Las urbes son el corazón de la vida de un individuo, que con el pasar del tiempo se va integrando en sociedad, relacionándose y desarrollándose en ambientes y bajo fenómenos diversos, donde finalmente completa sus características o rasgos como un ser social, sin ser solo un espacio que solo se habita, sino la forma de vida donde queda registrado el pasado y donde se inicia en el presente la construcción de un porvenir. El crecimiento geométrico de la población y su impacto en las ciudades, van centrando la atención sobre la problemática urbana, para mejorar las condiciones sociales y el buen funcionamiento de las ciudades, de tal manera que la industrialización inició una transformación sobre el nivel de vida en el ámbito nacional, en las jornadas de trabajo, problemas de vivienda y hacinamiento gracias a la necesidad de mano de obra y por ende a la migración. La concepción de Urbanismo data de 1869, cuando Ildefonso Cerda, publica la *Teoría General de la Urbanización*, cuyo proyecto era crear la ciencia del ordenamiento del espacio urbano (Rojas Caldelas, 2005, pp. 153). Ildefonso Cerda designa a esta nueva disciplina como “urbanismo” utilizando la raíz latina *urbs*, y la cual define por una parte como:

*“Un agrupamiento de construcciones puestas en relación y en comunicación de tal suerte que sus habitantes puedan encontrarse, ayudarse, defenderse...” (Ravella, 2001).*

El urbanismo moderno surge en el siglo XX, donde las ciudades se han ido convirtiendo en sistemas cada vez más complejos y el panorama urbano se encuentra en un cambio permanente. En cuanto a las técnicas del urbanismo moderno, tiene origen en las teorías desarrolladas por los alemanes Reinhard Baumeister, Joseph Stübben y Rud Eberstadt, quienes establecen los planes reguladores y el primer manual de técnica urbanística contemporánea, donde se establecen las medidas para la previsión del incremento demográfico, cálculo de la demanda de viviendas, volumen del tráfico, problemas de drenaje y de la limpieza urbana (Gravagnuolo, 1998). A principios del siglo XX se iniciaba el interés y necesidad de replantear el alojamiento de la población como resultado del crecimiento en las grandes ciudades, al control del uso del suelo y los costos de la tierra urbana, orientándose a una planificación regional o planeamiento urbano, mismo que se fue instituyendo como una disciplina analítica y proyectiva.

Más adelante en la segunda mitad del siglo XX la vida en las ciudades fue influyendo en la dinámica de crecimiento, transformando las estructuras urbanas como resultado del cambio social gracias al crecimiento económico de muchos países, industrias, grandes conjuntos de viviendas, la masividad de la construcción, los avances de la medicina y el uso masivo del automóvil y otros medios de transporte. El reto que se plantea la Administración pública con urbanismo es que tiene que procurar el acceso a todos los ciudadanos de una vivienda digna, respetando la propiedad privada del suelo sin olvidar la función social sobre el contenido individual de la propiedad. Por lo que el planeamiento y la gestión urbanística es considerada como competencias de la Administración pública contando con el instrumento fundamental de planeamiento el Plan General Municipal de Ordenación, así como los programas de desarrollo y ejecución.

#### Políticas Públicas y la Ordenación Territorial

Uno de los objetos de estudio de la Administración Pública es el campo de las políticas públicas, concepto analítico, intelectualmente construido para fines de modulación, ordenamiento, explicación y preinscripción de una política. El enfoque de las políticas públicas tiende a explicar y no solo a describir, ya que supone la conceptualización de procesos y la definición de una metodología que permita establecer y probar hipótesis causales, dichas metodologías recurren a las ciencias sociales, en especial a la economía, la ciencia política, la sociología y la psicología. La premisa fundamental es restablecer la racionalidad y el carácter público de las acciones gubernamentales restituyendo el carácter público a lo social, compartiendo la naturaleza de una ciencia aplicada que de una básica, orientada a detectar y resolver problemas específicos relevantes, basándose en instrumentos y descubrimientos de otras ciencias

sociales (Sánchez González, 2001) Las políticas públicas son entendidas como decisiones orientadas a impulsar los cursos de acción que relacionan al gobierno con los ciudadanos, creando una base importante para que la Administración pública recupere su carácter humanista. Por lo anterior, es importante que a través de las políticas públicas se de seguimiento a la vida del individuo la cual transcurre en un medio natural denominado territorio, resultando de gran importancia identificar las potencialidades, limitaciones y riesgos de un territorio específico, con la finalidad de contar con una distribución de asentamientos y actividades que le garanticen una vida y desarrollo en condiciones adecuadas.

El ordenamiento territorial suele definirse como la regulación de la utilización, ocupación y transformación del espacio, en función del bienestar colectivo actual y futuro, la prevención de desastres y el aprovechamiento sostenible de los recursos sostenibles (Enrique Vargas, 202). Entre otras de las definiciones la ordenación del territorio define la forma de utilización del suelo, redes formadas por los núcleos de población y los canales que conectan al conjunto, orientado a alcanzar un desarrollo equitativo, equilibrado y sostenible de los diferentes espacios territoriales(Gómez, 2001).

Una adecuada ordenación del territorio responde a una necesidad de controlar el crecimiento espontáneo de las actividades humanas, públicas y privadas, cuyo objetivo primordial es evitar los problemas socioespaciales, para así centrar el interés en la calidad de vida de la población. Para José Luis Palacio el ordenamiento territorial se concibe como un proceso y una estrategia de planificación de carácter técnico-político, a través del cual se pretende configurar en el corto, mediano plazo y largo plazo una organización del uso y ocupación del territorio, acorde con las aspiraciones de la sociedad y objetivos de desarrollo (Palacio Prieto, 2004). Con lo anterior es posible diagnosticar el sistema territorial actual, prever el futuro y gestionar su consecución de manera adecuada.

A través de la historia han existido muchos enfoques que han atendido y sustentado el tema de la ordenación territorial, donde han intervenido muchas disciplinas. Uno de ellos es de los *economistas* quienes centraban más la atención en vincular el ordenamiento territorial a la localización espacial de las inversiones, dando prioridad al diagnóstico económico- social y menor importancia al medio físico.

Los *urbanistas* se orientan al estereotipo geométrico en la ordenación del espacio, considerando las oportunidades y condicionantes del territorio. El enfoque *ruralista* se distingue en materia de colonización de tierras, de transformación de zonas rurales, de conservación de la naturaleza y espacios protegidos. Los *conservacionistas* sustentan su enfoque a una planificación y gestión del espacio que garantice el uso racional de los recursos naturales y la previsión de espacios protegidos de acuerdo a los criterios de protección existentes. Pero el enfoque real del ordenamiento territorial consiste en fomentar inversiones hacia las zonas marginadas del país.

Como resultado de estos enfoques se han ido desarrollando diferentes leyes y políticas públicas, y metodologías cuyo objetivo final es el desarrollo de las unidades territoriales a partir del equilibrio, integración, funcionalidad, uso racional de los recursos y calidad ambiental, de tal manera que la población dispone de una elevada calidad de vida. El ordenamiento territorial involucra cuatro elementos principales (Enrique Vargas, 202):

1. *Conocimiento de la presión actual y futura sobre el territorio:* Previsión del crecimiento poblacional y de la demanda de recursos y servicios ambientales para el mediano y largo plazo
2. *Conocimiento de los recursos, potencialidades y ventajas comparativas del territorio.*
3. *Conocimiento de los riesgos por el uso del territorio:* amenazas naturales y socio-naturales.

4. *Establecimiento de regulaciones y programas de acción para la protección, ocupación utilización y transformación del territorio*: Mejoramiento de la calidad de vida y el bienestar de las personas, minimizar riesgos de desastre y garantizar condiciones de sostenibilidad.

El ordenamiento territorial concebido como política pública, el cual se plasma en un plan, un Plan de Ordenamiento Territorial, el cual comprende el diagnóstico, objetivos, las políticas y estrategias, los programas y proyectos, las normas y los mecanismos de estímulos y sanción destinados a orientar y administrar el uso de un territorio específico. La planificación es esencialmente de carácter municipal o cantonal, puesto que el municipio o cantón cuenta con la estructura democrática y la capacidad administrativa, normativa y de control para lograr la formulación y ejecución del plan. Para muchos autores el ordenamiento territorial comprende cinco etapas principales (Palacio Prieto, 2004):

1. Caracterización y análisis territorial
2. Diagnóstico territorial
3. Prospectiva o diseño de escenarios
4. Formulación del programa de ordenamiento territorial
5. Gestión del programa de Ordenamiento territorial

Actualmente existe un consenso en considerar al territorio como un sistema complejo, que contiene una variedad de procesos, cuyos elementos se interrelacionan entre sí, otorgando una forma de organización, por lo que al formular el ordenamiento del territorio deben analizarse por lo menos tres *subsistemas*:

Primero el *natural*, ya que es importante determinar el impacto acumulativo de los métodos de explotación en el ambiente y las condiciones físicas, que el medio impone a los procedimientos de utilización de los recursos naturales.

El segundo es el *social*, en el cual se pueden identificar las condiciones de vida de los sujetos sociales, los procesos ligados a la calidad de vida, la cultura y las prácticas de las políticas públicas que intervienen en la ordenación territorial. Por último, el tercero que se refiere a lo económico, donde se precisan las tecnologías, los insumos, los mercados, los actores con poder de decisión, los procesos productivos, de distribución y de consumo, que conforman los usos del suelo en el territorio. La difusión del ordenamiento territorial es parte de una de las tendencias, por lo que actualmente ocupa un lugar preponderante en las agendas gubernamentales y sociales, lo que no ha modificado de manera sustancial el predominio en la práctica de las políticas sectoriales de nuestro país.

#### El Papel de las TIC'S en la Administración Pública

La creciente importancia de la tecnología en la vida económica en general y en el Estado en particular, que sufre el incremento y la complejización de sus actividades, motivan al estudio de ésta y el intento de optimizar su impacto. Es por esto, que en los últimos tiempos, la informática han vuelto los ojos hacia la Administración Pública como inversora en las más diversas soluciones de comunicación y tecnología, ya que es innegable el crecimiento de las actividades administrativas, que se encuentran sobrecargadas de manera extraordinaria y no pueden ser administradas con las herramientas tradicionales de la jerarquía administrativa (Crozier, Michael. "La Transición del Paradigma Burocrático a una Cultura de Gestión Pública", Reforma y Democracia. Revista del Centro Latinoamericano de Administración para el Desarrollo No. 7, (Enero 1997): 7-18), mientras la demanda de servicios exige una mayor calidad y una racionalización de costos. La evolución de la Administración pública tiene que ver directamente con los

beneficios que esta brinda a la sociedad en un contexto real, a través de la realización más eficiente del trabajo administrativo, independientemente de los mecanismos que esta utilice.

En estas etapas recientes de modernización, la Administración Pública ha apostado desde hace algunos años en la utilización de tecnología como parte de la estrategia de reforma, donde el reto es la optimización de los procesos en una búsqueda de máxima eficiencia, donde la tecnología puede, sin duda, contribuir a ello, haciéndose cada vez más indispensable desde el punto de vista estratégico, ya que hemos estado inmersos desde siempre en la evolución tecnológica, siendo testigos de sus diferentes etapas de desarrollo, contemplando sus aciertos y desaciertos en todos los ámbitos, lo cual ha dado de que hablar a muchos estudiosos de las Tecnologías de la Información y Comunicaciones como factor común en la disciplina de la administración.

Las Tecnologías de la Información y Comunicación (TIC's), se definen como el "Conjunto de técnicas y conocimientos que integra a los equipos y servicios de informática, incluyendo a los sectores de Tecnologías de la información y las Telecomunicaciones, así como los medios de comunicación"( Terceiro José B. y Matías Gustavo. Digitalismo, el nuevo horizonte sociocultural. Grupo Santillana, México 2001.), que implica la incorporación adecuada de técnicas y herramientas para administrar la información, desarrollar proyectos de sistematización y la incorporación de equipo de cómputo de procesamiento de datos y envío de señales, cuyo impacto de utilización repercute prácticamente en todas las actividades humanas, modificando las estructuras de producción y comercialización, la organización de instituciones, la difusión de conocimientos, así como la prestación de servicios, tal es el caso de los grandes proyectos de Sistematización de distintas dependencias que aún no están totalmente concretados, hasta lo más simple como es el manejo de un procesador de textos en alguna dependencia donde se presta algún servicio. Se puede decir que parcialmente se ha visto beneficiado el enlace sinérgico entre estado-sociedad, ya que aún esta pendiente realizar una valoración del uso de la tecnología que avale el nivel de servicio que la población mexicana recibe cuantificando beneficios de manera concreta, considerando si todos y cada uno de los proyectos TIC's son acordes a la situación actual del país y si la inversión realizada en tecnología es equiparable a los logros o frutos obtenidos.

El uso adecuado y un mayor aprovechamiento de las TIC's pueden brindar una contribución fundamental al cumplimiento de las metas nacionales en la oferta de servicios a la población en general. Por ello, la industria de las TIC's tiene claro que puede y debe desempeñar ese papel de facilitador para elevar el nivel de vida de los mexicanos, contribuyendo a un desarrollo sustentable a través de una reducción y paulatina eliminación de la actual brecha digital. La incorporación masiva y no planificada de equipos a la organización no produce más que puntuales mejoras, y por el contrario puede desarticular procesos manuales eficientes. La corriente de la Reingeniería de Procesos, por ejemplo, sostiene que la informática o la automatización permiten realizar las tareas con mayor celeridad, es por esto que la base metodológica para la modernización de la Administración Pública se basa en la aplicación de los conceptos de la Teoría General de Sistemas, donde dicho enfoque proporciona el sustento para una adecuada sistematización de actividades considerando a la Administración Pública como un sistema social, es decir, un conjunto de elementos en interacción constante que obedece a su propia lógica, distinta a la de cada una de sus partes y que mantiene interacción con su medio, ya que no puede estudiarse o considerarse independientemente de los cambios que se producen en el medio político y social, ya que su equilibrio y estabilidad internos dependen, como sucede con los sistemas abiertos, del flujo constante de energía del exterior, como es el caso de las demandas de la población. El medio ambiente de la Administración Pública determina los elementos a considerar en el proceso de manejo e implantación de las TIC's, contemplando básicamente el sistema sociopolítico, económico y cultural que lo envuelve y de donde surgen los insumos del sistema y donde se reciben los productos del mismo. Es por esto que el análisis del sistema administrativo, tiende a describir el proceso mediante el cual se responde a las demandas que requiere el medio social y el cual contempla tres fases de reflexión mismas que tiene que ver con: La inserción del sistema administrativo en su medio social, las condiciones de organización interna del sistema administrativo y las condiciones

de acción del sistema administrativo en la sociedad. Por consiguiente, además de la planeación estratégica y reingeniería de procesos es fundamental considerar los principios de la Teoría General de sistemas en los procesos de modernización, cuando en la actualidad estamos inmersos en una sociedad de la información que solo es concebida a través de la tecnología.

### Los Sistemas de Información Geográfica

Un Sistema de Información Geográfica (SIG's) es una tecnología cuyo propósito general es almacenar y manipular datos geográficos en forma digital, los cuales puedan ser explotados para analizar, visualizar y graficar diversos conjuntos de datos espaciales que tengan una georeferenciación, es decir, identificar el posicionamiento con el que se define la localización de un objeto espacial, el cual se representa a través de un sistema de coordenadas, mediante puntos, vectores, áreas y volúmenes (Pérez, 2011). Es así como es posible visualizar de manera gráfica características y objetos de un espacio físico, estableciendo relaciones de imágenes de raster o vector sobre una proyección gráfica. El *raster* es el modelo de codificación formado por una malla de rectángulos o cuadrados denominados células o retículas, las cuales contienen información alfanumérica que representa las características de la zona o superficie geográfica que cubre, como una fotografía digital. El *vectorial*, el cual está formado por pares ordenados de coordenadas, donde se representan objetos gráficos utilizando tres tipos de vectores: puntos, líneas y polígonos, los cuales se usarán dependiendo del tipo de datos que se tengan que manejar (Peña, 2008).

En cuanto al modelo de datos que maneja un SIG, permite relacionar y unir atributos gráficos y no gráficos, dicha relación se establece desde el punto de vista posicional y topológico, donde los posicionales indican donde está el objeto y los topológicos proporcionan información sobre la ubicación de un elemento con respecto a otros. La base de datos geográfica está formada por una colección de datos, cuyos objetos que están localizados en una determinada área de interés en la superficie de la tierra, organizados de tal forma que puedan ser manipulados a través de alguna aplicación.

Actualmente la *Cartografía Digital* es la base para la implementación de un SIG, ya que facilita el procesamiento de los datos para realizar el análisis de la información contenida, de tal forma que se generan presentaciones espaciales que no son una reproducción del mundo real, sino que plantean los elementos para la toma de decisiones sobre el territorio (Franco, 2003). Un SIG debe representar una aproximación a la realidad, proyectando los objetos del mundo real como resultado de un análisis detallado, de manera muy precisa (Sánchez, 2004). Es importante la referencia espacial de los datos que son descritos respecto a la situación correcta en la superficie de la tierra, lo cual significa georeferenciarlos. La Georeferenciación es el proceso de establecer una relación entre los datos visualizados en el SW y su situación en el mundo real, cuyo objetivo es tener un análisis exacto resultante de la base de datos. El conjunto de datos georeferenciados dan lugar a las bases de datos gráficas, a los mapas o documentos gráficos. Por otro lado, el conjunto de archivos que contienen los elementos georeferenciables, es decir, datos referidos a las entidades gráficas, se llaman base de datos alfanuméricas, ya que pueden relacionar datos numéricos y datos temáticos. El Sistema Gestor de la Base de Datos es quien se encarga de vincular las bases de datos gráficas y alfanuméricas, creando así la base de datos espacial (Star, 1990). Por lo tanto la información geográfica se define por: su geometría, la organización y estructuración topológica, y por la información alfanumérica asociada al dato espacial. Los SIG's cuentan con muchas operaciones y funciones tendientes a la gestión de la información que se introduce, de tal manera que se puede manipular y explotar, tanto la información temática como la gráfica. Las funciones más importantes de análisis espacial de la plataforma de un SIG son (Urrutia, 2006):

- a) *La superposición*, que permite un análisis multivariable al integrar capas temáticas o gráficas.
- b) *La vecindad*, que engloba un conjunto de operaciones del sistema que tienden a evaluar las características del área que envuelve una localización determinada.

c) *La conectividad*, son operaciones del sistema relacionadas con la conexión entre las entidades geográficas representadas.

En función de la capacidad de gestionar gran cantidad y variedad de datos, un SIG mejora los modelos descriptivos y predictivos, lo cual permite brindar información para la toma de decisiones y para realizar una planificación, ya que se modelan circunstancias y escenarios con variables susceptibles de modificar, aplicando la *teoría de decisión multicriterio*, misma que permite tomar una decisión en torno a una combinación de condiciones, controlando las variables que afectan a un hecho social.

## METODOLOGÍA

La investigación es de tipo descriptiva y exploratoria ya que se especifican los rasgos y características de los Sistemas de Información Geográfica, considerando a éste como un factor determinante para dar respuesta y una alternativa de solución al problema que actualmente atañe a muchos de los territorios tendientes a un crecimiento urbano. Por otro lado se utilizó la metodología de ordenamiento territorial para el desarrollo de los productos siguientes:

- 1) Mapas espaciales o temáticos.
- 2) Modelos digitales de elevaciones.
- 3) La tipificación de la cuenca-hidro.
- 4) Y la Edafología.

Esta investigación se realizó en apego a la siguiente metodología:

- 1) Revisión bibliográfica y acopio de información sobre los Sistemas de Información Geográfica y el crecimiento urbano,
- 2) Análisis de la problemática sobre la planificación urbanística,
- 3) Levantamiento de información a través del Sistema de Posicionamiento Global.
- 4) Diseño de escenarios,
- 5) Desarrollo de mapas temáticos a través de ArcGis,
- 6) Presentación de resultados y
- 7) Conclusiones.

## RESULTADOS

Como parte del compromiso social y mediante la participación voluntaria de docentes y estudiantes de la Licenciatura en Sistemas Computacionales Administrativos, así como el programa de Posgrado de la Maestría en Telemática de la Universidad Veracruzana, han venido desarrollando actividades de diagnóstico, captura y representación de información espacial para el desarrollo de propuestas de planificación de ciertos municipios y comunidades rurales, las cuales carecen de una correcta distribución del territorio, así como la inexistencia de los servicios públicos y de comunicación adecuados, pero que con el apoyo de las Tecnologías de la Información y Comunicaciones fue posible identificar y caracterizar territorios de manera digital mediante los SIG's, diseñando escenarios para la intervención a través del diagnóstico y zonificación para apoyar a la Gestión municipal, a través de planos temáticos que representan el crecimiento y desarrollo de las población y que permiten tratar de ordenar el uso de los espacios, optimizando la explotación de los recursos naturales para un desarrollo sostenible, ofreciendo así una mejor calidad de vida de los habitantes, y por consiguiente atender el crecimiento poblacional a

través de una planeación adecuada, para un crecimiento y desarrollo armónico e integral en los servicios públicos. Algunos de los beneficios y resultados obtenidos en este proyecto son:

*Mapas espaciales o temáticos* : de las comunidades, los cuales fueron diseñados para mostrar conceptos particulares sobre un tema o capa de información, elaborados de dos tipos cualitativos o cuantitativos. En los primeros se muestra la distribución espacial de un grupo de datos clasificados en medidas nominales, como es el caso en el que podemos representar claramente los tipos de carretera para el acceso terrestre a las comunidades. Por otro lado los cuantitativos muestran una distribución espacial con datos numéricos. Con ayuda de los *Modelos Digitales de Elevaciones* se ha representado la superficie continuada para una gran cantidad de usos, como resolver problemas en el diseño de carreteras y otros proyectos de ingeniería civil, para el diseño de paisajes y planificación, considerando que otros beneficios a partir de este tipo de mapas digitales es analizar la visibilidad en el campo, realizando comparaciones de diferentes tipos de terrenos para planear los tipos de cultivo, además de identificar las zonas de riesgo.

Los SIG's al georeferenciar los recursos naturales de una región, permite administrarlos de manera adecuada, ya que identificados podemos tener el conocimiento del mismo, ya sea para conocer su estado como para plantear soluciones a su problemática. Por ejemplo es posible la tipificación de una cuenca, ya que muchas veces las cuencas no coinciden con los límites políticos administrativos del territorio, dificultando su gestión. Por otro lado se ha obtenido la *Tipificación de la Cuenca-Hidro* a través de algunos mapas temáticos de la Hidrología, donde se pueden enumerar las cuencas hidrológicas de la zona, ubicar las masas naturales de agua como son las corrientes, estancadas, permanentes y estacionales. Así como representar las infraestructuras hidráulicas en entorno como son: las presas, canales, pozos, entre otros. Por último a través de la *Edafología* fue posible obtener información geográfica de suelos, así como su distribución en el paisaje, el uso actual y los usos potenciales. Los mapas digitales de suelos se producen a partir de una base de datos espacial, donde se utilizan métodos de observación, de campo y de laboratorio, asociados con sistemas de inferencia espacial y no espacial de suelos, los cuales proporcionan información sobre clases de suelos, sus propiedades y su distribución espacial.

## CONCLUSIONES

En el mundo real existen infinidad de problemáticas que afectan al bienestar del individuo o de la empresa, pero que a través de los Sistemas de Información Geográfica se pueden tener acceso a enormes volúmenes de datos y brindar la posibilidad de elaborar modelos a corto plazo, y mayor flexibilidad en el tratamiento de la información. Para el usuario investigador o académico los SIG's no solo aumentan las posibilidades de describir, explicar y predecir modelos y procesos espaciales, sino también nos permite formular y ensayar modelos complejos y realistas sobre un territorio de interés, de donde se adoptan decisiones acertadas o la mejor planificación respecto a un tema.

Para el caso de las comunidades que se encuentran en crecimiento acelerado dentro del estado de Veracruz y que por mucho tiempo han permanecido fuera de las estadísticas oficiales de su producción y/o de su existencia en la cartografía nacional, con esta experiencia adquirida y recabada a partir del manejo y manipulación de la información de un SIG, genera un impacto social que beneficia la calidad de vida de los habitantes y proporciona información valiosa para iniciar un proceso bien planeado de urbanización, el cual puede ser muy útil para diferentes instancias como por ejemplo la Secretaría de Desarrollo Urbano y Obras Públicas del estado. Los SIG's aunque dan la impresión de ser meramente prácticas basadas en un software, trabajan con una metodología propia y poseen un núcleo teórico importante en el que se combinan diferentes disciplinas como son: la geografía, la informática, la estadística y administración, inclusive aquellas hacia las cuales se orienta la digitalización de los datos, como por ejemplo permitir a los grupos de emergencia cercanos calcular fácilmente los tiempos de respuesta en caso de un desastre natural.

# ESTUDIO PARA ANALIZAR LA EFICIENCIA DE LAS TECNOLOGÍAS DE INFORMACIÓN DE LA FACULTAD DE CIENCIAS ADMINISTRATIVAS CAMPUS MEXICALI

Ricardo Ching Wesman, Universidad Autónoma de Baja California  
Adelaida Figueroa Villanueva, Universidad Autónoma de Baja California  
Cecilia Bustamante Valenzuela, Universidad Autónoma de Baja California

## RESUMEN

*Poco a poco los dirigentes de las instituciones de educación superior a nivel global se han hecho conscientes de la importancia y la utilidad que han adquirido el uso de las Tecnologías de Información en el proceso de enseñanza-aprendizaje, y para no quedar rezagados en su aplicación e implementación, en la actualidad proveen a su comunidad de alumnos y docentes una amplia variedad de herramientas tecnológicas para su aplicación como por ejemplo, plataformas en línea, el uso de tecnologías de videoconferencia, la contratación de bases de datos especializadas, entre otras, lo cual implica una considerable derrama de recursos públicos en lo que se considera es una inversión necesaria. Por lo tanto, la pregunta de fondo que impulsa esta investigación es estudiar en qué forma se utilizan estas herramientas informáticas y de qué manera ayudan a desarrollar competencias digitales cognitivas en los alumnos, las cuales son indispensables en esta sociedad globalizada en que vivimos.*

**PALABRAS CLAVES:** Tecnologías, Competencias Digitales, Recursos Digitales

## STUDY TO ANALYZE THE EFFICIENCY OF INFORMATION TECHNOLOGY

### ABSTRACT

*Gradually the leaders of higher education institutions globally have become aware of the importance and usefulness have acquired the use of IT in the teaching-learning process, and to not fall behind in their implementation and implementation, currently provides its community of students and teachers a wide variety of technological tools for application such as online platforms, the use of videoconferencing technology, hiring specialized databases, among others, which involves a considerable outlay of public funds in what is considered a necessary investment. Therefore, the basic question behind this research is to study how these tools are used and how they help develop cognitive skills in students digital, which are essential in this global society in which we live.*

### Tema

Estudio del uso del uso de las Tecnologías de Información para elaborar una propuesta de explotación eficiente de los recursos informáticos de la Facultad de Ciencias Administrativas Campus Mexicali

### Objetivo General

☐ Llevar a cabo un estudio sobre el uso de las Tecnologías de Información a fin de encontrar áreas de oportunidad que permitan potenciar los recursos y la infraestructura de TIC en la Facultad.

### Objetivos Específicos

☐ Identificar las competencias digitales que debe poseer un estudiante de educación superior de tronco común.

☐ Elaborar un diagnostico situacional

☐ Elaborar una propuesta a partir de este estudio para fomentar el uso eficiente de las TICS en varias etapas:

Etapa 1: Uso adecuado de las bases de datos académicas

Etapa 2: Uso eficiente de los recursos de Internet

Etapa 3: Uso eficiente de la infraestructura de cómputo

### Tipo de Investigación

En esta primera etapa se tienen dos variables: Competencias Digitales y Uso de Bases de datos académicas. Si hacemos referencia al tipo de estudio, la investigación se inserta dentro de un estudio cuantitativo, con un enfoque exploratorio. Además podemos clasificarla como un estudio de tipo transversal. La muestra será no probabilística. Se realizó una búsqueda bibliográfica de los temas que serían abordados en la investigación: Competencias Digitales, Tecnologías de Información, Sociedad de la Información, Alfabetización Informacional. Una vez que se han establecido los fundamentos teóricos necesarios para desarrollar esta investigación, se procedió a realizar el estudio propiamente como tal. Se aplicó un instrumento para medir las variables de interés elaborado en base a la escala de Lickert y el Estándar Internacional NETS para estudiantes elaborado por la UNESCO.

### **RESULTADOS ESPERADOS**

Elaboración de una metodología que fomente la adecuada explotación de los recursos digitales con que cuenta la facultad, en esta primera etapa se trabajara para eficientizar el uso de las bases de datos académicas, en una segunda etapa el uso de internet y en la tercera etapa el uso eficiente de los laboratorios de computo, y se buscara establecerla inicialmente con los alumnos de Tronco Común. Esto generaría un impulso espectacular al uso de estas herramientas digitales ya que el tronco común se compone de alrededor de entre 700-800 alumnos. ☐ Elaboración o adecuación de una herramienta de diagnostico de competencias digitales que nos permita medir o detectar las capacidades digitales de los estudiantes de nuevo ingreso, a fin de analizar cuales deberán ser fortalecidas.

Esta investigación reviste una singular importancia ya que las instituciones de Educacion Superior no podemos darnos el lujo de desperdiciar o subutilizar recursos de cualquier índole, debido a que es un recurso que la misma sociedad nos hace llegar a fin de mejorar la educación. Por lo tanto es en este tenor que el espíritu de esta investigación sea tendiente a estudiar el uso que se le da a los recursos tecnológicos en la Facultad de Ciencias Administrativas con el fin de sugerir alguna propuesta de mejora en cada etapa. En esta primera etapa se llevo a cabo la recolección de información en base a las competencias digitales que tienen los alumnos del tronco común de la FCA y el uso que hacen de las TICS en su vida diaria. De acuerdo a la realidad observada, buscaremos dejar planteada una propuesta acerca del uso eficiente de los recursos digitales, en base a las habilidades informacionales que tienen y las que deben desarrollar los alumnos universitarios.

## PROBLEMA DE INVESTIGACION

¿Los estudiantes de tronco común de la Facultad de Ciencias Administrativas Campus Mexicali, cuentan con las competencias digitales necesarias para hacer uso y explotar adecuadamente herramientas tecnológicas para el aprendizaje? Preguntas auxiliares:

- ☐ ¿Qué tan importante es el desarrollo de competencias digitales en la sociedad de la información?
- ☐ ¿Cómo se pueden identificar y potenciar estas capacidades digitales en el estudiante universitario?
- ☐ ¿Qué herramientas se pueden utilizar para desarrollar las competencias digitales en los alumnos?

### Delimitacion

Este proyecto de investigación se realizará con 250 alumnos del Tronco Común de la Facultad de Ciencias Administrativas del Campus Mexicali del primer semestre durante el ciclo 2012-2.

### Justificacion de la Investigacion

Desde 1983 se han estado desarrollando y aplicando en México diferentes proyectos con uso y aplicación de la tecnología en escuelas públicas, que van desde el proyecto Galileo, Red Escolar, Biblioteca digital, Edusat, Proyectos Colaborativos, Sepiensa, EMMAT, Enciclomedia, etc, hasta llegar al proyecto de “Habilidades Digitales para todos” que se está aplicando actualmente durante la gestión del actual Presidente Felipe Calderón Hinojosa. Es dentro de este contexto que considero que la investigación es válida debido a que después de que en la primaria, secundaria y preparatoria donde los alumnos han ido aplicando el uso de las TICs de diferentes formas, al llegar a la educación superior los docentes en gran medida no aprovechamos las competencias digitales que ya traen estos alumnos ni las potenciamos. Inclusive las cartas descriptivas por lo general no aprovechan este bagagge de conocimientos y habilidades preadquiridas. En gran parte se desperdician millones de pesos en recursos e infraestructura que no son aprovechados al máximo o que son subutilizados. Tal es el caso de las bases de datos académicas que se contratan por miles de dólares y no son usadas al nivel de explotación que se debiera.

Esta situación no es nueva, sin embargo a pesar de que es algo que se conoce, no se ha llevado a cabo ningún estudio a nivel Universidad que nos permita dimensionar esta situación en toda su amplitud. Este estudio y la propuesta que se genere tiene una aportación importante a la Facultad de Ciencias Administrativas y a la Universidad Autónoma de Baja California ya que deberán contribuir a desarrollar una metodología que apoye el desarrollo de la Tercera Competencia de los estándares para estudiantes de la UNESCO que es: Investigación y Manejo de Información donde los estudiantes aplican herramientas digitales para obtener, evaluar y usar información. También al identificar estas competencias será posible incluir en las cartas descriptivas prácticas que potencialicen el desarrollo de competencias digitales. De igual manera un beneficio adicional tangible será que al establecer una propuesta de trabajo para apoyar el proceso de enseñanza-aprendizaje en esta herramienta de bases de datos académicas, fomentaremos el uso de las mismas y aumentaremos su estadística de utilización que actualmente es casi nulo por parte de los 4782 alumnos de la Facultad de Ciencias Administrativas.

### Aplicación del Instrumento

Se aplicó el cuestionario de recolección de información sobre competencias digitales a 250 (se redondeo a 250 alumnos a pesar de que la muestra sugerida era de 223), donde el universo a encuestar era de 530 alumnos del tronco común, con un nivel de confianza de 95% y un margen aceptable de error de 5%.

También se tomo en cuenta el Nivel de heterogeneidad del 50% Los resultados derivados del análisis de datos se muestran a continuación:

*De aquí podemos observar que la brecha digital en el caso de esta generación es muy poca ya que la gran mayoría tiene acceso a equipo de computo propio o pueden acceder en alguna instancia.(café internet,Laboratorio,etc)*

*Si notamos que la mayoría no tiene problemas para encender o apagar dispositivos electrónicos, podemos tener como conclusión que no tendrían problemas para acceder a la información desde cualquier dispositivo. De igual manera se sugiere proporcionar alguna inducción en este tema.*

*En esta pregunta podemos observar que a pesar de ser tronco común la mayoría dice poder distinguir si una computadora es mejor que otra de acuerdo a sus características como memoria, procesador, disco duro, etc. Sin embargo se recomienda que en la unidad II de la Materia de*

*Tecnologías de Información se les siga enseñando las diferencias entre cada procesador, los tipos de memoria y almacenamiento así como nuevas tecnologías en el mercado como por ejemplo los discos de estado sólido.*

*Podemos notar gran afinidad en el uso de terminología de la Web, en gran parte debido a nuestra cercanía con la frontera y al uso intensivo que hacen del Internet, este mismo logra que ellos vayan conociendo terminología de actualidad.*

*Un aspecto muy importante de la búsqueda eficiente de la información es que hacer con ella cuando la tenemos. Por lo tanto es indispensable que el alumno sepa usar los diferentes medios de transmisión y almacenamiento de información. Podemos observar que la mayoría son competentes para descargar información o ponerla a disposición de otros en una red P2P.*

Subo archivos, fotos, música o películas en páginas web

*La capacidad de hacer UPLOAD de diferentes medios en su mayoría se observa que si son competentes. Sin embargo se recomienda incluir dentro de las prácticas de laboratorios algunas tendientes a reforzar esta área,-*

En el apartado de software de producción encontramos que el 76% se considera con conocimientos básicos de lo que es una base de datos.(no estamos hablando de crearla, modificarla o hacer formularios).Este punto también se imparte en la materia de tecnologías de Información donde se sugiere se les den las bases del uso de condicionantes u operadores condicionales de búsqueda de información.

Cuando busco información por Internet sigo pautas, normas o reglas para saber si la información que encuentro por Internet es verdadera o falsa.

Aquí nos podemos dar cuenta que los alumnos al buscar información para sus proyectos de investigación no se preocupan por la calidad de la misma, no aplican parámetros de evaluación ni le dan peso a las fuentes. Se sugiere enseñarles a evaluar información siguiendo la metodología de Luis Codina.

Consulta bibliotecas digitales, enciclopedias virtuales o materiales educativos a través de Internet.

El 56% de los alumnos encuestado no consulta en enciclopedias, bibliotecas digitales, bases de datos o material educativo confiable. Esta es un área de oportunidad enorme que se debe poner gran énfasis ya que la Universidad destina gran parte de sus recursos a la compra de estos materiales educativos.

Uso las opciones de búsqueda avanzada de los buscadores

*La gran mayoría de los encuestados afirma ser eficientes en el uso de las opciones avanzadas de búsqueda, sin embargo sería necesario evaluar su conocimiento del uso de operadores booleanos o el manejo de comodines para facilitar las búsquedas de información y evitar el ruido informático o sea la cantidad de información no requerida que resulta de una búsqueda.*

## PROPUESTA DE MEJORA

En base a lo anterior se propone la implementación de una Metodología de mejora que comprenda lo siguiente:

### Etapas

-Capacitar de manera permanente al personal docente en el manejo de las bases de datos académicas, de manera que ellos les demanden a sus alumnos trabajos de investigación basados en esas fuentes.

-Establecer Talleres de capacitación obligatorios de 1 Hora para cada uno de los grupos de Tronco Común de 1er. Semestre. Dentro de este taller se les mostrara como usar en forma genérica una de las bases de datos y como evaluar ese recurso académico usando la metodología de Luis Codina.

-Campaña de promoción permanente de “Explota tus recursos” invitando a los alumnos y maestros a explotar el potencial de la biblioteca y sus recursos tanto físicos como digitales.

-Llevar a cabo una reunión con Jefes de Carreras a fin de plantearles esta situación detectada y la necesidad de implementar mejoras a nivel de carta descriptiva donde los alumnos tengan que hacer prácticas usando este recurso.

Establecer Indicadores que nos permitan medir realmente el uso eficiente de las bases de datos académicas y los recursos digitales que se ponen a disposición de los alumnos.

### Etapas

Analizar los resultados de las encuestas en relación al uso eficiente de Internet y realizar una nueva medición con los alumnos del periodo 2013-1, para así observar si son similares los resultados y proponer alternativas de mejora en este punto. Para el semestre 2013-2 se propone implementar esta parte de la investigación a fin de poder establecer una muestra confiable y homogénea que involucre a todos los semestres y no solamente al tronco común.

# NEUROECONOMÍA Y TURISMO EN TIEMPOS DE CRISIS

Francisco J. Güemez Ricalde, Universidad De Quintana Roo

José L. Zapata Sánchez, Universidad de Quintana Roo

René Andreas Forster Ojer, Universidad de Quintana Roo

## RESUMEN

*Ante las crisis, del tipo que sean, económicas, de inseguridad, etc. las personas reaccionan (aumentando el ingreso o modificando hábitos de consumo), no queriendo asumir la realidad, para después convertir sus posibles consecuencias en foco de atención, generalmente acompañado de la sensación de pérdida de control, tensión, miedo y estrés. Las decisiones se toman, entonces, a muy corto plazo: efecto túnel. (Dominique Lasarre, 1995). La teoría del "Prozac", neuroeconomía o del ¿qué se viene? Surge hace menos de un año en Estados Unidos como resultado del prolongado ciclo de la actual crisis que ha creado un imaginario negativo en la mente de los consumidores modificando sus hábitos de compra, reduciendo volúmenes, cambiando marcas y sitios de compra, sustituyendo placeres y conceptos del gasto para constituirlos en ahorro ante un futuro no previsible, es parte de un nuevo imaginario que ahora se asocia a una crisis financiera global acentuada especialmente en países que suelen ser proveedores a gran escala de demandantes de servicios turísticos de la zona del Caribe y Centroamérica. A su vez, genera un cambio no previsto en la economía familiar de quienes recientes la posible influencia sobre el mercado y la actividad turística de la región. Plantear posibles alternativas quizás radique en el estudio y aplicación de la neuroeconomía.*

**PALABRAS CLAVES:** neuroeconomía, efecto túnel, crisis, consumidor, turismo

## NEUROECONOMIS AND TOURISM IN TIME OF CRISIS

### ABSTRACT

*Before the crisis, of whatever type, economic, insecurity people react (increasing income or by changing consumer habits), not wanting to face reality, and then turn their possible consequences in focus, usually accompanied by a feeling of loss of control, tension, fear and stress. Decisions are made, then, in the very short term: tunneling. (Dominique Lasarre, 1995). The theory of "Prozac", Neuroeconomics or what is coming? Comes less than a year in the U.S. as a result of prolonged cycle of the current crisis that has created a negative imagery in the minds of consumers changing their buying habits, reducing volumes, changing brands and shopping sites, replacing pleasures and concepts spending to make them into savings before an unforeseeable future, is part of a new vision that is now associated with a global financial crisis accentuated especially in countries that are usually large-scale providers of tourist services demanding the Caribbean and Central America. In turn, generates an unanticipated change in the household economy of those recent the possible influence on the market and tourism in the region. Propose alternatives may lie in the study and application of Neuroeconomics.*

## INTRODUCCIÓN

La economía mundial ha atravesado por la peor crisis en tiempos recientes después de aparentar un ritmo constante de crecimiento. Esta investigación muestra las principales tendencias de los indicadores económicos de países que tradicionalmente se consideran los más importantes generadores de demanda turística, haciendo al mismo tiempo observaciones sobre lo que está ocurriendo en forma reciente y asociando estas tendencias a lo que trata de dar una explicación de lo que ocurre en términos de drásticos cambios en la conducta de los consumidores desde la perspectiva y en relación al surgimiento de una nueva ciencia que agrupa diversas áreas del conocimiento, la *Neuroeconomía*.

## REVISIÓN LITERARIA

Van art Ark (2013), señala en su reporte de prospectiva mundial, que la economía global aún arrastra los efectos de la crisis iniciada en el 2007–2009. Menciona que tan sólo en el 2012 la economía mundial cayó casi 3%, año en el que se esperaba una franca recuperación. La caída de la economía mundial representa una tendencia anual decreciente de casi medio punto porcentual por año con una franca tendencia a mantenerse en los próximos años. Van art Ark, Jefe del Conference board trend menciona dos probables causas: la falta o caída en la demanda o el debilitamiento de las cadenas de suministro. Además especula al describir los riesgos en la economía del mundo y norteamericana y la posibilidad de que únicamente se pueda lograr impulsar a la economía mediante un lento crecimiento de largo plazo. En relación a lo anterior vemos en la Figura 1, indicadores tomados de la Organización Mundial de Turismo (OMT), una cierta recuperación en el crecimiento de la demanda turística mundial aunque como se explica en esta investigación, estos indicadores no reflejan lo que sucede en la mente del consumidor.

Figura 1: Tasa de crecimiento de la demanda turística mundial

La demanda turística mundial mostraba un crecimiento referente a una tasa sin precedentes en el periodo 2004/2007, en 2007 año de inicio de la crisis aún alcanzó una cifra de crecimiento de 6.4 hasta el 2007. En 2008 sufrió su peor registro año de la epidemia de influenza para reiniciar su recuperación aunque a una tasa de sólo el 4 por ciento y con modificaciones importantes en la estructura de la demanda ante cambios en la estrategia de los consumidores Fuente. Elaboración propia con datos de la OMT (2013)

La tendencia de recuperación observada en el turismo debe ser desglosada por regiones y ante cambios en los demandantes. En los países desarrollados Estados Unidos sólo registró un 3 por ciento al igual que Europa, que pueden ser signos de un cambio en las decisiones del consumidor y en la estabilidad económica de los países desarrollados en contraposición con economías emergentes, inclusive alternas

como el caso de Rusia, China, India y Sudamérica quiénes han adoptado nuevas formas de comercializar entre sí.

*Continúa la crisis:* El escenario de la economía mundial hacia el 2013 parece nuevamente tomar matices de decaimiento como resultado probable de la recomposición estructural microeconómica que se derivó de la crisis del 2008/2009. Sin duda los niveles de equilibrio económico de las estructuras familiares al 2013 no son los mismos de 5 años atrás. Ya que aún las tasas de desempleo siguen marcando signos de posible recesión ante la crisis que se vive principalmente en Europa aunque con claros reflejos en la economía mundial.

*Efecto de la crisis en las motivaciones de los consumidores:* Quintanilla Pardo (2010), menciona que existen evidencias que relacionan las crisis económicas con las motivaciones de los consumidores y viceversa. De esta manera trata la economía como realidad social que impacta la vida de las personas las que a su vez al cambiar su comportamiento de compra impactan también en la economía producto de los cambios experimentados en términos de motivaciones, conductas, actitudes, emociones y expectativas de los ciudadanos, cuyo nivel relativo de cambio es diferente según la etapa previa a la crisis económica que puede ser de bonanza lo que generaría una mayor especulación y drástico cambio en los consumidores y de forma más o menos generalizada. Propicia un consumo en el que las motivaciones tienen fuertes componentes psicológicas o de integración en las tendencias psicosociales dominantes. La crisis se inicia, sin que se advierta, con un periodo de fuerte especulación en el que, de una manera u otra, se implican la mayor parte de los ciudadanos mediante motivaciones esencialmente conspicuas y emocionales. La fase de especulación termina con un violento choque, depresión y, luego, de reestructuración del sistema económico durante el que los ciudadanos adecúan sus motivaciones por adaptación o ajuste.

## METODOLOGÍA

La investigación cualitativa como la cuantitativa son herramientas valiosas y necesarias para el análisis de los consumidores. El principal medio para la obtención de datos cualitativos primarios en el diseño de la investigación descriptiva que se implementó fue la encuesta personal. El análisis y reducción de los datos nos produjo una información; adecuando la información a los objetivos de la investigación obtuvimos hallazgos que, tras su interpretación, se traducen en conclusiones y recomendaciones.

*Cálculo de la muestra:* La muestra se calculó a través de la “fórmula de poblaciones finitas”, enfocándose de manera exclusiva a la Población Económicamente Activa (PEA), con la característica de ser jefes de familia de entre 15 a 74 años de edad que habitan regularmente en la frontera entre México y Belice, distribuyéndose aleatoriamente mediante afijación proporcional en relación a niveles socioeconómicos correspondientes a la zona en estudio.

Fórmula de Poblaciones Finitas.

$$n = \frac{pqNz^2}{z^2pq + Ne^2}$$

**n**= Tamaño de la muestra.

**N**= Tamaño de la población

**p**= Probabilidad de ocurrencia de un evento.

**q**= 1-p (ajuste de la probabilidad de ocurrencia a la probabilidad total de que ocurra un evento “1”).

$z$ = Nivel de confianza.

$e$ = Grado de error estadístico permitido.

De acuerdo a la fórmula anterior obtuvimos como resultado que el total de las encuestas necesarias para llevar a cabo este proyecto de investigación es de un total de 171 aunque se aplicaron 13 más para reposición dando un total de **184** como muestra representativa de los 157,000 habitantes de esta zona, con un 95% de nivel de confianza, error de estimación del 7.5% y del 0.5% de probabilidad a favor. Lo anterior considerando los recursos disponibles y con el software Survey Versión 2.0.

Tabla 1: Distribución de la Muestra Por Niveles Socioeconómicos

Nivel Socioeconómico	Mujeres	Hombres	Ambos	Número de encuestas
D/E (más bajo)	63	21	41	125
D+ (bajo)	10	3	7	20
C (medio)	8	3	4	15
A/B, C+ (medioalto y alto)	12	4	8	24

FUENTE: Elaboración propia con datos de la Asociación Mexicana de Investigación de mercados (AMAI, 2007)

Los lugares en donde se aplicaron las encuestas fueron las salidas de los principales centros comerciales de la ciudad a los que asisten los consumidores de distintos niveles socioeconómicos:

## RESULTADOS

*La crisis en la frontera México-Belize, “los consumidores opinan”.* Poco menos del 97% de los entrevistados en la zona en estudio afirmó haber resentido fuertemente la crisis económica, enfrentando desempleo, o baja en las ventas de sus negocios o salarios. El principal reflejo de la recesión fue la reducción de los ingresos por la fuerte caída del turismo, provocando despidos masivos y/o contratos reducidos en prestaciones y en tiempo. Muchos negocios hasta la fecha ya solo ofrecen empleo temporal o por quincenas alternadas. Las más afectadas fueron sin duda el 72% de las mujeres que dijeron haber perdido su empleo contra el 24% de los hombres entrevistados. Los menos afectados por la crisis fueron quienes dijeron ser empresarios (0.5%), profesionistas-funcionarios (0.5%) y algunos comerciantes. Por el contrario, los más afectados fueron las amas de casa jefas de familia sin aportación del cónyuge (31.5%), empleados y familias con un solo ingreso (31%) y con hijos, jubilados y desempleados (3%), pequeños comerciantes (16%) y profesionistas independientes (16%).

Las clases más bajas son las que han resentido mayormente la crisis actual según se aprecia en la Figura 4, es decir, el 33.7% quedó ubicado en el nivel socioeconómico más bajo (NSE “E”-ingreso menor a \$1,500), el 33.15% se ubicó en el NSE “D” (\$1,500- \$2,999), el 10.87% se encuentra en la clasificación “D+” (\$3,000-\$4,999), estas tres cifras anteriores representan que el 77% de la población cayó en el nivel socioeconómico más bajo. Lo anterior es un dato significativo de la crisis ya que, en comparación con datos de AMAI (2003), anterior al problema económico, menos del 38.5% de la población estaba en los dos niveles socioeconómicos más bajos antes citados (“D” y “E”), actualmente es casi el doble. Mientras, solo el 9.78% logró permanecer en la Clase “A/B”, “C+” con ingresos mayores a \$7,000 mensuales y un 8.15% perteneció a la Clase “C”, o media para el caso, con ingresos que van entre los \$5,000-6,999/ mes. Sin duda, el 80% de los consumidores al momento de la entrevista vieron muy reducidas las expectativas de mejorar al menos en un corto o mediano plazos al expresar que la crisis empeoraría o seguiría igual (Figura 2).

Figura 2 Rango de Ingresos Familiar por mes durante la crisis (%)

En 6 años se dió una redistribución de la clase media hacia los niveles más bajos. Fuente: Elaboración propia con base a datos de encuesta

*Cambios en la estrategia de compra derivados de la crisis:* La estrategia de compra y las metas de calidad y cantidad de productos en esta etapa de crisis se vieron fuertemente afectadas. Los consumidores dijeron haber cambiado algo del comportamiento tradicional de compra anterior a la crisis. Desde llevar lo que alcance (38.82%), cambiar de marca o buscar ofertas y promociones (32.35%), dejar de comprar ropa u otro tipo de mercancías generales (11.76%), reducir la cantidad de compra de un producto (12.94%) y hasta dejar de hacer despensa (2.94%), son algunas de las acciones tomadas para intentar reajustar el presupuesto.

*Frecuencia de compra y reducción del gasto:* También se ha afectado significativamente la frecuencia de compra, ya que el factor determinante ha sido la disponibilidad de empleo y/o efectivo, teniendo que elevar la frecuencia de veces que se desplazaron a los centros comerciales para hacer compras minorizadas en volumen y gasto (Figura 6). En los casos de menores ingresos la frecuencia de compra se elevó en mayor escala. Esto también significó que para adquirir los productos básicos para la alimentación fue necesario hacer a un lado las compras de ropa y otras mercancías de consumo general en el 62% de los casos, inclusive la compra de alimentos se vió reducida entre el 10 y el 20% del volumen adquirido anteriormente, pero sin duda el mayor gasto contraído según lo expresado por los entrevistados fue el del uso de tecnologías (celular y uso de internet principalmente) reducido su gasto al 50% y los viajes.

## CONCLUSIONES

La demanda turística mundial muestra tendencias de recuperación, sin embargo, también se observa una clara recomposición en la estructura de la demanda. Países como Francia, Italia, España y Reino Unido, tradicionalmente que han sido generadores de demanda de turismo intercontinental, hoy día se encuentran en peores condiciones económicas después de la crisis del 2008/2009. Las tasas de desempleo han alcanzado cifras nunca vistas con signos claros de una posible recesión, aunque Europa sigue siendo la región que recibe mayor número de visitantes. Los países emergentes como Rusia, Japón, entre otros han tomado el lugar más importante en las tendencias de crecimiento del turismo mundial pero debe mantenerse cautela respecto al optimismo de la OMT, ya que la crisis económica muestra signos globales.

Sin duda las personas siguen viajando pero en diferentes condiciones previas a la crisis, acortan sus viajes a períodos de dos días, viajan ahora en familias o grupos promedio de hasta 6 personas, planifican mejor sus viajes de tal forma que ahorren lo posible, seleccionan promociones de hoteles y viajes cada vez más

económicos, viajan muchas veces a crédito sin intereses y en una sola ocasión al año, o bien acuden a sitios más cercanos a su región buscando modos de hospedaje alternos y más seguros.

El estudio realizado en relación a la economía familiar en la frontera sur entre México y Belize constituye una herramienta para comprender lo que sucede en la mente de los consumidores en tiempo de crisis. La recomposición en la toma de decisiones para la redistribución del ingreso y el objeto de gasto, así como su uso óptimo se ha convertido en una decisión de corto plazo. Esto confirma el efecto *tunel* citado por la Neuroeconomía. Esta ciencia de reciente creación (2010) como resultado de la mezcla entre la Sociología, la Psicología, el Marketing, la Antropología y la Economía representan una importante herramienta aplicable al análisis de los cambios que están ocurriendo en la mente de cualquier consumidor y en cualquier región del mundo que se encuentre en situación de crisis.

## **LAS REDES DE CONOCIMIENTO EN LAS MIPYME LOCALIZADAS EN PUEBLA, MÉXICO**

María Antonieta Monserrat Vera Muñoz, Benemérita: Universidad Autónoma de Puebla

Rafaela Martínez Méndez, Benemérita Universidad Autónoma de Puebla

Gerardo Serafin Vera Muñoz, Benemérita Universidad Autónoma de Puebla

### **RESUMEN**

En este trabajo se presenta un análisis de las particularidades de las redes sociales y sus beneficios a las MIPYMEs localizadas en Puebla, México. Para lo cual, se parte de la revisión de algunos autores que han realizado estudios acerca de las redes sociales en las Micro Pequeñas y Medianas Empresas (MIPYMEs) localizadas en diferentes partes de México. La muestra fue 341 empresas representadas por su propietario o administrador, se aplicó un cuestionario de 10 preguntas; es importante señalar que la investigación de campo se realizó en una sola etapa, con duración de tres semanas; en la primera semana se aplicaron 91 cuestionarios, en la segunda semana se aplicaron 50 cuestionarios y en la tercera semana 200 cuestionarios. El objetivo del trabajo es indagar los beneficios de las Redes Sociales en las MIPYME poblanas como facilitadoras de conocimientos que les apoyan para su permanencia en el mercado, mejoras en su producto y procesos y en acciones de innovación. La investigación da respuesta a la pregunta ¿Cuáles son los intercambios de conocimientos que han tenido las MIPYME poblanas, de que tipo y con quiénes?

**PALABRAS CLAVE:** Redes de conocimiento, MIPYME.

## **KNOWLEDGE NETWORK ON MSMEs LOCATED IN PUEBLA, MEXICO**

### **ABSTRACT**

*This paper presents an analysis of the characteristics of social networks and their benefits to MSMEs located in Puebla, Mexico. To which is part of the revision of some authors who have studied about social networks in the Micro Small and Medium Enterprises (MSME) located in different parts of Mexico. The sample was 341 companies represented by its owner or administrator, a questionnaire of 10 questions, it is important to note that the field research was conducted in a single stage, lasting three weeks, in the first week 91 questionnaires were applied, in the second week and 50 questionnaires were applied in the third week 200 questionnaires. The objective of this work is to investigate the benefits of Social Networks in MSMEs poblanas as facilitators of knowledge that support them to remain in the market, improvements in product and process innovation and actions. The research answers the question what are the exchange of information that have poblanas MSMEs, what type and with whom?*

**KEYWORDS:** Knowledge Networks, MSME.

### **INTRODUCCIÓN**

El objetivo de la presente investigación es indagar los beneficios de las Redes Sociales en las MIPYMEs poblanas como facilitadoras de conocimientos que les apoyan para su permanencia en el mercado, mejoras en su producto y procesos y en acciones de innovación. Para ello, se parte de que las redes sociales son un factor indispensable de la actividad empresarial, y que es a través de éstas como se puede tener acceso a diferentes recursos, entre otros a diferentes conocimientos: tecnológicos, administrativos y

empresariales, que de otra forma no sería posible Basaldúa (2005). Asimismo, para llevar a cabo el estudio, se retoma el concepto de redes de conocimiento propuesto por Casas (2003), quien señala, que estas redes se construyen mediante intercambios entre un conjunto de actores que tienen intereses comunes en el desarrollo o aplicación del conocimiento científico, tecnológico o técnico para un propósito específico, sea este científico, de desarrollo tecnológico y de mejoramiento de procesos productivos. Para responder a la pregunta de investigación ¿Cuáles son los intercambios de conocimientos que han tenido las MIPYMEs poblanas, de que tipo y con quiénes?

El trabajo se estructura de la siguiente forma: Revisión de la literatura, donde se integra el concepto de las redes sociales en México y los modelos de redes, así como información de las MIPYMEs, entre otros puntos. La investigación de campo se integra con una muestra de 341 empresas representadas por su propietario o administrador, se aplicó un cuestionario de 10 preguntas; es importante señalar que la investigación de campo se realizó en una sola etapa, con duración de tres semanas; en la primera semana se aplicaron 91 cuestionarios, en la segunda semana se aplicaron 50 cuestionarios y en la tercera semana 200 cuestionarios, para después presentar los resultados obtenidos y cerrar con las conclusiones, en donde se menciona cuales son los beneficios obtenidos por las MIPYMEs provenientes de las redes de conocimiento.

## REVISIÓN DE LA LITERATURA

### Definiciones De Las Redes De Conocimiento

De acuerdo a Saexenian (1990): “Las redes de conocimiento constituyen un conjunto de instituciones académicas, industriales, políticas y agentes de enlace que colaboran conjuntamente, mejorando el trabajo científico, debido a que posibilitan el libre flujo de información e impulsan las condiciones locales para la innovación y que tienen por objetivo la construcción y difusión del conocimiento.” Lara (2007); Anunziata y Macchiarola (2010) explican las redes de conocimiento como individuos, grupos o instituciones, asociados con un fin en común:

*“...las redes de conocimiento son asociaciones entre individuos, grupos o instituciones que tienen una agenda común en torno a intereses diversos tales como: dar solución a problemas, compartir recursos e infraestructura, propiciar la cooperación, la solidaridad social, como así también el intercambio de información y conocimientos y la transferencia de tecnología”.*

Casas (2001; citado por Prada, 2005) menciona que, estas redes implican desde redes profesionales, hasta redes de entretenimiento, pero también abarcan la transmisión de conocimientos o innovaciones que dan lugar a la formación de espacios regionales de conocimiento. Red es aquella relación de los grupos humanos que sostienen dos o más personas con el propósito de ayudarse, realizar negocios o llevar a cabo cualquier actividad relacionada con sus intereses, van surgiendo relaciones que pueden ser de carácter formal o informal (Tapia y Tapia, 2010). Para fines de esta investigación se define a las redes de conocimiento como el conjunto de individuos, empresas, asociaciones y agentes de conexión que colaboran para la generación del conocimiento mediante el intercambio de información y la transferencia de tecnología con fines de innovación.

### Elementos que Integran Las Redes de Conocimiento

Las redes de conocimiento, están integradas por el elemento humano, así como por factores tecnológicos y sociales. Prada (2005) hace énfasis en cuatro elementos necesarios para la creación de Redes de Conocimiento, entre los cuales menciona:

- a) Comunidades y equipos expertos: los equipos tienen tareas, las comunidades se mueven por los intereses de los participantes y el experto cualifica y filtra la información.
- b) Comunidades de conocimiento: comunidades de cooperación. El trabajo colaborativo produce mejores resultados que el trabajo individual.
- c) El conocimiento, como la relación entre el sujeto y el objeto
- d) Conocimiento e innovación: plataforma base en la productividad.

### Formación de Redes de Conocimiento

Existe una vasta literatura sobre la noción de red, las principales aportaciones han surgido de las disciplinas sociales, todas ellas han contribuido a enriquecer el marco teórico - conceptual, dando lugar a una taxonomía que incluye redes de intercambio y redes de poder (Knoke, 1990), de información y de colaboración (Freeman, 1991), de producción (Saxenian, 1991), de innovación o de innovadores (De Bresson y Amesse, 1991) y redes sociotécnicas (Callon, 1989). Sin embargo, dado que en este trabajo el objetivo es analizar e identificar hasta qué punto las relaciones del empresario con diferentes actores beneficia la adquisición y transferencia de conocimientos, que le permitan poner en acciones en beneficio del medio ambiente, se retomará el concepto de redes de conocimiento planteado por Casas (2003).

Desde esta perspectiva, las redes de conocimiento se construyen mediante intercambios entre un conjunto de actores que tienen intereses comunes en el desarrollo o aplicación del conocimiento científico, tecnológico o técnico para un propósito específico, sea este científico, de desarrollo tecnológico, o de mejoramiento de procesos productivos. Siguiendo a Casas (2001), se tiene que: estas formas de intercambio pueden concebirse como un proceso de transacción de conocimiento, aunque no en términos económicos, ya que una gran parte del conocimiento que se transmite en estas redes hace por vía tácita y no mediante la compra – venta del mismo. Sin embargo estas formas de intercambio pueden llegar a tener un costo o beneficio económico. Las redes se construyen con las relaciones que se van creando entre los diferentes actores involucrados en una relación (Granovetter, 1973). Además, de los aspectos considerados sobre las redes de conocimiento, Casas (2003), señala que en el análisis de redes es necesario tomar en cuenta las siguientes dimensiones:

El contexto institucional de la colaboración entre los sectores público y privado;

1. La estructura o morfología de las redes;
2. La génesis, desarrollo y dinámica de las redes;
3. El contenido y/o los insumos que se intercambian y,
- 5) Los resultados de las redes y del intercambio de conocimientos.
4. Estas dimensiones incluyen un conjunto amplio de características, que se sintetizan en el Tabla .1.

Tabla 1: Dimensiones Para el Análisis de las Redes Sociales

Contexto institucional	Estructura o morfología de las redes (Integrantes)	Dinámica: direccionalidad, duración, frecuencia comunicación y alcance	Contenido: formas de intercambio e insumos que circulan	Resultados de las redes y del intercambio de conocimiento
Presencia de Instituciones de Educación Superior (IES), centros públicos de investigación, asociaciones empresariales, instituciones mixtas público-privadas.	Noción de red: los nodos representan a los actores y las áreas que conectan los nodos representan las relaciones entre los actores. Las redes involucran flujos de información entre varios de los nodos de la red. Las redes son el elemento crítico de la formación de mercados, mediante su contribución al aprendizaje. El desarrollo de la red es un proceso evolutivo detonado por la innovación, en el que el aprendizaje es el aspecto central de la red.	Direccionalidad, durabilidad, intensidad y frecuencia. Dinámica formal o informal. Dinámica horizontal y vertical. Los procesos de comunicación. El alcance espacial o territorial.	Sobre la idea de conocimiento: tácito y codificado; intercambio de conocimiento. Flujos e insumos de conocimiento: endógeno y exógeno. Tipos de conocimiento: científico, tecnológico, empresarial. Fuentes: acceso a fuerza de trabajo altamente capacitada, universidades locales e internacionales, competidores, alianzas, incentivos gubernamentales, prensa y artículos sobre comercio, eventos locales e internacionales. Canales para cruzar fronteras: contratación de nuevo personal, publicaciones, reuniones, modos informales de comunicación, movilidad de personas entre organizaciones. Extensión de fronteras: relaciones personales informales.	Innovaciones radicales o incrementales. Generación de capacidades en las empresas. Generación de conocimiento. Resultados sociales, económicos y/o políticos. Creación de redes de conocimiento.

Fuente: elaboración propia con datos de Casas (2003). El Tabla muestra las dimensiones que permiten analizar las redes sociales.

*Dinámicas de Redes de Conocimiento:* Un aspecto más sobre el que es necesario abundar, es naturaleza formal o informal de las relaciones que conforman la red. Las redes formales, según Birley (citado en Levanti, 2001: 1046), se componen de los bancos, las agencias locales o nacionales, así como las cámaras y otras representaciones oficiales. Las redes informales se refieren a todas las relaciones personales del empresario, principalmente la familia, los amigos y los contactos de negocios. Para Tapia y Tapia (2010), existen dos tipos de relaciones en las redes: a) las redes formales.-Se componen de las instituciones bancarias, las agencias locales o nacionales, las incubadoras y otras representaciones oficiales, b) las redes informales.- Se refiere a todas las relaciones personales del empresario, principalmente la familia, los amigos y los contactos de negocios, esta red informal de acuerdo a autores como Vera (2007), juega un papel fundamental en los procesos de creación de una empresa y son la primera fuente de ayuda del emprendedor.

*Las Redes De Conocimiento en las MIPYMEs:* En la actualidad las pequeñas y medianas empresas (PYMES), una sólida opción tanto para la creación de empleos y producción de artículos diversos, para responder a los requerimientos de la globalización. Dentro del desarrollo día a día de las PYMES se puede identificar la importancia que para ellas tienen las redes de conocimiento, es decir, aquellos vínculos tanto formales como informales que se van construyendo entre la empresa y un conjunto de agentes como proveedores, clientes, instituciones de gobierno, por mencionar algunas. Estas redes sirven de acceso a diferentes recursos y conocimientos (Tapia y Tapia, 2010). Un primer intento para proponer un marco de referencia que tome en cuenta la importancia que tiene las redes sociales en el proceso de consolidación de las PYMES ha sido el de Vera (2007; citado por Tapia y Tapia, 2010). En el marco de referencia mencionado, que es una adaptación de lo que ya con anterioridad habían propuesto Sharma, Chrisman y Chua, en la dimensión denominada: Administración en General y Cambio y Evolución Organizacional, se hace mención de la importancia que la construcción de las redes sociales tiene para el crecimiento y la consolidación, así como en el desarrollo del modelo de una PYME.

Uno de los aspectos que llama poderosamente la atención en el desempeño de las MIPYMEs (Micro, Pequeñas y Medianas empresas) en general, son las redes sociales, es decir, aquellos lazos tanto formales como informales que se van generando entre la empresa – vía la figura del dueño, empresario y/o directivo - y los proveedores, clientes gobierno, etcétera. Estas redes tal y como lo señala Basaldúa (2005) son el vehículo para que la empresa pueda tener acceso a diferentes recursos, entre otros a distintos conocimientos que de otra forma no sería posible o muy difícil.

### Mipymes

Las MIPYMEs se clasifican de acuerdo a diversos puntos de vista tal y como se muestra en el Tabla 2.

Tabla2: Clasificación de empresas

Tamaño	Sector	Rango de número de trabajadores	Rango de monto de ventas anuales (mdp)
<b>Micro</b>	Todos	Hasta 10	Hasta \$4
<b>Pequeña</b>	Comercio	Desde 11 hasta 30	Desde \$4.01 hasta \$100
	Industria y servicios	Desde 11 hasta 50	Desde \$4.01 hasta \$100
<b>Mediana</b>	Comercio	Desde 31 hasta 100	Desde \$4.01 hasta \$250
	Industria	Desde 51 hasta 100	
	Servicios	Desde 51 hasta 250	

Fuente: Elaboración propia con base en Secretaría de Economía, 2009

Las MIPYMEs en Puebla México son importantes al contribuir con fuentes de empleo. El Gobierno actual del Estado en el plan de Desarrollo 2011-2017 apoya a las MIPYMEs, con un programa de microcréditos y capital semilla. Su presencia es importante al encontrarse tal y con una presencia del 99% dentro la economía mexicana.

### **METODOLOGÍA**

El estudio se enfoca a identificar los beneficios de las redes de conocimiento en las MIPYME localizadas en Puebla, México. Considerando como variables de investigación las siguientes:

Clientes.

Proveedores.

Intercambio de conocimientos.

El marco muestral se construyó con las unidades y marcos siguientes ver Tabla 3:

Tabla3: Determinación de la Muestra

Unidad de análisis	MIPYMEs (Administradores y/o Dueños)
Tamaño del universo	207000
Tamaño de la muestra	384
Instrumento	Cuestionario
Periodo de tiempo	Febrero 2013 (tres semanas)
Cuestionarios aplicados	Respondidos 341
	No respondidos 43

Esta tabla muestra la población estudiada y el tamaño de la muestra del objeto de estudio

La aplicación de los cuestionarios se realizó por cuota; asignándole a cada encuestador que aplicará un determinado número de cuestionarios. Integrando una muestra definitiva 341 empresas eliminando 44 cuestionarios que no fueron contestados en su totalidad, cantidad inferior a la muestra determinada para

poblaciones finitas y que al aplicarla formula señala una muestra de 384 elementos, considerando una población de 207000 empresas. Para determinar el tamaño de la muestra se utilizó la siguiente fórmula:

$$n = \frac{Z^2 p q N}{N e^2 + Z^2 p q} \quad (1)$$

Donde:  $n = ?$   $e = 5\%$   $N =$  la población = 207000 empresas  $Z =$  nivel de confianza  $95\% = 1.96$   $p = 0.50$   
 $q = 1 - 0.50$

Sustituyendo los valores en la fórmula tenemos:

$$n = \frac{(1.96)^2 (0.50) (1-0.50) (207000)}{(207000)(0.05)^2 + 1.96^2 (0.50) (1-0.50)} = 384$$

La aplicación de cuestionarios se realizó en una sola etapa en el mes de febrero 2013, con duración de tres semanas; en la primera semana se aplicaron 91 cuestionarios, en la segunda semana se aplicaron 50 cuestionarios y en la tercera semana 200 cuestionarios.

## RESULTADOS

Previo a la aplicación del cuestionario se utilizó una pregunta filtro para tener la certeza de que la empresa estuviera dentro de las MIPYMEs. La pregunta fue la siguiente: ¿Cuántos trabajadores tiene la empresa? Tomando como referencia la clasificación de las MIPYMEs por el número de trabajadores, obteniendo los resultados de 160 Micro, 164 Pequeñas y 17 Medianas empresas. De la aplicación del cuestionario a una muestra de 341 Personas propietarios o administradores de MIPYME, se obtuvieron los resultados que a continuación se presentan, con el apoyo de las siguientes Figuras.

1.- ¿Desde cuándo está funcionando la empresa? Como se observa en la Figura 1 en las empresas entrevistadas predomina una madurez de 5 años.

Figura 1: Funcionamiento de la Empresa

Fuente: Elaboración propia, 2013. La Figura muestra la antigüedad de funcionamiento de la empresa.

2.- ¿Qué tiempo tiene participando como dueño o directivo en la empresa? La Figura 2 muestra que la participación de los entrevistados es de 2 a 5 años, pero no de manera dominante, ya que hay participación muy similar en otros intervalos de tiempo.

Figura 2: Antigüedad del Propietario o Administrador

Fuente: Elaboración propia, 2013. Se muestra la antigüedad de los responsables del manejo de la empresa en ese cargo

3.- ¿Tiene o ha tenido intercambio de conocimientos y/o experiencias con sus clientes? Esta Figura muestra claramente la existencia de la red conformada entre las MIPYME y los clientes.

Figura 3: Red de Conocimiento Con Clientes

Fuente: Elaboración propia, 2013. Muestra la existencia de red de conocimientos con Clientes.

4.- ¿Desde cuándo se da el intercambio? La antigüedad de la red se aprecia con un ligero predominio desde el inicio de la empresa.

Figura 4: Antigüedad de la Red con Clientes

Fuente: Elaboración propia, 2013. Se muestra la antigüedad de la existencia de la red

5.- ¿Qué tipo de experiencias y/o conocimientos se han intercambiado? Predomina el intercambio de Conocimientos y experiencias de gustos y preferencias del producto o servicio.

Tabla 6: Tipos De Intercambio Con Clientes

Conocimientos y experiencias de gustos y preferencias del producto o servicio		233
Conocimientos y experiencias sobre nuevos mercados		131
Conocimientos y experiencias respecto al empaque del producto		53
Otros intercambios		30
No Contesto	Servicios, especificaciones, actualizaciones, sistemas, procedimientos, calidad en el servicio, información fiscal, información laboral, precios.	37

Fuente: Elaboración propia, 2013. Se muestran los diferentes tipos de intercambio entre clientes y la empresa

6.- ¿Ha aplicado en la empresa alguna acción derivada del intercambio de conocimientos y experiencias con sus clientes? La empresa como se aprecia no únicamente realizan intercambios, sino además los aplican en las mismas.

Figura 5. Intercambio de Experiencias y/o Conocimientos con Clientes

Fuente: Elaboración propia, 2013. Presenta el aprovechamiento de los intercambios con los clientes y su aplicación.

7.- ¿Tiene o ha tenido intercambio de conocimientos y/o experiencias con sus proveedores? La Figura exhibe la existencia de la red entre los proveedores y el 73% de las empresas.

Figura 6: Red de Conocimiento con Proveed

Fuente: Elaboración propia, 2013. Se presenta la existencia de la red con proveedores

8.- ¿Desde cuándo se da el intercambio? La antigüedad de la red entre los proveedores y la empresa es preponderantemente entre 1 a 2 años.

Figura 7: Antigüedad de la Red con Proveedores

Fuente: Elaboración propia, 2013. Indica la antigüedad de la red entre proveedores y las empresas

9.- Qué tipo de experiencias y/o conocimientos se han intercambiado? El intercambio entre los proveedores y las empresas se da en forma equilibrada en los tres primeros puntos del Tabla 4.

Tabla 7: Tipos de Intercambio con Proveedores

Conocimientos y experiencias de gustos y preferencias del producto o servicio		123
Conocimientos y experiencias sobre nuevos mercados		122
Conocimientos y experiencias respecto al empaque del producto		95
Otros intercambios		30
	Servicios, tiempos de entrega, actualizaciones, sistemas, procedimientos, calidad en el servicio, información fiscal, información laboral, precios, nuevas marcas mercados y costos.	
No Contesto		67

Fuente: Elaboración propia, 2013. Se muestran los diferentes tipos de intercambio entre clientes y la empresa.

10.- ¿Ha aplicado en la empresa alguna acción derivada del intercambio de conocimientos y experiencias con sus proveedores? La empresa aplica el producto del intercambio que tiene con sus proveedores.

Figura 8: Intercambio de Experiencias y/o Conocimientos con Proveedores

Fuente: Elaboración propia, 2013. Aprovechamiento de los intercambios con los clientes y su aplicación.

Como se pudo apreciar los resultados obtenidos muestran la presencia de las redes de conocimiento en las MIPYMEs. Retomando lo señalado por Lara (2007) y Anunziata y Macchiarola (2010), las redes son asociaciones entre individuos con una agenda común.

También es notoria la diversidad de redes Casas (2003), en las MIPYMEs poblanas con sus clientes y proveedores, así como la existencia de intercambio de conocimientos a través de esas redes. Las empresas, en su mayoría tienen una permanencia de más de 5 años. El propietario o dueño se ha incorporado con posterioridad a la empresa.

Tabla 8: Existencia de las Redes de Conocimiento en las MIPYME Poblanas

Concepto	Si aplica Clientes	Si aplica Proveedores
Existencia de la Red de Conocimientos.	Si	Si
Elementos de la Red de Conocimientos. (elemento humano, así como por factores tecnológicos y sociales)	Si	Si
Formación de la Red de Conocimientos. (Relación del empresario con clientes y Proveedores)	Si	Si

5) Los resultados de las redes y del intercambio de conocimientos. (Innovaciones radicales o incrementales, Generación de capacidades en las empresas, Generación de conocimiento, resultados sociales, económicos y/o políticos y Creación de redes de conocimiento.	Si	Si

Fuente: Elaboración propia, 2013. Muestra la existencia de las redes de conocimiento en las MIPYME poblanas desde diferentes puntos de vista.

## CONCLUSIONES

Las dimensiones para el análisis de las redes de conocimiento señalado por Casas (2003), se presenta de forma sintética en el Tabla 8. El trabajo de investigación permitió conocer la existencia de Redes de conocimiento entre la empresa, sus clientes y sus proveedores, que entre ellos se da el intercambio de experiencias y conocimientos. Las redes con los clientes se han gestado desde el inicio de la empresa en la mayoría de los casos y con los proveedores en diferentes tiempos. El intercambio con los clientes se enfoca más al conocimiento de experiencias sobre gustos y preferencias del producto o servicio, a diferencia con los proveedores que intercambio es más intenso en diferentes aspectos. Los estudios realizados por diferentes autores en materia de redes sociales permitieron definir las redes de conocimiento, sus elementos, como se integran, sus dimensiones y conocer su presencia en las MIPYMEs, Tabla 8. Para cerrar las conclusiones se menciona que se da respuesta a la interrogante formulada señalando la existencia de las redes de conocimientos entre las MIPYME localizadas en la ciudad de Puebla, México, con clientes y proveedores.

# **IMPACTO DE LOS CURSOS DE CAPACITACION EN LOS EMPLEADOS DEL AREA ADMINISTRATIVA. CASO: COMISION FEDERAL DE ELECTRICIDAD “CENTRAL TERMOELECTRICA JOSE LOPEZ PORTILLO”**

Nemecio Lorenzo Valenzuela Salazar, Universidad Autónoma de Coahuila

Clara Patricia Buentello Martínez, Universidad Autónoma de Coahuila

Rubén Darío Flores Jiménez, Universidad Autónoma de Coahuila

## **RESUMEN**

*Comisión Federal de Electricidad (CFE) es una empresa que se dedica a generar la electricidad de un por ciento de los estados de Coahuila y Nuevo León. El trabajo que se presenta tiene como propósito establecer la importancia de la investigación del impacto que los cursos de capacitación causan en los empleados del área administrativa de CFE (Comisión Federal de Electricidad). Los cursos de capacitación son una herramienta muy importante para la empresa puesto que requiere de personal debidamente capacitado para el logro de sus objetivos. El impacto que estos cursos causan es una variable que a CFE le interesa conocer y para realizar el trabajo de investigación fue necesario aplicar encuestas al personal del área administrativa para lograr de esta manera si el impacto es favorable o desfavorable.*

**PALABRAS CLAVE:** Capacitación, Detección de necesidades, Cursos, Capacitación

## **IMPACT OF TRAINING COURSES IN THE AREA ADMINISTRATIVE EMPLOYEES: CASE FEDERAL ELECTRICITY COMMISSION "JOSE LOPEZ PORTILLO THERMOELECTRIC PLANT"**

## **ABSTRACT**

*Federal Electricity Commission (CFE) is a company dedicated to generating electricity than one percent of the states of Coahuila and Nuevo Leon. The work presented is intended to establish the importance of investigating the impact of training courses on employees causing the administrative area of CFE (Federal Electricity Commission). The training courses are an important tool for the company since it requires trained personnel to achieve their goals. The impact these courses cause is a variable that CFE is interested to know and to do the research work was necessary to apply staff surveys administrative area to achieve in this way if the impact is favorable or unfavorable*

**JEL:** A 20, I 20, I 23,

**KEYWORDS** Training needs assessment, Courses, Training

## **INTRODUCCION**

Los cursos de capacitación son una gran herramienta para que el personal de la empresa obtenga mejoras notables personal y profesionalmente. Es por esto, que los cursos de capacitación son necesarios para que las personas puedan ofrecer un trabajo mejor hecho y cumpliendo todas las exigencias que su empresa pide.(Jaime A. Grados Espinoza, 2009). Es necesario conocer el impacto que los cursos de capacitación

impartidos causan, para esto se deben evaluar primero. En esta investigación se pretende conocer si el impacto es favorable o desfavorable para el logro de los objetivos de la organización.

En CFE se tiene un interés por generar políticas que motiven al personal de la organización y los estimulen a su mejor desempeño posible. Tratando de lograrlo mediante los constantes cursos de capacitación que se imparten, aunque a pesar de los esfuerzos no se ha logrado definir de manera clara el impacto que estos causan en los empleados, los beneficios que estos dejan en la organización, y si son los cursos adecuados para esta parte de los empleados, varias son las variables que hacen que se desconozcan estos puntos. El problema que se identifica en la organización es no contar con un buen programa que garantice que los cursos de capacitación que se le imparte al personal administrativo de la CFE causen un impacto favorable, que sean los adecuados para esta área, además de que estos se reflejen para el logro de los objetivos de la organización.

En esta investigación se contempla como objetivo evaluar la importancia del impacto de los cursos de capacitación, que contribuyan al mejoramiento del desempeño del personal así como identificar el impacto que causan los cursos de capacitación en el área administrativa, identificar si el aprendizaje obtenido en los cursos de capacitación se pone en práctica a lo largo de las actividades laborales utilizando una encuesta analizar si los cursos impartidos al área administrativa son aplicables a su actividad laboral. La capacitación es una herramienta fundamental para la Administración de Recursos Humanos, es un proceso planificado, sistemático y organizado que busca modificar, mejorar y ampliar los conocimientos, habilidades y actitudes del personal nuevo o actual, como consecuencia de su natural proceso de cambio, crecimiento y adaptación a nuevas circunstancias internas y externas.

La capacitación mejora los niveles de desempeño y es considerada como un factor de competitividad en el mercado actual (Joaquín Rodríguez Valencia, 2008). Con esta investigación se busca conocer el impacto de la capacitación en una empresa de sector gobierno en el terreno del personal administrativo en corto y largo plazo para poder determinar que cursos de acción se pueden tomar a fin de mejorar la capacitación en este lugar. La investigación está relacionada con el área administrativa de la Comisión Federal de Electricidad, la cual cuenta con 25 empleados, se localiza a 30 km al suroeste de la Ciudad de Piedras Negras y a 14 km al noreste de la población de Nava, ambas del Estado de Coahuila.

### Marco Historico

La función de la capacitación se presenta como una fase intermedia en la evaluación de una sociedad agrícola tradicional a una industrial. En el periodo de las civilizaciones antiguas, como Egipto y Babilonia, la capacitación era organizada para mantener una cantidad adecuada de artesanos. Las leyes del Código de Hammurabi hacían referencia a la petición para que los artesanos enseñaran sus artes y oficios a los jóvenes. En Roma algunos artesanos eran esclavos, posteriormente se organizaron en el Collegia con el propósito de mantener activas las normas de sus artes y oficios.

La Revolución Industrial que se produjo en Europa a fines del siglo XVIII provocó grandes cambios en el ámbito comercial y en las estructuras sociales. Las principales características de la revolución industrial, es decir, el paso de la capacidad y la energía humanas del hombre a la máquina tuvieron enormes consecuencias en la administración. La Revolución industrial alteró el método de capacitación existente; ahora el personal con poca experiencia podía operar las máquinas y, en consecuencia, los gremios empezaron a decaer. Más tarde, cuando el proceso fabril reemplazó al proceso doméstico, asimiló a los aprendices provocando un nuevo tipo de aprendizaje, en donde el dueño de la maquinaria era también el propietario de la factoría, y el aprendiz, después del periodo de capacitación, se convertía en un trabajador de ella. La capacitación llegó a Estados Unidos durante el siglo XVII, en donde desempeñó un papel menos importante que en Europa, sobre todo porque entre los inmigrantes a este país venía un gran número de trabajadores expertos.

### Marco Referencial

En México, tenemos una de las legislaciones más avanzadas del mundo, dichas leyes están consignadas en nuestra Constitución Política y en la Ley Federal del Trabajo. La ley que rige la obligación de la capacitación, fue promulgada en 1970, cuando fue incluida en la fracción XV del artículo 132 de las reformas a la Ley Federal del Trabajo. Para supervisar el cumplimiento de esta obligación patronal se creó, en el mismo año, el Departamento de Vigilancia de la Capacitación de los Trabajadores, dependiente de la dirección general de trabajo de la Secretaría del Trabajo y Previsión Social (STPS).

La supervisión consiste en recabar información de los programas de capacitación que realizan las empresas, así como de sus resultados. Sin embargo, fue necesario implantar un modelo que no sólo considere las necesidades del sector productivo y de la fuerza de trabajo, sino las necesidades existentes y los recursos disponibles, y que además fuera viable técnicamente y propiciara la intervención de los factores de la producción. Por lo tanto, por decreto del 9 de enero de 1978 se adiciona la fracción XIII del artículo 123 constitucional. Y por decreto que entró en vigor el 1 de mayo del mismo año, se reforma la Ley Federal del Trabajo agregándose el capítulo III bis del título IV, de la capacitación y adiestramiento de los trabajadores, en donde las autoridades de la STPS se dedican a formular leyes secundarias que reglamentan el cumplimiento del decreto (Joaquín Rodríguez Valencia, 2007). Las actividades de capacitación correspondientes a la nivelación de estudios de la Enseñanza General Básica y Media, deberán ser realizadas o impartidas por entidades reconocidas por la Secretaría de Educación (Alfonso Siliceo, 2008).

### Marco Conceptual

La capacitación es una herramienta fundamental para la Administración de Recursos Humanos, es un proceso planificado, sistemático y organizado que busca modificar, mejorar y ampliar los conocimientos, habilidades y actitudes del personal nuevo o actual, como consecuencia de su natural proceso de cambio, crecimiento y adaptación a nuevas circunstancias internas y externas. La capacitación mejora los niveles de desempeño y es considerada como un factor de competitividad en el mercado actual. A continuación se presentan algunos conceptos sobre capacitación de personal.

La capacitación consiste en proporcionar a los empleados, nuevos o actuales, las habilidades necesarias para desempeñar su trabajo. Proceso de enseñanza de las aptitudes básicas que los nuevos empleados necesitan para realizar su trabajo.”(Gary Dessler, 1998). Actitudes del personal en conductas produciendo un cambio positivo en el desempeño de sus tareas. El objeto es perfeccionar al trabajador en su puesto de trabajo.”(Aquino y otros, 1997). La capacitación se considera como un proceso a corto plazo, en que se utiliza un procedimiento planeado, sistemático y organizado, que comprende un conjunto de acciones educativas y administrativas orientadas al cambio y mejoramiento de conocimientos, habilidades y actitudes del personal, a fin de propiciar mejores niveles de desempeño compatibles con las exigencias del puesto que desempeña, y por lo tanto posibilita su desarrollo personal, así como la eficacia, eficiencia y efectividad empresarial a la cual sirve. (Jaime A. Grados Espinoza, 2009).

Es un proceso educativo a corto plazo, aplicado de manera sistemática y organizada, mediante el cual las personas aprenden conocimientos, actitudes y habilidades, en función de objetivos definidos. El entrenamiento implica la transmisión de conocimientos específicos relativos al trabajo, actitudes frente a aspectos de la organización, de la tarea y del ambiente, y desarrollo de habilidades. Cualquier tarea, ya sea compleja o sencilla, implica necesariamente estos tres aspectos.” (Jaime A. Grados Espinoza, 2009). La capacitación en el trabajo no puede escapar al concepto de la educación continua, que pueda significar un verdadero proceso de aprendizaje y un cambio de actitudes del individuo, en beneficio de una mayor y mejor capacidad de conocimiento, ya que quien aprende es un agente que genera su propia información, para ratificar o rectificar sus acciones, sus hábitos y comprender en forma más real su ubicación en el

contexto social en el que se encuentra inmerso. La capacitación del personal de cualquier empresa, es uno de los desafíos más importantes que enfrentan las PYMES, pues existe la necesidad constante de que éstas se adapten al cambio, así mismo se supone que puede generar potencialmente mayor productividad. La globalización de la economía ha creado muchas oportunidades para las PYMES, pero también ha creado un sin número de retos, especialmente para las empresas de este tipo que desean tener una presencia global, o que envían a sus trabajadores a asignaciones en el extranjero, para poder comunicarse y comerciar. (Alfonso Siliceo,2008).

## METODOLOGIA

La presente investigación es de tipo descriptiva ya que se analizara si el impacto de los cursos de capacitación es positivo para el logro de los objetivos de la organización, y se realizara mediante una serie de encuestas a los empleados que han participado en dichos cursos. Este estudio es de tipo descriptivo y a la vez correlacional ya que describe variables y su relación que pueden tener con proceso de la capacitación.

## RESULTADOS

Figura 1: Satisfacción de Expectativas con Relación a la Capacitación Recibida

En esta figura se muestran los resultados arrojados en la grafica 1.1, el 76% de los empleados respondio que la satisfaccion a los cursos de capacitacion recibida ha sido excelente.

Figura 2: Cubrimiento de los Temas Planteados

En esta figura se muestran los resultados de la encuesta, en su mayoría se respondio que el cubrimiento de los temas planteados en los cursos es excelente.

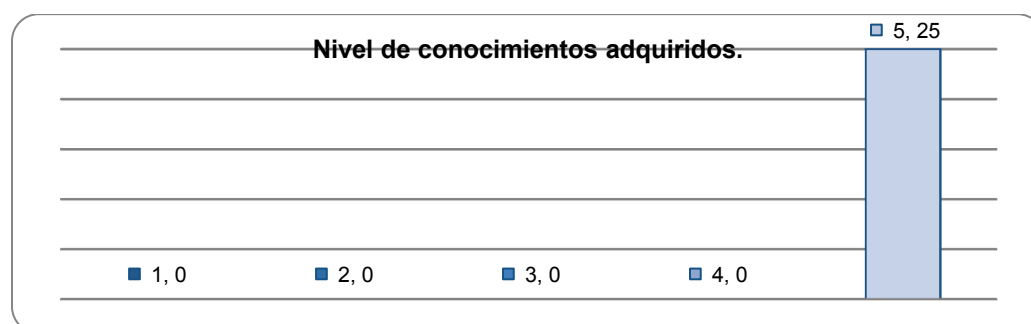

Figura 3: Aporte de la Capacitación en su Formación Profesional

En esta figura se muestran los resultados de la encuesta mostraron que al 92% de los empleados encuestados les pareció excelente el aporte de la capacitación para su formación profesional, mientras que al 8% le pareció bueno.

Figura 4: Nivel de Conocimientos Adquiridos

En esta figura se muestra un resultado positivo de acuerdo al nivel de conocimientos adquiridos ya que el 100% de los empleados encuestados respondió que es excelente.

Figura 5: las Actividades Variaron de Acuerdo a los Contenidos de los Cursos

En esta figura se muestra que el 56% de los encuestados calificó que las actividades son variadas como excelente, siendo este el mayor porcentaje.

Figura 6: las Actividades Permitieron la Socializacion de los Participantes

Se comprobo que las actividades de los cursos impartidos permitio la socializacion de los participantes, siendo este un factor muy importante para la organización.

Figura 7: la Planeación y Distribución Permitio el Logro de Lso Objetivos

En esta figura se comprueba el resultado de la pregunta en cuanto a la distribucion y planeacion del tiempo fue: 16 empleados respondieron fue excelente, 6 que fue bueno y 3 regular.

Figura 8: La Organización de los Cursos Ha Sido

En esta figura se obtuvo que la organización de los cursos se califico como excelente obteniendo el mayor porcentaje de los empleados encuestados.

Figura 9: La Utilidad De Los Contenidos Aprendidos

En esta figura los resultados dieron a conocer que los contenidos aprendidos en los cursos de capacitación son excelentes, siendo esta una variable muy importante.

Figura 10: la Utilización de Casos Prácticos

En esta figura se observa que el 80% de los empleados encuestados respondió, que la utilización del aprendizaje en los cursos de capacitación recibidos fue excelente.

Figura 11: Actualidad

En esta figura en cuanto a la actualidad de los temas de los cursos de capacitación impartidos un 40% respondió que Esta es regular, siendo este el porcentaje más alto.

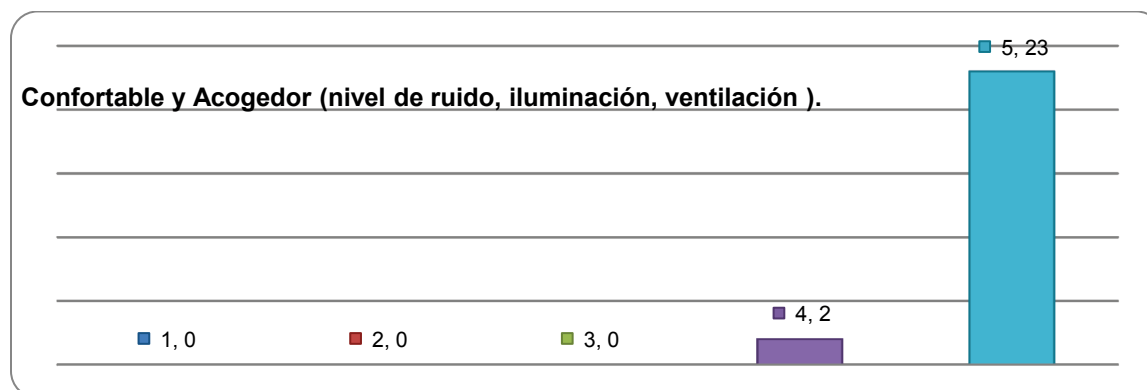

Figura 12: Adecuado Para la Capacitación

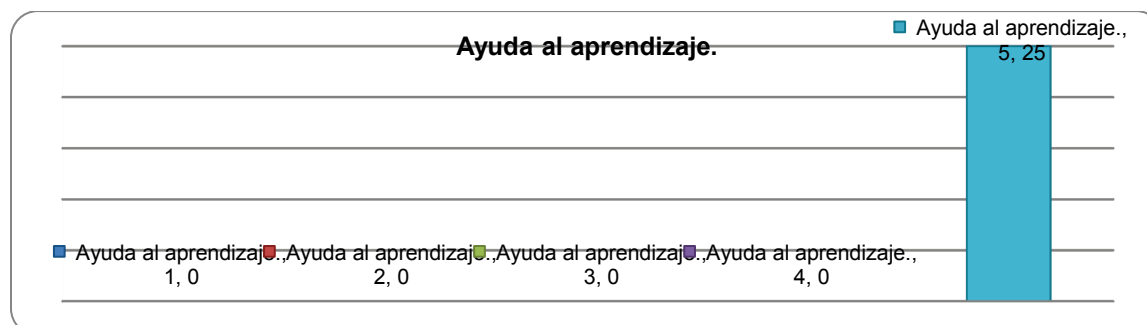

En esta figura se observa que el total de los empleados encuestados respondió que la capacitación recibida es adecuada.

Figura 13: Confortable y Acogedor (Nivel de Ruido, Iluminación, Ventilación)

En esta figura se observa que el lugar donde se imparten los cursos se calificó como cómodo y acogedor, ayudando esto al aprendizaje.

Figura 14: Ayuda al Aprendizaje

En esta figura se observa que en las preguntas en cuanto al sitio donde se imparten los cursos fueron respondidas de manera positiva, ya que en la mayoría la respuesta fue excelente.

Figura 15: la Aplicación en el Puesto de Trabajo Sera

De acuerdo a las preguntas se respondió que el aprendizaje que se obtuvo en los cursos de capacitación recibidos, es aplicable al puesto de trabajo respondiendo el 100% de los empleados encuestados que este era excelente.

## CONCLUSIONES

La capacitación de personal del área administrativa es un paso muy importante para comisión federal de electricidad, es por ello que la organización imparte una serie de cursos los cuales son dirigidos específicamente a esta área. Para el diseño de un programa de capacitación, verdaderamente relevante y útil, tienen que elaborarse ideas, objetivos tentativos además de consultar a los participantes potenciales en cuanto a sus necesidades de capacitación. El impacto que estos causan en los empleados siempre se vera reflejado en el logro de objetivos de la organización, por lo tanto es de suma importancia que los cursos que se impartan dejen un aprendizaje favorable en los participantes, ya que la capacitación garantiza que una persona no competente y por lo tanto no adecuada para las políticas de la empresa, orientadas a resultados, a la satisfacción de los trabajadores y a los clientes, se transforme en una persona eficiente con los Conocimientos, Actitudes y Habilidades adquiridas con la formación. Es necesario que la organización desarrolle un verdadero plan de capacitación adecuado para cada área en específico, además de realizar evaluaciones constantes de esta, para obtener mejores resultados.

## RECOMENDACIONES

Se debe actualizar periódicamente los temas de los cursos impartidos del área administrativa. La organización de los cursos se debe preparar con suficiente tiempo de anticipación.

# ANÁLISIS DE LA CAPACIDAD DE INNOVACIÓN REGIONAL: CASO BAJA CALIFORNIA

Virginia Guadalupe López Torres, Universidad Autónoma de Baja California

Ma. Enselmina Marín Vargas, Universidad Autónoma de Baja California

Luis Ramón Moreno Moreno, Universidad Autónoma de Baja California

## RESUMEN

*El desarrollo científico y la innovación son factores que proveen de competitividad a los países y regiones. El presente estudio define la región de Baja California como una región periférica con base a la caracterización y análisis de sus capacidades de innovación considerando como variables las solicitudes de patentes, la inversión extranjera directa, los centros universitarios y de investigación, las empresas involucradas en actividades de investigación y desarrollo, el producto interno bruto y el empleo. Para valorar la importancia de las variables se realiza un estudio correlacional a partir de datos tomados del Instituto Mexicano de la Propiedad Industrial (IMPI), del Instituto Nacional de Estadística y Geografía (INEGI), y de la Secretaría de Economía (SE). Los resultados del estudio empírico indican que el estado es en sí una región, donde más que innovar se está en un proceso de aprendizaje y adaptación de tecnologías nuevas en los procesos productivos.*

**PALABRAS CLAVE:** Capacidades de innovación, patentes, región, Baja California

## ANALYSIS OF REGIONAL INNOVATION CAPACITY: BAJA CALIFORNIA CASE

### ABSTRACT

*Scientific development and innovation are factors that provide competitiveness to countries and regions. This study defines the region of Baja California as a peripheral region based on the characterization and analysis of their innovation capabilities as variables considering patent applications, foreign direct investment, the university and research centers, the companies involved in research and development activities, gross domestic product and employment. To assess the importance of the variables a correlational study is performed using data taken from the Mexican Institute of Industrial Property (IMPI), the National Institute of Statistics and Geography (INEGI), and the Secretariat of Economy (SE). The empirical results indicate that the state itself is a region where innovation is more than a process of learning and adaptation of new technologies in production processes*

**JEL:** O39

**KEYWORDS:** Innovation capabilities, patents, region, Baja California

## INTRODUCCIÓN

Desde la economía sectorial, un centro de crecimiento se define como un centro urbano que contiene uno o más polos con la capacidad de captar los efectos de la polarización para el subsistema espacial que él define, dinamizando tanto al centro como a la periferia, aunque no al mismo ritmo (Boisier, 2006, 175). Según Germán-Soto, Gutiérrez y Tovar (2009) la teoría del crecimiento endógeno establece que en la medida que un país incrementa sus actividades de investigación y desarrollo tendrá mayor capacidad de resolver sus problemas y logrará mayor crecimiento económico. Complementariamente Álvarez (2012) señala que las regiones buscan ser cada vez más competitivas, siendo necesario para ello desarrollar la

habilidad para inventar e innovar. Ollivier, García y Martínez (2012) indican que México a pesar de ser la economía número once según su Producto Interno Bruto (PIB), en el área de innovación, medida a través de las solicitudes de patentes por residentes del país (SPR) se encuentra en el lugar 29, con 685.

En relación a la competitividad de Baja California (B.C.) el reporte del Instituto Mexicano para la Competitividad (IMCO) del 2010 muestra la tendencia de los resultados del 2001 al 2008, ilustra como el estado transito del cuarto lugar al sexto, pasando por los lugares quinto y séptimo, es decir ha tenido una ligera pérdida de competitividad, a pesar del ello su calificación (50.6) se ubica por encima del promedio nacional (43.5). Lo que representa una oportunidad para emprender un proceso de transición, a nivel país y estado, para alcanzar el desarrollo a través de la economía de la innovación y del cambio tecnológico.

Para Olaya (2008) la economía de la innovación y del cambio tecnológico o economía neoschumpeteriana, retoma los planteamientos teóricos de J. Schumpeter de los ciclos económicos a largo plazo, el análisis dinámico, el progreso técnico endógeno, la empresa y la innovación. Nueva evidencia empírica relaciona estrechamente el desarrollo económico y la competitividad empresarial con la innovación tecnológica. De acuerdo con Álvarez (2012) un sistema regional de innovación se considera como el cúmulo de organizaciones que dentro de un contexto interactúan entre sí, con el objetivo común de asignar recursos a la ejecución de actividades de Investigación y Desarrollo (I+D), que propicien la generación y difusión de conocimientos, para fomentar y fortalecer el desarrollo socioeconómico de las regiones. Según Palacios (1993) citado por Álvarez (2012) el concepto región comparte dos acepciones fundamentales. La primera hace referencia a la noción abstracta de un ámbito en cuyo interior se cumplen ciertos requisitos de semejanza u homogeneidad.

En la segunda acepción, el concepto se utiliza para identificar porciones determinadas de la superficie terrestre definidas a partir de criterios específicos y objetivos preconcebidos, los cuales pueden provenir de las ciencias naturales o de las ciencias sociales. Es pertinente destacar que en México se sabe poco sobre el carácter geográfico de las tendencias de innovación e invención en las áreas subnacionales y en las regiones. La región de incumbencia en la presente investigación es el estado de Baja California, el cual se ha configurado como un territorio altamente competitivo, dado su localización estratégica en la frontera noroeste del país y su colindancia con California, Estados Unidos. Germán-Soto, Gutiérrez y Tovar (2009) ilustran que la educación e inversión extranjera directa (IED) son dos factores explicativos e inseparables del proceso innovador, las figuras 1 y 2 ilustran el comportamiento de estas dos variables, el cual aunque es irregular, ambas tienen una tendencia ascendente lo que debió haber contribuido a un aumento de la innovación y crecimiento económico de Baja California.

Una forma de medir la innovación de un país es a través de las patentes registradas en un periodo determinado. Las patentes son el medio a través del cual fluye la información tecnológica hacia el aparato productivo (Germán-Soto, Gutiérrez y Tovar, 2009). Considerando este marco contextual, este trabajo tiene por objetivo caracterizar y cuantificar las capacidades innovación de Baja California, delimitado por la disposición de información, el trabajo se concentra en el periodo 2009-2012. La estructura del trabajo está definida en cinco apartados incluyendo este dedicado a la introducción. El segundo corresponde a la revisión literaria, en el cual se revisan los conceptos relativos a las capacidades innovación. En el tercero se describe la metodología utilizada, el cuarto ilustra las capacidades de innovación que posee Baja California y por último se presentan las conclusiones del estudio.

Figura 1: Escolaridad Promedio en Baja California

La figura ilustra el comportamiento longitudinal para el periodo 1995-2010 de la escolaridad promedio en Baja California medida en años, el valor mínimo de 8.8 años se presenta al inicio del periodo, el pico más alto se alcanza en 2007 con 9.7 años, posteriormente hay una disminución en 2008, pero nuevamente se tiene una tendencia ascendente. Fuente: Elaboración propia con datos de INEE, cálculos con base en la Encuesta Nacional de Ingresos y Gastos de los Hogares 2008, Módulo de Condiciones Socioeconómicas, e INEGI (2010).

Figura 2: Inversión Extranjera Directa en Baja California

La figura ilustra el comportamiento longitudinal para el periodo 2000-2012 para la inversión extranjera directa en Baja California medida en millones de dólares (mdd), el valor mínimo de 507 mdd se presenta en 2009, repercusión de la crisis mundial; el pico más alto se alcanza en 2008 con 1,445.70 mdd, en general el comportamiento es irregular. Fuente: Elaboración propia con datos de <http://www.bajacalifornia.gob.mx/sedeco/estadisticas/inversion/inversionExtranjeraDirecta.pdf> y Secretaría de Economía (2012).

## REVISIÓN LITERARIA

Rózga (2002) argumenta que actualmente la invención científica y la innovación son los factores más importantes del cambio socioeconómico, y que el crecimiento o el declive de las regiones, ciudades y naciones está relacionado con la creatividad científica y con el desarrollo de los recursos del capital humano y social en las áreas concretas. Según Olvera y Morales (2011) vivimos en la llamada era de la información, donde el conocimiento es el activo más valioso de la sociedad contemporánea. Mientras Quatraro (2009) señala que diferentes escuelas de pensamiento destacan la importancia de la innovación en la construcción de ventajas competitivas regionales.

Bustamante y Pérez (2005) consideran la innovación como proceso interactivo, donde ocurre la intervención de distintos actores, en atención a las estructuras tradicionales y las estructuras propiciadoras del cambio organizacional. De acuerdo con la *Organisation for Economic Co-operation and Development*

(OECD, 2010), la innovación es la introducción de nuevos productos, procesos o métodos considerablemente mejorados, también destaca que se necesita cada vez más la innovación como estrategia para impulsar el crecimiento, el empleo, y mejorar los niveles de vida; y que los países emergentes como México deben mirarla como una forma de aumentar la competitividad, diversificar la economía y encaminarse a actividades de alto valor agregado.

González, Martiarena, Navarro y Peña (2009) argumentan que la innovación depende del conjunto de organizaciones, instituciones e infraestructura con que cuente un área geográfica particular y que dentro de ella existen capacidades de innovación diferentes en relación a la generación y aplicación de conocimiento de unas localidades a otras. Las capacidades organizacionales, con carácter dinámico y orientado a la innovación, constituyen las capacidades de innovación (Robledo, López, Zapata y Pérez, 2010). Para Dosi (1988 en Quatraro, 2009) las capacidades de innovación se definen como el grado de acumulación tecnológica y la eficiencia de los procesos de búsqueda. Wang y Ahmed (2007 citados por Sánchez y Mendoza, 2012) señalan que la capacidad de innovación se refiere a la capacidad de desarrollar nuevos productos y/o mercados, alineando la orientación estratégica innovadora con el comportamiento innovador en procesos.

Ollivier, García y Martínez (2012) definen que los principales indicadores de la innovación son: el gasto en investigación y desarrollo (GIDE) como un porcentaje del PIB; el número de investigadores por cada millón de habitantes; el número de técnicos en I+D por cada millón de habitantes; el gasto en educación terciaria (superior); el monto de la inversión extranjera directa; el porcentaje de la población que se ha inscrito en educación superior; la disponibilidad del crédito interno para el sector privado. Asimismo señalan que los principales indicadores comúnmente empleados ligados a los resultados de la innovación son: el número de solicitudes de patentes por residentes del país; la balanza de pagos tecnológicos; las exportaciones de productos de alta tecnología en porcentaje de las exportaciones y el número de artículos en revistas científicas arbitradas. El total de las patentes disponibles para la aplicación, en un momento dado, representa la capacidad innovadora de la base regional de los conocimientos científicos y tecnológicos endógenos (Suárez Villa, 1993, citado por Rózga, 2002).

López-Fernández, Serrano-Bedia y García-Piqueres (2009) basándose en el modelo de Furman, Porter y Stern (2002) indican que los determinantes de la capacidad de innovación nacional son: PIB, stock de conocimiento, población, personal científico-técnico, gasto total en I+D, gasto de gobierno en I+D, apertura al comercio internacional, sistemas de protección, gasto en educación superior, políticas antimonopolio, gasto en I+D del sector privado, especialización tecnológica, gasto en I+D de las universidades y financiamiento venture-capital. Para González et al. (2009) los recursos que posee una región para la innovación son: centros universitarios, empresas involucradas en actividades de I+D, centros de investigación, parques tecnológicos, patentes, empleo en sectores manufactureros de media y alta tecnología y empleo en sectores intensivos en conocimiento.

Vázquez (2007, 187) establece que: “la teoría del desarrollo endógeno y los modelos de crecimiento endógeno aceptan que existen diferentes sendas de crecimiento de las economías en función de los recursos disponibles y de la capacidad de ahorro e inversión, que los rendimientos de los factores pueden ser crecientes, que el progreso tecnológico es endógeno en los procesos de crecimiento y que existe un espacio para las políticas de desarrollo industrial y regional”. Por otra parte, es pertinente definir que una “ciudad-región es un territorio que contiene en sí mismo el conjunto de subsistemas de cuya articulación y direccionamiento (sinapsis y sinergia) surge una complejidad evolutiva capaz de generar tanto crecimiento económico como desarrollo societal y que tiene un lugar central que funciona como una ciudad-global de primera clase, que articula un sistema de ciudades secundarias y que actúa como nodo emisor y receptor de procesos de intercambio entre la región y el mundo” (Boisier, 2006, 178).

La región es una herramienta metodológica que es indispensable para la comprensión del análisis territorial, que es multidimensional, es decir, que puede adoptar dimensiones muy variadas y múltiples; es de conformación dinámica que marca tendencias como resultado de la organización espacial de las relaciones humanas, la región es consecuencia y no el punto de partida de cualquier análisis que intente abordar la comprensión de las diferencias existentes en un territorio específico (Ramírez 1991 en Grave, 2001).

## METODOLOGÍA

Este trabajo es un estudio descriptivo con diseño no experimental cuyo ámbito de estudio corresponde al estado de Baja California como región. Para el logro del propósito del presente se revisaron distintos documentos de información estadística sobre las capacidades de innovación, tales como los informes generales del estado de la ciencia y la tecnología en México publicados por el Consejo Nacional de Ciencia y Tecnología (Conacyt), estadísticas del Sistema integrado de información sobre investigación científica y tecnológica (SIICyT), estadísticas del Instituto Mexicano de la Propiedad Industrial (IMPI), de la Secretaría de Economía (SE) y del Instituto Nacional de Estadística y Geografía (INEGI). Una vez identificada la información se organizó utilizando estadística descriptiva. La limitante de la investigación está dada por la disposición de información.

## RESULTADOS

Baja California es el estado más septentrional de la República Mexicana, cuenta con una superficie de 71,445 kilómetros cuadrados, casi 4% del total continental nacional. Polo de desarrollo, escenario de una poderosa producción pesquera, agropecuaria e industrial. Cuenta con 79,968 unidades empresariales, que emplean a 431,334 personas, pagan \$19'424,929 en remuneraciones. El sector industrial representa el 7.23% de las unidades económicas MIPyMEs, en el sector comercio alcanzan el 45.32%, mientras que en el sector servicios llegan a ser el 29.93%. En cuanto al empleo generado el sector comercio es el que predomina con 37.78%, seguido del sector servicios con un 36.08%, mientras que el sector industrial genera tan sólo el 17%. Con respecto al número de unidades económicas las micro empresas representan el 91.47%, y generan el 28.86% del empleo (INEGI, 2009).

En relación a la población, de acuerdo con INEGI (2010) su población asciende a 3'155,070 habitantes distribuidos en sus seis municipios, aunque la gran mayoría se concentra en tres municipios: la mitad en Tijuana (49.4%), en Mexicali el 29.7% y 14.8% en Ensenada. El 7.7% radica en localidades rurales (ver tabla 1). El valor en dólares del PIB per cápita proporciona una aproximación más concreta al significado de las diferencias entre los estados y municipios. La media estatal es de 9,571 dólares per cápita. Mexicali y Tijuana se ubican por arriba de este nivel con 11,855 y 9,812 dólares respectivamente. Se ubican por debajo de la media estatal los municipios de Tecate con 6,750, Ensenada con 5,388 y Playas de Rosarito con 5,353 dólares per cápita.

Tabla 1: Información General de Baja California

	Población	PIB per cápita (en dólares)	Analfabetismo (%)
Baja California	3,155,070	9571	3.52
Ensenada	466814	5388	5.6
Mexicali	936826	11855	3.4
Playas de Rosarito	90668	5353	4
Tecate	101079	6750	4
Tijuana	1559683	9812	2.9

*Esta tabla ilustra los datos relativos a la población, PIB per cápita y porcentaje de analfabetismo en Baja California y cada uno de sus municipios, el municipio más poblado es Tijuana, en Mexicali se tiene el más alto PIB per cápita y el mayor porcentaje de analfabetismo ocurre en Ensenada. Fuente: Elaboración propia con datos de INEGI (2010), Secretaría de Desarrollo Social (2012).*

En relación a las capacidades de innovación de Baja California, destacan los dos centros de conocimientos, uno de ellos es el Colegio de la Frontera Norte (COLEF) cuyo enfoque de investigación son las ciencias sociales y humanidades y se localiza en Tijuana, el otro es el Centro de Investigación Científica y de Educación Superior de Ensenada, (CICESE), cuyas líneas de investigación son de las ciencias exactas y naturales. Una de las capacidades de innovación está dada por el personal científico, una forma de estimar su tamaño es a través de los miembros de Sistema Nacional de Investigadores (SNI) el cual evalúa la productividad de cada investigador y de acuerdo a la calidad y cantidad de la misma otorga el nivel de candidato, 1, 2 y 3.

En 2012 Baja California tenía 566 investigadores miembros del SNI (ver figura 3). Dichos investigadores trabajan en COLEF (86), CICESE (153), Universidad Autónoma de Baja California (323), Universidad Politécnica de Baja California (3) y el gobierno del estado de Baja California (1) (Conacyt, 2012). Parte de la producción que desarrolla el personal científico-técnico son los artículos publicados, en 2010 la estadística de Baja California indica 7079 artículos, 28608 citas y un impacto de 4.0. Respecto a los artículos la producción se ubica por encima de la media nacional, las citas están por debajo de la media nacional y el impacto es igual a la media nacional (SIICyT, 2011). Las solicitudes de patentes suele ser una variable muy utilizada para medir los productos de la innovación, la figura 4 ilustra el comportamiento de esta variable de 1988 a 2010 para residentes de Baja California, periodo en el cual se solicitaron 75 patentes, teniendo una sequía en los años 2003 y 2004, mientras el mayor número de solicitudes se presentó en 2010 (SIICyT, 2011).

El Registro Nacional de Instituciones y Empresas Científicas y Tecnológicas (*RENIECYT*) es un instrumento de apoyo a la investigación científica, el desarrollo tecnológico y la innovación del país a cargo del Conacyt a través del cual se identifica a las instituciones, centros, organismos, empresas y personas físicas o morales de los sectores público, social y privado que llevan a cabo actividades relacionadas con la investigación y el desarrollo de la ciencia y la tecnología en México. De acuerdo con este registro al 2010 en Baja California se tenían 306 entidades vigentes, de las cuales 237 son empresas, 26 organizaciones no lucrativas, dos centros de investigación, cinco dependencias de la administración pública, 12 Instituciones de Educación Superior (IES) y 24 personas físicas (SIICyT, 2011).

Adicionalmente es preciso señalar que Baja California cuenta con 53 IES particulares, de acuerdo con listado de Instituciones Particulares de Educación Superior que imparten planes y programas de estudio que cuentan con Reconocimiento de Validez Oficial de Estudios (RVOE) con datos actualizados al primero de septiembre de 2012. 56.60% localizadas en Tijuana, 40% en Mexicali y 23.33% en Ensenada. El estado también cuenta con IES públicas dependientes de la Secretaría de Educación Pública (SEP) como lo son los Institutos Tecnológicos de Ensenada, Mexicali y Tijuana; también se cuenta con la Universidad Tecnológica de Tijuana (UTT), la Universidad Politécnica de Baja California y la Universidad Autónoma de Baja California (UABC).

Figura 3: Miembros del SNI en Baja California

La figura ilustra la evolución de miembros del SNI en el periodo 2002-2012, cuya tendencia es ascendente, en un lapso de diez años la cifra se incrementa en un 90%, lo que ilustra que cada vez hay mejores investigadores y más productivos en el estado. Fuente: Elaboración propia con datos de Conacyt, Base de datos del SNI, 2012.

Figura 4: Solicitudes de Patentes Por Residentes de Baja California

La figura ilustra la evolución de solicitudes de patentes por residentes de Baja California en el periodo 1988-2010, cuyo comportamiento es bastante irregular, aunque en los últimos años la tendencia es ascendente, lo que ilustra que la investigación se ha enfocado a resultados de innovación, por lo que se busca protegerlos para licenciarlos. Fuente: Elaboración propia con datos de SIICYT (2011).

## CONCLUSIONES

Los resultados muestran que las capacidades de innovación de Baja California están en proceso de construcción, dado que la práctica de solicitudes de patentes es incipiente, por ello se concluye que este estado se encuentra inmerso en un proceso de aprendizaje tecnológico más no de innovación, un resultado que confirma el hallazgo de Germán-Soto, Gutiérrez y Tovar (2009) quienes señalaron que en México las regiones no tienen procesos de innovación sino procesos de aprendizaje tecnológico. Además los resultados permiten inferir que para Baja California las capacidades de innovación ilustradas no están relacionadas con la IED a diferencia de lo encontrado por Germán-Soto, Gutiérrez y Tovar (2009). Con base en los resultados y características descrita se infiere que Baja California constituye una región periférica, dadas sus condiciones de desventaja para su territorio en términos de equipamiento, base industrial menor, débil red empresarial y de negocios con escasa cultura innovadora.

Los resultados obtenidos son reflejo de los argumentos de González y González (2012) quienes destacan que en México el índice de cobertura tecnológica se redujo de 0.24 a .04% en la última década, como resultado se compra el 96% de la tecnología que se utiliza. Hecho que muestra la débil capacidad interna para producir innovaciones, ya que la ciencia y la tecnología no han jugado el rol de aceleradores del cambio social que les corresponde por principio.

Por ello es trascendente como lo indica Rózga (2002) que el objetivo de incrementar los resultados de la invención endógena se convierta en la mayor prioridad estatal, por su importancia a largo plazo en el desarrollo y en la competitividad internacional. Las regiones que llegaron a ser ubicaciones importantes de invención no sólo se convirtieron en fuentes importantes de innovación, sino que también están mejor preparadas para hacer frente a las serias crisis económicas y financieras. Según Rózga (2002) las tecnópolis surgen a partir de la revolución de los conocimientos, del nuevo desarrollo acelerado de la tecnología de la información y de los campos relacionados.

En el núcleo de cada tecnópolis hay una institución que crea nuevos conocimientos: el centro de conocimientos. Con base en esta definición se plantea que desarrollando las políticas públicas adecuadas en Baja California pueden desarrollarse dos tecnópolis, dado que ya se tienen las instituciones centro de conocimientos, CICESE en Ensenada y UABC en Mexicali. En el futuro sería importante poder realizar un estudio aplicando el coeficiente de Gini para confirmar las localidades donde se concentra la distribución de las patentes en el estado. Además de estudiar la relación entre las patentes solicitadas y artículos publicados entre otras variables.

# MERCADO LABORAL PARA ADMINISTRADORES Y CONTADORES. RETOS Y OPORTUNIDADES DESDE LA VISIÓN EMPRESARIAL

Juan Carlos Román Fuentes, Universidad Autónoma de Chiapas  
Rafael Timoteo Franco Gurría, Universidad Autónoma de Chiapas  
Ángel Esteban Gordillo Martínez, Universidad Autónoma de Chiapas

## RESUMEN

*Desde la premisa que ubica a la relación universidad-mercado de trabajo, como uno de los componentes (no exclusivo) de la pertinencia educativa; mediante cuestionario autoadministrado, (doce interrogantes), se indaga la opinión de muestra empresarial domiciliados en seis municipios del estado de Chiapas, México; para caracterizar al mercado profesional de administradores y contadores, y construir indicadores a utilizar en procesos de actualización curricular. Al respecto, los resultados muestran que más del 80% de las organizaciones encuestadas, tienen menos de 100 empleados, mayoritariamente se dedican al comercio y suelen contratar administradores (21%), contadores (26%) o ambos (48%). Tratándose de conocimientos básicos en administradores, deben relacionarse con administración de personal, procesos administrativos y mercadotecnia; ser hábiles en: disposición para aprender constantemente, tomar decisiones y manejo de paquetería. Entretanto, los contadores fundamentalmente deben conocer: contabilidad financiera, fiscal y procesos administrativos; ser hábiles en: manejo de paqueterías, tomar decisiones y encontrar soluciones; en ambos, la actitud mejor valorada es la de emprendedor, la edad ideal para contratarlos oscila entre 25 y 30 años; debiendo aprobar una entrevista y un examen de conocimientos, con experiencia laboral de 1 a 3 años, a los que se ofrecen salarios que se ubican entre 3 y 5 veces el SMG.*

**PALABRAS CLAVE:** pertinencia educativa, egresados, mercado laboral

## LABOR MARKET FOR MANAGERS AND ACCOUNTANTS. CHALLENGES AND OPPORTUNITIES FROM THE BUSINESS VISION

### ABSTRACT

*From the premise that places the relationship between universities and the labor market, as one of the components (not exclusive) relevance of education, through self-administered questionnaire (twelve questions), it examines the view displays business domiciled in six municipalities in the state Chiapas, Mexico, to characterize the professional market managers and accountants, and develop indicators to use in curriculum updating processes. In this regard, the results show that over 80% of organizations surveyed have less than 100 employees, mostly engaged in trade and often hire managers (21%), accountants (26%) or both (48%). In the case of basic knowledge managers, must relate to personnel management, administrative and marketing, be skilled in: willingness to constantly learn, make decisions and package handling. Meanwhile, primarily accountants should know: financial accounting, fiscal and administrative processes, be skilled in: software management, make decisions and find solutions, in both, the highest score is the attitude of an entrepreneur, the ideal age to hire between 25 and 30 years must pass an interview and a knowledge test, with work experience of 1-3 years, to offer salaries that are between 3 and 5 times the SMG.*

**JEL:** I21, J24, J44

**KEY WORDS:** educational relevance, graduates, labor market

## INTRODUCCIÓN

Sin adoptar la visión que señala que la utilidad de las universidades se observa en el respaldo que brinden a la economía, mediante la formación de mano de obra calificada demandada por el sector laboral, olvidando su tradicional función crítica; al realizar este proyecto se abona a la idea que pugna porque la formación de nuevas generaciones, sea repensada en forma constante y se procure la creación de nuevos perfiles de egreso que acusen mayor flexibilidad y mejor capacidad para adaptarse a los constantes cambios del mercado laboral, sin dejar a un lado, que las demandas del sector ocupacional es uno de los componentes (no exclusivo) que contribuyen a evaluar la pertinencia de la educación superior.

En este sentido, identificar las características y demandas de la oferta laboral regional, para egresados de los programas de licenciatura relacionados con Administración y Contaduría, impartidos por la Universidad Autónoma de Chiapas (UNACH), considerando la visión empresarial; resulta elemental, puesto que contribuyen a la construcción de indicadores que apoyan al proceso de evaluación de la calidad educativa y junto con información que generan estudios de egresados, trayectorias académicas, tendencias disciplinares, por citar algunos, pueden elaborarse diagnósticos fundados, a través de los cuales se detecten fortalezas y áreas de oportunidad, para no ofrecer a la comunidad opciones educativas poco pertinentes (Fresán, 1998). Asimismo, para atender los requerimientos de organismos acreditadores, relacionados con procesos de actualización y rediseño curricular, resulta fundamental el conocimiento del entorno laboral en el que habrán de desempeñarse los futuros profesionistas, para que la distancia entre las prácticas declaradas, las prácticas de uso y las necesidades sociales, se acorten y como señala Gimeno, (citado por Stenhouse, 2003); no solo se intente reinterpretar nuevos esquemas, sino que se comprendan las consecuencias de la forma de seleccionar y presentar la cultura y el conocimiento en los esquemas mentales que predominan en la visión de investigadores, profesores y administradores de la educación.

Los resultados que en este reporte se socializan se presentan como sigue: posterior a esta introducción se realiza una apretada revisión de la literatura en donde se plantean argumentos respecto a la importancia de conceptualizar en forma multidimensional a la pertinencia educativa, en seguida se describe la metodología utilizada, enfatizando el diseño de la investigación, la caracterización del instrumento aplicado, población objetivo, selección de muestra y procedimiento de análisis; al finalizar se describen los resultados generados en donde se caracterizan los principales retos y oportunidades que el mercado laboral plantea a quienes estudian Administración y Contaduría, así como un apartado de conclusiones y desafíos que plantea el desarrollo de este tipo de trabajos.

## REVISION DE LITERATURA

Los procesos de transformación que viven las universidades, están explícitos en las tensiones que se observan entre las concepciones educativas adoptadas, que van desde las que exigen mayor funcionalidad de la educación frente al aparato productivo a las que demandan un mayor esfuerzo institucional en términos de democracia, interculturalidad y equidad, es decir, pervive una visión pragmática y totalizante de saberes y otra que promueve el valor intrínseco del conocimiento y su avance; en estas disputas, una cosa es cierta: la educación, debe revisarse periódicamente, si se tiene la aspiración de brindar a cada momento específico, las respuestas más pertinentes a los entornos que se presentan, (Sánchez, Ortiz & Gaytán, 2007). Por ello, sin caer en la visión reduccionista de circunscribir el concepto de pertinencia a las respuestas que la universidad debe dar a las demandas de la economía o del sector laboral o profesional, puesto que sin duda además de atender estos requerimientos debe visualizarse a la pertinencia desde una perspectiva amplia que considere integralmente desafíos, retos y demandas que la sociedad impone (Tünnermann, 2001), se coincide con quienes señalan que la pertinencia debe conjugar lo económico, social y cultural, adicionando la crítica permanente como discurso constructor de alternativas de pensamiento nuevo (Dengo, 1995; Grundy, 1998; Malagón, 2003), considerando entonces que el

mercado de trabajo, si bien referente necesario, es a la vez insuficiente cuando se intenta describir la calidad educativa (Valenti y Varela, 1998). Lejos de las posiciones que señalan que las universidades han de servir a las sociedades, primordialmente respaldando a la economía y mejorando las condiciones de vida de sus ciudadanos, sin ocuparse de la función crítica de la universidad, atendiendo otra más pragmática en términos de suministro de recursos humanos calificados y la producción del conocimiento (Gibbons, 1998), no puede soslayarse que la formación profesional de las nuevas generaciones debe ser replanteada periódicamente, creando perfiles de egreso más flexibles, con capacidad de adaptarse a los drásticos cambios que el mercado laboral presenta en el corto plazo, complementados con una amplia oferta, también flexible de programas de educación continua (Cordera y Lomelí, 2006).

Por ello, al desarrollar este proyecto, la tesis que se adopta al definir a la pertinencia, retoma los ejes planteados por la Organización de las Naciones Unidas para la Educación, la Ciencia y la Cultura (UNESCO, 1995) quien al señalar las respuestas de la educación superior, además de la calidad y la internacionalización, incluye a la pertinencia, misma que precisa a través de siete componentes: relaciones con la sociedad en su conjunto, la educación superior y el mundo del trabajo, las relaciones con el estado, las bases de la dirección y gestión de los centros, financiación y gastos compartidos, la renovación de la enseñanza y el aprendizaje: problemas de contenido y pedagogía, fortalecimiento de las funciones de investigación de la educación superior, y la responsabilidad de la educación superior con respecto a los otros niveles educativos.

Así, las relaciones de las universidades con el mundo del trabajo es un componente (no exclusivo) de la pertinencia; posición reforzada en la Conferencia Mundial sobre Educación Superior (UNESCO, 1998), al asumir que la pertinencia es un imperativo estratégico de las universidades, entendida como “estar en contacto con...” y es en el numeral dos, cuando afirma que la pertinencia educativa involucra al mundo del trabajo, la relación universidad-empresa, la vinculación universidad-sector productivo; los que constituyen mecanismos para la modernización tanto de las IES como del sector productivo, a partir de compartir sus experiencias y de generar espacios nuevos de cooperación para obtener beneficios mutuos. Partiendo de lo anterior el desempeño profesional de los egresados debe analizarse periódica y rigurosamente, puesto que a través de los profesionistas recién egresados se cristalizan los objetivos y se cumple la misión formalmente declarada (Lopera, 2005) y puede valorarse la coherencia entre las prácticas declaradas, las prácticas de uso y las necesidades del entorno.

Sin perder de vista que ya Coombs (1978) señalaba dentro de los retos de la educación superior la necesidad de atender los desequilibrios entre educación y empleo, mismos que en parte se originan por las dinámicas distintas que ambos sectores observan, ya que mientras el mercado laboral se comporta con base a las características del modelo de desarrollo económico imperante; el sistema educativo desde su trinchera busca responder a las demandas de mano de obra calificada sobre su propia tradición y con sus propios ritmos, lo que inevitablemente conlleva desajustes entre formación y empleo profesional. En el caso de México, debe agregarse la heterogeneidad que presenta el mercado laboral, traducido en variadas demandas, no necesariamente expresadas en las políticas públicas de educación superior, destacando las micro, pequeñas y medianas empresas (que no dejan de ser importantes puesto que con mucho, constituyen la principal fuente generadora de empleos) con escasa capacidad para vincularse con las universidades, que les impide expresar sus necesidades (Martuscelli & Martínez, 2003).

Con todo, resulta fundamental conocer las características del mercado laboral (para Administradores y Contadores en este caso), porque los indicadores que deriven, debieran ser variables a considerar en los proyectos de actualización curricular que se implementan en las universidades, sin perder de vista que tendrán utilidad si desde la propuesta de las dinámicas de pertinencia curricular (Malagón, 2007), las IES son capaces de “pedagogizar” (característica de la dinámica de pertinencia curricular, que según este autor, implica un proceso de “praxis del contexto”, es decir un proceso a través del cual los saberes involucrados en las diferentes experiencias de interacción con el entorno, son apropiadas como saberes

académicos e integradas al currículo) los saberes obtenidos del entorno (laboral en este caso), que implica la transformación de estos saberes a saberes académicos y su integración al currículo.

## **METODOLOGÍA**

Desde la visión positivista, este trabajo se desarrolló siguiendo una serie de pasos controlados, con la posibilidad de ser manipulados por el investigador y tomando en cuenta solo los que aportan evidencias sobre los temas a estudiar (Gil y Rosas, 2010). Asimismo, partiendo de la clasificación del método científico propuesta por Eyssautier (2006), al partir de teorías, enfoques y leyes generales para llegar a implicaciones particulares del tema, se recurrió al submétodo deductivo, utilizando el método de observación, a través de las técnicas de observación específica: investigación documental e investigación de campo; de acuerdo con la clasificación propuesta por Hernández, Fernández & Baptista (2007), el alcance de este estudio es exploratorio y descriptivo.

### Instrumento Aplicado

El instrumento utilizado; es una adaptación de diversas propuestas revisadas (el planteado por la Asociación Nacional de Universidades e Instituciones de Educación Superior, ANUIES, para realizar estudios de empleadores, proyecto PROFLEX “El profesional flexible en la sociedad del conocimiento”, Encuesta Nacional de Ocupación y Empleo, de la Secretaría del Trabajo; entre otras); cuya validación previa se realizó con cinco empresarios de Tuxtla Gutiérrez y posterior a ello surgió la versión final que constó de 12 preguntas, estructuradas en función de tres variables: Características de la empresa: tres preguntas: tamaño de las empresas (en función al número de empleados que en ella trabajan), actividad económica y requerimientos de profesionistas de las licenciaturas en Administración y en Contaduría Requisitos de contratación: tres preguntas: conocimientos requeridos en Administradores y Contadores, habilidades específicas y otras características importantes, que deben reunir tanto contadores como administradores; requisitos establecidos para la contratación de estos profesionistas y tiempo de experiencia laboral, en caso de que fuera un requisito. Características del empleo: seis preguntas: edad ideal para contratar a Contadores y Administradores, denominación de los puestos ofertados; salario promedio mensual ofrecido, actitudes deseables, prioridad de valores requeridos y áreas de conocimiento en las que resulta necesario capacitarlos constantemente. Se aplicó en forma autoadministrada a través de visitas domiciliarias realizadas por 39 estudiantes de la Facultad.

### Población Objetivo

El estudio se ha realizado en empresas del Estado de Chiapas, cuyo universo total, de acuerdo con la base de datos del Sistema de Información Empresarial Mexicano (SIEM), de la Secretaría de Economía (SE) consta de 4,126; número que se ve reducido a 3,570 al considerar únicamente a las organizaciones que se ubican en las cabeceras municipales en donde se imparten los programas educativos de licenciatura en Administración y Contaduría (Arriaga, Comitán, Pichucalco, Tapachula, Tonalá y Tuxtla Gutiérrez) clasificadas en sectores industriales: industria manufacturera, comercio, industria de la construcción, transporte, comunicación y servicios.

### Muestra

Considerando que se conoce el total de elementos que integran la población (población finita), se utilizó una proporción de la población del 50% con un nivel de significancia del 96% y un margen de error del 4%, obteniendo una muestra objetivo de 378 empresas distribuidas en las ciudades elegidas. El muestreo realizado fue estratificado por ciudad, utilizando como criterios de selección a todas aquellas empresas que tienen contratados como mínimo a diez empleados (criterio de inclusión) y se excluyeron del muestreo (criterio de exclusión), a las empresas del sector gubernamental; para la selección de las mismas

se empleó una tabla de números *random* y a los encuestadores se les explicó la necesidad de que los cuestionarios fueran respondidos única y exclusivamente por propietarios, gerentes generales o equivalente o en su caso directores de personal. El trabajo de campo permitió detectar algunas empresas que a pesar de estar registradas en el SIEM, no funcionan (9%) o en su defecto los propietarios se rehusaron a responder (5%) lo que derivó en la sustitución de las mismas, por una sola vez; al final las encuestas aplicadas representaron el 92.33% de la muestra objetivo, integradas según tabla 1.

Tabla 1: Muestra Objetivo de Empresas Seleccionadas y Encuestas Aplicadas Por Sector Y Municipio

Ciudad (municipio)	Población	Muestra objetivo	Encuestas aplicadas
Arriaga	5	2	2
Comitán	111	12	12
Pichucalco	21	3	3
Tapachula	411	43	37
Tonalá	99	10	10
Tuxtla Gutiérrez	2,293	308	285
<b>TOTAL</b>	<b>3,570</b>	<b>378</b>	<b>349</b>

*Aquí se describen los resultados obtenidos en la fase de investigación de campo; en donde se aprecia el número de encuestas aplicadas, por cabecera municipal, en contraste con la muestra objetivo planteada inicialmente y la población total, logrando recoger información en el 92.33% de los casos. Fuente: Elaboración propia con base de datos del SIEM y los obtenidos al realizar el proyecto.*

De manera que el muestreo realizado, observó las características que se resumen en la tabla 2.

Tabla 2: Resumen del Muestreo Realizado

<b>Población:</b>	<b>3,570 empresas distribuidas en los municipios (ciudades) de Arriaga, Comitán, Pichucalco, Tapachula, Tonalá y Tuxtla Gutiérrez.</b>
Muestra:	349 encuestas aplicadas a empresarios y/o directivos, representantes de alto nivel de la empresa.
Tipo de muestreo:	Probabilístico en una muestra estratificada por municipio (ciudad).
Criterio de inclusión:	Todas las empresas establecidas en los municipios (ciudades) seleccionados, con un mínimo de 10 empleados.
Criterio de exclusión:	No participan en el muestreo, empresas gubernamentales.
Error aleatorio:	4% con un nivel de confianza del 96%, $p=q= 50\%$ .
Periodo:	1 al 30 de mayo de 2012.

*Esta tabla refiere la caracterización del muestro realizado, partiendo de la población total identificada en la base de datos del Sistema de Información Empresarial Mexicano (SIEM) de la Secretaría de Economía (SE), incluyendo el periodo en que se recogió la información. Fuente: Elaboración propia*

## METODOLOGÍA DE ANÁLISIS

Las variables investigadas tienen un nivel de medición correspondientes a datos ordinales, ya que están representados por conjuntos de etiquetas (muy necesario, necesario, poco necesario o no necesario) es decir, de acuerdo a la valoración realizada por los encuestados, que aun cuando “tienen valores relativos, se pueden ordenar o clasificar” (Lind, Marchal & Wathen, p. 11, 2012). Para concentrar la información se construyó una base de datos de *excel*, agrupando los datos por medio de frecuencias, donde el estadístico representativo es la moda (datos con mayor frecuencia). En algunas preguntas, las respuestas se evaluaron a través de una media ponderada, no es posible utilizar la media aritmética como estadístico de decisión debido a que los datos, son ordinales. La información generada se presenta por medio de tablas de contingencias o cruzadas (respuestas clasificadas de tal manera que las celdas proporcionan información tanto filas como por columnas), (Levine, Krehbiel & Berenson, 2006).

## RESULTADOS

Producto de los pasos ya descritos, en seguida se muestran los resultados más relevantes, que han sido ordenados de acuerdo a las tres variables que contempla el instrumento diseñado.

### Características de las Empresas

Son descritas en las tablas 3, 4 y 5; refieren el tamaño prevaleciente de acuerdo al número de empleados contratados, sector al que pertenecen y frecuencia con que contratan a Administradores, Contadores o ambos; en donde se observa que la mayoría de las empresas (81%) tienen menos de 100 empleados; dedicadas al comercio (60%) y cerca del 95% de ellas han contratado a un Administrador (21%), a un Contador (26%) o ambos (48%).

Tabla 3: Número de Empleados Contratados en las Empresas Encuestadas

Número de empleados	Número de empresas	%
Menos de 15	90	25.79
Entre 16 y 100	193	55.30
Entre 101 y 250	42	12.03
Más de 251	24	6.88
Total	349	100.00

*Las empresas que conforman el mercado laboral de la región, en su mayoría (81%) no rebasan 100 trabajadores, solo 12% reportan tener entre 100 y 250 empleados y menos del 7% de la muestra declaran contar con más de 251 trabajadores. Fuente: elaboración propia.*

Tabla 4: Empresas Encuestadas Por Sector

Actividad económica	Total	%
Agrícola/ganadera/silvícola	6	1.70
Comercio	211	60.50
Paraestatal	1	0.30
Industria manufacturera	17	4.90
Industria de la construcción	36	10.30
Servicios bancarios, financieros y seguros	9	2.60
Turismo (hospedaje, alimentos y bebidas, esparcimiento, agencia de viajes)	24	6.90
Transporte/comunicación	16	4.60
Servicios profesionales (asesorías)	7	2.00
Otros	22	6.30
Total	349	100.00

*El sector económico predominante al que pertenecen las empresas encuestadas es el comercial (61%), seguido de las empresas dedicadas a la industria de la construcción (10%) y de aquellas que realizan actividades involucradas en el sector turístico (7%). Fuente: elaboración propia.*

Tabla 5: Empresas Que Han Contratado a un Administrador, a un Contador o Ambos

Licenciatura	Total	%
Administración	73	20.92
Contaduría	91	26.07
Ambos	166	47.56
Ninguno	19	5.44
TOTAL	349	100.00

*Los resultados procesados, muestran que las empresas encuestadas han contratado a un Administrador en el 21% de los casos, 26% a un Contador y ambos 48%; sólo el 5% de los casos señalaron no haber contratado a personal con este perfil. Fuente elaboración propia.*

### Requisitos de Contratación

Se incluyen las respuestas relacionadas a: conocimientos, habilidades y características consideradas relevantes por los empresarios para contratar a profesionistas de la Administración o la Contaduría, así como la jerarquía de requisitos a reunir para ser contratados, el tiempo de experiencia previa requerida y la edad ideal para incorporarse al sector laboral; resultados que son descritos en las tablas 6 a la 11.

Tabla 6: Jerarquía de Requisitos Para Contratar a administradores y Contadores

1. Aprobar Entrevista
2. Aprobar examen de conocimientos
3. Aprobar examen psicométrico
4. Poseer estudios de licenciatura
5. Contar con experiencia laboral
6. Aprobar examen médico
7. Conocimientos de lengua extranjera
8. Poseer estudios de posgrado

*De acuerdo con empresarios, para contratar a Administradores y Contadores, es fundamental que aprueben la entrevista de selección, seguido del examen de conocimientos y las pruebas psicométricas; llama la atención que para los encuestados tener conocimientos en lengua extranjera o contar con estudios de posgrado, ocupan los últimos lugares de la escala establecida. Fuente: elaboración propia.*

Tabla 7: Edad Ideal Para Contratar a Administradores y Contadores

Rango de edad	Administradores	%	Contadores	%
Entre 22 y 25 años	84	24.07	80	22.92
Más de 25 pero menos de 30	191	54.73	185	53.01
Más de 30 pero menos de 35	68	19.48	73	20.92
Más de 35 años	6	1.72	11	3.15
Total	349	100.00	349	100.00

*Los empresarios coinciden (más de la mitad) en que la edad ideal para contratar a Administradores y/o Contadores, se ubica entre 25 y 30 años, seguido de una cuarta parte que señala entre 22 y 25 años; un dato revelador es que después de 35 años, es difícil incorporarse al mercado laboral. Fuente: elaboración propia.*

Tabla 8: Conocimientos Específicos Que Deben Poseer Administradores y Contadores

Áreas de conocimientos específicos	Administradores	Contadores
<b>Opciones:</b>	Ponderación	Ponderación
Contabilidad financiera	2.38	3.08
Fiscal	2.15	3.04
Costos	2.25	2.79
Finanzas	2.34	2.73
Auditoria	2.18	2.68
Procesos administrativos	3.10	2.98
Administración de personal	3.13	2.83
Mercadotecnia	2.60	2.34
Estadística	2.18	2.22
Lengua extranjera	1.51	1.46
Otros	0.10	0.07

*Las respuestas proporcionados por los entrevistados, han sido procesadas bajo la siguiente escala de ponderación: de 0 a 1: no necesario; de 1.1 a 1.9: poco necesario; de 2 a 2.9: necesario; de 3 a 4: muy necesario; de lo anterior puede inferirse que tratándose de Administradores las tres principales áreas de conocimiento son: Administración de personal, procesos administrativos y mercadotecnia, mientras que para Contadores las áreas de conocimiento están relacionadas con: Contabilidad Financiera, Fiscal y procesos administrativos. Fuente: elaboración propia.*

Tabla 9: Habilidades Específicas Que Deben Poseer Administradores y Contadores

Habilidades específicas	Administradores	Contadores
	Ponderación	Ponderación
Manejo de paquetería de cómputo	3.05	3.38
Razonamiento lógico y analítico	2.77	2.88
Aplicación de conocimiento	2.79	1.43
Comunicarse en forma oral, escrita y gráfica	2.89	2.95
Tomar decisiones	3.38	3.29
Encontrar soluciones	3.15	3.26
Búsqueda de información pertinente y actualizada	2.68	2.79
Procesar y utilizar información	2.74	2.92
Realizar trabajo en equipo	3.02	3.17
Dirigir y coordinar equipos de trabajo	2.97	2.89
Administrar recursos humanos, financieros y materiales	3.10	3.13
Disposición para aprender constantemente	3.64	3.13
Disposición para manejo de riesgo	2.53	2.66
Relacionarse con otras personas	2.91	2.98
Innovar procesos y en general desempeñarse con creatividad	2.66	2.70
Identificarse con la empresa	2.77	3.02
Otro	0.09	0.05

*Tratándose de habilidades exigidas a Administradores, sobresalen como muy necesarias las relacionadas con: disposición para aprender constantemente, tomar decisiones, encontrar soluciones, administrar recursos, manejar paquetes de cómputo y trabajar en equipo, mientras que para Contadores destacan en el rango de “muy necesario”: manejo de paquetes de cómputo, tomar decisiones, encontrar soluciones, trabajar en equipo, administrar recursos, disposición para aprender constantemente e identificarse con la empresa. Fuente: elaboración propia.*

Tabla 10: Otras Características Que Deben Poseer Administradores y Contadores Para Ser Contratados

Otras características	Administradores	Contadores
	Ponderación	Ponderación
Imagen personal	2.88	3.19
Referencias	2.44	2.72
Edad	2.10	2.31
Sexo	1.61	2.11
Estado civil	1.57	2.06

*Utilizando la misma escala de ponderación, dentro de las otras características importantes que deben reunir Administradores y Contadores, en ambos se exigen similares requisitos, en donde sobresalen: imagen personal, contar con referencias y atender limitantes relacionadas con la edad. Fuente: elaboración propia.*

Tabla 11: Años Requeridos de Experiencia Laboral

Tiempo de experiencia laboral requerida:	Número	%
Un año o menos	126	36.10
Entre 1 y 3 años	200	57.31
Más de 3 años	23	6.59
Total	349	100.00

*Más de la mitad de los empresarios (57%) señalan que el tiempo requerido de experiencia laboral previa oscila entre uno y tres años; mientras que poco más de la tercera parte (36%) señaló como tiempo ideal de experiencia previa un año o incluso menos. Fuente: elaboración propia.*

### Características Del Empleo

Variable integrada con la denominación del puesto ofrecido tanto a Administradores como a Contadores, salarios ofrecidos, actitudes y valores exigidos a ambos profesionistas y áreas de conocimiento en los que deben capacitarse constantemente. Al respecto cuando se refieren a puestos directivos los puestos ofrecidos se denominan “administrador general” o “contador general”, tratándose de mandos medios “jefes de departamento” y en el caso de puestos operativos son denominados “auxiliares”; los salarios ofrecidos en su mayoría no rebasan cinco veces el salario mínimo mensual y se exige que sean emprendedores y responsables. Resultados que se detallan en las tablas que van de la 12 a la 15.

Tabla 12: Denominación de los Puestos Ofrecidos a Administradores y Contadores

Puesto	Administradores	Contadores
	Frecuencia	Frecuencia
<b>Mandos directivos</b>		
Director	5.31	9.63
Gerente	39.69	28.33
Administrador general	41.88	13.03
Contador general	13.13	49.01
Total	100.00	100.00
<b>Mandos medios</b>		
Subdirector de área	10.08	13.25
Jefe de departamento	34.17	34.94
Jefe de oficina	18.49	14.76
Jefe de área	17.37	19.58
Supervisor	19.89	17.47
Total	100.00	100.00
<b>Puestos operativos</b>		
Auxiliar	35.71	48.33
Analista	17.56	18.84
Capturista	6.25	7.90
Personal de ventas	25.60	14.29
Asistente	14.88	10.64
Total	100.00	100.00

Los puestos que predominan en el mercado laboral para Administradores y Contadores, se denominan Administrador general o Contador General cuando se trata de niveles directivos; jefes de departamento los relacionados a mandos medios y auxiliares cuando se relacionan con puestos operativos. Fuente: elaboración propia.

Tabla 13: Salario Promedio Mensual Ofrecido a Administradores Y Contadores

Salario promedio mensual (\$)	Total	%
\$1,772 a \$5,316 (1 a 3 veces el SMG)	83	23.78
\$5,316 a \$8,860 (3 a 5 veces el SMG)	182	52.15
\$8,861 a \$10,632 (5 a 6 veces el SMG)	59	16.91
\$10,632 a \$14,176 (6 a 8 veces el SMG)	17	4.87
Más de \$14,176 (más de 8 veces el SMG)	8	2.29
Total	349	100.00

Puede notarse que más del 90% de los salarios ofrecidos a Administradores y Contadores se ubica por debajo de seis salarios mínimos generales, incluso más de tres cuartas partes de éstos están por debajo de cinco salarios, situación que contrasta con los rangos que prevalecen a nivel nacional en donde de acuerdo a la Encuesta Nacional de Ocupación y Empleo de la Secretaría del Trabajo, en México; Administradores y Contadores, en promedio reciben ingresos mensuales que se ubican entre 6 y 8 salarios. Fuente: elaboración propia.

Tabla 16: Prioridades de Capacitación Constante Para Administradores y Contadores

Administradores	Contadores
1. Proceso administrativo	1. Fiscal y paquetes contables
2. Administración de personal	2. Auditoría y Costos
3. Paquetes administrativos	3. Finanzas
4. Mercadotecnia	4. Derecho
5. Finanzas	5. Proceso administrativo
6. Costos y Derecho	6. Proyectos de inversión
7. Comercio electrónico	7. Paquetes administrativos
8. Auditoría	8. Mercadotecnia
9. Fiscal	9. Administración de personal
10. Paquetes contables	10. Comercio electrónico
11. Proyectos de inversión	11. Comercio Internacional
12. Comercio internacional	

En lo referente a capacitación constante, los empresarios demandan como prioridades para administradores: proceso administrativo, administración de personal y manejo de paquetes administrativos; entretanto para contadores las demandas tienen que ver con aspectos fiscales y paquetes contables, auditoría y costos. Fuente: elaboración propia.

Tabla 17: Actitudes y Valores Que Deben Poseer Administradores Y Contadores

Actitudes	Administradores	Contadores	Valores	Ambos
	Ponderación	Ponderación		Ponderación
Persistente	2.60	2.69	Responsable	3.29
Emprendedor	3.25	3.05	Respetuoso	2.38
Disposición para aprender continuamente	2.19	2.36	Tolerante	2.35
Cooperativo	1.86	1.84	Asumir responsabilidades y	1.93

*En lo que se refiere a las actitudes que deben poseer Administradores y Contadores, los empresarios opinan que resulta muy necesario que sean emprendedores y califican como necesario el que sean persistentes y con disposición para aprender continuamente; mientras que en lo relacionado a valores que deben practicar estos profesionistas se ubica como muy necesaria la responsabilidad y se consideran necesarios el respeto y la tolerancia. Fuente: elaboración propia.*

## CONCLUSIONES

Las características de la oferta laboral, así como las demandas y retos que el sector empresarial plantea a los nuevos profesionistas, si bien no son los únicos elementos a considerar para determinar la pertinencia de los programas educativos, resultan un indicador valioso, que combinados con seguimiento de egresados, trayectorias escolares, tendencias disciplinares y perspectivas de desarrollo (por citar algunos) constituyen poderosos mecanismos de diagnóstico, que permiten evaluar la pertinencia de la oferta educativa y en consecuencia las universidades estarán en condiciones de redimensionar su labor y mejorar y actualizar los planes y programas de estudio. Identificar las características del mercado laboral, tiene utilidad si los indicadores que desde ya se atisban, van acompañados de procesos sistémicos de gestión de desarrollo curricular capaces de interpretar e incorporar en planes y programas de estudio, las exigencias planteadas por el entorno profesional en que los egresados habrán de competir; de manera que el currículo, sin descuidar la formación integral y el espíritu crítico que debe caracterizar a los procesos formativos, busquen la necesaria vinculación con las exigencias del sector productivo.

El reto que plantean estos indicadores, estriba en transformarlos en saberes académicos y posteriormente traducirlos a proyectos curriculares; tarea en donde debieran converger esfuerzos multi y transdisciplinarios de todos los involucrados en las tareas formativas de Administradores y Contadores, considerando además que no es tarea fácil responder a las necesidades del sector ocupacional puesto que no existe un acuerdo sobre lo que necesita el mercado de trabajo, sin embargo, debe insistirse en la necesidad de este tipo de estudios y en la inclusión de los resultados que de los mismos deriven, en las agendas de las autoridades que definen las políticas educativas.

# **EL APRENDIZAJE BASADO EN PROBLEMAS ABP, COMO MÉTODO ADECUADO PARA LA APLICACIÓN DE LA PLATAFORMA VIRTUAL EDUC EN LA FACULTAD DE CONTABILIDAD Y ADMINISTRACIÓN DE MANZANILLO**

José Gómez González, Universidad de Colima  
Sergio Felipe López Jiménez, Universidad de Colima  
Sergio Iván Ramírez Cacho, Universidad de Colima

## **RESUMEN**

*El ABP, es un método de enseñanza-aprendizaje que garantiza la instrucción en los estudiantes de distintas carreras. En las asignaturas tributarias de la carrera Contador Público de la Facultad de Contabilidad y Administración de Manzanillo de la Universidad de Colima, ha obtenido gran aceptación después de algunas inconsistencias presentadas al inicio de su aplicación. Este método utiliza problemas reales a resolver entre un grupo de estudiantes de semestres avanzados, quienes con la ayuda del profesor y otros recursos didácticos, como espacios adecuados para grupos numerosos y asistentes del profesor titular de la materia lo que permite obtener un aprendizaje significativo que pueden aplicar en su vida profesional.*

## **LEARNING BASED ON PROBLEMS ABP AS A METHOD FOR THE APPLICATION OF VIRTUAL PLATFORM EDUCATION IN THE FACULTY OF ACCOUNTING AND ADMINISTRATION OF MANZANILLO**

## **ABSTRACT**

*The Based learning PBL problems, as a suitable method for the application of the virtual platform EDUC in the Faculty of accountancy and administration of Manzanillo The PBL, is a method of teaching and learning that ensures instruction in students of different races. In the tax subjects of the career public counter of the Faculty of accounting and administration of Manzanillo of the University of Colima, has won wide acceptance after some inconsistencies presented at the beginning of your application. This method uses problems to solve among a group of students of advanced semesters, who with the help of the teacher and other teaching resources, as adequate space for attendees and numerous groups of Professor holder matter allowing a significant learning that can be applied in your professional life.*

## **INTRODUCCIÓN**

El método Aprendizaje Basado en Problemas (ABP), ha venido a comprobar las áreas de oportunidad que tiene el procedimiento de enseñanza-aprendizaje tradicional que se aplica desde hace varios años en la Universidad de Colima. La utilización empírica de este procedimiento basado en casos prácticos, había ayudado mucho para que el alumno aprendiera lo básico de los temas que su profesor, en una exposición tradicional le enseñaba. Sin embargo, el alumno no obtenía un aprendizaje significativo, ocasionando que su nivel de competencia fuera débil en el transcurso de su carrera, al no tener una práctica consistente. El

ABP no solamente ayuda a obtener un conocimiento seguro, sino garantizado para toda la vida, ya que permite utilizar variantes en las características del contenido programático de la asignatura en cuestión. Estos cambios van desde la utilización de un caso práctico transformado en un problema, que motive a los estudiantes reunidos en equipos, para analizarlo y emitir individualmente las hipótesis correspondientes, para luego, apoyándose en los conocimientos adquiridos en semestres anteriores, poder comprobarlas y obtener las respuestas pertinentes. Una de las modificaciones en la aplicación del ABP con estas asignaturas, es que un mismo problema con datos diferentes para cada equipo de trabajo, puede presentarse las veces que sea necesario.

Este cambio permite eliminar una de las principales características del ABP, que solamente puede aplicarse satisfactoriamente en grupos de 15 a 20 alumnos, pero en grupos de 40 alumnos o más, tendrían que utilizarse asistentes, ya que sin ellos se dificultaría el aprendizaje por la premura del tiempo, porque no basta una clase de 50 minutos, sino más tiempo para encontrar la solución del problema.

### Descripción del Problema

Para nadie es desconocido que el sistema educativo de nuestro país ha sufrido un retroceso. Desde los niveles elementales puede observarse la ausencia de métodos de enseñanza-aprendizaje innovadores, que ayuden tanto al profesor como al alumno a lograr un conocimiento significativo para toda la vida, como sucedía hace algunos años. Actualmente, todavía es común escuchar frases relacionadas con la manera en que se impartían las clases, donde la educación recurría a castigos severos para aquellos alumnos que no cumplían con sus tareas o que no aprendían. Los profesores se comportaban ante los alumnos como unos segundos padres que podían castigar a aquellos que no ponían atención o no servían para estudiar. El reto era lograr que aprendieran a como diera lugar.

En los semestres más recientes, han llegado a nuestra Facultad estudiantes que no están acostumbrados a escribir, no tienen el hábito de la lectura y cuando presentan sus trabajos de investigación o tareas encomendadas, los profesores con muchos años de experiencia, descubren inmediatamente sus deficiencias tanto en la gramática como en la redacción, por sus faltas de ortografía y porque copian y pegan del Internet. Esta actividad resulta molesta para el docente que tiene que revisar trabajos que los alumnos entregan como parte de sus obligaciones para acreditar la materia. Por ejemplo, cuando se les pide que lean en voz alta algún párrafo, pueden percibirse sus deficiencias, inclusive varios de ellos están conscientes de sus fallas y prefieren no participar.

### Objetivo

Demostrar la manera en que a partir de la aplicación del modelo ABP para resolver un problema previamente discutido y asimilado por los alumnos de la carrera de Contador Público, así como el apoyo de la plataforma de educación a distancia EDUC, el maestro titular de la materia y los alumnos con los mejores promedios (asistentes del profesor), es posible que los estudiantes tímidos y el resto del grupo incrementen su participación, mejoren su aprendizaje y expresen su satisfacción por el conocimiento adquirido en las materias tributarias.

### Aplicación del Método Abp

Este método de enseñanza-aprendizaje, al principio se aplicó en forma experimental, de tal manera que en las primeras experiencias con los alumnos que sirvieron de prueba, se presentaron situaciones difíciles como apatía y resistencia para trabajar con ese método, ya que estaban acostumbrados a la metodología tradicional, es decir, asumir un rol pasivo dejando que otros participaran. Hubo quienes expresaron que “ya no era importante acudir a la universidad, nos dedicamos a resolver los problemas en casa y

solamente venimos a presentar el examen y obtener el título profesional”; ya que para ellos el objetivo es pasar el examen para liberar una asignatura y no precisamente para aprender de manera significativa.

*Primer Paso (Planteamiento del Problema):* Durante la aplicación del modelo ABP se trabajó con un grupo de 38 alumnos, los cuales se organizaron en 7 equipos donde los líderes o responsables de cada uno de ellos fueron los estudiantes que tenían los promedios más elevados, los cuales sirvieron como asistentes del profesor, así como de sus compañeros de equipo. El resto de los integrantes quedó distribuido uniformemente según la lista de calificaciones de semestres anteriores.

*segundo paso (solución del problema):* Después de la integración de los equipos, se entregó por escrito a cada alumno el problema a resolver, el cual fue leído en silencio individualmente. Luego, al interior de cada equipo, los estudiantes aclararon sus dudas sobre la redacción del texto, los términos o palabras clave que no comprendían u otros aspectos. Posteriormente, cada equipo presentó por escrito las hipótesis del problema. Durante ese proceso, el profesor coordinó la discusión de la gente y estuvo pendiente de las preguntas planteadas. Más tarde, repartió las preguntas de investigación, los lineamientos a seguir y refirió consejos para aprovechar la bibliografía (aspectos legales y relacionados con el tema) sugerida al inicio de la actividad.

*Tercer Paso (Presentación De La Solución Del Problema):* Antes de llegar a la versión definitiva de la solución del problema, se hicieron presentaciones previas al interior de cada equipo para corregir los errores que pudieran presentarse y evitarlos en la presentación final. Esto ayudó bastante a que en la presentación final hubiera menos fallas. Durante esta etapa, pudo observarse que algunos alumnos aún presentaban deficiencias e incumplimiento en sus trabajos, lo que obligó a los líderes de cada equipo a motivarlos y concientizarlos de que si no realizaban correctamente la actividad, resultarían afectados. A pesar de lo anterior, hubo quienes hicieron caso omiso y siguieron presentando deficiencias en sus trabajos. Por el contrario, quienes sí se comprometieron con el líder del equipo y realizaron un esfuerzo mayor, alcanzaron mejores resultados. Cabe destacar que aún cuando persistió la actitud irresponsable en algunas personas, finalmente pudieron entregar sus respuestas en el lapso acordado, debido a lo extenso del tiempo disponible para entregar sus resultados. Para la presentación final de los proyectos se hizo un sorteo al azar, lo cual fue muy benéfico porque todos los equipos se preocuparon por tener todo listo para el día en que los tocó participar. También se acondicionó el lugar donde se mostraron los proyectos, de tal manera que todos tuvieran una buena visibilidad y pusieran atención.

#### Cuarto Paso (El Examen)

Para medir el aprendizaje adquirido por los alumnos, se aplicaron dos exámenes escritos, uno después de que se presentó el proyecto (aplicando el método tradicional) y otro después de trabajar con el método ABP.

### **RESULTADOS**

Aunque la aplicación de este método en la Facultad de Contabilidad y Administración de Manzanillo aún es incipiente, el ABP garantiza el aprendizaje en los alumnos, pues los resultados obtenidos así lo avalan. Ahora los estudiantes ya empiezan a exigir su aplicación en otras asignaturas y los profesores que aún no lo han aplicado empiezan a convencerse de sus bondades. Otro resultado positivo, es que cuando el alumno revisa el problema, se apropia de él y pide que lo incluyan en la discusión. Durante esa dinámica, también pide que respeten sus opiniones, las cuales en ocasiones no son escuchadas por la premura del tiempo que tienen las asignaturas, ya que debe dedicarse tiempo para nombrar lista de asistencia, para la exposición del profesor y para resolver dudas de los estudiantes.

## CONCLUSIONES

Uno de los motivos principales que dificultan la aplicación del ABP, es que el profesor abandone la clase y deje a los estudiantes a la deriva. Es importante que el docente siempre esté en la clase, ya que el alumno se siente seguro, aunque no pregunte, si el Maestro está disponible para ayudarlo a corregir en sus deficiencias. La dinámica de trabajo del ABP, contribuye para que los alumnos sean más pacientes y se sientan más seguros de lo que están realizando. Su presencia también favorece a que se mantenga la disciplina y control del grupo, lo cual es difícil de lograr en grupos numerosos. De esta manera, los estudiantes trabajen en una forma óptima y el profesor le da continuidad a la impartición de las asignaturas que tiene a su cargo.

# CULTURA ORGANIZACIONAL Y EFECTIVIDAD EN LAS PEQUEÑAS EMPRESAS CONSTRUCTORAS DE PUEBLA, MÉXICO

Rafaela Martínez Méndez, Benemérita Universidad Autónoma de Puebla.

María Antonieta Monserrat Vera Muñoz, Benemérita Universidad Autónoma de Puebla

José Gerardo Serafin Vera Muñoz, Benemérita Universidad Autónoma de Puebla

## RESUMEN

*En la presente investigación se realizó un análisis acerca de los tipos de cultura organizacional y su relación con la efectividad organizacional en las pequeñas empresas constructoras de Puebla. A fin de caracterizar la cultura organizacional como sustento teórico, se analizaron diversos autores relacionados con el tema, para posteriormente considerar algunos aspectos que fueron medidos a través de la aplicación de un cuestionario con escala de Likert, a una muestra de 91 trabajadores administrativos de las mismas. El objetivo de la investigación fue conocer el tipo de cultura organizacional que prevalece en las pequeñas empresas constructoras en Puebla, por lo tanto la pregunta de investigación que se plantea; ¿Qué tipo de cultura organizacional identifica a las pequeñas empresas constructoras de Puebla?: ¿Cuál es la influencia de las mismas en la efectividad organizacional? Entre los resultados se encontró que el modelo de regresión empleado explica un 67.1% de las variaciones en la efectividad, además no existe evidencia estadística de variables omitidas (test de la constante 2.255).*

**PALABRAS CLAVE:** Cultura organizacional, efectividad organizacional, pequeña empresa.

## ORGANIZATIONAL CULTURE AND EFFECTIVENESS IN SMALL BUSINESSES, CONSTRUCTION COMPANIES FROM PUEBLA, MEXICO

### ABSTRAC

*This research is an analysis about the types of organizational culture and its relationship with organizational effectiveness in small construction businesses in Puebla. In order to characterize the organizational culture as a theoretical support, various authors related to the topic were analysed in order to consider some aspects that were measured through a questionnaire based on Likert's scale to 91 administrative workers of the same companies. The objective of the research was to know the type of organizational culture that prevails in the small construction companies in Puebla, therefore, the research questions that arise are; What type of organizational culture is related to small construction businesses in Puebla?: what is their influence in the organizational effectiveness? Among the results, it was found that the regression model used, explains a 67.1% of the variations in effectiveness, however, there is no statistical evidence of omitted variables (2,255 constant test).*

**KEY WORDS:** organizational culture, organizational effectiveness, small business.

## INTRODUCCIÓN

Ante la acelerada ola de cambios, en las últimas décadas, como la apertura comercial entre las naciones, las empresas se encuentran inmersas en un nuevo contexto global en el que se percibe un ambiente organizacional cada vez más complejo y competitivo, con sus consecuencias positivas y negativas, y que de alguna forma obliga a las organizaciones a ser cada vez más efectivas en su intento por dominar los

mercados, o bien, en el peor de los casos evitar la desaparición de los mismos. En este contexto, el presente trabajo de investigación trata sobre la cultura organizacional que caracteriza a las pequeñas empresas constructoras de Puebla; con el objetivo de detectar la influencia que las modalidades culturales ejercen sobre el desempeño organizacional (efectividad) de dichas entidades productivas. Las empresas al igual que los individuos poseen personalidad propia y cada una es diferente de la otra por ésta característica en particular. Las mismas están compuestas por un conjunto de conductas e interacciones en su interior, determinada por los miembros que la integran. A través del conjunto de creencias y valores compartidos por los trabajadores de la empresa, la cultura existe a un alto nivel de abstracción y es la que permite condicionar el comportamiento de la misma, haciendo racional muchas actitudes que unen al elemento humano, estableciendo su modo de pensar, sentir y actuar. En este orden de ideas el conocimiento de la cultura, expresa claramente las actitudes, conductas y valores que han de tener los empleados en su área de trabajo, lo cual constituye la base del desempeño empresarial.

Por lo tanto, la cultura organizacional y la efectividad organizacional son dos variables presentes tanto en las organizaciones como en los individuos que laboran en ellas; en este sentido se plantea la siguiente pregunta central de investigación: ¿Qué tipo de cultura organizacional identifica a las pequeñas empresas constructoras de Puebla?: ¿Cuál es la influencia de las mismas en la efectividad organizacional? La investigación está dividida en tres grandes apartados; en el primero trata de los aspectos teóricos de la cultura organizacional, la efectividad organizacional y la pequeña empresa, en el segundo apartado presenta la metodología utilizada en el estudio empírico, en el tercer apartado se presentan los resultados y las conclusiones, así como la bibliografía utilizada.

## REVISIÓN LITERARIA

### Cultura Organizacional

Dada la complejidad del concepto, de cultura organizacional en el ámbito teórico se presentan dos perspectivas; a) la que concibe la cultura como elemento esencial en la vida organizacional, una variable crítica influyente en el comportamiento empresarial, del mismo modo que podría influir el clima, los conflictos o el liderazgo (algo que se tiene); b) y la que la identifica como esencia organizativa (metáfora original): conformadora de sentido, con la posibilidad de ofrecer una interpretación compartida de la realidad que facilita la habilidad de organizarse. La cultura desde esta óptica, promueve el sentido del orden y la lógica que simbólicamente constituye la organización (algo que se es).

Para fines de esta investigación se adopta el primer enfoque que conceptualiza a la cultura como variable independiente, la cual se importa a la organización, y su presencia se revela en los patrones de actitudes y acciones de los miembros individuales de la organización. La cultura desde esta perspectiva está relacionada con los estudios de administración comparativa que considera que “la cultura es un factor de fondo (casi sinónimo de país), una variable explicativa (Ajiferuke y Boddewyn, 1970) o un amplio marco de referencia (Cummings y Schmidt, 1972), que influye en el desarrollo y fortalecimiento de las creencias”. (Smircich, 1983:8). Desde esta perspectiva la cultura organizacional es sólo una variable más dentro de la dirección de las organizaciones, una variable muy útil: que se puede administrar: Como mecanismo de control, asociado a la lealtad, el compromiso y la cohesión y, por supuesto, tiene una existencia objetiva independiente de la observación humana. Es bajo esta visión que se llega a establecer una relación causal entre la cultura organizacional y el desempeño organizacional, dando paso a múltiples esquemas de estrategia organizacional en países desarrollados (Wilkins y Ouchi, 1983; Schein, 1991 (Gallardo Anahi: 87).

De acuerdo con esta investigación se considera la definición de Schein que enfatiza que la cultura es creada por líderes que manejan artefactos y símbolos a los que los empleados responden en el proceso de modificar su comportamiento. Así como se parte del supuesto de que el directivo-propietario de las

pequeñas empresas es el actor dominante en la conformación de la cultura organizacional, por lo que es necesario conocer la orientación cultural del empresario. Por lo tanto se entiende por cultura organizacional, como el resultado del comportamiento de todos los miembros de la organización tanto formal como informal ante un sistema simbólico, aprendido y transmitido internamente en la organización a fin de enfrentar las demandas del entorno en el cumplimiento de su objetivo organizacional.

### Tipos de Cultura Organizacional

Cameron y Quinn (1999) identifican cuatro grandes tipos de cultura dominantes en las empresas; a) Clan, b) Ad-hoc (Adhocracia), c) Jerarquizada y d) Mercado, la organización tiene características predominantes en cuanto al grado de flexibilidad ante los cambios del entorno de parte de sus miembros; o por el contrario la organización ésta predominantemente orientada a la estabilidad y control frente a los cambios. Las principales características de cada uno de los tipos de cultura dominantes en este modelo son las siguientes:

- a) Clan: La organización es un lugar muy amistoso para trabajar y donde las personas comparten mucho entre sí. Es, en general, como una familia. Los líderes o cabezas de la organización, se consideran mentores y quizás figuras paternas con profunda llegada al interior de la institución. La organización está unida por la lealtad o la tradición.
- b) Ad-Hoc (Adhocracia): Los miembros ven a la organización como un lugar dinámico para trabajar, de espíritu emprendedor y ambiente creativo. Las personas, por ende, tienden a ser creativas y toman riesgos aceptados. Los líderes también son considerados innovadores y tomadores de riesgo. Lo que sostiene a la organización en el tiempo es la experimentación de nuevos productos o servicios, la innovación, el estar en constante crecimiento y adquiriendo nuevos recursos.
- c) Jerarquizada: La organización es un lugar estructurado y formalizado para trabajar. Los procedimientos gobiernan y dicen a las personas qué hacer en el diario quehacer. El interés de los líderes de la organización es ser buenos coordinadores y organizadores, manteniendo una organización cohesionada, donde las reglas y las políticas juegan un rol preponderante.
- d) Mercado: Es una organización orientada a los resultados, cuya mayor preocupación es realizar el trabajo bien hecho. Las personas son competitivas y orientadas a los resultados u objetivos. Los líderes son directivos exigentes y competidores a su vez. (Cameron, 1999:5)

### Efectividad Organizacional

Existen varios modelos opuestos que han servido de base para el análisis de la efectividad organizacional. En ellos los arreglos estructurales, la estrategia, los procesos como la toma de decisiones, el liderazgo, la tecnología, el ambiente organizacional, y la relación con su ambiente externo; están diseñados para que contribuyan a la efectividad organizacional (Hall, 1996). Cada uno de estos modelos utiliza indicadores que permiten mostrar, cuándo una organización es efectiva, éstos pueden ser cuantitativos y cualitativos. Algunos indicadores cuantitativos son: el crecimiento en el número de trabajadores, la ampliación de su mercado, el crecimiento constante de sus ventas, incremento de las utilidades, la ampliación de planta, la modernización e incremento de su equipo de producción y reparto, etcétera.

Refiriéndose a la efectividad; Gibson L. James. et al. (1999), señala que los gerentes y quienes estén interesados en saber si las organizaciones funcionan en forma eficiente pueden centrar su atención sólo en una o en las tres perspectivas sobre eficiencia: efectividad individual, efectividad grupal y efectividad

organizacional. De los cuales el nivel más básico es la efectividad individual el autor pone énfasis en la realización de tareas de empleados específicos o miembros de la empresa. Las tareas a realizar son parte de trabajos o cargos de la empresa. Los gerentes constantemente evalúan la efectividad individual a través de procesos de evaluación de ejecución de tareas con el fin de determinar quiénes deberán recibir aumentos de sueldo, ascensos y otros tipos de reconocimientos que disponga la empresa.

*Pequeña empresa:* La Small Bussiness Administration (SBA), citado por Guillen y Pomar, (2005: 13) define a la pequeña empresa (PE) como: aquella en la que posee el dueño en plena libertad, manejada autónomamente y que no es dominante en la rama que opera. Existen muchas formas de clasificar a las organizaciones para determinar su tamaño, las más común es la que toma como base el número de trabajadores según el Diario Oficial de la Federación publicado el 30 de junio del 2009, Según los censos económicos 2009 realizados por el Instituto de Estadística Geografía e informática, en el Estado de Puebla como se puede observar en la tabla 1, había 664 empresas constructoras de las cuales, el 27.9% son micro empresas, con personal ocupado del 2.4%; el 60.8% son pequeñas, 40.8%; del personal ocupado y el resto 11.3% son medianas y grandes lo que representa el 56.7% del total de personal ocupado. En el Municipio de Puebla la pequeña empresa constructora objeto de este estudio representa el 41.6 % del total, así como, el personal ocupado representa el 30.5%.

Tabla 1: Unidades Económicas del Sector de la Construcción en el Estado de Puebla y el Municipio de Puebla.

Estado de Puebla				Municipio de Puebla				
	Unidades económicas		Personal ocupado			Personal ocupado		
		%		%			%	
Micro empresa	185	27.9	455	2.4	178	43.8	781	6.0
Pequeña empresa	404	60.8	7581	40.8	169	41.6	3980	30.5
Mediana empresa	66	9.9	6233	33.5	38	9.4	2588	19.9
Grande	9	1.4	4317	23.2	21	5.2	5683	43.6
Total	664		18586		406		13032	

*Esta tabla muestra el número de empresas constructoras según tamaño ubicadas en el Estado de Puebla y en el Municipio de Puebla.*

## METODOLOGÍA

En la presente investigación se empleó la investigación documental para sustentar la revisión literaria, conceptualizando la cultura organizacional y la efectividad organizacional. Así como la investigación directa utilizando la encuesta para el estudio empírico Rojas Soriano (2008: 41). La muestra fue de 49 pequeñas empresas de la construcción del Estado de Puebla. Las pequeñas empresas que formaron parte de la muestra fueron seleccionadas en forma aleatoria tomadas del directorio del Sistema de Información Empresarial Mexicano (SIEM). Las encuestas se aplicaron de Mayo-Julio 2012.

## RESULTADOS

Para la obtención de los resultados en esta investigación se utilizó el programa estadístico SPSS, con el cual se calcularon algunas medidas descriptivas como la media y la desviación estándar de las variables cultura organizacional así como de efectividad organizacional, se realizaron diferentes pruebas estadísticas como correlaciones entre las variables, regresiones lineales. Como se puede observar en la Tabla 1, las variables tienen promedios diferentes y una desviación mayor que cero, lo cual demuestra que los encuestados no sólo fueron consistentes entre sí, sino que además tuvieron la suficiente autocritica para ponderar debidamente sus respuestas. Las pequeñas empresas constructoras la cultura predominante es la jerarquizada con una media de 3.75 y una desviación típica de 1.070, en contraste la que presento un promedio menor de 2.15 es la cultura tipo clan con desviación típica de 1.089. La variable efectividad presenta una media de 4.15 y una desviación típica de 0.745.

Tabla 1: Media y Desviación Estándar de las Variables Efectividad y Cultura Organizacional

Variable	Media	Desviación tip.
Efectividad	4.15	0.745
Cultura clan	2.15	1.089
Cultura adhocracia	3.20	1.105
Cultura jerarquizada	3.75	1.070
Cultura de mercado	2.95	0.887

*Esta tabla muestra la media y desviación estándar de las variables tipos de cultura organizacional y efectividad*

Para calcular las correlaciones entre las variables de efectividad y de cultura organizacional, se aplicó el análisis de correlaciones de Pearson, como se observa en la tabla 3, la correlación es positiva entre la efectividad y los tipos de cultura; en la cultura clan 0.10; la cultura adhocracia 0.601; la cultura jerarquizada presenta una correlación de 0.0512; la cultura de mercado con correlación de 0.251. La regresión lineal es una prueba estadística que ayuda definir la relación entre una variable dependiente y ciertas variables independientes. Para esta investigación se aplicó la regresión lineal entre la efectividad y los cuatro tipos de cultura organizacional (clan, adhocracia, jerarquizada y de mercado); Dando como resultado el siguiente modelo de regresión lineal múltiple:

$$\text{Efectividad} = a + b_1 \times X_1 + b_2 \times X_2 + b_3 \times X_3 + b_4 X_4 + E \quad (2)$$

Donde:

$X_1$  = cultura clan,  $X_2$ = cultura adhocracia,  $X_3$ = cultura jerarquizada,  $X_4$ = cultura de mercado

Al sustituir los valores calculados en tabla 2, el modelo de regresión lineal es el siguiente

$$\text{Efectividad} = 1.569 + (-0.080)X_1 + 0.374X_2 + (0.260)X_3 + (0.197)X_4 + 0.549$$

Tabla 2: Coeficientes de Cultura Organizacional

Modelo		Coeficientes no estandarizados		Coeficientes estandarizados	t	Sig.	Error tip. De la estimación
		B	Error tip.	Beta	B	Error tip.	
1	(Constante)	1.569	0.696		2.255	0.040	
	Cultura Clan	-0.080	0.128	-0.117	-0.627	0.540	
	Cultura adhocracia	0.374	0.126	0.554	2.970	0.010	
	Cultura jerarquizada	0.260	0.123	0.374	2.117	0.051	
	Cultura Mercado	0.197	0.146	0.235	1.352	0.197	
							0.549

*Esta tabla muestra los coeficientes de las variables de cultura clan, cultura adhocrática, cultura jerarquizada y cultura mercado.*

De los resultados obtenidos se puede observar que:

- Existe una correlación positiva y significativa entre efectividad, cultura jerarquizada y cultura adhocracia
- Existe una correlación positiva mínima entre efectividad y las culturas clan y de mercado.
- El modelo de regresión empleado explica un 67.1% de las variaciones en la efectividad. Además no existe evidencia estadística de variables omitidas (test de la constante =2.255)
- La cultura clan es una variable que influye de modo negativo en la explicación de la efectividad  $t = -0.627$ .

- e. La cultura adhocracia es una variable que influye de modo positivo en la explicación de la efectividad  $t= 2.970$
- f. La cultura jerarquizada es una variable que influye de modo positivo en la explicación de la efectividad  $t= 2.117$  La cultura de mercado es una variable que influye de modo positivo en la explicación de la efectividad  $t= 1.352$

Por lo tanto, en esta investigación, la efectividad organizacional se explica por los efectos directos de la cultura adhocracia, la cultura jerarquizada y la cultura de mercado y de manera negativa de la cultura clan, como se observa en la figura 3. De tal forma que en las pequeñas empresas constructoras donde predomina la cultura adhocracia, la cultura jerarquizada y la cultura de mercado se espera que tengan una mayor efectividad. Una hipótesis que se pudiera plantear y que sería objeto de otra investigación es que los trabajadores en estos tipos de cultura se sienten más gusto ó bien están más identificados con la empresa. En síntesis, se analizaron las respectivas correlaciones y regresión simple entre las variables, lo que permite afirmar que: los tipos de cultura organizacional tienen relación directa con la efectividad organizacional. Por lo tanto, la efectividad organizacional está relacionada directamente con los tipos de cultura en la tabla 6 ANOVA se encontramos que el valor de  $p<0.007$ , es menor que 0.01, lo cual indica que existe una relación estadísticamente significativa entre las variables, para un nivel de confianza de 99%. De esta manera esta hipótesis se comprueba.

## CONCLUSIONES

Por último a manera de conclusión en este apartado se discuten las principales implicancias teóricas y empíricas derivadas de la presente investigación. Por último a manera de conclusión en este apartado se discuten las principales implicancias teóricas y empíricas derivadas de la presente investigación. El objetivo que se planteó al inicio de la investigación fue describir como son percibidos los tipos de liderazgo en las pequeñas empresas constructoras ubicadas en Puebla, así como su relación con la efectividad organizacional, misma que se alcanzó como puede observarse en el apartado resultado. En cuanto a las implicaciones teóricas, se puede concluir que la cultura organizacional, específicamente la cultura adhocrática y la cultura jerarquizada pueden influir positiva o negativamente sobre la efectividad de las pequeñas empresas constructoras.

Lo cual es consistente con el estado del arte, que indica que la cultura puede generar una ventaja competitiva (por ejemplo, Scholtz, 1987; Ogbanna, 1993, Rodríguez, 2010). Desde el punto de vista práctico es posible sugerir que para que las pequeñas empresas constructoras analizadas, es fundamental crear y sostener una cultura orientada a la cultura adhocrática ello implica que: a) Los miembros deben tener espíritu emprendedor: b) Los líderes son considerados innovadores y tomadores de riesgo: c) La empresa estimula la iniciativa individual. Por último, futuros trabajos podrían retomar esta investigación para abordar elementos que quedan pendientes de analizar, como los tipos de cultura predominantes en el conglomerado de las micro, pequeñas y medianas empresas (mipymes) y en cada sector específico de actividad. O bien, se podría revisar y discutir la relación que se estudio en esta investigación, tomando como unidad de análisis cada sector o el tamaño de las empresas (micro, pequeñas o medianas); así como añadir variables de control, como el género de los líderes

# CALIDAD DEL SECTOR TURÍSTICO EN MÉXICO

Oscar Hugo Pedraza Rendón, Universidad Michoacana de San Nicolás de Hidalgo

María Soledad Ramírez Flores, Universidad Michoacana de San Nicolás de Hidalgo

## RESUMEN

*La globalización de la economía mundial intensifica la competencia entre los destinos turísticos. Ante ello, resulta necesario emprender esfuerzos para mantener la posición privilegiada que actualmente gozan algunos países. Tal es el caso de México, que se distingue por ser uno de los líderes en el mercado del turismo al ocupar la décima posición en recepción de visitantes; pese a esto, aún no ha consolidado la cultura de la calidad y competitividad, como consecuencia muestra una tendencia a rezagarse en el ranking de competitividad de los principales destinos turísticos en el mundo.*

**PALABRAS CLAVE:** Calidad, Liderazgo, Servicios Turísticos

## QUALITY OF TOURISM INDUSTRY IN MEXICO

### ABSTRACT

*The globalization of world economy intensifies the competition between tourist destinations. Given this, it is necessary to make efforts to maintain the privileged position currently enjoyed by some countries. Such is the case of Mexico, which is distinguished as one of the leaders in the global tourism market by occupying the tenth position in the reception of visitors, although this has not yet established a culture of quality and competitiveness, as a result shows a tendency to linger in the competitiveness ranking of the top tourist destinations in the world.*

**JEL:** L83,L15,M10,M16

**KEYWORDS:** Quality, Leadership, Tourism Services

## INTRODUCCIÓN

El término liderazgo hace referencia a la influencia interpersonal ejercida en una situación, que se encuentra dirigida a través del proceso de comunicación humana y la consecución de uno o diversos objetivos específicos (Chiavenato, 1993; Davis, 2003; Gibson, 2003). Sin embargo, existen diversas aplicaciones de este término, independientemente de la categoría de liderazgo que se maneje, no queda duda que para adquirir la posición de líder, se requiere cumplir con características que implican la adopción de estrategias y de planificación; orientadas a la administración eficiente de recursos: productivos, económicos, financieros, institucionales y humanos. Al contar con dichas características se adquiere una posición privilegiada en relación a otras personas, empresas, regiones o países, según sea el caso. No obstante, cuando su calidad es escasa, se pone en riesgo su privilegiada situación.

En este contexto, se expone la calidad de los servicios turísticos mexicanos; así como, las condiciones que influyen de manera positiva y negativa. Esto, con la finalidad de emitir una serie de recomendaciones, para propiciar su incremento. Los aspectos que favorecen el desarrollo turístico en México, se encuentra en su diversidad, que lo ubica en el décimo lugar a nivel mundial y que a su vez, le permite poseer gran potencial y atractivo para el desarrollo de nuevos segmentos de mercado, tal es el caso actividades vinculadas con el turismo de naturaleza —ecoturismo, turismo rural y turismo de aventura—. Sumado a esto, la calidez de su gente y la pasividad, que aún perdura en la mayoría de sus destinos turísticos;

aspectos que son valorados y aprovechados por empresarios nacionales y extranjeros que creen y apuestan en México, como una opción viable de inversión y que paulatinamente buscan incorporar el uso de tecnologías con la finalidad de forjar un desarrollo de la actividad turística. El sector gubernamental ha fortalecido sus acciones en materia de política económica, vislumbrando al sector turístico como pieza clave para el desarrollo humano sustentable del país.

Bajo este contexto, se aprecia que sin duda México, cuenta con gran cantidad de atributos para igualar su indiscutible liderazgo con su competitividad. No obstante, requiere innovar e implementar acciones continuas y precisas, en materia de capacitación, promoción, calidad del servicio, certificación laboral, cultura turística, financiamiento y normatividad ambiental. Lo anterior, ayudará a elevar la calidad de sus servicios y destinos turísticos y sobre todo le permitirá obtener beneficios superiores al promedio con un aprovechamiento sustentable a corto y largo plazo.

### Turismo Mundial en México

El turismo es una de las principales actividades económicas a nivel mundial, según la Organización Mundial de Turismo (OMT) en 2010, se registraron 932 millones de llegadas de turistas y en 2011, se obtuvieron ingresos por 856 millones de dólares (OMT, 2011a). En México la Secretaría de Turismo (sectur, 2010), reporto 91,462 millones de visitantes internacionales e ingresos por 13,289 millones de dólares en 2011, su aportación al Producto Interno Bruto (PIB) en 2008 fue de 576,159.90 millones de pesos, en 2007 se emplearon 1,740,000 personas; además, la inversión privada generada por esta actividad superó lo presupuestado en el sexenio del 2000-2006, paso de 9 mil millones de dólares a 11 mil 852 mil millones de dólares, lo que hizo de esta actividad la más rentable del país.

Por esta razón, desde hace más de diez años este país se ha consolidado como uno de los líderes en turismo mundial; ya sea, por el número de turistas que recibe o por la enorme cantidad de divisas, que esta actividad deja al país. En 2010 México se ubicó a nivel mundial, dentro de los primeros diez países que reciben mayor cantidad de visitantes, siendo el único país de América latina en aparecer como líder mundial. En cuanto a generación de divisas, México, se situó en lugar número quince, en 2007. Esto, pese al inicio de la crisis económica mundial a finales de 2007, México se mantuvo dentro de los primeros veinte lugares en cuanto a ingresos. Del continente Americano sigue siendo Estados Unidos el que ocupa el primer lugar, seguido de Canadá (13° en la clasificación mundial) y en tercer lugar México.

### El Concepto y Medición de la Calidad de los Servicios Turísticos

La concepción de calidad, en cada momento histórico ha tratado de dar una respuesta adecuada a diferentes contextos económicos, industriales, socioculturales o tecnológicos, así como a las distintas demandas del mercado (Alonso, 2006). Varios autores coinciden que fue hasta el siglo XX cuando se empezó a especializar la calidad en diferentes ámbitos, iniciando con la calidad en la elaboración de productos y recientemente en servicios. Independientemente del concepto de calidad, debido a la naturaleza intangible y de múltiples facetas de muchos servicios, puede resultar más difícil evaluar la calidad de un servicio, que la calidad de un bien. Debido a que los clientes a menudo se involucran en la producción del servicio. Las investigaciones más extensas sobre la calidad en los servicios están poderosamente orientadas al usuario. En otras investigaciones identificaron los distintos criterios para la evaluación de la calidad en el servicio que al presentar un alto grado de correlación las conjuntaron en 5 dimensiones: 1. Tangibles (aparición de los elementos físicos), 2. Confiabilidad (un desempeño confiable y preciso), 3. Actitud positiva (prontitud y espíritu servicial), 4. Garantía (competencia, cortesía, credibilidad, seguridad), 5. Empatía (acceso fácil, buenas comunicaciones y comprensión al cliente); cada uno de los aspectos anteriores puede ser evaluado de manera sencilla; ya sea mediante encuestas o entrevistas aplicados al destino que se desee evaluar.

### Instrumentos Para Medir la Calidad en los Servicios Turísticos

Para medir la calidad de los servicios turísticos, se ha implementado: normas, certificados y programas; internacionales, locales y nacionales; entre los cuales se encuentran las normas ISO, las NOM's, entre otros. *Las Normas ISO 9000 como Instrumento para incrementar la Competencia Laboral y la Calidad en los Servicios Turísticos de Empresas Mexicanas* La norma ISO 9000, ha venido a formar en años recientes, la estrategia de algunas empresas que desean insertarse o permanecer en el mercado internacional. Su aplicación en las empresas mexicanas, si bien ha ido en aumento, estimándose un total que oscilaba en 1997, entre las 500 y 1,000 empresas certificadas (industriales, comerciales y de servicios). Mientras que para el año 2000, son unas cinco mil empresas mexicanas las que habrían obtenido la certificación ISO 9000, cifra que representa un incremento del 108.3 %. En el año 2006, las empresas certificadas por esta serie de normas fue de 7, 000, es decir, más del 500 % con respecto a 1997.

Entre las empresas que certifican la calidad, por mencionar algunas se encuentran: BVM: Bureau Veritas Mexicana, CALMECAC: Calidad Mexicana Certificada, IMNC: Instituto Mexicano de Normalización y Certificación, NORMEX: Sociedad Mexicana de Normalización y Certificación, SGS: Société Générale de Surveillance de México, TÜV-M: TÜV América de México, TÜV-RM: TÜV Rheinland de México y UL: UL de México. Para 2006, las empresas mexicanas que contaban con la certificación de la norma ISO-9001, se distribuían de la siguiente forma: 50% pertenecían al sector servicios, 40% al manufacturero, 4% gas y electricidad, 3 % construcción, 2% minería y el resto a otros. Entre las empresas o instituciones que tienen alguna certificación de la serie ISO 9000, están: la Secretaría de Comercio y Fomento Industrial, Air France cargo México, Aduana del aeropuerto internacional de la ciudad de México; certificada con la norma ISO 9002.

#### *Otros Certificados, programas y normas que certifiquen la calidad de los servicios turísticos en México*

Las certificaciones relacionadas a la calidad de los servicios turísticos en México aún son muy limitadas comparadas con la amplia gama de certificaciones que ya se implementan en otros países como es el caso de España, los certificados que hay a nivel nacional añadiendo los de algunas instituciones. Tal vez se carezca de información en cuanto a certificados vigentes, sin embargo es un reflejo del atraso en cuanto a la importancia de las empresas turísticas mexicanas que faltan de garantizar que los servicios que ofrecen son de calidad y de que más instituciones se especialicen para certificar los servicios ya que son parte de las bases fundamentales para la satisfacción de las necesidades del turista (sectur, 2011a).

### Factores Que Favorecen el Desarrollo del Turismo en México

Existen gran número de factores que favorecen el desarrollo del turismo en México, ya sea desde el punto de vista ambiental, económico o social, por ejemplo:

*Sus recursos y atractivos naturales y culturales:* Al contar con muchos sitios de patrimonio de la humanidad y poseer un nivel de participación en numerosas ferias del sector y efectivas campañas de marketing y de marca para atraer turistas. Por tal motivo, ocupo el lugar 25 en cuanto a atractivos naturales.

*La calidez de su gente:* Los mexicanos son ampliamente reconocidos en el mundo por su amabilidad y buen trato hacia los extranjeros, su notable actitud servicial y afamada cordialidad que realmente hace sentir a los visitantes que están entre amigos.

*La pasividad que aún perdura en algunos destinos turísticos:* Si bien es cierto, existen conflictos sociales e inseguridad en México, se debe puntualizar que no es en todo el país; la mayor parte de las regiones y

destinos turísticos ofrecen a los visitantes tranquilidad, privacidad y la seguridad de que realicen sus actividades de ocio y recreación de manera confortable.

*La disposición y ganas de hacer bien las cosas y sacar adelante a México:* Otra distinción del mexicano es su deseo de superación, por lo que constantemente busca mejorar su nivel de vida no solo en el ámbito económico sino también desarrollando y mejorando sus habilidades.

*Tendencia a incorporar el uso de tecnologías en el desarrollo del turismo:* Con la finalidad de ofrecer un servicio de manera más eficiente muchas empresas turísticas adquieren nuevas tecnologías y capacitan a sus empleados en la utilización de las mismas, lo cual beneficia de manera importante a los turistas y a los prestadores de servicios turísticos ya que pueden tener acceso a internet, sistema de localización o GPS, servicios de telecomunicaciones y sistemas de reservaciones.

*Empresarios que creen y apuestan en México:* Existen grandes flujos de inversión privada en México, tanto nacional y extranjera. En el último caso, predomina la inversión de origen estadounidense. No obstante, en años recientes y gracias a la participación y promoción del país en eventos internacionales en distintas partes del mundo ha crecido el interés de empresarios de España, Japón, China, Arabia Saudita entre otros por invertir en el turismo mexicano.

*Un gobierno que vislumbra al sector turístico como pieza clave para el desarrollo económico del país.* En los distintos ámbitos el gobierno mexicano da prioridad al turismo dado los grandes beneficios económicos que genera, no solo al sector de servicios, sino también a todas las actividades del sector primario y secundario, además favorece a la creación de empleos, mayor ingreso de divisas, así como; a la inversión y aumento de comercios.

## METODOLOGÍA

Para la presente investigación se llevó a cabo un análisis documental de diversos autores que hablan sobre calidad y sobre turismo, así como el análisis de datos que proporcionan distintos organismos como lo son: INEGI, Secretaría de Turismo, Secretaría de Economía, Organización Mundial de Turismo. La principal característica de la investigación es que se hizo un consenso de las variables que analizan cada uno de los autores y organismos sobre la calidad y el turismo, y en base a los obtenidos y analizados se llegó a algunos resultados.

## RESULTADOS DE LA INVESTIGACIÓN

Aunque, es evidente la importancia adquirida por la actividad turística en el ámbito mundial y nacional, para que los países puedan conservar su privilegiada posición de líder, tendrán que complementar esa condición con todos los elementos que hacen a una nación competitiva. Desgraciadamente, en el caso de gran número de países, la calidad, es un factor relegado a segundo término. Esta situación, constituye una fuerte amenaza para países que carecen de elementos (físicos, económicos, legales) para ostentar una elevada competitividad. Y que paradójicamente, son enlistados por organismos mundiales, como líderes dentro del turismo mundial al recibir un gran número de divisas y turistas.

Tal es el caso de México, que sin duda cuenta con gran cantidad de atributos para igualar su liderazgo con su competitividad. Asunto que debiera ser prioritario, ya que su desarrollo económico y social dependen en gran medida de esta actividad. Sin embargo, a través de este estudio se detectaron varios elementos que demuestran que existen condiciones que incluyen en la baja competitividad en los servicios turísticos de México, entre estos destacan: la mala calidad de la infraestructura turística, la inseguridad, las incongruencias políticas y la mala aplicación de estrategias turísticas, así como; el exceso de burocracia, la carencia de una cultura de calidad. Con fundamento en la investigación realizada se emiten una serie de recomendaciones:

I. Mejorar la calidad educativa, con materias que ayuden a la formación social y cultural de las personas, con programas o temas de educación cívica; en los cuales se fomente el respeto, la tolerancia y el trabajo en equipo, entre otros.

II. Implementar en mayor medida programas que certifiquen la capacitación del personal, para la mejora de procesos y procedimientos en la prestación de servicios.

III. Generar condiciones que propicien, que más instituciones manejen programas de capacitación para jóvenes y estudiantes enfocados a su futura integración al ámbito laboral.

IV. Se deben otorgar las facilidades, para que más empresas y trabajadores busquen certificarse con calidad.

V. Realizar y fomentar la investigación del fenómeno turístico; así como, originar información veraz y actualizada por parte de las instituciones gubernamentales; añadiendo que se debe mejorar el acceso a la información.

VI. Fomentar la diversificación de las actividades turísticas además de incentivar apoyos a nuevos proyectos en especial los elaborados por habitantes locales, en base a créditos, reducción de trámites y tiempo de respuesta, etc.

VII. Incentivar a empresas socialmente responsables, para fomentar el uso de energías alternativas para el cuidado de los recursos naturales, a través del reciclaje, el correcto manejo de residuos y desechos y, el adecuado tratamiento de aguas residuales, etc.

VIII. Realizar las gestiones necesarias para la modernización y mantenimiento de la infraestructura turística, vías de comunicación, tecnologías y telecomunicaciones.

IX. Difundir con mayor frecuencia, a más sectores de la población y empresas los programas de capacitación que ofrecen instituciones como SECTUR, Secretaría del Trabajo y Asociaciones Turísticas.

X. Revalorizar el recurso humano, tanto el perteneciente a mandos medios y altos, como personal que se encuentra en contacto directo con el turista. Ya que, la realización de una eficiente labor, repercute en la imagen que; la empresa, el destino turístico y país; dan al turista, nos visita.

## EQUIDAD DE GENERO EN EL MERCADO LABORAL

Martha Josefina Castrillón Rois, Universidad de la Guajira

Lorena Esther Gómez Bermúdez, Universidad de la Guajira

Edilberto Rafael Santos Moreno, Universidad de la Guajira

### RESUMEN

*En toda la historia de la humanidad, siempre se ha marcado la diferencia entre hombres y mujeres, anteriormente, las mujeres no tenían ningún derecho en la sociedad, no tenían ni voz ni voto; ya que mediante la distribución del trabajo las tareas quedaron asignadas de tal manera que el hombre se dedicaba a trabajar y las mujeres a los quehaceres del hogar y la familia. Bajo esas condiciones, las mujeres vivieron por muchos años en la misma situación, sin embargo poco a poco el género femenino han tenido la capacidad e inteligencia de abrirse espacios en un mercado laboral altamente competitivo. Es necesario entonces, hablar de Equidad de Género, entendido como la capacidad de ser equitativo, justo, es decir, tener todos la misma oportunidad e igualdad de condiciones, en cualquier actuar de la vida social, económica y política. Desde esa perspectiva, actualmente la desigualdad de género ha pasado a ser una problemática de todos los gobiernos y organismos internacionales, aunque se ha trabajado y se ha avanzado en la igualdad de género, todavía se puede decir, que la desigualdad continua, y con esto se ha estancado el crecimiento y desarrollo social de las mujeres en todo el mundo. El presente trabajo, tiene como objetivo realizar un análisis de los principales indicadores del mercado laboral desagregado por sexo, en el Municipio de Riohacha La Guajira Colombia, está investigación mostro la urgente necesidad de establecer políticas públicas de equidad de género, que propicie la igualdad de oportunidad entre hombres y mujeres*

**PALABRAS CLAVE:** Equidad de género, mercado laboral, empleo, desempleo, subempleo

## EQUALITY OF GENDER IN THE LABOUR MARKET

### ABSTRACT

*In the history of mankind, has always set the difference between men and women, previously, the women had no rights in society, had no voice or vote; Since using the distribution of work tasks were assigned in such a way that the man was devoted to work and women to household chores and family. Under these conditions, the women lived for many years in the same situation, however slowly the gender female have had the ability and intelligence to open spaces in a highly competitive labour market. It is necessary to then talk about equity of gender; understood as the ability to be fair, equitable, that is, have all the same opportunity and equal, in any act of the social, economic and political life. From that perspective, currently inequality of gender has become a problem of all Governments and international organizations, although it has worked and has made progress in equality of gender, can you still say, that inequality continues, and this has stalled growth and social development of women around the world. The present work aims to carry out an analysis of the main indicators of the labour market, disaggregated by sex, in the municipality of Riohacha La Guajira Colombia, is research showed the urgent need to establish public policies for gender equality, which is conducive to equality of opportunity between men and women.*

**KEYWORDS:** Gender equity, labor market, employment, unemployment, and underemployment

## INTRODUCCIÓN

En los últimos años, los diferentes gobiernos han involucrado el tema de equidad de género, como un compromiso para avanzar hacia el empoderamiento de las mujeres en el ámbito económico, político cultural y social en la región y su inclusión en el mercado laboral, sustentándose en la eliminación de todas las formas de discriminación. En Colombia, se han presentado avances significativos, aunque no suficientes, en la igualdad de hombres y mujeres, en aspectos como acceso a la educación, al mercado laboral, participación política, en altos niveles jerárquicos de las organizaciones; en la actualidad la población femenina ha alcanzado importantes logros, que les permiten una mayor participación en las decisiones locales y nacionales. También se han logrado importantes avances legislativos que protegen a las mujeres y promueven la inclusión en el mercado laboral. El presente trabajo pretende realizar un análisis de los principales indicadores del mercado laboral desagregado por sexo, en el Municipio de Riohacha La Guajira Colombia. La investigación es de tipo documental, cuya estrategia metodológica es la recolección de la información, a través de la Gran Encuesta Integrada de Hogares del Departamento Administrativo Nacional de Estadísticas (DANE).

## REVISION LITERARIA

1. El concepto de género, según la Organización Mundial de la Salud (2012), hace referencia a los estereotipos, roles sociales, condición y posición adquirida, comportamientos, actividades y atributos apropiados que cada sociedad en particular construye, asigna a hombres y mujeres. Todos ellos pueden llevar a desigualdades y, a su vez, estas desigualdades pueden causar inequidad entre los derechos de hombres y mujeres, según Palacio (2009). El análisis de género no es sólo el estudio de la mujer, sino que es el análisis de las normas, las creencias, los derechos, las obligaciones y las relaciones que sitúan a hombres y mujeres de forma diferente en el conjunto de la sociedad. Estas relaciones son las que llamamos de género. Dichas relaciones son de poder y sitúan al conjunto de las mujeres en una posición de desigualdad respecto a los hombres, es decir, de subordinación.

2.

3. Según Sojo (2002), esto no quiere decir que cada mujer esté subordinada a un hombre en concreto, sino que la organización social de las relaciones de género sitúa al conjunto de las mujeres en una posición de inferioridad respecto al conjunto de los hombres; así mismo, ellas históricamente se han dedicado a desempeñar el papel de ama de casa en el hogar y la dirección de la familia. Esta forma de vida ha pasado de generación en generación; sin embargo, las mujeres a través del tiempo, han demostrado tener amplias capacidades para actuar eficientemente en el ámbito económico, político y social, alcanzando excelentes resultados. Muchas son las contribuciones de la mujer al progreso de una País y específicamente; la mujer, ha alcanzado espacios importantes en la sociedad; luchando contra prejuicios y oposiciones, se ha destacado en diferentes campos, logrando espacios importantes en cargos de elección popular, promoviendo sus derechos en las constituciones políticas de muchos países como son: igualdad de oportunidades, libertad, entre otros.

4.

En este sentido, a pesar de los grandes cambios ocurridos en el rol de la mujer en la sociedad, todavía continua haciéndose cargo de las tareas del hogar y del cuidado de la familia, convirtiéndose esto en el factor de mayor peso que incide en la desigualdad entre mujeres y hombres, disminuyendo las posibilidades de la población femenina a acceder al mercado laboral. PNUD (2012). Las mujeres tienen más dificultades para vincularse laboralmente, lo que evidencia su mayor participación en la economía informal, dobles jornadas de trabajos, baja remuneración, escasa representación política, invisibilidad social, agravándose así la situación de marginamiento y discriminación de la mujer, frente a esta problemática, las mujeres se han organizado para presionar a los Gobiernos, con el fin de que se reconozcan sus derechos, buscando la eliminación de discriminación que conlleven a la igualdad de hombres y mujeres. De esta forma, se ha logrado que organismos internacionales establezcan políticas estructurales sobre equidad de género y reoriente papel de la mujer dentro de la sociedad.

En este sentido, El Banco Mundial, buscando cerrar la brecha de desigualdad en el acceso hacia las oportunidades económicas, fomentando mayor participación de las mujeres en la política y en los niveles más altos de los sectores públicos y privados; la Organización Internacional del Trabajo (OIT), busca promover la igualdad de oportunidades para que las mujeres y hombres accedan a un trabajo decente (trabajo bien remunerado, productivo y realizado en condiciones de libertad, equidad, seguridad y dignidad humana); La Organización de las Naciones Unidas (ONU Mujeres), impulsando políticas de violencia contra las mujeres, paz y seguridad, liderazgo y participación y empoderamiento económico de las mujeres; El Programa de las Naciones Unidas para el Desarrollo(PNUD), impulsando la transversalización de género, es decir, el proceso de las implicaciones para hombres y mujeres en cualquier acción planeada, incluyendo la legislación, políticas y programas, en todas las áreas y niveles y El Empoderamiento de las mujeres; La Comisión Económica para América Latina (CEPAL), promueve la implementación de políticas públicas para la igualdad de género:

El Empoderamiento de las mujeres en las regiones y el países; entre otras instituciones u organizaciones que promueven en todos los países la igualdad de género. En este sentido, los países han aprobado y sancionado leyes que buscan promover la equidad de género en el ámbito político, cultural, económico y social. En Colombia, “aunque en las últimas décadas se han obtenido avances, algunos indicadores muestran todavía la persistencia de graves discriminaciones que influyen negativamente sobre el desarrollo pleno de las mujeres y que se reflejan, entre otras cosas, en altos índices de violencia basada en género –VBG–, serias desigualdades en el mercado laboral y baja participación en los cargos de poder y de toma de decisiones. En este contexto, potenciar el papel de la mujer en la sociedad y atender sus intereses estratégicos, y necesidades, se configura en un tema de justicia, de reconocimiento, en pro de cumplir los compromisos del Estado Colombiano con las mujeres y con la comunidad internacional ratificados en convenios y en tratados internacionales en el camino de lograr la igualdad de género y la equidad social. Para plantear políticas publicas con equidad de genero, es necesario utilizar indicadores del mercado laboral, Estos indicadores, permiten visibilizar, cuantificar, y conocer la problemática de desigualdad de género. PNUD (2012)

#### Mercado Laboral Desde la Perspectiva de Género, en el Municipio de Riohacha, la Guajira Colombia

A continuación, se realiza un análisis detallado de las principales variables que determinan el comportamiento del mercado laboral, desagregados por sexo; tales como la tasa global de participación (TGP), tasa de ocupación, tasa de desempleo, los indicadores se analizaran para el municipio de Riohacha, La Guajira, Colombia para el periodo comprendido entre el año 2008 a 2012, (teniendo en cuenta que el 2012 es un promedio de nueve meses: enero – septiembre), así mismo se realiza un análisis para el año 2011; la información fue extraída de las Bases de Datos de la Gran Encuesta Integrada de Hogares del Departamento Nacional de Estadísticas de Colombia (DANE).

Al analizar la estructura de la población en la fuerza de trabajo, en el municipio de Riohacha, se observo que para el año 2011, la población total fue de 186.731 habitantes, de los cuales 59.845 hombres y 68.224 mujeres, se encontraban en edad de trabajar (PET); así mismo, se encontro que 45.108 hombres y 38.469 mujeres, constituían la población económicamente activa (PEA); en el mismo sentido, 14.737 hombres y 29.755 mujeres constituían la población económicamente inactiva (PEI). Analizando la PEA, se encontró una población de desocupados (PD) de 2.628 hombres y 6.402 mujeres, así mismo, se observo una población total de ocupados(PO) de 42.480 hombres y 32.067 mujeres. Ahora bien, del total de ocupados, 23.128 hombres y 16.860 mujeres se encontraban plenamente ocupados ; por ultimo, la poblacion subempleada, estaba constituida por 19.352 hombres y 15.207 mujeres.

### Principales Indicadores Laborales del Municipio de Riohacha, Por Sexo. Tasa Global de Participacion

En la Figura 1 se muestra un aumento gradual sostenible en la TGP, al pasar de 58.0% en el 2008 a 67.3% en el 2012, así mismo refleja un comportamiento desfavorable hacia las mujeres, lo cual se traduce en tasas de participación más bajas que las de los hombres, esas diferencias entre mujeres y hombres, se presenta a pesar de los múltiples esfuerzos de la mujer en incorporarse al mercado laboral. Fuente: Elaboración propia, GEIH (DANE).

Figura 1: Tasa Global de Participación. Riohacha, la Guajira. 2008- 2012\*

Para un análisis más específico de estas diferencias, se calcula la Brecha de Género en la Tasa Global de Participación en el periodo de 2008 – 2012.

Tabla 1: Evolución de la Brecha De Género en la Tasa de Global de Participación, en Riohacha, Años 2008-2012

Tasa Global de Participación (%)	2008	2009	2010	2011	2012*
Mujeres	48.6	56.2	58.6	56.4	59.7
Hombres	68.7	74.1	74.6	75.4	75.9
Brecha de Genero	-20.1	-17.9	-16.0	-19.0	-16.2

En la tabla 1 se observa una brecha de género negativa en la TGP en los años 2008-2012, lo cual indica que aunque la incorporación de las mujeres al mercado de trabajo ha ido en aumento, las diferencias con respecto a los hombres se mantienen; según el Observatorio de Genero de América Latina y el Caribe (2011), esta situación podría ser el reflejo de la División social del trabajo que determino que las mujeres estuviera a cargo de la reproducción, y los hombres se encargaran de las tareas productivas. Fuente: Elaboración propia, GEIH (DANE).

Figura 2: Evolución de la Brecha de Género en la Tasa de Global de Participación, en Riohacha, Años 2008-2012

En la Figura 2 se observa una brecha de género negativa en la tasa global de participación en los años 2008-2012, así mismo refleja mayor participación de los hombres con respecto a las mujeres. Fuente: Elaboración propia, GEIH (DANE).

Características De Las Tasa Global De Participación, Por Sexo Y Nivel Educativo, En El Municipio De Riohacha. En la Figura 3 La TGP por sexo y nivel educativo, para el año 2011, indica que la participación de los hombres es mayor en todos los niveles de educación, superan a las mujeres, así mismo, se puede decir que la participación laboral femenina se incrementa a medida que aumenta su nivel de estudio. Esto es coherente con lo que expresa Novales (1989), el cual señala que la educación es el factor principal a la hora de aumentar la participación laboral femenina. Fuente: Elaboración propia, GEIH (DANE).

Figura 3 : Tasa Global de Participación Por Sexo y Nivel Educativo, en Riohacha Año 2011

Con el propósito de establecer la posición relativa de la actividad femenina, se calcula el índice de participación relativa, dicho índice se obtiene mediante el cociente entre la tasa de participación global masculina y la tasa de participación global femenina. En la Tabla 2 al analizar el índice de participación relativa, se observa que en todos los niveles de estudios, la participación masculina en el mercado laboral, supera a las mujeres, por ejemplo; en el nivel de educación superior, se observa que la participación de los hombres es 1.1 veces mayor. Fuente: Elaboración propia, GEIH (DANE).

Tabla 2: Indice de Participación Relativa Por Sexo y Nivel Educativo, en Ríoacha Año 2011

Año 2011	HOMBRES (H)	MUJERES (M)	INDICE DE PARTICIPACION RELATIVA: (H/M)
Sin estudios	71.5	45.2	1.58
Primaria	76.5	50.5	1.51
Secundaria	71.4	46.8	1.53
Superior	83.0	76.0	1.1

Características De La Poblacion Ocupada, Por Sexo, En El Municipio De Riohacha. Al analizar la Figura 4 la tasa de ocupación por sexo, en el municipio de Riohacha, en el periodo comprendido entre los años 2008- 2012, persisten grandes diferencias entre las tasa de ocupación masculina y femenina, que dificultan una incorporación al mercado laboral en condiciones igualitarias. Fuente: Elaboración propia, GEIH (DANE).

Figura 4 : Tasa de Ocupación Por Sexo, en Riohacha, Años 2008 – 2012\*

A continuación se Analiza la evolución de la Brecha de Genero en la Tasa de Ocupación en el periodos de 2008 – 2012, para el municipio de Riohacha.

Tabla 3: Evolución de la Brecha De Genero en la Tasa de Ocupación, en Riohacha, Años 2008-2012

Tasa de Ocupación (%)	2008	2009	2010	2011	2012 <sup>+</sup>
Mujeres	37.0	45.1	48.7	47.0	49.4
Hombres	59.7	66.8	68.6	71.0	68.3
Brecha de Genero	-22.7	-21.7	-19.9	-24	-18.9

En la Tabla 3 se observa una Brecha de Genero Negativa, en los años de estudio, lo que deja entrever grandes diferencias en la tasa de ocupación; se observa que la tasa de ocupación masculina, supera a la

femenina en promedio en 21.4 puntos porcentuales, lo que indica que aunque la participación de las mujeres en el mercado de trabajo ha aumentado la población ocupada está compuesta principalmente por hombres. Fuente: Elaboración propia, GEIH (DANE).

Figura 5 : Evolución de la Brecha de Género en la Tasa de Ocupación, en Riohacha, Años 2008 – 2012\*

Al analizar la Figura 5 nos arrojó una brecha es negativa, los hombres se encuentra plenamente ocupados, aunque las mujeres aunque han aumentado su participación en los últimos años, esto no ha disminuido sus actividades y quehaceres en el hogar. Fuente: Elaboración Propia a partir de la GEIH. DANE.

#### Ocupados Por Sexo Según Ingresos, en el Municipio de Riohacha.

En la Figura 6 en los años 2008-2012, en Riohacha, los ingresos laborales de la población ocupada femenina es menor que la masculina; el salario promedio mensual de los hombres asciende a 777.170 pesos, mientras que las mujeres perciben un salario promedio mensual de 595.014 pesos; por lo tanto, el ingreso medio mensual de las mujeres es un 24.4% inferior al de los hombres. Fuente: Elaboración propia, GEIH (DANE).

Figura 6 : Ocupados Por Sexo Según Ingresos. 2008-2012.

A continuación se analiza la evolución de la Brecha de Género de los ocupados por sexo según Ingresos, en 2008-2012.

Tabla 4: Evolución de la Brecha de Género en los Ocupados Por Sexo Según Ingresos, en Riohacha, Años 2008-2012

Ingreso Promedio	2008	2009	2010	2011	2012
Mujeres	570.873	544.716	596.784	651.715	610.980
Hombres	657.213	707.399	790.210	883.163	847.815
Brecha de Género	-86.340	-162.683	-193.426	-231.448	-236.835

En la tabla 4 se observa una brecha de género Negativa en el ingreso promedio percibido en el periodo 2008-2012, presenta significativas diferencias a favor de la población masculina aumentando cada año, esta diferencia es debido a que los hombres se encuentran plenamente ocupados en todos los sectores económico, a excepción de los servicios sociales comunales y personales, en donde las mujeres tienen mayor participación, en los cargos de empleadas del servicio doméstica, en la que perciben bajos niveles de ingresos; tal como lo señala Anker (1998). Fuente: Elaboración propia, GEIH (DANE).

Figura 7: Evolución de la Brecha de Género en los Ocupados Por Sexo Según Ingresos, En Riohacha, en los Años 2008-2012

En la Figura 7 se observa una brecha negativa, en donde los hombres tienen mayor participación, en lo que respecta a los ingresos de las mujeres son muy bajos, lo cual ni siquiera aparecen en la Figura analizada. Fuente: Elaboración propia, GEIH (DANE).

#### Ocupadas Por Sexo Según Nivel Educativo, en el Municipio De Riohacha.

Figura 8 : Ocupados Por Sexo Según Nivel Educativo, en Río hacha, Año 2011

En la Figura 8 para el año 2011, la distribución de los ocupados por sexo según nivel educativo, muestra un alto número de hombres ocupados con bajo nivel de estudios (primarios y secundarios); la actividad laboral femenina aumenta a medida que incrementa su nivel de estudios. Se observa que en el nivel de educación superior, en el año 2011, existen más mujeres ocupadas con estudio superior que hombres. Fuente: Elaboración propia, GEIH (DANE).

#### Ocupados Por Sexo Según Rama de Actividad, en el Municipio De Riohacha.

En la Figura 9 se aprecia que la mayor concentración del empleo femenino es en servicios comunales sociales y personales (empleada doméstica), la mayor parte de los hombres se encuentra en comercio hoteles y restaurantes, transporte y construcción en este último se observa que existen sectores masculinizados. Fuente: Elaboración propia, GEIH (DANE).

Figura 9 : Ocupados Por Sexo Según Rama de Actividad, en Río hacha, Año 2011

Tabla 5 : Indice de Feminizacion en Poblacion Ocupada Por Ramas de Actividad, en Río hacha, Año 2011

Rama de Actividad	Mujer (M)	Hombre (H)	Índice de Feminización (M/H)
Servicios comunales, sociales y personales	13.284	5.683	2.33
Actividades Inmobiliarias	1.279	1923	0.67
Transporte, almacenamiento y comunicaciones	1.675	9.493	0.18
Comercio, Hoteles y Restaurantes	10.445	11.933	0.87
Construcción	113	7.272	0.015
Industria Manufacturera	2.531	4.477	1.77
Otras ramas	804	3.637	0.22

En la tabla 5 encontramos el índice de feminización que muestra, una población femenina que se encuentra en la mayoría de los sectores económicos, principalmente en la los servicios comunales, sociales y personales (2.33), seguida por la industria manufacturera (1.77). Los de menor participación de las mujeres es 0.015 en el sector de la construcción, seguido por el transporte, almacenamiento y comunicaciones con el 0.18. Fuente: Elaboración propia, GEIH (DANE)

### Características de la Tasa y Población Desocupada, Por Sexo, en el Municipio de Riohacha.

En la Figura 10 para los años 2008- 2011, se observa una la tasa desocupación de hombres y mujeres tuvo un comportamiento decreciente; la tasa desocupación femenina pasó de tener 23.9 % en el 2008 a 16.6 % en el 2011, al igual que los hombres, la tasa de desocupación paso de 13.1 % en el 2008 al 5.8% en 2011; lo anterior refleja, que la tasa global de participación en el mercado de trabajo de la población femenina, con el paso de los años, ha aumentado, coadyuvando a su plena realización y desarrollo personal. Fuente: Elaboración propia, GEIH (DANE)

Figura 10 : Desocupados Por Sexo En Riohacha, Años 2008 – 2011

A continuación se analiza la evolución de la Brecha de Género de la tasa de desocupación por sexo, en 2008-2012.

Tabla 6: Evolución de la Brecha de Género en la Tasa de Desocupación, en Riohacha, Años 2008-2012

Tasa Desocupación (%)	2008	2009	2010	2011	2012
Mujeres	23.9	19.7	16.9	16.6	17.2
Hombres	13.1	9.9	7.9	5.8	8.6
Brecha de Género	10.8	9.8	9.0	10.8	8.6

En la Tabla 6 se aprecia una Brecha de Género Positiva, en donde, los hombres tienen mayor participación en el mercado de trabajo; aunque los indicadores de desempleo para hombre y mujeres han disminuido, no necesariamente implica una mayor inserción del sexo femenino en el mercado laboral.

### METODOLOGIA

Esta investigación es de tipo documental, ya que la información se obtuvo a través de la Gran Encuesta Integrada de Hogares (GEIH - DANE), para su procesamiento se utilizó el software estadístico STATA. Se realizó un análisis de las principales variables del mercado laboral del municipio de Riohacha, La Guajira Colombia, para los años 2008 al 2012; teniendo en cuenta que el 2012 incluye un promedio de los 9 meses de enero a septiembre, tales indicadores son: tasa global de participación TGP por nivel educativo; tasa de ocupación, ocupados según ingresos, ocupados por nivel educativo, ocupados por rama de actividad, tasa de desocupados.

Figura 11: Evolución de la Brecha de Género en la Tasa de Desocupación, en Riohacha, Años 2008-2012

En la figura 11 en el municipio de Riohacha, existe muchas más mujeres desocupadas que hombres Fuente: Elaboración propia, GEIH (DANE).

## CONCLUSIONES

En cumplimiento a los mandatos legales Internacionales, el Gobierno Colombiano se ha incorporado dentro del plan de desarrollo nacional, departamental y municipal, el tema de equidad de género, y específicamente la inclusión de la mujer en el mercado laboral, para esto se trazaron políticas, planes, programas y proyectos, para disminuir la desigualdad entre hombres y mujeres. En este estudio, se reconoce que en Colombia, específicamente en el municipio de Riohacha, persisten grandes diferencias en las tasas de ocupación masculina y femenina, que dificultan una incorporación en el mercado laboral en condiciones igualitarias, debido a que existe concepciones machista y patriarcales, en donde se discriminan y no se reconocen los derechos fundamentales de la mujer, continúan las brechas salariales, ya que los ingresos de la población femenina son menores que los masculinos; aunque la población femenina ocupada se encuentra en menor proporción en todos los sectores de la actividad económica, la mayor representación de las mujeres se encuentra en el sector de los servicios comunales, sociales y personales con una mayor concentración en los servicios domésticos con unos salarios muy bajos. Aunque, la tasa global de participación en el mercado laboral de la población femenina, con el paso de los años ha aumentado, todavía es menor que la participación masculina.

## RESUMEN

*La insatisfacción laboral es un fenómeno que se ha abordado desde diversos enfoques: el de la Administración, el del Marketing, y por supuesto el de la Psicología. Dentro de este enfoque, se ha estudiado desde hace varios años, encontrando que se relaciona con una multitud de fenómenos como son, el autoestima del trabajador, su relación con sus superiores, relación con sus colegas de trabajo, remuneración y beneficios, horarios de trabajo, entre otros. Una de las áreas con las que se relaciona la insatisfacción laboral es la actitud de compromiso hacia el trabajo, que se refiere a que tanto interés muestra el trabajador con su empleo, y que tanto se involucra en el mismo. La insatisfacción laboral es un estado de ánimo negativo para los empleados, quienes desarrollan un papel laboral muy importante dentro de la organización. (Aparicio Pérez 2005). En este caso se investigara la insatisfacción laboral y la actitud de compromiso en el trabajo, a través de un cuestionario, que será de utilidad para analizar los factores de mayor incidencia que intervienen en la posible insatisfacción laboral, efectuar las recomendaciones necesarias para mejorar el ambiente, compromiso con la empresa, las relaciones personales y las condiciones de trabajo.*

**PALABRAS CLAVE:** Análisis, satisfacción e insatisfacción laboral, ambiente, relaciones personales, actitud, compromiso, trabajo

## ANALYSIS OF THE DISSATISFACTION LABOURAL IN A MEDIUM-SIZED ENTERPRISE SECTOR SERVICES, OF PIEDRAS NEGRAS, COAHUILA

### ABSTRACT

*The job dissatisfaction is a phenomenon that has been tackled from different perspectives: Administration, the Marketing, and of course the focus of Psychology, has been studied for several years finding that it relates a multitude of phenomena as they are, the self-esteem of the worker, his relationship with his superiors, relationship with your co-workers, pay and benefits, working hours, among others. One of the areas that is related to job dissatisfaction is the attitude of commitment towards work, which refers to both interest shows the worker with their employment, and that both engages in the same. The dissatisfaction labour is a negative mood for employees, who develop a very important role within the organization. (Aparicio Pérez 2005). In this case investigation into dissatisfaction and the attitude of commitment at work, through a questionnaire, which will be useful to analyze the factors of higher incidence influencing the possible labor dissatisfaction, make the necessary recommendations to improve the environment, commitment to the company, personal relationships and working conditions.*

**KEYWORDS:** Analysis, Satisfaction And Dissatisfaction Labour, Environment, Relationships, Attitude, Commitment, Work.

## INTRODUCCIÓN

La presente investigación, se realiza para poder aplicar en la práctica uno de los tantos conceptos que involucran al desarrollo organizacional: en este caso la insatisfacción en el trabajo y las repercusiones que puede tener para la organización en general, lo cual puede ser muy beneficioso al entender la relación insatisfacción-productividad en los trabajadores. El recurso más importante de la empresa es precisamente el recurso humano, de ahí parte la importancia de mantener un clima laboral bueno para que el empleado sea motivado y trabaje con mayor eficacia. Mediante el estudio de la insatisfacción, los directivos de la empresa podrán saber los efectos que producen las políticas, normas, procedimientos y disposiciones generales de la organización en el personal.

La eliminación de las fuentes de insatisfacción conlleva en cierta medida a un mejor rendimiento del trabajador, reflejado en una actitud positiva frente a la organización. La insatisfacción en el trabajo puede ser causada por diferentes razones que se presentan dentro de la organización y que provocan incomodidad al trabajador para poder realizar con eficiencia su trabajo. Que los empleados sean bien recompensados a través de sus salarios y sueldo acorde obviamente a las expectativas de cada uno. Que las condiciones del trabajo sean adecuadas, no peligrosas o incómodas lo cual hace mejor su desempeño. Además los empleados buscan dentro del trabajo que su jefe inmediato sea amigable comprensible y que los escuche cuando sea necesario.

La insatisfacción en el trabajo se refleja en la salida inminente de los empleados o que expresen situaciones que ayuden a mejorar las relaciones obrero-empresa, también de forma leal esperar que las condiciones mejoren. En el caso del presente trabajo, se estudiará a través de un análisis de la satisfacción laboral en una mediana empresa del sector servicios en Piedras Negras Coahuila. La cual cuenta con 31 trabajadores y para lo cual, se tomó una muestra de 31 trabajadores para la prueba de hipótesis. El objetivo general es comprobar por medio de un análisis, la repercusión negativa que tiene la insatisfacción laboral para la eficiencia de la organización.

## REVISIÓN DE LITERATURA

Podemos definir la insatisfacción laboral como una respuesta negativa del trabajador hacia su propio trabajo. Esta respuesta negativa o rechazo dependerá, en gran medida, de las condiciones laborales y de la personalidad de cada persona y hace referencia al estado de intranquilidad, de ansiedad o incluso depresivo al que puede llegar una persona que se encuentra insatisfecha laboralmente. La insatisfacción laboral puede afectar al rendimiento de los trabajadores y a la productividad de la empresa, por lo que las empresas u organizaciones deben tratar que sus empleados se encuentren satisfechos profesionalmente. Para ello, han de procurar que trabajen en un entorno físico adecuado y con unas condiciones favorables. Sitios ruidosos o lugares calurosos y congestionados o mal ventilados perjudican al trabajador y afectan negativamente a su rendimiento. Otra consecuencia de la insatisfacción es la desmotivación o falta de interés por el trabajo, que puede llegar a producir en el trabajador tal apatía, que incumpla con sus funciones de forma habitual. Por otro lado, esta situación, sea por el motivo que sea, puede llegar a producir ansiedad o estrés y, en caso extremo, el trabajador puede llegar a desarrollar una depresión. (Sargiotti, 2011) La insatisfacción laboral está íntimamente relacionada a una serie de elementos que influyen en el sentimiento de bienestar al realizar una tarea.

Por un lado, influyen en la satisfacción factores organizacionales como la retribución monetaria (salario), los aumentos, las promociones internas (y reconocimientos por la labor) y los beneficios (seguro médico, vacaciones, descuentos especiales en productos de la compañía, etc.). Asimismo, la *sensación de equidad*; es decir, la percepción de recibir igual salario ante iguales tareas, influye directamente en la motivación hacia el trabajo. Por otro lado, la satisfacción se encuentra íntimamente vinculada al tipo de tarea realizada. Por ejemplo, las tareas monótonas plantean serios problemas en cuanto a la *satisfacción*

*intrínseca* por el trabajo; es decir, la satisfacción como realización personal, como aporte a la humanidad, etc. Diferente es el caso para aquellas tareas que requieren de una participación más activa y creativa por parte del trabajador. Una persona puede sentirse insatisfecha porque no sabe lo que quiere y tal vez nunca lo haya sabido, de modo que ha aceptado el primer trabajo que ha salido a su paso. Si una persona no sabe lo que quiere, difícilmente se va a sentir satisfecha en el trabajo que realiza. (Aparicio Perez, 2005, pág. 1). Para muchas personas el trabajo aporta sentido a sus vidas, aumenta su autoestima, sienten que su labor es útil a los demás y encuentran un reconocimiento social. A través del trabajo, también se relacionan con otras personas y tienen la oportunidad de hacer amigos.

En algunos casos, supone una fuente de satisfacciones donde las personas encuentran cubiertas sus expectativas o deseos de prosperar y a través del cual logran independencia económica. Sin embargo, en otros muchos casos, es una fuente continua de insatisfacciones donde los trabajadores ven mermadas sus posibilidades de expansión o sus deseos profesionales, se encuentran ante un horario incompatible con la vida familiar, unas condiciones desfavorables o un trato hostil por compañeros o jefes. Es decir, una serie de aspectos o características que hace que las personas se sientan insatisfechas profesionalmente. Podríamos decir entonces que, ante *menor* presencia de factores de satisfacción extrínsecos (salario, beneficios) y/o intrínsecos, *mayor* presencia de insatisfacción laboral. (Buelga Otero, 1998).

La insatisfacción laboral provoca tensiones en el puesto de trabajo, reduce la productividad y dificulta la capacidad de innovar. Además, los trabajadores insatisfechos con su puesto de trabajo no están comprometidos con la empresa, por lo que esperan una oferta mejor para abandonarla, con el riesgo de pérdida de talento y conocimiento que esto supone. Con estos parámetros es evidente que los entornos con mayor insatisfacción laboral están peor posicionados para mejorar su competitividad y, como consecuencia, para enfrentar la salida de la crisis. Entre los factores que producen este desagrado y desmotivación está el volumen de trabajo. Los ajustes de plantilla en las compañías han provocado que aumente la carga de trabajo o que los empleados tengan que realizar multitareas, algunas para las cuales no están preparados. En el otro lado, también hay muchos trabajadores que han tenido que reducir sus expectativas profesionales y acogerse a un puesto de trabajo por debajo de su formación. Esta sobre cualificación provoca desidia o desinterés y afecta a la productividad de los empleados.

Otras causas de malestar son la baja remuneración y la imposibilidad de crecer profesionalmente en la empresa, ya que el empleado deduce que no “tiene futuro en la compañía”. Unido a este estancamiento profesional está también la falta de reconocimiento, que en muchos casos provoca que el trabajador sienta que su trabajo no es valorado y por tanto reduce su rendimiento. Todas estas causas llevan a un panorama complejo para las empresas. Por un lado, deben enfrentarse a un entorno cada vez más competitivo, donde la reducción de costes y el aumento de productividad son claves para asegurar la continuidad del negocio. Por otro lado, y lidiando con dicha situación, las compañías deben retener el talento de sus organizaciones, apoyar a aquellos trabajadores más comprometidos con la empresa y con mayor capacidad de innovación en su puesto de trabajo.

En la lista de causas de la insatisfacción laboral también aparecen las órdenes contradictorias, los problemas para compatibilizar aspectos prioritarios de la vida del empleado con el trabajo y la diferencia entre las expectativas que se tenía del trabajo y las que realmente ofrece. Además, actualmente, comienza a pesar también los valores éticos de la empresa. Si no se comparten se puede sentir ajeno a todo lo que pasa alrededor. Por eso, en ese punto, Hamas insiste en que el liderazgo efectivo es el que transmite valores. "El líder tiene que corporizar cierto valores y transmitirlos. Pero su actitud y acción tienen que ser creíbles sino tiene un efecto peor". (Marquez Perez, 2002). La mayor parte de la investigación en Comportamiento Organizacional se ha interesado en tres actitudes (S. Robbins, 1998): compromiso con el trabajo, satisfacción laboral y compromiso organizacional. Según Robbins, el compromiso organizacional es un mejor pronosticador de la rotación que la satisfacción en el trabajo, ya que un empleado podría estar insatisfecho con su trabajo en particular y creer que es una condición pasajera y no estar insatisfecho con

la organización. Puede considerarse que los resultados obtenidos por los empleados al asumir ciertas conductas en el trabajo son las razones por las cuales trabajan, ya que estos determinan la satisfacción de ciertas necesidades. Normalmente, se asocian a cualquier papel de trabajo cinco resultados específicos: Salario, Consumo de energía física y mental, Producción de bienes y servicios, Interacción social y el Estatus social. Es importante que los empleados sepan que la organización se preocupa por ellos, es decir, que están obteniendo algo más allá de lo material por el tiempo y esfuerzo que invierten. Esto se comunica principalmente a través de cosas como el trato de los superiores y el tipo de beneficios que los empleados obtienen además de otros mensajes sutiles.

Si las personas perciben apoyo de parte de la organización, experimentarán mayor satisfacción laboral. Recordar que no se trata de que la organización realmente brinde apoyo, sino que así lo perciba quien en ella trabaja. Las apariencias son importantes en la medida que si los empleados no perciben el apoyo, da igual que este exista o no. Por otro lado, baja satisfacción laboral también se relaciona con aspectos que poco tienen que ver con la responsabilidad de la organización o de quien está a cargo, como los problemas que surgen en los hogares de los empleados. Ciertos estudios sugieren que los problemas en la oficina suelen perturbar la vida en el hogar, y no en sentido inverso, pero en cualquier medida, hallar formas de distraernos del trabajo mientras estamos en casa es una forma de protegernos contra el estrés.

## METODOLOGIA

La presente investigación es de tipo descriptivo, ya que describe cual es el asunto o condición sobre el problema de la insatisfacción laboral en una empresa de Piedras Negras Coahuila, además de que está dirigido hacia situaciones específicas dentro de la organización como son los bajos salarios, las malas relaciones con patrones y compañeros, y la poca posibilidad de ascenso en el trabajo, el horario en el trabajo. Se utiliza el método no experimental de campo ya que este método, proporciona mayor objetividad en la información obtenida, da mayor confiabilidad, y un menor margen de error. El instrumento que se utilizó en esta investigación es: Encuesta por muestreo por medio de un cuestionario en escala de Likert. El muestro que se utilizó para la aplicación del cuestionario es el No Probabilístico, ya que en la empresa hay pocos empleados y aplicar los cuestionarios, proporciona la información con más certeza, es decir 30 cuestionarios. A continuación se presenta un modelo de cuestionario en escala de Likert que será aplicado a los 30 trabajadores de esta mediana empresa del sector servicios en Piedras Negras Coahuila, México.

## RESULTADOS

Se presentan los resultados obtenidos a través de los cuestionarios

*Grafica1. Se observa que el 26% de los empleados considera que su retribución económica no es suficiente para la calidad y cantidad de trabajo, porque tienen que trabajar horas extras y en días festivos. Sin embargo siguen laborando en esas condiciones a cambio de una remuneración. Para el 39% que es la mayoría muestra gran indiferencia a la situación, el 35% manifiesta de satisfecho a muy satisfecho, lo que puede considerarse al personal administrativo.*

**PROMOCIONES Y ASCENSOS**

Gráfica 2. Los resultados indican que el 21% está muy insatisfecho y el 40% de los empleados muestran insatisfacción con los procesos de ascensos, pues ante una vacante, el supervisor contrata personal nuevo, sin tomar en cuenta a quien se ha esforzado y permanecido. El 37% muestra neutralidad Y solo el 2% manifiesta satisfacción.

**Relación con patrones y compañeros**

Gráfica 3. Solo el 4% está muy insatisfecho. El 30% de los empleados está insatisfecho en la relación con sus supervisores y compañeros, se sienten incómodos, el 33% muestra neutralidad, el 25% se sienten satisfechos y su satisfacción se incrementa cuando el supervisor inmediato es comprensivo y escucha opiniones.

**MOTIVACION**

Gráfica 4. La gráfica arroja a un 30% del personal muy insatisfecho, y un 33% insatisfecho en cuanto a la motivación, consideran que no existen políticas, ni prácticas que incrementen su motivación al trabajo, el 24% es neutro y el 13% solo muestra estar satisfecho.

COMPROBACION DE HIPOTESIS

	Muy Insatisfecho	Insatisfecho	Neutro	Satisfecho	Muy Satisfecho
1	1	3	16	10	0
2	0	8	16	6	0
3	14	13	3	0	0
4	5	13	12	0	0
5	6	16	8	0	0
6	8	7	13	2	0
7	3	5	16	6	0
8	1	7	9	13	0
9	3	21	5	1	0
10	0	0	8	16	6
11	5	12	12	1	0
12	9	13	8	0	0
13	13	14	2	1	0
14	5	2	12	11	0
total	X1=73	X2=134	X3=140	X4=67	X5=6

$\mu=15$ ,  $\sigma=84$ ,  $\bar{O}=49.25$ ,  $n=30$ ,  $\alpha=0.05$ , Ensayo de hipótesis,  $H_0: \mu=15$ ,  $H_1: \mu \neq 15$

## HIPOTESIS

En base al problema planteado anteriormente y al objetivo que persigue la presente investigación, procedo a enunciar la hipótesis:

$H_1$ . "Los salarios bajos, las escasas probabilidades de promoción, las malas relaciones con los patrones y compañeros, desmotivación, son causas de la insatisfacción laboral que tienen repercusiones negativas para la eficiencia dentro de la organización"

$H_0$ . "Los salarios bajos, las escasas probabilidades de promoción, las malas relaciones con los patrones y compañeros, desmotivación, son causas de la insatisfacción laboral que no tienen repercusiones negativas para la eficiencia dentro de la organización."

FIG.1 La prueba demuestra el rechazo de la  $H_0$ .

## CONCLUSION

El recurso más importante de toda empresa es precisamente el recurso humano, es el principal motor de las organizaciones, de ahí parte la importancia de procurar mantener un clima laboral agradable, proporcionar las mayores herramientas posibles para que los empleados se sientan satisfechos en sus trabajos. Los resultados de la falta de satisfacción pueden afectar la productividad de la organización y producir un deterioro en la calidad del entorno laboral. Puede disminuir el desempeño, incrementar el nivel de quejas, el ausentismo o el cambio de empleo. Sugerencias, en relación a:

Salarios: Se recomienda que se revise el tabulador actual de salarios y que se elabore un nuevo tabulador que sea acorde a los nuevos puestos y responsabilidades de cada empleado. También se recomienda se

elabore un programa de estímulos económicos y motivacionales para que la empresa haga revisiones cada 3 o 6 meses, del desempeño laboral de cada empleado, ya que con esto se sentirá motivado de recibir un incremento salarial.

*Sistema de promociones y ascensos:* Es recomendable que se establezcan políticas para la promoción de puestos, que se apliquen exámenes de oposición para garantizar que el personal este satisfecho con los procesos ya que de esta forma serán transparentes.

*Relación jefes-compañeros:* Se recomienda mejorar la relación interpersonal e intrapersonal, mediante el establecimiento de reuniones diarias, ya sea al inicio del turno, medio turno o al terminar la jornada diaria laboral, en la que los supervisores tengan una mejor comunicación con los empleados y así poder detectar problemas y necesidades laborales.

*Motivación:* Es necesario que se presenten por escrito las políticas y se establezca un programa de incentivos, de reconocimiento, económicos, para que no se desanimen al ver que no existe continuidad con lo que se ofrece al inicio de su desempeño laboral.

## ANEXO

*ENCUESTA :*El propósito de esta encuesta es descubrir las diferentes opiniones de los empleados de farmacias similares acerca de algunos aspectos de su experiencia laboral. Por favor responda honestamente, siguiendo las instrucciones que se dan a continuación. Su opinión es muy importante y valiosa para esta investigación. La información que provea será tratada de forma confidencial. Por favor, después de completar todas las preguntas sea tan amable de regresarlo a la persona que se lo entrego.

*Instrucciones:* Deseamos saber cuan satisfecho o insatisfecho se encuentra con algunos aspectos relacionados con su centro de trabajo. Por favor después de leer cada enunciado marque con una cruz el número (solo uno) que indique el grado de satisfacción o insatisfacción que usted tiene en cada uno de ellos. Utilice la escala siguiente:

Salario	Muy Insatisfecho	Insatisfecho	Nuetro	Satisfecho	Muy Satisfecho
El salario actual que recibe	1	2	3	4	5
Recibo igual salario que mis compañeros y compañeras de trabajo en el mismo puesto	1	2	3	4	5
La facilidades para obtener prestamos	1	2	3	4	5

SISTEMA DE PROMOCIONES Y ASCENSOS					
Los sistemas utilizados para promover al personal	1	2	3	4	5
Las oportunidades de ascenso dentro del trabajo	1	2	3	4	5
Siento que mi supervisor inmediato practica favoritismo	1	2	3	4	5
SISTEMA DE PROMOCIONES Y ASCENSOS					
Mis relaciones con los supervisores inmediatos	1	2	3	4	5
Las relaciones que se dan con los(as) compañeros(as) de trabajo	1	2	3	4	5
Mi supervisor inmediato toma en cuenta mis logros laborales	1	2	3	4	5
Mis compañeros de trabajo me ayudan cuando tengo dudas sobre mis labores	1	2	3	4	5
Mi supervisor inmediato acepta sugerencias	1	2	3	4	5
MOTIVACION					
Mi supervisor inmediato me felicita cuando logro un objetivo	1	2	3	4	5
He recibido reconocimientos por mi labor	1	2	3	4	5
Mi supervisor inmediato me brinda capacitación para mejorar mis labores	1	2	3	4	5

Gracias por su colaboración.

## RESUMEN

*Este trabajo permite evidenciar la pertinencia y ventajas de la implementación de un Sistema de Gestión de Calidad en un Centro de Desarrollo Empresarial inserto en una Institución Educativa con un enfoque de Gestión del Conocimiento. El objetivo fue evaluar el proceso de aprendizaje en la implementación de un Sistema de Calidad mediante la identificación de capacidades e incapacidades para aprender, con el fin de hacer evidente la gestión del conocimiento en un proceso de certificación. Para alcanzar este objetivo se plantearon las siguientes preguntas de investigación: ¿Cómo se genera el conocimiento en CDE?, ¿Cómo se generaliza el conocimiento en el CDE?, ¿Cuáles son las incapacidades para aprender del CDE? y ¿Cuál es impacto de esta Gestión del Conocimiento? Para alcanzar el objetivo se aplicó el cuestionario ya aprobado de Yeung et al (1999) a todos los participantes del proceso de certificación. Se hizo uso de la estadística descriptiva y análisis multivariable. Se encontró un impacto importante en la generación de conocimiento, identificando el tipo de capacidad para aprender del CDE, las incapacidades y la forma en que se fue dando el aprendizaje desde la etapa inicial de implementación. Concluyendo con una propuesta para hacer más eficiente la implementación.*

**PALABRAS CLAVES:** Gestión del conocimiento, Aprendizaje organizacional, Calidad, Certificación, Sistema de Gestión.

# QUALITY MANAGEMENT AS AN APPLICATION OF KNOWLEDGE MANAGEMENT: CENTRO DE DESARROLLO EMPRESARIAL CASE (CDE) FECA-UJED

## ABSTRACT

*This procedure allows to demonstrate the pertinence and advantages of a Quality Management System implementation in a Centro de Desarrollo Empresarial (CDE) inserted in a Learning Institution with a perspective of Management Learning. The goal was to evaluate the process of knowledge on the implementation of a Quality Management System through identification of capacities and disabilities for learn. In order to reach this objective the next research questions were considered: How to generate knowledge in CDE? How to generalize the knowledge in CDE? What are the disabilities to be learned from CDE? What is the impact of this Knowledge Management? To reach that goal, the approved questionnaire of Yeung Et Al (1999) was given to every participant of the certification process. Descriptive statistics and multivariable calculus were made. A very important impact in the generation of knowledge was found, identifying the type of capacity to learn from CDE, the disabilities and the way of learning from the initial stage of the implementation, ending up with a proposal to make the implementation more efficient.*

**KEYWORDS:** Knowledge Management, Organizational Learning, Quality, Certification, Management System.

## INTRODUCCIÓN

Este proyecto de investigación se deriva de los resultados obtenidos en la implementación de un Sistema de Gestión de Calidad, bajo el Modelo Small Business Development Center (SBDC) en el Centro de Desarrollo Empresarial (CDE) de la Facultad de Economía Contaduría y Administración (FECA) de la Universidad Juárez del Estado de Durango (UJED). Para alcanzar este objetivo se plantearon las siguientes preguntas de investigación: ¿Cómo se genera el conocimiento en el CDE?, ¿Cómo se generaliza el conocimiento en el CDE?, ¿Cuáles son las incapacidades para aprender del CDE? y ¿Cuál es el impacto de esta Gestión del Conocimiento? El propósito de este trabajo es: Evaluar el Proceso de aprendizaje en la implementación de un Sistema de Calidad (Modelo SBDC) en un Centro de Desarrollo Empresarial mediante la identificación de capacidades e incapacidades para aprender, apoyados en el instrumento de capacidad de aprendizaje propuesto por Yeung et al (1999).

Para medir la capacidad de aprendizaje se consideraron seis factores: “Desempeño de la organización” “¿Dónde ocurre el aprendizaje?” “¿Quién aprende?” “Estilos de aprendizaje” “Cultura” e “Incapacidades que impiden la generación del conocimiento”. Se realizó un censo y se aplicó el instrumento a siete profesores miembros del Comité para el proceso de certificación del CDE de la Facultad de Economía Contaduría y Administración y a tres alumnos que participaron como apoyo directamente en el mismo proceso. Para llevar a cabo el presente estudio, se empleó el método cuantitativo aplicando herramientas estadísticas, la medición se realizó con la escala Likert del 1 al 5 y en el análisis de datos, se consideraron estadísticos descriptivos. Adicionalmente se realizó un análisis de escalamiento óptimo (Correlación Canónica) para relacionar Cultura e Incapacidades de Aprendizaje. Para éste fin se utilizó el Software SPSS 19.0 para procesar la información recopilada en los instrumentos aplicados validándose la información con el Alpha de Cronbach con un resultado de .902.

En la mayoría de los resultados se presentó una relación significativa para establecer que existe una relación directa entre el proceso de certificación y la capacidad de aprendizaje del CDE, de acuerdo con los datos percibidos y referidos por los profesores y alumnos que participaron en el proceso. La finalidad de ésta investigación es aportar información objetiva de la percepción de los participantes en el proceso de certificación del CDE para hacer más eficiente la implementación de los procesos de Certificación en los Centros Empresariales. Finalmente se explican los resultados, donde se muestran las respuestas a las preguntas de investigación, evidenciando como aprenden las organizaciones a través del establecimiento de un Sistema de Gestión de Calidad en un Centro Empresarial.

## REVISIÓN LITERARIA

Considerando un mundo tan competitivo donde las empresas apuestan un lugar para ser mejores cada día, la Instituciones de Educación Superior no son la excepción, los procesos de Calidad y las Certificaciones se consideran cada vez con mayor frecuencia en éste tipo de organizaciones para garantizar el mejor uso de los recursos, estandarización de procesos, transparencia, responsabilidades definidas, compromiso de alta dirección y satisfacción del cliente. (Del Río Bermudez, 2008). La situación anterior implica una participación y un compromiso por lo miembros que la adquieren, por lo tanto es primordial generar la Gestión del Conocimiento en las Instituciones de Educación Superior, a través de la implementación de Sistemas de Gestión y Certificaciones de Calidad, con la finalidad de elevar el nivel de servicio en cada uno de los rubros atendidos. En el caso específico del Centro de Desarrollo Empresarial (CDE) de la

Facultad de Economía, Contaduría y Administración (FECA) de la Universidad Juárez del Estado de Durango (UJED), no es la excepción, este Centro cuenta con 21 años de dar servicio a la sociedad en aspectos de Capacitación y Asesoría Empresarial, decidió definir un nuevo rumbo buscando la mejora, innovación y calidad en sus servicios. El camino mostrado no era muy halagüeño, si decidía continuar al mismo ritmo y repitiendo los mismo paradigmas, estaba destinado al fracaso ¿Cómo lograr un cambio sustancial? Una de las principales preguntas que nacieron a partir de la sensibilización en un Modelo de Gestión aplicado en FECA UJED. Posteriormente buscó hacia afuera competencias y habilidades de lugares y centros que ofrecieran servicios, similares o idénticos. Fue así que la coordinación del CDE decidió convertirse en socio activo de la Asociación Mexicana de Centros para el Desarrollo de la Pequeña Empresa (AMCDPE) (AMCDPE, 2013), desde marzo de 2012.

En ésta Asociación el Personal del Centro, tuvo la oportunidad de capacitarse en el Modelo SBDC, donde se le invitó a participar en un proceso para obtener una Certificación Internacional con un modelo de calidad alineado ISO 9001:2008 (Vince, 2011). Se preparó a un comité certificador para poder obtener la Certificación lográndose el 1 de febrero de 2013. El ejercicio fue un reto para los participantes en el proceso, donde se todos aprendieron, por esta razón pretendemos identificar las condiciones de aprendizaje en el CDE, ¿qué y cómo aprendieron? así como fundamentar de qué manera el aprendizaje en el CDE contribuyó a la certificación. El resultado de la certificación fue: 100% cumplimiento de requisitos, “0” no observaciones, “0” no conformidades encontrando además dos fortalezas, con la posibilidad de replicarse al resto de los miembros de la AMCDPE.

¿Qué es Calidad? El término calidad se define como “propiedad o conjunto de propiedades inherentes a algo, que permiten juzgar su valor”. Paralelamente a su definición, el concepto de calidad ha experimentado un proceso evolutivo que ha permitido migrar el sentido de calidad desde las características puramente técnicas o materiales de un producto hasta el conjunto de características que, en función de las necesidades particulares de los usuarios a los que va dirigido, sean capaces de satisfacer dichas necesidades. Certificación. La implantación de un Sistema de Gestión de Calidad puede abordarse con o sin ayuda exterior. Generalmente, y sobre todo para la implantación inicial, es habitual el apoyo en consultores externos cuya labor consiste en apoyar el proceso de documentación del Sistema y en la preparación de la organización para la auditoría de certificación. En el caso de la obtención de la Certificación del CDE, se logró a través de un proceso de auditoría practicado por Certificadores del Modelo SBDC (Small Business Development Center y por ATR (American Trust Register).

SBDC Small Business Development Center. Los Small Business Development Center (SBDC) surgen en Estados Unidos formando una red de 1, 100 centros que emplean a 5,000 profesionales de tiempo completo y brindan asesoría anual a 750 mil empresas. Participan en la definición y operación de la política gubernamental y reciben financiamiento público de acuerdo a sus resultados e impactos. Enfatizando: el Proceso de Atención al Cliente, Asesoría, Capacitación, Consultoría Actividades de Planificación y Liderazgo. Para llegar al proceso de certificación un grupo de 7 profesores conformaron un Comité de Certificación para trabajar en la obtención de la misma. Derivado del proceso de revisión los auditores evidenciaron los resultados de excelencia además se destacó el tiempo record en que se logró la certificación, manifestando que un 86% de los miembros de la Asociación en México no se han certificado todavía, por lo que éste entorno dio lugar a realizar el presente trabajo para explicar el fenómeno de aprendizaje de las organizaciones dentro de un Modelo de Gestión de Calidad, teniendo como principal sustento la Teoría de las Organizaciones que Aprenden.

En la revisión de la literatura pertinente, se pueden distinguir al menos tres formas en que se han nombrado a las organizaciones que están tomando al conocimiento como punto de partida para lograr ventaja competitiva: la empresa inteligente (Wiig, 1999) y (Choo, 1999), las organizaciones que aprenden (Yeung, A.K.; Ulrich, D.O.; Von Glinow, M.A., 1999), las organizaciones creadoras de conocimiento (Nonaka & Takeuchi, La Organización Creadora del Conocimiento., 1999), las organizaciones pensantes,

(Rubinstein & Firstenberg, 2001). De acuerdo a Yeung, “las organizaciones que tratan de aprovechar y apalancar los conocimientos existentes de una forma productiva suelen aprender de manera disciplinada, sistemática y estructurada”, (Yeung, A.K.; Ulrich, D.O.; Von Glinow, M.A., 1999) apoyado en esto, proponemos que el aprendizaje obtenido en el CDE, se puede aprovechar productivamente en el resto de los Centros que buscan la Certificación. Organizaciones inteligentes. Considerando los autores que se refieren a la empresa inteligente, entre ellos (Wiig, 1999) quien la define como “una organización que actúa efectivamente en el presente y es capaz de tratar efectivamente con los desafíos del futuro. Cumple sus objetivos implementando sus visiones y estrategias a través de las acciones individuales de los empleados, sus sistemas, políticas y estructura organizacional.” Por su parte (Choo, 1999) expresa las siguientes características: a) Una organización inteligente genera nuevo conocimiento cuando expande sus capacidades al compartir y convertir el conocimiento tácito de sus miembros; b) una organización inteligente hace operacionales los nuevos conceptos para permitir que la organización funcione con más eficiencia; y c) una organización inteligente difunde y transfiere nuevo conocimiento hacia el interior y hacia el exterior de la organización. Esto último expresado por Choo, expresa en gran medida la definición de lo que puede hacer una organización con un nuevo conocimiento.

Organizaciones que aprenden. Las organizaciones que aprenden tienen varias ideas distintivas entre ellas: a) Genera ideas (conocimiento) con impacto; b) generalizar esas ideas a lo largo y ancho de la organización; y c) Identificar las incapacidades para aprender. Sus premisas radican en explorar campos nuevos o explotar oportunidades existentes. Para Yeung, éstas organizaciones tratan de aprovechar y apalancar los conocimientos existentes de una forma productiva suelen aprender de manera disciplinada, sistemática y estructurada (Yeung A., Ulrich, Nason, & Glinow von, 2000). La organización creadora de conocimiento. Nonaka agrega otros elementos en el proceso de aprendizaje de las organizaciones tales como: la capacidad de una organización para generar nuevos conocimientos, diseminarlos entre los miembros de una organización y materializarlos en productos, servicios y sistemas. (Nonaka & Takeuchi, La Organización Creadora del Conocimiento., 1999).

Organizaciones pensantes. Otro término acuñado por Rubinstein, “Son organizaciones que como organismos vitales, viven a partir de las ideas y el compromiso de su gente. Su fortaleza estriba en la acumulación del conocimiento. Es decir, la clave es mantener los errores en la mente de la organización y perpetuarlos para que los perciban como una oportunidad de mejora, todo ello como un medio de evitar su repetición y como una vía de perfeccionamiento constante”. (Rubinstein & Firstenberg, 2001). Aprendizaje organizacional. Un concepto al que se hace referencia en la literatura sobre aprendizaje organizacional por parte de un muy elevado número de autores en sus trabajos e investigaciones es el de aprendizaje organizacional de (Argyris & Schön, 1978) en el que sostienen que “por medio del aprendizaje organizacional, las organizaciones se adaptan a los cambios, evitan repeticiones de errores pasados y retienen el conocimiento crítico que, de otra manera se perdería.

Por otro lado (Choo, 1999) explica que la creación del conocimiento se obtiene a través del descubrimiento de la relación sinérgica entre conocimiento tácito y explícito, y mediante el diseño de procesos sociales que crean nuevo conocimiento. En el caso del Centro de Desarrollo Empresarial, aplica lo que dice (Yeung, A.K.; Ulrich, D.O.; Von Glinow, M.A., 1999), respecto a cómo aprenden las organizaciones donde enuncia que el aprendizaje se logra a través de dos fuentes básicas: “la experiencia directa y la experiencia de terceros, y las organizaciones aprenden, fundamentalmente, con dos propósitos: explorar campos nuevos o explotar oportunidades” existentes”. La exploración se refiere a experimentar competencias, tecnologías o paradigmas nuevos. Se presenta cuando las organizaciones tratan de obtener una ventaja competitiva por medio de avances considerables en sus productos, procesos y métodos. En el caso del CDE, aprendió buscando e imitando la experiencia de Centros Certificados y además explorando nuevas competencias y buscando nuevos paradigmas, como la certificación. La exploración implica el perfeccionamiento y la ampliación de las competencias, las tecnologías y los paradigmas existentes. Se presenta cuando las organizaciones quieren apalancar los productos, procesos,

métodos y prácticas existentes. Basados en el Modelo de (Yeung, A.K.; Ulrich, D.O.; Von Glinow, M.A., 1999) Yeung et al. (1999) contemplan cuatro estilos de aprendizaje: la experimentación, la adquisición de competencia, los parámetros o marcas de referencia y las mejoras continuas. Su tipología de los estilos de aprendizaje caracterizaría a una organización; es decir, es posible identificar “perfiles de la capacidad para aprender”. Estos perfiles representan cómo es que las organizaciones generan ideas que tienen impacto. Es finalmente en Yeung, donde basaremos nuestro estudio de las organizaciones que aprenden y como con ese aprendizaje se obtuvieron mayores logros en el CDE.

## METODOLOGÍA

Considerando que éste trabajo nace a partir del análisis de la implementación de la certificación de calidad a través del Modelo Small Business Development Center (SBDC). Se intuyó una relación directa entre los procesos de aprendizaje de las organizaciones y el éxito logrado en la implementación del Modelo de Calidad SBDC. En éste estudio se empleó una metodología cuantitativa, donde se buscó determinar cómo se genera el conocimiento y como se generaliza, además de identificar las capacidades e incapacidades de aprendizaje, apoyados en el instrumento de capacidad de aprendizaje propuesto por Yeung et al (1999). Para medir la capacidad de aprendizaje dentro del CDE se consideraron seis factores: “Desempeño de la organización”, “¿Dónde ocurre el aprendizaje?”, “¿Quién aprende?”, “Estilos de aprendizaje”, “Cultura”, e “Incapacidades que impiden la generación del conocimiento”.

Se practicó un censo del personal involucrado en el Proceso de Certificación, y se aplicó un instrumento a siete profesores miembros del Comité de certificación del CDE FECA UJED y a tres alumnos que participaron como apoyo directamente en el mismo proceso. Se aplicó un estudio comparativo entre los años de 2010 y 2013, buscando el tipo de aprendizaje que ha utilizado en el CDE. La medición se realizó con la escala Likert del 1 al 5 y en el análisis de datos se consideraron estadísticos descriptivos y diferencia entre medias, adicionalmente se realizó un análisis de escalamiento óptimo (Correlación Canónica) para relacionar Cultura e Incapacidades de Aprendizaje. Para éste fin se utilizó el Software SPSS 19.0 para procesar la información recopilada en los instrumentos aplicados validándose la información con el Alpha de Cronbach con un resultado de .902. En la mayoría de los resultados se presentó una relación significativa para establecer que existe una correlación directa entre el proceso de certificación y la capacidad de aprendizaje del CDE, de acuerdo con los datos referidos por los profesores y alumnos que participaron en el proceso.

La finalidad de ésta investigación es aportar información objetiva de la percepción de los participantes en el proceso de certificación del CDE para hacer más eficiente la implementación de los procesos de Certificación en los Centros Empresariales SBDC, ya que de un total de 108 Centros que forman parte de la Asociación Mexicana de Centros para el Desarrollo de la Pequeña Empresa A.C. (AMCDPE), solamente hay 14 centros en la República Mexicana que han recibido ésta Certificación, por lo tanto se busca que éste estudio fortalezca e incremente el número de Centros Certificados por un sistema de Gestión de Calidad, acortando la brecha de aprendizaje, y emulando los aprendizajes principales en el proceso que coadyuvaron a la Certificación.

## RESULTADOS

Retomando las preguntas de Investigación: ¿Cómo se genera el conocimiento en el CDE? El conocimiento se genera preponderantemente más allá de los límites de la organización, quedando claro que con la formación de un grupo multidisciplinario y con la experiencia de certificación realizada por el equipo, el aprendizaje que permeó el proceso fue el adquirido más allá de los límites, factor que contribuyó en gran medida al logro de la certificación del CDE. Los resultados obtenidos coinciden con lo que define Choo como una organización inteligente “que es aquella que difunde y transfiere nuevo

conocimiento hacia el interior y hacia el exterior de la organización” además de que expande sus capacidades al compartir y convertir el conocimiento tácito de sus miembros.

Otros de los análisis que contribuyen a la respuesta de éste primer cuestionamiento son las dimensiones para analizar la generación del conocimiento en el CDE. Desempeño del Negocio; Estilos de Aprendizaje; y Cultura del Negocio. La implementación la Certificación SBDC permitió el aprendizaje organizacional de los participantes, llegando a los siguientes resultados: La investigación demuestra que el CDE aborda el aprendizaje de distintas maneras, los estilos que más predominan para la capacidad de aprender o desempeñarse son: en Liderazgo y la Innovación, (ver Figura 1), demostrando que uno de los elementos que aportó más a la obtención de la certificación es que dentro del equipo de trabajo se prueban muchas ideas nuevas y se adapta una posición receptiva ante los experimentos. El CDE tiene la capacidad de transferir el aprendizaje de un lugar a otro además de que proporciona retroalimentación específica para mejorar el desempeño de los miembros del equipo. En la medida que la empresa y sus líderes identifiquen cuál es el estilo de aprendizaje que más utiliza, puede sacar mayor provecho a su actuar y un mejor desempeño organizacional, medido en términos de liderazgo y de innovación.

Figura 1: Desempeño del Negocio

*Podemos observar en ésta gráfica que el elemento que más aportó a la obtención de la certificación, es que dentro del equipo de trabajo, se prueban muchas ideas nuevas y se adapta una posición receptiva ante los experimentos. El CDE tiene la capacidad de transferir el aprendizaje de un lugar a otro además de que proporciona retroalimentación específica para mejorar el desempeño de los miembros del equipo, predominando el Desempeño del Negocio “Liderazgo”.  
Elaboración propia.*

Los estilos de aprendizaje nos aportan más elementos para saber cómo es la generación de aprendizaje en el CDE, está se identifica un crecimiento de más del 50% en cada uno de los estilos de aprendizaje de 2010 a 2013, sin embargo el Estilo de Aprendizaje que más aplica en el CDE es la Adquisición de Competencias, con un crecimiento de 2010 de 2.4833 a 2013 de 4.75 consideramos que es, debido a que se ha fomentado continuamente, que los miembros del equipo de trabajo, adquieran diferentes competencias y habilidades ya sea con capacitación como a través de promover el aprendizaje en equipo, provocando la multiplicación del conocimiento. Se considera, que el estilo Adquisición de Competencias es el ideal en una organización que desee migrar de un modelo clásico de administración a un Modelo de Gestión de Calidad. En base a la evidencia empírica obtenida en la presente investigación, se concluye que el CDE muestra una orientación hacia el tipo de Cultura de Mercado y Adhocrática coexistiendo las dos, (ver Figura 2) esto significa que los colaboradores y miembros del Comité están más enfocados en el producto y la eficiencia y claridad de las metas además de que busca medir la adaptabilidad el crecimiento y la innovación de la institución. El tipo de cultura definitivamente se convirtió en un elemento decisor para llegar a la Certificación ya que los procesos están orientados a la satisfacción del cliente y el producto.

Figura 2: Cultura del Negocio

*Se observa que el análisis de cultura del negocio aporta elementos decisivos para facilitar la adquisición del modelo de Certificación ya que hace más énfasis en la satisfacción del cliente promoviendo que ésta sea más asequible.  
Elaboración propia.*

¿Cómo se generaliza el conocimiento en el CDE y cuáles son las incapacidades para aprender del CDE? Existe una relación estrecha entre las incapacidades de aprendizaje y la generalización del conocimiento las primeras cuatro incapacidades mostradas en la gráfica, (Ceguera, Candidez, Homogeneidad y Acoplamiento Estrecho) impiden generar nuevo conocimiento y las últimas 3 (Parálisis, Aprendizaje de Supersticiones y Difusión Deficiente) entorpecen la generalización más allá de los límites. De acuerdo a los resultados obtenidos, se logra observar en los dos estadíos (2010 y 2013) evidencia una disminución significativa en las incapacidades de aprendizaje, especialmente en Ceguera con una disminución de 1.8 y Candidez con una disminución de 1.5.

Para que Ceguera disminuyera considerablemente durante y después del proceso de Certificación se consiguió debido a que, se transparentaron los procesos, incluyendo las actividades cotidianas, por lo tanto la incapacidad de ceguera tendió a decrecer notablemente. Respecto a la disminución de la incapacidad de Candidez, el CDE aprendió a explicar los fenómenos con mediciones más analíticas a través de los diferentes indicadores obtenidos durante el transcurso de la certificación, sin llegar a la generalización ni a la respuesta fácil ante problemáticas complejas. Debido a esta clara disminución de las incapacidades de aprendizaje de 2010 a 2013, intuimos que el CDE incrementó su competencia para aprender ya que se ha generado un cambio dentro de la organización que se lo permite.

Respecto a las incapacidades para generalizar el conocimiento, se observa que la capacidad de generalizar el aprendizaje se ve afectada, debido a que la incapacidad de aprendizaje de supersticiones sigue siendo muy alta, (ver Fig. 3), no se ve un cambio importante de los periodos comparados, solamente en éste tipo de aprendizaje. Este tipo de incapacidad es peligrosa debido a que la organización puede llegar a malinterpretar el significado de la experiencia provocando que se generalicen ideas equivocadas. Se considera que la Certificación de los Procesos dentro del CDE coadyuvarán para trabajar con ésta incapacidad a un mediano plazo. El aprendizaje de supersticiones se presenta cuando hay interpretaciones erróneas del significado de la experiencia, la relación entre los actos y los resultados de la organización no está bien especificada que padecen esta incapacidad en el CDE, ello se debe a su ambiente turbulento (Yeung et al. 1999:62).

Figura 3: Incapacidades Para Aprender en el CDE

Se observa claramente en la gráfica que durante 2010 las incapacidades de aprendizaje del CDE eran más altas que para 2013, se puede apreciar una baja en las incapacidades de aprendizaje importante para 2013, sin embargo, la incapacidad de Aprendizaje de supersticiones se mantiene alto en los dos periodos comparados. Apuntando que es éste, el único aspecto entorpece la generalización del aprendizaje. Elaboración propia

Tabla 1: Escalamiento Óptimo. Bondad de Ajuste

Resumen del análisis				
		Dimensión		Suma
		1	2	
Pérdida	Conjunto 1	.006	.002	.008
	Conjunto 2	.006	.002	.008
	Media	.006	.002	.008
Autovalores		.994	.998	
Ajuste				1.992

Este resumen evalúa que existe una correlación significativa entre la cultura y las incapacidades para aprender. Hay una correlación significativa con una  $R^2 = .994$  y  $.998$  con un ajuste de 1.992 para dos conjuntos (un ajuste perfecto sería un valor igual a 2). De acuerdo a los datos la dimensión uno aporta un 99.4% (el referente es 1) y la dimensión dos aporta 99.8% en el mismo referente, concluyendo una correlación significativa entre los dos grupos.

Tabla 2: Pesos Canónicos

Conjunto		Ajuste múltiple			Ajuste simple			Pérdida simple		
		Dimensión		Suma	Dimensión		Suma	Dimensión		Suma
		1	2		1	2		1	2	
1	Clan	5.297	.861	6.158	5.297	.861	6.157	.000	.000	.000
	Adhocrática	.053	.103	.156	.052	.103	.155	.000	.000	.001
	Jerárquica	2.397	.739	3.136	2.397	.739	3.135	.000	.000	.000
2	Mercados	.062	.714	.776	.062	.714	.776	.000	.000	.000
	Ceguera	.054	1.492	1.546	.054	1.492	1.546	.000	.000	.000
	Candidez	.275	.092	.366	.274	.091	.366	.000	.000	.001
	Homogeneidad	.001	.147	.149	.001	.147	.148	.000	.000	.000
	Acoplamiento Estrecho	.017	.234	.251	.017	.234	.251	.000	.000	.000
	Parálisis	.508	.014	.522	.508	.014	.522	.000	.000	.000
	Aprendizaje de Supersticiones	.015	.150	.164	.015	.150	.164	.000	.000	.000
	Difusión Deficiente	.033	.007	.040	.033	.007	.040	.000	.000	.000

En el análisis se resumen las variables en dos dimensiones la primera definida con más peso del Tipo de Cultura (Clan y Jerárquica) e incluyendo la incapacidad de Parálisis, éstas variables se caracterizan por estabilidad y burocracia que en ésta dimensión se combinan con la no posibilidad de cambio.

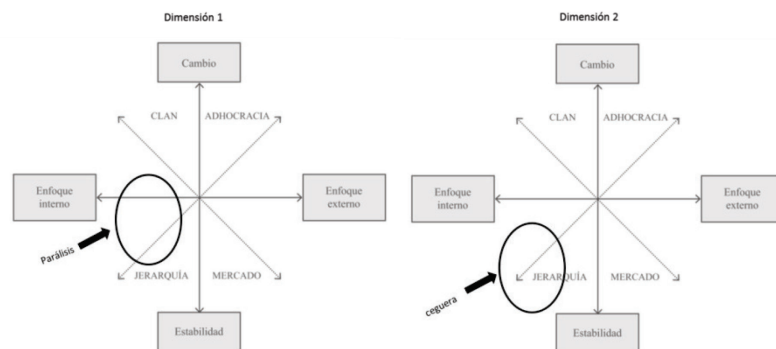

Figura 4: Saturaciones en Componentes

En la gráfica de saturación de componentes podemos observar como las variables que más aportan se encuentran alejadas del centro, como son ceguera y la cultura de clan. Además se observa el comportamiento más parecido en las variables de cultura que en las de incapacidades para aprender, que se encuentran más dispersas. Se pudiera decir que las que tienen un comportamiento más parecido son la candidez, difusión deficiente y homogeneidad.

Elaboración propia.

