### Introduction

1. A brief introduction to the problem being addressed.
2. Include some summary statistics of the magnitude of the problem.
3. One paragraph discussion of the general state of the literature.
4. What you are going to do in the paper to advance the literature.
5. A few lines indicating how the remainder of the document is organized.

### Literature Review

1. As a general rule do not cite magazines.

2. Use scholar.google.com
3. Narrow your literature review down to those articles that directly relate to the issue you are addressing in your paper.
4. Make sure that everything that you cite in the text is included in your reference section.
5. Make sure that everything you reference is cited in the body of the text.

### Data and Methodology

1. Where the data was obtained from?
2. Time period covered in the analysis?
3. Frequency of the data observations?
4. Variables that the data were collected for?
5. Summary statistics.
6. Hypotheses that are being tested.
7. For regressions, specify the equation being estimated in the text of the document.
8. For Surveys indicate
  - a. Questions included in your survey? (Consider including the survey instrument as an appendix to the paper)
  - b. When was the survey conducted?
  - c. Where was the survey conducted?
  - d. What was the response rate?
  - e. What are the total number of usable observations?
  - f. Did you receive human subject research permission from your University?

### Results

1. Make sure to introduce each table and figure you present in the text of your document.
2. Walk the reader through the results.
3. Select an observation in your table and explain that observation to the reader.
4. Incorporate data into MS Word tables.
5. Segregate your data when possible to get additional results,
  - a. by gender, age, country, region, year, industry, before and after a crises.

### Tables

1. Don't create small one or two line tables.
2. Include information directly in the document text.
3. Combine several small tables into a single table with multiple panels.
4. Do not use exponential notation (3.2E-5).
5. Display appropriate precision
  - a. 0.0021, 1.134, 10.22, 100.6, 1,049.1, 10,432

### Table Description

1. Make sure to include a 3-6 line description below your tables. The reader should be able to understand what is contained in the table without referring back to the text of the document.
2. This description is not to replace the discussion in the text, but to supplement the discussion in the text.
3. Redundancy is ok in this case.
4. Example of Table Description

*This table shows the results of the regressions on CEO compensation using data from 2004. The estimated equation is:  $CEO\ Compensation = a + b_1(CEO\ age) + b_2(years\ with\ company)$ . The first figure in each cell is the regression coefficient. The second figure in each cell is the t-statistic. \*\*\*, \*\* and \* indicate significance at the 1, 5, and 10 percent levels respectively.*

### Concluding Comments

1. Reiterate the goal of your paper.
2. Briefly describe the test methodology and data.
3. Briefly summarize your major findings.
4. Discuss how managers might benefit from the results.
5. Discuss any limitations of your work.
6. Provide suggestions for future research.

### Acknowledgements

1. Do acknowledge anyone that has helped you with the paper.  
     Colleagues, Administrators, Funding Agencies, Assistants, Reviewers, Editors.  
     It is a nice courtesy to the reviewers and editor.
2. It subtly communicates to colleagues the journal is peer reviewed.
3. Few people will be insulted if you acknowledge them but should not have.
4. Many will be insulted if you do not acknowledge them but should have.
5. Acknowledgments-Make sure to indicate that any remaining errors are the authors responsibility.
6. If someone has contributed substantially to your paper consider making them a co-author on the paper rather than just acknowledging them.

### Biography

1. Your biography should indicate your employer, your publication history, contact information and any other important information.  
     Tom Tetertall, Ph.D. is Professor of Management at the University of East Hawaii. He is also an arbitrator for the Human Ethics Commission. His research appears in journals that include: Diversity Review, Management Styles, and Latino Business Review. He can be contacted at: University of East Hawaii, COB, 400 W. 2nd St., Kauai Hawaii, 96333, USA, email: tomt@NHI.edu.
2. Do not make your biography excessively detailed.

### **FORMATTING**

1. Editors are looking for papers that are high quality. But they also look for papers that will not add an excessive burden to their work load.
2. They look for authors that will be pleasant to work with on revisions and in the publication process.
3. A properly formatted and written paper communicates to the editor that you will be pleasant to work with, thereby increasing your chance of publication.

4. Check the journal style guidelines to make sure you have the paper formatted properly.
5. Be sure figures and tables are editable in Word
6. Anything created or imported as an image is problematic.
7. Anything that is scanned needs to be recreated.
8. Make sure that figures and tables are legible.
9. If you are unable to edit it in MS Word it should be recreated.
10. When copying from Excel into word make sure to use the “Paste Special”, “Paste as Chart” Command so it can be edited in MS Word.
11. Avoid one-sentence paragraphs.
12. Avoid one-paragraph sections.
13. If you have subsections underneath a main section, start the main section by indicating how the subsections are laid out.
14. Bullet lists do not appear well in journals.
  - a. Longer lists should be placed in a table. Then reference the table in the text of the document.
  - b. Shorter lists should be incorporated directly into the text.
15. Make sure your references are formatted according to journal guidelines.
16. Do not use text boxes
17. Do not use section breaks.
18. Do not use text levels

## WRITING QUALITY

1. Use the grammar checker in MS Word.
2. Use an advanced writing editor:
  - a. Stylewriter \*\*
  - b. Whitesmoke.
3. Write in third person active voice when possible.
4. Give it to a friend to read.

## WORKING WITH THE EDITOR

### Submissions

1. Leave your document set for 1-2 weeks between completion and submission. Give the document a final read before submission.
2. Indicate in your submission correspondence that the paper is not under review elsewhere and has not been published elsewhere.
3. Never EVER submit a document to two journals simultaneously.

### Correspondence

1. Don't ask the editor every week for a status update. (every 2-3 months is sufficient)
2. If you are close to a tenure or promotion decision, do let the editor know. Editors are human and will commonly try to get the review completed prior to the promotion decision date.
3. Use submission numbers in all correspondences.
4. Be courteous when corresponding with the editor.

5. Publishing is to a certain degree political. Be willing to review papers for the journal.

### Reputation

1. Our industry is small. Editors remember if you were especially easy or especially hard to work with.
2. Your reputation is very important, so make sure you leave the best possible impression, even if your paper is rejected.

### Nonresponsive Editors

1. After 3 months, ask if there is any additional information you can provide.
2. After 6 and 9 months request that the editor send a reminder to the reviewers.
3. After 1 year send the editor a status check email.
4. After one year and two weeks, if the editor has not responded, send them a letter withdrawing your paper from publication consideration and try elsewhere.

## **REVIEWER AND EDITOR COMMENTS**

1. Respond to revise and resubmit requests as quickly as possible, but take sufficient time to complete the requested changes.
2. Set the revised manuscript down for a week and reread the paper before submitting it.
3. Do not send the exact same version back to the editor without having addressed the concerns of the reviewers.
4. Do not respond rudely.
5. Prepare a document that indicates how you have addressed each of the reviewers concerns.
6. Your document should review each change that the reviewer has requested and your response to each request individually.

Reviewer Comment: In your data section please indicate the number of observations.

Author Response: Thank you for your suggestion. We have incorporated a sentence indicating the number of observations on page 22 as follows. "The data included 2,436 usable observations."

7. In the event that you are not able to address a reviewers concern. Explain carefully why you are not making the changes, and request the reviewers understanding. Acknowledge the issue in the paper and note it as a limitation, or area for future research.

## **ACCEPTANCES**

1. Make sure to read the page proofs carefully.
2. Pay any fees due. Publishing is expensive, but it is a necessary evil. You have invested a great deal of your time in the research, the publication fee is a small part of your total investment in the project.
3. Expect some time between acceptance and publication.

## **REJECTIONS**

1. Rejections happen.
2. Don't be discouraged by a rejection. Rejections are part of the process.
3. Make any changes that the editor and reviewers suggest and submit the paper to a different journal.

# OMNICHANNEL RETAILING: THE MERGING OF THE ONLINE AND OFF-LINE ENVIRONMENT

Mariette Frazer, University of Johannesburg South Africa  
Beate Elizabeth Stiehler, University of Johannesburg South Africa

## ABSTRACT

*The technological environment is rapidly influencing the way in which shoppers go about retail activities. Shoppers are not only shopping online, but are in fact merging their online and offline shopping practises. The use of multichannel retailing (where different channels of shopping are still being operated in isolation) will now longer suffice and retailers will be forced to move towards what is termed Omnichannel retailing. Omnichannel retailing refers to an integrated shopper experience that merges the physical store with the information rich digital environment, with the aim of providing excellent shopper experiences across all touch points. The potential impact of Omnichannel retailing on the shopper experience is yet to be determined. The aim of this article is to expand the body of knowledge in the field of Omnichannel retailing and to demonstrate how this phenomenon can influence the shopper experience across shopping channels, as well as in-store. It is argued that shoppers are ready to engage in Omnichannel retailing and therefore a new perspective on the retailers' ability to influence shopper experience is provided.*

**JEL:** F23, L22, M15, M31, O30

**KEYWORDS:** Multichannel Retailing, Retail Technology, Mobile Technology, Shopper Engagement, Shopper Experience

## OMNICHANNEL RETAIL

Current literature suggests a strong focus on the use of multichannel retailing (Neslin & Shankar, 2009; Bick & Abratt, 2008; van Birgelen, de Jong, de Ruyter, 2006; Kruger & Fourie, 2003; Stone, Hobbs & Khaleeli, 2002). Multichannel retailing is defined as "... a distribution strategy to serve customers using more than one selling channel or medium such as the Internet, television and retail outlets" (Stone *et al.*, 2002). Omnichannel retailing on the other hand is described by Rigby (2011:11) as: "an integrated sales experience that melds the advantages of physical stores with the information-rich experience of online shopping." Kamel and Kay (2011:1) add that a true Omnichannel experience infers the "desire to serve the customer however, whenever and wherever they wish to purchase merchandise (and return it too)". From these two definitions it is clear that the Omnichannel concept involves the integration of various channels in order to serve the customers in a customised fashion through their channel of choice.

This is different to multichannel retailing in that some retailers, who make use of multichannels, still operate their channels in silos. A true Omnichannel experience would mean that one transaction can span over more than one channel. A customer can for example purchase a product online (digital environment) and he or she can collect it at the supplier's retail outlet (offline). Therefore implementing a true Omnichannel strategy implies the full integration of the off-line and the online shopping experience (Gill, 2013; Rigby, 2011:5). The implementation of an Omnichannel strategy is not without challenges. Traditional retailers are often efficient at everything that involves retailing, but they are not necessarily equally competent when it comes

to the digital environment (Rigby, 2011). Implementing an Omnichannel strategy requires a lot of changes in terms of infrastructure and recruiting competent IT specialists who could help them manage this new concept. Retailers therefore need to realise that the Omnichannel concept may be challenging to implement at first, but the right staff and infrastructure could make the process easier (Gill, 2013). The integration of the channels is only the first challenge presented by this concept and retailers should take caution to not forget about the purpose of this integration, namely providing a “seamless experience”.

### Shopper Experience

Schmitt wrote a paper in 1999 titled “Experiential marketing” which is focused specifically on marketing’s role in the process of progressing towards the development of experience offerings. In Schmitt’s paper, it is argued that marketing was traditionally developed in response to the industrial age and not for the market where people are faced with an information, branding and communications revolution and overload. Traditional marketers typically focus on developing products, planning product lines and extensions, communications and responding to competitive actions, whilst their marketing approaches are heavily focused on selling product features, advantages and benefits (Schmitt, 1999).

Experiential marketing is based on the following characteristics: A strong focus on customer experience, view consumption as a holistic experience, customers are rational and emotional and that the methods and tools of analysis are eclectic. Schmitt (1999) also argues the two most essential concepts of experiential marketing consist of strategic experiential modules (SEMS) and experience providers (ExPros). Managers may use SEMS to create different types of customer experiences which consist of: Sensory experiences (Sense), affective experiences (feel), creative cognitive experiences (Think), physical experiences, behaviors and lifestyles (Act) and social identity experiences (Relate). Further, ExPros is the vehicles used to implement the SEMS, consisting of communications, visual and verbal identity and signage, product presence, co-branding, spatial environments, electronic media and people (Schmitt, 1999).

### The Omnichannel Experience

This paper argues that even though the early research about Omnichannel retailing centres on the challenges posed by integrating channels, retailers should recognize the aim of Omnichannel retailing is to create a seamless experience. Further retailers should be able to improve the seamless shopping experience by approaching their Omnichannel strategies from an experiential marketing perspective. Focusing on the contact points where the retailer could evoke shoppers’ sense, feel, think and act reactions, the correct ExPros needed can be identified and implemented across channels, ensuring a more seamless experience across channels. More in-depth research about the shopper’s needs and behaviours in this new retail environment is therefore essential. The findings could help determine the key contact points that retailers need to use, as well as the shoppers’ behavior at each point, and ensure better shopper experience.

# CULTURAL SHOCK, ACCULTURATION AND REVERSE ACCULTURATION: THE CASE OF MEXICAN CITIZENS TRAVELING TO AND BACK FROM CHINA AND THEIR COMPETITIVENESS LEVEL

Susana Berenice Vidrio Barón, Universidad de Colima  
Alma Ruth Rebolledo Mendoza, Universidad de Colima  
Montserrat Saraí Ochoa Ríos, Universidad de Colima

## ABSTRACT

*Whenever an individual travels abroad in order to live for some years in another country different adaptation processes occur. Cultural shock and acculturation surface as explanatory variables for the phenomenon of cultural adaptation and relate to competitiveness. The first impression, clash and contact with a new environment and the resulting consequences to an individual's perception of it identifies as culture shock. This culture shock has an impact on the person's life and social behavior, not only because of the language (if it is the case) but also due to the cultural differences and local traditions, conventions and folklore. Furthermore, while time passes by, the individual starts to surpass the initial shock and gets immersed and adapts to this new atmosphere, moving to the next stage of this process which is the acculturation phase. Finally, when it is time to go back to his country of origin, the visitor has to go through another process, known as the reverse acculturation process. This involves getting reacquainted with his native state and relocating both physically and mentally to the regions' ways. In order to assess these three phases that occur under such circumstances, several cases of Mexican citizens traveling to and back from China became interviewed. In addition, their self-reported competitiveness level recorded so that a better impression can be formed about the causes behind those institutional reports on the poor results in this matter from individuals sent to China via formal programs (governmental, organizational, private sector, etc.). According to the World Economic Forum's 2012-2013 Global Competitiveness Report (Klaus Schwab, World Economic Forum, 2012) Hong-Kong ranks at the 9th position, Taiwan-China is at the 13th position, China is at the 29th position, and Mexico is at the 53th place. This ranking shows that there is a considerable difference in the competitiveness positions between China and Mexico. Thus, the need to identify the main elements and variables which interlope to cause these extreme differences amid these two nations and particularly for individuals who have been abroad and experienced training, work and day-to-day activities with the Chinese citizens.*

## INTRODUCTION

In recent years, there is a crescent urge to promote cultural-entrepreneurial interchanges with China. This interest derived from the steady yet non-stopping growth of Chinese economy. Based on a series of long term plans and strategies, China gains positions on the global economy. In 2010, it became the world's top exporter (Central Intelligence Agency (CIA), 2013).

Additionally, the People's Republic of China (PRC) moved to the second place in economic growth –displacing Japan- in 2010 after the US (CNNMoney, 2013). Mexico's private and public organizations aim to profit from other countries' information capital and develop a set of interchange programs –academic and entrepreneurial- for citizens willing to travel, learn the language and engage in business activities overseas (economia.gob.mx y otros).

Nevertheless, no recollection –from the qualitative perspective- of the resulting experiences derives from people returning to Mexico from China or people traveling and adapting to the new environment. Especially, there is no narrative or description of the socio-cultural elements affecting individual performance when visiting and working in a foreign country. Emotional variables render significant results when applied within business assessments. Cultural differences, “*foreign language, familiarity with the region, ability to adapt to foreign cultures, and strong emotional characteristics are desired positive factors*” (Gunhan & Ardit, 2005, p. 277; Moss Kanter & Ian Corn, 1994). Reported in the literature, is the fact that different variables affect an individuals' competitiveness level. However, there is a need to conduct in depth analysis (Shen, Lu, & Yam, 2006). Most likely, competitiveness relates to self-efficacy, performance and the resources employed to achieve a task (or effort) (Krishnan, Netemeyer, & Boles, 2002). However, there are other variables linked to this study.

Cultural influence on competitive traits received some attention when assessing between-country differences. The unit of analysis fixed at the nation-state level renders problematic due to the masking of cultural differences between subcultures, or local (ethnic) disparities. Therefore, need to report individual differences arises (Houston, Harris, Moore, Brummett, & Kametani, 2005). Amongst some of the identified cultural traits linked to competitiveness at the individual level, the following stand out: 1. Individualism and collectivism (Hofstede, 2001), 2. Language and culture shock (Furnham, 1993), and 3. Acculturation (Lucas & Stone, 1994).

## LITERATURE REVIEW

### Competitiveness

A revised version of the Competitiveness Index results in a modified two dimensional scale encompassing items correlated with the enjoyment of competition and contentiousness (i.e. a proclivity to avoid conflicts and arguments) (Harris & Houston, 2010). Additionally, trait competitiveness is a personality attribute that includes “*the enjoyment of interpersonal competition and the desire to win and be better than others*” (Spence & Helmreich, 1983, p. 41). Thus, establishing its internal and fully intentional nature (Kohn, 1992). Customarily, competition roots within a negative connotation, and ultimately leads to performance detriment (Stanne, Johnson, & Johnson, 1999). An alternative position suggests that this will stand depending on the person and the location. Furthermore, this proposal states that a competitive environment will boost the individual's competitiveness levels (Fletcher, Major, & Davis, 2008).

### Cultural Shock

Cultural shock is a phenomenon affecting the individual's life when travelling abroad. It is even considered as ‘occupational disease’ needing to reach a cure or the person will succumb to it and leave the country (Ober, 1960/2006). When born and raised in a cultural setting, the individual shares a common world-view and mindedness. Embedded within tradition, language, folklore and ethos, familiarity and acceptance are part of the daily experiences for both the individual and the group. Nevertheless, when individuals leave this cultural arrangement and meet with a new

culture they take with them the taken-for-granted structure of their home culture. They continue to choose actions consistent with it, and to interpret their own and their host's actions in terms of it. (Noesjirwan & Freestone, 1979, p. 190) Thus, when entering a new environment, a clash surfaces because of the struggle to either reject or embrace distinct living arrangements and surroundings (Kim Zapf, 1991). Several definitions pretend to encompass cultural shock. The summarized one entails those individual feelings of frustration with the incapacity to cope, identify with and function within the new culture due to alienation from cognitive frames, understanding of assignments and tasks and unfamiliarity (Taft, 1977). Another depiction of cultural shock states that individuals go through a series of steps when introduced to a foreign country. Namely, those stages are:

1. The honeymoon or tourist stage (i.e. excitement, happiness and emotion)
2. The crises or cultural shock phase (i.e. negative experiences, reactions and irritation)
3. The adjustment, reorientation, and gradual recovery phase (i.e. isolation, reconsideration, attitude change and adaptation) and
4. The adaptation, resolution, or acculturation phase (i.e. stable adjustment, cultural management and assimilation) (Winkelman, 1994).

Therefore establishing a possible solution for the negative effects of cultural shock or the final step of the process known as acculturation.

*Acculturation:* "Acculturation comprehends those phenomena which result when groups of individuals having different cultures come into continuous first-hand contact, with subsequent changes in the original cultural patterns of either of both groups" (Redfield, Linton, & Herskovits, 1936, p. 149). Adaptation to the new cultural environment, reflects in three main aspects; psychological, sociocultural and economic (Berry, 1997). It is a self-induced change in attitudes toward the receiving society. As a consequence, individual's reactions, activities, and efficiency become affected –primarily in positive way- by it. For this research effort, the acculturation process focuses on sociocultural aspects related to competitiveness levels.

## METHODOLOGY

### In-Depth Interviews.

Procedures. The interviews and contact became face to face -individually-, and the sessions lasted in average one hour and thirty minutes. The interview's questions developed in Spanish. Appointments to meet at a convenient location and time became standardized procedures for initial contact and the data audio taped for later analysis. Participants informed and consent obtained through documentation provided and authorization gathered for recording the interview. The interviewer acts as the moderator and is in charge of taking notes and pointing out salient topics or pin out critical accounts of information for the interviewee. Rapport building conditions arise when establishing a preferred location for the interviewees; comfort and familiarity results in open, honest and detailed answers and descriptions. Additionally, through contacts and referrals, some interviews complete and favorable setting builds beforehand. Content analysis is the procedure determined for data examination. The unit of analysis for this study is the interview, or the transcript of the conversation (Downe-Wamboldt, 1992). Nevertheless, words should be analyzed via word counts, semantic networks and cognitive maps in order to attain meaning or context through descriptive accounts of the situation. This technique of text reduction relates to condensation, which "*refers to a process of shortening while still preserving the core*"

(Graneheim & Lundman, 2004, p. 106). Therefore, for data analysis, coding and categorization (or meaning unit) procedures stand.

Participant selection. Mexican citizens travelling or having travelled to China and returned back became selected as participants. Hence, purposeful sampling -which is otherwise interchangeably known as selective sampling- applies. The description of purposive sampling will be useful in order to provide some clarification. According to Patton (1990), the *“logic and power of purposeful sampling lies in selecting information-rich cases for study in depth. Information rich cases are those from which one can learn a great deal about issues of central importance to the purpose of the research, thus the term purposeful sampling”* (p. 169). Additionally, the sample characteristics and structure will change as part of the research stage and analysis. During the interpretation of the data, *“the question again arises when you decide which parts of a text you should select for interpretation in general or for particular detailed interpretations (sampling within the material)”* (Flick, 2009, p. 115).

Finally, as stated by Patton (2002), there is a clear difference between random and purposive sampling for this case. He gives a thorough description of those cases on which the sample will be purposive, which is the sampling employed for this analysis. The selection of critical cases aims at those cases in which the relations to be studied become especially clear (e.g., in the opinion of experts in the field) or which are particularly important for the functioning of a program to be evaluated. (Flick, 2009, p. 122) Also, it is identifiable from the literature, that each of the participants will be treated as a case, so the case analysis method will be also part of the methods used and the way the information will be processed and analyzed.

Measures. In order to gain a profound understanding about the acculturation phenomenon, personal in-depth interviews conducted for an exploration of the competitiveness changes the travelers experienced when working in China and then returning to Mexico. In-depth semi-structured interviews constitute the data gathering tool. This method became selected for several reasons. Mainly, this is going to be an exploration of the way ‘acculturation’ stands among the participants and how it relates to their competitiveness and changes in the way they perform. Semi-structured interviews provide a reliable source of data compilation solely accounting for a source on a qualitative research project (DiCicco-Bloom & Crabtree, 2006). In this analysis, the use of this measure captured thorough information from the participants combined with other types of tools.

Analysis. The in-depth interviews will be analyzed by first transcribing all the information gathered through the recordings and putting it in text format. Then, data coding will be done by clustering the speech in meaningful categories so that patterns are identifiable and organized into certain criteria. Bogdan and Biklin (1998) suggest first ordering interview transcripts and other information chronologically or by some other basis. Abstraction of text is the term coined to describe *“descriptions and interpretations on a higher logical level. Examples of abstraction include the creations of codes, categories and themes on varying levels.”* (Graneheim & Lundman, 2004, p. 106).

Thus, systematic elicitation for analyzing texts includes word counts (helping to pin point themes within the text) and cognitive maps. Cognitive mapping is a hybrid technique embedding coding with network analysis (Carley & Palmquist, 1992). This tool renders graphical depiction of probable relations between themes and coding, helping with interpretation. When coding, the analyst should identify corpus of texts and later the units of analysis within the texts. Word counts help with this task. Once that those units arise, themes (also known as constructs) come up.

Techniques designed to induce themes include “*line-by-line reading of the text while looking for processes, actions, assumptions and consequences*” (Gery & Russell, 2000, p. 780). Also, looking for word repetition and shifts in content is indicated (Agar & Hobbs, 1985). Some of the coding choices for this analysis include the use of frequencies and occurrences. This assures bias elimination and validity. Therefore, the first stage is to identify frequencies and later conduct co-occurrence comparisons based on the number of concepts (Carley K. M., 1993). Afterward, the identification of categories and dimensions (later translated into variables) helps with the development of theoretical constructs. These constructs should result in unidimensional, exhaustive, mutually exclusive, and independent themes (Smith, 2000, p. 312).

The frequency and co-occurrence analysis will become possible with the use of the Provalis Research® QDA Miner®, WordStat® and Simstat® programs. Additionally, graphical depictions of data and interaction in the form of dendrogram and cluster retrieval is part of the data analysis applications provided. MAXQDA® version 11 program helps in the coding process. Additionally, concept-cognitive maps derive from this data in order to provide a framework for better understanding the phenomenon. Finally, in order to attain map analysis, and to identify possible cognitive networks, an application developed by IBM® called Many Eyes, works for the visualization of data in terms of phrase nets and word trees for text analysis. These connections describe relationships between the words in terms of their semantic connections (i.e. and, of the, the, a, at is, and if there is space between them, pointing out direction as well as meaning). This complies with the requirements for strength, direction, meaning and level of implication of the relationships needed for a thorough mental model analysis (Carley K. M., Extracting Team Mental Models Through Textual Analysis, 1997).

### ABSTRACT

*The Convergence Project between the International Accounting Standards Board and the Financial Accounting Standard Board in the United States was signed on September 18, 2002 in Norwalk, Connecticut in the U.S. The first is responsible for issuing International Financial Reporting Standards nowadays, these were created 40 years ago. More than one century ago local regulations are used in the U.S. The boards differ in years of experience. With the signing of the agreement both institutions are working to reduce the divergence of accounting. Although they have made significant progress it is appropriate to examine whether the difference in approaches to accounting will affect the achieved agreements. It is relevant to investigate whether the years leading the standards adopted in different countries will impact the final result. The date of completion of the project has been postponed and still has not indicated the date of termination. This research is an analysis of the importance of the convergence of accounting standards at a global level. The study presents statistics on the status of the adoption of international standards by country. The study shows a summary of the expressions made by the directors of both boards about the future of the project.*

**JEL:**

**KEYWORDS:** Convergence, Full IFRS, Little IFRS, IASB, FASB

## **INTRODUCTION**

Several years ago a transformation in accounting procedures has been seen, this is in order to cope with the changes that have occurred around the world in an organized way. Some countries have been able to adapt and face the consequences of these changes, for others it has become more difficult. This is because there are various economic social factors that affect nations in different ways. The evolution of these procedures is due largely to globalization. This has generated pros and cons for the countries. Globalization has made countries that lacked certain resources to enter into agreements with other countries by exchanging goods, services and/or expertise. They have also brought with them the evolution in technology, learning new methods and styles of doing business. It has also led to the increase in communication between countries through commercial agreements. It has generated greater awareness of other cultures and it has led to the exchange of production processes. These relations between the countries have generated new business transactions. The exchange of financial information is necessary for the integration of countries and stock markets. It also allows constant communication between users. With the emergence and proliferation of multinational enterprises (MNE) information flow has been increasing, since MNE generate large amounts of transactions that are the product of local and international trade relations.

Another sector that also generates large amount of financial information are small and medium-sized enterprises, *SMEs*, (Pacter and Scott, 2012). Local and international financial institutions use accounting reports to establish the collateral and interest rates. Other users around the world who use the information are credit rating agencies, investors and suppliers (IFRS, 2009). However, the accounting diversity that currently exists is created by diversity in the legal system, tax regulations, among others. This affects decision-making and implies that companies consume more resources to implement their strategies and achieve their goals. According to (Doupnick and Perea, 2012) is necessary to reduce the diversity at the accounting level to generate comparability in the financial statements. This will allow a group of standards that provide uniformity to be adopted.

To meet the demands of users who require uniform information on 1973 is created the *International Accounting Standards Committee (IASC)* with this begins the era of accounting convergence. Then in 2001 the International Accounting Standards Board (IASB) is created. The IASB is the entity that currently regulates the international financial reporting standards (IFRS) for public companies, full IFRS. Later in July 2009, the IASB published the version of the IFRS for SMEs, little IFRS.

The resistance to change and keep the tradition is an impediment to global convergence, particularly in the United States (Damant, 2006; Gornik and Showerman, 2010). This country is still in the process to converge its accounting standards with the IASB. The convergence project began more than one decade ago with the Financial Accounting Standards Board (FASB). The users, companies and the Government in the United States are in a waiting period that duplicates the efforts and consumes more resource. SMEs in the United States can apply the IFRS (Lozada and Ríos, 2013) however, it's forbidden to public enterprises to apply IFRS. Which means that a ME has to prepare their reports using the, US GAAP and apply IFRS to its subsidiaries. The reconciliation process requires more effort.

To develop a proper analysis, below is a review of the literature related to IFRS and the Convergence Project.

## **THEORETICAL FOUNDATIONS AND REVIEW OF LITERATURE**

### Convergence Project: IASB and FASB

For 11 years the boards have worked together to reduce the divergence of both existing financial reporting standards. They also coordinate their work in order to ensure that the compatibility reached is maintained. The Convergence Project seeks to align rules however, they maintain a degree of divergence as both accounting rules are not identical (INCP, 2013).

In 2002 the Convergence Agreement settled the following initiatives: work altogether, directing efforts in the short term to reduce the differences, encourage the coordination of future work. In 2004, the FASB issued: the *FAS 123 (revised 2004) Stock Based Payments*, *FAS 151, Inventory Costs*, and *FAS 153 Exchange of Non-monetary assets*, these were promoted by the initiative of both boards to submit projects on short-term (IFRS, 2013<sup>a</sup>). On 2005 the SEC proposes to eliminate the requirement of reconciliation, the form 20F.

The Memorandum of Understanding (MoU) was published in February 2006 by the FASB and the IASB. It describes the advances expected to achieve by 2008. In the MoU, the two boards reaffirmed their common objective of developing high quality and common accounting standards (IASB 2002).

In 2007 the SEC removed the requirement of reconciliation for foreign companies that are traded on the American stock exchanges. On August 6 of that year the SEC issued "Concept Release" to allow the issuers in the United States prepare the financial statements in accordance with IFRS. In September 2008, boards published an update of the MoU to report the progress made since 2006 and to set convergence targets until 2011. In 2008 the SEC issued a document proposing a route for the adoption of IFRSs in the United States and a proposal for a regulation on the optional use of IFRS on 2014. It was established that the SEC would decide in 2011 if the adoption of IFRS served the public interest and would benefit investors. The SEC also proposed that U.S. issuers that meet certain criteria can file their financial statements prepared using IFRS starting from December 15, 2009. Also in 2008 ended the first phase of the creation of the new conceptual framework (IASB, 2008).

In March 2009, the FASB reiterated their support in creating quality standards and recommends evaluating strengths, weaknesses, costs and benefits the U.S. could face to advance towards the objective of convergence. Also that year the group created by the boards the Financial Crisis Advisory Group (FCAG) published several recommendations to improve the effectiveness of the work to be done (IASB, 2009). That year the Financial Accounting Foundation (FAF) in collaboration with the AICPA and the National Association of National Accounting Boards began the process of creating a panel (Blue Ribbon) for the study and improvement of the accounting rules in private companies. This new panel was created three years later.

In February 2010 the SEC issued a statement in support of convergence and global accounting standards. In April 2010 the boards published a quarterly report on the progress of the work. In addition, they agree to work for the implementation of a plan that studies the effects of the adoption of IFRS in several areas and examining the regulatory environment that may be affected

by the new rules, among others. In June 2010, the FASB and the IASB agreed to modify its work plan and give priority to the most important projects that were agreed upon in the MoU, 2006.

In 2011 the boards reviewed strategies and discussed technical IASB projects and joint projects between this one and the FASB (IFRS, 2013<sup>b</sup>). In addition, IASB conducted an inquiry and identified that they must work with the conceptual framework so it provides a consistent and practical way of creating IFRS. They also have to improve some rules so that they respond to the needs of the users. It was also identified as necessary to strengthen the process of creating standards. The next conference will be held in 2015.

The SEC in 2012 reported that IFRS in the U.S. would not yet be used in public enterprises (FASB, 2103<sup>a</sup>). The work plan discussed in July of that year did not discuss the voluntary adoption. Moreover, the SEC did not indicate when and how these standards will be incorporated into the American accounting system. They did not provided full support to the adoption however, reported that the SEC is exploring other methods to incorporate IFRS in the US GAAP. We can deduce from the expressions of the SEC executives that the U.S. still shows their disposition to stay involved in the process of convergence. However, it is understood that the convergence era is about to end (PWC, 2013<sup>a</sup>). With the collaboration of the FAF and the AICPA the Private Company Council is created in 2012. The Private Company Council together with the FASB determines the modifications to the US GAAP that are needed to meet the needs of users of private companies (PWC, 2013<sup>b</sup>).

The members of the IASB in October 2012 as a response to the final work plan of the SEC, disclosed that they recognize that the US economic system is unique and that this represent major challenges for the implementation of IFRS. They also recognize that these challenges can be overcome with the appropriate policies.

By 2013 the foundation of IFRS, which is responsible for overseeing the processes in the IASB created the Accounting Standards Advisory Forum (ASAF) to expand the collaborative efforts of the IASB. The FASB is one of the 12 members (FASB, 2013<sup>a</sup>). That same year the AICPA also announces its plan to establish a framework of financial reporting for SMEs (PWC, 2013). For the last quarter of 2013 the future of the Convergence Project is uncertain because both boards are giving attention to their particular agendas. However, although the compulsory adoption or voluntary adoption in the United States is not in sight in the near future, the IFRS continue to be an important issue for American companies. Currently IFRS are still influencing changes in the US GAAP (PWC, 2013).

The boards are still working together. In addition they still maintain separate agendas. Table 3 shows the rules and amendments that both boards are working together on and the approximate date of issue. Table 4 and 5 present separate projects that each board in working on by October 2013. It's assigned to projects C to indicate the closing date for comments, DP for document discussion, ED for published draft, RFI request for information and F to indicate that it is final.

Table 3: Projects of IASB and FASB summarizes at October 2013

Joint Projects Standards and amendment	Responsible Board	Anticipated issuance: 2013	Anticipated issuance: 2014
Emissions trading schemes	Joint	ED	F
Financial Instruments	Joint	ED	F

(classification and measurement)			
Impairment	Joint	ED	F
Hedge accounting	Joint	F	
Financial Instruments	Joint	ED	
Financial statement presentation	Joint		
Insurance contracts	Joint	ED	
Leases	Joint	ED	
Revenue recognition	Joint	F	

Source: PWC. C = Comment deadline / DP = Discussion Paper / ED = Exposure Draft / RFI = Request for Information / F = Final

Table 4 and 5 present the status of the IASB projects. It also presents the approximate date of completion for projects in process.

## CONCLUSIONS

After 11 years of the signing of the Norwalk Agreement some convergence projects have been completed successfully. Several projects have been partially completed and others were discontinued. In some cases there was no consensus between the boards and different standards were created. To date some projects are still in process. The opinion of the auditing and consulting firm PWC is that a single set of global international standards is necessary, IFRS is better positioned than others to achieve this goal. In addition, emphasizes that the users should be bilingual in accounting terms, this will serve to create standards that would better serve users. The SEC still has not decided on the future of IFRS in the United States.

Those interested in the topic in the United States want clarity about the conduct of the IASB and the FASB with the process of convergence. Other users outside the American nation want greater commitment from the nation with the adoption of the IFRS and are waiting for substantial progress. Accounting service providers understand that both boards are keeping their commitment with the convergence project. However, the completions of projects together are a priority and will not be completed until beyond 2014. They also understand that a fast mandate of change is needed by the government, business and other sectors (PWC, 2013<sup>a</sup>). The members of the IASB understand there are still differences that can be reconciled. They are working and have undergone alternate solutions that understand can complement the work of the SEC team.

However, although the adoption of IFRSs in the United States will not be immediately it is advisable that the American companies are kept informed about the process. It is important they know in what way it will affect transactions such as mergers and acquisitions. In addition, it is necessary to disclose information of subsidiaries using IFRS to users abroad. Finally, it is important that users in the United States understand that future changes in the US GAAP are based on joint efforts between the IASB and the FASB.

## Recommendations

To the extent that markets increase their global presence, the number of foreign investors in American companies will increase. These shall require the IFRS-based financial statements. In addition, the American companies that have subsidiaries overseas should report their financial statements as required by each country. It is therefore recommended that multinational companies and SMEs in the United States stay informed about changes in IFRS and to also implement the agreement achieved in the convergence project. These companies should immediately identify what they can do to keep an understanding and mitigate the negative impact, if any, that new changes can bring with IFRS. It is advisable that the executives of the companies participate in the standards creation process. In addition, keep a constant monitoring in

subsidiaries overseas. This is because as more complex transactions arise the accounting standards require changes and new IFRS are created. These changes directly affect the activities between American and foreign companies. They also affect the taxes arising from these mergers and transactions generated jointly and separately. Both boards should establish accounting guidelines for the disclosure of financial information that reflects the economic substance of the transactions, for timely decision making. It is pertinent that the FASB prioritize issues where simplification is needed and where the current information does not provide useful information anymore to meet the changing needs of users in the United States.

## BIOGRAPHY

Aida R. Lozada, CPA, ABD is Professor of International Accounting and director of Development Business Program of the Faculty of Business Administration at the University of Puerto Rico at Río

Piedras Campus. She teaches intermediate accounting courses. Her research areas includes: The value relevance of IFRS vs USGAAP. Contact information is: [aida.lozada@upr.edu](mailto:aida.lozada@upr.edu) and College of Business Administration, UPR, P.O. Box 23332 San Juan, PR, 00931-3332.

Hedliam. J. Robles Arbelo was born in the town of San Juan but have lived most of his life in Manatí. She is currently a student Business Administration Faculty in the University of Puerto Rico Río Piedras campus. It is in the process of obtaining a Bachelor's degree in accounting. She wants to have professional success. She is fully bilingual. She is very responsible. PO Box 23332 San Juan, PR 00931-3332, [hedliamrobles@gmail.com](mailto:hedliamrobles@gmail.com).

Alejandra D. Álvarez Ruiz is a student of the University of Puerto Rico Río Piedras campus. A student of the College of business administration with a concentration in accounting and human resources. It is close to graduating in the year 2014 after completing an Exchange in Granada, Spain. She wants to be a very succesful professional. It is very dedicated to her studies and posses research skills. PO Box 23332 San Juan, PR 00931-3332, [Alejandra\\_13\\_daniela@hotmail.com](mailto:Alejandra_13_daniela@hotmail.com).

Jorge L. Vega Rodríguez, a graduate of Bachelor in 2007 of the College of business administration in concentration in finance from the University of Puerto Rico, Carolina. It is now in the 5th year, accounting in the UPR Río Piedras. He wants to take all the courses and requirements to become certified public accountant (CPA). He is very professional and is very responsible. PO Box 23332 San Juan, PR 00931-3332, [vega.jorgel@gmail.com](mailto:vega.jorgel@gmail.com).

Wilfredo Caparrós García, entered to the University of Puerto Rico, Río Piedras campus. It is currently in its fourth year of a Bachelor's degree in accounting. He worked at the psychological Institute of research, was Exchange at the University of Binghamton, NY and did an internship at the Insurance Commission. Moreover, it is member of Association of accounting and finance. PO Box 23332 San Juan, PR 00931-3332, [Wilo1704@gmail.com](mailto:Wilo1704@gmail.com).

Kevin A. Bultrón Clemente is currently studying a Bachelor's degree in business administration with a concentration in human resources. He hopes to graduate in May 2014. Their goals include continue to graduate studies and work efficiently and successfully in the race who is studying. Expected in the future create their own business to help the welfare and progress of their country. PO Box 23332 San Juan, PR 00931-3332, [kevin.bultron@upr.edu](mailto:kevin.bultron@upr.edu).

Carlos J. Castro Pérez studies in the College of business administration. Although lover to extreme sports, it has stood by their extraordinary skills. His fourth year of University, next to graduation, expects to meet many goals and expectations which it to turning to a career of excellence. Want to be CPA in the near future. He is very active un the extracurricular activities. PO Box 23332 San Juan, PR 00931-3332, [carlos.castro9@upr.edu](mailto:carlos.castro9@upr.edu).

Scarlett J. Figueroa Toledo is currently studying her Bachelor in business administration program with focus on accounting in the Business Faculty of the University of Puerto Rico, Río Piedras campus. Eventually she hopes to study in a design program to achieve a combination of the arts with the skills and knowledge of business administration. PO Box 23332 San Juan, PR 00931-3332, [scarlett.figueroa@upr.edu](mailto:scarlett.figueroa@upr.edu).

Jennifer Martínez is a student of the Faculty of Business Administration of the University of Puerto Rico in Río Piedras. It currently takes the course of international accounting. Their goals include graduating with honors. She wants to work as a professional in the field of business. She wants to become a CPA soon. She is very organized and always is willing to help others. PO Box 23332 San Juan, PR 00931-3332, [uprrp.jmartinez3570@gmail.com](mailto:uprrp.jmartinez3570@gmail.com).

Diemel Castillo Batista, completed his Bachelor of business administration, concentration in finance in may 2012. He is currently completing accounting. Its objective is to take the exams for certified public accountant and eventually working for one of the "Big Four" accounting firms. He is very active in the university. It is very dedicated to his studies and posses research skills. PO Box 23332 San Juan, PR 00931-3332, [diemelcastillo@yahoo.com](mailto:diemelcastillo@yahoo.com).

Andrés N. Rosa Aponte is a student in the College of business administration, concentration in accounting at the University of Puerto Rico, Río Piedras campus. It currently takes the course of international accounting. Its goal is to become authorized public accountant and business professional. He wants to be a succesfull professional. He posses research skills and she is a leader. PO Box 23332 San Juan, PR 00931-3332, [andres.rosa2@upr.edu](mailto:andres.rosa2@upr.edu).

Alice H. Abboud Chalhoub is a student of accounting and economics of the UPR Río Piedras. It is part of the honour society and is a member of the Association of accounting students at the University Río Piedras Chapter and is a member of the Association of Latino Professionals in Finance and Accounting. Her trilingual skills keeps her interested in international issues. PO Box 23332 San Juan, PR 00931-3332, [alice.abboud@upr.edu](mailto:alice.abboud@upr.edu).

Manuel A. Cecilio González is a student in the College of Business Administration, concentration in accounting from the University of Puerto Rico at Río Piedras. In these moments expected to graduate and obtain the license of certified public accountant (CPA). Also wants to become a professional business. He is very active in the university. It is very dedicated to his studies and is very organized. PO Box 23332 San Juan, PR 00931-3332, [macg.07pr@hotmail.com](mailto:macg.07pr@hotmail.com).

Erick D. Delgado Hernández is a student of Business Administration, concentration in accounting. After finishing his studies at the University aims to take exams for authorized public

accountant license and eventually work in the field of accounting. He wants to be a successful in the field of business. It is very dedicated to his studies and posses research skills He wants to graduates with honors. PO Box 23332 San Juan, PR 00931-3332, [diomelcastillo@yahoo.com](mailto:diomelcastillo@yahoo.com).

Eliezer A. Julián is a student of the Faculty of Business Administration of the University of Puerto Rico in Rio Piedras. It currently takes the course of international accounting. Their goals include graduating with honors. He wants to work as a professional in the field of business and become a CPA. Others of their goals are to be a professional in the field of business. PO Box 23332 San Juan, PR 00931-3332, [eliezerjulian@yahoo.com](mailto:eliezerjulian@yahoo.com).

Omar Barreto, is a student of the Business Administration Faculty of the University of Puerto Rico in Rio Piedras. It currently takes the course of international accounting. He wants to be authorized public accountant in the near future. Is very active in extracurricular activities on campus. He is the Global entrepreneurship week organizer at campus. PO Box 23332 San Juan, PR 00931-3332, [oabc16@hotmail.com](mailto:oabc16@hotmail.com).

Jesús Calderón is a student of the Business Administration Faculty of the University of Puerto Rico in Rio Piedras. It currently takes the course of international accounting. After finishing studies at the University aims to take exams for certified public accountant license and eventually work in the field of accounting. Is a dynamic person and always is willing to help others. PO Box 23332 San Juan, PR 00931-3332, [jesus.calderon@upr.edu](mailto:jesus.calderon@upr.edu).

Luis Cabrera is a student of the Business Administration Faculty of the University of Puerto Rico in Rio Piedras. It currently takes the course of international accounting. It is very dedicated to his studies and posses research skills. He wants to graduate soon to put into practice their knowledge. In addition, wants to be a professional in business field. He wants to graduate with honors. PO Box 23332 San Juan, PR 00931-3332, [Luis.cabrera\\_20@yahoo.com](mailto:Luis.cabrera_20@yahoo.com).

Yanet G. Vázquez is a student of the Business Administration Faculty of the University of Puerto Rico in Rio Piedras. It currently takes the course of international accounting. It is very dedicated to her studies and posses research skills. She wants to graduate with honors. She wants to be a professional in the area of business in the near future. She is very active in the university. PO Box 23332 San Juan, PR 00931-3332, [yanet.vazquez@upr.edu](mailto:yanet.vazquez@upr.edu).

Alicia Lozada is a student of the Business Administration Faculty of the University of Puerto Rico in Rio Piedras. It currently takes the course of international accounting. She wants to be a professional in the area of marketing in the near future. It is very active in extracurricular activities on campus. She organizes the global entrepreneurship week. PO Box 23332 San Juan, PR 00931-3332, [a.lozada.mur@gmail.com](mailto:a.lozada.mur@gmail.com).

Rodolfo A. Rivera is a student of the Business Administration Faculty of the University of Puerto Rico in Rio Piedras. It currently takes the course of international accounting. He wants to finish his Bachelor's degree with honors. He wants to work in the field of business. It has leadership and innovation skills. He wants to be a professional in the area of business in the near future. PO Box 23332 San Juan, PR 00931-3332, [raripr@hotmail.com](mailto:raripr@hotmail.com).

Enara Lorenzo is exchange student of the Business Administration Faculty of the University of Puerto Rico in Rio Piedras. It currently takes the course of international accounting. Her goal after finishing studies at the University and is working in the field of business. She wants to work in Spain where she lives. She is very organized. It has leadership skills. PO Box 23332 San Juan, PR 00931-3332, [enara\\_lg19@hotmail.com](mailto:enara_lg19@hotmail.com).

Andrea de el Valle is a student of the Business Administration Faculty of the University of Puerto Rico in Rio Piedras. It currently takes the course of international accounting. She is a member of the Association of accounting students río Piedras Chapter. It has leadership and innovation skills. She wants to be a professional in the area of accounting in the near future. PO Box 23332 San Juan, PR 00931-3332, [acdelvalle@ymail.com](mailto:acdelvalle@ymail.com).

Berenice Morales Rosario, is a student of fourth year of the UPR Río Piedras. Its concentration is accounting. She'd like to specialize more in the area of international accounting since after the course that took it met very important schemes that could help you achieve other goals. It expects to be in certified public accountant (CPA) in the near future. Also wants to be very successful in the field of business. PO Box 23332 San Juan, PR 00931-3332, [bernily81@yahoo.com](mailto:bernily81@yahoo.com).

Alexis Izquierdo is a student of the Business Administration Faculty of the University of Puerto Rico in Rio Piedras. It currently takes the course of international accounting. He wants to graduate with honors. He is very active and organized. He wants to be a professional in the area of business in the near future. It has leadership and innovation skills. PO Box 23332 San Juan, PR 00931-3332, [atomic.a.eduardo@gmail.com](mailto:atomic.a.eduardo@gmail.com).

Jonathan Fardonk is a student of the Business Administration Faculty of the University of Puerto Rico in Rio Piedras. It currently takes the course of international accounting. He wants to graduate with honors from the university. After finishing studies at the University aims focus on the area of business. He wants to continue graduate studies. PO Box 23332 San Juan, PR 00931-3332, [jonathan.fardonk@gmail.com](mailto:jonathan.fardonk@gmail.com).

# BIDDING IN THE TREASURY AUCTIONS AND THE EFFECT OF THE SELLER'S STRATEGY

Michal Bresky, Center for Economic Research and Graduate Education, Charles University & Economics Institute, Academy of Sciences of the Czech Republic

## ABSTRACT

*The main goal of the paper is to analyze changes in bidding behavior of participants on Treasury auctions arranged by the Ministry of Finance of the Czech Republic and Czech National Bank before, during and after the spillover of the credit crunch crises in 2007 and 2008 in Europe. Most of the auction bidders (more than 75%) are foreign controlled financial institutions or foreign controlled insurance corporations and pension funds. The seller faces a tradeoff between efficiency and revenue. In equilibrium it is optimal to set a positive reservation price both from revenue and efficiency point of view. The reason is that bidders use asymmetric strategies across units in equilibrium. The positive reservation price reduces such an asymmetry. During the crisis the Czech National Bank started to use new extraordinary policy tool-facility. I design a model of the multi-unit auction of Treasury auctions and using the data on individual bidder bids (price-quantity pairs) provided by the Ministry of Finance of the Czech Republic. I compare the impact of various changes in the auction rules on the bidder behavior and the revenue collected in the auction that determines costs of state debt service of the Czech Republic.*

**JEL:** D44, E43, G12.

**KEYWORDS:** Multi-Unit Auction, Banking, Treasury Market, Auction With Heterogenous Agents.

## INTRODUCTION

In the Czech Republic, the Ministry of Finance services the state debt by issuing Treasury securities (T-bills and T-bonds) in auctions. T-bills and T-bonds differ in many characteristics including maturity (T-bill less than a year and T-bond more than a year), coupon payment (T-bill has no coupon) and taxation method. Auctions of both types of securities are organised by CNB. While T-bills are sold in uniform-price auctions, T-bonds are sold in discriminatory-price auctions. After issuing Treasury securities on the primary market, they are further traded on the secondary market.

In a standard game theoretical analyses each bidder submits bids that maximize the bidder's payoff given the strategies of opponent bidders. But estimates of expected utility equilibrium first order conditions (FOC) in auction games are typically difficult if not impossible to evaluate even if their parametric representation has a simple functional form. The analysis of bidder best response strategies is a challenge for the auction theory (see Jackson and Swinkels (2005) for the proof of equilibrium existence). The nonparametric econometrics of auctions is discussed in Athey and Haile (2007) who analyse the strategic considerations that characterise the dealer's best response strategy. Athey and Haile (2007, section 10.1) show that in a multi-unit auction bidder's values can be econometrically identified from the submitted bid distribution.

Since the identification equation is not linear, the econometrician often uses appropriate simplifying assumptions on the bidder's value distributions to derive a representative econometric

model. Nyborg and Strebulaev (2004) provide an example of such a simplified model. Similar approaches were applied in empirical studies on Finish Treasury auctions by Keloharju, Nyborg, and Rydqvist (2005) and on ECB REPO auctions by Bindseil, Nyborg, and Strebulaev (2009). Another type of empirical studies include individual level characteristics to explain submitted bids (e.g. Hamao and Jegadeesh (1998) and Silva (2003)).

There are also non-parametric estimation techniques. If one applies the Constrained Strategic Equilibrium and Simulation Monte Carlo Approach (see Armantier, Florens, and Richard (2008) and Armantier and Richard (2000)) to the auction data numerical approximation of FOC can be computed. By combining these two approaches, it is possible to produce an operational procedure for analyzing a much broader class of game theory models than that for which there exists operational analytical or numerical solutions to their extensive game representation. An application specific form of strategies is motivated by two objectives: 1) ‘bounded rationality’ or ‘rules of thumb’ behavior, 2) functional approximation of more complicated Nash equilibrium solutions. There are, alternatively, other non-parametric approaches to estimate the FOC condition using Bootstrap technique applied by Kastl (2010 ) or GMM (see Fevrier, Preget and Visser (2002)) that we can apply.

## LITERATURE REVIEW

Our dataset was provided by the Ministry of Finance of the Czech Republic and other informational agencies and contains all bids submitted by each bidder in the Czech Treasury Bond auctions over the period from January 2005 to December 2011. For each auction, we know the submitted bid schedule of each bidder and the winning bids for each bidder. We also have information on volume and maturity of the bond.

The data show that noncompetitive bids play a small role with less than 5% of total issue size being allocated through noncompetitive bids. We will therefore abstract from the option of submitting noncompetitive bids in the structural/reduced form model. Similar approach was used in Hortacsu, A. and J. Kastl (2012), Elsinger and Zulehner (2007), and Elsinger, Schmidt-Dengler, Christine Zulehner (2013).

Noncompetitive bids are common in treasury auctions in several countries, although the exact rules regarding allocation and timing of submission of bids vary. While they do play a minor role in the eventual allocation, the option of purchasing at the average price may affect the bidding behavior and hence bias our interpretation of results (marginal valuations, etc.).

One can be reasonably justify that banks have idiosyncratic shocks to their liquidity needs due to deposit flows and the corresponding reserve requirements. The underlying assumption we make here is that these shocks are independent conditional on observed macro, secondary market conditions and other reporting data.

Due to the limited liquidity in the secondary market for Czech T-bonds, we use additional information to approximate the secondary market. We include German government bonds that were selected to fit the characteristics, i.e., end date and maturity, of the Czech government bonds. To capture the macroeconomic conditions, we added the consumer price index and GDP growth of Czech Republic, Germany, France and Netherlands and Eurozone and the exchange rate CZK/EUR. To capture bidders characteristics we use the data from monthly reporting of the Czech banks.

Since the ČNB moved from yield tenders to price auctions in 2004, we converted observed bids into annual yields using information on coupon size, coupon dates, and maturity. We will estimate the parameters in terms of yields.

Our choice of combination of French, Netherlands and German government bonds can be justified by the following consideration. As Figure 1 (source Graf III.6, CNB) reveals the 5-year government bond interest rates move together across all EU countries. The comovement of bond rates is more obvious after the introduction of the Euro until summer 2007 when the first signs of the financial markets crisis appeared. Before the introduction of the Euro we observe a convergence process showing that Czech government bond yields exhibit a similar pattern as the yields from countries such as Germany, France or the Netherlands. Thus, we believe that the use of German government bond yields is a good illustration.

## THE MODEL, DATA AND METHODOLOGY

I will model the strategic behavior of bidders in auctions for short term borrowing (i.e., REPO, T-bill and zero coupon T-bond) with maturity  $t$ . I will assume that both in the period before and after the global financial crisis break up bidders form rationally marginal value for short term funds that we denote as  $v_i(q | I, II_i)$  where  $q$  stands for the number of units demanded in auction,  $I$  represents all the public information common for all banks (e.g. ;data), and  $II_i$  represents the private information of a specific bank (e.g. micro) at given time.

We omit the time index of all variables for simplicity. By assuming that banks behave according to a particular strategic equilibrium model of value or profit maximization, the researcher can map bidder's observed bids and bidding decisions into their unobserved marginal values. The inferences drawn from such approaches rely on the assumed strategic behavior. Then marginal value can be identified from submitted bids (price quantity pairs) given the bidders use the optimal best response equilibrium strategies in the auction by Athey and Haile (2009, see section 10.1.). An overview and comparison of various recent methodologies used by various researchers to analyze multi-unit auctions of Treasury securities is in Cardozo (2010).

Using similar arguments to Kastl (2010) one may assume that bidders do not consider ties when playing equilibrium strategies because bids are rarely rationed in the data. In his approach the seller is flexible in adjusting the number of supplied units ex-post that simplifies the analysis. Let me construct one period  $n$ -bank model. Risk-neutral banks compete to provide funds to the government  $G$  in exchange for T-bills or T-bonds and private sector loans  $L$ . I model the problem of a profit maximizer bank that provides different services, pricing monopolistically the products where information costs are more relevant. We extend the model by Swinkels, in the spirit of Hortacsu McAdams and Elsinger, H. and P. Schmidt-Dengler, Ch. Zulehner (2013) : "Competition in Austrian Treasury Auctions", mimeo.

Let me construct one period  $n$ -bank model. Risk-neutral banks compete to provide funds to the government  $G$  in exchange for T-bills or T-bonds and private sector loans  $L$ . I model the problem of a profit maximizer bank that provides different services, pricing monopolistically the products where information costs are more relevant. The basic profit maximization problem of the bank is: To analyze bidder (=bank=dealer)  $i$ 's problem, suppose that he is a producer endowed with borrowing-lending technology  $A()$  which uses several inputs (various types of assets and liabilities, labour and capital) to provide financial services on the loan-deposit market.

Kastl assumes that banks compete in prices but not quantities. Quantities are generated by an exogenous process  $P_{\{Q\}}$ . Let us assume that  $P_{\{Q\}}$  is uniform on the interval  $[p_{\min}, p_{\max}]$ . We will design the model with the following features:

There are  $T$  discriminatory auctions indexed by  $t = 1, \dots, T$ . In each auction  $t$ , the seller offers  $S_t$  indivisible units for sale to  $N_t$  potential bidders (We will use  $he$  to represent the seller or auctioneer and  $she$  to represent the bidder.).

We allow for  $C$  different categories of bidders denoted by  $c$  such that  $N_t = \sum_{c=1}^C N_t^c$ . Conditional on type  $c$ , bidders in each auction are symmetric and risk-neutral with independent private values. Before the auction each bidder receives a private signal  $\varphi_{i,t}$  drawn from distribution  $F_c$ . The set of all possible signals of bidder  $i$  we will denote as  $\Phi_i$ . Signals are distributed independently within and across bidder types as well as across auctions. The marginal valuation function has the form  $v_i(q, \varphi_{i,t})$ . The marginal valuation function is increasing in  $\varphi_{i,t}$  and weakly decreasing in  $q$ . The marginal valuation function determines the total value  $TV_{i,t}$  of  $q_{i,t}$  T-bonds to each bidder with signal  $\varphi_{i,t}$   $TV_i(q_{i,t}, \varphi_{i,t}) = \int_0^{q_{i,t}} v_i(q, \varphi_{i,t}) dq$

Bidders are required to submit several bid-quantity pairs that specify what they are willing to buy in the auction T-bonds. Namely, we assume that each bidder  $i$ 's strategy space  $S_i$  consists of a triples  $\langle b_{i,t}, Q_{i,t}, K_{i,t} \rangle$  where  $b_{i,t}$  and  $Q_{i,t}$  are non-negative vectors of dimension  $K_{i,t}$  and  $K_{i,t}$  is a natural number. Moreover we restrict the bidders to sort bid-quantity pairs according to bids; i.e.  $b_{i,j,t} \geq b_{i,j+1,t}$  for  $j = 1, \dots, K_{i,t}$ . (Since the seller orders the price quantity pairs according to bids after collecting the bids this restriction has no effect on the auction game up to the permutation of the price-quantity pairs.

The total submitted cumulative quantity is at most  $Q_{i,t}^-$ . The seller truncates the demand curve; i.e.  $y_{i,t}(p | \varphi_{i,t}) = 0$  if  $[\underline{q}_{i,t}, K_{i,t}) > Q_{i,t}^-$ . For each bidder we denote the vector of cumulative quantities as  $q_{i,t}$  where  $q_{i,j,t} = \sum_{k=1}^j Q_{i,k,t}$  for  $j = 1, \dots, K_{i,t}$  and for technical reasons we define also  $b_{i,0,t} = \infty$  and  $q_{i,0,t} = 0$  and  $b_{i,K_{i,t}+1,t} = 0$  and  $q_{i,K_{i,t}+1,t} = \infty$ . Then one can easily construct a stepwise demand and inverse demand curves of bidder  $i$  whose private signal is  $\varphi_{i,t}$

$$y_{i,t}(p | \varphi_{i,t}) = q_{i,j} \text{ if } p \in [b_{i,j}, b_{i,j-1}) \text{ for } p \in [0, \infty) \quad (1)$$

$$y_{i,t}^{-1}(q | \varphi_{i,t}) = b_{i,j} \text{ if } q \in (q_{i,j}, q_{i,j+1}] \text{ for } q \in [0, \infty) \quad (2)$$

Each bidder is restricted to buy at most  $\bar{Q}_{i,t}$  T-bonds in an auction at time  $t$ . Therefore bidders has no incentive to submit such a quantity vector that  $q_{i,K_{i,t}} > \bar{Q}_{i,t}$ . (The total submitted cumulative quantity is at most  $Q_{i,t}^-$ . The seller truncates the demand curve; i.e.  $y_{i,t}(p | \varphi_{i,t}) = 0$  if  $[\underline{q}_{i,t}, K_{i,t}) > Q_{i,t}^-$ )

**The Game.** Before the auction the seller announces the number of T-bonds offered for sale  $O_t$  and a reservation price  $R_t$  where  $R_t \in [0, \infty)$ . Each bidder  $i$  submits a non-increasing step function. This function specifies how much a bidder of type  $\varphi_{i,t}$  demands at price  $p$ . We make two additional assumptions consistent with the auction procedure. First, we assume that whenever there price clearing the market is not unique, the seller uses the most favorable price from her perspective. Second, bids at the lowest price accepted (stop-out-price) may be subject to pro rata curtailments to sell the scheduled issue size. Therefore the quantity the bidder  $i$  wins  $\tilde{q}_{i,t}$ , depends on the submitted bid-quantity pairs of all bidders  $\langle b_{i,t}, Q_{i,t}, K_{i,t} \rangle_{i=1}^{N_t}$ , the quantity of T-bonds

offered for sale  $O_t$ , the reservation price of the seller  $R_t$ , the maximum quantities each bidder can buy in the auction  $\langle \bar{Q}_{i,t} \rangle_{i=1}^{N_t}$ ; i.e.  $\tilde{q}_{i,t} = \tilde{q}_i(\langle b_{i,t}, Q_{i,t}, K_{i,t} \rangle_{i=1}^{N_t}, R_t, \langle \bar{Q}_{i,t} \rangle_{i=1}^{N_t}, O_t)$ .

The ex post payoff to bidder  $i$  depends on the quantity of T-bonds she wins  $\tilde{q}_{i,t}$ , her type  $\varphi_{i,t}$ , the price paid for buying  $\tilde{q}_{i,t}$  T-bonds.

$$\prod(\varphi_{i,t}, \langle b_{i,t}, Q_{i,t}, K_{i,t} \rangle_{i=1}^{N_t}, R_t, \langle \bar{Q}_{i,t} \rangle_{i=1}^{N_t}, O_t) = \quad (3)$$

$$\int_0^{\tilde{q}_{i,t}} v_i(p, \varphi_{i,t}) dp \quad (4)$$

$$- \sum_{k=1}^{K_{i,t}} I(\tilde{q}_{i,t} \geq q_{i,k,t}) \cdot Q_{i,k,t} \cdot b_{i,k,t} \quad (5)$$

$$- \sum_{k=1}^{K_{i,t}} I(q_{i,k-1,t} \geq \tilde{q}_{i,t} > q_{i,k,t}) (\tilde{q}_{i,t} - q_{i,k-1,t}) b_{i,k,t} \quad (6)$$

The first term (4) in equation (3) is the total value of T-bonds bidder  $i$  wins, the second term (5) is what she pays for quantities on which she is not rationed, and the last term (6) is what she pays on quantities on which she is rationed.

Pure strategy is a list of submitted bids based on the observed information that bidder  $i$  knows before the auction, including her type  $\varphi_{i,t}$ , the reservation price, the distribution of all bidder values, the quantity of T-bonds for sale, and the number of opponents, ??? macro variables, micro variables, expectation about future. For the sake of simplicity I will write the pure strategy as a function of private values only. Bidder  $i$ 's pure strategy is a measurable mapping from the set of private signals to the set of weakly decreasing step functions with less than  $K_i$  steps  $\beta_i: \Phi_i \square S_i$ .

We will assume that bidders use pure symmetric strategies within each bidder's category  $c$ .

We assume that supply is non-random, although the MFČR reserves the right to withdraw supply entirely. This happens rarely (once in the history of Czech treasury auctions, when the yield resulting from the auction exceeded that of Belgian yields (Belgium had historically higher yields because of a debt ratio more than double that of Czech Republic). Moreover MFČR reserves the right to sell more T-bonds than  $O_t$  that is announced before the auction. I will assume that bidders are ignoring these changes in supply.

When the opponents use strategies  $\beta_{-i}(\cdot)$ , then the ex ante pointwise payoff to the bidder, whose type is  $\varphi_{i,t}$  and who bids  $\langle b_{i,t}, Q_{i,t}, K_{i,t} \rangle$  is:

$$\prod(\varphi_{i,t}, b_{i,t}, Q_{i,t}, K_{i,t} | R_t, \beta_{-i}(\cdot), O_t) = \int_0^{\tilde{q}_{i,t}} v_i(p, \varphi_{i,t}) dp \quad (7)$$

$$- E \left( \sum_{k=1}^{K_{i,t}} I(\tilde{q}_{i,t} \geq q_{i,k,t}) \cdot Q_{i,k,t} \cdot b_{i,k,t} \right) \quad (8)$$

$$- E \left( \sum_{k=1}^{K_{i,t}} I(q_{i,k-1,t} \geq \tilde{q}_{i,t} > q_{i,k,t}) (\tilde{q}_{i,t} - q_{i,k-1,t}) b_{i,k,t} \right) \quad (9)$$

The expectations in terms (8) and (9) are taken over possible opponent types  $\langle \varphi_{j,t} \rangle_{i \neq j}$  which induces the probability measure of the  $E$  operator (If the supply is random, then the induced probability measure takes this into account.). I use the word payoff to mean the ex ante payoff when no confusion arises.

The bidder maximizes his payoff from a strategy  $\beta_i(\cdot)$ :

$$\max_{\beta_i(\cdot)} E \left( \prod(\varphi_{i,t}, b_{i,t}, Q_{i,t}, K_{i,t} | R_t, \beta_{-i}(\cdot), O_t) \right) \quad (10)$$

The expectations in terms (10) are taken over all possible types  $\varphi_{i,t}$  of bidder  $i$  which induces the probability measure of the  $E$  operator.

The equilibrium concept we use is Bayesian Nash equilibrium. A vector of strategies  $y(\cdot | \cdot)$  constitutes a Bayesian Nash equilibrium if for all bidders  $i$ ,  $y_i(\cdot | i)$  maximizes her expected utility  $i(i)$ .

Similarly to Kastl (2012) we derive the first-order condition.

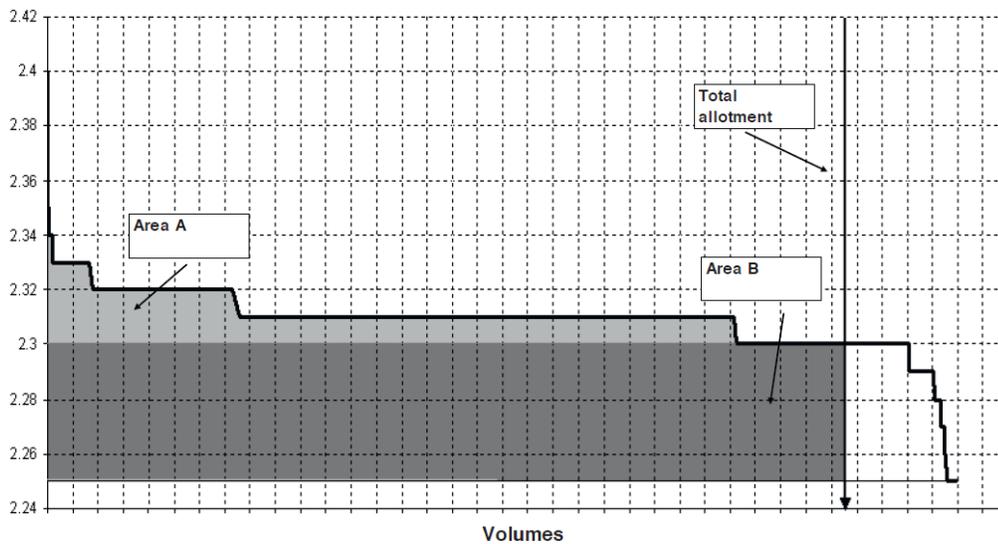

Let  $P^S(\varphi, y(\cdot | \varphi))$  denote the stop-out price associated with type vector  $\varphi$ . Kastl (2012) shows that for all steps  $k$  but the last step  $K_i$  a bidder's bid function has to satisfy

$$v(q_k, \varphi_{i,t}) = b_{i,k,t} + \frac{\Pr(b_{i,k+1,t} \geq P_t^S) \cdot (b_{i,k,t} - b_{i,k+1,t})}{\Pr(b_{i,k,t} \geq P_t^S > b_{i,k+1,t})} \tag{11}$$

We describe how to infer the marginal valuations of bidders from the above equation using resampling.

This way we will construct series of  $\hat{v}_{i,k,t}$ . We define  $\hat{U}_{i,t}^3 = \log((\hat{v}_{i,j,t} - S_t) \cdot q_{i,j,t})$  where  $S_t$  is the expected secondary market value; i.e.  $\frac{b_{i,t}^a - b_{i,t}^b}{2}$  or the sellers minimum accepted price.

**A central bank auction and the funding liquidity risk measures.**

Note: Thick black line is the aggregate demand curve.  $LRP = [(Area A + Area B) / total\ allotment]$ ,  $LRP\_1 = [Area A / total\ allotment]$

Therefore we will calculate the average weighted T-bond value of bidder  $i$  subtracted from some benchmark. We will use a seller's reservation price or secondary market price as benchmark. There is an analogy between constructing of our average value indicator and the approach used by Drehmann and Nikolaou (2009), who construct this indicator for the euro area. The measure is analogous to market liquidity index MIBL used for a particular bidder  $i$  (see CNB (2008, p.35) for the details).

What value measure to choose?

Volume of demanded T-bonds  $\bar{b}_{i,t}^1 = (b_{i,j,t} - S_t) \cdot q_{i,j,t}$  (12)

Weighted average value of T-bonds  $\bar{b}_{i,t}^2 = \frac{(b_{i,j,t} - S_t) \cdot q_{i,j,t}}{\sum_{k=1}^{K_i} q_{i,j,t}}$  (13)

$$\text{Log of (12)} \quad \bar{b}_{i,t}^3 = \log(b_{i,j,t} - S_t) \cdot q_{i,j,t} \quad (14)$$

$$\text{Log of (13)} \quad \bar{b}_{i,t}^4 = \log\left(1 / \left(\frac{(b_{i,j,t} - S_t) \cdot q_{i,j,t}}{\sum_{k=1}^{K_i} q_{i,j,t}} + \varepsilon\right)\right) \quad (15)$$

Given that all opponent bidders  $-i$  submit  $\langle b_{-i,t}, Q_{-i,t}, K_{-i,t} \rangle$  one can define residual supply for bidder  $i$  as the total amount of T-bonds offered for sale minus the demand of the opponent bidders  $-i$

$$RS_{i,t}(p) = O_t - \sum_{j \neq i} y_{j,t}(p | \varphi_{j,t}) \quad (16)$$

We follow the resampling approach proposed by Hortacsu and McAdam (2010) and Kastl (2011). They infer the valuations at the bid steps. The first-order condition is not tractable analytically unless a specific form of the marginal value distribution function has been specified (see Hortacsu (2002), Fevrier et al. (2004), Wolak (2003)). This kind of simplification may justify the usage of parametric methodologies in a few special cases. But I will focus on structural auction modeling advocated by Bajari and Hortacsu (2005) and discussed also in Athey and Haile (2009) and Hendricks and Porter (2007). Kastl (2010) applies this approach to auctions of Czech T-bills and Cassiola et al. (2010) applies this approach to ECB auctions. In their approach one constructs the residual supply curve for each bidder. This curve can be derived from the total number of T-bond offered for sale in the auction by the seller and the bids submitted by the opponent bidders. After that they use various analytical tools for estimation of the demand and supply equations. Their methodology also accounts for asymmetric behavior in the auctions.

Then I will explain these revealed marginal valuations  $v_i(q | I, II_i)$  from the information sets  $I, II_i$  available to the bank at the time of auctions. We will regress marginal values  $v_i$  for a given quantity

observed in submitted bids on the explanatory variables  $I, II_i$ .

$$v_i = \alpha_0 + II_i \alpha_1 + I \alpha_2 + \varepsilon_i$$

I will also consider spreads between marginal values and interbank interest rate variables. Then in the parameters  $\alpha_1, \alpha_2$  will allow us to test various hypothesis on the relations between the interest rates.

I will address the following hypotheses:

We will investigate the effect of the volume of maturing T-bonds around the auction day on the dealers'

demand in auctions. Does the number of tranches influence behavior of dealers in auctions?

Are the bidding strategies affected by adjusting total auction volume after bid submission?

What is the effect of T-bond sale on the dealers' portfolio? How does the dealer's portfolio changes? Does this change depend on their CDS? How does the bidding function depend on CDS of primary dealer's and clients CDS? What factors affect the fraction of the debt financed by domestic financial institutions and what fraction is financed by the rest of the world?

Is the demand in T-bond auctions higher in the case of participants which resale the T-bonds more around the auction day?

What measures can enhance the performance of the primary auction market of T-bonds?

How the bidding behavior of banks in T-bond auctions changed during the recent economic and financial crisis? In particular, CDS of individual banks increased in September 2008, increasing the demand for collateralized transactions. This may have increased the demand for T-bonds and thus their price. On the other hand, the fears from future additional negative liquidity shocks decreased the demand for collateralized transactions and thus the demand for T-bonds declined. We will test which of the two effects prevailed.

How the introduction of CNB liquidity providing REPO operations in October 2008 affected the bidding behavior of banks in T-bond auctions? We will test whether the effect on the demand for T-bonds was positive.

We will investigate contagion effects from abroad on the behavior of dealers. In particular, CDS of a number of EU countries increased significantly in March to May 2009 (CEE countries) and also in March to May 2010 (Greece).

What publicly available information has significant effect on bidder strategies?  
Some preliminary empirical findings will be discussed during the presentation.

## CONCLUSION

In this paper, I design and analyze a model of a uniform price and discriminatory price auctions. The seller offers several identical units for sale to  $n$  bidders. The seller is flexible in adjusting the number of supplied units ex-post that simplifies the analysis. The theory suggests that bidder behavior mimics the best response behavior of an oligopolist who faces fixed total demand. In such an oligopolistic game each agent does not know the private information of the competitors and therefore faces uncertain demand. In this model one can design appropriate estimation techniques and hypothesis testing to analyze multi-unit auction data. The estimation method enhances to capture heterogeneous impact of global financial crises on individual banks from disaggregated level data perspective. Although Czech banking system was not directly hit by sub-prime crises because the exposure to toxic assets was not significant, the liquidity hoarding and interest rate spread widening is present in the Czech Republic similarly to markets in the US, UK and Euro Area, albeit to a much lesser extent. Through the model of bidding we will argue that the bank value for liquidity has been much more dispersed than the raw bidding data show.

## RESUMEN

*El tema del Emprendimiento ha sido de gran interés para los investigadores mexicanos por años. En la actualidad identificamos que existen competencias deseables en los emprendedores, es por ello, la importancia de comparar las diversas teorías en emprendimiento y su impacto en los programas de educación universitaria. Por lo tanto, el objetivo de este trabajo es hacer un análisis bibliométrico de las principales revistas científicas con estudios realizados por nacionalidad, en el tema de competencias deseables en los emprendedores y como son desarrolladas por los programas de educación universitaria, para analizar la productividad y conocer si el interés en el tema es representativo entre los principales temas de investigación en el ámbito de la comunidad científica así como el grado de importancia por país y nacionalidad de los investigadores. Los resultados permiten afirmar que el tema de del emprendimiento universitario en México es de gran interés y que va incrementándose en la comunidad científica a nivel internacional, con un interés notable en Estados Unidos de América y en Colombia.*

**PALABRAS CLAVE:** Emprendimiento, Universidad, competencias, análisis bibliométrico.

## INNOVATING ON THE EDUCATION IN MÉXICO:INTERNAL FACTORS THAT IMPACT THE UNIVERSITY ENTREPRENEURSHIP

### ABSTRACT

*The topic of entrepreneurship has been of great interest for Mexican researchers for years. At present we identified that there are powers in the desirable entrepreneurs, therefore, is the importance of comparing the various theories in entrepreneurship and its impact on the programs of university education. Therefore, the objective of this work is making a bibliometric analysis of the main scientific journals with studies by nationality, in the theme of desirable skills in the entrepreneurs and how they are developed by the programs of university education, To analyze the productivity and know if the interest in the subject is representative between the major research topics in the field of the scientific community as well as the degree of importance by country and nationality of researchers The results suggest that the subject of the university endeavor in Mexico is of great interest and is increasing in the scientific community at international level, with a significant interest in United States of America and in Colombia.*

**JEL:** L14, L15, M14

**KEYWORD:** Entrepreneurship, University, Competence, bibliometric analysis

## INTRODUCCIÓN

El emprendimiento y la innovación son temas de alto interés en la actualidad, debido a su impacto en la economía de los países. México no es la excepción, los altos índices de desempleo, la falta de oportunidades de crecimiento y desarrollo profesional han promovido el incremento de incubadoras de empresas (SNIE, 2010), a pesar de lo anterior no ha sido suficiente para que México le de trabajo a los 942,000 jóvenes desempleados en edad de 20 – 29 años (INEGI, 2010). Las MiPyME constituyen el 97% del total de las empresas que generan ingresos equivalentes al 23% del Producto Interno Bruto (PIB), además de ser mayoría, representan casi el 70% de las fuentes de empleo de este (Gómez.M, 2006). Cuervo (2011) denomina enterpriser al empresario que actúa solo y se distingue del corporativo. El ser emprendedor es una de las cualidades o características esenciales y fundamentales de un empresario u hombre de negocios, junto a la de otros factores también considerados importantes como la innovación tecnológica, la organización y gestión empresarial (Julca Meza, 2011).