Figura 5: Ubicación de las Dimensiones en Base a la Tipología De Cameron &amp; Quin

Como se vio en la tabla de Saturaciones en Componentes el CDE está ubicado en la Dimensión 1 que se encuentra en el cuadrante inferior izquierdo. Considerándose que es una organización con enfoque interno.

Elaboración propia.

## CONCLUSIONES

Las organizaciones que aprenden pueden cambiar de sistema o paradigma con mayor facilidad, que aquellas que no lo hacen. En el caso de la del CDE, fue determinante el aprendizaje que se obtuvo más allá de los límites de la organización, expandiendo sus capacidades al compartir el aprendizaje recién adquirido. En ciertos casos, las organizaciones que aprenden no evidencian fácilmente los conocimientos adquiridos, sin embargo bajo un proceso de inserción de una Certificación de Calidad, ponen a prueba la facilidad o limitantes que tienen los miembros de la misma, para potencializar su capacidad de respuesta y de aprendizaje. Otro de los elementos que aportó, en gran medida, fue que dentro del equipo de trabajo se aportaron nuevas ideas, adoptando una postura receptiva ante la experimentación y la exploración, permanecer continuamente en la búsqueda de nuevos escenarios y nuevas respuestas. Otro elemento de éxito es la facilidad que tienen los miembros del Centro para poder transferir el aprendizaje de un lugar a otro, no limitándose a su radio de acción sino probar más allá de sus límites y proporcionar continuamente retroalimentación de mejora de desempeño a los miembros del equipo de trabajo.

Otro de los elementos imprescindibles para llegar exitosamente a la culminación de la certificación es la capacitación continua que han tenido los miembros del CDE en diferentes competencias y habilidades de organización, sistematización, sensibilización en los procesos que realizan otros centros SBDC en México y en Estados Unidos, situación que provocó la adquisición del aprendizaje de nuevas competencias y conocimientos relativos a los modelos y normas de calidad de referencia. Aunado a esto, la orientación hacia una cultura de mercado dentro de la organización, representa un elemento determinante para obtener la certificación, ya que no tendrá que desviar esfuerzos importantes para alinearse a satisfacción del cliente y definición del producto en el supuesto de que permee otro tipo de cultura.

En el caso de la medición de las incapacidades de aprendizaje, dan mucha luz en el sentido que una incapacidad como ceguera o candidez serían una barrera importante para la obtención de una certificación esto se evita a través de la transparencia de procesos incluyendo las actividades cotidianas. Elementos que se obtienen fácilmente en el proceso de certificación coadyuvando a disminuir notablemente estas incapacidades en el CDE fortaleciendo su aprendizaje. Finalmente, se propone que exista un cambio cultura a través de la Gestión del conocimiento en los Centros Empresariales, identificando en primer término el mal inconsciente, luego convertirlo a un mal consciente para con voluntad convertirlo a un bien consciente y derivado de la repetición transformarlo en un bien inconsciente. Con el propósito de disminuir nuestras incapacidades en primer término la Incapacidad de Aprendizaje de Supersticiones.

# LA RESPONSABILIDAD SOCIAL EMPRESARIAL

Lilia Alanis, Universidad Autonoma de Coahuila

Martha Patricia Tello, Universidad Autonoma de Coahuila

Lizeth Veronica Sanchez, Universidad Auotnoma de Coahuila

## RESUMEN

*La Responsabilidad Social Empresarial es él: “Hacer negocios basados en principios éticos y apegados a la ley. La empresa (no el empresario) tiene un rol ante la sociedad, ante el entorno en el cual opera. La RSE no es una cultura de la filantropía, no se busca que las empresas se conviertan en obras de beneficencia, ya que las empresas están hechas para ser rentables. Esto implica que las empresas adopten una postura activa y responsable en torno al impacto de sus operaciones. Esta cultura es una forma de hacer negocios que le garantiza mayor sostenibilidad a lo largo del tiempo a la empresa y crecimiento económico. La RSE es el rol que le toca jugar a las empresas a favor del Desarrollo Sostenible, es decir, a favor del equilibrio entre el crecimiento económico, el bienestar social y el aprovechamiento de los recursos naturales y el medio ambiente. Este equilibrio es vital para la operación de los negocios. Las empresas deben pasar a formar parte activa de la solución de los retos que tenemos como sociedad, por su propio interés de tener un entorno más estable y próspero. Las empresas tienen la responsabilidad de conocer el entorno en el que operan. Deben tener un claro conocimiento de todo lo que rodea su empresa, no solo en términos geográficos, sino en términos del conjunto de reglas, leyes que rigen su operación, y todas las actividades relacionadas directa e indirectamente con la empresa.*

**PALABRAS CLAVE:** ética, leyes, impacto positivo, equilibrio sostenible, entorno.

## BUSINESS SOCIAL RESPONSABILITY

### ASBTRACT

*Corporate Social Responsibility it is: "Doing business based on ethical and law-abiding. The company (not the employer) has a role in society, to the environment in which it operates. CSR is not a culture of philanthropy, not looking that companies become charities, as companies are made to be profitable. This means that companies take an active and responsible about the impact of their operations. This culture is a way of doing business that ensures greater sustainability over time to the business and economic growth. CSR is the role they have to play to businesses in favor of sustainable development, ie, in favor of balance between economic growth, social welfare and the use of natural resources and the environment. This balance is vital to the operation of business. Companies must become an active part of the solution to the challenges we face as a society, in their own interest to have a more stable and prosperous. Companies have a responsibility to understand the environment in which they operate. They should have a clear understanding of everything around your business, not only geographically, but in terms of the set of rules, laws governing its operation, and all activities related directly or indirectly with the company.*

**KEYWORDS:** Ethics, Law, Positive Impact, Sustainable Balance, Environment.

## INTRODUCCION

La definición de Responsabilidad Social Empresarial, diversos conceptos, raíces, evolución y cambios, su objetivo y beneficios, sus implicaciones con el entorno, enumera también distintos ejemplos de su

aplicación, se podrá conocer casos exitosos y todo lo relacionado con este tema. Además hace ver como la RSE impacta de manera interna y externa a la organización. La empresa es socialmente responsable en la medida en que sus actividades buscan la satisfacción de las necesidades de sus integrantes, la comunidad y de quienes se benefician de la actividad comercial, de igual manera la preservación del entorno”.

La Responsabilidad Social Empresarial (RSE) es la contribución al desarrollo humano sostenible, a través del compromiso y la confianza de la empresa hacia sus empleados y las familias de éstos, hacia la sociedad en general y hacia la comunidad local, en pos de mejorar el capital social y la calidad de vida de toda la comunidad. La responsabilidad social empresarial es un concepto que “implica la necesidad y obligación de las empresas que desarrollan algún tipo de actividad económica de mantener una conducta respetuosa de la ética, la moral y el medio ambiente. El compromiso con el desarrollo sostenible, la naturaleza y la sociedad, la solidaridad, salvar las condiciones que sustentan la vida, la calidad de vida de los grupos de interés, las familias y la comunidad en general”.

**Objetivo De La Responsabilidad Social Empresarial:** El objetivo principal que persigue la responsabilidad social empresarial radica en el impacto positivo que estas prácticas generen en los distintos ámbitos con los que una empresa tiene relación, al mismo tiempo que contribuya a la competitividad y sostenibilidad de la empresa.

### Beneficios

¿Por qué la Responsabilidad Social Empresarial es tan importante?

El desarrollo económico y social mejora las condiciones de vida de las comunidades. En el caso de México, es claro que aún existen innumerables asuntos por resolver para construir un entorno que ofrezca los satisfactores necesarios a toda la sociedad. Al ser el proceso de globalización una realidad en el mundo, las comunidades de negocios disfrutan día con día de mayor influencia y sus aportes son cada vez más significativos para la realización de una sociedad más justa y de una economía con crecimiento sostenible que permita aminorar y erradicar la miseria y la pobreza que enfrenta un importante segmento de la población. La única forma de atacar la pobreza es generando riqueza. La pobreza es asunto de todos. Las empresas no podrán ser prósperas en un país que no crece y no genera empleos.

### Raíces De La Responsabilidad Social

Los orígenes de la RSE en México habrá que ubicarlos hacia mediados del siglo XX. Dos organizaciones empresariales destacaron por su insistencia y pronunciamiento en el tema: la Confederación Patronal de la República Mexicana (COPARMEX) y la, en ese entonces, Uniones Sociales de Empresarios de México, A.C. (USEM). Ambas aportaron elementos teórico-prácticos para la fundamentación y desarrollo del concepto mismo. Más tarde, en 1992, el Centro Mexicano para la Filantropía (Cemefi), creó el programa de Filantropía Empresarial con 6 empresas participantes. A partir de ese momento, se genera una serie de acontecimientos, entre los cuales cabe destacar los siguientes: En 1997 Cemefi crea el Programa de Responsabilidad Social Empresarial. En 2000 con base en una iniciativa del mismo Cemefi, se lanza la convocatoria para reconocer a las Mejores Prácticas de Responsabilidad Social Empresarial. A esta iniciativa se suman las siguientes organizaciones: COPARMEX, Confederación USEM, Desarrollo Empresarial Mexicano y el Grupo Editorial Expansión. Al siguiente año, se lanza por primera vez la convocatoria para poder ostentar el Distintivo ESR 2001 a la Empresa Socialmente Responsable. En esa ocasión, el Distintivo ESR se otorga a 17 empresas; este certamen se ha mantenido, de modo que en 2004 el Distintivo se otorga a 61 empresas socialmente responsables y en 2005 a 84 empresas. Dentro del marco de la Asamblea Nacional de COPARMEX en 2001, se presenta a la Alianza por la Responsabilidad Social Empresarial en México o AliaRSE integrada por Administración por Valores

(Aval), COPARMEX, el Consejo Coordinador Empresarial (CCE), Cemefi, la Confederación USEM e Impulsa (antes Desarrollo Empresarial Mexicano). En 2002 CONCAMIN, se integra a AliaRSE

El breve recuento anterior es evidencia del proceso que el sector empresarial mexicano ha realizado al tomar conciencia de su condición de ciudadano corporativo, materializando el valor de la Responsabilidad Social Empresarial. En fechas recientes, el proceso de inserción de las empresas mexicanas en la economía global las está enfrentando a diversas presiones adicionales ejercidas por clientes extranjeros, gobierno, consumidores, etc., quienes les demandan no sólo la calidad especificada del producto o servicio que se trate, sino que sus procesos y estándares de trabajo, cumplan con requisitos legales y éticos, reforzando la integración de la Responsabilidad Social Empresarial dentro de sus estrategias de negocio.

### Importancia En El Cumplimiento Del Marco Legal

La RSE se logra evidenciar a través de la ejecución de prácticas empresariales que generan un impacto positivo tanto a lo interno como a lo externo para las empresas que las apliquen. La empresa puede orientar sus prácticas responsables hacia el interior de la empresa o hacia fuera de la empresa y en cada caso existen diferentes grupos hacia donde puede focalizar su acción. Se quiere promover la implementación de éstas prácticas en dos contextos: El primero es a lo interno y el segundo es a lo externo de la empresa. Este primer contexto, el interno contempla la interacción de los recursos de la Empresa en función de sus resultados. Para esto se consideran dos dimensiones:

El Cumplimiento del marco legal ya que es necesario reconocer que la empresa no puede ser responsable socialmente si no está cumpliendo, antes que nada, con el régimen legal ya que ésta es la base de cualquier acción de RSE y el fundamento para el desarrollo de cada uno de nuestros países. De cualquier otro modo, las acciones de la empresa carecerán de legitimidad y Sostenibilidad en el largo plazo.

Recordemos que la evasión y la falta de transparencia no son sinónimos de competitividad y que tenemos que pasar de ventajas comparativas a ventajas competitivas sostenibles en el largo plazo, porque la mano de obra barata está dejando de serlo por la falta de tecnificación y productividad. Necesitamos invertir en el desarrollo de las capacidades de nuestra gente y nuevas tecnologías que incorporen también la preservación del medio ambiente.

El segundo paso de este contexto es propiciar el desarrollo de la persona dentro de la empresa. Los colaboradores son necesarios para el éxito de cualquier empresa, y en la medida en que estén más capacitados, más motivados, mejor tecnificados y con buenas condiciones laborales, la competitividad de la empresa será mayor logrando así maximizar la productividad de las empresas. El segundo contexto es el externo, en donde ya se desarrollan las relaciones de la Empresa hacia fuera formando el vínculo empresa sociedad.

### Líneas Estratégicas

La responsabilidad social empresarial comprende, en consecuencia, las siguientes líneas principales de estrategia:

Generación de riqueza

Ética empresarial

Calidad de vida en la empresa

Desarrollo de la comunidad

Cuidado y preservación del ambiente

Presencia pública

Generar utilidades por medio de la entrega de bienes y la prestación de servicios útiles y provechosos a la sociedad, proporcionados con eficiencia y alta calidad. Generar empleos productivos y bien remunerados. Favorecer una justa distribución (con equidad) de la riqueza. Asegurar la permanencia y crecimiento de la empresa.

Ética empresarial: Vivir los valores y desempeñarse éticamente. La ética empresarial es la base de relaciones más sólidas entre la empresa sus proveedores, clientes, accionistas y otros involucrados. Permite la interpretación y solución de controversias de acuerdo a principios que guían la toma de decisiones, la formación de recursos humanos, la evaluación del personal y la forma en que se debe conducir el negocio.

Desarrollo de la Comunidad: Involucrarse con las comunidades en las que opera. La Empresa percibe e instrumenta el compromiso y responsabilidad con su comunidad; identifica las expectativas de la comunidad, propicia el involucramiento de los integrantes, autoridades y organizaciones de la comunidad. Impulsa la sinergia entre sectores para multiplicar resultados.

Calidad de Vida Empresa: Promover y establecer como prioridad la calidad de vida en la empresa. La Empresa crea un ambiente de trabajo favorable, estimulante, seguro, creativo, no discriminatorio, participativo; en el que todos sus miembros interactúan bajo bases justas de integridad y respeto que propician su desarrollo humano y profesional, contribuyendo a una mejor calidad de vida. Recibe por ello beneficios como: la eficiencia y la responsabilidad individual y colectiva; un mejor balance de vida personal y laboral; el impacto positivo en la productividad; relaciones obrero-patronales sanas y la percepción de la empresa como altamente humana y socialmente responsable.

Cuidado y preservación del ambiente: Cuidar y preservar su entorno, los recursos y el medio ambiente. La empresa, además de cumplir con todos los requerimientos legales aplicables, promueve esquemas de autorregulación e iniciativas voluntarias que mejoren tanto su desempeño ambiental como el de la cadena de valor en la que participa. Lo anterior se refleja en indicadores específicos que evidencian el compromiso de la empresa. De igual manera, la empresa influye en establecer y mantener un marco legal que promueva el crecimiento económico y la protección del ambiente.

Presencia Pública: La construcción del bien común requiere de la participación de todos. La vida cívica y pública no es ajena al empresario. Debe participar vía las estructuras gremiales, civiles y políticas para orientar el desarrollo y buscar la modificación de las condiciones sociales estructurales que impiden el desarrollo en general y el económico en lo particular.

#### Implementación Exitosa De La Responsabilidad Social

La implementación exitosa de la Responsabilidad Social Empresarial considera los siguientes principios del orden social:

Respeto a la dignidad de la persona y fomento de su desarrollo integral;

- Destino Universal de los Bienes: la naturaleza y los bienes de la tierra son la herencia común de todos los habitantes de la tierra, pasados, presente y futuros;
- Solidaridad con todos y en especial, hacia los menos favorecidos;
- Subsidiariedad en la interacción para buscar continuamente la creación de condiciones y oportunidades que favorezcan el auto desarrollo y la mejor calidad de vida;
- La contribución de todos para el bien común;
- Corresponsabilidad en el logro de mejores condiciones de vida;

### Manera Práctica De Cómo Aplicar El Concepto De Responsabilidad Social

Una manera práctica de aplicar el concepto de Responsabilidad Social Empresarial, lo ilustramos en el siguiente ejemplo. Asumiendo que su empresa inicia el proceso de RSE, lo inmediato que debe desarrollar son líneas de acción a un nivel primario sobre la base de la misión y visión de la empresa, sus actividades y los medios que utiliza para alcanzar los objetivos:

-Servir a la sociedad con un producto o servicio útil y en condiciones justas.- Descartar todos aquellos productos o servicios que perjudiquen el desarrollo humano y la salud. Esto se traduce en que los productos y servicios serán suministrados en condiciones aceptables de calidad, servicio y precio. Procurar la exclusión de los intermediarios con la finalidad de no incrementar el precio del producto.

-Crear riqueza de la manera más eficaz posible - La creación de riqueza es la generación de un aceptable beneficio económico, sobre la base de mejorar la posición competitiva que nos pueda generar en el futuro la empresa. Además del beneficio económico, considerar otros indicadores importantes tales como el capital intelectual, la innovación, la posición del mercado, entre otros.

-Respetar los derechos humanos. Establecer condiciones de trabajo dignas que favorezcan la seguridad y salud laboral, a través de la utilización de las herramientas y equipos de trabajos, que garanticen seguridad y salud a los colaboradores de la empresa. Promover el desarrollo humano y profesional de los trabajadores por medio de educación continua, condiciones de trabajo esenciales para lograr la calidad de los productos y procesos y la consecuente competitividad. Pagar los días establecidos en los acuerdos de trabajo y respetar los horarios laborales, de manera que el trabajador pueda vivir con dignidad y compartir con la familia.

-Respetar el medio ambiente. Evitar en lo posible cualquier tipo de contaminación, minimizar la generación de residuos que puedan afectar el medio ambiente, a los trabajadores y a las comunidades aledañas al sector donde se establezca la empresa. Racionalizar el uso de los recursos naturales y energéticos.

-Cumplir las leyes, reglamentos, normas y costumbres. Respetar los legítimos contratos y compromisos adquiridos con proveedores, clientes, la comunidad y trabajadores, dentro del marco de las exigencias éticas que permitan el desarrollo de relaciones económicas civilizadas y humanas. Una vez cumplidas estas acciones, la empresa está en capacidad de avanzar y cubrir niveles superiores en el marco de la RSE.

### **CONCLUSIONES**

La investigación nos permitió, determinar cuáles son las claves de los principios éticos y el rol ante la sociedad y sobre todo en el entorno en el cual opera. Teniendo así una gestión eficiente de una organización empresarial en el ámbito de hacer negocios de manera responsable para lograr un equilibrio con la sociedad, con los recursos naturales y el medio ambiente.

Si las organizaciones empresariales exitosas deben su eficiencia a la posesión de competencia específicas de sus integrantes así como a la posesión de ventajas competitivas, determinando cuáles son las capacidades que permiten a las organizaciones su desarrollo sustentable. Logrando así un equilibrio en la operación de los negocios.

Las empresas tienen la responsabilidad de conocer el entorno en el que operan. Deben tener un claro conocimiento de todo lo que rodea su empresa, no solo en términos geográficos, sino en términos del conjunto de reglas, leyes que rigen su operación, y todas las actividades relacionadas directa e indirectamente con la empresa.

La investigación está basada en la metodología cualitativa debido a que se buscó tener una visión integral de la Responsabilidad Social Empresarial a partir del análisis de la necesidad y obligación de las empresas que desarrollan algún tipo de actividad económica de mantener una conducta respetuosa de la ética, la moral y el medio ambiente. Así como el compromiso con el desarrollo sostenible, la naturaleza y la sociedad.

El Clima y Ambiente laboral que permite una sinergia del esfuerzo con la competencia de responsabilidad social altamente significativos facilitando una continuidad de responsabilidad y compromiso y una óptima cultura organizacional. Este equilibrio es vital para la operación de los negocios. Las empresas deben pasar a formar parte activa de la solución de los retos que tenemos como empresa, por su propio interés de tener un entorno más estable y próspero.

# USO Y MANEJO DEL CRÉDITO EN ESTUDIANTES UNIVERSITARIOS

Karen C. Castro-González, University of Puerto Rico

Cristina Delgado-Ortiz, University of Puerto Rico

Jomar Rodríguez-Madera, University of Puerto Rico

## RESUMEN

*El objetivo de este estudio es conocer el uso, manejo y actitudes de los estudiantes universitarios para con sus tarjetas de crédito. Estudios existentes argumentan que los estudiantes universitarios representan un mercado lucrativo que provee ingresos inmediatos a las entidades proveedoras de estas tarjetas (Mc Coy, 2006). Hyan, Grable y Bagwell (2003) encuentran que el 70 por ciento de los estudiantes universitarios tienen tarjetas de crédito. Sallie Mae (2008) indica que el 17 por ciento salda el balance de sus tarjetas mensualmente y también indica, Sallie Mae (2006,) que el 60 por ciento desconoce el balance de sus tarjetas. La evidencia de estudios pasados sirvió para que en el 2009, el gobierno de los Estados Unidos aprobara la Credit Card Accountability, Responsibility and Disclosure Act para proteger a menores de 21 años y requerir que éstos estén autorizados por sus tutores al solicitar estas tarjetas. Usando un cuestionario de 36 preguntas, se encuestó a 255 estudiantes universitarios en Puerto Rico. Las preguntas están relacionadas al uso, manejo, actitudes y perfil de estos estudiantes. Los resultados sugieren que la mayoría de los estudiantes hace buen uso y manejo de sus tarjetas. Esto contrasta con el hecho de que un 60 por ciento admite que otras personas cubren dichos pagos mensuales cuando estos no pueden hacerlo.*

**PALABRAS CLAVE:** tarjetas de crédito, deuda universitarios, finanzas personales

## STUDENTS USE AND MANEGEMENT OF CREDIT CARDS

### ABSTRACT

*The main objective of this study is to uncover undergraduate students use and management of credit cards and their attitudes towards credit. Past studies suggest that undergraduates represent a lucrative market for financial institutions (Mc Coy, 2006). Hyan, Grable and Bagwell (2003) find that 70 percent of undergraduates have credit cards. On the one hand, Sallie Mae (2008) finds that only 17 percent of them pay in full their credit card balance on a monthly basis. On the other hand, Sallie Mae (2006) found that 60 percent says they know the balance on their credit card. These findings helped the United States government in justifying the approval of the Credit Card Accountability, Responsibility and Disclosure Act of 2009 that requires parents' approval and involvement when minors under 21 years apply for a credit card. We used a questionnaire to survey 255 undergraduate students about attitudes, use and management of credit cards. Results suggest that most of them use and manage their credit cards adequately but, in contrast, a 60 percentage indicates that when they are unable to pay their debt, others do it for them.*

## INTRODUCCIÓN

La crisis económica causada por los préstamos hipotecarios entre los años 2007 y 2008 se ha expandido a varios sectores económicos en otros momentos históricos no estaban contemplados como potenciales causantes de una nueva crisis. En la actualidad el nivel de endeudamiento por parte de los estudiantes universitarios se encuentra a niveles alarmantes. La evidencia en los Estados Unidos (E.U.) sugiere que los estudiantes se endeudan significativamente mientras asisten a la universidad. El costo de los estudios universitarios en los E.U. es significativamente más alto que en Puerto Rico (P.R.) y el ingreso per cápita en P.R. es el más bajo de entre los estados americanos y sus territorios. Este estudio tiene como propósito evaluar el conocimiento y el manejo de las tarjetas de crédito de los estudiantes universitarios en P.R. y poder observar si esas tendencias se sostienen en nuestro mercado.

## REVISIÓN DE LITERATURA

El estudio realizado por Joo, Grable y Bagwell (2003) sobre el comportamiento y las actitudes de crédito de estudiantes universitarios, indica que aproximadamente el 70 por ciento de los estudiantes sub-graduados poseen una o más tarjetas de crédito. Ludlum, Tilker, Ritter, Cowart, Xu y Smith (2012) encontraron que el 70 por ciento de los estudiantes sub-graduados tiene tarjetas de crédito. Solo un tercio (33.9 por ciento) tiene una sola tarjeta de crédito. Según el estudio de Henry, Weber y Yarbrough (2001) muchos estudiantes tienen problemas de crédito, no tienen un presupuesto escrito y si lo tienen muy pocos lo utilizan. Ellos entienden que los estudiantes universitarios son vulnerables y esto podría resultar en una nueva crisis financiera.

## METODOLOGÍA

El propósito de esta investigación es evaluar el conocimiento y el manejo de las tarjetas de crédito de los estudiantes universitarios en P.R. Para lograr este objetivo se desarrolló un cuestionario de 36 preguntas titulado Uso y Manejo del Crédito en Estudiantes Universitarios. Las contestaciones a estas preguntas ayudan a describir el perfil de los encuestados, sus actitudes, manejo y uso de las tarjetas de crédito. La muestra seleccionada está compuesta por estudiantes que están matriculados en la Universidad de P.R., Recinto de Río Piedras y representa el 10 por ciento de la población estudiantil. Se escogió una muestra representativa por facultad y se encuestaron a base de disponibilidad. Se encuestó a un total de 255 estudiantes sub-graduados.

## RESULTADOS

Los estudiantes encuestados son estudiantes sub-graduados que poseen una o más tarjetas de crédito. El 85 por ciento tiene tarjetas de crédito y un 15 por ciento no tiene. Un 61 por ciento dijo tener una tarjeta de crédito, 19 por ciento poseen dos, 3 por ciento tiene tres tarjetas, 1 por ciento indicó tener cuatro, 1 por ciento tiene cinco tarjetas, y un 15 por ciento contestó que no tenía tarjetas de crédito. Esta evidencia es similar a la encontrada por Hyan, et al. (2003) y Ludlum, et al. (2012). Además, se les preguntó cuándo habían adquirido su primera tarjeta, un 62 por ciento indicó que la obtuvo entre los 18 y 20 años de edad, un 26 por ciento entre los 21 y 25 años, un 4 por ciento después de los 26 años y un 6 por ciento antes de los 18 años. Con relación al número de personas que posee tarjetas de crédito en su núcleo familiar, casi un 8 por ciento indicó que ningún miembro en su familia tiene tarjetas. Esto en comparación con casi un 92 por ciento que indica que algún miembro en su núcleo familiar si tiene.

Alrededor de 20 preguntas estaban dirigidas a auscultar sobre el uso, manejo y actitudes de los estudiantes con respecto a las tarjetas de crédito. Primero, se les preguntó que sucedía si en algún momento no podían pagar sus deudas. Interesantemente, un 40 por ciento contestó que no dejaba que otras personas pagaran sus deudas, un 33 por ciento indicó que otros pagaban por ellos, casi un 25 por ciento indicó que sólo en algunas ocasiones y un 2 por ciento no contestó. Nuevamente, vemos una tendencia a depender de otros cuando no pueden satisfacer o cumplir con sus obligaciones.

Quisimos también conocer si los estudiantes obtuvieron orientación antes de adquirir sus tarjetas de crédito. El 60 por ciento indicó que sí había obtenido información, un 36 por ciento no obtuvo ninguna orientación al momento de adquirir las tarjetas y un 4 por ciento no contestó. Más del 45 por ciento de los estudiantes dice haber recibido esa orientación de familiares y amigos. Casi el 34 por ciento dice haberla recibido en una institución bancaria y alrededor del 15 por ciento de la Internet, periódicos y televisión. Podemos señalar que nuevamente la familia y los amigos son pieza principal en asuntos económicos para los encuestados. Esto concuerda con los resultados de Sallie Mae (2008) y Borden, et al. (2007).

El estudio revela que el 25 por ciento de los estudiantes adeuda un balance promedio a su tarjeta menor de \$150. Un 16 por ciento adeuda entre \$151 y \$250, casi un 12 por ciento entre \$251 y \$350, casi un 4 por ciento entre \$351 a \$450, alrededor del 13 por ciento adeuda más de \$450 y un 12 por ciento desconoce el balance adeudado. Cerca de un 18 por ciento no contestó esta pregunta. Estos resultados podrían reflejar líneas de crédito limitadas para estudiantes cuyos ingresos son bajos o dependen de trabajo a tiempo parcial. También podrían reflejar control de parte de los familiares en los niveles de deuda de los estudiantes o un ajuste a los estilos de vida dada las limitaciones económicas. Vemos que estos resultados están muy por debajo del promedio en los E.U. y que contrastan significativamente con Block (2009) y Urban University (2010).

En cuanto a la tasa de interés de sus tarjetas de crédito se les preguntó cuán importante es conocerla y en su mayoría, con un 62 por ciento, contestaron que es *muy importante*. Un 25 por ciento indicó que es *importante*, un 6 por ciento alega que *le da igual saber o no* la tasa de interés de su tarjeta, un 1 por ciento dijo que es *poco importante*, un 2 por ciento dijo que *no le es importante* y un 4 por ciento no contestó. Se les preguntó si consideraban que el pago mensual de la tarjeta de crédito era uno fijo u obligatorio o irregular (“lo pago si puedo”). Un 76 por ciento contestó que consideran que el pago mensual es fijo y obligatorio a diferencia de un 12 por ciento que contestó que consideran que es un pago irregular. Un 12 por ciento no contestó. Además, le preguntamos a los encuestados cuán importante es para ellos el crédito y casi un 77 por ciento contestó que era muy importante.

Quisimos saber con qué frecuencia usan sus tarjetas de crédito para pagar gastos universitarios, comida, ropa, salidas con amigos, vivienda y emergencias. Casi un 30 por ciento de los estudiantes indica que nunca usa las tarjetas de crédito para sufragar gastos universitarios. El 18 por ciento las usa poco para este propósito, casi 15 por ciento dice usarlas a veces, casi 11 por ciento las usa en bastantes ocasiones y alrededor de un 10 por ciento las usa todo el tiempo. En cuanto a la compra de comida, casi un 30 por ciento de los estudiantes indica que nunca usa las tarjetas de crédito para este propósito. Sin embargo, alrededor de un 17 por ciento y casi un 18 por ciento las usa poco o a veces para comprar alimentos. Casi un 20 por ciento indica que las usa bastante o todo el tiempo para este propósito. Con respecto a la compra de ropa, más del 60 por ciento dice nunca, en pocas ocasiones o solo a veces usar su tarjeta para comprarla. Más de un 20 por ciento usa sus tarjetas bastante o todo el tiempo para comprar ropa.

Cuando a salidas con amigos se refiere, más del 65 por ciento dice nunca o pocas veces usar su tarjeta de crédito. Solo un 11 por ciento las usa a veces y alrededor de un 7 por ciento dice usarlas en bastantes ocasiones o todo el tiempo. En gastos relacionados a vivienda, más del 70 por ciento dice nunca, en pocas ocasiones o a veces usarla. Solo alrededor de un 8 por ciento dice usarlas bastante o todo el tiempo. En caso de emergencias, casi un 40 por ciento de los encuestados dice que nunca o pocas veces usa su

tarjeta. Casi 17 por ciento indica que la usa a veces y casi un 30 por ciento las usa bastante o todo el tiempo. Nuevamente, podemos observar que, dado el perfil de un estudiante que, en su mayoría, vive todavía con sus padres, probablemente recibe ayudas económicas o becas, tiene trabajo y que quizás tiene tarjetas de crédito con una línea de crédito muy limitada, nunca, en pocas ocasiones o a veces usa sus tarjetas de crédito para pagar. Se les preguntó sobre el tipo de pago de sus deudas con la entidad que les extendió sus tarjetas de crédito. Las alternativas provistas incluían: saldo el balance completo, hago el pago mínimo requerido o pago una cantidad mayor que el mínimo pero menos que el total de la deuda. Solo un 39 por ciento contestó que salda el balance completo, un 30 por ciento paga más del mínimo requerido pero menos del total, un 14 por ciento pagan solo el mínimo requerido y un 17 por ciento no contestó. Por otro parte, se les preguntó si alguna vez habían dejado de pagar sus tarjetas y un 70 por ciento contestó que nunca habían dejado de pagar, un 15 por ciento contestó que algunas veces habían dejado de pagar sus tarjetas. Se les solicitó que contestaran si en caso de no poder pagar sus deudas tomarían un préstamo para cubrir sus gastos.

Los resultados indican que un 60 por ciento no tomaría prestado, un 39 por ciento sí tomaría prestado y un 1 por ciento no contestó. Por último se les preguntó, qué cantidad tomarían prestada en caso de que necesitara un préstamo para pagar sus deudas. Un 5 por ciento tomaría prestado entre \$200 y \$500, un 9 por ciento entre \$501 y \$1,000, un 14 por ciento entre \$1,001 a \$3,000, un 6 por ciento entre \$3,000 a \$5,000, un 56 por ciento contestó que no tomaría prestado y un 5 por ciento no contestó. Esta evidencia podría sugerir varias cosas: poco acceso a fuentes de crédito, preferencia por otras fuentes de financiamiento, o uso y manejo consciente del presupuesto personal.

## CONCLUSIONES

Al parecer la mayoría de los encuestados son cuidadosos en el uso y manejo de sus tarjetas de crédito. La evidencia sugiere que pagan a tiempo y que no tienen balances significativos de deuda en sus tarjetas de crédito. Estos resultados contrastan significativamente con la evidencia de los E.U. Estas diferencias se pueden deber a los cambios que surgen luego de la aprobación de la Ley del 2009 *Credit Card Accountability, Responsibility and Disclosure* y también a las diferencias significativas en los costos de educación de los E.U. y P.R. y al perfil de los estudiantes. Al parecer los padres están asumiendo más responsabilidad sobre el uso y manejo de las tarjetas que tienen sus hijos o se están preocupando más de la educación y control sobre el crédito. Sin embargo, encontramos resultados que contradicen la noción de que los padres asumen un rol más activo en la vida financiera de sus hijos. Por ejemplo, encontramos que pagan a tiempo las tarjetas para quizás evadir pagos adicionales por concepto de intereses. Sin embargo, 60 por ciento de los participantes admite que otros hacen sus pagos mensuales a la tarjeta cuando estos no pueden hacerlo. Esto puede ser indicio de mal uso de la tarjeta, mala planificación financiera o intervención de los padres para evitar problemas de crédito de sus hijos. Interesantemente, la evidencia sugiere una aversión de la mayoría de los estudiantes a endeudarse y una preferencia por ajustes a su conducta para reducir sus gastos.

## Limitaciones

Este estudio se realizó con una muestra de los estudiantes de la UPRRP, uno de los centros docentes con los estudiantes más destacados académicamente en P.R. y con la mayor población estudiantil en Puerto Rico. El costo de sus estudios es menor que el de otras instituciones en el país y, por lo tanto, nuestra muestra no incluye a estudiantes que pudieran tener un perfil distinto al de los estudiantes en la muestra. Futuras investigaciones incluirán una muestra de estudiantes de otras instituciones para reflejar el comportamiento de estudiantes con otras características o perfiles en P.R.

# EL CONOCIMIENTO SOBRE PLANIFICACIÓN Y MANEJO DE LAS FINANZAS PERSONALES EN LOS ESTUDIANTES UNIVERSITARIOS

Giovani J. Rodríguez Martínez, Universidad de Puerto Rico

## RESUMEN

*El objetivo de este trabajo es estudiar el conocimiento sobre planificación financiera y manejo de las finanzas personales en los estudiantes universitarios en Puerto Rico. Estudios realizados en otros países sugieren que tanto adolescentes como adultos jóvenes carecen de conocimiento básico en cuestiones financieras. Los resultados de estudios hechos en los Estados Unidos por Jumpstart Coalition (2004) indican que la mayoría de los participantes contestaron incorrectamente preguntas sobre conocimiento y manejo de las finanzas personales. Según Cull y Whitton (2011) esta falta de conocimiento no se limita a estudiantes de nivel secundario, sino que se extiende también a universitarios. Para examinar si estos resultados coinciden con los de jóvenes puertorriqueños, se diseñó un cuestionario que se administró a 312 estudiantes universitarios matriculados en la Universidad de Puerto Rico, Recinto de Río Piedras. Los resultados sugieren que existe muy poco conocimiento sobre aspectos financieros entre los estudiantes subgraduados. Aunque los estudiantes de Administración de Empresas demostraron mayor conocimiento sobre aspectos financieros que sus compañeros de otras disciplinas, los resultados muestran que los estudiantes carecen de conocimiento, ya que no lograron obtener una calificación mayor de 55 por ciento. Los resultados de este estudio evidencian la necesidad de proveer educación financiera.*

**PALABRAS CLAVES:** educación financiera, planificación financiera, manejo de finanzas personales

## THE KNOWLEDGE ABOUT FINANCIAL PLANNING AND PERSONAL FINANCE MANAGEMENT IN UNIVERSITY STUDENTS

### ABSTRACT

*The major objective of this research is to assess the knowledge of financial planning and personal finance management in the undergraduate students in Puerto Rico. Some studies from several countries suggest that both adolescents and young adults lack basic knowledge in financial matters. The results of studies done in the United States by Jumpstart Coalition (2004) indicate that most participants incorrectly answered questions about knowledge and management of personal finance. According to Cull and Whitton (2011) this lack of knowledge is not limited to high school students, but also extends to university. To examine whether these results agree with those of young Puerto Ricans, we designed a questionnaire that was administered to 312 university students enrolled in the University of Puerto Rico, Río Piedras Campus. The results suggest that there is little knowledge about financial matters among undergraduates. Although students of Business Administration demonstrated more knowledge about financial matters than their peers in other disciplines, the results show that students lack knowledge because they failed to obtain a score greater than 55 percent. The results of this study demonstrate the need to provide financial education.*

**JEL:** A22, D14

**KEYWORDS:** financial literacy, financial planning, personal financial management

## INTRODUCCIÓN

La Coalición Jumpstart es una organización sin fines de lucro, con operaciones en los Estados Unidos de América (E.U.), que promueve la educación financiera de los estudiantes desde pre-kindergarten hasta la universidad. En 1997, Jumpstart realizó una encuesta en E.U. para medir el conocimiento sobre finanzas personales en jóvenes de escuela superior. Los resultados señalan que el 57.3 por ciento de los participantes contestaron correctamente las preguntas. La encuesta se repitió en intervalos de dos años, entre el 2000 y 2008 y los resultados revelaron que existe un menoscabo en el conocimiento de finanzas personales (Jump\$tart Coalition for Personal Financial Literacy, 2004; Bernanke, 2006; Jump\$tart Coalition for Personal Financial Literacy, 2008). Dara Duguay (2006, p.26) establece que “no se puede esperar que alguien sea capaz de construir una casa sólo brindándole una sierra, un martillo y algo de madera. De la misma manera, no se puede esperar que alguien sea capaz de manejar sus finanzas sólo brindándole una fuente de ingreso, un préstamo, una tarjeta de crédito y una póliza de seguro”. Por consiguiente, ante la preocupación que surge de los estudios Jumpstart y de las observaciones hechas por estos autores, es importante evaluar las necesidades específicas de la población que se pretende estudiar. Por esta razón, este estudio evalúa el nivel de conocimiento sobre finanzas personales entre los estudiantes universitarios en Puerto Rico (P.R.).

## REVISIÓN DE LITERATURA

El colapso de los mercados financieros a principios de la década del 2000 (crisis de las empresas Dot.com) y la crisis de los mercados financieros de 2007 o también, la conocida crisis de las hipotecas de alto riesgo, ha puesto a reflexionar a muchas personas sobre la manera en que se están manejando distintos aspectos financieros. Según Bernanke (2006), los avances tecnológicos y la innovación han contribuido a complicar el mundo de los negocios, ya que ahora, existen muchos servicios y productos financieros que están disponibles para los inversionistas. Por consiguiente, la toma de decisiones financieras es más compleja y frecuente. Ben S. Bernanke y algunos de los presidentes de los Bancos de la Reserva Federal han considerado como solución a la desinformación o falta de conocimiento financiero, la inversión de dinero, tiempo y esfuerzo en programas de educación financiera. “La industria [la banca] reconoce que los estudiantes de hoy son los propietarios de casas del mañana, y es importante que los jóvenes conozcan sobre el crédito llegado el momento de comprar un hogar” (Edgar, 1998, p. 58). Estos pensamientos sugieren que una educación temprana sobre las finanzas es muy importante para el desarrollo de un individuo que pretende ser útil a la sociedad.

## METODOLOGÍA

El objetivo principal de este estudio—de carácter exploratorio—es examinar el conocimiento sobre el manejo de aspectos financieros en los estudiantes universitarios en P.R. Considerando este objetivo, se diseñó y administró un cuestionario a estudiantes universitarios matriculados en la Universidad de P.R., Recinto de Río Piedras (UPR RP). El mismo incluye mitos financieros, diversos escenarios y preguntas para medir el nivel de conocimiento de los estudiantes universitarios sobre aspectos financieros. El cuestionario consiste de 37 preguntas, de las cuales 12 permiten observar el perfil de los participantes. Cuatro preguntas miden sólo el manejo de las finanzas, otras 14 miden conocimiento financiero, y las otras siete miden tanto manejo de las finanzas como conocimiento financiero.

Para este estudio, se desprenden las siguientes hipótesis: los estudiantes de la Facultad de Administración de Empresas poseen mayor conocimiento en temas financieros que sus compañeros de la Facultad de Ciencias Sociales, según sugieren los hallazgos presentados en el estudio de Cull & Whitton (2011). La segunda hipótesis es que los estudiantes que han tomado en el pasado un curso de finanzas, contabilidad, economía, finanzas personales obtienen mejores puntuaciones y/o poseen mayor conocimiento en el manejo y planificación de las finanzas. De esta investigación también se desprende que aquellos

estudiantes que están más cerca de completar el grado de bachillerato poseen mayor conocimiento sobre planificación financiera y el manejo de las finanzas personales que aquellos que recién comienzan a realizar dicho grado. De igual forma, aquellos estudiantes que trabajan poseen mayor conocimiento que aquellos que no.

## RESULTADOS

Este estudio fue realizado en las facultades de Administración de Empresas (en adelante EMPRESAS) y Ciencias Sociales (en adelante SOCIALES) de la UPR RP. Un total de 312 estudiantes universitarios a nivel sub-graduado componen la muestra, lo que representa un ocho por ciento de la población. La muestra está compuesta por 205 estudiantes de EMPRESAS (65.7 por ciento), 77 estudiantes de SOCIALES (24.7 por ciento), 30 estudiantes de OTRAS FACULTADES (9.6 por ciento). Además, los resultados sugieren que no hay diferencia entre género (50 por ciento masculino vs. 50 por ciento femenino). La mayoría de los estudiantes participantes de esta investigación trabajan (61.5 por ciento versus un 38.5 por ciento que no lo hace). Además, la muestra consiste de estudiantes de diversos años de estudio: un 13.5 por ciento es de primer año; 17.6 por ciento corresponde a segundo año; un 24.4 por ciento es de tercer año; un 28.5 por ciento se encuentra en cuarto año; y estudiantes de quinto y sexto año representan un 16 por ciento. Entre los estudiantes encuestados, un 31.7 por ciento de los estudiantes participantes no posee tarjeta de crédito versus un 68.3 por ciento que sí posee alguna (ya sea, porque sus padres se la proveyeron o la obtuvieron). De igual manera, la mayoría de los estudiantes participantes indicaron que poseen una cuenta bancaria (96.5 por ciento vs. 3.5 por ciento).

### Conocimiento Sobre Planificación Financiera y Manejo de las Finanzas

Esta investigación buscaba evaluar, primero, si el área de estudio de un estudiante universitario puede influir sobre el nivel de conocimiento sobre aspectos financieros. En general, tanto en las preguntas que miden planificación como conocimiento financiero como las de manejo de las finanzas personales, los estudiantes de EMPRESAS contestaron más preguntas correctamente que sus pares. Sin embargo, la media general de contestaciones correctas de los grupos de estudiantes en EMPRESAS es 55 por ciento vs. SOCIALES que es 48 por ciento. Aunque con una muestra no representativa de los estudiantes en otras facultades, el resultado obtenido para esos estudiantes encuestados es de 49 por ciento. Si se considera el sistema de calificación estándar—utilizado en el sistema educativo de E.U. y P.R.—para evaluar y determinar si un estudiante domina o no el material contenido en un examen o prueba, los participantes de ambas facultades reprobaron la prueba. Dicha escala es porcentual y se presenta a continuación: 100 a 90 A, 89 a 80 B, 79 – 70 C, 69- 60 D y 59 – 0 F. Ambos grupos de estudiantes se sitúan en un rango de 59 por ciento o menos. Estos resultados son similares a los obtenidos en los estudios de Jumpstart del 2000 al 2008. Por consiguiente, la data sugiere que hay un desconocimiento o carencia de información acerca de aspectos relacionados a las finanzas personales.

En segundo lugar, el 94.9 por ciento de los estudiantes indicó que no han tomado un curso de finanzas personales o manejo de dinero en escuela superior. Por un lado, cerca del 79 por ciento de los participantes indicaron no han tomado un curso de finanzas personales o manejo de dinero en la universidad; de dicha cifra, el 61 por ciento son estudiantes de EMPRESAS y el 28 por ciento de SOCIALES. Por otro lado, el 67.9 por ciento indicó haber tomado un curso de Economía versus un 31.4 por ciento que no la han tomado. Esta información sugiere que el porcentaje bajo de contestaciones correctas pudiera ser como consecuencia de la falta de educación en términos financieros, o la falta de una mejor preparación sobre dichos aspectos. La tercera hipótesis evaluaba si a medida que un estudiante está más cerca de culminar el bachillerato, posee mayor conocimiento acerca de las finanzas personales.

Los resultados sugieren que los estudiantes de tercer año de estudio en adelante no necesariamente poseen mayor conocimiento que sus compañeros de primer y segundo año. La media general de contestaciones

correctas para los estudiantes por años de estudio es la siguiente: primer año—50 por ciento, segundo año—51 por ciento, tercer año—49 por ciento, cuarto año en adelante—56 por ciento. Por tanto, los resultados sugieren que no hay un incremento constante en el nivel de conocimiento y no existe una diferencia marcada de conocimiento entre los estudiantes. Por último, este estudio evaluaba si aquellos estudiantes universitarios que trabajan poseen mayor conocimiento que aquellos que no trabajan. Basado en los resultados, los estudiantes que trabajan han demostrado mayor conocimiento contestando correctamente un 54 por ciento de las preguntas, en comparación, con un 51 por ciento de aquellos que no trabajan.

## CONCLUSIONES

Este trabajo exploratorio evaluó y documentó si los estudiantes universitarios de la UPR RP conocen sobre planificación financiera y el manejo de las finanzas personales. Aquellos estudiantes—que estudian campos en la administración de empresas—contestaron mejor que sus compañeros de campus. Una posible razón, es la continua exposición de éstos a temas relacionados a las finanzas. Por un lado, aquellos estudiantes que han trabajado o trabajan demostraron poseer mayor conocimiento que los estudiantes que no lo hacen. Si se considera que un 68.3 por ciento de los participantes posee una tarjeta de crédito y que un 96.5 por ciento, posee una cuenta bancaria, se puede inferir que trabajar trae consigo más responsabilidades, lo que impulsa al estudiante a aprender más sobre aspectos financieros.

Por otro lado, este estudio ha hallado que hay una carencia de información sobre aspectos financieros, posiblemente por la falta de educación financiera, lo que influyó en la forma de contestar de los participantes. Si los estudiantes no lograron contestar correctamente más allá de un 55 por ciento de las preguntas, el 77 por ciento no ha tomado cursos sobre el manejo de las finanzas personales, y un por ciento considerable posee tarjetas de crédito; no se puede esperar que los jóvenes tengan un buen manejo de las finanzas. Por tanto, se establece que los estudiantes universitarios necesitan recibir educación financiera—en la medida que los padres y la sociedad en general le exija a ellos que planifiquen y hagan un buen uso de sus recursos.

# PORTAFOLIOS DE INVERSIÓN EN EL MERCADO DE RENTA VARIABLE COLOMBIANO: EVALUACIÓN DE UN MODELO DE PROGRAMACIÓN NO LINEAL.

John Dairo Ramírez Aristizábal, Tecnológico de Antioquia

Nelson Eduardo Castaño Giraldo, Tecnológico de Antioquia

Davian Camilo Taborda Tabares, Tecnológico de Antioquia

## RESUMEN

*El trabajo se centra en la aplicación de un modelo de programación no lineal para determinar un portafolio de inversión en el mercado de renta variable colombiano, que busca que un inversionista maximice la rentabilidad de acuerdo con su perfil de riesgo. Para ello, se implementa y evalúa a partir de bases de datos históricas de los precios de los diferentes activos financieros del mercado de renta variable colombiano, posteriormente se contrasta la rentabilidad obtenida con el portafolio diseñado y la rentabilidad promedio obtenida por los fondos de pensiones en Colombia, con el fin de concluir acerca de la validez del modelo de programación no lineal para el diseño del portafolio.*

**PALABRAS CLAVE:** Portafolio de inversión, teoría moderna de portafolios, programación no lineal, aversión al riesgo, activos financieros.

## THE COLOMBIAN EQUITY MARKET INVESTMENT PORTFOLIOS: ASSESSMENT OF A NON-LINEAR PROGRAMING MODEL

### ABSTRACT

*The work focuses on the application of a nonlinear programming model to determine an investment portfolio in the Colombian equity market, an investor looking to maximize profitability according to their risk profile, is implemented and evaluated based historical database of prices of different financial assets colombian equity market, then the profitability contrasts with the portfolio designed and the average return obtained by pension funds in Colombia, in order to conclude about the validity of the nonlinear programming model for the design of the portfolio.*

**JEL:** C02, C13, C14, C22, C53, C61, D81, D84, G00, G11, G23

**KEYWORDS:** Portfolio investment, modern portfolio theory, nonlinear programming, risk aversion, financial assets.

### INTRODUCCIÓN

La aversión al riesgo y el riesgo de mercado son factores que inciden sustancialmente en la toma de decisiones de los agentes al momento de conformar los portafolios de inversión, especialmente en la última década, cuando el sistema financiero ha ofrecido otras alternativas de inversión, pero que siguen siendo desconocidas para muchas personas. Bajo un entorno de mercado incierto los precios de mercado que se pagan por dichas inversiones presentan una gran volatilidad, generada por múltiples causas: las fluctuaciones en la tasa de interés, la tasa de cambio, la tasa de los créditos hipotecarios, el precio de las acciones, entre otras. Todas las variables de la economía alteran sensiblemente la rentabilidad de los portafolios de inversión. Así mismo, la volatilidad de los mercados financieros, la complejidad y velocidad de las transacciones financieras han hecho que los riesgos sean cada vez más difíciles de

identificar, analizar, controlar y mitigar. La motivación por indagar y evaluar modelos para la conformación de portafolios, se centra principalmente en que es un tema poco estudiado en Colombia, siendo relevante para establecer otros parámetros de investigación, que articulen las herramientas tecnológicas, modelos financieros y procesos de toma de decisiones con base en pronósticos matemáticos, con el entorno económico, caracterizado por un proceso de liberalización financiera, proliferación de nuevos productos y servicios en los mercados de capitales, los cuales han permitido nuevas posibilidades de inversión a los diferentes agentes económicos (familias, empresas y gobierno).

Los inversionistas siempre toman las decisiones de inversión con el objetivo de maximizar la rentabilidad asumiendo el mínimo nivel de riesgo o de minimizar el riesgo con la máxima rentabilidad posible óptima que satisfagan las preferencias de rentabilidad, riesgo y liquidez. El interrogante que surge en torno al tema de los portafolios de inversión y su relación con los riesgos es: ¿Cómo puede un inversionista estimar y seleccionar un portafolio óptimo?, ¿Existirán modelos que permitan conformar portafolios de inversión eficientes en el mercado de renta variable Colombiana? Los inversionistas institucionales como los fondos de pensiones, firmas comisionistas y las grandes empresas, hacen grandes esfuerzos en el diseño de portafolios de inversión que permitan maximizar la rentabilidad y disminuir la exposición al riesgo. La volatilidad de los precios del mercado han provocado que estas instituciones exploren técnicas y modelos que permitan la conformación de portafolios eficientes.

Con el objetivo de estructurar un portafolio de inversión en el mercado de renta variable colombiano, que le permita a un inversionista maximizar la rentabilidad de acuerdo con su perfil de riesgo, se desarrolla la presente investigación utilizando modelos de programación no lineal, para lo cual se recopiló información de fuentes secundarias como la página del Grupoaval, el sistema de información Bloomberg, Reuters y libros y artículos acerca de la teoría moderna de portafolios y se construyeron bases de datos del valor histórico de los precios y rentabilidades de los diferentes activos financieros del mercado con el fin de implementar y evaluar dicho modelo. El proyecto pretende evaluar un modelo para la conformación de portafolios eficientes que se fundamenta en la teoría de portafolios y el estudio de la frontera eficiente, dicho modelo se implementará como un modelo de programación no lineal el cual consiste en la optimización de una función objetivo sujeto a una serie de restricciones. El modelo será evaluado en el mercado de renta variable colombiano. El resultado de la implementación del modelo es una proporción o porcentaje de inversión que se debe hacer en una determinada alternativa de inversión, donde cada alternativa de inversión estará conformada por la compra de acciones de las diferentes empresas cotizantes en la Bolsa de Valores de Colombia.

## REVISIÓN LITERARIA

### Teoría de Portafolios

En los mercados financieros, los inversionistas buscan poseer activos que les generen la máxima rentabilidad posible con un mínimo riesgo. Sin embargo, satisfacer estas dos condiciones al mismo tiempo no es tarea fácil, ya que el mercado, generalmente, otorga mayor rentabilidad en activos con alto riesgo y viceversa. Por lo anterior, en las últimas décadas se han venido desarrollando diferentes modelos y técnicas de selección, optimización y administración de portafolios, siendo el pionero Harry Markowitz, quien en 1952 publicó en *The Journal of Finance* el documento histórico “Portfolio selection”, que dio origen a la teoría moderna de portafolios. Posteriormente, esta teoría fue ampliada por el autor en 1959 en su libro “Portfolio selection: efficient diversification” y mejorada por Sharpe en 1964 con la publicación del artículo “Capital asset prices: a theory of market equilibrium under conditions of risk” en *The Journal of Finance*. En 1990, Markowitz, Sharpe y Miller recibieron el Premio Nobel en Ciencias Económicas por el desarrollo del modelo CAPM (Capital Asset Pricing Model) o modelo de valuación de activos de capital (Dubova, 2005). La aplicación de la teoría moderna de portafolios y el CAPM permitió resolver el problema de la selección de portafolios y encontrar el portafolio óptimo, dentro de los activos disponibles

en el mercado, que se ajuste a los criterios de rentabilidad y riesgo de cada inversionista.

En términos generales, se puede decir que la administración de portafolios de inversión consiste en mezclar diferentes activos financieros para obtener la combinación riesgo-rentabilidad que satisfaga las necesidades del inversionista, es decir, se trata de un método que permite diversificar la inversión para reducir el riesgo, lo cual se logra al repartir el capital del inversionista entre diferentes activos y seleccionar el portafolio óptimo, que no es más que aquel portafolio que pertenece a la frontera eficiente y que, combinado con una proporción de inversión en el activo libre de riesgo, maximiza la rentabilidad (Vélez-Pareja, 2001). En años recientes, se han publicado diferentes trabajos sobre este tema en Colombia, entre los que se destacan el de Vélez-Pareja (2001), Martínez, Restrepo y Velásquez (2004) y Dubova (2005). En Hong Kong se han publicado también trabajos como los de Ho, Strange y Piesse (2000), Lam (2001) y Chen y Huang (2005).

### Portafolio Óptimo y Línea de Frontera Eficiente

Cuando se tiene un conjunto de  $n$  activos, cuya rentabilidad esperada (calculada como el valor medio de los rendimientos históricos) y riesgo (calculado como la desviación estándar de los rendimientos históricos) se conocen, es posible formar un número infinito de portafolios. Afortunadamente, un inversionista no necesita evaluar todas esas alternativas para elegir su portafolio óptimo, puesto que lo elegirá del conjunto de portafolios que ofrecen un rendimiento esperado máximo para niveles variables de riesgo y un riesgo mínimo para niveles variables de rendimiento esperado. Al conjunto de portafolios que cumplen estas dos condiciones se le conoce como frontera eficiente (Markowitz, 1952).

En la actualidad son muchas las herramientas computacionales que le permiten a un inversionista encontrar los portafolios de la frontera eficiente, siendo el Excel una de la más utilizadas, ya que con su componente Solver es posible desarrollar el modelo de optimización que se necesita. Al graficar el conjunto de portafolios eficientes se obtiene la Línea de Frontera Eficiente de Markowitz, que está curvada positivamente y es cóncava con su origen. Ahora, teniendo la línea de frontera eficiente, el inversionista procede a seleccionar su portafolio óptimo, el cual será diferente para cada inversionista, según sea el grado de aversión al riesgo

### Modelo de Valoración de Activos de Capital (CAPM)

Después de la formulación de la teoría de selección de portafolios de Markowitz, fueron varios los investigadores que, basados en ella, buscaron hacerle aportes importantes, tales como Sharpe, que en 1964 publicó el artículo “Capital asset prices: a theory of market equilibrium under conditions of risk”. El modelo de Markowitz supone que los inversionistas seleccionarán portafolios constituidos por activos riesgosos; el modelo CAPM lo que hizo fue extender el modelo de Markowitz al agregar un activo libre de riesgo ( $R_f$ ) al conjunto de activos con riesgo, que es un valor emitido por el gobierno de cada país, con un vencimiento que coincide con la duración del período de tenencia del inversionista, con una rentabilidad segura, es decir, no hay incertidumbre acerca de su valor terminal, por lo tanto, su desviación estándar es cero, al igual que la covarianza con otros activos riesgosos.

Del teorema de la separación, planteado por Tobin en 1958, se desprende que el portafolio óptimo en la línea de frontera eficiente será el mismo para todos los inversionistas que forman el mercado, el cual estará ubicado en el punto de tangencia entre la línea que une la rentabilidad del activo libre de riesgo y la frontera eficiente de Markowitz. A este portafolio óptimo se le conoce como portafolio de mercado (M) y a la línea que une la rentabilidad del activo libre de riesgo con el portafolio de mercado (M) y va más allá de éste se le conoce como línea de mercado de capitales (CML) (Alexander et al., 2003).

La línea de mercado de capitales (CML o capital market line) representa la relación lineal entre el

rendimiento esperado y el riesgo total para diferentes combinaciones del portafolio de mercado (M) y varias proporciones de préstamo o endeudamiento libres de riesgo. Entonces, con el CAPM la nueva frontera eficiente es la línea de mercado de capitales, en la cual los inversionistas encontrarán los mejores portafolios y podrán elegir su portafolio óptimo, según su nivel de aversión al riesgo. Con el préstamo libre de riesgo, el inversionista obtendrá el portafolio de menor riesgo y menor rentabilidad, comparado con el portafolio de mercado (M). El endeudamiento libre de riesgo le permite al inversionista superar la rentabilidad del portafolio de mercado, al invertir todo su dinero más el dinero prestado en el portafolio de activos riesgosos (Dubova, 2005).

### Programación Lineal y no Lineal

La programación ha sido uno de los enfoques cuantitativos utilizado para la toma de decisiones en la administración. Se han reportado numerosas aplicaciones en las industrias química, del aerotransporte, del acero, del papel, del petróleo, entre otras. Los problemas de selección de cartera implican situaciones en las que los gerentes financieros deben elegir inversiones específicas (por ejemplo, acciones, bonos) a partir de diversas alternativas de inversión. Los administradores de fondos mutualistas, de uniones de crédito, de compañías de seguros y de bancos, encuentran frecuentemente este tipo de problemas. La función objetivo para los problemas de selección de cartera es por lo común la maximización del rendimiento esperado o la minimización de los riesgos. Las restricciones asumen, por lo general, la forma de restricciones sobre el tiempo de inversiones permisibles, leyes estatales, políticas de la compañía, máximo riesgo permisible, etcétera. Se han planteado y resuelto problemas de este tipo utilizando diversas técnicas de programación matemática. Sin embargo, si es posible plantear una función objetivo lineal y restricciones lineales en un problema específico de selección de cartera, entonces puede utilizarse la programación lineal para resolverlo, en el caso en que la función objetivo o alguna de las restricciones no es lineal, se cataloga como un modelo de programación no lineal. En este trabajo se muestra la forma en la que puede plantearse un problema de selección de cartera y el modo en que se puede resolver como un modelo de programación no lineal.

### **METODOLOGÍA**

La metodología consistió en conformar una base de datos con la información histórica de las rentabilidades mensuales de las 29 empresas de alta liquidez que cotizan en la BVC (Bolsa de Valores de Colombia) durante el año 2011. La Tabla 1 contiene los títulos de alta liquidez durante el período (2011) que cotizan en la BVC.

Con las rentabilidades mensuales de cada activo se calculó la rentabilidad promedio y la matriz de varianzas y covarianzas del conjunto de acciones con el fin de establecer los parámetros necesarios (Ruppert, 2004) para aplicar el modelo de programación no lineal (Ragsdale, 2008) que se explica a continuación:

En forma matricial se tiene que la varianza de un portafolio de inversiones es:

$$\sigma_p^2 = PCP^T \quad (1)$$

Donde:

$\sigma_p^2$ : es la varianza del portafolio

$$P = [P_1 P_2 P_3 \dots P_n]$$

(2)

Es el vector de proporciones o porcentajes a invertir en cada activo financiero que conforma el portafolio.

$P^T$ : es el vector de proporciones transpuesto

$$C = \begin{bmatrix} \sigma_1^2 & \sigma_{12} & \dots & \sigma_{1n} \\ \sigma_{21} & \sigma_2^2 & \dots & \sigma_{2n} \\ \cdot & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \cdot \\ \sigma_{n1} & \sigma_{n2} & \dots & \sigma_n^2 \end{bmatrix}$$

(3)

$C$ : es la matriz de varianzas y covarianzas de los activos financieros

Tabla 1: Títulos Valores de Alta Liquidez Durante el Año 2011 Que Cotizan en la BVC

Mnemotecnico	Emisor
Bcolombia	Bancolombia
Biomax	Biomax
Bogota	Banco De Bogotá
Bna	Bolsa Mercantil De Colombia

Prec	Pacific Rubiales
Etb	Empresa De Teléfonos De Bogotá
Isagen	Isagen
Sie	Sie
Suraminv (Gruposura)	Gruposura
Tablemac	Tablemac

En la tabla 1 se muestra el Mnemotecnico y el nombre de la empresa de las acciones de alta liquidez durante el período (2011).

La función a maximizar considerando múltiples objetivos que son: minimizar el riesgo (la varianza del portafolio) y maximizar la rentabilidad mínima requerida es:

$$Max Z = (1 - r)R - r\sigma_p^2$$

(4)

Donde:

$R$ : es la rentabilidad esperada del portafolio

$r$ : es una constante entre 0 y 1, y representa la aversión al riesgo del inversionista

$r = 1$ , indica la máxima aversión al riesgo, es decir, que al inversionista no le gusta correr riesgos y por tanto buscará minimizar la varianza del portafolio:  $Max Z = -r\sigma_p^2$

$r = 0$ , indica que al inversionista le gusta correr el riesgo, es decir, es amante del riesgo y por lo tanto lo que busca es maximizar el rendimiento esperado:  $Max Z = R$

El modelo está sujeto a las siguientes restricciones:

La suma de las componentes del vector de proporciones (2) no puede superar el 100%, es decir, que el capital invertido en el portafolio no puede exceder al máximo disponible:

$$\sum_{i=1}^n P_i = 1$$

(5)

Se debe garantizar un nivel mínimo de rentabilidad en el portafolio de inversiones y esto se logra con la siguiente restricción:

$$\sum_{i=1}^n \mu_i P_i \geq \Re$$

(6)

$\mu_i$ : es la rentabilidad promedio de los activos.

$\Re$ : es el rendimiento mínimo requerido del portafolio.

Las componentes del vector de proporciones pueden tomar valores entre cero y uno:

$$0 \leq P_i \leq 1$$

(7)

Para implementar el modelo se utilizó la herramienta Solver del software Microsoft Excel obteniendo el portafolio óptimo para el primer mes del año 2012, posteriormente se procede a calcular la rentabilidad real con base en los resultados arrojados por el modelo para el primer mes del 2012, el procedimiento se repite para los 11 meses siguientes del año 2012. Finalmente se calcula la rentabilidad acumulada durante el año 2012 obtenida con el modelo y definida para cada nivel de riesgo considerado en el modelo con la variable aversión al riesgo, por último se compara el rendimiento real obtenido del portafolio con la rentabilidad promedio entregada por los fondos de pensiones, con el propósito de medir la eficiencia del modelo.

## RESULTADOS

En la Tabla 2 se muestran los rendimientos reales mensuales y acumulados durante el año 2012 por nivel de aversión al riesgo, después de aplicar el modelo de programación no lineal para cada uno de los 12 meses.

Tabla 2: Rendimientos Reales Obtenidos Para el Año 2012

1.0	0.91%	0.84%	1.39%	-0.56%	-5.46%	-2.87%	-1.32%	1.53%	2.89%	2.84%	-5.58%	0.97%	-4.78%

En la Tabla 2 se muestran las rentabilidades reales mensuales y acumuladas arrojadas al aplicar el modelo de programación no línea para el año 2012.

En la Figura 1 se puede observar las rentabilidades acumuladas durante el año versus el nivel de aversión al riesgo después de aplicar el modelo de programación no lineal, se puede observar que la mayoría de las rentabilidades acumuladas son positivas a excepción del nivel de aversión al riesgo  $r=1$  con el que se obtiene un rendimiento negativo del 4.78% anual, mientras que con un nivel de aversión  $r=0.6$  se da la máxima rentabilidad con un valor de 25.28% anual. Al contrastar con los resultados de los fondos de pensiones

Figura 1: Rentabilidad Acumulada En Función De La Aversión Al Riesgo.

En la Figura 1 se muestran las rentabilidades reales anuales acumuladas arrojadas al aplicar el modelo de programación no línea para el año 2012.

## CONCLUSIONES

Con base en los resultados arrojados se comprueba la validez del modelo en el mercado de renta variable colombiano, al arrojar en un 90% rendimientos positivos para los diferentes niveles de aversión al riesgo, podemos concluir que de acuerdo al nivel de aversión al riesgo se obtienen diferentes rentabilidades para el acumulado del año 2012, es así como con un nivel de aversión al riesgo de 0.6 se obtuvo el mayor rendimiento acumulado del portafolio del 25.28% anual que contrastado con los datos oficiales proporcionados por la Superintendencia Financiera de Colombia, en su informe: Rentabilidad Fondos de Pensiones Obligatorias a 31/12/2012 en el cual se establece una rentabilidad promedio de los fondos de pensiones desde 31/12/2008 hasta 31/12/2012 del 15.49% anual inferior a la rentabilidad arrojada por el modelo. A pesar de que algunos activos disponibles para conformar el portafolio mostraron rendimientos negativos durante el periodo de estudio (2011-2012) el modelo realizó una buena diversificación a la hora de establecer el portafolio.

*Limitaciones:* Algunas acciones no tenían información durante los periodos iniciales del 2011 y por tanto no se consideraron en el abanico de opciones que se tenían en consideración por tratarse de empresas que apenas se comenzaron a tranzar en la BVC. Durante el periodo de estudio la acción de la empresa Fabricato S.A. tuvo un comportamiento atípico al incrementarse abruptamente su precio y generó que el modelo se polarizara generando una solución atribuyendo el 100% del portafolio a este activo.

## ABSTRACT

*The following paper aims to present results obtained by applying non-parametric techniques such as the Malmquist index to measure 20 major container port performance located at the pacific rim. For research proposes, the Malquist index methodolgy was used to measure efficiency within a period of time of five years (2004-2009). Ports selected are located at the Pacific Rim since this region annually produces one of the largest container cargo worldwide movements. Due to each container terminal efficiency directly contributes to port performance as set, the relevance and contribution of this research would be of great interest to port community and its results may contribute to port authority decisions. The results shown that the port with best results within the Malmquist index, during the analysis was Ho Chi Minh (Vietnam) Port with the best performance of the 20 ports reviewed ,within the Asia region as well as few ports located in North America. The results of this study can indicate improvements in port management and operational planning at local and national levels.*

## INTRODUCCION

Se estima que a nivel mundial el movimiento de carga contenerizada, creció un 4 por ciento alcanzando los 506 millones de contenedores en 2008, contribuyendo a esta cifra los puertos chinos con un 22.6 por ciento le siguen en orden de importancia Europa y Norte América (UNCTAD, 2009). En la actualidad existe gran interés por parte de las autoridades portuarias por incrementar la competitividad de sus complejos, ya que necesitan competir eficientemente con sus puertos vecinos generando que estos tengan mayores y mejores exigencias físicas. Este proceso de transformación se aceleró a medida que la globalización económica se intensifico generando la ampliación de mercados, la multiplicación de las transacciones comerciales en distintas áreas, lo que permite observar una acentuación de la competencia portuaria e incluso intra-portuaria y esto se asiste de un proceso progresivo de privatización, descentralización y des-regulación portuaria.

La aplicación de la técnica DEA ha sido ampliamente aplicado a diversos campos; (Camanho & Dyson, 2005) en el sector bancario; (Barros, 2005) en el sector hotelero; (Butler & Li, 2005) en hospitales, etc. La cantidad de trabajos publicados en diferentes periódicos y revistas, utilizando esta metodología, sugiere la amplia aplicación que tiene el DEA. El presente trabajo comprende el desempeño operacional que guardan los puertos contenedores que se encuentran en la Cuenca del Pacífico, esto derivado de un análisis de eficiencia realizado con metodologías no paramétricas, motivado por la necesidad de contribuir, como muchos otros autores, a la literatura portuaria con perspectivas diferentes. Para realizar el análisis del desempeño de las terminales mencionadas se planteó efectuar un análisis de corte longitudinal, tomando el periodo 2004 - 2009, ya que a partir del 2004, según Stopford (2009), el transporte marítimo tuvo un gran despegue económico a nivel mundial. Debido a que la metodología DEA, en sus modelos básicos no permite realizar mediciones a través del tiempo ya que son modelos estáticos y esta situación puede ser engañosa porque el ajuste dinámico puede dar lugar a un aparentemente empleo

excesivo de los recursos necesarios para producir resultados benéficos en futuros períodos. Por tal motivo se seleccionó una extensión del DEA llamada el Índice Malmquist, también referenciado como Factor total de Productividad (FTP), la aplicación de esta medida al sector portuario es reciente y esta técnica permite conocer los cambios en cada uno de los componentes de la productividad total: La eficiencia técnica y el cambio tecnológico. Conocer cómo se han comportado estos factores en los últimos años, de cualquier puerto, resultará importante para detectar las ineficiencias y mejorará las fortalezas del puerto. El presente artículo se ha estructurado de la siguiente manera: la sección uno versa sobre la eficiencia y sus desarrollos teóricos, en donde, brevemente se habla sobre las bases metodológicas del DEA y el Índice Malmquist. Posteriormente se presentan algunos de los trabajos portuarios cuyos desarrollos utilizan la herramienta del Índice Malmquist. En la sección tres, se expone la metodología usada, la selección de los inputs y outputs así como se propone el uso de nuevas variables y se comentan los resultados obtenidos. Por último, se presentan los resultados así como las conclusiones.

### LITERATURA PREVIA: EFICIENCIA PORTUARIA E ÍNDICE MALMQUIST

Si bien existen numerosos trabajos cuyo objetivo es lograr la eficiencia técnica de los puertos empleando tanto técnicas econométricas como programación lineal, la aplicación del índice Malmquist a la industria portuaria es reciente y los trabajos que abordan el tema son escasos. Como se mencionó anteriormente, la eficiencia técnica es uno de los componentes de la productividad, y su determinación es necesaria pero no suficiente para la eficiencia técnica de los puertos se encuentra en González y Trujillo (2005). A continuación se mencionan a algunos trabajos que emplearon el índice de Malmquist para medir el cambio en la productividad total. Liu, Liu y Cheng (2006) aplican el índice Malmquist y logran el cambio en el FPT de un buen número de terminales de contenedores en China. Este estudio es relevante, pues los puertos asiáticos, particularmente los chinos, han presentado crecimientos significativos en la presente década y han ido desplazando a los puertos norteamericanos y europeos en el tráfico de contenedores. De acuerdo con este trabajo, las terminales de contenedores que mayor movimiento presentaron obtuvieron ganancias en el FPT, lo contrario ocurrió en las terminales pequeñas. Los resultados del índice de Malmquist han sido tema de discusión en diversos ámbitos, pues como señalan Coelli, Prasada Rao y Battese (1998), al asumir una escala de retornos constante se puede incurrir en errores al calcular el cambio en la escala de eficiencia, si consideramos que en la práctica es más común asumir una escala de retorno variable.

Nuevamente en 2009, Guerrero y Rivera (2009), realizan una investigación que mide la eficiencia de puertos contenedores más importantes de México con el Índice Malmquist. Tal como lo intentó Estache en años anteriores, este trabajo pretende medir el desempeño únicamente en puertos especializados. De acuerdo a los resultados obtenidos se observó que los puertos de tamaño medio, como Progreso y Ensenada fueron mayores que puertos concentradores como: Veracruz y Altamira aun cuando la eficiencia en estas terminales es mayor. Utilizando la misma metodología, Cheon *et al.* (2009) evalúa como las reformas institucionales portuarias influenciaron la eficiencia portuaria, durante el periodo de 1991 a 2004, a 98 de los puertos más importantes a nivel mundial. En su trabajo concluye que las reestructuraciones de los puertos (privatización) contribuyen al factor total de productividad, principalmente en los puertos grandes, ya que les permite contar con instituciones especializadas así como concentrar la carga. Con la finalidad de extender el trabajo de autores previos, (Fu, Song, & Zi-jian, 2009) proponen mejorar el método DEA- Índice de Productividad Malmquist aplicando un método de cálculo sistemático llamado PCA (Principal Components Analysis por su nombre en inglés). Es una técnica de reducción de información y combina nuevas medidas múltiples definidas por los *inputs/outputs* y son usadas para identificar los conjuntos pequeños de índices que representan una gran parte de la discrepancia total en los índices originales. Para ejemplificar el uso de estas herramientas decidieron aplicarlas al análisis de 10 puertos Chinos durante el periodo 2001 a 2006.

## EFICIENCIA Y SUS DESARROLLOS TEÓRICOS

Los modelos básicos del DEA son: el CCR (por Charnes, Cooper y Rhodes) y el BCC (Banker, Charnes y Cooper). La diferencia principal entre estos dos métodos radica en el supuesto de las escalas de retorno. De hecho el modelo CCR asume constantes escalas de retorno, donde el modelo BCC permite variables escalas de retorno. Los modelos DEA pueden diferenciarse de acuerdo a su orientación ya sea hacia el *input* o hacia el *output* (e.i. ya sea para minimizar los *inputs* para un nivel dado de *output* o para maximizar un *output* para un nivel dado de *input*) (So, Kim, Cho & Kim, 2007.) Sin embargo, estos modelos del DEA aplican sólo en condiciones estáticas. Y esta situación puede ser engañosa debido a que el ajuste dinámico puede dar lugar a un aparente empleo excesivo de los recursos necesarios para producir resultados benéficos en futuros períodos. Algunas alternativas metodológicas más comunes para el análisis dinámico son (Färe, Grosskopf, & Lovell, 1994):

1. Fronteras contemporáneas (una frontera por año).
2. Fronteras secuenciales (acumulativas).
3. Fronteras intertemporales (evaluación global).

### Índice Malmquist (Im)

Los índices de Malmquist fueron introducidos por Caves *et al.* (1982). Nombrados en honor a Malmquist (1953) quien propuso la construcción de índices cuantificadores de *inputs* como proporciones de funciones de distancia. El índice de Malmquist (IM) relacionado con la productividad posee múltiples ventajas. Se basa en la representación de la frontera de múltiples *inputs* y *outputs* en tecnología de producción. En un contexto empírico, los resultados son obtenidos usando técnicas matemáticas (DEA) que ayudan a comprender la forma de la frontera de producción; por último, el índice se descompone en múltiples componentes para comprender la raíz del origen de los cambios de producción, de ahí que a este índice se le conozca como Factor Total de la Producción (FTP) ó el índice de productividad Malmquist.

1. Para introducir el concepto de función de distancia, consideremos  $n$  DMUs en un periodo  $t$  tal cual usa los *inputs*  $x_t \in R_+^m$  para producir los *outputs*  $y_t \in R_+$ . La tecnología de producción  $\phi^t$  puede ser definida como:

2.  $\phi^t = \{(x^t, y^t) : x^t \text{ puede producir } y^t\}$  (1)

3. Esto consiste en todos los vectores de *inputs-outputs* que sean técnicamente viables para cierto proceso de producción. La función de distancia de *output* está definida en la tecnología  $\phi^t$  como el recíproco de la expansión viable máxima del  $y^t$  producible del *input*  $x^t$  de la forma:

4.  $D_o^t(x^t, y^t) = \min \left\{ \theta : \left( x^t, \frac{y^t}{\theta} \right) \in \phi^t \right\}, \theta \leq 1$  (2)

5. Para definir un índice Malmquist se requiere la especificación de dos funciones con periodos combinados de tiempo tales como

6.  $D_o^t(x^{t+1}, y^{t+1}) = \min \left\{ \theta : \left( x^{t+1}, \frac{y^{t+1}}{\theta} \right) \in \phi^t \right\}, \theta^t \leq 1$  (3)

$$7. \quad D_o^{t+1}(x^t, y^t) = \min \left\{ \theta : \left( x^t, \frac{y^t}{\theta} \right) \in \phi^t \right\}, \theta^{t+1} \leq 1 \quad (4)$$

8. La primera función es de periodo combinado de tiempo, definida en (3), que mide el recíproco a la máxima expansión proporcional de los outputs producibles del input  $x^{t+1}$ , evaluado dentro de la relación de tecnología de producción en el periodo previo ( $\phi^t$ ). De forma similar, la segunda función de periodo combinado, definida en (4), mide el recíproco de la expansión proporcional máxima de los outputs producibles desde el input  $x^t$ , evaluado en relación a la tecnología de producción en el periodo de tiempo  $t + 1$ . Nótese que mientras el periodo individual de la función de distancia siempre es menor o igual a uno, en ambos periodos combinados de tiempo el valor de la función de distancia de output deberá ser mayor a la unidad. Esto es debido a que la combinación input-output observada en un periodo de tiempo podría no ser posible con esa misma tecnología en otro periodo de tiempo. Lo anterior se corresponde con el concepto de super-eficiencia propuesto por Ansersen y Petersen (1993).

9. Caves et al. (1982) define un índice de productividad Malmquist relativo a una tecnología individual  $\phi^t$  (en 5) o  $\phi^{t+1}$  (en 6), como a continuación se expresado:

$$10. \quad M_o^t = \frac{D_o^t(x^{t+1}, y^{t+1})}{D_o^t(x^t, y^t)} \quad (5)$$

$$12. \quad M_o^{t+1} = \frac{D_o^{t+1}(x^{t+1}, y^{t+1})}{D_o^{t+1}(x^t, y^t)} \quad (6)$$

13. Los valores de  $M_o^t$  y de  $M_o^{t+1}$  deben ser mayores, iguales o menores que uno, dependiendo del crecimiento en productividad, estancamiento o su declive que ha ocurrido entre los periodos  $t$  y  $t + 1$ .

En general,  $M_o^t$  y  $M_o^{t+1}$  mantienen distintos números de productividad ya que refieren a tecnologías diferentes.

14. El índice Malmquist fue tratado teóricamente hasta las mejoras aplicadas por Färe et al. (1994). Una de las mayores aportaciones de este trabajo fue el de asumir a las eficiencias usando modelos de DEA (Charnes et al. 1978) para el cálculo de las funciones de distancia integradas en el índice Malmquist.

15. Färe et al. (1994) define un índice de productividad orientado a inputs-outputs como la media geométrica de dos índices Malmquist refiriendo a la tecnología en un periodo de tiempo  $t$  y  $t + 1$  (5) y (6) respectivamente, mostrando la siguiente medida de productividad Malmquist:

$$16. \quad I^{t+1,t} = \left( \frac{D_o^t(x^{t+1}, y^{t+1})}{D_o^t(x^t, y^t)} \cdot \frac{D_o^{t+1}(x^{t+1}, y^{t+1})}{D_o^{t+1}(x^t, y^t)} \right)^{\frac{1}{2}} \quad (7)$$

17. Otra de las mejoras aportadas por Färe et al. (1994) es la de mostrar la forma de descomponer el índice (7) en un índice de cambio de eficiencia técnica y en un índice que refleja el cambio en la frontera del grupo de posible producción, por ejemplo, un índice de cambio tecnológico.

18. Estos componentes se obtienen al reescribir (7) de la siguiente manera:

$$19. \quad I^{t+1,t} = \frac{D_o^{t+1}(x^{t+1}, y^{t+1})}{D_o^t(x^t, y^t)} \cdot \left( \frac{D_o^t(x^t, y^t)}{D_o^{t+1}(x^t, y^t)} \cdot \frac{D_o^t(x^{t+1}, y^{t+1})}{D_o^{t+1}(x^{t+1}, y^{t+1})} \right)^{\frac{1}{2}} \quad (8)$$

20. La porción fuera de los paréntesis son las medidas del cambio de la eficiencia técnica entre los periodos de tiempo  $t$  y  $t + 1$ . El significado geométrico de las dos proporciones dentro de los paréntesis obtienen el cambio de la tecnología (o corrimiento de la misma) entre los dos periodos, evaluados a los niveles de input-output en  $t(X^t, Y^t)$  y  $t + 1(x^{t+1}, y^{t+1})$ . Sobre todo, mejoras en la productividad mostrarán un índice Malmquist ( $I^{t+1,t}$ ) con valores mayores a la unidad.

21. Los índices Malmquist orientados al output requieren la estimación dentro del periodo intertemporal del los valores con los modelos de DEA.

22. Los valores entre los periodos de tiempo pueden ser obtenidos usando el modelo (9), donde  $x^t$  y  $y^t$  son vectores de los inputs y de los outputs de la DMU bajo análisis en el periodo  $t$ , y  $X^t$  y  $Y^t$  son las matrices de los inputs y outputs respectivamente (datos observados) en el periodo  $t$ . El modelo debe ser resuelto y calculado para cada año analizado.

$$23. \quad [D_o^t(x^t, y^t)]^{-1} = \max_{\delta, \lambda} \delta$$

sujeta a:

$$\delta y^t \leq Y^t \lambda,$$

$$x^t \geq X^t \lambda$$

$$\lambda \geq 0 \quad (9)$$

24. Teniendo que  $D_o^t(x^t, y^t) \leq 1$ , y  $D_o^t(x^t, y^t) = 1$  indicando que  $(x^t, y^t)$  está localizado en la frontera de  $\phi^t$ . Notar que  $D_o^t(x^t, y^t)$  coincide con la medida orientada a output de la eficiencia técnica de Farrell, el cual es recíproca a  $\delta$ .

25. Los valores intertemporales se obtienen usando los modelos (10) y (11), donde  $t$  es al periodo base y  $t + 1$  es uno de los siguientes años analizados.

$$26. \quad [D_o^t(x^t, y^{t+1})]^{-1} = \max_{\delta, \lambda} \delta$$

sujeta a:

$$\delta y^{t+1} \leq Y^t \lambda$$

$$x^{t+1} \geq X^t \lambda$$

$$\lambda \geq 0 \quad (10)$$

$$27. \quad [D_o^{t+1}(x^t, y^t)]^{-1} = \max_{\delta, \lambda} \delta$$

sujeta a:

$$\delta y^t \leq Y^{t+1} \lambda$$

$$\begin{aligned} x^t &\geq X^{t+1}\lambda \\ \lambda &\geq 0 \end{aligned} \quad (11)$$

28. Note que el índice Malquist debe ser calculado asumiendo una tecnología CRS, como es explicado en Färe y Grosskopf (1996). Para una mayor y más completa revisión los desarrollos teóricos y aplicaciones del índice Malquist consulte Färe et al. (1998).

## METODOLOGIA UTILIZADA

Aunque existe diversidad sobre las variables a utilizarse dentro de la métrica de eficiencia de los puertos, Chang (1978) sugiere que los *inputs* de un puerto deberían incluir el valor monetario real de los activos netos en el puerto, el número de trabajadores por año y el número promedio de empleados por mes de cada año. Dowd y Leschine (1990) sostiene que la productividad de una terminal o puerto de contenedores depende del uso eficiente de la mano de obra, terrenos y equipo. En los últimos años, sin embargo, muchos estudios sobre terminales de contenedores tienden a presentar una especie de uniformidad. Según Wang *et al.* (2004), las variables *inputs* y *outputs* deberán reflejar el objetivo y el proceso de envase terminal de la producción con la mayor precisión posible.

Derivado de la investigación realizada en la literatura previa, los *inputs* y *outputs* propuestos para este ensayo son los siguientes: La información de infraestructura del puerto representan muy bien a los insumos tierra y capital. Y dentro de este trabajo se quedaron representados por el área total de las terminales del puerto y la longitud de los muelles respectivamente. No se consideró la mano de obra debido al poco tiempo y dificultad en obtener esta información. Y como *output*, el número de contenedores movidos anualmente, este *output* es el más utilizado por la mayoría de los autores por ser la variable que más representa el producto final de un puerto..

La correlación de los 3 *inputs* contra el *output* fue mayor a 0.5 demostrando que todos ellos se correlacionan positivamente. La base de datos para procesar los cálculos se obtuvo de los libros *Containerisation International Yearbook* (Lloyds & Fossey (2004-2009) y *Cargo System* (CS, 2010), ambos de los años 2004, 2005, 2006, 2007, 2008 y 2009. La correlación de los 3 *inputs* contra el *output* fue mayor a 0.5 demostrando que todos ellos se correlacionan positivamente. Para realizar este trabajo se buscó que se encontraran dentro de la lista de los 100 Puertos, con mejor desempeño en el movimiento de carga de contenedores (CS, 2010), así como que pertenecieran a la Cuenca del Pacífico. Esto por la importancia económica y portuaria, para el país y en especial a nivel mundial. Se eliminaron los puertos outliers y con base en esto se construyó una base de datos de 20 puertos como se aprecia en la tabla 1.

Tabla No1: Puertos de la Cuenca del Pacífico Analizados

1	Corea del Sur	Bus an	11	Viet Nam	Ho Chi Minh
2	China	Guangzhou	12	Filipinas	Manila

## ANÁLISIS Y RESULTADOS

Como se ha comentado el índice Malmquist no solo permite obtener el cambio en el factor de productividad, sino que también posibilita conocer el cambio de cada uno de los componentes de la productividad, es decir, eficiencia técnica y el cambio tecnológico. El presente trabajo utilizó el *software* de uso libre llamado EMS (Efficiency Measurement System) versión 1.3.0. Copyright 1998-2000. Para la interpretación de los resultados se debe de tener en cuenta que, cuando la eficiencia técnica / cambio tecnológico / IM son  $> 1$ , quiere decir que existió progreso en el factor de un periodo respecto del otro, mientras que si el factor es  $= 1$ , significa que ésta se mantuvo sobre la frontera de producción, por último, cuando el factor  $< 1$ , indica que no hubo cambio ó mantuvo su *statu quo* y por el contrario existió un retroceso / deterioro en el factor.

### Eficiencia Técnica (Et)

En el análisis global, se observa que la mayoría de las terminales obtuvieron eficiencia técnica, esto es,  $ET > 1$ , significa que existió progreso en la eficiencia, respecto de un periodo al otro. Se observa que el puerto de Qingdao (China), casi todos los años obtuvo niveles de eficiencia por encima de la frontera, sin embargo en el análisis global obtuvo el resultado más bajo. Este comportamiento podría haberse generado debido a la disminución de carga que presento en 2009, respecto de los años anteriores, ya que en 2005 el puerto recibió 75 millones de dólares para extender el puerto, y en 2007 recibió a operadores globales para operar algunas de sus terminales. Situación que generó mucha inversión y quizá el modelo lo traduce como que hubo mucha inversión para el movimiento bajo de contenedores, tomándolo como ineficiente. En contra parte, en el análisis global, el puerto de Ho Chi Minh (Vietnam) obtuvo el resultado más alto de todos los puertos. Los puertos cuyos resultados de eficiencia no presentaron variaciones, esto es que encuentran en la frontera de eficiencia y su valor siempre fue de 1, tanto en el análisis global como en el anual, fueron los puertos: Busan (Corea del Sur), Guangzh (China), Xiamen (China) y Manzanillo (México). Lo anterior se debe a que estos puertos siempre presentaron mayor eficiencia técnica durante el periodo analizado, por lo tanto al ser siempre parte de la frontera de eficiencia no puede presentar mejoría en este factor. Los puertos que observaron una regresión en su eficiencia en el análisis global fueron Ningbo 0.8345 (China), Laem Chabang 0.8424 (Tailandia), Kobe 0.9914 (Japón), Manila 0.8454 (Filipinas), este último también obtuvo bajos niveles de eficiencia en 2008, 2007 y 2006.

### Cambio Tecnológico (Ct)

De acuerdo a Cheon *et al.* (2009), las estrategias que utilizan los puertos para mejorar su “cambio tecnológico” consisten principalmente en mejorar las practicas operacionales, tales como ampliar horario de labores (24/7), así como las operaciones administrativas (intercambio de información electrónicamente). También consideran como mejoramiento de las terminales con la adquisición y utilización de equipos de punta (grúas de todo tipo modernas). En el resultado global de este factor se puede observar que casi todas las terminales presentaron *status quo* y principalmente regresión en la frontera de tecnología. Dentro del análisis de las posibles causas se tiene, que esto se pudo haber debido a que en casi todos los puertos a partir del 2004, hasta el 2007, las inversiones hechas en los mismos fueron muy grandes y es probable que con la contracción de la economía a principios de 2008, todos los puertos tuvieron reducciones en sus niveles de carga contenerizada, generando que el modelo traduzca la falta de tráfico como una ineficiencia. Los puertos que estuvieron por encima de la frontera del CT en el análisis global fueron: Los Ángeles (1.08) (US) y Manzanillo (1.34) (México).

### Índice Malmquist

En el análisis global se observa que un 45% de los puertos registraron progreso en la Productividad Total de los Factores ( $IM > 1$ ). Sin embargo, el puerto que tuvo mejor productividad de todos los puertos, fue el de Ho Chi Minh (Vietnam). Aunque de los años 2006 al 2008 sus valores estuvieron por abajo de la frontera de producción. Quizá debido a que desde el año del 2006 el incremento en la inversión en terminales por parte de operadores globales, y la baja en la carga anual, el modelo lo traduce como ineficiencia en la producción. Los puertos que le siguen con mejor productividad son: El puerto de Manzanillo (México) que durante todo el análisis obtuvo buenos resultados. Después los puertos de Kaoshiung (Taiwan), Long Beach y los Ángeles (USA) y por último los puertos de Laem (Tailandia), Tanjung (Indonesia). Mientras que los puertos chinos y japoneses no aparecen aquí. Tongzon & Heng (2005) mencionan que se debería tener cuidado al momento de la interpretación de los datos pues en su experiencia había observado que unos puertos con valores de productividad bajos, al momento de determinar las causas, estos puertos habían hecho grandes inversiones en infraestructura; así que para el modelo no eran productivos pero para los clientes del puerto era lo contrario. En el futuro sería recomendable integrar a este tipo de técnica un modelo de análisis adicional para generar conclusiones efectivas.

### CONCLUSIONES

Este trabajo exploró la evolución del factor de productividad y sus componentes de los puertos ubicados en la Cuenca del Pacífico, durante el periodo 2004 al 2009. Con la finalidad de conocer la eficiencia que guardan estos puertos entre sí, ya que algunos compiten entre ellos por la carga, otros por el hinterland de su región y dentro de los mismos compiten sus operadores portuarios. Se observó que la técnica Malmquist provee, hasta la fecha, uno de los mejores métodos para conocer la eficiencia a través del tiempo, principalmente porque permite descomponer cada uno de sus factores. Y esta situación es de valor para los tomadores de decisiones en las unidades, ya que les permite implementar políticas adecuadas y realizar planeación estratégica. Para evitar errores en la interpretación de los resultados es recomendable que en el futuro sería apropiado integrar a este tipo de técnica un modelo de análisis para generar conclusiones más precisas. Esta metodología se podría potencializar si aparte de utilizar técnicas de interpretación se da la incorporación de técnicas estadísticas como lo sería la aplicación de un bootstrap, para ayudarle a eliminar las críticas por las cuales sufren las herramientas de programación lineal, como el DEA, por su falta de robustez econométrica. Ya que la generación de resulta con mayor grado de precisión ayudarán al decisor de las empresas a generar e implementar políticas adecuadas de planeación estratégica. En este sentido, una línea de investigación pendiente, consistiría en incorporar modelos de interpretación, así como el bootstrap al momento de usar el índice Malmquist en cualquier investigación que pretenda utilizar técnicas de programación lineal, no paramétricas.

Los puertos asiáticos son principalmente puertos exportadores, esto es que se dedican solo a cargar barcos más que a descargar, y los puertos de América, en especial México, son puertos importadores y es difícil que se incrementen los volúmenes de carga contenedora anual, por ende tamaño y número de terminales, mayores equipos etc. Ya que se depende de la demanda de los bienes que se importen, aparte de esta situación si los tiempos de espera y costos son altos eso disminuye las probabilidades de mejorar el número de TEUs movidos anualmente. También la conectividad terrestre forma parte medular de la logística portuaria, ya que los clientes que utilicen esos puertos busquen que sus mercancías lleguen lo más oportuno y a buen costo posible. México aún no cuenta con la infraestructura vial para solventar este problema, a pesar de que el puerto de Lázaro Cárdenas, se promociona con el hecho de que tiene mayor cercanía con Kansas City (US) que los puertos de Long Beach y Los Ángeles. México tiene un buen representante en la Cuenca del Pacífico, pero aún le falta que el resto de sus puertos entren a un sistema de igual productividad y eficiencia como el del puerto de Manzanillo.

## RESUMEN

*El presente trabajo es el primer avance de un estudio que pretende identificar factores que influyen en el desempeño de micro, pequeñas y medianas empresas en la región Costa Sur de Jalisco, México. Los factores a considerar como variables independientes son: características del empresario, acceso al financiamiento, innovación, procesos internos y condiciones del mercado. Se diseñó un instrumento con el fin de analizar los factores señalados. La muestra se compone de 114 empresas localizadas en la región. Los resultados muestran la importancia del financiamiento, el nivel educativo del empresario y la innovación en procesos.*

**PALABRAS CLAVE.** Financiamiento, Desempeño, PyME

## DETERMINANTS OF SMALL FIRMS PERFORMANCE IN COSTA SUR OF JALISCO, MÉXICO

### ABSTRACT

*This study is the first outcome of a research project to examine the factors that affect small business performance. The main purpose is to analyze external and internal factors that influence performance in small companies in Costa Sur region in Jalisco, México, considering the importance of these companies for economic development in a country. We found relationship between the owner educational level and the firm performance; in the same way process innovation and financing access were significant.*

**KEYWORDS.** Smes, Performance, Finance, Human capital

## INTRODUCCIÓN

El análisis de las condiciones que enfrentan las pequeñas empresas se ha convertido en un tema relevante para el entendimiento del desarrollo de un país. Según la Organización para la Cooperación y Desarrollo Económico, las Pequeñas y Medianas Empresas (PyME) desempeñan un papel importante en el desarrollo de las naciones, especialmente el segmento de la microempresa, que en los países latinoamericanos oscila entre el 60% y el 90% de las unidades económicas. En México las PyME tienen gran importancia para la economía nacional y regional al ser generadoras de empleo y constituir un 99% del universo empresarial en México. De esto se deriva el interés creciente por estudiar la situación y condiciones de operación de estos negocios, con el fin de identificar los factores que influyen en su desempeño y permanencia en sus sectores de actividad.

Los cambios en el entorno de negocios causan mayor incertidumbre en las PyME que en las compañías grandes. Estas empresas tienen menos recursos para obtener información sobre el comportamiento del entorno, por lo que su respuesta a los cambios se da a un ritmo diferente (Islam, et al, 2011). Esto aunado al carácter familiar de la PyME mexicana y al nivel educativo de propietarios y recurso humano que la conforman (Dussel, 2004) incrementa el riesgo de fracaso. La tasa de mortalidad registrada por estas empresas da un indicio de su bajo nivel de desempeño, anualmente inician operaciones alrededor de 200 mil empresas de las cuales dos años más tarde sobreviven 35 mil (Tan, et al, 2007).

Las pequeñas empresas juegan un papel importante en el desarrollo de una región, al generar empleo y producción impactan positivamente la economía local. En el caso de la región Costa Sur de Jalisco, el tejido empresarial se caracteriza por pequeñas y medianas empresas dedicadas al comercio y servicios, teniendo un desarrollo industrial bajo. Las actividades predominantes son la agricultura y ganadería, así como en los municipios costeros el turismo. El presente trabajo presenta los primeros resultados de un proyecto de investigación sobre aspectos que inciden en el desarrollo y desempeño empresarial, el objetivo principal es el análisis de factores internos y externos que inciden en el desempeño de las PyME en la Región Costa Sur de Jalisco. El documento se organiza como sigue, se presenta una revisión de la literatura relacionada con diversos enfoques en el análisis de los factores que inciden en el desempeño empresarial, a continuación se presenta la metodología y posteriormente los resultados obtenidos de la aplicación del instrumento a empresarios de la región, al final las conclusiones obtenidas del análisis realizado.

## REVISIÓN LITERARIA

En el análisis de las características de la pequeña empresa se ha considerado a esta organización como un conjunto homogéneo de unidades económicas clasificadas por su tamaño, aspecto que está lejos de la realidad. Como señalan Di Tomasso y Dubinni (2000) existe la necesidad de considerar un enfoque teórico especial para estudiar a la pequeña empresa, tomando en cuenta que se trata de entidades heterogéneas con características propias y diferentes entre sí, que enfrentan condiciones internas y externas diferentes a la empresa tradicional. Partiendo de este punto se comienza por definir a la PyME, considerando para ello diferentes criterios.

### Información General Y Tipología.

Existen diferentes criterios para definir que es una PyME: considerando el número de trabajadores, el nivel de ventas, los activos o alguna combinación de los anteriores. Un aspecto que llama la atención es la ausencia de una definición homogénea a escala internacional (Vera-Colina y Mora-Riapira, 2011). En México los principales criterios para la clasificación de las empresas son los que se presentan a continuación en la tabla 1.

El criterio a seguir en el presente trabajo para la clasificación de las empresas es el publicado en el Diario Oficial de la Federación el 30 de diciembre de 2002. *FACTORES QUE INCIDEN EN EL DESEMPEÑO DE LAS PyME*: El desempeño empresarial se analiza desde diferentes dimensiones, tales como, supervivencia, rentabilidad, incremento de las ventas, número de empleados, reputación, entre otros (Islam, et al, 2011). Al analizar el desempeño de las empresas en la región Costa Sur de Jalisco debido a las condiciones existentes en el ambiente de negocios y a la dificultad para obtener datos contables se consideró como medida de desempeño en este trabajo el incremento en las ventas. Existen diversos enfoques para analizar los aspectos que inciden en el desempeño empresarial (Di Tomasso y Dubinni, 2000; Chittithaworn, et al, 2011).

Para Zevallos (2006) las áreas consideradas como relevantes o problemáticas en el desarrollo de las PyMEs son el área financiera, la infraestructura (servicios públicos), la política, los problemas sociales y culturales, el mercado interno, el comercio exterior, la tecnología y la información, el medio ambiente. Bechetti y Trovato (2002) analizan el crecimiento de las pequeñas empresas contrastando la edad y tamaño de las mismas con aspectos externos como los subsidios que otorga el estado, la capacidad exportadora y el racionamiento del crédito. Dussel (2004) señala el crecimiento económico y mercado interno, la sobrevaluación del tipo de cambio y la falta de acceso y elevado costo del financiamiento como factores críticos para el desarrollo de las PyMEs. Para Rutherford y Oswald (2000) el desempeño de las pequeñas empresas se clasifica en tres categorías de antecedentes: Las características individuales del empresario/gerente; las características de la empresa y los aspectos ambientales.

Tabla 1: Principales Criterios De Clasificación Del Tamaño De Las Pymes Utilizados En México

Organismo	Excluye microempresa en PyME	Clasificación con base en	Tipo de empresa	Rangos de clasificación
Banco de México	No	Ventas	Pequeña	1 a 100 millones de pesos
Diario oficial de la Federación (30 de marzo 1999) SECOFI, SHCP, SEP, SDS, SAGARPA, SEMARNAP, NAFIN y BANCOMEXT	No	N° de trabajadores y sector	Mediana	101 a 500 millones de pesos
				De 1 a 30 en industria
				De 1 a 5 en comercio
				De 1 a 20 en servicios
DOF (30 de diciembre de 2002) SECOFI, SHCP, Secretaría de Economía, SEP, SAGARPA, SEMARNAP Y NAFIN.	No	N° de trabajadores y sector	Pequeña	De 31 a 100 en industria
				De 6 a 20 en comercio
				De 21 a 50 en servicios
			Mediana	De 101 a 500 en industria
IMSS	No	N° de trabajadores		De 21 a 100 en comercio
				De 51 a 100 en servicios
				De 1 a 10 trabajadores en industria, comercio o servicios
INEGI	Si	N° de trabajadores y sector	Micro	De 11 a 50 en industria
				De 11 a 30 en comercio
				De 11 a 50 en servicios
			Mediana	De 51 a 250 en industria
				De 31 a 100 en comercio
				De 51 a 100 en servicios
				De 1 a 100 trabajadores
			Micro, pequeña y mediana	De 1 a 10 trabajadores todos los sectores
			Micro empresa	De 11 a 50 en industria
				De 11 a 30 en comercio
				De 11 a 50 en servicios
			Pequeña	

Fuente: Adaptado de Pavón (2010)

*El perfil del empresario y empleados:* La figura del empresario es importante en las pequeñas empresas, su comportamiento y decisiones influyen en el desempeño empresarial (Di Tomasso y Dubinni, 2000). Atributos como la edad, educación, know how gerencial, experiencia y habilidades del empresario o director han sido analizados en estudios recientes (Islam, et al, 2011; Capeller y Greene, 2008). Otro aspecto que ha sido considerado en el análisis del desempeño es la propiedad familiar tiene un impacto en la toma de decisiones y el rumbo que seguirán las organizaciones (Sánchez Gardey, et al, 2009)

*La actividad innovadora:* Investigaciones previas han demostrado la relación entre innovación y el desempeño de la firma (Madrid-Guijarro, et al, 2011). Como medida de actividad innovadora se considera el lanzamiento de nuevos productos o servicios al mercado en los últimos cuatro años.

*Los procesos internos y tecnología:* El acceso a la tecnología e información consiste otro factor importante a considerar al analizar el desempeño de las pequeñas unidades económicas, estudios señalan el atraso tecnológico que sufren las PyME (Zevallos, 2006).

*Aspectos de mercado:* El desempeño de la firma está relacionado con el éxito en el mercado (Islam, et al, 2011), para ello se considera el área de operación de las organizaciones, si es local, regional, estatal, nacional o internacional.

*Financiamiento:* En este contexto se identifica al financiamiento como un factor determinante para el crecimiento y desarrollo empresarial en empresas localizadas en países emergentes (López, 1999; López-Gracia y Sogorb\_Mira, 2008). Aspectos relacionados con la dificultad de las empresas de obtener recursos financieros debido a elevadas tasas de interés, exceso de garantías colaterales que exigen las instituciones crediticias, numerosos trámites, costos de capital, entre otros (Zevallos, 2006) consisten en barreras para que la PyME busque financiamiento proveniente de la deuda, por lo que limita su crecimiento y desarrollo al limitarse al empleo de recursos propios, ya sea generados internamente por la empresa o bien provenientes del capital del empresario (Psillaki y Daskallaris, 2009).

## METODOLOGÍA

La investigación se basa en información obtenida de empresas que operan en los municipios de la región Costa Sur del estado de Jalisco. Para obtener los datos se diseñó un instrumento conformado por 80 ítems basados en escala likert, agrupados en 5 bloques relacionados con el perfil del empresario, la actividad innovadora, los procesos internos y tecnología, aspectos de mercado e inversión y financiamiento, se validó el instrumento con el Alfa de Cronbach con un resultado de 0.74. Las entrevistas se realizaron tomando como base los padrones de licencias municipales, que posteriormente fueron depurados eliminando giros negros y consultando con personas que conocen el municipio e identifican aquellas empresas que efectivamente continúan operando. La tasa de respuesta fue de 78% en promedio, siendo más alta en el municipio de Autlán de Navarro y La Huerta, Jalisco. Se entrevistaron 114 empresarios de los sectores de comercio, industrial y servicios en cinco municipios de la región. La muestra se compone de 67 empresas del sector servicios, 13 empresas industriales y 34 empresas comerciales.

Tabla 2: Número de Empresas Que Componen la Muestra

Municipio	Clasificación sectorial		
	Comercio	Industrial	Servicios
Autlán	9	1	27
Cihuatlán	0	0	5
Cuautitlán	2	0	0
La Huerta	13	11	18
Purificación	10	1	17

A continuación se presentan los resultados obtenidos del análisis de la información proporcionada por los empresarios de la región empleando el programa SPSS versión 20.

## RESULTADOS

Las empresas que componen la muestra operan en su mayoría como persona física para efectos fiscales, 19 están constituidas como persona moral. Se observa que predominan los casos en los que la dirección no se encuentra en manos de profesionales de la administración, especialmente cuando el propietario de la pyme interviene es quien dirige la empresa (tabla 3).

Las dimensiones a considerar para el análisis de los factores que inciden en el desempeño de las empresas en la Región Costa Sur de Jalisco son: El perfil del empresario, la actividad innovadora, procesos internos y tecnología, aspectos de mercado y financiamiento. El perfil del empresario se relaciona con el nivel de formación del propietario, para los ítems utilizados para medir la innovación en procesos, la organización

interna, las condiciones de mercado, el acceso al financiamiento y el comportamiento de las ventas se empleo un formato de escala likert.

Tabla 3: Características Del Director General/Administrador De La Pyme

Género del director general	Nivel de Formación	Sector industrial					
		Comercial		Industrial		Servicios	
		Persona física	Persona moral	Persona física	Persona moral	Persona física	Persona moral
Femenino	Básica	1	0	2	0	8	0
	Bachillerato	1	0	0	0	6	0
	Técnico	2	0	1	0	0	1
	Universidad	4	2	0	1	6	4
Masculino	Básica	7	2	5	1	8	0
	Bachillerato	5	0	3	0	2	0
	Técnico	2	1	0	0	4	1
	Universidad	4	2	0	0	20	4

Tabla 4: Estadísticos Descriptivos

Factores	Media	Desviación típica	Mínimo	Máximo
Nivel formación propietario	2.65	1.309	1	5
Innovación en procesos	3.35	1.540	0	5
Organización interna	3.53	1.032	1	5
Condiciones del mercado	3.11	.938	1	5
Acceso al financiamiento	3.58	1.042	1	5
Comportamiento ventas	2.58	.881	1	4

El nivel medio de formación del propietario la persona que realiza la función de director general/administrador de la empresa es equivalente a bachillerato, en general en las empresas que conforman la muestra la administración recae en el propietario o algún familiar cercano a él, las empresas que contratan profesionistas son aquellas que tienen un mayor grado de formalización. La innovación en procesos es baja, el empresario señala en el 90% de los casos no dedicar recursos a innovar en procesos o productos. La evaluación de la organización interna fue baja, especialmente en aquellas empresas cuyo propietario y empleados tienen un nivel educativo básico. Los empresarios perciben las condiciones del mercado como malas en comparación con años anteriores. En el acceso al financiamiento señalan que tienen acceso a créditos de la caja popular, sin embargo la gran mayoría menciona no estar interesados en recursos provenientes de la deuda. Para identificar aquellos factores que inciden en el desempeño de la empresa, medido por el comportamiento de las ventas en el año 2011, se realizó una prueba de Kruskal-Wallis, los resultados se presentan en la tabla 5.

Tabla 5: Estadísticos de Contraste

Factor	Chi-cuadrado	Gl	Sig. asintót.
Nivel formación propietario	11.053	3	.011
Innovación en procesos	9.079	3	.020
Organización interna	5.039	3	.169
Condiciones del mercado	4.072	3	.254
Acceso al financiamiento	8.318	3	.040

a. Prueba de Kruskal-Wallis

b. Variable de agrupación: Comportamiento de las ventas

Se encuentra una relación entre el nivel de formación del propietario, la innovación en procesos y el acceso al financiamiento con el desempeño de la empresa. Para el caso de la organización interna y las condiciones del mercado los resultados no fueron estadísticamente significativos.

## CONCLUSIONES

Las empresas en la región Costa Sur de Jalisco son en un 94% de carácter familiar, la toma de decisiones recae en el propietario, y en aquellas en las que se cuenta con un profesional que realice las tareas de administración, el propietario marca de manera similar el rumbo de la compañía. Se encuentra relación entre el nivel de formación del propietario y el desempeño de la empresa, de igual forma la innovación en procesos y el acceso al financiamiento resultaron significativos. Las empresas señalan una preferencia por los recursos propios para financiar las actividades de inversión, sin embargo en momentos en los que necesitaron recursos para infraestructura o mejoras en los procesos fue determinante que tuvieran el acceso a los mismos. El presente trabajo presenta un avance en un proyecto de investigación para identificar aspectos que inciden en el desempeño empresarial, sin embargo debe considerarse que existen limitantes en la información que el empresario está dispuesto a compartir y el nivel de acceso a datos contables es mínimo, existe desconfianza para proporcionar información sobre la marcha del negocio, por lo que las mediciones se sustentan en el juicio del empresario.

## **RESUMEN**

*La empresa familiar es uno de los principales entes económicos a nivel mundial, en México se destaca por ser una importante fuente generadora de empleos y por su considerable aportación a la economía del país. Su principal problema es trascender las generaciones, es decir, su limitada permanencia a lo largo del tiempo debido principalmente a su propia naturaleza, ya que al estar formada por dos sistemas disímiles, se crea una zona de solapamiento entre el negocio y la familia de la que surgen conflictos que al no gestionarlos adecuadamente pueden llevar al fracaso de la empresa familiar. Por lo tanto, resulta trascendental para las organizaciones familiares establecer reglas que les permitan conjugar los diferentes objetivos e intereses de ambos sistemas para el funcionamiento exitoso y armonioso de la empresa familiar. Para el presente trabajo de investigación se encuestaron a 342 empresas familiares de manufactura, comercio y servicios de Tehuacán. Los resultados evidencian la falta de reglas para regular la relación familia-empresa en las organizaciones familiares de Tehuacán. La unión y el compromiso resultaron ser elementos clave e importantes coadyuvantes para la creación de relaciones sólidas dentro de las organizaciones estudiadas y para la continuidad de dichas empresas.*

**PALABRAS CLAVE:** Empresa familiar, reglas empresa-familia, unión, compromiso, protocolo familiar

## **IMPACT OF RULES ON THE CONTINUITY OF BUSINESS FAMILY OF TEHUACAN**

### **ABSTRACT**

*Family business is an important global financial entity, in Mexico stands out as an important source of employment and their substantial contribution to the economy. Ensuring business continuity is a common challenge faced by many family-owned businesses. Family business is composed by two dissimilar systems that create a zone of overlap between the company and the family when the interests of a family member may not be aligned with the interest of the business. Disputes arising from this area if not managed properly can cause the failure of the family business. Therefore, it is crucial for organizations to establish family rules that allow them to combine the different objectives and interests of both systems for successful and harmonious operation of the family business. The survey sample covers 342 family businesses in manufacturing, trade and services in Tehuacan city. The results show the lack of rules to regulate the family-business relationship in family organizations in Tehuacan. Union and commitment proved to be key elements and important aids for creating strong relationships within the organizations studied and the continuity of these companies.*

## INTRODUCCIÓN

En México y en el mundo las empresas familiares tienen una gran importancia económica y social; según Jorge Durán, director del Centro de Investigación de Empresas Familiares de la Universidad de las Américas, en el Estado de Puebla existen alrededor de 182,750 empresas familiares, las cuales aportan anualmente el 70% del Producto Interno Bruto (PIB) y generan al menos seis de cada diez empleos a nivel estatal (Herrera, 2011). Sin embargo, la esperanza de vida de las empresas familiares en México es de 25 años (Urzúa, 2012). En la primera generación fracasan 6 de cada 10 negocios mientras que únicamente el 4% de las empresas familiares del país sobreviven a la tercera generación (Gachuz, 2010). Una de las causas que impiden la trascendencia de las empresas familiares son los conflictos surgidos a raíz de la interacción entre el sistema empresarial y el familiar, esto debido a la falta de visión de los empresarios familiares para establecer desde un principio reglas que regulen la relación empresa-familia y así evitar que dichos conflictos pongan en riesgo la armonía familiar y la estabilidad del negocio.

El objetivo principal de este estudio es analizar si existe relación entre el establecimiento de normas de convivencia en la empresa familiar y la continuidad de la misma. El presente estudio se encuentra estructurado de la siguiente manera: en la sección revisión de la literatura se presenta teoría desde la perspectiva de diversos autores acerca del problema que representa para los negocios familiares el permitir que los intereses familiares obstruyan el desarrollo exitoso del negocio, la importancia del establecimiento de normas para evitar o manejar adecuadamente los conflictos generados por esta situación, la formalización de estas normas a través de un protocolo familiar y su influencia en la continuidad de las empresas familiares. En la parte de metodología, se explican las consideraciones metodológicas, se menciona el diseño general de la investigación, además se explica cómo se seleccionó la muestra de acuerdo a la población estadística. En el siguiente apartado se presentan los resultados más sobresalientes con sus respectivos análisis. En la última sección de conclusiones, se presentan las consideraciones finales de la investigación, donde se incluyen las limitaciones del estudio así como las futuras líneas de investigación.

## REVISIÓN DE LA LITERATURA

Entre el 80 y 90% de las empresas en el mundo son familiares, generan el 75% del PIB mundial y emplean el 85% de la población trabajadora, razones por las que se les considera un motor económico y social a nivel mundial (Poza, 2005). De acuerdo a Sánchez-Crespo (2004), una empresa familiar es aquella en la que el capital y, en su caso, la gestión y/o el gobierno, están en manos de una o más familias, que tienen la capacidad de ejercer sobre ella una influencia suficiente para controlarla, y cuya visión estratégica incluye el propósito de darle continuidad en manos de la siguiente generación familiar. En la empresa familiar coexisten dos subsistemas: la familia y la empresa, sin embargo, la superposición de estos sistemas cuando no están bien delimitados es la causante de una amplia gama de conflictos que de no ser gestionados adecuadamente pueden hacer que la empresa familiar desaparezca. La empresa y la familia tienen diferentes intereses, necesidades, objetivos, su propio estilo de comunicación, de toma de decisiones y de resolución de conflictos que cuando se solapan crean una tensión capaz de quebrantar la armonía familiar y la estabilidad de la empresa. En la siguiente Tabla se pueden apreciar las principales diferencias entre el sistema familiar y el empresarial:

Tabla 1: Principales Diferencias Entre el Sistema Empresarial y el Sistema Familiar

EMPRESA	FAMILIA
Objetivo: Competitividad en el mercado	Objetivo: Transmitir sus propios valores y permitir el desarrollo de sus miembros
Intereses económicos, busca rentabilidad	Intereses emocionales, busca equilibrio armonía entre los miembros
Orientación hacia el logro profesional y económico	Orientación hacia el apoyo y protección de los miembros
Mira al exterior	Mira al interior
Sistema abierto	Sistema cerrado
Comunicación formal	Comunicación informal

*Fuente: Gimeno, Baulenas y Coma-Cros (2009), Modelos de empresa familiar p. 22*

*Esta Tabla nos muestra las principales diferencias entre el sistema empresa y el sistema familia, estas diferencias son las que dificultan la gestión de las empresas familiares, ya que estos sistemas al ser disímiles y no estar bien delimitados se contraponen generando una gran cantidad de conflictos de diversa índole, que terminan afectando a ambos sistemas, rompiendo su estabilidad. Lo idóneo es alcanzar un equilibrio entre lo empresarial y lo familiar para lograr la continuidad de la empresa familiar.*

Para evitar o en su caso gestionar adecuadamente los conflictos surgidos a raíz de la superposición de sistemas es necesario establecer reglas claras, lo ideal es hacerlo cuando la empresa empieza a operar en manos del fundador. En un principio, la dualidad de roles entre los miembros de la familia que trabajan en la empresa facilita la toma de decisiones, pero con el paso del tiempo, el hecho de llevar los problemas de la familia a la empresa y viceversa, genera situaciones que pueden resultar perjudiciales tanto para la familia como la empresa. El establecimiento de reglas claras desde un principio y por escrito, es una de las claves para lograr un equilibrio perfecto en la empresa familiar, donde lo personal y lo profesional no se mezclen y se eviten conflictos que afecten la rentabilidad de la empresa (Valda, 2010). Según un estudio efectuado por el Consejo Hondureño de la Empresa Privada (COHEP) implementar reglas y tener una visión compartida es primordial para asegurar el equilibrio en la armonía familiar y en la rentabilidad de la empresa (Vásquez, 2012). De acuerdo a Brenes y Madrigal (2008) el éxito para la continuidad de las empresas familiares está en el establecimiento de reglas claras, siendo común en Latinoamérica ver no solo la quiebra de empresas sino de la separación de familias, esto por no anticipar y resolver los conflictos inherentes al negocio familiar de manera adecuada.

En la misma línea, de acuerdo a Juan Carlos Simón (s.f.), asesor de Negocios de PricewaterhouseCoopers México, es necesario definir y establecer reglas que les permitan a las empresas familiares sobrevivir al cambio de estafeta entre generaciones. Debido a que la comunicación entre familiares es informal, es común que las reglas se den por sentadas y no se pongan por escrito, trasladando esta práctica a la empresa. Sin embargo, resulta indispensable plasmarlas por escrito para regular la relación entre familiares, trabajen o no en la empresa, y evitar conflictos futuros buscando un equilibrio en donde se satisfaga tanto al sistema familiar como al empresarial, en pos de la continuidad de la empresa familiar. Una forma de formalizar estas reglas es a través del protocolo familiar.

De acuerdo a Aimetta (2007) el protocolo familiar “es el documento en el que una familia propietaria de una empresa pone por escrito las normas que van a regir la relación entre la empresa y la familia en el presente y en el futuro. El objetivo es establecer las reglas básicas de dicha relación, para los socios actuales y para las futuras generaciones, a manera de asegurar la continuidad de la empresa en manos de la familia”. Para Eduardo Campos Cortés (s.f), consultor Senior en Protocolo Familiar en el programa BID-ULSA sobre Protocolo Familiar para PYMES, el protocolo familiar es un instrumento que busca establecer las reglas para la participación ordenada de la familia dentro del negocio, es un *elemento fundamental para la visión a largo plazo de la empresa familiar*. Según Campos (s.f) la falta de protocolo es la causa del fracaso de muchas empresas en México y en el mundo, y aunque éste no salva, ni garantiza el futuro de las empresas familiares, “sí es un instrumento que establece un vínculo muy estrecho pero perfectamente bien definido entre la familia y el negocio y bien instrumentado, con la profundidad necesaria, en el momento adecuado y con la asesoría de algún especialista en el tema, evitará, de manera segura, conflictos tanto en la empresa como hacia dentro de la familia”. Ignacio Moreno (2013),

Coordinador de Empresa y Familia de La Universidad La Salle, considera muy importante aplicar el protocolo de familia para darle continuidad a las empresas y evitar su mortandad.

Como se puede observar la mayoría de los autores ligan el protocolo familiar a la continuidad de la empresa familiar. Dentro de las principales razones por las que el fundador desea la continuidad de su empresa están (Vega de Rosario, 2013): (1) Dar una oportunidad a sus hijos, (2) conservar la herencia, (3) crear riqueza para la familia, (4) garantizar la seguridad económica familiar. El protocolo familiar permite establecer normas y procesos de participación familiar en el negocio, condiciones de ingreso de los miembros de la familia a la empresa, remuneraciones, sucesión, transferencia de la propiedad y mecanismos para la resolución de conflictos (CAPS, 2011) para evitar que los intereses de la familia se antepongan a las necesidades de la empresa para prever problemas tales como falta de liquidez, falta de disciplina en las utilidades, entre otros. Sin embargo el protocolo no es una panacea, ni vuelve a la familia automáticamente inmune a los conflictos; lo que sí puede hacer es garantizar que la empresa esté mejor preparada para afrontar situaciones difíciles, e incluso para minimizar la aparición de conflictos (Aira, s.f). El protocolo ayuda a promover la unidad y armonía de los miembros y a fomentar su compromiso por la continuidad de la empresa en manos de la familia (Vega de Rosario, 2013). A través de este trabajo de investigación se busca saber si en las empresas familiares de Tehuacán existe relación entre el establecimiento de normas –escritas o no- y su continuidad.

## METODOLOGÍA

El presente estudio se llevó a cabo de septiembre de 2010 a abril de 2011, es de tipo transversal, exploratorio, descriptivo y explicativo. La información utilizada fue de tipo secundaria y primaria. Se aplicó una encuesta a 342 empresas familiares de los sectores de manufactura, comercio y servicios de Tehuacán y su región. Los sujetos de estudio fueron todas aquellas personas que tuvieran una relación laboral con la empresa familiar, incluidos directores, gerentes y empleados. Se generó un banco de datos en Excel 2007, el cuál fue exportado al paquete estadístico SPSS v. 19 para su procesamiento y posterior análisis. Para fines de la presente investigación, se utilizaron las siguientes variables: (1) Edad de la empresa, (2) clara separación entre la familia y la empresa, (3) obtención de puestos de acuerdo al conocimiento, experiencia y habilidades, (4) sueldos similares para todos los empleados, (5) límites de participación de los parientes políticos, (6) la unidad familiar es fundamental para la continuidad de la empresa, (7) compromiso. Se diseñó el instrumento y realizó una encuesta piloto para su respectiva validación. La construcción del instrumento es resultado de una exhaustiva revisión de estudios relacionados con la empresa familiar hechos en otras latitudes pero considerando en todo momento la cultura familiar y empresarial mexicana.

A lo largo de tres meses se formularon ítems y se adecuaron escalas Likert, de intervalo y nominativas. El instrumento está formado por un total de 95 ítems y está dividido en dos partes, la primera se refiere a los datos generales de la empresa, y la segunda a la profesionalización de la empresa, es dentro de esta sección donde encontramos la sección de normas y protocolo familiar. El siguiente paso consistió en identificar el marco muestral y a pesar de que surgieron un sinnúmero de obstáculos, finalmente a principios del tercer trimestre del 2010 se logró delimitar el tamaño de la muestra ya que el INEGI puso en línea el Sistema Automatizado de Información Censal 2009, desde esta base de datos se obtuvieron las cifras para Tehuacán del año 2009 por sector de actividad y por estrato de personal ocupado. Con estos datos se procedió a calcular una muestra estadística estratificada, que considerara el sector y tamaño de los establecimientos con un grado de confianza del 95%. En la Tabla 1 se presenta la estructura de la muestra:

Tabla 2: Muestra Estratificada.

	INDUSTRIA	COMERCIO	SERVICIOS	TOTAL
Micro	48	181	121	350
Pequeña	5	3	5	13
Mediana	2	3	2	7
Grande	2	2	0	4
Total	57	189	128	374

Fuente: Elaboración propia, con base en INEGI 2010, Sistema Automatizado de Información Censal 2009.

Esta Tabla presenta la estructura de la muestra estratificada final por sector y por tamaño de Tehuacán 2009, la cual sirvió de base para el levantamiento de la encuesta.

El levantamiento de encuestas se realizó a 342 empresas con el perfil deseado (ser familiares). El muestreo fue de tipo aleatorio estratificado con el fin de que la industria, el comercio y los servicios al igual que la micro, pequeña, mediana y gran empresa estuvieran adecuadamente representados dentro de la muestra. Por tamaño: micro= 93%; pequeña= 4%; mediana= 2%; grande= 1%. Y por giro: comercio= 47%; industria= 17%; servicios= 36%. La captura de los datos se hizo en una base de Excel que se exportó a SPSS para su procesamiento.

## RESULTADOS

A continuación se muestran parte de los resultados obtenidos, presentado algunas de las características y situaciones relacionadas con el establecimiento de normas en las empresas familiares de Tehuacán.

Tabla 3: Giro de la Empresa Por Número de Trabajadores (Frecuencias)

	Comercio	Industria	Servicios	Total
Micro empresa	154	48	116	318
Pequeña empresa	3	5	5	13
Mediana empresa	3	2	2	7
Gran empresa	2	2	0	4
Total	162	57	123	342

Fuente: elaboración propia con base a la encuesta a empresas familiares de Tehuacán 2011

En la Tabla anterior se presentan las frecuencias de las empresas familiares que se encuentran en los giro de comercio, industria y servicios; de acuerdo a su tamaño: micro, pequeña, mediana y gran empresa. En el giro de industria tenemos 17%, en el giro de servicios 36% y por último el giro que predomina es el de comercio con un 47%.

Para la presente investigación se encuestaron a 342 empresas familiares de Tehuacán, y fueron clasificadas de acuerdo a la estratificación propuesta por la Secretaría de Economía, según el número de empleados que laboran: micro, pequeña, mediana y gran empresa. Sobresale el sector comercio con 162 empresas de las cuales 154 son micro y 8 son pequeñas, medianas y gran empresa. En segundo lugar está el sector de servicios con 123 empresas, las cuales 116 son micro y el resto son empresas pequeñas y medianas. En tercer lugar se encuentra el sector industrial con 57 empresas y sobresalen los microempresarios con 48 y el resto que son 9 pertenecen a la pequeña, mediana y gran empresa. Destaca el hecho que en Tehuacán no existe ninguna empresa grande de servicios, además de que predominan las microempresas en todos los sectores económicos.

Figura 1: Edad de la Empresa

Fuente: elaboración propia con base a la encuesta a empresas familiares de Tehuacán 2011 En la gráfica de pastel se presenta la edad de las empresas por intervalos de años. En esta gráfica se puede observar que el 5% de las empresas familiares tienen entre 1 y 10 años, un porcentaje menor si lo comparamos con las empresas que tienen entre 31 y 40 años de edad las cuales representan el 31%. Con un porcentaje muy cercano (30%) están las empresas familiares entre 41 y 50 años. Con un 17% encontramos las empresas entre los 11 y 20 años, y con un porcentaje similar encontramos a las empresas familiares de 21 a 30 años de edad.

En la Figura 1 podemos observar que el 31% de las empresas familiares en Tehuacán son empresas que tienen entre 31 y 40 años, seguidas muy de cerca por las empresas entre 41 y 50 años de edad, las cuales representan el 30%. Las empresas familiares jóvenes apenas llegan al 5% (1 a 10 años de edad). En cuanto a las empresas entre 11 y 20 años, y las de 21 a 30 años, ambos rangos de edad cuentan con un 17% respectivamente. De acuerdo a estos porcentajes podemos percatarnos que la mayoría de las empresas familiares son maduras y sus directivos han tenido la habilidad suficiente para hacerlas perdurar, ya que el 61% de las empresas estudiadas sobrepasa los 31 años de edad.

Figura 2: Clara Separación en los Temas Familiares y de Negocio

Fuente: elaboración propia con base a la encuesta a empresas familiares de Tehuacán 2011 En la grafica de barras se presenta la forma en la que las empresas familiares de Tehuacán separan los temas familiares de los temas del negocio. Se puede observar que el 62% de las empresas procura separar los intereses y objetivos de la familia de los de la empresa .El 14.3% lo hace de manera frecuente; el 9.1% lo realiza irregularmente, en algunas situaciones sí, en otras no; mientras que el 6.7% rara vez mantiene separada a la familia del negocio; el 7.9% prefiere nunca poner límites entre los temas familiares y los de la empresa. Por lo tanto, el 23.7% de las empresas familiares está altamente expuesto a enfrentarse a conflictos surgidos por la superposición de sistemas.

Esta Figura (2) ilustra la manera en la que las empresas familiares de Tehuacán separan los temas familiares de los de la empresa. Como se puede observar, un alto porcentaje de empresas familiares (62%), procura siempre separar la familia del negocio para evitar futuros conflictos y el 14.3% lo hace frecuentemente. Sin embargo, un 9.1% pone límites de manera irregular, dependiendo de las circunstancias; un 6.7% rara vez, y el 7.9% nunca hace una separación entre la familia y el negocio, lo cual puede resultar altamente perjudicial para la estabilidad y continuidad de la empresa familiar ya que el choque de intereses y objetivos disímiles entre la familia y el negocio crean conflictos que pueden llevar a su fracaso.

Figura 3: Existen Normas Que Regulan la Relación Empresa-Familia

*Fuente: elaboración propia con base a la encuesta a empresas familiares de Tehuacán 2011 En la Figura 3 se puede observar que el 68% de las empresas familiares de Tehuacán no tienen reglas para regular la relación empresa-familia, y tan solo el 32% sí cuentan con dichas reglas. Por lo tanto, un alto porcentaje de empresas familiares se encuentran vulnerables ante situaciones de conflicto, al no tener separados los intereses de la familia de los de la empresa.*

En la Figura 3 se puede apreciar que la mayoría de las empresas familiares de Tehuacán (68%) carecen de normas para regular la relación empresa-familia, lo que las vuelve sumamente vulnerables al surgimiento de conflictos que pueden no solo llevar al fracaso del negocio sino a la separación de la familia. Solo el 32% de las empresas familiares estudiadas cuentan con normas que les ayudan a gestionar la relación empresa-familia, lo que permite la continuidad de la empresa y a su vez preservar la armonía en la familia.

#### Análisis de Tablas Cruzadas, Prueba Chi<sup>2</sup>

En la Tabla 4 se presentan las asociaciones significativas entre la variable “edad de la empresa” (continuidad) y variables relacionadas con el establecimiento de normas en la empresa familiar, además de las variables unión y compromiso a las que se aplicó la prueba chi cuadrada. El análisis indicó que entre todas las variables propuestas para el análisis existe una relación significativa con la variable “edad de la empresa” (0.0001), excepto con la variable “protocolo familiar”, la cual resultó tener una relación regular con la variable “edad de la empresa” (continuidad) con lo se puede deducir que el protocolo familiar no es determinante, al menos para la continuidad de las empresas familiares de Tehuacán objeto de estudio. En este análisis se ha corrido el nivel de significancia utilizado en décadas anteriores, que equivale al 95% o un nivel de significancia inferior a 0.05, el cual se encuentra con la descripción de asociación significativa.

Tabla 4: Tabla Cruzada de la Variable Edad de la Empresa (Continuidad) con Variables Relacionadas al Establecimiento de Normas en la Empresa-Familia

VARIABLES	Chi <sup>2</sup>	SIGNIFICANCIA	GRADO DE ASOCIACIÓN
Edad de la empresa * Clara separación familia empresa	350.307	0.0001***	Relación significativa
Edad de la empresa * Puestos de acuerdo al conocimiento experiencia y habilidades	361.919	0.0001***	Relación significativa
Edad de la empresa * Sueldos similares para todos los empleados	343.183	0.0001***	Relación significativa
Edad de la empresa * Límites de participación de los parientes políticos	322.871	0.0001***	Relación significativa
Edad de la empresa * La unidad familiar es fundamental para la continuidad de la empresa	392.155	0.0001***	Relación significativa
Edad de la empresa * Compromiso	375.397	0.0001***	Relación significativa
Edad de la empresa * Protocolo familiar	99.748	.001**	Relación regular

\*, \*\* y \*\*\* significativo al 10%, 0.5% y 0.01% respectivamente

## CONCLUSIONES

En el presente estudio se encuentra la primera encuesta realizada a empresas familiares de Tehuacán y el primer estudio estadístico sobre la realidad de dichas empresas. Esta investigación tiene implicaciones sobre la vida académica, el sector empresarial e incluso sobre organismos gubernamentales. La empresa familiar es un destacado propulsor económico y social en Tehuacán, por lo que este estudio pretende ayudar a los empresarios familiares a detectar esas pequeñas fallas que comenten al permitir que los intereses familiares entorpezcan y desequilibren el funcionamiento de la empresa familiar y que con el tiempo pueden llevar al cierre del negocio.

También intenta concientizar sobre la importancia de implementar medidas preventivas para evitar conflictos e instaurar instrumentos para gestionarlos correctamente en caso de que se presenten, todo esto con el fin de que las empresas familiares aumenten su ciclo de vida de manera exitosa. Los resultados arrojados muestran que el 61% de las empresas familiares en Tehuacán sobrepasan los 31 años, siendo la segunda generación al frente de la empresa la que predomina (51%), lo que demuestra renuencia por parte de los directivos a dejar la gestión de la empresa a las nuevas generaciones. Por otro lado, el 62% de las organizaciones estudiadas consideran que separan de manera clara los asuntos de la familia de los de la empresa, sin embargo un alto porcentaje de ellas (68%) no cuenta con normas que regulen la relación empresa-familia, lo que evidencia la falta de prevención y planeación por parte de los directivos para el desarrollo exitoso y armonioso de su empresa familiar, lo que permitiría impulsar la continuidad de su organización. Por medio de los datos obtenidos también se puede concluir que el protocolo familiar sí resultó ser una variable importante para la continuidad de las empresas familiares de Tehuacán, sin embargo, ésta no es determinante dentro de su ciclo de vida; aunque sería positivo difundir el uso de esta herramienta entre los empresarios familiares, ya que, empleado de manera correcta puede resultar un buen medio de prevención de conflictos.

En cambio, el compromiso y la unión resultaron ser elementos clave para construir relaciones sólidas dentro de las organizaciones estudiadas, las cuales influyen en la continuidad de la empresa. Por último, hay que recalcar que, para aquel 32% de empresas familiares que cuentan con normas implementadas -tales como, asignación de puestos de acuerdo al conocimiento experiencia y habilidades, sueldos similares para todos los empleados y límites de participación de los parientes políticos-, éstas normas sí resultaron tener relación con la continuidad de la empresa, por lo que es necesario hacer del conocimiento del empresariado en Tehuacán, la relevancia de contar con normas dentro de la empresa familiar que

ayuden al mejor funcionamiento del negocio, a la estabilidad de la armonía familiar y a la continuidad de la organización familiar.

### Limitaciones y Recomendaciones Para Futuras Investigaciones

Este proyecto es un estudio transversal que se efectuó en el lapso de dos años (2010-2011) y comprendió empresas familiares de manufactura, comercio y servicios de Tehuacán y su región. Se sugiere profundizar sobre aquellos aspectos que no fueron contemplados en el presente trabajo debido a la limitación de recursos (tiempo y acceso a la información, entre otros), tales como: (1) El proceso sucesorio en las empresas familiares de Tehuacán, (2) Órganos de Dirección y Gobierno en las empresas familiares de Tehuacán. (3) Métodos de resolución de conflictos en las empresas familiares de México. (4) Análisis de la influencia de la cultura familiar sobre el desempeño de las empresas familiares en México. (5) Análisis de las herramientas usadas por las empresas familiares de Tehuacán para su gestión.

### RESUMEN

*Las demandas de adaptación que exige el entorno actual, hacen que el tema de aprendizaje organizacional ocupe cada vez más la práctica empresarial, predominando el interés de lograr ventajas competitivas. El presente estudio tiene como objetivo valorar los indicadores de aprendizaje organizacional individual que se manifiestan en una pequeña empresa de la industria metalmecánica del estado de Coahuila y contribuir a ampliar, precisar y dinamizar la comprensión en este nivel de aprendizaje. Para ello, se obtuvo información cuantitativa de 33 personas que laboran en la empresa de estudio, mediante un cuestionario estructurado y posteriormente se analizaron los datos a través del software SPSS, aplicando la herramienta de Cross Tabs. Uno de los hallazgos, entre otros, es que en este estudio se muestra una relación significativa entre el tiempo que invierten los empleados en crear un ambiente de confianza entre ellos y la ayuda que se dan en el proceso de aprendizaje así como la disposición a una realimentación honesta entre unos y otros.*

**PALABRAS CLAVE:** Aprendizaje Organizacional Individual, Aprendizaje Organizacional, Pyme.

## INDIVIDUAL ORGANIZATIONAL LEARNING INDICATORS IN A COAHUILA'S SMEs

### ABSTRACT

*The demands of adaptation that the current environment requires, make the organizational learning topic depends more on the business practice, where the interest to achieve competitive advantages is prevailed. The present study aims to value the individual organizational learning indicators shown in a small metalworking industry of Coahuila and to help to expand, clarify and encourage the understanding at this level of learning. For this purpose, quantitative information was obtained from 33 people working in that SME by using a structured questionnaire to analyze collected data which was processed using SPSS software, using the tool of Cross Tabs. One of the findings, among others is that this study shows a significant relationship between invested time on employees, creating an environment of trust between them and the help given in the learning process as well as the provision of an honest feedback with one another.*

**KEY WORDS:** Individual Organizational Learning, Organizational Learning SMEs.

### INTRODUCCIÓN

La fuerte competencia, la globalización de los mercados y los cambios en la cultura, hacen del aprendizaje organizacional un tema de creciente interés en la práctica de las organizaciones, respecto a lo que comenta Ahumada (2002), los gerentes tienen serias dificultades para predecir el comportamiento de los mercados y será la principal fuente de ventaja competitiva en el tiempo. Dodgson (1993) plantea que a través del aprendizaje organizacional las empresas construyen y organizan conocimientos a través de sus actividades y desarrollan eficiencia organizativa mediante la mejora del uso de las habilidades generales de sus fuerzas laborales. No existe un consenso entre los teóricos sobre los niveles y/o

dimensiones en que manifiesta el aprendizaje organizacional, pero se consideran el aprendizaje individual (AI) el grupal (AG) y el organizacional (AO) que distinguen Crossan, Lane y White (1999) y Castañeda y Pérez (2005). El aprendizaje organizacional se basa inicialmente en el aprendizaje individual (Argyris y Schon, 1978; Dodgson, 1993; Huber, 1991), por ello la importancia de valorar los indicadores del A.I. que permitirá al empresario tomar decisiones al respecto.

El estudio fue efectuado en una Pyme, ya que es el segmento de la economía que aporta el mayor número de unidades económicas y personal ocupado, “de hecho en el contexto internacional se puede afirmar que el 90% o un porcentaje superior de las unidades económicas totales está conformada por las micro, pequeñas y mediana empresas” INEGI (2009). En las siguientes páginas se puede apreciar una revisión de la literatura que expone lo concerniente al aprendizaje organizacional y aprendizaje individual; la metodología utilizada en el estudio; posteriormente se abordan los resultados; para culminar en conclusiones y recomendaciones, mismas que pueden desencadenar en el establecimiento de políticas para favorecer el AI que podrá concretarse en AO.

## REVISIÓN DE LITERATURA

### Aprendizaje Organizacional

Extensa es la literatura relativa al Aprendizaje Organizacional, alguna versa respecto al clima y la cultura que influyen en él, como son los argumentos presentados por (Ahumada, 2002; Enriquez, 2007; Garzón, 2004) otros lo relacionan con la innovación como factor de competitividad (Bell, 1984; Bell y Pavitt, 1995; Stata, 1989; Jiménez, 2006). Cuantiosos son los estudios teóricos efectuados con la finalidad de ampliar el conocimiento respecto al tema y otras investigaciones de campo que se han realizado con la intención de aplicar y experimentar el nuevo conocimiento, con el objetivo de buscar un mejor desempeño en las organizaciones. El AO se define como “el proceso mediante el cual los administradores buscan mejorar las habilidades de los miembros de la organización para comprender su medio ambiente y poder tomar decisiones que continuamente impacten su efectividad general”. (Ronquillo, 2006, p.54) El aprendizaje organizacional, sucede cuando la cultura organizacional establece procesos que facilitan el desarrollo de las destrezas basadas en aptitudes y características personales como la responsabilidad, la capacidad de discusión y análisis, la iniciativa. (Schein, 2000). Se considera que el aprendizaje en equipo es vital porque la unidad fundamental de aprendizaje en las organizaciones modernas no es el individuo sino el equipo y considera que si los equipos no aprenden la organización no puede aprender; sin embargo, otras perspectivas sostienen que el aprendizaje sólo ocurre a nivel individual y que la organización establece mecanismos para apropiarse de este aprendizaje. Senge (2005).

### Aprendizaje Individual

La mayor parte de los estudiosos del tema están de acuerdo con que el AO tiene lugar a través de los individuos (Hedberg, 1981; Fiol y Lyles, 1985; Kim, 1993) quienes proponen modelos integradores del aprendizaje organizacional donde los modelos mentales tienen una importancia central. La importancia del aprendizaje individual es obvia ya que las organizaciones están compuestas por individuos, y es sutil porque las organizaciones pueden aprender independientemente de un individuo específico, pero no puede hacerlo siendo independiente de todos los individuos. (Kim, 1993). El aprendizaje individual es “un proceso consciente o inconsciente, por el cual los individuos obtienen nuevo conocimiento procedente de la transformación de la información, que modifica sus perspectivas internas y en ocasiones su conducta, amplía sus habilidades y capacidades cognitivas, y mejora su comportamiento y los resultados de éste. Es el pilar sobre el que se sustentan procesos de aprendizaje desarrollados a otros niveles, como el grupal y organizativo” (Martínez, et al, 2002:4). Tanto la educación, como el trabajo exponen Arias y Heredia (2000), pueden constituir medios para atraer hacia el exterior de la persona toda su esencia humana, dando vigencia plena a todas sus potencialidades y talentos. Las personas también

aprenden “de la utilidad y conveniencia de ciertos comportamientos fijándose en modelos y consecuencias del proceder, y actúa de acuerdo con lo que cree que debe esperar como resultado de sus actos” (Schunk,1977:102).

El aprendizaje que se adquiere de la experiencia señala Pérez (1991), puede significar tres cosas distintas: el adquirir un nuevo recuerdo para la memoria, desarrollar una nueva habilidad operativa, desarrollar su capacidad evaluativa, al ser capaz de apreciar sus propias acciones a las que Pérez denomina virtudes morales, las cuales son las que facilitan al sujeto que las futuras decisiones sea correctas o más correctas. Argyris (1999) menciona que se adquiere cuando detectamos y corregimos un error y un error es cualquier discordancia entre lo que queremos que produzca una acción y en lo que sucede cuando se implementa. También hay aprendizaje cuando producimos por primera vez una concordancia entre intenciones y resultados. La espiral del conocimiento que aborda Nonaka (2007) se refiere al conocimiento tácito y al explícito, el primero es el que adquiere el individuo y es difícil de formalizar, de comunicar, el individuo se apropia de él y surge a partir de la observación, la imitación y la práctica y puede pasar de tácito a tácito, cuando una persona comparte conocimiento con otra, generalmente destrezas técnicas, el segundo es sistemático y formal y es tratar de comunicar lo inexpresable.

La teoría de acción humana, en la se fundamenta el estudio, indica que se puede concebir la acción humana (agente activo) como parte de un proceso de interacción con un entorno formado por una o varias personas (agente reactivo). Estos agentes, menciona Pérez (1991), pueden aprender como consecuencia del proceso de interacción, entendiendo como aprendizaje aquellos cambios que ocurran en el interior de los agentes como consecuencia de la propia interacción. En relación a esta teoría, Martínez (2004) expone que el AO ocurre cuando los miembros individuales de la organización investigan para beneficio de todos dentro de ella, la gente es expuesta a la teoría de la acción en relación a las teorías en uso, estas entidades con se observan directamente sino que se infieren por sus acciones, pláticas y rangos de adopciones que proponen el diseño de la acción humana.

## **METODOLOGÍA**

El trabajo de investigación que se llevó a cabo es de tipo cuantitativo, descriptivo y transversal. La población objeto de estudio fueron 33 trabajadores de una Pyme de la Industria Metalmecánica que representan la totalidad de la misma y fueron encuestados a principios del 2013. Los datos cuantitativos se procesaron a través del paquete estadístico SPSS, con la finalidad de encontrar los elementos más fuertes y débiles relacionados con el indicador de Aprendizaje Individual, constituido por trece ítems medidos a través de la escala de Likert (1 a 6 de menor a mayor) y poder describir los hallazgos. Posteriormente se midió el grado de relación existente entre cada uno de ellos, así como con los datos demográficos buscando alguna relación significativa. El instrumento utilizado fue el cuestionario sobre las dimensiones de la organización aprendiente, adaptado del instrumento “Dimensions of Learning Organization Questionnaire” (DLOQ) por Rómulo Mayorca, et. al. (2007), para el contexto venezolano.

## **RESULTADOS**

Del cuestionario aplicado a los 33 empleados que laboran en una Pyme de la Industria Metalmecánica, de la región centro del estado de Coahuila, respecto a datos demográficos; el indicador de aprendizaje organizacional y la asociación de variables, se obtuvieron los resultados que a continuación se mencionan: En cuanto a los datos demográficos se encontró que el porcentaje mayor es el 84.8% y es género masculino; el 54.6% se encuentra en el rango de 25 a 43 años de edad; los mayores porcentajes de años de experiencia laboral, se encuentra en los rangos de 4-8 el 21.2% y en el de 29-33 con el 21.2%; respecto a la antigüedad que tienen laborando en la empresa el 42.4% se concentra en los empleados que tienen de 15 días a 1 años y por último en el nivel de estudios, predomina el de secundaria con el 39.4%.

En la siguiente tabla se pueden observar los indicadores de aprendizaje organizacional, y las respuestas que eligieron en porcentaje de empleados.

Tabla 1: Indicadores de Aprendizaje Organizacional

Indicador de aprendizaje individual	Nunca %	Muy rara vez %	Ocasionalmente %	Generalmente %	Casi siempre %	Siempre %
Las personas discuten abiertamente sobre los errores con el fin de aprender de estas experiencias.	15.2	15.2	18.2	12.1	21.2	18.2
Las personas identifican las habilidades requeridas para las áreas futuras.	9.1	18.2	24.2	18.2	9.1	21.2
Las personas se ayudan entre sí en el proceso de aprendizaje.	3.0	18.2	21.2	12.1	18.2	27.3
Las personas pueden conseguir dinero, tiempo y otros recursos para costear/facilitar su aprendizaje.	15.2	12.1	15.2	21.2	21.2	15.2
A las personas se les da tiempo para su desarrollo personal/profesional.	18.2	15.2	18.2	21.2	18.2	9.1
Las personas perciben los problemas en el trabajo como oportunidades de aprendizaje.	9.1	12.1	24.2	18.2	18.2	18.2
Recompensan a la gente que busca mejorar su desarrollo profesional.	24.2	15.2	12.1	15.2	12.1	21.2
Las personas están dispuestas a una realimentación honesta entre unos y otros.	15.2	9.1	12.1	30.3	18.2	15.2
Las personas están abiertas a escuchar diferentes puntos de vista antes de hablar.	12.1	12.1	30.3	18.2	12.1	15.2
Se incentiva a la gente a que pregunte “¿Por qué?” sin importar el puesto dentro de la organización.	15.2	15.2	15.2	30.3	15.2	9.1
Cuando las personas dan su punto de vista o su opinión, también preguntan la opinión de los otros.	12.1	12.1	24.2	27.3	9.1	15.2
Se tratan a las personas con respeto.	9.1	12.1	21.2	15.2	24.2	18.2
Las personas invierten tiempo creando un ambiente de confianza entre ellos.	9.1	18.2	12.1	15.2	18.2	27.3

En esta tabla se muestra la percepción que tienen los trabajadores respecto a los indicadores de aprendizaje individual que se manifiestan en su trabajo. Considerando las respuestas de generalmente, casi siempre y siempre como una dirección positiva, la de medición más alta es: Las personas están dispuestas a una realimentación honesta entre unos y otros en las que se promedia un 63.7%; así mismo, considerando las respuestas de nunca, casi nunca y ocasionalmente en dirección negativa, la de medición más alta es: Las personas están abiertas a escuchar diferentes puntos de vista antes de hablar en la que se promedia un 54.5%.

Como se ha mencionado, el que “las personas están dispuestas a una realimentación honesta entre unos y otros”, considerando agrupar las 3 últimas opciones de la escala se integra el 63.7%, le siguen en orden descendente: “las personas invierten tiempo creando un ambiente de confianza entre ellos” con un 60.7%; “las personas se ayudan entre sí en el proceso de aprendizaje”, se trata a las personas con respeto” y “las personas pueden costear/facilitar su aprendizaje”, obtuvieron cada una un 57.6%; “se incentiva a la gente a que pregunte ¿por qué? sin importar el puesto dentro de la organización” y “las personas perciben los problemas en el trabajo como oportunidades de aprendizaje”, el 54.6%; “cuando las personas dan su punto de vista o su opinión, también preguntan la opinión de los otros” el 51.6%; “las personas discuten abiertamente sobre los errores con el fin de aprender de estas experiencias” el 51.5%; “las personas identifican las habilidades requeridas para las áreas futuras” y “a las personas se les da tiempo para su desarrollo personal/profesional”, el 48.5% y para finalizar, “las personas están abiertas a escuchar diferentes puntos de vista antes de hablar”, con el 45.5%. A continuación se presentan en la tabla 5, la asociación encontrada entre las variables del aprendizaje individual.

TABLA 2: Asociación Entre Variables del Aprendizaje Individual

Asociación de variables	Coefficiente de contingencia	Significancia
Las personas invierten tiempo creando un ambiente de confianza entre ellos.	.738	.034
Las personas se ayudan entre sí en el proceso de aprendizaje.		
Las personas invierten tiempo creando un ambiente de confianza entre ellos.	.732	.046
Las personas perciben los problemas en el trabajo como oportunidades de aprendizaje.		
Las personas invierten tiempo creando un ambiente de confianza entre ellos.	.747	.020
Las personas están dispuestas a una realimentación honesta entre unos y otros		
Las personas están abiertas a escuchar diferentes puntos de vista antes de hablar.	.765	.006
Las personas identifican las habilidades en áreas futuras.		
Las personas están abiertas a escuchar diferentes puntos de vista antes de hablar.	.748	.018
Cuando las personas dan su punto de vista o su opinión preguntan la opinión de otros.		
Las personas están dispuestas a una realimentación honesta entre unos y otros.	.739	.032
Se trata a las personas con respeto.		

\*\*\* $p < 1\%$ , \*\* $p < 5\%$ . En la relación entre variables, se puede apreciar que el ambiente de confianza creado entre los empleados, se asocia con la ayuda que se dan en el proceso de aprendizaje, con el percibir los problemas como oportunidades de aprendizaje y con el recibir una realimentación honesta entre unos y otros. Se manifiesta la asociación entre la apertura que tienen a escuchar diferentes puntos de vista antes de hablar, con la identificación de habilidades futuras y con el que cuando dan su punto de vista o su opinión preguntan la opinión de otros, y por último se asocia el que estén dispuestas a una realimentación honesta entre unos y otros, con el que se trate a las personas con respeto.

No se encontró relación significativa entre la variable de datos demográficos y los indicadores de aprendizaje organizacional, exceptuando el de la Edad, con respecto al tiempo que se les da a las personas para su desarrollo personal-profesional, \*\* $p < 5\%$  (coeficiente de contingencia .730 Nivel de significancia .034) interpretando que ha mayor edad, los empleados obtienen más tiempo para su desarrollo personal-profesional.

## CONCLUSIONES

El aprendizaje en las organizaciones se ha convertido en una práctica anhelada, pues se considera un activo intangible, creador de ventajas competitivas para la empresa. En este estudio en particular se pudieron identificar 13 indicadores que influyen en el aprendizaje individual y llegar a la conclusión que los individuos si adquieren el conocimiento en forma tácita, debido a la cultura que se manifiesta en esta pequeña empresa. Sin importar la edad, el género, su nivel de estudios, los años que tienen trabajando fuera y dentro de la empresa los individuos aprenden a través de sus relaciones. Si la confianza y la ayuda recíproca son promovidas por las organizaciones asevera Durston (2000), que eso beneficiará en reducir costos y facilitar la constitución de organizaciones de base efectiva. La relación que tiene en este estudio, el ambiente de confianza creado entre los empleados nos muestra que desencadena en la ayuda que se dan en el proceso de aprendizaje, con el percibir los problemas como oportunidades de aprendizaje y con el recibir una realimentación honesta entre unos y otros. El presente estudio muestra sus debilidades y limitaciones, pues el conocimiento no puede ser generalizado, pero se espera que sirva de base a futuras investigaciones.

# TRANSFERENCIA DE CONOCIMIENTO, EL CASO DE UNA REGIÓN MEXICANA

Silvia Pomar Fernández, Universidad Autónoma Metropolitana

Araceli Rendón Trejo, Universidad Autónoma Metropolitana

## RESUMEN

*El desarrollo acelerado de la tecnología, particularmente en áreas relacionadas a la Información y Comunicación (TIC's), sentó las bases para la configuración de una "sociedad del conocimiento", la cual actúa en un nivel superior al de la "sociedad de la información". (Bueno, 2008). En esta dinámica es importante el capital humano en la generación de conocimiento ya que en la medida en que el conocimiento se socialice, se codifique, se absorba y se materialice existirá la innovación, lo que le permite a las organizaciones ofrecer nuevos productos o servicios con el propósito de mantener y acrecentar su mercado. El capital humano impulsa el desarrollo económico y social, genera ideas, nuevos productos, servicios o procesos productivos, que permiten comercializar su producto. Esto lleva a la mejora de la calidad de vida individual, organizacional y, en algunos casos, de la comunidad como es el caso que presentamos en esta investigación. Este trabajo tiene como objetivo explicar el proceso de transferencia de conocimiento que ha llevado a cabo el Centro de Organización Campesina de la Sierra Árida (COCASA), constituida como una Sociedad de Solidaridad Social (SSS) localizada en un municipio del estado de Querétaro, con el fin de apoyar en diversos proyectos socio- económicos a personas de comunidades marginadas y en situación de pobreza. Para ello se han puesto en marcha programas de vinculación y enseñanza-aprendizaje para que los miembros de la localidad sean productivos aprovechando los recursos naturales con los que cuenta cada uno de los municipios. Como resultado de esto se han creado microempresas y se ha impulsado el desarrollo y crecimiento de las ya existentes. La metodología empleada para este proyecto es cualitativa. Se utilizaron como herramientas de investigación la entrevista semi – estructurada y el análisis documental. Las entrevistas se aplicaron a los fundadores del Centro y a los integrantes del grupo, formado por habitantes de los diversos municipios que se encuentran alrededor de Vizarrón, en el estado de Querétaro en México. Entre los resultados a los que se ha llegado está la identificación de las estrategias seguidas para la transmisión del conocimiento por parte de COCASA, así como la forma en que los conocimientos fueron asimilados por los diversos grupos. El artículo está compuesto por cuatro apartados. En el primero se hace referencia al contexto de la región y las condiciones que guarda actualmente; en el segundo se realiza un análisis de la innovación y transferencia del conocimiento desde un punto de vista teórico; en la tercera parte se explica y analiza el proceso de transferencia de conocimiento para lograr la mejora en la calidad de vida de los miembros de la región, por último se presentan las reflexiones.*

**PALABRAS CLAVE:** aprendizaje, innovación y transferencia de conocimiento.

## KNOWLEDGE TRANSFER, THE CASE OF A MEXICAN REGION

### ABSTRACT

*The rapid development of technology, particularly in areas related to Information and Communication Technologies (TICs), have guided the to "knowledge society", which acts at a level above that of the "information society". (Good, 2008). Human capital, in turn, generates knowledge wich is important for innovation. It is important to generating and using new knowledge for organizations to offer new products or services for the purpose of maintaining and increasing its market. Human capital drives economic development in the first instance and the resulting social, as it increases its production capacity through the transfer of knowledge and teaching skills. In this sense, the human have the necessary*

*resources and is able to generate ideas for new products, services or production processes, enabling it to market its product. This leads to the improvement of life quality of individual, organizational and as in the case studied community development. This paper explains the process of knowledge transfer has taken place the center of the Sierra Campesino Organization Arid (COCASA), organized as a Social Solidarity Society (SSS) located in a Vizarrón, a place in Querétaro stat. COCASA support various socio-economic projects for people from marginalized communities and in poverty. This has included teaching and learning programs for members of the town for the productive use of natural resources. As a result of these programs and with the support of the Centre people have created microenterprises and have improved the existing ones. The methodology used for this project is qualitative. We were used as research tools the semi - structured interviews and document analysis. The interviews were applied to the founders of the Centre and the group formed by residents of the various municipalities located around Vizarrón, in the state of Querétaro in Mexico. Among the results that you get in this part of the research is to identify the strategies used for the transmission of knowledge by COCASA and how knowledge was assimilated by the various groups. The article is composed of four sections. The first one refers to the context of the region and the conditions that currently saves, the second is an analysis of innovation and knowledge transfer from a theoretical point of view, in the third part describes and analyzes the process of knowledge transfer to achieve the improvement in the quality of life of the members of the region, and finally presents the reflections.*

## INTRODUCCION

El desarrollo acelerado de la tecnología, particularmente en áreas relacionadas a la Información y Comunicación (TIC's), sentó las bases para la configuración de una “*sociedad del conocimiento*”, la cual actúa en un nivel superior al de la “*sociedad de la información*”. El capital humano, por su parte, genera conocimiento, que al socializarse, codificarse, absorberse y materializarse existirá la innovación, importante para que las organizaciones ofrezcan nuevos productos o servicios con el propósito de mantener y acrecentar su mercado. El capital humano impulsa el desarrollo económico y social, ya que incrementa su capacidad productiva a través de la transferencia de conocimientos y la enseñanza de habilidades. El factor humano capacitado y con los recursos necesarios, genera ideas de nuevos productos, servicios o procesos productivos, que le permitan comercializar su producto, lo que permite la mejora de la calidad de vida individual, organizacional y, en algunos casos, de la comunidad como es el caso que se presenta. Este trabajo tiene como objetivo explicar el proceso de transferencia de conocimiento llevado a cabo por el Centro de Organización Campesina de la Sierra Árida (COCASA), constituida como una Sociedad de Solidaridad Social (SSS) localizada en un municipio del estado de Querétaro, con el fin de apoyar en diversos proyectos socio- económicos a las personas de comunidades marginadas y en situación de pobreza. Para ello se han puesto en marcha programas de vinculación y enseñanza-aprendizaje para que los miembros de la localidad sean productivos aprovechando los recursos naturales con los que cuentan. El resultado ha sido la creación de microempresas y el impulso al crecimiento de las ya existentes. El artículo está compuesto por cuatro apartados. En el primero se hace referencia al contexto de la región y a sus condiciones; en el segundo se realiza un análisis de la innovación y transferencia del conocimiento desde un punto de vista teórico; en la tercera parte se explica y analiza el proceso de transferencia de conocimiento para lograr la mejora en la calidad de vida de los miembros de la región, por último se presentan las conclusiones.

### Gestión y Transferencia del Conocimiento. Revision de Literatura

La apertura económica, el proceso de globalización y la crisis actual mundial constituyen el escenario al que se enfrentan las empresas de cualquier tamaño. Para la micro y pequeña empresa (Mipe) la situación se dificulta más por su sistema de organización, carencia de conocimientos, pocos apoyos económicos, limitada calificación en el personal, escasa cultura empresarial y una baja capacidad tecnológica. Sin embargo, son empresas que por su flexibilidad en cuanto a su estructura, se han podido adaptar más rápido al cambio innovando en procesos, productos y en la forma de organización. El conocimiento implica procesos de aprendizaje internos y externos a la organización, que favorezcan la generación y comercialización de conocimiento que permitan la creación de nuevos productos, servicios y la mejora de los procesos productivos. Tanto el proceso de innovación como las condiciones que la favorezcan han de ser gestionadas de forma integral y estratégica” (Moso, 2004: 3).

También es esencial recurrir a fuentes externas a través de la adquisición de nuevas tecnologías, asesoramiento científico-técnico, vigilancia tecnológica, información de proveedores, distribuidores y clientes. La innovación se nutre de ideas creativas y éstas resultan del conocimiento que se transmite del individuo, el grupo, la organización y la interacción de esta con diversas organizaciones, entre ellas las instituciones educativas y los centros de investigación. El aprendizaje que se genera en la organización es importante para su crecimiento. Una forma de generar conocimiento y aprendizaje es el llamado “aprendizaje interpersonal e interorganizativo”, aquel aprendizaje que se da “con” o “a partir de otros”.

Algunos de los beneficios que se pueden obtenerse de ello son que permite considerar diversos enfoques de forma crítica y estructurada, reduce riesgos e incrementa las posibilidades para tener y poner en práctica nuevas ideas, se exploran modelos mentales ajenos a la experiencia normal de las organizaciones individuales, con el propósito de reconocer que existen cosas que se han generado en y desde la organización. Las organizaciones son entidades que para sobrevivir están revalorizando la participación del ser humano como cualidad sensible capaz de generar conocimiento y de alternar con los adelantos tecnológicos, con el objeto de generar ventaja competitiva. Esta situación se da como resultado de un proceso de articulación de los conocimientos y de las experiencias de cada uno de los individuos que forman parte de la organización que, por diversos mecanismos conducen al aprendizaje (Guillén y Pomar, 2003). De acuerdo con Nonaka y Takeuchi (1999) es muy importante socializar el conocimiento para lograr una ventaja competitiva en la organización.

De acuerdo con Powel y Dimaggio (1999), el conocimiento se torna en el activo más valioso para las organizaciones, el cual reside en la cabeza y cuerpo de los individuos. Para reproducir el conocimiento se requiere de libertad y espacios de socialización, condiciones económicas y un lenguaje que permita la interacción de un mayor número de personas en su construcción (Pomar, 2007). La era actual es considerada por algunos investigadores como “La era de la información y el conocimiento”; ésta última está compuesta de dos elementos: uno explícito (codificado) y otro tácito (lo no dicho). En relación al primero, Nonaka y Takeuchi (1999) establecen que para lograr la innovación, y, por ende una ventaja competitiva, el conocimiento debe socializarse. Polanyi (1983), por su parte, señala que el elemento tácito del conocimiento limita la posibilidad de expresarlo, ésto es, no todo conocimiento puede ser expresado y por ende transmitido, además de que hay conocimiento del cual el individuo no es consciente.

Los procesos humanos involucran un proceso de influencia interpersonal, que se convierte en una fuerza liberadora de la inteligencia al reconocer la existencia del conocimiento tácito. Nonaka y Takeuchi (1999) encontraron lo que esto implica para la empresa:

- a. Se obtiene una visión distinta de la organización, en cuanto a los procesos de información y a los ideales, emociones, imágenes y símbolos de la misma.

- b. Hay una evolución hacia la innovación, originando una forma distinta de pensamiento y reflexión a nivel personal y organizacional.
- c. Existe la posibilidad de aprender a aprender, lo que genera ideas que se relacionan con la misión y el compromiso organizacional.

Nonaka y Takeuchi (1999), hablan de la espiral del conocimiento, formada por dos dimensiones: una que va de lo individual a lo social y la otra, de la conversión del conocimiento tácito al explícito. Esta conversión implica pasar por cuatro fases:

1. La socialización, la cual se da al pasar del conocimiento tácito a tácito y se adquiere con base a la experiencia
2. La exteriorización, que es el paso del conocimiento tácito a explícito a través de las metáforas, analogías, conceptos o modelos
3. La combinación que va de explícito a explícito a través del lenguaje o las figuras
4. La interiorización. Todo conocimiento en algún momento se convierte nuevamente de explícito a tácito.

El conocimiento fluye mejor cuando se deja navegar libremente al interior de la organización, sin tanto formalismo, fomentando la confianza y promoviendo los encuentros casuales entre todo el personal que conforma la organización, al respecto debe tenerse en cuenta que la relativa dificultad de capturar y transferir conocimiento depende del tipo de conocimiento implicado, el conocimiento que es mayormente explícito puede ser embebido en los procedimientos o representado en documentos y bases de datos y se transfiere con razonable precisión; el conocimiento tácito generalmente requiere para su transferencia extenso contacto con el personal (Davenport & Prusak, 1998).

La simple existencia del conocimiento no garantiza su uso. La transferencia espontánea de conocimiento no estructurada es vital para el éxito de una empresa y aunque el término "*gestión del conocimiento*" implica la transferencia formal, uno de sus elementos esenciales es el desarrollo de estrategias específicas para promover esos intercambios espontáneos, esta gestión del conocimiento debe tomar en cuenta elementos como la rapidez con la cual el conocimiento se mueve a través de la organización, lo que Davenport y Prusak (1998) llaman velocidad y viscosidad o grosor (riqueza) de los conocimientos transferidos. La transmisión del conocimiento es realizada de diversas maneras en las organizaciones. En el caso estudiado la transmisión se da de persona a persona y son ellas quienes transfieren la información al grupo que formará la empresa. Con ello se logra crear actividades productivas y la formación de las microempresas.

## METODOLOGIA

La metodología empleada para este proyecto es cualitativa. Se utilizaron la entrevista semi – estructurada y el análisis documental. Se aplicaron veinticinco entrevistas, entre ellas a los fundadores del Centro y a los integrantes del grupo, habitantes de los diversos municipios que se encuentran alrededor de Vizarrón, en el estado de Querétaro en México. Entre los resultados están la identificación de las estrategias seguidas para la transmisión del conocimiento por parte de COCASA, así como la forma en que los conocimientos fueron asimilados por los diversos grupos.

### Contexto de la Región De Querétaro

El estado de Querétaro es montañoso, ubicado en la Sierra Gorda y la Sierra Queretana y parte de la Sierra Madre Oriental. De acuerdo al Instituto Nacional de Geografía (INEGI) en 2010, en el estado habitaban un total de 1,827,937 personas, localizados en dieciocho municipios, en siete de ellos existen asentamientos indígenas con una población de casi 50,000 habitantes pertenecientes a las etnias Otomí y Pame, como se muestra en la siguiente tabla:

**Tabla 13: Asentamientos Indígenas en el Estado de Querétaro**

Región	Municipios	Ubicación
Región Sur	Amealco de Bonfil	Cuenta con una población de 25,269 habitantes indígenas Otomíes, asentados en 31 localidades, integradas en las micro regiones de San Ildefonso Tultepec, Santiago Mexquititlán, Chitejé de la Cruz y San Miguel Tlaxcaltepec.
Región Semidesértica Central	Tolimán, Cadereyta de Montes, Colón y Ezequiel Montes.	Cuenta con 21 430 indígenas Otomíes, asentados en 56 localidades, distribuidas en 7 micro regiones: San Miguel, San Pablo, Casablanca y Carrizalillo en Tolimán; Sombrerete en Cadereyta; El Poleo en Colón; y Villa Progreso en Ezequiel Montes.
Región Serrana	Jalpan y Arroyo Seco	Se encuentran 3 775 habitantes indígenas Pames y Huastecos, asentados en las delegaciones de Tancoyol y Valle Verde en Jalpan; y en la delegación de Purísima en Arroyo Seco.

*En Querétaro como en otras partes de México hay distintos grupos indígenas con fuertes problemas de marginación y pobreza. En el Estado se encuentran predominantemente los Otomíes y menor medida los pames y huastecos; todos estos grupos se encuentran en distintas localidades dedicados a actividades relacionadas con los recursos existentes en los alrededores. Fuente: Consejo de Concertación Ciudadana para el Desarrollo de los Pueblos Indígenas p. 14*

En estas regiones, que presentan los climas más secos de la entidad, la gente vive en situación de marginalidad y pobreza con un alto índice de analfabetismo. La población municipal más ruralizada se encuentra en Peñamiller, Cadereyta y Colón. Entre el 77 y el 100% de sus habitantes viven en localidades menores a 2500. Los niveles de analfabetismo en la región alcanzan casi el doble de los del estado y el país. Aunado a esto, el diagnóstico de los municipios de la región resaltó que Cadereyta y Peñamiller, tiene el crecimiento demográfico menor, densidad baja y el indicador de ruralidad, equivalente a dispersión, es alto. Sin embargo, su población económicamente activa percibe menos de dos salarios mínimos en un alto porcentaje (76%), lo que genera que sus habitantes carezcan de los satisfactores esenciales para mantener una buena calidad de vida. El municipio de Cadereyta es uno de los que presenta la mayor extensión y número de habitantes y es en esta localidad donde se ubica COCASA.

### El Proceso de Transferencia de Conocimiento de Cocasa a los Microempresarios. Resultados

#### La Organización COCASA

La Comisión Nacional para el Desarrollo de los Pueblos Indígenas maneja varios programas, entre ellos, *La Coordinación para el apoyo a la Producción Indígena, Fomento y Desarrollo de las Culturas Indígenas, Fondos Regionales Indígenas, Organización Productiva para Mujeres Indígenas*. En este tipo de programas se inserta el proyecto de Enlace Rural Regional (ERRAC), formada como una asociación civil el 20 de octubre de 1988. Como parte de los proyectos de Enlace Rural Regional se creó el Centro de Organización Campesina de la Sierra Árida como una Sociedad de Solidaridad Social constituida con un patrimonio de carácter colectivo cuyos socios son personas físicas de nacionalidad mexicana, en especial ejidatarios, comuneros, campesinos sin tierra, parvifundistas y, personas con derecho al trabajo, a un fondo de solidaridad social y que puedan realizar actividades mercantiles. Los socios establecerán libremente las modalidades de sus actividades para cumplir las finalidades de la sociedad. Sobre estas bases se crea COCASA. COCASA apoya diversas actividades, entre ellas las orientadas al mejoramiento de las viviendas, pequeño comercio y producción.

Entre estas últimas está el apoyo a caprinocultores, fruticultores, recolectores de plantas silvestres, artesanos marmoleros y de herbolaria. El crédito otorgado por la organización se ofrece a la población marginada, quienes lo requieren para resolver problemas de vivienda y de producción. La cartera de crédito se integró con fondos de la Unión Europea, gestionados por Tierra de los Hombres-Francia y complementados por Acción Solidaridad Tercer Mundo-Luxemburgo y el Socorro Católico Francés. 2005 COCASA recibió recursos del Programa de Apoyo a las Organizaciones Sociales Agropecuarias y Pesqueras (PROSAP) que ayuda a organizaciones económicas para la realización de proyectos productivos estratégicos del sector rural y las impulsa a desarrollar capacidades y fortalecer la actividad empresarial. COCASA ha apoyado la realización de diversas actividades relacionadas con las artesanías de mármol y la elaboración y venta de productos naturales. Estas últimas iniciaron en 1996 cuando varias personas de la región, ante problemas de salud, se organizaron en dieciocho grupos de mujeres para reunir medicamentos y formar botiquines comunitarios. Como no estaban habituados a utilizar este tipo de productos y preferían las plantas medicinales, formaron talleres de herbolaria. La Comisión les otorga también el servicio de comercialización de sus productos, entre los que se encuentran shampoo, pomadas, jarabes, jabones, cremas, tinturas, gel para el cabello, cápsulas, licor y artesanías hechas de mármol (ERRAC y COCASA, 2006.).

### La Transmisión del Conocimiento en la Creación de Actividades Productivas

La manera de integrar a las personas de las comunidades fue llegando directamente a ellas e invitándolas a emprender actividades productivas en las que pudieran hacer uso de los recursos animales, vegetales o minerales de la región. Después de aceptar llevar a cabo una actividad, el paso siguiente fue conseguir financiamiento. Arturo quien funge como promotor de COCASA es quién promovía las actividades y asesoraba a las personas en la forma en que debían llevar a cabo esa actividad. Hay varias formas en las que se trasmite el conocimiento a los miembros de la comunidad, las cuales se explican a continuación:

*Por Medio del Promotor:* Dado que entre las actividades están la crianza de chivas, el cultivo de árboles frutales para la producción de manzana, el promotor transmite dos tipos de información: a) la técnica agropecuaria y b) aquella relacionada con la manera en que deben organizarse financieramente para que puedan recibir y pagar apoyos crediticios. En el apoyo a las actividades productivas relacionadas con el agro, ha sido importante la formación profesional del promotor ya que cuenta con conocimientos útiles para asesorar en el cultivo de los árboles frutales, así como la de crianza y crecimiento de animales de corral. El promotor ha tomado diversos cursos para poder guiar al aprovechamiento de recursos naturales en la región en la elaboración de shampoo, por ejemplo. Esto le ha permitido transmitir ese conocimiento al grupo de mujeres interesadas en esa actividad. Así mismo ha tomado cursos de herbolaria, conocimientos que ha aprovechado para transmitirles diversas formas de utilizar los vegetales que se dan en la región

*Asesorías de Expertos:* Cuando no se conoce la técnica o proceso de una de las actividades que se pretende emprender, se busca a personas que la dominen y tengan experiencia para que instruya, asesore y posteriormente vigile el buen funcionamiento de la actividad emprendida. Es el caso de la producción de pan, actividad que no se había practicado entre los miembros de la organización y que quería ser llevada a cabo por dos mujeres que deseaban iniciar ese negocio. Por medio de COCASA se contactó a una experta que pudiera asesorar a las interesadas. Esta persona era una capacitadora de Vizarrón, “ella fue a decirles como deberían instalarse y que necesitaban”. Posteriormente las mujeres aprendices fueron a la panadería de la capacitadora a ver cómo se elaboraba el pan (socialización e interiorización del conocimiento), posteriormente esta última regresó para revisar el trabajo y los productos. Estas dos mujeres también aprendieron a hacer la pasta para pizzas y consideraban la idea de tomar cursos para elaborar pasteles. Esta actividad ha generado nuevos empleos, ya que los dos hijos de una de ellas,

participaba en el amasamiento. Las mujeres panaderas han podido comercializar sus productos mediante la venta en el local que tienen, como de puerta en puerta y en reuniones que se tienen en COCASA.

*Organizaciones e Instituciones:* Existen diversas organizaciones gubernamentales que apoyan a las personas a mejorar sus condiciones de vida, otras instituciones financieras de desarrollo han apoyado con recursos para la capacitación por intermedio de COCASA. En otras ocasiones el apoyo se busca, ya que parte del trabajo de COCASA es la gestión de los apoyos y la firma de los convenios-contratos. La Secretaría de Desarrollo Social, por su parte, apoya el combate a la pobreza y la productividad. La transmisión de conocimientos y formación de los habitantes de estas comunidades se ha dado también de manera formal. Una de las mujeres que se dedica a la producción de shampoo, durante un año asistió a una escuela en la que recibió instrucción sobre ese aspecto. El conocimiento adquirido fue transmitido a otras compañeras, entre ellas a su madre, con las que inició su negocio. La elaboración de este shampoo tuvo algunos problemas en relación a los químicos que lleva por lo que el promotor participó activamente con ellas con el fin de resolverlos y encontrar la forma de aprovechar de la mejor manera los recursos que existen en los municipios como las diversas plantas que ahí se siembran.

*Transmisión de Conocimiento Entre Compañeros:* La socialización del conocimiento en este caso se da como resultado de la experiencia que han adquirido los integrantes de grupos de sus descendientes y amigos dedicados a diversas actividades productivas relacionadas con los productos que se siembran y fabrican en Cadereyta, esto ha favorecido el cambio en el nivel de vida de la comunidad. En el caso de los marmoleros, uno de los compañeros les enseñó nuevas técnicas aprendidas en un trabajo en los Estados Unidos; otros más han mejorado sus técnicas cuando ingresan a trabajar a grandes marmolerías y socializan ese conocimiento a los marmoleros dueños de pequeños negocios.

*Transmisión por medio de organizaciones educativas o de desarrollo social:* Adicionalmente hay cursos que se imparten en las instalaciones de COCASA que buscan una mejor preparación en diversos aspectos de los miembros de la comunidad, dada la precaria formación escolar que tienen. Estos cursos son impartidos ya sea por el promotor o bien por miembros de diversas instituciones, entre ellas la UAM-Xochimilco con participación ha sido en la impartición de cursos otorgados por profesores de la licenciatura en Administración con el fin de desarrollar su capacidad administrativa y de control de sus operaciones, con el propósito de generar una nueva forma de organización que les permita comercializar sus productos. Este apoyo ha sido en el área de organización del trabajo, aspectos legales y fiscales, impulso a la formación de redes de trabajo, abasto y comercialización.

Un aspecto importante de la labor de este promotor es que no se limita a la obtención de los recursos financieros (lo cual también apoya mediante la elaboración de proyectos que son presentados en diferentes instancias en diferentes lugares) ni simplemente una asesoría transitoria sino que está en constante cercanía con todos los miembros de la organización. El promotor de COCASA además busca vincularse con diversas organizaciones relacionadas con el desarrollo social. En 2009 esa organización fue elegida para establecer un convenio con una filial del *Consejo Mexicano Empresarial que permitió que les fuera transmitida la metodología de diez empresas sociales* para ser aplicada a algunos de los grupos.

A continuación analizaremos el caso de las mujeres que se han distinguido por la tenacidad y entusiasmo con la que han desarrollado su actividad productiva elaborando shampoo, cremas y jarabes, como un ejemplo de lo que ha logrado COCASA con los miembros de la comunidad.

#### Caso de las Productoras de Shampoo

En la comunidad de Vizarrón se encuentra una organización de mujeres, que forman parte de COCASA, que se dedican principalmente a la elaboración de shampoo, productos medicinales y de limpieza con

productos de origen natural; ellas son conocidas entre la localidad como “las shampooseras”. Estas mujeres forman pequeños grupos dentro de sus comunidades y organizan sus actividades para que puedan elaborar sus productos en determinados días de la semana. Aprovechan las plantas que se dan de manera natural en las localidades en que habitan. Cada grupo tiene de tres a ocho integrantes. Como se mencionó. Dentro de la línea de productos que se elaboran se puede encontrar una gama diversa, principalmente de shampoos que ayudan al control de la caída, eliminación de la caspa, brillo y salud del cabello. Entre los ingredientes que emplean está el romero, la sábila y la ortiga con los que se realizan diferentes tipos de shampoo en función al tipo de hierba que se siembra en los diversos municipios. También producen diferentes tipos de jarabes para diversas enfermedades como el de damiana, contra la tos y gripe, empleando, al igual que en el shampoo plantas y animales -como el armadillo, por ejemplo-. Así mismo producen licor de orégano, cápsulas de nopal y pomadas reductoras.

Todos estos productos son elaborados por las participantes del grupo, los cuales han sido diversificados de acuerdo con la experiencia que han ido adquiriendo a través del tiempo, con los conocimientos interiorizados han logrado innovar en productos y procesos. Hay diversos problemas que se enfrentan al interior de los pequeños grupos de “shampooseras”. En lo concerniente a la venta, se tiene que son ventas locales y solamente salen fuera de su localidad cuando asisten a ferias o eventos a los cuales son llevadas o invitadas por el promotor de COCASA o por el gobierno municipal. Otro problema son los desacuerdos entre las participantes ya que no todas las integrantes de los grupos participan por igual, algunas no se comprometen a vender y, otras, en cambio, tienen una participación muy activa. Para la no participación las causas son diversas, en algunas sus deberes familiares o el esposo que les impiden participar más. Por otro lado, la zona de venta del producto es limitada ya que se realiza en negocios cercanos a los lugares de producción (pequeñas farmacias o comercios) o en las instalaciones de COCASA. La participación en ferias se constituye en una alternativa muy positiva ya que además de poder vender mayor cantidad del producto, se dan a conocer por lo que se pueden concertar nuevos pedidos. El grupo de mujeres que se dedican a esta actividad sólo dentro de la comunidad, se encuentran satisfechas con el trabajo que realizan. Ellas se sienten valiosas por la actividad que realizan, los conocimientos que han adquirido y los ingresos que han logrado percibir con su propio esfuerzo. Todo esto les ha permitido incrementar su autoestima.

## CONCLUSIONES

La transferencia del conocimiento, ha sido un factor muy importante para lograr la innovación, esto lo vemos en el caso estudiado en donde los miembros de la comunidad pudieron perfeccionar la forma de hacer las cosas y mejorar sus productos, desde la forma de sembrar y cosechar, hasta la fabricación de diversos productos aprovechando los recursos naturales con los que cuenta la región de Cadereyta. En la transferencia del conocimiento a la comunidad, la socialización es la forma en que se transmite en mayor medida, ya que en la mayoría de los casos *aprenden haciendo*; es el momento en el cual el conocimiento se convierte en tácito nuevamente y se interioriza, como es el caso de las panaderas y shampooseras. Con este estudio vemos la importancia que tiene la existencia y la función de un promotor que a la vez es el líder del proyecto; su participación ha sido esencial ya que ha logrado, mediante diversas formas de apoyo el desarrollo de capacidades y habilidades en los miembros de la comunidad quienes una vez adquirido el conocimiento a su vez lo transmiten a sus compañeros y compañeras, contribuyendo a la construcción del conocimiento y el aprendizaje.

Es importante destacar que los miembros de estas comunidades cuentan con la motivación y el entusiasmo necesarios para aprender, a pesar de que muchos de ellos no tienen instrucción escolar. Ello no les ha impedido realizar sus actividades y aplicar mejoras a sus productos, así como a la forma de organizarse para producir y comercializar sus productos. El caso de las productoras de shampoo es muy interesante ya que a pesar de ser amas de casa y madres de muchos hijos han logrado desarrollarse participando en sus propias empresas. Existen varias microempresas en las que participan las mujeres en

diversos grupos produciendo, además de shampoo, diversos productos que ellas mismas elaboran con las hierbas que se cosechan en las diversas regiones; con esto han diversificado sus productos con ideas que ellas mismas desarrollan. Un aspecto importante a destacar es que la Organización de Seguridad y Solidaridad Social busca incorporar tecnología, conocimiento y el mejor manejo de la actividad de las personas de la comunidad mediante la asesoría o supervisión de diferentes profesionales y académicos de diversas instituciones y universidades, con el propósito de incrementar sus conocimientos para producir y mejorar su calidad y nivel de vida.

# MODELO DE GESTIÓN INCLUSIVA EN LA FACULTAD DE ECONOMÍA Y NEGOCIOS DE LA UNIVERSIDAD DE CHILE

Oscar Jerez, Universidad de Chile  
Beatriz Hasbún, Universidad de Chile  
Tamara Van Hemelryck, Universidad de Chile  
Claudio Castro, Universidad de Chile

## RESUMEN

*El presente artículo sintetiza el Modelo de Gestión Inclusiva desarrollado por la Facultad de Economía y Negocios en conjunto con Prorectoría, con miras al aseguramiento de la calidad que consideren los criterios de diversidad e inclusión, replicable en las distintas unidades académicas de la Universidad, generando sistemas que permitan el monitoreo y la toma de decisiones sobre los avances e impactos. Para lo anterior, se realizó una investigación documental respecto a los criterios utilizados tanto a nivel nacional como internacional para monitorear indicadores relacionados a calidad y equidad en Educación Superior.*

**JEL:** A-20

**PALABRAS CLAVES:** Gestión, Calidad, Diversidad, Inclusión, Monitoreo.

## INTRODUCCIÓN

En la actualidad, las instituciones de Educación Superior tienden al uso de estándares de excelencia a nivel internacional como medio para el aseguramiento de la calidad del proceso formativo. Lo anterior se refleja, por una parte, en los rankings de las Instituciones de Educación Superior (IES) y, por otra, en los procesos de acreditación internacional.

En ese sentido, los rankings universitarios “*tienen por objeto realizar una jerarquización de las IES basándose en parámetros e indicadores que intentan medir la calidad de la educación universitaria*”. (Pérez y López; 2009; 330). Si bien los indicadores utilizados en los rankings universitarios están orientados en general a la medición de la calidad, pueden observarse que ciertos rankings utilizan criterios (indicadores) orientados a medir diversidad tales como la cantidad de alumnos internacionales; inclusividad; porcentaje de estudiantes de fuera de la provincia, cantidad de profesores internacionales y proporción de profesorado que son mujeres (Pérez y López; 2009). Así mismo, dentro de los estándares y criterios utilizados por las agencias de acreditación internacional, una de las dimensiones que ha tomado más fuerza en el último tiempo corresponde a la diversidad, entendida como diversidad cultural, socio-económica, étnica, de opinión y género. En ese sentido, se plantea que la diversidad genera resultados de alta calidad en los procesos de formación de profesionales preparados para el performance en el contexto global. (AACSB; 2012). Así mismo, cabe considerar que en las últimas décadas, la Educación Superior en Chile ha aumentado considerablemente su cobertura pero, sin lograr la superación de la segregación social que proviene desde los niveles educativos anteriores, ya que a menor quintil, la participación en Educación Superior resulta ser inferior (OCDE; 2009). Sin embargo, no sólo deben generarse los mecanismos de ingreso equitativo, sino que además aquellos que permitan al interior del proceso de enseñanza-aprendizaje la cohesión social y la acumulación de capital social y cultural, los cuales se convierten potentes dispositivos para construir una sociedad capaz de propiciar la movilidad social y la convivencia en un Chile inclusivo con todos y para todos. Es así, que la Universidad de Chile ha abierto

la discusión sobre la equidad en sus aulas, y se ha cuestionado de qué manera esta casa de estudios puede generar una mayor inclusión. En palabras del Rector de la Universidad de Chile: “En nuestra universidad - así como en la sociedad en su conjunto: “Equidad es Calidad”. (Pérez, 2007). Entre los avances más relevantes de la Universidad de Chile hacia una mayor equidad, se cuentan: a) la implementación de becas que aseguran la gratuidad de los estudios de los estudiantes en los primeros dos quintiles (5.000 estudiantes/año, las becas cubren el diferencial entre el arancel real y el arancel de referencia, cubierto por el estado) además de otras becas complementarias para su mantención; b) la implementación de vías de ingreso especial para estudiantes meritorios con condición socioeconómica desfavorecida y bajo acceso a la educación de calidad en la etapa escolar; c) el trabajo para mejorar los aprendizajes de estudiantes y docentes coordinado por la Red de Excelencia Docente (RED); y d) el esfuerzo institucional para desarrollar una Política Sistémica de Equidad e Inclusión, reflejado en la reciente creación de una Oficina de Equidad e Inclusión, dependiente de la Pro rectoría. Es así que, el presente artículo asume el desafío de sistematizar el trabajo realizado en torno a la revisión de la experiencia internacional considerando la misión de la Universidad de Chile como la universidad pública y más importante del país y de américa latina.

## REVISIÓN DE LITERATURA Y CONTEXTO DE LA UNIVERSIDAD DE CHILE

En las últimas décadas, la educación superior en Chile ha aumentado la cantidad de instituciones que imparten clases en este nivel, como también, las modalidades y acceso a financiamiento de los usuarios. Es así, que el ingreso de jóvenes a la educación terciaria ha aumentado considerablemente en la última década. Pero, tal como se muestra en el Figura 1, esta situación no muestra una superación de la segregación social que proviene desde los niveles educativos anteriores, ya que a mayor quintil, la participación en educación superior (ES) resulta ser mucho mayor (alrededor del 60%), y en los más bajos apenas llega o supera el 20% de participación (Casen, 2009).

Figura 8: Participación por quintiles CASEN 2009 en Educación Superior entre 1990 y 2009

Ante este panorama actual, se hace necesario generar nuevas y distintas propuestas de acceso y permanencia a la ES de los sectores menos favorecidos con este crecimiento exponencial, entre las cuales se encuentran las acciones afirmativas en inclusión educacional, las que son definidas por Heras (2009) como programas compensatorios que ayudan, por medio de propuestas, a igualar (o intentar igualar) las condiciones de inicio del estudiante, y así propiciar la solución de los efectos sociales de inequidad para asegurar el derecho de todos a una educación de calidad. Es así, que la Universidad de Chile ha abierto la discusión sobre la equidad en sus aulas, y se ha cuestionado de qué manera esta casa de estudios puede generar una mayor inclusión. En palabras del Rector Víctor Pérez: “En nuestra universidad - así como en la sociedad en su conjunto: “Equidad es Calidad”. Al manifestarlo queremos expresar con fuerza que no asistiremos como observadores pasivos a la elitización de nuestro estudiantado y que estamos

*trabajando para visualizar e implementar acciones correctivas a nivel sistémico: ingreso, progreso y egreso.” (Pérez, 2007)*

De esta manera, una preocupación fundamental es que los diversos grupos socioeconómicos tengan las mismas oportunidades de acceder y permanecer en la educación superior (Latorre, González & Espinoza, 2008), y en este caso en la Universidad de Chile. A partir de aquella reflexión y de las experiencias previas en el tema, se crea el Sistema de Ingreso Especial de Estudiantes Prioritarios de Equidad Educativa o Cupo de Equidad, una nueva modalidad, introducida inicialmente por la Facultad de Ciencias Sociales de la Universidad de Chile, para acceder a tres de sus carreras (Psicología, Sociología y Antropología) y ampliada el año 2012 a diez carreras de la Universidad, entre ellas las carreras de Ingeniería Comercial e Ingeniería en Información y Control de gestión y/o Contador Auditor, proyectándose para el año 2013 que cuarenta carreras de la misma implementen este cupo. Este ingreso especial se focaliza en el acceso de los estudiantes de liceos dependientes del sistema público, por medio de los municipios y que pertenecen a familias que se encuentren dentro de los tres primeros quintiles económicos de ingreso, y considerando otras variables como el ranking de egreso del/la estudiante que postula, el Índice de Vulnerabilidad Económica (IVE) de la escuela de proveniencia, y un puntaje mínimo exigido en la Prueba de Selección Universitaria (PSU) según la carrera de interés (los cuales fluctúan entre los 600 y 650 puntos).

Si bien, según postula Latorre et al. (2008), el acceso es un paso relevante para promover mayor equidad en la educación no es el único momento que se debe sortear, sino también, se debe resguardar la permanencia de sus integrantes en el sistema terciario, promover los logros académicos de los estudiantes, y asegurar la inserción equitativa en el mundo laboral. Por el momento, la preocupación ha estado enfocada en el acceso a la Educación superior, por lo que estos últimos elementos mencionados resultan aún muy difíciles de abordar. Para lograr la visión de la universidad estatal como un espacio público de calidad que existe como garantía de equidad, transversalidad y cohesión social, debe enfrentarse el desafío de reforzar de manera sistémica el compromiso con la equidad y calidad en el proceso formativo.

A menudo la literatura y el sentir de algunos en el mundo académico, contraponen la calidad y la equidad como fines deseables pero contrarios entre sí, porque la focalización en uno, eventualmente, debilitaría al otro. El enfoque que se promueve desde la Universidad de Chile es distinta: se basa en el supuesto de que en el siglo XXI esta disyuntiva está obsoleta porque la calidad exigida a la educación superior es inalcanzable sin equidad y diversidad. Por lo mismo, superar la tensión entre equidad y calidad es el actual desafío cultural de la Universidad. Una de las posibles razones de esto es, por una parte, la estrecha relación entre equidad y diversidad y, por otra, el rol fundamental que hoy en día juega la diversidad en el éxito o fracaso del desempeño profesional, empresarial y político de personas y colectividades. Entre 2008 y 2010 la Universidad incrementó en un 33% el número de estudiantes pertenecientes al 40% de la sociedad chilena con menores recursos (Quintiles de Nivel Socioeconómico 1 y 2), lo que en términos de proporción de la matrícula nueva por año, representa un incremento desde un 24% a un 29% entre ambos momentos.

Es así que se abre un nuevo escenario en donde aparece la figura de un estudiante con características diferentes de quienes han ingresado tradicionalmente a la universidad, produciendo una heterogeneización de las aulas, principalmente en relación a sus trayectorias educativas marcadas principalmente por su nivel socioeconómico y el de sus familias (Sebastián, 2007). Una de las dificultades que presenta este nuevo contexto para las instituciones educativas, es que estas no serían capaces de asegurar los resultados académicos de todos sus estudiantes, ya que, en parte, no tomarían en cuenta las diferencias que entre ellos existen (Blanco, 2006). Por lo tanto, la institución “no estaría ofreciendo oportunidades equivalentes a cada estudiante según sus especificidades, sino que, en la práctica, estaría discriminando a favor de unos y en contra de otros” (Sebastián & Scharager, 2007, p. 23), en donde las diferencias de los estudiantes pueden ser percibidas como un problema para cualquier casa de estudios.

A partir de ello, es que se hace necesario relevar elementos sobre cómo la diversidad representa una oportunidad de aprendizaje para los estudiantes, y por supuesto de enseñanza para los profesores. Dronkers (2010) afirma que las aulas con una alta heterogeneidad tienen mejores aprendizajes que en las salas con baja diversidad. Para Duran (2009) la clave está en reconocer la heterogeneidad y valorar la diversidad, ya que de esta manera se aúnan aprendizajes y se promueve la inclusión. Las aulas diversas deben concebirse como un valor, ya que contribuyen a dar diversos puntos de vista y concepciones del mundo en un mismo espacio (Pesce, n.d). A partir de esto, cabe destacar el rol fundamental del docente para aprovechar esta diversidad dentro del aula promoviendo el intercambio personal y la facilitación del aprendizaje cooperativo (Pesce, n.d). Este último permite la adquisición de diversos tipos de competencias, como también, el desarrollo de habilidades complejas de trabajo en equipo (Durán, 2009; UNESCO; 1996).

Para abordar la diversidad en el aula, las universidades chilenas han implementado progresivamente programas de nivelación, que permiten a los estudiantes desarrollar las competencias genéricas y disciplinares que les permitan mantenerse dentro del sistema educativo y egresar oportunamente. Dentro de esta línea la Facultad de Economía y Negocios de la Universidad de Chile ha implementado, por ejemplo, un Programa de Apoyo Académico el cual se encuentra orientado al repaso de las materias o cursos disciplinares a modo de tutorías orientadas a pequeños grupos. Como así también, la creación de un Centro de Enseñanza y Aprendizaje, responsable de apoyar la mejora de las condiciones de los procesos formativos al interior de la facultad.

## **DATOS Y METODOLOGÍA**

El modelo de gestión inclusiva se plantea como respuesta a la necesidad de contar con mecanismos constantes de aseguramiento de la calidad de la formación de pregrado en la Universidad de Chile, en conjunto con la evaluación de las políticas de equidad implementadas desde el año 2010. Este consta, por una parte, de un set de indicadores seleccionados para monitorear la calidad y los criterios de equidad dentro de la institución, y por otra, constará de una plataforma web que se alimentará de las bases de datos de la facultad, permitiendo emitir reportes en tiempo real respecto de dicha selección de indicadores. En principio la idea es monitorear la consecución de objetivos y metas de la facultad mediante dicha información, que no solo sea útil para los procesos de auto-evaluación de las carreras, sino de la gestión de las escuelas de pregrado y la Facultad en su totalidad. Para darle sustento al modelo, se realizó una revisión documental respecto a criterios y/o en su caso indicadores utilizados por agencias de acreditación a nivel nacional e internacional además de la experiencia de otras universidades a nivel internacional. Lo anterior permitió identificar un set de indicadores para alimentar el modelo de gestión inclusiva, y mediante los cuales se realicen diagnósticos periódicos de las unidades académicas en miras a la toma de decisiones en base a resultados y levantamientos de información pertinentes al contexto universitario. De esta revisión se obtuvieron once macro-categorías que abordan los principales criterios utilizados para asegurar la calidad y la equidad. Cabe destacar que dentro de las macro-categorías mencionadas no se considera la diversidad y equidad ya que la apuesta es integrar esta dimensión dentro de cada una de las macro-categorías. Si bien la mayoría de los criterios que componen estas macro-categorías cumplen con el criterio de saturación de información, las clasificaciones de las distintas fuentes eran diversas, por lo que se homologó la clasificación al sistema que la Facultad estaba utilizando.

## **RESULTADOS Y DISCUSIÓN**

A continuación se presenta el resultado de la revisión bibliográfica en término del levantamiento de criterios de calidad y aseguramiento de la diversidad en la educación superior. Si bien no todos los sub-criterios son excluyentes, se presenta la información de manera tal que cada institución y/o unidad académica tenga la libertad de seleccionar aquellos que sean más pertinentes a su contexto.

Aspectos Curriculares

En Aspectos Curriculares se incluyen todos aquellos criterios que se relacionen con el desarrollo y proceso de implementación del currículum en relación a las responsabilidades de la Institución, examinando cómo el currículo se alinea con la misión Institucional. También considera la puesta en práctica de programas que estén en sintonía con las demandas sociales y con las necesidades locales. A continuación se presentan las dimensiones asociadas a los aspectos curriculares y los criterios seleccionados por saturación de fuentes.

Tabla 14: Aspectos Curriculares

<b>Diseño y Desarrollo Curricular</b>	<b>Flexibilidad Académica</b>
	Actualización curricular
	Existencia de evaluación integrada o de alternativa
	Plan de Desarrollo Institucional.
	Congruencia con marco institucional.
	Aplicación de sistema de créditos ECTS (SCT)
	Congruencia con marco filosófico.
	Participación de los agentes externos relacionados con la carrera.
	Participación de los miembros de la comunidad académica de la institución en los aspectos curriculares
	Definición de ámbitos y perfiles profesionales de los titulados en función de la demanda social.
Plan de Estudios	Posibilidades de logro en función del tiempo disponible para cursar el plan.
	Definición expresa del modelo de formación y de los objetivos educativos generales de la carrera
	Estructura del plan de estudios
	Orientaciones metodológicas y su adecuación a los objetivos
	Orientaciones relativas a la evaluación de conocimientos y su adecuación con los objetivos
	Plan académico de cada asignatura.
	Contenidos de las enseñanzas. Actualización y adecuación a los objetivos.
	Previsión de actividades de nivelación y refuerzo (propedéuticas).
	Previsión de necesidades (recursos humanos y materiales) en consonancia con los contenidos del plan.
	Nivel de conocimientos y aceptación del plan por parte de los miembros de la comunidad educativa.
	Programa de seguimiento, evaluación y actualización del plan.
	Interdisciplinariedad de los programas
	Titulaciones ofrecidas
	Nivel de las calificaciones de acceso a la titulación o carrera
	Porcentaje de horas del Plan de estudios destinada a asignaturas complementarias y a la Formación Cultural

### Enseñanza y Aprendizaje

Este criterio hace referencia a los esfuerzos de la institución en la formación de estudiantes con diferentes habilidades y diversos orígenes, por medio de experiencias de enseñanza y aprendizaje. Dichas experiencias se llevan a cabo mediante el uso de dinámicas como entrevistas, grupos de discusión, debates, proyectos, presentaciones, experimentos, prácticas y aplicación de los recursos de TIC, etc. Una de las principales preocupaciones de este criterio es la eficiencia de las técnicas utilizadas para continuamente evaluar el desempeño de los docentes. Dentro de este criterio se señalan las siguientes sub-categorías:

### Investigación y Desarrollo

Este criterio pretende capturar la información sobre las políticas, prácticas y resultados de la institución con referencia a la investigación, dado que la institución tiene la responsabilidad de capacitar a los docentes para llevar a cabo proyectos que benefician a la sociedad. Dentro de este criterio se señalan las siguientes sub-categorías:

Tabla 15: Proceso De Enseñanza y Aprendizaje

<b>Satisfacción general del programa</b>	
<b>Satisfacción estudiantil sobre:</b>	Orientación hacia la investigación del programa de formación
	Evaluación de la docencia
	Organización del programa
	Proceso Enseñanza-Aprendizaje
	Calidad de los cursos
	Clima social: interacción con los docentes
	Página WEB de la Universidad
	Proceso de enseñanza y aprendizaje
	Calidad docente
	Procesos de evaluación y reforma
Evaluación	Entrega de syllabus
	Contenidos más allá del syllabus
	Calendario académico
	Evaluación continua
	Uso de equipamiento, laboratorios.
	Aprendizaje centrado en el estudiante
	Feedback estudiantil
	Planificación y coordinación de las actividades educativas
	Análisis y valoración de los conocimientos, capacidad e intereses de los estudiantes que acceden a la carrera.
	Mecanismos de seguimiento del progreso académico de los estudiantes y control de logros.
Procesos de Enseñanza	Mecanismos de evaluación de la calidad de la enseñanza y planes de mejora.
	Clima de trabajo, relaciones humanas y compromiso.
	Trabajo en equipo.
	Preparación técnica para la función.
	Actitudes y motivaciones en relación con el trabajo.
	Adecuación de las enseñanzas a los niveles reales de conocimientos y capacidades de los estudiantes que acceden a la carrera.
	Adecuación de los objetivos específicos de cada disciplina a los generales de la enseñanza.
	Actualización de los contenidos y adecuación con los objetivos específicos.
	Metodología didáctica y su adecuación a los objetivos.
	Sistema de evaluación del aprendizaje y su coherencia con los objetivos, contenidos y metodología.
	Distribución de alumnos en función de las instalaciones, equipos y métodos de trabajo.
	Utilización por parte de los alumnos de los medios de laboratorios y talleres.

Trasferencia y Extensión	Utilización por parte de los estudiantes de los medios informáticos.
	Utilización por parte de los alumnos de los medios bibliográficos.
	Funcionamiento de las tutorías u otros sistemas de apoyo estudiantil.
	Dirección de trabajos de fin de carrera.
	Clima de trabajo e integración de los estudiantes en la institución.
	Puntajes de logro de los estudiantes
	Participación y compromiso estudiantil
	Motivación por el aprendizaje continuo
	Número total de actividades de formación continua
	Estudiantes matriculados en actividades de formación continua
	Número de horas presenciales en actividades de formación continua
	Porcentaje del presupuesto de la IES destinado al desarrollo de actividades de formación continua
	Porcentaje del presupuesto de la IES destinado al desarrollo de actividades de extensión y transferencia

Tabla 16: Investigación y Desarrollo

Financiamiento y resultados	<b>Fomento de la investigación</b>
	Resultados de investigación y publicación
	Cantidad de consultorías
	Colaboraciones
	Financiamiento interno para actividades de investigación y desarrollo
	Proyectos de investigación financiados por externos
	Participación en la industria
	Proyectos estudiantiles
	Política de Investigación
	Número de publicaciones ISI por investigador
	Impacto promedio de las publicaciones ISI por investigador
	Ingreso por investigaciones de fondos competitivos
	Cantidad de post-doctores
	Actividades de investigación interdisciplinarias
	Factor de impacto publicaciones
	Número de productos relacionados al arte
	Número de premios y reconocimientos
	Ingresos externos para investigación
	Productividad de los doctorados
	Publicaciones altamente citadas
Transferencia del conocimiento	Publicaciones en revistas
	Número de publicaciones post - doctorales
	Títulos de doctor otorgados
	Iniciativas para intercambio de conocimiento
	Financiamiento mediante donaciones
	Publicaciones en conjunto con la industria
	Tamaño de la oficina de transferencia tecnológica
	Número de cursos CPD ofrecidos
	Académicos con experiencia laboral fuera de la educación superior
	Ingresos por licencias
	Contratos de investigación con el sector privado

### Infraestructura y Recursos para el aprendizaje

Este criterio trata de generar datos sobre la adecuación y el uso óptimo de las instalaciones disponibles en una institución, para mantener la calidad de los programas académicos. También requiere información sobre cómo cada componente de la institución se benefician de estas instalaciones.

Tabla 17: Infraestructura y Recursos para el Aprendizaje

	Instalaciones físicas para el aprendizaje
Recursos para el aprendizaje	Biblioteca como recurso de aprendizaje
	TIC como recurso de aprendizaje
	Instalaciones, equipos y recursos didácticos de apoyo a la función docente.
Infraestructura Universitaria	Hogares universitarios ( hombres y mujeres)
	Respaldos de energía
	Instalaciones reprográficas (fotocopias, fotografías, etc)
	Laboratorios de idiomas
	Instalaciones médicas
	Instalaciones de Internet
	Transporte
	Disponibilidad de puestos en laboratorios
	Capacidad documental
	Implantación de las tecnologías de información y comunicación
	Infraestructura destinada a servicios y recreación de estudiantes.
	Disponibilidad del uso libre de equipos de computación, utilización de redes de información y de Internet.
	Adaptación espacial a discapacitados
	Número, capacidad, equipamiento y adecuación de aulas.
	Número, capacidad, equipamiento y adecuación de talleres y laboratorios.
	Bibliotecas; capacidad, dotación, accesibilidad y adecuación.
	Instalaciones y recursos informáticos. Capacidad y adecuación.
Satisfacción estudiantil con las instalaciones	Asignación adecuada del espacio
	Mantenimiento de la infraestructura
	Instalaciones destinadas al trabajo del personal docente y relación entre sus miembros.
	Satisfacción estudiantil con las salas de clases
	Satisfacción estudiantil con los laboratorios
	Satisfacción estudiantil con la biblioteca

Estudiantes: apoyo y progresión

La Institución debe prestar la asistencia necesaria a los estudiantes para adquirir experiencias significativas de aprendizaje. Por lo anterior, se deben conocer las características que éstos presentan. . Dentro de este criterio se señalan las siguientes sub-categorías:

Tabla 18: Estudiantes: apoyo y progresión

	Existencia de Becas
Proceso de Ingreso	Proceso de reclutamiento y admisión de los estudiantes
	Provisión de cupos de matrículas
	Puntaje de ingreso de los estudiantes
	Número total de estudiantes matriculados
	Número total de nuevos estudiantes
	Número de postulaciones efectivas
	Porcentaje de estudiantes a tiempo completo
	Porcentaje de estudiantes internacionales
	Porcentaje de estudiantes adultos
	Porcentaje de estudiantes de postgrado
Composición	Composición por sexo del estudiantado
	Nivel socio-económico del estudiante.
	Porcentaje de estudiantes no pertenecientes a la región en que se ubica la IES
	Distribución interna de la oferta de titulaciones

Condiciones de Ingreso	Conocimientos previos en áreas básicas.
	Capacidades intelectuales generales y específicas en función de las exigencias de la carrera de ingeniería.
	Procedencia de los estudiantes: centros de estudios, situación socioeconómica.
	Motivos de la elección de la carrera y del centro.
	Clima social: interacción con otros estudiantes
	Clima social: actitud hacia los estudiantes de la ciudad
	Forma en que los estudiantes organizan su tiempo.
	Resultados académicos
	Tasa de participación
	Tasa de retención
Resultados	Tasa de progresión
	Tasa de transición
	Tasa de éxito
	Tasa de desgaste
	Proporción de estudiantes por docente/investigador equivalente a tiempo completo
	Porcentaje promedio de titulación de acuerdo al nivel socioeconómico
	Tasa de egreso de estudiantes matriculados de acuerdo a nivel socioeconómico
	Desarrollo de competencias profesionales
	Desarrollo de conocimientos profesionales
	Desarrollo de Habilidades profesionales
Otros	Desarrollo de Valores profesionales
	Carga de trabajo del estudiante
	Provisión de espacios para los estudiantes
	Acceso y apoyo estudiantil adecuado
	Provisión de servicios TI
	Apoyos sociales a estudiantes
	Apoyo a estudiantes minoritarios o de equidad
	Becas de financiamiento para grupos sub-representados
	Servicios de orientación
	Provisión de acceso especial
Servicios de soporte	Organización estudiantil operativa
	Servicios de orientación y tutorías.
	Actividades extracurriculares sociales y físicas
	Programa de atención a necesidades especiales
	Clima social: seguridad
	Servicios estudiantiles

### Internacionalización

La internacionalización es un fenómeno ampliamente debatido y complejo. El aumento de la globalización ha ejercido una presión creciente sobre las instituciones de educación superior. Las razones de lo anterior son diversas; entre ellas cabe destacar la mejora en la formación de los estudiantes para un buen rendimiento profesional internacional, lo cual mejora el perfil y la reputación institucional.

Tabla 19: Internacionalización

Programas en lengua extranjera	
Apertura al extranjero	Académicos internacionales
	Tasa de graduados internacionales en programas de doctorados
	Publicaciones de investigación en colaboración internacional
	Número de programas con titulación internacional
	Estudiantes entrantes del extranjero y salientes al extranjero
	Tasa de egresados empleados internacionalmente
	Financiamiento internacional de investigaciones
Satisfacción estudiantil: internacionalización de los programas	

Compromiso regional	Porcentaje de estudiantes internacionales
	Relaciones internacionales
	Oportunidades de intercambio
	Graduados trabajando en la región
	Ingreso proveniente a nivel regional / local
	Publicaciones en conjunto a nivel regional
	Contratos de investigación con negocios regionales
	Internados de estudiantes en empresas locales / regionales
	Tesis en cooperación con empresas regionales
	Participación regional en educación continua
	Escuelas de Verano/ Cursos para estudiantes de educación secundaria

### Organización y liderazgo

Este criterio facilita la obtención de datos que tienen relación con las políticas y prácticas de la institución en materia de planificación estratégica, gestión financiera y funciones de liderazgo.

Tabla 20: Gobernanza, Organización y Liderazgo

Gestión de la Organización	Visión institucional y liderazgo
	Normas de la organización Planificación y monitoreo Ranking institucional focalizado Transparencia Procedimientos de reclutamiento y su efectividad Política de asensos Iniciativas motivacionales Estrategia de desarrollo y desvinculación Descentralización, delegación y participación por facultad. Constitución del consejo de administración Distribución en función de unidades docentes y actividades.
Recursos Humanos	
Participación	

### Recursos Financieros y Distribución

Dice relación con los criterios relacionados al financiamiento de la institución, su fuente y distribución entre las unidades correspondientes.

Tabla 21 Recursos Financieros y distribución

	Presupuesto asignado a la institución y su utilización ( recurrente, no recurrente)
	Presupuesto asignado al departamento y su utilización ( recurrente, no recurrente) Eficiencia en el uso de recursos Ingresos de la Universidad Recursos públicos captados en I+D+i Recursos privados captados en I+D+i Ingresos por donativos Ingresos por extensión Rango por estudiante a tiempo completo Biblioteca y recursos computacionales Investigación Gastos administrativos Gastos en enseñanza Inversión en laboratorios Administración financiera y movilización de recursos Salud financiera operacional
Ingresos	
Gastos en:	
Administración	

### Recursos Humanos: Académicos y Staff

Los criterios mencionados a continuación hacen relación con la composición de los recursos humanos asociados a la institución y/o unidad académica, su desarrollo, desempeño, la administración de los RRHH y las características de los académicos asociados.

Contexto: Este criterio hace referencia a la vinculación de la institución con el medio al que pertenece. A través de él se logra analizar y plantear soluciones a las problemáticas que la región presenta. Asimismo, permite conocer el real impacto de los profesionales y estudiantes en el entorno.

Tabla 22: Recursos Humanos, Academicos y Staff

	Número de personal de apoyo
<b>Composición</b>	Personal administrativo y de servicio. Número y distribución en función de actividades.
	Programa de captación, formación, perfeccionamiento, retención y renovación de profesores y personal de administración y servicios
	Habilidades del personal de apoyo
Desarrollo y Desempeño	Participación de la facultad en actividades de desarrollo
	Impacto de las iniciativas de desarrollo
	Análisis y seguimiento de la evaluación de desempeño
Administración	Reglas de servicio, pagos, etc.
	Administración del recurso humano
	Número de académicos de planta y a honorarios
Académicos	Diversidad de los académicos
	Salario de los académicos
	Proporción de estudiantes por docente/investigador equivalente a tiempo completo
	Porcentaje de docentes/investigadores doctores
	Personal docente/investigador equivalente a tiempo completo
	Porcentaje de académicos con grado de Magister, o superior, en relación al número de académicos D.N.
	Cumplimiento de actividades docentes programadas.
	Rendimiento académico de los estudiantes.
	Docencia efectiva en relación a docencia contratada
	Actualización en aspectos pedagógicos.
	Participación en Congresos/Reuniones técnicas.
	Participación en proyectos de Docencia.
	Participación en Proyectos de Investigación.
	Participación en Proyectos de Extensión.
	Caracterización de la evaluación del rendimiento.
	Existencia de evaluación de la función docente por estudiantes y autoridades.
	Grado de satisfacción sobre las condiciones de trabajo.
	Número de profesores y su dedicación.
	Distribución de profesores por edades y años de experiencia docente y categorías académicas.
	Distribución en función de unidades docentes y actividades.
	Nivel académico.
	Experiencia académica, formación y producción pedagógica.
	Formación, experiencia investigadora y producción científica.
	Experiencia profesional.
	Dedicación a cada una de las actividades docentes, investigadoras, de extensión y de gestión.
	Formación continua de los docentes

Tabla 23: Contexto

Estructura económica y educativa del entorno	PIB per cápita de la región
	Tasa de ocupación de la población de la región
	Tasa de ocupación de los titulados en educación superior de la región
	Porcentaje de la población joven de la región.
	Distribución sectorial de la población económicamente activa ocupada en la región.
	Porcentaje de la población adulta con estudios en educación superior completos en la región
	Tasa de cobertura en educación secundaria en la región

*Graduados:* Conocer las características de sus egresados proporciona a la institución la información necesaria sobre el desempeño de sus profesionales en el mercado, como también sobre la satisfacción de los egresados con su formación.

Tabla 24: Graduados

Ingreso	Tasa de matrícula de postgrado
Satisfacción de los graduados	Participación de los graduados en continuidad de estudios
	Satisfacción general
	Satisfacción con los docentes
	Satisfacción con la formación adquirida
	Satisfacción con el desarrollo de competencias genéricas
	Satisfacción con su empleador
	Tasa de licenciados
	Tasa de graduación
	Tasa de abandono inicial de la titulación
	Tasa de rendimiento de la titulación
Resultados	Tasa de eficiencia en la graduación de la titulación
	Número total de egresados titulados
	Nivel de logro de los objetivos previstos.
	Relación entre los estudiantes que logran graduarse y los que iniciaron los estudios.
	Duración real media de los estudios.
	Identificación de los graduados con el centro, facultad o departamento.
	Desenvolvimiento de los titulados en programas de postgraduados.
	Competencias de los graduados
	Empleabilidad a tiempo completo de los graduados
	Salario inicial de los graduados
Empleabilidad	Tiempo de logro de su primer trabajo y tasas de desocupación.
	Período de iniciación profesional y formación complementaria requerida.
	Funciones profesionales desempeñadas por los egresados.
	Tiempo de titulación
	Tasa de egresados ocupados al cuarto año de finalizar sus estudios
	Tasa relativa de desempleo de los egresados

Las dimensiones y criterios anteriormente mencionados son referenciales y deben orientar la construcción y/o selección de indicadores pertinentes al contexto de la institución y los desafíos de la educación superior a nivel global. Posterior a dicho paso, las expectativas son poder construir un sistema informático que se comunique con las bases de datos de la Facultad y permita de manera rápida generar reportes que permitan el monitoreo constante de los indicadores seleccionados para el aseguramiento de la calidad y equidad de la institución.

## COMENTARIOS FINALES

La Política de Equidad e Inclusión busca impulsar desde la dirección de la Universidad, invita a la Comunidad Universitaria a una profunda transformación. Sin embargo, para avanzar exitosamente en su

diseño e implementación se requieren modificaciones importantes en la gestión universitaria para una eficiente y efectiva implementación de la Política en todas las unidades académicas que no solo aseguren la equidad y la inclusión sino que vallan asociadas al aseguramiento de la calidad de la formación entregada. Este desafío, centrado en la potenciación de las capacidades de los estudiantes, requiere necesariamente de un conocimiento más riguroso de las realidades de cada Unidad que permita generar acciones que tiendan a resolver las dificultades y mejoren el aprovechamiento de sus potencialidades. La implementación de este proyecto ha evidenciado dificultades en la gestión local que impiden un avance más eficiente en el apoyo a los estudiantes de distintas unidades académicas. El contar con un modelo basado en estándares internacionales de aseguramiento de la equidad y calidad nos permitirá avanzar hacia una Institución efectivamente centrada en las capacidades de sus estudiantes, que al mismo tiempo es capaz de sacar provecho de su diversidad.

Se espera que en el mediano plazo, el piloto que se implemente en la Facultad de Economía y Negocios se constituya en la base de un Modelo que se replique en todas las unidades de la Universidad y que en el largo plazo, la situación debería estar determinada por una cooperación entre el Nivel Central y las Unidades Académicas, el establecimiento de estándares mínimos, a partir del levantamiento de indicadores que se realice, como mecanismo para avanzar hacia la equidad interna en la Universidad, el monitoreo permanente de procesos y resultados, que permitan regular y ajustar las acciones con base en evidencia y el trabajo cooperativo con otras iniciativas focalizadas hacia la equidad: en búsqueda de la eficiencia en el uso de los recursos humanos y materiales, y de las capacidades institucionales instaladas.

Todas las iniciativas emprendidas en el marco del presente proyecto serán coordinadas y complementadas con otras acciones que se desarrollan actualmente a distintos niveles de la Universidad (por ejemplo, Fondo de Apoyo a la Docencia de Pregrado –interno-, FIAC 2011, Beca de Nivelación Académica –externos-). La cooperación permanente entre las unidades de bienestar estudiantil y el pregrado será un factor crítico para lograr esta perspectiva sinérgica entre proyectos. El Modelo de Gestión Inclusiva (MGI) nace de la necesidad de formalizar, sistematizar y promover el mejoramiento continuo de la calidad dentro de la Facultad de Economía y Negocios. De esta manera, se establece que el modelo deberá ayudar a monitorear los avances y resultados utilizando indicadores o índices acordes a la realidad y a las intenciones (misión, visión) de la Facultad.

El aseguramiento interno de la calidad se refiere a que cada política de la institución y mecanismos para el aseguramiento deben cumplir con su propósito, con los estándares aplicados y con la profesión o disciplina particular. En este sentido, el mayor desafío es generar un modelo de gestión que cumpla con todos los requerimientos exigidos por los diferentes actores involucrados en el proceso educativo y cuya implementación piloto permita demostrar el estado del arte de lo que realmente se hace en la facultad en términos de calidad y equidad. En esta misma dirección, será necesario realizar ajustes a la gestión y aplicación del modelo en base a resultados por lo que el modelo propuesto será dinámico y flexible para permitir de esa forma el traspaso de la experiencia de FEN a otras unidades académicas de la Universidad. Entendiendo que todas las facultades de la Universidad de Chile poseen características disímiles y que por lo tanto requerirán indicadores diferentes y un plan de implementación acorde a la estructura administrativa y política propia de cada una de ellas.

# PERCEPCIONES DE RELACIONISTAS PROFESIONALES SOBRE LA RESPONSABILIDAD SOCIAL CORPORATIVA

Elizabeth Robles, Universidad de Puerto Rico

## RESUMEN

*El Consejo Mundial de Negocios para el Desarrollo Sostenible (World Business Council for Sustainable Development, 2008) propone la siguiente definición de responsabilidad social corporativa basado en las ideas del modelo del público de interés (stakeholder): "la responsabilidad social corporativa es la conducta ética de una compañía hacia la sociedad, esto es, la gerencia actuando responsablemente en sus relaciones con otros "stakeholders" que tienen legítimo interés en el negocio." El propósito de este estudio es exponer las percepciones que poseen los relacionistas profesionales sobre la responsabilidad social de una organización, cómo se afecta la imagen de la empresa al utilizarla, qué objetivos las compañías persiguen al tener prácticas de responsabilidad social y qué procesos son empleados por las empresas para implementarla. Los relacionistas profesionales están de acuerdo que las corporaciones mejoran su habilidad de lograr sus metas tradicionales (ganancias) si establecen metas de responsabilidad social; que la gerencia debe de actuar consistentemente en el mejor interés del público, y no sólo cuando es conveniente hacerlo; y que las corporaciones tienen que tratar de calcular el impacto social de sus decisiones de gran importancia, antes de implementar políticas o de tomar acción. Este estudio aporta al conocimiento de estrategias y prácticas de responsabilidad social corporativa.*

**JEL:** M 14

**PALABRAS CLAVES:** responsabilidad social corporativa, relacionistas públicos, imagen corporativa

## PERCEPTIONS OF PUBLIC RELATIONS PRACTITIONERS ABOUT CORPORATE SOCIAL RESPONSIBILITY

### ABSTRACT

*The World Business Council for Sustainable Development (2008) proposes the following definition of corporate social responsibility based on the ideas of the stakeholder model: "Corporate social responsibility is the ethical behavior of a company toward society, that is, management acting responsibly in its dealings with other stakeholders who have a legitimate interest in the business." The purpose of this study is to present the perceptions held by public relations practitioners on the social responsibility of an organization, how it affects the image of the company by using it, what objectives the companies pursue by having social responsibility practices and what processes are employed by them to implement it. Public relations practitioners agree that corporations improve their ability to achieve traditional goals (profits) if they establish social responsibility goals; that management must consistently act in the best interest of the public, and not just when it is convenient to do so; and that corporations have to try to calculate the social impact of major decisions before implementing policies or taking action. This study contributes to the knowledge of strategies and practices of corporate social responsibility.*

## INTRODUCCIÓN

La Responsabilidad Social Corporativa (RSC) ha existido como concepto por más de 70 años. Se practica en muchos países y se estudia en las universidades de todo el mundo. Sin embargo, la RSC no es un concepto universalmente adoptado porque se entiende de manera diferente a pesar de las presiones cada vez mayores para su incorporación a las prácticas comerciales. La falta de una definición clara se complica por el uso de términos ambiguos en las definiciones ofrecidas. El propósito de este estudio es exponer las percepciones que poseen los relacionistas profesionales sobre la responsabilidad social de una organización, cómo se afecta la imagen de la empresa al utilizar RSC, qué objetivos las compañías persiguen al tener prácticas de RSC y qué procesos son empleados por las empresas para implementar RSC. Las siguientes tres preguntas sirven de base para la investigación.

¿Los profesionales de las relaciones públicas pensarán que las corporaciones mejoran su habilidad de lograr sus metas tradicionales (ganancias) si establecen unas metas más contemporáneas como las de responsabilidad social?

¿Los profesionales de las relaciones públicas pensarán que es importante para la responsabilidad social separarse de convicciones profundas arraigadas y de que la gerencia debe actuar consistentemente?

¿Los profesionales de las relaciones públicas pensarán que tienen un rol importante en asegurarse de que las corporaciones sean socialmente responsables?

Este estudio aporta al conocimiento de estrategias y prácticas de responsabilidad social corporativa. A continuación se presentan las siguientes secciones: revisión de literatura, imagen corporativa y las relaciones públicas, metodología, procedimiento y limitaciones del estudio, resultados, información demográfica, discusión de los resultados, conclusiones y recomendaciones.

## REVISIÓN DE LITERATURA

El Consejo Mundial de Negocios para el Desarrollo Sostenible (2008) propone la siguiente definición de responsabilidad social corporativa (RSC) basado en las ideas del modelo del público de interés (stakeholder): “la responsabilidad social corporativa es la conducta ética de una compañía hacia la sociedad, esto es, la gerencia actuando responsablemente en sus relaciones con otros “stakeholders” que tienen legítimo interés en el negocio.” Existe un debate de cuándo, realmente, surgió el concepto de responsabilidad social de las empresas. Muchos historiadores concuerdan que todo comenzó en las décadas de 1960’s y 1970’s con el periodo de protestas en Estados Unidos y los movimientos de grupos ambientales, de derechos humanos y de derechos del consumidor. El mayor reto de las organizaciones estriba en entender las diversas definiciones de responsabilidad social. Hoy día, existe un consenso sólo con relación a las responsabilidades sociales de aquellas corporaciones que venden sus acciones en el mercado libre. Broom (2009) incluye la siguiente lista que debe cumplir una corporación pública.

*Proveer una fuente estable de empleo, con un compromiso visible hacia la diversidad en el reclutamiento, ascenso, y recompensa de los trabajadores en todos los niveles.*

*Operar con ganancias y proveer a los accionistas un rendimiento en la inversión razonable.*

*Establecer y cumplir con objetivos estratégicos que provean un crecimiento a largo plazo y competitividad.*

*Voluntariamente cumplir con o exceder las regulaciones del gobierno con relación a la salud, la seguridad y el ambiente.*

*Separar una cantidad razonable de los ingresos anuales para propósitos filantrópicos.*

*Mantener estándares operacionales comparativos en cada país donde la compañía haga negocios.*

*Participar activamente en los procesos de política pública que afectan a la compañía, a su industria y a otros grupos de interés (stakeholders) que forman parte del interés público.*

El reto para estas organizaciones es definir qué es lo que sirve al interés del público y cumple a su vez, con las exigencias de los accionistas y con los requerimientos del gobierno.

### Imagen Corporativa y las Relaciones Públicas

La identidad corporativa se refiere a la auto presentación de la compañía que consiste en las señales ofrecidas por la organización a través de su conducta, comunicación y símbolos. Estas señales son recibidas por varios grupos, tanto interna como externamente, y se convierten en percepciones de actitudes sobre la organización que constituyen la “imagen” de la compañía (Demetriou Et al., 2009). Una imagen corporativa positiva es el cimiento del éxito corporativo, que puede ser un incentivo para la venta de productos, el reclutamiento de los mejores empleados y la atracción de inversionistas, y puede actuar como ventaja competitiva (Green y Peloza, 2011). Las relaciones públicas ayudan a las organizaciones a anticipar y a responder a las percepciones y opiniones públicas; a nuevos valores y estilos de vida; a cambios en el electorado y en los cuerpos legislativos; y a otros cambios en el ambiente político y social (Dardis y Haigh, 2008).

### **METODOLOGÍA**

Este estudio es de tipo descriptivo. Para esta investigación participaron, por disposición, 58 profesionales de las relaciones públicas, la mayoría miembros de la Asociación de Relacionistas Profesionales de Puerto Rico. El instrumento utilizado es la escala de Ryan, M. (1986). La escala de tipo Likert se compone de una totalidad de 14 reactivos con un rango de respuestas de 1 al 7 (1= Totalmente en desacuerdo, 7=Totalmente de acuerdo). Del instrumento de Benn, Todd y Pendleton (2010) se utilizó la siguiente pregunta: ¿Qué rol usted cree que juegan las relaciones públicas en la responsabilidad social de su organización? Además, se incluyó una sección de preguntas demográficas e información sobre el tipo de organización para los cuales trabaja el participante, tipo de industria, tamaño y número de empleados.

### Procedimiento

Se contactaron a los relacionistas públicos para invitarlos a participar en esta investigación, a través de la Asociación de Relacionistas Profesionales de Puerto Rico por vía telefónica y por correo electrónico. Los relacionistas profesionales que mostraron interés en participar en la investigación fueron contactados para establecer fecha, lugar y hora a la cual se le administraría el cuestionario. El procedimiento a seguir en la administración del cuestionario fue auto administrar el mismo para asegurarle la privacidad al participante. Se dejó al participante la hoja de consentimiento informado junto con el cuestionario en un sobre sellado para que la persona lo contestara y lo devolviera en el mismo. Los datos se analizaron mediante tabulaciones de frecuencias utilizando el programa SPSS. Como la muestra es de 58 personas solamente, no se determinaron diferencias significativas entre los grupos. En el análisis cualitativo se clasificaron los datos en 6 categorías.

### Limitaciones del Estudio

Una limitación que tiene este estudio es que la muestra es pequeña. Ésta es seleccionada por disposición, no probabilística, por lo tanto, los resultados se ciñen a la misma. Además, no existe consenso en cuanto a la definición de RSC y su aplicación para empresas privadas que no vendan sus acciones públicamente. Si las organizaciones donde los relacionistas profesionales trabajan no son públicas, se esperaría una falta de uniformidad en cuánto a la definición y la aplicación del concepto de RSC.

## **RESULTADOS**

### Información Demográfica

La muestra consiste de 58 participantes, 34 mujeres (63%) y 20 hombres (37%), cuatro personas no contestaron la pregunta. Sus edades fluctúan desde 20 años hasta 64 años. Aproximadamente el 54% tiene ingresos mayores de \$45,000. La mayoría posee un bachillerato (53%) y una maestría (40%), con concentraciones en mercadeo, publicidad, relaciones públicas, gerencia y comunicaciones, entre otras. Casi la mitad son casados (46%), un 39% son solteros y un 11% son divorciados. Un diez y nueve por ciento de los participantes son especialistas en relaciones públicas, un 12% son gerentes, un 12% son especialistas en comunicaciones y un 12% son dueños de negocios, 10% son ejecutivos de cuentas y 9% son asistentes de ejecutivos de cuentas. Los años de experiencia en el puesto fluctúan desde 5-31 años. Trabajan para agencias de relaciones públicas (39%), corporaciones (14%), organizaciones sin fines de lucro (9%), gobierno (5%), consultores independientes (4%), y organizaciones relacionadas a la educación (4%). El número de empleados en la organización donde trabajan fluctúa entre 1 a 100 empleados (91%) y más de 100 empleados (8%).

A continuación se presentan las contestaciones de las preguntas abiertas: ¿Qué rol usted cree que juegan las relaciones públicas en la responsabilidad social de su organización? Y Comentarios o pensamientos adicionales sobre el tema de las relaciones públicas y la responsabilidad social. Luego se presentan los resultados de las preguntas cerradas relacionadas con los procesos y prácticas de responsabilidad social corporativa del instrumento de Muthuri y Gilbert (2010). En la pregunta abierta sobre el rol que juegan las relaciones públicas en la responsabilidad social de la organización, 40 participantes contestaron la misma, (40/58= 69%). En las respuestas a la pregunta se observaron seis categorías (Tabla 1).

Tabla 1: Rol de las Relaciones Públicas en la RSC

Categorías	n =40	Por ciento
1. Promover la comunicación con sus clientes y su comunidad interna.	10	25%.
2. Promover la imagen de la empresa.	8	20%.
3. La integración de la RSC como parte importante de su plataforma de trabajo.	7	17.5%.
4. La RSC toma un rol pasivo o mínimo.	7	17.5%.
5. La RSC toma un rol importante o protagónico.	5	12.5%.
6. Otros	3	7.5 %.

En la segunda pregunta abierta sobre comentarios adicionales sobre el tema de las relaciones públicas y la responsabilidad social, sólo contestaron 12 personas. En esta pregunta las respuestas no se dividieron por categorías. La Tabla 2 presenta algunos comentarios.

## **DISCUSIÓN DE LOS RESULTADOS**

Las categorías más importantes de la pregunta abierta sobre el rol que juegan las relaciones públicas en la responsabilidad social de la organización fueron: promover la comunicación con sus clientes y su comunidad interna, promover la imagen de la empresa e integrar la RSC como parte de la plataforma de

su trabajo (Tabla 1). Esto implica que los participantes opinan que las relaciones públicas son un medio para dar a conocer lo que la empresa ha hecho relacionado a las prácticas de responsabilidad social (Kim, Soo-Yeon y Reber, B. H., 2009). En la segunda pregunta abierta relacionada a comentarios adicionales sobre las relaciones públicas y la RSC, los participantes que contestaron, se limitaron a definir la RSC y cómo se complementan ambas (Tabla 2). Señalan además que las personas deben individualmente estar conscientes de sus propias responsabilidades y apoyar el trabajo voluntario entre los empleados.

Tabla 2: Comentarios Adicionales Sobre las Relaciones Públicas y la Responsabilidad Social

<p>“La responsabilidad social es relativa, ya que la mayoría de las organizaciones la utilizan como un margen de prevención de pérdidas.</p> <p>La responsabilidad social es algo más que filantropía, va más allá de hacer el bien a la comunidad. Responsabilidad social es una plataforma de negocio que combina el bien social y el crecimiento y bienestar de la empresa. Ambos van de la mano... RSC va sustentando en seis columnas básicas que incluyen áreas específicas del negocio: relaciones con los suplidores, mercadeo y comunicaciones, comunidad, relaciones con los empleados, regulaciones y leyes, y protección del ambiente. Todas esas áreas tienen que tocarse dentro de una plataforma de RSC a fin de que la empresa logre sus objetivos de negocio a la vez que es responsable con las comunidades.</p> <p>Toda empresa debe perseguir tener un plan de responsabilidad social a largo plazo, como mínimo en la comunidad donde opera y promover el apoyar el trabajo voluntario entre sus empleados.</p> <p>Debe haber unión de las relaciones públicas y de la responsabilidad social. Si una compañía es deshonesto redundará en la desconfianza de los clientes y la comunidad en general tanto local como internacional.</p>
--

En la Tabla 3 se presenta la opinión de los participantes sobre los procesos y prácticas de RSC. Las preguntas 1, 2 y 3 se usaron para contestar la primera pregunta de investigación: ¿Los profesionales de las relaciones públicas pensarán que las corporaciones mejoran su habilidad de lograr sus metas tradicionales (ganancias) si establecen unas metas más contemporáneas como las de responsabilidad social? Los siguientes resultados se obtuvieron por cada pregunta.

- 1) Desarrollar programas que sean buenos para la sociedad, es de provecho, tanto para la empresa como para los ciudadanos (88% estuvo de acuerdo y totalmente de acuerdo).
- 2) Perseguir metas sociales fortalece la habilidad de la empresa de obtener una ganancia justa (80% % estuvo de acuerdo y totalmente de acuerdo).
- 3) Una empresa que es socialmente responsable por un largo periodo de tiempo, tiene más credibilidad ante el público que una que no lo es (81% estuvo de acuerdo y totalmente de acuerdo).

Al comparar los resultados de estas tres preguntas con el estudio de Ryan (1986) existe concordancia (98%, 77% y 95%, respectivamente), considerando que su muestra fue de 135 participantes y que su estudio fue en el año 1986. A pesar de que han pasado 26 años, los profesionales de las relaciones públicas están de acuerdo que las corporaciones mejoran su habilidad de lograr sus metas tradicionales (ganancias) si establecen metas de responsabilidad social.

Las preguntas 4, 5, 6 y 7 se usaron para contestar la segunda pregunta de investigación: ¿Los profesionales de las relaciones públicas pensarán que es importante para la responsabilidad social separarse de convicciones profundas arraigadas y de que la gerencia debe de actuar consistentemente? Los siguientes resultados se obtuvieron por cada pregunta.

- 4) La responsabilidad social corporativa tiene que surgir de una firma en donde la gerencia tenga una firme convicción de que es importante para las corporaciones el actuar a favor del interés del público (69% estuvo de acuerdo y totalmente de acuerdo).
- 5) En una organización que desea ser socialmente responsable, la Gerencia tiene que actuar consistentemente en el mejor interés del público, y no sólo cuando es conveniente hacerlo (84% estuvo de acuerdo y totalmente de acuerdo).

6) La Gerencia tiene que actuar socialmente responsable sin importar cómo sus acciones influyan las ganancias (69% estuvo de acuerdo y totalmente de acuerdo).

\*7) Es correcto para un individuo tener un estándar ético en su vida privada y un estándar diferente en lo que respecta a los negocios (sólo un 43% estuvo en desacuerdo o totalmente en desacuerdo y un 26% estuvo de acuerdo y totalmente de acuerdo; 12% estuvo neutral). (\* Diferencia marcada).

Comparando los resultados de estas cuatro preguntas con el estudio de Ryan (97%, 98%, 63% y 84% en desacuerdo respectivamente), continúa una concordancia moderada entre las preguntas 4-6. La pregunta 7 tiene diferencias marcadas, sólo un 43% estuvo en desacuerdo o totalmente en desacuerdo comparado con el estudio de Ryan, donde el 84% estuvo en desacuerdo. Los profesionales de las relaciones públicas están de acuerdo que la gerencia debe de actuar consistentemente en el mejor interés del público, y no sólo cuando es conveniente hacerlo. No obstante, no existe consenso entre los participantes en cuanto a que sea correcto para un individuo tener un estándar ético en su vida privada y un estándar diferente en lo que respecta a los negocios. Esto puede indicar que algo no se está haciendo bien en cuanto a la enseñanza de ética en las aulas de la universidad. Esto confirma el estudio de Kim y Reber (2009) donde señalan que se necesita mejorar las relaciones públicas como profesión.

En 1986 los profesionales de las relaciones públicas tenían unas convicciones sólidas de lo que era la ética y los valores en nuestra sociedad, hoy día aparentemente esto no está tan claro! De acuerdo a Ryan (1986) conocer lo que es correcto y bueno es una cosa pero lo que realmente importa es si estas personas actúan de maneras correctas y apropiadas.

Las preguntas 8 a la 14 se usaron para contestar la tercera pregunta de investigación: ¿Los profesionales de las relaciones públicas pensarán que tienen un rol importante en asegurarse de que las corporaciones sean socialmente responsables? Los siguientes resultados se obtuvieron por cada pregunta.

8) Los practicantes de las Relaciones Públicas deben actuar como las conciencias de las corporaciones para las cuales trabajan (56% estuvo de acuerdo y totalmente de acuerdo).

9) Los practicantes de las relaciones públicas deben involucrarse profundamente en ayudar a los gerentes a definir el rol social de la empresa (71% estuvo de acuerdo y totalmente de acuerdo).

10) Los practicantes de las relaciones públicas tienen que evitar anteponer la obediencia corporativa sobre su conciencia personal (55% estuvo de acuerdo y totalmente de acuerdo; 18% estuvo neutral).

11) Los practicantes de las relaciones públicas tienen que trabajar arduamente para asegurarse de que la confidencialidad corporativa no se utilice para esconder alguna conducta inapropiada de la empresa (76% estuvo de acuerdo y totalmente de acuerdo).

\*12) Las corporaciones tienen que tratar de calcular el impacto social de sus decisiones de gran importancia, antes de implementar políticas o de tomar acción (90% estuvo de acuerdo y totalmente de acuerdo). (\* Diferencia marcada).

13) Un personal de relacionistas públicos socialmente responsable cuando disemina su información presenta varios lados de un asunto y provee una evaluación objetiva de opiniones conflictivas (75% estuvo de acuerdo y totalmente de acuerdo).

Tabla 3: Preguntas Sobre Procesos y Prácticas de Responsabilidad Social Corporativa (Ryan, 1986)

Proceso o Práctica	Totalmente en Desacuerdo 1	Desacuerdo 2	Poco en desacuerdo 3	Neutral 4	Un poco de acuerdo 5	De acuerdo 6	Totalmente de acuerdo 7	Total
1) Desarrollar programas que sean buenos para la sociedad, es de provecho, tanto para la empresa como para los ciudadanos.	0	0	0	1.75% (1/57)	10.53% (6/57)	29.82% (17/57)	57.89% (33/57)	100%
2) Perseguir metas sociales fortalece la habilidad de la empresa de obtener una ganancia justa.	0	1.72% (1/58)	0	8.62% (5/58)	10.34% (6/58)	34.48% (20/58)	44.83% (26/58)	100%
3) Una empresa que es socialmente responsable por un largo periodo de tiempo, tiene más credibilidad ante el público que una que no lo es.	0	3.45% (2/58)	1.72% (1/58)	3.45% (2/58)	10.34% (6/58)	22.41% (13/58)	58.62% (34/58)	100%
4) La RSC tiene que surgir de una firma en donde la gerencia tenga una firme convicción de que es importante para las corporaciones el actuar a favor del interés del público.	1.72% (1/58)	3.45% (2/58)	3.45% (2/58)	6.90% (4/58)	15.52% (9/58)	18.97% (11/58)	50% (29/58)	100%
5) En una organización que desea ser socialmente responsable, la Gerencia tiene que actuar consistentemente en el mejor interés del público, y no sólo cuando es conveniente hacerlo.	1.72% (1/58)	0	1.72% (1/58)	5.17% (3/58)	6.90% (4/58)	20.69% (12/58)	63.79% (37/58)	100%
6) La Gerencia tiene que actuar socialmente responsable sin importar cómo sus acciones influyan las ganancias.	0	3.51% (2/57)	8.77% (5/57)	7.02% (4/57)	12.28% (7/57)	22.81% (13/57)	45.61% (26/57)	100%
7) Es correcto para un individuo tener un estándar ético en su vida privada y un estándar diferente en lo que respecta a los negocios.	34.48% (20/58)	8.62% (5/58)	6.90% (4/58)	12.07% (7/58)	12.07% (7/58)	3.45% (2/58)	22.41% (13/58)	100%
8) Los practicantes de las Relaciones Públicas deben actuar como las conciencias de las corporaciones para las cuales trabajan.	3.64% (2/55)	3.64% (2/55)	3.64% (2/55)	5.45% (5/55)	27.27% (15/55)	27.27% (15/55)	29.09% (16/55)	100%
9) Los practicantes de las relaciones públicas deben involucrarse profundamente en ayudar a los gerentes a definir el rol social de la empresa.	0	1.72% (1/58)	0	6.90% (4/58)	20.69% (12/58)	22.41% (13/58)	48.28% (28/58)	100%
10) Los practicantes de las relaciones públicas tienen que evitar anteponer la obediencia corporativa sobre su conciencia personal.	7.02% (4/57)	5.26% (3/57)	0	17.54% (10/57)	15.79% (9/57)	29.82% (17/57)	24.56% (14/57)	100%
11) Los practicantes de relaciones públicas tienen que trabajar arduamente para asegurarse de que la confidencialidad corporativa no se utilice para esconder alguna conducta inapropiada de la empresa.	0	3.45% (2/58)	0	6.90% (4/58)	13.79% (8/58)	32.76% (19/58)	43.10% (25/58)	100%
12) Las corporaciones tienen que tratar de calcular el impacto social de sus decisiones de gran importancia, antes de implementar políticas o de tomar acción.	0	0	0	3.45% (2/58)	6.90% (4/58)	41.38% (24/58)	48.28% (28/58)	100%
13) Un personal de relacionistas públicos socialmente responsable cuando disemina su información presenta varios lados de un asunto y provee una evaluación objetiva de opiniones conflictivas.	1.82% (1/55)	1.82% (1/55)	0	7.27% (4/55)	14.55% (8/55)	43.64% (24/55)	30.91% (17/55)	100%
14) Presentar todos los lados de un asunto y proveer una evaluación objetiva de opiniones conflictivas es el trabajo de los medios noticiosos, no de las relaciones públicas.	17.86% (10/56)	16.07% (9/56)	8.93% (5/56)	7.14% (4/56)	14.29% (8/56)	26.79% (15/56)	8.93% (5/56)	100%

\*14) Presentar todos los lados de un asunto y proveer una evaluación objetiva de opiniones conflictivas es el trabajo de los medios noticiosos, no de las relaciones públicas (36% estuvo de acuerdo y totalmente de acuerdo; 34% estuvo en desacuerdo o totalmente en desacuerdo; 7% estuvo neutral). (\* Diferencia marcada). Al comparar estos resultados con los de Ryan (1986) (8. 71%, 9. 95%, 10. 85%, 11. 90% 12. 98%, 13.66%, 14. 51%) los porcentajes son más bajos en este estudio y existe una diferencia marcada en la pregunta número 14. Los profesionales de las relaciones públicas no están de acuerdo en que tienen un rol importante en asegurarse de que las corporaciones sean socialmente responsables. Sí concuerdan casi en su mayoría que las corporaciones tienen que tratar de calcular el impacto social de sus decisiones de gran importancia, antes de implementar políticas o de tomar acción.

## CONCLUSIONES

El propósito de este estudio es exponer las percepciones que poseen 58 relacionistas profesionales sobre la responsabilidad social de una organización, usando el instrumento de Ryan (1986) y la pregunta abierta sobre el rol que los participantes creen que juega las relaciones públicas en la responsabilidad social de la organización. Los relacionistas profesionales de este estudio están de acuerdo que las corporaciones mejoran su habilidad de lograr sus metas tradicionales (ganancias) si establecen metas de responsabilidad social; que la gerencia debe de actuar consistentemente en el mejor interés del público, y no sólo cuando es conveniente hacerlo; que las corporaciones tienen que tratar de calcular el impacto social de sus decisiones de gran importancia, antes de implementar políticas o de tomar acción. Este estudio aporta al conocimiento de estrategias y prácticas de responsabilidad social corporativa. Un negocio que actúa responsablemente y le da información completa y precisa al público encontrará una imagen corporativa favorable que lo protegerá siempre.

Todavía existe poco conocimiento de lo que realmente es la responsabilidad social corporativa y falta de compromiso de las empresas, porque la teoría de los negocios que prevalece es la de maximizar las ganancias (Kim, Soo-Yeon. y Park, H., 2011). No obstante, ambas cosas pueden ser simultáneas, maximizar las ganancias y llevar a cabo prácticas y procesos de RSC. El hecho de que un 31% de los participantes no contestó la primera pregunta abierta, además de que la muestra es pequeña, no indica el grado en que estas prácticas de RSC se llevan a cabo. Se necesita mayor investigación con relación a este tema. La diversidad de perspectivas en la literatura es un reflejo de la falta de acuerdo en la práctica. La desconexión entre el mundo académico y los profesionales se encuentra dentro de los estudios de RSC, lo que afecta la validez de los argumentos. La falta de validez, establece limitaciones, dando lugar a que muchas organizaciones se quedan sin políticas o directrices de RSC claras y precisas (Freeman y Hasnaoui, 2011).

Las siguientes conclusiones se derivan del estudio:

1. Los profesionales de las relaciones públicas están de acuerdo que las corporaciones mejoran su habilidad de lograr sus metas tradicionales (ganancias) si establecen metas de responsabilidad social.
2. Los profesionales de las relaciones públicas están de acuerdo que la gerencia debe de actuar consistentemente en el mejor interés del público, y no sólo cuando es conveniente hacerlo.
3. No existe consenso en cuanto a que sea correcto para un individuo tener un estándar ético en su vida privada y un estándar diferente en lo que respecta a los negocios.
4. Los profesionales de las relaciones públicas no están de acuerdo en que tienen un rol importante en asegurarse de que las corporaciones sean socialmente responsables.
5. Los profesionales de las relaciones públicas concuerdan casi en su mayoría que las corporaciones tienen que tratar de calcular el impacto social de sus decisiones de gran importancia, antes de implementar políticas o de tomar acción.
6. No existe una definición clara y precisa de lo que es RSC ni de las estrategias a seguir.

Estos resultados indican que se necesita mejorar las relaciones públicas como profesión. Los criterios para una profesión incluyen: intelectualismo, un código de ética, una organización auto gobernada, mayor énfasis en el servicio público que en el auto interés, rendimiento de un servicio único y esencial basado en un cuerpo de conocimiento substancial, amplia autonomía, y ser guiado por el altruismo (Kim y Reber, 2009). Una certificación legal de todos los practicantes hará posible que las relaciones públicas logren un estatus profesional verdadero (Kim y Park, 2011).

## RECOMENDACIONES

La intención de este estudio es abrir camino a futuras investigaciones respecto a la responsabilidad social corporativa y a su aplicación en Puerto Rico. Se recomienda: replicar el estudio con una muestra mayor para poder establecer diferencias significativas en cuanto a género, edad, puesto en el trabajo, tipo de compañía y tamaño de la compañía; determinar si la responsabilidad social corporativa mejora la imagen positiva de la empresa y la lealtad de sus clientes; determinar si la responsabilidad social corporativa puede ser usada como una ventaja competitiva sostenible de la empresa; e investigar qué prácticas de RSC son utilizadas en Puerto Rico. Aparentemente la responsabilidad social corporativa todavía tiene un largo camino que recorrer. El rol de los profesionales de las relaciones públicas en cuanto a la responsabilidad social corporativa es de suma importancia y tiene que estar claro y bien definido en esta profesión. ¿Se necesita enfatizar en nuestros currículos de enseñanza, algo más que ética corporativa, algo más que la regla de oro, se necesita engendrar la semilla de la responsabilidad social, tanto en los individuos como en las empresas!

## BIOGRAFÍA

La Dra. Elizabeth Robles es profesora de mercadeo del Departamento de Gerencia de la Universidad de Puerto Rico. Sus áreas de investigación son conducta del consumidor, relaciones públicas, mercadeo en

un sistema no capitalista, mercadeo de modas, responsabilidad social corporativa, empresarismo social y espiritualidad en el lugar de trabajo. La Dra. Robles ha publicado su investigación en el “Marketing News,” Forum Empresarial, “Inter Metro Business Journal,” y “Review of Business and Finance Studies.” Su correo electrónico es: [elirobles@yahoo.com](mailto:elirobles@yahoo.com).

# EL APRENDIZAJE BASADO EN LOS DESAFÍOS PROFESIONALES Y EMPRESARIALES

Oscar Jerez, Universidad de Chile  
Leslier Valenzuela, Universidad de Chile

## RESUMEN

*El aprendizaje de la administración y las finanzas basado en clínicas empresariales se ha constituido, en el último tiempo, como una poderosa herramienta en la formación de nuevos profesionales. Lo anterior radica en la posibilidad de enfrentarse a desafíos profesionales en contextos reales, abordables a lo largo de un curso. El presente artículo sistematiza la experiencia que el Centro de Enseñanza y Aprendizaje de la Facultad de Economía y Negocios de la Universidad de Chile ha llevado a cabo durante más de tres años, por medio del diseño, implementación, monitoreo y evaluación de impacto de una metodología especialmente intencionada para vincular la formación con los desafíos profesionales que emergen de las empresas de menor tamaño. El Aprendizaje basado en los Desafíos Profesionales y Empresariales (ADPE) es una metodología de alto valor formativo, que genera efectos positivos en la calidad de los aprendizajes, la percepción de los estudiantes sobre el proceso formativo y en la evaluación de docente en los cursos que utilizan ADPE; y de impacto social, ya que ofrece a las empresas de menor tamaño, motor clave de la economía y empleabilidad en Chile, la posibilidad de asesorías profesionales en formación en conjunto con el acompañamiento de los docentes, sin costo.*

**PALABRAS CLAVE:** Aprendizaje clínico, aprendizaje activo, metodologías de enseñanza, vinculación social, aprendizaje significativo.

## THE LEARNING PROCESS BASED ON PROFESSIONAL AND BUSINESS CHALLENGES

### ABSTRACT

*The learning process of the management and finance area based on business clinics has recently become a powerful tool in the training of new professionals. This lies on the possibility of facing professional challenges in real contexts, suitable to be studied along a course. This article explores the experience that the Teaching and Learning Center has conducted for over three years at the Faculty of Economics and Business of the University of Chile, designing, implementing, monitoring and evaluating the impact of a methodology especially intended for linking training with professional challenges that emerge from small companies. The learning process based on Professional and Business Challenges (ADPE) is a high-value training methodology, that generates positive effects on the quality of learning, on the students' perceptions about the training process and on the evaluation of teaching in courses using ADPE. It also has a social impact, as it gives small companies -a key driver of the economy and employability in Chile- the chance of receiving consultancy by professionals in training and teachers, at no cost.*

**KEYWORDS:** Clinical learning, active learning, teaching methodologies, social bonding, meaningful learning.

## INTRODUCCIÓN

Con el propósito de mejorar la pertinencia de la formación de los estudiantes, la Facultad de Economía y Negocios, por medio del Centro de Enseñanza y Aprendizaje, inicia el diseño e implementación de una metodología innovadora especialmente intencionada para vincular la formación con los desafíos profesionales que emergen de las empresas de menor tamaño. Lo anterior, con un triple propósito formativo: El primero, de mejorar la pertinencia y significatividad de los aprendizajes de los estudiantes. El segundo, de aproximarse a las características y contextos en donde se desenvuelven las empresas de menor tamaño. El fin último de esto apuntaba a generar extensión en la universidad, desde modalidades no tradicionales y con mayor responsabilidad con su entorno.

La metodología se diseñó inicialmente para implementarse en la cátedra de marketing III en la formación de los administradores hace más de seis semestres. Hasta la fecha, se han implementado más de veinte cursos utilizando ADPE. La metodología consta de seis fases consecutivas: preparación, inducción, contextualización, diagnóstico, generación de soluciones, comunicación y valoración (Valenzuela y Jerez, 2013). A continuación detallamos brevemente cada una de estas etapas. La primera fase de preparación involucra el proceso de reclutamiento de las empresas, según el perfil predefinido para cada curso y lo establecido en sus resultados de aprendizaje. Se lleva a cabo la primera reunión con las empresas, en la cual se les explica la metodología, su rol en el proceso, los compromisos que debe asumir, los beneficios que recibirá y los resultados de experiencias anteriores. Asimismo, se define y delimita junto a la empresa cuál es el desafío que deberán enfrentar los estudiantes y el producto que pueden esperar de la experiencia. Paralelamente, se procede al reclutamiento del equipo de estudiantes ayudantes, los cuales son los responsables del monitoreo y vinculación con la empresa. Estos, por lo general, son estudiantes de últimos años de formación que han aprobado con anterioridad el curso.

En la etapa de inducción, el propósito es introducir a los estudiantes en la metodología, estableciendo cómo y qué implica el “aprender haciendo”, describiendo y consensuando los roles, responsabilidades, compromisos y la actitud profesional requerida. Junto con esto, se enfatizan aspectos tales como: vestuario, comunicación, relación con el cliente (organización de reuniones dentro y fuera de la universidad). Además, se establece el calendario con todas las actividades del curso en función de la asesoría, especialmente las que tienen relación con los hitos claves del proyecto (ceremonia de inauguración, firma de cartas de compromisos, asignación de empresas a los equipos consultores, monitoreo y acompañamiento docente, presentación de las propuestas y la ceremonia de cierre). En adelante, los estudiantes se organizan en “equipos consultores”, es decir, en equipos de trabajo que asumen las mismas tareas y actitudes de profesionales reales con sus clientes. En algunas ocasiones, dos equipos consultores pueden competir en la generación de la mejor propuesta para una empresa.

Se prosigue con la fase de contextualización, en la cual se realiza el primer encuentro entre la empresa y los equipos consultores, en la cual se generan los vínculos y se firman los compromisos de las partes en una ceremonia solemne. El objetivo central de esta etapa es lograr que los estudiantes contextualicen la posición de la empresa o la unidad de negocios, dentro de su sector a través de la investigación, recopilación de información relevante, trabajo en terreno y reuniones con los empresarios. En la fase diagnóstica, los equipos consultores deben generar un análisis de la situación actual de la empresa, según el desafío previamente establecido. Conducente a ello, puede aplicarse diversos modelos o metodología de análisis según los resultados de aprendizajes del curso. Durante la etapa siguiente los estudiantes elaboran una o varias propuestas de soluciones a los problemas o desafíos identificados para la UEN, que cumplan con los criterios de consistencia y viabilidad.

En el siguiente momento, y considerando las diversas propuestas de solución, se procede a evaluar y seleccionar las alternativas a corto, mediano y largo plazo, a partir de criterios preestablecidos en conjunto con la empresa. Una vez seleccionada la o las alternativas, se diseña la propuesta o producto

acordado. De igual modo, el estudiante deriva conclusiones, implicancias empresariales y recomendaciones estratégicas que se materializan en la elaboración de un informe escrito. Durante esta etapa el docente y el equipo de estudiantes ayudantes se reúnen al menos tres veces con los equipos consultores para facilitar el desarrollo de la propuesta.

Posteriormente los equipos consultores comunican los resultados de su trabajo-asesoría a la empresa y al equipo docente. Esta etapa es crucial para los equipos: es la instancia de comunicar, explicar, argumentar los análisis y persuadir acerca de las ventajas de sus proyectos, sobre todo cuando compite más de un equipo por empresa. De igual forma, desde la exposición y la retroalimentación que realizan la empresa y el equipo de docente, deben realizar los ajustes pertinentes a sus propuestas. Finalmente, la valoración del proceso se realiza en varios niveles. En primer lugar se considera la autoevaluación del estudiante sobre su desempeño durante el desarrollo del proceso. En segundo lugar se observa la co-evaluación entre pares sobre su contribución al trabajo del equipo. En tercer lugar se analiza la evaluación del equipo docente en torno al proceso y el resultado final, y por último, se examina la evaluación de parte de la empresa, tanto a nivel del proceso (la relación entre el equipo consultor y la empresa durante el semestre), como del producto final obtenido. En esta etapa la empresa escoge el proyecto con mayor valor para los desafíos de su negocio y para una eventual implementación. El presente artículo sintetiza los principales resultados obtenidos en más de veinte cursos a lo largo de tres semestres en la formación de pregrado, especialmente los referidos a los cursos del área de administración y finanzas.

## REVISIÓN LITERARIA

Un sistema educativo de calidad requiere centrarse en el rol activo del estudiante, en la vinculación con los requerimientos del sector productivo y de la sociedad, y en la adquisición y desarrollo de competencias que le preparen para ejercer con éxito su vida profesional (Tunning, 2004). Los resultados de diversos estudios señalan que implicar activamente al estudiante en todo el proceso mejora el aprendizaje (Ala-Vähäla y Saarinen, 2009; González y Wagenaar, 2005; Hager, Holland y Beckett, 2002; De Miguel Díaz, 2005). Asimismo, las investigaciones de Umbach y Wawrzynski (2005) evidencian que se obtienen mejores niveles en el aprendizaje en la medida en que los profesores utilizan metodologías activas en las que haya una interacción continua con los estudiantes y se establezca un clima de colaboración entre las partes. Una de las metodologías desarrolladas para lograr el aprendizaje en torno a las competencias es el experiencial, que corresponde a un “proceso mediante el cual se crea conocimiento a través de la transformación de la experiencia”.

Este tipo de aprendizaje tiene múltiples ventajas, como por ejemplo su fácil acceso, que permite concientizar el proceso de aprendizaje (meta-cognición), conocer cuál es su importancia o valor (self-system) (Marzano et. al, 2011) e ir más allá de los aspectos básicos de la enseñanza (Vince, 1998). Bajo este contexto, la utilización de clínicas empresariales como una opción de aprendizaje activo, surge como una alternativa viable y con consecuencias positivas, no sólo para los estudiantes sino también para la contraparte o los beneficiarios de estas clínicas. Por una parte, los estudiantes tienen la posibilidad de integrar sus conocimientos y experiencias en la creación de una solución para un problema real de un cliente (Heriot K. , Cook, Jones, & Simpson, 2008). Y por otra, los empresarios juegan un doble rol, ya que se ven beneficiados con esta consultoría basada en sus desafíos empresariales y complementan la formación profesional de los estudiantes como mentores, permitiéndoles experimentar situaciones reales del mundo de los negocios. La literatura sobre el uso de esta metodología ha sido desarrollada principalmente por el Instituto de Pequeñas Empresas de Estados Unidos. Esta institución conecta a las pequeñas empresas del país con universidades, con el objeto de trabajar con la modalidad de clínicas empresariales (Heriot K. , Cook, Simpson, & Parker, 2008). De la misma forma en Europa, los gobiernos han comenzado a implementar políticas de fortalecimiento de las PYMES, por medio del acercamiento de éstas con las universidades (Collinson & Quinn, 2002).

## METODOLOGÍA

Para establecer el impacto de la metodología se consideraron dos dimensiones: el aprendizaje del estudiante y el desempeño docente. Para los aprendizajes de los estudiantes, se comparó un mismo producto elaborado en años anteriores sin la implementación de alguna innovación, con otro de iguales características que utilizó la metodología ADPE. Hemos denominado al grupo de productos sin innovación Grupo de Control Histórico (GCH); y al que utilizó ADPE, Grupo Experimental (GEX). Es así como dieciocho de los veinte cursos de administración y finanzas contaron con GCH y GEX, con un total de 180 productos o trabajos posibles de comprar entre sí. Para la evaluación de cada producto se diseñó una rúbrica elaborada según lo establecido en los syllabus de cada curso. Cada rúbrica consideró al menos 5 dimensiones claves: los fundamentos, análisis o diagnósticos, generación de propuestas, desarrollo o diseño de propuestas y recomendaciones/conclusiones. El instrumento consideró para cada dimensión un puntaje máximo de 5. En el caso del desempeño docente, se consideró la evaluación de la universidad que los estudiantes realizan al finalizar cada curso. En las 12 afirmaciones del instrumento, la escala varía entre 1 a 7, donde este último puntaje representa la calificación máxima. Para efecto de este artículo, se comparó el promedio Histórico del profesor (Hi) con el promedio del semestre que utilizó la Metodología (Me), con un total de 22 docentes en 20 cursos.

## RESULTADOS

En el caso de los aprendizajes de los estudiantes, y tal como lo sintetiza la tabla 1, el uso de la metodología es altamente significativo en cuatro de las cinco dimensiones. Claramente, la dimensión referida al manejo conceptual o de los fundamentos no registra cambios significativos entre una metodología tradicional y otra con ADPE, evidenciando una baja diferencia (0,08). En cambio, las otras dimensiones referidas al análisis (0,82), la generación de propuestas (1,42), el desarrollo o diseño de productos (1,15) y las recomendaciones/conclusiones (1,16), evidenciaron una diferencia significativa entre una metodología y otra. La mayor diferencia se plasmó en la generación de propuestas (1,42), debido posiblemente a un mejor conocimiento de los contextos y del cliente que se ve expuesto. De este modo, el trabajo con empresas de menor tamaño permite al estudiante conocer en mayor profundidad y sin restricciones las dificultades y desafíos de la unidad de negocios, permitiendo una mayor compenetración en el proceso de enseñanza y aprendizaje.

En otras palabras, ADPE favorece significativamente el desarrollo de aprendizajes de nivel superior, especialmente los vinculados a la creatividad, la integración de conocimientos, el análisis y la contextualización. Entre los distintos tipos de cursos y año en que se dictan, no hubo diferencias significativas que reportar. Por otra parte, la evaluación docente arrojó diferencias significativas (tabla 2) entre el promedio histórico de los docentes (hi) y el obtenido utilizando la metodología (Me). No se obtuvieron diferencias significativas entre el tipo de curso, los docentes, el género ni los años de experiencia docente. En síntesis, usar una metodología de aprendizaje clínico en el ámbito de la administración y las finanzas impacta positivamente en los aprendizajes de los estudiantes, así como en la percepción de estos sobre el desempeño de sus docentes.

Tabla 1: Estadígrafos Descriptivos de las Rúbrica

Dimensión	N	Medias		Diferencia
		GCH	GEX	
Fundamentos	180	3,78	3,86	0,08
Análisis	178	3,08	3,90	0,82
Propuestas	179	2,78	4,20	1,42
Desarrollo/Diseño	140	2,65	3,80	1,15
Recomendaciones/Conclusiones	180	2,80	3,96	1,16

Tabla 2: Estadígrafos Descriptivos Despeño Docente

Total Profesores	Medias		Diferencia
	Hi	Me	
22	5,03	6,2	1,17

## CONCLUSIONES

Las experiencias de aprendizaje clínico basado en los desafíos profesionales y empresariales constituyen una potente herramienta de aprendizaje para la formación en administración y finanzas. Se evidencia una mejora significativa sobre la calidad de los aprendizajes de los estudiantes y en la percepción de estos sobre el desempeño de sus docentes. Asimismo, el trabajar con empresas de menor tamaño les ofrece la posibilidad de acceder sin costo a asesorías de calidad, pertinentes a sus requerimientos y desafíos. El ADPE es una metodología que permite mejorar los desempeños de todos: de los estudiantes, de los docentes y de las empresas de menor tamaño.

# COMUNIDADES DE MARCA VIRTUALES EN REDES SOCIALES

Leslier Valenzuela Fernández, Universidad de Chile  
Carolina Martínez Troncoso, Universidad Finis Terrae  
Oscar Jeréz Yáñez, Universidad de Chile

## RESUMEN

*Las redes sociales se han convertido en espacios relevantes de interacción y comunicación con las audiencias, lo cual ha fomentado el surgimiento de las llamadas “Comunidades de Marca Virtuales” (CMV). Actualmente en Chile se observa que la mayoría de las empresas pertenecientes a industrias del retail, tecnología, telecomunicaciones, servicios, etc., han creado CMV en redes sociales, con las que pretenden generar un vínculo más cercano con los consumidores. El propósito de la investigación es (1) explorar cuáles son las principales razones que tienen los consumidores chilenos para participar en una CMV en redes sociales y su relación con el compromiso y futuras intenciones con la CMV (2) analizar estos resultados para identificar diferencias y similitudes, dependiendo del tipo de CMV que el consumidor utilice, es decir, generada por otros consumidores o generadas por la misma empresa y (3) aportar evidencia empírica a través de la propuesta de un modelo testeado por medio de un cuestionario auto-administrado aplicado a 284 usuarios de redes sociales y que declararan ser participantes activos de CMV.*

**PALABRAS CLAVES:** Comunidades De Marca Virtuales Generadas Por La Empresa (CMGE); Comunidades De Marca Virtuales Generadas Por Los Consumidores (CMGC) Y Redes Sociales (RS)

## VIRTUAL BRAND COMMUNITIES IN SOCIAL NETWORKS.

### ABSTRACT

*Social networks have become important areas of interaction and communication with the audience, which has fostered the emergence of so-called "Virtual Brand Communities" (VBC). Currently in Chile the most companies in the retail industry, technology, communications, services, etc., have created a VBC in social networks, with the aim to create a closer link with consumers. The purpose of the research is to (1) explore what the main reasons are Chilean consumers to participate in a VBC in social networks and their relationship with the commitment and future intentions with VBC (2) analyze these results to identify differences and similarities, depending on the type of VBC that consumers use, ie generated by the consumer or generated by the same company, and (3) provide empirical evidence by proposing a model tested by means of a self-administered questionnaire applied to 284 social network users and be active participants declared VBC.*

## INTRODUCCIÓN

¿Usted participa en algún “fan page” de un equipo de fútbol en *Facebook*? o ¿es seguidor de una marca de tecnología en *Twitter*? Probablemente su respuesta sea positiva, ya que el uso de Internet en el mundo ha sufrido un crecimiento vertiginoso en la última década convirtiéndose en uno de los medios más

requeridos por las empresas para enviar mensajes e interactuar con el llamado “mercado objetivo” (Castelló, 2010). Según el GlobalWebIndex(globalwebindex.net), estudio periódico en relación al comportamiento del usuario de internet en el mundo, el uso de redes sociales es uno de los comportamientos con mayor alza en los últimos años. Una red social es un sitio online en donde un usuario puede crear un perfil y construir una red personal que se conecta con otros (Lenhart y Madden, 2007). Bajo este contexto, las empresas han encontrado en las redes sociales una poderosa herramienta para la aplicación de sus estrategias de marketing como por ejemplo su estrategia de gestión de relaciones con clientes o “*Customer Relationship Management, CRM*”, segmentación, “*marketing viral*”, *branding*, etc. (Castelló, 2010; González, 2011). Esto se debe a que las redes sociales se han convertido en espacios de interacción y comunicación con las audiencias, las cuales se encuentran fragmentadas en la actualidad y por tanto la posibilidad de comunicarse con clientes potenciales a bajo costo se hace muy atractivo para los anunciantes, fomentado el surgimiento de las llamadas “comunidades de marca virtuales” (CMV) (González, 2011).

Una CMV se genera socialmente y emerge de la red cuando suficientes personas llevan discusiones públicas como para formar redes de relaciones personales en el ciberespacio (Rheingold, 1993). Los perfiles públicos y oficiales desarrollados a través de las comunidades de marca virtuales, intensifican el “valor agregado” a través del desarrollo del “discurso simbólico” o “relación emocional” de los clientes hacia la marca (Alcaide, 2010). De esta forma, la audiencia asociará sus experiencias emocionales con una marca en específico proporcionándole un valor agregado, lo cual crea una nueva relación marca, producto, consumidor (Anderson, 2005; González, 2011).

## REVISION DE LA LITERATURA

Basados en el trabajo realizado por Sung et al. (2010) es posible identificar seis principales razones que justifican el por qué las personas participan en una CMV: *utilidad interpersonal, simpatía por la marca, búsqueda de entretenimiento, búsqueda de información, expectativas de incentivos y búsqueda de conveniencia*. Estas seis razones se traducen en el deseo de los participantes por establecer y mantener una relación con la CMV, lo cual se convertiría en compromiso y en futuras intenciones con la CMV. A partir de estas relaciones planteadas en el estudio se derivan las siguientes hipótesis.

*H1.1: La búsqueda de utilidad interpersonal influye positivamente en el compromiso con la CMV.* Debido a la búsqueda constante por parte de los consumidores de generar una relación social con usuarios que tengan intereses y necesidades similares (Muñiz y O’Guinn, 2001) con la intención de mantener una conectividad interpersonal (Wellman y Gulia, 1999) y por tanto una búsqueda constante de aprobación de los miembros de la CMV, podría traducirse en la generación de compromiso con la CMV (Dholakia et al., 2004).