El emprendimiento es una competencia desarrollada dentro de la formación profesional, permite a las instituciones educativas contribuir con el país con profesionales con una inclinación a crear ideas de negocios a partir del aprovechamiento de las oportunidades que se encuentran en el mercado. Para Meza (2011) la educación es un derecho humano y un deber social fundamental, es democrática gratuita y obligatoria. El Estado la asumirá como una función indeclinable y de máximo interés en todos sus niveles y modalidades... está fundamentada en el respeto a todas las corrientes de pensamiento, con la finalidad de desarrollar el potencial creativo de cada ser humano y el pleno ejercicio de su personalidad en una sociedad democrática basada en la valoración ética del trabajo y en la participación activa, consciente y solidaria en los procesos de transformación social consustanciados con los valores de la identidad cultural. La presente investigación nace de la necesidad de comprender los factores determinantes de la actitud emprendedora para innovar dentro de los procesos educativos. De aquí nuestro interés por realizar un análisis bibliométrico del desarrollo teórico sobre la innovación en los sistemas Educativos en México donde se involucran factores que impactan en el emprendimiento universitario.

## REVISIÓN DE LITERATURA.

Existen diversos estudios y conceptualizaciones sobre el emprendedurismo, por su parte Varela (2001) lo define como la persona o conjunto de personas que es capaz de percibir una oportunidad de producción o de servicio y ante ella formula libre e independientemente una decisión de consecución y asignación de los recursos naturales, financieros, tecnológicos y humanos necesarios para poder poner en marcha el negocio que crea valor a la economía y genera trabajo para el y muchas veces para otros. Stevenson (2000) define la actividad de emprender como perseguir la oportunidad más allá de los recursos que se controlen en la actualidad. El emprendedurismo es un campo emergente que se esfuerza por obtener legitimidad como disciplina independiente en las ciencias sociales y, en especial, el de las ciencias administrativas o gerenciales. El sistema educativo es el medio más expedito y eficaz para transmitir, socializar y re-crear la cultura, por lo tanto es desde la “escuela”, en sus diferentes niveles, que se puede materializar el propósito transformador, incluyendo dentro de los currículos y planes de estudio la cultura del emprendimiento en el proceso formativo, y desde allí proyectar la generación de oportunidades laborales, la obtención de riqueza, a través de las sinergias entre los distintos sectores e instituciones, para consolidar la educación como un derecho y creando las oportunidades para que toda la población se encamine hacia el desarrollo humano (Tibana & Duarte, 2009).

La Bibliometría es la ciencia que permite el análisis cuantitativo de la producción científica a través de la literatura, estudiando la naturaleza y el curso de una disciplina científica. consiste en la aplicación e métodos matemáticos y estadísticos para medir cambios cualitativos y cuantitativos que se producen en las publicaciones científicas (Camps, 2007). Flores et al., (2004) define la bibliometría como una “herramienta que permite elaborar un conjunto de indicadores referidos específicamente a la producción científica de una disciplina, proporcionando, de este modo, una base de discusión para estimar el grado de consolidación y desarrollo de la misma”. Los análisis bibliométricos permiten mejorar el acceso electrónico a los repositorios de publicaciones académicas a través de una mayor cantidad de bases de datos. (De Bakker, Groenewegen, & Den Hond, 2005).

## METODOLOGÍA

Esta investigación se orienta a una revisión del patrimonio teórico producido sobre los procesos innovadores en la educación donde se busca identificar factores que desarrollen las habilidades de emprendimiento entre los jóvenes universitarios de México. Se elaboró un análisis bibliométrico retrospectivo y descriptivo. Se utilizó como criterios de búsqueda en los campos año 2009 – 2014 y address México, Latinoamérica y España, pero no arrojaba resultados positivos, así que se decidió revisar que países llevaban la delantera en la investigación sobre el tema. Se incluyeron artículos originales, tesis, libros, papers. Para iniciar la investigación se requiere seleccionar y examinar los índices que permitan concluir sobre la situación siguiendo las propuestas expuestas en la literatura (Agudelo, Bretón-López, & Buena-Casal, 2004; Flores et al., 2004; Pérez et al., 2003)

Los artículos se obtuvieron de la base de datos Web of Knowledge del ISI( El Institute for Scientific Information) que fue fundado por Eugene Garfield en 1960 y adquirido por Thomson (Thompson Reuters) una de las mayores empresas de información. ISI mantiene Web of Knowledge una plataforma basada en la tecnología web y formada por una amplia colección de bases de datos bibliográficas, citas y referencias de publicaciones científicas de cualquier disciplina del conocimiento, tanto científico como tecnológico, humanístico sociológico. (Salvadores Santamaría, 2012). De cada material se analizaron los siguientes indicadores. Indicadores para la caracterización de la colaboración como: número de autores por documento, universidades por documento; Indicadores bibliométricos generales: la nacionalidad de los autores, cantidad de referencias bibliográficas, año de publicación de los artículos, tipo de trabajo realizado, idioma de publicación, número de producciones por universidades. De los 250 títulos que arroja la búsqueda utilizando las palabras claves “ innovation education entrepreneurship” “inovation education” “ model education” “entrepreneurship””higer education” “se les revisaron la introducción, resultados y conclusiones, los criterios de inclusión, de donde se obtuvo un total de 100 artículos que describían temas relacionado al estudio.

## RESULTADOS

Del total de los 250 registros extraídos de ISI, se encontró que 232 registros (92.80%) corresponden a artículos en sus diversas modalidades (ensayos, reportes de investigación, ponencias, estudios y documentos), 6 registros (2.4%) a reseñas bibliográficas, 3(1.2%) material editoriales. El estudio se realizó tomando como base únicamente los 100 registros.

### Indicadores de la Colaboración

a. número de autores por documento -Se determinó la existencia de un total de 102 autores de

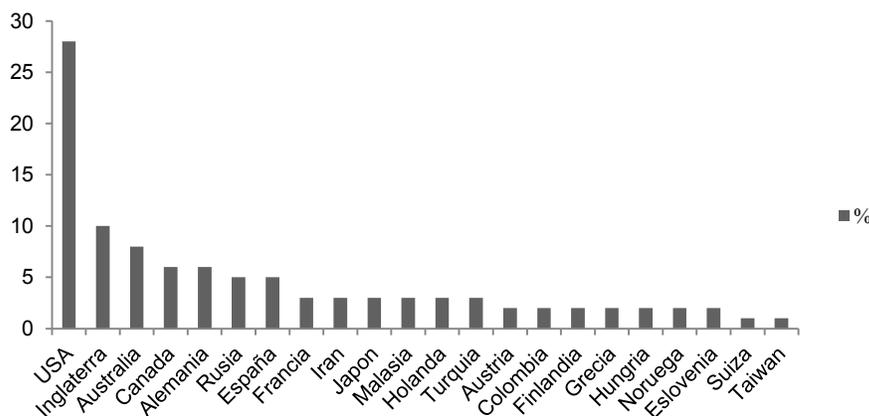

artículos, de éstos 98 (98%) únicamente publicaron un artículo cada uno y sólo 2 autores (2%) dos artículos.

- b. universidades por document-El nivel de colaboración entre las universidades es bajo solo el 20% de los trabajos son colaborativos, y tan solo se involucran 2 Instituciones por trabajo.

### Indicadores Bibliométricos Generales

a. La nacionalidad de los autores En cuanto a la procedencia geográfica de los 100 autores, se advierte que 28 (28%) son de USA, el 10% de Inglaterra, 8% de Australia, 6% Canadá al igual que de Alemania, 5% de Rusia y España, 3 % Latinoamérica, Francia, Iran, Japón, Malasia, Holanda, Turquía como se muestra en la Figura 1.

Figura 1: Nacionalidad de los Autores

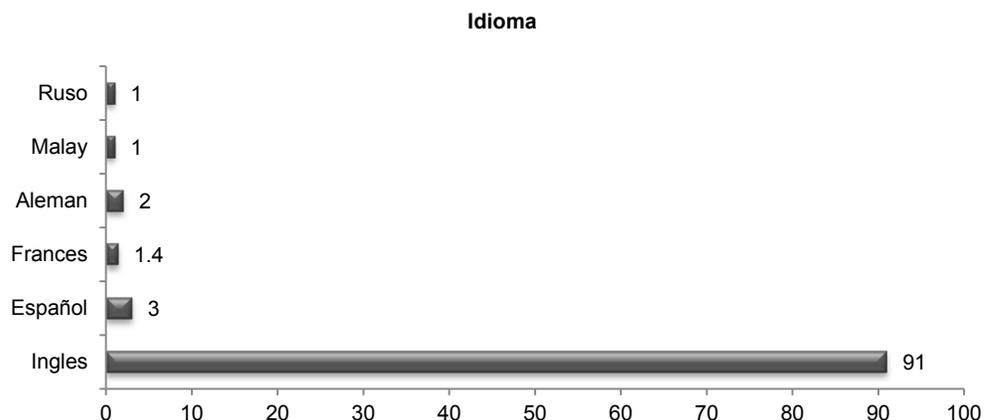

En esa figura se muestra la representación gráfica de las nacionalidades que representan a los autores de la muestra en el periodo del (2009 – 2013).

b. Año de publicación de los artículos Al analizar el número de artículos publicados por año se observa que de los 100 artículos editados durante los 4 años, el año 2013 es el que contabiliza mayor número de artículos (43), seguido por 2012 con 29 trabajos, 2009 con 21, 2011 con 4 y 2010 con 3 artículos. Como podemos observar las investigaciones en el tema han ido incrementándose, aunque no son aun representativa la presencia de Latinoamérica.

c. Tipo de trabajo realizado Los trabajos en la temática presentados en el periodo del 2009 al 2013 son principalmente artículos científicos con un 92%.

d. Idioma de publicación En la Figura 2. muestra que el 91% de los trabajos están escritos en Ingles, siendo el idioma oficial a nivel mundial.

Figura 2: Idiomas en Que se Presentan Los Artículos

*En esa figura se muestra la representación gráfica los idiomas en que están escritos los trabajos objeto de este análisis, donde el idioma ingles tiene una representación mayoritaria. Periodo del (2009 – 2013).*

e .Número de producciones por universidades. Al examinar la procedencia institucional, encontramos que Arizona State Univ, London Sch Hyg Trop Med, Russian Acad SCI, Univ de Florida, Univ Kebangsaan Malaysia, y la Univ Wollongong tienen 2 artículos por universidad. El resto de las Universidades en el periodo del 2009 al 2014 solo tienen un artículo por institución.

## CONCLUSIONES

Al realizar el análisis bibliométrico de las publicaciones relacionadas con la innovación educativa en México: factores internos que impactan al emprendimiento en base de datos Web of Knowledge, se observa que sólo tiene registrados 100 trabajos sobre el tema de un total de 10,000 publicaciones que la componen, siendo muy bajo el nivel de investigación teórico y experimental en el tema. El estudio confirma el incremento en las publicaciones lideradas por los países Estados Unidos de Norteamérica, Inglaterra, España y Alemania en el tema, y una baja representatividad de América Latina y México, Ello evidencia que la innovación educativa no se ha extendido en el contexto tanto en investigación teórica como empírica, lo cual se corresponde con el hecho de que no están claros los factores que impactan en el emprendedurismo universitario. Se reconoce un sesgo debido a que la base de datos tiene el 92 % de trabajos en el idioma inglés dejando de lado toda la producción científica de México y América Latina.

De los 104 autores registrados solo el 20% de ellos colaboran de manera intra-institucional mientras que su nivel de colaboración inter-institucional es casi nulo. El índice Price nos indica que el porcentaje de referencias utilizadas con menos de 5 años de antigüedad fue tan solo de 4, nos confirma que son muy pocas las publicaciones en el tema. El indicador h-index nos confirma que las referencias utilizadas en promedio en cada artículo es de 6 siendo bajo para la importancia planteada del tema en la actualidad. La bibliometría se utiliza en distintas ramas científicas, ya que se considera un método confiable y universal para medir la productividad del sector. (Camps, 2007). El presente análisis es la primera aproximación a los estudios bibliométricos relacionado al tema, así como las limitaciones identificadas se recomienda como futura línea de investigación desarrollar estudios bibliométricos comparando otras bases de datos y directorios donde estén indexadas publicaciones de México, así como países de América Latina como Scielo, Redalyc, Latindex y otros e incrementar los indicadores bibliométricos a aplicar.

# AFECTACIONES POR EL SERVICIO DE CONSOLIDACIÓN Y DESCONSOLIDACIÓN DE CARGA DE LOS RECINTOS FISCALIZADOS DEL PUERTO DE MANZANILLO, COLIMA, MEXICO

Oscar Bernardo Reyes Real, Universidad De Colima  
Aurelio Déniz Guizar, Universidad De Colima  
Ariel Gutiérrez Ortiz, Universidad De Colima  
Manuel Rubio Maldonado, Universidad De Colima

## RESUMEN

*La presente investigación tienen como objeto mostrar las causas particulares por las que se provocan afectaciones a los usuarios de los recintos fiscalizados en sus operaciones de comercio exterior y mercancías almacenadas en contenedor dentro de los recintos fiscalizados ubicados en el puerto de Manzanillo, Colima, México, durante la prestación del servicio de desconsolidación y consolidación de carga, las afectaciones que de esto se deriva, responsables de dicha situación, así como la influencia desfavorable que esto ha generado en los usuarios mencionados. La exploración de la información fue a través de una investigación de campo con la elaboración y aplicación de un instrumento de recopilación de información, que para el caso en concreto fue el cuestionario, llegándose a los siguientes resultados: que la principal causa por la que se generan afectaciones sobre las operaciones de comercio exterior y las mercancías de los usuarios de los recintos fiscalizados es la negligencia del personal que realiza el manejo directo de la mercancía, resaltando que se trata en su mayoría de personal afiliado a un sindicato y su falta de capacitación, responsabilizándose principalmente al mismo recinto fiscalizado, teniendo como principales consecuencias el daño o maltrato de la mercancía, la pérdida o destrucción de la misma, el retraso en la logística de la operación de comercio exterior, generando desfavorablemente decisiones en los usuarios como el cambio de recinto fiscalizado para el manejo de sus operaciones de comercio exterior por la falta de competitividad en sus servicios.*

**PALABRAS CLAVE:** Servicio, causas, afectaciones, mercancía, contenedor, puerto, costos, competitividad

## ABSTRACT

*This research has as object show particular causes by which cause damages to users of the sites audited in its foreign trade and goods stored in container operations within controlled enclosures located in the port of Manzanillo, Colima, Mexico, during the provision of the service of deconsolidation and consolidation of cargo the effects arising from this, responsible for this situation, as well as the unfavorable influence that this has generated in the mentioned users. The exploration of information was through field research with the development and implementation of a tool in gathering information that for the specific case was the questionnaire, leading to the following results: the main cause that generates effects on foreign trade operations and goods of the users of controlled enclosures is negligence of the personnel responsible for performing the direct handling of the goods, highlighting that it is mostly affiliated to a Trade Union and their lack of training staff, are primarily responsible to the same trade zone, having as main impact damage or abuse of the goods, the loss or destruction of the same, the delay in the operation of foreign trade logistics, generating decisions adversely in users as the change of premises*

*inspected for the management of their foreign trade operations by the lack of competitiveness in services.*

**KEYWORDS:** Service, Causes, Effects, Merchandise, Container, Port, Costs, Competitiveness

## **INTRODUCCIÓN**

La ampliación del Puerto de Manzanillo en el estado de Colima proporcionará condiciones para escalar posiciones dentro de la red mundial de puertos y constituirse como un eje de apoyo regional e internacional que obtiene carga de la interconexión marítima y las operaciones de transbordo. El puerto de Manzanillo, cuenta con las mejores condiciones geográficas y ventajas comparativas; ya que se ubica en la intersección y cruce de las rutas principales del Pacífico. Significa para México la principal entrada de contenedores, con una participación del 68% en el Pacífico; lo que representa el 46% del Total de TEU'S del país. Por ello es uno de los más importantes a nivel nacional debido a su volumen de operaciones, relativo al movimiento de mercancía contenerizada y despachos, dichas operaciones portuarias han sido brindadas con infraestructura y servicios de clase mundial, dentro de un ambiente de libre competencia, para cubrir y satisfacer eficientemente las exigencias de los usuarios.

La política económica de los puertos mexicanos consiste en ampliar su cobertura, modernizar la infraestructura existente y proporcionar servicios confiables y de calidad para toda la población. Pero el desarrollo de cada una de las terminales portuarias, desde infraestructura y mejora de servicios hasta la diversificación de los mismos, ha sido moderado y necesita aumentar, ya que el sector de puertos se ha convertido en uno de los sectores económicos del país. Actualmente al interior de los recintos fiscalizados existen prácticas laborales no confiables para la integridad de las mercancías, lo anterior derivado de la ineficiencia e ineficacia de los servicios desempeñados por las operadoras portuarias, específicamente durante el servicio de consolidación y desconsolidación de las mercancías que son transportadas y almacenadas en un contenedor. Esta situación pudiera estar entorpeciendo el cumplimiento a las demandas de los usuarios, causando a su vez que los clientes sustituyan su recinto fiscalizado por otro que les garantice mejor servicio, o tal vez cabe la posibilidad de que las líneas navieras sean quienes estén buscando otros puertos para realizar el descarga de su mercancía, derivado del mal servicio.

La realización de una mala manipulación de las mercancías en los recintos fiscalizados genera afectaciones operativas, económicas y materiales, que se ven reflejadas en retrasos en la logística de importación o exportación, costos derivados de gastos, pérdida o daño sobre las mercancías, para los usuarios, llamémosles agentes aduanales, importadores o exportadores que requieren de los servicios de manejo, almacenaje o custodia de sus mercancías. Por lo que el blanco de la investigación es identificar las afectaciones y sus causas que pueden generar los servicios de consolidación y desconsolidación de mercancías que son transportadas a través de un contenedor, cuyo manejo y custodia ha sido encomendado a los recintos fiscalizados del puerto de Manzanillo, Colima, México y en base a los resultados de la investigación proponer la puesta en marcha de las estrategias necesarias para el buen trato de las mercancías para que lleguen a su destino final en condiciones óptimas, evitando así gastos innecesarios e interrupciones en la logística de las operaciones de comercio exterior de los usuarios.

## **REVISIÓN LITERARIA**

El comercio internacional para Witker J. y Hernandez L. (2002:10) es el conjunto de movimientos comerciales y financieros, y en general todas aquellas operaciones cualquiera que sea su naturaleza, que se realicen entre naciones; es pues un fenómeno universal en el que participan las diversas comunidades humanas. Las economías que participan del comercio internacional se denominan economías abiertas. Este proceso de apertura externa se inició fundamentalmente en la segunda mitad del siglo XX, y de forma espectacular en la década de 1990, al incorporarse las economías latinoamericanas, de Europa del Este y el oriente asiático, todo esto como producto de la globalización.

Globalización para Hill Ch. (2007:5) se refiere al cambio hacia una economía mundial más integrada e interdependiente, teniendo según el autor de cita dos caras: Globalización de los mercados y globalización de la producción. La Globalización de los mercados para Hill Ch. (2007:6) consiste en la fusión de los mercados nacionales que por tradición eran distintos y estaban separados, en un solo mercado mundial enorme y la globalización de la producción para el mismo Hill Ch. (2007:7) se refiere a la subcontratación de bienes y servicios a diversos lugares del mundo para aprovechar las diferencias nacionales de costos y calidad de los factores de producción (como mano de obra, electricidad, tierra y capital). Ambos conceptos refieren a la participación de diferentes estados en una sola economía o una economía global o internacional donde se interactúa para generar un beneficio en función de las ventajas o bienes que el otro país o que los otros países ofrecen. Cada vez existe mayor interrelación entre lo que ocurre en los mercados internacionales y lo que sucede en la economía de un país determinado.

Ahora bien en 1990, el promedio de tiempo que se requería para que una corporación procesara y entregara mercancía de su almacén a un cliente era de 15 y 30 días, o incluso más, sin embargo, en esa misma década ocurre un cambio masivo y global como resultado de la tecnología de la información; el comercio mundial fue afectado de manera irreversible por la computación, la entrada del internet y diversas operaciones y prácticas en transmisión de la información. En esta etapa la realidad de la continua conectividad en los negocios ha establecido un nuevo orden de relaciones entre empresas llamado gestión de la cadena de suministros, las practicas se renuevan y se pueden fabricar productos conforme requerimientos específicos y ser entregados de forma rápida en cualquier parte del globo.

La gestión de la cadena de suministros Según Anaya J. (2011:242) es el conjunto de actividades de coordinación y colaboración con los diferentes canales de suministro, tanto internos como externos, así como los proveedores y clientes relacionados con la planificación, gestión del abastecimiento, compra y distribución física de productos. Esencialmente la gestión de la cadena de suministros para el mismo Anaya J. (2011:242) integra las actividades de suministros y gestión de la demanda a lo largo del denominado eje del producto entre diferentes empresas relacionadas, de tal manera que se puede hablar de una red autoorganizada de negocio que coopera para proporcionar productos y servicios. Hoy día ya podemos decir que la competencia no se da entre empresas sino entre cadenas de suministros, estructuras que se pueden definir según Akermans (Cit. por Anaya J. 2011) como grupos de organizaciones semi-dependientes, cada una con sus propias capacidades, que colaboran en una constelación en constante cambio y que atienden a uno o más mercados con el fin de seguir los objetivos empresariales específicos de la colaboración. Dentro de la cadena de suministros, los puertos son un eslabón que facilita el intercambio comercial internacional; en definición un puerto es el conjunto de obras, instalaciones y servicios que proporcionan el espacio de aguas tranquilas necesarias para la estancia segura de los buques, mientras se realizan las operaciones de carga, descarga y almacenaje de las mercancías y el tránsito de viajeros. En general, las funciones de un puerto son: comercial, intercambio modal del

transporte marítimo y terrestre, base del barco y fuente de desarrollo regional. Entre las funciones de índole específica se encuentran: actividad pesquera, de recreo y de defensa.

México tiene una gran actividad económica para la que ha desarrollado una importante infraestructura portuaria. Aunque cada una de las costas del país tiene capacidad para recibir embarcaciones, la importancia de un puerto es considerada a partir de su capacidad de administración integral, y de operación. Los puertos Mexicanos operan a través de un sistema de concesiones del gobierno federal, llamada Administración Portuaria Integral (API), en la actualidad existen 97 puertos, de los cuales los 16 principales son administrados por La Secretaría de Comunicaciones y Transportes, aunque existen otros tres operados por el Fondo Nacional del Fomento al Turismo (FONATUR) como son Cabo San Lucas, Baja California Sur, Ixtapazihuatanejo, Guerrero y Huatulco, Oaxaca. Los puertos del país reciben y envían diariamente miles de toneladas de bienes, cuyas operaciones representan ingresos para el gobierno federal a través de las API's. Sin embargo, es necesaria una continua inversión en los puertos ya que se requieren servicios logísticos, que hagan posible desde el ingreso de la mercancía, hasta su despacho al destino final, por tanto, se desarrollan estrategias para su recepción, vigilancia, servicios administrativos, almacenamiento, y transportación.

Es importante destacar que la carga que se traslada vía contenedor es la que más se mueve en los puertos de Mexicanos, a nivel mundial el movimiento de la carga vía contenedores, se constituye en el instrumento de transporte que ha revolucionado la logística a nivel mundial, ya que mediante este recipiente de veinte pies de largo o cuarenta pies de longitud, puede movilizarse todo tipo de mercancías.

En México para la realización de las transacciones comerciales internacionales se necesita de un Agente Aduanal, mismo que se han convertido en una figura de vital importancia en la correcta gestión de la cadena de suministros, el agente aduanal para Acosta F. (2005:11) es la persona física autorizada por la secretaria de hacienda y crédito público, mediante la expedición de una patente, para ocuparse a nombre y por cuenta ajena de los actos y las formalidades del despacho aduanero y celebrar los actos civiles y mercantiles necesarios para recibir las mercancías, así como para hacerlas llegar a su destino.

Entonces se puede entender que el agente aduanal es el encargado de llevar a cabo el proceso de importación y exportación de las mercancías en el país, sin embargo, cuando éste ejecuta dicho proceso, se ve involucrado con diferentes actores que pueden contribuir o afectar al fácil y rápido desarrollo del proceso para la realización de la operación de comercio internacional y su implícita gestión de la cadena de suministros. Como ya se expresó, en México para los trámites de importación y exportación de mercancías, es decir para la gestión del despacho aduanal o aduanero, es necesario un agente aduanal.

Ahora bien, se entiende como despacho aduanero para Reyes E. (2009:23) una serie de procesos o procedimientos que están establecidos en la ley aduanera, esta es una ley de carácter procedimental a fin de facilitar, por que así está el objeto de la ley en su artículo 1, la entrada y salida de las mercancías, asimismo esta disposición jurídica establece que el despacho aduanero no es un acto ni autónomo de parte de los contribuyentes, ni único para efecto de la autoridad sino que prevé el que todas las partes se involucren con la ayuda de los agentes y apoderados aduanales. Cuando las mercancías atraviesan el proceso del despacho aduanero, dentro de los actos que constituyen el despacho se encuentra el depósito ante la aduana, que para Reyes E. (2009:33) la mercancía queda en depósito ante la aduana con el objeto de ser desaduanizada, sometiéndola a alguno de los regímenes aduaneros.

El depósito ante la aduana conforme lo establece el artículo 23 de la ley aduanera vigente en México, se realiza en un recinto fiscal o un recinto fiscalizado, entendiéndose al primero conforme al artículo 14 primer párrafo de la ley citada como aquellos lugares en donde las autoridades aduaneras realizan indistintamente las funciones de manejo, almacenaje, custodia, carga y descarga de las mercancías de comercio exterior, fiscalización, así como el despacho aduanero de las mismas, y en el caso de los recintos fiscalizados, el mismo numeral de cita lo define como concesión para que los particulares presten los servicios de manejo, almacenaje y custodia de mercancías, en inmuebles ubicados dentro de los recintos fiscales, sin embargo, la legislación aduanera mexicana también prevé la posibilidad de denominarle como recinto fiscalizado al inmueble donde los particulares tengan el uso o goce y que sea colindante con un recinto fiscal o de un inmueble ubicado dentro o colindante a un recinto portuario, tratándose de aduanas marítimas, fronterizas, interiores de tráfico ferroviario o aéreo, y que hayan solicitado al Servicio de Administración Tributaria, dependiente de la Secretaría de Hacienda y Crédito Público de México, la autorización para prestar los servicios de manejo, almacenaje y custodia de mercancías. Es decir los recintos fiscalizados son concesiones o autorizaciones que se otorgan a particulares quienes son responsables de las mercancías; dicha concesión o autorización sólo se otorgará a personas morales constituidas de conformidad con las leyes mexicanas y cumplan con los requisitos y condiciones que se señalen en las bases de licitación que al efecto emita el SAT.

En relación a todo lo anterior, debe de quedar claro que dentro de la gestión de la cadena de suministros, uno de los elementos más importantes es la logística, que para Trejo P. (2008:31) el concepto de logística aplicado al comercio exterior, es el conjunto de operaciones desarrolladas en apoyo del intercambio o flujo de mercancías o servicios en los mercados mundiales, misma que comprende la consecución, mantenimiento, seguridad y transporte de bienes, con el fin de satisfacer en forma eficiente con el menor costo, esfuerzo y tiempo posibles a los clientes o consumidores. En pocas palabras la logística se traduce en ser competitivos en un entorno globalizado del comercio mundial. Asimismo Reyes E. (Cit. por Trejo P. 2008) la logística representa un conjunto de actos y actividades interrelacionados entre si y que interactúan para mejorar; en términos de tiempo, dinero y esfuerzo, la entrega de un producto al consumidor final. Dentro del proceso logístico encontramos al despacho aduanero que realiza el Agente Aduanal, mismo que sufre afectaciones derivado de los servicios contratados y que son prestados por los recintos fiscalizados en procesos como la consolidación y desconsolidación de la carga o mercancías transportadas a través de un contenedor

## **METODOLOGÍA**

El objetivo principal de esta investigación es conocer las causas particulares por las que se provocan afectaciones a los usuarios de los recintos fiscalizados en sus operaciones de comercio exterior y mercancías almacenadas en contenedor dentro de los recintos fiscalizados ubicados en el puerto de Manzanillo, Colima, México, durante la prestación del servicio de desconsolidación y consolidación de carga. Resulta interesante resolver algunas cuestiones: ¿Cuáles son la causas por las que se genera la ineficiencia durante la realización del servicio de desconsolidación y consolidación de carga que prestan a las mercancías almacenadas en contenedor los recintos fiscalizados ubicados en el puerto de Manzanillo, Colima, México? ¿Quiénes son los principales responsables respecto de la ineficiencia en el manejo por parte de los recintos fiscalizados ubicados en el puerto de Manzanillo, Colima, México de las mercancías almacenadas en contenedor? ¿Cuáles son las afectaciones relacionadas con la ineficiencia durante la realización del servicio de desconsolidación y consolidación de carga que prestan a las mercancías almacenadas en contenedor los recintos fiscalizados ubicados en el puerto de Manzanillo, Colima, México? ¿Qué decisiones ha generado respecto de la percepción que se ha formado en los

usuarios de los servicios de los recintos fiscalizados ubicados en el puerto de Manzanillo, Colima, México, respecto de la ineficiencia durante la prestación del servicio de desconsolidación y consolidación de carga?

Además se pueden enlistar algunos objetivos específicos que se cumplirán al término de la investigación: Establecer las causas particulares por las que se provocan afectaciones a los usuarios de los recintos fiscalizados en sus operaciones de comercio exterior y mercancías almacenadas en contenedor dentro de los recintos fiscalizados ubicados en el puerto de Manzanillo, Colima, México, identificar los principales responsables respecto de la ineficiencia en el manejo por parte de los recintos fiscalizados ubicados en el puerto de Manzanillo, Colima, México de las mercancías almacenadas en contenedor, identificar las afectaciones relacionadas con la ineficiencia durante la realización del servicio de desconsolidación y consolidación de carga que prestan a las mercancías almacenadas en contenedor los recintos fiscalizados ubicados en el puerto de Manzanillo, Colima, México, conocer las decisiones que se han generado respecto de la percepción que se ha formado en los usuarios de los servicios de los recintos fiscalizados ubicados en el puerto de Manzanillo, Colima, México, respecto de la ineficiencia durante la prestación del servicio de desconsolidación y consolidación de carga.

El cumplimiento de los objetivos planteados, así como la resolución a las preguntas elaboradas para la investigación, conducen una hipótesis general. Durante la prestación ineficiente del servicio de desconsolidación y consolidación de carga por de los recintos fiscalizados ubicados en el puerto de Manzanillo, Colima, México, se provocan afectaciones a los usuarios de los recintos fiscalizados en sus operaciones de comercio exterior y mercancías almacenadas en contenedor. En el transcurso de la investigación se determinó la cantidad de agencias aduanales ubicadas en el municipio de Manzanillo, Colima, México que son usuarios de los servicios de los recintos fiscalizados y al tenerlas plenamente identificadas se siguió el método inductivo, ya que se planteó que durante la prestación del servicio de desconsolidación y consolidación de carga por de los recintos fiscalizados ubicados en el puerto de Manzanillo, Colima, México, se provocan afectaciones a los usuarios de los recintos fiscalizados en sus operaciones de comercio exterior y mercancías almacenadas en contenedor, que impactan negativamente la llegada a destino final de las mercancías y por consiguiente afectaciones económicas para los importadores y/o exportadores que realizan operaciones de comercio exterior por el puerto de Manzanillo, Colima, México, situación que podría ser aplicada en general en cualquier otro tipo de organización para identificar estas situaciones y que su desempeño sea eficiente.

La investigación tendrá un enfoque cuantitativo ya que para comprobar la hipótesis, el estudio se basará en el instrumentos de medición aplicado, dicho instrumento es un cuestionario que se podrá tabular de manera estadística, a través de herramientas informáticas como el Excel. Cabe hacer mención que la información analizada fue obtenida de una encuesta que se aplicó a una muestra constituida por las agencias aduanales ubicadas en el municipio de Manzanillo, Colima, México que es de 81, sobre la cual se realizó el estudio estadístico. Es importante señalar que a fin de determinar la muestra se utilizó la fórmula de muestra de poblaciones finitas, considerando un universo finito cuando la población objeto de estudio es menor a 500000. La investigación de campo se realizó durante el 2012.

La población a la que se le aplicó la encuesta se determinó en base al padrón de Agencias Aduanales que se encuentran asociadas a la Asociación de Agentes Aduanales del Puerto de Manzanillo, Colima, A. C. (AAPUMAC), de lo anterior se desprende una población de 103 Agencias Aduanales asociadas a esta organización y que se encuentran ubicadas en el puerto de Manzanillo, Colima, México, de las cuales nuestra muestra constó de 81 entidades a aplicarles la

encuesta. Las personas a las que se les aplicó la encuesta fueron los dependientes autorizados (tramitadores) del departamento de operación, pertenecientes a cada una de las 81 agencias aduanales para tener un valor más correcto en las gráficas producto de la tabulación de resultados, estos individuos tienen como característica principal el laborar para una agencia aduanal y participar en las operaciones de comercio exterior que realizan como parte de sus servicios las agencias aduanales ubicadas en el puerto de Manzanillo, Colima, México.

Se elaboró un cuestionario de 15 preguntas que apoyo a saber cuáles son las causas particulares por las que se provocan afectaciones a los usuarios de los recintos fiscalizados en sus operaciones de comercio exterior y mercancías almacenadas en contenedor dentro de los recintos fiscalizados ubicados en el puerto de Manzanillo, Colima, México durante la prestación del servicio de desconsolidación y consolidación de carga, las afectaciones que de esto se deriva, responsables de dicha situación, así como la influencia desfavorable que esto ha generado en los usuarios mencionados.

## RESULTADOS

Con base en información proporcionada por AAAPUMAC, A. C., se aplicaron un total de 81 cuestionarios. Con base en la investigación de campo realizada, se puede determinar el estado de las agencias aduanales en el 2012, respecto de las afectaciones por el servicio de consolidación y desconsolidación de carga de los recintos fiscalizados del puerto de manzanillo, Colima, México. Después de haber realizado la investigación correspondiente, de haber tabulado y graficado los datos y finalmente haber realizado el análisis y la respectiva interpretación de los datos se han obtenido los siguientes resultados: En relación al planteamiento de la ineficiencia en los servicios de desconsolidación y consolidación de carga que se presta los recintos fiscalizados sobre mercancía transportada en contenedor El 69% de los encuestados respondió que existe ineficiencia durante el manejo de mercancía contenerizada, mientras que el 31% contestó que no existe ineficiencia en el manejo de mercancías durante las servicios de consolidación y desconsolidación debido a que mencionaron que no han presentado algún tipo de problemática con el recinto.

Ahora bien en relación a las causas de la ineficiencia durante este proceso, los encuestados respondieron la principal causa de la ineficiencia es la negligencia del personal de estiba, seguido del 21% que señalo que era falta de supervisión del personal del recinto fiscalizado y un 18% expresando que la premura o celeridad con la que se presta el servicio son la principal causa de ineficiencia, atinente a el principal responsable de la ineficiencia y las afectaciones que de esto se deriva, por la prestación del servicio de desconsolidación y consolidación de carga que prestan los recintos fiscalizados, los encuestados expresaron considerar como principal responsable al recinto fiscalizado con un 63% y con un 20% al personal que manipula directamente la mercancía, asimismo resulto interesante conocer si en alguna ocasión los usuarios habían sufrido algún daño o deterioro en la mercancías en donde el 80% de la muestra expreso afirmativamente esta situación, señalando que los principales daños se relacionaban con el maltrato o destrucción de la mercancía con el 29 y 30 por ciento respectivamente, así como la destrucción o daño sobre el embalaje de las mercancías y el daño debido a la humedad con un 19% y 17% de las respuestas, concerniente a las decisiones que se están tomando por parte de los propietarios de las mercancías y/o consignatarios, debido al mal servicio que están recibiendo por parte de los recintos, los encuestados respondieron que la principales decisiones provocadas eran las de cambio de recinto fiscalizado, cambio de línea naviera y la de cambio de puerto de destino con el 45, 20 y 21 por ciento respectivamente, en relación a las afectaciones económicas, el 80% de la muestra afirmo tener afectaciones por los servicios de desconsolidación y consolidación de carga,

externando que la pérdida de la mercancía, pérdida de clientes por parte del importador y/o exportador o agente aduanal y disminución respecto del valor de las mercancías, son las principales afectaciones económicas con el 47, 25 y 20 por ciento respectivamente, en relación a las afectaciones operativas o logísticas,

Los encuestados respondieron que el retraso en la realización del despacho aduanero de las mercancías, en la carga del vehículo y retraso en la salida de las mercancías del almacén, son las principales afectaciones en la operación o logística con los porcentajes del 41, 29 y 23 por ciento respectivamente del total de respuestas, también se les cuestiono respecto de la existencia de causas que justificaran la ineficiencia en el servicio de consolidación y desconsolidación de carga y respecto del maltrato de mercancías, el 58% del total afirmó no existir causas que justifiquen la ineficiencia y en relación al maltrato de los bienes en contenedor, el 67% señaló que la rapidez con la que se realiza la operación o la prestación del servicio no era causa de justificación del maltrato, encontrando como respuesta en relación al planteamiento de la causa principal de ineficiencia del servicio era con 51% de los resultados la falta de capacitación al personal que manipula las mercancías y en segundo término la falta de espacios para el almacenamiento y/o manipulación de las mercancías con un 18% de los resultados, por último se planteó a la muestra la posibilidad de la implementación de un sistema de gestión de calidad para la mejor en la prestación de los servicios a lo que el 87% expreso que un sistema de esta naturaleza mejoraría el servicio, siendo el área operativa el departamento del recinto fiscalizado en donde se debería de implementar según lo respondido por el 82% de los que respondieron, considerando el 91% de las respuestas que para el puerto de Manzanillo, Colima, México, la implementación de un sistema de gestión de calidad en la prestación de los servicios de consolidación y desconsolidación de carga como una ventaja competitiva.

## CONCLUSIONES

La calidad y eficiencia con la que los recintos fiscalizados ofrecen a los agentes aduanales como usuarios de sus servicios, resulta de suma importancia de acuerdo a la investigación realizada, pues a partir de las opiniones que externan los usuarios entrevistados, se pudo constatar que la ineficiencia en la prestación de los servicios de consolidación y desconsolidación de carga debido a la falta de capacitación al personal que manipula las mercancías y en segundo término la falta de espacios para el almacenamiento y/o manipulación de las mercancías y el equipo adecuado para estas maniobras generan la ineficiencia y por consiguiente se causan afectaciones de naturaleza económica, operativa o logística y en todo caso incluso hasta moral, ya que se genera una percepción negativa por parte de los clientes de los mismos usuarios como los son los importadores y/o exportadores y a su vez de estos con sus clientes respectivamente, que generan decisiones tan extremas como las de cambiar de puerto destino para la realización de sus operaciones de comercio exterior, afectando directamente a la calidad de los servicios de los agentes aduanales, tal como se registró en la indagatoria.

Se puede sustentar que la calidad con la que dichos recintos prestan sus servicios influye directamente a la calidad de los servicios que los agentes aduanales prestan a sus clientes, ya que el despacho aduanero de mercancías que es encomendado a los agentes de aduanas es un elemento importantísimo dentro de la logística que es un factor substancial como lo señala Long D. (2006:5) dentro del proceso de la cadena de abastecimiento que planea, implementa y controla eficiente y efectivamente el flujo y almacenamiento de bienes, servicios e información desde el punto de origen hasta el punto de consumo, para satisfacer las necesidades del cliente. De esta manera si los servicios de los recintos fiscalizados se prestan totalmente con la calidad que exigen los usuarios, se podría obtener una eficaz realización del despacho, un desaduanamiento ágil de

mercancías, un correcto manejo de las mismas, una reducción de costos en el despacho, además de la facilitación del almacenamiento de la carga, y por consiguiente la reducción en los costos de la gestión de la cadena de suministros y por consiguiente la disminución en el encarecimiento de los bienes que son ofrecidos al consumidor final, alcanzando con esto la competitividad en los servicios prestados ya que como lo establece Porter M. (2009:33) No se puede entender la ventaja competitiva si se examina la empresa en su conjunto. La ventaja nace de muchas actividades discretas que ejecuta al diseñar, fabricar, comercializar, entregar y a poyar su producto. Que para este caso nos referimos al servicio otorgado a sus usuarios los recintos fiscalizados ubicados en el puerto de Manzanillo, Colima, México.

Por tanto se realizan las siguientes recomendaciones sugerencias: Se debe contar con una capacitación constante al personal indicado respecto al servicio al cliente, contar con una capacitación constante al personal indicado respecto al correcto manejo de las mercancías, los directivos deben programar auditorías internas para evaluar la calidad de los empleados, y cerciorarse de que estén en constante mejoramiento, evaluar constantemente la satisfacción del cliente, respecto a sus servicios, apegarse a los tiempos acordados con los clientes. Por todo lo antes expuesto se puede afirmar que en un mundo globalizado las naciones deben que trabajar unidas para conseguir un desarrollo y evolución equitativa, todo en virtud de la interdependencia que el fenómeno de la globalización genera, hoy México depende de factores externos para crecer o decrecer, factores tales como la reactivación económica norteamericana, la creciente competencia de China, Europa del Este, Centro y Sudamérica e India en los mercados de las exportaciones Mexicanas, por ello no basta que las autoridades en todos los contextos hagan su función, para que México sea un país menos costoso para el comercio internacional, también es importante como señala Reyes E. (2006:63)

La suma de esfuerzos para alcanzar la competitividad globalizada, pero no es lo único, empresarialmente debemos cumplir con más metas y tener una mejor política industrial. Por eso es que se establece por el mismo Reyes E. (2006:64) el esfuerzo de todos es lo que puede hacer mejor a México un país competitivo, productivo y generador de empleos. La tarea del sector privado, bien puede sintetizarse en los siguientes puntos, enunciativamente más nunca limitativamente: Capacitación y tecnología, desarrollo de proveedores, infraestructura y logística, orientación a nichos de mercados específicos y especializados, mantenimiento de la productividad y calidad con estándares mundiales y una visión social y regional. Como se ha constatado, con este trabajo de investigación de campo se comprobó la hipótesis planteada, en la cual se afirma que durante la prestación ineficiente del servicio de desconsolidación y consolidación de carga por de los recintos fiscalizados ubicados en el puerto de Manzanillo, Colima, México, se provocan afectaciones a los usuarios de los recintos fiscalizados en sus operaciones de comercio exterior y mercancías almacenadas en contenedor.

# AVAPRENEURS JÓVENES: UNA COMBINACIÓN DEL BUEN USO Y MANEJO DE LAS 'TICS' CON UNA VISIÓN ESTRATÉGICA SOBRE LOS NEGOCIOS

Natacha Gentile, Universidad Nacional de Mar del Plata

## RESUMEN

*Los jóvenes nacieron y crecieron en un entorno marcado por el cambio tecnológico en la era del capitalismo informacional, desigual y post-moderno. En este contexto, destacamos el papel asumido por muchos de ellos, de ser parte de una generación que tiene la capacidad para crear y gestionar empresas basadas en el conocimiento. Así, el objetivo de este trabajo consiste en interpretar el comportamiento de un emprendedor virtual -avapreneur- joven para identificar través de la narrativa biográfica cómo empezó su negocio, cómo percibe su actuación y cuáles son las acciones y motivaciones que determinan comportamiento empresario.*

**PALABRAS CLAVES:** jóvenes - emprendedores virtuales - biografías

## YOUNG AVAPRENEURS: A COMBINATION OF GOOD USE AND GOOD MANAGEMENT OF 'TICS' WITH A STRATEGIC VISION ON BUSINESS

### ABSTRACT

*Young people were born and raised in an environment marked by technological change in the age of informational capitalism, uneven and post-modern. In this context, we emphasize the role played by many of them, that are part of a generation that has the ability to create and manage knowledge-based companies. Thus the aim of this work is to interpret the behavior of a young avapreneur to identify through biographical narrative, how he started his business, how perceived his performance and what are the actions and motivations that determine their entrepreneurs actions.*

**JEL:** M10 – M20

**KEYWORDS:** Youth - Avapreneurs - Biographies

## INTRODUCCIÓN

Los jóvenes nacieron y crecieron en un ambiente marcado por el cambio tecnológico en la era del capitalismo informacional, desigual y post-moderno. En línea con esto Feixa (2006) reconoce que en la actualidad un rasgo distintivo que identifica a muchos jóvenes tiene que ver con su acceso a las nuevas tecnologías desde que tienen uso de razón. En este contexto, caracterizado por Castells (1998) como economía global, informacional y que además funciona en red, destacamos el rol que están asumiendo muchos de ellos, quienes aprovechando las ventajas derivadas del buen uso y manejo que hacen de las nuevas tecnologías de la información y la comunicación -tics-, son parte de una generación que tiene la capacidad de crear y gestionar emprendimientos de negocios

basados en el conocimiento. En relación a esto, entendemos que estudiar el accionar de estos emprendedores jóvenes a través de su propio relato, resulta cada vez más importante no solo porque emergen como un nuevo colectivo social diferenciado, con habilidades innatas que facilitan el desarrollo de sus propios emprendimientos virtuales, sino por la necesidad de comprender situaciones y vivencias personalísimas vinculadas con la creación y gestión de su propia empresa dado que además, en general, estas habilidades y acciones han resultado menos observadas y estudiadas desde el punto de vista de la economía y del análisis de las decisiones estratégicas a nivel empresarial. Así, sobre la base de los planteos previos **el objetivo perseguido** con este trabajo tiene que ver con interpretar el comportamiento de un avapreneur joven para identificar través de la narrativa biográfica, cómo comenzó el negocio, cómo percibe su desempeño y cuáles son las acciones y motivaciones que determinan su accionar empresarial. La finalidad perseguida con este trabajo tiene que ver con discutir estrategias de aproximación a este sector particular de los emprendedores: los emprendedores que son jóvenes y además desarrollan negocios virtuales. En lo que sigue hacemos referencia al encuadre teórico del trabajo, luego describimos la metodología utilizada, a continuación se presentan los resultados del trabajo empírico y por último las conclusiones.

### **BREVE REVISIÓN DE LA LITERATURA**

Parte de la revisión de la literatura aquí realizada se vincula al proyecto de investigación “eENTREPRENEURSHIP: un análisis exploratorio del proceso de creación de empresas virtuales en Mar del Plata”. Dirección y co-dirección: Mg. N. Gentile y Dra. F. Baltar (FCEYS-UNMDP). Investigadora: M. Artigas. El emprendedor como agente de cambio económico-productivo ha provocado la creación de diferentes programas de investigación alrededor de su figura. Kantis (2003a: 4) destaca que “La creación de nuevas empresas se ha convertido cada vez más en un eje estratégico de las políticas de desarrollo productivo (...) debido a la existencia de crecientes evidencias acerca de que hay una relación positiva entre el surgimiento de emprendedores y la diversificación del tejido productivo; la creación de puestos de trabajo; la regeneración de los espacios regionales y, por último, el crecimiento económico.” Brunet y Alarcón (2004: 82) sostienen además que la «empresarialidad» es uno de los temas que ha recibido mayor atención durante los últimos años dado el “amplio consenso en torno a que los empresarios juegan un papel importante en las economías de mercado o en las mixtas, así como la importancia de los «nuevos empresarios» para movilizar los recursos económicos, generar empleo y crear riqueza (...) [a pesar de que, de acuerdo a los autores] paradójicamente, la unidad de análisis principal en el estudio de las características de la actividad económica ha sido principalmente la empresa y no el empresario”.

Galindo Martín y Méndez Picazo (2008: 29) observan que “En las últimas décadas, se ha venido prestando una especial atención a lo que se ha denominado entrepreneurship, término que se ha traducido en ocasiones como «emprendedor». Esto es, aquella persona o personas que desean crear y llevar a cabo un negocio, esto es, desarrollar una actividad productiva”. En relación esto, se destaca la creación del Global Entrepreneurship Monitor Consortium (GEM, <http://www.gemconsortium.org>), el mayor proyecto de investigación internacional que analiza la propensión de la población adulta de un país para participar en actividades emprendedoras, ideado en 1997 por investigadores de la London Business School y Babson College.

El GEM hace una recolección de información primaria a partir de aplicar un cuestionario estructurado a adultos mayores de 18 años y realizar una encuesta a expertos en cada país sobre temas específicos del contexto emprendedor a nivel nacional. Dicho programa, si bien ofrece la ventaja de disponer de una base de datos armonizada, sistematizada y comparable a nivel

internacional, que permitiría sustentar el diseño de políticas de fomento al emprendedor, tiene la contra de no permitir un análisis focalizado y contextualizado de la realidad en la que se crean las empresas y se inician los emprendimientos, a la vez que pasa por alto lecturas subjetivas de los empresarios cuyos rasgos personalísimos coadyuvan a comprender el proceso emprendedor. Esta situación, está en línea con lo que ocurre con otros modelos teóricos orientados a la descripción del proceso de creación de empresas, planteados desde diferentes disciplinas que parecieran orientarse fundamentalmente a describir y analizar los factores que inciden del lado de la demanda del emprendedor o empresario, esto es, factores asociados a la estructura de oportunidades (Reynolds, 1991) y en menor medida, aparecen volcados a estudiar las características asociadas al propio emprendedor o hacedor de la empresa (McClelland, 1961; Gibb y Ritchie, 1982; Shapero y Sokol, 1982). Jaramillo y Parodi (2003: 21) luego de mencionar que en los últimos años “ha crecido el interés por explicar los rasgos particulares de quienes optan por tomar riesgos y crear su propio empleo” destacan que los avances empíricos que se han dado están lejos permitir entender las motivaciones y las características que están presentes en el proceso de formación del emprendedor. Reynolds (1997) por su parte, afirma que analizar el proceso de creación de empresas y/o desarrollo de emprendimientos implica, no sólo estudiar el momento de ingreso de la empresa al mercado, sino también supone reconocer las etapas previas vinculadas con la concepción-gestación-incubación que realiza un agente [el emprendedor y/o empresario] que decide involucrarse en la actividad empresarial junto al ingreso al mercado propiamente y la posterior etapa de supervivencia.

De hecho modelos teóricos reconocidos sobre espíritu empresarial integran factores que inciden de manera diferencial en cada uno de estos momentos. Así, tal como resume Gartner (1989), explicar el fenómeno emprendedor también implica incorporar la noción de “proceso emprendedor” por el cual se hace referencia a un enlace de perspectivas que tienen que ver con la creación de empresas: la individual, la organizacional, la del entorno y la de las acciones y comportamientos de estos agentes. Kantis (2003b: 2) sostiene que “El proceso emprendedor incluye distintas etapas y eventos al interior de las mismas cuyo output es el nacimiento de empresas y de emprendedores. Las etapas son la gestación del proyecto empresario (...); el lanzamiento de la empresa (...) y la gestión de los primeros años de vida de la empresa”. En similar sentido, Graña y Rearte (2004: 10) agregan “que la creación de una empresa se inicia mucho antes que ella comience a operar en el mercado”.

Ahora bien, al trasladar la discusión anterior al universo juvenil, la cuestión de acuerdo a Fernández y Ruiz (2006: 18), “comienza a revestir una complejidad notable” dado que al mismo tiempo que la juventud puede visualizarse como un colectivo social estratégico en lo que hace al fenómeno emprendedor, también reconocen que éstos [los jóvenes] no disponen de condiciones que les faciliten el inicio y consolidación de sus potenciales empresas. En línea con esto, coincidimos con el planteo que realiza Jaramillo Baamante (2004: 36) cuando afirma que “no todas las personas están destinadas a convertirse en emprendedores. Por lo tanto, el nivel de satisfacción y las bondades (...) de los emprendimientos juveniles pasan en primer lugar por la percepción subjetiva de cada sujeto respecto a ser potencialmente emprendedor, y en segundo lugar, dependen del perfil del joven y de sus expectativas”.

Finalmente destacamos los efectos que el actual auge de la economía de red ha generado [y continúa haciéndolo] sobre el funcionamiento empresarial que se materializan entre otras cosas en la emergencia de un nuevo tipo de emprendedor y una nueva modalidad de empresas: el emprendedor virtual -avapreneur- y las empresas virtuales. Estas últimas tienen la particularidad, tal como lo afirman Serarols Tarrés y Pulido (2007: 140), de usar de manera creciente las ‘tics’ para aumentar su eficiencia y reducir sus costes de transacción. En relación a esto, Zitnik y

Drnovsek (2010: 10) consideran que, analizar el campo del e-entrepreneurship [Manuel, 2006] “además de ofrecer un nuevo fenómeno de estudio, representa una oportunidad para estudiar un fenómeno conocido en un nuevo contexto”.

## METODOLOGÍA

Así, dada la emergencia de un nuevo tipo de emprendedor: el emprendedor virtual –avapreneur– que además de ser joven emerge como un “nativo digital” (Prensky, 2001) en razón de llevar incorporadas las nuevas tecnologías de la información y la comunicación como parte de su vida cotidiana, y dada también la importancia que en los últimos años ha ido adquiriendo la metodología cualitativa para el análisis y la comprensión del fenómeno emprendedor en general, para cumplir con el objetivo de este trabajo hemos decidido realizar un estudio de tipo biográfico generando información a partir de una entrevista en profundidad que se complementó con revisión de información secundaria. En relación a la perspectiva biográfica, destacamos el planteo que realiza Baltazar Silva (2008) quien sostiene que la misma toma como punto de partida al empresario entendiéndolo como un actor histórico y además protagonista central de su propia vida, a la vez que visualiza en la actividad que éste realiza una articulación de elecciones racionales, emociones, construcciones de tipo social y cultural y estrategias de futuro. En tal sentido, continúa la autora (2008: 6), “El tema del empresario no es sólo un problema de estrategias de negocios, ni tampoco de capacidades individuales intrínsecas del humano sino que la perspectiva biográfica integra estos aspectos en la concepción de itinerarios y trayectorias. Ahí es donde reside el meollo de la aportación teórica.” Complementando este planteo, también destacamos la postura de Gartner (2010) quien visualiza en el uso la narrativa no un relato ilustrativo sino un método de abordaje de las acciones y comportamientos del emprendedor que sólo pueden entenderse desde la propia experiencia emprendedora. Con relación al proceso de investigación narrativo-biográfico Sepúlveda y Rivas (2003) lo caracterizan diciendo que a la par que permite compartir la construcción de un relato o de una narración y la argumentación teórica acerca de la misma, también representa una estrategia de investigación enmarcada en un proceso de tipo democrático y a la vez colaborativo donde los sujetos pueden hacer explícita su lectura de las experiencias que han ido conformando su identidad.

Así, entendemos que a través del relato biográfico, podemos comprender y aproximarnos a las diferentes acciones, motivaciones y decisiones empresarias asumidas por un emprendedor virtual que además es joven, a la vez que podemos visibilizar de manera particular el impacto que el acceso y manejo de las nuevas tecnologías tiene en todo el proceso. Finalmente, asociado a este método destacamos que el objetivo perseguido con su implementación tiene que ver con identificar el relato cronológico de una historia individual, en este caso particular, la que realiza un emprendedor joven vinculada a la creación y gestión de su emprendimiento virtual.

El caso que aquí proponemos presentar tiene que ver con un emprendedor virtual -avapreneur-joven, Martín, que al momento de entrevistarlo [marzo del año 2013] tenía 29 años, que vivía en la ciudad de Mar del Plata, una localidad con cerca de 600.000 habitantes de la Provincia de Buenos Aires -República Argentina- y que fue fundador de un emprendimiento virtual [en la actualidad lo sigue dirigiendo] que ofrece un servicio de marketing online en la localidad y con extensiones en el país, socio y fundador además de un delivery a nivel local que en virtud de su conocimiento y formación permanente en el uso de las nuevas tecnologías de la información y la comunicación ‘tics’ combinado con una visión estratégica sobre los negocios, ha logrado crecer de manera destacada en los últimos años. La entrevista que le realizamos a Martín indagó en su vida, y en particular en los factores que a lo largo de la misma fueron impactando en el proceso por el cual concibió y puso en marcha su negocio virtual. Asimismo, destacamos que en la

presentación de resultados hemos utilizamos un enfoque narrativo, a través del cual buscamos recuperar palabras, decires y sentires expresados en este caso por *Martín*, que son los que entendemos nos permiten acercarnos y comprender situaciones y fenómenos no universalizables sentidos y vividos por él en todo el proceso de creación de su emprendimiento, y son los que aparecen presentados entre comillas y en bastardilla.

## RESULTADOS

*¿Quién Es Este Avapreneur Joven? “¿Quién Soy?: ”* Martín se define a sí mismo como un “Economista Informático que por ‘error’ se enamoró del Marketing Online”. Asimismo en su página virtual se describe (Desde su página de internet y también esto se deriva de su relato en la entrevista que le realizamos) como “Analista Full-Time, Amante de las Tecnologías, Buscador de Soluciones, Racionalmente Irracional, Flexible, Optimista, Defensor de mis propias Convicciones, Hombre de Palabra y Compromiso... Puros palabreríos al lado de lo realmente importante: Intento ser ‘Buena Gente’. [También reconoce que] “La EFICIENCIA es la base de mi Pensamiento y de la forma de encarar mi propia vida: apunto a encontrar la óptima combinación de los recursos disponibles para la obtención de los objetivos deseados.” [Aclara además que] “Mi formación académica altamente analista... [tiene todas las materias de la carrera Lic. en Economía cursadas] me es de gran utilidad para saber ‘¿Dónde estamos? ¿Hacia dónde vamos? ¿Qué necesitamos mejorar en el camino?’... En tanto mis estudios en Informática, la pasión por las nuevas tecnologías, mi pensamiento muchas veces racionalmente irracional y mi entusiasmo por romper estructuras pero con objetivos claros, son gran parte de la fuente de inspiración para [saber]... ‘¿Cómo llegamos?’. [Finalmente relata que] “Desde hace más de 15 años intento aplicar mis conocimientos y mi forma de encarar las cosas a esto que, desde hace un tiempo, se conoce como ‘Marketing Online’.”

*¿De Qué Se Trata Su Emprendimiento Virtual? “¿Cómo Defino Mi Emprendimiento?”:* Martín está al frente de una “empresa que lo que hace es asesorar todo tipo de empresas que quieran meterse en Internet para obtener algún objetivo en especial... contando [para ello] con todas las herramientas, conocimientos y experiencia que tenemos nosotros [en diseño de sitios web, en campañas en redes sociales, en campañas de posicionamiento de mailing]” y recomendándole a cada uno “lo que nosotros creemos que tendría que hacer su empresa para lograr el objetivo que tiene”. [Al momento de realizar la entrevista] Martín describe que trabaja con otras 3 personas a las que considera parte de un equipo de trabajo [socios] que él dirige: “...yo hago toda la estrategia para que eso cierre... dirijo todo... porque cada uno tiene una visión de lo que hace y no en general.” Con relación a su trabajo manifiesta que “...Hoy cualquier persona puede hacer un sitio web, cualquier persona que diseña puede hacer campañas en redes sociales, el problema es cómo lo hacés para lograr tu objetivo, que [por ejemplo] es en el caso de los deliveries, que vendan. Y somos lejos, tenemos los deliveries que más venden en cada uno de los lugares donde están, pero lejos lejos.”

*¿Cuál Fue Es El Proceso Que Lo Llevó A Fundar Y Estar Al Frente De Su Emprendimiento? “¿Como Empecé Con Esto?”:* ¿Hubo influencias? ¿Cuáles? ¿Cómo incidió el buen uso y manejo de las tecnologías de la información y la comunicación para iniciar su experiencia emprendedora? ¿Cómo lo condicionó el contexto? Para responder a estos interrogantes, reconstruimos un relato cronológico marcado por lo que pudimos identificar como cuatro momentos claves en su vida y en la de su emprendimiento: (1) Los inicios que se remontan a la niñez y la adolescencia (2) La etapa previa al emprendimiento, en la que se facilita la gestación de la idea. (3) La etapa de implementación y su gestión inicial (4) Finalmente se completa la comprensión del proceso a partir de describir brevemente la etapa en que “la empresa sigue creciendo y no hay un techo” y

aparecen nuevas actividades: la empresa de delivery propia y el dictado de cursos sobre herramientas de marketing online en distintos lugares del país.

(1) *Los Inicios: “[Desde Chico Siempre Fui Un] Informático De Corazón:* Martín describe que la informática le “encanta de toda la vida”. Se evidencia además de su relato, un entorno familiar propicio que facilitó su acercamiento a la misma [a la informática]. Recuerda que su primer contacto con las `nuevas tecnologías de la información y la comunicación` fue a los 10 u 11 años cuando en ocasión de su `comunió`n “... me regalaron mi primer computadora y empecé a relacionarme con todo esto...En ese momento había que hacer trabajos para el colegio, bueno en mi casa, era el único que sabía manejar el Encarta (Enciclopedia multimedia digital publicada por Microsoft Corporation desde 1993 hasta 2009), y era copiar y pegar...” Del uso de la enciclopedia digital, pasó a los 12 o 13 años a tomar contacto con internet donde “empecé chateando” [con un chat anterior al conocido como ICQ [ICQ (“I seek you” que en castellano significa “ te busco”) se trataba (continúa vigente) de una mensajería instantánea, la primera de su tipo en ser ampliamente utilizada en Internet, mediante la cual era posible chatear y enviar mensajes instantáneos a otros usuarios conectados a la red de ICQ. También permitía el envío de archivos, videoconferencias y charlas de voz. ICQ fue creado por la empresa israelí Mirabilis a finales de la década del noventa.], que fue el primero que hubo en Mar del Plata] “...nos juntábamos todos los domingos, éramos 10 o 12 en (...) [toda la ciudad], que nos juntábamos todos los domingos... [en un cybercafé]”. De estos primeros recuerdos, Martín pasa a otro momento emblemático: “Mi primera página web la hice a los 14 años, porque yo le enseñaba a los profesores del colegio de cómo hacer la página web porque no tenían ni idea”. En relación a esto rememora además que la armó “...solo. Ni siquiera tenía alguien al lado que lo sepa hacer...” Luego de este momento rememora uno nuevo: cuando empezó a trabajar a los 18 años en la parte de informática del consulado italiano, ahí “... trabajaba con otra gente, había que resolver algo que había que cargar datos y no sé, había que resolverlo. Entonces tenías que cargar 500 cosas, éramos 3 personas, ... 2 se ponían a cargar las 500 cosas, yo no me ponía a cargarlas. Me ponía a hacer un sistema que después me permitiera cargarlas mucho más rápido...” Por esos años Martín comenzó a estudiar la Lic. en Economía y una vez que terminó la carrera decidió estudiar “...dos años de programación, que en realidad, yo siempre trabajé de informática toda mi vida...” Sobre la carrera en economía, reconoce que “lo que me gustó de economía, [es que] te hacía pensar, vos no estabas aprendiendo algo que lo aprendías de memoria, yo odio estudiar de memoria, no puedo estudiar de memoria, no tengo memoria.” Finalmente, destaca la importancia que él asigna a la “prueba y error... yo tengo esa política de querés hacerlo? hacélo vos. No importa que lo hagas mal, probá y rompete la cabeza pensándolo. Después, una vez que le encontraste la vuelta no te lo olvidas más... Entonces fue mi forma de aprender de toda la vida.” Finalmente Martín planteó su predilección por “Todo lo que sea razonamiento, lógica, me encanta. Todo en mi vida en sí. Y en esto lo tenés que aplicar todos los días. Me encanta, de lo que hago estoy enamorado.”

(2) *La etapa previa: aprendí a usar Google AdWords y después “Me enamoré de Analytics”:* Luego de indagar en sus inicios, le preguntamos a Martín cómo surgió su emprendimiento “¿Cómo empecé con todo esto del marketing? [Y] yo empecé a trabajar en una empresa hace 5 años [en 2008 cuando tenía 24 años] que hacía fotografía digital”. Y esa empresa, disponía de una “plataforma para que esos clientes [que eran otras empresas] pidan y puedan imprimir sus fotos a través de internet. Entonces yo entré a trabajar ahí... Medio que me querían para la parte de ventas y yo les dije `mirá, yo no

*sé vender, no me interesa vender...’” a lo que luego siguió “...un primer período de adaptación y después como que me dijeron ‘bueno, fijate en la página Google AdWords’. En relación a este trabajo, él reflexiona que no era claro lo que tenía que hacer y que “en el camino se fue acomodando” (Google AdWords es un programa que utiliza Google para ofrecer publicidad patrocinada a potenciales anunciantes. Desde la página oficial del mismo, se anuncia –entre otras cosas- que “Con AdWords, puede llegar a nuevos clientes mientras buscan en Google palabras relacionadas con su negocio o navegan por sitios web sobre temas relacionados. Además, puede llevar el control de sus costes publicitarios. Le ayudaremos a entender el funcionamiento de AdWords y le ofreceremos una descripción general de los conceptos básicos.” <https://adwords.google.com>).*

Empezó a aprender sobre Google AdWords que era una herramienta que él no conocía y que a partir de conocerla empezó a formarse ideas en torno a cómo “pensar las campañas de marketing sobre los clientes ... [los de la empresa en que estaba]”. Así, recuerda que “Empecé bien atado a AdWords” “empecé a estudiar y a leer, y me fui formando solo [como había sucedido otras veces en el pasado]... Y una vez que se inició en AdWords, a continuación lo combinó con [google] Analytics ((Definida en el sitio oficial como “Analítica web para empresas” en el cual además se describe que: “Google Analytics ofrece muchos recursos formativos. Tanto si utiliza analíticas por primera vez como si es un usuario experimentado, encontrará videos y artículos que le ayudarán a obtener el máximo rendimiento de Google Analytics.”). Y a partir de esto se sincera diciendo: “me encantó, me enamoré de Analytics y de las cosas que podés saber que pasan y cómo interpretarlas para generar y tomar decisiones que te hagan crecer. Me enamoré de Analytics, empecé junto a Analytics.” Así, a partir del buen manejo que empezó a tener de estas herramientas virtuales “...empezó a detectar ‘errores’ en las estrategias [de marketing] de los clientes de la empresa y a sugerir cambios.” Y a continuación empezó a hacer seguimiento de comercio electrónico “... Configuré todo para saber cuánta gente se suscribía [a las páginas a las que les hacía el seguimiento], de dónde... cuánto tiempo tardaba, cuántos días tardaba en comprar, cuánto compraba, cuáles eran los días que más se compraba, los horarios, no sé; mil análisis que después te llevaban a decir ‘bueno, ahora la oportunidad está acá, ¿qué hacemos para aprovecharla?’”. Finalmente, Martín remarca que si bien sus inicios tuvieron que ver con hacerle las campañas a los clientes de la casa de fotografía donde él era empleado, ocurría que “estaba muy limitado...”

*(3) Implementación Inicial: Me Metí 100% Y Empecé A Aprender Muchísimo Y Me Encantaba:* Así, lo que Martín nos sigue contando es que si bien empezó trabajando sólo en la cuestión del marketing online como parte de sus labores como empleado de la casa de fotografía, a continuación decidió dejar ese trabajo dependiente y ponerse de forma autónoma a hacer las campañas de marketing online de diferentes clientes que empezaron a acercarse, incluidos clientes que le pasaban los dueños de la casa de fotografías “Al principio empecé trabajando sólo, después conocí al diseñador, que lo que hice fue tomarlo como empleado, le pagaba por los trabajos que hacíamos. Al programador [otro de los miembros de su equipo] yo lo conocía, trabajaba conmigo ahí en (...) [la casa de fotografía], nunca habíamos hecho nada juntos. Yo resolvía toda la parte de programación, cuando la cosa se empezó a complicar, varios meses después, a complicar en el sentido que empezó a aumentar el trabajo y yo había un par de cosas que no sabía, empezó a trabajar también como empleado conmigo.”

Al salirse de la empresa en la que estaba [la casa de fotografías], y poner su propio emprendimiento Martín nos cuenta que empezó a sentir otra libertad para trabajar “y cuando me metí 100% en eso empecé a aprender muchísimo más y me encantaba.” Así, nos relata que “llegó

*un momento en que la cosa fue creciendo y dijimos 'bueno, la idea es mía y que se yo, pero yo para perfeccionarme necesito un diseñador y un programador'. Había una chica que me ayudaba en redes sociales en ese momento así que dijimos 'bueno, hagamos una sociedad'. Yo tengo el porcentaje mayoritario porque yo empecé con esto pero quiero que ganemos todos, (...) yo solo quiero que se comprometan y no quiero tener problemas."* De esta forma, Martín armó una sociedad en la que él mantiene "el porcentaje mayoritario" dado que fue quien tuvo la idea [y es además quien realiza la dirección].

*(4) La empresa sigue creciendo y no hay un techo. Martín decide fundar deliverys propios y comienza a dictar cursos por distintos lugares del país:* Martín comenta que la empresa siguió creciendo aunque él todavía no visualiza un techo. En relación a esto nos cuenta que percibe y entiende que los avances en las nuevas tecnologías se transforman en nuevas oportunidades del contexto para su negocio, junto a la experiencia y trayectoria que de manera permanente va ganando tanto él como su equipo, junto al placer que supone en su caso personal el hecho de aprender: *"Me encanta aprender, me encanta. Te vas capacitando todo el tiempo y vas pensando y no te quedás... Todo lo que sea razonamiento, lógica, me encanta. Todo en mi vida en sí. Y en esto lo tenés que aplicar todos los días. Me encanta, de lo que hago estoy enamorado."* Martín también nos pone al tanto que su empresa es la única empresa "certificada en Mar del Plata para AdWord, somos una de las doce a nivel país. Lo mismo, Analytics que también estamos certificados y... está bueno. [y que además] Estamos dando cursos y todo eso." En relación a este tema agrega que comenzó a dictar cursos en diferentes lugares del país sobre el uso de herramientas de marketing virtual *"sí, el año pasado fui con el Analytics a Córdoba [también a Buenos Aires] a la Universidad Blas Pascal. Allá fueron clases regulares directamente y después estuve yendo a un par de congresos que tuve que dar en Rosario, algunas charlas."*

Asimismo, el crecimiento en el número de clientes -a nivel local y a nivel nacional- lo motivó a poner oficinas propias para atender a sus clientes. En similar sentido, la mayor experiencia en el tema y los buenos resultados logrados, también lo decidieron a fundar algunos deliverys virtuales propios a partir de reproducir un modelo de negocios que le da resultados *"Lo del delivery en Mar del Plata no sé, porque siempre lo pensé y nunca había tenido tiempo de hacerlo y dije bueno hagámoslo"* [Se dio en un viaje cuando] *"Estaba en Buenos Aires y había una gente que ... entrevistaron como caso de éxito, está allá en Palermo, se llaman La Barata del Central. No tengo ningún problema en decirlo en ningún lado. Realmente...sacamos la idea de eso. Así que ellos hacía un año y medio que estaban y tienen 10.000 seguidores y en Buenos Aires crecieron un montón. Nos encantó la idea, bueno repliquémosla acá como sabemos hacer nosotros..."* Entonces volvieron [el equipo] a Mar del Plata *"Nos buscamos un socio y en dos meses 5.000 seguidores, ya tenemos la mitad de seguidores de ellos en dos meses y ellos lo vienen haciendo hace un año y medio. Ellos son la parte operativa y contrataron una agencia de marketing que les hace lo que hacemos nosotros. Nosotros directamente somos nosotros que hacemos todo."* Finalmente, destacamos de la entrevista con Martín un proceso de aprendizaje conjunto entre todo el equipo que ocurre de manera permanente y la mayor parte de las veces a través del contacto virtual *"Sí, todo el tiempo. Y mismo, ahora, usamos programas de tamizadores de tareas, nosotros cargamos las tareas, se las mandamos al otro, el otro nos responde. Está todo súper coordinado, virtualmente, todo el tiempo."* También relata que la formación y el aprendizaje deben ser permanentes en el ámbito de la economía en red *"sí, permanente. Todo el tiempo salen cosas nuevas, todo el tiempo hay una empresa nueva que podés aprovechar o cosas por el estilo, o estrategias nuevas que surgen. Muchas veces uno las inventa, muchas veces uno ve algo y trata de encontrar la mejor manera de adaptarlo a lo suyo, no sé, tratar de ir superándose uno todo el tiempo. Si te quedás en algo fijo te pasan. De hecho, nosotros empezamos con redes sociales y*

*ahora todo el mundo está copiando lo que nosotros hacemos, entonces nosotros tenemos que hacer más para diferenciarnos.”*

## CONCLUSIONES

Con este trabajo nos propusimos comenzar a indagar, en el contexto de la economía en red y en un escenario en que los jóvenes aparecen con ciertas habilidades innatas vinculadas al uso de las nuevas tecnologías, quiénes son y/o qué rasgos presentan los emprendedores virtuales jóvenes que emergen creando y gestionando empresas basadas en el conocimiento. En relación a esto, reconocimos además la necesidad de comprender situaciones y vivencias personalísimas vinculadas con la creación y gestión de su propia empresa dado que además, en general, estas habilidades y acciones han resultado menos observadas y estudiadas desde el punto de vista de la economía y del análisis de las decisiones estratégicas a nivel empresarial.

Así, sobre la base de estas consideraciones, y entendiendo además las ventajas derivadas del uso de la perspectiva narrativa-biográfica para aproximarnos a este colectivo social, nos acercamos a Martín, un emprendedor virtual joven que es fundador y se encuentra al frente de una empresa de marketing online en la ciudad de Mar del Plata y además es socio y fundador de un delivery a nivel local. En Martín había una peculiaridad que es la que nos motivó a querer investigarla, y era que en virtud de su conocimiento y formación permanente en el uso de tics combinado con una visión estratégica sobre los negocios, ha logrado un crecimiento importante en su emprendimiento en los últimos años. Así, a través de los resultados de esta investigación pudimos reconocer en Martín un emprendedor virtual joven que además de manejar herramientas derivadas de su formación en ciencias económicas, se reconoce fundamentalmente como un “informático de corazón” y analista de siempre, que se fascina siendo autónomo en su aprendizaje a la vez que destaca su habilidad para manejar las nuevas tecnologías de la información y la comunicación aplicadas al marketing, que son las que en definitiva propiciaron su negocio. Un negocio para el cual adquirió habilidades innatas desde su niñez y que sin embargo solo surgió por casualidad, cuando le mostraron la oportunidad que suponían las herramientas virtuales para hacer marketing. Martín es un emprendedor que reconoce las ventajas del trabajo en equipo y la capacidad de aprendizaje de ese equipo, a la vez que también hace explícito que la formación y el aprendizaje deben ser permanentes en el ámbito de la economía en red.