*H1.2: La simpatía por la marca influye positivamente en el compromiso con la CMV.* La identificación con la marca podría ser un antecedente de la participación constante de los consumidores y de su afiliación permanente con la comunidad (Bagozzi y Dholakia, 2006) por lo que la simpatía que sienten los consumidores hacia una determinada marca podría influir positivamente en el compromiso con la CMV.

*H1.3: La búsqueda de entretenimiento influye positivamente en el compromiso con la CMV.* Estudios previos respecto del uso de Internet y en consecuencia, de las CMV, sugieren que la búsqueda de entretenimiento genera un alto promedio de uso, lo cual podría motivar a los consumidores para una utilización más frecuente de las CMV (Ko et. al, 2005). Por otro lado, los encargados de marketing a menudo utilizan esta entrega de entretenimiento como parte de su estrategia para incrementar el conocimiento de marca y para crear relaciones de largo plazo (Winkler y Buckner, 2006), lo cual podría influir positivamente en el compromiso con la CMV.

*H1.4: La búsqueda de información influye positivamente en el compromiso con la CMV.* Las personas estarían navegando dentro de la CMV cuando tienen una alta motivación para buscar información y cuando perciben que ese lugar puede satisfacer esta necesidad (Ko et. al, 2005). El buscador de información encontrará útil la CMV y volverá a ingresar sólo si puede encontrar dentro de la comunidad a otros participantes que provean información, o en su defecto al administrador de la CMV (Dholakia et. al, 2004). Si esto ocurre se podría influir de forma positiva en el compromiso que siente con la CMV.

*H1.5: Las expectativas de entrega de incentivos por parte de la CMV influyen negativamente en el compromiso con la CMV.* Según Sung et. al, 2010 los consumidores utilizan las CMV para obtener recompensas e incentivos a cambio de una participación activa. Por tanto, si las expectativas de entrega de incentivos son muy altas, y la CMV no logra satisfacer dichas expectativas, esto se traducirá en un bajo compromiso con la CMV.

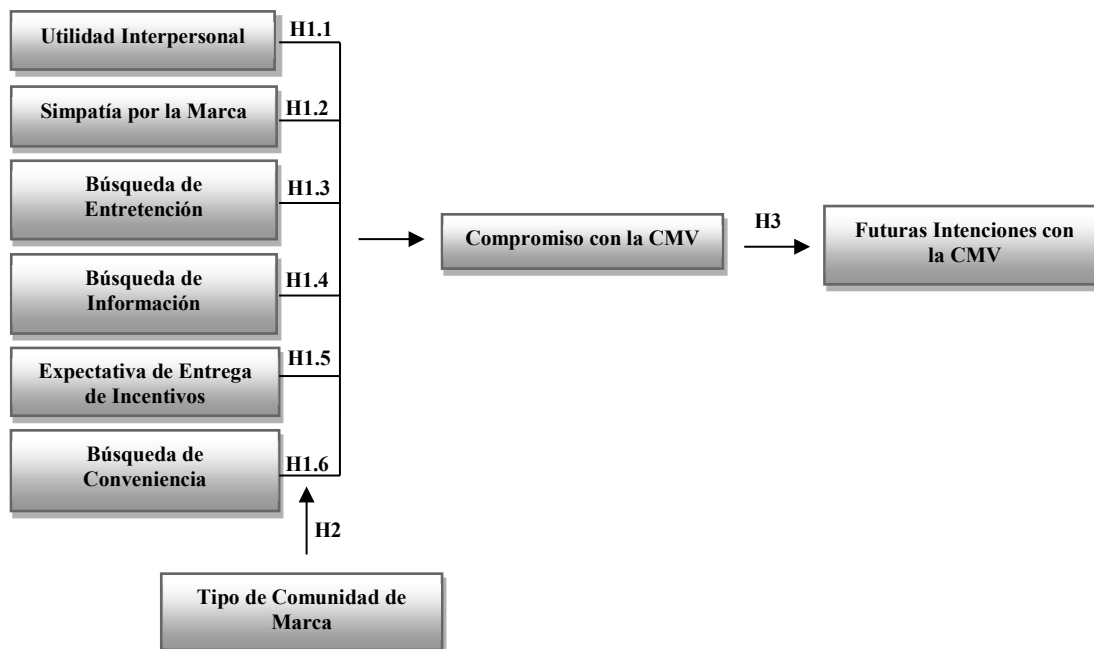

*H1.6: Las búsqueda de conveniencia por parte de la CMV influye positivamente en el compromiso con la CMV.* Los hallazgos de Sung et. al., 2010 señalan que los miembros de CMV sienten que éstas son fáciles de utilizar y convenientes de acceder ya que proveen información útil de la marca, resuelven problemas, entregan diversión y relajo (Ko et. al, 2005), lo cual influiría positivamente en el compromiso con la CMV. Por otro lado, el tipo de CMV influiría en la relación entre las razones para utilizar la CMV y el compromiso con la CMV, por lo cual, podríamos suponer que dependiendo del tipo de comunidad, se afectaría la relación entre las razones de participar en la comunidad y su nivel de compromiso (Leimeister et. al, 2006). Basándose en lo anterior, la segunda hipótesis es:

*H2: El tipo de CMV afecta significativamente la relación entre todas las razones de participar en una CMV y el compromiso con la CMV.* Finalmente el compromiso con una CMV implicaría una intención de mantener una relación de largo plazo con una marca o empresa (Dwyer et al., 1987). El compromiso que se generaría entre los consumidores y la CMV influiría positivamente sobre las futuras intenciones de esos consumidores con la CMV. Autores como Garbarino y Johnson (1999) reconocen que el compromiso es el ingrediente esencial para la mantención de relaciones a largo plazo y es definido como el fuerte deseo de mantener una relación de valor, por lo que podríamos señalar que el compromiso hacia una CMV influiría significativamente en las futuras intenciones con la comunidad. La relación de compromiso generada con la CMV existiría exclusivamente cuando la relación es importante y cuando la parte comprometida desea mantener una relación indefinida con la otra parte (Morgan y Hunt, 1994), por lo que se presume que el compromiso influiría en las futuras intenciones con la CMV.

*H3: El compromiso con la CMV influye significativamente en las futuras intenciones con la CMV.*

Figura 1: Modelo Explicativo e Hipótesis

## METODOLOGÍA

Se realizó un análisis cuantitativo transversal simple con una estrategia de obtención de datos multicanal: vía online (85%) y vía presencial (15%). El instrumento aplicado fue un cuestionario auto-administrado. Se usó una escala Likert de 7 puntos, donde 1 = “totalmente en desacuerdo” y 7 = “totalmente de acuerdo”. Previo a la realización de las encuestas se realizó un pre-test del instrumento con el fin de depurarlo. Los criterios utilizados para examinar la unidimensionalidad, validez convergente y fiabilidad de los constructos fueron: Kayser-Meyer-Olkin mayor que 0,6, Eigenvalue mayor que 1, el Test de Esfericidad de Bartlett menor que 0,5, cargas factoriales mayores a 0,7, y Alpha de Cronbach mayor que 0,7. El muestreo fue del tipo no probabilístico por conveniencia, la muestra consistió en 284 personas. El universo objetivo correspondió al total de personas chilenas mayores de 15 años, que son miembros de redes sociales Facebook y/o Twitter y que declaren participar en CMV creadas por empresas o por consumidores en dichos sitios. Se escogió Facebook, ya que es la red social que lidera el mercado chileno alcanzando a más del 90% de los usuarios que utilizan Internet, lo que se traduce en casi 7 millones de visitantes. Además, se escogió Twitter, ya que ha sido utilizado por 1,2 millones de personas en el último año (Comscore, 2011). Estas redes concentran la mayor cantidad de CMV creadas tanto por empresas como por consumidores.

## RESULTADOS

### Descriptivos

Casi el 80% de la muestra tiene entre 19 y 30 años. Alrededor del 60% son mujeres y el 40% son hombres. Más del 65% tiene estudios universitarios y casi el 10% tiene estudios de post grado. Más del 50% utiliza internet más de 4 horas diarias y casi el 100% utiliza Internet al menos 1 hora al día. El 100% de los encuestados declaró tener una cuenta en Facebook, un 59,2% en Twitter y un 56,7% en Youtube. Con menor participación aparecen Google Plus (20,4%) y LinkedIn (28,5%). Algunos encuestados declararon además, utilizar redes como Skype o Foursquare. El 67,6% declaró que participaban en

CMGE. Casi el 70% de la muestra visita la CMV al menos una vez por semana y que más del 20% lo hace entre dos y cuatro veces por semana. Incluso un 12% la visita todos los días. Más del 50% declaró que sus visitas a la comunidad son breves y no superan los diez minutos. El 34,9% declaró escribir dentro de la CMV al menos una vez a la semana, el 32,4% declaró escribir en esta CMV una vez al mes y el 32,7% una vez al año.

### Validación de la Escala

Se realizó un análisis de componentes principales con rotación varimax. Este análisis arrojó una solución de seis factores. Los seis componentes explicaron el 70,13% de la varianza. El análisis presentó una medida de adecuación muestral (KMO) de 0,903 y una prueba de esfericidad de Barlett con significancia  $< 0,01$ . Todos los Alphas de Crombach (AC) por cada constructo superaron los 0,8 (Utilidad Interpersonal AC= 0,93; Simpatía por la Marca AC= 0,84, Búsqueda de Entretenimiento AC= 0,87; Búsqueda de Información AC= 0,86; Expectativa de Entrega de Incentivos AC= 0,85; Búsqueda de Conveniencia AC= 0,81)

### Resultados Generales

El análisis de medias por constructo indicó que la Simpatía por la Marca obtuvo el promedio más alto (5,01), seguida por Búsqueda de Entretenimiento y Búsqueda de Conveniencia, ambas con un promedio de 4,43. En cuarto lugar, Expectativa de Entrega de Incentivos con 3,83, seguida por Búsqueda de Información con 3,42 y Utilidad Interpersonal con 3,35. Para descubrir la existencia de diferencias y/o similitudes entre las CMV generadas por empresas (CMGE) o generadas por consumidores (CMGC) en redes sociales se realizó un análisis de frecuencia y prueba Chi cuadrado. Respecto de si los participantes saben o no quién es el operador de esta comunidad, encontramos que solo el 23,3% de los participantes de CMGE saben quién es el operador de la comunidad. Mientras que el 53,8% de los participantes de CMGC declaran saber quién es el operador. Esta diferencia resultó ser significativa ( $p < 0,01$ ). El 63,2% de los usuarios de CMGE la encontraron a través de Internet en comparación con un 41,8% de los usuarios de CMGC. Por el contrario, se observa que un 58,2% de los usuarios de CMGC la encontraron a través de una recomendación de un amigo o familiar versus un 36,8% que declararon los usuarios de CMGE. Esta diferencia también resultó ser significativa ( $p < 0,01$ ).

Para identificar si existen diferencias y similitudes entre las CMGE y las CMGC en redes sociales utilizadas en Chile en cuanto a las razones que tienen los consumidores para comprometerse con las actividades de esa comunidad se realizó una serie de Test-t. Las medias más altas para los miembros de CMGE fueron Simpatía por la Marca ( $M=4,57$ ) y Expectativa de Entrega de Conveniencia ( $M=4,47$ ).

Los miembros de la CMGC mostraron un promedio significativamente mayor en Simpatía por la Marca (Media = 5,56) y en la Búsqueda de Entretenimiento (Media = 4,91) en comparación con los miembros de la CMGE (Media = 4,57,  $p < 0,01$ ; Media = 4,21,  $p < 0,01$ ). Para las demás razones, no se pudo encontrar diferencias significativas ( $p > 0,01$ ;  $p > 0,05$ ). Respecto de las diferencias o similitudes entre las CMGE y las CMGC en redes sociales utilizadas en Chile y el compromiso y futuras intenciones con la CMV, las diferencias resultaron ser significativas

### Prueba de Hipótesis

Para probar las Hipótesis desde la 1.1 a la 1.6 se realizó un análisis de regresión lineal. La “Utilidad Interpersonal”, “Simpatía por la Marca”, “Búsqueda de Entretenimiento” y “Búsqueda de información” influyen positivamente sobre el compromiso siendo significativa ( $p < 0,05$ ;  $p < 0,01$ ) por lo que se aceptan las hipótesis H1.1, H1.2, H1.3 y H1.4. La hipótesis H1.5 (Las “expectativas” de entrega de incentivos por parte de la CMV influyen negativamente en el compromiso con la CMV) se acepta ya que la búsqueda de incentivos influye negativamente sobre el compromiso ( $\beta = -0,135$ ;  $t = -2,757$ ;  $p < 0,01$ ).

La hipótesis H1.6 (La “Búsqueda de conveniencia” por parte de la CMV influye positivamente en el compromiso con la CMV) también se acepta ( $p > 0,05$ ).

Para explorar cómo las razones de los consumidores chilenos para entrar y participar en CMV en redes sociales se relacionan con el compromiso y futuras intenciones a las CMV, según el tipo de CMV, se realizó un análisis de regresión lineal (Ver Tabla N°7). Para las CMGE, la regresión resultó ser significativa con un  $R^2 = 0,407$ ,  $F = 21,32$ ,  $p < 0,01$ . El resultado del análisis de regresión indica que “Simpatía por la Marca” ( $\beta = 0,388$ ;  $t = 4,762$ ;  $p < 0,01$ ) y “Búsqueda de Información” ( $\beta = 0,162$ ;  $t = 2,226$ ;  $p < 0,05$ ) son predictores significativos del compromiso con la comunidad. La “Utilidad Interpersonal”, “Búsqueda de Entretenimiento”, “Expectativa de Entrega de Incentivos” y “Expectativa de Entrega de Conveniencia” no parecen como predictores significativos del compromiso con la comunidad. Para las CMGC, la regresión resultó ser significativa con un  $R^2 = 0,424$ ,  $F = 10,86$ ,  $p < 0,01$ . Se muestra que existen tres predictores significativos del Compromiso con las CMV “Simpatía por la Marca” ( $\beta = 0,339$ ;  $t = 3,725$ ;  $p < 0,01$ ), “Búsqueda de Entretenimiento” ( $\beta = 0,229$ ;  $t = 2,4$ ;  $p < 0,05$ ) y “Búsqueda de Información” ( $\beta = 0,314$ ;  $t = 2,983$ ;  $p < 0,01$ ).

Respecto de la CMGE y las futuras intenciones con la CMV, la regresión total es significativa  $R^2 = 0,341$ ,  $F = 16,059$ ,  $p < 0,01$ . El resultado del análisis de regresión muestra que dos motivos (“Simpatía por la Marca” y “Expectativa de Entrega de Conveniencia”) son predictores significativos de las futuras intenciones, siendo el predictor más poderoso la “Expectativa de Entrega de Conveniencia” ( $\beta = 0,273$ ) seguido por “Simpatía por la Marca” ( $\beta = 0,26$ ). Por el contrario, “Utilidad Interpersonal”, “Búsqueda de Entretenimiento”, “Búsqueda de Información” y “Expectativa de Entrega de Incentivos” no aparecen como predictores significativos. Para las CMGC, la regresión total es significativa  $R^2 = 0,349$ ,  $F = 7,495$ ,  $p < 0,01$  con dos razones significativas. La “Simpatía por la Marca” es el predictor más fuerte ( $\beta = 0,356$ ;  $t = 3,681$ ;  $p < 0,01$ ), seguida por la “Búsqueda de Información” ( $\beta = 0,322$ ;  $t = 2,88$ ;  $p < 0,05$ ). Las demás razones resultaron no ser predictores significativos. Finalmente, respecto de la Hipótesis 3 se acepta ( $p < 0,01$ ) por lo que el compromiso con la CMV influye significativamente en las futuras intenciones con la comunidad.

## CONCLUSIONES

El presente estudio comprueba efectivamente que *Facebook* es la red social más utilizada en Chile, seguida por *Twitter* y *Youtube*. Además, basado en los dos tipos de CMV en redes sociales: creadas por empresas (CMGE) y creadas por otros usuarios (CMGC) (Leimeister, Sidiras y Kremer, 2006) el estudio muestra que casi el 70% participa en CMGE y más del 60% se informó de su existencia a través de publicidad. En cambio para las CMGC casi el 60% se enteró por recomendación de un amigo. Una de las diferencias entre la CMV yace en que las CMGC tienen mayor conocimiento del operador y del patrocinador en comparación con las CMGE. Considerando que las empresas estimulan a los consumidores a que formen parte de sus CMV, resulta coherente que la mayoría encontrara la comunidad a través de publicidad y búsqueda por Internet, en comparación con las CMGC que fundamentalmente fueron encontradas a través de la recomendación de algún amigo o familiar.

Sin embargo, tanto las CMGE como las CMGC muestran niveles similares de compromiso con la comunidad y futuras intenciones, resultando en diferencias no significativas, al igual que en los resultados obtenidos en el estudio realizado por Sun et al., 2010. El estudio empírico ha permitido verificar la existencia de seis razones para utilizar estas CMV: *Utilidad Interpersonal*, *Simpatía por la Marca*, *Búsqueda de Entretenimiento*, *Búsqueda de Información*, *Expectativa de Entrega de Incentivos*, *Expectativa de Entrega de Conveniencia*. De las cuales, las principales razones consideradas por los usuarios encuestados en este estudio son *Simpatía por la Marca*, *Búsqueda de Conveniencia* y *Búsqueda de Entretenimiento*. Los hallazgos señalan que la *Utilidad Interpersonal* es un factor importante para que los miembros de una comunidad estén motivados para establecer y mantener una relación con otras personas

dentro de la CMV (Dholakia et al, 2004). En segundo lugar, la *Simpatía por la Marca* es siempre un motivo importante para que los consumidores entren y participen de una CMV. Los miembros quieren compartir su cariño y amor por la marca, así como el significado que tiene para ellos. Esta simpatía refuerza el sentido de pertenencia a esta comunidad virtual (Muñiz y O'Guinn, 2001). La *Búsqueda de Entretenimiento* indicaría que los consumidores utilizan la CMV para hacer nuevas conexiones, pasar tiempo con otros, jugar, etc. Es decir, los miembros buscan diversión y relajación a través de su participación en la comunidad. (Dholakia et al., 2004). En la *Búsqueda de Información*, los miembros de la comunidad formarían esta relación social para obtener y compartir información útil acerca de la marca. Respecto de las *Expectativas de Entrega de Incentivos*, los miembros de la comunidad esperan obtener recompensas e incentivos por una participación activa en la CMV. Existen incentivos monetarios y no monetarios para incentivar el uso de la comunidad virtual, lo cual también genera una boca-oído positiva a través de los consumidores que podría reforzar la relación entre el consumidor y la marca.

Con relación a las *Expectativa de Entrega de Conveniencia* es una motivación para los consumidores la facilidad para ingresar y acceder a la CMV ya que los proveen de información útil acerca de la marca, soporte para resolver problemas, entretenimiento para divertirse y relajarse, beneficios y un lugar en el cual pueden expresar su sentido de pertenencia e involucramiento con la marca. A partir de los resultados obtenidos en la presente investigación es posible concluir que existirían diferencias entre los tipos de CMV y las razones de participar en ellas. Por ejemplo, los miembros de las CMGC mostraron un promedio significativamente mayor en la *Simpatía por la Marca* y en la *Búsqueda de Entretenimiento* en comparación con los miembros de las CMGE.

Esto se puede explicar porque la interacción en este tipo de comunidades virtuales se desarrolla de forma voluntaria sin ánimo de recibir algún tipo de incentivo o beneficio. Por otro lado, para la relación existente entre las seis razones y el compromiso con la comunidad, los resultados indican un patrón similar para ambos tipos de CMV en cuanto a *Simpatía por la Marca* y *Búsqueda de Información*. Es decir, los miembros con motivaciones de *Simpatía por la Marca* y *Búsqueda de Información* serán más probablemente comprometidos con la CMV que aquellos miembros sin esas motivaciones. Respecto a la relación existente entre las motivaciones y las futuras intenciones con la comunidad, la *Simpatía por la Marca* se encontró como uno de los predictores más significativos de la intención de participación en la comunidad tanto para las CMGE como para las CMGC. La *Búsqueda de Conveniencia*, resultó no ser un predictor significativo de la intención de participar en las CMGE en la intención de participar en las CMGC. En conclusión, existen diferentes motivaciones para comprometerse con actividades dentro de una CMV, por lo que los especialistas en marketing locales deben desarrollar estrategias y tácticas especializadas para facilitar la participación de los consumidores.

Las experiencias positivas dentro de las CMV permitirían que miembros de la comunidad incrementen sus niveles de lealtad hacia la marca, la cual podría traducirse en un mayor apoyo hacia la marca y mayores compras (Bagozzi y Dholakia, 2006). Asimismo, hay que considerar la gran oportunidad que traen consigo las CMV para desarrollar estrategias de marketing, en las que casi el 70% de los miembros declaran visitar la comunidad al menos una vez por semana y que más del 20% lo hace entre dos y cuatro veces por semana. Sin embargo, estas visitas son breves y en más del 50% de los casos no superan los diez minutos, por lo cual, lo que se desea comunicar debe ser capaz de llamar la atención de la audiencia para motivar su participación continua lo que podría traducirse en compromiso con la marca. Este compromiso influiría significativamente en las futuras intenciones con la comunidad. Las CMV en redes sociales representan una gran oportunidad para los avisadores, ya que permiten interactuar de forma directa con los consumidores.

### Limitaciones

Las limitaciones de la presente investigación radican en los alcances de esta, ya que considera solo una muestra pequeña no probabilística de personas. Además, futuros estudios podrían replicar esta investigación utilizando una muestra balanceada por variables socio demográfica. De esta forma se podrían realizar análisis comparativos por segmentos de la población de las razones de participar en CMV en redes sociales y su influencia en el compromiso y futuras intenciones con la comunidad con usuarios, de manera de poder dar recomendaciones a los avisadores más específicas.

# **LA CONTABILIDAD MEDIO AMBIENTAL Y LOS IMPUESTOS AMBIENTALES APLICADOS EN LAS PYMES: CASO EMPRESAS AGRÍCOLAS DEL VALLE DE AUTLÁN JALISCO, MÉXICO (RESULTADOS)**

Martha Sheila Gómez González, Universidad de Guadalajara

Mónica Araceli Reyes Rodríguez, Universidad de Guadalajara

Roberto Flores Villegas, Universidad de Guadalajara

## **RESUMEN**

*La calidad del medio ambiente es una de las actuales preocupaciones a nivel mundial; las empresas ya empiezan a establecer vinculaciones entre los aspectos económicos, sociales y ambientales, es un problema social que no puede dejarse de lado. La presente investigación es el resultado de un diagnóstico aplicado en PYMES agrícolas del Valle Autlán Jalisco, México, respecto a la aplicación de la contabilidad medio ambiental y su aspecto fiscal en las mismas, con el fin establecer y aplicar un sistema de determinación costos destinados al daño y cuidado del medio ambiente, así como los beneficios fiscales aplicables a estas mismas. Ha sido uno de los propósitos conocer la relación de la actividad agrícola y su impacto en el deterioro ambiental para contrarrestar esta problemática y a partir de ello se ha establecido una herramienta que aplica conceptos contables en los Estados Financieros de las empresas, el costo beneficio de la contabilidad ambiental y el impacto fiscal de las mismas.*

**PALABRAS CLAVE:** Contabilidad ambiental, impuestos ambientales, empresas agrícolas

## **ENVIRONMENTAL ACCOUNTING AND ENVIRONMENTAL TAXES APPLIED IN SMALL AND MEDIUM-SIZE BUSINESS: CASE AGRICULTURAL ENTERPRISES AUTLAN VALLEY, JALISCO, MEXICO (RESULTS)**

### **ABSTRACT**

*The quality of the environment is one of the current global concerns, companies are beginning to establish linkages between economic, social and environmental, is a social problem that cannot be ignored. This research is the result of a diagnosis applied in small and medium-sized agricultural enterprises Autlan Valley, Jalisco, Mexico, on the implementation of environmental accounting and tax side in them, to establish and implement a system determining costs for damage and environmental care, and tax benefits applicable to the same. It was one of the purposes to know the relationship of agriculture and its impact on environmental degradation to counter this problem and from it has established a tool that applies accounting concepts in the financial statements of companies, the cost benefit of environmental accounting and fiscal impact thereof.*

**JEL:** M2, M4

**KEY WORDS:** Environmental accounting, environmental taxes, agricultural enterprises

### **INTRODUCCIÓN**

El problema que representa actualmente la degradación del medio ambiente a nivel mundial, es en gran parte, resultado de las formas de producción de las sociedades industriales, las cuales tienen como

objetivo el crecimiento económico dejando de lado los ciclos de la naturaleza y el daño que efectúan a la misma. Esta tendencia se observa mayormente en los países industrializados, pero no es la excepción en los países en vías de desarrollo, donde la poca atención y la falta de recursos económico que se destinen a la protección del medio ambiente. Un medio ambiente sano y los recursos naturales constituyen la base para un desarrollo económico, motivo por el cual es importante y necesario tomar acciones que permitan mitigar los daños al medio ambiente. Los cultivos agrícolas a través de la historia han sido uno de los agentes responsables del deterioro ambiental, deforestación, tecnologías agrícolas mal utilizadas, uso excesivo de agroquímicos, etc., (Jardel, 2000).

Desde la perspectiva agroecológica y partiendo de la noción de sustentabilidad surge el cuestionamiento de las prácticas agrícolas que se desarrollan en regiones particulares, como es el caso del Valle de Autlán, Jalisco, México, objeto de estudio de esta investigación. El Valle de Autlán es un área interesante para el análisis de la agricultura principalmente por dos razones: La agricultura es una actividad central en la economía regional y ha sido uno de los factores más significativos de cambio ambiental en el último medio siglo en la región, y ha sido uno de los agentes responsables del deterioro ambiental, deforestación, tecnologías agrícolas mal utilizadas, uso excesivo de agroquímicos, etc., dicha problemática ambiental se deriva de las explotaciones agrícolas en el Valle de Autlán, incluye procesos de degradación y contaminación, como; salinización, plagas agrícolas, contaminación de mantos freáticos por abonos orgánicos y pesticidas, contaminación por materia orgánica y desechos industriales, contaminación atmosférica por quemas agrícolas y el uso intensivo de maquinaria agrícola. (Jardel, 2000). Este impacto ambiental se presenta de forma indirecta por las actividades agrícolas debido a una falta de cultura ambiental y en un problema de salud pública. (Gómez, 2012)

Existe una problemática ya que por un lado existe la necesidad de la actividad agrícola y por otro, el deterioro medioambiental, lo cual no es recogido por la Contabilidad, y básicamente no se controlan ni se analizan los costos asociados a esta problemática. El resultado de este trabajo de investigación es un diagnóstico en las PYMES agrícolas del Valle Autlán Jalisco, México, respecto a la aplicación de la contabilidad medio ambiental y su aspecto fiscal con el fin de establecer un sistema contable que permita determinar costos destinados al daño y cuidado del medio ambiente y los beneficios fiscales aplicables a las empresas que son socialmente responsables.

## REVISIÓN LITERARIA

Una de las preocupaciones más importantes de nuestro tiempo es la calidad del entorno como es el aire, el agua, la tierra y su biodiversidad: las empresas deben producir bienes sin perder de vista el medio ambiente, esto implica pasar de un desarrollo basado en el crecimiento económico a uno en donde se establecen estrechas vinculaciones entre aspectos económicos, sociales y ambientales, capaz de aprovechar las oportunidades que supone avanzar simultáneamente en estos tres ámbitos, sin que el avance de uno signifique ir en deterioro del otro (Division for Sustainable Development, 2009).

Los problemas ambientales son complejos y múltiples sus causas y alcances, para su explicación se requiere de los fundamentos teóricos y estructuras metodológicas de diversas ciencias, entre las cuales se encuentra la contabilidad. Esta disciplina se concibe como una herramienta que genera información útil para la toma de decisiones; para ello debe considerar la base conceptual que surge de la relación, hasta hace poco ignorada, de las empresas con el ambiente en el cual interactúan. (Ablan y Méndez 2004). Conservar los recursos naturales y tener un impacto positivo en el ambiente, es permanentemente referido como uno de los objetivos de las políticas de desarrollo de la agricultura en México. Sin embargo, es bastante conocido que gran parte de las prácticas de producción en la agricultura resultan en un deterioro, o al menos desperdicio, de los recursos naturales. Superar esta situación requiere de conocimientos, capacidad de gestión, disponibilidad de tecnología, inversiones y otras prácticas que permitan producir en forma tal que se aprovechen mejor y no se destruyan los recursos naturales. (Pomareda 2000).

En el contexto ambiental, inclusive por las organizaciones empresariales, la explotación de los recursos naturales descontrolada ha llevado a la polución y a la degradación. De esta forma, la responsabilidad empresarial en relación al medio ambiente es un hecho consumado. La comprensión de estos cambios hace que las empresas se preocupen con la administración y control de los impactos ambientales. Como ciencia que valora y mide el patrimonio de las organizaciones, la contabilidad también participa de estos cambios. Puede evidenciar la interacción entre las empresas y el medio ambiente, evidenciando los efectos externos a este y qué hacer para utilizarlos como instrumentos de gestión con el fin de controlar o reducir las agresiones al ecosistema. (Dauzacker, Campo, y Melo, 2007)

La contabilidad tienen un importante lugar en el proceso de mejorar la gestión ambiental, debido a que constituye la base para la toma de decisiones gerenciales, y lo que es importante ayuda a definir y medir el éxito de las acciones emprendidas por las organizaciones (Gray, Bebbinton, & Walters, 1999). Desde hace treinta años surge la protección al medio ambiente como una reacción al daño material de los recursos naturales. Parker (1971), Estes (1972) señalaban que la contabilidad debía incluir la cuestión medioambiental con el fin de proporcionar indicadores de gestión que incluyeran criterios sociales y medioambientales. Desde entonces y hasta la fecha se han ido incorporando diferentes disciplinas del conocimiento, adaptándose cada una a las necesidades de cuidado y defensa del medio ambiente.

El grupo de trabajo Intergubernamental de Expertos en Normalización Contable Internacional (ISAR) también ha llamado la atención, en sus reuniones periódicas, sobre la necesidad de que los estados financieros recojan información relativa a la actividad medioambiental de la empresa (Naciones Unidas, 1992, 1993). La contabilidad es una ciencia empírica, social y económica, con un importante componente normativo, que se encarga del estudio de la realidad económica. Para ello, es capaz de proporcionar información acerca de esa realidad lo más relevante, fiable, rigurosa, comprensible y fiel que resulte posible, teniendo en cuenta las necesidades específicas de todos aquellos usuarios que tienen derecho razonable a esa información. Al respecto autores como Larrinaga (2007) y Llull (2008) se refieren a la importancia de asumir criterios en cuanto a la racionalidad de esta información asociados a la actividad ambiental. Gray (1990) afirma que el talento más importante de la contabilidad probablemente es el diseño, reconocimiento, evaluación y control de los sistemas de información y que, al igual que en los aspectos tradicionales (valoración de inventarios y de activos, de resultados) en los aspectos medioambientales deberá confiar en la capacidad de otros expertos.

Rubenstein (1992) enfatiza la necesidad de redefinir la contabilidad, en el sentido de expandir las definiciones de activos y pasivos y la introducción en los estados financieros de estimadores del uso de los recursos naturales. En tal sentido, la contabilidad debe tener la capacidad de aglutinar información de tipo relevante sobre los hechos económicos de manera tal que pueda ser utilizada de forma rápida y oportuna por sus usuarios. Desde esta perspectiva, desde la década de los 70 hasta la fecha surge como una necesidad imperiosa para las empresas, accionistas y proveedores una nueva área de interés, la contabilidad ambiental. La contabilidad no es neutra en el comportamiento medioambiental de la empresa, no es autónoma, sus prácticas están determinadas por el marco legal y la regulación medioambiental. Es erróneo considerar que la contabilidad no tiene ningún papel en las actividades de la empresa con consecuencias medioambientales.

Desde el ámbito de la contabilidad medioambiental los elementos implicados en la información financiera medioambiental son: activo, pasivo, patrimonio, gastos e ingresos. La información medioambiental es la preparación y provisión, por parte de la gerencia, de información destinada al consumo externo, sobre el estado y desempeño medioambiental de la organización. Esta información puede presentarse en un informe separado y distinguirse claramente de la contabilidad tradicional. (González, 2002) La información suministrada por las empresas debe cumplir una serie de cualidades que le permitan alcanzar el objetivo establecido para la contabilidad financiera medioambiental. Estas características cualitativas

operan como garantía de que las normas que van a orientar la elaboración de la información controlan la relación entre la entidad informativa y los partícipes. Uno de los problemas que precisa más desarrollo es la adecuación de los elementos de los estados financieros tradicionales al hecho medioambiental y la configuración de nuevos elementos propios de la información medioambiental.

Desde el ámbito de contabilidad financiera medioambiental los elementos implicados son activo, pasivo y gasto. En los tres casos las definiciones habitualmente utilizadas, excluyen parte de la problemática medioambiental. Se pueden señalar las debilidades siguientes: En primer lugar la definición de activo está vinculada a la obtención de beneficios económicos futuros. Sin embargo, no está claro que algunas inversiones en activos materiales medioambientales generen rendimiento para la entidad, aunque el costo social disminuya. Como resultado de la definición de activo, el tratamiento de los costos medioambientales tiende a realizarse de forma inadecuada, dado de que una parte de ellos podría capitalizarse, aunque no produjesen ingresos. Otro problema de los gastos medioambientales es su identificación y clasificación, para su adecuada presentación en los estados financieros. La complejidad de dichos gastos incide en que se encuentren agrupados en otras partidas o se clasifiquen como ordinarios y extraordinarios. En la definición del pasivo, basada en la definición de sucesos de hechos pasados, se impide el reconocimiento de obligaciones futuras, en cuanto a los pasivos debería recogerse con mayor claridad la introducción del concepto de obligación asumida por la empresa.

Diversas investigaciones como las de Llul (2006), Fronti (2006) han demostrado que las empresas suelen proporcionar información confusa, en el mejor de los casos, y engañosa, en el peor caso. Tampoco existe una correlación clara entre el suministro de información medioambiental y el resultado medioambiental de las empresas. En el análisis del marco de la contabilidad ambiental, la consideración de este tipo de información significa la ampliación del objetivo tradicional de utilidad de la información contable. Los problemas ambientales en las explotaciones agrícolas de El Valle de Autlán están asociados a la intensidad del uso de agroquímicos que es un factor que contribuye al deterioro de las aguas superficiales y subterráneas y la alteración de la biodiversidad; el exceso de fertilizantes afecta la eutrofización de suelos y aguas con las consecuencias en la sobre fertilización de los cultivos para la alimentación humana principalmente de nitrógeno; el sistema de cultivo comercial del agave que está impactando la erosión del suelo; el manejo inadecuado de los residuos de cosechas y de los envases de los agroquímicos y otros desechos industriales de uso agropecuario. (CADER, 2006). No hace mucho tiempo, se consideraba que la única responsabilidad de la empresa era con sus accionistas, con los dueños de su patrimonio; más adelante se amplió dicha responsabilidad comprendiendo las empresas que también con el mercado, con el consumidor final, se asumen responsabilidades ya, más actualmente, esta visión de responsabilidad empresarial no resulta suficiente ni aceptable en diferentes regiones.

Si bien se acepta como una misión la generación de utilidades, hablándose de empresas con fines lucrativos, en la actualidad se exige también que la empresa tome en cuenta que sus actividades afectan, de una u otra forma (positiva o negativamente), la calidad de vida de su personal y de las comunidades en las que realiza sus operaciones. En el Plan Nacional de Desarrollo 2007-2012 se establece como una de sus estrategias (8.1), proteger el país de plagas y enfermedades y mejorar la situación sanitaria, mediante la aplicación de la normatividad en materia de sanidad e inocuidad agroalimentaria, por lo que El Gobierno Federal mediante SAGARPA, y la Dirección General de Inocuidad Agroalimentaria, Acuícola y Pesquera cuentan con el programa Servicio Nacional de Sanidad, Inocuidad y Calidad Agroalimentaria, (SENASICA) que cuenta con lineamientos generales para la operación y certificación de Sistemas de Reducción de Riesgos de Contaminación (SRRC) en la producción primaria de alimentos de origen agrícola los cuales son voluntarios y buscan minimizar la contaminación física, química y microbiológica en las operaciones de campo y empaque de los productos hortofrutícolas.

La información y los procedimientos han sido desarrollados con datos provenientes de un amplio sector de la industria de las hortalizas frescas y representan los mejores esfuerzos de la iniciativa de Inocuidad

de Alimentos (Food Safety) para proporcionar información acerca del mejor manejo posible y las consideraciones importantes que permitan reducir los riesgos potenciales de contaminación física, química y microbiológica de una manera consistente con los reglamentos existentes, así como con las normas y los lineamientos. Estos lineamientos voluntarios, así como los formatos que se recomiendan, están diseñados como guía para ser aplicados por algún agricultor en sus campos e instalaciones de empaque de acuerdo a sus propias características. Muchas de las recomendaciones que contiene este documento ya son obligatorias según las leyes y regulaciones federales, estatales y locales. Finalmente y más importante, estos lineamientos están diseñados para ser generales y no específicos. Están diseñados para informar a otros acerca de nuestra actual y evolutiva atención a estos temas.

#### El Valle de Autlán, Jalisco, México

El municipio de Autlán de Navarro se localiza al suroeste del Estado Jalisco, entre las coordenadas extremas de 19°34'30" a los 19°53'45" de latitud norte, y 104 °07'00" a 104°27'35" de longitud oeste. Limita al norte con el municipio de Ayutla, al sur con Cuautitlán, al oriente con El Grullo y al poniente con los municipios de Purificación y Casimiro Castillo y pertenece a la región Costa Sur. Cuenta con una superficie de 927.3 km<sup>2</sup>, y con una población de 57,559 habitantes (INEGI, 2010). Está integrado por 126 ejidos y sus localidades; las más importantes son Autlán de Navarro como cabecera municipal, El Chante, Ahuacapán, Lagunillas y El Corcovado.

En el valle se desarrolla un sistema de producción intensivo básicamente en cultivos hortícolas y caña de azúcar, que estos dependen esencialmente de insumos externos, de una tecnología de punta, y de un uso excesivo y elevado nivel de agroquímicos. La siembra de las hortalizas en la región es importante por la derrama económica y social que genera en la mano de obra que contrata, pero también, tiene efectos ambientales por el elevado uso de insumos externos y de agroquímicos que emplea, y a las elevadas inversiones que destina en tecnología y que se convierten en una limitante para pequeños y en su caso para algunos medianos productores el desarrollar este tipo de agricultura, lo que conduce a que los pocos productores que hay logren incrementar la superficie para esta actividad.

El sistema de producción vigente, conducirá en un futuro a una concentración de tierras productivas en pocas manos conformando unidades de producción con características empresariales integradas a mercados internacionales, la cual se acompaña de un detrimento en la seguridad alimentaria regional, caracterizado por un excesivo uso de insumos agrícolas altamente tóxicos que como consecuencia traerá una contaminación de las aguas superficiales y subterráneas, una reducción en la variabilidad de los cultivos, proliferación de plagas y enfermedades, contaminación del aire por la excesiva quema en el cultivo de la caña. Con los problemas señalados, se prevé de un riesgo de la seguridad económica y social, una disminución en la siembra de los cultivos de maíz, sorgo, frijol, que comprenden la base de la alimentación de la población regional, así como de un cambio en la estructura de la superficie cultivada y en la rentabilidad de los mismos. De no hacer un cambio y bajo las condiciones actuales de producción agrícola que se tiene en el valle, esto puede conducir en el corto y mediano plazo a una catástrofe.

(Gómez, 2012) Según Jardel (2000) la práctica de la agricultura en el Valle de Autlán es muy antigua, remontándose a la época prehispánica. A la llegada de los españoles en la primera mitad del siglo XVI, la cantidad de población de la región alcanzaba un nivel que no volvió a recuperar hasta la década de 1960. Esta población numerosa se mantenía de la agricultura. En los siglos siguientes la actividad agrícola se desarrolló en torno a ranchos y haciendas, y después de la Revolución en 1910 en torno a los ejidos, que producían fundamentalmente para autoconsumo y comercio local. Hasta la década de 1950 la agricultura en el Municipio de Autlán era predominante de temporal. Se cultivaban principalmente granos básicos sobre todo maíz, frijol y sorgo. El riego estaba restringido a áreas pequeñas, cercanas a ríos y arroyos, y las vías de comunicación eran precarias limitando el transporte de los productos y limitando el desarrollo

de una agricultura comercial de mayor envergadura. A partir de los años 1950 ocurrieron una serie de eventos que originaron un cambio significativo en la agricultura del municipio de Autlán.

En las décadas de 1950-1960 se inicia programas gubernamentales de desarrollo que favorecen la construcción de infraestructura y las comunicaciones. Se introduce la electrificación el sistema nacional telefónico, se comunica a Autlán con Guadalajara y la Costa del Pacífico por carretera pavimentada, se construye el sistema de riego del Valle de Autlán-El Grullo, se desarrollan programas de fomento agropecuario y se establece la agroindustria cañera “Ingenio Melchor Ocampo”, en este periodo aumenta la demanda de recursos naturales y productos agrícolas como parte de la expansión económica del país y la demanda del mercado norteamericano. El desarrollo de la actividad minera y de la explotación maderera es también parte del contexto del desarrollo y de la actividad de la economía en la región. Con la minera, la madera y cultivos comerciales como algodón y jitomate en Autlán, y melón en.

El Grullo entra capital extranjero en la región. La ocurrencia de estos eventos en el valle de Autlán llevo a la diversificación de cultivos, produciéndose además de granos básicos, hortalizas, caña de azúcar y frutales. Este nuevo giro que dio la agricultura con cambios en las técnicas de cultivos y el uso de insumos, inició además una serie de impactos económicos (agriculturas dependientes de ciclos de mercados), sociales (cambios en la organización de la actividad agrícola condiciones de trabajo de los jornales) y ambientales (como la alteración hidrológica por las obras de regadío y la extracción de aguas freáticas, la degradación de suelos, el uso creciente de agroquímicos) los cuales necesitan ser evaluados a través de estudios específicos. (Quintero, 2000)

## METODOLOGÍA

La metodología aplicada para el desarrollo de la presente investigación de corte cualitativo, lo que ha permitido abundar, profundizar en los conceptos importantes, destacándose a través de la entrevista al empresario, nuevas ideas, nuevos panoramas, nuevas formas de entender el objeto de estudio atendido a lo largo de estas páginas. Se elaboraron fichas de trabajo o bibliográficas, a partir de la consulta de fuentes de información especializada, las cuales fueron integradas, en su caso, al cuerpo de este trabajo final mediante su respectivo crédito al autor de dicha información Para la realización de esta investigación se utilizó un diseño de investigación no experimental, específicamente se utilizó un diseño transaccional descriptivo. Dado que no fue posible la conformación de grupos artificiales en el experimento, el grupo se integró de manera dirigida, no intervino ningún proceso de selección probabilístico.

Los participantes en el estudio fueron agricultores de la región Costa Sur, del estado de Jalisco, dentro del padrón de la Junta Local de Sanidad Vegetal Región Sierra de Amula, Cader No. 26 de Autlán conformado por 83 agricultores de interés en el estudio, solo 6 agricultores cumplieron con una de la característica clave para el estudio, que en este caso era que los agricultores estuvieran certificados por alguna agencia reconocida y otras empresas que no estuvieran certificadas pero en las mismas condiciones de producción del producto y en semejantes cantidades producidas. La tabla 1 contiene la relación de las empresas consideradas en la investigación:

Tabla 1: Empresas Consideradas

NOMBRE DE LA EMPRESA	CULTIVO	CERTIFICACIÓN
Agrícola la Tunita	Chile Morrón	Si
Agro invernadero la Esperanza	Chile Morrón	No
Agrícola los Chivos	Tomate	Si
Grupo Agrícola RIJAS	Tomate	No
Agrícola ROAR	Limón	Si
Productores Agrícolas y Ganaderos el Mezcalito	Limón	No

*En esta tabla se describe las empresas consideradas para la investigación, su denominación, el producto que cultiva y si la misma cuenta o no con un proceso certificado de producción inocua.*

## RESULTADOS

Se aplicaron en total 2 tipos de cuestionarios, uno dirigido a las empresas que cuentan con un proceso de producción certificado y el otro para quienes no lo llevan, esto con el fin de identificar las diferencias entre empresas agrícolas que se comprometen con la responsabilidad social y las que no, llegando con ello al diagnóstico de la aplicación de las partidas ambientales y su incidencia fiscal.

Tabla 2: Superficie de Producción y Control del Proceso de Producción

NOMBRE DE LA EMPRESA	CULTIVO	SUPERFICIE (Ha)	PRODUCCIÓN
Agrícola la Tunita	Chile Morrón	1	Ambiental
Agro invernadero la Esperanza	Chile Morrón	1	Tradicional
Agrícola los Chivos	Tomate	4	Ambiental
Grupo Agrícola RIJAS	Tomate	8	Tradicional
Agrícola ROAR	Limón	40	Ambiental
Productores Agrícolas y Ganaderos el Mezcalito	Limón	40	Tradicional

*En esta tabla se muestra la superficie de las empresas consideradas así como la forma de cultivo que utilizan.*

En la tabla 2 se observa que las empresas que se encuentran certificadas en sus procesos de producción cuentan con un proceso ambiental, en tanto que las empresas que no se encuentran certificadas no utilizan un proceso de producción ambiental, sino que lo hacen de forma tradicional.

Tabla 3: Superficie de Producción y Control del Proceso de Producción

NOMBRE DE LA EMPRESA	MERCADO	VOLÚMEN DE PRODUCCIÓN
Agrícola la Tunita	Nacional e Internacional	120
Agro invernadero la Esperanza	Nacional	110
Agrícola los Chivos	Nacional e Internacional	125
Grupo Agrícola RIJAS	Nacional	60
Agrícola ROAR	Nacional e Internacional	30
Productores Agrícolas y Ganaderos el Mezcalito	Nacional	15

*En la tabla se muestra el tipo de mercado y el volumen de producción*

En la tabla 3 se señala el mercado en el que se colocan sus productos así como las toneladas de producción obtenidas por hectárea. Se desprende que las empresas que utilizan procesos ambientales en la producción venden sus productos tanto en el país como en el extranjero, en tanto que las empresas que sólo venden en territorio nacional no cuentan con procesos certificados y su proceso de producción se elabora de forma tradicional.

Tabla 4: Superficie de Producción y Control del Proceso de Producción

NOMBRE DE LA EMPRESA	Gasto de Agua (m <sup>3</sup> x Ha)	Costo del químico (x Ha)
Agrícola la Tunita	32 a 64	\$5,000
Agro invernadero la Esperanza	30	\$10,000
Agrícola los Chivos	100	\$13,000
Grupo Agrícola RIJAS	80	\$5,000
Agrícola ROAR	Sin información	\$480
Productores Agrícolas y Ganaderos el Mezcalito	60.5	\$960

*Esta tabla muestra el consumo de agua por hectárea así como el costo del químico utilizado por cada hectárea.*

La tabla 4 muestra cuáles es el consumo de agua por hectárea así como el costo del químico que se utiliza por hectárea. En lo que se refiere al gasto por agua en la empresa Agrícola ROAR, la empresa no cuenta con esa información, razón por la cual no se muestra. Los costos se muestran en pesos mexicanos.

Tabla 5: Ingresos Y Egresos Obtenidos en el Ejercicio 2012

NOMBRE DE LA EMPRESA	Ingresos	Egresos	Utilidad Bruta	% Utilidad
Agrícola la Tunita	\$1,200,000	\$840,000	\$360,000	30%
Agro invernadero la Esperanza	300,000	200,000	100,000	33%
Agrícola los Chivos	2,000,000	1,060,000	400,000	20%
Grupo Agrícola RIJAS	3,360,000	2,560,000	800,000	24%
Agrícola ROAR	5,760,000	2,000,000	3,760,000	65%
Productores Agrícolas y Ganaderos el Mezcalito	2,700,000	1,600,000	1,100,000	41%

*Esta tabla muestra los ingresos y egresos obtenidos durante el ejercicio 2012.*

La tabla 5 se refiere a los ingresos y egresos obtenidos durante el ejercicio 2012. Se observa que las empresas certificadas y que llevan un proceso de producción certificado obtuvieron mayores ingresos y que si bien sus costos también fueron mayores, la relación con sus ingresos es menor en contraste con las empresas que no cuentan con procesos certificados. Lo cual demuestra las empresas certificadas tienen mayores egresos pero también mayores ingresos, ya que gran parte de la venta de sus productos los efectúan a empresas extranjeras, las cuales tienen establecido como requisito para la compra que sean alimentos inocuos.

Tabla 6: Identificación de Partidas Ambientales en su Sistema Contable

NOMBRE DE LA EMPRESA	Activos	Costos y Gastos	Impuestos
Agrícola la Tunita	SI	SI	NO
Agro invernadero la Esperanza	NO	NO	NO
Agrícola los Chivos	NO	NO	NO
Grupo Agrícola RIJAS	NO	NO	NO
Agrícola ROAR	SI	NO	NO
Productores Agrícolas y Ganaderos el Mezcalito	NO	NO	NO

*Esta tabla muestra las partidas ambientales identificables en cada empresa.*

La tabla 6 muestra las cuentas ambientales que se pueden identificar en las empresas a partir de su sistema contable. La mayoría de las empresas no tienen establecidas cuentas ambientales para los activos, costos y gastos e impuestos ambientales que erogan.

## CONCLUSIONES

En esta investigación se ha dado a conocer un concepto, una visión empresarial, un modelo de negocios que, en la práctica, se aleja por completo de la tradición administrativa mexicana de las ganancias por las ganancias mismas, sin consideraciones muchas veces de tipo ético, alimenticio, ecológico, de protección

al medio ambiente, como deberían ser todas las acciones que emanen de la actividad humana. La tendencia internacional en el tema de Responsabilidad Social Empresarial van en aumento; cada día son más las empresas que se suscriben, sobre todo en el mundo industrializado, sin que esto tampoco sea una exclusividad, en este rumbo de RSE, con lo que ello implica en términos de protección de derechos de stakeholders, pero también medioambiental, de empleados, de proveedores y clientes, que permita a la empresa la sustentabilidad mercadológica, financiera y ecológica o medioambiental que es necesaria preservar. Las inversiones en activos fijos que contribuyen a la producción de bienes de forma ambientalmente responsable, de ahorro de agua, de energía, los costos de producción que la empresa realiza para la producción de sus cultivos, como la preparación del suelo, la compra de semilla, los gastos de operación ambientales, todos estos adicionales a las inversiones, costos o gastos de operación que no implican partidas ambientales, deben plasmarse en los Estados Financieros, a objeto de determinar en ellos el costo por el daño al medio ambiente, así como los costos o gastos que se deben destinar a resarcir el mismo daño ambiental por la producción.

Si bien, las empresas que se encuentran certificadas tienen la obligación de cambiar sus procesos productivos, realizando acciones para producir sanamente sus productos, al igual que con insumos libres de químicos, esto no se ve reflejado en sus Estados Financieros. La contabilidad proporciona no solo información económica, sino también información social y ambiental; es un error considerar que la contabilidad no tiene ningún papel en las actividades ambientales, lo cual obliga a implementar un sistema de Contabilidad Medio ambiental que lo refleje el costo-beneficio de la actuación de la empresa con respecto al medio ambiente, producto de una nueva investigación que se realizará en un futuro, a fin de darle continuidad a la presente.

# **COSTOS MONETARIOS DE LA DESERCIÓN ESTUDIANTIL EN LOS PROGRAMAS ACADÉMICOS EN LA UNIVERSIDAD DE LA GUAJIRA COLOMBIA**

Marlenis Ucrós Brito, Universidad de la Guajira  
Dalmer Vargas Palacios, Universidad de la Guajira  
Charles J. Blanco M., Universidad del Zulia

## **RESUMEN**

*El objetivo de la presente investigación fue determinar los costos monetarios de la deserción estudiantil en los programas académicos de la Universidad de La Guajira-Colombia y sus extensiones 2007-2011, la investigación es descriptiva, bajo un enfoque cuantitativo. Los resultados evidencian que los costos de deserción en la Universidad de La Guajira, es un indicador relevante en la medida que refleja el grado de eficiencia de sus políticas institucionales. Sin embargo, la estimación de los costos monetarios y las tasas de deserción, presentan diferencias de acuerdo a la población y periodos analizados, las cuales son: mayor tasa de deserción y costos, tanto en la sede principal como en las extensiones, fue el correspondiente al segundo periodo académico del 2010, donde el rango de la tasa de deserción, osciló entre el 12.88 % y el 27.29%, alcanzando altos costos, de acuerdo a los programas académicos relacionados en estos rangos. También se observó, que la tendencia más alta en la generación de mayores tasas de deserción y costos son los programas ofrecidos en las extensiones de Maicao, Fonseca y Villanueva. Este indicador se ve afectado en su tendencia por diversas causas, donde los factores más relevantes son los siguientes: bajo rendimiento académico, la falta de orientación profesional y el escaso apoyo institucional.*

**PALABRAS CLAVES:** Costos Monetarios, Deserción estudiantil, Programas Académicos, Universidad de la Guajira, Colombia

## **MONETARY COSTS OF THE STUDENT DESERTION IN THE ACADEMICS PROGRAMS IN THE UNIVERSITY OF LA GUAJIRA-COLOMBIA**

### **ABSTRACT**

*The objective of the present investigation was to determine the monetary costs of the student desertion in the academic programs of the University of La Guajira-Colombia and their extensions 2007-2011, the investigation is descriptive, under a quantitative approach. The results evidence that the costs of desertion in the University of La Guajira, are an excellent indicator in the measurement that reflects the degree of efficiency of its institutional policies. However, the estimation of the monetary costs and the rates of desertion, present differences according to the population and analyzed periods, which are: greater rate of desertion and costs, as much in the main seat as in the extensions, was the corresponding one to the second academic period of the 2010, where the rank of the rate of desertion, oscillated between 12,88% and the 27,29%, reaching high costs, according to related academics programs in these ranks. Also it was observed, that the highest tendency in the generation of greater rates of desertion and costs is the programs offered in the extensions of Maicao, Fonseca and Villanueva. This indicator is affected in its tendency for to many causes, where the most excellent factors are the following ones: under academic efficiency, the absence of professional direction and the little institutional support.*

**JEL:** I2, I22, I23

**KEYWORDS:** Monetary costs, student Desertion, Academics Programs, University of La Guajira, Colombia

## INTRODUCCION

En el sistema de educación superior colombiana, se han producido cambios fundamentales caracterizados por el incremento de Instituciones de Educación Superior (IES), los cuales se manifiestan en el aumento de la cobertura en matrícula, sin unas óptimas condiciones de calidad de los programas académicos; escasos recursos económicos para su funcionamiento, como es el caso de las universidades públicas; desorganización académica-administrativa de las mismas; deficiencias de los profesores en el desarrollo de las funciones de docencia, investigación y proyección social; falta de apoyo académico y socioeconómico de los estudiantes de escasos recursos (Bienestar Universitario, becas, subsidios, etc.); modelos currículos incoherentes con el Proyecto Educativo Institucional-PEI y la carencia de un eficiente sistema de información estadística. Esto ha impulsado a considerar la deserción estudiantil, como la imposibilidad de retener al estudiante matriculado en un programa académico, lo que podría calificarse como un bajo índice de eficiencia para las mismas.

El propósito de la investigación fue determinar los costos monetarios de la deserción estudiantil en los programas académicos de la Universidad de La Guajira-Colombia y sus extensiones 2007-2011, con el fin de instituir el modelo para calcular los costos monetarios relacionados con la deserción de sus programas. Esta investigación se presenta organizada como sigue: En la sección de revisión de literatura se plantean los argumentos que sustentan el estado de la deserción en la educación superior y sus estadísticas en el SPADIES (Sistema de Prevención y Atención de la Deserción en las Instituciones de Educación Superior), cuyo objetivo es el seguimiento sobre las cifras de la deserción de estudiantes de la educación superior con el fin de identificar su comportamiento, causas, variables y riesgos de la deserción en este nivel de formación, para luego brindar el apoyo que permita alcanzar la permanencia del estudiante en las universidades. Posteriormente se presenta la metodología utilizada, en donde describe los procedimientos para calcular la tasa de deserción por periodo académico y el cálculo del costo monetario. Seguidamente se presentan los resultados de la investigación y conclusiones.

## REVISION LITERATURA

En la literatura relacionada con la deserción se distinguen varios conceptos que permiten clasificarla de acuerdo con el tiempo de permanencia en el sistema educativo. Castaño (2004). Dentro de este marco de referencia, Salcedo (2010), efectuó análisis de los diferentes estudios realizados en Colombia sobre la deserción y los factores que la causan. En general, en los estudios empíricos previos se presentan una información en términos cuantitativos de la deserción de los estudiantes de pregrado en la Universidad de Ibagué, señalando la gravedad del problema y el escaso nivel de atención institucional, generalizada en la mayoría de Instituciones de Educación Superior, (IES) en Colombia. Más de la mitad de los estudiantes universitarios abandonan sus carreras sin obtener un título profesional; una alta proporción de estudiantes prolongan el tiempo de estudios generando una alta rotación interna. González y otros (2008). También, las estadísticas en el SPADIES (Sistema de Prevención y Atención de la Deserción en las Instituciones de Educación Superior, 2012), reflejan altas tasas de deserción en las universidades colombianas y en especial en las instituciones de educación superior en el Caribe colombiano.

## METODOLOGIA

En esta investigación se utiliza como muestras, la población estudiantil y las estadísticas de los últimos cuatro años (2008-2011) de los estudiantes que han desertado de los diferentes programas académicos de la Universidad de La Guajira.

En la primera fase, se emplearon las estadísticas de la Oficina de Admisiones, Registro y Control Académico de la Universidad de La Guajira, que permitieron determinar la tasa de deserción por periodo académico. Posteriormente se aplicó el cálculo del total de alumnos desertores, entre el total de alumnos matriculados en el mismo periodo multiplicados por cien, para encontrar la tasa de deserción. En la segunda fase, se calcula el costo monetario de deserción por programa, donde se estableció el valor de las matrículas y complementarios en los distintos programas y periodos académicos y éstos resultados se multiplicaron por los totales de alumnos desertores correspondientes a los periodos académicos analizados.

Tabla 25: Población Estudiantil Universidad de la Guajira

Programas académicos	Población estudiantil
Administración de Empresas (Riohacha)	563
Contaduría Pública (Riohacha)	1088
Ingeniería Industrial	550
Ingeniería Ambiental (Riohacha)	322
Licenciatura Pedagogía Infantil	444
Licenciatura Etnoeducación	703
Trabajo Social	636
Artes Visuales	7
Ingeniería de Sistemas	340
Licenciatura en Educación Física	158
Tecnología en Acuicultura	11
Administración de empresas (Maicao)	360
Administración de Empresas (Villanueva)	131
Biología	153
Ingeniería Ambiental (Fonseca)	144
Tecnología en Gerencia en Farmacia	33
Trabajo social (Fonseca)	133
Trabajo Social(Maicao)	213
Trabajo social (Villanueva)	126
Administración turística y Hotelera	179
Ingeniería Civil	419
Ingeniería Mecánica	227
Negocios Internacionales	246
Técnico profesional en Operación Turística	13
Técnico Profesional en Administración Pública	59
<b>TOTAL</b>	<b>7.258</b>

En esta tabla se describen las estadísticas de la población estudiantil por programas académicos, que hicieron parte de las muestras, adyacente se relacionaron con las estadísticas de los últimos cuatro años (2008-2011), para obtener el cálculo de las tasas de deserción y los costos .Fuente: la Oficina de Admisiones, Registro y Control Académico de la Universidad de La Guajira

En la tercera fase, para el cálculo de la deserción acumulada, se aplicaron las siguientes fórmulas:

$$\text{Deserción} = (1 - \text{Retención}) (1)$$

También se analizó la permanencia, calculando el tiempo de duración de la carrera para cada uno de los estudiantes graduados, durante las cinco (5) cohortes analizadas, teniendo en cuenta el periodo académico en el cual se matricularon por primera vez. En este sentido, el promedio de permanencia de los programas se determinó, así:

$$P = \sum p_i / N (2)$$

En síntesis, las fases expuestas anteriormente permitieron calcular la tasa de deserción y el costo por periodo académico para instituir el modelo para deducir los costos monetarios de la deserción de los programas académicos objeto de estudio.

## RESULTADOS

Los resultados muestran que aplicando la metodología descrita en la primera y segunda fase, se determina la tasa de deserción por periodo académico. La Tabla 2, presenta las tasas de deserción con mayores valores en los siguientes programas: Educación Física Biología, Ingeniería Industrial, Contaduría Pública, Ingeniería Civil, Ingeniería Mecánica y Ingeniería Ambiental. En resumen tasas de deserción que oscilaron en el rango entre el 12.88% y el 27.29%.

Tabla 2: Tasas de Deserción

Programas	Periodo académico	Alumnos matriculados	Alumnos Desertores	Tasas deserción	Costo matricula
Contaduría publica	2010-2	1.153	223	19.34%	618.000
Ingeniería Industrial	2010-2	547	108	19.66%	618.000
Ingeniería Civil	2010-2	299	51	17.07%	618.000
Ingeniería Ambiental	2010-2	286	37	12.88%	618.000
Ingeniería Mecánica	2010-2	213	38	18.07%	618.000
Educación fisica	2010-2	133	36	27.29%	618.000
Biología	2010-2	127	27	21.49%	618.000

*En esta tabla se muestra el número aproximado de estudiantes en el segundo periodo académico (2010-2), matriculados, desertores, tasa deserción y costo matricula en la sede principal en la Universidad de la Guajira. Fuente: Elaboración Propia.*

En la tercera fase, se aplican las fórmulas descritas en la metodología, que permitieron estimar los costos monetarios y validar el modelo para calcular los costos monetarios que genera la deserción de los programas académicos en la Universidad de la Guajira. La tabla 3, presenta la estimación de los costos monetario en los siguientes programas: Contaduría Pública con \$137.814.000, porque es el programa con mayor número de estudiantes desertores, le sigue Ingeniería Industrial con \$ 66.744.000. En resumen los costos monetarios con valores más altos oscilaron en el rango entre el \$137.814.000-\$66.744.000 respectivamente.

Tabla 3: Estimaciones de los Costos Monetarios

Programas	Periodo académico	Costos monetarios
Contaduría publica	2010-2	137.814.000
Ingeniería Industrial	2010-2	66.744.000
Ingeniería Civil	2010-2	31.518.000
Ingeniería Ambiental	2010-2	22.866.000
Ingeniería Mecánica	2010-2	23.484.000
Educación fisica	2010-2	22.248.000
Biología	2010-2	16.686.000
Costos (Monto dejado de percibir) deserción		<b>321.360.000</b>

*En esta tabla se muestran los costos monetarios del periodo 2010-2. Evidencia que este modelo se puede aplicar en todos los programas académicos, en la sede principal de la Universidad de la Guajira, se deja de percibir el monto de \$321.360.000, a causa de la deserción estudiantil. Fuente: Elaboración Propia.*

También, se observó que en los programas académicos ofrecidos en las extensiones de Maicao, Fonseca y Villanueva, muestran tendencias altas en la generación de mayores tasas de deserción. La Tabla 4, presenta las tasas de deserción con mayores valores en los siguientes programas de las extensiones: Maicao, Fonseca y Villanueva en el programa de Trabajo Social, Administración de Empresas en Maicao y Villanueva, Ingeniería Ambiental en Fonseca. En resumen tasas de deserción que oscilaron en el rango entre el 20.99% y el 27.29%.

Tabla 4: Tasas de Deserción Programas Académicos Extensiones Universidad de la Guajira

Programas Extensiones	Periodo académico	Alumnos matriculados	Alumnos Desertores	Tasas deserción	Costo matricula
Trabajo Social-Maicao	2010-2	283	77	27.29%	618.000
Administración de empresas-Maicao	2010-2	299	63	20.99%	618.000
Ingeniería Ambiental-Fonseca	2010-2	135	30	22.44%	618.000
Trabajo Social-Fonseca	2010-2	174	47	27.29%	618.000
Administración de empresas-Villanueva	2010-2	122	28	22.59%	618.000
Trabajo Social-Villanueva	2010-2	155	42	27.29%	618.000

*En esta tabla se muestra el número aproximado de estudiantes por periodo académico, matriculados, desertores, tasa deserción y costo matricula en segundo periodo académico del 2010 en las extensiones de los Municipios de Maicao, Fonseca, Villanueva, adscritas a la sede principal en la Universidad de la Guajira. Fuente: Elaboración Propia.*

Los altos costos monetarios que genera la deserción de los programas académicos en las extensiones adscritas a la Universidad de la Guajira son los siguientes: La tabla 5, presenta la estimación de los costos monetario en los programas: Trabajo Social en Maicao, \$47.586.000, porque es el programa con mayor número de estudiantes desertores, le sigue Administración de Empresas con \$ 38.934.000; Trabajo Social en Fonseca, \$29.046.000 y Villanueva, \$25.956.000; Ingeniería Ambiental en Fonseca, \$18.540.000; Trabajo Social en Villanueva \$17.304.000 respectivamente.

Tabla 5: Estimaciones de los Costos Monetarios-Extensiones, Universidad de la Guajira

Programas-Extensiones	Periodo académico	Costos monetarios
Trabajo Social-Maicao	2010-2	47.586.000
Administración de empresas-Maicao	2010-2	38.934.000
Ingeniería Ambiental-Fonseca	2010-2	18.540.000
Trabajo Social-Fonseca	2010-2	29.046.000
Administración de empresas-Villanueva	2010-2	17.304.000
Trabajo Social-Villanueva	2010-2	25.956.000
<b>Costos (Monto dejado de percibir) deserción</b>		<b>177.366.000</b>

*En esta tabla se muestran los costos monetarios del periodo 2010-2. Evidencia que este modelo se puede aplicar en todos los programas académicos, en las extensiones adscritas a la sede principal de la Universidad de la Guajira, se deja de percibir el monto de \$177.366.000, a causa de la deserción estudiantil. Fuente: Elaboración Propia.*

En consecuencia, en esta investigación el cálculo de las tasas de deserción en los periodos 2007-2011 en la primera fase y la estimación de sus costos por programas académicos en la segunda y tercera fase, finalmente permitieron validar el modelo propuesto para calcular los costos monetarios relacionado con la deserción, donde se evidencia que el segundo periodo académico (2010-2), es el que genera mayores tasas de deserción y costos en diferentes programas académicos en la Universidad de la Guajira-Colombia y sus extensiones.

## CONCLUSIONES

La validación del modelo propuesto para la estimación de los costos de la deserción en Universidad de la Guajira, a través de las fases primera, segunda y tercera, permitió internamente a la Institución estimar los costos por la deserción estudiantil en todos sus programas académicos en la sede central y sus extensiones. Además, al conocer este indicador relevante podría ahondar en encontrar los factores asociados a esta problemática; asimismo mide la eficiencia y eficacia de sus políticas. En términos generales, como consecuencia de lo anterior, la universidad de la Guajira, deja de percibir por concepto de este fenómeno \$3.720.367.572, de acuerdo a los periodos objeto de estudio. Teniendo en cuenta estas consideraciones, se evidenció que en los periodos analizados (2007-2011), la mayor tasa de deserción y costos, tanto en la sede principal como en las extensiones, fue el correspondiente al segundo periodo académico del 2010, asciende \$498.726.000. Este indicador se ve afectado en su tendencia por diversas

causas de deserción, donde se destacan los factores más relevantes son los siguientes: bajo rendimiento académico, la falta de orientación profesional y el escaso apoyo institucional.

### Limitaciones

Dentro de las limitaciones hay que resaltar, las estadísticas no son homogéneas en los últimos cinco (5) años en las diferentes dependencias de la Universidad de la Guajira, deben hacer esfuerzos para producir sus datos estadísticos, para que en futuras investigaciones se pueda evaluar la tendencia real del indicador de la deserción y sus costos y sus causas. Asimismo, esperamos que la metodología propuesta el modelo para estimar los costos de la deserción, sea replicada para darle validez y confiabilidad a los resultados de esta investigación.

## **APÉNDICES**

Calculo de deserción acumulada

$$\text{Deserción} = (1 - \text{Retención}) (1)$$

Teniendo que,  $\text{Retención} = (M_t - N_t - T_t + G_{t-1}) / M_{t-1}$

Donde:

$M_t$  = Matricula total en el periodo t de los programas de pregrado.

$M_{t-1}$  = Matricula total en el periodo t – 1 de los programas de pregrado.

$N_t$  = Matriculados en primer semestre por primera vez en el periodo t de los programas de pregrado.

$T_t$  = Esta variable incluye los matriculados por transferencias recibidas, reintegros y demás formas de vinculación de personas que pertenecieron a algún nivel de educación superior, es decir, incluye aquellos estudiantes que no estaban matriculados en el periodo inmediatamente anterior.

$G_{t-1}$  = Graduados del periodo t-1.

El cálculo se realizó para cada periodo académico, desde el I -2007 hasta el II - 2011, donde la deserción acumulada se reporta como el promedio de los resultados.

$$P = \sum p_i / N (2)$$

Donde:

$P_i$  = Permanencia de cada alumno graduado durante las cinco (5) cohortes analizadas.

$N$  = Número total de alumnos graduados durante las cinco (5) cohortes de este estudio.

## RESUMEN

*En la actualidad la base de cualquier economía (pública o privada) se encuentra en su capacidad de gestión, en la forma en que hacen negocios y pactan sus procesos de compra venta. En este documento, parte de uno más extenso, hacemos una revisión crítica de los estudios y aplicaciones que sobre encadenamientos productivos y clúster se han publicado, tratando de llevar a lector por un sendero que descubra la importancia que el estudio y análisis de estos fenómenos económicos revisten tanto para el desarrollo económico de un país o región, a través de la identificación de sectores estratégicos, así como en aspectos de generación y distribución de innovaciones y conocimiento.*

*La globalización ha marcado en el contexto actual, una diversidad de formas de comercio, algunas veces difícil de sobrevivir para empresas pequeñas y es a través de la integración de clústeres como han logrado mantenerse, salir adelante y en varios de los casos expandirse. Los eslabones que forma la relación cliente-empresa-productor es determinante en el éxito de cualquier integración económica por incipiente que sea, es por eso que en este documento revisamos una serie de investigaciones que documentan estudios empíricos y teóricos, a fin de identificar los aspectos más importantes en la creación, gestión y evolución de los encadenamientos productivos y clústeres de diversas regiones y la forma en que han sido abordados y aplicados a la realidad económica y contextual de cada país o región, para concluir en la forma en que son estudiados para así, definir su caracterización en sectores específicos y su impacto en el desarrollo regional.*

Palabras clave: Encadenamiento productivo, clúster, desarrollo regional

## APPROACHES AND PERSPECTIVES IN THE STUDY OF PRODUCTION LINKAGES AND CLUSTER

### ABSTRACT

*At present the basis of any economy (public or private) is in its management capacity, in the way they do business and covenant of sale processes. In this paper, part of a more extensive one, we critically review the studies and applications about cluster and production linkages that have been published, trying to take the reader on a path to discover the importance of the study and analysis of these economic phenomena coat both for the economic development of a country or region, through the identification of strategic sectors, as well as its paper as generators and spillovers of innovation and knowledge.*

*Globalization has set in the present context, a variety of forms of commerce, sometimes difficult for small business to survive, and is through integration of clustering and better managed practices the way to stay, getting ahead and in several cases expand. The links former by the client-company-producer relations is critical to the success no matter how incipient level of economic integration it has. Is why in this paper we review a number of researches documenting empirical and theoretical studies in order to identify important areas in creation, management and development of production chains and clusters of various regions, and the way they have been addressed and applied to economic reality and context of each*

*country or region, concluding with the way they are studied to so, define its characterization in specific sectors and their impact on regional development.*

**KEYWORDS:** Productive linkage, cluster, regional development

## **INTRODUCCIÓN.**

El presente trabajo forma parte de un documento más extenso sobre una investigación referida a los “Encadenamientos Productivos”. Estas literaturas, artículos científicos en su mayoría, muestran hallazgos de los últimos años, sobre tópicos relacionados con el tema central encadenamientos productivos, y su análisis se integra como parte de un documento más amplio.

El objetivo de la presente compilación es mostrar el estado que guardan algunas de las más recientes investigaciones y que pueden sumarse como referencia del tema de estudio y la forma en que este ha sido abordado, tanto de forma teórica como en ejercicios prácticos y desde perspectivas cualitativas y cuantitativas

Partimos del análisis conceptual de encadenamientos productivos como un gran resumen de varios autores y de ahí damos lugar a diferentes trabajos que permiten establecer un marco conceptual, contextual y metodológico para abordar el tema central. La mecánica de presentación es de acuerdo a la fecha en que fueron realizadas y publicadas las investigaciones.

### Encadenamientos Productivos

Diversas corrientes han surgido en torno a la descripción e interpretación de las agrupaciones de empresas, intentando responder ¿cómo? ¿por qué?, y en ese sentido para esta investigación ¿para qué?. En las siguientes líneas haremos una revisión de algunas de las corrientes teóricas que plantean el surgimiento, operación e importancia de estos encadenamientos y de las formas de organización territorial económica.

El concepto de enlace surge “como un criterio para la planeación de inversiones en los proyectos de desarrollo” (Furió-Blasco, 1998, pág. 33). Furió (1988) cita el objetivo de evaluar las decisiones de inversión que define a los enlaces o eslabonamientos dada por Hirshman las decisiones de inversión se evalúan “no sólo por su contribución inmediata a la producción sino también por el impulso, mayor o menor, que tales decisiones probablemente inspirarán nuevas inversiones, es decir a causa de sus eslabonamientos.”

Hirshman llamó eslabonamiento hacia atrás a la dinámica que se genera “Si una actividad productiva ejerce cierta presión hacia la fabricación interna de estos insumos, a la postre, también aportaría un mercado para una industria interna de bienes de capital”, y en sentido contrario le denominó eslabonamiento hacia adelante a “la existencia de un producto dado, línea A, que es un artículo de demanda final o se utiliza como insumo en la línea B, actúa como estimulante para establecer otra línea C, que también puede utilizar A como insumo” (Furió-Blasco, 1998, pág. 34)

Los enlaces productivos requieren tiempo para desenvolverse y son el “indicador de la forma que una cosa, conduce a otra. [...] Los enlaces se centran en ciertas características inherentes a las actividades productivas que están en proceso en cierto momento.” (Furió-Blasco, 1998, pág. 94). Estas características “invitan” a otros participantes a tomar nuevas actividades, lo que deriva un “enlace de la actividad existente y la nueva” (Furió-Blasco, 1998, pág. 34).

Quizá el concepto de encadenamiento como tal no se tenga como referencia presente, sin embargo, si lo pensamos como las relaciones proveedor – empresa- cliente, veremos cómo es un tema que está de manera permanente en el argot empresarial y académico, para así poder dimensionar la importancia de llevar su estudio a niveles más estructurados y poder, así, desarrollar estrategias de crecimiento y desarrollo empresarial, regional y nacional enfocadas.

### Clúster

En las últimas décadas se ha estudiado por diversos autores la integración de aglomeraciones, éstas son sistemas basados en una densa red de eslabonamientos entre unidades de producción (Longás García, 1997, pág. 174), uno de los esquemas de organización que más auge han tomado es el denominado “cluster, palabra inglesa que expresa la aglomeración de empresas en un mismo lugar geográfico” (Corrales, 2007, pág. 185). Laguna Reyes (2010, pág.120) cita a [Turner, 2001] quien estableció que “El enfoque basado en clúster está en la frontera de la teoría del desarrollo, tanto en términos teóricos como prácticos. En lugar de enfocarse en una empresa individual, el enfoque de clúster obliga a considerar las economías regionales en términos del conjunto de empresas encadenadas y de la infraestructura de soporte.” (Laguna Reyes, 2010, pág. 120)

“Los clústeres son concentraciones geográficas de empresas e instituciones interconectadas, que actúan en determinado campo. Agrupan a una amplia gama de industrias y otras entidades relacionadas que son importantes para competir.” (Porter 2002 p.13). Continúa Porter “en un sentido amplio, los clúster representan una inédita línea de pensamiento acerca de la ubicación física, que pone en tela de juicio gran parte de la sabiduría convencional sobre cómo deberían configurarse las empresas, de qué manera pueden contribuir al éxito competitivo instituciones como las universidades y en qué sentido los gobiernos están en condiciones de promover el desarrollo económico y la prosperidad.”

Una vez clarificados de manera breve los conceptos de encadenamiento productivo y clúster, en las próximas páginas realizaremos una breve revisión de textos científicos y artículos de difusión tratando de resaltar las diversas formas de estudio y aplicación que estos conceptos tienen, su importancia y metodologías de intervención.

## **ENFOQUES Y PERSPECTIVAS EN EL ESTUDIO DE ENCADENAMIENTOS PRODUCTIVOS (EP) Y CLÚSTER**

Tratando de identificar algunas corrientes de planteamiento y estudio de los EP y los clúster, se seleccionaron para su revisión algunos artículos que tocan estos temas como centrales y desarrollan formas y metodologías de análisis. Los documentos se presentarán en orden cronológico de publicación.

### **Encadenamientos Insumo-Producto en un Municipio Fronterizo de Baja California, México**

El objetivo de la investigación es describir “los problemas específicos de compilación de la matriz de insumo -producto para Mexicali, Baja California, un municipio fronterizo con una base agrícola y un sector maquilador importantes. Además presenta los resultados de los encadenamientos hacia adelante y hacia atrás y genera un índice que combina los resultados de estos encadenamientos. Identifica los sectores clave -es decir, grupos de actividades interrelacionadas con coeficientes por arriba de la media- y detecta sectores críticos que determinan la precisión del sistema insumo-producto.” (Fuentes Aaron, 2003, pág. 151)

En los siguientes párrafos describe la metodología utilizada, misma que está basada en la agregación de ramas de actividad con base en “el Sistema de Cuentas Nacionales de México (SCNM). Para la homologación de los valores de este sistema y los de los Censos económicos respecto a las 72 ramas

establecidas por el SCNM, se utilizó el codificador de actividades y productos (CAMP) del SCNM.” (Fuentes Aaron, 2003, pág. 151)

El autor destaca como punto nodal de los hallazgos de su investigación el haber detectado la importancia del consumo como factor crítico que determina la precisión del sistema de insumo-producto. La columna de hogares en la demanda final y el trabajo en el valor agregado determinan grandemente la influencia de los índices de encadenamientos y multiplicadores. También las importaciones y exportaciones del resto del país y el extranjero son importantes para la estimación del consumo, insumos intermedios y ventas de la producción regional.” (Fuentes Aaron, 2003, pág. 169)

Este tipo de investigación permiten conocer más profundamente los flujos de bienes y servicios y quienes mantienen los liderazgos en cada área o sector, y quienes se encuentran rezagados tienen economías dependientes de otros, para así establecer las estrategias sectoriales y de gobierno que permitan a las empresas del entorno desarrollarse de una forma más estandarizada.

#### Análisis De Encadenamientos Productivos Para La Economía Regional, Base 1996.

Este apartado escrito por Pino Arrigada (2004) toca los encadenamientos a partir de los modelos de oferta y de demanda, en sus dos enfoques más tradicionales Chernery Watanabe (1958) y de Rasmussen (1956). En la definición de los parámetros requeridos para el análisis de los multiplicadores y los índices de Poder y Sensibilidad de Dispersión de Rasmussen, se encuentra un elemento prioritario y del cual se desprenden todos los cálculos posteriores: la Matriz Inversa Insumo-Producto.” (Pino Arrigada, 2004, pág. 73)

Existen dos principales multiplicadores con los cuales se define ampliamente un enfoque de demanda: “Multiplicador de la producción y Multiplicador de una expansión uniforme de la demanda” (Pino Arrigada, 2004, pág. 73). El “Multiplicador de la producción, Define el efecto final sobre todos los sectores de un incremento de una unidad en la demanda final del sector j.... Expresado de otra manera, simplemente se trata de la sumatoria de las variaciones que experimenta el Valor Bruto de la Producción, ante distintos requerimientos de demanda” (Pino Arrigada, 2004, pág. 74). De aquí se derivan los conceptos de arrastres hacia adelante o hacia atrás (Refiriendo a Pulido y Fontela, 1993). Estos efectos normalmente se dan en los proceso de producción en función de la cadena y dependencia que se establece hacia proveedores “arrastre hacia atrás”, es decir permite valorar el uso que un sector hace de los recursos de otros sectores, así como los efectos que genera. Así como el impacto que se genera hacia las compras de los clientes “arrastre hacia adelante”

Uno de los elementos importantes de realizar estudios a través de la matriz insumo producto para la definición de encadenamientos es el poder establecer el papel que juega cada sector en la economía, una vez que se son calculados de manera individual los índices [Poder y Sensibilidad De Dispersión], así como también de la apreciación combinada de ambos, derivando en una clasificación sectorial:

“Claves: Cuando el efecto de arrastre es superior a la media tanto de un sector cualquiera sobre otros sectores, como de otros sectores sobre él.

Estratégicos: Cuando el efecto de arrastre es inferior a la media de un sector cualquiera sobre otros sectores, pero mayor a ésta, en el efecto de otros sectores sobre él. La denominación de “estratégicos” apunta al hecho de que son sectores que pueden constituir posibles estrangulamientos del sistema económico.

Impulsores de la economía: Cuando el efecto de arrastre es superior a la media de un sector cualquiera sobre otros sectores, pero inferior a ésta, en el efecto de otros sectores sobre él. Es decir, produce efectos

mayores sobre la economía que los efectos que se centran en él. Islas: Ramas de actividad para las cuales ambos índices son menores a la media. Son sectores poco importantes, dado que no provocan efectos de arrastre significativos en el sistema económico, ni reaccionan en forma importante ante el efecto de arrastre provocado por variaciones en la demanda de otros sectores. Una conclusión importante del estudio es que “cuando el análisis centra su atención en la magnitud de los encadenamiento, desde la perspectiva de la capacidad de generación de efectos inducidos, entonces se concluye que las estructuras país-región responden de manera distinta, según sea el enfoque utilizado (enfoque de oferta o de demanda).” (Pino Arrigada, 2004, pág. 81)

### Innovación, Redes, Recursos Patrimoniales Y Desarrollo Territorial

Las redes son un esquema que permiten la distribución de conocimiento e innovaciones, al estar ampliamente relacionados los sectores y las empresas, crean vínculos que forzan intercambios, es por eso que cada vez más se estudian esas redes y los impactos que se derivan de su interacción dado que la existencia de relaciones de cooperación propicia una reducción de los costos de transacción interempresarial, el acceso a experiencias y conocimientos, el desarrollo de procesos de aprendizaje colectivo, de logro de nuevas soluciones a los problemas y la reducción de los riesgos de la innovación. Es importante destacar que esos impactos no son generados ni impactan a todas las empresas de manera similar, ya que mucho de eso dependerá de la capacidad de gestión de cada una de ellas, hecho que se pone de manifiesto especialmente en las redes establecidas para proyectos de investigación y desarrollo, según refiere Caravaca (2005) a [Cohen y Levinthal, 1990; Smith et al., 1991; Capello, 1995 y 1999].” (Caravaca, González, & Silva, 2005, pág. . Sección 3 párrafo 7)

Una de las condiciones que no ha sido ampliamente estudiada y desarrollada, son las redes de cooperación socio-institucionales, pese a reconocerse que el papel de los agentes socioeconómicos e institucionales resulta crucial para el fortalecimiento de las oportunidades de desarrollo local.” (Caravaca, González, & Silva, 2005, pág. Sección 3 párrafo 10)

“La propuesta de Filippi y Torre (2003), aunque limitada a las redes de carácter local, diferencia entre las empresariales y las socio-institucionales, distinguiendo las formadas por un reagrupamiento espontáneo de empresas en torno a una serie de proyectos comunes y las desarrolladas o estructuradas por organismos públicos y privados para apoyar actuaciones empresariales de carácter colectivo. Una clasificación mucho más compleja que las anteriores es la propuesta por Maillat y Kebir (1998), quienes consideran el anclaje territorial de la red y el tipo de agente, distinguiendo además no sólo entre actores socio-institucionales o empresariales, sino también entre pequeñas, medianas o grandes empresas. Por su parte, Koschatzky (2002) distingue entre redes verticales, con proveedores y clientes, y las horizontales, con otras empresas del sector, organizaciones e instituciones.” (Caravaca, González, & Silva, 2005, pág. Sección 3 párrafo 11)

El grado de apertura al exterior puede ser definido como el anclaje territorial. Cabe destacar de este documento las apreciaciones finales que hace acerca de la proximidad geográfica, ya que, aunque constituye una base indispensable para activar indirectamente las acciones colectivas, no es suficiente para poner en marcha la cooperación entre actores locales. Por otro, no hay que perder de vista la importancia que adquiere la participación en redes externas; en este último sentido, si es crucial la multiplicación, la diversificación y la conectividad de los actores locales, también lo es que formen parte de las redes, organismos e instituciones cuyos ámbitos de acción se amplíen a otras escalas, y a su vez, que los actores locales se integren en redes externas; uno u otro procedimiento puede servir para difundir conocimientos e innovaciones hacia la comunidad local.” (Caravaca, González, & Silva, 2005, pág. Sección 3 párrafo 23)

Para efectos del tema central de investigación, es importante rescatar este último apartado en función de dos situaciones, la primera es el hecho de que la proximidad geográfica no es sinónimo de trabajo intersectorial organizado, ni de éxito, y por otra parte que debe dedicarse más investigación y trabajo a las redes que se establecen con otros grupos de interés como la sociedad, las instituciones, empresas de soporte, etc., mismo que en todo momento pueden ser detonantes del éxito o fracaso de los sectores de una economía, en virtud de su permanente interrelación en el entorno.

#### Encadenamientos Productivos, Externalidades y Crecimiento Regional. Una Tipología De Comportamiento Empresarial

En esta investigación se resalta también la importancia hacia las diferentes relaciones que se dan entre los sectores, estableciendo que “la articulación productiva constituye un factor clave por su repercusión directa y por su influencia sobre otras dimensiones de la integración territorial de las unidades productivas” (Romero Luna & Santos Cumplido, 2006, pág. 51) “Los encadenamientos entre empresas y sectores presentan diversos patrones de localización espacial que son consecuencia de las características del territorio (dotación y productividad de los factores de producción, economías externas, factores socio-culturales y político-institucionales, etcétera) y de las propias características y decisiones de las empresas. (Romero Luna & Santos Cumplido, 2006, pág. 51).

Romero (2006) hace referencia a una cierta articulación interna de los sistemas productivos que favorece el crecimiento regional como resultado de la explotación de externalidades estáticas y dinámicas vinculadas al territorio y derivadas tanto de flujos reales de bienes o servicios intermedios entre unidades productivas como de flujos inmateriales de tecnología y conocimiento.” (Romero Luna & Santos Cumplido, 2006, pág. 53). Situación que se refleja en la repercusión de los vínculos hacia adelante y hacia atrás (forward and backward linkages) en la localización espacial de la actividad económica.” (Romero Luna & Santos Cumplido, 2006, pág. 52)

Es así como a partir del análisis de ciertos patrones derivados de esas articulaciones productivas de las empresas, propone una tipología de empresas que conllevan combinaciones diversas de integración funcional y territorial. De este modo, se pueden distinguir siete categorías o tipos empresariales: la empresa «doméstica», la Pyme «dependiente», la Pyme «exportadora», la Pyme «extravertida », la gran empresa «motriz» o «tractora», la gran empresa «enclave» y la gran empresa «orientada al mercado interno.” (Romero Luna & Santos Cumplido, 2006, pág. 53). Cada diferente tipo de organización por lo tanto, debe tener su trato particular ya que asumen “funciones diferenciadas dentro de un sistema productivo, mereciendo valoraciones particulares desde el punto de vista de su contribución al crecimiento regional. Por consiguiente, la composición del tejido empresarial de una región, contemplada a la luz de esta tipología, refleja las fortalezas y debilidades del sistema productivo y, en definitiva, la calidad de su tejido empresarial (Guzmán et al., 2000; Romero, 2003; Santos, 2004).” (Romero Luna & Santos Cumplido, 2006, pág. 53).

En este texto podemos observar la importancia en la identificación de los encadenamientos productivos y su clasificación de acuerdo a la función que desempeñan en el sector, a fin de poder caracterizarlos de una mejor forma y desarrollar estrategias de crecimiento inter y extra-sectorial por la fuerza del arrastre. Modalidades organizativas de los encadenamientos productivos en países de economías emergentes: el caso del sector lácteo en el Caribe Colombiano Este texto es una tesis doctoral que “aborda desde la perspectiva del pensamiento neoinstitucionalista las modalidades organizativas que se originan en las relaciones empresariales entre agentes económicos participantes del mercado lácteo de la región Caribe colombiana. Específicamente, analiza (a) si las empresas están sometidas a las fuerzas del libre mercado, (b) si establecen acuerdos de coordinación vertical ó (c), si están integradas verticalmente en su

proceso productivo, destacando los factores explicativos asociados a cada una de las modalidades (costes de transacción, contratos y mecanismos de resolución de conflictos)” (Ruíz Ramos, 2006, pág. xi).

La mayor parte de las conclusiones mostradas en el trabajo se centran en los hallazgos de la investigación de campo realizada al sector y como se dan y formalizan las relaciones intersectoriales, uno de los elementos más importantes es la amplia descripción que se hace sobre las modalidades de coordinación entre productores primarios y procesadores agro-industriales y las de coordinación costes de transacción y acuerdos: análisis de la transacción. En ambas se hace un amplio desarrollo del establecimiento de acuerdos y transacciones entre las partes y como una influye en la otra, para así finalmente realizar una serie de propuestas de estrategias específicas sobre los principales participantes de estos encadenamientos.

“Cada día más, las empresas para poder ser competitivas deben actuar eficientemente dentro de un complejo laberinto de proveedores, clientes, distribuidores y socios de negocios. Entender y optimizar las relaciones donde están inmersas las empresas, será la clave para organizar sus agrupamientos productivos que las lleve a competir en un mundo globalizado.” (Ruíz Ramos, 2006, pág. 10)

#### Iniciativas De Desarrollo Local y Fomento Del Clúster Turístico

En este documento, mas de corte práctico que científico, la autora analiza conceptualmente el clúster, sus aplicaciones y realiza una serie de acotaciones sobre el turismo, el desarrollo local, integración y desempeño del clúster para finalmente ofrecer iniciativas sobre el desarrollo del clúster turístico sobre las siguientes bases: (Varisco, 2007)

Promover los encadenamientos

Promover la calidad

Promover la integración

Crear un sistema de información

Promover la capacitación

Promover la asociatividad

Promover la institucionalidad

Como podemos ver en lo general las acciones giran en torno al desarrollo de actividades conjuntas entre empresarios e instituciones que permitan la integración de sinergias que detonen el crecimiento del sector turístico y la importancia del rol que tiene cada uno de los participantes. Destacando la identificación de los encadenamientos a fin de poder promover acciones de crecimiento y desarrollo económico.

#### Encadenamientos Productivos y Su Relación Con La Inversión Directa Extranjera

La investigación se realizó a través de un estudio en el que se visitó a más de 35 empresas transnacionales instaladas en Costa Rica bajo los regímenes de Zona Franca y Perfeccionamiento, a fin de tener identificada la distribución porcentual de las compras de bienes y servicios, para proceder a la identificación de las mejores prácticas para administrar la cadena de abastecimiento (ACA) a través de visitas personalizadas tanto a empresas transnacionales, como a pequeñas y medianas empresas (PYMES) de Costa Rica.” (Quesada, La Fuente Chrysopoulos, & all, 2008, pág. 41) Quesada Pineda (2008) cita el estudio realizado por Emiliani (2000), quien definió que el estudio por el método ACA constituye el establecimiento una estrategia que viniera a comprobar que los encadenamientos de empresas ayudan a eliminar la incertidumbre en las cadenas de suplidores. Además, el autor buscó crear mecanismos para que los diferentes suplidores se percataran de las diferentes oportunidades de que disponen al integrar una cadena de suplidores. Los tres aspectos más relevantes de esta estrategia cubrían los siguientes aspectos:

1. El reconocimiento de las prácticas o procedimientos específicos que dificultan la labor de los proveedores cuando intentan cumplir con los requerimientos de sus clientes.
2. El compromiso, por parte de los proveedores, para resolver problemas sistemáticos.
3. La evaluación de las operaciones de los proveedores y recomendaciones para mejorar las diferentes áreas involucradas

Dentro de los Hallazgos más importantes en la investigación de campo se obtuvo que “los clústeres industriales se presentan como un modelo de desarrollo para Costa Rica por medio de la consolidación de las fortalezas de los sectores industriales y de servicios propios de la demanda. Sabemos que Costa Rica cuenta con gran favoritismo para atraer inversión extranjera y la oportunidad se presenta a través de la formación de encadenamientos productivos como aspecto estratégico u operacional. Esta formación planificada de clúster, a través de encadenamientos, es un intento por compensar la debilidad del país.” (Quesada, La Fuente Chrysopoulos, & all, 2008, pág. 45)

Como podemos observar de acuerdo a estas conclusiones, nuevamente destaca el uso de la identificación de los encadenamientos productivos y de los clústeres conformados en las economías regionales y nacionales, a fin de establecer estrategias que permitan un mayor crecimiento y desarrollo económico. En este apartado se utiliza una metodología diferente, misma que se puede replicar para el análisis de otras regiones.

#### Jerarquización Sectorial de la Economía Mexicana: Un Enfoque de Teoría de Grafos

En esta investigación se identifica una nueva metodología basada en la teoría de grafos para realizar un análisis estructural de la economía mexicana; la fuente de información es la matriz de transacciones intersectoriales de la tabla nacional de insumo-producto, 2003 (INEGI, 2008).

El grafo de influencia relativa asociado a la tabla nacional permite analizar las relaciones de dominación-dependencia entre los diferentes sectores productivos en su doble vertiente de compradores y vendedores, lo que también brinda una visión estructural del comportamiento del conjunto de tales relaciones.” (Fuentes & Garcia Adelaido, 2009, pág. 2)

La base del estudio de Grafos en esta investigación es la Matriz Insumo Producto, reclasificando los sectores productivos y destacando sus relaciones de causalidad (arrastre) y cuantificando mediante varios índices sus poderes de atracción relativos (Morillas, 1995, p. 98).” (Fuentes & Garcia Adelaido, 2009, pág. 4) La aportación teórica principal del documento es la conceptualización de la matriz insumo producto como herramienta para evaluar las interrelaciones e interdependencias entre los diferentes sectores productivos de una economía, considerando que tienen pesos diferentes de acuerdo a su participación en la economía” (Fuentes & Garcia Adelaido, 2009, pág. 4)

“Recientemente se ha desarrollado un novedoso enfoque de clasificación sectorial de la estructura productiva, basado en la teoría de grafos. Esta teoría tiene un gran potencial pues integra en su desarrollo cuestiones relevantes como la importancia de las interrelaciones sectoriales, que permiten calibrar las posiciones relativas entre sectores, su orientación o los caminos por donde circula la influencia económica dentro de la estructura considerada. Por lo tanto, permite la detección de aquellos sectores clave para la economía en función de la importancia de las influencias productivas dentro de la estructura de intercambios.”

“Conceptualmente, los sectores base presentan unos encadenamientos hacia atrás menores que el promedio y hacia delante por encima de la media; éstos generan una escasa demanda, pero mucha oferta. Los sectores impulsores de la economía demandan insumos de otros sectores intermedios, consecuentemente, generan un estímulo a la producción de bienes intermedios. Los sectores independientes o aislados en general son poco atractivos, ya que provocan un menor impacto en la

economía, pues su desarrollo no afecta significativamente a los sectores que demandan sus productos, ni a los que los utilizan como productos intermedios. En tanto, los sectores clave presentan unos encadenamientos hacia atrás y hacia adelante mayores al promedio; son importantes por la demanda que producen y la oferta que generan en el resto de los sectores.” (Fuentes & Garcia Adelaido, 2009, pág. 9)

Dentro de los datos más relevantes obtenidos con esta investigación Arón García (2009) considera que la clasificación de los sectores arrojada por el método es similar al enfoque clásico “Es decir, existe correspondencia conceptual entre los sectores estratégicos, independientes, base y clave; sin embargo, difiere el reparto subyacente. Esto se debe a la posición de centralidad de cada sector en la red económica, que les permite transmitir unos efectos totales sobre la economía con relativa rapidez o lentitud, jugando un papel importante o no en la intermediación de las relaciones intersectoriales del resto de la economía.” (Fuentes & Garcia Adelaido, 2009, pág. 23)

### Identificación de sectores estratégicos en la economía de Aguascalientes

González Acolt, describe que el propósito de su investigación es “identificar los sectores estratégicos de la economía de Aguascalientes, utilizando la Matriz Insumo Producto (MIP) estatal y una de las metodologías ampliamente empleada en la selección de sectores líderes en la economía: los índices de Rasmussen.” (González Acolt, Díaz Flores, & Leal Medina, 2010, pág. 40)

Una vez analizada de manera general la estructura económica del Estado misma que es altamente concentrada en algunas actividades productivas, establece que es “importante identificar cuál es el grado de interdependencia, mediante los eslabonamientos o encadenamientos que tienen estas ramas dentro del sistema económico. Esto permitiría detectar su posible limitación, potencial y capacidad de arrastre para inducir efectos multiplicadores sobre otras ramas productivas. De tal manera que, dentro del conjunto de opciones de estrategias de desarrollo económico en Aguascalientes, se tenga en consideración las posibles ramas que puedan representar un escollo o amplios eslabonamientos en el aparato productivo económico” (González Acolt, Díaz Flores, & Leal Medina, 2010, pág. 41)

Justifica su investigación y el uso de la Matriz Insumo Producto a partir de las siguientes consideraciones: “a) La inexistencia de una herramienta que identifique las interrelaciones de los sectores económicos clave en el proceso de desarrollo económico del Estado. A pesar de que del Plan de Desarrollo del Estado de Aguascalientes 2004-2010 en el apartado referente a bienestar económico se propone identificar las actividades económicas estratégicas con el fin de estimular el desarrollo y la competitividad estatal.

b) La identificación de sectores líderes en la economía de Aguascalientes, serviría de apoyo – conjuntamente con otras herramientas de análisis-, a quienes toman las decisiones de la esfera pública, en su estrategia de fomento al desarrollo económico en la entidad.” (González Acolt, Díaz Flores, & Leal Medina, 2010, pág. 41)

Las conclusiones a las que llega en función de la metodología trabajada es que “como lo planteara el propio Rasmussen, sus índices tienen limitaciones y deben considerarse como elementos descriptivos que muestran la interdependencia de la economía, por lo tanto, los resultados del análisis propuesto deben interpretarse con mucho cuidado. Además, la identificación de sector clave se realizó mediante sus efectos de encadenamiento con otros sectores productivos, no obstante, existen otras variables y elementos que deben considerarse al definir un sector como importante en la estrategia de crecimiento y desarrollo económico de un Estado” (González Acolt, Díaz Flores, & Leal Medina, 2010, pág. 47)

### **CONCLUSIONES**

En esta muy sucinta selección de textos relativos al estudio de encadenamientos productivos y clúster, podemos observar de manera concreta como el área de aplicación y estudio de los mismos se vuelve

extensa. Los mecanismos y metodologías de aproximación nos permiten abordar el estudio de las relaciones de proveeduría y suministro de bienes y servicios a niveles que van desde lo local, a lo regional y nacional, definiendo en la importancia de su estudio el impacto que generan en el desarrollo económico.

Por otra parte podemos ubicar como en su análisis y desarrollo se deben considerar no solo los participantes directos de las operaciones y las redes que se generan, si no, también a aquellos involucrados de manera indirecta, como son las instituciones del sector público (dependencias) así como las del sector educativo, que hoy en día deben ser parte medular del estudio y potencialización de las capacidades del sector privado, a través de las investigaciones profundas y científicas que sobre cada sector puedan darse.

Finalmente es menester obligado referir en esta conclusión el papel trascendental que forman en las últimas fechas este tipo de estructuras, que de esta forma pretenden dar vida a las pequeñas y medianas empresas, que con base en la organización e integración, pueden volverse entidades idealmente constituidas y competitivas para hacer frente a las grandes transnacionales y a los retos que el comercio globalizado presenta en el día a día.

1 Los estudios de Hirshman sobre encadenamientos o eslabonamientos productivos se dan en su obra El comportamiento de los proyectos de desarrollo, de editorial Siglo XXI, México, 1969 (texto original: Development Projects Observed, The Brookings Institution; Washington,D.C.)

# MODELOS DE CALIDAD Y SU IMPACTO EN LA PERCEPCIÓN DEL SERVICIO DE USUARIOS Y TRABAJADORES EN UN HOSPITAL GENERAL DE MÉXICO

Ernesto Geovani Figueroa González, Universidad Juárez del Estado de Durango

Carlos Antonio Iturbide Urrutia, Universidad Juárez del Estado de Durango

Claudia Berenice Cano López De Nava, Universidad Juárez del Estado de Durango

## RESUMEN

*Este trabajo se sustenta en literatura sobre teoría de las organizaciones, desarrollo organizacional y teoría de sistemas, para su desarrollo se toma como base la interrelación que existe entre el proceso de planeación y ejecución de los procesos y modelos de calidad en el Hospital General de Zona no. 1 del Instituto Mexicano del Seguro Social Durango y su impacto en la percepción del servicio de usuarios y trabajadores, estos elementos en su conjunto aportan las bases conceptuales y los criterios a partir de los cuales se abordó este estudio descriptivo y exploratorio. Se utilizó el método cuantitativo para conocer y describir el estado actual de la calidad de los servicios. El objetivo de este trabajo es realizar un análisis de los programas de calidad implementados en el hospital e identificar acciones que mejoren su funcionamiento y resultados. En general los resultados alcanzados muestran satisfactorio el desempeño de los programas implementados y señalan la conveniencia de darle continuidad al Sistema de Calidad.*

**PALABRAS CLAVE:** modelos de calidad, percepción, servicio

## QUALITY MODELS AND ITS IMPACT ON THE PERCEPTION OF SERVICE USERS AND WORKERS IN A GENERAL HOSPITAL MEXICO

### ABSTRACT

*This work is supported by literature on organizational theory, organizational development and systems theory, for its development builds on the interrelationship between the planning process and implementation of processes and quality models in the General Hospital no. 1 of the Mexican Social Security Institute Durango and its impact on the perception of service users and workers, these elements together provide the conceptual basis and the criteria by which addressed this descriptive and exploratory study. Quantitative method was used to discover and describe the current state of the quality of services. The aim of this paper is to analyze the quality programs implemented in the hospital and identify actions to improve their performance and results. In general, the results obtained show satisfactory performance of the programs implemented and indicate the advisability of giving continuity to the Quality System.*

**KEYWORDS:** quality models, perception, service

## INTRODUCCIÓN

La necesidad de la implantación de los modelos de calidad en el Instituto Mexicano del Seguro Social (IMSS) Durango, está ligada a la existencia de recursos escasos; la discrecionalidad en la toma de decisiones; las diferencias en los objetivos necesidades y motivaciones entre diferentes personas y grupos

y la propia complejidad de la realidad organizativa. El crecimiento constante en la población derechohabiente y beneficiaria del IMSS a nivel nacional y particularmente en el estado de Durango, en los últimos años no ha sido paralelo con los presupuestos, infraestructura, personal y administración del instituto, circunstancia que ha originado que cada vez sea más difícil para el mismo, cumplir con sus objetivos. Ante la limitación de recursos financieros, el IMSS delegación Durango debe poner énfasis en la eficiencia y la efectividad de su administración, características que se pueden obtener si se cuenta con un modelo de gestión de la calidad, para acomodar lo existente de forma distinta.

Una de las áreas relacionadas con el manejo de los recursos del instituto, es el Hospital General de Zona (HGZ) no. 1, el cual es el pilar en cuanto a servicios médicos de primero y segundo nivel en Durango, por la naturaleza de sus servicios el área más costosa, conflictiva y de mayor complejidad, por el grado de especialización y criterio de sus integrantes, motivo por el cual se eligió como objeto del presente trabajo. Con base en las consideraciones anteriores, el objetivo de este trabajo es realizar un análisis de los programas de calidad implementados en el HFZ no. 1, desde la percepción de los usuarios y trabajadores para proponer acciones que mejoren su funcionamiento y resultados. La investigación está organizada en cuatro apartados. En el primero tenemos la sección de revisión literaria y se presentan algunos conceptos relevantes sobre calidad y un panorama general de liderazgo, después tenemos la sección de metodología donde se explica cómo se llevó a cabo el estudio, la sección de resultados contiene una descripción del análisis de la información realizado y después tenemos las conclusiones.

## REVISIÓN LITERARIA

### Calidad

A través de los diferentes momentos de la calidad, se ha buscado la satisfacción de los usuarios mediante el uso eficiente de los recursos y la utilización de métodos que permitan la mejora continua. Existen muchos autores y precursores de los conceptos modernos de la calidad, destacando los reconocidos mundialmente como los cuatro grandes artífices de la calidad mundial: Edward Deming, Joseph M. Juran, Phillip B. Crosby y Kaoru Ishikawa. De sus aportaciones se eligieron aquellas que fueran de utilidad para la elaboración del Plan Integral de Calidad del IMSS delegación Durango, siendo los enfoques más relevantes de cada uno los siguientes. Edward Deming. Considerado el principal responsable del milagro japonés de la postguerra, hace la advertencia que “Se logran más beneficios haciendo que la gente trabaje en forma inteligente y no más duro”. Menciona la existencia de dos tipos de problemas, los ocasionados por fallas del sistema y los de operación. Deming asegura, que la administración es responsable de aproximadamente el 80% de los problemas de calidad en una organización y nos propone un sistema de calidad total (Deming, 1989).

Joseph M. Juran enfatizó que la empresa u organización que quiera emprender un nuevo rumbo en la gestión de la calidad, debe crear un clima de unidad en toda la organización, de modo que todo el mundo conozca cuál es la nueva orientación y sea ayudado a moverse según ella. La creación de esta unidad requiere afrontar fuerzas poderosas que resisten un enfoque unificado, estas fuerzas son, en su mayor parte, debidas a las no uniformidades inherentes en toda empresa. De acuerdo con Juran (1992), el mejoramiento de la calidad se compone de tres tipos de acciones: control de calidad, mejora de nivel o cambio significativo y planeación de la calidad. Phillip B. Crosby dice que “hacer las cosas bien desde la primera vez” no añade costo al producto o al servicio; pero, si se hacen mal, hay que corregirlas posteriormente, y esto sí representa costos extra para el productor y el cliente. Si se pudiera resumir en una palabra lo que significa administración de la calidad, Crosby elegiría la palabra “prevención” y hace énfasis en que la calidad es un estándar de desempeño personal (Crosby, 2000).

Kaoru Ishikawa fue conocido por su contribución a la gestión de la calidad a través del control estadístico. El desarrollo del diagrama de Ishikawa (de espina de pescado) y el empleo de las siete antiguas

herramientas de la calidad proporcionaron las capacidades básicas para el uso de la técnicas de resolución de problemas (Guajardo, 1996). Los conceptos y métodos de control de calidad se usan para resolver problemas en los procesos de producción, control de abastecimiento de materiales y control del diseño de nuevos productos; igualmente para apoyar a la alta dirección en la revisión de políticas, solución de problemas de venta personal y administración (Ishikawua, 1993). Como los otros creadores japoneses de la calidad, Ishikawa puso especial atención en desarrollar el uso de métodos estadísticos prácticos y accesibles para la industria. En forma sencilla, su trabajo se centra en la recopilación y presentación de datos, el uso del diagrama de Pareto para priorizar las mejoras de calidad y el diagrama de causa - efecto, también llamado diagrama de Ishikawa o de pescado.

### Liderazgo

Antes de describir cuales son los planteos específicos de las corrientes teóricas para el estudio del liderazgo, es posible encontrar algunas características comunes entre ellas. Gran parte de las escuelas acuerdan que el liderazgo puede ser definido como un proceso natural de influencia que ocurre entre una persona (líder) y sus seguidores. Además coinciden en que este proceso de influencia puede ser explicado a partir de determinadas características y conductas del líder, por percepciones y atribuciones por parte de los seguidores y por el contexto en el cuál ocurre dicho proceso (Antonakis, Cianciolo & Sternberg, 2004). Tanto los líderes como los seguidores poseen un estereotipo sobre cuáles son las conductas esperadas de una persona para ser considerada líder (Wofford, Wodwin & Wittington, 1998). Las teorías implícitas del liderazgo señalan las creencias acerca de cómo los líderes se tienen que comportar para ser considerados como tales y que se espera de ellos. Por otra parte existe cierto consenso en suponer que el liderazgo es necesario para guiar a las organizaciones y recursos humanos hacia objetivos estratégicos (Zaccaro, 2001).

### **METODOLOGÍA**

El objetivo de este estudio es realizar un análisis sobre el desempeño de los modelos de calidad implementados en el HGZ no. 1, partiendo de la siguiente hipótesis: las estrategias de implementación de los modelos de calidad por el HGZ del IMSS delegación Durango, no han dado resultados positivos debido en su mayoría al liderazgo. Esta investigación es un estudio de caso con base en la definición de Yacuzzi (2005): “una investigación empírica que estudia un fenómeno contemporáneo dentro de su contexto de la vida real, especialmente cuando los límites entre el fenómeno y su contexto no son claramente evidentes. (...) Una investigación de estudio de caso trata exitosamente con una situación técnicamente distintiva en la cual hay muchas más variables de interés que datos observacionales; y, como resultado, se basa en múltiples fuentes de evidencia, con datos que deben converger en un estilo de triangulación; y, también como resultado, se beneficia del desarrollo previo de proposiciones teóricas que guían la recolección y el análisis de datos.” Para este estudio se seleccionó una muestra estratificada (50% trabajadores y 50% usuarios) probabilística a través del método de muestreo aleatorio simple, utilizando números aleatorios proporcionados por la computadora (Zuwaylif, 1986) para los trabajadores de la institución y una selección por conveniencia de acuerdo a la unidad de observación, seleccionando para las entrevistas a directivos del hospital y mandos medios y para la encuesta de trabajadores se agruparon los mismos en 7 categorías (médicos, enfermería, auxiliar universal de oficinas, asistentes médicas y trabajo social, intendencia, auxiliares de áreas médicas y otras categorías. La muestra quedó conformada por 384 unidades muestrales.

### Instrumentos de Recopilación de Datos

Encuesta. Esta se aplicó en la modalidad de cédula de entrevista, es decir, el cuestionario de preguntas diseñado como instrumento de registro de las opiniones. Se elaboraron dos diferentes uno para los trabajadores de la institución y otro para los usuarios. Entrevista Este instrumento, se utilizó para obtener

datos procesados con metodología cualitativa. Permite obtener la información del entrevistado, dándole facilidad para que se expone en sus comentarios, pero con un documento previamente elaborado que permite conducir la entrevista, haciendo los registros al momento de la entrevista por escrito o con el uso de grabadoras, previa autorización del entrevistado.

## RESULTADOS

Se inició con la elaboración del formato de la encuesta como instrumento de recopilación, se realizó una prueba piloto con 5 trabajadores y 5 usuarios para evaluar el instrumento. Después de las modificaciones necesarias para darle mayor claridad se aplicó al total de unidades que componen la muestra. En lo que se refiere a la encuesta, las respuestas fueron capturadas en el programa de base de datos SPSS. Con los datos recopilados con la encuesta se calcularon algunas medidas descriptivas como promedios y medidas de desviación. Con los datos cualitativos se manejaron proporciones o se agruparon en distribuciones de frecuencias con el objeto de homogeneizar la naturaleza de los datos utilizando intervalos de las distribuciones construidas, siguiendo la regla práctica que mencionan Berenson y Levin (1992 p. 97).

Una vez capturados los datos y determinados los intervalos, y con el fin de resumir la información que contiene la muestra sobre la naturaleza de la población, se procedió a hacer un análisis descriptivo de todos los indicadores, en el que se calcularon medidas de tendencia central (media, mediana, moda), medidas de dispersión (absoluta: desviación estándar, relativa: coeficiente de variación), valores máximos, valores mínimos, graficándose las distribuciones de frecuencia respectivas. Se elaboraron tablas de contingencia, para observar la asociación entre variables.

## CONCLUSIONES

Para mejorar la calidad de los servicios que se prestan al ciudadano es preciso conocer cómo se prestan, cuáles son las buenas prácticas de gestión y cuáles son los aspectos de ésta que es necesario modificar, con el fin de mejorar el rendimiento de las organizaciones que los gestionan y dispensan. Por ello, la evaluación de la calidad de los servicios ofertados por la administración se ha convertido en un elemento esencial para lograr una administración que sepa responder a los retos derivados de la transformación de la sociedad y a las demandas de los ciudadanos, situándoles en el centro de sus decisiones.

En general los resultados alcanzados en el desarrollo de este trabajo, realizado en el HGZ no. 1 son satisfactorios con relación al desempeño de los programas implementados y señalan la conveniencia de darle continuidad al sistema de calidad institucional. Los puntos susceptibles de mejora se relacionan con la necesidad de más y mejores recursos, lograr el involucramiento y compromiso de los directivos delegacionales, mandos superiores y medios del Hospital, concertar con el sindicato para apoyo en la sensibilización de personal y del mismo sindicato, la necesidad de implementar controles que permitan dar seguimiento y enlace a la implementación de todos estos programas de una forma más sistemática y con mayor planeación y contar con un programa delegacional de capacitación que responda a las necesidades específicas del trabajador que se traduzcan en mejores servicios.

Existe poca documentación sobre la historia del movimiento de la calidad en el IMSS particularmente en Durango se obtuvo escasa evidencia documental sobre la operación de modelos, programas y proyectos implementados en el HGZ 1. En relación a la aplicación de la encuesta para la recopilación de información se observó mayor resistencia a responderlo en los trabajadores que en los derechohabientes, lo anterior en virtud de que los trabajadores manifestaron temor por su situación personal además de considerar innecesario responderla. La opinión de los derechohabientes en relación al servicio que presta el HGZ 1 es mejor que la de los trabajadores, ya que en su gran mayoría son ciudadanos de bajos recursos cuya única opción real de salud es el IMSS, por lo cual su margen de tolerancia a la demora y los trámites es mayor, aunado a ello, se encontró que un gran porcentaje de los derechohabientes en espera de consulta médica o

cualquier otro servicios son en su mayoría mujeres amas de casa, las cuáles por no tener la presión de regresar rápido al trabajo disponen de un mayor tiempo para llevar a su familia al médico y estar atentas a sus problemas de salud.

Con relación al nivel académico presentado en la descripción de la muestra se encontró que predominantemente la escolaridad de los trabajadores es media básica y básica esto debido a que un considerable porcentaje del personal de enfermería y de las categoría no médicas solo cuenta con estudios técnicos. Con relación a la filosofía que han tenido los modelos y programas de calidad todos han buscado los mismos objetivos, los cuales se han orientado en tres grandes ejes (mejora de procesos, incidir en la cultura organizacional y sustentabilidad) beneficios que se han obtenido de manera parcial y solo temporalmente ya que es fundamental la influencia y estabilidad del delegado en turno que los promueva y ejecute. La principal debilidad de los modelos y sistemas de calidad implantados en el hospital han sido en relación a que los modelos solo fueron vistos por los directivos y mandos medios como una moda pasajera o novedad del delegado en turno y no como las herramientas necesarias para implantar un sistema de calidad institucional que permanezca a través del tiempo y los directivos.

Se encontró que la percepción del trabajador es más homogénea en relación al servicio que se le presta al derechohabiente, siendo más severo que este último en su evaluación en contraste con su opinión respecto al ambiente de trabajo en donde presentó una mayor dispersión con sesgo positivo. Respecto al liderazgo los trabajadores manifestaron que sus jefes directos presentan muy poca influencia ante ellos, por lo cual se sugiere continuar con el programa de escuela de líderes ya que la participación de los directivos como promotores e impulsores del sistema de calidad institucional es de carácter estratégico.

## RESUMEN

*Este artículo da cuenta de las caracterizaciones sobre experiencias significativas en los procesos de enseñanza y aprendizaje mediados por las Tecnologías de Información y Comunicación en la Fundación Universitaria Católica del Norte, con los actores que hacen parte del programa de Ingeniería Informática. Para realizar dicha caracterización se partió de la definición del objetivo general: "Caracterizar las experiencias significativas en ambientes educativos mediados por las TIC en el Programa de Ingeniería Informática de la Fundación Universitaria Católica del Norte (FUCN)"; este objetivo se apoyó en dos objetivos específicos. El primero analizó los factores y los componentes mediadores en los procesos de enseñanza y aprendizaje, y el segundo identificó los factores potenciadores para la configuración de las experiencias significativas.*

*Se realizó una revisión de autores nacionales e internacionales en tesis de maestría, de doctorado y artículos científicos relacionados con la mediación de las TIC en educación superior, de igual forma se trabajaron conceptos relacionados con las TIC y se involucró de forma especial el referente institucional de la FUCN como aporte de gran valor. La estrategia metodológica utilizada tuvo dos vertientes, la primera fue cuantitativa utilizando para ésta encuestas virtuales como instrumento de recolección de información la segunda vertiente fue la cualitativa construida a partir de los resultados de las encuestas, utilizando como técnica de recolección de información entrevistas semiestructuradas aplicadas a grupos focales.*

*Los hallazgos de la investigación son el resultado de la aplicación de estrategias cuantitativas y cualitativas, en el caso de las estrategias cualitativas fueron abordadas a través de grupos focales, donde se encontraron componentes y factores asociados a cada tipo de actor, extraídos a partir de las diversas experiencias de éstos, involucrando el punto de vista subjetivo e intersubjetivo de sus propias vivencias acorde a su rol dentro del proceso de enseñanza y aprendizaje liderado por la FUCN. Los resultados anteriores permitieron obtener como conclusiones de la investigación para el programa de Ingeniería Informática ofrecido por la FUCN factores potenciadores para la configuración de las experiencias significativas, tales como el trabajo colaborativo fundamental para el aporte al desarrollo del ser en su interacción y aporte con y para otros, el fomento del auto aprendizaje, la autodisciplina, el análisis crítico y reflexivo, de igual forma la valoración de los diferentes estilos de aprendizaje están orientados al reconocimiento de las individualidades y al reconocimiento del sujeto desde sus aprendizajes previos, que se amplían a lo largo del artículo.*

**PALABRAS CLAVES:** Caracterización, TIC, Educación, Significativo.

## ABSTRACT

*This article reports on important experiences characterizations in teaching and learning processes mediated by Information and Communication Technologies in the Northern Catholic University Foundation, with the actors who are part of the Computer Engineering program. To obtain this characterization was based on the definition of the objective: "To characterize the significant experiences*

*in learning environments mediated by ICT in the Computer Engineering Program of the Northern Catholic University Foundation (FUCN)"; this goal relied on two goals specific. The first analyzed the factors and mediator components in the teaching and learning, and the second factor identified enhancers for the configuration of meaningful experiences.*

*A review of national and international authors Master's thesis, doctoral and scientific articles related to the mediation of ICT in higher education, just as it worked ICT-related concepts and engaged in a special way the reference institutional FUCN as the contribution of great value. The methodological strategy used was twofold, the first was quantitative using this virtual surveys as a tool for collecting information the second was built on the qualitative results of the surveys and used as a data collection technique applied to semi-structured interviews focus groups.*

*The research findings are the result of the application of quantitative and qualitative strategies in the case of qualitative strategies were addressed through focus groups, where they found components and factors associated with each type of actor, extracted from the diverse experiences of these, involving the standpoint of subjective and intersubjective their own experiences according to their role in the teaching and learning process led by the FUCN. The above results allowed us to obtain as research findings for the Computer Engineering program offered by the FUCN enhancing factors in fashioning meaningful experiences, such as collaborative work fundamental to the development impact of being in their interaction and contribution to and for others, promoting self-learning, self-discipline, critical analysis and thoughtful, just as the valuation of different learning styles are geared to the recognition of individuality and the recognition of the subject from their previous learning, extending to Throughout the article.*

**KEYWORDS:** Characterization, ICT, Education, Noteworthy

## INTRODUCCIÓN

A través del presente artículo, se pretende mostrar los hallazgos y conclusiones arrojados por la investigación “Caracterización de experiencias significativas mediadas por las TIC en educación superior virtual”, investigación que fue motivada por el interés que poseemos sobre temas relacionados con los procesos de enseñanza y aprendizaje y los cambios que se deben generar al interior de estos, buscando con ello, la realización de aportes importantes que permitan el mejoramiento de la calidad en la educación, para lo que se tomó como referente la FUCN (Fundación Universitaria Católica del Norte), especialmente su programa de Ingeniería Informática, institución reconocida como pionera en educación virtual mediada por las TIC en Colombia.

### Problema de investigación y objetivos

De acuerdo a las transformaciones sociales de esta nueva era de la sociedad denominada de la información y el conocimiento, se hace necesario que las TIC contribuyan a la dinamización de los procesos de enseñanza y aprendizaje en los diferentes niveles educativos. Especialmente, ésta dinamización deberá contribuir a la comprensión de las nuevas formas en las que el conocimiento puede producirse, difundirse e incorporarse.

En las últimas décadas, con la aparición de las TIC, se han percibido cambios acelerados en todos los sectores de la sociedad, siendo muy lentos los cambios acaecidos en el sistema educativo colombiano que, a pesar de haber sufrido reestructuraciones sustanciales en los modelos pedagógicos tradicionales, se siguen perpetuando prácticas y reproduciendo esquemas rígidos de enseñanza y de aprendizaje. Actualmente el modelo hegemónico está orientado al desarrollo de competencias en el saber, saber hacer y ser de los estudiantes para que puedan desenvolverse mejor en el mercado laboral y competitivo

mundial. Este modelo ha recibido importantes críticas, las cuales podemos sintetizar en la argumentación que presenta Mejía (2008) al decir que basarse en estándares y competencias, obedeciendo al sistema capitalista neoliberal, obliga a pasar de una educación centrada en la formación a una educación orientada a la productividad.

A pesar de los cambios, se observan falencias en las didácticas y su desarticulación de los contextos tecnológicos, percibiéndose en el sistema educativo cierta apatía en lo referente a la apropiación e incorporación de las TIC a la discusión y dinamización curricular. Al respecto, Mejía (2008) afirma que la tecnología busca hacer productos con el conocimiento a través del uso de aparatos tecnológicos, los que entran en la vida cotidiana marcando pautas en el sistema de socialización, es decir, reestructurando las clases sociales.

Si bien se reconoce la puesta en marcha de iniciativas para la consolidación del trabajo de las universidades y los centros de investigación en redes académicas para la generación social de conocimiento, tal como es el caso de la Red Nacional Académica de Tecnología Avanzada RENATA, que con el apoyo del Gobierno Nacional a través de la Agenda de Conectividad, el Ministerio de Educación Nacional y Colciencias, impulsa iniciativas para generar proyectos conjuntos de investigación y vinculación a redes especializadas que posibiliten a los participantes adquirir, compartir y desarrollar conocimientos y aplicaciones de alcance cada vez mayor; se observa que aún persiste cierta apatía de parte de las IES para consolidar proyectos conjuntos que generen nuevo conocimiento y que, de alguna forma, permitan solucionar conjuntamente las problemáticas sociales.

Este artículo busca dar cuenta de los hallazgos relacionados con las preguntas que dieron origen a la investigación “Caracterización de experiencias significativas mediadas por las TIC en educación superior virtual”, como son: ¿cuáles son las características (atributos y propiedades) de las experiencias significativas en los procesos de enseñanza y aprendizaje mediados por las TIC?, ¿cuáles son los factores que han contribuido a la configuración de dichas experiencias como significativas?, ¿cuáles son los atributos de estas experiencias que son más valoradas (o estimadas) por los actores?, ¿cuáles son las condiciones institucionales que han favorecido el fortalecimiento y posicionamiento de dichas experiencias en los escenarios educativos?

Dichos cuestionamientos se centran en identificar y caracterizar las experiencias significativas y en reconocer qué es lo que les otorga ese carácter de significativo, por ello, en la investigación se dio importancia a la experiencia del sujeto que participa activamente en los procesos de enseñanza y aprendizaje, pero también se tuvo en cuenta los factores institucionales de carácter objetivo que contribuyen a la configuración de dichas experiencias.

Por lo tanto, tendiente a dar solución a las preguntas problematizadoras, se planteó el objetivo general que consiste en, Caracterizar las Experiencias Significativas en Ambientes Educativos mediados por las TIC en el Programa de Ingeniería Informática de la Fundación Universitaria Católica del Norte (FUCN) y para alcanzar dicho objetivo general, se establecieron dos objetivos específicos que consisten en, analizar los factores y los componentes que median en los procesos de enseñanza y aprendizaje, así como la identificación de los factores potenciadores para la configuración de las experiencias significativas mediadas por las TIC para el programa en mención.

El enfoque de la investigación es de carácter hermenéutico que se orienta como “metodología de investigación cualitativa que permite considerar un acontecimiento desde una doble perspectiva, no solo como acontecimiento objetivo o material, sino como un evento que puede comprenderse e interpretarse” (Habermas, 1985, p.35).

El tipo de investigación se basó en el estudio de casos que según Stake (2007) es entendido como el estudio de la particularidad y la complejidad de un caso singular para llegar a comprender su actividad en circunstancias importantes, siendo el estudio de casos la particularización no la generalización del este. Es importante seleccionar el caso que permita maximizar nuestro aprendizaje, en lo posible el caso debe ser fácil de abordar permitiendo ubicar a los actores de manera sencilla.

En tal sentido para nuestra investigación, el método de estudio de casos se centró en la comprensión del significado de experiencias individuales que permitieron analizar eventos desde diferentes contextos, sin perder de vista el objetivo principal del caso estudiado, permitiéndonos registrar e interpretar hechos y proporcionar conocimientos en relación a la caracterización de experiencias significativas en el Programa de Ingeniería Informática de la FUCN.

## REFERENTE CONCEPTUAL

Como soporte conceptual para la investigación se tomaron algunos autores que han venido trabajando en torno a las TIC y que permitieron generar reflexiones en cuestiones relacionadas con la brecha digital, la sociedad de la información y el conocimiento, experiencias significativas y la penetración de las TIC en la vida cotidiana y en las instituciones educativas.

### De la brecha digital a la integración intergeneracional en la era digital

Es necesario abordar esta temática desde el punto de vista de Piscitelli (2009), quien afirma que existen dos tipos de brechas, una generacional y otra cognitiva en creciente ascenso, es necesario dentro de la investigación abordar temáticas como la brecha digital, por ser esta causante de desigualdades sociales entre los que pueden acceder a la información, el conocimiento y la educación y las que son marginadas de éstas posibilidades, en relación a esta temática Civallero (2006) la expone como el espacio que separa a aquellos que poseen acceso regular y efectivo a tecnologías digitales considerados como conectados y aquellos que no lo tienen considerados como desconectados.

Otro autor que aborda la brecha digital orientado a la educación virtual es Prensky (2008), quien hace alusión a dos clases principales de usuarios de tecnología según la edad, estos son nativos digitales e inmigrantes digitales. Sobre lo que expresa el autor, los nativos digitales poseen unas características particulares, estos consideran que internet es la fuente de conocimiento, centrando sus relaciones sociales a partir del uso de la tecnología (redes sociales), con manejo natural de herramientas tecnológicas inmersas en la tecnología.

De la sociedad de la información a la sociedad del conocimiento: transiciones, cambios y retos para la educación. Barbero (1992), en su artículo “Notas sobre el tejido comunicativo de la democracia” sostiene que hemos empezado un nuevo modelo de sociedad, cuya denominación hegemónica es sociedad de la información, afirma además que se puede caracterizar; siguiendo la reflexión de Castell, como un nuevo modo de producción estructuralmente asociado a un nuevo modo de comunicar que convierte al conocimiento en una fuerza productiva directa.

En lo que respecta a la sociedad del conocimiento, según Krüger (2006), se le considera como un factor del cambio social. La expansión de la educación, por ejemplo, se constituirá en la base de los procesos sociales en diversos ámbitos funcionales de las sociedades. En lo referente al término conocimiento, no se puede hablar de la sociedad del conocimiento en relación únicamente al hecho de producir cada vez más conocimiento en términos de número de personas con estudios de doctorado, sino como sistema de producción de conocimiento en donde se ponen en interrogante las suposiciones, percepciones y expectativas.

La UNESCO (2005), en su informe titulado Hacia las Sociedades del Conocimiento define tres grandes iniciativas para edificar auténticas sociedades del conocimiento: la primera como una mejor valoración de los conocimientos existentes para luchar contra la brecha cognitiva, la segunda como un enfoque más participativo del acceso al conocimiento y la tercera como una mejor integración de las políticas del conocimiento con un proyecto integral plural e inclusivo de sociedad, donde para formular dichas políticas es necesario ampliar la investigación y realizar un análisis crítico de los procesos a través de los cuales se produce y se utiliza el conocimiento para satisfacer todas las necesidades: tecnológicas, éticas, estéticas, históricas, sociales y culturales.

De la experiencia como repetición a la experiencia como posibilidad: entre los lineamientos del Ministerio y los agenciamientos de los sujetos. Con respecto a experiencias significativas en educación superior mediadas por el uso de las TIC, no se cuenta con información relevante que pueda dar cuenta de las características de dichas experiencias. El Ministerio de Educación Nacional desde el año de 1995 viene recopilando información sobre experiencias significativas que ha denominado mejores prácticas a través de la aplicación y seguimiento a un conjunto de indicadores. Sin embargo, no se ha tenido en cuenta lo significativo como interpretación subjetiva de la experiencia propia de cada sujeto, ni lo significativo como construcción con el otro, orientándose sólo a la construcción de lo significativo desde el punto de vista de un indicador.

Los autores como Larrosa (2010) y Bárcena (2005), concuerdan en que la educación debe mirarse tanto desde la experiencia como desde la práctica. Ambos autores relaciona la experiencia y la práctica, pero dándole cada uno una mirada diferente, Larrosa da más valor a la experiencia ligando el pensamiento y el sentido ya que está más cerca a la vida como factor primordial del ser humano; Bárcena da mayor prelación a la práctica como experiencia reflexiva y de sentido ya que lo que da sentido a la educación es la libertad misma como relación entre los individuos que están inmersos en el ambiente educativo.

Acorde a los planteamientos del Ministerio de Educación Nacional, no se ve explícito lo significativo como interpretación subjetiva desde la propia experiencia, que permita que cada individuo se reconfigure, se auto reflexione, así como tampoco se observa la construcción desde la otredad que le permita al individuo, al mismo tiempo que se auto transforma, transformar a otros, pero reconociendo sus diferencias y autonomía.

Por lo tanto en relación al objetivo general de la investigación, consideramos que Las Experiencias Significativas son prácticas concretas y sistemáticas relacionadas con las vivencias del sujeto que le dan sentido y le permiten generar acciones auto reflexivas que nacen desde el mismo sujeto, llevándolo a realizar transformaciones importantes para reconfigurar su vida y la de las personas con las cuales interactúa, así como la influencia e impacto en el cambio positivo de la sociedad.

## **METODOLOGIA**

En la investigación se recurrió a estrategias del orden cualitativo y cuantitativo para identificar y caracterizar las experiencias consideradas significativas en el Programa de Ingeniería Informática de la FUCN. En el caso de la estrategia cuantitativa, se recurrió a encuestas virtuales, construidas a partir de la elaboración de una matriz de dimensiones en la que se cruzó los objetivos de la investigación con las dimensiones (Ser, Saber, Saber-Hacer y Convivir) así como las variables del orden personal, académico, profesional, ciudadano, dando como resultado la construcción de indicadores que fueron la base para el diseño de las encuestas que se aplicaron a los diferentes actores (estudiantes, facilitadores, egresados y personal administrativo), relacionados con el programa de Ingeniería Informática.

En lo que concierne a las estrategias cualitativas, se optó por la realización de entrevistas semiestructuradas a grupos focales como un modo de acercamiento al estudio de casos que es definida como "una técnica de investigación que permite recolectar información a través de la interacción que desarrolla un grupo en torno a un tema determinado por el investigador" (Galeano, 2004, p. 16), otro autor que aborda la temática la define como "Los grupos focales proporcionan luces en cuanto a las creencias y actitudes que subyacen al comportamiento. Los datos relacionados con las percepciones y opiniones se enriquecen por medio de la interacción del grupo debido a que la participación individual se puede mejorar en el escenario grupal" (Morse, 2003, p.263).

## RESULTADOS

Se hace referencia a los hallazgos de los tres actores trabajados en relación con los componentes y los factores propuestos para la identificación de experiencias significativas propuestas por el MEN y fortalecida por la propia definición construida por el grupo de investigación. Hallazgos de grupo focales en cuanto a La Pertinencia:

El estudiante ve la educación virtual como un espacio en el que puede optimizar su tiempo, teniendo la oportunidad de plantear de forma libre inquietudes y opiniones, utilizando como mediadores herramientas TIC como foros y correos electrónicos con el fin de abordar temas sugeridos o libres, compartiendo aspectos personales y académicos. El facilitador se convierte en mediador para el establecimiento del diálogo, posibilitando la solución de los conflictos, siendo conciliador ante las dificultades presentadas entre los estudiantes, a la vez que explora experiencias previas de éstos, buscando que el estudiante compare lo que sabe con lo que debe saber. En lo relacionado con el personal administrativo y coordinadores, la pertinencia se ve reflejada en la libertad que tiene para desarrollar simultáneamente actividades laborales y de esparcimiento, de igual forma la utilización de las herramientas TIC le presenta soluciones sociales a través de su centro virtual de emprendimiento facilitando la inserción laboral de los empleados.

Hallazgos de grupo focales en cuanto al Empoderamiento-El estudiante asume responsabilidades y sentido de pertenencia para el desarrollo de sus actividades siendo autodidacta y recursivo, tienen apropiación de las herramientas TIC, propuestas por la FUCN y otras que el estudiante considere útiles para su proceso de aprendizaje. El facilitador, considera al estudiante como eje central del proceso educativo, es responsable de rol como docente, es consciente de la preparación continua en herramientas TIC, se orienta a formar los estudiantes en competencias, tiene claro el trabajo colaborativo como estrategia fundamental en el proceso de educación mediada por las TIC y el grupo administrativo-coordinador, tiene en cuenta los ritmos de aprendizaje del estudiante a través de la estructuración de los currículos, así como flexibilidad espacio temporal para el desarrollo de las prácticas académicas.

Hallazgos de grupo focales en cuanto a la Evaluación- El estudiante, existe claridad sobre la forma de evaluar desde el inicio del curso, se hacen seguimientos a través de la utilización de herramientas TIC, teniendo en cuenta socialización de ideas sobre temáticas comunes, se mide de forma cuantitativa los logros alcanzados, resultados que quedan registrado en dichas herramientas, donde se puede hacer un rastreo de todo el proceso académico, hasta la evaluación. El facilitador, promueve el trabajo en equipo con sustentaciones y argumentaciones en espacios virtuales, mediante la metodología basada en problemas y estudio de casos y los administrativos-coordinadores, dan relevancia al portafolio como herramienta que permite que el alumno exprese sus aciertos, avances y dificultades con los temas del curso y de la institución.

Hallazgos de grupo focales en cuanto al Seguimiento-El seguimiento que realiza la FUCN a los estudiantes, apoya el desarrollo y crecimiento de la personalidad de los mismos, dichos espacios son: la Ciberconsejería, la Unidad Pastoral, Bienestar Institucional y la Cibercapilla. De igual forma se realiza

seguimiento a las actividades académicas. Los facilitadores, generan espacios para la autoevaluación permanente a través de herramientas TIC y el trabajo en equipo y el grupo administrativo y coordinadores, facilitan herramientas que permiten la evaluación de los diferentes procesos académicos, que consiste en una tabla de saberes que contiene lo que debe desarrollar el estudiante a lo largo del proceso aprendizaje, un cuadro de prerrequisitos para el desarrollo de competencias de los cursos, basado en competencias previas y posteriormente una guía de elaboración del curso por competencias, que termina con el análisis de la información recolectada en relación a aspectos institucionales, académicos administrativos y tecnológicos. Otro aspecto importante es el acompañamiento a emprendedores ganadores de la feria semestral del emprendimiento.

Hallazgos de grupo focales en cuanto al Resultado-Para los estudiantes, el trabajo colaborativo, es un factor potenciador del verdadero intercambio de conocimiento, enriquecido con las experiencias del otro para fortalecer los aprendizajes individuales y el desarrollo de habilidades comunicativas. Otro aspecto importante tiene que ver con el desarrollo de habilidades y destrezas que le permiten ser más recursivos, autónomos y proactivos para la toma de decisiones. Los facilitadores, la implementación de sesiones sincrónicas utilizando la herramienta Live Meeting, para que los estudiantes sustenten sus trabajos online y los administrativos y coordinadores, se evidencia articulación con la práctica profesional empresarial en correspondencia con los resultados del proceso académico, así como la creación de empresas de base tecnológica.

Otro resultado tiene que ver con la articulación entre el sector educativo y productivo a través de las soluciones de situaciones problemáticas con aportes académicos, innovando en procesos y servicios.

Hallazgos de grupo focales en cuanto a Transferencia e Innovación: Los estudiantes perciben el trabajo colaborativo como aporte al desarrollo personal, respetando la diferencia, siendo tolerantes, pero teniendo lineamientos definidos con metas comunes. La infraestructura tecnológica que soporta todo el proceso de educación virtual es un mecanismo que incentiva la permanente actualización y utilización de dichas herramientas como mediadoras en el aprendizaje. Los facilitadores reconocen la importancia de la generación del conocimiento compartido a través de la generación de ideas, la participación en eventos regionales, nacionales e internacionales con el fin de compartir experiencias con pares de forma presencial y virtual. El grupo de los administrativos y coordinadores, realizan una feria virtual de emprendimiento, mediante este espacio se le permite al estudiante dar a conocer su idea de negocio, su proyecto de vida empresarial y adicionalmente se le acompaña en la revisión, estructuración y asesoría del modelo de negocio, existiendo alta aceptación del modelo de educación virtual por parte de la comunidad en general.

Hallazgos de grupo focales en cuanto a la Motivación:

Los estudiantes son motivados porque encuentran en la FUCN apoyo en Cibercapilla Bienestar Institucional, Apoyo Sicológico, y a nivel personal, en la parte académica ven la asesoría y acompañamiento como factores potenciadores del pensamiento crítico analítico y reflexivo importantes para su formación. Adicionalmente la FUCN permite que el estudiante exprese sus opiniones en relación con diferentes temas, otro elemento motivante tiene que ver con los lazos de amistad que van más allá de las actividades académicas. Los facilitadores, fortalecimiento en la formación profesional del quehacer docente, los motiva el hecho de participar en redes de conocimiento. El grupo de los administrativos y coordinadores, e poder servir a la sociedad a través del alcance que se genera por medio de la educación virtual, soportada en las herramientas TIC, además de la posibilidad de adaptar los cursos en pro del desarrollo de las competencias de los estudiantes. Otro motivante consiste en la participación en ferias y concursos, donde la FUCN pueda hacer presencia mostrando sus logros y aprendiendo de otros.

El poder articular los procesos académicos con el sector productivo a través de la solución de problemas reales del entorno, lo que facilita la inserción laboral de sus egresados.

## CONCLUSIONES Y RECOMENDACIONES

En lo referente a las conclusiones podemos decir que el programa de Ingeniería Informática ofrecido por la FUCN a través de modalidad virtual con el apoyo de las TIC, evidencia dentro de su proceso de enseñanza y aprendizaje factores potenciadores para la configuración de las experiencias significativas, tales como el trabajo colaborativo fundamental para el aporte al desarrollo del ser en su interacción y aporte con y para otros, el fomento del auto aprendizaje, la autodisciplina, el análisis crítico y reflexivo, de igual forma la valoración de los diferentes estilos de aprendizaje, orientados tanto al reconocimiento de las individualidades como al reconocimiento del sujeto desde sus aprendizajes previos. A continuación se muestran las principales conclusiones en relación a los factores identificados.

Trabajo colaborativo rompe el aislamiento entre los diferentes actores, permitiendo ver las cualidades individuales que son compartidas entre pares y facilitadores a través de herramientas como el foro y el correo electrónico, lo que es tomado por la FUCN como un elemento de fortalecimiento de las capacidades subjetivas, que lo proyectan como un ser social que puede contribuir significativamente al mejoramiento de su proyecto de vida y el de los demás

El Auto aprendizaje permite que los actores muestren gran capacidad de autoexigencia, así como de toma de decisiones, siendo consientes del impacto que dichas decisiones pueden generar en su proyecto de vida, así como el fortalecimiento de los ritmos de aprendizaje acorde a los intereses del sujeto, además de la oportunidad de profundizar en temas de interés, llevando al actor a ser autodidacta, a alcanzar competencias a través de actos auto reflexivos que le permitan realizar actividades como la búsqueda de información para la generación de conocimiento.

La autodisciplina Se encontró como otro factor potenciador para las experiencias significativas ya que fortalece en el estudiante la capacidad para controlar su tiempo. Ésta permite libertad y flexibilidad para el aprovechamiento del aprendizaje mediado por las TIC, conduciendo a la generación de movimientos de los sujetos hacia el logro de sus propias metas, quienes desde la afirmación de sí mismos, crean estructuras para su autoconfiguración y el abordaje de nuevos procesos cognitivos que se ajusten a su realidad, formando individuos con gran capacidad de decisión y responsabilidad.

El análisis crítico y reflexivo contribuye al fortalecimiento del desarrollo integral del estudiante y a la generación de conocimiento que se aborda como la habilidad para razonar, analizar, y argumentar hechos o acciones. Éste busca hacer de la educación un proceso más humanizante, desde el punto de vista de la reivindicación de los actores como sujetos pensantes, actuantes, creadores y constructores de saberes individuales y sociales.

Y por último se encontró como otro factor potenciador para la configuración de experiencias significativas el reconocimiento de las individualidades y la valoración de los diferentes estilos de aprendizaje, teniendo en cuenta que los seres humanos aprendemos de manera diferente, ya sea por asociación, imitación, motivaciones intrínsecas o extrínsecas, entre otras, que nos impulsan a aprender, siendo importante el reconocimiento de las individualidades de los sujetos para identificar las oportunidades de crecimiento individual y social.

# **CORRUPCIÓN PRIVADA: UNA APROXIMACIÓN EN TRES DEPARTAMENTOS DE COMPRAS DE LA INDUSTRIA MAQUILADORA EN MÉXICO**

Oscar Javier Montiel Méndez, Universidad Autónoma de Ciudad Juárez

Ingrid Yadira Ruz Velázquez, Universidad Autónoma de Ciudad Juárez

Diana Irasema Cervantes Arreola, Universidad Autónoma de Ciudad Juárez

## **RESUMEN**

*El presente artículo aborda la dinámica de tres compradores y su accionar dentro de sus departamentos de compras en la Industria Maquiladora en México. Se realizan precisiones conceptuales en torno a la corrupción, se exponen algunos aspectos de las relaciones entre compradores y proveedores, sus relaciones de poder, así como un análisis exploratorio de este hecho social como un problema psicopatológico, en el cual los sujetos pueden cometer actos de corrupción a partir de una psicopatía o narcisismo. Los hallazgos sugieren dinámicas que pueden enriquecer a futuros y hasta hoy escasos estudios empíricos sobre psicopatía de la corrupción privada, abordada en la presente artículo desde varias dinámicas, tales como utilizar, revelar, y manipular información confidencial de un proveedor a otro, negociar con el directa o indirectamente precios, marcas, especificaciones de productos etc., con el fin de obtener una ganancia o cualquier otra clase de beneficio económico personal. La presión social, condicionamientos externos, y el ambiente en que se vive, son elementos por lo cual este tipo de personas anteponen la parte económica sobre la moral o ética. Asimismo, coinciden en la percepción de corrupción en su entorno social y cultural y reconocen es una práctica común, en donde la alta gerencia es muchas veces partícipe en ello.*

**PALABRAS CLAVE:** corrupción privada, industria maquiladora, psicopatía de la corrupción.

## **ABSTRACT**

*This article deals with the dynamics of three buyers and their actions within their purchasing departments in the maquiladora industry in Mexico. Conceptual clarifications are made about corruption, some aspects of the relationships between buyers and suppliers, its power relations, and an exploratory analysis of this social fact as a psychopathological problem, in which subjects may commit acts of corruption from a psychopathy or narcissism. The findings suggest dynamics that can enrich future and at this point few empirical studies on psychopathy private corruption, addressed in this article from several dynamics, such as use, disclose and manipulate sensitive information from one supplier to another, negotiate with prices directly or indirectly, trademarks, product specifications, etc., to gain a personal economic benefit. Social pressure, external conditions, and the environment in which they live, are elements that these people take into account before morality or ethics. They agree on the perception of corruption in its social and cultural environment and recognize it as a common practice within its organizations, where top management is often a key factor in it.*

**KEYWORDS:** Private to private corruption, maquiladora industry, corruption psychopathy.

## **INTRODUCCIÓN**

Las prácticas de actos de corrupción privada (private to private) o arreglos con los proveedores dentro de un departamento de compras en la industria maquiladora, suceden principalmente cuando una persona tiene el propósito de sacar ventaja o un beneficio propio de las negociaciones que están a su cargo, y es uno de los principales departamentos en los que los empleados se encuentran más expuestos a diversas

situaciones que pueden derivar en actos corruptos (Athanas, 2011). Ciudad Juárez, lugar donde se localizan los compradores entrevistados, es la octava zona metropolitana más grande de México (INEGI, 2010), dedicada principalmente a la actividad manufacturera y es cuna del modelo maquilador en el mundo. La industria maquiladora en el país alcanzó su nivel máximo en el 2006 generando casi 1.3 millones de empleos (INEGI, 2006), y dicho sector contribuyó en 2011 con el 78.3% del total de las exportaciones no petroleras y con el 81.8% de las exportaciones manufactureras, lo que demuestra su importancia estratégica para la segunda economía de Latinoamérica (Gobierno de los Estados Unidos Mexicanos, Presidencia de la República, 2011).

El objetivo de la presente investigación fue describir y analizar el contexto bajo el cual compradores pertenecientes a la industria maquiladora de exportación de México incurren en procesos de corrupción privada dentro de un departamento de compras.

## REVISIÓN DE LA LITERATURA

### Corrupción Privada (Private-to-Private)

En este sentido Mauro (1995) distingue la corrupción pública y privada; a la primera la liga a aquellas prácticas ilegales que afectan la eficiencia del gobierno y a la segunda al crimen organizado o a los actos ilegales de los individuos, siendo éstos particularmente difíciles de investigar (OECD/ADB, 2009). Cartier-Bresson (1996), mencionan que este tipo de corrupción privada suele ser juzgado con menos dureza que la corrupción político-administrativa, ya que en el sector privado parece ser que, legítimamente, la norma es la codicia. Los costos, no despreciables, de la corrupción privada son puramente económicos y no, a la vez, económicos, políticos y sociales, como en los casos de corrupción político-administrativa.

La corrupción private-to-private ocurre cuando los involucrados tienen el poder de manipular la información confidencial o privilegiada para obtener un beneficio o una ganancia que responde a intereses egoístas y personales, reflejando una psicopatía. Al categorizarlos como delitos de cuello blanco, estos son definidos como "actos ilegales o poco éticos que violan la responsabilidad fiduciaria o fideicomiso público, cometido por un individuo u organización, generalmente durante el curso de las actividades profesionales legítimas, por personas de condición social alta o respetable para ganancia personal o de organización" (Helmkamp, Bola y Townsend, 1996, p. 351, citado en Dawn, 2011).

### Departamento de Compras

El departamento de compras ha de garantizar el aprovisionamiento de los materiales y componentes necesarios para satisfacer los tipos de demanda (Fernández y García, 2007). Es responsabilidad exclusiva de este departamento proporcionar al requisitor los materiales que solicite en las mejores condiciones, con la calidad apropiada, a buen costo y con las mejores condiciones en el plazo de entrega existentes en el mercado. Por su parte Combs (2011) menciona que otro objetivo es responsabilizarse de que las cotizaciones sean justas y den oportunidad por igual a los proveedores, obteniendo siempre la ventaja competitiva a favor de su organización.

### Compras y Corrupción

Dos áreas de particular riesgo dentro de una empresa son la función de compras (vulnerable al fraude, sobornos y mal uso de regalos) y ventas y mercadotecnia, en donde en la primera las PYMES son especialmente vulnerables a la extorsión (OECD/ADB, 2009). Brege, Brehmer y Lindskog (2010) expresan que para proveer lo mejor posible a los departamentos de una organización de los materiales necesarios al menor costo, es menester que el departamento de compras haga diferentes cotizaciones,

ocasionando competencia entre proveedores, y con ello generar posibles causas para manifestar un acto corrupto o indebido en la relación, en la que de alguna manera una de las partes o las dos generan beneficios particulares. Comentan que el comprador, al obtener información de varios proveedores, obtiene el poder de negociar con éstos precios, calidad de los productos, fletes y fechas de entrega entre otras cosas, todo para los fines que a la organización convenga y, en algunos casos, manipular información. En ocasiones se puede tender a favorecer a cierto proveedor excediendo los precios de los otros competidores, o darle un mayor valor al objeto comprado con el fin de recibir una compensación, regalo, o cualquier beneficio a favor del comprador, siendo ello ejemplos de actos de corrupción.

### Perspectiva Psicológica

El entorno de las organizaciones a menudo sirve para producir personalidades antisociales, muchas personas pueden ignorar el comportamiento moral y se esfuerzan para avanzar a toda costa dentro de dicha estructura (Simon y Hagan 1999; citado en Dawn, 2011). Los comportamientos psicópatas son normales en entornos corporativos, los individuos propensos a involucrarse en delitos de “cuello blanco” son capaces de mentir y manipular con facilidad (Robinson y Murphy, 2009; citado en Dawn, 2011)

Existe un enfoque sobre la comisión de un acto de corrupción como un problema psicopatológico, en el cual los sujetos puedan cometer actos de corrupción a partir de una psicopatía o narcisismo. Ruiz (2005, p. 155) menciona que “en la corrupción, se implican procedimientos narcisistas, los de aquellos practicantes del peculado y posibles sobornos”, definido el trastorno narcisista de la personalidad como “patrón general de grandiosidad, necesidad de admiración y falta de empatía que empieza al comienzo de la edad adulta y que se da en diversos contextos” (López, 2002, p. 799).

El delito de cuello blanco es un tema decisivo en criminología y resalta “ las diferencias de poder e influencia ” así como la dinámica de la desigualdad en riqueza, poder, estatus y reputación personal. Los delincuentes de cuello blanco necesitan excusas sus participantes tales como: “Si todos se están haciendo ricos así, ¿por qué no yo?”, “Merezco estas ventajas como compensación”, “esto es un crimen sin víctimas, nadie sale lastimado; de hecho lo que hago es por una buena causa”, o “no es realmente un asunto grave” (Braithwaite, 1991; citado en Ramamoorti, 2008).

Una persona con psicopatía, menciona Pont y Sauch (2008), no solo la podemos encontrar en centros penitenciarios, sino también en algunas posiciones sociales respetadas, e incluso no es necesario que cometan asesinatos o crímenes, sino pequeñas transgresiones una u otra vez. Algunas de las personas psicópatas “son trabajadores informales y poco fiables, empresarios depredadores y sin escrúpulos, políticos corruptos o profesionales sin ética, que usan su prestigio y poder para victimizar a sus clientes” (Pont y Sauch, 2008, p. 117). Estas personas “psicópatas de cuello blanco”, serían igual de egocéntricos, manipuladores, e insensibles como lo sería un psicópata criminal, pero “su inteligencia, historia familiar, habilidades y circunstancias sociales les permiten construir una fachada de normalidad y conseguir lo que quieren con relativa impunidad” (Pont y Sauch, 2008, p. 117). Según el instrumento DM IV -TR (López, 2002), el Trastorno de la personalidad del grupo B, de donde se subdivide el Trastorno antisocial de la personalidad que a su vez se le ha denominado psicopatía, sociopatía o trastorno disocial de la personalidad, menciona las siguientes características en las personas que lo presentan: Patrón repetitivo y persistente de comportamiento en el que violan los derechos básicos de los demás o las principales reglas o normas sociales apropiadas para la edad, no logran adaptarse a las normas sociales en lo que respecta al comportamiento legal, pueden perpetrar actos que son motivo de detención como la destrucción de una propiedad, hostigar, robar o dedicarse a actividades ilegales, frecuentemente engañan y manipulan con tal de conseguir provecho de placeres personales; y pueden mentir repetidamente, utilizar un alias, estafar a otros o simular una enfermedad, tienen frecuentemente rasgos de personalidad que cumplen con criterios para otros trastornos de personalidad, en especial, trastornos límite, histriónico o narcisista. Peña (2007) y Nizama (2008) han abordado la psicopatía de la corrupción. Sin embargo, no presentan evidencia

empírica, solo una disertación teórica, y la revisión de literatura sugiere que, hasta donde tenemos conocimiento, son muy escasas las investigaciones sobre la relación de la corrupción y su psicopatía abordada desde el contexto de los departamentos de compras.

## METODOLOGÍA

El presente trabajo tiene un diseño no experimental transversal exploratorio descriptivo, bajo la estrategia de investigación estudio de caso. Las unidades de análisis son las personas encargadas de un departamento de compras en la industria maquiladora (véase Tabla 1). Se realizaron entrevistas profundas (realizadas en Marzo y Octubre de 2012), analizadas y codificadas con Atlas ti. Los tres entrevistados tuvieron algún tipo de relación en actos corruptos en sus respectivos departamentos de compras y también comparten sus experiencias en otras empresas.

Tabla 1. Perfil de los compradores

	COMPRADOR 1	COMPRADOR 2	COMPRADOR 3
EDAD	34	30	45
SEXO	HOMBRE	MUJER	HOMBRE
PUESTO	ENCARGADO DE COMPRAS	COMPRADORA DE GASTOS INDIRECTOS	COMPRADOR
AÑOS DE EXPERIENCIA	6	4	11
LUGARES EN LOS QUE HA PRESTADO SUS SERVICIOS	RESERVADO	RESERVADO	RESERVADO
FORMACIÓN ACADÉMICA	INGENIERÍA INDUSTRIAL	MAESTRÍA EN ADMINISTRACIÓN	LICENCIATURA EN FINANZAS

## RESULTADOS

Tabla 2. Análisis de las entrevistas, entrevistado1, 2 y 3

CÓDIGO	COMPRADOR 1	COMPRADOR 2	COMPRADOR 3
JUSTIFICACIÓN DEL ACTO DE PODER	"Se pueden dar negociaciones donde se pudiera sacar ventaja, una de los dos partes o ambos, si comprador quiere, puede hacerlo en cualquier momento, hasta puede decirle a cualquier proveedor que hagan negocios, va a ser muy difícil que el proveedor le diga que no".	"Cuando un comprador tiene la intención de sacar ventaja como mencionaste, va a tratar de encontrar la oportunidad, momento o circunstancia para que esto suceda".	"uno cuando entra a trabajar a una empresa va con toda la intención de trabajar honestamente y todo, porque para eso se nos paga, pero si la empresa tiene ya ese ambiente, se empieza uno a envolver con sus compañeros, a familiarizarse con los proveedores"
BARRERAS PARA PROVEEDORES	"Cuando un proveedor desea entrar a una maquiladora para cotizar, habiendo tantos interesados, necesita tener algún contacto dentro de la organización, entonces podría ofrecer un soborno para que lo dejen entrar".	"Dependen mucho las políticas que tengan en la maquila, en algunas es más fácil y en otras casi imposible, porque es requisito que los proveedores tengan certificaciones, pudieran ser del ISO o que las requisiciones pasan por miles de firmas antes de autorizarlas".	"existen varios filtros en donde no nada más tiene la decisión una sola persona de a quien se le gira la orden, sino ya entran algunas jerarquías para tomar la decisión y así es más complicado que se le dé preferencia sobre alguna orden de algún producto o servicio a los proveedores"

SOBORNO	"El soborno podría ocupar este tema, pero no como un soborno en sí, sería más bien como una comisión".	"Cuando a mí me daban mí cheque, lo llevaba el proveedor en un folder junto con una cotización y ahí me lo entregaba, nadie se daba cuenta".	"cuando un proveedor te ofrece de entrada un soborno, que no te sorprenda que a la vuelta de la esquina te quede mal, o que ni te de lo que pactaron. Así son algunos, con tal de vender, te prometen lo que sea y al último, se hacen locos".
PREFERENCIAS DE INTERCAMBIO	"Que el comprador reciba su comisión o un regalo en agradecimiento por haber elegido girar a ese proveedor la orden de compra".	"Él me daba un cheque al portador que no dijera la leyenda depósito en cuenta del beneficiario, para poder cambiarlo y no ser rastreado"	" ya si hay un regalo o una cantidad monetaria de por medio, pues obviamente trato de analizar...aquí lo importante es que los proveedores cumplan con las calidades y ya si quieren darte un regalo o alguna ayuda monetaria pues que mejor!!!! ya es un plus jajajajaja.
USO ILEGAL DE INFORMACIÓN CONFIDENCIAL	"Para favorecer a un proveedor pues yo creo que también es común hasta cierto punto puesto que se está filtrando los precios de un proveedor".	"Se pasan los precios de un proveedor para que otro los mejore, aunque sea por unos cuantos pesos, o mejore el tiempo de entrega, se le da a conocer información de los proveedores para que sepa con quien está compitiendo y en que puede mejorar, así se beneficia a un proveedor en particular y hasta a la maquila, porque va a obtener mejor precio y servicio, pero a los otros proveedores, pues alguien tiene que salir perdiendo".	"obviamente pasan por varios filtros para decidirse por cual proveedor en ese inter esta el estira y afloja, se da el "te doy un descuento" y después el "te doy tanto y me queda tanto", en ese inter, muchas veces el mismo proveedor dice: mira si das el fallo hacia mi pues te puedo pasar el... no sé 2, 3 o 5 % de la cantidad que se compre"
ENTORNO ECONÓMICO DEL COMPRADOR	"Si una persona que está en compras bien remunerada, siente que su trabajo está bien pagado, no tendría entonces la necesidad de buscar situaciones para sacar un poco más de dinero y arriesgue todo por ganarse un dinero extra".	"Pues el adquirir artículos que no puedo comprar con lo que gano".	"cuando el ambiente de la empresa es muy sano, es difícil que una persona se deje intimidar o quiera sacar agua para su molino, el dinero nunca sobra, y ya depende de cada quien y de cómo seas para ver si entras o no en la jugada"
INICIATIVA DEL ACTO DE CORRUPCIÓN	"Definitivamente en mi experiencia siempre es el proveedor, pero el que decide si va a ocurrir o no siempre es el comprador, entonces sí, yo pienso que el proveedor siempre es el que toma el riesgo porque es el que tiene más intereses en esto".	"Pues sería el proveedor, casi siempre es el que se abre primero para mostrar el caminito, además, la persona con la que tiene uno contacto directo es con el vendedor, y por lo general él quiere lograr una comisión sobre la venta".	"Por lo regular el proveedor es el que incita al comprador, ellos llegan primero ofreciendo su producto y a ponerse a tus ordenes, y dicen mira yo te ofrezco ese producto, cumple con las expectativas que estas pidiendo y si me aceptas, para ti te corresponde tanto posteriormente se da la negociación"
ETICA DEL COMPRADOR	"Aunque las personas que son avariciosas y quieren tener más a toda costa, obviamente no se van a detener aunque tengan el sueldo que tengan, pero obviamente lo hacen con mucho más cuidado y me imagino que ante ciertas circunstancias en que no se les vaya a descubrir sus negociaciones ilícitas".	"en los últimos años las empresas han cambiado su política hacia los proveedores haciendo estas prácticas más difíciles de llevarse a cabo.	" yo evito cualquier situación que me pudiera generar problemas, si quiero aumentar mis ingresos, entonces invierto en un negocio propio, pero ya depende de cada quien"...yo siempre busco lo que es la calidad para no desmeritar obviamente mi trabajo".
COMPORTAMIENTO DEL COMPRADOR	"En mi trabajo no quiere decir que con todos los proveedores con los que tengo un trato haya una negociación corrupta, para esto tienes que saber con quién y cómo te dije yo a muchos proveedores les he dicho que no a sus propuestas corruptas".	"Si he rechazado ofrecimientos y es simplemente porque la persona no te da la confianza o porque hay algo que no te late mucho y la verdad, no hago este tipo de negocios con cualquiera, no porque alguien te este ofreciendo dinero así nada más y ya lo aceptas, primero tienes conocerlos un poco más, tener confianza y saber que todo queda entre nosotros".	"bueno en lo personal yo siempre busco lo que es la calidad y eficiencia para no desmeritar mi trabajo, ya si hay un regalo o una cantidad monetaria de por medio, pues obviamente trato de analizar que tanto me conviene, pero el objetivo mío es primero que cumpla con las expectativas que la empresa requiere".
NEGOCIACIONES PRIVATE-TO-PRIVATE	"Siempre que hay alguna relación que no es estrictamente profesional entre un comprador y un proveedor es cuando se pueden dar negociaciones en las que como dicen ustedes se pudiera sacar ventajas".	"El proveedor es el que se acerca o insinúa algo, para quedar bien, ya saben que si quedan bien con el de compras, tienen trabajo seguro".	"el proveedor empieza a llegar y dicen mira yo te ofrezco ese producto, cumple con las expectativas que estas pidiendo y si me aceptas para ti te corresponde tanto, entonces ahí entra lo que es la negociación"

EL PODER DE LA INFORMACIÓN	"La información da poder a cualquiera, cuando ya tienes las cotizaciones de los proveedores, los datos de los productos, marcas, cuando ya sabes que es lo que se necesita comprar exactamente, es ahí cuando el comprador, puede pasar esta información al mejor postor".	"Cuando se tiene el poder de decisión de compra y se puede decidir a quién comprar, se puede desde negar la entrada a nuevos proveedores o arreglarse con ellos para dejarlos entrar, se negocia con ellos recibir a cambio un comisión por otorgarles compras por cierto periodo o simplemente quedarse con los proveedores que ya se tiene más confianza".	"cuando uno manda una cotización, puede invitar a las empresas a que entran a cotizar... el comprador es quien tiene el contacto directo con el proveedor, el decide y con su firma autoriza a quien girar la orden de compra... el contacto siempre va a ser el comprador con el proveedor"
ENTORNO SOCIAL DEL COMPRADOR	"La corrupción en nuestro país, en nuestra ciudad es muy común, las personas estamos acostumbradas hasta cierto punto en ver normal los actos corruptos".	"Compras mexicanas, que son en las que más se puede hacer tranzas, en las compras americanas, casi con dos cotizaciones es suficiente, normalmente se maneja por contratos y además, es más difícil que los gringos te quieran intimidar o tu a ellos".	" A veces, si no entras tu, al círculo de la corrupción, no tienes forma de ir ascendiendo, porque no te toman en cuenta, porque les estorbas y no les ayudas a ganar, entonces te tienes que envolver en lo mismo para que para que a todos nos toque. Esto pasa hasta en el mismo gobierno"
MANIPULACIÓN DE INFORMACIÓN	"la calidad de otro proveedor, marcas, tiempos de entrega, se filtra toda esta información que tiene el comprador y se le da a otro proveedor para utilizarla y manipularla".	"pueden llegar al acuerdo de inflar los precios, la maquila pagaría un poco más, de ahí se dividen ganancias, pero los precios no se pueden inflar tanto que pueda llamar la atención de contabilidad o finanzas o que sea un indicador para una revisión".	"ya entran algunas jerarquías para tomar la decisión y así es más complicado que se le dé preferencia sobre alguna orden de algún producto, o contrato de servicio a los proveedores, a menos que para recibir el soborno el comprador tenga de tarea tratar de persuadir a los jefes, que también se puede, pero como te dije, ya es más complicado".
FAVORES PERSONALES	"el se ofreció a hacerle algunos arreglos a mi casa, que la verdad si se necesitaban y yo le dije que después ya que por el momento no podía y él me dijo que no me preocupara por eso del pago, que después veríamos".	"se cotizo con el proveedor que ofreciera mejor precio y servicio, tan buen servicio, que hasta la alfombra de mi casa me lavaron gratis, también con la compañía que se dedicaba a fumigar la planta, iban a fumigarme mi casa de vez en cuando, con paquete todo incluido".	"dimos el fallo a un negocio que nos había prometido pues... una cantidad considerable, el nos dijo que cuando saliera el cheque nos iba a dar una parte proporcional, entro pues la mercancía al almacén, obviamente el cheque salió un mes, mes y medio después, y cuando se le pago, desapareció, o sea no nos toco absolutamente nada".
FAVORECER PROVEEDORES	"al momento de favorecer a cierto proveedor con el que se tiene la negociación ahí entra ya pues lo que podrá ser una comisión".	"yo te estoy platicando las experiencias que yo he tenido en las que he sacado beneficio, pero no es para pensar que en un departamento de compras lluevan los ofrecimientos de proveedores".	"bueno ya uno tiene la decisión de aceptar o no, porque este proveedor ya entraría para surtimos ese producto, pero yo opino que lo que te puedan a ti, de verdad hay que analizarlo y ver si realmente ese proveedor cumple con las expectativas que necesita la empresa o con los estándares de calidad, mejor se va uno con el proveedor que realmente cumpla y no nos quede mal".
MOTIVACIÓN DEL COMPRADOR	"poder sacar algún beneficio, la motivación prácticamente sería económica".	"pues el adquirir artículos que no puedo comprar con lo que gano".	"depende de cada quien, de si tiene problemas económicos o simplemente lo hace porque se dio la situación y ya".
PODER DEL COMPRADOR	"ser comprador te da cierto poder, la maquila te otorga la capacidad de poder tomar cierto tipo de decisiones otras personas no pueden tomar y esto crea ventaja sobre algún otro empleado e incluso ventaja sobre los proveedores, hay cosas que se dan solo en el departamento de compras".	"es que cuando se tiene el poder de decisión de compra y se puede decidir a quién comprar".	"el comprador es quien tiene el contacto directo con el proveedor, el decide y con su firma autoriza a quien girar la orden de compra, compras mayores ya va la firma de enterado del gerente encargado del departamento que está requiriendo y el puede influir en la decisión para elegir al proveedor, pero el contacto siempre va a ser el comprador con el proveedor".

RESPONSABILIDAD FIDUCIARIA	"Yo creo que el hecho de que exista ya en el departamento de compras una persona que acceda a los actos corruptos, eso puede afectar a la empresa directa o indirectamente"	"si se llega a tener arreglos con los proveedores, es algo independiente a la maquila, es un trato aparte"	"cuando realmente no se agarra al proveedor indicado que cumple perfectamente con los estándares de calidad por aceptar un dinero mal habido, o algún favor o regalo, puede pasar que el proveedor se quede corto con los pedidos, o la calidad no sea la misma que nos ofreció en un principio y hasta lo haga quedar mal a uno".
ÉTICA HACIA GRUPOS DE INTERÉS	"si yo por ejemplo, estoy inflando precios junto con un proveedor, claro que estoy afectado directamente a mi empresa, a mi organización".	"al comprador que estaba antes de que yo entrara en esa maquila, lo corrieron porque estaba inflando los precios de unos motores para los aires que costaban 2500 pesos y los metía hasta por 5000, me imagino que estaba recibiendo un pago por parte del vendedor, su mochada con el de su comisión".	"yo opino que lo que te puedan a ti, de verdad hay que analizarlo y ver si realmente ese proveedor cumple con las expectativas que necesita la empresa o con los estándares de calidad, mejor se va uno con el proveedor que realmente cumpla y no nos quede mal".
COMPORTAMIENTO DEL PROVEEDOR	"el proveedor siempre va a buscar salir beneficiado y siempre va a existir un comprador dispuesto a caer en este hecho de corrupción".	"si se llega a tener arreglos con los proveedores, es algo independiente a la maquila, es un trato aparte".	"Así son algunos, con tal de vender, te prometen lo que sea y al último, se hacen locos".
RELACIONES AMIGABLES PRIVATE-TO-PRIVATE	"Estas negociaciones se pueden hacer por amistad, yo tenía una amistad con una proveedora y me sentía obligada a comprarle a ella y no me daba ninguna comisión, pero como te digo era por amistad. Estas negociaciones no puedes hacerlas con personas con las que tienes alguna amistad".	"Cuando tienes un compa que se dedica a vender o dar un servicio que se requiera en la maquila, pues lo metes como proveedor, mueves ahí adentro en finanzas o contabilidad para que se le de alta su RFC y todo lo que necesiten para registrarlo y pues entonces con más razón tiene que haber mochada, digo, en agradecimiento por el favor".	"Pues Igual a veces nos llegan con botellas, han de verle a uno cara de borracho, ¿será? Jajajaja, pero si en navidad o por el cumpleaños, ellos averiguan cuando es, y en realidad a mi pues no me gusta tomar, es mas ni son vinos que me gusten".
INFLUENCIA DE LOS SUPERIORES EN ACTOS CORRUPTOS	"Si te das cuenta de que tus jefes están haciendo tranzas, donde obviamente no se van a ganar tres pesos, son negociaciones de mucho dinero, si un subordinado ve que ellos lo pueden hacer, pues con más ganas lo hacen, y sí, si pienso que influye mucho que los jefes pongan el ejemplo".	"He visto gerentes que ganan muy buena lana y aun así siguen haciendo sus tranzas, así que no creo que lo que gana influya para aceptar o no un ofrecimiento, a veces lo hacen solo por comodidad, porque pueden".	"la gerencia se supone que confía en su personal y le dan al comprador carta abierta para hacer las cotizaciones y buscar proveedores".
PERCEPCIÓN DE CORRUPCIÓN DEL COMPRADOR	"Definitivamente sí, si es una práctica común por los intereses, hay mucho dinero de por medio"... "Aunque hay algunas empresas donde obviamente por sus políticas no es posible".	"Puedo decir que he visto que es una práctica común, donde el comprador y proveedor forman un equipo de complicidad, porque están trabajando bajo grandes corporativos que tienen mucho capital"	"a veces, si no entras tu, al círculo de la corrupción, no tienes forma de ir ascendiendo, porque no te toman en cuenta, porque les estorbas y no les ayudas a ganar, entonces te tienes que envolver en lo mismo para que para que a todos nos toque. Eso pasa aquí en la industria maquiladora, inclusive hasta en el mismo gobierno".
MEDIDAS PREVENTIVAS	"Pues más que nada el departamento de auditoría es el que regula esta situación, registrando los movimientos de cotizaciones, compras, que estén bien los procedimientos y comparan las cotizaciones de los proveedores, en fin todo esto lo regulan muy bien, hay muchas políticas en diferentes maquilas que evita la práctica de corrupción".	"Es diferente en cada maquila, en algunas una orden de compra debe pasar hasta por cinco firmas para ser autorizada o que te pudieran exigir que anexes en todas las órdenes de compra, copia de las cotizaciones de los proveedores con los que cotizaste".	"Pues si existen políticas, procedimientos y hasta por ética, pero si alguien tiene la determinación de sacar un dinero extra, se las va a brincar".

## ANÁLISIS Y DISCUSIÓN

Se dividieron los diversos códigos en grupos según se consideró semejanza entre ellos, y se realizó el proceso de generalización analítica.

Grupo 1: Justificación del acto de poder, iniciativa del acto de corrupción, medidas preventivas, influencia de los superiores en actos corruptos, motivación del comprador:

Podemos realizar análisis desde dos perspectivas psicológicas: La primera mostrando a los actos como las motivaciones internas (“adquirir artículos que no puedo comprar con lo que gano”) y externas del sujeto que lo llevan a cometer determinado acto (“depende de cada quien, de si tiene problemas económicos o simplemente lo hace porque se dio la situación y ya”). Para justificar los actos por medio de condicionamientos, De la Torre (2000, p. 239) menciona que “la presión social, los condicionamientos externos, el ambiente en que se vive, un temperamento introvertido- extrovertido, estable-inestable, la edad, el sexo, la herencia, sirven a menudo para justificar ciertos actos no muy morales... pero solo son circunstancias atenuantes...nunca eliminan la voluntariedad y la libertad”. La existencia de corrupción resulta incluso por la complacencia y complicidad de superiores (“los jefes, si se dan cuenta hasta pueden pedirte su comisión o su parte”), (“he visto gerentes que ganan muy buena lana y aun así siguen haciendo sus tranzas, así que no creo que lo que ganes influya para aceptar o no un ofrecimiento, a veces lo hacen solo por comodidad, porque pueden”). La segunda vértice nos presenta la justificación del acto desde la voluntariedad del sujeto, “acción humana que procede de un acto libre y voluntario, excluyendo los actos meramente naturales, los instintivos, los coaccionados, y los no imputables” (De la Torre, 2000, p. 234). El sujeto puede emitir un acto, siendo éste voluntario, escudándose en “otros lo hacen, por qué yo no”. Bietti menciona que “en el caso de las conductas inmorales, y debido al enorme costo psicológico de admitir que realizamos una acción de ese tipo, la gente tiende a resolver la disonancia modificando sus actitudes para que coincidan con su comportamiento” (Bietti, 2009, p.16). Esto refiere una disonancia cognitiva en el ser humano, a pesar de saber que su acción no es buena, intenta justificar el hecho de alguna manera. En este caso, es hacia el proveedor, quien usará aquello a su alcance para lograr su objetivo y asegurar una ventaja sobre su competencia (“pues sería el proveedor, casi siempre se abre primero para mostrar el caminito, además, la persona con la que tiene uno contacto directo es con el vendedor, y por lo general, él quiere lograr una comisión sobre la venta”). En la justificación del acto de poder, al comprador le conviene que el poder de negociación de los proveedores sea bajo para asegurar mejores condiciones de negociación y tenga control sobre éstos (“hasta puede decirle a cualquier proveedor que hagan negocios, va a ser muy difícil que el proveedor le diga que no”).

Grupo 2: Soborno, preferencias de intercambio, favores personales, Favorecer a Proveedores.

La psicología económica ayuda a realizar estudios sobre las actitudes que tienen los individuos hacia el dinero y cómo lo perciben (“el soborno podría ocupar este tema, pero no como un soborno en sí, sería más bien como una comisión”), e incluso como algunos sobornan o se dejan sobornar (Gil, Samuel, Borrás, Juanola, 2004). Es de vital importancia para entender esta clasificación tener los conceptos claros de soborno, regalo y propina, aunque en muchos casos se intente disfrazar lo uno con etiqueta de otro. (López, 2008)

Realizar un favor a cambio de algo, se fortalece en el hecho de que surge la posibilidad de un intercambio ilegal entre funcionarios y clientes (Del Castillo, 2001), pues las decisiones de los compradores pueden volverse un recurso con mucha demanda y ganar valor económico, por lo cual es tentador aceptar favores personales (“se ofreció a hacerle arreglos a mi casa, la verdad si se necesitaban y yo le dije que después, ya que por el momento no podía y me dijo que no me preocupara por el pago, que después veríamos”) y laborales, pues también la posición de autoridad colabora en el poder que tiene el comprador, en este punto en específico, la poca experiencia que tiene el comprador en su departamento podría ser un factor importante para que pueda manejar situaciones, ya que le podría ser difícil dar una negativa tajante al ofrecimiento del proveedor. La aceptación de atenciones y obsequios (“que el comprador reciba su comisión o un regalo en agradecimiento por haber elegido girar a ese proveedor la orden de compra”) podrían hacer que otras partes pongan en juego la independencia e integridad de la empresa. Un favor personal pone al comprador en una situación en que se siente obligado a favorecer a un proveedor. “ya si

hay un regalo o una cantidad monetaria de por medio, pues obviamente trato de analizar...aquí lo importante es que los proveedores cumplan con las calidades y ya si quieren darte un regalo o alguna ayuda monetaria pues que mejor!!!! Ya es un plus jajajajaja”. La particularidad el aceptar un soborno o hacerse partícipe de este, implican todo tipo de valores morales y psicológicos, el individuo puede encontrarse en conflicto consigo mismo al participar en prácticas corruptas. Cuando los sujetos se encuentran frente a este dilema, parecen preferir la opción del interés personal antes que el beneficio común.

Las prácticas corruptas son conductas tipificadas en los códigos penales, por lo cual, se llevan a cabo en la clandestinidad. “...si un comprador va a tener una negociación en donde va a tener una ventaja, pues hay que guardarlo en secreto, entre menos personas se enteren de esto pues es mejor”. Este anonimato responde a la necesidad de mantener encubierta una conducta que va en contra del bienestar social. Al llevar a cabo la práctica corrupta, el sujeto escoge implícitamente uno de dos tipos de valores posibles. Por una parte, se encuentra el valor de recibir de manera inmediata y directa un beneficio para sí mismo. Por otra, se encuentra el valor de manejar los recursos hacia su finalidad inicial, generando un bienestar para la comunidad. (Guerrero 2004).

#### Grupo 3: Uso ilegal de la información confidencial, manipulación de la información, el poder de la información:

El uso de la información y manipulación que se tiene sobre ésta refiere al concepto de confianza, la cual la empresa para la que trabaja el comprador brinda a éste, ("la gerencia se supone que confía en su personal y le dan al comprador carta abierta para hacer las cotizaciones y buscar proveedores"). Desde la perspectiva psicológica, menciona Laso (2010, p. 2): “la confianza tiene siempre relación con el riesgo; es decir, sólo puede surgir en contextos donde se puede “perder”; cuanto mayor sea la potencial pérdida, menor será la tendencia a confiar”. Las personas corruptas puedan aprovechar el hecho de que tienen esa confianza por parte de sus superiores y poder manejar la información de manera que mejor convenga. El poder que se tiene con la información, menciona Laso (2010, p. 3), tiene que ver con una cuestión de “control”: es “mío” aquello que yo, y solamente yo, puedo utilizar a mi antojo; esto es, “controlar”, por lo que podemos tener el poder sobre aquello que podemos “controlar”. Utilizar, revelar y manipular información confidencial de un proveedor (“la calidad de otro proveedor, marcas, tiempos de entrega, se filtra toda esta información que tiene el comprador y se le da a otro proveedor para utilizarla y manipularla”) con el fin de obtener ganancia o cualquier otra clase de beneficio económico personal, es otra práctica. El riesgo pudiera ser poco, el beneficio mucho, tanto para la empresa y comprador, pero no para los otros proveedores (“así se beneficia a un proveedor en particular y hasta a la maquila, porque va a obtener mejor precio y servicio, pero a los otros proveedores, pues alguien tiene que salir perdiendo”).

#### Grupo 4: Poder del comprador, entorno económico del comprador, comportamiento del comprador, entorno social del comprador, percepción de corrupción del comprador, comportamiento del proveedor:

La teoría de la desvinculación moral menciona Vázquez (2010, p.3), presenta que “las creencias que tienen las personas acerca de sí mismas son claves para el control y la competencia personal. Entre las creencias propias que usan los individuos para controlar su ambiente están las creencias de autoeficacia”. Esta se relaciona con las cosas que un individuo se siente capaz de hacer (“la maquila te otorga la capacidad de tomar cierto tipo de decisiones que otras personas no pueden y esto crea ventaja sobre algún otro empleado e incluso sobre los proveedores”), mientras que el autoconcepto supone una conceptualización de la propia persona hecha por el individuo (Vázquez, 2010), por lo cual el comportamiento y la percepción ante este acto por parte del comprador, hace que maneje su ambiente de manera que las creencias que tiene y su entorno social ("la corrupción en nuestro país, en nuestra ciudad es muy común, estamos acostumbrados hasta cierto punto en ver normal los actos corruptos"), le ayuden a justificar el acto (“tienes que saber con quién y cómo te dije yo a muchos proveedores les he dicho que no

a sus propuestas corruptas”). El entorno económico del comprador representa una justificación de que en la sociedad corrupta se impone lo material a lo espiritual; se sobrevalora lo económico (“si una persona que está en compras bien remunerada, siente que su trabajo está bien pagado, no tendría entonces la necesidad de buscar situaciones para sacar un poco más de dinero”). Las personas corruptas dándose cuenta o no, viven en una pobreza ética, afectiva y emocional, y se apropian de todo lo posible (“el comprador y proveedor forman un equipo de complicidad”), incluyendo personas (Peña, 2007). (“dimos el fallo a un negocio que nos había prometido pues... una cantidad considerable, el nos dijo que cuando saliera el cheque nos iba a dar una parte proporcional, entro pues la mercancía al almacén, obviamente el cheque salió un mes, mes y medio después, y cuando se le pago, desapareció, o sea no nos toco absolutamente nada”). Estas experiencias van haciendo que el individuo se torne más pragmático para involucrarse en actos de corrupción (“el proveedor siempre va a buscar salir beneficiado y siempre va a existir un comprador dispuesto a caer en este hecho de corrupción”). Desde la perspectiva del proveedor que emite un comportamiento de “corrupción”, al ofrecer algo al comprador, Kofman (2001) menciona que “todo lo que uno hace, lo hace por alguna razón”, o sea, la obtención de “ganancias secundarias”, los beneficios ocultos que justifican la acción. El ser humano es complejo, pero su psique le permite mantener posiciones opuestas en forma simultánea comenta Kofman, es decir, aunque el proveedor sabe que no está bien su comportamiento, lo emite bajo este doble juicio y obtiene la ganancia secundaria (que se le compre a él).

#### Grupo 5: Ética del Comprador, Responsabilidad fiduciaria, ética hacia los grupos de interés, autoridad y ética de los superiores:

Gaither y Frazier (2003), mencionan que existe un compromiso legal y ético del comprador cuando se emite un pedido de compra. Estos autores comentan (p. 555) que un problema constante de los compradores es que, “estos intentos de ofrecer regalos a los compradores, generan la pregunta de cuánto es demasiado. ¿En qué punto los presentes se convierten en no éticos, e incluso ilegales?”, pregunta en la cual el acto moral y ético juega un papel relevante. En el desarrollo de las empresas y las relaciones con terceros, se espera exista responsabilidad fiduciaria entre compradores y proveedores, en la que sus empleados se sientan obligados a actuar con equidad y manejar los bienes en beneficio de su empresa (“se da más fácilmente cuando no se daña a la empresa o cuando no tiene ella la facultad de detectar alguna falla”). En algunas empresas implementan un código ético o de conducta para manifestar sus valores y dar ejemplo en la relación con sus grupos de interés, estos códigos no siempre trascienden de manera importante (“al comprador que estaba antes de que yo, lo corrieron porque estaba inflando los precios...imagino estaba recibiendo un pago por parte del vendedor, su mochada”) (“gerentes que ganan muy buena lana y aun así siguen haciendo sus tranzas...no creo que lo que ganes influya para aceptar o no un ofrecimiento, a veces lo hacen solo por comodidad, porque pueden”).

### **FUTURAS LÍNEAS DE INVESTIGACIÓN Y CONCLUSIONES**

Una limitante de esta investigación fue que no se incluyeron datos para su análisis, tales como género, raza, edad, estado civil, formación educativa, experiencia, abuso de sustancias, o desorden psicológico Poortinga, Lemmen y Jibson (2006) entre otras variables para realizar el análisis, y no se aplicó ningún tipo de prueba que midiera el nivel de corrupción de los entrevistados, debido a no haber encontrado ninguna herramienta en la literatura.

Se sugiere que la corrupción depende mucho de la motivación y el interés que tienen las personas para actuar de alguna manera, y que la disposición de un empleado hacia la corrupción no depende solamente del salario sino de actitudes éticas. La aplicación de políticas internas en una empresa debería paliar actos irregulares, pero la corrupción es un hecho presente en las relaciones privado-privado, y como tal debe reconocerse para tomar medidas preventivas y evitar la corrupción; entre más eficiencia, eficacia, rendición de cuentas y transparencia, menores posibilidades de actos ilícitos por el servidor estatal y

privado (Campos, 2007). Una limitación es que las entrevistas fueron analizadas a partir de una grabación y se considera que el lenguaje verbal y no verbal brindaría más características sobre el discurso de los entrevistados. Se recomienda investigar más el tema debido a que la revisión de literatura sugirió es escasa y por los beneficios que las empresas pudieran recibir y así evitar este tipo de prácticas que afectan sus operaciones y la sociedad en general.

A pesar de la importancia y existencia de normas de control interno en las organizaciones, prevalecen las prácticas corruptas, lo que sugiere como una medida preventiva adicional aun no implementada, examinar, a través de la construcción de un instrumento psicológico enfocado a la psicopatía de la corrupción, al empleado o al candidato potencial a ser contratado para puestos clave.

# **IMPACTO DE LA LOGÍSTICA EN LA LIBERACIÓN DE MERCANCÍA CONTENERIZADA DE IMPORTACIÓN EN EL PUERTO DE MANZANILLO, COLIMA, MEXICO**

Aurelio Deniz Guizar, Universidad de Colima  
Manuel Rubio Maldonado, Universidad de Colima  
Oscar Bernardo Reyes Real, Universidad de Colima  
Erendira Yareth Vargas López, Universidad de Colima

## **RESUMEN**

El impacto de la logística del puerto de Manzanillo para la liberación de mercancía contenerizada ha cobrado relevancia debido a la excelente ubicación geográfica en donde se encuentra, es además, el principal vínculo entre el océano pacífico y el corredor industrial y comercial más importante del México, estos beneficios no dejan de ser una preocupación para la gran demanda de actividad portuaria existente derivado de la globalización y la apertura comercial en los últimos años. La concentración de carga y la falta de mayores recursos disponibles son parte de los obstáculos en la operación logística para la liberación de mercancía contenerizada. El puerto de Manzanillo resulta ideal para la realización del comercio internacional con países como Estados Unidos, Canadá, Centroamérica, Sudamérica y los países que conforman parte importante de la cuenca del pacífico. Por ello es importante, analizar las operaciones logísticas y las actividades que realizan los entes participantes en el proceso. Este trabajo de investigación soportado por una metodología mixta, pretende identificar estrategias para la agilización en la liberación de mercancías contenerizadas en Manzanillo, ya que el moderno desarrollo exige una integración logística adecuada que optimice los recursos portuarios.

**PALABRAS CLAVE:** Logística portuaria, importación, mercancía, estrategia, carga.

## **IMPACT OF LOGISTICS IN THE RELEASE OF MERCHANDISE-CONTAINERIZED IMPORTS AT THE PORT OF MANZANILLO, COLIMA, MEXICO**

## **ABSTRACT**

The impact of logistics in the port of Manzanillo, for the release of containerized goods, has gained importance due to the excellent geographical location in which it is, also the main link between the Pacific Ocean and the commercial industrial corridor, the most important in Mexico. These benefits do not cease to be a concern due to the high demand for existing port activity, resulting from globalization and trade liberalization in recent years. The cargo concentration and lack of resources are major obstacles of logistics operation for the release of containerized goods. The port of Manzanillo is ideal for conducting international trade with countries like the U.S., Canada, Central and South America and the countries that make up an important part of the Pacific basin. It is therefore important to analyze the logistics operations and activities undertaken by entities involved in the process. This research supported by a mixed methodology, intended to identify strategies for speeding up the release of containerized goods in Manzanillo, as the modern logistics development requires proper integration that optimizes port resources.

**KEYWORDS:** Port logistics, import, merchandise, strategy, cargo.

## INTRODUCCIÓN

En el puerto de Manzanillo existen problemáticas que alteran su logística y hacen ineficiente la liberación de mercancía contenerizada, afectando principalmente a los importadores, mas sin embargo, por ser un proceso en cadena también afecta a los entes involucrados en la logística portuaria, esto ocasionado por la saturación de mercancías y el poco espacio disponible en los recintos fiscalizados, por ello, es importante que el personal que opera en el puerto de Manzanillo, se preocupe por orientar de manera constante todas las actividades y perfilarlas a las necesidades de los usuarios, así como controlar su capacidad en el manejo de las mercancías tomando como base a la infraestructura portuaria actual, ya que Manzanillo, es un puerto natural que cuenta con vías de comunicación ferroviarias, carreteras y navieras que facilitara la logística portuaria para empresas de clase mundial, mas sin embargo se percibe una desarticulación del elemento humano con los procesos logísticos, así como la fluidez de los tramites al comercio exterior y que en cuestión de importaciones y exportaciones, no deben de omitirse, por ello es importante conocer todo lo referente a la logística, considerando desde la liberación de mercancía contenerizada involucrando las actividades realizadas por los importadores, operadoras portuarias, la aduana, agencias navieras y aduanales, así como los transportistas. Esto con la finalidad de realizar la importación de mercancías contener izadas de la manera mas competitiva posible, considerando tres aspectos que son tiempo, costo y trámite, este ultimo manejado tanto de manera operativa como legal haciendo un análisis de las dependencias involucradas, tomando esto como base se realizaran estrategias que puedan ser implementadas con la finalidad de optimizar la liberación de mercancía contenerizada, para su importación definitiva de una manera más eficiente.

## REVISION LITERARIA

Con la gran cantidad de operaciones logísticas que se realizan en el puerto de Manzanillo es necesario un análisis de los factores que facilitan o entorpecen el proceso logístico e identificar las áreas de oportunidad que presentan las actividades portuarias en la liberación de mercancías.

En la actualidad Manzanillo es parte de una cadena logística competitiva, la cual, desde el punto de vista de Jesús Carrillo Ramos, (2009), afirma que “ante el crecimiento de la carga se ha reflejado la necesidad de redefinir los procesos y los procedimientos de cada uno de los actores del puerto”, entendiéndose como actores los distintos entes involucrados en la actividad logística portuaria, llámese importadores, navieras, operadoras portuarias, agentes aduanales, transportistas, la aduna y demás dependencias de gobierno que son participe en los actos logísticos, Iberri (2009) afirma que, “puesto que la idea es tener un mapeo completo de todos los movimientos, desde el arribo de un contenedor hasta su liberación, buscando las mejores prácticas para determinar estándares” a efecto de agilizar la liberación de mercancía contenerizada de importación.

Y es que como lo afirma Diaz (2002) “logística es mucho más que la entrega física del producto. Es hacer que todo trabaje óptimamente para un fin común, como si fuese un ser cuyo sistema nervioso le permite advertir irregularidades, informar lo sucedido y ordenar las tareas”

Motivo por el cual, se ha considerado importante lo que José Luis Iberri Martínez, (2009) contextualiza que “ En la comunidad portuaria, lo referente a esfuerzos y voluntad, es un factor de suma importancia, ya que en conjunto, todos los participantes de la operación logística han logrado reducir el tiempo de estadía de los contenedores, dando capacidad de unos 6,000 mil Teus diarios. Constatando que sí hay otras formas alternas de hacer eficiente y lograr el incremento en la capacidad, como lo es la actitud de no esperar a ser competitivos hasta tener una ampliación portuaria, aun cuando éstas forman parte de los proyectos a corto, mediano y largo plazo, por lo contrario, se ha decidido agilizar las actividades para sacar mayor provecho a los recursos que actualmente se tienen”

Para Moreno y Trejo (2005) la logística juega un papel de suma importancia para poder realizar la liberación de mercancías contenerizada de importación correctamente y de forma ágil, pues si bien es cierto, te “permite el establecimiento adecuado para atender y resolver quejas así como solucionar problemas en la operación, que esto a su vez se ve reflejado en una reducción de la inversión económica que tienen los distintos entes participantes y el incremento en la calidad de servicios”

Mientras que por otra parte Jesús Alberto Lara Arechavala, (2009) menciona que en “realidad nadie estaba preparado para el incremento de carga que se ha dado en Manzanillo, aun cuando hemos tenido un crecimiento sostenido en los últimos años”

Tomando como sustento los distintos puntos de vista, investigaciones, artículos informativos, libros y revistas, donde gente que día a día se encuentre involucrada en la operación portuaria, investigación o tenga conocimiento de la logística en cualquiera de sus enfoques, es como se pretende otorgar herramientas que puedan contribuir a que el “el impacto de la logística en el puerto de Manzanillo para la liberación de mercancías contenerizadas de importación” sea cada vez mejor.

## METODOLOGIA

Para recopilar información es necesario implementar una serie de técnicas de investigación, que se adecuen al tipo de trabajo que se está realizando. Se optó por realizar una Investigación Mixta: la cual es la que combina la investigación documental y la de campo; es la compresión del conocimiento científico y la utilización práctica de estos.

**La Investigación documental:** La cual, como su nombre lo indica, se define apoyándose en fuentes de carácter documental, esto es, en documentos de cualquier especie tales como, las obtenidas a través de fuentes bibliográficas, hemerográficas o archivísticas; la primera se basa en la consulta de libros, la segunda en artículos o ensayos de revistas y periódicos, y la tercera en documentos que se encuentran en archivos como cartas oficios, circulares, expedientes, etc. **Según Marín la Investigación de campo** se apoya en informaciones que provienen entre otras, de entrevistas las cuales pueden ser en forma grupal o individual, cuestionarios abiertos o cerrados, encuestas y observaciones. Derivado de lo anterior se realizaron entrevistas y aplicaron cuestionarios. Con preguntas en relación al impacto de la logística para la liberación de mercancía contenerizada de importación. Con los resultados obtenidos se procedió a hacer un análisis de la información que nos permita cumplir con los siguientes objetivos: *Objetivo general:* Analizar la logística que se desarrolla en el puerto de Manzanillo para la liberación de mercancías contenerizadas, con la finalidad de identificar situaciones viables y alcanzables que permita agilizarla.

*Objetivo específico a)* Proporcionar un mejor servicio logístico de las mercancías contenerizadas para su liberación, *b)* Identificar cada una de las situaciones que aquejan a los distintos entes implicados en la liberación de mercancía.

Para la obtención de la información se aplicó un muestreo, por ello mediante la fórmula utilizada para las “muestras en poblaciones finitas, en la cual se requieren menos de 500 000 elementos”( FISHER V. L., NAVARRO V. A., ESPEJO C. J. (2004). Investigación de mercados. Teoría y práctica. Tipos Futuras S. A. de C. V. México. Pág. 57), es como se define el tamaño de la muestra para la aplicación de la encuesta referentes a la investigación de campo, que forma parte de la presente investigación.

Formula:

$$n = \frac{z^2 N p q}{e^2 (N - 1) + z^2 p q}$$

En donde:

z= Nivel de confianza

N= Universo o población

p= Probabilidad a favor

q= Probabilidad en contra

e= Error de estimación (Precisión en los resultados)

n= Número de elementos (Tamaño de la muestra)

Y el valor proporcionado a cada una de las variables es el siguiente:

n=? (Que se refiere al número de elementos para aplicar la encuesta).

N= 145 (El cual representa la cantidad total de entes involucrados en la logística portuaria, ya que se decidió realizar un cuestionario, aplicable para operadoras portuarias; agencias aduanales; transportistas y líneas navieras, de manera general).

$$z= 1.96$$

$$p=50\%$$

$$q=50\%$$

$$e= 5\%$$

Por lo que, haciendo la sustitución de los valores aplicables a cada variable de la fórmula para la determinación de la muestra, se realiza el siguiente desglose:

$$n = \frac{(1.96^2) (145) (0.5) (0.5)}{(0.05^2) (145-1) + (1.92^2) (0.5) (0.5)}$$

$$n = \frac{139.258}{0.36 + 0.9216} = 108.65948$$

Por tanto, el resultado se redondea quedando con un total de **109** cuestionarios para llevar a cabo su aplicación. Una vez determinada la muestra, se procede a la aplicación de encuestas, que consisten en las tres operadoras portuarias representando un 2.07% de la población, catorce navieras con un 9.66% y veinticinco transportistas que es un 17.24%. Más sin embargo para las agencias aduanales, quienes representan un 71.03% de la población, con una cantidad de 103 entes, solamente se aplicaran sesenta y siete encuestas, lo que representa un 46.21% de todos los entes involucrados en la logística portuaria para liberación de mercancía contenerizada de importación. Puesto que de esta manera se tiene un total de ciento nueve encuestas, tal como se determino mediante la formula desarrollada con anterioridad.

## RESULTADOS

En base a la aplicación de las encuestas se obtuvieron resultados diversos desde la ubicación que cada empresa tiene hasta lo que es su logística y capacitación del personal, por ello es que realizando un concentrado de entes involucrados en la logística portuaria, se determinó que las agencias aduanales constituyen la mayor población de las empresas involucradas en el proceso de liberación de mercancía contenerizada en el puerto de Manzanillo representadas con un 69%, le siguen las transportistas con un 17%, navieras con un 10%, mientras que las operadoras portuarias con un 2%, dejando el otro 2% restante para empresas como re-expedidoras conocido comúnmente como forwarder y comercializadoras. Por otra parte, un 92% de las empresas consideran tener una ubicación estratégica en el puerto, lo que les permite estar cerca de los lugares a donde tienen que desplazarse para realizar sus actividades operativas. Entendiendo con ello, que no es lo único indispensable, puesto que la capacitación es fundamental, motivo por el cual el 79% de las empresas les brinda capacitación constantemente a sus empleados pero con mayor enfoque en relación al comercio exterior, mientras que un 49% brinda capacitación cada seis meses.

El tiempo tiene un papel importante en el comercio exterior, debido a diversos factores (costos, contratos, demoras, entregas, etc.) Por eso a los importadores requieren se despache su mercancía lo más rápido posible. Seria magnifico el poder despachar toda la mercancía contenerizada de importación en menos de

6 horas, pero por el momento no en todos los casos es posible por diversos factores. Por tal motivo la mayoría de los encuestados, que se representa con un 37% respondió que el tiempo óptimo para despachar la mercancía es de 48 a 72 horas. Ya que las principales causas que originan un retraso en el despacho en tiempo y forma son: falta de espacio en el recinto fiscalizado con un 25%, retraso en la programación de previos con un 20% y retraso en la revalidación un 19%, pues si bien es cierto existe una mala coordinación de actividades y falta de comunicación entre las empresas. La problemática que más afecta el retraso de la liberación de la mercancía contenerizada, representada por un 43% de las empresas encuestadas determinó que son los horarios de las empresas, dejando a la infraestructura portuaria, como un segundo lugar de las situaciones que aquejan la logística en Manzanillo.'

Los horarios tienen incidencia directa con empresas privadas y como causales son las secretarías, dependencias gubernamentales, son el factor principal por ser en estos espacios en donde se demora la entrega de un trámite o permiso.

Sin embargo, los errores más comunes dentro de un despacho ordenados de menor a mayor, son los siguientes en primer lugar se tiene la programación de maniobras representada en un 10.5%, como consecuente el segundo error más frecuente se refiere a la presentación extemporánea de documentos con 11.80%; el tercer error de 12% son los horarios de trabajo, cuarto error la comunicación de las empresas con 13.40%, quinto error la capacitación del personal establecida en un 16.40%, sexto la ineficiencia del personal con 17% y finalizando con un séptimo error del equipo y transporte obsoleto con 18.80%; aunado a todo ello, los encuestados aportaron opiniones muy particulares, como es la falta de documentación de origen o el retraso de la misma. Cabe mencionar que aquel error con menor porcentaje es el que sucede con más frecuencia, ya que se le pidió a los encuestados enumeraran del uno al siete de forma sucesiva, es decir el más frecuente sería número uno y el menos frecuente el número dos, por lo que haciendo una sumatoria es evidente que la situación con mayor afectación a la logística, tendría menor puntuación.

El factor de mayor afectación en la logística con un 51% de las empresas encuestadas, es la infraestructura portuaria. Aunado a esto, se encuentra que la problemática mas irrelevante que ocasiona cuellos de botella en la ruta fiscal, para un 53% de las empresas encuestadas determinó que es el proceso burocrático de la aduana, es lo que sin duda alguna, ocasiona lentitud en el despacho de mercancía contenerizada de importación.

La cantidad de importación de contenedores, aunado a diversas situaciones como proceso burocrático de aduana, falta de puntos de revisión de la documentación, la presentación de documentación inadecuada, entre otros, provocan serios cuellos de botella en lo que es la ruta fiscal.

Por otra parte, un 59% de las personas entrevistadas consideran que los aspectos legales sí son un obstáculo para agilizar la liberación de mercancía contenerizada de importación, pero en realidad es una opinión muy pareja puesto que el 41% marca que lo legal no obstaculiza en nada a la operación, dándonos una mínima diferencia de un 18%, lo que haciendo cálculos nos da un resultado de veintiséis personas que hacen la diferencia. Pero ante todo ello, existen razones aportadas por los encuestados tanto de forma positiva como negativa, ejemplo de ello y de manera muy general, quienes nos respondieron que los aspectos legales sí son obstáculo, nos mencionan que esto es derivado de: a) La pérdida de tiempo en realizar o conseguir la documentación necesaria para un despacho aduanero, b) La gente que opera en la aduana realiza el trabajo de manera muy mecanizada y no se encuentran dispuestos a recibir nuevas ideas, c) La lentitud en la ruta fiscal.

Con respecto a la comunicación un 65% de los entrevistados manifiestan que es mala la comunicación entre las empresas involucradas para el despacho de mercancía contenerizada de importación. Con un

57%. Se reflejo la falta de capacitación en los tramitadores, y personal involucrado en el despacho de mercancías.

## CONCLUSIONES

Por todo lo ya mencionado es importante resaltar que un 64% de los encuestados opina que no es adecuada la logística que en el Puerto de Manzanillo se maneja para liberar mercancía contenerizada de importación comparada con otros puertos Hub en otros países.

Si bien es cierto, todas las situaciones mencionadas anteriormente, al resultar con porcentajes negativos, repercute en la empresa de forma ya sea económica, en tiempo, demoras o comunicación, por ello, las encuestas reflejan que el primer lugar lo ocupa el tiempo, es decir, debido a una mala logística hay atrasos en el proceso de despacho, lo que se ocasiona pérdidas económicas. Las demoras y la mala comunicación son los aspectos más relevantes que limitan la logística en la liberación de mercancías contenerizadas de importación.

## EL AUSENTISMO EN UN INSTITUTO DE SEGURO SOCIAL EN MÉXICO

Arturo Reveles Pérez, Universidad Juárez del Estado de Durango

Víctor Lerma Moreno, Universidad Juárez del Estado de Durango

Jesús Job Reza Luna, Universidad Juárez del Estado de Durango

### RESUMEN

*El presente trabajo es una investigación descriptiva y correlacional del ausentismo en los Hospitales de la Delegación Estatal en Durango del Instituto Mexicano del Seguro Social y sus posibles causas; el ausentismo no programado para el Instituto es un problema que le genera efectos en su economía, imagen y calidad en los servicios. Las hipótesis planteadas son: La relación que pueden tener la categoría de los trabajadores, la edad, el estado civil, la antigüedad, la cultura organizacional, el compromiso organizacional, el tipo de puesto, la satisfacción laboral y el clima organizacional con el ausentismo. De una población 3095 trabajadores de los cuatro hospitales de la Delegación se obtuvo una muestra de 342 trabajadores a los que se aplicó un instrumento para conocer sus características individuales, su percepción de la cultura y compromiso organizacional, del tipo de puesto, de la satisfacción y clima laboral; se aplicaron ocho entrevistas a los Directores y Subdirectores administrativos de los cuatro hospitales. Los resultados obtenidos permitieron declarar como válidas todas las hipótesis planteadas a excepción de la cultura organizacional que de acuerdo a los resultados, se determinó que no incide en el ausentismo de los empleados. Se efectuó validación estadística con el uso de la CHI cuadrada y la correlación de Spirman. Se diseñaron conclusiones, producto del análisis de comportamiento de cada una de las variables de manera aislada y en su relación con el ausentismo; se proponen una serie de recomendaciones encaminadas a resolver la problemática que enfrenta la Institución y que le permitirá disminuir sus índices actuales de ausentismo.*

**PALABRAS CLAVES:** Ausentismo, Cultura, Compromiso, Satisfacción Y Clima Laboral

## ABSENTEEISM IN ONE OF THE MEXICAN INSTITUTE OF SOCIAL SECURITY

### ABSTRACT

*The present research paper is a description and correlative work of the absenteeism in the Mexican Institute of Social Security in the State of Durango and its possible causes; unscheduled absenteeism in the hospital causes problems that generate effects on its economy, image, and quality in the services. The proposed hypothesis are: the relationship that the employees have, the category, the age, the civil status, the seniority, the organizational culture, the organizational commitment, job position, the sense of achievement and the organizational atmosphere related to the absenteeism. A survey instrument was applied to a population of 3095 workers to know their individual characteristics, their perception of culture and their organizational commitment referring to their job position, their sense of achievement and the work environment; there were 8 interviews with the directors and administrative assistants of the four hospitals. The results that were obtained allowed us to say that all the hypothesis were valid except one; the organizational culture that according to the results, was established not to have an impact on the employee absenteeism. A statistical validation was performed using the squared CHI and the Spirman correlation. Conclusions were given according to the behavior analysis of each one of the variables and its relation with the absenteeism; we propose a series of recommendations to address the problems faced by the institution and that will help reduce their current rates of absenteeism.*

## INTRODUCCIÓN

En todos los organismos sociales, el aprovechamiento eficaz del talento humano representa para los administradores una prioridad entre sus múltiples responsabilidades pues las organizaciones surgen para aprovechar la sinergia y el esfuerzo de las personas que trabajan coordinada y conjuntamente. La eficacia con la que pueda ser administrada una organización dependerá de la forma en que sea utilizado su personal. Un indicador de que disponen las organizaciones para medir el nivel de mantenimiento del personal es el ausentismo de éstos. El ausentismo laboral que los estudiosos del comportamiento humano lo definen como una actitud del trabajador que se relaciona directamente con el nivel de satisfacción del trabajador entre otros factores. El ausentismo es un fenómeno que se presenta en muchas organizaciones tanto del sector privado como del sector público y que puede impactar negativamente en las mismas propiciando sustancialmente niveles bajos de productividad y de eficiencia, por lo que se convierte en un problema serio en materia de Administración de Personal que debe ser atendido.

En organizaciones muy grandes, demasiado estructuradas, con altos niveles de división del trabajo y en consecuencia, amplia variedad de puestos con tareas muy especializadas, el fenómeno del ausentismo de su personal suele incrementarse por las características de la propia organización. En el Instituto Mexicano del Seguro Social (IMSS) desde hace muchos años ha venido presentando índices de ausentismo del 3% muy superiores a los promedios que presentan las organizaciones en el País del 1%. (Bases de datos del IMSS 2008). En este organismo, el ausentismo es un problema añejo, se llevan más de veinte años enfrentándolo, por lo que se han instrumentado diferentes soluciones, sin lograr resolver de raíz el mismo. Se han obtenido disminuciones importantes en el porcentaje del ausentismo, al bajar de un 7% en los años ochentas a un 4% en los noventas, porcentaje este último que se ha podido mantener a base de esfuerzos sostenidos por los diferentes actores, es decir, las autoridades Institucionales y la Cúpula Sindical.

Para el Instituto, el ausentismo de su personal se ha ido convirtiendo en un grave problema al verse la Institución afectada en materia financiera y en la calidad de los servicios, para ello se han realizado un gran número de estudios y se han implementado diversas estrategias encaminadas a la disminución de los índices de ausentismo, con lo que se lograron resultados importantes que permitieron tranquilidad financiera a la Institución. Se denomina índice de ausentismo, como la relación porcentual del número de ausencias sobre el total de presencias programadas de los trabajadores agrupados bajo una misma área de trabajo en un mes.

Para efectos de esta investigación el campo de estudio será el Comportamiento Humano en el trabajo en el que se explica el comportamiento individual, grupal y de las organizaciones.

### La Administración y el Comportamiento Organizacional

Esta investigación incurre en el ámbito de estudio de la Administración entendida esta como “El proceso de trabajar con personas y con los recursos para lograr las metas de la organización” (Bateman, Thomas S, Scott, A. Snell, 2001) y específicamente en las áreas de Recursos Humanos y Comportamiento Organizacional. Según Dessler(2001) la Administración de Personal es un conjunto de políticas y prácticas que se requieren para cumplir con los aspectos relativos al personal o recursos humanos que competen a un puesto de administración que incluyen reclutar, seleccionar, capacitar, compensar y evaluar. Robbins(1999) define el Comportamiento Organizacional como el campo de estudio y que investiga el impacto que los individuos, los grupos y la estructura tienen sobre el comportamiento dentro de las organizaciones, con el propósito de aplicar tal conocimiento al mejoramiento de la eficacia de la organización. Luthans(2008) por su parte lo define como la comprensión, predicción y administración del

comportamiento humano en las organizaciones Un número importante de estudiosos del tema construyen sus escritos dividiéndolo en tres elementos fundamentales. Individuo, grupo y organización.

Los diferentes autores de comportamiento organizacional que analizan el ausentismo como una conducta individual señalan como generador principal de la misma a la satisfacción en el trabajo. En esta investigación se busca determinar si existen otros elementos que de manera directa puedan generar también ausentismo en las organizaciones. Guilles(1994) define el ausentismo como cualquier periodo de tiempo durante el cual deliberadamente se deja de acudir al trabajo. La organización internacional del trabajo (1991) define al ausentismo como “La no asistencia al trabajo por parte del empleado que se pensaba que se pensaba que iba a asistir quedando excluidas las vacaciones y las incapacidades por maternidad” (trabajo, 1991). Los indicadores de ausentismo más utilizados son los recomendados por la OTI(1991) que indica el porcentaje de días perdidos por enfermedad y otras causas contra el total de días de trabajo previstos.

*Factores de ausentismo:* A continuación se abordaran teóricamente los diferentes factores que hipotéticamente pueden generar ausentismo en las organizaciones

*Características biográficas:* Edad, sexo, estado civil y antigüedad

*Cultura organizacional:* Edgar Shein(1985), define la cultura como un patrón de supuestos básicos( inventados, descubiertos o desarrollados por un grupo determinado, a medida que aprende a enfrentar sus problemas de adaptación externa e integración interna) que ha funcionado suficientemente bien para considerarlo valioso y, por lo , enseñarlo a los nuevos miembros como la manera correcta de percibir , pensar y sentir con relación a esos problemas

*El compromiso organizacional:* Esta actitud hacia el trabajo se define como un estado en el cual un empleado se identifica con una organización en particular y con sus metas, y desea mantenerse en ella como uno de sus miembros. De manera similar a la satisfacción en el trabajo, en el compromiso organizacional se pueden señalar una serie de resultados que se generan cuando los empleados tienen un alto nivel de compromiso, que van desde un alto grado de desempeño en el trabajo así como índices bajos de ausentismo y rotación. (Mathieu, J.E. y Zajac, D.M., 1990).

*El puesto:* Chiavenato (2007) señala que los individuos trabajan en las organizaciones ocupando un puesto. Para la organización el puesto representa la base para las personas en las tareas organizacionales. Para los trabajadores el puesto constituye una fuente básica de expectativas y de motivación. Puesto es un conjunto de tareas y atribuciones (funciones) con una posición determinada en la estructura de la organización. El puesto se compone de las actividades que realiza una persona y que pueden contenerse en un todo unificado y que ocupa formalmente un lugar en la organización.(Chiavenato, 2007).

*Satisfacción en el trabajo:* Las actitudes pueden dividirse en tres elementos substanciales: Emocional, que incluye los sentimientos de las personas. Informativo, que consiste en las creencias y lo que la persona conoce sobre el objeto. Comportamiento, incluye las tendencias del individuo a comportarse de manera específica hacia el objeto. (Detweiler, Brian y Salovey, Peter, 2002 ) Una actitud básica del comportamiento humano dentro de una organización es la satisfacción en el trabajo entendida esta como el conjunto de sentimientos y emociones favorables o desfavorables con que lo empleados ven su trabajo.

La satisfacción o insatisfacción en el trabajo se ha asociado a algunas otras variables. Algunos autores consideran el ausentismo como una de las manifestaciones de actitudes negativas hacia el trabajo y que demuestra la insatisfacción con el mismo. Según Arias (1982)

*Clima Organizacional:* Citado a Moran y Wolwein(1992) ellos proponen cuatro perspectivas sobre el clima organizacional, la estructural, la perceptual, la interactiva y la cultural. La perceptual se basa en el individuo, el clima es un proceso psicológico que describe las condiciones de la organización. En la perspectiva interactiva la interacción de los individuos es una respuesta a las situaciones objetivas y compartidas de la organización. Finalmente en el enfoque cultural, el clima se crea por un conjunto de interacciones individuales que comparten un marco común de referencia que es la cultura organizacional.

Bajo la perspectiva estructural que es la que interesa para efectos de esta investigación se consideran al clima organizacional como un filtro por el cual pasan los fenómenos, es decir, estructura, liderazgo, toma de decisiones.

*La centralidad:* La organización como función administrativa es la coordinación planificada de las actividades de un grupo de personas para procurar el logro de un objetivo explícito y común, a través de la división del trabajo y a través de autoridad y responsabilidad. La anterior definición corresponde a una organización formal, ésta se representa por medio de un organigrama, sin embargo el organigrama no representa completa y adecuadamente la realidad pues faltaría mostrar tres dimensiones básicas de una organización. (Daft, , 2000)

La dimensión jerárquica: Muestra niveles relativos en la misma forma que aparecen en el organigrama.

Dimensión funcional: Muestra los diferentes tipos de trabajo que se tienen que realizar.

Dimensión de inclusión o centralidad: Muestra la medida en que cada persona se acerca se aleja de la columna vertebral de la organización.

La centralidad, también refleja el poder de un departamento en la actividad primaria de una organización. Una medida de ésta es el grado en que el trabajo del departamento afecta el producto final de la organización, finalmente la centralidad se asocia con el poder porque refleja la contribución que se hace a la organización.

### Instituto Mexicano Del Seguro Social

El 19 de Enero de 1943 fue aprobada la ley del Seguro Social por el H Congreso de la Unión para entrar en vigencia el 1 de Enero del 1944 creándose a su vez el Instituto Mexicano del Seguro Social, como una institución de servicio público descentralizado con personalidad jurídica propia y con libre disposición de su patrimonio (Iniciativa de Ley del Seguro Social, Diario de los debates dde la Cámara de Diputados XXXVIII Legislatura, 1942).

*Descripción de la Institución:* En la actualidad protege a poco menos de media parte de la población; es decir 43 479 000 derechohabientes al mes de febrero del 2009; tiene una estructura física de 1 083 unidades de Medicina familiar, 250 centros hospitalarios, 103 centros de seguridad social; tres centros de artesanías; un centro cultural; 12 unidades deportivas; 38 teatros cubiertos; 99 centros de extensión del conocimiento y 1 562 guarderías; 15 velatorios; 136 tiendas para empleados; cuatro centros vacacionales; 3 609 unidades médicas rurales y 69 hospitales rurales; tiene a su servicio más de 350 000 trabajadores. (Seguro Social). A nivel de la Delegación estatal en Durango el IMSS protege a poco más de 750 000 derechohabientes y al mes de mayo del 2009 su infraestructura física se compone de: 29 unidades de medicina familiar, tres centros hospitalarios, dos centros de seguridad social, 18 guarderías, 166 unidades médicas rurales y tres hospitales rurales. La plantilla de personal es de 6 000 trabajadores.

*Ausentismo en el IMSS:* Este trabajo de investigación se circunscribe básicamente en los centro de trabajo más grandes del Estado que son los Hospitales generales de zona y y Sub zona establecidos en las ciudades de Durango, Gómez Palacio, El salto P.N., ver Tabla No 1

Tabla 1: Distribución del Objeto de Estudio

Localidad	Número de Hospital	Número de empleados
Durango, Dgo.	HGZ No. 1	1,573
El Salto, P.N. Dgo.	HGSZ No. 2	210
Gómez Palacio, Dgo.	HGZ No. 46	586
Gómez palacio, Dgo.	HGZ No. 51	390
Total		2,759

*Se observa mayor número de empleados en el HGZ No. 1 y menor número en el HGSZ No. 2*

El ausentismo se clasifica en programado y no programado; las incidencias contempladas en el ausentismo programado son: Becas, comisiones para capacitación y vacaciones Las incidencias contempladas en el ausentismo no programado son: faltas, licencias sin sueldo, becas, incapacidades por maternidad, enfermedad y de riesgo de trabajo.

Tabla 2: Unidades médicas con mayor índice de Ausentismo

**De** los autores a petición

*Del análisis de la tabla No. 2 se puede observarse que las unidades médicas que más generan ausentismo son las unidades hospitalarias como el Hospital de zona # 1 con un 5.81 de porcentaje de ausentismo muy por encima del porcentaje promedio de la Delegación de 3.65, el Hospital de Zona # 51 con 4.7 de porcentaje y el Hospital de Sub zona # 2 con 4.45 que serán unos de los centros de trabajo involucrados en esta investigación, a diciembre del 2008*

En el Contrato Colectivo de Trabajo que tiene convenido el Instituto con el Sindicato Nacional de Trabajadores del Seguro Social(SNTSS) se tienen establecidas más de 250 categorías de trabajadores

Tabla 3: Categorías Con Mayor Incidencia De Ausentismo

Categoría	Pres	IRT	IEG	IMA	TotInc	LCS	LSS	LSS3	Fal	AusNoProg
Enfermera	25,493	4	594	80	678	109	68	217	323	1395
Medicos	16,551	27	236	32	295	24	13	67	57	456
Intendencia	8,489	24	186	12	222	43	31	139	202	637
Asistente Medica	7,336	43	178	25	246	17	10	44	55	372
Aux Univ De Oficinas	6,701	9	96	64	169	14	4	45	17	249
Manejador De Alimentos	2,427		53		53	11	4	15	31	114

*En esta tabla se pude observar que de las categorías que más se incapacitan son las enfermeras seguidas de los de intendencia, la causa que más impacta es las incapacidades de enfermedad seguidas por licencias sin sueldo*

### Investigación del Ausentismo

Esta investigación es un estudio transversal, descriptivo y explicativo; así mismo es un estudio correlacionar ya que se busca demostrar la relación que puede darse entre varios factores y el ausentismo, describe la situación actual del ausentismo en la Institución. Las variables independientes que se plantean son los factores del comportamiento organizacional y la variable dependiente es el ausentismo. Por otra parte, el estudio considera el enfoque cuantitativo, entendiendo por investigación cuantitativa cuando la recolección de los datos se pueden codificar numéricamente y su análisis se hace con métodos estadísticos (Hernández Sampieri, 2003).

### Preguntas De Investigación

En la reflexión de este problema surgen estas preguntas:

¿Se relacionan las características individuales de los empleados con el ausentismo?

¿Se relaciona la cultura organizacional con el ausentismo de los empleados de la Institución

¿Se relaciona el compromiso organizacional de los empleados con el ausentismo?

¿Se relaciona el diseño del puesto con el ausentismo?

¿Se relaciona la satisfacción del trabajo con el ausentismo?

¿Se relaciona el clima organizacional de la Institución con el ausentismo de sus empleados

¿Se relaciona la centralidad de los empleados con el ausentismo?

### Hipótesis

*Existe relación entre las características individuales de los empleados: edad, sexo, estado civil, antigüedad, ocupación y nivel de empleo) y el ausentismo.*

*Existe relación entre la cultura Organizacional de los empleados y el ausentismo.*

*Existe relación entre el compromiso organizacional de los empleados y el ausentismo.*

*Existe relación entre el tipo de puesto de los empleados y el ausentismo*

*Existe relación entre la satisfacción en el trabajo de los empleados y el ausentismo*

*Existe relación entre el clima laboral de los empleados y el ausentismo.*

*Existe relación entre la centralidad de algunos empleados y el ausentismo.*

### Instrumental

Los instrumentos utilizados para recopilar información son cuestionarios que se aplicaron a los empleados de IMSS y que permitieron conocer la relación de los diferentes factores así como entrevistas a el director y al Subdirector de cada uno de los hospitales Se utilizó un instrumento de cinco escalas y diez reactivos en cada escala y se cuantifico con la aplicación de la escala de Likert. (Cooper R. K.2004)

Las cinco escalas son:

*Cultura organizacional*

*Compromiso organizacional*

*Tipo de puesto*

*Satisfacción laboral*

*Clima organizacional*

Cada escala se mide en cuatro rangos desde: Mucha con un valor de 30, moderada con un valor de 20, poca con un valor de 10 y nada con un valor de 0 para las tres primeras escalas y de muy bien con un valor de 30, moderadamente bien con un valor de 20, poco con un valor de 10 y nada con un valor de 0.

3.4 Muestra Se pretende utilizar el muestreo aleatorio simple; la dimensión de la muestra se obtendrá utilizando la varianza máxima (50%) para muestreo de proporciones (Proaño, 1983):

$$n = \frac{NZ_{\alpha}^2 pq}{d^2(N-1) + Z_{\alpha}^2 pq}$$

n= muestra

N= población

Z= 1.96

D2= 0.05

P = 0.50

Q 0.50

La muestra obtenida es de 342

## RESULTADOS

De la aplicación de 342 encuestas de la muestra determinada a la población de los cuatro hospitales del Instituto Mexicano del Seguro Social en el estado de Durango y así como de la aplicación de las ocho entrevistas a los Directores y subdirectores administrativos de dichos hospitales se obtuvieron los siguientes resultados.

*El ausentismo y el puesto o categoría:* En la tabla No. 4 se pudo observar que en el grupo de puestos de trabajadora y asistente social son los que presentan un ausentismo más prolongado con un 56.6% respecto a los demás rangos de ausentismo; en seguida el grupo de puestos de ausentismo más prolongado es el de enfermería básica rango No. 3 enfermería básica con un 38.1% respecto a los demás rangos de ausentismo.

Tabla No 4: Rangos de Ausentismo por Grupo de Puestos

	1	2	3	4	
Grupos de puestos	1 a 2 días	3 a 7 días	8 a 27 días	28 a 271 días	Total
Administrativos	25.00%	30.00%	25.00%	15.00%	100.00%
Trab. y asist. Social	11.10%	11.10%	22.20%	56.60%	100.00%
Enfermería Básica	23.80%	33.30%	4.80%	38.10%	100.00%
Enfermería	22.90%	31.30%	29.20%	16.70%	100.00%
Servicios Básicos	18.20%	30.30%	24.20%	27.30%	100.00%
Servicios especializados	6.70%	33.30%	33.30%	26.70%	100.00%
Médicos distintos	13.30%	46.70%	20.00%	20.00%	100.00%

*En esta tabla se observa que grupo de puestos genera más ausentismo observándose que el porcentaje mayor lo ocupa el grupo de trabajo social y asistente médica en el rango de 28 o más días siguiéndole el grupo de enfermería*

*El ausentismo y la edad:* De la revisión efectuada a la tabla No.8 se observa que el personal encuestado con ausentismos más prolongados esta en los rangos No. 3 de 35 a 39 años y el personal encuestado y en el rango No. 6 de 49 a 60 años se observa que no genera ausentismo de 1 a 2 días pero es el que genera porcentajes más alto en los rangos No.2 de 3 a 7 días y No. 3 de 8 a 27 días; así mismo se observa que el personal de rango 1 de 20 a 29 presenta ausentismos de menos días.

Tabla 5: Ausentismo por rangos de edad

	1	2
Rangos de edad	1 a 2 días	3 a 7 días
1 de 20 a 29 años	26.00%	37.00%
2 de 30 a 34 años	25.00%	20.00%
3 de 35 a 39 años	17.60%	29.40%
4 de 40 a 43 años	23.50%	20.60%
5 de 44 a 48 años	16.30%	40.50%
6 de 49 a 60 años	0.00%	36.90%

*En esta tabla se ve que el rango de 44 a 48 años es el grupo de trabajadores que más incidencia de ausentismo presenta con un 40.50 seguido del grupo de 20 a 29 años con un porcentaje de 37.00*

*El ausentismo y el sexo:* De la revisión efectuada a la tabla No. 9 se pudo observar que el personal encuestado del sexo femenino tiene una tendencia a ausentarse más como se muestra en todos los rangos de ausentismo del No. 1 al No.4 donde predomina un mayor ausentismo del personal del sexo femenino hasta en más del doble respecto al sexo masculino, a pesar que el sexo masculino representa un 35.7% y el sexo femenino un 64.3%,

Tabla 6: El Ausentismo Por Sexo de los Empleados Encuestados

Ausentismo por sexo					
Sexo	1 1 a 2 días	2 3 a 7 días	3 8 a 27 días	4 28 a 271 días	Total
Hombres	4.10%	8.80%	9.40%	7.60%	29.80%
Mujeres	14.60%	22.20%	14.60%	18.70%	70.20%
				<b>Total</b>	<b>100.00%</b>

Se observa en esta tabla que las mujeres generan un mayor ausentismo respecto a los hombres con un 70.20% y más en el rango de 3 a 7 días

*El ausentismo y el estado civil:* De la revisión efectuada a la tabla No. 10 se pudo observar que el personal encuestado soltero tiene una tendencia a ausentismos más prolongados, como se muestra en los rangos de ausentismo No. 4 con un 31.70% contra un 23.1 de los casados y el No. 2 donde predomina un porcentaje ligeramente mayor de ausentismo del personal soltero respecto al casado.

Tabla 7: el Ausentismo Con Relación Al Estado Civil

El ausentismo y el estado civil					
Estado Civil	1 1 a 2 días	2 3 a 7 días	3 8 a 27 días	4 28 a 271 días	total
Casado	20.40%	30.65	25.90%	23.10%	100.00%
Soltero	15.90%	31.70%	20.60%	31.70%	100.00%

Aquí se puede visualizar que el personal con estado civil de soltero es el que más incide en ausentismo sobre todo en el rango de 28 o más con un porcentaje de 31.7%

*El ausentismo y la Antigüedad:* En la revisión a la tabla No. 11 se detecta que el personal que tiene ausentismo más prolongado es el que tienen una antigüedad dentro del rango numero 6 de 23 a 29 años con un 37.5% en los rangos 2 y 3 de ausentismo, se observa además que el personal con menos antigüedad presenta ausentismo alto solamente en el rango menos de 1 a 2 días.

Tabla 8: el Ausentismo en Relación con la Antigüedad de los Empleados

El Ausentismo y la Antigüedad					
Antigüedad	1 1 a 2 días	2 3 a 7 días	3 8 a 27 días	4 28 a 271 días	total
1 a 3 años	39.30%	26.10%	13.00%	21.60%	100.00%
4 a 9 años	17.90%	35.70%	7.10%	39.30%	100.00%
10 a 14 años	30.00%	23.30%	20.00%	26.70%	100.00%
15 a 19 años	8.30%	27.80%	30.60%	33.30%	100.00%
20 a 22 años	13.30%	36.70%	33.30%	16.70%	100.00%
23 a 29 años	8.30%	37.50%	37.50%	16.70%	100.00%

El personal con mayor antigüedad genera un porcentaje muy bajo con respecto al personal con antigüedad de 4 a 9 años el cual genera un 39.30% de ausentismo en el rango de 28 a 271 días.

*El ausentismo y la cultura organizacional:* De la revisión realizada a la tabla No. 12 se puede detectar que el personal que presenta ausentismos prolongados es el que percibe moderadamente alta la cultura organizacional con un 31.3 %, además se observa que los trabajadores que perciben la cultura más bajo en el rango No. de 7 a 18 puntos encabezan en algunos rangos el porcentaje de ausentismo, no obstante se pudo detectar que no se manifiesta claramente alguna tendencia.

Tabla 9: el Ausentismo en Relación con la Cultura Organizacional Percibida por los Empleados Encuestados

El Ausentismo y la Percepción de la Cultura Organizacional					
Cultura organizacional	1	2	3	4	Total
	1 a 2 días	3 a 7 días	8 a 27 días	28 a 271 días	
1 7 a 18 pto.	21.20%	30.30%	21.20%	27.30%	100.00%
2 19 a 21 pto.	18.20%	30.30%	24.20%	27.30%	100.00%
3 22 a 23 pto.	19.40%	25.80%	35.50%	18.40%	100.00%
4 24 a 26 pto.	18.80%	25.00%	25.00%	31.20%	100.00%
5 27 a 28 pto.	24.00%	28.00%	20.00%	28.00%	100.00%
6 29 a 30 pto.	5.90%	58.80%	11.80%	23.50%	100.00%

*El ausentismo y el compromiso organizacional:* Del análisis realizado a los datos plasmados en la tabla no 13 se puede detectar que el ausentismo más prolongado esta en el rango donde el compromiso percibido es más bajo, con un 42.2% con respecto a los rangos de ausentismo más bajos; en el rango más alto de percepción de compromiso se observan porcentajes bajos de ausentismo respecto a los demás rangos de percepción del compromiso como en el rango no 2 de ausentismo el porcentaje menor es de 20.8% en el rango No. 2 de ausentismo.

Tabla No 10: El Ausentismo En Relación Con El Compromiso Organizacional Percibido Por Los Empleados Encuestados

El ausentismo y el compromiso organizacional				
Compromiso organizacional	1	2	3	4
	1 a 2 días	3 a 7 días	8 a 27 días	28 a 271 días
1 13 a 25 pto.	28.10%	34.00%	34.10%	42.20%
2 26 a 28 pto.	40.60%	45.30%	29.30%	31.10%
3 29 a 30 pto.	31.30%	20.80%	36.60%	26.70%
Total	100.00%	100.00%	100.00%	100.00%

*El ausentismo y el tipo de Puesto:* Del análisis realizado a los datos plasmados en la tabla no 14 se puede detectar que en el rango No. 4 correspondiente a la más alta percepción del tipo de puesto se presentan los porcentajes de ausentismos más bajos respecto a los demás rangos, así mismo, en el rango No. 1 correspondiente a la percepción más baja del tipo de puesto por parte de los empleados encuestados se presentan los porcentajes de ausentismo más altos.

Tabla 11: el Ausentismo en Relación Con el Tipo de Puesto Percibido por los Empleados Encuestados

Tipo de Puesto	1	2	3	4
	1 a 2 días	3 a 7 días	8 a 27 días	28 a 271 días
1 5-20 pto.	37.50%	30.20%	29.30%	22.20%
2 21-23 pto.	25%	30.20%	24.40%	31.20%
3 24-26 pto.	25%	30.20%	34.10%	22.20%
4 27-30 pto.	12.50%	9.40%	12.20%	24.40%
Total	100.00%	100.00%	100.00%	100.00%

*El ausentismo y la satisfacción en el trabajo:* Del análisis realizado a los datos plasmados en la tabla no 15 se puede detectar que en el rango No. 4 correspondiente a la más alta percepción de la satisfacción laboral se presentan los porcentajes de ausentismos más bajos respecto a los demás rangos, así mismo, en el rango No. 1 correspondiente a la percepción más baja de la satisfacción laboral por parte de los empleados encuestados se presentan los porcentajes de ausentismo más altos.

Tabla 12: el Ausentismo en Relación con la Satisfacción en el Trabajo Percibida Por los Empleados Encuestados

Satisfacción	1	2	3	4
Laboral	1 a 2 días	3 a 7 días	8 a 27 días	28 a 271 días
1 9-18 ptos.	28.10%	20.80%	22.00%	26.70%
2 19-22 ptos.	21.80%	22.60%	24.40%	17.80%
3 23-24 ptos.	15.60%	15.10%	14.60%	20%
4 25-26 ptos.	18.80%	13.20%	17.10%	13.30%
5 27-28 ptos.	9.40%	15.10%	14.60%	13.30%
6 29-30 ptos.	6.30%	13.20%	7.30%	8.90%

*El ausentismo y el clima laboral:* Del análisis realizado a los datos plasmados en la tabla No 16 se puede detectar que en el rango No. 4 correspondiente a la más alta percepción del clima laboral se presentan los porcentajes de ausentismos más bajos respecto a los demás rangos, así mismo, en el rango No. 1 correspondiente a la percepción más baja del clima laboral por parte de los empleados encuestados se presentan los porcentajes de ausentismo más altos.

Tabla 13: el Ausentismo en Relación con el Clima Organizacional Percibido por los Empleados Encuestados

Clima	1	2	3	4
Laboral	1 a 2 días	3 a 7 días	8 a 27 días	28 a 271 días
1 2-14 ptos.	25.00%	24.50%	24.40%	28.90%
2 15-17 ptos.	3.10%	13.20%	12.20%	20.00%
3 18-20 ptos.	15.60%	22.60%	19.50%	17.80%
4 21-22 ptos.	28.10%	9.40%	24.40%	8.90%
5 22-26 ptos.	15.60%	17.10%	9.70%	20.00%
6 27-30 ptos.	12.50%	13.20%	9.80%	4.40%
Total	100%	100%	100%	100%

## CONCLUSIONES

En la comparación del ausentismo contra las posibles causas se concluye lo siguiente: En la comparación con el puesto o categoría, manifiesta mayor ausentismo (57.6) el grupo No 2 Social que incluye el puesto de Asistente Médica cuya función básica consiste en asistir al médico familiar durante la consulta y sin ser una labor de alto riesgo presenta ausentismo en incapacidades de enfermedad y riesgo de trabajo, presentándose entonces el comportamiento de centralidad donde la asistente se beneficia de recibir certificados de incapacidad por tener relación de trabajo estrecha con el médico, facultado para la extensión de incapacidades. Esto demuestra que es válida la hipótesis que señala que existe relación entre la centralidad y el ausentismo de los empleados del IMSS En la comparación con la edad se visualiza que el personal incluido en el rango No. 6 que incluye a los trabajadores con edad de 49 a 60 años es decir los de más edad, presentan los porcentajes más altos en ausentismos desde los 6 hasta los 271 días con ello se comprueba la hipótesis que establece que existe relación positiva entre la edad y el ausentismo, En la comparación con el sexo de los empleados, los empleados del sexo femenino reportan un ausentismo en los diferentes rangos de más del doble respecto a los trabajadores del sexo masculino; resultados similares se han obtenido en investigaciones realizadas en otros ámbitos y en otros países con culturas semejantes a la de México. En la comparación con el estado civil, las encuestas manifiestan que los empleados solteros reportan porcentajes superiores en el ausentismo del rango de 28 días o más de un 31.7% contra un 23.1% de los empleados casados, no obstante que el porcentaje de empleados casados es mayor que el de los solteros. Con ello se hace válida la hipótesis de que existe relación entre el ausentismo y el estado civil.

En la comparación con la antigüedad de los empleados encuestados se encontró que el empleado con más antigüedad reporta porcentajes más altos en los rangos No 2 de 3 a 7 días y No. 3 de 8 a 27 días con un 37.5% en cada uno, mientras que el personal de menos antigüedad reporta un porcentaje mayor en el rango No. 1 de 1 a 2 días con un 39.3%; esto se explica en parte por la relación directa que se tiene entre

antigüedad y edad; entonces, es válida la hipótesis de que existe relación entre la antigüedad y el ausentismo de los empleados. En la comparación con la cultura organizacional, las encuestas manifiestan que no existe una tendencia notoria en el sentido de que los empleados que perciben bajo la cultura de la organización tengan más ausentismo o a la inversa; La hipótesis planteada en cuanto que existe relación entre la cultura organizacional y el ausentismo de los empleados no es válida. En la comparación con el compromiso organizacional los encuestados reportaron que el porcentaje de ausentismo prolongado, de 28 días en adelante, más alto (42.2%) se presenta en aquellos empleados que presentan una percepción baja de compromiso con la organización, en apego a la literatura, en ella se expresa que una causa fundamental que puede generar ausentismo es la carencia de un fuerte compromiso con la organización. Los directivos encuestados opinaron en el sentido de que sí incide el compromiso organizacional con el ausentismo. Por lo antes comentado es válida la hipótesis planteada que señala que existe relación entre el compromiso organizacional y el ausentismo de los empleados.

En la comparación con el tipo de puesto los encuestados manifestaron que el porcentaje más alto de ausentismo se presenta en los empleados con baja percepción de su puesto con un 37.5%, 30.20%, 29.3% y 22.2%, mientras que el porcentaje más bajo (9.4%) se presenta en los empleados con buena percepción del tipo de puesto. Lo anterior puede obedecer a que el diseño de los puestos en el Instituto siguen realizándose bajo el modelo tradicional, dicho modelo según lo señala la literatura ocasiona en el ocupante fastidio, aburrimiento, desmotivación. Por lo tanto es válida la Hipótesis de que existe relación entre el tipo de puesto y el ausentismo de los empleados. En la comparación de la satisfacción laboral, las encuestas indican que el porcentaje más alto de ausentismo prolongado, de 28 días o más y es de un 26.7% se da en los empleados con la percepción más baja de satisfacción laboral mientras que el porcentaje más bajo (13.3%) se da en los empleados con una percepción alta de satisfacción laboral. Los diferentes autores de Comportamiento Organizacional coinciden en señalar como resultados de la insatisfacción en el trabajo, además de bajos niveles de desempeño índices elevados de ausentismo y rotación; lo que se buscó demostrar en esta investigación. Por lo anterior se demuestra que es válida la hipótesis que establece que existe relación entre la satisfacción laboral y el ausentismo de los empleados.

En la comparación con el clima laboral, se encontró que el porcentaje más alto de ausentismo prolongado, de 28 días o más y es de un 28.9% se da en los empleados con la percepción más baja de clima laboral mientras que el porcentaje más bajo (4.4%) se da en los empleados con una percepción alta de clima laboral. La literatura establece que dentro de la perspectiva estructural del clima, las características de la organización generan un determinado clima organizacional; esto repercute sobre la motivación de los miembros de la organización y sobre su comportamiento el cual puede tener muy variadas consecuencias para la organización como productividad, satisfacción, rotación y ausentismo. En base a lo antes expuesto es válida la hipótesis de que existe relación entre el clima laboral en la Institución y el ausentismo de los empleados. En apoyo con lo antes señalado se proponen las siguientes recomendaciones:

# LA INNOVACIÓN COMO FACTOR DE COMPETITIVIDAD EN LAS EMPRESAS TURÍSTICAS EN CANCÚN, QUINTANA ROO, MÉXICO

Enrique Corona Sandoval, Universidad del Caribe

Lucila Zárraga Cano, Universidad del Caribe

## ABSTRACT

*El turismo se ha convertido en una gran fuerza económica y social en el mundo, aporta el crecimiento de las economías, el estado mexicano de Quintana Roo es conocido a nivel mundial por una oferta turística de vanguardia, sin embargo son muy escasos los trabajos realizados por comprender la importancia y las formas de innovación en la compleja actividad turística. Es necesario conocer los aspectos que se llevan a cabo para generar innovación, elemento clave para la competitividad de las empresas turísticas, que permite la adaptación a su entorno y mantenerse vigente en plena competencia de destinos turísticos. El objetivo de esta investigación es conocer la percepción que tienen los empresarios de compañías turísticas en el ramo de servicios sobre las capacidades de innovación más relevantes con las que cuentan en áreas de procesos, productos, tecnología, mediante un estudio descriptivo transversal a través de una encuesta en donde se aplicó un método discriminante. El identificar cuáles son las capacidades de innovación más importantes para los empresarios turísticos, ayudará a generar estrategias que permitan coadyuvar a la competitividad del sector e ir adaptándose a los cambios.*

**PALABRAS CLAVE:** Turismo, servicio, marketing de servicios, innovación, capacidades innovadoras

## ABSTRACT

*Tourism has become a major economic and social force in the world, brings the growth of economies, the Mexican state of Quintana Roo is known worldwide for a tourist-edge, although very few studies conducted by understand the importance and forms of innovation in the tourism complex. You need to know the issues that are carried out to generate innovation, key to the competitiveness of tourism businesses, which allows its adaptation to the environment and keep in full force competition destinations. The objective of this research is to understand the perception of entrepreneurs tour companies in the area of services on innovation capabilities most relevant to that count in areas of processes, products, technology, through a descriptive study through a survey where I apply a discriminant methods. Identifying what are the most important innovation capacities for tourist entrepreneurs, help generate strategies to contribute to the competitiveness of the sector and adapting to the changes.*

## INTRODUCCIÓN

Para iniciar nuestro estudio es necesario comprender como se conforma el sector terciario en México, el cual corresponde a todas aquellas actividades que no se dedican a la producción de bienes materiales propiamente, excluye las labores de campo, la extracción de minerales y todas las ramas de la industria. Este sector terciario es conocido también como sector de servicios cuyas características fundamentales es que sus productos sean efímeros, ya que sólo duran el tiempo de la transacción, son intangibles o inmateriales y en esencia no pueden ser almacenados (Atlántida, Córdoba y Ordoñez, 2006).

La industria del servicio en México representa un 70% del PIB y contribuye con el 63% del empleo a nivel nacional (PROMEXICO, 2012). El sector servicios en el Estado de Quintana Roo, ocupa el primer lugar a nivel nacional con un crecimiento de 6.9 en el segundo trimestre del 2012 (INEGI, 2012).

Las presiones competitivas sobre las empresas de servicios están en aumento, estimulando mayor uso de tecnologías, así como una mayor productividad de su fuerza laboral, por lo que estas buscan beneficiarse a partir de una dinámica empresarial más eficiente e innovaciones que ayuden a resistir los cambios del entorno y del mercado (OCDE, 2005).

El estado mexicano de Quintana Roo es conocido a nivel mundial por una oferta turística de vanguardia, que a lo largo de varias décadas se ha ido adaptando a los cambios dictados por el mercado, adoptando novedades o mejoras en productos, procesos, capacidades organizacionales y tecnología.

Siendo la innovación un aspecto de suma importancia para la competitividad y el progreso económico de las empresas turísticas, se plantea el objetivo de conocer cuáles son los aspectos que se llevan a cabo para generar cambios adaptativos dentro de la organización y que permiten mejores maneras de satisfacer las necesidades de los consumidores, adaptándose a los cambios en forma rápida y acertada. Estos procesos de innovación coadyuvarán a la competitividad provocando una cultura de generación de capacidades innovadoras al interior que permitan establecer mecanismos estratégicos de generación de innovaciones en las empresas turísticas.

## REVISIÓN LITERARIA

Un servicio es un acto o desempeño que ofrece una parte a otra, aunque el proceso puede estar vinculado a un producto físico, el desempeño es en esencia intangible y por lo general, no da como resultado la propiedad de ninguno de los factores de producción. Un servicio son actividades económicas que crean valor y proporcionan beneficios a los clientes en tiempos y lugares específicos como resultado de producir un cambio deseado en o a favor del receptor del servicio (Lovelock y Reynoso, D'Andrea y Huete (2004).

Para poder encuadrar los servicios en el sector turístico, se debe definir en primera instancia que es el turismo para conceptualizar mejor los servicios que aquí se abordan. La Organización Mundial del Turismo (OMT), formaliza los aspectos de la actividad turística como: “Las actividades que realizan las personas durante sus viajes y estancias en lugares distintos al de su entorno habitual, por un periodo de tiempo consecutivo inferior a un año con fines de ocio, por negocios y otros” (OMT, 1994).

Los servicios tienen cuatro características principales: 1) Intangibilidad, 2) Heterogeneidad, 3) Caducidad y 4) Simultaneidad de la producción y el consumo (Lovelock, 1997). Sin embargo un servicio puede estar compuesto de un bien tangible con un servicio que lo acompañe (automóviles o computadoras); Un híbrido que combina partes iguales de bienes y servicios (un restaurante); Un servicio principalmente con bienes y servicios menores que lo acompañen (un viaje aéreo) (Lovelock et al., 2004).

Shumpeter (1967), menciona que la innovación es el punto esencial que hay que tener en cuenta en un sistema capitalista con un proceso evolutivo, el cual impulsa y mantiene procesos, recursos, métodos, mercados, energía, estructura y movimientos.

Esta innovación da pie a que exista una competencia, sin embargo es importante distinguirla pues la competencia que cuenta es la que lleva consigo la aparición de artículos nuevos, de una técnica nueva, de

fuentes de abastecimientos nuevos, de un tipo de organización nueva, es la que supera ya sea en costos o en calidad (Varela, 2001).

Las capacidades innovadoras son competencias organizacionales que se manifiestan en la velocidad de respuesta ante los cambios en el entorno o mercado a través de la aplicación de conocimientos organizacionales, y/o competencias personales buscando resultados congruentes con la estrategia (Goñi, 2004). Estas variables pueden ser medibles a través de los procesos de innovación agrupados en torno a los constructos de: Estrategia, Producto/Servicio, Mercado, Procesos, Organización, Personas y Tecnología (Goñi, 2004).

A continuación se describe cada una de las competencias innovadoras: Jones y George (2006) mencionan que una estrategia es un conglomerado de decisiones relativas a qué metas perseguir, qué actividades emprender y cómo aprovechar los recursos para alcanzar esas metas.

Kotler y Armstrong (2008) definen producto como cualquier cosa que se pueda ofrecer a un mercado para su atención, adquisición, uso o consumo y que podría satisfacer un deseo o una necesidad. Y un servicio como cualquier actividad o beneficio que una parte puede ofrecer a otra y que es básicamente intangible porque no tiene como resultado la obtención de la propiedad de algo.

Los mercados de consumo consisten en individuos y hogares que compren bienes y servicios de consumo personal (Kotler y Armstrong, 2008), los mercados parten ya sea de una necesidad, deseo o demanda; La necesidad son estados de carencia percibida, y son un componente básico. Los deseos son la forma que adoptan las necesidades humanas moldeadas por la cultura y la personalidad individual. Y las demandas son deseos humanos respaldados por el poder de compra (Kotler y Armstrong, 2008).

Un proceso es un método de operación particular o una serie de acciones que comúnmente incluyen pasos múltiples que deben seguir una secuencia definida. Los procesos de servicios van desde procedimientos relativamente simples que implican sólo algunos pasos hasta actividades muy complejas (Lovelock, et al, 2004).

Katz y Kahn (1966) además de Thompson (1967) plantean que una organización es un sistema abierto que toma recursos del exterior y los convierte en bienes y servicios que devuelve al entorno para ser adquiridos por los clientes. El desempeño organizacional es la medida de la eficiencia y eficacia con lo que los administradores aprovechan los recursos para satisfacer a los clientes y alcanzar las metas de la organización (Jones y George, 2006).

El personal es el factor más importante en la mayoría de los encuentros de servicio, estos tienen interacción directa con el cliente, y puede afectar la entrega del servicio. Las empresas de servicios exitosas se caracterizan por una cultura de servicios y un liderazgo diferencial además de la implicación activa del Departamento de Recursos Humanos en donde se vea a los empleados como un recurso que tiene que alimentarse y no como un costo que hay que minimizar (Lovelock et al, 2004).

La tecnología es la combinación de herramientas, maquinas, computadoras, habilidades, información y conocimiento que se valen los administradores para diseñar, producir y distribuir bienes y servicios. Las fuerzas tecnológicas son los resultados de los cambios en la tecnología de que se valen los administradores para diseñar, producir y distribuir bienes y servicios (Jones y George, 2006).

## DATA AND METHODOLOGY

Se requiere la definición del problema el cuál es identificar cual es la percepción que tienen los empresarios de compañías turísticas en el ramo de servicio sobre las capacidades de innovación más

relevantes. Estas empresas turísticas abarcan restaurantes, hoteles, spas, parques temáticos, tour operadoras y agencias de viaje como se muestra en la tabla 1.

Tabla 1. Tipo de Empresas que fueron encuestadas.

Empresas turísticas	Número de empresas	Porcentaje
Restaurantes	12	24%
Hoteles	11	22%
Spas	8	16%
Parques temáticos	1	2%
Agencias de viaje	10	20%
Tour operadoras	8	16%
Total	50	100%

*El levantamiento de las encuestas a empresas de servicios, se realizó en la ciudad de Cancún en donde se obtuvo una muestra no probabilística por conveniencia de 50 empresas entre las cuales destacan restaurantes, hoteles, spas, parques temáticos, agencias de viaje y tour operadoras. Fuente: Elaboración propia.*

Posteriormente se redefinió el tema en constructos que permitan medir cada una de las variables, como se muestra en la tabla 2.

Tabla 2: Definición operacional de las variables.

Variables	Constructos
Estrategia	Dirección que lleva la empresa. Recursos para alcanzar las metas. Competencia. Aprovechamiento de recursos.
Producto/Servicio	Satisface una necesidad. Adapta nuevos atractivos. Ofrece beneficio. Ofrece un valor agregado.
Mercado	Satisfacción del mercado. Lealtad del mercado. Conocimiento de valor agregado.
Procesos	Eficiencia. Mejorar el servicio. Control de procesos. Calidad de procesos.
Organización	Toma en cuenta las oportunidades. Toma en cuenta las amenazas. Toma en cuenta las fortalezas. Toma en cuenta las debilidades.
Personal	Capacitación. Consideración de propuestas hechas por el personal. Motivación. Inversión en el personal.
Tecnología	Cuenta con hardware Cuenta con software. La tecnología ayuda a la toma de decisiones. La tecnología ayuda para comunicar.

*Las variables se operacionalizan por constructos las cuales se pueden preguntar y medir su percepción en una escala de uno al siete. Fuente: Elaboración propia.*

El diseño de la investigación que se siguió fue un estudio descriptivo, que se basa en procedimientos científicos para recolectar datos puros, que se hacen para responder a las preguntas de quién, que, cuándo, en dónde y cómo (Mc Daniel y Gates, 2011).

La muestra que se llevó a cabo fue no probabilística, que es un proceso muestral en el que la probabilidad de selección de cada unidad muestral es desconocida (Hair, Bush y Ortinau, 2004), debido a que no se tiene con precisión estadísticas confiables sobre el total de empresas turísticas en la ciudad de Cancún, Q. Roo. La muestra no probabilística fue por conveniencia que es un procedimiento en el que las muestras se toman por conveniencia del investigador (Hair, Bush y Ortinau, 2004). En la tabla 1 se muestra el tipo de empresas que se encuestaron de una muestra de cincuenta.

Posteriormente para estudiar las variables se obtuvo el estadístico de tendencia central para conocer la percepción promedio que tiene así como la frecuencia de la constructo. Por cada bloque de variables se realizó un análisis discriminante como Lambda de Wilks.

## RESULTADOS

Dentro de los resultados que se obtuvieron fueron los siguientes: El porcentaje de empresas turísticas las cuales fueron encuestadas el 24% fueron restaurantes, el 22% hoteles, el 16% spas, el 2% parques temáticos, el 20% agencias de viaje y el 16% tour operadoras.

La tabla 3 da una panorámica de cómo las empresas califican los diferentes constructos.

Obteniendo un promedio de cada grupo que abarcan cada una de las capacidades innovadoras se tienen los siguientes resultados (Tabla 4). Se puede observar, que la capacidad innovadora con el promedio más alto es la tecnología, el segundo la organización y a la que menos énfasis en promedio se le pone es al mercado.

Tabla 3: Concentrado de frecuencias de los constructos de cada variable.

Variable	Constructo	Capacidad innovadora						
		Baja 1	2	Media 3	4	5	Alta 6	7
Estrategia	La empresa sabe hacia dónde va.	2%		20%	26%	24%	20%	8%
	Utiliza los recursos para alcanzar las metas	4%	6%	24%	20%	18%	18%	10%
	Conoce lo que hace su competencia	4%	22%	28%	28%	28%	16%	2%
	Aprovecha sus recursos (financieros y humanos)		6%	22%	24%	24%	18%	6%
Producto/ Servicio	El servicio satisface una necesidad		2%	16%	24%	26%	18%	14%
	El servicio adapta nuevas atracciones	6%	16%	22%	20%	16%	12%	8%
	El servicio ofrece un beneficio	6%	6%	20%	20%	20%	18%	10%
	El servicio ofrece un valor agregado			6%	18%	34%	24%	18%
Mercado	El mercado está satisfecho			8%	20%	26%	28%	18%
	El mercado es leal		2%	24%	36%	28%	10%	
	El mercado tiene conocimiento del valor agregado que ofrece	6%	20%	30%	24%	12%	8%	
Proceso	Los procesos de la empresa son eficientes		6%	22%	24%	24%	18%	6%
	Los procesos buscan mejorar el servicio		10%	22%	20%	22%	18%	8%
	Se tiene control de los procesos	12%	24%	40%	12%	6%		6%
	Se busca la calidad de los procesos		6%	24%	42%	22%		6%
Organización	Toma en cuenta las oportunidades		6%	18%	12%	42%	18%	4%
	Toma en cuenta las amenazas		12%	12%	6%	22%	18%	30%

Personal	Toma en cuenta las fortalezas			6%	24%	12%	36%	22%
	Toma en cuenta las debilidades	6%	6%	30%	28%	6%		24%
	Capacitan a los empleados regularmente	6%	6%	30%	24%	28%	6%	
	Consideran las propuestas hechas por el personal	6%	6%	40%	24%	12%	12%

El siguiente cuadro muestra los porcentajes que recibió cada constructor del grupo de variables correspondientes, en donde los valores 1 y 2 se tomaron como bajos, los valores 3, 4 y 5 como medio y 6 y 7 como altos. Fuente: Elaboración propia.

Tabla 4: Promedio de las capacidades innovadoras.

Capacidad Innovadora	Promedio de calificación
Estrategia	4.25
Producto/Servicio	4.5
Mercado	4
Procesos	3.75
Organización	4.75
Personal	4.5
Tecnología	5.75

Promedio obtenido por el total de casos que tiene cada constructor que constituyen las variables. Fuente: Elaboración propia.

En cuanto a cada uno de los constructos que conforman las variables la tabla 5 muestra que en todos los casos hay una pertinencia, por lo que ninguno de los constructos es discriminatorio.

Tabla 5: Estadístico discriminante de los constructos por variables.

Variable	Constructo	Lambda Wilks
Estrategia	La empresa sabe hacia dónde va.	.741
	Utiliza los recursos para alcanzar las metas	.962
	Conoce lo que hace su competencia	.816
	Aprovecha sus recursos (financieros y humanos)	.923
Producto/ Servicio	El servicio satisface una necesidad	.826
	El servicio adapta nuevas atracciones	.888
	El servicio ofrece un beneficio	.974
	El servicio ofrece un valor agregado	.844
Mercado	El mercado está satisfecho	.876
	El mercado es leal	.957
	El mercado tiene conocimiento del valor agregado que ofrece	.862
Proceso	Los procesos de la empresa son eficientes	.958
	Los procesos buscan mejorar el servicio	.929
	Se tiene control de los procesos	.779
	Se busca la calidad de los procesos	.922
Organización	Toma en cuenta las oportunidades	.931
	Toma en cuenta las amenazas	.946
	Toma en cuenta las fortalezas	.949
	Toma en cuenta las debilidades	.805

Personal	Capacitan a los empleados regularmente	.920
	Consideran las propuestas hechas por el personal	.911
	La empresa motiva a sus empleados	.935
	La empresa invierte en el personal	.919
Tecnología	La empresa cuenta con hardware	.878
	La empresa cuenta con software especializado	.919
	La tecnología ayuda a la toma de decisiones	.890
	La tecnología ayuda a una mejor comunicación	.866

*Se aplicó el estadístico Lambda Wilks para cada uno de los grupos en donde en todos los casos hay una pertinencia de los constructos. Se tuvo una significancia de 0.003*

## CONCLUSIONES

Hasta ahora, la mayoría de las investigaciones relacionadas a la innovación en empresas turísticas está más orientada a la teoría y muy poco a los hechos, debido a los pocos estudios que se han realizado, las capacidades innovadoras se han estudiado de forma aislada sin tomar en cuenta el factor innovación y ser plasmadas como una ventajas competitivas.

Se infiere que las capacidades de innovación detectadas mantienen un contacto con el mercado poco claro, pues si bien no se especifica el vínculo, se entiende que hay una relación estratégica no detectada que motiva y detona la innovación como capacidad competitiva.

Si bien la tecnología es mencionada como la capacidad de innovación más destacada, existen otras capacidades como procesos o estrategia que figuran en niveles de percepción inferiores. Lo anterior pone en evidencia que existen capacidades de innovación más visibles y notorias que otras, es recomendable indagar y profundizar en las menos visibles en el ánimo de abonar en el conocimiento de las realidades de las empresas turísticas en Quintana Roo.

Se deben de considerar nuevos constructos que puedan ser medibles en las variables con el fin de poder contar con una mayor claridad de la percepción sobre las capacidades de innovación que los empresarios tengan para fomentar una distinción entre ellas y que por sí solas permitan establecer estrategias que coadyuven a la competitividad.

La gran mayoría de los empresarios turísticos de la muestra caen en un rango medio de las capacidades innovadoras pues saben hacia donde van, utilizan los recursos de una forma eficiente pero no eficaz por lo que deben dar un paso adelante con las estrategias que se toman para poder hacer frente a la competencia. Así mismo el producto o servicio debe de estarse innovando debido a su ciclo de vida del producto o servicio por lo que se requiere realizar estrategias tanto de desarrollo de productos como de mercado. Es necesario que los procesos se consideren más ya que estos son una herramienta la cual ayuda a que el consumidor perciba el valor agregado que se quiere ofrecer. En los servicios turísticos el personal es otra herramienta en la que se debe de trabajar e invertir a través de programas de capacitación ya que como capacidad de innovación tiene un rango medio y sin embargo son los que dan la cara con los clientes, son los embajadores de las empresas.

# **FACTORES QUE IMPULSAN A LAS PYMES PRODUCTORAS DE LIMÓN Y COCO DEL ESTADO DE COLIMA A INCURSIONAR EN EL SECTOR EXPORTADOR**

Manuel Rubio Maldonado, Universidad de Colima  
Oscar Bernardo Reyes Leal, Universidad de Colima  
Aurelio Déniz Guizar, Universidad de Colima

## **RESUMEN**

*En la actualidad el mercado doméstico e internacional exige altos estándares de calidad, es por ello que las PyMES que realizan actividades de exportación se ven en la necesidad de cumplir con éstos, para cubrir las necesidades de sus clientes. Lo que obliga a estar a la vanguardia para competir con marcas reconocidas a nivel mundial. Derivado de lo anterior y en función a un mercado altamente competitivo, crean sus propias marcas para dar a conocer sus productos en el extranjero. Así, mencionar, que el 93% de las PyMES del Estado de Colima, cuenta con la capacidad de competir con productos con marca propia. Lo que las posiciona en un nivel sobresaliente tanto económico como empresarial. El Estado de Colima cuenta con una posición estratégica de gran potencial en recursos naturales. En relación a esta posición estratégica la investigación se enfocó a determinar los factores y condiciones que impulsan a las PYMES productoras de limón y coco a incursionar en el sector exportador. Para realizar la investigación se consideran los municipios de Tecmán, Manzanillo y Colima capital donde se localizaron las empresas que participan en el mercado internacional.*

**PALABRAS CLAVE:** empresas PYMES, empresa exportadora, mercado doméstico e internacional.

## **FACTORS THAT MOTIVATE SMES PRODUCERS COCONUT AND LEMON COLIMA STATE TO DABBLE IN THE EXPORT SECTOR**

### **ABSTRACT**

*At present, the domestic and international market demands high quality standards, which is why SMEs that carry out activities in export are the need to comply with them, to meet the needs of its customers. This forces them to be in the vanguard to compete with global brand. Due to the above and according to a highly competitive market, they create their own brands to present their products across borders. So, mentioning that 93% of SMEs in the State of Colima, has the ability to compete with private-label products. What an outstanding level positions in economic and business. The state of Colima has a strategic position of great potential in natural resources. In relation to this strategic position focused research to identify the factors and conditions that propel SMEs producing lemon and coconut to make inroads in the export sector. To conduct the research are considered Tecmán municipalities, Manzanillo and Colima is located capital where the companies participating in the international market.*

**KEYWORDS:** SME Firms, Export Company, Domestic And International Market.

### **INTRODUCCIÓN**

El Estado de Colima cuenta sin duda con una posición estratégica de gran potencial en cuestión de recursos naturales, lo que lo hace apto para la producción agropecuaria. Y, en lo que respecta a las actividades portuarias en el puerto de Manzanillo, la vía para exportar su producción a cualquier mercado internacional. Esto les proporciona una ventaja comparativa a las Pequeñas y Medianas Empresas del Estado respecto a las demás empresas del país. Cabe mencionar que el sector al que fue enfocado este proyecto es el sector primario, específicamente: la agroindustria, en 3 municipios, Tecomán, Manzanillo y Colima capital, donde se ubicaron estas empresas. Son los más destacados económicamente por sus actividades relacionadas con el sector exportador.

El sector exportador en Colima ha enfrentado transformaciones profundas durante las dos últimas décadas. El continuo proceso de urbanización y las tendencias del mercado mundial, han influido de manera decisiva en la estructura del sector exportador. La producción adquiere un carácter mucho más comercial, donde la competencia impone estándares de calidad y servicio, obligando a las unidades productoras a una continua modernización en sus procesos productivos, así como a la diversificación de productos y nichos de mercado. Se considera la actividad exportadora un complemento con el mercado doméstico que utilizan las empresas para el desarrollo económico. Así, su posicionamiento a nivel internacional, depende de la cantidad de exportaciones que realice para que llegue a tener un renombre respecto a otras empresas. Esto traerá como beneficio, derivado de esta actividad la estabilidad económica del Estado de Colima. Mediante esta investigación se busca tener un amplio conocimiento de las diversas empresas que han incursionado en el sector exportador, así como identificar las generalidades de cada una de las firmas. También se pretende que la información recabada pueda lograr interesar a las empresas que no han incursionado en las exportaciones y se fomente su participación por cuenta propia y no a través de terceros. Se considera que esta información es de gran importancia, porque en la actualidad las empresas buscan ser más competitivas y, estos factores puestos en práctica por las empresas exitosas pueden servir como herramienta básica para que logren sus objetivos. Al realizar esta investigación se espera encontrar la realidad de lo que son los factores estratégicos con los cuales estas empresas se han apoyado para lograr un crecimiento sostenido con las exportaciones.

Este fenómeno ha alcanzado a una gran cantidad de países, aún, cuando se observa que en general a Latinoamérica le hace falta una mayor internacionalización de sus empresas (Wilska y Tourunen, 2001), por lo que es de suma importancia realizar investigaciones para referirse a cuáles han sido los elementos determinantes de la internacionalización (Sánchez, 2002). Aunado a lo anterior, investigadores postulan que en el siglo XXI, el éxito o fracaso de la PYMES dependerá de su desempeño en los mercados globales. Esta afirmación supone la vigencia de un nuevo paradigma, según el cual, las empresas son creadas y actúan en mercados crecientemente interconectados, en donde las barreras nacionales tienden a diluirse. Dentro de esta lógica, las empresas pasarían a considerar el mundo como un gran mercado y sus estrategias y decisiones de negocio se formularían bajo esta premisa de internacionalización. Ahora bien, cabe preguntar si nuestras Pequeñas y Medianas Empresas están preparadas y si su evolución responderá a esta lógica. Dado que los resultados competitivos de las PyMES no son neutros para las sociedades de pertenencia, su éxito competitivo tiende a traducirse en generación de mayor empleo y riqueza, incorporación de nuevos conocimientos y desarrollo de talento local. De modo que, el desempeño competitivo tendrá impacto sobre la evolución económica, social, institucional y cultural de las sociedades que las albergan, razón para dedicar este artículo al entendimiento de los procesos de internacionalización con el fin de identificar los factores que determinan e impulsan la internacionalización de las PYMES locales.

*Objetivo general: Determinar los factores y condiciones que impulsan a las Pymes productoras de limón y coco a incursionar en el sector exportador del Estado de Colima”.*

*Hipótesis de investigación:* Si se dan los factores internos como infraestructura, capacidad de producción, financiamiento, capacitación, equipamiento y capital social, luego entonces, estos influyen para que entren las PyMES en el sector exportador.

## REVISIÓN LITERARIA

Desde hace dos décadas, las pequeñas empresas exportadoras del Estado de Colima se encuentran en un proceso de apertura creciente al mercado exportador. Es de recordar que en México, las PYMES representan un 97% de la fuerza laboral y ocupan más del 50% de la población económicamente activa y generan una cuarta parte del Producto Interno Bruto (Morales, 2006, p21). La falta de capacitación, innovación tecnológica, financiamiento, entre otros aspectos, ha generado que estas empresas enfrenen múltiples obstáculos para participar competitivamente en los mercados internos y externos (Montero & Muñoz 2007).

Para lograr incursionar y mantenerse en las esferas de la economía global, estas Firms deben considerar la productividad y la competitividad como parte de sus objetivos estratégicos (Charruca, Barrutia & Landeta 1995). La productividad es el empleo eficiente de los recursos técnicos, materiales y humanos para producir bienes y servicios de calidad (Sánchez, 2008), representando la relación entre cantidad y calidad del producto o servicio. La calidad es la ausencia de deficiencias y constituye el cúmulo de características que satisfacen al cliente (Juran, 1990). El sector exportador representa un factor económico muy importante tanto para los colimenses como para el país. Por lo tanto, para obtener un mejor desarrollo y crecimiento económico a través del sector exportador, es importante resaltar las ventajas competitivas con las que cuenta el estado de Colima (Porter, 2004). Cuenta con variedad de productos como coco, limón, melón, sandía, piña y aceite de coco, la cercanía a uno de los puertos más importantes del país y apoyos gubernamentales a la exportación necesarios; sin embargo, en los últimos años, no sólo su potencialidad productiva ha venido en decremento, sino también su capacidad para mejorar el bienestar de calidad de vida de los trabajadores. Así, en esta investigación, se considera importante determinar los factores que impulsan a las PyMES productoras de coco y limón a incursionar en el sector exportador y conocer, de primera mano, que tanto limitan o impulsan la participación en el mercado internacional y determinar la efectividad de estas estrategias con los cuales han logrado un crecimiento sostenido.

La internacionalización tradicional, es la que por lo común siguen las empresas transnacionales. Esta internacionalización tradicional supone un proceso a través del cual, en un primer momento, la empresa instala fuera de sus fronteras aquellas actividades más próximas al cliente final —ventas a través de la exportación— para progresar en su internacionalización asumiendo un mayor grado de compromiso —como pueden ser las inversiones directas. Las etapas que generalmente suelen seguir las empresas son: exportación ocasional, exportación regular directa e indirecta, establecimiento de filiales de venta en el extranjero y estableciendo subsidiarias de producción en el extranjero (Sáez y Cabanelas 1997, p26). Venderle al mundo es hoy una posibilidad. Se puede hacer en forma individual o en grupo. Es clave la asistencia a ferias: la frase “la unión hace la fuerza”, es cada vez más popular en el mundo PYME. Si bien hay actividades que parecen restringidas a las grandes empresas, le límite desaparece si de exportar se trata. Con estrategias propias o formando parte de una asociación, las Pymes colimenses han ganado espacios en mercados extranjeros. Así, los factores que impulsan a una PYME que se inicia en la exportación, son la buena calidad y los buenos precios. Los reportes sobre las Pequeñas y Medianas Empresas (PYMES), se pueden clasificar en dos tipos, los reportes sobre estadísticas y los reportes sobre Política Industrial. En ambos reportes se reconoce que las PYMES son importantes para la economía y para el desarrollo del país, por el número de empleos que representan y por su contribución a la derrama económica en el mercado (SBA, 2001). Por otra parte, se comenta la importancia de que no desaparezcan y crezcan para aumentar el impacto positivo en la economía. Sin embargo, las publicaciones disponibles, no analizan de manera formal la gestión de las PYMES en México, lo que existe son los comentarios y argumentos de profesionales y proveedores de servicios, basados principalmente en experiencias pasadas,

que expresan en los medios de comunicación las áreas de oportunidad en las PYMES, por ejemplo: el desarrollo de una estrategia de negocio, realizar benchmarking, estudios de mercado, capacitación para la exportación, apoyos de financiamiento para el crecimiento, cursos de administración y de las operaciones del negocio, capacitación del recurso humano en todas las áreas y desarrollo de sistemas informáticos internos y de e-commerce (Barceló y Pérez, 2003). En este contexto consideramos dos enfoques desarrollados por NAFIN, denominados enfoques internos y externos. El enfoque externo se caracteriza por problemas que afectan a las PYMES, pero que son más bien del tipo macroeconómico y en donde las PYMES no tienen influencia en su solución (o no es su razón de ser); mientras que el enfoque interno, en cambio, se caracteriza por problemas derivados de la gestión propia del negocio y del sector económico al que pertenecen, y donde las PYMES son responsable de su solución y mejora. Como primer ejemplo tenemos el caso de la "Encuesta a la industria pequeña y mediana" de NAFIN (1985) donde se analizó una muestra de 20,923 empresas y que, de los 9 factores identificados como "problemas", solo 5 factores pueden ser asociados a la gestión interna del negocio: carencia de organización, retraso tecnológico, falta de capacitación del personal, problemas en la colocación de productos, y carencia de registros contables. Otro estudio de interés es "La industria por escala productiva", realizado por SECOFI (1987). Abarcando 35,000 empresas que representaban el 40% de la industria nacional, y que identifica 6 factores en la "problemática" de la micro y pequeña empresa, de los cuales, sólo 2 pueden ser asociados a la gestión interna del negocio: altos costos de operación y liquidez financiera. Así, el estudio de Sánchez (2003), menciona un estudio de Nafin que reporta los "motivos o causas internas por las cuales mueren las PYMES", entre las cuales se mencionan: problemas administrativos (43%), problemas fiscales (16%) incapacidad de cumplir requisitos (15%), deficiencia en comercialización (11%), por errores en insumos y producción (8%) y debido a falta de financiamiento (7%). Con excepción de los puntos "problemas fiscales" y "falta de financiamiento", el resto son puntos que se pueden asociar a la Gestión Interna del Negocio. Sin embargo, no se reporta la referencia del estudio, por lo que debe ser tomado solamente como un comentario. En relación a un estudio más reciente realizado en el período 2001-2002, se aplicó una encuesta a 1,034 PYMES (CIPI, 2003a), donde las principales conclusiones del reporte preliminar son: primero, se reconoce que los programas para las PYMES no deben ser los mismos que para las Micro y para las grandes empresas; segundo, los indicadores de eficiencia utilizados en los programas públicos, cuando se basan en el número de empresas atendidas, provoca que la atención sea sobre las Micro empresas que representan más del 90% de las empresas. Así reporte preliminar se orientan a recomendaciones para mejores apoyos públicos definidos específicamente como política industrial para el segmento de las PYMES, más que en mejoras de la gestión interna de las PYMES y solo reconoce dos problemas de la gestión interna de las PYMES: falta de certificación en calidad y de metodologías orientadas a la mejora en calidad y productividad. Sin embargo, en las publicaciones revisadas de las PYMES nada se menciona sobre los procesos de gestión y sus temas, los cuales son independientes a tener una estructura organizacional compleja o a tener que documentar la calidad del producto. Los procesos de gestión pueden dividirse en dos tipos: procesos operativos y los procesos de apoyo (APQC, 2004), y la literatura sobre los temas de gestión que soportan los procesos de gestión son: administración general, administración de operaciones, control de piso y calidad, administración de la productividad, y planeación estratégica.

## METODOLOGÍA

La última década del siglo pasado y la década actual en donde la participación de México en el sector exportador ha sido productiva, obliga a conocer cuáles han sido los factores que impulsan a las pymes al mercado exportador. Así con esta dinámica muy propia del medio exportador obligo a encuentros con empresarios y fue llevando a profundizar aspectos referidos a la capacitación de sus cuadros técnicos y operativos, así como a preguntarles acerca de la contribución que realiza el mundo del conocimiento (universidades, escuelas de negocios, laboratorios, etc.) a favor de sus aspiraciones de internacionalización.

La presente investigación se enmarca en la búsqueda y acopio de datos de fuentes primarias ya que se obtuvo a través de investigaciones específicas, principalmente por el instrumento de encuestas y la entrevista en profundidad. Además se utilizó la fuente secundaria consultando a las oficinas de Fomento Económico de los gobiernos municipales y a la delegación de la Secretaría de Economía del estado de Colima, publicaciones oficiales de la Secretaría de Economía, del portal de Proméxico, oficinas de Fomento Económico de los municipios de Colima, Tecomán y Manzanillo. Para procesar la información se utilizaron métodos cuantitativos de los resultados obtenidos de las encuestas. Se analizaron bajo métodos estadísticos y hechos observables con la finalidad de controlar las variables y medir los resultados. Soto y Dolan (2004), señalan que la PYME tiene características que le permiten desenvolverse de manera más eficiente que las grandes empresas, éstas son: su elevado grado de flexibilidad, su acceso a nuevas formas de distribución, operar contractualmente con agentes, distribuidores, empresas comerciales, utilizar asociaciones sectoriales junto con otras empresas, fomentar alianzas con empresas extranjeras a fin de comercializar en sus mercados, la motivación e ingenio que son capaces de desarrollar ante la competencia.

De acuerdo a la SE, (2012), SAGARPA (2012), FOMENTO ECONOMICO (2012). De un total de 560 empresas PYMES solo 32 están dentro de los exportadores de coco y limón del sector exportador.

Este trabajo se auxilió del método deductivo, ya que parte de lo general a lo particular que se aplica a la realidad de la actividad exportadora de las empresas colimenses (Hernández & Fernández 2006).

*Técnicas a utilizar en la investigación:* Visitas domiciliadas a las empresas seleccionadas del padrón de las instituciones públicas antes mencionadas, aplicando la encuesta y observación directa al empresario respecto a los factores que lo llevaron al mercado exportador.

*Valor metodológico:* basada en “dos enfoques desarrollados por NAFIN denominados enfoques internos y externos. El enfoque externo se caracteriza por problemas que afectan a las PYMES, pero que son más bien del tipo macroeconómico y en donde las PYMES no tienen influencia en su solución (o no es su razón de ser); mientras que el enfoque interno, en cambio, se caracteriza por problemas derivados de la gestión propia del negocio y del sector económico al que pertenecen, y donde la PYME es responsable de su solución y mejora. En relación a estos enfoques se determinaron las características que engloban los factores internos y externos utilizados por las PYMES exportadoras del área agroindustrial del estado de Colima, durante el período de 2010-2012.

*Valor práctico:* Se encara principalmente a la participación y opinión de las empresas que están exportando sus productos agroindustriales en función de los dos enfoques antes mencionados. Esto deja el antecedente para que, en una futura investigación, proponer estrategias para su mejora continua.

*Fortaleza de infraestructura colimense:* A nivel internacional, la ubicación geográfica del Estado, sus condiciones climatológicas y el contar con el puerto más importante del pacífico mexicano representan ventajas estratégicas para las empresas exportadoras. “El puerto de Manzanillo es un puerto de transbordo –puerto Hub- ideal para los países de Centro y Sudamérica, así como para la costa oeste de los Estados Unidos de Norteamérica y Canadá (Gobierno del estado libre y soberano de Colima. 2010).” Cuenta con un recinto portuario de 437 hectáreas en total, dividido en dos polígonos, que comprende zona de agua, más de 5,000 metros de muelles en 30 posiciones de atraque; 2.6 hectáreas de zonas de almacenamiento techado; 43 hectáreas de patios de usos múltiples; con terminal de hidrocarburos, pesquera y turística, así como un moderno centro de emergencias. Para el desalojo adecuado y seguro de las mercancías se encuentra equipado con 17.1 kilómetros de vías férreas, con servicio de tren de doble estiba y 6.2 kilómetros de vialidades. El movimiento interno de cargas, se realiza a través de quince terminales e instalaciones especializadas, las cuales son operadas por inversionistas nacionales y extranjeros con recursos tecnológicos de punta. La capacidad dinámica de carga del puerto es de 18.2 millones de

toneladas para el manejo y almacenamiento de diversos productos, en 2010 registró un movimiento anual de 1'600,000 Teu's. Para los próximos años se espera un crecimiento exponencial a un ritmo anual superior a 22%.

#### *Ventajas competitivas del puerto*

- “Ubicación geográfica estratégica, que le facilita desplazar mercancías a los principales centros comerciales e industriales de la zona Occidente, del Bajío y Centro de México.
- Cercanía con los países situados en la región de la Cuenca del Pacífico que promueve el desarrollo de un servicio marítimo frecuente entre México y Asia.
- Apoyo a los puertos estadounidenses de Los Ángeles y Long Beach, que presentan problemas logísticos por congestión.
- Más de 130 hectáreas de superficie de reserva para el desarrollo de nuevas instalaciones y terminales en la zona norte (proyecto en desarrollo fecha estimada de terminación 2015) (API 2011).
- Autopistas y red ferroviaria en condiciones excelentes, que conectan directamente con importantes puntos nacionales e internacionales simplificando la instauración de corredores terrestres y hermanamientos con puertos interiores.
- Servicio de ferrocarril de doble estiba en ruta fija, único en México, brindando mayor seguridad en el transporte de carga contenerizada.
- Aduana y recintos fiscales modernos que contribuyen a la fluida circulación de la mercancía que ingresa al puerto.
- Condiciones climáticas favorables para la navegación que le permiten operar las 24 horas del día los 365 días del año.
- Apertura e incentivos por parte del Gobierno del Estado de Colima para la inversión nacional y extranjera.
- Tecnología de punta en sus instalaciones y terminales que erigen al puerto por quinto año consecutivo como el líder nacional en manejo de carga.
- En la entidad operan dos centrales termoeléctricas con una capacidad efectiva de generación de 1,900 Mw., las cuales producen el 70 por ciento del total de energía generada por la división occidente.
- La red eléctrica estatal tiene una longitud de 6,337 Km. La red de alta tensión en 115 KV y 69 KV en el Estado tiene una longitud de 702 Km. La red que corresponde a las líneas de mediana tensión en 34.5 KV, 23 KV y 13.8 KV mide 3,696 Km. y las líneas de baja tensión tienen una longitud de 1,939 Km.(API, 2010).

#### *Proyectos en desarrollo*

“Actualmente en Colima se están invirtiendo grandes capitales en el desarrollo de importantes proyectos en el sector energético para almacenamiento y transporte de gas LP y gas natural así como en la generación de energía eléctrica, que beneficiarán a más de 10 estados de la región centro-occidente e impulsarán la competitividad para el desarrollo del país. Desarrollo del segundo puerto denominado Cuyutlán con el doble de capacidad de la antes mencionada.(Gobierno del estado de Colima, 2010)

## **RESULTADOS**

Desde la perspectiva del enfoque interno, se encontró lo siguiente:

Al realizar un análisis de los datos recopilados a través de la aplicación de las encuestas a las Pequeñas y Medianas Empresas de los municipios de Colima, Tecomán y Manzanillo nos percatamos que el 100% de estas empresas tienen conocimiento de que representan una gran importancia para su Estado y País.

Las PyMES además de tener conocimiento de la importancia que juegan en el país, el 93% de ellos están exportando sus productos a otro país, obteniendo grandes beneficios de ello, diversificando su mercado y alargando el ciclo de vida de algún producto, mientras que el 7% restante no quiere arriesgar su patrimonio llevando a cabo dicha actividad.

El 57% de las PyMES que están exportando, al momento de llevar a cabo dicha actividad, realizan previamente una investigación de mercado para poder conocer cómo se comporta el mercado en relación a la competencia y a las necesidades de los posibles consumidores, en relación a las razones por las que el 57% de las PyMES encuestadas no hacen una investigación de mercados es porque ellos sólo exportan a empresas para que otros la vendan con su propia marca o sencillamente porque no requieren investigar el mercado para poder vender su producto. Una vez hecha la investigación de mercados el 100% de estas Pequeñas y Medianas Empresas tienen la capacidad de satisfacer estos mercados gracias a la calidad de sus productos.

Una vez que éstas, realizan la investigación de mercado y logran cubrir la demanda de sus consumidores y darse cuenta de que su producto es de alta calidad, el 93% de las PyMES tienen la capacidad de crear su propia marca y competir con las marcas ya conocidas en el extranjero, mientras que el otro 7% no tiene la capacidad de competencia con marcas reconocidas, por lo que se ven en la necesidad de invertir en la creación de una marca propia o de mejorarla.

Según los resultados obtenidos, el 86% de las Pequeñas y Medianas Empresas de los municipios de Colima, Tecomán y Manzanillo, cuentan con la capacidad financiera suficiente para poder llevar a cabo la exportación de sus productos, mientras que el 14% no cuentan con dicha capacidad, siendo que el 93% de éstas tienen conocimiento de los apoyos que les puede otorgar el gobierno, por ejemplo a través de ASERCA / SAGARPA para que lleven a cabo esta actividad. Siendo que de este 93% sólo el 57% recibe dichos apoyos otorgados por el gobierno.

En relación a las empresas que están exportando y que logran vender su producto, el 14% no lo hacen, mientras que el 86% si ofrecen algo distinto tanto en precio, calidad, servicio, entre otros.

Una vez realizada la venta del producto en el extranjero de las Pequeñas y Medianas Empresas de Colima, éstas dieron un resultado positivo del 86% de la totalidad de las empresas que con la exportación pueden diversificar su riesgo de invertir en un solo mercado, esto realizando un plan de marketing, siendo el 64% las que aplican este plan.

El 79% de las PyMES encuestadas, tienen la capacidad y disponibilidad de incrementar su productividad y por consecuencia sus volúmenes de producción y ventas. Mientras que el 93% de estas empresas tiene la disponibilidad y la capacidad para mejorar la calidad y competitividad de sus productos en caso de ser necesario. Del total de estas empresas encuestadas que están exportando sólo el 43% no cuentan con un análisis FODA.

Si bien para llevar a cabo la exportación es necesario que estas empresas cuenten con personal conocedor del medio, para hacerlo las PyMES cuentan con personal 100% especializado para llevar a cabo los trámites de exportación, es decir, cuentan con un agente aduanal para todas sus actividades del despacho aduanero de las mercancías.

El 93% de las empresas encuestadas utilizan los beneficios que brindan los diferentes acuerdos y tratados comerciales en materia de comercio exterior que tiene México con el resto de los países del mundo al realizar las exportaciones de sus productos, mientras que el 7% restante no cuenta o tiene conocimiento de estos convenios antes mencionados.

Para poder darse a conocer en otros mercados, es necesario la publicidad en el mismo país destino, siendo el 36% de las empresas encuestadas las que cuentan con campañas publicitarias, mientras que el otro 64% no cuenta con ellas, puesto que sus productos se venden muy fácilmente debido a los diferentes aspectos que los caracterizan, como el precio y la calidad, por mencionar algunos.

Resultado de la investigación realizada se dio como resultado que el 71% de las PYMES encuestadas les gustaría incursionar en nuevos mercados. Mientras que el 29% restante de las empresas no sienten la necesidad de realizar esta actividad y formar parte de este número de empresas exportadoras. Así, al lograr este beneficio para propio crecimiento, estarían contribuyendo al progreso de su estado.

## CONCLUSIÓN

El principal objetivo de esta investigación fue determinar a través de una investigación de campo, los factores internos y externos que determinan la participación de las PYMES en el sector exportador de los municipios de Tecoman, Manzanillo y Colima capital del Estado de Colima en el periodo 2010-2012.

De acuerdo a información proporcionada por parte de la Secretaría de Economía, las Pequeñas y Medianas Empresas siempre han sido de gran importancia para el país. Cabe mencionar que a partir de los años 80's el sector agroindustrial comenzó a tener un gran auge y un crecimiento económico en el Estado de Colima; sin embargo, fue hasta los años 90's que comenzó a explotarse dicho sector, y, es así, como las empresas emprendieron la actividad agroindustrial, citando las exportaciones de diferentes productos colimenses como es el limón, el coco y sus derivados, el café, melón, sandía y plátano, por mencionar algunos; tratando así de sobresalir y dándole la importancia económica al Estado de Colima.

Aunado a esto, y considerando la ubicación estratégica del puerto de Manzanillo como número uno a nivel nacional y reconocido internacionalmente en el movimiento de carga contenerizada y derivado de lo anterior, se cuenta con la logística adecuada para el movimiento de mercancías producidas en los municipios de Manzanillo, Tecmán y Colima capital, del estado. Beneficio que tienen estas firmas para sus actividades de exportación.

Como se pudo observar, en esta investigación de campo se corrobora la hipótesis planteada en la que se analizó específicamente los factores internos que impulsan a las PYMES productoras de limón y coco en el estado de Colima a incursionar en el sector exportador. No se consideró el análisis de los factores externos por falta de información proporcionada por las empresas.

# **EL PROCESO DE CERTIFICACIÓN DE GESTIÓN DE CALIDAD EN LAS PYMES DE LA REGIÓN FRONTERIZA DE CD. JUÁREZ, CHIH. MÉXICO COMO ESTRATEGIA COMPETITIVA**

Oscar Alejandro Rodarte Contreras, Universidad Autónoma de Ciudad Juárez

Francisco Arturo Bribiescas Silva, Universidad Autónoma de Ciudad Juárez

## **RESUMEN**

*El buen desempeño de los sistemas de gestión de calidad en las empresas es un factor determinante en la competitividad en el mercado nacional e internacional. En el presente trabajo se muestra el análisis que se realizó sobre las pequeñas y medianas empresas (PYME) de la industria de proveeduría local. Para ello se realiza una búsqueda de las estrategias de competitividad actuales dentro del ramo de las PYME's que se encuentran en la literatura existente del tema aunado a la aplicación de un cuestionario que estudia los factores que las empresas de manufactura consideran como críticos para la competitividad de sus proveedores. Como resultado de la investigación se puede observar que las empresas de manufactura locales consideran como requerimiento importante que sus proveedores tengan la certificación del sistema de gestión de calidad, como una ventaja competitiva y aumenta el grado en que son elegibles para dar proveeduría en su cadena de suministros. Además se concluye con una propuesta de estrategia empresarial que genere un mayor desempeño para las PYME's que se enfoque en cumplir los requerimientos críticos de calidad que piden las empresas de manufactura de la localidad.*

**PALABRAS CLAVES:** Competitividad, PYME, Gestión de Calidad, Certificación

## **CERTIFICATION PROCESS IN QUALITY MANAGEMENT IN SME'S BORDER REGION OF CD. JUAREZ, CHIH. MEXICO AS A COMPETITIVE STRATEGY**

### **ABSTRACT**

*The good performance of the quality management systems in enterprises is a key factor in the competitiveness in the domestic and international markets. This paper shows the analysis was performed on small and medium enterprises (SMEs) in the local supply industry. This will perform a search of competitiveness strategies present within the branch of SME's that are in the literature of the subject together with the application of a questionnaire that examines the factors that manufacturing companies consider critical to the competitiveness of suppliers. As a result, research shows that local manufacturing companies consider as important requirement that their suppliers have certification of quality management system as a competitive advantage and increases the degree to which they are eligible to give in their supply chain . It also concludes with a proposed business strategy that generates higher performance for SME's to focus to fulfill the critical requirements of quality required by manufacturing companies in the city.*

**KEYWORDS:** Competitiveness, SME, Quality Management, Certification

## INTRODUCCIÓN

México es un país que se ha caracterizado por su gran aportación a la economía por parte de la industria de manufactura, como por ejemplo la industria automotriz que en el 2008 el país exportó el 79.1% de sus bienes manufacturados generando un valor de \$230,848 millones de dólares, según datos del Banco de México (2011). Mientras que en las exportaciones de servicios se obtuvo un valor de \$25 775 millones de dólares durante el año pasado. (INEGI, 2011) En estas cifras se marca la diferencia entre ambas industrias y como México ha ido avanzando en el servicio.

Como se ha mencionado la industria manufacturera ha sido de gran ayuda en el desarrollo del sector servicios ya que a partir del crecimiento de la industria maquiladora en la frontera norte se han desarrollado diferentes empresas. Para conocer mas a fondo la evolución de las empresas según datos del INEGI la evolución de las unidades económicas del sector manufacturero inicio su crecimiento a partir del año 1990 y según la Figura 1 que se presenta a continuación entre 1975 y 2000 el numero de plantas maquiladoras se multiplico ocho veces y por consiguiente el numero de empleados contratados.

Figura 1: Numero de Plantas Maquiladoras en México en los Años 1975-2006

Fuente: INEGI 2009. Esta figura muestra la relación entre el número de plantas maquiladoras que se establecieron en México denotando su crecimiento en el periodo de los años 1975-2006, mostrando a la vez el número de empleados contratados por las empresas durante el mismo periodo de tiempo ayudando así al crecimiento económico del país a través de la creación de empresas que requieren proveedores de tamaño PyME.

Ahora bien, Adentrándonos al sector de servicios según datos del INEGI (2011) la evolución de las unidades económicas de servicios en el periodo que va de 1998 a 2003 muestra un crecimiento de 8 por ciento, siendo los establecimientos micro, los que contribuyeron en términos absolutos con el mayor número, pues pasaron de 896 mil 179 en 1998 a 960 mil 135 en 2003 como se muestra en la Figura 2.

Figura 2: Crecimiento de las Unidades Económicas en México

Tamaño	Unidades Económicas		Crecimiento Porcentual
	2003	2008	2003-2008
<b>Total Servicios</b>	1013743	1367287	34.9
<b>Micro</b>	960135	1291080	34.5
<b>Pequeños</b>	43835	64310	46.7
<b>Medianos</b>	5179	6555	26.6
<b>Grandes</b>	4594	5342	16.3

*Fuente: INEGI, Censos Económicos 2004 y 2009. Muestra el total de unidades económicas en los diferentes tamaños de empresas y su crecimiento entre los años 2003 y 2008. En específico se muestra el crecimiento en las empresas de pequeño y mediano tamaño para ubicar la investigación en el contexto de su desarrollo en el mercado económico del país.*

Ahora bien, se ha remarcado la importancia del sector de servicios pero es elemental mencionar que, al igual que las otras industrias como la manufacturera, para obtener un éxito económico y trascender en el mundo de los negocios es relevante cumplir con ciertas características de la empresa que sean vistas por el cliente para cautivarlo y así generar una ventaja competitiva sobre las demás industrias. Una de esas características es la calidad con la que se preste el servicio hacia los clientes. La certificación del sistema de gestión de calidad en las empresas es un requisito que se ha ido haciendo mas importante en el mercado, y la evolución de las empresas certificadas ha ido en aumento desde el año 1999 donde los establecimientos de servicios con certificación ISO-9000 dieron un total de 176 y para el año 2011 se tiene un total de 1164 establecimientos. (V Informe de Gobierno México, 2011).

### Planteamiento del Problema.

En las empresas de servicios es importante generar ventajas competitivas para un correcto desarrollo del negocio, es por eso que surge la necesidad de tomar la certificación del sistema de gestión de la calidad como una de esas ventajas que permite a la empresa lograr los objetivos que se plantean para alcanzar el éxito laboral. Dentro de las empresas de servicios de talleres de proveeduría de apoyo a la industria manufacturera es necesario contar con un porcentaje alto de satisfacción del cliente ya que de eso depende el desarrollo en el mercado con los clientes potenciales y cautivos. La satisfacción del cliente se logra teniendo una buena gestión de la calidad dentro de los procesos y actividades de la empresa. Las empresas que demandan los servicios de talleres de proveeduría en la actualidad han puesto como requisito que las empresas cuenten con una certificación y eso provoca que muchos talleres queden fuera de esa selección para la prestación del servicio y genera que no se desarrollen ni crezcan en su medio ambiente. Es por eso que en la presente investigación se demostrara como la certificación en el sistema de la gestión de la calidad en el servicio es importante para tener ventaja competitiva dentro del mercado contra los competidores e investigar las razones por la cuales las empresas de talleres en Ciudad Juárez no buscan la certificación.

### REVISIÓN LITERARIA

Una primera línea de opinión concibe la gestión de la calidad como un conjunto de métodos útiles de forma aleatoria, puntual y coyuntural para diferentes aspectos del proceso administrativo. Es una herramienta para mejorar la dirección de recursos humanos, así como de otros que la contemplan desde el marketing como un instrumento útil para crear una organización orientada al cliente. (Witcher, 1995). Ahora bien para generar una estrategia competitiva en el mundo actual debemos comprender el concepto de ventaja competitiva. Porter (1987), describió la estrategia competitiva como las acciones ofensivas o defensivas de una empresa para crear una posición defendible dentro de una industria, acciones que eran la respuesta a las cinco fuerzas competitivas determinantes de la naturaleza y el grado de competencia que rodeaba a una empresa y que como resultado, busca obtener un importante rendimiento sobre la inversión.

Entonces la competitividad se define como la capacidad estructural de una empresa de generar beneficios sin solución de continuidad a través de sus procesos productivos, organizativos y de distribución. Donde la capacidad estructural es función directa de sus principios estratégicos, del bagaje cognoscitivo de su factor humano y de su organización y la continuidad en la generación de beneficios y de la empresa misma, es directamente proporcional a su dinamismo estructural. (Fea U, 1995).

### Certificaciones Para Pequeñas y Medianas Empresas (Pyme).

En esta sección se muestran las opiniones de diferentes autores sobre la importancia de una certificación para las pequeñas y medianas empresas en México. Y para finalizar la sección se encuentra una comparación entre las diferentes certificaciones disponibles para las PyME. Ante el creciente mercado internacional se requiere que las PyME en México alcancen la certificación ISO 9001, asegura Juan Carlos Gómez, quien es gerente de mercadotecnia de SAI Global en México. Las pequeñas y medianas empresas deben certificarse en el ISO 9001 para alcanzar nuevos niveles de desarrollo y resultados cuantitativos y cualitativos con la incorporación de las mejores practicas en el mundo globalizado. Se tiene la falsa creencia de que el valor de la certificación es muy elevado, sin embargo, en una PyME de uno a diez empleados el costo de la gestión de calidad alcanza los mil dólares con una duración de tres años. Ahora bien se muestra en la Tabla 1 las diferentes certificaciones que son aplicables para las PyME en México y que tienen validez a nivel internacional.

Tabla 1: Certificaciones Para Pyme

Certificación	Organismo Acreditador	Objetivo
ISO 10003:2007	ISO	Es una guía para una organización que ayuda a planificar, diseñar, desarrollar, operar, mantener y mejorar un efectivo y eficiente proceso de solución de diferencias de denuncias que no se han resuelto a la organización.
ISO 9004:2009	ISO	Proporciona orientación a las organizaciones de apoyo para el logro del éxito sostenido por un enfoque de gestión de la calidad. Esto es aplicable a cualquier organización, independientemente de su tamaño, tipo y actividad.
ISO 9001:2008	ISO	Especifica los requisitos para un sistema de gestión de calidad en caso de que una organización debe demostrar su capacidad para ofrecer productos que se ajustan a las necesidades y requisitos legales, y tiene por objeto mejorar la satisfacción del cliente a través de la aplicación efectiva del sistema, incluyendo los procesos para la mejora continua del sistema y el aseguramiento de la conformidad para el cliente y requisitos legales.

*Fuente: Elaboración propia en base a lo expuesto en la pagina web de la Organización Internacional de Estandarización (ISO) que muestra las diferentes certificaciones del sistema de gestión de calidad con las cuales las PyME pueden generar una estrategia competitiva para tener un desarrollo optimo en el mercado.*

### Despliegue de la Función de la Calidad

El despliegue de la función de calidad conocido por sus siglas en ingles QFD (Quality Function Deployment) se desarrollo en Japón hacia el final de la década de 1960. Desde sus inicios fue considerada parte de las herramientas de la gestión de calidad total, y fue diseñada específicamente para la creación de nuevas aplicaciones y productos. Esta técnica se ha utilizado en el planeamiento estratégico tanto en operaciones de manufactura como de servicios y en la mejora de servicios en el sector publico.

### Modelo Kano

El modelo Kano es útil para la interpretación de la “voz del cliente” en los procesos posteriores de desarrollo de productos o implementación de servicios. Kano (1984) define cualitativamente la relación entre los atributos del producto o servicio con la satisfacción del cliente y ofrece cinco tipos de atributos de los productos y/o servicios: 1.- Debe ser, 2.- Unidimensional, 3.- Atractivo, 4.- Indiferente, 5.- Opuesto. Un atributo es considerado como “debe ser” cuando su ausencia produce una insatisfacción absoluta en el cliente pero que su presencia no incrementa la satisfacción. Un atributo Unidimensional se

considera cuando su cumplimiento ayuda a aumentar la satisfacción y viceversa. Ahora bien un atributo es considerado “atractivo” si conduce a una mayor satisfacción siendo que no estaba esperado dentro del producto o servicio. En cambio un atributo “indiferente” se cataloga como el atributo que con su presencia en el producto o servicio no contribuye en gran parte a la satisfacción del cliente. Y finalmente un atributo es considerado como “opuesto” si su presencia causa insatisfacción y viceversa.

## METODOLOGÍA

A continuación se muestra el proceso que se sigue para llevar a cabo la investigación sobre las empresas de proveeduría. Como primer apartado se muestra el diagrama de flujo con los pasos de la investigación, además se plantea el universo en el cual se trabaja para la obtención de los resultados del presente trabajo. También se detalla el cálculo de la muestra junto con el instrumento de medición. Además se muestra el proceso de validación del instrumento para que sea posible su posterior aplicación en las empresas y que los resultados sean significativos en el universo en el cual se trabaja la investigación.

### Diagrama de Flujo De Metodología

La Figura 4 muestra el proceso de la metodología que se basa en 6 etapas fundamentales para llevar a cabo la investigación en PyME.

Figura 4: Diagrama de Flujo Metodología

*Fuente: Elaboración Propia. La figura muestra el proceso metodológico que sigue la investigación que consiste en la creación de un cuestionario usando el modelo Kano para su aplicación en empresas de la industria maquiladora de la ciudad.*

### Universo

La investigación se centra en las pequeñas y medianas empresas que son proveedoras de la industria maquiladora en Ciudad Juárez, es por eso que nuestro universo para la investigación se basa en el número total de PyME en la región según lo indica el Sistema de Información Empresarial Mexicano de la Secretaría de Economía que da como resultado la cantidad de 140 empresas (Directorio Estadístico Nacional de Unidades Económicas, 2013) que tienen una actividad económica referente a la proveeduría de la industria manufacturera en la ciudad.

### Calculo de la Muestra

El cálculo de la muestra se lleva a cabo mediante la validación del instrumento de medición con el cual se obtuvieron los resultados de las encuestas aplicadas cuyos resultados se muestran en la Tabla 2 que se muestra a continuación.

Tabla 2: Muestreo

Cuestionario	Preguntas											
	1	2	3	4	5	6	7	8	9	10	11	12

Fuente: Elaboración propia en base a los resultados de la aplicación del instrumento de medición donde se traduce los resultados a la escala 0.1 a 0.5 de cada una de las respuestas proporcionadas por los encuestados de la muestra de empresas que se dedican a la proveeduría de la industria maquiladora de Ciudad Juárez y que cuentan con la categoría PyME de acuerdo al Instituto Nacional de Estadística y Geografía (2013), en el cual se especifica que toda pequeña y mediana empresa deben de contar con no mas de 100 empleados para que queden dentro de esa categoría.

### Instrumento de Medición.

El instrumento de medición con el que se tomaron los datos sobre la percepción que tienen las PyMES sobre la certificación en el sistema de gestión de calidad. La aplicación de la encuesta a las empresas fue de manera aleatoria en base al Directorio Estadístico Nacional de Unidades Económicas. El porcentaje de respuesta de los cuestionarios enviados fue de un 100%, esto nos indica la disposición con la que cuentan las pequeñas y medianas empresas proveedoras para mejorar sus procesos para la generación de mejores productos o servicios.

## RESULTADOS

Los resultados que se obtuvieron para esta investigación muestran que en la rama de la proveeduría se necesita contar con un alto grado de competitividad. Es por eso que para que las pequeñas y medianas empresas, que se encuentran en la región fronteriza de Ciudad Juárez, Chih., sean exitosas deben de contar con estrategias que aumenten la competitividad en comparación con sus contrarios dentro del mismo rubro de la industria. Los resultados y las reflexiones se muestran de la siguiente manera: Las Figuras 5-8 expresan los resultados de las preguntas funcionales correspondientes a las primeras preguntas del instrumento de medición con sus porcentajes correspondientes para cada una de las 5 opciones con las que cuenta la encuesta.

Figura 5: Entregas a Tiempo

*Respuesta a la pregunta ¿Cómo se siente si se le entrega el producto en el tiempo establecido y sin retrasos?*

Las entregas a tiempo son parte fundamental de la satisfacción del cliente, es por eso que la empresa debe de enfocar gran parte de sus recursos a cumplir con esta característica que es crítica para la calidad que la organización muestra a sus clientes. Como se muestra en la Figura 5, los encuestados refieren en un 67% que las entregas a tiempo son parte importante para la elección de un proveedor.

Figura 6: Flexibilidad de los Proveedores

*Respuesta a la pregunta ¿Cómo se siente cuando un proveedor no tiene la flexibilidad de suministrarle productos diferentes y variados cuando usted lo requiere?*

Figura 7: Calidad y Tiempo Esperado

*Respuesta a la pregunta ¿Cómo se siente si el producto que recibe es de la calidad deseada y dura el tiempo esperado?*

Figura 8: Percepción de la Certificación en el Sistema de Calidad.

*Respuesta a la pregunta ¿Cómo se siente si el proveedor cuenta con una certificación en el sistema de gestión de calidad?*

La certificación es un recurso importante para las empresas de proveeduría ya que al cumplir con los parámetros y requisitos que se necesitan para acceder a la certificación se origina un cambio en el proceso del sistema de gestión de calidad, aumentando así, la competitividad de la empresa. Según los resultados de la encuesta el 70% de las empresas perciben la certificación como un atributo obligatorio con el que debe contar la empresa proveedora.

## CONCLUSIONES

Para que las empresas sean exitosas en un ambiente competitivo es recomendable que las PyME's apliquen un modelo empresarial donde se enfoque en la certificación de los sistemas de gestión de calidad, ya que de acuerdo a los resultados que arrojó la investigación es importante para los clientes que el proveedor cuente con certificación ya que ello mejoraría en gran medida los procesos que maneja la empresa e incrementa la productividad y la calidad del servicio y esto da como resultado un mejor rendimiento en los requerimientos claves que exigen los clientes de cualquier empresa proveedora de la industria maquiladora. Para llevar a cabo la estrategia competitiva es necesario que las pequeñas y medianas empresas realicen actividades que las lleven a posicionarse en el mercado como organizaciones que muestran la calidad de sus productos y servicios con el cumplimiento de certificaciones en sus sistemas de gestión de calidad. Esto a su vez los llevara a un mejor desempeño en su ramo industrial.

## Propuestas a Futuro

Las pequeñas y medianas empresas deben de tomar en cuenta las nuevas estrategias empresariales que manejan las grandes empresas como, por ejemplo, los procesos esbeltos que llevan a evitar los costos innecesarios dentro de las empresas generando así una mejora en el desempeño y en las ganancias netas de la organización. Gerber (2008) menciona que para que las pequeñas y medianas empresas funcionen deben de enfocarse en obtener una estrategia organizacional que se organice alrededor de las funciones y no de las personas. Esto quiere decir que como parte de una estrategia organizacional a futuro y para lograr una certificación es necesario detallar con exactitud las funciones dentro de la empresa para así lograr una competitividad y una sustentabilidad empresarial actual.

# ANÁLISIS DEL COMERCIO INFORMAL EN LA REG. 101, BENITO JUÁREZ, QUINTANA ROO, MÉXICO, UN ESTUDIO LONGITUDINAL

Francisco J. May Hernández, Universidad del Caribe, Cancún, México

Oswaldo Aguilera Muñoz, Universidad del Caribe, Cancún, México

Mario Gabriel Martínez Casas, Universidad del Caribe, Cancún, México

## RESUMEN

*Hablar de emprendimiento y de formalidad hoy día, no conlleva por necesidad una relación inalienable. La manera en que las personas, independientemente de su posición económica, se dan a la tarea de generar el ingreso necesario para solventar los gastos mínimos necesarios para su familia, son de las mas variadas formas. En el caso de Quintana Roo, diversos son los factores que conllevan a las personas a incursionar en algún tipo de emprendimiento, desafortunadamente, en muchos de los casos, dentro de la informalidad, inclusive utilizando, como en muchos casos en el país, los recursos de uso cotidiano en las labores y actividades familiares, para generar el ingreso que complementa o inclusive, sostenga a la familia. El presente trabajo muestra la forma en cómo en una zona específica, (Región 101 del Municipio de Benito Juárez, Quintana Roo, México), este fenómeno se ha venido gestando y desarrollando a través del paso del tiempo. Por ser un estudio longitudinal, la observación y recopilación de datos a través de censos son las herramientas que se utilizaron para la elaboración de esta investigación.*

**PALABRAS CLAVE:** Microempresa, EDOCO, Emprendimiento, informalidad. Análisis del comercio informal en la reg. 101, Benito Juárez, Quintana Roo, México, un estudio longitudinal.

## INFORMAL COMMERCE IN BENITO JUÁREZ, QUINTANA ROO

### ABSTRACT

*Entrepreneurship and formality do not connote a necessity an inalienable relationship. The way in which persons, regardless of their economic position, are given the task of generating income needed to afford the necessary minimum expenses for his family, are of the most varied forms. Unfortunately, in many cases within the informal economy, the resources of daily use in work and family activities, to generate the income that complement or even hold the family. The present work shows how in a specific area (101 Region of the municipality of Benito Juárez, Quintana Roo, Mexico), this phenomenon has been brewing and developing through the passage of time. As a longitudinal study, the observation and collection of data through censuses are the tools that were used for the preparation of this research.*

### INTRODUCCIÓN

El desempeño de los micronegocios en México desde cualquier perspectiva, deja mucho que desear en la mayoría de las ocasiones, en especial si se valora o toma en consideración el monto de sus ganancias como unidad de negocio, la cual se limita a proveer un ingreso para lo indispensable de quien se atreve a emprender a través de cualquier forma existente de hacerlo. No se puede argumentar de manera tácita que esto se encuentre en gran medida determinado por las características sociodemográficas del patrón o autoempleado (sexo, edad y escolaridad, entre otras), porque es más que elocuente que la fortuna juega un papel preponderante en algunos emprendedores; sino que se deben de tomar en cuenta de igual manera las variables económicas y de mercado: rama de actividad, región geográfica y cantidad de horas dedicadas al

negocio, para poder argumentar con mayor sustento las razones por las que este fenómeno se presenta. No se debe tampoco, dejar de tomar en consideración el tipo de emprendimiento elegido (Iniciar desde cero, ofrecer servicios, comercializar servicios o productos de terceros, fabricar productos propios, comprar un negocio y relanzarlo o inclusive franquiciar), porque cada uno es diferente del otro.

Para poder desarrollar de mejor manera el presente trabajo, se plantean los siguiente objetivos, a fin de tener una directriz que permita una mejor obtención de información:

Determinar el número de unidades económicas operando en la reg. 101 independientemente de su estatus formal o informal.

Identificar las Unidades Estratégicas de Negocios (UEN) que operan en la informalidad.

Realizar análisis comparativos de las UEN informales en el devenir del tiempo

Determinar la apertura o cierre de las UEN informales del 2010 al 2012.

## REVISION LITERARIA

El fenómeno del emprendimiento, de acuerdo con estudios realizados, es algo muy frecuente en la cultura latinoamericana. Sin embargo, aún y cuando se ha escrito de forma frecuente en diversos foros referente a las razones que se perciben que conllevan a la decisión de emprender por cuenta propia, dentro de las cuales la necesidad de un mejor ingreso económico es de las principales, e incluso se ha correlacionado el índice de bienestar familiar con la satisfacción que conlleva el hecho de ser generador de los ingresos propios en el seno de un negocio familiar (olivares, 2010), lo cierto es que no se ha logrado consolidar una propuesta que permita, en la medida de lo aceptable, incrementar significativamente el nivel de supervivencia de los micronegocios que los emprendedores llevan a cabo, independientemente del grado de formalidad o informalidad en el que se desempeñen.

En el caso que nos concierne, que es el relativo a la región 101 del Municipio de Benito Juárez en el estado de Quintana Roo, México, (Cancún), es de llamar la atención la manera en cómo los emprendedores llevan al terreno de la realidad sus proyectos, muchos de los cuales, no son ni planeados, ni desarrollados de acuerdo a los más mínimos lineamientos que la academia o el curso más simple de emprendimiento impartido por la Secretaría de Economía recomiendan. Inclusive, se puede considerar que el dinero o la falta de capital suficiente tampoco representa en sí mismo un problema que coarte la posibilidad de emprender, ya que de acuerdo con Olivares y Aguilera (2008), el monto requerido para iniciar el emprendimiento en el caso del Municipio Benito Juárez, Cancún, es en el 57% de los casos con montos de hasta 50 mil pesos o menos, cantidad que puede ser obtenida por diversos medios como una liquidación, aguinaldo, préstamos a familiares o amigos, préstamos bancarios, venta de algún bien, o en el extremo de los casos, el empeño.

Sin embargo, la situación no es el monto utilizado para llevar a cabo el emprendimiento per sé, sino el tipo de emprendimiento que se lleva a cabo, ya que, de acuerdo con datos del Instituto Nacional de Estadística y Geografía (INEGI), Quintana Roo, como estado, se encuentra entre las 10 entidades del país con mayor índice de trabajo informal. La realidad de esto puede palpase en la decisión, o más bien, la intención de la Secretaría del Trabajo y Previsión social (STPS), de incorporar al sector formal a más del 26.5% de su población, la cual de acuerdo con datos del INEGI, al 2010, ascendía a 1,325,578 habitantes en todo el estado. Si consideramos la necesidad de excluir al 29% de la población correspondiente a menores de edad entre los 0 y 14 años, la decisión de la STPS impactaría al 37.2% de la población económicamente activa (PEA), lo cual equivale a 352 mil personas que laboran en la informalidad, que incluyen vendedores ambulantes, tianguistas, taxistas y comisionistas que trabajan en el sector hotelero, así como menores de edad provenientes de los estados de Chiapas y Tabasco principalmente, que laboran como albañiles y luego son abandonados a su suerte, situación ante la cual muchos terminan por desempeñarse como lustradores de calzado o vendedores de golosinas y botanas en los semáforos, bares y

otras áreas públicas de libre acceso o no, lo cual no ha podido contrarrestarse en el pasado debido a la proliferación de las outsourcing (pagadoras).

De acuerdo con la Comisión Económica Para América Latina y el Caribe (CEPAL), las empresas del sector informal son definidas según el siguiente criterio: “son empresas hogareñas no corporativas (excluyendo las cuasi-corporaciones), tal y como son definidas por el Sistema Nacional de Cuentas de 1993: que produce algún tipo de bien o servicio para la venta o el canje, que se ocupa de actividades no agropecuarias (incluyendo las actividades no agropecuarias secundarias de los emprendimientos en el sector agricultor); y cuyo tamaño (en número de empleados), está por debajo de un umbral específico, determinado por las circunstancias nacionales, o que no se encuentra registrada según las normas específicas establecidas por la legislación nacional (como las actuaciones comerciales, las leyes impositivas o de seguridad social, grupos profesionales, actuaciones regulatorias, o similares, leyes o regulaciones establecidas por la legislación nacional), o ninguno de sus empleados está registrado. Los hogares que producen servicios domésticos o personales que emplean a trabajadores domésticos pagos están incluidos.” La definición de la CEPAL, evidencia el espectro que comprende lo que se conoce como negocio informal; sin embargo, lo que ellos llaman empresas hogareñas no corporativas, no especifica si contemplan el emprendimiento que en el seno de los hogares se da como soporte o apoyo al ingreso familiar proveniente de algún empleo formal o no, lo que en la investigación realizada por el CAIVECI en la región 101 del Municipio Benito Juárez en Quintana Roo, se le ha denominado como Economía Doméstica Complementaria (EDOCO), los cuales definimos como “Emprendimientos informales en pequeña escala que se dan en el seno de un hogar, sin incurrir en una inversión extraordinaria y cuya operación y “administración” es realizada por miembros de la familia, pudiendo ser servicios o productos, utilizando los recursos materiales propios de las actividades cotidianas como las ollas con que preparan sus propios alimentos, los cubiertos, la mesa de la cocina, las sillas, etc. Con la finalidad de propiciar un ingreso adicional para las necesidades propias de la familia. Muchas veces se ubican por letreros en la fachada con leyendas como se vende hielo, se hacen cortes de cabello, se dan clases de guitarra, etc.” Tal denominación puede equiparse a la realizada por Birch (1979), en donde llama a este tipo de pequeña empresa como de “sustitución de ingresos”, donde refiere que el emprendedor, en lugar de trabajar para las grandes compañías, labora para él mismo generando ingresos con el fin de sostener a la familia.

Sin embargo, el fenómeno de la informalidad no es situación menor y requiere realmente de prestarle atención, ya que de acuerdo con Flores (2013), ser taxista, abrir un changarro, ocuparse en el ambulante vendiendo discos pirata u ofrecer servicios diversos a destajo, ha pasado de ser una opción de empleo temporal para los jóvenes mexicanos a una preocupante realidad, ya que de acuerdo con datos obtenidos por esta fuente, en la página del INEGI (2013), el 71.1% de ellos trabaja en la informalidad.

Si se toma en consideración que en todo el país trabajan, de acuerdo con la misma página, 9 millones 330,000 jóvenes de entre 14 y 24 años de edad y de esta población 7 de cada 10 se desenvuelve en el sector informal, quiere decir que 6 millones 638,000 trabajan por salarios precarios, sin protección social ni prestaciones ni derechos laborales, y en sectores de baja productividad.

Lo anterior ya es en sí preocupante. Wissing (2012), advierte que si los jóvenes permanecen en la informalidad corren el riesgo de convertirse en una generación perdida que, por no tener acceso a empleos formales, contribuyen a frenar el desarrollo propio y el del país. Y concluye diciendo que: "Los jóvenes llegan al mercado de trabajo con muchas expectativas y con ganas de trabajar, pero actualmente no están encontrando las posibilidades de articular sus competencias de lo aprendido en las aulas con lo que el mercado laboral ofrece".

De acuerdo con la Encuesta Nacional de Ocupación y Empleo “ENOE” (2012), con base a cifras comprendidas al cuarto trimestre, el porcentaje de jóvenes que trabaja en la informalidad supera el índice de informalidad registrado para la población ocupada en general en ese sector, que es de 59.8%. Cabe

señalar que los poco más de seis millones de jóvenes mexicanos que trabajan en la informalidad representan, a su vez, 23% del total de informales del país, que asciende a 28 millones 867,00 personas. Para poder entender de mejor manera las cifras que se manejan, basta observar la siguiente tabla:

Ante todo el panorama que se percibe, merece la pena cuestionarse ¿Cuál sería la razón por la cual los emprendimientos rayan en el terreno de la informalidad? Si de acuerdo con Puchol (2005), un negocio se llevara de manera adecuada desde su concepción hasta su puesta en marcha, deberían, en primera instancia considerarse cinco requisitos básicos, los cuales son: Que la idea sea realista

Contar con un capital inicial

Contar con ciertas cualidades específicas.

Disposición a trabajar sin descanso al menos durante la etapa inicial.

Contar con conocimientos, al menos básicos en áreas como mercadotecnia, finanzas, recursos humanos, etc.

#### Razones observadas de informalidad en la Reg. 101.

Lo cierto es que, ninguna o pocas microempresas, pueden jactarse de seguir lo anterior, y ni qué decir respecto a la planeación antes, durante y después de la puesta en marcha del negocio como tal; En todo caso, de acuerdo al estudio longitudinal que se ha venido haciendo en la Reg. 101 del Municipio de Benito Juárez, en Quintana Roo, México, desde el año 2010, a la fecha, el punto 4, pareciera ser el único que mantiene a flote a la mayoría de los negocios, ya que, de acuerdo con la misma investigación, y sobre la cual se manejan censos semestrales por parte del Cuerpo Académico en Innovación, Visión Empresarial y Competitividad Internacional (CAIVECI), la disposición a trabajar sin descanso durante la etapa inicial permanece a lo largo del tiempo, conllevando con esto, a que el emprendimiento represente el empleo del emprendedor, situación por la cual se convierte en una especie de autoempleo y llega a representar, sino el ingreso principal y único del emprendedor, si una fracción importante del mismo.

Dentro de la investigación que se ha venido realizando durante los tres últimos años (2010-2012), es de llamar la atención la renuencia de las personas a dar información respecto a su situación fiscal; es decir, para poder determinar la formalidad o no de un emprendimiento, se pretendía utilizar estos datos a fin de dar seguimiento a cada una de las unidades económicas de negocio (UEN); sin embargo, no fue posible. Por otra parte, la excesiva burocracia en la entidad para abrir un negocio, frena mucha inversión formal, y se infiere que es otro factor que propicia la informalidad. En un estudio que realizó Doing Business del Banco Mundial ubicó a Cancún en el lugar 27 de un ranking de 32 ciudades de México que encabeza Colima, para la apertura de un negocio.

La publicación califica cuatro puntos que son: Apertura de un Negocio, Manejo de Permisos de Construcción, Registro de Propiedades y Cumplimiento de Contratos.

Si a lo anterior sumamos que para abrir un negocio en Cancún se deben esperar 48 días, ya que se tienen que efectuar diferentes procedimientos: el permiso de razón social, notarización de la escritura constitutiva, escrituración en el Registro Público y del Comercio del Estado, inscripción al Instituto Mexicano del Seguro Social, registro de la compañía al Impuesto de Nómina e inscripción al Sistema de Información Empresarial, además de pagar la cantidad de 11 mil 685 pesos. Obvia una razón por la que la informalidad llega a ser la opción. En el caso del régimen de pequeño contribuyente (REPECO), los gastos son mucho menores, pero no menos engorroso el trámite de apertura.

#### ¿Qué es el emprendimiento?

Se considera pertinente en este punto, entender qué ese entiende por emprender, o bien, por emprendimiento.

De acuerdo con la página [degerencie.com](http://degerencie.com), (2013), el emprendimiento “es un término últimamente muy utilizado en todo el mundo. Aunque el emprendimiento siempre ha estado presente a lo largo de la historia de la humanidad, pues es inherente a ésta, en las últimas décadas, éste concepto se ha vuelto de suma importancia, ante la necesidad de superar los constantes y crecientes problemas económicos.”

Si buscamos la raíz etimológica del término, éste proviene del francés *entrepreneur* que significa pionero, hace referencia a la capacidad de una persona para hacer un esfuerzo adicional por alcanzar una meta u objetivo, aunque el término también es utilizado para referirse a la persona que inicia una nueva empresa o proyecto.

En conclusión, de acuerdo con la misma página referida, emprendimiento “es aquella actitud y aptitud de la persona que le permite emprender nuevos retos, nuevos proyectos; es lo que le permite avanzar un paso mas, ir mas allá de donde ya ha llegado. Es lo que hace que una persona esté insatisfecha con lo que es y lo que ha logrado, y como consecuencia de ello, quiera alcanzar mayores logros”.

La importancia del emprendimiento hoy en día, se sustenta en la necesidad de muchas personas de lograr su independencia y estabilidad económica. Quizás, producto de los altos niveles de [desempleo](#), o bien por la baja calidad de los empleos existentes que pagan “lo necesario” en la medida que sustente las necesidades primarias de los empleados, lo que ha conllevado a crear en las personas, la necesidad de generar sus propios recursos, de iniciar sus propios negocios, y pasar de ser empleados a ser empleadores, aunque en la mayoría de las ocasiones, como se mencionó con anterioridad se vuelvan empleadores de ellos mismos al caer en el autoempleo.

Aunque la palabra emprender se dice fácil, lo cierto es que todo esto, sólo es posible, si se tiene un espíritu emprendedor, y éste no se desarrolla de la noche a la mañana, ni se nace con genes emprendedores, adicional a que se requiere de una gran determinación para renunciar a la “estabilidad” económica que ofrece un empleo (en caso de tenerlo) y aventurarse como empresario; más aun si se tiene en cuenta que el empresario no siempre gana como si lo hace el asalariado, el cual, mensualmente tiene asegurado un ingreso mínimo que le permite sobrevivir, y en algunos casos, la garantía de la asistencia y beneficio social, producto del pago de las obligaciones patronales. En cambio el empresario solo podrá ver ingreso alguno si los pagos a proveedores están al día, los salarios de los empleados se han cubierto, los pagos de los impuestos están en orden, sin contar los gastos propios de la operación del negocio, por lo que el riesgo es grande.

#### ¿Empleado o Empresario?

Vale la pena considerar, que dejar de ser empleado, para ser pequeño empresario implica un gran análisis y alejarse de cierta seguridad laboral en contraste con una gran necesidad de libertad (Anzola, 2010). Si realizáramos una tabla que represente las ventajas o desventajas de ser empleado, de acuerdo con Anzola (idem), en un estudio realizado al respecto, dio como resultado lo siguiente:

#### Ventajas y desventajas de ser empleado

Características de ser empleado	Ventaja	Desventaja
Seguridad económica	66%	33%
Seguridad del Trabajo	50%	50%
Menor responsabilidad	53%	47%
Horario fijo	50%	50%
Vacaciones regulares	66%	34%
Menos preocupación	74%	26%
Menor riesgo	74%	26%
Mayor experiencia	80%	20%
Rutina	10%	90%
Dependencia	25%	75%

*Fuente: Anzola 2010 Administración de pequeñas empresas*

En muchos países (Casi todos los países Latinoamericanos), para muchos profesionales, la única opción de obtener un ingreso decente, es mediante el desarrollo de un proyecto propio, ya que los salarios que las empresas establecidas ofrecen no permiten, en algunas ocasiones, cubrir lo indispensable para una vida digna de acuerdo a las expectativas generadas en la sociedad consumista y materialista en la que nos desenvolvemos hoy día. Los niveles de desempleo, en gran parte de nuestras economías, rondan el 20%, por lo que resulta de suma urgencia buscar alternativas de generación de empleo, que permitan mejorar la calidad de vida de la población, con salarios más dignos y oportunidades reales de una mejor calidad de vida para los trabajadores.

Los gobiernos han entendido muy bien la importancia del emprendimiento, tanto así, que han iniciado programas de apoyo a emprendedores, para ayudarles en su propósito de crear su propia unidad productiva. En México, es común ver propuestas y programas de apoyo a las Mipyme, a grado tal que se publicó en el sexenio del presidente Felipe Calderón (2006-2012), el Plan Nacional de Desarrollo 2007 - 2012, en el que se contemplaba en la estrategia 6.4, lo siguiente: “Revisar y ajustar los programas actuales de apoyo para que permitan lograr un escalamiento de la producción hacia manufacturas y servicios de alto valor agregado. Para ello es clave complementar el apoyo directo con recursos financieros mediante un servicio conducente a mayor capacitación y habilidad administrativa, y programas de asesoría y consultoría que faciliten la expansión de las empresas, la adopción de nuevas prácticas de producción y de las tecnologías más avanzadas”.

Casi todos los países, tienen entidades dedicadas exclusivamente a promover la creación de empresas entre profesionales, y entre quienes tengan conocimiento específico suficiente para poder ofertar un producto o un servicio.

Lo cierto, es que aún y con los programas desarrollados por los gobiernos para la generación de empleos, la solución no es nada fácil, ya que la oferta de mano de obra, por lo general crece a un ritmo más acelerado de lo que crece la economía, por lo que resulta imposible poder ofrecer empleo a toda la población. Teniendo en cuenta que de acuerdo a los datos vertidos por el INEGI, nuestros estados, no tienen la capacidad de subsidiar el desempleo como sí lo pueden hacer algunos países europeos, la única alternativa para garantizar a la población el acceso a los recursos necesarios para su sustento, es tratar de convertir al asalariado en empresario, independientemente del sector en el que decidan incursionar en su emprendimiento..

Ante estas circunstancias económicas, puede verse al emprendimiento como el salvador de muchas familias, en la medida en que les permite emprender proyectos productivos, con los que puedan generar sus propios recursos, y les permita mejorar su calidad de Vida, pudiendo inclusive, como se ha mencionado, ser la principal y única fuente de ingresos para solventar la economía familiar.

### La realidad del emprendedor en la Reg. 101

Anteriormente se hizo mención del estudio longitudinal que se realiza en la región 101 del Municipio Benito Juárez en el estado de Quintana Roo, México, lugar al que se conoce internacionalmente como Cancún, principal destino turístico del país.

Ubicando las condiciones de ésta, y para poder entender la manera en cómo está distribuida geográficamente, merece la pena observar la siguiente información:

### Marco de referencia de la Región 101

El Municipio de Benito Juárez, se encuentra ubicado en la parte norte del estado del estado de Quintana Roo, que con una superficie de 1,664 Km<sup>2</sup> ocupa el 3.27% del territorio del estado. La población de este municipio, alcanzó en el año 2005 una población de 572,973 habitantes.

El Plan Integral de Actuación Municipal para Prevenir la Inseguridad PIAMPI (2009) estimó la población de Cancún en unos 700,000 habitantes. Esta población habita en 205 áreas urbanas, en que está dividida la ciudad. Estas áreas se denominan supermanzanas o regiones y su nomenclatura es numérica, aunque irregular.

Descontando las dos áreas hoteleras, que son, predominantemente, de uso turístico, el resto o 203 regiones, presentan diferencias urbanas y socio-económicas muy marcadas. Mientras las áreas urbanas más próximas o cercanas a la principal zona hotelera de Cancún, están debidamente pavimentadas y ordenadas en su uso del suelo; y la población que las habita, corresponde a niveles de ingresos medios, medios altos y altos; las otras regiones, es decir las más alejadas a la zona turística; están habitadas, principalmente, por población de ingresos medios, bajos y muy bajos.

Incluso la población de Cancún, de manera informal, ha realizado sus propia denominación ya que tiende a llamar a las zonas, donde habita población de ingresos medios y altos, como supermanzanas y cuya numeración va de la supermanaza 1 hasta la noventa. Y a las zonas, donde habita la población de ingresos medios bajo y muy bajo, se les tiende a denominar como regiones y éstas van de la 91 en adelante. El Observatorio Urbano Local de la ciudad de Cancún, realizó el Plan Integral de Actuación Municipal para Prevenir la Inseguridad –PIAM- (2009). En este plan, de acuerdo con Izquierdo y Cupul (2009), tomando como datos la distribución territorial, proporciona lo siguiente: “La Región 101 se encuentra ubicada en la zona noroeste de la ciudad de Cancún, perteneciendo al segundo cuadro de crecimiento histórico de esta ciudad (periodo de 1987-1994), que se conforma por las supermanzanas SM’s 90’s y 100’s.

El siguiente mapa muestra gráficamente la distribución de las Regiones en la ciudad de Cancún Quintana Roo, marcando con un círculo la Región 101, siendo esta región una de las 10 Regiones más violentas y necesitadas de programas de acción para contribuir al desarrollo de esa población. La región 101, objeto de nuestra investigación, presenta un bajo nivel de urbanización, tanto en lo concerniente a la falta de pavimentación en calles y banquetas, como en lo concerniente al tipo de casa – habitación predominante. Se trata de construcción no planeada o de autoconstrucción. Son casas-habitación que sus habitantes han construido, poco a poco, a lo largo de varios años. Esta región pertenece al segundo cuadro de crecimiento histórico de esta ciudad (periodo de 1987-1994), que se conforma con las supermanzanas o regiones 90 y hasta la 149.

El Plan Director de Desarrollo Urbano de Cancún (PDDU, 2005), establece que la superficie territorial de la región 101 es de 47.77 hectáreas y su uso del suelo está destinado, predominantemente, para habitación unifamiliar y comercio de barrio, (entendiendo por éste como el que da servicio a las necesidades básicas

de la zona o “barrio” en donde se ubica. En cada barrio es habitual encontrar un conjunto de pequeños negocios, concentrados en un punto concreto y que realizan esta función); Cuenta con un total de 95 manzanas, de las cuales 15 están dedicadas a usos comunitarios como: parques, escuelas, mercado público, el dispensario de la Cruz Roja y otras áreas no habitadas.

En cuanto al nivel de ingresos, de la población que habita la Región 101, el mismo PDUC los clasificación como nivel D+, es decir con un ingreso mensual de entre \$ 6,800 y 11,599 pesos, de acuerdo a los niveles AMAI.

Nivel	Ingreso Mínimo	Ingreso Máximo
<u>A/B</u>	85,000.00+	
<u>C+</u>	35,000.00	84,999.00
<u>C</u>	11,600.00	34,999.00
<u>D+</u>	6,800.00	11,599.00
<u>D</u>	2,700.00	6,799.00
<u>E</u>	0.00	2,699.00

No es de sorprender, con la media de ingreso estimado por persona trabajando, que se desarrolle el ímpetu emprendedor que caracteriza a los habitantes de esta región, ya que por mantener o al menos tener un nivel de vida más adecuado, recurren a la generación de ingresos adicionales. El perfil de los habitantes de la reg. 101, se toma de forma aleatoria como referencia de lo que podría ser el perfil promedio del ciudadano mexicano de clase media, media baja y baja, ya que como se puede observar con los datos vertidos, cumple con el estereotipo del mismo.

## CONCLUSIONES RECOMENDACIONES

Debido a la falta de información respecto a los datos que permitan aseverar con bases la formalidad o informalidad de los negocios (RFC, trámites ante las autoridades, etc), se toma como dato de referencia lo que los censos semestrales han arrojado en cuanto a negocios que carecen de nombre en la fachada del lugar de operaciones, ya que en muchas de las ocasiones son EDOCO, o emprendimientos con base a alguna habilidad o conocimiento técnico específico como plomería, pintura, albañilería, costura, corte de cabello, etc.

Con base en los resultados obtenidos en los años 2010, 2011 y 2012, en los censos semestrales que se realizan en la región, se obtuvo la siguiente información:

De acuerdo con los datos recabados, en el 2010, la región 101 contabilizó 355 negocios, dentro de los cuales 83 no tenían nombre, ni un letrero o marquesina para ubicarlos, es decir, el 23.3% se podrían considerar como informales. Para el 2011 hubo un incremento del 46.47% en aperturas de negocios, ya que de 355 la cifra ascendió a 520, es decir 165 unidades más que el año inmediato anterior. Lo curioso del caso es que en cuanto a negocios “sin nombre” se ubicaron 214 unidades es decir, el 41.15 % del total de los negocios se encontraban trabajando de manera informal o EDOCO en todo caso; lo que representó un incremento de 131 unidades o el 157%. Ya para el 2012, los censos arrojaron que el número de unidades totales en la región, ascendían a 570, un incremento de 56 nuevos emprendimientos o el 9.6%, ubicando ahora 276 negocios “sin nombre”, lo que representó un incremento en 62 respecto al año anterior o el 28.9%, lo que quiere decir que no solo se abrieron nuevos negocios, sino que además se sumaron algunos ya existentes a la informalidad.

Con los datos anteriores, se puede percibir cómo el fenómeno del emprendimiento de manera informal, es una alternativa viable para las personas, independientemente su clase social o preparación. El incremento que se manifiesta con el paso del tiempo debería ser factor para que las autoridades volteen la mirada para ver cómo se puede ayudar a las personas a realizar mejores emprendimientos y en especial, cómo a través

de éstos, se mejora la situación del entorno en donde se desarrollan por medio del pago oportuno y justo de los impuestos correspondientes.

Como recomendación principal a la problemática de la informalidad, y es algo en lo que el CAIVECI está poniendo especial énfasis, es la capacitación constante de los microempresarios, ayudándoles a aprender mejores prácticas empresariales, que van desde la parte administrativa, hasta la calidad del servicio que prestan, pasando por las áreas de mercadotecnia, contabilidad, etc.

Las universidades de igual forma deberían trabajar de manera conjunta con las autoridades, la generación de alternativas que permitan hacer que los emprendimientos, más allá de ser una solución individual para quien lo realiza, se convierta en una herramienta que coadyuve a la consecución de la generación de empleos formales.

# **LAS MUJERES EN EMPRESAS, PROFESIONES Y OCUPACIONES NO TRADICIONALES: LA EXPERIENCIA DE PUERTO RICO**

Eva J. López Sullivan, Universidad de Puerto Rico -Ponce

## **RESUMEN**

*Esta investigación gira en torno a mujeres puertorriqueñas que poseen empresas atípicas y otras que trabajan en profesiones y ocupaciones no tradicionales. Se dividió en dos fases. La primera fase tuvo como propósito estudiar las características y condiciones que posibilitan o dificultan a la mujer del agro y su accionar en el campo empresarial, priorizando la metodología cualitativa. Esto permitió dar cuenta de las dificultades que confrontan y sus vivencias. Se estudiaron los casos de empresarias de tilapias, vaquerías hidropónicas, café, porquerizas, guineos, plátanos y conejos, entre otros. Se entrevistaron diecisiete mujeres en sus fincas con el objetivo de conocer sus vivencias: motivaciones, problemas, logros y su cotidianidad, entre otros aspectos. En la segunda fase, se estudiaron las mujeres que se emplean en trabajos que rompen los paradigmas de la segregación horizontal: embalsamadoras, arquitectas, veterinarias, mecánicas, hojalateras, bomberas, plomeras y electricistas, entre otras. Esta se realizó desde un acercamiento metodológico mixto. De esta manera, se considera conocer las realidades de mujeres en empleos caracterizados como “varoniles” o de hombres. Se administró un cuestionario a ciento ocho mujeres y se entrevistaron quince féminas.*

## **WOMEN IN BUSINESS, PROFESSIONS AND OCCUPATIONS NOT TRADITIONAL EXPERIENCE OF PUERTO RICO**

### **ABSTRACT**

*This research focuses on Puerto Rican women who have atypical entrepreneurship and others working in nontraditional jobs. It was divided into two phases. The first phase was aimed to study the characteristics and conditions that enable or empower women in agriculture and their actions in the field of business, prioritizing qualitative methodology. This allowed to account for the difficulties faced and their experiences. We studied the cases of entrepreneurs of tilapia, hydroponic dairy, coffee, piggeries, bananas, plantains and rabbits, among others. Seventeen women were interviewed on their farms in order to know their experiences: motivations, problems, achievements and everyday life, among other things. In the second phase, we studied women who are employed in breaking the paradigms of horizontal segregation: “embalsamadoras”, architects, veterinary, mechanical, “hojalateras”, firefighters, and electricians, among others. This was from a mixed methodological approach. Thus, it is considered to know the realities of women in part characterized as “manly” or men. A questionnaire was administered to one hundred and eight women.*

### **INTRODUCCION**

Las mujeres en Puerto Rico constituyen un poco más de la mitad de la población (52%) de la Isla (Junta de Planificación, 2010). De acuerdo al Departamento del Trabajo y Recursos Humanos de la Isla (2010), las mujeres representan el 45% de la fuerza laboral. En los últimos cuarenta años la economía puertorriqueña ha generado 401,000 empleos y de estos el 73% corresponde a empleos de mujeres (Departamento del Trabajo, 2010). La cantidad de mujeres estudiando en instituciones universitarias tanto públicas como privadas ha aumentado considerablemente en los últimos veinte años y en la actualidad constituyen el 61% de la población universitaria de Puerto Rico (López, 2005). Sin embargo, se ha

encontrado que no logran alcanzar posiciones de dirección y mando en las empresas en la misma proporción que los hombres. Además, los datos del Negociado de estadísticas del Trabajo del Departamento del Trabajo y Recursos Humanos de Puerto Rico (2013), indican que los empleos que ocupan son tradicionalmente femeninos, es decir, que las ocupaciones se segregan por género. Por otra parte, los datos que presenta el portal electrónico de estadísticas de la facultad de Ciencias Sociales de la Universidad de Puerto Rico (2009), indican en la Isla hay alrededor de 38,000 empresarias o que trabajan por cuenta propia, lo que representa el 22% del total de personas empleadas por cuenta propia, aunque esta proporción tiende a crecer. Los estudios realizados sobre emprendedoras en la Isla demuestran que estas poseen en su gran mayoría negocios tradicionalmente femeninos como salones de estilismo, spas, cuidado de niños y tiendas al detal (López, 2009). No se encontraron estadísticas sobre mujeres con emprendimientos atípicos. Esta situación de segregación ha sido estudiada por Ascencio (2000) y llamada “generización de la gestión empresarial” y por Daeren (2000) que la reconoce como “segmentación sectorial”.

A pesar de estos datos tan reveladores sobre la escasa participación de la mujer puertorriqueña en emprendimientos, profesiones y ocupaciones atípicas en las mujeres, no se han encontrado investigaciones que estudien esta situación. Se reconoce que los trabajos y empresas responden a la construcción social del género como muchos otros aspectos de la vida de los pueblos. Esta investigación tiene como objetivo ampliar el estudio de las mujeres con emprendimientos, ocupaciones y profesiones no tradicionales en Puerto Rico. Se conocieron los perfiles sociodemográficos de estas mujeres, sus experiencias, motivaciones, obstáculos y retos, entre otros aspectos. Se llevaron a cabo entrevistas así como estudio de casos con el propósito de aportar más conocimientos sobre las vivencias de estas féminas que rompen esquemas y paradigmas.

En los últimos cuarenta años las mujeres puertorriqueñas han aumentado notablemente su presencia en el mundo laboral. Sin embargo, sus recorridos laborales son diferentes a los de sus colegas hombres. La discriminación que sufren afecta sus carreras laborales, además de condicionar sus opciones en la vida profesional (López, 2013). Este discrimen se manifiesta en la doble jornada de trabajo, el techo de cristal, el diferencial de salario, la baja participación femenina en empleos tradicionalmente masculinos, el hostigamiento sexual y el trato desigual por maternidad y embarazo, entre otros (Acevedo, 2006). Las que optan por la empresariedad se encuentran con grandes obstáculos si sus negocios no son “típicamente femeninos”, lo que plantea otro tipo de segregación (López, 2011).

La segregación sexual del trabajo implica un acceso diferencial entre hombres y mujeres a ocupaciones y puestos de trabajo, directivos, categorías ocupacionales y relativas a emprendimientos. Son variadas las formas de segregación que las mujeres encuentran en su vida laboral. Estas se pueden identificar y clasificar en dos grandes tipos: la segregación horizontal (Amarante y Espino, 2002; Alario, Pascual y Baraja, 2009) y la vertical (Veale y Gold, 1998; Cooper, 2001; Barbera y Ramos, 2003; Escarrer, Navarro, Bosch y Ferrer, 2007, Douglas y Taylor, 2012).

El Departamento del Trabajo y Recursos Humanos (2013) indica que las mujeres constituyen el 45% de la fuerza laboral de Puerto Rico. Al analizar las estadísticas de personas empleadas por género y por grupo ocupacional se puede apreciar que la presencia de las mujeres en algunas ocupaciones es mínima o inexistente. Entre estas se pueden identificar los administradores de fincas, construcción, mecánicos, operarios y trabajadoras agrícolas. La agencia gubernamental señala que en algunos casos los datos son muy pocos en la muestra para un estimado confiable, lo cual implica que la presencia de las mujeres puede ser considerada invisible.

Además, los datos del Departamento del Trabajo y Recursos Humanos de Puerto Rico (2013) también indican que las mujeres están principalmente ocupadas como maestras, secretarias y otras ocupaciones de apoyo administrativo. Los datos sobre los emprendimientos liderados por mujeres no se conocen.

Como se señaló anteriormente, se ha indicado que en la Isla hay 38,000 mujeres con negocio propio pero no se indica los tipos de negocios que poseen (Mujeres trabajando, 2006).

De acuerdo a la Federación Americana de Trabajadores (2010), se considera “no tradicional” cualquier ocupación o empleo en el cual las mujeres representan 25% de la fuerza trabajadora. De acuerdo a esta federación, solamente 7% de todas las mujeres que trabajan son empleadas en trabajos no tradicionales. La Federación señala que existe diversidad de razones para que las mujeres deseen trabajar en ocupaciones no tradicionales. En primer lugar, los salarios que reciben son de 20% a 30% más altos que lo que devengan en trabajos más tradicionales. Además, cuentan con mejores beneficios marginales. Los trabajos en los campos técnicos y en los oficios manuales ofrecen en muchas ocasiones, mejores beneficios de salud, licencias por enfermedad y vacaciones que los que son provistos a las mujeres en los trabajos tradicionales. En tercer lugar, se indica que se puede gozar de mayor autonomía en la realización de la labor no tradicional ya que hay menos supervisión. Por último, otro beneficio que la Federación (2010) ha expresado, es la oportunidad de trabajar al aire libre, de tener buen estado físico, y de trabajar con sus manos.

La Federación Americana de Trabajadores (2010) indica que entre los trabajos no tradicionales en que se emplean las mujeres se encuentran: choferes de ambulancia, detectives, oficiales de correcciones, oficiales de policía, guardabosques, biólogos marinos, electricistas, ingenieros, médicos, obras públicas, oficios e inspectores de construcción. Además, la Federación (2010), señala cuáles son las barreras que desalientan a las mujeres para que se empleen y mantengan trabajos no tradicionales. En primer lugar, indica la falta de apoyo de parte de su familia, amigos, y compañeros de trabajo. La sociedad todavía socializa a las mujeres para que acepten roles tradicionales y las presiona para que no consideren trabajos no tradicionales. En segundo lugar, la falta de equidad en la educación, lo cual comienza temprano en la vida. Las niñas jóvenes muchas veces son motivadas a tomar clases “tradicionales” y no dirigidas hacia los cursos “no tradicionales” como las matemáticas y las ciencias. Como resultado de este proceso de socialización los logros de las mujeres en las matemáticas y las ciencias son menores. Las niñas también suelen ser desalentadas a tomar clases donde aprenderían a usar las herramientas de reparación y la maquinaria. Otra barrera lo constituye la discriminación en el lugar de trabajo. De acuerdo a lo planteado por la Federación (2010), se convence con más frecuencia a las mujeres que escogen trabajos no tradicionales a dejar sus empleos. Hay maneras obvias y no tan obvias en las cuales las mujeres son tratadas en forma diferente en el lugar de trabajo. Para explicar este aspecto, la Federación (2010) presenta distintos argumentos. En primer lugar, señala la falta de aceptación de parte de los supervisores o compañeros de trabajo varones. En segundo lugar, indica la falta de adiestramiento adecuado y permiso para las mujeres para que estas puedan aprender todos los aspectos del trabajo. Además, reclaman que a las trabajadoras se les entrega herramientas y equipo que no son del tamaño adecuado para una mujer y más complicados por la falta de familiaridad con éstas. En tercer lugar, señalan la asignación de las tareas más pesadas, sucias, o serviles a las mujeres. Además, de acuerdo a la Federación, las trabajadoras son confinadas al aislamiento en el sitio de trabajo incluyendo acceso limitado a los mentores y modelos femeninos a seguir. Un último aspecto muy importante es el problema del acoso sexual, el cual ocurre más frecuentemente en el ambiente de trabajo no tradicional. Las mujeres en trabajos no tradicionales pueden enfrentar más acoso sexual que las que se emplean en ocupaciones tradicionales. Esto puede ocurrir de varias maneras y hace más difícil para las mujeres ser exitosas en sus trabajos. Las mujeres que entran en ambientes previamente limitados a hombres no son tratadas como “uno del equipo,” sino pueden estar expuestas a un lenguaje más vulgar o a una conducta sexual no apropiada. Los supervisores o compañeros de trabajo hombres pueden resentir el hecho de que las mujeres están en su lugar de trabajo y optar por un comportamiento sexualmente hostigante para humillarlas.

Con respecto a las empresarias del agro, no se encontraron muchas investigaciones sobre el tema. Solo se encontró el estudio de Sampredo y Camarero (2007) y el de Vargas (2004) sobre la mujer en la puertorriqueña en la agricultura. Además, aparecen varios artículos publicados sobre el tema en la prensa

puertorriqueña. Esto indica que el presente estudio de carácter exploratorio constituye un aportación valiosa a la investigación del tema.

Sampedro y Camarero (2007) realizaron una investigación sobre las mujeres empresarias de la España rural. Para realizarlo contaron con la recopilación y posterior análisis de datos estadísticos, tres grupos de discusión constituidos por empresarias rurales y por diez entrevistas en profundidad que recogían las opiniones de mujeres de diferentes edades y situaciones laborales. En tercer lugar, llevaron a cabo cinco entrevistas a expertas, técnicas o políticas que trabajan en el marco de desarrollo rural.

El análisis cualitativo mostró que quienes llegan a pertenecer al grupo de empresarias rurales lo han hecho fundamentalmente mediante herencia familiar. Estas mujeres entrevistadas han ordeñado vacas, llevado las cuentas, ocupado de las colmenas, aprendiendo desde la niñez lo que han visto hacer a sus padres. Al cuestionarle las razones para convertirse a empresarias rurales, las contestaciones plantean que fue algo que se dio como resultado o evolución natural de la relación con la finca o negocio, no les quedó más remedio, para mantener la tradición familiar. Esto plantea la información generada en la literatura en lo relacionado a lo difícil que resulta hacer cambios e innovaciones pero a la misma vez los conocimientos transmitidos por generaciones se convierten en la base formativa principal de las empresarias.

Las razones principales para decidir hacerse empresarias se remiten esencialmente a la tradición familiar. En muchos casos se sintieron obligadas porque no había herederos. Desde muy pequeñas se han involucrado en este ambiente, han aprendido. La base formativa de estas mujeres se compone principalmente de conocimiento experto y familiar y de dosis mucho menores de conocimiento técnico e instrumental. Reconocen que el conocimiento heredado es realmente importante para asegurar el éxito de sus negocios.

Sampedro y Camarero (2007) plantean que los resultados de su investigación sugieren que aparte de las lealtades familiares, tienen gran importancia determinados elementos relacionados con la identidad social de las propias mujeres. La gratificación de tener su propio negocio y el orgullo e hacerlo tiene que ver con una auto imagen positiva como una mujer activa, decidida, dinámica, con una imagen positiva del trabajo fuera de casa y con la carga emocional que se vincula a la actividad profesional.

En el análisis de los datos estadísticos se encontró que las mujeres rurales muestran una educación superior a la de los hombres rurales pero netamente inferior que el colectivo de las asalariadas. Además, mostró que las mujeres rurales son féminas maduras y que acceden al empresariado en función de la posición que ocupan dentro de la familia.

Por otra parte, las mujeres estudiadas señalaron que aparte de las obligaciones y lealtades familiares, tienen gran importancia determinados elementos relacionados con la identidad social de las propias mujeres, fundamentalmente el valor que las féminas otorgan y la representación que se hace de su autonomía individual. Para ellas tiene importancia y produce gratificación tener su propio negocio, la imagen que proyecta de ser decidida, activa, dinámica y la carga emocional que se vincula a la actividad profesional. Consideran que atributos como responsabilidad, la capacidad de entrega, la perseverancia, son inherentes a la condición femenina.

De acuerdo a los investigadores, hay dos tipos de agro empresarias: la que mantiene el negocio con su cónyuge y la que dirige sola. En el primer caso, se considera una empresaria invisible debido a que en muchos casos es la que aporta tanto o más que su esposo pero no se le reconoce. En el segundo caso, el reconocimiento social recae en la cabeza de la familia y la actividad de la mujer se considera como complementaria.

Por otra parte, Sampedro y Camarero (2007), encontraron en su estudio que al comparar las mujeres investigadas con los varones éstas cuentan con niveles educativos superiores a los hombres rurales. Estos datos sobre el perfil, sugieren que las mujeres acceden al empresariado en función de la posición que se ocupa dentro de la familia y condicionadas por las estrategias familiares ligadas a la conservación y mantenimiento del patrimonio familiar. Esto indicaría que este colectivo femenino presenta de manera débil dos características asociadas al modelo ideal en empresarialidad como lo son el riesgo y la autonomía.

## METODOLOGÍA

Esta investigación se llevó a cabo en los años 2010 y 2011 y para realizarla se utilizó un acercamiento metodológico mixto (cualitativo y cuantitativo), para lograr un análisis más completo del tema que se deseaba estudiar (Hernández, Fernández y Baptista, 2012). Mertens (1998); Ander- Egg (2000); Lucca & Berrios (2003), y Morse (2003) en Tashakkor y Teddúe, eds. (2003), reconocieron las bondades que tiene integrar los dos acercamientos: el cualitativo y el cuantitativo en las investigaciones. Morse en Tashakkor y Teddúe, eds. (2003) señaló que se puede lograr ampliar las esferas y dimensiones del estudio, lograr un panorama más completo de la experiencia humana y aunque podrían surgir contradicciones, se logra una perspectiva más completa de lo que se está investigando (Hernández et al. 2012). Se llevó a cabo en dos fases: en primer lugar, el estudio de las emprendedoras atípicas (agro empresarias), y en segundo lugar, el estudio de las mujeres en profesiones y ocupaciones no tradicionales.

La primera fase tuvo como propósito estudiar las características y condiciones que posibilitan o dificultan a la mujer del agro y su accionar en el campo empresarial. Se planteó el agro como una industria predominantemente masculina de acuerdo a las estadísticas del gobierno presentadas en la Revisión de literatura de este escrito. Para realizar esta fase se utilizó un acercamiento metodológico cualitativo priorizando el estudio de casos.

En la segunda fase, se estudiaron las mujeres que se emplean en trabajos que rompen los paradigmas de la segregación horizontal. Se seleccionaron estas ocupaciones y profesiones utilizando dos referencias: las estadísticas que ofrece el Departamento del Trabajo y Recursos Humanos de Puerto Rico (Ver Tabla 1) y la conceptualización de la Federación American de Trabajadores (2010). Para realizar esta fase, se encuestaron ciento ocho mujeres y se entrevistaron quince féminas. Las entrevistas tenían como propósito profundizar en respuestas de las preguntas realizadas a las encuestadas. Este acercamiento metodológico también fue utilizado de acuerdo a la literatura revisada por Padavic (1992); Worrall, Stewart y McDermont (2010). Los datos se analizaron con el programa Statistical Package for Social Sciences.

## RESULTADOS

En la primera fase del estudio se contó con una muestra no probabilística de diecisiete (17) agro empresarias. El concepto mujeres agro empresarias se refiere a féminas con emprendimientos que se dedican a cualquiera de los sectores de la actividad agrícola. Pueden dedicarse a la siembra y cosecha de cítricos, de plátanos, de *café*, *guineos*, o la crianza y venta de cerdos, conejos, gallinas o al cultivo de plantas ornamentales, entre otros. Estas mujeres son dueñas de fincas y granjas. La Tabla 3 recoge los tipos de fincas y granjas de la muestra de mujeres agro empresarias. Se contactaron las agro empresarias con la colaboración del Departamento de Agricultura de Puerto Rico.

En la segunda fase, se estudiaron las mujeres que se emplean en trabajos que rompen los paradigmas de la segregación horizontal. Las ocupaciones y profesiones de las mujeres estudiadas aparecen en la Tabla 4. Se seleccionaron estas ocupaciones y profesiones utilizando dos criterios: las estadísticas que provee el Departamento del Trabajo de Puerto Rico y aparecen en la Tabla 1 de este escrito y los criterios que identifica debido a que no aparecen datos sobre la presencia de mujeres en estas o las estadísticas que se

ofrecen indican que hay muy pocas féminas. Para realizar esta fase, se encuestaron ciento ocho mujeres en profesiones y ocupaciones no tradicionales y se entrevistaron quince féminas. El concepto mujeres en profesiones no tradicionales se refiere a trabajos usualmente de cuello blanco, con educación formal, universitaria, que se caracterizan porque el 25% o menos del total de miembros de esa profesión son mujeres. Las mujeres que trabajan en ocupaciones no tradicionales son aquellas que están empleadas en trabajos de cuello azul con poca o ninguna educación formal, universitaria, que se caracterizan porque el 25% o menos del total de esos empleos están ocupados por mujeres.

Tabla 3: Tipos de fincas y granjas de las agro empresarias estudiadas

Finca	Granjas
Siembra de café y recogido	Gallinas
De café (beneficiado)	Conejos
De café (torrefacción)	Tilapias
Plátanos	Cerdos (crianza con mogolla)
Guineos	Cerdos (crianza con purina)
Hidropónicos	
Orquídeas y crotos	
Bromelias y plantas exóticas	
Cítricos	

Tabla 4: Profesiones y ocupaciones de las mujeres estudiadas

Agentes de seguridad	Bomberos	Ingenierasciviles
Agente de explosivos	Electricistas	Ingenierasmecánicas
Policías	Empleada de construcción	Ingenieraselectricistas
Embalsamadoras	Carpinteras	Arquitectas
Hojalateras	Podadoras	Veterinarias
Zapateras	Técnicas de refrigeración	Mecánicas de autos
Maestra de conducir equipo pesado	Supervisoras de vertederos	Plomeras
Apicultoras	Delineante	

## CONCLUSIONES

La investigación realizada ayuda a concluir que es importante que las mujeres en empresas, profesiones y ocupaciones atípicas tengan en cuenta que ellas están liderando un cambio en toda la actividad empresarial, laboral profesional de Puerto Rico. Están son hacedoras de nuevos paradigmas para las futuras generaciones de mujeres trabajadoras en Puerto Rico. Se espera que las corporaciones del futuro sean más orientadas a la diversidad y a la tolerancia y así lograr esa sinergia necesaria para mantenerse competitivos en el mercado. La presencia de mujeres en profesiones y ocupaciones que típicamente copaban los hombres, le añade riqueza a las áreas de trabajo con las fortalezas que las féminas aportan. Además, se espera que las empresas del futuro sean más humanizadoras o humanizantes, reconociendo que el éxito de las organizaciones dependerá más del manejo del recurso humano que el de los tecnológicos, físicos o financieros. La presencia de las mujeres en trabajos atípicos ayuda a crear ambientes de trabajo más equitativos.

Por otra parte, el gobierno de Puerto Rico tiene ante sí la realidad de la inserción de la mujer en la agricultura no ya como empleada sino como emprendedora. Este colectivo de mujeres agroempresarias estudiadas representa un modelo que sirve de inspiración a otras mujeres interesadas en el agro como opción para desarrollar sus emprendimientos. El Departamento de Agricultura de la Isla así como las facultades de agronomía de los recintos universitarios de Puerto Rico deben proveer a las mujeres de las herramientas necesarias para acceder al mundo empresarial agrícola con iguales oportunidades que los hombres.

# SISTEMAS DE CONTROL DE GESTIÓN EN EMPRESAS AGROINDUSTRIALES DE LA REGIÓN DEL MAULE

José Antonio Tello Ávila, Universidad de Talca

## RESUMEN

*El presente estudio tiene como objetivo determinar sistemas de control de gestión para la agroindustria exportadora de la Región del Maule. Dentro de los objetivos específicos establecidos se encuentran identificar la misión de la agroindustria de la Región del Maule, señalar ventajas y desventajas de contar con sistemas de control de gestión, identificar los elementos genéricos que componen un sistema de control de gestión, identificar las debilidades de los canales de exportación e identificar los factores claves de éxito que definen un sistema de control de gestión.*

*En la primera parte de la investigación se describen los antecedentes generales de la agroindustria a nivel nacional, como así también a nivel regional; en esta sección se mencionan las ventajas de Chile como productor y exportador de frutas y sus derivados, se señalan ventajas como clima templado, la evolución de la agroindustria en Chile, los principales productos de exportación de la Región del Maule, los mercados de destino y el potencial regional en éste rubro.*

*En la segunda parte de la investigación se abordan conceptos fundamentales sobre sistemas de control de gestión y de qué forma contribuyen a mejorar el desempeño de la agroindustria exportadora de la Región del Maule. Por otra parte lo que se busca en este apartado es identificar aquellas variables que influyen en la medición y entendimiento de éstos conceptos y que servirán de base para llegar a determinar un modelo de control de gestión. En la tercera parte se discute la metodología seleccionada, teniendo como objetivo principal la determinación de un modelo de control de gestión para la agroindustria de la Región del Maule, teniendo presente lo que señalan diversos autores y que nos permiten llegar a una conclusión sobre la utilización de sistemas de control de gestión y de qué forma contribuyen a cumplir la misión País de ser una potencia agroalimentaria.*

*Más adelante se presentan en forma detallada los resultados obtenidos de la investigación los que podemos dividir en 3 áreas específicas que son: 1) La Agroindustria de la Región del Maule; 2) Las Exportadoras de la Región del Maule y 3) Los Agricultores de la Región del Maule. En donde a partir del modelo inicial se tomó y se llevó mediante un proceso estadístico a la obtención de un nuevo modelo ajustado y más representativo del área al cual está dirigido. El sistema de control de gestión orientado a las empresa exportadoras está compuesto por los siguientes constructos; control de gestión, cadena de valor, desempeño, logística y eficiencia operativa. El sistema de control de gestión orientado a las empresas agroindustriales está compuesto por los siguientes constructos; cadena de valor, encadenamiento, desempeño, integración y control de gestión. El sistema de control de gestión orientado a los agricultores está compuesto por los siguientes constructos; control de gestión, eficiencia operativa, logística, cadena de valor, desempeño y encadenamiento.*

*Si consideramos la aplicación de éste modelo por cada uno de los entes mencionados anteriormente podemos llegar a concluir que se puede lograr la misión País de ser una potencia agroalimentaria, puesto que se está apostando a un sistema que mejora el desempeño de los entes involucrados y por lo tanto permite realizar mejoras a los procesos ya existentes. Con la utilización en conjunto de éstos modelos por cada categoría podemos aprovechar ventajas que nos permitirían estar un nivel más arriba que la competencia.*

## MANAGEMENT CONTROL SYSTEM IN THE AGRO INDUSTRY- MAULE REGION

### RESUMEN

*El presente estudio tiene como objetivo determinar sistemas de control de gestión para la agroindustria exportadora de la Región del Maule. Dentro de los objetivos específicos establecidos se encuentran identificar la misión de la agroindustria de la Región del Maule, señalar ventajas y desventajas de contar con sistemas de control de gestión, identificar los elementos genéricos que componen un sistema de control de gestión, identificar las debilidades de los canales de exportación e identificar los factores claves de éxito que definen un sistema de control de gestión.*

# ANÁLISIS DE TIC COMO APOYO EN LA TOMA DE DECISIONES PARA EL DEPARTAMENTO DE RECURSOS HUMANOS DE LAS PYMES DE TECOMÁN, COLIMA, MÉXICO

Oscar Mares Bañuelos, Universidad de Colima  
Arquímedes Arcega Ponce, Universidad de Colima  
Enrique Macías Calleros, Universidad de Colima  
Jesús Martín Santos Virgen, Universidad de Colima

## RESUMEN

*El presente proyecto tiene por objetivo investigar, si las tecnologías de información y comunicación impactan favorablemente en el proceso de reclutamiento de personal. El estudio emplea la aplicación un instrumento basado en 11 ítems en parámetro Likert, sobre una muestra de 13 microempresas del Valle de Tecomán, Colima, México, en la cual se aborda el tema de los procesos de reclutamiento vs modelo administrativo, analizando tres variables: infraestructura en TIC, modelo administrativo y procesos de reclutamiento. Como valores agregados de la investigación, se proponen algunas metodologías basadas en el uso de las TIC y los procesos de reclutamiento, así mismo, el trabajo concluye que las empresas que aplican procesos automatizados en reclutamiento potencian las siguientes resultados: contratar a la persona adecuada para el puesto adecuado, disminuir el índice de rotación en las empresas y mantener una gestión del personal de recursos humanos más eficiente.*

**PALABRAS CLAVE:** Tecnologías de Información y Comunicación, Recursos Humanos, Proceso de Selección de Personal.

## ANALYSIS OF ICT AS SUPPORT DECISIONS FOR HUMAN RESOURCES DEPARTMENT OF MICROENTERPRISES IN TECOMÁN, COLIMA, MÉXICO

### ABSTRACT

*This project aims to investigate whether information and communication technologies impacting favorably on the recruitment process. The study uses an instrument application based on 11 items in Likert parameter on a sample of 13 microenterprises of Tecomán Valley, Colima, Mexico, which addresses the issue of recruitment processes vs. administrative model, analyzing three variables: ICT infrastructure, administrative model and recruiting processes. As added value of research methodologies are proposed based on the use of ICT and the recruitment process, also, the paper concludes that companies implementing automated processes enhance recruiting the following results: hire the right person for the right job, reduce turnover in business and maintain a personnel management human resources more efficiently.*

**JEL:** M12, D22.

**KEYWORDS:** Information and Communication Technology, Human Resources, Recruitment Process.

## INTRODUCCIÓN

En los últimos años, las empresas en Tecomán llevan a cabo el proceso de selección del personal por medio de actividades comunes sin tomar en cuenta las nuevas tendencias de tecnologías de información y comunicación. Esto se debe a que las empresas siguen los procesos como se hacía anteriormente llenando una solicitud en papel y presentándose a reuniones con el personal de recursos humanos para conocer la información laboral del trabajador a seleccionar. Los buró de antecedentes laborales tienen la misión de proveer soluciones de información laboral a las empresas ayudando a mejorar la toma de decisiones para tener éxito en la contratación del personal y una visión de proveer información laboral a las empresas confiable, integra y oportuna. Hoy en día existen una gran variedad de empresas de los tres sectores productivos en la región. Cada una de ellas tiene como objetivo ser líderes en el mercado y tener la mayor cantidad de clientes posibles, para ello se requiere de una gran calidad competitiva en cada uno de sus miembros, por eso es fundamental tomar en cuenta su experiencia laboral, así como sus habilidades en un área específica sus competencias profesionales, destrezas, y carencias del prospecto, así como aquellas actividades que son capaces de realizar para la empresa. Esta herramienta conocida como Software de Competencias Profesionales ya es utilizada en varias regiones del país tales como Monterrey, Guadalajara Distrito Federal, Toluca, y Cancún, teniendo un gran impacto para los empresarios que han decidido utilizar este tipo de tecnologías como un software principal para la selección del personal.

Figura 1: Proceso De seleccion

Fuente: COBACH. Recursos Humanos 1. 4ta. Edición. México, EDIT. COBACH, pp. 120.

La problemática existente en las pequeñas y medianas empresas de Tecomán es que no cuentan con un mecanismo sistematizado, confiable y eficaz para el proceso de selección de personal, además no se cuenta con una base de información del personal que está desempleado en el municipio para poder suplir de manera inmediata el puesto que este vacante, lo cual impide al encargado de recursos humanos agilizar el procedimiento y predeterminar de manera precisa cuáles serían los posibles trabajadores que en un determinado momento fueran elegidos. Para aportar una solución a este problema nos hemos planteado las siguientes preguntas de investigación: ¿Pueden las pymes de Tecomán adoptar un proceso sistematizado de selección de personal?, ¿Aportaría valor agregado al activo de las empresas un sistema automatizado de selección de personal?, ¿Impide la cultura empresarial de Tecomán, la adopción de nuevas TIC? Nuestro objeto de estudio es básicamente el proceso que llevan a cabo las pymes para la selección del personal, así como también, el funcionamiento y las aportaciones que daría un software para el proceso de selección de personal en las empresas que utilicen este mecanismo.

El objetivo general de nuestra investigación es elaborar el análisis y la propuesta de una herramienta tecnológica como apoyo en la toma de decisiones en el departamento de recursos humanos en las pymes de Tecomán, específicamente se pretende la automatización de procesos en el departamento de recursos humanos y proporcionar información valiosa para la toma de decisiones en las empresas.

### Planteamiento Del Problema

*Es más importante para la ciencia, saber formular problemas, que encontrar soluciones.* (Alberth Einstein). Uno de los problemas más sobresalientes en las Pymes de Tecomán, es la tardanza en el proceso que llevan a cabo para la selección del personal, ya que es un poco laborioso el seleccionar a un trabajador y principalmente suplir un puesto especificado. Esta situación se ha presentado por la falta cultura de parte de los emprendedores y por qué no existe en la región una alternativa que sea de gran apoyo para las empresas que requieran de manera inmediata personal de trabajo. Este problema se ha venido incrementado por la inasistencia de nuevas tecnologías computacionales y por qué en algunos casos las empresas no se dan cuenta del valor agregado que podría tener si adoptaran un sistema de información. Es ahí la importancia de analizar qué tan factible sea para las medianas empresas el contar con una herramienta tecnológica y sistematizada para la selección del personal a través de las TIC.

Objetivo general: Analizar y proponer una herramienta tecnológica como apoyo en la toma de decisiones en el departamento de recursos humanos en las medianas empresas de Tecomán.

### Objetivos específicos

1. Proponer la automatización de algunas fases del proceso selección y reclutamiento en el departamento de recursos humanos.
2. Lograr una eventual reducción de costos en el proceso de selección y reclutamiento del personal de trabajo.
3. Proporcionar información valiosa para la toma de decisiones.

### Preguntas de investigación

1. ¿Es factible que las PYMES de Tecomán puedan adoptar un proceso sistematizado de selección de personal?
2. ¿Aportaría valor agregado al activo de las empresas un sistema automatizado de selección de personal?
3. ¿Impide la cultura empresarial de Tecomán, la adopción de nuevas TIC?

## **REVISIÓN LITERARIA**

### Antecedentes

Las tecnologías de información y comunicación TIC la unión de las computadoras y las comunicaciones desataron una explosión sin precedentes de formas de comunicarse al comienzo de los años 90. A partir de ahí el internet paso de ser un instrumento especializado de la comunidad científica a ser una red de fácil uso que modifico las pautas de interacción social. (TURBAN, 2010).

Las TIC: El uso creativo de la tecnología de la información puede proporcionar a los administradores una nueva herramienta para diferenciar sus recursos humanos, productos y/o servicios respecto de sus competidores (Alter, 1999). Este tipo de preeminencia competitiva puede traer consigo otro grupo de estrategias, como es el caso de un sistema flexible y las normas justo a tiempo, que permiten producir una

variedad más amplia de productos a un precio más bajo y en menor tiempo que la competencia. Las tecnologías de la información representan una herramienta cada vez más importante en los negocios, sin embargo el implementar un sistema de información de una empresa no garantiza que ésta obtenga resultados de manera inmediata o a largo plazo. (TURBAN, 2010).

**Automatización del Proceso Administrativo:** Cuando se administra cualquier empresa, existen dos fases: una estructural, en la que a partir de uno o más fines se determina la mejor forma de obtenerlos, y otra operativa, en la que se ejecutan todas las actividades necesarias para lograr lo establecido durante el periodo de estructuración. (VILLA, 2008). A estas dos fases se les llama: mecánica y dinámica de la administración. Para este autor la mecánica administrativa es la parte teórica de la administración en la que se establece lo que debe hacerse, y la dinámica se refiere a cómo manejar el organismo social.

**Recursos Humanos:** La existencia del capital humano que se materializa en la aplicación de conocimientos, fuerza de trabajo y capacidades técnicas y operativas requiere que dicho capital sea gestionado según los principios de la eficiencia y eficacia para poder cumplir con objetivos específicos. Los gestores de ese capital son profesionales especializados que tienen grupos y/o equipos de trabajo a su cargo. (GRADOS, 2009) entre de estos profesionales altamente capacitados para esta tarea, muchas veces se distinguen entre gestores (o managers) y líderes.

**Funciones:** El departamento de recursos humanos se ocupa en general de llevar adelante temas macro que hacen a la administración, reclutamiento y selección, capacitación y control de los recursos humanos. En los últimos años, con la globalización y la creciente competencia en los mercados, las funciones del departamento de recursos humanos se han ido ampliando y sofisticando cada vez más. Hoy tratan temas relacionados con la retención y el desarrollo de talentos, la gestión del conocimiento, la formación de equipos virtuales, políticas de expatriación y complejas negociaciones sindicales.

**Reclutamiento:** Para cualquier tipo de puesto en su organización. Contamos con una amplia cartera de candidatos actualizada y con medios de reclutamiento efectivos y confiables, algunos de ellos son: bolsas de trabajo, periódicos y boletines, internet, redes sociales, ferias de empleo, intercambio de cartera, agencias especializadas, perifoneo, volanteo. (GRADOS, 2009). Entrevista inicial: Realizamos un cuestionario que recaba la información general no especificada en el currículo o solicitud de empleo del candidato y se le dan a conocer las características del puesto a cubrir. Validación de referencias: Nos aseguramos que estas, personales o laborales, sean verdaderas. Entrevista por competencia: Analizamos, identificamos y verificamos los conocimientos. Destrezas, experiencias, valores, conducta, comportamiento del candidato y los comparamos con el modelo de competencias y perfiles del puesto. Evaluaciones psicométricas: Aplicamos diferentes evaluaciones orientadas a identificar al personal mayor compatibilidad con las demandas del puesto. Evaluando rasgos de personalidad, coeficiente intelectual, intereses, rendimiento, habilidades, actitudes y valores. Evaluación médica: Realizamos los estudios exhaustivos para comprobar que el solicitante no tiene una enfermedad o adicción que le impida el normal desenvolvimiento en sus funciones. Estudio socio-económico: Llevamos a cabo una investigación domiciliaria para confirmar la información familiar, laboral, económica proporcionada por el candidato, a través de vecinos, jefes inmediatos, compañeros, etc. Proceso de contratación: Para garantizar el buen desempeño del candidato seleccionado y de integración, ofrecemos contratarlos bajo el sistema de outsourcing durante un mes, o más, o la contratación directa por el cliente a partir del momento que lo decida. (GRADOS, 2009).

**Las TIC en las PYMES del municipio de Tecmán:** En la actualidad en el municipio de Tecmán las pymes no cuentan con la información necesaria sobre las Tecnologías de información y comunicación, por lo tanto no están al día y a la vanguardia. Es importante dar a conocer a las empresas que existen nuevas tendencias que han sido desarrolladas para automatizar los procesos de trabajo que se llevan a cabo en cada una de las empresas, esto con la finalidad de reducir los costos de producción y para que la

empresa obtenga más utilidad. Hoy en día es necesario que las empresas de Tecomán, sin importar su clasificación cuenten con un sistema de información que al final del día les demuestre su stock de ventas y la utilidad que se ha logrado hasta ese momento. De las 4745 empresas existentes solo el 35% cuentan con tecnología, esto debido a la falta de conocimiento, cultura e ingreso personal disponible. (INEGI, 2012).

**Proceso de selección de personal en las PYMES de Tecomán:** En la actualidad en las empresas se ha hecho necesario contar con un mecanismo o proceso que permita dotarse de gente capacitada y que reúna lo más cercanamente posible los requisitos indispensables para ocupar un puesto, por tal motivo fue necesario definir el proceso de personal y los pasos a seguir para su realización. Mediante el proceso de selección se podrá contar con la seguridad de que en las empresas tienen el personal adecuado para lograr el éxito. Esta seguridad se logra aplicando cada uno de los pasos del proceso de selección, adecuadamente, obteniendo así a la persona idónea para desempeñar con exactitud las funciones de un puesto determinado.

**Ventajas del proceso de selección:** Al realizar adecuadamente el proceso de selección se pueden obtener una serie de ventajas que se traducen en beneficios para las empresas.

Contratar a la persona adecuada para el puesto adecuado.

Realizar una contratación con el 100% de éxito.

Disminuir el índice de rotación en las empresas.

Contar con personal que se encuentre más comprometido con la empresa.

Obtener personas que se sientan satisfechas con las actividades que desempeña.

Evitar costos.

Conocer al nuevo empleado en todos los aspectos.

Informarle al candidato de los beneficios al integrarse a la empresa.

Y, por último, cumplir con el cliente interno el cual está constituido por los gerentes que encabezan a la empresa, al proporcionarle la gente adecuada. (MORA, 2009)

## METODOLOGÍA

El presente estudio en su carácter cuantitativo, requirió definir las técnicas de recolección de datos o instrumentos necesarios para obtener resultados de investigación representativos de la población, este proceso, implicó la selección de un instrumento de medición válido y confiable, que pudiera ser aplicado para obtener información de interés para el estudio y susceptibles de analizar. La metodología que se empleo está constituida por cuatro fases que se desarrollan en diferentes pasos desde los básicos como son la integración del equipo de investigación, la revisión bibliográfica, como fundamento del marco teórico, y la construcción del protocolo de investigación, compuesta por el planteamiento del problema, formulación de preguntas de investigación, definición del objeto de estudio, determinación de objetivos general y específicos, formulación de hipótesis y la elaboración de la justificación. La fase tres contempla el diseño y elaboración de los instrumentos de investigación, la determinación del tamaño de la muestra para la aplicación de las encuestas, capturar los datos obtenidos y realizar el procesamiento y análisis estadístico de la información proporcionada. La aproximación metodológica general al objeto de estudio (Eyssautier, 2002), en la investigación del presente proyecto, es tanto teórica como aplicada.

### Medios para la obtención de los datos

Los medios que utilizados para la obtención de la información (datos) para nuestro proyecto de investigación fueron: Investigación documental: En esta etapa nos basamos en fuentes bibliográficas y en el sitio de revistas y artículos científicos, como Redalyc, Latindex, Pubindex y fuentes oficiales de bases de datos, como el INEGI, IMCO y CANACO. En ella definimos conceptos de tecnologías de información

y conceptos de nuestro objeto de estudio que en este caso fue el proceso que llevan a cabo las empresas para seleccionar su personal de trabajo. Investigación de campo: Este tipo de investigación fue utilizada como medio de recopilación de datos en información referente al proceso de selección en las pymes del municipio de Tecomán y desde luego en la aplicación del instrumento diseñado exprofeso. Instrumentos utilizados: El instrumento o herramienta principal que utilizamos para la recolección de la información y datos del proceso de selección del personal en las pymes de Tecomán es el cuestionario, ya que este nos permite con las personas relacionadas con nuestro tema de investigación y conocer varios aspectos que son necesarios e importantes para que las pymes de Tecomán utilicen las nuevas tendencias tecnológicas. Determinación del tamaño de la muestra: La encuesta consta de 11 preguntas en escala de Likert, la cual se utilizó para poder obtener datos cuantificables, reales y confiables para su posterior análisis a través de gráficos, tablas y métodos estadísticos.

**Población y muestra:** La población total de la investigación, es decir, el número total de empresas entrevistadas del Municipio de Tecomán, obtenidas mediante el software Mitofsky, con nivel de confianza de 95% y población de 14 empresas seleccionadas de bienes y servicios, se enlista a continuación la muestra poblacional:

Figura 2: Lista de Empresas del Estudio

1.- Surtidora de Ferretería y Materiales	5.- Sello rojo.	10.- Telmex.
2.- Refaccionaria Koraza Tecomán	6.- Limones Montaña.	11.- Zephia
3.- Coca – cola	7.- Citrojuco.	12.- Refaccionaria el Güero Ochoa.
4.- Aceites Grasas y Derivados	8.- Infotec.	13.- Agroservicios Passa.
	9.- Auto Zone.	

## RESULTADOS

El estudio arroja datos por demás interesantes, los cuales dan luz sobre la dinámica al interior de las organizaciones del Valle de Tecomán, en relación a sus procesos administrativos, sobre contratación de personal y de recursos humanos.

Figura 3: Giro de la Empresa

Fuente: Elaboración propia.

Como se puede apreciar el mayor porcentaje de las empresas encuestadas son comerciales, tomando como referencia que la suma de los de los otros dos giros es proporcional al total de un 100 %. Eso nos da como conclusión que en Tecomán existen más empresas de giro comercial.

Figura 2: No de Trabajadores en la Empresa

Como se muestra en esta grafica de pastel el número de trabajadores que más sobresale es la opción de más de 50, esto debido a que en su gran mayoría las empresas encuestadas son grandes empresas y cuentan amplio equipo de trabajo.

Figura 5: Depto RRHH

Como en las gráficas anteriores podemos apreciar el porcentaje que más sobre sale en este caso el 77 % que la mayoría de las empresas encuestas cuentan con departamento recursos humanos.

Figura 6: Metodos para Contratación de Personal

Es de nuestro interés, conocer el modelo administrativo, en relación con los procesos de selección de personal, pues consideramos que el capital humano, es un factor sumamente relevante en los núcleos productivos, es decir, de las empresas. Nótese la considerable cantidad y porcentaje del poco menos de la mitad para el uso de recomendaciones.

Figura 7: Requerimientos de Personal

En esta imagen como podemos apreciar hay una gran variabilidad de porcentajes aun que dos pares de ellos son proporcionales entre sí, eso nos da a entender que las empresas se basan en distintas causas para contratar personal de trabajo

Figura 8: TICs Mejoramiento en el Proceso de Selección de Personal

En esta grafica como podemos apreciar pues simple y sencillamente el mayor porcentaje de los gerentes o encargados de del departamento de recursos humanos afirman que las TIC si ayudan a mejorar el proceso de selección de personal.

Figura 9: Disposición de la empresa para adquirir tecnologías

En esta grafica nos podemos dar cuenta que la mayoría de empresas encuestadas están dispuestas a invertir en tecnologías de información debido a que sus líderes creen que podrían aportar un valor agregado al activo monetario de la empresa.

Figura 10: TIC en la Empresa

**8 Cuenta la empresa con alguna tecnología de información para el proceso de selección de personal,, como por ejemplo? 13/13**

Ver gráfico

Como se aprecia en esta grafica existen dos porcentajes iguales los cuales nos reflejan que las empresas regularmente utilizan sistemas desarrollados por su departamento de sistemas y otras prácticamente coinciden en internet bolsas de trabajo entre otros.

Figura 11: Objetivo de las TIC en las Empresas

**9 En caso de que desee, o ya utilice un sistema de TIC's ¿cual cree usted que sea el objetivo principal de estas tecnologías? 19/19**

Ver gráfico

En esta grafica se muestra cada una de las opiniones y las diferentes formas que tienen los líderes de una empresa con respecto a las tecnologías de información algunos es su mayoría comparten la idea que automatizan los procesos de selección y reclutamiento.

Figura 12: Ventajas Competitivas

**10 Considera usted que al utilizar un sistema de tecnologías de información su empresa pudiera brindar ventajas competitivas para la selección de su personal. 14/14**

Ver gráfico

En esta grafica de pastel podemos observar que el mayor porcentaje de las empresas consideran que las Tecnologías de información facilitan el trabajo al encargado del departamento de recursos humanos aportando conocimientos valiosos para la toma de decisiones.

## CONCLUSIONES

La presente tesis se realizó con el objetivo de analizar y proponer una herramienta sistematizada para el proceso de selección de personal en las Pymes de Tecmán. Se concluye que lo siguiente:

Conocer la importancia de las tecnologías de información en el proceso de reclutamiento de personal, siendo esta positiva para la mayoría de las empresas encuestadas.

Se identificaron como son los procesos de reclutamiento de personal en las empresas, así como los criterios más conocidos para la evaluación del reclutamiento de personal, siendo estos el uso de la tecnología puesto que varias empresas ya cuentan con un sistema de reclutamiento de personal, el cual sus procesos son más rápidos y dinámicos.

Se comprobó que existe efectividad en los procesos del reclutamiento de personal por medio TIC, en más de la mitad de las empresas.

## CONSIDERANDOS

Un porcentaje considerable de empresas utilizan la Internet para reclutar personal, pues los candidatos acceden a la red para dejar sus currículos en línea.

Las empresas en su totalidad opinaron que las tecnologías de información ayudarían a mejorar los procesos de reclutamiento de personal en las empresas.

Un porcentaje considerable de empresas ya cuenta con un sistema de reclutamiento de personal que les ayuda a sus procesos de reclutamiento y un 50% de las empresas opinan que al utilizar las tecnologías de información en el proceso de reclutamiento ayuda a una mejora toma de decisiones, una buena elección, y localización del recurso humano.

Se comprueba como afirmativa la hipótesis de trabajo, ya que la función de las tecnologías de información es importante estratégicamente en la mayoría de las empresas encuestadas del área metropolitana de Monterrey al verse como un recurso indispensable para la mejora del proceso de reclutamiento de personal, considerando que aumenta el valor en la empresa al eficiente sus procesos, tareas, y administración del área de recursos humanos.

# **EL IMPACTO DE LA CERTIFICACIÓN BAJO LA NORMA ISO 9000 2008 EN LA GENERALIZACIÓN DE UNA CULTURA DE CALIDAD EN LA UNIDAD ACADÉMICA HERMOSILLO DE LA UNIVERSIDAD ESTATAL DE SONORA**

Elsa Isabel Montaña Martínez, Universidad Estatal de Sonora  
Norma Lorena Arenas Mozqueda, Universidad Estatal de Sonora  
Sofía Amavizca Montaña, Universidad Estatal de Sonora

## **RESUMEN**

*La mejora en empresas o instituciones que generan productos o de servicios no se logra únicamente mediante la aplicación de normas de calidad o certificaciones con incorporación de los procedimientos de control y verificación; si no que se genera desde los trabajadores mismos, de todas las áreas de la organización que está estrechamente relacionado con el comportamiento, conocimiento y capacitación de los trabajadores. El presente trabajo, tiene como objetivo analizar la cultura de calidad en la Universidad Estatal de Sonora. Los cambios en el entorno llevan a las organizaciones a tener la habilidad de adecuarse a las necesidades generadas por el ambiente donde se encuentran interactuando, por ello es indudable que las instituciones y las organizaciones buscan obtener beneficios realizando sus actividades eficientemente que se ve reflejado en ahorro de costos, tiempo, esfuerzo, espacios y capacidad. La cultura de calidad de acuerdo a la norma ISO 9000 2008, tienen como eje principal el desempeño y comportamiento del capital humano de una empresa en todas sus áreas., por ello la trascendencia de esta investigación es la percepción de quienes generan la calidad en esta institución de educación superior*

**PALABRAS CLAVES:** Cultura, Calidad, Certificación, ISO.

## **THE IMPACT OF CERTIFICATION UNDER THE ISO 9000 2008 IN THE GENERALIZACIÓN OF A CULTURE OF QUALITY IN THE ACADEMIC UNIT OF HERMOSILLO SONORA STATE UNIVERSITY**

## **ABSTRACT**

*The improvement in companies or institutions that generate products or services cannot be achieved solely through the application of quality standards or certifications with co corporation of control and verification procedures, otherwise that is generated from the workers themselves, from all areas of the organization that is closely related to the behavior, knowledge and training of workers. This paper aims to analyze the culture of quality in Sonora State University. Changes in the environment lead to the ability to adapt to the needs generated by the environment in which they are interacting, so it is clear that institutions and organizations seek to profit on making activities efficiently than is reflected in cost savings, time, effort, space and capacity. The culture of quality according to standard ISO 9000 2008, they have as main axis the performance and behavior of the human capital of a company in all areas, this the importance of this research, is the perception of those who generated the quality in this institution of higher education.*

**KEYWORDS:** Culture, quality, certification, ISO

## **INTRODUCCIÓN**

El impacto de la certificación bajo la Norma ISO 9000 2008 en la generalización de una cultura de calidad en la Unidad Académica Hermosillo de la Universidad Estatal de Sonora (UES), se exponen a través de la aplicación de una encuesta el equipo de trabajo de las diferentes áreas que integran la institución, a los responsables y equipo de apoyo de Administrar el Sistema de Gestión de la Calidad, teniendo como objetivo conocer si realmente se ha logrado generalizar una cultura de calidad. En los últimos años la estrategia de la administración de la calidad total es la que más han adoptado las organizaciones en todo el mundo, surgiendo la necesidad de desarrollar el concepto de cultura de calidad, definir el concepto de acuerdo, estrategias y una propuesta sobre cómo lograrse.

La presente investigación se desarrolló de la siguiente manera: los antecedentes sobre los sistemas de calidad y la adopción en las empresas tanto públicas como privadas, como parte de la competitividad que estas deben de tener para estar presentes en la mente de sus clientes, por los que requiere cambiar los paradigmas de la forma de trabajar para adoptar una cultura de calidad como eje central para poder cumplir con los requerimientos del cliente. Muchas organizaciones al introducir sistemas de calidad recurren a propuestas de los clásicos; implementando sus métodos a manera de formula bajo enfoques pragmáticos; sin considerar las costumbres, valores, hábitos, comportamientos y necesidades de la organización en su totalidad. La fundamentación teórica sobre investigaciones desde diferentes ámbitos para centrarse en cuestiones de calidad dentro de las organizaciones; debido a que abordar el tema de cultura implica la comprensión de la misma desde diferentes enfoques del área del conocimiento, por lo complejo del tema. La metodología de investigación realizada en este trabajo que esta basada en el enfoque cualitativo, que también se le conoce como investigación naturalista, fenomenológica, interpretativa o etnográficas; una de las características del enfoque que respaldan esta investigación son: Sampieri, Fernández y Baptista (2006). El análisis y discusión de los resultados son desarrollados para conocer la percepción de los empleados sobre el impacto de la certificación bajo la norma ISO 9000 2008 en la generalización de una cultura de calidad en la UAH de la UES a través de la aplicación de un cuestionario a una muestra de 98 empleados de los diferentes áreas que integra la institución y finalmente se da una conclusión.

## **REVISIÓN LITERARIA**

En la actualidad la calidad, se ha convertido en un elemento sustantivo de competitividad y en algunos mercados como la Unión Europea es un requisito para estar presentes; razón por la cual cada vez son más las empresas e instituciones que están implantando la administración de la calidad total. En los últimos años se pueden observar varios enfoques de la administración; caracterizada por la variedad de técnicas y estrategias que tiene como finalidad la mejora de las organizaciones, que van desde capacitar al trabajador hasta la eficacia de las organizaciones a través de grupos de calidad y equipos de alta productividad; así como la reingeniería, cero defectos, justo a tiempo, administración de la calidad total, aprendizaje de organizacional entre muchas más. Todas estas técnicas y estrategias se han convertido en una alternativa para apoyar en el cambio organizacional, con el fin de obtener mejor desempeño y resultados independientemente del giro de la empresa. Pérez (2001).

La estrategia de la administración de la calidad total es la que más han adoptado las organizaciones en todo el mundo, surgiendo la necesidad del desarrollo cultural y las necesidades del definir el concepto acorde a las estrategias y una propuesta para lograrse. Muchas organizaciones al introducir sistemas de calidad recurren a propuestas de los clásicos; implementando sus métodos a manera de formula bajo enfoques pragmáticos; sin considerar las costumbres, valores, hábitos, comportamientos y necesidades de

la organización total. Cuando las empresas a nivel mundial adoptan los principios la administración de la calidad detona el concepto del desarrollo de una cultura de calidad.

Pérez (2001), en lo referente a la cultura de calidad en las organizaciones como elemento principal para dirigir los esfuerzos hacia la calidad, no ha sido tratado con suficiente profundidad, tal vez por la dificultades que presenta, considerado como unos de los vacíos al implementar la administración de la calidad total en las empresas. El modelo de Calidad en la educación en México. El gobierno federal por medio de la Secretaría de Educación Pública (SEP) promueve la calidad en la educación formando parte de programas estratégicos y desarrollados a través de los planes nacionales, estatales y municipales. Los objetivos estratégicos y estrategias organizacionales de SEP (2000) retomado de Velázquez (20007) son: Avanzar hacia la equidad de la educación, Proporcionar una educación de calidad adecuada a las necesidades de todos los mexicanos, e Impulsar el federalismo educativo, la gestión institucional y la participación social en la educación.

SEP (2000) tomado de Velázquez (2007) comenta, el modelo de innovación y calidad de la SEP fue diseñado a partir del plan nacional de desarrollo 2001 -2006. Este modelo de innovación y calidad enfatiza una idea central, la necesidad de orientar todos los esfuerzos y tareas a lograr resultados que generen valor a quienes han sido identificados como clientes: estudiantes, padres de familia, empleadores, maestros y empleados. A partir del modelo de innovación y calidad SEP se desprende la integración de las actividades en la educación superior en México; del cual surge el Programa de Innovación y calidad (PIC), teniendo como origen conceptual el modelo para la calidad total (Premio nacional de calidad) e INTRAGOB, que es impulsado por la presidencia para la innovación gubernamental. Velázquez (2007).

La calidad en la educación superior en México. Oria (2003) “La educación de y para la calidad se da solamente cuando las partes interesadas se comprometen y asumen su responsabilidad. La calidad se ha de generar en cada escuela, con la experiencia, la información y el compromiso de su comunidad”. Asimismo también afirmo que la calidad no se puede calcar o recoger de un tratado o video grama, la calidad es el producto de quienes laboran en la institución; por lo que el modelo de calidad debe de surgir de los conocimientos y las experiencias de los directivos, docentes y administrativos, es decir; cada modelo adapta a las necesidades propias organizacionales. Citando a Baena (1992) “La calidad total en la educación superior es un modelo completo basado en la participación de todos los involucrados y está dirigido a los diversos públicos de las universidades que imparte la educación superior”. Por lo tanto, la calidad tiene un papel importante dentro de la educación superior, debido a que muchas instituciones están preocupadas y trabajando en el desarrollo e implementación de modelos de calidad para poder solventar las necesidades de la sociedad.

Gestión de la calidad en la educación superior- Lepeley (2003) “La gestión de la calidad es un sistema de administración de organizaciones que se basa en el principio de hacer las cosas bien”. Asimismo, la gestión de la calidad se basa en la satisfacción de las necesidades, que podrán ser satisfechas solo si el cliente interno siente que la organización satisface sus necesidades. Las universidades han utilizado la estrategia de ISO para mejorar el nivel de satisfacción del cliente en los servicios de consultoría y educación continua en forma estandarizada y acorde a las necesidades para favorecer la vinculación con las empresas. (Velásquez 2007.) La norma ISO 9000: 2000 plantea un enfoque basado en procesos para desarrollar, implementar y mejorar la eficiencia de sistema de gestión de la calidad; lo que permite aumentar la satisfacción del cliente mediante el cumplimiento de sus requisitos, necesidades y expectativas. “El enfoque basado en proceso dentro de una organización puede vislumbrarse primeramente a través de la identificación de estos y posteriormente los elementos clave, para ordenar desde el proceso de selección del alumno, hasta un seguimiento de egresados el cual permite constar la pertinencia de los servicio educativos”. Yzaguirre (2005), además agrega, que la norma ISO 9000 es una herramienta, que permite evidenciar de forma sistemática y metódica las áreas de oportunidad en la institución de educación en base al desempeño de sus procesos.

Por otra parte, Oria (1998), plante que el enfoque de las normas ISO 9000 utilizadas en los servicios de educación, se conciben en dos líneas primordiales. La primera es la forma de organizar la administración de la calidad, a través de un sistema adaptado internamente y segundo, como una asignatura dentro del currículo escolar. No obstante, plantea que se puede separarse, ya que la educación debe de ser integral, teoría y práctica cotidiana. La educación en México del siglo XXI debe de ser de buena calidad y mejorar continuamente. Las escuelas deben de responder, sin duda alguna, a las necesidades de sus clientes, los alumnos, aunado a los de los padres, docentes, trabajadores administrativos, la comunidad inmediata y la sociedad. Además debe de prever lo que cada uno espera, debido a que en la actualidad todo cambia constantemente que no se puede saber en el presente cuales son las necesidades de conocimiento y habilidades requeridas en un futuro; es decir, la calidad no se restringe. Al bien hacer, sino al bien prever.

En México se encuentran 4 mil 500 entidades privadas y públicas que bajo un enfoque de sistema de acuerdo a la norma ISO 9000 encontrándose: Las universidades tecnológicas, los planteles de CONALEP, los Institutos Tecnológicos y centros de capacitación para el trabajo. De acuerdo a la norma ISO 9000 los elementos decisivos es enfocar la atención a los procesos y no solo a los resultados, lo que permite hacer las cosas bien desde el inicio, evita los desperdicios en las empresas de productos; pero en las instituciones educativas permite bajar los índices de reprobación y deserción escolar. Razón por la cual los dos procesos que tienen lugar en el plantel escolar, la administración y el aprendizaje deben estar estrechamente relacionados y debe guiarse hacia el objetivo común de la calidad. (Oria 2006) De igual forma, dentro del comité 176 de la ISO está un grupo de trabajo, con un presidente y siete miembros expertos en calidad, con un reconocimiento internacional. En octubre del 2002 en Acapulco Guerrero, se llevó acabo una reunión de la ISO, estableciéndose las guías para la aplicación de la ISO 9000:2000 en la educación, el International Workshop Agreement 2 (IWA-2), misma que fue inaugurada por Reyes Tamez Guerra, Secretario de la Educación pública de México, manifestando, Oria (2006):

*“Es un esfuerzo por alcanzar por la mejora de la calidad y la evaluación del sistema educativo”,  
Explico: “Con la certificación de la calidad en el sector de la educativo se pretende contar con  
sistemas de juicio efectivo para elevar la eficiencia en la educación”*

La guía IWA-2 para la aplicación de ISO 9001:2000 en la educación ayuda al desarrollo y mejora el sistema de gestión de la calidad en las instituciones de educación; asimismo, permiten identificar la mejor continua, para evitar errores, desviaciones y reducción de pérdidas y desperdicios que provoca la falta de calidad en el sector educativo. Según Oria (2006)

## METODOLOGÍA

La metodología de investigación realizada en este trabajo está basada en el enfoque cualitativo, aunque se vale de herramientas de análisis cuantitativas para lograr una aproximación al planteamiento del problema de investigación. Se recopiló la información a través de la aplicación de la encuesta, por considerarse un medio más rápido que la entrevista en relación al tiempo de aplicación. Se aplicó a una muestra aleatoria de 98 empleados de los diferentes puestos. La Matriz de indicadores se realizó con fin de validar la información obtenida a través de los resultados de los cuestionarios aplicados a los trabajadores de la UAH de los diferentes puestos, de acuerdo a los lineamientos de la Norma ISO 9000 2008 que se aplicó a los responsables de la administración del Sistema de Gestión de la Calidad a nivel institucional y de Unidad. Así mismo, cabe aclarar que las características de las dos herramientas que a continuación se describen fueron: Encuesta con la cual se recopiló la información a través de la aplicación de este instrumento, por considerarse un medio más rápido que la entrevista en relación al tiempo de aplicación. La encuesta se aplicó a los trabajadores de la Unidad Académica Hermosillo con una muestra aleatoria de 98 empleados de los diferentes puestos. El cuestionario se elaboró después de haberse definido el objetivo de la investigación, dado que en base a este se establecen los indicadores y las variables para la

construcción del instrumento adecuado para medirlas. El cuestionario está integrado por 12 preguntas de las cuales 4 de ellas, remiten a un porqué de la respuesta presentándose a cuatro opciones, lo que permitió conocer más a fondo el sentir de los encuestados. La información obtenida fueron procesados en el programa estadístico informático Statistical Package For the Social Sciences (SPSS) programa estadístico para las ciencias sociales. Matriz de indicadores, esta se realizó con el fin de validar la información obtenida a través de los resultados de lo cuestionario aplicado a los trabajadores de la UAH de los diferentes puestos, se realizó una matriz de indicadores de acuerdo a los lineamientos de la Norma ISO 9000 2008 que se aplicó a los responsables de la administración del Sistema de

Gestión de la Calidad a nivel institucional y de Unidad; asimismo al equipo de auditores internos responsables de evaluar el sistema de gestión de la calidad a nivel institucional y de unidad; como lo indica uno de los mandatorios de la norma antes mencionada. EL objetivo de la investigación es evaluar el impacto de la certificación en la norma ISO 9000 2008 en la generalización de una cultura de calidad en la UAH de la UES, por lo que la encuesta se aplicó a la población de empleados de la institución educativa. Para definirla se partió de 296 empleados que integran el universo total de la Unidad Académica Hermosillo en sus diferentes puestos; seleccionándose una muestra de 98 empleados a los cuales se le aplicaría la encuesta aleatoriamente, distribuidos entre profesores, administrativos, personal de servicio, jefes de carrera y encargados de área. Para tal caso, la fuente utilizada para determinar la población es la estadística básica de la SGPYV. Es una medida de asociación que muestra que tan similares son elementos dentro de un conglomerado, toma valores de (0 a 1). DEEF.-Es la pérdida o ganancia en precisión que se logra al estratificar y conglomerar en un diseño muestra. Se define como cociente entre la varianza real y la teóricamente se hubiera logrado con un muestreo aleatorio.

Expresión:  $DEFF = \frac{V(p)d}{V(o) \text{ más}}$  Cálculo  $DEFF = 1 - \text{Rho}(v-1)$

Por otra parte en el caso de la aplicación de la matriz de impacto de la cultura de la calidad no se seleccionó ninguna muestra sólo se partió del conocimiento y experiencia en el sistema de gestión de la calidad.

## RESULTADOS

Como método de investigación para conocer la percepción de los empleados sobre el impacto de la certificación bajo la norma ISO 9000 2008 en la generalización de una cultura de calidad en la UAH de UES se llevó a cabo la aplicación de un cuestionario a una muestra de 98 empleados de los diferentes áreas que integra la institución, exponiéndose continuación los resultados de la misma.

Tabla 1: Tipo de Puesto Que Desempeñan

Puesto	No. de respuestas	Porcentaje de respuestas
Secretaría	1	1%
Profesores	44	45%
Personal de servicios	15	15%
Personal administrativo	28	29%
Jefes de carrera, encargados de área	10	10%
Total	98	100

Los resultados de las encuestas organizadas por tipo de encuesta es el siguiente: el 45% fueron las respuestas de los profesores, 29% de personal administrativo, 15% personal de servicios, 10% Jefes de carrera y encargados de área y 1 % secretaria.

El punto de partida del cuestionario fue conocer la percepción de los trabajadores de la Unidad Académica Hermosillo, si se comparten una visión o cultura de calidad, reflejando que en un 45% de las respuestas fueron afirmativamente y el 55% negativas. Asimismo el personal que si consideraba la existencia de una cultura de calidad en un 20% argumenta que se debe a que gran parte del personal comparte el compromiso de trabajar con calidad en su área de trabajo y un 13% se debe a que el personal

es consciente de la pertinencia e importancia de sus actividades y cómo contribuye a su trabajo; por otra parte los que no consideran que exista una cultura de calidad en un 34% consideran que no se ha logrado generalizar entre el personal el compromiso de trabajar con calidad y un 31% respondió que pese a que se han certificado varios procedimientos la calidad se maneja en términos y documentos. Se observa una inconsistencia en 11 respuestas menos en relación al 45% del resultado que respondió que sí, y en 13 respuestas de más en relación al 55% que indicó que no.

El personal administrativo fue el que presentó el mayor número de respuestas inconsistentes, en relación a la pregunta sobre si se comparte actualmente una visión o cultura de calidad entre los empleados de la Unidad, 17 respondieron que sí, pero en sus respuestas de opciones de porque, faltaron 5 respuestas relacionadas con las opciones de respuestas positivas. Se puede observar que en todas las áreas se presenta una inconsistencia en las respuestas, en los resultados de jefes de carrera y encargados de área, sólo 5 habían contestado que no se compartía una visión o cultura, mientras que en las dos opciones de respuesta del por qué no, suman 12; es decir 5 más.

Al cuestionarles a los empleados de la Unidad Académica, evalúas la calidad de los servicios que recibe de sus compañeros directos y de las diferentes áreas que impactan de manera inmediata a su trabajo, se obtuvieron las siguientes respuestas: un 58% respondió que si evalúa, representando más de la mitad de los encuestados y un 48% contestaron que no evalúan la calidad de los servicios brindados por sus compañeros que impactan directamente con el trabajo. De los 57 empleados de la unidad académica que respondieron que si evalúan la calidad de los trabajos recibidos entre sus compañeros de área u otros departamentos, utilizan los siguientes recursos para evaluar: 44% le informan a sus jefes sobre la problemática, 37% habla directamente con sus compañeros para que no siga afectado su trabajo y el 15% utiliza el recurso de las acciones correctivas, preventivas y no conformidad. Con el fin de conocer por área las formas de evaluar la calidad de los servicios, se agruparon las respuestas por tipo de puesto, lo que permitió conocer que los docentes, personal administrativo y jefes de carrera son los que utilizan el recurso de acciones correctivas y preventivas.

Es importante señalar, que una acción correctiva es la corrección indisoluble del problema y/o de la no conformidad, lo que busca que no se vuelva a presentar, es decir, se busca que el desempeño del proceso retome los niveles planeados. Mientras que las acciones preventivas buscan prevenir fallas potenciales, identificando y atendiendo la causa; esto sólo se puede detectar a través de la experiencia, conocimiento y capacidades de los empleados de la institución, lo que permitirá tomar medidas para prevenirla. La metodología que se puede utilizar es el Análisis de Fondo y Efecto, herramienta que proporciona bases para la prevención, antes de que convierta en un problema. La opción que más utilizan el personal de la Unidad Académica Hermosillo para evaluar la calidad del servicio es “informando a mis jefes” sobre la problemática específica con un 44%, siguiéndoles un 22% hablo directamente con mis compañeros para que no se siga afectando mi trabajo y por último otras, con un 2%.

Los resultados del seguimiento a las evaluaciones de la calidad del servicio que se realizan en las diferentes áreas se obtuvieron los siguientes resultados: La respuesta no lo sé, fue la respuesta más emitida por cada uno de los empleados que apoyó contestando el cuestionario, correspondiéndole 29 a los profesores, 12 administrativos, 7 servicio y 2 jefes de carrera y encargados de área. Los empleados consideran en un 64% que sí trabajan bajo un sistema de calidad, ante la pregunta por qué, expresaron lo siguiente: 38% cumple a cabalidad con las responsabilidades propias de mi puesto y 24% considera que satisface los requisitos del puesto. Por el contrario el 36% manifestó que no trabaja bajo un sistema de calidad, por qué un 28% no cuenta con los recursos que ayuden a desempeñarse bajo dichos sistemas de calidad y un 8% coincidieron en que no cuentan con la capacitación suficiente en sistemas de calidad. Se puede deducir, que en la mayoría de los empleados de la UAH tienen la percepción de que efectivamente trabajan bajo un sistema de calidad por que cumplen con las funciones de su puesto. Los resultados obtenidos en cuanto a trabajo en equipo un 60% consideran que trabajan en equipo en su área.

Otro elemento que confirma lo anterior, es el compromiso de áreas y la comunicación en la misma que en un 68% expresó que en su área se le da seguimiento a las acciones tomadas en reuniones de trabajo.

Ante el cuestionamiento sobre la capacitación, formación y experiencia para lograr un desempeño de acuerdo a los objetivos de calidad, un 77% opinó que si tienen la competencia, en un 29% porque al ingresar a la institución ya contaba con la formación y experiencia en el trabajo y el 42% porque he recibido la formación y capacitación suficiente dentro de la institución.

El 24% de las repuestas señalan que no tienen la capacitación, formación y experiencia para lograr un desempeño de acuerdo a los objetivos de la calidad, el 21% respondió que le falta por aprender, el 7% considera que las capacitaciones que se dan no están dirigidas para hacer mejor su trabajo y 1% considera que su trabajo no requiere ningún tipo de capacitación. Asimismo El 77% de las repuestas consideran que si cuentan con la capacitación, formación y experiencia para lograr un desempeño de acuerdo a los objetivos de calidad, 24% respondió que no. En cuanto a la evaluación de la gestión de los recursos financieros y materiales los empleados de la UAH, consideran en un 67% que no es efectiva la forma de gestionar los recursos financieros y materiales, comparado con un 32% que opina que si es efectiva. Al organizar por tipo de puesto que desempeña en la institución, se observa una consistencia en cada una de las áreas que la falta de recursos afecta para realizar las actividades con calidad:

El área de trabajo en un 68% fueron evaluadas buenas, en relación a mobiliario y equipamiento, y equipos de apoyo fueron evaluados malos con un 53% y 49% respectivamente. Si lo vemos por tipo de empleo las respuestas sobre el rubro área de trabajo, fue considerada buena en cada una de ellas; profesores, personal de servicios, administrativos y jefes de carrera y encargados de área, con los siguientes resultados: un 61.4%, 85%, 74% y 89% respectivamente. En el rubro de mobiliario y equipamiento fue mal evaluado por los profesores con un 61% y jefes de carrera y encargados de área 64%; por su parte, el personal de servicios 67% y el personal administrativo en sus respuesta se establece un equilibrio del 50% opina que son malos y el otro bueno.

Otro aspecto a destacar, es que un 98% de las personas que respondieron la encuesta consideran que su trabajo es pertinente, importante y contribuye a los objetivos de calidad de la unidad académica; y un 30% son responsables de un procedimiento certificado y/ o por certificar. Por otra parte, con el fin de conocer el alcance del Sistema de Gestión de la Calidad en la Unidad Académica Hermosillo, se aplicó una matriz de impacto a una muestra de 9 empleados de la institución que tiene la comisión de administrar el SGC a nivel institucional y de la unidad académica, así como al equipo de 7 auditores internos, partiendo de que tienen el conocimiento y la experiencia sobre el sistema de gestión de la calidad de acuerdo a la certificación en la Norma ISO 9000 2008; además de darle seguimiento y evaluar el cumplimiento de la misma, de igual forma identifican y evalúan la mejora continua, teniendo como prioridad el cumplimiento de las necesidades del estudiante considerado como cliente de la institución.

Los resultados de la matriz de impacto se puede observar que cada uno de los rubros evaluados respecto al impacto del sistema de gestión de la calidad las respuestas tienen diferentes percepciones, las respuestas en impacto promedio con un mayor porcentaje son: las acciones para mantener satisfecho al cliente, logro de los objetivos de calidad evaluados y la pertenencia a la calidad como sistema en un 78% y 76% respectivamente. Asimismo, las opciones de respuestas: superación del personal, motivación del personal, gestión de los recursos coincidieron, y mejoramiento de los servicios de apoyo sus impacto fueron evaluados en un 56% de la misma forma, los rubros de seguimiento de acuerdos, logro de la política de calidad, mejoramiento en la organización y planeación de las actividades su impacto fue calificado con un 44%. Por su parte, el trabajo en equipo y capacitación del personal fueron evaluados en un 33% y mejoramiento del mobiliario con un 11% de impacto.

Las opciones de respuesta que salieron igual evaluadas en un impacto fuerte son: trabajo en equipo, capacitación del personal, mejoramiento de las áreas de trabajo y mejoramiento de los servicios de apoyo

con 22% de los resultados, cabe destacar que los rubros restantes presentan una consistencia en los resultados obteniéndose un 11% en cada uno. Como podemos observar en las respuestas de los elementos a evaluados fueron estables en los referente a impacto fuerte, lo que denota que los responsables de la administrar y evaluar internamente el sistema de gestión de la calidad han podido constatar el impacto del SGC y el alcance que se ha obtenido en cada uno de ellos. En las respuestas de impacto escaso la percepción con 44% mejoramiento de mobiliarios y 33% motivación del personal; de igual forma, las siguientes opciones tuvieron el mismo resultado de impacto con un 22% opciones de trabajo en equipo, seguimiento de acuerdos y gestión de los recursos, mientras, pertenencia a la calidad como sistema, capacitación del personal, superación del personal y mejoramiento en los servicios de apoyo fue evaluado su impacto con un 11%. De las evaluaciones de impacto nulo de sistema de gestión de la calidad son en las opciones de mejoramiento en las áreas de trabajo y mejoramiento del mobiliario obteniéndose un 11% de respuestas en ambas.

## CONCLUSIONES

Es importante antes de hacer cualquier acotación en relación a la investigación sobre el impacto de la certificación de la norma ISO 9000:2008 en la generalización de la cultura de calidad de la Unidad Académica, debe de quedar claro lo siguiente: 1). La calidad en la actualidad es parte de los requisitos que necesitan las instituciones de educación superior para estar presentes, ya que al certificarse como el caso de la Unidad Académica Hermosillo en la Norma ISO 9000:2008 en una estrategia a largo plazo, 2). La probabilidad de éxito de las organizaciones es mucho mayor cuando implementas un sistema de gestión de la calidad, por lo que se debe de tomar como base el elemento humano y el trabajo en equipo, a través del reconocimiento de una cultura organizacional en busca de la calidad 3). La certificación en la norma ISO 9000:2008 no garantiza productos de calidad, tan sólo lleva a la organización a sistematizarse y formalizar una serie de procesos para generar los productos o servicio que requiere el cliente.

Los resultados obtenido a través de la aplicación del cuestionario a los trabajadores de las diferentes áreas de la Unidad Académica Hermosillo, que tenían como objetivo: Evaluar el impacto de la certificación en la norma ISO 9000: 2008 en la generalización de la cultura laboral en la UAH y los resultados de la matriz de impacto del sistema de gestión de la calidad entre la comunidad de la Unidad Académica, aplicada a los responsables de administrar y evaluar el sistema de calidad de la Unidad Académica Hermosillo del CESUES, permitieron avalar los resultados obtenido. Se evidenció a través de los resultados de la encuesta que existe un impacto favorable de la norma ISO 9000:2008 en la cultura de calidad en la unidad académica Hermosillo.

Partiendo de que el sistema de gestión de la calidad sólo tiene 5 años que se implantado en la institución de educación superior con alcance a la Unidad Académica Hermosillo en donde esta investigación permitirá conocer cuáles son los aspectos a mejorar que cuyo impactó se vea reflejado en la cultura laboral de calidad de quienes trabajan. Comparten una visión o cultura de calidad al comparar los resultados se puede observar que las percepciones son muy similares, por una parte el equipo de trabajo de la Unidad Académica Hermosillo, consideró en 45% que comparten una visión o cultura y la evaluación emitida por los responsables de administrar y evaluar el SGC a nivel institucional como de unidad, evaluaron el impacto en un 44%. Es decir, el impacto es moderado; cabe señalar, que si existe en forma generalizada una cultura de trabajo que se comparte entre los trabajadores de la Unidad Académica Hermosillo, que se ha ido consolidando con los años de vida de la institución.

Es imperativo de alta dirección que estimule la participación del capital humano en el mejoramiento y desarrollo de una cultura de cultura de calidad de acuerdo a los lineamientos de la Norma ISO 9000 2008; recordando cómo se señala en la revisión literaria que cuando nos enfrentamos a cambiar formas de trabajar o hábitos es un trabajo constante que no se da de la noche a la mañana.

La calidad de los servicio y la evaluación de los mismos son elementos que van estrechamente ligados, permitiendo identificar los puntos a mejorar, aunado a que te permiten identificar la mejora continua para poder cumplir con los requisitos del cliente, como la parte central de un SGC. En el caso de la Unidad Académica Hermosillo 58% consideran que cumplen con la calidad de los servicios y 53% no tiene el conocimiento de que se evalué los servicios. Por su parte los responsables de SGC consideran un impacto moderado de estos rubros en la Unidad Académica.

Otro aspecto es que los empleados de las unidad si consideran en un 62% que trabaja en un sistema de calidad, lo que revela la percepción de los empleados en cuanto a lo que para ellos es un sistema de calidad que de acuerdo al impacto desde el punto de vista de los responsables del SGC es promedio. Así lo demuestran las siguientes respuestas, 26% de las acciones para mantener satisfecho al cliente considera la acción de hablar con el jefe sobre la problemática presentada, el impacto es moderado de acuerdo a los responsables del SGC. Por lo que se debe de trabajar más, utilizar las acciones de correctivas y preventivas como lo señala la Norma de ISI 9000 2008. Cabe señalar que esta situación generalizada que se observa en la Institución.

La apreciación de los trabajadores de la Unidad en cuanto a la capacitación del personal, gestión de recursos, mejoramiento del mobiliarios, del servicio y las áreas de trabajo es la siguiente; 77%,67%,68; 53% 51% respectivamente. En contraparte los responsables del SGC consideran 33%, 56%,44%,56% y 44% presentadas en el mismo orden anteriormente mencionados, que lo ubican en un impacto moderado, excepto el mejoramiento de mobiliario que lo consideran escaso. Asimismo en un 94% del capital humano ha evaluado considera que si se logran los objetivos de calidad, mientras el SGC considera que tiene un impacto moderado y en los que respecta el logro de la política de calidad opina los empleados en un 94% que sí y en contraparte el impacto es moderado de acuerdo a los responsables del SGC.

Las respuestas en cada uno de sus rubros permiten observar desde dos perspectivas diferentes, por una parte la evaluación emitida por los responsables de que se cumpla con la certificación del Norma ISO 9000 208 que miden y evalúan los avances y mejora continua para cumplir con los requisitos de la norma de calidad y el impacto de la misma para la generalización de una cultura de calidad que en base a sus evaluaciones emiten una evaluación al trabajo realizado en la Unidad Académica y por otra parte está la percepción del equipo de trabajo evaluado que desde su enfoque y formas de trabajar consideran que si cumplen ; por la cultura de trabajo que los identifica como institución pero que en todos los aspectos abordados en esta investigación revelan el impacto de la certificación en la norma ISO 9000 2008 para generalizar una cultura de calidad; permitiendo observar que sólo se encontraron percepciones similares en las áreas de personal de servicio y administrativo las cuales dependen de la Secretaría General Administrativo, lo que revela la similitud.

Por su parte, los jefes de carrera y encargados de áreas evidencia tener mayor impacto en cuanto a que trabajan con una cultura de calidad, por otra parte el equipo de profesores de las diferentes programas educativos que participaron en la investigación respondiendo el cuestionario, dejaron ver que se encuentran más alejados de la cultura de calidad a pesar de que los jefes de carrera son los responsables de organizarlos, evaluar su trabajo y el servicio que brindan a los estudiantes, el cliente final de este proceso. Asimismo no podemos dejar de lado que todo sistema de calidad para poder mejorar se debe de evaluar y mediar, otro aspecto que viene a diferir en cuanto a la apreciación de los empleados de la unidad y la evaluación que emitieron los responsables del sistema de gestión de la calidad que esta percepción que muestra una brecha en cuanto a lo que se conoce y lo que se percibe. En general todas las áreas evaluadas tienen un impacto bajo en cuanto a compartir una visión o cultura de calidad, impacto nulo en la evaluación de los servicios que impactan directamente en el áreas y seguimiento a las evaluaciones de la calidad. En contra parte todas las áreas de la Unidad Académica consideran que su trabajo es pertinente y contribuyen a al cumplimiento de los objetivos de calidad, lo que revela diferentes apreciaciones entre el personal y el SGC. Queda mucho por hacer en cuanto al cambio de hábitos de las formas de hacer las

evaluaciones y el seguimiento de las mismas; asimismo es importante un programa constante de comunicación organizacional que impregne a toda la comunidad trabajadora la calidad como una forma de vida, que se vera reflejada en cliente satisfechos.

Los resultados de esta investigación es el punto de partida para otras investigaciones para conocer más sobre el impacto los sistemas de calidad en un ambiente laboral, desde un enfoque institucional de acuerdo al alcance de la norma ISO 9000:2008. Lo permitirá identificar cuáles son los elementos a mejorar a nivel para que constantemente se genere la calidad. En cuanto a la Unidad Académica Hermosillo, sugiero que se estructure un programa a mediano y largo plazo que este comunicando, capacitando y evaluando a cada una de las áreas, con el fin de que en un futuro se estandaricen las acciones para evaluar al cliente. Por último, recordemos las recomendaciones de Juran (1995), para obtener una calidad superior se debe de trabajar: Cumplir con las necesidades del cliente a través del desarrollo de la tecnología para producir productos y procesos, a través de la cultura de la organización que vea a la calidad como la meta más importante.

# **POLÍTICAS PÚBLICAS Y FACTORES QUE DETERMINAN LA COMPETITIVIDAD TURÍSTICA DE MORELIA, MÉXICO Y DE ALCALÁ DE HENARES, ESPAÑA**

Rubén Molina Martínez, Universidad Michoacana de San Nicolás de Hidalgo

Melissa Ochoa Galván, Universidad Michoacana de San Nicolás de Hidalgo

## **RESUMEN**

*En este artículo se aborda el análisis de la competitividad turística para las ciudades de Morelia, México y Alcalá de Henares, España, partiendo de los aspectos conceptuales sobre turismo, competitividad turística, políticas públicas, inversión extranjera directa, marketing turístico, recursos culturales y recursos humanos, como factores determinantes de la competitividad turística para estas ciudades. Tras este análisis conceptual se exponen las principales teorías sobre competitividad turística. Los resultados del trabajo de campo muestran que la competitividad turística de Morelia, México está determinada particularmente por los recursos humanos y el marketing turístico; mientras que para la ciudad de Alcalá de Henares, España, la competitividad turística se encuentra determinada por el marketing turístico y los recursos culturales. En este trabajo, los otros factores mencionados no resultaron determinantes para la competitividad turística.*

**PALABRAS CLAVE:** competitividad turística, turismo, políticas públicas, inversión extranjera directa, marketing turístico, recursos humanos, recursos culturales

## **PUBLIC POLICIES AND FACTORS THAT DETERMINE THE TOURISM COMPETITIVENESS OF MORELIA, MEXICO AND ALCALA DE HENARES, SPAIN**

### **ABSTRACT**

*This article deals with the analysis of tourism competitiveness for the cities of Morelia, Mexico and Alcala de Henares, Spain, based on the conceptual aspects of tourism, tourism competitiveness, public policy, foreign direct investment, tourism marketing cultural resources and human resources as determinants of the tourism competitiveness for this cities. After this conceptual analysis, presents the main theories of tourism competitiveness. The results show that the tourism competitiveness of Morelia, Mexico is particularly determined by human resources and tourism marketing; and for Alcala de Henares, Spain, tourism competitiveness is determined by the tourism marketing and cultural resources. In this work, the other factors mentioned were not decisive for the tourism competitiveness.*

**JEL:** L83, L88, M31, M38

**KEY WORDS:** tourism competitiveness, public policy, foreign direct investment, tourism marketing, human resources, cultural resources.

## **INTRODUCCIÓN**

El turismo exige a los destinos turísticos un importante esfuerzo para que ofrezcan a los turistas productos y servicios de mayor calidad. Por consiguiente, la búsqueda de la calidad se ha convertido en un objetivo de los destinos turísticos, lo cual se puede traducir en buscar ser más competitivos.

Las ciudades de Morelia, México y de Alcalá de Henares, España son destinos turísticos reconocidos a nivel mundial gracias a sus productos y servicios turísticos culturales de calidad y de gran valor, además, son ciudades declaradas Patrimonio Cultural de la Humanidad. Para hacer atractivo el turismo en estas ciudades para turistas e inversionistas extranjeros, es necesario que concurren todos los sectores y actores sociales involucrados en esta actividad fundamental. A través de los factores establecidos como competitivos para estas ciudades, estos destinos serán capaces de fortalecer sus productos turísticos o de crear nuevos, por medio de acciones encaminadas a mejorar la calidad, así como para incrementar su competitividad. Por ello, es necesario conocer cuáles son los factores que determinan la competitividad turística de dichos destinos para poder gestionarlos de manera adecuada.

### Definiciones Conceptuales

La evolución de la definición de la palabra turismo ha pasado por tres etapas: la inicial durante la primera mitad del siglo XX cuando, el turismo empieza a ser estudiado como un fenómeno social principalmente por la escuela alemana; la segunda, cuando surge el turismo de masas con el desarrollo de la aviación comercial después de la Segunda Guerra Mundial; y la tercera etapa, con el nacimiento de la Organización Mundial de Turismo, en la década de los setentas, que influye en la alineación de las políticas turísticas nacionales y el reconocimiento de la importancia de su contribución en la economía.

A través de los años, la Organización Mundial de Turismo (OMT), ha evolucionado el concepto de turismo: en un principio, definió al turismo como la suma de las relaciones y de servicios resultantes de un cambio de residencia temporal y voluntario no motivado por razones de negocios o profesionales. Posteriormente, propuso una extensión para incluir “todo movimiento de personas sin tomar en cuenta sus motivaciones”. Y finalmente, la OMT actualizó sus conceptos estableciendo que el turismo comprende las actividades de personas que viajan y permanecen en lugares fuera de su ambiente usual durante no más de un año consecutivo con fines de gozar de tiempo libre, negocios u otros (OMT, 1991).

Se puede definir que el turismo es la combinación de actividades y servicios que son suministradas por organizaciones lucrativas y/o no lucrativas que proveen una experiencia de viaje a los turistas, por ejemplo: el transporte, el alojamiento, establecimientos para alimentos y bebidas, tiendas, espectáculos, entre otras instalaciones y que les proporcionan una satisfacción. Debido a que el turismo es una actividad que depende de una ubicación geográfica determinada, éste obliga a los turistas a elegir entre un destino u otro, los cuales deben ofrecer productos y servicios turísticos de calidad y valor añadido. Por consiguiente, la competitividad y la continua búsqueda de excelencia y calidad se han convertido en objetivos fundamentales de los destinos turísticos. El concepto de competitividad es un concepto complejo, subjetivo y multidimensional. La competitividad se puede aplicar a un amplio rango de entidades económicas, desde un país, hasta un producto o un servicio, pasando por una región, un municipio, un sector económico o una empresa.

La competitividad desde el punto de vista empresarial, se puede considerar desde dos aspectos: la competitividad interna, que se refiere a la competencia de la empresa consigo misma a partir de la comparación de su eficiencia en el tiempo y de sus estructuras internas y la competitividad externa, que está orientada a competir con otras empresas dentro de su mismo sector. Por otra parte, la competitividad gubernamental consiste en ser una entidad competente que busque mejorar la calidad social de sus gobernados, así como agregar valor económico y social las empresas y a la sociedad en general. Para fines de este artículo, se considerará la competitividad a nivel empresarial y gubernamental, ya que desde el punto de vista de la oferta turística, un destino es más competitivo cuando dispone de atributos que son gestionados eficientemente y los hace llegar al consumidor de la manera más adecuada.

Llegando al concepto de competitividad bajo un enfoque turístico, Hassan (2000), define que la competitividad turística es la capacidad de un destino para crear e integrar productos con valor añadido

que permitan sostener los recursos locales y conservar su posición de mercado respecto a sus competidores. Crouch y Ritchie (1999) definen que la competitividad turística es la capacidad de un país para crear valor añadido e incrementar, de esta forma, el bienestar nacional mediante la gestión de ventajas, procesos y atractivos, integrando las relaciones entre los mismos.

Se puede definir el concepto de competitividad turística de la siguiente manera: la capacidad de un destino para crear, desarrollar e integrar a los productos turísticos con un valor añadido que permitan incrementar la derrama económica del turista y el bienestar nacional; aumentar la rentabilidad del sector; sostener los recursos locales y mejorar su posición en el mercado respecto a la competencia a través de distintas estrategias para promover y comercializar la oferta. Ahora bien, a través de las políticas públicas, un destino turístico es capaz de crear o fortalecer sus productos turísticos por medio de estrategias y acciones encaminadas a mejorar la calidad y las condiciones de un destino turístico. Por lo tanto, las políticas públicas son un factor que influyen en la competitividad turística de un destino. Dye (1987), menciona que una política pública es aquello que el gobierno escoge hacer o no hacer.

Para esta investigación, la política pública se define como la decisión gubernamental plasmada en la solución de un problema de la sociedad. A través de la vinculación entre el gobierno y el sector privado, se realizan acciones para hacer de los destinos lugares atractivos para los turistas, y además, para promoverlos como destinos ideales para realizar inversiones en ellos. El termino marketing aplicado al turismo, equivaldría a conseguir un mayor número de turistas que visiten el destino. El marketing turístico se utiliza herramientas propias de la mercadotecnia, pero adaptadas a localidades; desarrolla productos y servicios en el destino para satisfacer las necesidades, creando y potenciando la demanda y además se encarga de promocionar los recursos de un destino (Kotler, et. al 2008). La promoción de un destino turístico y las políticas públicas fomentan la inversión extranjera directa en los destinos turísticos para desarrollar o mantener una infraestructura adecuada en éstos. En la industria turística, la inversión extranjera directa se traduce en mejorar o crear nuevas infraestructuras enfocadas a satisfacer las necesidades de los turistas, es decir, creación de hoteles, restaurantes, marinas, campos de golf, etc. Adoptando la definición dada por Krugman y Obstfeld (1999), la inversión extranjera directa es el flujo internacional de capital mediante los cuales una empresa de un país crea o amplía una filial en otro país.

#### Principales Teorías de Competitividad Turística y los Factores Que la Determinan

Las diferentes teorías de competitividad se han aplicado a las empresas para conocer el entorno en el que se desarrollan y para competir contra otras a través de la creación, innovación y mejora de los productos que se ofrecen en los mercados. Pero también, la competitividad se puede aplicar al sector servicios. Partiendo de la teoría de la ventaja comparativa y la ventaja competitiva, se desarrolla la teoría de la competitividad turística. Crouch y Ritchie (1999), indican que la ventaja comparativa hace referencia a los factores de los que está dotado el destino turístico, es decir, recursos humanos, naturales y culturales; y, la teoría de la ventaja competitiva hace referencia a la capacidad de un destino turístico para utilizar sus recursos de forma eficiente a mediano y largo plazo. De aquí parten otras teorías sobre competitividad turística, así como los factores que la determinan. En general, los estudios teóricos sobre competitividad turística hacen énfasis en los factores que influyen sobre la competitividad turística, como son: las políticas públicas, la inversión extranjera directa, el marketing turístico, los recursos culturales, los recursos humanos, los recursos naturales, la infraestructura, la calidad, el precio, entre otros factores.

#### Políticas Públicas en el Desarrollo de la Inversión Extranjera Directa y Marketing Turístico.

La posición de un gobierno en la elaboración de las políticas públicas en turismo puede ser pasiva, en tanto responde a acciones básicas que afecten la actividad, pero sin influir en su desarrollo, o activa, que se manifiesta en acciones que favorecen de manera integral el desarrollo turístico. Esto implica el reconocimiento de necesidades específicas como dotación de alojamiento en zonas de potencial atractivo,

habilitación turística de espacios protegidos, etc. (Monfort, 2000). En este sentido, el gobierno se encarga de estimular la atracción de inversiones extranjeras para dotar a un destino de nuevas infraestructuras o para mantener o mejorar la capacidad actual de un destino turístico.

Diversos estudios realizados sobre la inversión extranjera directa (por ejemplo, Chen, 2010, u organismos internacionales ECLAC, 2011), han demostrado que gracias a políticas públicas que han facilitado la atracción de inversionistas, se ha tenido un rápido desarrollo en el turismo. A través de la promoción y con ayuda del marketing turístico, las políticas públicas promocionan los atractivos y ventajas de un destino turístico, facilitando el proceso de toma de decisiones de los potenciales inversionistas. Además, el marketing turístico en el sector privado, se encarga de promocionar los servicios y productos que éstos ofrecen, elevando la oferta disponible en el destino. Las políticas públicas se encargan de la planificación, desarrollo y fomento del turismo, mientras que el marketing turístico se encarga de atraer a los turistas a un destino. Es necesario crear una relación entre las políticas públicas y el marketing turístico para llevar a cabo planes y acciones estratégicas para lograr que las ventajas competitivas del destino aumenten.

## MÉTODO

Para analizar cuál de los factores: políticas públicas, inversión extranjera directa, marketing turístico, recursos culturales, recursos humanos, calidad y el precio de los servicios turísticos son determinantes en la competitividad de las ciudades se recurrió a la aplicación de 2 encuestas dirigidas al sector público y privado de cada ciudad: en Alcalá de Henares la dirigida al sector privado se aplicó a 113 encuestados y la dirigida al sector público a un total de 19. En Morelia, la encuesta destinada al sector privado se aplicó a un total de 164 empresas, mientras que la dirigida al sector público se aplicó a 16 entidades. Cada encuesta incluía 23 ítems que examinaban 7 aspectos: precio de los servicios, calidad de los servicios, recursos humanos, recursos culturales, políticas públicas en el turismo, marketing turístico e inversión extranjera directa. Para ordenar las respuestas se utilizó una escala de medición tipo Likert y la información obtenida se procesó mediante una distribución de frecuencias. La confiabilidad de los instrumentos utilizados se calculó mediante el coeficiente Alfa de Cronbach, los cuales oscilaron entre valores de .60 y .85.

## RESULTADOS

### Principales Resultados en Alcalá de Henares, España

El 67% de los encuestados del sector privado consideran que el marketing turístico es el principal factor determinante para la competitividad turística, ya que consideran que una buena planeación de marketing puede traer grandes beneficios a la ciudad, se atraen más turistas, y también se puede ser más competitivo a través de la gestión y desarrollo de planes estratégicos y de marketing. Del sector público, el 78% considera que los recursos culturales son el factor determinante para la competitividad turística, puesto que suponen que éstos generan un valor añadido, fortalecen el desarrollo de políticas y programas para impulsar dichos recursos; además, incrementan las ventajas comparativas del destino aumentando el inventario de atractivos culturales (por ejemplo, construyendo museos o aumentando su número de patrimonios culturales).

### Principales Resultados en Morelia, México

Al igual que el sector privado de Alcalá de Henares, el 54% de los encuestados del sector privado de Morelia consideran que el marketing turístico es el principal factor determinante para la competitividad turística, ya que consideran que por medio de las actividades del marketing turístico se promociona, se comercializa y se gestiona a la ciudad, llevándola a ser más competitiva. Para el sector público, el principal factor determinante para la competitividad turística son los recursos humanos (62%), ya que

consideran que estos recursos son un elemento importante para ser más competitivos, y si los recursos humanos están cualificados, se pueden obtener ventajas competitivas en el sector turístico.

## CONCLUSIONES

La competitividad turística de las ciudades estudiadas es el resultado de las interrelaciones que se establecen entre los factores descritos en el trabajo de campo. Es decir, los factores de la competitividad turística van a depender de la capacidad de los recursos humanos para desarrollar y fortalecer al turismo; de los recursos culturales con los que cuenta el destino turístico y de las herramientas del marketing turístico para atraer a los turistas y para promocionar al destino. Además, para que un destino sea exitoso, es necesario que el gobierno gestione de manera adecuada los elementos sociales y económicos que influyen en el sector turismo, así como el estimular la creación de nuevos productos para permanecer en el mercado competitivo y añadir valor al destino. El gobierno juega un papel importante, pero también el sector privado, por lo que se tienen que tomar acciones y medidas en conjunto para que se cuente con lineamientos y estrategias más adecuadas y apropiadas, que satisfagan las necesidades tanto de anfitriones como de visitantes.

## RESUMEN

*Este artículo muestra una exploración teórica de las principales publicaciones acerca de la Logística Inversa (LI) en donde se revisan casos exitosos de la industria automotriz, electrónica, comercio al detalle, reciclaje de plásticos y cómo se ha mejorado la competitividad empresarial en México.*

**PALABRAS CLAVES:** Logística Inversa, Competitividad, México

## EXPLORATION IN REVERSE LOGISTICS BUSINESS COMPETITIVENESS IN MEXICO

### ABSTRACT

*This paper presents a theoretical exploration of the major publications on Reverse Logistics (RL) where we review case studies in automotive, electronics, retail, plastic recycling and how it has improved business competitiveness in Mexico.*

**JEL:** F64, M10, M16, M19

**KEYWORDS:** REVERSE Logistics, Competitiveness, México

## INTRODUCCIÓN

La creciente competencia entre las diversas compañías en un mercado en el que los factores de diferenciación son cada vez menores, ha obligado a las empresas a desarrollar nuevas estrategias que les permitan incrementar su nivel de competitividad empresarial. Una de ellas es mejorar las políticas de servicio al cliente, con estrategias de ventas y publicidad (famosas y frecuentes son las frases conocidas, tales como: “si no está satisfecho, le devolvemos su dinero”, “satisfacción garantizada”, “utilízelo y si en 60 días no obtiene resultados recibimos el producto sin hacer preguntas”, entre otras). Desde la perspectiva del cliente son privilegios y derechos que permiten disfrutar de una mayor calidad tanto en el servicio como en el producto y que cada vez son más comunes.

Este principio es una mejora en el servicio al cliente desde la perspectiva del consumidor, de igual manera, es importante considerar la postura e implicaciones que este tipo de servicio representa para las empresas. Considerando lo expuesto anteriormente, para los empresarios surgen algunos cuestionamientos como ¿Existe alguna herramienta que permita administrar el flujo de mercancías desde el consumidor hasta el fabricante? ¿Qué tipo de implicaciones tiene para el empresario el ofrecer este servicio adicional al cliente? ¿Qué motiva al empresario a prestar este tipo de servicio? ¿Cuáles serán los costos? y sobre todo, si estas acciones le permitirán elevar su nivel de competitividad empresarial. El estudio de todo ese flujo de productos en el camino opuesto, es decir desde el consumidor hasta el fabricante, e incluso hasta el proveedor del fabricante, es precisamente lo que se ha denominado en los últimos años como **Logística Inversa** (Rogers & Tibben- Lemcke, 2002).

## REVISIÓN DE LITERATURA

### Antecedentes

El origen de la Logística Inversa se explica desde el momento en que los empresarios deben atender varios aspectos, tales como: el retorno o devolución de las mercancías, el reciclaje de envases, restos de embalajes, desperdicios peligrosos, tratamiento de productos obsoletos o de inventarios estacionales, en cualquier eslabón de la cadena de suministro, procurando que su recuperación sea efectiva y económica (Ballesteros & Ballesteros, 2007). Durante los años ochenta, la definición se inspira en el movimiento de los flujos en contra de las corrientes tradicionales de la cadena de suministro, o como dijo Lambert y Stock (1981) "va por el camino equivocado". También Murphy (1986) y Murphy y Poist, (1989) son de los primeros autores que utilizan el término de Logística Inversa como tal, enfocándose en aspectos de la distribución en reversa como "el movimiento de mercancías de un consumidor a un productor en un canal de distribución". En el Council of Logistics Management, Stock (1992), aportó la primera definición conocida de Logística Inversa:

*"...es un proceso mediante el cual las empresas pueden ser más eficientes en términos ambientales a través del reciclaje, la reutilización y la reducción de la cantidad de los materiales utilizados. Visto en un estrecho margen, se puede considerar como la distribución en reversa de los materiales entre los miembros del canal. Una visión más holística de la Logística Inversa incluye la reducción de materiales en el sistema hacia adelante de tal manera que haya menos flujo de materiales hacia atrás, y que la reutilización de materiales sea posible, y con esto facilite el reciclaje".*

Pohlen y Farris (1992) definen a la logística inversa, manteniendo lo ya presentado por el sentido de la dirección opuesta a las corrientes tradicionales de distribución:

*"Logística Inversa es un término amplio que se refiere a la administración de la logística, así como, a la eliminación de residuos tanto peligrosos como los no peligrosos procedentes de envases y productos. Se incluye la distribución inversa que hace que los bienes y la información fluya en la dirección opuesta a las actividades de la logística normal".*

En 1998, y hasta la actualidad, surge el primer grupo de trabajo internacional de investigación acerca de la Logística Inversa, denominado REVLOG, fundado con la participación de seis universidades de países como Holanda, Grecia, Francia y Alemania, en la coordinación de la Universidad Erasmus Rotterdam, de Holanda, en donde el objetivo principal es analizar los temas clave de la Logística Inversa, con el fin de analizar su impacto en diversas industrias y la sociedad, y construir un marco que vincule estas cuestiones; REVLOG define la Logística Inversa como:

*[...] son todas las actividades de logística llevadas a cabo para recoger, desensamblar y procesar los productos usados, las partes de los productos y/o materiales tiene la finalidad de asegurar una recuperación sostenible y amigable con el medio ambiente".*

El Grupo Europeo de Trabajo sobre la logística inversa, (ver De Brito y Dekker, [2004]) en donde proponen la siguiente definición:

*"Es el proceso de planificación, ejecución y control de los flujos hacia atrás de las materias primas, inventario en proceso, empaque y productos terminados, desde su fabricación, distribución o punto de uso, a un punto de recuperación o de punto de eliminación adecuada".*

### Logística Inversa

Ha habido una serie de tesis doctorales y artículos científicos en el campo de la logística inversa, a continuación, se describen algunas de ellas. Thierry y otros (1995) estudió el impacto de la gestión de recuperación de producto en la industria electrónica y del automóvil. Se prestó especial atención al impacto en el diseño de productos, la logística y las relaciones entre los actores. El autor hizo uso de dos casos de la vida real: una empresa manufacturera de copiadoras y la recuperación del producto del fabricante de automóviles BMW. Por otro lado, Jahre (1995), investigó el desempeño de los sistemas de recolección y reciclado de los residuos domésticos, haciendo hincapié en los materiales de embalaje. Dos aspectos principales se tuvieron en cuenta: el grado de separación en la fuente y la cooperación para la recolección. Los datos empleados fueron proporcionados por la Asociación de Recuperación y Reciclaje de la Unión Europea. Asimismo, Van der Laan (1997) analizó los efectos de re-manufactura en control de inventarios, poniendo especial atención a los mecanismos de coordinación entre la fabricación y re-manufactura de operaciones y acciones adecuadas para un nivel aceptable de costo-eficiencia. Los resultados fueron probados con datos reales de Volkswagen en piezas del coche de re-manufactura.

Fleischmann M. , Bloemhof-Ruwaard, Dekker, Van der Laan, Van Nunen, & van Wassenhove (1997) compilan una revisión de Investigación de Operaciones (IO) modelos para la logística inversa. El examen está organizado en términos de distribución, control de inventarios y los modelos de planificación de la producción. Los autores señalaron la necesidad de enfoques globales, teniendo en cuenta los aspectos económicos y los aspectos ecológicos en la cadena de suministro. Gungor y Gupta (1999) presentaron una revisión exhaustiva de más de 300 artículos o textos sobre la fabricación con conciencia ambiental y la recuperación del producto. Los autores observan que las cuestiones ambientales son cada vez más populares entre la sociedad, los gobiernos y la industria. Además, identifican la necesidad de desarrollar instrumentos cualitativos y cuantitativos para el apoyo adecuado en la toma de decisiones de tipo ambiental para la fabricación de sus productos.

Carter y Ellram (1998), elaboran una revisión del transporte, envasado y la compra. Los autores deducen desde la literatura que hay factores internos y externos que afectan al comportamiento de las organizaciones con respecto a la Logística Inversa e indican las oportunidades para la investigación futura. De Brito et al. (2003) presentaron una revisión de estudios en el caso de la Logística Inversa, en la cual abarca diversos aspectos como el diseño de redes, control de inventario y tecnología de la información. En resumen, la definición de la Logística Inversa ha cambiado con el tiempo, comenzando con un sentido de dirección inversa, pasando por un énfasis excesivo en aspectos ambientales, de regreso a los pilares originales del concepto, y, finalmente, la ampliación de su ámbito de aplicación.

### Competitividad

La competitividad se define como la capacidad de competir. Es decir la capacidad de diseñar, producir, y ofrecer productos superiores en el mercado, a los ofrecidos por los competidores, considerando el precio (Ambastha & Momaya, 2004). Por lo tanto una organización es competitiva ante los ojos de sus clientes si ésta puede entregar un mejor valor comparado con el de sus competidores, logrando precios más bajos con beneficios equivalentes o superiores a las de sus competidores. El valor del cliente por lo tanto, se puede considerar como la ventaja percibida en lo referente a lo que este exige (Valenzo, Martinez, & Bonales, 2010).

### **METODOLOGÍA**

Este artículo utilizó una metodología de carácter exploratorio ya que pretende examinar de manera exhaustiva el tema de la Logística Inversa tanto de revistas internacionales, nacionales, tesis y casos de

éxito en empresas que han puesto en marcha programas de Logística Inversa en México y que les ha permitido mejorar su competitividad empresarial.

## RESULTADOS

### La Logística Inversa como factor de competitividad empresarial

El desarrollo de la logística en la empresa durante las últimas décadas ha sido significativo debido a la posibilidad de lograr ventajas competitivas que permitan incrementar su competitividad. Hoy en día existe la posibilidad de recuperar y aprovechar económicamente aquellos productos que dejan de satisfacer las necesidades del consumidor, lo cual genera un flujo de materiales y productos hacia el productor denominada Logística Inversa (Cure, Meza, & Amaya, 2006).

La Logística Inversa se ha convertido en una importante herramienta competitiva en los últimos años, ya que dicha área envuelve todas las etapas de las cadenas de suministro en varios sectores industriales (Cruz-Rivera & Ertel, 2010). Jayaraman & Luo (2007), realizaron su propia clasificación de las ventajas competitivas al llevar a cabo programas de Logística Inversa (ver Tabla #1). En donde el rol de la Logística Inversa es considera como una fuente de retroalimentación tomando como factor principal la información. El análisis de las razones del retorno pueden ayudar a identificar las dificultades en los procesos de producción, distribución, así como, para promover cambios en la política comercial o en el diseño del producto.

Tabla 1: Ventajas Competitivas de la Logística Inversa.

Ventajas Competitivas Tangibles	Ventajas Competitivas Intangibles
La recuperación de valor de los productos utilizados proporciona un buen rendimiento de las inversiones y nuevos mercados para las mercancías retornados. Ofrecer productos "verdes" pueden ayudar a las empresas a retener clientes y colaboradores conscientes del medio ambiente, además la producción de productos más ecológicos pueden reducir las obligaciones futuras, las tasas de los seguros y los costos de disposición de los clientes	Los retornos por filantropía y de buena voluntad pueden significativamente mejorar la imagen corporativa.  Retroalimentación de la información de los productos retornados pueden proporcionar múltiples beneficios como conocer datos sobre la magnitud de los flujos retornados, así como, los mercados potenciales para diversas operaciones de recuperación.
Los bienes retornados pueden ofrecer una perspectiva detallada sobre la eficacia de la comercialización, el rendimiento del producto, las expectativas del consumidor y la rentabilidad de la línea de productos. Las políticas de extensión de retornos tales como: opciones de localización para los retornos, el pago del envío y el reembolso rápido a los clientes, todos han tenido un alto crecimiento tanto las operaciones realizadas en línea como fuera de línea.	Ofrecen a los detallistas y a los proveedores la oportunidad de capturar la riqueza de la información que puede ser obtenida de los productos retornados.  Proporciona la oportunidad para medir las reacciones, opiniones y satisfacción de los clientes con respecto a los atributos físicos de los productos retornados.

### Logística Inversa Como Factor de Competitividad: Casos de Organizaciones en México

La logística inversa es un factor de competitividad para muchas empresas u organizaciones a nivel global y el caso de México, no es la excepción. En este apartado, se abordan algunos ejemplos de empresas establecidas en México que llevan a cabo la práctica de la Logística Inversa. La industria automotriz presenta algunos aspectos relevantes de esta industria, particularmente en aquellos denominados Vehículos al Final de su Vida Útil (ELV por sus siglas en Inglés, que se refiere a automóviles y camiones ligeros con un peso menor a 3.5 toneladas) (Togawa, 2006). El caso de México, genera año con año una creciente cantidad de productos al final de su vida útil, los cuales requieren de un manejo adecuado para evitar impactos negativos al ambiente y otros sectores (CESOP, 2004; AMDA, 2005).

En el caso de los ELV en México, no existen leyes integrales ni planes específicos para su manejo, además de esto, se suma la escasez de información acerca de la flota vehicular (Cruz-Rivera & Ertel, 2010). El actual manejo de ELV en México se rige por las leyes del mercado, donde solamente aquellos materiales susceptibles de ser comerciados son recuperados y reciclados, y en donde el objetivo principal de los actores de la cadena es obtener el mayor beneficio económico posible (Alvarez, 2007).

Uno de los principales productos recuperados de los ELV son los neumáticos viejos de autos, la cual es ampliamente utilizada como combustible complementario por la industria del cemento en México (CEMEX 2007) en (Carranza- García, 2007). Sin embargo en México la empresa Tiresys desarrolló un proceso tecnológico ambiental de bajo costo para la trituración y reciclado de neumáticos en la que se requiere poco consumo de energía eléctrica, además de ofrecer un esquema de movilidad y modularidad, cualidades que permiten moler una cantidad considerable de llantas anualmente y destinarlas en la fabricación de concreto hidráulico (Noticitrus, 2010). Esta empresa dio el primer paso y crearon el "llancreto", una mezcla de neumáticos de desecho y concreto. Y lo usaron para pavimentar una calle que se estima puede durar 20 años con un mínimo de mantenimiento y condiciones de seguridad promedio.

La novedosa técnica promete resolver el problema del reciclaje de este producto altamente contaminante. Este método también puede utilizarse en la fabricación de impermeabilizante, empaques para motores y en la industria de bolsas y tapetes, así como suelo de espacios recreativos, entre ellos, canchas de fútbol, parques y jardines infantiles, por lo que el producto de la galardonada empresa tiene diferentes nichos de oportunidad. Otra industria ligada directamente a los ELV, es la de los acumuladores automotrices en México existen plantas en donde se reciclan baterías automotrices de desecho con el fin de recuperar la materia prima (polipropileno y plomo), para la fabricación de acumuladores así como la búsqueda de programas de Logística Inversa en donde los miembros de la cadena están altamente involucrados, todo este cambio se ha venido dando gracias a la legislación impuesta a todos los comercializadores de este tipo de productos ya que actualmente, cada vez que un cliente compra un acumulador, los distribuidores de cada marca toman a cambio el casco usado.

De esta forma, cuando el fabricante de acumuladores les provee de los nuevos acumuladores, los distribuidores regresan los cascos usados o de lo contrario tienen que pagar una multa por no haber recuperado ese casco a cambio y es ahí donde surge toda una industria de recolección de este tipo de productos, hoy en día un casco encontrado en un basurero o abandonado en alguna casa tiene un valor de 200 pesos (aproximadamente 15 dólares americanos) por lo que hace muy atractivo el que la comunidad en general este en búsqueda de este producto. Cabe señalar que actualmente existen acuerdos entre fabricantes de ciertos componentes y recicladores, tal es el caso del reciclaje de acumuladores automotrices, para el cual los distribuidores recolectan los productos al final de su vida útil y los envían a reciclar a la planta ENERTEC en Nuevo León (LTH, 2008), (Autobaterías, 2008). Otro de los casos de éxito en México, se da en la industria electrónica, en particular, de firmas trasnacionales como IBM y Hewlett Packard (HP), las cuales fabrican y comercializan herramientas, programas y servicios relacionados con la informática. Ambas forman parte del clúster electrónico de Guadalajara, Jalisco, conformado por alrededor de 700 empresas.

IBM tiene presencia en más de 160 países del mundo y ha tenido en los últimos cuatro años ahorros multimillonarios en costos de operación, debido a que hace tiempo implementó acciones en su cadena de suministros. Desde 1990, posee un programa de gestión de recuperación de productos en varios países europeos y, además, tiene una nueva línea de ordenadores fabricados con componentes recuperados a bajo precio, llamado ETN. Un ejemplo claro de esto es el que IBM desarrolla productos para que éstos puedan ser adaptados a nuevas tecnologías, ya que la visión que busca la empresa es cómo diseñar productos para que éstos, desde el campo de acción, no tengan la necesidad de ser transportados, es decir, lo que se busca es que puedan ir creciendo o adaptando a las nuevas tecnologías desde un nuevo nivel de ingeniería.

También es importante resaltar que esta empresa se ocupa de reciclar el empaque de los productos (cartón y plástico) y concentrarlos en centros en los que tienen mejor uso y disposición, localizados en Nueva York, EU y Canadá (CNNEXPANSION.COM, 2009).

En el caso de Hewlett- Packard HP, esta empresa facilita al cliente el reemplazo de productos y la disposición de los mismos por mecanismos que minimizan el impacto al medio ambiente. La empresa ha desarrollado un programa denominado Cadena de abastecimientos “verde” de HP, un modelo práctico de Logística Inversa en la que se busca seguir con los esfuerzos que inició la empresa desde hace más de 20 años, cuando comenzó a reciclar en más de 50 países, y para finales del año 2010, lograron la meta de reciclar alrededor de un millón de toneladas de productos electrónicos y cartuchos de impresora de la marca HP. Esto tiene una alta importancia ya que en el año 2007, solamente se lograron reciclar 5,000 toneladas de productos electrónicos y cartuchos de impresora.

La industria del comercio al detalle está considerada como la segunda industria más grande del mundo, esto es debido a la gran cantidad de negocios que están relacionados directamente a esta industria y consecuentemente al número de empleados que trabajan dentro de este sector (Blue Star, 2011). Un caso exitoso de este sector en México, es la empresa Liverpool que ha logrado reducir sus mermas en un 60 por ciento utilizando los programas de Logística Inversa lo cual se traduce en un valor de aproximadamente 35 millones de pesos. El director de logística de Liverpool, Antonio Domínguez, explicó que el costo logístico de Liverpool asciende a mil millones de pesos al año, sin embargo, aseguró que han llevado a la compañía a un nivel muy bajo de pérdidas, esto en relación con lo que cuesta la mercancía (T21, 2010). Las acciones implementadas por parte de la empresa Liverpool en su programa de Logística Inversa, Domínguez destacó que hace dos años, la empresa invertía 26 millones de pesos al año en la compra de ganchos porque éstos se desechaban.

Hoy en día, se retorna el gancho, se clasifica y se regresa al proveedor; de esta manera se reutilizan hasta cinco veces y el costo ha bajado a 12 millones de pesos al año. Cadwell (1999) destaca el caso de FEMSA Coca Cola, localizada en la Ciudad de México, esta compañía es el cuarto productor más grande botellas de plástico a nivel mundial, FEMSA Coca Cola implementó Numetrix/3 un software especializado de Logística Inversa; esta herramienta táctica de planeación hizo posible mejorar el programa de promociones especiales de modo que los picos en la demanda coincidieran con los picos de retorno a inventario de botellas, reduciendo la necesidad de fabricar mas botellas en respuesta a una nueva demanda. Y finalmente, porque la disponibilidad de botellas fue mejor comprendida, la producción de botellas de plástico no retornables fue reducida, esto tuvo como consecuencia una reducción en el capital que FEMSA tenía en inventario de botellas almacenadas.

## CONCLUSIONES

### Discusión

Hace más de 30 años las cadenas de suministro trataban de especializarse en la Logística Directa. Actualmente los productos siguen fluyendo hasta el cliente final, con la enorme diferencia de que ahora sabemos que existe un flujo creciente de productos que van a regresar. Lo que confirma que aún no se están llevando a cabo estas prácticas de Logística Inversa de manera generalizada en las empresas y organizaciones y solamente son pocas, principalmente, las internacionales las que ya han comprobado los beneficios que les puede aportar un manejo adecuado de la Logística Inversa como factor de competitividad. Y dentro de los beneficios que aportan el realizar programas de Logística Inversa podemos destacar los siguientes:

*Incrementar la competitividad y mejorar la rentabilidad de las empresas para acometer el reto de la globalización y de esta manera lograr ventajas competitivas sostenibles.*

*Mejorar la imagen de la compañía ante la opinión pública, posicionando a la organización de mejor manera que sus principales competidores*

*Optimizar la administración comercial nacional e internacional en donde se visualice las oportunidades internacionales, de comercializar todos aquellos productos que han sido retornados por alguna de las razones ya expuestas anteriormente.*

*Coordinación óptima de todos los factores que influyen en la decisión de compra: calidad, confiabilidad, precio, empaque, distribución, protección y servicio.*

Ahora en relación a los casos de estudio planteados, se puede comentar que existe muy pocas empresas en México que lleven a cabo las prácticas de Logística Inversa, claro sin contar a las empresas transnacionales que realizan este tipo de prácticas en diversos países y que han comprobado los beneficios, ahora bien, para el caso de México se puede mencionar que los casos mostrados en este ensayo (industria automotriz, industrias derivadas del sector automotriz, la industria electrónica, industria del comercio al detalle) son algunos de los ejemplos de éxito más representativos en nuestro país, lo que ha permitido obtener una mayor competitividad en cada uno de los sectores en los que participan y compiten. A modo de conclusión, podemos afirmar que los programas de Logística Inversa a nivel internacional han podido generar grandes cambios, sobre todo en el aspecto ambiental, y esto ha permitido, a las empresas generar valor al servicio ofrecido al cliente, con respecto a los productos que adquiere, sin embargo, no hay que olvidar que la Logística Inversa se da en gran medida entre empresas.

Ante esto, la finalidad de este estudio fue el de explorar y discutir los marcos teóricos disponibles en materia de Logística Inversa para interpretarlos y determinar si proporcionan un mayor nivel de competitividad empresarial en México. La Logística Inversa está cada vez más presente en el mundo empresarial. En un entorno competitivo, muchas empresas se han percatado de que la resolución de los contratiempos relacionados con el flujo inverso de las mercancías puede implicar una reducción significativa de costos. La Logística Inversa es sin duda una filosofía que cualquier empresa debe agregar a su entorno, debido a todos los factores ya mencionados y ante la globalización que se está dando, es importante tener un planteamiento estratégico de la Logística Inversa. Las actividades de Logística Inversa sirven como herramienta de apoyo a la competitividad de las organizaciones, en la medida en que refuerza los lazos entre éstas y el cliente, haciendo a este último sentirse importante para el proveedor. Un buen servicio en todo el sentido de la palabra, es decir, que tenga en cuenta todas las posibilidades de contacto con el cliente, hace que éste sienta que le están cumpliendo con sus requerimientos y, por lo tanto, que la empresa se mantenga en una buena posición en el mercado.

Otro aspecto a resaltar es que el cliente es lo más importante, y éste se ha convertido en el factor más influyente cuando se pretende establecer políticas públicas y empresariales, esto con la finalidad de garantizar que la relación que se dan entre el cliente-empresas-gobierno sea lo más cordialmente posible conciliando los intereses de éstos actores. Y siguiendo esta misma idea de la importancia del cliente, en todas las definiciones de Logística Inversa se incluye a éste, bien sea como consumidor final del producto o como una organización intermedia en el proceso de la cadena de abastecimiento. Y cualquier estrategia que las organizaciones pretendan implementar para su funcionamiento, usualmente tiene como objetivo primordial la permanencia en un mercado determinado por su propia actividad. Y cabe recordar que Quien determina la factibilidad de esta permanencia es el cliente; ya qué es desde su percepción la importancia que tengan los productos o servicios que son adquiridos. De ahí las actividades de Logística Inversa sirven como herramienta de apoyo a la competitividad de las organizaciones, en la medida en que refuerza los lazos entre éstas y el cliente, haciendo a este último sentirse importante para el proveedor.

También se puede concluir que existen pocas organizaciones y empresas preparadas en México para implementar un programa de Logística Inversa. Se debe, entonces, continuar trabajando en una

renovación de la mentalidad tanto de los consumidores, proveedores, empresarios y políticos, en el que puedan aprender a detectar las oportunidades que ofrece este tipo de programas. Y es por lo anteriormente mencionado que en la parte académica, especialmente en las universidades y centros de investigación se debería hacer un esfuerzo en las reformas curriculares para establecer o implementar la cátedra de Logística Inversa, así como de la Administración de la Cadena de Suministro Verde en correspondencia con las estrategias ecológicas.

Julio Cuauhtémoc Guerrero Dávalos, Universidad Michoacana de San Nicolás de Hidalgo

## RESUMEN

*En buena parte debido a los avances del conocimiento científico, la administración enfrenta en este siglo XXI un cambio de paradigmas que suponen una transformación, no sólo de sus planteamientos esenciales como una disciplina científica, sino también de sus propios métodos e incluso, de la visión que ésta guarda sobre su objeto de conocimiento y praxis: las sociedades humanas. Ahora bien, con base en lo anterior, ¿puede afirmarse que tales transformaciones apuntan a su desarrollo evolutivo? La respuesta es afirmativa, si se atiende a que los nuevos paradigmas observan de manera más certera al universo social en que la administración se inserta y, por ende, le permitirían ofrecer mejores soluciones para ayudar a que ese mismo universo se desarrolle.*

**PALABRAS CLAVES:** administración, cambios, sociedad

## ADMINISTRATION: EVOLUTION AND CHANGE IN A CHANGING SOCIETY

### ABSTRACT

*In large part due to advances in scientific knowledge, management faces in this century a paradigm shift involving a transformation, not only their essential approach as a scientific discipline, but also of their own methods and even of the vision it keeps on his object of knowledge and practice: human societies. Now, based on the above, it can be argued that such transformations point to their evolutionary development? The answer is yes, if we look at that new paradigms observed in more accurate the social universe in which the administration is inserted and, therefore, would allow better solutions to help develop that same universe.*

**KEYWORDS:** Management, Changes, Society

### INTRODUCCION

Como nunca antes en la historia, la ciencia ha avanzado en la obtención de nuevos conocimientos y en la creación de tecnologías, lo cual ha provocado una transformación que abarca, incluso, su filosofía como disciplina. El abandono paulatino de los postulados de la ciencia clásica, ha significado también dejar atrás el antiguo ideal de un universo inmutable, de un orden establecido donde tanto los hechos y sus causas, como el conocimiento, iban acumulándose en una larga cadena, dispuesta para que las generaciones venideras hicieran uso de ellos frente a una realidad más o menos similar a las de sus predecesoras.

En el siglo XXI la propia forma de leer la historia de la administración ha variado de perspectiva, pues – tal como la ciencia histórica- ha dejado de verse como un recuento, a menudo cronológico y lineal, de hechos y sucesos, para atender más a los contextos donde éstos se desarrollan, lo cual “permite esclarecer condiciones que posibilitan la comprensión de los llamados sucesos revolucionarios que tenemos

actualmente de la ciencia” (Kuhn, 1983), producto de la pérdida de vigencia de los viejos paradigmas, ante las expectativas que plantea la realidad presente, cada vez más acelerada.

Además, de acuerdo con el texto de referencia, ha surgido “la necesidad de pensar en la historicidad de la administración como un conjunto de esquemas” en función de las cuales las organizaciones han administrado los recursos a su alcance, siempre, como decíamos, en relación con un contexto -ya temporal o material-específico, que de esta forma las condiciona y hasta puede llegar a determinar sus acciones, como actualmente ocurre.

Por otra parte, no sólo el acercamiento histórico a la teoría administrativa ha cambiado en tiempos recientes. También lo ha hecho su idea sobre el mismo contexto que, en términos generales, se plantea aquí como un “universo entrópico” y cambiante, caótico y prácticamente impredecible que, empero, puede ser intervenido mediante un nuevo instrumento: el pensamiento sistémico, “una nueva visión y un nuevo método que da cabida al azar, al propósito y a la voluntad..., porque considera la realidad no como una serie de cadenas causales sino como una red de sistemas, y sustituye la relación causa / efecto por la de productor y producto” (Mora Faustoy Aguilar García).

Esto anterior se refleja en la teoría de la administración dado que, en tanto ciencia, ha sido permeada por los nuevos planteamientos del conocimiento científico desde hace ya algún tiempo. De acuerdo con Mora Fausto y Aguilar García, la teoría administrativa, específicamente la inaugurada con la tesis de Frederick Taylor en el siglo XX, se adhirió “como una actitud y una filosofía”(Optner L., Stanford, 1978) a los principios científicos, por entonces todavía impregnados de los planteamientos clásicos de los científicos emanados de la revolución renacentista, quienes –como Galileo Galilei- propusieron el uso de los instrumentos matemáticos para develar los principios causales de los fenómenos de la naturaleza.

De esta suerte, cuando los paradigmas científicos cambiaron, tras “el abandono de un modelo de comprensión de la realidad estático, como el newtoniano, con uno de carácter dinámico como el planteado por la física einsteniana” (Optner L., Stanford, 1978), también lo hizo la teoría administrativa, que pasó del modelo estructural –en función del primer esquema- a una Teoría de Sistemas de la Organización, inspirada en Física de Albert Einstein y según la cual, existe un “universo que interactúa en el cambio orgánico” (Optner L., Stanford, 1978),

En ese marco, uno de los cambios que se presentaron en los modelos administrativos tras la adopción de las teorías científicas, está relacionado con la concepción del trabajo y del propio trabajador. Taylor hablaba de un Homo economicus, concepto que destacó entre los varios que se plantearon en el siglo anterior, mientras que otros autores hablaron de un ser social, de un ser organizacional e incluso, de un ser complejo. Según los aportes teóricos de Kuhn, las variantes en las perspectivas de la administración dependerán de la modificación de los conceptos de organización, hombre, trabajo y entorno. Así, mientras que –por ejemplo- para la Teoría de la Burocracia, cuyo énfasis está en la estructura organizacional, el hombre es un ser que se organiza en función de un objetivo mayor: el de la misma organización, para la Teoría de los sistemas el enfoque debe recaer en el ambiente, el hombre es un ser funcional que interactúa en un tipo de organización ‘abierta’.

El texto de referencia señala al menos ocho tipos de teorías o modelos administrativos, cuyas diferencias más importantes derivan, como se decía más arriba, de la concepción que cada una plantea de hombre, trabajo, contexto y organización; de fondo, la diferencia parece emanar del cómo se ponen en función esos cuatro elementos para lograr un fin dado, competente con las tareas de la administración en el universo de las empresas. Mora Fausto y Aguilar García refieren que, con base en la conceptualización de los paradigmas del mismo Kuhn, se pueden dividir dichos modelos en dos vertientes específicas: las que conciben a la administración como un sistema cerrado –las teorías Clásica y Neoclásica, de la Burocracia y de las Relaciones Humanas-, ad hoc con los postulados de la ciencia clásica y su universo inmutable, ordenado; y, aquellas -teorías Comportamental, Estructuralista, de Sistemas y de la Contingencia- que

conciben a la administración como un sistema abierto, donde la llamada entropía funciona como una “fuerza de degradación intrínseca al proceso organizacional”.

Independientemente de cuál de esas teorías resultó mejor para los fines supuestos, la ciencia administrativa no parece haberse quedado con un paradigma en particular, sino con elementos variables, en función de lo que el contexto pueda determinar. Así como tampoco se quedó con los primeros esquemas de la ciencia, sobre todo porque su carácter social la alejó de los esquemas meramente científicos de la Física y otras disciplinas estrictamente racionales, aportándole un dinamismo que se acentuó cuando –al comienzo del nuevo siglo– la nueva sociedad se transformó radicalmente debido al uso de la tecnología; la emergencia de la “sociedad del conocimiento” en la era del postcapitalismo, planteó a la administración nuevos retos a resolver; el más importante quizá, sea el de la aparición de una “Economía del Conocimiento”(Valez) que deriva de la conciencia global de la finitud de los recursos naturales.

El tiempo presente ha desechado la idea de la riqueza como sinónimo de la explotación de los ecosistemas; incluso, el concepto de riqueza material va perdiendo fuerza frente a la nueva valía del conocimiento y el saber humanos. De acuerdo con los teóricos, en ese contexto sólo prevalecerán las “organizaciones con procesos que les permitan concebir modos eficaces para poder operar y ser efectivas, en un entorno caracterizado por nuevos modos de producción y modernos y vertiginosos procesos tecnológicos; organizaciones que sepan aprovechar el conocimiento existente y ser productoras a su vez de conocimiento, es decir, organizaciones del conocimiento” (*Op. cit.*)

Todo ello, estos “saltos cualitativos”, plantean a la administración, y con ésta a las organizaciones, la necesidad de nuevos paradigmas y métodos que le permitan responder a las exigencias del contexto social al cual pertenece. De esta forma, arribamos a la aparición de la “Teoría de Sistemas” de Ludwig Von Bertalanffy, que plantea una mejor comprensión de las distintas teorías administrativas y, una vez aplicada a las mismas, es capaz de revolucionar “profundamente los antiguos modelos que se tenían” (*Op. cit.*).

De acuerdo con nuestros autores, ha sido “el cambio dinámico y no la evolución” lo que ha transformado a la ciencia administrativa. Ese dinamismo también ha influenciado profundamente la acción de las empresas, que han debido crear nuevos modelos, tanto administrativos como de comprensión de la realidad, para responder a las variantes inusitadas de los últimos años en las sociedades humanas. Ello supone un cambio sustancial en la teoría administrativa, pues ha pasado de obviar la ‘irregularidad’ a adaptarse a ella, e incluso, a tratar de intervenirla para “mantener la estabilidad en el desequilibrio”.

No obstante a dichos cambios paradigmáticos, la nueva teoría, tendiente a la apertura, interacción y adaptabilidad de las organizaciones como sistemas, que son a su vez, observadas como parte de sistemas generales, todavía no termina de configurarse, ya que “la noción de sistemas está asociada a un nuevo modelo de ciencia” todavía inacabado(*Op. cit.*). Autores como Edgar Morin (Morin, 1994). advierten la necesidad de ampliar las distintas teorías, conformándolas en una Teoría General de la Organización, que rebase el pragmatismo de los esquemas teóricos y metodológicos propuestos hasta ahora en función de la actividad de las empresas. A ello, habría que agregar un planteamiento más depurado del ser humano – actor esencial en la teoría administrativa, sea como trabajador, cliente o productor-, ya visto antes, en las teorías con sistemas abiertos, como un ser complejo e incluso integral.

Por ahora, el mayor aporte de los sistemas abiertos inscritos en una incipiente Teoría General de la Administración está, precisamente y como se ha dicho ya, en la observación del entorno como un factor determinante para la aplicación de los modelos de organización. Ello es especialmente visible en la Teoría de la contingencia, la cual enfatiza “la variable ambiente”,( Mora Fausto y Aguilar Aguilar, p. 36) al modificar la relación recíproca entre éste y la organización, de forma que la misma “se vuelca del interior

al exterior, donde, sólo a partir de las demandas ambientales, la organización debe responder y modificarse para adaptarse, dependiendo de la estrategia de sobrevivencia que ésta determine”.

Dicha teoría destaca, entonces, que las características del ambiente o entorno son “las que condicionan las características organizacionales y que es en el ambiente donde pueden hallarse las explicaciones causales de éstas últimas” (Mora Fausto y Aguilar Aguilar). También plantea que la organización, como su administración, forma parte y es dependiente de un sistema integrado por subsistemas “y enmarcado dentro de límites identificables con la relación a su suprasistema ambiental”. En ese sentido, señalan nuestros autores, “no existe una manera única y mejor (The Best Way) de organizar”.

Tal enunciado plantea una nueva posibilidad de apertura, en términos de no rigidez, a la ciencia administrativa, que de esta forma estaría posibilitada a variar sus teorías y métodos organizacionales, en función de lo que la estructura externa le presente, ya como necesidades sociales o retos a desarrollar para el mejoramiento de las empresas. Sobre esas líneas, ya Burns y Stalker habían encontrado una diversidad de métodos y procedimientos administrativos, con base en la cual “clasificaron a las empresas como mecanicistas y orgánicas; éstas últimas... se adaptan a condiciones inestables cuando surgen problemas y exigencias de acción que no pueden ser fragmentadas y distribuidos entre especialistas en una jerarquía claramente definida. Apropia para condiciones ambientales de cambio e innovación” (Mora Fausto y Aguilar Aguilar).

De tal forma, entonces, que nos encontramos ante la transformación del paradigma en las ciencias administrativas, derivado, a su vez, de la transformación del modelo de pensamiento vigente; la teoría administrativa ha abandonado paulatinamente la visión del método analítico a ultranza y con éste, el reduccionismo y el determinismo que le son afines, al pensar al mundo, ya como un conjunto de partículas elementales, esenciales, o bien, como una cadena de causas y efectos que se suceden y se recrean a sí mismos en una cadena interminable; estamos ante “la emergencia de la Era de los Sistemas” donde –escribíamos al comienzo– azar, propósito y voluntad tienen cabida en una nueva visión y método que considera a la realidad como una red de sistemas donde las cosas se mueven en función de la relación entre productor y producto.

Por otra parte, y dada la emergencia de nuevos fenómenos, como la cibernética, el nuevo valor del conocimiento y el propio dinamismo de las sociedades contemporáneas, se agudiza la necesidad de una gran transformación sobre los modelos de pensamiento, que también incluyen a la ciencia administrativa. Ante la previsible escasez de productos y materiales, que ya es palpable con elementos como la energía y el agua, teóricos como Tadaichi Saikaya (Sakaiya, 1995) avizoran la emergencia de una “sociedad que tenderá a consumir una gran cantidad de tiempo y saber y tendrá menos interés en la cantidad de bienes materiales”, pues el conocimiento será “una necesidad vital en una atmósfera caracterizada por la diversificación y una subjetividad social en mutación constante que obligará con frecuencia a optar con rapidez”.

Ello plantea a las empresas una nueva forma de valorar aspectos como la producción, el trabajo y el entorno, que pesa como nunca antes para la planeación y aplicación de los métodos organizacionales que deberán emplear. Han de ejercer, como lo hacen desde algunas décadas, en “un entorno constreñido, altamente competitivo, en una fuerte turbulencia económica y social, donde el cambio ha dejado de ser un accidente del trayecto, para convertirse en la forma natural en que deben operar, para subsistir y desarrollarse” (Toffler, 1990).

Además, lo que antes fue materia ‘interior’, como la fuerza laboral, depende ahora del entorno; las principales tendencias y cambios externos que atañen al universo de la administración aplicada a las empresas, tienen ahora que ver con la medición del exterior, en aspectos como los “cambios en las preferencias de los consumidores, tipo y formas de la competencia, regulaciones que afecten al negocio,

amenazas de que se incorporen productos sustitutos, etcétera”, por un lado, y por otro –un macro-entorno- con las “tendencias que afectan a la generalidad, como la del comercio electrónico” y, en un sentido más amplio, con entornos más significativos para nuestro universo empresarial, como el tecnológico, económico, social, político y ecológico.

En ese contexto, para nuestros autores el cambio paradigmático más significativo es el de la eficiencia (la relación entre insumos-gastos con resultados-ingresos), cuya lógica es, grosso modo, obtener los máximos resultados con los mínimos recursos; este factor dependía específicamente del contexto interno de la empresa; sin embargo, dado que ahora tenemos entornos cada vez más convulsos, el concepto de eficiencia ha dejado de ser suficiente para asegurar el desarrollo de la misma. Es decir, que ahora, no sólo basta con ser eficientes, hay que ser “eficaces, hacer las cosas bien”, más cuando se trata de la relación que se guarda con el entorno y los consumidores; esto se logra al enfatizar el logro de objetivos y resultados, en la creación de valores y en “un enfoque proactivo (del futuro al presente)”. De esta forma, la unión de ambos factores y la inclusión constante de la innovación, podrá asegurar el desarrollo positivo de la empresa que, vista como un sistema y a la vez parte de un sistema, dependerá de su capacidad para adaptarse y dar respuesta a las demandas de su ambiente para sobrevivir.

## RESUMEN

*La tutoría es una herramienta importante en el avance de las universidades ya que ayuda a los estudiantes en su desarrollo tanto académico como personal a lo largo de su trayectoria en la Universidad. En el presente estudio se muestra la aplicación de un instrumento para evaluar el desempeño la tutoría y de esta manera poder obtener la percepción de los estudiantes de la División Académica de Ciencias Económico Administrativas en cuanto al Programa Institucional de Tutorías en la Universidad Juárez Autónoma de Tabasco, la cual será de mucha utilidad para que se pueda aplicar adecuadamente el citado Programa en la División. La investigación fue de tipo cuantitativa con un muestreo aleatorio estratificado, enfocado hacia la evaluación de la efectividad del programa tutorías tomando en consideración tres factores: académico, administrativo y calidad en el servicio.*

**PALABRAS CLAVES:** Tutoría, percepción, universidad.

## THE PERCEPTION OF THE STUDENTS IN THE ACADEMIC DIVISION OF SCIENCES ECONOMIC ADMINISTRATIVE AS FOR THE PROGRAM OF TUTORSHIPS

### ABSTRACT

*The tutorship is an important tool in the advance of the universities since it helps the students in his development so much academic as personnel along his path in the University. In the present study the application of an instrument appears to evaluate the performance the tutorship and hereby Administrative officers are able to obtain the perception of the students of the Academic Division of Sciences Economically as for the Institutional Program of Tutorships in the Universidad Juárez Autónoma de Tabasco, which will be many usefulness in order that it could take to him adequately the Program of Tutorships in the Division. The investigation was of type quantitative with a random simple sampling and was focused towards the evaluation of the efficiency of the program tutorships taking.*

**KEYWORDS:** Tutorship, perception, university

### INTRODUCCIÓN

En la Universidad Juárez Autónoma de Tabasco uno de los objetivos del Programa Institucional de Tutorías es garantizar el logro de la formación integral del alumno para mejorar la calidad de su proceso educativo y este se sustenta y tiene congruencia con el Reglamento de Tutorías, el cual establece disposiciones que sientan las bases para hacer más eficiente el funcionamiento de este Programa; la operatividad del Modelo Educativo Flexible requiere que existan condiciones que le permitan poner en

práctica sus fundamentos, dimensiones y áreas de formación, y es por ello que el PIT en donde se desarrolla una relación entre el tutor y el tutorado es una estrategia pedagógica implementada para acompañar la trayectoria escolar del alumno (Universidad Juárez Autónoma de Tabasco, 2011). Gómez-Collado (2012) comenta que las instituciones educativas trabajan con programas tutoriales con diversos puntos de vista y estrategias de intervención, entre ellas se pueden mencionar las áreas académicas, personales, profesionales, afectivas y asistenciales por señalar algunas. Los programas de tutoría académica frecuentemente funcionan a través de dos modalidades: individual y grupal, citando a Sanz (2001:28) éste indica que “en el enfoque del asesoramiento, el orientador centra su acción de manera práctica únicamente en el asesoramiento —individual y en grupos— a los estudiantes”, constituyendo una actividad complementaria del docente.

## REVISIÓN LITERARIA

### Tutoría

La tutoría tiene un carácter preventivo y formativo para que el estudiante curse sus materias a lo largo de su carrera, y si se le presenta alguna problemática, lo pueda resolver con la guía y el acompañamiento del tutor. De acuerdo con Neva (s.f.), la tutoría se considera como instrucción y guía de un estudiante por un tutor en un proceso de aprendizaje uno a uno. El sistema tutorial ha ido obteniendo seguidores en cuanto ha demostrado ser efectivo en la medida que ha inducido el trabajo individual bajo una guía. En la orientación de la tutoría, el tutor y tutorado participan de manera personal, y esta participación parece beneficia a los estudiantes en su desarrollo académico, para que este pueda lograr tener mejores hábitos de convivencia social y en su imagen personal.

La tutoría es considerada como una actividad encargada de proporcionar a los estudiantes las herramientas y ayuda indispensable para que éstos cubran con éxito sus metas académicas, personales y profesionales que se plantearon en un principio al ingresar a la universidad. De igual manera de acuerdo con Gómez-Collado (2012), es una acción pedagógica que trata de beneficiar a los estudiantes, ayudándolos por parte del docente en situaciones de tipo educativas a manera de generar un modelo educativo que ayude al proceso de enseñanza-aprendizaje tanto de manera individual como grupal, formando parte sustancial de la currícula en la cual se integran los conocimientos, procedimientos, valores y actitudes coordinadas a los estudiantes con capacidades e intereses definidos.

### Programas de Tutorías en las Instituciones de Educación Superior

En México, de acuerdo con la Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES, 2001), cuando se hizo la propuesta orientada a propiciar la implantación de un programa institucional de tutorías se analizaron las principales causas del rezago o abandono de los estudios, dado que su identificación es necesaria para la estructuración de alternativas de acción que ayuden a contrarrestarlas. Se llevó a cabo una reflexión sobre la tutoría como estrategia viable, en conjunto con otras acciones institucionales, para promover el mejoramiento de la calidad de la educación superior. Para cumplir con el objetivo de construir una propuesta de programa, el grupo interinstitucional, convocado por ANUIES, convino en la necesidad de trabajar sobre una definición de tutoría, aceptada por todos sus integrantes, así como de precisar la concepción y los objetivos de un sistema institucional de tutoría académica, en el marco de las características de las Instituciones de Educación Superior (IES) mexicanas, lo cual tuvo como resultado la propuesta en la que se hace indispensable, la asesoría académica y los programas para la mejora de la calidad del proceso educativo. La propuesta para implantar un Programa Institucional de Tutoría, señaló la importancia de determinar los compromisos de cada uno de los actores universitarios en el desarrollo del programa. Un programa institucional de tutoría, en esa época podría tener un efecto positivo en la resolución de los problemas antes indicados y servir como herramienta para elevar la eficiencia terminal de las universidades y fortalecer la formación integral

del estudiante. De acuerdo con ANUIES (2002, citado por Orduño y Nabor, 2009) la educación y la tutoría son factores importantes que se deben de considerar en la formación para la vida y el desarrollo integral de las personas. De esta manera las universidades han implementado el programa de tutorías a partir de que fue considerado como un requisito que establece en México la Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES).

El proceso educativo y sus elementos de apoyo como la tutoría son factores determinantes en el desarrollo del ser humano, señala que uno de los objetivos de la tutoría es fomentar la capacidad crítica, creativa y el rendimiento académico de los estudiantes, así como el mejoramiento de su transformación social y personal y por ende la eficiencia terminal en las universidades. En este sentido, Romo (2005:13) afirma que el Programa de Desarrollo Integral de los alumnos tiene como objetivo: “Apoyar a los alumnos del SES (Sistema de Educación Superior), con programas de tutoría y desarrollo integral, diseñados e implementados por las IES, de suerte que una elevada proporción de ellos culmine sus estudios en el plazo previsto y logre los objetivos de formación establecidos en los planes y programas de estudio”.

De acuerdo con la Universidad de Guadalajara (2004), los principales problemas a resolver por la tutoría son: Rezago, deserción y bajos índices en la eficiencia terminal en las Instituciones de Educación Superior: tanto la deserción como el rezago son condiciones que afectan el logro de una alta eficiencia terminal en las instituciones. En este sentido es de vital importancia para las IES lograr índices de aprovechamiento y de eficiencia terminal satisfactorios, para cumplir con el objetivo de responder a las demandas sociales con más y mejores egresados que, al mismo tiempo, puedan lograr una incorporación exitosa al mercado de trabajo. Este tipo de problema se da de la siguiente forma:

- 1.1) Abandono o suspensión voluntaria y definitiva de los estudios y del sistema de educación superior por parte del alumno.*
- 1.2) Salida de alumnos debido a deficiencias académicas y bajo rendimiento escolar.*
- 1.3) Cambio de carrera (el alumno continúa en la misma institución pero se incorpora a otra cohorte generacional) o de institución.*
- 1.4) Baja de los alumnos que alteran el orden y la disciplina institucional. Generalmente obstaculiza el ingreso a otra escuela o facultad.*

Dentro de la problemática que afecta la trayectoria escolar podemos encontrar las siguientes causas: Desarticulación familiar, Desadaptación al medio, por su origen sociocultural, Estudiantes que trabajan, Desubicación en propósitos de vida, Inadecuada opción vocacional. Problemas económicos, Perfiles de ingreso inadecuados, Falta de hábitos de estudio, Problemas físicos de salud. Es por lo anterior que la tutoría se considera una estrategia para mejorar la calidad de la Educación Superior, sin embargo también es pertinente considerar la importancia los factores sociológicos y las características socioeconómicas y familiares de los estudiantes, como son: la posición económica de la familia, el nivel de escolaridad y ocupación de los padres y la calidad del medio ambiente que rodea al estudiante, las cuales influyen en forma significativa en el rendimiento escolar de los mismos. Finalmente también es importante considerar, en los estudiantes, los factores psicológicos, nutricionales y de salud.

#### El Programa Institucional de Tutorías en la Universidad Juárez Autónoma de Tabasco

De acuerdo con Alcaraz (2011) en la Universidad Juárez Autónoma de Tabasco, fue en el año 2000 cuando se impulsó formalmente su Programa Institucional de Tutorías (PIT), como una estrategia para apoyar el Modelo Educativo basado en la formación integral del estudiante; iniciando este proyecto involucrando a comisiones de profesores destacados de cada una de sus Divisiones Académicas, capacitándolos, formándolos y estableciendo una estructura organizacional que asegurara su funcionamiento mediante la definición de su operatividad. Es así como en el Programa Institucional de Tutorías de la Universidad Juárez Autónoma de Tabasco se puede visualizar claramente su misión, visión,

objetivos y reconocer un marco normativo, contextual y conceptual, el cual clarifica las tendencias y orientaciones en este campo; de igual manera, se hace un análisis de la problemática escolar de deserción, aprovechamiento, rezago, eficiencia terminal y de la distribución de la matrícula que le permite justificar esta estrategia; haciendo un planteamiento operativo que ve desde el nivel directivo tanto central como divisional, la proposición de una Comisión Institucional de Tutorías, y once Comisiones Divisionales como la participación de tres actores principales, el Programa Institucional de Tutoría, la formación integral del alumno y la mejora de la calidad del proceso educativo.

### **ANTECEDENTES Y EVOLUCIÓN DEL PROGRAMA DE TUTORÍAS EN LA DIVISIÓN ACADÉMICA DE CIENCIAS ECONÓMICO ADMINISTRATIVAS (DACEA)**

El programa de tutorías en la DACEA se inicia en enero del año 2004 a raíz de la implementación del Modelo Educativo denominado Flexibilidad Curricular que fue aprobado por el Consejo Universitario en el agosto de 2003 donde además se presentó la reestructuración de las Licenciaturas de la DACEA "... bajo la modalidad de un modelo con Enfoque de Flexibilidad Curricular, modelo que la UJAT puso en marcha en agosto de 2003. La DACEA, por las características propias de la demanda educativa inició con este proceso a partir de enero de 2004. El modelo con este enfoque se basa en la movilidad del alumno con la asesoría de un tutor que le permite escoger su trayectoria escolar durante su formación profesional". (Universidad Juárez Autónoma de Tabasco, 2004:17)

A casi una década de haberse iniciado, se han tomado acciones concretas para el desarrollo del Programa Institucional de Tutorías, sin embargo a la fecha no se ha realizado formalmente una autoevaluación integral del mismo. Los análisis presentados son de escuelas aisladas y con diferentes enfoques, por lo que no se puede sopesar un impacto cercano a la realidad en cuanto a los posibles resultados del Programa Integral de Tutorías en la UJAT. Por otra parte, el tema de la Tutoría, aunque de forma aislada se ha abordado desde diferentes perspectivas, tales como la forma de ejercer la tutoría, las principales experiencias en torno a la misma y la gestión administrativa como apoyo para la tutoría. También se ha dado importancia a la tutoría integral en el sentido de apoyar al estudiante a través de una red de Consultorios Psicopedagógicos para subsanar algunas problemáticas de tipo personal y psicológico.

#### **Percepción de la Tutoría**

La percepción, a efecto de lograr una interpretación lo más acertada posible acerca de la realidad que otros ven, puede tener un enfoque más cualitativo que cuantitativo. En el caso de la percepción al respecto del ejercicio de la tutoría, la situación puede tornarse confusa ya que básicamente se trata de un servicio educativo, por lo que indagar cómo ven o experimentan éste servicio los destinatarios puede arrojar inconsistencias desde la perspectiva de que un servicio está considerado como intangible, heterogéneo, perecedero y con características de inseparabilidad y de especialidad. Es decir que el tutor, quien presta el servicio puede presentar variantes ante quien recibe el servicio, pero además debe ser un especialista formado y capacitado para brindar la tutoría. Por otra parte de acuerdo con el concepto de percepción, Díaz Barriga (2008) explica que "... reconocemos la presencia de una dialéctica entre la información conceptual, juego de subjetividades en el proceso de investigación (subjetividades de los entrevistados y subjetividades de los investigadores) e información empírica producto de las entrevistas".

### **METODOLOGÍA**

El enfoque de esta investigación fue cuantitativo con un alcance descriptivo de tipo no experimental transeccional, se aplicó un muestreo aleatorio estratificado, ya que se consideró a los alumnos de las cinco licenciaturas que actualmente se imparten en la División Académica: Economía, Administración, Contaduría Pública, Relaciones Comerciales y Mercadotecnia.

### Población

El estudio se realizó en la División Académica de Ciencias Económico Administrativas (DACEA) de la Universidad Juárez Autónoma de Tabasco (UJAT). La categoría que se revisó en ésta investigación fue la percepción del desempeño del tutor por parte de los tutorados. La población de estudio o los sujetos encuestados fueron estudiantes inscritos en la DACEA/UJAT, durante el ciclo escolar septiembre 2012 – enero 2013. La muestra fue probabilística de tipo aleatorio estratificado. El tamaño de la muestra se determinó de la siguiente forma, de acuerdo con los objetivos de la investigación se sentaron los siguientes criterios para encontrar la población de estudio.

Criterios de inclusión:

- Ser estudiante de alguna de las Licenciaturas que se imparten en la DACEA/UJAT.
- Estar inscrito en el ciclo escolar septiembre 2012 – enero 2013.
- Cursar del segundo semestre en adelante.
- Tener o haber tenido un tutor asignado.

Criterios de exclusión:

- No ser estudiante de la DACEA/UJAT.
- No estar inscrito en el ciclo escolar septiembre 2012 – enero 2013
- Cursar Primer semestre
- No tener o no haber tenido un tutor asignado.

La población de alumnos que reunieron las anteriores características, de acuerdo a los datos recabados en la Dirección de Servicios Escolares de la UJAT y en la Coordinación de Servicios Escolares de la DACEA, fueron: Total de estudiantes de la DACEA inscritos en el ciclo escolar septiembre 2012 – enero 2013: 4,056. Los cuáles están divididos de la siguiente forma:

Administración	Contaduría Pública	Economía	Rels. Comerciales	Mercadotecnia
1362	1263	323	587	521

Es pertinente aclarar que no se tomaron en cuenta los alumnos inscritos en el Sistema a Distancia de la DACEA, debido a que el número no es significativo, pero principalmente porque el sistema de tutorías en ésta modalidad es principalmente a través de la internet.

### Muestra

Para conocer el tamaño de la muestra se necesitó realizar un cálculo bajo la siguiente fórmula:

$$n = \frac{Z^2 pqN}{(N - 1)e^2 + Z^2 pq}$$

Al despejar la fórmula queda de la siguiente forma:

$$n = \frac{(1.96)^2(0.5)(0.5)(4056)}{(4056 - 1)(0.05)^2 + (1.96)^2(0.5)(0.5)}$$

Donde:

*“n” es el tamaño de la muestra.*

*“Z” es igual al nivel de confianza requerido para generalizar los resultados hacia toda la población.*

*“p q” se refiere a la variabilidad del fenómeno estudiado.*

*“e” Indica la precisión con que se generalizarán los resultados o error de estimación.*

*“N” es el tamaño de la población.*

*Para llevar a cabo la operación se decidió trabajar con un 95% de confianza y con un 0.5% de error de estimación.*

Lo anterior significa que si un tamaño de la muestra se calcula utilizando un 95% de confianza, la probabilidad de los datos de la muestra de que resulten idénticos en la población será igual al 95% y habrá un 5% de probabilidad de que difieran. El nivel de precisión, simbolizado por “e” significará la precisión con la que se generalizarán los resultados. Este valor permite calcular el intervalo en donde se encuentran los verdaderos valores de la población. Una vez especificado lo anterior y sustituyendo los valores de la fórmula arriba mencionada, se tiene que:

$$n = \frac{(1.96)^2(0.5)(0.5)(4056)}{(4056 - 1)(0.05)^2 + (1.96)^2(0.5)(0.5)}$$

$$\frac{3895.38}{(10.1375 + 0.9604)}$$

$$\frac{3895.38}{11.0979} = 351$$

El resultado fue de 351 cuestionarios para tutorados. Sin embargo se hizo un muestreo probabilístico estratificado proporcional, de acuerdo al número de alumnos que están inscritos en cada licenciatura que consideraremos subgrupos por lo que hacemos la siguiente operación para obtener el cálculo del factor de proporción:  $k = n/N = 0$

Se sustituye:  $k = 351/4056 = 0.09$

Quedando de la siguiente forma:

Licenciatura en Administración:  $1362 (0.09) = 122.5$  (Se cerró a 123 cuestionarios).

Licenciatura en Contaduría Pública:  $1263 (0.09) = 113.67$  (Se cerró a 114).

Licenciatura en Economía:  $323 (0.09) = 29$

Licenciatura en Mercadotecnia:  $521 (0.09) = 47$

Licenciatura en Relaciones Comerciales:  $587 (0.09) = 53$

Teniendo como resultado, ajustando cantidades, la aplicación de **366 cuestionarios** a los alumnos de la DACEA- UJAT que cumplieron con los requisitos de inclusión para ser susceptibles de ser encuestados. El procedimiento que se planteó para el análisis de los datos será a través del programa Excel y luego se trasladará a SPSS17 Multilenguaje Full para su correspondiente análisis.

### Instrumento

A los tutorados se les aplicó una encuesta anónima consistente en 20 preguntas realizadas bajo una escala tipo Likert. Dicho instrumento está basado en el publicado en el libro “Programas Institucionales de Tutoría” editado por la ANUIES (2001) que tiene como objetivo evaluar el desempeño de la tutoría y conocer la opinión de los estudiantes tutorados acerca del programa y de sus tutores. Fue aplicado durante el periodo de Septiembre 2012 a enero 2013.

### **RESULTADOS**

De los 366 encuestados 161 son hombres y 205 mujeres. Esta situación reproduce las cifras generales del total de alumnos que asisten a la DACEA, ya que la oficina de Servicios Escolares reporta una mayor cantidad de estudiantes mujeres inscritas. El mayor número de encuestados se concentró en los semestres: primero (69), quinto (57), tercero (53), cuarto (46) y séptimo (43). Lo anterior resulta importante ya que la tutoría es obligatoria para los alumnos hasta que hayan acreditado 45% de créditos de la currícula de su carrera, situación que se observa cuando han cursado los cinco primeros semestres.

En cuanto a la edad de los estudiantes encuestados se observa que las frecuencias más altas fueron para las edades de 20 y 21 años con 75 entrevistados cada una. Posteriormente le siguieron 59 estudiantes de 19 años y 52 de 22 años. Se destaca también la presencia de las edades de 29, 30 y 32 años con un encuestado cada una. Esto resulta interesante ya que al tener estudiantes que ya han rebasado la juventud temprana y que pueden considerarse maduros, habría que detectar su opinión específica respecto al programa de tutorías. Entre los resultados preliminares podemos distinguir interesantes hallazgos en torno a la satisfacción que los estudiantes de la DACEA/UJAT tienen con respecto al Programa de Tutorías y en relación al tutor que les fue asignado.

Se realiza como primera parte la interpretación de estos dos cuestionamientos (pregunta 19 y pregunta 20 del instrumento), ya que se ha considerado que arrojan interesantes datos con respecto a la percepción que los alumnos tienen de la forma en cómo se lleva a cabo el programa y con respecto al tutor que les fue asignado. En términos generales, con respecto a su satisfacción acerca del Programa de Tutorías, los resultados más altos fueron los siguientes:

- Licenciatura en Economía fue la respuesta: más o menos de acuerdo (12.4%)
- Licenciatura en Administración: Totalmente de acuerdo (45.7%)
- Licenciatura en Contaduría Pública: En desacuerdo (44.1%),
- Licenciatura en Mercadotecnia: De acuerdo (19.7%)y
- Licenciatura en Relaciones Comerciales: Totalmente en desacuerdo (27.3%).
- 

Por otra parte al responder acerca de su satisfacción con respecto al tutor que les fue asignado, las respuestas con los más altos porcentajes son los siguientes:

- Licenciatura en Economía (10.8%): Más o menos de acuerdo
- Licenciatura en Mercadotecnia (18.1%): Más o menos de acuerdo
- Licenciatura en Administración Totalmente de acuerdo (41.7%),
- Licenciatura en Contaduría Pública: Más o menos de acuerdo (43.9%) y
- Licenciatura en Relaciones Comerciales: Totalmente en desacuerdo (28.6%).

La principal observación es la coincidencia que se muestra en cuanto a la respuesta Totalmente en desacuerdo de los estudiantes de la Licenciatura en Relaciones Comerciales en ambos cuestionamientos. Los números marcan que la mayoría de los tutorados de ésta carrera no están satisfechos ni con el

programa de tutorías, ni con el tutor que les fue asignado. Estos resultados se consideran como un punto de alerta para revisar la situación de dicha percepción por parte de los estudiantes de éste grupo. Es importante aclarar que los entrevistados forman parte de las últimas generaciones que cursan dicha Licenciatura ya que la carrera con la que se sustituirá este programa es la de Mercadotecnia, por lo que Relaciones Comerciales está por desaparecer. Otro aspecto a destacar es que también en cuanto a la Licenciatura en Administración en ambos cuestionamientos las respuestas que obtuvieron los más porcentajes fue: Totalmente de acuerdo, por lo que éste los alumnos de esta licenciatura tienen una buena percepción del programa y del tutor que les fue asignado.

## CONCLUSIONES

Este ejercicio que consiste en analizar la percepción de los estudiantes con relación a una estrategia para apoyar en la formación de sus estudios profesionales, es un primer acercamiento en la División Académica de Ciencias Económico Administrativas para evaluar la aplicación del Programa Institucional de Tutorías bajo en enfoque de un instrumento validado por la propia ANUIES. La DACEA, es una de las escuelas con mayor matrícula de la UJAT y una de las de mayor antigüedad y tradición en el Estado de Tabasco, por lo que de lo anterior se desprende la importancia de hacer frente a una problemática, que es común en muchas instituciones, pero no por ello poco importante, es decir el rezago académico y la eficiencia terminal. Es así que a diez años de haber implementado en la citada institución el Programa Institucional de Tutoría, abordamos la evaluación del mismo con la finalidad de proponer y promover nuevas estrategias que nos lleven a continuar elevando la calidad educativa. Es probable que sea necesario realizar cambios de fondo y también cambios de paradigmas a fin de generar resultados que a mediano plazo puedan ser la punta de lanza para obtener mejores resultados, con la finalidad de fortalecer el objetivo de la educación superior: formar profesionales altamente capacitados.

**ANEXO 1: INSTRUMENTO PARA EVALUAR EL DESEMPEÑO DE LA TUTORÍA**

CUESTIONARIO

LICENCIATURA \_\_\_\_\_ SEMESTRE \_\_\_\_\_ SEXO \_\_\_\_\_ EDAD \_\_\_\_\_

Introducción: Este instrumento de evaluación tiene el propósito de conocer la forma en que los tutores de la División Académica de Ciencias Económico Administrativas realizan sus actividades de tutoría desde la perspectiva de los tutorados. (ANUIES, 2001) con la finalidad de conocer el grado de satisfacción de los alumnos.

Lea cuidadosamente cada pregunta y marque con una “ X ” la respuesta que más se acerque a su opinión de acuerdo a la escala señalada.

Desempeño del tutor		Totalment e de acuerdo	De acuerd o	Más o menos de acuerdo	En desacuerd o	Totalmente en desacuerdo
No	Pregunta					
1	Muestra el tutor buena disposición para atender a los alumnos.					
2	La cordialidad y capacidad del tutor logra crear un clima de confianza para que el alumno pueda exponer sus problemas					
3	Trata el tutor con respeto y atención a los alumnos					
4	Muestra el tutor interés en los problemas académicos y personales que afectan el rendimiento de los alumnos					
5	Muestra el tutor capacidad para escuchar los problemas de los alumnos					
6	Muestra el tutor disposición a mantener una comunicación permanente con el alumno					
7	Tiene el tutor capacidad para resolver dudas académicas del alumno					
8	Tiene el tutor capacidad para orientar al alumno en metodología y técnicas de estudio					
9	Tiene el tutor capacidad para diagnosticar las dificultades y realizar las acciones pertinentes para resolverlas					
10	Tiene el tutor capacidad para estimular el estudio independiente					
11	Posee el tutor formación profesional en su especialidad					
12	Posee el tutor dominio de métodos pedagógicos para la atención individualizada o grupal					
13	Es fácil localizar al tutor que tiene asignado					
14	El tutor conoce suficientemente bien la normatividad institucional para aconsejarle las opciones adecuadas a sus problemas escolares					
15	La orientación recibida de parte del tutor le ha permitido realizar una selección adecuada de cursos y créditos					
16	El tutor lo canaliza a las instancias adecuadas cuando tiene algún problema que rebasa su área de acción. (Solamente responda esta pregunta si lo ha requerido).					
17	Su participación en el programa de tutoría ha mejorado su desempeño académico					
18	Su integración a la universidad ha mejorado con el programa de tutoría					
19	Es satisfactorio el programa de tutoría					
20	El tutor que le fue asignado es adecuado

# **MEDICIÓN DEL CLIMA ORGANIZACIONAL Y SU RELACIÓN CON EL LIDERAZGO EN UNA FRANQUICIA DE COMIDA RÁPIDA EN LA CIUDAD DE TIJUANA, BAJA CALIFORNIA, MÉXICO**

Suisin Priscila Lam Lam, Universidad Autónoma de Baja California

Jessica Lizbeth Cisneros Martínez, Universidad Autónoma de Baja California

Loreto María Bravo Zanoguera, Universidad Autónoma de Baja California

Sósima Carrillo, Universidad Autónoma de Baja California

Ana Cecilia Bustamante Valenzuela, Universidad Autónoma de Baja California

## **RESUMEN**

*En México, las franquicias han proliferado en los últimos años, especialmente las de comida rápida, este tipo de organizaciones han representado una de las entradas de dinero más sólidas para la región, generando empleos, dando a proveedores de la localidad la oportunidad de consumir su producto y permitir el desarrollo de la urbe mediante la presencia de marcas reconocidas en los centros comerciales. Sin embargo la competencia en una organización se mide a través de la mejora continua, la cual permite perfeccionar procesos y una mejor atención a los clientes, este cambio exige tomar en cuenta a los empleados para que tengan claros los objetivos de la organización y actúen en base a ellos. Por ello el presente trabajo, permite identificar la importancia de un clima organizacional adecuado, que sensibilice a no solo reportar estados financieros adecuados, hacer estrategias de mercadotecnia o contratar personal, sino uno de sus mayores retos es lograr un clima interno agradable que permita que los empleados se sientan satisfechos y por ende aumenten su productividad. Sin embargo las organizaciones hacen caso omiso a este tópico lo que lleva a desaprovechar el potencial de los empleados así como evitar el cumplimiento de metas de la organización.*

**PALABRAS CLAVES:** Franquicias, mejora continua, clima organizacional

## **MEASUREMENT OF THE WORK ENVIRONMENT AND ITS RELATIONSHIP WITH THE LEADERSHIP IN FAST FOOD FRANCHISES IN TIJUANA, BAJA CALIFORNIA, MÉXICO**

### **ABSTRACT**

*In Mexico, the franchises have proliferated in recent years, especially fast food, these organizations have represented one of the strongest cash inflows to the region, creating jobs, and also provides the opportunity a giving local to consume their products. However, competition in an organization is measured through continuous improvement, which allows improve processes and better customer service. This change requires listen to the employees, have clear organizational goals and act based on them. Therefore, the present study measures the work environment and his relation with the leadership, in a fast food franchise, in the city of Tijuana, Baja California. However organizations ignore this topic leading to wasting the potential of employees and avoid compliance with organizational goals.*

**JEL:** M12

**KEYWORDS:** Franchises, leadership, work environment

## INTRODUCCIÓN

En México, las franquicias han proliferado en los últimos años, especialmente las de comida rápida, aunque algunas ya tienen bastante tiempo establecidas en el país, no deja de haber aperturas de franquicias especialmente en la ciudad de Tijuana, Baja California. Este tipo de organizaciones han representado una de las entradas de dinero más sólidas para la región, toda vez que son una fuente de generación de empleos, aprovechamiento de materias primas mexicanas ya que se compra a proveedores locales y además ayuda al desarrollo de la urbe a través de la presencia de marcas reconocidas en los centros comerciales. En los últimos años se ha dado prioridad a que las franquicias obtengan buenos resultados económicos, dejando de lado su contribución al desarrollo social. Hoy día, casi todo el trabajo de rutina se ha vuelto automatizado, desatendiendo así el elemento humano, el cual es esencial para que una organización se desarrolle exitosamente.

Por lo que para lograr un equilibrio entre el factor económico y el factor humano, los directivos no sólo deben interesarse en que el trabajador realice el trabajo con un buen nivel de eficiencia, sino también preocuparse por el ambiente laboral interno en que está inmersa su empresa. Para mantenerse competente una organización debe preocuparse por la mejora continua. Las ideas para perfeccionar los procesos y la atención a los clientes deben provenir, cada vez más, de los empleados que están cerca de los procesos internos y de los mismos clientes de la organización. Este cambio exige tomar en cuenta a los empleados para que tengan claros los objetivos de la organización y actúen en base a ellos. Para lograr progresos a largo plazo en la productividad es indispensable mejorar la calidad del entorno laboral. Los directivos de la organización y los profesionales de la administración de los recursos humanos deben unirse en la necesidad de crear en su organización un clima en el que verdaderamente se valore y se trate a las personas dignamente y así obtener mejores decisiones, más productividad y una mejor calidad del personal. Es en este aspecto en donde el liderazgo se percibe dentro de una empresa. Si existe un líder que concilie los aspectos productivos con los humanos, la organización estará en mejores condiciones para sobresalir en el mercado.

## REVISIÓN LITERARIA

El presente trabajo de investigación se centra en una franquicia que tiene sus inicios en el año 1997 con tres sucursales en la ciudad. Al cabo de algunos años, incrementa la cantidad de sucursales a cinco y actualmente la empresa tiene ocho sucursales en la ciudad de Tijuana, Baja California. El producto que se ofrece es un sándwich, en diferentes presentaciones e ingredientes. Los directivos han mostrado interés por aumentar la cantidad de franquicias en la ciudad, con todo, debido a la globalización, existe tanta competencia que es necesaria la diferenciación para atraer al cliente y para ello la mejor manera de atraerlo es dándole un excelente servicio o producto, y por supuesto, el mejor de los tratos ofrecido por el personal de la compañía, sin embargo, se ha detectado que la falta de un clima organizacional favorable afecta a los empleados de la organización, y por ende al logro de los objetivos de la misma, por lo que la presente investigación atiende de forma especial este tema, dándole así pruebas contundentes a los directivos de esta franquicia sobre la importancia del elemento humano y de un clima organizacional adecuado y dejando un precedente para el lector sobre los beneficios de la aplicación del citado clima organizacional. Cuando se habla de clima organizacional, uno de los enfoques que más aceptación ha tenido entre los estudiosos es el que utiliza las percepciones de los trabajadores sobre las estructuras y procesos que ocurren en el ambiente laboral.

La importancia de este enfoque es que el comportamiento del trabajador no es un resultado de los factores organizacionales que existen, tal como lo describiría un enfoque objetivista. Al contrario, el comportamiento depende de las percepciones que tenga el trabajador de los factores que hay dentro de su organización. Dichas percepciones dependen de las actividades, interacciones y otras experiencias que

cada empleado tenga con la empresa. De ahí que el clima organizacional refleja la interacción entre características personales y organizacionales (Schneider y Hall, 1982). Citados por Goncalves (1999). Desde esa perspectiva el clima organizacional es un filtro por el cual pasan los fenómenos objetivos, como lo son la estructura, el liderazgo y la toma de decisiones. De tal modo, al evaluar el clima organizacional se mide la forma como es percibida la organización. Este repercute sobre las motivaciones de los miembros de la organización y sobre su correspondiente comportamiento. El modo que tenga un sistema organizacional genera un determinado clima, que a su vez tiene una gran variedad de consecuencias para la organización como es en la productividad, satisfacción, rotación, adaptación, etcétera. Así, el clima organizacional está compuesto por el conjunto de decisiones individuales, grupales y colectivas realizadas en una organización, cuyas consecuencias influyen en el logro de objetivos organizacionales.

## METODOLOGÍA

Con el objetivo de alcanzar los objetivos de la investigación es importante operacionalizar el marco teórico y conceptual. Los objetivos y preguntas de investigación, junto con las variables de estudio y las hipótesis son básicamente los indicadores para construir el instrumento de medición. En este caso se utilizará un instrumento de medición ya validado. El instrumento seleccionado para la recolección de la información fue el cuestionario WES, el cual es precodificado, de cinco opciones a partir de escalas. Dicho cuestionario está diseñado para medir el clima organizacional. Para evaluar el instrumento de medición, conocer la reacción de los entrevistados y sondear la pertinencia de la escala de medición, se aplicó una prueba piloto a 12 empleados de la franquicia. Se observó que no hubo inconvenientes para la aceptación del cuestionario. Se les explicó a los encuestados que la información sería confidencial. El tiempo de respuesta de los cuestionarios fue de entre una y dos semanas. Los resultados que se obtuvieron están en concordancia con los 21 cuestionarios aplicados posteriormente.

Esta información se menciona más adelante. El instrumento consistió en un cuestionario de 54 preguntas cerradas y 2 preguntas abiertas. Dichas preguntas están distribuidas por secciones y de la siguiente manera: Sección I. Sobre mi trabajo, Sección II. Sobre las condiciones de trabajo, Sección III. Sobre las relaciones interpersonales y de trabajo, Sección IV. Sobre liderazgo, Sección V. Sobre la organización, Sección VI. En general. En el diseño del cuestionario que se utilizó en esta investigación considera que cada uno del ítem tiene igual peso, y así los puntajes de los reactivos son sumados para proporcionar el puntaje de las percepciones de un individuo (Flores, 2009). Asimismo en esta investigación se aplica la escala de Likert. Este método fue desarrollado por Rensis Likert a principios de los años treinta; sin embargo, continúa siendo un enfoque vigente, el cual consiste en un conjunto de ítems presentados en forma de afirmaciones o juicios ante los cuales se pide al sujeto que externé su reacción eligiendo uno de los cinco puntos de la escala. A cada punto se le asigna un valor numérico. Así, el sujeto obtiene una puntuación respecto a la afirmación y al final se obtiene su puntuación total sumando las puntuaciones obtenidas en relación a todas las afirmaciones.

El rango de respuestas va de: TA: Totalmente de Acuerdo, TD: Totalmente en Desacuerdo. La escala de intervalo se integra por 5 aciertos quedando de la siguiente manera: Totalmente de acuerdo, De acuerdo, Desacuerdo, Totalmente en desacuerdo, y N/A (No aplica) El grado de confiabilidad del cuestionario fue validado por el propio autor, Moos (1974) al aplicarlo a 624 empleados de distintos ámbitos en Estados Unidos. A cada sub escala que compone el cuestionario, Moos le otorgó un porcentaje de confiabilidad interna de entre .70 y .91. Citado por Darrel (1986). Para verificar la fiabilidad de los factores del instrumento aplicado se utilizó el Alpha de Cronbach en el Programa SPSS a los 54 ítems, arrojando una confiabilidad de .932 Según Nunally (1967), en una etapa inicial de investigación, los valores de Alpha de Cronbach entre 0.6 y 0.7, son aceptables para ítems que han de formar un mismo constructo. También se utilizó la correlación de Spearman, la cual es una prueba no paramétrica que se utiliza para medir el grado de asociación entre las dos variables.

TABLA 1: Matriz del Coeficiente de Correlación de Spearman's (Rho) Bivariada. Correlaciones de Pearson Para Medir el Clima Organizacional y su Relación con el Liderazgo y Relaciones Interpersonales

MATRIZ CORRELACIONES	CONDICIONES DE TRABAJO				RELACIONES INTERPERSONALES				LIDERAZGO										POLÍTICAS DE LA ORGANIZACIÓN				EN GENERAL		CLIMA ORG.																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																														
CONDICIONES DE TRABAJO	1.000																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																						</

Fuente: elaboración propia \*\* La correlación es significativa en el nivel 0.01 \* La correlación es significativa en el nivel 0.05

Se observan correlaciones positivas y negativas en algunas de las variables, solo se tomarán en cuenta las correlaciones positivas mayores a .600. Cabe aclarar que algunas columnas en las cuales no aparecen datos significativos, fueron eliminadas por falta de espacio. Sin embargo, las correlaciones de interés son aquellas que se encuentran ubicadas en las secciones de condiciones de trabajo, relaciones interpersonales, liderazgo y políticas de la organización. A continuación se mencionan. La correlación entre las políticas de la organización y las condiciones de trabajo tienen un coeficiente de .603, lo cual muestra una correlación moderada sustancial, con un nivel de significancia de 0.01.

De igual manera la correlación entre el liderazgo y las relaciones interpersonales tienen un coeficiente de .698, lo cual muestra una correlación moderada sustancial, con un nivel de significancia de 0.01. Se encuentran dos correlaciones en la sección de relaciones interpersonales, un coeficiente de .600 y otro de .757. Ambos con un nivel de significancia de 0.01, lo cual muestra una correlación moderada sustancial y marcada alta, respectivamente. Esto, a su vez, señala una alta influencia entre el clima organizacional y las relaciones interpersonales, ya que ambas preguntas se encuentran en la sección de relaciones interpersonales únicamente. Existen dos correlaciones más entre el liderazgo y las relaciones interpersonales con un coeficiente de .608 y .726. Los dos tienen un nivel de significancia de .01, lo que significa una correlación moderada sustancial y marcada alta, respectivamente. Es importante destacar

que se observa una fuerte correlación entre el liderazgo y el clima organizacional, debido a que existen veintidós correlaciones en esta sección.

De éstas, diez correlaciones se consideran moderadas sustanciales debido a que se encuentran en el rango de .610 a .669 y doce correlaciones que se consideran marcadas altamente por encontrarse en el rango de .701 a .864. Dichas correlaciones tienen un nivel de significancia de .01. Por último, se encuentra una correlación marcada alta entre las políticas de la organización con el clima organizacional, ya que muestra un coeficiente de .751 con un nivel de significancia del 0.01. Como estrategia de investigación se propone que a partir de la evidencia que arroja la matriz de coeficientes de correlación de Pearson, se consideren sólo aquellas correlaciones significativas al nivel de 0.01 y de una magnitud igual o mayor a 0.5, lo cual representa una correlación positiva de moderada a fuerte. Siguiendo esta estrategia, se determina que el clima organizacional está relacionado de alguna forma con la mayoría de las variables, excepto la variable “en general”. Las variables más fuertes son el liderazgo y las relaciones interpersonales, encontrándose en menor medida las condiciones de trabajo y las políticas de la organización. Por lo tanto, se acepta la  $H_0$ , es decir, el clima organizacional de esta organización guarda una fuerte relación con el liderazgo, principalmente y con las relaciones interpersonales, en segunda instancia.

Tabla 2: Resultados de las Correlaciones Bivariadas de las Variables Independientes

Correlación entre variables independientes	
Políticas de la organización - Condiciones de trabajo	
Metas establecidas - Equipo necesario para realizar el trabajo	.603**
Liderazgo - Relaciones interpersonales	
Satisfacción con la forma de trabajar del jefe - Relaciones interpersonales cordiales y abiertas	.638**
Orientación del jefe para cumplir con el trabajo – Conocer al cliente final	.608**
Comunicación de políticas y forma de trabajo por el jefe – Conocer al cliente final	.726**
Relaciones interpersonales - Relaciones interpersonales	
Apoyo entre compañeros para servir a cliente – Conocimiento de responsabilidades y funciones de compañeros de trabajo	.600**
Recibo información oportuna para mi trabajo – Recibo información que requiero	.757**
Liderazgo – Liderazgo	
Evidencia de que el jefe utiliza las ideas propuestas del empleado – Jefe solicita ideas y propuestas	.701**
Jefe y empleado acuerdan expectativas de desempeño – Evidencia de que el jefe utiliza ideas propuestas del empleado	.648**
Confianza con el jefe – Satisfacción con la forma de trabajar del jefe	.641**
Orientación del jefe para cumplir con el trabajo – Satisfacción con la forma de trabajar del jefe	.702**
Jefe flexible y justo antes peticiones – Satisfacción con la forma de trabajar del jefe	.701**
Orientación del jefe para cumplir con el trabajo – Confianza con el jefe	.864**
Comunicación de políticas y forma de trabajo por el jefe – Confianza con el jefe	.669**
Retroalimentación sobre desempeño constructiva – Confianza con el jefe	.642**
Jefe flexible y justo antes peticiones – Confianza con el jefe	.791**
Comunicación de políticas y forma de trabajo por el jefe - Orientación del jefe para cumplir con el trabajo	.791**
Retroalimentación de desempeño - Orientación del jefe para cumplir con el trabajo	.707**
Retroalimentación sobre desempeño constructiva - Orientación del jefe para cumplir con el trabajo	.610**
Jefe valora los esfuerzos del empleado - Orientación del jefe para cumplir con el trabajo	.623**
Jefe flexible y justo antes peticiones - Orientación del jefe para cumplir con el trabajo	.751**
Jefe flexible y justo antes peticiones – Comunicación de políticas y forma de trabajo por el jefe	.649**
Retroalimentación de desempeño - Jefe y empleado acuerdan expectativas de desempeño	.705**
Retroalimentación sobre desempeño, aspectos positivos y negativos – Jefe otorga retroalimentación	.630**
Jefe valora los esfuerzos del empleado - Jefe otorga retroalimentación sobre desempeño	.663**
Retroalimentación sobre desempeño constructiva – Retroalimentación, aspectos positivos y negativos	.789**
Retroalimentación sobre desempeño oportuna - Retroalimentación sobre desempeño constructiva	.616**
Jefe flexible y justo antes peticiones - Retroalimentación sobre desempeño constructiva	.716**
Jefe flexible y justo antes peticiones - Jefe valora los esfuerzos del empleado	.712**
Políticas de la Organización - Políticas de la Organización	
Reconocimiento de Dirección al personal por sus esfuerzos – Comunicación que apoya el logro de objetivos	.751**
En General-En General	
Buen lugar para trabajar – Satisfecho con el trabajo	.517*

Fuente: elaboración propia \*\*La correlación es significativa en el nivel 0.01 \* La correlación es significativa en el nivel 0.05

Los resultados de las correlaciones anteriores permiten concluir que cinco variables están relacionadas con otras cuatro variables en este modelo. Se propone como estrategia de investigación que, a partir de la evidencia empírica que arroja la matriz de coeficientes de correlación de Spearman, considerar sólo aquellas correlaciones significativas de 0.01 y de una magnitud igual o mayor a 0.5, lo cual representa una correlación positiva de moderada a fuerte.

## RESULTADOS

La investigación estableció como objetivo general medir el clima organizacional de una franquicia de comida rápida y la relación que guarda con la variable de liderazgo. En la sección sobre el liderazgo se puede observar que la mayoría de las respuestas son contestadas de manera positiva, a excepción de una pregunta en donde mencionan que el jefe no solicita sus ideas para mejorar en el trabajo. Respecto a las secciones que se refieren al trabajo, las condiciones de trabajo, las relaciones interpersonales y de trabajo, y en general, los encuestados en su mayoría contestan positivamente. Por otra parte, en la sección que se refiere a la organización, la mayoría son respuestas negativas. Es decir, los empleados consideran que la dirección no se preocupa por su futuro, no se reconoce la trayectoria del personal y las promociones que se realizan no se otorgan a quienes se lo merecen realmente.

## CONCLUSIONES

La aplicación del instrumento WES permitió conocer que existe una relación alta entre el liderazgo y el clima organizacional, es decir, las relaciones internas que se dan en la empresa, así como la visión que tienen los empleados sobre sus jefes, compañeros y el modo en general de operar de la organización. Además, con los resultados obtenidos de dicho instrumento se obtuvo la información necesaria para lograr los objetivos y comprobar la hipótesis de esta investigación. Existen algunas características que conforman el clima favorable de la franquicia como son las relaciones interpersonales de respeto y cordialidad, la confianza entre los miembros del equipo, así como el compromiso que los empleados tienen para cumplir sus tareas. Esto le permite al líder ejercer de manera adecuada su función de guía y facilitador debido a que el líder al brindar confianza y propiciar una comunicación favorable con sus empleados, los encamina a realizar su trabajo de manera satisfactoria.

Otra variable que tuvo una correlación alta con el clima organizacional fue la de relaciones interpersonales. Se observa que en esta franquicia existe un ambiente de cordialidad y respeto entre los compañeros de trabajo y el jefe, lo cual se debe al sentido de identidad que tienen los miembros, a que se conocen las actividades y responsabilidades propias, así como al compromiso que ambas partes tienen con la organización. Por otra parte, la variable de políticas de la organización no resultó con una correlación alta, ya que sólo se obtuvo una correlación positiva y en las gráficas se muestra una percepción desfavorable. Es decir, existen algunos aspectos que los empleados no perciben de modo conveniente, ya que la empresa no cuenta con una política de promociones definida.

Es importante señalar que las promociones se realizan en base a lo siguiente: primero, el supervisor determina quién tiene el potencial, segundo se le ofrece el puesto al empleado y si éste acepta, se inicia la capacitación, tercero, el empleado seleccionado debe ocupar el puesto de *sándwich artist* (preparador de sándwiches) mínimo por seis meses, antes de poder ocupar el puesto de gerente. Esto depende de la actitud y desarrollo del empleado, es decir, la duración puede ser superior o inferior a seis meses y cuarto una vez como gerentes, se les otorga la capacitación que dura aproximadamente de uno a dos meses, dependiendo también del desarrollo de la persona. Se ha dado el caso que a los empleados no les gusta el nuevo puesto y prefieren regresarse como *sándwich artist*.

Con estos criterios son a los empleados de piso a los que se promociona como gerentes de las sucursales, quedando una percepción entre los demás trabajadores de que no se otorgan a promociones a quienes se las merecen por lo cual se irían de la empresa si se les hiciera un ofrecimiento en otra empresa con las mismas condiciones de trabajo. Además de que la mayoría de los empleados no desean la promoción de la gerencia de la sucursal por la responsabilidad que implica y porque el sueldo no es alto, optando por quedarse como preparadores de sándwiches. Otro factor que ha influido a que esta percepción sea desfavorable, fue la contratación de una agencia de colocación para la contratación de personal a nivel gerencial ya que los empleados que si desean ser promocionados refieren que se le está dando preferencia a una persona de fuera en lugar de tomarlos en cuenta a ellos para el puesto.

Es interesante señalar que el liderazgo no se ejercería de un modo propicio en caso de que el clima organizacional fuera desfavorable para la organización. Si hubieran existido más variables con percepción negativa, los superiores tendrían problemas para llevar a cabo un adecuado ejercicio del liderazgo. Los resultados encontrados permiten afirmar que el clima organizacional influye de manera directa en el liderazgo y relaciones interpersonales de la franquicia. No se puede afirmar que esto sea igual para todas las empresas del mismo giro, pero este estudio se puede utilizar como guía y como una referencia válida para futuros estudios relacionados con el tema. A continuación se emiten algunas recomendaciones en base a los resultados obtenidos en la aplicación del cuestionario WES y tienen como finalidad el mejoramiento de las relaciones interpersonales dentro de la empresa.

Primera. Los directivos y gerentes deben mantener una comunicación más estrecha con los empleados y permitirles exponer sus puntos de vista sobre una determinada situación. Segunda. A los empleados se les pueden pedir ideas de mejora para que se sientan más comprometidos con su trabajo y desarrollen un sentido de pertenencia. Para lograr esto se les pediría que cada mes propusieran una forma de mejorar su área de trabajo. Las propuestas serían analizadas en conjunto con los mandos superiores, destacando los puntos positivos y negativos que podría tener dicha propuesta. En caso de ser viables se aplicarían las ideas de mejora. Tercera. La empresa debe realizar promociones basadas en parámetros a evaluar como: experiencia, actitud, habilidades, conocimientos, resultados. Los resultados obtenidos en este estudio aplican solamente para la franquicia de comida rápida que se analizó. No se puede generalizar los resultados para otras empresas similares, pero pueden ser una guía para otros estudios posteriores.

## COMPETITIVIDAD, CADENA DE VALOR E INVESTIGACIÓN CIENTÍFICA

Jaime Apolinar Martínez Arroyo, U.M.S.N.H

Irma Cristina Espitia Moreno, U.M.S.N.H

Marco Alberto Valenzo Jiménez, U.M.S.N.H

### RESUMEN

*En este artículo se analiza la importancia de las fuentes de ventajas competitivas por costos o diferenciación en la cadena de valor de las empresas exportadoras de aguacate ubicadas en Uruapan, Michoacán. Se proponen fuentes de ventaja competitiva diferentes a las mencionadas por Michael Porter. Además El análisis o medición se realiza de todo el modelo de variables, es decir se evalúan hasta los indicadores del modelo utilizado en esta investigación, ya que, al llevar la medición hasta este plano de análisis permite conocer o mostrar el origen de las ventajas competitivas. Es decir no es suficiente ver la ventaja competitiva de manera total, es necesario conocer de donde proviene. También se muestra la cadena de valor, la cual está formada por los siguientes agentes o eslabones, viveristas, productores, empacadores y transportistas y los resultados de su desempeño con respecto a las actividades de costos y diferenciación.*

**PALABRAS CLAVE:** Cadena de valor, Competitividad, Investigación científica.

## COMPETITIVENESS, VALUE CHAIN AND SCIENTIFIC RESEARCH

### ABSTRACT

*This article discusses the importance of the sources of competitive advantage by cost or differentiation in the value chain of avocado exporting companies located in Uruapan, Michoacán. Proposed sources of competitive advantage than those listed by Michael Porter. Besides analysis or measurement is made all model variables, i.e. indicators evaluated until the model used in this research because, by bringing up this plane measurement analysis allows to know or show the source of competitive advantage. That is not enough to see the totally competitive advantage; we need to know where it comes from. Also shown the value chain, which consists of the following agents or links, nurserymen, growers, packers and shippers and the results of its performance with respect to cost and differentiation activities.*

JEL: Q17, N56, O13

**KEYWORDS:** Competitiveness, value chain and scientific research

### INTRODUCCIÓN

Desde el surgimiento de la ciencia, esta ha sido un medio por el cual el mundo ha sido transformado, en los tiempos actuales resulta impresionante observar la forma en que las fronteras del saber han sido rebasadas, por medio de la creación y diseminación del conocimiento, por lo tanto, la constante batalla por su búsqueda y generación han concebido cambios drásticos en la sociedad de muchas maneras como, en la comunicación, la salud, la educación, el trabajo por mencionar algunas y hasta en la forma de competir de un país de una empresa u organización y hasta de una persona. Las naciones que han comprendido las exigencias del entorno mundial para evolucionar y encontrar soluciones a sus problemáticas son los más desarrollados por ejemplo, Suiza, Singapur, Corea, Finlandia, Alemania, Estados Unidos, Japón, Holanda y China. Desde luego la lista de países es superior a la mencionada

anteriormente. Por medio del conocimiento estos países han entendido o comprendido que dar prioridad al establecimiento de políticas públicas en actividades estratégicas como educación, salud, la economía y desde luego mediante el apoyo decidido a la ciencia es necesario para asegurar el bienestar de sus habitantes. Es decir, hacer más competitiva a su nación, de tal forma, que considero que la competitividad de una nación debe medirse en función de los beneficios que proporciona a sus habitantes. Por lo tanto, es indudable que mediante la investigación científica se logra una mejora en la competitividad y por lo tanto, en lo económico, es bien sabido que las organizaciones que no sean capaces de desarrollar formas de producción de conocimiento, articulando adecuadamente los sistemas de investigación con el desarrollo tecnológico y la innovación, están condenadas a un porvenir incierto (Olive, 2008).

Por medio de la ciencia hoy en día el ambiente de los negocios es más competitivo, de tal manera que cada ventaja competitiva de la empresa es y será rápidamente erosionada y superada por el rápido ritmo de competencia (Grimm, Lee, & Smith, 2006). Los mercados están en un estado constante de flujo y desequilibrio es decir, el ambiente actual de los negocios se encuentra lejos de ser estable y predecible. Sin embargo, actualmente la mayoría de las economías emergentes tienen una ventaja comparativa en el suministro de trabajo y tierra y la explotación de ciertos recursos naturales y ventajas climáticas sobre los países más desarrollados. Con la posible excepción de China y algunas economías asiáticas. Al explotar estas ventajas comparativas, las industrias dominantes en las economías emergentes tienden a estar caracterizadas por altos niveles de participación de micro y pequeñas empresas.

Cualquier estrategia en estos países que busque lograr un crecimiento económico amplio y reducir la pobreza, necesitará centrarse en las industrias con la capacidad de ser globalmente competitivas. Un sector ampliamente competitivo en México es el agroindustrial, en el cual destaca el aguacate, el cual goza de una alta demanda en el mercado nacional e internacional. El desarrollo de la industria del aguacate en México, en los últimos años se ha incrementado notablemente y con grandes oportunidades de desarrollo sobre todo con la diversificación de mercados y presentación final del producto. México es el principal productor, exportador y consumidor de aguacate en el mundo, con una producción de más de un millón de toneladas al año y produce 42 por ciento del aguacate que se cultiva a nivel mundial. En este mismo sentido, Michoacán es el primer estado productor con aproximadamente el 83% del total, además la exportación en 2008, rebasó ya las 200 mil toneladas de aguacate en fresco (Agropecuaria, 2008). Y en el siguiente periodo 2009 exportó más de 300 mil toneladas a los Estados Unidos. El principal consumidor extranjero es Estados Unidos, le siguen Japón, Canadá, Centroamérica.

## REVISIÓN LITERARIA

En este apartado se muestra el sustento teórico fundamental para la investigación, realizando un análisis de los enfoques teóricos que permitan la construcción de un nuevo conocimiento en el objeto estudiado. De acuerdo con Bacharach, el objetivo final de la investigación es generar una nueva teoría. Y define una teoría como una “declaración de las relaciones entre las unidades observadas o aproximadas en el mundo empírico”. Las unidades aproximadas significan los constructos, que por su misma naturaleza no pueden ser observados directamente (centralización, satisfacción, o cultura). Las unidades observadas significan las variables, que son operacionalizadas empíricamente para su medición (Bacharach, 1989). La teoría es la base del conocimiento que se adquiere constantemente y sistemáticamente, arreglado y convertido.

### Cadena de Valor

El concepto de “cadena de valor” es relativamente nuevo en el sector agroalimentario mundial Sin embargo, un pronóstico de la importancia que tendrán las cadenas de valor para la mejora de las ventajas competitivas de las empresas agroindustriales en el corto plazo es el realizado por el Dr. David Bell Director del programa de negocios de agroindustria de la Universidad de Harvard y el cuál menciona lo siguiente. “El futuro no será un agricultor compitiendo contra otro agricultor, o un distribuidor

compitiendo con otro distribuidor, o un detallista compitiendo contra otro detallista, o será una cadena de valor compitiendo con otra cadena de valor” (Bell, 2004).

En este mismo sentido Michael Porter afirma que una organización puede obtener una ventaja competitiva por costos o diferenciación si desempeña ciertas actividades mejor que sus competidores, la ventaja competitiva en costos: tecnologías propias, acceso preferencial a materias primas, capacitación y motivación, cultura de la empresa, programa de reducción de costos, economía de escala, y respecto a la ventaja competitiva en diferenciación Porter propone las siguientes actividades: producto, sistema de entrega, enfoque de mercadotecnia, desarrollo tecnológico, servicio y mantenimiento, amplitud de actividades de exclusividad. Ante las condiciones de competencia actuales es necesario evolucionar en las fuentes que proporcionan una ventaja, por lo tanto, se propusieron para la ventaja por costos Economías de escala Comercio electrónico, Benchmarking y Outsourcing; y para diferenciación Calidad, Innovación, Conocimiento, Gestión ambiental y Administración de las relaciones, las cuales se formaron a partir del análisis de la literatura publicados en distintas bases de datos, principalmente internacionales, se seleccionaron en base a que los autores mencionaban que estas actividades generaban ventajas por costos o diferenciación, además, se utilizó el criterio de la frecuencia de variables para llevar a cabo la creación del modelo propuesto. A su vez, el planteamiento de este modelo permite la generación de conocimiento del objeto de estudio. De tal forma, que al realizar una revisión de las referencias teóricas, se construyeron las ideas y argumentos que se mostraron y que apoyan esta investigación.

De igual forma, la teoría de la cadena de valor es imprescindible en esta investigación recordando que, el análisis de la cadena de valor es un método utilizado para descomponer el conjunto en las actividades que lo conforman, con la finalidad de facilitar la toma de decisiones estratégicas, al ubicar a la empresa frente a sus clientes, proveedores y competidores. La importancia y trascendencia de este análisis reside en crear ideas estratégicas que generen ventajas competitivas. También mediante el análisis de la cadena de valor se pueden localizar fuentes de competitividad. Por consiguiente es muy importante considerar la identificación de las bases de las ventajas competitivas de la cadena de valor del aguacate que faciliten el desempeño de los diferentes agentes económicos. No basta que un eslabón de la cadena alcance la competitividad deseada, ya que se requiere que toda la cadena o sistema lo logre. Dicho de otra forma, el análisis de la cadena de valor es esencialmente un sistema de creación de valor, es una herramienta analítica que facilita la identificación y la evaluación de las alternativas estratégicas (Walters & Rainbird, 2007). La cadena de valor de las empresas exportadoras de aguacate se muestra en la Figura 1. La cual está formada por viveristas, productores, empacadores y transportistas de aguacate.

Figura 1: Cadena de Valor del Aguacate

*Los viveristas son los que producen las plantas de aguacate, los productores cultivan el aguacate, los empacadores lo preparan para su exportación y los transportistas lo trasladan a los mercados internacionales. El trabajo bajo este esquema debería producir beneficios equitativos para todos, sin embargo, la realidad muestra que no es así. Fuente: Elaboración propia*

### Ventaja Competitiva Temporal en Retrospectiva

El concepto de ventaja competitiva ha tomado un lugar central en las discusiones de la estrategia de negocio. Las declaraciones acerca de la ventaja competitiva abundan, pero una definición precisa es difícil de alcanzar. El uso de la ventaja competitiva en la literatura es sinónimo de creación de valor (Rumelt, 2003). La ventaja competitiva que han logrado obtener algunas empresas a través de la adopción de la estrategia, tiene sus inicios en el concepto básico de finales de 1930, denominado “adaptación competitiva” (Alderson, 1937), en la cual, las actividades intelectuales y las relaciones con los

proveedores son las principales fuentes de ventaja competitiva. Está es una de las primeras literaturas sobre la competencia en la que el autor afirmó, que un aspecto fundamental de la adaptación competitiva es la especialización de los proveedores para cumplir con la variación en la demanda del comprador. La ventaja competitiva es "la rentabilidad sostenida por encima de la normal." (Peteraf M. A., 1993).

De igual manera Barney (1991), argumenta que una ventaja competitiva es lograda, cuando una empresa implementa una estrategia de creación de valor, que no ha sido simultáneamente implementada por cualquiera de los competidores actuales o potenciales (Barney J. B., 1991). Por lo tanto, la ventaja competitiva no es algo que se 'tiene', sino que se 'alcanza'; no es simplemente algo que nos hace distintos de la competencia, sino obtener una rentabilidad más alta que ella.

### Ventaja Competitiva Sostenida

Entender las fuentes de la ventaja competitiva sostenida para las empresas se ha convertido en la mayor área de investigación en el campo de la administración estratégica (Porter, 1985). De tal forma que la ventaja competitiva sostenida casi todas las organizaciones buscan y tratan de desarrollarla (Cheney & Jarrett, 2002). Y es definida por Bar-Eli, Galily & Israeli, (2008) como "aquella que la competencia no puede copiar o simular". De igual manera Barney, (2001) la conceptualiza como: " el beneficio prolongado de la aplicación de algunas estrategias únicas de creación de valor no implementadas simultáneamente por cualquier competidor actual o potencial y con la incapacidad para duplicar los beneficios de esta estrategia." Además, deben poseer cuatro atributos: rareza, valor, la imposibilidad de ser imitada, y su incapacidad para ser sustituido.

Al mismo tiempo argumenta que una empresa que posea un recurso particularmente valioso y que es obtenido en circunstancias históricas únicas, puede obtener una ventaja competitiva sostenida, puede mejorar la eficiencia y la eficacia de una manera que las empresas competidoras no pueden competir de esa manera y que estos no pueden imitarla a través del tiempo (Barney,1991). Cabe mencionar que los recursos de la empresa desde esta perspectiva incluye: todos los activos, capacidades, procesos organizacionales, atributos de la empresa, información, conocimiento etcétera, controlados por la empresa que permiten que la organización implemente estrategias para hacerla más eficiente (Daft, 1983) Sin embargo, Sostener una ventaja competitiva permanentemente, es muy difícil, particularmente en la era de la incertidumbre, de la crisis y del impacto del internet en el comportamiento de los consumidores y la capacidades de transacción. Como se observa en los anteriores conceptos, la definición de la ventaja competitiva ha tenido una evolución a través del tiempo, por lo tanto la evolución de las empresas debe ser similar en cierto sentido.

### Estrategia Competitiva Por Costos

La ventaja en costo es uno de los tipos de ventaja competitiva que puede tener una empresa. El costo es de enorme importancia para las estrategias de diferenciación, porque un diferenciador debe mantener una proximidad en el costo a la de sus competidores. Una empresa tiene ventaja de costo si su costo acumulado de desempeñar todas las actividades de valor es menor que los costos de sus competidores. El éxito del liderazgo en costo depende de las habilidades de la empresa en la implementación real en una base cotidiana, los costos bajan como resultado de un fuerte trabajo y atención constante, de acuerdo con Porter, (1985), varios son los factores que inciden en el liderazgo en costos, incluyen las economías de escala, entrenamiento y motivación de los empleados, la cultura de la empresa, la adopción de programas formales de reducción de costos, un seguimiento constante de automatización y una fuerte creencia en la curva del aprendizaje contribuyen a la capacidad de una empresa en el logro del liderazgo en costo.

### Ventaja Competitiva Por Diferenciación

La diferenciación es otro de los dos tipos de ventaja competitiva que puede poseerse. El nivel general de diferenciación de una empresa es el valor acumulado que crea para los compradores por cumplir todos los criterios de compra. Las fuentes de diferenciación en la cadena de valor de la empresa son con frecuencia múltiples. Una empresa se diferencia de sus rivales cuando ofrece algo especial que aprecian los compradores. La diferenciación proviene de la cadena de valor de la empresa, prácticamente cualquier actividad constituye una fuente potencial de exclusividad. Las estrategias de diferenciación tratan de crear valor para el cliente a través de la cadena de valor. Porter sugirió la diferenciación como una alternativa al liderazgo en costos. De tal forma, que hoy en día las compañías necesitan encontrar ventajas competitivas sustentables en sus actividades en la cadena de valor que les permitan mantenerse en el mercado por un periodo más amplio, así como obtener una mayor rentabilidad y ampliar o mantener su participación en el mercado.

### **METODOLOGÍA**

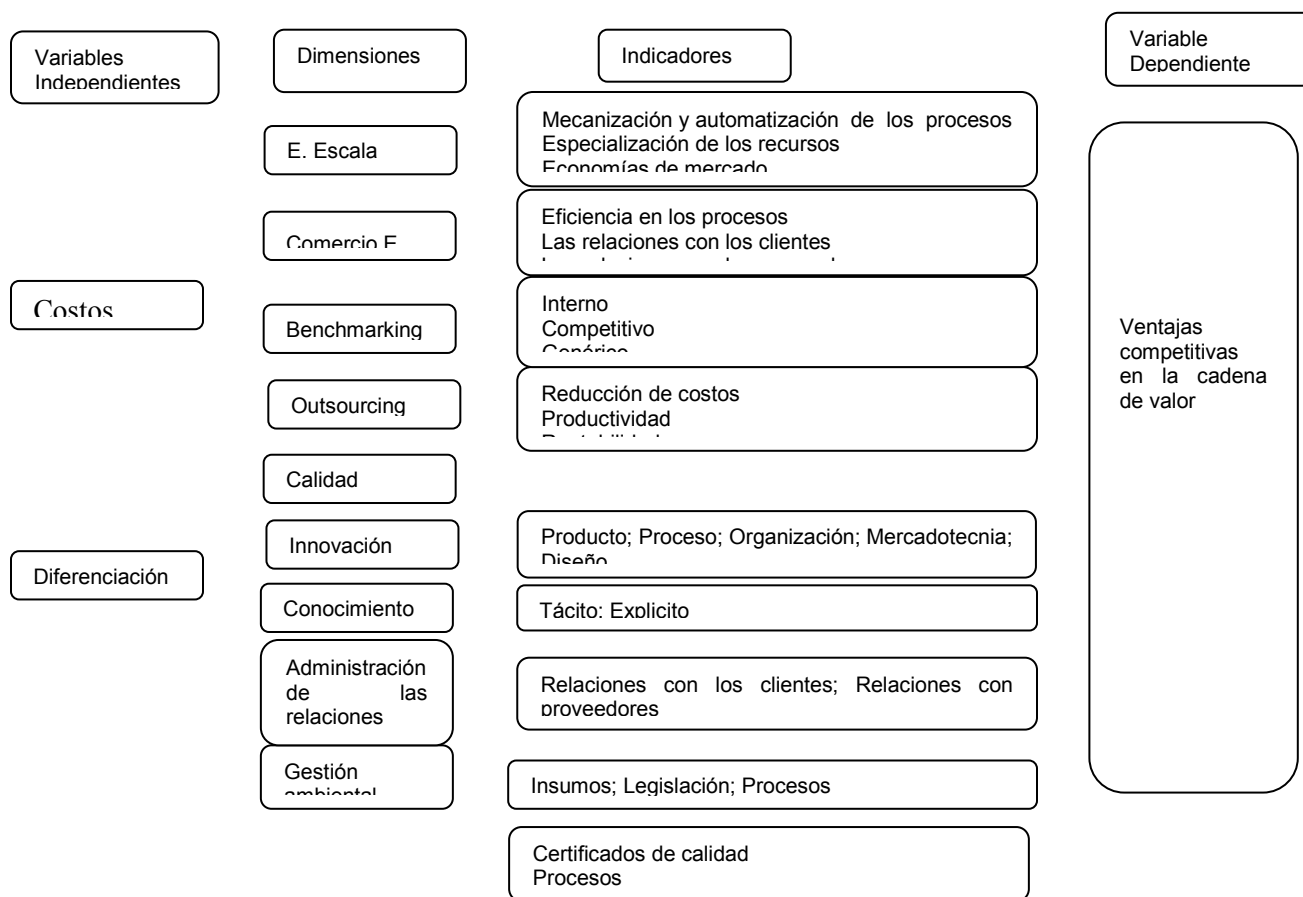

El presente artículo emana de una investigación científica y tiene un diseño descriptivo- correlacional, ya que, describe al objeto de estudio y segundo porque determina la correlación que tienen la variable independiente con la variable dependiente ventajas competitivas en la cadena de valor de las empresas exportadoras de aguacate ubicadas en Uruapan Michoacán. Se aplicó un cuestionario que contiene 156 preguntas distribuidas en las dimensiones de las variables de costos y diferenciación, a los 4 agentes que componen la cadena con la finalidad de determinar cuál de estos desempeña mejor las actividades planteadas, y como consecuencia agrega más valor al siguiente eslabón.