Y esto en su experiencia personal se evidencia como determinante de su éxito. Finalmente y para concluir, además de destacar las oportunidades que las nuevas tecnologías de la información y la comunicación pueden dar a los emprendedores cuando éstos son jóvenes, remarcamos la importancia de profundizar el análisis y comprensión de la variedad y diversidad de situaciones y vivencias previas que los atraviesan y tienen por protagonistas. En ese sentido, insistimos en la importancia de propiciar el reconocimiento de singularidades y especificidades de cada uno de estos emprendedores, si en verdad intentamos comprenderlos, tanto en las etapas previas al desarrollo de su emprendimiento como durante la implementación del mismo.

## **RESUMEN**

*El presente estudio tiene como propósito conocer las principales motivaciones que tienen las personas a la hora de decidir sus destinos vacacionales en el marco del turismo de intereses especiales en el litoral central chileno. La metodología para la obtención de resultados fue una fase cualitativa exploratoria a través de entrevistas en profundidad y una segunda fase cuantitativa concluyente donde se obtuvieron los principales resultados y recomendaciones de este estudio. Los resultados obtenidos apuntan a generar una oferta orientada hacia la familia, mayor desarrollo de las actividades turísticas guiadas y el incremento de la oferta cultural existente.*

**PALABRAS CLAVE:** Turismo de Intereses Especiales, Motivación, Investigación de mercados, Análisis Multivariado, Marketing.

## **SPECIAL INTEREST TOURISM: MARKET RESEARCH OF MOTIVATION FROM A CUSTOMER**

### **ABSTRACT**

*The present study aims to identify the main motivations of people deciding their holiday destinations within the special interest tourism in Chile's central coast. The methodology for obtaining results was an exploratory qualitative phase through in-depth interviews and a second quantitative stage conclusive where the main findings and recommendations of this study were obtained. The results point to generate an offer family-oriented, further development of tourism activities guided and increasing the existing cultural offer.*

**JEL:** M310

**KEYWORDS:** Special Interest Tourism, Motivation, Market Research, Multivariate Analysis, Marketing.

## INTRODUCCIÓN

En el ámbito turístico una de las preguntas más frecuentes circulan en torno a la toma de decisiones y los motivos que tienen las personas para dirigirse a diferentes destinos vacacionales. Es por esta razón que en este estudio quisimos conocer las principales motivaciones que tienen las personas que visitan el litoral central de Chile, enfocándonos únicamente en el turismo de intereses especiales, que en el último tiempo ha cobrado gran fuerza en el país atrayendo a diferentes segmentos que prefieren destinos poco masivos y en fechas de baja aglomeración.

## REVISIÓN LITERARIA

### Turismo de Intereses Especiales

En la actualidad entender cómo funciona el turismo de intereses especiales es un desafío obligatorio para cada país, como forma de desarrollar y promocionar estrategias de comercialización que permitan generar apuestas sostenibles en los destinos turísticos. Sin embargo, a pesar del desarrollo turístico en Chile, se ha investigado poco sobre un tipo de turismo en particular conocido como Turismo de Intereses Especiales. El TIE, es comprendido por la Organización Mundial de Turismo como una amplia categoría de turismo basado en intereses concretos que incluye naturaleza, cultura, historia y otros campos de índole diversa ofrecidos en un entorno local (OMT, en Ignarra, 1999). Para Albornoz y Rodríguez (2010), el TIE incorpora aquellos viajes que tienen como fin realizar actividades recreativas en contacto directo con la naturaleza y las expresiones culturales con una actitud y compromiso de conocer, respetar, disfrutar y participar en la conservación de los recursos naturales y culturales.

En este sentido, posee los siguientes componentes: a). El motivo por el cual se desplazó el turista es el de recrearse en su tiempo libre realizando diversas actividades en constante movimiento, buscando experiencias significativas; b) En donde busca desarrollar estas actividades con la naturaleza; c) El turista debe asumir al realizar estas actividades un compromiso cuidado, apreciación y respeto con los recursos que está utilizando para recrearse (Bigné et al, 2000). Este tipo de turismo se refiere a formas distintas de viajes basados en motivaciones específicas más allá de los objetivos habituales de vacaciones. Se caracteriza principalmente por ser poco masivo, entregar garantías respecto al cuidado del medioambiente y la sustentabilidad además de entregar especial importancia a la valoración de la experiencia por sobre todo en aquellos turistas que han viajado mucho y buscan algo nuevo que los motive. El turismo de intereses especiales suele generarse en aquellos mercados más maduros ya que responden a una segmentación elevada, donde predomina el turista de alto nivel cultural y socioeconómico, que además posee gran experiencia en destinos. Un elemento importante a considerar es que estos mercados suelen ser más flexibles en sus épocas de viaje, por lo que sus flujos ayudan a desestacionalizar la actividad turística diversificando territorialmente y generando productividad en los destinos y empresas turísticas locales. Esta tal vez sea una de sus principales ventajas.

Es el sector de la actividad turística que más crece hoy en el mundo, reflejando la importancia y el nuevo sentido que el turismo tiene en la sociedad moderna, donde más que una opción por el ocio y la recreación, ha pasado a ser una oportunidad ideal y planificada para ocupar el tiempo libre con nuevas experiencias físicas y espirituales de conocimiento y desarrollo personal. Por esta razón, el conocimiento y disfrute de la naturaleza y la cultura son hoy objetivos de gran importancia al momento de tomar la decisión de concretar un viaje de turismo, dejando de lado destinos tradicionales como las playas o los grandes centros urbanos. Surge así el turismo de

intereses especiales, que se nutre directamente del patrimonio natural y cultural que pueden ofrecer los diferentes destinos del mundo.

### Motivaciones y Turismo

Diversos investigadores han postulado distintas teorías que explican las motivaciones que tienen las personas para viajar. Así para autores como McIntoch y Goeldner (1990) las razones para que los turistas viajen puede clasificarse en cuatro categorías de motivadores: 1) Físicas (descanso, salud, deporte y placer), 2) Culturales (conocer nuevas culturas y entornos), 3) Interpersonales (gente nueva, visita a familiares y amigos), y 4) De estatus y prestigio (desarrollo personal, deseo de reconocimiento). Por otra parte Vogeler y Hernández (2000), dividen las motivaciones viajeras en seis grupos que son los siguientes: 1) Razones culturales, educativas y profesionales (conocer culturas, arte, idiomas), 2) Razones étnicas (regreso al origen, motivos sentimentales), 3) Razones deportivas (asistencia a manifestaciones deportivas o práctica de deportes), 4) Razones físicas (descanso, reposo, salud), 5) Razones sociológicas (conocer mundo, viajes de estudio, lunas de miel), 6) Razones religiosas (peregrinaciones, visitas a lugares religiosos). En el turismo, la motivación es el inicio del proceso de consumo turístico y se estimula a partir de un complejo conjunto de influencias económicas, sociales, psicológicas, culturales, políticas y ambientales. El propósito y motivación de un viaje es un concepto que parece explicarse por sí mismo y que no es lo mismo que las razones subyacentes para viajar. Estas razones parecen encubiertas y reflejan deseos y necesidades de los individuos. Como la clave de la comprensión de la motivación turística es estudiar el viaje como algo que satisface una necesidad y un deseo (Mill y Morrison, 1992).

Resulta difícil conocer las motivaciones verdaderas de los turistas ya que, en ocasiones, el propio turista no quiere o no puede reflexionar sobre sus motivaciones, mientras que otras veces no puede o no quiere expresarlas (Dann, 1981). John Crompton (1979) identifica nueve motivos en la selección del destino de vacaciones de las cuales siete pueden clasificarse como psicosociales (huida del entorno habitual, exploración y evaluación del yo, relajación, prestigio, regresión, ensalzamiento de la niñez, relaciones y facilidad para la interacción social), mientras que las dos restantes serían culturales (novedad y educación). Otros autores hablan de la motivación turística como un conjunto de necesidades personales que van desde el deseo de escapar del entorno cotidiano a la necesidad de ampliar horizontes, la diversión e incluso la autorrealización personal (Isho-Ahola, 1980; Krippendorf, 1987;

Schmidhauser, 1989) y Álvarez, 1994). Albert (1998) habla del concepto de necesidad viajera de forma equiparable con la motivación. La describe como un conjunto de necesidades donde subyacen aspectos psicológicos como la necesidad de descanso físico y mental (romper con la rutina diaria, disfrutar del ocio), actividad física y deportiva, relacionarse, conocer gente, hacer negocios o contactos profesionales, recrearse en la naturaleza, conocer culturas diferentes, cuidarse el cuerpo, autorrealización espiritual y otras nuevas que aparecen día a día en la sociedad moderna. Según Esteban (1996), los turistas pueden clasificarse en función de las motivaciones generales (físicas, culturales, interpersonales, sociales o de prestigio) dando lugar a cuatro perfiles psicográficos o de estilos de vida. En la revisión teórica sobre el tema, realizada por Graham Dann se distinguen entre motivaciones intrínsecas, relacionadas con factores psicológicos (de personalidad, gustos, etc.), con el propósito del viaje y con la experiencia turística, por su parte se tienen las motivaciones extrínsecas que se relacionan con los factores sociales y demográficos, así

como la relación entre el ocio y el trabajo. En la Tabla 1 se resumen las perspectivas que fueron identificadas por Dann (1981) sobre el estudio de la motivación turística.

Tabla 1: Perspectivas de la Motivación Turística

Viaje como respuesta a una carencia	El viaje se presenta como algo nuevo o diferente que no se puede conseguir en la vida cotidiana.
Atracción del destino como respuesta a factores de motivación de empuje	Distinción entre necesidades y deseos (factores de empuje) y aquellos que se forman por la percepción del destino (factores de atracción).
Motivación como una fantasía	Los turistas pueden estar motivados por realizar actividades no aceptadas culturalmente en su lugar de origen.
Motivación por el propósito	Algunos turistas se motivan por la actividad que van a realizar (visitar amigos, por ejemplo).
Motivación según tipologías	Los diferentes tipos de personalidad pueden influir en la motivación del viaje.
Motivación y experiencia turística	Los turistas pueden estar motivados por tener experiencias diferentes a las de su entorno habitual.
Motivación como autodefinición y significado	La forma en la que los turistas definen las situaciones y responden a ellas es una buena manera de entender sus motivaciones.

Fuente: Elaboración de Raquel Huete, basada en Dann, 1981.

Cabe destacar el segundo punto del cuadro en el que el concepto de motivación ha sido clasificado en dos grandes categorías o fuerzas: la necesidad de escape y la necesidad de búsqueda (Dann, 1977, 1981). Los visitantes viajan bien porque son empujados por motivos o variables internas o bien porque son atraídos por los atributos de los lugares. Los factores de empuje (push factors) están relacionados con aspectos internos y emocionales, como el deseo de escapar, de descansar y relajarse, de aventura o de interacción social. Los factores de atracción (pull factors) están conectados con aspectos externos, cognitivos y de situación, como los atractivos del lugar, las infraestructuras recreativas, o los escenarios culturales y naturales. La OMT (2008) también ofrece una clasificación de las motivaciones de viajes y divide a los turistas según el motivo que lo lleva a viajar en nueve grupos diferentes: 1) Vacaciones, recreo y ocio, 2) Visitas a familiares y amigos, 3) Educación y formación, 4) Salud y atención médica, 5) Religión/peregrinaciones, 6) Compras, 7) Tránsito, 8) Otros motivos, 9) Negocios y motivos profesionales.

### Objetivos de Investigación

#### Objetivo General

Explorar y caracterizar las principales motivaciones del turista de intereses especiales a partir de un estudio empírico que permita obtener resultados concluyentes que entreguen información para la toma de decisiones de los agentes de la industria del turismo.

#### Objetivos Específicos

Determinar un listado de las principales motivaciones que poseen los turistas que concurren a la zona para poder cuantificarlas y segmentarlas. Generar una clasificación por motivaciones y perfiles de consumidores para poder obtener una segmentación y resultados profundos respecto a las variables que los impulsan. Generar resultados concluyentes respecto a los principales motivadores con el fin de entregar recomendaciones y sugerencias útiles para la toma de decisión de la industria turística.

## **METODOLOGÍA**

La metodología utilizada para esta investigación consistió en 2 fases. La primera parte de carácter exploratorio, utilizándose 13 entrevistas en profundidad a expertos en el área del turismo y 30 entrevistas estructuradas a turistas a partir de las diferentes categorías de motivación indagadas en la revisión bibliográfica. Esta información preliminar fue analizada a través de la construcción de categorías que sentaron las bases para la segunda parte del estudio. La segunda etapa cuyo objetivo fue obtener resultados concluyentes, fue de carácter cuantitativo a través de modelos multivariados de análisis en investigación de mercados. Utilizó como herramienta un cuestionario estructurado con preguntas cerradas aplicado de forma presencial a un total de 210 turistas de la Zona del Litoral Central de Chile (Algarrobo, El Quisco e Isla Negra), donde actualmente se ha desarrollado con fuerza el TIE. El tipo de muestreo utilizado es de tipo No Probabilístico (por conveniencia) e incluyó personas de 18 hasta 66 años de edad. Respecto al género el 54% de la muestra son mujeres y el 46% corresponde a hombres.

## **RESULTADOS**

Para lograr los objetivos planteados inicialmente, los resultados fueron obtenidos en tres etapas. En la primera se realiza un análisis factorial para lograr reducir la cantidad total de motivaciones consultadas y en la segunda etapa se busca agrupar por tipo de consumidor de turismo realizando un análisis de conglomerados. Finalmente en una tercera fase son analizadas las actividades que desarrollan los turistas con mayor frecuencia en la zona.

### Análisis Factorial

Con un total de 203 datos (se eliminaron 7 encuestas no válidas e incompletas) y 17 indicadores de motivación, se realizó un análisis factorial de componentes principales, en donde se obtienen un total de seis factores que consiguen explicar un 61,156% de la varianza de los datos originales (Tabla 2).

Tabla 2: Matriz Análisis Factorial Motivaciones

Fuente: Elaboración Propia.

Para verificar que es un modelo adecuado se realizan diferentes análisis, los resultados son expresados en la Tabla 3

Tabla 3: Índices de Confiabilidad y Validez del Modelo de Motivaciones

<b>Índices</b>	<b>Valores</b>
Alfa Cronbach	0.708
KMO	0.714
Sig.	0.000
Determinante	0.027

Fuente: Elaboración Propia

Luego de obtener las saturaciones de los Motivos en cada factor, es decir en la componente en la cual tiene la mayor participación, se procede a identificar cada uno de estos seis factores. Estos son determinados de la siguiente forma:

Factor 1: “*Aventuras Culturales y Gastronómicas*”. Visitar monumentos históricos, Motivaciones Culturales, Visitar lugares y pueblos típicos, Aventurarse a nuevas experiencias y conocer sitios nuevos, Disfrutar de la Gastronomía.

Factor 2: “*Descanso y Salud Natural*”. Buscar la tranquilidad y el descanso, Disfrutar de la naturaleza, Escapar de las tensiones y poder relajarse, Por salud y vida sana, Motivado por los paisajes y belleza del lugar.

Factor 3: “*Recreación*”. Juntarse o Visitar a familias y amigos, Practicar algún deporte, Poder llevar a cabo sus hobbies o actividades favoritas.

Factor 4: “*Ambiental*”. Motivado por el ambiente que se genera en la comuna, Motivaciones Climáticas.

Factor 5: “*Economía*”. Opción económicamente accesible de viaje.

Factor 6: “*Ocio*”. Disfrutar de momentos de ocio en días libres.

En la Tabla 4 son presentados los resultados en términos de promedios. Estos resultados equivalen a las elecciones correspondientes a las preferencias de los encuestados, que van desde nada importante hasta muy importante, una escala Likert que va desde el 1 al 5 (1= Nada Importante, 2=Poco Importante, 3=Más o Menos Importante, 4= Importante y 5= Muy Importante).

Tabla 4: Promedios Totales de la Muestra Por las Preferencias de Cada Motivo

Factor	Motivaciones	Promedio
Descanso y Salud Natural	Escapar de las tensiones, poder relajarse	4.80
Descanso y Salud Natural	Buscar la tranquilidad y descanso	4.72
Descanso y Salud Natural	Disfrutar de la Naturaleza	4.55
Ocio	Disfrutar momentos de ocio	4.33
Descanso y Salud Natural	Motivado por los paisajes y belleza	4.27
Descanso y Salud Natural	Por salud y vida sana	4.12
Economía	Opción accesible de viaje	3.98
Ambiental	Motivado por el ambiente que se genera	3.64
Aventuras Culturales y Gastronómicas	Aventurarse a nuevas experiencias	3.62
Ambiental	Motivaciones Climáticas	3.47
Recreación	Poder llevar a cabo sus hobbies	3.45
Aventuras Culturales y Gastronómicas	Disfrutar de la gastronomía	3.44
Recreación	Juntarse o visitar a familia y amigos	3.25
Aventuras Culturales y Gastronómicas	Por visitar lugares y pueblos típicos	3.24
Aventuras Culturales y Gastronómicas	Motivaciones Culturales	3.08
Aventuras Culturales y Gastronómicas	Visitar monumentos históricos	2.90
Recreación	Practicar algún deporte	2.62

Fuente: *Elaboración Propia.*

De los resultados es posible apreciar que los motivos preferidos hacen referencia al factor “Descanso y Salud Natural”. Con respecto a los motivos menos preferidos es posible destacar que sólo dos motivaciones tienen promedios bajo la nota 3.0 (visitar monumentos históricos y practicar algún deporte), además cabe señalar que la peor votación la obtuvo “Motivaciones Religiosas” con promedio 1.69. Este motivo fue eliminado del análisis debido a su poca representatividad. De todas formas de estas 17 motivaciones finales cabe mencionar que en términos generales las motivaciones fueron consideradas con un rango alto de importancia.

### Análisis de Conglomerado

En la segunda etapa se procede a determinar los conglomerados de personas que formarán parte en cada grupo, con el fin de clasificar a los turistas según tipo de motivación. El método utilizado para conformar los diferentes segmentos, es el procedimiento Conglomerados de K medias, ésta es una técnica multivariante que permite agrupar los casos de un archivo de datos en función del parecido o similitud existente entre ellos. Este método de agrupación de casos se basa en las distancias existentes entre ellos en un conjunto de variables. Cada una de las 203 personas fue asignada a uno de los tres conglomerados (Tabla 5).

Tabla 5: Conglomerado en Base a Turistas

Número de caso	Conglomerado	Distancia
1	3	2.798
2	1	1.331
3	3	2.338
4	2	1.884
5	3	2.661
.	.	.
.	.	.
.	.	.
200	1	2.440
201	3	1.575
202	3	1.526
203	3	2.511

Fuente: Elaboración Propia.

Finalmente se tiene la siguiente distribución de personas, expresadas en la Tabla 6

Tabla 6: Total de Personas Por Conglomerado

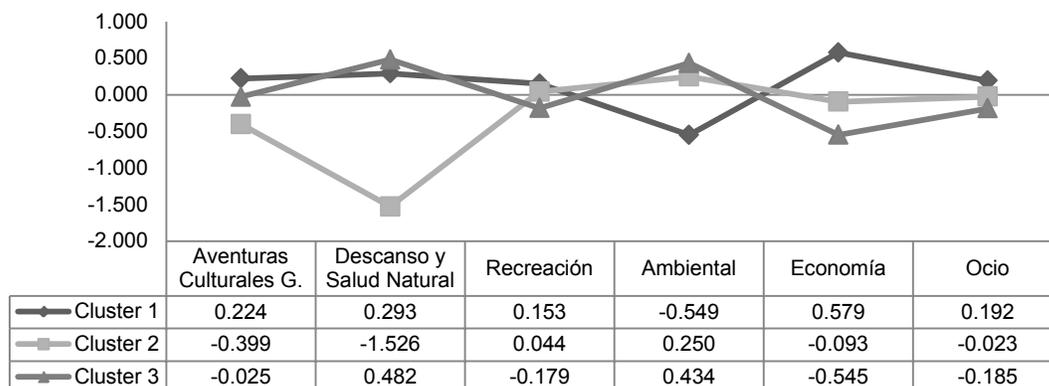

Conglomerado	Cantidad (personas)
1	82
2	41
3	80

Fuente: Elaboración Propia.

Se puede observar que los conglomerados 1 y 3 poseen una cantidad similar de turistas, además doblan la cantidad de personas que integran el segundo conglomerado. Luego de tener los tres casos conformados por sus respectivos integrantes, se procede a determinar las características de cada cluster. Para esto se muestra el Figura 1, que muestra la media de los valores de cada factor por conglomerado (valor de la media igual a 0), tal como lo hace Niefer (2005) en su investigación para la identificación y denominación de los conglomerados.

*Cluster 1:* Obtiene valores sobre la media para cinco de los seis factores (Aventura Cultural, Descanso y Salud Natural, Recreación, Economía y Ocio), con lo que se puede decir que a este tipo de turistas son motivados por estas cinco componentes. En cuanto al factor Ambiental se ubican por debajo de la media. Las características recién mencionadas conllevan a denominar al Cluster 1 con el nombre de “*Entusiastas, importando que el lugar sea económicamente accesible*”. Es decir, son turistas motivados por la gran mayoría de actividades; tanto culturales, recreacionales, poder descansar y disfrutar del ocio. Incluso sin importar el ambiente que exista en la zona, ni como sea el lugar, sin embargo, para este grupo es muy importante que el lugar sea económicamente accesible para ellos.

Figura 1: Conglomerados y Factores Motivacionales

Fuente: Elaboración Propia.

*Cluster 2:* Como se observa en la figura anterior, se tienen valores por debajo de la media para el factor Aventuras Culturales y Gastronómicas y muy por debajo de la media al factor Descanso y Salud Natural, por su parte los otros cuatro factores se posicionan cercanos a la media, dos por debajo (Economía y Ocio) y dos por sobre de ésta (Recreación y Ambiental). Los valores obtenidos hacen que se denomine a este tipo de visitantes como “*Vividores, que disfrutan del ambiente y actividades del lugar*”, es decir son personas que se encuentran motivados por el ambiente y clima del lugar y que buscan realizar actividades de recreación en conjunto con amigos o familiares, además no les interesa ir a la zona a descansar, si no que les gusta pasarlo bien.

*Cluster 3:* Alcanza valores por sobre la media en los factores Descanso y Salud Natural y Ambiental, mientras que en los factores correspondientes a Aventuras Culturales y Gastronómicas, Recreación, Economía y Ocio posee valores bajo la media. Finalmente se denomina a este grupo como “*Tranquilos, que buscan el descanso en un ambiente natural*”, es decir, este último conglomerado de personas, está integrado por personas interesadas en descansar en medios naturales con belleza paisajística y escaparse de la ciudad para tener una vida saludable.

Luego de obtener los tres conglomerados que representan las características comunes de los tres tipos de encuestados, se procede a compararlos con la muestra general. La composición socio económica y demográfica de cada conglomerado fue analizada por medio de tres variables; el sexo, la edad y el total de ingresos familiares. Lo anterior, con el fin de apreciar las diferencias existentes entre cada cluster y entre el conglomerado y la muestra general. En cuanto a la composición del sexo por cada cluster se obtuvo que los conglomerados uno y tres son conformados por la misma cantidad de hombres y mujeres en términos de porcentaje y poseen características similares a la composición de la muestra general. Por su parte el segundo conglomerado difiere bastante de los otros dos y de la muestra general, en este caso existe una pequeña predominancia de hombres en su conformación.

Con respecto a la conformación por rango etáreo, los resultados obtenidos indican que el cluster uno destaca en su conformación por personas que tienen rangos entre 26 - 35 y 46 - 55 años. Además se observa que no existen personas de 66 y más años. Por su parte el conglomerado dos destaca el considerable aumento en términos de proporciones de las personas menores a 26 años y la disminución de encuestados que tienen entre 26 y 35 años. Finalmente el tercer conglomerado destaca su alza en personas de rangos entre 26 - 35 y más de 65 años.

Tras el análisis se logró establecer que el conglomerado uno destaca por su gran porcentaje de personas pertenecientes al rango menor de \$600,000, en cuanto a la comparación de este grupo con la muestra general se puede observar que se mantiene el porcentaje de ingreso mensual entre \$600,001 y \$1,700,000. En relación al segundo cluster se puede apreciar un aumento con respecto a la muestra en el rango menor de \$600,000 y más de 1,700,001. Con respecto al tercer conglomerado, se puede observar que existe un aumento en la composición de personas que pertenecen al rango de ingresos familiares de entre \$600,000 - \$1,700,000. Los resultados obtenidos respecto a la compañía con que viajan los turistas se puede establecer tras el análisis de los resultados, que el primer conglomerado se compone de personas que viajan principalmente con la pareja o con la familia, el segundo grupo aumentan los casos, con respecto a la muestra general, de personas que visitan la zona acompañados de solos, en pareja y principalmente con amigos. Por último se logró apreciar que en el tercer cluster aumenta el porcentaje de personas que viaja en familia y disminuyó el porcentaje de las demás componentes. Finalmente son resumidos los conglomerados de la siguiente manera:

C1: Grupo compuesto por ambos sexos con predominancia de mujeres. Las edades de estas personas van desde los 26 a los 55 años principalmente, por lo tanto son personas en edades activas que quieren desarrollar diversas actividades. Sin embargo para ellos es muy importante que el lugar esté “al alcance de la mano” en términos económicos. Principalmente porque son personas que tienen hijos y por ende tienen otro tipo de responsabilidades de primer orden, además porque es el grupo que se compone en mayor porcentaje por personas que tienen ingresos menores a los \$600,000 pesos.

C2: Conglomerado compuesto por ambos sexos en prácticamente el mismo porcentaje, son principalmente jóvenes menores a 26 años, los cuales en su carácter de juventud buscan divertirse en la zona y les es muy importante que existan diversos panoramas para poder entretenerse. Este segmento no se preocupa de lo económico, debido a que principalmente o son jóvenes que están trabajando y no tienen mayores responsabilidades o porque viven con sus padres que ganan sobre \$1,700,000 pesos. Viajan a la zona en un alto porcentaje (41%) con su pareja o amigos y un 51% viaja en familia (es el grupo con menor porcentaje en términos de viaje con familia). Además cabe destacar que es el grupo compuesto por menos personas (aproximadamente la mitad de personas en comparación al primer y tercer grupo).

C3: Grupo compuesto por ambos sexos con predominancia femenina. En cuanto a las edades de este segmento van principalmente desde los 26 años hacia arriba, de manera similar al primer grupo (26 a 55), sin embargo en éste destaca la composición de personas mayores de 66 años. Este conjunto al igual que el primero está conformado por personas que viajan junto a sus familias principalmente (66%, es el segmento con mayor porcentaje en este ítem de los tres grupos), la diferencia es que éstos prefieren no realizar muchas actividades, más bien quieren descansar en el ambiente natural que la zona puede ofrecer. La mayor cantidad de personas que conforman el grupo tienen un ingreso familiar mensual entre \$600,001 y \$1,700,000 pesos.

## CONCLUSIONES

A partir de este estudio se puede concluir que la principal motivación que tienen las personas en el marco del turismo de intereses espaciales para viajar a la zona denominada como litoral central, son motivaciones denominadas como de “Descanso y Salud Natural”, es decir lo que buscan las personas es poder escaparse de la monotonía para lograr relajarse y descansar de las tensiones generadas por la estresante vida laboral y por la constante rutina. Es por esto que buscan disfrutar de los paisajes y la belleza del entorno natural, optando por una vida sana que es posible encontrar gracias a la tranquilidad que brinda el sector costero. Otras motivaciones de gran

importancia para poder lograr visitar las comunas durante estadías cortas de entre uno a tres días, son que los balnearios sean “Económicamente Accesibles” y que las personas puedan vivir momentos de “Ocio”, es decir que no se tenga algún trabajo por delante o algún otro tipo de obligación.

Una de las principales recomendaciones de esta investigación es enfocarse en la promoción de actividades dirigidas o centradas en la familia. Como se pudo apreciar en los resultados la mayor cantidad de la muestra viaja a la zona con sus familias, y por ende buscan panoramas familiares los fines de semanas de temporada baja, para que desde el menor de sus integrantes hasta el mayor, pueda divertirse. En segundo punto, es aumentar la oferta de actividades turísticas guiadas. Esto debido a que uno de los tipos de turismo de intereses especiales más preferidos por las personas es el Turismo Natural. Además, dentro de los atractivos turísticos más importantes se encuentran visitar Santuarios de la Naturaleza y Quebradas y Embalses (primer y tercera opción de un total de dieciséis). Una tercera recomendación corresponde a aumentar también la oferta en actividades culturales abiertas a todo público. Se pudo observar que la realización de Actividades Culturales, espontáneamente fue la actividad más mencionada por los visitantes: festivales, música, arte, teatro y exposiciones abiertas a todo público, ya sea en plazas, playa o anfiteatros. Además, se destaca que en varias ocasiones se mencionó que la única actividad cultural que existe en la zona es la casa de Pablo Neruda en Isla Negra.

José Alberto Bustamante Curiel, Universidad Juárez del Estado de Durango

### RESUMEN

*El clima organizacional es un tema de gran importancia en las organizaciones, ya que contribuye al logro de los objetivos en una organización. Evaluando el clima organizacional se puede conocer cuál es la percepción que tienen los trabajadores sobre la entidad en la que laboran. Los objetivos de la presente son evaluar las dimensiones del clima organizacional: estructura, recompensa, relaciones e identidad, en las unidades de venta de las tiendas del Instituto de Seguridad y Servicios Sociales de los Trabajadores del Estado (ISSSTE) del municipio de Durango, e identificar cual es la dimensión mejor evaluada, cual resulta con menor aceptación, que unidad de venta percibe mejor el clima organizacional y que correlación tienen las dimensiones entre sí. La investigación es de tipo descriptivo, se entrevistó al total de la población de las unidades de venta, en todos sus niveles. Se concluye que los trabajadores en las dimensiones evaluadas perciben de manera positiva cada una de ellas, así mismo la dimensión mejor evaluada es la dimensión de identidad y la de menor aceptación pero no negativa es la de relaciones. La unidad de venta que mejor percibe el clima organizacional es la N° 2, y por último se concluye que las dimensiones entre sí tienen un alto grado de correlación.*

**PALABRAS CLAVE:** clima organizacional, estructura, recompensa, relaciones, identidad.

## ORGANIZATIONAL CLIMATE IN THE SELLING UNITS STORES OF THE ISSSTE IN DURANGO CITY

### ABSTRACT

*The organizational climate is a topic of great importance in organizations, as it contributes to the achievement of objectives in an organization. In assessing the organizational climate, we can get to know what the worker's perception is about the organization in which they work. The objective of this study is to assess the organizational climate dimensions: structure, rewards, relationships and identity in the selling units stores of the Institute of Security and Social Services for State Workers (ISSSTE) in the city of Durango. Also, identify which dimension is better evaluated, which one has less acceptance, which selling unit perceives a better organizational climate, and the correlation with each other dimensions. This research is descriptive, the total population of selling units were interviewed at all levels. We conclude that workers perceive each evaluated dimension positively; also, the highest evaluation is the dimension of identity, and the lower acceptance dimension, but not negative, is relationships. The selling unit that perceives a better organizational climate is No. 2. Finally, we can conclude that the dimensions together have a high degree of correlation.*

**JEL:** M12

**KEY WORDS:** organizational climate, structure, rewards, relationships, identity.

## **INTRODUCCIÓN**

En la actualidad las organizaciones se enfrentan a diversas complejidades por la competencia que existe entre las mismas, por tal motivo es necesario que mantengan un clima organizacional positivo debido a que las relaciones humanas y el ambiente laboral son de gran importancia para alcanzar un buen nivel de desempeño en los trabajadores y de esta manera lograr los objetivos organizacionales y ser competitivos. Goncalves (2000) menciona que el clima organizacional dentro de las instituciones se refleja en las estructuras organizacionales, tamaño de la organización, modos de comunicación y estilo de liderazgo. Ahora bien, quien intente intervenir en una organización para mejorar el clima de la misma, debe partir de que es un constructo que utilizamos para referirnos de diferentes dimensiones de la organización. Es sobre esas dimensiones sobre las que deberemos dirigir nuestra intervención para mejorar el clima (Gairín, 1996).

## **REVISIÓN LITERARIA**

De acuerdo con Brunet (2004) el concepto de clima organizacional fue introducido por primera vez en la psicología industrial, por Gorman, en el año de 1960. Denison (1991) menciona que la expresión de clima organizacional también se encuentra en las investigaciones realizadas por, Halpin y Croft (1963), Litwin y Stringer (1978), Tagiuri y Litwin (1968), Likert (1967). Al respecto se menciona que no es un concepto reciente, ha sido motivo de múltiples investigaciones, pero a pesar de ello sigue teniendo un lugar para la discusión y la búsqueda de nuevos conocimientos. Tagiuri y Litwin (1968) expresan que: El clima organizacional es una cualidad relativamente permanente del ambiente interno de una organización que: (a) experimentan sus miembros, (b) influye en su comportamiento y (c) se puede describir en función de los valores de un conjunto particular de características (o actitudes) de la organización.

Como lo manifiestan Navarro y Santillán (2007) el éxito de una empresa depende de la manera como sus empleados perciben el clima organizacional; es decir si los integrantes de la empresa consideran que el clima es positivo o negativo obedece a las percepciones de los mismos. Cuando suelen valorarlo como adecuado, cálido o positivo, es porque consideran que éste permite y ofrece posibilidades para el desarrollo del desempeño laboral, aportando estabilidad e integración entre sus actividades en la organización y sus necesidades personales. Sin embargo, el clima organizacional también puede ser percibido como negativo por parte de los empleados cuando ellos observan un desequilibrio entre sus necesidades, la estructura y los procedimientos de la misma.

Litwin y Stinger (1978) reflexionaron sobre el tema, considerando que el contexto y la estructura de una organización influyen en el clima organizacional, y éste a su vez impacta en el comportamiento de sus miembros. Midiendo la percepción y la conducta de los trabajadores de una organización puede darse una retroalimentación que permita a la organización operar cambios que mejoren la satisfacción y desempeño de sus empleados.

## **METODOLOGÍA**

La presente investigación es de modalidad descriptiva, indica el desempeño del personal consultado en la organización estudiada, partiendo de la revisión de las variables contenidas en el modelo de clima organizacional expuesto por Litwin y Stringer (1978). El diseño que se utilizó en esta investigación es el no experimental que en general se diferencia del experimental, en que las variables no se manipulan porque ya han sucedido Del Tronco (2005). La población objeto de estudio, queda definida por el total de los trabajadores y está constituida por 76 individuos, según la información obtenida de la gerencia de la organización objeto de estudio, se realizó un censo ver tabla 1, donde se indica la composición de la población.

Tabla 1: Composición de la Población

Nº	Unidad de venta	Trabajadores
1	Semicentro comercial No. 79	27
2	Tienda No. 38	14
3	Bodega Súper isste No. 226	35
	Población total	76

*Composición de la población. La población objeto de estudio, queda definida por el total de los trabajadores y está constituida por 76 individuos, según la información obtenida de la gerencia de la organización objeto de estudio.*

El criterio de confiabilidad del instrumento, se determinó en la presente investigación, por el coeficiente de Alfa Cronbach, donde se obtuvo una confiabilidad= 0.935

## RESULTADOS

### Dimensión Estructura

En esta dimensión los elementos que se evalúan, son la normatividad, las reglas, el orden, la cantidad de trámites, el ritmo de trabajo y el material necesario para realizar el trabajo, se muestra en el promedio general que el 82% de los trabajadores están de acuerdo o muy de acuerdo con la dimensión estructura. De la antigüedad de los trabajadores se percibe que la mayoría de ellos tienen más de cinco años trabajando en la organización por lo cual este porcentaje coincide con la estructura organizacional así como sus deberes y responsabilidades.

### Dimensión Recompensa

Con respecto a la dimensión recompensa que es definida como la percepción que se tiene acerca de lo adecuado de la recompensa que se recibe por la correcta realización de su trabajo, nos indica que el 70% de los trabajadores están de acuerdo en esta dimensión lo que quiere decir que, a la mayoría de los trabajadores les parece adecuado el mecanismo de recompensa en la organización. Y que respecto al jefe inmediato la mayoría está de acuerdo con que muestra interés en el resultado de las tareas y reconoce el esfuerzo de los trabajadores. Bajo este contexto, cabe destacar que las actitudes de recompensas y comportamiento del jefe inmediato hacia el personal propicia mayor compromiso del trabajador, así mismo los entrevistados están conformes con que la institución ha contribuido en su desarrollo profesional.

### Dimensión Relaciones

En relación al comportamiento en esta dimensión donde los principales elementos evaluados son en primer término, la relación entre los trabajadores, y en segundo término, el liderazgo del jefe inmediato, por el hecho de que aquí se califica, sí el líder tiene capacidad para dirigir proyectos, motivar, sí es imparcial, sí hay respeto con los compañeros y brinda respaldo en las actividades

encomendadas, la dimensión relaciones es la que consta de más interrogantes, y la que más peso tiene por el hecho de que, como se ha visto anteriormente el clima organizacional es el ambiente que se genera dentro de una organización.

### Dimensión Identidad

La dimensión con mejor evaluación es identidad, que se ha definido como el sentido de pertenencia a la organización, lo que significa que el individuo se reconoce como un integrante importante que contribuye en el logro de los objetivos institucionales y que en general tiene la sensación de compartir los objetivos personales con los de la organización, en esta última dimensión, a través de los resultados que anteriormente se presentan, se evidencia que un 93% de los trabajadores, opino que aspectos como: me siento parte de esta institución , me siento comprometido a presentar propuestas para mejorar mi trabajo , considero importante mi trabajo , la realización de mis actividades tiene un impacto en la institución y contribuye con el logro de los objetivos de la misma así como, disfruto en trabajar dentro de esta institución , están bien determinados en el quehacer cotidiano de sus funciones y demuestra que en las unidades de venta de tiendas del ISSSTE del municipio de Durango se comparte una misma identidad entre los individuos que componen la organización y no existen marcadas diferencias de opiniones en cuanto a la identidad existente en la organización objeto de estudio.

En la tabla 2. Se puede observar que al calcular el Coeficiente de correlación Rho de Spearman las dimensiones tienen una fuerte correlación entre sí a un nivel de significancia de 0,01 (bilateral), así mismo se describen las relaciones que existen entre sí en cada una de las dimensiones. La primer relación que se analiza es la que se da entre la dimensión estructura y recompensa, que presenta una correlación de .728 al igual que la correlación entre estructura y relaciones, esto quiere decir que existe un alto grado de influencia entre las dimensiones antes mencionadas, y que de la estructura dependen las recompensas y las relaciones en la organización. La siguiente relación analizada es la que se da entre la estructura y la identidad donde se obtiene un valor de .504 en el coeficiente de correlación que aunque no es tan alto como los anteriores, muestra que la estructura influye también en la identidad que tienen los trabajadores dentro de la organización objeto de estudio. Para continuar con el análisis de la tabla anterior se procede con la dimensión recompensa y la dimensión relaciones, dando como valor .754 siendo este el valor más alto que presenta la tabla antes mencionada y significando que las recompensas influyen en alto grado con las relaciones que se dan entre los trabajadores de la institución.

Tabla 2: Correlación Rho Spearman

Dimensión	Estructura.	Recompensa	Relaciones.	Identidad.
Estructura	1	.728**	.728**	.504**
Recompensa	.728**	1	.754**	.469**
Relaciones	.728**	.754**	1	.514**
Identidad.	.504**	.469**	.514**	1

\*\* La correlación es significativa al nivel 0,01 (bilateral). La tabla muestra las correlaciones de cada una de las dimensiones con el resto de las mismas por medio de la correlación de Spearman, la correlación siempre debe ser de uno o menor. Entre más se acerque el resultado de  $r$  a la unidad, más fuerte será la relación que existe entre las dos variables, así mismo, cuando se aleje de la unidad menor será la fuerza que ejerce una variable sobre otra.

## CONCLUSIONES

En la dimensión estructura, el personal de esta organización, opina, que sus funciones y responsabilidades están claramente definidas, que los procedimientos, la normatividad vigente, la cantidad de registros así como la información plasmada en ellos facilitan el desempeño, las normas de disciplina las consideran que son adecuadas; así mismo consideran que existe un orden, que los ritmos de trabajo son adecuados y que el personal puede opinar para mejorar los procedimientos y se les permite poner en práctica lo que consideran más adecuado. De igual forma para el personal, la organización otorga los materiales suficientes para la realización y desarrollo de sus actividades laborales, aunque consideran que se podría mejorar. En cuanto a la dimensión recompensa, los factores motivacionales empleados por las unidades de venta de tiendas del ISSSTE, muestra que la mayoría de los trabajadores opina que la organización ha contribuido y brinda capacitación de manera justa para elevar el desarrollo de los mismos. En la dimensión relaciones, se concluye que se cuenta con mecanismos de comunicación fluida de parte de los trabajadores y por lo general comunican la información clara y precisa, donde la mayoría trabaja con espíritu de equipo, con alta integración, desarrollando relaciones armónicas y constructivas entre los miembros de la organización, y para poder entender como son las relaciones interpersonales entre los trabajadores es importante tener en cuenta que un grupo es un número de personas que interactúan entre sí, se identifican sociológicamente, y se sienten miembros del mismo. Esto propicia que los equipos sean eficaces, es decir, que logren ideas innovadoras, alcancen sus metas y se adapten al cambio; sus miembros están altamente comprometidos tanto con el equipo como con las metas de la organización. Por lo tanto, son altamente estimados por los directivos y se reconocen y recompensan sus resultados.

Así mismo, los resultados obtenidos del análisis de la dimensión identidad, permiten concluir que el personal de la organización objeto de estudio, conoce los objetivos de ésta y a la vez están comprometidos con los mismos, se sienten parte importante dentro de ella y disfrutan su trabajo, se esfuerzan para realizar de la mejor manera su trabajo y por ende mejorar día con día la calidad del mismo; ya que específicamente la identidad es la totalidad de los patrones repetitivos del comportamiento individual y de relaciones, que todos juntos reflejan el significado no reconocido de la vida organizacional. La identidad organizacional está influenciada por el pensamiento consciente: la forma en que se relacionan los individuos en el trabajo está en principio motivada por pensamientos y sentimientos inconscientes, su nacimiento depende de la transferencia de emociones que se da bajo la estructura organizacional. Por último cabe mencionar que dentro de la presente investigación se pudo observar que en general el clima organizacional en las unidades de venta analizadas se percibe un clima organizacional positivo es decir que existe un ambiente aceptable de trabajo y esto contribuye al logro de los objetivos organizacionales.

# MODELO DE SATISFACCIÓN DE LOS ESTUDIANTES POR MEDIO DE ECUACIONES ESTRUCTURALES

María Fernanda Castrillón Barbosa, Universidad Sergio Arboleda  
Martha Lucia Corrales Bossio, Universidad Sergio Arboleda

## RESUMEN

*La satisfacción del cliente es una variable importante para la gestión del servicio de las diferentes entidades, instituciones y empresas en general; sin embargo, comúnmente es medida con metodologías que no tienen en cuenta primero que, desde el punto de vista estadístico, es una variable sujeta a errores de medida; y segundo, la posible interrelación de las variables que la determinan. Por lo tanto, se requiere de una metodología que permita descomponer el concepto en dimensiones del servicio y estas a su vez en indicadores. La metodología empleada es la modelización mediante sistemas de regresión estructural, tomando como base para su especificación, consideraciones teóricas y variables latentes detectadas por medio de un análisis factorial. Los resultados del modelo presentado en este informe, permiten una mejor comprensión de una estructura sencilla de la satisfacción de los estudiantes de primer semestre de la Escuela de Derecho y plantea una línea base de análisis para este concepto.*

**PALABRAS CLAVE:** Nivel de satisfacción, ecuaciones estructurales, regresiones estructurales, análisis factorial, dimensión del servicio, variable latente.

## STUDENT SATISFATION MODEL BY STRUCTURAL EQUATIONS

### ABSTRACT

*Customer satisfaction is an important service for the management of the various institutions and companies in general variable, however, is commonly measured with methods that do not consider first that, from a statistical point of view, is a variable subject to measurement errors , and second, the possible interrelationship of the variables that determine it. Therefore, it requires a methodology that can decompose the dimensions of service concept and these in turn on indicators. The methodology is the modeling of structural systems using regression basis for its specification , theoretical considerations and latent variables identified by factor analysis . The model results presented in this report allow a better understanding of a simple structure satisfying the first semester students of the Law School and raises a base line for this concept analysis.*

**KEYWORDS:** Satisfaction level, structural equation, structural regression, factor analysis, dimension of service, latent variable.

### INTRODUCCIÓN

En la actualidad, y tomado como base tanto la dinámica comercial como la homogeneidad en la oferta de valor de productos y servicios, se hace necesario identificar la estructura de interacción de las diferentes dimensiones del servicio, con el fin de caracterizar el concepto de satisfacción de

los clientes y poder ofrecer beneficios y valores agregados diferentes a los de las entidades competidoras. Dado que la dinámica de la prestación de servicios funciona en torno a procesos interrelacionados y no a dimensiones independientes, para entender el concepto de satisfacción con la calidad del servicio, es importante analizar la interacción entre los componentes que definen dicho concepto. Por tal motivo, la estructura analizada parte de la identificación, por medio de un análisis factorial exploratorio, de los componentes o variables latentes que resumen la información de los indicadores de servicio. Las variables latentes extraídas del análisis factorial, corresponden a las dimensiones sobre las cuales se plantea la hipótesis de interrelación.

La metodología utilizada para este análisis son los modelos de ecuaciones estructurales, realizando un análisis factorial confirmatorio y de regresión estructural. El propósito de este trabajo, permite una mejor comprensión de la compleja estructura de la satisfacción de los estudiantes, explicando la correlación entre las variables latentes (variables no observables directamente) y la asociación entre cada una de ellas con sus correspondientes variables observadas, para establecer un modelo estructural y un modelo de medición de ellas.

### Base de datos

Se construyó un cuestionario semiestructurado de aplicación personal, que consta de preguntas cerradas de selección múltiple con calificación con escala de recorrido de 1 a 5. La base de datos utilizada en este trabajo, proviene de las calificaciones dadas por los clientes a los indicadores de servicio de la sección de calidad de servicio. De esta forma, se cuenta con las respuestas de 99 estudiantes para 19 indicadores de servicio y una variable de nivel de satisfacción general. Por lo tanto, en total se tienen 20 preguntas (19 indicadores de servicio + la variables de satisfacción general).

### Variables Del Modelo

- $\eta$  1 = Estudiantes
- $\eta$  2 = Aspectos académicos
- $\eta$  3 = Docentes
- $\eta$  4 = Tecnología e infraestructura
- $\eta$  5 = Bienestar estudiantil
- $\eta$  6 = Satisfacción
- y1 = Puntualidad y asistencia de los docentes a clase
- y2 = Metodologías didácticas
- y3 = Evaluaciones de los docentes
- y4 = Exigencia académica
- y5 = Cantidad, capacidad y calidad de las aulas
- y6 = Conexión Internet
- y7 = Salas de sistemas y de estudio
- y8 = Características generales de la Biblioteca
- y9 = Ambiente académico de la Universidad
- y10 = Acompañamiento académico
- y11 = Proceso inducción
- y12 = Presencia de directivos
- y13 = Acoplamiento con el grupo de estudiantes
- y14 = Servicios de la cafetería
- y15 = Servicio médico
- y16 = Actividades adicionales de Bienestar

y17 = Asistencia a clase por parte de los estudiantes  
y18 = Compromiso de los estudiantes con el programa académico  
y19 = Cumplimiento actividades académicas de los estudiantes  
y20 = Satisfacción general

### Análisis Factorial Exploratorio

Como primer paso para modelar utilizando este método, se realiza un análisis factorial exploratorio

para determinar si es posible explicar las variables independientes existentes en un número menor de variables latentes, partiendo de la hipótesis de que debe existir una interdependencia entre la satisfacción producida por los indicadores de servicio evaluados. Se asume que estas correlaciones son medidas de un mismo concepto. De esta forma, se procede con el análisis y se escoge la extracción de 5 factores que tiene un porcentaje de varianza explicada de 70% y su interpretación se ajusta de mejor manera a los conocimientos teóricos de las dimensiones que subyacen la satisfacción del estudiante. De acuerdo a las ponderaciones de cada una de las variables, cada uno de los factores puede ser interpretado de la siguiente manera:

Factor 1: Aspectos académicos. Las variables de mayor ponderación corresponden a ambiente académico de la Universidad, acompañamiento académico suministrado al estudiante, proceso de inducción, presencia de los Directivos, acoplamiento a los compañeros del curso.

Factor 2: Estudiantes. Las variables de mayor ponderación corresponden a asistencia a clase por parte de los estudiantes, compromiso de los estudiantes con el programa académico y cumplimiento de las responsabilidades académicas y administrativas de los estudiantes.

Factor 3: Docentes. Las variables de mayor ponderación corresponden a puntualidad y asistencia a las clases de los docentes, las formas de evaluaciones y las metodologías del docente y exigencia académica y conocimiento de los docentes en las diferentes materias.

Factor 4: Tecnología e infraestructura. Las variables de mayor ponderación corresponden a las metodologías didácticas y usos de aulas virtuales empleadas en las materias, conexión a internet de la Universidad, cantidad, capacidad y calidad de las aulas de clase de la Universidad, cantidad y calidad de las salas de sistemas y salas de estudio y las características generales de la Biblioteca.

Factor 5: Bienestar. Las variables de mayor ponderación corresponden a servicios prestados por las Cafeterías de la Universidad, servicio médico ofrecido por la Universidad y actividades adicionales de bienestar universitario.

Modelo De Regresión Estructural

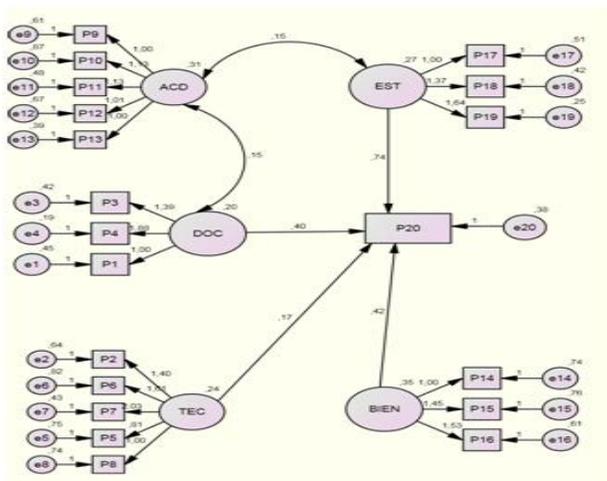

Tabla 1: Estadísticas Descriptivas De Las Preguntas Realizadas

Número	Ítem	NS/ND	Malo	Bastante	Buena	Excelente
P1	Los docentes muestran puntualidad y asistencia a las	1.01%	6.06%	42.42%	39.39%	11.11%
P2	Las metodologías didácticas y usos de aulas	6.06%	16.16%	25.25%	42.42%	10.10%
P3	Las formas de evaluaciones y las metodologías	1.01%	4.04%	22.22%	39.39%	33.33%
P4	Exigencia académica y conocimiento de los docentes	2.02%	5.05%	12.12%	39.39%	41.41%
P5	Cantidad, capacidad y calidad de las aulas de clase	2.02%	9.09%	21.21%	46.46%	21.21%
P6	Conexión a Internet de la Universidad (Velocidad y	13.13%	29.29%	21.21%	27.27%	9.09%
P7	Cantidad y calidad de las salas de sistemas y salas de	11.11%	15.15%	23.23%	37.37%	13.13%
P8	Características generales de la Biblioteca	2.02%	6.06%	18.18%	36.36%	37.37%
P9	Ambiente académico que pronuncia la Universidad	4.04%	3.03%	19.19%	40.40%	33.33%
P10	Acompañamiento académico realizado por la	10.10%	6.06%	22.22%	41.41%	20.20%
P11	Inducción realizada al programa académico y la	3.03%	6.06%	15.15%	43.43%	32.32%
P12	Presencia de los directivos del programa en su	5.05%	7.07%	22.22%	44.44%	21.21%
P13	Grado en el que se identifica con el grupo de	2.02%	6.06%	20.20%	51.52%	20.20%
P14	Servicios prestados por las Cafeterías de la	3.03%	11.11%	22.22%	39.39%	24.24%
P15	Servicio médico ofrecido por la Universidad	11.11%	3.03%	14.14%	41.41%	30.30%
P16	Actividades adicionales de bienestar universitario	9.09%	10.10%	23.23%	35.35%	22.22%
P17	Asistencia a clase por parte de los estudiantes	2.02%	5.05%	28.28%	46.46%	18.18%
P18	Compromiso de los estudiantes con el programa	3.03%	8.08%	25.25%	45.45%	18.18%
P19	Cumplimiento de responsabilidades académicas y	3.03%	9.09%	13.13%	51.52%	23.23%

## CONCLUSIONES

La aplicación de modelos de ecuaciones estructurales, permitió identificar una estructura de interrelación de variables latentes subyacente al concepto de satisfacción de los estudiantes.

El modelo evaluado muestra por un lado, una relación positiva de las cinco dimensiones de servicio (Ambiente académico, Estudiantes, Docentes, Tecnología-Infraestructura y Bienestar) con el nivel de satisfacción general.

La dimensión que mayor efecto tiene sobre la satisfacción de los estudiantes, es el factor denominado Estudiantes (asistencia a clase por parte de los estudiantes, compromiso de los estudiantes con el programa académico y cumplimiento de las responsabilidades académicas y administrativas de los estudiantes).

Esta situación se debe, posiblemente, a que en un mercado competitivo donde la oferta de productos es similar, los Aspectos Académicos (ambiente, acompañamiento, presencia de directivos, acoplamiento) y las propias responsabilidades de los estudiantes (asistencia a clase por parte de los estudiantes, compromiso de los estudiantes con el programa académico y cumplimiento de las responsabilidades académicas y administrativas de los estudiantes), se traducen en la calidad de la atención prestada a las necesidades de los estudiantes, convirtiéndose en un atributo diferencial que influye en la percepción de ellos sobre el servicio ofrecido por la Universidad.

El factor que menos pesa en la satisfacción, para los estudiantes de Derecho de primer semestre es el factor Tecnología e infraestructura de la Universidad.

Observando la tabla de estadística descriptiva (Tabla 1) de los resultados obtenidos de las variables, se pueden observar las calificaciones de las preguntas en cada una de las modalidades.

En general la satisfacción de los estudiantes de primer semestre de la Escuela de Derecho se resume de la siguiente manera: el 5.05 %, se encuentra bastante insatisfecho, el 17.17% se encuentra mediante satisfecho, mientras que el 77.77% se encuentra muy satisfecho.

# **POLÍTICA DE FIJACIÓN DE PRECIOS: UNA NUEVA METODOLOGÍA BASADA EN LA ESTRUCTURA DE COSTOS-COMPETENCIA DE LA EMPRESA**

Martín Alberto Rodríguez Brindis, Universidad Anáhuac Oaxaca

## **RESUMEN**

*En este artículo se presenta una revisión teórica de los diferentes enfoques utilizados por las empresas para fijar el precio final de sus productos, mostrando los alcances y limitaciones de cada una ellas. Además, se presenta una nueva metodología para fijar precios basado tanto en la competencia como en los costos, tomando en cuenta la estructura de costos de la propia empresa frente al precio observado de sus principales competidores para estimar un precio sugerido. Lo anterior se realiza mediante un esquema de ponderaciones que nos permite asignar un peso apropiado a los principales competidores dentro del mercado objetivo al que va dirigido el producto de la empresa y un peso a la propia estructura de costos de la empresa.*

**PALABRAS CLAVES:** Fijación de precios, estrategia de precios, estructura de costos, competencia.

## **PRICING POLICY: A NEW METHODOLOGY BASED ON COST-COMPETITIVE STRUCTURE OF THE COMPANY**

### **ABSTRACT**

*This paper presents a theoretical review of the different approaches used by companies to set price of their products, showing the scope and limitations of each of them. It also presents a new methodology to set prices based on both competition and on costs, taking into account the cost structure of the company against the observed price of its main competitors for a suggested price estimate. This is done using a weighting scheme that allows us to assign an appropriate weight to the main competitors in the target market you are targeting the product of the company and a weight to the cost structure of the company.*

**KEYWORDS:** Pricing, price strategies, cost structure, competition.

### **INTRODUCCIÓN**

En el común de los libros de texto de economía se plantea que el principal objetivo de las empresas es la maximización de beneficios. Una buena política de fijación de precios contribuye a que se alcance esta meta y que se logre la lealtad del cliente. La fijación de precios se vuelve entonces un elemento clave para determinar la rentabilidad de un negocio; sin embargo, si el precio es demasiado alto provocará una reducción de la cantidad demandada y la consecuente pérdida de market share o incluso llevar a la empresa a quedarse fuera del mercado; si el precio es muy bajo, el volumen de ventas podría no generar el ingreso suficiente para cubrir los costos

asociados a la empresa o bien, cubrirlos, pero sin lograr el objetivo tan anhelado de la maximización de beneficios. En términos de mercadotecnia, el precio es el único elemento dentro del mix del marketing que produce ingresos; todos los demás elementos del mix del marketing representan costos para la empresa (Kotler y Armstrong, 2010). Siguiendo a Churchill y Peter (1998), el precio juega dos papeles primordiales dentro del mix del marketing:

*Da los incentivos para que la compra de un producto o servicio se efectúe y, de ser así, establece cuánto del producto o servicio los consumidores o empresas comprarán.*

*Influye en determinar si los productos del marketing serán lo suficientemente rentables.*

En este artículo se presenta una metodología para fijar precios basado tanto en la competencia, como en los costos, tomando en cuenta la estructura de costos de la propia empresa frente al precio observado de sus principales competidores para establecer un precio sugerido. Lo anterior es realizado mediante un esquema de ponderaciones que nos permite asignar un peso apropiado a los principales competidores dentro del mercado objetivo al que va dirigido el producto de la empresa, y un peso a la propia estructura de costos de la empresa. El trabajo está estructurado de la siguiente manera: una sección de revisión de literatura en la que se presentan los cuatro principales enfoques metodológicos utilizados por las empresas para establecer el precio de sus productos, esto para analizar, a nivel teórico y práctico, los principales alcances y limitaciones de cada una de ellos. A continuación, se presenta la propuesta metodológica para fijar precios basado en las estructuras de costo-competencia de la empresa. Posteriormente, en la sección de resultados se presenta un ejemplo práctico para estimar precios para una cafetería, específicamente para la bebida capuchino caliente. Finalmente, la última sección contiene las conclusiones en las que se resumen las principales características de la metodología propuesta.

## REVISIÓN DE LITERATURA

Existen al menos cuatro enfoques metodológicos que usan las empresas para fijar los precios de sus productos o servicios: fijación de precios basados en costos, fijación de precios orientado a beneficios, fijación de precios basado en valor y fijación de precios basados en la competencia.

*La fijación de precios basado en costos:* es el método más utilizado por las empresas para obtener sus precios (Kerin et al, 2007, Nagle et al, 2010). Este método toma en cuenta los costos totales de la empresa, que incluyen tanto los costos fijos como los variables. Para la obtención del precio basado en este enfoque, se calcula el costo unitario de producción del bien o servicio y se le agrega un markup sobre dicho costo con la finalidad de obtener el precio de venta. Este markup puede ser expresado como un porcentaje sobre los costos o como un porcentaje del precio de venta. Si llamamos  $CU$  a los costos unitarios de producción,  $CV$  a los costos variables y  $CF$  a los costos fijos, podemos obtener los costos unitarios de la siguiente manera:

$$CU = CV + \frac{CF}{\text{Unidades Vendidas}} \quad (1)$$

De esta forma, si lo que la empresa desea es obtener un precio que le genere un margen de utilidad sobre sus costos, el precio se fijaría de la siguiente manera:

$$P = CU + (CU * \pi_d) = CU * (1 + \pi_d) \quad (2)$$

Si lo que se desea es un beneficio como porcentaje del precio de venta, el precio sería entonces:

$$P = \frac{CU}{(1-\pi_d)} \quad (3)$$

Donde  $P$  es el precio obtenido y  $\pi_d$  es el margen en porcentaje de beneficio deseado.

Una de las principales limitaciones de esta metodología es que no considera el efecto que el precio tiene sobre la demanda de los consumidores (Churchill & Peter, 1998). Bajo esta técnica, se podría fijar un precio que cubra los costos de la empresa y el margen deseado para obtener los anhelados beneficios, pero que sea tan alto que los compradores (a gran parte de ellos) prefieran comprar productos sustitutos a los principales competidores. Otro problema con esta metodología es la dificultad en la práctica de determinar adecuadamente los costos unitarios de producción, ya que estos dependen del número de unidades vendidas del producto. Como mencionan Nagle et al. (2010), un incremento de precios para “cubrir” costos fijos altos reduce las ventas futuras y causa que los costos unitarios se incrementen aún más, esto nos llevará a una “espiral de muerte” de fijación de precios basados en costos en la que los costos fijos se distribuirán en cada vez menos unidades de producto llevando a una constante escalada en el precio. Otra manera en que las empresas pueden lograr establecer sus precios es mediante

*La fijación de precios orientada a beneficios:* esta metodología permite a la empresa encontrar un equilibrio entre sus costos y los ingresos esperados. A diferencia del costo más margen como porcentaje del precio de venta (ecuación (3)), bajo este enfoque, la empresa se fija un beneficio objetivo en términos monetarios para un periodo determinado. El precio, bajo esta metodología, se obtiene como sigue:

$$\pi = IT - CT \quad (4)$$

$$\pi = (P * Q) - [(CV * Q) + CF] \quad (5)$$

Despejando  $P$  tendemos:

$$P = \frac{\pi + CF}{Q} + CV \quad (6)$$

Donde  $\pi$  son los beneficios objetivos de la empresa en términos monetarios,  $IT$  son los ingresos totales y  $CT$  son los costos totales. El planteamiento del beneficio deseado por la empresa también puede ser expresado en términos del rendimiento deseado sobre la inversión que realiza, un modo de medir este rendimiento es a través del ROI (rendimiento sobre la inversión). El ROI es un valor expresado en porcentaje que nos permite evaluar que tan eficiente es el gasto que se está haciendo o que planea realizar, por ejemplo, si el ROI fuera del 20% significaría que por cada peso invertido en el proyecto se obtienen 20 centavos adicionales como rendimiento. Para efectos de la determinación de precios, no es necesario estimar el ROI, sino definir (de manera arbitraria) el ROI que la empresa desea obtener, por lo que el precio se obtendría de la siguiente manera:

$$P_{ROI} = CU + \left( \frac{ROI * \text{capital invertido}}{\text{Ventas Unitarias}} \right) \quad (7)$$

Claramente, al igual que la fijación de precios basada en costos, las técnicas para establecer precios orientada a beneficios dependen de estimar adecuadamente la demanda del producto, lo que podría llevar a la empresa, como ya vimos, a establecer estrategias de fijación de precios que generen ciclos que dañen su rentabilidad.

*La fijación de precios basados en valor* : considera como principal determinante del precio la percepción que los consumidores tienen sobre el valor de un bien o servicio al momento del intercambio. Este valor es visto por los consumidores como la diferencia entre los beneficios que ellos aprecian del producto y los costos percibidos para realizar la transacción. Lo que sugiere este enfoque es buscar lo que los consumidores esperan o están dispuestos a pagar por un producto y el rango de precios que ellos consideran aceptables para adquirirlo, para esto, se parte de un precio de referencia, es decir, el precio que los compradores usan para comparar el precio al que se ofrece el producto y a partir de este estimar el mayor o menor valor que el producto de la empresa pueda ofrecer con respecto al de sus competidores.

Nagle et al. (2010) presentan una metodología para estimar el valor económico de un bien o servicio en el que se parte de un valor de referencia el cual es definido como el precio de un producto de la competencia que el consumidor ve como la mejor alternativa con respecto al producto de la propia empresa, a lo que se le agrega un valor de diferenciación para obtener el valor económico total y, finalmente, el precio.

En general, la fijación de precios basados en valor es el “ideal” para la fijación de precios, ya que le permite a la empresa darle al consumidor exactamente lo que él desea. Sin embargo, a nivel práctico, es muy complicado encontrar cual es el precio de referencia que utilizan los consumidores para comparar un producto, sobre todo cuando la empresa se encuentra inmersa en una estructura de mercado en la que hay más de un competidor cercano y con productos relativamente diferenciados. En la medida en que la empresa pueda encontrar un equilibrio entre lo que hace bien y cuanto lo valora el consumidor, la fijación de precios basada en valor será adecuada.

*La fijación de precios basados en la competencia* : consiste en observar los precios de los competidores y decidir, con base en los objetivos de ventas de la empresa y a la estructura de mercado en la que se encuentre; fijar un precio que guarde una relación con el precio de dichos competidores, por lo que la decisión estribará en establecer un precio por debajo, igual o superior al de la competencia. A nivel práctico, las empresas, para establecer precios mediante estos objetivos, realizan un benchmarking para identificar el precio de mercado de su producto. En sentido estricto, podríamos decir que bajo esta metodología la empresa se vuelve precio aceptante, lo que sería adecuado si se encontrara dentro de una estructura de mercado muy cercana a la *competencia perfecta* o bien, dentro de una estructura *oligopólica* en la que existe una empresa líder y una serie de competidores cuasi-competitivos dentro de los cuales se encuentra la propia empresa.

El suponerse que la empresa debe de ser precio aceptante al fijar sus precios es uno de los principales conceptos erróneos al utilizar esta metodología a nivel práctico, ya que existen muchas empresas, sobre todo en el sector servicios, que se encuentran en una estructura de mercado de *competencia monopolística*, en la que si bien el número de competidores es relativamente grande, existe la posibilidad de diferenciación de producto, lo que debe de llevar a una estrategia de fijación de precios proactiva y no seguidora, aun tomando en consideración a sus competidores. Otra limitación del enfoque de fijación de precios basados en la competencia

es el que no incluya la estructura de costos a la que se enfrenta la empresa, si sus costos son demasiado altos con respecto al de sus competidores, la empresa podría no ser capaz de fijar un precio por debajo (o incluso igual) al de estos y poder sobrevivir en el mercado.

## **METODOLOGÍA**

Las decisiones sobre qué, cuánto y cómo producir están irremediablemente ligadas a los costos de las empresas, además, gran parte de las ventajas competitivas de una empresa se reflejan en la estructura de costos que posee. Una apropiada y rentable metodología para fijar precios requiere de alguna manera tomar en cuenta los costos en los que la empresa incurre. Por otro lado, en la medida en que los segmentos de mercado a los que se dirige la firma se encuentran inmersos en una significativa o fuerte competencia, es necesario no pasar desapercibidos los precios a los cuales los competidores ofrecen los productos que los consumidores podrían considerar como sustitutos cercanos al de la empresa.

La metodología de fijación de precios basados en la estructura de costos-competencia de la empresa se ha desarrollado con la intención de combinar los costos en los que incurre la empresa al elaborar su producto y los precios a los que sus principales competidores ofrecen bienes y servicios sustitutos cercanos. Los costos que se tomarán en cuenta para esto son sólo aquellos que determinen el impacto sobre los beneficios de una decisión sobre los precios, es decir, usando la terminología presentada por Nagle et al. (2010), sólo se tomarán en cuenta aquellos costos que son evitables. Estos costos evitables serán la base sobre la cual la empresa fijará un margen deseado de rentabilidad sobre ellos.

Si no existiera competencia dentro del mercado objetivo al que se dirige la empresa, este markup podría arrojar el precio final al que la empresa fijaría su precio. La diferencia entre este margen y el utilizado en la metodología de fijación de precios basado en costos presentada en la sección anterior, es que este no toma en cuenta los costos unitarios de producción, sino sólo los costos relevantes para la fijación de precios, de alguna manera, por tanto, es un costo de producción que pretende ser utilizado como un margen de rentabilidad más que como un margen de utilidad, lo que le permitiría a la empresa un control más apropiado de sus costos relevantes al fijar precios (véase la sección de resultados).

No obstante, muchas empresas se encuentran inmersas en estructuras de mercado muy cercanas a la competencia perfecta o, más probablemente, dentro de una estructura de mercado de competencia monopolística (para una explicación de las diferentes estructuras de mercado puede verse Mas-Colell et al., 1995 y Varian, 1998). Dada estas circunstancias, es necesario tomar en cuenta el precio al que los principales competidores de la empresa ofrecen sus productos.

De esta manera, la fijación de precios basado en la estructura de costos-competencia pondera el peso que tienen los costos y el markup deseado por la empresa, frente a los precios a los cuales venden sus productos los competidores cercanos, de esta forma, en la medida en que existan “muchos” competidores dentro del mercado objetivo, la ponderación se acercará cada vez más a uno (y el peso asignado a los costos se acercará a cero), en el límite, cuando la ponderación asignada a los competidores sea uno, el precio que fijará la empresa simplemente será un promedio ponderado de los precios de todos los competidores, lo que nos llevará, de alguna manera, a que la empresa se vuelva precio aceptante y su precio sea muy cercano al de una estructura de mercado de competencia perfecta. Por otro lado, en la medida en que la empresa tenga “pocos” competidores, la ponderación asignada a ellos se acercará a cero y por ende, el peso asignado a los propios costos tenderá a uno, de nuevo, en el límite cuando no existan

competidores dentro del mercado objetivo de la empresa, el peso asignado a los costos será de uno, lo que nos llevaría a una aproximación de fijación de precios dentro de una estructura de mercado monopólica.

El precio basado en la estructura de costos-competencia se calcularía entonces de la siguiente manera:

$$P_s = w_1 * P_{Cm} + w_2 * \left[ \sum_{i=1}^n P_i^c * \theta_i \right]$$

s.a.

(8)

$$w_1 + w_2 = 1 \quad y \quad \sum \theta_i = 1$$

Donde  $P_s$  es el precio final sugerido;  $P_{Cm}$  es el precio basado en costos relevantes al que la empresa vendería su producto para mantener el margen de rentabilidad deseado;  $w_1$  y  $w_2$  son los pesos (importancia) asignados al precio obtenido basado en costos y los precios de los principales competidores respectivamente;  $P_i^c$  es el precio de venta observado del competidor  $i$  y finalmente,  $\theta_i$  es la importancia (peso) asignada al competidor  $i$  con respecto a los demás competidores cercanos.

Note en la ecuación (8) una vez asignadas las ponderaciones adecuadas tanto para la estructura de costos como para la de mercado, si los competidores bajan sus precios con la finalidad de incrementar su market share y, posiblemente, dando inicio a una guerra de precios, nuestra empresa podría reaccionar bajando también sus precios; sin embargo, el peso asignado a la estructura de costos reflejada en  $P_{Cm}$  sólo le permitirá seguir bajando sus precios en la medida en que sus ventajas competitivas de costos se lo permitan, por lo que dicha estructura reflejada en el precio sugerido generará los incentivos para no entrar en una guerra de precios que mermaría los beneficios de la empresa. De manera análoga, si la estructura de costos de la empresa es baja (lo cual podría reflejar una ventaja competitiva en la medida que sea sostenible y no alcanzable por los competidores) la empresa podrá reaccionar a una baja en los precios de los competidores con una disminución igual a sus precios sin perder beneficios.

Otra ventaja que presenta esta nueva metodología, es que no depende de estimar la demanda, esto debido a que la definición de “costos unitarios” está basada sólo en los costos relevantes de producir una unidad adicional más del producto, lo que nos lleva a un enfoque mucho más cercano a los costos marginales y no a los costos medios. Además, de alguna manera, al tomar en cuenta los precios promedios de los principales competidores, podríamos asumir que de manera implícita se está teniendo en cuenta las características de los consumidores. Finalmente, hemos definido  $P_s$  como un precio final sugerido y no como un precio final de venta, para permitir al área de fijación de precio tener un margen adicional para tomar en cuenta ciertas valoraciones que los consumidores tengan sobre el producto o la marca de la empresa que podrían llevar a reducir o aumentar el precio final de venta con respecto al precio sugerido.

## RESULTADOS

A manera de resultado, y con la finalidad de poder comprender mejor la ecuación (8), se ha desarrollado un sencillo ejemplo para determinar el precio sugerido para la venta de una bebida en una cafetería: *capuchino caliente*. La estructura de costos marginales (costos evitables) de un

capuchino podría ser muy similar a la mostrada en la Tabla 1. En ella podemos observar el costo de producción en el que se incurre al preparar una bebida capuchino caliente de, digamos 12 onzas, desglosados por la contribución que cada uno de los insumos tiene sobre los costos totales de la bebida. Los precios y los costos monetarios están expresados en pesos mexicanos. La columna (1) dentro de la tabla nos muestra los insumos necesarios para la preparación de la bebida; columna (2) nos indica el precio al que se adquieren cada una de las unidades de compra de estos insumos (columna (3)); columna (4) y (5) nos muestran las cantidades y medidas unitarias relativas a la bebida; columna (6) y (7) indican la cantidad y medida unitarias usadas en la preparación de la bebida y, finalmente, la columna (8) nos muestra el costo con que contribuye cada insumo en específico del total de la bebida, el cual es obtenido de la división de (2)/(4) multiplicado por (6).

Tabla 1: Costos de producción de un capuchino caliente

Insumos (1)	Precio de la unidad de Compra (2)	Unidad de Compra (3)	Cantidad de unidades por la unidad de Compra (4)	Unidades de la unidad de compra (5)	Cantidad Usada (6)	Unidad de la Cantidad (7)	Costo de la unidad Utilizada (8)
Café Regular	\$ 250.00	Kg	1000	gr.	14.00	gr	\$ 3.50
Agua	\$ 20.00	Lts	20000	ml.	30.00	ml	\$ 0.03
Leche	\$ 14.00	Lts	1000	ml.	320.00	ml	\$ 4.48
Vaso	\$ 927.00	Paquete	1000	pz	1.0	pz	\$ 0.93
Tapa	\$ 506.00	Paquete	1000	pz	1.0	pz	\$ 0.51
Servilleta	\$ 84.90	Paquete	2000	pz	2.0	pz	\$ 0.08
Cucharas	\$ 11.00	Paquete	50	pz	1.0	pz	\$ 0.22
Azúcar Ligth	\$ 189.00	Caja	1500	pz	1.0	pz	\$ 0.13
<b>Costo total</b>							<b>\$ 10.25</b>

En esta tabla se presenta la posible estructura de costos de producción en la que se incurre para la preparación de una bebida capuchino caliente, la columna (1) nos muestra los insumos necesarios para la preparación de la bebida; columna (2) nos indica el precio al que se adquieren cada una de las unidades de compra de estos insumos (columna (3)); columna (4) y (5) nos muestran las cantidades y medidas unitarias relativas a la bebida; columna (6) y (7) indican la cantidad y medida unitarias usadas en la preparación de la bebida y, finalmente, la columna (8) nos muestra el costo con que contribuye cada insumo en específico del total de la bebida, el cual es obtenido de la división de (2)/(4) multiplicado por (6).

Como podemos apreciar en la Tabla 1 el costo marginal de producir un capuchino adicional es de \$10.25, estos costos evitables son los que nos servirán de referencia para obtener el precio basado en costos  $P_{Cm}$  en la ecuación (8), de esta manera, si el margen de rentabilidad deseado por la empresa fuera de 65%, lo que la llevaría a tener sus costos de producción promedio en un margen del 35%,  $P_{Cm}$  sería igual a \$29.28 ( $\$10.25/0.35$ ), es decir, si nuestra empresa deseara un margen de rentabilidad del 65% y deseara fijar el precio de su producto basado en costos, el precio establecido sería de \$29.28 por capuchino.