El universo de estudio está formado por los eslabones de la cadena de valor, viveristas, productores, empacadores y transportistas, representadas por los dueños, gerentes, administradores o el jefe de producción de las empresas exportadoras de aguacate ubicadas en Uruapan, Michoacán. Una vez identificado el universo se seleccionó la muestra representativa, en la cual se estableció un nivel de confianza del 95% y un nivel máximo de error del 5%. La medición es el proceso de vincular conceptos abstractos con indicadores empíricos (Hernandez Sampieri & Fernandez, 2010). Para ello se necesita un instrumento de medición adecuado que registre los datos observables que representen verdaderamente los conceptos o variables de las que se están presentando, con el objeto de medir las variables que afectan las ventajas competitivas. En el instrumento de medición se utilizó una escala tipo Likert, la escala para el cuestionario tiene cinco intervalos, los cuales van desde el valor mínimo 1 que corresponde al rango de muy bajo, 2 al rango de bajo, 3 mediano, 4 al rango de alto y 5 al rango de muy alto.

Es necesario recalcar que la situación problemática que guía este trabajo es el siguiente. Según Bonales y Sánchez, el sector aguacatero se caracteriza por su poca organización (Bonales & Sánchez, 2003), siendo ésta una de sus principales debilidades, además algunas ventajas comparativas traducidas en ventajas competitivas de los productores de aguacate, han sido mejoradas (Sánchez, 2007), por ejemplo, Israel consigue rendimientos de casi 20 toneladas por hectárea (Naamani, 2007), mientras los productores de aguacate en Michoacán apenas logran pasar las diez toneladas por hectárea. Además, a pesar del incremento en las exportaciones de México al mercado norteamericano en el periodo 2010-2011, ha perdido participación en el mercado en ese país, ya que, en el periodo 2009-2010, México tenía una participación del 54.1%, y para el periodo 2010-2011, disminuye su participación al 51.7% del mercado norteamericano, por lo tanto, esta investigación está encaminada a la búsqueda de ventajas competitivas en las actividades de la cadena de valor con la finalidad de mejorar su competitividad la figura 2 muestra el modelo de variables bajo el cual se desarrolló esta investigación

Figura: 2: Modelo de Variables

Este es el modelo de variables bajo el cual se desarrolló la investigación, las variables independientes son costos y diferenciación, las dimensiones de costos economías de escala, comercio electrónico, benchmarking y outsourcing cada una muestra los indicadores. La variable diferenciación tiene las dimensiones, calidad, innovación, conocimiento, administración de las relaciones y gestión ambiental todas con sus dimensiones y la variable dependiente que es ventajas competitivas en la cadena de valor. Fuente: Elaboración propia

## RESULTADOS DEL ESTUDIO

Aspectos vitales posteriores a la elaboración del cuestionario son la medición de la confiabilidad y validez se dice que un cuestionario es confiable cuando mide con la misma precisión, da los mismos resultados, en sucesivas aplicaciones realizadas en situaciones similares (Santillana, 1998), esta medición proviene de toda la muestra recolectada es decir no es de una prueba piloto.

Tabla 1: Medición de la Confiabilidad Alfa de Cronbach

Elemento	Cuestionario	Variable Independiente Diferenciación	Variable Independiente de costos
Alfa de Cronbach	.962	.964	.955

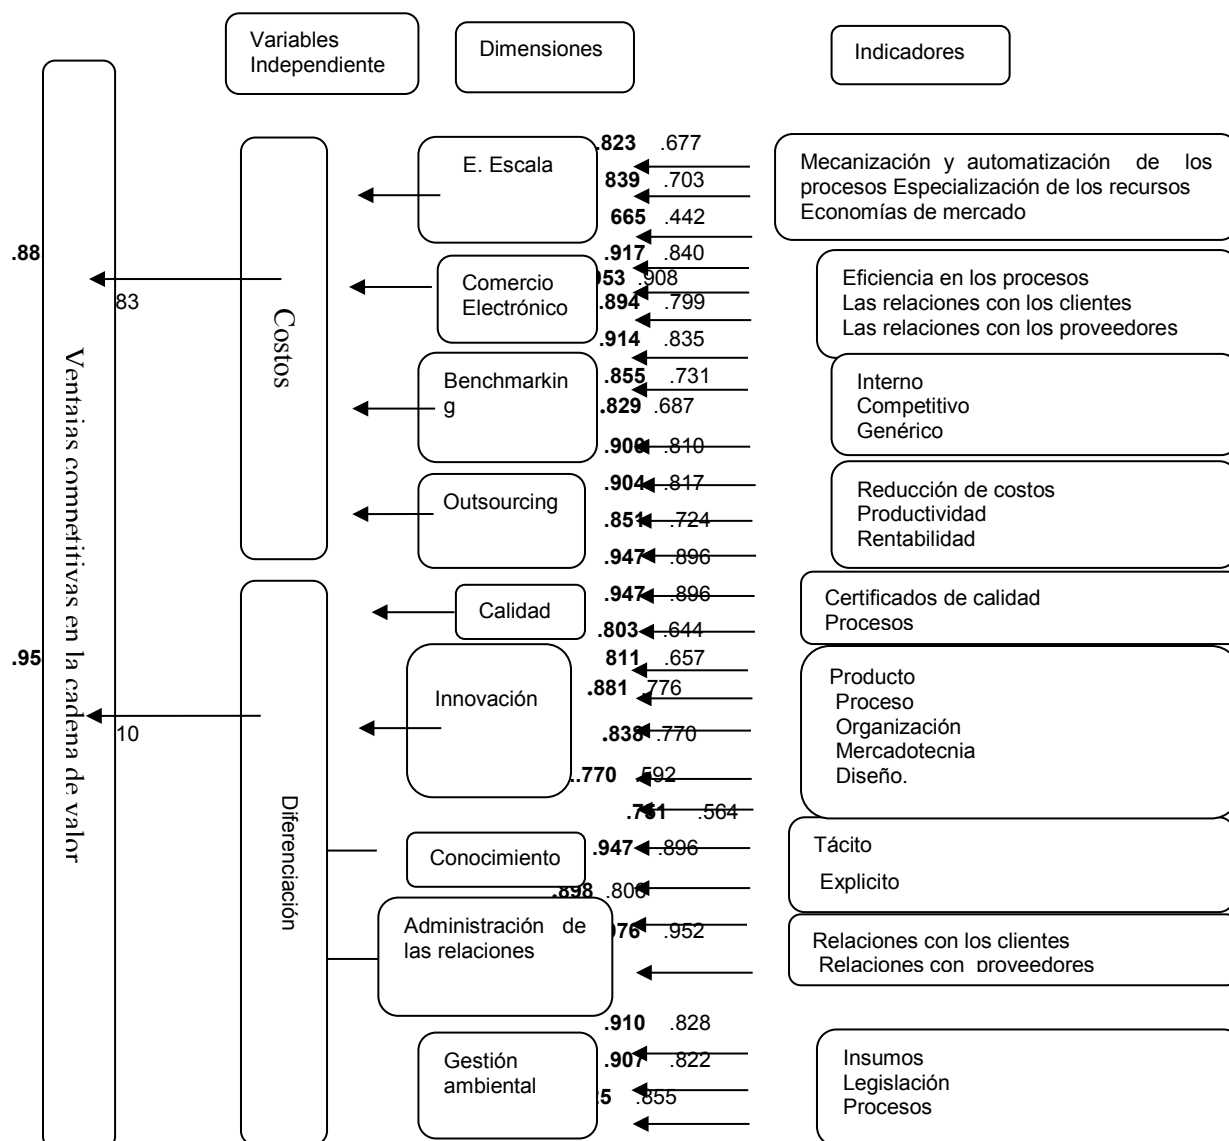

Esta tabla muestra la Alfa de Cronbach del cuestionario utilizado en esta investigación el cual se observa tiene una confiabilidad de .962 y la variable independiente diferenciación .964 y la variable de costos .955, lo que se infiere que es un instrumento muy confiable en su aplicación. Fuente: Elaboración propia.

### Índice de Correlación de Pearson

El coeficiente de correlación de producto-momento de Pearson ( $r$ ), se aplica a dos variables a nivel intercalar por lo menos, éste es un coeficiente de correlación paramétrico que indica con la mayor precisión cuándo dos cosas están correlacionadas, es decir, hasta qué punto una variación en una corresponde con una variación en otra, la figura 3 muestra el coeficiente de correlación de Pearson y determinación del modelo de variables.

Figura 3: Coeficiente de Correlación de Pearson y Coeficiente de Determinación

En esta imagen se muestra la medición total del modelo de investigación en relación a la correlación y al coeficiente de determinación, esto permite observar el impacto de cada indicador, dimensión y variables independientes en la variable dependiente, determinándose el origen de los factores de mayor impacto y de esta manera incidir de donde provienen las ventajas competitivas. Fuente: Elaboración propia

### Medición de las Variables

Las ventajas competitivas en la cadena de valor de las empresas exportadoras de aguacate se miden considerando las variables propuestas para esta investigación. De tal forma, que después de haber capturado la información recopilada en el programa estadístico SPSS, se procedió a su análisis e interpretación, la cual se realizó de una manera deductiva, es decir del resultado general al resultado particular. Por lo tanto, la primera medición fue el resultado general de la investigación, se calculó la media siendo esta 445.7 cayendo en el rango de regular, la moda es la opción de regular, lo que significa que este es la opinión que más fue seleccionada por las personas encuestadas. Este resultado general muestra finalmente que las actividades desarrolladas por los agentes que componen la cadena de valor del aguacate, representan una posibilidad regular de ser fuente de ventaja competitiva para las empresas exportadoras de aguacate ubicadas en Uruapan, Michoacán, sin embargo, éste resultado está más cercano al rango de baja. La medición de las variables independientes, ponen en evidencia la relación significativa que presentan con la variable dependiente.

Las variables de costos y diferenciación son las que determinan directamente el resultado obtenido. Continuando con el análisis de las respuestas la medición de las variables independientes, dieron los siguientes resultados. La media de la variable independiente de costos es de 159 ubicándose en el rango de regular, con una marcada proximidad hacia el rango de baja. La variable de diferenciación. En este caso, se obtuvo una media de 286.5 puntos, ubicándose en el rango de regular, éste resultado es muy similar al mostrado en la variable de costos y en la variable dependiente. Las actividades destinadas a la disminución de costos que contiene la variable independiente se midieron con cada agente de la cadena, es decir los viveristas, productores, empacadores y transportistas dieron sus repuestas en el instrumento de medición, de tal forma que los empacadores son los que mayormente realizan actividades destinadas a reducir costos, sin embargo, los resultados no son convincentes para lograr mejorar su competitividad, ya que, de un 100% que sería la calificación óptima los empacadores únicamente obtuvieron el 64.5%.

En relación a la variable diferenciación, recordemos que es uno de los dos tipos de ventaja competitiva que puede poseerse. Esta estrategia tiene por objetivo dar al producto cualidades distintivas importantes para el comprador y que la diferencien de la oferta de los competidores. Así, una diferencia acertada permite obtener beneficios superiores siempre que el mercado esté dispuesto a pagar un precio superior. Esta estrategia implica además inversiones importantes en el marketing operacional con el objetivo de dar a conocer al mercado las cualidades distintivas del producto.

Los resultados de esta variable muestran que los empacadores son los que con mayor frecuencia realizan actividades para lograr una diferenciación en sus actividades, es importante mencionar que este eslabón es el más fuerte económicamente hablando, las actividades destinadas a mejorar la diferenciación que con mayor empeño desempeñan este eslabón, es la calidad y la innovación, enfatizando mayormente en la primera ya que por medio de esta sus resultados son más competitivos y los clientes lo perciben, todos los empacadores tienen certificados de calidad lo cual se ve reflejado en su desempeño. Con relación a la actividad de innovación, son los empacadores los que más invierten en este sentido, los resultados lo muestran ya que, de acuerdo con estos realizan actividades destinadas a la innovación en un 70%, es decir frecuentemente se realizan actividades destinadas a la búsqueda de mejora. Por otro lado, sin embargo resulta lamentable que todos los agentes de la cadena hayan manifestado que el cuidado al medio ambiente no es una prioridad para ninguno, ya que, en los resultados obtenidos de la dimensión gestión ambiental, el porcentaje obtenido es de 42% es decir, todos los agentes realizan pocas actividades destinadas al cuidado del ambiente en sus operaciones diarias en sus procesos y desconocen la legislación al respecto, lo que resulta lamentable dadas las condiciones en las que el entorno se encuentra.

## CONCLUSIONES

El incremento en la competencia, la forma de competir, así como, la globalización, han llevado a las empresas a una incesante búsqueda de la mejor estrategia para contender en el entorno actual en los negocios. En definitiva, el concepto de ventaja competitiva ha tomado un lugar central en las discusiones de la estrategia de negocio. Las declaraciones acerca de la ventaja competitiva abundan, pero una definición precisa es difícil de alcanzar. Las organizaciones aguacateras enfrentan una competencia masiva interna y externa y compiten por una mejor posición en el mercado y por sobrevivir, emplean técnicas conocidas, las rutinas son consagradas por el tiempo con hábitos basados en la experiencia. La toma de decisiones viene de los procesos inconscientes sobre la base de las experiencias pasadas que da el trabajo, la confianza y el instinto. La innovación viene de estructuras irregulares y de comportamientos basados en las ideas personales, muchas veces, los gerentes necesitan imaginación y creatividad, no dejan las viejas rutinas que les proporcionan resultados confiables y las medidas del rendimiento de las innovaciones, continúa siendo hasta cierto punto un misterio.

La ventaja comparativa que proviene de Las excelentes condiciones naturales en las que se cultiva el aguacate, sigue siendo lo que proporciona la competitividad al aguacate, ya que, esta investigación muestra que, no existe unidad en la cadena de valor, no se tiene objetivos comunes, constantemente se abusa de los eslabones más débiles y en constantes ocasiones hay desacuerdos respecto al precio del aguacate, esta organización dista mucho de ser una cadena de valor. Los empacadores es el eslabón más fuerte de la cadena, sin embargo sus esfuerzos para mejorar de manera constante son incipientes y aún más los del resto de la cadena. Para concluir es importante mencionar las empresas exportadoras de aguacate cuentan con ventajas comparativas, basadas en los recursos naturales donde se cultiva este fruto, es decir el clima, el terreno, el agua, el viento son factores que permiten que en esa región se tengan hasta 2 floraciones por año, es decir se tiene aguacate todo el año, a diferencia de otros países como Chile y los Estados Unidos que solo tiene aguacate durante un periodo de tiempo por temporada.

# FACTORES DE LA EMPRESA Y DEL EMPRESARIO Y SU RELACIÓN CON EL ÉXITO ECONÓMICO EN LAS PYMES DE LA REGIÓN CENTRO DE COAHUILA, EN MÉXICO

Elvira Velarde López, Universidad Autónoma de Coahuila  
Zóchitl Araiza Garza, Universidad Autónoma de Coahuila  
Anahí García Moreno, Universidad Autónoma de Coahuila

## RESUMEN

*Desde la perspectiva de la teoría de recursos y capacidades, los factores de la empresa y del empresario son fortalezas que pueden ser usadas para crear e implementar sus estrategias en aras de lograr el éxito económico de la empresa. En este artículo se analiza la relación que existe entre los factores de la empresa y del empresario y el éxito económico que han desarrollado las pequeñas y medianas empresas (Pymes) de la región centro del estado de Coahuila, México. La metodología consistió en obtener información cuantitativa mediante un cuestionario estructurado aplicado a una muestra de 130 Pymes de la región; los datos obtenidos fueron procesados posteriormente con el software estadístico SPSS aplicando Cross Tabs y Coeficiente de Correlación de Spearman. Entre los resultados más relevantes se tiene que los factores del empresario no tienen asociación con el éxito económico, excepto en el grado de escolaridad obtenido, en el que se encontró que a un nivel de confianza del 95 % existe una relación positiva de 0.222 con el crecimiento en la inversión de maquinaria y equipo. El análisis efectuado también arrojó que la mayoría de las características de la empresa se asocian con el éxito económico de las pequeñas empresas.*

**PALABRAS CLAVE:** Factores de la empresa, Factores del empresario, éxito económico, Pymes.

## FACTORS OF THE FIRM AND THE EMPLOYER AND ITS RELATIONSHIP TO ECONOMIC SUCCESS IN SME's OF THE CENTRAL REGION OF COAHUILA, MEXICO

### ABSTRACT

*From the perspective of the resources and capabilities theory, factors of the firm and the employer are strengths that can be used to create and implement their strategies in order to achieve economic success of the firms. This article analyzes the relationship between the factors of the firm and the entrepreneur and the economic success developed by the small and medium enterprises (SMEs) in the central region of the state of Coahuila, Mexico. The methodology was to obtain quantitative information using a structured questionnaire administered to a sample of 130 SMEs in the region, the data were further processed with the SPSS statistical software using Cross Tabs and Spearman correlation coefficient. Among the most important results were the fact that entrepreneur factors have no association with economic success, except in the level of education obtained, because it was found that at a confidence level of 95%, there is a positive relationship of 0.222 with the growth in investment in machinery and equipment. The analysis also showed that most of the features of the company are associated with the economic success of small businesses.*

## INTRODUCCIÓN

Las empresas, para lograr una ventaja competitiva, deben aprender a modificar sus patrones de comportamiento, adaptándose a las necesidades que se presentan a medida que la competencia se intensifica y se internacionaliza (Dekkers, 2005; Arechavala, 1998; Arechavala y Madrigal 2003). La ventaja competitiva de una empresa se puede medir de diferentes maneras, entre las cuales cabe mencionar la que utilizan Máynez, Cavazos, Torres y Escobedo (2013), con los indicadores de crecimiento de las ventas, crecimiento de la empresa y la productividad. Derivado de lo anteriormente expuesto y de acuerdo con la teoría de recursos y capacidades, la cual asume que los factores de la empresa y del empresario son fortalezas que pueden ser usadas para diseñar e implementar sus estrategias en aras de lograr el éxito económico de las firmas (Barney, 1991), se realizó esta investigación, la cual tiene como objetivo analizar la relación que existe entre los factores de la empresa y del empresario y el éxito económico que han desarrollado las Pymes en la región centro del estado de Coahuila, México.

## REVISIÓN LITERARIA

*Factores de la empresa y del empresario:* Aragón y Rubio (2005) clasifican a los factores de éxito de las empresas en dos grandes grupos: internos donde se identifican todas aquellas variables que derivan del ambiente organizacional como lo son: capacidades directivas, capacidades de marketing, calidad, innovación, recursos tecnológicos, sistemas de información, adecuada gestión financiera, valores culturales, estructura organizativa; y por otro lado, los externos constituidos por todas aquellas variables sociales, económicas, políticas y legales que afectan a un grupo empresarial y que de una forma o de otra no dependen de la gestión de cada organización. Hansen y Wernerfelt (1989) mencionan que hay dos enfoques en la investigación de los determinantes del desempeño de las empresas: el primero está basado en una economía tradicionalista, enfatizando la importancia de factores externos relacionados con el mercado y el otro se basa en factores organizacionales con respecto a su comportamiento con el medio ambiente. Bajo esta perspectiva se le da poca importancia a la posición competitiva de la empresa; de igual manera, bajo la perspectiva de la economía tradicionalista no se ha tomado en cuenta los factores internos de la firma. Sin embargo, los mencionados autores, unen en sus investigaciones estos dos enfoques para medir y analizar la rentabilidad de la firma.

*Éxito económico:* Schutjens y Wever (2000) mencionan como factores asociados a la firma aquellos relacionados con las actividades económicas de la empresa como son las utilidades, la recuperación de la inversión y la generación de ingresos sustanciales para los empresarios; otros indicadores como el valor agregado, el incremento en volumen de ventas, en número de empleados y en términos de la supervivencia de la empresa; por otro lado, las características de la firma como el tamaño, la presencia de socios, el capital inicial. Como factores asociados con el empresario se refieren a la experiencia, habilidades, nivel de educación, edad del empresario o administrador, entre otros, que pueden llegar a explicar el éxito o fracaso de una empresa y según los mismos autores, los factores externos Incluyen factores externos a la firma y al empresario, como el tipo de actividad, los cambios en las condiciones del mercado, estructura competitiva, la heterogeneidad del producto y algunos otros.

Por su parte, McNamee, Greenan y McFerran (1999), en su estudio sobre pequeñas empresas irlandesas, utilizó dos medidas del éxito o fracaso empresarial: crecimiento (en volumen de ventas y de empleo) y utilidad (rendimiento sobre los activos, rendimiento sobre las ventas, utilidad por empleado). Y por otro lado, en un estudio comparativo sobre el desempeño en el sector bancario en Nueva Inglaterra, Powers y Hahn (2002) emplearon sólo un indicador (rendimiento sobre los activos). La relación entre la edad de la firma encontrada en algunas investigaciones (Wynarczyk and Watson, 2005; Wengel and Rodriguez, 2006) muestran una tendencia a ser una relación negativa: a mayor edad, menor éxito económico en la firma, ya que las empresas jóvenes tienden a ser relativamente más fáciles de lograr un incremento proporcionado en escala (Rosli, 2005 citando a Storey *et al.*, 1987). Pero por otro lado, otros estudios

arrojan evidencia de una relación positiva entre la edad y el desempeño de la firma (Maes, Sels y Roodhooft, 2005); con respecto a esta relación positiva, Wijewardena y Tibbits (1999) argumentan que las empresas grandes tienden a crecer más rápidamente porque poseen ideas innovadoras y administraciones más dinámicas.

## METODOLOGÍA

Derivada de la revisión bibliográfica efectuada para el presente estudio se plantean las siguientes hipótesis:

H<sub>1</sub>: Los factores del empresario se relacionan con el éxito económico que han desarrollado las Pymes de la región centro del Estado de Coahuila.

H<sub>2</sub>: Los factores de la empresa y se relacionan con el éxito económico que han desarrollado las Pymes de la región centro del Estado de Coahuila.

La estrategia metodológica se basó en un estudio cuantitativo aplicando las encuestas con un cuestionario estructurado, adaptado de Saavedra *et al.* (2007), entrevistando cara a cara a los empresarios de las 130 pequeñas empresas que conformaron la muestra por conveniencia de una población infinita de Pymes. Los datos se procesaron a través del paquete estadístico SPSS, utilizando *Cross Tabs* y *Rho de Spearman*. La medición de los Factores de la Empresa se efectuó a través de cinco sub-dimensiones: sector económico, tamaño de empresa, estructura jurídica, tipo de ventas y actividad del negocio los cuales se detallan en la Tabla 2; mientras que la medición de los Factores del Empresario se realizó mediante cinco dimensiones: género, número de generación como empresario heredero, escolaridad, área de estudio y experiencia del propietario; finalmente la medición de Éxito Económico se realizó de acuerdo a la información proporcionada por los empresarios acerca del crecimiento obtenido en los últimos dos años en las cuatro variables siguientes: número de empleados, ventas, utilidades o ganancias e inversión en maquinaria y equipo, cada una de ellas medidas en una escala ordinal de nulo, bajo, medio ó alto.

## RESULTADOS

Para comprobar la H<sub>1</sub>: *Los factores del empresario se relacionan con el éxito económico que han desarrollado las Pymes de la región centro del Estado de Coahuila*, se aplicó el coeficiente de correlación *Rho de Spearman* en los indicadores generación como empresario heredero y escolaridad para determinar su relación con el éxito económico; los resultados encontrados muestran una correlación positiva (.222) y estadísticamente significativa a un nivel de confianza del 95% entre el nivel de escolaridad del empresario y el crecimiento en la inversión en maquinaria y equipo, lo cual confirma que a mayor nivel de escolaridad del empresario, mayor será el crecimiento de la inversión en maquinaria y equipo. Para el resto de los indicadores de los factores del empresario se aplicó la técnica *Cross Tabs*, no encontrándose valores estadísticamente significativos a un nivel de confianza del 95%, excepto en el área con más experiencia del empresario que de manera específica se relaciona con el crecimiento en ventas en los últimos dos años, donde se encontró un coeficiente de contingencia de .535 con valores significativos a un nivel de confianza del 95%, de una relación entre la mayor experiencia desarrollada por el empresario y el crecimiento en ventas obtenido en los dos últimos años. Lo anterior permite aceptar parcialmente la H<sub>1</sub>.

Para comprobar la H<sub>2</sub>: *Los factores de la empresa se relacionan con el éxito económico que han desarrollado las Pymes de la región centro del Estado de Coahuila*, se aplicó el coeficiente de correlación *Rho de Spearman* en el indicador tamaño de empresa, no encontrándose valores significativos. Para el resto de los indicadores de los factores de la empresa se aplicó la técnica *Cross*

*Tabs*, encontrándose únicamente valores significativos para: i) una asociación con el éxito económico medido con el crecimiento del número de empleados (coeficiente de contingencia de .255 con  $p < 0.05$ ) y con el crecimiento de la inversión en maquinaria y equipo en ese mismo tiempo (coeficiente de contingencia de .281 con  $p < 0.05$ ); ii) una asociación del sector económico de la empresa con el éxito económico medido con el crecimiento en ventas (coeficiente de contingencia de .328 con  $p < 0.05$ ) y con el crecimiento de la inversión en maquinaria y equipo en ese mismo tiempo (coeficiente de contingencia de .376 con  $p < 0.01$ ); iii) una asociación entre el tipo de ventas con el éxito económico medido con el crecimiento del número de empleados (coeficiente de contingencia de .309 con  $p < 0.05$ ) y con el crecimiento de la inversión en maquinaria y equipo en ese mismo tiempo (coeficiente de contingencia de .337 con  $p < 0.01$ ). Lo anterior permite aceptar parcialmente la  $H_2$ .

## CONCLUSIONES

El presente trabajo de investigación se realiza en una muestra por conveniencia de micro, pequeñas y medianas empresas (Pymes) de la región centro del estado de Coahuila, por tanto los resultados encontrados, se limitan a las empresas antes mencionadas y corresponden al trabajo de campo realizado en el 2012. El estudio versó entorno al análisis, por un lado, de la relación que existe entre los factores de la empresa con el éxito económico obtenido por las Pymes, y por el otro, al análisis de la relación que existe entre los factores del empresario con el éxito económico obtenido por dichas empresas.

Los resultados de la investigación arrojan evidencia empírica estadísticamente significativa que permite aceptar parcialmente la  $H_1$ : *Los factores del empresario se relacionan con el éxito económico que han desarrollado las Pymes de la región centro del Estado de Coahuila* ya que, sólo existe evidencia estadísticamente significativa para hacerlo en el caso del nivel de escolaridad del empresario que se relaciona con el crecimiento en la inversión de maquinaria y equipo y el área con más experiencia del empresario que de manera específicas se relaciona con el crecimiento en ventas en los últimos dos años; este estudio no arroja evidencia suficiente para asegurar que exista una asociación entre el resto de los indicadores de los factores del empresario con el éxito económico.

Respecto a la  $H_2$ : *Los factores de la empresa se relacionan con el éxito económico que han desarrollado las Pymes de la región centro del Estado de Coahuila*, los hallazgos permiten aceptarla parcialmente ya que, sólo existe evidencia estadísticamente significativa para hacerlo en el caso de la estructura jurídica de la empresa y el tipo de ventas que realiza la empresa, que se relacionan con el éxito económico medido en términos del crecimiento en el número de empleados y en la inversión de maquinaria y equipo, así como el sector económico de la empresa, que de manera específicas se relaciona con el éxito económico en el crecimiento en ventas y en la inversión de maquinaria y equipo en los últimos dos años. Este estudio no arroja evidencia suficiente para asegurar que exista una asociación entre el resto de los indicadores de los factores de la empresa con el éxito económico. Se recomienda como línea de investigación futura analizar con una muestra probabilística, la relación que existe entre factores de la empresa y del empresario y el éxito económico, discriminando el análisis con base en el tamaño de la empresa, pues de acuerdo a la literatura las características y operación de la microempresa, difiere en gran medida de las pequeñas y medianas.

# DIAGNÓSTICO DE LOS SISTEMAS DE REPRESENTACIÓN DE LA INFORMACIÓN EN AMBIENTES UNIVERSITARIOS ENFOCADOS A LA LICENCIATURA EN SISTEMAS COMPUTACIONALES ADMINISTRATIVOS DE LA UNIVERSIDAD ESTATAL DE SONORA UABJ.

Aracely Gutiérrez Serna, Universidad Estatal de Sonora

Daniel Paredes Zempual, Universidad Estatal de Sonora

Lizeth Alejandra González Martínez, Universidad Estatal de Sonora

Alma Isabel Arias Hurtado, Universidad Estatal de Sonora

## RESUMEN

*Este proyecto de investigación se realizó con 33 estudiantes de la Licenciatura en Sistemas Computacionales Administrativos (LSCA) de la Unidad Académica Benito Juárez, de los cuales 17 son varones y 16 mujeres. El rango de edad de estos universitarios al momento de aplicar para este proyecto oscilaba entre los 17 y 19 años. El 98% de los jóvenes, proceden de comunidades rurales ubicadas en el sur del Estado de Sonora, en la región del Mayo; se aplicó el test de sistemas de representación VAK. Al realizar el análisis comparativo sobre los resultados del test y los promedios generales de los estudiantes, se concluye que efectivamente los sistemas de representación influyen en gran manera del éxito académico de los estudiantes universitarios. Al revisar la teoría VAK se detecta que los kinestésicos poseen habilidades de práctica y manipulación, por lo que categorizamos a la Licenciatura de Sistemas Computacionales Administrativos como una carrera totalmente práctica en la que la principal fuente de trabajo y estudio es la computadora. En la población estudiada se detecta que solo 2 estudiantes de los 33 que contestaron el test, han desarrollado en gran medida el sistema Kinestésico y alcanzaron los promedios más altos de la generación, por lo cual se considera significativo el resultado; ya que sus habilidades prácticas les permiten desarrollarse con más facilidad dentro de sus actividades escolares tales como las asignaturas enfocadas al diseño y programación de software, así como al mantenimiento y soporte técnico de equipo de computo.*

**PALABRAS CLAVE:** Aprendizaje, Información, Estudiantes

## DIAGNOSIS OF SYSTEMS OF REPRESENTATION OF INFORMATION IN UNIVERSITY ENVIRONMENTS FOCUSED ON BACHELOR'S DEGREE IN COMPUTER SYSTEMS ADMINISTRATION FROM THE STATE UNIVERSITY OF SONORA UABJ

### ABSTRACT

*This research project was conducted with a population of 33 students, 100% of the group from Bachelor in Administrative Computer Systems (LSCA) at Universidad Estatal de Sonora, campus Benito Juárez. From which 17 are males and 16 females. The age of these university students when applying for this project ranged between 17 and 19 years, 98% of them are from rural communities located in the southern region of the state of Sonora. In the aforementioned location a test was applied, it is called VAK representations systems test. When performing a comparative analysis on the test results and the overall averages of students, it was concluded that indeed representation*

*systems greatly influence the academic success of college students. Based upon the VAK theory, the kinesthetic students have exhibited practical and manipulation skills. Therefore, the Bachelor of Computer Systems Administrative can be labeled as an academic program that needs a lot of practical endeavors to be performed by the students, and their main source of work and study is the computer. In the study's population it was detected that only 2 of the 33 students who completed the test developed largely kinesthetic system and reached the highest average generation, so the result is considered significant, since their practical skills allow them to develop more easily in school activities such as courses focused on software design and programming, and the maintenance and support of computer equipment.*

## INTRODUCCIÓN

La Universidad Estatal de Sonora (UES), antes Centro de Estudios Superiores del Estado de Sonora (CESUES), es una universidad creada en 1983 con el objeto de contribuir al progreso social de nuestro país, atendiendo a las prioridades para el desarrollo integral del estado de Sonora, la oferta educativa de Licenciatura y Posgrado, se imparte en cinco ciudades ubicadas estratégicamente en la geografía estatal; San Luis Río Colorado, Hermosillo, Navojoa, Magdalena y Benito Juárez. En el año 2000, se crea la Unidad Académica Benito Juárez, siendo ubicada en la población de Villa Juárez, Sonora, ofertando inicialmente las carreras de Lic. en Administración de Empresas, Licenciado en Sistemas Computacionales Administrativos y Licenciado en Acuicultura, actualmente se cuenta con las licenciaturas en Entrenamiento Deportivo, Sistemas Computacionales Administrativos, Agronegocios y Acuicultura. En el 2007 inicia operaciones el nuevo Modelo Educativo ENFACE que se describe como un modelo educativo es una representación que refleja el diseño, la estructura y los componentes esenciales de un proceso formativo que sirve de guía para la acción y **ENFACE significa:**

- ENFocado en el
- Aprendizaje y las
- Competencias del
- Estudiante

### Tiene por objetivos:

Formar profesionales con un alto nivel de competencias que les permitan ser generadores del desarrollo del conocimiento, de competencias y estrategias de aprendizaje.

Formar profesionales capaces de facilitar la integración de saberes (saber, saber ser y saber hacer) con la experiencia cotidiana.

Formar profesionales que se constituyan en agentes de desarrollo social.

La UES tiene como objetivo, formar recursos humanos profesionales y científicos con una gran visión global con capacidad para incidir en el desarrollo local, nacional e internacional, por medio de sus funciones de docencia, investigación, extensión del conocimiento y difusión de la cultura, por medio de capacitación de excelencia. Nuestra meta es formar a los alumnos con programas dirigidos a lograr un sólido conocimiento disciplinario y práctico de la profesión, así como al fomento de actitudes que fortalezcan la conciencia de nacionalidad, el pensamiento solidario con el bien social y una visión creativa e innovadora, la UES ofrece educación profesional de calidad, integrada con programas culturales, deportivos y recreativos para el óptimo desarrollo de la comunidad. Bajo este enfoque pedagógico y apegados a la misión y visión de la universidad es que se ha buscado formas novedosas de facilitar el

aprendizaje a los estudiantes universitarios. Es evidente que el mundo en continuo cambio en el que vivimos nos exige que aprendamos cosas nuevas continuamente, pero para ello lo primero que necesitamos es ser buenos aprendices, saber lo que se desea aprender; Para poder aprender todo lo que se requiere de nosotros tenemos, que aprender a aprender mejor.

Existe un gran interés para conocer la forma de aprender de cada individuo y existe también la posibilidad de conocer la forma en la que aprende mejor cada uno. Esta afirmación nos dirige a reflexionar un poco sobre las diferentes concepciones del aprendizaje y la forma en la que se contempla el mismo. Si nos detenemos solamente a lo investigado en las últimas décadas nos encontramos con que algunos autores consideran la forma de aprender muy ligada a los aspectos relacionados con la personalidad; Uno de los grandes desafíos de la educación universitaria es reconocer y potenciar al alumno como centro y motor de su propio proceso formativo. Esto requiere esfuerzos decididos por parte de las instituciones formadoras por conocer y comprender los procesos y estrategias de aprendizaje de los estudiantes que ingresan a sus aulas. En este contexto adquiere relevancia la comprensión y análisis de los estilos de aprendizaje y los sistemas de representación predominantes en los futuros profesionistas, como factor coadyuvante en su desarrollo académico. (García, 2002) Dentro de las aulas se lleva a cabo el proceso Enseñanza-Aprendizaje (E-A) se pueden identificar dos aspectos de suma importancia, por un lado, como profesores necesitamos plantearnos no sólo que es lo que queremos que aprendan nuestros alumnos sino, también, la forma en que les es más fácil aprender. por otra parte, como alumnos nos interesa entender mejor que es lo que hacemos para aprender y cómo podemos hacerlo mejor.

Si a este proceso E-A le agregamos que los estudiantes se encuentran etapa universitaria, época de decisiones que determinaran el rumbo de su futuro como personas y profesionista, el factor personalidad se ve inmiscuido directamente determinando la predominancia de algún sistema de representación. Uno de los aspectos a considerar de mayor relevancia en el concepto de aprendizaje es La Programación Neurolingüística (PNL) la cual ofrece una oportunidad de aprender a aprender, es decir, a manejar cognitivamente el progreso de cada persona en cuanto a aprendizaje se refiere, con base en lo anterior surge la necesidad de plantearse la pregunta, de qué manera la PNL a través de los sistemas de representación, facilita el proceso enseñanza aprendizaje en jóvenes universitarios. Las actividades de aprendizaje hacen referencia a cierta dinámica meta cognitiva por parte del individuo; a lo que ocurre en él, justo en el preciso momento en el que adquiere el aprendizaje, relacionados a aspectos cognitivos, afectivos y reguladores.(Sambrano, 2000) Este proyecto pretende ofrecer información tanto a profesores como alumnos sobre las distintas peculiaridades individuales existentes en relación con los estilos de aprendizaje y los sistemas de representación predominantes en nuestra forma de aprender.

## MÉTODOLOGIA

Este proyecto de investigación se realizó con 33 estudiantes de la Licenciatura en Sistemas Computacionales Administrativos (LSCA) de la Unidad Académica Benito Juárez, de los cuales 17 son varones y 15 mujeres. El rango de edad de estos universitarios al momento de aplicar para este proyecto oscilaba entre los 17 y 19 años. El 98% de los jóvenes, proceden de comunidades rurales ubicadas en el sur del Estado de Sonora, en la región del Mayo. El instrumento que se utilizó para recabar información sobre los sistemas de representación es de elaboración propia (diseño de formato) obtenido de la revisión electrónica en <http://www.galeon.com/aprenderaaprender/vak/vakest.htm>; esta prueba establece que recibimos información a través de nuestros sentidos, seleccionamos parte de esa información y cuando la recuperamos utilizamos los tres grandes sistemas de representación, visual, auditivo y kinestésico (VAK).

Seleccionamos únicamente la información que tenemos que organizar, aprender no consiste en almacenar datos aislados; el cerebro humano se caracteriza por su capacidad de relacionar y asociar la mucha información que recibe continuamente y buscar pautas y crear esquemas que nos permitan entender el mundo que nos rodea. Recordamos la última manzana que comimos y recuperamos a la vez la imagen de

la manzana, el sabor y la sensación de morderla. Unimos recuerdos muy distintos (las manzanas se pudren si no nos las comemos, el frutero no se estropea) y generalizamos y abstraemos conceptos más generales (la fruta se estropea, el barro no). Todos nosotros organizamos la información que recibimos, pero no todos seguimos el mismo procedimiento. Una vez más tenemos distintas preferencias y estilos a la hora de organizar lo que sabemos. La manera en que organicemos esa información también afecta a nuestro estilo de aprendizaje. Dos alumnos predominantemente visuales pueden aprender de manera muy distinta y tener resultados muy distintos en los estudios, dependiendo de cómo organicen esa información visual. Este instrumento se aplicó a los 33 estudiantes de primer semestre en el año 2008, en la primer semana que ellos se integraban a la universidad, posteriormente se archivó la información para comparar los resultados obtenidos en el test, al momento de su egreso; el cual se dio en el año 2012, fue entonces cuando se procesó la información y se hizo un análisis comparativo de los resultados obtenidos en el test con el promedio general de egreso, tratando de obtener una relación entre el sistema de representación predominante y el resultado académico obtenido.

## RESULTADOS

A continuación se muestra el test aplicado y los resultados obtenidos de los 32 estudiantes de LSCA, así como los promedios obtenidos al momento de su egreso, cabe hacer mención que en los resultados del test se han incluido a los estudiantes que no terminaron su carrera y que desertaron en el transcurso de ella.

### TEST DE SISTEMA DE REPRESENTACIÓN FAVORITO

Elige la opción a), b) o c) más adecuada y encierra el inciso que elijas:

1. Cuando estás en clase y el profesor explica algo que está escrito en la pizarra o en tu libro, te es más fácil seguir las explicaciones:
  - a) escuchando al profesor
  - b) leyendo el libro o la pizarra
  - c) te aburres y esperas que te den algo que hacer a ti
2. Cuando estás en clase:
  - a) te distraen los ruidos
  - b) te distrae el movimiento
  - c) te distraes cuando las explicaciones son demasiado largas.
3. Cuando te dan instrucciones:
  - a) te pones en movimiento antes de que acaben de hablar y explicar lo que hay que hacer.
  - b) te cuesta recordar las instrucciones orales, pero no hay problema si te las dan por escrito
  - c) recuerdas con facilidad las palabras exactas de lo que te dijeron.
4. Cuando tienes que aprender algo de memoria:
  - a) memorizas lo que ves y recuerdas la imagen (por ejemplo, la página del libro)
  - b) memorizas mejor si repites rítmicamente y recuerdas paso a paso
  - c) memorizas a base de pasear y mirar y recuerdas una idea general mejor que los detalles
5. En clase lo que más te gusta es que:

- a) se organicen debates y que haya dialogo
- b) que se organicen actividades en que los alumnos tengan que hacer cosas y puedan moverse.
- c) que te den el material escrito y con fotos, diagramas.

6. Marca las dos frases con las que te identifiques más:

- a) Cuando escuchas al profesor te gusta hacer garabatos en un papel.
- b) Eres visceral e intuitivo, muchas veces te gusta/disgusta la gente sin saber bien porqué.
- c) Te gusta tocar las cosas y tiendes a acercarte mucho a la gente cuando hablas con alguien.
- d) Tus cuadernos y libretas están ordenados y bien presentados, te molestan los tachones y las correcciones.
- e) Prefieres los chistes a los cómics.
- f) Sueles hablar contigo mismo cuando estás haciendo algún trabajo.

Cada opción de respuesta indica un estilo de aprendizaje, para calificar, solo revise la respuesta seleccionada e identifique el estilo al que corresponda.

Respuestas:

- 1. a) Auditivo b) Visual c) Kinestésicos
- 2. a) Auditivo b) Visual c) Kinestésicos
- 3. a) Kinestésicos b) Visual c) Auditivo
- 4. a) Visual b) Auditivo c) Kinestésico
- 5. a) Auditivo b) Kinestésicos c) Visual
- 6. a) Visual; b) Kinestésicos; c) Kinestésicos; d) Visual; e) Auditivo; f) Auditivo

A continuación se muestra la descripción de cada sistema de representación VAK. *Visual*: Cuando pensamos en imágenes (por ejemplo, cuando 'vemos' en nuestra mente la página del libro de texto con la información que necesitamos) podemos traer a la mente mucha información a la vez, por eso la gente que utiliza el sistema de representación visual tiene más facilidad para absorber grandes cantidades de información con rapidez. Visualizar nos ayuda además, a establecer relaciones entre distintas ideas y conceptos. Cuando un alumno tiene problemas para relacionar conceptos muchas veces se debe a que está procesando la información de forma auditiva o kinestésica. La capacidad de abstracción está directamente relacionada con la capacidad de visualizar. También la capacidad de planificar. Esas dos características explican que la gran mayoría de los alumnos universitarios (y por ende, de los profesores) sean visuales. Los alumnos visuales aprenden mejor cuando leen o ven la información de alguna manera. En una conferencia, por ejemplo, preferirán leer las fotocopias o transparencias a seguir la explicación oral, o, en su defecto, tomarán notas para poder tener algo que leer.

*Auditivo*: Cuando recordamos utilizando el sistema de representación auditivo lo hacemos de manera secuencial y ordenada. En un examen, por ejemplo, el alumno que vea mentalmente la página del libro podrá pasar de un punto a otro sin perder tiempo, porque está viendo toda la información a la vez. Sin

embargo, el alumno auditivo necesita escuchar su grabación mental paso a paso. Los alumnos que memorizan de forma auditiva no pueden olvidarse ni una palabra, porque no saben seguir. Es como cortar la cinta de una cassette. Por el contrario, un alumno visual que se olvida de una palabra no tiene mayores problemas, porque sigue viendo el resto del texto o de la información. El sistema auditivo no permite relacionar conceptos o elaborar conceptos abstractos con la misma facilidad que el sistema visual y no es tan rápido. Es, sin embargo, fundamental en el aprendizaje de los idiomas, y naturalmente, de la música. Los alumnos auditivos aprenden mejor cuando reciben las explicaciones oralmente y cuando pueden hablar y explicar esa información a otra persona.

Tabla Comparativa de Resultados de Test Y Ppromedios Generales de Egreso

Nº	Expediente	Nombre	Resultado	Promedio Egreso
1	8050120023	Alvarez Zamorano Jose Humberto	Visual-Auditivo	Rezago

*Kinestésico:* Cuando procesamos la información asociándola a nuestras sensaciones y movimientos, a nuestro cuerpo, estamos utilizando el sistema de representación kinestésico. Utilizamos este sistema, naturalmente, cuando aprendemos un deporte, pero también para muchas otras actividades. Por ejemplo, muchos profesores comentan que cuando corrigen ejercicios de sus alumnos, notan físicamente si algo está mal o bien. O que las faltas de ortografía les molestan físicamente. Escribir a máquina o computadora es otro ejemplo de aprendizaje kinestésico. La gente que escribe bien a máquina no necesita mirar donde está cada letra, de hecho si se les pregunta dónde está una letra cualquiera puede resultarles difícil contestar, sin embargo sus dedos saben lo que tienen que hacer.

Aprender utilizando el sistema kinestésico es lento, mucho más lento que con cualquiera de los otros dos sistemas, el visual y el auditivo. Se necesita más tiempo para aprender a usar computadora sin necesidad de pensar en lo que uno está haciendo que para aprenderse de memoria la lista de letras y símbolos que aparecen en el teclado. El aprendizaje kinestésico también es profundo. Nos podemos aprender una lista de palabras y olvidarlas al día siguiente, pero cuando uno aprende a montar en bicicleta, no se olvida nunca. Una vez que sabemos algo con nuestro cuerpo, que lo hemos aprendido con la memoria muscular,

es muy difícil que se nos olvide. Los alumnos kinestésico aprenden cuando hacen cosas como, por ejemplo, experimentos de laboratorio o proyectos. El alumno kinestésico necesita moverse. Cuando estudian muchas veces pasean o se balancean para satisfacer esa necesidad de movimiento. En el aula buscarán cualquier excusa para levantarse y moverse. Donolo, 2010

## CONCLUSIONES

Al realizar el análisis comparativo sobre los resultados del test y los promedios generales de los estudiantes, se concluye que efectivamente los sistemas de representación influyen en gran manera del éxito académico de los estudiantes universitarios. Al revisar la teoría VAK se detecta que los kinestésicos poseen habilidades de práctica y manipulación, por lo que categorizamos a la Licenciatura de Sistemas Computacionales Administrativos como una carrera totalmente práctica en la que la principal fuente de trabajo y estudio es la computadora. En la población estudiada se detecta que solo 2 estudiantes de los 33 que contestaron el test, han desarrollado en gran medida el sistema Kinestésico y alcanzaron los promedios más altos de la generación, por lo cual se considera significativo el resultado; ya que sus habilidades prácticas les permiten desarrollarse con más facilidad dentro de sus actividades escolares tales como las asignaturas enfocadas al diseño y programación de software, así como al mantenimiento y soporte técnico de equipo de computo.

## RECOMENDACIONES

A continuación se sugieren algunas actividades y estrategias para los alumnos y docentes, a fin de perfeccionar el proceso Enseñanza-Aprendizaje dentro del aula.

Visual		Auditivo		Kinestésico	
Aprendizaje Alumnos	Enseñanza Profesor	Aprendizaje Alumnos	Enseñanza Profesor	Aprendizaje Alumnos	Enseñanza Profesor
Contar una historia partiendo de viñetas, fotos, texto.	Escribir en la pizarra lo que se está explicando oralmente	Realizar un debate.	Dar instrucciones verbales.	Representar role-play.	Utilización de gestos para acompañar las instrucciones orales.
Dictarle a otro.	Utilizar soporte visual para información oral (cinta y fotos...)	Preguntarse unos a otros.	Repetir sonidos parecidos.	Representar sonidos a través de posturas o gestos.	Corregir Mediante gestos.
Realizar ilustraciones para el vocabulario nuevo.	Escribir la en pizarra.	Escuchar una cinta prestándole atención a la entonación.	Dictar.	Escribir sobre las sensaciones que sienten ante un objeto.	Intercambiar "feedback" escrito.
Dibujar comics con texto.		Escribir al dictado.	Leer el mismo texto con distinta inflexión.		
Leer y visualizar un personaje.		Leer y grabarse a sí mismos.		Leer un texto y dibujar algo alusivo.	Leer un texto expresando las emociones.
	Acompañar los textos de fotos.

## RESUMEN

*La apertura de la economía, a través de los diferentes procesos, ha permitido el ingreso de competidores externos, generando un cambio en el panorama del desarrollo, crecimiento y sostenibilidad de pequeñas y medianas empresas. El cambio del enfoque de estas, que en su mayoría surgieron empíricamente, algunas veces empresas familiares, sin obedecer a una reestructuración planificada y flexible de su organización, es un factor determinante en su desarrollo y competitividad. La habilidad de una empresa para conservar su posición competitiva, puede ser bien salvaguardada por gerentes que sean capaces de establecer un mecanismo que les permita prever el futuro, mediante estrategias y tácticas formales que conduzcan al logro de sus objetivos a largo plazo. Por lo cual los administradores deberán estar dispuestos a ser capaces de percibir la estrategia dentro del contexto de la actividad diaria. El presente bosquejo, muestra un Modelo de Planeación Estratégica para las microempresas, con la finalidad de poder formular, implementar y evaluar estrategias para el logro de los objetivos corporativos. Este estudio revela herramientas y metodologías básicas para que el administrador gestione correctamente las oportunidades y evite que las fluctuaciones del mercado, la falta de conocimientos administrativos y adelantos tecnológicos se conviertan en amenazas.*

**PALABRAS CLAVES.** Planeación estratégica, misión, visión, objetivos, auditoría interna, auditoría externa

## STRATEGIC PLANNING MODEL FOR MICRO ENTERPRISES

### ABSTRACT

*The economy aperture, through different process, has allowed the entry of foreign competitors, generating a change in the panorama, growth and sustainable development of micro and medium enterprises. The change of the focus of these, that mostly emerged empirically, sometime family businesses, without obeying a planned restructuring of its organization and flexible, is a determinant factor in its development and competitiveness. The ability of a company to maintain its competitive position, can be well safeguarded by managers who are able to establish a mechanism that allows them to predict the future, through formal strategies and tactics that lead to achieving his long-term goals. So the administrators must be willing to be able to perceive the strategy within the context of daily activity. The following sketch, shows a strategic planning model for micro-enterprises, in order to formulate, implement and evaluate strategies for achieving the corporate objectives. This study reveals the basic tool and methodology for the administrator to properly manage the opportunities and avoid the market fluctuation, the lack of administrative knowledge and technological advances became a threat.*

**KEYWORDS.** Strategic planning, mission, vision, objectives, internal audit, external audit.

## INTRODUCCIÓN

Las estrategias existen desde los tiempos prehistóricos. De hecho una de las funciones de los primeros historiadores y poetas era testimoniar tanto las estrategias exitosas como las fallidas. Con el crecimiento de las sociedades y la creciente complejidad de los conflictos sociales, generales, hombres de estado y capitanes, estudiaron, codificaron y aprobaron los conceptos estratégicos esenciales hasta lograr una estructura coherente de principios. (Mintzberg, Quinn, Voyer, 1997: 9 ). Con el tiempo, las empresas más importantes fueron principalmente las que desarrollaron sistemas de planeación estratégica formal, denominados sistemas de planeación a largo plazo. Desde entonces, la planeación estratégica formal se ha ido perfeccionando al grado que en la actualidad todas las compañías importantes en el mundo cuentan con algún tipo de este sistema y un número mayor de empresas pequeñas está siguiendo este ejemplo. Como resultado de esta experiencia se ha producido un gran acervo de conocimientos, por lo cual este trabajo de investigación es recopilar la esencia de estos; es decir, intentar descubrir en un lenguaje sencillo y conciso los conceptos, hechos, ideas, procesos y procedimientos fundamentales acerca de la planeación estratégica, con la finalidad de que las microempresas pongan en práctica este conocimiento.

## DESARROLLO

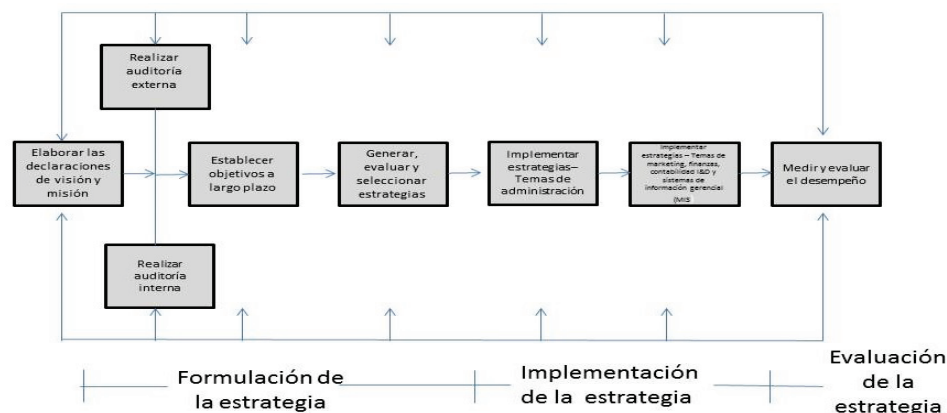

Hoy en día, la dirección y planeación estratégica son vitales en cuanto al éxito de las compañías, ya que una estrategia inadecuada puede crear graves problemas, no importando lo eficiente que puede ser una empresa interna o externamente; sin soslayar que los dos escenarios son importantes. Existen dos formas importantes, que no deben ser subestimadas para ayudar a los altos directivos a cumplir con sus responsabilidades de planeación estratégica: la planeación de anticipación intuitiva y la planeación sistemática formal. En muchas compañías existen conflictos entre los dos procedimientos ya que se encuentran involucrados dos diferentes procesos de pensamiento. Sin embargo, la planeación formal no puede llevarse a cabo sin la intuición de la dirección. Si el sistema de planeación formal se adapta correctamente a las características directivas puede contribuir a mejorar la intuición de los directores. Según Fred (2008: 5), conceptualiza la administración estratégica:

*“...como el arte y la ciencia de formular, implementar y evaluar decisiones multifuncionales que le permiten a una organización lograr sus objetivos. Como la misma definición implica, la administración estratégica se enfoca en integrar la administración, el marketing, las finanzas y la contabilidad, la producción y las operaciones, las actividades de investigación y desarrollo, así como los sistemas computarizados de información, para lograr el éxito de la organización.”*

Algunas veces el término de administración estratégica, se utiliza para referirse a la formulación, implementación y evaluación de la estrategia mientras que la planeación estratégica se refiere solo a la formulación de la estrategia. Este último término se utiliza en el mundo empresarial, mientras que el primero es más frecuente en el ámbito académico. La mejor manera de estudiar y aplicar la planeación estratégica es utilizando un modelo. Cada modelo representa un tipo de proceso, pero lo que lo distingue en sí, son los elementos que componen cada una de las fases que lo integran. Cualquier modelo de la realidad social debe trabajar con una cantidad de variables y relaciones. Además, una representación del proceso debe incluir elementos cuantitativos y cualitativos, lo que plantea la cuestión de la coherencia de los elementos cuantitativos entre sí y los cualitativos por otro lado. (Véase figura 1).

Figural1: Modelo Completo de la Administración Estratégica

*Fuente: Fred, R. David (2008: 15). La presente figura muestra el proceso de la administración estratégica.*

Cabe precisar que tanto este modelo como otros, no garantizan el éxito de las microempresas, pero si representan un planteamiento claro y práctico de las estrategias de formulación, implementación y evaluación.

## CONCLUSIONES

A excepción de algunas empresas, cualquier compañía que no cuenta con algún tipo de formalidad en su sistema de planeación estratégica, se expone a grandes riesgos. Algunos directores tienen conceptos muy distorsionados de ésta y rechazan la idea de intentar aplicarla; otros están tan confundidos acerca de este tema que lo consideran sin ningún beneficio, y algunos más ignoran las potencialidades del proceso tanto para ellos como para sus empresas. La planeación estratégica adaptada a una microempresa permitirá mantener unido al equipo directivo para traducir la misión, la visión y estrategias en resultados tangibles, reducir los conflictos, fomentar la participación y el compromiso a todos los niveles de la organización con los esfuerzos requeridos para hacer realidad el futuro que se desea.

# RECONOCIMIENTO DEL FENÓMENO TRIBUTARIO Y SU IMPACTO EN LAS ORGANIZACIONES

César Vega Zárate, Universidad Veracruzana

Jerónimo Domingo Ricárdez Jiménez, Universidad Veracruzana

## RESUMEN

*El interés principal del presente artículo es hacer una reflexión teórica sobre un impacto organizacional que ha presentado la legislación tributaria sobre la gestión no financiera en las organizaciones, como parte de un proceso globalizador. Partiendo de la noción de una realidad económica evolutiva, la participación de novedosas variables presentadas en el entorno macro empresarial ha sido objeto de interés por el pensamiento administrativo, en donde el reconocimiento de éstas sobre la gestión organizacional merecen ser comprendidas. Así, la participación del Estado, vía políticas tributarias, ha generado que nuevas manifestaciones organizacionales se pongan en práctica, no sólo con la intención de contribuir para el sostenimiento económico estatal, sino que sus acciones están traspasando los límites económicos, generándose una nueva visión en la realidad empresarial bajo un enfoque meramente cualitativo. Una revisión a la literatura muestra que la Teoría Tributaria y la Teoría Organizacional no se encuentran desconectadas, y que hoy en día es necesario establecer un diálogo, con la intención de mejorar la gestión en las organizaciones, y al mismo tiempo, valorar la política tributaria.*

**PALABRAS CLAVE:** Teoría Tributaria, Teoría Organizacional, política tributaria, gestión organizacional, capacidades organizacionales.

## RECOGNITION OF THE TRIBUTARY PHENOMENON AND ITS IMPACT ON ORGANIZATIONS

### ABSTRACT

*The main interest of this article is mostly theoretical to reflect organizational impact has filed tax legislation on non-financial management in organizations, as part of the globalization process. Based on the notion of an evolutionary economic reality, participation of innovative variables presented in the macro business environment has been the subject of interest in management thinking, where the recognition of these on organizational management deserve to be understood. Thus, the participation of the State, via tax policies, has led to new organizational forms are implemented, not only with the intention of contributing to a state economic support, but their actions are beyond the limits economic, generating a new vision business reality under a purely qualitative approach. A review of the literature shows that the Tax Theory and Organizational Theory are not disconnected, and that today is necessary to establish a dialogue with the aim of improving the management of organizations, and at the same time, assess policy tax*

## INTRODUCCIÓN

Hoy en día, la gestión organizacional requiere tomar en cuenta múltiples elementos que provengan de su entorno, no sólo para su conocimiento, sino para que éstas sean capaces de reconocer de qué manera les afectan o benefician. Para comprender esto, es necesario que la organización moderna adquiera una capacidad adaptativa al medio ambiente del cual forma parte. Bajo una óptica social, la empresa es entendida como un conjunto social con formas, normas y pautas de relación que le dan continuidad a sus procesos (Etkin, 2010), permitiendo mantenerse en relación directa con su propio contexto, llegándose a modificar su actuar administrativo, para que su realidad empresarial sea la más apropiada. Por tal reflexión, el grado de comunicación que guarda la organización con su contexto se ha vuelto una parte esencial para un funcionamiento óptimo en cuanto a su gestión.

### Marco Teórico

La gestión de las organizacionales requiere de un eficiente contacto con su entorno, generándose una capacidad abierta, que sea capaz de identificar y reconocer aquellas fuerzas y/o amenazas que le circunscriben. Así, el pensamiento administrativo ha reconocido que el entorno es un factor importante que deben conocer las organizaciones en el ejercicio diario de sus actividades. La Teoría de la Contingencia y la Teoría de Sistemas: cuyas premisas centrales son el reconocer cómo el entorno de las organizaciones influye sobre la gestión, son un ejemplo teórico que explica el diálogo *organización-entorno*.

*La Teoría de la Contingencia*: reconoce que existen variables externas a la organización, cuya incidencia sobre las organizaciones inciden a desarrollar ciertas capacidades de adaptación a su entorno y sobreviva en su contexto. Sin embargo, esto no podría llevarse a cabo si la organización permanece cerrada a su entorno. Por otro lado, la *Teoría de Sistemas* nutre a la de la contingencia, en el sentido de concebir a la organización como un sistema de naturaleza abierta, y en su conjunto se logre un buen funcionamiento organizacional. En la medida de lo posible, el cierto grado de incidencia que puede mostrar el contexto sobre las organizaciones debe ser tomado en consideración, ya que de éste depende mucho el éxito de las organizaciones. Por lo tanto, toda organización deberá vigilar cuidadosamente cómo su entorno influye en su estructura, en donde la tendencia actual no sólo debe centrarse en la generación de buenos resultados económicos, sino que deben atender al mismo tiempo su performance organizacional.

### El Fenómeno Tributario

Una variable externa importante a considerar por parte de la gestión organizacional es la que proviene del Estado, específicamente aquella orientada a exigir a sus gobernados una parte de su riqueza generada para el sostenimiento público y satisfacción de necesidades sociales. Partiendo de una noción teórica económica (Adam Smith, 1776), cuya generación de riqueza colectiva requería de la contribución para parte de aquella generada por los agentes económicos, el rol del Estado se ha centrado en buscar aquellos recursos que sean suficientes para construir un ambiente estable del que las organizaciones forman parte.

Bajo la esencia de una *Teoría Tributaria*, el establecimiento de las condiciones hacendarias impuestas por el Estado depende del análisis de sus condiciones económicas, mismas que se limitan a promulgar leyes, normas, reglamentos y demás instrumentos que sirvan para fiscalizar recursos que por derecho deben exigir. Por tal, la estructuración de un *Sistema Tributario* debe contar con ciertas características y atributos que permitan cumplir sus funciones, siempre bajo la observancia de disciplina jurídica (*principio de equidad y proporcionalidad*). Lo mencionado anteriormente es bajo la percepción del Estado, sin embargo, es interesante de igual forma indagar la percepción que tienen los agentes contributivos, llamadas organizaciones, que como consecuencia de su capacidad económica deben contribuir en tiempo y forma ante las exigencias del Estado. Es precisamente en este punto en donde la aparición de un

denominado fenómeno tributario nace, cuya evolución ha reflejado en las organizaciones un cierto grado de dependencia en su gestión, en donde se nota una cierta incidencia en su sentido administrativo, generándose que éstas busquen nuevas maneras de gestionar sus capacidades y recursos hacia los fines contributivos, en donde el factor organizacional está cobrando vida.

En consecuencia, al referirse al término “fenómeno tributario”, estamos hablando del reconocimiento que hace la gestión organizacional de las acciones tributarias impuestas en su contexto, mismas que son incorporadas en la organización como acciones administrativas encaminadas a un fin específico, el cumplimiento de obligaciones tributarias.

## REVISIÓN LITERARIA

Si bien es cierto que la literatura tributaria se ha centrado más en atender más la parte económica y jurídica, una parte no muy amplia se ha centrado en explicar cómo la gestión organizacional se ha visto modificada como consecuencia de poner en práctica diversas acciones públicas tributarias, en la búsqueda de una adaptabilidad al entorno económico, social, político y cultural. En la búsqueda por una posible percepción del fenómeno tributario por parte de las organizaciones, la participación del Estado para crear sistemas tributarios eficientes y adecuados a una realidad actual, cobra importancia para una mejor comprensión. Estudios empíricos por Romero (2003), Delgado (2008) y Giraldo (2009) en el que el aspecto tributario contribuye a que la gestión de las empresas se vea limitada por el factor tributario, ha dado importancia a que las organizaciones sean mucho más atentas a las reformas constantes en el contexto hacendario. Díaz Yubero (2003) explica que las normas fiscales deberán cumplir ciertos requisitos de adaptabilidad a la realidad empresarial, en donde es la propia

Hacienda Pública como institución aquella que deberá de implementar acciones mucho más acordes a la realidad económica vivida el día de hoy. La participación del Estado ante una transformación económica requiere poner en práctica nuevas acciones que no frenen ni limiten el crecimiento de las organizaciones (Gómez Godillo, 1994), sino por el contrario, que fomenten el emprendurismo (Bedoya y Vargas, 2009), el desarrollo organizacional y prácticas que permitan que se cuenten con instrumentos suficientes y necesarios para enfrentarse a un contexto globalizador.

Para una mejor comprensión del fenómeno tributario en las organizaciones, la literatura ha capturado ciertos fenómenos no económicos que de una manera u otra están incidiendo sobre el gestar organizacional. Algunos eventos identificados son: el *comercio electrónico*, la *innovación empresarial*, una *preocupación por el medio ambiente* y otros *aspectos sociales* detectados. El comercio electrónico, visto como un evento revolucionario, cuya significancia radica en facilitar las transacciones comerciales tradicionales a partir de una plataforma virtual, ha sido objeto de reflexión por diversos estudiosos para abordarlo. Sin embargo, si buscamos su vinculación en el ámbito fiscal-organizacional, podemos evocar los trabajos realizados por, Olivero (2009), Núñez (2004) y Aguilar y Regalado (2012), cuyos intereses de conocer la manera en cómo los avances tecnológicos en un nuevo contexto económico globalizador contribuye a construir una *fiscalidad al comercio electrónico*, en donde el Gobierno se ha preocupado por “controlar” dicho avance en un sentido de recaudación, como consecuencia de una observación altamente favorecedora para las organizaciones.

Siendo la Organización para la Cooperación y Desarrollo Económico (OCDE) pionera en hacer diversos estudios a profundidad sobre este fenómeno tecnológico, la gestión de las organizaciones al mismo tiempo que atienden sus capacidades orientadas a esos nuevos mercados virtuales, deben tomar en consideración la parte tributaria, no como una opción, sino como una obligación. Sin embargo, la problemática legal en definir aquellos criterios normativos tendientes a un establecimiento permanente o residencia para evitar problemas de doble tributación para las empresas, ha dado hincapié a que aún no se encuentre tan desarrollado dicho tema, al menos por lo que respecta en América Latina. Dicha situación

no exenta a que la gestión de las organizaciones que opten por plataformas virtuales, en un futuro, se pueda ver limitada por las acciones públicas tributarias ante dicha evolución tecnológica.

De una forma similar, la literatura explica algo que se le conoce como *fiscalidad verde o ecológica*, derivada de un proceso de concientización colectiva a favor del medio ambiente, en donde las acciones políticas del Estado se han encargado de imponer cargas tributarias aquellas empresas que pongan en riesgo al planeta como consecuencia de sus actividades industriales.

Así, bajo la premisa de “*quien contamina paga*”, cuya interpretación por parte del Estado radica en disminuir los niveles contaminantes, el sentido que llega a tomar para la organización se ve reflejado en su gestión, buscando ahora nuevas estructuras organizaciones no evasoras, sino permisivas a lograr un equilibrio con el entorno y con su capacidad económica. El estudio comparativo de Hercowitz y Puig (2003), cuya valoración de acciones políticas ecológicas insertas en un contexto fiscal, ha logrado incidir sobre las acciones empresariales, cuyo paso particular ha servido para fomentar al turismo. Por otro lado, los avances económicos que la tributación verde ha dejado más que nada en España, han servido como un instrumento referencial para que las organizaciones dejen de ver el fenómeno tributario como algo negativo, sino más que nada se convierta en un incentivo más que genere un desarrollo organizacional. Tal es el caso del informe realizado por el Gobierno de Aragón, España (2011), quien concluye que el tejido organizacional de tal región no se ve desfavorecida por la fiscalidad verde, y no afecta su grado de competitividad, sino más bien ha servido para reforzar a la organización. Ante este caso, la medición de la efectividad de los tributos ecológicos ha comenzado, tales como los explicados por Ordoñez de Haro y Rivas (2005), en el que los posibles índices de eficacia permiten hacer una valoración general, sin embargo, la visión organizacional no ha contribuido mucho para la reflexión.

En sí, la instrumentación política ambiental puesta en práctica poco a poco se está desarrollando, lo que significa que se traspase los límites del Estado (Mourelle y Abad, 2011), y en donde la sensibilidad de la gestión organizacional se puede ver afectada directa o indirectamente, obligándolas a lograr un equilibrio en todo el sentido estricto de la palabra. La literatura en cuanto a este tópico si bien es basta, el enfoque otorgado ha sido tratado como una valoración más a un sistema impositivo, dejando fuera la óptica que dan las propias organizaciones para el cumplimiento a dichas disposiciones normativas.

Otro aspecto que está siendo tomado en cuenta por la política pública lo es el fomento a la innovación empresarial. La innovación tecnológica es un fenómeno social, ya que constituye un proceso que surge de las condiciones materiales de la vida social y económica de un país (Bramuglia, 2000). Por tal, el desarrollo de nuevos productos, la inversión en investigación empresarial, así como el desarrollo de ciencia y la tecnología son algunos tópicos que el Estado está retomando, cuyo resultado es un beneficio fiscal para aquellas organizaciones que realicen estas prácticas que promueven actividades innovadoras. El reconocimiento de la importancia de la investigación y el desarrollo ha cobrado mucho importancia, para los cuales la instrumentación de una política pública en este sentido contribuye a una práctica sana para la economía actual, tal y como lo decía Schumpeter. Por ende, las prácticas organizacionales generadoras de innovación están siendo recompensadas vía estímulos y/o subsidios fiscales, los cuales hacen que la carga fiscal de los contribuyentes disminuya, situación que provoca en que las organizaciones tiendan a alterar su desarrollo positivamente (Araujo y Borgoña, 2008).

De acuerdo a Fujii y Candaudap (2007), se requiere entonces definir una política pública “ideal” que apoye a la innovación en la organización. Al parecer, este tipo de recompensa económica está motivando a que los empresarios mejoren sus capacidades y habilidades gerenciales para innovar en productos y/o servicios, siendo estas actividades en particular valoradas por el Estado. El estudio realizado por la Federación Asturiana de Empresarios en España en 2008, han observado que la desgravación solicitada por ese grupo de empresarios por consecuencia de sus actividades en la investigación y al desarrollo, proporciona ciertas pistas referentes a la actitud de tales empresarios a comenzar a fomentar esas

actividades, vistas como una manera de sufragar sus cargas tributarias. De igual manera, su adaptación organizacional por obtener dicho beneficio tributario se ha convertido un medio para pagar menos impuestos. Así, parece que los estímulos fiscales se están convirtiendo en un factor de desarrollo (Angulo y Araujo, 2006), los cuales están el comportamiento de las organizaciones, tal y como lo demuestra Santos Lugo (2005) a partir de su estudio del comportamiento asociado a estímulos fiscales en innovación.

Igualmente, podemos evocar ciertos estudios que han tratado de demostrar que la relación que tiene la fiscalidad con la gestión organizacional, tales como la fiscalidad en las fundaciones (Jiménez, 2006), estudio de la fiscalidad y la equidad y género (Pazos y Rodríguez, 2010) y el estudio de la fiscalidad en la transmisión de la empresa familiar (Gallo, 1990), cuyos resultados reflejan cómo perciben al fenómeno tributario y cómo éste influye sobre la gestión empresarial familiar.

## METODOLOGÍA

Por el hecho de tratarse de un proyecto de investigación doctoral en construcción, por el momento aún se cuenta con la intención de elaborar un instrumento metodológico que en una primera instancia se llegue a indagar la forma en que las organizaciones perciben al fenómeno tributario a partir de un cuestionario medido en escala de Likert, en donde de una forma empírica se podrán obtener datos que pueden servir para definir algunas variables compartidas. Dichos resultados podrán servir como una base cualitativa para hacer una valoración de la política tributaria actual, reconociendo que ésta tiende a ser cambiante, por lo menos en el caso de México.

## CONCLUSIONES

Con base a la revisión literaria expuesta, y haciéndose una relación entre el fenómeno tributario y la gestión organizacional, se pueden llegar a conclusiones de alcance primario. La primera: no existe demasiada literatura en donde se vincule el reconocimiento del fenómeno tributario en la organización bajo un enfoque administrativo, ya que generalmente el impacto se ha medido en términos económicos, dejando fuera su incorporación en la gestión organizacional. Segunda: algunos estudios tienden a dar una reflexión bastante generalizada de lo que la organización puede llegar a percibir como fenómeno tributario, situación que orilla a que la disciplina administrativa pueda llegar a investigar dicha incidencia.

Tercera: sin duda, la participación del Estado en la definición de políticas hacendarias representa una variable predominante en los estudios presentados, ya que el contexto en el que se desenvuelven las organizaciones es vital para un adecuado funcionamiento, en donde la carga impositiva, aunque pareciera que sólo puede ser traducida en términos financieros, también podría traducirse en términos de eficiencia y eficacia organizacional, lo cual contribuiría a definir un desempeño tributario territorial. Sin embargo, algo que se tendría que tomar en cuenta en este punto, son las constantes adaptaciones, reformas o modificaciones al sistema tributario en turno, ya que ese cambio incide sobre la gestión de las organizaciones, dando cabida a que las capacidades y recursos en las organizaciones evolucionen al mismo tiempo que su contexto. A partir de todo lo anterior, podríamos llegar a preguntarnos *¿En qué sentido, el actuar administrativo de las organizaciones en su gestión tributaria se ve afectada por los cambios puestos en práctica por su contexto tributario?* Para dar una respuesta, forzosamente tendríamos que hacer una valoración tripartita: *Estado-Contexto-gestión empresarial*. Sería interesante tener alguna respuesta a esto.

# LA GESTIÓN DE LA PROPIEDAD INTELECTUAL EN LAS PYMES DE BASE TECNOLÓGICA

Germán Aníbal Narváez Vásquez, Instituto Tecnológico y de Estudios Superiores de Monterrey  
Julio Cuauhtémoc Guerrero Dávalos, Universidad Michoacana de San Nicolás de Hidalgo

## RESUMEN

*Uno de los paradigmas es seguir considerando al capital y trabajo como los factores productivos más significativos para que las empresas puedan ser más competitivas. En la actualidad las empresas en cualquier actividad que se desenvuelvan requieren de: tecnología, conocimiento e información para poder ser eficientes y sobrevivir. Las pequeñas y medianas empresas (Pymes) suelen ser la fuerza motriz que impulsa dichas innovaciones. No obstante, no siempre se explota plenamente su capacidad innovadora y creativa ya que muchas de estas empresas no conocen el sistema de la Propiedad Intelectual ni la protección que éste puede dar a sus invenciones, marcas y dibujos, modelos industriales, derechos de autor, secretos comerciales, etc. La metodología utilizada en la investigación se fundamenta en el análisis del estado del arte, estudio exploratorio de las prácticas de gestión en las Pymes y estudio de casos detectados en la Base de Datos "IP Advantage" de la Organización Mundial de la Propiedad Intelectual. Como resultado del presente trabajo, se presentan dos aportes al enriquecimiento del tema: i) la integración de todas las áreas del conocimiento que se protege a través de la PI y, ii) la propuesta de un modelo de Gestión de la Propiedad Intelectual que permitirá ser un referente a seguir para las Pymes de base tecnológica.*

**PALABRAS CLAVES:** Gestión Propiedad Intelectual, PYME, Base Tecnológica

## INTELLECTUAL PROPERTY MANAGEMENT IN TECHNOLOGY-BASED SMEs

### ABSTRACT

*One of the paradigms is further consideration to capital and productive work as the most significant factors for businesses to be more competitive. Today companies in any activity requiring unfold: technology, knowledge and information in order to be efficient and survive. Small and medium enterprises (SMEs) are often the driving force behind these innovations. However, not always fully exploit its innovative and creative capacity as many of these companies do not know the system of Intellectual Property and the protection it can give your inventions, trademarks and designs, industrial designs, copyrights, trade secrets malls and more. The research methodology is based on the state of the art analysis, exploratory study of management practices in SME and case studies found in the database "IP Advantage" of the World Intellectual Property Organization. As a result of this work, we present two contributions to the enrichment of the topic: i) the integration of all areas of knowledge that is protected by intellectual property and, ii) the proposal of a model of Intellectual Property Management will allow being a point forward for technology-based SMEs.*

**JEL:** O32, O34

**KEYWORDS:** Intellectual Property Management, SMEs, Technology Base

## INTRODUCCIÓN

Las pequeñas y medianas empresas (Pymes) suelen ser la fuerza motriz que impulsa las economías de los países, no obstante, no siempre se explota plenamente su capacidad innovadora y creativa, ya que muchas de estas empresas no conocen el sistema de la Propiedad Intelectual (PI) ni la protección que éste puede dar a sus invenciones, marcas y dibujos, modelos industriales, derechos de autor, secretos comerciales, entre otros. En la mayoría de los casos se entiende que la Gestión de la Propiedad Intelectual (GPI) sólo comprende el registro de las solicitudes para la obtención de los títulos de propiedad de que se trate. En la actualidad la GPI se refiere a la capacidad de la empresa para comercializar las creaciones intelectuales, lanzar al mercado sus marcas, conceder licencias sobre sus conocimientos técnicos, etc.

La estrategia metodológica empleada se dividió en tres fases: la primera, el análisis documental del estado del arte, donde se plantean los argumentos que sustentan la presencia de los eslabones y las variables mas frecuentemente utilizadas para la GPI; la segunda, una investigación exploratoria/transeccional de las buenas prácticas de GPI en las Empresas de Base Tecnológica (EBT) en la Ciudad de Morelia-México y la tercera, estudio de casos de la base de datos “IP Advantage” de la Organización Mundial de la Propiedad Intelectual (OMPI). Seguidamente se presentan los resultados de la investigación, donde se señala la confusión que existe en la literatura sobre el tema, cuando se habla de GPI, se hace referencia únicamente a las actividades de protección ante las oficinas competentes y como se demuestra, existen mas actividades que hay que gestionar. Por otro lado y muy importante es la propuesta de un modelo de GPI para EBT. Finalmente, las conclusiones y limitaciones.

## REVISION DE LITERATURA

Desde la década de 1950 surge en México, dentro del contexto de la política industrial, apoyada en la sustitución de importaciones, el principio de que la pequeña y mediana empresa era clave para el desarrollo del país por su gran capacidad de generar empleo, (Campos, M. 2002, p. 5). De tal forma que el Artículo 1 de la Ley para el Desarrollo de la Competitividad de la Micro, Pequeña y Mediana Empresa, (MIPYMES). (DOF 06-06-2006), señala que el objetivo de la creación de este tipo de empresas es el de promover el desarrollo económico nacional, así como incrementar su participación en los mercados, en un marco de crecientes encadenamientos productivos que generen mayor valor agregado nacional.

Si bien no se ha establecido una definición de carácter internacional para las empresas bajo el “etiquetado” de PYME, las legislaciones de los países han establecido ciertos criterios para su reconocimiento. Por ejemplo en la Recomendación 2003/361/CE de la Comisión, de 6 de mayo de 2003, se las define en función de sus efectivos y de su volumen de negocios o de su balance general anual, así:

Tabla 1: Características de las Microempresas, Pequeñas y Medianas Empresas de la Comunidad Europea

<b>Mediana Empresa</b>	<b>Se define como una empresa que ocupa a menos de 250 personas y cuyo volumen de negocios anual no excede de 50 millones de euros o cuyo balance general anual no excede de 43 millones de euros.</b>
<b>Pequeña Empresa</b>	Se define como una empresa que ocupa a menos de 50 personas y cuyo volumen de negocios anual o cuyo balance general anual no supera los 10 millones de euros.
<b>Microempresa</b>	Se define como una empresa que ocupa a menos de 10 personas y cuyo volumen de negocios anual o cuyo balance general anual no supera los 2 millones de euros.

*En esta tabla encontramos definidas las características de las microempresas, pequeñas y medianas empresas consideradas en la Comunidad Europea. Las diferencias entre unas y otras se presentan con relación al número de personas, el volumen anual de negocios y el balance general. Fuente: Elaboración propia con datos de la Recomendación 2003/361/CE.*

En México la fracción III del artículo 3 de la Ley define a las MIPYMES, siguiendo el criterio de la “Estratificación por el Número de Trabajadores” como lo señala la Tabla 2; donde se incluyen productores agrícolas, ganaderos, forestales, pescadores, acuicultores, mineros, artesanos y de bienes culturales, así como prestadores de servicios turísticos y culturales.

Tabla 2: Definición de MIPYMES Según la Ley

Sector/Tamaño	Estratificación por Número de Trabajadores		
	Industria	Comercio	Servicios
Micro	0-10	0-10	0-10
Pequeña	11-50	11-30	11-50
Mediana	51-250	31-100	51-100

*En esta tabla encontramos definidas las características que han de considerarse para una Pyme, de acuerdo a la Estratificación por número de trabajadores. Se considera por un lado el sector, ya sea este Industrial, Comercial o de Servicios. Por otro lado el tamaño, dividido en micro, pequeña y mediana empresa. Por ejemplo; es considerada una -Pequeña empresa- en el -Sector Industrial- aquella empresa que tiene entre 11 y 50 empleados. Fuente: Diario Oficial de la Federación (6 de Junio 2006). Ley para el Desarrollo de la Competitividad en las MIPYMES.*

Como hemos señalado la ley no hace referencia a las Empresas de Base Tecnológica (EBT). Sin embargo Little, A. (1977), las define como: “empresas de propiedad independiente, de no más de 25 años de edad, que se basan en la explotación de una invención o innovación tecnológica que implica un riesgo tecnológico sustancial”. Shearman, C. y Burell, G., (1988) las definen como: “empresas nuevas e independientes cuya actividad está relacionada con el desarrollo de nuevas industrias”. En cambio para Storey, D. y Tether, B. (1998), siguiendo un sentido más amplio las definen como: “pequeñas empresas de propiedad independiente y de reciente creación que operan en sectores de alta tecnología”. Según el Virtual Observatory for Technology Transfer, (2010), Las EBT se caracterizan por tener los siguientes rasgos:

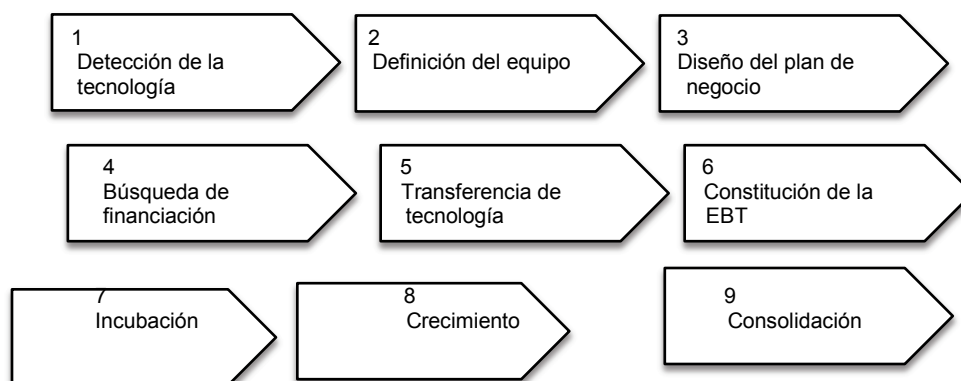

- Surgen dentro de las universidades y centros de investigación.
- Tienen una fuerte base tecnológica y una alta carga de innovación
- Su objetivo es el lanzamiento de nuevos productos y servicios de alto valor añadido al mercado.
- Son impulsadas por investigadores, doctorandos y profesores universitarios.
- Tienen un tamaño reducido, con escaso personal.
- Son flexibles, basadas en la innovación y capaces de adaptarse a los cambios.
- Normalmente, se instalan en [parques científicos y tecnológicos](#), y en sus primeros años son albergadas en [incubadoras de empresas](#).

El proceso de creación de una EBT es propio de cada caso, pero podemos describirlo en siete fases, (Figura 1) correspondientes a las siguientes etapas señaladas por Everis (2008, p. 26).

- 1) La Incubación: Normalmente las EBT suelen instalarse en [incubadoras de empresa](#) de parques científicos y tecnológicos, universidades o centros de investigación. En esta fase lo más importante es fortalecer el equipo humano y mejorar sus habilidades directivas y de gestión, así como generar redes de contacto.
- 2) Crecimiento: En esta fase la empresa comienza a tener beneficios, resultado de la penetración en el mercado, y de las decisiones estratégicas sobre la tecnología, centrando la atención en la gestión de la [propiedad intelectual](#), la vigilancia tecnológica y el establecimiento de alianzas estratégicas.
- 3) Consolidación: La empresa adquiere solidez en el mercado, tanto en ventas como en capacidad económica y financiera. La empresa debe adquirir la capacidad de reinventarse a sí misma para no morir en el mercado.

Figura 1: Proceso de creación de una Empresa de Base Tecnológica

La presente figura nos muestra las diferentes etapas que propone Everis (2008) para la creación de una EBT. Donde comienza con la detección de la tecnología necesaria para consolidar la idea innovadora, seguida de la definición del equipo de trabajo y el análisis de factibilidades a través de un plan de negocio. En la segunda parte encontramos el fortalecimiento a través de la búsqueda de ayuda financiera, transferencia de tecnología y la constitución legal de la empresa. Y finalmente muestra la consolidación y crecimiento a través de la Incubación.

### La Gestión de la Propiedad Intelectual

La gestión de la innovación está estrechamente vinculada a la GPI. La gestión de activos de PI es una esfera compleja en la que pocos empresarios o directores de PYME son capaces de especializarse puesto que exige generalmente poseer conocimientos de tipo jurídico, técnico y empresarial. (OMPI/CEPAL, 2003). Para comprender la dimensión de la GPI, recurriremos al rastreo etimológico término *gestión*. Para Huero (2004) el término *gestión* proviene del latín *gerere*, que posee varios significados: llevar adelante o llevar a cabo, cargar una cosa, librar una guerra o trabar combate, conducir una acción o un grupo. Según el DRAE (2001), la palabra *gestión* proviene del latín *gestio, onis*: Acción o efecto de gestionar, acción o efecto de administrar. En sentido general y amplio, equivale a toda diligencia realizada para la consecución de un fin. EUI. (1924).

Por lo tanto *Gestionar* efectivamente los recursos intelectuales de una organización abarca actividades tales como la promoción de la inventiva, el vínculo con inteligencia tecnológica, la utilización de criterios de PI en la selección y administración de proyectos, la compra de licencias útiles a la investigación, al igual que el licenciamiento de los desarrollos tecnológicos y el avalúo de los mismos de cara a la comercialización. Luna, K. (2007). Para Solleiro (2003) Administrar la PI es una tarea amplia que comprende una serie de actividades conducentes a la maximización económica de los conocimientos propios (derivados del esfuerzo de I+D, o de la experiencia), de conocimientos ajenos (el uso legal de derechos de PI de otros mediante la adquisición de licencias) y de conocimientos del dominio público (bases de datos, patentes). Para Sullivan (2001) un sistema bien construido para gestionar las propiedades intelectuales es fundamental para extraer todo el valor de las propiedades y además para ser capaz de crear sistemas de gestión de los activos intelectuales.

Existe abundante literatura sobre la GPI en el ámbito de las grandes empresas, sobre todo aquellas de países desarrollados que siguen estrategias ofensivas de innovación para consolidar sus ventajas competitivas. Pero poco o nada se ha dicho respecto de un “modelo” de GPI para Pymes de base tecnológica, que sea un referente general donde al conjugarse todas las variables permitan obtener mayores beneficios, resultado del conocimiento, protección, promoción y comercialización de sus creaciones intelectuales. (Figura 2).

Figura 2: Eslabones de la Gestión de la Propiedad Intelectual

En esta figura se presentan los eslabones que en forma secuencial conforman la GPI y sus respectivos indicadores, así tenemos: Para el –Conocimiento–, la SAP (Selección y Administración de Proyectos) e ITC (Inteligencia Tecnológica Competitiva). Para la –Protección–; EP (Estrategias de Protección) y VPT (Vigilancia del Patrimonio Tecnológico). Para la –Promoción–; PI (Promoción de la Inventiva). Para la –Comercialización–; VPI (Valuación de la PI), LTP (Licenciamiento de Tecnología Propia), ALI (Adquisición de Licencias para Investigación). Como resultado de la sumatoria eficiente de las diferentes actividades de gestión se obtendrá los Beneficios esperados. Fuente: Elaboración propia.

## METODOLOGÍA

La estrategia metodológica empleada se dividió en tres fases: la primera, el análisis documental del estado del arte; la segunda, una investigación exploratoria/transeccional de las buenas prácticas de GPI en las EBT en la Ciudad de Morelia–México y la tercera, estudio de casos de la base de datos “IP Advantage” de la OMPI. La primera y segunda fase, sirvieron para determinar los eslabones y sus respectivas variables de GPI como lo demuestra la Figura 2.

La tercera fase, consistió en seleccionar de la base de datos “IP Advantage” aquellos casos que tenían relación exclusivamente con la GPI, de acuerdo con dos criterios de clasificación limitados en la base de datos: i) Por su instrumento de protección y ii) Por su enfoque. Dentro del primero se encontraban los siguientes aspectos: Los Derechos de Autor y Conexos, Indicaciones Geográficas y Denominaciones de Origen, Dibujos y Modelos Industriales, Patentes, Derechos de Obtentor, Secretos Comerciales, Marcas y Modelos de Utilidad. En el segundo criterio encontramos a: Branding, Comercialización, Financiación, Franquicias, Solución de Controversias, Infracción de la PI, Gestión de la PI, Valoración de la PI, Licencias, Asociaciones, Información sobre Patentes, Investigación y Desarrollo.

El criterio adoptado fue: “Gestión de la PI” para “Cualquier instrumento de protección”, quedando para el análisis 42 de 139 casos (Datos actualizados al 12 de enero 2011). Una vez delimitados los casos, se procedió a la identificación y análisis de las actividades de GPI. Para lo cual se construyó una matriz de frecuencias. Los resultados obtenidos fueron analizados utilizando el software de Word y Excel de Microsoft 2010 empleando texto, gráficos, tablas y figuras. (Ver Anexo 1).

## RESULTADOS

Como se demuestra en el Anexo 1 y en la Figura 3, la actividad de GPI que más se repite con un 100% es la relacionada con las -Estrategias de Protección-. Es decir los mecanismos que las empresas buscan para proteger sus innovaciones. Este resultado demuestra la confusión que existe en la literatura sobre el tema, cuando se habla de GPI, se hace referencia únicamente a las actividades de protección ante las oficinas competentes y como podemos ver, existen mas actividades que hay que gestionar.

La siguiente actividad de GPI con un 76% correspondiente a 32 casos; es el LTP, es decir los contratos de transferencia de tecnología que los centros o empresas realizan para comercializar sus innovaciones. Contraria a un 17% correspondiente a la ALI; esto es, la adquisición de licencias para la explotación de las innovaciones propiedad de terceros, este reducido porcentaje en relación a la anterior actividad nos permite identificar una de las causas para el incremento de la *piratería*. La transferencia de tecnología a

través del licenciamiento es una actividad que en la actualidad ha adquirido singular importancia, no solo por el -permiso- para la explotación de la innovación, sino por los beneficios adicionales como la adquisición de conocimiento a través del asesoramiento de expertos, el intercambio de información, sobretodo el beneficio por el retorno de la inversión.

Figura 3: Frecuencia de las Actividades de GPI en Casos Analizados.

*En esta figura se presentan la frecuencia de las actividades de GPI en los casos analizados en la base de datos "IP Advantage". Demostrando en concordancia con la literatura que la EP (Estrategias de Protección) es la actividad mas utilizada por las Pymes, seguida de LTP (Licenciamiento de Tecnología Propia), ITC (Inteligencia Tecnológica Competitiva), SAP (Selección y Administración de Proyectos), VPT (Vigilancia del Patrimonio Tecnológico, seguidas igualmente por la ALI (Adquisición de Licencias para Investigación) y PI (Promoción de la Inventiva), finalmente y no menos importante la VPI (Valuación de la PI). Fuente: Elaboración propia.*

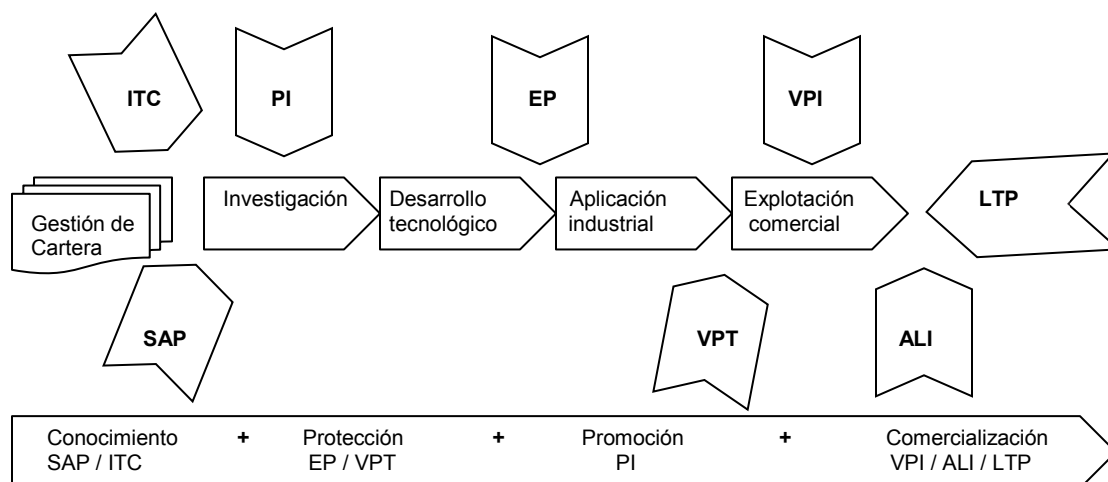

Seguida y no por ser menos importante encontramos a las actividades que se relacionan con la variable – Conocimiento-, es decir; la ITC con un 67% correspondiente a 28 casos y SAP con un 62% correspondiente a 26 casos. Temas relacionados con la búsqueda, recuperación, selección y análisis de la información y proyectos. No podría ser de otra manera, en otros países los centros de investigación, empresas y universidades acuden a las enormes bases de datos sobre patentes que maneja la OMPI y las oficinas de propiedad industrial, para escudriñar la información que allí se detalla para partir de las innovaciones ya existentes y evitar perder tiempo y dinero en crear algo ya creado.

Es necesario enfatizar que el hecho de que en este análisis aparezca la ITC en menor proporción que la EPN, no quiere decir que sea menos importante ya que todas las actividades son iguales. Lo que se demuestra en este punto es que todas absolutamente todas las empresas protegen sus innovaciones. Algunas empresas como las farmacéuticas o las universidades parten del análisis de la información a través de la ITC para crear sus innovaciones, otras por el conocimiento adquirido en la práctica de sus labores cotidianas. (Conocimiento tradicional). La actividad que menos frecuencia tiene con el 17% correspondiente a 17 casos, la relacionada con la VPI. Un tema que hasta el momento no se han puesto de acuerdo en tanto a la unificación de un método que permita cuantificar a los activos intangibles, razón por la cual en los casos no se entra en detalle pero que es obvio que se aplica.

Por ejemplo, en los casos se hace referencia al retorno de la inversión con base al cálculo de los costos que se incurrieron y los beneficios esperados a través de la demanda en el mercado del nuevo producto o servicio. Además que en la mayoría de los casos se ha recurrido a préstamos bancarios, el cual es un factor que influye en el cálculo del precio de venta del producto o el cobro de regalías. Olvidando incluir factores como el conocimiento, la experiencia, prestigio de marca u otros componentes que forman parte del capital intelectual. Con estos antecedentes y considerando la estructura de conformación de una EBT de la Figura 1 y las variables que intervienen en la GPI de la Figura 2, se representa en la Figura 3 el Modelo de GPI para las Empresas de Base Tecnológica.

Figura 3: Modelo de GPI Para las Pymes de Base Tecnológica

En esta figura se representa al Modelo de GPI para las Pymes de Base Tecnológica, considerando por un lado el proceso de formación de una EBT que comprende las etapas de Investigación, Desarrollo Tecnológico, Aplicación Industrial y la Explotación Comercial (Proceso de un sistema de innovación básico) y una Cartera de Gestión de Proyectos. Por otro lado considerando los eslabones de la GPI, encontramos las variables que se han de considerar en cada una de las etapas de innovación de la EBT. Así, la SAP y la ITC que corresponde al eslabón del Conocimiento se han de considerar en la Gestión de Cartera y la Investigación. La EP y la VPT que corresponden a la Protección se han de considerar en las etapas de Desarrollo Tecnológico, Aplicación Industrial y Explotación Comercial, La PI en la etapa de Investigación y la VPI, ALI, LTP que corresponden a la comercialización, se han de considerar en la etapa de Explotación comercial. Fuente: Elaboración propia.

En la primera etapa, en el “Proceso de Investigación” y “Gestión de Cartera”, las EBT ignoran el manejo de la propiedad intelectual, lo cual se evidencia al no tener mecanismos de protección. Para lo cual es necesario crear una cartera primaria para descubrir las fortalezas y debilidades así como la localización de oportunidades y riesgos. Esto es a través de la Inteligencia Tecnológica Competitiva (ITC), que permite el análisis sistemático de la información científica, tecnológica, legal y comercial, así como el establecimiento de estrategias de inversión y adquisición de personal técnico/científico. En forma paralela encontramos la Selección y Administración de Proyectos (SAP) que precisamente tiene que ver con la formación de equipos de calidad y la formulación de propuestas que permitan plantear criterios de selección y seguimiento de proyectos. No se debe olvidar que una vez que se ha detectado el proyecto con posibilidades de convertirse en un producto innovador y alta posibilidad de penetrar en el mercado, es necesario realizar el reconocimiento al personal o equipo que contribuyó al logro de los objetivos deseados (Promoción de la Inventiva, PI).

En la siguiente etapa de Desarrollo Tecnológico y Aplicación Industrial, donde se concibe la idea innovadora ya sea desarrollada por el equipo de trabajo o mediante la Adquisición de Licencias para Investigación (ALI) por parte de terceros, la cual se utiliza como estrategia para ahorrar tiempo y costos en el proceso de I+D. Es necesario establecer Estrategias de Protección (EP), mediante la utilización de títulos de PI, dependiendo del tipo de creación intelectual que desarrollo la empresa, esto es: patentes, diseños industriales, marcas, derechos de autor, derechos de obtentor, indicaciones geográficas, etc., o mediante alianzas estratégicas para defenderse de la competencia. También se generan políticas amplias de resguardo de secretos industriales y comerciales.

Finalmente en la etapa de Explotación Comercial (EC), se consideran aspectos como la Valuación de la Propiedad Intelectual (VPI), es decir la determinación del valor económico del o los activos intelectuales generados. La Vigilancia del Patrimonio Tecnológico (VPT), donde se adoptan políticas de vigilancia para supervisar el mercado y asegurar que no se infrinjan los derechos de PI. Para consumir la comercialización de las tecnologías protegidas por un título de PI se suscriben contratos de transferencia

de tecnología, los cuales se realizan a través de Licenciamiento de la Tecnología Propia (LTP), donde entre las cláusulas se incluyen aspectos como: los derechos que confiere la patente, la información técnica, el porcentaje de regalías sobre las ventas, acciones en caso de controversias, etc.

## CONCLUSIONES

En general las EBT no valoran adecuadamente la PI y, subestiman las posibilidades de obtener beneficios futuros gracias a su uso. La propiedad intelectual puede convertirse en un activo valioso cuando se protege de acuerdo con la ley y cuando existe una demanda en el mercado para los productos y servicios protegidos. La protección legal no es más que una de las diversas formas posibles de dar a la empresa una protección monopolística y, de ese modo, captar valor de la innovación. Parte importante de la GPI la comprende la estrategia de protección por medio de títulos como patentes, marcas, secretos industriales, modelos de utilidad y diseños industriales, circuitos integrados, derechos de autor y obtentor de vegetales. En este sentido, gestionar eficazmente la PI también supone la capacidad de la empresa para comercializar las invenciones, lanzar al mercado sus marcas, conceder licencias sobre sus conocimientos técnicos, realizar transacciones conjuntas y celebrar acuerdos contractuales, así como ejercer y supervisar eficazmente sus derechos de propiedad intelectual.

### Limitaciones

Dentro de las limitaciones hay que resaltar, por una parte, el número reducido de Pymes de Base Tecnológica encontradas en la Ciudad de Morelia México y por otro un margen de error considerable en la información proporcionada por los dueños de este tipo de empresas, debido principalmente al desconocimiento de los temas relacionados con la GPI como son: la Valoración de la PI, Inteligencia Tecnológica Competitiva, Licenciamiento de Tecnología Propia, entre otros, que a pesar de que desconocían los conceptos, en la práctica realizaban de alguna forma estas actividades.

## ANEXOS

Anexo 1: Tabla de Frecuencias de las Actividades de GPI

No.	SAP	ITC	EP	VPT	PIV	VPI	LTP	ALI	
1	X	n/d	X	X	n/d	n/d	n/d	n/d	3
2	X	X	X	X	n/d	n/d	X	n/d	5

		67%	100%	55%	40%	17%	76%	40%	

En esta tabla localizamos en la primera columna los 42 casos correspondientes a empresas innovadoras, en la primera fila las variables que conforman la GPI detectadas en el análisis del estado del arte y buenas prácticas. Los resultados confirman la literatura, el 100% de las actividades corresponde a las EP (Estrategias de protección). También se confirma que existen otras actividades igualmente importantes pero no mencionadas comunmente en la literatura, como el LTP (Licenciamiento de la Tecnología Propia) con un 76%, ITC (Inteligencia Tecnológica Competitiva) con un 67%, SAP (Selección y Administración de Proyectos) con un 62% entre las mas importantes. Fuente: Elaboración propia a partir de "IP Advantage" (2011).

## RESUMEN

*Manzanillo y Puerto Vallarta son unos de los destinos turísticos de sol y playa más importantes del pacífico mexicano. Las dos ciudades cuentan con riquezas tanto naturales como culturales semejantes de oferta turística por la ubicación geográfica, sin embargo Puerto Vallarta recibe una cantidad mucho mayor de turistas todo en año que Manzanillo, al contrario Manzanillo solo recibe turistas en temporada vacacional o fines de semana largos. Es necesario analizar las causas por las cuales los turistas prefieren a Puerto Vallarta como destino favorito de playa. Este trabajo fue desarrollado por la metodología comparativa de los indicadores de la competitividad turística y análisis "FODA". Resultados: El costo de los servicios y hospedaje en Manzanillo son mas caros que en Puerto Vallarta pero la calidad del servicio no es la misma, siendo en Manzanillo menor, debido a que los pobladores que son los actores principales carecen de cultura turística y capacidad organizacional; además el desarrollo de la infraestructura turística en Puerto Vallarta está más avanzada y cuenta con una gran variedad de actividades turísticas. Conclusiones: Manzanillo no es destino competitivo en comparación con Puerto Vallarta aunque Manzanillo cuenta con mejores condiciones ambientales en sus playas.*

## ANALYSIS OF THE TOURISM COMPETITIVENESS IN DESTINATION OF SUN AND BEACH, CASE NATIONAL TOURISM IN MANZANILLO AND PUERTO VALLARTA, MEXICO

### ABSTRACT

*Manzanillo and Puerto Vallarta are ones of the most important tourist beach destinations of the Mexican Pacific coast. The two cities have both natural and cultural wealth of tourist offer similar by geographic location, but Puerto Vallarta receives much more tourists every year than Manzanillo that receives tourists just only in holiday season or long weekends. It is necessary to analyze the reasons why tourists prefer Puerto Vallarta as beach destination. This work was developed by the comparative methodology of tourism competitiveness indicators and "SWOT" analysis. Results: The cost of services and lodging in Manzanillo is more expensive than in Puerto Vallarta but quality of service is not the same, being in Puerto Vallarta is better, because the people who are the main actors lack tourist culture and organizational capacity; further development of tourism infrastructure in Puerto Vallarta is more advanced and there is variety of tourist activities. Conclusions: Manzanillo is not competitive destination compared with Puerto Vallarta but Manzanillo has more beautiful beaches.*

### INTRODUCCIÓN

El turismo es una herramienta muy importante para el desarrollo económico de los países, lo cual ha generado que en la actualidad, estos enfrenten una gran competencia por atraer el mayor número de

turistas. Existen factores que influyen en la baja competitividad del sector turístico en México tanto como factores que favorecen su desarrollo. Manzanillo es la zona turística más importante de Colima, se encuentra ubicado en una región geográfica de México caracterizada por una oferta turística muy semejante, con atractivos casi idénticos y no cuenta con elementos que lo distingan, por lo tanto necesita elevar su competitividad turística, perfeccionando la infraestructura, los factores de apoyo y la administración del destino para poder lograr un posicionamiento superior en el mercado a través de una mejor imagen real y percibida. En la costa del Pacífico Mexicano existen por lo menos siete destinos importantes con lo que en el lenguaje turístico se denomina oferta de sol y playa.

En el mercado turístico mundial, la oferta de sol y playa es considerada una comodidad. En los cinco continentes hay cientos de destinos con una oferta muy parecida, esto ya no resulta suficiente, por lo cual debe acompañarse con algún otro tipo de servicio que haga peculiar al destino (Amaya et al.:2008).

De acuerdo a los factores que han sido creados, uno de los componentes básicos para el establecimiento de la competitividad turística es la seguridad del destino, como lo menciona Brent Ritchie en su obra “El destino competitivo: Una perspectiva de turismo sustentable”. México, hoy en día ha sido golpeado considerablemente por una serie de aspectos negativos en materia de seguridad, aspectos internos y externos. El estado de Colima se ubica dentro de los destinos mejor posicionados en materia de seguridad en algunos rubros a nivel nacional, sin embargo los números en cuanto a delitos empiezan a elevarse, algo que debe preocupar a las autoridades locales y principalmente a las del destino Manzanillo por ser un lugar turístico. El problema de competitividad turística del estado de Colima y de su municipio más sobresaliente, Manzanillo, no tiene una fácil solución, necesita lograr un importante posicionamiento competitivo turístico, surgieron así la siguiente interrogante: ¿Cuál es el elemento necesario para Manzanillo que mejore la competitividad turística a comparación del destino turístico de Puerto Vallarta?

*El objetivo general:* del trabajo fue el análisis de la competitividad turística en destino del Sol y playa en caso de turismo nacional entre Manzanillo y Puerto Vallarta, México para poder a incrementar la comercialización de sus servicios turísticos en Manzanillo.

*Métodos a utilizar en la investigación:* La búsqueda y acopio de datos se orientó a la obtención de información primaria ya que se utilizaron indicadores de la competitividad turística del Consejo Mundial del Turismo y Viajes (WTTC) y el análisis de FODA de los dos destinos turísticos, se obtuvo a través de las investigaciones específicas (trabajo de campo), principalmente por medio de encuestas, entrevistas y de la observación, también se utilizó la investigación secundaria ya que se consultó a la Secretaría de Turismo del Estado de Colima, publicaciones oficiales de la Secretaría de Turismo, de la Organización Mundial de Turismo, entre otros. Se utilizaron métodos cuantitativos de los resultados obtenidos de las encuestas, se analizaron bajo métodos estadísticos y sobre hechos observables con la finalidad de poder controlar las variables y medir los resultados. Se formó un grupo de voluntarios de la Escuela de Turismo y Gastronomía integrado por doce estudiantes que aplicaron encuestas directas tanto a prestadores de servicios turísticos como a visitantes para obtener las dos partes del estudio

*Técnicas a utilizar en la investigación:* Reuniones con prestadores de servicios turísticos, aplicación de encuestas, tormenta de ideas, entrevistas, sistemas estadísticos en la concentración de información, herramientas matemáticas **Valor teórico:** Lo fundamentan los conceptos actuales en materia de mercadotecnia en los entornos turísticos y la interrelación con los aplicados en las estrategias comerciales que permitan incrementar la utilización de los servicios turístico en Manzanillo. **Valor metodológico:** Esta compuesta esencialmente por los marcos conceptuales y las estrategias mercadotécnicas diseñadas, con posibilidad de aplicación en la comercialización de servicios turísticos. **Valor práctico:** Se enfoca primordialmente a la factibilidad y pertinencia de aplicación de estrategias promocionales que permita mejorar la calidad de los servicios turísticos en Manzanillo. **Valor social:** Radica en la investigación de cómo mejorar las motivación de uso de los servicios turísticos así como de las campañas promocionales

en el Estado que creen un flujo de turistas, para que utilicen los servicios turísticos logrando una mayor derrama económica y una significativa reactivación económica local.

*Desarrollo de la investigación:* Según El Consejo Mundial del Turismo y Viajes (WTTC), que tiene encomendadas tareas de promoción y evaluación del turismo, inició en 2001 la elaboración y recopilación de un conjunto de indicadores de competitividad de los destinos turísticos que están en la línea de los elaborados por el Fondo Monetario Internacional para el seguimiento de la competitividad de la economía de los países. Estos indicadores de competitividad del WTTC recopilan una amplia gama de información que indica en qué medida un país ofrece un entorno competitivo para el desarrollo del turismo y, tal y como afirman Gooroochurn y Sugiyarto (2003), es el primer intento de construir los siguientes indicadores de competitividad para el sector turístico.

1. Precios de los principales bienes y servicios consumidos por los turistas,
2. Factor humano en la industria turística,
3. Desarrollo de la infraestructura,
4. Medio ambiente,
5. Desarrollo humano
6. Desarrollo social

Los cuales se comparan la competitividad turística de Manzanillo con Puerto Vallarta en el cuadro presentado de la siguiente manera:

Tabla No.1: Indicadores de la Competitividad Turística de Manzanillo y Puerto Vallarta

Indicadores De Competitividad	Manzanillo	Puerto Vallarta
<b>Precios</b> (Principales Bienes Y Servicios Consumidos Por Los Turistas)	<b>Regular</b> Manzanillo Ofrece Productos Y Servicios A Precios Altos Especialmente En Temporadas Altas	<b>Bueno</b> Además De Ser Un Destino Altamente Turístico Sus Precios Son Promedio.
<b>Factor Humano En La Industria Turística</b>	<b>Regular</b> Es Poca La Población Local Que Se Dedicar Al Turismo	<b>Bueno</b> La Mayoría De La Población Local Se Dedicar Al Turismo
<b>Desarrollo De Infraestructura</b>	<b>Regular</b> Se Ha Incrementado Muy Lentamente La Infraestructura Turística, Solo Se Cuenta Con 6 Hoteles Categoría 5 Estrellas	<b>Bueno</b> El Desarrollo De Infraestructura Turística Está Avanzando Muy Rápidamente
<b>Medio Ambiente</b>	<b>Regular</b> A Pesar De La Contaminación De La Termoeléctrica Y El Hábitat Natural En El Cual Intervino El Puerto Comercial, Manzanillo Cuenta Con Playas Amplias, Limpias Y Con Gran Parte De Áreas Verdes A Las Orillas Del Municipio	<b>Regular</b> Puerto Vallarta Está Disminuyendo Sus Áreas Naturales Al Mientras Crece Su Infraestructura Especialmente Hotelera.
<b>Desarrollo Humano</b>	<b>Bueno</b> Las Personas De Manzanillo Se Caracterizan Por Ser Muy Amables Y Por Brindar Un Excelente Servicio	<b>Bueno</b> Las Personas De Puerto Vallarta Brindan Muy Buen Servicio Ya Que Su Actividad Principal, Como Ya Se Había Mencionado, Es El Turismo
<b>Desarrollo Social</b>	<b>Bueno</b> Como Actividad Social Manzanillo Realiza El Torneo Internacional De Pez Vela	<b>Bueno</b> Puerto Vallarta Realiza Eventos Nacionales E Internacionales Así Como También Cuenta Con Tianguis Cultural

Fuente: Investigación propia, año 2013

Análisis de Fortalezas, Oportunidades, Debilidades y Amenazas (FODA) de Manzanillo como destino turístico Manzanillo es un destino el cual los turistas lo eligen en cierta parte por la tranquilidad de la ciudad y por ser un destino de sol y playa. En esta investigación se muestra un diagnóstico para identificar las fuerzas y debilidades del destino así como también las oportunidades y amenazas en las que se encuentra, conocido también como análisis FODA. Las fortalezas que se presentan a continuación son características propias del destino que representan ventajas competitivas y capacidades para el desarrollo del turismo; las oportunidades son las circunstancias del entorno que favorecen al logro de los objetivos, que pueden dar lugar a una posición de ventaja para el destino.

- *Fortalezas:* Características propias del destino que representan verdaderas ventajas competitivas y capacidades para el desarrollo del turismo.  
F1.- Calidez y Amabilidad de la gente del puerto.  
F2.- Ubicación Geográfica, cerca de grandes poblaciones.  
F3.- Belleza y variedad de playas.  
F4.- Seguridad y paz social, aún es un puerto tranquilo.  
F5.- Pesca Deportiva, cuenta con el Distintivo: Capital Mundial del Pez Vela.  
F6.- Existe voluntad política en reconocer al turismo como prioritario para el desarrollo del municipio.  
F7.- Infraestructura en vías de comunicación al puerto.  
F8.- El tipo de clima.  
F9.- Gastronomía Regional.

- *Oportunidades:* Circunstancias del entorno que favorecen al logro de los objetivos, que pueden dar lugar a una posición de ventaja para algún destino.

*O1.- Creciente participación empresarial.*

*O2.- Mayor inversión en infraestructura vial y de servicios básicos por las diferentes entidades gubernamentales.*

*O3.- Avances en la planificación de infraestructuras de comunicación que permitirán la reducción del tiempo para alcanzar nuestro destino de playa.*

*O4.- El municipio de Manzanillo cuenta con extensas áreas idóneas para la construcción de desarrollos turísticos sustentables y estratégicamente planeados.*

*O5.- Las nuevas tecnologías de telecomunicaciones permiten el acceso más amplio y directo a los mercados.*

*O6.- La competencia directa (Puerto Vallarta) tiene playas con piedras (principal desagrado de sus visitantes) y están consideradas dentro de las más sucias del país.*

*O7.- El gobierno estatal tiene un plan de incentivos fiscales para atraer inversiones al estado.*

*O8.- El turismo es un sector muy atractivo para la población, como generador de empleos a nivel local.*

*O9.- La actividad turística del puerto de Manzanillo se encuentra todavía por debajo de su desarrollo potencial.*

*O10.- Repotenciación y Cambio de Combustible a Gas Natural en la Central Termoeléctrica de CFE.*

*O11.- La actividad turística es considerada como un área estratégica para la economía nacional.*

*O12.- Existe una sana relación entre las autoridades estatales y municipales entorno a los objetivos turísticos.*

- *Debilidades:* Características propias del destino turístico que representan verdaderas desventajas competitivas para el logro de sus objetivos.

*D1.- Incapacidad del sistema regulatorio para sancionar el incumplimiento de las normas y revertir la informalidad en la actividad turística.*

*D2.- No se cuenta con los servicios básicos adecuados y suficientes en temporadas de mayor afluencia turística, como abastecimiento de agua potable, tratamiento de aguas residuales y de residuos sólidos, recolección de basura, etc., lo que incrementa la degradación ambiental, además de generar descontento en los habitantes.*

*D3.- El Sector tiene poco conocimiento acerca de la aplicación de los resultados sobre los estudios de mercado.*

*D4.- Existe poca inversión en infraestructuras hoteleras de categoría superior.*

*D5.- Falta de asociación, debilidad gremial, desunión de los empresarios locales y ridículo control de tarifas en las distintas ramas del sector turístico.*

*D6.- Falta de aplicación de las herramientas de medición de satisfacción del cliente como encuestas, cuestionarios, solicitud de sugerencias o formularios de contacto.*

*D7.- Falta de innovación en la conformación de la oferta turística. D8.- Escasa conciencia y cultura turística en la población, y falta de responsabilidad social empresarial.*

*D9.- Carencia de capacitación y asesoramiento sobre el sector turístico en los prestadores de servicios*

*D10.- Deficiente flotilla de vehículos de transporte urbano*

*D11.- Visión del turista receptivo orientado principalmente a los circuitos turísticos tradicionales, escasa diversificación.*

*D12.- La comercialización sigue estando orientada hacia una comunicación masiva, sin valorar la diferenciación de los diversos segmentos de mercado.*

*D13.- Los operadores externos no ofertan nuestro destino como primera opción, a falta de incentivos económicos.*

*D14.- Se cuenta con una imagen de pueblo sucio, con calles deterioradas y con estructura urbana desastrosa.*

*D15.- Escasos lugares de diversión y entretenimiento nocturno, ausencia de parques temáticos y recorridos turísticos.*

*D16.- Insuficientes plataformas comerciales a través del Internet y las nuevas tecnologías.*

*D17.- Aún no se cuenta con una terminal de cruceros.*

*D18.- Contaminación, normatividad demasiado laxa.*

*D19.- Inexistencias de estándares o programas de apoyo a la calidad aplicadas al sector turístico, lo que genera mediocridad en los prestadores de servicios.*

*D20.- Precarios sistemas de información locales al turista e improvisación del personal de apoyo a esta actividad.*

*D21.- Tarifas altas en casetas de cobro de autopistas.*

*D22.- Falta de estacionamiento, sanitarios e iluminación en el Centro Histórico.*

*D23.- Ausencia de áreas de diversión, entretenimiento y recreación infantil o familiar.*

- Amenazas: Circunstancias del entorno que ponen en riesgo el logro de los objetivos del destino, los cuales no tenemos control directo pero debemos considerar para fijar objetivos realistas diseñar estrategias para minimizar su impacto adverso sobre nuestras metas.

*A1.- Elevado grado de competencia cercana a nuestra zona turística.*

*A2.- Problemática derivada del exceso de procesos burocráticos y la falta de información para inversión privada y desarrollo de los destinos turísticos.*

*A3.- Inseguridad y creciente violencia a nivel nacional.*

*A4.- Aumento de la contaminación, depredación, daño de zonas y ecosistemas.*

*A5.- Exposición a desastres naturales (sismos, ciclones, inundaciones).*

*A6.- Clara tendencia en los medios informativos de transmisión nacional a no tomar en cuenta al puerto de Manzanillo como destino turístico de importancia.*

*A7.- Elevado costo de las tarifas aéreas domésticas.*

*A8.- Inestabilidad y crisis financiera-económica mundial.*

*A9.- La inseguridad y los problemas sociales pueden desalentar la demanda actual y potencial del turismo internacional.*

*A10.- La marcada preferencia de atención al turista extranjero por parte de los prestadores de servicios complica los procesos de fidelización de la demanda nacional.*

*A11.- Falta de conocimiento real sobre las necesidades de la demanda para generar acciones correctivas específicas.*

*A12.- Aumento de precios en temporadas altas.*

*A13.- Existencia de protestas en contra de la explotación de los recursos naturales en áreas potenciales de desarrollos turísticos.*

## RESULTADOS Y CONCLUSIONES

El problema planteado en el presente trabajo de investigación muestra que hay cientos de destinos con una oferta turística muy parecida, en este caso la oferta de *sol y playa*. Esto ya no resulta suficiente, por lo cual debe acompañarse con algún otro tipo de servicio que haga peculiar al destino (Manzanillo).

En relación a esa problemática se comprueban las siguientes hipótesis de acuerdo a los resultados obtenidos de las encuestas aplicadas: Manzanillo cuenta con una oferta turística muy semejante a otros destinos nacionales, para aumentar su nivel de competitividad necesita más y mejor infraestructura además de mejorar en los servicios principalmente en la promoción turística según el 18% de las personas encuestadas esta promoción podría mejorar la oferta turística del municipio también se debe mejorar la vida nocturna según el 17% de la respuesta de los encuestados.

Las ventajas del instrumento turístico de Manzanillo son óptimas y fortalecen su destino turístico ante la competencia, el 56% de las personas encuestadas respondieron que no consideran a Manzanillo como un destino turístico competitivo mientras que el 46% contestaron que si consideran a Manzanillo competitivo, comentaron que a pesar de no tener mucha infraestructura, el municipio tiene playas amplias y limpias además que tiene potencial para desarrollarse turísticamente y posicionarse en niveles mayores en cuanto a competitividad turística. Se obtuvo un resultado de 26% para el estado de Jalisco mostrándose en las encuestas como competencia para Manzanillo, específicamente el municipio Puerto Vallarta. Las desventajas del instrumento turístico de Manzanillo son perjudiciales y debilitan su destino turístico ante la competencia. El 54% de las personas encuestadas perciben que el turismo actual es bueno en comparación con otros años pero comentaron que podría estar mejor, hace falta más interés en mejorar sus servicios. El 49% cree que el turismo en Manzanillo va a ser bueno dentro de 10 años comentando que solo si se mejora en la infraestructura turística del municipio.

El comportamiento de la población local influye para que Manzanillo pueda ser un destino turístico competitivo, el 47% de los encuestados considera que el comportamiento de la población local ante los turistas es bueno mientras que el 40% respondió que la población se muestra indiferente. Por otro lado se muestra que el grado de satisfacción de los turistas al visitar Manzanillo es muy bueno según el 41% de los encuestados y bueno según el 29%. Manzanillo le da la misma importancia al turismo nacional en relación con el turismo extranjero siendo el 87% de los prestadores de servicios encuestados quienes respondieron que a ambos se les da la misma importancia mientras tanto solo el 8% contestaron que la importancia se le da al turismo extranjero y el 4% al turismo nacional. Se obtuvo también que el 90% de los visitantes son nacionales y el 10% respondió que son extranjeros.

Como conclusión del presente trabajo de investigación se puede observar que Manzanillo, a pesar de ser un municipio pequeño con poca infraestructura turística (en comparación de su principal competidor Puerto Vallarta) tiene mucho potencial por desarrollar; cuenta principalmente con la calidez de la gente local que caracteriza al puerto por ser personas amables y por brindar muy buen servicio al turista; las playas de Manzanillo son una ventaja turística mas del puerto ya que son playas amplias, limpias y tranquilas además el clima del municipio es cálido la mayor parte del año siendo favorecedor para el turista. Las estrategias que se generen deben tratar de aprovechar, simultáneamente, varias fortalezas y, actuar en el aprovechamiento (o reducción del impacto) de varias oportunidades (o amenazas). Para la presentación de las estrategias, se agruparon en grandes áreas de interés, éstas fueron: Recursos Humanos / Sociedad. Producto Turístico, Comercialización, Infraestructura, Regulación y Normatividad. Cada una de ellas a su vez, cuenta con diversas acciones, las cuales constituyen la parte operativa del Plan Estratégico y son instrumentos diseñados para enfrentar la problemática identificada y solucionar problemas particulares y/o aprovechar oportunidades concretas.

# **DETERMINANTES REALES QUE IMPIDEN A LA PROVEEDURÍA LOCAL TENER MAYOR PARTICIPACIÓN EN LA INDUSTRIA MAQUILADORA SECTOR ELECTRÓNICO EN TIJUANA, B.C. MÉXICO.**

María Marcela Solís Quinteros, Universidad Autónoma de Baja California, México

Alfonso Vega López, Universidad Autónoma de Baja California, México

María Virginia Flores Ortiz, Universidad Autónoma de Baja California, México

## **RESUMEN**

*El objetivo de la investigación es identificar las determinantes reales que impiden a la proveeduría local mexicana tener mayor participación en la industria maquiladora de exportación sector electrónico en Tijuana, B.C. México. La metodología de investigación consistió en entrevistas a profundidad a los responsables de compras de 10 empresas maquiladoras consideradas como las más exitosas, así como la aplicación de una encuesta a 38 empresas maquiladoras. Con los resultados obtenidos se creará un diagnóstico de los factores actuales que inciden en la baja contratación de proveeduría local mexicana por parte de la Industria Maquiladora sector electrónico en Tijuana, B.C. Se propone aportar información necesaria que podrá ser de utilidad a las asociaciones industriales y ayuntamiento del estado para toma de decisiones que puedan contribuir a incrementar el suministro de la proveeduría local a las grandes empresas.*

**PALABRAS CLAVES:** industria maquiladora sector electrónico, proveeduría local, encadenamiento productivo, integración vertical, integración horizontal.

## **REAL DETERMINANTS THAT PREVENT LOCAL SUPPLY HAVE GREATER PARTICIPATION IN ELECTRONIC INDUSTRY SECTOR BOND IN TIJUANA, B.C. MÉXICO**

## **ABSTRACT**

*The objective of the research is to identify the real determinants that prevent local suppliers have greater involvement in Mexican maquiladora export electronics industry in Tijuana, BC. The research methodology consisted of depth interviews with purchasing managers from 10 maquiladoras considered the most successful, and the implementation of a survey of 38 maquiladoras. With the results, it is proposed to provide necessary information that may be useful to industry associations and the state council for decisions that can help increase the supply of local suppliers to large companies.*

**JEL:** A12, D20, D24, M11, O14,

**KEYWORDS:** Maquiladora electronics industry, local supply, production chain, vertical integration, horizontal integration.

## **INTRODUCCIÓN**

De acuerdo a la Organización Mundial de Comercio (OMC, 2004) las exportaciones de producto electrónico representaron el 15% del valor total de las mercancías comerciadas en el mundo. Se estima

que las distintas ramas de la industria electrónica mantendrán elevadas tasas de crecimiento a nivel mundial. Este impulso será mayor en tanto más acertadas sean las estrategias de cada país para integrar las cadenas productivas que intervienen en la innovación y fabricación del desarrollo de nuevos productos electrónicos (Secretaría de Economía 2001) Entre 2003 y 2010, el PIB del sector electrónico creció en promedio anual 1.2%, al pasar de 7,000 millones de dólares a 7,589 millones de dólares. En 2010, el PIB sectorial significó el 0.7% del PIB nacional, de acuerdo con cifras del INEGI. ([promexico.gob.mx](http://promexico.gob.mx))

En México existen más de 728 unidades económicas pertenecientes al sector electrónico. Las empresas manufactureras están ubicadas principalmente en estados como Baja California, Chihuahua, y Tamaulipas, empleando a un aproximado de 258,000 personas en el país, de acuerdo con INEGI. ([promexico.gob.mx](http://promexico.gob.mx)). Siguiendo las cifras de Secretaría de Economía, entre 2000 y 2010, la inversión extranjera acumulada en el sector electrónico ascendió a 20,625 millones de dólares, concentrándose principalmente en la fabricación de computadoras y equipo periférico. Tan sólo en 2010, la inversión extranjera en esta industria alcanzó un valor de 1,301 millones de dólares; los principales países origen de la inversión fueron Países Bajos, Estados Unidos, Japón, Alemania y Canadá.

A pesar de los esfuerzos del sector privado y del gobierno mexicano, la participación de la proveeduría nacional en la Industria Manufacturera, Maquiladora y de Servicios de Exportación (IMMEX) en sus 40 años de presencia en el país, ha sido relativamente baja. En 2004, esta participación nacional fue de 10% del consumo intermedio, siendo esta participación aún más baja en el rubro de materias primas, (Koido, 2003) Estudios de Carrillo y Hualde (2001) señalan que las plantas locales no cuentan con recursos para producir insumos con altos estándares de calidad y alto nivel tecnológico que se requieren, las firmas transnacionales recurren a proveedores extranjeros que han localizado sus plantas cerca de sus clientes. Asimismo, según datos del Colegio de la Frontera Norte (Cofe) 2002, las empresas proveedoras mexicanas locales sólo producen materiales indirectos, ninguna produce insumos directos. Los proveedores extranjeros, por el contrario, fabrican diversos materiales directos. Existen diversas razones por las que la IMMEX no ha desarrollado una importante red de proveedores locales, pero principalmente porque las plantas al instalarse en México ya contaban con proveedores locales en su lugar de origen y con quienes ya habían establecido una relación de confianza en cuanto a calidad y tiempo de entrega.

Dentro de las acciones que ha hecho el gobierno federal en materia de proveeduría local, es la organización de foros como Baja PYME porque se propician relaciones de negocios, así como el intercambio de servicios y mercancías, lo que permitirá que pequeñas y medianas empresas puedan resurgir. El objetivo es que las empresas “tractoras” (todas aquellas que se encargan de producir productos a gran escala) desarmen sus piezas y productos terminados para que el industrial local conozca cuáles son los componentes que necesitan y que en la mayoría de los casos tienen que comprar en otros países, con el costo que ello implica. Actualmente la Secretaría de Economía ha impulsado el programa de desarrollo de proveedores, que representa una estrategia de promoción para identificar y elevar la competitividad de las micro, pequeñas y medianas empresas (PyME's), con la finalidad que se integren a los encadenamientos productivos de las empresas tractoras, las cuales son las grandes compradoras que en su operación jalen a este tipo de empresas. Al elevar la competitividad de la pequeña y mediana empresa tiene como consecuencia grandes beneficios para el país, pues de esta forma se conservan y crean empleos, se fortalece el mercado interno y se logra una más equitativa distribución de la riqueza. A pesar de este programa de apoyo por parte del Gobierno para el apoyo de proveeduría local a la IMEX, aún existen características y obstáculos que limitan su incursión.

## REVISIÓN LITERARIA

*Encadenamiento productivo:* A. Hirschman (1981), planteo por primera vez en 1958 la teoría de los encadenamientos hacia adelante y hacia atrás, los cuales constituyen una secuencia de decisiones de inversión que tienen lugar durante los procesos de industrialización que caracterizan el desarrollo

económico. \_Los encadenamientos hacia atrás están representados por las decisiones de inversión y cooperación orientadas a fortalecer la producción de materias primas y bienes necesarios para la elaboración de productos terminados. Entretanto, los encadenamientos hacia adelante implica la incorporación de nueva tecnología e investigación y desarrollo que mejora o crea nuevos productos. \_Los tipos de encadenamiento pueden ser: desarrollo de productos, materias primas, bienes secundarios, infraestructura, capital humano, manufactura y logística.

*Integración vertical:* La integración vertical se caracteriza por una dirección de integración, la cual puede ser hacia atrás o hacia adelante. De acuerdo a las características de la empresa, la integración vertical hacia atrás consiste en que una empresa se acerca hacia sus proveedores incorporándolos a su cadena de valor, controlando las empresas proveedoras de sus insumos. La integración hacia adelante implica una mayor aproximación a sus clientes, la empresa misma se encarga de proporcionar al cliente el producto final; prescindiendo de empresas externas para realizar dicha labor (Schmalensee y Willig, 1989) La relaciones de cooperación vertical permiten tanto la especialización de las empresas, dando lugar a la conformación de una cadena productiva altamente fragmentada (desde proveedores de insumos básicos hasta los agentes de comercialización), y al mismo tiempo fuertemente integrada y cohesionada dentro de la aglomeración. (Carrillo, 2000)

*Integración horizontal:* (López, 2003) afirma que la integración horizontal se caracteriza por la alianza entre un grupo de empresas que ofrecen un mismo producto servicio cooperando entre sí en algunas actividades, pero compitiendo entre sí en un mismo mercado. Este tipo de integración generalmente están compuestas por grupos de micro, pequeñas y medianas empresas en la misma localidad o el mismo sector. La cooperación horizontal hace posible que las pequeñas empresas accedan a beneficios colectivos, que difícilmente lograrían de manera individual

*Teoría de Trama productiva o Red productiva:* Está conformado por una firma organizadora, su conjunto de proveedores y clientes, así como interrelaciones que se derivan de las transacciones de compraventa como los flujos de información, experiencia y conocimiento que circulan por los canales formales e informales constituidos (Rullani, 2000). La principal ventaja de este tipo de configuraciones deriva del intercambio y acumulación de conocimientos, que sus componentes generan a lo largo de su vinculación comercial. Sin embargo estudios de Carrillo pone de manifiesto que estas conceptualizaciones teóricas no responden necesariamente a la forma en que se manifiestan las vinculaciones interfirmas en la realidad (González R. 2010) Prácticas de Modelos de Proveeduría local en otros países.

*Modelo de proveeduría Taiwanés:* \_El desarrollo de proveedores en el sector electrónico está alineado a las necesidades impuestas por la competitividad internacional; el factor básico de éxito es su base de proveeduría local, que cuenta con empresarios emprendedores, receptivos y con potencial e iniciativa para el aprendizaje (Hobday, 1994). Concluyendo que el proceso gradual de aprendizaje y acumulación de capacidades tecnológicas facilitó a Taiwán la transición de fabricación de productos simples a procesos y productos más complejos.

*Modelo de proveeduría de Malasia:* La proveeduría local se caracteriza por el desarrollo de las capacidades para satisfacer los niveles de calidad, costo y oportunidad que exige las empresas transnacionales, estableciendo sistemas de producción flexibles, así como programas de entrenamiento y promoción para la creación de nuevas empresas en el seno de otras empresas ya existentes, que actúan como incubadoras (Ariffin, 2000)

*Modelo de proveeduría de Singapur:* La importancia de la industria electrónica representa el 40% del valor de la producción y de las exportaciones, sin embargo la participación de la proveeduría local es mínima, ya que los encadenamientos de las empresas transnacionales fueron básicamente con otras empresas transnacionales de la región. Las políticas de educación y entrenamiento técnico para el trabajo

han impulsado la industrialización, sin embargo no se formó una base local de empresas alrededor de las grandes empresas transnacionales. Durante más de tres décadas no hubo políticas para el desarrollo de las Pymes, favoreciendo a las grandes empresas foráneas sobre las pequeñas locales. Algunas empresas locales pudieron proveer apoyo de ingeniería desarrollando sus propias marcas, fabricando discos duros, chips, tableros para circuitos impresos y Computadoras. (Torres, 2007)

*Modelo de proveeduría japonés:* Busca proponer una subcontratación o integración vertical, de empresas grandes con empresas de tamaño mediano o pequeño. De esta forma la empresa “integradora del producto” pueden ofrecer un producto, que está diseñado y desarrollado bajo ciertas especificaciones técnicas por varias empresas pequeñas del sector, en donde cada pequeña empresa realiza uno o más módulos y posteriormente son integrados en un solo producto. Si el proveedor cumple los requisitos de calidad y plazos de entrega la relación es duradera. Los programas de desarrollo de proveedores son eficientes, pues se aplican a los proveedores que tienen problemas para cumplir con las especificaciones, enviando equipos para mejorar la productividad en las empresas de sus proveedores (González, B. 2000)

#### Modelo de Proveeduría Italiano

Propone crear redes horizontales de empresas. Las redes horizontales se diferencian de las redes verticales, en que son una forma de cooperación y competencia entre empresas que se sitúan en posiciones distintas y consecutivas de la cadena productiva y se asocian para lograr ventajas competitivas que no podría lograr de manera individual. (Domínguez, 1996)

*Proveedores en cadenas de valor:* Otro enfoque es el dado por el análisis de la cadena de valor, entendiéndose como “el conjunto de actividades de un proceso productivo desde el diseño o concepción del producto hasta la entrega al consumidor final y eventualmente su reutilización” Generalmente la literatura enfatiza estos encadenamientos a través de las fronteras entre empresas productivas y sistemas de distribución, lo cual permite apreciar todo el ciclo (diseño del producto - recepción por parte del consumidor final) como un proceso de interacción continua y de agregación de valor. Las empresas proveedoras están conectadas con la industria a la cual proveen o industria principal, que corresponde a aquellas actividades situadas en el eje central de la cadena (Humphrey, 2005)

## METODOLOGÍA

### Objetivo General

Análisis de las determinantes que inciden en la baja contratación de proveeduría local mexicana por parte de la Industria Maquiladora sector electrónico en Tijuana.

### Objetivos Particulares

1. *Identificar los criterios de selección por parte de los compradores de IMMEX (Industria sector electrónico para elegir a sus proveedores.*
2. *Identificar los principales obstáculos que tiene la proveeduría local para ser considerado como proveedores de la IMMEX sector electrónico.*
3. *Conocer la capacidad de la empresa local para proveer a la Industria maquiladora sector electrónico con las especificaciones establecidas por la misma.*

El método propuesto consiste en tres etapas: 1) Estudio documental de los antecedentes estadísticos de la IMMEX apoyándose en investigaciones de expertos sobre proveeduría local para conocer el contexto en el entorno nacional, así como en la frontera norte; 2) Un estudio en la Ciudad de Tijuana, Baja California, donde se aplicó una encuesta a los responsables de compras en 38 empresas maquiladoras del sector

electrónico, tomadas de un total de 89 empresas del Directorio de la Industria maquiladora sector electrónico 2012, para conocer cuáles son los requerimientos de la proveeduría local para ser considerados proveedores de la industria maquiladora de exportación sector electrónico. Para el cálculo del tamaño de la muestra aleatoria se tomo una proporción del 25% de las empresas maquiladoras sector electrónico, con 10% de error y 90% de confianza 3) Entrevistas a profundidad a empresarios de 10 empresas maquiladoras consideradas como las más exitosas para obtener información complementaria para identificar los factores asociados a la problemática de la proveeduría local, así como posibles opciones de solución El trabajo de investigación está sustentado con la información estadística, de SEDECO (Secretaría de economía del gobierno del estado de Baja California), SE (Secretaría de Economía), SIEM (Sistema de Información Empresarial Mexicano), INEGI (Instituto Nacional de Estadística, Geografía e Información).

## RESULTADOS

De la investigación secundaria sobre proveeduría local se encontró que existen características y obstáculos que limitan su incursión. En las siguientes tablas (1 y 2) se identifican las características de proveeduría local extranjera y proveeduría local mexicana, así como los principales obstáculos a los que se enfrenta la proveeduría local mexicana para incursionar en la IMMEX (Industria Manufacturera, Maquiladora y de Servicios de Exportación) sector electrónico de acuerdo a investigaciones realizadas por diferentes estudiosos en el tema (Mungaray Alejandro (2000), Carrillo Jorge 2002 y 2003, Zarate Robert (2003), Ollivier Fierro, Juan Oscar (2007), Arias Torres, Daniela; Solari Vicente, Andrés (2008), Bracamonte Sierra, Álvaro; Contreras, Oscar F (2008)

Tabla 1 Características de de Proveedores Locales Extranjeros y Proveedores Locales Mexicanos

<i>Proveduría local extranjera</i>	<i>Proveduría local mexicana</i>
Tecnologías de información y comunicaciones que facilitan el intercambio electrónico de datos con las empresas maquiladoras. Certificaciones de calidad. Fechas de entrega pactadas para cubrir con los requerimientos en tiempo Alto desarrollo tecnológico. Desarrollo de proveedores por parte de las empresas transnacionales. Capacitación continua y actualizada.  Cuentan con tecnología propia. Alto nivel de especialización.	Falta de infraestructura que facilite la tecnología de información. Carecen de certificaciones de calidad. Rapidez en la entrega, reducción del costo de transporte y mayor control de suministro. Bajo desarrollo tecnológico. Apoyo gubernamental a proyectos y programas para el desarrollo de proveedores. La capacitación no es considerada como un factor de desarrollo que permita lograr beneficios. No cuentan con tecnología propia. Bajo nivel de especialización.

En la tabla se identifica la brecha que existe entre la proveeduría local extranjera y proveeduría local mexicana.

Tabla 2: Obstáculos de la Proveeduría Local Mexicana Ante la IMMEX (Industria Manufacturera, Maquiladora y de Servicios de Exportación) Sector Electrónico

<i>Investigadores</i>	<i>Principales obstáculos</i>
Mungaray, Alejandro; Benítez, César (2000)  Carrillo, Jorge (2002) Carrillo Jorge; Zárate, Roberto (2003)  Ollivier Fierro, Juan Oscar (2007)  Arias Torres, Daniela; Solari Vicente, Andrés (2008)  Bracamonte Sierra, Álvaro; Contreras, Oscar F (2008)	Capacidad de producción, la estructura administrativa, calidad y logística. Baja capacidad, precios, tiempos de entrega y tecnología. Baja capacidad tecnológica, calidad, precio barreras para acceder a recursos financieros y entrega a tiempo. Baja tecnología, volumen insuficiente, problemas de calidad, precio elevado, incumplimiento de entregas y falta de certificación. Falta de cooperación y asociatividad, precio elevado, bajo nivel de competitividad. Baja capacidad tecnológica, baja calidad y tiempos de entrega requeridos

En la tabla se observa que el principal obstáculo que presenta la proveeduría local mexicana ante la IMMEX es su baja capacidad tecnológica

De acuerdo a las 38 encuestas que se aplicaron a los encargados de compras de la industria maquiladora se encontró lo siguiente

1. El 94% de sus compras de sus insumos que forman parte de su cadena productiva se compra a las grandes empresas transnacionales y solo el 6% a la industria local mexicana.
2. Del 6% de los insumos que se compran a la industria local el 3% corresponde a insumos indirectos.
3. Los principales criterios de la IMMEX para contratar a sus proveedores de insumos directos son:  
Certificación: En cuanto a este criterio, el 60% de las empresas IMMEX pide que sus proveedores deban contar con alguna certificación, ya que sus clientes así se los exige.  
Calidad: El 80% de las empresas IMMEX exigen un alto nivel de calidad en sus insumos principales, ya que esto tiene un efecto directo en sus costos de producción.  
Precio: El cuanto a esta exigencia el 50% busca precios competitivos.  
Habilidad para el manejo de inventario: El 40% de la IMMEX sector electrónico exige a sus proveedores flexibilidad para entregas a tiempo de acuerdo a sus capacidades.  
Buen servicio: El 50% exige a sus proveedores altos niveles de confiabilidad en sus tiempos de entrega, calidad y flexibilidad.  
Capacidad tecnológica: En cuanto a este criterio el 90% pide a sus proveedores capacidades de innovación, de producción y mejoramiento continuo.

Los responsables de compras de la IMMEX sector electrónico que participaron en la aplicación de las encuestas consideraron que los principales obstáculos para mantener relaciones con los proveedores locales mexicanos son: calidad, cumplimiento de entregas, capacidad tecnológica y que los proveedores no fabrican lo que la empresa necesita. En relación al desarrollo de proveedores no están interesados en brindar capacidad tecnológica, sin embargo si los han apoyado con información sobre requerimientos futuro de la demanda; los convenios están relacionados con insumos indirectos, como material de empaque, etiquetas y material de limpieza. De las medidas que recomiendan por parte del gobierno o asociaciones del sector industrial para apoyar a la proveeduría local mexicana destacaron los siguientes puntos:

1. Mayor apoyo financiero, para establecer capacidades de inventario.
2. Subsidios para creación de proveeduría local que pueda satisfacer a las grandes empresas.
3. Formación de alianzas entre proveedores para manejen precios competitivos, ya que las compañías asiáticas se han vuelto muy agresivas en este factor.
4. Mayor estímulos a las pymes como se hace en otros países, pero siempre y cuando sean compañías redituables para no caer en un paternalismo.
5. Capacitar al personal en la mejora continua
6. Desarrollo de cadenas de distribución.
7. Apertura de mas ferias de tecnología, así como mas apoyo a los proveedores locales, negociando materias primas en un volumen grande uniendo las capacidades de producción de los proveedores locales.

De acuerdo a las entrevistas a profundidad realizadas a los encargados de compras de 10 empresas maquiladoras consideradas como las transnacionales más importantes establecidas en Tijuana, B.C. México (porque representan las mejores prácticas mundiales y por tanto el más alto nivel de competitividad al que debe aspirar una organización empresarial), se encontraron los siguientes hallazgos:

1. Las plantas al instalarse en México ya contaban con proveedores locales en su lugar de origen, con quienes ya habían establecido una relación de confianza en cuanto a calidad y tiempos de entrega.
2. Los clientes de la Industria maquiladora de exportación sector electrónico para hacer negocios establecen criterios de antemano al seleccionan a los proveedores, que siempre deben ser empresas transnacionales.
3. Hay poco interés por la proveeduría local mexicana debido a su capacidad limitada de capacidad tecnológica.
4. El volumen de oferta de la industria maquiladora es grande y el tiempo del personal que gestiona compras es reducido; ya que solo al iniciar proyectos se busca a proveedores reconocidos y no se abre la puerta al proveedor para que ofrezca.
5. La proveeduría local mexicana no tiene la capacidad para manejar volúmenes altos y cambiantes.
6. Incapacidad de proveeduría local mexicana para entregar a tiempo el material con precios competitivos.
7. Capacidad del proveedor para mantener un nivel de calidad alto y constante.
8. Capacidad del proveedor de entregar a tiempo el material con precios competitivos.
9. La proveeduría local mexicana no fabrica los insumos que necesitan.
10. Carecen de certificaciones de calidad, que son exigibles por sus clientes.
11. No hay interés por desarrollar proveedores porque consideran que la proveeduría local carecen de solidez financiera.
12. Las cadenas de distribución por parte de proveeduría local mexicana no son fuertes.
13. Capacidad de servicio de muchos proveedores locales es limitada por su inversión en personal o equipo.

## CONCLUSIONES

El gobierno ha establecido acciones para incrementar el desarrollo de proveeduría local mexicana, como encuentro de negocios, donde acuden las grandes empresas y muestran sus productos para desarrollar actividades formales de integración de cadenas productivas, incluyendo cámaras y organismos empresariales. Estos encuentros de negocios han favorecido el apoyo necesario para la implementación de programas de desarrollo de proveedores al permitir el enlace de oferta y demanda, informar de manera estructurada los perfiles de proveedores y requerimientos de empresas compradoras. Además con el apoyo de asociaciones se ha establecido un catalogo de proveedores, la cual es una estrategia integral de promoción de negocios de las empresas que se especializan en la proveeduría de servicios y productos al

sector industrial maquilador, incorporándolas principalmente a las cadenas productivas de las industrias asentadas en todo el País; en este catalogo los proveedores muestran su plataforma tecnológica. En ese tipo de encuentros de negocios las IMMEXs podrán evaluar de manera general al proveedor potencial y solicitar en su caso información adicional. Sin embargo a pesar de las estrategias que se han implementado para promover el desarrollo de proveedores, aun existen limitantes que no han permitido el incremento para incursionar en las grandes empresas transnacionales; entre las principales causas se encuentran:

1. La IMMEX no está interesada en hacer negocios con la proveeduría local porque existe una fidelidad con proveedores de su país de origen.
2. La proveeduría local no está preparada para fabricar los tipos de insumos principales que requieren las grandes empresas.
3. La baja capacidad tecnológica en que se encuentran inmersas la proveeduría local, por la falta de apoyo para invertir.
4. Los empresarios son más exigentes en las variables, de calidad, tiempos de entrega, precios y certificaciones para ser considerados como candidatos a proveedores.

# VALIDACIÓN DEL MODELO INTEGRADOR PARA EL MARKETING SOCIAL: ANÁLISIS MULTIVARIANTE CON ECUACIONES ESTRUCTURALES

Mónica Bibiana González Calixto, UPTC

## RESUMEN

*El marketing social ha sido de gran utilidad para las entidades que buscan mejorar las condiciones de vida de las personas e influir en las conductas; así gobierno, hospitales y otras entidades, acogen los principios del marketing adaptados a modelos que permiten un mejor acercamiento a fines sociales. Lefebvre (2011), planteó el modelo integrador para el marketing social, integrando los diferentes enfoques del marketing social de países desarrollados y países en desarrollo, centrándose en tres variables para lograr el beneficio público: (1) el marketing mix (2) la esencia de los comportamientos, los productos y servicios y (3) el comportamiento deseado. En Tunja, Boyacá, Colombia, las enfermedades de transmisión sexual han aumentado su peso en la mortalidad, por lo tanto se requiere determinar si el modelo es válido y aplicable a la realidad de los universitarios Duitamenses, en cuanto a programas de prevención, control y promoción, relacionados con este tipo de enfermedades. Esta propuesta de investigación, se dirige a validar dicho modelo por medio de la modelación de ecuaciones estructurales, con el apoyo del software LISREL (versión 8.8). El proceso se llevará a cabo, en seis fases según Hair, Anderson, Tatham & Black (1999), usando diferentes instrumentos y basado en variables con relaciones causales.*

**PALABRAS CLAVE:** Marketing social, análisis multivariante, ecuaciones estructurales, validación modelo.

## VALIDATION INTEGRATIVE MODEL FOR SOCIAL MARKETING: MULTIVARIATE ANALYSIS WITH STRUCTURAL EQUATION

## ABSTRACT

*Social marketing has been very useful for organizations seeking to improve the lives of people and influence behavior, and government, hospitals and other institutions, hosting marketing principles adapted to models that allow for a better approach to social. Lefebvre (2011), raised the integrative model for social marketing, integrating the different approaches of the social marketing of developed and developing countries, focusing on three variables to achieve public benefit: (1) the marketing mix (2) the essence behaviors, products and services, and (3) the desired behavior. In Tunja, Boyaca, Colombia, sexually transmitted diseases have increased their weight in mortality therefore required to determine whether the model is valid and applicable to the reality of college Duitama, in terms of prevention, control and promotion related to these diseases. This research proposal aims to validate the model through structural equation modeling, supported by LISREL software (version 8.8). The process will be conducted in six phases according to Hair, Anderson, Tatham & Black (1999), using different instruments and based on causal variables.*

**JEL:** M00, M30, M31, M39.

**KEYWORDS:** Social Marketing, multivariate analysis, structural equation model validation.

## INTRODUCCIÓN

En los últimos años se han incrementado las necesidades sociales de la población. La pobreza, las enfermedades infectocontagiosas y la superpoblación son ejemplos de problemas que requieren soluciones de gran envergadura, lideradas por empresas del estado y organizaciones sin ánimo de lucro y con el apoyo de empresas privadas. Por esta razón, políticas y regulaciones públicas deben ser enfocadas hacia el logro de beneficios sociales (Hoek & Jones, 2011), situación que ha requerido el uso de actividades del marketing comercial. En el campo de la salud, por ejemplo, se ha buscado la manera de llegar a los usuarios, con programas de promoción para prevenir y controlar enfermedades, evitar conductas de riesgo y crear buenos hábitos en beneficio de la salud de las personas.

Ante esta situación surgen teorías y modelos conceptuales de marketing social, enfocados a los cambios de comportamiento de la comunidad y el beneficio público. Dichos modelos involucran variables con relaciones causales entre ellas. En este sentido, el modelo, planteado por Lefebvre (2011), busca integrar los diferentes enfoques del marketing social de países desarrollados y países en desarrollo, centrándose en tres variables para lograr el beneficio público: (1) el marketing mix (2) la esencia de los comportamientos, los productos y servicios y (3) el comportamiento deseado. El modelo propone ser aplicado en diferentes escenarios y tomó como referente la aplicación del marketing social en las empresas de salud. Los modelos permiten representar situaciones, objetos, sistemas o ideas, con el fin de explicar, entender, predecir o mejorar la realidad.

Los modelos conceptuales son “proyectados por científicos, ingenieros, profesores, para facilitar la comprensión y la enseñanza de sistemas físicos o de fenómenos naturales” (Moreira, M. y Greca I. 2002). Sin embargo los modelos conceptuales pueden presentar algunas dificultades como estar muy lejos de la realidad u omitir alguna variable significativa, por lo que se hace necesario validarlos. En este sentido, el modelo de Lefebvre (2011) se desarrolló teóricamente, pero no ha sido validado para comprobar su ajuste con la realidad; aún no se puede establecer si el modelo es medible por indicadores y si la incertidumbre se minimiza en el momento de aplicarlo, tomar decisiones y planear programas de prevención y promoción en salud; tampoco se puede asegurar que dichos programas lleguen a ser efectivos con el uso de este modelo. Adicionalmente el modelo en estudio, aunque explica claramente algunas de las variables, otras las menciona sin la profundidad teórica necesaria para establecer las relaciones y el grado de dependencia entre estas. Por lo tanto esta propuesta se dirige a validarlo, con base en programas de prevención, control y promoción relacionados con enfermedades de transmisión sexual, en estudiantes universitarios de la ciudad de Duitama, Colombia, con el fin de dar respuesta a estos planteamientos.

## METODOLOGÍA

La investigación propuesta es de tipo no experimental, con enfoque cuantitativo y se estima una duración de un año. La validación se hará por medio de la modelación de ecuaciones estructurales (MEE), con el apoyo del software LISREL (versión 8.8). El proceso se llevará a cabo en seis fases, con base en la modelización de ecuaciones estructurales (Hair, Anderson, Tatham & Black, 1999); buscando evidencia empírica y aplicando diferentes instrumentos, principalmente encuesta, a una muestra de los estudiantes universitarios de la ciudad de Duitama (Colombia), con edades entre 17 y 19 años, dado que pueden ofrecer la información requerida por el modelo y también están expuestos a programas y servicios de prevención de enfermedades de transferencia sexual. En la primera fase, se definirán los constructos endógenos y exógenos y luego se vincularán las relaciones en un diagrama para obtener las secuencias.

Durante la segunda fase se trasladará el diagrama de secuencias a ecuaciones estructurales, se especificará el modelo de medida, el número de indicadores y la fiabilidad de cada constructo y su correlación con los indicadores; el resultado de esta fase es un conjunto de ecuaciones estructurales. La tercera fase comprenderá la introducción de datos (matriz de varianza-covarianza), atendiendo a los datos ausentes, el

tamaño muestral, la evaluación de la normalidad multivariante y el método de estimación. Esta fase concluye con la elección del tipo de matriz de entrada y la estimación del Modelo Integrador para el Marketing Social. La cuarta fase incluirá la determinación de los grados de libertad, diagnosticando y remediando los problemas de identificación, para la valoración de la identificación del modelo estructural.

La quinta fase, se destinará a la identificación y corrección de las estimaciones infractoras, evaluación del ajuste global, evaluación de la fiabilidad y unidimensionalidad de la medida de cada constructo y el ajuste del modelo estructural. De esta fase se obtendrá la evaluación de los criterios de calidad de ajuste. En la sexta fase se interpretará el modelo y se realizarán las modificaciones necesarias, para lo cual se examinarán los resultados estandarizados, considerando los índices de modificación y los cambios potenciales del modelo. Durante el proceso investigativo se buscarán escenarios para dar a conocer los avances y resultados de la investigación, tanto a entidades de salud interesadas como a la comunidad académica, buscando también obtener retroalimentación.

## REVISIÓN LITERARIA

El marketing social fue definido por Kotler y Zaltman (1971), como el diseño, implementación y control de programas generados para influenciar la aceptabilidad de ideas sociales e involucrar consideraciones de planeación del producto, precio, comunicación, distribución e investigación de mercado. Sin embargo, el concepto ha sido redefinido y ya no se limita a la comunicación de ideas, sino que se destina a influir en las conductas (Andreasen, 2002). El marketing social aplicado a la salud pública y específicamente a los programas de prevención, control y promoción relacionados con las enfermedades de transmisión sexual, ha sido estudiado por diferentes autores y en varios países. Grier, S. y Bryant, C. (2005), realizaron un recorrido por los usos del marketing en la salud pública, sus retos y concepciones; ellos explican los pasos en el proceso del marketing social, la aplicación del marketing mix y ofrecen una visión para el futuro del marketing social en salud pública.

Según Lefebvre (2011), los programas de prevención, control y promoción de la salud pública, han aplicado el marketing social a nivel mundial, principalmente en el uso del condón para prevenir el VIH. Gordon, R. (2011) se enfoca en la crítica social al marketing que consiste en examinar el impacto de lo bueno y lo malo que puede aportar el marketing a la sociedad, por ejemplo el impacto de los comerciales de tabaco y el alcohol y el efecto que realmente tiene en la salud de las personas. Hoek and Jones (2011), plantean que se requiere un acercamiento entre las dos corrientes del marketing social, una enfocada en el cambio en el comportamiento voluntario y la otra en el entorno que promueve y altera los cambios en el comportamiento. Nathanson, J. (2008), resalta la importancia del componente cultural en el comportamiento de las personas hacia productos como el tabaco y el significado que la publicidad le ha dado al consumo del mismo. También deduce que una campaña típica de marketing social debe recurrir a la teoría de la psicología social para explicar aspectos del comportamiento como la adopción, necesidad de pertenencia, autoestima y la influencia de los compañeros y sobre esa base crear intervenciones apropiadas. En Colombia, Vargas (2005) validó el Modelo Psicoeconómico del Consumidor con el uso de ecuaciones estructurales, aplicado en la ciudad de Barranquilla, este trabajo presenta aportes metodológicos para la presente propuesta. También Rojas, L. y Ramírez C. (2001), realizaron la validación del Modelo Simbólico-Cultural del Comportamiento del Consumidor en la ciudad de Bucaramanga, al final realizaron ajustes al modelo generando a lo que llamaron un nuevo modelo estandarizado. Con base en estos estudios se puede decir que el Modelo Integrador para el Marketing Social, ha considerado variables que se encuentran planteadas de distintas maneras por otros autores y en otras regiones, por lo que se podría pensar que el modelo puede ser validable.

# DESAFÍO DE LA GERENCIA INTEGRAL COMO ESTRATEGIA DE COMPETITIVIDAD EN LAS UNIVERSIDADES PÚBLICAS EN LA ZONA DE INTEGRACIÓN DE FRONTERAS

Noralbis Cardeño Portela, Universidad De La Guajira

Edwin Cardeño Portela, Universidad De La Guajira

## RESUMEN

*La presente investigación tuvo como objeto Analizar la gerencia integral como estrategia de competitividad de las Universidades Públicas en la Zona de Integración de Fronteras Colombo Venezolana. La investigación se fundamentó en los aspectos teóricos de la gerencia integral, según Sallenave (2004), Sallenave (2005), González (2006) y competitividad, según Porter (2002), Domínguez (2006), Berumen (2006) entre otros. El estudio fue descriptivo, analítico modalidad de campo, diseño no experimental, transeccional. Se trabajó con una población conformada por los rectores, vicerrectores, decanos, directores de programas, directores de escuela de la Universidad del Zulia y de La Guajira. Por ser poblaciones finitas se trataron con criterios de censo poblacional. Para recolectar la información se utilizó un cuestionario de 92 ítems respectivamente con cinco alternativas de respuesta, validado por 10 expertos, la confiabilidad arrojó 0.925. Los resultados generaron unas consideraciones altas al proceso de la gerencia integral, determinadas a través de la forma como programan la planeación, como ejecutan la organización, como realizan la dirección y como implementan el control. La mayoría de los directivos conocen la necesidad de gerenciar de manera integral ya que a través de esta se genera la competitividad de las organizaciones.*

**PALABRA CLAVE:** Gerencia Integral, Estrategia, Competitividad, Universidades

## INTEGRAL MANAGEMENT CHALLENGE AS COMPETITIVE STRATEGY IN PUBLIC UNIVERSITIES IN THE BORDER AREA INTEGRATION

### ABSTRACT

*The present investigation had like object Analyse the gerencia integral like strategy of competitiveness of the Public Universities in the Zone of Integration of Borders. The investigation fundamento in the theoretical appearances of the gerencia integral, as Sallenave (2004), Sallenave (2005), González (2006) and competitiveness, as Porter (2002), Domínguez (2006), Berumen (2006) between others. The study was descriptivo, analytical modalidad of field, design no experimental, transeccional. It worked with a population conformada by the rectors, vicerrectores, deans, directors of programs, directors of school of the University of the Zulia and of The Guajira. To be populations finitas treated with criteria of censo poblacional. For recolectar the information use a questionnaire of 92 ítems respectively with five alternatives of answer, validated by 10 experts, the confiabilidad launched 0.925. The results generated some high considerations to the process of the gerencia integral, determined through the form like programan the planeación, as they execute the organization, as they realize the direction and as they implement the control. Most of the directors know the need of gerenciar of integral way since through this generates the competitiveness of the organizations.*

**KEYWORDS:** Gerencia Integral, Strategy, Competitiveness, Public Universities.

## INTRODUCCIÓN

Las organizaciones deben crear e implementar estrategias para el aprovechamiento de sus recursos y oportunidades en la dinámica organizacional, es por ello que demandan una gerencia integral que permita desarrollar todas las facetas empresariales en busca de una mayor competitividad, asegurando su supervivencia, rentabilidad y crecimiento en un entorno competitivo. Por lo tanto no son competitivas por si solas, son los gerentes que integran prácticas o principios y las llevan a un mayor desarrollo. Estas prácticas están relacionadas con las decisiones que se toman dentro y fuera de la empresa. Por lo tanto, en la presente investigación trata la forma de la gerencia integral para analizar la competitividad de las universidades públicas en la zona de integración de fronteras. Atendiendo estas consideraciones, el trabajo se estructuró en cuatro capítulos.

## REVISIÓN LITERATURA

Se efectuó una revisión de literatura, establecidas como fuente de información que apoya la presente investigación, sirve de soporte para el problema planteado por lo cual se hace necesario recordar conceptos y teorías emitidos por algunos autores de la variable gerencia integral. Sallenave (2004), Núñez (2006), Caldera, 2004 Chiavenato 2006, Fabregas y Castellano (2007), Newstrom (2007) Así mismo se trabajó la variable competitividad con Porter (2006), Fuenmayor (2004), Calderón, F. (2008), Pérez (2008), entre otros.

## METODOLOGÍA

Con base en los objetivos planteados y las teorías que soportan el presente trabajo: gerencia integral como estrategia de competitividad de las Universidades Públicas en la Zona de Integración de Frontera, se puede considerar que esta investigación es de tipo analítica descriptiva, El diseño de esta investigación es no experimental de tipo transeccional, la población que va a ser estudiada y sobre la cual se pretende generalizar los resultados de la gerencia integral como estrategia de competitividad en las universidades públicas en la zona de integración de fronteras Colombo-venezolana, está conformada por la alta gerencia como son: rector, vicerrectores y decanos. Como también, por la gerencia media que está conformada por: directores de escuelas y directores de programas. Como la población es conocida y pequeña se realizara un censo poblacional. Se utilizó la técnica de la observación mediante encuesta, utilizando el cuestionario como herramienta. Se aplica una técnica válida para obtener la información necesaria para realizar la investigación, utilizando un cuestionario tipo escala likert, con preguntas cerradas, sustituyendo los datos en la ejecución del SPSS el resultado obtenido es de 0,925 de confiabilidad del instrumento. A efecto de la confiabilidad del instrumento que se aplicó en la presente investigación fue el método de coeficiente Alfa de Cronbach.

## RESULTADOS

La presentación y discusión de los resultados, constituye dentro del proceso de la investigación una fase importante, por cuanto refleja la etapa de integración del esfuerzo teórico metodológico que los investigadores realizan para dar respuesta a la problemática planteada y contrastar en este sentido, las evidencias recolectadas, a través de la aplicación de los instrumentos elaborados a partir de los diferentes enfoques teóricos y posterior interpretación de los datos recolectados, para convertirlos en información relevante, que permita responder los interrogantes planteados. Al respecto de los objetivos planteados para medir las variables, gerencia integral como estrategia de competitividad; el primero relacionado a identificar los procesos de la gerencia integral en las universidades públicas en la zona de integración de

fronteras. Se aborda a través de la dimensión procesos de la gerencia integral, la cual se realiza a través de los objetivos institucionales, la toma de decisiones, la estructura, la autoridad, la responsabilidad, la delegación de funciones el liderazgo, la comunicación, la motivación la ejecución, y el desempeño laboral. Se alcanzó mediante las respuestas de los sujetos encuestados.

En lo que respecta al indicador Objetivos los resultados se ubicaron en la categoría muy alta, esto quiere decir que la alta y media gerencia considera que se establecen y planifican los objetivos de la universidad. Ivancevichh, Konopaske y Matteson (2006) señalan que si los objetivos se establecen de forma adecuada, dictarán los resultados y el camino para alcanzarlos. Al contrastar los resultados de la investigación con las teorías, los objetivos organizacionales comprenden según los autores, un estado deseado que la organización pretende alcanzar y que orienta su comportamiento frente al futuro, por lo que un objetivo alcanzado deja de ser objetivo y se convierte en realidad. Por tanto, en las universidades se requiere no solo la planificación de los objetivos, sino también, la concertación y socialización de los mismos.

Por otro lado, el indicador toma de decisiones se ubica en la categoría alta, indicando que las decisiones se toman programadamente. Barrera (2003) señala que las decisiones son programadas en la medida que son repetitivas y rutinarias, así mismo en la medida que se ha desarrollado un método definitivo para poder manejarlas. Al contrastar los resultados, se determina que lo importante para los gerentes, en cuanto a la decisión a considerar, es estar seguros del tipo de respuesta o resultado que se obtendrá en beneficio de las metas organizacionales. En relación al indicador estructura se ha situado en la categoría alta, lo cual indica que los directivos establecen las funciones según los diferentes cargos. La estructura y el diseño de la organización, Por otro lado, Chiavenato (2006), define la estructura organizacional como la manera de dividir, organizar y coordinar las actividades de la organización. Para el investigador al contrastar los resultados se determina que en las universidades se asegura la división y coordinación de las actividades de los miembros de la organización. El indicador autoridad, se sitúa en categoría alto.

Los resultados alcanzados permiten inferir que los encuestados afirmaron estar de acuerdo con la autoridad de la universidad. Al respecto, Ivancevichh, Konopaske y Matteson (2006), señalan que cada gerente decide cuánta autoridad se delega a cada puesto y empleado en la condición y el momento oportuno. Para el autor, la línea de mando de las universidades constituye la jerarquización, y por lo tanto, se fundamenta autoridad en la misma. La autoridad representa el manejo de la operatividad en los procesos que se dan en la institución. En cuanto al indicador responsabilidad, se ubica en categoría muy alto, lo que indica que la mayoría de los encuestados están totalmente de acuerdo que los directivos son responsables de los trabajos asignados. Newstrom (2007), la define como la disposición a aceptar rendir cuentas por las consecuencias de las acciones y a admitir errores o fallas.

Los resultados alcanzados permiten inferir que en las universidades los que integran la alta y media gerencia, mantienen un alto grado de responsabilidad, y esta es reflejada a través de las actividades laborales desempeñadas en la institución. Por otro lado, el indicador delegación de funciones se ubicó en la categoría alto, esto significa que la mayoría de los encuestados consideran que los directivos de la universidad delegan funciones a sus empleados. Se refiere a la asignación de tareas, autoridad y responsabilidad a otros, siendo definido por Ivancevich, Konopaske y Matteson (2006), como el proceso por el cual la autoridad se distribuye hacia abajo en una organización. Los resultados alcanzados permiten inferir que en las universidades se da la delegación de funciones a los funcionarios de otros niveles, permitiéndoles adquirir otras habilidades inherentes a las funciones establecidas en el cargo que desempeñan. En este mismo orden, el indicador liderazgo se situó en la categoría alto, por lo tanto se puede inferir que los directivos de las universidades poseen un alto grado de liderazgo. Newstrom (2007) considera el liderazgo como el proceso de influir y apoyar a otros para que trabajen con entusiasmo para alcanzar ciertos objetivos. En este sentido, la función principal de un líder es influir en otros para que busquen de manera voluntaria objetivos definidos. Al contrastar los resultados de la investigación con la

teoría, permiten inferir que los gerentes de las universidades planean actividades, organizan estructuras y controlan los recursos, así mismo, mantienen un estilo de liderazgo de nivel superior.

En cuanto al indicador comunicación se sitúa en la categoría alto. Por tanto, se puede inferir que los encuestados consideran que las universidades mantienen buena comunicación. Para Newstron (2007), la comunicación es la transferencia de información y el entendimiento de una persona con otra. Es una forma de llegar a otros transmitiéndoles ideas, hechos, pensamientos, sentimientos y valores. Se puede inferir que en las universidades existe buena comunicación, al relacionarla como un instrumento de gestión, por medio del cual toda forma de comunicación interna y externa conscientemente utilizada, esta armonizada tan efectiva y eficazmente como sea posible, por tanto, desde la alta gerencia se mantienen estrategias comunicacionales tanto internas como externas.

Por otro lado, el indicador motivación se ubica en categoría alto. Se puede inferir que la motivación se mantiene en las universidades por parte de los directivos. Keith D, Nuñez A, (2005), proponen ideales tales como una toma de decisión participativa, puesto que implica responsabilidad y desafío, y buenas relaciones de grupo, como los enfoques que maximizan la motivación de los empleados. Los resultados alcanzados permiten inferir que en las universidades existe un alto grado de motivación generado por parte de los directivos, además, utilizan determinadas estrategias dirigidas a motivar o aumentar el nivel de desempeño de las personas que trabajan en ellas. Las más utilizadas son los sistemas de incentivos, el diseño o rediseño de puestos; los sistemas de participación y el liderazgo. Igualmente, existen otras estrategias motivacionales como las políticas de promoción y ascenso, y la formación.

Así mismo, el indicador desempeño laboral se sitúa en la categoría alto, se puede inferir que las universidades evalúan el desempeño laboral de los empleados. En este sentido, Alodgetts y Altman, (1991), citado por Gómez, (2005), hacen referencias al establecimiento de las medidas del rendimiento individual, frente a los resultados esperados, lo cual se puede llegar a determinar mediante el proceso de evaluación del individuo. A juicio del investigador, se entiende entonces que una de las actividades más importantes de la alta y media gerencia en las universidades es evaluar el desempeño de los funcionarios sin embargo, consideran que no es fácil juzgar con precisión el desempeño de sus subordinados y a menudo resulta más difícil comunicarle al mismo la evaluación en forma constructiva. Lo anterior determina que de una forma u otra se establecen los objetivos y posteriormente se evalúan los desempeños de los trabajadores. Esto indica que existe una evaluación desempeño por parte de quienes dirigen gerencialmente las universidades.

Por otro lado, el objetivo: Determinar los componentes de la gerencia integral. Este se encuentra, a través de los indicadores determinados en la misión, visión, metas, diversidad, valores, técnicas, humanas y conceptuales. En lo que respecta, a la dimensión: estrategias basadas en la filosofía del comportamiento organizacional que sostienen los gerentes constan de un conjunto integrado de supuestos y creencias sobre la forma y el propósito de las actividades a llevar a cabo en la organización.

En cuanto al indicador misión se ubica en la categoría alta, los resultados alcanzados permiten inferir que las universidades tienen en cuenta la misión para los planes y estrategias. En tal sentido, Serna (2003) considera la misión como la enunciación de las intenciones de una organización, la diferencia de otras dependencias en cuanto al desarrollo de sus acciones, productos y otros elementos que soportan esos fines. A juicio del investigador, la misión de las universidades, contempla acciones de desarrollo gerenciales y competitivas, sin embargo existe la necesidad de replantear la misión que contenga; el crecimiento, el desarrollo y la función gerencial de las universidades. Por tanto es necesario cambiar el papel de las universidades a fin de cumplir con la misión, cuyo propósito fundamental sea la producción de conocimientos que satisfagan las necesidades socioeconómicas del entorno inmediato y del país.

En cuanto al indicador visión se ubica en la categoría muy alto. Los resultados alcanzados permiten inferir que la universidad los directivos revisan la visión para prestar un mejor servicio. David (2003),

considera la visión como una referencia valiosa para la planificación y la toma de decisiones, tanto a nivel personal como organizacional, pues de ella dependerá la estructuración de estrategias conducentes al futuro deseado. Al contrarrestar los resultados se puede concluir, que no solo es revisar la visión sino también, implementar estrategias que contengan la prospectividad de las universidades con el entorno. Así mismo, se considera que esta debe estar acorde con los avances y desarrollo de las universidades, la región y en general del país; para alcanzar las metas, orientar y optimizar la capacidad de respuesta de las instituciones ante las oportunidades del entorno.

Por otro lado, el indicador metas se ubica en categoría alto. Así mismo, los directivos de las universidades establecen las metas según el entorno y la prestación del servicio. En este sentido, Newstrom (2007), manifiesta que el establecimiento de metas es un proceso complejo, ya que necesitan fusionarse las gerenciales con las de los empleados, quienes traen a la organización sus propias necesidades psicológicas, sociales y económicas. A juicio del investigador en las universidades, se establecen las metas por parte de la alta y mediana gerencia, las metas ofrecen una forma de señalar los objetivos para alcanzar la misión. Además, son las metas las que orientan específicamente hacia donde se van a alinear los esfuerzos para alcanzarlas. De esta forma, se establecen los objetivos institucionales y la manera de alcanzarlos, en este sentido las metas de estas universidades tiene que ver con labor que desempeñan los integrantes de estas instituciones.

En cuanto al indicador diversidad se ubica en la categoría muy alta, por lo tanto se puede inferir que los encuestados consideran que en las universidades respetan y tienen en cuenta la diversidad de sus funcionarios. Según Newstrom (2007), los empleados de las organizaciones se dividen en grupos de varias clases, cuya formación está determinada por dos amplios conjuntos de condiciones. Primero, diferencias y similitudes relacionadas con el puesto, Por otro lado, existe un segundo conjunto de condiciones que surgen principalmente del trasfondo personal del individuo. Al contrarrestar los resultados se puede concluir, que la diversidad cultural, ofrece tratamiento justo a los trabajadores que no ocupan puestos de autoridad en las universidades de la zona de integración de frontera. En este sentido, se puede establecer que en estas instituciones existe, y se tienen en cuenta la diversidad cultural, los grupos étnicos de origen, las condiciones socioeconómicas, sexo y raza de sus empleados.

En este mismo orden, el indicador valores se ubica en la categoría alta. Permitiendo inferir que los directivos establecen los valores institucionales y estimula a los funcionarios el manejo de los valores. Robbins (2006) señala que los valores enturbian la objetividad y la racionalidad. A juicio del investigador, las universidades en su filosofía tienen como finalidad propender por la creación de valores comunitarios de igualdad y de participación, que permita el desarrollo de las comunidades universitarias. Por otra parte, las políticas y normas establecidas sirven para definir los conceptos de productividad, eficiencia, calidad y rentabilidad, entre otros, los cuales configuran, conjuntamente con el liderazgo y posicionamiento, los factores clave del éxito que determina el cumplimiento del desarrollo gerencial y de la institución. Por lo tanto las Universidades deben tener bien establecida los proyectos misionales, como orientar las estrategias hacia el futuro que desean verse, estas acciones gerenciales se realizan desde la alta dirección para toda la institución, en este sentido todos los funcionarios deben interiorizar el hacer y el estar institucional. Por otro lado, el indicador habilidades técnicas se sitúa en la categoría alta, por lo tanto se puede inferir que las universidades los directivos conocen y manejan los procedimientos técnicos como herramientas de trabajo. Sallenave (2004), define la habilidad técnica como posesión de conocimientos y destrezas en actividades que suponen la aplicación de métodos, procesos y procedimientos. Implica por lo tanto, el diestro uso de instrumentos y técnicas específicas.

A juicio del investigador son los directivos de las universidades en la zona de integración de fronteras los más indicados para conocer y manejar bien las habilidades técnicas del accionar gerencial, de esta forma se puede generar eficacia, eficiencia, efectividad y competitividad institucional. En cuanto al indicador habilidades humanas se situó en la categoría muy alta. Así mismo, se puede inferir que los encuestados

consideran que los directivos utilizan el dialogo con sus funcionarios. Según Robbins (2006), la habilidad humana se refiere a la capacidad de trabajar con las personas, de entenderlas y motivarlas tanto en lo individual como en grupo. Al contrastar los resultados de la investigación con las teorías, en las universidades de la zona de integración de fronteras los directivos establecen muy buena relaciones con sus colaboradores y manejan excelentes capacidades para trabajar en equipos, y mantienen la relación de persona como ser, teniendo en cuenta la parte motriz, para la participación activa en las actividades laborales. En lo que respecta, al siguiente objetivo Analizar los factores de competitividad de las universidades públicas en la zona de integración de fronteras.

Este se alcanzó a través de los indicadores, conocimiento, la experiencia, innovación, calidad, globalización, infraestructura, recursos financieros, eficacia, productividad y ventajas competitivas. En cuanto al indicador conocimiento se sitúa en la categoría alto, lo cual indica que la mayoría de los encuestados consideran actualizan y poseen conocimientos gerenciales. Para Carpio (2003), a pesar de que el factor monetario es considerado importante, no es sino a través de la gente que se toman las decisiones sobre los recursos financieros y materiales de una empresa. A juicio del investigador las universidades para competir dentro de un entorno globalizado, altamente competitivo, de transformaciones profundas, aceleradas y dinámicas cuentan con un excelente talento humano con una alta formación, capacidad y conocimiento no solo de la institución sino del entorno en el que se desempeña. En este sentido, los directivos mantienen un alto conocimiento gerencial para obtener el compromiso del talento humano con la institución, y generar sostenibilidad y ventaja competitiva.

Por otro lado, el indicador experiencia se sitúa en la categoría alto. Los resultados alcanzados permiten inferir que los encuestados afirmaron estar de acuerdo que la universidad posee experiencia en el manejo gerencial para ser competitivos. López (2001), señala que para adelantar la estrategia de desarrollo del recurso humano la experiencia, desempeñando los cargos adecuados, resulta ser la mejor formadora de las habilidades del personal. Para el investigador, las universidades, tienen experiencia y constituye un pilar fundamental en el desarrollo de habilidades del recurso humano, sobre todo a los directivos de estas se les exige un alto nivel de experiencias, que permiten el desarrollo gerencial y toma de decisiones ante situaciones relevantes. En cuanto al indicador innovación se ubica en la categoría alto, lo que indica que la mayoría de los encuestados están de acuerdo que en la universidad los directivos poseen experiencia en los procesos de cambios innovadores. Según Porter (2006), la tecnología está incorporada en todas las actividades de valor de la empresa de forma interconectada, así mismo, el cambio tecnológico puede afectar la competencia a través de su repercusión sobre casi cualquier actividad. Al contrastar las teorías planteadas por los autores, se puede inferir que existe una estrecha relación entre innovación y competitividad en las universidades públicas esto quiere decir que los directivos manejan un alto grado de innovación en los procesos gerenciales.

En cuanto al indicador calidad se ubica en categoría alto. Lo anterior permite inferir que las universidades ofrecen calidad en los procesos de acuerdo a los estándares establecidos. Lefcovich (2005), define la calidad como el compromiso ético con la excelencia, porque sólo una empresa que ha definido en sus valores supremos el generar productos y servicios de calidad, estará realmente comprometida en su consecución. A juicio del investigador, la calidad de las universidades, se construye y genera en cada actividad, tarea y proceso que realizan su talento humano, es por ello que los directivos deben modelar su mente y luego hacer otro tanto con la del resto del personal, de igual forma, sólo aquellas organizaciones que tengan el firme propósito de mejorar de manera continua podrán triunfar en los actuales mercados. Por otra parte, el indicador globalización se sitúa en la categoría alta, por lo tanto se puede inferir que las universidades objeto de estudio transfieren conocimientos internacionalmente. Anan (2001), señala que las ventajas de la globalización son evidentes: rapidez en el crecimiento, mejores niveles de vida, nuevas oportunidades. Al contrastar la teoría planteada por los autores, se puede inferir que el reto que hoy enfrentan los directivos de las universidades debe basarse en asegurar que la globalización se convierta en una fuerza positiva para la institución y su entorno. En la actualidad, estas universidades tienen como

objetivo buscar la expansión internacional. Ahora, los directivos conciben sus actividades mundialmente, adaptándose para funcionar en un mercado globalizado.

En cuanto al indicador infraestructura se sitúa en la categoría alto. Así mismo, se puede inferir que los encuestados consideran que en las universidades existen infraestructuras físicas y tecnológicas para garantizar los procesos y mejorar la competitividad. En este sentido, el Ministerio de Economía del Salvador (2007), señala que la infraestructura juega un papel vital en las perspectivas de crecimiento de las economías, tanto en relación a su extensión como en la calidad de la misma. Para el investigador, las infraestructuras con las que cuentan las universidades hace parte de una de las ventajas competitivas y los directivos son los más indicados para el manejo y aprovechamiento de estas. Al respecto, la infraestructura determina la calidad del servicio de estas universidades.

En este mismo orden, el indicador recursos financieros se ubica en la categoría alto, se puede inferir que los directivos de las universidades en estudio controlan el presupuesto y buscan recursos financieros a través del autofinanciamiento para desarrollar los proyectos institucionales. En este sentido, Baqueiro (2003) expresa que toda empresa requiere de recursos financieros para poder realizar sus actividades o para ampliarlas. Para el investigador, los recursos financieros de estas universidades en estudios dependen del buen manejo de los directivos ya que estas perciben recursos por los aportes que realizan la nación por ser instituciones públicas y por la venta de servicios que las mismas puedan tener. En este sentido los encuestados consideran que si hay un buen manejo de estos recursos, así mismo, se puede inferir que los recursos financieros de estas universidades tienen una buena distribución y se debe a la capacidad gerencial existente en dichas instituciones. En cuanto al indicador eficacia se ubica en la categoría alto. Los resultados alcanzados permiten inferir que la universidad posee personal calificado y con un alto grado de eficacia. Según el blog de Administración de empresas (2008), la eficacia empresarial se refiere a cómo hacer óptimas las formas de rendimiento de la organización. En este sentido, la eficacia busca que el rendimiento de la empresa sea máximo, a través de medios técnicos y económicos. A juicio del investigador, los directivos de las universidades objeto de estudio cuentan con un alto grado de eficacia, y orientan la acción gerencial al alcance de los objetivos institucionales propuestos.

Por otro lado, el indicador productividad se ubica en categoría alto. Así mismo, las universidades organizan optimización de los procesos gerenciales. Para Jáuregui (2007), la productividad del trabajo es una relación entre la producción y el personal ocupado y refleja qué tan bien se está utilizando este personal en el proceso productivo. Para el investigador la productividad en las universidades se determinan las políticas de formación de recurso humano, los efectos del cambio tecnológico en el empleo y en el desempeño, evalúa el comportamiento de los costos laborales, compara con otras universidades los avances de la productividad de ellas, y está en manos de los directivos de las instituciones mantener y mejorar cada vez la productividad, ya que ellos son los que determinan la forma de la prestación del servicio a los usuarios internos y externos. En cuanto al indicador ventajas competitivas se ubica en la categoría alto, los resultados alcanzados permiten inferir que los encuestados afirmaron que las universidades desarrollan acciones oportunamente para el mejoramiento continuo de los procesos. Según Porter (2006), las ventajas competitivas son las características o atributos de un producto o servicio que le dan cierta superioridad sobre sus competidores inmediatos.

Al contrastar los planteamientos de las teorías de los autores, se puede inferir que los directivos de estas universidades cada vez más se especializan, adquieren mayor experiencia, mejoran sus métodos de trabajo y consideran que ellos hacen parte de las ventajas competitivas organizacionales, por tanto, mantienen un alto grado de compromiso institucional. En cuanto, al cuarto objetivo Caracterizar los elementos esenciales de éxito de la competitividad en las universidades públicas en la zona de integración de fronteras. Determinado a través de la dimensión elementos esenciales de éxito de la competitividad. Se alcanzó mediante los indicadores tiempo de respuesta, atención al cliente, alianza estratégica. El indicador tiempo de respuesta, se ubica en la categoría alto, se puede inferir que los encuestados afirman que las universidades generan un alto tiempo de respuesta a la prestación del servicio, generando competitividad.

Por otra parte, el indicador atención al cliente se ubica en la categoría alto. Así mismo, las universidades presentan un alto grado de competitividad en la atención al cliente. Por último, el indicador alianzas estratégicas se sitúa en la categoría alta. En este orden de ideas, los resultados alcanzados permiten inferir que las universidades coordinan las actividades de la cadena de valor con otras instituciones. Es importante tener en cuenta alianzas estratégicas o convenios que puedan establecer la construcción de acciones al mejoramiento de los servicios prestados. Por lo tanto, los elementos esenciales de éxitos de competitividad son las reglas que determinan que las universidades públicas en la zona de integración de frontera sean financiera y competitivamente exitosas. El concepto de competitividad nos hace pensar en la idea de excelencia, o sea, con características de eficiencia, eficacia y efectividad de las organizaciones.

## CONCLUSIONES

Con respecto al objetivo específico: identificar los procesos de la gerencia integral en las universidades públicas en la zona de integración de fronteras. Los resultados generaron unas consideraciones altas al proceso de la gerencia integral, determinadas a través de la forma como programan la planeación, como ejecutan la organización, como realizan la dirección y como implementan el control. Además, los directivos manifiestan que en cuanto a los procesos gerenciales estos se cumplen en el accionar de las actividades programadas por la alta gerencia, como también, en el cumplimiento de las funciones.

Por otro lado, el segundo objetivo: determinar los componentes de la gerencia integral en las universidades públicas en la zona de integración de fronteras. Estos se dan mediante el establecimiento de las estrategias, la participación de la cultura y el conocimiento de las habilidades gerenciales. Los resultados presentan un análisis de la forma como se están dando estos en las universidades públicas en la zona de integración de fronteras y como la alta gerencia los tienen en cuenta para el manejo de los mismos. En este sentido los resultados obtenidos de los componentes de la gerencia integral son altos. Para el objetivo: analizar los factores de competitividad de las universidades públicas en la zona de integración de fronteras. Se realiza mediante el conocimiento y manejo del talento humano, la tecnología, las capacidades gerenciales y la gestión empresarial, en este sentido los resultados arrojaron altos, teniendo en cuenta que los directivos de las universidades públicas en la zona de integración de fronteras, tienen un alto grado de formación académica y por ende conocen y tienen en cuenta los factores de competitividad que afecta a la institución.

Por otra parte, el cuarto objetivo: caracterizar los elementos esenciales de éxito de la competitividad en las universidades públicas en la zona de integración de fronteras. A través del tiempo de respuesta, la atención al cliente y las alianzas estratégicas, el análisis de los resultados ubican a las universidades públicas en la zona de integración de fronteras en una categoría alta, ya que los directivos implementan estrategias para el cumplimiento de la excelencia organizacional. Esto conlleva a la conclusión que la mayoría de los directivos conocen la necesidad de gerenciar integralmente, a través de esta se genera la competitividad de las organizaciones. Por último y para dar respuesta al objetivo específico relacionado con formular lineamientos estratégicos de la gerencia integral para la optimización de la competitividad en las universidades públicas en la zona de integración de fronteras, se procedió a desarrollar lineamientos estratégicos gerenciales basados en los resultados y las conclusiones originadas del proceso de investigación. De forma general, se puede concluir que los directivos de las universidades objetos de estudios tienen un amplio conocimiento del manejo gerencial de estas instituciones, como también, del entorno en que se desenvuelven, llevándolas a ser competitivas en el mercado.

Por otro lado, se puede decir que existen aspectos que pueden ser mejorados por parte de la alta y media gerencia, como lo es la delegación de funciones, teniendo en cuenta los factores que intervienen, los estilos de liderazgo que estos ejercen, los canales y sistemas de comunicación que se utilizan, la motivación que implementan. Es así como se pudo inferir que los gerentes de estas instituciones tienen un alto conocimiento de gerencia y se hace necesario que la forma de administrarla sea integral. Para

finalizar, la presente investigación arroja unos resultados que pueden ser tenidos en cuenta por las universidades objetos de estudios. En este sentido se hace necesario que los directivos de dichas instituciones conozcan los alcances y formas de manejo que realizan a nivel gerencial, como también los factores que intervienen para llevarlas hacer más competitivas. En este mismo orden de ideas se plantea una serie de recomendaciones que pueden ser de utilidad tanto para las universidades objeto de estudio, como para los directivos de las mismas y para la sociedad en las que estas intervienen.

## ANEXOS

### Operacionalización de Variables

<b>Objetivo General: Analizar la gerencia integral como estrategia de competitividad en las universidades públicas en la zona de integración de fronteras</b>

# REDEFINICIÓN DE LA ESTRUCTURA ORGANIZACIONAL, PARA LA EMPRESA CALCALIZAS DE NOBSA, BOYACÁ, COLOMBIA

Mónica Bibiana González Calixto, UPTC

Viviana Marcela Hernández, UPTC

Luz Mery Corredor, UPTC

## RESUMEN

*Calcalizas, es una empresa ubicada en el municipio de Nobsa, Boyacá, Colombia, dedicada a la explotación y comercialización de piedra caliza y sus derivados. Actualmente afronta momentos difíciles por la falta de organización, direccionamiento estratégico y presencia de fuerte competencia. El artículo presenta el diseño organizacional de Calcalizas, realizado en cinco fases. En las cuales se realizó un diagnóstico, analizando información interna y externa del sector minero y de la construcción a nivel municipal y nacional; se utilizaron matrices para identificar aspectos a analizar como complemento a las caracterizaciones determinadas previamente y se realizaron reuniones de trabajo con el gerente para plantear la plataforma estratégica, enfocada a la satisfacción de los clientes; luego se diseñó la estructura organizacional por procesos, en la que prima la visión del cliente y se sistematizaron los manuales de funciones, procesos y procedimientos. Finalmente se realizó la implementación y socialización del diseño organizacional, dentro de la empresa y en la comunidad académica, por medio de talleres, exposiciones, capacitaciones y publicaciones. Los resultados del diseño organizacional implementado permitieron involucrar a los empleados; realizar cambios a nivel estratégico fortaleciendo la empresa, estructurar las funciones y los cargos claves para la ejecución de los procesos e identificar otras oportunidades de mejoramiento.*

**PALABRAS CLAVE:** Diseño organizacional, plataforma estratégica, estructura organizacional, estructura por procesos.

## REDEFINITION OF THE ORGANIZATIONAL STRUCTURE FOR THE COMPANY CALCALIZAS NOBSA, BOYACA, COLOMBIA

### ABSTRACT

*Calcalizas, is a company located in the municipality of Nobsa, Boyacá, Colombia, dedicated to the exploitation and marketing of limestone and its derivatives. Currently facing difficult times due to lack of organization, strategic direction and the presence of strong competition. The paper presents the design of organizational Calcalizas, conducted in five phases. In which a diagnosis was made by analyzing internal and external data mining and construction at the municipal and national matrices were used to identify issues to be analyzed in addition to the previously determined characterizations and conducted meetings with the manager to raise the strategic platform, focused on customer satisfaction, then the organizational structure was designed for processes in which raw client vision and manuals were systematized functions, processes and procedures. Finally was the implementation of organizational design and socialization within the company and in the academic community, through workshops, exhibitions, training and publications. The results allowed implemented organizational design involving employees, make changes to strengthen the company strategic level, structure and function key positions for the execution of other processes and identify opportunities for improvement.*

**JEL:** M00, M10, L23.

**KEY WORDS:** organizational design, strategic platform, organizational structure, process structure.

## INTRODUCCIÓN

El presente trabajo parte de reconocer la necesidad de las empresas por dirigir sus esfuerzos y habilidades hacia el desarrollo de estrategias que les permitan afrontar una realidad cambiante propia de un mundo globalizado, donde su permanencia depende de la destreza para utilizar la información, la tecnología y el conocimiento. Los cambios constantes generados por la globalización, hacen que el diseño de las estructuras de las empresas, adquieran importancia en las decisiones gerenciales, ya que las empresas deben coordinar sus acciones para utilizar y aprovechar los recursos de la mejor forma. Es así como las empresas buscan el logro de altos grados de eficacia y eficiencia, comenzando por la definición de una plataforma estratégica que dirija su rumbo, apoyados de la coordinación de las tareas, para que se puedan evaluar y mejorar en el transcurso del tiempo.

El desarrollo de un diseño organizacional se presenta como una estrategia para sobrevivir frente a grandes empresas, que gracias a su buena organización han logrado crecer y generar nuevas ideas para mantenerse en un entorno cambiante y competitivo. La empresa Calcalizas, dedicada a la exploración, explotación y transformación de piedra caliza, requiere implementar un diseño organizacional, como base de fortalecimiento interno para posteriormente iniciar procesos de certificaciones y mayores oportunidades de expansión. Se propone un diseño organizacional para Calcalizas que le permitan ser flexible y dinámica frente a las fluctuaciones del medio.

## REVISIÓN LITERARIA

En 1916, Henry Fayol con la teoría general, busca mejorar la eficiencia de la empresa partiendo de su organización y teniendo en cuenta las características e interrelaciones estructurales de los órganos componentes de la misma. En esta teoría se estableció una estructura jerárquica organizacional, se presentaron aportes como la centralización, unidad de mando, definición de autoridad y división del trabajo en grandes unidades operacionales especializadas por función.

El diseño organizacional ha estado presente desde los inicios de la teoría administrativa y ha ganado protagonismo entre los gerentes, quienes notan los impactos de su desarrollo en la eficacia de la organización, considerando factores como la tecnología, la naturaleza del trabajo, el entorno interno y externo de la organización y las estrategias elegidas para sobrevivir a largo plazo. Así el diseño organizacional, “Es el proceso por medio del cual los gerentes seleccionan y administran los aspectos de estructura y cultura para que una organización pueda controlar las actividades necesarias con las que logra sus metas” (Gareth, 2008, p. 9). Según Gibson, Ivancevich, y Donnelly, el diseño organizacional presenta dos modelos generales, el mecanicista y el orgánico; el primero destaca la importancia de conseguir elevados niveles de producción y eficacia a través de un amplio uso de normas y procedimientos, centralización de la autoridad y alta especialización laboral.

El segundo define un diseño organizacional que enfatiza la importancia de lograr altos niveles de flexibilidad y desarrollo, a través del uso limitado de reglas y procedimientos, descentralización de la autoridad y niveles de especialización relativamente bajos. Al realizar un diseño organizacional, se parte de la definición de la misión, visión y objetivos para crear una estrategia que dirija el rumbo de la organización. La estrategia se define como un patrón específico de decisiones y acciones que los gerentes toman para utilizar competencias clave con el fin de lograr una ventaja competitiva y superar a sus competidores (2003). La estructura por procesos, es una forma de organización en la que prima la visión del cliente sobre las actividades de la organización. Facilita la eficiencia y la eficacia de las interacciones en la cadena de valor, orientada hacia el mercado, buscando ganar un valor agregado superior para el cliente. La estructura parte del resultado, identifica y delimita el o los procesos de desarrollo, los

procedimientos y las actividades, desde las cuales se estructuran las funciones y los cargos claves para la ejecución. Se fundamenta en modelos teóricos pues toma elementos de varias teorías organizacionales y administrativas. Al estructurar por procesos se integran las acciones en una o más áreas claves de resultados, donde se definirá la función del área tanto como de sus cargos para determinar una descripción con base en lo que debe ser logrado por éstos (Mejía, 2004).

## **METODOLOGÍA**

Este proyecto se enmarca en una investigación descriptiva y aplicada, con enfoque cualitativo, se parte de conocer y describir la situación actual de la empresa, recopilando información a partir de observación, entrevistas y encuestas a la totalidad de los trabajadores. El proyecto se desarrolló en cinco fases, en la primera se realizó un diagnóstico de la empresa; la segunda fase consistió en el planteamiento de los aspectos básicos de la plataforma estratégica necesarios para el diseño organizacional. En la tercera fase se diseñaron los manuales de funciones, procesos y procedimientos; la cuarta fase se destinó a la capacitación a los trabajadores, de forma tal que conocieran los cambios generado, facilitando la adaptación a la nueva estructura de Calcalizas; también se crearon los indicadores que permitirán a los directivos de la empresa evaluar los resultados después de la implementación del diseño organizacional. La fase cinco corresponde a la socialización del proyecto.

## **RESULTADOS**

La fase diagnóstica arrojó información del sector minero en el departamento de Boyacá, encontrando que el departamento ha sido por años, cuna de explotación de importante diversidad de minerales, de igual forma se encuentra que la actividad minera es de pequeña y mediana escala, utiliza tecnología intensiva en mano de obra y presenta una estructura de costos que no le permite ser competitivo en los mercados internacionales. Calcalizas está dividida en dos secciones: mina y trituradora; en los dos últimos años como requerimiento de Corpoboyacá ha realizado programas de mitigación de impactos generados y protección de los trabajadores. En el planteamiento de la plataforma estratégica, junto con el gerente se definió así la Misión: Calcalizas, es una empresa Boyacense, dedicada a la exploración, explotación y procesamiento de la piedra caliza, apoyada en el desarrollo de su personal; comprometida con el respeto al medio ambiente; buscando siempre el beneficio de la comunidad y la plena satisfacción de sus clientes.

Por su parte la visión se definió así: En el año 2017 Calcalizas, logrará obtener la certificación de calidad, enmarcándose en la mejora continua, proporcionando confianza y credibilidad a sus grupos de interés; logrando ser una empresa líder en la venta y comercialización de piedra caliza y sus derivados, reconocida por su responsabilidad ecológica y social. También se definieron los valores, políticas y los objetivos empresariales. Para la definición de estructura, primero se caracterizaron los cargos, con base en las observaciones, entrevistas y encuestas realizadas; se definieron dos procesos de producción principales, la exploración-explotación y transformación de la piedra caliza. Luego se definió la estructura organizacional identificando los ciclos de negocio o macroprocesos, se codificaron los cargos y se diseñaron los manuales. Los manuales fueron sistematizados y contienen la identificación del cargo, objetivos, perfil (edad, género, conocimientos, formación y experiencia), funciones (actividades, resultado y procedimiento que involucra) y responsabilidades.

Los indicadores para la evaluación de la implementación del diseño fueron definidos por grupos así: clientes, aspectos financieros, talento humano y calidad. La capacitación se realizó mediante una exposición que dio a conocer al gerente y la secretaria general, la sistematización de los manuales, realizada bajo la plataforma de Microsoft Excel. Para facilitar el uso se les enseñó a manejar el programa, dando a conocer las opciones y características propias de la aplicación y se hizo entrega del manual del usuario. Se suministraron charlas a los empleados, cuyo principal objetivo fue darles a conocer los cambios dentro de la empresa, una detallada explicación de la estructura organizacional y su justificación. Se ubicaron en la oficina principal de la empresa los cuadros en los cuales se expone la misión, visión, valores y políticas empresariales, así como el diseño y la impresión del portafolio de

productos y servicios, la empresa no contaba con este documento, por lo cual se realizó un prototipo teniendo en cuenta sugerencias del gerente de la empresa. La socialización se realizó internamente en la empresa, en la Universidad Pedagógica y Tecnológica de Colombia, en el X encuentro regional de semilleros de investigación, REDCOLSI NODO – BOYACÁ, realizado durante los días 10 y 11 de mayo de 2012 en el municipio de Santa Rosa de Viterbo y en el Global Conference on Business and Finance, Costa Rica 2013.

## CONCLUSIONES

Al definir la estructura de la empresa por procesos, esta es capaz de adaptarse rápidamente a los cambios del entorno, en la cual prima la visión del cliente, ya que se parte del objetivo trazado, se identifican y delimitan los procesos, procedimientos y actividades, desde las cuales se estructuran las funciones y los cargos claves para la ejecución. Calcalizas debe seguir fortaleciéndose como estrategia para mantenerse en un mercado exigente, partiendo de realizar estudios para encontrar un mercado objetivo, que permita darle dinamismo y mejore la rentabilidad. Respecto a la toma de decisiones, se deben tener en cuenta los conocimientos y aportes de todos los empleados, dado que solo ellos conocen su trabajo y la forma de mejorarlo. Para la definición de la estructura adecuada de una empresa, el paso fundamental es la realización de un buen diagnóstico que permita conocer de forma detallada la parte externa de la empresa, así como los procesos, actividades, pensamientos y conocimientos de todos los integrantes de la misma, como método de integración del personal hacia los procesos de transformación de las mismas; y como base para la creación de la misión, visión, políticas y valores empresariales. Se recomienda a la empresa actualizar constantemente el manual de funciones, procesos y procedimientos, para darles mayor aplicabilidad.

# MÉTODO PARA DETERMINAR PRIORIDAD EN VARIABLES INDEPENDIENTES: EL CASO DE COMPETITIVIDAD TURÍSTICA

Aníbal Gabriel Herrera Moro Valdovinos, Univ. Michoacana de San Nicolás de Hidalgo  
Gerardo Gabriel Alfaro Calderón, Universidad Michoacana de San Nicolás de Hidalgo  
Óscar Hugo Pedraza Rendón, Universidad Michoacana de San Nicolás de Hidalgo

## RESUMEN

*La competitividad es un tema cada vez más importante debido a la globalización, a partir del siglo pasado y de manera perenne los estudios referentes a la competitividad estarán presentes en diferentes rankings, de sectores e industrias públicas o privadas. La medición de la misma, se realiza con la aplicación de modelos, los cuales tienen distintas cantidades de variables. La principal pregunta al inicio de una investigación en estudios de posgrado, una vez que se ha definido el título y objeto de estudio de la misma es: ¿Cuántas y cuáles variables independientes serán suficientes incluir en mi estudio para obtener resultados de impacto sobre la variable dependiente? En este artículo se presenta un método que permite responder a la pregunta anterior, aplicado el método a un caso de competitividad turística, los resultados muestran que la promoción, la seguridad, la cultura, la calidad en el servicio, los servicios complementarios y la administración del destino son las variables independientes con mayor prioridad, superando incluso al precio.*

**PALABRAS CLAVES:** Método, modelos, variable independiente, competitividad

## METHOD FOR DETERMINING PRIORITY IN INDEPENDENT VARIABLES: THE CASE OF TOURISM COMPETITIVENESS.

### ABSTRACT

*Competitiveness is an increasingly important issue by globalization, from the last century and perennially studies related to competitiveness will be present in different rankings, industry sectors and public or private. It's measurement is performed with the application of models, which have different numbers of variables. The main question at the beginning of research in graduate studies, once defined the title and subject of study of it is: How many and which independent variables will be sufficient to include in my study to obtain results on the variable impact dependent? In this paper we present a method to answer the question above, applied the method to a case of tourism competitiveness, the results show that promotion, security, culture, quality of service, ancillary services and administration the destination are independent variables with higher priority, surpassing even the price.*

**JEL:** C00, L08

**KEYWORDS:** Method, models, independent variable, competitiveness.

### INTRODUCCIÓN.

Generalmente la competitividad medida a través de modelos, emplea una combinación de resultados en encuestas, censos, entrevistas y datos duros (cifras generados por eventos), para obtener un valor numérico ponderado que en su mayoría da lugar a ranking (posicionamiento), ya sea mundial, internacional, nacional, regional o local.

Los modelos de competitividad, incluyen todas las variables que impactan al objeto de estudio de dicho modelo, en este artículo se presenta un método, para determinar cuántas y cuales variables incluir en un modelo de competitividad dentro de una tesis de posgrado. Se explica la aplicación del método y se exponen los resultados del mismo, tomando como ejemplo la investigación: *“La competitividad turística internacional de Zihuatanejo Gro.”*, dando como resultado un modelo inicial con seis variables independientes y el porcentaje de impacto estimado de cada una sobre la variable dependiente.

## REVISIÓN DE LITERATURA

Se revisaron diversos libros y revistas para construir una matriz de frecuencia de variables, así como los resultados de dos modelos de competitividad turística: el del Foro Económico Mundial (F.E.M) (Mundial, 2010) y el del Índice de Competitividad Turística de los Estado Unidos Mexicanos (ICTEM) (Tecnológico de Monterrey, 2012).

En el 2006, el Foro Económico Mundial, junto con sus socios de la industria y las empresas que generan información estadística, se embarcó en un esfuerzo de varios años de investigación destinado a explorar diversas cuestiones relacionadas con la competitividad de la industria de viajes y turismo en 139 países de todo el mundo. Este índice se basa en tres grandes categorías de variables:

- 1) Marco reglamentario de la industria de viajes y turismo;
- 2) Entorno empresarial e infraestructura de la industria de viajes y turismo;
- 3) Rec. humanos, culturales y naturales de la industria de los viajes y turismo.

Cada uno de estos tres sub-índices está compuesto a su vez por un número de pilares de competitividad, de los cuales hay **14 en total**. La variables se muestran en la Tabla 1.

Tabla 1: Modelo de Competitividad Turística del F.E.M. 2011.

Índice de Competitividad Turística			
Marco regulatorio	Clima de Negocios	e Recursos Humanos,	
	<b>Infraestructura</b>	<b>Culturales y Naturales</b>	
1. Políticas y Regulaciones	6. Infraestructura Aérea	11. Capital Humano	
2. Sostibilidad Ambiental	7. Infraestructura de transporte terrestre.	12. Afinidad para el Desarrollo del Turismo	
3. Seguridad	8. Infraestructura Turística	13. Recursos Naturales	
4. Salud e Higiene	9. Infraestructura de Tecnología y Comunicaciones	14. Recursos Culturales	
5. Prioridad del Sector turismo	10. Competitividad de Precios		

*En esta tabla se muestran las variables del Modelo del Foro Económico Mundial para la Competitividad Turística por países. Fuente: reporte del F.E.M. 2011.*

El modelo de competitividad creado por el Instituto Tecnológico de Monterrey en el ICTEM 2012 no es únicamente una lista de factores comparativos y competitivos sino también toma en cuenta la relación y desempeño entre los diferentes factores a manera de crear un modelo sistémico de competitividad del destino turístico. En este sentido, el modelo de competitividad usado en el ICTEM 2012 está compuesto de seis elementos:

Ambiente (Micro) competitivo.  
 Ambiente (Macro) global.  
 Recursos clave y atractivos.  
 Factores de soporte y recursos.  
 Administración del destino.  
 Condiciones situacionales.

## METODOLOGÍA

El método propuesto consiste en una revisión de diversos factores agrupados en cuatro fases o etapas, cada una de las cuales tiene una ponderación, de acuerdo con ella, en cada fase las distintas variables estudiadas van incrementando en mayor o menor medida su prioridad.

A cada fase se le ha otorgado una ponderación subjetiva (explicada enseguida), tomando para ello las siguientes consideraciones:

$Pr = aMM + bEE + cFV + dMA$       Donde:

Pr= Prioridad de la variable,  
 MM=Mapa Mental,  
 EE=Entrevista a Expertos,  
 FV=Frecuencia de Variables,

MA=Modelos Aplicados, y  
 $a+b+c+d=1$  (factores de ponderación).

Mapa Mental: ponderación  $a = 0.1$ . Esta fase es la inicial para un problema de investigación, aquí se apuntan las variables independientes que el investigador supone tienen intervención con la variable dependiente. La ponderación es baja debido a que solo es el punto de vista del investigador basado en su experiencia.

Entrevista a Expertos: ponderación  $b=0.2$ . En esta actividad se realizan entrevistas a expertos en el tema estudiado, pueden ser investigadores, estudiosos del tema, docentes, figuras públicas, empresarios, clientes, especialistas de algún área, etc., con la intención de conocer cuáles son las variables independientes mas importantes que a su punto de vista afecten a la dependiente. Por esa razón la ponderación es el doble que la anterior fase.

Frecuencia de Variables: ponderación  $c=0.3$ . En diversos estudios, una forma de elegir a las variables independientes es construir una matriz de frecuencia de variables, revisando revistas, libros, artículos, modelos, tesis y otros trabajos de investigación, como por sí sola esta actividad permite elegir de manera rápida las variables independientes, se le otorga una ponderación superior a las otras dos fases anteriores.

Modelos Aplicados: ponderación  $d=0.4$ . Esta última actividad lleva el peso más fuerte en el método, debido a que se utilizan los resultados de modelos ya aplicados en problemas iguales o similares, por lo cual, al existir ya una medición; su impacto es de mayor relevancia.

*Nota: como es de suponer el número de variables incorporadas en el mapa mental, se irá incrementando conforme se avance en las etapas del método y la cantidad de expertos a entrevistar, la cantidad literatura revisada y los modelos aplicados serán a consideración del investigador. Se sugieren las siguientes cifras: mapa mental. 10-15 variables, entrevistas a expertos: 10-20 entrevistados, frecuencia de variables: 20-40 fuentes de información y modelos aplicados: 2-5 con resultados explícitos.*

### Flexibilidad del método

El método es flexible tanto en la ponderación de cada fase como en el número de ellas, dependiendo del tema de investigación y del acceso a la información que se vaya presentando, las fases pueden eliminarse y el peso correspondiente de la fase eliminada puede repartirse entre las fases que persistan, tomando en consideración la tabla 2 de proporciones entre las ponderaciones:

Tabla 2: Proporciones sugeridas del método.

Fase	Mapa Mental	Entrevista a Expertos	Frecuencia de Variables	Modelos Aplicados
Mapa mental	1:1	1:2	1:3	1:4
Entrevista a expertos	2:1	1:1	2:3	1:2
Frecuencia de variables	3:1	3:2	1:1	3:4
Modelos Aplicados	4:1	2:1	4:3	1:1

*Proporciones de ponderaciones propuestas para el método Fuente: Propia de acuerdo a las ponderaciones del método MORO.*

Por ejemplo: si el investigador no tiene idea del tema que desea investigar, no habría mapa mental, el 10% correspondiente se repartiría entre las otras 3 fases, respetando la proporción y quedarían:

*Entrevista a Expertos=22%, Frecuencia de Variables=33% y Modelos Aplicados=45%.*

En otro caso, si lo que no es posible es entrevistar a expertos, entonces las ponderaciones quedan:

*Mapa Mental=13%, Frecuencia de Variables=35% y Modelos Aplicados=52%*

En caso de que no se encuentren modelos aplicados en el tema de investigación, las ponderaciones se establecerían: *Mapa Mental=17%, Entrevista a Expertos=33% y Frec. de Variables=50%*

## RESULTADOS

Los resultados generales del método aplicado a la competitividad turística, se pueden apreciar en la Tabla 3 y los resultados finales ordenados en la tabla 4.

Tabla 3: Resultados Generales.

		A		B		C		D		TOT	
		10%		20%		30%		20%		40%	
No.	Dimensión							FEM 2011	ICTEM 2012	ST

*Porcentaje de estimado de cada variable independiente sobre la dependiente. Fuente:* Elaboración propia con datos de la tabla 3.

Debido a la gran similitud para medir las variables de políticas públicas y privadas y de acuerdo a su prioridad casi igual obtenida, se decide agrupar las en una en una sola que se llamará administración del destino, estableciendo un porcentaje promedio (55%) del total de ambas. Quedando determinadas seis variables independientes de acuerdo con este método, las cuales serán las que integrarán el modelo de competitividad turística internacional para Ixtapa-Zihuatanejo.

#### Aplicación del método para establecer las preguntas, objetivos e hipótesis de investigación.

En la tabla 6 se muestra cómo se pueden formular la congruencia del planteamiento en el problema de investigación de acuerdo a los resultados del método.

Tabla 6: Congruencia de planteamiento.

MATRIZ DE CONGRUENCIA DE PLANTEAMIENTO					
COMPETITIVIDAD TURÍSTICA INTERNACIONAL DE ZIHUATANEJO, GRO.					
Preguntas de Investigación GENERAL	ESPECÍFICAS	Objetivos GENERAL	ESPECÍFICOS	Hipótesis GENERAL	ESPECÍFICAS
¿En qué medida la promoción, la seguridad, el factor humano, la calidad en el servicio, los servicios complementarios y la administración del destino influyen en la competitividad turística internacional de Zihuatanejo, Gro.?	1. ¿Cuál es el nivel de influencia de la promoción para la competitividad turística internacional de Zihuatanejo, Gro.?	Determinar el nivel de influencia de la promoción, la seguridad, el factor humano, la calidad en el servicio, los servicios complementarios y la administración del destino en la competitividad turística internacional de Zihuatanejo, Gro.	1. Identificar en qué medida influyen la promoción para la competitividad turística internacional de Zihuatanejo, Gro.	A un mayor y/o mejor nivel de aplicación de promoción, seguridad, factor humano, calidad en el servicio, servicios complementarios y administración del destino, mayor será la competitividad turística internacional de Zihuatanejo, Gro.	1. A mayor nivel de promoción, mayor será la competitividad turística internacional de Zihuatanejo, Gro.
	2. ¿Cuál es el nivel de influencia de la seguridad para la competitividad turística internacional de Zihuatanejo, Gro.?		2. Identificar en qué medida influye la seguridad para la competitividad turística internacional de Zihuatanejo, Gro.		2. A mayor nivel de seguridad, mayor será la competitividad turística internacional de Zihuatanejo, Gro.
	3. ¿Cuál es el nivel de influencia del factor humano para la competitividad turística internacional de Zihuatanejo, Gro.?		3. Identificar en qué medida influye el factor humano para la competitividad turística internacional de Zihuatanejo, Gro.		3. A mayor nivel de factor humano, mayor será la competitividad turística internacional de Zihuatanejo, Gro.
	4. ¿Cuál es el nivel de influencia de la calidad en el servicio para la competitividad turística internacional de Zihuatanejo, Gro.?		4. Identificar en qué medida influye la calidad en el servicio para la competitividad turística internacional de Zihuatanejo, Gro.		4. A mayor calidad en el servicio, mayor será la competitividad turística internacional de Zihuatanejo, Gro.
	5. ¿Cuál es el nivel de influencia de los servicios complementarios para la competitividad turística internacional de Zihuatanejo, Gro.?		5. Identificar en qué medida influyen los servicios complementarios el para la competitividad turística internacional de Zihuatanejo, Gro.		5. A mejores servicios complementarios, mayor será la competitividad turística internacional de Zihuatanejo, Gro.
	6. ¿Cuál es el nivel de influencia de la administración del destino para la competitividad turística internacional de Zihuatanejo, Gro.?		6. Identificar en qué medida influye la administración del destino para la competitividad turística internacional de Zihuatanejo, Gro.		6. A mejor administración del destino, mayor será la competitividad turística internacional de Zihuatanejo, Gro.

Aquí se presenta un ejemplo de la aplicación de los resultados del 'método para el planteamiento del problema de investigación y su congruencia. Fuente: elaboración propia.

#### Modelo propuesto para medir la competitividad turística internacional de Ixtapa-Zihuatanejo.

Finalmente, en la figura 1, se presenta el modelo propuesto como resultado de la aplicación del método, recordando el impacto de cada variable independiente sobre la dependiente.

Figura 1: Modelo de competitividad propuesto:

## CONCLUSIONES

La incertidumbre al inicio de una investigación acerca de las variables a considerar por parte del objeto de estudio cuando no se elige un modelo ya aceptado, es algo que sucede en distintas investigaciones en mayor o menor medida.

En este trabajo se presentó un método que permite elegir de manera apropiada de acuerdo a una ponderación de la prioridad en cada variable independiente determinada a partir de cuatro etapas. Los resultados mostraron a siete variables por encima de una prioridad mayor al 50%, también mostró la cercanía y similitud entre dos variables (políticas públicas y privadas) permitiendo con ello la fusión de ambas en una sola (administración del destino).

También permite discriminar o descartar variables que en teoría deberían ir siempre para la medición de un modelo, como es el caso del **precio** en los modelos de competitividad, ya que se obtuvo un 33% de prioridad para el caso del turismo, lo cual puede interpretarse como que el turista no necesariamente elige un destino con base en el precio, sino más bien de acuerdo a las promociones del destino, su infraestructura y la seguridad.

# MEJORAMIENTO DE LA CARTERA CASO DE UNA EMPRESA DE PINTURAS E IMPERMEABILIZANTES

Mónica Bibiana González Calixto, UPTC

## RESUMEN

*El presente caso es resultado de una investigación realizada en una empresa colombiana, dedicada a la producción, distribución y aplicación de productos pinturas e impermeabilizantes para la construcción. El objetivo de este caso es ser una herramienta de aprendizaje para estudiantes de pregrado y posgrado en temas de administración de capital de trabajo y políticas de crédito y cartera, puede ser aplicado también en otros tópicos financieros y en áreas administrativas. La empresa, a pesar de tener un buen volumen de ventas, presentaba problemas en la administración de cartera, lo que generaba una disminución en las utilidades y dificultades de liquidez. Para mejorar esta situación y como resultado del trabajo investigativo, fue necesario replantear, modificar y estructurar los créditos, teniendo en cuenta las necesidades del departamento de ventas. La metodología empleada en esta investigación consideró dos fases, en la primera se solucionó la problemática y en la segunda se escribió el caso, presentado en este artículo; El caso fue estructurado en los siguientes apartados: título, introducción y pregunta detonante, cuerpo del caso, cierre, preguntas de estudio y anexos.*

**PALABRAS CLAVE:** Capital de trabajo, políticas de crédito, políticas de cartera, casos para la enseñanza.

## IMPROVEMENT OF INVESTMENTS IF A COMPANY OF PAINTINGS AND IMPERMEABILIZANTES

### ABSTRACT

*This case is the result of an investigation into a Colombian company dedicated to the production, distribution and application of waterproofing products and architectural coatings. The aim of this event is to be a learning tool for undergraduate and graduate students on issues of working capital management and credit policies and portfolio, can be applied in other financial topics and administrative areas. The company, despite having a good sales volume, due to problems with portfolio management, which generated a decrease in earnings and cash flow difficulties. To improve this situation and as a result of research work, it was necessary to reconsider, modify and structuring loans, taking into account the needs of the sales department. The methodology used in this study considered two phases, the first problem was solved and the second was written in the case reported here, the case was divided into the following sections : title, introduction and question detonating body of case closure, study questions and annexes.*

**JEL:** G10, G11, G30, G32, G35, G39, A20.

**KEYWORDS:** Working capital, credit policies, accounts receivable policies, cases for teaching.

### INTRODUCCIÓN

La Empresa de pinturas e impermeabilizantes ofrece un portafolio de 22 productos y cuenta con 57 empleados La sede principal de la empresa alberga las instalaciones manufactureras donde se cumple todo el proceso productivo; luego los productos entran a la cadena de distribución que abarca distintos lugares

de Colombia. Debido al gran tamaño de sus competidores, la empresa debe llevar a cabo una fuerte estrategia comercial que le permita alcanzar el reconocimiento que hoy ya tienen sus competidores.

#### Pregunta Detonante

El gerente general y la contadora, han observado falencias en cuanto al manejo actual de las cuentas por cobrar, ellos piensan que se podría mejorar y se preguntan ¿cómo modificar y estructurar los créditos para mejorar la liquidez y la rentabilidad, teniendo en cuenta las necesidades del departamento de ventas?

#### Cuerpo del Caso

Por motivo de la crisis económica de los últimos años y los ciclos propios del sector de la construcción, la empresa ha tenido algunos inconvenientes en la administración de su cartera de créditos, lo que ha alertado a la administración y los ha llevado a emprender acciones correctivas. El otorgamiento de crédito está sujeto al análisis de solvencia de cada cliente. Como política general se concede un plazo de 30 días, sin embargo, para ciertos clientes este término puede variar entre 15 y 60 días, según el acuerdo negociado.

#### Cierre

Por estas razones se considera pertinente evaluar cuánto está afectando al capital en trabajo la situación actual y a partir de ahí determinar cuáles serían las posibles soluciones, para finalmente recomendar la más adecuada.

#### Preguntas De Estudio

¿Qué le recomendaría a la gerencia para gestionar de manera más efectiva la política de crédito? ¿Cómo se deberán determinar los descuentos por pronto pago?

#### **BIOGRAFÍA**

# **MICROEMPRESA LOCALIZADA EN PUEBLA, MÉXICO DEDICADA A LA ELABORACIÓN DE PRODUCTOS NOSTALGIA Y LAS REDES SOCIALES**

María Antonieta Monserrat Vera Muñoz, Benemérita: Universidad Autónoma de Puebla

Rafaela Martínez Méndez, Benemérita Universidad Autónoma de Puebla

Gerardo Serafin Vera Muñoz, Benemérita Universidad Autónoma de Puebla

## **RESUMEN**

*En este trabajo se presenta un análisis de las particularidades de las redes de sociales y sus beneficios a las MICROEMPRESAS localizadas en Puebla, México, dedicadas a la elaboración de productos nostalgia (Dulces típicos). Revisando autores que han realizado estudios acerca de las redes sociales en las Micro Pequeñas y Medianas Empresas (MIPYME) localizadas en diferentes partes de México. La investigación de campo descansa en un estudio de caso de una microempresa dedicada a la elaboración de dulces típicos poblanos en particular uno llamado "tortita de Santa Clara", mediante entrevistas a profundidad con el dueño de la empresa y tres familiares más que trabajan en la empresa, así como la observación directa en la empresa, tanto del proceso productivo, como de la comercialización del producto. El objetivo del trabajo es indagar los beneficios de las Redes Sociales en las MIPYME poblanas como facilitadoras de conocimientos que les apoyan para su permanencia en el mercado, mejoras en su producto y procesos y en acciones de innovación. La investigación da respuesta a la pregunta ¿Cuáles son los intercambios de conocimientos que han tenido las MICROEMPRESAS poblanas, que le han permitido permanecer en el mercado?*

**PALABRAS CLAVE:** Microempresa, productos nostalgia, redes de conocimiento

## **MICROENTERPRISE LOCATED IN PUEBLA, MEXICO DEDICATED TO THE ELABORATION OF PRODUCTS NOSTALGIA AND THE NETWORKS SOCIALES**

## **ABSTRACT**

*En this paper presents an analysis of the characteristics of social networks and their benefits to enterprises located in Puebla, Mexico, dedicated to the manufacture of products nostalgia (sweets). Reviewing authors who have made studies about social networking in Micro small and medium enterprises (SMEs) located in different parts of Mexico. Field research rests in a case study of a small company dedicated to the elaboration of Puebla sweets in particular one called "Santa Clara pancake", through family interviews in depth with the owner of the company and three more than they work in the company, as well as direct observation in the company, both the production process and marketing of the product. The objective of the work is to investigate the benefits of social networks in the MSMEs poblanas as facilitators of knowledge that support them to remain in the market, improvements in its product and processes and innovation actions. Research responds to the question what are the exchanges of knowledge that have taken the poblanas MICROEMPRESAS, which allowed him to stay in the market?*

**KEY WORDS:** microenterprise, nostalgia products and knowledge networks

## INTRODUCCIÓN

El objetivo del trabajo es indagar los beneficios de las Redes Sociales en las MIPYME poblanas como facilitadoras de conocimientos que les apoyan para su permanencia en el mercado, mejoras en su producto y procesos y en acciones de innovación. La investigación da respuesta a la pregunta ¿Cuáles son los intercambios de conocimientos que han tenido las MICROEMPRESAS poblanas, que le han permitido permanecer en el mercado? El trabajo se estructura de la siguiente forma; revisión de literatura, en la que se incluye el concepto de MIPYME, productos nostalgia y las redes sociales en México y los modelos de redes entre otros puntos. La metodología está enfocada a un estudio de caso. Posteriormente se presentan generalidades de los dulces típicos y algunos aspectos del mercado, continuando con el estudio de caso en donde se describen, diferentes aspectos de la empresa como sus orígenes, estructura de operación producción, mercado y resultado del análisis del caso de estudio finalizando con las conclusiones y bibliografía.

## REVISIÓN DE LA LITERATURA

### Mipyme

Al considerar definir una micro empresa no se encuentra literatura al respecto por lo que con base en información referida a las microempresas y a la publicación del Diario Oficial de la Federación (DOF) con fecha 30 de diciembre 2009 Tabla 1, se define a la microempresa como: empresa que tiene hasta 10 trabajadores, independientemente de se dedique a la industria, al comercio o los servicios (www.mexicoemprende.org.mx).

Tabla 1: Estratificación de Empresas Publicada en el Diario Oficial de la Federación 30 De Diciembre de 2009 Clasificación Según Número De Empleados

Tamaño	Sector		
	Industria	Comercio	Servicios
Micro	de 0 a 10	de 0 a 10	de 0 a 10
Pequeña	de 11 a 50	de 11 a 30	de 11 a 50
Mediana	de 51 a 250	de 31 a 100	de 51 a 100

Fuente: Autoría propia, con base en DOF 30 de diciembre 2009. Clasificación de empresas por Número de trabajadores de una fuente de Gobierno Federal.

En México, de cada 100 empresas mexicanas 96 son microempresas, contribuyen con el 40.6% del empleo y aportan el 15% de PIB. En lo que respecta a las empresas manufactureras su participación se muestra en la Tabla 2.

Tabla 2: Presencia de las Empresas Manufactureras en México

Establecimientos			Empleo	
Tamaño	Número	%	Número	%
Total	344 118	100.00	4 232 322	100.00
Micro	310 118	90.1	773 288	18.3
Pequeña	22 739	6.6	499 473	11.8
Mediana	8 228	2.4	916 654	21.6
Grande	3 033	0.9	2 042 907	48.3

Fuente: Autoría propia con base en Instituto Nacional de Estadística, Geografía e Informática (INEGI), 2009. Participación de las Microempresas dentro de la economía mexicana con número de establecimientos y fuentes de empleo.

### Productos Nostalgia

La nostalgia provoca sentimientos de tristeza y aislamiento, hay actividades que pueden ayudar a sobreponerse a esta condición como es escribir una carta, realizar una llamada telefónica (Thubre, Patterson, Mount; citados por Cervantes, 2008). Una recomendación hecha por Psicólogos, para disminuir la nostalgia es llevar objetos a la nueva casa que ayuden a la transición al nuevo ambiente. Cuando se aborda el tema de productos nostalgia, por lo general se hace referencia para su comercialización a países como Estados Unidos y Canadá, que es donde se encuentra un buen número de personas de origen latinoamericano. No se considera al propio país México como un mercado para los referidos productos y el aprovechar los talentos mexicanos para la elaboración de los productos nostalgia.

Puede ser que lo anterior obedezca a una no clara definición de lo que es un producto nostalgia. Por producto nostalgia se entiende: aquellas mercancías bienes y servicios que forman parte de los hábitos de consumo, cultura y tradición de los diferentes pueblos y naciones (Comisión Económica para América Latina y el Caribe [CEPAL], 2003). Olmedo (2006), los productos nostalgia son mercancías y servicios, con particularidades que los vinculan e identifican con un pueblo o grupo. Como se puede apreciar en la definición no se menciona que el mercado de los productos nostalgia deba estar en el extranjero o en una región distinta a donde se consumen habitualmente, se cultivan o se elaboran. La CEPAL señala que una de las virtudes de los productos nostalgia es que se elaboran de forma artesanal, en algunos casos. Los productos nostalgia para ser comercializados en mercados internacionales tienen que cumplir con requerimientos específicos que se convierten en retos para las pequeñas empresas que los elaboran y desconocen como poder cumplirlos o en ocasiones cuales son, y ello constituye un impedimento para poder ampliar su mercado. Los productos nostalgia están integrados por diversos satisfactores, entre los cuales destacan los alimentos y bebidas, los muebles y las artesanías, el vestuario y la música, e incluso los detergentes y jabones (CEPAL, 2003).

### PYMES Que Elaboran Productos Nostalgia

En el caso de la manufactura, en una muestra de 15 países latinoamericanos, en nueve de ellos las pequeñas y medianas empresas (PYME) manufactureras generaban alrededor de 50% del empleo en ese sector y en ocho de ellos aportaban más del 30% del PIB manufacturero en los años noventa (Peres y Stumpo, 2002). La trayectoria de política industrial dirigida a las MIPYME muy particular de cada gobierno y del período del que se trate, ha dejado diversas enseñanzas tanto sobre los elementos que ayudan o que resultan eficaces, como sobre aquellos que han fracasado en su objetivo de ayudar a despegar a este segmento productivo. Lo anterior se ve reforzado por la exportación de productos nostalgia y étnicos realizada por México gráfica 1.

Gráfica 1: Composición De Las Importaciones de los Estados Unidos de Productos Étnicos y de Nostalgia de México (*Millones De Dólares*)

Fuente: Elaboración propia con base en CEPAL, 2003. Se muestra el incremento anual en las importaciones de productos étnicos y nostalgia por los Estados Unidos.

En investigación realizada por Cervantes (2008), se menciona la preferencia de los migrantes que habitan en Estados Unidos y Canadá, el extrañar, en primer lugar a la familia 42%, en segundo lugar la comida típica y en tercer lugar las costumbres. Y algo de lo que más se llevan al extranjero cuando emigran son dulces típicos mexicanos. Dentro de esos migrantes existen un buen número de poblanos.

### Mercado de Dulces Típicos Poblanos

El estado de Puebla es reconocido por su amplia gama gastronómica, ninguna de sus regiones carece de tradición culinaria; la delicia de sus platillos, que va desde un simple guisado diario hasta la elaboración de algún dulce, es inigualable; estos últimos, los dulces, nacieron por la necesidad de satisfacer el antojo de un postre o simplemente por el interés por comer algo dulce. Son más de 300 delicias, elaboradas en su mayoría en la época colonial. Los dulces típicos poblanos surgen de la fusión de las culturas, española árabe, e indígena, Puebla fue y sigue siendo una ciudad dulcera por excelencia (Suárez, 1991, p.4; citada por Mercado, 2010) Es importante mencionar el contexto histórico de los dulces típicos poblanos debido a la necesidad de saber la historia sobre su elaboración y cómo es que empezaron a surgir en Puebla; la fama de los dulces es reconocida en gran parte de la república mexicana y en el extranjero.

Los dulces típicos poblanos se empezaron a elaborar en los conventos de las diferentes órdenes que existían en Puebla: clarisas, dominicas, carmelitas, etc. Una de las razones principales por la cual que surgieron estos dulces, fue por agradecimiento de las religiosas a sus benefactores, situación que con el tiempo fue vista como una posibilidad para obtener grandes beneficios a través de la venta de estas delicias. Desde esos días y hasta la actualidad, existen congregaciones donde se elaboran de forma artesanal algunos de dulces. La fabricación de estos fuera de los conventos ha sido por medio de generaciones y por tradición familiar, la mayoría de estos obradores continúan fabricando los exquisitos dulces de manera artesanal, los espejos o tortitas de Santa Clara, que son galletas de harina, manteca vegetal, azúcar, leche y pepita de calabaza y datan de 1890 (Convento de Santa Clara). Los dulces típicos tienen una demanda constante en todos los meses del año excepto enero.

### Redes de Conocimiento

Definiciones De Las Redes De Conocimiento De acuerdo a Saexenian (1990):

*“Las redes de conocimiento constituyen un conjunto de instituciones académicas, industriales, políticas y agentes de enlace que colaboran conjuntamente, mejorando el trabajo científico, debido a que posibilitan el libre flujo de información e impulsan las condiciones locales para la innovación y que tienen por objetivo la construcción y difusión del conocimiento.”*

Anunziata y Macchiarola (2010) explican las redes de conocimiento como individuos, grupos o instituciones, asociados con un fin en común:

*“...las redes de conocimiento son asociaciones entre individuos, grupos o instituciones que tienen una agenda común en torno a intereses diversos tales como: dar solución a problemas, compartir recursos e infraestructura, propiciar la cooperación, la solidaridad social, como así también el intercambio de información y conocimientos y la transferencia de tecnología”.*

Para fines de esta investigación se define a las redes de conocimiento como el conjunto de individuos, empresas, asociaciones, así como agentes de conexión que participan en la generación del conocimiento mediante el intercambio de información y la transferencia de tecnología con fines de innovación. Elementos que Integran Las Redes de Conocimiento Las redes de conocimiento, están integradas por el elemento humano, así como por factores tecnológicos y sociales. Prada (2005) hace énfasis en cuatro

elementos necesarios para la creación de Redes de Conocimiento, entre los cuales menciona: Comunidades y equipos expertos, trabajo colaborativo, conocimiento e Innovación. Formación de Redes de Conocimiento Casas (2001) menciona que en un principio las fuentes que contribuyen al desarrollo de innovación, tenían su centro de atención en las empresas, porque se pensaba que los factores de las mismas, contribuían de manera directa en los procesos de aprendizaje en los sectores industriales.

Existe una vasta literatura sobre la noción de red, las principales aportaciones han surgido de las disciplinas sociales, todas ellas han contribuido a enriquecer el marco teórico - conceptual, dando lugar a una taxonomía que incluye redes de intercambio y redes de poder (Knoke, 1990), de información y de colaboración (Freeman, 1991), de producción (Saxenian, 1990), de innovación o de innovadores (De Bresson y Amesse, 1991) y redes sociotécnicas (Callon, 1989). Casas (2003), las redes de conocimiento se construyen mediante intercambios entre un conjunto de actores que tienen intereses comunes en el desarrollo o aplicación del conocimiento científico, tecnológico o técnico para un propósito específico, sea este científico, de desarrollo tecnológico, o de mejoramiento de procesos productivos.

Siguiendo a Casas (2001), se tiene que: estas formas de intercambio pueden concebirse como un proceso de transacción de conocimiento, aunque no en términos económicos, ya que una gran parte del conocimiento que se transmite en estas redes hace por vía tácita y no mediante la compra – venta del mismo. Sin embargo estas formas de intercambio pueden llegar a tener un costo o beneficio económico. Las redes se construyen con las relaciones que se van creando entre los diferentes actores involucrados en una relación (Granovetter, 1973). Además, de los aspectos considerados sobre las redes de conocimiento, Casas (2003), señala que en el análisis de redes es necesario tomar en cuenta las siguientes dimensiones:

- 1) El contexto institucional de la colaboración entre los sectores público y privado;
- 2) La estructura o morfología de las redes;
- 3) La génesis, desarrollo y dinámica de las redes;
- 4) El contenido y/o los insumos que se intercambian y,
- 5) Los resultados de las redes y del intercambio de conocimientos.

**Dinámicas de Redes de Conocimiento** Un aspecto más sobre el que es necesario abundar, es naturaleza formal o informal de las relaciones que conforman la red. Las redes formales, según Birley (citado en Levanti, 2001: 1046), se componen de los bancos, las agencias locales o nacionales, así como las cámaras y otras representaciones oficiales. Las redes informales se refieren a todas las relaciones personales del empresario, principalmente la familia, los amigos y los contactos de negocios. Las redes informales están sustentadas en un clima de confianza y de cordialidad. Lomnitz (1975), señala que la confianza es la base de la reciprocidad, y la reciprocidad es posible cuando hay igualdad de carencias; en el caso de los empresarios, estas carencias pueden ser de conocimientos, de tipo económico, de materiales, de maquinaria, etcétera. El aporte de Lomnitz resulta fundamental en el concepto de redes, pues al agregar los factores confianza y reciprocidad, sugiere la idea de que la construcción de las redes sociales no es una acción inmediata, y por lo tanto, su presencia solamente es posible apreciarla en horizontes de tiempo de mediano y largo plazo, y a partir de intercambios recurrentes. Las Redes de Conocimiento en las MIPYMEs Dentro del desarrollo día a día de las MIPYMEs se puede identificar la importancia que para ellas tienen las redes de conocimiento, es decir, aquellos vínculos tanto formales como informales que se van construyendo entre la empresa y un conjunto de agentes como proveedores, clientes, instituciones de gobierno, por mencionar algunas. Estas redes sirven de acceso a diferentes recursos y conocimientos (Tapia y Tapia, 2010).

Dentro del proceso de desarrollo de un modelo de MIPYME, uno de los recursos fundamentales es el conocimiento, pues cuando existe un proceso eficaz de adquisición y transferencia de conocimientos la tasa de acumulación de capacidades tecnológicas puede incrementarse, así como también las capacidades administrativas y empresariales. Y es en este aspecto que las redes sociales puede resultar un factor

determinante. En el desempeño de las MIPYMES (Micro, Pequeñas y Medianas empresas) en general – también en el caso de las grandes empresas - son las redes sociales, es decir, aquellos lazos tanto formales como informales que se van generando entre la empresa – vía la figura del dueño, empresario y/o directivo - y los proveedores, clientes gobierno, etcétera. Estas redes tal y como lo señala Basaldúa (2005) son el vehículo para que la empresa pueda tener acceso a diferentes recursos, entre otros a distintos conocimientos que de otra forma no sería posible o muy difícil.

## METODOLOGÍA

En la ciudad de Puebla existen 10 empresas dedicadas a la elaboración de dulces típicos y 9 conventos (Paredes, 2005). Por lo que se observa un número reducido de empresa y respecto a los no sé logro obtener entrevistas por la vida de claustro que practican las monjas. El trabajo se desarrolló a través de una investigación cualitativa, bajo el método del estudio de caso, mismo que se justifica por el número reducido, de empresas pero primordialmente por reservados que son los empresarios con sus recetas. El diseño incluyó un estudio de campo, que se realizó a través de una guía de entrevista llevando a cabo entrevistas a profundidad con el dueño de la empresa y tres familiares más que trabajan en la empresa, así como la observación directa en la empresa, tanto del proceso productivo, como de la comercialización del producto. Variables: relaciones con clientes, proveedores amigos, Gobierno.

*El estudio de caso Orígenes:* La empresa se encuentra localizada en la ciudad de Puebla, capital, sus inicios se remontan a 1925. Por medio del abuelo del actual director de la empresa, el abuelo era de oficio repostero, se inicia en la elaboración de un dulce típico poblano al que le dio el nombre de “tortita de Santa Clara” llamada espejo en un inicio, a insistencia de los dueños de las dulcerías que vendían el producto y lo conocían entre los años de 1950-1960. La tortita de santa Clara inicialmente la compraban los comercializadores de dulces típicos a las monjas clarisas, pero al no tener suficiente producción para surtir la demanda, buscaron al abuelo “Don Juan”, quien poseía la habilidad de identificar los ingredientes contenidos en un producto con únicamente comerlo.

*Estructura y operación de la empresa:* La empresa surge como circunstancialmente al aprovechar el incremento de la demanda y la insuficiente producción por parte de las monjas conjuntado con el oficio de repostero del abuelo Don Juan. la empresa inicia con recursos propios. Utilizando lo que ya tenía para la repostería; cazos de cobre, palas de madera y montó un horno de leña Posteriormente la empresa fundada por el abuelo se divide entre dos de los hermanos, uno de ellos es quien actualmente dirige la empresa “Dulces don Juan”. Y actualmente las hijas e hijos del actual director de la empresa deciden incorporarse. Hasta antes de este momento la empresa era vista por el actual director “como algo que da para vivir”, pero no había una visión más ambiciosa. A partir de la incorporación de sus hijos, lo cual tiene escaso año y medio, deciden darle un cambio radical a la empresa Es a partir de este momento que la empiezan a concebir como una empresa que no solamente les va a dar para vivir, sino también la posibilidad de crear un patrimonio, hacerla crecer, participar en otros mercados y mejorar la calidad de sus productos, particularmente en lo que a su presentación se refiere. Pues respecto a la calidad de sus ingredientes, es algo que siempre se ha mantenido y que es lo que distingue su producto del resto de sus competidores, incluso de sus familiares que son propietarios de una empresa similar.

Ha sido recientemente cuando se ha buscado el apoyo de algunas amistades para el diseño de la ampliación de la empresa, así como para financiar tal proyecto. En este caso un amigo arquitecto de la familia, desarrollo y financió el proyecto. Y uno de sus clientes, que es propietario de una de las dulcerías más antiguas de la calle 6 Oriente donde se comercializan los dulces típicos (dulcería el Lirio), por la relación de amistad que mantiene con el actual propietario de la empresa, fue posible que les compartiera la receta de un dulce llamado yemita, el cual tiene una demanda importante.

Actualmente, se han dado algunos acercamientos con algunas instituciones de gobierno, específicamente con la SAGARPA, a través de la Red de Nacional de Desarrollo Sustentable (RENDRUS). El contacto se dio por medio de facebook, a sugerencia de un amigo. Es por este medio que participan en una feria agroindustrial en la ciudad de Puebla y posteriormente en otra realizada en la ciudad de México, D.F. y una más en el estado de Chiapas. La participación en estas ferias a decir de la quien se encarga de las tareas de comercialización de la empresa, ha sido útil para ampliar su cartera de clientes. Como se mencionó anteriormente, lo que se ha intercambiado han sido técnicas de producción y algunas técnicas administrativas. Sobre esto último, se comenta que a partir del acercamiento que hubo con RENDRUS, aprendieron la importancia que tiene el documentar todo. En su estructura administrativa el Sr. Juan es el director de la empresa una de las hijas se encarga de las relaciones publicas y la comercialización, otra de ellas atiendo la administración de la empresa y el hijo está involucrado en la producción.

*Proceso de producción, productos y mercado:* Por otra parte, desde sus inicios la empresa se ha mantenido como una empresa micro, enfocada casi exclusivamente a un mercado local y con un tipo de producción de tipo artesanal. No obstante que el producto tiene más de cincuenta años de estarse produciendo, el proceso continua siendo artesanal, y el mismo de siempre, utilizando cazos de cobre y palas de madera. Lo único que ha cambiado es el horno, pues en un principio se utilizaba un horno de leña, actualmente es de gas. Asimismo, la forma que se le da a la tortita de santa clara anteriormente se hacía a mano, hoy día se hace utilizando unos moldes, los cuales fueron invención del actual director de la empresa. Actualmente la producción de la tortita de santa clara es de aproximadamente 10,000 piezas por semana y aunque tiene un costo más elevado que el de la competencia, su calidad es superior lo que es apreciado por el cliente. Además de este producto también se elaboran rosquitas de vainilla o de glass, polvorón de nuez (también es receta propia), así como yemitas (dulce de leche) y calaveritas de chocolate (solamente por pedido); se señala que todos sus productos son hechos con ingredientes naturales y no utilizan ningún tipo de conservador. Más recientemente se trató de modificar el proceso de producción (automatizarlo), para ello se buscó el apoyo de algunos profesionistas, sin embargo, el proyecto no tuvo el éxito esperado. En cuanto a los trabajadores que se han ido incorporando a la empresa, la capacitación necesaria es dada por los mismos dueños.

*Mercado y Comercialización:* Únicamente se participa en el mercado local, siendo sus clientes principales algunas de las dulcerías de la calle de Santa Clara (esta es una calle del centro histórico de la ciudad, donde se localizan varias tiendas que venden los dulces típicos de la ciudad). Y a través de intermediarios ha llegado a colocar sus productos en los comedores de la armadora de autos Volkswagen. Asimismo en un tiempo vendía sus productos a Liverpool y al Palacio de Hierro, sin embargo, con estas tiendas el problema fue los largos periodos de pago que imponen. También en algún momento vendieron algunos de sus productos (calaveritas de chocolate) a la Gran Bodega (tienda de autoservicio de capital poblano), sin embargo, aquí el problema fue la logística, pues les exigían que surtieran a todas las tiendas que se tienen en el estado y al mismo costo, lo cual no fue posible cumplir. Algunos clientes se han conseguido a través de intermediarios y más recientemente, aproximadamente en el último par de años ha sido a través de su participación en ferias como ABASTUR, FACEBOOK y correo electrónico. Recientemente a través de la venta directa al público (en el lugar donde se elaboran los productos se acondicionó un espacio para la venta directa al público, además de los dulces típicos en este lugar también venden talavera, caramelos y dulces a granel). Sus canales de distribución son principalmente las tiendas de dulces típicos locales, su participación en ferias y la venta directa.

*Conocimientos, asistencia técnica y capacitación:* Los conocimientos adquiridos para la elaboración de los productos han sido a través de la transferencia de experiencias y de conocimientos tácitos entre los integrantes de la familia. Respecto a los aspectos administrativos, la integración a la empresa de la tercera generación de la familia, quienes ya cuentan con estudios superiores (una de las hijas es licenciada en turismo, otra es licenciada en gastronomía y otro está estudiando administración de empresas) vino a darle un visión diferente a la empresa.. La nueva visión que se le está intentando dar a la empresa vino con la

nueva generación de la familia. Algunos de los cambios principales ha sido la participación en ferias para contactar con nuevos clientes, comercializar de manera directa, buscar la certificación kosher, dar servicio a domicilio, específicamente en banquetes donde arman centros de mesa con dulces típicos y algunos casos los personalizan. En cuanto a la capacitación como ya se mencionó esta la dan ellos mismos (los dueños de la empresa). Y también recientemente han buscado asistencia técnica para el empaque, envolturas y el uso posible de conservadores naturales.

## ANÁLISIS DE LOS RESULTADOS

Considerando los datos que reflejan la situación de la empresa estudio de caso, se puede referir, que ha establecido relaciones que le han permitido adquirir conocimientos principalmente con clientes, amigos e instituciones de gobierno. Retomando a Saexenian (1990; citado por Álvarez, 2007; Lara, 2006; citado por Anunziata y Macchiarola 2010 Casas 2001; citado por Prada, 2004; Tapia y Tapia, 2010): la empresa ha establecido colaboración, dentro de un grupo de individuos con una agenda común para transmitir conocimientos, facilitando dar respuesta a desafíos y ayudarse a realizar actividades resultado de las relaciones formales o informales entre los actores que integran la red. Y como lo señala Basaldúa (2005; citado por Vera y Vera, 2011) son las redes sociales, es decir, aquellos lazos tanto formales como informales que se van generando entre la empresa – vía la figura del dueño, empresario y/o directivo - y los proveedores, clientes gobierno, etcétera. Son el vehículo para que la empresa pueda tener acceso a diferentes recursos, entre otros a distintos conocimientos que de otra forma no sería posible o muy difícil. Se retoma a Casas (2003) para presentar el Cuadro 1 donde se plasma el análisis de resultados de la red de la empresa, considerando las Dimensiones para el análisis de las redes sociales.

**Cuadro 1: Resultados del Análisis de la Red de Conocimiento Para la Microempresa Dedicada a la Elaboración de Productos Nostalgia Dulces Típicos Poblanos**

Contexto institucional	Estructura o morfología de las redes	Dinámica: origen, desarrollo y trayectorias de las redes	Contenido: formas de intercambio e insumos que circulan	Resultados de las redes y del intercambio de conocimiento
Se observa la presencia de instituciones de gobierno, clientes proveedores y amigos.	La red se integra por la empresa y RENDRUS de gobierno principalmente, además de otros actores como lo son clientes proveedores y amigos. Creándose lazos entre los actores que han facilitado intercambio de conocimiento y logro de metas que no presentan costo financiero, se centran principalmente en la confianza y buena voluntad.	La red inicia con el vínculo establecido los clientes, siguiendo la integración de otros actores, principalmente amigos y con instituciones de gobierno que apoyan a las empresas como SAGARPA (RENDRUS). El vínculo con la SAGARPA (RENDRUS) ya no sigue pero fue el que dio pie a que la empresa iniciara una nueva visión. El vínculo con amigos se ha mantenido al igual con los clientes.	Los insumos que circulan o se intercambian son principalmente apoyos financieros entre la empresa y los amigos, capacitación con instituciones de gobierno e intercambio de recetas de dulces típicos con los clientes.	Los resultados obtenidos de la red son mejoras en la infraestructura, nuevos productos y apertura de un espacio para venta directa al público, lo que ha permitido ampliar el giro de la empresa y tener amplios planes a futuro. Y capacitación que está convirtiendo al personal de la empresa en expertos en el giro.

*Fuente: elaboración propia con datos de Casas (2003). En el cuadro se observan los resultados de la investigación de campo considerando la propuesta de Casas, 2003.*

La red construida por la empresa presenta de forma muy marcada el intercambio de conocimientos, experiencias y acciones entre los diferentes actores que participan notándose fuertemente la presencia por supuesto de la empresa clientes, amigos y Gobierno. La empresa inicio a construir la red al participar en el año 2012 en el concurso organizado por el RENDRUS, a partir de ahí se fueron generando y fortalecido diferentes relaciones que le han facilitado adquirir conocimientos de manera más pronta y aplicarlos en beneficio de la empresa. El intercambio de conocimientos entre los integrantes de la red han sido precisos; experiencias empresariales y para el acceso a apoyos financieros.

## CONCLUSIONES

La red iniciada por la empresa estudio caso se inicia con los clientes al intercambiar la necesidad de producir la tortita de santa Clara, generando intercambio de conocimientos, por lo que los como son experiencias empresariales e información sobre el producto referido cuyos resultados se presentan desde diferentes ópticas para los involucrados con la red y han sido benéficos para los involucrados en la red sobre todo para la microempresa, para el gobierno representan alcanzar sus metas y sus estadísticas, para la microempresa mantenerse en el mercado y contar con una capacitación; y para los amigos la satisfacción de apoyar. Sin embargo en términos generales para la empresa, la red ha sido un detonante para la permanencia crecimiento y desarrollo de la empresa, teniendo como punto medular la confianza y la reciprocidad en el intercambio de experiencias, conocimientos y beneficios.

Vislumbrando un futuro prometedor. Lográndose reafirmar lo que autores que abordan el tema de redes de conocimiento señalan en cuanto a la facilidad y rapidez para la transmisión de conocimientos, la existencia de confianza y reciprocidad a través de los vínculos que se construyen entre los diferentes actores que participan en la red. Por otra parte, es necesario apuntar, que en el caso de esta empresa de dulces típicos su demanda es muy probable que vaya en aumento, y que cada vez haya más posibilidades para colocar sus productos en mercados más atractivos, tanto nacionales como internacionales. Probando que las variables: relaciones con clientes, proveedores amigos, Gobierno. Han permitido a la empresa construir una red que le facilita un intercambio de conocimientos y dando respuesta a la pregunta de investigación.

## RESUMEN

*Los cambios actuales han requerido de transformaciones más rápidas a todos los niveles entre los que se encuentran los educacionales, tecnológicos, de información y de procesos, lo que ha llevado a los individuos y a las organizaciones a crear y desarrollar redes de cooperación de conocimiento.*

*Las redes de cooperación han, crecido en los últimos años, debido en parte al aumento de la competencia propiciada por la inserción de los países al proceso de globalización, lo que ha intensificado la necesidad de las personas y las organizaciones de apoyarse para lograr sus objetivos. Las redes de cooperación son convenios de transacciones que se dan entre las personas, entre estas y las organizaciones o estableciendo relaciones interorganizacionales, con el fin de unir esfuerzos, capacidades, recursos y conocimientos para apoyarse y mejorar sus ventajas competitivas, es por ello que se esperan beneficios para todas las partes involucradas. Con el fin de ser más competitivas las grandes empresas han utilizado estrategias que les permiten disminuir sus costos y mantener su rentabilidad, en las últimas décadas se ha observado una mayor tendencia hacia la desincorporación de ciertas actividades. Esto ha dado lugar a otras formas de organización al conformar redes de cooperación, lo que ha permitido la participación de las pequeñas y medianas empresas (Pymes, en diferentes niveles de la cadena de valor y en determinadas actividades de comercialización, asesoría, soporte técnico y de servicios financieros. Sin embargo, las redes de cooperación no se han dado únicamente de esa forma, ya que se han establecido también vinculaciones con centros de investigación y con el sector educativo que es uno de los principales lugares donde se genera conocimiento. Se han realizado convenios de colaboración de asesoría, consultoría, así como de la realización de trabajos para resolver problemas específicos. El objetivo de esta investigación es estudiar cómo se han conformado las redes académicas de cooperación de conocimiento que se han dado entre investigadores de diversas instituciones de educación superior a nivel nacional e internacional, con el propósito de ayudar a las Pymes a resolver sus necesidades y mejorar su desempeño.*

**PALABRAS CLAVE:** pequeñas y medianas empresas, conocimiento y redes de colaboración

## NETWORKS OF COOPERATION OF KNOWLEDGE FOR SUPPORT TO THE SMALL AND MEDIUM MEXICAN COMPANIES

### ABSTRACT

*Current changes require most rapid transformations at all levels: educational, technological, information, and processes. Therefore, individuals and organizations have created and developed knowledge cooperation networks. Cooperation networks have grown in recent years, largely due to increased competition because of the integration of countries into the globalization process, which has promoted that individuals and organizations support each other to achieve their goals. Cooperation Networks are transaction agreements between different people, people and organizations, or establishing inter-organizational relations in order to join forces, skills, resources, and knowledge to improve their competitive advantages and have benefits for all parties involved. In order to be more competitive, large companies have used strategies to reduce costs and maintain their profitability, and in recent decades there has been a greater tendency toward the elimination of certain activities. This has originated other*

*forms of organization (cooperation networks), which has allowed the participation of small and medium enterprises (SMEs) in different levels of the value chain and in certain advice, support, and financial activities. However, cooperation networks are not only originated in this way because there have been also links with research centers and education institutions that are one of the knowledge generators. Collaboration agreements of advisory and consultancy have been created, as well as some projects to solve specific problems. The aim of this research is to study how it has done the academic networks of cooperation among researchers from various national and international institutions of higher education in order to help SMEs to meet their needs and improve their performance.*

## INTRODUCCIÓN

El creciente énfasis que están poniendo las organizaciones en la creación y desarrollo de redes para la construcción del conocimiento y el aprendizaje colaborativo, ha derivado de la lógica empresarial de que el conocimiento es igual a incrementar su valor y elevar sus ventajas competitivas. El conocimiento debe ser socializado para que se multiplique, lo que permitirá la acumulación del mismo para ser apropiado y, finalmente lograr el aprendizaje. Los sectores en los que las redes de conocimiento están adquiriendo mayor desarrollo son: la investigación, las organizaciones en general y las instituciones educativas.

Actualmente el aprendizaje colaborativo en las universidades es muy importante, porque en ellas se genera conocimiento que impulsa el desarrollo económico. En las Instituciones de Educación Superior (IES) las redes de conocimiento desempeñan un rol relevante como instrumentos para reestructurar los procesos de enseñanza-aprendizaje. El conocimiento que se genera de la investigación nutre la docencia, permitiendo que los alumnos estén actualizados y conozcan más de lo que sucede en la realidad. La investigación permite identificar problemáticas, su posible solución y da posibilidad a la vinculación del investigador con los sectores sociales y productivos.

Es por ello que se han conformado redes de colaboración multi e inter-universitaria con el propósito de lograr intercambio de conocimiento y la vinculación con las empresas. El objetivo de esta investigación es estudiar cómo se han dado las redes académicas de cooperación de conocimiento que se han dado entre investigadores de diversas instituciones de educación superior a nivel nacional e internacional, con el propósito de ayudar a las Pymes a resolver sus necesidades y mejorar su desempeño. Para ello se analiza en primer instancia el aprendizaje colaborativo como sistema, en el que se destaca la importancia de la formación de las redes para lograr el intercambio y la acumulación del conocimiento, se habla de las redes de expertos, de las redes como sistema colaborativo, las redes de investigación e innovación, así como de las redes organizacionales. Por otra parte se habla de las redes que se han generado para apoyar a las pymes entre las que se encuentran las que se forman con investigadores y cuerpos académicos de las instituciones de educación superior. Finalmente se presentan dos casos en los que analizamos el proceso de colaboración entre las organizaciones y los resultados obtenidos.

## REVISIÓN DE LITERATURA

### Las Redes de Conocimiento Como Sistemas Colaborativos

El aprendizaje colaborativo consiste en el intercambio y desarrollo del conocimiento en pequeños grupos de iguales (pequeñas redes de adquisición de conocimiento). Este aprendizaje tiene como propósito la participación de los individuos que forman pequeños grupos para cumplir con los objetivos del mismo o de la organización o grupo de organizaciones que participan en la red. Según Martín-Moreno Carrillo (2002) tiene las siguientes ventajas:

- a) Incrementa la motivación de todos los integrantes del grupo hacia los objetivos y contenidos del aprendizaje.
- b) Incrementa el aprendizaje que consigue cada individuo del grupo.
- c) El aprendizaje del grupo y sus integrantes alcanzan mayores niveles de rendimiento y favorece una mayor retención de lo aprendido.
- d) Promueve el pensamiento crítico (análisis, síntesis y evaluación de los conceptos), al dar oportunidades a sus integrantes de debatir los contenidos objeto de su aprendizaje. Cada integrante del grupo contrasta su interpretación de un contenido, con las interpretaciones de sus compañeros, lo que le obliga a ir más allá de su propia posición, puesto que se ve en la necesidad de reflexionar, a fin de poder exponer sus argumentos.
- e) La diversidad de conocimientos y experiencias del grupo contribuye positivamente al proceso de aprendizaje y reduce el tiempo de ansiedad que provocan las situaciones individuales para resolver problemas.
- f) Implica la interacción entre iguales para la construcción del conocimiento, lo que da lugar a la constitución de redes de aprendizaje, (actualmente apoyadas telemáticamente).

Las redes de conocimiento son sistemas colaborativos de interacciones entre iguales para la construcción y difusión del conocimiento y su alcance se potencia con el apoyo telemático de las redes de conocimiento. Las redes de conocimiento están configurando la sociedad global, integradas por individuos que se interrelacionan cognitivamente a través de las mismas y las personas que forman parte de las redes están comprometidas con el intercambio y desarrollo del conocimiento.

#### Redes Para La Investigación E Innovación

Las redes de conocimiento para la investigación e innovación constituyen sistemas colaborativos de apoyo para la construcción del conocimiento basado en la diversidad multidisciplinaria de sus integrantes. El objetivo de estas redes de conocimiento es el dar una respuesta adecuada a los nuevos desafíos de la competitividad, facilitar el intercambio de ideas en las organizaciones y compartir los resultados de las investigaciones para estimular la creación de conocimiento e innovación, las cuales requieren para la investigación e innovación (Martín-Moreno Cerrillo, Q., 2002):

- a) Analizar la interacción social y el intercambio de conocimientos
- b) Compartir los conocimientos de los expertos.
- c) Analizar qué habilidades cognitivas y sociales se requieren para participar productivamente en actividades socialmente compartidas y apoyarlas en red.
- d) Examinar qué métodos y prácticas facilitan el desarrollo de conocimientos entre los miembros de la red en tareas que tienen diferentes requerimientos en conocimientos y habilidades.
- e) Determinar en qué medida los expertos son capaces de compartir sus resultados intelectuales y utilizar productivamente el conocimiento distribuido en una red.
- f) Detectar los cambios metodológicos producidos en la red y el estudio del proceso de aprendizaje colaborativo.

En las dos últimas décadas se han incrementado las redes multimedia interpersonales con el uso de las computadoras, en la que están participando investigadores, lo que ha contribuido al desarrollo de redes de colaboración científica y avances en el desarrollo de la investigación.

### Redes Organizacionales y Redes de Cooperación Para Apoyo a la Pyme

Con el fin de ser más competitivas las grandes empresas han utilizado estrategias para disminuir sus costos y mantener su rentabilidad, es por ello que la tendencia es la desincorporación de ciertas actividades, lo que ha dado origen a nuevas formas de organización formando redes de cooperación, lo que ha permitido la participación de las pequeñas y medianas empresas. Una de las relaciones o vínculos que más se dan entre las empresas es a través de la subcontratación. En esta forma de organización de la actividad productiva, las organizaciones establecen relaciones con una o más empresas, dando lugar a redes. Con esto se ha logrado que las grandes empresas se dediquen a la actividad principal y dejen las actividades no prioritarias a otras empresas. Las empresas pequeñas tienen flexibilidad tecnológica, flexibilidad para adaptarse a los cambios y oportunidades de mercado, mayor especialización en los procesos, capacidad de producción en pequeños lotes que les dan ventajas que pueden ser aprovechadas por distintos grupos de empresas, incluidas las medianas y grandes.

Estos vínculos, pueden traer beneficios tanto a la empresa contratante y a la pequeña o mediana, por ejemplo, pueden satisfacer demandas específicas lo que le permite a la grande disminuir sus costos de inversión y producción, además de poder cumplirlas. En el caso de las pequeñas, tienen una demanda segura, lo que les genera ingresos, además de que para satisfacer las necesidades se requiere de información y transferencia de conocimiento que les permite actualizarse y aprender (Pomar y Rendón, 2007). Dentro de este contexto, las pequeñas y medianas empresas crean empleo y les permite generar ventajas competitivas. La cooperación se ha convertido en una alternativa para las micro, pequeñas y medianas empresas que les permitirá permanecer en el mercado y lograr un mayor conocimiento y aprendizaje. En función a este contexto, las empresas han establecido cada vez más eslabonamientos por los beneficios que ello genera, permitiéndole a la Pyme ser proveedoras de empresas más grandes. Las redes no se dan únicamente entre las empresas, en los últimos años la vinculación de éstas con las universidades ha crecido. Las (IES) han desarrollado capacidades para utilizar diversas tecnologías, han adquirido conocimiento, han desarrollado investigaciones que les ha permitido relacionarse con las organizaciones para apoyarlas en diferentes aspectos.

### **METODOLOGÍA**

Esta es una investigación descriptiva y explicativa. Es descriptiva ya que describe situaciones y eventos y es explicativa ya que da respuesta al por qué de ciertas situaciones. Se utilizan como herramientas de investigación el análisis del contenido, esta es una técnica para leer e interpretar el contenido de toda clase de documentos y más concretamente de los documentos escritos y entrevistas a los coordinadores, de las dos redes descritas, con el propósito de realizar una interacción mutua y crear significados.

### Resultados de la Aplicación de Redes de Cooperación Universidad-Empresa

Red PYME de conocimiento entre Instituciones de Educación Superior Mexicanas Las Instituciones de Educación Superior (IES) deben encontrar los métodos pedagógicos más adecuados para dar respuesta a los nuevos desafíos. Las (IES) públicas mexicanas son contextos idóneos para el aprendizaje en redes de conocimiento, teniendo el apoyo telemático con el equipo necesario y las conexiones informáticas, considerando un marco de actividad configurado a través de métodos de aprendizaje. “A nivel internacional la evidencia ha mostrado que la vinculación entre las (IES) y las empresas fortalece la creación de nuevas ideas que pueden transformarse en innovaciones con valor social o comercial” Sampedro J, Becerra N, Dutrenit F., Torres A, 2012:120). Es relevante el papel de las universidades para

generar y capitalizar el conocimiento desde el enfoque de la Triple Hélice, Etzkowitz y Leydesdorff (Sampedro J, Becerra N, Dutrenit F., Torres A, 2012:121).

Las empresas tienen diversos problemas que en muchos casos no pueden resolver ellas mismas, es por ello que en algunos casos acuden a las universidades para solicitar apoyo, sobre todo en cuestiones relacionadas con innovación y tecnología. Algunas de ellas han enviado a sus empleados a las instituciones académicas para adquirir conocimientos que posteriormente serán transmitidos a sus compañeros, lo que les ha permitido generar ventajas competitivas. Por lo tanto, una estrategia que permite incrementar la competitividad de las empresas y promover su desarrollo es la formación de redes de colaboración academia-industria. Sin embargo, Guillen (2012) menciona que existen obstáculos culturales que les impiden a las empresas considerar la colaboración con las universidades como una alternativa para solucionar sus problemas. Existen aún paradigmas relacionados con esta asociación, uno es que el sector académico analiza problemáticas alejadas de la realidad empresarial, se dedican al análisis de problemas teóricos que no representan la realidad de las empresas y no consideran la urgencia que usualmente predomina en los requerimientos de la industria.

Sin embargo la estrategia de algunas empresas ha sido buscar el apoyo de las universidades considerando que son instituciones en donde se genera conocimiento y donde tienen la posibilidad de crear eslabones que les permitan solucionar sus problemas. El trabajo conjunto con las Universidades puede promover la formación de los estudiantes identificando las competencias necesarias para las empresas. Pero también se establecen estrategias que permite formar equipos de trabajo en el que intervienen alumnos, investigadores y los dueños y empleados de las empresas. En estos convenios existen beneficios para todos los que intervienen en ellos, este es el caso que se ha dado entre la Universidad Autónoma Metropolitana (Ciudad de México) y varias empresas Pymes.

Redes de Cooperación para apoyo de las Pymes el caso de la UAM. Uno de los objetivos de las universidades públicas en México es la investigación, la docencia y la difusión de la cultura, con el propósito de generar conocimientos científicos, tecnológicos y humanísticos para impactar favorablemente en la satisfacción de las necesidades de la sociedad. La investigación en la Universidad Autónoma Metropolitana (UAM), se desarrolla a partir de los proyectos y/o programas surgidos de los departamentos. Se promueven actividades a través de otros colectivos de investigación, diferentes a los contemplados por la legislación, como es el caso de las redes de investigación que llevan a cabo estudios o análisis de temáticas de investigación específicas, relevantes y pertinentes que inciden en el desarrollo social del país (Foro PYME, 2009). De acuerdo con el último censo económico 2009 (INEGI) la Micro, Pequeña y Mediana Empresa (MIPyME), representa el 97.2% de los establecimientos, mantiene ocupada al 88.8% de la población económicamente activa, y su participación promedio en el PIB es de 41.8%. Y por su importancia han sido objeto de estudio por los investigadores de diversas universidades del país, entre ellas, la (UAM). El conocimiento que se genera de la investigación nutre la docencia, permitiendo que los alumnos estén actualizados y conozcan más de lo que sucede en la realidad, permite identificar problemáticas, su posible solución y da posibilidad a la vinculación del investigador con los sectores sociales y productivos. Es por ello se han conformado redes de colaboración.. Como parte de estas redes de cooperación se presentan dos casos:

#### Foro Pyme Uam

Alrededor de la década de los 90 se empezó a hablar de la vinculación entre las universidades y las empresas. En la UAM (Universidad Autónoma Metropolitana) de manera individual entre los profesores y las empresas se ha dado la vinculación, la realización de convenios de vinculación se ha dado entre ellos y la Universidad. A nivel institucional existe una tendencia de vinculación entre los diferentes sectores de la sociedad con el propósito de buscar soluciones a la problemática que enfrenta el país, en este sentido, durante 2006 y 2007 con el apoyo de la administración de Rectoría General, se realizaron foros temáticos

multi e interdisciplinarios en el áreas prioritarias como las de Pobreza, Agua y Micro, Pequeña y Mediana Empresa, con la finalidad de analizar las problemáticas y generar propuestas desde diversos enfoques. Como parte de estos foros se formó el foro de la Red de la Micro, Pequeña y Mediana Empresa (MIPYME), con la participación de profesores-investigadores de la Unidad Azcapotzalco, Iztapalapa y Xochimilco, este foro se realizó con los propósitos que se presentan en el Tabla 1:

Tabla 1: Objetivos Del Foro PYME

Objetivos Generales	Objetivos Específicos
Desarrollar conocimiento de frontera mediante investigaciones interunidades e interinstitucionales de carácter inter, multi y transdisciplinarias en relación a la Micro, Pequeña y Mediana Empresa	Incentivar proyectos de investigación innovadores, interunidades, con carácter multi e interdisciplinario sobre la problemática organizacional de las MIPyME. Establecer líneas estratégicas de investigación para el desarrollo de la RED, y para contribuir a la acumulación de conocimiento de frontera sobre la MIPyME. Constituir mecanismos de vinculación y fomentar relaciones con organizaciones de empresarios de la micro, pequeña y mediana empresa, con la finalidad de detectar las necesidades particulares del sector y promover la investigación patrocinada. Promover anualmente investigaciones relevantes sobre la problemática organizacional de la MIPyME entre la UAM y otras instituciones de educación superior.
Formar cuadros con una visión teórica-práctica de carácter crítico y multidisciplinario que atienda la demanda del sector de la MIPyME.	Establecer mecanismos de vinculación entre la UAM y organismos concentran a la MIPyME, con la finalidad de crear convenios de colaboración relacionados con asuntos de carácter laboral; por un lado, con la oferta de personal capacitado por parte de la UAM, y por el otro, la demanda del sector MIPyME. Ofertar programas de formación innovadores y pertinentes con la realidad de la MIPyME mexicana. Ofrecer cursos, talleres, conferencias y seminarios sobre la problemática organizacional, dirigidos a empresarios e interesados en el tema.
Promover esquemas de colaboración universidad-empresa mediante la intervención y difusión del conocimiento en materia de MIPyME	Propiciar la investigación y la intervención para atender la demanda de la MIPyM y establecer convenios de colaboración con instituciones educativas Divulgación de los trabajos de la RED Crear un centro de documentación sobre la literatura en torno a la MIPyME Ofrecer a investigadores y estudiantes en específico y al público en general documentación e información sobre la MIPyME

*Los objetivos generales del Foro de la pequeña y mediana empresa muestran que la planeación del mismo permite coordinar los recursos humanos, materiales, técnicos, financieros, pero sobre todo ayudan al buen desempeño de sus actividades. Y los objetivos específicos permiten la realización de los proyectos de investigación y que la vinculación crezca y se desarrolle, además de también ofrecer cursos de formación, capacitación a estudiantes y trabajadores. La finalidad del foro es la difusión de los resultados de la investigación, intervención Fuente: Documento Foro Pyme, 2009*

Los resultados obtenidos hasta la fecha por este foro son:

- 1) La realización de tres foros: En el primero participaron los investigadores de cuatro Unidades de la UAM (Atzacapotzalco, Cuajimalpa, Iztapalapa y Xochimilco) en redes interinstitucionales con el propósito de conocer sus trabajos, lo que reforzó la investigación de cada uno de ellos. El segundo tuvo como propósito la interacción con investigadores de diversas universidades del país y la participación de empresarios que hubieran tenido experiencias de vinculación con universidades.