El siguiente paso para establecer un precio es definir el esquema de ponderaciones para  $w_1$  y  $w_2$ , es decir, definir la importancia que la empresa debe de dar a su propia estructura de costos frente a la estructura de mercado en la que se encuentra inmersa. Una profunda investigación de mercado nos ayudaría a estructurar las ponderaciones de manera adecuada. Para nuestro ejemplo, asignaremos un valor de 0.3  $w_1$  y de 0.7 para  $w_2$ . Asignados estos valores, lo que nos resta es observar a través de un benchmarking, el precio al que los principales competidores con los que se enfrenta la empresa ofrecen sus productos ( $P_i^c$ ) y la importancia relativa que cada uno de ellos tiene dentro del mercado ( $\theta_i$ ). Para esto, supondremos que dentro del mercado objetivo de la empresa sólo existen dos principales competidores (piense en una plaza comercial en la que están establecidas tres cafeterías incluyendo la de la empresa), los precios a los que estos competidores ofrecen sus capuchino son  $P_1^c = \$35$  y  $P_2^c = \$32$ , la importancia relativa correspondiente a cada uno de estos competidores dentro del mercado es de  $\theta_1 = 0.65$  y de  $\theta_2 = 0.35$ , esto porque se

considera que el competidor uno tiene un posicionamiento de marca más fuerte con respecto al competidor dos. De esta forma, el precio basado en la estructura de costos-competencia se calcularía de la siguiente manera:

$$P_s = 0.3 * \$29.28 + 0.7 * [(35 * 0.65) + (32 * 0.35)]$$
$$P_s = \$32.55$$

(9)

El precio sugerido al que la empresa podría vender el capuchino es de \$32.55. Para este ejemplo, el precio sugerido por la metodología queda por encima del precio basado en costos (\$29.28), lo que podría darle un pequeño margen a la empresa para establecer su precio final por debajo de los \$32.55, lo que no necesariamente llevaría a la empresa a una guerra de precios insostenibles, puesto que esta baja de precio está sustentada por su propio margen de rentabilidad.

## CONCLUSIONES

En este trabajo se presentó una nueva metodología que puede ser usada por las empresas para establecer el precio de venta de sus productos y que está sustentada, a nivel teórico, en el enfoque de fijación de precios basados en la competencia. Sin embargo, permite a la empresa tomar en cuenta su propia estructura de costos al establecer sus precios, lo que, como mencionamos en el artículo, es una de las principales limitantes teóricas y prácticas cuando usamos el enfoque de fijación de precios basado en la competencia. Se argumentó además que uno de los principales conceptos erróneos al usar el enfoque de fijación de precios basado en la competencia es suponer que la empresa deba de ser precio aceptante, ya que existen muchas empresas, sobre todo en el sector servicios, que se encuentran en una estructura de mercado de *competencia monopolística*, en la que si bien el número de competidores es relativamente grande, existe la posibilidad de diferenciación de producto, lo que debería de llevar a una estrategia de fijación de precios proactiva y no seguidora, aun tomando en consideración a sus competidores.

La metodología aquí presentada, la cual hemos llamado *fijación de precios basado en la estructura de costos-competencia*, pondera el peso que tiene los costos y el markup deseado por la empresa, frente a los precios a los cuales venden sus productos los competidores cercanos. Además, por la forma en que se han redefinido los costos unitarios dentro de este método, nuestro enfoque nos permite acercarnos más al concepto de costo marginal dentro de la toma de decisiones en vez de los costos medios. La metodología promete dar una mucho más adecuada descripción de la relación competitiva entre la empresa y la estructura de mercado en la que se encuentra inmersa, permitiendo al tomador de decisiones utilizar de manera más adecuada la información del mercado con la que cuenta para, finalmente fijar el precio de sus productos.

# LA INDUSTRIA DEL BACANORA, COMO PROPUESTA DE DESARROLLO ENDOGENO EN LA REGION DE DENOMINACION DE ORIGEN

Emma Vanessa Casas Medina, Universidad Estatal De Sonora  
Vidal Salazar Solano, Centro de Investigación en Alimentación y Desarrollo, A. C.

## RESUMEN

*En el presente trabajo, se detalla la situación actual de la industria del Bacanora en el Estado de Sonora, bebida espirituosa típica de la región, de alta graduación alcohólica, es elaborada a base del vegetal denominado científicamente *Agave Angustifolia* Haw. En el cual, se analizaron a los actores directos e indirectos de la cadena de suministro, identificando las fortalezas y áreas de oportunidad que presenta esta actividad, con el objetivo de diseñar una propuesta de una cadena de valor eficiente que permita el repunte de la misma. Se realizó una investigación bibliográfica, entrevistas de profundidad, visitas de campo en las vinatas de aquellos empresarios que contaran con caracterizas formalidad en cada uno de los procesos, así como entrevistas semi estructuradas a instituciones gubernamentales y centros de investigación que se dedican a impulsar el desarrollo endogeno de la región mediante de esta actividad.*

**PALABRAS CLAVES:** Bacanora, Cadena de Suministro y Valor

## BACANORA'S INDUSTRY, AS A PROPOSAL OF ENDOGENOUS DEVELOPMENT IN THE ORIGIN'S DENOMINATION REGION

### ABSTRACT

*This research is intended to detail the Bacanora's industry current situation in the state of Sonora. A typical region's spirit drink, of high alcohol content, is elaborated with a vegetal scientifically named *Agave Angustifolia* Haw. In the study, direct and indirect actors are analyzed, identifying the strengths and the opportunities' areas this activity exhibits, with the purpose of designing a proposal of an efficient value chain that allows the upturn of it. They were realized bibliographical research, profound interviews, field visits to the rustic breweries of the businessmen that had a defined formal process, as well as semi-structured interviews to government officers and investigation centers dedicated to promote the endogenous development of the region through this activity.*

**JEL:** L.16. L26 L.66

**KEY WORDS:** Bacanora, Supply Chain and Value

### INTRODUCCIÓN

El bacanora es una bebida espirituosa derivada del procesamiento y destilación del *Agave Angustifolia*, cuya industria tradicional se desarrolla en treinta y cinco municipios de la sierra en el estado de Sonora, México, la cual está conformada por los todos los actores que participan en la producción, distribución, comercialización y demás actividades, socioeconómicas y culturales vinculadas al aprovechamiento de la misma. La presente propuesta se orienta a la búsqueda de

alternativas económicas para la sierra sonorese, cuyas actividades productivas tradicionales corresponden cada vez menos con la disposición de recursos naturales, y las necesidades básicas de sus habitantes (empleo, ingreso educación, salud, alimentación y vivienda), agudizando las condiciones de pobreza y marginación. Desde otra perspectiva, la industria del bacanora constituye una alternativa a las necesidades de empleo e ingreso para los habitantes de la sierra sonorese, de hecho, está ampliamente documentado que ante la imposibilidad de obtener medios de subsistencia suficientes de su participación en el patrón de acumulación tradicional, los habitantes de esta localidad optan por complementar su ingreso en diversas labores de corte campesino, entre las que destaca como un símbolo de sus tradiciones la elaboración y comercialización de bacanora.

Para dar sentido y orientación al presente trabajo de investigación, fue necesario plantearse las siguientes hipótesis:

*H1: El entorno de una industria caracterizada por la informalidad, dificulta a este grupo de empresas trascender de una especie de espiral que profundiza la discontinuidad en sus procesos productivos.*

*H2: La desorganización de los actores económicos y la desarticulación de sus unidades de negocios dificultan su eslabonamiento y la eficiencia en los procesos de creación de valor y con ello, la posibilidad de apalancar procesos de desarrollo local sustentable en el Área de Denominación de Origen del Bacanora.*

El trabajo está organizado como de la siguiente manera: en la sección de revisión de literatura se encontrará información puntual y precisa sobre los esquemas de desarrollo local, desarrollo endógeno y cadenas de valor. Asimismo, se hace una revisión de las contribuciones que existen de la literatura actual y el cómo abonan al tema de la industria del bacanora; del mismo modo, el presente trabajo de investigación contribuirá a enriquecer aún más el campo literario objeto de estudio. Posteriormente, en la sección de metodología se presentan aspectos relevantes en cuanto a la operatividad de las variables que son estudiadas y analizadas, a partir de un cuestionario estructurado y aplicado a una muestra representativa del total empresarios identificados dentro de los eslabones de la cadena en el estado de Sonora, para identificar sus procesos de producción. Seguidamente, se presentan los resultados de la investigación con base al estudio descriptivo. Finalmente, se presentan las conclusiones, propuestas y las futuras líneas de investigación derivadas del presente trabajo de investigación.

## **REVISIÓN DE LA LITERATURA**

El enfoque de desarrollo local pone énfasis en varias dimensiones, que trascienden el ámbito economicista, con el cual se abordaban anteriormente las explicaciones sobre el proceso de Desarrollo Económico. El desarrollo local se ha ido nutriendo de diferentes corrientes teóricas que han determinado una explicación aproximada sobre dicha cuestión, que tiene como característica una visión ecléctica sobre el análisis, la interpretación y potencialización de los actuales procesos de desarrollo. Son múltiples los factores que motivan emprender un proceso de desarrollo local (Llorens *et al*, 2002); sin embargo, para la realización de esta investigación, se coincide con la posición de Vázquez Barquero (1999), quien señala que este proceso obedece a la crisis o pérdida del dinamismo de un sistema productivo tradicional; así como a la aparición de nuevas oportunidades de mercado. Vázquez Barquero (1999), identifica tres dimensiones territoriales de carácter endógeno, que sustentan y potencian el desarrollo local dentro de un ámbito territorial específico, éstas son: Dimensión endógena de carácter económico, Dimensión endógena de carácter sociocultural y Dimensión endógena de carácter político.

## METODOLOGIA

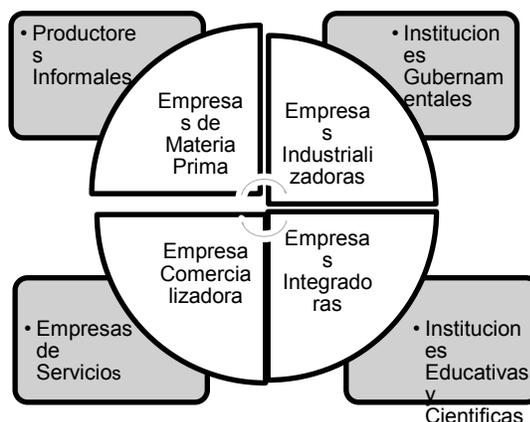

La investigación exploratoria, se desarrolla con el objetivo de proporcionar una visión general del tipo de aproximación, diseñada de manera No Experimental, considerada del tipo transversal-causal y tiene la unidad de medida de veinte y una empresas que en la actualidad, cuentan con algunas características de las empresas formales. 1er grupo Actores Directos: Empresas productoras de materia prima, Empresas Industrializadoras o Transformadoras, Empresas Comercializadoras y Empresas Integradoras. Y el segundo grupo son los actores indirectos, que se consideran a todas aquellas instituciones que de alguna manera han coadyuvado al desarrollo de la industria como son: universidades, centros de investigación e instituciones gubernamentales.

## RESULTADOS

Para la presentación de los resultados de esta investigación, se presentan en dos fases: la primera se hace un estudio de cada uno de los actores de los eslabones participantes de la industria. Y la segunda se realiza un análisis de los procesos de producción del bacanora.

### 1) Actores Directos de la Cadena de Abastecimiento.

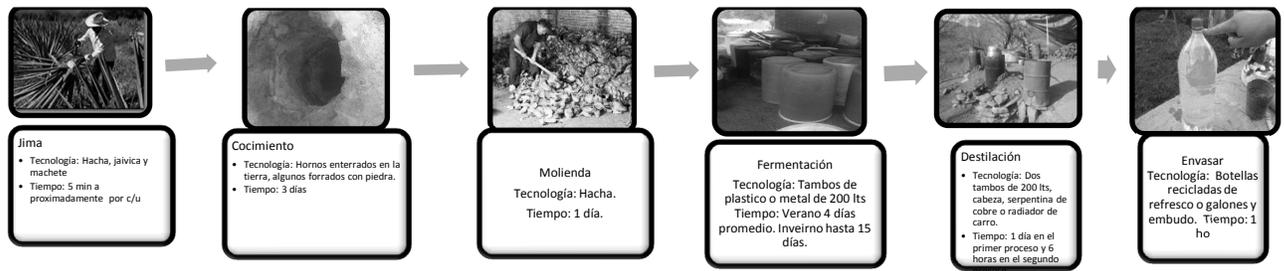

Figura 1: Estructura de la Cadena de Abastecimiento de la Industria del Bacanora

Fuente: Elaboración propia.

En la figura anterior, se muestra todos los actores de la cadena productiva de la industria, tanto directos como indirectos. 2. Segunda Fase de Resultados. A continuación se detalla el proceso de producción tradicional a proceso semi industrial del bacanora. Como se detalla en la figura 2, el proceso de artesanal del bacanora, se compone de seis fases primordiales.

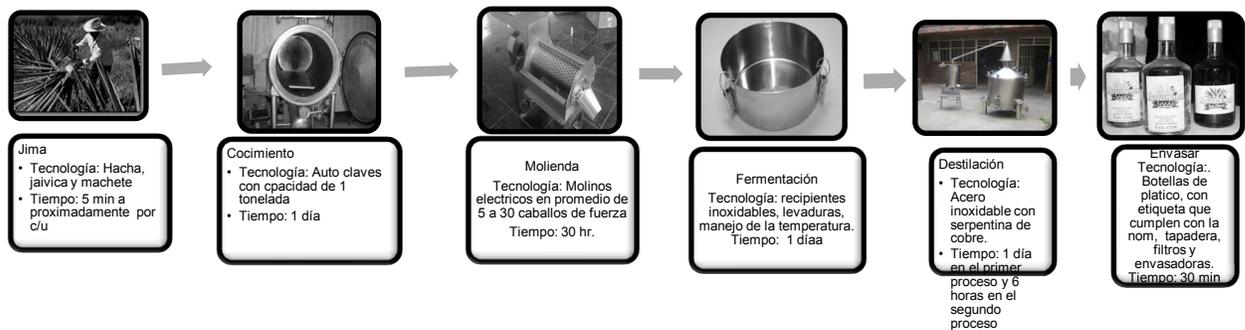

Figura 2: Proceso de Elaboración Artesanal del Bacanora

Fuente: Elaboración propia, en base a la información proporcionada por los productores.

Un cambio el proceso de industrialización que se detalla en la figura 2, se muestra la producción más industrializada, utilizando herramientas que le permiten ahorrar tiempo, recursos y por ende, elevar la productividad.

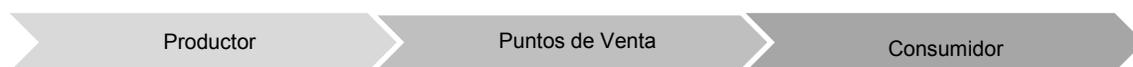

Figura 3: Proceso de Elaboración Semi Industrial del Bacanora

Fuente: Elaboración propia, en base a la información proporcionada por los productores.

Como se detalla en la figura anterior, el proceso del bacanora se puede reducir de 20 días a 5 días, con la incorporación de equipo y técnicas apegadas a la NOMB, lo que permite elevar su productividad y reducir sus costos.. Están generando productos con 32 grados hasta 48 grados de alcohol. Los canales de comercialización han cambiado de manera clandestina e informal a cierto grado de formalidad, debido a que los empresarios cuentan con licencia para producir, trasladar y comercializar bacanora sólo en el municipio de origen, como se detalla en la figura 4.

Figura 4: Canal de Distribución en el Municipio de Origen

Fuente: Elaboración propia, en base a la información proporcionada por la dirección de Alcoholes.

Es decir, sólo podrán distribuirlo en su municipio, o bien si desean exportarlo, pero si pretenden ampliar mercados, el empresario realiza estrategias de venta con restaurantes, bares, distribuidores con la finalidad de utilizar la licencia de éstos. Es importante señalar, que el empresario puede distribuir el directamente su producto en otro lugar de manera directa, pero para lo cual debe de adquirir otra licencia que les permita la comercialización de bebidas alcohólicas, con un consto de 450,000 pesos y el permiso de traslado de 30,000 pesos y en la actualidad solamente tres empresas cuentan con esos permisos. En la tabla 2, se hace un comparativo de la industria del bacanora tradicional, el semi industrializado, el mezcal y el tequila, analizando sus procesos de producción, organización y tecnología.

Tabla 2: el Bacanora y su Proceso de Producción Frente a Otros Mezcales y Regiones

Concepto	Bacanora Tradicional	Bacanora (Artesanal)	Bacanora semi industrial	Tradicional (Mezcal)	Tecnificado (Tequila)
Materia Prima	Agave silvestre recolectado	Agave silvestre recolectado	Agave silvestre y cultivado	Agave cultivado	Cultivo apoyado en selección genética
Cocción	“tatema” de piñas en hornos rudimentario, subterráneos.	“tatema” de piña en hornos rudimentario, subterráneos.	Cocimiento en hornos de autoclave y mampostería.	Cocimiento en hornos de mampostería.	Cocimiento en autoclave, para procesos altamente tecnificados
Molienda	Molienda y desfibrado con mazos o palos de madera.	Molienda y desfibrado en Molino.	Desfibrado del agave cocido con molinos mecánicos y eléctricos (pequeña capacidad)	Desfibrado en molinos mecánicos o tahonas jaladas por bestias	Desfibrado del agave cocido con molinos mecánicos y eléctricos
Fermentación	En barriles rudimentarios de metal (u otros material) con capacidad de 200 litros	En barriles rudimentarios de metal (u otros material) con capacidad de 200 litros	En recipientes cilíndricos de acero inoxidable sellados de alta capacidad. Uso natural de levaduras y control de temperatura	En recipientes cilíndricos o tinas de madera fabricadas expofeso. Uso controlado de levaduras.	En recipientes cilíndricos de acero inoxidable sellados de alta capacidad. Uso controlado de levaduras y cepas.
Destilación	Barriles metálicos, “sombbrero y serpentina” de cobre rudimentarios. calentado a leña	Barriles metálicos, “sombbrero y serpentina” de cobre rudimentarios. calentado a leña	Alambiques de cobre o acero inoxidable con poca capacidad, con uso de leña.	Alambiques de cobre con poca capacidad, con uso de gas.	Alambiques de cobre o acero de gran capacidad, con uso de gas
Escala de la producción	Baja escala destinada a mercado informal y autoconsumo	Baja escala destinada al mercado formal, Bares, Restaurantes)	Baja escala destinada al mercado formal, (Bares, Restaurantes y en poca escala a la exportación)	Mediana escala orientada a un mercado de mayor cobertura.	Alta escala, orientada a un mercado nacional y de exportación.
Vinculación tecnológica	Con esporádica vinculación al sector de ciencia y tecnología	Con incipiente vinculación al sector de ciencia y tecnología	Con incipiente vinculación al sector de ciencia y tecnología	Con relativa vinculación al sector de ciencia y tecnología.	Alta vinculación al sector de ciencia y tecnología

Rendimientos	Rendimientos: 15 a 18 kgs. de agave por litro de mezcal.	Rendimientos: 10 a 15 kgs. de agave por litro de mezcal.	Rendimientos: 8 a 10 kgs. de agave por litro de mezcal.	Rendimientos: 6 a 10 kilogramos de agave por litro de mezcal.	Rendimientos de 6 kilogramos de agave por litro de mezcal

## CONCLUSIONES

La industria de bacanora ha crecido, comprada con la industria artesanal de hace 5 o 10 años, el empresario desgraciadamente hasta hoy, ha generado la conciencia de que se acabaron tanto ellos como cambios climáticos la materia prima y no se puede crecer sin ella, además, entendieron que para que esta industria sea sustentable se debe de cuidar y fomentar con prácticas apegadas a la NOM del bacanora, cuidar las prácticas y procesos de fabricación, realizar alianzas estratégicas con los miembros de la cadena que les permita generar una relación ganar – ganar y por ende, eficientar sus productividad para generar un desarrollo endógeno en sus comunidades. Aceptar la hipótesis de que la informalidad no les permite acceder a recursos financieros y/o capacitación para poder crecer, es así que de tres empresas formales que existían hace cinco años, en la actualidad existen 21 empresas con una identificación clara de su participación en la cadena de suministro y 10 empresas más que se están incorporando a este proceso de formalidad, que la informalidad si les dificulta trascender de una especie de espiral que profundiza la discontinuidad en sus procesos productivos. Se ha comprobado que la desorganización de los actores económicos y la desarticulación de sus unidades de negocios dificultan su eslabonamiento y la eficiencia en los procesos de creación de valor. Sin embargo, al empresario le falta comprender que se puede obtener un producto con altos estándares de calidad y productividad sin sacrificar nuestras tradiciones, que si realmente se quiere participar en mercados tan exigentes como lo es la exportación, deben de saber utilizar sus fortalezas y generar una capacidad de industrialización.

## RESUMEN

*Esta investigación analiza con un diseño cuantitativo experimental el desarrollo tecnológico de detector de Co/humo con protocolo inalámbrico de comunicación i4 en la industria electrónica de México. Para el planteamiento del desarrollo tecnológico, se utilizó la metodología del Plan de Desarrollo del Producto (PDP). Para el desarrollo de los prototipos se utilizó la Metodología del Prototipado Rápido (MPR). Esta metodología se concentró en las fases de definición del problema y la definición de las pruebas funcionales. Para realizar el desarrollo tecnológico se realizaron tres diferentes corridas. La corrida piloto de ingeniería; la corrida piloto de manufactura y; la corrida piloto de aprobación. Para el análisis de las corridas, se utilizó la evaluación del proceso de ensamble de SMD, el bill de materiales, el programa de corrida en línea y las pruebas de ingeniería de diseño. Para el análisis de los estudios de confiabilidad y reproducibilidad se utilizó el paquete estadístico MiniTab. Este paquete de análisis estadístico permitió realizar diseños de experimentos, evaluar el control estadístico del funcionamiento del equipo y su consecuente validación. El presente estudio provee apoyo empírico para las empresas y los investigadores en el desarrollo tecnológico y la innovación. Este proyecto se llevo a cabo a través del apoyo de Conacyt en México. Uno de los elementos fundamentales fue el de desarrollar innovación abierta.*

**PALABRAS CLAVE:** Desarrollo tecnológico, prototipos, productos electrónicos.

## TECHNOLOGICAL DEVELOPMENT OF SMOKE/CO DETECTOR WITH i4 WIRELESS COMMUNICATION PROTOCOL

### ABSTRACT

This research analyzes with a quantitative experimental design the technological development of a smoke/CO detector with wireless communication protocol of i4 in the electronics industry in Mexico. The approach for the technological development, was the methodology of Product Development Plan (PDP). For the development of the prototypes we used the Rapid Prototyping Methodology (MPR). This methodology is focused on the phases of problem definition and the phase of definition of the functional tests. For the technological development were used three different runs. The engineering pilot run, the manufacturing and pilot run and, the approval pilot run. For the analysis of every runs, we used the assessment SMD assembly process, the bill of materials, the online program run, and the design engineering tests. For the analysis of the reliability and reproducibility studies we used the MiniTab package. These statistical analyses allowed create the design of experiments, statistical control evaluation of the equipment

performance and its subsequent validation. This study provides empirical support for businesses and researchers in technological development and innovation. This project was carried out through the support of CONACYT in Mexico. One of the key elements was the development of open innovation.

## INTRODUCCIÓN

El presente estudio tiene como objetivo, el de plantear temas de discusión que eventualmente conduzcan al desarrollo e implantación de estrategias efectivas para fortalecer la innovación en las empresas y fortalecer la vinculación con las instituciones de educación superior en México. Una de las conclusiones de este trabajo, es el de superar el reto de la falta de articulación entre los actores del sistema de innovación. Una de las grandes incógnitas de la tecnología se encuentra en su evolución, en su desarrollo, su importancia radica en la dirección en que las tendencias de la técnica y la tecnología tomarán a futuro y la preocupación del hombre, si ese cambio o transformación lo podrá controlar a voluntad o simplemente tendrá que aceptarlo tal cual fuere su desarrollo de manera autónoma. Cuando se aborda la administración de operaciones existen varias vertientes. En cuanto a la innovación, la mayoría de los investigadores y teóricos están de acuerdo en que la innovación se basa en las ideas creativas como los elementos básicos.

La creatividad, se puede pensar en cómo tener la capacidad o el poder de ser imaginativo, novedoso y original. Por lo tanto, la innovación organizacional es la implementación exitosa de ideas creativas dentro de una organización. Dentro de esta definición, las ideas en cuestión pueden ser cualquier cosa, desde ideas para nuevos productos, procesos o servicios en línea de la organización de las empresas, a las ideas de los nuevos procedimientos o políticas que tengan aplicación dentro de la propia organización. Y el término "aplicación" es muy crítico, que abarca los elementos de desarrollo de nuevas ideas y la puesta en uso. El Consejo Nacional de Ciencia y Tecnología (CONACYT), apoya a las empresas en el programa de estímulos a la investigación, desarrollo tecnológico e innovación. Proyectos que por su trascendencia e impacto tecnológico son considerados de alto nivel científico y tecnológico. Dicha trascendencia debe ir más allá de simplemente mejorar un producto o proceso. La innovación debe considerar aportar algo nuevo al mercado y las necesidades de las empresas y en este punto no solo basta ser creativo, se debe ser innovador. Esta parece ser la diferencia clave entre la innovación y la creatividad, aunque algunas definiciones anteriores de la innovación son prácticamente idénticas a las de la creatividad. No existe ninguna mención del componente de aplicación en la definición de la innovación. Por ejemplo, Drucker (1985) define la innovación sistemática simplemente como la "búsqueda intencionada y organizada para los cambios", mientras que Zahman, Duncan y Hobeck (1973) lo definen como "una idea, práctica o material de un artefacto percibido como nuevo por una unidad competente de la adopción y que es parte de su planeación estratégica".

Uno de los elementos fundamentales en System Sensor de México sobre planeación estratégica es la innovación. La innovación en empresas de vanguardia, es más que tan sólo un ideal, la innovación es una forma de vida. Todos los días, se trabaja con el objetivo de diseñar nuevos productos que aprovechan las más innovadoras tecnologías de la manera más ingeniosa. Productos cuya instalación sea más fácil y su operación más eficiente; productos que les brinden a los clientes el más alto nivel de confiabilidad. El nuevo paradigma de la innovación es la innovación abierta, término acuñado en la Universidad de Berkeley. La innovación abierta es el

uso intencional de conocimiento generado dentro y fuera de la organización, para acelerar la innovación en la empresa y ampliar la penetración en los mercados. Este paradigma supone que las empresas pueden y deben usar tanto las ideas generadas internamente, como aquellas provenientes del entorno, además de utilizar caminos para llegar al mercado.

Este paradigma supone que las empresas pueden y deben usar tanto las ideas generadas internamente, como aquellas provenientes del entorno, además de utilizar caminos para llegar al mercado. Uno de los factores que han conducido al desgaste de la innovación cerrada es la movilidad y disponibilidad de recursos humanos con conocimientos y habilidades de investigación. Como resultado de ello, se producen una gran cantidad de conocimientos fuera de los laboratorios de investigación de las grandes empresas.

La posibilidad de desarrollar ideas y tecnologías fuera de la empresa en forma de spin offs o mediante acuerdos de vinculación está creciendo. Otro aspecto importante dentro de la administración de operaciones, es la colaboración cada vez más cercana que entablan las empresas con las instituciones de educación superior y los centros de investigación y desarrollo tecnológico, para activar la transferencia de tecnología que brinde insumos a la innovación. En este proyecto se utilizó la vinculación con el ITESM en apoyo a las actividades de asesoría y consultoría del proyecto, así como en el impulso al desarrollo de recursos humanos especializados. Esta investigación se presenta organizada como sigue. En la sección de revisión literaria, una discusión de la literatura relevante es presentada. En este apartado se clarifica la innovación, se aborda el constructo de la innovación tecnológica y su relación con el desarrollo tecnológico. Finalmente, en esta sección se relata la historia del nacimiento de los detectores de humo. Se presenta y justifica la metodología utilizada para generar el desarrollo tecnológico innovador. Los resultados obtenidos se presentan describiendo las características del desarrollo tecnológico. El apartado de conclusiones presenta la discusión crítica de los resultados obtenidos.

## REVISIÓN DE LITERATURA

La mayoría de las definiciones de innovación incluyen el "desarrollo e implementación" de la nueva dimensión de las ideas. Van de Ven (1986), es bastante explícito sobre el papel tanto del individuo y de la organización al describir la innovación como el desarrollo e implementación de nuevas ideas por personas que se involucran en transacciones con otras personas dentro de un orden institucional. La innovación también se ha definido como "la exitosa producción, asimilación y explotación de la novedad en los ámbitos económico y social, ofreciendo nuevas soluciones a los problemas y por lo que es posible para satisfacer las necesidades tanto de las personas" (Comisión Europea, 1995).

Kanter (1983) define la innovación como un proceso de traer alguna idea para resolver problemas nuevos en uso. El mismo autor señala que la innovación es la generación, la aceptación y la aplicación de nuevas ideas, procesos, productos o servicios. Damanpour (1991) define la innovación como un medio de cambio de una organización, ya sea como respuesta a los cambios en su entorno interno y externo o como una actividad preventiva para influir en que el medio ambiente. La innovación también se ha definido como la adopción de una idea o de la conducta, ya sea perteneciente a un dispositivo, sistema, procedimiento, política, programa, producto (Aiken y Hage, 1971; Daft, 1982; Zaltman, Duncan, y Holbeck, 1973).

La innovación no puede entenderse sin una cuidadosa atención a los contextos personales, organizativos, tecnológicos y ambientales en las que se desarrolla (Tomastzky y Fleischer, 1990). Recientemente, sin embargo, ha habido cierta convergencia entre los estudiosos de innovación que se indica en tres vertientes: la primera, que no puede haber una teoría de la innovación, ya

que cuanto más aprendemos, más nos damos cuenta de que "el todo" queda fuera de nuestro alcance. La segunda establece que existen varias teorías adecuadas, circunscritas de la innovación, pero que se aplica en diferentes condiciones y una tercera que considera que el esfuerzo investigador debe estar dirigida a la determinación de las contingencias que determinan cuándo se aplican diversas teorías de innovación en tecnología (Abrahamson, 1991; Eveland, 1991, Mohr, 1987; Poole y Van de Ven, 1989; Tomatzky y Fleischer, 1990, Van de Ven y Rogers, 1988). Una de las grandes incógnitas de la tecnología se encuentra en su evolución, en su desarrollo, su importancia radica en la dirección en que las tendencias de la técnica y la tecnología tomarán a futuro y la preocupación del hombre, si ese cambio o transformación lo podrá controlar a voluntad o simplemente tendrá que aceptarlo tal cual fuere su desarrollo de manera autónoma. Este asunto ha presentado a lo largo del tiempo diversas posturas para su análisis, las cuales serán señaladas a continuación, pero no estarán agotadas, solamente servirán de sustento para estructurar el planteamiento que se mantiene a lo largo del trabajo.

Una primera postura plantea la división entre desarrollo tecnológico interno (endógeno) que se refiere según Quintanilla (1991) a la mejora de la eficiencia de un proceso, la fiabilidad de los artefactos, dispositivos, partes, etcétera, o al funcionamiento en términos generales de la maquinaria como mecanismo eficiente. Este planteamiento considera a la tecnología exenta de carga valorativa, ajena al proceso de implantación entre usuario y proceso tecnológico. Su función es ser cada vez más útil a partir de los propios parámetros del proceso (Blanco, 2008). Esta categoría sería de corte instrumentalista, de mejora continua, de diálogo ingenieril, de carencia cultural y social. En otro sentido estaría el desarrollo tecnológico externo (exógeno) que apela a su implantación, uso y consumo, pero incluyendo al usuario, y abarca factores sociológicos, económicos, culturales, sociales y hasta demográficos. En este último sentido, la lista sería larga ya que se incluirían tantos ámbitos como implicaciones tiene la tecnología (Blanco, 2008). El desarrollo tecnológico también puede ser analizado por ser acumulativo, es decir, los avances en este sentido podrán ser poco significativos pero alineados en cierta dirección que permitirá acumularse o agruparse alrededor de un cierto campo tecnológico específico. Su contraparte será el desarrollo a saltos, "el salto a la oscuridad" que señala Schumpeter (1975), este cambio en el desarrollo tecnológico se encuentra motivado en la mayoría de las ocasiones por el progreso técnico, la innovación, la invención, el diseño, la adaptación, entre otros.

Para Schumpeter (1995), la forma básica de la innovación es cualitativa y discontinua, es un cambio que surge desde adentro de los sistemas establecidos (desarrollo endógeno), pero que desplaza el punto de equilibrio anterior (exógeno) y trata de establecer uno nuevo que no tiene comparación con el anterior. En este sentido es compartido el desarrollo tecnológico tanto endógeno como exógeno. Comparten atributos que permite implantar nuevo conocimiento a lo ya existente y de ahí derivar un nuevo proceso técnico.

Quintanilla (1991), afirma que existe una lógica del desarrollo tecnológico, el cual se regula por "el imperativo de innovación constante". Esto quiere decir que la innovación no es un accidente en la historia de la técnica, sino una constante. el desarrollo tecnológico implica por un lado, una sucesión de conocimientos alineados de tal manera que se pase de uno a otro de forma racional, lógica y natural. Por el otro, el desarrollo tecnológico obedece a cambios bruscos, discontinuos, saltos, los avances son de carácter cualitativo ya que son internos y desplaza al conocimiento anterior para implantar un nuevo conocimiento vigente. La diferencia entre técnica y tecnología es que la técnica avanza gracias a la sucesión de procesos y conocimientos encadenados, mientras que la tecnología cambia cualitativamente por saltos y por nuevo conocimiento, no necesariamente acumulado.

Precisamente estos cambios en tecnología son los que exigen revoluciones tecnológicas en diferentes industrias y empresas. Una de las industrias que registra constantes desarrollos innovadores es la de la detección de incendios y alarmas contra incendio. Desde el primer gran incendio en Roma en el año 64 D.C., hasta los incidentes actuales que son notificados a diario en los medios de comunicación, la humanidad ha sufrido innumerables incendios. Las consecuencias y reacciones, independientemente de los cuantiosos daños personales y materiales, ha sido generar métodos y tecnología para evitarlos, detectarlos y combatirlos. Un hito significativo de la detección es el gran incendio en Londres en el año 1666, en el que la ciudad adoptó un ‘código completo de regulaciones sobre edificios’, mediante el cual se intentó prevenir las posibles causas que causaron la catástrofe. Fue a partir de ese momento, cuando surgieron los primeros detectores contra incendios; estos fueron utilizando los avances tecnológicos del momento para evolucionar y convertirse en los elementos que conocemos actualmente.

En 1902 George Andrew Darby, ingeniero eléctrico de Birmingham, Inglaterra, patentó el indicador eléctrico de calor y la alarma de incendios. El aparato indicaba cualquier cambio de temperatura en el lugar en donde estaba colocado. Funcionaba mediante un circuito eléctrico que se cerraba si la temperatura superaba un límite, haciendo sonar una alarma. Básicamente es el principio de funcionamiento de los termostatos. Desde 1980, la evolución de los sistemas de incendio ha estado ligada a los avances en los micro controladores. Actualmente, gracias a las nuevas capacidades de estos componentes, se pueden diseñar sistemas de detección contra incendio más pequeños, fiables y con mucha más funcionalidad que sus predecesores. Tradicionalmente los sistemas de detección son diseñados de manera independiente para cada tipo de gas, así como de manera independiente en cuanto a los mecanismos de alerta. Los sistemas de calefacción que utilizan gas, los calentadores de agua y otros sistemas de combustión en edificios, centros comerciales, cines, etc., están propensos a ser mal calibrados o a la variación de la calidad del mismo gas que puede ser de mayor cantidad de BTU's, lo que puede dar origen a la generación del monóxido de carbono. El monóxido de carbono es un gas incoloro e inodoro y en altas concentraciones es mortal para la vida humana.

Los detectores de humo y de monóxido de carbono (CO) son dispositivos que tienen como función principal detectar, alertar y favorecer la emisión de señales de sonido y luminosas que permitan salvar las vidas de las personas que pudieran estar siendo intoxicadas con el gas. El problema de estos dispositivos en el mercado, es que la gente decide comprar e instalar solo uno, corriendo riesgos al no poseer la doble detección. Otros de los aspectos, es el de asegurar el adecuado funcionamiento de un mecanismo dual y que posea comunicación inalámbrica con paneles de control, que puedan avisar del riesgo que se presenta ante la presencia de CO y humo. De acuerdo con el marco teórico presentado aquí, este estudio presenta las siguientes preguntas de investigación:

*¿Las capacidades tecnológicas actuales permiten desarrollar un detector de humo y de monóxido de carbono de comunicación i4?*

*¿Las capacidades tecnológicas actuales permitirán desarrollar prototipos de detector de humo y de monóxido de carbono con comunicación i4?*

Una de las dificultades más importantes que tienen que superar las empresas en sus procesos de innovación tecnológica es ajustar sus proyectos a las expectativas del mercado. Existe una combinación muy valiosa de experiencia, conocimientos y liderazgo en México, los cuales no han sido resaltados por estas organizaciones en beneficio de la competitividad e innovación tecnológica en México.

## METODOLOGIA

Esta investigación aplicada es de campo y utiliza un diseño experimental para el desarrollo de prototipos funcionales de detectores de humo y monóxido de carbono con protocolo de comunicación i4. La información obtenida se generó a partir del proyecto de innovación tecnológica apoyado por Conacyt en la empresa System Sensor del Estado de Chihuahua, México y perteneciente al corporativo Honeywell.

Esta propuesta representa innovar en el ámbito más importante de la detección de incendios, los sistemas “inteligentes” al integrar la comunicación i4 inalámbrica. Esto es, redes de detectores cuyos componentes entablan una comunicación bidireccional inalámbrica con el panel de control, analizan entornos complejos, ajustan sus propios niveles de sensibilidad, y toman decisiones “educadas” basándose en la información almacenada. Conforme a los elementos planteados, se estableció el siguiente objetivo general:

- a) *Diseñar y desarrollar detector innovador de CO/humo con protocolo inalámbrico de comunicación i4 a nivel prototipo, para aumentar su posicionamiento en el mercado.*

Este proyecto utilizó la Metodología de Prototipado Rápido, MPR, la cual está orientada al desarrollo de prototipos y fuertemente apoyada en tecnología de Bases de Datos y herramientas visuales para Desarrollo Orientado a Componentes. En MPR se concentró un gran esfuerzo en dos fases fundamentales: la definición del problema que se va a abordar y en la ejecución de las pruebas, donde además se potenció el uso de lenguajes de cuarta generación utilizados como lenguajes de consulta para verificar la estructura y funcionalidad del prototipo desarrollado, asegurándose de que su diseño responde a las definiciones especificadas. Un prototipo es un modelo inicial de lo que al final se corresponderá con el modelo definitivo y sus procedimientos asociados. Este prototipo se someterá a pruebas para comprobar su funcionalidad, de las que surgirán modificaciones que darán origen a un segundo prototipo, versión mejorada y posiblemente ampliada del primero, el cual se volverá a probar, repitiéndose sucesivamente el proceso hasta alcanzar el prototipo definitivo.

Para el análisis de los estudios de confiabilidad y reproducibilidad se utilizó el paquete estadístico MiniTab. Este paquete de análisis estadístico permitió realizar diseños de experimentos, evaluar el control estadístico del funcionamiento del equipo y su consecuente validación. Las fases son descritas en el diagrama y son ampliadas posteriormente. Fase 1: Definición de especificaciones Esta primera fase tiene por objeto auditar la información de relativa al problema, con el fin de recabar todos los datos necesarios para su resolución. Fase 2: Diseño Conceptual El objetivo de esta fase es construir un modelo de información que refleje el esquema conceptual del prototipo. Es muy importante que este modelo esté lo más ajustado posible a la realidad para que el diseño posterior pueda cumplir con sus objetivos. Fase 3: Desarrollo del Prototipo Como su nombre indica, esta fase tiene por objeto la construcción del primer prototipo operativo de la Aplicación. Fase 4: Pruebas del Usuario En esta fase se realizaron todas las pruebas necesarias para validar el prototipo desarrollado en la fase anterior. Fase 5: Implantación En esta fase se ejecutaron el Plan de Formación y se llevó a cabo el proceso de migración al entorno de ejecución real de la aplicación. Una vez completada la migración, se realizaron las pruebas finales y se llevaron a cabo las actividades correctivas finales, revisándose de paso toda la documentación del proyecto. Fase 6: Auditoría y Seguimiento Se identificaron parámetros de rendimiento, compromisos de uso / respuesta, verificar la calidad global de la aplicación y efectuar las medidas correctivas oportunas.

## RESULTADOS

En ésta sección, se presentan a detalle los resultados obtenidos. El propósito de este proyecto fue el de diseñar y desarrollar tecnología innovadora de detectores de humo/CO<sub>2</sub> con protocolo de comunicación inalámbrica i4. El primer paso fue el de la investigación y experimentación de las especificaciones funcionales y de diseño. Dicho proceso permitió establecer las características mecánicas a través del proceso de análisis de modos de falla. El segundo paso fue la determinación de los requerimientos para lograr el protocolo de comunicación i4. Se diseñó la tablilla electrónica de control y se procedió a realizar las corridas piloto para el análisis de fallas. A la vez se diseñó el equipo de prueba y laboratorio para desarrollar la capacidad tecnológica de análisis de confiabilidad y validez de productos con protocolo de comunicación i4. Uno de los aspectos fundamentales del desarrollo tecnológico actual fue realizar innovación abierta. La innovación abierta permite a las empresas aprovechar las capacidades de investigadores y estudiantes de las instituciones de educación superior.

Este proyecto se llevó a cabo mediante innovación abierta. Estudiantes de nivel Maestría fueron incorporados al proyecto y participaron activamente en las actividades de innovación del desarrollo tecnológico de detector de humo/CO<sub>2</sub>. De la misma manera, se contribuyó a formar recursos humanos especializados de nivel de licenciatura. Estudiantes de Ingeniería en Mecatrónica participaron en las actividades de apoyo al departamento de diseño. De esta manera, se fortaleció la innovación abierta al llevar a cabo acuerdos de redes de colaboración con las instituciones de educación superior en México. La participación de investigadores, docentes y estudiantes en este caso, por parte del ITESM, representó una contribución a la formación de recursos humanos y al fortalecimiento de las capacidades profesionales, tanto de la IES como de los miembros de nuestra empresa.

El tercer paso consistió en evaluar el desempeño y validación del sistema de desarrollo tecnológico del detector de humo/CO<sub>2</sub>. Para ello, se realizaron estudios de funcionabilidad del detector de humo/CO<sub>2</sub> y pruebas piloto de funcionalidad, reproducibilidad y repetitibilidad del producto. Las pruebas realizadas permitieron determinar la alta confiabilidad del producto. Una vez desarrollado el producto tecnológico de detectores de humo/CO<sub>2</sub> con protocolo de comunicación i4, se puede determinar de la inversión inicial de 2.7 millones de pesos, producirá un beneficio de \$31 millones de pesos al año. Por lo que considerando un periodo de tres años y una tasa de descuento del 9%, el valor presente neto será:

$$VPN = 31MM / (1 + .09) + 31MM / (1 + .09)^2 + 31MM / (1 + .09)^3 - 2.7MM = 75.78MM$$

Este análisis permite determinar que las empresas que dedican esfuerzos a la investigación y a la innovación alcanzan beneficios altamente competitivos. En los tiempos actuales, en que las tecnologías se renuevan cada vez más rápido, la innovación es la herramienta fundamental de supervivencia económica de las organizaciones. Uno de los indicadores financieros más adecuados para determinar la factibilidad de un proyecto lo representa el retorno de la inversión (ROI). De acuerdo a los beneficios estimados de \$31MM; utilizando una tasa de descuento del 9% y una inversión inicial de \$2.7 MM. El análisis de este indicador, conforme a las proyecciones establecidas en la evaluación económica, es presentado a continuación:  $ROI = 31MM / 1.09 / 2.7 = 1055\%$  Considerando la inversión inicial y los beneficios esperados se puede considerar este proyecto como altamente redituable. Por tanto, el periodo de recuperación de la inversión de acuerdo a la inversión realizada que será de 2.7 millones de pesos y un beneficio esperado anual de \$31 millones de pesos, se puede calcular de la siguiente manera:  $P = 2.7 / 31 =$

.087 Esto nos indica que el periodo de recuperación de la inversión es de 32 días, lo que lo convierte en altamente redituable.

## CONCLUSIONES

El presente estudio planteó el diseño y desarrollo tecnológico de un detector de humo/CO<sub>2</sub> con protocolo de comunicación inalámbrica i4. El objetivo se alcanzó, diseñando un detector con las características que demanda un mercado cada vez más cambiante. Destacar la gran capacidad técnica-tecnológica de los ingenieros y desarrolladores mexicanos es completamente válido. México desde hace tiempo se ha convertido en un referente en cuanto a innovación de procesos y productos.

Desafortunadamente, muchos de los esfuerzos y éxitos de las empresas se quedan guardados en los escritorios, archiveros y equipo de cómputo de las empresas. Este trabajo pretende alentar los procesos de transferencia de tecnología para la innovación. Actualmente, los programas institucionales como los que maneja Conacyt en México para estimular la innovación son gratificantes. El objetivo de divulgar este proyecto, es de motivar a las empresas con elementos concretos para que dentro de nuestro sistema de innovación, encuentren caminos para vincularse y concreten con éxito sus proyectos de innovación tecnológica. Para sostener la competitividad, las empresas de México deben mejorar constantemente su desempeño teniendo muy claro que el mercado es el mundo y no solo el país o la región donde se encuentran. Por tanto, la estrategia de innovación es una parte esencial y obligada de la planeación estratégica de un negocio. En la actualidad, la acumulación de ventajas con base en la innovación es un requisito indispensable para el posicionamiento en el mercado y para escalar posiciones en la escala global. Las instituciones de educación superior deberán desarrollar un rol más proactivo en su relación con la industria, el planteamiento es puntual para las IES: matrimonio o divorcio.

Si pretenden involucrarse en el proceso de innovación y maximizar los resultados de investigación y desarrollo en beneficio del aparato productivo y de la sociedad en general, entonces deberán optar por el matrimonio. Como tal requiere de establecer relaciones y constante comunicación. Si se opta por el divorcio, las IES seguirán sin alcanzar la competitividad educativa que exigen los tiempos actuales. La falta de competitividad es el principal problema que afecta a México, lo cual se refleja en que nuestro sistema de innovación no está suficientemente consolidado para ser el motor de la productividad y del crecimiento de la economía nacional. Por ello, se debe buscar conjuntar los esfuerzos de las empresas, de las instituciones de educación superior y del gobierno para coordinar acciones, que contribuyan a impulsar el dinamismo a nuestro sistema de innovación y asegurar un crecimiento económico sustentable en todo el país.

## RESUMEN

*Esta investigación analiza con un diseño mixto el desarrollo del liderazgo en tiempos de cambios radicales en las empresas de manufactura en México. El diseño cuantitativo incluyó el estudio de la cultura organizacional. Dicho contexto sirvió de base para las entrevistas individuales que representa la parte cualitativa del estudio. Este estudio utilizó un alcance fenomenológico para la parte cualitativa y el instrumento de Cameron y Quinn para la evaluación de la cultura organizacional en sus dos dimensiones, para la parte cuantitativa. Para el análisis de las entrevistas se utilizó un proceso de codificación mediante el software nVivo. Para la evaluación cuantitativa, se evaluaron seis categorías, los cuales representan atributos de una cultura. Cada uno de los atributos fue analizado a través de la prueba de Chi cuadrada a fin de determinar su significancia. Los resultados de esta investigación demuestran y confirman la naturaleza integral e interdependiente de los conceptos clave que se utilizan como fundamentos teóricos para el estudio de las influencias de la cultura organizacional y el entorno operativo en el desarrollo del liderazgo. Las implicaciones prácticas de los resultados son sujetas a discusión. Las oportunidades para futuras investigaciones y las limitaciones del estudio son presentadas.*

**PALABRAS CLAVE:** Liderazgo, desarrollo organizacional, cambio organizacional.

## LEADERSHIP DEVELOPMENT DURING RADICAL ORGANIZATIONAL CHANGE

### ABSTRACT

*This research analyzes with a mixed design the leadership development during radical organizational changes in manufactures companies in Mexico. The quantitative design includes the analysis of the organizational culture. This context provided the basis for individual interviews representing the qualitative part of the study. This study used a phenomenological scope for the qualitative design and for the quantitative design, the instrument of Cameron and Quinn for assessing organizational culture in its two dimensions. For the analysis of the interviews we used a coding process using the software NVivo. For the quantitative evaluation, we evaluated six categories, which represent attributes of a culture. Each of the attributes was analyzed using Chi-square test to determine their significance. The results of this research demonstrated and confirmed the integral and interdependent nature of the key concepts that are used as theoretical foundations for the study of the influence of organizational culture and operating environment in the development of leadership. The practical implications of the results are subject to discussion. The opportunities for future research and the limitations of the study are presented.*

## INTRODUCCIÓN

Una parte importante de la responsabilidad de un líder es garantizar la existencia de una organización, que pueda llevar a cabo la misión y la estrategia de apoyo a la visión del líder (Bass, 1985). Buscando garantizar una sucesión efectiva de liderazgo, el mejor líder desarrolla individuos talentosos que pueden asumir roles de liderazgo en el futuro. Existen una variedad de factores que pueden afectar el éxito de las actividades de desarrollo de liderazgo. Este estudio se centra en dos de esos factores en el contexto organizacional, la cultura organizacional y la estrategia de negocio, o la respuesta de la empresa a su entorno operativo. El contexto cultural de la organización impulsa el lado humano de desarrollo de liderazgo, mientras que el entorno operativo impulsa el componente técnico de desarrollo de liderazgo. Durante décadas, los investigadores han observado que la gestión de la cultura de la organización es, o debería ser, la función principal del director o gerente de la empresa (Schein, 1985).

Varios autores han señalado el importante papel que el liderazgo transformacional tiene para conseguir un cambio organizacional (Bass, 1985; Burns, 1978; Sashkin y Rosenbach, 2001). Numerosos instrumentos se han desarrollado para clasificar y medir las características clave de la cultura organizacional (Cameron y Quinn, 1999; Cooke, 1997; Ridgway, 2001; Sashkin, 1995). Muchos también han tomado nota de la gestión de la cultura en la organización como un componente importante del desarrollo de los futuros líderes cuando se hace de una manera que refuerza y mejora los aspectos positivos de la cultura organizacional (Sashkin y Rosenbach, 2001; Vaughan y Weisman, 2003). Como líderes de las actividades de desarrollo del diseño para el liderazgo futuro, se debe tener en cuenta tanto la cultura, como la organización y el entorno operativo (Conger, 2004).

Los líderes se enfrentan a la tarea de asegurar que el diseño de un programa de desarrollo de liderazgo sea eficaz para producir futuros líderes exitosos, y esa responsabilidad incluye dar prioridad a los diversos factores en el proceso de desarrollo (Lord y Hall, 2005). Sin una clara comprensión de las implicaciones de sus prioridades en el proceso de desarrollo, los líderes actuales de la organización no podrán desarrollar con eficacia las nuevas generaciones de líderes que tengan el necesario equilibrio de la comprensión cultural y habilidades de liderazgo técnico.

Varios autores señalan el importante papel que juegan los líderes y gerentes en la definición y que afectan a la cultura deseada de la organización; sin embargo, los participantes en el proceso de desarrollo del liderazgo parecen tener claro el papel que deben tener como líderes en la formación de esa cultura, y lo que la cultura debe ser (Sashkin y Rosenbach, 2001; Schein, 1985; Sharkey, 1999). Este estudio pretende analizar la relación entre el liderazgo y la cultura organizacional en las pymes en Ciudad Juárez, Chihuahua, México. Esta investigación se presenta organizada como sigue. En la sección de revisión literaria, una discusión de la literatura relevante es presentada. En este apartado se clarifica el liderazgo y la cultura organizacional. Se aborda el papel de los líderes en el establecimiento del clima organizacional y se presenta la discusión teórica del líder y su influencia en el desarrollo de los empleados. Se presenta y justifica la metodología utilizada para determinar la influencia del comportamiento del líder en el desarrollo de los recursos humanos. Los resultados obtenidos se presentan realizando por una parte las pruebas estadísticas y su

significancia estadística. Por otra parte, en la parte cualitativa se destacan los elementos fundamentales de las entrevistas. El apartado de conclusiones presenta la discusión crítica de los resultados obtenidos, las limitaciones del estudio y las recomendaciones para futuras investigaciones.

## REVISIÓN DE LITERATURA

Generalmente se utiliza la palabra líder para designar a quien destaca en una área, en una empresa, en una comunidad (Hernández, Gallarzo y Espinoza, 2011). Para que un líder pueda conseguir las metas y los objetivos de cualquier proyecto, lo primero que debe hacer, es cultivar las características que le garanticen una empatía entre él y sus seguidores (Hernández et. al, 2011). Las grandes corporaciones, universidades y centros de investigación y desarrollo, identifican el perfil del líder actual como multidimensional; sin embargo, frecuentemente solo eligen aquellos con un liderazgo parcial, es decir, que reflejan competencia en una sola dimensión, no en todas las que se requiere. Dotlich y Cairo (2006), abordan este interesante enfoque y afirman que un líder completo, tal como lo demandan las organizaciones actuales, necesita identificar sus talentos naturales y saber lo que está mayormente predispuesto. Drucker (1996), afirma que el liderazgo tiene que surgir de la responsabilidad. El buen liderazgo no lo demuestran los logros del líder, sino lo que pasa después que éste abandona el escenario. El liderazgo es hacer cosas, considerar el liderazgo y dirección por separado no tiene ningún sentido. Investigaciones de expertos actuales tienden a señalar que el liderazgo es un proceso educativo que pueden usarlo los colaboradores que deseen transformarse (Sternberg, 2003). Para reforzar la hipótesis de que el talento no lo es todo, sino que el liderazgo es un proceso que se puede enseñar y desarrollar, accesible a todo colaborador que manifieste el deseo de aprenderlo y realice esfuerzos comprometidos para tal fin, se puede mencionar el efecto “Pígalión”. Merton (1948), establece que es el proceso mediante el cual las creencias y expectativas de un individuo o grupo respecto a alguien, afectan su conducta a tal punto que se provoca en el individuo o grupo la confirmación de dichas expectativas.

Rickards (1999), comenta que al principio, en la mitología, los líderes eran semejantes a dioses inspirados por ellos, o incluso dioses que desempeñaban cierto drama terrenal. Agrega, durante la mayor parte de la civilización documentada, el liderazgo se aceptaba ampliamente como un don concedido por Dios, que enaltecía a los pocos escogidos. Weber (1977), clasifica en tres categorías las formas de dominación legítima: autoridad legal, autoridad tradicional y autoridad carismática. El autor considera el carisma como la cualidad que pasa por extraordinaria de una personalidad, por cuya virtud se le considera en posesión de fuerzas sobrenaturales o sobrehumanas.

McClelland (1975), establece que repetidamente se ha descubierto que los líderes no son tanto nacidos, sino hechos. Generalmente, en los lugares en donde la gente siente que no hay mucho potencial de liderazgo, existe un gran potencial, incluso entre gente que nunca ha pensado en sí misma como líder, o intentado influenciar a otros de cualquier forma. Por su parte Conger y Kanungo (1988), afirman que existe una seria escasez de liderazgo en la industria. Los gerentes han sido entrenados y socializados para ser administrados, no líderes. Senge(1998), afirma que nuestra perspectiva tradicional de los líderes como personas especiales que marcan el rumbo, toman las decisiones cruciales y arregan a las tropas, está profundamente arraigada en una visión del mundo individualista y asistémica.

Los hermanos Boyett (1999), sostienen que probablemente el tema más popular en toda la literatura sobre el mundo de las empresas es el liderazgo. Tres cuartas partes de las empresas del

mundo, envían gente a tomar cursos de liderazgo. Sternberg (2003), comenta que para ser un líder eficaz, no se necesita ser un “líder nacido”, sino más bien poseer tres elementos: sabiduría, inteligencia y creatividad. Goleman y Daniel (2004), señalan que los líderes no nacen, se hacen. Durante los últimos años, muchos autores se han interesado en desarrollo del liderazgo en tiempos de cambio. La influencia que un líder puede ejercer en la cultura de una organización depende del tipo de líder del que se trate. Si es el fundador de la organización, si ejerce su labor en el marco de una organización ya consolidada, o si la organización atraviesa un periodo de crisis. El papel de los líderes en el establecimiento del clima y la visión de las organizaciones que dirigen es un concepto fundamental en la idea de liderazgo transformacional (Bass y Avolio, 1993; Burns, 2003). En uno de los elementos fundamentales de la cultura organizacional, los líderes se les advierte que la creación, gestión y desarrollo de la cultura es uno de los papeles más importantes de liderazgo (Schein, 1985). Del mismo modo, la comprensión de las ramificaciones culturales del cambio organizacional estratégico es fundamental para la implementación exitosa (Lorsch, 1986). Se deduce entonces, que la cultura organizacional y la implementación del cambio son conceptos inseparables para los líderes eficaces.

Algunos investigadores han establecido que las fuertes culturas organizacionales, pueden mejorar el proceso de cambio y hacer el cambio más efectivo, mientras que una débil cultura ni ayuda ni bloquea el cambio (Erdem y Satir, 2003; Lorsch, 1986). En muchos casos, la capacidad de una organización para responder a los cambios está directamente relacionada con su medible de desempeño. Una correlación que Kotter y Heskett (1992), destacan en el estudio de la relación entre la intensidad de la cultura organizacional y el desempeño de la organización.

Muchos otros investigadores y autores han observado posiciones coherentes con la perspectiva de Hatch (1997), que los líderes no pueden gestionar con eficacia la cultura como un objeto extraño, ya que son en realidad parte de la cultura y no fuera de ella. Por ejemplo, Johnson (2000) en un estudio de la cultura y la formación de la estrategia, recomienda una visión más amplia del contexto organizacional que incluye una sensibilidad hacia el papel de líder en la cultura en lugar de distanciarse de ella. Por el contrario, si el líder intenta gestionar e influir en la cultura, el desarrollo del liderazgo es una de las herramientas más importantes para lograr esa meta. Keiper (2002), llegó a la conclusión de que el liderazgo tiene un vínculo directo con la cultura de la organización, en el que el proceso de desarrollo del liderazgo resulta importante en el fortalecimiento de la cultura y en algunos casos, en el cambio de la cultura. Trice y Beyer (1991), examinaron el proceso de cambio cultural en las organizaciones y el papel de la dirección en ese cambio. Sugieren, en consonancia con otros autores (Keiper, 2002 ; Sharkey, 1999) que el proceso de desarrollo del liderazgo necesita un enfoque en la cultura de la organización con el fin de ser eficaces para lograr el cambio organizacional. De hecho, Trice y Beyer (1991) señalaron que la capacitación para los administradores de la cultura organizacional es necesaria para mantener la cultura existente. La cultura crea una dinámica dentro de la organización que se manifiesta como la adecuación entre las características individuales y diversas de la organización y sirve como manera de predecir la satisfacción, el rendimiento y la retención de los empleados. Esto se convierte en un factor importante en la identificación, el reclutamiento, y el desarrollo de futuros líderes.

El tema de la cultura organizacional es una amplia intersección de la teoría organizacional (Hatch, 1997), la sociología (Hofstede, 1998) y la antropología (Pettigrew, 1979), entre otras disciplinas. Los investigadores en este campo han estudiado las culturas de las organizaciones desde la perspectiva de la eficacia de la organización (Offer y Kennedy, 1982), a partir de la vista jerárquica (Schein, 1996) , y con frecuencia se han visto culturas organizacionales como una colección de subculturas únicas (Van Maanen, 1992). Un área importante de la investigación en

este campo ha sido el papel de liderazgo en la conformación o la gestión de la cultura (Hatch, 1997; Johnson, 2000).

El debate se ha centrado en si la gestión de la cultura es aún posible. A medida que más organizaciones se centran en el desarrollo del liderazgo en el contexto de su propia cultura, el énfasis en el desarrollo del liderazgo, el liderazgo transformacional, y la cultura organizacional como marcos interdependientes continúa ganando aceptación (Keiper, 2002; Sharkey, 1999; Trice y Beyer, 1991) . Los líderes con un sentido cultural aguda reconocen el papel que encaje cultural tiene en la contratación, la retención y el rendimiento (Kristof, 1996; Schneider, 1987).

Todos los sistemas cambian de alguna manera ya que reaccionan a los estímulos del medio ambiente en el que operan. Los investigadores en este campo tratan de comprender las formas en que las organizaciones interactúan con ciertos tipos de estímulos que se encuentran frecuentemente en un ambiente organizacional basada en el mercado (Rummler y Brache, 1995). Este estudio considera la afirmación de los investigadores, que la organización es un sistema complejo que reacciona a los cambios ambientales que pueden venir desde el exterior en términos de los cambios del mercado , la tecnología, o la demografía, o los cambios que puede provenir de los componentes internos que incluyen el liderazgo, la cultura y el desarrollo de liderazgo. Todos estos factores son entradas interdependientes en el sistema organizacional. Con el fin de comprender mejor la influencia de la cultura organizacional en un entorno operativo dinámico en el proceso de desarrollo de liderazgo, este estudio busca responder las siguientes preguntas de investigación:

1. ¿De qué manera las personas responsables de la creación y gestión de las actividades de desarrollo de liderazgo en una empresa entienden y consideran la cultura organizacional en el proceso de desarrollo del programa? Las empresas medianas han adquirido una creciente importancia a partir de la década de los setenta debido al papel que desempeña en la creación de empleo, la innovación económica, la generación de emprendedores, espíritu empresarial y el desarrollo económico a largo plazo (Fong, 2007).

# CAPACITACIÓN: FACTORES QUE AFECTAN EL DESARROLLO DEL PERSONAL ADMINISTRATIVO EN UNA INSTITUCION DE EDUCACION SUPERIOR

Jorge Armando Cárdenas Morales, Universidad Tecnológica de Cd. Juárez

Alberto Cárdenas Valenzuela, Instituto Tecnológico de Cd. Juárez

Elvira Mora Lujan, Instituto Tecnológico de Cd. Juárez

Karen de la Rosa Andazola, Gobierno del Estado de Chihuahua

## RESUMEN

*Este estudio descriptivo se llevó a cabo en una Institución de educación superior en donde se buscó determinar los factores que afectan el desarrollo del personal administrativo en lo referente a la capacitación. Es un estudio cuantitativo, no-experimental, transversal o transeccional; ya que no se llevo a cabo una manipulación intencional de las variables, sino que se observo el fenómeno de la investigación tal y como se desenvuelve en su entorno natural y en un momento determinado. La población está compuesta por el personal administrativo arrojando un total de 142 personas, las cuales se consideraron para determinar la muestra objeto de estudio empleando el método de selección de muestreo probabilístico para obtener una muestra de 104 personas. El instrumento aplicado para la recolección de datos fue un cuestionario de 20 preguntas utilizando el escalamiento Likert para medir las variables con 5 opciones o alternativas que van desde totalmente de acuerdo hasta totalmente en desacuerdo. En este estudio se analizaron los factores que se consideraron de mayor importancia según una encuesta previa aplicada al personal, detectando así los de mayor impacto para que los empleados, a través de la capacitación, mejoren su posibilidad de ser personas más productivas y por ende mayor posibilidad de éxito de la institución.*

**PALABRAS CLAVE:** Capacitación, Personal

## FACTORS THAT AFFECT THE DEVELOPMENT OF ADMINISTRATIVE PERSONNEL WITH RESPECT TO TRAINNING IN AT UNIVERSITY

### ABSTRACT

*This descriptive study was realized in a higher learning institute attempting to determine the factors that affect the development of administrative personnel with respect to training. This is a quantitative, non-experimental, transversal or trans-sectional study since no intentional manipulation of the variables was carried out, but instead the researched phenomenon was observed as it develops in its natural surroundings and at a specified moment in time. The population is composed by the institute's administrative personnel providing a total of 142 persons, which are considered for determining the study's target sample using the probabilistic sampling selection method to obtain a sample of 104 persons. The instrument applied for data collection was a 20 question survey using the Likert scale to measure variables with five options*

*or alternatives that span from completely agree to completely disagree. In this study the factors analyzed were those considered of greater importance according to a previous survey applied to the personnel, thus detecting those of greater impact in order for the employees, through training, to improve their likelihood of being a more productive person y therefore the institute's greater likelihood of success.*

**KEYWORDS:** Training, Employees

## JUSTIFICACIÓN

Debido a la gran inquietud que existe por el personal administrativo en cuanto a la capacitación, y la inconformidad que existe por los cursos que se han impartido, surge el interés de detectar los factores que más afectan en el personal capacitado para desarrollarse adecuadamente en su lugar de trabajo y tener un sentido de pertenencia. La capacitación se debe ver como una oportunidad tanto para el trabajador como para la institución. Para el primero, adquirir más conocimientos sobre su área de trabajo y por ende desempeñarse de forma más eficiente y para la institución, porque conduce a una mayor actitud positiva, mejora el conocimiento del puesto a todos los niveles, maximiza los resultados, crea mejor imagen e incrementa la productividad y calidad del trabajo. El factor motivante para realizar esta investigación es fundamentalmente el beneficio que pueden obtener los empleados al realizar su trabajo con más conocimiento, satisfacción, motivación y que le pueda servir para seguir desarrollándose. Por otra parte, aportar a la institución mejores prácticas de desarrollo humano y con ello mantener un ambiente de trabajo donde todos los integrantes de la institución puedan desarrollarse de una manera productiva. Todo ello para lograr que verdaderamente impacte en la institución ya que de ellos depende el buen funcionamiento de la misma. El reconocer la importancia del elemento humano dentro de la organización crea un sentido de pertenencia logrando así un impacto considerable en el desempeño del personal. Estas acciones tienden a convencer a los empleados de la verdadera importancia de los programas de capacitación y desarrollo de recursos humanos. Frente a este escenario, es que nace el interés por llevar a cabo esta investigación para contribuir a impulsar la capacitación continua dentro de la institución.

## INTRODUCCIÓN

Sabido es que el factor humano es cimiento y motor de cualquier organización por lo que hay que darle la debida importancia ya que nos encontramos en una sociedad en donde el cambio se ha vuelto una constante y todos nos vemos afectados por el. Las acciones que tienden a convencer a los empleados de la verdadera importancia de los programas de desarrollo de recursos humanos es cuando los directivos proporcionan los recursos necesarios para la función de desarrollo de los mismos. Los esfuerzos que pueden desarrollar una Institución o empresa en las relaciones con sus empleados, también influyen en el programa de Desarrollo de Recursos Humanos. Los trabajadores desean sentir que la institución está interesada en ellos. La capacitación debe proporcionar los conocimientos teórico práctico a los trabajadores para mejorar el desempeño al realizar sus funciones en sus respectivos puestos. El interés básico para promover el cambio a través de la capacitación es porque la institución y sus recursos humanos pueden ser más productivos. Para ello, se requiere de un buen análisis de los cursos que se ofrecen para lograr cubrir las necesidades del personal administrativo y que estos realmente adquieran los conocimientos teórico-prácticos así como habilidades que contribuyan a un mejor desempeño en su trabajo y un mejor desarrollo de la institución.

## MARCO TEORICO

La capacitación se refiere a los métodos que se usan para proporcionar a los empleados nuevos y actuales las habilidades que requieren para desempeñar su trabajo. (Desler, Gary, 2001) Un diagnóstico de necesidades de capacitación no es simplemente la petición desordenada de un jefe o de sus subordinados acerca de lo que ellos creen necesitan para desempeñar su puesto de trabajo, ya que si la investigación de necesidades se hace con esa idea, se caerá en el error de “capacitar por capacitar”. Tampoco un diagnóstico es simplemente el listado de cursos a escoger entre los supervisores de la empresa. Un diagnóstico es: una estrategia para conocer la carencia en cuanto a conocimientos, aptitudes, actitudes y hábitos que el personal requiere satisfacer para poder desempeñarse efectivamente en un puesto. Por otra parte es el punto de partida o materia prima para la formulación del plan y los programas de capacitación. (Jesús Carlos Reza Trosino, 2006) Toda capacitación parte de una necesidad, por lo cual se tiene que analizar para poder identificar las necesidades a cubrir. El primer paso en el proceso de desarrollo de recursos humanos es pues detectar las necesidades específicas de capacitación y desarrollo. Para ello, se necesitan tres tipos de análisis: Análisis organizacional, análisis de tareas y análisis de la persona.

El análisis organizacional: examina toda la institución para detectar en donde se debe de llevar a cabo la capacitación y desarrollo. En el análisis de tareas en donde se realiza un estudio detallado del puesto para identificar las habilidades requeridas. El análisis de tareas es recomendable para determinar las necesidades de capacitación de los empleados que son nuevos en el puesto. Al realizar el análisis de tareas se deben de detectar dos factores principales: importancia y rendimiento. La importancia se relaciona con la relevancia de las tareas y el o los comportamientos específicos en un puesto en particular y con la frecuencia con que se desempeña. El rendimiento es la competencia de los empleados para desarrollar estas tareas.

El análisis de las personas gira en torno a dos preguntas: ¿A quién se necesita capacitar? Y ¿Qué clase de capacitación se necesita? En un análisis de persona primeramente se debe comparar el desempeño del empleado con la norma establecida. Si el desempeño del empleado esta por debajo de la norma, se necesita una investigación adicional para identificar los conocimientos y habilidades específicos que se requieren para un desempeño satisfactorio del puesto. Otras técnicas utilizadas pueden proporcionar información para el desarrollo de recursos humanos son las descripciones de puestos, los cuestionarios, informes de los supervisores, pruebas de conocimiento, etc. Una vez hecho el análisis de necesidades el siguiente paso es proceder al establecimiento de objetivos de la capacitación. En este punto se especifica en términos medibles y observables el desempeño que se espera tener de los empleados. El siguiente paso es la Capacitación. En este punto se seleccionan las técnicas reales de capacitación y se lleva a cabo el entrenamiento. Por último es la evaluación de la capacitación. En este punto se ve el desempeño que tiene la persona comparándolo con el anterior y con esto se evalúa la eficiencia del programa para poder llevar a cabo un buen desarrollo de recursos humanos que ayude a facilitar el cambio.

## **METODOLOGÍA**

### **Materiales y Métodos**

Se realizó un estudio descriptivo con un diseño de la investigación de tipo cuantitativo *No experimental* ya que no se llevo a cabo ninguna manipulación de las variables sino que se observo el fenómeno de la investigación tal y como se desenvuelve en su entorno natural. La investigación igualmente siguió los lineamientos de un *estudio Transversal o Transeccional*, en virtud de que la recopilación de información se hizo en un momento determinado.

El instrumento utilizado fue un cuestionario de 20 preguntas el cual fue aplicado a una muestra probabilística de 104 personas. Dicha cantidad se obtuvo a través de la fórmula que a continuación se muestra teniendo como universo un total de 142 personas que representan el personal administrativo con un nivel de confianza del 95%

$$n = \frac{z^2 pqN}{e^2(N-1) + z^2 pq}$$

En donde:

n = Es el tamaño de la población o universo

Z = Nivel de confianza (95%) en valores de z (1.96).

p = Proporción de los que poseen el atributo (50%)

q = Proporción de los que no poseen el atributo (50%)

e = Error de muestreo (0.05)

N = Población (142 trabajadores)

$$n = \frac{(1.96)^2 (.50) (.50) (142)}{(142-1) (.0025) + (1.96)^2 (0.5) (0.5)} \quad n = \frac{136.3768}{0.3525 + 0.9604} \quad n = \frac{136.3768}{1.3129} \quad n = 103.8$$

## RESULTADOS

El Análisis de los Datos Fue a Través de Excel. Obteniéndose los Siguietes Resultados de las Preguntas Más Representativas

Pregunta	promedio	
9	4.85576923	tomo los cursos porque me interesa aprender
17	4.58653846	los cursos de capacitación me ayudan a mejorar el ambiente de trabajo
15	4.54807692	la capacitación me ayuda a desarrollarme profesionalmente
3	4.52884615	los instructores están bien capacitados para impartir el curso
20	4.33333333	mi jefe me informa de la forma como ve mi desempeño después de la capacitación
6	4.17307692	Estoy dispuesto a capacitarme fuera de mi horario de trabajo
13	4.14423077	mi jefe reconoce mi mejor esfuerzo
14	4.05769231	El lugar donde se han impartido los cursos han sido adecuados
2	4	La capacitación me hace tener mayor compromiso con mi trabajo
18	3.98	Mis superiores me motivan a aplicar los conocimientos adquiridos
4	3.90384615	Aplico los conocimientos adquiridos en el curso en mi área de trabajo
10	3.61538462	Los cursos que he tomado han cubierto mi expectativa
1	3.58653846	La capacitación que he recibido ha sido adecuada para un mejor desempeño en el área de trabajo
7	3.27472527	Mi jefe respeta mi horario de capacitación
8	3.125	tomo los cursos porque necesito la constancia para poder aspirar a un ascenso
16	2.58653846	mis superiores toman en cuenta mi opinión para seleccionar los cursos de capacitación que contribuyan a mi desarrollo
19	2.50666667	mis jefes evalúan mi trabajo de acuerdo a los conocimientos adquiridos en la capacitación
11	2.49038462	mi jefe me apoya para asistir a los cursos
5	2.38846154	los cursos que se ofrecen son muy eventuales
12	2.20652174	mis superiores hacen una detección de necesidades para posteriormente ofrecer cursos que cubran dichas necesidades

El promedio de la motivación del personal para realizar su capacitación fue de 4.096153 de un máximo de 5. El personal administrativo evaluó a la administración en el proceso de detección de necesidades e impartición de cursos en un promedio de 3.64458 en relación a un máximo de 5.

## CONCLUSIÓN

La Administración no realiza un análisis organizacional, de tareas, ni de personas para realizar la detección de necesidades y de los cursos a impartir, propiciando una mala alineación entre los

objetivos a cumplir y los objetivos logrados. Los factores que más afectan en el Desarrollo del personal administrativo son:

- No existe un diagnóstico previo para la detección de las necesidades, ni de los cursos de capacitación a impartir.
- Los cursos que se ofrecen son eventuales
- El jefe inmediato ofrece poco apoyo para asistir a los cursos de capacitación
- Los jefes no evalúan adecuadamente el trabajo en función de la capacitación recibida

Los factores que más influyen en la productividad (éxito) son:

- Interés de la gente en capacitarse
- Los cursos de capacitación mejoran el ambiente de trabajo
- La capacitación los ayuda a desarrollarse profesionalmente
- La institución tiene personal muy capacitado para apoyar impartiendo cursos

## **RECOMENDACIONES**

La administración debe de actuar en forma proactiva e iniciar un programa de detección de necesidades, basado en el análisis organizacional, análisis de tareas y el análisis de personas. Y debe centrarse en los verdaderos objetivos de la capacitación para lograr el desarrollo del personal administrativo, ya que algunas instituciones o empresas consideran un gasto el impartir capacitación, sin conocer los grandes beneficios que ésta obtendrá al impartir un curso. Debe detectar antes de ofrecer cualquier curso las necesidades existentes en los diferentes departamentos y ofrecer cursos que cubran dichas necesidades, de lo contrario esto puede ser causa de conflictos y si no se resuelve en forma eficaz repercute en forma negativa impidiendo la consecución de los objetivos del equipo o del departamento. Programar la capacitación continua y que cubra las necesidades de los departamentos. Una vez tomado el curso y puesto en práctica el jefe debe hacer una evaluación de los resultados obtenidos con el objeto de ir mejorándolos cada vez y también para felicitar al personal si se ha visto una mejora en su trabajo.

## RESUMEN

*El turismo se ha convertido en una de las principales fuentes de empleo a nivel mundial, 1 de cada 11 empleos son generados por actividades relacionados al turismo y genera el 9% del PIB a nivel global, uno de los principales motivos de visita, después del ocio y las vacaciones, es el turismo de salud. Entre los 10 principales emisores de turistas, están los Estados Unidos y Canadá en el lugar 3 y 7 respectivamente (OMT, 2013). Siendo estos países nuestros vecinos del norte y aunado al bajo costo que se tiene en este rubro en México, coloca a esta región con grandes oportunidades para la explotación del turismo médico. Las nuevas herramientas basadas en las TIC's, permiten la atracción de turistas con un costo más bajo y promover de manera más eficiente todos los servicios que ofrece el sector salud. El presente trabajo tiene como finalidad conocer el impacto que han tenido estas tecnologías y obtener las mejores prácticas, para proponer una estrategia que permita elevar el número de turistas de salud en Mexicali y su Valle.*

**PALABRAS CLAVES:** TIC's, Turismo, Estrategia

## IMPACT OF TECHNOLOGICAL TOOLS IN MEDICAL TOURISM COMPANIES IN MEXICALI AND ITS VALLEY

### ABSTRACT

*Tourism has become a major source of employment worldwide, 1 in 11 jobs are generated by tourism related activities and generate 9% of GDP globally, one of the main reasons for visiting, after leisure and holidays, is health tourism. Among the top 10 emitters of tourists, are the United States and Canada ranked 3rd and 7th, respectively (OTM, 2013). As these countries our northern neighbors and coupled with the low cost you have in this area in Mexico, puts this region with great opportunities for the exploitation of medical tourism. New tools based on information technology, allow attracting tourists with a lower cost and more efficiently promote all services offered by the health sector. The main objective of this work is to understand the impact that these technologies have and get the best practices to develop a strategy to increase the number of health tourists in Mexicali and its valley.*

**KEY WORDS:** Tic's, Tourism Strategy

## INTRODUCCIÓN

Actualmente el turismo a nivel mundial representa una de las principales actividades económicas, genera el 9 % del producto interno bruto a nivel global, 1 de cada 11 empleos y el 6% de las exportaciones mundiales (OMT, 2013), ha sido el motor de crecimiento de muchos países que le han apostado a la venta de sus atractivos naturales, culturales e históricos, y demás productos que puedan satisfacer la demanda de bienes y servicios por los visitantes. De acuerdo a la Cuenta Satélite de Turismo en México se define como turismo a el desplazamiento momentáneo que realizan las personas y comprende las acciones que efectúan durante sus viajes y estancia fuera de su entorno habitual (INEGI, 2003).

En México el turismo es uno de los pilares de la economía nacional, según datos de la INEGI en 2010, el turismo aportó el 8.6% del Producto Interno Bruto del país y es el principal destino de arribo de turistas internacionales en América Latina. El PIB turístico de México, es mayor que el PIB nacional de algunos países de América Latina como son: Cuba, Ecuador, Guatemala, Uruguay y Panamá. (INEGI I. N., 2012). Por lo cual es importante fomentar el desarrollo del mismo. Gracias a su situación geográfica privilegiada en Baja California el turismo se ha desarrollado de forma natural ya que comparte más de tres mil kilómetros de frontera con el país más poderoso del mundo, con dos de sus estados más ricos y progresistas, California y Arizona. El turismo es una actividad económica importante para esta zona, sin embargo el turismo médico y de salud representa un nicho de oportunidad en crecimiento, el cual genera una derrama económica de 86 millones de dólares (Cervantes, 2011), ya que diariamente cientos de pacientes norteamericanos y canadienses cruzan nuestra frontera para consultar a especialistas de la salud, adquirir medicinas y realizarse estudios y análisis de en laboratorios.

En un estudio realizado por la UABC donde se encuestó a 385 turistas de la tercera edad llamados “pájaros de la nieve” se logró identificar que un 61% de los encuestados visitan Los Algodones por cuestiones médicas, es decir que el principal motivo de su viaje es una consulta o compra de medicina (Luque & González, 2013). Sin embargo existen muchos más servicios de la salud representados por micro, pequeñas y medianas empresas, que todavía son desconocidos para nuestros visitantes y que requieren necesariamente una estrategia de Marketing para ofertar sus productos y servicios a los turistas médicos que ya visitan nuestra ciudad.

Actualmente las Tecnologías de la Información y Comunicación proporcionan una diversidad de herramientas en apoyo a las MiPymes. Estas herramientas tecnológicas propician el contacto directo con el cliente, ayudan a elevar la calidad en el servicio y por supuesto a promocionar sus productos y servicios con una mayor cobertura a bajos costos. Además tienen un impacto directo en la comunicación y la administración de su empresa. Las MiPymes del sector salud en esta región requieren visualizar a las TIC's como aliadas en su proceso de negocios. De acuerdo con SECTUR, empresas que eligen no hacer caso del fenómeno de las TIC's, o mirarlo como una actividad secundaria, se ponen a sí mismas en peligro porque sus competidores importantes seguramente si explotarán las oportunidades que ofrecen las TIC's para elevar su competitividad (SECTUR, 2008).

Considerando que los turistas médicos que visitan nuestra ciudad, provienen de países desarrollados y por consecuencia han tenido mayor contacto con las TIC's y para ellos su uso es cotidiano, es deseable que las MiPymes del sector salud al menos cuenten con una página informativa en internet que permita ser visible para los turistas médicos a la hora de elegir sus servicios médicos. Como lo advierte la consultora Marketing Exchange los negocios no pueden

permitirse ignorar las búsquedas móviles, de acuerdo con su estudio el 90% de los usuarios de smartphones usan internet en sus dispositivos móviles diariamente, de los cuales 68% utilizan un buscador para localizar productos, 42% adquieren un producto o servicio a través del Smartphone, 40% usó cupones para compras. Además de los usuarios que realizan búsquedas por internet en sus smartphones, el 97% de ellos busca negocios locales, el 67% de estas búsquedas están influidas por la geo localización o ubicaciones específicas. En lo que respecta a las acciones que llevan a cabo una vez realizada la búsqueda a nivel local, el 48% llamó al negocio, 17% escribió o leyó una crítica, 13% realizó una recomendación, 29% realizó una compra en la tienda física, 24% compró online, 51% visitó el negocio, 47% visitó la website, 11% añadió el negocio a su lista de favoritos y el 47% anotó direcciones. (Exchange, 2012).

Además de las páginas de internet otra estrategia de Marketing para ampliar la cobertura tanto del turismo en general como del turismo médico son las Redes Sociales. Estas no solo permiten el acercamiento de los clientes sino compartir experiencias y dar recomendaciones según su experiencia. De acuerdo con los datos analizados por LeadSift en los cuales se destaca el hecho de que más de un 55% de los usuarios han comenzado a seguir a una marca turística en Facebook después de su viaje. Además un 46% afirma haber publicado reseñas o comentarios en internet. El estudio habla de tres fases en el ciclo del viaje: una primera etapa de planificación, una segunda en la que se produce el viaje y una tercera que denomina luna de miel. En la primera de esas fases, cada vez más usuarios acuden a las redes sociales para decidir y planificar su viaje. Un 92% afirma que tiene en cuenta los consejos de sus amigos y familiares en la red, mientras que un 59% reconoce haber realizado publicaciones en redes sociales sobre sus futuras vacaciones. En la segunda fase, la del viaje propiamente dicho, cabe destacar que un 85% de los usuarios de smartphone hace uso de estos dispositivos durante el viaje.

Un 74% accede a las redes sociales y un 48% comparte videos o imágenes del mismo mientras está sucediendo. El ser capaz de identificar oportunidades de negocio localizando a los usuarios que están hablando de tu hotel y conectar con ellos facilita que publiquen buenas historias sobre su experiencia durante el viaje. Y por último, en esa tercera fase de luna de miel, el 76% de los usuarios comparte contenido sobre sus vacaciones en redes sociales. Además, el 55% ha seguido a algún hotel o marca turística en Facebook a raíz de su viaje (LeadSift, 2013). Sin duda alguna la recomendación respecto algún producto o servicio es una forma clara de marketing en donde se añade el valor agregado que le da en sí, el reconocimiento al producto o servicio de quien recomienda. Fomentar este tipo de marketing en el turismo médico no es una idea que se deba desechar.

El principal problema de las MiPymes del turismo médico en esta región es el desconocimiento de las herramientas TIC's y la falta de una estrategia de Marketing que les apoye en el uso de las mismas. La presente investigación tiene como propósito identificar los principales medios por los cuales los turistas médicos que visitan esta región, buscan y toman decisiones respecto a los servicios médicos que reciben, así como los medios que utilizan los microempresarios de la salud para ofertar sus servicios. Y con ello proponer las mejores estrategias de Marketing basadas en las TIC's y lograr elevar la cobertura de promoción de los servicios médicos que se brindan en la ciudad de Mexicali y su valle.

## **REVISIÓN LITERARIA**

### Turismo en Baja California

El estado de Baja California se localiza en la frontera noroeste de México, y colinda con los estados de Sonora, y Baja California Sur, y el estado de California en la frontera con los Estados Unidos, y con el océano pacífico y el mar de Cortez, lo que lo sitúa en un lugar privilegiado para el desarrollo de la actividad turística. El turismo en el estado se encuentra situado en la parte norte de la península, debido a que es donde se cuenta con la infraestructura necesaria para la captación de visitantes. De acuerdo al estudio realizado por el Plan de Mercadotecnia 2007-2013 de la Secretaría de Turismo en el cual se menciona que, en términos generales el promedio el 47% del turismo en Baja California es nacional y el 53% extranjero. Lo que es claro es que el 92.6% del turismo extranjero proviene de EEUU y 86.2% de este son residentes del estado de California, 22.4% de Los Ángeles y 20.6% de San Diego. Con cifras del 2% y fracción aparecen, las ciudades de Calexico, Riverside, El centro y Sacramento siendo las principales fuentes de turistas extranjeros para el estado. (SECTUR S. d., 2007).

Dentro de las estadísticas más interesantes que nos proporciona este Plan de Mercadotecnia nos menciona que 79.9% nos visitan en su automóvil 94.6% son turistas independientes, es decir, solo 5.4% lo hacen a través de un tour operador, 48.2% viajan (1-2 personas), 37.9% (3-4), 11.5% (5-10). El 62.7% del turista nacional pernocta mientras solo el 47.9% del extranjero lo hace en el destino. 77.7% del turismo extranjero ha visitado el destino antes, 22.3% son visitantes por primera ocasión, 76.5% extranjeros vinieron por recomendación, 7.6% por un mapa-folleto, 5.4% por Internet, 4.2% por medios electrónicos y solo 0.6% por prensa (SECTUR S. d., 2007).

#### El Corredor Turístico Tijuana, Playas de Rosarito y Ensenada

Las principales atracciones del corredor turístico Tijuana, Playas de Rosarito y Ensenada han evolucionado conforme a las nuevas demandas de los viajeros que arriban a la región, en un primer momento se trataba de turistas que buscaban atractivos que no estaban relacionados en forma directa con el medio natural. Ahora la oferta se ha diversificado y se basa en atractivos naturales y culturales así como en otras opciones que se encuentran en los alrededores. Las actividades turísticas del corredor turístico tienen como eje reactor sus recursos costeros y marinos. Las playas son uno de los principales atractivos y aunque no todas ofrecen las condiciones ideales, del clima y rasgos del oleaje para su uso como balneario, este litoral es muy buscado por los viajeros provenientes de latitudes más altas, pues entre otros aspectos el clima es más benigno.

Según las características de las playas las actividades realizadas pueden ir, desde el descanso hasta la práctica de deportes extremos. La mayoría de las playas del corredor se encuentran rodeadas de acantilados rocosos, de modo que su paisaje es una combinación de montaña, desierto y cuerpos de agua costeros. A lo anterior se suma una vegetación y una fauna singulares, lo que evidencia un equilibrio estético ampliamente usado para publicitar esta región; los asentamientos turísticos se han incrementado en los territorios que poseen paisajes excepcionales, en donde es bastante redituable invertir en fraccionamientos de lujo para turistas extranjeros. Los paisajes del corredor son apreciados de manera especial en los miradores ubicados en puntos estratégicos, sobre todo en acantilados.

La pesca deportiva es un importante atractivo para los paseantes, esta, se practica en playas de Tijuana, playas de Rosarito, La Salina, Ensenada y la Bufadora, que son puertos de altura con marinas de primer nivel o incluso embarcaderos rústicos con rampas de boteo y servicios básicos; además, se organizan torneos anuales para impulsarla. Por otro lado el avistamiento de fauna en su medio natural siempre se ha promocionado como un elemento que conquista a los visitantes.

En las costas bajacalifornianas es posible observar una gran diversidad de especies, algunas de ellas endémicas, pero el interés turístico se centra en los mamíferos marinos. Los Recursos culturales con que cuenta el corredor turístico se centran en las zonas urbanas y la mayoría son localidades recientes, por lo que hay pocos edificios históricos que promueven con fines turísticos; más bien lo que se publicita son equipamientos turísticos específicos y culturales, plazas de toros, instalaciones deportivas, marinas, infraestructura hotelera de lujo (como los spas), galerías de arte, artesanías, reconocida vida nocturna y su gastronomía, además de múltiples actividades programadas. En los principales centros urbanos del corredor se han implantado paseos peatonales turísticos para optimizar el tiempo de estadía de los turistas, en un lugar; como los que ofertan en Playas de Rosarito y Ensenada; se visitan los puntos más interesantes de la zona y la duración es de dos o tres horas; eventualmente pueden permanecer todo el día, según los intereses de cada turista. (Mares & Correa, 2008)

### La Ruta Del Vino

La Ruta del Vino de Baja California es un corredor discontinuo que va de norte a sur y atraviesa los municipios de Tecate, Tijuana y Ensenada. Esta ruta se compone de ocho valles: Tijuana, Tecate, Guadalupe, El Tule, Ojos Negros, Uruapan, Santo Tomás y San Vicente. El enoturismo, es uno de los segmentos turísticos que en los últimos años ha registrado mayor crecimiento; se ha visto favorecido por la conformación de la Ruta del Vino en el estado, la cual inició su desarrollo a partir del año 2000. El apoyo que desde entonces se ha mantenido por parte del gobierno y los empresarios involucrados, ha logrado que ésta se posicione como uno de los principales productos turísticos de Baja California. (Quiñónez, Bringas, & Barrios, 2011)

La puerta norte de la ruta del vino, inicia al norte en el pueblo mágico de Tecate, terminando en el puerto de Ensenada. Los principales atractivos son las vinícolas, que están situadas en sus valles. La mayor cantidad de productores de vino se localizan en el valle de Guadalupe. Rodeados por montañas y por grandes áreas de vid, ofrecen un atractivo único para el turismo rural. En la región se encuentran desde pequeños restaurantes campestres familiares, hasta refinada cocina regional e internacional, sin olvidar sitios para acampar, ranchos, centros artesanales, museos, hoteles boutique, cultura indígena y sitios naturales. Se estima que alrededor de 160 mil personas visitan la ruta del vino cada año, 30 mil durante las fiestas de La Vendimia y las restantes en recorridos por las casas vinícolas de los diferentes valles. A lo largo de la ruta del vino se cuenta con una oferta de hospedaje que no supera las 100 habitaciones, la mayoría en pequeños establecimientos, algunos de estos de la categoría denominada boutique.

Año tras año, en el mes de agosto los gobiernos estatal y municipal, conjuntamente con las principales casas productoras de vino de la región, organizan las fiestas de La Vendimia, cuya variedad de eventos (concursos de paellas, vinos, conciertos artísticos, entre otros) les ha valido reconocimiento internacional. A partir de 2011, la Secretaría de Turismo del estado, en coordinación con provino, fomento la realización de mayores eventos para promover las visitas a la ruta del vino: se logró un calendario de más de 100 eventos entre abril y noviembre (Quiñónez, Bringas, & Barrios, 2011).

### El Turismo en Mexicali, Su Valle y San Felipe

La actividad turística en el municipio de Mexicali esta diversificada a la del resto del estado. Los principales segmentos de mercado que se explotan son el turismo de negocios y el turismo

médico. El segmento de negocios ha crecido gracias al desarrollo de la industria maquiladora en la ciudad, siendo Mexicali una de las principales ciudades industriales del país, lo que atrae a diferentes turistas nacionales y extranjeros que visitan la ciudad con fines de trabajo, dejando una derrama económica importante.

El segmento de turismo médico se ha incrementado de forma significativa en los últimos años convirtiéndose la ciudad y su valle en un punto estratégico a nivel internacional para el desarrollo de este turismo, contando con tres puntos estratégicos para el turismo de retirados y los llamados Snow Birds provenientes de los países de Estados Unidos y Canadá, quienes nos visitan año con año para escapar de las heladas temperaturas de sus lugares de origen y disfrutar de las diferentes opciones médicas y de esparcimiento que ofrece este municipio. Los Algodones, es la comunidad más al norte de todo México, y de acuerdo a la investigación presentada Luque y González, esta comunidad es uno de los principales receptores de turismo médico en la región de Baja California, su ubicación geográfica, en la división entre Baja California y Arizona, hace que Los Algodones sea una opción muy atractiva para los visitantes del Norte de Estados Unidos y Canadá que desean atender su salud, principalmente por servicios de odontología. En la misma investigación se plasman que: Los Algodones se ha convertido en uno de los principales receptores de turismo médico en la región de Baja California con 1, 649,484 cruces fronterizos en 2011 de acuerdo a datos de la Secretaría de Turismo del Estado. Los visitantes mencionados visitan el lugar principalmente entre noviembre y marzo para alejarse de la intensa temporada invernal de sus lugares de residencia, instalando su residencia temporal esencialmente en Yuma, para cruzar hacia Los Algodones, en busca de los servicios dentales principalmente, seguido por optometristas, servicios médicos generales y farmacias (Luque & González, p.13).

Por su parte San Felipe es una pequeña y pintoresca ciudad perteneciente al Municipio de Mexicali, capital del estado de Baja California, que se encuentra ubicada estratégicamente a solo 120 millas al sur de la frontera con California, en los Estados Unidos. Esta cobijada por una hermosa Bahía de casi 20 kilómetros de extensión en el extremo norte del Mar de Cortez, en donde sus aguas son templadas y tranquilas durante casi todo el año y su clima es cálido y seco en el verano, por lo que sus nublados y lluvias son escasos. (COTUCO C. d., 2013). Siendo considerado como una de las comunidades de mayor atracción para el turismo de retirados, teniendo diferentes atractivos cercanos para el desarrollo de diversas actividades. Entre los principales atractivos de acuerdo al comité de turismo y convenciones de Mexicali son: Paseo al valle de los gigantes, pesca en el islote Konsag, visitar las pinturas rupestres en algunos de los cañones cercanos, y el alpinismo siendo la ciudad más cercana al Picacho del Diablo, la mayor elevación en toda la Baja California. Por su parte la ciudad de Mexicali, de acuerdo con la Secretaría de Turismo cuenta con la infraestructura necesaria para recibir a los turistas en la ciudad, cuenta con una oferta hotelera de 3,386 habitaciones con un promedio de ocupación anual 2007: 60.7% (SECTUR S. d., 2007).

### Turismo Médico

De acuerdo con la Secretaría de Turismo, el turismo médico está orientado a la vinculación del viaje, con la realización de intervenciones quirúrgicas, dentales o tratamientos médicos en países donde son más baratas. A diferencia del Turismo de la salud que va más enfocado a la recreación, a la relajación y esparcimiento relacionados con tratamientos alternativos, que ofrecen los Spas, los balnearios, para diversas dolencias reumatológicas, estrés, dermatológicas, tratamientos de belleza entre otros (SECTUR 2010). Baja California anualmente recibe a miles de turistas médicos, y de la salud que viajan a México para realizarse intervenciones quirúrgicas a precios bajos, en lugares confortables que ofrecen armonía para el proceso de recuperación. Las

principales ventajas que encuentran los pacientes en Baja California, son: la ubicación estratégica por la cercanía con California y los costos atractivos que son entre un 50% y un 80% más económicos que en Estados Unidos y Canadá, estas condiciones permiten al estado desarrollar turismo médico y de salud (SECTURE, 2008).

La infraestructura con la que cuenta Baja California para albergar a estos turistas, según los datos de la Secretaría de Turismo en Baja California del 2010, Tijuana tiene con 346 hospitales, 1,616 médicos generales, 284 médicos especialistas, 526 dentales, 332 laboratorios; Tecate con 7 hospitales, 36 médicos generales, 6 médicos especialistas, 17 dentales, 7 laboratorios; Rosarito cuenta con 10 hospitales, 53 médicos generales, 6 médicos especialistas, 20 dentales, 17 laboratorios; La ciudad de Ensenada con 14 hospitales, 515 médicos generales, 53 médicos especialistas, 85 dentales, 51 laboratorios; así mismo la capital del Estado Mexicali, cuenta con 42 hospitales, 347 médicos generales, 263 médicos especialistas, 357 dentales, 127 laboratorios (Turismo de Bistutí, 2013).

### TIC'S y el Turismo

Las tecnologías de información son todos aquellos dispositivos, herramientas, equipos y componentes electrónicos capaces de manipular información que soporten el desarrollo y crecimiento económico de cualquier tipo de organización (Gradados, 2004). La OECD define a las TIC's, como el conjunto de avances tecnológicos que proporcionan aquellos dispositivos que capturan, transmiten y despliegan datos e información electrónica y que apoyan el crecimiento y desarrollo económico de la industria y los servicios (OCDE, 2002). Las TIC's son excelentes aliadas para el desarrollo del nuevo Marketing, gracias a estas herramientas hemos pasado de la satisfacción puramente de las necesidades a la creación de deseos. De producir para vender (marketing masivo e indiferenciado), a crear valor para el cliente. De la venta y la gestión del producto, a la gestión de la relación con el cliente para mantener diálogo con él. De atender a clientes a la gestión de clientes. De la comunicación masiva a la comunicación centrada en la información, y la comunicación individualizada y emocional. De conquistar a los clientes al marketing de fidelización, que quiere mantener con el cliente relaciones de satisfacción, a largo plazo. De vender masivamente a la segmentación y personalización de la oferta (micromarketing o marketing one to one) (Kotler Philip, 2013). Actualmente existen múltiples tecnologías y aplicaciones, y empresas especializadas que diseñan e implementan estas herramientas TIC's a medida de las empresas. Algunas de estas herramientas son sistemas de información para gestionar toda la cadena de valor de la empresa incluyendo su último eslabón que es el conocimiento e investigación del mercado y la gestión de la relación de la empresa con sus clientes (Kotler Philip, 2013).

Una de las industrias más favorecidas por la evolución de las TIC 's en el Marketing, es el sector turístico que originalmente adoptó a los sistemas globalizadores (GDS) como las herramientas tecnológicas para la promoción de servicios turísticos, los cuales permitían la concentración de la información de diversos destinos en un sólo sistema centralizado. Con la aparición del internet se crearon sistemas idóneos para mostrar diferente información a los ojos del consumidor final, dándoles la posibilidad de reservar y comprar los servicios directamente. A partir de su desarrollo y su uso cada vez más frecuente, han surgido múltiples tecnologías y aplicaciones que han revolucionado el mercado del turismo en el mundo (SECTUR, 2008). De acuerdo con la Secretaría de Turismo, las herramientas más utilizadas por el sector turístico en México, son: Portales turísticos / Página web, acceso a internet vía el aparato televisor – web TV., sistemas de FrontDesk. Punto de ventas - Point of Sale, tarificador, sistemas administrativos (Back of the House Systems), sistemas de reservaciones (Central Reservation Systems), chapas electrónicas

vía tarjeta, radios de intercomunicación (walkie talkie), sistemas para administrar el historial de los clientes (Guest history), también conocidos como CRM (Customer Relationship Management).

Boleto electrónico –eTicket, TV Service, acceso del huésped a los servicios del hotel (alimentos y bebidas, lavandería, check-out, películas) a través de la TV instalada en su habitación. Yield Management, también denominada Revenue Management, se refiere al sistema de análisis de operaciones de compañías de aerolíneas, hoteles y renta de autos para controlar el precio y oferta de algún servicio con base en la demanda y su inventario, internet, correo electrónico, teléfono, conmutador, fax, comunicación telefónica vía satélite, video conferencia, redes de área local - local area network y sistemas globalizadores (GDS) SABRE, Worldspan, Apollo, Amadeus, etc.

## **METODOLOGÍA**

### Sujetos de Estudio

Se aplicarán 2 encuestas, una a las MiPymes del Sector salud y otra a los turistas médicos que visitan la ciudad de Mexicali y su Valle, en base a un catálogo proporcionado por la Secretaria de Turismo del Estado. Para las MiPymes del sector médico, se aplicará un instrumento de medición que permitirá evaluar el uso de la tecnología y, el impacto de estas en la atracción de turistas médicos. Se realizará un muestreo al azar. En lo que respecta a los turistas médicos se aplicará un instrumento de medición para conocer el grado de penetración que tienen las herramientas tecnológicas en los turistas, así como la forma en que seleccionan los servicios médicos que requieren. También se realizará una entrevista en profundidad a las 5 empresas turísticas de mayor tamaño en el municipio para conocer el impacto que han tenido las TIC's en su crecimiento.

## **MÉTODOS Y MATERIALES**

La aplicación de la encuesta se realizará en los meses de Noviembre 2013 a Enero de 2014. A un total de 385 turistas médicos y 85 empresas del sector salud y 5 Pymes que cuenten con un proyecto de Marketing probado, basado en las TIC'S. Las encuestas se aplicarán en sitio en lo que respecta a las MiPymes y en el cruce fronterizo a los turistas médicos. Una vez aplicadas las encuestas se utilizará el programa SPSS en su versión 20 para generar estadísticas y graficas de los resultados. Se analizarán los resultados y se realizará una descripción de los hallazgos para establecer propuestas que den respuesta a las necesidades de los sujetos encuestados. Y establecer una caracterización del uso de las tecnologías en las MiPymes de turismo médico en la región, respecto a las MiPymes dedicadas al sector médico se pretende identificar su grado de adopción de estas tecnologías en su proceso de Marketing.

## **RESULTADOS ESPERADOS**

Con el resultado de esta investigación se espera conocer, el uso e impacto que ha tenido las TIC's en la atracción de turistas médicos a la localidad. De igual forma se pretende distinguir las herramientas que más utilizan los turistas médicos que visitan Mexicali y su valle, para la selección de los servicios médicos que recibirán. Además se podrá identificar el grado de adopción de las tecnologías en las MiPymes de esta región. Con ello se pretende establecer un

modelo de Marketing basado en las TIC's, que responda a las necesidades de información de los turistas médicos que nos visitan. Se busca que al menos cada consultorio médico, hospitales, laboratorios, farmacias, y demás servicios médicos, se encuentren en un padrón electrónico que lo haga visible a los ojos de los turistas a la hora de seleccionar, o de buscar un servicio médico en esta región. Sin dejar a un lado las herramientas básicas de marketing como son: páginas de internet, correo electrónico, motores de búsqueda, redes sociales, canales de videos, herramientas de geo localización y software para comunicación en tiempo real.

Para ello es necesario involucrar a la Secretaría del Turismo del Estado y al Comité de Turismo y Convenciones, así como el Fidecomiso para la Promoción Turística del Municipio, para la creación de un centro tecnológico para el manejo de la comunidad turística del sector médico en el estado. Donde se utilice la tecnología necesaria y se agrupe por clúster a las empresas que brindan los servicios médicos en la región, pudiendo disipar las dudas del turista a la hora de planear su viaje, dirigirlo, una vez estando en la ciudad, y darle un seguimiento en sus próximas visitas así como brindarles alternativas de esparcimiento.

# **FACTORES QUE INFLUYEN EN LA DECISIÓN DE COMPRA DE LOS CLIENTES A TRAVÉS DE LAS ESTRATEGIAS DE MARKETING CON REDES SOCIALES EN EL SECTOR HOTELERO**

Ana María Miranda Zavala, Universidad Autónoma de Baja California  
José Gabriel Ruiz Andrade, Universidad Autónoma de Baja California

## **RESUMEN**

*El presente artículo tiene como objetivo identificar los factores del marketing en redes sociales que influyen en la decisión de compra de los clientes del sector hotelero de cuatro y cinco estrellas de la ciudad de Tijuana, Baja California, México. Asimismo, busca evaluar cada estrategia implementada con las características y contenidos de las redes sociales de los hoteles. Reconociendo la importancia que representa las redes sociales como medio de comunicación con los clientes, es de suma importancia que las empresas hoteleras utilicen eficientemente la herramienta de redes sociales, ya que este medio de comunicación está cambiando la forma de hacer marketing. En México el 75% de las organizaciones administran perfiles en redes sociales; un 69% realiza publicidad en redes digitales y aprovecha ese medio para intensificar la comunicación con sus clientes. En el estado de Baja California la utilización de las tecnologías es alta, pero el uso inadecuado de estas provoca que las empresas no tengan éxito, por lo que en el área de mercadotecnia digital las PYMES tienen mayor posibilidad y potencial de crecimiento, lo que conlleva a tener una gran necesidad en Baja California de explotar el área de marketing en redes sociales para incrementar el desarrollo de las organizaciones.*

**PALABRAS CLAVE:** Marketing, redes sociales, hoteles, canales de comunicación

## **FACTORS AFFECTING THE DECISION TO BUY FROM CUSTOMERS THROUGH MARKETING STRATEGIES WITH SOCIAL NETWORKS IN THE HOTEL SECTOR**

### **ABSTRACT**

This article aims to identify the factors of social media marketing that influence the buying decision of the customers in the luxury four and five star hotels in the city of Tijuana, Baja California, Mexico. It also seeks to evaluate each strategy implemented with the features and contents of social networking hotels. Recognizing the importance of representing social networks as a means of communication with customers is of utmost importance that hotel companies effectively use social networking tool, since this media is changing the way we do marketing. In Mexico 75% of organizations manage social media profiles, a 69% carry advertising on digital networks and uses this medium to enhance communication with their customers. In the state of Baja California the use of technology is high, but the misuse of these causes that companies do not succeed, so that in the digital marketing area are more likely SMEs and growth potential, leading to have a great need in Baja California to exploit the area of social media marketing to increase the development of organizations.

## INTRODUCCIÓN

Actualmente las redes sociales se han revelado como una de las formas más generalizadas, revolucionarias de intercambio y de relación, por su alcance y posibilidades en casi todos los sectores, como en el área de mercadotecnia donde ha aumentado considerablemente la utilización de redes sociales para la publicidad de los productos y/o servicios. Las empresas invierten cada día más en redes sociales debido a las ventajas que ofrece como estrategia de marketing, ya que permite obtener rentabilidad con una baja inversión, abarcando una gran cantidad de usuarios incluso mayor que la publicidad convencional como la televisión, la radio y el periódico, los cuales están limitados a cierta información que logran comunicar, mientras que las redes sociales la información se trasmite en tiempo real y logra ser más eficaz sabiéndolo utilizar adecuadamente.

Las redes sociales son una herramienta que pueden ayudar a las empresas a conocer qué valoran sus clientes, qué necesitan, por qué deciden comprar sus productos y/o servicios. En el caso particular de las empresas sujetos de análisis en la presente investigación, se encuentra el problema de que no utilizan en forma eficiente las redes sociales, por lo que se precisa necesario identificar qué factores influyen en la decisión de compra de los clientes a través de las redes sociales, las cuales puedan brindar la posibilidad de mejorar la atención y servicio a los clientes.

## REVISIÓN LITERARIA

Wiertz y De Ruyter (2007) citado por (Casaló, Flavián y Guinalú, 2012) definen a las redes sociales como incorporaciones online de consumidores que de manera colectiva producen y consumen contenidos de carácter comercial, lo cual representa motivación para participar en la red social de las empresas. Por lo tanto, el principal objetivo de las redes sociales de los hoteles debe ser generar el valor añadido que permita atraer al consumidor para obtener beneficios que se derivan en la participación en la red digital.

De acuerdo a Conde, Nel Schmidt, Covarrubias y Zavala (2011) las empresas del ramo turístico y de otros sectores, se han percatado del impacto que las redes sociales tienen sobre su negocio y de la influencia de las mismas en el mercado al que desean dirigirse, por lo que las empresas de servicio turístico deberían aprovechar las bondades de esta herramienta en donde pueden dar a conocer a sus clientes y seguidores las novedades y promociones del establecimiento o producto, además de tener la oportunidad del intercambio de información y opiniones a través de las redes sociales, las cuales sirven de pauta para que la organización las considere en el desarrollo de estrategias de marketing a través de ese medio.

Los indicadores que influyen en la decisión de compra de los clientes a través de las redes sociales, de acuerdo a Martínez e Izquierdo (2009) es la confianza y la gestión de la información; la confianza se adquiere, según los autores, mediante la privacidad y la seguridad de la red social. Otro indicador con base en Ruiz y Sanz (2006) es la motivación que se genera mediante la comodidad, el tiempo de respuesta, los precios de los servicios y la variedad en la red digital. De acuerdo a Rojas, Arango y Gallego (2009) el indicador de la confianza se obtiene con base en el aspecto de diseño de la red social como diseño atractivo, estructura de la información, tiempo de respuesta, privacidad y sensación de comodidad. De acuerdo a Martínez, Bernal y Mellinas (2012) las redes sociales deben especificar el número de estrellas del hotel, link con la página web del hotel, número de fotos y videos, servicio *wifi* y registro en google maps.

## METODOLOGÍA

Con base en la información proporcionada por la Secretaría de Turismo del Estado de Baja California (SECTURE) y la Asociación de Hoteles del Noroeste (ASHONO) en la ciudad de Tijuana son diecisiete hoteles de cuatro y cinco estrellas, los cuales en su totalidad han utilizado redes sociales durante los años 2012 y 2013. Los clientes sujetos de análisis en la presente investigación a quienes se les aplicó el instrumento de recolección de datos bajo la modalidad de encuesta, fueron huéspedes de dichos hoteles que utilizaron redes sociales. La población estimada de los hoteles sujetos de análisis fue de 320,426 huéspedes, la cual se obtuvo por el número total de habitaciones de cada hotel con una ocupación del cien por ciento en el mes de julio del año 2012, ya que el comportamiento de ocupación en los hoteles se comporta de forma similar con base en los indicadores obtenidos en el Sistema Nacional de Información Estadística del Sector Turismo de México (DATATUR). Para obtener el tamaño de la muestra de clientes a encuestar, se utilizó la fórmula de población conocida.

$$n = \frac{N Z_{\alpha/2}^2 P(1-P)}{(N-1)e^2 + Z_{\alpha/2}^2 P(1-P)}$$

(1)

Donde:

n = Tamaño de la muestra.

Z = Corresponde al nivel de confianza seleccionado (95%).

P = Proporción de una categoría de la variable.

e = Error estándar permitido ( $\pm 6\%$ ).

$$n = \frac{320,416 * (1.96^2) * 0.5 * (1 - 0.5)}{[320,416 - 1] * 0.06^2 + [1.96^2 * 0.5 * (1 - 0.5)]} = \frac{307,727.5264}{1154.4544} = 266.56 = 267$$

Con base en la fórmula de la muestra para población finita, se determinó aplicar 267 encuestas. En la tabla 1 se describe la distribución de la muestra en los hoteles de cuatro y cinco estrellas de la ciudad de Tijuana en el periodo 2012-2013.

Tabla 1: Distribución de la Muestra

Nombre del Hotel	No. de Habitaciones	Porcentaje	Cantidad (Datos continuos)	Cantidad (Datos discretos)
1 City Junior	134	5.19%	13.85	14
2 City Express	127	4.91%	13.12	13
3 Fiesta Inn Otay	142	5.50%	14.67	15
4 Holiday Inn	127	4.91%	13.12	13
5 Hacienda del Río	131	5.07%	13.54	14
6 La Mesa Inn	139	5.38%	14.36	14
7 Lausana	140	5.42%	14.47	14
8 Real del Río	105	4.06%	10.85	11
9 Principado	49	1.90%	5.06	5
10 Velario	45	1.74%	4.65	5
11 Grand Hotel Tijuana	422	16.33%	43.60	44

12	Camino Real Tijuana	263	10.18%	27.18	27
13	Lucerna	168	6.50%	17.36	17
14	Marriott Tijuana	209	8.09%	21.60	22
15	Palacio Azteca	201	7.78%	20.77	21
16	Pueblo Amigo Inn	106	4.10%	10.95	11
17	Real del Mar	76	2.94%	7.85	8
	Total	2584	100%	267.00	267

*En esta tabla se describe la distribución de la muestra en los hoteles de cuatro y cinco estrellas de la ciudad de Tijuana en el periodo (2012-2013). El total de encuestas aplicadas son 267 distribuidas de manera proporcional en base al número de habitaciones de cada hotel. Fuente: elaboración propia.*

## RESULTADOS

Hasta el momento la investigación se encuentra en el proceso de análisis de la información como resultado de la aplicación del instrumento de recolección de datos hacia los clientes de los hoteles sujetos de estudio. Paralelamente, se realiza un análisis cualitativo de cada una de las redes sociales de los hoteles, para determinar su eficiencia en tiempos de respuesta, entre otros factores considerados por los autores de la literatura citada. Los resultados finales se tienen planeados obtenerlos en el primer trimestre del año 2014.

## CONCLUSIONES

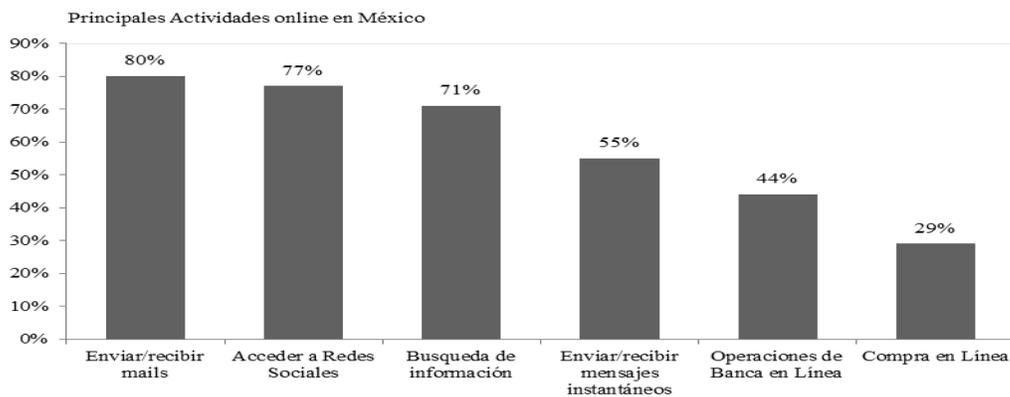

Con base en el análisis previo realizado a las redes sociales de los hoteles de cuatro y cinco estrellas de la ciudad de Tijuana, la mayoría de los hoteles no cuentan con un administrador de la red social, lo que trae como consecuencia la falta de actualización permanente de información. Dentro de las estrategias de análisis de las redes sociales de los hoteles objetos de estudio, se han realizado consultas sobre los servicios que ofrecen y se ha detectado que en la mayoría de los casos, el tiempo de respuesta es muy lento y otros incluso no respondieron. Se concluye por tanto, que de acuerdo al análisis previo de la información, los hoteles en su mayoría carecen de estrategias de marketing en sus redes sociales. A reserva de obtener el análisis completo de los datos recolectados, se detecta una gran oportunidad en este sector para el desarrollo e implementación de estrategias eficientes de marketing en las redes digitales, que permitan influir en la decisión de compra de los consumidores, a través de ofrecer una diversidad de productos y/o servicios que permitan interactuar con los clientes obteniendo una mejor satisfacción y de esa manera influyan en su decisión de compra

### Limitaciones

Las limitaciones que se han presentado en la presente investigación es la logística que se ha tenido que desarrollar para poder tener permiso y por ende acceso a los clientes de los hoteles objetos de estudio, lo que ha traducido en un largo tiempo invertido en esta tarea, pero que gracias a la ASHONO se ha podido lograr la aplicación del instrumento de recolección de datos.

## ANEXOS

Anexo 1: Principales Actividades Online en México

Lo importante de esta figura es que el 77% de los internautas mexicanos utilizan las redes sociales, por lo que la tendencia de los usuarios es la utilización de este medio de comunicación, el cual representa para los hoteles un área de oportunidad para llegar a sus clientes, conocerlos y satisfacerlos.

# FACTORES DE CONTINGENCIA QUE INCIDEN EN LA PROFESIONALIZACIÓN DE LAS EMPRESAS FAMILIARES DEL SECTOR COMERCIO EN TIJUANA, B.C., MÉXICO

María Virginia Flores-Ortiz, Universidad Autónoma de Baja California  
Alfonso Vega-López, Universidad Autónoma de Baja California  
Edgar Armando Chávez-Moreno, Universidad Autónoma de Baja California

## RESUMEN

*El presente trabajo contempla una investigación cuyo objetivo es analizar los factores de contingencias tales como el proceso de profesionalización, selección, liderazgo, capacitación y la cultura organizacional para determinar los factores que inciden en profesionalización de las empresas familiares del Sector Comercio de Tijuana, B.C., México. Es importante que la gestión de toda organización logre profesionalizarse, tomando en cuenta que prácticamente es a través de la contratación de directivos ajenos a la familia. Para medir los niveles de profesionalización se tomaron aquellos estados o condiciones organizativas proponiéndose el tamaño de la empresa, cantidad de empleados que laboran en ella, antigüedad, sexo, estudios universitarios y el sector de actividad con la finalidad de determinar el perfil del propietario por variables de contingencia. Se realizó el análisis estadístico de los datos, logrando como resultado presentar un esquema en el que se muestran los factores de contingencia que inciden directamente en la profesionalización.*

**PALABRAS CLAVES:** factores de contingencia, profesionalización, sector comercio

## CONTINGENCY FACTORS THAT INFLUENCE THE PROFESSIONALISM OF FAMILY BUSINESS IN THE COMMERCE SECTOR OF TIJUANA, B.C., MÉXICO

### ABSTRACT

*This study includes an investigation aimed at analyzing contingency factors such as the professionalization process, selection, leadership, training and organizational culture to determine the factors affecting professionalization of family businesses within the commerce sector in Tijuana, BC, Mexico. It is important that the management of any organization to achieve professionalization, considering that practically it is possible through hiring non-family managers. To measure levels of professionalization took those proposing organizational conditions, the company size, number of employees working in it, old, sex, college and the business sector in order to determine the profile of the owner of variables contingency. We performed statistical analysis of the data, present a scheme that shows the contingency factors that directly affect the professionalization.*

**KEYWORDS:** Contingency Factors, Professionalization, Commerce Sector

## INTRODUCCIÓN

Las empresas familiares representan un rubro importante en la economía de México ya que el 90% de estas organizaciones son familiares y el 80% de los nuevos empleos en la última década han sido creados por las mismas (Urzúa, 2012). En un estudio que realiza (García 2011), en el que hace referencia de que en el país el 99% del total de las empresas que equivalen a unos cuatro millones, son catalogadas como micro, pequeñas y medianas empresas (OCDE, 2007; INEGI 2006). Según datos del INEGI (2009), en México existen 3, 724, 019 empresas familiares en todo el país, de los cuales 98.35% se concentran en comercio 49.9% (1, 858,550). La profesionalización en las empresas familiares, es el lograr que las actividades se lleven a cabo con criterios organizacionales de eficiencia para evaluar sus resultados, para que la toma de decisiones no este influenciada por juicios familiares, que no siempre están relacionadas con los de la empresa. Por lo tanto, es importante contar con un equipo directivo con experiencia y conocimientos en el manejo de la administración de las empresas.

El ámbito empresarial es cada vez más competitivo, los mercados son complejos y los consumidores son más exigentes, por lo cual en los contextos actuales en los que se desenvuelven las empresas están deben ser más competitivas, siendo de suma importancia el ser eficientes y obtener resultados. Por lo antes expuesto es importante que las empresas familiares busquen y logren profesionalizar su gestión empresarial, incorporando personal ajeno a la familia o profesionalizar su equipo directivo actual. Las empresas familiares van creciendo, llega un momento en que es difícil que la familia pueda ocupar los puestos claves y tener todos los requerimientos y competencias necesarias, para enfrentarse a los desafíos a los que se enfrenta, una manera de profesionalizar es a través de la capacitación ya sea interna o externa a los directivos familiares y no familiares. Por lo tanto es necesario que las empresas familiares cuenten con un plan estratégico, que deben conocer los empleados de la organización, para obtener los resultados esperados y lograr sobrevivir en los mercados actuales.

## REVISIÓN LITERARIA

### La Profesionalización de la Empresa Familiar

Existe un creciente interés de parte de las empresas familiares de cómo llevar a cabo la profesionalización, ya que la gran mayoría no sobrevive a una segunda generación. (Raposo, 2010). Es un hecho que una de las fallas de la empresa familiar se encuentra en dos aspectos que resultan fundamentales: la falta de una apropiada gestión de los recursos y su limitada capacidad para desarrollar estrategias competitivas. (Rueda, 2011), hace mención que se debe reconocer que los fundadores y empleados vinculados al entorno de la empresa familiar son en su gran mayoría trabajadores expertos en procesos operativos, la fuerte carencia en el aspecto administrativo empresarial se ha convertido en debilidad. Urzúa (2012), hace referencia a la empresa familiar como el ente económico donde la dirección general, así como los puestos claves para la toma de decisiones, son ocupados por personas con lazos consanguíneos que se pueden considerar dueños, parciales o totales de la empresa. En tanto que (Betancourt, Arcos, Torres y Olivares (2009), consideran que son una organización controlada y operada por dos o más miembros del grupo familiar con la intención que la empresa continúe en propiedad de la familia. Asimismo Roman (2009), menciona que una definición integral de empresa familiar establece que éstas son una

síntesis única de los siguientes elementos: a) control sobre la propiedad (15% o más) por parte de dos o más miembros de una familia o asociación de familias; b) influencia estratégica de los integrantes de la familia en la dirección de la empresa; c) interés por las buenas relaciones familiares; d) interés en la continuidad de la empresa de generación a generación (Poza, 2004).

Para esta investigación se tomó como base el modelo de articulación dinámica de Belausteguigoitia (2010), en donde la empresa familiar ilustra el balance y la articulación que deben existir entre la propiedad, la empresa y la familia. Ejemplificándose de la siguiente manera: La familia: Este círculo representa esencialmente a las personas que pertenecen al mismo grupo sanguíneo que controla la empresa, a los cónyuges e hijos, incluidas sus necesidades, aspiraciones e inquietudes. La familia, como sistema aspira a respaldar a cada uno de sus miembros y les brinda protección, cariño, seguridad, educación y recursos para su desarrollo. Empresa. Una de las fuentes de apoyo que tiene la familia es la empresa, pues, pues de ellas se obtienen recursos para financiar los gastos familiares. La empresa está constituida por las personas que trabajan en la organización (incluidos los miembros de la familia), sus instalaciones, productos y servicios. Por su parte, a empresa recibe el apoyo de la familia, pues algunos de sus miembros, en ella, ocupan puestos, invierten recursos y capitalizan sus relaciones. Propiedad: Belausteguigoitia (2010), para este punto hacer referencia de una definición de Williams (1992), la propiedad de una organización es un tema de orden legal. La propiedad de un bien da el derecho de usarlo para obtener beneficios. En el caso de una empresa, esto implica que puede gozarse de las utilidades que ella proporcione o incluso intercambiarse.

#### Profesionalización en la Gestión de las Empresas Familiares

En palabras sencillas, la profesionalización de un negocio familiar implica pasar por un proceso, en el que el negocio se empieza a manejar y administrar como una empresa, en lugar de una familia; y en donde se invitan a personas a bordo de la empresa, por sus habilidades, capacidades y experiencia, y no por el simple hecho de ser un miembro familiar. (Miranda, 2013). Una organización puede ser de propiedad de una familia, estar gestionada por la familia y ser profesional. El profesionalismo nada tiene que ver con categorías, sino con actitudes y comportamientos personales. Y, de hecho, es posible que los miembros de la familia que posean la combinación apropiada de cualidades tengan ciertas ventajas al gestionar el negocio, en especial para asegurar a los principales interesados, familiares accionistas, empleados, clientes y proveedores, que la empresa es estable y pueden confiar en ella. Por lo tanto, no hay que caer en la trampa de suponer que para hacer más profesional una empresa hay que deshacerse de los empleados-familiares. (Valda, 2011)

En un estudio realizado por (Flores, Vega, Solís, 2013), hacen referencia que de acuerdo con Belausteguigoitia (2010), la profesionalización es un proceso de transformación gradual que implica un cambio de mentalidad en cada uno de los elementos de la organización. Para que esto sea eficaz, deben comprometerse aquellos que se encuentran en las máximas posiciones jerárquicas. Para cualquier empresa la profesionalización significa un gran reto, pero para las empresas familiares, que suelen dejarse llevar por la inercia y les cuesta más trabajo transformarse este proceso es más complejo. El largo periodo que ocupan los directores generales en este tipo de organizaciones es un factor que puede inhibir los cambios que exige la profesionalización. Por lo tanto la profesionalización es un proceso de cambio gradual que se va conociendo y entendiendo mejor a través de las diferentes etapas por las cuales suele atravesar una empresa familiar y tomar en cuenta los factores de contingencia que inciden en su profesionalización. De tal modo que los factores de contingencia, son aquellos estados o condiciones organizativas que están asociados al uso de ciertos parámetros de diseño. Los

factores a los que vamos a referirnos pueden clasificarse de la siguiente manera:

Proceso de profesionalización. El diseño organizativo en las empresas familiares debe preocuparse por contemplar una estructura que le permita el control y la toma de decisiones tanto desde una perspectiva de negocio como familiar. (Meroño, 2009). El perfil del gerente/propietario, la edad y el tamaño, tomando en cuenta la dimensión, ubicación geográfica de la organización; entre mayor antigüedad tenga la organización, más formalizado estará su comportamiento, y entre más grande sea la organización, más compleja será su estructura es decir, más especializadas estarán sus tareas, más diferenciadas sus unidades de trabajo y su componente administrativo. De tal manera que en una estructura burocrática, existe la especialización del trabajo, se requiere la definición de la jerarquía de autoridad, reflejándose en una tecno estructura para planificar y formalizar el trabajo, así como el crecimiento, desarrollo de la empresa, procesos y mecanismos con los que cuente la empresa familiar para realizar su proceso de profesionalización, lo anteriormente mencionado fue definido en una investigación realizada para el sector servicio, en donde se utilizaron los mismos factores de contingencia por (Flores et al., 2013), clasificándose de la siguiente manera:

Capacitación. El sistema técnico, que utiliza el núcleo de operaciones, es decir, cuánto más sofisticado sea el sistema técnico, más elaborada será la estructura administrativa, siendo más profesional y capacitado su personal y *staff* de apoyo. Con el control de la familia sobre la empresa, la primera garantiza que sus sueños, valores y deseos se reflejen en la segunda. Así, la familia puede estar segura de que la expresión de la familia a través de la empresa sería la adecuada. Belausteguigoitia (2010). Cultura organizacional. Distintos aspectos del entorno, especialmente la estabilidad, la complejidad, la diversidad y la hostilidad. Asimismo Belausteguigoitia (2010), también hacer referencia que con el compromiso de la empresa hacia la familia y viceversa, ambos subsistemas se mantienen cohesionados, por lo que es más difícil que se enfrenten. En este caso es mayor el grado de involucramiento de las personas relacionadas con la organización. Liderazgo. Algunas de sus relaciones de poder, que se ejerce de manera interna en la empresa, de acuerdo a las necesidades de poder de los miembros de la organización.

Belausteguigoitia (2010), menciona que con un liderazgo apropiado a las características de la propiedad y de la empresa, los propietarios, directores, y trabajadores en general se mantendrán relativamente unidos y perseguirán un mismo objetivo común: hacer una empresa fuerte que sea rentable para los accionistas y un buen lugar para trabajar. Selección. Según Zayas (2010), seleccionar no implica escoger a unos discriminando a otros, sino que la selección brinda la posibilidad de orientar y clasificar a las personas en función de sus potencialidades, y contribuir a la formación y desarrollo de los candidatos en la necesaria interrelación hombre-trabajo. El problema ético no está en seleccionar, sino en cómo se realiza la selección, ahí estriba el comportamiento ético del proceso, en las políticas, en los objetivos, en el proceder de las personas; esto enfatiza la necesidad de contar con principios que guíen el proceso de selección personal.

## MÉTODO

La metodología de investigación es cuantitativa. La investigación cuantitativa se aplica para el levantamiento de encuestas, a través de cuestionarios a los propietarios según una muestra finita de la población total de las empresas familiares del sector comercio. Se procesó la información recolectada con aplicación del programa estadístico SPSS para el análisis descriptivo e inferencial.

### Problemática y Justificación

En el contexto actual de la economía mexicana, se encuentran un número relevante de empresas familiares, en las que de acuerdo a las características de los mercados son globalizados y competitivos, en donde la turbulencia es muy agresiva, que ha incidido en lo económico, aunado a la poca formación de los propietarios con respecto a los conocimientos gerenciales que hoy en día se requieren, algunas empresas han cerrado y otras se encuentran estancadas, lo que conlleva a que se tomen las medidas y acciones adecuadas para contrarrestar los efectos de las variables de contingencias del entorno. La profesionalización de las empresas familiares en México, así como en Tijuana, B.C. es importante, ya que su existencia puede depender de dicho factor. Muchas empresas, al iniciar la producción de bienes o servicios, deben contemplar y considerar los diferentes factores que inciden en su organización. En una primera etapa, el propietario abarca todas las áreas de desarrollo de su empresa, pero llega un momento en el cual es necesaria la profesionalización de la misma y debe poner énfasis en la especialización de tareas para un correcto y sustentable desarrollo. Lo anterior, generalmente es obviado por los empresarios, ya que el trabajo cotidiano, les resta tiempo en temáticas de gestión de su empresa y la mayoría de las veces no cuentan con los conocimientos necesarios. (Flores, et al., 2013)

### Objetivos

**Objetivo General.** Analizar los factores de contingencias, tales como proceso de profesionalización, capacitación, cultura organización, liderazgo y selección, para determinar cuáles inciden en la profesionalización de las empresas familiares del Sector Comercio de Tijuana, B.C., México\_ **Objetivo Específico.** Determinar si los factores de contingencia tales como el proceso de profesionalización, capacitación, cultura organización, liderazgo y selección inciden en la profesionalización de las empresas familiares del Sector Comercio.

### **MÉTODO**

Para esta investigación la metodología utilizada es cuantitativa. En la investigación se aplicaron encuestas a través, de cuestionarios y entrevistas a los propietarios, de acuerdo a una muestra aleatoria, de la población total de las empresas familiares del sector servicios. Se procesó la información recabada con aplicación del programa estadístico SPSS 15.0 para el análisis descriptivo e inferencial. La variable dependiente es la profesionalización que consiste en hacer que las actividades se ejecuten con criterios empresariales de eficiencia y evaluación de resultados, sin que la toma de decisiones se encuentre influenciada por criterios familiares, que no siempre son compatibles con los empresariales.

En cuanto a las variables independientes se tomaron las siguientes: a) Proceso de profesionalización, como un factor que se caracteriza por la enseñanza-aprendizaje desde el punto de vista del rol que se ejerce y las actividades laborales que desempeña el empleado, b) Selección, en lo referente a los parámetros del perfil que debe tener la persona a ocupar el puesto, c) Liderazgo, en cuanto a la proactividad si se ejerce un liderazgo efectivo y si tiene libertad en la toma de decisiones, d) Capacitación, para determinar el crecimiento de los directivos dentro de la empresa y esto genere un sentido de lealtad y pertenencia, si son contratados por su capacidad y no por referencia, y, e) Cultura organizacional, refiriéndose al cúmulo de valores, expectativas de los empleados, creencias, normas y políticas aceptadas practicadas dentro de la empresa. (Flores, et al., 2013)

Para ello, consideraremos los factores de contingencia como variables independientes y la profesionalización como un parámetro de diseño con un valor dependiente, suponiendo por

consiguiente que la profesionalización representa el elemento “contingente” con la situación de la organización. Para el presente trabajo se eligió una muestra de 54 propietarios de las empresas familiares del sector comercio, registrados en el Sistema de Información Empresarial Mexicano (SIEM), correspondiente a delegación Tijuana, Baja California. A los propietarios se les aplicó un cuestionario conformado con 41 preguntas relacionadas al tema de estudio. Una vez recopilada la información de los cuestionarios se procedió a la elaboración de una base de datos en SPSS y posteriormente se procedió a la captura de la información, para luego realizar el respectivo análisis para su interpretación. Se utilizó una escala de medición con una escala de *likert*. Se elaboraron los cuadros, que permiten un análisis de la situación actual de la profesionalización en las empresas del sector comercio. (Flores, et al., 2013)

El diseño de la muestra es resultado de la identificación de una población total de 84 empresas familiares del sector comercio, registradas en el Sistema de Información Empresarial Mexicano (SIEM) de Marzo 2010, de Tijuana, B.C. México y de la consideración del porcentaje de presencia sobre la población total, dando como resultado 54 empresas, como se muestra en la Tabla 1. Los factores que se tomaron en cuenta en el cálculo de la muestra, es que la población se considera con características homogéneas, además, de contarse con una población finita, ya que el número de empresas familiares es conocido y la representatividad de la muestra está determinada por un error permisible de 0.068, con un nivel de confianza del 95% y  $p = q = 0.5$ . Para la recolección de la información se realizaron entrevistas personales, para aclarar cualquier duda que tuviera el entrevistado, acerca de alguna de las preguntas del cuestionario, finalmente se obtuvieron 54 encuestas, estas fueron válidas y ninguna fue excluida al momento de analizar la información

Tabla 1: Total de Empresas de Acuerdo al SIEM, Marzo 2010

	Población	Muestra
Total de empresas	84	54

*Esta tabla muestra que el total de las empresas encuestas del sector comercio y si cuentan con un nivel de confiabilidad. Fuente: elaboración propias con datos del spss (2013)*

### Validación del Instrumento

A los propietarios se les aplicó un cuestionario conformado con 41 preguntas, el cual fue validado relacionado al tema de estudio. Se utilizó una escala de medición con categorías de respuestas de opción múltiple. Se elaboraron los cuadros que permiten un análisis de los factores que inciden en el proceso de profesionalización de las empresas familiares. La validez del cuestionario se determinó mediante el coeficiente de confiabilidad de *Alfa-Cronbach*, por medio del programa SPSS: el resultado arrojado por dicho programa fue de .80, un grado de confiabilidad aceptable (ya que esta por arriba .60 y de 0.70, puntuación mínima aceptable.).

Tabla 2: Análisis de Fiabilidad

Alfa de Cronbach	No. de elementos

## RESULTADOS

### Análisis de Factores de Contingencias de Área y Distribución Geográfica

Asimismo, en la Tabla.3, se presenta la ficha técnica de la investigación, en donde se muestra la información más relevante en cuanto al universo objeto de estudio, que son las empresas familiares del sector comercio que cuenten con dos o más empleados, el ámbito de la investigación es el Municipio de Tijuana, B.C., con un muestreo aleatorio simple estratificado, encuestándose a 54 empresas, con un error muestral de  $E=\pm 5\%$  para un nivel de confianza del 95% y  $p = q= 0.5$ , aplicándose una encuesta presencial por empresa, respondiendo el propietario, gerente o un directivo de la empresa, se aplicó un cuestionario de 41 preguntas, relacionadas con la situación de la empresa familiar.

En la Tabla 4. Se refleja la información acerca de la representatividad de la distribución del tamaño de la muestra, atendiendo el criterio del tamaño y el sector al que pertenecen las empresas familiares en Tijuana, B.C., de acuerdo a la clasificación publicada en el Diario Oficial de la Federación de 2009 para el sector comercio, siendo dos categorías las de mayor representatividad; las microempresas (con un rango de empleados de 0 a 5 trabajadores) representando el 68.52% y las empresas pequeñas (con un rango de 6 a 20 trabajadores) representando el 29.63% y las empresas medianas representan un 1.85% de la muestra.

Tabla 3: Ficha Técnica Encuesta Por Muestreo Empresas Familiares del Sector Comercio

<b>Trabajo de Campo</b>		<b>Inicio: 12 de Agosto de 2011</b> <b>Final: 30 de Noviembre 2012</b>
Universo Objeto de Estudio	Empresas familiares del Sector Comercio con dos o más empleados pertenecientes al sector servicios, de Tijuana, B.C.	
Ámbito	Municipio de Tijuana, B.C., México	
Selección de unidades muestrales	Muestreo aleatorio simple estratificado	
Muestra	54 encuestas	
Error Muestral	$E=\pm 5\%$ para un nivel de confianza del 95% y $p = q= 0.5$	
Selección unidad muestral	Una encuesta por empresa, responde el propietario, gerente o algun directivo de la empresa.	
Tipo de entrevista	Presencial	
Cuestionario	Estructurado, 41 preguntas relacionadas a la situacion de las empresas familiares del sector comercio	

*Esta tabla contiene la ficha técnica en la cual se refleja el muestreo realizado a las empresas familiares del sector comercio, resumiendo la información más importante como el Universo objeto de estudio, el ámbito, selección de unidades muestrales, la muestra utilizada en la investigación, el error muestral, selección de unidad muestrales de una encuesta por empresa, el tipo de entrevista siendo esta presencial y la estructura del cuestionario aplicado de 41 preguntas. Tabla 4: Distribución de la Muestra las Empresas Familiares del Sector Comercio

<b>De acuerdo al Tamaño (%)</b>	<b>Porcentaje del tamaño de la muestra</b>
Microempresa	68.52%
Empresa Pequeña	29.63%
Empresa Mediana	1.85%
De acuerdo al sector de actividad (%)	100%

Tabla 5: Antigüedad de Empresas Familiares del Sector Comercio

De acuerdo al Tamaño	Antigüedad (promedio)	Porcentaje del Tamaño de la Muestra
Microempresa	8 años	68.52%
Empresa pequeña	15 años	29.63%
Empresa Mediana	20 años	1.85%
De acuerdo al sector de actividad (%)		100%

En la tabla se muestra el porcentaje de la distribución de la muestra de las empresas familiares del sector comercio, dando como resultado que las empresas familiares encuestadas del sector comercio, son empresas jóvenes, ya que promedio tienen una antigüedad de 8 años y representan el 68.52% de la muestra y el 29.63% son empresas consolidadas con una antigüedad promedio de 15 años y el 1.85% son empresas maduras con una antigüedad promedio 20 años de la muestra. Fuente: elaboración propia (2013)

A continuación se presentan los criterios utilizados para la estimación de la proporción de empresas familiares del Sector Comercio, de manera que se encuestaron 54 empresas del sector servicios por el número de empleados contratados, siendo estas de la localidad y de carácter familiar como se muestra en la Tabla 6.

Tabla 6: Estimación de Proporción de Empresas Familiares del Sector Comercio Por Empleados

Empleados	Población	Muestra
0 a 5	37	68.52%
6 a 20	16	29.63%
21- 100	1	1.85%
Total	54	100%

Esta tabla muestra la estimación de proporción de empresas familiares del sector comercio que fueron encuestadas, en base al número de empleados con que cuentan, dando como resultado que el 68.52% son empresas que tienen de 0 a 5 empleados y el 29.63% de las empresas encuestadas de 6 a 20 empleados y e. 1.85% son empresas que tienen de 21 a 100 empleados. Fuente: elaboración propia (2013)

Asimismo en la Tabla 7, se muestra la estructura organizativa por variables de contingencia del sector servicios representando un 59.98% las empresas que son dirigidas por miembros de la familia siendo estas microempresas y jóvenes en cuanto a su antigüedad. Y las de menor proporción con un 40.02% participan más directivos no familiares.

Tabla 7: Estructura Organizativa Por Variables de Contingencia del Sector Comercio

Dirección de la Empresa Familiar por miembros de la familia	Empresa de dirección familiar	Dirección de la Empresa familiar por directivos no familiares	Empresa de dirección por directivos no familiares	Gran Total
	40.74%	Directivo No	21.14%	61.88%
	12.96%	Familiar	12.20%	25.16%
	3.70%	Encargados		3.70%
	9.26%			9.26%
	66.66%		33.34	100%

Esta tabla muestra la estructura organizativa por variables de contingencia del sector comercio de acuerdo al tipo de dirección de la empresa familiar, dando como resultado que el 66.66% de las empresas familiares su dirección está a cargo de algún miembro de la familia y el 33.34% la dirección de la empresa es dirigida por un miembro ajeno a la familia. Fuente: elaboración propia (2013)

Tabla 8: Perfil del Propietario/Gerente Por Variables de Contingencia del Sector Comercio

Perfil del propietario/gerente	Mujer 26	Hombre 28	Dirección familia propietaria	Edad Rango 40-45 años	Antigüedad Rango 4 – 6 años	Estudios Universitarios

Según el tipo de dirección familiar por miembros de la familia	73.08%	60.71%	66.66%	56.50%	53.42%	39.60%
Según la dirección de la empresa familiar por directivos no familiares	26.92%	39.29%	33.34%	43.50%	46.58%	60.40%
Total	100%	100%	100%	100%	100%	100%

En esta tabla se muestra el perfil del propietario/gerente en cuanto a las variables de contingencias de sexo representando un 73.08% la participación de las mujeres en la dirección de la empresas dirigidas por miembros de la familia y un 26.92 las que se encuentran en las empresas dirigidas por directivos no familiares, asimismo el 66.66% de los propietarios/gerentes son los que dirigen la empresa familiar y el 56.50% está dentro del rango de los 40-45 años de edad promedio, con una antigüedad en el puesto de 4 a 6 años con un porcentaje del 53.42% y solo el 39.60% de los directivos de la empresa familiar en la cual la dirección es asumida por algún miembro de la familia cuenta con estudios universitarios. Fuente: elaboración propia (2013)

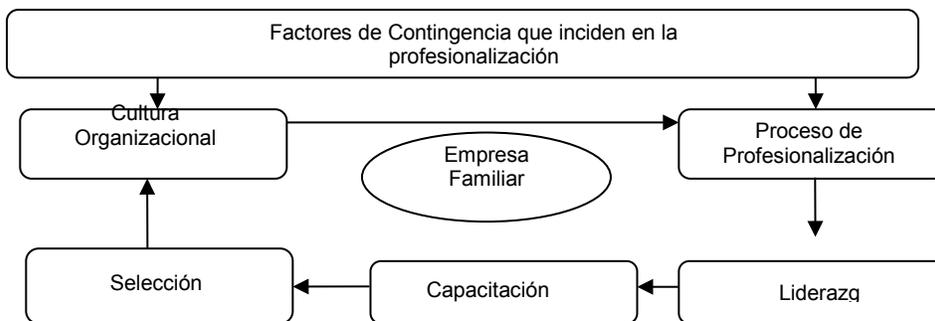

Tabla 9: Correlaciones Bivariadas (Matriz De Pearson) de las Variables Independientes

Correlación entre Variables	Correlación
Cultura Organizacional – Cultura Organizacional	.665**
Selección – Selección	.638**
Liderazgo-Selección	.603**
Liderazgo-Liderazgo	.747**
Capacitación – Capacitación	.683**
Proceso de Profesionalización - Selección	.610**
Proceso Profesionalización – Liderazgo	.633**
Proceso Profesionalización – Capacitación	.633**
Proceso Profesionalización-Proceso Profesionalización	.679**

En la tabla se observan las correlaciones que resultaron del análisis estadístico a través del SPSS 15. Se muestran las correlaciones más altas con respecto a las variables independientes, dando como resultado que el liderazgo incide en la selección en un 0.603, el proceso de profesionalización incide en la selección en un 0.610, de igual manera en el liderazgo con un 0.633, así como en la capacitación en un .633 y los cinco factores de contingencia presentan correlaciones significativas en el nivel 0.01, dado como resultado las siguientes correlaciones en cada uno de ellos: cultura organizacional con 0.655, selección con 0.638, liderazgo con 0.74, capacitación con 0.683 y el proceso de profesionalización con 0.679. Fuente: elaboración propias con datos del spss (2013)

En la figura 1, se muestran las variables que se tomaron como factores de contingencia y que inciden en el proceso de profesionalización de las empresas familiares del sector comercio en Tijuana, B.C., obteniendo como resultado las cinco variables: la cultura organizacional, selección, capacitación, liderazgo y el proceso de profesionalización. Estas cinco variables representan un conjunto de criterios empresariales de eficiencia que las empresas familiares deben considerar para profesionalizarse, que se respaldan en la gestión de estas variables como recursos intangibles, sin olvidar que su estructura organizacional se fundamenta en los tres elementos básicos que son la familia, propiedad y empresa y por lo tanto el Modelo de los tres círculos, sirve de base para ilustrar el modelo de articulación dinámica de Belausteguigoitia (2010), en donde la empresa familiar muestra el balance y la articulación que deben existir entre la propiedad, la empresa y la familia.

Figura 1: Factores de Contingencia Que Inciden en la Profesionalización de las Empresas del Sector Comercio

La Figura 1, muestra un esquema en donde se representan los cinco factores de contingencia que inciden de manera directa en la profesionalización de las empresas familiares del Sector Comercio, de acuerdo a los resultados obtenidos en las correlaciones realizadas. Estas cinco variables representan un conjunto de criterios empresariales de eficiencia que las empresas familiares deben considerar para profesionalizarse, que se respaldan en la gestión de estas variables como recursos intangibles, sin olvidar que su estructura organizacional se fundamenta en los tres elementos básicos que son la familia, propiedad y empresa y por lo tanto el Modelo de los tres círculos, sirve de base para ilustrar el modelo de articulación dinámica de Belausteguigoitia (2010). Fuente elaboración propia Flores M.V. y Vega A. (2013).

## CONCLUSIONES

Es de suma importancia para que las empresas familiares permanezcan, es importante que realicen la profesionalización de su gestión, por lo cual los puestos directivos deben estar ocupados por personas con los requerimientos solicitados, habilidades, capacidades y la experiencia necesaria, independientemente si son miembros de la familia o directivos ajenos a la familia. Solo que contar con profesionales externos, pasa a ser una necesidad en un determinado momento por el crecimiento de la empresa, porque va a llegar un punto en el cual el propietario no va a poder administrar de manera eficiente la organización, como es el caso de las empresas familiares del sector comercio que las empresas en un 33.34% son dirigidas por directivos ajenos a la familia y con estudios universitarios representado en un 60.40%

La presencia de la mujer en la dirección tanto de la empresa familiar dirigida por algún miembro de la familia o en la que es dirigida por directivos no familiares representan una minoría, solo siendo 26 el total de propietarios/gerentes las que ocupan estos puestos. Aun así, continua siendo mayor la presencia de los hombres tanto en las empresas de dirección familiar como en las empresas que son dirigidas por directivos ajenos a la familia, el rango de edad entre ambas es el mismo ya que es de 40 a 45 años en promedio, teniendo también una antigüedad en el puesto de 4 a 6 años en promedio dado lo joven de las empresas familiares del sector comercio representando un 68.52%. Cabe resaltar que el nivel de estudios universitarios es menor en las empresas familiares cuya dirección es familiar, pero es importante que las empresas familiares tomen en cuenta la contratación de personal directivo ajeno a la familia con una preparación profesional, ya que resultan un recurso valioso cuando estas organizaciones se tornan complejas. (Flores, et al., 2013). Obteniéndose como resultado que son las empresas las de mayor complejidad las que su personal directivo es de la familia con una representatividad del 66.66%.

En cuanto a su estructura organizativa las empresas familiares al inicio de su ciclo de vida tienen estructuras sencillas, basadas en el propietario, si logran sobrevivir empiezan a formalizar su estructura organizacional debido a su crecimiento contemplando nuevos departamentos e inclusive la contratación de personal ajeno a la familia, siendo la gestión y la toma de decisiones más descentralizada. (Flores, et al., 2013) Las empresas familiares del sector comercio aún tienen estructuras sencillas basadas en la gestión y en la toma de decisiones de su fundador, siendo microempresas con un máximo de 5 empleados, representando el 68.52% de las empresas

familiares de este sector, por lo cual son empresas jóvenes con un promedio de antigüedad de 8 años.

Respecto a las variables independientes, el liderazgo incide en la selección en un 0.603, el proceso de profesionalización incide en la selección en un 0.610, de igual manera en el liderazgo con un 0.633, así como en la capacitación en un .633 y los cinco factores de contingencia presentan correlaciones significativas en el nivel 0.01, dado como resultado las siguientes correlaciones en cada uno de ellos: cultura organizacional con 0.655, selección con 0.638, liderazgo con 0.74, capacitación con 0.683 y el proceso de profesionalización con 0.679. Asimismo de acuerdo a lo anterior las decisiones sobre la estructura organizacional de las empresas familiares del sector comercio concentran la toma de decisiones en el propietario y al tratarse de microempresas y siendo de dirección familiar representando un 66.66%, por lo cual estas no han formalizado su estructura organizativa a través de un organigrama. Por último se puede concluir que al analizar los factores de contingencia de la cultura organizacional, selección, capacitación, liderazgo y el proceso de profesionalización estos tienen una incidencia directa en la profesionalización de las empresas familiares del sector comercio como se representó en el esquema.

# **POLÍTICAS PÚBLICAS E INTEGRACIÓN DE LA SOCIEDAD CIVIL EN LA TRANSPARENCIA Y ACCESO A LA INFORMACIÓN GUBERNAMENTAL EN MÉXICO**

María del Carmen Morales Tostado, Universidad de Sonora

## **RESUMEN**

*En la Constitución Política de los Estados Unidos Mexicanos está incorporado el derecho a la información desde el año de 1977 y fue hasta el año 2002 que se aprobó e inició vigencia la Ley Federal de Transparencia y Acceso a la Información Pública Gubernamental. Al promulgarse la Ley de transparencia se empodera a la sociedad civil ya que le permite hacer uso del derecho a la información pública, lo que ha propiciado avances significativos en las discusiones sobre el desempeño del gobierno y el diseño e implantación de las políticas públicas de transparencia y acceso a la información. La estructura legal de la transparencia y acceso a la información gubernamental obliga a los funcionarios públicos a cumplir con las obligaciones de transparencia y acceso a la información y brinda seguridad jurídica a los ciudadanos para que puedan acceder a la información que les interese de las gestiones y desempeño del gobierno. Ley Federal de Transparencia y Acceso a la Información Pública gubernamental, constituye la piedra angular del derecho humano a la información, sin embargo es necesario la promulgación o modificación a leyes secundarias que fortalezcan y apoyen el cumplimiento de tan importante derecho. Dentro de esas se pueden mencionar la Ley General de Contabilidad Gubernamental, Ley Federal de Archivos, Ley de Fiscalización y rendición de cuentas, Ley Federal de Presupuesto y Responsabilidad Hacendaria, entre otras.*

**PALABRAS CLAVE:** Derecho, Información, Sociedad

## **PUBLIC POLICIES AND INTEGRATION OF CIVIL SOCIETY IN THE TRANSPARENCY AND ACCESS TO GOVERNMENT INFORMATION IN MEXICO**

### **ABSTRACT**

*In the Constitution of the United Mexican States is built the right to information from the year 1977 and until 2002 was approved and initiated force the Federal Law of Transparency and Access to Public Government Information. The enactment of transparency empowers civil society because it allows you to use the right to public information, which has led to significant progress in the discussions on the government's performance and the design and implementation of public policy of transparency and access to information. The legal framework of transparency and access to government information requires public officials to fulfill the obligations of transparency and access to information and provides legal certainty for citizens so they can access the information they are interested in the negotiations and government performance. Federal Law of Transparency and Access to Government Public Information, is the cornerstone of the human right to information, however you need the enactment or amendment of secondary legislation to strengthen and support the implementation of this important law. Among these may be mentioned the Government Accountability Act , Federal Archives, Law Enforcement and accountability, Federal Budget and Fiscal Responsibility , among others.*

**KEYWORDS:** Law, Information, Society

**JEL:** H83, K39, M48

## **INTRODUCCIÓN**

El derecho de acceso a la información pública que tienen los ciudadanos mexicanos, tiene su sustento en la Constitución Política de los Estados Unidos Mexicanos. En 1917 se incorporó ese derecho a la Constitución y a partir de entonces fue algo olvidado y no era prioridad para el gobierno informar a la sociedad sobre su quehacer. Fue hasta el año 2002 cuando se aprobó la Ley Federal de Acceso a la Información Pública Gubernamental y con ella se abre paso a una nueva relación gobierno y sociedad.

En el presente trabajo se desarrolla los temas del Derecho de acceso a la información, la participación de la sociedad civil y los órganos garantes. En cada uno de ellos se abordan cuestiones sobre antecedentes, definiciones, evolución y algunos datos importantes para analizar de forma más integral estos elementos.