En el tercero se logro la participación de investigadores a nivel nacional e internacional y la participación de varios dueños de MIPYMES.

- 2) Se logró la vincualción con varios empresarios que asistieron a las Unidades de acuerdo a la cercanía, se acercaron a los profesores para solicitar asesoría y apoyo para resolver sus problemas.

- 3) El número de investigaciones empíricas se incrementó lo que dio como resultado la participación de los investigadores en diversos eventos y la publicación de artículos en revistas y libros colectivos a nivel nacional e internacional
- 4) Se han publicado dos libros en los que se incluyen estudios de caso.

#### Red Pyme de Cuerpos Académicos

El trabajo en equipo permite intercambiar conocimientos, reflexionar en los mismos y actuar con mayor eficiencia y rigor intelectual. Un Cuerpo Académico (CA) es un grupo de profesores con diversos conocimientos en temas disciplinares o multidisciplinarios, con fines y objetivos. Una de las tareas del (CA) es la difusión y aplicación de nuevos conocimientos en su entorno, por medio del intercambio de experiencias e información con sus pares de su disciplina o de otras disciplinas, de su institución o con otras instituciones, propiciando con ello una gran riqueza intelectual. Esto permite formar redes interdisciplinarias con el propósito de enriquecer y complementar el conocimiento, es el caso de los (CA) en las ciencias sociales que para realizar sus investigaciones se interrelacionan con áreas disciplinarias relacionadas con una temática para estudiar por ejemplo a las organizaciones.

PROMEP publicó una convocatoria en la que se convocaba a la inscripción de proyectos académicos en las Ciencias Sociales que estuvieran conformados por (CA) de diversas universidades a nivel nacional e internacional. Como resultado de ello se creó la red PYME “Estrategias competitivas ante la crisis. permanencias y cambios” y el nombre del proyecto fue el mismo de la red, además de “Estudio comparado Aguascalientes, Distrito Federal, Hidalgo y San Luis Potosí”. (Documento de la Red Temática de Colaboración, 2009):

a) Conocer los disfuncionamientos de las Pymes estudiadas pero con un principal interés en la gestión de recursos humanos y en impacto ambiental, a partir de las entrevistas realizadas a los trabajadores. b) Analizar si existen estrategias de sustentabilidad en la empresa, que evite la externalización de costos ocultos a la sociedad. c) Generar las condiciones para promover cambio organizacional, hacia un estilo de gestión participativa sustentable, generado por el proceso de intervención socioeconómica, que permitan mejorar los resultados económicos y sociales de las empresas estudiadas a través de la creación de potencial. ) Analizar los procesos de interacción con las grandes empresas, a través de la transferencia de tecnología y generación de capacidades de absorción.

Como parte de esta red tuvimos la participación de la Université Jean Moulin Lyon 3 de Lyon Francia, en la que colaboraron como miembros de la red Veronique Zardet y Henri Savall, quienes fungieron como asesores de la realización del proyecto. El objetivo del proyecto red pyme fue la construcción colaborativa del conocimiento de la metodología socioeconómica (investigación-intervención-acción). Este modelo fue desarrollado por Savall y Zardet. El grupo de profesores de la UAM-X capacitó a los profesores- investigadores de las universidades de Hidalgo, San Luis Potosí y Aguascalientes en el método de intervención-acción y de sus herramientas. Los participantes aplicaron la metodología de investigación-acción en las pequeñas y medianas empresas de la industria metalmeccánica donde realizaron investigación. Se llevaron a cabo reuniones periódicas en las universidades participantes. Los propósitos de la red PYME fueron aprender en equipo y aplicar la metodología socioeconómica en las pymes del sector metalmeccánico. Los investigadores analizaron el contenido de la comunicación de los profesores en el entorno basado en la Web. Los hallazgos sugieren que el entorno virtual era utilizado como una herramienta de comunicación para organizar el trabajo colaborativo, más que como una herramienta genuina para la construcción del conocimiento. Este proyecto tuvo una duración de 2 años y terminó en 2012, obteniéndose los siguientes resultados:

- a) Los profesores participantes lograron el aprendizaje de la metodología investigación-intervención-acción y pudieron aplicarla en las empresas estudiadas.
- b) Se cumplieron las metas, con la intervención en 20 pymes del sector metalmecánico, en las que se identificaron los disfuncionamientos provocados por la interrelación entre las estructuras y los comportamientos, los cuales estaban afectando el desempeño de las mismas.
- c) Se realizaron los efectos espejo en los que se dieron a conocer los problemas existentes en las empresas, en este proceso los directivos y trabajadores propusieron alternativas de solución con la asesoría del investigador-consultor.
- d) Se realizaron varios seminarios con el propósito de dar a conocer los hallazgos encontrados en estas empresas, a través del dialogo se propusieron alternativas de solución entre los investigadores.
- e) Los miembros de la red pymes participaron en Foros, Seminarios, Coloquios, Congresos, con ponencias que trataban diversas temáticas relacionadas con lo encontrado en las empresas.
- f) Se elaboraron diversos artículos que fueron publicados en revistas y libros colectivos.
- g) Se publicaron dos libros, uno sobre el estudio y análisis de los casos estudiados y otro sobre una reflexión sobre las políticas de apoyo establecidas por el gobierno para apoyar a este sector, así como un análisis comparativo de las empresas participantes, por Estado y tamaño de empresas.

## REFLEXIONES

Con estos resultados se ha probado que las redes de colaboración universidad-empresa son sistemas de colaboración efectivos que permiten beneficios para todos los participantes. En los dos casos estudiados puede observarse que tanto las empresas como los investigadores resultaron beneficiados, las primeras con la detección y asesoría para dar solución a sus problemas y para los segundos porque les permitió realizar estudios de caso en donde se pudieron detectar diversos factores que han limitado el desarrollo y desempeño de las empresas. Con esto último se ha logrado contribuir al conocimiento al desarrollar los casos y dar a conocer que pasa con las micro, pequeñas y medianas empresas.

Es importante señalar que el conocimiento que se genera de estos estudios contribuye a fortalecer y ampliar el conocimiento, con esto podemos darnos cuenta que las redes de colaboración permiten fortalecer tanto a la investigación como a las empresas, quienes se dan cuenta que existe la posibilidad de establecer convenios de colaboración en los que se les puede proporcionar ayuda gracias al conocimiento que en ellas se genera. Todavía existen muchos obstáculos que limitan el proceso de vinculación, algunos como mencionamos provienen de los paradigmas que se han creado debido a la falta de información, por desconocimiento y miedo a compartir su información. Es importante acercarse más a las empresas para generar en ellas confianza, esto les permitirá modificar su cultura y ver en las universidades la posibilidad de establecer redes para lograr el cambio.

## RESUMEN

*Las Micro, Pequeñas y Medianas Empresas (MiPyMEs) son un elemento fundamental para el desarrollo económico de los países, tanto por su contribución al empleo, como por su aportación al Producto Interno Bruto. Por ello la falta de continuidad de ellas es un problema que afecta la economía de cualquier País. Este trabajo de investigación tiene como objetivo conocer cuáles son los factores que han propiciado el cese de sus operaciones, las cuales habían realizado actividades económicas por más de 10 años. Así como analizar los mecanismos de apoyos gubernamentales que evitan el cierre de estas empresas. La investigación realizada fue de tipo cualitativa, inductiva, utilizando una muestra no probabilística. El instrumento utilizado para la recolección de los datos fue una entrevista estructurada la cual fue aplicada a los propietarios de las MiPyMEs, así como a personas expertas en la materia. En relación a los resultados obtenidos se tiene que los principales factores que han ocasionado el cierre de este tipo de empresas son básicamente la falta de experiencia en el sector, en el producto o servicio que ofrecían, problemas en ventas en relación a la competencia, problemas en la administración respecto a la toma de decisiones, problemas de liquidez y elevados costos de operación. En cuanto a los apoyos gubernamentales existentes para minimizar los problemas detectados en estas empresas como: altos costos para hacer negocios, dificultades de acceso a financiamientos, problemas de infraestructura y sensibilidad al riesgo, se tiene que no eran conocidos por los empresarios.*

**PALABRAS CLAVE:** Factores, Continuidad, Apoyos gubernamentales y MiPyMEs.

## FACTORS AFFECTING THE CONTINUITY OF MSME

### ABSTRACT

*The Micro, Small and Medium Enterprises (MSMEs) are key to the economic development of the country, both for its contribution to employment, and its contribution to GDP. Thus the lack of continuity of these is a problem that affects the economy of any country. This research aims to determine the factors that have led to the cessation of its operations, which were carried out economic activities for over 10 years. And analyze government support mechanisms that prevent the closure of these companies. The research was qualitative, inductive, using a nonrandom sample. The instrument used for data collection was a structured interview which was applied to the owners of small businesses, as well as experts in the field. In relation to the results obtained must be the main factors that have caused the closure of these businesses are basically the lack of industry experience in the product or service offering, sales problems relating to competition problems administration in regard to decision-making, liquidity problems and high operating costs. As for the existing government support to minimize the problems identified in these companies as: high business costs, difficult access to financing, infrastructure problems and sensitivity to risk, has not been known to employers.*

**JEL:** M10, M21

**KEYWORDS:** Factors, Continuity, government support and MSMEs.

## INTRODUCCIÓN

Actualmente es indiscutible la importancia y la necesidad de crear nuevas empresas con una vocación de competir a mediano y largo plazo. No todas las empresas que se crean contribuyen de igual manera al progreso económico y social de una comunidad; mientras que algunas de estas empresas alcanzan el éxito, otras subsisten con una reducida capacidad o desaparecen durante sus primeros años de vida. En un país como México, las Micro, Pequeñas y Medianas Empresas (MiPyMEs) constituyen un elemento fundamental para el desarrollo económico del mismo. Con base en información proporcionada por el Instituto Nacional de Estadística Geografía e Informática (INEGI), se estima que las MiPyMEs representan el 99% del total de unidades económicas del país, aportan alrededor del 50% del Producto Interno Bruto y contribuyen a generar más del 70% de los empleos en México, razón por la cual es fundamental vigilar y fortalecer su funcionamiento, de tal forma que permitan aumentar los niveles de productividad del país y generar más empleos. A pesar de su importancia, las MiPyMEs enfrentan de manera individual una serie de problemas que, en algunos casos, han impedido su continuidad. Esto significa que los caracteres que le confieren su naturaleza no han podido permanecer a lo largo de los años.

### Objetivo de Investigación

El objetivo de esta investigación es conocer cuáles han sido los factores que han impedido la continuidad de MiPyMEs en la zona conurbada Veracruz-Boca del Río y analizar los mecanismos de apoyo gubernamentales que evitan el cierre de estas empresas.

### Problema de Estudio

Dada la importancia que tiene para la economía de un país el establecimiento y permanencia de MiPyMEs, toda vez que fomentan el empleo y el bienestar social y económico de diversos participantes, se ha observado el problema de que una gran cantidad de negocios no logra consolidarse y tiende al fracaso y cierre de las mismas. Las cifras del fracaso de las MiPyMEs son significativas en cualquier país que se analicen. Las estadísticas indican que en promedio, el 80% de las mismas fracasa antes de los cinco años y el 90% de ellas no llega a los 10 años (Soriano, 2005). Este problema se acentúa si se considera que el Ejecutivo Federal, en el Presupuesto de Egresos de la Federación, destina recursos para el apoyo de las MiPyMEs, a fin de cumplir con los compromisos establecidos en la Ley para el Desarrollo de la Competitividad de la Micro, Pequeña y Mediana Empresa publicada en el Diario Oficial de la Federación el 30 de diciembre de 2002 y reformada el 6 de junio de 2006. Sin embargo no obstante tales apoyos, se mantiene la tendencia al fracaso de estas entidades. La falta de continuidad de MiPyMEs es un problema que afecta la economía de cualquier país, por lo que se considera conveniente conocer las causas que han impedido tal continuidad en empresas de la zona conurbada Veracruz-Boca del Río.

### Justificación

Soriano (2005) refiere que los índices de mortandad de las Pymes son muy altos en cualquier economía o país que se analice. La pregunta importante es: ¿Por qué se produce esta voluminosa desaparición de empresas? Las respuestas a esta pregunta se dividen en dos grandes grupos. Las que dan los dueños de las Pymes y las que ofrecen los analistas empresariales. Para los primeros, las razones del alto índice fracaso es necesario atribuir las a fuerzas externas a las empresas, que actúan en el entorno económico-político-social: escaso apoyo oficial, deficientes programas de ayuda, casi inexistentes fuentes de financiamiento, excesivos controles gubernamentales, altas tasas impositivas, alto costo de las fuentes de financiamiento disponibles y similares. El segundo grupo de respuestas, las de los analistas empresariales, aún tomando

en consideración el entorno negativo en que operan estas empresas, se orienta más a encontrar las causas del fracaso en las propias Pymes y en particular, en la capacidad de gestión de sus responsables. Pickle (1986) ha considerado que la cuestión verdaderamente importante de los fracasos empresariales estriba en saber la causa que los origina. Un gran paso hacia el logro del éxito de la pequeña empresa, es conocer y comprender los motivos que originaron el fracaso para poder evitarlos. Asimismo considera que nueve de cada diez de las quiebras son consecuencia directa de la incompetencia, ignorancia e inexperiencia del administrador, solamente un pequeño porcentaje de éstas se debe al fraude, la negligencia, o a cuestiones imprevisibles. Se puede agrupar a las variadas causas de fracaso en cinco grandes áreas: Problemas para vender, problemas para producir y operar, problemas para controlar, problemas en la planificación y problemas en la gestión. La razón por la cual surge esta investigación radica en la importancia que tienen las MiPyMEs para la economía de nuestro país, toda vez que, de acuerdo a cifras proporcionados por la Secretaría de Economía, representan casi el 99% del total de empresas formalmente constituidas, por lo que se consideró pertinente analizar los factores que han propiciado el cierre de algunas empresas. Adicionalmente, también surgió la idea de conocer de qué forma el Gobierno Federal apoya a estas empresas que le aportan más del 70% de empleo formal en nuestro país.

### Hipótesis de Trabajo

La hipótesis de esta investigación fue: La falta de continuidad de las MiPyMEs en la zona conurbada Veracruz Boca del Río está asociada a factores internos relacionados con la gestión administrativa.

### **REVISIÓN LITERARIA**

*Generalidades de la empresa:* La palabra empresa se deriva del latín *in-prehensa*, que significa: "acción ardua y dificultosa; intento o designio de hacer una cosa; casa o sociedad mercantil o industrial fundada para emprender o llevar a cabo proyectos o negocios de importancia (Sepúlveda, 1997). De ahí se deriva, su definición como "La actividad económica ejercitada por los emprendedores". La idea de empresa en la economía clásica incluye los conceptos de organización, producción y la participación del capital y el trabajo. La noción empresa es heterogénea en virtud de la diversidad de factores que contribuyen a formarla. En ella participan trabajadores, patrones y capitalistas para la producción de bienes y servicios con valor económico. La organización de elementos personales, materiales e inmateriales, destinados a una finalidad específica, prevalece como rasgo esencial de esta figura. La organización social y económica actual tiene su centro de gravedad en las empresas. Por el influjo preponderante de lo económico y de lo material en la vida del hombre, las empresas de mayor significación social y laboral son aquellas que producen bienes o servicios de carácter público o privado.

La empresa produce para vender bienes o servicios al mercado. La finalidad de vender, y por lo tanto de ganar, resulta esencial a la empresa, que de ese modo se hace mercantil. La empresa constituye una actividad económica organizada por el titular, esto es, el empresario, sobre los recursos humanos (personal de la negociación) y materiales (bienes) que forman la hacienda comercial o fondo de comercio- según se acepte la expresión italiana (*azienda*) o la francesa (*fonds de commerce*)-. Esta labor de organización, de coordinación del empresario, no sólo constituye el impulso inicial para que la empresa surja, sino que acompaña a ésta durante su existencia, al imprimir con energía la huella e influencia personal del titular, por lo que la suerte de la negociación está ligada a las cualidades o las limitaciones del empresario.

*Elementos:* Tradicionalmente, la doctrina mercantil ha considerado como elementos de la empresa: a) al empresario; b) al ejercicio de una actividad económica, c) a la hacienda y d) a la clientela (Lastra, 1997).

El empresario Lo definitorio del empresario es esa actividad que emprende y en la que se empeña. El empresario es pues quien realiza profesionalmente una actividad para la producción. En esa actividad es precisamente en lo que se resuelve la empresa; por ello, a la hora de caracterizar la empresa, los

economistas ponen todo el acento sobre la producción, y de ahí que no hayan podido evitar el término actividad para designar el proceso productivo. Pero también la palabra actividad es, junto con esfuerzo, la más empleada para definir el trabajo. El trabajo, se dice es una actividad, y es el empresario el sujeto de la empresa, su alma coordinadora y organizadora.

El ejercicio de una actividad económica Es una nota distintiva del empresario la actividad económica para la producción o intercambio de bienes y servicios organizada, ejercida profesionalmente. El concepto de la actividad mercantil implica, tres elementos: ejercicio de una actividad intermediadora, y la ejecución de uno o más actos mercantiles fundamentales; ejercicio permanente o constante de la actividad intermediadora y el fin de obtener una ganancia o lucro. Otra idea al respecto establece que: la empresa no produce porque sí, sino para vender; la finalidad de vender y, por tanto, de ganar, resulta esencial a la empresa; los factores de la producción se hacen también de ganancias. La hacienda El conjunto de bienes organizados por el empresario para la explotación de la empresa constituye la hacienda. Dichos bienes pueden ser muebles e inmuebles; materiales e inmateriales; edificios, máquinas, mercancías, patentes, sumas de dinero. La hacienda es el patrimonio de la empresa.

Aviamento y clientela La doctrina italiana define el aviamento como la capacidad de la hacienda y el empuje dado a su organización para producir económicamente y proporcionar beneficios al empresario. El aviamento tiene como titular al empresario, quien explota el conjunto de bienes que componen la hacienda. El ejercicio de una actividad productiva sólo puede mantenerse en cuanto exista un público cuyas necesidades sean satisfechas por la producción de la empresa y, también, cuando ese público demande constantemente los bienes y servicios que en ella se producen. Por ello, Barrera (1987) considera que la clientela es quien da la medida del valor de la empresa. Las relaciones continuas que sostienen las personas que forman la clientela con la casa de comercio o empresa en demanda de bienes o servicios, le procuran beneficios económicos a la empresa. Por ello, la clientela es considerada un valor económico.

#### Ley Para el Desarrollo de la Competitividad de la Micro, Pequeña y Mediana Empresa

Esta Ley es el marco legal sobre el que descansan la normatividad de las MiPyMEs en México, teniendo por objeto promover el desarrollo económico nacional a través del fomento a la creación de micro, pequeñas y medianas empresas y el apoyo para su viabilidad, productividad, competitividad y sustentabilidad. Incrementando su participación en los mercados, en un marco de crecientes encadenamientos productivos que generen mayor valor agregado nacional. Lo anterior, con la finalidad de fomentar el empleo y el bienestar social y económico de todos los participantes en la micro, pequeña y mediana empresa. La autoridad encargada de la aplicación de esta Ley es la Secretaría de Economía quien, en el ámbito de su competencia, celebra convenios para establecer los procedimientos de coordinación en materia de apoyo a la Micro, Pequeña y Mediana Empresa, entre las Autoridades Federales, Estatales, del Distrito Federal y Municipales, para propiciar la planeación del desarrollo integral de cada Entidad Federativa, del Distrito Federal y de los Municipios, en congruencia con la planeación nacional.

*MiPyMEs:* Micro, Pequeñas y Medianas Empresas, legalmente constituidas, se clasifican con base en la estratificación establecida por la Secretaría, de común acuerdo con la Secretaría de Hacienda y Crédito Público y publicada en el Diario Oficial de la Federación, partiendo de la siguiente:

Tabla 1: Estratificación de Empresas de Acuerdo Al Número de Trabajadores

Estratificación por Número de Trabajadores			
Sector/Tamaño	Industria	Comercio	Servicios
Micro	0-10	0-10	0-10
Pequeña	11-50	11-30	11-50
Mediana	51-250	31-100	51-100

Fuente: Elaboración propia

### Importancia de las Mipymes en la Economía Nacional

Las MiPyMEs siempre han figurado a lo largo de toda la historia como entidades relacionadas con la vida cotidiana, aunque es hasta hace apenas dos décadas que se les empieza a dar la importancia requerida, puesto que tanto en los países industrializados, como en los que están en vías de desarrollo han fortalecido sus políticas de apoyo como parte integral de los planes de crecimiento nacional. Todo es debido a que se ha comprobado que ante circunstancias difíciles, las MiPyMEs pueden amortiguar de forma positiva la caída del empleo y la producción, además de que ayudan al progreso de las regiones. Las Micro, Pequeñas y Medianas Empresas (MiPyMEs) son un elemento fundamental para el desarrollo económico de los países, tanto por su contribución al empleo, como por su aportación al Producto Interno Bruto (PIB). En el caso de México, las MiPyMEs generan el 52 por ciento del PIBruto y contribuyen con el 72 por ciento de los empleos formales de acuerdo con datos de la Secretaría de Economía.

La importancia de las MiPyMEs radica en que constituyen el primer eslabón de una larga cadena productiva que se observa desde que el comercio constituía un factor de comunicación importante. Es probable que en estas empresas se puedan encontrar, como país, respuestas favorables a algunos de los graves problemas, como el desempleo, la pobreza, la concentración del ingreso y la baja productividad.

Tabla 2: Participación de Acuerdo al Número y Porcentaje de Empresas en el Empleo y PIB en México

Tipo	No. de Empresas	% del total de empresas	Aportación al empleo	Aportación al PIB
Micro	3'837,000	95.6%	40.6%	15%
Pequeñas	138,500	3.4%	14.9%	14.5%
Medianas	31,600	0.8%	16.6%	22.5%
Grandes	7,900	0.2%	27.9%	48%

Fuente: Elaboración propia con datos de la Secretaría de Economía

Las MiPyMEs representan condiciones de ahorro y consumo de cada región, participando en los procesos de integración para contribuir al incremento de las exportaciones nacionales (Anzola, 2002). Sin embargo a pesar de su importancia, enfrentan de manera individual sus problemas y probables soluciones. Por estos motivos, existe una creciente necesidad de generar un concepto de desarrollo equilibrado que involucre la participación activa de todos los sectores económicos y sociales, siendo necesario la vinculación de estos sectores y el desarrollo de proyectos que se basen en identificar las causas de la falta de continuidad, estableciendo políticas para alcanzar la competitividad de estas empresas.

### Ventajas y Desventajas

Las ventajas de estas empresas derivan directamente de su tamaño y de su gestión autónoma (Pickle, 1986). Una ventaja significativa en estas empresas es la comunicación directa, el contacto entre los empleados y el gerente la hacen efectiva, estableciendo una relación armónica con el personal y la clientela. Otro de los grandes incentivos a ofrecer por la empresa a su propietario es el hecho de poder trabajar para sí mismo. Las ganancias obtenidas de las operaciones de la empresa son la retribución financiera de su dueño. El pequeño negociante está directamente relacionado con todas las decisiones que

afectan el funcionamiento de su empresa, por lo que, puede decidir a su libre albedrío, incluso sobre la marca. Cuando el tiempo es un factor vital, ello se constituye en una ventaja importantísima.

Dentro de las más significativas desventajas de estas empresas están las siguientes: La empresa cuenta con un administrador (general no especialista) que lleva a cabo todas las funciones y actividades necesarias para el buen funcionamiento de la empresa, debido a que sus recursos son limitados y no podría financiar el costo de expertos. El administrador realiza cualquier cargo que sea necesario desempeñar. Esta cantidad de trabajo absorbe a tal grado su tiempo, que le impide planear las actividades de largo plazo del establecimiento. Una seria limitación de la pequeña empresa es su imposibilidad de contar con los servicios de un especialista. Asociado con las oportunidades lucrativas, está el riesgo de perder el dinero invertido en ella. La quiebra trae consigo pérdidas, por supuesto y más aún débitos que pueden ser onerosos.

### Continuidad en las Mipymes

*Postulado del Negocio en Marcha:* Para efectos contables y financieros, las empresas en México deben aplicar la normatividad emitida por el Consejo Mexicano para la Investigación y Desarrollo de las Normas de Información Financiera (CINIF). Es un organismo independiente en su patrimonio y operación, constituido en 2002 por entidades líderes de los sectores público y privado (ASOCIADOS), con los siguientes objetivos: Desarrollar normas de información financiera, transparentes, objetivas y confiables relacionadas con el desempeño de las entidades económicas y gubernamentales, que sean útiles a los emisores y usuarios de la información financiera, llevar a cabo los procesos de investigación, auscultación, emisión y difusión de las normas de información financiera, que den como resultado información financiera comparable y transparente a nivel internacional y lograr la convergencia de las normas locales de contabilidad con normas de información financiera aceptadas globalmente.

*Normas de Información Financiera:* Son el conjunto de pronunciamientos normativos, conceptuales y particulares, emitidos por el CINIF o transferidos al CINIF, que regulan la información contenida en los estados financieros y sus notas, en un lugar y fecha determinados, que son aceptados de manera amplia y generalizada por todos los usuarios de la información financiera.

*Postulados básicos:* De acuerdo con el Centro de investigaciones de la Contaduría Pública los postulados básicos son fundamentos que configuran el sistema de información contable y rigen el ambiente bajo el cual debe operar. Estos postulados tienen influencia en todas las fases que comprenden dicho sistema contable; es decir, inciden en la identificación, análisis, interpretación, captación, procesamiento y finalmente, en el reconocimiento contable de las transacciones, transformaciones internas y de otros eventos, que lleva a cabo o que afectan económicamente a una entidad.

Dentro de los postulados básicos emitidos por el CINIF, se ubica uno que para efectos del presente trabajo representa una pieza medular, toda vez que representa la continuidad del negocio, este es el denominado: negocio en marcha. La entidad económica se presume en existencia permanente, dentro de un horizonte ilimitado, salvo prueba en contrario, por lo que las cifras en el sistema de información contable, representa valores sistemáticamente obtenidos, con base en las NIF. En tanto prevalezcan dichas condiciones no deben determinarse valores estimados provenientes de la disposición o liquidación del conjunto de los activos netos de la entidad.

*Existencia permanente:* Se asume que la marcha de la actividad económica continuará previsiblemente en el futuro. Al evaluar si la presunción de negocio en marcha resulta apropiada, la administración tendrá en cuenta toda la información que esté disponible para el futuro, que deberá cubrir al menos, pero no limitarse a, los doce meses siguientes a partir de la fecha del balance general. El grado de detalle de las consideraciones dependerá de los hechos que se presenten en cada caso. Cuando la entidad tenga un

historial de rentabilidad, así como facilidades de acceso a fuentes de recursos financieros, puede concluirse que la base de negocio en marcha es adecuada, sin hacer un análisis detallado. En una situación típica, la ausencia de mención expresa de negocio en marcha en la información financiera, implica que se asume la continuidad de la entidad. Cuando ello no sea así, es decir, en situaciones atípicas en las que deba considerarse un horizonte temporal limitado (por ejemplo, a causa de la disolución, suspensión de actividades, quiebra o liquidación), dicha información debe sujetarse a los criterios establecidos por las Normas de Información Financiera que en caso dado le sean aplicables.

*Causas que condicionan la falta de continuidad:* La continuidad de las empresas se refiere al hecho de que sus operaciones permanezcan a lo largo de los años. Por ello es necesario conocer las causas que originan el fracaso de las empresas. Como punto de partida teórico para el análisis de las PYMES fracasadas se emplea la concepción de fracaso de Beaver citado por Arquero, Abad & Jiménez (2009), considerando que la empresa es una reserva de activos líquidos, en la que hay flujos de entrada y de salida de tesorería. La reserva sirve como colchón que permite salvar diferencias temporales entre estas entradas y salidas. En estos términos, la solvencia se define en función de la probabilidad de que la reserva se agote hasta un punto en el que la empresa sea incapaz de atender a sus obligaciones al vencimiento. La concepción establece que el fracaso financiero se produce cuando el deudor es incapaz de atender a sus compromisos. Los modelos de predicción de la quiebra que utilizan como variables explicativas los datos contables, pueden ser utilizados para medir la capacidad de la información contable para predecir la futura solvencia de la empresa. Siguiendo a Dietrich citado por Mora (1995) se dice que existen dos motivos para estimar los modelos de predicción del fracaso empresarial: probar el contenido informativo de los datos contables y predecir el propio fracaso empresarial.

Sheth y Sisodia en su libro *The Rule of Three: Surviving and Thriving in Competitive Markets* (2005) consideran que la esperanza de vida de las compañías americanas está decayendo, y que incluso algunas de las más respetadas firmas son susceptibles al fracaso. Los seis factores externos que provocan un cambio son: regulación, mercados de capitales, competencia, tecnología, globalización y clientes. Cuando alguno de estos contextos externos cambia radicalmente y la compañía o es incapaz o no está dispuesta a cambiar, a menudo resulta en fracaso. Los factores externos con un movimiento más rápido son regulación, competencia y mercados de capitales, mientras que los de movimientos más lentos son tecnología, clientes y globalización. Regulación, en concreto, es el más influyente.

*Los nodos de la micro-región Veracruz-Boca del Río:* En el presente apartado se lleva a cabo la determinación de la fuerza de atracción de los municipios que integran la región Sotavento, en relación a los dos principales: Veracruz y Boca del Río, para mostrar la forma en que se relacionan estrechamente y la importancia que tienen como nodo en dicha región, considerando este hecho como primordial para el desarrollo de las MiPyMEs por su estratégica ubicación en el nodo. El estado de Veracruz se encuentra ubicado entre la Sierra Madre Oriental y el Golfo de México, en las coordenadas 17° 03' 18" y los 22° 27' 18" de latitud norte y los 93° 36' 13" y los 98° 36' 00" de longitud oeste. Limita al norte con el Estado de Tamaulipas, al este con el Golfo de México, al sureste con los Estados de Tabasco y Chiapas, al sur y suroeste con el Estado de Oaxaca, al oeste con el Estado de Puebla, al noroeste con los Estados de San Luis Potosí e Hidalgo. El territorio del Estado se divide en 212 Municipios. El estado de Veracruz se encuentra dividido en diez regiones, dentro de las cuales se localiza la región Sotavento que comprende once municipios dentro de los cuales se ubican geográficamente Veracruz y Boca del Río, este último se localiza en la zona centro costera del Estado, en las coordenadas 19° 07' latitud norte y 96° 06' longitud oeste, a una altura de 10 metros sobre el nivel del mar. Limita al norte y noroeste con Veracruz, al este con el Golfo de México, al sureste con Alvarado, al sur con Medellín, al oeste con y. Su distancia aproximada por carretera a la capital del estado es de 95 Km. Después de aplicar el modelo de fuerza de atracción poblacional y el de potencial demográfico, se determinó que el puerto de Veracruz es el principal nodo de la región sotavento, por el tamaño de su población y la ubicación geográfica que

permite conectar a los otros once municipios que conforman la mencionada región. También se observó que al encontrarse el puerto y el municipio de Boca del Río conurbados, presentan los mayores resultados en fuerza de atracción y potencial demográfico, por lo que es conveniente considerarlos como una sola fuerza económica.

## MÉTODO

El presente trabajo se desarrolló a través de una investigación científica con un enfoque cualitativo, que se fundamentó en un proceso inductivo. Para esta investigación se utilizaron planteamientos abiertos que se iban enfocando de acuerdo a la evolución del estudio. Este planteamiento se orientó a aprender de las experiencias y puntos de vista de empresarios que se vieron impedidos a continuar con la operación de su empresa. La investigación se enfocó a empresarios que no han continuado con su negocio. En el 57% de los casos, se tuvo contacto directo en las empresas que no lograron su continuidad, no obstante que por algunos años, tuvieron una rentabilidad aceptable, lo que permitió observar los eventos que ocurrieron en ese ambiente antes de su cierre. Las variables no fueron controladas ni manipuladas, sólo permitieron definir conceptos generales. Los significados fueron extraídos de los empresarios y los datos no se limitaron a valores numéricos. La revisión de la literatura se llevó a cabo después de efectuar la primera recolección de datos con un especialista en concursos mercantiles, posteriormente se fue consultando de acuerdo con la evolución de la investigación, para relacionarla con eventos similares. Esta revisión permitió un mejor entendimiento de los datos recolectados y analizados, sin perder de vista que los insumos fundamentales surgieron de los datos emergentes provenientes de las entrevistas con los empresarios.

### Muestreo CUALITATIVO

Dado que es una investigación de tipo inductiva, toda vez que el interés de la misma no es generalizar los resultados del estudio a una población más amplia; el trabajo se concentró en los casos que ayudaron a entender el fenómeno de estudio y a responder las preguntas de la investigación. El principal factor que se consideró fue la capacidad operativa de recolección y análisis. Para este estudio se utilizaron muestras no probabilísticas, pues permitieron analizar los casos que interesaban para el trabajo de investigación y una muestra de expertos, misma que permitió tener una opinión para dirigir la hipótesis de trabajo. Los métodos que se utilizaron para la recolección de datos cualitativos fueron: la observación y la entrevista. La técnica de análisis empleada para el presente trabajo fue fenomenología, que consistió en el análisis de un número de empresarios que experimentaron el mismo hecho. Se eligieron participantes que experimentaron la misma situación (Cierre de su empresa). La elección fue por conveniencia. Las muestras dirigidas se consideraron válidas en cuanto a que este determinado diseño de investigación así lo requirió. Los resultados se aplicaron únicamente a la muestra, por tanto no son generalizables a una población. El tipo de instrumento que se utilizó fue la entrevista estructurada basada en una guía específica. La entrevista con el experto fue abierta y se fue estructurando conforme avanzaba el trabajo de campo. El tipo de preguntas fueron generales porque partieron de planteamientos globales para dirigirse al tema que interesaba y de opinión porque permitieron obtener el punto de vista del entrevistado.

## RESULTADOS

A continuación se presentan los principales resultados de la aplicación de las entrevistas realizadas al experto y propietarios de empresas que cerraron operaciones. De acuerdo a la entrevista con el experto en el tema se encontró que las principales causas de fracaso que enfrentan estas empresas son: las deficiencias en la administración de la empresa (toma de decisiones), sin embargo, algunas han sobrevivido dada la nobleza del mercado. Otro problema detectado es la apertura del mercado, las empresas que sobrevivían en una economía cerrada han encontrado problemas por la firma de Tratados Internacionales, lo que repercute en una disminución en la demanda de servicios. Un problema más que

ha apreciado este especialista es la falta de apertura crediticia a la que se enfrentan los comerciantes y dentro de los problemas internos detectados, se encuentran cuestiones laborales, sobre todo en aquellas empresas en las que se tienen constituidos sindicatos. Finalmente, su apreciación es contundente respecto a la falta de apoyos para las empresas por parte del Gobierno.

Después de analizar detalladamente los resultados obtenidos de los empresarios propietarios de una MiPyME, respecto a las principales causas que condicionaron la falta de continuidad de su establecimiento comercial, se considera que el cierre de su empresa se debe básicamente a: la falta de experiencia en el sector o en el producto o servicio que se está ofreciendo, problemas en ventas en relación a la competencia, a la entrada al mercado de grandes empresas o por incumplimiento de contratos por parte de clientes, problemas en la administración respecto a la toma de decisiones, lo cual se considera una consecuencia de la falta de experiencia en el sector, problemas de liquidez y elevados costos de operación. Aunado a lo anterior, se detectaron ciertas deficiencias en la operación de las empresas: Ninguna de las empresas realizaba una planeación estratégica, consistente en el establecimiento de objetivos y metas organizacionales, identificación de sus fortalezas y debilidades, establecimiento de una misión y visión de la organización, establecimiento de políticas y estrategias para alcanzar las metas y realización de proyectos y sistemas presupuestales.

Los empresarios no realizaban una segmentación del mercado y no tenían establecidos planes formales de mercadotecnia. Sólo algunos de ellos contaron con asesoría de expertos, aunque algunas empresas capacitaban al personal ocasionalmente, no tenían establecidos programas formales de capacitación al mismo. No realizaban innovación en productos y no contaban con un adecuado soporte tecnológico. Con lo anteriormente expuesto, se contesta la pregunta de investigación ¿Cuáles son los factores que han condicionado la falta de continuidad de las MiPyMEs en la zona conurbada Veracruz- Boca del Río? y si antes del cierre de la empresa, ¿Utilizó algún mecanismo de apoyo instrumentado por el gobierno para las MiPyMEs?. Un punto de coincidencia en todos ellos es que no contaron con ningún apoyo gubernamental para la operación o para evitar el cierre de su empresa.

## CONCLUSIONES

En un entorno como el actual, cada vez más competitivo, es importante disponer de herramientas que permitan anticipar el posible fracaso de una empresa, por las graves consecuencias que tal hecho puede llevar consigo, no sólo para sus propietarios, sino también para otros agentes con los que mantiene relaciones de tipo laboral, comercial o financiero. Derivado de la investigación, se pudo observar que todas las empresas analizadas estuvieron en operación más de 10 años, lo que implica que estaban relativamente posicionadas en el mercado. Todas las empresas tenían un control mayoritario de tipo familiar. Dentro de los factores que propiciaron la falta de continuidad de las MiPyMEs se encontró la falta de experiencia en el sector, producto o servicio, lo cual también permitió identificar que en la mayoría de los casos (83%) quien estaba al frente del negocio era la segunda generación de empresarios (Hijos de los propietarios). Otro de los factores detectados, en orden de importancia, son los problemas en las ventas, derivados de la competencia (Apertura de grandes empresas y competencia desleal), problemas con los clientes en general, lo cual también se aprecia dada la falta de experiencia en el negocio. Un tercer problema detectado fue el relacionado con la administración; al tratar de que los empresarios fueran más explícitos en este concepto, expresaron que se trataba de problemas en cuanto a toma de decisiones y a la falta de capacidad con que afrontaron las situaciones que se les presentaban. Los siguientes problemas fueron una consecuencia de lo anterior: Falta de liquidez y por ende elevados costos de operación.

Un aspecto más a considerar es que los empresarios no realizaban las siguientes actividades: planeación estratégica, segmentación del mercado, planes de mercadotecnia, programas formales de capacitación del personal, innovación en productos o servicios y soporte tecnológico, por lo que habrá que considerar esta situación como un detonante más del cierre de las empresas. Respecto a la asesoría de expertos, no

obstante que parte de los entrevistados si la tuvieron, esto no fue una ayuda suficiente para impedir el cierre de la empresa. Un factor más que se apreció dentro de la investigación, fue que esa misma falta de experiencia provocó que los empresarios extrajeran recursos de la misma, por encima de lo que el mismo negocio podía aguantar. En relación a los apoyos gubernamentales, todos los empresarios que participaron en esta investigación, no tenían conocimiento de cuáles son los apoyos que ofrece el Gobierno Federal a través de la Secretaría de Economía, por lo que tampoco recibieron ningún apoyo antes el cierre. En este sentido es necesario que las autoridades consideren la importancia de analizar las causas que impiden la continuidad de las MiPyMEs, a fin de establecer estrategias que apoyen a las empresas que están presentando estos problemas, para evitar una pérdida de empleos, sobre todo en aquellos negocios que han coadyuvado al crecimiento económico en el país y región.

# FACTORES DE CAPITAL HUMANO QUE DETERMINAN LA CALIDAD DEL SERVICIO POSTVENTA DEL SECTOR COMERCIO EN EL ÁREA AUTOMOTRIZ DE BAJA CALIFORNIA

Raúl González Núñez, Universidad Autónoma de Baja California  
Virginia Guadalupe López Torres, Universidad Autónoma de Baja California  
Marcela Reyes Pazos, Universidad Autónoma de Baja California

## RESUMEN

*La presente investigación, pretende analizar los factores del capital humano que determinan la calidad del servicio posventa de las agencias de autos nuevos del sector comercio automotriz. Es importante caracterizar el talento humano desde la perspectiva del trabajador, además de analizar el entorno donde se involucra, el diseño de la organización, la cultura organizacional y el estilo de la administración donde se desempeña. El desarrollo de la investigación está basado en un diseño mixto, investigación cualitativa y también la aplicación de dos cuestionarios, el primero enfocado a conocer las características del trabajador y el segundo se basa en conocer la percepción de los clientes que solicitan el servicio en las agencias. Se analizan las principales teorías e investigaciones de autores enfocados al capital humano, donde se hace un énfasis especial en el modelo de capital humano del investigador y doctor en Administración Idalberto Chiavenato. Es necesario señalar que es un estudio descriptivo, correlacional, donde, se busca conocer qué factores del talento humano son importantes en las personas para ofrecer un servicio con calidad y que cumplan con las expectativas de los clientes. El estudio se desarrolla en las agencias de autos nuevos del estado de Baja California, principalmente en las ciudades de Mexicali, Tijuana, Rosarito y Ensenada.*

**PALABRAS CLAVE:** talento humano, calidad, servicio postventa, capacitación. Capital humano.

## HUMAN CAPITAL FACTORS THAT DETERMINE THE QUALITY OF THE CUSTOMER SERVICE OF THE COMERCIO EN THE AUTOMOTIVE SECTOR OF BAJA CALIFORNIA

### ABSTRACT

*This research aims to analyze the human capital factors that determine the quality of the service sector new car aftermarket automotive trade. It is important to characterize the human talent from the perspective of the worker, as well as analyze where are involved, the design environment of the Organization, organizational culture, and the management style where he works. The research is based on a mixed design, qualitative research and also the application of two questionnaires, the first focused on the characteristics of the worker and the second is based on knowing the perception of customers who request the service agencies. Discusses the major theories and research of authors focused on human capital, which makes a special emphasis on the model of human capital of the researcher and doctor in administration Idalberto Chiavenato. It should be noted that it is a descriptive, correlational, study where it seeks to know what factors of human talent are important in people to provide a quality service and to fulfil the expectations of the clients. The study develops new car from the State of Baja California, mainly in the cities of Mexicali, Tijuana, Rosarito and Ensenada.*

## INTRODUCCION

El presente estudio exhibe los dos instrumentos de investigación que se adaptaron y diseñaron para medir la calidad del servicio, y los factores de capital humano, respectivamente. La investigación es con un enfoque de diseño de investigación mixto, (investigación cualitativa y cuantitativa). El planteamiento del problema es conocer si existe relación entre los factores del capital humano y la calidad del servicio postventa de las pymes del sector comercio en el área automotriz de Baja California. La variable independiente es el capital humano, las dimensiones son talento humano y contexto. Según Idalberto Chiavenato, el Capital Humano está compuesto por dos aspectos principales: Los talentos; dotados de conocimientos, habilidades y competencias que son reforzados, actualizados y recompensados de forma constante y el contexto es el ambiente interno adecuado para que los talentos florezcan y crezcan.

El contexto es determinado por aspectos como la cultura organizacional, diseño organizacional y el estilo de la administración. Los indicadores de talento humano son: 1.1) Conocimientos, 1.2) Habilidades, 1.3) Actitudes, 1.4) Valores. Los indicadores de contexto son: 2.1) Cultura Organizacional, 2.2) Diseño Organizacional, 2.3) Estilo de la administración. La variable dependiente es la calidad del servicio. Ruiz V. (1996) menciona que según Parasuraman, Zeithaml y Berry (1988) definen a la calidad del servicio como un juicio global del consumidor, relativo a la superioridad del servicio, que resulta de la comparación realizada por los clientes entre las expectativas sobre el servicio que van a recibir y las percepciones de la actuación de las organizaciones prestadoras del servicio y Gronroos (1994). Las dimensiones de la percepción de la calidad del servicio, son las del modelo SERVQUAL: elementos tangibles, la fiabilidad, capacidad de respuesta, seguridad, y empatía. Se limita al área de servicio de las 37 agencias automotrices del estado de Baja California, México, durante el periodo 2012.

## REVISION LITERARIA

### capital humano

Chiavenato (2009), refiere que hablar del recurso humano en las empresas, implica saber que representa realmente el capital humano. Es por eso que entender que significa capital humano es indispensable para el presente trabajo de investigación. premio nobel en economía Theodore W. Shultz publicado en 1961 en la American Economic Review. Desde entonces, los economistas han cargado muchos términos la maleta actual del capital humano. La mayoría coinciden en que el capital humano comprende habilidades, experiencia y conocimientos. Algunos, como el economista Gary Becker (otro premio nobel), añaden personalidad, experiencia, reputación y credenciales. Y todavía otros, como el consultor de gestión Richard Crawford, equiparan al capital con sus propietarios señalando que el capital humano consiste en personas hábiles e instruidas.” (Davenport, 2000).

Según el Profesor Idalberto Chiavenato 2009, el Capital Humano está compuesto por dos aspectos principales: Los talentos; dotados de conocimientos, habilidades y competencias que son reforzados, actualizados y recompensados de forma constante. Y el Contexto; Es el ambiente interno adecuado para que los talentos florezcan y crezcan. El contexto es determinado por aspectos como la cultura organizacional, diseño organizacional y el estilo de la administración. Las funciones de recursos humanos en la actualidad son estratégicamente desarrolladas en las empresas exitosas. El término de capital humano se refiere a la suma de los conocimientos que poseen los empleados y que le dan una ventaja competitiva a la organización. La importancia de las actividades de recursos humanos se hace evidente cuando se toma conciencia de que los seres humanos constituyen un elemento común a toda organización, en todos los casos son hombre y mujeres quienes crean y ponen en práctica las estrategias e innovaciones de sus organizaciones. Debemos tener muy en cuenta que los recursos materiales hacen las cosas posibles, pero las personas las convierten en realidades.

Chiavenato (2011) explica que las organizaciones no funcionan sin los individuos, y éstos no viven sin las organizaciones. Cada empresa tiene sus propias características, mientras que la variabilidad humana es infinita y prodigiosa. Además, señala que el área de Recursos Humanos es sensible a los diferentes factores que involucran a las organizaciones y a las personas. De acuerdo a Casado (2003), El servicio debería estructurarse en función de las necesidades de sus clientes internos, de acuerdo con una serie de criterios y políticas del departamento de Recursos Humanos, conectados con la estrategia del negocio y las necesidades del entorno. Para ello, hay que conocer y gestionar los resultados del área de Recursos Humanos, así como los mecanismos de gestión interna, esto se debe medir a través de indicadores que permitan valorar la excelencia del servicio y mejorar las prestaciones. Para lo cual es menester contemplar al menos lo relacionado con:

*Clientes: Miden la calidad del servicio y la satisfacción del usuario o cliente interno.*

*Resultados: Miden la actividad y eficiencia interna.*

*Organización: miden la evolución y capacidad de mejora.*

Es importante señalar que los indicadores señalados anteriormente, deben emanar de los objetivos que aparezcan en el cuadro de mandos de la empresa.

### Calidad en el Servicio

En relación al origen de la palabra calidad, Maqueda, J (1995) menciona lo siguiente: en todos los idiomas expuestos, la etimología de los términos cualidad y calidad nos remonta al latín del adjetivo relativo e interrogativo qualis (qualitas-qualitatem) como término imprecador (<cuál>, <tal como>, <de qué clase>; el modo de ser correspondía rigurosamente a talis) que demanda la esencia, contenido o características de las personas y de las cosas. Se ha considerado que los principales teóricos que propiciaron el desarrollo del movimiento hacia la calidad son: Deming, Juran, Ishikawa y Crosby, quienes desplegaron sus teorías a partir del mejoramiento del control de la calidad y del trabajo en equipo para lograr un alto nivel de productividad. Anda C. (2004) Se necesita que cada organización defina los conceptos que darán estructura a la filosofía que apoyara a la organización en la búsqueda del mejoramiento. Podemos elegir entre varias opciones.

Existen filosofías orientadas principalmente al usuario como es la planteada por Ishikawa; orientadas al producto, como es la propuesta por Crosby; o para obtener evidencia estadística de los procesos como propone Deming. Anda C. (2004) Hoy en día el tema de calidad del servicio tiene bastante importancia en las organizaciones, satisfacer las necesidades y gustos del cliente no es tarea fácil. Sin embargo las organizaciones apuestan por cumplir con los requerimientos que exige el cliente, con la finalidad de lograr la fidelidad del consumidor hacia la empresa. El servicio es el conjunto de prestaciones que el cliente espera (además del producto o del servicio básico) como consecuencia del precio, la imagen y la reputación del mismo. Para ofrecer un buen servicio hace falta algo más que la amabilidad y gentileza, aunque estas condiciones son imprescindibles en la atención al cliente. Vértice (2008) Los bienes y servicios de alta calidad proporcionan a una empresa una ventaja sobre la competencia.

La alta calidad reduce los costos que resultan de devoluciones, reproceso y mermas; incrementa la productividad, utilidades y otras medidas del éxito. Algo muy importantes es que la alta calidad genera clientes satisfechos, quienes recompensan a la organización con un patrocinio continuo y publicidad verbal favorable. Evans, R. (2008) Cuando un cliente valora la calidad de un servicio, no disocia todos sus componentes, sino que la juzga como un todo. Lo que prevalece, por tanto, es la impresión de conjunto y no el éxito relativo de una u otra acción específica. Vértice (2008) Las personas cambian constantemente de gustos, preferencias y exigencias, entonces las organizaciones deben de identificar las necesidades puntualizadas que requiere el cliente para poder cubrir sus peticiones. El empleado que otorga el servicio, debe hacer buen uso de su comunicación verbal, y no verbal.

### Evaluacion de la Calidad y el Modelo Servqual

Las evaluaciones a través de las percepciones de los clientes, consumidores, usuarios o pacientes en la actualidad, son de uso muy frecuente, por parte de organizaciones, tanto privadas como públicas, de muy diversos sectores, incluido el ámbito sanitario. Los índices de calidad y de satisfacción, conforme el demandante es el juez final e inapelable de la gestión, constituyen uno de los principales activos sobre los cuales se basan las posibilidades de sostener la rentabilidad y el crecimiento de las empresas, o la confianza del ciudadano en los servicios que se le ofrecen. Lo que revelen las evaluaciones a través de las percepciones, ha de determinar en muy buena medida la capacidad competitiva de las empresas. Botero, M. (2006) Los requisitos de competitividad y universalidad del mercado actual han convertido a los sistemas de gestión de la calidad en algo, además de recomendable, obligatorio, ya que aporta un punto de fiabilidad y seguridad indudable a los clientes. De esta situación no está exento el ámbito de la Inteligencia Empresarial, donde la realización de servicios y productos de calidad. Carro J.R. (2008)

Existen múltiples normas, estándares y sistemas de calidad, dependiendo estos de la industria, del sector, de la región y el país. Como ejemplos de modelos de gestión de la calidad aplicables a las organizaciones en general se pueden mencionar: el Modelo EFQM de Excelencia, el Cuadro de Mando Integral (Balanced Scorecard) (una herramienta más que modelo), el Modelo SERVQUAL, el Marco Común de Evaluación (Common Assessment Framework), la estrategia SeisSigma (m-asa nna estrategia para corregir defectos), las normas BS (del Reino Unido), las normas ISO, entre otros. Carro J.R. (2008)

El modelo servqual propuesto por Parasuraman, Zeithaml y Berry, en los años ochentas en Estados Unidos, mide la calidad del servicio en las organizaciones comparando la diferencia entre las expectativas, es decir lo que el cliente espera recibir del servicio y las percepciones, se refiere a lo que el cliente percibe al momento de tomar el servicio.

### Capital Humano y Calidad en el Servicio

El servicio es brindado por los integrantes de la organización, hacia el cliente. El servicio es intangible, no se puede tocar, sin embargo es perceptible, se percibe a través de los sentidos del ser humano, el cliente distingue si esta recibiendo un servicio de calidad por parte de la persona que brinda el servicio, ya sea el empleado o el directivo, o si no recibió un buen servicio. Todos los signos, verbales o no, que acompañan el servicio, tienen un papel fundamental en este sentido: mirar al cliente a la cara, cederle el paso, expresar con una sonrisa el placer que nos produce verlo, llamarlo por su nombre, son otras de las ventajas para ofrecer un servicio de calidad que tenga por objeto la conquista del cliente.

Vértice (2008) Alcalde (2010) enuncia que se estima más del 20% de los clientes que se retraen de adquirir un producto o servicio lo hace por fallos en la información o atención por parte de las personas encargadas de atender y motivar a los compradores. Ante esta circunstancia es necesario que la atención al cliente sea de la mas alta calidad con la información concreta y precisa de modo que la persona que recibe la información no solo tenga una idea de un producto, sino también de la calidad del capital humano y técnico con el que va a establecer una relación comercial. Blanco (2005) manifiesta que para el cumplimiento de los estándares de calidad en la prestación del servicio, desde el proceso de selección de las personas, se deben reconocer los aspectos relacionados con sus cualidades. La norma ISO9001, versión 2000 plantea las siguientes estrategias a considerar para lograrlo:

1. Identificar las competencias que requiere el personal para desarrollar adecuadamente las actividades que afectan la calidad.
2. Capacitar y brindar entrenamiento al personal para satisfacer esas necesidades.
3. Evaluar la efectividad de la capacitación y entrenamiento.

4. Asegurar que los empleados sean conscientes de la relevancia e importancia de sus actividades y como estas contribuyen para el cumplimiento de los objetivos de calidad.
5. Mantener registros adecuados de educación, experiencia, entrenamiento y habilidades.

Los negocios de menor escala, son más capaces de proveer un servicio de calidad a sus clientes cuando las capacidades humanas les permiten responder de mejor manera a las necesidades de los clientes, pero es importante reconocer que el capital humano por si mismo no produce riqueza, ésta se logra cuando la estructura social y el proceso organizacional articula al capital humano y otros recursos para producir y distribuir bienes y servicios que demanda el mercado, por ello es muy importante referirse al capital organizacional. Martin, M.M. (2006) Existen criterios y preferencias por parte de los usuarios que determinan cuando un servicio es de calidad y cuando no. A pesar de que estas determinantes podrían ser momentáneas, lo que hace que los resultados de la investigación no se puedan generalizar en el tiempo, las mismas muestran una tendencia que orienta a la gestión de recursos humanos, específicamente la de los procesos de selección, capacitación y evaluación, hacia una gestión por competencias. Guerra, M.K. (2010)

## **METODOLOGIA**

Se propone un diseño mixto, investigación cualitativa, y la aplicación de un cuestionario a través de investigación cuantitativa y finalmente que se realice una profundización y evaluación de los resultados a través de investigación cualitativa. Es un estudio descriptivo, correlacional. Además de entrevistas estructuradas a los Gerentes de los departamentos de Servicio.

## **INSTRUMENTOS DE INVESTIGACIÓN**

El primer instrumento es una adaptación del instrumento SERVQUAL, donde se miden las percepciones de la calidad de los clientes que acuden al área de servicio en la agencia automotriz. El segundo instrumento es creación propia, donde se mide la percepción de los factores de capital humano, de los trabajadores del área de servicio. Se utilizó la escala de tipo Likert en los dos instrumentos de investigación. Ésta escala de Likert se compone de 5 respuestas, siendo 1 totalmente en desacuerdo, 2 en desacuerdo, 3 ni de acuerdo ni en desacuerdo, 4 de acuerdo y 5 totalmente de acuerdo. En el primer instrumento (clientes), al principio se piden datos sobre la identificación de la persona encuestada, como son: el nombre, correo electrónico, año en que visitó por primera vez la agencia, ciudad donde vive actualmente, modelo y año de la unidad automotriz. Para conocer la percepción de los Clientes (Variable dependiente: Calidad en el servicio posventa) se utilizaron 20 ítems que miden las dimensiones de: Confiabilidad (fiabilidad), capacidad de respuesta, seguridad, empatía, bienes materiales (tangibilidad).

En el segundo instrumento (trabajadores), en la identificación del trabajador se piden datos como: puesto, edad, antigüedad en el puesto, últimos estudios, nombre de la agencia, y nombre del gerente general o propietario de la empresa. Para conocer las características de los Factores del Capital Humano de los trabajadores del Departamento de Servicio (Variable independiente: Capital Humano) se utilizaron 32 ítems que miden las dimensiones de: talento humano y contexto. Los indicadores son conocimientos, habilidades, actitudes, valores, cultura organizacional, diseño organizacional, y estilo de la administración.

## **RESULTADOS**

La investigación se limita a las 37 agencias automotrices del estado de Baja California, México, durante el periodo 2011-2012. Las unidades de análisis son los mecánicos y los asesores del departamento de servicio, además los clientes que acuden al departamento de servicio. El rango de trabajadores de cada agencia en el área de servicio es entre 2 a 38. Los resultados esperados son conocer las características del

talento humano del personal que trabaja en el departamento de servicio del sector comercio en el área automotriz de Baja California no se encuentran identificadas claramente, las características del contexto del departamento de servicio del sector comercio en el área automotriz de Baja California no son las adecuadas para desarrollar las actividades, identificar la percepción de la calidad del servicio posventa por parte de los clientes, comparar la relación entre los factores del capital humano y la calidad del servicio posventa.

## CONCLUSIONES

Actualmente se aplica la prueba piloto de los instrumentos, para conocer su validez y confiabilidad, y posteriormente aplicar cuestionarios a la muestra, realizar los análisis estadísticos correspondientes, e interpretar los resultados. En la práctica se pretende que los datos producidos en ésta investigación sirvan de apoyo a las agencias de autos nuevos en el área de servicio postventa, con el fin de aportar información relevante a la asociación de autos nuevos, A.C. de Baja California. También se espera que los resultados generados en esta investigación sirvan en la toma de decisiones estratégica a las empresas de comercio automotriz, con el fin de contribuir en la planeación y organización del capital humano del área, y a la mejora del servicio para los clientes.

### INSTRUMENTO 1. "CALIDAD DEL SERVICIO"

#### 1. IDENTIFICACIÓN DE LA PERSONA ENCUESTADA

- 1.1 Nombre del entrevistado: \_\_\_\_\_
- 1.2 Correo electrónico: \_\_\_\_\_
- 1.3 Año en que visitó por primera vez la agencia: \_\_\_\_\_
- 1.4 Ciudad donde vive actualmente: \_\_\_\_\_
- 1.5 Modelo de su unidad automotriz : \_\_\_\_\_
- 1.6 Año de su unidad automotriz: \_\_\_\_\_

#### DATOS GENERALES DE LA AGENCIA

- 1.7 Nombre: \_\_\_\_\_

Se le solicita de la manera más atenta, por favor nos ayude a contestar el siguiente cuestionario. Las respuestas son del 1 al 5, siendo 1 totalmente en desacuerdo, 2 en desacuerdo, 3 ni de acuerdo ni en desacuerdo, 4 de acuerdo y 5 totalmente de acuerdo

#### A) CONFIABILIDAD

1. Cuando la agencia me promete un servicio en tiempo determinado, lo cumple.

1	2	3	4	5
---	---	---	---	---

2. Cuando tengo un problema, la agencia muestra sincero interés por resolverlo.

1	2	3	4	5
---	---	---	---	---

3. La agencia desempeña el servicio de manera correcta la primera vez.

1	2	3	4	5
---	---	---	---	---

4. La agencia me proporciona sus servicios en la oportunidad en que promete hacerlos.

1	2	3	4	5
---	---	---	---	---

5. La agencia me mantiene informado sobre el momento en que se van a desempeñar los servicios.

1	2	3	4	5
---	---	---	---	---

#### B) CAPACIDAD DE RESPUESTA

6. Los empleados de la agencia me brindan un servicio con prontitud.

1	2	3	4	5
---	---	---	---	---

7. Los empleados de la agencia siempre se muestran dispuestos a brindarme ayuda

1	2	3	4	5
---	---	---	---	---

8. Los empleados de la agencia me atienden en el tiempo agendado.

1	2	3	4	5
---	---	---	---	---

9. Los empleados de la agencia siempre me explican muy bien los servicios que necesita mi auto.

1	2	3	4	5
---	---	---	---	---

**C) SEGURIDAD**

10. El comportamiento de los empleados de la agencia me inspiran confianza.

1	2	3	4	5
---	---	---	---	---

11. Me siento seguro al realizar transacciones con la agencia.

1	2	3	4	5
---	---	---	---	---

12. Los empleados de la agencia cuentan con el conocimiento y experiencia para resolver mis consultas satisfactoriamente.

1	2	3	4	5
---	---	---	---	---

**D) EMPATÍA**

13. La agencia cuenta con empleados que me brindan una buena atención personal.

1	2	3	4	5
---	---	---	---	---

14. La agencia se preocupa de cuidar los intereses conmigo.

1	2	3	4	5
---	---	---	---	---

15. Los empleados de la agencia entienden mis necesidades específicas.

1	2	3	4	5
---	---	---	---	---

16. Los empleados de la agencia siempre me tratan con cortesía.

1	2	3	4	5
---	---	---	---	---

**E) BIENES MATERIALES O TANGIBLES**

17. La apariencia de los equipos de la agencia es moderna.

1	2	3	4	5
---	---	---	---	---

18. Las instalaciones físicas de la agencia son visualmente atractivas.

1	2	3	4	5
---	---	---	---	---

19. La presentación de los empleados de la agencia siempre es buena.

1	2	3	4	5
---	---	---	---	---

20. Los materiales asociados con el servicio (como folletos o catálogos) de la agencia son visualmente atractivos.

1	2	3	4	5
---	---	---	---	---

**INSTRUMENTO 2. “FACTORES DE CAPITAL HUMANO”****I. IDENTIFICACIÓN DE LA PERSONA ENCUESTADA.**

- a. Puesto: \_\_\_\_\_
- b. Edad: \_\_\_\_\_
- c. Antigüedad en el puesto: \_\_\_\_\_
- d. Últimos Estudios: \_\_\_\_\_

**DATOS GENERALES DE LA AGENCIA:**

- e. Nombre de la empresa: \_\_\_\_\_
- f. Nombre del Gerente general o propietario de la Agencia: \_\_\_\_\_

Se le solicita de la manera más atenta, por favor nos ayude a contestar el siguiente cuestionario. Las respuestas son del 1 al 5, siendo 1 totalmente en desacuerdo, 2 en desacuerdo, 3 ni de acuerdo ni en desacuerdo, 4 de acuerdo y 5 totalmente de acuerdo

**TALENTO HUMANO****A) Conocimientos.**

1. Los cursos de capacitación programados en la empresa por año, son los adecuados para realizar mis actividades en mi actual puesto de trabajo.

1	2	3	4	5
---	---	---	---	---

2. La capacitación que imparte la empresa se realiza dentro de mi horario de trabajo.

1	2	3	4	5
---	---	---	---	---

3. Los cursos de capacitación son fáciles de entender debido a instructores preparados y profesionales.

1	2	3	4	5
---	---	---	---	---

4. Estoy interesado en capacitarme constantemente para poder mejorar mis actividades y beneficiar a la empresa.

1	2	3	4	5
---	---	---	---	---

**B) HABILIDADES.**

5. Realizo mis actividades diarias en el tiempo indicado de acuerdo a las políticas de la empresa.

1	2	3	4	5
---	---	---	---	---

6. Expreso mis ideas a sus compañeros de trabajo de una manera clara y objetiva.

1	2	3	4	5
---	---	---	---	---

7. Participo regularmente en actividades deportivas y sociales dentro de la empresa.

1	2	3	4	5
---	---	---	---	---

8. Mis actividades las desarrollo regularmente dentro de un equipo de trabajo.

1	2	3	4	5
---	---	---	---	---

9. Las actividades manuales siempre las desarrollo de una manera rápida y correcta.

1	2	3	4	5
---	---	---	---	---

**C) Actitudes.**

10. El comportamiento con el que desempeño mis actividades diarias es el adecuado y me favorece.

1	2	3	4	5
---	---	---	---	---

11. El comportamiento de mis compañeros de trabajo en mi departamento es el adecuado y me favorece al momento de realizar mis actividades.

1	2	3	4	5
---	---	---	---	---

12. Mis compañeros de trabajo por lo general tienen hacia mi persona una actitud positiva.

1	2	3	4	5
---	---	---	---	---

13. Me agrada de mi jefe inmediato la forma de dar las instrucciones y me beneficia en el desempeño laboral.

1	2	3	4	5
---	---	---	---	---

14. Una buena actitud me beneficia en mis actividades diarias y mejora el ambiente de trabajo con mis compañeros.

1	2	3	4	5
---	---	---	---	---

**D) Valores**

15. Conozco los valores que debemos poner en práctica como integrantes de esta empresa.

1	2	3	4	5
---	---	---	---	---

16. Considero muy importantes los valores de honradez, modestia, solidaridad y amistad para ser un mejor trabajador.

1	2	3	4	5
---	---	---	---	---

17. Existe una congruencia entre la empresa y mi jefe inmediato con respecto a los valores que ponemos en práctica todos los días.

1	2	3	4	5
---	---	---	---	---

18. Es importante poner en práctica los valores de la empresa en el momento de realizar mis actividades en mi área de trabajo.

1	2	3	4	5
---	---	---	---	---

## CONTEXTO

### E) Cultura Organizacional.

19. En nuestra empresa se valora la opinión de todos para resolver los problemas.

1	2	3	4	5
---	---	---	---	---

20. En nuestra empresa es bueno que todos nos comuniquemos para resolver los problemas.

1	2	3	4	5
---	---	---	---	---

21. En nuestra empresa existe flexibilidad para solicitar permisos especiales y faltar a trabajar.

1	2	3	4	5
---	---	---	---	---

22. En nuestra empresa existe confianza con nuestros compañeros.

1	2	3	4	5
---	---	---	---	---

### F) Diseño organizacional.

23. En nuestra empresa se tiene claro la asignación de actividades por área y departamento.

1	2	3	4	5
---	---	---	---	---

24. Existe una adecuada organización en la empresa que facilita el contacto y la comunicación con todo el personal.

1	2	3	4	5
---	---	---	---	---

25. Los planes realizados en la organización favorecen al logro de los objetivos de la empresa.

1	2	3	4	5
---	---	---	---	---

26. Las personas que integran la organización están comprometidas con el logro de los objetivos.

1	2	3	4	5
---	---	---	---	---

27. Los jefes en la empresa tienen claras las fortalezas, debilidades, oportunidades y amenazas de la organización.

1	2	3	4	5
---	---	---	---	---

## G) ESTILO DE LA ADMINISTRACIÓN

28. El liderazgo que existe en la empresa es el adecuado para realizar mis actividades.

1	2	3	4	5
---	---	---	---	---

29. Mi jefe inmediato conoce bien todas las actividades del departamento y siempre pone el mejor ejemplo al momento de realizar su trabajo.

1	2	3	4	5
---	---	---	---	---

30. Las instrucciones que recibo de mi jefe inmediato son claras facilitándome mis actividades.

1	2	3	4	5
---	---	---	---	---

31. Existe plena confianza con mi jefe inmediato en el momento de recibir instrucciones en mi área de trabajo.

1	2	3	4	5
---	---	---	---	---

32. En la empresa existe un buen equipo de trabajo que facilita la armonía y el clima laboral.

1	2	3	4	5
---	---	---	---	---

# LA GESTION DE CALIDAD COMO HERRAMIENTA ESENCIAL PARA LA COMPETITIVIDAD DE LAS EMPRESAS DE LA RAMA METAL MECANICA DEL SURESTE DEL ESTADO DE COAHUILA

Baltazar Rodríguez Villanueva, Universidad Autónoma de Coahuila

Rosalva Diamantina Vásquez Mireles, Universidad Autónoma de Coahuila

Yolanda Mejía de León, Universidad Autónoma de Coahuila

## RESUMEN

*Las MiPyMes presentan un conjunto de ventajas que las hace sumamente importantes para la economía de México, pero también padecen de factores internos y externos que limitan su competitividad. Uno de esos factores internos (es decir, controlables por la empresa) es la gestión de calidad. El objetivo central de esta investigación es conocer y analizar los factores que influyen en la gestión de calidad de las empresas metal mecánicas, (una de las principales actividades económicas, por el clúster automotriz), de la región sureste del Estado de Coahuila, México. Para lograrlo, se diseñó un instrumento de medición (con escalamiento Likert, diferencial semántico y preguntas dicotómicas), considerando las variables de dirección empresarial o comportamiento estratégico, competitividad, tecnología, innovación y calidad. La encuesta, se aplicó a 69 gerentes o propietarios de micros y pequeñas empresas. La investigación es exploratoria, descriptiva, no experimental y en cuanto a la temporalidad de la recolección de los datos el estudio es transeccional o transversal. La hipótesis principal que se plantea es que la innovación, la calidad y la gestión empresarial, limitan a las MiPyMes metalmecánicas para ser proveedoras de las grandes empresas que integran el clúster automotriz en Coahuila. Algunos de los resultados obtenidos, muestran que en cuanto a calidad en el producto como factor de éxito, el 55% de los empresarios contestó como indispensable; el 39% dijeron es sumamente importante y el 6% señalaron de regular importancia. Uno de los principales descubrimientos del estudio es que solamente el 23% cuenta con certificación en procesos de calidad; el 29% manifestó no tenerla, pero estar en el proceso (sin comprobarlo) y el 48% indicó no contar con certificación en calidad, ni estar en el proceso. Respecto a innovación en el proceso, el 72% contestó llevarla a cabo y el 28% no; en innovación en el producto el 80% dijeron practicarla y el 20% no; mientras que en innovación para la gestión de la empresa el 58% indicaron ejercerla y el 42% no llevarla a cabo. Se concluye que, no obstante que los empresarios consideran que la gestión de calidad es primordial e insoslayable para lograr la competitividad, por otra parte se demuestra una gran debilidad en el proceso y en la implantación, por lo que existe una excelente oportunidad para promover modelos de aseguramiento de calidad y de innovación para la gestión empresarial.*

**PALABRAS CLAVES:** MiPyMes, Gestión, Calidad y Competitividad.

## QUALITY MANAGEMENT AS ESSENTIAL TOOL FOR COMPETITIVENESS OF METAL MECHANICAL BRANCH STATE SOUTHEAST COAHUILA

### ABSTRACT

*MSMEs provide a number of advantages that make them very important to the economy of México, but also suffer from internal and external factors that limit their competitiveness. One of these internal factors (controllable by the company) is quality management. The objective of this research is to identify and analyze the factors that influence the quality management of enterprises mechanical metal, (one of*

*the main economic activities for the automotive cluster), from the southeast region of the State of Coahuila, México. To achieve this, we designed a measuring instrument (with Likert scaling, semantic differential and dichotomic questions), considering the variables of corporate governance or strategic behavior, competitiveness, technology, innovation and quality. The survey was applied to 30 managers or owners of micro and small enterprises. The research is exploratory, descriptive, nonexperimental and the temporality of the collection of the study data is transactional or transversal. The main hypothesis raised is that innovation, quality and enterprise management, limit metalmechanic MSMEs for providing of large companies in the automaker cluster in Coahuila. Some of the results show that in terms of product quality as a success factor, 55% of entrepreneurs said is essential, 39% said it is extremely important and 6% reported of regulating importance. One of the main discoveries of the study is that only 23% is certified in quality processes, 29% said they are not certified, but being in the process (without checking) and 48% reported not having quality certification, or be in the process. Regarding innovation in the process, 72% said carry out and 28% did not, in product innovation 80% said practice and 20% did not, while in management innovation company reported 58% exercise and 42% not doing. We conclude that, notwithstanding that employers believe that quality management is essential and unavoidable to achieve competitiveness on the other hand demonstrates a major weakness in the process and in the implementation, so there is an excellent opportunity to promote models quality assurance and innovation for enterprise management.*

## INTRODUCCIÓN

Las Micro, Pequeñas y Medianas Empresas, en adelante MiPyMes, han jugado un papel muy importante en la economía del país, no solo por su contribución al PIB, a la generación de empleo y su participación en cuanto a número en la totalidad de empresas existentes, sino también, como un mecanismo que promueve la actividad empresarial. Por la función que desempeñan en México, las MiPyMes son consideradas, por lo tanto, como un sector de orden estratégico fundamental. Sin embargo, las exigencias que plantean la apertura de la economía y la globalización de los mercados, tienden a debilitar su poder competitivo (ubicándolas en una situación muy desfavorable), debido a cuestiones como economías de escala, acceso a fuentes de financiamiento, acceso a los mercados de exportación, poder de negociación frente a proveedores, acceso a capacitación y asistencia técnica, a tecnologías de punta, y en general a los mecanismos que contribuyen a fortalecer su nivel de competitividad.

La implantación de sistemas de aseguramiento de la calidad junto con un enfoque de calidad total, se han convertido en un factor primordial para mejorar su competitividad, de forma que aquellas MiPyMes que carezcan de esta implantación y preferentemente certificadas por un organismo reconocido, se encontrarán en clara desventaja frente a su competencia regional, nacional e internacional. Con la realización de esta investigación se pretende demostrar que la innovación, la calidad y la gestión empresarial limitan a las MiPyMes dedicadas a la actividad metalmecánica para ser proveedoras de las grandes empresas que integran el clúster automotriz en el Estado de Coahuila, México. Este tipo de empresas necesitan, por lo tanto, realizar un gran esfuerzo hacia la gestión de la calidad a corto y largo plazo asignando recursos financieros, técnicos, y humanos para cubrir esta deficiencia que las hace perder competitividad. Esta investigación está estructurada como sigue: se desarrolla el sustento teórico; enseguida se describe el proceso metodológico para alcanzar los objetivos señalados, posteriormente se presentan los resultados de la investigación y finalmente, se presentan las conclusiones, limitaciones y futuras líneas de investigación.

## REVISION DE LITERATURA

La calidad, es un concepto que ha ido variando con los años, su aplicación se ha realizado de acuerdo a como la concibe o adopta la empresa, tomando en cuenta sus necesidades, hasta la fecha, algunos investigadores han realizado grandes contribuciones a la administración de la calidad buscando que estas aportaciones sean aplicables, incluyendo estudios en la medición, administración y mejora en los procesos de las organizaciones, sin embargo, la mayoría de los autores coinciden en señalar a tres filósofos como los “gurús” de la administración en la revolución de la calidad: el Doctor W. Edwards Deming, Joseph M. Juran y Philip B. Crosby; sus filosofías, junto con la de Ishikawa, han traspasado fronteras dejando un gran impacto en organizaciones de muchos países del mundo Porter, (2004). A continuación se detallan algunas de las definiciones que comúnmente son utilizadas en la actualidad.

Edward Deming: "Un grado predecible de uniformidad y fiabilidad a bajo coste, adecuado a las necesidades del mercado". Esta definición considera que los productos ofrecidos al público deben servir para algo más que para atraer clientes y conseguir ventas, deben comportarse como medida de calidad. Dr. J. Juran: la calidad es "La adecuación para el uso satisfaciendo las necesidades del cliente" o como algo "listo para su uso". En esta definición también se presupone que el uso de los productos o servicios ha sido previamente definido y por tanto, especificado y que, además está claro quién es el usuario. Según Crosby, la filosofía en que debe basarse un buen management de calidad puede sintetizarse en cuatro principios: "La calidad consiste en satisfacer las exigencias de los clientes; Prevenir es mejor que inspeccionar; El objetivo a alcanzar es un estándar de "defecto cero"; La calidad se mide monetariamente". Kaoru Ishikawa define a la calidad como: "Desarrollar, diseñar, manufacturar y mantener un producto de calidad que sea el más económico, útil y siempre satisfactorio para el consumidor". Drucker, P.F. considera que "calidad es lo que el cliente está dispuesto a pagar en función de lo que obtiene y valora". Esta definición indica que existe una estrecha relación entre la calidad y el precio de un producto, esto no significa que un precio superior sea indicativo de una calidad superior.

En conclusión, la calidad se considera como una garantía de progreso y como una herramienta estratégica para que la organización sea competitiva en donde el precio y la calidad deben ser tomada en cuenta. Por otra parte, la gestión de la calidad está definida como "las actividades coordinadas para dirigir y controlar una organización en lo relativo a la calidad" (AENOR, 2000). La evolución de la gestión de la calidad se ha producido en cuatro fases: gestión de la calidad por inspección, control estadístico de calidad, aseguramiento de la calidad y gestión de la calidad total. (Moeno-Luzón et al., 2001). Las dos últimas son enfoques de dirección y las dos primeras están orientadas a resolver problemas de carácter operativo. Una de las herramientas que utiliza la empresa para competir en el mercado globalizado es la mejora continua de la calidad de procesos o productos, este concepto no solo ha sido asociado a un criterio de ventaja competitiva de las empresas, sino que a la vez ha sido reconocido como parte fundamental para mantener una relación óptima en las cadenas de suministros.

El desempeño de una empresa, no depende de acciones realizadas en el interior, sino también del comportamiento de los indicadores de desempeño de sus proveedores, distribuidores, de sus clientes y su entorno, o lo que actualmente se llama responsabilidad social empresarial. La importancia de la gestión de calidad se encuentra sustentada en que las empresas adquieren beneficios tangibles producto de la formación de equipos multidisciplinarios que colaboran conjuntamente en la planeación, control y mejora continua en los procesos productivos. La gestión de calidad ha evolucionado hacia una visión cada vez más global, y orientada hacia los aspectos humanos y hacia la mejora de los procesos de dirección de las organizaciones. La evolución hacia este nuevo enfoque es consecuencia de los retos a los que tienen que enfrentarse las empresas en el mercado globalizado. Con los tratados de libre comercio que se realizan entre países a nivel mundial, es necesario que las empresas convengan a sus compradores potenciales que sus productos o servicios estén dentro de los estándares de calidad. Lo que significa para una empresa

alcanzar y lograr la implementación de la gestión de calidad basado en el sistema ISO 9001:2000 (Hoyle, 2001). Pero por otra parte, la certificación ISO 9000 por si sola, no garantiza un producto de calidad, tan solo asegura que una empresa llevar a cabo una serie de procedimientos los cuales controlarán dicha calidad (Hill, 1996; Zhu Scheuermann, 1999), sin embargo, proporciona más confianza al consumidor.

Es necesario tomar en cuenta que la mayoría de las empresas micro y pequeñas tienen poca innovación, sus procesos de innovación están estimulados por las empresas líderes locales del sector, vía imitación, la cual se difunde de forma rápida y constante en el ámbito productivo local. Las señales provenientes del mercado impulsan a las empresas a tomar medidas para introducir y desarrollar innovaciones ya que como menciona Porter (2004) “la única ventaja competitiva sostenible es la innovación permanente”. Los proveedores locales podrían impulsar las ideas que desencadenan actividades de innovación de las empresas y los institutos tecnológicos y universidades pueden ayudar a potenciar esas innovaciones. Las empresas que no innovan, pronto serán alcanzadas y superadas por sus competidores. Para superar los retos cada vez más complejos y ambiciosos que plantea la globalización, las micro y pequeñas empresas necesitan apoyo gubernamental e institucional. Un enfoque en tres componentes puede ayudarles a crear y consolidar su competitividad: una colaboración más estrecha entre las empresas el gobierno y las universidades; una interacción eficaz en redes de los organismos nacionales encargados de la cadena de valor y un aprovechamiento óptimo de las nuevas tecnologías.

### Información Estadística

Con respecto a la importancia del sector manufacturero (secundario) en la economía mexicana, tanto municipal, estatal, así como nacional, la estructura de la población ocupada, según sector de actividad, para el año 2011, la información es la siguiente;

Tabla 1: Estructura de la Población Ocupada, Según Sector de Actividad. 2011

Sector de Actividad	Nacional México	Estatad Coahuila	Municipal Saltillo
Sector Primario	13.9 %	5.9 %	0.8 %
Sector Secundario	23.4 %	32.9 %	36.3 %
Sector Terciario	62.0 %	60.5 %	62.3 %
No Especifica	0.7 %	0.7 %	0.6 %
Totales	100 %	100 %	100 %

*Fuente; INEGI Instituto Nacional de Estadística, Geografía e Informática. Perspectiva Estadística, Coahuila de Zaragoza. Marzo de 2012.*

Como puede observarse, el sector industrial o secundario, absorbe la tercera parte de la población ocupada en el Estado de Coahuila y el 36% en el caso de Saltillo, Coah. en ambos casos, superior a la media nacional (23.4%); la muestra de la industria metal-mecánica que se estudió, corresponde al sector secundario.

### **METODOLOGÍA**

El objetivo central de esta investigación es conocer y analizar los factores que influyen en la gestión de calidad de las empresas metal-mecánicas, una de las principales actividades económicas, por el clúster automotriz. Se definieron 5 variables principales: dirección empresarial o comportamiento estratégico, innovación, competitividad, tecnología, innovación y calidad. El diseño de la investigación es no experimental, ya que no se manipularon las variables. En cuanto a la temporalidad, de la recolección de los datos, el estudio es transeccional o transversal. Es descriptivo, ya que solamente se analizaron cómo son y cómo se manifestaron algunos fenómenos y sus componentes. Por otra parte, es una investigación aplicada exploratoria. La hipótesis principal que se plantea es que la innovación, la calidad y la gestión empresarial, limitan a las MiPyMes metal-mecánicas para ser proveedoras de las grandes empresas que integran el clúster automotriz en la región sureste del Estado de Coahuila, México.

Para lograrlo, se diseñó un instrumento de medición propio, (encuesta), para obtener información del grupo previamente seleccionado. Dicho instrumento, considera escalamiento Likert, diferencial semántico y preguntas dicotómicas, considerando las variables mencionadas, e incluye 37 reactivos o preguntas, los cuales se dividen en 6 bloques: I.- Datos Generales y de Identificación de la Empresa. II.- Dirección Empresarial. III.- Competitividad. IV.- Tecnología, Innovación y Calidad. V.- Competencia. VI.- Asociacionismo Empresarial. En la primera parte se incluyeron 23 datos de identificación, los cuales permitieron obtener la información general de la empresa, así como el perfil del empresario. Con respecto a la segunda sección, Dirección Empresarial y de acuerdo con la tipología básica que definieron Miles y Snow (1978), se presentaron 4 opciones para que el empresario ubicara su empresa en función a los 4 comportamientos estratégicos señalados por estos autores: Tipo A = Exploradora Tipo B = Analizadora Tipo C = Defensiva y Tipo D = Reactiva. Escalamiento Tipo Likert; En la serie de preguntas que se refieren al bloque III.- Competitividad se utilizó una escala de Likert de 5 puntos.

En relación al bloque IV, Tecnología, Innovación y Calidad, se incluyeron 4 opciones para que el empresario ubicara a su empresa considerando la posición tecnológica: Fuerte, Buena, Sostenible y Débil. Se identificó también si la empresa contaba con certificación ISO-9000, así como innovaciones relacionadas con procesos productivos, productos/servicios y de gestión de la empresa. Diferencial Semántico; En el bloque V Competencia se utilizó el diferencial semántico (Par de adjetivos Peor-Mejor) con una escala de 5 opciones. Originalmente la encuesta se aplicó a 30 MiPyMes, sin embargo, se logró obtener el Directorio Empresarial de la CANACINTRA (Cámara Nacional de la Industria de la Transformación) en la Región Coahuila Sureste, la cual agrupa a 212 socios y se aplicaron los cuestionarios a 69 empresas de la actividad metalmeccánica, principalmente, es decir, una muestra del 32.5% de la población total. Por lo tanto, se siguió la estrategia de diseño de muestra no probabilística a través del muestreo dirigido, que selecciona sujetos típicos, es decir, se eliminaron deliberadamente empresas grandes y aquellas que no tuvieran como actividad principal la metal mecánica. Los cuestionarios se levantaron en los meses de Agosto, Septiembre y Octubre de 2011. En el 2012, se revisó, analizó y organizó la información. En el procesamiento de la información se utilizó el paquete excel y el software estadístico SPSS en su versión 16. Se aplicaron fundamentalmente dos tipos de criterios; uno relativo a los ponderados que se usaron para verificar los resultados y otro para conocer los hallazgos con relación a los objetivos.

## RESULTADOS

Como se mencionó anteriormente, para examinar los diferentes comportamientos estratégicos que adoptan las MiPyMes, se utilizó la clasificación de las cuatro tipologías propuestas por Miles y Snow (1978). A.-Exploradora, B.-Analizadora, C.-Defensiva y D.-Reactiva. Es preciso mencionar que las respuestas son la apreciación subjetiva del empresario y no es el resultado de un diagnóstico específico sobre planeación estratégica; hecha esta aclaración, se presentan los siguientes resultados; El 44.93% de las empresas (31) se consideran de tipología B, es decir analizadoras; el 30.43% de las empresas (21) se identifican con la tipología C defensivas; el 21.74% (15) se identifican como exploradoras y el 2.90% restante (2) empresas son del tipo D, reactivas. En cuanto a la variable de competitividad de las empresas se incluyó en la encuesta como bloque o sección III y se consideró una escala de Likert de 5 puntos, utilizando 12 ítems para cada uno de los 69 encuestados. Enseguida se presenta una tabla que presenta los resultados obtenidos.

Tabla 2: Variable: Competitividad Empresarial.

INDIQUE EL NIVEL DE IMPORTANCIA QUE HA TENIDO EN LOS ULTIMOS DOS AÑOS LOS SIGUIENTES FACTORES PARA EL DESARROLLO Y ÉXITO DE SU EMPRESA. Fuente; Elaboración propia 2012.

Respecto a la calidad, el 55.07% de las empresas (38) contestaron como indispensable la calidad como factor de éxito; el 39.13% (27) dijeron que es sumamente importante y el 5.8% (4) empresas señalaron que la calidad tiene regular importancia. Para ninguna empresa la calidad es poco importante o no se toma en cuenta. Referente al esfuerzo en investigación y desarrollo, como un factor de éxito estas fueron las respuestas: El 29% de las empresas (20) contestaron indispensable como; el 42% (29) dijeron que es sumamente importante, el 24% (17) empresas señalaron que el esfuerzo en investigación y desarrollo tiene regular importancia y finalmente 3 empresas (5%) respondieron que es poco importante o no se toma en cuenta. En relación a la incorporación de procesos tecnológicos e innovación el 23% (16) lo consideran indispensable como factor de éxito; el 53% (37) como sumamente importante; el 19% (13) respondieron que tiene regular importancia y el 5% (3) contestaron como poco importante o no tomarlo en cuenta. Con relación al servicio al cliente, como un factor de éxito, estas fueron las respuestas: El 59% de las empresas (41) contestaron como indispensable; el 36% (25) dijeron que es sumamente importante, solamente el 3% (2) empresas señalaron que la calidad en el servicio tiene regular importancia y finalmente 1 empresas (2%) respondieron que es poco importante.

En cuanto a los costos de fabricación el 25% (17) empresas contestaron como indispensable; el 62% (43) dijeron que es sumamente importante, solamente el 10% (7) empresas señalaron que los costos de fabricación tienen regular importancia y finalmente 2 empresas (3%) respondieron que es poco importante. En la sección IV dedicada a la Tecnología, Innovación y Calidad, con respecto a la posición tecnológica de la empresa, se le indicó al encuestado que escogiera un perfil de cuatro opciones; posición tecnológica fuerte, buena, sostenible o débil. Los resultados obtenidos son que el 33.33% (23) empresas consideran tener una posición tecnológica fuerte; el 39.13% (27) buena; el 26.08% (18) sostenible y solo

el 1.46% (1) se ubicó con posición tecnológica débil En relación a la implementación de sistemas de calidad, con certificación ISO 9000, se obtuvo la siguiente información: solamente 16 empresas de 69, que representan el 23.18% cuentan con certificación ISO 9000, mientras que 20 (28.98%) manifestó no tenerla, pero encontrarse en un proceso de certificación (sin comprobarlo) y casi la mitad, es decir 33 empresas que representan el 47.84% dijeron no contar con certificación ISO 9000 ni estar en el proceso. Esta situación es muy interesante por dos razones: A.- La primera es el contraste entre la respuesta de darle una gran ponderación a la calidad como un factor importante de éxito, ya que como se mencionó anteriormente la gran mayoría 65 empresas (94.20%) consideran este factor como indispensable o muy importante, pero por otra parte, el 48%, no cuentan con un proceso formal de acreditación o certificación en calidad. B.- La segunda razón es precisamente la oportunidad de promover un esquema de certificación ISO 9000, pero adaptado a las necesidades de este tipo de empresas ya que se detectó que muchos empresarios señalan los costos como una importante limitante. Otro de los factores que mencionaron es la gran cantidad de productos diferentes que realizan (algunos trabajan por proyectos), no trabajan en serie, por lo que no es fácil estandarizar procesos.

Cabe mencionar que si bien existen instituciones que apoyan este tipo de proyectos, no cuentan con información o asesoría de alguien que los oriente. Otro factor importante que se consideró en este bloque IV fue el de la innovación en tres puntos; en los procesos productivos, en los productos y en la gestión de la empresa, los datos finales arrojan lo siguiente: En **innovación en el proceso** 50 empresarios (72.46%) dijeron si llevarla a cabo y 19 (27.64%) no; en **innovación en el producto** 55 si (79.71%) y 14 no (20.29%), mientras que la **innovación en gestión de la empresa** 40 empresarios que representan el 57.97%, dijeron llevarla a cabo y casi la mitad 29 empresarios manifestaron no llevarla a cabo (42.03%).

Las respuestas a la pregunta ¿Cómo considera la calidad de los productos que fabrican las MiPyMes en la región? Las respuestas fueron: el 57% considera que la calidad es muy buena, el 35% buena; el 8% regular y ningún empresario consideró que la calidad era mala. Con relación a la siguiente pregunta ¿Ha adquirido o recibido equipo de alta tecnología en los últimos 5 años? 58% de los empresarios indicaron que sí y el 42% respondieron negativamente, de lo cual se deduce que casi la mitad de los empresarios no ha invertido para renovar maquinaria y equipo. Finalmente, y con respecto a la pregunta ¿Qué tipo de innovaciones de proceso ha realizado en los últimos 5 años? los empresarios entrevistados contestaron de la siguiente manera: El 35% contestó haber realizado innovaciones o adaptaciones en maquinaria; el 33 % en adquisición e instalación de equipo informático; el 26% en mecanización y control y el 6% en equipo de pruebas.

## CONCLUSIONES

Los resultados obtenidos en la presente investigación, muestran que el 94% de las empresas están conscientes de la importancia que reviste la gestión de calidad. Sin embargo, este factor por sí sólo no garantiza mantener una posición competitiva en el mercado al que van dirigidos. Un descubrimiento interesante y que contrasta con la respuesta anterior, es que solamente el 23% de las empresas tienen implementados sistemas de aseguramiento de calidad; el 29% manifestó no tenerla, pero estar en el proceso y el 48% restante reconoció no contar con certificación ni estar en un proceso formal.

Algunas de las causas señaladas por los empresarios, para entender la situación anterior, indican que la actividad metal-mecánica es multifacética, (diseños especiales, corte, soldadura, troquelado, maquinado, equipo de precisión, etc.) lo que implica trabajar en proyectos especiales y “únicos”, es decir, algunas empresas no trabajan producción en serie, lo que dificulta la estandarización de los procesos. Otro de los factores mencionados son los costos de la implementación de los procesos de aseguramiento de calidad y certificación ISO-9000; finalmente, y si bien hay instituciones que los pueden apoyar en este sentido, no cuentan con información suficiente ni asesoría de alguien que los oriente.

De lo anterior se deduce la oportunidad para promover esquemas de implementación y certificación ISO-

9000 adaptados a este tipo de empresas, ya que como es sabido, las cadenas de suministro de las grandes corporaciones, requieren que sus proveedores estén certificados en gestión de calidad, para considerarlos proveedores confiables. En cuanto a innovación en el proceso, el 72% de los empresarios manifestaron llevarla a cabo, mientras que el 80% contestó afirmativamente en innovaciones en el producto; sin embargo, en innovaciones en gestión de la empresa sólo el 58% de los encuestados contestaron llevarla a cabo y el 42% no contar con algún proceso de gestión empresarial. Esta situación se traduce en una excelente oportunidad para derivar proyectos de vinculación universidad-empresa, en los cuales esta institución puede participar. Por otra parte, en los últimos 5 años, el 42% de los empresarios no han hecho inversiones que tengan que ver con innovación, lo cual los limita y debilita su condición para ser considerados proveedores de clase mundial. Este escenario demuestra que el financiamiento sigue siendo una de los factores importantes que deben solucionar. Finalmente, con la presente investigación, queda demostrado que la innovación, la calidad y la gestión empresarial limitan a las MiPyMes dedicadas a la actividad metalmeccánica para ser proveedoras de las grandes empresas que integran el clúster automotriz en el Estado de Coahuila, México.

## RESUMEN

*Las IES, a nivel mundial están viendo surgir procesos de acreditación e iniciativas de evaluación como medios importantes en la búsqueda de calidad educativa. México, como muchos otros países, está empeñado en la mejora continua de la calidad de su sistema de educación superior para ser capaz de competir en un mundo globalizado y cambiante que presenta numerosos desafíos. Los líderes de la educación superior mexicana han demostrado interés en metodologías internacionalmente reconocidas para incrementar la calidad educativa (Ríos, C. 2004). La acreditación institucional y los procesos de evaluación son algunas de las tendencias actuales, en 1996 el Presidente Ernesto Zedillo ofreció completo apoyo al establecimiento y consolidación de un sistema nacional de evaluación y acreditación. Sin embargo, no fue sino hasta finales del año 2000 cuando se formalizó en México la creación del Consejo para la Acreditación de la Educación Superior (COPAES, 2000).*

**PALABAS CLAVE:** Acreditación, evaluación, calidad educativa, educación superior.

## MENTORING AS A QUALITY INDICATOR IN MEXICAN UNIVERSITIES

### ABSTRACT

*The IES worldwide are seeing emerge accreditation processes and evaluation initiatives as important means in the pursuit of educational quality. Mexico, like many other countries, is committed to continuously improving the quality of its higher education system to be able to compete in a globalized and changing world that presents many challenges. The leaders of the Mexican higher education have shown interest in internationally recognized methodologies to increase the quality of education (Ríos, C. 2004). Institutional accreditation and assessment processes are some of the current trends; in 1996 President Ernesto Zedillo offered full support to the establishment and consolidation of a national system of assessment and accreditation. However, it was not until late 2000 when Mexico was formalized in the creation of the Council for Higher Education Accreditation (COPAES, 2000).*

**JEL:** I20, I21, I23

**KEYWORDS:** Accreditation, evaluation, quality of education, higher education.

## INTRODUCCIÓN

La Tutoría asociada con la calidad educativa, como un proceso de ayuda continua y sistemática, dirigida al alumnado en todos sus aspectos, especialmente en el desarrollo personal, profesional y social, que se realiza a lo largo de toda la carrera universitaria, con la implicación de los diferentes agentes educativos y sociales, surge en México con el proceso de evaluación de la educación superior y la acreditación de programas académicos, como un medio para reconocer y asegurar la calidad de la educación superior.

## REVISIÓN LITERARIA

### Origen

En México las universidades públicas desde año 2000 están teniendo un proceso de acreditación de programas educativos como un medio para reconocer y asegurar la calidad de la educación superior. De los indicadores que contempla la acreditación, el servicio de Tutoría, es un apoyo para el aprendizaje de los estudiantes cuya existencia y cobertura de la tutoría así como de otras formas de atención que oriente al estudiante en lo relativo al programa educativo y a la organización de su trayectoria escolar; es el eje conductor para la implementación de Programas Institucionales de Tutoría (PIT) en las universidades públicas como indicador de calidad. Las primeras acciones para iniciar la evaluación de la educación superior en México se realizaron en la década de los setenta del siglo veinte y fueron parte de programas de gobierno e iniciativas de la Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES). Pero realmente la evaluación de la educación superior se institucionalizó en México con el Programa para la Modernización Educativa 1989-1994 del Gobierno Federal. En este programa se estableció como una acción prioritaria, las evaluaciones interna y externa permanentes de las instituciones, para impulsar la mejora de la calidad de los programas educativos y servicios que ofrecían como meta la creación de una instancia que integrara y articulara un proceso nacional de evaluación de la educación superior (Anuies, 1979).

Para incidir sobre la problemática anterior, la Asamblea General de la Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES) acordó en 1997 impulsar la creación, por parte de la CONPES, de un organismo no gubernamental cuyo propósito fuera regular los procesos de acreditación, y que diera certeza de la capacidad técnica y operativa de las organizaciones especializadas dedicadas a la acreditación de programas académicos. Por su parte, la sociedad civil demandaba la fundación de un organismo que garantizara la operación de procesos confiables, oportunos y permanentes para el mejoramiento de la calidad de la educación superior. Como respuesta, después de realizar un amplio proceso de análisis para definir su estructura, composición y funciones, a finales de 2000 fue instituido formalmente el Consejo para la Acreditación de la Educación Superior, A. C. (COPAES).

La labor de reconocimiento de organizaciones acreditadoras por parte del COPAES no nace como una estrategia sobrepuesta a las que operan en el ámbito de la educación superior, sino que está en estrecha relación con las funciones que desarrollan las autoridades educativas, los organismos profesionales y académicos, y particularmente, las instituciones de educación superior, tanto pública como particular. Con la experiencia acumulada y con la creación del COPAES se inició en el 2001 la construcción de un Sistema para la Acreditación de los programas educativos que las instituciones ofrecían. La función del COPAES es regular los procesos de acreditación y dar certeza de la capacidad académica, técnica y operativa de los organismos acreditadores (Copaes, 2000).

Con el propósito de asegurar la calidad educativa, los comités Interinstitucionales para la Evaluación de la Educación Superior, CIEES, *se propusieron integrar la Metodología General CIEES para la evaluación de programas educativos*, su fin, consiste en que los programas educativos sujetos a los procesos de evaluación diagnóstica y de seguimiento, cumplan con calidad sus funciones a corto, mediano y largo plazo. En la actualidad los CIEES están conformados por nueve comités (Arquitectura Diseño y Urbanismo; Ciencias Naturales y Exactas; Ciencias Agropecuarias; Ciencias de la Salud; Ciencias Sociales y Administrativas; Artes, Educación y Humanidades; Ingeniería y Tecnología; Difusión, Vinculación, y Extensión de la Cultura y Administración y Gestión Institucional).

### Modelo

En el transcurso de los últimos años los esfuerzos de las universidades se concentraron en la construcción y elaboración de un Programa Institucional de Tutorías. En la revisión documental de programas implementados en las diferentes universidades mexicanas se perciben en la elaboración del Programa Institucional de Tutorías tres dimensiones en su sustentación: En una primera dimensión, la tutoría se visualiza en el contexto de las tendencias de la educación superior internacional, que en una primera aproximación son los referentes para la construcción de políticas y programas en el ámbito nacional. En una segunda dimensión, la tutoría se enmarca en la perspectiva de las políticas y programas nacionales que son un referente para las instituciones de educación superior.

En la tercera dimensión, la tutoría esta visualizada en el marco institucional de la propia universidad, apoyada en los documentos rectores de la misma, los cuales se consideran como los pilares de la tutoría. La tutoría tal como se le concibe actualmente es una actividad reciente en el contexto del Programa de Mejoramiento del Profesorado (PROMEP), y en el Estimulo al Desempeño del Personal Docente (ESDPED) en los que se induce como una actividad del profesorado de tiempo completo a la tutoría y del Programa Integral de Fortalecimiento Institucional en el cual se incorpora como meta el número y porcentaje de profesores de tiempo completo que realizan tutorías. La puesta en marcha de los programas antes señalados obligó a las universidades públicas a realizar acciones de carácter institucional con el propósito de encauzar la tutoría que le permitiera no sólo responder a los requerimientos de estos programas, sino el de impactar en el mejor desempeño de los estudiantes en su proceso de formación.

### Desde los Diferentes Marcos de Universidad

La relación que existe ente los fines de la universidad y la función tutorial desarrolladas por los docentes universitarios, está íntimamente ligada a las tradiciones de cada marco de universidad, esto permite justificar la coexistencia de diferentes modelos de programas institucionales de tutoría que incluyen diferentes concepciones con relación a la docencia y a la tutoría de los estudiantes (Rodríguez, Coord. 2004). Desde una perspectiva global destacan tres grandes modelos. Modelo Académico: Centra las funciones de la universidad en el desarrollo académico de los estudiantes, con un fin exclusivamente profesionalizador, y en el estimulo de la ciencia, el papel del docente se restringe a los aspectos académicos, desvinculando las necesidades de desarrollo del estudiante.

Modelo de Desarrollo Personal: La universidad presta mayor atención al bienestar y desarrollo personal de sus alumnos, incluyendo la orientación académica, profesional y personal. Modelo de Desarrollo Profesional: El interés principal es asegurar la capacitación profesional y el ajuste al mercado laboral, con la colaboración de otras figuras tutoriales del entorno organizacional (tutor de empresa), surgido de las necesidades de las escuelas técnicas para salvar la demanda del sector empresarial. Interpretadas desde los diferentes marcos de universidad, estas, generan su propia concepción de Programa Institucional de Tutoría, por lo anterior coexisten en nuestros días mezclando sus objetivo y produciendo diferentes perspectivas y no pocas confusiones. A pesar de eso la mayor parte de las universidades mexicanas definen como objetivo prioritario la atención a la dimensión personal del estudiante. Desde nuestra perspectiva, el nivel de desarrollo de los sistemas tutoriales en México, no presenta enormes divergencias.

*La Población Universitaria:* El perfil de estudiante universitario ha cambiado drásticamente. Nos encontramos ante un fenómeno de masificación en las aulas debido a la concentración poblacional, por el proceso de urbanización acelerado de los últimos años en país, así, se ha pasado de una sociedad rural a una sociedad urbana, cuyo desarrollo se vincula al proceso de industrialización del país y de sus regiones (ANUIES, 1999). Según estimaciones de la ANUIES, en el 2010 ocho de cada diez mexicanos vivían en centros urbanos de más de 15 mil habitantes, tres de cada cinco en ciudades de más de medio millón y uno de cada dos en ciudades de más de un millón. Actualmente, más del 67% de la población vive en

asentamientos urbanos, a la inversa de lo que sucedía en 1950 cuando un 57% de la población del país vivía en el medio rural (ANUIES, 1999; CESU, 2000). Se prevé un considerable crecimiento en la demanda de educación superior (18 a 24 años), en el 2013, año en que alcanzará un máximo de 14.9 millones de personas con edad potencial de cursar la educación superior, de manera que entre 2000 y 2013 la demanda se incrementó en un 6.9% (CONAPO, 2004). Hoy vemos la diversificación de los estudiantes que acuden a la universidad, generando necesidades nuevas, alto incremento en la tasa de mujeres y estudiantes de más edad. Sin duda, en el contexto de la universidad pública, la nueva situación conduce entre otras, al incremento de la necesidad de información, de mejora en los aprendizajes y de orientación curricular, los estudios específicos sobre el perfil del estudiante universitario en cada carrera debe ser un punto de referencia para abordar las necesidades.

### La Preocupación Por la Calidad Universitaria

El interés por la calidad de la formación ha traído varias consecuencias para la universidad actual: La primera, un debate sobre estos indicadores de calidad. Como consecuencia inmediata presenciamos la puesta en marcha de procesos de evaluación y acreditación en todas las universidades mexicanas. Fenómenos hasta hace poco tiempo no contabilizados, como son el rezago, abandono de los estudios, reprobación, eficiencia termina, son hoy objeto de medición y análisis (Rodríguez Espinar, 1997, 2002). La segunda, la atención de las diferentes fases de transición a la universidad y el ajuste e inserción en el mercado laboral constituyen indicadores de calidad y competitividad de las universidades. La función tutorial aparece como un elemento clave para facilitar la intervención con el propósito de optimizar el proceso de transición a la universidad y el logro de los estudiantes, en atención del alumnado que presenta dificultades para el seguimiento de los estudios y en facilitar los procesos de elección entre la formación continua en estudios de posgrado y la transición al mercado laboral.

Sin duda, la universidad tiene el nuevo reto de reconstruir su identidad para dar respuesta a las necesidades planteadas tanto en el nivel social como institucional. Porta (1998) afirma que estamos ante un nuevo arquetipo de universidad que abre el milenio: la universidad multifuncional. En este nuevo modelo la educación de la persona vuelve a ser el eje vertebrados central, sintetizando y superando los defectos de la universidad investigación y docente.

### Características de la Tutoría

La tutoría se define como un proceso de acompañamiento durante la formación académica del alumno que se concreta mediante su atención, personalizada o grupal, por parte de un profesor, contando ambos con el respaldo de la infraestructura institucional, contribuye al logro del aprendizaje y el rendimiento académico, la orientación curricular y la orientación profesional. A continuación se describen las características básicas de la tutoría universitaria: Es una acción docente de orientación dirigida a impulsar y facilitar el desarrollo integral de los estudiantes en su dimensión intelectual, afectiva personal y social, en concordancia en un planteamiento de calidad desde la perspectiva del estudiante.

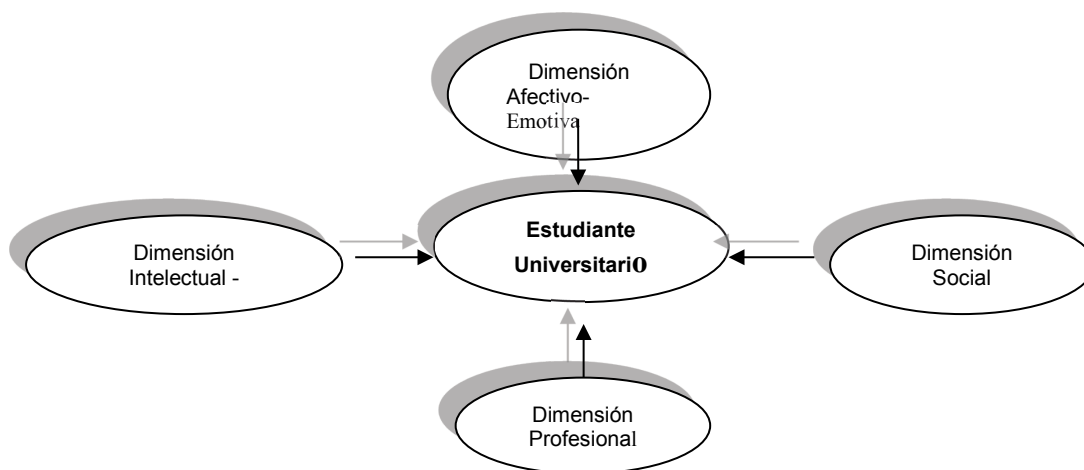

La tutoría contribuye a personalizar la educación universitaria, en la medida que favorezca el proceso de maduración personal de los estudiantes universitarios, se reflejará en las decisiones académicas y vocacionales permitiendo que el alumno desarrolle una personalidad equilibrada, que le permita actuar con plenitud y eficacia en la sociedad y momento histórico que le toca vivir. La atención al estudiante constituye un elemento clave de calidad. La ratio de alumnos hace de la tutoría un recurso clave y sin alternativa. La tutoría canaliza y dinamiza las relaciones del alumnado con los diferentes segmentos de atención al estudiante, tanto d carácter administrativo (facilitando el proceso y la interpretación de la información), docente (contribuyendo a la comprensión del currículum formativo de los estudios y del significado y demanda de las diferentes materias), organizativo (favoreciendo la participación...) y de servicios (de orientación, culturales, de salud...). Es de este modo, un garante en el uso adecuado de los

diferentes recursos curriculares y extracurriculares que la institución pone a su alcance. La tutoría permite la integración activa del estudiante a la institución. No sólo porque facilita el acceso a la información, de una forma crítica y constructiva, sino porque estimula la implicación y participación de todos los niveles organizativos (Rodríguez Espinar, 2004).

*Dimensiones y Niveles de la Tutoría en el Desarrollo del Estudiante:* Desde un modelo de formación holístico, las dimensiones de la acción tutorial incluyen aquellas áreas relacionadas con el desarrollo personal del estudiante universitario: Dimensión intelectual cognitiva, dimensión afectivo-emotiva, dimensión social y dimensión profesional; la atención a estas dimensiones presenta diferencias importantes en función del tipo de universidad como se aprecia en la Figura 1.

Figura 1: Dimensiones del Desarrollo Personal del Estudiante Universitario.

En esta figura se muestra la representación gráfica de las dimensiones del desarrollo personal del estudiante universitario. Fuente: Elaboración propia.

Si se tiende a modelos integrales, encontramos tres niveles de intervención diferentes en la acción tutorial: La tutoría de materia que se ocupa de orientar al estudiante sobre temas relativos al los contextos disciplinares que el profesor expone en clase. La tutoría de carrera o de itinerario académico, se refiere al acompañamiento del estudiante a lo largo de sus estudios universitarios, en cuestiones generales relativas a los itinerarios curriculares, a la adaptación a la vida universitaria, a la mejora del rendimiento escolar, a la superación de la reprobación y a la salida de la conclusión de la carrera. La tutoría de asesora *mento* que corresponde a la tutoría del estudiante ante circunstancias personales y que es responsabilidad del profesor-tutor atender o bien derivar a instancias especializadas de la propia universidad. Dentro del contexto universitario, la planificación de la secuencia y el desarrollo de estas dimensiones dependen de la interrelación de los diferentes factores relacionados con la institución, con los estudios específicos y con los propios estudiantes:

*Las características de la institución:*, incluyendo aspectos que irán desde la propia ideología hasta el grado de profesionalización. *Las características de los estudios*, en cuanto al grado de dificultad de la carrera, con ratios de abandono y fracaso elevados. Las características de los estudiantes hacen necesario marcar diferencias en la intervención, la homogeneidad de los estudiantes de la DES de ingeniería es mayor donde predominan estudiantes de tiempo completo a diferencia de la DES de ciencias sociales en donde aparecen diferencia muy marcadas entre estudiantes de turnos, diurnos, sabatinos, sistema abierto y a distancia, donde la tasa de estudiantes adultos con un proyecto profesional claro y/o ya insertados en el campo profesional, que buscan una mayor proyección contrasta con los jóvenes de turnos matutinos sin la experiencia laboral y con un futuro menos definido y claro.

*Servicios de Tutoría en Apoyo al Aprendizaje de los Estudiantes:* A continuación pondremos los indicadores que establece la guía de los CIEES, categoría 6 correspondiente a servicios de apoyo a los estudiantes, tabla 2, indicadores que son parte fundamental de la evaluación de programas educativos en proceso de acreditación (CIEES, 1994). Donde la existencia y cobertura de los servicios de tutoría, así como de otras formas de atención que orienten al estudiante en lo relativo al programa educativo y, a la organización de su trayectoria escolar, son:

- a) Tutoría individual;
- b) Apoyo en el diseño de la trayectoria escolar del estudiante;
- c) Apoyo a estudiantes rezagados; optimación del tiempo de dedicación.
- d) La relación docente-alumno es adecuada a los requerimientos del programa de tutoría.

*Número total de estudiantes/Número de PTC*

Tabla 2: Categoría 6, Servicios De Apoyo A Los Estudiantes.

<b>Categoría 6: Servicios de apoyo a los estudiantes</b>	
<b>32. Asesoría de apoyo al aprendizaje (Complementario)</b>	
¿Están satisfechos los estudiantes con el programa de asesoría?	
¿Participa en el programa de asesorías todo el personal académico?	
¿Permite la estructura del personal académico una atención personalizada a los estudiantes?	
¿Es la relación docente-alumno óptima?	
¿De qué manera se fomenta una buena comunicación entre el alumno y el docente para afianzar el aprendizaje?	
<b>33. Servicios de tutoría en apoyo al aprendizaje de los estudiantes (Esencial)</b>	
¿Existen estudios que detecten las necesidades de este programa?	
¿Quiénes son los responsables de efectuar estas tareas?	
¿Están satisfechos los estudiantes con el programa de tutoría?	
¿Cómo se evalúa la eficacia del programa de tutoría?	
¿Cómo se asegura que la difusión del mismo alcance 100% de los estudiantes?	
<b>34. Programa de apoyo para la inserción laboral (Complementario)</b>	
¿Existe un programa de orientación profesional para los estudiantes?	
¿Se han realizado estudios que detecten necesidades del mercado laboral?	
¿Quiénes son responsables de efectuar estas tareas?	
¿Están satisfechos los estudiantes con el programa de orientación profesional?	
¿Cómo se evalúa la eficacia del programa de orientación profesional?	
¿Cómo se asegura una difusión adecuada del mismo?	
<b>35. Actividades complementarias para la formación integral (Complementario)</b>	
¿Se establecen actividades para la formación integral del estudiante?	
¿Se promueve su participación?	
¿Existen estudios que detecten las necesidades de formación integral de los estudiantes?	
¿Quiénes son los responsables de efectuar estas actividades?	
¿Están satisfechos los estudiantes con las actividades de formación integral que se realizan?	
¿Cómo se mide la eficacia de las actividades destinadas a la formación integral?	
¿Cómo se promueve su participación?	
¿Cómo se mide la eficacia del programa?	
¿Cómo se evalúan las actividades complementarias para la formación integral?	
¿Qué decisiones se toman a partir de los resultados de la evaluación de las actividades complementarias para la formación integral?	
¿Cómo se asegura que la difusión del mismo alcance al 100% de los estudiantes?	
<b>36. Programa de enseñanza de idiomas (Complementario)</b>	
¿Forma parte del plan de estudios el aprendizaje de un idioma?	
¿Cómo se promueve la participación del estudiante?	
¿Cómo se evalúa el programa de enseñanza de idiomas?	
¿Qué decisiones se toman a partir de los resultados de la evaluación del programa de enseñanza de idiomas?	
¿Mediante que mecanismos se difunde el programa de enseñanza de idiomas?	
<b>37. Programa de becas (Complementario)</b>	
¿Cómo está estructurado el programa de becas?	
¿Cómo opera el programa de becas?	
¿Qué participación tiene el programa educativo en el Programa Nacional de Becas para la Educación Superior?	
¿Mediante que mecanismos se difunde y promueve el programa de becas?	
<b>38. Reconocimiento a los estudiantes de alto desempeño (Complementario)</b>	
¿Existe un programa que reconozca a los estudiantes de alto rendimiento?	
¿Son adecuados los procedimientos para otorgar los reconocimientos?	
¿Cómo se asegura que la difusión del mismo alcance al 100% de los estudiantes?	

*Los indicadores 32 a 38 corresponden a la numeración de la guía original de los CIEES.*

### La Compleja Visión de la Tutoría: a Modo de Conclusión

Se ha iniciado este artículo con una revisión histórica de la evaluación educativa en México y su relación con la calidad educativa en el sistema de educación superior en los diferentes marcos de universidad, que da como resultado una visión que podemos definir como <<compleja>> en tanto que coexisten y en ocasiones se solapan, diferentes concepciones de la tutoría y el rol del tutor. Nos atrevemos a decir que el interés actual por la tutoría universitaria, nace como un intento de dar respuesta a las nuevas necesidades de la institución universitaria y de los estudiantes que acceden a ella. Hemos de destacar que en los últimos años haya crecido de forma significativa el número de universidades y de carreras que han puesto en marcha programas institucionales de tutoría, como también el número de equipos dirigentes de universidades que se interesan por la tutoría universitaria y el convencimiento de que los planes de acción tutorial se inscriben dentro de las medidas de calidad de las instituciones universitarias.

Estos aspectos nos permite afirmar que la tutoría no es ya sólo una realidad, sino un elemento a futuro que permitirá contribuir a uno de los retos que tiene la universidad del siglo XXI: el desarrollo del capital humano.

## RESUMEN

*Uno de los problemas que afecta el funcionamiento óptimo de una empresa, es la disminución de su liquidez. En el presente proyecto abordaremos este problema y sus repercusiones originado por el excesivo pago del Impuesto Sobre la Renta (ISR), cuando las personas morales dedicadas a la innovación tecnológica realizan ventas a crédito al sector público.*

*Estas empresas realizan estrategias, para evitar el pago del ISR, y las cuales no están soportadas con fundamentos legales, ocasionados por el desconocimiento de las leyes fiscales. La finalidad del proyecto es desarrollar las estrategias adecuadas, que eviten la realización de pagos excesivos del ISR y que estos originen una disminución de la liquidez de las empresas, todo fundamentado con las leyes fiscales.*

*Palabras clave. Liquidez, créditos, sector público, personas morales.*

## ANALYSIS OF THE LOSS OF THE LIQUIDITY OF THE COMPANIES BY BILLING TO CREDIT TO THE PUBLIC SECTOR CARRIED OUT BY THE MORALES AT THE CLOSE OF THE FISCAL YEAR

### ABSTRACT

*One of the problems affecting the optimum performance of a company, is the decline in its cash flow; In this project we will address this problem and its repercussions caused by the over-payment of income taxes (ISR) when the legal entities engaged in technological innovation make sales on credit to the public sector. These companies carry out strategies to avoid paying income taxes, and which are not supported with legal basis, caused by ignorance of tax laws. The project aims to develop appropriate strategies to prevent the realization of income tax overpayments and these give a decrease in the cash flow of the companies, all based in the tax laws.*

**KEY WORDS:** Liquidity, credit, public sector entities.

### INTRODUCCIÓN

Los empresarios en México, han intentado mantenerse aún con los elementos en contra que actualmente se encuentran en toda la república Mexicana, como son la carga tributaria implementada por el gobierno federal para aumentar la recaudación fiscal; y el aumento de la inseguridad ocasionado una disminución en la inversión empresarial. Los inversionistas se encuentran en su mayoría en una crisis económica, ocasionando una disminución en sus ingresos y el cierre de algunos negocios ya establecidos.

La carga tributaria que pesa hoy en día en los empresarios, provoca que aun cuando estos deseen cumplir con todas sus obligaciones tributarias, la disminución en su liquidez se los impide, ocasionando el incumplimiento en sus obligaciones fiscales. Al intentar evadir el fisco las empresas dejan de cumplir con sus obligaciones fiscales de forma correcta, poniendo a estas en riesgo, ya que toman decisiones incorrectas que las llevan a la defraudación fiscal.

El pago del Impuesto Sobre la Renta en las personas morales que tienen ventas a crédito y sobre todo aquellas empresas que su principal cliente es el gobierno, ocasiona un pago mensual o anual sobre un ingreso no cobrado, que le afecta a la liquidez de una empresa.

La presente investigación tiene como objetivo el otorgar a los empresarios que realizan sus operaciones comerciales mediante la figura de persona moral; y realizan ventas a crédito, los conocimientos y las herramientas legales necesarias para poder realizar una estrategia adecuada para el pago de sus impuestos y no les ocasione una disminución en su liquidez y de esa manera puedan promover el desarrollo de las empresas. Con lo anteriormente expuesto se realiza una investigación descriptiva de acuerdo al caso de pérdida de liquidez en sus flujos de efectivo, por realizar facturaciones anticipadas que repercuten en el pago de los impuestos.

#### Planteamiento del problema

En México se encuentran empresas, que prestan servicios de innovación tecnología al sector público, la mayoría de las ocasiones el ser proveedor de este sector, trae consigo la falta de liquidez para poder solventar las ventas a crédito que se realizan a este sector; este problema se aumenta al momento de expedir un comprobante fiscal para las empresas que están registradas ante la Secretaría de Hacienda y Crédito Público, como Personas Morales esto por la forma de acumulación de sus ingresos.

El tener que pagar un impuesto sobre un ingreso no cobrado origina una disminución en el flujo de efectivo, y en ocasiones el no tener suficiente efectivo para poder realizar el pago correspondiente. Esto ocasiona que las empresas realicen estrategias para disminuir su carga fiscal y muchas veces estas las llevan a caer en defraudación fiscal, porque la mayoría de los empresarios buscan el pagar menos impuestos, cuando por ética y por ley debemos de contribuir con el gasto público. La disminución en la liquidez de las empresas repercute en su funcionamiento óptimo, por lo que es necesario analizar las repercusiones ocasionadas por esta; al igual que las estrategias necesarias para evitar estas disminuciones.

#### OBJETIVO GENERAL

Identificar las repercusiones en el cumplimiento de sus obligaciones fiscales y en la liquidez de las empresas en el Estado de Colima del régimen general de ley cuando realizan ventas a crédito al sector público y desarrollar las estrategias adecuadas para disminuir estas repercusiones.

#### OBJETIVOS ESPECÍFICOS

- 1.- Identificar las repercusiones que ocasiona la falta liquidez en las empresas en México.
- 2.- Evaluar si las ventas a crédito de las empresas al sector público originan una disminución en su liquidez.
- 3.- Evaluar si la implementación de estrategias fiscales en las empresas del régimen general de ley en estado de colima, favorece a la liquidez de estas.
- 4.- Evaluar si la implementación de estrategias fiscales, evita riesgos y da seguridad en el cumplimiento de las obligaciones fiscales.

Hipótesis

H1.- A mayor conocimiento en las repercusiones de liquidez, menor será la pérdida durante el ejercicio fiscal.

H2.-A mayor facturación de crédito en el sector público, menor será la liquidez que se tendrá en el ejercicio fiscal.

### Preguntas de investigación

De lo anterior, se originan las siguientes preguntas de investigación.

¿Cuándo se acumulan los ingresos en las personas morales?

¿En que afecta la falta de liquidez a las empresas?

¿Cuáles son las estrategias fiscales adecuadas para favorecer la liquidez de la empresa?

### Justificación

Las empresas de innovación de tecnología en México, que realizan ventas a crédito en el sector público, pueden llegar a tener problemas de liquidez, si estas no recuperan esas cuentas por cobrar de manera rápida, debido a que estarán trabajando con un nivel de flujo de efectivo menor.. Para los efectos del artículo 17 de esta Ley, se considera que los ingresos se obtienen, en aquellos casos no previstos en otros artículos de la misma, en las fechas que se señalan conforme a lo siguiente tratándose de:

I. Enajenación de bienes o prestación de servicios, cuando se dé cualquiera de los siguientes supuestos, el que ocurra primero:

a) Se expida el comprobante que ampare el precio o la contraprestación pactada.

b) Se envíe o entregue materialmente el bien o cuando se preste el servicio.

c) Se cobre o sea exigible total o parcialmente el precio o la contraprestación pactada, aun cuando provenga de anticipos.”Diario Oficial de la Federación (D.O.F., 2010)

Lo que provoca que estas tengan todavía una disminución más en su flujo de efectivo, porque al momento de considerar como ingreso un comprobante que ampare el precio o la contraprestación pactada, provoca que pague sobre ingresos no cobrados. Lo que ocasiona que las empresas deban de absorber el pago de impuestos, ocasionando una disminución en su flujo de efectivo de manera considerable a estas, y más aun cuando el pago es alto y salta de un ejercicio a otro. En el estado de Colima existen diversas empresas que se encuentran en esta situación ante el gobierno del estado, y muchas de ellas tienen como principal cliente a este, por lo que el pago del Impuesto Sobre la Renta les afecta considerablemente a su flujo de efectivo. Lo que origina que las empresas realicen estrategias que les ayuden a evitar el pago de impuestos.

La mayoría de las estrategias que realizan las empresas colimenses son inadecuadas, y muchas de ellas son tomadas sin el conocimiento de las leyes fiscales, provocando que caigan en evasión fiscal. La evasión fiscal constituye un acto que además de disminuir la recaudación fiscal, provoca que los que la realicen estén infringiendo la ley. Torres ( 2001), menciona “por medios de engaños o aprovechamientos de errores... obtenga un beneficio indebido con perjuicio del fisco federal”, se estará cometiendo un delito fiscal.

La realización de estrategias no adecuadas puede tener grandes repercusiones negativas, en la empresa ya que pueden llegar a ejercer acciones en contra de estas empresas, el fisco. La creación de impuestos, que afectan al flujo de efectivo de las empresas, ocasiona que estas no puedan hacer frente a sus operaciones comerciales diarias, realizar inversiones, generar empleos y pagar sus contribuciones. Por lo que la mejor manera de poder hacer frente a todas estas dificultades hoy en día, es el implementar estrategias a través de un modelo de planeación fiscal. “Aunque la planeación fiscal ha sido menospreciada por

diversas razones: resalta la falta de un conocimiento preciso de las disposiciones fiscales y la incertidumbre de incurrir en defraudación fiscal.” Sánchez (2011),.

## MARCO TEÓRICO

La investigación sobre los problemas que causan la crisis de liquidez en las empresas se ha realizado en diferentes regiones, tanto del país como en el extranjero. Un ejemplo de estas investigaciones es la realizada en Cuba donde se abordó como uno de los problemas el que se menciona a continuación:

“Una crisis de liquidez más acusada indica que la empresa es incapaz de satisfacer sus deudas y obligaciones corrientes. Ello puede dar lugar, en las economías de mercado, a una venta forzosa de inversiones y activos a largo plazo y, en su forma más grave, a insolvencia y quiebra. Para sus propietarios implicará reducción de la rentabilidad y oportunidad del dinero y pérdida total o parcial de la inversión de capital.” Gutiérrez (2005),

Otro ejemplo de las investigaciones sobre la liquidez en las empresas es la realizada en Baja California con el título de “Restricciones de liquidez en microempresas y la importancia del financiamiento informal en Baja California” Ramírez (2009),

Como se puede notar el problema de liquidez en las empresas ya se ha estudiado de manera internacional, así como de manera nacional, por lo que el estudio que se pretende realizar no es nuevo, pero la diferencia entre los estudios antes mencionados y el nuestro es que se analizara el problema sobre un enfoque fiscal, es decir como el pago de impuestos afecta la liquidez de la empresa y viceversa.

Ya que los empresarios al verse bajo la falta de liquidez, no cumplen con sus pagos de impuestos de manera correcta y oportuna. Y en ocasiones realizan estrategias fiscales incorrectas por el desconocimiento de las leyes fiscales.

### Liquidez

“Es la facilidad con que se puede cambiar por dinero el objeto de la inversión. Al invertir habremos puesto dinero a cambio de un activo y nos interesa la facilidad para andar el camino inverso.” (Companys R. y Corominas A., 1998). “Capacidad de un activo de convertirse en efectivo, sin una concesión importante de precio.” Wachowicz (2002),

“Significa que uno tiene los medios para realizar un pago inmediato por alguna compra o liquidar una deuda que ha vencido. Falta de liquidez, es una situación en la cual uno tiene suficiente riqueza para pagar la compra o liquidar la deuda, pero no tiene los medios para pagarla inmediatamente.” Bodie (1999), “Calidad del activo de un banco que puede transformarse fácilmente en dinero efectivo. Relación entre el conjunto de dinero en caja y de bienes fácilmente convertibles en dinero, y el total del activo, de un banco u otra entidad.” Real Academia Española. R.A.E (2001),

Empresa “Es un concepto económico :Organización económica integradora de personas y del trabajo que éstas realizan, Procura satisfacer necesidades y carencias presentes en los mercados, con los bienes que produce o comercializa, o con los servicios que presta, Su principal orientación no es producir para el autoconsumo, Busca la obtención de beneficios, con independencia del destino que dé al beneficio obtenido, Cuenta con medios materiales y aportaciones dinerarias, Está sometida a riesgos.” Nieto (2000), “Unidad económica que dan un superávit a los empresarios privados, quedando excluidas las empresas públicas, cooperativas, etc.” Gil (2007),

“Puede definirse en esta interpretación económica como toda actividad de combinación de factores, cuyos comportamientos están definidos por sus propias estructuras, en primer lugar, y por el entorno en cuanto afecta a la disposición de los factores de producción, así como a la colocación de sus programas de

productos y servicios.”García(1994). “Desde un punto de vista macroeconómico las empresa son las unidades de produccion del modelo. A efectos del modelo, la principal función de la empresa representativa es transformar factores en producción final.”Gimenez(1999),

“Acción o tarea que entraña dificultad y cuya ejecución requiere decisión y esfuerzo. Unidad de organización dedicada a actividades industriales, mercantiles o de prestación de servicios con fines lucrativos. Lugar en que se realizan estas actividades.”Real Academia Española. R.A.E(2001)

### Ventas

“Es la ciencia que se encarga del intercambio entre un bien y/o servicio por un equivalente previamente pactado de una unidad monetaria, con el fin de repercutir, por un lado, en el desarrollo y plusvalía de una organización y nacion y por otro, en la satisfacción de los requerimientos y necesidades del comprador. Para ello, se basa en una serie de tecnicas de comunicación, psicología y conocimientos técnicos; para informar de los beneficios y convenencia del intercambio a favor de ambas partes.”Parra (2002),

“Son el proceso que inicio con la identificación del cliente y sus necesidades para proveerlo de información que los persuade de realizar un intercambio.”Lerema (2007).

“Son los incrementos en los beneficios económicos, producidos a lo largo del ejercicio, en fomra de entradas o incrementos de valor de los activos, o bien como decrementos de las obligaciones, que dan como resultados aumentos del patrimonio neto, y no estan relacionados con las aoprtaciones de los propietarios a este patrimonio.”Romero (2005),

“Se definen en un sentido amplio, como aumentos en los beneficios economicos que tienen lugar durante el periodo contable, y que comportan un incremento en el patrimonio neto distinto del derivado de aportaciones de los accionistas. Tales beneficios económicos se producen en forma de entrada de flujos de tesorería o incremento de valor de otros activos, o bien, como decremento de los pasivos.”Julve (2007),

### Credito

“Ventas a crédito es aquella operación en la cual un sujeto enajena una determinada cantidad valores, entregado inicialmente en concepto de garantía un porcentaje del importe de la venta, y posteriormente, antes de que transcurra un determinado período de tiempo, la cantidad y clase de valores enajenada, que permite la venta de valores al descubierto, o sea, sin ser titular de los mismos.”UCAB (2002).

“Credito es la posibilidad de obtener dinero, bienes o servicios sin pagar en el momento de recibirlos, a cambio de una promesa de pago realizada por el prestatario de una suma pecunaria debidamente cuantifiacada en una fecha determinada en el futuro.

El credito interempresarial o comercial es la venta de bins o servicios mediante un acuerdo entre proveedor y cliente de aplazar el pago del intercambio comercial a una fecha determinada en el futuro.”Brachfield(2003).

### Sector Público

“Es aquel en que se aplica la Macro-Dirección, se el estatuto de la organización publico o privado, pertenezca ésta o no a la economia comercial o a la no comercial.” Laufer (1984).

“Incluye al gobierno, a los ministerios económicos, al banco emisor y a sus órganos de gobierno, a todas las autoridades y organismos públicos con competencias en la determinación de los impuestos, en la imposición de multas, sanciones, en la concesión de ayudas y subvenciones públicas, en cualquier otra actividad con contenido económico. Además de incluir a la mayoría de los organismos del poder

ejecutivo, esta definición de sector público también incluye a los poderes legislativo y judicial.”Gimenez(1999).

“Es el que comprende todos los órganos legislativos, ejecutivos y judiciales del Estado, establecidos a través de los procesos políticos, que comprende tanto los órganos del gobierno central que ejercen la autoridad y además comprende los organismos públicos independientes.”Gonzalo (2004).

### Impuestos

“Son aquellas cantidades que el sector público detrae del sector privado de forma coactiva como medio de contribuir a la financiación general de la actividad pública. Esta definición pone de manifiesto que la característica que define a un ingreso público como impuesto es la coactividad. Esto es, el Sector Público determina unilateralmente la cantidad a pagar y los agentes privados están obligados a pagar esta cantidad sin contrapartida directa.

Que los impuestos no tengan contrapartida significa que, quien los paga, no adquiere en general un derecho a recibir más prestaciones públicas que quien no los paga y quien paga más impuestos no adquiere un derecho a mayores prestaciones que quien paga menos.”Albie (2009).

“Son las contribuciones establecidas en ley que deben pagar las personas físicas y morales que se encuentran en la situación jurídica o de hecho prevista por la misma.” D.O.F (2011). “Tributo que se exige en función de la capacidad económica de los obligados a su pago.

Directo.El que grava las fuentes de capacidad económica, como la renta y el patrimonio. Indirecto, el que grava el consumo o gasto. Revolucionario, sistema montado por una organización terrorista para financiarse mediante extorsión y amenazas.”Real Academia Española (2001).

### Persona Moral

“Son personas morales:La nación, los estados los municipios;Las demás corporaciones de carácter público reconocidas por la ley;Las sociedades civiles o mercantiles;Los sindicatos, las asociaciones profesionales y las demás que se refiere la fracción XVI del artículo 123 de la Constitución Federal;Las sociedades cooperativas y mutualistas;Las Asociaciones distintas de las enumeradas que se propongan fines políticos, y científicos, artísticos, de recreo o cualquiera otro fin lícito, siempre que no fueren desconocidas por la ley; y Las personas morales extranjeras de naturaleza privada, en los términos del artículo 2736.”D.O.F (1928).

“La Ley del Impuesto Sobre la Renta (LISR), señala que cuando en esta Ley se haga mención a persona moral, se entienda comprendida, entre otras:

Las sociedades mercantiles,los organismos descentralizados que realicen preponderantemente actividades empresariales, las instituciones de crédito.

Las sociedades y asociaciones civiles y la asociación en participación cuando a través de ella se realicen actividades empresariales en México.”D.O.F (2010).

### La Ley General de Sociedades Mercantil menciona los siguiente:

“Artículo 1o.- Esta Ley reconoce las siguientes especies de sociedades mercantiles: Sociedad en nombre colectivo; comandita simple, responsabilidad limitada, anónima, comandita por acciones, cooperativa.”D.O.F (2009).

### Ejercicio Fiscal

El Código Fiscal de la Federación marca lo siguiente:

“Artículo 11.- Cuando las leyes fiscales establezcan que las contribuciones se calcularán por ejercicios fiscales, éstos coincidirán con el año de calendario. Cuando las personas morales inicien sus actividades con posterioridad al 1 de enero, en dicho año el ejercicio fiscal será irregular, debiendo iniciarse el día en que comiencen actividades y terminarse el 31 de diciembre del año de que se trate.

En los casos en que una sociedad entre en liquidación, sea fusionada o se escinda, siempre que la sociedad escidente desaparezca, el ejercicio fiscal terminará anticipadamente en la fecha en que entre en liquidación, sea fusionada o se escinda, respectivamente. En el primer caso, se considerará que habrá un ejercicio por todo el tiempo en que la sociedad esté en liquidación.”D.O.F (2011).

En el capítulo I de la Ley del Impuesto Sobre la Renta se mencionan los ingresos acumulables para la persona moral los cuales se resumieron de la siguiente manera. Las personas morales residentes en el país, incluida la asociación en participación, acumularán la totalidad de los ingresos en efectivo, en bienes, en servicio, en crédito o de cualquier otro tipo, que obtengan en el ejercicio, inclusive los provenientes de sus establecimientos en el extranjero. El ajuste anual por inflación acumulable

No se consideran ingresos los que obtenga el contribuyente por aumento de capital, por pago de la pérdida por sus accionistas, por primas obtenidas por la colocación de acciones que emita la propia sociedad o por utilizar para valuar sus acciones el método de participación ni los que obtengan con motivo de la revaluación de sus activos y de su capital.

## ANÁLISIS Y DISCUSIÓN DE RESULTADOS

### Momento De Acumulación De Los Ingresos (Persona Moral)

La LISR considera que los ingresos se obtienen, en aquellos casos no previstos en otros artículos de la misma, en las fechas que se señalan conforme a lo siguiente tratándose de: Enajenación de bienes o prestación de servicios, cuando se dé cualquiera de los siguientes supuestos, el que ocurra primero, Se expida el comprobante que ampare el precio o la contraprestación pactada, se envíe o entregue materialmente el bien o cuando se preste el servicio, se cobre o sea exigible total o parcialmente el precio o la contraprestación pactada, aun cuando provenga de anticipos. Cuando se acumula el ingreso al momento en que se expide el comprobante que ampare la contraprestación puede afectar considerablemente como se observa en la siguiente tabla:

#### Caso Practico

	EJEMPLO 1	EJEMPLO 2	EJEMPLO 3
FACTURADO	\$ 1,000,000.00	\$ 1,000,000.00	\$ 1,000,000.00
COBRADO	\$ 1,000,000.00	\$ 300,000.00	\$ -
INGRESO ACUMULADO	\$ 1,000,000.00	\$ 1,000,000.00	\$ 1,000,000.00
ISR X PAGAR	\$ 300,000.00	\$ 300,000.00	\$ 300,000.00
EFFECTIVO DISPONIBLE	\$ 700,000.00	\$ 0.00	-\$ 300,000.00

Fuente: Elaboración Propia

En los tres ejemplos el ingreso acumulado es de \$1,000,000.00 debido a que esa es la cantidad que se facturo en el ejercicio y en la fila de los cobrado se refiere a la cantidad que fue pagada de los ingresos facturados, este dato se requiere para obtener el flujo de efectivo.

En el ejemplo 1 se facturo \$1,000,000.00 y fueron cobrados los ingresos facturados por lo que se tiene el efectivo para poder realizar el pago del impuesto de los \$300,000.00 y la empresa tiene disponible los \$700,000.00 para realizar operaciones en la empresa.

En el ejemplo 2 se facturo \$1,000,000.00 y fueron cobrados \$500,000.00 de los ingresos facturados por lo que se tiene el efectivo para poder realizar el pago del impuesto de los \$300,000.00 y la empresa tiene disponible solo \$0 para realizar operaciones en la empresa .

En el ejemplo 3 se facturo \$1,000,000.00 y fueron cobrados \$0 de los ingresos facturados por lo que no se tiene el efectivo para poder realizar el pago del impuesto de los \$300,000.00 y la empresa tiene un saldo negativo en el efectivo disponible.

Como se puede notar en los ejemplos mencionados anteriormente la empresa está obligada al pago de los \$300,000.00 aunque no los haya cobrado afectando a su flujo de efectivo y en el peor de los casos, obligando a la empresa a endeudarse para poder realizar un pago de impuesto.

Se podría llegar a la sencilla conclusión de que la empresa solo facture la cantidad que se cobrada; pero en la mayoría de las ocasiones cuando se realiza ventas al sector público, se debe facturar el total de la operación y esperar la fecha de pago que se puede retrasar varios meses.

Cuando sucede esto ocasiona que la empresa sea afectada por el pago de este impuesto y ocasiona que la empresa no realice el pago correctamente, no pueda seguir con sus operaciones de forma normal o que contraiga una deuda para poder realizar el pago.

## CONCLUSIONES

En la actualidad el pago de impuestos es uno de los factores que todo empresario debe de analizar escrupulosamente, ya que el pagar impuestos excesivos, es tan malo como el no pagarlos. El pago de nuestras contribuciones no deban de ser excesivos, sino que las empresas deben de optimar el pago de sus contribuciones, buscando que esta se apegue a los lineamientos legales establecidos por las normas jurídicas; y así poder canalizar los recursos para incrementar su productividad y fortalecer su planta de empleos.

La disminución en la liquidez de las empresas repercute en su funcionamiento óptimo, por lo que es necesario mantener un pago de impuestos optimo que no perjudique el flujo de efectivo de las empresas. Las empresas que tributan en el régimen general de ley; de personas morales son las que deben de tener un buen control fiscal para poder tener un correcto y optimo pago de sus contribuciones y no dañen su flujo de efectivo, aun y cuando realicen sus operación de crédito con el sector publico

## RECOMENDACIONES

Se recomienda entonces que las empresas, personas morales tengan un control adecuado de sus flujos de efectivo, ya que esto le puede representar perdida de liquidez en sus operaciones. Así como buscar la manera de realizar un contrato para no facturar sus ventas de crédito con el sector público, ya que estos duran un período promedio de ocho meses para liquidar a sus proveedores, por consiguiente , pierden liquidez y tienen que pagar un impuesto por una facturación anticipada.

Es importante pues revisar todas sus operaciones con sus clientes y no estar en este supuesto, ya que ponen en riesgo su situación financiera de la empresa.

## RESUMEN

*Uno de los problemas que presentan las personas físicas contribuyentes de los diferentes impuestos que se pagan por tener una actividad preponderante y el resultado de obtener una posible utilidad del ejercicio fiscal es que pueda obtener erogaciones, gastos o inversión superiores a sus ingresos.*

*En su ciclo económico puede presentarse como una pérdida financiera en su liquidez, más sin embargo para efectos fiscales puede presentarse como una discrepancia fiscal, con ello se presentan problemas fiscales y aumenta el riesgo de perder su patrimonio e inversión. Con este supuesto las autoridades fiscales aplican el procedimiento de discrepancia fiscal, mismas que generan gastos al determinar créditos fiscales a las personas físicas por determinar que sus erogaciones son superiores a sus ingresos. Es importante saber que una persona física, aun cuando no esté inscrita en el Registro Federal de Contribuyentes, y realice en un ejercicio fiscal erogaciones superiores a los ingresos que hubiere declarado en ese mismo periodo, esta ante la presencia de una discrepancia fiscal.*

**PALABRAS CLAVE:** Discrepancia fiscal, Ingresos, Liquidez, Personas físicas

## ABSTRACT

*One of the problems that different tax payer individuals have about the different taxes they pay for having a predominant activity and the outcome of getting a possible tax profit for the year is that they can get expenditures, expenses or investment over their income. In its economic cycle can be presented as a financial loss in cash flow, however for tax purposes can be presented as a tax variance, this would have tax problems and increases the risk of losing their property and investment. With this assumption the tax authorities apply the tax variance procedure, the same generating costs in determining tax credits to individuals to determine their expenses are greater than their income. It is important to know that an individual, even though he is not registered in the Federal Taxpayer Registry, and perform in a fiscal year expenditures exceed revenues that have been declared in the same period, is the presence of a tax variance.*

**KEYWORDS:** Tax Wedge, Income, Liquidity, Individuals

## INTRODUCCIÓN

Las personas físicas del régimen de actividad empresarial que comercializan frutas y verduras al público en general, ya sea al mayoreo y menudeo, perciben ingresos en efectivo en grandes cantidades, las cuales ante la falta de cultura para declarar correctamente sus ingresos, utilizan ese dinero para adquirir bienes con dinero producto de la evasión de impuestos, lo que las lleva a incurrir en la Discrepancia Fiscal. Lagarda (2011). Discrepancia Fiscal, desde 1980 fue su nacimiento en la Ley del Impuesto Sobre la Renta

en su artículo 75, y con el gran avance tecnológico que el Sistema de Administración Tributaria.(SAT).Ha logrado obtener gracias a un préstamo del Banco Mundial por 10 millones de dólares con el único objetivo de reconfigurar sus sistemas informáticos para realizar de forma efectiva la recaudación y evitar que los contribuyentes tiendan a evadir impuestos. SAT (2009).

De acuerdo con Miranda,(2010). Menciona que en México el sistema tributario es complejo y costoso al tener multiplicidad de tasas y diversos regímenes especiales que alientan la cultura del no pago y conducen a que paguen más los que menos deberían, con un costo de cumplimiento excesivo para el contribuyente. Asimismo considera que una de las maneras de eficientar el sistema tributario es la simplificación. Con la presente investigación se hace un análisis a la Discrepancia Fiscal que incurren las personas físicas que perciben ingresos por la enajenación de frutas y verduras al mayoreo y menudeo, para que éstas tengan el conocimiento necesario, y con la aplicación correcta, evitar ser requeridos por la autoridad fiscal. Con lo anteriormente expuesto se realiza una investigación descriptiva de acuerdo a la situación de la discrepancia fiscal con relación a los ingresos y egresos del contribuyente que repercuten en el pago de los impuestos y pérdida de su liquidez.

### Planteamiento del problema

La Ley del Impuesto Sobre la Renta en su artículo primero, establece la obligación al pago de éste impuesto para quienes residan en México por todos los ingresos que perciban. Asimismo otorga la facultad a la autoridad fiscal en su artículo 107, para comprobar cuando las personas físicas realicen en un año de calendario erogaciones superiores a los ingresos aun y cuando estas no estén inscritas en el RFC y que no cumplan correctamente con dicho impuesto a lo que se le llama Discrepancia Fiscal.

Villarreal,(2006).menciona que es Discrepancia Fiscal cuando, “las autoridades tienen elementos o conocen de hechos que evidencien o hagan presumir una posible discrepancia entre los ingresos declarados por una persona y los gastos, adquisiciones de bienes o depósitos en inversiones financieras realizadas por ésta”. Uno de los problemas que existen en México cuando se incurre en la Discrepancia Fiscal se debe a la falta de una cultura en el pago de impuestos. Segura,(2011). Menciona que se requiere de programas y planes de educación fiscal como contribuyentes que permitan conocer las distintas opciones en materia fiscal sobre todo la pequeña y mediana empresa PyMES que carecen de una adecuada asesoría que les permita hacer frente a sus obligaciones fiscales. García (2010), menciona que otro de los problemas hoy en día es que en la declaración anual las personas físicas omiten manifestar ciertos datos informativos (flujos de recursos o ingresos exentos) y no dimensionan que, tal omisión conlleva a que se conviertan dichos datos en ingresos que generan el pago del Impuesto Sobre la Renta. Martínez (2010), menciona que el incumplimiento en las obligaciones fiscales se debe al desconocimiento básico de las obligaciones fiscales y la percepción no tangible de los beneficios sociales y económicos, los cuales tienen como implicaciones la evasión y un bajo nivel de cumplimiento voluntario.

### Objetivos

General: Encontrar las estrategias para no caer en una discrepancia fiscal, que permitan al contribuyente, personas físicas en no estar en este supuesto de ley.

Particular: Proporcionar una herramienta para que las personas físicas calculen correctamente sus impuestos relacionados a sus ingresos y egresos así mismo no caer en una discrepancia fiscal, por no registrar sus operaciones correctamente.

### Hipótesis

H1.-El desconocimiento a las leyes fiscales, mayor será la discrepancia fiscal de las personas físicas.

H2.-El no registro correcto de sus actividades preponderantes, mayor será el riesgo de caer en una discrepancia fiscal.

### Preguntas De Investigación

Por lo anterior nos lleva a cuestionar lo siguiente:

¿Cuáles son los ingresos por la actividad preponderante?.

¿Cómo es que las personas físicas que enajenan frutas y verduras al mayoreo y menudeo pueden incurrir en la Discrepancia Fiscal?.

¿Cuáles son las sanciones por Discrepancia Fiscal, para quienes tributan en el régimen de actividad empresarial y Profesional?.

### Justificación

En México, a Junio 2011, el total de contribuyentes inscritos en el Registro Federal de Contribuyentes está conformado por 35,106,000 registros activos de los cuales 1,365,000 son personas morales y 11,419,000 son personas físicas, incluidos 22,322,000 asalariados. SAT ( 2011).

Además se identificó a alrededor de 600 mil contribuyentes que en el ejercicio de 2009, recibieron depósitos y evadieron el pago del ISR, del total de contribuyentes 60 mil recibieron depósitos por montos superiores al régimen en el que están registrados, alrededor de 180 mil recibieron depósitos sin estar inscritos en el RFC y casi 300 mil recibieron depósitos que debieron declarar y no lo hicieron, ante esta situación busca recaudar alrededor de 5 millones de pesos. Segura (2011), menciona que se debe tener como consecuencia el cumplimiento de obligaciones ciudadanas sin menoscabo de que una adecuada planeación le generara a las empresas ahorros importantes en materia fiscal y se evitarán dolores de cabeza con las autoridades respectivas. Por lo que con esta Investigación se busca hacer una aportación a los contribuyentes que tributan en el régimen de actividad empresarial y profesional, al demostrarles de las consecuencias que pueden tener cuando la autoridad les detecte discrepancias en sus ingresos declarados y los determinados por ésta, los cuales al no ser aclarados correctamente les provocan sanciones y seguramente afectaciones en su patrimonio.

## **MARCO TEÓRICO**

### Persona física

De acuerdo con el Diccionario de la Real Academia Española se define como “Individuo de la especie humana”, mismo que no es definido de forma clara.

Nos remitimos al Código Civil para el Estado de Guanajuato mismo que define como Persona Física a “los individuos de la especie humana, desde que nacen hasta que mueren. Se reputa nacido el feto que, desprendido enteramente del seno materno, vive veinticuatro horas o es presentado vivo al Registro Civil”.

Carrasco (2008), la define como “todo aquel que es capaz de ejercer derechos y contraer obligaciones. Las personas pueden ser físicas o morales”.

Asimismo en la página de internet del SAT coincide y la define como “un individuo con capacidad para contraer obligaciones y ejercer derechos; pueden prestar servicios, realizar actividades comerciales, arrendar bienes inmuebles y trabajar por salarios”.

### Impuestos

El Diccionario de la Real Academia Española lo define como la “obligación dineraria establecida por la ley, cuyo importe se destina al sostenimiento de las cargas públicas”. Carrasco (2008), lo define como la “cantidad de dinero que debe pagar al Estado el habitante de un núcleo social determinado”. Jiménez

(2004), menciona que son aquellos recursos que el Estado obtiene mediante el ejercicio del poder de imperio, o sea por leyes que crean obligaciones a cargo de sujetos-individuos y entidades en la forma y cuantía que dichas leyes establezcan. Para el Servicio de Administración Tributaria lo define como: La prestación en dinero o en especie que establece el Estado conforme a la Ley, con carácter obligatorio, a cargo de personas físicas y morales para cubrir el gasto público y sin que haya para ellas una contraprestación o beneficio especial, directo o inmediato.

Hernández (2003), los define como: La obligación coactiva y sin contraprestación de efectuar una tramitación de valores económicos a favor del Estado y de las entidades jurídicamente autorizadas para recibirlos por un sujeto económico con fundamento en una Ley, siendo fijadas las condiciones de la prestación en forma autoritaria y unilateral por el sujeto activo de la obligación tributaria.

### Evasión Fiscal

Nos remitimos al Diccionario de la Real Academia Española la cual nos define como Evasión al “efugio para evadir una dificultad”, asimismo nos define como fiscal a lo “perteneiente o relativo al fisco o al oficio de fiscal”, por lo que podemos definir como evasión fiscal evitar ilegalmente una dificultad o una obligación fiscal ante el fisco. Carrasco (2008), la define como “Eludir el pago de un impuesto mediante simulación o artificio, una vez que se ha caído en la situación que la ley señala como hecho generador de un crédito fiscal”.

Martínez (2008), coincide y menciona que: Consiste fundamentalmente no sólo en la omisión del pago de la contribución, sino en que esta resulta del uso de engaños o aprovechamiento de errores, con la finalidad de omitir total o parcialmente el pago de alguna contribución o de obtener un beneficio indebido en perjuicio del fisco.

Rodríguez (2001), menciona que evasión es “el no pago de una contribución; no hacer el pago de una contribución es equivalente a eludir el deber de cubrirla. Se trata de la violación de la Ley que establece la obligación de pagar al fisco lo que este órgano tiene derecho a exigir”. Asimismo menciona que “es el incumplimiento de un deber legal tipificado, que surge de lo que se llama hecho generador del crédito fiscal, y al que se le denomina hecho imponible”.

Tapia (2003), menciona que la evasión fiscal es: Un fenómeno social y de moral pública de todos los tiempos, que se da en todos los países, desarrollados y en vías de desarrollo, en mayor o en menor grado y se explica a través de diferentes manifestaciones de la población de tipo psicosociológico, que van desde el simple rechazo, pasando por la alteración o el engaño doloso, el error involuntario, hasta la alta planeación financiera; en otros casos, se da por simples razones de necesidad y supervivencia económica.

Espinoza (2011), menciona que se entiende que existe evasión fiscal “cuando una persona infringiendo la ley, deja de pagar todo o una parte de un impuesto al que está obligado”

Hernández (2004), la definen “como una acción ilegal de no pago de impuestos, total o parcialmente”. Asimismo mencionan que el término que se utiliza legalmente es el de defraudación fiscal.

### Enajenación

El diccionario de la Real Academia Española la define como “pasar o transmitir a alguien el dominio de algo o algún otro derecho sobre ello”.

Asimismo Carrasco, H. (2008) coincide y lo define como “pasar a otro el dominio de una cosa”. El Código Fiscal de la Federación en su artículo 14, define como enajenación a “toda transmisión de propiedad, aun en la que el enajenante se reserve el dominio del bien enajenado”.

Pérez (2006), define a la enajenación como:

Todos los actos y contratos, de carácter oneroso, en donde se impongan a los ahí participantes gravámenes y provechos recíprocos como son: la compraventa, permuta y aun, la expropiación, en la que se toma como referencia el monto de una indemnización que el Estado cubre por ella.

Asimismo, la Ley del Impuesto al Valor Agregado en su artículo 8, también menciona que se considera enajenación “el faltante de inventarios de las empresas”, salvo que se muestre lo contrario. Por lo anterior se puede definir como enajenación a todo aquel faltante de inventarios en las empresas, solo si estas comprueban lo contrario, así como aquella transmisión de propiedad de una cosa de manera onerosa, aun y cuando el enajenante tenga el dominio de ésta.

#### Actividad preponderante

En la página de internet del Servicio de Administración Tributaria encontramos la definición de actividad preponderante como “la actividad por la que un contribuyente obtiene la mayor cantidad de sus ingresos durante un ejercicio”.

Asimismo el Reglamento del Código Fiscal de la Federación en su artículo 57 define como actividad preponderante “aquella actividad económica por la que, en el ejercicio de que se trate, el contribuyente obtenga el ingreso superior respecto de cualquiera de sus otras actividades”.

#### Actividad Empresarial

El diccionario de la real academia Española define como empresarial a aquello “perteneciente o relativo a las empresas o a los empresarios” y como actividad al “conjunto de operaciones o tareas propias de una persona o entidad”.

En la página de internet del Servicio de Administración Tributaria encontramos la definición de actividad empresarial como “el desarrollo de actividades en áreas económicas como industriales, comerciales, agrícolas, silvícolas, mineras y servicios”.

#### Defraudación Fiscal

De acuerdo con el Diccionario de la Real Academia Española se define como defraudar “eludir o burlar el pago de los impuestos o contribuciones”.

Asimismo el Artículo 108 del Código Fiscal de la Federación la define como “quien con uso de engaños o aprovechamiento de errores, omita total o parcialmente el pago de alguna contribución u obtenga un beneficio indebido con perjuicio del fisco federal”.

Hernández (2004), coinciden y lo definen como “quien con uso de engaños o aprovechamiento de errores, omita total o parcialmente el pago de alguna contribución (parcial o provisional) u obtenga un beneficio indebido con perjuicio del fisco federal”.

Tapia (2003), coincide y la define como: Una de las modalidades de la infracción tributaria material, consistente en una infracción llevada a cabo por el contribuyente, cualificada por una serie de circunstancias que produce como resultado la sustracción total o parcial de la contribución debida, con el consiguiente perjuicio para la hacienda pública. Bello y Henríquez (2008), la definen como cuando existe “el dolo o la intención de cometer un delito, la obtención de un enriquecimiento indebido en beneficio propio o de un tercero a expensas del fisco”.

### Planeación fiscal

Corona (2007), menciona que planeación fiscal es cuando: Trata de respetar el marco de la ley y supeditar las acciones de la empresa y de las personas al establecer medidas de seguridad fiscal y de productividad, por medio de una planeación financiera y estratégica del negocio, donde se considere el esquema fiscal adecuado y pagando al final de cuentas lo justo, entendiéndose por ello lo que se encuentra regulado en ley fiscal y en la constitución.

Sánchez (2008), menciona que es planeación fiscal: Un conjunto de técnicas, que sirven para optimizar el costo fiscal inherente a las operaciones de la empresa, siempre dentro de los límites permitidos por la ley. Resulta obvio que para no rebasar los parámetros que nos marcan las leyes, es primordial que la planeación fiscal se efectúe previamente a la realización de los hechos, sin efectuar ninguna simulación de actos o abusar de los derechos.

Torres (2008), coincide y la define como “una lucha entre Hacienda y el Contribuyente, en la cual la primera tratará de allegarse la mayor cantidad posible de tributos, en tanto que el contribuyente luchará por pagar lo menos posible, pero siempre dentro del marco legal”.

### Profesional

El Diccionario de la Real Academia Española nos define como profesional a la “Persona que ejerce su profesión con relevante capacidad y aplicación”. Martínez (2008), lo define como una “Persona física, generalmente con una cierta titulación, que la ejerce individualmente, esto es, no en Sociedades, aunque puede formar grupo y en algunas profesiones, formar Sociedad. El caso usual, funcionamiento individualmente, fija el Impuesto sobre Actividades Económicas, pasar a deducirse el Impuesto al Valor Agregado ( I V A ), sus beneficios están gravados en el Impuesto sobre la Renta de Personas Físicas y tienen otras particularidades comunes con los empresarios individuales”.

Por lo tanto se puede decir que un profesional es aquella persona física que tiene un título que ampara su profesión en la cual ejerce una actividad empresarial obteniendo ingresos y paga impuestos de conformidad con las leyes fiscales.

### Factura

Martínez (2008), lo define como “no cualquier cosa para Hacienda, su deducibilidad tiene requisitos y su simple existencia no le supone veracidad, y ésta puede ser puesta en duda”.

Carrasco (2008), coincide y la define como un documento por medio del cual se hace constar una venta. Asimismo señala que es una relación cuantitativa de los objetos, artículos o servicios comprendidos en una venta. Debe incluir los datos siguientes: nombre, dirección, Registro Federal de Causantes, del vendedor; la palabra Factura y el folio correspondiente; nombre y dirección del comprador; fecha; condiciones de la operación; cantidad, descripción, precio unitario e importe de los artículos vendidos. Total de la venta; otros cargos, en su caso; IVA, en su caso; total del documento. En las operaciones que no son con el público en general también se debe incluir el Registro Federal de Causantes del Comprador.

Para reafirmarlo en la página de Internet del SAT encontramos la definición de factura como “un mecanismo de comprobación de ingresos y egresos en el ámbito fiscal, que se caracteriza por la utilización de documentos impresos y electrónicos”.

Con las anteriores definiciones se puede definir como una factura a un documento autorizado por medio del cual se describen de forma detallada ciertos bienes, servicios, arrendamientos que sirve para respaldar una deducción o un ingreso.

### Discrepancia fiscal

Navarrete y Rivas (2005), mencionan que “consiste en que una persona física realice, en un año calendario, erogaciones superiores a sus ingresos que hubiese declarado en el mismo”.

Lagarda (2011), Coincide y la define como “La diferencia o desigualdad que resulta entre el contribuyente y la autoridad fiscal cuando se realizan erogaciones superiores a los ingresos declarados”.

Jiménez (2006), La define como cuando:

Las autoridades fiscales sin darle conocimiento al contribuyente de que tiene en su poder los Estados de Cuenta Bancarios, hace la comparación con las declaraciones anuales de impuestos y determina diferencias por los depósitos bancarios, compra de bienes inmuebles, de autos, de viajes, cuentas bancarias mancomunadas, préstamos, de los cuales detecta diferencias con lo declarado por los mismos.

Robles (2010), La define como, “la diferencia entre el contribuyente y la autoridad fiscal en materia de ingresos”. Arias (2001), menciona que “consiste en que una persona física realice en un año de calendario erogaciones superiores a los ingresos que hubiese declarado en el mismo”.

Por las anteriores definiciones podemos definir a la Discrepancia Fiscal como aquellas erogaciones para compra de activos, servicios, manejo de efectivo, entre otras, de las personas físicas que la autoridad fiscal obtiene por medio de terceros, de los cuales no se informan en la declaración anual.

## ANÁLISIS Y DISCUSIÓN DE RESULTADOS

En un segundo caso los impuestos indirectos como el Impuesto al Valor Agregado el cual grava al consumo, y su característica principal es que se trasladan en el precio del bien o servicio al consumidor, de tal manera que el comprador es quien paga el tributo, independientemente de su nivel de ingresos. Astudillo (2009). Luego entonces, la problemática que enfrenta el país al tener leyes fiscales complejas, y las constantes modificaciones a estas, ocasiona que a los contribuyentes se les complique hacer sus declaraciones correctamente. Licea (2011), Menciona que con el aumento de la tasa de IVA al 16% y el ISR del 28 al 30% en 2010, la recaudación aumento considerablemente comparado con el año 2009, mismos que se muestran en la siguiente gráfica:

Recaudación de impuestos 2009 y 2010

Fuente: Elaborado con base en datos de los "Informes sobre la Situación Económica, las Finanzas Públicas y la Deuda Pública, al cuarto trimestre de 2010", SHCP.

Padrón de contribuyentes 2003 – 2011.

Fuente: Secretaría de Hacienda y Crédito Público

Como se puede observar el padrón de contribuyentes se ha incrementado constantemente, todo esto debido a que la autoridad fiscal ha incrementado su presencia para tratar de disminuir los altos índices de evasión.

A continuación se presenta un caso de una empresa el cual muestra la forma de cómo registra sus ingresos y cae en el supuesto de discrepancia fiscal.

#### COMPARATIVO INGRESOS OMITIDOS 2010-2011

Ilustración 1 Comparativo ingresos omitidos 2010-2011

Fuente: Revisión empresa en estudio

Con base a los resultados obtenidos, se puede observar que los ingresos omitidos en los ejercicios revisados se obtuvieron resultados similares, de los cuales a nuestro punto de vista son considerables y que se pudieron obtener a través de los diferentes medios que hemos venido investigando durante el presente trabajo.

### COMPARATIVO DE INGRESOS OMITIDOS 2010 - 2011

Ilustración 2 Comparativo ingresos omitidos 2010-2011 Fuente: Revisión empresa en estudio.

En resumen, se determinó que los ingresos omitidos en ambos ejercicios son superiores a un millón de pesos y podemos decir que a mayores ingresos, mayores eran los ingresos omitidos de los cuales aumentaban principalmente en los consumos por tarjetas de crédito de instituciones bancarias.

### CONCLUSIÓN

Actualmente, evadir de impuestos a través del manejo de efectivo por no declarar los ingresos se vuelve un problema para todos aquellos contribuyentes que lleven a cabo ventas con el público en general. La autoridad fiscal cuenta con las herramientas e información actual proporcionada por terceros sobre cada contribuyente registrado o no el RFC.

Como pudimos determinar en la presente investigación, cuando los contribuyentes no declaran correctamente sus ingresos pueden o son sujetos a revisiones fiscales por parte de la autoridad fiscal, lo que conlleva a tener la obligación de pagar multas, recargos, actualizaciones, afectación en el flujo de dinero de su empresa, pérdida de bienes, de la libertad del contribuyente e incluso pérdida de la empresa por no realizar el debido registro de los ingresos fiscales.

Así mismo, con el análisis realizado se determinó que en cada ejercicio se obtienen datos de operaciones relevantes por parte de las personas físicas, motivo por el cual y de acuerdo a los datos obtenidos, nos lleva a decir que un 15.46% para 2011 y el 18.02% para 2012 del total de personas físicas, no cumplen correctamente con sus obligaciones fiscales y por ende pueden ser sujetas a una revisión por parte de la autoridad fiscal.

Contar con un adecuado control de las operaciones financieras de la empresa beneficia a los contribuyentes para que obtengan información real de las operaciones en cada ejercicio, mismas que le pueden permitir tomar mejores decisiones, determinar si es rentable, obtener beneficios fiscales, así como tener información fiscal correcta. Es necesario considerar que todos los ingresos se deben registrar en la contabilidad, para de esta forma evitar caer en posible discrepancia fiscal.

El control de las finanzas personales forman parte esencial para evitar caer en el supuesto de discrepancia fiscal, para ello se recomienda que aún y cuando no se trate de un ingreso acumulable para efectos de las distintas leyes fiscales, se sustenten las operaciones que ocasionarán mayores egresos que ingresos para futuras aclaraciones con la autoridad fiscal.

Los resultados obtenidos derivados del análisis realizado nos pudo confirmar que el problema es grave para quien trate de no pagar sus impuestos correctamente en el momento en que está obligado a declarar. Consideramos que en el país muchos contribuyentes que enajenan frutas y verduras presentan este problema, sin embargo derivado de la información que las autoridades no nos proporcionaron podemos

decir que se pudo comprobar a través de las leyes analizadas que las sanciones pueden tener consecuencias graves como ya lo hemos determinado.

Para evitar mayores consecuencias, se recomienda que si tiene el conocimiento el contribuyente sus declaraciones fiscales no son las correctas, se asesore con un especialista en el tema para de esta manera corregir su situación fiscal, lo cual sólo tendrá como beneficio evitar perder su empresa y además de que tendrá la tranquilidad en materia fiscal.

## RECOMENDACIONES

Se recomienda entonces que no se confunda la discrepancia fiscal con una pérdida fiscal ya que esta puede estar jurídicamente justificada. Que sus operaciones relacionadas con la actividad preponderante se registren adecuadamente ya que puede suceder que no se facturen todos sus ingresos, y en esos momentos se daría la discrepancia fiscal.

# EL DIAGNÓSTICO ADMINISTRATIVO COMO HERRAMIENTA DE EVALUACIÓN DE PROGRAMAS DE ASISTENCIA SOCIAL GUBERNAMENTALES

Elsa Irene García Prieto, Universidad Autónoma de Baja California  
Sheila Delhumeau Rivera, Universidad Autónoma de Baja California  
Sonia Elizabeth Maldonado Radillo, Universidad Autónoma de Baja California

## RESUMEN

*Durante las últimas dos décadas se han realizado en México y América Latina esfuerzos para construir estrategias institucionales que orienten la gestión pública a resultados relevantes para el desarrollo. Debido al índice de crecimiento económico y las desigualdades en dichos países, la asistencia social es una responsabilidad social tradicionalmente imputada al Estado para generar acciones enfocadas a ciudadanos que se encuentran en una situación de vulnerabilidad, causada por la pobreza, la discapacidad o desastre natural, para mejorar sus condiciones sociales y de acceso al bienestar. La evaluación y seguimiento de las mismas ha sido un tema de discusión ante una sociedad que exige cada vez más transparencia y rendición de cuentas.*

*Este trabajo analiza las posibilidades de la auditoría administrativa como herramienta para medir la efectividad de programas sociales asistenciales y elaborar recomendaciones para alcanzar resultados, a partir de la realización un diagnóstico administrativo a un programa de asistencia social sin fines de lucro en la ciudad de Ensenada, Baja California, el cual tiene como objetivo asegurar el desayuno diario de niños en edad primaria a partir de la aportación mensual de ciudadanos*

**JEL:** Z18, M48

**PALABRAS CLAVE:** Evaluación administrativa, Administración Pública, Asistencia Social.

## ADMINISTRATIVE DIAGNOSIS AS TOOL OF EVALUATION OF GOVERNMENTAL SOCIAL ASSISTANCE PROGRAMMES

### ABSTRACT

*During the last two decades have been in Mexico and Latin America efforts to build institutional strategies that guide public management to relevant search results for development. Due to the rate of economic growth and inequality in these countries, social welfare is a social responsibility traditionally imputed to the State to generate actions focused on people who are in a situation of vulnerability, caused by poverty, disability, or natural disaster, to improve their social conditions and access to welfare. The evaluation and follow-up of the same has been a topic of discussion in a society that demands more and more transparency and accountability. This work analyses the possibilities of the administrative audit as a tool to measure the effectiveness of social assistance programmes and to make recommendations to achieve results, by executing an administrative diagnosis a programme of social assistance non-profit in the city of Ensenada, Baja California, which aims to ensure the daily breakfast of primary age children from the monthly contribution of citizens*

## **RESUMEN**

*En México se oficializan las competencias laborales en 1993 al crearse el sistema normalizado por competencias laborales y el sistema de certificación laboral, sistemas derivados del proyecto de modernización de la educación técnica y la capacitación (pmetyc). El proyecto fue realizado Hasta el siglo XIX, la inversión sistemática en el Capital Humano no era importante para ningún país y la inversión en educación, salud entre otros, no eran significativos. Sin embargo, con la Revolución Científica que se da a partir del siglo XIX, la educación, el conocimiento, y las habilidades se convirtieron en factores decisivos para determinar la productividad de un trabajador. Como resultado de ésta evolución, el siglo XX, sobre todo a partir de los años 50' para algunos autores se considera la era del Capital Humano, en el sentido de que un factor condicionante primario del nivel de vida de un país es el éxito en el desarrollo y la utilización de las habilidades, los conocimientos, y los hábitos de sus ciudadanos. Con ésta visión, fue necesario transformar la economía a la economía humana, desde el Capital de Trabajo hacia el desarrollo para potenciar el Capital Humano, como una ventaja competitiva sustentable en la empresa.*

**PALABRAS CLAVE:** Capital Humano, Competencia, Innovación.

## **LABOUR COMPETENCIES AS EDUCATIONAL INNOVATION STRATEGY IN THE FACULTY OF ACCOUNTANCY AND ADMINISTRATION XALAPA, VERACRUZ UNIVERSITY**

### **ABSTRACT**

*In Mexico, professional skills formalized in 1993 with the creation of the standardized system for labor skills and labor certification system, derived systems modernization project of technical education and training (PMETY , spanish initials). The project was done until the nineteenth century, systematic investment in human capital was not important for any country and investment in education, health, among others, were not significant. However, with the Scientific Revolution that occurs from the nineteenth century, education, knowledge, and skills have become decisive factors in determining the productivity of a worker. As a result of this evolution, the twentieth century, especially from the 50's for some authors considered the era of human capital, in the sense that a primary determinant factor of living of a country's success in development and use of skills, knowledge, and habits of its citizens. With this vision, it was necessary to transform the economy to the human economy, from working capital to development to strengthen human capital, as a sustainable competitive advantage in business.*

**KEYWORDS:** Human Capital, Laborskills, Innovation

## INTRODUCCIÓN

Hasta el siglo XIX, la inversión sistemática en el capital humano no era importante para ningún país y la inversión en la educación, salud, entre otros, no eran significativa; sin embargo, con la revolución científica que se da a partir del siglo XIX, la educación, el conocimiento y las habilidades se vuelven un factor determinante en la productividad de un trabajador. Como resultado de esta evolución, el siglo XX, sobre todo a partir de los cincuentas, algunos autores la consideran como la “era del capital humano”, en el sentido, en que un factor condicionante del nivel de vida de un país es el éxito en el desarrollo y la utilización de las habilidades, los conocimientos y los hábitos de sus ciudadanos.

Con esta visión fue necesario transformar la economía a la economía humana, desde el capital de trabajo, hacia el desarrollo para potencializar el capital humano como una ventaja competitiva sustentable en la empresa. Aunque el sistema de certificación de competencias es difícil de desarrollar, evaluar y llevar a la realidad, debe ser un esfuerzo continuo y sobre todo, compartido con los sectores gubernamentales, privado y educativo, de tal manera que una alianza entre ellos, pueda derivar en el incremento de la productividad, las utilidades, el incremento en el empleo y en el sistema de capitales basados en conocimientos y habilidades en el contexto empresarial actual.

En México, se oficializan las competencias laborales en 1993, al crearse el sistema normalizado por competencias laborales y el sistema de certificación laboral; ambos derivados del proyecto de modernización de la educación técnica y la capacitación (PMETYC), proyecto que fue realizado conjuntamente por la Secretaría de Educación Pública y la Secretaría de Trabajo y Previsión Social.

## REVISIÓN DE LITERATURA

En 1996, la UNESCO publicó un informe sobre la educación para el siglo XXI, “La Humanidad está expuesta a múltiples desafíos y la educación es el instrumento indispensable para enfrentarlos”. En este documento, propone tener en cuenta las competencias adquiridas más allá de la educación inicial, pretendiendo que éstas sean reconocidas por las empresas y por el sistema educativo, proponiendo ampliar las posibilidades y las relaciones entre la educación y el mundo laboral. En este contexto, el término de “competencias” ingresa al campo educativo desde estas dos importantes vertientes: laboral y educativo.

Noamchomsky, en 1965, publicó sus teorías de comunicación a partir de sus estudios de lingüística realizados en Norteamérica, distinguiendo a la competencia como la capacidad que desde muy pequeños tienen los seres humanos de entender frases nuevas y producir mensajes inéditos con una vieja lengua. El concepto de competencia está asociado a la idea de destreza intelectual, ésta a la de innovación y por lo tanto, a la creatividad.

En el mundo de la reingeniería empresarial, competencia, se refiere a la destreza que genera rentabilidad y competitividad (Barrero, 2004), entendiendo lo anterior y de acuerdo al modelo de educación vigente en la Universidad Veracruzana y en otras escuelas de educación superior que requieren egresar profesionistas competentes acorde al mercado laboral actual, pero es aquí donde surge una pregunta: ¿Cuáles deben ser las competencias profesionales para la práctica docente que garanticen el egreso de los profesionistas con las competencias que demanda el mercado laboral actual?

De acuerdo a la Organización Mundial de Salud, OMS (2001) una competencia es una combinación integrada de conocimientos, habilidades y actitudes conducentes a un desempeño adecuado y oportuno en diferentes contextos. La Organización para la Cooperación y el Desarrollo Económico, OCDE (2004) publicó el proyecto de competencias, en el cual se establecen los principios pedagógicos de este enfoque,

definiendo las competencias docentes y destacando aquellas necesarias para el desarrollo integral del estudiante, permitiéndole afrontar los retos que impone la educación de las nuevas generaciones.

En virtud de lo anterior, el objetivo de nuestra investigación es identificar las competencias profesionales con las que actualmente cuenta el Académico en la Facultad de Contaduría y Administración de la Universidad Veracruzana.

Jenny Beltrán Casanova, menciona que, en 1997 surgió el mega proyecto en la Universidad Veracruzana, “Formación Integral y Flexible” que concentra cinco proyectos específicos y que fueron presentados al Fondo para el Mejoramiento para la Educación Superior (FOMES), mismo que entró en operación a finales de 1998 a través de 14 Programas académicos. Este Modelo Educativo Integral y Flexible, (MEIF) tiene como eje central la formación del estudiante no sólo en el plano intelectual y profesional, sino también en la formación social y lo humano. Se conforma por tres ejes transversales Teórico-Epistemológico, Heurístico y Axiológico.

Lo anterior, se resume en lo siguiente: “La educación Integral del estudiante, la flexibilidad de la organización curricular, el equilibrio entre el enfoque formativo y el informativo, la obligación de habilidades de comunicación y auto aprendizaje, así como la educación ética y el compromiso social de la Universidad Veracruzana” En el caso de la Universidad Veracruzana, las competencias profesionales integrales son un conjunto articulado de conocimientos globales y profesionales, así como de experiencias laborales, que reconoce las necesidades y los problemas de la realidad, en otras palabras, es la relación de lo aprendido dentro y fuera de las aulas y que esto sea congruente con las demandas del entorno.

Así mismo, Leticia Audirac (2010) menciona “Los conocimientos, habilidades y actitudes deben de ir asociados a ámbitos de desempeño claramente inidentificables, susceptibles de ser transferidos a diferentes contextos.” Otro término importante de citar es el de innovación educativa, para el cual Jaume Carbonell (2002) lo define como “un conjunto de ideas, procesos y estrategias, más o menos sistematizados, mediante los cuales se trata de introducir y provocar cambios en las prácticas educativas vigentes. La innovación no es una actividad puntual sino un proceso o trayecto que se detiene a contemplar la vida en las aulas, la organización de los centros, la dinámica de la comunidad educativa y la cultura profesional del profesorado...la innovación apela a la subjetividad del sujeto y al desarrollo su individualidad, así como a las relaciones teórico-prácticas inherentes al acto educativo”.

La palabra innovación es un término policémico y complejo por su polivalencia y aplicación a diferentes áreas del conocimiento. Concretamente implica acciones vinculadas con actitudes y procesos de investigación para la solución de problemas que implican un cambio en la práctica educativa. Los ámbitos de la innovación son los siguientes: 1) innovación educativa en los planes y programas de estudios: su objetivo es la formación integral del estudiante en sus dimensiones, conocimientos, habilidades y actitudes en el proceso educativo; 2) en el proceso educativo: proceso de aprendizaje, proceso de enseñanza, formación docente y recursos materiales de aprendizaje; 3) en el uso de las tecnologías de información y la comunicación (TIC’S); 4) en las modalidades alternativas para el aprendizaje: curriculum flexible y con materias optativas, modalidad del estudiante, diversificación de ambientes de aprendizaje, adecuación de la educación a los ritmos, condiciones y procesos de aprendizaje de los estudiantes, docencia optativa como apoyo al aprendizaje; y 5) en el gobierno, dirección y gestión: experiencia con propósitos de aprendizaje, capacitación del personal y flexibilidad de la gestión universitaria.

Para la Universidad de Valencia (2012) Facultad de Filología describe a la creatividad como la capacidad más natural y exclusiva del ser humano. Es una condición presente en el desarrollo y en el progreso de una sociedad y aun más, en situaciones adversas, podemos fomentar e incentivar la actitud creativa en nuestra vida personal y profesional. Por otra parte, Ramón Armengol (2012) define la creatividad como

concepto o imagen, es el pensamiento original, la imaginación constructiva, el pensamiento divergente, la generación de nuevas ideas o conceptos, solos o relacionados entre sí, que producen habitualmente, soluciones originales. En otras palabras, la creatividad hace referencia a crear, inventar o construir, está relacionado con el arte en el plano humano, la moda, el marketing, la docencia, la música, hasta en la forma de realizar cualquier actividad.

### Elementos de las Competencias

No existe un Modelo Educativo ni curriculum que asegure la formación previa e integral de los académicos, ya que éstas dependen de las actitudes y el contexto social de formación del académico.

El profesor actual debe ser positivo, entusiasta, mesurado y tener un sentido de equilibrio; debe promover procesos transparentes, flexibles y colaborativos con un sentido analítico enfocado a obtener resultados a corto y a largo plazo; con el convencimiento de que debe rendir cuentas de y sujetarse a evaluación, valoración y certificación.

El verdadero aprendizaje se logra al comprender los conocimientos, desarrollar las habilidades y generar los valores en el aula, en el campo profesional y en la sociedad. Es nuestra responsabilidad formar profesionistas íntegros que atiendan a la demanda social y organizacional del mundo actual.

Los conocimientos conforman un acervo acumulado de teoría, datos obtenidos científicamente, técnicas y métodos sobre un cierto tema, su asimilación no es óptima cuando se realiza por la repetición; por el contrario el conocimiento en las competencias se expresa como el “saber” y se transmite por métodos no repetitivos.

Las habilidades corresponden a los conocimientos en la acción, la secuencia de operaciones realizadas en el campo de la profesión generalmente dirigidos al logro de una meta; en concreto son procesos específicos que se desarrollan con la práctica. Las actitudes y los valores pertenecen a la parte humanística de las competencias cognosocioafectivo corresponden a los comportamientos esperados en relación con valores, virtudes, leyes, principios, que permiten accionar y perfeccionar el desarrollo del hombre en el contexto personal, familiar, empresarial y social.

### Elementos de la competencia profesional

Entre las múltiples implicaciones pedagógicas del cambio curricular hacia un enfoque basado en competencias, se consideran necesarios para la correcta conducción del proceso de enseñanza aprendizaje, los aspectos siguientes: Reconstrucción de los modelos mentales cotidianos de los estudiantes en lugar de la repetición mecánica de contenidos disciplinares, como nuevo objetivo del proceso enseñanza aprendizaje. Motivar un aprendizaje significativo requiere de estrategias didácticas que estimula la capacidad del estudiante para comprender su propio proceso de aprendizaje. El trabajo colaborativo es una estrategia didáctica de primer orden, ya que estimula el diálogo, el debate, el respeto a las diferencias, el saber escuchar, así como tener la generosidad para ofrecer lo mejor de sí mismo. Considerar la flexibilidad y creatividad de la organización de los contextos educativos acorde con las exigencias del entorno empresarial.

Lo anterior, entre otros aspectos, el impacto del desarrollo de las competencias docentes en instituciones educativas, está pensado para mejorar la calidad y eficiencia del sistema de formación del docente, facilitar la cohesión social, mediante la apertura de los sistemas de educación y formación, y actualizar los sistemas de formación para el desarrollo del talento humano, el emprendimiento social de forma ética, promoviendo permanentemente los vínculos con la sociedad y con el propio estudiante.

### Principios de la formación profesional por competencias

Estos principios son necesarios para que el docente que se quiere formar como profesional en la educación por competencias:

**Accesibilidad pedagógica:** Se centra en el aprendizaje y selección de métodos, actividades, materiales didácticos y medios de evaluación, espacios y horarios óptimos para la organización secuencia de los elementos de los programas que permitan el logro de los objetivos.

**Funcionalidad:** Dominio de competencias que permitan ejercer adecuadamente las funciones y responsabilidades profesionales.

**Polivalencia:** Formación que permite la movilidad profesional, la adaptación y actualización a nuevas situaciones que impulsen el desarrollo de la persona en todas sus dimensiones.

#### **Educación permanente**

Los programas deben actualizarse y adaptarse para que puedan enfrentar la diversidad de situaciones de trabajo y responder a las diferentes demandas.

**Flexibilidad:** Facilita a las personas el cambio a lo largo de su vida productiva, ofrece a trabajadores y empresas un medio para capacitar y atender los requerimientos de productividad que les exige el desempeño de sus funciones en un contexto de transformación.

**Pertinencia:** Contribuye al crecimiento de la calidad porque considera las necesidades del contexto y responde a una formación enfocada en el desarrollo humano de un profesionista altamente calificado.

**Eficiencia:** Se refiere cuando los resultados obtenidos son superiores al esfuerzo realizado, gracias al aprovechamiento óptimo de todos sus recursos.

**Eficacia:** Plena satisfacción de las necesidades del componente del modelo (sociedad, institución, empresa y persona).

### Clasificación de las competencias

Se dividen en competencias básicas (que se desarrollen), las específicas (que se aprenden, capacitan y se construyen en consenso) y las genéricas (que se adquieren, se generan, son cognosocioafectivas) y valores socioculturales.

Las competencias básicas son transversales y afines al perfil profesional y a las disciplinas de apoyo, están asociadas a conocimientos elementales de índole formativa, provenientes de la educación básica y desarrolladas en el nivel universitario con base en la ciencia, indispensables para vivir y desenvolverse laboralmente, sus herramientas son la interpretación, la argumentación, la hipótesis, la solución de problemas y la deducción de secuencias, permiten comprender los problemas cotidianos de la vida. En otras palabras, conforman el eje rector del procesamiento de la información.

Las competencias específicas están relacionadas con la función productiva y con un currículo específico, se seleccionan en consenso y abarcan las competencias de índole técnico y científico, tienen la característica de volverse obsoletas con el cambio, ya que se adquieren con requerimientos de tipo conductista en el grupo u organización. En otras palabras, el docente se convierte de transmisor de información a facilitador del aprendizaje, es decir, de la teoría a la práctica.

Las competencias genéricas se manifiestan a través de comportamientos asociados con desempeños comunes a diversas ocupaciones y ramas de la actividad productiva, se observan en el comportamiento ético del profesionista dentro del contexto social. El docente transita de transmisor a planificador, de diseñador a facilitador del proceso de enseñanza-aprendizaje.

### Competencias profesionales para la práctica docente

El docente debe de estar consciente para aprender a bailar, aprenderá bailando; para aprender a contar, lo hará contando; en otras palabras, los conocimientos se vuelven significativos cuando el estudiante los vive y experimenta, en este contexto, se presenta un enfoque en la educación universitaria y en la docencia desde una perspectiva profesional, las cuales se enumeran a continuación:

Comprende y aplica la formación basada en competencias para el desarrollo integral de los estudiantes.

Comprende y aplica el proceso de diseño, desarrollo y gestión del curriculum.

Planifica y organiza la práctica docente.

Aplica la didáctica en la formación por competencias, ubicando su conceptualización.

Evalúa el aprendizaje.

Aplica métodos y técnicas de investigación para elevar la calidad del proceso de enseñanza-aprendizaje.

Localiza y utiliza efectivamente fuentes de información en su actividad docente e investigativa.

Ser crítico, autocritico y reflexivo en torno a su práctica docente.

Desarrolla con enfoque interdisciplinario el proceso de enseñanza-aprendizaje.

Desarrolla estrategias de comunicación con el fin de lograr la apropiación de la competencia.

Promueve el trabajo en equipos colaborativos durante la práctica docente.

Motiva el aprendizaje significativo y la práctica profesional competente de los estudiantes.

Promueve la generación de valores, conciencia moral y conducta ética.

Emplea las tecnologías de la información y la comunicación en su práctica docente.

Desarrolla el trabajo colaborativo en redes y con pares docentes.

Realiza la función de tutoría.

Integra en la práctica docente, la misión y visión institucional.

Vincula la formación profesional por competencias con el contexto económico y social.

Participa en la gestión social, desarrollando actividades comunitarias.

Actualiza permanentemente su actuación profesional y docente

El propósito de la presente investigación es conocer si los académicos de la Facultad de Contaduría y Administración, cuentan y utilizan con las competencias profesionales propuestas por Medina Elizondo (2012), basadas en las diez competencias citadas por de Philippe Perrenoud (2004), de acuerdo al Modelo de Educación vigente en la Universidad Veracruzana bajo el enfoque de competencias.

En el siglo XXI, el liderazgo se pone en riesgo cuando el conocimiento no es suficiente y esto obliga al uso de la inteligencia mediante la reflexión, para la toma de decisiones, para la innovación y la creatividad. El docente debe de estar consciente para aprender a bailar, aprenderá bailando; para aprender a contar, lo hará contando; en otras palabras, los conocimientos se vuelven significativos cuando el estudiante los vive y experimenta; por lo anterior, y con base en las competencias citadas de Philippe Perrenoud (2004), Alegre de la Rosa y Villar Angulo (2005) y Zabalza (2003), los dos primeros consideran únicamente diez competencias orientadas al área de educación básica y el tercero, presenta un enfoque en la educación universitaria y en la docencia desde una perspectiva profesional.

## **METODOLOGÍA**

Para realizar el presente trabajo, se realizó una investigación en carácter de exploratoria, sin embargo, se consideró una muestra de acuerdo a los siguientes datos:

De un total de 124 académicos en promedio que se encuentran impartiendo alguna experiencia educativa en el periodo comprendido entre agosto 2012 y julio 2013 en la Facultad de Contaduría y Administración, región Xalapa, Veracruz, México, se calculó la muestra siguiente:

$n$ = Tamaño necesario de la Muestra

$Z$ = Nivel de confianza

$V$ = Varianza (cuadrado de la desviación estándar)

$E$ = Error que se está dispuesto a aceptar.

Se determinó que el grado de confianza será del 95% ( $Z=1.96$ ) y el margen de error en 6.08% se calculó una varianza de 0.1971 estimando el valor de  $p$  y  $q$ .

Donde:  $p$ = porcentaje de académicos que sí realizaron un diseño de instrumento basado en competencias (Proyecto Aula).

$q$ = porcentaje de académicos que no realizaron un diseño de instrumento basado en competencias (Proyecto Aula).

Con base a lo anterior:

$p$ = .93

$q$ =.07

$V = (p)(q) = (0.0651)$

Por lo tanto:  $n$ = 70 académicos.

A pesar de saber que existen instrumentos diseñados por diversos investigadores sobre el tema de competencias, se elaboró un instrumento de investigación de acuerdo a las necesidades y características de la población considerada en la Facultad. Consta de 2 preguntas de relación de conceptos, 27 de opción múltiple y 4 dicotómicas, que se elaboró con base a las 20 competencias antes descritas, así como generales de los entrevistados.

Previamente fue aplicado un instrumento piloto con la finalidad de determinar la varianza y el instrumento definitivo, mismo que se aplicó a la muestra determinada, en las instalaciones de la Facultad de Contaduría y Administración, región Xalapa, en el mes de febrero de 2013.

## RESULTADOS

En un estudio realizado a 70 académicos de la Facultad de Contaduría y Administración zona Xalapa, para conocer las competencias profesionales con las que cuenta y utiliza el académico en su práctica docente con los estudiantes de los cuatro Programas Educativos en las Licenciaturas de: Administración, Contaduría, Sistemas Computacionales Administrativos así como Gestión y Dirección de Negocios.

Es importante mencionar que por la extensión del instrumento, únicamente se mostrarán los resultados más sobresalientes, considerados por los autores.

Después de autoevaluarse los académicos se encontró, en base a los indicadores considerados en el instrumento, el 64 % aplica la didáctica en la formación por competencias, conoce el término de competencia en la educación y lo utiliza pero el resto (36 %) no comprende a fondo el concepto. Lo anterior coincide con 51% de los que comprenden y utilizan dicho término, no aplican de manera pertinente los aspectos axiológicos de las competencias consideradas en los programas de las Experiencias Educativas.

Otro resultado relevante, en relación a la competencia número 4 mencionada con anterioridad, sólo el 37% de los académicos que aplican adecuadamente la didáctica en la formación por competencias, y considera los criterios de desempeño docente; sin embargo, el 63% continúan utilizando una didáctica tradicional, sabiendo que el modelo educativo vigente está basado en competencias.

En relación a la competencia profesional, de evaluar el aprendizaje en la formación basada en competencias (FBC), el 70 % de los académicos, conoce y utiliza de acuerdo a su autoevaluación dichos criterios, sin embargo en otra pregunta relacionada con los indicadores para validar los aprendizajes esperados, el 66% realiza evaluaciones durante el proceso de aprendizaje, el 41% lo hace sólo al final del proceso de aprendizaje, y sólo el 19 % utiliza la Rúbrica como instrumento de evaluación.

En este aspecto, 27% siempre utiliza el portafolio de evidencias como una forma de evaluación de los aprendizajes, el 37 % algunas veces pero el 36% no conoce la estructura del portafolio ni lo utiliza. Por otra parte, cuando se les preguntó si aplican métodos y técnicas de investigación para elevar la calidad del proceso de enseñanza aprendizaje (competencia 6), el 35% explican y promueven metodología de investigación, de manera permanente, pero el resto no lo explican a los estudiantes o no lo fomentan.

Para determinar si localiza y utiliza efectivamente fuentes de información, se les preguntó que si sugiere y utiliza con sus estudiantes nuevas y diversas fuentes de información para lo cual se encontró que el 47% de los académicos sigue utilizando las mismas fuentes desde que inició su práctica docente, y sólo el 53%, si busca, fomenta y promueve el uso de fuentes de información diversas.

El centro de la educación basada en competencias es el promover el pensamiento crítico y reflexivo en los estudiantes. En relación a la competencia 8, se les preguntó si promueven la reflexión de los aprendizajes en el aula, el 46% de los académicos siempre lo promueve, el 41% sólo a veces y el 13% nunca lo promueven. En relación a esta competencia el 34% siempre permite la intervención de las ideas y opiniones de los estudiantes, el 51% a veces lo permite y el 14 % nunca lo permite.

Para determinar si los académicos conocen y desarrollan con enfoque interdisciplinario el proceso enseñanza aprendizaje (competencia 9), se les preguntó si promueven el proceso de E-A desde la visión integral del estudiante, encontrando en la autoevaluación de los académicos que el 37% siempre lo considera, el 40% a veces pero el 23% nunca lo ha considerado. Otra de las preguntas en relación a ésta competencia profesional que el académico debe tener, fue si eran promotores de un ambiente que genere innovación y creatividad, encontrando que 21% siempre lo promueven, el 41% a veces y el 47% no fomenta dicho ambiente en el aula.

Para conocer la competencia 12, se les preguntó si conocía técnicas para motivar el aprendizaje significativo y la práctica profesional competente de los estudiantes, el 84% respondió que sí conocía algunas, y el 16% desconoce dichas técnicas; en este sentido, se les incluyó una pregunta para saber si las implementan en sus clases, el 31% siempre implementa estrategias motivacionales, el 30% a veces pero el 39% nunca las desarrolla en el aula.

Un dato sobresaliente en la evaluación de la competencia 13, para conocer si promueve la generación de valores conciencia moral y conducta ética considerados como ejes transversales de los programas, se les preguntó si reconocen el avance ético de los estudiantes y el 21% de los académicos siempre lo reconoce, el 27% de los académicos solo a veces lo reconoce y el 51% no reconoce el avance ético de los estudiantes.

El 73% de los académicos conoce y utiliza las TICs en su práctica docente de manera constante, el 21% a veces y el 6% nunca.

## CONCLUSIONES

Los cambios y tendencias que genera la globalización, así como la sociedad actual, exige que de las universidades egresen profesionistas que además de contar con los conocimientos disciplinares, adecuados y pertinentes al contexto actual, cuenten con las habilidades para utilizar dichos conocimientos, pongan en práctica sus valores y además se comprometan con el desarrollo Estatal y Nacional.

En este sentido la Universidad Veracruzana, según el Plan General de Desarrollo 2025, a través de los ejes estratégicos para el desarrollo institucional, específicamente el número 2, relativo a la innovación educativa, que establece el reto de instaurar la mejora curricular permanente de los programas educativos de todos los niveles que tiene nuestra máxima casa de estudios, ha logrado un modelo de educación bajo el enfoque de competencias, permitiendo un desarrollo integral en los estudiantes y egresados, fortalecimiento los perfiles de egresos de los diferentes programas educativos con lo que cuenta nuestra Universidad.

En congruencia con lo establecido en el Plan General de Desarrollo, la Facultad de Contaduría y Administración, región Xalapa, en el Plan de Desarrollo de la Entidad 2009-2013, determina en el eje 2, referente a la Innovación Educativa, la revisión permanente de los planes y programas de estudios de las áreas de formación, bajo el enfoque de competencias.

En congruencia con la línea señalada en la Dirección General de Desarrollo Académico, la Dirección de la Facultad de Contaduría y Administración tiene el interés de fortalecer las competencias académicas de la planta docente, por lo que en la presente investigación se decidió partir de un diagnóstico que mostrara cuáles son las competencias con las que se cuentan actualmente y detectar cuáles son las áreas de oportunidad en las que se debe trabajar y establecer un plan con estrategias bien definidas que permitan enriquecer y generar resultados satisfactorios en los indicadores establecidos por organismos evaluadores nacionales, en un mediano plazo; mientras que en los estudiantes se espera que adquieran las herramientas y habilidades suficientes, acordes a las exigencias del mundo laboral, en el largo plazo.

Esta investigación pone de manifiesto los logros y esfuerzos de los programas considerados en los ejes estratégicos, específicamente en el proyecto aula y lo que ahora es denominado innovación educativa, permitiendo a estudiantes y académicos desarrollar y facilitar la adquisición de competencias de los estudiantes para que puedan consolidar el proceso de enseñanza-aprendizaje.

Esta investigación nos permitió hacer un análisis crítico y reflexivo de la práctica docente actual, pero sobre todo nos permitió una autoreflexión que nos ayuda a lograr una mejora en la acción formadora, en reconstruirnos como entes creativos que somos, cambiando las viejas formas de enseñanza por nuevas maneras de facilitar el conocimiento y la experiencia profesional de cada uno de los académicos, así como transmitir valores sólidos y constructivos, considerando el respeto y tolerancia a la diversidad.

Lo anterior nos permitirá consolidar el proceso de enseñanza-aprendizaje mediante el beneficio del aprendizaje reflexivo y crítico que no sólo impacta al estudiante sino también al docente; esto es, “Si no existe una mínima capacidad de autocritica y aceptación de otros puntos de vista, no puede haber desarrollo profesional, no sólo en el ámbito de la educación, sino en cualquier terreno, porque no existe la posibilidad de hacer conscientes las inconsistencias externas de la misma práctica” (Sancho, 1990).

# EFICACIA DE PROCESOS ADMINISTRATIVOS, UTILIZANDO LAS TECNOLOGÍAS DE INFORMACIÓN EN LAS EMPACADORAS DE FRUTA DEL VALLE DE TECOMÁN, COLIMA

Enrique Macías Calleros, Universidad de Colima  
Alfredo Salvador Cardenas Villapando, Universidad de Colima  
Oscar Mares Bañuelos, Universidad de Colima  
Juan Alfredo Lino Gamiño, Universidad de Colima

## RESUMEN

*El propósito de este trabajo de investigación es indagar en los procesos administrativos en el uso de TIC (Tecnologías de la Información y la Comunicación) en varias plantas empacadoras de fruta ubicadas en el valle de Tecomán, Colima, México; así como también tener evidencia de las personas entrevistadas sobre este tema, ya que se han realizado algunos estudios que han demostrado que el uso intensivo de las Tecnologías de información y comunicaciones (TiC), tienen un impacto significativo en la rapidez y el grado de internacionalización de las empresas. También tiene como objetivo evaluar la eficiencia de los procesos administrativos utilizando tecnologías de información en las empacadoras de frutas del Valle de Tecomán, Colima, investigando la Innovación en Gestión, Marketing y en su procesos de dichas empresas. La metodología utilizada fue cualitativa a través de la aplicación de un cuestionario representado con estadística descriptiva. Como resultado se destaca que un 80% de las empacadoras del valle de Tecomán, Colima obtienen un nivel medio y por lo que las tasas de inversiones en las empacadoras por lo regular son estables ya que son favorecidas a un buen negocio hacia al mercado.*

**Palabras clave:** Procesos, innovación, gestión, tecnologías, plantas empacadoras de fruta.

## EFFECTIVENESS OF ADMINISTRATIVE PROCESSES, USING INFORMATION TECHNOLOGIES IN THE PACKERS OF FRUIT FROM THE VALLEY OF TECOMÁN, COLIMA

### ABSTRACT

*The purpose of this research work is to look into the management processes in the use of TIC in several fruit packing plants located in the valley of Tecomán, Colima, México, as well as to have evidence from the people interviewed on this topic, since some studies have shown that the intensive use of TIC (Information and Communication Technology), have a significant impact in the speed and degree of internationalization of companies. It also aims to assess the efficiency of administrative processes using TIC (Information and Communication Technology) in several fruit packing plants in the valley of Tecomán, Colima by investigating Innovation in management, marketing, and the processes of those companies. A qualitative methodology was used through the application of a questionnaire represented with descriptive statistics. The results highlight that 80% of fruit packing plants in the valley of Tecomán, Colima have an average level and because of this, the investment rates in the fruit packing plants are usually stable due to the fact that they are favored as a good business to market.*

**KEYWORDS:** Processes, innovation, management, technology, fruit packing plants.

## INTRODUCCIÓN

En los últimos años el entorno globalizado ha permitido la entrada de nuevos competidores, así como las graves crisis económicas por las que atravesó nuestro país, por ello se ha puesto en riesgo la existencia de las PyMES por la falta de factores indispensables para el buen funcionamiento de las mismas, que se consideran necesarias para evitar la pérdida de mercados internos, e indispensables para acceder a mercados externos. Leva (2004) sostiene que la capacidad para operar de forma global tiene que ser producida, al igual que la capacidad de coordinación y de control que implican las nuevas tecnologías de la información. Efectivamente, la liberalización y los efectos de la competitividad internacional perjudicaron en mayor medida a las pequeñas empresas, mostrando una indudable rentabilidad baja o bien en el cierre de ellas.

La competitividad de un país está ligada primordialmente a la eficacia de los sectores privados. El aumento de los niveles de rentabilidad de la empresa es una forma de desarrollar la capacidad competitiva, pero el empresario mexicano atribuye al gobierno, al sistema financiero y a factores económicos el que su empresa no goce de un alto rendimiento; sin embargo, los elementos organizacionales e individuales representan un papel importante, e incluso fundamental, en la productividad y competitividad de la empresa (Pacheco, 1993).

*Planteamiento del problema:* En el municipio de Tecomán, Colima, observamos que hay tecnología a un gran volumen en las empacadoras ya que se han convertido en una herramienta indispensable para la competitividad. Por eso proponemos a las empacadoras que puedan impulsar la economía de sus productores y habitantes del municipio, a la vez relacionarse como socios y llevar un control de fruta que llegan a vender a determinados clientes.

*Objetivo general:* Evaluar la eficiencia de los procesos administrativos utilizando tecnologías de información en las empacadoras de frutas del Valle de Tecomán, Colima, investigando la Innovación en Gestión, Marketing y en su procesos de dichas empresas.

### Objetivos específicos

1. Investigar estudios previos sobre el uso de las TIC, en las empacadoras de frutas en Tecomán, Colima.
2. Analizar de manera general el uso de las TIC en las empacadoras de frutas del municipio de Tecomán
3. Brindar una perspectiva del uso de las TIC en las empacadoras de frutas del valle de Tecomán.

### Preguntas de investigación

- ¿Cuál será el nivel y la tasa de inversiones en tecnología de la organización?
- ¿Qué inversiones tecnológicas deberían eliminarse o reducirse?
- ¿Cuáles son las fuentes de información acerca de los avances tecnológicos que afectan a la organización?

## REVISIÓN LITERARIA

### Antecedentes

Las empacadoras que están ubicadas en el municipio de Tecomán, Colima, mediante grupos de productores de empresas S.A de C.V nombres que adquieren debido a que su región sea la actividad principal de producción de frutas como el limón, el coco, la papaya etc.

En nuestra sociedad y mundo en que vivimos, las Tecnologías de información (TI) se han integrado a nuestras vidas, a tal grado que se han vuelto indispensables en muchas de nuestras actividades cotidianas y ámbitos tan diversos como la educación, la salud, la industria, la economía, solo por mencionar algunos. Esto es comprensible cuando entendemos que estas tecnologías tienen como objetivo introducir, procesar, almacenar, producir, transmitir y recibir información, la cual puede presentarse a través de texto, gráficos, video o audio. Ya que las TI se encuentran presentes en diversos campos de las prácticas culturales, sociales, económicas y científicas, es difícil concebir a la sociedad humana sin estos elementos, así como también es innegable la responsabilidad que cada uno de nosotros adquirimos al utilizar o desarrollar Tecnologías de información. (Andrade-Aréchiga, M., López, G., López-Morteo, G., y Contreras-Castillo, J., 2007) citado por (Pulido JRG, Contreras Castillo Juan, Román Gallardo Armando, 2007).

La eficiencia es la expresión que mide la capacidad de la actuación de un sistema o sujeto económico de lograr el cumplimiento de un objetivo minimizando el empleo de recursos: es la actuación económica en sentido estricto y supone hacer bien las cosas. La cual mide del uso de entradas (o recursos) para alcanzar resultados; un ejemplo de eficiencia podría ser cuánto dinero se requiere para generar cierto nivel de ventas. Una manera interesante de distinguir el termino es la siguiente: Eficiencia = Hacer correctamente “las cosas”.

El proceso administrativo es una metodología fundamental para la aplicación de la administración, independientemente de que esta forme parte de la escuela del proceso administrativo, una herramienta indispensable en torno a la cual se pueden aplicar los demás enfoques o escuelas administrativas; su importancia es similar a la de las operaciones básicas de aritmética; sin estas no es posible realizar otras operaciones matemáticas. Igualmente, las etapas del proceso administrativo son básicas para aplicar cualquier estilo o escuela de administración. Citado por (A. Bocchino William, 1979)

La teoría de gestión del conocimiento propone nuevas formas de dirigir las empresas, al tenerse que ocupar del uso y de los efectos del cambio en la nueva economía, como consecuencia de las de la información y de la comunicación (TIC), a las que Solé y Ole atribuyen ser la causa y efecto de la revolución del conocimiento (Martínez, 2006). La teoría de la gestión del conocimiento se caracteriza por estudiar la dirección bajo un enfoque interdisciplinario.

La teoría de la contingencia estructural. Se parte del principio ecológico de la adaptación de las organizaciones al entorno. No hay única forma óptima de organización, sino que esta dependerá de cómo se perciba el entorno y algunos factores contingentes de las propias organizaciones. Algunos factores clave que influyen en la determinación de las mejores formas de organización son: la estrategia, el tamaño, la tecnología y el grado de claridad y de complejidad de los objetivos de las organizaciones.

## **METODOLOGÍA**

La presente investigación fue descriptiva, porque en la cual se llego a describir la situación de emparadoras en el municipio de Tecmán ya que se mencionaron los canales de distribución utilizados en el municipio para el comercio de las frutas y la adecuada tecnología usada por cada empaadora.

El cuestionario se aplicara con la finalidad de conocer el grado de gestión del conocimiento en relación con las empaadoras de Tecmán, Colima. Hay 3 variables que constituyen las preguntas para poder entrevistar, en si para poder evaluar la veracidad de la opinión de los encuestados, se hicieron preguntas innovación en procesos, en gestión, en marketing que integran factores predominantes de los procesos de gestión del conocimiento por analizar que reciben una gran importancia y se puede hablar de una correcta ejecución de los procesos estudiados.

La metodología que se empleo está constituida por cuatro fases que se desarrollan en diferentes pasos desde los básicos como son la integración del equipo de investigación, la revisión bibliográfica, para crear el marco teórico, hasta pasos complejos como la fase dos, de construcción del protocolo de investigación compuesta por el planteamiento del problema, formulación de preguntas de investigación, definición del objeto de estudio, determinación de objetivos general y específicos, formulación de hipótesis y la elaboración de la justificación, conforme a los lineamientos para la titulación en educación superior.

## RESULTADOS

En 5 sectores de 24 encuestas entrevistadas a las emparadoras de Tecomán en su innovación de procesos para automatizar si han introducido nuevos equipos y metodos de prestacion de servicios en su organización, por lo cual el IPC1 se muestra que 20 estuvieron en total desacuerdo y 4 estuvieron en total acuerdo, el IPC2 19 en total desacuerdo y 5 en total acuerdo, en el IPC3 12 en total desacuerdo y 12 en total acuerdo, en el IPC4 11 en total desacuerdo y 13 en total acuerdo y por ultimo en el IPC5 6 en total desacuerdo y 18 en total acuerdo.

De un total de las 24 encuestas realizadas a las emparadoras hacia su innovación de gestión se observan 9 sectores, se verifico si han introducido nuevos métodos para organizar y administrar el trabajo de su organización mediante el cual el IOR1 se muestra que 16 estuvieron en total desacuerdo y 8 estuvieron en total acuerdo, en el IOR2 15 en total desacuerdo y 9 en total acuerdo, en el IOR3 9 en total desacuerdo y 15 en total acuerdo, en IOR4 8 en total desacuerdo y 16 en total acuerdo, en el IOR5 9 en total desacuerdo y 15 en total acuerdo, en el IOR6 9 en total desacuerdo y 15 en total acuerdo, en el IOR7 8 en total desacuerdo y 16 en total acuerdo, en el IOR8 10 en total desacuerdo y 14 en total acuerdo y por ultimo en el IOR9 8 en total desacuerdo y 16 en total acuerdo.

Tomando en cuenta un total de las 24 encuestas realizadas a las emparadoras en sus labores de trabajo de innovación en Marketing se observan 9 sectores, se verifico si han desarrollado o adoptado nuevos métodos de comercialización ya sea para productos nuevos o ya existentes, mediante el cual el IME1 se muestra que 17 estuvieron en total desacuerdo y 7 estuvieron en total acuerdo, en el IME2 16 en total desacuerdo y 8 en total acuerdo, en el IME3 17 en total desacuerdo y 7 en total acuerdo, en el IME4 10 en total desacuerdo y 14 en total acuerdo, en el IME5 9 en total desacuerdo y 15 en total acuerdo, en el IME6 5 en total desacuerdo y 19 en total acuerdo, en el IME7 13 en total desacuerdo y 11 en total acuerdo, en el IME8 7 en total desacuerdo y 17 en total acuerdo y por ultimo en el IME9 7 en total desacuerdo y 17 en total acuerdo.

## CONCLUSIONES

En este trabajo de investigación se concluyo sobre eficiencia de los procesos administrativos, utilizando las tecnologías de información en las emparadoras de fruta del valle de Tecomán, Colima.

Para ello las emparadoras están realizando nuevos intentos por mejorar este nuevo activo, para así satisfacer las necesidades del cambiante mercado, donde se juega un papel muy importante en esta dinámica, ya que pueden coadyuvar a establecer las condiciones asociadas a la implementación del gestión del conocimiento, apoyando así en la toma de decisiones, basadas en los procesos de innovación en Gestión y “Marketing” (o Mercadotecnia) y por lo cual se tiene una explotación de las capacidades de cada uno de los miembros de la organización.

En la pregunta de investigación; ¿Cuál será el nivel y la tasa de inversiones en tecnología de la organización? Resultó ser afirmativa, por lo cual se desprende la siguiente información:

Se destaca que un 80% de las empacadoras del valle de Tecomán, Colima obtienen un nivel medio y por lo que las tasas de inversiones en las empacadoras por lo regular son estables ya que son favorecidas a un buen negocio hacia al mercado. Los encargados de las empacadoras del valle de Tecomán, Colima actualmente dependen de un poder estable.

En el objetivo específico se consideró Investigar (o realizar) estudios previos sobre el uso de las TIC, en las empacadoras de frutas en Tecomán, Colima. Por lo que fue necesario hacer un análisis general sobre el uso. Cual analizar de manera general el uso de las TIC en las empacadoras de frutas del municipio de Tecomán.

En dicha perspectiva hacia el objetivo específico se dio a conocer la calidad y las nuevas formas de colaboración con proveedores para así mejorar las relaciones existentes, por lo cual se brindó el uso de las TIC en las empacadoras de frutas del valle de Tecomán.

En la hipótesis se realizó una investigación sobre el proceso administrativo de empacadoras en el Valle de Tecomán, Colima. Para ello, se realizó una encuesta y así conocer si. Se han introducido nuevos equipos para automatizar los procesos de la organización.

En dicha hipótesis también se especifica si dichas empacadoras del valle de Tecomán, Colima utilizan programas informáticos y técnicas para el abastecimiento de insumos, la asignación de suministros en la empresa o en la distribución de productos finales, a satisfacer el servicio al cliente con mayor eficiencia a través de nuevos métodos de organización empresarial y comercialización de productos en las empacadoras.

## RESUMEN

El fenómeno de la globalización en el mundo actual, se presenta en las sociedades por medio de múltiples formas que tienen los consumidores de conocer y optar en sus decisiones de compra de los diversos productos y servicios que requieren para cubrir y satisfacer todas sus necesidades. El día de hoy, están al alcance de los consumidores una gran cantidad de modernos comercios que les ofrecen los productos y servicios más avanzados desde el punto de vista tecnológico, y con las mejores condiciones de venta, precio, garantía y descuentos, al igual que si se adquirieran en los centros cosmopolitas más importantes del mundo como Nueva York, París, Londres, Hong Kong. La globalización ha generado diversos factores importantes, como la competencia, la calidad, el intercambio de productos y servicios y el flujo de capitales, que han impactado económica y comercialmente a los diferentes países entre ellos México, tanto en sus Industrias, comercios y obviamente en la sociedad. En este contexto de la globalización, un objetivo fundamental en las diferentes organizaciones es la de implantar una metodología que aumente la productividad y la competitividad que permita la mejora continua y la certificación, (ISO 9000).

**PALABRAS CLAVE:** Calidad, Globalización, Consumo, Sociedad, Competitividad

## THE QUALITY AND GLOBALIZATION AS TRIGGERS IN MEXICO CONSUMPTION

### ABSTRACT

*The phenomenon of globalization in the world today, is presented in societies through multiple ways for consumers to know and decide on their purchase decisions on various products and services they need to Meet and satisfy all your needs. Today, are available to consumers a lot of modern shops that offer the most advanced products and services from the technological point of view, and with the best conditions of sale, price, warranty and discounts, as if purchased in major cosmopolitan centers of the world such as New York, Paris, London, Hong Kong. Globalization has led to several important factors, such as competition, the quality, the exchange of goods and services and capital flows, which have impacted economically and commercially to different countries including Mexico, both in their industries, businesses and obviously society. In this context of globalization, a major goal in different organizations is to establish a methodology to increase productivity and competitiveness to enable continuous improvement and certification (ISO 9000).*

## INTRODUCCIÓN

En la actualidad las distintas sociedades del mundo se ven influenciadas y en ocasiones afectadas por el fenómeno de la globalización, viéndose invadidas y saturadas por productos ajenos y muchas veces desconocidos principalmente en las pequeñas comunidades, produciendo una crisis en su propia identidad cultural, como el cambio de costumbres, adquisición de nuevas modalidades. El fabricar productos de calidad implica una gran responsabilidad y compromiso ya que la organización que así lo haga deberá contar con una filosofía que cumpla cabalmente con la plena satisfacción de sus clientes.

La empresa que quiera producir con calidad y eficiencia requiere contar con una adecuada administración lo que implica una eficiente planeación y organización, implementando mejoras de manera permanente.

El mercado global deberá estar consciente que el operar con calidad implica un reto, donde hay grandes oportunidades, aceptando que producir con calidad y eficiencia abarata los costos y se es más competitivo globalmente.

## REVISION LITERARIA

### Las Sociedades De Consumo

El consumo se puede definir como el conjunto de actividades de índole sociocultural a través de las cuales los individuos se apropian y utilizan los diferentes productos. Dichos productos pueden ser adquiridos en diferentes lugares y consumidos de distintas formas.

El ser humano siempre ha sido consumidor; con la diferencia de que en otros tiempos el consumo se daba de acuerdo a las necesidades, y en la actualidad se tiende a crear una serie de hábitos y modos de vida que llevan a consumir por el mero placer de consumir. Surge, de esta manera, la sociedad consumista, que se caracteriza por:

- Crear nuevas necesidades
- Aumentar la predisposición para comprar
- Ser influenciada por los medios de comunicación
- A gastar más de los ingresos obtenidos

Diversos estudios han tratado de determinar si el consumidor actúa de manera racional o irracional al hacer sus compras.

A continuación se mencionan diferentes enfoques sobre la manera de actuar de los consumidores:

- **Enfoque microeconómico:** supone un consumidor lógico y racional donde su decisión fundamentalmente se basa en el precio y cantidad.
- **Enfoque conductista:** En este tipo de consumidores la conducta se ve influenciada por la observación, imitación de otros consumidores o por experiencias personales.
- **Enfoque sociológico** No se puede interpretar el comportamiento de los consumidores sin considerar los aspectos sociales que influyen en sus gustos y decisiones de compra, en donde en ocasiones son los vendedores los que manipulan a tal grado a los consumidores a través de los medios de comunicación y fabricando nuevos productos que van creando nuevas necesidades

### Los Medios de comunicación y las sociedades de consumo

Actualmente los medios de comunicación tienen un importante impacto en las personas, en su comportamiento y sus modos de elección.

En la sociedad de hoy, la publicidad tiene un profundo impacto en cómo las personas entienden la vida, el mundo y a sí mismas, especialmente con relación a sus valores y sus modos de elección y comportamiento.

Debido a la publicidad y al poder de los medios de comunicación, se ha desarrollado una cultura social altamente consumista, tendiendo a estandarizar los gustos y las aspiraciones, ya que reciben mensajes publicitarios idénticos, lo que trae como consecuencia generar intereses similares.

En determinados casos la publicidad puede llegar a ser nociva para los consumidores, al crear de manera artificial necesidades superfluas que dejan de lado a las necesidades realmente importantes.

### La calidad y la globalización

La competitividad de una empresa está determinada por la calidad, el precio y el tiempo de entrega de sus productos o servicios.

Fabricar productos de calidad representa un gran compromiso y responsabilidad en las empresas, ya que se debe contar con una filosofía para desarrollar productos y servicios que cumplan cabalmente con las expectativas de los clientes.

El producir con calidad y eficiencia requiere contar con una adecuada planeación, capacidad y habilidades, poniendo mucha atención al detalle en el diseño de los productos, teniendo siempre presente la mejora continua. Aunque producir con elevados niveles de calidad pueda parecer imposible, existen en nuestro país empresas que lo han logrado.

El reto está ahí, las oportunidades abundan y seguirán existiendo, la clave está en tener un cambio de mentalidad y aceptar que la única manera de competir globalmente hoy en día, es producir con calidad, eficiencia y bajos costos, siendo esta una de las ventajas que para los consumidores, ha generado la globalización en las sociedades modernas del mundo, y también en ciudades pequeñas como Veracruz.

### Consumismo Global

La sociedad de consumo con el fenómeno de la globalización se ve inmersa en mercados que se expanden, y las estrategias de venta de los productores se proyecta a gran escala en todo el mundo.

Un mercado globalizado favorece el intercambio de productos estimulando y aumentando el consumo. El mercado global se ve reflejado en la moderna infraestructura de los grandes almacenes que en sus múltiples anaqueles ofrecen una extensa gama de artículos fabricados en diferentes países, calidad y precio.

Cuando el consumidor se enfrenta a los aparadores de estos almacenes podrá elegir entre productos similares que tienen distintas procedencias tanto nacionales como extranjeras y muchas ocasiones el productor nacional se ve obligado a competir con productos que provienen de lugares con realidades económicas distintas, como por ejemplo la mano de obra barata de China. Muchas veces esta competencia se torna desleal si tenemos en cuenta las diferencias en cuanto al desarrollo tecnológico, capacidad productiva, costo de la mano de obra y condiciones de seguridad social.

Es importante considerar también que el avance de la tecnología ha hecho más ágil la comunicación, lo que ha favorecido la relación entre productor-consumidor, lo que ha aumentado considerablemente el consumo, siendo un ejemplo de esto las compras por Internet.

### México ante el reto de la Calidad y la Globalización

En la actualidad México se encuentra involucrado como resultado de la globalización y los tratados comerciales en proceso de competencia tanto a nivel regional con países Latinoamericanos, como a nivel mundial con muchos otros países, lo que le representa un reto ser competitivo y responder a las expectativas existentes.

El compromiso de producir con calidad obliga a las empresas a tener la misión de cumplir cabalmente con las expectativas de los clientes, entendiendo perfectamente cuáles son sus gustos y necesidades y sobre todo contar con una adecuada planeación y capacidad, impulsando la mejora continua mediante la adopción del concepto “Six Sigma”.

Un claro ejemplo de esto son las tiendas Walmart empresas del sector detallista en la que todos los productos de res, pollo y cerdo en estado natural del departamento de carnes provienen de proveedores 100% TIF, asimismo sus plantas procesadoras. Este certificado lo otorga la Secretaría de Agricultura, Ganadería, Desarrollo Rural, Pesca y Alimentación (SAGARPA), a las plantas productoras y procesadoras de carnes que cumplen con estrictas normas y medidas de sanidad e inocuidad.

### Veracruz ante el reto de la Calidad y la Globalización

En Veracruz, este fenómeno dio inicio a finales del siglo pasado y a principios de este , cuando empezaron a instalarse empresas transnacionales como Walmart, Sam's, Homdepot, Oficemax, Oficce Depot, Costco, Zara, mismas que vinieron a revolucionar el comercio existente en la localidad.

La primera plaza comercial que se creó en Veracruz, fue Plaza Mocambo, la cual se inauguró en el año 1980 en el municipio de Boca del Río, dando inicio a partir de este momento al proceso de descentralización comercial del Puerto, ya que hasta esta fecha, el comercio se encontraba centralizado en el centro histórico de la ciudad. La tienda ancla de este centro comercial fue la empresa nacional Comercial Mexicana, inversión que fue pionera en su campo en llegar a tierras veracruzanas.

Las características de este centro comercial, es que le ofrecía al consumidor en un mismo lugar, comercios que le brindan desde productos de primera necesidad, tales como frutas y verduras, carnes, ropa, zapatos, hasta productos electrónicos y de línea blanca, así como restaurants y centros de diversión como cines y cafeterías, con estacionamiento propio.

Posteriormente, aumento el proceso de desarrollo comercial de descentralización por medio de la creación de este tipo de centros o plaza comerciales, y fue en el año 1985 cuando se fundó Plaza Floresta, ubicada también en la zona sur de Veracruz y desarrollado por el grupo Chedraui, siendo esta empresa quién funcionó como ancla de esta plaza.

En el año de 1992, se desarrolla en el municipio de Boca del Río el centro comercial más importante del estado, por iniciativa de la Cámara Nacional de Comercio de Veracruz, en terrenos adjuntos al Centro de Exposiciones y Convenciones World Trade Center y con un hotel formando parte del complejo, a la cual se le denominó Plaza Américas con motivo de los festejos que en ese año se llevaban a cabo para conmemorar los 500 años del descubrimiento de América. Esta plaza es desarrollada también por el grupo Chedraui, siendo las tiendas anclas SEARS, LIVERPOOL Y CHEDRAUI.

A partir de esta fecha se empiezan a construir y desarrollar centros y plazas comerciales por todas las zonas habitacionales de Veracruz, existiendo a la fecha 16 desarrollos comerciales, de los que 12 se

encuentran en Veracruz y 4 en Boca del Río, y 2 en proceso de desarrollo en Boca del Río y en la zona conurbada de Alvarado.

La globalización hasta la fecha ha cambiado los hábitos y las costumbres de los consumidores, tanto al realizar actividades de compra y abastecimiento, como de recreo y diversión. Los centros comerciales se han convertido en lugares de paseo y recreación, sustituyendo a los lugares tradicionales como el malecón y zócalo de la ciudad, y diversiones que parecían haber desaparecido, como el cine, vuelven a ser parte importante de la agenda de la sociedad, al ofrecer los centros comerciales múltiples cines modernos con todas las comodidades.

#### Ventajas de la Calidad y la globalización en el Consumo en México

Una de las ventajas que la globalización ha generado en los diferentes países entre ellos México es el establecimiento de diferentes comercios internacionales como Sam's, Costco, Homedepot, Zara, Walmart, que han abierto sus puertas ofreciendo a los consumidores productos y servicios con las mismas condiciones de precio, garantía, ofertas y descuentos que ofrecen en sus lugares de origen, estando respaldada la calidad de estos productos por modernos sistemas, ya que estas empresas le exigen a sus proveedores que el proceso de fabricación de los diferentes artículos que les venden deben estar soportados por sistemas de calidad ISO.

De esta forma, la globalización en el campo del comercio y de los servicios a partir de finales del siglo pasado, está presente en la vida de las sociedades en todos los países entre ellos México elevando el nivel de calidad de los productos y servicios que ofrecen a los consumidores, y gracias a lo cual estos tienen varias alternativas para poder elegir aquellos artículos que más les convengan y que tenga los mejores precios y condiciones de compra.

En lo que se refiere a salud, la alta tecnología que han desarrollado países del primer mundo ha permitido descubrir la cura a múltiples enfermedades de alto riesgo y a través de la globalización han compartido estos descubrimientos con todo el mundo.

#### Impacto en México de los problemas sociales consecuencia de la Globalización

La globalización frecuentemente se ve reflejada en los problemas que sufren la sociedad. Como es el caso del desempleo. Siendo el trabajo un elemento muy importante que permite el individuo además subsistir, integrarse a la sociedad.

En la economía global de mercado, con la llegada de nuevas formas de producción y tecnología, los trabajadores se ven obligados a tener más preparación, incluso los obliga a profesionalizarse, lo que en muchos casos aumenta el índice de desempleo. Lo que afecta considerablemente a las comunidades principalmente pequeñas donde sus habitantes en muchas ocasiones tienen que emigrar a otras ciudades incluso otros países para poder encontrar un medio de subsistencia.

En diversos estudios realizados las pequeñas comunidades de México se han visto afectadas por los fenómenos globales en su salud aumentando los niveles de alcoholismo, perdiéndose en muchas ocasiones la cultura y costumbres y sobre todo aumentándose el índice de pobreza.

México también se ha visto afectado al querer aumentar su productividad y competitividad por problemas ecológicos degradando su ecosistema y creando grandes daños ambientales. Lo anterior se presenta cuando industrias nacionales y transnacionales que no operan con calidad, en busca de recursos naturales para la fabricación de sus productos, alterando los ríos, el aire la tierra, contaminado también el medio ambiente.

## METODOLOGÍA

Documental.- Recopilación adecuada de datos de fuentes documentales que permiten redescubrir hechos, sugerir problemas, orientar hacia otras fuentes de investigación, orientar formas para elaborar instrumentos de investigación

## CONCLUSIONES

El fenómeno de la Globalización que se manifestó en la última década del siglo XX generó un gran número de transformaciones económicas, sociales y culturales en el mundo, incluyendo a México, situación que ha aumentado el nivel de desarrollo desde sus ciudades más importantes hasta las más pequeñas comunidades, que constantemente se ven invadidas por factores diversos y desconocidos produciendo cambios significativos en su identidad cultural, en sus costumbres y adquiriendo nuevas modalidades de consumo.

En la época actual en la que hay grandes avances en la tecnología, y los medios de comunicación juegan un papel muy importante en la socialización del ser humano, estos se convierten en muchas ocasiones únicamente en instrumentos de marketing, más que de información, aumentando con esto la compulsión por el consumo.

Una de las preocupaciones de nuestro país como consecuencia de la globalización es el deterioro de los recursos naturales, al no contar algunas empresas con la certificación en calidad de sus procesos y el avance de la pobreza que se ha dado en algunas comunidades, Por no contar sus pobladores con la calificación necesaria para obtener un empleo en las grandes empresas trasnacionales.

No obstante lo anterior ningún país que quiera alcanzar el desarrollo podrá quedar al margen de la globalización, tratando de prepararse para enfrentarla y considerando que la calidad es un factor fundamental para que el impacto de esta en nuestro país México sea más positiva que negativa.

# HISTORIA DEL COMERCIO Y SU IMPACTO EN EL DESARROLLO ECONÓMICO DE LA CIUDAD DE VERACRUZ

María Eugenia Senties Santos, Universidad Veracruzana

Enriqueta Sarabia Ramírez, Universidad Veracruzana

Minerva Parra Uscanga, Universidad Veracruzana

## RESUMEN

*La ciudad de Veracruz siempre ha dependido económicamente de la existencia del Puerto como "Llave" del comercio nacional e internacional. Desde su descubrimiento en 1519, y su posterior redescubrimiento, después de que Cortés buscó, primero a Quiahuiztlán, y en 1523 a la Antigua como mejores alternativas portuarias, en el año 1599, regresa la Villa Rica de la Veracruz, al lugar del desembarco inicial, frente al islote de San Juan de Ulúa, en virtud de que, era el mejor lugar para recibir a los barcos de la flota española y las mercancías que traían de Europa. Desde ese momento, el puerto de Veracruz se convierte en el enlace comercial entre España y México, y a través de diversos momentos históricos de nuestro país, el puerto y su aduana han sido elementos estratégicos para todos los gobiernos federales. Después de la Independencia, siempre está presente el puerto de Veracruz en los diversos movimientos armados que sufre el país, hasta llegar a los años de la revolución de 1910.*

**Palabras clave:** Comercio, Desarrollo, Puerto, Economía

## HISTORY OF TRADE AND ITS IMPACT ON ECONOMIC DEVELOPMENT OF THE CITY OF VERACRUZ

### ABSTRACT

*The city of Veracruz has always depended economically on the existence of the port as "Key" national and international trade. Since its discovery in 1519, and its subsequent rediscovery, after Cortes sought, first Quiahuiztlán, and in 1523 to the former as better alternatives port in 1599, returns the Villa Rica de la Veracruz, the initial landing site, opposite the island of San Juan de Ulua, considering that it was the best place for the ships of the Spanish fleet and the goods they brought from Europe. Since then, the port of Veracruz becomes the commercial link between Spain and Mexico, and through various historical moments of our country, port and customs have been strategic elements for all federal governments. After independence, there is always the port of Veracruz in the various armed movements affecting the country, up to the years of the 1910 revolution.*

### INTRODUCCIÓN

El desarrollo de la ciudad de Veracruz se da a partir del año 1880, fecha en que se decide el derrumbe de la muralla, la cual para esas fechas la limitaba y condicionaba, generando múltiples problemas de salud y contaminación. A partir de esta decisión, tomada por el visionario alcalde Bureau, la ciudad empieza realmente a buscar su desarrollo urbano, económico y social. Los censos de población indican los habitantes que tenía la ciudad antes y después de este hecho: en 1874, 10,000 habitantes, en 1910, la

población era de 48,633, lo que significa, que en 36 años la población creció un 386%, mientras el D.F. creció en ese mismo período un 135%, Guadalajara un 59% y Puebla un 28%. Como se señaló en este documento, hasta antes de esta fecha, la ciudad de Veracruz era considerada un sitio que tenía movimiento económico solo en los días que llegaban los barcos, y de acuerdo a la temporada en que no había nortes, lo que permitía su arribo sin peligro, llegando a considerársele durante muchos años, como un lugar de tránsito.

Las principales casas comerciales de finales del siglo XIX y principios del siglo XX se dedicaban al comercio exterior, importando y exportando diversas mercancías, además de tener el servicio directo al consumidor en su giro comercial elegido, siendo los más frecuentes, abarrotes y licores, cantinas, ropa, agencias aduanales y hoteles. La mayoría de los socios fundadores de la Cámara Nacional de Comercio de Veracruz realizaban operaciones de comercio exterior, y contribuyeron al crecimiento y desarrollo tan importante que vivió el puerto, después de las obras de modernización de 1902, teniendo fuertes relaciones comerciales con los principales puertos del Golfo de México, del Caribe, y de Europa. Como menciona el agente aduanal Ramón Gómez “el comerciante venía con su mercancía en el barco negociando con la misma en los puertos que el barco tocaba, y el almacén funcionaba, además de como almacén de ultramarinos y abarrotes, como agencia aduanal según se acostumbraba en esa época”.

El auge comercial que vivió la ciudad y el Puerto de Veracruz en los años previos a 1910, año en que dio inicio la revolución mexicana, ha sido posiblemente la mejor época económica en la historia de esta ciudad.

## DESARROLLO

Toda ciudad se va construyendo día a día con la participación activa y dinámica de todos los sectores sociales que la integran. Independientemente de la función económica que desempeñan, el comercio y los prestadores de servicios turísticos, que con sus empresas, hoteles y restaurantes, representan la infraestructura productiva de la ciudad, adicionalmente se requiere crear la infraestructura de edificios e instalaciones que le proporcionan a sus habitantes otro tipo de servicios: de salud, recreación, deportivos. Desde principios del siglo XX, los comerciantes se dieron a la tarea de participar en la edificación de ese otro tipo de infraestructura que le da solides a la sociedad: el banco Mercantil, la construcción del hospital de la Beneficencia Española, el Club Regatas, los campos deportivos de futbol del club Sporting y del parque España, el Casino Español, fueron un ejemplo de ello.

El movimiento revolucionario de 1910 vino a detener el proceso de desarrollo comercial que existía en Veracruz en esos años. Los comerciantes demostraron su solidaridad con la población, por medio del abasto ininterrumpido de productos básicos, y de su participación en los diferentes eventos y conflictos vividos. Correspondió a varios comerciantes, miembros fundadores de la Cámara de Comercio, ser los alcaldes de Veracruz en esos primeros años del conflicto: Félix Léycgui Núñez, Emilio González de Castilla y Mosquera, Andrés Gómez Oreján y Roberto Díaz Romero, quienes con su experiencia, prudencia y capacidad, hicieron su mejor esfuerzo para mantener a la ciudad en calma y trabajando, logrando que el tejido social no se rompiera. En las instalaciones de la Canaco se llevaron a cabo muchas de las reuniones con los trabajadores para llegar a solucionar los problemas de paros y huelgas, que afortunadamente, siempre llegaron a buen fin, sin que se existieran derramamientos de sangre o se salieran de control. Durante el movimiento armado de Adolfo de la Huerta en 1923, los comerciantes atendieron con seriedad y prontitud la petición económica del líder revolucionario, de adelantar los impuestos correspondientes, evitándole con ello mayores problemas a la ciudad. Los trabajadores del puerto, encabezaron a los trabajadores de otros sectores productivos, y a partir de estas fechas se convirtieron en actores muy importantes del sector obrero estatal y nacional. La promulgación de la ley Agraria por el Presidente Venustiano Carranza en 1915, durante la estancia de su gobierno en el puerto, convirtió a Veracruz en protagonista en este tema. En ese mismo año, el General Cándido Aguilar

expropió las tierras de la hacienda La Boticaria, en el municipio de Boca del Río. Veracruz fue uno de los estados, en donde más tierras se expropiaron en esos años, especialmente en los períodos del Gobernador Adalberto Tejeda.

La Cruz Roja, es posiblemente la institución de beneficencia más importante de cualquier ciudad, en virtud de los servicios humanitarios que proporciona a la ciudadanía de manera gratuita. En el año 1921, la Cámara de Comercio por medio de su presidente, Andrés Gómez Orejón donó un terreno ubicado en la calle Prim a la Cruz Roja para que construyera su Puesto de Socorros. El terreno lo recibió el comerciante Natalio Ulibarri, dueño de la Galatea, quien presidía en esos años a la Benemérita Institución.

Pasados los años de la revolución mexicana, vino la reconstrucción de la ciudad. La Canaco siempre ha tenido una participación activa en los programas y trabajos para el bien y mejora de Veracruz. En el año 1925, su presidente Juan Palavicini formó parte del Primer Comité de Carnaval, que por iniciativa del Alcalde, organizó las fiestas carnestolendas, con la finalidad de atraer turismo que generara una derrama económica en la ciudad, y que sirviera también para recomponer la relación entre los diversos sectores de la sociedad. A partir de esa fecha el Carnaval es la fiesta más importante de Veracruz, y del Estado, en la que siguen participando activamente todos los sectores sociales, incluyendo a los comerciantes.

A finales de la década de los 30, aparecieron en la escena veracruzana los turistas, como consecuencia de haberse puesto de moda en Europa y los Estados Unidos, ir a la playa y bañarse en el mar. La infraestructura hotelera empezó a desarrollarse a partir de esos años, y el balneario Villa del Mar de Mario B. Remes, construido desde 1919, se convirtió en el centro de moda del turismo y de la sociedad porteña. Las autoridades municipales, coordinadamente con los sectores productivos realizaban diversos eventos, grupos y bandas musicales tocando en parques públicos, visitas a los barcos militares atracados en los muelles, recorridos en lancha a las islas, organización de eventos deportivos, como competencias de remo y natación y partidos de fútbol con los equipos del momento: América y Necaxa, con la idea sumar atractivos para los visitantes. Por su parte, el comercio de esos años, abastecía a todo el sureste del país, por medio de sus vendedores, que transportaban las mercancías en caballo o en lancha por los ríos de la región, a todas las poblaciones circunvecinas, ya que Veracruz era el principal punto comercial de esta zona de México.

El Puerto vivió su peor época durante los años de la segunda guerra mundial. Sus muelles estuvieron desiertos de barcos y el desempleo tuvo sus niveles más altos en la historia de Veracruz. La acertada decisión del Presidente Manuel Ávila Camacho, a petición de las fuerzas vivas de la ciudad, de construir el boulevard costero, para darle trabajo al sector obrero, permitió a la sociedad veracruzana sobrepasar esos difíciles años. Muchos agentes aduanales tuvieron que cambiar de residencia en esas fechas por la misma razón. El crecimiento de la mancha urbana de la ciudad, quedó orientada con esta obra, hacia el sur, en dirección paralela a este moderno boulevard, que se convirtió desde esos días, en la zona económica y turística más importante de Veracruz.

Al terminar los terribles años de la segunda guerra mundial, en los que el desempleo generó la peor de la épocas económicas para la población veracruzana, se creó un Comité Municipal de Proindustrialización de Veracruz en el año 1944, que presidió el conocido comerciante, expresidente de la Cámara de Comercio, Eugenio de Ochoa Carballo, con el propósito de promover a la ciudad como una alternativa para que las industrias se vinieran a establecer, y de esta forma generar empleos, con otra alternativa que no fuera la actividad portuaria. Este Comité logró el establecimiento de Tamsa a principios de los 50. En la década de los 70, el Gobierno del Estado, 20 años después de haberse instalado Tamsa, desarrolla con el Gobierno Federal, el Parque Industrial Framboyán, hoy Ciudad Industrial Bruno Pagliai, con el mismo propósito de promover la instalación de Industrias.

En el año 1972 es creado el INFONAVIT con el propósito de construir vivienda popular con las aportaciones del 5% de los empresarios. En la zona conurbada Veracruz-Boca del Río-Medellín se han otorgado más de 130,000 créditos desde esa fecha. La modalidad que tuvo el INFONAVIT de desarrollar unidades habitacionales, vigente hasta el año 1997, fue determinante para atender las necesidades de las clases trabajadoras: en Veracruz se desarrollaron 12 unidades habitacionales con 18,000 viviendas, y en Boca del Río 2 unidades con 2,720 viviendas. En Medellín se estima que existen más de 10,000 viviendas de tipo popular actualmente, y en la Riviera Veracruzana de Antón Lizardo, más de 2,000 viviendas tipo media y residencial.

La modernización y desarrollo tecnológico del comercio llegó a Veracruz en 1980 con la apertura de Plaza Mocambo. Este concepto comercial ofreció la novedad, de poder realizar en un mismo lugar, compras en diversos establecimientos, con comodidad y seguridad, con estacionamiento y con la modalidad de tomar un café o comer, y asistir al cine a distraerse. La inauguración de esta Plaza, motivó que el comercio empezara a salirse del centro histórico, buscando a la zona conurbada con Boca del Río para establecerse. Inclusive, vino a crear nuevos hábitos en la familia, ya que nació la costumbre para el ama de casa, de realizar las compras semanales acompañada del esposo y los hijos, y de convertirse en una distracción y paseo. Plaza Mocambo, fue el primer Centro Comercial del estado y del sureste de México.

La Cámara de Comercio llevó a cabo en la década de los 80, varios eventos, que de manera conjunta fueron determinantes en la difusión y promoción de Veracruz, los cuales contribuyeron a su crecimiento y desarrollo comercial: el Certamen Señorita México en 1988 y 1990, las ferias comerciales y de servicios MAXIVENTA desde 1987, y la planificación y desarrollo del Centro de Exposiciones y Convenciones Expover, el Hotel Continental y Plaza Américas. Este proyecto comercial y turístico, le dio a la zona conurbada Veracruz-Boca del Río la imagen de modernidad y desarrollo a nivel nacional e internacional, que propició el crecimiento económico, que a partir de esta década se está viviendo en esta zona Metropolitana. Al mismo tiempo, fue un ejemplo de lo que se puede lograr cuando las autoridades federales, estatales, municipales y la iniciativa privada se unen en el propósito de logros comunes en beneficio de la sociedad. El aprovechamiento que se le dio a las 30 hectáreas que pertenecían a Pemex, y que durante años permanecieron abandonadas, debido a que su proyecto habitacional se canceló, transformándolas en el corazón comercial y turístico del Estado de Veracruz, fue excelente.

La decisión del Gobierno Federal de concesionarle a los diversos sindicatos portuarios, aglutinados en la empresa Serpover, el manejo del Puerto en 1973, copiando el modelo de gestión obrera alemán, no tuvo los resultados esperados, ya que los niveles de eficiencia en el desarrollo de las operaciones fue muy bajo, llegando a manejar 4 millones de toneladas de carga anuales únicamente, además de que existían una gran cantidad de robos de mercancías, situación que generó una baja considerable en las operaciones del puerto, razón por la que las compañías navieras empezaron a canalizar su carga a otros puertos. Estas circunstancias llevaron a Carlos Salinas de Gortari, Presidente de la República a tomar la decisión de requisar el puerto en 1991, crear la Administraciones Portuaria Integral y concesionar a la iniciativa privada las diversas actividades portuarias. Una lección que no se debe de olvidar.

La requisa del Puerto de 1991, fue una decisión acertada de la Presidencia de la República, y los resultados logrados a la fecha lo demuestran con creces: el Puerto de Veracruz recuperó su primacía a nivel nacional, llegando a manejar más de 19 millones de carga de mercancías anuales, considerándosele el puerto más versátil del país al tener la capacidad de manejar diferente tipo de carga: granel agrícola, granel mineral, fluidos, automóviles, carga general y en contenedores. Las empresas concesionarias operan a los niveles de eficiencia y calidad más elevados del mundo, y el Puerto, como siempre ha sido a través de la historia, es la mayor fuente de empleos directos e indirectos de la ciudad, ascendiendo estos a más de 35,000.

Como quedó demostrado gráficamente en este documento, en todas las imágenes históricas del puerto y la aduana de Veracruz, siempre están presentes como vigilantes del lugar dos hoteles: el México y el Oriente, como símbolo de hospitalidad de la gente jarocho, ofreciendo un lugar agradable para que los visitantes se pudieran hospedar y descansar. En la plaza de armas, el hotel Diligencias, que tomó su nombre precisamente porque de ese sitio salían las diligencias para la ciudad de México, fue el otro hotel que siempre cerca del punto de salida, ofrecía sus servicios a los viajeros desde los primeros años de fundarse la ciudad. Al paso de los años se fueron construyendo otros hoteles en el centro que conformaron la oferta hotelera local. A finales de la década de los 30, se termina de construir el hotel Mocambo, en aquellos años, en el vecino municipio de Boca del Río. En los siguientes años se empezaron a construir hoteles en la zona del malecón, y el Boulevard Ávila Camacho. A partir de la década de los 70, empezaron a construirse hoteles de playa en Boca del Río, así como modernos edificios de condominios, llegando de esta forma a sumar cerca de 9,000 cuartos, siendo esta la oferta hotelera actual, que genera ochocientos diez millones de pesos anuales y que ocupa seis mil quinientos empleados, convirtiéndose en uno de los sectores económicos más importantes de la zona conurbada.

El atractivo turístico más importante de la zona metropolitana es el Acuario, mismo que recibe más de 13,000 visitantes anuales y que fue construido en el año 1992. Adicionalmente se encuentran las playas y las visitas a las islas cercanas, que desde la llegada de los turistas a finales de la década de los 30, fueron el atractivo principal. En el renglón histórico, los sitios más visitados son el Castillo de San Juan de Ulúa y el Baluarte de San Santiago.

El comercio organizado existente en la zona Metropolitana Veracruz-Boca del Río-Medellín-Alvarado es el más moderno y avanzado en términos tecnológicos, y del nivel de calidad y eficiencia que existe en cualquiera de las ciudades más importantes del país. En los diversos giros comerciales, como almacenes de autoservicio, almacenes departamentales, agencias de automóviles, agencias aduanales, comercios de ropa, de zapatos, joyerías, franquicias de determinada marca, y en general en cualquier rubro, el consumidor encuentra en la zona conurbada lo que desee. Las diversas variables de la mercadotecnia que manejan las empresas en sus estrategias, como el precio, calidad, promoción, ubicación, variedad, crédito, rapidez en la entrega, están a disposición del mercado veracruzano. En el renglón de hipermercados y autoservicio están presentes los más importantes a nivel nacional: Chedraui, Soriana, Comercial Mexicana, Walmart, Sams Club, Costco, Aurrera y Superama; en el de tiendas departamentales están, Liverpool, Sears, Suburbia, Fábricas de Francia, Coppel, y próximamente Palacio de Hierro. Inclusive, una debilidad que tenía el comercio organizado, como era la falta de atender todos los núcleos poblacionales existentes, ya que la atención principal estaba en la zona sur de la mancha urbana, en los años recientes se ha reorientado hacia las diversas áreas poblacionales del norte y noroeste de la misma, que tenía estas carencias. Del año 2000 a la fecha, se inauguraron 14 Plazas Comerciales, 11 hipermercados o tiendas de autoservicio, y existen tres importantes Plazas Comerciales en Proyecto.

Como se mostró en el documento, a partir de finales del siglo pasado y en estos primeros doce años del actual, el crecimiento y desarrollo del comercio ha sido impresionante, lo que demuestra la confianza que tiene este sector en la economía de la zona, la cual en buena manera depende de que los planes de ampliación del Puerto se concreten.

Las expectativas que genera la ampliación del Puerto son muy importantes para la ciudad de Veracruz, ya que como se ha señalado en esta investigación, desde su fundación, el puerto es la principal fuente económica de la ciudad, razón por la que inclusive, su manejo y operación siempre ha estado controlada por el Gobierno Federal. Las ventajas de la ampliación, como son el poder manejar hasta 95 millones de carga anuales, tener 36 unidades de atraque, aumentar la profundidad de los muelles a 18 metros, contar con más terminales de carga, representan elementos para aumentar la exitosa competitividad de Veracruz en este mundo cada vez más globalizado que se avizora en el futuro, y de igual forma como ocurrió a finales del siglo XIX con las obras de modernización realizadas por Porfirio Díaz, si estas se realizan, el Puerto de Veracruz podrá seguir siendo competitivo y continuará generando los recursos económicos y

los empleos que la sociedad veracruzana demanda. En caso de que este proyecto no se dé, el Puerto no tendrá las posibilidades de ser una alternativa competitiva en el mundo del comercio exterior, y poco a poco disminuirá su volumen de operación, y su participación en este mercado, con las consecuencias económicas que esta situación producirá en materia económica y de desempleo para la ciudad.

El crecimiento de la ciudad de Veracruz fue desordenado y sin ninguna planeación, orientado preferentemente por las obras costeras hacia el sur, ya que las instalaciones del ferrocarril limitaban su desarrollo hacia el norte. A finales de la década de los 50, con el desarrollo del fraccionamiento Reforma, prácticamente se llegó a los límites con el municipio de Boca del Río, en la avenida Américas. En esos años la población de Veracruz era de 153,705 habitantes y la de Boca del Río de 6,207, según el censo de 1960. El crecimiento poblacional siguió dándose hacia el sur, ya en el territorio de este municipio, que a partir de 1948, dejó de ser considerado población rural, y obtuvo la denominación de Villa, el cual, con el desarrollo del fraccionamiento Virginia y sus instalaciones deportivas, llegó en 1970 a 22,962 habitantes, y en 1980 a 61,883. A finales la década de los 80, con la inauguración de Plaza Mocambo y la construcción de Expover, Boca del Río llegó a tener su máximo de habitantes en 1990, 144,549: un crecimiento inimaginable del 2,229 % en 30 años, de 1960 a 1990. Veracruz en este mismo periodo creció de 153,705 habitantes a 328,607, un 113%, y Medellín de 15,151 a 29,298, un 93%.

Boca del Río obtuvo la denominación de ciudad en el año 1988. Obviamente que el crecimiento explosivo que vivió, generó múltiples problemas para las personas y empresas que llegaron a radicar en ese período a este municipio, debido a que la ciudad no contaba con la infraestructura de servicios públicos que las necesidades habitacionales y comerciales les demandaban, como drenaje y servicio de agua potable, banquetas y calles pavimentadas, iluminación, servicio de recolección de basura y seguridad. Problemas que subsanaron los gobiernos municipales durante la primera década de este siglo.

En las décadas siguientes, al llegar a los límites del territorio disponible en Boca del Río, el crecimiento de Veracruz como ciudad líder de la zona conurbada, se reorientó hacia el norte de la ciudad, y hacia Medellín, en el segmento de vivienda popular, y en fraccionamientos residenciales hacia la zona limítrofe de Alvarado con Boca del Río: Antón Lizardo. Veracruz aumentó su población en este período 1990 a 2010, de 328,607 a 552,126, un 68%; Medellín de 29,298 a 59,126, un 102%; Alvarado de 49,040 a 51,955, un 6%. En cambio Boca del Río, en este período tuvo un decremento del 4.4%, al disminuir sus habitantes de 144,549 a 138,058 (6,491).

En el 2012, el crecimiento de la población en la zona conurbada sigue siendo muy acelerado, mencionando el Infonavit, que se destinan para esta zona el 50% de los créditos que se aplican en todo el estado. Este crecimiento se está presentando en el norte de Veracruz, en Medellín y Alvarado. Lamentablemente, lo que está sucediendo en Medellín y en Alvarado, en la llamada Riviera Veracruzana de Antón Lizardo, es lo mismo que sucedió en Boca del Río en las décadas anteriores, ya que estos municipios carecen de la infraestructura pública adecuada para cumplir con su responsabilidad de servir y apoyar, permitiendo que el desarrollo urbano y comercial se dé en las mejores condiciones posibles. La historia se repite.

En los párrafos siguientes se relacionan las principales fortalezas que posee la ciudad de Veracruz y la zona conurbada Boca del Río-Medellín-Alvarado. La zona Conurbada de Veracruz y Boca del Río, junto con los municipios de Alvarado y Medellín forman la más importante Zona Metropolitana del estado de Veracruz.

La Ciudad de Veracruz, ha sido protagonista indiscutible y ha aportado una rica historia, siendo pocos los actos o eventos de gran trascendencia para México que no estén vinculadas con la existencia de esta Ciudad y Puerto.

El Puerto de Veracruz, es sinónimo de historia, comercio, y orgullo de nuestro país, que por su ubicación geográfica estratégica, y la modernización en sus servicios han hecho a este la principal entrada y salida de mercancías hacia el resto del mundo, contando con una infraestructura moderna que lo ubica como líder nacional en el movimiento de granos, minerales, automóviles y carga en general en el Golfo de México.

El Puerto de Veracruz se distingue por contar con la primera Aduana Marítima de México, por el valor de sus mercancías y la segunda por el volumen total de su carga, además de contar con la más avanzada tecnología que lo hace ser la única Aduana del País donde el 100% de su mercancía de importación y exportación es revisada con equipos de rayos gamma, además de contar con rayos X, control de accesos y vigilancia con cámaras de circuito cerrado.

El Puerto para la Ciudad de Veracruz representa una importante fortaleza ya que es el principal generador de fuentes de empleo para la población, lo que demuestra y justifica plenamente la exigencia de su ampliación.

Desde el punto de vista educativo, la ciudad de Veracruz cuenta con una gran variedad de Instituciones educativas de nivel primaria, medio superior y superior, públicas y privadas, entre las que destaca la Universidad Veracruzana que ofrece una importante variedad de licenciaturas en diferentes áreas como son: Artes, Ciencias Biológico-Agropecuarias, Ciencias de la Salud, Económico-Administrativa, Humanidades y Técnica, que han permitido la formación de profesionistas con los más altos estándares de calidad, que han satisfecho las demandas del campo laboral de la localidad, del Estado y del País, lo que ha propiciado y favorecido el desarrollo económico, local, regional y nacional.

Otra importante fortaleza que posee la Zona Conurbada Veracruz-Boca Del Río, Alvarado-Medellín, es contar con diversas Instituciones como Cámaras Empresariales y Colegios de profesionistas que apoyan y se preocupan por el bienestar de los diferentes sectores de la sociedad, siendo un notorio ejemplo de esto la Cámara Nacional de Comercio, Servicios y Turismo de Veracruz que desde su fundación en 1909, ha participado activamente en los eventos más importantes que han definido el Desarrollo Económico y Social de esta zona Metropolitana.

La ciudad de Veracruz cuenta con gran variedad de atractivos y actividades turísticas tanto culturales, como de negocios y de aventura, lo que representa una diversidad de posibilidades para los visitantes, pudiéndose disfrutar de su Centro Histórico con edificios coloniales, así como las modernas instalaciones que ofrece Boca Del Río en sus cómodas plazas comerciales, centros nocturnos, hoteles y una amplia selección de restaurantes de gastronomía internacional y comida típica veracruzana, que representa una rica tradición culinaria con una combinación de aromas, sabores y colores que le han dado fama nacional e internacional, sin dejar de mencionar su música e innumerables tradiciones, siendo una de las más importantes, las fiestas del Carnaval que inician desde la época de la colonia con carácter meramente religioso, siendo hasta 1925 como lo conocemos actualmente y que atrae a una gran cantidad de turistas lo que deriva en una importante derrama económica para la localidad.

Otra fortaleza con que cuenta también la Zona Conurbada Veracruz-Boca Del Río, Alvarado-Medellín es el World Trade Center Veracruz, antes Centro de Exposiciones y Convenciones Expover, considerado por la revista Mercado de Convenciones (MDC), como uno de los diez mejores recintos de México, ya que ofrece instalaciones de clase mundial, diseñadas y equipadas conforme a estándares internacionales de calidad.

Es importante mencionar que este Centro de Convenciones fue construido a instancias de la Cámara Nacional de Comercio Servicios y Turismo de Veracruz, inaugurándose en 1990, siendo una de sus principales finalidades que sus afiliados tuvieran la oportunidad de aumentar sus ventas mediante la

realización de ferias comerciales y tener relaciones públicas con las diferentes empresas asistentes, siendo la primera en el año de 1987 denominada Maxiventa, posteriormente llamada Expoventa CANACO, ferias que han favorecido la unión y fortalecimiento del comercio organizado de la región. Con el propósito de aportar algunas alternativas de solución y posibles oportunidades, se relacionan a continuación varias de ellas.

La falta de una debida planeación del crecimiento de la zona conurbada y su adecuado desarrollo comercial, representa una oportunidad, situación que en los últimos años se ha estado reflejando al empezar a desarrollarse centros y zonas comerciales en las colonias olvidadas del norte y noroeste de la mancha urbana. Estas zonas comerciales en de considerar la construcción de Mercados Públicos, ya que con excepción de los mercados Hidalgo, Unidad Veracruzana y Zaragoza, no se ha creado ninguno en los últimas décadas.

Otra oportunidad es el rescate del centro histórico de la ciudad, ya que a la fecha sigue siendo la zona en la que se encuentran instalados más comercios, y en donde se encuentran los edificios más representativos de la historia de Veracruz. Sin embargo, su rescate no queda únicamente en manos del sector comercial, ya que tiene que ser el resultado de una acción conjunta con las autoridades municipales y otros sectores productivos como los hoteleros, restauranteros, constructores, arquitectos, banqueros. La solución de los siguientes problemas tienen que ser atendidos de forma integral por todos los sectores señalados: mala imagen y apariencia de abandono del centro, falta de limpieza y de iluminación, invasión de calles por ambulantes, avenidas llenas de baches, falta de un sistema moderno de transporte, mejora de la vialidad de la zona, falta de estacionamiento y construcción de espacios públicos familiares seguros, museos y centros culturales, rescate de inmuebles, reubicación de oficinas públicas, señalización adecuada y facilidades para el tránsito peatonal.

La ampliación del Puerto contempla la entrega de determinadas áreas, en la zona de almacenes y oficinas de la aduana al Ayuntamiento, las cuales pueden ser utilizadas para desarrollar alternativas comerciales, de recreación y de servicios para el Centro Histórico.

Esta ampliación considera también la creación de una zona de actividades logísticas, de 307.56 hectáreas, que será un recinto fiscalizado y estará destinado para que las empresas puedan generarle un valor agregado a las mercancías derivadas del comercio exterior por medio de un proceso de transformación, y contará con áreas comerciales, y espacios para almacenar automóviles, contenedores, granel mineral y agrícola, fluidos y carga general.

## **REVISIÓN DE LITERATURA**

Las fuentes de información que se utilizaron para la realización de esta investigación, fueron documentos existentes en el archivo municipal, bibliotecas, empresas, instituciones y particulares.

## **METODOLOGÍA**

Documental.- Recopilación adecuada de datos de fuentes documentales que permiten redescubrir hechos, sugerir problemas, orientar hacia otras fuentes de investigación, orientar formas para elaborar instrumentos de investigación

## **CONCLUSIÓN**

El crecimiento poblacional desordenado que la zona conurbada ha tenido desde principios del siglo pasado hasta la fecha, y que en estos momentos por el sur, se encuentra ya en terrenos de Alvarado y Medellín, y por el norte, en pocos años estará llegando al municipio de La Antigua, presenta la

oportunidad de que por medio de la realización de un Plan Maestro de Desarrollo Urbano Metropolitano, se diseñe el crecimiento de la población a un período de cien años, en los que se contemplen un conjunto de ejes viales que rodeen la mancha urbana, y que permitan la comunicación intermunicipal sin tener que entrar a ningún municipio, evitando con ello congestionamientos viales. Este Plan Maestro, debe señalar las zonas comerciales a desarrollar de manera ordenada en las zonas de los municipios que se encuentran en crecimiento. El Implante debería de ser la Institución que realice esta tarea.

La planeación, construcción y desarrollo de Centros de Diversión y Educación, como el Acuario, que sigue siendo el único atractivo diferente a las playas y edificios históricos de la zona, y que no obstante que tiene ya 20 años, es el lugar más visitado por los turistas.

El desarrollo de un Programa de Capacitación y Desarrollo Profesional de Proveedores Comerciales y de Servicios Técnicos, de forma conjunta entre los diversos Organismos Empresariales y Colegios de Profesionistas con el Gobierno del Estado, los Gobiernos Municipales de la zona Metropolitana, la Administración Portuaria Integral y las principales empresas de la Región como TAMSA, ICAVER, CICE, con el propósito de que los insumos y servicios que estas requieran, puedan ser suministrados por las empresas y el comercio de la localidad, dejando a las empresas foráneas, como alternativa, cuando las locales no estén en condiciones de competir con ellas, por alguna variable sustantiva.

En virtud de que la ciudad de Veracruz está a seis años de cumplir 500 años de su fundación, se sugiere la constitución de un Comité Organizador de los Festejos Conmemorativos de los 500 años, que aglutine a todas las Cámaras Empresariales y Colegios de Profesionistas, que junto con las autoridades del Gobierno Municipal, elaboren un Programa que contemple la realización de diversas obras y tareas encaminadas a mejorar las condiciones materiales de la ciudad, y la de ejecutar programas de capacitación y desarrollo de los recursos humanos de los diversos sectores productivos, como prestadores de servicios turísticos, taxis, transporte urbano, entre otros. Uno de los Programas que podría manejar este comité es el Rescate Integral del Centro Histórico, ya que es vital que para las fechas de los festejos señalados, este se encuentre exitosamente rescatado.

# CONVERGENCIA Y ADOPCIÓN DE NIIF EN LATINOAMÉRICA: UN ANÁLISIS DE AFINIDAD

Noemí Vásquez Quevedo, Tecnológico de Monterrey - Campus Ciudad de México

Mariana Andrea Carril Márquez, ITESM

María Pascual García, ITESM

## RESUMEN

*La adopción y convergencia de las Normas Internacionales de Información Financiera (NIIF) ha iniciado en varios países alrededor del mundo desde hace varios años. En el caso de Latinoamérica, el proceso es relativamente reciente. Este trabajo documenta el proceso de adopción y convergencia a las NIIF, las características y condiciones de dicho proceso y los principales retos que han enfrentado las empresas. Utilizando un análisis clúster, se identifican características para encontrar afinidades entre los países. Una aportación de la investigación, es que incluye un número mayor de países latinoamericanos de los que se hayan estudiado previamente entorno a este tema.*

**PALABRAS CLAVES:** Adopción, Análisis Clúster, Convergencia, Diagrama de afinidad, Latinoamérica, NIIF, PYME.

## CONVERGENCE AND ADOPTION OF IFRS IN LATIN AMERICA: AN AFFINITY ANALYSIS

### ABSTRACT

*Convergence and adoption of International Financial Reporting Standards (IFRS) began several years ago in different countries around the world. For Latin America, this has been a fairly recent development, and this paper documents the process of convergence and adoption of IFRS, as well as its particular characteristics, conditions and challenges faced. A cluster analysis is used to identify certain characteristics that allow finding affinities among countries. The amount Latin American countries studied in comparison to previous papers is one of the contributions of this research.*

**JEL:** M41, G30

**KEY WORDS:** Adoption, Cluster Analysis, Convergence, Affinity Diagram, Latin America, IFRS, SME.

## INTRODUCCIÓN

Los fenómenos que implican la globalización, tales como el económico, tecnológico y social, generan asociaciones entre los diferentes países del mundo y nuevos paradigmas en la forma de hacer negocios, ocasionando consecuencias en las áreas económico-administrativas, como en el caso del área contable.

La globalización además de permitir posibilidades de financiamiento e inversión, tiene un impacto en la apertura de los mercados de capitales alrededor del mundo. Este hecho ha sido trascendental para incrementar la importancia y la implementación de las Normas Internacionales de Información Financiera (NIIF de aquí en adelante). Muestra de ello es que algunos países de América Latina, se han unido recientemente a los más de 120 países que emiten sus reportes financieros bajo las NIIF (Joshi *et. al*, 2012).

Los países europeos adoptaron las NIIF en el año 2005 y existen varios estudios que hacen referencia a los procesos, consecuencias, dificultades y resultados en los indicadores financieros que ocasionó dicha adopción. En América Latina nos encontramos en un momento crucial de la historia en materia contable, pues en los años 2009 y 2010 se publicaron los primeros estados financieros bajo NIIF en Chile y Brasil; por su parte, en Argentina y México se empezó dicha emisión en el primer trimestre del año 2012 (Joshi *et. al*, 2012).

La investigación es de tipo exploratoria y documental que tiene el propósito de brindar una referencia del avance que han tenido 20 países Latinoamericanos en sus procesos de convergencia y/o adopción de NIIF. Muestra las características y condiciones de dichos países para comenzar a escribir la historia contable reciente en materia de estándares internacionales. Los países que conforman el estudio son: Argentina, Bolivia, Brasil, Chile, Colombia, Costa Rica, Cuba, Ecuador, El Salvador, Guatemala, Honduras, México, Nicaragua, Panamá, Paraguay, Perú, Puerto Rico, República Dominicana, Uruguay y Venezuela. Con los datos recabados se agruparon los países de acuerdo a la afinidad que tienen en sus procesos de adopción/convergencia. Para detectar esta afinidad se utilizaron tres variables que son: Bolsa de Valores, Empresas Obligadas y Adopción/Convergencia. Dichas variables se seleccionaron por medio de un análisis factorial y posteriormente se realizó un diagrama de afinidad con tales variables.

## REVISIÓN LITERARIA

La investigación relativa a procesos de armonización contable internacional ha sido referenciada desde 1965. Baker y Barbu (2007) identifican la existencia de más de 200 artículos de investigación sobre el tema publicados entre los años de 1965 y 2004.

De acuerdo con Chua y Taylor (2008), existen varios países que han elaborado durante años sus propias normas de contabilidad, sin embargo la adopción de NIIF se ha presentado en las últimas dos décadas. Al analizar el crecimiento permanente de la implementación de NIIF, ellos concluyen que éste no se debe sólo a razones económicas, sino también a aspectos políticos y sociales, determinantes en la convergencia de normas contables.

De acuerdo con Callao *et al.* (2009) la presión de las empresas multinacionales llevó a los países de la Unión Europea a la adopción de las NIIF. Utilizando una muestra de 242 empresas pertenecientes a 11 países, analizaron razones financieras para determinar si a todos los países les había impactado la adopción de NIIF de la misma forma. Por medio de un análisis clúster se identificaron cuatro grupos, dos de los cuales sólo cuentan con un miembro (Grecia y Portugal). En el caso de Grecia, por reportar resultados de ROE y ROA negativos, y en el caso de Portugal, por reportar razones financieras con valores extremos. En el grupo integrado por España, Finlandia, Francia, Italia y el Reino Unido, los efectos de la adopción fueron mayores. El impacto en las razones financieras de estos países, proviene principalmente por cambios en las cuentas por pagar y los activos circulantes.

Black (2012) resumió seis investigaciones sobre oportunidades y retos al converger o adoptar las NIIF en Nigeria, Australia, Alemania, Francia, entre otros. El reporte señala que dentro de los principales retos se encuentran el tiempo para llevar a cabo la implementación de las NIIF, las características culturales, así como el nivel de desarrollo de cada país. Al comparar la adopción de NIIF en Nigeria, un país en vías de desarrollo y en Australia, un país desarrollado, se mostró que una de las principales diferencias es la falta de información accesible en países en vías de desarrollo. Por otro lado, se identificó que cuando la economía del país es más fuerte y estable, es más probable que el gobierno exija el cumplimiento de las NIIF. En el caso particular de Australia, se identificó que el principal problema fue la interpretación de la calidad contable reportada por las diferentes empresas.

Al analizar dos países desarrollados, Alemania y Francia, se mostró que la comparabilidad de los reportes financieros emitidos recientemente, ha disminuido con respecto a aquéllos emitidos en los primeros años de adopción.

En cuanto a los países de América Latina, éstos han iniciado un avance de internacionalización en materia de normatividad contable en años recientes, encontrándose la gran mayoría en un proceso de convergencia o de adopción de las NIIF. Palacios (2005) realiza un estudio de armonización contable en Latino América que revela el interés particular de converger a NIIF y las características relacionadas con ello, en Argentina, Brasil, Chile y México.

Vílchez (2008) describe el grado de avance en el que se encuentran algunos países americanos en la utilización de las NIIF, siendo los más frecuentes, los casos de adopción. Señala que la adopción ha sido selectiva, desfasada en el tiempo o aplicable de manera opcional.

Gómez y De La Hoz (2011) realizan un estudio empírico sobre la armonización de las NIIF en las prácticas contables de entidades que cotizan en la Bolsa de Valores de Caracas. Concluyen que existe una armonización significativa de más del 70% entre lo que ya aplican las entidades del estudio y las NIIF.

Por otra parte, existen estudios que analizan el impacto en los indicadores financieros que tuvo la adopción de las NIIF. Yañez et al. (2010) analizan a 16 empresas chilenas que adoptaron anticipadamente las NIIF. Al comparar cifras contables al primer trimestre del año 2008 (normas locales vs. NIIF), identifican que el principal impacto estuvo en el patrimonio y en las consecuencias de presentación e interpretación que ocasiona el uso del concepto de valor razonable.

Vásquez (2012) compara las medianas de las principales razones financieras y cifras contables calculadas bajo normas mexicanas y normas internacionales. Los resultados muestran que no hay diferencia estadística significativa en los indicadores financieros al comparar la aplicación de ambas normas en los mismos periodos. También encuentra que los principales ajustes se encuentran en el patrimonio; debido al uso del modelo de revaluación en la valuación de propiedad, planta y equipo, y también debido a la eliminación de la inflación acumulada de periodos anteriores.

## METODOLOGÍA

La muestra se conforma de los países de Latinoamérica cuya lengua oficial es el español y el portugués. Con el propósito de encontrar afinidad en los procesos de adopción y/o convergencia de los diferentes países, identificamos las variables que se definen en la Tabla 1.

Cada una de las variables tiene valores dicotómicos o métricos. Para medir la variable tamaño del país, se utilizaron cuartiles que definieran el rango que delimita el tamaño de acuerdo con el número de empresas que cotizan en la bolsa de valores de cada uno de ellos.

Con la finalidad de conocer la estructura y las interrelaciones de las variables planteadas, realizamos un análisis factorial para determinar si la información obtenida de los países, se puede condensar en dimensiones subyacentes comunes que se puedan identificar como factores o componentes. Dado que uno de los objetivos de nuestro trabajo es resumir los datos e identificar estructuras para encontrar afinidades de los países, se trata de una investigación de tipo exploratorio.

Una vez que tuvimos los datos agrupados como variables, realizamos un análisis factorial. En el análisis se identificaron cinco componentes de los cuales sólo el primero y el segundo se consideran como el mejor resumen de las relaciones lineales de los datos (Hair, et al, 2007); por lo cual para la selección de variables significativas sólo se tomaron en cuenta dichos componentes.

Tabla 1. Descripción de variables

Variable	Definición de la variable	Valores
Adopción anticipada	La posibilidad de las empresas de adoptar las NIIF antes del plazo establecido.	1: Sí, 0: No
Bolsa de Valores	El país cuenta con una bolsa de valores.	1: Sí, 0: No
NIIF - PYME	Las Pequeñas y Medianas Empresas adoptan la versión PYME de las Normas Internacionales de Información Financiera.	1: Sí, 0: No
Decisión: pública/privada	La iniciativa de la adopción/convergencia de las NIIF fue por parte del gobierno o por parte de la iniciativa privada.	1: Pública, 0: Privada
Normas locales	El país ha tenido sus propias normas contables o ha usado las de otros países.	1: Sí, 0: No
Emisión de normas locales: privada/pública/extranjera	El organismo emisor de las normas locales ha sido una entidad privada, pública o extranjera.	1: Privada, 2: Pública, 3: Normas Extranjeras
Tamaño del país	Número de empresas que cotizan en la bolsa de valores del país.	1: 0 -19 empresas, 2: 20-73 empresas, 3: 74-141 empresas, 4: 142-531
Años implementando NIIF	Número de años que el país tiene implementando obligatoriamente las normas internacionales de información financiera.	Número de años
Localización	Posición geográfica de los países la cual puede ser: Norteamérica, Centroamérica y el Caribe o Sudamérica.	1: Norteamérica, 2: Centroamérica y el Caribe, 3: Sudamérica
Empresas obligadas	Grupo de empresas que están obligadas a la adopción de las NIIF.	1: Todas, 2: Cotizan en bolsa incluyendo sector financiero, 3: Cotizan en bolsa excepto sector financiero, 4: Cotizan en bolsa más las que exceden ciertos ingresos, 5: Ninguna
Fuentes de información	Número de fuentes de información utilizadas por cada país.	Número de fuentes
Adopción/Convergencia	El país adopta (utiliza las NIIF directamente), converge (adapta las normas locales a las NIIF), o bien es un proceso mixto que inicia con la convergencia y después se adopta.	1: Adopción directa, 2: Convergencia-Adopción, 3: Convergencia, 4: US GAAP

**Fuente:** Elaboración propia consultando diversas referencias, tales como las páginas web de los organismos profesionales de cada país.

De acuerdo con Hair, et al. (2007), las cargas factoriales que son mayores a  $|0.5|$  son significativas siempre y cuando la muestra sea mayor a cien. Debido a que nuestra muestra es menor, consideramos significativas, sólo a aquellas variables con carga factorial mayor a  $|0.7|$ .

Debido a lo anterior, las variables significativas en nuestro estudio son: Bolsa de Valores, Empresas Obligadas y Adopción/Convergencia.

Una vez que se decidieron las variables a utilizar realizamos el diagrama de afinidad que se muestra en la Tabla 2.

Tabla 2. Agrupación de países por afinidad de acuerdo con las tres variables más significativas

Bolsa de Valores		Adopción / Convergencia	
Con Bolsa de Valores	Sin Bolsa de Valores	Adopción	Convergencia - Adopción
Argentina Bolivia Brasil Chile Colombia Costa Rica Ecuador El Salvador Guatemala Honduras México Nicaragua Panamá Paraguay Perú República Dominicana Uruguay Venezuela	Cuba Puerto Rico	Argentina Brasil Colombia Costa Rica Ecuador El Salvador Guatemala Honduras Nicaragua Panamá Perú República Dominicana Uruguay Venezuela	Chile México  <b>Convergencia</b>  Bolivia Cuba  <b>US GAAP</b>  Puerto Rico
<b>Todas</b>	<b>Empresas Obligadas NIIF PYME</b>		<b>Cotizan en bolsa excepto sector financiero</b>
Brasil Chile Colombia Costa Rica Ecuador El Salvador Guatemala Honduras Nicaragua Panamá Uruguay Venezuela	Argentina Chile Colombia Costa Rica Ecuador El Salvador Guatemala Honduras Nicaragua Panamá Perú República Dominicana Venezuela		Argentina México  <b>Cotizan en bolsa, incluyendo sector financiero</b> República Dominicana

**Fuente:** Elaboración propia de acuerdo con los resultados obtenidos en el análisis factorial.

## RESULTADOS

Como resultado de esta investigación, pudimos ver que el 55% de los países permitió la adopción de las NIIF de forma anticipada. El 90% de los países cuentan con una bolsa de valores propia, mientras que el 10% restante (Cuba y Puerto Rico) no la tienen. El 60% de los países ya está utilizando o ha decidido utilizar la versión PYME de las NIIF. En el 90% de los casos, la decisión de adoptar las NIIF fue pública, mientras que en Argentina y Chile fue una decisión privada. El 75% de los países ha tenido sus propias normas locales, mientras que el 15% restante ha utilizando normas extranjeras. En el 50% de los países, el emisor de normas locales es privado, mientras que un 35% es público y el 15% restante es un organismo extranjero. El 25% de los países tienen una bolsa de valores micro, pues tiene entre 0 y 19 empresas cotizando en ella; el 20% tiene una bolsa pequeña, pues en ella cotizan entre 20 y 73 empresas; el 30% de los países tienen una bolsa mediana de entre 74 y 141 empresas y el 25% restante tiene una bolsa grande, pues tiene entre 142 y 531 empresas.

La fecha en las que se han adoptado las NIIF es variable, pues algunos países iniciaron en 2004, seguido por otros en 2006, 2007, 2009, 2010, 2011, 2012 y otros con fechas tentativas para 2013 y 2014. Por otro lado, existen otros países en los que la adopción aún no se encuentra en sus planes. El 5% de los países

utilizados en esta investigación se encuentran en Norteamérica, el 45% en Centroamérica y el Caribe y el 50% restante en Sudamérica. En el 60% de los países todas las empresas están obligadas a usar las NIIF, en 20% ninguna empresa está obligada, un 10% sólo obliga a las empresas que cotizan en bolsa excepto al sector financiero, un 5% obliga a todas las empresas que cotizan en bolsa incluyendo al sector financiero y el 5% restante a las empresas que cotizan en bolsa y a empresas que tienen ingresos superiores a cierta cifra. El 75% de los países optó por una adopción directa hacia las NIIF, un 10% por convergencia, un 10% por converger primero y después adoptar y el 5% restante por utilizar US-GAAP. Como se puede observar en el diagrama de afinidad, todos los países que cuentan con una bolsa de valores decidieron adoptar o converger. La mayoría de éstos decidió obligar a todas las empresas a aplicar las NIIF.

## CONCLUSIONES

La información mostrada de los 20 países de América Latina descritos en este estudio, dan un ejemplo de la importante labor que ha realizado la profesión contable de cada uno de ellos. A través de sus colegios, federaciones y consejos, la organización del gremio contable ha permitido llevar a cabo un orden en el proceso normativo contable, ya sea a través de la emisión de normas locales o bien de la adopción de algún marco normativo extranjero.

Los resultados mostrados en este trabajo revelan también la importancia que se ha dado en Latinoamérica a las Normas Internacionales de Información Financiera (NIIF). Muestra de ello es el grado de avance en el proceso de convergencia o adopción de NIIF que han realizado todos los países del estudio.

Un factor que influye en que un país decida adoptar las NIIF es la existencia de una bolsa de valores nacional. Los usuarios de la información financiera de las empresas que cotizan en bolsa requieren información que pueda ser entendible y comparable, y las NIIF permiten que esto sea posible pues proveen de estándares contables utilizados en todo el mundo.

Por otro lado, los principales retos que han tenido que enfrentar las empresas son los relacionados con la falta de guías técnico-contables, de guías en la primera adopción de NIIF, de personal calificado y de tecnología.

La información mostrada en este trabajo aporta el estatus y grado de afinidad entre países latinoamericanos en cuanto a uno de los cambios contables más significativos en la historia reciente, que es la transición a las Normas Internacionales de Información Financiera.

## RECONOCIMIENTO

La autora reconoce y agradece el apoyo brindado durante esta investigación a las estudiantes de la Licenciatura en Contaduría Pública y Finanzas del Tecnológico de Monterrey, Campus Ciudad de México: Mariana Carril y María Pascual.

## BIOGRAFÍA

Noemí Vásquez Quevedo, es Doctora en Administración con Especialidad en Contabilidad por el Tecnológico de Monterrey Campus Ciudad de México y la Universidad de Texas en Austin. Es coordinadora e instructora de cursos de capacitación en México y países de Sudamérica, en el tema de *Normas Internacionales de Información Financiera (NIIF)*. Miembro del Sistema Nacional de Investigadores. Conferencista en congresos académicos y foros empresariales de temas relacionados con la Contaduría y las NIIF.

# DIAGNOSTICO DE LIDERAZGO GERENCIAL Y CLIMA ORGANIZACIONAL EN UNA EMPRESA FAMILIAR METAL MECÁNICA

Sandra Patricia de la Garza Cienfuegos, Universidad Autónoma de Coahuila

Fernando Ruiz Díaz, Universidad Autónoma de Coahuila

Rosa Hilda Hernández Sandoval, Universidad Autónoma de Coahuila

## RESUMEN

*El objetivo de esta investigación es poder medir el liderazgo gerencial y el clima laboral favorable que existe. En una empresa metal- mecánica en Frontera, Coahuila. Este tipo de clima puede impactar en el grupo operario de la empresa. La importancia para los empresarios de mantener un clima laboral favorable. El clima organizacional es afectado por los miembros y actitudes del liderazgo gerencial y los miembros de la organización. Un clima negativo destruye el ambiente de trabajo y afecta los objetivos. Por tal motivo se analizó el liderazgo gerencial y si existe un clima laboral favorable mediante un instrumento de elaboración propia, aplicado a directivos, administrativos y empleados. Las organizaciones prestan mayor importancia a las variables de investigación referente a liderazgo, las primeras investigaciones comenzaron antes del siglo XX y estuvieron centradas en identificar los rasgos de un líder. Con el fin de determinar el clima organizacional, los niveles de motivación, liderazgo gerencial y el desarrollo del talento humano en esta empresa familiar. Así como los niveles de satisfacción de los empleados con el líder gerencial.*

Palabras clave: Clima laboral, Motivación, Liderazgo.

## DIAGNOSTICS MANAGEMENT LEADERSHIP AND ORGANIZATIONAL CLIMATE IN A FAMILY COMPANY METAL-MECHANICS

### SUMMARY

*The objective of this research is to measure the managerial leadership and positive work environment that exists. In a metalworking company in Frontera, Coahuila. This type of weather can impact the business operator group. The importance for entrepreneurs to maintain a positive working environment. Organizational climate is affected by the attitudes of members and managerial leadership and members of the organization. A negative climate destroys the work environment and affects the objectives. Therefore we examined the managerial leadership and whether a positive work environment with a home-made instrument, applied to managers, administrators and employees. The organizations pay more attention to the research variables concerning leadership, the first investigations began before the twentieth century and focused on identifying a leader rasgos. In order to determine the organizational climate, levels of motivation, leadership, management and development of human resources in the family business. And levels of employee satisfaction with management leader.*

**KEYWORDS:** Employee satisfaction, Motivation, Leadership.

### PLANTEAMIENTO DEL PROBLEMA

El problema principal es medir mediante un instrumento la capacidad del líder gerencial con clima laboral, si influye la relación de Jefe Inmediato (Líder) con en la satisfacción laboral de los trabajadores en una empresa Metal-Mecánica Familiar.

### Objetivo General

Presentar un análisis del Líder Gerencial y el liderazgo que influye en un clima laboral satisfactorio.

### Preguntas de Investigación

¿Existe correlación si el líder gerencial motiva y crea un clima laboral satisfactorio?

¿siente que su trabajo contribuye a la calidad de la empresa en conjunto con su líder gerencial?

¿% de los trabajadores que disfrutan el trato con su líder gerencial de trabajo en la empresa?

### Marco Contextual

Coahuila es el tercer estado más grande del país, se encuentra localizado en el noreste de México comparte frontera con estados unidos de Norteamérica de 512 kilómetros, su extensión territorial es de 151,571 km<sup>2</sup> su población es de 2;748,391 según datos del Inegi 2010. de los cuales el 49.63% son Hombres y el 50.37% son mujeres con un PIB estatal de 36.3 % comercio, restaurantes y hoteles 20.4% y servicios 16.9%, Frontera cuenta con 75,215 habitantes.

## **REVISIÓN LITERARIA**

No nos deja creer jamás que hemos llegado a la cumbre en ningún sentido, ni cegarnos hasta el punto de no ver lo mucho que nos queda por adelantar y la ventaja que otros nos llevan. Solo si nos sabemos menos, pretenderemos ser más. Saber rectificar sobre todo si la equivocación versa sobre sí mismo.

Las características cualitativas diferenciales encontradas en ellas fueron la modestia y la firmeza, el mejor líder es aquel que se hace notar. El buen líder habla poco, detrás de un liderazgo social se encuentra gente grande y sencilla, la humildad en efecto, no es atributo de camaleones sociales. Hunter había dicho con tino que el liderazgo no era cuestión de estilo sino de carácter cuyos aspectos fundamentales son: paciencia simpatía, humildad, generosidad, respeto, indulgencia, honradez y compromiso. Una parte sustantiva del oficio del líder es ofrecer proyectos que aúnen rigor y exigencia con amabilidad y afecto. Líder tiene como misión evitar los conflictos a todo trance llegando a un resultado aceptable. Sumar la firmeza de humildad para concebir el conflicto. (Llano, 2004)

La discusión es a veces la base del trabajo en equipo (Burke, 2001). De Johnson and Johnson, la firmeza y la humildad no casualmente aparecen juntas en los líderes excepcionales, “me olvide de ser yo”, Ser dueño de sí, ser sí mismo es la cima de la firmeza.

Liderazgo no es rebeldía, humildad y firmeza significan equilibrio, el liderazgo implica rectificar errores pasados. El Líder ha de tener una firmeza segura, porque ninguna persona normal desea ser guiada por alguien voluble. Nadie desea ser gobernado por quien fundamenta su acción de gobierno, queremos como jefes a personas que tengan en cuenta, nuestros sentimientos, pero que actúen siguiendo las ideas claras y firmes de su inteligencia. Ello implica tratar a nuestros subordinados como si alguna vez llegaran a ser jefes nuestros, y seguramente lo serán si somos capaces de este tipo de liderazgo

El liderazgo será mediocre si no cuenta con su transitoriedad. Se precisa ser firmes pero humildes. El éxito y el fracaso siempre van juntos, entretejiéndose en las diversas coyunturas vitales., no se puede

ayudar a los hombres haciendo permanentemente por ellos lo que ellos pueden y deben hacer por sí mismos.

Comprometido atento, exige responsabilidad a sus hombres, anima a la gente, posee una actitud positiva y entusiasta, aprecia a las personas y las trata con respeto. Trata a las personas como si fueran importantes, posee lealtad, clemencia, religiosidad y caridad.

#### Influencia del jefe inmediato

Estrategia: supervisar la ejecución de las tareas de forma permanente, de parte de los jefes, para brindar apoyo, y si se requiere transferir la experiencia profesional resultando de esta forma un trabajo de calidad.

#### Trabajo en equipo y relación con mi jefe

Estrategia: organizar grupos de trabajo por proyecto, para compartir conocimientos y experiencia profesional, y una vez concluido el proyecto, reorganizar al personal involucrado en ellos para realizar nuevas tareas en la compañía.

#### Cultura organizacional

Estrategia: elaborar un programa continuo de adiestramiento a través de una detección de necesidades, en áreas como integración de equipos de trabajo y relaciones humanas, así como seguridad industrial, retroalimentando en forma mensual los resultados obtenidos de cada curso realizado. De igual forma, integrar a dicho programa algunos externos que permitan involucrar a la empresa en acciones de beneficio social. (Herzberg, 2008) nos hace ver que también existen factores motivacionales como la participación, cooperación, la base técnica de motivación práctica que significa “el enriquecimiento del trabajo”

(Greene, 2011) la comunicación es una especie de guerra, y su campo de batalla, la reacia y defensiva mente de la gente en la que quieres influir, la meta es penetrar sus defensas y ocupar sus mente, Induciendo a la gente a llegar a las conclusiones que tú deseas y pensar que llegó a ellas por si sola. James Hunter(Pont, Nusche, Moorman, & Organización de Cooperación y Desarrollo Económico, 2009) nos ofrece una definición que conviene retener, Liderazgo es el arte de influir sobre la gente para que trabaje con entusiasmo, que la dirección es más arte que ciencia, ese gozo que supone servir a los demás no es una ficción, sino que requiere solo “esforzarme un poco para ser auténtico con la gente

Humildad: que combate la soberbia

La Magnanimidad: combate la avaricia, capacitandonos para aspirar a metas altas

La Castidad: combate la lujuria

El Amor al prójimo: que combate la envidia.

La Templanza: que combate la gula

La Paciencia: que combate la ira

La Diligencia: que combate la pereza.

Liderazgo y Humildad

Hunter mismo nos dice que ese gozo que supone servir a los demás no es una ficción, sino que requiere solo “esforzarme un poco para ser auténtico con la gente” Esta autenticidad no solo anima a la disensión sino que la demanda, y se rodean de personas lo suficientemente inteligentes para conocer la verdad y lo suficientemente independientes para decirla.

### Preponderancia

La Teoría ERG de Alderfer, C. (Alderfer, 1969) (Existence needs, Related needs, Growth needs) resalta las necesidades existenciales, relacionales y de crecimiento como elementos motivacionales básicos; la diferencia básica con los planteamientos de Maslow es que para Alfred Adler,

las necesidades satisfechas no guardan necesariamente una relación jerárquica y no llevan a la satisfacción de otro tipo de necesidades sino a un aumento o intensificación de dicha necesidad.

Por su parte Herzberg, plantea la existencia de Factores Higiénicos y Motivacionales; los primeros de orden preventivo y constituido por las características de contexto en el trabajo cuya presencia no aumenta la satisfacción pero si no están presentes causan insatisfacción.

Estas son las condiciones físicas y ambientales que rodean al sujeto cuando trabaja. Estos planteamientos se corroboran por diversos estudios sobre motivación y con los vinculados a la satisfacción laboral.

La teoría de la equidad o igualdad, planteada por (Festinger, 1979) señala que los empleados requieren percibir equidad o justicia en sus puestos de trabajo o empresa. Las personas tienden a comparar su actuación con las de otros y hacer juicios al respecto; la persona estará motivada en proporción con la justicia que percibe en las recompensas que recibe por una cantidad determinada de esfuerzo y en relación a la que otro recibe por lo que da.

Un segundo grupo de teorías son las referidas al proceso motivacional cuyo énfasis se entra en los mecanismos por los que se logra la motivación. La teoría de las expectativas, representado por (Vroom & Manton, 2010) considera que la motivación opera en función con las expectativas que se tenga del resultado de su comportamiento y la valencia de las mismas.

### **METODOLOGIA**

Es de carácter mixto cualitativa ya que se acudió a la información documental y cuantitativa donde las técnicas utilizadas fueron entrevistas, además la investigación presenta la aplicación de 25 encuestas a los trabajadores, y se complementa con fuentes de carácter documental que han investigado sobre este tema

### **RESULTADOS**

¿Existe correlación si el líder gerencial motiva y crea un clima laboral satisfactorio?

Variable - Variate Correlations Section

## Plots Section

Si existe correlación ya que un líder gerencial cuando fija metas y principalmente incentiva a una mayor calidad de desempeño, esto contribuye a que sus trabajadores sienten que su trabajo tiene una calidad de servicio de la empresa.

**CONCLUSIÓN**

En los datos encontrados de acuerdo al instrumento validado, se observa que existe correlación en la motivación que el líder gerencial proyecta e influye en un clima laboral satisfactorio. los empleados encuentran satisfechos con el trabajo que realiza sin embargo y de acuerdo a los histogramas se encontró que un 86% de los empleados se encuentran motivados y satisfechos con el trabajo que realiza su jefe gerencial y el impacto en el clima laboral satisfactorio.

**PROPUESTA**

Teniendo una excelente relación en los compañeros de trabajo y líder gerencial se recomienda a los directivos implementar recursos económicos motivacionales cuando exista una carga de trabajo extra.

<b>IDENTIFICAR A LOS INCORPORANTES</b>	<b>DIAGNOSTICO</b>	<b>OBSERVACIÓN</b>	<b>PLAN ESTRATEGICO</b>
Lider Gerencial	Supervisar el trabajo laboral, establecer comunicación constante	Valorar la calidad de desempeño, puntualidad, asistencia y responsabilidad.	Reconocimientos por mes.
Lider Gerencial	Trabajo en equipo, establecer metas disciplina.	Producción, sistema de calidad y servicio	Ofrecer premio de convivencia al mejor equipo
Lider Gerencial	Escuchar propuestas, e ideas de los empleados	Valorar ideas, propuestas y desempeño de los trabajadores	Analizar las mejores propuestas.
Directivos	Crear incentivos al merito laboral.	Valorar, trabajo en equipo así como el trabajo realizado por el Jefe Gerencial.	Premios viajes, Reconocimientos, e incentivos empleados y gerente. Eventos convivios laborales y familiares.

# **QUE Y COMO APRENDEN LOS ESTUDIANTES ASOCIADOS A LA VINCULACIÓN EMPRESARIAL, A TRAVES DE UN CENTRO DE DESARROLLO DE PEQUEÑOS Y MEDIANOS NEGOCIOS EN LA FECA DE LA UJED**

Rosa Martha Ortega Martínez, Universidad Juárez del Estado de Durango

Claudia Nora Salcido Martínez, Universidad Juárez del Estado de Durango

Claudia Berenise Cano López de Nava, Universidad Juárez del Estado de Durango

José Ramón Duarte Carranza, Universidad Juárez del Estado de Durango

## **RESUMEN**

*La vinculación empresarial en las Instituciones de Educación Superior, es una herramienta extracurricular y natural para la adquisición de conocimientos, habilidades y aptitudes empresariales en el profesorado y en los estudiantes. El Centro de Desarrollo Empresarial de la Facultad de Economía, Contaduría y Administración de la Universidad Juárez del Estado de Durango, atiende a pequeñas y medianas empresas de la región a través de la capacitación, el emprendimiento y la consultoría. Esta investigación analiza las competencias, que los estudiantes asociados a diversos proyectos empresariales adquirieron, durante los años 2011 y 2012. Mediante la estadística descriptiva, se identificaron factores que facilitan o inhiben el proceso de gestión del conocimiento, los saberes que comúnmente se adquieren, los que resultan más complejos de alcanzar y los proyectos empresariales mediante los cuales este proceso de formación de competencias se puede potencializar.*

**PALABRAS CLAVES:** Competencias, Vinculación Empresarial, Gestión del Conocimiento.

## **WHAT AND HOW DO ASSOCIATED STUDENTS WITH BUSINESS LINKING LEARN THROUGH A DEVELOPMENT CENTER FOR SMALL AND MEDIUM BUSINESSES IN THE FECA – UJED?**

### **ABSTRACT**

*The business linking in the Institutions of Superior Learning is an extracurricular and natural tool in the acquisition of knowledge and business ability in the teaching staff and students. The Development Business Center in the Faculty of Economy, Accountancy and Management of the Juarez University of the State of Durango, care for the region small and medium businesses through training, engage and consultancy. This research analyze the competition, that the students associated to different business projects acquired in the years 2011 and 2012. Through the descriptive statistic, factors that facilitate or inhibit the process of knowledge management were identified, as well as de knowledge that is usually obtained, the knowledge that is more difficult to reach and the business projects in virtue of this skill training process can be strengthen.*

**JEL:** M10, M14, M19

**KEYWORDS:** Competence, Business Linking, knowledge Management.

### **INTRODUCCION**

La vinculación con las organizaciones, públicas o privadas, productivas o de servicios, es indispensable no solo para justificar la pertinencia de la oferta educativa de las Instituciones de Educación Superior (IES), sino también para actualizar el quehacer docente e identificar las competencias que se requieren para resolver las problemáticas de la realidad. Estas situaciones están enmarcadas en una economía global, interdependiente y donde cada vez es más clara la tendencia a considerar el conocimiento como el recurso más significativo de las organizaciones. Un colaborador con conocimiento, se considera el activo más importante (Drucker, 1993). Si este conocimiento es más que teoría y se identifica como un saber hacer, se vuelve en la práctica un recurso de mayor valor.

El Centro de Desarrollo Empresarial (CDE), de la Facultad de Economía, Contaduría y Administración (FECA) de la Universidad Juárez del Estado de Durango (UJED), constituido desde 1992, está dedicado a “contribuir al Crecimiento Integral del Sector Económico y Productivo brindando servicios de capacitación, consultoría y emprendimiento de calidad a través de un equipo multidisciplinario que fortalezca el Desarrollo, la Competitividad y la Cultura Emprendedora” (Salcido, y otros, 2013). Toda esta labor sin embargo, carece de sentido si no se involucra a los estudiantes, pues ellos son la razón, principio y fin del ser Universidad. Ikujiro Nonaka ha afirmado que “crear conocimiento tiene que ver tanto con Ideales como con Ideas” (Nonaka, 2007). Por ello el CDE ha observado de manera consciente el crecimiento y las competencias adquiridas en los estudiantes y ex alumnos que participan en sus diversos proyectos desde el 2011, tanto si estos tienen que ver con actividades hacia dentro (la propia gestión del CDE, como una empresa con clientes, proveedores, procesos y servicios), como las que están orientadas hacia afuera (tales como la consultoría y la capacitación).

Las preguntas de investigación que se plantean son: ¿Qué aprendizajes <competencias> adquieren los estudiantes al participar en proyectos del CDE?, ¿Qué impacto tiene en la perspectiva profesional y en el Plan de Vida de los Estudiantes participar en estos proyectos? ¿Qué estilos de aprendizaje favorecen más la adquisición de competencias para los estudiantes que participan en proyectos en el CDE? ¿Qué incapacidades para aprender inhiben la adquisición de competencias para los estudiantes que participan en proyectos en el CDE? Con un diseño de investigación de tipo cuantitativo, mediante la estadística descriptiva no experimental, se establecieron asociaciones entre los estilos de aprendizaje y las incapacidades para aprender, adaptando parte del modelo de Capacidad de Aprendizaje propuesto por Yeung, et al (1999). Se utilizó el SPSS 19.0 para procesar la información y se validó el instrumento con el Alpha de Cronbach con un resultado de .967. Se identificaron, por ejemplo que no hay un estilo de aprendizaje significativo definido entre los estudiantes y que aprenden mas los equipos que los individuos.

Estos resultados, llevan a identificar proyectos para vincular a los estudiantes, que permiten aprender y por lo tanto, tienen el valor agregado de formar competencias prácticas que más adelante serán una fortaleza en el egresado cuando este se enfrente a la vida laboral. Estos hallazgos, orientan la labor del CDE para fomentar la participación de los estudiantes y egresados en aquellas actividades que los fortalecerán, corregir o rediseñar proyectos que inhiben la adquisición de competencias.

## REVISIÓN LITERARIA

La vinculación de las IES se ha recomendado desde varias perspectivas. La UNESCO (United Nations Educational Scientific and Cultural Organization) sugiere no solo revisar sus programas de estudio para garantizar la pertinencia respecto a las necesidades de la sociedad y sus organizaciones, sino también cooperar en la solución de estos, mediante el intercambio de docentes y el propiciar experiencias de prácticas reales para los estudiantes. (UNESCO, 2009). Y por su parte ANUIES (Asociación Nacional de Universidades e Instituciones de Educación Superior), explica claramente en su sitio que La vinculación es una actividad estratégica de las IES que contribuye significativamente a las tareas de formación

integral de los estudiantes; la producción y transferencia de conocimientos socialmente útiles que aporten soluciones a los problemas más urgentes de la sociedad y que incidan en el bienestar social, el crecimiento económico” (ANUIES, 2012). Incubadoras de empresas, prácticas profesionales, centros de competitividad o desarrollo empresarial son entre otros, escenarios propicios para la vinculación universitaria.

Formar en Competencias, tiene que ver con visualizar el futuro. No se pretende que el estudiante aprenda procedimientos para acreditar una unidad académica, como lo propone la enseñanza tradicional. Zavala y Arnau, definen a la Competencia como la respuesta eficiente ante una situación real (Zavala & Arnau, 2008). Por ello la Vinculación de las IES, en cuanto más involucre a sus estudiantes y su profesorado, proveerá de escenarios valiosos para la formación de saberes. La adquisición de competencias, tiene que ver con aprendizaje profundo. Se refleja en el cambio de actitudes y creencias, aptitudes y capacidades y por lo tanto mayor consciencia. A esto Peter Senge, le ha llamado el Círculo del Cambio duradero (Senge, Roberts, Ross, Smith, & Kleiner, 2012). Una competencia, es la combinación de saberes: habilidades, actitudes y conocimientos. Y una competencia profesional, implicaría la conjunción de esos saberes, más la experiencia y la propia personalidad para desempeñar una tarea con calidad. El hecho de tener personas con talento y que posean las competencias correctas es tan importante para el éxito de una organización, que uno de los actores centrales que considera la revista “Fortune” para hacer su lista de las empresas más admiradas es “La capacidad para atraer, desarrollar y retener a personas con talento”. (Hellriegel, Jackson, & Slocum, 2009)

La gestión o administración del conocimiento, se discute y surge como una respuesta a la interrogante de porque individuos u organizaciones en las mismas circunstancias tienen éxito y otras no. Los conocimientos están, pero la capacidad de crearlos y utilizarlos constituye el aprendizaje. La teoría de la estrategia basada en los recursos y capacidades propios, propuesta por Wernerfelt 1984, da respuesta a esta interrogante. (Riesco, 2006). En la década de los 90's autores como Turban, Wiig, Van der Spek, Beckman y Mayers, estructuraron el conocimiento con elementos comunes como la información, las creencias, las experiencias, el razonamiento y todos ellos valorados como un activo para las organizaciones. Por su parte Davenport, define el conocimiento como una “mezcla fluida de experiencia estructurada, valores, información contextual e internalización experta que propicia un marco para la evaluación e incorporación de nuevas experiencias de información”. (Riesco, 2006). Desde la perspectiva de “gestión” o “administración” del conocimiento, autores como Nonaka, Takeuchi, Senge, Drucker, Polanyi se consideran con una visión moderna que trasciende al individuo para incorporar el concepto de organizaciones inteligentes. Argyris por su parte, propone que aprender a aprender, significa cuestionarse sobre la propia capacidad de aprender (Argyris, 2001).

Yeung et al, plantea que las organizaciones aprenden: a) cuando generan ideas, b) cuando generalizan las ideas, es decir las comparten dentro de los límites de la organización. Y también reconoce las incapacidades para aprender como un obstáculo para generar una organización inteligente. “La forma de aprender de las organizaciones depende en primer término como descubren problemas y cómo inventan soluciones, lo que nosotros hemos llamado generación de ideas” (Yeung, Ulrich, Nason, & Glinow, 1999). El mismo autor habla de cuatro tipos de aprendizaje: la experimentación, la adquisición de competencia, la imitación de parámetros y marcas de referencia y la mejora continua. En la experimentación se aprende probando muchas ideas nuevas. En la adquisición de competencias se aprende centrado en la experiencia de terceros. En la imitación, su busca ver que hacen otros y se trata de adoptar y copiar estos conocimientos. En la mejora continua, la organización aprende mejorando constantemente. Estos son tipos ideales de aprendizaje, pero no deben considerarse los únicos.

También hay que considerar que para Yeung et al, las organizaciones se permiten aprender con dos propósitos fundamentales: explorar campos nuevos o explorar oportunidades existentes (Yeung, Ulrich, Nason, & Glinow, 1999). Esto marca los límites del aprendizaje. Dentro o fuera de los límites de la propia organización.

El otro aspecto importante para el aprendizaje de las organizaciones es poder ver sus errores. Senge, habla del “te veo” desde el lenguaje de las tribus africanas (Senge, Roberts, Ross, Smith, & Kleiner, 2012). Es un “darse cuenta”. Y Yeung afirma que si la organización no es capaz de “ver” sus errores y aprender de ellos, no puede ser sensible al cambio y entonces no habrá mejora de sus procesos. A esto lo define como Incapacidad para Aprender. La Ceguera, que consiste en no identificar problemas. La candidez, que corresponde a aplicar soluciones poco cuidadosas a problemas complejos. La homogeneidad, cuando se da por hecho que ante situaciones distintas aplica la misma respuesta. El acoplamiento estrecho, significa el exceso de control, que impide ser creativo. Tanto las incapacidades como los estilos (situaciones que favorecen) de aprendizaje, están relacionadas con el tipo de cultura y estrategia de una empresa.

Finalmente, cabe destacar que la vinculación universitaria con el sector empresarial, público o privado, busca la aplicación de la teoría con la realidad. Pero esta práctica no se limita a los conocimientos “duros” como son el saber hacer cálculos, presupuestos, estados financieros. También se trata de habilidades, es decir, conocimientos “blandos”. Sofia Macías, autora de finanzas personales ha dicho que las habilidades no profesionales, son las que “de verdad pueden hacer la diferencia entre dos tipos igualmente brillantes en lo técnico de su profesión y convertir a uno de ellos en líder”. (Macías, 2011)

## METODOLOGÍA

Desde 2011, el CDE ha estado realizando proyectos de vinculación, que involucran a los estudiantes. Como se puede observar en la Tabla 1, los proyectos en los que participan alumnos son de diferente naturaleza y los alumnos pueden obtener o no el beneficio adicional como liberar servicios sociales, requisitos para obtener grados académicos. Todos los proyectos tienen la característica de tener profesores como asesores. En todos estos programas se tienen actividades asignadas muy claras para los participantes.

Tabla1: Relación de Proyectos del CDE donde participan estudiantes

Tipo de Proyecto	Nombre	Relación Alumnos	Años	No. Participantes
Hacia Adentro	Certificación SBDC	Servicio Universitario	2012	5
Hacia Afuera	Encuestador Incubadora de Negocios	Servicio Universitario	2012	6
Hacia Afuera	IMEF Universitario	Afiliación Libre	2011-2012	15
Hacia Afuera	Taller Yo Emprendo	Afiliación Libre	2011-2012	30
Hacia Afuera	Consultor junior	Práctica Profesional /Servicio Social	2012	3
Hacia Afuera	Programa Estancias Infantiles SEDESOL	Práctica Profesional /Servicio Social	2011	39

*En esta tabla, se encuentran los diferentes proyectos en los que de manera intencional se involucran alumnos, mismos que se están utilizando en este trabajo para observar las competencias que adquieren, los estilos de aprendizaje y las incapacidades para aprender. Los proyectos se realizaron entre 2011 y 2012. La relación de alumnos implica que además de las acciones realizadas, el alumno se interesó en participar para liberar un trámite indispensable para obtener su grado académico. En los proyectos de afiliación libre, no hay un trámite relacionado como beneficio para el alumno.*

La duración mínima de participación de los estudiantes o ex alumnos es de un semestre y la máxima de 3. Los estudiantes vinculados, provienen de las tres carreras que se ofrecen en la FECA: Licenciado en Administración, Contador Público y Licenciado en Economía. Solo un participante del estudio, es egresado y se desempeñó como Consultor Junior. En la Tabla 2, se pueden identificar los proyectos, una descripción general de ellos y el tipo de vinculación que se genera al participar en él.

Tabla 2. Descripción de los Proyectos del CDE para vincular estudiantes

Proyecto de Vinculación	Descripción	Se vincula con:
Certificación SBDC	La certificación implicó una auditoría interna y otra externa, de carácter internacional. Se implementó un sistema de gestión en el CDE y se documentaron los requisitos de cumplimiento del Modelo SBDC (Small Business Development Centers).	Audidores Internos, Externos, Comité de Certificación, estudiantes involucrados.
Encuestador Incubadora de Negocios	Se recibe capacitación y entrenamiento para aplicar encuestas, capturarlas y documentarlas para integrarse al Plan de Negocios, según requerimientos de convocatoria de Secretaría de Economía. El servicio se presta bajo la supervisión del Asesor de Negocios, un profesor de la FECA.	Emprendedores, Asesores de Negocios, otros estudiantes
IMEF Universitario	El Instituto Mexicano de Ejecutivos en Finanzas, en su capítulo universitario tiene presencia en la FECA desde 2011. Los jóvenes participan en eventos técnicos, congresos locales y nacionales, difunden las finanzas, realizan investigación y publican boletines, entre otras actividades. El CDE hospeda el proyecto, lo coordina y gestiona recursos.	Empresarios Locales y Nacionales, Miembros del IMEF regionales y nacionales estudiantes de otras universidades del país. Profesores.
Taller Yo Emprendo	Programa de la Secretaría de Economía. Difunde la formación de emprendedores y la elaboración de planes de negocios para su posterior incubación. El CDE hospeda este programa, sus profesores asociados son instructores certificados y asesoran estudiantes en la elaboración del Plan de Negocios.	Empresarios Locales, Asesores y Consultores del CDE y de la Incubadora de Negocios. Otros estudiantes.
Consultor junior	El programa de Consultor Jr. Se diseñó por el CDE para formar habilidades para la formulación, diseño y evaluación de planes de negocios, bajo requerimientos de Secretaría de Economía. El estudiante acompaña al emprendedor en el desarrollo de su proyecto y es supervisado por el Asesor de Planes de Negocios.	Emprendedores, Asesores de Negocios, otros estudiantes
Programa Estancias Infantiles SEDESOL	Intervención bajo la modalidad de Consultoría a 39 Estancias Infantiles de Secretaría de Desarrollo Social, en la Ciudad de Durango. Se implementó un Sistema de Gestión. El estudiante fue responsable de acompañar a los encargados de las Estancias Infantiles en la implantación del Sistema. Se entrenó, recibió capacitación, documentó la experiencia, dio capacitación y asesoró en la resolución de problemas de las estancias.	Profesores Consultores, Estudiantes, Responsables de Estancias Infantiles, Colaboradores de Estancias Infantiles. Autoridades de SEDESOL

*Esta tabla, muestra el proyecto, una descripción de las actividades o características que incluye y las personas o instituciones con las que se genera la vinculación. Puede observarse que Hay una fuerte relación con el sector empresarial y también con instancias gubernamentales. Algunos de estos proyectos son supervisados y coordinados desde una modalidad "huésped" por el CDE, es decir, no fueron creados por el mismo pero si son auspiciados. Otros nacen específicamente dentro del CDE, como el programa de*

El estudio lo delimitan los estudiantes asociados a los proyectos del CDE de la FECA de la UJED, que participaron durante los años 2011 y 2012. El instrumento se aplicó durante los meses de febrero y marzo del 2013. Se adaptó el cuestionario para identificar las capacidades de aprendizaje de las organizaciones (Yeung, Ulrich, Nason, & Glinow, 1999). Se aplicó a toda la población. El Instrumento original tiene cinco apartados: Tipos de organizaciones que aprenden, Incapacidades para aprender, Capacidad para el Cambio, Procedimientos de Recursos humanos, Cultura. Para esta investigación se utilizaron solamente los apartados de Tipos de Organizaciones que aprenden y las Incapacidades para aprender. Se solicitó al estudiante que valorara el proyecto en el que estuvo o está asociado. Además se diseñó una sección para identificar las habilidades adquiridas y los saberes fortalecidos. Finalmente también se indagó sobre los factores que desde la perspectiva de los estudiantes facilita o inhibe el aprendizaje.

El instrumento se mide con una escala de Likert, donde 1 es la percepción más baja o nula y 5 la más alta. La validación con el Alpha de Cronbach arrojó un resultado de 0.96, por lo que el instrumento es confiable. Toda la información se procesó en SPSS 19.0.

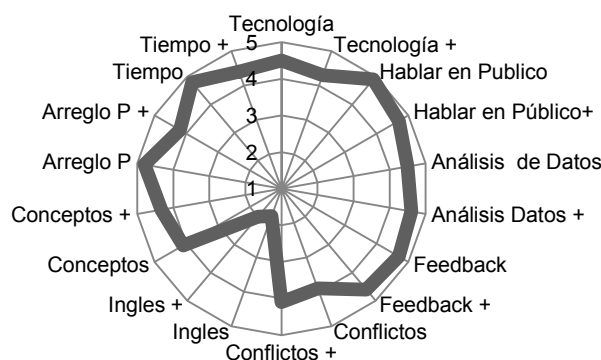

## RESULTADOS

Retomando las preguntas de investigación: ¿Qué aprendizajes <competencias> adquieren los estudiantes al participar en proyectos del CDE? ¿Cómo impacta este aprendizaje en la Perspectiva Profesional del estudiante y en su Plan de Vida? ¿Qué estilos de aprendizaje favorecen más la adquisición de competencias para los estudiantes que participan en proyectos en el CDE? ¿Qué incapacidades para aprender inhiben la adquisición de competencias para los estudiantes que participan en proyectos en el CDE? Los resultados fueron los siguientes. La edad promedio de los Estudiantes es de 22.5 años y la Licenciatura de la que proviene la mayoría es de Contador Público.

### Que aprenden los estudiantes asociados al CDE de la FECA de la UJED

Figura 1: Aprendizajes Adquiridos.

Esta figura muestra los resultados en dos vertientes. Por ejemplo Tecnología y Tecnología +. La diferencia consiste en que en el primer caso se le pregunta si tuvo que usar la tecnología durante su participación en el proyecto. En el segundo, si una vez terminado, su uso de tecnología se mejoró. Podemos observar que durante el proyecto la mayoría de las variables fueron utilizadas claramente y también consideran una mejora, excepto en el uso de Ingles, que claramente no fue una competencia adquirida ni fortalecida.

Los participantes, consideraron que Hablar en Público, su Arreglo Personal y una Mejor Administración del tiempo, son habilidades que tuvieron que utilizar en mayor medida, durante el proyecto. La manera en como resolvieron los conflictos que se les presentaron, fue el saber en el que se presenta más variación en la respuesta de los estudiantes con una  $S = 1.4491$ . El Resto de las competencias, se usaron en gran medida y los estudiantes consideran que ha habido una mejora, excepto en el uso del idioma ingles.

### Perspectiva Profesional y Plan de Vida

La siguiente serie, indaga sobre la percepción de la Perspectiva Profesional y el Plan de Vida en términos generales. En la perspectiva profesional, se les preguntó si consideraban si esta coincide con el que se plantea en el proyecto en el que participaron. Y también si se había sido aclarada una vez concluido el proyecto. (Perspectiva Profesional +). El Plan de Vida en términos generales también podía o no coincidir con los planteamientos de la vinculación y al finalizar verse enriquecida esta perspectiva. La Figura 2 muestra el comportamiento.

Figura 2: Futuro Profesional y Plan de Vida

Esta Figura, muestra el comportamiento ante la interrogante de la perspectiva profesional y el plan de vida. En el primer momento se cuestiona si estas dos perspectivas coinciden con los planteamientos del proyecto en el que participaron. En el Futuro Prof. + y Plan de Vida +, se pregunta si estas perspectivas se aclararon o mejoraron a raíz de su vinculación. Se puede ver como participar en estos proyectos aporta elementos que mejoran o amplían las perspectivas profesionales y los planes de vida de los participantes.

### Estilos de Aprendizaje

Las capacidades de aprendizaje de las organizaciones, definidas por Yeung, son cuatro: Exploradoras, Adquisición de Competencias, Imitadoras y Expertas. De acuerdo a los resultados, no hay un estilo de aprendizaje según el resultado de ANOVA con  $p = .858$ . Es decir, ninguno de ellos tiene datos que definan con suficiente claridad que se trata de un estilo en particular. La Figura 3, muestra esta relación.

Figura 3: Estilos de Aprendizaje

Esta figura, expone que dentro de los participantes en proyectos de Vinculación del CDE, no hay un estilo de aprendizaje que prevalezca más que el otro. El tipo de aprendizaje con mayor frecuencia es el de Expertas y aunque no hay diferencia significativa entre los otros, la búsqueda de las mejores prácticas prevalece con una ligera diferencia, seguida por la adquisición de competencias que se define como el fomento a la adquisición de habilidades.

El análisis de las medias arroja diferencias poco significativas para determinar un estilo de aprendizaje predominante.

### Donde y quien aprende

El instrumento de Yeung, propone que hay escenarios que facilitan o inhiben el aprendizaje. En el caso de los proyectos auspiciados por el CDE la pregunta es si se aprende dentro de los límites (las propias actividades, eventos) del proyecto o más allá de los límites. (Esto comprendería el escenario del CDE, su dinámica, su incrustación con el sector empresarial en un sentido más robusto). Las pruebas realizadas arrojan que el aprendizaje ocurre dentro de los límites del propio proyecto. La tabla 3, muestra la información del análisis descriptivo y las pruebas de significancia. En el mismo análisis también se plantea que se aprende más en Grupo que en forma Individual.

Tabla 3: ¿Donde ocurre el aprendizaje y Quien aprende?

	Mínimo	Máximo	Media	Desv. típ.
¿Donde ocurre el aprendizaje?				
Dentro del Proyecto	3.33	5.00	4.4667	.59213
Fuera del Proyecto	2.33	5.00	4.1667	.97183
¿Quién aprende?				
Personas	1.33	5.00	4.2333	1.10050
Grupos	2.00	5.00	4.5750	.92833

La tabla 3, expone el análisis descriptivo de los valores del instrumento. La desviación estándar del escenario donde se facilita el aprendizaje es 59213 vs. 97183, que representa un mayor consenso en las respuestas para "dentro del proyecto". Mientras que en el análisis de Quien Aprende, la diferencia en las medias indica que los grupos posibilitan mas la adquisición de conocimientos, aunque la variación en las respuestas no es tan sensible.

### Incapacidades para aprender.

El instrumento adaptado pudo medir cuatro incapacidades para aprender. La Figura 4, muestra los resultados. Se identifica que soluciones comunes a distintos problemas, inhibe la creatividad o la búsqueda de alternativas, por lo que no se da el crecimiento.

Figura 4: Incapacidades para aprender.

Esta Figura, muestra los resultados en los cuales se observa que la principal incapacidad para aprender es la homogeneidad, seguida por el acoplamiento estrecho. El análisis ANOVA reveló que si hay diferencia significativa. Las soluciones a los problemas, según Yeung et al (1999), tienden a ser las mismas. Entre más diferencias se presentan en las soluciones, mayor posibilidades de aprendizaje. El acoplamiento estrecho, muestra que los proyectos son muy controlados y esto desde la perspectiva de este instrumento inhibe el aprendizaje.

## CONCLUSIONES

Los estudiantes asociados al CDE a través de sus diferentes proyectos de vinculación adquieren competencias para la vida laboral. Tanto en programas diseñados por el propio CDE como los que son hospedados y auspiciados, se integran profesores, asesores, empresarios, autoridades y otras unidades académicas de la UJED. Los alumnos participantes tienen responsabilidades que requieren el uso de tecnología y aplicación de los conocimientos de su carrera, pero también se enfrentan a situaciones que superan lo enseñado en las aulas. En este trabajo se estudió que es lo que se aprende al participar en este tipo de actividades y como se aprende. Además del impacto que tiene este tipo de vinculación en la perspectiva profesional y en el plan de vida.

¿Que se aprende?, es decir que competencias se adquieren, destacan la Administración del Tiempo, Hablar en Público, Arreglo personal, todas se pueden entender como conocimientos “blandos” (habilidades). Los alumnos también aprendieron a manejar conflictos y la manera en la que los resolvieron les será de utilidad fuera del CDE y del proyecto que participaron. Se aprende en ambientes que propician la colaboración, aunque no hay un estilo de aprendizaje que defina esta adquisición de competencias. Es decir, este análisis deberá ser complementado con el de la cultura organizacional que propone el instrumento completo de Yeung et al.

Los datos estudiados, no dan evidencia suficiente sobre la diferencia entre el ambiente que propicia el aprendizaje. Es decir, no hay datos contundentes para afirmar o negar que se aprenda solamente dentro de los proyectos sin tomar en cuenta el entorno de estos. Otra circunstancia del estudio es que el momento de la aplicación no es el mismo para todos los participantes. Ellos pudieron haber madurado sobre su experiencia o bien aún no valorarla con suficiencia. Por lo que una recomendación es aplicar el instrumento una vez que termina la participación y valorarla también una vez pasado un periodo de maduración con la misma población.

El estudio también demuestra que se trata de proyectos muy controlados por el CDE, con una fuerte supervisión por parte de coordinadores y asesores, esto también se vuelve en una incapacidad para aprender al no permitir la creatividad de los estudiantes participantes y resolver situaciones complejas por su propia cuenta. Y por otro lado la homogeneidad como impedimento para aprender, posiblemente esté ligado a la búsqueda de estándares de calidad, como lo es obtener una certificación internacional (SBDC), en la que se busca repetir procesos comprobados y documentarlos según una norma o modelo con el fin de garantizar la calidad en el servicio. Esta última parte tendría que estudiarse y adaptarse al instrumento para verificarla.

Esto último podría orientar el diseño de proyectos donde el alumno tenga la posibilidad de experimentar la búsqueda de alternativas y probarlas, cuidando también la calidad del producto o servicio que el CDE brinde a su cliente.

Respecto al plan de vida y a la perspectiva profesional, aunque se muestran datos que dicen que esta se ve enriquecida al asociarse a alguno de los proyectos del CDE, esta relación podría quedar más clara dando un seguimiento a los egresados y correlacionar puestos, tiempo de obtener empleo, experiencias laborales.

Estudios futuros pueden correlacionar el perfil y carrera del participante asociado al CDE, edad, sexo para profundizar en el tipo de estudiantes para quienes resulta más fácil adquirir competencias a través de la vinculación empresarial.

# TUTORIA EN ESTUDIANTES INDÍGENAS DE NIVEL SUPERIOR

Alma Rosa García Ríos, Universidad Michoacana de San Nicolás de Hidalgo  
Zoila Margarita García Ríos, Universidad Michoacana de San Nicolás de Hidalgo

## RESUMEN

*La incorporación de los jóvenes estudiantes indígenas a las aulas universitarias requiere de condiciones y estrategias didácticas específicas. Siendo el apoyo de tutorías un importante recurso institucional para abatir los niveles de reprobación y deserción, por lo que es necesario seguir fortaleciendo estos servicios. Así como proporcionar a los docentes tutores, las estrategias que les permitan lograr un desempeño adecuado en el acompañamiento del estudiante indígena del nivel superior. El presente trabajo es una investigación de la situación actual de los estudiantes indígenas de la Universidad Michoacana de San Nicolás de Hidalgo, Universidad pública del Estado de Michoacán, México. En cuanto a su distribución en la Universidad así mismo se aplica una propuesta de estrategias de acción tutorial en un grupo de estudiantes indígenas de la Carrera de Químico Farmacobiología con la intención de demostrar la efectividad de las estrategias propuestas. La metodología comprende un desarrollo progresivo de varias etapas; desde la obtención de información en planeación universitaria (SIIA) en el ciclo escolar: 2009, además del trabajo directo con un grupo de estudiantes indígenas a quienes se aplicaron entrevistas, Análisis FODA, análisis clínico, aplicación de test de Inteligencias múltiples y uso de Técnicas de estudio. En base a los resultados obtenidos, se aplicaron estrategias de refuerzo correlacionando en los puntos de debilidad logrando mejorar el aprovechamiento académico, abatiendo el rezago y la deserción, concluyendo con el término de la carrera universitaria.*

**PALABRAS CLAVE:** tutoría, indígenas, estrategias, nivel superior, optimización

## TUTORING IN TOP LEVEL INDIAN STUDENTS

### ABSTRACT

*The incorporation of native young female students to the university classrooms requires of specific didactic strategies. Tutorials incorporated by the University are an important institutional resources to prevent students desertion and failure, for that matter strengthening this tool as well as training professors may help students to finish they career.. The present work is an investigation of the current situation of indigenous students of the Universidad Michoacán de San Nicolas de Hidalgo, Public University of Michoacán, Mexico. In terms of Distribution University Jan likewise applies a proposed tutorial action strategies in a group of Indian students of the School of Chemical Pharmacobiology with the intention of demonstrating the effectiveness of the proposed strategies. The methodology comprises a multistage progressive development, from obtaining information on college planning (SIIA) s in the school: 2009, in addition to direct work with a group of Indian students who applied interviews, SWOT, clinical analysis , application of multiple Intelligences test and use of study skills. Based on the results obtained, correlating reinforcement strategies applied at points of weakness managing to improve academic achievement, bringing down the backlog and desertion, concluding with the end of the college career*

**JEL:** I20, I21, I23, I24

**KEYWORDS:** Mentoring, Indians, strategies, higher level, optimization.

## INTRODUCCIÓN

Desde sus orígenes la Universidad Michoacana de San Nicolás de Hidalgo, México. Se ha caracterizado por un rasgo social de apoyo a las clases desprotegidas siendo una Universidad pública, da cabida a estudiantes de la mayoría de las entidades de la república, a medida que las oportunidades de educación se van ampliando, cada vez más, jóvenes indígenas llegan a nuestra universidad, esto por supuesto con una serie de necesidades académicas, económicas y sociales graves que dificultan su estancia en el nivel medio superior y superior, teniendo como consecuencia: la marginación, el rechazo, la reprobación y deserción, algunos jóvenes a pesar de esto, logran desarrollarse eficazmente pero son minoría.

La incorporación de estos jóvenes a las aulas universitarias requiere de condiciones y estrategias didácticas, siendo el apoyo de tutorías un importante recurso institucional para abatir los niveles de reprobación y deserción, por lo tanto es latente la necesidad de seguir fortaleciendo estos servicios. El presente trabajo es una investigación de la situación actual de los estudiantes indígenas de nuestra universidad: en cuanto a su distribución en la universidad por dependencias. Y una propuesta de estrategias de acción tutorial para la mejora en el desarrollo académico de un grupo de 5 estudiantes indígenas de la carrera de Químico farmacobiología de la UMSNH utilizando estrategias como: Análisis FODA, Análisis de Laboratorio Clínico, apoyo con técnicas de estudio, Asesoría en el desarrollo de las inteligencias múltiples así como tutoría entre pares. Haciendo un acompañamiento académico hasta el término de la carrera profesional y la culminación con la obtención del título universitario.

En relación a los docentes que participan en el programa institucional de tutoría (PIT), Armenta, (2010), menciona que de 3,550 plazas académicas (UMSNH, 2010), apenas 607 profesores se han capacitado para ser tutores, representando un 17 % del personal docente, por lo que se presume que la cobertura del programa es limitado. Por otro lado, de la experiencia empírica de los coordinadores de los programas de tutoría de las diferentes unidades académicas, se detectan las dificultades que enfrentan para realizar la tutoría en tres dimensiones: Institucionales, tutorado y tutor. El programa de atención tutorial de Químico farmacobiología inicia en 2004. Con 33 profesores formados en tutorías de los cuales 20 están activos y solo uno de ellos atiende a estudiantes indígenas, otras dependencias no practican este tipo de tutoría independientemente de que tiene la demanda de este servicio aunque se cuenta con el Programa de Apoyo Académico a Estudiantes indígenas del estado de Michoacán PAAIEM en coordinación con la ANUIES, el Gobierno del Estado y la UMSNH. Actualmente se desconocen las cifras de estudiantes indígenas tampoco se conoce la ubicación de estos por dependencias por lo que es pertinente realizar esta investigación.

## REVISION LITERARIA

El Programa de Apoyo a Estudiantes Indígenas en Instituciones de Educación Superior (PAEIIES) es una iniciativa de base étnica implementada en México a partir del año 2001 con financiamiento de la Fundación Ford. Como parte de un proyecto de cobertura mundial, a favor de la equidad en la educación superior: tomando forma en cada país, de acuerdo a sus características y necesidades. Operó durante diez años, “en 22 países del mundo y 73 instituciones” (Petrovich, 2007, citado en Didou y Remedi, 2010: 11). Con el objetivo de “fortalecer los recursos académicos de las instituciones de educación superior participantes en el programa para responder a las necesidades de los estudiantes indígenas inscritos en ellas y ampliar sus posibilidades de buen desempeño académico en este nivel” (ANUIES-Fundación Ford, 2005: 7). La integración de las IES de carácter público permitió una interacción en la cual el vínculo entre las instituciones y la Fundación Ford generando un permanente intercambio de experiencias entre los participantes, así como la sistematización del proceso de Impulsar la creación de las Unidades de Apoyo Académico para estudiantes indígenas en las IES siendo un campo de interés institucional que se abre a nuevos aprendizajes en torno a la diversidad cultural y la educación superior. Con este propósito, se integró un Comité de Gestión para brindar asesoría técnica y académica al Programa, comité integrado

por: Secretaría de Educación Pública, Comisión Nacional para el Desarrollo de los Pueblos Indígenas, Centro de Investigaciones y Estudios Superiores en Antropología Social, Asesores externos, Su coordinación estuvo a cargo de la Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES). De 2001 a 2005, la ANUIES lanzó tres convocatorias, mediante las cuales se incorporaron al programa 16 instituciones. El PAEIIES funcionó con recursos de Fundación Ford hasta el primer semestre de 2010, año en que terminó Pathways to Higher Education (PHE). Previendo esta situación, en 2009 la Coordinación del Programa buscó el financiamiento del Banco Mundial y de la Secretaría de Educación Pública para dar continuidad a sus actividades, obteniendo un resultado positivo. Sobre esta base, en 2009, lanzó una cuarta convocatoria e integró al PAEIIES a siete instituciones más (Ver Tabla: 1)

Tabla 1: IES Incorporadas al PAEIIES Por Año de Convocatoria.

2001-2002	<b>Universidad Tecnológica Tula-Tepeji</b> <b>Universidad Pedagógica Nacional</b> <b>Universidad Autónoma del Estado de México</b> <b>Universidad Autónoma Chapingo</b> <b>Universidad Veracruzana</b> <b>Instituto Tecnológico Tuxtla Gutiérrez</b>
2002-2003	Benemérita Universidad Autónoma de Puebla Universidad de Guadalajara Centro de Estudios Superiores del Estado de Sonora Universidad de Ciencias y Artes de Chiapas Universidad de Quintana Roo
2005	Universidad Autónoma Benito Juárez de Oaxaca Universidad de Occidente Universidad Autónoma de Guerrero <b>Universidad Michoacana de San Nicolás de Hidalgo</b> Universidad Autónoma de Nayarit Universidad de Sonora
2009	Universidad Tecnológica de la Huasteca Hidalguense Universidad Autónoma de Chihuahua Universidad Autónoma de Chiapas Universidad Tecnológica de la Selva Universidad Autónoma de Yucatán Universidad Autónoma de Campeche
Al mes de junio de 2011	El PAEIIES se encontraba instalado en 18 entidades federativas, en 23 instituciones de educación superior públicas afiliadas a la ANUIES. De acuerdo con la información disponible en su sitio electrónico, atendía a una matrícula de 11,155 estudiantes, con el apoyo de 689 tutores y 75 asesores, y contaba con 2,677 egresados y 1,004 titulados. Según Didou y Remedi “en México, Pathways

Fuente:: Badillo . Información General. Consultado el 24 de mayo de 2011, en: [http://paeiies.anui.es.mx/index.php?pagina=info\\_gral.html](http://paeiies.anui.es.mx/index.php?pagina=info_gral.html)

El PAEIIES pretendió insertar en las agendas, gubernamental y asociativa, el concepto de obligatoriedad de la educación superior indígena o intercultural, en las agendas de política pública e institucional” (2009: 84). Las unidades de apoyo formadas en las instituciones participantes reciben diferentes nombres y actúan en forma paralela a los programas institucionales de tutoría. Prácticamente, todos los estados de nuestro país cuentan con población indígena. Chiapas, Oaxaca, Veracruz, Yucatán, Guerrero, Estado de México, Distrito Federal, Hidalgo, Michoacán, Puebla, Quintana Roo y San Luis Potosí son los estados que concentran el mayor número de indígenas ubicándose, en cada uno, más de 100,000 habitantes que manifiestan hablar alguna lengua indígena. En estos estados, el porcentaje que representa la población indígena, respecto al total de la población censada, va del 10 al 38%. Según las estadísticas sobre población indígena del INEGI (6’274,418), un porcentaje del 2.7 de la población hablante de lenguas indígenas tiene algún año aprobado en la educación superior, aun cuando ni siquiera el 2% logra concluir estudios en el nivel superior, mucho menos ingresar al posgrado.

Cabe señalar que existen grupos y poblaciones que si bien ya no son hablantes de una lengua indígena, mantienen usos, costumbres y tradiciones de su etnia y se reconocen a sí mismos como indígenas, por ello la oficina para el desarrollo de los pueblos indígenas identifica una población mayor (10'040,401). El promedio de la población hablante de alguna lengua indígena mayor de 15 años que tiene algún grado de escolaridad oscila entre el 3 y el 5.9%, la tasa de monolingüismo llega, en algunos estados de la República mexicana, hasta el 37.4%. Actualmente, la atención en educación superior para la población de origen indígena no alcanza ni siquiera el 2% de la población total atendida, lo que significa una desventaja superior a cualquier otro sector o grupo social.

La Universidad Michoacana, ofrece estudios de calidad en los niveles medio superior, técnico, superior y posgrado en un conjunto de 83 programas académicos que se ofrecen en las diferentes modalidades: escolarizada, abierta y a distancia. La matrícula, en el ciclo 2009/2010, fue de 49,204 alumnos, (sin contar los 4,811 alumnos inscritos en los cursos del Departamento de Idiomas), de ellos, 15,172 (30.83%) fueron de nuevo ingreso, el 20.68% para el Bachillerato; el 1.38% para el Nivel Técnico de Enfermería; el 75.21% para la Licenciatura y el 2.73% para el Posgrado (UMSNH, 2010).

El Programa Institucional de Acción Tutorial (UMSNH. 2010), se establece en el año 2000 con el objeto de definir las directrices, objetivos, servicios y mecanismos de evaluación de cada Unidad Académica, invitando a las 83 dependencias universitarias para que implementen el programa de tutoría, actualmente 25 unidades académicas han implementado el Programa de Tutoría, los Planes de Acción Tutorial de las unidades académicas son diversos en la modalidad de tutoría que se practica, de donde un 87% es presencial y un 13% virtual; la tutoría individual corresponde al 60%, grupal al 36% y un 4% combinan ambas, en una dependencia se desarrolla la tutoría entre pares. Haciendo una revisión de los datos globales de la capacidad de atención del programa de tutoría al estudiantado, encontramos que, del total solo 4,278 estudiantes están inscritos en el programa de tutoría representando un 8.69 %, cifra poco significativa, como para que se vea reflejado el impacto positivo de la acción tutorial en los índices de calidad, como la reprobación, rezago, deserción, eficiencia terminal y los índices de aprovechamiento.

## METODOLOGÍA

En este estudio se obtuvieron dos muestras : 1ª. para determinar la distribución de estudiantes indígenas se tomó la población de ingreso de estudiantes indígenas a la UMSNH en el ciclo 2009 a 2010 la información fue proporcionada por la dirección de planeación en el departamento de estadística a partir de archivos en Excel de los cuales se depuró la información concerniente a estudiantes indígenas seleccionando los siguientes datos, 1.- Si se reconoce como indígena, 2.- lugar de procedencia, 3.- Bachillerato o Carrera a la que aspiran ingresar, 4.- Sexo, 6.- Lengua o dialecto que practican, 7.- Si habitan en casa de estudiantes. Posteriormente se ubicó en un mapa de la República Mexicana los estados de procedencia de los estudiantes indígenas, también se construyó una hoja de Excel y el resumen ubicando las carreras solicitadas con mayor demanda expresándolo en porcentajes, las lenguas habladas por los estudiantes de las carreras más demandadas. Obteniéndose además, algunas observaciones interesantes, que fortalecen la investigación.

La 2ª. Muestra Para la aplicación de las estrategias de tutoría propuestas, se eligió una muestra de 5 estudiantes indígenas de la facultad de Químico farmacobiología, 4 de ellas captadas por el PAEIM y una captada por la tutora que realiza la investigación, se hicieron expedientes conteniendo 1.- historia personal, antecedentes familiares, económicos, académicos y sociales, 2.- Se les proporcionó un cuadernillo con técnicas de estudio, 3.- Se les realizó análisis clínicos de laboratorio; Biometría Hemática, química sanguínea ( glucosa , urea, creatinina, colesterol, ác. Úrico) Examen general de orina.

Se realizaron entrevistas periódicas antes, durante y después de cada semestre sobre propósito académico y personales, para establecer metas. 4.- En 2 estudiantes se aplicó la técnica de tutoría entre pares (La

variante consistió en que el tutor par era una compañero del mismo grado y grupo). 5.-Se obtuvieron los memorándums de calificaciones proporcionados por control escolar de la UMSNH . 6.- se graficaron resultados correlacionando la eficiencia terminal. En el Análisis e interpretación de resultado se comparan estos con los esperados en los objetivos que plantean UNESCO y PAEEIS para evitar reprobación, rezago y deserción. Las técnicas y procedimientos de recolección y análisis de datos se realizaron por parte del investigador mediante entrevistas, encuestas, análisis FODA y construcción de tablas y gráficos

## RESULTADOS

### a) De La Encuesta Sobre Estudiantes Indígenas En La Umsnh Ciclo 2009-2010

b)

En el año 2009 Se registraron 1886 estudiantes indígenas de un total de 18180 aspirantes a ingresar a la Universidad representando el 10.37% de aspirantes (SIIA planeación 2009). De los cuales sus aspiraciones de estudio más frecuentes fueron: 241 bachillerato Morelia, 205 bachillerato Uruapan, 131 Ing. Agrónomo Uruapan, 141 Lic. Enfermería, 128 Lic. en Derecho, 79 Medico Cirujano Dentista, 77 Medico Cirujano y Partero, 72, Biólogo, 69 Lic. en Contaduría, 57 Ing. Civil, 52 Licenciado en Psicología, 51 Quimicofarmacobiología, 50 Medico Veterinario Zootecnista, entre otros de menor proporción. Se observó que las entidades de las cuales proceden son: Baja California Norte, Campeche, Chiapas, Colima, Distrito Federal, Durango, Edo De México, del Extranjero, Guanajuato, Guerrero, Hidalgo, Jalisco, Nayarit, Nuevo León, Michoacán, Oaxaca, Puebla, Querétaro, San Luis Potosí, Sonora, Tabasco, Veracruz, Zacatecas. Las lenguas que hablan son: Mazahua, Mazateco, Mixteco, Tzeltal, tzotzil, Náhuatl, Chool, Otomí, Zapoteco, Purépecha.

Zona Purépecha De San Lorenzo, Michoacán, 5<sup>a</sup>. Estado De Michoacán.

Figura 3: Muestra el Rendimiento Académico de las 5 Estudiantes del Grupo de Investigación, Desde el 1er Semestre Hasta El 10. Semestre Que Consta La Carrera Universitaria Mostrándose La Distribución Entre Los Promedios de Calificación De 7.2 – 9.5 Con Media De 8.2 En Escala De 0 A 10 Con Mínimo Aprobatorio De 6.0

## CONCLUSIONES

Haciendo uso de las estrategias tales como: Análisis FODA, Análisis clínicos, tutoría entre pares uso de técnicas de estudio y desarrollo de inteligencias múltiples se logró que las tutoradas hicieran introspección. al conocer y aceptar sus debilidades y fortalezas se aumentó su autoestima permitiéndoles mejorar su rendimiento académico y abatir la reprobación y deserción ya que se obtuvieron los siguientes resultados: Todas terminaron la carrera; la 1er. tutorada para obtener el título de licenciatura obtuvo mención honorífica su tesis, actualmente se encuentra realizando el doctorado en Neurociencias en CINVESTAV, 2ª. tutorada titulada por examen de conocimientos generales, 3ª tutorada titulada por tesis actualmente estudia maestría, 4ª Tutorada está realizando tesis para obtener título de licenciatura con propósito de continuar con una maestría, 5ª. Tutorada Actualmente realiza trámites para titularse por examen del CENEVAL, se encuentra ejerciendo su profesión. Además de ubicar las carreras de Lic. En Enfermería, Ing. Agrónomo, Lic. En Derecho, Médico cirujano Dentista y Médico Cirujano Partero como las 5 carreras de mayor demanda en nuestra universidad por estudiantes indígenas, ubicando éstas carreras como focos de atención para la tutoría de indígenas. Lo cual invita a proponer la aplicación de las estrategias probadas en esta investigación abriéndose el panorama para nuevos proyectos de investigación basándose en el presente trabajo.

### RESUMEN

*La presente investigación es realizada para conocer los factores y frecuencias de consumo que tienen las familias de clase media y media alta en la ciudad de Chihuahua Chih. De acuerdo a su ciclo de vida familiar. Para efectos de esta investigación se determina la clase social con base en la recopilación de varios elementos, tales como ingreso mensual, frecuencia de compra, preferencias, etapa de vida familiar. Los datos arrojados por la presente investigación nos da la oportunidad de analizar el comportamiento de consumo de los diferentes hogares chihuahuenses, lo cual nos permite identificar el estilo de vida así como la aceptación hacia determinados productos y sus frecuencias de consumo hacia los mismos considerados accesorios entre elementos específicos los cuales son : gusto por la música, bebidas alcohólicas, accesorios personales, gadgets, ropa, artículos de consumo diario, deporte, religión consumo de tabaco, medicamentos, agua que se consume, entre otros. Después de obtener esta información durante el proceso de la investigación y para obtener un mejor resultado se relacionan dichos elementos con datos como lo son: edad, escolaridad, estado civil, tipo de empresa donde trabaja el entrevistado y número de hijos dependientes Encontrando diferencias congruentes en las diferentes etapas.*

**PALABRAS CLAVE:** hábitos de consumo, ciclo de vida, familia, productos, servicios, estilo de vida, clase social, ingreso.

## FACTORS DETERMINING CONSUMER HABITS IN THE FAMILY LIFE CYCLE AS IN CHIHUAHUA CITY

### ABSTRACT

*This research is conducted to understand the factors and consumption frequencies with families of middle and upper middle class in the city of Chihuahua, Chih. According to his family life cycle. For purposes of this investigation it is determined social class based on the compilation of several elements, such as monthly income, purchase frequency, preferences, family life stage. The data collected from this research gives us the opportunity to analyze the behavior of household consumption of different Chihuahua, which allows us to identify lifestyle and acceptance towards specific products and frequency of consumption to the same considered accessories among specific elements which are: love of music, alcoholic beverages, personal accessories, gadgets, clothes, daily commodities, sport, religion snuff consumption, medicines, water consumed, among others. After obtaining this information during the research process and for best results relate these data elements such as: age, education, marital status, type of respondent's employer and number of dependent children Finding consistent differences in different stages.*

## INTRODUCCIÓN

Kanuk (2000), Nos dice que al hablar del comportamiento del consumidor nos referimos a los actos, procesos y relaciones sociales sostenidas por individuos, grupos y organizaciones para la obtención, uso y experiencia consecuente con productos, servicios y otros recursos. Kotler (1996) Menciona que son los clientes los que tienen la última palabra, éstos comprarán en donde, según su criterio, les retribuya un mayor valor o beneficios, de ahí el grado de satisfacción, que resulta de comparar el rendimiento o resultado que se percibe de un producto o servicio con sus expectativas. En el proceso de compra, el consumidor reúne información acerca de las alternativas, la procesa, aprende acerca de los productos disponibles y determina que alternativa es la más acorde con las necesidades percibidas. Los problemas del consumidor empiezan cuando intenta desarrollar, mantener o cambiar su estilo de vida. Es muy importante entender el estilo de vida del consumidor, el cual refleja el cómo vive una persona, que productos compra, como los utiliza. Rolando Arellano (2002) Determina las variables del comportamiento mediante la premisa de que cada persona es el resultado de la interacción de una multiplicidad de variables, cada una de ellas integrada por muchos componentes, lo que supone un universo casi infinito de combinaciones.

## REVISION DE LITERATURA

**Comportamiento del Consumidor** Se define como el comportamiento que los consumidores muestran al buscar, comprar, utilizar, evaluar y desechar los productos y servicios, que consideran satisfarán sus necesidades. El comportamiento del consumidor se enfoca en la forma en que los individuos toman decisiones para gastar sus recursos disponibles (tiempo, dinero y esfuerzo) en artículos relacionados con consumo (Damico1996). Necesidad adquirida..También se le conoce como necesidades psicogénicas o secundarias. (*William Zikmund Michael Damico 1996*). La Familia: Muchas de las decisiones de compra las lleva a cabo por más de una persona. La toma de decisiones colectiva se presenta siempre que dos o más personas participan en la evaluación, selección o uso de un producto o servicio. Es importante comprender la dinámica familiar en la toma de decisiones. Los cónyuges en particular, tienen diferentes prioridades y ejercen distintos grados de influencia en relación a esfuerzo y poder.

Los niños también están incrementando su influencia en un alto rango de decisiones de compra. Las necesidades y los gastos de una familia dependen de factores como el número de personas que la integran, las edades de sus miembros y el número de integrantes que trabajan fuera de casa. Las parejas con niños generalmente tienen gastos mayores, por ejemplo en alimentos y pago de servicios. Una pareja de recién casados realiza gastos muy diferentes que una con hijos jóvenes, la cual también es muy diferente de una pareja con hijos en la universidad. Las familias con madres que trabajan necesitan efectuar gastos de guardería y guarda ropa de trabajo para la mujer, reducir la disonancia. (*William Zikmund Michael Damico 1996*). Roles de la Familia Para que una familia funcione como unidad cohesionada, las tareas del hogar deben hacerse entre varios de sus miembros.

En la sociedad actual constantemente están cambiando los roles relacionados con la familia. Por ejemplo dado el número de mujeres que trabajan, aumentan las responsabilidades del hombre en casa, los mercadólogos deben tener particular sensibilidad dados los cambios de roles en la familia ya que estos afectan la composición de los mercados objetivos. . (León G. Schiffman /Leslie Lazar Kanuk, 2001). Influencias situacionales en el proceso de toma de decisiones Son marcos físicos inmediatos, circunstancias sociales o condiciones económicas que provienen del interior del individuo o de los productos tangibles que se están considerando (León G. Schiffman /Leslie Lazar Kanuk, 2001). Ingreso y Clase Social. La clase social de un consumidor se refiere a su posición en la sociedad y depende de varios factores como la educación, la ocupación y el ingreso. Aunque el ingreso es un indicador importante de la

clase social la relación entre ambos no es del todo perfecta, debido a que la clase social depende de factores como el lugar de residencia, los intereses culturales y la perspectiva mundial.

Cuando el ingreso familiar se incrementa debido a que más integrantes de la familia perciben un salario, cada trabajo adicional probablemente es de estatus inferior, por tanto, el hecho de tener más dinero no da como resultado un mayor estatus ni cambia los patrones de consumo, ya que el dinero se utiliza para comprar más de lo que usualmente se consume y no para adquirir productos de mayor estatus. (León G. Schiffman /Leslie Lazar Kanuk, 2001). Grupos sociales y grupos de referencia. Los grupos sociales están compuestos por una cierta cantidad de personas de una misma sociedad, que ejercen relaciones entre ellas, además de compartir una serie de creencias y valores, dichos grupos desempeñan funciones de gran importancia para los individuos, un ejemplo de ello son las escuelas, muchas veces a su supervivencia, como su lugar de trabajo y la expresión de sus potencialidades tales como los clubes deportivos, por ellos es importante que estos grupos estén conformados por personas afines o parecidas.

(Kotler y Armstrong, 1996). Estilos de Vida. Los compromisos del estilo de vida de la familia, que incluyen el aprovechamiento del tiempo, influyen en gran medida en los patrones de consumo. También, cuando ambos padres trabajan se pone mayor énfasis en la noción de calidad del tiempo, en lugar de cantidad de tiempo que se pasa con los niños y otros miembros de la familia. (Kotler, 2006). Criterios de Clasificación Económica. Además de la clasificación económica hay tres tipos principales de clasificación; vivienda, ocupación y nivel de instrucción.. Ciclo de Vida Familiar Esta es una categoría usada con gran frecuencia en los países desarrollados y con muy poca frecuencia todavía en América Latina. Las etapas clásicas en estos países, señaladas por Wells y Gubar, son las siguientes. Fase I: Esta corresponde a hombres y mujeres, jóvenes solteros, que tienen su hogar aparte del de sus padres, además de que la mayoría de ellos tienen un empleo de tiempo completo, también hay muchos que son estudiantes de licenciatura y de posgrado.

Fase II: Esta fase de ciclo de vida familiar, funciona como un periodo de ajuste para la vida matrimonial. Como muchos de los cónyuges trabajan ambos fuera de casa, estas parejas disponen de un ingreso combinado. Fase III: La fase de la paternidad denominada la fase del nido lleno suele prolongarse en un periodo de más de 20 años. Por su larga duración esta fase se divide en varias sub fases más cortas: La preescolar de la escuela primaria, bachillerato y la universidad. Fase IV: A esta fase se le conoce como nido vacío para los padres significa volver a nacer, es decir, la oportunidad de hacer todo lo que no pudieron hacer cuando sus hijos vivían en el hogar y ellos tenían que preocuparse por solventar los considerables gastos de su educación. Fase V: Esta fase ocurre cuando sobreviene la muerte de algunos de los cónyuges se ajustan a un estilo de vida más modesto. (Schiffman, 2010)

## METODOLOGIA

Investigación tipo descriptiva no experimental transversal. Para la recolección de datos se utilizó, principalmente la entrevista de selección, para conocer atributos y frecuencias relacionadas con actitudes de compra, con la intención de analizar a detalle las características relevantes relacionadas con los productos. Procesándose los datos en el SPSS. Se efectuaron 55 encuestas de forma aleatoria simple en cada una de las etapas del CVF. En integrantes de la población de clase media y media alta para conocer los factores que determinan sus hábitos de consumo familiar. Se elaboró como herramienta piloto de investigación una encuesta para cada sector encuestado de acuerdo a su etapa de vida familiar.

## RESULTADOS

Etapas I. Se encontró que la gran mayoría de los encuestados invierten sus ingresos para consentirse a sí mismo, por ello los mercadólogos encuentran un mercado atractivo para la gran variedad de oferta de bienes y servicios. En el plano siguiente queda la compra y mantenimiento de automóviles y diversiones.

Por ello se comprobó cómo hallazgo que es un mercado potencial, del cual pueden obtenerse ganancias considerables. Etapa II. La información obtenida arrojó los resultados de que ambos integrantes de la pareja son fuente de ingreso para su nuevo hogar durante esta etapa de ajuste matrimonial, invirtiendo en mobiliario y accesorios del hogar. Etapa III.

Existe un gran número de familias en etapa de nido lleno o paternidad las cuales invierten más en sus hijos dándole prioridad a su educación y abastecimiento de necesidades diversas ya en épocas anteriores a los hijos no se les daba tanta libertad de opinión respecto a artículos de consumo tales como artículos de consumo específicos, cabe mencionar que en esta etapa se coincidió totalmente como la más costosa debido al cambio de necesidades de acuerdo a las necesidades de los hijos. Etapa IV. En esta etapa se comprobó que los nidos vacíos no tienen tantos gastos por el hecho de no contar con sus hijos dentro del hogar. Retoman sus hábitos de tiempo libre entre otros. Con respecto a los productos de vestuario no es tan importante la adquisición de prendas de marca en su totalidad, sin embargo ciertas prendas sí. Por otra parte algunos se inclinan más por las actividades espirituales con algunas excepciones debido a su religión. Etapa V. De igual forma los encuestados pertenecientes a esta etapa adquieren de forma rutinaria sus productos ya que la mayoría no están interesados en probar algunos productos, realmente por apego a sus costumbres, sin embargo se descubrió una variable en esta etapa que es el cuidado de los nietos y esto representa un gasto parecido al de la Etapa II, de igual manera una parte pequeña muestra la tendencia de buscar nuevas opciones de compra.

## CONCLUSIONES

Se pudo concluir el auge que ha cobrado la psicología del consumidor, y lo importante que es entender la perspectiva individual de consumo, así como la importancia de saber acerca de los productos que adquieren las familias de clase media en la ciudad de Chihuahua. Para nosotros es primordial conocer los diferentes perfiles de comportamiento de compra para poder implementar estrategias eficientes de mercado y saber las preferencias según las necesidades de cada familia de acuerdo a la etapa en la que viven. Conociendo las preferencias de las mismas se pueden ofrecer productos más especializados y dirigidos a un segmento específico, ampliando los horizontes de mercado y experimentando en diferentes nichos de mercado. Nos resulto complicado encontrar bases fundamentadas en familias de comunidades latinas, y ni que decir de información referente a los hábitos de la familia mexicana, de las diferentes etapas del ciclo de vida familiar.

# LA NECESIDAD DE LA FORMULACIÓN Y APLICACIÓN DEL REGLAMENTO INTERIOR DE TRABAJO EN UNA EMPRESA O ESTABLECIMIENTO

Gilberto Enrique Bustamante Valenzuela, Universidad Autónoma de Baja California

## RESUMEN

*En este artículo se analiza de manera objetiva la institución jurídica denominada Reglamento Interior de Trabajo que se contempla en la Ley Federal de Trabajo vigente en México, así como la necesidad de la formulación y la aplicación del mismo en la empresa. Siendo un conjunto de disposiciones obligatorias para trabajadores y patrones en el desarrollo de las labores de la empresa o establecimiento, resulta inexcusable que existan empresas que no cuenten dentro de su documentación legal con ese Reglamento ya que no se encuentran plenamente definidas las obligaciones y derechos de los sujetos de la relación de trabajo. Y si bien es cierto que la propia ley laboral contiene las disposiciones básicas aplicables, no menos cierto es que resulta necesario reglamentar aquellas instituciones contempladas en la ley de tal manera que su interpretación y aplicación no queden al arbitrio de las partes. Además en caso de existir dicho Reglamento dentro de la empresa o establecimiento, es básico que se haga del conocimiento de aquellos a quienes va dirigido, ya que su ignorancia hace nula su aplicación, lo que deriva en una pérdida del orden que debe imperar en la relación de trabajo al violentarse los derechos y obligaciones que a cada uno corresponden.*

**PALABRAS CLAVES:** Laboral, trabajo y ley

## THE NEED OF THE FORMULATION AND IMPLEMENTATION OF THE WORK INTERNAL REGULATION IN A COMPANY OR ESTABLISHMENT

### ABSTRACT

*In this article is analyzed objectively the legal institution named "work internal regulation" referred to in the in the federal work law in force in Mexico, as well as the need for the formulation and the implementation of it in a company. Being a group of mandatory rules for workers and employers in the development of the work of the company or establishment, it is inexcusable that there are companies that do not have within its legal documentation this regulation and so the obligations and rights of the subjects of the employment relationship are not fully defined. And if it is true that the labor law contains the basic provisions, not least is true that it is necessary to regulate those institutions to avoid any partial interpretation for any of the parts involved. Also, if this document exists in a company or establishment, is basic to let it know to all the workers, because if this is unknown it is not applied, and the order in the working relationship is lost because the rights and duties are violated.*

**KEYWORDS:** Labor, work and law.

## INTRODUCCIÓN

Una de las principales preocupaciones que existe en cualquier empresa o establecimiento es mantener un orden en el desarrollo de la relación obrero patronal. Para ello es necesario el establecimiento de reglas específicas conforme a las cuales se van a prestar los servicios. Esto conlleva el que se formule un documento laboral que prevé la propia Ley Federal del Trabajo y que sin lugar a dudas establecerá condiciones claras para los trabajadores sin que en ningún momento se sobrepase la normatividad

contenida en la ley federal antes mencionada. Ese documento legal denominado Reglamento Interior de Trabajo no es una imposición patronal propiamente dicha, sino que su aprobación debe darse después de una revisión de las autoridades del trabajo, a más de que debe contener el consentimiento de los trabajadores. Desde el punto de vista del trabajador implica obligaciones y derechos que no son sino una regulación específica de aquello contenido en la ley, y desde el punto de vista patronal genera a su favor el cumplimiento de las disposiciones normativas y un orden dentro de la empresa o establecimiento.

Sin embargo, esas reglas deben ser del conocimiento de las partes envueltas en la relación obrero patronal, ya que su falta de observancia genera desorden y una inadecuada productividad afectando los intereses de la empresa y también los de los trabajadores.

## RESULTADOS

El Reglamento Interior de Trabajo encuentra su fundamento legal en los artículos del 422 al 425 de la Ley Federal del Trabajo, que se ubican dentro del Título Séptimo que se refiere a las relaciones colectivas de trabajo. No lo encontramos dentro del capitulado de las relaciones individuales de trabajo ya que se trata de un documento cuyo contenido no es una norma jurídica individualizada, sino que es de observancia general para todos los trabajadores de una empresa o establecimiento.

El artículo 422 del ordenamiento federal en cita lo define como “el conjunto de disposiciones obligatorias para trabajadores y patrones en el desarrollo de los trabajos en una empresa o establecimiento”. Partiendo de este supuesto, debe quedar muy claro que en cuanto a su aplicación tiene un carácter general y no individualizado como ya quedó plasmado más arriba. Esas disposiciones resultan obligatorias tanto para trabajadores como para patrones, ya que su formación no queda al arbitrio de una sola de las partes, sino que debe existir el consenso de patrón y trabajadores, y siendo estos últimos un grupo muy numeroso entonces se hace necesaria la formación de una comisión de trabajadores que trabaje con el patrón en la formulación del documento. Es importante destacar el consenso que debe existir entre ambas partes puesto que la imposición unilateral solo llevará a que el Reglamento no sea observado en su cumplimiento por la parte inconforme. Una vez que es logrado el consentimiento de ambas partes respecto de las disposiciones contenidas en el Reglamento Interior de Trabajo, es necesario que se firme y se deposite en el término de ocho días ante la Junta de Conciliación y Arbitraje, la que después de una exhaustiva revisión lo sancionará procurando que no exista ninguna violación al contenido de la ley superior, o sea de la Ley Federal del Trabajo.

En el caso de que alguna disposición de las contenidas en el Reglamento Interior de Trabajo sea contraria a la ley y que ninguna de las partes lo haya notado al momento de formularlo, o bien que sabiéndolo cualquiera de ellas se pretenda aprovechar del estado de ignorancia en que su contraparte se encuentra, y asimismo que la autoridad laboral tampoco se percate en su revisión de la existencia de esa disposición contraria a la ley, simplemente no podrá surtir efecto legal alguno, por lo que aun cuando haya abuso de la ignorancia de una parte por otra no se verán menoscabados los derechos que le confiere la ley laboral.

Lo anterior desde luego aplica también en tratándose de la interpretación de los preceptos contenidos en el Reglamento, ya que es bien sabido que cuando existe una controversia interpretativa siempre prevalecerá aquella que sea más favorable al trabajador. Esto último sin perjuicio de que en cualquier momento trabajadores o patrón soliciten a la Junta de Conciliación que se subsanen las omisiones del reglamento o se revisen sus disposiciones que sean contrarias a la ley. El tema de la transparencia en la información gubernamental ha permeado también en el ámbito laboral, y de conformidad con la Ley Federal de Transparencia y Acceso a la Información Pública Gubernamental y de las leyes que regulen el acceso a la información gubernamental de las entidades federativas, todos los Reglamentos que se encuentren depositados ante la Junta de Conciliación y Arbitraje deben ser puestos a disposición de aquella persona que así lo solicite, e incluso en forma electrónica a través de Internet y de manera gratuita.

El reglamento resulta obligatoria para las partes signantes desde la fecha de su depósito ante la autoridad laboral. Pero es sumamente importante que sea dado a conocer a los trabajadores, sea mediante la impresión que se haga de dicho Reglamento y su posterior reparto a cada uno de ellos, debiendo además fijarse en los lugares más visibles del establecimiento. Aun cuando la ley laboral no lo señala, es conveniente que el trabajador conserve un ejemplar del Reglamento y que al momento de su recepción por parte del patrón firme un documento en el que se haga constar que lo recibió de manera íntegra.

Esto a fin de evitar que un futuro y en caso de conflicto por su aplicación, el trabajador manifieste el desconocimiento de ese documento. Así también es importante que no únicamente les sea entregado, sino que se convoque a reuniones donde se les dé a conocer el contenido para con ello lograr una mayor observancia de las disposiciones que contiene. El hecho de que no se le dé la debida publicidad ante los trabajadores implica desde luego su inobservancia, lo que hará nugatorias las reglas y se generará un desorden pues tal vez algunos de los trabajadores tengan a bien adoptar dichas reglas, pero otros no lo harán generando esto que los que si lo cumplen opten por dejar de hacerlo al darse cuenta de que su aplicación no es general. En cuanto al contenido del Reglamento, la Ley Federal del Trabajo contempla que este no debe contener las normas de orden técnico y administrativo que formulen directamente las empresas para la ejecución de los trabajos. Es decir, no debe establecer los procedimientos para llevar a cabo las labores en la empresa o establecimiento sino que debe concretarse a regular el buen desarrollo de la relación de trabajo. El artículo 423 de la Ley Federal del Trabajo expone de manera enunciativa y no limitativa cual debe ser el contenido del Reglamento: Artículo 423.- El reglamento contendrá:

- I. Horas de entrada y salida de los trabajadores, tiempo destinado para las comidas y períodos de reposo durante la jornada;
- II. Lugar y momento en que deben comenzar y terminar las jornadas de trabajo;
- III. Días y horas fijados para hacer la limpieza de los establecimientos, maquinaria, aparatos y útiles de trabajo;
- IV. Días y lugares de pago;
- V. Normas para el uso de los asientos o sillas a que se refiere el artículo 132, fracción V;
- VI. Normas para prevenir los riesgos de trabajo e instrucciones para prestar los primeros auxilios;
- VII. Labores insalubres y peligrosas que no deben desempeñar los menores y la protección que deben tener las trabajadoras embarazadas;
- VIII. Tiempo y forma en que los trabajadores deben someterse a los exámenes médicos, previos o periódicos, y a las medidas profilácticas que dicten las autoridades;
- IX. Permisos y licencias;
- X. Disposiciones disciplinarias y procedimientos para su aplicación. La suspensión en el trabajo, como medida disciplinaria, no podrá exceder de ocho días. El trabajador tendrá derecho a ser oído antes de que se aplique la sanción; y
- XI. Las demás normas necesarias y convenientes de acuerdo con la naturaleza de cada empresa o establecimiento, para conseguir la mayor seguridad y regularidad en el desarrollo del trabajo.

Como puede observarse, la enunciación que hace la ley laboral es demasiado escueta y solo señala de manera muy general algunos de los temas a que se puede referir el Reglamento. Pero también se debe dejar establecido que el Reglamento debe ser formulado de acuerdo a las necesidades propias de cada empresa o establecimiento puesto que no se puede establecer uno de manera general. Así por ejemplo, es muy común que se incluyan temas que son cotidianos en la relación de trabajo como los que a continuación se enumeran:

- 1. El uso de uniformes proporcionados por el patrón, estableciéndose su obligatoriedad durante el desarrollo de las labores.*
- 2. El uso de equipo o material de seguridad proporcionado por el patrón.*
- 3. La forma en que los trabajadores deben dejar constancia de su llegada y salida del centro de trabajo, sea esto a través de un reloj checador o bien de tarjetas o relaciones de asistencia diaria.*
- 4. La forma en que ha de hacerse el pago del salario de los trabajadores.*
- 5. Normas relativas a seguridad e higiene.*
- 6. Las sanciones por el mal uso del equipo de trabajo.*
- 7. El uso del equipo de transporte y la responsabilidad de quienes lo tienen a su cargo.*
- 8. Las sanciones a los trabajadores por su inasistencia o retardo en la llegada a su centro de labores.*
- 9. Las condiciones en que se otorgaran los permisos y licencias.*
- 10. El comportamiento que deben observar los trabajadores ante el patrón y ante los demás trabajadores.*
- 11. El trato de los trabajadores hacia cualquier persona ajena a la empresa o establecimiento, entiéndase por estos a clientes, proveedores y visitantes.*
- 12. La confidencialidad que deben observar los trabajadores respecto de los procedimientos de la empresa o establecimiento.*
- 13. La observancia de la política de privacidad respecto de la información que obre en su poder y que sea de terceras personas con las que la empresa tenga relación.*

Las menciones anteriores son solo temas aislados que se considera deben incluirse en el Reglamento Interior de Trabajo, pero como se ha venido diciendo, no son las únicas situaciones que puede y que debe contener, sino que su alcance puede ser tan amplio como lo requiera la empresa o establecimiento. Ahora bien. Se debe analizar desde el punto de vista obrero y patronal el establecimiento de este documento en una empresa o establecimiento. En primer término se valido establecer que implica una presión para los trabajadores ya que dará elementos al patrón para que en un momento dado pueda dar por rescindida la relación de trabajo sin tener responsabilidad. En este caso el Reglamento se logra convertir en un arma del patrón contra los trabajadores. Pero si se deja de lado esa mención de que es una presión patronal hacia los trabajadores, se puede establecer que solo se pretenden regular aquellos aspectos que no lo han sido por virtud de que la ley laboral es muy general y no puede abarcar a la totalidad de las necesidades de las distintas empresas. Es decir, darle el buen sentido a su implementación y concluir que es un documento que dejará a los trabajadores con reglas a las cuales deben apegarse haciéndoles saber que ninguno de sus

derechos laborales se encuentra vulnerado dentro del Reglamento. Y en segundo término, si lo vemos desde el punto de vista obrero puede parecer a simple vista solo obligaciones para ellos, pero no menos cierto es que también puede incluir obligaciones patronales como lo es por ejemplo la obligación de tener el equipo de seguridad necesario para la realización de las labores, ya que de no tenerlo a disposición de los trabajadores resulta en que los trabajadores dejan de cumplir con el Reglamento, a más de que comprometen su seguridad personal y la de sus compañeros y la de la empresa.

Nuevamente hay que tener la visión de que se hace de buena fe y entonces se arriba a la conclusión de que es un documento que va a dejar de lado la ambigüedad que en ocasiones se presenta en el desarrollo de la relación de trabajo, al no tener una certeza el trabajador hasta donde llegan sus obligaciones como empleado y cuáles son los derechos que le son conferidos. Es así entonces que se trata de un documento que debe ser realizado de buena fe entre trabajadores y patrones y que solo servirá para regular aquello que ya existe y que es la relación de trabajo, y dotará a ambas partes de un ambiente de trabajo optimo que incentivará la producción, con el consiguiente beneficio para los dos.

## CONCLUSIONES

El Reglamento Interior de Trabajo no debe ser considerado como una opción de implementación en una empresa o establecimiento, sino que de manera categórica debe existir durante el desarrollo de los trabajos. La certeza en cuanto a las obligaciones obreras y patronales y la igualdad entre aquellos solo puede darse en el momento en que se establecen reglas que son generales y a las que todos deben ceñirse, dando con ello un orden que hace más armónica la relación jurídica entablada entre trabajadores y patrón. No se puede seguir sosteniendo la idea de algunas empresas o establecimientos en el sentido de que no son necesarios tantos documentos legales para que estas funcionen, lo cual hasta cierto punto es cierto, pero no es precisamente por el Reglamento Interior de Trabajo por lo que una empresa funcionará, pero si contribuirá de manera impactante en la convivencia de los sujetos de la relación obrero-patronal. Esa convivencia se refleja en todos los aspectos: en la productividad, en la certeza de los derechos y obligaciones, y sobre todo en el orden continuo, dejando de lado las arbitrariedades por cualquiera de las partes.

## RESUMEN

*El objetivo de esta investigación es identificar el nivel de relación entre el tipo de aprendizaje y las características del sujeto de estudio de las Estancias Infantiles de SEDESOL en Durango. Para lograr el objetivo se plantean las preguntas de investigación: ¿Cuáles son los tipos de aprendizaje de las EI?, ¿Cuáles son las características de los mandos superiores en las EI. Se aplica un enfoque tanto cualitativo como cuantitativo adaptando el instrumento de medición de Yeung et al para tipos de aprendizaje. Se aplica luego un análisis de diferencia entre medias para evaluar los resultados, además de algunas herramientas de estadística descriptiva como promedios, dispersión, tablas de contingencia. Los resultados nos llevan a una diferencia poco significativa en relación a ¿quién aprende? Y se observa más diferencia en cuanto a dónde se aprende y estilos de aprendizaje. Todo lo anterior es con el fin de tener una base para un proyecto de aplicación de TIC's en la gestión del conocimiento de estas empresas.*

**PALABRAS CLAVES:** Gestión del conocimiento, Aprendizaje organizacional, organizaciones inteligentes.

## CARE CENTERS (CCC) OF SEDESOL. ITS WAY TO KNOWLEDGE

### ABSTRACT

*The goal in this investigation is to identify the level of correlation between the the Child Care Centers of SEDESOL characteristics in Durango and their way to learn to identify ways to improve their knowledge management. To reach this goal arise some research questions: What is the type of learning in the CCC?, Where do they learn?. The angle of approach is qualitative as well as quantitative using Yeung et al's measurement instrument adapted. to evaluate the findings is applied, moreover, some tools of descriptive statistics as averages, dispersion, contingency tables, etc. . The results take us to a no significant difference in some variables like ¿who learns? and difference significant in others.*

### INTRODUCCIÓN

Las estancias infantiles de SEDESOL, son establecimientos dedicados al cuidado y atención infantil que funcionan a través de una responsable capacitada por DIF Nacional y la SEDESOL. (SEDESOL, 2011) Operan bajo las propias reglas establecidas por el programa, donde se considera por ejemplo que pueden abrirse al público en general pero principalmente están destinadas a los beneficiarios del programa.

El Programa, busca combatir la pobreza, propiciando que madres y padres que no cuentan con un servicio de guardería, por las características de su empleo o por ser estudiantes, tengan acceso a uno. Mas claramente, se describe a un beneficiario como: “Hogares que se encuentran en situación de pobreza patrimonial en los que las madres, padres, tutores o principales cuidadores, trabajan, estudian o están buscando trabajo y no tienen acceso al servicio de guardería o cuidado infantil a través de instituciones públicas de seguridad social u otros medios” (SEDESOL, 2011). Los niños deberán ser menores de 4 años o bien de 6 si es que cuentan con alguna discapacidad. Si se tiene un ingreso este no deberá rebasar 1.5 veces el salario mínimo por cabeza. Estas microempresas se encuentran en situación muy difícil dado

los recursos con los que cuentan y las características mismas de su creación y contexto, que las hacen más vulnerables. por lo que se deberán buscar opciones que permitan su desarrollo.

Menciona Carballal (2006) que “dada la velocidad con la que cambia el entorno, el grado de desarrollo de las tecnologías y la creciente globalización del mercado, las organizaciones deben responder de manera innovadora, lo que a su vez exige sacar el máximo partido al conocimiento, y si éste no se posee, habrá que adquirirlo o desarrollarlo”. Dentro de este contexto, Según Arie de Geus, jefe de planificación de Royal Dutch/Shell “la capacidad de aprender con mayor rapidez que los competidores tal vez sea la única ventaja competitiva sostenible”. Las microempresas tienen pocas alternativas para generar diferentes ventajas competitivas dadas su limitación de recursos, por lo que pueden tratar de concentrar sus esfuerzos en mejorar la capacidad de aprender. El objetivo de este trabajo es identificar elementos de gestión de conocimiento en estas EI para tener base para establecer estrategias dirigidas a su desarrollo basado en la gestión del conocimiento.

## REVISIÓN LITERARIA

La gestión del conocimiento es un proceso que consiste en la generación, explicitación, sociabilización y aplicación del conocimiento, con base en los individuos quienes son los que generan, adquieren y aplican este conocimiento en el ámbito de las organizaciones. En algunos enfoques se podría agregar un paso previo a este proceso que sería la necesidad de “desaprender”, rompiendo paradigmas que dejen espacio a nuevos conocimientos. La gestión del conocimiento implica conceptos como Organizaciones que aprenden, aprendizaje organizacional, sociedad del conocimiento, expertise, etc. Que se han manejado desde diferentes enfoques. Carball (2006) establece como características del conocimiento: “...necesario para realizar las actividades propias de la empresa; intangible, puede medirse, evaluarse, percibirse pero no tocarse; relevante o valioso, estratégico para la heterogeneidad, difiere de una organización a otra, no todas utilizan los mismos conocimientos para elaborar sus bienes y servicios; sinérgico, puede extenderse con un costo reducido a otros productos o mercados sin disminuir su valor; no depreciable, entre más se usa más valor incorpora; difícil de imitar, producto de su propia naturaleza tácita y compleja”. Y menciona a la vez, como una característica de las “organizaciones basadas en conocimiento” el tener una cultura organizacional basada en compartir conocimientos y valorar los resultados a medio y largo plazo.

Existen muchos autores con diferentes enfoques sobre cómo las organizaciones aprenden, entre las que podemos mencionar a Argyris & Schon (1978), Senge (1990), Nonaka & Takeuchi (1995) Crossan et al. 1999, Pedler (1997), Ventura et al. 2003. Los puntos comunes coinciden en que el proceso de aprendizaje organizacional involucra tres elementos: los individuos, el grupo y la organización, quienes interactúan mediante la generación, la absorción, la difusión y la utilización del conocimiento, donde la comunicación, el estilo de aprendizaje y la cultura son hilos conductores del aprendizaje organizacional.

Por otro lado, otros abarcan desde la gestión documental hasta la gestión de competencias, la información comercial, la gestión de sistemas de información, el aprendizaje organizacional o la implantación de sistemas de comunicación corporativa. Los autores mencionado han establecido diferentes tipos de conocimiento. Se habla de un conocimiento tácito, implícito, etc. tres enfoques dominantes son, Conductual o del Comportamiento en el que la empresa es un sistema racional que aprende a través de la experiencia, desarrollando nuevas respuestas y acciones en base a la interpretación de estímulos internos y o externos y considerando el papel limitante de las rutinas organizativas, tanto en número de respuestas posibles como por las respuestas estandarizadas. Cognitivo que señala como punto de partida del aprendizaje en la organización, la transformación de una estructura cognitiva dada como consecuencia de nueva información. El aprendizaje se ve como un proceso a través del cual se desarrolla conocimiento sobre las relaciones acción-resultado y sobre la influencia del entorno en dichas relaciones. Posteriormente, dicho conocimiento es distribuido a lo largo de la organización, comunicado entre los diferentes miembros, consensuado e integrado dentro de los procedimientos de trabajo y la estructura.

Conductual-Cognitivo que representa la integración de las dos perspectivas anteriores, tal como un grupo de reconocidos científicos sociales ha venido planteando (Argyris y Schon, 1978; Fiol y Lyles, 1985; Miller, 1991; Easterby-Smith, 2000) y que representa la línea dominante en el abordaje actual del fenómeno. Bajo este enfoque, el aprendizaje es un proceso que requiere la adquisición de conocimientos y el desarrollo de esquemas conceptuales compartidos entre los miembros de la organización que permitan su disseminación y utilización, produciendo como resultado tanto nuevos marcos de referencia cognitivos dentro de los cuales tomar decisiones, como nuevos comportamientos, lo que permite mantener o mejorar la actuación de la empresa. (Naranjo Herrera & Gallego Giraldo, 2009).

Para este trabajo consideramos el modelo de Yeung *et al*, en el que establece que las organizaciones se permiten aprender con dos propósitos fundamentales: explorar campos nuevos o explorar oportunidades existentes (Yeung A. K., Ulrich, Nason, & Glinow, 1999). Esto marca los límites del aprendizaje. Dentro o fuera de los límites de la propia organización. Afirma que si la organización no es capaz de “ver” sus errores y aprender de ellos, no puede ser sensible al cambio y de esta manera no estará en posibilidad de mejora de sus procesos: Incapacidades para Aprender: La Ceguera, que consiste en no identificar problemas. La candidez, que corresponde a aplicar soluciones poco cuidadosas a problemas complejos. La homogeneidad, cuando se da por hecho que ante situaciones distintas aplica la misma respuesta. El acoplamiento estrecho, significa el exceso de control, que impide ser creativo.

Tanto las incapacidades como los estilos (situaciones que favorecen) de aprendizaje, están relacionadas con el tipo de cultura y estrategia de una empresa. Según lo dice George P. Huber: “Para la adquisición del conocimiento de los individuos en una organización hay solo una parte en la que ella puede influir, en la otra parte podrá influir muy poco o nada tal es el caso de aspectos como la experiencia personal y emocional, la capacidad de reflexión y asimilación, la experiencia adquirida en el pasado y la formación académica”. Sin embargo, a pesar de esta limitante, existen más elementos en los que la organización si puede intervenir positivamente, entre ellos, está la capacitación y la gestión del conocimiento, en éste estudio nos estaremos refiriendo al aprendizaje individual que cada individuo puede adquirir a través de las herramientas que proporcione la organización colaborando, entonces si, como parte estratégica del aprendizaje organizacional. El enfoque de este trabajo son los tipos de aprendizaje siguiendo el modelo de Yeung *et al*., quien establece

## METODOLOGÍA

Se inició con una investigación documental sobre la teoría. Se aprovechó un congreso de estancias infantiles para aplicar la encuesta a las representantes de estancias asistentes, por lo que la muestra fue por conveniencia. Se aplicaron 31 cuestionarios. El instrumento de recopilación fue adaptado del cuestionario de (Yeung A. K., Ulrich, Nason, & Glinow, 1999) en la sección estilos de aprendizaje, ¿dónde ocurre el aprendizaje? y ¿quién aprende? con una escala de Likert del 1 al 5 (1 = nada aplicable, 5 = muchísimo aplicable). Con los datos obtenidos se aplicó la prueba de Kolmogorov y Smirnov, resultando normalidad en los datos. Se utilizaron herramientas estadística descriptiva para describir la muestra y las variables. Se aplicaron pruebas de diferencia entre medias.

## RESULTADOS

### Descripción de la Muestra

El 97% de las personas encuestadas fueron del género femenino con una edad promedio de 43 años con una desviación estándar de 9.5 años. Se trata de empresas nuevas, con una antigüedad promedio de 2.41 años con una desviación estándar de 1.54 .

Figura 1: Antigüedad de las Empresas

En la gráfica se puede observar como el 47% de las empresas tienen menos de 2 años de edad y el resto cuentan con entre 2 y 5 años de antigüedad.

El nivel académico de las encuestadas se presenta en la siguiente figura.

Figura 2: Nivel Académico de la Muestra

Como muestra la figura dos, casi la mitad de las dueñas o encargadas de las estancias infantiles tienen nivel profesional (47%), quedando el 53 % con nivel técnico o preparatoria.

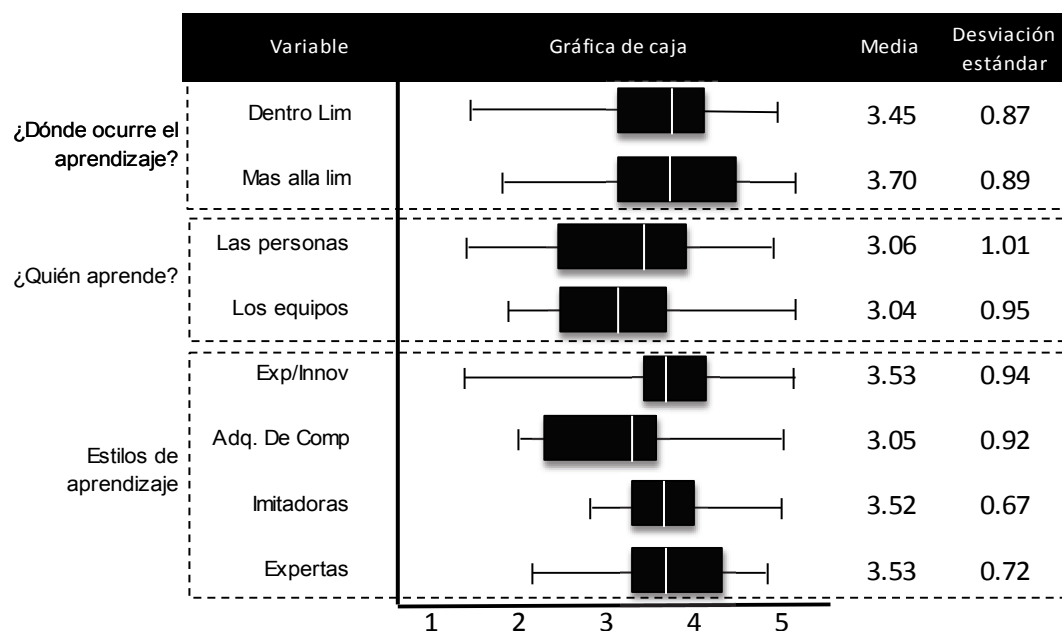

Para analizar los datos se presenta un comparativo de graficas de caja por variable, que nos permiten visualizar la forma de la distribución de los datos. Se aplicó la prueba de Kilmogorov y Smirnof resultando aproximación a la normal en el patrón de los datos, por lo que nos deja la posibilidad de aplicar la prueba T para la diferencia entre medias, por lo que después de confirmar la normalidad en los datos, se aplicó una prueba T para la diferencia entre medias, resultando una diferencia significativa entre las variables de ¿Dónde ocurre el aprendizaje? Y Estilos de aprendizaje”. En la Figura 3 se resumen los estadísticos de las variables. En la gráfica de caja se pueden identificar el rango (las orillas del diagrama), los cuartiles 1 2 y 3 (el cuartil 2 corresponde a la mediana de los datos), lo que permite darnos una idea clara del patrón de comportamiento de cada grupo de datos y compararlo con las demás variables.

Con el resumen presentado en la Figura 3 podemos concluir que en relación al lugar donde ocurre el aprendizaje está un poco más cargado hacia “Más allá de los límites” de la organización. Considerando ¿Quién aprende? No hay diferencia significativa (confirmado con la prueba T de Student) con bastante dispersión en las respuestas a las dos variables. En los estilos de aprendizaje es donde se aprecia una mayor diferencia entre las variables, siendo las respuestas más consistentes en relación a las “Imitadoras”. El estilo de aprendizaje de “Adquisición de competencias” sería el que menos las define.

#### Relación entre las características de la muestra y los estilos de aprendizaje

Figura 3: Comparativo de Graficas de Caja

Se aprecia en esta figura la forma de la distribución de los datos. La caja, como sabemos, muestra la ubicación del 50% de los valores centrales. Se observa en el estilo de aprendizaje Experimentadoras/innovadoras una gran dispersión en los datos en los cuartiles externos (confirmada con una alta desviación estándar), siendo alta la concentración de los dos cuartiles internos. El estilo de aprendizaje imitadoras es la variable con menor variación en las respuestas, corroborado con la gráfica y la medida de dispersión.

En la tabla 2 se presenta una tabla de contingencia con el resumen de las medias relacionando la variable con las características de la muestra.

Tabla 2: Resumen de promedios Característica/Variable de conocimiento

		Dónde aprenden		Quién aprende			Estilos de aprendizaje		
		Dentro de los lims. De la org	Mas alla de los lim de la org	Las personas	Los equipos	Exp/Innov	Adq. De Comp	Imitadoras/est- M ref	Expertas/Mejora continua
Antigüedad	Educadora	4.00	5.00	4.00	4.50	4.00	4.25	4.50	4.33
	Dueño	3.00	3.67	3.17	3.58	4.00	3.38	3.50	3.39
	Responsable	3.45	3.72	3.02	2.86	3.39	2.94	3.55	3.56
	menos de 1	4.00	5.00	4.00	4.50	4.00	4.25	4.50	4.33
Edad	1 a 5	3.25	3.79	2.41	2.56	2.89	2.48	3.31	3.27
	6 a 10	3.58	3.44	3.59	3.33	4.10	3.46	3.61	3.69
	20 a 30	4.00	4.33	3.50	3.25	2.75	3.38	3.33	4.33
	31 a 40	3.56	3.59	2.79	3.32	3.58	3.06	3.38	3.72
Escolaridad	41 a 50	3.06	3.56	3.08	2.71	3.70	2.90	3.47	3.11
	mas de 50	3.27	3.80	3.05	2.90	3.40	2.98	3.72	3.33
	Sec	3.22	3.67	3.50	3.00	3.50	3.25	3.44	3.33
	Prepa/tecnico	3.33	3.42	3.08	3.11	3.99	3.10	3.38	3.42
	Profesional	3.63	3.92	2.88	3.00	3.19	2.94	3.66	3.69

En esta tabla se presenta un resumen del resultado de los promedios relacionados con las características de la muestra. Se observa la preponderancia de "Más allá de los límites de la organización" en la dimensión de "Dónde aprenden", un poco menos marcada la variable "Equipos" en ¿quién aprende? Y más dispersión en el estilo de aprendizaje, marcando la menor preponderancia en la "Adquisición de competencias"

Se calculó la diferencia entre medias por característica de la muestra, dentro de cada variable para saber si habría una influencia de las características en el estilo de aprendizaje, lugar donde se aprende y quien aprende con los siguientes resultados:

Tabla 2: Calculo de la prueba T y F de Fisher para diferencia entre muestras

	Dentro de los lims.	Mas alla de los lim	Las personas	Los equipos	Exp/Innov	Adq. De Comp	Imitadoras/est- M ref	Expertas/Mejora continua
<b>T calculada</b>								
Antigüedad	- 0.58	1.15	- 2.33	- 1.22	1.05	0.73	- 0.35	- 0.17
Puesto	- 0.55	0.76	0.71	2.07	- 0.61	- 1.24	- 0.92	- 2.36
<b>F de Fisher</b>								
Escolaridad	1.05	1.18	1.60	0.31	0.98	1.31	3.22	0.57
Edad	0.80	0.48	0.81	1.11	3.01	0.64	0.59	0.28

Como se observa en esta tabla, por puesto y escolaridad no hay diferencia significativa en las variables den cuanto a la característica de la muestra. (La T crítica = 2.037) Considerando el puesto de trabajo (Dueño o responsable) se observa diferencia en las medias en los equipos de ¿quien aprende? Y en estilo “Expertas de aprendizaje”. Con relación a la edad, solamente en el estilo de aprendizaje de Exploradoras, innovadoras se observa diferencia De igual manera se aplicó una regresión para cada una de las variables con las características de las empresas encontrando solamente la correlación significativa:

Tabla 3: Correlaciones Significativas

Característica	Dimensión	Variable	Valor de P
Puesto	Quién aprende	Los equipos	0.011
		Expertos	0.031
Escolaridad	Estilo de aprendizaje	Imitadoras	0.028

*En esta tabla se presentan los resultados del análisis de correlación que si obtuvieron una correlación significativa con su respectivo valor de P. Este análisis corrobora el análisis anterior de diferencia entre medias.*

## CONCLUSIONES

Las estancias infantiles de SEDESOL son microempresas con características específicas que las diferencian de otro tipo de empresas, como es su vulnerabilidad, regulaciones de SEDESOL específicas para ellas, entre otras. El aprendizaje de estas empresas ocurre más allá de los límites de la organización, es decir, están interesadas en explorar campos nuevos, en aplicar nuevas soluciones a los problemas que se les presentan. Esta característica permite que se creen programas de capacitación, o que se implementen proyectos financiados por SEDESOL que incidan en su desarrollo, por lo que existe el área de oportunidad para las universidades y sociedades civiles para que concursen en estas convocatorias e incidan en estas empresas. Con relación a ¿quién aprende?, se observó que no existe diferencia significativa para las estancias infantiles, por lo que se sugiere seguir fomentando tanto el que aprendan las personas como que aprenda el equipo, así como hacer énfasis en el aprendizaje individual que de acuerdo al resultado de la correlación se podría fomentar aumentando el nivel de escolaridad de los dueños y representantes. El estilo de aprendizaje menos predominante de estas estancias infantiles es el de adquisición de competencias. En este estilo se aprende centrado en la experiencia de terceros. Este estilo de las estancias deberá ligarse con el lugar que aprenden de manera que puedan fortalecer sus estilos de aprendizaje considerando que ellos buscan el conocimiento fuera de la organización.

En cuanto a la relación de las características de las empresas con los estilos de aprendizaje, donde aprenden y quien aprende, considerando la diferencia entre las medias, se concluye que la edad y el puesto son características que pudieran marcar una diferencia en el tipo de aprendizaje. La principal propuesta que se haría a estas empresas sería empezar por identificar todas las implicaciones e importancia de la gestión del conocimiento. Es necesario un cambio cultural que haga consientes todos los elementos de la gestión del conocimiento, que se establezcan estrategias para integrar en la operación

diaria y estratégica estos elementos, que se establezcan indicadores y se de seguimiento sistemático a este proceso de manera que en el largo plazo sean procesos mecánicos que se desarrollan de manera mecánica.

Miriam Judith Macias Ocampo, Universidad de Guadalajara

Jorge Alberto Balpuesta Pérez, Universidad de Guadalajara

Enrique Castro López, Universidad de Guadalajara

### RESUMEN

*Cada año en México se genera lo que se conoce comúnmente como la cuesta de enero, esto se genera por el exceso de compras que se realizan entre el mes de diciembre y enero, aunado a que las personas no lleva un buen control de sus finanzas. Obliga a muchas familias tepatitlense a tener que recurrir a un tipo de financiamiento u otros controles. Es por ello que realizamos esta investigación donde mostraremos la planeación financiera que llevan a cabo las familias en la región de Tepatitlán de Morelos, y como sobrellevan esta cuesta. Durante esta investigación se recabo información de cinco vertientes que son: composición familiar y rasgos socio-ocupacionales, ingresos y fuentes de financiamiento, planeación financiera en época navideña, control financiero y cultural financiera y conocimiento general. Estos rubros nos mostrarán la composición familiar, la fuente de ingreso, si realiza un presupuesto, el destino de su dinero en el mes de diciembre, la forma como hace frente a sus compromisos financieros, así como si requirió de algún financiamiento.*

**PALABRAS CLAVES:** planeación financiera, cuesta de enero, financiamientos.

## CONSUMER BEHAVIOR AND ITS IMPACT ON THE SLOPE OF JANUARY, IF TEPATITLAN DE MORELOS

### ABSTRACT

*Each year in Mexico generates what is commonly known as the January costs, that is generated by excess purchases made between December and January, together with people not wearing a good control of your finances. Tepatitlense forces many families to have to resort to a type of financing or other controls. That is why we do is research where financial planning show holding families in the region Tepatitlán of Morelos, and how they cope this hill. During this research gathered information from five areas are: household composition and socio-occupational characteristics, income and sources of financing, financial planning at Christmas time, financial control and financial culture and general knowledge. These items will show household composition, income source, if you make a budget, the fate of their money in the month of December, how addresses its financial commitments and whether any funding required.*

**JEL:** D, D1, D14, J, J1, J12, J13, R, R2, R29,

**KEYWORDS:** financial planning, cost January financings.

## INTRODUCCIÓN

Hablar de la denominada cuesta de enero, como un fenómeno derivado de una mala planeación y uso de los recursos excedentes que se tienen en el mes de diciembre tales como aguinaldos o cajas de ahorro que genera un gasto excesivo por parte de las personas y hace que el mes de enero sea difícil en materia de economía ya que se en ocasiones se inician proyectos que requieren inversión y en otro casos se deben pagar deudas, creando así, un panorama para enero es bastante desalentador, ya que los ingresos vuelven a los niveles normales y es necesario hacer frente a los compromisos adquiridos en diciembre y las compras navideñas. Lo anterior hace por demás interesante desde el punto de vista de las finanzas personales conocer la forma en que las personas enfrentan este fenómeno, es por ello que se realizó esta investigación, abonando así a la generación de conocimiento en el campo disciplinar de finanzas.

El presente trabajo da a conocer datos interesantes, como el hecho que para un porcentaje alto de encuestados, el fenómeno de la cuesta de enero y las dificultades económicas derivadas del mismo, se prolonga más allá del primer mes del año, asimismo la investigación desarrollada puede suponer en algunos casos, desequilibrios económicos de enero por causas de una mala planeación financiera y deficiente control presupuestal, sin embargo en la interpretación de las figuras que se mostrarán, se encontrará también el lado positivo, ya que para la mayoría de entrevistados la buena planeación y administración financiera son cotidianos.

## REVISIÓN LITERARIA

Según Cárdenas (2009), la planificación financiera determina las necesidades y objetivos de un individuo para identificar sus requisitos financieros a corto y largo plazos, la estrategia de sus inversiones, necesidades de seguros y planificación de su caudal hereditario. El concepto anterior invita a la reflexión y presunciones en que la mayoría de los casos, los preceptos de una buena administración planeación financiera no son realizados, por ello que cada año aparece lo que se le conoce como la cuesta de enero y se convierte el tema en una generalidad de dificultades económicas de la sociedad, así entonces, con el objetivo de prevenir a los pobladores de cualquier comunidad, y fomento de una cultura financiera, se dejan ver publicaciones y artículos o notas relacionadas con la Cuesta de Enero.

Los principales diarios, aseguran que los gastos realizados por las familias mexicanas en las pasadas fiestas decembrinas, ahora se encuentran en una situación financiera difícil, por lo que tendrán que buscar otras formas para hacer frente a la llamada “cuesta de enero” y equilibrar sus finanzas. El Universal 2013. Otra nota informa: luego de una temporada con elevado consumismo, enero es cuando menos gastan los mexicanos en el año, ya que los aumentos de precios que se registran les hacen modificar sus hábitos de consumo, revela un estudio de la firma Kantar Worldpanel México. La Jornada Jalisco 2013 Este problema ha llevado al gobierno a crear instituciones para protección, auxilio, asesoría y realizan estudios relacionados con la planeación financiera de las familias y así que traten de evitar la cuesta de enero. De acuerdo con información de la Procuraduría Federal del Consumidor (Profeco), la denominada cuesta de enero es una combinación del movimiento estacional a la alza de la inflación con el gasto excesivo durante la época decembrina derivado de la falta de planeación en el uso de los recursos excedentes (aguinaldo, cajas de ahorro, etc.). (CNN Expansión 2013.) Como se podrá comprobar la cotidianeidad del tema, en los meses de diciembre y enero, dan pie a diferentes publicaciones con niveles distintos de rigurosidad metodológica, y con ello la diversidad de enfoques al respecto, en la mayoría de los casos, sin el rigor científico, por lo que la presente investigación pretende generar información confiables y útil para los analistas y estudiosos de los fenómenos financieros y económicos.

## METODOLOGIA

La elaboración del diseño del instrumento de medición muestra la necesidad de obtener información sobre la planeación financiera de las familias de Tepatitlán utilizando variables cualitativas como cuantitativas que reflejaran los gastos realizados en una época significativa como lo es la navideña. Se validó el instrumento mediante una prueba piloto y realizando las modificaciones pertinentes se determinó la encuesta final. La presente investigación es de tipo descriptivo-transversal.

*Muestra:* bajo el rigor estadístico, se determinó el tamaño de muestra mínima representativa partiendo del tamaño de población de 32,987 hogares, entendiendo como tal, a la casa habitación que puede formarse por una o varias familias (INEGI, 2011), considerando que es normalmente distribuida bajo lo siguiente fórmula:

$$n = \frac{N Z^2 p q}{(\pm)^2 (N-1) + Z^2 p q} \quad (1)$$

n= tamaño de muestra

N= tamaño de población (32,987 hogares)

Z= valor estandarizado que corresponde a un nivel de confianza del 95% (1.96)

± = margen de error del 5%

p = probabilidad de éxito

q= probabilidad de fracaso

pq = multiplicación de las probabilidades en su máxima combinación (0.5)(0.5) = 0.25

Al sustituir los valores en la fórmula, se obtiene un valor mínimo representativo de la muestra de 380 hogares a encuestar. De los que se obtuvieron 694 encuestas, cubriendo de ésta manera el 100% de la muestra. Tres registros fueron eliminados por falta de número de integrantes en el hogar, quedando un total de 691 registros.

*Variables:* la clasificación de las variables se realizaron mediante 5 grupos: composición familiar y rasgos socio-ocupacionales, ingresos y fuentes de financiamiento, planeación financiera en época navideña, control financiero, cultura financiera y conocimiento general,

*Codificación:* para las colonias, se consiguió el mapa actualizado de las colonias de Tepatitlán de Morelos, Jalisco mediante su adquisición en la dirección de catastro municipal; éstas fueron enumeradas de la uno a la 116, y se aplicó un muestreo al azar simple. En el instrumento de medición, se obtuvieron 80 variables entre numéricas y alfanuméricas dentro de las 22 preguntas generadoras para los cinco bloques determinados y considerando el 100% a 691 encuestas capturadas en el software de Microsoft Excel. Para la presente investigación se analizaron 41 variables.

*Trabajo de campo:* el proceso para el trabajo de campo se desarrolló en los meses de febrero y marzo de 2013 que es al inicio del ciclo escolar del calendario 2013-A, fecha de aplicación de las encuestas. Los recursos humanos utilizados en la presente investigación fueron alumnos de las licenciaturas de Administración, Negocios Internacionales y Contaduría Pública. Para la aplicación de las encuestas se formaron 40 grupos de trabajo de dos a tres personas para cubrir el 100% de las encuestas, asignando una colonia a cada grupo, y se asignó una colonia contigua considerada como de reemplazo en el caso de no cubrir las encuestas esperadas en la colonia establecida. Previo a la aplicación de las encuestas se consideró lo siguiente: Se proporcionó capacitación a todos los alumnos que fueron a la aplicación de las encuestas. Se realizó la asignación de colonias a cada grupo de trabajo. Se facilitó la ubicación mediante la presentación del mapa enumerado con las colonias.

Al grupo de trabajo que no completó sus encuestas con la colonia asignada, se facilitó la designación de una colonia contigua previamente establecida para la conclusión de su encomienda, recurriendo con el profesor investigador a cargo, considerando el muestreo con reemplazo. Las indicaciones para el inicio de la aplicación fue ubicarse al inicio de la colonia y ubicarse en la orilla de la colonia en la primer casa e iniciar el proceso mediante el muestreo sistemático de una casa si y otra no, y si se da el caso de no encontrarse una persona que pueda contestarla (ser mayor de edad) o que no se encuentre nadie, deberá continuar con la casa inmediata de su derecha. Al término de la captura de información, se determinó que el total de colonias visitadas fueron 41 y 691 encuestas contestadas.

## RESULTADOS

Los datos recolectados y procesados presentan información confiable para el análisis del comportamiento en materia financiera de las familias en el municipio de Tepatitlán de Morelos, Jalisco; en este sentido los gráficos y tablas que se muestran en este apartado dan cuenta de las características del comportamiento en el manejo y uso del dinero en una época propicia para el consumo y de la planeación que identifica a esta región. Un primer aspecto a mencionar, de interés en el análisis financiero, en el ámbito personal, es la composición familiar ya que depende en gran parte del número de integrantes de cada familia, la posibilidad de administrar adecuadamente las finanzas así como acceder a temas como el ahorro, el financiamiento, entre otros. Por lo que respecta al número de integrantes por familia, el promedio del número de integrantes en el hogar, desde uno hasta 13 que es el valor máximo se tiene que es de 4.45 personas

Asimismo, con la misma importancia las siguientes tablas muestran las edades de los integrantes de los hogares femeninos y masculinos, mismas que dejan apreciar que del total de integrantes identificados en la recolección de datos, el género femenino, es ligeramente mayor que el género masculino; además de un dato coincidente entre géneros es que la edad que predomina entre las familias es de entre 11 y 20 años.

Tabla 1: Rango de Edades Género Femenino

2.- Integrantes Femenino	Edad 0-10	2.- Integrantes Femenino	Edad 11-20	2.- Integrantes Femenino	Edad 21-30	2.- Integrantes Femenino	Edad 31-40	2.- Integrantes Femenino	Edad 41-50	2.- Integrantes Femenino	Edad 51-60	2.- Integrantes Femenino	Edad 60 O Más
282		386		351		245		224		97		51	1636

Tabla 2: Rango De Edades Género Masculino

2.- Integrantes Masculino	Edad 0-10	2.- Integrantes Masculino	Edad 11-20	2.- Integrantes Masculino	Edad 21-30	2.- Integrantes Masculino	Edad 31-40	2.- Integrantes Masculino	Edad 41-50	2.- Integrantes Masculino	Edad 51-60	2.- Integrantes Masculino	Edad 60 O Más

En materia propia de administración financiera y entrando en la razón principal de este trabajo las variables que se analizan dan cuenta de la manera en que las familias de Tepatitlán de Morelos, asumen la temporada decembrina y su posterior Cuesta de Enero. En la siguiente gráfica se percibe que un porcentaje por arriba del 50% planea el ejercicio de sus ingresos en periodos decembrinos o navideños, esto indica que la cultura de planeación va creciendo y la disciplina en administración del dinero es constante en buen porcentaje de la población.

5.- Las compras de fin de año fueron presupuestadas

#### 6. ¿En Que Destinó Su Dinero En El Mes De Diciembre?

En la pregunta expresa sobre el destino del dinero, se observa la forma de distribución del dinero en los gastos de fin de año:

Tabla 3: Distribución del Gasto

<b>Cena navideña</b>	<b>De 691 encuestas, solo 428 contestaron que destinaron dinero para la cena navideña, de cuales 364 indicaron el porcentaje invertido en este rubro, del cual se pudo determinar que destinaron en promedio el 27.6 % de su dinero.</b>
Adornos navideños	196 hogares indicaron que gastarían en adornos navideños, de los cuales, 167 indicaron en que porcentaje lo gastarían, de los que se determinó que sería aproximadamente el 17.5%
Regalos	En 511 encuestas indican destinar su dinero en regalos navideños, de los cuales 426 en que porcentaje lo realizaron, y en promedio se determinó que gastaron aproximadamente el 38% de su dinero
Viajes	En 121 hogares indicaron que gastaron su dinero en viajes, de los que 108 indicaron que en promedio gastaron el 40% de su dinero.
Mejoras a la casa	En 117 hogares indicaron que gastaron su dinero en mejoras a la casa, de los que 101 indicaron que en promedio gastaron el 32% de su dinero.
Pago de deudas	En 264 hogares indicaron que gastaron su dinero en pago de deudas, de los que 239 indicaron que en promedio gastaron el 36% de su dinero.
Ahorro	En 159 hogares indicaron que destinaron su dinero en ahorro, de los que 141 indicaron que en promedio gastaron el 31% de su dinero
Otro	Únicamente solo 32 hogares indicaron gastar su dinero en otros rubros, tales como: Al día, Alimentación, gastos fijos, boda, servicios, compra automóvil, costos y gastos diarios, en mí, enfermedades, gastos bebé, gastos necesarios, gastos normales, gastos semanales, gastos semanales y de acuerdo a la necesidad, medicinas, necesidad, negocio nuevo.

Concordante con la pregunta referente a la planeación, la siguiente gráfica muestra que existe una relación sobre lo presupuestado, ya que el 75% de las respuestas indican que no se exceden sobre lo presupuestado, aquí muestra un aspecto importante de la administración, “la disciplina financiera y el control presupuestal”.

7.- Hubo exceso en los gastos respecto al presupuesto inicial

8.- Dificultad para cubrir sus compromisos

En la gráfica anterior se observa como dos terceras partes de la población aseguran no encontrar dificultad para cubrir los compromisos adquiridos en estas épocas. Muestra de la disciplina en planeación y en control presupuestal. En relación a la tercera parte que contestó encontrar dificultad para cubrir sus compromisos adquiridos, ocho de cada diez mencionaron que cuentan con ahorro y en base a éste solventarán lo comprometido.

9.- Cómo cubrirá sus compromisos de principio de año

Del resto que dijo, recurrir al financiamiento, se encuentra la siguiente diversificación, destacando que se echa mano de varios instrumentos de financiamiento, no obstante el préstamo personal sigue predominando en esta región de los Altos de Jalisco, esto se observa en la siguiente tabla (4):

Tabla 4: Frecuencia de Financiamiento

Código	Frecuencia	Proporción	Código	Frecuencia	Proporción
1,	5	2.65	1, 3, 7	4	2.12
2,	43	22.75	1, 5	1	0.53
3,	16	8.47	1, 7	7	3.70
4,	16	8.47	2, 3	2	1.06
5,	2	1.06	2, 4	2	1.06
6,	5	2.65	2, 4, 7	2	1.06
7,	17	8.99	2, 5	2	1.06
8,	17	8.99	2, 6	2	1.06
1, 2	6	3.17	2, 7	8	4.23
1, 2, 3	1	0.53	3, 4	2	1.06
1, 2, 3, 4, 5, 6, 7	1	0.53	3, 5	2	1.06
1, 2, 5	1	0.53	3, 7	2	1.06
1, 2, 6	1	0.53	4, 5, 6	1	0.53
1, 2, 6, 7	1	0.53	4, 6	2	1.06
1, 2, 7	6	3.17	4, 7	7	3.70
1, 3	5	2.65	Total general	189	100

*Codificación:* 1.- Empeño, 2.- Préstamos personales de terceras personas, 3.- Prestamos de cajas populares, 4.- Pago con tarjeta de crédito, 5.- Retiro de efectivo mediante la tarjeta de crédito, 6.- Préstamo bancario, 7.- Tanda, vaquita o rifa, 8.- Ninguna, Otro. De los que eligieron que recurren a otro tipo de financiamiento, indicaron a que o quienes recurren tal como se menciona enseguida: empleo extra, hijos, vender la casa, préstamo del trabajo.

## CONCLUSIONES

La información obtenida en este trabajo de investigación, nos muestra la forma en que los habitantes de Tepatitlán de Morelos, Jalisco; hacen frente al fenómeno denominado “Cuesta de Enero” una vez hecho el análisis e interpretación de cada una de las variables podemos dar cuenta de manera confiable que el comportamiento de las familias en el manejo de sus finanzas y la planeación que llevan a cabo en esta época propicia para el consumo cada día es mejor. En primer término los resultados muestran que las familias en la región están integradas en promedio de 4.45 miembros, otro aspecto importante a señalar como consecuencia de esta investigación es el hecho de que el 50% de los entrevistados tienen una planeación adecuada de sus ingresos y gastos para este periodo, lo que habla de que ha ido creciendo una cultura de planeación financiera personal. Asimismo se concluye en el uso que le dan al dinero, que un 40 % de los entrevistados lo aplican a hacer algún viaje y en menor proporción al pago de deudas, apareciendo en tercer lugar el ahorro. Por lo anterior podemos concluir derivado de esta investigación el hecho de que las familias de la región van tomando conciencia de la importancia de hacer una buena planeación de sus finanzas personales para no verse afectados de manera importante por el fenómeno llamado “Cuesta de Enero”

Melissa Bugarini Calleros, Embajada de México en Italia  
Sandra López Chavarría, Universidad Autónoma de Coahuila

## **RESUMEN**

*Desde el año 2001 se constituyó el “Fondo Mixto de Fomento a la Investigación Científica y Tecnológica CONACYT - Gobierno del Estado de Durango”, como una de las acciones encaminadas a la descentralización de la Gestión de la Ciencia y la Tecnología. La presente investigación defendida como Tesis doctoral, tiene como objetivo: Proponer y validar un Modelo de Evaluación de Impacto de los proyectos de investigación enmarcados en ese Programa, en las Convocatorias del 2002 y el 2003. La Metodología desarrollada partió de la revisión documental de los informes técnicos finales de los proyectos y la iniciativa presentada, asimismo se aplicó encuesta al investigador y al usuario, para garantizar la evaluación desde una doble perspectiva. Los resultados arrojaron que el FOMIX-Durango cumplió con los objetivos y metas plasmados en las convocatorias, teniendo un alto índice de formación de recursos humanos, una vinculación con el sector primario y secundario, se propició la consolidación de grupos de investigación y la generación de redes, lo que impactó en la calidad de los programas de posgrado que se ofrecen en el estado y la incorporación de investigadores en el Sistema Nacional de Investigadores.*

**PALABRAS CLAVES:** evaluación de impacto, proyectos de investigación, fondos mixtos, grupos de investigación, generación de redes.

## **IMPACT ASSESSMENT PROGRAM MIXED FUNDS NATIONAL COUNCIL OF SCIENCE AND AND TECHNOLOGY-DURANGO STATE GOVERNMENT**

## **ABSTRACT**

*Since the 2001 year, the “Fondo Mixto de Fomento a la Investigación Científica y Tecnológica CONACYT - Gobierno del Estado de Durango” was constituted, as one of the actions designed to the deseutralization from the Gestion de la ciencia y la tecnología. The present investigation defended as PhD Thesis, has as an objective : propose and validate an impact assessment model of the research projects framed in this program, in the convocations ration of from 2002 and 2003 the methodology developed, departed from the documental review of final technical reports and the presented initiative, it was also applied a survey to researcher and user, to guarantee the assessment from two perspectives. The results shown that FOMIX-Durango successfully fulfilled the objectives and goals reflected in the convocations. Having a high index of human resources development , a linjage with the user and gubernamental sector in the projects linked with the primary and secondary sector, in led the consolidation of researcher groups and the generation of networks, that impacted in the quality of the*

*postgraduate programs that the state offer and the incorporation of researchers in the Sistema Nacional de Investigadores.*

**JEL:** I2

**KEYWORDS:** impact assessment, research projects, mixed funds, research groups, networking.

## INTRODUCCION

Es indudable la importancia estratégica que tiene para un país el diseño e implementación de una política de Estado con respecto a la ciencia y la tecnología. En México se ha hecho un esfuerzo importante en las últimas décadas en este sentido, con énfasis en la descentralización de las actividades científicas y tecnológicas, lo que permita integrar las capacidades de investigación y educación existentes en las distintas regiones del país, tomando en cuenta las necesidades del sector productivo, y coordinando los esfuerzos que llevan a cabo los gobiernos estatales y la sociedad en general. De conformidad con las atribuciones que confiere la Ley de Ciencia y Tecnología, en su artículo 35 “que el CONACYT podrá convenir con los gobiernos de las Entidades Federativas y de los Municipios, el establecimiento y operación de Fondos Mixtos de carácter regional, estatal y municipal de apoyo a la investigación científica y tecnológica, que podrán incluir la formación de recursos humanos de alta especialidad”, se crearon los Fondos Mixtos (FOMIX), que propician el fortalecimiento de las capacidades científicas y tecnológicas locales. (Ley de Ciencia y Tecnología, 2002) El Fondo Mixto de Fomento a la Investigación Científica y Tecnológica CONACYT - Gobierno del Estado de Durango se creó el 17 de diciembre del año 2001, y constituye objetivo de esta investigación: realizar una evaluación de impacto del Fondo Mixto de Fomento a la Investigación Científica y Tecnológica CONACYT - Gobierno del Estado de Durango; para determinar la eficacia, eficiencia y efectividad de la inversión. (

## REVISIÓN LITERARIA

La evaluación constituye esencialmente un juicio de valor, es una de las actividades más necesarias en la planificación, esto cobra más importancia ante la evaluación de programas, desde su definición, diseño, ejecución y resultados. (Tejeda Fernández, 2000) El concepto de evaluación ha ido evolucionando, y cada día es más importante su aplicabilidad en todos los sectores tanto educativo, como político, social y económico, lo que implica que se continúe debatiendo y reflexionando sobre este tema. Uno de los puntos en debate es sobre el tipo de evaluación. Al respecto, encontramos diferentes tipos de evaluaciones y múltiples clasificaciones, dependiendo del objeto y el propósito: internas y externas; sumatoria, de balance, recapitulativa o conclusiva, y formativa, endoformativa o correctora; *a priori* o ex-ante, concomitante y *a posteriori* o ex-post; cuantitativa y cualitativa; de resultados y de impactos; entre otras. Los tipos de evaluación varían según el momento en que se realicen. (Pérez Serrano, 1999) La evaluación incluye la supervisión, evaluación de los procesos, evaluación de costos-beneficios y evaluación de impacto. Un sistema de supervisión de programas permite una retroalimentación constante sobre el estado en que se encuentra la implementación del programa e identifica los problemas específicos a medida que surgen. (Baker, 2000)

Durante décadas la idea predominante fue “evaluar, es medir” dándose peso únicamente a las dimensiones e indicadores cuantitativos. Actualmente, la evaluación de impacto es valorada como un proceso amplio y global, en el que al abordaje cuantitativo se agregan técnicas cualitativas. La medida de los resultados, característica principal de la evaluación de impacto, permite comparar el grado de realización alcanzado con el grado de realización deseado. Comprar de esta forma, la planeación con el resultado de la ejecución. (Abdala, 2001).

## METODOLOGÍA

El presente estudio es Transversal. Se analizaron un total de total de 41 proyectos de investigación, los que habían finiquitado, y cubren las áreas de: Desarrollo Social y Humano, Salud, Desarrollo Industrial y Económico, Desarrollo Agropecuario, Educación, Medio Ambiente, Recursos Naturales, Desarrollo Urbano y Rural. La variable independiente del estudio fue: Proyectos de investigación y desarrollo, definida conceptualmente como: una planificación que consiste en un conjunto de actividades que se encuentran interrelacionadas y coordinadas mediante el método científico, contribuyendo a la explicación de fenómenos. Las variables dependientes se muestran a continuación:

*Demandas atendidas:* Son las necesidades que presentó el Estado para que fueran investigadas y encontrar medidas de solución. Variable dependiente cualitativa, dicotómica, sí o no, son cumplidas.

*Proyectos concluidos:* Son los proyectos que fueron terminados de cada una de las demandas, variable cualitativa dicotómica, si o no se concluyó.

*Formación de recursos humanos:* Es la formación de personal académico para el término de su grado académico. Variable dependiente cuantitativa.

*Publicaciones científicas nacionales:* Artículos científicos, que se publican de acuerdo a la especialidad en México. Variable dependiente cuantitativa.

*Publicaciones científicas Internacionales:* Artículos científicos, que se publican de acuerdo a la especialidad en el extranjero. Variable dependiente cuantitativa.

*Vinculación con el sector productivo:* Relación existente de beneficio de acuerdo a lo investigado, para ambas partes investigador y empresario. Variable dependiente cualitativo, dicotómica, si o no hubo vinculación.

*Modificaciones realizadas:* Modificaciones hechas al proyecto de investigación. Variable dependiente cualitativa, dicotómica, si o no según análisis de los proyectos.

*Infraestructura:* Es el equipo que se provee el investigador para poder realizar el proyecto, este puede ser de laboratorio, de computo. Variable dependiente cuantitativa. Las covariables fueron:

*Asistencia a congresos nacionales:* Difusión de los resultados obtenidos en los proyectos de investigación que se dan a conocer a nivel nacional.

*Asistencia a congresos internacionales:* Difusión de los resultados obtenidos en los proyectos de investigación que se dan a conocer a nivel internacional.

## RESULTADOS

Se detecta retraso en la conclusión de los proyectos de acuerdo a lo estipulado en los Convenios, un 49% de proyectos no fueron terminados en tiempo, y un 51% de proyectos terminados. En relación a la proporción de publicaciones científicas obtenidas por proyecto, los resultados son los siguientes: El 43% de los proyectos solo arrojó la producción de un artículo siendo el porcentaje más bajo en este rubro. Por el contrario solamente una producción importante en cuanto a número de publicaciones fue la obtenida para un 3% y 9 % de los proyectos resultando con 6 y 5 publicaciones respectivamente Otras de las aportaciones de este estudio fue el de conocer la productividad con la difusión de los proyectos y sus resultados mediante la asistencia a congresos. La proporción mayor establecida con al menos una

asistencia a un foro como el que se menciona fue del 61%. La proporción mayor de asistencia a congresos fue de 4 siendo un 3% de los 33 proyectos terminados.

Uno de los grandes intereses de este estudio fue el de establecer cómo se desarrolló la vinculación con los usuarios, ya que esto representa una de las mediciones de mayor importancia para los sistemas de financiamiento federales actuales, por las repercusiones implícitas de los recursos aplicados y sus implicaciones con los resultados obtenidos del proyecto, así como la utilidad con la sociedad. En este sentido se encontró que un 91 % de los proyectos en este período tuvieron una vinculación efectiva con los usuarios directos de los proyectos, un 9% no consideraron esta situación.

El 70% de los proyectos dio resultados que plantearon soluciones que permitieron resolver y atender las demandas plasmadas en las Convocatorias, solo el 30% medianamente solucionó la problemática planteada, mientras que el 71% de los proyectos se desarrollaron conforme al presupuesto programado. Esto no implica que no se hayan llevado a cabo ajustes en los rubros, el 29% efectuaron la inversión económica planeada, o bien solo ejercieron parcialmente el presupuesto en el tiempo y rubros autorizados. El 82% de los usuarios, manifestó tener interés en realizar las adecuaciones necesarias para implementar los mecanismos de transferencia, así como 88% de los usuarios de los proyectos, tiene interés en participar en nuevas iniciativas y un 12%, tiene medianamente interés en nuevas iniciativas. El 76 % de los resultados obtenidos en los proyectos estuvieron de acuerdo a lo esperado por el usuario, lo que muestra que se atendió la demanda expresada por el mismo, mientras que el restante 24%, considero que el resultado solo atendió medianamente sus necesidades, esta es un área de oportunidad para las convocatorias, al mejorar la comunicación entre usuario y director del proyecto.

# **VALORACIÓN DE LA SATISFACCIÓN DE LOS ESTUDIANTES CON LOS SERVICIOS OFRECIDOS POR EL SISTEMA BIBLIOTECARIO EN LA UNIVERSIDAD DE CARTAGENA (SEDE PIEDRA DE BOLÍVAR)**

Juan Carlos Vergara Schmalbach, Universidad de Cartagena

Víctor Quesada Ibargüen, Universidad de Cartagena

Andrea Ramírez Palacios, Universidad de Cartagena

## **RESUMEN**

*Conocer cuáles son los motivos que impulsan a un usuario a adquirir un servicio y establecer una relación duradera con la organización, son los intereses de muchos académicos, investigadores y administradores. En este sentido, el presente estudio es el resultado de la construcción de un modelo teórico de tipo causal, empleado para valorar la satisfacción e intenciones futuras de los estudiantes de la sede Piedra de Bolívar de la Universidad de Cartagena respecto al servicio ofrecido por la biblioteca, y así poder conocer los efectos que tienen las percepciones en dichas variables. Para validar el modelo se llevó a cabo el desarrollo de un caso empírico resuelto mediante modelos de ecuaciones estructurales, con la aplicación de una encuesta estructurada a una muestra de 200 estudiantes. Con esta investigación se demostró la validez estructural del Modelo, concluyendo que para poder aumentar la calidad percibida del servicio, la satisfacción, la intención de usar el servicio en un futuro y la intención de recomendar boca a boca el uso del servicio, se debe hacer especial énfasis en las percepciones, destacándose: la atención y capacidad de respuesta del personal de la biblioteca, la facilidad de préstamo interno y externo, y la variedad de obras, publicaciones, base de datos y documentos disponibles.*

## **ASSESSMENT OF STUDENT SATISFACTION WITH THE SERVICES OFFERED BY THE UNIVERSITY LIBRARY SYSTEM IN CARTAGENA (SEE STONE BOLIVAR)**

### **INTRODUCCIÓN**

La universidad de Cartagena cuenta con un sistema de bibliotecas, la cual está conformada por una Biblioteca Central cuyo nombre es “José Fernández de Madrid” y tres bibliotecas satélites en la ciudad de Cartagena: El principal objetivo de las bibliotecas de la institución es seleccionar, adquirir, procesar, organizar y difundir el material bibliográfico, hemerográfico y documental, servicios electrónicos e Internet, que responda a las necesidades de la comunidad universitaria. Apoyar los procesos de enseñanza-aprendizaje y servir de intermediario con bibliotecas de la ciudad y del país en la prestación de los servicios que demande la comunidad universitaria.

La misión del Centro de Información y Documentación de la Universidad de Cartagena es ser una dependencia que garantiza la disponibilidad oportuna de la información bibliográfica, documental y electrónica, necesarias para el desarrollo del estudio, la docencia, la investigación y demás actividades, incluidas las de extensión cultural, con las que se compromete mediante una adecuada gestión, prestación de servicios, recursos tecnológicos y talento humano con los más altos estándares de calidad. Adicionalmente, la biblioteca ofrece capacitación sobre el uso y manejo de las fuentes de información bibliográfica, ya sea a través de la inducción a los estudiantes de primer semestre de todos los programas

académicos, sobre el uso y los servicios de la biblioteca, o talleres sobre uso de las bases de datos con que cuenta la Universidad, a solicitud de las facultades o programas que demanden este servicio.

## REVISIÓN DOCUMENTAL

Entre los autores referidos como antecedentes para el presente caso, se cita a Martensen y Gronholdt (2003), quienes realizaron una investigación cuya finalidad era determinar la calidad y el nivel de satisfacción percibido por los usuarios de un servicio de biblioteca, y la lealtad que esta situación generaba en los mismos. Otro estudio destacable que sirvió como base para el diseño del modelo propuesto fue elaborado por Kassim (2009), quien delimitó la calidad del servicio global de las bibliotecas en tres dimensiones generales:

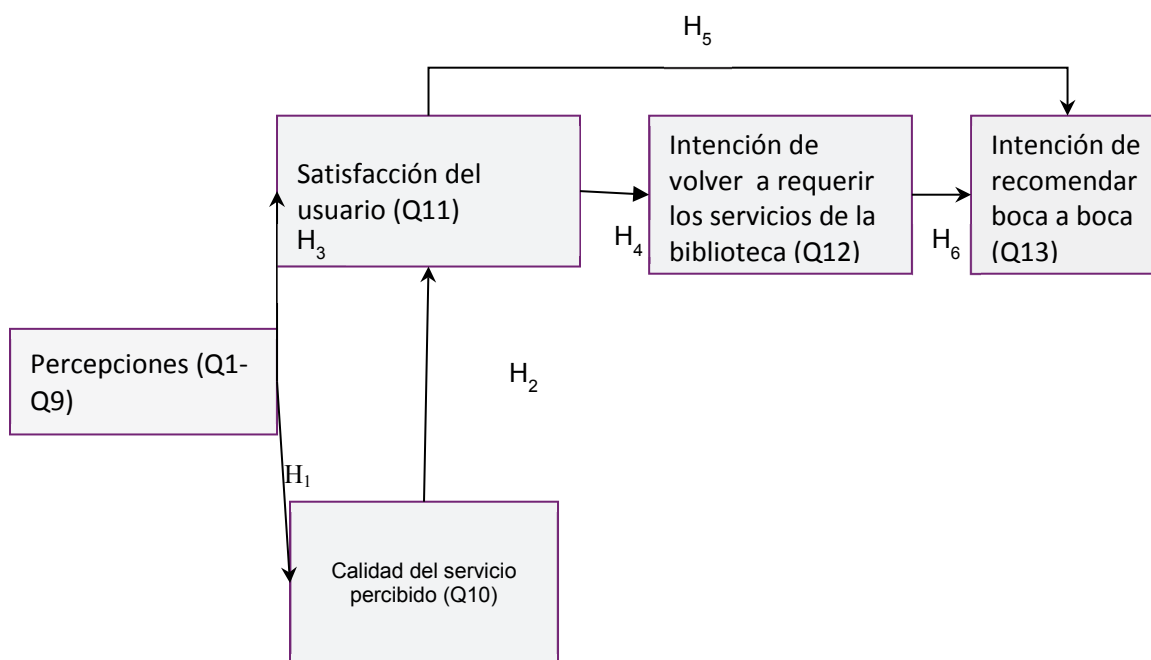

*Servicios ofrecidos por la biblioteca (valorado con 19 preguntas)*  
*Infraestructura, lugar y espacio (valorado con 20 preguntas), y*  
*Colección e información (valorado con 12 preguntas)*

En dicha investigación se concluye que la colección e información y los servicios ofrecidos por la biblioteca, son los factores que mayor efecto tienen sobre la satisfacción de los usuarios. La calidad de un servicio como el de biblioteca puede ser perfectamente relacionada con otras variables, a través del uso de los SEM, ya que permiten descomponer las covarianzas observadas, dentro de una perspectiva de análisis conjunto, finalmente ayudando a explicar de qué depende el grado de satisfacción del servicio de biblioteca que siente un usuario por el uso de la misma.

## METODOLOGÍA

Modelo teórico propuesto Basado en el modelo propuesto por Oh (1999), Brady y Cronin (2001), Martensen y Gronholdt (2003) y Kassim (2009), se determinó un modelo causal compuesto por 5 variables latentes (ver Figura 1).

Figura 1: Modelo Teórico Propuesto

Las hipótesis planteadas (ver Tabla 1) procuran explicar el efecto que tienen las percepciones sobre la calidad del servicio y la satisfacción del usuario de la biblioteca. Así mismo, se procedió a medir el grado de influencia existente entre la satisfacción del usuario, la intención de visitar nuevamente la biblioteca y la recomendación boca a boca.

Tabla 1: Hipótesis planteadas

Hipótesis	Relaciones
H1	Las percepciones se asocian positivamente con la calidad del servicio percibido
H2	La calidad del servicio percibida se asocia positivamente con la satisfacción del usuario
H3	Las percepciones se asocian positivamente con la satisfacción del usuario
H4	La satisfacción del usuario se asocia positivamente con la intención de visitar nuevamente la biblioteca
H5	La satisfacción del usuario se asocia positivamente con la intención de recomendar los servicios de la biblioteca por medio del boca a boca
H6	La intención de visitar nuevamente la biblioteca se asocia positivamente con la intención de recomendar los servicios de la misma, a través del boca a boca

Las variables observables definidas se muestran a continuación. A partir de estas variables, se diseñó una encuesta estructurada para la recopilación de de datos. En la Tabla 2 y 3 se listan las variables observables (o medibles) y latentes empleadas en el modelo, que sirvieron como base para el diseño del instrumento empleado en este caso.

Tabla 2: Listado De Variables Observables

Listado de variables observables
Q1. Amabilidad de los empleados de la biblioteca. Q2. Variedad de obras, publicaciones, base de datos y documentos disponibles. Q3. Atmósfera de investigación. Q4. Facilidad de préstamo interno y externo de obras, trabajos de grado, publicaciones y documentos. Q5. Servicio de referencia, orientación e inducción a los usuarios sobre el uso de la biblioteca y sus recursos. Q6. Atención y capacidad de respuesta del personal de la biblioteca. Q7. Tecnología disponible para la consulta de bibliografía y base de datos. Q8. Infraestructura física. Q9. Flexibilidad en el horario de atención. Q10. Calidad del servicio percibido. Q11. Satisfacción del cliente. Q12. Intención de hacer uso de los servicios de biblioteca en el futuro. Q13. Intención de recomendar el servicio boca a boca.

Tabla 3: Listado de variables latentes

Listado de variables latentes
Var 1. Percepciones Var 2. Calidad del servicio percibido Var 3. Satisfacción del usuario Var 4. Intención de visitar nuevamente la biblioteca Var 5. Intención de recomendar los servicios de la biblioteca por medio del boca a boca

### Determinación del Tamaño de la Muestra

La población objeto de análisis la conformaron los estudiantes pertenecientes a la Facultad de Ciencias Económicas de la Universidad de Cartagena en cada uno de sus programas: Economía, Administración Industrial, Administración de Empresas y Contaduría Pública, tamaño que equivale a 1.877 personas. Al igual que en el caso anterior, la muestra fue conformada por estudiantes a partir de tercer semestre hasta el último semestre de cada programa, puesto que se considera que el estudiante ya ha pasado cierto tiempo, aproximadamente un año, de haber comenzado a interactuar y recibir los servicios de la biblioteca de la universidad (ver Tabla 4).

Tabla 4: Parámetros Para el Cálculo de la Muestra

Variable	Valor
N	1.877
Z	95%-1.96
E	7%
P	50%
Q	50%

Z equivale al parámetro crítico del nivel de confianza del 95%; E el porcentaje de error; P la probabilidad de que suceda una contestación de la encuesta por parte del sexo masculino y Q la probabilidad de que la contestación provenga del sexo femenino. El tamaño de la muestra obtenida fue de 196 encuestas, valor que se ajustó a un tamaño superior a las 200 encuestas.

### Escala De Medida

La amabilidad de los empleados se midió usando una escala de 6 puntos, donde 1 es muy bajo y 6 muy alto. Con esta misma escala se midieron variables como la variedad de obras, trabajo de grados, publicaciones y documentos, la atmósfera de investigación, la facilidad de préstamo interno y préstamo externo, los servicios de referencia y orientación, atención y capacidad de respuesta del personal, tecnología para la investigación, infraestructura, y flexibilidad del horario. Los encuestados calificaron la calidad en el servicio usando una escala de 6 puntos, en la cual 1 representaría mucho peor de lo esperado y 6 mucho mejor de lo esperado; esta misma escala se usó para determinar el grado de satisfacción en donde 1 equivale a muy insatisfecho y 6 muy satisfecho. En cuanto a la intención de seguir consultando en la biblioteca, 1 se refirió a muy poco dispuesto y 6 completamente decidido; y de la intención de recomendar la biblioteca sede Piedra de Bolívar de la Universidad 1 se percibe como muy inseguro y 6 muy seguro.

*Validación de la escala de medidas:* La proporción de encuestas válidas fue del 98,5% (con un error máximo +/-6,775%), para un total de 203 grupos datos analizados. Las escalas fueron contrastadas aplicando el coeficiente de Alfa de Cronbach, cuyo resultado fue igual a 0.875 (en términos generales), asegurando la confiabilidad del instrumento.

*Método Y Software Empleado:* La encuesta fue aplicada a los estudiantes de los distintos programas de la Facultad de Ciencias Económicas de la Universidad de Cartagena, con el objetivo de recolectar información acerca del grado de satisfacción. Las aulas de clase, fueron el lugar propicio en donde se encuestó un número de estudiantes de manera aleatoria simple; el proceso de recolección de la información se realizó durante un periodo de una semana. La hipótesis propuesta en la Figura 21, fue analizada empleando el software LISREL 8.80, aplicación con la cual se correlacionaron y describieron las variables; esta técnica de análisis permite la estimación de ecuaciones de regresión múltiple de forma simultánea, en un marco único. La variable Q9 no registró un comportamiento normal, recurriendo al uso del método ULS (Unweighted Least Squares) para el desarrollo del modelo teórico.

## **RESULTADOS ARROJADOS**

Los resultados preliminares se evidencian en la Tabla 5. Las variables observables arrojaron promedios comprendidos en un rango entre 3,44 y 4,40, y desviaciones estándar entre 0,89 y 1,39.

Tabla 5: Resultados Descriptivos de las Variables Observadas

Variable Latente	Variable Observada	Promedio	Desviación	Vr. Mínimo	Vr. Máximo
Percepción	Q1	4.00	1.16	1	6
	Q2	3.63	1.14	1	6
	Q3	3.59	1.22	1	6
	Q4	4.05	1.26	1	6
	Q5	3.70	1.27	1	6
	Q6	3.83	1.19	1	6
	Q7	3.51	1.28	1	6
	Q8	3.44	1.39	1	6
	Q9	4.12	1.39	1	6
Calidad	Q10	3.92	0.89	1	6
Satisfacción	Q11	3.95	0.90	2	6
Intención de Uso	Q12	4.40	1.05	1	6
Intención de Recomendación	Q13	3.96	1.19	1	6

Basados en la prueba de bondad de ajuste sobre las covarianzas obtenidas entre las variables latentes (tomando un intervalo de confianza del 95% bajo una prueba de dos colas y una correlación significativa para un valor calculado de  $t > |1,96|$ ), solo se obtuvo una correlación no significativa como se puede observar en la Figura 2 (entre paréntesis se muestran los valores de calculados para cada correlación). (Contacte al autor para solicitar esta figura) En la Figura anterior se evidencian las relaciones entre las variables latentes; por ejemplo, existe un índice de covarianza representativo (0.82) entre las percepciones y la calidad del servicio percibido, de esta misma forma, la variable satisfacción del usuario se ve afectada por percepciones y calidad del servicio percibido en un 0.50 y 0.46 respectivamente.

Igualmente, la satisfacción del usuario tiene un efecto sobre la intención de volver a la biblioteca en el futuro en un valor de 0.56 y de recomendar los servicios boca a boca en un 0.65; cabe mencionar que la variable intención de volver a la biblioteca en un futuro, no presenta consecuencias significativas sobre la variable intención de recomendar los servicios boca a boca. Los índices de covarianza explican en qué grado afecta el cambio de una variable a otra. Por ejemplo, tomando en cuenta la escala de Likert (con la cual se trabajó en esta investigación con una puntuación que va de 1 a 6, siendo 1 muy bajo y 6 muy alto), se muestra que, si se aumenta en 1 punto las percepciones que tienen los estudiantes de los servicios ofrecidos por la biblioteca, se aumentará en 0.82 puntos la calidad del servicio percibido.

Así mismo, según la escala de Likert, si se aumenta en un punto la intención de volver a la biblioteca en el futuro, la intención de recomendar los servicios boca a boca presentará un incremento insignificante, casi nulo. De igual manera, existen variables que se verían afectadas de manera indirecta, por lo tanto si se incrementa la calidad del servicio percibido podría aumentar indirectamente la intención de volver en un futuro y la intención de recomendar los servicios de biblioteca boca a boca. El modelo determina 4 ecuaciones finales (predictores), relacionadas con las variables latentes dependientes como se ilustra a continuación.

$$Var2 = 0.82Var1 \quad (1)$$

$$Var3 = 0.46Var2 + 0.50Var1 \quad (2)$$

$$Var4 = 0.56Var3 \quad (3)$$

$$Var5 = 0.65Var3 + 0.093Var4 \quad (4)$$

#### 4.1 Validación del modelo

El  $X^2$  que se obtuvo en el desarrollo del modelo fue igual a 168.54, valor que supera el máximo requerido (para un  $p < 0.05$ ), razón que involucró el análisis de otros indicadores para validar el modelo, como se puede observar en la Tabla 6.

Tabla 6: Indicadores Para Validar el Modelo

Indicadores	Valor calculado
Razón $X^2/df$	2.85
GFI (Índice comparativo ajustado)	0.98
NFI (Índice de ajuste normado)	1.00
NNFI (Índice de ajuste no normado)	1.04
RMR (Root mean residual)	0.096

Dichos indicadores concuerdan con los parámetros establecidos en el capítulo 2, justificando la validez del modelo propuesto.

## CONCLUSIONES

Con la investigación, se demostró la validez estructural del Modelo y la factibilidad de su uso en bibliotecas, así mismo, la aceptación y rechazo de las hipótesis planteadas al inicio del estudio. Entre los efectos entre variables latentes obtenidos se destacaron las percepciones, con un significativo índice de covarianza con respecto a la calidad del servicio percibido. De esta misma forma, de las 6 hipótesis planteadas al inicio del caso, fueron validadas 5 de ellas. La hipótesis que se rechazó, planteaba que la intención de visitar nuevamente la biblioteca se asociaba positivamente con la intención de recomendar los servicios de la misma, a través del boca a boca. Igualmente, se concluye que para poder aumentar la calidad percibida del servicio, la satisfacción del usuario, la intención de usar el servicio en un futuro y la intención de recomendar boca a boca el uso del servicio se debe hacer especial énfasis en las percepciones.

## **COMPANIES AND THEIR INFLUENCE ON SOCIAL COHESION IN THE MUNICIPALITY OF DURANGO**

### **ABSTRACT**

*According to the Maastricht Treaty (1992), it's necessary to "promote an economic and social progress and development, through the creation of an area without external borders, strengthening economic and social cohesion, and the establishment of an economic union and money ". At meetings of the Lisbon European Council (March 2000), Nice (December 2000), Stockholm (March 2001) and Laeken (December 2001) Renewed commitment to promote sustainable economic growth and quality employment to reduce the risk of poverty and social exclusion, and strengthen social cohesion If social cohesion is sought for this purpose, it is necessary to establish indicators to measure this social cohesion. The EU has Laeken indicators, consisting of 21 internationally comparable indicators. Given that Latin America is the most unequal region in the world, CEPAL considerst necessary to go beyond the Laeken indicators for a concept of social cohesion to new boundaries, whereas socio-economic environments of the European Union and Latin America are different, some indicators may not be as effective analytic in the region and in the EU, there are limitations to the data sources, in Latin America there are no standardized household surveys at regional and surveys panel type are not common.*

*This paper seeks to identify indicators from little companies that influence Social Cohesion, and an analysis of their behavior*

## INTRODUCCIÓN

De acuerdo al artículo 2 del Tratado de Maastricht (1992), se busca “Promover un progreso económico y social equilibrado y sostenible, principalmente mediante la creación de un espacio sin fronteras exteriores, el fortalecimiento de la cohesión económica y social, y el establecimiento de una unión económica y monetaria” De igual manera, en las reuniones realizadas por los Consejos Europeos de Lisboa (marzo 2000), Niza (diciembre 2000), Estocolmo (marzo 2001) y Laeken (diciembre 2001) Se renueva el compromiso de promover un crecimiento económico sostenible y un empleo de calidad que reduzcan el riesgo de pobreza y exclusión social, y refuercen la cohesión social

Si se busca la cohesión social para estos fines, será necesario establecer los indicadores que midan esta Cohesión Social. La Unión Europea cuenta con indicadores de Cohesión Social llamados indicadores Laeken, que consisten en 21 indicadores comparables internacionalmente. Actualmente la CEPAL (Comisión Económica para América Latina y el Caribe) busca diseñar una guía metodológica para el análisis de la cohesión social, con relación a la Estrategia revisada para la cohesión social, aprobada por el Comité de ministros en 2004; se busca un desarrollo concertado de indicadores con el objetivo específico de armonizarlos y homogeneizar los procedimientos metodológicos, reconociendo la heterogeneidad de los países miembros del Consejo, con el propósito de alcanzar un nivel de comparación entre los indicadores de cohesión de los 46 países que conforman el Consejo Europeo.

Dentro de la estrategia revisada para la Cohesión social establecidas en 2004, se consideran 4 niveles: las tendencias, evaluación de la CS como un todo, la evaluación de la CS por áreas de la vida y evaluación de la CS según grupos vulnerables. Dada que América Latina es la región más inequitativa del mundo, la CEPAL considera que es necesario ir más allá de los indicadores de Laeken para la exploración de un concepto de Cohesión Social con nuevas fronteras, tomando en cuenta que los entornos socio-económicos de la unión Europea y de América Latina son distintos (multiculturalismo, inequidad), que algunos indicadores pueden no tener la misma eficacia analítica en la región y en la UE, que hay limitaciones en cuanto a las fuentes de datos, que en América Latina no existen encuestas de hogares estandarizadas a nivel regional y que las encuestas de tipo panel no son comunes. En este trabajo se busca identificar indicadores en las PyMEs que influyen en Cohesión Social, y hacer un análisis del comportamiento de los mismos

## REVISIÓN LITERARIA

La cohesión social se refiere a los mecanismos instituidos de inclusión y exclusión en la sociedad y a la forma en que éstos influyen y moldean las percepciones y conductas de los individuos de cara al grupo en que se desenvuelven; de tal forma que el concepto vincula fuertemente los mecanismos de integración y bienestar con la plena pertenencia social de sus miembros (CEPAL, 2007). El concepto de cohesión social que predomina en el debate internacional nació en la Unión Europea a partir de los años noventa como parte de un discurso político que busca definir un horizonte deseable para la sociedad. Se puede afirmar que la cohesión social sintetiza de los valores de solidaridad e igualdad, componentes centrales del modelo europeo; el cual se contrapone explícitamente al modelo anglosajón, orientado hacia una visión con valores individualistas y menos preocupados con las dimensiones distributivas, es decir, en aquellas en donde el rol del Estado busca promover el bien común (Martucelli y Sorj, 2008).

La cohesión social de acuerdo con Greenspan y López calva (2007), requiere de tres elementos: individuos, objetivos potencialmente compartidos y un sistema de incentivos e instituciones que permitan unir y alcanzar dichos objetivos. Atendiendo estos planteamientos, la moderna empresa cumple con los citados elementos, además de jugar un papel significativo en el actual sistema económico mundial y por tanto influye en fenómenos como el que nos ocupa.

De acuerdo con Miguelez y Prieto (2001), la norma del empleo dominante en los países desarrollados en la segunda mitad del siglo XX (un empleo seguro, estable y con derechos), ha sido una de las bases más firmes de la cohesión social y más ampliamente, del orden social. El empleo -en las formas que ha adquirido en las últimas décadas en las sociedades desarrolladas- juega un papel clave en la cohesión social por diversas razones; tener ingresos estables provenientes, directa o indirectamente (pensiones y jubilaciones), del trabajo y mejorar paulatinamente las condiciones del mismo inclina a las personas a la aceptación de determinados valores y reglas que son vistos como la garantía de aquellos objetivos.

Conseguir objetivos que ayuden a consolidar ciertas garantías laborales y económicas lleva a las organizaciones colectivas y a los grupos de interés a asumir las normas de una sociedad cuyas reglas de juego contribuyen a configurar. El citado planteamiento, nos lleva entonces al tema de la calidad en el empleo, que de acuerdo con Somarriba, Ramos, Merino y Negro (2007), en su acepción más amplia, abarca, por un lado, las características objetivas del empleo, tanto las características específicas del puesto de trabajo (como sueldo, jornada laboral, perfil necesario, posibilidades de promoción, como las relativas al entorno de trabajo en general (incluido el mercado laboral en su conjunto, especialmente aquellas relacionadas con las condiciones de trabajo, la movilidad entre puestos de trabajo o la facilidad de entrar y salir del mercado laboral) y, por otro lado, la valoración subjetiva del trabajador relativa a ese puesto de trabajo (esto es, su grado de satisfacción profesional), precisando que cuando se habla de promover o fomentar la calidad del trabajo no necesariamente se pretende mejorar todos y cada uno de los aspectos que se acaban de señalar; destacando por otro lado que su conclusión más importante señala que la mejora del empleo, desde un punto de vista político, no siempre conduce a una mejora de la calidad del empleo desde el punto de vista del individuo.

Por lo anterior, resulta evidente el vínculo existente entre el empleo, el bienestar social y la cohesión social, descrito por Pizarro (2009, citado en Pascual y Pascual coordinadores 2009). En este orden de ideas, y como parte importante de este estudio, se consideró precisar aspectos como el Compromiso organizacional, (CO) y la Satisfacción laboral (SL), que han sido considerados, por el Comportamiento Organizacional, de acuerdo con Robbins (2004), dentro del estudio de actitudes relacionadas con el trabajo. En este sentido, Blau y Boal (1987) mencionan que una importante actitud hacia el trabajo con repercusión en el comportamiento organizacional en las empresas, es el compromiso con ellas. El CO, consiste en la intensidad de la participación de un empleado y su identificación con la organización, caracterizado por el apoyo y aceptación de las metas y valores de la organización; la disposición a realizar un esfuerzo importante en beneficio de ésta y el deseo de mantenerse dentro de la misma.

El CO entonces, va más allá de la lealtad y llega a la contribución activa en el logro de las metas de la organización, siendo una actitud hacia el trabajo más amplia que la satisfacción, porque se aplica a toda la organización y no solo al trabajo, siendo algo más estable que la satisfacción, pues es poco probable que los acontecimientos cotidianos lo cambien. Por su parte, Meyer y Allen (1990), describen el CO, como un estado psicológico que caracteriza la relación entre una persona y la organización, la cual presenta consecuencias respecto a la decisión de continuar en la organización o dejarla. Estos autores, propusieron un modelo tridimensional para conceptualizar el compromiso organizacional, a partir del cual describen las distintas formas en que se desarrolla el compromiso en la organización así como las consecuencias en el comportamiento de los empleados. En la primera dimensión, el compromiso afectivo, que son los sentimientos positivos de identificación con, el apego y la participación en la organización del trabajo, la

segunda dimensión, el compromiso de permanencia, se definen como el grado en que los empleados se sienten comprometidos con su organización, en virtud de los costos que ellos sienten que serían vinculados con su cese y la tercera dimensión, el compromiso normativo se define como los sentimientos de obligación de los empleados a permanecer con la organización.

El CO, de acuerdo con Yubo H., Ge G., Fei W., Tingrui L. y Zhilan Y. (2011), refleja la percepción del empleado acerca de la organización, que incluye el reconocimiento de los objetivos organizacionales, y la voluntad de alcanzarlos en consonancia con ella. En una sociedad post-industrial, los objetivos de las organizaciones han pasado de ser-productivo, a ser innovador, aspecto que en gran medida depende de la creatividad a nivel individual, lo que ha enfocado a los investigadores a enfocarse en aspectos tales como las relaciones entre el compromiso organizacional y la creatividad. La importancia del CO, radica en que al formar parte de las actitudes de los empleados con relación al trabajo, de acuerdo con Davis y Newstrom (2000), se les debe vigilar, entender y manejar en vista de las implicaciones que pueden tener en la organización, al igual que la Satisfacción laboral, otra de las actitudes con relación al trabajo cuyas características generales se describen en las siguientes líneas.

El interés por el estudio de la SL, emerge durante la década de los años 30's, con los trabajos de Hoppock, a los cuales denominó Job Satisfaction. Además de delimitar el campo de este fenómeno, expone los factores que pueden influir en la SL: la fatiga, la monotonía, las condiciones de trabajo y la supervisión; y asocia la SL con el desempeño. A partir de esos estudios son numerosas las aportaciones que se han hecho con el afán de integrar mayor conocimiento en este tema. Considerando las implicaciones, no sólo para la organización, sino para todos los aspectos que conforman la vida integral del individuo, la SL es uno de los fenómenos que ha venido recibiendo cada vez más atención en los últimos años. De hecho de acuerdo con Saari L. y Judge T (2004), la interacción entre la satisfacción laboral y satisfacción con la vida es un área emergente de estudio. En este sentido, Paris (2008, citado en Omar 2011), afirma que la felicidad con el trabajo influye positivamente en la satisfacción con la vida en general. Según planteamientos de Werther (1988), un alto grado de satisfacción se reflejará en una actitud positiva hacia las actividades diarias, mientras que para Miñarro, Verdú, Díaz, Larraínzar y Molinos (2002, citado por Molina, Avalos, Valderrama y Uribe 2009), la SL se concentra en una percepción subjetiva e individual, en una valoración afectiva, de las personas de una organización frente a su trabajo y a las consecuencias que se derivan de éste.

## METODOLOGÍA

Para este trabajo se partió de una investigación documental tratando de identificar, de acuerdo a la teoría, indicadores relacionados con las PyMEs que influyen de alguna manera en la cohesión social. Una vez identificados, se operacionalizaron estos indicadores para elaborar el instrumento de recopilación de datos. Se determinó un tamaño de muestra de 384 cuestionarios a aplicar a trabajadores de PyMEs de la siguiente forma:

$$n = \frac{NZ^2pq}{e^2(N-1) + Z^2pq} = \frac{2340590^2 \times 1.96^2 \times 0.5 \times .5}{.06^2(2340590-1) + 1.96^2 \times 0.5 \times 0.5} = 384$$

Donde N representa el tamaño de la población, Z el nivel de confianza del 95%, e el error de estimación del 6%, p la probabilidad de un evento simple, que en este caso como no es conocido se utiliza 50% utilizando un criterio prudencial, y q que es igual a 1-p, en este caso 50%. Se hizo una prueba piloto tamaño 20 para probar el cuestionario, resultando con una confiabilidad de Alpha Cronbach igual a un 79.5% Se hizo uso de la estadística descriptiva aplicando medidas de tendencia central, frecuencias, dispersión, asimetría, curtosis, tablas de contingencia para establecer asocian entre variables, así como análisis de correlación múltiple.

Las variables con sus indicadores identificados en la etapa de investigación documental se muestran en la Tabla 1

Tabla 1: Indicadores identificados

<b>Compromiso</b>	Compromiso normativo	6
	Compromiso calculado	6
	Compromiso afectivo	6
<b>Integración</b>	Cohesión	6
	Responsabilidad social	6
<b>Responsabilidad social</b>	Pleno Empleo	6
	Satisfacción extrínseca	8
<b>Pleno empleo</b>	Satisfacción intrínseca	7
<b>Satisfacción</b>		

*Los elementos identificados de acuerdo al objetivo del trabajo fueron 5 dimensiones generales con 4 variables. Se establecieron 6 indicadores para cada una de las variables, con excepción de las de satisfacción en la que se establecieron 7 y 8 indicadores.*

## RESULTADOS

Se presenta al inicio de los resultados una descripción general de la muestra con el fin de que el lector tenga un panorama general del patrón de comportamiento de la muestra para interpretar los resultados.

### Descripción General de la Muestra

De los trabajadores entrevistados el 52.1% fueron del género masculino y 44.8% femenino, con relación a la distribución por sector, la mayoría fue del sector comercio. En la agrupación de otros servicios se consideran en general servicios profesionales (médicos, asesoría, etc.)

Figura 1: Distribución de la muestra por giro

*En esta figura se presenta la distribución de la muestra por tipo de giro. Se observa un 57% en el sector servicio*

La edad promedio de los trabajadores es de 29.4 años con una desviación estándar de 2.47 años distribuidos conforme a la Figura 2.

Figura 2: Histograma de la edad de los entrevistados

En esta figura se presenta el histograma de los entrevistados. Se puede observar una marcada asimetría a la derecha (coeficiente de asimetría de .497 y una Curtosis de 0.239, (curva platycúrtica, un poco por debajo de la distribución normal) presentando una mayor concentración de trabajadores con edades entre 21 y 40 años (el 65% de los trabajadores).

Con relación a la escolaridad de los entrevistados es evidente la carga de la muestra hacia los niveles superiores, con un 90% con prepa y más.

Figura 3: Escolaridad de los entrevistados

En esta figura se presenta la distribución de la muestra de acuerdo al nivel de escolaridad de los trabajadores entrevistados. Se observa poca asimetría hacia la izquierda (Coeficiente de asimetría = -0.056) y una curva de tipo platycúrtica (Curtosis = -0.529)

### Descripción de las Variables de Cohesión

Durante la etapa de identificación de indicadores mencionada en la metodología, se ubicaron 51 indicadores (señalados en metodología en la Tabla 1). Estos 51 indicadores se agruparon en 8 variables Señaladas en la Tabla 2 con sus estadísticas descriptivas.

Tabla 2: Estadísticas descriptivas

Variable	Mínimo	Máximo	Media	Desv. típ.	Asimetría		Curtosis	
					Estadístico	Error típico	Estadístico	Error típico
Compromiso normativo	1.50	5.00	3.33	0.80	-0.007	0.178	-0.434	0.355
Compromiso calculado	2.00	5.00	3.47	0.67	0.301	0.178	-0.267	0.355
Compromiso afectivo	1.50	5.00	3.58	0.85	-0.277	0.178	-0.704	0.355
Integración	1.00	5.00	2.90	0.96	-0.023	0.178	-0.944	0.355
Responsabilidad social	1.67	5.00	3.60	0.74	-0.195	0.178	-0.537	0.355
Empleo pleno	1.33	5.00	3.77	0.72	-0.365	0.178	-0.353	0.355
Satisfacción extrínseca	1.63	5.00	3.85	0.75	-0.323	0.178	-0.610	0.355
Satisfacción intrínseca	1.29	5.00	3.85	0.83	-0.616	0.178	-0.160	0.355

En esta tabla se observa que las variables de más peso son las de satisfacción, siendo la de menor peso la de "integración", cuyos indicadores se refieren a la participación en grupos sociales. La prueba anova para diferencia entre medias refleja una diferencia significativa entre los promedios de las variables. Las respuestas de los encuestados de la variable "Compromiso calculado" es el que presenta un mayor consenso, con una desviación estándar de 0.67 y la de "Integración" la que presenta una mayor dispersión. En general todas las variables presentan una asimetría hacia la izquierda, salvo el compromiso calculado y respecto a la curtosis todas son de tipo platocurtica siendo la mas alejada a la normal la de menor curtosis como es satisfacción intrínseca y la que se le acerca un poco es Integración

En seguida se presenta en la Figura 4 la gráfica de frecuencias porcentuales para cada variable, donde se corrobora la curtosis de la tabla anterior

Figura 4: Comparación de la Frecuencia Porcentual de las Variables

En esta grafica en que se presentan las frecuencias porcentuales de cada una de las variables de estudio, se puede corroborar la medida de curtosis calculada en la tabla 2. Las variables que presentan un patrón homogéneo se dibujaron con el mismo estilo de línea con el fin de resaltar las que se diferencian más. Como es sabido, la curtosis es una medida de forma, con la que se puede estimar la aproximación a la distribución normal, quedando de esta manera la variable Integración menos lejos de la normal (la referencia es 3) y la variable de

Con el fin de analizar el peso de cada una de las variables en la Cohesión Social, se presenta una gráfica en la Figura 5, con el peso comparativo de cada variable en la Cohesión social.

Figura 5: Comparativo del Peso de Cada Una de las Variables

En esta figura se observa el peso de cada una de las variables identificadas en la Cohesión social. La variable Satisfacción tanto intrínseca como extrínseca son las variables de mayor peso quedando la variable integración como la de menos peso.

### Relación Entre las Características de la Muestra y las Variables de Cohesión Social Identificadas.

Se corrió el análisis de correlación lineal con el fin de analizar las relaciones entre las características del sujeto de estudio y las variables de cohesión con los siguientes resultados.

Tabla 3: Resumen de la correlación entre las características de la muestra y las variables de cohesión

Variables	R	R cuadrado	R cuadrado corregida	Error típ. de la estimación	F	Sig.
Compromiso normativo	.430	.185	.153	.74055	5.779	.000
Compromiso calculado	.254	.064	.028	.66409	1.752	.100
Compromiso afectivo	.456	.208	.176	.77182	6.660	.000
Integración	.293	.086	.050	.93138	2.392	.023
Responsabilidad social	.430	.185	.153	.68147	5.780	.000
Empleo Pleno	.488	.238	.208	.64000	7.937	.000
Satisfacción extrínseca	.422	.178	.146	.68926	5.517	.000
Satisfacción intrínseca	.494	.244	.214	.73736	8.210	.000

En esta tabla se observa el nivel de significación de la correlación de las variables con un valor menor a 0.05, con excepción de la variable "Compromiso calculado", por lo que la correlación entre las demás características del sujeto de estudio y las variables de cohesión es significativa. Considerando la R cuadrada corregida el Pleno empleo es el que se ve más afectado por las características mencionadas con un 24.4% (Proporción de la variabilidad de las variables de cohesión) y el compromiso calculado el menor.

Se determinó un modelo de regresión para cada variable, Los coeficientes del modelo se presentan en la siguiente tabla.

Tabla 4: Coeficientes del Modelo

	Compromiso normativo	Compromiso calculado	Compromiso afectivo	Integración	Responsabilidad social	Empleo Pleno	Satisfacción extrínseca	Satisfacción intrínseca
(Constante)	1.811	3.976	2.811	1.213	2.443	4.358	3.614	4.146
Sector	0.038	-0.213	-0.270	0.183	-0.202	-0.721	-0.537	-0.814
Giro	0.016	0.034	0.074	0.020	0.066	0.066	0.117	0.126
Tamaño	0.214	-0.062	0.005	0.029	0.050	-0.102	-0.016	-0.129
Genero	0.149	0.094	0.171	0.361	0.424	0.120	0.290	0.205
Edad	0.049	0.041	0.043	0.024	-0.061	-0.133	-0.118	-0.153
Escolaridad	-0.005	-0.156	-0.051	0.207	0.060	0.050	0.032	0.106
Antigüedad	0.254	0.023	0.310	0.043	0.226	0.282	0.242	0.315

*En esta tabla se presentan los coeficientes de cada una de las características para las ecuaciones de regresión de cada variable. En estos coeficientes se refleja el bajo valor de  $R^2$  al comparar el valor de la constante de la ecuación, que, por su monto, en comparación con el de las características, es quien determina el valor de la variable, sobre todo en "Pleno empleo", "satisfacción" y "compromiso calculado"*

Por último se presentan los niveles de significación para cada uno de los coeficientes.

Tabla 5: Niveles de Significación Para Cada Coeficiente.

	Compromiso normativo	Compromiso calculado	Compromiso afectivo	Integración	Responsabilid ad social	Empleo Pleno	Satisfacción extrínseca	Satisfacción intrínseca
(Constante)	0.001	0.000	0.000	0.070	0.000	0.000	0.000	0.000
Sector	0.812	0.135	0.104	0.361	0.168	0.000	0.000	0.000
Giro	0.730	0.406	0.121	0.725	0.117	0.096	0.006	0.006
Tamaño	0.042	0.511	0.964	0.828	0.605	0.261	0.868	0.216
Genero	0.176	0.340	0.136	0.010	0.000	0.206	0.005	0.063
Edad	0.484	0.515	0.561	0.787	0.350	0.029	0.073	0.030
Escolaridad	0.939	0.010	0.459	0.014	0.330	0.389	0.602	0.113
Antigüedad	0.000	0.699	0.000	0.611	0.000	0.000	0.000	0.000

*En esta tabla se analiza el nivel de significancia de cada una de las características de la muestra para la ecuación de regresión de cada una de las variables. Como es de suponer, dado los análisis anteriores, la constante tiene el mayor de significación, salvo para la variable Integración, para la que no es significativa. De todas las características, la que es más significativa para las variables de cohesión es la Antigüedad, con excepción de para compromiso calculado e integración.*

## CONCLUSIONES

Es imprescindible establecer una serie de indicadores que permitan medir conceptos como el de cohesión social, capital humano, gestión del conocimiento, con el fin de tener datos más sólidos para la toma de decisiones, sobre todo desde el punto de vista político. Este es un proceso de mejora continua, que requiere mucha innovación, análisis y concertación para estar en posibilidades de comparar niveles de cohesión en diferentes regiones. Con relación a los indicadores propuestos en este trabajo, los relacionados con la variable de integración son los que menos peso tienen en el modelo. Estos indicadores se refieren a la participación de los trabajadores en grupos u organizaciones sociales, considerando la frecuencia, participación en la toma de decisiones, costo, nivel de aceptación. Por otro lado, las variables que más impactan en el modelo son las de satisfacción, seguidas de pleno empleo. La variable de satisfacción extrínseca contempla indicadores como condiciones físicas en el trabajo, relación con los compañeros, jefes y subordinados, salario, estabilidad del trabajo, horario de trabajo. La satisfacción intrínseca se refiere al nivel de autonomía, reconocimiento, responsabilidad, posibilidades de ascenso, capacidad de aportación en las tareas. El pleno empleo implica oportunidades de mejora, el clima laboral, calidad de vida, competencias, capacitación.

Dado lo anterior, se recomendaría hacer un nuevo análisis incluyendo nuevos indicadores y variables adicionales a los que resultaron con aportación en este trabajo y excluir a los que no. Con relación a las características de la muestra, de igual manera, en nuevos análisis se sugiere eliminar aquellos que no impactan en el modelo como fueron Género, escolaridad y Tamaño de la empresa y seguir considerando antigüedad en el puesto. Si se revisa el desempeño global los participantes en el proceso de implementación del Modelo de Calidad SBDC

# CAUSAS POR LAS CUALES NO SE HA DESARROLLADO UN PUERTO INTERMODAL EN EL SUR DEL PAIS: CASO QUINTANA ROO, MÉXICO

Cinthya Aranda de Paz, Universidad del Caribe

## RESUMEN

*El intermodalismo no es un medio de transporte, sino un sistema logístico de coordinación para hacer un envío. Este sistema se ha revolucionado en las últimas décadas. Conceptualmente es "un cargamento que usa medios de transporte diferentes y coordinados". Integralmente es un sistema para transportar mercancías en el que éstas, agrupadas en unidades de carga, utilizan más de un modo entre el lugar de expedición y el de destino, al amparo de un único documento o contrato. En el comercio internacional o nacional, el uso de unidades de transporte intermodal como el contenedor o caja móvil, presenta importantes beneficios, entre los cuales destacan el abaratamiento de costo del transporte; reducción de hasta un 70% en los tiempos de carga y descarga. El siguiente trabajo tiene el objetivo de identificar las causas de por qué no hay un puerto intermodal en el sur del país, mediante un estudio cualitativo a través de entrevistas de profundidad a encargados de los puertos de aduanas en Quintana Roo. Se espera con este estudio, establecer las causas principales del por qué no existe un puerto intermodal.*

**PALABRAS CLAVE:** Intermodalismo, Puerto Intermodal, Desarrollo

## REASONS WHY HAS NOT DEVELOPED AN INTERMODAL PORT SOUTH COUNTRY: CASE QUINTANA ROO, MEXICO

### ABSTRACT

*Intermodalism not a means of transport, but a coordinating logistics system to make a submission. This system has been revolutionized in recent decades. Conceptually it is "a load using different transportation and coordinated." Integrally is a system for transporting goods in which they grouped into load units, using more than one mode between the place of departure and destination, under a single document or contract. In international trade or domestic use of intermodal transport units such as container or swap, has important benefits, among which are the cheaper transportation costs, reduction of up to 70% at the time of loading and unloading. The next job is to identify the causes of why there is no intermodal port in the south of the country through a qualitative study through in-depth interviews with managers of customs ports in Quintana Roo. This study is expected to establish the root causes of why there is no intermodal port.*

**JEL:** R42

### INTRODUCCIÓN

El Estado de Quintana Roo cuenta con una ubicación geográfica estratégica ya que se localiza frente a la Cuenca del Caribe, por donde transitan las líneas navieras que realizan el intercambio comercial de los países del lejano oriente, y la costa oeste de Sudamérica, y que se dirigen hacia la costa este de los EUA y Canadá, pasando por el Canal de Panamá. Asimismo, se ubica frente los países de las Islas del Caribe, que constituye un importante nicho de mercado para el comercio con México, ya que estos países tienen necesidades comerciales similares a las de Quintana Roo, por su vocación netamente enfocada hacia el

turismo. Es necesario hacer una evaluación de la situación actual de las operaciones comerciales e internacionales en el Estado de Quintana Roo, México, para poder contextualizar la investigación.

Quintana Roo cuenta con doce puertos marítimos, nueve de altura y cabotaje y tres de cabotaje, el puerto de altura se le asigna a aquel que está en condiciones de recibir embarcaciones de gran calado, es decir, de grandes cantidades de carga, esto por su alto dragado, así como mantener relaciones comerciales, se caracteriza por enviar y recibir embarcaciones internacionales. El puerto de cabotaje en términos navales es el transporte de carga y pasajeros entre puertos de un mismo país, navegando relativamente cerca de la costa; etimológicamente significa navegar de cabo en cabo y proviene del vocablo francés “caboter”, que se refiere a la navegación realizada entre cabos. Posee cuatro aeropuertos, tres internacionales y uno nacional. El aeropuerto internacional de Cancún es el segundo más importante del país debido al número de vuelos internacionales y nacionales. Los principales municipios como Othon P. Blanco, Solidaridad, Felipe Carrillo Puerto, Benito Juárez y Cozumel cuentan con aeródromos que prestan el servicio en rutas interestatales (Gobierno del Estado de Quintana Roo, 2013).

Destacan tres puertos principales: Puerto Morelos y Cozumel que están concesionados a la empresa Administradora Portuaria Integral de Quintana Roo, SA de CV (APIQROO) y Calica ubicado en Punta Venado del municipio de Solidaridad. Puerto Morelos y Calica son los puertos comerciales más importantes del Estado y cuentan con la infraestructura para manejar alta capacidad de carga. Están localizados en una zona estratégica del tráfico marítimo, la cual enlaza varios puertos de los Estados Unidos en el Golfo de México, América Central y el Caribe (Secretaría de Relaciones Exteriores del estado de Quintana Roo, 2013). De acuerdo a las estadísticas realizadas en el periodo del 2011 – 2012, arrojan la siguiente información, el tipo de embarcación que llega a Puerto Morelos en relación a las operaciones de importación es de 18,330 y de exportación es de 3,463 en el 2012, como se muestra en la siguiente tabla.

Tabla 1: Totales Por Tipo de Embarcación del 2011 Al 2012 en Puerto Morelos

Recinto	Arribos		Gral.	Suelta	Contenerizada		Importación		Exportación	
	2011	2012			2011	2012	2011	2012	2011	2012
Puerto Morelos	<u>53</u>	<u>57</u>	433	162	19,262	21,633	15,161	18,330	4,535	3,463
Total	53	57	433	162	19,262	21,633	15,161	18,330	4,535	3,463

Numero de operaciones de embarcaciones de Altura en Puerto Morelos, Quintana Roo.

Una interrogante es porque Quintana Roo no cuenta con un puerto intermodal ya que cuenta con el espacio geográfico y los puntos estratégicos para poder realizar las operaciones comerciales en el sur del país, minimizando costos y tiempo.

El artículo se desarrollo con una revisión literaria en donde se explican conceptos de logística internacional, seguido de la parte metodológica que abarca una investigación de tipo cualitativo para poder finalmente concluir.

## REVISIÓN LITERARIA

Para poder comprender este análisis se necesita comprender el término de Logística. Según el Council of Logistics Management (2012) menciona que la Logística es la parte del proceso de la cadena de abastecimiento que planea, implementa y controla eficiente y efectivamente el flujo y almacenamiento de bienes, servicios e información desde el punto de origen hasta el punto de consumo, para satisfacer las necesidades del cliente. Long (2102), menciona que Logística es hacer que las cosas lleguen a donde necesitan estar. Mira y Soler (2010) menciona que el puerto es el conjunto de espacios terrestres, aguas marinas e instalaciones, situados a la orilla del mar o de las rías, ya sean construidos o naturales, cuyas funciones principales son el refugio de los buques y la realización de las operaciones de entrada, salida,

ataque, desatranque y reparación de los mismos. También las de transbordo entre buques o de éstos a tierra y a los medios de transporte de mercancías, pasajeros, pesca, así como el almacenamiento temporal y la manipulación de dichas mercancías. Su concepción ha evolucionado de acuerdo con el incremento progresivo de las funciones portuarias, hasta constituirse en centros logísticos y enclaves intermodales. Long (2012), menciona que un puerto es la intersección de diferentes medios de transporte. Los puertos modernos son corporaciones altamente sofisticadas que ofrecen una gran variedad de servicios a mucho más clientes; los puertos operan en diferentes dimensiones; los consignatarios y los transportistas los cuales dejan o recogen la carga, que es el servicio básico, no obstante, hay un amplio manejo de la carga, empaçado y reempaçado, manufactura ligera, etc.

Los puertos también cuentan con actividades comerciales que pueden tener poca intervención con el transporte, como el espacio para oficinas en terrenos del puerto. Los puertos tienen dos funciones según los lineamientos de las operaciones aduanales la de altura y de cabotaje, es decir el puerto de altura se le asigna a aquel que está en condiciones de recibir embarcaciones de gran calado, es decir, de grandes cantidades de carga, esto por su alto dragado, así como mantener relaciones comerciales, se caracteriza por enviar y recibir embarcaciones internacionales. El puerto de cabotaje en términos navales es el transporte de carga y pasajeros entre puertos de un mismo país, navegando relativamente cerca de la costa; etimológicamente significa navegar de cabo en cabo y proviene del vocablo francés “caboter”, que se refiere a la navegación realizada entre cabos.

Además de contar con sistemas logísticos que permiten la eficiencia del puerto. Los dos sistemas son el transporte multimodal, el cual se refiere al traslado de una misma mercancía mediante transporte intermodal, entre un punto de origen y otro de destino, ofrecido por un operador de transporte multimodal y al amparo de un documento de transporte único denominado Documento de transporte multimodal y la mercancía no se puede fragmentar (Portales, 2006). El transporte intermodal, establece una definición, como una de las más complejas formas de transporte. Es necesario precisar, que no es un medio de transporte sino una técnica que combina los diferentes medios para obtener un movimiento de carga más eficiente, mientras que los medios de transporte han estado aquí por mucho tiempo, el intermodalismo es uno de los más importantes desarrollos en el ambiente de negocios internacionales de las décadas más recientes (Long, 2012). Mira y Soler (2010), menciona que el signo distintivo del transporte multimodal reside en que en el recorrido más largo del traslado de las mercancías, intervienen diferentes medios de transporte. Este sistema posee dos características singulares; la primera es que la carga no sufre ninguna ruptura en su traslado desde su punto de salida hasta su lugar de destino, la segunda característica indica, que solo se utiliza un solo documento de transporte para todos los medios. En el transporte internacional se tratará habitualmente del conocimiento de embarque Fiata negociable para el transporte multimodal. Para el transporte intermodal, Mira y Soler (2010) determinan que es un sistema integral para transportar mercancías en el que éstas, agrupadas en unidades de carga, utilizan más de un modo de transporte entre el lugar de expedición y el de destino, al amparo de un único documento o contrato.

## METODOLOGÍA

La metodología usada para esta investigación fue un estudio exploratorio, que se centra en recolectar datos primarios o secundarios mediante un formato no estructurado o procedimientos informales de interpretación; la investigación exploratoria incorpora el menor número de características de los principios del método científico. Muchas veces se aplica tan sólo para clasificarse los problemas u oportunidades, y no se pretende que arroje información concluyente para determinar cierta acción en particular (Hair, Bush y Ortinau, 2005), de tipo cualitativa es decir es una investigación de los diseños exploratorios para adquirir ideas preliminares sobre problemas y oportunidades de decisión (Hair, Bush y Ortinau, 2005), a través de una entrevista de profundidad que es proceso formal en el que un entrevistador capacitado formula al sujeto preguntas semiestructuradas en un encuentro personal; se entrevistó al Capitán de Altura Guillermo Rentería Zuñiga, que es el Oficial de Protección de la

Instalación Portuaria; esta entrevista se llevo a cabo el día 15 de marzo del presente año, en las instalaciones de la Aduana Marítima de Puerto Morelos, Quintana Roo.  
Esta entrevista tuvo una serie de tópicos los cuales se enumeran en la tabla 2.

Tabla 2: Tópicos de la Entrevista De Profundidad

Operaciones internacionales (exportaciones e Importaciones)	
Frecuencia de Operaciones	
Tipo de mercancías que mueve	
Habilitación del Puerto	
Fortalezas y Debilidades del Puerto	
Parque Logístico	
Reactivación del Parque Logístico	
Servicio Intermodal

Inversión	

Fuente: Elaboración propia.

## RESULTADOS

¿Existen operaciones internacionales de Importación y Exportación en Puerto Morelos?

R: Si, se realizan mayormente actividades de Importación y en menor cantidad teniendo operaciones de Exportación en donde solo se mueven cuatro o cinco contenedores.

¿Con que frecuencia se reciben embarcaciones en Puerto Morelos?

R: Dos veces por semana, generalmente llegan los días Lunes y Martes

¿Qué tipo de mercancías son las que más reciben?

R: Las mercancías que comúnmente se Importan son: Insumos de hotelería, como camastros, vinos, carnes, lácteos, muebles para hotelería; en el caso de la mercancía de Exportación que comúnmente se manejan es Pepino y Pescado congelado.

¿Por qué no se ha considerado la posibilidad de habilitar a Puerto Morelos, para realizar todas las operaciones comerciales y no hacerlas en Puerto Progreso?

R: No hay espacios para habilitar el servicio, el patio y almacén son pequeños y no pueden expandirse, debido a que a su alrededor existen manglares y el gobierno no otorga permisos para construir sobre manglares.

¿Qué impide poder habilitar a Puerto Morelos como Puerto de Altura?

R: El puerto está diseñado para operar como puerto de altura, pero no cuenta con el espacio para manejar y operar las mercancías contenerizadas, ya que cuenta con un patio reducido, al mismo tiempo que su almacén es insuficiente para la operación que se requiere y por otro lado la profundidad del canal de navegación con la que cuenta el puerto, ha limitado la llegada de embarcaciones más grandes y por tal motivo el número de operaciones que se realizan en este puerto son menores, ya que van de acuerdo al espacio e infraestructura con la que se cuenta.

¿Por qué no se ha desarrollado un Parque Logístico?

R: Si se desarrollo un parque logístico en Puerto Morelos, ya que contaba con el espacio y la inversión económica, comenzaron los trabajos de construcción de las bodegas, pero en este momento esta cancelado el proyecto, debido a la falta de clientes, esto se debe, a que es muy poco el volumen de producción que manejan los empresarios locales y la capacidad de recepción de mercancías con las que cuenta Puerto Morelos, por lo que no cubrió con los objetivos para lo que fue creado el proyecto, es por ello que se detuvo el desarrollo.

¿Qué se requiere para reactivar nuevamente el Parque logístico? R: Incentivar y diversificar nuestra actividad económica en el estado de Quintana Roo, abriendo nuestras fronteras e invitando a productores o empresarios de los estados vecinos del sur de México para promover las exportaciones al mercado americano y europeo, ofreciéndoles servicio competitivo, reducción de costos y tiempo en su sistema logístico. Para que Puerto Morelos logre la calidad de servicio Intermodal, que necesita el Estado de Quintana Roo para llevar a cabo el desarrollo de este proyecto.

R: Lo único que le faltaría es el *Transporte Ferroviario*, pero este servicio no garantiza que el puerto brinde el servicio intermodal, ya que la capacidad de producción de nuestro estado es insuficiente para poder brindar un servicio competitivo a nuestro mercado local, debido a que la mercancía que se consume en nuestro estado viene del Norte y Centro del País, lo que genera que los precios de la mayoría de los productos sean altos. El gobierno Federal cuenta con planes o proyectos de habilitar a Puerto Morelos con el servicio Intermodal. R: Tiene la intención de hacerlo, hay recursos para invertir en el desarrollo pero no se ha planteado ni definido cual será el tipo de mercancías y servicio que se estaría manejando para la operación en ese puerto. Se ha considerado invitar al sector privado y público, para invertir conjuntamente para el desarrollo de un servicio intermodal en Puerto Morelos, lo cual lo haría más eficiente. R: Si hay recursos para invertir en infraestructura, pero faltan los clientes a quien les beneficiaría este servicio, no conviene desarrollar e invertir en infraestructura si realmente no se va a utilizar, debido a la poca producción con la que cuenta nuestro estado.

## CONCLUSIÓN

Se puede concluir que el desarrollo de un puerto intermodal, en el sur del estado sería viable, ya que se cuenta con disponibilidad de recursos económicos tanto del sector público como el privado, pero el desarrollo de este proyecto no se realizaría en Puerto Morelos, debido a que se necesita incrementar sus operaciones comerciales tanto para importación como para exportación, esto requiere el desarrollo de su infraestructura para contar con la capacidad de manipulación y almacenamiento de las mercancías que llegarían a este puerto. Lo cual deriva una de las primeras causas por las cuales no se ha desarrollado el puerto intermodal, el factor ecológico de la zona de Puerto Morelos ha limitado las causas para el crecimiento de ampliación del puerto marítimo; de este puerto cuenta con un terreno de dos hectáreas, el cual se encuentra cubierto alrededor de su ubicación por zona de manglares y por tal motivo el gobierno no puede otorgar permisos de construcción para la ampliación del mismo, lo que ocasiona que las operaciones de este puerto no puedan crecer por la falta de espacio para la manipulación de las mercancías y el almacenamiento de las mismas; otra causa es que no se puede dar más profundidad al canal de navegación del puerto para que arriben embarcaciones más grandes, lo que permitiría operar como un puerto de altura generando el crecimiento de las operaciones comerciales, pero esto no es posible, debido a que está ubicado en una zona de arrecife el cual está ubicado en una área nacional protegida, el cual también limita el crecimiento para esa área.

Como lo se ha mencionado anteriormente, el puerto no cuenta con el espacio para poder desarrollar y establecer infraestructura nueva y competitiva para operar como un puerto de altura con servicio intermodal, esto limita el número de embarcaciones que arriban a este puerto con mercancía de importación y de la misma manera las operaciones de exportación son menores, puesto que en el estado es poca la mercancía que se produce y se envía al extranjero. La infraestructura industrial actual en Quintana Roo buscaba la constitución de tres Parques Industriales que son Puerto Morelos, Chetumal y Felipe Carrillo Puerto, este sector de la entidad presenta un amplio potencial en función de las ventajas competitivas que ofrece el Estado que se traducen en la existencia de materias primas, disponibilidad de mano de obra y su posición geográfica, sin embargo no se produce lo suficiente para invertir en un puerto intermodal si no se va a utilizar eficientemente.

Con la iniciativa del gobierno Federal se busca que para el 2014 comiencen los trabajos de desarrollo del proyecto Transpeninsular, que comprende la construcción y remodelación de las vías férreas entre el estado de Yucatán y Quintana Roo, en este último está contemplado que la construcción de esta vía se ubique en el puerto del sector privado denominado con el nombre de Calica, en Punta Venado en el municipio de Solidaridad, ya que cuenta con el espacio y la capacidad de profundidad de canal de navegación para recibir cualquier tipo de embarcación de altura tanto comercial como de pasajeros; es por ello que en la segunda etapa del desarrollo de esta investigación se analizará la viabilidad de trasladar la sección aduanera de Puerto Morelos al puerto de Calica buscando una fusión del sector privado y público para el desarrollo y construcción del puerto Intermodal en el estado de Quintana Roo, debido a que en esa zona de Punta Venado tiene la capacidad de ampliar su infraestructura de manipulación y almacenaje dentro del puerto como de la recepción de embarcaciones de altura.

Es por ello, la importancia de continuar con el desarrollo de habilitar un puerto Intermodal en esta zona lo cual dará a esta entidad federativa una mayor infraestructura de comunicación y operaciones internacionales, así mismo ser eficiente en conjunto con el sector privado para el crecimiento económico que requiere emergente el estado de Quintana Roo y tener una alternativa de actividad económica del sector turístico, es por ello que se pretende que la propuesta de inversión y esfuerzos sea público y privado.

# IDENTIFICACIÓN DEL IMPACTO DE LA GESTIÓN DE LOS STAKEHOLDERS EN LA ESTRUCTURA DE LAS EMPRESAS QUE DESARROLLAN ESTRATEGIAS DE RESPONSABILIDAD SOCIAL EMPRESARIA

Jorge Roberto Volpentesta, Universidad de Buenos Aires

## RESUMEN

*La investigación propuso, como primer objetivo, recabar en empresas que actúan en territorio argentino las construcciones administrativas (comunicacionales, procedimentales, organizativas, estructurales) que aquellas empresas que dicen tener con la sociedad un compromiso que va más allá de la obtención de utilidades para sus accionistas, adoptan para poder identificar, escuchar y traducir las voces de sus stakeholders en acciones concretas que permitan satisfacer sus requerimientos. Como segundo objetivo se propuso indagar si dichos mecanismos responden a propuestas provenientes de diversas organizaciones que tienen formulaciones de modelos al respecto (por ejemplo, las provenientes del Institute of Social And Ethical Accountability -AA1000S- o las del Global Reporting Initiatives -GRI-) o si son desarrollos originales surgidos de la cultura y las características de la propia empresa y del ambiente en el que se encuentra. Ante esta segunda situación, se plantea una descripción y análisis de los fundamentos y aspectos operacionales más salientes. Finalmente, se evalúa la efectividad de esos mecanismos a través del plasmado concreto de los requerimientos de los stakeholders en la visión, misión, objetivos, políticas y estrategias de las empresas, analizando la congruencia o discrepancia de lo que la empresa dice y manifiesta y lo que la empresa realmente hace.*

**PALABRAS CLAVE:** Stakeholders, responsabilidad social empresaria, mecanismos organizacionales

## IDENTIFICATION OF THE IMPACT OF THE MANAGEMENT OF STAKEHOLDERS IN THE STRUCTURE OF THE CORPORATION THAT DEVELOP CORPORATE SOCIAL RESPONSABILITY STRATEGIES

### ABSTRACT

*The investigation proposed, as a first target, dig over in companies operating in Argentine territory administrative buildings (communicational, procedural, organizational, structural) that those companies that says that they have a commitment with the society that goes beyond of the obtaining of profits for their shareholders, adopt to identify, listen and translate the stakeholders voices into concrete actions to satisfy their requirements. The second goal was to research if those mechanisms respond to proposals that comes from different organizations that, in this regard, have formulation models (for example, those coming from Institute of Social And Ethical Accountability -AA1000S- or from Global Reporting Initiatives -GRI-) or if they are original developments stemming from the culture and characteristics of the company and from the environment in which is situated. Facing this second situation, there is a description and analysis of the fundaments and operational aspects more remarkable. Finally, the effectiveness of these mechanisms is evaluated by the concrete reflection of the stakeholder's requirements in the vision, mission, objectives, policies and business strategies, analyzing the congruence or discrepancy in what company says and manifest, and in what the company really does.*

**JEL:** M10, M14, M19.

**KEYWORDS:** Stakeholders, corporate social responsibility, organizational mechanisms.

## INTRODUCCIÓN

En función del nuevo paradigma del desarrollo sostenible -progreso y desarrollo social, equilibrio ecológico y crecimiento económico- (Elkington, 2001) y de una de sus consecuencias, la Responsabilidad Social Empresaria (RSE), la empresa que quiera permanecer en los tan exigentes y competitivos mercados actuales y futuros no deberá desconocer o ignorar a sus stakeholders, tanto internos como externos (primarios como secundarios), razón por la cual deberá ajustar su estrategia, visión, misión, políticas y objetivos para reflejar las preocupaciones de todos ellos. Es por esto que resulta primordial para cada empresa identificar debidamente a todos los stakeholders y determinar, de alguna manera, el potencial de cooperación o amenaza que detentan en cada circunstancia y momento dentro de la vinculación témporo-espacial que los une (Mitchell, Agle y Wood, 1997).

En función de la consideración de los intereses de los distintos stakeholders de una empresa, es posible identificar dos modelos de gobierno diferentes. Uno de ellos, denominado *modelo de gobierno de los accionistas*, está representado por la visión tradicional del gobierno de la empresa, caracterizado por la búsqueda de la maximización del valor de la empresa para sus accionistas, satisfaciendo con esto a los inversores, ya que la maximización del valor de la empresa supone la concreción del valor central que guía esta filosofía: el crecimiento económico. En cambio, el modelo denominado *gobierno de los stakeholders*, persigue un objetivo más amplio que el de satisfacer sólo al grupo de los accionistas, ya que su orientación es hacia el logro y obtención de un equilibrio en la satisfacción de los intereses de todos los stakeholders de la empresa. Desde el pensamiento de este modelo, el valor central no es el crecimiento económico sino el desarrollo sostenible. Por esto, el gobierno de la empresa sostenible persigue como fin último crear valor de forma duradera, tanto para los accionistas como para la sociedad en su conjunto, a través de la satisfacción no sólo de los objetivos de los inversores, sino de todas las partes interesadas. La esencia de este modelo es la creencia en la imposibilidad de crear valor si las acciones se dirigen exclusivamente hacia los inversionistas, ignorando o desestimando a todos los demás interesados necesarios para que la organización desarrolle su actividad (Ricart *et al.*, 2002).

Gestionar una empresa en función del modelo de gobierno de los stakeholders implica que los integrantes de sus órganos de dirección deberán contemplar entre sus tareas: priorizar el diálogo con los stakeholders; establecer entre la empresa y éstos relaciones cordiales; cuidar que los valores asumidos por la empresa sean internalizados por todos sus integrantes; comunicar tanto hacia dentro como hacia fuera esos valores a través de acciones concretas evitando el uso de lemas o frases huecas, generar mecanismos que permitan identificar adecuadamente a sus stakeholders, así como herramientas que logren incorporar sus intereses como objetivos empresariales. Por otro lado, deberán monitorear que el aprendizaje, el conocimiento y la credibilidad que se generen de las tareas anteriores provoquen el resultado de innovaciones, que sean económica, medioambiental y socialmente valiosas (Ricart *et al.*, 2002).

### Objetivos

El primer objetivo de la presente investigación fue recabar dentro del panorama empresarial argentino las construcciones administrativas (comunicacionales, procedimentales, organizativas, estructurales entre otras) que aquellas empresas que dicen tener con la sociedad un compromiso que va más allá de la obtención de utilidades para sus accionistas, adoptan para poder identificar, escuchar y traducir las voces de sus stakeholders en acciones concretas que permitan satisfacer sus requerimientos. Una vez identificados estos mecanismos, y como segundo objetivo de la investigación, se estableció si dichos mecanismos responden a propuestas provenientes de diversas organizaciones que tienen formulaciones de modelos al respecto (por ejemplo, las provenientes del Institute of Social And Ethical Accountability - AA1000S- o las del Global Reporting Initiatives -GRI-) o si bien, son desarrollos originales surgidos de la

cultura y las características de la propia empresa y del ambiente en el que se encuentra. Ante esta segunda situación, se realizó una descripción de los fundamentos y aspectos operacionales más salientes.

Finalmente, se evaluó la efectividad de estos mecanismos por intermedio del plasmado concreto de los requerimientos de los stakeholders en la visión, misión, objetivos, políticas y estrategias de las empresas, analizando la congruencia o discrepancia de lo que la empresa dice y manifiesta y lo que la empresa realmente hace al confrontar, por ejemplo, los enunciados de su visión, misión y objetivos con las acciones y decisiones que efectivamente asume en su accionar cotidiano. La hipótesis asociada a estos objetivos es que en la medida que las empresas no operen en su relación con los stakeholders a través de mecanismos administrativos (ya sean estandarizados o de propio desarrollo) que permitan su identificación, comunicación y posterior volcado de sus intereses en la operatoria empresarial, existirá discrecionalidad por parte de los directivos de las empresas en la determinación de qué intereses son los que se deberían satisfacer, con lo cual, y quizá de manera inconsciente, sientan que están ejerciendo un gobierno de stakeholders cuando en realidad siguen actuando fuertemente bajo las premisas de la racionalidad de la gestión privada (el “yo organizo, mando y controlo”).

## REVISIÓN LITERARIA

Tanto los economistas clásicos como los neoclásicos presentan un modelo de empresa donde prevalece, en términos generales, una función de producción conforme a una tecnología dada donde predomina sobre todo otro concepto la eficiencia técnica, orientada por parámetros de costos y decisión tendientes a la maximización del beneficio. Dentro de dicho marco no sorprende que muchos doctrinarios (Argenti, 1970; Jensen, 2002; Hayek, 1960/1985) expresen que el objetivo básico de la empresa es maximizar el rendimiento a largo plazo del capital confiado a los directivos por parte de los accionistas. Estas ideas respecto del objetivo de las empresas se encuadran dentro de las teorías llamadas monistas que según su planteamiento tradicional desconocen cualquier otro objetivo que no sea la exclusiva obtención de beneficios para los propietarios. Pero en los últimos años otras voces se han hecho escuchar al respecto. Por ejemplo Stiglitz (2004) enfatiza que maximizar la riqueza de los accionistas no necesariamente conduce a la eficiencia económica ni alcanza otros objetivos significativos como la protección del medio ambiente, la justicia social, el respeto de los derechos humanos. Stiglitz (2004) aboga por una actuación socialmente responsable de las empresas para compensar algunos fallos del mercado tales como la información imperfecta, los mercados incompletos y la limitada capacidad de regulación de los estados para mitigar las externalidades empresariales negativas.

De acuerdo con lo expresado por Rodríguez Fernández (2002) estas voces plantean una visión pluralista donde el gobierno empresarial se observa con una perspectiva más amplia, como una red de estructuras, reglas y procedimientos institucionales que determinan el poder de control, la generación de incentivos a diversos stakeholders (y no solo a los accionistas), la distribución del riesgo, la orientación a la creación de riqueza para todos los partícipes y la distribución del excedente obtenido por la empresa, concepción muy cercana a la tradición empresarial centroeuropea, escandinava e incluso japonesa (p. 76). Esta forma de ver el gobierno de las empresas no representa una visión idílica sino por el contrario implica un gran esfuerzo en compatibilizar incentivos y posturas divergentes, arbitrar entre intereses, generar adhesiones y convencer, utilizando criterios de razonabilidad y satisfacción general más que reglas unilateralmente definidas en función de un único interés. Pfeffer y Salancik (1978/2003) señalan que se trata de construir redes de intereses y practicar estrategias de cooperación, reforzando la supervisión mutua de todos los diferentes grupos de stakeholders, como solución a los problemas de interdependencia e incertidumbre (p. 42-43), en función de lograr compatibilizar la eficiencia económica con la equidad a través de un entramado donde no solo toman parte los derechos sino también las responsabilidades individuales.

La perspectiva de un gobierno pluralista se enfrenta con diversos cuestionamientos y planteos cuyos principales argumentos se centran en la cuestión de la definición clara y concisa de quiénes son los

stakeholders de una empresa, por un lado, y los mecanismos que se utilizan para combinar y equilibrar los diferentes deseos e intereses de los stakeholders, por el otro. Los stakeholders de una empresa deben ser definidos por cada empresa en particular, ya que si se lo hace en abstracto adoptando una definición amplia de ellos, prácticamente sería ilimitada la cantidad de stakeholders que podrían señalarse.

Respecto del segundo aspecto, los señalamientos se refieren a las estructuras y procedimientos institucionales que las empresas diseñan para un efectivo gobierno pluralista. En este sentido, en función de los diferentes entornos dinámicos y cambiantes que enfrenta cada empresa resultaría utópico determinar un único modelo de participación de los stakeholders en el gobierno de las empresas, aclarando que cualquiera sea el camino elegido de ninguna manera esto significa que el protagonismo de los stakeholders en estas instancias de gobierno signifique eliminar el papel y la intervención de los accionistas. Para poder desarrollar un efectivo gobierno de stakeholders las empresas deben desarrollar mecanismos de escucha y de participación de sus stakeholders de manera que sus intereses, deseos y demandas no sólo sean escuchados sino que se incorporen en los elementos organizacionales, a la par que esos stakeholders son tenidos en cuenta en los procesos de toma de decisiones.

## **METODOLOGÍA**

La presente investigación es un estudio descriptivo. En él se trabajó con empresas ubicadas en el territorio argentino que manifiestan considerar en sus acciones los requerimientos e intereses no sólo de sus propietarios sino también los de otros grupos de interesados. Se utilizó la técnica de muestreo no probabilístico para la elección de las empresas como unidad de análisis, entre aquellas empresas que declaran su actuación socialmente responsable a través de informes o reportes, y aquellas otras que por conocimiento profesional y referencias dentro del mercado, se conoce que realizan actividades en ese sentido. Se trabajó con el criterio de muestras disponibles o accesibles en aquellas empresas que aceptaron la invitación de participar en el estudio.

Se cursaron invitaciones a 78 empresas de las cuales se prestaron a la investigación 25 de ellas. Para la recolección de datos se realizaron entrevistas en profundidad con los responsables de las áreas o sectores encargados de desarrollar las actividades de RSE o de dirigir y/o coordinar dichas acciones. Además, se analizó documentación pública de las empresas consultadas con el fin de verificar el grado de congruencia o discrepancia entre lo que la empresa dice y manifiesta y lo que la empresa realmente hace confrontando, por ejemplo, los enunciados de su visión, misión, objetivos y estrategias con las acciones y decisiones que efectivamente realiza en su accionar cotidiano, de manera de cotejar la información desde diferentes puntos de referencia (triangulación metodológica). El trabajo de análisis sobre los datos se hizo inmediatamente después de recolectados, organizando las ideas que de ellos iban emergiendo a través del análisis cualitativo, con el propósito de establecer conceptos relacionados con el objeto de estudio y de generar nueva teoría que represente un avance en el conocimiento (Valles Martínez, 2000).

## **RESULTADOS**

### Identificación de los Stakeholders

Siendo que cada empresa actúa en un determinado contexto (cambiante y dinámico) es su responsabilidad establecer los mecanismos para lograr una clara identificación de sus stakeholders y sus respectivos intereses, lo cual no siempre resulta una tarea sencilla debido a la complejidad de las relaciones de las empresas con sus stakeholders puesto que éstos pueden desempeñar diferentes roles para una misma empresa, a la vez que los diferentes grupos o individuos pueden establecer interconexiones en forma de coaliciones que les permiten potenciar algunas de sus características. Todas las empresas estudiadas tienen establecidos quiénes son sus stakeholders. Lo primero que surge de este hecho es que todas estas empresas los designan nominalmente: clientes, proveedores, comunidad, gobierno, periodistas,

organizaciones no gubernamentales, entre otros. Y se hace esta observación porque, si bien implícitamente en el orden en que se establecen y ordenan en cada empresa surge un criterio de importancia, ninguna empresa tiene una identificación cualitativa de ellos, o bien, una clasificación por otros motivos. La literatura sobre la materia es profusa en clasificaciones: primarios, secundarios, normativos, derivados, demandantes, influyentes. Estas clasificaciones de alguna manera son indicativas de la importancia y legitimidad que cada stakeholder tiene para la empresa. De modo que se puede concluir que para estas empresas, al menos de los hechos, todos sus stakeholders tienen un “mismo peso relativo”, una misma importancia y relevancia.

Asimismo, a los stakeholders en ninguna empresa se los clasifica por niveles o grupos, tal como podría ser lo establecido por Ricart *et al.* (2002) que identifican tres niveles: nivel consustancial, nivel contractual y nivel contextual. Otro elemento distintivo es que sobre los stakeholders tampoco se identificaron atributos determinados que permitirían una mejor clasificación, como la ofrecida por Mitchell *et al.* (1997) que elaboraron un modelo dinámico de identificación en el cual los stakeholders afectan o son afectados por los objetivos o resultados de una organización determinada, en diferente grado, y en la medida que posean entre uno y tres atributos básicos: El **poder** del stakeholder para influenciar en la empresa; la **legitimidad** de la relación del stakeholder con la empresa; la **urgencia** de los reclamos del stakeholder hacia la empresa.

La importancia de tener una refinación en la identificación de los stakeholders es la de poder determinar fehacientemente “quién o qué realmente cuenta” para la organización. Además, en todas las empresas los stakeholders fueron definidos en un momento determinado pero nunca, en un momento posterior, esa definición fue modificada o alterada, lo cual reafirma la ausencia de elementos cualitativos en esas clasificaciones puesto que los factores que definen a un stakeholders son dinámicos y se alteran con el paso del tiempo, así como se producen coaliciones e interrelaciones entre ellos. Otro aspecto que surge del análisis de los datos recolectados es el número variable de stakeholders que cada empresa tiene identificados. Un grupo de ellos aparece identificado invariablemente en todas las empresas: clientes, proveedores y empleados. Esta circunstancia no resulta fortuita puesto que al estar en las empresas argentinas el desarrollo de las ideas de RSE y de gestión de stakeholders en un estado embrionario, la orientación hacia estas actividades se racionalizan de manera cercana al negocio principal de las empresas. De esta manera, tanto los clientes como empleados y proveedores responden a la primera definición de stakeholders dada por el Stanford Research Institute de “aquellos grupos sin cuyo apoyo la organización podría dejar de existir” (Freeman 1984, p. 31).

Otra característica saliente del análisis es que en una sola de las empresas se identifica un stakeholder no humano (el medioambiente). Si bien existen posturas encontradas en la definición del ambiente como stakeholders, lo cierto es que en la República Argentina la legislación positiva relativa al entorno natural se encuentra en un grado muy avanzado, de manera tal que resulta probable que las empresas no identifiquen este aspecto como uno de especial atención por fuera de las leyes y reglamentos. Lo llamativo de la empresa que identificó el medioambiente como stakeholder es que es una empresa de servicios (la empresa N° 07), en cuya actividad no hay mayor impacto ambiental. Otro hecho significativo es que en solo dos empresas se identificó como stakeholders a los accionistas, en una sola a las generaciones futuras, y en ninguna a los gerentes y directivos ni a los competidores. Si bien todas las empresas manifiestan tener como stakeholders a sus empleados, ninguna nombró a sus representantes sindicales, siendo que por el tamaño de las empresas estudiadas sus trabajadores tienen por ley representación sindical interna. En la profundización de las preguntas se verificó esta circunstancia, no obstante lo cual la mención como stakeholder siempre fue hacia los “empleados” y no hacia los “representantes sindicales”.

### Mecanismos de Identificación y Escucha

Si bien las empresas estudiadas en su gran mayoría declaran utilizar diferentes mecanismos de identificación de sus stakeholders, lo cierto es que en la profundización de las conversaciones con los directivos y responsables de las áreas que gestionan el tema, la posición dominante es de reacción, vale decir, que se implementan mecanismos en la medida que surge una demanda específica o un reclamo concreto de un stakeholder. La totalidad de las empresas manifestó que el mecanismo por excelencia para identificar y, principalmente, escuchar a sus stakeholders, es el diálogo implementado a través de grupos. Todas las empresas sustentan esta elección en función de recomendaciones establecidas en normas emanadas por instituciones internacionales como las del Institute of Social And Ethical Accountability -AA1000S- o las del Global Reporting Initiatives -GRI- a las que en su gran mayoría adhieren. Este mecanismo del diálogo es utilizado especialmente con el stakeholder “comunidad” o “sociedad” si bien se extiende su uso hacia otros grupos de stakeholders (gobierno, ONGs, accionistas).

Algunos mecanismos utilizados parecieran estar especializados en algún tipo de stakeholders, tal el caso de las encuestas, que prevalece como procedimiento en la escucha de los empleados y el público interno, o los desayunos de trabajo que invariablemente son utilizados con los proveedores. Si bien una gran mayoría de empresas tienen implementados sitios en Internet para que los stakeholders vuelquen allí sus opiniones y comentarios, todavía este canal no tiene demasiada importancia en lo que respecta a su utilización por parte de los stakeholders. Otros mecanismos utilizados, pero en menor medida, son las reuniones con representantes, los *focus groups*, las reuniones públicas, la investigación de mercado, el análisis del mapa de públicos y los cursos.

### Participación de los Stakeholders en los Mecanismos Organizacionales

La vinculación entre los negocios y la sociedad transita por una evolución que, en cada estadio, responde a las características y circunstancias propias de cada época. Así, cuando en el inicio del desarrollo de las empresas a éstas se las consideraba como máquinas especializadas al servicio de sus propietarios, no resultaba extraño que la consciencia colectiva aceptara que esas organizaciones sólo tuvieran como objetivo la maximización de la riqueza de quienes eran sus propietarios. Al evolucionar desde una concepción mecanicista hacia una sociosistémica, gradual y naturalmente se van incorporando a ese objetivo inicial, intereses y deseos de otros partícipes, ya sean directos como indirectos. El objetivo de la empresa seguirá siendo la obtención de resultados económicos que le permita ser eficiente en términos de ingresos y costos, para poder proporcionar a sus miembros los incentivos necesarios, los que no sólo serán monetarios. Hoy, las sociedades están frente al incipiente desarrollo de otro modelo de empresa, uno en el cual todos y cada uno de sus integrantes reconozcan los efectos y consecuencias de sus acciones sobre los demás, resolviendo la oposición entre interés propio e interés por los demás, entre egoísmo y altruismo, actuando desde una posición superadora de dichos dilemas.

Hoy se perfila un modelo de empresa más inclusivo, en el cual cada grupo de stakeholders merece consideración por lo que en sí mismo representa y no sólo por su capacidad para ser un medio o instrumento de otro grupo: al considerar a los stakeholders como seres humanos, complejos por naturaleza, se comienza a colocar la ética y la responsabilidad en el centro de una nueva forma de concebir a las empresas, y en las cuales los stakeholders tienen una participación más activa en los procesos organizacionales. Muchos de los conceptos del párrafo anterior son sostenidos por las empresas que hacen pública su adhesión a los principios de RSE y de gestión de stakeholders. Sin embargo, en el relevamiento efectuado son muy pocas las empresas que generan espacios de participación en los procesos organizacionales a sus principales stakeholders. Pareciera ser que la actitud que prevalece es la de restringir la participación de los stakeholders a las instancias del diálogo, y solo hasta allí.

El pensar, el decir y el hacer

Puede decirse que el fenómeno de la RSE y de los stakeholders estalló para las grandes empresas en el territorio argentino en los últimos años, de manera tal que su desarrollo puede ser calificado como de embrionario. Esto ha llevado a que muchas empresas sintieran la necesidad de incorporar rápidamente aspectos de gestión relacionados con el enfoque stakeholder y con una actuación socialmente responsable. Este apresuramiento por mostrar estos aspectos de la gestión empresarial se demuestra en ciertos elementos organizacionales, tales como lo que las empresas dicen que hacen con las demandas de los stakeholders y lo que realmente hacen con ellas. Y específicamente, cuando se argumenta que estos deseos e intereses son considerados para ser incorporados en la visión, misión, estrategia y políticas de la empresa. Así, la empresa N° 1 que en la investigación manifiesta que los intereses, deseos, demandas, peticiones y expectativas de sus stakeholders son incorporados en la visión, misión, estrategia y políticas de la empresa, presenta en su página web el siguiente enunciado de misión y visión:

*Misión: Somos una empresa automotriz moderna y flexible, fabricante y vendedora de vehículos, transmisiones, componentes y repuestos, que brinda la mejor oferta de productos y servicios integrales para cada segmento y mercado en los que elegimos participar, satisfaciendo las necesidades de nuestros clientes basándonos en nuestros valores y los principios de procesos robustos, productos maduros y excelencia en atención.*

*Visión: Ser una compañía automotriz integral, integrada al Grupo XX rentable y sustentable ante escenarios cambiantes, basada en nuestros valores.*

*Ser el representante del Grupo XX en el mercado de habla hispana de Sudamérica, produciendo y vendiendo productos y servicios tecnológicamente avanzados y confiables, excediendo las expectativas del cliente, liderando el mercado nacional e incrementando las exportaciones.*

*Ser el mejor equipo humano en el sector automotriz, asegurando el crecimiento y desarrollo de la gente.*

Este divorcio entre el pensar en hacer algo, decirlo y hacerlo realmente es el continuo que se encontró en la mayoría de las empresas, demostrando a través de este hecho lo aseverado anteriormente sobre el estado incipiente de estos temas en las empresas argentinas. Otro ejemplo de esta argumentación lo ofrece la empresa N° 09 que expresa su misión y visión de la siguiente manera:

*Misión: Prestar servicios financieros integrales y de excelencia con base en la calidad, colaboradores altamente capacitados y orientación hacia la satisfacción de nuestros clientes, buscando rentabilidad y contribuyendo al desarrollo sustentable del país.*

*Visión: Ser el mejor Banco Privado de la Argentina.*

Esta empresa manifiesta actuar con ciertos valores tales como: cercanía, para construir relaciones de confianza a largo plazo; compromiso, para cumplir con nuestros objetivos; innovación, ofreciendo soluciones prácticas y adecuadas; entusiasmo, actuando en equipos de alto rendimiento. Además, manifiesta volcar en su gestión las demandas de todos sus stakeholders.

Sin embargo, en una de las empresas estudiadas se encontró una gestión en la cual había una congruencia total entre el pensar, el decir y el hacer. La empresa N° 15 se presenta así en sus comunicaciones:

*Misión: Ser una empresa líder mundial en la cadena de agronegocios en términos de productos, servicios y conocimientos, orientada hacia el desarrollo y bienestar de las*

*personas y su entorno. Queremos agregar valor a los negocios, transformar los sueños en valor sustentable y construir juntos el futuro.*

*Visión: Crear el mejor ambiente para el desarrollo de las personas y su entorno, para ello proveemos materias primas, servicios e información a la red de agronegocios. Aspiramos a ser el mejor aliado en la cadena, por nuestra capacidad para interpretar y aceptar nuevos paradigmas y convertir las ideas en productos y servicios innovadores.*

*Enunciación de Valores o conceptos asociados: Pasión por hacer: inteligencia para darnos cuenta; generosidad para compartir*

En esta empresa se pudo constatar una preocupación sincera en relación a la gestión de stakeholders, siendo que muchos de ellos de manera directa o a través de representantes actúan en comités de asesoramiento al máximo órgano de dirección de la empresa. Esta fue la única empresa donde pudo verificarse la creación de verdaderos espacios de participación de los stakeholders en procesos organizacionales. Un elemento destacable de la investigación es que en dos empresas no estaban definidas ni la visión ni su misión.

### Consideración Estratégica de la Actuación Socialmente Responsable

Siguiendo a Burke y Logsdon (1996) la RSE (política, programa o proceso) es estratégica cuando aporta beneficios a la empresa vinculados con el negocio, especialmente cuando apoya actividades consideradas centrales y que contribuyen a la efectividad de la empresa en lograr su misión. Una reorientación estratégica de la empresa en relación a su filosofía de responsabilidad social apoya sus intereses financieros así como los de sus stakeholders; la reorientación de la RSE con una perspectiva más estratégica es la clave para que se realicen más actividades de responsabilidad social mientras se atienden los intereses de los stakeholders de una forma más integral.

La idea implícita es que para que la RSE sea estratégica debe estar relacionada con la misión de la empresa y, en consecuencia, con su plan estratégico. Bajo este planteamiento en el estudio se encontró que la mayoría de las empresas consideraban su actuación socialmente responsable y la gestión de sus grupos de interés con un enfoque netamente estratégico, si bien las búsquedas de beneficios concretos variaban entre ellas: gestión de riesgos; reducción de costos; incremento de la legitimidad; mejora de la imagen y la reputación de la empresa; obtención de ventajas competitivas a través de la diferenciación con sus competidores; entre otros. En este sentido, y sin que fuera un objetivo establecido de la investigación, pudo detectarse que en todas las empresas estudiadas existía una necesidad concreta de darle visibilidad a sus actividades sociales y su gestión de stakeholders.

La visibilidad se vincula al grado que las iniciativas sociales pueden ser observadas por los stakeholders de la empresa: los proyectos visibles de RSE parecen tener un efecto positivo en la reputación de la empresa. Según Roberts y Dowling (2002) algunas investigaciones han demostrado que una buena reputación empresarial tiene un importante potencial de creación de valor siendo además muy difícil de imitar por los competidores (p. 1078). La visibilidad de los programas de RSE permitiría a la empresa lograr diferenciarse de sus competidores, y de esta forma crear valor a través del aumento de la cuota de mercado que pudiera obtener o bien, a través de la obtención de una prima en el precio de sus productos. La consideración de la importancia estratégica de la gestión de stakeholders y la actuación socialmente responsable se verificó en la investigación en el hecho que solo en dos empresas el máximo cuerpo directivo no intervenía en las estrategias, políticas y acciones orientadas en ese aspecto. En todas las demás empresas, si bien existían sectores o departamentos específicos relacionados con los temas de responsabilidad social y stakeholders, las líneas definitivas de las actuaciones se definían en lo más alto de la jerarquía organizacional.

### Voluntariedad de las Acciones

Tal como se planteó anteriormente, las empresas que fueron objeto de estudio son aquellas que declaran públicamente tener un comportamiento socialmente responsable, a través de acciones sostenibles y con preocupación por sus stakeholders. Cabe destacar que en la República Argentina no existe legislación positiva que obligue a las empresas a realizar acciones o tener programas de responsabilidad social, de manera tal que las empresas que desarrollan actividades en ese sentido las realizan de manera totalmente voluntaria. El estudio determinó que la totalidad de las empresas realizan acciones de responsabilidad social y manifiestan considerar a sus stakeholders de manera totalmente voluntaria, sin recibir para ello ningún tipo de presión tanto del sector industrial como de la sociedad.

Esta característica que presentan las empresas estudiadas coincide con una de las dimensiones estratégicas que Burke y Logsdon (1996) identificaron de los programas estratégicos de responsabilidad social de las empresas que sirven a los intereses económicos de la empresa así como a los intereses de sus stakeholders, es decir, a la creación de valor. Ellos identificaron cinco dimensiones: la centralidad; la visibilidad; la especificidad; la proactividad; la voluntariedad. La voluntariedad, según Burke y Logsdon (1996), requiere que la empresa desarrolle actividades sociales libremente, en lugar de responder a restricciones legales, incentivos fiscales, o prácticas de la industria. En la literatura de RSE la voluntariedad se asocia con la elección, y ésta se define en términos de superar las restricciones legales y fiscales (McWilliams y Siegel, 2001). Aquellas empresas que opten por involucrarse en conductas voluntarias de RSE pueden aprovechar la oportunidad de construir recursos y capacidades específicas de la empresa, necesarias para la creación de valor. Además, la comunidad valora más las acciones voluntarias que las no voluntarias. De las entrevistas realizadas a diferentes stakeholders de las empresas estudiadas se pudo verificar que no existía un total conocimiento de que las acciones socialmente responsables de las empresas se realizaban de manera voluntaria, y una vez conocido ese hecho, la valoración hacia ellas se consideró de manera más positiva.

### **CONCLUSIONES**

La investigación permitió encontrar algunos elementos significativos de la evolución de las ideas sobre responsabilidad social empresarial y gestión de stakeholders en las empresas argentinas. Sobre los procedimientos organizacionales relacionados con la identificación y escucha de los stakeholders, que los mecanismos utilizados mayormente provienen de recomendaciones de organismos internacionales que elaboran normas al respecto. Su implementación no se encuentra totalmente formalizada y las empresas suelen responder ante situaciones concretas con una gestión más del tipo reactiva que proactiva. La profundidad y especificidad de la identificación de los stakeholders es muy precaria, no existiendo indicadores cualitativos en sus clasificaciones. Salvo en una empresa, la participación de los diferentes stakeholders se limita a ser actores de rondas de diálogo en las cuales si bien se los escucha, luego no se los considera en ninguna etapa posterior de gestión que haya sido generada a partir de esos diálogos. Pareciera que las instancias de participación se agotan en los diálogos.

En función del escaso desarrollo que tienen estas temáticas en la República Argentina existen divergencias muy claras entre lo que las empresas piensan que hacen, dicen y hacen realmente. Este divorcio de conceptos se expresa claramente con solo leer sus manifestaciones públicas. El modelo prevaleciente en las empresas es el de la consideración estratégica de la RSE, de modo que su implementación presupone por parte de las empresas que en algún momento futuro esas acciones traerán algún tipo de beneficio traducido en menores costos, mejora de imagen y reputación o ventaja competitiva entre otros. Finalmente, las acciones establecidas son impulsadas voluntariamente por las empresas, ya que no existe en el país legislación positiva sobre esas cuestiones.

# POTENCIAL DEL CENTRO HISTORICO DE CARTAGENA DE INDIAS PARA CONVERTIRSE EN UN GRAN CENTRO COMERCIAL ABIERTO

Emperatriz Londoño Aldana, Universidad de Cartagena  
María Eugenia Navas Ríos, Universidad de Cartagena

## RESUMEN

*El comercio radicado en el centro histórico de Cartagena de Indias -con algunas excepciones-, ha estado concentrado en variedad de establecimientos pequeños y especializados, administrados familiarmente y con muy poca tendencia hacia la modernización. Sin embargo, la dinámica del turismo nacional y extranjero unido a las fuertes corrientes migratorias y a los planes de desarrollo municipales, ha generado, en el tiempo, graduales cambios los cuales muestran gran aceleración en los últimos diez años. Dentro de ellos se destacan el ingreso y expansión de los hoteles boutique, establecimientos que ofertan marcas exclusivas y/o grandes marcas, restaurantes de cuatro y cinco tenedores, Spa y utilización de sitios abiertos en los que tienen a concentrarse negocios para recreación y diversión. Ante esta perspectiva y mirando el potencial de la ciudad amurallada, propender por su transformación en un centro comercial abierto además de su proyección y posicionamiento permitirá la participación de todo tipo de comercio cuyas características apunten a la satisfacción de las necesidades de los consumidores locales y del turismo social, nacional y extranjero. La presente investigación se centra en la percepción que tienen los propietarios y/o administradores de los diferentes establecimientos acerca del potencial de la ciudad amurallada, para su conversión en centro comercial abierto.*

**PALABRAS CLAVE:** City marketing, centro comercial abierto, comercio, consumidor

**JEL:** M20, M31

## THE POTENTIAL OF THE HISTORICAL CENTER OF THE CITY CARTAGENA DE INDIAS FOR CONVERSION ITS TRANSFORMATION TO AN A BIG OPEN MALL

## ABSTRACT

*The Commercial activity based in the historic center of Cartagena de Indias, with some exceptions, has been concentrated in a variety of small and specialized family-run establishments with very little tendency toward modernization. However, the dynamics of domestic and foreign tourism coupled with strong migratory flows and the municipal development plans, has led to gradual changes which have increased in the last ten years. Among them are the entry and expansion of boutique hotels, that offer exclusive brand stores and / or brands, restaurants four and five forks, Spa and the use of open spaces where entertainment business tend to focus. Having said that and looking at the potential of the old city, it suggest for its transformation into a open mall, which, will allow the participation of all trade whose features aim at satisfying the needs of local consumers and social tourism, domestic and foreign. This research focuses on the perception of the owners and / or managers of the various establishments of the potential of the walled city, for conversion to open mall.*

**KEYWORDS:** City marketing, strip mall, retail, consumer.

**JEL:** M20, M31

## METODOLOGIA

La investigación es de orden descriptivo en la cual se ha optado por el método transversal de encuestas, dirigidas a diferentes elementos muestrales dentro de la ciudad amurallada: residentes, comerciantes, ejecutivos, de los subsectores financiero, hotelero, servicios, instituciones y representantes gubernamentales locales y departamentales; se tomará como unidad muestral el sitio de vivienda en unos casos y en otros el sitio donde se lleva a cabo la actividad productiva. Se aplicó una encuesta estructurada con objetivo encubierto a una muestra de 220 personas propietarias o administradoras de los diferentes establecimientos que hacen presencia en el centro histórico. Se trabajó con preguntas categóricas uni y multirespuesta y mixtas; para estas últimas se utilizó una escala de Likert con valoración de uno a cinco puntos para medir grados de acuerdo/ desacuerdo; la validez fue comprobada con el coeficiente Alpha de Cronbach (Peterson, 1994): 0,89. Para el tratamiento de los datos se utilizó el software Dyane: diseño y análisis de encuestas de Miguel Santesmases Mestre; fueron realizadas tabulaciones simples y cruzadas con aplicación de las pruebas F de Snedecor según el caso. Finalmente para establecer asociaciones entre variables múltiples se hizo un análisis factorial de correspondencias –AFC- tomando como variable criterio la vinculación de los encuestados los distintos establecimientos comerciales y de servicios

## CONCLUSIONES

El centro histórico de Cartagena conocido como la *ciudad amurallada* y cariñosamente denominado el *corralito de piedra* avanza de forma natural hacia un centro comercial a cielo abierto. Dentro de los objetivos de *marca-país* a través de la Corporación Nacional de Turismo, proyectan a la ciudad como el destino turístico de nacionales y extranjeros de alto poder adquisitivo. En consecuencia las transformaciones de orden de infraestructura física comercial y de servicios (con alta participación de capital extranjero) apuntan a una oferta integral mirando solamente un mercado objetivo cada vez más exigente y exclusivo. Para el mercado local es motivo de preocupación por una parte el desplazamiento del gremio de comerciantes locales que no cuentan con la capacidad para competir con las marcas nacionales y extranjeras que van tomando asiento y por otra los precios de bienes y servicios que hace a la ciudad excluyente para nativos y residentes. Finalmente si bien la ciudad en muchas zonas se muestra como centro comercial abierto, tiene como falencias principales: problemas con el alcantarillado de aguas lluvias, definición zonas peatonales y de estacionamiento, organización de los vendedores callejeros estacionarios y afinamiento de la seguridad especialmente en inmediaciones de los cajeros automáticos.

## **EL IMPUESTO POR SERVICIO DE HOSPEDAJE: TRANSPARENCIA, FISCALIZACION Y COMPORTAMIENTO EN EL ESTADO DE SONORA**

Oscar Acosta de los Santos, Universidad Estatal de Sonora

Esthela Carrillo Cisneros, Universidad Estatal de Sonora

Elia del Carmen Moreno Ibarra, Universidad Estatal de Sonora

Diana Elizabeth Moreno Carrillo, Universidad de Sonora

### **RESUMEN**

*Es fundamental que los recursos públicos sean administrados por el gobierno de forma eficaz, productiva y honesta, promoviendo la transparencia y la rendición de cuentas. Esta investigación contribuye con un diseño de comportamiento del Impuesto al Hospedaje en el Estado de Sonora, el cual, se genera de manera implícita con la afluencia turística al Estado; de igual forma, el análisis revela la falta de transparencia y fiscalización de este impuesto en la administración de los ayuntamientos, así como en la transición de la administración de este impuesto recientemente delegada al Gobierno Estatal. De acuerdo a la Ley de Hacienda del Estado, el 90% de los recursos captados por este impuesto deben ser aportados a un fideicomiso de administración que se creará para tal efecto, el cual debe aplicar los recursos en los rubros de promoción, difusión y publicidad turística del municipio en donde se recaudó, sus atractivos turísticos y mejoras materiales de los mismos y en general para realizar acciones tendientes a promover el turismo del municipio. El 10% restante del impuesto captado deberá ser utilizado por el Estado en tareas de administración, cumplimiento de obligaciones y fiscalización del impuesto. La propia Ley de Hacienda del Estado señala que la cuenta pública estatal correspondiente, deberá reflejar la aplicación que se haga de lo recaudado por este concepto, tomando como base los fines de este impuesto, respecto de cada municipio.*

**PALABRAS CLAVE:** Cuenta Pública, Impuesto, Transparencia, Fiscalización

## **THE HOSTING SERVICE TAX: TRANSPARENCY, AUDIT FINDINGS AND BEHAVIOR IN THE STATE OF SONORA**

### **ABSTRACT**

*It is essential that public resources are managed by the government in an efficient, productive and honest way, promoting transparency and accountability. This research contributes with a design behavior regarding the hosting tax in the State of Sonora, which is generated implicitly with the influx of tourists to the state, on the other hand, the analysis reveals a lack of transparency and audit findings to this tax in administration of the municipalities, as well as the transition of the administration of this tax to the State Government recently empowered. According to the State Finance Act, 90% of the funds raised by this tax must be contributed to a trust fund administration which will be created for this purpose, which should apply resources in the areas of promotion, dissemination and publicity tourism in the municipality in which was raised, its tourist attractions and material improvements of themselves and generally to perform actions to promote tourism in the municipality. The remaining 10% of the tax raised should be used by the state in administration tasks, and monitoring compliance with tax obligations. The Act itself states that the appropriate state public account shall reflect the application made of the proceeds of this concept, based on the purpose of this tax, for each municipality.*

**KEYWORDS:** Public account, Tax, Transparency, Audit.

## INTRODUCCION

Analizando los distintos impuestos que por distintas causas son menos fiscalizados, determinamos que el Impuesto al Servicio de Hospedaje es uno de los impuestos que no se localiza desglosado en los informes de auditoría de la Cuenta Pública en el marco de las finanzas públicas gubernamentales. El propio Plan Estratégico de Desarrollo Turístico Sustentable del Estado de Sonora 2010-2015, señala que es necesario crear un marco regulatorio que coordine la realidad del Impuesto al Servicio de Hospedaje en el Estado, ya que su fin último deberá ser la promoción y reactivación de la actividad turística, para coadyuvar a la transparencia de los datos y el manejo de los fondos recaudados en el Estado de Sonora. Derivado de lo anterior, se confirma la existencia de Fideicomisos y Oficina de Convenciones y Visitantes (OCV) cuyas leyes municipales establecen esta conformación para administrar este impuesto recaudado. Por otra parte, se grava por primera vez en el presente ejercicio fiscal 2013 la prestación de servicios de hospedaje en el orden Estatal; al haberle sido transferida la recaudación que por varios años se administró desde el ámbito Municipal, con lo cual se espera mayor eficacia, transparencia y fiscalización en la propia recaudación y aplicación del citado impuesto y por supuesto, mantener como destino la promoción de la actividad turística Sonorense.

## REVISION LITERARIA

### Principal Contexto Jurídico Del Impuesto Al Servicio De Hospedaje

*Ley de Acceso a la Información Pública:* La exposición de motivos de esta ley señala que la transparencia y la información pública son materias que se relacionan íntimamente con la rendición de cuentas, pues por un lado, una sociedad informada se encuentra en posibilidad de exigir el respeto a los derechos individuales, además de exigir a la autoridad un desempeño eficaz, objetivo, y apegado a la legalidad y, en segundo término, conmina a la autoridad a realizar sus atribuciones de manera cabal, cumpliendo la ley y evitando abusos en el ejercicio de la función pública.

*Instituto Superior de Auditoría y Fiscalización (ISAF):* El Órgano de Fiscalización Superior del H. Congreso del Estado es el Instituto Superior de Auditoría y Fiscalización de Sonora, cuyo objeto es fiscalizar los recursos públicos en forma imparcial y transparente, inducir el manejo eficaz, productivo y honesto de los mismos, promoviendo la transparencia y la rendición de cuentas por parte de cualquier ente público o privado que maneje, custodie o aplique recursos públicos del Estado o municipios. En tal sentido, los informes de los resultados de auditorías a los municipios de la Cuenta Pública deben ser publicados en apego a lo establecido en la Ley de Acceso a la Información Pública del Estado de Sonora. Ley de Hacienda del Estado de Sonora 2013.

Por lo que se refiere al Impuesto por la Prestación de Servicios de Hospedaje, fue finalmente elevado del orden Municipal como se había venido manejando, al orden Estatal en el presente ejercicio fiscal 2013; haciéndose necesario también adecuar cinco de los nueve artículos que tipifican el Impuesto, lo anterior para concretar su correcta operación por parte del Ejecutivo Estatal, pretendiendo facilitar, simplificar y mejorar la operación del esquema a través de la instrumentación de un Fideicomiso Estatal que permita ejecutar el recurso captado teniendo en el comité técnico del mismo, a la Iniciativa Privada organizada del sector turismo como mayoría y contrapeso que garantice la correcta, equitativa y eficaz inversión del recurso en la promoción y la publicidad turística de todos los destinos del Estado.

En ese sentido, el Artículo 5 de la citada Ley, señala que se considerarán servicios de hospedaje, la prestación de alojamiento o albergue temporal de personas a cambio de una contraprestación, dentro de los que quedan comprendidos los servicios prestados por hoteles, moteles, tiempo compartido, hostales, casas de huéspedes, villas, bungalows, campamentos, paraderos de casas rodantes, departamentos amueblados con fines de hospedaje para fines turísticos y otros establecimientos que brinden servicios de hospedaje de naturaleza turística.

Los contribuyentes realizarán el traslado del impuesto a las personas a quienes se preste el servicio de hospedaje. Como lo señalan los Artículos 8 y 9, la tasa del impuesto será del 2% sobre el valor de las contraprestaciones que los contribuyentes perciban por los servicios de hospedaje, calculándose por mes calendario. Son los artículos 10 y 11 los que señalan que el importe de los recursos recaudados por este Impuesto se destinará a los municipios donde se recaude, de la siguiente manera: Un 90% de los recursos captados en el municipio de que se trate, serán aportados a un fideicomiso de administración que para el efecto se creará, el cual deberá aplicar los recursos en los rubros de promoción, difusión y publicidad turística, del municipio en donde se recaudó, sus atractivos turísticos y mejoras materiales de los mismos y en general para realizar acciones tendientes a promover el turismo del municipio.

El 10% restante, deberá ser utilizado por el Estado en tareas de administración, cumplimiento de obligaciones y fiscalización del impuesto. Integración del Fideicomiso que administra la recaudación del Impuesto sobre servicio de Hospedaje: Los artículos 11 y 12 de la Ley de Hacienda del Estado de Sonora señalan que se tendrá como fideicomitente al Gobierno del Estado, como fiduciaria a la institución fiduciaria que mejores condiciones ofrezca y como fideicomisarios a los ayuntamientos de los municipios.

#### Análisis del Presupuesto de Ingresos del Impuesto al Servicio de Hospedaje

Para poder integrar el comportamiento que ha tenido este impuesto en los últimos años, primeramente relacionamos lo presupuestado en las leyes de ingresos y presupuestos de ingresos concentrándose solo en 9 de los 72 Municipios, los cuales resultan ser los principales centros turísticos del estado de Sonora.

Figura 1: Ingresos Por Impuesto al Servicio de Hospedaje Presupuestado Durante 2009 Al 2012

En esta figura se muestra que lo presupuestado en Sonora de Impuesto al Servicio de Hospedaje se concentra en 9 Municipios, siendo además los de mayor afluencia turística. Fuente: Elaboración Propia a partir del análisis a las leyes de ingresos municipales durante los ejercicios fiscales 2009 al 2012.

## METODOLOGIA

La presente investigación comprende datos de corte transversal de los ejercicios fiscales 2008 al 2012 recopilados de fuentes autorizadas como INEGI, DATATUR, COFETUR (Comisión de Fomento al Turismo) SECTUR (Secretaría de Turismo), IMCO (Instituto Mexicano para la Competitividad). Los datos más recientes con cifras aún no oficiales ni publicadas en INEGI pero con el respaldo de la COFETUR. En otra etapa incluye análisis exhaustivo de los distintos informes de auditoría publicados electrónicamente en la página oficial del Órgano de Fiscalización del Estado, es decir, el Instituto Superior de Auditoría y Fiscalización, además de entrevistas con personal de este organismo fiscalizador. Por otra parte, se aplicaron encuestas en el centro turístico de Puerto Peñasco y se recopiló material bibliográfico, histórico, legal aplicable y pertinente a los objetivos de este estudio.

## RESULTADOS

El comportamiento del presupuesto de ingresos en los distintos municipios se mantuvo constante del año 2009 al 2011, reflejando un ascenso de relevancia para el ejercicio fiscal 2013.

Figura 2: Comportamiento del presupuesto de Ingresos del Impuesto al Servicio de Hospedaje en Sonora del ejercicio fiscal 2009 al 2013.

*Esta figura muestra el comportamiento de lo presupuestado en Sonora por Impuesto al Servicio de Hospedaje. Se resalta que en enero del 2012, el Secretario de Hacienda del Gobierno del Estado emitió Acuerdo que declara que para el ejercicio fiscal 2012 continuarán en vigor las disposiciones contenidas en la Ley del 2011, en tanto que el Poder Legislativo apruebe la Ley para el ejercicio fiscal 2012. No obstante, al emitirse la Ley de Ingresos durante el ejercicio 2012, no se contempla la recaudación del Impuesto al Servicio de Hospedaje. Fuente: Elaboración Propia con datos de las leyes de Ingresos Municipales y Ley de Ingresos Estatal. Como se puede ver además, para el presente ejercicio 2013 se refleja un despunte de este impuesto.*

Por otro lado, si analizamos también la afluencia turística (en este caso nacional), vemos que también el comportamiento ha ido en ascenso, por lo que es razonable que el citado impuesto también se comporte de tal manera.

Figura 3: Afluencia Turística de Residentes Nacionales Hacia el Estado de Sonora Del 2010 Al 2012

*La figura muestra un ascenso del 189% de incremento en la afluencia turística nacional del ejercicio 2010 al 2012; es decir, en el año 2010 la afluencia ascendió a 1,851,665 visitantes nacionales, en 2011 a 3,239,167 y en 2012 a 3,507,680 visitantes nacionales.. Fuente: elaboración propia con datos preliminares de la COFETUR 2013.*

Ahora bien, al analizar los ingresos reales captados por los municipios y que debieran estar totalmente publicados en el INEGI y en las páginas de Transparencia de cada uno de éstos, solo se identificaron una parte de éstos ingresos, realizándose el siguiente comparativo de lo ingresado contra lo presupuestado.

Figura 4: Comparativo del Impuesto al Servicio de Hospedaje Presupuestado contra lo ingresado.

La figura muestra que existe gran diferencia entre lo presupuestado en la Ley de Ingresos del Impuesto al Servicio de Hospedaje y lo efectivamente recaudado (considerando cifras oficiales del INEGI) durante los ejercicios 2009 al 2011. Fuente: Elaboración propia.

## CONCLUSIONES

La falta de transparencia y fiscalización se evidencia al constatar que la Oficina de Convenciones y Visitantes de Puerto Peñasco (centro turístico del estado), obtuvo en Marzo de 2013, resolución favorable por parte del Instituto de Transparencia y Acceso a la Información Pública, derivado de inconformidad mediante recurso de revisión en contra del Ayuntamiento de Puerto Peñasco, al negársele copia fiel de estados de cuenta bancarios de los ejercicios 2010 y 2011 que reflejan el ingreso por el 2% al Servicio de Hospedaje, debiendo la citada oficina hacer uso de lo señalado en el precepto legal relativo al recurso de revisión como medio de defensa de los particulares contra los actos u omisiones de los sujetos obligados con plazos para su interposición, señalado en la Ley de Transparencia y acceso a la Información Pública, a través del Instituto de Transparencia Informativa del Estado de Sonora (ITIES2013).

Asimismo, el organismo fiscalizador en los informes de auditoría de la cuenta pública no desglosa el importe auditado del presente impuesto, no obstante, que ellos manifiestan de forma verbal que al no reflejar observaciones en el informe de auditoría, debe entenderse que no existen situaciones irregulares, lo anterior, fue manifestado sin proporcionar la evidencia correspondiente. Con la aprobación de la Ley de Transparencia y Acceso a la Información Pública, el Estado cuenta con un marco jurídico completo en esta materia, sin embargo, en lo que a este impuesto corresponde, los datos se han manejado con falta de transparencia, lo cual propicia que la sociedad desconozca el ingreso real y aplicación de estos recursos, además de no existir congruencia entre lo presupuestado y lo efectivamente captado del impuesto.

No obstante, en el presente ejercicio fiscal 2013 el gobierno estatal dio un gran avance al incluir en el texto de la ley que el fideicomiso creado para la administración del impuesto en cuestión presentará al Instituto Superior de Auditoría Fiscal (ISAF), a más tardar en el mes de Mayo de cada año, un informe financiero de la aplicación y destino de los recursos del año inmediato anterior.

# **PROPUESTA DE UN SISTEMA ADMINISTRATIVO PARA UNA EMPRESA GANADERA EN EL MUNICIPIO DE ALVARADO, VERACRUZ, MÉXICO**

Minerva Parra Uscanga, Universidad Veracruzana  
María Eugenia Senties Santos, Universidad Veracruzana  
Karla María Gallegos Parra, Universidad Veracruzana  
José Luis Ramírez Rojas, Universidad Veracruzana  
Suzel Gómez Jiménez, Universidad Veracruzana

## **RESUMEN**

*En este protocolo se presenta una propuesta de diseño de un sistema administrativo, de agronegocios para el rancho "El Huamichal". El rancho es una unidad de producción pecuaria de doble propósito, que produce ganado F1 (Cebú con Suizo), está situado en el municipio de Alvarado, en Veracruz, México. Desde su creación el rancho, ha sido manejado por sus propietarios de con una administración empírica y tradicional utilizando el mismo sistema de producción heredado por generaciones anteriores, por tanto no cuenta con ningún tipo de sistema de administración formal para él, manejo del mismo. Lo anterior provoca un desorden y falta de uniformidad en los documentos, procedimientos, decisiones y organización de la empresa, además de que se hace difícil establecer el control eficiente de las operaciones. La intención de este trabajo es contribuir a la solución de un problema administrativo del rancho, haciendo en un futuro factible la propuesta.*

**PALABRAS CLAVE:** Administración, agronegocio, producción pecuaria.

## **DESIGN SYSTEM AGRIBUSINESS MANAGEMENT, FOR THE RANCH "THE HUAMICHAL" OF ALVARADO, VERACRUZ, MEXICO**

### **ABSTRACT**

*This protocol presents a design proposal for an administrative system for the ranch agribusiness "The Huamichal". The ranch is a unit of dual purpose cattle production, producing Zebu cattle, is located in the town of Alvarado, Veracruz. Since its inception the ranch has been managed by its owners and traditional empirically using the same production system inherited from previous generations, therefore lacks any formal administration system for, handling. This causes a disorder and lack of uniformity in the documents, procedures, decisions and organization of the company, plus it is difficult to establish efficient control of operations. The intention of this paper is to contribute to the solution of an administrative problem of the ranch, making a viable future in the proposal.*

**JEL:** M1, M10, M11, M15, Q12, Q13

**KEYWORDS:** Administration, agribusiness, cattle production.

### **INTRODUCCIÓN**

La administración se basa en el establecimiento de un sistema que permite, de manera continua, integral y secuencial, la planeación, el seguimiento y la evaluación de las actividades de la empresa. En México, las actividades ganaderas en general registran escasos márgenes de utilidad como consecuencia del bajo uso

de innovaciones tecnológicas, que incluye aspectos tanto de tecnología como de administración, organización, capacitación y capital. Esta situación se ha agudizado en la primera mitad de la década del 2000, en parte por la apertura comercial que pone a competir a los ganaderos del país con los ganaderos de otras partes del mundo, lo que afecta desde el productor más grande y tecnificado hasta al más pequeño productor por el incremento en sus costos de producción, principalmente en los insumos alimenticios. Al continuar en la actividad pecuaria, los ganaderos deben aceptar el reto de reconvertir los sistemas tradicionales de producción en sistemas eficientes y rentables, modificar prácticas tradicionales de producción y aplicar conceptos de administración, apoyados en las inversiones necesarias. Para lograrlo, se demanda cada vez más de información tanto técnica como económica para identificar áreas problema en la empresa, contar con elementos para justificar nuevas inversiones, identificar los beneficios de las innovaciones tecnológicas adoptadas, evaluar su productividad, y sobre todo, conocer si su actividad es rentable y competitiva (Aguilar et al., 2001).

Por lo tanto, para que los ranchos dedicados a la ganadería en México, tanto empresarial como en unidades familiares de producción, puedan garantizar su permanencia a largo plazo produciendo y generando empleos, ingresos y bienestar, es indispensable que trabajen de manera organizada y que adopten un esquema de administración que incluya procesos de planeación, seguimiento y evaluación técnica y económica de las actividades del rancho. Los objetivos específicos de la investigación son: realizar el diagnóstico situacional del rancho, elaborar el análisis y diseño del sistema de administración, elaborar la propuesta final del sistema. Los impactos esperados son:

*Impacto administrativo.* Servirá para adoptar y aplicar teoría y técnicas de administración en el rancho. El sistema permitirá, el orden y arreglo lógico de las actividades realizadas en la unidad de explotación. Cuando el sistema administrativo de agronegocio se implante en un futuro en el rancho, se espera que tenga entre otros los siguientes resultados:

*Impacto económico:* Incrementar los ingresos económicos del rancho y a disminuir los costos

*Impacto técnico:* Posibilitará la mejora de la productividad del hato ganadero

*Impacto social:* Apoyará a mantener la planta productiva actual. Los propietarios se verán beneficiados, al contar con un sistema administrativo que mejore su eficiencia operativa, toma de decisiones y procesos de control. El concepto de agronegocio se revaloriza en el mundo de hoy debido a las exigencias de los consumidores en materia de calidad, presentación, precios, que adquieren tal magnitud que el sistema en su conjunto debe reaccionar para satisfacer su demanda. Veracruz de Ignacio de la Llave destaca como el mayor productor de carne en pie de Bovino. (SAGARPA, 2010)

## REVISIÓN LITERARIA

La presente investigación en su marco teórico, recurre a varios autores, pero sobre todo del que más se encuentra literatura es de Aguilar Valdés, Alfredo. Los ganaderos deben aceptar el reto de reconvertir los sistemas tradicionales de producción en sistemas eficientes y rentables, modificar prácticas tradicionales de producción y aplicar conceptos de administración, apoyados en las inversiones necesarias. Para lograrlo, se demanda cada vez más de información tanto técnica como económica para identificar áreas problema en la empresa, contar con elementos para justificar nuevas inversiones, identificar los beneficios de las innovaciones tecnológicas adoptadas, evaluar su productividad, y sobre todo, conocer si su actividad es rentable y competitiva (Aguilar, 2001).

La administración se basa en el establecimiento de un sistema que permite, de manera continua, integral y secuencial, la planeación, el seguimiento y la evaluación de las actividades de la empresa. La administración es un proceso que comprende una serie de acciones y características en donde se

determina principalmente la fijación de objetivos, es un proceso continuo, ya que siempre existirán necesidades alimenticias, y en medida de que haya un crecimiento, motivara a hacia nuevas aspiraciones, encaminadas hacia la mejora de los productos agrícolas y pecuarios.

## METODOLOGÍA

La investigación es mixta, Cuantitativa y cualitativa. El alcance es descriptivo ya que el estudio no es experimental. La población a estudiar esta formada por propietarios y empleados se realizara un censo. Se utilizaran fuentes de información, secundarias para el desarrollo del marco contextual de la investigación como lo son los censos de, Servicios de Información y Estadística Agroalimentaria y Pesquera (SAGARPA), Instituto Nacional de Estadística y Geografía ( INEGI).

# LA INDUSTRIA AEROESPACIAL EN MEXICALI, BAJA CALIFORNIA, MÉXICO Y SUS ESTRATEGIAS PARA CONTRATAR AL PERSONAL MÁS CAPAZ

Cruz Elda Macías Terán, Universidad Autónoma del Estado de Baja California

Robert Efraín Zárate Cornejo, Universidad Autónoma del Estado de Baja California

Leonel Rosiles López, Universidad Autónoma del Estado de Baja California

## RESUMEN

*El propósito del presente trabajo es brindar a la industria aeroespacial ubicada en Mexicali, Baja California, México, un diagnóstico sobre la eficiencia de sus estrategias de gestión del talento humano al reclutar, seleccionar y contratar a sus trabajadores. Es una investigación de corte cuantitativo de tipo descriptivo. Para lograr el propósito mencionado, se revisan los diversos procesos de reclutamiento y selección de personal que realizan las 8 empresas que integran la industria aeroespacial ubicada en la ciudad materia de estudio. Se revisan algunos planteamientos teóricos sobre la gestión del talento humano. Se realizan encuestas a gerentes y trabajadores de las empresas estudiadas, de esta manera se identifican algunas estrategias empleadas para reclutar, seleccionar y contratar a sus trabajadores, las cuales prevalecen entre las citadas empresas, así como aquellas estrategias que requieren ser modificadas o sustituidas por no haber demostrado su eficiencia. Como hallazgo de la investigación sobresale el hecho que no existe consenso sobre el número de empresas que conforman la industria aeroespacial en Mexicali. Lo anterior resulta significativo, si se considera que la industria aeroespacial se estableció en Baja California desde hace más de 40 años. Con base en los resultados de este trabajo, se presentan algunas reflexiones finales.*

**PALABRAS CLAVE:** industria aeroespacial, gestión del talento humano, proceso de selección del personal

## THE AEROSPACE INDUSTRY IN MEXICALI, BAJA CALIFORNIA, MEXICO, AND ITS STRATEGIES TO RECRUIT MORE CAPABLE PERSONNEL

### ABSTRACT

*The purpose of this paper is to provide the aerospace industry located in Mexicali, Baja California, Mexico, a diagnosis on the efficiency of its human talent management strategies to recruit, select, and hire its workers. It is a quantitative descriptive research. To achieve the purpose just mentioned, various processes of recruitment and selection of personnel performed by eight companies that integrates the aerospace industry located in the city area of study are reviewed. Some theoretical approaches to the management of human talent are reviewed. Surveys are carried out to managers and employees of the companies studied; in this way some strategies to recruit, select and hire workers, which prevail among the aforementioned companies, as well as strategies that need to be modified or substituted for not having demonstrated its efficiency, are also reviewed. As a research finding is the fact that there is no consensus on the number of companies that make up the aerospace industry in Mexicali. This is significant, considering that the aerospace industry has been established in Baja California for more than 40 years. Based on the results of this work, some final thoughts are presented.*

**KEYWORDS:** aerospace industry, human talent management, the recruitment process

## INTRODUCCIÓN

En México, dada su creciente incursión en el intrincado ámbito global, las empresas mexicanas deben enfrentar la exigencia de contratar trabajadores que posean conocimientos y habilidades cada vez más especializados. En la actualidad talento y competitividad son dos términos que forman parte del lenguaje y significado de los negocios, pues el talento se ha convertido en un activo principal para la creación de valor estratégico de las empresas. “La mayor evidencia de falta de talento la sufren especialmente en organizaciones de alta tecnología” (Cheese, Thomas y Craig, 2008, p. xviii). La industria aeroespacial es tal vez uno de los sectores en la industria mexicana en donde esta situación resulta evidente, pues en ella se realizan actividades de muy alta tecnología. Según datos de la Federación Mexicana de la Industria Aeroespacial, A. C. [FEMIA] (2012), con más de 40 años en el país, la industria aeroespacial mexicana se encuentra ahora en una marcada expansión. La existencia de 266 empresas ubicadas en 18 estados del país dan cuenta de ello. los estados en donde se ubica el mayor número de estas empresas son: Baja California con 59, Sonora con 45, Querétaro con 33, y Chihuahua y Nuevo León con 32, respectivamente. A decir de Salieri y Santibañez (2010) “el sector aeroespacial mexicano tiene un fuerte enfoque hacia la manufactura y el ensamblaje de componentes básicos para la exportación” (p.9).