La participación de la sociedad civil en el derecho al acceso a la información es otro de los puntos que se abordan y se relata la participación que ha tenido la sociedad civil desde la etapa de elaboración de la iniciativa de la Ley Federal de Acceso a la Información Pública Gubernamental hasta nuestros días. Es tan importante y necesaria la participación de la sociedad civil que en el Plan Nacional de Desarrollo (2013-2018), se contempla como política pública en la estrategia transversal: Gobierno cercano y moderno, la vinculación con las organizaciones de la sociedad civil y la promoción de la participación ciudadana en la gestión pública.

Otro punto de análisis fue el relacionado a los órganos garantes del derecho a la información pública tanto en el ámbito federal como en el estatal. Se realizó una compilación de los nombres de cada órgano garante, la fecha en que iniciaron y el número de solicitudes que recibieron en cada uno de los años siguientes: 2006, 2007, 2008 y 2009. Todos estos puntos de análisis permiten dar cuenta de los cambios estructurales que ha sufrido nuestro país para responder a las exigencias del contexto internacional y nacional, sin embargo la participación ciudadana en el legítimo uso del derecho a la información es un cambio cultural que promueve que los ciudadanos se involucren de manera directa en la evaluación y seguimiento de la gestión pública.

## **REVISIÓN LITERARIA**

El derecho de acceso a la información se considera un derecho humano fundamental consagrado en una serie de instrumentos internacionales de derechos humanos, (López, 2009) señala que “los derechos humanos son una de las primeras y más importantes expresiones, se plasmó en Francia en 1789 con la Declaración de los Derechos del Hombre y Ciudadano”. También son instrumentos importantes la Declaración Universal de los Derechos Humanos, el Pacto Internacional de Derechos Civiles y Políticos y la Convención Americana de Derechos Humanos. En 1946, la Asamblea General de Naciones Unidas, afirmó en su resolución 59. “La libertad de información es un derecho humano fundamental y la piedra angular de todas las libertades a las que están consagradas las Naciones Unidas”. De esta resolución se desprende que el derecho de acceso a la información debe defenderse como un fin en sí mismo, en su carácter de derecho

fundamental, y como un medio, en su dimensión de derecho facultativo para la exigencia de otros derechos. La Corte Interamericana de Derechos Humanos dictaminó que la información pertenece a las personas, la información no es propiedad del Estado y el acceso a ella no se debe a la gracia o favor del gobierno. Éste tiene información sólo en cuanto representante de los individuos. Las instituciones del Estado tienen disposiciones jurídicas, cuyo objetivo es precisamente la protección de los derechos de las personas y de sus datos personales. Sin embargo, la información de interés público, se refiere a la que surge o se encuentra en posesión de las autoridades en función de las atribuciones del Estado, misma que será pública y podrá ser solicitada por los ciudadanos.

El derecho a la información pública, ha adquirido notoria importancia en el mundo de las ideas políticas, sociales y jurídicas del pensamiento contemporáneo; al grado de que se le considera como uno de los rasgos más distintivos de los Estados constitucionales modernos, esto en virtud de que el acceso a la información forma parte de una corriente universal, que va mucho más allá de una administración y se exige que se observe como un auténtico derecho y no sea ignorado, evadido o pospuesto.

## **METODOLOGIA**

Dentro de los objetivos del presente trabajo se pueden mencionar los siguientes: Explicar el marco constitucional del derecho de acceso a la información, analizar la participación de la sociedad civil en el derecho de acceso a la información y conocer el número de solicitudes de información que se recibieron en los años siguientes: 2006, 2007, 2008 y 2009. Para la realización de esta investigación se revisaron libros, artículos en revistas especializadas y páginas electrónicas de las instituciones gubernamentales relacionadas con los temas de derecho de acceso a la información, participación de la sociedad civil y órganos garantes del derecho de acceso a la información.

La Técnica utilizada fue el análisis documental y el instrumento lo constituyó la guía de análisis documental. El tipo de investigación es informativa ya que brinda una panorámica sobre el derecho de acceso a la información y la participación de la ciudadanía. Una vez revisada la información se procedió a estructurar el tema vinculando el derecho a la información pública gubernamental con la participación de la sociedad civil y con los órganos garantes del derecho de acceso a la información. Posteriormente se visitaron las páginas electrónicas de las instituciones relacionadas al derecho de información y se realizó una búsqueda para conocer el número de solicitudes que recibieron los órganos garantes en los años: 2006, 2007, 2008 y 2009. Con la información obtenida se elaboró una figura que permite conocer el número de solicitudes recibidas por cada ámbito de gobierno: estatal y federal y el total de solicitudes recibidas y finalmente se dan a conocer las conclusiones de nuestra investigación.

## **RESULTADOS**

Aplicando la metodología descrita se presenta un análisis detallado del marco constitucional del derecho de acceso a la información.

En la Constitución Política de los Estados Unidos Mexicanos el derecho a la información está incorporado desde el año de 1977, sin embargo no existían instituciones o procedimientos para proporcionar a los ciudadanos la información en poder del gobierno, fue hasta el año 2002, cuando entro en vigor la Ley Federal de Transparencia y Acceso a la Información Pública Gubernamental (LFTAIPG). Con ello se origina una nueva perspectiva ciudadana, la cual se nutre

con la información que genera el gobierno en su desempeño, también le permitirá conocer los motivos en los que se basan para tomar determinadas decisiones en cualquier área incluyendo el manejo de los recursos económicos que la ciudadanía le proporciona al gobierno en forma de impuestos.

El fundamento legal para hacer uso del derecho de acceso a la información pública lo constituye el artículo 6 constitucional que dentro de las garantías individuales o derechos humanos, consagra al derecho de acceso a la información en el ámbito federal, estatal y municipal. Dicho artículo se ha venido adecuado a las necesidades y demandas de la sociedad con el objetivo de brindar certidumbre jurídica en el uso del derecho de acceso a la información pública. A continuación se describe de forma resumida las modificaciones del artículo 6 constitucional que dan mayor sustento legal al derecho de acceso a la información: En el año 2007 se hicieron dos modificaciones al artículo 6 constitucional; una de ellas para incluir el derecho de réplica y se establece que será ejercido en los términos dispuestos en la ley. La otra modificación se detalla en la iniciativa que reforma el artículo 6 constitucional publicada en la Gaceta Parlamentaria de la Cámara de Diputados, número 2155-I el 19 de diciembre de 2006, donde se puntualiza que para garantizar el derecho al acceso a la información tanto en la federación, los estados y municipios, se requiere una descripción más detallada de la información que están obligados a proporcionar, por ello y mediante decreto se adicionaron siete fracciones al artículo 6 constitucional y se publicaron en el Diario Oficial de la Federación el día 20 de julio de 2007. Por su importancia se describe de forma resumida el contenido de cada una de las fracciones que se adicionaron al artículo 6 constitucional:

I.- Toda la información en posesión de cualquier autoridad, entidad, órgano y organismo federal, estatal y municipal, es pública y solo podrá ser reservada temporalmente por razones de interés público.

II.- La información que se refiere a la vida privada y los datos personales será protegida en los términos y con las excepciones que fijen las leyes.

III.- Toda persona sin necesidad de acreditar interés alguno o justificar su utilización. Tendrá acceso gratuito a la información pública, a sus datos personales o a la rectificación de estos.

IV.- Se establecerán mecanismos de acceso a la información y procedimientos de revisión expeditos.

V.- Los sujetos obligados deberán preservar sus documentos en archivos administrativos actualizados y publicaran a través de los medios electrónicos disponibles.

VI.- Las leyes determinaran la manera en que los sujetos obligados deberán hacer pública la información relativa a los recursos públicos que entreguen a personas físicas o morales.

VII.- La inobservancia a las disposiciones en materia de acceso a la información pública será sancionada en los términos que dispongan las leyes. El 11 de junio de 2013, se publicaron en el Diario Oficial de la Federación, algunos párrafos al artículo 6 constitucional, por su importancia se señalan a continuación:

*Toda persona tiene derecho al libre acceso a información plural y oportuna, así como a buscar, recibir y difundir información e ideas de toda índole por cualquier medio de expresión.*

*El Estado garantizará el derecho de acceso a las tecnologías de la información y comunicación, así como a los servicios de radiodifusión y telecomunicaciones, incluido el de banda ancha e internet. Para tales efectos, el Estado establecerá condiciones de competencia efectiva en la prestación de dichos servicios.*

Como se puede apreciar las modificaciones al artículo 6 constitucional, describen con mayor detalle las situaciones que estaban sujetas a los criterios de los sujetos obligados. Las adiciones tienen el propósito de establecer los principios y las bases mínimas a partir de las cuales se daría cumplimiento al derecho de acceso a la información pública en todo el país. (Merino, 2008). Una vez que se analiza la información constitucional, vale la pena continuar con la Ley principal: Ley Federal de Transparencia y Acceso a la Información Pública gubernamental (LFTAIPG), para entrar en materia, se define la Ley de acceso a la información, Ackerman y Sandoval (2008), la describen como “una ley que otorga a los ciudadanos el derecho a conseguir información bajo el resguardo del gobierno, sin la necesidad de demostrar interés legal”. Se considera que la LFTAIPG forma parte de un proyecto diseñado para la formación de los ciudadanos, donde se busca que se incorporen los valores de responsabilidad, respeto, honestidad, tolerancia, entre otros, dicho proyecto debe darse desde los espacios formativos, tales como escuelas y universidades y organizaciones de la sociedad civil.

La LFTAIPG en el artículo 3 fracción XIV señala a los sujetos obligados: funcionarios públicos del Poder Ejecutivo Federal, la Administración Pública Federal y la Procuraduría General de la República, el Poder Legislativo Federal, integrado por la Cámara de diputados, la Cámara de Senadores, la Comisión Permanente y cualquiera de sus órganos, el Poder Judicial de la Federación y el Consejo de la Judicatura Federal y los Órganos Autónomos donde se señalan los siguientes: Instituto Federal Electoral, la Comisión Nacional de los Derechos Humanos, el Banco de México, las universidades y las demás instituciones de educación superior a las que la ley otorgue autonomía y cualquier otro establecido en la Constitución Política de los Estados Unidos Mexicanos.

Así también, el artículo 7 de la LFTAIPG señala las obligaciones de transparencia y dentro de ellas se mencionan las siguientes: la estructura orgánica de la entidad donde presten sus servicios, las facultades de cada unidad administrativa, el directorio de servidores públicos, desde el nivel de jefe de departamento o sus equivalentes, la remuneración mensual por puesto y las compensaciones que se reciban, el domicilio de la unidad de enlace y la dirección electrónica donde podrán recibirse las solicitudes para obtener la información, las metas y objetivos de las unidades administrativas señalados en sus programas operativos.

Todos estos cambios a las legislaciones mexicanas para dar un sustento a la obligación de la transparencia y acceso a la información gubernamental se despliegan en el contexto de un compromiso internacional por contener la corrupción el cual fue expresado en la Convención de la ONU contra la Corrupción, cuyo texto se publicó en diciembre de 2003.

Un dato importante es que los países con menor corrupción en el mundo, tienen una sólida ley de acceso a la información. Por medio de estas legislaciones, los ciudadanos se pueden convertir en vigías sociales, su escrutinio permanente es una salvaguarda de la rectitud en el manejo de recursos y en la toma de decisiones públicas. (Ramírez, 2008) A partir de la entrada en vigor de la LFTAIPG, más de 250 dependencias y entidades del gobierno federal tienen la obligación de atender las solicitudes de información, esta obligación brinda a la sociedad la oportunidad de que recupere la confianza en el gobierno, por medio del conocimiento de la información sobre la gestión pública, incluyendo los presupuestos donde se identifique el origen y aplicación de los

ingresos. Pazos, (1991) señala que el fin del gobierno es la generación del bien común que se refiere a lo siguiente: Crear, mantener y proteger la atmósfera propicia para que individuos y grupos se desarrollen plenamente.

Así mismo, se analizó la literatura que sobre la participación de la sociedad civil, donde se conoció que existen varias definiciones del derecho de acceso a la información dependiendo de la rama del derecho que lo analice, para efectos de esta investigación se considera que el derecho de acceso a la información es un derecho fundamental que forma parte de las garantías individuales que consagran los derechos humanos. Para analizar el significado de sociedad civil, se parte también, de que la sociedad civil tiene muchas definiciones, pero para nuestro propósito es suficiente decir que cubre todas las actividades que son independientes de los Estados y mercados, basadas en una actividad voluntaria sin ánimo de lucro. La sociedad civil está integrada por organizaciones no gubernamentales, organizaciones sin ánimo de lucro, organizaciones comunitarias, organizaciones de autoayuda, sindicatos, organizaciones religiosas y cooperativas, voluntariado, movilización social, acción colectiva y demás manifestaciones de la sociedad civil en nuestro país. La participación de la sociedad civil en el uso legítimo del derecho a la información ha propiciado avances significativos, en la mayoría de las discusiones sobre la política de transparencia y acceso a la información subrayan la importancia de que la sociedad civil vigile los procesos mediante los cuales se garantiza el derecho a la información.

Al respecto Luna Pla (2009), señala que “la sociedad en México ha respondido de manera lenta asimilando y comprendiendo los usos, alcances y límites del derecho de acceso a la información”, quizá esto va a cambiar con el paso de los años, cuando realmente se refleje el impacto en la gestión pública, con funcionarios comprometidos con la sociedad a la cual se debe, esta actitud puede revertir aunque sea un poco, la desconfianza hacia los servidores públicos. La ley que protege el Derecho de acceso a la información fue resultado de la participación intensa de los integrantes de la sociedad civil en el denominado Grupo Oaxaca, quienes plasmaron el decálogo del derecho a la información, donde se establecen los puntos centrales que se incluyeron en la LFTAIPG, por considerar elemental para nuestra investigación se transcribe el decálogo.

Tabla 1: Decálogo del Derecho a la Información

<b>1.</b>	<b>El acceso a la información es un derecho fundamental</b>
2.	La información pública le pertenece a las personas y a ellas corresponde qué información requieren y como la usarán.
3.	Debe existir la máxima apertura, transparencia y rendición de cuentas por parte de los poderes del estado.
4.	Hay obligación de publicar y entregar información que posee el estado de forma veraz, oportuna y correcta.
5.	Deben establecerse procedimientos ágiles, sencillos y a costos mínimos. La entrega no deberá exceder de diez días h
6.	La ley establecerá las excepciones para tener acceso a la información. Entre ellas se incluirán los campos de: vida privada, seguridad nacional, seguridad pública, política exterior y secretos científicos, industriales y bancarios.
7.	Debe haber un organismo autónomo para promover la apertura y resolver las controversias
8.	Todos los órganos del estado y entidades que ejerzan gasto público estarán obligados a permitir el acceso a la información relacionada con los fondos administrados por ellos.
9.	La ley debe poseer consistencia jurídica
10.	Significa una promoción del federalismo. Se busca que la ley de acceso a la información sea punto de partida para fomentar la deliberación y regulación de la materia en el ámbito de los estados y municipios.

Fuente: Elaboración propia con datos de Escobedo 2002. Citado en Ramírez (2008)

En México están emergiendo nuevas formas de participación pública, se han abierto nuevas fórmulas de participación ciudadana en la elaboración de políticas públicas en todo el conjunto de la democracia representativa. Los ciudadanos exigen a sus gobiernos mayores cuotas de transparencia y control, y demandan la oportunidad de participar activamente en la elaboración de políticas que les afecten, un documento de la OCDE (2005) refiere que los gobiernos deben ser

eficientes, flexibles, responsables, orientados en base a resultados y deben ser transparentes, abiertos al escrutinio público y garantes del derecho que cualquier ciudadano tiene a acceder a la información en manos de las instituciones y los servidores públicos. Así también el documento en mención señala que la mayoría de los países de la OCDE han evolucionado hacia un gobierno más abierto y transparente, donde el gobierno permite la participación ciudadana en la toma de decisiones.

La influencia de la sociedad civil sobre la transparencia y el acceso a la información se reconoce ampliamente, O'Donnell (1999), señala que el impacto de la presión de la sociedad civil en la transparencia de las autoridades públicas, depende en gran medida de las acciones que toman agencia de estado propiamente autorizadas para investigar y sancionar las ofensas. La relación entre el estado y sociedad civil es, en la actualidad, compleja y problemática. Tradicionalmente el Estado apoya las actividades de la sociedad civil como una cuestión de principios, simplemente porque son manifestaciones del derecho de asociación de los ciudadanos. Hoy, este principio se enfrenta a la creciente presión del énfasis puesto en la gestión por resultados y la necesidad de la participación en los servicios de las organizaciones de la sociedad civil.

Es importante recordar que los ciudadanos dirigen el Estado federal en lugar de lo contrario. En este proceso, se requieren debates abiertos y libres en la sociedad civil. Sin embargo se necesitan iniciativas ascendentes y descendentes. El Estado puede apoyar a la ciudadanía activa a través de la educación. (INAP 2008) En un país en el que la desigualdad es uno de los principales problemas que enfrenta la población, las organizaciones civiles adquieren un compromiso especial con el desarrollo económico, social, cultural y el impulso de una ciudadanía plena y responsable. Sojo (2005), expresa que para ser sólida, una democracia necesita mucho más que elecciones libres y equitativas. En una sociedad plural, como la mexicana, la convivencia diaria tiene que fundamentarse en virtudes cívicas como la tolerancia, el respeto a las leyes y a los derechos de terceros y, de manera específica a los derechos de las minorías.

Una de estas organizaciones de la sociedad civil, se le conoce como: El Colectivo por la Transparencia, surgió a finales del año 2002 como un espacio de reflexión y acción, conformado por seis organizaciones de la sociedad civil. Para agosto de 2006 ya se han sumado otras organizaciones a este esfuerzo, quedando integrado por las siguientes once instituciones:

Fuente: *Elaboración propia con datos de México transparente*

En México a partir del año 2000 se han establecido condiciones que fomentan las organizaciones civiles, se puede mencionar la creación de un marco normativo para identificar y regular la actividad de las organizaciones civiles, el cual sienta las bases para la institucionalización de la relación con las organizaciones civiles. Adicionalmente se estableció el registro Nacional de instituciones y organizaciones políticas sociales y civiles, para identificar aquellas con causas

similares, a fin de propiciar su trabajo conjunto. En necesario señalar que en el Plan Nacional de Desarrollo (2013-2018), se contempla la política pública de participación ciudadana en el quehacer gubernamental, en la estrategia II de la meta: México en paz, se señala lo siguiente “Estrechar desde la oficina de la Presidencia, la Secretaría de Gobernación y demás instancias competentes, la vinculación con las organizaciones de la Sociedad Civil y promover la participación ciudadana en la gestión pública”

Por tanto, es necesario que realmente se lleve a la práctica acciones tendientes a promover la creación de organizaciones de participación ciudadana como mecanismos fundamentales para la participación de la ciudadanía en el diseño de las políticas públicas, la transparencia y la rendición de cuentas, así como alentar la participación de las organizaciones civiles tanto en la elaboración de los programas sectoriales como en el diseño de políticas públicas específicas. Esta estrategia busca impulsar que los ciudadanos participen de forma activa en el monitoreo, el seguimiento y la evaluación de la gestión pública con la finalidad de que estas acciones se traduzcan en medidas correctivas dentro de la función pública, ya sea en la mejora de la administración o en la sanción ante actos de corrupción. Para implementar la estrategia se requiere construir alianzas con la sociedad civil y el establecimiento de foros permanentes de consulta, evaluación y seguimiento sobre la gestión gubernamental donde participe la sociedad. Por otra parte, es necesario desarrollar e implementar estrategias que permitan la participación ciudadana en los procesos de toma de decisión para mejorar la gestión pública.

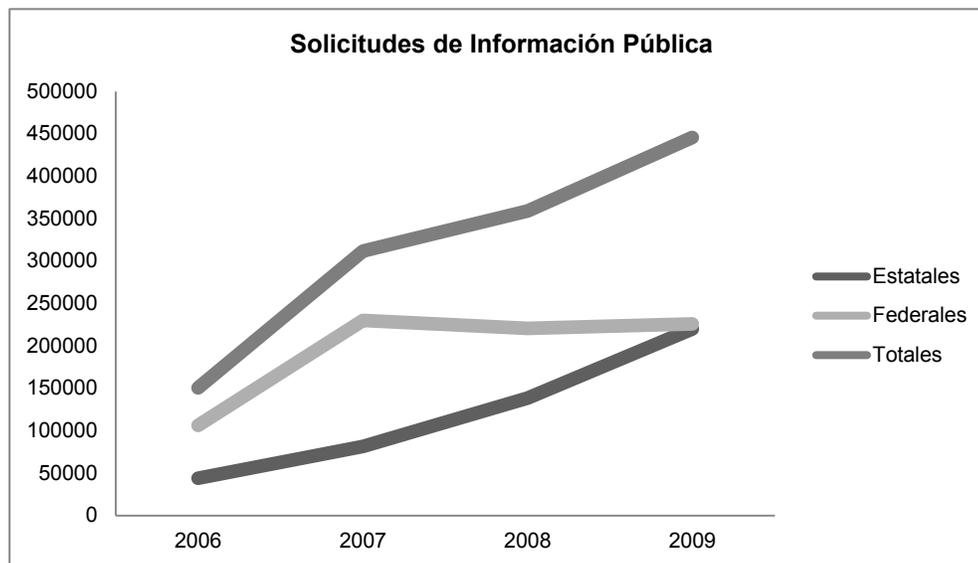

#### Órganos Garantes del Derecho al Acceso a la Información (OGDAI)

Un órgano garante de un derecho, es una instancia pública con autonomía operativa, presupuestaria y de decisión, encargado de promover y difundir el ejercicio del derecho que protege. Para la protección del derecho de acceso a la información, los integrantes del Grupo Oaxaca, propusieron la creación de un órgano supervisor y se logró la aprobación en la LFTAIPG la creación del Instituto Federal de Acceso a la Información Pública (IFAI). La LFTAIPG en el artículo 33 establece que el IFAI, es un órgano de la administración pública federal, con autonomía operativa, presupuestaria y de decisión, encargado de promover y difundir el ejercicio del derecho de acceso a la información, resolver sobre la negativa a las solicitudes de acceso a la información y proteger los datos personales en poder de las dependencias públicas. El IFAI y los órganos garantes en las entidades federativas son considerados como órganos reguladores y en el ámbito gubernamental los órganos reguladores han sido parte del marco institucional de la administración pública, surgen como una idea de formar agencias reguladoras independientes. Los órganos reguladores se pueden clasificar en dos categorías, la primera relacionada a los órganos que regulan sectores económicos específicos como el de energía y el de comunicaciones. La segunda categoría se refiere a los órganos que se crearon para afianzar los procesos de reforma horizontal, tales como el IFAI. López, Haddou (2007).

Así como se tiene establecido en la LFTAIPG la creación del IFAI, de igual manera cada entidad federativa tiene su propia ley de transparencia y acceso a la información, que garantiza al ciudadano el derecho al acceso a la información pública y también cada ley estatal contempla la creación de un órgano garante, que puede denominarse comisión, instituto o consejo. Al realizar el análisis de la participación social como un elemento relevante en el uso del derecho de información, se indagó el número de solicitudes que reciben los órganos garantes, por considerarse a las solicitudes de información una manifestación de la participación de los integrantes de la sociedad, y se ve que año con año se suman más ciudadanos decididos a conocer la información del gobierno, por lo que se incrementan las solicitudes de información

pública. En la siguiente figura se puede conocer el número de solicitudes de información tanto en el ámbito estatal como en el federal.

Figura 1: Solicitudes de Información Pública

*Elaboración propia con datos del estudio Métrica para la Transparencia (2010) del CIDE*

Se puede apreciar que en 2006 se recibieron en los estados un total de 44,075 solicitudes y en el ámbito federal 106,340 dando una suma total de 150,415. Para el año 2007 se recibieron en los estados 81,587 solicitudes y en el ámbito federal 230,132 dando una suma total de 311,719. En el año 2008 se recibieron en los estados 138,615 solicitudes y en el ámbito federal 220,544 dando un total de 359,159. Por último en el año 2009 se recibieron en los estados 219,941 solicitudes y en el ámbito federal 225,835 dando un total de 445,776.

## CONCLUSIONES

Con el análisis realizado del marco constitucional del derecho a la información se puede concluir que se han llevado a cabo cambios importantes en el aspecto normativo con las modificaciones y adiciones al artículo 6 para dar certidumbre jurídica a los ciudadanos al hacer uso del derecho a estar informado sobre el desempeño de sus gobernantes. Sin embargo, no basta consagrar un derecho en la Constitución para que por sí solo genere los cambios que se requieren, se hace necesario traducir las normas constitucionales en lenguaje sencillo, para que puedan aplicarse en la práctica en la vida cotidiana de las instituciones y de la sociedad para que realmente impacte y genere un beneficio social.

La reforma constitucional y la aprobación de la LFTAIPG, así como la constitución del órgano garante a nivel federal y la constitución de los órganos garantes estatales, son pasos firmes hacia una mejor utilización del derecho de acceso a la información. En cada reforma constitucional y legal, se reconoce la participación de grupos de la sociedad civil que de manera comprometida

participan haciendo que las cosas sucedan, en un país como México donde los problemas sociales como pobreza, desempleo, inseguridad, las sociedades civiles adquieren un compromiso especial con el desarrollo económico, social, cultural y el fomento de una ciudadanía responsable y plena.

Hay mucho por hacer en el tema de los órganos garantes, algunos de ellos no gozan de autonomía plena y estas sujetos a las preferencia de los gobernantes en turno, con las futuras investigaciones y la comprometida participación de los integrantes de los grupos de la sociedad civil, se seguirá poniendo énfasis en lo que se requiere para que el ejercicio del derecho de acceso a la información vaya mejorando en todas sus dimensiones. Sin duda se ha avanzado mucho en el derecho de acceso a la información pública, la participación ciudadana y los órganos garantes, sin embargo la aprobación de la LFTAIPG y las modificaciones que se han realizado al marco legal del derecho a la información es solo un inicio, por si solos no generan cambios, se requiere el compromiso y voluntad de cambio de los funcionarios públicos para cumplir con la ley, así como de los ciudadanos para hacer uso del derecho de información.

En el discurso político se puede interpretar que todo está muy bien y que hay grandes avances en materia de transparencia y acceso a la información, sin embargo es necesario investigar lo que realmente sucede en el entorno. Las investigaciones sobre estos temas son esenciales para el futuro de nuestro país, queda pendiente el análisis de cada una de las respuestas emitidas por los sujetos obligados para evaluar si realmente cumplen con la solicitud de los ciudadanos. Por último conviene mencionar que en los últimos años se han realizado algunas investigaciones y será menester seguir con ellas hasta que se conforme las condiciones óptimas para el ejercicio de este derecho.

# **INTEGRACIÓN DE LA CADENA DE VALOR DE LA OFERTA DE PROVEEDORES DE SERVICIOS PARA EL TURISMO DE REUNIONES DEL MUNICIPIO DE TIJUANA, BAJA CALIFORNIA**

Karen Gardenia Ramos Higuera, Universidad Autónoma de Baja California

Onésimo Cuamea Velázquez, Universidad Autónoma de Baja California

## **RESUMEN**

La presente investigación analiza la integración de los eslabones de la Cadena de Valor de la Oferta de Proveedores de Servicios para el Turismo de Reuniones en la ciudad de Tijuana, B.C., México. Por lo cual se definió que es el Turismo de Reuniones, se identificaron los eslabones que integran la cadena de valor del turismo, así como las tres variables para analizar la integración entre estos. El diseño de la investigación fue transversal y no experimental. El método de investigación fue cuantitativo se realizó un censo aplicando encuestas cara-cara a los directivos de las 121 empresas proveedoras para el Turismo de Reuniones ubicadas en Tijuana, estas fueron aplicadas de abril a junio del 2013. El número de empresas proveedoras se determinó mediante la integración de bases de datos de asociaciones, cámaras, Comité de Turismo y Convenciones y directorios telefónicos comerciales. Una vez realizado el trabajo de campo se analizaron los datos y se determinó cuáles son los eslabones mayormente consolidados y los eslabones débiles o inexistentes dentro en la cadena de valor del Turismo de Reuniones.

**PALABRAS CLAVE:** Turismo De Reuniones, Cadena de Valor, Integración Horizontal, Integración Vertical, Convenios

## **INTEGRATION OF THE VALUE CHAIN OF THE SERVICE PROVIDERS'S OFFER FOR THE MEETINGS TOURISM IN THE CITY OF TIJUANA B.C., MEXICO**

### **ABSTRACT**

The present study examines the integration of the links in the offer Service Providers in the Meeting Tourism value chain in the city of Tijuana, B.C., Mexico. Therefore it was defined meetings tourism, identified the links that integrate the tourism value chain, as well, the three variables to analyze integration between them. The research design was cross-sectorial and non-experimental study. The research method was quantitative, a census was conducted applying face-to-face surveys to the managers of 121 supplier companies for Meeting Tourism located in Tijuana, and it were applied from April to June 2013. The number of providers was determined by integrating databases from associations, business chambers, the Tourism and Conventions Committee and commercial telephone directories. Once the fieldwork data was analyzed, it was determined the strongest, weak or nonexistent links within the Tourism Meeting value chain.

**JEL:** L83, D22

**KEYWORDS:** Meeting Tourism, Value Chain, Horizontal Integration, Vertical Integration, Agreements

## INTRODUCCIÓN

Se desconoce el estado de integración entre los eslabones de la Cadena de Valor de la Oferta de Proveedores de Servicios (CVOPS) para el Turismo de Reuniones del municipio de Tijuana, Baja California, México. Por lo cual, fue necesario realizar un diagnóstico de la oferta actual de servicios turísticos, determinando si las condiciones actuales de las empresas proveedoras permiten la consolidación de la cadena de valor para el de Turismo de Reuniones. Debido a que mejorando los nexos entre las diferentes cadenas de valor, se pueden obtener ventajas competitivas, logrando estrategias de diferenciación de producto lo que podría contribuir paulatinamente a atraer un mayor número de eventos a la ciudad, los proveedores de servicios aumentarán sus ventas y por ende, habrá una mayor derrama económica. El objetivo general de la investigación fue analizar la cadena de valor de la oferta de servicios, identificando la caracterización y estado actual de encadenamiento de las empresas proveedoras para el Turismo de Reuniones en Tijuana. Los objetivos específicos planteados fueron:

1. Identificar la cadena o sistema de valor del sector de Turismo de Reuniones.
2. Elaborar un inventario de los proveedores de la oferta de servicios para el Turismo de Reuniones en el municipio de Tijuana.
  - 1.1
3. Caracterizar de los proveedores de servicios para el Turismo de Reuniones en Tijuana.
4. Diagnosticar el nivel de integración entre los proveedores para el Turismo de Reuniones.
  - 1.2
5. Explicar la relación entre los eslabones de la cadena de valor de proveedores para el Turismo de Reuniones.

## REVISIÓN LITERARIA

Para realizar la investigación resultó imprescindible definir el Turismo de Reuniones, de acuerdo con CESTUR (2011), es el conjunto de participantes que viajan a las Reuniones, los cuales pernoctan fuera de su lugar de residencia en establecimientos de alojamiento pagados, o que viajan más de 75 kilómetros de distancia de su domicilio para asistir a la reunión. Los componentes del sector de Reuniones considerados como industrias “centrales” e industrias de “apoyo” que incluyen un grupo más amplio de negocios. Las industrias centrales de las Reuniones y sus actividades relacionadas son Organizadores de Reuniones especializados, Centros de Convenciones especializados, Casas de incentivos y compañías de administración de empresas y Oficinas Profesionales de Convenciones. Las industrias de apoyo incluyen a todos los negocios registrados en la economía, que participan en la producción de servicios que inciden directamente o están relacionados con la participación o la organización de reuniones.

Tales negocios proveen servicios de apoyo, equipamiento y personal que son usados en la organización o participación en las reuniones. Para realizar el análisis de la oferta de los proveedores de servicios de la ciudad de Tijuana, fue necesario definir cuáles son los actores que integra la oferta, para ello se revisaron los modelos de Sistema Turístico propuesto por Neil Leiper, (1990), el modelo de Sistema Turístico propuesto por la OMT (1998). Sin embargo, debido a que no especificaban suficientemente las variables que los integran se analizó el modelo

de Sistema turístico propuesto por Boullón (1985) integrado por: 1) La demanda, 2) La oferta, 3) El Proceso de venta y 4) El Producto Turístico. Este último modelo fue el seleccionado para realizar el análisis de la oferta turística en Tijuana, debido a la especificidad de este en cuanto a los aspectos que integran la oferta dentro del producto turístico.

Boullón afirma que el punto de partida del funcionamiento del sistema, se origina en el encuentro de la oferta con la demanda turística a través de un proceso de venta del llamado producto turístico, que junto a la infraestructura forman la estructura de producción del sector y por último, la superestructura turística, cuya función es controlar la eficiencia del sistema vigilando el funcionamiento e interrelación de las partes. Posteriormente, se determinó el modelo a utilizar para definir y analizar los eslabones que integran la cadena de valor del turismo, la revisión de la literatura incluyó el modelo del Diamante de Porter (1990), el cual no fue seleccionado debido a que autores como Fayos Sola(1994) y la OMT(2001), afirman que el modelo del diamante de la competitividad de Porter ha sido útil, al permitir un elevado nivel de consenso entre la industria, pero carece especificidad turística y de capacidad de cuantificación de los actores y resultados.

Por lo tanto se revisaron la cadenas de valor específicas de la actividad turística, tales como la cadena propuesta Poon (1993), la cadena de valor del turismo Internacional propuesta por Christian, Fernández, Ahmed y Gereffi (2011), finalmente se revisó y seleccionó como modelo para esta investigación, el Sistema de Valor Territorial del Turismo (Gollub, Hosier, Woo, 2003), donde sus autores definen la cadena de valor del sector turismo, como un conjunto de actividades económicas interrelacionadas entre si y vinculadas al hecho turístico. Este modelo está integrado por seis eslabones principales: 1) Planificación de vacaciones, 2) Transporte, 3) Alojamiento, 4) Alimentos, 5) Compras y Ocio y por último 6) Experiencias del visitante. Dentro de la definición de la cadena de valor del sector turístico, se encuentra la variable de integración, la cual es una de las variables independientes del estudio, por ellos es necesaria su definición. Varisco (2004), define la integración como los encadenamientos productivos que constituyen una característica esencial de la actividad turística, tengan éstos carácter formal o no.

La integración vertical está presente en el armado de paquetes por acuerdo entre empresas o por intermediación de agencias y operadores de viajes, pero en última instancia, de no existir una integración formal, en el producto que el turista consume, existe dependencia al punto que una falla en un servicio, puede significar la valoración negativa del conjunto. La integración horizontal está presente en el nivel de productos genéricos, como agroturismo, turismo de aventura, turismo de salud, etc. Estos productos enlazan tipos de alojamientos, gastronomía, esparcimiento, etc., para conformar a un segmento de demanda, y son una clave para la competitividad de los destinos. La variable integración se analiza en tres aspectos, 1) La existencia de grupos de empresas unidas por una propiedad y administración común. 2) La existencia de acuerdos entre empresas que se concretan en los productos ofrecidos en el mercado. 3) La existencia de eslabonamientos en relación a proveedores de insumos.

## **METODOLOGÍA**

El diseño de la investigación fue transversal y no experimental. El método de investigación utilizado es cuantitativo, se realizó un censo, aplicando encuestas cara-cara a los directivos de las 121 empresas proveedoras para el Turismo de Reuniones identificadas en Tijuana, estas fueron aplicadas de abril a junio del 2013. El número de empresas proveedoras se determinó mediante la integración de bases de datos de asociaciones, cámaras, Comité de Turismo y Convenciones y directorios telefónicos comerciales etc.

El cuestionario se diseñó mediante la aplicación de tres encuestas pilotos y la validación de tres expertos en la materia. El instrumento final está compuesto por 29 preguntas las cuales fueron diseñadas para cumplir los cinco objetivos de esta investigación. El primer bloque de la pregunta dos a la once es para cumplir con el objetivo de determinar la caracterización de los proveedores de servicios para el Turismo de Reuniones en Tijuana B.C. El segundo bloque, de la pregunta 12 a la 18 cumple con el objetivo de identificar la cadena o sistema de valor del sector de turismo de reuniones. El último bloque, de la pregunta 19 a la 29, fueron diseñadas para diagnosticar el nivel de integración entre los proveedores para el turismo de reuniones y explicar la relación entre estos.

## RESULTADOS

En el presente apartado se muestran los resultados del trabajo de campo realizado, es importante resaltar que se identificaron 121 empresas que cuentan con los criterios necesarios para atender al turismo de reuniones, sin embargo solo fueron encuestadas 104, debido a que 17 empresas se negaron a contestar el cuestionario. De acuerdo con el trabajo de campo, de las 104 empresas de proveedoras de servicios para el turismo de reuniones, en Tijuana existe un mayor número de restaurantes, se encuentra ubicados 41 de establecimientos de este giro, 14 agencias de viajes, existen 13 hoteles de clasificación de clasificación de cuatro y cinco estrellas, con el mismo número de establecimientos, existen 13 arrendadoras. En la ciudad se encuentra ubicadas siete tour operadoras, cinco empresas ofrecen el servicio de proveeduría de mobiliario y equipo, solamente existen 4 empresas organizadoras de eventos especializados, donde tan solo existe una DMC en la ciudad y ninguna OPC. Cuatro empresas ofrecen el servicio de renta de equipo audiovisual, existen dos sedes especializadas y por último, se encuentra una Oficina de Convenciones y Visitantes. De las 104 empresas proveedoras de servicios para el Turismo de Reuniones, solamente el 61% pertenece a una cámara o asociación, es decir 64 proveedores del total del censo. Donde el 53% (34 empresas) pertenecen a la Cámara Nacional de la Industria Restaurantera y Alimentos Condimentados (CANIRAC), el 16% (10 empresas) a Cámara Nacional Comercio (CANACO) y el 12% (8 empresas) a la Asociación Mexicana de Hoteles y Moteles.

En cuanto a la integración horizontal, de las 104 empresas proveedoras participantes en el estudio, 57 empresas cuentan con algún convenio o alianza con una empresa de servicios del sector turismo, mientras que 47 empresas no cuentan con ningún convenio. De estas 57 empresas que cuentan con convenios o alianzas con empresas del sector turismo, los restaurantes cuenta con 29 convenios, los hoteles con 25, las agencias de viajes con 23, las arrendadoras de autos con 10, las empresas de renta de mobiliario y equipo cuenta con cinco, los banqueteros, tour operadoras y renta de equipo audiovisual cuenta con tres convenios cada giro, los organizadores de eventos con dos, las sedes y recintos cuentan con uno, y por último la oficina de convenciones no cuenta con ningún convenio o alianza con otras empresas del sector.

Se encontró que de los 29 convenios con los que cuentan los restaurantes, el 31% (9 convenios) son con empresas de alimentos y bebidas, de los 25 convenios con los que cuentan los hoteles el 20% (5) es con empresas de otro sector, de los 23 convenios con el que cuentan las agencias de viajes el 26% (6) es con empresas de alojamiento. Por otra parte, las arrendadoras cuenta con 10 convenios, los cuales el 50% (5) es con alojamiento. Las empresas de mobiliario y equipo cuentan con cinco convenios y el 40% (2) son con agencias especializadas de eventos. De los tres

convenios existentes en los tour operadores, el 33% (1) es con transportación terrestre. Los proveedores que ofrecen el servicio de banquetes, cuentan con tres convenios, el 33%(1) es con un centro de convenciones, y otro 33%(1) con alimentos y bebidas. Las empresas de renta de equipo audiovisual cuentan con tres convenios, el 66%(2) son con agencias especializadas de eventos. Los organizadores de eventos solo cuentan con dos convenios y el 100% (2) es con diseño y montaje. Las sedes para reuniones solo cuentan con un convenio con una agencia organizadora especializada en eventos.

De los 104 empresas de servicios participantes en la investigación, 83 empresas cuentan con convenios o alianzas con proveedores de productos o servicios, lo que representa un 80% del total de estas, 21 no cuenta con ningún convenio con proveedores para la empresa, es decir el 20% de la población. De acuerdo con el giro de cada empresa, el 100% de las empresas de renta de mobiliario y equipo cuentan con convenios con proveedores, al igual que los establecimientos de banquetes y renta de equipo audiovisual. El 92% del total de las arrendadoras participantes cuenta con convenios con proveedores, el 80% de los restaurantes, 76% de los hoteles, el 71% de las agencias de viaje y el 57% de las tour operadoras. Solamente la mitad de las sedes y recintos cuentan con acuerdos con proveedores (lo que corresponde al 50% de estas) y la Oficina de convenciones y Visitantes no cuenta con ninguno.

## CONCLUSIONES

Después de analizar la variable integración desde sus tres aspectos, se determinó que los eslabones mayormente fortalecidos debido al número de convenios y alianzas con empresas del sector turismo son los eslabones de Restaurantes, Hoteles y Agencias de Viaje, los cuales pertenecen a las industrias de apoyo del sector del Turismo de Reuniones. Los eslabones intermedios, son las arrendadoras de autos, las empresas de renta de mobiliario y equipo, proveeduría de equipo audiovisual, banquetes y tour operadoras. Estos eslabones cuentan con algunos convenios con otras empresas del sector turístico, sin embargo, son los cuatro eslabones que cuentan con mayor número de alianzas con sus proveedores de insumo, es decir están fortalecidos con una integración vertical. Por lo cual, es necesario desarrollar la integración horizontal entre estos. Los eslabones débiles o inexistentes son: el de Organizadores Profesionales de Convenciones (OPC), Oficina de Convenciones y Visitantes (OCV), organizadores de eventos especializados, por último sedes y recintos, debido a los pocos o nulos convenios con los que estos cuenta con empresas del sector turismo. Es importante señalar que estos eslabones son las cuatro industrias centrales del Turismo de Reuniones

Por lo tanto para desarrollar el sector del Turismo de Reuniones en la ciudad de Tijuana B.C., es necesario mantener los eslabones ya fortalecidos, desarrollar la integración horizontal entre los eslabones intermedios y sobretodo desarrollar fomentar la creación de un mayor número de empresas pertenecientes a las industrias centrales, los cuales son los eslabones más débiles de la cadena y desarrollar un mayor número de convenciones entre empresas del sector turístico y con proveedores de insumos o servicios necesarios para la operación de estas.

Karen Ramos Higuera es Licenciada en Turismo por la Universidad Autónoma de Baja California. Profesora de asignatura de las materias Logística y Operación de Eventos y Entorno Global de los Negocios en la Facultad de Turismo y Mercadotecnia en UABC. Actualmente cursa la Maestría en Administración en la UABC. Se puede contactar en el correo electrónico karen\_ramos55@hotmail.com

# UN MODELO DE NEGOCIO PARA LA CERTIFICACIÓN DE RESIDENCIAS GERIÁTRICAS

Sergio Villacobos Granados, Universidad Autonoma de Coahuila  
Esteban Pedraza Flores, Universidad Autonoma de Coahuila  
Melchor David Elizondo Sandoval, Universidad Autonoma de Coahuila

## RESUMEN

*Esta investigación, puede considerarse como un primer acercamiento para abordar la problemática que enfrentan las residencias geriátricas en los aspectos de administración, normatividad, certificación, residencias geriátricas y medios de información. El objetivo de como intervienen los factores de administración normatividad, certificación, residencias geriátricas, y medios de información en el adulto mayor. Se trata de una investigación sincrónica porque el instrumento es aplicado en una sola ocasión. El instrumento es un cuestionario de opinión con 102 variables simples referentes a los 5 ejes, 15 señalísticas medidos en una escala del 0 al 10. La investigación es abierta, es decir a familiares que acompañan al paciente que acude a la consulta externa de geriatría en el centro estatal del adulto mayor de Saltillo, Coahuila, de los cuales fueron un total de 105 adultos.*

Palabras Clave: Administración, Normatividad, Certificación, Residencias Geriátricas y Medios de Información.

## A BUSINESS MODEL FOR THE CERTIFICATION OF NURSING HOMES

### ABSTRACT

This research can be considered as a first approach to address the problems faced by nursing homes In the areas of administration, standards, certification, nursing homes and media.As the objective of management factors involved, regulations, certification, nursing homes and media in the elderly. Research is a synchronous because the instrument is applied only once. The instrument is an opinion questionnaire with 102 variables concerning the 5 simple axes, 15 signalísticas measured on a scale of 0 to 10.

Research is open, ie relatives accompanying the patient who comes to outpatient geriatric state in the Center of the Elderly in Saltillo Coahuila. Of which were a total of 105 adults.

**KEYWORDS:** Administration, Standardization, Certification, Nursing Homes and The Media.

### INTRODUCCIÓN

El proceso de envejecimiento de la población en México se hizo evidente a partir de la última década del siglo XX, mostrando una inercia que lo convertirá, durante la primera mitad de del siglo XXI, en el cambio demográfico más notorio. En poco tiempo el número y proporción de población de edades avanzadas aumentará con respecto a los otros grupos de edad, en un proceso ineludible que finalmente supone una perenne estructura envejecida.

Junto con la delimitación en términos de dependencia de la población envejecida, también se manejan conceptos de vulnerabilidad. La mayor vulnerabilidad en la vejez se relaciona con la salud, cuando se genera dependencia debido a enfermedades crónicas y discapacidades motrices o mentales, requiriendo prevención, atención médica, medicamentos y cuidados personales de modo permanente. Un hecho crucial es que se trata de servicios especialmente costosos. Cuando el adulto mayor o su familia tienen capacidad económica, estas necesidades se adquieren en la oferta privada.

## **METODOLOGÍA**

Por la proposición del objetivo es de construcción de modelos que implica la asociación coherente de los elementos, atributivos que permitan plantear una descripción y explicación probabilística o estructural. Es de carácter inductivo. Además es de Innovación que supone un cambio, transformación o asociación en función de insumos que proporcionan novedad en elementos, formas, relaciones o estructuras.

Por la orientación funcional es aplicada porque interviene en la realidad concreta con objeto de ejecutar modelos, efectuar cambios o transformaciones en la misma. Es deductiva. Además es fáctica y conceptual ya que trabaja con hechos, ideas, nociones, objetos, conceptos y las relaciones que se dan entre ellos.

Por la orientación operacional es longitudinal porque se observa a lo largo del fenómeno integrado. Además es diacrónica debido a la exploración sucesiva y explícitamente secuencial en relación al tiempo.

Por su forma de ejecución la investigación es prospectiva, porque es una parte de la historia pero no toma ni el pasado ni el presente, proyecta dimensión de futuro. Su eje principal radica en la probabilidad.

Por la derivación expositiva es mostrativa porque enseña, muestra o presenta los atributos en cuanto tales o, en su caso, el fenómeno a manera de origen comprensivo. Además es explicativa, no requiere de un marco de referencia, necesita de la relación coherencia explícita entre los elementos atributivos y sus relaciones con capacidad predictiva.

### Previsión de Secuencia Metodológica

**Deducción:** Se realiza un análisis de la bibliografía que delimita el campo de investigación, descomponiendo ese todo en los elementos que los constituyen.

**Analogía:** Por medio de las medidas de tendencia central y variabilidad, se realiza una comparación entre los atributos, para destacar aquellos que se tienen en mayor y menor importancia, diferenciándolos de los que se muestran como regularidades.

**Inducción:** Articulando de manera coherente los elementos de un todo, a través del nivel correlacionar, se pretende establecer relaciones, explicar y discernir el fenómeno.

### Tratamientos y Estadísticos

Prueba de confiabilidad Alfa de Cronbach, análisis de ítems análisis univariable, frecuencias y porcentajes de los señaléticas, medidas de tendencia central y de variabilidad; n, Mínimo, Máximo, Media, Mediana, Moda, Desviación Estándar, Coeficiente de Variación, Coeficiente de Dispersión, valor Z, Sesgo, Kurtosis y prueba de normalidad. Análisis Comparativo Prueba t Student y análisis Correlacional de Pearson

Universo

Centro estatal del adulto mayor de Saltillo, Coahuila

Población

Familiares que acuden con pacientes adultos mayores a la consulta externa de geriatría en el centro estatal del adulto mayor.

### Muestra

Se selecciona un grupo al azar y se les aplica el instrumento a todos aquellos familiares de pacientes que acuden a la consulta externa de geriatría en el centro estatal del adulto mayor.

Para fines de la investigación, se trabaja con 105 familiares de adultos mayores, el instrumento se aplicó a todos ellos en el mes de mayo y junio del 2012, que acuden a consulta externa de geriatría de 9:00 a.m. a 14:00 hrs.

### Selección de Variables

Se incluyeron 120 variables, descartándose aquellas que por sus respuestas tienden a ser constantes, sumando un total de 117 variables, no se descartó ninguna variable para su análisis.

De esta manera, se explora un total de 102 variables, de las cuales, se miden con una escala del 0 al 10, son de tipo ordinal de razón, las cuales están organizadas en cinco ejes y sus variables categoriales El fenómeno se observa por medio de 5 variables ejes, que son: Los aspectos de administración, normatividad, certificación, residencias geriátricas y medios de información de la cual se destilan 22 variables simples, de administración, 18 variable simples de normatividad, 18 variables simples de certificación, 32 variables simples de residencias geriátricas y 12 variables simples de medios de información.

Se incluyen también, 15 variables signalíticas (edad, sexo, fecha de nacimiento estado civil, lugar de nacimiento, nacionalidad, ingreso económico, profesión, número de hijos, actividad a la que se dedica, religión, nivel cultural, escolaridad, entorno vital y finalmente nivel de satisfacción personal).

### Relevancia de los Signalíticos

Sexo. Es una variable que por su naturaleza sirve para fines de contrastación.

Edad, estado civil, donde los familiares tienen diferentes estados civiles y existe una oscilación muy grande entre las edades, lo que permite contrastar opiniones.

Ingreso económico, profesión, número de hijos, actividad a la que se dedica, religión, nivel cultural, escolaridad, y entorno vital se agrega para fines de contrastación debido a que existe una gran variedad de opiniones.

La prueba de confiabilidad del instrumento de medición se sustenta en el análisis de ítems, realizado en la prueba piloto (n=20) indica como nivel de confiabilidad de un Alpha de Cronbach de 0,893039.

Hipótesis

Las hipótesis se originan de la interrogante principal de las interrogantes de investigación y de la bibliografía, las cuales van dirigidas a la muestra en estudio, de los familiares de pacientes mayores de 60 años que acuden al centro estatal del adulto mayor.

- H1 Existe relación entre la calidad, calidez y el cumplimiento de normas y derechos.  
H2 Existe relación entre la acreditación y la confianza en las residencias geriátricas.  
H3 Existe relación entre las normas establecidas y el buen funcionamiento de la administración.  
H4 Existe relación entre eficiencia, capacitación y la competitividad.  
H5 Existe relación entre los lineamientos, capacitación y la certificación.  
H6 Existe relación entre la acreditación, protocolos e innovación.

### Nivel Univariable

El análisis de las estadísticas sobre la certificación de residencias geriátricas hace pensar que esta problemática sobre la regulación en los aspectos como son administrativos, normativos, funcionalidad y estructuralmente que afecta a tantas residencias en todo el país y muy en especial en nuestra localidad.

Si a esto le sumamos que esta etapa de la vida, por sus características muy peculiares, condiciona en muchos casos la aparición de múltiples enfermedades crónico degenerativos, demencias, depresión, delirium y sobre todo síndrome de abandono, maltrato, fragilidad y deslizamiento, entonces no cabe duda acerca de por qué es necesaria la regulación y certificación de las residencias.

### Frecuencias

En las tablas de frecuencias una (n=102) de los encuestados el 61 % son del sexo femenino, las edades más representativas son de 36 y 40 años de edad, el 49% son casados y el 32% solteros, la mayoría de los encuestados con un 63% son de saltillo, de nacionalidad mexicana, el 33% tiene 2 hijos y el 31% no tiene familia, el nivel económico al que pertenece es el 86% que representa al nivel medio, el 23% son empleados, la religión que profesan es la católica con un 82% ,en cuanto a su nivel cultural el que predomina es el medio con un 62%, de los entrevistados el nivel de escolaridad más alto representado por un 61% es con licenciatura, en conjunto podemos afirmar que pertenecen al medio urbano y muestran un alto nivel de satisfacción en sus vidas.

En los aspectos de la administración indica que los familiares de los adultos mayores prefieren que en las residencias geriátricas se de calidad, calidez, eficiencia, satisfacción, capacitación, responsabilidades, recursos, funcionamiento, organización, calificación de personal, de manera común que se respeten las normas, evaluaciones y organigrama y en baja proporción la participación, los puestos, aspectos legales y democracia.

En los aspectos de normatividad indica que los familiares de los adultos mayores prefieren en las residencias geriátricas que cuenten con planes de emergencia, medidas de seguridad, cumplimientos, normas, licencias, derechos, programas, aspectos funcionales y en las funciones de manera común que existan evaluaciones, protección ambiental, departamento de quejas, proyectos, plantilla laboral y modelos de valoración y en baja proporción consten con políticas y datos informáticos.

En los aspectos de certificación indica que los familiares de los adultos mayores prefieren que las residencias geriátricas cuenten con calidad, instalaciones, sistema de guarda, obligaciones y reglamentos.

Los familiares de los adultos mayores en las características de las residencias geriátricas prefieren la atención las 24 hrs. los 365 días del año, la presencia de médicos, enfermeras, servicio de urgencias instalaciones adecuadas.

Los familiares de los adultos mayores les gustaría recibir información de las residencias geriátricas a través de los médicos, familia, internet trípticos y televisión en forma común del periódico la radio, trabajo, pláticas y amigos y en menor proporción de espectaculares y revistas.

#### Nivel Comparativo

Al contrastar a los casados prefieren que en las residencias geriátricas se brinde confianza, planificación y cumplimientos, sin embargo los solteros prefieren que existan buenas instalaciones.

Que las personas de nivel económico medio prefieren que en las residencias geriátricas cuente con servicio de capilla y tienda de regalos en comparación con los del nivel alto.

Que las personas del nivel económico bajo en las residencias geriátricas opten por la participación, puestos, que cuenten con sacerdote, tienda de regalos y que la información de las residencias geriátricas la reciban a través de espectaculares en relación con los del nivel medio.

Que las personas de nivel económico bajo prefieren en las residencias geriátricas que se brinde calidez, participación, seguridad calificación de personal, datos informáticos, y que cuenten con un laboratorio, comedor, gimnasio, capilla, sacerdote y que se les informe a través de pláticas e internet en relación al nivel económico alto.

Que las mujeres le dan más importancia que los hombres a los aspectos de administración, normatividad, certificación, residencias geriátricas democracia, eficiencia, funciones, capacitación, evaluaciones, participación, organización derechos, medidas de seguridad, reglamentos, lineamientos manuales, calidad, registros, visión, contratos, innovación y certificación para la selección de una residencia geriátrica.

#### Nivel Correlacional

Cuando existe eficiencia hay una gran mejora en sus derechos y satisfacciones dando una mejor calidad, capacitación y un buen funcionamiento ayudando a una mejor planificación, contribuyendo a mejorar los programas de actividades, evaluaciones y normas reflejando mejores recursos en la administración de las residencias geriátricas. Existiendo una buena capacitación se podrá contar con instalaciones adecuadas, programas de prevención organización, participación, evaluación, satisfacción funciones, reglamentos y eficiencia contribuyendo a la capacitación de médicos y, enfermeras dando a conocer las normas, derechos, políticas, funcionamiento, lineamientos, sistemas de acreditación reflejando las responsabilidades y calidad en los departamentos. Cuando se generan evaluaciones existe una mejor organización, confidencialidad, participación, protección de datos, información, legal y ambiental, lineamientos, código de ética, registros, programas, satisfacción y sistema de acreditación. Cuando se constituyen los lineamientos esto favorece a un buen funcionamiento, organización, política, participación, obligaciones, trato digno, confidencialidad, seguridad, derechos, plantilla laboral, normas, protocolos, sistema de acreditación, manuales, registros, evaluaciones, capacitación y funciones. Cuando se dispone de manuales se despliegan mejores programas, modelos de valoración, plantilla laboral, planificación, información completa, código de ética, programas de actividades, protección de datos, de información y ambiental, recursos, lineamientos, evaluaciones, registros, derechos, protocolos, organización, participación y reglamentos. Cuando se cuenta con un sistema de acreditación se ve reflejado en las medidas de seguridad, protocolos, instalaciones adecuadas, políticas, mayor participación, evaluaciones, lineamientos., Al reflejarse un trato digno se confirma un buen servicio de enfermeras ofreciendo un buen funcionamiento, seguridad,

confidencialidad, reglamentos, medidas de seguridad, organización, lineamientos, recursos, protocolos. Generando confidencialidad mejora la organización, funcionamiento, registros, lineamientos, reglamentos, código de ética.

## RESULTADOS

Interpretando a Martínez (2006), para el buen funcionamiento de un hospital, todos están de acuerdo que son fundamentales, los recursos. Villacobos 2012 Que cuando existe la eficiencia en la residencias geriátricas constituye la utilización de los recursos disponibles para la obtención de los resultados deseados, al establecer la capacitación se propiciará la competitividad, fortaleciendo las actitudes, valores, destrezas y conocimientos para un buen logro de los objetivos.

Interpretando a Yoder (2006), la dirección y gestión de un hospital, actúa en el ámbito interno, ahí es donde se puede trabajar para facilitar la eficiencia, economía, transparencia y efectividad. Villacobos 2012 en el aspecto de la administración de residencias geriátricas probablemente es más importante la calidad, calidez y eficiencia, sin embargo la normatividad le es más significativa que existan las medidas de seguridad, cumplimientos, normas derechos, programas y funciones.

Drucker (2000), dice, que no basta que la dirección y gestión hagan bien las cosas (eficiencia), tienen que hacerlas correctamente (efectividad). Villacobos 2012 Cuando existe una mejor proyección en los sistemas de acreditación, protocolos, desempeño de actividades, innovación se brindarán mejores resultados en todos los programas de los centro geriátricos.

Interpretando a Reyes (2004), en un hospital a parte de la administración de los recursos financieros, recursos materiales y tecnológicos, es fundamental para la dirección y gestión, la humanos. Villacobos 2012 Para un buen funcionamiento administrativo en las residencias geriátricas se necesita que existan elementos de organización, integración, control y consten criterios de desempeño, un programa de planeación, normas establecidas y se creará una mejor administración en las residencias geriátricas.

Interpretando a Porter (1997), la incorporación de los principios de competitividad al desarrollo de las funciones, actividades y operaciones de los hospitales, permite incrementar su nivel de competitividad. Villacobos 2012 Si existe la participación en la residencias geriátricas se genera una sensibilización, formación, transparencia, planificación, participación y toma de decisión en forma transparente obteniendo la satisfacción mediante el logro de las virtudes, capacidades, comportamientos y evaluaciones reflejándose el logro en las metas en las residencias geriátricas.

Villacobos 2012 Contando con una buena organización se obtienen mejores resultados en los sistemas de acreditación actuando correctamente bajo las normas dándose los mejores resultados en todos lineamientos, cuando se ejecutan perfectamente los programas se obtienen mejores resultados en todos los proyectos de las residencias geriátricas.

Según Socorro (2002), múltiples tendencias en el área gerencial como la Calidad Total, el Mejoramiento Continuo, todas han aportado grandes cambios luego de su aplicación. Villacobos 2012 Cuando existe una mejor proyección en los sistemas de acreditación, protocolos, desempeño de actividades, innovación se brindarán mejores resultados en todos los programas de las residencias geriátricas.

## CONCLUSIÓN

A los familiares de los adultos mayores en el aspecto de administración en las residencias geriátricas probablemente les es más importante la calidad, calidez y eficiencia, sin embargo la normatividad le es más significativa que existan las medidas de seguridad, cumplimientos, normas derechos, programas y funciones.

En el aspecto de certificación de residencias geriátricas les es más importante la calidad, las instalaciones, sistema de guarda, obligaciones, reglamentos, sistemas de acreditación, atención las 24 hrs. los 365 días de año, la presencia de médicos, enfermeras, nutriólogo, rehabilitador, que cuenten con un departamento de terapia ocupacional, servicio de urgencias y sobre todo que brinden confianza.

Cuando existe la eficiencia constituye la utilización de los recursos disponibles para la obtención de los resultados deseados, al establecer la capacitación se propiciará la competitividad, fortaleciendo las actitudes, valores, destrezas y conocimientos para un buen logro de los objetivos.

A través de la capacitación se propicia la competitividad, fortaleciendo las actitudes, valores, destrezas y conocimientos para un buen logro de los objetivos, existiendo un buen funcionamiento que valore su capacidad para cumplir con todas sus funciones ordenadas y continuas.

Contando con una buena organización se obtienen los mejores resultados en los sistemas de acreditación. Si se aplican cabalmente las evaluaciones se alcanzan mejores efectos en los planes diseñados estableciendo los derechos logrando mejores resultados al respetar, proteger y realizar las medidas de seguridad reflejará un mejor funcionamiento.

Cuando existe una mejor proyección en los sistemas de acreditación, protocolos, desempeño de actividades, innovación se brindarán mejores resultados en todos los programas.

Cuando se cuenta con instalaciones adecuadas, departamento de recursos humanos, un buen equipo médico se brindará confiabilidad, trato digno mayor credibilidad del uso y servicio de sus instalaciones.

Propuesta de acción y cambio

En base a las conclusiones y resultados presentados en este trabajo, a continuación se despliega los contextos que puede significar un cambio categórico en adoptar una perspectiva de ciclo vital para poner al alcance del común de la población un envejecimiento saludable.

Proporcionan un entorno universal para evaluar aspectos administrativos, métodos de calidad, técnicas, herramientas, procedimientos; además, proveen un enfoque de implementación hacia la calidad total y lograr identificar los procesos claves de la organización en los centros geriátricos.

Contar con un sistema de derecho confiable y objetivo, haciendo un manejo sustentable del medio ambiente, sociedad incluyente, preparada y sana, refrendar un sistema político estable y funcional, mercado laboral amplio, una gran infraestructura y estar en constante sofisticación e innovación.

Progreso y cambio cultural en la sociedad mexicana para aceptar ingresar en un centro geriátrico llegada la vejez o jubilación.

Realizar un autodiagnóstico de la situación que prevalece en el núcleo familiar.

Modelo para el perfeccionamiento en la certificación de las residencias geriátricas.

Sistema de dirección que incita a lograr niveles de competitividad permanencia y crecimiento continuo. En base a las conclusiones y resultados presentados en este trabajo, a continuación se despliega los contextos que puede significar un cambio categórico en adoptar una perspectiva de ciclo vital para poner al alcance del común de la población un envejecimiento saludable.

Karla María Barraza Martínez, Universidad Estatal de Sonora

## RESUMEN

*Es indudable que las empresas sustentables están de boga; sin embargo, no es una moda, es una tendencia. En este marco y ante la ola “verde”, es común que muchas empresas, sobre todo las franquicias mexicanas quieran sumarse a este esfuerzo; motivo por el cual, no es raro encontrar que algunas compañías comiencen a incluir uno o más productos ecológicos como parte de su oferta de diversificación, o incluso empiecen a implementar acciones sustentables como parte integral de su plan de marketing. Así, para que una empresa pueda decir con veracidad que realiza marketing sustentable, debe saber y conocer dónde y bajo qué condiciones vienen sus insumos; si es un bien renovable; quién lo procesa y cómo lo hace; qué impactos sociales y ambientales conlleva la producción del producto; a qué mercado se le hace llegar; cómo se distribuye y a qué precio se comercializa; cómo es utilizado y posteriormente, la forma en que se desecha, con la finalidad de diferenciarse y posicionarse en un mercado cada vez más competido. La investigación analiza la información obtenida mediante la aplicación de cuestionarios estructurados a las franquicias mexicanas y que operan en Hermosillo, Sonora, desde la perspectiva e inclusión de las cuatro “P’s” en la filosofía del marketing sustentable.*

**PALABRAS CLAVES:** Marketing sustentable; diversificación; franquicias

## INTRODUCCIÓN

Hasta hace poco, la sustentabilidad pertenecía al ámbito del departamento de Responsabilidad Social Empresarial (RSE) de una empresa, pero a medida que la comunidad nacional e internacional se ha enfrentado a problemas como la sobrepoblación, la creciente demanda energética, la pérdida de biodiversidad y los efectos del cambio climático, la sustentabilidad se ha convertido en un objetivo que ha trascendido fronteras políticas, culturales y profesionales. Buscar los medios para desarrollar prácticas de marketing más sostenibles se ha convertido en un asunto primordial que toda organización, grande o pequeña, debe tener en cuenta para prosperar y las firmas transnacionales como las franquicias, no son la excepción. Mediante el desarrollo de este trabajo de investigación, se pudo valorar la estrategia del marketing sustentable y como ésta es, efectivamente una práctica que combina consideraciones sociales, como por ejemplo, derechos humanos; igualdad o diversidad; y medioambientales, tales como la gestión de residuos; uso energético y contaminación; todos ellos inevitablemente conectados e interrelacionados. Partiendo del enfoque del desarrollo sustentable en el contexto de la empresa, éste implica un enfoque basado en la triple cuenta de resultados, de modo que los beneficios de la empresa no se midan teniendo en cuenta exclusivamente su rentabilidad financiera, sino también su rentabilidad

social y medioambiental. El objetivo es dar una respuesta a las demandas de esta generación sin poner en peligro la capacidad de futuras generaciones para atender sus propias necesidades.

Sin embargo, surge la siguiente pregunta de investigación, ¿qué tanto impacta el marketing sustentable como estrategia de posicionamiento global en las franquicias mexicanas? Antes de dar respuesta al cuestionamiento, primeramente, se debe de entender el concepto de “marketing sustentable”; en ese sentido, Fuller (1999) define del siguiente modo el marketing sustentable: *“El proceso de planificación, implementación y control del desarrollo, precios, promoción y distribución de productos de modo que satisfaga los tres criterios siguientes: (1) satisfacción de las necesidades del cliente; (2) consecución de los objetivos de la empresa; y (3) compatibilidad del proceso con el ecosistema”*.

De igual forma, se procedió con la aplicación de un cuestionario estructurado en cuatro secciones, una para cada “p’s” del estudio: Producto (*Product*); Precio (*Price*); Plaza (*Place*) y Promoción (*Promotion*), desde el punto de vista mercadológico; sin embargo, es importante resaltar que en cada una de ellas (p’s), existieron preguntas relacionadas con las “3p’s” del marketing sustentable: Personas (*People*); Planeta (*Planet*) y Beneficio (*Profit*). Asimismo, se establecieron 24 preguntas del tipo dicotómicas cerradas (Si o No). El instrumento de medición fue aplicado a 33 franquicias mexicanas que operan en la ciudad de Hermosillo, Sonora, de un total de 49 empresas, las cuales conforman la población total, de acuerdo al a la Secretaría de Economía del Estado de Sonora (SE, 2013).

Lo anterior, corresponde a una muestra probabilística del 73.46 %; sin embargo, es importante mencionar que de acuerdo a Santesmases (2009), se procedió a calcular el tamaño de la misma, considerando un error del 10 %, con un intervalo de confianza del 95 %, un nivel de heterogeneidad (p y q) de atributo del 50 %, dando como resultado un tamaño de muestra de 36 empresas (franquicias) a encuestar, tal y como se presenta en la siguiente ecuación estadística (1), para el cálculo de muestras para poblaciones N, finitas y conocidas.

$$n = \frac{N * Z_{\alpha}^2 * p * q}{d^2 * (N - 1) + Z_{\alpha}^2 * p * q} \quad (1)$$

Donde:

N = Tamaño de la población;  
 Z = Nivel de confianza;  
 p = Probabilidad de éxito;  
 q = Probabilidad de fracaso;  
 d = Error máximo permisible.

Para evaluar la confiabilidad del instrumento de medición, se procedió con el análisis de consistencia interna mediante el alfa de Cronbach. Se trata de un índice que toma valores entre 0 y 1 y, que sirve para comprobar si el instrumento que se está evaluando recopila información defectuosa y por tanto, llevaría a conclusiones equivocadas o si se trata de un instrumento confiable que hace mediciones estables y consistentes (Santesmases 2009, citado por Ibarra, Casas & Barraza, 2013). Dentro de esta categoría de coeficientes, el alfa de Cronbach es, sin duda, el más ampliamente utilizado por los investigadores. Alfa estima el límite inferior del coeficiente de confiabilidad y se expresa mediante la siguiente formula como:

$$\alpha = \left( \frac{K}{K-1} \right) * \left[ 1 - \left( \frac{\sum_i S_i^2}{S_{sum}^2} \right) \right] \quad (2)$$

Donde  $k$  es el número de ítems de la prueba,  $S_i^2$  es la varianza de los ítems (desde 1...i) y  $S_{sum}^2$  es la varianza de la prueba total. El coeficiente mide la confiabilidad del test en función de dos términos: el número de ítems (o longitud de la prueba) y la proporción de varianza total de la prueba debida a la covarianza entre sus partes (ítems). Ello significa que la confiabilidad depende de la longitud de la prueba y de la covarianza entre sus ítems (Santesmases 2009, citado por Ibarra, *et al.*, 2013). Su interpretación será que, cuanto más se acerque el índice al extremo 1, mejor es la confiabilidad, considerando un resultado aceptable a partir de 0.70; en ese sentido, para el presente trabajo de investigación, el resultado de alfa de Cronbach, fue igual a 0.7931, lo que significa que el cuestionario aplicado es aceptable y por ende, confiable, lo que indica que el instrumento de medición utilizado tiene un alto grado de confiabilidad, validando su uso para la recopilación de datos.

La presente investigación está organizada como sigue. En la sección de revisión de literatura se encontrará información puntual y precisa sobre el esquema del marketing sustentable y como países de la Unión Europea y del Continente Americano, en un esfuerzo por situarse en la vanguardia, buscan constantemente lo que se ha denominado la triple cuenta de resultados de acuerdo con la cual, además de la rentabilidad financiera habitual, una empresa debe tener en cuenta sus impactos sociales y medioambientales. Asimismo, se hará una revisión de las contribuciones que existen de la literatura actual y el cómo abonan al tema que se investiga; del mismo modo, el presente trabajo de investigación contribuirá a enriquecer aún más el campo literario objeto de estudio. Posteriormente, en la sección de metodología se presentan aspectos relevantes en cuanto a la operatividad de las variables que son estudiadas y analizadas, a partir de un cuestionario estructurado y cómo éstas han iniciado con la adaptación de esta estrategia del marketing sustentable para lograr posicionarse en el mercado donde se compite. Seguidamente, se presentan los resultados de la investigación con base al estudio descriptivo y análisis estadístico de la información obtenida, a través del *software IBM SPSS Statistics 21*. Finalmente, se presentan las conclusiones y las futuras líneas de investigación derivadas del presente trabajo de investigación.

## REVISIÓN DE LA LITERATURA

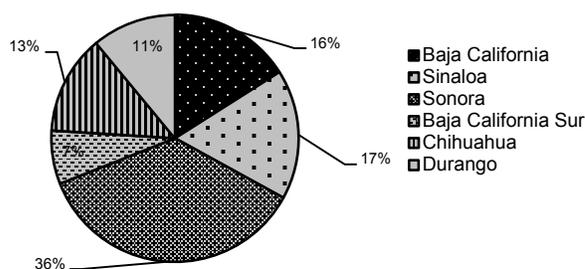

Primeramente, se definirá el sector empresarial para lo cual se ha seleccionado como el objeto de estudio. El sector de las franquicias mexicanas, específicamente aquellas que se localizan y operan en la ciudad de Hermosillo, Sonora, México. De acuerdo con cifras de la Asociación Mexicana de Franquicias (AMF, 2013), de las 1,300 franquicias que se estima hay en el país, unas 500 están realmente activas, y casi la mitad de las que operan ya están acreditadas en el Padrón Nacional de Franquicias (PNF). La distribución de las franquicias existentes en México, según la AMF, es como se muestra en la Figura 1, donde se aprecia la distribución en porcentajes correspondiente al número de franquicias localizadas en cada una de las regiones del país, notándose un fuerte porcentaje en la región Centro de México, con un 43 %, seguido de la región Occidente, con un 15 %. Para el caso de la región Noroeste, existe un 9 % de establecimientos con respecto al total nacional, distribuidos en seis Estados. Para el Estado de Sonora, le corresponde un 36 %, el mayor porcentaje de la región, de acuerdo a la Figura 2.

Figura 1: Distribución Porcentual de las Franquicias Por Región en México

En esta Figura se muestran los porcentajes de distribución de franquicias mexicanas por región en el país. Fuente: Elaboración propia a partir de la información de la AMF, 2013.

Figura 2: Distribución de las Franquicias Mexicanas, Región Noroeste

En la presente Figura se muestran los porcentajes de distribución de franquicias mexicanas por región en el país. Fuente: Elaboración propia a partir de la información de la AMF, 2013.

De acuerdo a Combs y Ketchen (2003, citado por Hitt, Ireland y Hoskisson, 2008), el franquiciamiento es una estrategia corporativa de cooperación que una empresa (el franquiciador) utiliza como relación contractual mediante una franquicia que describe y controla la forma en que compartirá sus recursos y capacidades con sus socios (los franquiciados). De acuerdo a Lafontaine (1999), una franquicia es “un contrato que celebran dos empresas independientes desde el punto de vista legal, mediante el cual la empresa franquiciadora otorga a la franquiciada el derecho de vender su producto o desarrollar sus actividades en una plaza determinada, utilizando sus marcas comerciales registradas, durante un periodo específico”. Ahora bien, se puede decir que el marketing sustentable surge como respuesta mundial frente al deterioro medioambiental provocado por el crecimiento social que, junto a los hábitos de consumo, han provocado un daño y alteración al ecosistema. Por lo que las empresas, como principal responsable de este problema deben hacer frente a las demandas sociales y hacerse cargo de estos problemas (Lorenzo, 2002). Cabe mencionar que, para referirse a marketing sustentable en la actualidad, se han utilizado diferentes conceptos en la literatura, tales como: marketing ecológico, marketing verde, marketing ambiental y eco-marketing, por mencionar algunos.

Santesmases (2000), define el marketing ecológico “...como la comercialización de productos y envases que son menos tóxicos o contaminantes que los normales, más duraderos, contienen materiales reutilizables, incorporan componentes reciclados, o su fabricación supone un menor

*desgaste de los recursos naturales, o una menor contaminación del medio ambiente*". Mientras que Terron (2007), define al marketing ecológico como "...es el resultado de complementar el factor medioambiental en las funciones de marketing y por lo tanto, la aplicación de un marketing operativo que reafirme al consumidor el producto que por su naturaleza, presentación, costo e impacto medioambiental, responda mejor a sus necesidades". Por último, American Marketing Association (2008), define al marketing verde como "es el esfuerzo que hace una empresa para producir, promover, empaclar y recuperar los productos con un enfoque de responsabilidad y sensibilidad ecológica".

### El Contexto del Marketing Sustentable

El marketing sustentable ha tenido muchas definiciones desde el desarrollo y promoción de productos y empaques que contienen componentes biodegradables que protegen el medio ambiente; sin embargo, este concepto tiene una visión mucho más amplia y busca contemplar el ciclo de vida completo del producto, es decir, integrar en todos los aspectos del marketing, las consideraciones medioambientales, por lo que se le da importancia a todas las actividades del ciclo de vida del producto hasta la comercialización final del mismo (Lara, 2011). Existen diversas razones para adoptar el marketing sustentable o verde en la estrategia de la organización, ya que ésta genera algunas oportunidades y ventajas competitivas que se pueden obtener una vez que la empresa se diferencie de los competidores, generando un mejor posicionamiento de marca. Otra razón fundamental es la responsabilidad social empresarial, ya que hoy los consumidores son cada vez más conscientes de los fenómenos y daños medioambientales, por lo que exigen una mayor responsabilidad por parte de las empresas hacia la protección ambiental en todos sus sentidos. También tiene su peso las regulaciones gubernamentales en materia de leyes y certificaciones en materia ambiental, motivo por el cual, los competidores están prestando atención a los requerimientos gubernamentales y alientan a los consumidores a la adquisición de productos ecológicos (Echeverri, 2010; Lara, 2011). "La filosofía del marketing ecológico es propiciar la producción de bienes y servicios que sean amigables con el medio ambiente mediante el uso de tecnologías que no atenten contra la naturaleza y el ecosistema y que a su vez sean fuentes de nuevos negocios en el mercado", Prieto, J. (2009). Algunas de las ventajas del marketing ecológico son: penetrar en el mercado ambiental, mantener o aumentar la competitividad, incrementar la rentabilidad, mejorar la imagen corporativa, disminuir la incidencia de los grupos de presión, ayudar a la comunidad a conservar la naturaleza, Prieto, J. (2009).