Las citadas autoras señalan que actualmente este sector integra una cadena de valor con actividades como: desarrollo de materiales y sistemas innovadores, diseño de aviones, diseño de componentes, diseño de sistemas, manufactura, así como ensamble de aeromóviles o componentes y mantenimiento y reparación de aviones o componentes. Resulta evidente que tales actividades requieren capacidades especializadas por parte de los trabajadores que las realizan. He ahí la necesidad de este sector de contratar al personal más capaz. Para lograrlo, las empresas deben hacer gala de un amplio repertorio de estrategias de reclutamiento y selección de talento humano que les permita contratar al personal más idóneo. Dado lo anterior, el propósito de esta investigación es brindar a la industria aeroespacial, particularmente a la ubicada en Mexicali, Baja California, México, un diagnóstico sobre la eficiencia de sus estrategias de gestión del talento humano al reclutar, seleccionar y contratar a sus trabajadores.

Por tanto, el objetivo de esta investigación es analizar los diversos procesos de reclutamiento y selección de personal que realizan las empresas que integran la industria aeroespacial ubicada en la ciudad materia de estudio, para identificar aquellas estrategias que requieren ser modificadas o sustituidas por no haber demostrado su eficiencia. El trabajo que se presenta a continuación es la primera parte de un trabajo más amplio, el cual se encuentra en proceso. El estudio está organizado de la siguiente manera: en la sección de revisión literaria se presentan algunos planteamientos teóricos sobre la gestión del talento humano, el reclutamiento, la selección y contratación del personal; en la sección de metodología se especifica los sujetos estudiados, el material utilizado y el procedimiento aplicado; en la sección de resultados se presenta un análisis de los datos obtenidos; finalmente en la sección de conclusiones se presentan algunas reflexiones finales.

## REVISIÓN LITERARIA

Se inicia la presente revisión literaria retomando la propuesta de Dessler (2001) quien visualiza a la administración de recursos humanos como: “el proceso que contiene las funciones del proceso administrativo, que se aplica a las políticas y las prácticas que se requieren para cumplir con los aspectos relativos al personal o al recurso humano, que competen a un puesto de administración, que incluyen reclutar, seleccionar, capacitar, compensar y evaluar” (p. 2). A decir de Daft y Marcic (2006) la administración de recursos humanos se ha convertido en los últimos años en un jugador vital de la estrategia corporativa, haciendo a un lado la antigua imagen del “departamento de personal”. Los citados

autores precisan que una administración de recursos humanos que resulte efectiva, impacta positivamente en el desempeño organizacional, lográndose una productividad de los empleados más alta y un desempeño financiero más fuerte. Por su parte Cheese, Thomas y Craig (2008), destacan el surgimiento de un nuevo paradigma en el que las organizaciones se basan en el talento humano como una estrategia para el logro de alto rendimiento (*high performance*) en un mundo global.

Luego entonces, en el ámbito de las organizaciones, la realización de un proceso oportuno de reclutamiento y selección de talento humano, garantiza que los puestos de trabajo se cubran con el personal más capaz. De esta manera, se evita el riesgo de hacerlo de manera precipitada, con personas que en realidad no reúnan los requerimientos del puesto y que como consecuencia tengan un bajo rendimiento. Algunos autores que han estudiado el tema del reclutamiento y selección de personal han sido: Chiavenato (2011), Alles (2006), Rodríguez (2007), Yagüez, López-Jurado, García y Casanovas (2007), Robbins y Decenzo (2002), Porret (2010) y Cheese, Thomas y Craig (2008). El reclutamiento ha sido definido por Chiavenato (2009), como una “actividad cuyo objeto inmediato es atraer candidatos de entre quienes elegir a los futuros integrantes de la organización” (p. 128). El citado autor señala que se siguen tres etapas: 1) investigación interna de las necesidades, 2) investigación externa del mercado y 3) definición de las técnicas de reclutamiento.

Por su parte Alles (2006), define al reclutamiento como “el proceso de identificar y atraer a un grupo de candidatos, de los cuales más tarde se seleccionará a alguno que recibirá la oferta de empleo” (p.101). En tanto que la selección de personal la define como la “elección de una persona en particular en función de criterios preestablecidos” (p. 102). Existe consenso entre algunos autores al establecer diferencias sustanciales entre el proceso de reclutamiento y el proceso de selección de personal. Así Rodríguez (2007) destaca esta diferencia, al decir que el reclutamiento se realiza mediante la aplicación de varias técnicas para escoger a aquellos candidatos que reúnan los requisitos mínimos para ocupar un puesto que se encuentre vacante; en tanto que la selección de personal se realiza entre los candidatos reclutados escogiendo a aquel que posiblemente se ajustará de la mejor manera al puesto vacante.

Yagüez y cols. (2007) coinciden con Rodríguez (2007) al decir que “el reclutamiento trata de conseguir una cantidad suficiente de candidatos sobre los que posteriormente se realizará el proceso de selección” (p. 73). Por su parte Robbins y Decenzo (2002) siguiendo el mismo orden de ideas, identifican al proceso de selección de personal, a partir de los candidatos reclutados, como el siguiente paso a seguir y observan en él un ejercicio de pronósticos, pues “pretende pronosticar cuáles solicitantes tendrán ‘éxito’ en caso de ser contratados, cuáles cumplirán bien a partir de los criterios que la organización usa para evaluar a sus empleados” (p. 190) Así también Porret (2010), observa la existencia de varias fases en el proceso de reclutamiento de personal: 1) decisión de la empresa de cubrir un puesto de trabajo, 2) difusión de la existencia de vacante e inicio de recepción de solicitudes, 3) fin de recepción de solicitudes e inicio del proceso de selección, 4) elección de la persona más adecuada e incorporación a la organización y 5) decisión de la empresa de incorporarlo definitivamente. De esta manera, el citado autor distingue a la selección del personal como un subproceso del proceso de reclutamiento. Así también Alles (2006) identifica a la selección como un subsistema del reclutamiento.

A decir de la citada autora, “el subsistema que se ocupa de la selección de personas se denomina: Atracción, Selección e Incorporación de Personas” (p. 101). Cheese, Thomas y Craig (2008), plantean como pregunta clave para los empresarios: “¿Cómo descubrir el talento individual que necesita y atraerlo a su organización?” (p.89). Los citados autores destacan que en la actualidad la economía basada en el conocimiento exige una combinación tanto de una serie de capacidades principales como de un conocimiento específico. Así los empresarios deben identificar capacidades que requieren que tengan los candidatos a contratar, que pueden ser tecnológicas, informativas (oral y escrita), para la resolución de problemas, de adaptación y de trabajo de equipo. Así también deben identificar los conocimientos

específicos que requieren, que pueden ser sobre ciencia e ingeniería, matemáticas, lenguas y conocimientos comerciales.

Tras la identificación de las capacidades y los conocimientos, los autores antes citados, exponen que el primer paso para la contratación de talento humano es el utilizar los canales de contratación interna, tales como boletines informativos, comunicaciones vía intranet y el boca a boca, para desarrollar a los trabajadores con que ya se cuenta y darles oportunidades de crecimiento dentro de la empresa. Para la contratación externa, los autores recomiendan el uso del propio sitio web de la empresa, a través del cual las personas interesadas en la empresa puedan de una manera fácil y eficiente presentar su solicitud de empleo. Así también recomiendan el uso de otros sitios web especializados para la contratación de talento humano. Sin duda el uso de las Tecnologías de la Información y la Comunicación (TICs) ha transformado la gestión del talento humano, especialmente la manera en que se realiza actualmente el reclutamiento y la selección de personal.

## METODOLOGÍA

El presente estudio es una investigación de corte cuantitativo de tipo descriptivo y transversal. Se analizan los diversos procesos de reclutamiento y selección de personal que realizan las empresas que integran la industria aeroespacial ubicada en Mexicali, Baja California, México. El universo estudiado está conformado por 4,134 trabajadores que laboran en ocho empresas dedicadas a la industria aeroespacial, como se puede observar en la Tabla No. 1.

Tabla 1: Empresas Que Integran la Industria Aeroespacial en Mexicali, Baja California

No.	Nombre de la Empresa	No. de Empleados
1	<u>Empresas L. M.</u>	30
2	<u>Gkn Aerospace Chem-Tronics Mexicali</u>	135
3	<u>Goodrich Aerospace De México</u>	300
4	<u>Honeywell Aerospace De México</u>	1200
5	<u>Interiores Aéreos (Gulfstream)</u>	1400
6	<u>Lmi Aerospace</u>	135
7	<u>Nex-Tech Aerospace</u>	34
8	<u>Placas Termodinámicas</u>	900
	Total	4134

*Esta tabla fue elaborada a través de métodos propios con Información obtenida en el Directorio de la Industria Maquiladores de Baja California (2011). Se puede observar que son tres las empresas con mayor número de empleados en la ciudad.*

La muestra fue no probabilística, de tipo bola de nieve, ya que las empresas de la industria aeroespacial no permitieron el acceso a los encuestadores, argumentando que no se debía distraer a los trabajadores de sus actividades tan especializadas. Dado lo anterior, se optó por solicitar ayuda a los alumnos de la Facultad de Ciencias Administrativas de la Universidad Autónoma de Baja California, a quienes se les preguntó si tenían algún familiar, amigo o conocido que trabajara en esta industria y que quisiera participar en el presente estudio. De esta manera a través de alumnos de licenciatura y posgrado se pudo llevar a cabo una encuesta. La muestra estuvo integrada por 87 trabajadores de empresas que conforman la industria aeroespacial en la ciudad materia de estudio, y que aceptaron participar en la presente investigación, de los cuales 62 fueron hombres y 25 mujeres. El rango de edad más frecuente de los participantes fue de 21 a 23 años, la escolaridad más frecuente fue a nivel secundaria y el rango de antigüedad más frecuente en la empresa de 1 a 5 años.

Asimismo se encuestaron a 21 gerentes que laboran en las empresas materia de estudio y que aceptaron participar en la presente investigación. En este caso, la aplicación de cuestionarios se realizó a través de los alumnos de la Facultad antes mencionada o a través de llamadas telefónicas, con la ayuda de prestadores de servicio social del programa Adjunto de Investigadores. En el caso de los trabajadores se aplicó un cuestionario con 19 preguntas cerradas pluricotómicas con opción única y dicotómicas. En el caso de los gerentes se aplicó un cuestionario con cinco preguntas, de las cuales tres eran preguntas abiertas. Lo anterior, dada la poca disponibilidad de tiempo de los encuestados. La encuesta entre los

gerentes se realizó durante los meses de junio y julio de 2012, en tanto que la encuesta entre los trabajadores se realizó durante los meses de enero a abril de 2013. Los datos obtenidos en esta indagatoria fueron procesados a través del programa estadístico IBM SPSS. Para analizar los datos obtenidos se aplicó estadística descriptiva, como fueron medidas de tendencia central. Asimismo se realizaron algunas correlaciones entre variables como por ejemplo el grado de escolaridad y la duración del proceso de selección, o el área donde se labora y el tipo de contratación con que se cuenta.

## RESULTADOS

Los resultados de la presente investigación se presentan de acuerdo a cuatro categorías de análisis: 1) fuentes de reclutamiento de personal, 2) proceso de selección de personal, 3) estrategias para atraer al personal más capaz y 4) la contratación que se realiza.

### Las Fuentes de Reclutamiento de Personal

A decir de los gerentes encuestados, entre las fuentes que realiza la empresa para atraer personal especializado destacan el uso de fuentes internas, como lo es el ofrecer las vacantes primero al interior de la empresa al personal ya capacitado y fuentes externas como lo es la Feria del Empleo. Al preguntárseles a los trabajadores si las fuentes de reclutamiento que utiliza la empresa donde trabajan logran proporcionar a la empresa al personal más preparado, la mayoría contestó afirmativamente. Al respecto, el 18% de los trabajadores encuestados las evaluó como regulares, 36% como buenas y 25% las evaluó como muy buenas en el cumplimiento de esta tarea. Asimismo el 40% de los trabajadores encuestados expuso que la publicación de las vacantes en la empresa es buena y 25% la consideró como muy buena. De hecho el 67% de los trabajadores encuestados manifestaron que fue fácil enterarse de la vacante en la empresa. En cuanto a los medios publicitarios que utiliza la empresa para publicar las vacantes los trabajadores los evaluaron como satisfactorios: 15% los consideró como regulares, 38% los consideró buenos y un 29% los considero muy buenos.

### El Proceso de Selección de Personal

Con relación al proceso de selección, el 60% de los trabajadores encuestados consideró que no fue un proceso largo. Sin embargo, se pudo observar que para los candidatos con grado académico de maestría y licenciatura, el proceso de selección si resultó largo, lo que podría indicar que para puestos más especializados el proceso de selección podría ser más complejo (Ver Tabla 2).

Tabla 2: el Tiempo Que Duró el Proceso de Selección Fue Largo en Opinión de los Trabajadores (En %)

Grado Académico	Verdadero	Falso	Total
Secundaria	37	63	100
Técnico	36	64	100
Preparatoria	41	59	100
Licenciatura	54	46	100
Maestría	67	33	100
Total	40	60	100

*En esta tabla se puede observar que en opinión de los trabajadores, el tiempo que dura el proceso de selección aumenta a partir de los puestos que requieren estudios a nivel licenciatura.*

El 92% de los trabajadores manifestó que los encargados del proceso de selección le explicaron claramente en qué consistía el trabajo. El 36% de los encuestados señaló que la empresa los seleccionó aunque no contaba con los conocimientos especializados para el puesto. Sin embargo se observó que para todos los trabajadores encuestados con grado de maestría, esta afirmación resultó ser falsa, lo que podría implicar que para puestos más especializados las empresas no contratan a personas que no cuenten con los conocimientos que el puesto requiere (Ver Tabla 3). Lo anterior se confirmó al preguntárseles a los gerentes si la formación académica con la que cuenta el aspirante es la principal razón por la que se le

selecciona para ingresar a trabajar en el área de producción, 25% contestó que es falso, en tanto que 75% manifestó que es verdadero. Al realizar la misma pregunta pero en relación al área administrativa se obtuvo que el 100% de los encuestados contestó que la formación académica es la principal razón de selección en esta área. Lo que significa que prevalece entre las empresas materia de estudio la estrategia de darle importancia a la formación académica a la hora de seleccionar al personal.

Tabla 3: Importancia de los Conocimientos Especializados Para la Selección del Personal en Opinión de los Trabajadores (En %)

Grado Académico	Verdadero	Falso	Total
Secundaria	29	71	100
Técnico	45	55	100
Preparatoria	39	61	100
Licenciatura	46	54	100
Maestría	0	100	100
Total	36	64	100

En esta tabla se puede observar que en opinión de los trabajadores, los conocimientos especializados en su proceso de selección fueron importantes, especialmente para puestos donde se requirió de un grado de maestría.

El dominio del idioma inglés no fue requisito para ser seleccionado para trabajar en las empresas materia de estudio. Del total de trabajadores encuestados de departamentos de manufactura, el 76% manifestó que el dominio del idioma inglés no fue requisito para obtener su puesto. Sólo se pudo observar que para el 67% de los trabajadores que trabajan en el área de recursos humanos si fue requisito para obtener su puesto (Ver Tabla 4). Lo anterior resulta significativo, dado el hecho que las empresas aeroespaciales ubicadas en Mexicali son de Estados Unidos.

Tabla 4: El Idioma Inglés Como Requisito Para Obtener Un Puesto Por Área o Departamento en Opinión de los Trabajadores (En %)

Área o Departamento	Verdadero	Falso	Total
Ingeniería y diseño	44	56	100
Calidad	41	59	100
Manufactura	24	76	100
Recursos Humanos	67	33	100
Otra	34	66	100
Total	33	66	100

En esta tabla se puede observar que en opinión de la mayoría de los trabajadores encuestados, el dominio del idioma inglés no fue requisito para obtener su puesto, con excepción de la mayoría de los trabajadores encuestados del departamento de Recursos Humanos.

Las Estrategias Para Atraer al Personal Más Capaz: El 100% de los gerentes encuestados manifestó que en las empresas de la industria aeroespacial donde trabajan si se contemplan estrategias tendientes a atraer, desarrollar y retener a las personas más capaces para el logro de la competitividad de la empresa. Sin embargo el 57% señaló que se requieren mejorar las estrategias relacionadas al ingreso de personal, lo anterior pone de manifiesto que a decir de los encuestados no todas las estrategias puestas en práctica para reclutar, seleccionar y contratar personal han demostrado su efectividad. Por su parte los trabajadores al ser encuestados, confirmaron lo dicho por los gerentes. En su opinión si se aplican estrategias tendientes a atraer a las personas más capaces (Ver Tabla 5).

Tabla 5: Opinión De Los Trabajadores En Cuanto A Si Se Aplican Estrategias Tendientes A Atraer A Las Personas Más Capaces. (En %)

Área o Departamento	Verdadero	Falso	Total
Ingeniería y diseño	56	44	100
Calidad	81	19	100
Manufactura	81	19	100
Recursos Humanos	100	0	100
Otra	67	33	100
Total	78	21	100

*En esta tabla se puede observar que en opinión de la mayoría de los trabajadores encuestados, es verdadero que se aplican estrategias tendientes a atraer a las personas más capaces. Resulta significativo que no sólo el Departamento de Recursos Humanos, sino todos los demás departamentos coinciden en esto.*

A decir de los gerentes encuestados, entre las acciones que realiza la empresa para atraer personal especializado destacan el contratar sólo personal con experiencia comprobable, publicar las vacantes en la Feria del Empleo con especificaciones precisas, elaborar descripciones de puestos detalladas y contratar sólo a quienes encuadren en ellas, aplicar exámenes de conocimientos y práctico, así como realizar entrevistas a profundidad. Algunos gerentes también comentaron otras estrategias como la de buscar personal en otras empresas del mismo giro en el país, ofrecer prestaciones superiores a las de la Ley y la de capacitar adecuadamente a los encargados del proceso de selección.

### La Contratación Que Se Realiza

En relación a la contratación que se realiza en las empresas materia de estudio, el 24% de los gerentes encuestados señaló que las contrataciones son de tiempo indeterminado y por *outsourcing*. El 42% expresó que las contrataciones en la empresa que laboran son por tiempo determinado, indeterminado y *outsourcing*. En tanto que 14% manifestó que las contrataciones en la empresa donde laboran son por tiempo determinado e indeterminado. Únicamente el 10% manifestó que las contrataciones se realizan por tiempo determinado. Ninguno de los encuestados manifestó que se contrata personal por honorarios. A través de las encuestas aplicadas a trabajadores de las empresas materia de estudio, se pudo constatar que las principales formas de contratación se realizan a través de contratos por tiempo definido e indefinido. Analizando esta situación por departamento se observó que la mayoría de los trabajadores encuestados cuenta con este tipo de contratación, lo que confirma lo dicho por los gerentes encuestados. Sobresale en este punto el departamento de Ingeniería y Diseño, ya que el 100% de los trabajadores dijo contar con contrato por tiempo indefinido (Ver tabla 6). Sin duda esta situación les brinda a los trabajadores una estabilidad laboral y económica, muy difícil de encontrar en las empresas durante estos tiempos de crisis económica

Tabla 6: Mi Contratación es por Tiempo Indefinido

Área o Departamento	Verdadero	Falso	Total
Ingeniería y diseño	100	0	100
Calidad	70	30	100
Manufactura	57	43	100
Recursos Humanos	67	33	100
Otra	83	17	100
Total	68	32	100

*En esta tabla se puede observar que un gran número de Trabajadores encuestados manifestaron contar con contrato por tiempo indefinido, lo que pone de manifiesto una estabilidad laboral para ellos. Sobresale el caso de los trabajadores del área de Ingeniería y Diseño.*

### CONCLUSIONES

Tras el análisis de los datos presentados en el apartado anterior, se plantean a continuación las siguientes conclusiones: Primera.- Las fuentes de reclutamiento de personal utilizadas por la industria aeroespacial en Mexicali, Baja California, resultaron eficientes para reclutar al personal más capaz, pues a decir de los gerentes se utilizan en primera instancia a las fuentes internas, como lo es el ofrecer la vacante al personal con el que ya se cuenta y que ha sido capacitado para trabajos más especializados. Esta estrategia resulta eficiente, pues de esta manera se conocen de primera mano los conocimientos, habilidades y actitudes que posee el candidato al puesto. Se reduce el riesgo de fracaso del candidato. Asimismo de esta manera se privilegia la permanencia en la empresa, la creación de un plan de vida y trabajo, se reduce la monotonía y se promueve el interés en el trabajo a través del logro de metas tanto personales como organizacionales.

Segunda.- Se observó que la duración del proceso de selección de personal varía en función del grado de especialización que se busca. Mientras para los trabajadores con una escolaridad de nivel secundaria y preparatoria el proceso de selección fue corto, para los trabajadores con niveles de escolaridad de licenciatura y maestría el proceso de selección fue largo. Esta estrategia resulta adecuada, ya que indica que las empresas se toman más tiempo para evaluar a los candidatos que cubrirán puestos de mayor especialización. Se concluye que esta estrategia se debe mantener para que se pueda realizar la contratación de personal más capaz, a través de pruebas de conocimiento y de práctica.

Tercera.- Se observó que el dominio del idioma inglés no fue requisito para ser seleccionado para trabajar en las empresas de la industria aeroespacial. Se concluye que esta estrategia debería modificarse, ya que tanto la materia prima, el equipo, así como los manuales de operación y demás instrumentos, en su mayoría portan instrucciones o anotaciones en inglés. El desconocimiento de este idioma puede provocar desperdicio de material, descomposturas en el equipo, productos terminados que no aprueben los estándares de calidad, entre otras cosas, con el consecuente impacto económico que esto implicaría para la empresa. Todo lo anterior además de la dificultad para comunicarse con sus similares en las empresas matrices en el extranjero. Cuarta.- Se pudo constatar que sí existen estrategias para atraer al personal más capaz; sin embargo se pudo observar que existe entre los gerentes un claro sentimiento de que se requiere mejorarlas. Lo anterior pone de manifiesto que no todas las estrategias puestas en práctica para reclutar, seleccionar y contratar personal han demostrado su eficiencia.

La revisión literaria realizada en este estudio, mostró que el proceso de reclutamiento y selección de personal en la actualidad ha incorporado a las TICs como herramienta valiosa en la consecución de esta tarea. Sin embargo ni los gerentes, ni los trabajadores encuestados mencionaron la utilización de esta herramienta para mejorar el proceso de reclutamiento y selección de personal. Si bien es cierto que el 67% de los trabajadores encuestados manifestó que fue fácil enterarse de la vacante en la empresa, se podría aumentar este porcentaje si se incorporaran decididamente las TICs en este proceso. Se concluye que se deben mantener las estrategias existentes para atraer al personal más capaz y adicionar el uso del propio sitio web para que los candidatos puedan presentar sus solicitudes de empleo y sus currículums, además del uso de otros sitios web especializados y que son utilizados como bolsas de trabajo.

Quinta.- La contratación que se realiza en la industria aeroespacial es en su mayoría a través de contratos por tiempo indefinido; visto como estrategia de gestión de talento humano es una práctica que sin duda debe continuar, pues le brinda a los trabajadores un sentido de estabilidad laboral y económica, además de una tranquilidad mental para realizar su trabajo. Al llegar al término de la presente investigación se hace conciencia que se trata de un tema inacabado, el cual ofrece múltiples aristas para futuras investigaciones. Se requiere estudiar por ejemplo, la gestión del talento humano que se realiza en la industria aeroespacial para retener al personal en la empresa, una vez que ha sido contratado, asimismo resulta importante estudiar las estrategias que se realizan para provocar el interés en el trabajo del personal y para mantenerlo interesado.

### Limitaciones

Cabe señalar que existieron algunas limitaciones en el desarrollo de la presente investigación, tales como la falta de acceso a las empresas, lo que dio como resultado que la muestra no fuera probabilística y que ésta no fuera representativa de las ocho empresas que se pretendían estudiar con un índice de certidumbre alto.

## BIOGRAFÍA

Cruz Elda Macías Terán es Licenciada en Administración de Empresas egresada de la Escuela de Contabilidad y Administración de la Universidad Autónoma de Baja California (UABC) México en 1987, titulada en 1989; obtuvo grado de Maestra en Docencia y Administración Educativa en 2004 por la UABC; obtuvo grado de Doctora en Ciencias de la Educación en 2009 por la Universidad Autónoma del Estado de Hidalgo. Es doctorante del programa de Doctorado en Ciencias Administrativas en UABC. Es Académica Certificada en Administración por la Asociación Nacional de Facultades y Escuelas de Contaduría y Administración (ANFECA) y se desempeña actualmente como Profesor Investigador en la Facultad de Ciencias Administrativas de la Universidad Autónoma de Baja California.

Leonel Rosiles López es Contador Público egresado de la Escuela de Contabilidad y Administración de la Universidad Autónoma de Baja California (UABC) México en 1987, titulado en 1988; realizó estudios de especialidad en fiscal terminados en 1996; obtuvo grado de Maestro en Contaduría en 2003; obtuvo grado de Doctor en Ciencias Administrativas en septiembre de 2011, por la UABC. Es Académico Certificado en Contaduría por la Asociación Nacional de Facultades y Escuelas de Contaduría y Administración (ANFECA) y se desempeña actualmente como Profesor Investigador en la Facultad de Ciencias Administrativas de la Universidad Autónoma de Baja California.

Robert Efraín Zárate Cornejo realizó sus estudios de licenciatura en Economía en la Universidad Nacional San Cristóbal de Huamanga (Perú, 1994), la Maestría en Desarrollo Regional (2002) en El Colegio de Frontera Norte y el Doctorado en Ciencias Económicas (2006) en la Universidad Autónoma de Baja California. Es profesor investigador miembro del SNI nivel I, actualmente se desempeña como profesor de Tiempo Completo en la Facultad de Contaduría y Administración, en la Licenciatura de Negocios Internacionales y las maestrías en Administración y Maestría en Tecnologías de Información y

Comunicación, coordina el área de economía y comercio internacional y realiza investigación en la línea de investigación Desarrollo Regional, Competitividad y Sistemas de Innovación.

# **GESTIÓN DE LA INVESTIGACIÓN CIENTÍFICA UNIVERSITARIA Y SU FINANCIAMIENTO. CASO: UNIVERSIDAD DEL ZULIA- VENEZUELA**

Rubén Araujo, Universidad del Zulia  
Caterina Clemenza, Universidad del Zulia  
Elizabeth Castro, Universidad del Zulia  
Jeffry Ferrer, Universidad del Zulia

## **RESUMEN**

*El propósito de esta ponencia es analizar la gestión de la investigación científica en la Universidad del Zulia y las estrategias de financiamiento llevadas a cabo por Consejo de Desarrollo Científico y Humanístico, como ente rector de la investigación en esta institución universitaria. Esta gestión está signada por problemas de índole presupuestaria que han hecho que se redefina de manera importante la actividad de investigación y las estrategias de subvención a la misma, impactando la producción científica. Se tomó como referente empírico a la Universidad del Zulia y a través de una investigación documental, con diseño bibliográfico, se procedió a levantar la información primaria, considerando para ello categorías de análisis como: presupuesto asignado a LUZ y al Consejo de Desarrollo Científico y Humanístico, así como también financiamiento otorgado a: publicaciones, programas y proyectos, y asistencia a eventos nacionales e internacionales. Los resultados empíricos demuestran que durante el periodo 2002-2011, la Universidad del Zulia se ha visto en la necesidad de redefinir su política de investigación, visualizando la actividad científica como elemento estratégico que permite la inserción de ésta a las transformaciones que se están suscitando en el país, promoviendo la producción y desarrollo de proyectos que fortalezcan el aparato científico, tecnológico e industrial de Venezuela.*

**PALABRAS CLAVE:** Investigación Científica, financiamiento, producción científica.

## **SCIENTIFIC RESEARCH MANAGEMENT AND FUNDING UNIVERSITY. CASE: UNIVERSIDAD DEL ZULIA, VENEZUELA**

## **ABSTRACT**

*The purpose of this paper is to analyze the management of scientific research at the University of Zulia and financing strategies conducted by Council of Scientific and Humanistic Studies, as the governing body of research in this university. This management is marked by such budgetary problems have led to significantly redefine the research activity and strategies to grant the same, impacting scientific production. Was taken as empirical reference to the University of Zulia and through desk research, literature design, we proceeded to lift the primary information, taking into consideration as analytical categories: budget allocated to LIGHT and the Council of Scientific and Humanistic Studies, as well as financing provided to: publications, programs and projects, and assistance to national and international events. The empirical results show that during the period 2002-2011, the University of Zulia has seen the need to redefine its policy research, visualizing scientific activity as a strategic element to allow the inclusion of this transformations being raised in the country, promoting the production and development projects that strengthen the apparatus of science, technology and industry of Venezuela.*

**JEL:** M10

**KEYWORDS:** scientific research, finance, scientific production.

## INTRODUCCIÓN

Se tiene registros que el proceso científico de Venezuela se inicia en los años 1950, con la fundación de la Asociación Venezolana para el Avance de la Ciencia (ASOVAC); pero es entre 1958 y 1969 años de consolidación de la democracia venezolana, cuando se evidencia desarrollo de las instituciones científicas con la expansión de la educación superior, amparadas por el Estado quien comienza a asumir el compromiso por el desarrollo económico del país, creando el Instituto Venezolano de Investigaciones Científicas (IVIC), adscrito al Ministerio de Sanidad y Asistencia Social<sup>1</sup>, y en 1968 con la creación del Consejo Nacional de Ciencia y Tecnología (CONICIT), quien le dio un impulso importante a la estructura de la investigación, convirtiéndose en un ente de promoción y subvención de la actividad científica bajo la premisa de desarrollar investigación con utilidad social, convirtiéndose así, en la institución rectora de la política científica y tecnológica en Venezuela (Castejón, 1997).

Ahora bien, a partir de la creación de las instituciones antes mencionadas, el proceso de investigación científica en Venezuela pasa por dos momentos bien diferenciados: la década de los ochenta y de los noventa. Para investigadores como López y Ochoa (1998); Romero y Bustamante (2000); Castejón (1997); entre otros, la década de los ochenta es singular para la sociedad venezolana, representando un periodo de transición que marca a la ciencia y tecnología de incertidumbre ya que comienza a desdibujarse el orden imperante y nace nuevas formas de concebir la investigación. El discurso comienza a girar en torno a regionalización de la investigación, descentralización de la investigación, investigación orientada o aplicada vs. Investigación básica, investigación vinculada al sector productivo y por supuesto la discusión en cuanto a los peligros de caer en el utilitarismo de la investigación. Todo lo cual hace que la ciencia en Venezuela cambie de rumbo.

Para Romero y Bustamante (2000), citando a Freitas (1990), con el II Plan de Ciencia y Tecnología (1981-1984) comienza el declive de la ciencia en Venezuela “.... provocado por el pragmatismo que se adueñó de quienes definían la Política de Ciencia y Tecnología en el país..., desatando la fuga de cerebro como efecto de la desinversión en el sector, imposibilitando la compra o reposición de insumos, equipos, material bibliográfico especializado y asistencia de investigadores a congresos internacionales a fin de actualizarse y la contratación de científicos extranjeros para trabajar en Venezuela. (Romero y Bustamante, 2000: 140). Entonces, la actividad científica en nuestro país estuvo signada por un considerable desinterés del Estado de invertir en ella, tal vez por considerar que los productos generados de la investigación eran innecesarios y sin una aplicabilidad inmediata. Paralelamente a esta situación y afirmando que la universidad es el espacio donde se edificó la tradición de investigación en el país, se tiene que, por un lado en las universidades del país se comienza a internalizar la importancia de la investigación para el desarrollo nacional y en muchas universidades se elabora un reglamento general de investigación donde se orienta la actividad de creación de conocimiento a la resolución de problemas concretos que coadyuven al bienestar social, y por el otro; las universidades eran presionadas por el Estado para que redefinieran sus funciones básicas (docencia, investigación, extensión), bajo los lineamientos de éste dándole prioridad a la docencia y desarticulándola de la investigación.

Bajo estas situaciones, la investigación científica va perdiendo el rumbo. Los investigadores hacen investigación libre, al margen de la política de investigación, la cual se convierte en letra muerta. Tal y como lo dice López y Ochoa (1998) la política de investigación en los ochenta se formuló a través de un proceso racional pero el resto del proceso de formación siguió una lógica distinta. Tal vez el escenario en el cual se desenvolvían las universidades públicas las obligaba a marginar la investigación. Incremento de la matrícula e ineficiente asignación de recursos financieros, contribuyeron al deterioro universitario en todas las actividades que desarrollaba, específicamente las actividades del sector científico que se apoyaban en el ámbito universitario. Siguiendo a Romero y Bustamante (2000), los institutos públicos de

investigación compartían, en su mayoría los problemas de las universidades, más los propios a los cuales ellos se enfrentaban por formar parte directa del Estado, como por ejemplo el CONICIT que fue manejado burocráticamente y solo como instrumento de financiamiento a algunas actividades científicas y tecnológicas. Los noventa se caracterizan por una década de crisis severa para la comunidad científica venezolana. Hay un malestar creciente ante el deterioro profundo del ámbito de la investigación. Sin embargo, no se trata solamente de dificultades en un segmento particular de la vida nacional, sino de una crisis de grandes proporciones que aflige a la sociedad en su conjunto. (Vessuri, 1996: 253).

Es una década vinculada al nuevo modelo económico promocionado por el Estado, donde se produce para la exportación, con gran incidencia en el sistema científico-técnico (López y Ochoa, 1998). El nuevo paradigma productivo anunciaba que las ventajas comparativas de las empresas y de los países dejaban de estar sustentadas en materias primas y fuerza de trabajo abundante: ahora es el binomio conocimiento, tecnología convertido en capital intelectual e incorporado a los productos y procesos, así como la gestión global de la producción, lo que permite aumentar la productividad y mantener la competitividad a nivel internacional. (Romero y Bustamante, 2000: 144).

En este contexto se inicia y desarrolla la política científica en el país, dirigida por el Consejo Nacional de Investigaciones Científicas y Tecnológicas (CONICIT) quien orienta sus esfuerzos a la consolidación de los lineamientos de política de investigación, creando así las denominadas “Agendas”, las cuales persiguen orientar la investigación, a problemas específicos del quehacer nacional, con el concurso de todos los entes de investigación universitarios o no. Así, los años noventa marca la entrada del país al paradigma tecnoeconómico (Romero y Bustamante, 2000), el cual ha sido la perspectiva teórica – metodológica hasta finales del 2004. A partir de entonces, se asume, que el trabajo científico es estratégico que va más allá de la autorrealización del investigador y que requiere de organización bien estructurada y con visión de futuro.

Estas consideraciones llevan a plantear esta ponencia cuyo propósito es determinar el financiamiento de la investigación y su relación con la producción científica en la Universidad del Zulia durante el período 2002 – 2010. A través de una investigación documental, con diseño bibliográfico se procedió a levantar la información primaria, considerando para ello categorías de análisis como: presupuesto asignado a LUZ y al Consejo de Desarrollo Científico y Humanístico, así como también financiamiento otorgado a: publicaciones, programas y proyectos, asistencia a eventos nacionales e internacionales, formación de talento, y organización de eventos.

### **FINANCIAMIENTO ASIGNADO POR EL CONSEJO DE DESARROLLO CIENTÍFICO Y HUMANÍSTICO (CONDES) A LA ACTIVIDAD DE INVESTIGACIÓN**

Para determinar el financiamiento de la investigación y su relación con la producción científica en la Universidad del Zulia durante el período de 2002 – 2010, se considera en primer término el presupuesto total asignado a la Universidad del Zulia y la distribución que esta le otorga a la Investigación, vía Consejo Científico y Humanístico (CONDES), luego la distribución del Presupuesto del CONDES en las partidas financiadas por él, específicamente a las referidas: programas y proyectos financiados, asistencia a eventos y el número de revistas científicas. En la tabla 1, se observa el comportamiento del presupuesto asignado a la Universidad del Zulia (LUZ) y las asignaciones otorgadas al Consejo de Desarrollo Científico y Humanístico (CONDES) así como el monto en bolívares ejecutado, para los años 2002-2011. Se evidencia, que el incremento del presupuesto de LUZ ocasiona un aumento en la asignación financiera otorgada al CONDES, exceptuando de esta consideración los años 2003, 2006 y 2009, donde se ve disminuido el aporte Institucional. Se aprecia, una participación con respecto al presupuesto LUZ por debajo del 1%, tendencia mantenida durante el año 2010 y 2011.

Tabla 1: Presupuesto Asignado A Luz Y Al Condes Años 2002-2011

Años	Presupuesto asignado a LUZ	Presupuesto asignado al CONDES	Presupuesto ejecutado por el CONDES	Participación del presupuesto asignado al CONDES respecto al asignado a LUZ	Participación del presupuesto asignado al CONDES respecto al ejecutado
2002	266.859.907.762,00	3.000.000.000,00	2.012.000.388,07	1,12%	67,07%
2003	375.007.711.428,00	2.200.000.000,00	1.906.248.994,07	0,59%	86,65%
2004	479.922.430.413,00	5.279.706.275,00	4.063.029.278,00	1,10%	76,96%
2005	311.990.742.000,00	6.355.259.593,00	4.977.641.529,59	2,04%	78,32%
2006	459.222.226.000,00	3.663.633.195,00	3.176.467.837,94	0,80%	86,70%
2007	525.140.781.000,00	5.275.761.134,00	4.350.156.376	1,00%	82,45%
2008*	710.355.415	8.500.000	7.590.000	1,20%	89,29%
2009	780.046.569	3.500.000	3.496.266	0,45%	99,89%
2010	871.611.165	5.214.092	5.206.537	0,60%	99,86%
2011	980.543.002	5.749.683	5.659.165	0,59%	98,43%

Fuente: Dirección General de Planificación Universitaria de la Universidad del Zulia (DGPLANILUZ), Consejo de Desarrollo Científico y Humanístico CONDES. Universidad del Zulia. Elaboración propia \*A partir del año 2008, expresado en bolívares fuertes

-Para los años 2002, 2003, 2004, 2005 sólo se ejecutaba hasta recibir el dozavo correspondiente quedando pendiente algunos que no se recibieron

Ahora bien, con respecto a cómo el CONDES distribuyó su presupuesto, se tiene los datos en la tabla 2. Específicamente se consideran tres rubros, por ser éstos los que directamente afectan a los investigadores. El primero Programas y Proyectos, financió una totalidad de BsF.23.911.523 distribuidos en 1280 programas y proyectos. Se precisa que las subvenciones otorgadas se han mantenido más o menos estables a lo largo de los nueve años presentados. Observándose un aumento, del 2007 al 2008, con una importante disminución en el 2009 y recuperándose en el 2010.

A fin de precisar la participación porcentual de este rubro con respecto al presupuesto asignado al CONDES, en la tabla 3 se visualiza, como en el año 2002 un 68,49% fue destinado a subvencionar programas y proyectos, cayendo significativamente en el año 2003 a un 17,85%. Se debe recordar que en este año, estábamos sufriendo las consecuencias del paro petrolero y el golpe de estado perpetrado en el 2002. Ya para el 2004, se visualiza un incremento del mismo, llegando a 53,16%, alcanzando su valor máximo en el 2006 y 2010 (87,44% y 89,90% respectivamente)

Tabla 2: Distribución de las Subvenciones Asignadas Por el Condes Años 2002-2010

Programas y proyectos		Asistencia a eventos nacionales e internacionales	Revistas Científicas
Años	Asignación en Bs/BsF*	Asignación en Bs/BsF*	Asignación en Bs/BsF*
2002	2.054.902.540,17	168.122.560,00	356.033.009,92
2003	392.802.924,18	223.778.721,00	282.025.550,30
2004	2.806.825.133,95	372.524.733,00	755.829.284,00
2005	2.564.634.603,39	698.632.541,92	809.610.198,00
2006	3.203.393.006,38	625.163.526,49	907.863.821,00
2007	2.654.648.929,23	763.417.401,57	1.137.293.920,00
2008*	4.136.602,34	-	1.328.071,49
2009	1.410.476,70	-	1.124.202,41
2010	4.687.236,88	-	1.501.664,77
<b>TOTAL</b>	<b>BsF.23.911.523,00</b>	<b>Bs.2.851.549.483,98</b>	<b>BsF. 8.202.594,7</b>

Fuente: Consejo de Desarrollo Científico y Humanístico CONDES. Universidad del Zulia \*A partir del año 2008, expresado en bolívares fuertes. -TOTAL: 1280 programas y proyectos financiados durante el periodo 2002-2010. -Para el periodo 2008, 2009, 2010 y 2011 de acuerdo a comisión conjunta de CONDES, se decidió no abrir convocatoria para subvención a eventos científicos. -El Condes subvenciona 28 revistas científicas arbitradas

Partiendo de lo antes descrito, se debe puntualizar que este incremento del presupuesto otorgado a las publicaciones científicas, ha sido impulsado por la cantidad de revistas subvencionadas; pasando de 13 revistas en 1993, en las diferentes áreas de conocimiento, al apoyo a 28 revistas.

Es importante destacar que de las 28 revistas científicas arbitradas subvenciona, 21 están en el [Registro de Publicaciones Científicas y Tecnológicas Venezolanas](#) del [Fondo Nacional de Ciencia, Tecnología e Innovación \(Fonacit\)](#) y 7 de las 9 venezolanas están en el [Science Citation Index \(SCI\)](#) (Revista de la Facultad de Agronomía, Revista de Ciencias Sociales, Revista Científica, Revista Técnica, Revista Venezolana de Gerencia, Investigaciones Clínicas y Kasmera). Estas cifras revelan el compromiso y la importancia otorgada por la Universidad del Zulia a la difusión del conocimiento científico generado en sus espacios. Por otra parte se otorgó financiamiento a Asistencia a Eventos Nacionales e Internacionales hasta el año 2007, por un monto total de Bs.2.851.549.484 (ver tabla 2), a un total de 861 investigadores. A partir del año 2008, en reunión Conjunta de la Comisiones del CONDES, se decidió no otorgar este financiamiento debido al recorte presupuestario al cual fue sometida esta Dependencia.

Tabla 3: Participación de las Subvenciones Otorgadas Por el CONDES Respecto al Presupuesto Asignado. Años 2002-2010

Años	Presupuesto asignado al CONDES	Programas y proyectos		Asistencia a eventos nacionales e internacionales		Revistas Científicas	
	Asignación en Bs/BsF*	Asignación en Bs/BsF*	%	Asignación en Bs/BsF*	%	Asignación en Bs/BsF*	%

## REFLEXIÓN FINAL

La actividad científica en Venezuela atraviesa en los actuales momentos condiciones favorables para insertarse en la idea postmodernista, bajo una concepción transdisciplinaria e interinstitucional, donde apunta al desarrollo de un nuevo paradigma humanista; obligando a las universidades a cambiar su política de investigación, y considerar la actividad científica como elemento estratégico que permitirá que Venezuela forme parte del escenario mundial en cuanto a producción de conocimiento científico, para lo cual se plantea como política de Estado, impulsar la ciencia, tecnología e innovación para el desarrollo de proyectos que fortalezcan el aparato científico, tecnológico e industrial del país.

Donde la tendencia de investigar, producto de necesidades individuales, se ha ido minimizando, enfocando la atención hacia los nuevos escenarios que exige una mayor y sólida política de investigación orientada a dar respuesta a las necesidades de las comunidades; evidenciándose una serie de políticas y estrategias, que se han venido ejecutando como un esfuerzo por mejorar la calidad y pertinencia de las actividades de investigación, asumiéndola como la columna vertebral que debe sostener e impulsar el desarrollo del país. En este sentido, las universidades son los espacios propicios para desarrollar investigación con pertinencia social, para lo cual debe destinar de manera prioritaria, recursos para adelantar proyectos orientados a mejorar la calidad de vida de las comunidades. Estos recursos se canalizan a través de los Consejos de Desarrollo Científico, Humanístico y Tecnológicos, a quienes se les asignan presupuesto para apoyar la actividad de investigación. En el caso particular de la Universidad del Zulia, se tiene que el presupuesto asignado al Consejos de Desarrollo Científico y Humanístico

(CONDES) para el financiamiento de la investigación, debe ser incrementado debido a la insuficiencia del mismo para subvencionar las demandas de los investigadores, quienes acuden a otras instituciones y quienes en ocasiones recurren a autofinanciamiento como complemento para llevar a cabo tales iniciativas.

Guberney Muñeton S., Universidad de Antioquia

## RESUMEN

*El artículo analiza los determinantes de los flujos bilaterales de inversión extranjera directa (IED) en algunos países de América Latina y, con base en la metodología de estimación de un modelo gravitacional de inversión, se incorporaron elementos que han sido abordados desde la Nueva Geografía Económica; se comparó y controló el peso de los factores que están directamente relacionados con la IED; se agregaron al análisis variables que dan cuenta de: (i) inversión potencial, como tamaño del mercado y tamaño comercial de los países y sus socios de inversión; (ii) factores que históricamente han estado arraigados y predeterminados a los países: la distancia geográfica, la existencia de fronteras, el idioma común; y (iii) factores institucionales y gubernamentales, generados mediante variables categóricas que explican las restricciones e incentivos a la inversión: la participación en acuerdos comerciales y de inversión, el otorgamiento de accesos preferenciales. El principal hallazgo determina que la distancia y las variables de inversión potencial juegan un papel determinante en la configuración de los patrones de inversión en algunos países de la región.*

**PALABRAS CLAVES:** inversión extranjera directa, nueva geografía económica, modelo gravitacional

## ECONOMIC GEOGRAPHY AND FOREIGN DIRECT INVESTMENT FLOWS IN LATIN AMERICA

### ABSTRACT

*Using a gravity investment model, this paper analyzes the determinants of bilateral foreign direct investment inflows (FDI) in some Latin America countries. It incorporates some elements that have been addressed by the New Economic Geography, comparing and controlling by the weight of the factors directly related to FDI. The analysis includes variables related to: (i) potential investment, such as the market and commercial size of the countries and their investment partners; (ii) predetermined and historically-rooted factors, such as geographic distance, frontiers, and common language; and (iii) dummies for institutional and governmental factors that explain restrictions and investment incentives, such as participation in trade and investment agreements, and the grants of preferential access. The paper finds that distance and potential investment variables play a role in shaping investment patterns in some countries of the region.*

**JEL:** C33, F21, R12

**KEYWORDS:** foreign direct investment, new economic geography, gravity model.

### INTRODUCCIÓN

El destino de recursos financieros en el enfoque espacial ubica algunos países de América Latina, región que, con pocas excepciones, ha mantenido bajas tasas de ahorro nacionales que han hecho depender a sus países del ahorro externo. Sin embargo, es solo desde los años 90, cuando se observan el incremento de

los flujos de capital en la región, específicamente los correspondientes a IED. Los principales factores que motivaron dicho incremento se pueden identificar a la luz de los debates económicos de finales del siglo XX, cuando la postura del libre mercado es acogida como forma de mejorar los resultados sociales y económicos; entonces, se privilegian los modelos de crecimiento económico que describían la liberalización de los flujos de capital sobre las formas de control estatal comunes en la primera mitad del siglo XX. Dicha evolución de los flujos evidencia la importancia del estudio de los principales factores que explican la IED, objeto de este trabajo al analizar los factores que determinan los flujos de inversión foránea, con énfasis en aquellos abordados por la Nueva Geografía Económica (NGE).

Ahora bien, dado que los flujos de IED circulan de un territorio a otro, se hace necesario que en los estudios de la NGE las variables de la geografía sean reconsideradas en las modelaciones en el contexto regional, puesto que son factores condicionantes de la configuración de los patrones de desarrollo, tanto regionales como nacionales. Se plantea una reconsideración puesto que en los años 90 los avances en las tecnologías de la información ayudaron a la profundización de los mercados financieros postulando como irrelevantes las variables de la geografía física, principalmente el territorio y la distancia, en la consolidación de los procesos económicos. Por tanto, la distancia como variable determinante de conexión de mercados perdía relevancia para los flujos de inversión y el territorio era considerado como un receptáculo de los procesos sociales, sin influencia en los procesos económicos.

El trabajo analiza los factores que influyen en los flujos de la IED en algunos países de América Latina, a partir del estudio empírico de determinantes económicos, geográficos e institucionales. Para ello se usa un modelo de panel de datos para cinco países de la región: Brasil, Chile, Colombia, México, y Perú, con información del periodo 1997-2009. Un hecho de importancia se desprende de las relaciones que se tejen alrededor del tema flujos de IED de los países seleccionados: el comportamiento de las tendencias de inversión bilateral sobre aquellos países que disfrutaban de acceso al mar, fronteras o dialectos comunes, poseen ventajas en cuanto a las dotaciones en recursos de explotación natural (minería, petróleo, gas, etc.), acuerdos de inversión y de comercio, entre otros. Este trabajo está organizado en la siguiente forma. La siguiente sección presenta la discusión de los flujos de IED y la NGE. Después se muestra la metodología de estimación. Los resultados empíricos y la discusión se desarrollan en la sección cuatro. La última sección presenta la conclusión general del estudio.

## REVISIÓN LITERARIA

Los fundamentos teóricos que dan explicación a la configuración de los flujos de IED y que, además, sustentan este trabajo, se basan en: i) teorías de la IED y ii) Nueva Geografía Económica (NGE). En las teorías de la IED se destaca que las corrientes microeconómicas y macroeconómicas permiten explicar la formación de los flujos de capital foráneos. Caves (1971) señaló que estos flujos se explicaban por la transferencia neta de recursos financieros en términos reales desde un país a otro y por la diversificación de las actividades de una firma foránea inserta en una industria nacional. Por su parte, Dunning (1980) partía de dos supuestos fundamentales para comprobar su hipótesis de la localización: i) el tamaño y características del mercado, y ii) producción y costos de transferencia.

Para los países latinoamericanos, Shatz (2001) y Kinoshita y Campos (2004) diferencian la IED en tres categorías: i) aquella orientada a la exportación, ii) aquella orientada a crear y mantener una porción del mercado, y iii) aquella para infraestructura. La primera, depende de los costos de inversión, los costos de producción y de transporte. Por su parte, la IED tipo II, o de acogida en el mercado, ésta determinada por el tamaño de éste, aunque la distancia del país inversionista juega un papel importante, al igual que la política comercial. Por su parte, las entradas de IED para infraestructura dependen básicamente del entorno regulador, debido a los altos costos sepultados que conllevan los proyectos de infraestructura.

Desde el enfoque de la NGE existen dos razones esenciales vinculadas entre sí y que reflejan la importancia de la geografía en la configuración de las relaciones económicas. En primera instancia los

países se encuentran distanciados geográficamente de las zonas económicas de influencia. Además, se presentan factores estructurales predeterminados que hacen que las naciones estén desbalanceadas en sus dotaciones factoriales, lo cual genera desventajas absolutas.

Luego, la distancia podría afectar los precios relativos de diferentes bienes, la rentabilidad relativa de diferentes actividades y el flujo de nuevas ideas y tecnologías en la región (Venables, 1999). Según la NGE, las economías de escala y los vínculos hacia atrás y hacia adelante de las empresas propician la concentración de la actividad económica que irradia el crecimiento de una nación. Con base en estos lineamientos, las firmas establecerán sus decisiones de emplazamiento dependiendo de una serie de consideraciones, entre las que destacan: i) tamaño del mercado, ii) cercanía entre firmas, iii) acceso a mercados y iv) factores que obstaculizan la concentración empresarial. Al final, la combinación de estos elementos, se mezcla con las barreras e incentivos a la inversión (Krugman, 1998; Henderson et al., 2000; Venables, 2002). Dentro de los trabajos empíricos que estudian la interacción para determinar la localización de la IED existe gran variedad de enfoques y aproximaciones.

En la revisión realizada se puede identificar el uso de la ecuación gravitacional con énfasis en el tema de la integración comercial (Vallejo y Aguilar, 2004); en la distancia y los factores cíclicos, como el riesgo, ciclo de los negocios y el crecimiento económico (Frenkel et al., 2004); en las características y políticas de los países en un mercado regional (Melendez y Abreu, 2006); las políticas implementadas por países y los procesos de privatización y regulación (Portillo, 2005); en los tratados bilaterales de inversión (Neumayer y Spess, 2005), en los efectos de las variables geográficas en particular la distancia (Martín y Turrión, 2003); en los costos de transportes y coordinación y temas de infraestructura con datos a nivel de firma que incluye (Shatz y Bobonis, 2007); y en las decisiones de inversión por parte de las firmas multinacionales (Talamo, 2007).

## METODOLOGÍA

El análisis empírico pretende extender nuestra comprensión de los determinantes de la IED en algunos países de América Latina incorporando variables adicionales que aproximan las relacionadas con la NGE en el proceso de modelación.

### Técnica de Estimación

Dado que los países latinoamericanos son heterogéneos entre sí se utilizará como método de estimación econométrica la técnica de datos de panel con efectos aleatorios (Baltagi, 2001) por país, para tratar de capturar la incidencia de las variables dicotómicas que se mantiene constante en el tiempo (Bergstrand, 1985; Hutchinson, 2002; Bun y Klaassen, 2002). La siguiente es la ecuación matemática que se estimará (Ecuación 1):

$$\ln (IED_{dot}) = \hat{\sigma}_0 + \hat{\sigma}_1 \ln (PIB_{dt}) + \hat{\sigma}_2 \ln (PIB_{ot}) + \hat{\sigma}_3 \ln (POB_{dt}) + \hat{\sigma}_4 \ln (POB_{ot}) + \hat{\sigma}_5 \ln (DIS_{do}) + \hat{\sigma}_6 \ln (COM_{dot}) + \hat{\sigma}_7 IRN_{dt} + \hat{\sigma}_8 INS_{do} + \hat{\sigma}_9 FRO_{do} + \hat{\sigma}_{10} IDI_{do} + \hat{\sigma}_{11} TLC_{do} + \hat{\sigma}_{12} TBI_{do} + T_t + \varepsilon_{dot} \quad (1)$$

Los índices inferiores *d* y *o* hacen referencia al país destino de los flujos de inversión y a los países origen de esos flujos, respectivamente, y el sufijo *t* indica la temporalidad (1997-2009). La variable independiente *IED* son los flujos de inversión extranjera entre el país latinoamericano y los países origen de la inversión. Las variables independientes hacen alusión a: *PIB* Producto Interno Bruto, *POB* población, *COM* comercio bilateral, *DIS* distancia física en kilómetros entre ciudades capitales, *IRN* índice que mide intensidad de los recursos naturales en el país destino, *INS* índice que mide institucionalidad en el país destino; luego aparecen un conjunto de variables categóricas que toman el valor de 1 (uno) sí: *FRO* el país comparte frontera con su otro par de inversión, *IDI* si comparten el mismo idioma, *TLC* si los países hacen parte de un acuerdo comercial; *TBI* si tienen firmado un tratado

bilateral de inversión; y 0 (cero) en otro caso. Se incluye la variable  $Tt$  como variable de tendencia para controlar por flujos de inversión crecientes. Los  $\delta_i$  son los coeficientes de cada una de las variables dependientes. Finalmente, el símbolo  $\varepsilon_{dot}$  corresponde al término de perturbación que se supone es independiente e idénticamente distribuido (iid).

### Variable Dependiente

La variable de interés son los flujos bilaterales de inversión extranjera directa (millones de dólares) para los principales países de la región que publican información lo suficientemente desagregada a nivel de país: Brasil, Chile, Colombia, México y Perú. Operativamente es necesario expresar estos flujos en logaritmos naturales y realizar una transformación semi-logarítmica (Ecuación 2) por la presencia de entradas con valores cero o negativos.

$$IED = \text{signo}(IED) * \ln(1 + |IED|) \quad (2)$$

### Variables explicatorias

El Producto Interno Bruto (PIB) y el tamaño total de la población se toman como las variables que dan cuenta del tamaño del mercado. Como medida del tamaño del comercio internacional se usa la suma de exportaciones e importaciones bilaterales. También se construye un índice de recursos naturales dada la importancia de éstos para atraer inversión. La distancia física se mide en kilómetros desde la ciudad capital del país destino hasta la ciudad capital del socio de inversión, utilizando el método de *as the crow-flies*. La información de acuerdos comerciales, áreas de libre comercio y tratados bilaterales de inversión se modela mediante variables categóricas. Por último, para medir la calidad institucional y estabilidad política se usó el índice de restricciones políticas (POLCON).

## **RESULTADOS Y DISCUSIÓN**

Siguiendo los planteamientos de Frenkel et al (2004), el análisis empírico parte de la idea de que los flujos de inversión que llegan a los países destino dependen de las especificidades de éstos, y junto con las fuerzas gravitacionales son importantes en dar una explicación de los mismos entre países. La Tabla 2 resume los principales resultados de las distintas estimaciones realizadas. En su acepción básica, la ecuación gravitacional presenta una alta significancia estadística y los signos correctos, positivos para la producción interna bruta de los países origen y destino, y negativa para la distancia entre éstos (columna 1). Al incluir los efectos fijos de los países origen y destino, así como los efectos temporales, las variables mantienen tanto los signos esperados como la importancia estadística, y el poder explicativo del modelo mejora ostensiblemente (columna 2). Dos hechos vale la pena destacar de este último resultado: i) los efectos temporales son significativos, por lo que hay evidencia de que los factores cíclicos presentan perturbaciones sobre los flujos de inversión en la muestra de países analizada en su conjunto, y ii) los efectos fijos de los países origen y destino en su mayoría no son significativos, por lo que no poseen suficiente poder explicativo para actuar como variables explicatorias adicionales y complementar las usadas en los modelos gravitacionales.

Hay que destacar que con estos hallazgos se tienen bases para plantear un modelo gravitacional ampliado, en el que se incluyen los efectos temporales y los efectos país destino y se dejan de lado los efectos país origen (estos resultados se muestran en la Tabla 2, columna 3). De nuevo el PIB y la distancia mantienen su poder explicativo, aunque ahora la población ya no lo es más. Las nuevas variables incluidas se encuentran dentro de los límites de la significancia estadística, a excepción del idioma y el área de libre comercio, aunque la bondad de ajuste del modelo se reduce de 33,7% a 21,5%, así como los grados de libertad. Además, se aprecia que los recursos naturales, la estabilidad política, la contigüidad y los acuerdos bilaterales de inversión están relacionados de forma negativa con los flujos de inversión. Una interpretación de estos resultados inesperados puede ser que los inversores mueven sus posiciones hacia nuevas oportunidades, en relación con las diferentes actividades económicas y su rentabilidad esperada.

La mayoría de los flujos de capital son operados por países distantes a los de la región, lo cual se complementa con el impacto negativo de la distancia y, probablemente, con las reformas específicas en ciertas esferas políticas y económicas. Si bien existen incentivos y tratados específicos para estimular la inversión, pueden estar desarticuladas e incidir negativamente en la toma de decisiones de inversión.

Por último, el modelo aumentado presenta dos especificaciones adicionales (columnas 4 y 5). Los resultados en los signos, significación y ajuste son similares al anterior. La única diferencia característica que sobresale cuando se controlan por los efectos del país receptor es que la importancia estadística de la variable institución y de comunicación se intercalan. Así, sino se controlan por efectos país destino, la variable idioma llega a ser significativa y se relaciona de forma negativa con la inversión, por lo que puede ser vista como una limitante en el aumento de los flujos. Ahora, si se controla por los efectos de país, dicha variable no es significativa y la variable de estabilidad política sí lo es.

Tabla 2: Resultados de las Estimaciones Gravitacionales

		Especificación

Observaciones		2.981	2.981	2.379	2.379	2.379
R2 (overall)		0.052	0.337	0.215	0.175	0.175

\*, \*\*, \*\*\* Denota significancia al 10, 5 o 1%, respectivamente. P-valores entre paréntesis. (1) Ecuación gravitacional básica. (2) Ecuación gravitacional básica controlando por características de los países origen y destino y efectos temporales. Ver en el anexo las estimaciones para las variables de tiempo y país origen. (3) Ecuación gravitacional aumentada controlando por características de los países origen y destino y efectos temporales. Ver en el anexo las estimaciones para las variables de tiempo. (4): Ecuación gravitacional aumentada sin controlar por características de los países origen y destino y efectos temporales. (5): Ecuación gravitacional aumentada incluyendo efectos aleatorios y controlando por características del país destino.

En síntesis, es importante hacer notar que a medida que se transitaba de un modelo simple gravitacional a un modelo más complejo y con efectos de control e interacción, el tema de la distancia cobraba cada vez más importancia no solo en significancia sino en efectos negativos sobre los flujos de inversión, en tanto que el tamaño del país, medido por el PIB, si bien continuó siendo una variable relevante, su impacto positivo se redujo moderadamente.

## CONCLUSIÓN GENERAL

El objetivo de este estudio consistió en analizar los principales determinantes de los flujos de inversión extranjera directa hacia algunas de las principales economías de América Latina, con el uso de un modelo gravitacional. Los efectos de tiempo y efectos específicos de los países receptores fueron factores importantes en la bondad de ajuste de los modelos. El análisis de los flujos de inversión hacia Brasil, Chile, Colombia, México y Perú confirmó el fuerte y significativo impacto negativo de la distancia entre éstos. Asimismo, se probó el gran impacto positivo que tiene sobre éstos el tamaño de mercado y comercial. De esta forma, los planteamientos básicos gravitacionales se cumplen. Cuando se involucran aspectos adicionales en estas ecuaciones, las condiciones anteriores se siguen cumpliendo, aunque los nuevos elementos no presentan los signos esperados que han mostrado otros trabajos similares (por ejemplo, Neumayer y Spess, 2005). En este sentido, se evidencia que los recursos naturales, la estabilidad política, la contigüidad y los acuerdos bilaterales de inversión están relacionados, de forma negativa, con los flujos de inversión.

# OPINIÓN DE LOS CLIENTES SOBRE LA CALIDAD DE SERVICIO PRESTADA POR LAS EMPRESAS DE TELEVISIÓN POR SUSCRIPCIÓN DEL ESTADO ZULIA. VENEZUELA

Caterina Clemenza, Universidad del Zulia

Omar Galbán, Universidad del Zulia

Rubén Araujo, Universidad del Zulia

Orlando Cuicar, Universidad del Zulia

## RESUMEN

*En la ponencia se analiza la opinión de los clientes sobre la calidad de servicio prestada por las empresas de televisión por suscripción. La investigación es descriptiva con diseño transeccional, no experimental y de campo, la cual fue desarrollada en el Municipio Maracaibo del Estado Zulia, tomando en cuenta la concentración de suscriptores y la ubicación de las sedes principales de las empresas dedicadas al ramo, específicamente: Inter, Net Uno, DirecTV y Movistar. El instrumento de recolección de datos estuvo constituido por un cuestionario estructurado, validado por expertos en la variable de estudio, y aplicado a una muestra de 272 personas. La confiabilidad del instrumento se determinó a través del coeficiente de Alpha Cronbach ubicándose en 0,89. Los resultados indican que los suscriptores muestran mayor interés sobre aquellas operadoras que ofrecen mayor cantidad en número de canales para tener al alcance las suficientes opciones que permitan adaptarse al grupo familiar, así como aquellas que ofrecen precios promocionales; en este sentido las necesidades de los clientes están satisfechas. En cuanto a la percepción del servicio, los atributos que evidenciaron opiniones positivas fueron: la recepción y la hospitalidad, atención personalizada, trato especial, clima de seguridad, diversidad de maneras de pago del servicio, respuesta ante las fallas en la programación. Mientras que aspectos como la respuesta ante reclamos y confianza en la facturación, las valoraron de manera positiva pero por debajo de la media. Se recomienda robustecer la estructura tecnológica, mitigar los tiempos de atención en relación a instalación y reclamos, rediseñar las áreas de estacionamiento y llevar a cabo estudios de mercado para la localización de nuevos centros de atención, reforzar la imagen de la empresa en función de su marca, renovar constantemente la funcionalidad del servicio y promover la inclusión de nuevos productos de valor agregado adaptado a las necesidades actuales.*

**PALABRAS CLAVE:** calidad de servicio, percepción de los clientes, necesidades de los clientes, empresas de Televisión por Suscripción

## CUSTOMER REVIEWS ABOUT THE QUALITY OF SERVICE PROVIDED BY TELEVISION COMPANIES BY SUBSCRIPTION OF THE STATE ZULIA. VENEZUELA

### ABSTRACT

*The paper analyzes the customer feedback on the quality of service provided by the subscription TV companies. The research design is descriptive transactional, non-experimental and field, which was developed in the Municipality Maracaibo, Zulia State, taking into account the concentration of subscribers and the location of the headquarters of companies engaged in the industry, specifically: Inter*

, Net One, DirecTV and Movistar. The data collection instrument consisted of a structured questionnaire validated by experts in the study variable, and applied to a sample of 272 people. The reliability of the instrument was determined through Cronbach Alpha coefficient standing at 0.89. Results indicate that subscribers are more concerned about those operators offering more number of channels in order to have enough affordable options to suit the household as well as those offering promotional prices in this sense the needs of customers are satisfied. As for the perception of the service, the attributes that showed positive ratings were: the reception and hospitality, personal attention, special treatment, safety climate, variety of ways to pay for the service, response failures in programming. While aspects of response to complaints and confidence in billing, positively evaluated but below average. It recommends strengthening the technological structure, mitigate service times in relation to installation and claims, redesigning the parking areas and conduct market research to locate new centers, reinforcing the image of the company in terms of its brand, constantly renewing service functionality and promote the inclusion of new value added products adapted to current needs.

**JEL:** M10

**KEYWORDS:** Service quality, customer perception, customer needs, Subscription Television Companies

## INTRODUCCIÓN

Hoy día la calidad de servicio se ha convertido en pilar fundamental para el desarrollo de una empresa, su puede decir que ha pasado a ser la base para mantener una organización en el tiempo y sin duda alguna para su crecimiento, según Tschohl (1994), puede ser indirectamente una acción de ventas que estimula a los clientes a mantenerse leales y a reincidir en la compra de los productos por la satisfacción del servicio prestado. Este valor que ha tomado en la actualidad la calidad de servicio no ha sido fortuito, ha sido el resultado de la evolución que actualmente experimenta la humanidad abarcando aspectos de índole cultural, social, económico y muy especialmente tecnológico, que de forma global conllevan a cambios directos en cada individuo condicionando sus necesidades.

Estos cambios constantemente crecientes son los que hacen que los usuarios sean más exigentes a la hora de demandar un servicio que logre cubrir sus aspiraciones, mucho más aún cuando de por medio existe un coste que debe ser cancelado. Sobre ese nivel de exigencia es que las empresas han volcado su atención, se han dado cuenta que la manera de captar y mantener un cliente es satisfacerlo desde el momento en que se establece un primer contacto ofreciendo una atención personalizada enfocada a los intereses directos de quien se acerca en búsqueda del servicio. Bajo un ambiente de competitividad el sector de telecomunicaciones no se ha quedado atrás y más aun cuando el desarrollo tecnológico avanza de manera vertiginosa, sobre este crecimiento las empresas involucradas en el rubro se han apoyado para ofrecer innovaciones que atraigan la atención de sus consumidores bien sea a través de la incorporación de nuevos productos que repuntan en vanguardia o a través del desarrollo continuo de aquellos productos ya existentes sobre los cuales se agregan atributos que le confieren cualidades atractivas y lo hacen permanente en el tiempo. Producto de esta lucha constante entre empresas del sector por superarse unas a otras y conseguir destacarse con elementos diferenciadores siempre pensados y concebidos para el usuario, es que se desenvuelve el entorno que actualmente se vive, mientras más aspectos se abarquen en sentido a la satisfacción del cliente mas se hace competitiva la empresa y en consecuencia los resultados obtenidos en rentabilidad serán mucho mejores que las del resto.

Bien se sabe que al hablar de telecomunicaciones se habla de una amplia gama de medios que la conforman entre ellos la telefonía celular, el Internet y la televisión por suscripción, cada uno de manera independiente con su grado de desarrollo en nuestro territorio nacional. En la última década la modernización de las telecomunicaciones ha tenido un crecimiento importante, pero el desarrollo

progresivo del sector se ha producido por etapas de acuerdo con los tipos de servicio, de manera que se potenció primero la telefonía celular, la televisión por suscripción en segundo lugar y más recientemente la oferta de conexiones a internet. Por lo general son estos tres servicios los que ofrece una empresa de telecomunicaciones, tales son los casos de Inter, Net Uno, DirecTV y Movistar en Venezuela, quienes han estado en el mercado desde hace 13 años en promedio, en principio todas comenzando con un producto en específico y que progresivamente fueron incorporando el resto hasta disponer de la red completa de los servicios señalados, muy recientemente la televisión por suscripción en el caso de Movistar quien se ha tenido que enfrentar a un contexto considerablemente dificultoso en lo que a penetración del mercado se refiere, tomando en cuenta el posicionamiento del resto de sus competidores específicamente en dicho servicio. La penetración de la televisión por suscripción, de acuerdo con las estimaciones de la Comisión Nacional de Telecomunicaciones (Conatel), fue de 37% al cierre del tercer trimestre de 2011 lo que revela un crecimiento sostenido. En términos de sintonía la TV paga se ubica en 36% según diversas mediciones, aún duplicada por la TV abierta, pero en franco proceso en expansión, debido a la ruptura de algunas barreras que han impedido una mayor masificación, como las dificultades de acceso geográfico de las plataformas tecnológicas y los precios finales (Gerente, 2012).

En la región zuliana este mercado se ha expandido notablemente en los últimos años, estas cuatro empresas operadoras constantemente luchan por alcanzar un mayor número de suscriptores y conseguir el liderazgo a través de estrategias gerenciales, innovación y una serie de medios que proporcionan valor agregado al servicio prestado. Para ello se han apoyado para lograrlo en la calidad de servicio como elemento competitivo especialmente en la ciudad de Maracaibo donde se concentra una alta densidad de población. Ofrecer a sus clientes elementos diferenciadores en la prestación del servicio se ha tornado el eje central como estrategia de marketing y promoción así como lo indica Acker (2004), en el mercado actual la imagen que tiene la competencia es tan importante como la propia. En ocasiones hasta más importante, por lo cual para posicionarse en la mente del consumidor es necesario saber cómo está la competencia y cuál será la manera más apropiada de compararse con ella, considerando los niveles de diferenciación, teoría que se apoya en los comentarios de Kotler y otros (2004), quien agrega, para tener éxito en el mercado actual las empresas deben convertirse en auténticas expertas, no solo en la gestión del producto sino también en la gestión de las relaciones con los clientes, superando así a sus competidores.

Los argumentos antes expuestos motivan al desarrollo de esta investigación con el propósito de hacer un análisis desde la perspectiva del consumidor de la calidad de servicio prestada por las empresas de Televisión por Suscripción.

## CONSIDERACIONES METODOLÓGICAS

La investigación desarrollada es de carácter descriptiva. El diseño de investigación fue de campo, transeccional y no experimental. Por otra parte, el universo de estudio estuvo conformado por todas aquellas personas naturales usuarios de las empresas de televisión por suscripción con cobertura en Maracaibo, por ser este el municipio que concentra la mayor población del Estado Zulia y por contener inmerso en su área las sedes principales de las organizaciones seleccionadas Net uno, Inter, DirecTV y Movistar. Mientras que la población objeto de estudio estuvo constituida por todos aquellos sujetos que cumplieron, para el momento de observación de la variable, con las siguientes condiciones: a) se encuentra en el municipio Maracaibo, b) es usuario activo del servicio de televisión por suscripción, d) es el usuario principal, aunque no sea titular. El número de personas que cumplen con estas condiciones es un valor difícil de determinar, tomando en cuenta que existen limitaciones para obtener un listado de todos los usuarios del municipio Maracaibo por parte de los proveedores, las asociaciones del sector de telecomunicaciones y entes reguladores, en consecuencia se contempla la idea de una población infinita. Se calculó el tamaño muestra, obteniéndose un total de 272 personas.

Determinado el tamaño de la muestra se aplicó un muestreo no probabilístico por cuotas, considerando el horario de atención de las sedes principales de las cuatro empresas de Televisión por Suscripción. Se fijó

una cuota en partes iguales de forma proporcional siendo ello 68 individuos para cada una de las cuatro empresas de televisión por Suscripción. Para la recolección de datos se diseñó un instrumento constituido treinta y dos (32) preguntas a los fines de evaluar los indicadores de estudio. El cuestionario se aplicó a una población bastante homogénea, con niveles similares y problemática semejante. Se empleó la escala tipo Likert donde se presenta cada afirmación y se solicita al sujeto que externé su reacción eligiendo una de las cinco opciones lo cual permitió calificar al objeto de actitud que se está midiendo. Dicho instrumento fue validado por cinco (5) expertos quienes evaluaron la correspondencias de los ítems / preguntas con relación a los objetivos planteados y a las variables de estudio planteadas. La confiabilidad del instrumento se determinó a través del coeficiente de Alpha Cronbach ubicándose en 0,89.

## RESULTADOS DEL ESTUDIO

A continuación se exponen los resultados obtenidos con la aplicación del instrumento diseñado para analizar la opinión de los clientes sobre la calidad de servicio prestada por las empresas de televisión por suscripción. Se estableció un baremo para la dimensión necesidades, el cual se presenta en la tabla 1 y otro para las dimensiones: expectativas y percepción (ver tabla 2)

Tabla 1: Baremo Para las Necesidades

Rango	Necesidades
1,00 - 1,80	No satisfecha
1,81 - 2,60	
2,61 - 3,40	
3,41 - 4,20	Satisfecha
4,21 - 5,00	

Fuente: Elaboración propia

Tabla 2: Baremo Para las Expectativas y la Percepción

Rango	Expectativas y Percepción
1,00 - 1,80	Desfavorable
1,81 - 2,60	
2,61 - 3,40	
3,41 - 4,20	Favorable
4,21 - 5,00	

Fuente: Elaboración propia

*Necesidades de los clientes:* En la tabla 3 se observan las necesidades de los clientes considerando los indicadores diversidad, atributos, disponibilidad y beneficios. Se evidencia que el indicador con mayor valor resultó ser la diversidad en el servicio de Televisión por Suscripción, traducido ello en el grado de interés por parte de los usuarios en contar con buen número de opciones para elegir programación infantil, musical, de entretenimiento, salud, hogar, así como también canales y horarios adaptados a cada uno de los miembros del grupo familiar. Por su parte el indicador con tendencia desfavorable resultó ser la disponibilidad del servicio, afectado directamente por el factor tiempo, hoy día convertido en una necesidad primordial por parte de los clientes al momento de contratar servicios.

Tabla 3: Necesidades de los Clientes

Indicadores	Satisfecha	No Satisfecha
Diversidad	4,26	-
Atributos	3,96	-
Disponibilidad	3,72	-
Beneficios	3,96	-
<b>Total</b>	<b>3,98</b>	-

Fuente: Elaboración propia

Sobre esta necesidad Monges y Escorche (2011), hacen referencia a los comentarios expuestos por Juan Carlos Amaro, Vicepresidente Comercial y Negocios de DirecTV, “Hoy en día la cantidad y variedad de canales es el principal impulso que tiene la industria de la TV paga. Añadido a eso tiene un periférico llamado tecnología, otro que es el precio o costo y un servicio postventa, apostando a ello es lo que nos va a permitir seguir siendo líderes en el mercado”.

Al hablar de los paquetes ofrecidos por las empresas de Televisión por Suscripción el 47,04% de los encuestados aseguran que la programación incluida está adaptada a sus necesidades en referencia a edades (niños / adolescentes / adultos), así como también el 35,93% expresó casi siempre estar cubiertas sus necesidades en este sentido. Solo un 2,22% manifestó casi nunca cubrir sus necesidades. En cuanto a las necesidades de servicios adicionales, a los que actualmente el mercado competitivo ofrece como recurso de valor agregado al servicio propio, se evidenció opiniones divididas, donde el 38,15% consigue siempre una serie de beneficios, 28,15% casi siempre lo consigue y solo 27,41% algunas veces.

Los productos y servicios de DirecTV, por ejemplo, se han convertido en uno de los principales diferenciadores, comentan Monges y Escorche (2011), gracias a ellos se ha logrado que las personas disfruten de una experiencia de otro nivel. Sobre ello agregan, el primero que dio el vuelco fue el sistema prepago, posteriormente apareció el codificador que permite grabar, pausar, retroceder y adelantar la programación, también el contenido de alta definición con tecnología HD, la cantidad de posibilidades que tiene el cliente a través del control remoto como guía de programación y entre otros el portal donde solo con registrarse el suscriptor puede activar paquetes de programación, contratar películas, solicitar asistencia técnica, consultar su saldo, y todo lo que está asociado al servicio posventa.

El tiempo de respuesta para la activación del servicio constituye un factor básico en el que las empresas de Televisión por Suscripción deben tener en cuenta para satisfacer la necesidad del cliente de forma breve, dicha experiencia generará un juicio de valor sobre la calidad de servicio. En función de ello, el 40,37% de usuarios que respondieron algunas veces cubrir sus necesidades sobre el tiempo empleado para disponer del servicio y el 27,78% casi siempre, tan solo un 2% dijo nunca. La contratación de servicios de Televisión por Suscripción involucra una serie de productos necesarios para la operatividad del mismo, por ejemplo las antenas y codificadores en el caso de Televisión Digital y cable en el caso de Televisión por Cable valga la redundancia. Estos elementos son piezas fundamentales dentro del proceso de activación y su disponibilidad puede o no afectar el proceso del servicio a prestar. Basado en ello un 80,37% de encuestados, afirmaron haber encontrado los productos necesarios para la instalación del servicio, cubriendo así su necesidad de disposición inmediata.

Una vez solicitado y activado el servicio en el Centro de Atención al Cliente le sigue la fase de instalación en la residencia del suscriptor, la cual generalmente está a cargo de empresas subcontratadas por las empresas de Televisión por Suscripción. Al respecto un 49,63% de encuestados respondieron ser rápido en la instalación algunas veces, un 14,44% siempre y solo un 2% no cubrió su necesidad de rapidez.

Según Lovelock (2009), los clientes ocupados ahora esperan que los servicios estén disponibles cuando lo necesitan y no cuando le convenga al proveedor, es probable que se tengan expectativas del tiempo que toma completar cierta tarea si ya se ha utilizado algún tipo de servicio relacionado, por ellos los comerciantes de servicios deben entender las prioridades y limitaciones de tiempo de los clientes, así como también de descubrir nuevas formas de competir en rapidez. Por último, la prestación del servicio constante sin interrupciones de señal suele ser un factor de suma importancia para los usuarios de la Televisión por Suscripción. Esto se refleja en el alto porcentaje de satisfacción, traducido ello en 78,89% de encuestados que respondieron disponer de un servicio ininterrumpido. Solo un 6,30% respondió cierto descontento sobre este indicador.

### Expectativas de los Clientes

Los resultados obtenidos en cuanto a las expectativas, se ven en la tabla 4, en cuanto a indicadores de referencia, comunicación, experiencia, apariencia y precio. Solo las expectativas de referencia, resultaron desfavorable con un valor de 3,20, entendiéndose esto como la influencia del grupo social al cual estamos día a día vinculados y relacionados, dejando claro que los comentarios transmitidos de una a otra persona crean expectativas que posteriormente al uso del servicio pueden resultar afectadas de forma negativa.

En un nivel medio se ubican las expectativas relacionadas al servicio deseado influenciado por referencias de terceras personas y comunicación generada por las empresas de Televisión por Suscripción con un valor de 3,70. El precio también forma parte de este último valor constituyendo un elemento que medianamente crea expectativas en los usuarios.

Tabla 4: Expectativas de los Clientes

Indicadores	Favorable	Desfavorable
Referencia	-	3,20
Comunicación	4,00	-
Experiencia	4,33	-
Apariencia	4,38	-
Precio	3,91	-
<b>Total</b>	<b>4,16</b>	<b>3,20</b>

Fuente: *Elaboración propia*

Los comentarios recibidos de otros usuarios sobre la prestación del servicio por las empresas de Televisión por Suscripción generan expectativas del servicio esperado, muestra de ello es lo reflejado en las respuestas donde el 35,19% de los encuestados casi siempre resultan influenciados por tales comentarios, acompañado de un 29,36% que respondieron solo algunas veces. Un 12,22% no les afecta en lo absoluto y no toman en cuenta los comentarios de otros usuarios. Las imágenes publicitarias también constituyen otro factor influenciador de expectativas, tienen un impacto altamente positivo desde el punto de vista de los encuestados, de ellos el 47,41% lo confirmó casi siempre, el 23,33% algunas veces y el 21,11% siempre lo consideraron así.

Por otra parte se evidenció el alto nivel de expectativa que pueda generar la comparación del servicio esperado con el servicio anteriormente disfrutado en experiencias anteriores, bien sea con la misma empresa de Televisión por Suscripción contratada o con otra operadora obviamente del mismo ramo de telecomunicaciones. El 92,22% de los suscriptores encuestados confirmaron siempre y casi siempre sus expectativas satisfechas en este sentido. La apariencia del personal de atención también suele ser una fuente que genera expectativa desde el primer momento en que se establece contacto, crea una impresión que de antemano puede llevar a los usuarios a crear un juicio de valor bien sea positivo o negativo sobre la calidad de servicio. El 44,81% de los encuestados aseguran que la apariencia casi siempre es aceptable, un 42,22% siempre y solo un 12,96% algunas veces.

Las instalaciones de las empresas de Televisión por Suscripción también deben ser cuidadas, todo aquel espacio al alcance de los usuarios crea una imagen y en consecuencia expectativa que pueden afectar la satisfacción plena sobre el servicio esperado. El 55,93% de los encuestados lo considera así, sus experiencias siempre han sido satisfactorias al enfrentarse a una buena apariencia, en contraste a un 4,07% quienes respondieron solo algunas veces. Zeithaml y Col. (2009), agrega al respecto, los consumidores juzgan la calidad de los servicios muchas veces por la calidad de los alrededores físicos donde se entrega el servicio, ello representa la imagen del servicio, en particular para clientes nuevos cuando por primera vez visitan los centros de atención.

El precio según Zeithaml y Col. (2009), es un elemento de carácter explícito que conduce a inferencias sobre lo que debería ser y será el servicio, en general mientras más alto y más impresionante son los tangibles el cliente esperará más del servicio, se piensa que al pagar un precio más alto se debería proporcionar un servicio de mayor calidad y una mejor cobertura. Al respecto, se observó un 56,30% de suscriptores que contestaron recibir un servicio casi siempre acorde al precio pagado y un 22,59% siempre acorde. Solo un 2,22% estuvo en desacuerdo y respondieron nunca ser acorde el precio con el servicio recibido. Para los proveedores, comenta al respecto Lovelock (2009), la estrategia de fijación de precios es el mecanismo financiero a través del cual se genera el ingreso, con el fin de compensar los costos del encuentro del servicio y crear un excedente de ganancia. La estrategia de fijación de precios es muy dinámica ya que se ajusta con el paso del tiempo de acuerdo a factores como el tipo de cliente, el momento y lugar de entrega, el nivel de la demanda y la capacidad disponible.

### Percepción de los Clientes

Sin duda alguna la percepción de los clientes sobre las empresas de Televisión por Suscripción es altamente favorable, así lo demuestran los resultados obtenidos sobre esta dimensión, mostrados en la Tabla 5. El valor total 4,07 demuestra el punto de vista favorable de los clientes encuestados sobre la facturación de los servicios, los medios de pago, los alcances de información, los consejos, el recibimiento, la hospitalidad y el confort, todos involucrados en el proceso de atención, desde el momento en que usuario ingresa a las instalaciones de la organización hasta el momento de su retiro, básicamente el proceso de atención en sí mismo.

Al considerar las percepciones, dicen Zeithaml y Col. (2009), se debe tomar en cuenta los encuentros únicos de los clientes, específicos de una transacción, y los encuentros globales basados en experiencias acumuladas, con ellos se pueden diagnosticar problemas del servicio y hacer cambios inmediatos para asegurar la satisfacción del cliente, una satisfacción en la que el usuario sienta la equidad y la imparcialidad en el momento de la atención. Una de las consultas que suelen hacer los usuarios de Televisión por Suscripción es lo referente a sus saldos por concepto de renta básica u otros cargos adicionales, sobre ello, un 44,81% de suscriptores están complacidos en este sentido, quienes casi siempre reciben la información de forma rápida por parte del personal que labora en la empresa afiliada y un 38,15% siempre. Los clientes de hoy son los más preocupados por el tiempo, asegura Lovelock (2009), tienen más prisa y consideran que deben evitar perder el tiempo.

La percepción de los suscriptores sobre la variedad de medios para realizar el pago de los servicios contratados, opciones como el pago por taquilla, vía transferencia, depósito bancario, débito directo, débito online, entre otros son ofrecidos actualmente por las empresas de Televisión por Suscripción. Los clientes perciben cada vez más facilidad y comodidad para pagar cuando han adquirido una gama amplia de servicios, en este sentido, el 48,52% respondió contar casi siempre con opciones que facilitan su pago, un 35,93% siempre y solo un 2,22% casi nunca.

Tabla 5: Percepción De Los Clientes

Indicador	Favorable	Desfavorable
Facturación	4,13	-
Pago	4,14	-
Información	4,04	-
Consejo	3,80	-
Recepción	4,41	-
Hospitalidad	4,32	-
Seguridad	4,19	-
Imprevistos	3,56	-
<b>Total</b>	<b>4,07</b>	-

Fuente: Elaboración propia

El tiempo para hacer efectivo la transacción de pago en cualquiera de los diferentes medios anteriormente señalados influye sin duda alguna en la percepción de los usuarios, sobre ello un 40,37% de encuestados que consideran casi siempre rapidez en la operación bien sea presencial o indirecta, y un 37,78% siempre rápida. Al momento de recurrir a las empresas de Televisión por Suscripción para una atención personalizada las percepciones derivadas de la interacción con el personal de atención suelen causar un impacto positivo y/o negativo, la manera en que el representante de atención responda a las solicitudes realizadas dará pie al suscriptor para emitir juicios de valor sobre la empresa. Al respecto, el 50,37% asegura propiedad casi siempre en la información suministrada y un 32,59% siempre, lo que denota un elevado dominio de la información vinculada al servicio prestado.

El manejo de las herramientas por parte del personal de atención de igual forma constituye un componente fundamental en el desenvolvimiento adecuado en la gestión de servicio, por ejemplo el conocer el funcionamiento de sistemas digitales y/o electrónicos, los medios de comunicación interna, la metodología de los procesos involucrados, entre otros. En este sentido, un 49,26% de usuarios que respondieron positivamente sobre el desenvolvimiento del personal de atención casi siempre al momento de manejar las herramientas y poder conocer la situación de reclamos, sin embargo un 29,63% respondió solo algunas veces y un 2,22% casi nunca.

La disposición del personal de atención es otro aspecto que puede dar origen a percepciones generales sobre la empresa de Televisión por Suscripción y en consecuencia sobre el servicio. Los encuestados en este sentido respondieron medianamente positivos casi siempre y algunas veces reflejados en un 72,22% a diferencia de un 5,93% quienes dijeron casi nunca y un 2,22% nunca recibir ofertas de alternativas ante requerimientos hechos. Sobre este aspecto Lovelock (2009), explica que ningún programa de marketing puede tener éxito sin una comunicación efectiva la cual debe tener tres componentes fundamentales tales como: proporcionar la información y consejos necesarios, persuadir a los clientes y animarlos a actuar en momentos específicos. Otro indicador es la forma en que los suscriptores perciben el recibimiento por parte del personal de atención al momento de acudir a la empresa de Televisión por Suscripción bien sea para contratar servicios, para emitir reclamos o simplemente hacer consultas sobre algún tema en específico. Sobre ello se evidencia un 55,56% de usuarios encuestados que afirmaron una recepción siempre cordial y un 29,63% casi siempre. Un porcentaje mínimo de 14,81 respondió solo algunas veces.

Comentan Huete y Pérez (2003) que no hay elemento que tangibilice mejor la atención que la empresa quiere ofrecer a sus clientes que el hecho de que sus empleados les reciban con una abierta y franca sonrisa. Una vez culminado el momento del recibimiento, sigue la fase en donde el cliente expone sus necesidades y/o requerimientos al personal de atención para que este suministre la información al respecto, en ese preciso momento es donde el usuario fija su atención sobre la manera en que es tratado generando de forma inmediata una percepción sobre la calidad de servicio. En este sentido la encuesta arrojó resultados altamente positivos, donde un 48,89% de encuestados el trato recibido siempre es cortés y para un 38,15% casi siempre, restando solo un 12,96% quienes respondieron solo algunas veces.

Los clientes al exponer quejas generalmente esperan una respuesta rápida que enmiende su insatisfacción sobre la operatividad técnica y/o funcional del servicio contratado. 42,96% de los encuestados respondieron solo algunas veces rapidez por parte del personal que labora en las empresas de Televisión por Suscripción, 34,44% solo algunas veces y 8,52% aseguraron casi nunca rapidez en la solución de la queja expuesta. Las fallas en el servicio también suele ser otro factor que puede afectar la percepción de los usuarios sobre la calidad de servicio. La solución de dicha falla por parte de las empresas de Televisión por Suscripción siempre se espera sea rápida, sin embargo 40,74% de los suscriptores encuestados no lo perciben así, para ellos solo algunas veces existe rapidez en la solución del inconveniente, mientras que un bajo porcentaje traducido en 8,89% reflejado en la Tabla No.31 respondió casi nunca haber rapidez, asegurando cierta demora para disponer nuevamente del servicio en su estado

normal. Explican Zeithaml y Bitner (2002), los incidentes donde se halla provocado fallas del sistema para la prestación del servicio requiere por parte del empleado una respuesta acertada ante las reclamaciones y desilusiones de los clientes. El contenido o la forma en que el empleado responda es lo que provocará que el cliente recuerde el acontecimiento como favorable o desfavorable.

## CONCLUSIONES

Disponer de un buen número de alternativas para elegir programación televisiva es hoy día motivo de competencia entre empresas del sector, correspondiendo ello a la necesidades de diversidad, los suscriptores muestran mayor interés sobre aquellas operadoras que ofrecen mayor cantidad en número de canales para tener al alcance las suficientes opciones que permitan adaptarse al grupo familiar, y en este sentido la necesidad es totalmente satisfecha. Los atributos son todos aquellos valores adicionales al servicio propio contratado, y sobre ello las empresas de Televisión por Suscripción agregan constantemente particularidades técnicas y funcionales para hacerlo más atractivo, generando así una serie de bondades sobre el servicio, que en gran medida es buscado por los suscriptores para obtener mayores beneficios. Bajo estas premisas necesidades de atributos y beneficios están satisfechas en un grado considerablemente alto. Las expectativas de servicio deseado son influidas por necesidades personales, promesas de servicio a través del ámbito publicitario, comunicación boca a boca y experiencias pasadas del cliente. Por su parte, las expectativas de servicio adecuado se puede decir que están influidas por situaciones de experiencias momentáneas y por las primeras impresiones en contactos relacionados al servicio, que muchas veces suele estar fuera del control del proveedor.

Sin duda alguna la recepción y la hospitalidad son medios que sensibilizan la relación cliente-proveedor y está favorablemente bien vista desde la percepción de los clientes. La calidez brindada por parte del personal de atención forma parte de una serie de elementos que contribuyen a crear un ambiente ameno, acompañada de una atención personalizada con la que el cliente se siente identificado y cautivado bajo una atención de trato especial. En situaciones de imprevistos los suscriptores mantienen una percepción favorable ante inconvenientes presentados durante el disfrute del servicio, la solución de fallas por parte de las empresas de Televisión por Suscripción suele ser rápida, así como también la respuesta ante reclamos expuestos suele ser de períodos cortos, otorgando de esta manera una atención que pretende solapar el contratiempo surgido y las molestias ocasionadas.

## **RESUMEN**

*La presente ponencia tiene como objetivo analizar la satisfacción de los usuarios en cuanto a los servicios prestados por las empresas privadas de educación empresarial y profesional en el estado Zulia. Esta investigación es descriptiva, con diseño no experimental, transeccional y de campo. Para el desarrollo del objetivo planteado se empleó bases teóricas inherentes a la variable estudiada combinada con los resultados prácticos que arrojó el estudio. El instrumento de recolección de datos estuvo constituido por un cuestionario estructurado, contentivo de la variable que se estudió, basado en el modelo SERVQUAL. El mismo fue validado por expertos. La confiabilidad se determinó a través del coeficiente de Alpha de Cronbach. La recolección de los datos se realizó a través de la aplicación del instrumento tipo encuesta a una muestra de 278 personas durante un periodo determinado para suministrar información sobre las expectativas y la percepción de los participantes que acuden a las actividades ofrecidas por las empresas estudiadas. En la información recolectada se identificó el tipo de participante que acude a las empresas privadas de enseñanza, así como los motivos para seleccionar tales empresas. De igual manera se tomó las apreciaciones de los participantes con respecto al servicio y sus mejoras a fin de lograr satisfacer sus necesidades y requerimientos futuros. Los resultados indican que el usuario califica el servicio como satisfactorio, observándose una pequeña brecha en la capacidad de respuesta y en la confiabilidad. El resto de las subdimensiones (tangibles e intangibles) superaron las expectativas de los participantes. Esto evidencia que los usuarios están satisfechos con el servicio ofrecido. Este estudio permite a las entidades educativas abordadas, fijar su atención en aquellos indicadores donde debe reforzar sus acciones gerenciales a fin de lograr adaptarse a las exigencias de sus participantes y garantizar su estabilidad en el tiempo como centro de formación de talento humano.*

**PALABRAS CLAVE:** Satisfacción del cliente, calidad de servicio, percepción, empresa de educación empresarial.

## **SATISFACTION OF THE USERS OF THE SERVICE PROVIDED BY THE COMPANIES PRIVATE BUSINESS AND PROFESSIONAL EDUCATION OF THE STATE ZULIA VENEZUELA**

### **ABSTRACT**

*This paper aims to analyze the user satisfaction regarding the services provided by private business and professional education in the state of Zulia. This research is descriptive, non-experimental design, transactional and field. For the development of the goal set was used theoretical inherent variable studied combined with the practical results that the study found. The data collection instrument consisted of a structured questionnaire covering the variables that were studied, based on the SERVQUAL model. The same was validated by experts. Reliability was determined through Cronbach Alpha coefficient. The data collection was carried out through the application of the instrument type survey of a sample of 278 people over a given period for providing information on the expectations and perceptions of the*

*participants attending the activities offered by the companies studied. The information collected will be identified on the participant who comes to private education, and the reasons for selecting such companies. Similarly, it took the findings of the participants with regard to service and improvements to achieve their needs and future requirements. The results indicate that the user calls the service as satisfactory, showing a small gap in responsiveness and reliability. The rest of the sub-dimensions (tangible and intangible) exceeded the expectations of the participants. This shows that users are satisfied with the service provided. This study allows educational institutions addressed, focus your attention on those indicators which should strengthen their management actions to achieve adapt to the demands of its participants and ensure their stability over time as a training center for human talent.*

**JEL:** M10

**KEYWORDS:** Customer satisfaction, service quality, perception, business education company.

## INTRODUCCIÓN

La capacitación y el adiestramiento del talento humano le permite a las organizaciones el mejorar la eficiencia de sus empleados, así como también a las personas quienes por su propia iniciativa buscan mejorar sus conocimiento para elevar su calidad de vida, productividad y desarrollo personal; así mismo se puede decir que el adiestramiento es una herramienta empleada para mejorar el recurso humano permitiéndole detectar aquellas áreas que presenten deficiencia en la organización y en el individuo. En tal sentido se hace cada vez más necesario que las empresas implanten programas de adiestramiento y de formación, que a través de estos les permita a su talento humano el satisfacer sus objetivos personales y laborales; siempre y cuando el proveedor de este servicio sea confiable y cumplan con patrones de calidad de servicio acorde a las necesidades propias de la entidad contratante.

Los constantes cambios en leyes y normas nacionales, las tendencias gerenciales y técnicas de procesos de operaciones y administrativas hacen necesario que la empresa venezolana y los profesionales tengan la necesidad de actualizarse a través de empresas de enseñanza, que están dedicadas a ofrecer planes de formación acorde a la realidad de búsqueda oportuna del conocimiento. Es por ello que la enseñanza es un servicio intangible según lo mencionado por Zeithaml y colaboradores (2009), donde se establece que la misma no es un bien físico tangible que se adquiere y se puede trasladar fácilmente de un lugar a otro; es adquirido en un momento dado por la persona quien a pesar de que pueda obtener material de apoyo o implementos de enseñanza la forma con que recibe el servicio es intangible que es por excelencia un espectro de intangibilidad dominante como lo muestran G. Lynn Shostack (1977); citado por Zeithaml y colaboradores (2009). Las empresas privadas de enseñanza son instituciones creadas bajo legislación venezolana en forma de asociación civil, fundaciones, compañías anónimas, cooperativas, sociedad de responsabilidad limitada y también todas aquellas creadas por personas de forma libre y registradas ante las oficinas gubernamentales de control como registros mercantiles o civiles y que en algunos casos se registran ante Ministerios o Institutos del estado que regulan la materia educativa venezolana. Estas empresas planifican, organizan y ejecutan actividades de enseñanza de forma privada y no dependen del Estado en su operatividad interna.

El mercado zuliano conformado por múltiples entidades de formación bajo las diferentes figuras jurídicas están presentes para captar a los participantes y ofrecerles sus servicios educativos, demostrando su experiencia, antigüedad y la calidad de sus Instructores; el precio es determinado por las condiciones económicas del mercado; la plaza y proximidad de la empresa de enseñanza al participante es un indicador que determina el volumen de inscritos en los cursos y/o actividades programadas por estas empresas; la promoción como un medio para aumentar participación en el mercado o para aprovechar oportunidades de mantener operativa la empresa en temporadas de baja cuota de inscritos. Cada día el participante se hace más exigente porque vive la experiencia de optar por varias empresas de enseñanza

que pueden o no en un momento ofrecer el mismo tipo de adiestramiento y hasta con el mismo precio y en la misma plaza; pareciera que al ser todo uniforme no existiría dificultad en seleccionar a cualquier empresa de enseñanza, pero el participante seleccionará aquella que de una forma u otra pueda satisfacer. El servicio es una clave fundamental para las empresas de enseñanza como es su principal razón social, debe internalizarlo y demostrar que puede no solo ofrecer educación sino hacerlo de tal forma que el participante puede quedar satisfecho con su percepción del servicio recibido.

Las entidades de formación seleccionadas serán las que generen mayores expectativas por parte del participante, una vez realizada la capacitación; el participante determinará su percepción sobre la calidad del servicio prestado por el proveedor y se compara dentro de las expectativas del servicio esperado, versus el servicio percibido estableciendo por parte del cliente una brecha según lo explicado por Zeithaml y colaboradores (2009). Lo que determinará si las empresas privadas de educación empresarial y profesional prestan calidad del servicio en sus actividades.

Dado los argumentos anteriores se presenta un trabajo de investigación que tiene como objetivo general analizar la satisfacción de los usuarios en cuanto a los servicios prestados por las empresas privadas de educación empresarial y profesional en el estado Zulia. Para lo cual se responden las siguientes interrogantes: ¿Cuáles son las expectativas de los participantes cuando se inscriben en los cursos que imparten las empresas privadas de enseñanza y ¿Cuál es la percepción de los participantes de la calidad de servicio prestada por las empresas privadas de enseñanza?.

## CONSIDERACIONES METODOLÓGICAS

Esta investigación es de tipo descriptivo ya que busca especificar propiedades, características y los perfiles más importantes de las personas que se someten a un análisis, según Hernández y colaboradores (2010). El diseño de la investigación es no experimental, transeccional o transversal y de campo. Para conocer el número de empresas privadas de enseñanza empresarial y profesional para el estudio se procedió a obtener información del Sistema Nacional de Contrataciones; Ente adscrito a la Comisión Central de Planificación de la Vicepresidencia de la República. Este sistema tiene un registro de todas las empresas que ofrecen productos y servicios al Estado venezolano a través del Registro Nacional de Contrataciones. Hasta el 30 de Marzo de 2012, específicamente en el estado Zulia se cuenta con 25 empresas que ofrecen servicios de formación y adiestramiento.

Una vez identificadas las empresas que ofrecen el servicio de enseñanza, se procedió ubicarlas, obteniéndose que 3 están inactivas, 7 no están interesadas en participar, 10 no se pudieron ubicar y 5 decidieron participar en este estudio. Luego se decidió hacer un censo poblacional determinado por la matrícula para el mes de Mayo del año 2012, obteniéndose un total de 278 participantes que asistieron a los programas de educación que ofrecen las empresas privadas de enseñanza empresarial y profesional del estado Zulia. El instrumento utilizado en la presente investigación, estuvo representado por un cuestionario elaborado por el investigador, el cual estuvo compuesto por 44 afirmaciones que comprenden cinco categorías como alternativas de respuesta dentro de una escala tipo Lickert; en donde se midió las expectativas y las percepciones de los participantes respecto a las dimensiones del servicio

Al momento de comprobar la confiabilidad del instrumento, se aplicó una prueba piloto a treinta sujetos pertenecientes a la población objeto de estudio, es decir, a los participantes de los planes de formación que ofrecen las empresas privadas de educación empresarial y profesional; con esta prueba piloto se logró probar que el instrumento ha sido diseñado de manera clara, sencilla y sobre todo comprensible por todos los miembros de la población objeto de estudio; en donde todos los ítems fueron entendidos, lo cual conllevará a un análisis de resultados más confiable y representativo de la realidad referida a la variable de estudio. Con respecto a la validez, se consultó a cinco expertos para que evaluaran la correspondencia

de los ítems planteados con respecto a las bases teóricas expuestas, y a la variable de estudio planteada, así como también a los objetivos expuestos.

## RESULTADOS DEL ESTUDIO

Los resultados de la investigación se presentan en forma cuantitativa, a través de análisis de las frecuencias relativas determinadas para cada uno de los ítems que conforman el instrumento. Se analizan las evaluaciones realizadas por los participantes encuestados con respecto a cada subdimensión de la variable calidad de servicio de acuerdo a la metodología SERVQUAL en términos de las expectativas y percepciones de los participantes. En las tablas 1 se observan la escala y el rango valorativo para los puntajes obtenidos para la dimensión expectativas de los usuarios.

Tabla 1: Categoría de Respuestas Sobre Expectativas

Puntaje	Alternativas	Rango	
1	Nada Importante	1,00 - 1,80	Baja
2	Poco Importante	1,81 - 2,60	
3	Medianamente Importante	2,61 - 3,40	Media
4	Importante	3,41 - 4,20	
5	Muy Importante	4,21 - 5,00	Alta

Fuente: Elaboración propia

Mientras que en la tabla 2, se presentan las categorías de respuestas para la percepción y el rango obtenido de acuerdo a los puntajes.

Tabla 2: Categoría de Respuestas Sobre Percepciones

Puntaje	Alternativas	Rango	
1	Totalmente en desacuerdo	1,00 - 1,80	Baja
2	En desacuerdo	1,81 - 2,60	
3	Medianamente de acuerdo	2,61 - 3,40	Media
4	De acuerdo	3,41 - 4,20	
5	Totalmente de acuerdo	4,21 - 5,00	Alta

Fuente: Elaboración propia

## Perfil del Participante

Los resultados mostrados en la tabla 3, indican que el 69,79% de la muestra son participantes entre 26 a 45 años mientras un 30,21% son personas entre 18 a 25 años y mayores a 46 años

Tabla 3: Edad del encuestado

Alternativa	Porcentaje
18-25 años	15,47%
26-35 años	40,65%
36-45 años	29,14%
Más de 45	14,74%

Fuente: Elaboración propia

Se determinó un predominio del sexo femenino en un 73,38%, lo cual coincide con los indicadores publicados por el Instituto Nacional de Estadística el cual determina un crecimiento constante en la matrícula del sexo femenino en comparación con la matrícula del sexo masculino.

Tabla 4: Sexo del Encuestado

Alternativa	Porcentaje
Femenino	73,38%
Masculino	26,62%

Fuente: Elaboración propia

Los resultados de la investigación arrojaron un 52,8% de los consultados viven en el Municipio Maracaibo según las cifras reflejadas en la tabla 5; encontramos un 28,06% de participantes de los Municipios Cabimas y Ciudad Ojeda, un 6,83% del Municipio San Francisco lo que representan los Municipios de mayor número de habitantes según estadísticas del I.N.E. (2012). Lo anterior expresa los señalamientos de Gorrochotegui y otros (2006): “La fundación de instituciones privadas de educación superior surgen de las necesidades de algunas regiones del interior de la República en formar recursos profesionales para su propio desarrollo local”.

Las empresas privadas de educación empresarial y profesional, organizan actividades de formación en las principales ciudades del Estado Zulia. Es de notar una participación de apenas un 5,03% de personas que residen en los Estados Falcón, Lara y otros; que participan en actividades de formación en el Estado Zulia. Esto sin duda por la cercanía geográfica como también por el acceso a diversidad de planes de formación que no se ofrecen en sus ciudades de origen, según los comentarios compartidos con los propios participantes encuestados.

Tabla 5: Municipio Donde Reside el Encuestado

Alternativa	Porcentaje
Maracaibo	52,88%
San Francisco	6,83%
Cabimas	14,03%
Ciudad Ojeda	14,03%
La Villa del Rosario	2,52%
El Mojan	0,36%
Estado Falcón	3,59%
Estado Lara	1,08%
Otro estado	0,36%
Venancio Pulgar	0,72%
Colon	2,52%
Los Puertos de Altagracia	1,08%

Fuente: Elaboración propia

En la tabla 6 podemos observar que un 87,77% de los encuestados son empleados, mientras que un 1,4% manifiesta que son desempleados cifra muy inferior al nivel de desempleo publicado por el Instituto Nacional de Estadística de 7,9% hasta Abril 2012; Adicionalmente se tiene un 10,80% de encuestados que son trabajadores independientes y empresarios-emprendedores las cuales muestran una tendencia de cifras iguales 5,40% cada uno.

Tabla 6: Situación Laboral

Alternativa	Porcentaje
Empleado	87,77%
Desempleado	1,44%
Trabajador Independiente	5,40%
Empresario-Emprendedor	5,40%

Fuente: Elaboración propia

Motivación de los Participantes

En la tabla 7, se resumen los resultados de las razones para la selección de la empresa privadas de educación empresarial y profesional por su prestigio en el mercado donde el 32,01% de los encuestados expresaron que el prestigio de la entidad educativa fue su principal razón para seleccionarla, mientras un 68,99% no respondió a esta pregunta por considerar que existen otros factores mucho más relevantes para la selección de la entidad de formación. Por otra, están los resultados de las razones para la selección de la empresa privadas de educación empresarial y profesional donde el 7,19% de los encuestados expresaron que el costo de inversión y/o inscripción es un factor importante para su participación, mientras un 92,81% no respondió a dicha pregunta por considerar que existen otros factores mucho más relevantes para la selección de la entidad de formación.

Tabla 7: Motivos Para Realizar Sus Estudios en Esta Empresa Y/O Institución Privada

Alternativa	Si respondió	No respondieron
	Porcentaje	Porcentaje
Prestigio de la institución	32,01%	68,99%
Costos de inversión y/o inscripción	7,19%	92,87%
Contenido del plan de formación ofrecido	78,78%	21,22%
Otros especifique	2,88%	97,12%

Fuente: Elaboración propia

Las razones para la selección de la empresa privadas de educación empresarial y profesional donde el 78,78% de los encuestados expresaron que el Contenido del plan de formación ofrecido por estas entidades es un factor importante para su participación, mientras un 21,22% no respondió a dicha pregunta. Apenas un 2,9% de los encuestados manifestaron que su participación en los planes de formación ofrecido por las empresas privadas de educación empresarial y profesional por otras condiciones distintas al prestigio, costo de matrícula y contenido programático ya que manifestaron condiciones como cercanía del lugar para el dictado del curso, fechas y conocimiento de determinado Instructor. La tabla 8 muestra la preferencia de los participantes donde las áreas laborales, RRHH y gerencia tienen altos niveles de frecuencia como los temas gerenciales que obtiene un 33,09% de la muestra que manifestó su interés para su desarrollo personal y profesional, mientras un 66,91% no lo considera. Por otra parte el área de formación de interés del participante en temas laborales representa un 52,9% de interés mientras un 47,1% no lo considera. Adicionalmente el área de interés denominado recursos humanos obtiene un 44,60% de interés mientras un 55,40% no lo considera de interés.

Tabla 8: Área de Formación de Interés

Alternativa	Si respondió	No respondieron
	Porcentaje	Porcentaje
Gerencial	33.09%	66.91%
Laboral	52.9%	47.1%
Tributario	26.26%	73.74%
Recursos Humanos	44.60%	55.40%
Mercadeo	9.35%	90.65%
Ingeniería	6.47%	93.53%
Finanzas	15.83%	84.17%
Contabilidad	21.94%	78.06%
Tecnología	7.19%	92.81%
Legislación	8.27%	91.73%
Seguridad Industrial	11.15%	88.85%
Otros	4.68%	95.32%

Fuente: Elaboración propia

En la tabla 9 se muestra las razones por las cuales el participante se inscribe en los planes de formación por motivos de exigencias laborales que representa un 56,47% de interés para su desarrollo personal y profesional mientras un 43,53% no lo considera como una norma u obligación para participar.

Tabla 9: Participación en los Planes de Formación

Alternativa	Si respondió	No respondieron
	Porcentaje	Porcentaje
Exigencias laborales	56.47%	43.53%
Satisfacción propia	72.66%	27.34%
Otras especifique	2,52%	97,48%

Fuente: Elaboración propia

Las empresas dentro de su plan de formación y profesionalización de su talento humano recurren a la planificación de actividades de formación con entidades externas para postular a su personal, bien sea dentro de programas de inducción, actualización o aplicación de nuevos conocimientos en la misma. Esto tiene relación en lo planteado por Ivancevich (2005), y Villegas (1997), sobre la importancia de fortalecer al talento humano de las organizaciones a través de los planes de formación y más cuando los mismos son de forma regular y permanente. Por eso encontramos un 56,47% de participantes en planes de formación por exigencias propias de las empresas donde laboran. Por otra parte, muestra el interés del encuestado en participar en los planes de formación por satisfacción propia, lo cual representa un 72,66% de interés para su desarrollo personal y profesional, mientras un 27,34% no lo considera como una norma u obligación para participar.

### Expectativas y Percepción de los Participantes

En la tabla 10, se reflejan las expectativas de los participantes con respecto a las subdimensiones de la calidad de servicio, las cuales se encuentra dentro del nivel de expectativas “Muy importante”. Esto comprueba el alto grado de exigencia de los clientes. Para Zeithaml y colaboradores (2009), las expectativas del cliente son creencias relacionadas con la prestación del servicio que funcionan como estándares o puntos de referencia con los cuales se evalúa el desempeño de la entidad.

Tabla 10: Expectativas de los Participantes Con Respecto a las Subdimensiones de la calidad de servicio

Subdimensión	Media
Confiabilidad	4.80
Seguridad	4.64
Empatía	4.71
Tangibles	4.40
Capacidad de respuesta	4.78
Media	<b>4.66</b>

*Fuente: Elaboración propia*

La confiabilidad que tiene el participante hacia la entidad educativa viene dada por la expectativa que ofrece la misma sobre la experiencia y conocimiento actualizado del instructor que obtiene una puntuación muy alta de 4,80. Esto indica el deseo del participante de recibir una instrucción de calidad. Por otra parte la educación constituye un servicio intangible por excelencia, según lo mencionado por Zeithmal y colaboradores (2009), ya que en ella recae toda la responsabilidad de su éxito a la relación entre docente – participante y este último participa por exigencias laborales como por satisfacción propia, dos elementos que generan presión. La empresa que envía a sus participantes a planes de formación estiman que el empleado puede obtener conocimientos que posteriormente serán transferido a la empresa; los que participan por satisfacción propia lo hacen pensando en los beneficios propios de adquirir conocimientos nuevos o actualizados para competir en un mercado laboral, cada vez más competitivo, según lo mencionado por Johnson (1999).

La seguridad, la cual obtiene una puntuación de 4,64 está dentro del rango muy alto. Es producto de esa exigencia del participante en seleccionar a su proveedor de educación por la credibilidad que otorga en el mercado laboral y profesional, además de la seguridad personal relacionada a los procesos suministrados por la empresa de enseñanza y por sobre todo la necesidad de seguridad dentro de los espacios donde se estén impartiendo las clases de formación. Por otra parte, para los clientes la empatía sigue en importancia, pues se evidencia que los clientes asignaron puntajes de 4,71, muy alto, a la capacidad de la institución para brindar atención personalizada. La tangibilidad de las expectativas del participante obtuvo una puntuación de 4,40, lo cual indica la necesidad de ofrecer aspectos relevantes en las instalaciones físicas de la empresa de educación, como facilidades de estacionamiento, cercanía de lugares de alimentación, utilización de tecnología, calidad en los materiales impresos y material de apoyo, la apariencia del instructor en cuando a su indumentaria, modales y aspectos físicos del mismo. Estos aspectos deben ser cuidadosamente acondicionados para garantizar el logro de la calidad del servicio.

Por último la capacidad de respuesta obtiene 4,78 puntos, indica la importancia que tiene la actualización de los conocimientos impartidos, la aplicación de los conocimientos en el campo laboral y la preparación académica del docente para facilitar el proceso enseñanza-aprendizaje. En cuanto a la percepción, en la tabla 11 el valor medio de la puntuación es de 4,70 obtenido para la medición de la percepción, se encuentra dentro del nivel de percepción “totalmente de acuerdo”. La confiabilidad y la seguridad obtienen una puntuación de 4,70 cada uno lo que nos puede indicar el grado de exigencia del participante y la calidad que ofrece la empresa de enseñanza lo cual permite satisfacer esas necesidades propias del cliente.

Tabla 11: Percepción de los Participantes Con Respecto a las Subdimensiones de la Calidad de Servicio

Subdimensión	Media
Confiabilidad	4.70
Seguridad	4.70
Empatía	4.71
Tangibles	4.66
Capacidad de respuesta	4.76
Media	<b>4.70</b>

Fuente: Elaboración propia

La empatía obtiene una pequeña ventaja con respecto a la confiabilidad y a la seguridad de apenas 0,01 puntos: la puntuación resultante de 4,71 muestra el grado de conexión que tiene la empresa de enseñanza para con sus participantes lo que indica que la comunicación y la comprensión de las necesidades propias del cliente son claves en el éxito de esta relación. Las empresas de enseñanza privadas personalizan mucho más su trabajo lo contrario al esquema impersonal de la masificación muy tradicional en las instituciones oficiales. Los aspectos tangibles obtiene una puntuación de 4,66 a pesar de estar dentro del rango muy alto, fue la más baja de las 5 subdimensiones. Por otra parte la capacidad de respuesta fue la que mayor puntuación obtuvo con 4,76 lo cual indica la percepción que tiene el participante de los conocimientos adquiridos y que pueden ser aplicados y reconocidos en el ámbito laboral y personal. Los niveles de expectativas y percepción se evaluaron en una escala comprendida entre (1,0), y (5,0), para señalar menor y mayor valoración, respectivamente. Por lo tanto, el nivel de satisfacción de los participantes o la brecha existente entre las puntuaciones entre percepción y expectativas de los participantes encuestados con respecto a los componentes de la calidad de servicios, estará comprendida en la escala (-4,0), “Muy Insatisfecho” y (4,0), “Muy Satisfecho” (ver tabla 12)

Tabla 12: Escala de Medición Entre la Percepción y Expectativa

Nivel de satisfacción	P - E		
Muy Satisfecho	2,4	a	4,0
Un Poco Satisfecho	0,8	a	2,4
Neutral	-0,8	a	0,8
Un Poco Insatisfecho	-2,4	a	-0,8
Muy Insatisfecho	-4,0	a	-2,4

Fuente: Elaboración propia

Tabla 13: Escala de Medición del Nivel de Satisfacción

Subdimensión	Percepción	Expectativas	P-E
Confiabilidad	4.70	4.80	-0.10
Seguridad	4.70	4.64	0.06
Empatía	4.71	4.71	0.00
Tangibles	4.66	4.40	0.26
Capacidad de respuesta	4.76	4.78	-0.02
Media	<b>4.70</b>	<b>4.66</b>	<b>0.04</b>

Fuente: Elaboración propia

En la tabla 12 los valores comprendidos entre -0,8 y 0,8 corresponden a niveles de satisfacción “Neutral”; los valores obtenidos en la tabla 13 muestran que la diferencia entre percepción y expectativas tiene una media de 0,04, lo cual entra dentro del rango de satisfacción neutral y se considera que el nivel percibido se corresponde con el nivel esperado (P~E). La confiabilidad y la capacidad de respuesta obtienen un leve descenso de sus indicadores de expectativas con respecto a la percepción; por otra parte la tangibilidad y

la seguridad superaron con pequeños márgenes sus niveles de expectativas, mientras que la empatía no tiene variación alguna. Para Zeithmal y colaboradores (2009), en tanto las brechas entre expectativas y percepciones de los clientes o participantes de un servicio tienden a cerrarse cada vez más hasta llegar a un nivel medio o cero, entonces se logra la satisfacción del cliente y por ende se llega a la calidad del servicio.

## CONCLUSIONES

La determinación de las expectativas de los participantes con respecto a los componentes de la calidad de servicios señala que el nivel de expectativas es “Muy importante”. Las subdimensiones que más puntuación arrojaron en la encuesta aplicada a los participantes, fueron la confiabilidad con 4,80 puntos, la empatía con 4,71 puntos y la capacidad de respuesta con 4,78 puntos. Estos constituyen los elementos de mayor importancia sobre las expectativas de los servicios que ofrecen las empresas de educación, no obstante a pesar de estar dentro de una puntuación muy importante las subdimensiones de seguridad y tangibles tiene una ligera baja en su calificación.

La determinación de la percepción de los participantes con respecto a los componentes de la calidad de servicios señala que el nivel de percepción es “totalmente de acuerdo”. Las subdimensiones que mayor puntuación se obtuvieron fueron las de confiabilidad con 4,70 puntos, la seguridad con 4,70 puntos, la empatía con 4,71 puntos y la capacidad de respuesta con 4,76 puntos, mientras la tangibilidad tiene una pequeña disminución con relación a las otras subdimensiones de 4,66 puntos obtenidos. Los participantes consideran que la percepción del servicio recibido superó sus propias expectativas.

La aplicación de comparación entre las expectativas y la percepción a través de las subdimensiones, en el presente trabajo de investigación, muestra como la percepción de 4,70 puntos supera a las expectativas de 4,66 puntos. Lo cual aplicando operaciones matemáticas para obtener un indicador confiable para ser evaluado dentro de las brechas entre expectativas y percepciones, nos da una diferencia 0,04 puntos. Este resultado indica que la reducción de las brechas se encuentra en un estado neutral dentro de un nivel de satisfacción del cliente, lo que nos permite indicar la satisfacción propia del servicio que a su vez muestra el logro por parte de las empresas privadas de educación empresarial y profesional de la calidad de servicio.

## SEGUROS AGRÍCOLAS EN MÉXICO

Armando Ramírez Román, Universidad Autónoma Chapingo

Montserrat Guillén I Estany, Universidad de Barcelona

Daniel Sánchez-Moscona, Universidad de Barcelona

### RESUMEN

*Las actividades económicas: agrícola, ganadera, pesquera y forestal, se consideran de alto riesgo por los agentes económicos. Las fuentes de riesgos que enfrentan los productores son: climatológicas, biológicas, de mercado, etc. Estos riesgos tienen impactos directos en el patrimonio y la economía de los productores, así como también daños a la economía regional y nacional. El objetivo de este estudio fue analizar el mercado de seguros agrícolas en México en su cobertura, esquemas de seguros agrícolas catastróficos y no catastróficos, así como la situación financiera del mercado privado de seguros. Los resultados para el 2011 muestran que 55.55 % de la superficie sembrada en México fue cubierta por algún esquema de aseguramiento agrícola catastrófico y hay un potencial de crecimiento para el logro de una cobertura nacional más amplia; el uso del seguro agrícola no catastrófico representó 25.61 % y se concentró en estados de Veracruz, Guerrero, San Luis Potosí, Jalisco y Guanajuato y en cultivos de trigo, caña y cebada. Finalmente, el análisis financiero aplicado a las aseguradoras privadas para el 2011 muestra indicadores positivos: índice de pérdida menor a 1; índice de siniestralidad 4 %; remanente de las primas después de pagar siniestros de 3.68 pesos por hectárea.*

Palabras clave: riesgo, seguros agrícolas, catastrófico, concentración, análisis financiero.

### AGRICULTURE INSURANCE IN MEXICO

This paper's analysis of the agriculture insurance in Mexico. Risk, coverage and financial impact are considered.

# **DESARROLLO DE UN MODELO DE ECUACIONES ESTRUCTURALES PARA MEDIR LA SATISFACCIÓN DE LOS PROFESIONALES QUE IMPLEMENTAN PROYECTOS DE INTERVENCIÓN SOCIAL**

Sara Arancibia, Universidad Diego Portales

Andrea Acuña, Universidad Diego Portales

Angela Denis, Universidad Diego Portales

Mauricio Rosenbluth, Fundación Superación de La Pobreza

## **RESUMEN**

*El objetivo de esta investigación es desarrollar un modelo de satisfacción de los profesionales que llevan a cabo proyectos sociales, utilizando la metodología PLS de ecuaciones estructurales, que permita apoyar a los directivos y jefes de proyectos en la gestión de los programas de intervención, identificando los factores más importantes que hacen sentir satisfechos a los profesionales con el trabajo realizado, de modo que los directivos puedan proponer mejoras en las acciones que se realizan en el Programa. El modelo propuesto permite contar tanto con un indicador de satisfacción como con indicadores de los factores que la afectan.*

*En particular, el modelo se aplica al Programa Servicio País de Chile, cuyo propósito es contribuir a que las personas en situación de pobreza mejoren su accesibilidad a oportunidades de desarrollo en ámbitos claves del bienestar.*

*Los resultados de la aplicación indican que los factores “Imagen percibida”, “Motivación” y “Valor de la experiencia vivida” tienen efectos directos sobre la satisfacción y que los factores “Gestión del Programa” e “Interacción con los Beneficiarios” tienen efectos indirectos. El valor de la experiencia es el factor que más incide sobre la satisfacción, la que a su vez influye de manera considerable sobre el compromiso de los profesionales.*

**PALABRAS CLAVES:** Satisfacción, Motivación, Imagen, Valor percibido, Intervención Social, Modelación mediante PLS.

## **MODEL TO MEASURE SATISFACTION ON PROFESSIONAL QUE IMPLEMENT SOCIAL PROJECTS**

*This paper proposes a model to measure social service professionals' satisfaction*

## RESUMEN

*¿Cómo se mide el bienestar social de una población? Ciertamente no podemos definir ni asegurar cuales son las variables que intervienen al momento de establecer un indicador que permita conocer con exactitud las condiciones de vida y de bienestar de la población. En la primera parte de este trabajo, se pretende analizar variables que sean diferenciadoras de los distintos Niveles Socio-Económicos (NSE) para la población en el municipio de Chihuahua, basados en datos obtenidos del Instituto Nacional de Estadística y Geografía (INEGI), con el fin de obtener los niveles que nos permitan diferenciar con mayor precisión la diversidad de los NSE, a nivel de Áreas Geo estadísticas Básicas (AGEBS). En la segunda parte se requiere aplicar una encuesta en la que se vean reflejadas las distintas dimensiones que se propone compongan el bienestar de las personas y por último mediante un programa de Lógica Difusa poder establecer los NSE desde el punto de vista socio demográfico y de percepción. Este producto está dirigido principalmente a los gobiernos federales, estatales y municipales así como a los sectores social, académico y privado como apoyo alas tareas de planeación, diseño y formulación de políticas y programas específicos, en sus respectivos ámbitos de acción*

## MEASUREMENTS OF SOCIAL WELL-BEING

### ABSTRACT

*How to measure the social well- being people? We certainly cannot define which variables must be included when setting an indicator to show accurately living conditions and well- being population. In the first part of this paper, it try to analyze variables that are discerning the different socio-economic levels (NSE) for the population in the city of Chihuahua, it based on data from the National Institute of Statistics and Geography (INEGI), in order to obtain the levels that allow us to distinguish with greater precision the diversity of the NSE, in basic areas geo- statistics (census tracks). The second part is required to apply a survey in which are reflected the different dimensions that make up to project the well-being of people. And finally by a fuzzy logic program to found the NSE from the point of view of socio demographic and perception This product is directed, primarily at the federal, state and municipal governments as well as the social, academic and private sectors to support the work of planning, design and formulation of specific policies and programs in their respective areas of action*

## INTRODUCCIÓN

Intentar definir y sustentar lo que es el bienestar, nos lleva a entrar en un ámbito complejo e inconcluso, ya que no existe una delimitación conceptual que permita la aclaración del término y su sustentación. Implica tratar de responder a la pregunta quizás más antigua de la humanidad: ¿qué es lo que hace feliz al ser humano? ¿Qué lo hace sentirse satisfecho con su vida?

A pesar de ser más que una búsqueda científica, un núcleo central de la existencia de los hombres, génesis de múltiples conflictos a lo largo de la historia personal y colectiva, el tema del bienestar no ha sido lo suficientemente abordado, y cuando lo han hecho, al tratar de controlar y analizar todas las variables que

podrían intervenir en el constructo, se ha perdido la variable central, el verdadero meollo del asunto: el ser humano. En una primera etapa de estos estudios, las investigaciones se centraron en correlacionar el bienestar con características demográficas como la edad, el sexo, los ingresos, la salud, etc. Actualmente las investigaciones se enfocan en entender los procesos que subyacen al bienestar, es decir, el cómo de cada una de esas experiencias, y las condiciones sociales que facilitan o dificultan su consecución.

El Bien-estar, podría hacernos pensar que se limita al mero hecho de estar bien, entiéndase, tener todas las necesidades básicas resueltas. Pero el término en inglés nos permite percatarnos de lo complejo del asunto y de qué tanto toca la naturaleza del ser humano: Well-being (recordemos que el verbo que se asocia a este estado - ¿subjetivo?- es el verbo To Be, ser-estar). El bienestar no es un hecho final y conclusivo, sino una experiencia subjetiva que se va haciendo en cada momento.

Desde este punto de vista, alguien podría tener todo lo aparentemente necesario para “estar bien”, pero, ¿es realmente feliz y pleno? Puede que tenga un exceso de bienestar tal como ha sido entendido por muchos hasta el momento, pero también puede que tenga una carencia de sentido vital, que no le permita integrarse a su entorno y encontrarse a sí mismo, y como resultado ser feliz.

Entendido así, el bienestar podría contemplarse como algo cercano a la experiencia mística del ser humano, encontrando lo trascendente como fuente de felicidad, como lo puramente humano. Csikszentmihalyi (1999), plantea que la alternativa espiritual puede ser entendida como psicológica si se parte de la premisa que la felicidad es un estado mental que las personas pueden llegar a controlar cognoscitivamente: la felicidad podría enfocarse así en los procesos en que la conciencia humana usa sus habilidades.

De esta manera, el bienestar psicológico no es simplemente la vida feliz per se, sino los procesos del vivir con sus mezclas de sabores dulces y amargos; una vida que, no evita el dolor, sino que todo lo contrario, lo enfrenta y le da un significado constructivo para transformar lo doloroso y conflictivo de la vida en algo hermoso y digno de vivirse.” (Cuadra & Florenzano 2003, p. 93). ¿Será que al perder todo lo que aparentemente sustenta y soporta al ser humano (elementos materiales e incluso sociales) también pierde éste la posibilidad de estar bien consigo mismo y de estar feliz? Es imposible sistematizar y encuadrar un concepto de bienestar partiendo de los meros hechos cuantitativos y observables que quizá, erróneamente, nos han llevado a creer que en ellos se encuentra el bienestar y por ende, hayamos fracasado tantas veces en su búsqueda, tanto científica como humana.

La concepción de bienestar ha atravesado por varias discusiones con respecto a su definición. Las investigaciones realizadas en los últimos años sobre el tema (Diener, Suh, Lucas, & Smith, 1999), (Díaz & Sánchez, 2002. Cit en: Díaz et al, 2006) han ampliado notablemente lo recopilado sobre este constructo.

Ryan y Deci (2001. Cit. en: Díaz, et al, 2006), proponen organizar los estudios en dos tradiciones: la que aborda el bienestar desde el concepto de felicidad (bienestar hedónico), y la que lo hace desde el desarrollo del potencial humano (bienestar eudaimónico).

En principio, la tradición hedónica concibe el bienestar como indicador de calidad de vida basándose en la relación entre las características del ambiente y el grado de satisfacción experimentado por las personas (Campbell, Converse, & Rodgers, 1976. Cit. en: Diener, 2000). El bienestar sería la visión de cómo interpreta esa persona sus circunstancias actuales, lo que piensa y siente con respecto a esto.

Dentro de esta tradición, el bienestar también fue definido en términos de satisfacción con la vida, es decir, como el juicio global que las personas hacen de su vida (Diener, 1984; Diener, 2000; Veenhoven, 1994). Esta visión es a largo plazo, ya que la satisfacción es un juicio, una medida de la vida de una

persona de felicidad, es decir como el balance global de los afectos positivos y negativos que han marcado nuestra vida..

### Antecedentes

Todos queremos una vida mejor, pero ¿qué significa esto y cómo medirlo? Sabemos que la felicidad y el bienestar no son sólo una cuestión de PIB y que también tenemos que tener en cuenta elementos tales como la educación, los ingresos de la unidad familiar, calidad de la vivienda y el acceso a elementos vitales como el agua potable y aire puro.

“La calidad de vida se debe evaluar en términos de la capacidad para lograr funcionamientos valiosos”. (Sen,1980). El ser humano debe ser capaz de tener la cualidad de lograr una nutrición adecuada que le permita tener vida larga y con salud, debe ser capaz de obtener logros más complejos como el de alcanzar la auto dignidad, incorporarse a la sociedad y en general tener funcionamientos que le otorguen un bienestar en términos sociales y de fortaleza física y mental.

A la fecha existen un gran número de indicadores que nos permiten evaluar las condiciones humanas, ya no tanto en términos de acumulación de recursos, sino en razón de las capacidades y el bienestar de los pobladores de las naciones. Este trabajo pretende dar una ojeada a los diferentes indicadores y el lugar que ocupa México como nación, además de analizar las variables que fueron tomadas en cuenta para llegar a establecer un parámetro de medición.

La necesidad de seleccionar y discriminar variables es necesaria para llegar a la conceptualización del bienestar social, indicadores, que vayan más allá del Producto Interno Bruto per cápita, que ilustre de manera fidedigna la condiciones de vida de los habitantes de la ciudad de Chihuahua. Para lo cual es necesario tomar en cuenta aspectos como la percepción de la población acerca de su nivel de vida y el grado de felicidad que los pobladores experimentan y analizar las estadísticas proporcionadas por el Instituto Nacional de Geografía y Estadística (INEGI) para poder determinar las divergencias que pueden existir en la interpretación del nivel de vida de la población con los datos subjetivos obtenidos de fuentes primarias.

Por lo anterior es necesario utilizar herramientas que den un enfoque más cercano a la realidad de la percepción del bienestar social. La lógica difusa permite adecuar aspectos tan subjetivos como la felicidad o el bienestar a funciones matemáticas que se aproximan más al razonamiento humano que no son tan deterministas ya que contienen una connotación de incertidumbre. Desde el punto de vista tecnológico, la lógica difusa se encuadra en el área de la llamada Inteligencia Artificial, que se utiliza más que todo en procesos industriales, así como también, en el diseño de dispositivos artificiales, esquemas que por presentar un carácter multivariado para su elaboración, requieren de este instrumento matemático.

No es muy común encontrar la aplicación de la lógica difusa en temas de tipo social como el que se está presentando en esta investigación pero se adapta muy bien debido a la imprecisión del poder determinar el nivel social al que se pertenece, ya que puede tener incluso varios grados en diferentes contextos o lugares, o como en este caso en diferentes ciudades. No es lo mismo un nivel socioeconómico en el norte del país como el mismo nivel socioeconómico en el sureste del mismo.

Este trabajo, va más allá, pretende encontrar las diferencias que existen entre los mismo niveles económicos de la misma ciudad de Chihuahua bajo la óptica de la percepción de sus habitantes y sus condiciones socioeconómicas, utilizando datos estadísticos que se combinen con la aplicación de un instrumento que reconozca los diferentes “grados” de un mismo nivel. La lógica difusa nos permite obtener una descripción de un proceso mediante reglas, o heurística, que son desarrolladas a partir de un cocimiento previo del proceso.

### Organización para la cooperación económica y el Desarrollo.

Durante más de cincuenta años, la Organización para la Cooperación y el Desarrollo Económico (OCDE) ha ayudado a los gobiernos a diseñar mejores políticas para una vida mejor para sus ciudadanos. Proporciona un foro en el que los líderes y los responsables políticos pueden trabajar juntos para compartir experiencias y buscar soluciones a problemas comunes, y produce alta calidad de las estadísticas internacionalmente comparables utilizados para comprender lo que impulsa el cambio económico, social y ambiental.

Desde que comenzó la OCDE en 1961, el PIB ha sido el factor principal por el cual se ha medido y entendido el progreso económico y social. Pero no ha logrado captar muchos de los factores que influyen en la vida de las personas, tales como la seguridad, el ocio, la distribución del ingreso y un medio ambiente limpio.

¿Es realmente la vida cada vez mejor? ¿Cómo podemos saber? ¿Cuáles son los ingredientes clave para la mejora de la vida - ¿es mejor la educación, el medio ambiente, la salud, la vivienda, o las horas de trabajo? ¿El progreso significa lo mismo para todas las personas o en todos los países y sociedades? Un pionero en este campo emergente de la investigación, la OCDE ha estado trabajando desde hace casi diez años para identificar la mejor manera de medir el progreso de las sociedades - en movimiento más allá del PIB y el examen de las áreas de vida de las personas que los efectos de todos los días.

La Iniciativa de la OCDE Better Life permite una mejor comprensión de lo que impulsa el. Bienestar de las personas y de las naciones y lo que hay que hacer para lograr un mayor progreso para todos Basándose en las recomendaciones de la Comisión para la Medición del Desempeño Económico y el Progreso Social (a la que la OCDE ha sido un contribuyente importante), la OCDE ha identificado 11 dimensiones como esenciales para el bienestar, desde la salud y la educación para el medio ambiente local, seguridad personal y la satisfacción general con la vida, así como medidas más tradicionales, como los ingresos. Estos 11 dimensiones se exploran y analizan en detalle en el informe de la Vida ¿Cómo está, el primer intento a nivel internacional para presentar el mejor conjunto de comparables y completas indicadores de bienestar.

Al mismo tiempo, la OCDE ha creado el "Índice Su Mejor Vida" para apoyar la formulación de políticas para mejorar la calidad de vida.

### Índice de Desarrollo Humano.

Desde su origen, el concepto de desarrollo humano ha priorizado la capacidad de las personas para elegir entre formas alternativas de vida que se consideran valiosas. Esta noción se refiere a las oportunidades de los individuos para gozar de una vida larga y saludable, para acceder a conocimientos individual y socialmente útiles, y para obtener medios suficientes para involucrarse y decidir sobre su entorno. Originalmente el IDH ha servido como una guía que aproxima ese progreso dando prioridad a la libertad de las personas y no a la mera acumulación de recursos.

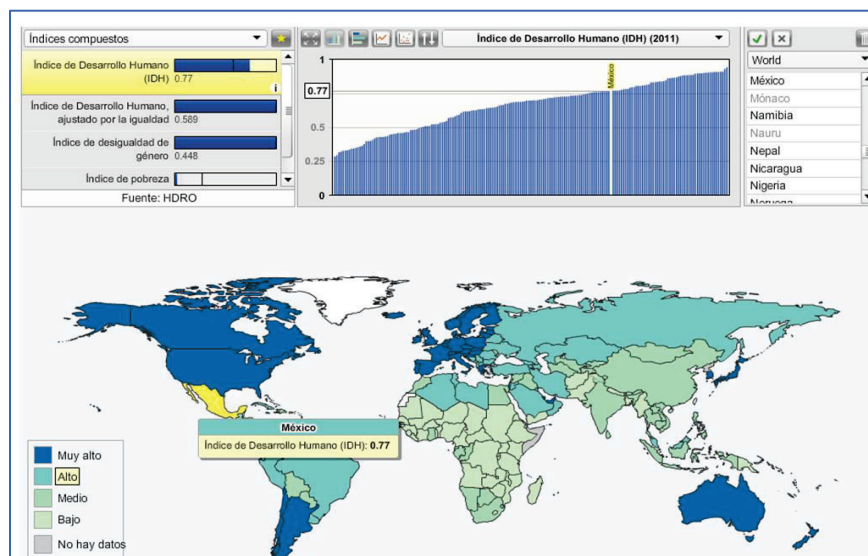

El Informe Mundial sobre Desarrollo Humano 2010 introdujo un conjunto de cambios a la manera en que tradicionalmente se había calculado el IDH. Estos ajustes inciden tanto en los indicadores empleados para el cálculo de las dimensiones que lo componen, como en los valores máximo y mínimos con lo que se evalúan el avance relativo en cada uno de ellas, así como en la expresión matemática con que éstas

El más reciente Informe Mundial sobre Desarrollo Humano 2011, ubicó a México en la posición 57 del ordenamiento internacional, con un IDH de 0.770. De acuerdo con ese informe, el país se encuentra en el segundo grupo de países con mayor desarrollo humano; es decir, en la categoría que agrupa al 25% de países catalogados con desarrollo humano alto. En ese año, el nivel de desarrollo humano nacional

resulta comparable al de Arabia Saudita o Panamá. De acuerdo con la dinámica internacional reciente, el país logró avanzar dos posiciones entre 2006 y 2011. Ver figura No. 1.

Figura 1 Índice de Desarrollo Humano en México, fuente PNUD (Programa de las Naciones Unidas para el Desarrollo).

En lo que respecta las entidades federativas, ninguna de ellas se sitúa con un nivel de desarrollo humanos bajo, es decir menor de .50, si bien la mayoría se sitúa en niveles de desarrollo medio entre .50 y .79, la distancia entre la entidad con mayor y menor desarrollo es aún considerable: el Distrito Federal, con un IDH de .8905 tiene 1.23 veces el nivel de desarrollo de Chiapas que registra un IDH de .7212

### Consejo Nacional de Población (CONAPO)

El Instituto Nacional de Estadística, Geografía e Informática (INEGI), ha producido un documento llamado: “Regiones Socioeconómicas de México”, cuyo objetivo es presentar un resumen comparativo de las diferencias y similitudes observadas en las condiciones económicas y sociales de la población, a lo largo y ancho del territorio nacional, bajo la óptica del XIII Censo General de Población y Vivienda en el año 2010, mediante indicadores que abordan temas relacionados con el bienestar como son educación, ocupación, salud, vivienda, y empleo. Esta síntesis comparativa se presenta no sólo a nivel de las Entidades Federativas y Municipios del país, sino también a nivel de las Áreas Geo estadísticas Básicas (AGEB). Para ello se forman siete estratos (distintos entre sí), donde los elementos clasificados en un mismo grupo tienen en promedio características similares, es decir, son homogéneos. Los estratos se ordenan de tal forma que en el estrato 7 se encuentran las Entidades Federativas (Municipios o AGEBs según sea el caso) que -respecto al total de indicadores considerados- presentan en promedio la situación relativa más favorable, por el contrario, el estrato 1 se compone de las unidades que en promedio presentan la situación relativa menos favorable.

### Capacidad y Bienestar

Amartya Sen, por su parte, ha señalado que los principios éticos bien fundados suponen la igualdad entre los individuos, pero como la habilidad para aprovechar la igualdad de oportunidades varía con cada persona, el problema de la distribución de bienestar nunca podrá resolverse del todo.. No obstante, muchos de los principios de este paradigma pueden encontrarse en los escritos de estudiosos y filósofos de tiempos pasados y de diversas sociedades.

A partir de 1990, el concepto de desarrollo humano se aplicó a un estudio sistemático de temas mundiales, según se publicó en los Informes anuales sobre Desarrollo Humano patrocinados por el PNUD. El trabajo de Amartya Sen y de otras personas fundó las bases conceptuales de un enfoque alternativo y más amplio del desarrollo humano, definido como el proceso de ampliación de las opciones de las personas y mejora de las capacidades humanas (la diversidad de cosas que las personas pueden hacer o ser en la vida) y las libertades, para que las personas puedan vivir una vida larga y saludable, tener acceso a la educación y a un nivel de vida digno, y participar en la vida de su comunidad y en las decisiones que afecten sus vidas. “El desarrollo humano, como enfoque, se ocupa de lo que yo considero la idea básica de desarrollo: concretamente, el aumento de la riqueza de la vida humana en lugar de la riqueza de la economía en la que los seres humanos viven, que es sólo una parte de la vida misma.” (Amartya Sen, 1985). Sen presenta un conjunto de tesis inter-relacionadas sobre los fundamentos de la economía del bienestar, y en especial sobre la evaluación de las ventajas bienestar personal. El argumento mostrado se centra en la capacidad de funcionar, es decir, lo que una persona puede hacer o puede ser, cuestionando en el proceso el énfasis más estándar en la opulencia o en la utilidad. De hecho, la motivación de una persona detrás de elección, es tratada como una variable paramétrica que pueden o no coincidir con la búsqueda de su propio interés. Dado el gran número de problemas prácticos derivados de las funciones y limitaciones de los diferentes conceptos de interés y el criterio del beneficio y el bienestar, la investigación científica es a la vez un interés teórico y práctico de importación.

### Indicadores

Un indicador se identifica como una medida de algo importante o valioso para el individuo y la comunidad. Se encuentra disponible en forma de estadísticos o series estadísticas y en todas aquellas otras formas de evidencia para que las personas puedan evaluar su situación y progreso con respecto a sus objetivos, además se utilizan, para evaluar el éxito de la política y su impacto (Bauer, 1966:1; Salvaris et al 2000). Los indicadores comunitarios de bienestar son herramientas estadísticas para traducir las metas generales de la comunidad en resultados claros, tangibles y comprensibles para evaluar y comunicar el progreso en el logro de estos objetivos. Al ampliar a un nivel o ámbito nacional, los indicadores pueden decirnos sobre el progreso o el bienestar de las naciones, o la condición de un problema social o económico. En el micro nivel, nos puede decir si la meta anual de un programa gubernamental o pequeña empresa se ha logrado (Salvaris et. al. 2000). En la literatura (Salvaris et. Al. 2000) se reconoce que los indicadores deben poseer ciertas características para que sean instrumentos ideales en su propósito. Ante todo Los indicadores deben ser globales en la naturaleza. Es decir, necesitan ser capaces de medir diferentes aspectos del progreso y el bienestar en las diferentes dimensiones de un dominio en particular. En segundo lugar, tienen que ser estratégico a la meta relacionada. Es decir, debe ser un instrumento para lograr los objetivos y establecer puntos de referencia para el análisis que se está realizando. En tercer lugar, los indicadores que se utilizan para el estudio de nivel de bienestar de la comunidad deben reflejar valores comunes y condiciones. En cuarto lugar, tienen que ser aplicables a nivel local en un área específica y comparable entre regiones. Deben cubrir los temas que pueden ser importantes para el área local y deben ser reproducibles en diferentes momentos y diferentes localidades para el análisis comparativo. Los indicadores también son importantes para fomentar la visión y un sentido de propósito común para lo que se han desarrollado. En este sentido se debe plasmar un conjunto coherente de indicadores que permita a las personas determinar el estado de una región o comunidad en un dominio específico y también evaluar el logro de políticas y programas gubernamentales (Bhután-GNHI, 2008) en ese dominio. Los indicadores pueden ser objetivos o subjetivos en la naturaleza o en función del propósito y el entorno de los dominios que se está midiendo. Esta distinción es importante, ya que el objetivo de los indicadores en general es proporcionar información sobre la calidad de vida, más sin embargo, si nos quedamos en los indicadores objetivos resultaría muy pobre la apreciación, por lo que es necesario incluir indicadores subjetivos, tales como, percepciones individuales y juicios de valor (Cummins, 1998), ya que el bienestar integra muchos aspectos individuales, sociales y sistémicos de la vida. Así, en el contexto

específico de la medición para el bienestar es necesario estudiar las respuestas a las diferencias de percepción de las personas, al comportamiento y a los valores. El papel de la educación es igualmente importante en la mejora de la participación social ya que el conocimiento permite el cambio de las comunidades.

Los enfoques objetivos para la medición del bienestar económico y social como el ingreso, la educación, el empleo y la disponibilidad de recursos y servicios en la región, se suelen acopiar de forma centralizada por INEGI y los distintos departamentos del gobierno del estado, organizaciones e institutos de investigación. Los enfoques subjetivos para medir el bienestar se refieren a la percepción de un individuo, actitudes y valores, a menudo requieren atención especial para allegar datos a través de un diseño individual de encuestas para la región. Así, para el propósito de la culminación de esta investigación, el conjunto de indicadores seleccionados deberán medir adecuadamente todos los aspectos del bienestar tanto individual como comunitario, de forma objetiva y subjetiva, que son necesarios para evaluar los diferentes niveles y sus características sociodemográficas.

### Planteamiento Del Problema

Los datos proporcionados por el INEGI en el censo de población 2010, están diseñados para homogenizar las diferencias entre el 94.17 % de Áreas Geo estadísticas Básicas (AGEBS) que pertenecen a un mismo nivel socioeconómico. Esto no permite conocer las diferencias entre los distintos niveles de bienestar social. El método “tradicional”, utilizado por el INEGI, tiene por objeto formar estratos con mínima varianza buscando agrupar a los elementos que más se parezcan entre sí o que estén más cercanos, siguiendo un criterio de similitud establecido y que a su vez permita diferenciar un estrato de otro, utilizando este método proporciona las menores varianzas y en consecuencia genera estratos más homogéneos.

### Preguntas de Investigación

¿Realmente el 97.17 de los AGEBS que conforman el municipio de Chihuahua en su ubicación urbana, pertenecen al Nivel 6 o 7?

¿Que variables son diferenciadoras al momento de establecer un nivel socioeconómico?

¿Qué indicadores será necesario incluir para poder establecer una diferenciación entre dichos niveles?

¿Cómo evaluar la percepción en términos psicológicos, de los niveles a los que pertenece cada individuo?

Objetivos de la investigación (primera parte) Determinar los elementos diferenciadores entre los AGEBS que conforman el municipio de Chihuahua. Analizar los AGEBS para encontrar las variables que establecen diferencias significativas. Implementar una subdivisión de los estratos socio-económicos de la población del municipio de Chihuahua en el área urbana.

Determinar como se distribuyen porcentualmente los distintos niveles encontrados en el municipio.

Hipótesis de la Investigación (primera parte) Existe una diversidad más amplia de NSE divididos por AGEBS, si se utilizan variables que permitan establecer una diferenciación entre ellos.

Es posible hacer una división hasta en 7 niveles del municipio.

Justificación: Es necesario conocer las diferencias entre los distintos grupos sociales para :

Aplicar políticas de desarrollo comunitario en cada una de las áreas urbanas. Desde el punto de vista Mercadológico cada segmento de mercado tiene gustos y necesidades muy distintas que es necesario satisfacer.

Es prioritarios conocer la debilidad y carencias de la población para así poder allegarles recursos necesarios para su bienestar social.

El obtener un indicador de desarrollo humano se entiende en términos de las capacidades individuales

### **METODOLOGÍA (PRIMERA PARTE)**

La primera parte de la presente investigación es de tipo descriptivo, mediante datos obtenidos en el Censo Poblacional 2010. El primer paso será obtener las variables comprendidas en el censo del 2010 que nos permita establecer una diferenciación entre cada uno de los estratos. Dividiendo en cuatro dimensiones que serían: Salud, Condiciones de la Vivienda, Economía y Bienes disponibles en la vivienda

Obtención de la base de datos: Mediante una revisión exhaustiva de los 595 AGEBS que conforman el municipio de Chihuahua, formando así una base de datos con las variables seleccionadas para cada uno de los AGEBS.

En las variables que estaban representada por número de habitantes se obtuvo un porcentaje de cada AGEBS y en aquellos en los que se presentan números o veces en que se repite el evento se presentó en promedio

Se Homogeneizaron o se normalizaron los datos para poder validar de igual forma las 4 variables con sus componentes. Se ponderó cada uno de los componentes de acuerdo a un análisis factorial, en donde se le dio mayor peso aquellas variables que presentaban un índice de correlación más bajo es decir aquellas que presentaran una mayor diferenciación en su regresión. Y con consecuencia aquellas que presentaban una correlación alta se calificó con un peso menor (Ver Tabla No.1) Se dividió en una escala de 7 intervalos para ser congruente con la escala que se maneja por parte del Índice de Desarrollo Humano a través de CONAPO.

### **RESULTADOS**

A continuación se presenta la tabla que corresponde a las ponderaciones que se aplicaron a cada una de las variables así como sus componentes y sus pesos (ver tabla No. 1 “Ponderación) Se obtuvo un Nivel promedio de 4.45 en los 595 AGEBS distribuidos según se muestra en la tabla No. 2, también se puede observar que el porcentaje más alto de AGEBS y/o viviendas está contemplado en los niveles 4 y 5 lo que difiere en forma significativa contra los datos obtenidos por el INEGI, debido principalmente a que en esta investigación, se tomaron otros indicadores que permitieran hacer una diferenciación más efectiva tomando en cuenta las condiciones socioeconómicas del municipio que no son equiparables a las condiciones generales en el país. (Ver Tabla No. 2, “Distribución de Niveles Socioeconómicos).

Por otra parte el método utilizado por el INEGI tiene por objeto formar estratos con mínima varianza buscando agrupar a los elementos que más se parezcan entre si o que estén más cercanos, siguiendo un criterio de similitud establecido y que a su vez permita diferenciar un estrato de otro. Entre las técnicas utilizadas en el método del INEGI se buscó que proporcionar las menores varianzas y en consecuencia el que genere estratos más homogéneos. (Ver tabla No. 3). Según se puede observar el grueso de los AGEBS está concentrado en los niveles 6 y 7 mientras que para la presente investigación se nota una mayor coincidencia con los niveles 4 y 5. Lo que muestra mayor diferenciación entre los estratos. Definitivamente es otro método pero para fines de buscar cómo se comportan las variables en los diferentes NSE se aprecia mucho mejor la diferencia entre ellos. Falta aplicar una encuesta que contemple los aspectos socioeconómicos y de percepción los que servirá para constatar la información de gabinete que se obtuvo para esta primera parte de la investigación.

### **RECOMENDACIONES**

En la obtención de los resultados antes expuestos, fue necesario utilizar variables diferentes a las que utiliza el Índice Desarrollo Humano o el estudio de las Regiones Socioeconómicas del país, con el fin de obtener una mejor diferenciación entre los distintos NSE, por lo cual podemos concluir que un proceso de este tipo requiere la selección cuidadosa de variables, de preferencia que sean en lo posible comunes al Censo y a la Encuesta Nacional de Ingresos y Gastos de los Habitantes. De manera que se obtengan los mejores modelos de predicción, siempre que se acompañe de encuesta en hogares de la población en su conjunto. Para lo cual se requiere:

Tabla No. 1 “Ponderación”, Fuente: La propia investigación.

<i>Salud</i>	<i>0.20</i>
Población Derechohabiente	1.00
Economía	0.05
Población Ocupada	1.00
Educación	0.30
Población 3-5 años que asiste a la escuela	0.10
Población 15-17 años que asiste a la escuela	0.10
Población 18-24 años que asiste a la escuela	0.25
Población 18+ años con educación post básica	0.30
Grado promedio de escolaridad	0.25
Bienes disponibles en la vivienda	0.30
Refrigerador	0.07
Lavadora	0.08
Automóvil o camioneta	0.30
Computadora	0.10
Línea telefónica fija	0.15
Celular	0.05
Internet	0.25
Condiciones de Vivienda	0.15
Ocupantes promedio por cuarto	0.20
Ocupantes promedio por hogar	0.15
2 Dormitorios o mas	0.30
3 cuartos o mas	0.20
Servicios (Agua, energía eléctrica, drenaje	0.10
Sanitario o excusado	0.05

Una encuesta de hogares que incluya condiciones de vida y otras características socio demográficas. Obtención de variables psicológicas que muestren estado de satisfacción e insatisfacción de los habitantes con sus condiciones actuales. Una metodología que busque básicamente indicadores de bienestar más que de pobreza o rezago. Un conjunto de herramientas estadísticas y matemáticas que puedan definir con mayor claridad la situación de bienestar desde los puntos de vista socioeconómicos como de percepción.

Tabla No. 2, “Distribución de Niveles Socioeconómicos Fuente: La propia Investigación

<i>NIVEL</i>	<i>No. De AGEBS que pertenecen a este Nivel</i>	<i>Porcentaje</i>
1	4	0%
2	39	1%
3	72	4%
4	160	34%
5	213	40%
6	103	21%
7	3	0%

Tabla No. 3 “Regiones Socioeconómicas de México”, Fuente: INEGI, 2010

NIVEL	No. De AGEBS que pertenecen a ese Nivel	Porcentaje
1	9	.02 %
2	2	.00%
3	26	.67%
4	31	3.39%
5	36	1.74%
6	180	47.89%
7	154	46.28

## CONCLUSIONES

Se concluye que dependiendo que sea lo que se quiera encontrar, dependerá que indicadores se deben utilizar. Los índices que utiliza el INEGI sirven para mostrar una homogeneidad en la población, sin embargo utilizando otras variables dentro los mismos datos obtenidos por el Censo del 2010, se puede adquirir un panorama más claro de la diferencias que existen entre los AGEBS que conforman el municipio de Chihuahua. Todo dependerá con que fines se desee utilizar la información, para fines mercadológicos las diferencias son muy importantes.

Sin embargo es necesario tomar en cuenta el aspecto de percepción de los habitantes para conocer mejor el nivel al que pertenecen y como diferenciar entre un nivel sociodemográfico y otro. Por lo que en la segunda parte de este trabajo se proporcionará con mayor claridad y precisión las diferencias de estratos sociales ya que el bienestar que alcanza cada individuo no únicamente está representado por los bienes obtenidos, sino que implica también, una serie de factores; tanto sociales, psicológicos y de percepción.

La utilización de la herramienta matemática de Lógica Difusa permitirá dar una idea mejor definida de las diferencias antes expuestas.

## SUSTENTABILIDAD EMPRESARIAL

Fernando Agüeros Sánchez, Universidad Autónoma de Coahuila

Verónica de León Estavillo, Universidad Autónoma de Coahuila

Irineo Sánchez Luna, Universidad Autónoma de Coahuila

### RESUMEN

*En la Conferencia Río +20, llevada a cabo en el mes de Junio de 2012, en Río de Janeiro, Brasil, los líderes mundiales, junto con miles de participantes del sector privado, las ONG y otros grupos, se reunieron para ver: la manera en que puede reducir la pobreza, fomentar la equidad social y garantizar la protección del medio ambiente en un planeta cada vez más poblado. Las conversaciones oficiales se centraron en dos temas principales: cómo construir una economía ecológica para lograr el desarrollo sostenible y sacar a la gente de la pobreza, y cómo mejorar la coordinación internacional para el desarrollo sostenible.*

**PALABRAS CLAVE:** pobreza, equidad social, medio ambiente, desarrollo sostenible

### ABSTRACT

*In the Rio +20 Conference, held in the month of June 2012, in Rio de Janeiro, Brazil, world leaders, along with thousands of participants from the private sector, ONG's and other groups gathered to watch: the way we can reduce poverty, promote social equity and ensure the protection of the environment in increasingly crowded planet. Official talks focused on two themes: how to build a green economy to achieve sustainable development and lifting people out of poverty, and how to improve international coordination for sustainable development.*

**KEYWORDS:** Poverty, Social Equity, Environment, Sustainable Development

### INTRODUCCIÓN

La sustentabilidad ha representado un nuevo estilo de vida que es fundamental en el modelo de negocios y la generación de innovaciones para que ofrezcan soluciones integrales ante un mundo gris, sombrío y sobrepoblado, ya que las actividades necesarias para mantener una economía, han suscitado presiones adversas sobre el planeta, al extraer sus recursos a un ritmo y forma que no se pueden compensar.

El factor económico, uno de los pilares fundamentales de las empresas, es considerado como sustentabilidad corporativa, dado que consiste en impactar lo menos posible en el medio ambiente, más allá de cualquier legislación ambiental y contribuir a la igualdad de oportunidades, avanzando hacia un mundo multipolar duradero. La sustentabilidad empresarial, luego entonces, significa alcanzar los objetivos institucionales tendientes a lograr el desarrollo socioeconómico, aprovechando al máximo los recursos existentes; es decir, sin afectar el entorno social, sin comprometer los recursos ni la calidad de vida de las generaciones venideras. Para ello, en el presente trabajo se expone el tema de la sustentabilidad empresarial, desde los puntos de vista ecológico, económico, tecnológico y social; a fin de comprender la manera en que se pueden aplicar en un modelo de negocio.

### REVISION LITERARIA

*Sustentabilidad Empresarial:* Sustentabilidad significa satisfacer las necesidades de las generaciones presentes, sin comprometer la capacidad de las generaciones futuras de satisfacer sus propias necesidades. La sustentabilidad en relación con la planificación entonces debe ser considerada como una meta social,

nueva e importante para la planificación del espacio y su utilización racional como espacio de vida del hombre como un todo.

*Áreas De Sustentabilidad Empresarial:* El desarrollo sustentable es una combinación de aspectos: Medio Ambiente, Economía, Tecnología y Gente (Social) que desarrollados de manera individual, pero intersectados en una sociedad o población específica se vuelve "sustentable".

El equilibrio de estos factores, de manera global, resulta bastante difícil de lograr y cuesta más trabajo mantenerlos en el tiempo. México, durante la era priista, tuvo muchos momentos en que alcanzó el equilibrio, pero jamás logró mantenerlos (vaya, ni siquiera por unos meses se mantuvo) y cada vez es más marcado el desequilibrio. El aspecto que más se dejaba de lado era el ambiental que no representaba mayor problema, pero en los últimos años éste se ha sumado al desequilibrio generalizado y se le ha dado mucha más importancia que a los otros dos aspectos. Ahora, el aspecto olvidado es el de la "gente" ya que las desigualdades sociales se han incrementado y el acceso a la tecnología parece cada vez más limitado a los que cuentan con los recursos suficientes para hacer uso de ella. Cada año, la UNESCO y la ONU hacen un ranking que evalúa las ciudades en el aspecto de sustentabilidad, siendo la ciudad de Curitiba en Brasil, el mejor ejemplo de una sociedad con desarrollo sustentable.

*Ecología:* Representa el estado natural (físico) de los ecosistemas, los que no deben ser degradados sino mantener sus características principales, las cuales son esenciales para su supervivencia a largo plazo.

La ecología y la empresa van de la mano con el fin de demostrar su ética y compromiso con la sociedad y sobre todo con la vida. Para las empresas es primordial mantener una economía sana por lo que requieren utilizar recursos naturales como fuentes de energía necesaria para su operación, para la electricidad, el transporte o la calefacción, entre otros; mismos, que en su mayoría provienen de combustibles fósiles como el petróleo, carbón y gas natural; recursos no renovables, cuyos productos de combustión son altamente contaminantes que se convierten en principales fuentes de las emisiones de gases de efecto invernadero.

Es necesario entonces impulsar el aspecto ecológico en el sector industrial por lo que debemos poner especial atención en las estrategias que adoptan algunas empresas a nivel mundial. Otras medidas puestas en práctica que optimizan los recursos naturales se dividen en cinco categorías: ahorro de agua, empresas sanas, energía eficiente, energía renovable y bosque sostenible. Las responsables de sensibilización de mercados en el mundo, como la WWF Red Ibérica de Comercio Forestal y la FSC Forest Stewardship Council, destacan la importante labor que tienen las empresas, sobre todo en el sector de distribución de productos de madera para impulsar la gestión sostenible y la conservación de los bosques y uno de los puntos clave es la certificación de la madera vendida.

Como se evidencia, el sector forestal en México que es extenso y diverso, ha logrado una inusual madurez al realizar lo que las comunidades del resto del mundo apenas están comenzando a explorar: la producción comercial de madera. En la mayor parte del mundo, el manejo forestal se refiere a la recuperación por parte de las comunidades de tierras forestales degradadas o la cosecha de productos forestales no maderables en tierras de propiedad gubernamental. Durante los últimos 30 años las comunidades mexicanas han llevado a cabo la producción comercial de madera en bosques de propiedad comunitaria, un logro que tiene raíces profundas en la historia del siglo XX en México.

Por lo que se refiere a Comisión Federal de Electricidad, en el aspecto de sustentabilidad ambiental y en cumplimiento a lo estipulado por el artículo 27 de la Constitución Política de los Estados Unidos Mexicanos; el cual señala que la Nación debe regular el aprovechamiento de los recursos naturales en beneficio social, para cuidar de su conservación y preservar el equilibrio ecológico; ha establecido como uno de los criterios rectores en la realización de sus actividades el desarrollo sustentable, a través de la adopción de medidas orientadas a la reducción del impacto de sus actividades en el medio ambiente y,

específicamente en las adquisiciones, arrendamientos o servicios se solicitará a los proveedores el cumplimiento de las medidas siguientes, que son enunciativas, mas no limitativas.

Actualmente, los empresarios deben tomar conciencia de la importancia de ayudar a conservar el medio ambiente desde sus mismas compañías, concienciar a ejecutivos, trabajadores y personal en general, de implantar sistemas de gestión ambiental en los diferentes sectores para generar mayores ganancias al efficientar procesos limpios.

*Economía:* Debe promoverse una economía productiva auxiliada por la infraestructura moderna, que proporcione ingresos suficientes para garantizar la continuidad en el manejo sostenible de los recursos, por lo que el desarrollo integral sostenible, deberá enfocar la gestión empresarial en actividades que definan estrategias de innovación que incorporen los requisitos ambientales a un costo menor.

Bajo este enfoque, las empresas deben procurar minimizar la cantidad de recursos utilizados mientras maximizan la creación de valor económico que satisfaga las necesidades y requerimientos de sus grupos de interés, el cual se traduce en beneficios tangibles para la organización, al lograr un fortalecimiento de las ventajas competitivas así como nuevas oportunidades de negocio.

Específicamente, algunos de los beneficios que obtienen las empresas son el acceso a nuevos mercados, aumento en los volúmenes de ventas al poder mostrar que se está produciendo en forma sostenible y al aprovechar oportunidades de negocios sostenibles, se obtiene ahorro en costos por una mejor eco-eficiencia, generación de nuevas oportunidades de negocios, mejora la productividad y el establecimiento de un sistema de gestión integral que incluye la dimensión necesaria para dirigir una empresa, la económica.

*Tecnología:* Slideshare (tecnología limpia. n.f.) define a la tecnología limpia como la tecnología que al ser aplicada no produce efectos secundarios o transformaciones al equilibrio ambiental o a los sistemas naturales (ecosistemas). Para abordar la cuestión de la sostenibilidad ecológica de las actividades industriales puede ser útil contemplar la compatibilización ecológica de la actividad industrial como un proceso lineal o secuencial, en el que se avanza a lo largo del tiempo mediante la progresiva introducción de criterios ecológicos en la gestión de los sistemas industriales, bajo la presión de la creciente conciencia ambiental. Este proceso de adaptación comenzó a desarrollarse de manera evidente en los países industrializados a finales de los años sesenta, y tomó carta de naturaleza sobre todo a partir de la Conferencia de Estocolmo de 1972, y de la aceptación por la OCDE, en la misma época, del principio de "el que contamina paga". Desde entonces, todos los países industrializados han venido acumulando una extensa normativa medioambiental para el control de las actividades industriales, y en respuesta a la misma, la tecnología y los métodos de producción industrial han intentado adaptarse a las nuevas restricciones, aunque con decisión y acierto muy variables por parte de las diferentes empresas, ramas industriales y países. Sobre tecnologías limpias, lo más destacable, es la reducción de los desechos no biodegradables, y la auto sostenibilidad ambiental; es decir, la reposición del gasto ecológico causado por la actividad manufacturera. Ventajas: Desarrollo sostenible, administración limpia de recursos, autodestrucción y reciclaje de desechos. Desventajas: Generalmente la adopción de tecnologías limpias es sinónimo de aumentos considerables en los costos de producción y fabricación, lo cual no es bueno para las utilidades de las empresas.

Mercadeo Verde es la inserción de conceptos ambientales a las actividades tradicionales de mercadeo. El mercadeo verde crea valor adicional en los productos de la empresa y en las actividades que ésta realiza, aunque todos esos valores sean cuantificables financieramente.

Las industrias con mayor impacto en el ambiente son la extractiva (minería y petrolera), la minero metalúrgica, petroquímica y química y en algunos casos cemento y cal. En general, estos tipos de industrias provocan escurrimientos y arrastres de residuos peligrosos de alta afectación ambiental, así

como la descarga de aguas residuales en cuerpos receptores. Las emisiones a la atmósfera son particularmente excesivas en procesos de fundición y refinación.

*Social:* La Organización Internacional del Trabajo (Pobreza, n.f.) menciona que para romper con el ciclo de la pobreza es necesario crear nuevas oportunidades y bienestar a nivel local. La Organización Internacional del Trabajo ha desarrollado un programa para la comunidad del trabajo, representada por sus miembros tripartitos, con la finalidad de mover sus recursos para crear estas oportunidades y ayudar a reducir y eliminar la pobreza. La pobreza no es sólo un problema de los pobres. Es difícil vislumbrar una seguridad política y social en el mundo si un número tan grande de personas continúa atrapado en el ciclo de la pobreza o si perciben pocas oportunidades en un sistema global que les parece discriminatorio e injusto.

El número de desempleados en el mundo aumentó en 4,2 millones en 2012 hasta más de 197 millones, un 5,9 por ciento de la tasa de desempleo. Un cuarto de este incremento tuvo lugar en las economías desarrolladas, mientras que tres cuartas partes se debieron al efecto secundario que éste tuvo sobre otras regiones, en especial en Asia Oriental, Asia Meridional y el África Subsahariana. A medio plazo, las previsiones indican que la recuperación económica mundial no será lo suficientemente fuerte para reducir el desempleo con rapidez, y se estima que el número de personas en búsqueda de trabajo aumentará hasta más de 210 millones durante los próximos cinco años. La situación del mercado laboral permanece especialmente desalentadora para los jóvenes, con casi 74 millones de personas entre 15 y 24 años desempleadas en el mundo, una tasa de desempleo juvenil de 12,6 por ciento. Despierta particular preocupación el hecho de que cada vez más jóvenes experimentan el desempleo por largo tiempo. Alrededor de 35 por ciento de los jóvenes desempleados en las economías avanzadas han estado sin empleo durante seis meses o más tiempo. Como consecuencia, un número creciente de ellos pierde la motivación y se retira del mercado laboral (Organización Internacional del Trabajo, “Tendencias Mundiales del Empleo 2013”).

En lo referente a la seguridad y salud en el trabajo, de acuerdo a publicación de la OIT, cada día mueren 6.300 personas a causa de accidentes o enfermedades relacionadas con el trabajo, más de 2,3 millones de muertes por año. Anualmente ocurren más de 317 millones de accidentes en el trabajo, muchos de estos accidentes resultan en absentismo laboral. El coste de esta adversidad diaria es enorme y la carga económica de las malas prácticas de seguridad y salud se estima en un 4 por ciento del Producto Interno Bruto global de cada año. Las condiciones de seguridad y salud en el trabajo difieren enormemente entre países, sectores económicos y grupos sociales.

Las empresas sostenibles no deben permitir que ocurran accidentes y enfermedades en el trabajo, ya que éstos no sólo interrumpen sus operaciones, sino que pueden incidir en importantes consecuencias económicas y afectar su reputación. Si bien la globalización ha sometido a los empleadores a una mayor presión para mejorar la eficiencia y la productividad de la empresa, existen claros indicios de la falacia de tratar de reducir costos a costa de la seguridad y salud en el trabajo.

### Empresas Sustentables

Una empresa sustentable, es aquella que toma en cuenta múltiples aspectos que van desde la satisfacción y bienestar de sus empleados, la calidad de sus productos, el origen de sus insumos, hasta el impacto ambiental de sus actividades, sin dejar de lado el efecto que causan sus productos y desechos, es decir, el impacto social, político y económico que produce su actividad y su compromiso con el desarrollo social y económico de un país.

Desafortunadamente, en México apenas se comienza a incorporar medidas y programas para que las empresas implementen sistemas de sustentabilidad ambiental. En la actualidad en nuestro país, una de las

prácticas en que incurren las empresas es el envío de sus residuos a las disposiciones de tratamiento más baratas, sin importar cuál es la opción más acorde con el tipo de desecho que producen, lo que se traduce en un mal manejo de los residuos industriales, generando un elevado impacto negativo en la sociedad.

No obstante y a pesar de estos rezagos, la Secretaría del Medio Ambiente y Recursos Naturales (Semarnat) tiene registradas 2,000 empresas con el certificado de Industria Limpia, esto alude al compromiso de las compañías con el desarrollo sustentable y las regiones en que se localizan.

Las empresas, además de preocuparse por el bienestar de sus empleados y la calidad de sus productos, también deben hacerlo por el impacto ambiental de sus actividades. Algunas empresas mexicanas ya implementan acciones para reducir el impacto ecológico de sus cadenas productivas y han descubierto que invertir en energías verdes y contra el cambio climático es un negocio rentable.

## CONCLUSIONES

La visión de la sustentabilidad empresarial va más allá del cumplimiento de regulaciones ambientales, la implementación de conceptos de producción más limpia o políticas de recursos humanos; el objetivo es lograr un equilibrio entre las dimensiones ecológica, económica, tecnológica y social para asegurar la continuidad de la empresa en el largo plazo.

Para fortalecer la capacidad de las empresas en cuanto a desarrollar oportunidades orientadas al mejoramiento de sus resultados ecológicos, económicos, tecnológicos y sociales; se deben crear metodologías para implementar de forma integral la sustentabilidad empresarial, que esté enfocada a los elementos de generación de impacto en los parámetros críticos de la competitividad de la empresa (utilidades, acceso a mercados, ventas, utilización de recursos, eficiencia de procesos, estabilidad y ambiente laboral y proyección comunitaria); también deberá estar enfocada a la creación de capacidades organizacionales.

La tecnología limpia es un aspecto sumamente importante hoy en día, dada la afectación a los ecosistemas en la forma de producir productos de consumo, así como al número de habitantes en el planeta, los cuales requieren contar con servicios y productos para su bienestar, por tal motivo las industrias y empresas deben implementar nuevas formas de producir cuidando el medio ambiente, debido a que los desechos son la parte que más afecta a nuestro planeta. En la actualidad se requiere otorgar mayor apoyo a las industrias limpias con la finalidad de acrecentar la conciencia ambiental, fomentar la investigación para que ésta pueda ser llevada a la práctica e informar las ganancias que se pueden obtener a través del ahorro de consumo de energía, materia prima; y generar la transformación a un equilibrio ambiental a través del control de emisiones, desechos tóxicos, residuos sólidos, etc. A pesar del poco apoyo para impulsar a la industria limpia, mucho se ha logrado en producir productos que afecten en menor grado el medio ambiente, tal es el caso de los vehículos eléctricos, híbridos o de muy bajo consumo que generan menos cantidad de gases y sus componentes son reciclables, también podemos mencionar los edificios ambientalmente correctos que consumen poca energía y generan bajos impactos ambientales.

En el ámbito social, podemos concluir que debemos crear y dar oportunidades justas e imparciales a todos los niveles de la población y especialmente a las áreas laborales más vulnerables, para ayudar a reducir y eliminar la pobreza, además de que la seguridad y salud de los trabajadores es importante incrementarlas en las empresas sostenibles, por lo que debemos crear conciencia sobre la importancia y las consecuencias de accidentes, lesiones y enfermedades relacionadas con el trabajo, ya que las empresas que han tomado estas medidas para mejorar la salud y seguridad de sus trabajadores, han observado una mejora en la reducción de accidentes, una mejora en la motivación, la moral y la productividad, reduciendo el ausentismo, entre otros beneficios, y contribuyendo al logro de los objetivos de una empresa sostenible, así como la reducción de la pobreza de estos trabajadores al obtener mejores salarios derivado de la

rentabilidad de estas empresas. En lo referente a la crisis del mercado laboral, los gobiernos deben apoyar en las actividades relacionadas con las competencias laborales y la recapitación, a fin de contar con personal calificado o competente en las distintas especialidades, y que a su vez puedan reducirse las tasas de desempleo a nivel nacional e internacional.

El objetivo de las empresas es lograr un equilibrio entre las dimensiones ecológica, económica, tecnológica y social para asegurar la continuidad en el largo plazo. La dimensión ambiental procura minimizar el impacto negativo al medio ambiente a través de la gestión ambiental, la dimensión económica analiza los intercambios de servicios, productos y capital que se efectúan entre la empresa y su entorno, la dimensión tecnológica establece tendencias por medio de productos innovados y de tecnologías. Finalmente la dimensión social se refiere al impacto social de la organización tanto a nivel interno como a nivel externo.

# EL PRESIDENTE DE LA REPÚBLICA Y EL EJERCICIO DE SUS FACULTADES EN LA ADMINISTRACIÓN PÚBLICA FEDERAL

Norma Alicia Canto Vera, Universidad Autónoma De Baja California  
Martha Patricia Bórquez Domínguez, Universidad Autónoma De Baja California

## RESUMEN

*La figura del Presidente de la República en México no es entendida en su justa dimensión y generalmente se le considera como una persona dotada de facultades plenas a quien se le atribuye, por parte de los gobernados, un status de omnipotencia, distante e inalcanzable, olvidando que es un servidor público con facultades, pero que también está obligado a desempeñar funciones en cumplimiento del mandato que le fue conferido por el voto popular, en beneficio de los gobernados, hayan o no votado por él.*

*Sin embargo, últimamente se percibe cierta cercanía de la figura presidencial con los gobernados, merced a los medios masivos de información y de comunicación, como es el caso de las redes sociales, donde es posible ver y escuchar en directo y en tiempo real los mensajes que tiene a bien dirigir a la Nación. El acelerado avance en las comunicaciones y los transportes ha facilitado esta tarea, dando una nueva dimensión al concepto de tiempo y distancia.*

## THE PRESIDENT OF MEXICO AND ADMINISTRATIVE FACULTIES AT THE FEDERAL LEVEL

*This paper analysis the President of Mexico administrative faculties and federal public administration*

## INTRODUCCIÓN

Es común en México, que al terminar el quinto año de funciones y penúltimo para que deje de ser Presidente, ya se empieza a especular sobre el siguiente Primer Mandatario (como también se le denomina) para rendirle las pleitesías que su imagen mitificada merece a juicio de muchísimos gobernados, olvidando o ignorando que el sistema político mexicano obedece al modelo establecido en Francia por Montesquieu, e implantado en este país, que se refiere al establecimiento de pesos y contrapesos que tiende a neutralizar el exceso de poder en una sola persona. Es por todos conocida la frase “L’état ce moi”, (el Estado soy yo) mediante la cual se representa el poder soberano y absoluto centrado en la investidura del rey francés Luis XIV.

En los distintos medios de comunicación, es común referirse al Presidente de la República, como Jefe de Estado o Jefe de Gobierno. En el presente trabajo pretendemos establecer si pueden ser sinónimos dichos apelativos o si se está en presencia de figuras distintas ostentadas por la misma persona.

Asimismo, mencionaremos a grosso modo el cúmulo de actividades, funciones, facultades y prerrogativas que le han sido encomendadas tanto por la Constitución como por otros ordenamientos legales y factuales para cumplir con sus objetivos, en lo personal y en su ámbito competencial, es decir, dentro de la Administración Pública Federal y abordaremos la estructura de ésta para conocer el alcance de sus potencialidades.

Expresaremos, asimismo, nuestra opinión objetiva respecto del excesivo presidencialismo en México, así como también el hecho de poder exigírsele responsabilidad en que incurre el presidente en aquellos casos

de incumplimiento de sus funciones, de actuación excesiva o de omisión, en perjuicio del prevalecimiento del estado de derecho a que todo Estado aspira.

## LA ADMINISTRACIÓN PÚBLICA EN MÉXICO

A efecto de abordar la figura del Presidente de la República, se le tiene necesariamente que ubicar en el contexto de la Administración Pública.

Los grupos humanos, constituidos bajo cualquier figura político-jurídica, tienen necesidades colectivas que satisfacer; para tal efecto requieren allegarse de los recursos suficientes para cubrirlas, de acuerdo a una adecuada planeación y en atención de los rubros prioritarios.

En los estados absolutistas en los que el soberano regía a su antojo, era él mismo quien procedía a determinar las fuentes y destinos de dichos recursos; al instaurarse la división de poderes, como una forma consensuada de gobierno, la tarea de la organización se le encomienda al poder ejecutivo, de tal suerte, que a éste le corresponde desempeñar las funciones administrativas dentro de la estructura gubernamental, en beneficio del interés colectivo. Si lo decimos en otras palabras, significa que al Poder Ejecutivo le corresponde la función de la administración pública; sin embargo, la costumbre ha hecho que se reputen a ambos como sinónimos.

### La Función Administrativa

A partir de que en nuestro país adoptamos el sistema de la división de poderes, Ejecutivo, Legislativo y Judicial, se ha conferido a cada uno de ellos diversas atribuciones, a efecto de que puedan realizar las actividades o funciones que les competen, según el Poder que las ejerza, denominadas funciones administrativas, legislativas y jurisdiccionales, respectivamente.

Las funciones del Estado están delimitadas en la Constitución Política de los Estados Unidos Mexicanos. El Poder Ejecutivo Federal, a cuyo cargo está la función administrativa, está dotado de atribuciones diversas, de acuerdo al artículo 89 de la Ley Suprema. Fraga, respecto de la función administrativa, señala lo siguiente: “Las funciones constituyen la forma de ejercicio de las atribuciones.” (FRAGA, Gabino. Derecho Administrativo. Editorial Porrúa. Décimocuarta edición. México. 1971. Pág. 24)

Este mismo autor, clasifica a la función administrativa desde dos puntos de vista: el formal y el material. Define a la función administrativa, desde el punto de vista formal, como “la actividad que el Estado realiza por medio del Poder Ejecutivo.” (FRAGA, Gabino. Op cit. Pág. 52) Por tanto, todas las funciones establecidas en el artículo 89 constitucional, son formales, debido a que atienden al órgano del cual emanan. La función administrativa, desde el punto de vista material, tiene que ver con la naturaleza del acto, es decir, independiente del Poder del cual emana.

Ejemplo: El artículo 89, fracción I de la Constitución, señala lo siguiente: “Las facultades y obligaciones del presidente son las siguientes: I. Promulgar y ejecutar las leyes que expida el Congreso de la Unión, proveyendo en la esfera administrativa a su exacta observancia;...”

La disposición transcrita es conocida genéricamente como la “facultad reglamentaria de Presidente de la República”, mediante la cual éste puede emitir reglamentos, dentro de su ámbito de competencia, para facilitar el cumplimiento de las leyes. En otras palabras, el contenido del artículo 89, fracción I, en el caso de los reglamentos, está implícito el desempeño de una función formalmente administrativa ya que emana del Poder Ejecutivo, pero es materialmente legislativa por la naturaleza de las disposiciones, que son las que ordinariamente corresponde emitir al Poder Legislativo dentro de su esfera competencial

(generales, impersonales y abstractos). Ejemplo: el reglamento de la Ley del Impuesto Sobre la Renta que facilita el cumplimiento de los lineamientos generales de la propia ley que reglamenta.

Es importante señalar que el reglamento no debe ir más allá o en contra de lo dispuesto en el propio precepto legal, ya que de lo contrario se estaría ante el ejercicio indebido de una facultad no concedida al Jefe del Ejecutivo, que es la de legislar.

Asimismo, en base al precepto constitucional que se comenta, además de otorgarle al Presidente de la República la facultad para emitir reglamentos, puede también emitir acuerdos, decretos y otros actos administrativos.

A cargo de la Administración Pública Federal, está el Presidente de la República, apoyado en sus funciones, por unidades de asesoría, de apoyo técnico y de coordinación que el propio Ejecutivo determine, de acuerdo con el presupuesto que tenga asignado. Podrá, además, constituir comisiones intersecretariales, para el despacho de asuntos en que deban intervenir varias Secretarías de Estado.

# **TENDENCIAS DEL EMPLEO PROFESIONAL EN LAS EMPRESAS DEL ESTADO DE COAHUILA Y SU IMPACTO EN LAS UNIVERSIDADES MEXICANAS**

Juan Jesús Nahuat Arreguín, Universidad Autónoma de Coahuila  
Fernando Agüeros Sanchez, Universidad Autónoma de Coahuila  
Javier Toledo Aguilar, Universidad Autonoma de Coahuila  
Abigail Natalia Velasco Sandoval, Universidad Autonoma de Coahuila

## **RESUMEN**

El desarrollo de las económico de las naciones se basa en su planta productiva y esta a su vez necesita de profesionistas capacitados para el desarrollo de la competitividad entre las empresas, sin embargo cada vez los jóvenes profesionistas encuentran una realidad mas cruda, donde cada vez es mas difícil ofrecer sus servicios profesionales, por lo que esta documento realizó una encuesta en las empresas mas importantes del estado de Coahuila, México observando la tendencia sobre la contratación, encontrando las áreas de oportunidad mediante la localización de las variables sensibles que les permitan su desarrollo profesional mediante la obtención de un empleo.

**PALABRAS CLAVE:** Empleo, desempleo, educación superior, capital humano

## **COAHUILA STATE COMPANIES PROFESSIONAL RECRUITMENT TREND AND ITS MEXICAN UNIVERSITIES IMPACT**

### **ABSTRACT**

The nations economics development is based on its productive plant at the same time it needs professionals trained to develop the competitiveness between business to business, however young proffesionals find a more raw reality, because is more difficult to offer their professionals services. This document did an inquest on the Coahuila (Mexico) most important companies, observing the trend on the recruitment, finding the oportunity areas by sensitive variables that allow its proffesional development by obtaining employment

**KEYWORD:** Job, unemployment, higher education, Human Capital.

**JEL:** I20, I25, J21, J24, J28, O15

### **ANTECEDENTES**

En la actualidad la globalización ha traído sin duda muchos beneficios económicos al Estado de Coahuila, sin embargo, cada vez es más complicado encontrar un empleo para los profesionistas de todas las carreras, aunado a esto los salarios se han venido modificando hacia la baja, ya que al existir la carencia de trabajo y mucha demanda, los profesionistas se ven obligados a aceptar las condiciones de las empresas que muchas veces no son las mas idóneas.

Otra consecuencia de la falta de oportunidades, es la del subempleo donde no es muy raro, observar a jóvenes profesionistas emplearse en trabajos muy por debajo de su nivel intelectual, como por ejemplo, como dependientes de alguna micro empresa o choferes. Algunos autores aseguran que el exceso de oferta de profesionistas se debe a que la oferta de egresados se incrementó en el periodo 6.7% en promedio anual, mientras que la economía sólo creció al 3.5% anual en promedio, provocando que los

profesionistas no encontraran empleos adecuados a su preparación, y desperdiciando un capital humano que pudiera ser más productivo en otro ámbito de la economía.

El problema es encontrar algunas áreas de oportunidad de empleo en la que los jóvenes profesionistas puedan incursionar e incorporarse a la fuerza de trabajo, teniendo beneficios económicos y profesionales satisfactorios, por lo que es necesario visitar y entrevistar a los empresarios del estado y pedir su opinión de como consideran que se pueda incorporar a estos profesionistas al mercado laboral, ya sea de una forma directa con esas empresas, o quizás, puede ser de forma indirecta, siempre y cuando, ambos tengan beneficios. Por lo que es de suma importancia la opinión que tienen dichos empresarios, sobre la preparación, en comparación con las oportunidades que se puedan aprovechar en un estado como Coahuila de Zaragoza, donde coexisten importantes clusters de desarrollo económico (Cluster automotriz y de la construcción al SE del estado, Cluster textil, agroalimentario y del mueble en la Región Lagunera del estado, y el cluster carbón-siderurgia-metamecánico, al centro-norte del estado.

## INTRODUCCIÓN

La educación es una actividad que tiene determinantes económicos, políticos y sociales. Desde el punto de vista económico, la educación se puede entender como una inversión, como un proceso de creación de capital humano. Shultz (1961) y Becker (1975) formalizaron esta teoría y recibieron el Premio Nobel de Economía por sus aportaciones en este tema. A diferencia de un gasto en consumo, que produce satisfacción o beneficio inmediato, los gastos en inversión generan algún tipo de activo que producirá ingresos en el futuro. A estos activos se les da el nombre de capital. Así como el capital físico, maquinaria y bienes raíces, por ejemplo, generan flujos de ingreso a lo largo del tiempo para sus propietarios, de la misma manera, la educación ayudará a los individuos a incrementar sus ingresos a lo largo de su vida. En este sentido, existe una clara analogía entre capital físico y capital humano. Por esta razón, la educación, y en particular, la educación superior, constituye un elemento importante dentro de los múltiples determinantes del crecimiento económico y el desarrollo de las sociedades. Lustig, Arias y Rigolini (2002) presentan una síntesis de la literatura sobre esta relación.

Por ello, es importante dimensionar como se está comportando el empleo profesional en México considerando los reportes de la Secretaría de Trabajo de la situación laboral en 2011, y con ello analizar la situación del estado de Coahuila donde se tienen universidades públicas y privadas y grandes polos de desarrollo económico.

## NÚMERO DE PROFESIONISTAS OCUPADOS AL TERCER TRIMESTRE DE 2011

Los datos de la Encuesta Nacional de Ocupación y Empleo (ENOE)<sup>1</sup>, mostraron que el número total de profesionistas ocupados en el país es de 6.3 millones de personas.

Las carreras con mayor número de profesionistas ocupados son (Figura 1): Contaduría (659 mil 400 ocupados), Ciencias Administrativas (637 mil 400 ocupados), y Derecho (606 mil 400 ocupados).

No obstante, no todos los profesionistas de estas carreras se ocupan en actividades afines a sus estudios: Contaduría (31.8%), Ciencias Administrativas (59.4%), y Derecho (37.7%).

Las áreas que muestran el menor número de ocupados son: Humanidades, Artes y Ciencias Físico-Matemáticas.

Las carreras con menos profesionistas ocupados son: Forestales (3 mil 800 ocupados), Ciencias del Deporte (3 mil 500 ocupados), y Pilotos aviadores y Navales (3 mil 200 ocupados).

Figura 1.

Las cifras al tercer trimestre de 2011 presentadas en el presente documento son preliminares.

### DISTRIBUCIÓN DE LOS PROFESIONISTAS OCUPADOS POR SEXO AL TERCER TRIMESTRE DE 2011

El porcentaje de mujeres profesionistas ocupadas con respecto al total de profesionistas ocupados en el país es de 42.2%. Las áreas profesionales en donde las mujeres representan a más de la mitad del total de profesionistas ocupados son (Figura 2): Humanidades, Educación, Artes y Ciencias de la Salud.

Las carreras con mayor porcentaje de mujeres profesionistas ocupadas son: Diseño Textil (99.1%), Formación Docente en Educación Preescolar (96.5%), y Formación Docente en Educación Especial (92.4%).

Las mujeres profesionistas tienen menor presencia en la ocupación en las áreas de las Ingenierías, Ciencias Biológicas y Arquitectura, Urbanismo y Diseño.

Las carreras con los porcentajes más bajos de mujeres profesionistas ocupadas son: Zootecnia (3.7%), Ingeniería Mecánica (2.5%), e Ingeniería Electromecánica, y Pilotos Aviadores y Navales (2.2% respectivamente).

Figura 2.

### PROFESIONISTAS OCUPADOS POR GRUPOS DE EDAD (%) AL TERCER TRIMESTRE DE 2011

Los profesionistas ocupados de 20 a 24 años de edad se concentran mayoritariamente en las áreas de Artes, Humanidades, Ciencias Sociales e Ingenierías.

Las carreras que cuentan con el porcentaje más alto de jóvenes ocupados en este rango de edad son (Figura 3): Nutrición, Antropología, Administración Pública y Ciencias Políticas (20.3%, 18.8% y 15.8% respectivamente).

Mientras que los profesionistas ocupados de 25 a 34 años se concentran en mayor medida en las áreas de Artes, Humanidades e Ingenierías.

Por su parte, los profesionistas ocupados de 35 a 44 años tienen una mayor representación en las áreas de Ciencias Físico-Matemáticas, Económico-Administrativas y Artes.

Para el grupo de profesionistas ocupados mayores de 45 años, la mayor concentración se observa en las áreas de las Ciencias Biológicas, Ciencias de la Salud y en el área de Ciencias Físico-Matemáticas.

Las carreras de Ciencias Naturales (81.4%), Zootecnia (64.7%), y Ciencias Sociales (60.8%) son las que ocupan al mayor número de personas mayores de 45 años.

Figura 3.

### PROFESIONISTAS ASALARIADOS Y NO ASALARIADOS AL TERCER TRIMESTRE DE 2011

En su mayoría, los profesionistas ocupados en el país son asalariados, es decir, en promedio, 8 de cada 10 dependen de un patrón (Figura 4). Al tercer trimestre de 2011, Educación es el área con la mayor proporción de profesionistas ocupados asalariados (96 de cada 100).

Las carreras de Geografía, Ciencias de la Educación y Educación Musical, poseen los porcentajes más elevados de profesionistas asalariados (99.1%, 97.5% y 97.5% respectivamente).

Por el contrario, la proporción más baja de profesionistas asalariados se encuentra en el área de Arquitectura, Urbanismo y Diseño, ya que de cada 100 profesionistas ocupados, 69 son asalariados.

Las carreras con más profesionistas independientes (no asalariados) son: Odontología, Artes Plásticas y Diseño Textil (57.2%, 54.7% y 48.9% respectivamente).

Figura 4.

### RELACIÓN ENTRE OCUPACIÓN Y ESTUDIOS REALIZADOS AL TERCER TRIMESTRE DE 2011

Más del 30% de los profesionistas ocupados en las áreas de Ciencias Sociales, Ingenierías, Ciencias Biológicas y Económico-Administrativas trabajan en ocupaciones que no son acordes con su formación profesional.

Las carreras con el mayor porcentaje de profesionistas ocupados en actividades no acordes con sus estudios son (Figura 5): Ciencias Políticas (73.5%), Ciencias de la Comunicación (68%) y Bioquímica (65.3%).

En contraste, en las áreas de Educación, Ciencias de la Salud, Artes, Arquitectura, Urbanismo y Diseño, y Humanidades la proporción de quienes sí trabajan en ocupaciones acordes con sus estudios es superior al 70%.

Las carreras que mostraron una mayor relación entre los estudios realizados y la ocupación desempeñada son: Medicina Física y Fisioterapia (93.5%), Medicina (88.8%), y Formación Docente en Educación Preescolar (87.2%).

Figura 5.

## LA TEORÍA DEL CAPITAL HUMANO

El concepto de capital humano se refiere al hecho de que los seres humanos invierten en sí mismos. Los gastos en educación, capacitación, cuidado de la salud y hasta aquéllos destinados a emigrar se pueden considerar como inversiones, ya que elevan el ingreso futuro de los individuos.

Esta teoría explica por qué existe un nivel óptimo de educación para cada persona: un individuo racional invertirá en capital humano siempre que los beneficios esperados de su educación sean mayores a los costos en que debe incurrir para obtenerla.

Existe un costo directo en colegiaturas, libros y otros elementos directamente relacionados con el proceso educativo, y otro definido por el costo de oportunidad del tiempo dedicado a la educación. El costo de oportunidad para un individuo que decide continuar con sus estudios es el sueldo que deja de ganar por no estar trabajando.

Los beneficios privados de la educación se definen como el ingreso adicional que obtendrá el individuo a lo largo de su vida.

## EMPLEO PROFESIONAL

A pesar que en la década pasada se incrementó en 2.8 millones el número de profesionistas en el país, al menos 16%, es decir, 448 mil egresados universitarios, se mantuvieron inactivos, mientras la tasa de desempleo para este sector pasó de 2.3 a 5.1%, con una media de 260 mil nuevos graduados que buscan empleo cada año.

En cuanto a la cobertura, se estima que en casi 40 años, las universidades públicas perdieron 20% del total de la matrícula nacional, pues de 1971 a 2009 la proporción de alumnos atendidos en instituciones

privadas pasó de 14 a 31%, por lo que actualmente casi cuatro de cada 10 profesionistas son formados por el sector privado.

De acuerdo con el informe preliminar Mercado laboral de profesionistas en México: diagnóstico 2000-2009 y prospectiva (2012-2015), elaborado por la Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES), y presentado en 2011, la calidad de la ocupación entre los egresados de licenciatura también se modificó. Los empleos con actividades altamente profesionalizadas cayeron de 69 a 61 puntos porcentuales. En contraste, las ocupaciones de mediana y nula calidad aumentaron de 19 a 24%, y de 12 a 16%, respectivamente.

En un documento, sometido para su análisis durante la 38 sesión ordinaria del Consejo de Universidades Públicas e Instituciones Afines de la ANUIES, en la Universidad Autónoma de Campeche, destaca que frente al crecimiento de la oferta de profesionistas en el país, en un contexto de "falta de crecimiento económico, el desempleo de éstos se incrementó y se deterioró la calidad de su empleo". Después de cursar una carrera, subraya que un porcentaje significativo de profesionistas formados en las aulas universitarias se ubicó en actividades para las cuales no era necesario contar con educación superior, por lo que en comparación con la década anterior "se produjo un deterioro respecto del perfil de las ocupaciones que desempeñan los profesionistas".

En el encuentro, donde se presentó una segunda etapa del estudio, que incluyó un análisis prospectivo del mercado laboral de profesionistas para el ciclo 2015-2020, así como el impacto de las remuneraciones reales que percibe este sector de la población, se discutieron los efectos de la concentración de la matrícula en pocas carreras universitarias. El informe señala que 80% de quienes concluyeron su licenciatura y tienen empleo, sólo proceden de cinco áreas de conocimiento: ciencias económico-administrativas (25%), ingenierías (17.7%), educación y pedagogía (14%), ciencias sociales y políticas (13%), así como ciencias de la salud, nutrición y biomédicas (8.2%). Si se analiza por licenciatura, se estima que más de la mitad de los profesionistas ocupados son egresados de seis carreras: administración (10%), contaduría (10.8%), derecho (8.8%), docentes de educación básica (7.8%); ingeniería mecánica e industrial (5.9%) e ingeniería en computación e informática (5.4%). En la primera década del siglo XXI, destaca el informe, creció en 32% el egreso. Sin embargo, las universidades públicas mantuvieron un promedio de 200 mil nuevos profesionistas por año, mientras las instituciones privadas pasaron de 75 mil a 143 mil egresados por anuales, que representó un incremento de 92.5%.

## **SUBEMPLEO PROFESIONAL**

Los jóvenes de mayor preparación académica son el sector más golpeado por el desempleo en México. Un análisis realizado por académicos del Instituto de Investigaciones Económicas (IIE) de la Universidad Nacional Autónoma de México muestra que 66% de los jóvenes laboran en la informalidad, lo cual los convierte en más pobres y vulnerables. Agrega que 71.2% del total de desempleados en el país cuentan con estudios completos de secundaria y preparación media superior y superior. De acuerdo con el documento "El empleo, el ingreso y el actual gobierno", publicado en el boletín mensual Momento Económico de esa dependencia universitaria, 40% de esta población entre 15 y 24 años que labora en empresas formales no tienen seguridad social ni prestaciones. Juan Arancibia Córdova, del IIE, indicó que la Organización Internacional del Trabajo (OIT), en su Informe sobre tendencias mundiales del empleo 2012, calcula que casi 75 millones de personas entre 15 y 24 años estaban desempleadas en 2011. La tasa de desocupación juvenil es de 12.7%, el doble de la que se registra entre la población en general, y se estima que 6.4 millones de jóvenes han perdido la esperanza de encontrar una fuente de trabajo. A escala regional, mientras en América Latina el desempleo juvenil bajó de 15.9% durante 2010 a 14.9% para 2011, en el mismo período, subió en México de 9.7 a 10%, subrayó el académico. Respecto del nivel de los ingresos a escala nacional, en el tercer trimestre del año pasado, 13% de los trabajadores

recibían hasta un salario mínimo; 22.7% hasta dos; 21.1% hasta tres; de tres a cinco salarios lo percibían 15.9%; más de cinco, 8.5% de la población ocupada; 8.7% del total no cobraban sueldo, y 10% se reportó como no especificado. El análisis ya pronosticaba para 2012 una desaceleración del crecimiento de la economía y en la creación de empleos. Entre 2006 y 2011, se acumuló un rezago potencial cercano a 4 millones 300 mil trabajadores. El documento asienta que parte de la demanda de empleos en el país se resolvió con la migración hacia Estados Unidos, y la población restante “permanece en el limbo y podría ser miembro activo de los llamados ninis (jóvenes que no estudian ni trabajan), que suman unos 7.5 millones, y de la delincuencia organizada”. El problema actual no sólo es el déficit de las plazas, sino su calidad, porque muchas no cumplen con las normas laborales y de seguridad social establecidas por la OIT. Los datos aportados por los investigadores universitarios señalan que al cierre de 2010, 70% ciento de los empleados eran subordinados a un patrón; mientras en diciembre de 2011, esa cifra disminuyó a 65.7%, lo que equivale a que 34.3% eran trabajadores informales.

## **LAS UNIVERSIDADES Y EL DESEMPLEO DE SUS EGRESADOS**

En un ambiente económico difícil, caracterizado por la incapacidad de la economía mexicana para generar empleos, la presión sobre el sistema universitario se ha incrementado, responsabilizándolo, cada vez con mayor frecuencia, del desempleo de sus egresados.

Como consecuencia de la globalización, la apertura comercial de México y de las presiones sociales, las universidades e instituciones de educación superior se han abocado a acelerar su modernización.

El reto de las universidades es formar el capital humano que requiere el país para enfrentar la globalización y la competencia. Debemos reconocer que al momento de la apertura comercial no existía una adecuada vinculación con el sector productivo. Además, éstas no estaban preparadas para responder a las demandas emergentes en materia de formación o recalcificación de recursos humanos y a los requerimientos específicos de innovación tecnológica de los sectores productivos afectados por la globalización.

La entrada en vigor del TLCAN implicó que las universidades mexicanas consideraran cambios en su misión, funcionamiento y planes de desarrollo. La competitividad resultante obligó a que éstas aceleraran sus programas de modernización y a que esta modernización se orientara a enfrentar la competencia de Estados Unidos y Canadá. En estos países, la acreditación es un proceso que las universidades realizan desde hace más de un siglo, lo que significa la constatación de que la sociedad y quienes utilizan los servicios profesionales pueden tener la confianza en el profesional acreditado o certificado, dado que la institución de educación superior y el programa de estudios que lo formó cumple con los indicadores de calidad que se han establecido.

En México, la acreditación y certificación se están formalizando, aunque todavía no convencen en relación a costo-beneficio. Se debe reconocer que algunas universidades públicas han realizado importantes esfuerzos por su modernización y sus logros son evidentes: han podido consolidar programas que tienden a ser competitivos en el ámbito internacional.

Parte de la responsabilidad del desempleo de profesionistas se le puede atribuir a las universidades que las formaron, sin embargo, a unas más que a otras. Pero se debe recordar que para que los egresados de las universidades encuentren empleo la condición necesaria es el crecimiento de la economía mexicana, y en particular, de cada uno de los estados del país.

## METODOLOGÍA

Considerando el desarrollo de los principales polos económicos coahuilenses, se tomaron muestras con algunas PYMES y Grandes Empresas representativas del Estado de Coahuila, recabando su visión sobre como se podrá tener una mayor participación de los profesionistas en sus respectivas empresas y sus métodos de contratación para el trabajo, así como que nicho de oportunidad pueden tener los jóvenes profesionistas para que puedan incursionar al mercado laboral.

El total de empresas visitadas fue de 32, las más importantes en el estado de Coahuila, abarcando la industria de la minería, metalmecánica, automotriz y de alimentos, y tres clusters de desarrollo de económico según el Programa Regional de Competitividad Sistémica: Coahuila Competitivo 2020 (Secretaría de Planeación y Desarrollo del Estado de Coahuila de Zaragoza-Secretaría de Economía, 2006): El cluster textil, agroalimentario y del mueble con la ciudad de Torreón, Coah., como núcleo empresarial; el cluster automotriz y de la construcción con la ciudad de Saltillo, como la ciudad representativa; y el cluster carbón-siderurgia-metamecánico, extendido en Monclova y la Región Carbonífera.

Se entrevistó a los responsables de Recursos Humanos y a los gerentes de área, responsables directos de la autorización para la contratación de personal, por lo que es valiosa su opinión ya que cuentan con la experiencia y conocimientos sobre cómo ve al personal de nueva incorporación puntualizando a los profesionistas recién egresados en los siguientes rubros:

- 1.- Selección y Reclutamiento.
- 2.- Experiencia para profesionistas recién egresados.
- 3.- Tendencia sobre el Empleo (permanente, eventual).

## DISEÑO DE LA INVESTIGACIÓN

Una vez entrevistadas y encuestadas las más importantes empresas de Coahuila, se obtuvieron los datos que permiten analizar la situación actual del profesionista egresado frente al desafío de incorporarse a la vida laboral, considerando las variables mencionadas:

- 1.- Selección y Reclutamiento.
- 2.- Experiencia para profesionistas recién egresados.
- 3.- Tendencia sobre el Empleo (permanente, eventual).

Cada uno de los puntos se evaluó, y posteriormente se observó el comportamiento de las empresas mediante las variables que se analizaron, proporcionando información valiosa para las Universidades de la Región a fin de lograr reforzar los conocimientos impartidos ó bien fortalecer la vinculación con el sector productivo.

La herramienta utilizada fue la encuesta, por variables categóricas, y simples que suministran las tendencias.

Los resultados se basaron en la escala de Likert, el cual es un tipo de instrumento de medición o de recolección de datos que disponemos en la investigación.

Las Tablas 1 y 2 muestran las escalas utilizadas en el estudio.

Tabla 1.

Respuesta	Nada Importante 1	Poco Importante 2	Regular 3	Importante 4	Muy Importante 5
Ponderación	20	40	60	80	100

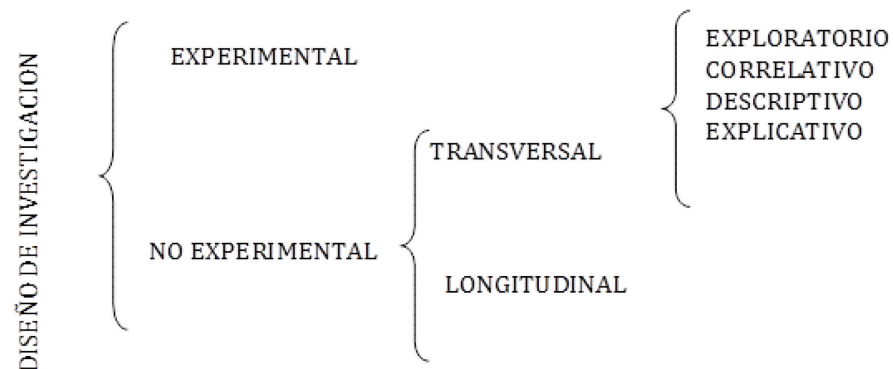

En el caso de cuatro opciones, se clasificó de la siguiente manera:

Tabla 2.

Respuesta	Malo 1	Regular 2	Bueno 3	Excelente 4
Ponderación	25	50	75	100

Todos los datos fueron capturados en un software estadístico para analizar los diferentes indicadores respecto a las variables mencionadas. La investigación es no experimental en la categoría de transversal-descriptiva (Figura 6), debido a que no se están manipulando las variables, simplemente se observa y se recolectan los datos en su contexto natural para ser analizados.

Figura 6. Representación esquemática de la investigación no experimental para este trabajo.

Se definieron las variables que se manejarían y medirían, debido a que se requiere traducir los conceptos (variables) a hechos observables para lograr su medición (Tabla 3).

Tabla 3.

Constructor	Variables a medir:	Definición
Selección y Reclutamiento	1. Edad	Datos generales donde se indaga sobre el conocimiento previo.
	2. Sexo	
	3. Estado Civil	
	4. Reputación de la institución donde estudió	
	5. Título	
	6. Contactos o conocidos	
	7. Experiencia laboral	
	8. Pruebas de conocimiento	
	9. Entrevista de selección	
	10. Test de personalidad intelectual	
	11. Test de personalidad	
Experiencia	1. Conocimientos	Medir la importancia que tienen los industriales en la experiencia desde el punto de vista de un recién egresado.
	2. Aptitudes	
	3. Responsabilidad	
	4. Toma de decisiones	
	5. Trabajo bajo presión	
Tendencia	1. Permanencia	Medir el interés de las empresas para la contratación de profesionistas a futuro si es de manera permanente o eventual
	2. Eventual	

## ANÁLISIS DE RESULTADOS Y DISCUSIÓN

Los resultados de las encuestas, se dividieron en tres áreas de acuerdo a los polos de desarrollo económico: La primera es la ciudad de Saltillo; la segunda, Torreón; y la tercera, Monclova en conjunto con la Región Carbonífera.

La Figura 7 sugiere que la *variable 7. Experiencia laboral* es importante para la industria en Saltillo, Coahuila, en conjunto con las variables 8 y 9 (*Pruebas de conocimiento, y Entrevista de selección*, respectivamente), siendo cruciales para la obtención de un puesto de trabajo.

La experiencia de las empresas en la contratación de nuevos profesionistas con poca o nada de experiencia (*Variables 1 a 5*), coincidieron en dar una calificación del 75 (Figura 7B), por lo que se puede deducir que el resultado de estas contrataciones es regular.

Figura 7. Diagrama con resultados de las variables relacionadas a la A) Selección y Reclutamiento de Personal; y B) Experiencia de las empresas sobre la contratación de profesionistas recién egresados para la ciudad de Saltillo, Coah.

**Selección y Reclutamiento de Personal  
Saltillo**

**A**

**Experiencia en Contratación de  
Profesionistas Recien Egresados Saltillo**

**B**

La Figura 8A indica que la industria en Torreón hace mucho énfasis en la personalidad intelectual y personal, así como en la entrevista individual de cada profesionista (*Variables 9, 10 y 11*), sin embargo, las empresas coincidieron que es de suma importancia las pruebas de conocimiento de cada candidato (*Variable 8*).

En el área de Torreón, el nivel de satisfacción al contratar los profesionistas recién egresados es alto, ya que tienen una calificación de 87 (*Variable 2. Aptitudes*), pero en el área de conocimientos el nivel de satisfacción es regular con una calificación de 75.

Figura 8. Diagrama con resultados de las variables relacionadas a la A) Selección y Reclutamiento de Personal; y B) Experiencia de las empresas sobre la contratación de profesionistas recién egresados para la ciudad de Torreón, Coah.

**Selección y Reclutamiento de Personal  
Torreón**

**A**

**Experiencia en Contratación de  
Profesionistas Recien Egresados Torreón**

**B**

La Figura 9A enfatiza que los estudiantes deben tener una experiencia laboral aceptable con conocimientos apegados a la realidad que se vive en el sector productivo de Monclova y la Región Carbonífera, siendo crucial para la contratación la entrevista individual (*Variable 9*).

La experiencia en la industria de Monclova y la Región Carbonífera (Figura 9B), ha sido buena con una calificación mayor a 85 (*Variable 2. Aptitudes*), donde los egresados demuestran un gran entusiasmo e interés en el trabajo, pero se muestran con un desempeño regular en el nivel de conocimientos (*Variable 1. Conocimientos*), por lo que también es regular la toma de decisiones (*Variable 4. Toma de decisiones*).

Figura 9. Diagrama con resultados de las variables relacionadas a la A) Selección y Reclutamiento de Personal; y B) Experiencia de las empresas sobre la contratación de profesionistas recién egresados para la ciudad de Monclova y la Región Carbonífera, Coah.

La Figura 10A sintetiza los rasgos de las tres áreas económicas de Coahuila, donde la entrevista personal es crucial para una respuesta positiva (*Variable 9*), sin olvidar la importancia la experiencia y la personalidad del candidato (*Variables 8 y 11*).

La Figura 10B muestra, de forma general para los clusters incluidos en este trabajo, que la contratación, desde el punto de vista en actitud hacia el trabajo y ganas de realizar bien las cosas, ha sido satisfactoria (*Variable 2*), sin embargo, en cuanto a nivel de conocimientos, indica un desempeño regular con una calificación de 74 (*Variable 1*), igual a la calificación para la respuesta a problemas hacia el trabajo (*Variable 3*), y el trabajo bajo presión (*Variable 5*), y la peor calificación es en la toma de decisiones con una calificación de 71 (*Variable 4*).

Figura 10. Diagrama con resultados de las variables relacionadas a la A) Selección y Reclutamiento de Personal; y B) Experiencia de las empresas sobre la contratación de profesionistas recién egresados para el estado de Coahuila.

Por otra parte, aun cuando algunas empresas mundiales están cambiando el esquema de contrataciones al pasar de forma permanente a eventual o por proyectos, en el caso de Coahuila, las grandes empresas siguen pensando en contratación permanente, con un promedio de contratación por año de 27 profesionistas (Tabla 4), buscando tener personal altamente capacitado y con sentido de lealtad y pertenencia, contribuyendo al desarrollo competitivo.

Tabla 4. Tendencias sobre el empleo para la contratación en un future

No. Pregunta	Pregunta	Respuesta
1	Cantidad de profesionistas por contratar por año	27
2	Tendencia sobre el trabajo	El 80% de la empresas la contratación seria de manera permanente
3	La cantidad de tiempo que trabajan los trabajadores eventuales	El 60% están en el rango de 6 a 8 meses al año.
4	Tiempo que labora un trabajador de Outsourcing	El 60% labora las horas que sean necesarias.

En los resultados podemos observar que para las empresas la Selección y Reclutamiento en el caso de la edad, estado civil y contactos o conocidos los marcan como no muy importante con una calificación de 45 promedio, por lo que se puede deducir que este elemento no es crucial para la contratación de nuevos egresados, otro punto a recalcar es el del sexo ya que en promedio lo marcan con un 61 lo que probablemente a la hora de decidir si se queda o no, con el puesto si es importante en algunos casos, sin embargo esto no es determinante, en este mismo caso esta los estudios de posgrado que lo ubicaron con una calificación de 64

## CONCLUSIONES

En esta investigación se centro en el futuro para los profesionistas recién egresados que se encuentran en la necesidad de encontrar un trabajo digno que les permita desarrollarse como personas y como profesionales, las empresas que se encuestaron fueron unas de las más importantes en el estado de Coahuila, como por ejemplo General Motors, AHMSA, LALA, Caterpillar, etc. Por lo que la opinión de estas empresas son de suma importancia ya que marcan una tendencia hacia como los empresarios ven la contratación de los profesionistas.

En estas empresas como se observo, la tendencia es que los nuevos profesionistas egresados esperan que su contratación sea de manera permanente ya que para las empresas es más económico y como estrategia ir capacitando a los nuevos trabajadores para que el desarrollo sea sustentable, con esto despiertan el sentido de pertenencia y lealtad hacia la compañía que los contrato.

Por otro lado las Universidades se deben preocupar en dos variables importantes, una es la que se aseguren que sus docentes estén actualizados para impartir sus clases ya que con esto el rendimiento de aprendizaje de los estudiantes sería mejor pero sobretudo los conocimientos están acorde con las necesidades del sector productivo. La segunda variables es la promover la vinculación real con la iniciativa privada donde los estudiantes puedan hacer investigación de campo así como sus prácticas profesionales, estos elementos son de suma importancia ya que es donde el alumno puede ganar experiencia laboral que posteriormente le sirve para la incorporación al mercado laboral.

## RESUMEN

El propósito de ésta investigación es realizar una aproximación para caracterizar al consumidor ecológico. La metodología realizada consistió en un cuestionario aplicado a través de un muestreo no probabilístico por conveniencia, con un total de 196 encuestas válidas donde se evaluaron las variables socio demográficas, de consumo y las variables psicográficas (actitudes, valores y estilos de vida). Los principales resultados de la investigación, indican que consumidores ecológicos son personas entre 18 y 41 años con un nivel socioeconómico elevado. El principal motivo de consumo responde a que consideran que los productos orgánicos son más saludables que los tradicionales y no están hechos con pesticidas ni químicos. Consumidor ecológico está dispuesto a pagar un precio más elevado por un producto orgánico en relación a un producto tradicional, sin embargo son sensibles a cambios en los precios de algunos alimentos orgánicos específicos.

**PALABRAS CLAVE:** Consumo ecológico, estilos de vida, actitudes

## EXPLORATORY ANALYSIS OF ECO-FRIENDLY PRODUCTORS BY CONSUMERS

*The purpose of this research is to carry out an approach for characterizing the ecological consumer. The methodology consisted of a questionnaire applied through a sampling non-probability for convenience, with a total of 196 valid surveys. Variables evaluated include socio demographics of consumption and the variable psychographic (attitudes, values and lifestyles). The main results of the research indicate that organic consumers are people aged 18 to 41 with a high socioeconomic level. The main reason for consumption responds to a feeling that organic products are healthier than traditional ones and are not made with chemical pesticides. The green consumer is willing to pay a higher price for an organic product in relation to a traditional product, but they are sensitive to changes in the prices of some specific organic foods.*

**KEYWORDS:** Eco-friendly Product Consumption, Life Style, Atitudes

## INTRODUCCION

El marketing verde o ecológico, es una de las herramientas que permite y contribuye al desarrollo sostenible. Según Pettie (2010), el comportamiento de consumo ecológico, implica alguna forma de comportamientos proambientales en diferentes etapas del proceso de consumo como el reconocimiento de un deseo, la búsqueda de información, etc. Esto indica que los consumidores ecológicos poseen una predisposición a comprar productos que sean ecológicos (Scott y Willits, 1994; Dietz et al., 1998). La investigación sobre la preocupación ambiental (Berenguer & Corraliza, 2000) se ha centrado en dos

aspectos diferenciados: la investigación sobre factores socio demográficos relacionados con la preocupación ambiental, y el estudio de valores y creencias con los que se relacionan los indicadores de preocupación (Dietz et al., 1998). En uno y en otro caso, el interés por la preocupación ambiental se ha justificado porque ésta puede ser un recurso útil para predecir el comportamiento ecológico. Se ha comprobado la existencia de una fuerte relación entre preocupación ambiental y otras actitudes y creencias proambientales y se ha comprobado igualmente la existencia de correlaciones bajas y muy bajas entre el nivel de preocupación y los comportamientos proambientales (Black et al., 1985). De acuerdo con la idea de Stern (1992), la preocupación ambiental puede ser definida desde cuatro perspectivas: 1) la perspectiva ecológica, de la que son buenos ejemplos la escala New Environmental Paradigm (NEP) de Dunlap Van Liere (1978) y la «Escala de Preocupación Ambiental» de Weigel y Weigel (1978), utilizada en una muestra española por Aragonés y Amérigo (1991); 2) la perspectiva que relaciona la preocupación ambiental con valores altruistas, 3) la perspectiva egoísta, según la cual la preocupación ambiental refleja la preocupación por el propio bienestar, y éste sería el factor determinante de creencias y acciones proambientales; y 4) la perspectiva ideológica, según la cual la preocupación ambiental estaría relacionada con valores sociales y culturales que subyacen a los modelos socialmente aceptados de relación entre las personas y la naturaleza (Newman, 1996). Esta diversidad de perspectivas ha producido una cierta anarquía en la medición y utilización del concepto de preocupación ambiental (Stern, 1992), cuestionándose el uso del indicador de preocupación ambiental como predictor de conductas, aunque opere efectivamente como correlato de otras creencias proambientales (Scott y Willits, 1994). Recientes trabajos han mostrado la dificultad para establecer una relación consistente entre el nivel de preocupación ambiental y factores de la estructura social como el nivel educativo, la edad y el género, entre otros (Dietz et al., 1998). Al mismo tiempo, se ha comprobado empíricamente (González y Amérigo, 1998; Amérigo y González, 1999) la necesidad de diferenciar los valores de tipo biosférico (preocupación por la tierra), de otros valores sociales (como el altruismo y los de apertura al cambio) utilizados para explicar la preocupación ambiental. Ambas evidencias avalan la necesidad de definir la estructura interna de las actitudes ambientales, independientemente de otros valores sociales y culturales y la de explicar el poder predictivo de los distintos factores actitudinales que describen la preocupación ambiental en las intenciones de acción pro ambiental (Danieri & Takahashi, 1999)

A partir de los antecedentes anteriormente mencionados, la presente investigación tiene como objetivo realizar una aproximación empírica para poder conocer a consumidores ecológicos a través de un trabajo de investigación desarrollado con un enfoque orientado a caracterizar y describir los principales aspectos que engloba el comportamiento de compra de este segmento en nuestra población.

## **METODOLOGÍA**

Los datos se obtuvieron a partir de la realización de una encuesta online, a través del software SurveyMonkey, entre los meses de Diciembre de 2011 y Febrero de 2012. El método utilizado para seleccionar la muestra válida corresponde a un procedimiento no probabilístico, a través de un muestreo por conveniencia, ya que ésta, fue seleccionada de acuerdo a la conveniencia del investigador y la muestra corresponde a 196 encuestados residentes de la ciudad de Santiago de Chile.

## **RESULTADOS**

Respecto a las características relacionadas con el comportamiento de los consumidores ecológicos encuestados, se concluye lo siguiente: La mayoría de los encuestados consume todos los días (28%) y algunas veces por semana (47%), lo que significa que son consumidores habituales de este tipo de alimentos. Compran éstos productos principalmente en ferias, supermercados y tiendas especializadas. El lugar de la compra depende del tipo de alimento que se desea adquirir. Así, por ejemplo, la mayoría de los encuestados compran frutas y hortalizas, legumbres y cereales y frutos secos, en ferias, esto se puede explicar en parte a la poca disponibilidad de estos productos en supermercados y también a que

actualmente se está haciendo más común la venta de estos alimentos mediante las llamadas ferias ecológicas u orgánicas.

Los datos reflejan que los individuos están informados respecto a las características de los productos orgánicos que están consumiendo, muestran un alto grado de interés en conocer los efectos de los productos antes de la compra y durante ésta. Adquieren este tipo de alimentos porque son más saludables y poseen una mayor calidad que los productos tradicionales, los que los hace también estar dispuestos a pagar más dinero por ellos y a realizar un esfuerzo de búsqueda adicional en la compra de éste tipo de alimentos.

El principal motivo de compra, es que los consumidores ecológicos consideran que los alimentos orgánicos son más saludables y también porque están hechos sin pesticidas ni químicos, así que por un lado se preocupan por su bienestar físico y también por el bienestar del medioambiente. En relación a los precios, se concluye que los consumidores orgánicos son sensibles cuando se trata de cambios en el precio de la lechuga, el aceite de oliva extra virgen y el pan, sin embargo cuando se trata de cambios en el precio del vino, la demanda se comporta de manera inelástica, los consumidores son menos sensibles frente a cambios bruscos en el precio del vino. Los resultados anteriores se explican ya que productos como el pan, la lechuga y el aceite de oliva presentan una alta participación en el consumo de los individuos, y poseen alimentos sustitutos, versus el vino que es un producto que se consume con menos frecuencia.

#### Actitudes, valores y eficacia percibida del consumidor.

Cuando se trata de afirmaciones como, “Estaría dispuesto a pasear, andar en bicicleta o tomar transporte público en vez de usar auto”, “Estaría dispuesto a usar un sistema de transporte menos contaminante para ayudar a reducir la contaminación del aire”, o “Dejaría de comprar productos de empresas que contaminan el medio ambiente, incluso aunque fuese un inconveniente para mí” “Escribiría a una revista relacionada con los problemas medioambientales” y “Distribuiría información de casa en casa acerca del medioambiente”, la mayoría de los encuestados están de acuerdo o muy de acuerdo, esto demuestra el fuerte compromiso verbal y la conciencia que existe por parte de los consumidores ecológicos en la mejora del medioambiente. También, la mayoría de los encuestados se encuentran afectados por los problemas relacionados con la contaminación.

En relación al comportamiento ecológico los datos reflejan que gran parte de ellos manifiestan una postura positiva respecto a las aseveraciones asociadas acciones ecológicas como el reciclaje o la compra de productos de menor efecto contaminante, donde más del 90% de los encuestados presentan estos comportamientos. En consecuencia, los consumidores de alimentos orgánicos manifiestan un compromiso real hacia el medio ambiente, realizando actos como el reciclaje, comprando productos reciclables, realizando actos en pro del medioambiente, más aún, más de la mitad de los encuestados han asistido a conferencias ecológicas y están suscritos a revistas de ecología lo que demuestra que dichos consumidores están muy involucrados con el medioambiente. Los principales valores que manifiestan los consumidores ecológicos son: seguridad, a través de los ítems que reflejan el respeto al pasado, la tradición como elementos que dan seguridad. Manifiestan un fuerte compromiso por la familia, un rechazo a que las costumbres cambien tan de prisa, a poseer tranquilidad interior y a valorar las cosas pequeñas de la vida. También se muestran optimistas con su actual vida, poseen confianza en sí mismos, son sociables, informados, vanguardistas, individualistas y competitivos. Según lo analizado en el marco teórico la eficacia percibida del consumidor puede ser definida como la creencia por parte del consumidor ecológico que mediante su comportamiento puede contribuir a solucionar un problema medioambiental concreto (Berger y Corbin, 1992; Kinnear et al., 1974; Roberts, 1995; Roberts y Bacon, 1997; Webster, 1975). Los resultados reflejan que los individuos creen que mediante su comportamiento pueden influir en pro del medioambiente.

### Análisis Factorial

Como se ha analizado a lo largo de la investigación, las actitudes pueden ser divididas en su componente verbal, afectivo y real. Se realizó un análisis factorial basado en componentes principales y rotación Varimax, para cada tipo de actitud. La elección de los pesos factoriales para cada uno de los análisis siguientes se ha limitado a valores superiores a 0.40. Además con el fin de comprobar que el análisis factorial es adecuado y puede proporcionar buenos resultados se realizaron las correspondientes pruebas de Kaiser-Meyer-Olkin (KMO) y Barlett. De esta manera se obtuvo que es posible llevar a cabo un análisis factorial, ya que el valor KMO es mayor a 0,5 y en la prueba de esfericidad de Bartlett el nivel crítico (Sig) no es mayor a 0,05, esto para los componentes, verbal, afectivo y real. (Tablas 1,2 y 3)

#### 3.2.1 Componente Verbal

Para poder observar cómo se estructuran las variables del componente verbal de las actitudes se realiza un análisis factorial con éstas 7 sentencias de las que se extraen 2 factores que explican el 54,429% de la varianza total (Tabla 1).

En el primer factor se agrupan las variables relacionadas con un compromiso activo por parte de los individuos para la mejora del medio ambiente. A este factor se le puede denominar “compromiso por la mejora medioambiental”, el signo del factor indica que la muestra está de acuerdo con las sentencias pertenecientes al factor.

El segundo factor, agrupa las variables que suponen un compromiso adicional superior por parte de los encuestados en la mejora del medio ambiente. El signo positivo de ambas aseveraciones pertenecientes al segundo factor, muestra que las personas están de acuerdo con ambas, es decir que no irían de casa en casa a distribuir publicidad e información del medioambiente y tampoco pagarían un impuesto medioambiental por la contaminación. Por lo que el segundo factor agrupa a aquéllos individuos que no poseen un compromiso superior por el medio ambiente. Este factor se denominará “compromiso superior por el medio ambiente (-)”.

Tabla 26: Estructura factorial del componente verbal de las actitudes.

	Componente	
	1	2
Estaría dispuesto a usar un sistema de transporte menos contaminante para ayudar a reducir la contaminación del aire	,811	
Estaría dispuesto a pasear, andar en bicicleta o a tomar el transporte público en vez de usar un auto	,733	
Dejaría de comprar productos de empresas que contaminan el medio ambiente, incluso aunque fuese un inconveniente para mí	,686	
Escribiría a una revista relacionada con los problemas medioambientales	,601	
Donaría el sueldo de un día a una institución para que ayudase a mejorar el medioambiente	,503	
No iría de casa en casa a distribuir publicidad e información sobre el medio ambiente		,836
No pagaría un impuesto medioambiental por la contaminación aunque ello supusiese una disminución del problema de la polución		,829
% Varianza	32,68	21,74

### Componente Afectivo.

Como vemos en la tabla 2, los factores obtenidos explican el 57, 67% de la varianza para las actitudes del compromiso afectivo. En el primer factor (36,18% de la varianza), se agrupan las variables relacionadas con la preocupación acerca de la contaminación, este factor se llamará “preocupación por la contaminación”; el segundo factor concentra las variables relacionadas con los efectos de la contaminación en los individuos. El segundo factor se denomina “Interés sobre los efectos de la contaminación”. El signo negativo de dos de las sentencias asociadas al componente 2, significa que las personas están en desacuerdo con ambas aseveraciones y que por lo tanto, se preocupan por los efectos del humo y les afecta la contaminación.

Tabla 27: Análisis factorial para el compromiso afectivo.

	Componente	
	1	2
Llego a indignarme cuando pienso sobre el daño causado a las plantas y vida animal por la contaminación	,831	
Cuando pienso en como contaminan las industrias, me enfado mucho	,814	
Me enfurece pensar que el Gobierno no hace nada para ayudar a controlar la contaminación del medio ambiente	,802	
Me deprimó en los días que hay contaminación en el ambiente (niebla, humo, malos olores)	,677	
Me asusta pensar que la comida que ingiero está contaminada con pesticidas	,530	
Casi nunca me preocupo sobre los efectos que el humo puede causar en mi familia y en mi		-,775
Nunca me ha afectado la contaminación ya que se exagera mucho sobre el tema		-,715
Creo que la crisis energética es muy grave		,604

### Componente Real

La tabla 3, agrupa las variables relacionadas con el componente real en tres factores que explican el 60,548% de la varianza total. En el primer factor se congregan aquellas variables relacionadas con la participación de los individuos en actos ecológicos y explica un 21,751% de la varianza total. En él se agrupan aquellas personas que nunca han participado en un acto medioambiental, que nunca han asistido a conferencias sobre ecología, que no han asistido a conferencias ofrecidas por una organización que se preocupe del medioambiente y en menor medida, por aquellos que nunca han comprado un producto porque tuvieran menores efectos contaminantes. Este factor se denominará: Participación ecológica(-). El

componente 2 (21,637% de la varianza), agrupa a las variables relacionadas con la acción real que realiza el individuo en su vida cotidiana en pro del medioambiente, como el reciclaje la compra de producto ecológicos o la compra de productos reciclables, este componente se llamará: Acción real hacia el medio ambiente.

Finalmente el tercer factor (17,43% de la varianza) congrega a las variables relacionadas con un compromiso real por la mejora medioambiental expresado mediante actos que reflejan el nivel que tiene el individuo para informarse acerca de temas como la contaminación o ecología con la finalidad de mejorar el medioambiente.

### Valores y estilos de vida

Con el fin de explorar cómo se agrupan los valores en distintos estilos de vida, se realizó un análisis factorial exploratorio sometido a rotación varimax sin un número prefijado de factores o componentes. Para comprobar la hipótesis de que la matriz de correlaciones no es una matriz identidad se realizó la prueba de esfericidad de Bartlett, obteniéndose un valor Chi-cuadrado de 1006 con 378 grados de libertad y un nivel crítico de 0, por lo que se rechaza la hipótesis nula. Además con el fin de comprobar si la matriz de correlaciones es adecuada para el análisis factorial, es decir, que las correlaciones entre pares de variables son explicadas por las otras variables, se solicitó la prueba Kaiser-Meyer-Olkin mediante la que se comprobó que la adecuación de la matriz era meritoria ( $KMO=0,619$ ).

Del análisis factorial se obtuvieron 10 factores que explican el 62,02% de la varianza total (Tabla 4). Posteriormente, se decidió disminuir el número de factores por lo que se realizó un nuevo análisis factorial con un número prefijado de 8 factores que explican el 57,720% de la varianza total.

Tabla 28: Análisis factorial para el compromiso real

	Componente		
	1	2	3
Nunca he participado en un acto que se preocupara por aspectos medioambientales (plantar un árbol, limpieza de parques, etc.)	,840		
Nunca he ido a una conferencia sobre ecología.	,829		
He asistido a una conferencia ofrecida por una organización que se preocupa por la mejora medioambiental	-,617		
Nunca he comprado un producto porque tuviera menores efectos contaminantes	,481

Fuente: Elaboración Propia.

El primer factor explica un 11,647% de la varianza total. Agrupa aquéllos valores que conforman el estilo de vida “aspiracional”, caracterizado a través de una mejor posición social. Además de ser personas que no les gusta experimentar y que son conformistas, se da más importancia a guardar cierta imagen frente a los demás (ostentación) y a poseer una buena posición social por sobre las cualidades personales (estatus). El segundo factor, que explica un 9,6% de la varianza total, está compuesto por valores que conforman un estilo de vida “Optimistas”. Son personas con valores como el optimismo (la verdad que me va muy bien hasta ahora), la no preocupación por la precariedad económica (el dinero del que dispongo no me alcanza más que para las cosas necesarias y urgentes), la tolerancia y el consumismo.

El tercer factor explica un 7,755% de la varianza, agrupa los valores relacionados con el estilo de vida de “Seguridad”. El tradicionalismo (pienso que las costumbres y modos de vida están cambiando muy de prisa), y la formalidad (en mi tiempo libre prefiero quedarme en casa tranquilamente) actúan como elementos que dan seguridad a través del respeto por el pasado y las tradiciones. El individualismo (hay que hacer las cosas por uno mismo, ya que nadie te va a ayudar a solucionar los problemas), la impulsividad y la autoafirmación, son elementos que describen la seguridad que posee en individuo en sí mismo.

El cuarto factor explica un 6,280% de la varianza e incluye valores que caracteriza un estilo de vida de “Visión global”. Otorga un mayor importancia a un concienciación de que la conducta de los demás me afecta inevitablemente y viceversa, es decir, que mis propios actos también afectan a los demás. También se valora estar bien informado con lo que ocurre en el mundo.

El quinto factor explica un 5,157% de la varianza tota y conforma el estilo de vida denominado “Conformes”. Se estructura a partir de los valores de serenidad (para mí lo fundamental es la tranquilidad interior) y el gusto por la vida cotidiana, para terminar con la posibilidad de ascenso social (pienso que lo fundamental es tener paciencia y trabajar duramente; la recompensa llegará algún día)

El sexto factor explica un 4,833% de la varianza total y corresponde al estilo de vida denominado “Confianza”. Prevalece la confianza en lo que hacen, por medio de la impulsividad (creo que si me parara a pensar todo lo que hago no haría ni la mitad), en los políticos, en sus compañeros de trabajo y en el trabajo (por medio de la seguridad económica).

Tabla 29: Estructura Factorial de los valores.

<b>Varianza: 11,647%</b>	<b>Factor1</b>
Me gusta comprar cosas para mi casa, porque creo que es importante guardar cierta imagen ante los demás	,732
Tener una buena posición social es más importante que tener buenas cualidades personales	,681
Eso de que hay que intentar probar de todo en la vida no va conmigo	,678
Creo que la información en general que nos dan los medios de comunicación es correcta y suficiente	,527
Varianza: 9,602%	Factor2

La verdad es que me va muy bien hasta ahora	,727
El dinero del que dispongo no me llega más que para las cosas necesarias y urgentes	-,722
Pienso que la mayoría de la gente es honesta en su trabajo	,453
Cuando voy a comprar algo me gusta ver otras cosas por si las necesito	,430
Varianza: 7,755%	Factor 3
Hay que hacer las cosas por uno mismo ya que nadie te va ayudar a solucionar los problemas	,698
Pienso que las costumbres y los modos de vida están cambiando demasiado deprisa	,519
Suelo hacer las cosas sin pensarlas dos veces, me fío mucho de mi instinto	,454
En mi tiempo libre prefiero quedarme en casa tranquilamente	,449
En general, en mi vida, hago las cosas sin importarme lo que los demás piensen sobre mí	,480
Varianza: 6,280	Factor 4
Lo que hacen los demás me afecta inevitablemente	,740
Sé que lo que hago influye sobre los demás inevitablemente	,674
Creo que es fundamental estar bien informado acerca de lo que ocurre en el mundo para comprender lo que pasa en este país	,477
Varianza: 5,157	Factor 5
Me gusta disfrutar de la vida cotidiana: la familia, los amigos, la casa,...., no necesito grandes cosas para ser feliz	,669
Para mí lo fundamental es tener tranquilidad interior	,654
Pienso que lo fundamental es tener paciencia y trabajar duramente; la recompensa ya llegará algún día	,633
Varianza: 4,833	Factor 6
Creo que si me parara a pensar todo lo que hago, no haría ni la mitad	,694
Tengo mucha confianza en las personas que son elegidas democráticamente	,524
Pienso que la mayoría de la gente es honesta en su trabajo	,475
Para mí la seguridad económica es lo más importante	,446
Varianza: 4,370	Factor 7
Creo que es fundamental estar bien informado acerca de lo que ocurre en el mundo para comprender lo que pasa en este país	,412
Me gusta estar al tanto de todo lo que ocurre en arte, literatura, novedades tecnológicas	,639
Me gusta participar en todos los actos solidarios-que se convocan (conciertos benéficos, actos de protesta, campañas de apoyo...)	,612
Siempre protesto cuando me ocurre algo que no me gusta	,457
A la hora de comprar prefiero gastar el dinero en cosas para la comodidad de mi hogar y de mi familia	,402
Varianza: 4,292	Factor 8
Siempre protesto cuando me ocurre algo que no me gusta	,456
En general, en mi vida, hago las cosas sin importarme lo que los demás piensen sobre mí	,503
Cuando voy a comprar algo me gusta ver otras cosas por si las necesito	-,503
No me cuesta relacionarme con gente que no conozco	,488

Fuente: Elaboración Propia.

El séptimo factor explica un 4,37% de la varianza total, está compuesto por valores que caracterizan el estilo de vida “Vanguardista”. En este estilo de vida prevalece la búsqueda de lo nuevo, vanguardismo (me gusta estar al tanto de todo lo que ocurre en arte, literatura y novedad tecnológicas), junto con la importancia de apoyo y participación en actos solidarios. Se valora estar bien informados, la no conformidad y el consumismo.

El octavo factor explica un 4,292% de la varianza total, corresponde al estilo de vida de “Innovación”, donde se agrupan los valores que reflejan una tendencia a la autoafirmación (a no darle importancia a lo que los demás piensen), al no conformarse con lo que no les gusta, a la vida social y al no-consumismo.

### 3.4 Análisis Cluster: Segmentando al Consumidor Verde.

A partir de los análisis anteriores y siguiendo el esquema apuntado por numerosas investigaciones previas, se procede a realizar un análisis cluster, con la finalidad de encontrar grupos de individuos que muestren diferencias en cuanto a los factores de actitudes. Para la realización del análisis clusters se combinaron los métodos de segmentación jerárquicos y no jerárquicos (K-medias).

Las variables tomadas para realizar este análisis son las que resultaron del análisis factorial de las actitudes (componentes verbal, afectivo y real): Compromiso por la mejora medioambiental, compromiso superior por el medio ambiente, preocupación por la contaminación, interés sobre los efectos de la contaminación, participación ecológica, acción real hacia el medio ambiente, compromiso real por la mejora medioambiental.

El número de conglomerados se determinó a partir del dendograma resultante del análisis cluster a través del método jerárquico, el cual fue de 2 conglomerados, posteriormente se realizó un análisis cluster mediante el método no jerárquico de k-medias, del cual se obtuvieron los dos grupos, el primero con 60 casos y el segundo con 125. Las características socio-demográficas para el Grupo 1 son las siguientes: Son mujeres (55%) y hombres (45%), que poseen entre 18 y 41 años (78,4%), son principalmente empleados (43,3%) y pertenecen en igual proporción (46,7%) al grupo socio económico ABC1 y C2. El Grupo 2, son mujeres (74,4%) y hombres (25,6%), entre 18 y 41 años (80,8%), son independientes (49,6%) y pertenecen al grupo socioeconómico ABC1 (36%) y C2 (55,2). Respecto a la frecuencia de consumo promedio de alimentos orgánicos, ambos grupos consumen algunas veces por semana (50% del grupo 1, 47,2% del grupo 2) y todos los días (20% el grupo 1 y 30,4% el grupo 2). El grupo 1, compra en ferías (27,5%) y supermercados (25%), el grupo 2 lo hace en otros (26,6%, como granjas orgánicas, elaboración propia) y tiendas especializadas (21,5%). Ambos grupos declaran que el principal motivo de compra es que los alimentos orgánicos son más saludables (39%). En relación a los precios, se tiene que el grupo 2 es más sensible que el grupo 1 frente a cambios en los precios. Las actitudes reflejan las principales diferencias entre los grupos. El grupo 1 no manifiesta un compromiso verbal, afectivo y real hacia el medioambiente, mientras el grupo 2 si lo hace, por lo tanto se puede concluir que el grupo 2 posee mayores actitudes ecológicas que el grupo 1. En relación a los estilos de vida, también se aprecian diferencias entre los grupos. El grupo 1 está asociado a los estilos de vida aspiracional, optimista, seguridad, confianza, no-conformidad, no-vanguardista. El grupo 2 se asocia a aspiracional (-), optimista (-), conformidad, confianza (-), vanguardista.

## CONCLUSIONES

A partir de este estudio se puede concluir que el principal motivo de compra del consumidor ecológico es que consideran que los productos orgánicos son más saludables que los tradicionales y, en segundo lugar, porque están hechos sin pesticidas ni químicos, lo que evidencia que llevan una vida saludable y que se preocupan por el medioambiente. El consumidor ecológico está dispuesto a pagar un precio más elevado por un producto orgánico en relación a un producto tradicional, sin embargo son sensibles a cambios en los precios de los alimentos orgánicos: lechuga, aceite de oliva, pan; esto se explica por la alta participación de estos alimentos en el consumo de los individuos. Respecto de las actitudes del

consumidor ecológico, éste manifiesta un fuerte compromiso verbal, afectivo y real con el medio ambiente, lo que implica un comportamiento bastante ecológico. Además, poseen conocimientos medioambientales. Son consumidores que poseen alto grado de seguridad, un fuerte compromiso por la familia, las tradiciones y el pasado, poseen tranquilidad interior, valoran las cosas pequeñas de la vida, se muestran optimistas, confiados, sociables, informados, vanguardistas, individualistas y competitivos. Por último, poseen la creencia que por medio de sus acciones pueden contribuir a la mejora del planeta.

# LA RESONSABILIDAD SOCIAL UNIVERSITARIA EN LA FORMACION DE UNA CULTURA ETICA EN UNA SOCIEDAD GLOBALIZADA

Alain Castro Alfaro, Corporación Universitaria Rafael Núñez

## RESUMEN

*La principal misión de las universidades en el mundo es formar élites intelectuales que son las que tomarán el destino de la sociedad. La actual sociedad del conocimiento necesita individuos que generen conocimientos y los apliquen en su entorno. El artículo presenta la responsabilidad social que tiene la universidad como formadora de una cultura desde la perspectiva ética y como se materializa en el proceso global en la que está inmersa la humanidad. La sociedad está sedienta de la ética y este trabajo enfatiza la importancia de la cultura ya que de ella provienen las acciones éticas humanas producto de su interpretación de su realidad.*

**PALABRAS CLAVE:** Responsabilidad Social Universitaria, Cultura, Ética, Globalización.

## UNIVERSITY SOCIAL RESPONSIBILITY IN THE FORMATION OF A CULTURE ETHICS IN A GLOBAL SOCIETY

### ABSTRACT

*The main mission of universities in the world is to form intellectual elites are those will the destiny of society. The present knowledge society requires individuals to generate and apply knowledge in their environment. The paper presents the social responsibility that the university as a culture-forming from an ethical perspective and the way it presents in the overall process in which humanity is immersed. Society is thirsty of ethic and this research emphasizes the importance of culture as because of that human ethics actions come result of their interpretation of their reality.*

**KEY WORDS:** University Social Responsibility, Culture, Ethic, globalization.

**JEL:** M14, I23, F60

## INTRODUCCIÓN

Hablar de globalización pareciera ser algo común en nuestros días, ya que se vive el día a día los avances tecnológicos y como el planeta se vuelve en un tipo de aldea global y las universidades no están exentas de este fenómeno. Ahora, las universidades tienen un objetivo claro en la sociedad, la cual es la formación de los individuos a nivel intelectual, que son al fin y al cabo, los que llevarán los destinos de la sociedad. Son las instituciones de educación superior las que deben verse a sí mismas como entidades socialmente responsables, ya que su trabajo va más allá de las labores tradicionales como son la docencia, investigación y la extensión. Por ser generadora y transmisora de conocimientos, es también formadora de cultura a sus educandos, llegando con ello a influir en el desarrollo económico y social de la sociedad donde se encuentre. Es debido a ello, que la ética, al ser el estudio de la moral que repercute en el comportamiento de los individuos, es función primordial de la academia darle amplia importancia a este tema porque, tanto el conocimiento como la moral, son imprescindibles para el desarrollo de las naciones. El objetivo del presente artículo es comprender la responsabilidad social que tiene la

universidad como formadora de una cultura desde la perspectiva ética y como se materializa en el proceso global en la que está inmersa la humanidad.

## REVISION DE LA LITERATURA

### La Globalización

La palabra globalización, es una terminología que está en boga en esta sociedad del conocimiento y la información. Ella, es objeto de múltiples análisis y ha sido tocada desde diversas disciplinas y sigue siendo objeto de discusión en el ámbito académico a nivel local, nacional e internacional. De la Dehesa (2000) afirma que aunque el proceso global tiene su aspecto positivo ya que hace que haya crecimiento y se dé la convergencia mundial, existe otro aspecto negativo, en la forma en que los costes y beneficios no van a estar distribuidos equitativamente. Es cierto que la globalidad mejora la eficiencia de la economía en general, la productividad y el crecimiento mundial, y ésta de la mano de la tecnología. Pero, no hay que perder de vista en que se tiende a la fragmentación de los procesos de producción, el mercado laboral, las instituciones políticas y las sociedades. Otra importante contradicción del proceso global está en relación a los estados, ya que produce exclusión en países en desarrollo ya que pueden presentar desempleo o salarios más bajos en comparación a grupos poblacionales de países desarrollados.

Es necesario analizar la globalización desde diversos aspectos y realidades que la definen y la condicionan y para ello se va a referenciar diversas conceptualizaciones y posturas. Levitt (1983) se enfoca por la globalización de los mercados, en la cual se va pasando de una producción basada en el ciclo del producto a una global de los mercados. Este autor se asemeja a lo que dice el Fondo Monetario Internacional (FMI) (citado en Ramiro y William, 2002), siendo esta una entidad financiera. Para el FMI se presenta en el mundo una cada vez más creciente transacción de bienes, servicios y de capitales. Se puede inferir que ambos autores concuerdan en que el flujo comercial ya dejó de ser unilateral o local y ahora es de manera mundial. Todo esto está trayendo una interdependencia, y va cada vez en aumento, económica entre las naciones del orbe. Sin ir más lejos, la crisis que está sucediendo en Europa es un vivo ejemplo de esta situación. Ahora, hay que tener presente que sin el acelerado desarrollo de la tecnología hubiese sido imposible hablar de globalización. Porter (1990) utilizó la terminología de la globalización para hacer una diferencia entre la empresa multinacional y la global. Ohmae (1991) explica que la empresa global es aquella que ha dejado de lado su identidad nacional y opera como un ente sin patria a escala mundial.

*Subercaseaux (2002), afirma que:*

*La globalización es, entonces, un fenómeno altamente complejo y contradictorio, con múltiples variables, lo que debe precavernos de miradas simplistas o de concepciones ideológicas o fundamentalistas, ya sea que se pronuncien obstinadamente a favor de la misma, fetichizándola como una nueva panacea, o la critiquen en bloque, demonizándola y culpándola de todos los males habidos y por haber” (p. 10).*

Ante esto se puede decir que el proceso global difiere de una manera profunda a las diferentes naciones y a los grupos sociales de diversas índoles que viven dentro de cada estado. Stiglitz (citado en Ortega, 2002), expone que la globalización como una mayor integración entre los países del mundo, esto debido a la baja de precios del transporte y las comunicaciones, además de la apertura cada vez mayor de flujos de bienes y servicios, capitales, conocimientos y personas. Este proceso globalitario va acompañada de la creación de nuevas instituciones y es fuertemente impulsada por las empresas transnacionales. Manuel Castells (1999) explica que “la globalización es el proceso resultante de la capacidad de ciertas actividades de funcionar como unidad en tiempo real a escala planetaria” (p.3). Esta afirmación muestra que es debido a la tecnología en que se vuelve el planeta en una red en que se interconectan todas las actividades humanas. Como muestra se puede nombrar a las redes sociales.

Le Goff (2001) se enfoca por una concepción multifacética, ya que expone al proceso de la mundialización desde cuatro perspectivas, las cuales son: lo económico, lo social, lo cultural y lo político. El autor expone que para el estudio del tema en mención se deben de analizar en su conjunto. Es decir, que para entender a la globalización en todas sus dimensiones e influencias, es necesario analizarla desde los puntos dichos líneas arriba. Giddens (citado en De Zubiría), al explicar sobre la globalización, la define como una intensidad cada vez mayor de las relaciones sociales, la cual lleva a interconectar localidades distantes, es decir, se rompe el aspecto de la territorialidad, ya que para mantener relaciones entre los individuos era necesario la presencia física del emisor como del receptor, pero ahora la desterritorialidad permite que los individuos puedan estar en lugares distantes de manera virtual y no físicamente. Para el autor, en este proceso globalitario, también se presenta la interconexión entre lo global y lo local y que a la vez no son excluyentes entre ellas, ya que es gracias a esta desterritorialidad que se dan la circulación planetaria de los bienes culturales.

*Sáez (1988), expresa:*

*“Hace referencia a la creciente internacionalización de los procesos económicos (producción, inversión, comercio y finanzas), políticos y culturales, dando como resultado su acelerada interdependencia a nivel mundial y la generación de poderes y dinámicas que tienden a rebasar la capacidad de acción de los Estados y de los actores tradicionales condicionando claramente sus intervenciones” (p. 11).*

La mundialización se presenta a nivel de los estados en la pérdida, en parte, de su soberanía, ya que ellos mismos han entregado a entidades llamadas supranacionales como son el FMI, el Banco Interamericano de Desarrollo (BID) y la Organización Mundial del Comercio (OMC), etc. Se puede citar lo que ha pasado con el estado colombiano ante la Corte Interamericana de la Haya por un problema limítrofe con el estado de Nicaragua. Desde finales del siglo pasado se está viendo un resurgir de nacionalismos, fundamentalismos, grupos étnicos en distintas partes del globo. Ante esto Fierro (2000) sostiene que la actual sociedad se encuentra entre dos frentes tensionales. Por un lado, se da cada vez más una realidad global y, por otro, siguen vigentes y resurgen los nacionalismos y fundamentalismos. Como ejemplos se puede nombrar a Venezuela y en el medio oriente, los movimientos extremistas islámicos.

Brunner (1998) une el concepto de globalización desde las perspectivas económica y tecnológica, con el de la postmodernidad, que tiene que ver con el aspecto cultural, ya que ambos tienen el intento de dar el nombre a algo y de esa forma compenetrarlo en la historia. Para Brunner, el proceso global tiene que ver con un capitalismo que se ha expandido por todo el mundo debido al crecimiento de los mercados y de una mayor interconexión a través de las redes de información, esto de la mano de lo postmoderno, la cual representa el estilo cultural que se forma producto de esa globalidad. Finalizando este asunto, Estefanía (2003) somete a escrutinio una definición más general de la globalización definiéndola como un “estado de desarrollo planetario sin barreras, donde todo está próximo, accesible, y donde todo comunica y donde, consecuentemente, las solidaridades y las interdependencias se acrecientan” (p. 28). Ante esta aseveración, cabe resaltar que ha quedado demostrado que si bien hay una interrelación sin barreras a nivel financiero y comunicacional, en otros ámbitos no necesariamente han sido quebradas las barreras con la misma rapidez.

### Conceptos Cercanos Y Diferenciados

Es necesario precisar términos que no son del todo equivalentes, aunque la separación es débil, tales como son las palabras “mundialización”, “globalización” y “universalización”.

En lo concerniente a la mundialización, el catedrático belga de las Facultés Universitaires Saint-Louis de Bruselas, François Ost (citado en Falcón y Tella, 2007), lo enfatiza como la interdependencia entre las

sociedades y países en diversos campos de la vida social, dejando atrás la perspectiva de las fronteras y la subsiguiente pérdida de elementos de soberanía de los estados-nación. Armand (2000), sin embargo, lo expresa desde la perspectiva ética, ya que apela a la solidaridad y la unión entre los miembros de la aldea global, reconociendo la igualdad de derechos entre los individuos. Por su parte Ortiz (1997) dice que la idea de mundialización está reservada para la especificidad cultural, poniendo como ejemplo el idioma inglés, la cual aunque se habla de una manera global no produce la desaparición de las otras lenguas. Ortiz lo expresa en estas palabras: “una cultura mundializada no implica el aniquilamiento de las otras manifestaciones culturales, cohabita y se alimenta de ellas. La lengua es un ejemplo” (p. 42).

La palabra globalización, para el autor belga, se centra en lo económico, privilegiando la eficacia y la competencia, dando autoridad y libertad jurídica al mercado para que rija la vida de las sociedades. La universalización, para François, se enfoca en el respeto a los derechos humanos. Esta afirmación no dista de lo afirmado por Armand en su concepto de mundialización ya que este autor lo relaciona con la ética y la solidaridad entre los individuos de una sociedad, teniendo presente que los derechos humanos son un pilar importante para la convivencia internacional.

### La Cultura

Para poder hablar de la cultura en el proceso global se considera imperativo explicar sobre el significado de cultura. Según la Declaración Universal sobre la Diversidad Cultural de la Unesco (2011), dice:

La cultura debe ser considerada como el conjunto de los rasgos distintivos espirituales y materiales, intelectuales y afectivos que caracterizan a una sociedad o a un grupo social y que abarca, además de las artes y las letras, los modos de vida, las maneras de vivir juntos, los sistemas de valores, las tradiciones y las creencias. (p. 4). De manera más genérica, pero similar lo dice Cohen (1992) “la cultura puede definirse como la suma total de los rasgos de comportamiento y de las creencias – características aprendidas – de los miembros de una sociedad particular” (p. 24).

Hay que resaltar que la cultura abarca los aspectos internos o subjetivos de los individuos como también sus manifestaciones externas que se ven en todo lo creado a nivel material por las sociedades. Así lo afirma Edward T. Hall (citado en Weaber, 1998) al explicar que la cultura interna engloba las conductas, creencias y valores que se traducen en sentimientos e ideas y la cultura externa es cuando hay interacción y conflictos con nuestra propia cultura, la cual es adquirida a través de la observación, educación e instrucción. El concebir a la cultura implica no disociarla nunca de los actores sociales que la producen, la emplean o la consumen, en otras palabras, no puede existir cultura sin las personas ni personas sin cultura. Las normas culturales son patrones establecidos de lo que un grupo espera (o acepta) en cuanto a pensamiento y conducta. Los tales varían muchas veces de una cultura a otra y se manifiestan a través de los *valores*, que son sentimientos enraizados en los miembros de una sociedad. Las *tradiciones*, son las formas acostumbradas y usuales de actuar dentro de una sociedad y las *costumbres*, que contienen implicaciones significativas acerca de lo correcto e incorrecto para una sociedad. Las costumbres generalmente se incorporan al sistema legal y a las enseñanzas religiosas de una comunidad.

Es importante acotar que existen diferencias culturales en un mismo país y eso es debido a las diferencias sociales. Bate (1984) afirma que las diferencias culturales se manifiestan a través de las subculturas ya que cada una de ellas tiene características específicas que las diferencia de las otras. Sin embargo, eso no las exime de compartir formas culturales con otros grupos que forman parte de una sociedad. Cada país al tener su propia cultura, tiene sus propios significados en determinadas conductas sociales. Como ejemplo se puede citar la puntualidad, si comparamos la sociedad americana con la latinoamericana. En la primera es un factor importante de catalogar a una persona, en cambio en la segunda la impuntualidad es más común y no es un factor tan importante.

No estaría completo en análisis sobre cultura si se dejara de lado el aspecto de la diversidad cultural, la cual, según la Campaña Nacional por la Diversidad Cultural en México (2008) expresa que cada grupo social tiene la necesidad de hablar de lo que es, sus recursos, proyectos, haberes e historias, todo esto es lo que forma su identidad y le permite relacionarse consigo mismo y con otros. Por otro lado, al hablar de cultura mundializada, Renato Ortiz (citado en Jiménez, 2002), expresa que solo se encuentra una larga lista de “íconos” de la mundialización: jean, *T-Shirt*, tarjetas de crédito, *Mc Donald's*, computadoras, etc. Ante esto cabe resaltar que el simple consumo de bienes de circulación mundial no vuelve al sujeto partícipe de una supuesta cultura mundializada, como beber Coca-Cola no convierte a un ruso en americano.

### La Ética

En lo tocante a la ética es imperativo comenzar por su definición, Velásquez (2006) dice que una disciplina que se encarga de analizar los estándares morales que una persona posee y, además, de lo que una sociedad tiene como valoración moral. Es interesante poder examinar este concepto ya que así puede tenerse un claro entendimiento sobre ella y a la vez diferenciarla de la moral, las cuales son confundidas como sinónimo, pero realmente no lo son. Cuando se habla de disciplina se refiere a una rama del conocimiento que estudia, en este caso, la conducta moral. La ética se pregunta cómo son aplicados los estándares morales a las personas y sociedades y ver si son razonables o no. Ahora, los estándares morales son normas de los tipos de acciones que se cree que son moralmente correctas o incorrectas y que van acompañados de una carga valorativa. Aquí se puede dar una diferencia clara entre ética y moral y para ello se cita a Londoño (2000), el cual dice que la primera es el tratado o estudio sobre la moral y la segunda estudia el conjunto de reglas de comportamiento que establecen la diferencia entre lo bueno y lo malo. Palacios de Torres (2009), al hablar de moral, dice que ella está en concordancia a la suma total del conocimiento adquirido que ha sido apropiado por individuo o sociedad respecto a lo bueno y noble.

5

Según Guédez (2001), en la globalidad, los individuos y sociedades pueden caer víctimas de diversas formas de dominación, pero a la vez, pueden edificar un ambiente propicio para el crecimiento de la solidaridad y ella a través de la educación ética que ayude a sistematizar los valores que constituirán las formas de relacionarse entre los individuos, las sociedades, las organizaciones y con la naturaleza. Por otro lado, al existir diferentes culturas, sistemas sociedades, sistemas económicos se vuelve imposible el hablar de una ética de consenso que englobe a todas las sociedades. Sin embargo, Kung (1999) nos habla de que a pesar de las diferencias, los seres humanos necesitan de un mínimo de consenso ético. Ante ello, es de vital importancia la formación de una ética planetaria para afrontar el mercado mundial, tal como lo expresa Francois (2001) al decir que la humanidad global demanda de seres humanos con nuevos valores que sean comunes a todas las diferentes sociedades existentes y donde se armonicen en el hombre la pasión y la razón. Además, como lo dice Guédez (2001), es necesario establecer una conexión entre la ética de la persona, la profesional y la empresarial y que entre ellas se condicionen unas con otras. Retomando a Kung (1999), al hablar de consenso ético, da a entender a la formación de estándares éticos fundamentales y que a pesar de las diferencias socio-culturales entre las naciones, éstas sirvan como una base fundamental para la actuación humana y su convivencia social.

### La Responsabilidad Social Universitaria

Es de vital importancia incorporar la idea de la responsabilidad social en las organizaciones empresariales y de formación académica superior, ya que así se puede dar una favorable respuesta al compromiso de los demás. La responsabilidad social es “la capacidad de respuesta que tiene una empresa o una entidad, frente a los efectos o implicaciones de sus acciones sobre los diferentes grupos con los que se relaciona (stakeholders o grupos de interés)” (Fernández, Gallego y Ortiz, 1993, p. 36). Esto da a entender que se valora el aspecto ético en las organizaciones y que ello genera valor, crecimiento y desarrollo de la

empresa y su entorno. Ivancevich (1997) lo expresa como la práctica empresarial respecto a terceros, es decir el impacto que tiene el ente sobre la sociedad y cómo ésta influye sobre la organización.

La organización es responsable ante todo aquello que pueda ser afectado por su actividad, así lo declara Nascimento (2001) cuando dice que la empresa tiene el objetivo de servir a todos sus grupos de interés o también llamados agentes sociales. Según Melé (1991), es en esta interacción donde surgen derechos y deberes morales, siendo éstas las que dan forma a las responsabilidades sociales y éticas de la empresa.

La universidad, tiene como función social el de ser un ente generador de conocimientos, de difundirlos y de formar personas que son los que van a llevar adelante los destinos de las naciones, por lo tanto no puede estar lejos de los aspectos éticos y de los valores necesarios para su desenvolvimiento y de la responsabilidad de transmitirlos a sus educandos. Las organizaciones están sujetas a cambios permanentes y las instituciones de educación superior se encuentran dentro de ellas, además de que su contexto está caracterizado por un entorno complejo. De Souza (2002), al hablar de los cambios que tienen que haber en las universidades, lo considera necesario para que puedan ser más eficientes, competitivas y aumenten su calidad. Fuenmayor (citado en Martínez, Mavarez, Rojas, Rodríguez y Carvallo, 2006), agrega que el cambio es lograr un equilibrio entre lo interno y la demanda de su contexto, en otras palabras, del discurso a la acción. Vallaes (2006) enfatiza que la responsabilidad social es una estrategia donde se manifiesta la gerencia ética y el impacto inteligente. Al referirse a la primera, da a entender que todos los afectados por la actividad empresarial deben de tener los mayores beneficios y también los menores daños. La segunda, es el retorno hacia la empresa en beneficios por su gestión responsable de los impactos, así entonces, podrá esta estrategia tener continuidad.

Ahora, al hablar de Responsabilidad Social Universitaria, vamos a ver como es influencia por la ética, y para ello se cita al Proyecto Universidad Construye País (2006), el cual declara que la Responsabilidad Social Universitaria (RSU) es “la capacidad que tiene la universidad, de difundir y poner en práctica un conjunto de principios y valores generales y específicos” (p. 5). Lo anteriormente dicho se puede llevar a cabo a través de los cuatro procesos que son claves para el desempeño institucional superior, los cuales son la gestión, la docencia, la investigación y la extensión universitaria. Garza (citado en Sánchez, 2007) lo enfoca de manera similar llamándola “política de gestión de la calidad ética de la universidad” (p. 3), la cual busca la sincronización de los cuatro procesos como los ya dichos líneas arriba, con la misión de la universidad, los valores y el compromiso social, por medio de la participación de la comunidad universitaria con aquellos actores sociales interesados en la buena performance de la organización, para que se pueda dar un cambio en la sociedad y se puedan dar estrategias que den solución a la exclusión, inequidad y de sostenibilidad.

Toda organización educativa debe de responder por sus propios educandos y por su entorno en donde está inserta. En esta misma línea, Martínez y otros (2008), dicen que debe de haber una estrecha relación entre la universidad, estado y sociedad, ya que de esta manera se puede dar por evidenciado la función social que tiene la universidad. Ante esto, se puede ver el aspecto cultural ya que toda sociedad no existiría sino tuviese una cultura. Se puede inferir que la universidad está inserta dentro de una sociedad, la cual tiene a su vez una cultura en su interior. El Proyecto Universidad Construye País (2004) enfatiza que la academia es realizada a través de tres funciones que son las tradicionales en ellas, las cuales son la docencia, la investigación y la extensión. Ahora, la gestión forma parte indispensable de la actividad universitaria, estando en el centro de estas funciones los principios y valores que deben de caracterizar a una universidad socialmente responsable y es de suma importancia que se pueda verificar la puesta en práctica de éstos. Definitivamente, cuando se habla de principios y valores, se está hablando de cultura.

Debe señalarse que el asunto de la RSU es tratar de definir de qué cosa es responsable, ante quién o quiénes se responden y cómo se es responsable. Al hablar de principios (Yarce, 2009), la cual forma parte del aspecto cultural, se refiere a las leyes que son universales, que no cambian con el tiempo, y que tiene

validez para todas las personas, organizaciones y sociedades, las cuales buscan inspirar la buena conducta personal y social. Cuando se refiere a universalidad y que son inmutables con el tiempo, el autor se centra, por ejemplo, en la dignidad humana, ya que ella es universal, es válida para todas las épocas, no es variable y es independiente de lo que una persona piensa o sienta. Yarce, cita otros ejemplos como son el derecho a vivir, a tener un buen nombre, al empleo, a un juicio justo, etc.

En el enfoque organizacional, los llamados principios administrativos, o también llamados valores corporativos, son las guías que enrumban el comportamiento personal y colectivo en las empresas. Hay autores que los llaman cultura organizacional y sin lugar a dudas, la universidad es un ente organizativo que tiene una cultura interna, pero también, al transmitir conocimientos, comunica cultura a sus educandos, los cuales lo retransmiten a la sociedad. Finalmente, Romero (2006), dice que los principios “son paradigmas morales para ser aplicados mediante una correspondiente necesidad de clarificación y de discusión pública; estos son conocidos independientemente y previamente antes de su aplicación” (p. 640). Yarce (2009), no concuerda con el concepto dado por Romero, ya que dice que no se pueden “reducir los principios a paradigmas, ni a normas, porque el principio inspira conductas que van más allá del paradigma o de la norma” (p. 16). Es razonable esta apreciación, ya que paradigma da a entender a un modelo a seguir y la verdad, es que en el transcurrir del tiempo los paradigmas empresariales han sido diferentes. Ahora, no hay que perder de vista que los principios pueden formar parte de los paradigmas de una época determinada, pero al fin y al cabo, los principios permanecen a pesar de los cambios paradigmáticos.

## CONCLUSIONES

El fenómeno de la globalización es, sin lugar a dudas, una realidad objetiva por el cual todas las naciones del mundo están inmersas en ella. Las grandes transnacionales, debido a sus intereses económicos, manejan el mercado mundial y esto por medio del capital financiero y las tecnologías de comunicación. La cultura es formadora de realidades, ante ello, las universidades, al ser su función el de transmitir conocimientos, está a la vez formando cultura. Ante ello, la responsabilidad social universitaria, al nutrirse de principios y valores, los cuales son temas eminentemente morales y culturales, deben de concientizarse del impacto y responsabilidad que tienen ante la sociedad, ya que los individuos que manden al mercado serán los que tomarán las riendas de la sociedad en esta era global. Sin dejar de lado que el tema de la responsabilidad y la ética debe de estar interconectada en toda su labor de gestión.

Es importante un mínimo de consenso de ética que pueda traspasar toda concepción cultural y societal por más globalizada que pueda ser. Entonces, una vez más, son las universidades las llamadas a tomar el liderazgo sobre este consenso y, si cumple a cabalidad este asunto, se verá creado en los educandos, una cultura ética que sea de transformación y desarrollo a las naciones. Por último, es factible decir que, mientras más moral sea una sociedad, más desarrollo logrará, y, mientras menos moral sea una sociedad, menos desarrollo obtendrá.

## Universities and Institutions Represented

A T B University, Bauchi, Nigeria	National Yunlin University of Science and Technology
Academy of Economics Studies Bucharest	Neumann University
AIST	New York Institute of Technology
Anglia Ruskin University	North Central College
Annasaheb Magar College	PUCPR
Arabian Gulf University	Rowan University
Ashford University	Spangler and de Stefano, PLLP
ATB University Buchi- Nigeria	Stevens Institute of Technology
Autonoma De Las Américas	SUNY Lehman College/CUNY
Belmont University	SUNYIT
Benemérita Universidad Autonoma de Puebla	Tecnológico De Antioquia
Bethune-Cookman University	Tecnológico de Monterrey, Campus Guadalajara
Bharati Vidyapeeth University, Pune	Texas Wesleyan University
Bucharest Academy of Economic Studies	The Citadel
BUID	The University of the South Pacific
California State University San Marcos	The World Bank
California State University, Northridge	UADEC
Carleton University	UCV Venezuela
Centro Universitario UAEM Amecameca	UNAM
Chang Jung Christian University	Uni Veracruzana
Chaoyang University of Technology	Univ. Moncton
China Huarong Asset Management Company Limited	Universidad Andres Bello
Cinde-Universidad de Manizales	Universidad Autónoma de Coahuila
Cnam	Universidad Autonoma Benito Juarez
Consejo Nacional de Ciencia y Tecnología (CONACYT), México	Universidad Autónoma Benito Juárez de Oaxaca
Corporación Universitaria Rafael Núñez	Universidad Autónoma Chapingo
Cuautitlán UNAM México	Universidad Autónoma de Aguascalientes
Desales University	Universidad Autónoma de Baja California
Dublin City University	Universidad Autónoma de Barcelona
Elmhurst College	Universidad Autónoma de Campeche
Embajada de Mexico en Italia	Universidad Autónoma de Chiapas
Fashion Institute of Technology	Universidad Autónoma de Ciudad Juárez
Financial Research Institute of Development	Universidad Autónoma de Coahuila
Research Center of The State Council	Universidad Autónoma de las Américas
Four Horsemen Investments	Universidad Autónoma de Tamaulipas (UACJS)
Free International University of Moldova	Universidad Autónoma de Yucatán
Fundación Superación de La Pobreza	Universidad Autónoma del Estado de Hidalgo
Hanken School of Economics	Universidad Autónoma del Estado de México
Indiana State University	Universidad Autónoma Latinoamericana
Institut of Economics, Skopje	Universidad Autónoma Metropolitana
Institute of Certified Specialists	Universidad Católica de Santa María
Instituto Politecnico Nacional	Universidad Complutense de Madrid
Instituto Tecnológico de Chihuahua	Universidad de Barcelona
Instituto Tecnológico de Ciudad Juárez	Universidad de Buenos Aires
Instituto Tecnológico de Sonora	Universidad de Cartagena
Instituto Tecnológico y de Estudios Superiores de Monterrey	Universidad de Chile
ITESM	Universidad de Colima
Johnson & Wales University	Universidad de Concepción
King Saud University	Universidad de Guadalajara
LQS School of Management	Universidad de Guadalajara, CUCSUR
Macquarie University	Universidad de Guadalajara, CURSUR
Metro S.A	Universidad de La Ciudad de Mexico
Mount Saint Vincent University	Universidad de La Guajira
Mumbai University	Universidad de Puerto Rico
Nanyang Technological University	Universidad de Puerto Rico en Ponce
National University	Universidad de Quintana Roo
	Universidad de Sonora
	Universidad de Talca

Universidad de Valparaíso	Universidad Tecnológica de Pereira
Universidad de Zulia	Universidad Tecnológica de Pereira