Los resultados de las investigaciones en otros países sugieren la existencia de segmentos de mercado sustanciosos, viables e identificables, que toman en cuenta el nivel de responsabilidad social de las empresas en sus decisiones de compra e inversión (NMI, 2005; Arellano, R., 2002; Mohr, Webb y Harris, 2001). Más aún, "... parecen pruebas suficientes, no sólo de la existencia de una incipiente demanda colectiva, sino también de cierta disponibilidad a pagar por actuaciones socialmente responsables" (Fernández y Merino, 2005:40). Esta es una gran oportunidad para que las empresas y comerciantes apelen a este segmento y de este modo satisfagan sus objetivos de negocio al mismo tiempo que contribuyen con la sociedad (Mohr, Webb y Harris, 2001:69).

Con base a lo anterior expuesto, se puede deducir que el marketing sustentable aporta a las empresas algunos beneficios, tanto tangibles como intangibles, tales como los que se mencionan a continuación: distinción de la marca; reducción de riesgos e identificación de oportunidades; lealtad por la marca y retención de clientes; creación de nuevas oportunidades de mercado; innovación y creatividad en los productos y servicios; motivación a los empleados; reputación del

negocio y de la propia marca; reducción en la estructura de costos; atraer inversión; transparencia con los clientes en cuanto a las operaciones que se realizan; desarrollar un marketing relacional; es decir, ayudar al consumidor a llevar un consumo más proactivo y consciente; desarrollar y optimizar la tecnología “verde”; minimizar las emisiones al medio ambiente; creación de mayor conciencia y respeto por el entorno; desarrollo de un marketing responsable y; generar una eficiencia energética en sus proceso y procedimientos.

### Las Franquicias en el Contexto del Marketing Sustentable

En los últimos años, el establecimiento de empresas verdes en México y el mundo ha ido en aumento, esto orienta al sector franquicias hacia un nueva fase, donde los grandes retos son: el cuidado del medio ambiente y ofrecer productos y/o servicios de calidad inigualable. Actualmente, contar con una franquicia verde es una gran oportunidad de inversión, debido a que su concepto pro ambiental da más valor a la imagen de las marcas; brinda una mayor fortaleza ante su competencia, está a la vanguardia, cuenta con una mayor afiliación de mercado y ofrece productos y servicios únicos. Las franquicias son una modalidad de negocios que ha incrementado sustancialmente el número de establecimientos en el país en un tiempo relativamente corto y en una gran diversidad de actividades económicas, la Encuesta Nacional de Ocupación y Empleo (ENOE, 2013), al inicio del año 2005, el catálogo registraba alrededor de 450 unidades económicas, actualmente, contiene alrededor de 1,245 establecimientos, mismos que no solamente son de origen extranjero como podría pensarse en un inicio, sino que muchos de ellos son de origen nacional, de ahí la importancia de que la ENOE pueda dar cuenta del número y de las características generales con que operan en lo referente al mercado laboral mexicano.

Los negocios sustentables tienen el reto de mantenerse en constante innovación para ofrecer alternativas al consumo cotidiano. Su responsabilidad más grande es brindar productos y servicios que propicien una mejora en el medio ambiente, el entorno social y que a la vez permitan una rentabilidad a la empresa. “El interés por la sustentabilidad está creciendo en los consumidores, ésta es una carta a favor de los negocios que incorporan tecnología verde; sin embargo, es momento de observar las tendencias que se vislumbran en el futuro cercano”, señala Julián Vega Gregg (2013), Senior Advisor de Ernst&Young para la práctica de cambio climático y sustentabilidad.

### **METODOLOGÍA**

La metodología empleada para el desarrollo de esta investigación se llevó a cabo en dos fases, siendo la primera de ellas la consulta de fuentes y revisión de la literatura existente de acuerdo al tema de investigación; asimismo, se consultó fuentes de información oficial como la Secretaría de Economía; la Asociación Mexicana de Franquicias; Secretaría de Economía Municipal, entre otras. En la segunda fase, se diseñó un cuestionario estructurado por preguntas dicotómicas, distribuidas en cuatro secciones y que a la vez, fue aplicado a los administradores o encargados de las franquicias mexicanas y que operan actualmente en la ciudad de Hermosillo, Sonora, por lo que se considera una investigación de campo.

*Preguntas de Investigación:* ¿Qué tanto impacta el marketing sustentable como estrategia de posicionamiento global en las franquicias mexicanas que operan en la ciudad de Hermosillo, Sonora?

*Instrumento de Medición:* El instrumento que se diseñó para medir el marketing sustentable partió del contexto de las “4 P’s” de la mercadotecnia tradicional (Precio, Promoción, Plaza y Producto); sin embargo, no se perdió el enfoque de las “3 P’s” del marketing sustentable (*Planet, People y Profit*). Los cuestionarios fueron aplicados a los encargados o administradores de las 36 franquicias, de acuerdo a la muestra representativa calculada, lo que hizo más confiable y válida la información que se recabó.

En la presente Tabla se muestra el directorio de las franquicias mexicanas que actualmente están operando en el Estado de Sonora. Fuente: Elaboración propia a partir de la información de la SE, 2013.

El cuestionario diseñado se aplicó durante el mes de junio del año 2013, al total de las franquicias que integran la muestra estadística y que operan en la ciudad de Hermosillo, Sonora, siendo 33 empresas. En ese sentido, se puede considerar que el estudio es de corte transversal y de diseño no experimental, ya que la información obtenida y analizada corresponde a un periodo en particular y se maneja de forma cualitativa para una mejor interpretación, pero no se modifica los argumentos originales de las fuentes de información primaria. La metodología usada para el apoyo en la interpretación de los resultados obtenidos de los cuestionarios aplicados, fue la utilizada por *The European Business Network for Corporate Social Responsibility (CSR Europe)* y por el *Business to Business Working Group on Sustainable Marketing*. Los factores básicos determinantes que se analizaron son los que se muestran en la Tabla 2 y que para efectos del presente trabajo de investigación se operacionalizaron como variables de acuerdo a las “3 P’s” del marketing sustentable.

Tabla 2: Operacionalización de las Variables de Acuerdo a las “3 P’s” del Marketing Sustentable

Variable	Consideraciones
Producto	¿De qué está hecho? ¿Quién lo hace? ¿Cuál es la vida útil del producto? ¿El embalaje es reutilizable / reciclable?
Plaza	¿Dónde se fabrica el producto? ¿Dónde / cómo se vende el producto? ¿Cómo se transporta?
Precio	¿Refleja el precio de manera adecuada los valores de sostenibilidad de la empresa? ¿Se le comunican al cliente de manera clara y precisa las características del producto?
Promoción	¿Qué transmite el producto sobre los valores de la empresa? ¿Podría utilizarse el producto para mejorar la reputación de la organización?
Profit	¿Detalla los atributos del producto? ¿Es el compromiso de la empresa serio?

<p>People</p> <p>Planet</p>	<p>¿Es consciente la empresa de la oportunidad de mercado?</p> <p>¿El precio es razonable al producto que se ofrece?</p> <p>¿Cuenta con un programa de capacitación para sus empleados?</p> <p>¿Cuenta con un programa de apoyo para sus empleados y sus familias?</p> <p>¿Realiza campañas en mejora del medio ambiente?</p> <p>¿Cómo manejan el cuidado del medio ambiente en la elaboración de sus productos?</p>
-----------------------------	--

### RESULTADOS

A continuación, se presentan los principales resultados obtenidos y procesados en el SPSS, v21. En la Tabla 3 se puede apreciar el total de franquicias por sector, predominando el sector de alimentos con un total de 52.78 %

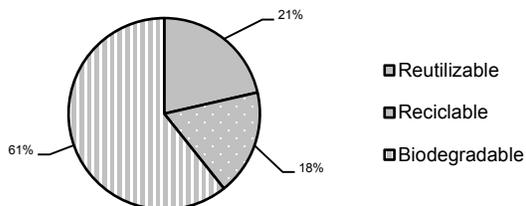

Tabla 3: Número de Franquicias Por Sector

Sector de la Franquicia	Número de Franquicias	Porcentaje
Sector de Refacciones	3	8.33 %
Sector de Alimentos	19	52.78 %
Sector de Belleza	4	11.11 %
Sector de Informática y Consumibles	2	5.56 %
Sector de Botanas y Dulces	1	2.78 %
Sector de Decoración	1	2.78 %
Sector Varios	6	16.67 %
Total =	36	100.00 %

En la presente Tabla se muestra el número de franquicias por sector que actualmente están operando en la ciudad de Hermosillo, Sonora, y que forman parte de la muestra que fue seleccionada. Fuente: Elaboración propia a partir de los datos obtenidos en el SPSS, v21.

De acuerdo a la vida útil del producto que manejan las franquicias, un 36.1 % afirmaron que sus productos tienen una utilidad de 1 a 6 meses, mientras que en menor escala, observaron que la vida útil de sus productos oscilan entre 6 a 5 años. Analizando el tipo de producto que manejan las franquicias mexicanas, en la Figura 3, se puede apreciar el tipo de producto clasificado de acuerdo al instrumento de medición, en biodegradable, reciclable y reutilizable.

Figura 3: Tipo de Producto Utilizado Por las Franquicias Mexicanas

En la presente Figura se muestran los porcentajes por tipo de producto que manejan las franquicias mexicanas que operan en la ciudad de Hermosillo, Sonora. Fuente: Elaboración propia a partir de los datos obtenidos en el SPSS, v21.

Otro resultado importante de análisis es el tipo de material con que está fabricado el empaque del producto que comercializan las franquicias mexicanas, el cual se puede observar en la Tabla 4, donde se especifica las cinco áreas que se englobaron para fines del estudio.

Tabla 4: Material del Empaque del Producto

Material	Frecuencia	Porcentaje
Cartón	8	22.22 %
Unicel	5	13.89 %
Plástico	21	58.33 %
PVC	1	2.78 %
No Tiene	1	2.78 %
<b>Total</b>	<b>36</b>	<b>100.00 %</b>

En la presente Tabla se muestra la frecuencia del material con que está fabricado el empaque del producto que comercializan las franquicias que actualmente están operando en la ciudad de Hermosillo, Sonora. Fuente: Elaboración propia a partir de los datos obtenidos en el SPSS, v21.

Sin embargo, las respuestas proporcionadas a la pregunta de ¿qué si el material de empaque es reciclable?, se puede observar que el 36.1 % de los encargados de las franquicias contestaron que no lo es, mientras que un 58.3 %, dijeron lo contrario, a lo que se puede deducir que es necesario que las empresas inicien con una sensibilización hacia la producción o adquisición de materiales para el empaque más ecológicos o amigables con el medio ambiente. En cuanto al servicio de postventa, la gran mayoría de las franquicias consultadas observaron que no realizan ningún tipo de actividad relacionada con el servicio después de efectuado la venta del producto o el servicio brindado, siendo un grueso 72.2 %, lo que hace suponer que es necesario que las empresas realicen este tipo de estrategias en aras de posicionarse aún más en el mercado y que al mismo tiempo, atiendan una de las P's del marketing sustentable (*people*). Analizando la parte del *Profit*, los encargados de las franquicias respondieron en su mayoría de forma positiva al cuestionamiento de ¿qué si el precio es razonable al producto y/o servicio que se ofrece?, es decir, un 97.2 % respondió que sí, lo que indica que se están generando las expectativas en cuanto a ganancias y aceptación del producto y/o servicio entre los consumidores de la ciudad. En cuanto a la parte *People*, las franquicias de acuerdo a la Tabla 5, respondieron tener y llevar a cabo un programa de capacitación para sus empleados, lo que significa que se preocupan por el bienestar de ellos y del cómo manejar los productos y/o servicio que ofrecen o comercializan.

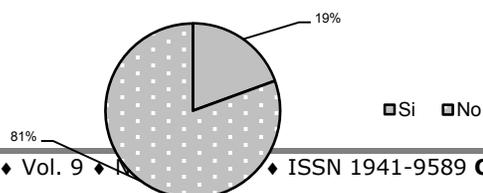

Tabla 5: Frecuencia de Respuestas Para la Operación de un Programa de Capacitación

	Frecuencia	Porcentaje	Porcentaje válido	Porcentaje acumulado
No	4	11.1	11.1	11.1
Válidos Si	32	88.9	88.9	100.0
Total	36	100.0	100.0	

En la presente Tabla se muestran las frecuencias y porcentajes de respuesta a un programa de capacitación existente para las franquicias que actualmente están operando en la ciudad de Hermosillo, Sonora. Fuente: Elaboración propia a partir de los datos obtenidos en el SPSS, v21.

Analizando la variable de promoción, se obtuvo que un 83.3 % de las franquicias, detallan los atributos del producto o servicio que brindan en las campañas de promoción que se diseñan para tal efecto. Sin embargo, el 80.6 %, negó realizar campañas enfocadas a la mejora del medio ambiente, lo que se entiende que se tendrá que valorar la participación de la franquicias mexicana, muy en especial, aquellas que operan en la ciudad de Hermosillo, Sonora, en cuanto a las campañas de mejora y conservación del medio ambiente, como parte de sus valores y formas de actuación. El anterior resultado se puede apreciar con más ahínco en la Figura 4, ya que los valores obtenidos son mostrados gráficamente.

Figura 4: Frecuencia de Realización de Campañas Para Mejora del Medio Ambiente

*En la presente Figura se muestran los porcentajes por de realización de campañas de atención al medio ambiente por parte de las franquicias mexicanas que operan en la ciudad de Hermosillo, Sonora. Fuente: Elaboración propia a partir de los datos obtenidos en el SPSS, v21.*

## CONCLUSIONES

Se concluye que a partir del análisis realizado, que un marketing sustentable sería aquel que consiga la máxima satisfacción del cliente en cuanto a funcionalidad y servicio del producto, teniendo en cuenta tanto el uso de funciones ambientales, como los recursos naturales empleados; así como su capacidad para un tratamiento adecuado después de su vida útil dentro de unos determinados límites. Asimismo, el marketing sustentable debería contribuir a hallar puntos de encuentro entre el mundo de los negocios (franquicias) y los retos ambientales y sociales, en los que la situación resultante sea beneficiosa para ambas partes. Hoy, las mejoras ambientales de productos y servicios están demostrando que son la mejor vía para aumentar los beneficios y la eficiencia de las franquicias. Diferenciarse del resto depende de la capacidad de la empresa, en este caso, las franquicias mexicanas de transmitir el valor del marketing en cuanto al desarrollo sustentable aporta al producto o servicio. El objetivo es crear en el consumidor la necesidad de adquirir un producto y/o servicio, y hacer que se decante por él frente al de la competencia. En igualdad de características e igualdad de precios, los consumidores se basan para la toma de sus decisiones en el proceso de compra.

Por lo tanto y de acuerdo a los resultados obtenidos, existe una correlación fuerte en cuanto a los productos y tipo de material utilizado, lo cual indica que las franquicias mexicanas están haciendo uso de la sustentabilidad y cuidado del medio ambiente y que será la clave para que su estrategia de marketing sustentable sea efectiva. La elección de un buen mensaje no es sencillo, y más teniendo en cuenta que lo que se desea decir y lo que finalmente se percibe puede ser distinto. Esto pone de manifiesto que no se puede desvirtuar la realidad del modelo de negocio de la franquicia ni la imagen que se tenga sobre ella.

Por lo anterior, es oportuno hacer una reflexión del papel relevante que tienen las empresas como lo es el compromiso inalienable con el planeta en cuestiones ambientales, el cual presenta un ritmo de explotación de los recursos naturales mayor al grado de recuperación del mismo. El término “huella ecológica” acuñado por los autores Wakernagel y Rees (1996), hace referencia a este fenómeno que *“es una forma de medir la intensidad del impacto de la población sobre el medio ambiente a través de la cantidad de superficie que se requiere para producir los bienes que consume, dotarlo de servicios y absorber o reciclar sus desechos”*. Esta “huella ecológica” requiere la atención inmediata del gobierno, de la sociedad y de las empresas, sobre todo de estas últimas que generan un volumen importante de desechos contaminantes al medio ambiente como producto de su actividad.

### Estudios Posteriores

Una nueva línea de investigación que puede surgir del presente estudio o trabajo, es proponer un modelo de análisis de integración de las variables enmarcadas en el desarrollo sustentable y en la mercadotecnia “verde”, como parte de una estrategia global de negocios; así como ética en la forma de actuación de las empresas, de tal manera que permita la mejora en los modelos de negocios de todas las empresas nacionales e internacionales. Cabría mencionar que, algunas limitaciones que se pudieran presentar en el estudio o estudios posteriores, es la disposición de los

empresarios en cuanto al tiempo y tipo de información que se vaya a manejar o manipular como parte del instrumento de medición que se diseñe para tal efecto.

# LA INFLUENCIA DE LA INNOVACIÓN Y LA INFORMACIÓN FINANCIERA EN LA COMPETITIVIDAD DE LA PEQUEÑA Y MEDIANA EMPRESA MANUFACTURERA

Jorge Antonio Rangel Magdaleno, Universidad Autónoma de Aguascalientes

Luis Aguilera Enríquez, Universidad Autónoma de Aguascalientes

Martha González Adame, Universidad Autónoma de Aguascalientes

Silvia Pomar Fernández, Universidad Autónoma Metropolitana-Unidad Xochimilco

## RESUMEN

*En este trabajo de investigación se busca medir la influencia de la innovación y la información financiera en la competitividad de la Pequeña y Mediana Empresa (Pyme) manufacturera. El objetivo es analizar los aspectos más importantes relacionados con la innovación, la información financiera y la incidencia de éstos en la competitividad empresarial, identificando la significancia y sus interrelaciones. Para este estudio se consideró una muestra de 149 Pymes del sector manufacturero del estado de Aguascalientes, México. Los resultados obtenidos muestran una evidencia empírica que la intervención de la consultoría externa especializada y la falta de protección del conocimiento mediante patentes son los factores de innovación más relevantes para la muestra, así como la repercusión de la información financiera en la competitividad de este tipo de empresas.*

**PALABRAS CLAVE:** Innovación, Información Financiera, Competitividad, Pyme Manufacturera.

## THE INFLUENCE OF INNOVATION AND FINANCIAL INFORMATION IN COMPETITIVENESS OF MANUFACTURING SMALL AND MEDIUM-SIZED ENTERPRISE

### ABSTRACT

*This research seeks to measure the impact of innovation and financial information on the competitiveness of the manufacturing Small and Medium-Sized Enterprises (SMEs). The aim is to analyze the most relevant aspects related to innovation, financial information and the impact of these on business competitiveness, identifying the significance and interrelationships. For this study, we considered a sample of 149 SMEs in the manufacturing sector of the state of Aguascalientes, Mexico. The results obtained show empirical evidence that the intervention of specialized external consultants and the lack of patent protection of knowledge are the most relevant factors in the innovation for the sample, as well as the impact of financial information on the competitiveness of such companies.*

**JEL:** M40, M20, L60

**KEY WORDS:** Innovation, Financial Information, Competitiveness, SMEs Manufacturing.

### INTRODUCCIÓN

Existen en la literatura una serie de investigaciones que abordan los recursos o factores clave en el éxito de las estrategias empresariales, permitiendo identificar cuáles son críticos y que se les confiere una mayor importancia para la competitividad y el crecimiento de las empresas (Rubio y Aragón, 2006; Warren y Hutchinson, 2000; Pelham, 2000, 1997; Barney, 1991; Huck y McEwen, 1991). Este análisis de investigaciones arroja que son diversos los recursos o factores internos que inciden en el éxito competitivo de las Pequeñas y Medianas Empresas (Pymes). Los más importantes, por ser los que aparecían con mayor frecuencia, son la tecnología, la innovación, los recursos comerciales, los recursos humanos, las capacidades directivas, aspectos financieros, la cultura y la calidad del producto o servicio. Como se observa, dentro de los principales recursos estratégicos se encuentran la innovación y la información financiera, los cuales pueden influir en el proceso de adaptación a los cambios del entorno y mejorar las oportunidades para alcanzar los objetivos empresariales.

En la actualidad no existe abundancia en estudios que consideran la innovación y el uso de la información financiera como pieza fundamental en el proceso de toma de decisiones encaminadas a la competitividad de las Pymes. La mayoría de la literatura se enfoca principalmente a abordar este tema en grandes empresas (Rouhani y Mahmodian, 2012; Guío, 2007; Gonzalo, 2004), dejando de lado su importancia en empresas de menor tamaño. Es por esto que surge la necesidad de estudiar la importancia de la innovación e información financiera en las Pymes de la industria manufacturera de Aguascalientes en su desempeño competitivo. Así, en el presente trabajo de investigación se utilizó un enfoque cuantitativo, empírico y correlacional en la cual se consideró la influencia de la innovación y la información financiera en la competitividad de las Pymes manufactureras del estado de Aguascalientes. Para esto, se realizó un muestreo probabilístico aleatorio simple de Pymes del estado arrojando una muestra de 149 empresas a quienes se les aplicó, durante el periodo comprendido entre abril – junio de 2012, un instrumento de medición tipo encuesta personalizada dirigida a los gerentes o responsables directos de la administración de este tipo de organizaciones.

Para la medición de los resultados, se aplicó un análisis de fiabilidad considerando el coeficiente Alfa de Cronbach con la finalidad de validar la confiabilidad del modelo teórico (Nunnally y Bernstein, 1994). Además se efectuó un análisis de la varianza (ANOVA por sus siglas en inglés: *Analysis of Variance*) para validar si las variables de competitividad empresarial toman valores medios significativamente distintos que los valores arrojados por la variable innovación y de la existencia de una persona encargada del análisis de la información financiera (Uriel y Aldás, 2005; Luque *et al.*, 2000). Ambos análisis se realizaron con el programa de cómputo IBM SPSS Statistics versión 19, con lo que se busca obtener resultados que permitan determinar si, efectivamente la innovación y la información financiera influyen de manera significativa en la competitividad de la muestra de Pymes manufactureras del estado de Aguascalientes.

### Marco Contextual

La Pyme es de suma importancia en la economía local y nacional. De acuerdo cifras arrojadas por el último censo económico llevado a cabo por el Instituto Nacional de Estadística y Geografía (INEGI) en el año 2009, las Pymes en México representan el 4.8% del total de las empresas. Además generan el 26.4 por ciento del Producto Interno Bruto y contribuyen con el 31.2 por ciento de los empleos formales. Con cifras muy similares, la Pyme también es muy importante en la economía del estado de Aguascalientes ya que según el Instituto Nacional de Estadística y Geografía, en Aguascalientes, el 5.14% de las empresas son de estos tamaños. Adicionalmente, las Pymes aportan el 24.85% de del producto interno bruto del estado y el 25.81% de las personas económicamente activas se encuentran ocupadas en una empresa de estas características (INEGI,

2009). Asimismo, cabe señalar que la industria manufacturera ocupa un lugar de coyuntura en la entidad. El 10.52 por ciento de las empresas manufactureras en la entidad son pequeñas y medianas (INEGI, 2009). De acuerdo a cifras proporcionadas por el INEGI, (2012), Aguascalientes ha sido uno de los estados en donde la industria manufacturera ocupa el primer lugar de aportación al producto interno bruto local con un 27.1%; además, principalmente el empleo en el estado de Aguascalientes está conformado principalmente por el sector manufacturero con un 30.4%. En este sentido, las remuneraciones totales al personal ocupado por la industria manufacturera asciende al 48.7% del total de remuneraciones a la población económicamente activa de la entidad.

### **REVISIÓN DE LA LITERATURA**

En la literatura, varios autores que han realizado importantes aportaciones en el tema, han coincidido en que parte importante en la estrategia empresarial constituyen los recursos con los que cuentan las organizaciones. En este sentido, Chandler (2000) estableció que la estrategia es el elemento que especifica las metas básicas de una empresa a un largo plazo, así como la adopción de planes de acción y la asignación de los recursos necesarios para alcanzar estas metas. Mintzberg (1996) señala que la estrategia busca el desarrollo de ventajas competitivas o la supervivencia de la organización incluyendo un adecuado esquema de utilización de los recursos. Según algunos investigadores, los recursos o factores clave en el éxito de las estrategias empresariales son la tecnología, la innovación, los recursos comerciales, los recursos humanos, las capacidades directivas, aspectos financieros, la cultura organizacional y la calidad del producto o servicio (Rubio y Aragón, 2006; Warren y Hutchinson, 2000; Pelham, 2000, 1997; Barney, 1991; Huck y McEwen, 1991). Como se observa en el párrafo anterior, dentro de los principales recursos estratégicos se encuentran la innovación y los aspectos financieros, los cuales pueden influir en el proceso de adaptación a los cambios del entorno y mejorar las oportunidades para alcanzar los objetivos empresariales.

Por otra parte, dentro de los principales problemas que enfrentan las organizaciones empresariales del sector industrial en México son la falta de innovación y deficiencias en la cultura financiera (Castillo, 2010; Secretaría de Economía, 2007). En relación a la innovación, de acuerdo a la Encuesta de Entorno Empresarial 2010: "Problemática que Enfrentan las Empresas del Sector Industrial" realizada por la Cámara Nacional de la Industria de Transformación (CANACINTRA), se evidencia que dentro de los principales problemas que padecen las empresas del sector industrial se encuentra la actividad innovadora. Por su parte, la Pyme manufacturera comparte esta realidad al no poder hacer frente a la competencia de manera adecuada debido a que carece de actividades de innovación y desarrollo (Cámara Nacional de la Industria de Transformación, 2010).

Hadjimanolis (2000) señala que la mayoría de los estudios sobre innovación se han concentrado en empresas grandes, que por su estructura organizacional y su carácter de orientación al mercado, son por naturaleza innovadoras. A pesar de que las grandes empresas, por poseer más medios financieros y humanos, pueden parecer más propensas a realizar innovaciones, algunos trabajos muestran que no se trata de un factor de éxito exclusivo de este tipo de empresas (Aguilera, *et al.*, 2013). De hecho, muchas estadísticas evidencian que las Pymes son las principales promotoras del crecimiento en los niveles de innovación de los países (Camisón *et al.*, 2004; Lloyd *et al.*, 2002). Berumen (2008), Furio Blasco (2005) y Witt (2002) –citando a Schumpeter (1912)– mencionan que la innovación consiste en la utilización productiva de algo nuevo (bienes con nueva calidad, nuevo método productivo, nuevo mercado, nuevas fuentes de materias primas o nuevos esquemas de organización). Al respecto Sutton (1980) indica que la innovación es un proceso que implica la elaboración de productos y servicios con cierto grado de

novedad para quien los adopta. También Frenkel (2003) indica que la innovación faculta a las empresas para operar más eficientemente y mejorar su habilidad para ofrecer productos al mercado, resaltando el importante rol de la información y el conocimiento en el cambio de procesos y tecnología.

Administradores de empresas que han tenido un crecimiento acelerado han señalado que la innovación es, más que cualquier otro atributo, un aspecto diferenciador que les ha brindado una ventaja frente a sus competidores más cercanos (PricewaterhouseCoopers, 2002). La transformación de ideas en nuevos negocios, productos, servicios y soluciones se sustenta en la comprensión de las sinergias e interacciones entre las diferentes tecnologías, productos y conocimientos de la empresa y el establecimiento de una adecuada organización interna (Helfat y Raubitschek, 2000). Desde esta premisa, parte de la competitividad de la empresa se puede explicar a partir del potencial innovador que la creación, transferencia, integración y aplicación de conocimientos aportan a la organización.

Otro recurso importante en relacionado con la estrategia empresarial es la parte financiera (Koontz, 2004; Chandler, 2000; Mintzberg, 1996). Koontz (2004) señala que, para el proceso de formulación de la estrategia empresarial es importante conocer la situación por la que pasa la organización para así poder adoptar los cursos de acción y la asignación de los recursos necesarios para lograr los propósitos fundamentales y los objetivos básicos a largo plazo. Considerando entonces los recursos y capacidades clave del éxito de las empresas, éstas utilizan diversas estrategias formuladas partiendo de la situación actual y sus factores externos e internos que la rodean, visualizando el crecimiento y posición competitiva futura deseada (Haugstad, 1999). Así, en el proceso de formulación de la estrategia, el administrador deberá pensar en sus distintos recursos y capacidades disponibles, consciente de la realidad actual por la que pasa la entidad y hacia dónde la querrá dirigir. Como punto de partida, es necesario establecer un diagnóstico adecuado, por lo que será fundamental contar con información financiera suficiente que permita conocer cómo se encuentra la empresa hacia su interior y con respecto al entorno que la rodea. Por lo tanto, parte primordial del análisis situacional de la entidad económica es la información financiera, ya que esta última conlleva implícito un potencial valioso para la determinación de un adecuado diagnóstico interno y externo (Bolívar, 2004).

De acuerdo al Consejo Mexicano para la Investigación y Desarrollo de Normas de Información Financiera (CINIF) (2013), la información financiera que emana de la contabilidad, es información cuantitativa expresada en unidades monetarias y descriptiva, que muestra la posición y desempeño financiero de una entidad, y cuyo objetivo esencial es el de ser útil al usuario general en la toma de sus decisiones económicas. Se enfoca esencialmente a proveer información que permita evaluar el desenvolvimiento de la entidad, así como en proporcionar elementos de juicio para estimar el comportamiento futuro de los flujos de efectivo, entre otros aspectos. La información financiera representa entonces, una herramienta básica para establecer un diagnóstico más profundo y objetivo de la situación y desempeño de la administración de una entidad económica determinada, sirviendo como apoyo en la toma de decisiones (Consejo Mexicano para la Investigación y Desarrollo de las Normas de Información Financiera, 2013).

A la vez, Naruanard y Kotey (2006) revelan que la calidad de la información financiera tiene un efecto positivo significativo en el rendimiento y en la percepción de su capacidad para acceder a capital externo propietarios y gerentes de las Pymes. Además señalan que, junto a la falta del conocimiento del negocio y la carencia de la información financiera les impide aprovechar oportunidades de financiamiento con proveedores e instituciones financieras, lo cual impacta en su desempeño competitivo. En las organizaciones de hoy, los datos y la información son una de

sus principales riquezas. Las partes interesadas en las empresas requieren utilizar esta riqueza para ganar ventajas competitivas, basándose en ella la toma de decisiones de negocios orientadas también al desarrollo de innovaciones en productos y procesos administrativos. Los sistemas de información de negocios, como son los sistemas de información financiera, convierten y almacenan los datos financieros importantes.

Por lo tanto, es primordial integrar la toma de decisiones apoyándose en el medio ambiente de estos sistemas (Rouhani y Mahmodian, 2012). Por lo tanto, para las empresas manufactureras, la innovación y la utilización de la información financiera representan aspectos que influyen de manera positiva en su competitividad. Estos aspectos son determinantes en la estrategia empresarial, puesto que el éxito éstas, por una parte se asocia al desarrollo de nuevos productos, servicios o procesos que permitan responder a las necesidades de los clientes, adaptarse a los cambios en el entorno o mejorar las oportunidades para alcanzar los objetivos de la empresa (Rubio y Aragón, 2006; Camisón *et al.*, 2004; Lloyd *et al.*, 2002). Para ello, se puede plantear la siguiente hipótesis:

H<sub>1</sub> - La Innovación Incide Positivamente en la Competitividad de la Pyme Manufacturera

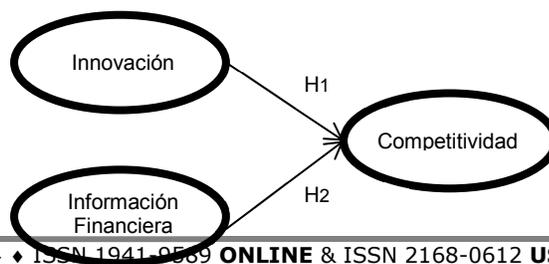

Por otra parte, Rouhani y Mahmodian (2012) señalan que los datos y la información son una de las principales riquezas de las organizaciones, las partes interesadas en las empresas requieren utilizar esta riqueza para impulsar la competitividad, basándose en ella su toma de decisiones de negocios. En este sentido se formula la siguiente hipótesis:

H<sub>2</sub> – La Utilización de la Información Financiera Influye Positivamente en la Competitividad de la Pyme Manufacturera Es por ello que en el presente trabajo de investigación, se realizó con una muestra de empresas para investigar y medir el papel de la innovación y la información financiera como factores que inciden en la competitividad de las Pymes manufactureras del estado de Aguascalientes.

## METODOLOGÍA

El presente trabajo de investigación es de tipo descriptivo, exploratorio y correlacional en el cual se analizó la influencia de la innovación y la información financiera en la competitividad de la Pyme manufacturera de Aguascalientes. Se tomó como referencia la base de datos que ofrece el Directorio Empresarial de Aguascalientes (SIEM, 2009) donde se menciona que en Aguascalientes, existen registradas 7,061 empresas de las cuales 1,332 son Pyme y para lo cual el tipo de muestreo fue aleatorio simple. El trabajo es de carácter empírico y se tomaron como muestra los datos de 149 Pymes del sector de manufactura en Aguascalientes a quienes se les aplicó un instrumento de medición tipo encuesta personalizada para los gerentes o responsables directos de este tipo de organizaciones. En base a esto, para medir las hipótesis establecidas, se plantea el siguiente modelo teórico:

Figura 1: Modelo Teórico

Fuente: Elaboración propia

### Desarrollo de Medidas

Para la elaboración del instrumento de medición utilizado en el presente trabajo de investigación, el cual se aplicó a los gerentes responsables de las Pymes manufactureras de Aguascalientes, se conformó mediante una adaptación de los siguientes tres bloques: Actividad Innovadora, Información Financiera y Competitividad. Para el análisis estadístico del primer bloque (F1) llamado Actividad Innovadora, se utilizaron 21 elementos en total medidos con escala Likert del 1 al 5 con diferentes descripciones (Choe *et al.*, 1997). El segundo bloque (F2) se denominó “Información Financiera” medido con un elemento dicotómico (Zorrilla, 2006; Claver *et al.*, 2005; Kent y Mentzer, 2003). El tercer bloque (F3), fue identificado como “Competitividad” compuesto por 30 elementos, medidos con escala Likert de 5 puntos (Porter, 2008, 1996, 1980; Camisón *et al.*, 2007; Prahalad y Hamel, 1990; Quinn y Rohrbaugh, 1983).

### RESULTADOS Y DISCUSIÓN

En primera instancia, se realizó un Análisis Factorial Confirmatorio (AFC) con la finalidad de evaluar la fiabilidad y validez de la escala de medida utilizada en este trabajo. Para ello, el programa estadístico SPSS arroja el valor de 0.903 para el coeficiente  $\alpha$  de Cronbach, con lo que se puede interpretar que el estudio es fiable y válido (Nunnally y Bernstein, 1994).

Tabla 1: Estadísticos de fiabilidad

Alfa de Cronbach	Alfa de Cronbach basada en los elementos tipificados	N de elementos
.903	.901	52

Fuente: Elaboración propia con IBM SPSS Statistics v19

Posteriormente, el análisis de la varianza se realizó para validar si las variables de competitividad empresarial toman valores medios significativamente distintos que los valores arrojados por la variable de la existencia de una persona encargada del análisis de la información financiera, lo cual permitirá separar la muestra en grupos distintos, además de medir si estos grupos son heterogéneos uno frente a otro y tener la certeza de que no tienen los mismos resultados entre sí (Luque *et al.*, 2000; Uriel y Aldás, 2005).

Tabla 2: ANOVA

		Suma de cuadrados	gl	Media cuadrática	F	Sig.
Inter-personas		1687.012	145	11.635		
Intra-personas	Inter-elementos	2030.746	51	39.819	35.425	.000
	Residual	8312.139	7395	1.124		
	Total	10342.885	7446	1.389		
Total		12029.897	7591	1.585		

Fuente: Elaboración propia con IBM SPSS Statistics v19

De acuerdo a estos resultados resumidos en la Tabla anterior, se observa que el p-valor es inferior a 0.05, lo que sugiere que hay una relación estadísticamente significativa en el vínculo entre las variables independientes que representan la innovación e información financiera con la variable dependiente de competitividad con un 95% de nivel de confianza (Manzano, 1995). Por lo tanto,

para las hipótesis planteadas en el presente trabajo de investigación muestran resultados favorables que permiten evidenciar resultados que a continuación se describen: Con respecto a la primera hipótesis  $H_1$ , los resultados obtenidos presentados en la Tabla 2 ( $p < 0.05$ ), indican que la Innovación incide positivamente en la Competitividad de la Pyme manufacturera. Para la segunda hipótesis  $H_2$ , los resultados obtenidos ( $p < 0.05$ ), indican que la utilización de la Información Financiera influye positivamente en la Competitividad de la Pyme manufacturera.

## CONCLUSIONES

Aspectos como la innovación y el conocer el desempeño de las empresas a través de la información financiera, representan factores de envergadura en el proceso de diseño e implementación de estrategias en las organizaciones, las cuales, considerando los factores señalados, pueden resultar con una mayor eficacia para encarar los desafíos que demanda el ambiente externo. Por una parte la innovación, ha despertado mayor interés en los investigadores considerándola como parte de sus estudios, mismos que han reafirmado que es determinante en el desempeño empresarial, influyendo en su competitividad. Asimismo, la Pyme manufacturera de Aguascalientes comparte esta realidad. Este estudio, por un lado se destaca el papel de la innovación dentro de la competitividad de la Pyme del estado de Aguascalientes, para lo cual los resultados obtenidos permiten inferir que la innovación influye positivamente en la competitividad de la muestra de Pymes de la industria manufacturera. Dentro de la innovación, se pueden resaltar dos puntos, la importancia de la intervención de la consultoría externa especializada y la escasa protección del conocimiento mediante patentes registradas en el Instituto Mexicano de la Propiedad Industrial (IMPI), debido a que estos aspectos son los que mayormente explican la importancia de la innovación en el marco de esta investigación.

Primeramente, los resultados de este estudio arrojaron un impacto negativo en la competitividad empresarial la falta de protección del conocimiento generado mediante patentes, debido a que la mayoría de las Pymes encuestadas manifestaron una baja protección del conocimiento desarrollado a través de registros en el Instituto Mexicano de la Propiedad Industrial, lo cual puede provocar que si un producto tiene éxito, otras empresas competidoras estarán tentadas a fabricarlo, aprovechándose de la capacidad innovadora de la empresa creadora, sin tener que pagar por dicho uso. Además del riesgo de que alguien más se anticipe y registre alguna invención de la empresa, lo que puede excluir de manera legítima a ésta última del mercado. Adicionalmente sin derechos de propiedad industrial, la empresa no tendrá posibilidades de negociar la concesión de licencias, venta o transferencia de tecnología a terceros (Morales, 2010). Asimismo, el servicio de consultoría externa especializada u “*outsourcing*” es prestado por un individuo o empresa que, como ente distinto a la empresa cliente, presta sus servicios desde fuera.

Otorga a las empresas un punto de vista libre de prejuicios con el cual puede apalancarse para tomar decisiones más objetivas ante situaciones específicas o generales. Además, los asesores externos, debido a su alto grado de especialización en temas particulares, comúnmente tienen mayor conocimiento sobre la situación actual en la propia industria en la cual se desenvuelve la organización y en otras distintas, así como poseer información actualizada y tendencias futuras útiles para el proceso de decisión. El uso de la consultoría externa especializada permite a la empresa incrementar su nivel de innovación al adaptar sus operaciones y costos a las necesidades actuales del mercado enfocando sus esfuerzos, talentos y recursos clave partes medulares del negocio, las cuales pueden ser la fabricación de artículos, así como brindar servicios de mayor calidad a los clientes, facultando a la consultoría externa adentrarse en otra clase de asuntos, apoyando en aspectos administrativos, financieros, técnica-tecnológica, entre otros.

El servicio prestado por consultores externos puede favorecer la creación de un ambiente en el cual se genere información financiera confiable, comparable y oportuna. En lo particular, para la Pyme, contratar servicios de “outsourcing” puede representar una alternativa viable permitiendo una carga financiera más ligera que la contratación de personal exclusivo para estas funciones aportando opiniones más objetivas e innovadoras. En este sentido, la Pyme, en repetidas ocasiones, requiere de especialistas que apoyen en el procesamiento, presentación y revelación de las transacciones, transformaciones internas y otros eventos que afecten económicamente a la organización para poder contar con información financiera útil para la toma de decisiones. Los resultados de este estudio permiten ver que prácticamente el 84% de los casos encuestados tienen a al menos una persona encargada del análisis de la información financiera, lo cual, en la mayoría de los casos, se refiere al servicio de consultoría externa.

Esto se puede adjudicar a que hoy en día uno de los principales problemas a los que se enfrenta la información financiera en el panorama nacional es la complejidad en la aplicación de la normatividad financiera mexicana para el procesamiento, revelación y presentación de reportes financieros. La posición y los resultados financieros pueden ser expresados de muy diferentes maneras, en función del tipo de organización que se trate. El empresario de una Pyme puede verse con limitaciones al momento de analizar, interpretar y aplicar los lineamientos contenidos en las Normas de Información Financiera mexicanas, a menos que tenga una preparación previa en estos temas. Es por esto que se ve con mayor obligación a contratar los servicios de expertos que puedan auxiliar en este sentido, aunque en muchas ocasiones sólo sea para fines de cumplimiento fiscal. Aunado a esto, actualmente en México no existe normatividad financiera diseñada particularmente para las empresas de menor tamaño, diferenciándolas de las grandes, considerando las características y problemáticas especiales de estos tipos de entidades económicas. Aun cuando en México el Consejo Mexicano de Normas de Información Financiera (2011), argumentando que los mismos principios de reconocimiento y de valuación son aplicables a todas las entidades que emiten estados financieros, cualquiera que sea su tamaño, decidió que en el país no se admitiera; con la finalidad de lograr una mayor adecuación a las organizaciones económicas de menor tamaño, se puede buscar la adopción de la “IFRS for Small and Medium sized Entities” o “IFRS for Smes” (Norma Internacional de Información Financiera para entidades de tamaño pequeño y mediano o NIIF para Pymes) emitida por el Consejo de Normas Internacionales de Contabilidad (International Accounting Standards Board - IASB). Esta norma ofrece una estructura alternativa que puede ser aplicada por las entidades de menor tamaño en lugar del conjunto pleno de estándares nacionales e internacionales de información financiera vigentes. Mediante la eliminación de algunos tratamientos permitidos por las NIIFS, la eliminación de asuntos y requerimientos de revelación que generalmente no son relevantes para las Pymes, y la simplificación de los requerimientos para el reconocimiento y la medición, la NIIF para Pymes reduce en más del 90 por ciento el volumen de los requerimientos de contabilidad aplicables a las Pymes, cuando se comparan con el conjunto pleno de las NIIFS. Con esto, muchas Pymes pueden encontrar un “sello” reconocido internacionalmente para sus estados financieros, lo que mejorará su acceso a mercados globales (Muñoz, 2009).

# CASO DE LA EMPRESA DE B & B, INC.: ANÁLISIS DE LA COMPETITIVIDAD DE LA INDUSTRIA ELECTRÓNICA DE TIJUANA, B.C., MÉXICO

Sonia Mata-Naranjo, Universidad Autónoma de Baja California, México  
María Virginia Flores-Ortiz, Universidad Autónoma de Baja California, México

## RESUMEN

*En la presente investigación se realiza una correlación de los niveles de turbulencia que inciden en la competitividad de la empresa B & B, Inc., cuyo objetivo es identificar las actividades que generan valor y crean ventajas competitivas, de manera que sea posible crecer y mejorar la posición de la compañía, la cual ha basado su ventaja competitiva en mantener costos bajos integrales utilizando el esquema de maquiladora que se le otorga en México a su división de diseño, ensamble y manufactura y de manejar la comercialización de su producción de filtros electrónicos a través de representantes de ventas en Estados Unidos de América; sin embargo, el surgimiento de nuevos competidores ha traído el reto de que la organización sea competitiva a escala mundial. Se aplicó un censo a 20 supervisores y gerentes de la empresa para revisar la situación actual de la organización con la finalidad de generar estrategias que promuevan su competitividad.*

**PALABRAS CLAVES:** Competitividad, Niveles de Turbulencia, Industria Electrónica

## CASE OF THE B & B COMPANY, INC., COMPETITIVENESS STUDY OF ELECTRONIC INDUSTRY TIJUANA, B.C., MÉXICO

### ABSTRACT

*This research carried out a study on the levels of turbulence that impact the competitiveness of the company B & B Inc., as the company has based its competitive advantage in maintaining low integral costs using the maquiladora scheme that is given in Mexico to its design division, assembly and manufacturing, also handle the marketing of its production of electronic filters through sales representatives in the United States of America, however, the development of new competitors has brought the challenge of the organization to be competitive globally, to obtain results we applied a census to 20 supervisors and managers of the company to review the current status of the organization in order to develop strategies that promote competitiveness. In order to establish an action plan presenting the objectives, strategies and goals for the next five years, which will be evaluated by management prior to his implementation.*

**KEYWORDS:** Competitiveness, Turbulence Levels, Electronic Industry

**JEL:** L21, L22,

## INTRODUCCIÓN

La industria de la radiofrecuencia es un mercado muy fragmentado, donde algunos tipos de componentes son claves, como los filtros que son el corazón de los electrónicos. En Estados Unidos de América (EE. UU.), los componentes electrónicos representaron un mercado de \$3.6 billones de dólares en 2011, con un crecimiento anual aproximado proyectado de 5.6% anual hasta 2016. Es un mercado que ha incrementado su atractivo, ha tenido grandes evoluciones técnicas y cambios que son observados en el terreno competitivo de cada una de las categorías de los componentes. (Yole, 2012). La manufactura en EE. UU. ha sido un sector que se ha caracterizado por la costosa mano de obra en comparación con otros países, donde el lento crecimiento económico, la fortaleza de los competidores externos y la reubicación de fábricas en países emergentes han golpeado el sector gravemente. (*Economic sectors: Manufacturing*, 2007). La participación de la manufactura en el empleo total ha decrecido, cayendo de un alto 32% en 1953 a 9% en 2009. (Johnson, 2010)

Actualmente, México es el segundo proveedor más importante de productos electrónicos en el mercado de Estados Unidos; siendo la industria electrónica constituida por electrónica de consumo, computadoras personales, equipo de telecomunicaciones, componentes electrónicos y equipo industrial y médico, uno de los sectores de más rápido crecimiento en México en términos del potencial exportador donde los elementos centrales de competitividad son recursos humanos y tecnología. De acuerdo con estadísticas por el Instituto Nacional de Estadística y Geografía (2010), del Sistema de Cuentas Nacionales de México. Producto Interno Bruto por Entidad Federativa 2005-2009), la industria manufacturera es detonador del crecimiento económico del país y en los últimos años ha tomado mayor relevancia derivado de la apertura comercial, llevándola a contribuir con un 17.51% de la producción total del país, medida a través del Producto Interno Bruto (PIB); siendo Baja California el sector con mayor contribución al PIB con 20.77% por lo cual se puede reconocer su poder generador de crecimiento económico a través de la inversión y la generación de empleo, ubicándose dentro de los principales sectores económicos

La Empresa B & B, Inc. comercializa filtros electrónicos por medio de su división LE Engineering, Co. a través de representantes de ventas en Estados Unidos, asimismo se encarga de cubrir los costos de operación de Filtrónicos, S.A. de C.V. generados por las actividades de maquila, actividad que realiza bajo el Programa para la Industria Manufacturera, Maquiladora y de Servicios de Exportación (IMMEX), a través del cual el Gobierno Mexicano otorga la facilidad de manufacturar mercancías en el país para su posterior retorno al extranjero con beneficios que le permiten recibir facilidades administrativas, obtener ventajas arancelarias y acogerse a beneficios fiscales que disminuyen sus costos de operación en México, haciéndolas competitivas en el ámbito mundial.

## REVISIÓN LITERARIA

En la literatura en un estudio (Vega, Flores, Solís y Chávez, 2013), hacen referencia que en cuanto a la competitividad no es un estadio a alcanzar, sino un proceso continuo de esfuerzos conjuntos hacia la adquisición de atributos diferenciables en el que los resultados se obtienen a largo plazo. (Horta y Jung, 2002) . En tanto que el Instituto Mexicano para la Competitividad, conocido por sus siglas, por IMCO, (2011), define la competitividad como la capacidad de atraer y retener inversiones. La definición mostrada anteriormente, implica que para poder atraer y retener inversiones, es necesario que un país ofrezca las condiciones integrales aceptables en el ámbito internacional, para maximizar el potencial socioeconómico de las empresas y personas que en él radican y, además incrementar de forma sostenida su nivel de bienestar, más allá de las posibilidades intrínsecas que sus propios recursos, capacidad tecnológica y de innovación

ofrezcan y, todo ello, con independencia de las fluctuaciones económicas normales por las que el país atraviese. (Vega, Flores, Solís y Chávez, 2013)

En tanto que concepto de estrategia que de acuerdo con Ansoff (1997) define estrategia como una serie de normas para la toma de decisiones que guían el comportamiento de la empresa. Existiendo cuatro tipos de normas: Los objetivos y metas que son criterios con los que se mide el rendimiento presente y futuro de la empresa, la estrategia empresarial que son normas para desarrollar la relación de la empresa con su ambiente externo, es decir, qué tecnología de productos desarrollará, dónde y a quién se venderán los productos y cómo obtendrá la ventaja sobre sus competidores. El concepto de organización tales como las pautas para establecer las relaciones y los procesos internos dentro de la organización y por último las políticas operativas siendo las reglas por medio de las cuales la empresa dirige sus negocios diarios.

En cuanto a su funcionamiento se toma como base el Modelo de Turbulencia de Ansoff (1979), el objetivo de este modelo es analizar el comportamiento de las organizaciones en ambientes turbulentos, donde el estado actual de conocimiento de las organizaciones puede ser dividido en dos partes, la primera de cómo las organizaciones deberían comportarse y la otra parte consiste en por qué y cómo se comporta una organización. A través de este modelo se busca realizar un diagnóstico estratégico para determinar los cambios que deben realizarse en la estrategia de la empresa y en su capacidad interna para asegurar el éxito en su ambiente futuro, teniendo como concepto central que los resultados de éxito o fracaso de la empresa son ampliamente determinados por la alineación externa entre el nivel de turbulencia ambiental y la agresividad estratégica, y otra parte es interna entre la agresividad estratégica y las capacidades de la empresa. Para diagnosticar la alineación se debe construir una escala de turbulencia ambiental, que se limita a cinco niveles de turbulencia que pueden ser encontrados en una industria, donde en un extremo se encuentra la estabilidad con un ambiente completamente tranquilo y en el otro lado, el ambiente creativo caracterizado por grandes adelantos tecnológicos o trastornos sociopolíticos.

El nivel de turbulencia en una industria es el estado de conocimiento con el cual las organizaciones que sirven al ambiente deben responder a los cambios, las industrias no se mueven en un solo paso, puede ser que los adelantos tecnológicos, el cambio en la estructura de los mercados o una política de discontinuidad, aumenten rápidamente la turbulencia en una industria estable o manden a una industria en crecimiento al declive, por lo cual la escala de turbulencia ambiental puede ser usada para diagnosticar la turbulencia presente y futura de una industria. Ansoff, (1997) menciona que el nivel 1 de turbulencia describe un ambiente plácido en el cual una empresa puede dedicar atención a su mercado histórico, los retos continuos son una repetición del pasado, el cambio es más lento que la habilidad de la empresa para responder y donde se espera que el futuro sea una réplica del pasado, observando en raras ocasiones economías de libre mercado. En el nivel 2 el ambiente cambia en forma lenta y progresiva, una empresa tiene éxito si cambia sus productos sólo para responder a las medidas tomadas por los competidores, cuando estos no representan una amenaza, las empresas mantienen sus productos históricos, minimizando los costos para afectar los precios de la competencia.

En el nivel 3 las empresas mejoran progresivamente sus productos históricos anticipándose a las necesidades en evolución de los clientes, son empresas que descubrieron el secreto de dar forma a las necesidades del consumidor y de influir sobre ellas. El nivel 4 puede observarse en empresas cuyo entorno presenta una discontinuidad frecuente y una escasa capacidad de predicción, por lo que es mucho más complejo que los anteriores. La fórmula de éxito del nivel 5 es muy sencilla, aparentemente permanecer como líder en el desarrollo de productos, incorporando la ventaja de la innovación y la tecnología. Los distintos niveles de turbulencia se enfrentan por medio de la

agresividad estratégica definida por Ansoff, (1979), como el conjunto de características comunes a su actividad estratégica a través del tiempo, un común denominador o el patrón de una estrategia. La agresividad estratégica presenta como cualidades el grado de discontinuidad y la puntualidad; donde se analiza el grado de discontinuidad de los nuevos productos desde el pasado.

Los ambientes competitivos y las estrategias de marketing, variando la escala de discontinuidad de ningún cambio a un cambio progresivo y de un cambio discontinuo en la empresa pero que puede observarse en el ambiente o un cambio creativo que no se ha observado previamente; mientras que la puntualidad se refiere a la introducción de nuevos productos de la empresa en relación con nuevos productos que aparecen en el mercado, pudiendo pasar por ser reactiva, previsor, innovadora o creativa. (Ansoff, 1997). La capacidad estratégica es la medida de efectividad con la que una organización apoya la agresividad y que es determinada por la competencia de la administración, la estructura y la cultura.

## **METODOLOGÍA**

Para el presente trabajo se eligió una muestra de 20 supervisores y gerentes por tratarse de un estudio de caso realizado en una empresa, aplicándoseles un cuestionario conformado por 33 preguntas relacionadas al tema de estudio. Se utilizó una escala de medición con una escala de *lickert*. Se elaboraron los cuadros y gráficos que nos permite identificar, analizar y correlacionar los niveles de turbulencia para determinar los factores que inciden en la competitividad de la empresa B & B, Inc., y elaborar un perfil estratégico. Una vez recopilada la información de los cuestionarios, se procedió a la elaboración de una base de datos en SPSS 16.0 y posteriormente se realizó el respectivo análisis descriptivo y estadístico para su interpretación.

### Planteamiento del Problema

B & B, Inc. ha basado su ventaja competitiva en mantener costos bajos integrales utilizando el esquema de maquiladora que se le otorga en México a Filtrónicos, S.A. de C.V. y de manejar con *LE Engineering, Co.*, la comercialización de filtros electrónicos a través de representantes de ventas en Estados Unidos de América; sin embargo, ante el surgimiento de competidores globales, la empresa se ve en la necesidad de buscar nuevas estrategias que deriven en el incremento de la eficiencia para mantener su crecimiento en el sector y su posición en el mercado, por lo cual se busca ejercer acciones que le permitan fortalecer y maximizar cada una de las ventajas que posee con respecto a sus competidores.

### Justificación

Debido a la gran competencia del mercado, se tiene la necesidad de implementar estrategias que garanticen el éxito futuro, por lo cual se busca analizar el medio ambiente, la estrategia y la capacidad de respuesta de la empresa a través de la correlación de variables que inciden en la competitividad, con el objetivo de determinar la situación actual de B & B, Inc. Esta investigación se justifica desde el punto de vista práctico, ya que propone estrategias de acción al identificar, analizar y correlacionar los niveles de turbulencia para determinar los factores que inciden en la competitividad de la empresa B & B, Inc., y elaborar un perfil estratégico.

### Objetivos

*Objetivo General:* Identificar, analizar y correlacionar los niveles de turbulencia para determinar los factores que inciden en la competitividad de la empresa B & B, Inc., y elaborar un perfil estratégico.

*Objetivos específicos:* Identificar, analizar y correlacionar los niveles de turbulencia para determinar los factores que inciden en la competitividad de la empresa B & B, Inc. Determinar los niveles de turbulencia para la elaboración del perfil estratégico.

*Muestra:* Se conoce la población total, siendo la población objetivo los supervisores y gerentes de la empresa B&B, Inc. ya que cuentan con los criterios establecidos para el estudio de caso, llevándose a cabo un censo para obtener las mediciones del número total de los sujetos de estudio, aplicando los cuestionarios a través de una entrevista personal para estar en posibilidad de aclarar dudas que pudieran surgir sobre el mismo, estas fueron válidas y ninguna fue excluida al momento de analizar la información.

*Validación del Instrumento:* A los propietarios se les aplicó un cuestionario conformado con 33 preguntas, el cual fue validado relacionado al tema de estudio. Se utilizó una escala de medición con categorías de respuestas de opción múltiple. Se elaboraron los cuadros que permiten un análisis de los niveles de turbulencia que inciden en la competitividad de la Empresa B&B Inc. La validez del cuestionario se determinó mediante el coeficiente de confiabilidad de *Alfa-Cronbach*, por medio del programa SPSS: el resultado arrojado por dicho programa fue de .80, un grado de confiabilidad aceptable (ya que está por arriba .60 y de 0.70, puntuación mínima aceptable.). (Flores, Vega, Solís, 2013)

Tabla 1: Validación del Instrumento

Alfa de Cronbach	N de elementos
.824	33

Tabla 4. Estadístico de fiabilidad Fuente: SPSS versión 16.0

## RESULTADOS

Para determinar las variables en las que existe correlación se utilizó la Matriz de Correlación de *Pearson*. Los resultados de las correlaciones permiten concluir que dos variables están relacionadas. Se propone como estrategia de investigación a partir de la evidencia que arroja la matriz de coeficientes de correlación de *Pearson*, considerar sólo aquellas correlaciones significativas al rango de 0.01 y 0.05 con una magnitud igual o mayor a 0.5, lo cual representa una correlación positiva de moderada a fuerte. (Vega, Flores, Solís, 2012)

Tabla 2: Matriz de Pearson. Correlaciones Bivariadas de las Variables Independientes

VARIABLES	Correlación
Medio ambiente - Medio ambiente	0.649(**)
Medio ambiente - Agresividad	0.619(**)
Agresividad - Agresividad	0.680(**)
Agresividad - Cultura	0.645(**)
Agresividad - Administración	0.616(**)
Cultura - Estructura	0.629(**)
Cultura - Administración	0.975(**)
Estructura - Administración	0.682(**)

Fuente: Elaboración propia. (2012) En la tabla se observan las correlaciones resultado del análisis estadístico a través del SPSS 16.0, se muestran las correlaciones más altas con respecto a las variables independientes, dando como resultado que el medio

*ambiente incide de manera directa con el medio ambiente en 0.649, el medio ambiente incide de manera directa con agresividad en 0.619, asimismo que se presenta una incidencia directa en la agresividad del 0.680, en tanto que la agresividad incide directamente con la cultura en 0.645 y con la administración en 0.616, también se presenta una correlación entre la cultura incidiendo de manera directa con la estructura en 0.629 y la administración en 0.975 y por último una correlación entre la estructura incidiendo de manera directa con la administración en 0.682.*

*\*\*La correlación es significativa en el nivel 0.01*

*\* La correlación es significativa en el nivel 0.05*

*Medio ambiente – Medio ambiente:* Se considera que existe un relación positiva y fuerte entre la presión que ejercen los clientes y la frecuencia con que aparecen nuevos productos en la industria. De igual manera la frecuencia con que aparecen nuevos productos en la industria presenta una fuerte relación con el ritmo de cambio de la tecnología. Medio ambiente – Agresividad Existe una fuerte relación entre el futuro de la capacidad de la industria para enfrentar la demanda y como se desarrolla el mercado. Agresividad – Agresividad Se pudo encontrar que el enfoque para el desarrollo del producto tiene una amplia relación con cómo se desarrolla el producto. Agresividad – Cultura El enfoque para el desarrollo del producto presenta una fuerte relación con la actitud hacia los planes de mejora en la empresa.

*Agresividad – Administración :* Se muestra una fuerte relación entre cómo se desarrolla el mercado y el modelo de éxito que se utiliza como factor clave del éxito.

*Cultura – Cultura :* Se observó una fuerte relación directa entre los valores y actividades de la empresa y la actitud hacia el cambio.

*Cultura – Estructura:* El sistema de recompensas y sanciones tiene una muy fuerte relación con cuál es la organización en la empresa. También se encontró una muy fuerte relación entre la comunicación ascendente y descendente y el grado de flexibilidad organizacional.

*Cultura – Administración:* La comunicación ascendente y descendente tiene una relación importante con la forma en que se resuelven los problemas.

*Estructura – Administración:* Se consideró una relación fuerte respecto a cómo se lleva a cabo la descripción de puestos y que tipos de conocimientos se tienen. Asimismo existe una fuerte relación entre el grado de flexibilidad organizacional y la forma en que se resuelven los problemas. La forma de cómo se controlan las señales de los problemas presentó una fuerte relación con el modelo utilizado como factor clave del éxito.

### Modelo de Turbulencia Ambiental

Diagnostico estratégico Para elaborar el diagnostico estratégico se recurrió al modelo de turbulencia ambiental donde se utilizó como instrumento un cuestionario de 33 *items* que se aplicó a 20 gerentes y supervisores de B & B, Inc. para el análisis del medio ambiente, la agresividad estratégica y la capacidad de respuesta de la empresa, donde se visualizó el futuro a 5 años de acuerdo a la percepción de gerentes y supervisores acerca del ciclo de vida de la demanda y la tecnología pronosticado en base a la extrapolación de tendencias históricas, con los siguientes resultados:

Tabla 1: Diagnóstico estratégico de B & B, Inc

Diagnostico estratégico	Nivel
Medio ambiente	3.4
Agresividad estratégica	2.9

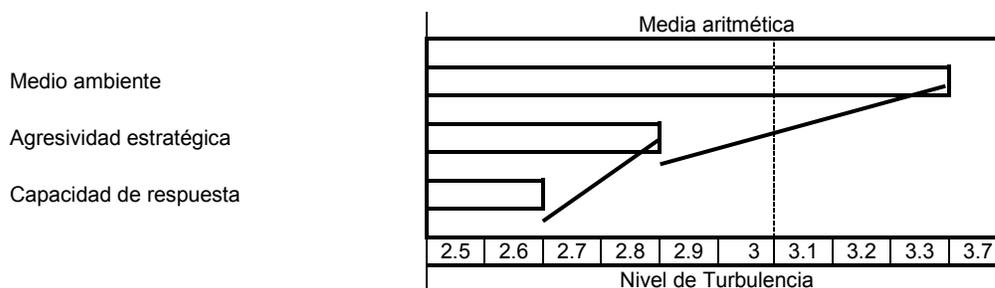

Capacidades		2.7
a) Estructura	2.9	
b) Cultura	2.6	
c) Administración	2.5	
Total		9.1
Media aritmética		3.0

En la Tabla , se muestra el análisis del medio ambiente dando como resultado un nivel de 3.4., la agresividad estratégica con un 2.9 y la capacidad de respuesta de la empresa en cuanto a su estructura con 2.9, cultura 2.6, administración 2.5, donde se visualizó el futuro a 5 años de acuerdo a la percepción de gerentes y supervisores acerca del ciclo de vida de la demanda y la tecnología pronosticado en base a la extrapolación de tendencias históricas. Fuente: Elaboración propia en base a cuestionario de Ansoff para el diagnóstico estratégico. (2012)

De acuerdo al diagnóstico estratégico el medio ambiente se ubica en un nivel de 3.4, mientras que la agresividad estratégica se encontró en 2.9, finalizando con el promedio determinado para estructura, cultura y administración para establecer la capacidad de respuesta de B & B, Inc. en un nivel de 2.7, elaborado basándose en el modelo de turbulencia ambiental de Ansoff, representado de acuerdo a lo siguiente:

De acuerdo a la aplicación del modelo de turbulencia ambiental se puede concluir respecto a medio ambiente de acuerdo a lo siguiente: En un futuro la estructura de mercado tendrá pocos competidores, que podrán influir en el precio, con empresas líderes de mercado y con gran influencia en el precio y pequeñas empresas que no podrán influir en el mismo. Asimismo se considera que la empresa continuará con participación mundial sin necesidad de establecerse en otro país. Se considera que la industria en el futuro podrá satisfacer las necesidades de los clientes en cuanto a demanda de filtros electrónicos. La presión del gobierno en ciertos casos puede ser fuerte y determinante por medio de sus políticas económicas. La presión de los clientes se considera insistente y demandante para reducir constantemente precios y aumentar calidad. La frecuencia con la que aparecen nuevos productos se considera moderada, considerando también un ritmo de cambio de la tecnología rápido, donde la clave del éxito en la innovación será el crear nuevas tecnologías.

Figura 1: Grafica de Likert de B & B, Inc

La grafica de Lickert de B&B Inc, en cuanto al nivel de turbulencia tiene una media aritmética de 3.0, basada en el modelo de turbulencia ambiental de Ansoff, de acuerdo al diagnóstico estratégico realizado el medio ambiente se ubica en un nivel de 3.4, mientras que la agresividad estratégica se encontró en 2.9, finalizando con el promedio determinado para estructura, cultura y administración para establecer la capacidad de respuesta de B & B, Inc. en un nivel de 2.7. Fuente: Elaboración propia en base a cuestionario de Ansoff para el diagnóstico estratégico. (2012)

Respecto a agresividad se concluyó con lo siguiente: La forma de responder al cliente es identificar sus necesidades y satisfacer sus dudas y comentarios con un enfoque en desarrollar el producto basados en la mejora de productos existentes con la finalidad de aumentar su calidad, su desempeño o de mejorar las condiciones para su producción. El ciclo de vida del producto es considerado de mediano a largo, dependiendo del producto considerando desde 1 a 10 años el ciclo. Se considera que se introducen nuevos productos con una alta frecuencia, alrededor de cada

2 años. Respecto al desarrollo del mercado se considera que principalmente se mantienen clientes pues se tienen ventas continuas con los mismos clientes y de los mismos productos. Sin embargo, se busca expandir mercados a través de la captación de mercados que antes tenían los competidores.

*La respuesta de las capacidades arrojó lo siguiente:* Los valores de la empresa y actitudes de la empresa se basan en dejar funcionar las cosas y reaccionar cuando surge el problema, teniendo mayormente una actitud de reacción hacia el cambio y estableciendo como criterio de éxito la eficiencia en resultados y sancionando las desviaciones. Se pudo observar que la actitud hacia los planes de mejora es cuestionarlos otorgando apoyo parcialmente y donde existe una comunicación suficiente para cubrir las necesidades de la empresa lo que crea un ambiente de trabajo de cohesión en el grupo y solidaridad. Se considera que la organización de la empresa es de tipo funcional, con la existencia de supervisores especializados en determinadas áreas. Considerando que existe una moderada flexibilidad organizacional y donde las descripciones de puestos se llevan a cabo por tareas específicas, es decir en base a las funciones o actividades principales. Se considera como principal centro de poder al departamento de Ingeniería y con respecto al liderazgo para ciertas situaciones hay un liderazgo autoritario dominante para tomar decisiones sin necesidad de que participen subordinados y sin tener que justificarlas; sin embargo, se da también el liderazgo situacional que mantiene un equilibrio entre dirigir y apoyar basado en un comportamiento que define funciones y tareas de los subordinados, donde se señala qué, cómo y cuándo deben realizarlas y se controlan resultados, asimismo se da el comportamiento de apoyo centrado en el desarrollo del grupo, donde se fomenta la participación en la toma de decisiones y se mejora la cohesión, se apoya y motiva al grupo. La resolución de problemas es a través del método de prueba y error, donde se rechaza el riesgo pero también se considera la aceptación del riesgo conocido, sin buscar afrontar nuevos riesgos. La reacción a la crisis es utilizada como la base para resolver problemas, y donde se busca la desviación hacia los planes, encontrando que los sistemas y procedimientos son la base para la toma de decisiones.

### Perfil Estratégico

Con base en los resultados arrojados por el modelo de turbulencia ambiental, se elabora el perfil estratégico, determinando que se presenta una brecha entre el perfil actual y el perfil óptimo futuro. La agresividad estratégica y la capacidad de respuesta actuales se encuentran por detrás de la turbulencia del medio ambiente, por lo que se sugiere alinear la agresividad estratégica y la respuesta de la empresa al medio ambiente para que la empresa pueda tener éxito en el futuro.

Tabla 2: Perfil Estratégico de B & B, Inc

Medio futuro	ambiente Repetitiva	En expansión	Cambiante	Discontinua	Sorpresiva
Complejidad	Nacional económica	+	Regional	<b>*Mundial</b>	Mundial, Social y Política
Conocimiento de los sucesos	Conocidos	Pueden extrapolarse		Discontinuos y conocidos	Discontinuos y nuevos
Rapidez del cambio	Más lento que la respuesta		<b>*Comparable a la respuesta</b>		Más rápido que la respuesta
Percepción del futuro	Recurrente	Puede pronosticarse	<b>*Predecible</b>	Parcialmente predecible	Sorpresas imprevisibles
<b>Agresividad estratégica actual</b>	<b>Estable</b>	<b>Reactiva</b>	<b>Previsora</b>	<b>Emprendedora</b>	<b>Creativa</b>
Base	Basada en precedentes	En aumento Basada en la experiencia	<b>*En aumento Basada en la extrapolación</b>	Discontinua Basadas en futuros esperados	Discontinua Basada en la creatividad

Se busca	Estabilidad		<b>*Eficiencia operativa</b>		Creatividad
Sistema	Cerrado		*		Abierto
<b>Nivel de turbulencia</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>

En la tabla 2, se muestra el Perfil estratégico en base al nivel de turbulencia determinado para el medio ambiente futuro, agresividad estratégica y la capacidad de respuesta actual de acuerdo al cuestionario de Ansoff. Fuente: Elaboración propia (2012)

Tabla 3: Plan de Acción Como Resultado del Análisis Realizado se Presenta el Siguiendo Plan de Acción Que Contiene Objetivos, Estrategias y Metas Para Los Próximos Cinco Años, el Cual Será Evaluado Por la Dirección Para su Posterior Implementación

<b>Objetivo</b>	<b>Penetración en el mercado</b>
Estrategia	Atracción de clientes de la competencia y clientes potenciales
Metas	Incrementar la participación del mercado en un 10%
Responsable	Gerente de ventas
Plazo	5 años
<b>Objetivo</b>	<b>Optimizar los procesos de producción</b>
Estrategia	Automatización de procesos de producción
Metas	Minimizar procesos manuales en un 50%
Responsable	Gerente de producción
Plazo	3 años
<b>Objetivo</b>	<b>Fabricación de filtros digitales</b>
Estrategia	Incurcionar en el diseño, ensamble y manufactura de filtros digitales
Metas	Incrementar en 5% anual la producción de filtros digitales
Responsable	Gerente de planta
Plazo	2 años
<b>Objetivo</b>	<b>Análisis de prestaciones laborales</b>
<b>Estrategia</b>	Reducción de costos laborales
<b>Metas</b>	Disminución de costos laborales en un 20%
<b>Responsable</b>	Gerente de Recursos Humanos
<b>Plazo</b>	1 año
<b>Objetivo</b>	<b>Fortalecimiento del modelo de operaciones de bajo costo</b>
Estrategia	Aplicar plan de austeridad en gastos de operación
Metas	Disminuir los costos de operación de un 15 a 20%
Responsable	Gerente de planta
Plazo	6 meses

En la tabla 3, se presenta el siguiente plan de acción que contiene objetivos, estrategias y metas para los próximos cinco años, el cual será evaluado por la dirección para su posterior implementación. Fuente: Elaboración propia (2012)

## CONCLUSIONES

Para el Modelo de Turbulencia Ambiental de Igor Ansoff se pudo observar que existe una brecha respecto del medio ambiente futuro con la agresividad estratégica, de la misma forma prevalece la brecha en relación al medio ambiente futuro con la capacidad de respuesta de la empresa B & B, Inc., por lo que se debe buscar que estas tanto la agresividad estratégica como la capacidad de respuesta de la empresa puedan alinearse al medio ambiente futuro con el objetivo de lograr el éxito futuro de la empresa. Las correlaciones resultado del análisis estadístico a través del SPSS 16.0, muestran las correlaciones más altas con respecto a las variables independientes, dando como resultado que el medio ambiente incide de manera directa con el medio ambiente en 0.649, considerándose que existe un relación positiva y fuerte entre la presión que ejercen los clientes y la frecuencia con que aparecen nuevos productos en la industria. De igual manera la frecuencia

con que aparecen nuevos productos en la industria presenta una fuerte relación con el ritmo de cambio de la tecnología.

En cuanto al medio ambiente incide de manera directa con agresividad en 0.619, existiendo una fuerte relación entre el futuro de la capacidad de la industria para enfrentar la demanda y como se desarrolla el mercado. Asimismo que se presenta una incidencia directa en la agresividad del 0.680, encontrándose que el enfoque para el desarrollo del producto tiene una amplia relación con cómo se desarrolla el producto. En tanto que la agresividad incide directamente con la cultura en 0.645, ya que El enfoque para el desarrollo del producto presenta una fuerte relación con la actitud hacia los planes de mejora en la empresa. De igual manera se la agresividad con la administración inciden de manera directa en 0.616, ya que se muestra una fuerte relación entre cómo se desarrolla el mercado y el modelo de éxito que se utiliza como factor clave del éxito. También se presenta una correlación entre la cultura incidiendo de manera directa con la estructura en 0.629, en cuanto al sistema de recompensas y sanciones tiene una muy fuerte relación con cuál es la organización en la empresa; también se encontró una muy fuerte relación entre la comunicación ascendente y descendente y el grado de flexibilidad organizacional. En tanto que existe una correlación directa entre la cultura y la administración en 0.975, dado que el sistema de recompensas y sanciones tiene una muy fuerte relación con cuál es la organización en la empresa; asimismo se encontró una muy fuerte relación entre la comunicación ascendente y descendente y el grado de flexibilidad organizacional. Por último una correlación entre la estructura incidiendo de manera directa con la administración en 0.682., considerándose una relación fuerte respecto a cómo se lleva a cabo la descripción de puestos y que tipos de conocimientos se tienen.

Asimismo existe una fuerte relación entre el grado de flexibilidad organizacional y la forma en que se resuelven los problemas. La forma de cómo se controlan las señales de los problemas presentó una fuerte relación con el modelo utilizado como factor clave del éxito. Al realizar el perfil estratégico la agresividad estratégica y la capacidad de respuesta actual se encuentran por detrás de la turbulencia del medio ambiente, por lo que se sugiere alinear la agresividad estratégica y la respuesta de la empresa al medio ambiente para que la empresa pueda tener éxito en el futuro. Asimismo se presenta un plan de acción el cual contiene objetivos, estrategias y metas para los próximos cinco años el cual lo debe evaluar la dirección para su posterior implementación en donde se propone: como primer objetivo realizar una penetración en el mercado, cuya estrategia es para atraer clientes de la competencia y clientes potenciales, teniendo como meta incrementar la participación de la compañía en el mercado en un 10%, siendo el responsable el Gerente de Ventas, llevándose a cabo el objetivo, la meta y la estrategia en un plazo de 5 años. El segundo objetivo es el optimizar los procesos de producción, cuya estrategia es lograr la automatización de los procesos de producción, teniendo como meta lograr minimizar los procesos manuales en un 50%, el responsable será el Gerente de Producción llevándose a cabo el objetivo, la meta y la estrategia en un plazo de 3 años. El tercer objetivo es la fabricación de filtros digitales en donde la estrategia es incursionar en el diseño, ensamble y manufactura de filtros digitales, estableciéndose como meta el incrementar en un 5% anual la producción de los mismos, siendo el responsable el Gerente de Plan, llevándose a cabo, el objetivo, la meta y la estrategia en un plazo de 2 años. El cuarto objetivo es el análisis de prestaciones laborales, cuya estrategia es la reducción de costos laborales y la meta es la disminución de costos laborales en un 20%, siendo el responsable siendo el responsable el Gerente de Recursos Humanos, llevándose a cabo el objetivo, la meta y la estrategia en un plazo de 1 año. Y el último objetivo es el fortalecimiento del modelo de operaciones de bajo costa, a través de la estrategia de aplicar el plan de austeridad en gastos de operación, teniendo como meta disminuir los costos de operación

de un 15% a un 20%, el responsable el Gerente de Planta, llevándose a cabo el objetivo, la meta y la estrategia en un plazo de 6 meses.

# MODELO MATEMÁTICO DE INTELIGENCIA DE ENJAMBRE

Rolando Garnica Arias, Universidad Católica de Colombia  
Alfonso Lozano Montaña, Universidad Católica de Colombia  
Carlos Alberto González Camargo, Universidad Católica de Colombia

## RESUMEN

*Este artículo presenta la propuesta para un modelo de enjambre en una organización. Este modelo tiene como objetivo promover el mejoramiento continuo de las organizaciones, se presenta a través del modelo autoorganizativo. Además, este modelo se construye a partir de un análisis comparativo en el que se involucraron las diferentes teorías encontradas para adecuarse para su posterior aplicación. En el artículo se definen los diferentes enfoques organizacionales, las ventajas del modelo de enjambre y se describen los principios y conceptos básicos, que direccionan su aplicación, los resultados esperados, el proceso y los requerimientos generales que son necesarios para ponerlo en funcionamiento.*

**PALABRAS CLAVE:** Mejoramiento Continuo, Modelos Administrativos, Autoorganización, Enjambre

## MATHEMATICAL MODEL SWARM INTELLIGENCE

### ABSTRACT

*This paper presents the proposal for an organization in general swarm model. This model aims to promote the continuous improvement of organizations, is presented through self-organizing model. In addition, this model is constructed from a comparative analysis which involved different theories found to conform in order to apply .. The article defines the various organizational approaches, the advantages of swarm model and describes the principles and basic concepts, objectives and principles that address implementation, expected outcomes, process and general requirements that are necessary to put in operation.*

**JEL:** L14, L16, L19, L22, L29, L69, M14

**KEYWORDS:** Continuous improvement, administrative models, self-organization, swarm.

## INTRODUCCION

Las interacciones que se desarrollan al interior de una organización están basadas en las actividades de inteligencia que adelantan los individuos que pertenecen a ella, donde es relevante la obtención, tratamiento y análisis de la información destinada a la planeación y la toma de decisiones que permitan asegurar la perfecta ejecución del trabajo, disminuyendo el riesgo de cometer errores. En el contexto de la inteligencia como actividad de un grupo de individuos que interacciona con su entorno, esta investigación pretende hacer una identificación sobre los enfoques y teorías de organizaciones y el estado actual de los sistemas organizacionales, así como enmarcar conceptualmente las actividades y los procesos de interacción, para identificar las interacciones, que regulen el proceder, el comportamiento y forma de actuar en el quehacer, en

una organización, en el ámbito de los fundamentos, naturaleza, alcances y medios de control de estos factores. Durante la investigación se analizaron una serie de modelos que brindan las bases para diseñar y poner en marcha una propuesta organizada para el establecimiento y desarrollo de un Modelo de Gestión de Calidad. De igual forma se revisó la literatura de algunos de los modelos de calidad, de excelencia de calidad y de acreditación más reconocidos a nivel mundial – incluyendo implícitamente el enfoque a la gestión por procesos–, como referencias útiles para ser tenidas en cuenta en el desarrollo de la propuesta. Esta investigación tiene la siguiente organización. En la sección de revisión de la literatura se plantean los argumentos relacionados con la inteligencia de enjambre. Posteriormente se presenta la metodología utilizada, en donde se describe cómo debe aplicarse a una organización. Después de lo anterior se presentan resultados generales de la investigación. Finalmente las conclusiones, limitaciones y futuras recomendaciones de investigación.

## REVISIÓN LITERARIA

Los sistemas de Inteligencia de Enjambre (Stacey, 1995) están constituidos por agentes simples que interactúan localmente unos con otros y con el ambiente. Siguen reglas simples sin tener un control centralizado, como resultado de sus interacciones se produce la emergencia de una conducta global inteligente. La perspectiva clásica de la administración (1890), estudió la anatomía de la organización formal, la organización era vista como un medio racional para alcanzar metas y objetivos. El dirigente organizacional visto como un profesional líder que direcciona procesos de desarrollo humano y organizacional tendientes al aumento de la productividad y competitividad, con énfasis en resultados, en esta perspectiva está enmarcado en el enfoque sustancialista, donde eran líderes por sus condiciones personales, ya que el liderazgo se consideraba como un atributo de pocos elegidos. Además se encontraban bastante escépticos respecto a la posibilidad de crecimiento del potencial del liderazgo de las personas mediante la educación. En esta perspectiva, se manejan las siguientes teorías:

### Teoría de la Administración Científica

Elaborada por Frederick W. Taylor a finales del siglo XIX. El nombre de esta teoría obedece al intento de aplicar los métodos de la ciencia a los problemas de la administración para alcanzar elevada eficiencia industrial, los principales métodos científicos aplicables a los problemas de la administración son la observación y la medición. Las características principales son: entrenamiento en reglas y rutinas, —una mejor manera de hacer las cosas, motivación financiera y división del trabajo. El énfasis de esta teoría es las tareas, enfocado en el empleado, donde las personas eran consideradas como máquinas especializadas para realizar una función que estaba preestablecida y era parte de un resultado final. Como seguidores de Taylor están: Henry Metcalfe, Henry R. Towne, Frank y Lilian Gilbreth, Henry Gantt, Harrington Emerson, Moris Cooke, entre otros.

### Teoría de la Administración

Su pionero fue Henri Fayol, la cual se distinguía por el énfasis en la estructura. En esta teoría se parte del todo organizacional y de su división para garantizar la eficiencia en todas las partes involucradas, sean ellas órganos (secciones, departamentos), o personas (ocupantes de cargo y ejecutores de tareas). Las características principales son: definición de las funciones administrativas, división del trabajo, jerarquía, autoridad y equidad. La empresa se debe encargar de seis actividades: técnicas, comerciales, financieras, seguridad, contables y administrativas. Estas últimas teniendo en cuenta la planeación, organización, dirección, coordinación y control.

Como seguidores de Fayol están: Luther Gulick, Lyndall F. Urwick, James D. Money y Alan C. Reiley, entre otros.

### Teoría de la Burocracia

La teoría de la burocracia tuvo su origen en la necesidad de organizar la empresa, cuyo tamaño se incrementaba generando complejidad en la operación e integración de los diferentes recursos. Max Weber realizó el estudio sistemático de la burocracia, donde estableció la estructura, el equilibrio y el orden de las organizaciones por medio de la jerarquía integrada de actividades, definidas por reglas y/o normas. Las características de la burocracia son: división del trabajo, jerarquía de la autoridad, racionalidad, reglas y normas, compromiso profesional, registros escritos e impersonalidad. En énfasis es la estructura con enfoque en la organización global. Como seguidores de esta teoría están: Robert K. Merton, Philip Selznick, Alvin W. Gouldner, Richard H. Hall, Nicos Mouzelis, entre otros.

*Perspectiva humanística:* Esta perspectiva hace énfasis en el elemento humano y en las motivaciones que impulsan, estimulan e influyen en el comportamiento humano dentro y fuera del entorno laboral. El líder organizacional para esta perspectiva debe poder generar motivación entre sus colaboradores, es por eso, que el enfoque comportamentalista es el más adecuado. Ya que sería difícil obtener buenos logros a largo plazo sin un personal comprometido y motivado. Siempre se deben tener en cuenta los sentimientos, actitudes y cualidades humanas y emocionales de los empleados. Dentro de esta perspectiva, están:

*Teorías de la transición:* Mary Parker Follet basó sus estudios en la función de coordinación, como núcleo central de la disciplina administrativa y, por ello, llamo la atención sobre el tema mediante cuatro principios: Coordinar por medio de un contacto directo, coordinar el proceso de planeación, coordinar por medio de relaciones recíprocas y coordinar en forma de proceso continuo. Los aspectos relevantes que exploró son: reducir el conflicto, obedecer la ley de la situación y elaborar procesos psicológicos básicos. Su enfoque fue principalmente en las personas y en la forma en que éstas podían dirigir sus esfuerzos hacia sus objetivos. Chester Irving Barnard, propuso un análisis lógico de la estructura de las organizaciones y la aplicación de conceptos sociológicos a la administración de las mismas. Sostenía que las funciones del ejecutivo eran: proveer un sistema de comunicaciones, promover la garantía de los esfuerzos personales y formular y definir los objetivos de la organización que permitieran lograr la eficiencia.

*Escuela de las relaciones humanas:* Las interacciones que se desarrollan al interior de una organización están basadas en las actividades de inteligencia que adelantan los individuos que pertenecen a ella, donde es relevante la obtención, tratamiento y análisis de la información destinada a la planeación y la toma de decisiones que permitan asegurar la perfecta ejecución del trabajo, disminuyendo el riesgo de cometer errores. En el contexto de la inteligencia como actividad de un grupo de individuos que interactúa con su entorno, esta investigación pretende hacer una identificación sobre los enfoques y teorías de organizaciones y el estado actual de los sistemas organizacionales, así como enmarcar conceptualmente las actividades y los procesos de interacción, para identificar las interacciones, que regulen el proceder, el comportamiento y forma de actuar en el quehacer, en una organización, en el ámbito de los fundamentos, naturaleza, alcances y medios de control de estos factores.

En particular, la disciplina se enfoca en las conductas colectivas que resultan de las interacciones locales de los individuos entre sí y con el ambiente. La inteligencia de enjambres es una tendencia

informática inspirada en la teoría de enjambres, que forma parte de la rama de sistemas multiagentes de la inteligencia artificial. Los comportamientos se pueden modelar para solucionar problemas eficazmente, sin recurrir a implementaciones complejas, basado en los comportamientos sociales descentralizados y autoorganizativos. La inteligencia de enjambres corresponde a un grupo de técnicas que están basadas en el estudio del comportamiento colectivo en sistemas autoorganizados y descentralizados (distribuidos). Estos sistemas están conformados típicamente por una población de agentes computacionales simples capaces de percibir y modificar su ambiente de manera local. Tal capacidad hace posible la comunicación entre los individuos que detectan los cambios en el ambiente generado por el comportamiento de sus semejantes. Aunque normalmente no hay una estructura centralizada de control que dictamina como los agentes deben comportarse, las interacciones locales entre los agentes usualmente llevan a la emergencia de un comportamiento global. Otra característica adicional es la inexistencia de un modelo explícito del ambiente. Según Muñoz (2008) dentro de esta rama las técnicas principales son la optimización por enjambre de partículas (Partile Swarm Optimización PSO) y la optimización por colonia de hormigas (Ant Colony Optimización). Los sistemas de Inteligencia de Enjambre (Muñoz, 2008) están constituidos por agentes simples que interactúan localmente unos con otros y con el ambiente. Siguen reglas simples y sin tener un control centralizado, como resultado de sus interacciones se produce la —emergencia de una conducta global inteligente. Los objetivos más frecuentes para la conformación de enjambres son: La búsqueda de comida o pareja, la protección ante actividad predatoria, y el seguimiento de rutas migratorias. Aun cuando los individuos del enjambre no son inteligentes, las interacciones de estos, permiten al enjambre cumplir con su objetivo de manera inteligente, beneficiando a todos los individuos en una actividad que no pueden hacer por sí solos o cuya realización demandaría un gran esfuerzo individual. Las ventajas de la inteligencia de enjambre (Bonebau, 1999) son: Flexibilidad. El grupo se adapta con rapidez a un ambiente cambiante. Robustez. Incluso cuando uno o más individuos fallan, el grupo todavía puede realizar sus tareas. Auto-organización.

El grupo requiere poca supervisión o control de arriba hacia abajo. Los algoritmos más conocidos que se basan en inteligencia de enjambres son: optimización por colonia de hormigas (ACO), el cual se desarrolló en la segunda fase de Bioescenarios; enrutamiento basado en el comportamiento de termitas; colmena de abejas artificiales (ABHA); y, el PSO; todos estos algoritmos tienen un grupo de agentes computacionales autónomos que cumplen unas reglas simples, determinadas por el algoritmo particular. Las reglas están formuladas para que dichos agentes funcionen sin la necesidad de una estructura de control centralizada, de manera que interacciones locales de cada agente y sus vecinos permitan la emergencia de comportamientos globales inteligentes.

La inteligencia de las hormigas está basada en encontrar el camino más corto desde el sitio donde está su colonia hacia la fuente de alimentos, las hormigas envían varias exploradoras en diferentes direcciones. Cada hormiga va emitiendo una substancia química: feromona, que atrae a otras hormigas. Cuando encuentran alimento, las hormigas regresan a su colonia. La hormiga que encontró alimento regresa primero al hormiguero, ése será el camino más corto, y la ruta utilizada tendrá entonces el doble de feromona (viaje de ida y vuelta) que las demás rutas, ya que las demás hormigas aún no regresan a la colonia. Sus hormigas compañeras serán atraídas por el camino que tiene más feromonas, y al pasar por ese camino, lo impregnarán con más feromonas, y lo harán todavía más atractivo para las restantes hormigas. En este caso las reglas simples que han conducido a la conducta beneficiosa para toda la colonia de hormigas son dos: emita feromonas y siga el camino con más feromonas. Este método ha sido adaptado y seguido por empresas tales como France Telecom., British Telecom y MCI WorldCom en sus redes de

## Comunicaciones

Otro ejemplo de la inteligencia de enjambre, es la división del trabajo que tienen las abejas. Los individuos se especializan en ciertas tareas, pero cuando las circunstancias lo exigen, por ejemplo, cuando el alimento está escaso, ellos tienen flexibilidad y pueden asumir tareas diferentes. La regla de Utilizar Reglas Simples, es considerada también como una de las formas más poderosas e inteligentes que podemos aprovechar del comportamiento de los insectos. Las técnicas de inteligencia de enjambre más exitosas es la Optimización de la existencia en Colonia de Hormigas (ACO) y optimización de enjambre de partículas (PSO); el ACO es un algoritmo de optimización de meta-heurísticos que pueden ser utilizados para encontrar soluciones aproximadas a los difíciles problemas de optimización combinatoria. En ACO las hormigas pueden construir soluciones al problema y que, identificando el depósito artificial de feromonas en el de tal manera que el futuro de hormigas pueden construir mejores soluciones.

## **METODOLOGIA**

Durante la investigación se analizaron una serie de modelos que brindan las bases para diseñar y poner en marcha una propuesta organizada para el establecimiento y desarrollo de un Modelo de Gestión de Calidad. De igual forma se revisó la literatura de algunos de los modelos de calidad, de excelencia de calidad y de acreditación más reconocidos a nivel mundial —incluyendo implícitamente el enfoque a la gestión por procesos—, como referencias útiles para ser tenidas en cuenta en el desarrollo de la propuesta.

De acuerdo a los Dres. Marco Dorigo y Mauro Birattari, de la Université Libre de Bruxelles, Bélgica, se llama inteligencia de enjambre a —la disciplina que trata con sistemas naturales y artificiales compuestos de muchos individuos que se coordinan utilizando control descentralizado y auto-organización. En particular, la disciplina se enfoca en las conductas colectivas que resultan de las interacciones locales de los individuos entre sí y con el ambiente (Bonebau, 2001).

Una vez analizadas varias fuentes de información se propone la identificación de las interacciones de los sistemas de controles endógenos y exógenos, que se desarrollan en diferentes etapas de tiempo, los cuales se aplican a una organización basada en un sistema de inteligencia de enjambre. Al establecer un sistema basado en la descentralización de funciones, es necesario definir la estructura, procedimientos y prácticas, y a su vez establecer los sistemas de control endógenos y exógenos del sistema. Los sistemas de Inteligencia de Enjambre están constituidos por agentes simples que interactúan localmente unos con otros y con el ambiente. Siguen reglas simples y sin tener un control centralizado, como resultado de sus interacciones se produce la —emergencia de una conducta global inteligente. Los objetivos más frecuentes para la conformación de enjambres son: La búsqueda de comida o pareja, la protección ante actividad predatoria, y el seguimiento de rutas migratorias. Aun cuando los individuos del enjambre no son inteligentes, las interacciones de estos, permiten al enjambre cumplir con su objetivo de manera inteligente, beneficiando a todos los individuos en una actividad que no pueden hacer por sí solos o cuya realización demandaría un gran esfuerzo individual.

Las ventajas de la inteligencia de enjambre son: Flexibilidad. El grupo se adapta con rapidez a un ambiente cambiante. Robustez. Incluso cuando uno o más individuos fallan, el grupo todavía puede realizar sus tareas. Auto-organización. El grupo requiere poca supervisión o control de arriba hacia abajo.

Los algoritmos más conocidos que se basan en inteligencia de enjambres son: optimización por colonia de hormigas (ACO), el cual se desarrolló en la segunda fase de Bioescenarios;

enrutamiento basado en el comportamiento de termitas; colmena de abejas artificiales (ABHA); y, el PSO; todos estos algoritmos tienen un grupo de agentes computacionales autónomos que cumplen unas reglas simples, determinadas por el algoritmo particular. Las reglas están formuladas para que dichos agentes funcionen sin la necesidad de una estructura de control centralizada, de manera que interacciones locales de cada agente y sus vecinos permitan la emergencia de comportamientos globales inteligentes.

## RESULTADOS

El sistema organizacional de una organización basado en un sistema de inteligencia de enjambre, se compone de muchas personas, que pertenecen a una misma tipología donde la interacción de los individuos espacialmente vecinos o de la percepción local de la vecindad actúa sobre la base de reglas simples como objetivos, planes, parámetros de las actividades de inteligencia. Este sistema tiene la capacidad para actuar de forma coordinada, sin la presencia de un coordinador o de un controlador, donde cada persona es consciente de la conducta del grupo en general, instituido en unas reglas simples, aprovechando la información que intercambian directamente o a través del medio, para tomar decisiones y auto-organizarse. El número de interacciones no tiende a crecer con el número total de personas en el sistema, por lo tanto la relación del tamaño de sistema organizacional no afecta su función ni la interacción entre las personas. Cada persona del sistema, debe conocer los objetivos, planes programas y analizar la interacción con sus vecinos, para que no se presenten conflictos entre las actividades a realizar.

Un aspecto importante y fundamental del sistema es el alto grado de conectividad o conexión entre las personas, la cual tiene una relación directa con el flujo global de información o influencia o interacción. Las personas que componen el sistema pueden realizar diferentes actividades en diferentes lugares sin que se afecten las funciones del sistema, así mismo puede ayudar a hacer más flexible el sistema, para lo cual el sistema es capaz de autoorganizarse en grupos que se ocupan simultáneamente de diferentes aspectos de

### Una Tarea Compleja

El sistema debe tener establecida sus objetivos, la interacción de las personas y su entorno, las interacciones empiezan cuando cada integrante del sistema percibe su entorno y realiza una relación entre las reglas simples, la información en base de datos y la disponibilidad que tiene; y establece la necesidad o no de realizar una actividad determinada como planear, buscar, analizar, divulgar, retroalimentar información. Al finalizar la actividad, realiza una relación entre las funciones, la información en base de datos y la actividad realizada, para determinar si esta culminada con éxito dicha actividad o si hay necesidad de realizar otra actividad. Como ventajas podemos considerar que se reduce la congestión en las comunicaciones, aumenta la fluidez en la información recibida y procesada, el sistema puede adelantar varias funciones al mismo tiempo por medio de niveles y, procesos sinérgicos continuos de interacción e iteración de ciclos, el sistema es capaz de ajustar su asignación de tareas a una perturbación externa, sin dejar a un lado sus funciones, gracias a la comunicación directa entre las personas, hay una reacción rápida a los problemas imprevistos, las personas se motivan por tener la libertad de ejercer su propia iniciativa y creatividad y eficiencia a través de la competencia personal con características de la función, la disciplina fiscal y los gastos. La alta dirección puede dedicarse a los temas estratégicos en lugar de la toma de decisiones diaria. La acción de los sistemas complejos adaptativos se exploró mediante simulaciones por ordenador en el que cada agente es un programa de ordenador, es decir, un conjunto de reglas de interacción expresado en instrucciones de computadora.

Debido a que cada instrucción es una cadena de bits, una secuencia de símbolos en forma de 0 y 1, que se deduce que un agente es una secuencia de símbolos, dispuestas en un determinado patrón que especifica una serie de algoritmos. Estos algoritmos determinan cómo el agente va a interactuar con otros agentes, que son también los acuerdos de los símbolos. En otras palabras, el modelo no es más que un gran número de los patrones de símbolos colocados de forma que interactúan unos con otros. Es esta la interacción local entre los patrones de símbolo que organiza el patrón de interacción por sí misma, ya que no existe un patrón de interacción o instrucciones de la organización. El programador especifica los patrones de símbolo inicial, entonces el programa de ordenador se ejecuta y los patrones de interacción se observan. Las simulaciones de este tipo demuestran la posibilidad de lo simbólico la interacción, en el medio de símbolos digitales dispuestos a normas algorítmicos. El modelo cuando sus interacciones son buenas, tiene la capacidad inherente espontánea de producir un patrón coherente en sí mismo, sin ningún tipo de plan o programa. Es así que, las interacciones tienen la característica de la continuidad y novedad, identidad y diferencia, al mismo tiempo.

*Características:* Están constituidos por agentes simples homogéneos, que interactúan localmente unos con otros y con el ambiente. Cada agente tiene una importancia equivalente, sin tener un control centralizado. Como resultado de sus interacciones se producen comportamientos autogestores, de una conducta global inteligente. La formulación del modelo debe considerar 3 interacciones:

1. El de los agentes entre sí.
2. El de los agentes con el ambiente.
3. El de los agentes y las bases de datos.

1. La interacción de los agentes entre sí. Esta es una relación binaria homogénea la cual es la que se da entre los elementos de una organización, que para el caso se llamará A, tendríamos:

2. La interacción de los agentes con el ambiente. Esta es una relación binaria heterogénea la cual es la que se da entre dos conjuntos A y B, donde A es distinto de B, en este caso en la organización.

De lo anterior puede formularse una propuesta de modelo matemático a las interacciones que tiene una organización y la explicación del comportamiento del flujo de información.

## CONCLUSIONES

El campo de la estrategia organizacional, tal y como es característico de la administración, así como de la teoría administrativa y de las organizaciones, aún está lejos de ser realmente organizacional, ya que su ámbito de aplicación se ha centrado en la empresa privada capitalista, por lo cual este terreno, se encuentra aún frente a múltiples y muy variadas formas de desarrollo conceptual, teórico y práctico.

La necesidad de desarrollar un modelo matemático, para generar condiciones propicias en modelos que surjan de las interacciones que se producen como un medio, permite generar y articular agentes del sistema para responder a las necesidades planteadas del sistema; adicionalmente como un fin porque la innovación y conocimiento del sistema genera un aprendizaje y permite retroalimentación de la función del sistema. Es así que el enfoque a seguir para futuras investigaciones se debe fundamentalmente en la estrategia como unidad intermedia entre el sector y las empresas que la componen, lo cual puede verificar su convergencia en la estrategia central o de sector y está

centrada en un Plan de donde se diseñan instrumentos viables que efectivamente permitan convertir la organización deseada en una posible. En este sentido, un Plan de Desarrollo es la búsqueda de un adecuado balance entre objetivos y limitaciones, con la mira siempre puesta en tratar de incrementar el bienestar de la población. Aunque existe un amplísimo catálogo de técnicas modernas de gestión que pueden utilizarse por parte de la gerencia social casi las mismas que tiene a su disposición cualquier gerente privado, las cuales es posible adaptar.

## RESUMEN

*Los estudios de caso de logística humanitaria revisados hasta el momento, han sido elaborados acorde con el criterio de los autores, sin embargo no se ha encontrado que sigan una metodología unificada para tal fin. Teniendo en cuenta lo anterior resulta conveniente construir una metodología adecuada para la construcción de casos de logística humanitaria, que sirva de guía para la comunidad académica y a las diferentes partes involucradas en la atención a desastres. De igual manera se busca que sea soporte para la toma de decisiones, a partir de la documentación de experiencias acontecidas y sirva como herramienta para la planeación en futuros eventos. Por lo tanto, el objetivo de este trabajo es diseñar una metodología para la construcción de estudio de casos en situaciones de soporte logístico para la atención de desastres, con el fin de contar con una herramienta que facilite y estandarice la forma en que se deben realizar dichos estudios, orientándolos a presentar la información precisa, completa y ordenada y así, a su vez, facilitar su posterior estudio y comparación con otros casos.*

**PALABRAS CLAVE:** Logística, logística humanitaria, desastres, prevención de desastres.

## DESIGN OF A METHODOLOGY FOR CASE STUDIES BUILDING SITUATIONS CARE LOGISTICS SUPPORT FOR DISASTER

### ABSTRACT

*The case studies reviewed humanitarian logistics so far, have been prepared in accordance with the opinion of the authors, however not found to follow a unified methodology for this purpose. Given the above it is desirable to build a methodology for the construction of cases of humanitarian logistics, to guide the academic community and the various parties involved in the disaster response. Likewise, it seeks support for decision - making, from the documentation of experiences and serve as a tool for planning future events. Therefore, the aim of this work is to design a methodology for the construction of case study situations logistical support for disaster relief, in order to have a tool to facilitate and standardize the way that must be performed these studies, guiding them to submit accurate, complete and orderly and so, in turn, facilitate further study and comparison with other cases.*

**KEYWORDS:** Logistics, humanitarian logistics, disaster cases, disaster prevention.

### INTRODUCCION

A lo largo de la historia la humanidad se ha visto amenazada por un creciente número de eventos impredecibles que son los que denominamos desastres humanitarios. Estos pueden ser naturales, como los terremotos, las inundaciones y los huracanes, o artificiales, como los ataques terroristas y las fugas químicas. Los investigadores han hecho esfuerzos para desarrollar estrategias adecuadas de logística humanitaria buscando atender de manera efectiva las necesidades generadas en dichos desastres. Igualmente, la academia busca documentar, mediante estudios de caso lo ocurrido antes, durante y después del evento. Los estudios de caso de logística humanitaria revisados hasta el momento, han sido elaborados acorde con el criterio de los autores, sin embargo no se ha encontrado que sigan una metodología unificada para tal fin. Teniendo en cuenta lo anterior resulta conveniente construir una metodología adecuada para la construcción de casos de logística humanitaria, que sirva de guía para la comunidad académica y a las diferentes partes involucradas en la atención a desastres. De igual manera se busca que sea soporte para la toma de decisiones, a partir de la documentación de experiencias acontecidas y sirva como herramienta para la planeación en futuros eventos.

Por lo tanto, el objetivo de este trabajo es diseñar una metodología para la construcción de estudio de casos en situaciones de soporte logístico para la atención de desastres, con el fin de contar con una herramienta que facilite y estandarice la forma en que se deben realizar dichos estudios, orientándolos a presentar la información precisa, completa y ordenada y así, a su vez, facilitar su posterior estudio y comparación con otros casos. Esta investigación tiene la siguiente organización. En la sección de revisión de la literatura se identifican los conceptos relacionados con catástrofes naturales. Para el desarrollo del trabajo, inicialmente se realizó una revisión bibliográfica sobre estudios de casos existentes en la teoría y documentos doctrinales publicados por organizaciones nacionales e internacionales reconocidas en atención a desastres. Posteriormente se realiza la revisión y comparación de las diferentes metodologías existentes en la teoría para el desarrollo de estudios de caso y a partir del análisis y evaluación de las metodologías encontradas se plantea la metodología para el desarrollo de estudios de caso de logística humanitaria. Finalmente se presentan las conclusiones, limitaciones y futuras recomendaciones de investigación.

## REVISIÓN LITERARIA

Debido a los desastres naturales y a los generados por la actividad humana, el mundo afronta unas situaciones permanentes de riesgos y su frecuencia ha aumentado en los últimos años, incurriendo en altos costos y pérdidas humanas (Guha, et. al., 2004) (Wassenhove, 2006). Se han creado múltiples organizaciones de ayuda humanitaria con la participación de instituciones gubernamentales, particulares y de la academia, las cuales deben coordinar sus actividades para la atención en dichos desastres. La logística humanitaria según Thomas (2004) se encarga del proceso de planificación, ejecución y control del flujo eficiente, rentable y almacenamiento de mercancías y materiales, así como información relacionada desde el punto de origen hasta el punto de consumo con el fin de aliviar el sufrimiento de las personas vulnerables. Dentro de la tipología de los eventos que pueden ser atendidos en situaciones humanitarias, se encuentran la atención a desastres y la atención a largo plazo (hambrunas, epidemias, situaciones de desplazamiento, reconstrucción). Es por lo anterior que la logística humanitaria no puede ser improvisada en el momento de la emergencia, sino que debe ser debidamente planificada, de tal manera que sea posible identificar previamente la ubicación y disponibilidad de los suministros, y posteriormente el despliegue logístico (Bará, 2006).

Las situaciones de desastre pueden presentarse por causas naturales como huracanes, terremotos, avalanchas, erupciones volcánicas, inundaciones, etc., o por acciones del hombre como ataques

terroristas o accidentes nucleares. Es de especial interés el estudio de la respuesta logística de atención a desastres debido a las características propias de este tipo de eventos. Algunos ejemplos recientes de desastres son el tifón que afectó Filipinas en el 2013, la avalancha de lodo en enero de 2011 en Brasil, el accidente nuclear tras el tsunami de Japón en marzo de 2011, las inundaciones de Tailandia en Octubre de 2011, el terremoto de Haití en enero de 2010, el caso del Huracán Katrina en Estados Unidos en agosto de 2005, el atentado a las estaciones de trenes de Madrid-España en marzo de 2004 y el ataque terrorista del 11 de septiembre de 2001 a las torres gemelas en Nueva York.

A partir del año 2002, se encuentra evidencia en la literatura científica de publicaciones enfocadas a realizar reportes del desempeño logístico en situaciones de desastre a través de estudios de casos. Algunos ejemplos son: el estudio de Ofstad (2002) que presenta la logística humanitaria y las estrategias de ayuda en el conflicto armado de Sri Lanka los reportes dados por Skipper et. al. (2010) sobre el huracán Katrina; el estudio de caso publicado por Turégano et. al. (2008) para proporcionar una evaluación general de la respuesta a los atentados terroristas de Madrid, el 11 de marzo 2004; el estudio de caso presentado por Coles et. al. (2012) que analiza las asociaciones entre las agencias en el terremoto de Haití del 2010; y estudios sobre el despliegue logístico para enfrentar la cólera en Mozambique por Rodon et. al. (2011). Los problemas sanitarios comunes a todos los desastres naturales tienen que ver con reacciones sociales, enfermedades transmisibles, desplazamientos de la población, exposición a la intemperie, alimentación y nutrición, abastecimiento de agua y servicios de saneamiento, salud mental y daños a la infraestructura. Según Bará (2006) en operaciones de emergencia, la logística es requerida para apoyar la organización e implementación de las acciones de respuesta, para que éstas sean no solo rápidas, si no también ágiles y efectivas. La movilización del personal, del equipo y del material necesario para el trabajo de las organizaciones que brindan asistencia y hasta actividades relacionadas con la evacuación de heridos o la reubicación de poblaciones afectadas por el desastre, requieren de un sistema logístico para ser llevadas a cabo eficientemente. Bará (2006) afirma que existen dos principios de los procesos logísticos en operaciones humanitarias a saber:

1. La logística humanitaria no puede ser improvisada en el momento de la emergencia, si no debe ser debidamente planificada, de tal manera que sea posible identificar previamente la ubicación y disponibilidad de los suministros, y posteriormente el despliegue logístico.
2. Existe una cadena de suministro en situaciones de emergencia o desastre, en donde existe interdependencia entre las organizaciones que atienden la emergencia, las fuentes de suministro y los mismos beneficiarios.

Thomas (2004) propone una definición más formal de la logística humanitaria, donde la define como "el proceso de planificación, ejecución y control del flujo eficiente, rentable y almacenamiento de mercancías y materiales, así como información relacionada desde el punto de origen hasta el punto de consumo con el fin de aliviar el sufrimiento de las personas vulnerables. La función incluye una serie de actividades, incluida la preparación, planificación, adquisición, transporte, almacenamiento, seguimiento y localización de aduanas, y la limpieza". Ausente en esta definición es la noción de ganancia, una característica sobresaliente del sector comercial. En lugar de beneficios, las organizaciones humanitarias buscar un equilibrio entre velocidad y el costo de su cadena de suministro (Tomasini y Wassenhove, 1999). En orden de dar respuesta efectiva ante las amenazas de los desastres, Washburn & Kress (2009) generan un marco de acción para la atención logística en situaciones de desastre para la toma de decisiones, divididas en dos niveles: El nivel estratégico o estructural, en donde se definen las decisiones antes de que

ocurra el desastre. El segundo nivel es el operacional o en tiempo real, donde se reacciona después del desastre. Adicionalmente autores como Lee and Zbinden (2003) adicionan una nivel de reconstrucción o atención de las secuelas del desastre.

A continuación se exponen los tres niveles de decisión en la atención de desastres. La validez de un estudio es la cualidad que lo hace creíble y da testimonio del rigor con que se realizó. La validez implica relevancia del estudio con respecto a sus objetivos, así como coherencia lógica entre sus componentes. La validez se va desarrollando a lo largo de todo el estudio, en cada una de sus etapas. Un caso tendrá resultados válidos si todos los procesos se monitorean adecuadamente, desde el diseño del caso y el desarrollo del trabajo de campo hasta la preparación del informe y la difusión de sus resultados (Yacuzzi, 2006). La validación (que es el aseguramiento de la validez) comienza en el diseño de la investigación. Consideramos cuatro aspectos de la validez, que se aplican en general a los estudios empíricos de las ciencias sociales: validez de la construcción conceptual, validez interna, validez externa, y fiabilidad (Yacuzzi, 2006).

## **METODOLOGIA**

Mediante la evaluación de estudios de casos existentes en la literatura y de los criterios teóricos considerados en la logística humanitaria. La metodología se diseña con el fin de contar con una herramienta que facilite y estandarice la forma en que se deben realizar dichos estudios, orientándolos a presentar la información precisa, completa y ordenada y así, a su vez, facilitar su posterior estudio y comparación con otros casos. Para el desarrollo de la investigación conducente a elaborar una metodología para la elaboración de estudios de caso de logística humanitaria, se deben abordar tres fases que son:

*Revisión bibliográfica:* En esta fase se identifican los aspectos estudiados en la logística humanitaria mediante la revisión de la literatura representativa sobre el tema. Adicionalmente se revisará una muestra de estudios de casos existentes en la teoría con el fin de identificar aspectos comunes y diferencias que puedan resultar relevantes y a su vez permitan visualizar de mejor manera el campo de aplicación de la logística humanitaria y la información que actualmente se registra en dichos estudios. Para la revisión bibliográfica se consultaron diferentes bases de datos de artículos y publicaciones científicas como: Science Direct, Springer, Emerald, ProQuest, Ebsco. ISI, Scopus; y documentos doctrinales publicados por organizaciones nacionales e internacionales reconocidas en atención a desastres. Lo anterior se realiza con el fin de establecer la información general, y específica para cada caso, que debería brindar todo estudio de caso sobre logística humanitaria.

*Construcción.* A partir del análisis y evaluación de las metodologías encontradas, y de la información y análisis de casos de la fase anterior, se plantea la metodología para el desarrollo de estudios de caso de logística humanitaria que cumpla con los requerimientos establecidos.

*Validación de la metodología.* Con el fin de validar la metodología propuesta, se aplica la metodología a un caso de estudio piloto y se evalúa su conveniencia. En esta fase se revisa que en el caso piloto se exprese toda la información requerida en un caso de estudio de logística humanitaria, y que ésta quede presentada en forma ordenada y conveniente para estudios posteriores.

Con el objetivo de encontrar una metodología común para la documentación de estudios de caso, se analizaron los documentos relacionados con el ciclón tropical Larry que azotó la costa Australiana el 20 de marzo de 2006. El resultado de la evaluación indicó la existencia de fuertes patrones de satisfacción, eficiencia y oportunidad en términos de velocidad de llegada, especialmente lo que concierne a la Australian Defense Force (ADF). El ritmo de restauración vial, así como la velocidad de entrega de los alimentos y el agua fueron percibidos favorablemente en la evaluación. También se consideró el terremoto de Yogyakarta del 27 de mayo de 2006 de 6.3 grados en la escala de Richter junto con dos réplicas de 4.8 y 4.6. El terremoto afectó una de las zonas más densamente pobladas del mundo, dejando muertes de alrededor de 58000 personas, más de 1.5 millones de personas sin hogar y 135000 viviendas totalmente arruinadas. A finales de 2004, un Tsunami arrasó el sudeste de Sri Lanka, causando la muerte de aproximadamente 35.000 personas. Las recomendaciones y los informes que se generaron una vez ocurrido el Tsunami, resaltan futuras necesidades de planificación.

Las entrevistas demostraron que había muchos problemas en la logística, un problema principal fue el caos generado por la gran cantidad de donaciones, magnificado por la falta de almacenamiento, equipos de movimiento y transporte adecuado. Las entrevistas también revelaron que la logística no fue incluida en la etapa de la planeación y toma de decisiones. Otro problema principal logístico detectado, fue la congestión del aeropuerto, esto causó retrasos en la distribución del alivio, el aeropuerto era muy pequeño y además carecía de capacidad para mantener el alto volumen de aviones. El Tsunami dejó retos logísticos como: la reconstrucción de transporte, carreteras, puentes, energía y telecomunicaciones. El 11 de marzo de 2004 España presenció uno de los ataques terroristas más graves ocurridos en ese país. El atentado consistió en una serie de ataques terroristas en 4 trenes de la red de cercanías de Madrid. La detonación de los explosivos fue por medio de celulares, dejando como consecuencia la pérdida de 177 vidas, 1800 heridos y enormes daños en la infraestructura. El reto logístico fue la atención rápida de emergencias en los diferentes hospitales.

## RESULTADOS

La estructura de caso planteada puede abordarse bajo un esquema de investigación y contener los siguientes puntos de análisis:

1. Formulación y planteamiento del estudio de caso, preguntas, propósitos y objetivos del evento humanitario.
2. Identificación del caso de logística humanitaria con sus respectivas variables.
3. Definición del alcance del estudio de caso.
4. Instrumentos de recolección.
5. Observación y/o entrevistas
6. Análisis de la información (categorización, contextualización, representaciones visuales)
7. Objetividad y calidad del estudio (validez interna, externa, fiabilidad)
8. Reporte final

El Planteamiento del problema y las preguntas de investigación conforman la introducción. Al momento de diseñar la investigación en temas de logística humanitaria, las preguntas de investigación deben estar en capacidad de: Enfocar el estudio, cuyas preguntas deben tener en consideración lo que se quiere hacer por medio del estudio (objetivos) y que se conoce acerca del fenómeno en cuestión; y por otra parte, dar una base para cómo llevar a cabo la investigación, refiriéndose a los métodos y validación. Selección de caso, tipos de muestreo. En los estudios de caso de logística humanitaria se debe partir por de una muestra teórica, cuyo objetivo es elegir los

casos que probablemente pueden replicarse o extenderse, el número de casos escogidos depende del conocimiento existente, del tema y la información que se pueda adquirir del mismo Unidad de análisis. La selección de la unidad de análisis dentro del contexto de logística humanitaria debe acoplarse a las preguntas de investigación establecidas. Ésta unidad de análisis permite delimitar el estudio e identificar lo que va a ser medido o descrito; es decir, un fenómeno contextualizado en el tiempo y el espacio. De acuerdo con el diseño puede ser holístico, en donde se examina la naturaleza global del fenómeno; o un diseño incrustado que presta mayor atención en las subunidades.

**Alcance.** La planeación de la investigación por medio de estudios de caso requiere decisiones relativas al alcance del estudio. El alcance implica tanto el área sustantiva de la investigación (los límites del tema de investigación) y las áreas a ser investigadas (la muestra). Instrumentos de recolección de datos. La combinación de múltiples fuentes de información tales como: entrevistas, observaciones directas, revisión de la literatura y el cumplimiento del principio de triangulación garantizan la validez interna de la investigación. Flujo financiero y de información, coordinación, capacidades, planes y actividades desarrolladas por parte de cada uno agentes involucrados, tales como: Organizaciones no gubernamentales (ONGs), gobierno nacional y extranjero, agencias multilaterales, sector privado y comercial, organizaciones militares, instituciones especializadas, donantes, entre otros.

Efectos socioeconómicos, culturales, físicos, políticos, psicológicos y problemas sanitarios generados por el desastre natural o causado por el hombre. Revisión de la literatura. A través de evidencia documental como publicaciones especializadas, base de datos, informes de organismos oficiales y medios de comunicación se busca: Determinar si la pregunta de investigación ya ha sido respondida, en tal caso, la investigación iniciará y terminará con la revisión de investigaciones previas. Por el contrario, si la pregunta no ha sido respondida, la revisión de la literatura proveerá ideas acerca de cómo recolectar y analizar información pertinente para dar solución a la pregunta Entrevistas. Las entrevistas son una conversación entre 2 o más personas con la finalidad de obtener información, es el método más común de recolección de datos y por lo general es la fuente primaria en los casos humanitarios de acuerdo al cuadro comparativo de los casos recientes en la literatura.

*Documentos:* Se debe seleccionar los documentos pertinentes para construir un entendimiento sobre lo que está pasando y posteriormente analizarlo. Los documentos son ampliamente útiles como entrada para la elaboración de la entrevista

*Observación:* La observación se define como el acto de recoger información escuchando y viendo. La observación aumenta su eficacia cuando es combinada con otros métodos. Las consideraciones en observaciones son: tipo de observación, cuando entrar, cuantas observaciones hacer y que grupos observar.

*Análisis de los datos recolectados:* El análisis de datos es la parte más importante de proceso, la literatura actual en estudios de casos generalmente describe métodos de recolección de información, pero no su posterior análisis.

*Estrategia de categorización:* La codificación es la principal estrategia, en ella se fraccionan los datos y se reordenan en categorías que permiten la comparación de los datos dentro de cada categoría y con las demás categorías, generando conceptos teóricos. Las categorías nacen del análisis inductivo desarrollado por el investigador durante la fase de análisis.

*Estrategias de contextualización:* A través de la vinculación de datos se pretende entender los datos en el contexto, en base a las relaciones entre acontecimientos y afirmaciones, Explicar estas relaciones mejoran sustancialmente la comprensión del fenómeno estudiado.

*Representaciones visuales:* Son una estrategia analítica complementaria que permite la reducción de datos irrelevantes y la presentación de los datos como un todo, por lo general incluyen: gráficos; matrices o tablas, permiten realizar análisis cruzados de los datos; tabulación de frecuencias, para analizar el comportamiento mediante medias y varianzas; redes o mapas conceptuales, para relacionar los datos jerárquicamente; entre otros.

*Objetividad y calidad de la investigación:* La propuesta metodológica descrita se ha elaborado detalladamente para maximizar la validez y confiabilidad tanto de las entradas como las salidas del proceso de investigación de casos en contexto de logística humanitaria.

*Validez de la construcción:* La flexibilidad y la interacción característica de la entrevista brindan un soporte a la investigación cualitativa, de tal modo, muchos ítems se podrán abordar desde diferentes perspectivas. La exploración de conceptos originados de diversas fuentes y su posterior análisis mejoran la construcción teórica. Triangulación de diferentes métodos de recolección de datos: El investigador puede verificar la veracidad de la evidencia a partir de la comparación, determinando si los datos obtenidos de diversas fuentes guardan relación entre sí.

*Ciclos de retroalimentación:* Retornar a los entrevistados con interpretaciones surgidas de la primera recolección de datos para buscar contradicción en la información Establecimiento de la cadena de evidencia: Se debe ejecutar en la fase de diseño y recolección de la información

Validez interna. Hace alusión a la validez en las relaciones postuladas entre los conceptos. La validez interna es producto de estrategias para eliminar la contradicción y ambigüedad entre los datos, asegurando el establecimiento de una fuerte conexión entre datos. Las tácticas de estudio de caso para incrementar la validez interna son:

*Construcción de la explicación del fenómeno:* Comparación sistemática de la literatura estructura en el modelo teórico

*Validez externa:* Se establece el grado en el cual los resultados pueden llegar a ser generalizados: Uso de la replicación en los estudios: La lógica replicante se evidencia en estudios de casos con múltiples unidades de análisis, derivando en la generalización analítica.

*Fiabilidad:* La fiabilidad se centra en si el proceso de estudio es consistente, lógico y estable a través de otros métodos e investigadores y si se llegan a los mismo resultados. La fiabilidad proporciona resultados consistentes y estables. La investigación por medio de estudios de casos es criticada por los métodos de recolección de datos, ya que se basa fuertemente en las entrevistas y las observaciones.

*Protocolo de estudio de caso:* La elaboración de esta guía de procedimientos necesarios en la fase de obtención de la evidencia, se convierte en el instrumento más importante para asegurar la objetividad del estudio de caso, tanto para su validez como fiabilidad. Para protocolizar las tareas, instrumentos y procedimientos a ejecutar, el protocolo de estudio de caso debe contener los siguientes elementos:

## CONCLUSIONES

La propuesta del modelo de estudio de caso ha partido de la identificación de la documentación de diferentes estudios de caso sobre logística humanitaria en el mundo. El contar con una metodología nos permite identificar la forma como pueden prepararse las diferentes ciudades, regiones y países frente a una eventualidad de las consideradas en este estudio. La logística del riesgo humanitario debe considerarse para mitigar de alguna manera las pérdidas de vidas en el evento de una tragedia. La investigación que se ha realizado tiene el objetivo principal de aportar una metodología concreta para el análisis de desastres ante la falta de un modelo de estudio de caso, en el cual se incluyan los requisitos, directrices, etapas y actividades necesarias para documentar el evento.

# ANALISIS COMPETITIVO DE LAS PEQUEÑAS Y MEDIANAS EMPRESAS EN CUENCA ECUADOR

Luis Tobar Pesántez, Universidad Politécnica Salesiana del Ecuador

## RESUMEN

*Cuenca, la tercera del Ecuador, Patrimonio Cultural de la Humanidad ha recibido múltiples distinciones a lo largo de su historia, la más reciente, la otorgada por el Magazine Financial Times, como ciudad número uno en la categoría costo-beneficio dentro de las ciudades pequeñas en el ranking Ciudades Americanas del Futuro 2013-2014; durante cinco años estuvo entre las diez urbes del mundo que se deben visitar; además ha sido considerada como el mejor destino para los jubilados del mundo por sus buenas condiciones de vida, calidad en los servicios públicos y costos accesibles; en el plano nacional fue calificada por la Asamblea Nacional como Ciudad Universitaria, por la calidad de las instituciones de educación superior en la región y dispone de la mayor cobertura de servicios públicos a nivel nacional. En el plano empresarial cuenta con la mayor densidad de unidades productivas en el país en donde se incluyen la pequeña y mediana empresa, que si bien en número no son tan importantes como la microempresa, si lo son en generación de empleo y de una fuente importante de ingresos para la economía local, aunque no en la cantidad que debería ya que su limitada competitividad les ha impedido crecer; en ello han influido tanto factores de origen interno como externo; precisamente aquello es fruto del presente trabajo investigativo, el de identificarlos y priorizarlos con el fin de orientar a la formulación de estrategias de mejoramiento a corto, mediano y largo plazo.*

**PALABRAS CLAVE:** Cuenca, pequeñas, medianas, empresas

## COMPETITIVE ANALYSIS OF SMALL AND MEDIUM ENTERPRISES IN CUENCA, ECUADOR

### ABSTRACT

*Cuenca, the third largest city in Ecuador, World Heritage Site, has received a number of awards during its history, the latest is the one it received from Financial Times Magazine, as the number one city in the cost – benefit category within the Small Cities of the Future 2013 -2014 ranking; during five years it was among the ten cities in the world that had to be visited; furthermore it is considered as the best destination in the world for retirees due to its good living conditions, quality in public services and accessible costs; nationally the Ecuadorian National Assembly labeled it as the city of Universities, because of the quality of its higher education institutions in this region and it counts with the highest national coverage of public services. At the business level, it has the highest density of production units in the country including small and medium enterprises, which in numbers are not as important as the microenterprise, but they are in fact important at generating employment and as an important source of income for the local economy, but not as much as it should because its limited competitiveness has prevented its growth; it has been influenced by internal factors as well as external ones; and that is precisely what this research project is about, to identify them and prioritize them so as to formulate strategies to improve in short, medium and long term.*

**JEL:** L26

**KEYWORDS:** Cuenca, Small, Medium, Enterprises

## INTRODUCCIÓN

Ecuador el segundo país más pequeño de Sudamérica, de gente amable y emprendedora, es uno de los siete países con mayor biodiversidad del mundo, cuenta con una innumerable variedad de especies de animales, plantas y microorganismos, que lo hacen diferente (Agencia Andes, 2010). Y aunque apenas ocupa 0.19% de la masa continental del planeta, dada su biodiversidad cuenta con el 18% de las especies de aves, 4,500 especies de orquídeas y 10% de las plantas. (Ministerio de Turismo, 2009). Cuenta con cuatro regiones, la Sierra, la Costa, el Oriente ya la Región Insular, dada sus características propias se puede pasar en poco tiempo de las frías montañas de los Andes, a climas primaverales de los valles de la Sierra y de ahí a un paso de las playas de la Costa ecuatoriana y en pocas horas se encuentra el Oriente con su exótica vegetación, es así que ha sido calificado como el mejor destino turístico de América para el 2013 (El País, 2012). Y han sido precisamente sus recursos naturales que le han posibilitado avanzar; el cacao, el banano, las flores, el petróleo han sido la fuente de ingresos que ha permitido reflotar su economía. A pesar de la riqueza de su tierra y el empuje de su gente, el país continúa con niveles altos de pobreza (a pesar de haberlos reducido significativamente en los últimos 5 años) y sobre todo de desigualdad, múltiples han sido las causas para ello desde su histórica inestabilidad política hasta los problemas de corrupción en todos los gobiernos y sobre todo la inseguridad.

Todo ello se ve reflejado en los indicadores nacionales e internacionales sobre el manejo de la economía ecuatoriana, a pesar de habernos recuperado con el actual gobierno, continuamos a la saga de nuestros vecinos Colombia y Perú, nuestra competitividad es una de las más bajas no solo de América Latina sino del mundo (World Economic Forum, 2012). Situación similar sucede con el Índice para hacer Negocios, históricamente nos encontramos en los últimos lugares a nivel mundial estamos adelante tan solo de Venezuela y Bolivia, en América del Sur (International Finance Corporation, 2012). Lo señalado se ha dado por una serie de factores tanto endógenos como exógenos que no han permitido un despegue total del aparato productivo nacional. Sin embargo al estar inmersos en la crisis mundial fundamentalmente de Europa y Estados Unidos a pesar de ello los países de la región estamos en crecimiento unos más que otros, pero a diferencia de los países vecinos este “crecimiento de la economía no se asienta en el dinamismo del sector privado y la inversión extranjera, sino a través de la expansión del gasto y la inversión pública”. (Mantilla, 2012). Con referencia a la inversión extranjera es una de las más bajas de América del Sur (ocupa el penúltimo lugar en el 2012); contrasta con las expectativas de crecimiento de la Inversión Extranjera directa que según las previsiones de la Comisión Económica para América Latina y el Caribe (Cepal) será muy alta en la región (Universo, 2012). No tiene comparación alguna (en términos porcentuales con nuestros vecinos) en donde han tenido una mayor crecimiento y a pesar de todos los elementos que juegan alrededor de ello (a favor y en contra) su ausencia de hecho influye en el desempeño y oportunidades del sector productivo.

Más aún si tomamos en cuenta que nuestra economía por su carácter de dolarizada tiene dependencia directa de la cantidad de divisas que ingresan al país, contando con el petróleo como uno de los aliados fundamentales por su valor tan alto registrado en los últimos años; pero a pesar de la bonanza petrolera el país no ha logrado mejorar la productividad y competitividad; como tampoco ha logrado un mayor acceso a los mercados financieros. La dependencia petrolera es tal que si no consideramos sus exportaciones la balanza comercial es negativa; se agrava el

panorama si tomamos en cuenta que el flujo de remesas provenientes del exterior está en descenso fruto de la crisis mundial (Araujo, 2013).

Todos los factores abordados inciden en gran medida en el aparato productivo ecuatoriano y sobre todo en las unidades productivas de menor tamaño que serán fruto de estudio, elemento clave y dinamizador de la economía que no ha estado atendido adecuadamente por parte de las políticas de los gobiernos de turno, quienes han fijado sus objetivos generalmente en las grandes empresas. En este sentido los principales grupos económicos del país cada vez han ido incrementando su participación en la economía el volumen de sus ingresos se ha incrementado en más de doce puntos en la última década, y durante el actual gobierno en cinco puntos (Martín & Varela, 2012). Frente a esta problemática se encuentra una nueva estrategia del actual gobierno, cual es la transformación de la matriz productiva del país, cuyos resultados los podremos ver en los próximos años, y que se hecho influenciará en las pequeñas y medianas empresas. Con estos antecedentes, el estudio está orientado a detectar las fortalezas y debilidades de estas unidades productivas a través de una investigación de campo efectuada en la ciudad de Cuenca.

## REVISIÓN DE LITERATURA

Las clasificaciones de micro, pequeñas, medianas y grandes empresas si bien guarda una cierta característica común a nivel mundial; existen particularidades a nivel de cada región y país. La Unión Europea clasifica como microempresa a toda unidad económica con menos de diez trabajadores, así como aquellas que tienen un nivel de ventas anuales menor a dos millones de euros. En los Estados Unidos, la entidad Micro Enterprise Works considera microempresas a aquellas con menos de cinco trabajadores. A nivel centroamericano, el criterio más utilizado en la definición de micro y pequeña empresa es el número de trabajadores; en esta región existe consenso para considerar a toda empresa con menos de diez trabajadores como microempresa (Gutierrez, 2009). En el Ecuador, también existe cierta ambigüedad al respecto, a continuación citamos la fuente que tomamos como base para la investigación:

### Plan Nacional de Desarrollo 2007-2010

De acuerdo con lo señalado en el Plan Nacional de Desarrollo, preparado por la Comunidad Andina de Naciones, las empresas se clasifican considerando las siguientes variables: el número de empleados efectivos, el valor bruto de las ventas anuales y el valor de los activos totales. (Presidencia de la República, 2007).

Tabla 1: Clasificación de las Micro, Pequeñas, Medianas y Grandes Empresas Por el Número de Empleados, Valor Bruto en Ventas Anuales y Valor de Sus Activos Totales

Clasificación	Micro	Pequeñas	Medianas	Grandes
Número	1 - 9	Hasta 49	50 - 199	Mayor a 200
Ventas anuales	100.000	1'000.000	1'000.001 - 5'000.000	Mayor a 5'000.000
Activos totales	Menor a 100.000	100.001 - 750.000	750.001 - 4'000.000	Mayor a 4'000.000

Fuente: Proyecto de Ley PYMES y Proyecto de Estatuto Andino para las MIPYMES

Elaborado por: el autor

El Ecuador es uno de los países de Latinoamérica que registra una de las mayores densidades en cuanto al número de establecimientos: 381 por cada 10.000 habitantes, México lidera la clasificación con 458; detrás del número de emprendimientos ecuatorianos están Colombia con 350 y Perú con 319. (Universo D. E., 2011); A su vez en la ciudad de Cuenca el indicador supera a todos, llega a 538, con la siguiente composición:

Tabla 2: Clasificación de las Unidades Productivas de la Ciudad de Cuenca Por el Número de Empleados, Valor Bruto en Ventas Anuales y Valor de Sus Activos Totales

Estrato	Unidades	%	Personal Ocupado	%	Ingresos Generados	%
1 - 9	26.696	94,9%	52.915	45,4%	2.384	23,8%
10 - 49	1.194	4,2%	22.312	19,2%	1.934	19,3%
50 - 199	195	0,7%	17.673	15,2%	1.092	10,9%
200 y más	46	0,2%	23.605	20,3%	4.623	46,1%
<b>Total</b>	<b>28.131</b>	<b>100,0%</b>	<b>116.505</b>	<b>100,0%</b>	<b>10.033</b>	<b>100,0%</b>

Fuente: Inec. Base de datos Censo Nacional Económico Elaborado por: el autor

De esta clasificación se desprende que el 4,7% de las unidades productivas en la ciudad son pequeñas y medianas, generan empleo en el orden del 34,4%, y aportan a la economía con ingresos que llegan al 30,2%; a diferencia de las grandes en donde a pesar de ser solo 46 es decir solo el 0,2%, aportan con el 46,1% de los ingresos generados, lo que demuestra el carácter concentrador de la economía local (Inec, 2010), situación similar se refleja a nivel del país. Con los antecedentes expuestos consideramos de fundamental importancia realizar un análisis de las Pymes en el Ecuador y particularmente en Cuenca.

Cuenca, la tercera ciudad en importancia en el Ecuador y tradicionalmente artesanal; desde la colonia reconocida por la habilidad del cuencano, “por estar dotados de capacidad para la obras y ocupaciones que necesitan acabados delicados y finos”; en donde dada la escasez de mano de obra en el siglo XIV obligó a los ciudadanos a levantar sus casas y ocuparse de innumerables labores desempeñándose como albañiles, carpinteros, agricultores, sastres, cerrajeros, zapateros entre otros oficios, en donde primaba el aporte de los manual (Hurtado, 2009). La ciudad cuenta con unos de los mejores estándares de vida del país; luego de la capital Quito ocupa el segundo lugar en necesidades básicas satisfechas; la cobertura de servicios es una de las mejores del país, su tasa de analfabetismo es la mitad de la media nacional; cuenta con indicadores sobresalientes en cuanto al índice de mortalidad infantil, nivel de educación; y su aporte importante al erario nacional vía recaudación de impuestos (Hurtado, 2009); su índice de desempleo del 3,69% se encuentra debajo de la tasa nacional. Sin embargo el costo de la canasta básica es el más alto del país, que llega a 625 dólares, entre otros aspectos por gran disponibilidad de remesas de los migrantes fruto del 3,37% oriundos de esta ciudad que viven en los Estados Unidos y Europa (Invec, 2013).

Las comúnmente denominadas Pymes, dada su importancia en todas las economías, han sido objeto de innumerables estudios a nivel mundial, latinoamericano, y particularmente en el Ecuador. Sin embargo en el caso de la ciudad de Cuenca, las investigaciones han sido menores y han carecido de un elemento común al de los estudios realizados a nivel mundial, latinoamericano y ecuatoriano; que los análisis han sido efectuados en forma conjunta con las microempresas, es decir como si tuvieran similares características, cuando la realidad es diferente. En el ámbito nacional consideramos el “Proyecto Mapa Artesanal y Oferta exportable de la provincia del Azuay” presentado en marzo de 2003, cuyo objetivo fue el de identificar las potencialidades artesanales de las provincias integrantes de la Región Austral, así como los lugares específicos en donde se encuentran ubicados los talleres, a efecto de elaborar el mapa respectivo; trabajo realizado con auspicio del Ministerio de Industrias de aquella época. Sin embargo el estudio concluyó tan solo con la descripción de los hallazgos más relevantes, ya el objetivo general planteado no permitió conocer las potencialidades y debilidades del sector.

Por otra parte, a nivel nacional, uno de los primeros estudios en el país sobre el tema lo realizó la Fundación Ecuador en donde mayoritariamente se enfoca al análisis del crédito y este sector productivo, a más de dar recomendaciones de cómo se debe apoyarlo, no maneja información cuantitativa, sin embargo nos ha servido de una primera base para la investigación. (Dávalos &

Espinel, 1997), estudios que de la mano con los realizados por la diversas cámaras de la Pequeña Industria del país, como “El Diagnóstico de la Pequeña y Mediana Industria del Ecuador” en, en donde se analiza la posición competitiva de las pequeñas y medianas en 5 provincias del Ecuador, en donde se realiza mediante encuestas un análisis global de la estructura de estas unidades productivas, al ser un análisis general no se dispone de información exclusivamente de la ciudad de Cuenca (INSOTEC, 2002). De igual manera se estudiaron los documentos de base para la elaboración del Plan Nacional de Desarrollo para los años 2007 al 2010 sobre las micro, pequeñas y medianas empresas en el Ecuador, y Plan Estratégico de Cuenca.

## METODOLOGÍA

Para efectos de esta investigación, se aplicó una encuesta con 44 preguntas cerradas (Hernández Sampieri, Fernández Collado, & Baptista Lucio, 2010), en el 2012, en la ciudad de Cuenca. El instrumento fue aplicado a 110 pequeños y medianos empresarios, con un nivel de confianza del 95%, con un error estimado del 5%, la muestra fue estratificada y clasificada por sectores y/o actividades. La información fue introducida en una base de datos, para posteriormente ser trabajada en el programa estadístico SPSS 21.

Tabla 3: Distribución del Tamaño de la Muestra del Sector de la Pequeña y Mediana Empresa de Cuenca

Sector/actividad	Universo	%	Muestra
Prendas de vestir	36	24%	26
Alimenticio	26	17%	19
Metalmecánico	23	15%	16
Substancias químicas	19	12%	14
Madera y corcho	14	9%	10
Minerales no metálicos	13	8%	9
Industrias gráficas	9	6%	6
Tics y servicios	8	5%	6
Joyería y otras	5	3%	4
Total	153	100%	110

Fuente: Cámara de la Pequeña Industria de Cuenca Elaborado por: el autor

Los resultados de la aplicación de la encuesta se clasificaron en cinco partes, cuatro de las cuales corresponden a las áreas funcionales de las organizaciones: administración, finanzas, mercado y producción, y uno referido al análisis del entorno en el que se desenvuelven las microempresas.

Tabla 4. Descripción de las variables utilizadas y su descripción

Ambito	Variable	Descripción	
ADMINISTRACION	Permanencia en el mercado	Mide el tiempo en años de permanencia del negocio en el mercado.	
	Carácter de su organización	Estable la estructura de la organización si es jurídica o es informal.	
	Tipo de local	Buscamos conocer si el local en donde se producen sus bienes y/o servicios de propio o arrendado u otra forma de posesión.	
	Equipos de computación	Buscamos conocer si cuenta con apoyo de equipos de computación en el desarrollo de su actividad.	
	Estructura organizacional	Establecer si la unidad productiva tiene definida una estructura administrativa y realiza labores de planificación.	
	Capacitación	Conocer si el personal ha recibido capacitación.	
	Motivación a la capacitación	Conocer si están dispuestos a iniciar proceso de capacitación; si están de acuerdo si las universidades del medio puedan apoyarles y en qué áreas	
	FINANZAS	Registros contables	Establecer si llevan registros contables como apoyo a su gestión financiera
		Posee cuentas bancarias	Conocer si cuenta con el apoyo de herramientas financieras que les posibilite el ahorro y el manejo de sus recursos, y de qué tipo.
		Rentabilidad de su negocio	Medir el grado de conocimiento financiero y de costos del negocio
Acceso al financiamiento		Conocer si los sectores analizados han sido sujetos de crédito, así como los motivos por los que no fueron beneficiados.	
MERCADO	Fuentes de financiamiento	Establecer cuáles han sido las fuentes de financiamiento, formales privados y públicos así como el financiamiento informal, así como los motivos por los que no fueron beneficiados.	
	Tasas de interés	Conocer las condiciones de financiamiento a las que se han beneficiado.	
	Impuestos	Conocer cuáles son los principales problemas del entorno por los que atraviesan los sectores analizados.	
	Tiene web site	Conoce si el negocio tiene una página web como herramienta de su gestión.	

PRODUCCIÓN	Investigaciones de mercado	Establecer si la unidad productiva tiene realiza estudios de mercado que le posibilites ser más competitivo.
	Calidad y precios	Conocer si la unidad productiva conoce la calidad y precios de la competencia.
	Tipo de consumidores	Define el tipo de consumidores de su negocio.
	Mercado internacional	Conocer si ha exportado en alguna ocasión y los motivos por los cuáles no lo ha hecho.
	Dispone de internet	Conocer si se apoya en las tecnologías.
	Ampliación de su negocio	Conocer las perspectivas a futuro de su negocio y cómo lo financiará.
	Volumen de producción	Conocer el comportamiento de su producción en el último año.
	Costos de producción	Establecer tanto los efectos de la inflación y especulación en su negocio, como su eficiencia en su proceso productivo.
	Acceso a materias primas	Conocer si tiene dificultades en conseguir materias primas de calidad y la procedencia de las mismas.
	ENTORNO	Sistemas de control de calidad
Sistemas de seguridad y salud		Buscamos conocer si la unidad productiva tiene implementado sistemas de seguridad y salud o si los desconoce.
Tecnología, equipos		Conocer el tipo de tecnología que utilizan.
Estado de sus equipos		Conocer el estado de los equipos que intervienen en su proceso productivo.
Acceso a servicios básicos		Conocer como aprecian el acceso a los servicios básico, agua luz, teléfono, internet, infraestructura, etc.
Afiliación a gremios		Conocer si los negocios se encuentran afiliados a los gremios de la localidad y que tipo de apoyo ha recibido de aquellos.
Apoyo de organismos		Conocer si han recibo apoyo de organismos públicos o privados del país y la región.
Desempeño del país		Establecer la percepción sobre el desempeño económico del país.
Seguridad jurídica		Establecer la percepción sobre la seguridad jurídica del país.
Clima político		Establecer la percepción sobre el clima político del país.
Seguridad pública	Cuáles son los principales problemas del entorno por los que atraviesan los sectores analizados.	

*Los reactivos empleados se clasificaron de esta manera para el análisis de las ponderaciones en base a las respuestas obtenidas.*

*Fuente: Encuesta Elaborado por: el autor*

Para cada ámbito se estableció un porcentaje similar de reactivos, respuestas a las que se establecieron ponderaciones en función del resultado de cada una de ellas, de 1 a 5 (1 la posición más crítica y 5 la posición ideal). Una vez que a cada respuesta se asignó la ponderación, se sumaron los puntajes obtenidos y se dividió para la posición ideal obteniendo el resultado porcentual para cada ámbito y del desempeño general del sector. Una vez establecido el diagnóstico de las pequeñas y medianas empresas, se procedió a la identificación de las variables como fortalezas, oportunidades, debilidades y amenazas a través de un FODA ponderado. Es así que con el fin de establecer el peso de cada variable en función que ha sido identificada como fortaleza, debilidades oportunidad y amenaza de cada sector; a éstas realizamos la prueba de independencia Chi-cuadrado.

$$\chi_0^2 = \sum_{i=1}^k \frac{(O_i - E_i)^2}{E_i}$$

Lo que nos permitirá establecer la existencia de una relación entre dos variables categóricas; los cálculos han sido realizados con un nivel de confianza del 95%, por lo que el valor de alfa es del 0,05; lo cual corresponde al complemento porcentual de confianza. (SPSS, 2013); por lo tanto se elaboraron tablas de contingencia entre las variables de cada sector tomando en consideración los valores obtenidos de Chi-cuadrado iguales o menores a 0,05; en donde se descarta la hipótesis nula de independencia y aceptando las variables que se encuentran relacionadas. Las variables que tengan una mayor relación con las otras se considerarán de mayor impacto.

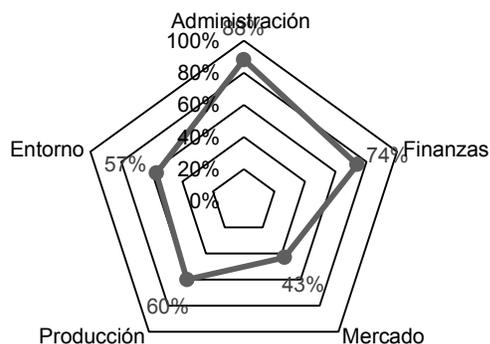

## RESULTADOS

Los resultados generales de la investigación se presentan en dos partes, la primera correspondiente al diagnóstico de las pequeñas y medianas empresas en la ciudad de Cuenca; y la segunda clasificadas las variables en un FODA ponderado. Primera parte En cuanto al diagnóstico de las pequeñas y medianas empresas, una vez realizada la respectiva ponderación se

establece que su rendimiento en el período de análisis llega al 69% de la situación establecida como ideal, con diferente desempeño en cada ámbito que lo detallamos a continuación:

Figura 1: Posición competitiva de las pequeñas y medianas empresas

POSICIÓN COMPETITIVA DE LAS PEQUEÑAS Y MEDIANAS EMPRESAS

En la figura 1 se resume la posición competitiva de las pequeñas y medianas empresas en la ciudad de Cuenca en los cuatro ámbitos correspondientes a sus áreas funcionales y al entorno en el que se desenvuelven. Fuente: Encuestas Elaborado por: el autor

**Ámbito Administrativo:** El área administrativa es la de mejor desempeño de las pequeñas y medianas empresas llegando al 88% de la situación considerada como ideal; se destacan aspectos en su mayoría positivos, entre los más relevantes: su permanencia en el mercado llega en promedio a 17 años, un importante 38% ingresó al mercado la última década; en un 97% se encuentra constituidas como empresas jurídicas ya sean sociedades anónimas o limitadas, lo cual se posibilita tener una mayor credibilidad ante el mercado, esta estabilidad se ve reflejada en que el 84% de ellas cuenta con un local propio para el desempeño de sus actividades, las mismas que se desarrollan con el apoyo de equipos de computación en un 100%, ya que todos los locales disponen de esta herramienta básica en apoyo a su gestión; un importante 80% ha recibido capacitación y casi la totalidad de quienes no la han recibido están dispuestos a capacitarse, constituyéndose el área de producción con un 38% la que más demanda tiene para procesos de formación y actualización. En su totalidad estarían de acuerdo en que las universidades del sector contribuyan a su preparación. En los aspectos por mejorar, tan solo el 45% tiene claramente definida su estructura organizacional, lo cual es indispensable para organizaciones de este tamaño.

**Ámbito financiero:** En el análisis de los factores internos del ámbito financiero buscamos conocer con qué grado de eficiencia manejan sus recursos, llegando a un cumplimiento del 74% de lo considerado como óptimo. El 100% cuenta con el manejo de cuentas bancarias, el 84% de las empresas encuestadas manejan cuentas de ahorro y corrientes; el 100% lleva contabilidad, sin embargo únicamente el 90% conoce la rentabilidad real de los productos y/o servicios que ofrece; por otra parte si bien el 100% ha tenido acceso al crédito, este no ha sido conseguido en condiciones del todo favorables en referencia a los plazos y las tasas de interés; su principal fuente de financiamiento ha sido la banca privada en un 61% y en su mayoría con intereses superiores al 15%; además debemos tomar en cuenta que este importante sector productivo en un 9% ha recurrido a la usura como mecanismo para financiar sus actividades sobre todo por problemas de liquidez (cambio de letras y/o cheques), en el tema crediticio se destaca un importante 13% que desconocían la tasa a la cuál fue otorgada la operación.

*Ámbito de mercado:* El mercado se constituye en el sector de menor desempeño de las áreas funcionales de las microempresas con un 43%. Si bien el 86% de los encuestados conoce la calidad y precios de su competencia, tan solo la mitad de ellos realizan estudios de mercado de manera formal; de ello se deriva las características de sus consumidores que se encuentran básicamente en el mercado nacional y local; tan solo el 9% exporta de manera periódica y el 16% de manera ocasional, esto a pesar que en alguna de las actividades los productos que elaboran son de muy buena calidad; entre los principales los motivos por los que no exportan el 26% respondió que tener una capacidad insuficiente de producción es un gran limitante; por otra parte el 15% señaló por qué no saben cómo hacerlo. Finalmente un importante 74% tiene planes de ampliar su negocio, y en su gran mayoría lo hará con financiamiento.

*Ámbito de la producción:* El ámbito de la producción también se constituye de cierta forma un área en donde hace falta mejorar; su rendimiento llega al 60%. El estado general de sus equipos no es de los mejores, apenas el 6% lo califica como de punta y el 53% como modernas; sus procesos productivos los llevan de forma semiautomática en un 60%, manual el 34% y un preocupante 6% señala que no conoce; sus costos de producción se han incrementado con referencia al último año, así lo afirma el 96% de los encuestados, lo que se refleja en la disminución del volumen de producción de un 44%; tan solo el 38% manifestó que incrementó sus volúmenes de producción en similar período. En cuanto a la aplicación de las normas de seguridad y salud ocupacional, se refleja su cumplimiento de tan solo el 58% de las unidades productivas, y del 55% en lo referente a la implementación de sistemas lo que de hecho les resta competitividad. Por otra parte se verificó que el 61% de los insumos que utilizan son importados y en el 69% de las empresas no tiene dificultades para adquirir materias primas de calidad.

*El entorno:* El entorno no favorece a un cabal desempeño de las pequeñas y medianas empresas en la ciudad de Cuenca, su desempeño llega al 57% de lo establecido como un ambiente ideal; en lo que se encuentran más afectados lo constituye el clima político por el que atraviesa el país en donde el 54% lo calificó como malo y el 24% como regular; de igual manera con el tema de la seguridad jurídica que entre malo y regular lo calificaron con el 84%; en cuanto al desempeño económico del país se tiene una posición un poco más favorable, en donde el 2% lo calificó como excelente y el 49% como bueno, el tema de la inseguridad también se vio reflejado en la investigación, en donde el 13% manifestó su preocupación sobre los problemas de la delincuencia en la ciudad. En el aspecto económico uno de los principales temas expuestos es el tributario motivado por las constantes reformas en dicha área en los últimos años. Un factor importante se refleja en la afiliación a los gremios productivos, encontrándose el 98% afiliado a diversas organizaciones empresariales; de donde han recibido algún tipo de apoyo en un 53%, fundamentalmente en capacitación; por otra parte el 39% de los encuestados manifestó que no reciben apoyo de ninguna entidad pública ni privada del medio.

*Segunda parte:* Una vez que llegamos a esta fase y con el fin de poder aportar con elementos que posibiliten a nuevas investigaciones la definición de estrategias de mejoramiento en función de los principales problemas detectados, se ha clasificado las variables analizadas en Fortalezas, Oportunidades, Debilidades y Amenazas en función de las respuestas a los reactivos aplicados de la siguiente manera:

Tabla 6: Clasificación FODA de las Pequeñas y Medianas Empresas

Pequeñas y medianas			
F	O	D	A
14	5	11	5

Fuente: Encuestas Elaborado por: El autor

Las 35 variables analizadas fueron clasificadas utilizando la matriz FODA; el 40% de ellas son fortalezas, el 31% son debilidades y el 14% son oportunidades y amenazas. Bajo las condiciones señaladas coincidimos con el análisis anterior en donde se refleja que la posición competitiva de las pequeñas y medianas empresas de la ciudad de Cuenca no es de las mejores. Una vez obtenida la clasificación la siguiente acción fue la priorización, es decir listamos las fortalezas, oportunidades, debilidades y amenazas en función de su mayor impacto en la gestión competitiva de las organizaciones, obteniendo el siguiente resultado:

Tabla 7: Clasificación FODA de las variables de mayor impacto del sector de las pequeñas y medianas empresas de la ciudad de Cuenca, en función del número de variables relacionadas.

VR	FORTALEZAS	VR	OPORTUNIDADES
20	Tipo de consumidores	24	Desempeño del país
20	Materia prima	21	Apoyo de organismos
17	Personal capacitado	16	Fuentes de financiamiento
16	Conocimiento de la rentabilidad del negocio	11	Acceso a servicios básicos
15	Tipo de local	4	Ampliación de su negocio
15	Calidad y precios de la competencia		
10	Dispone de internet		
VR	DEBILIDADES	VR	AMENAZAS

22	Tecnología	22	Seguridad jurídica
22	Tasas de interés	20	Clima político
21	Sistemas de seguridad y salud	19	Seguridad pública
21	Sistemas de control de calidad	6	Costos de producción
20	Investigaciones de mercado		
15	Volumen de producción		
10	Estado de sus equipos		

VR: Hace referencia al número de variables con las que tiene alguna relación. Dato obtenido al relacionar entre cada una de las variables mediante el cálculo de chi-cuadrado. Fuente: Base de datos SPSS (cálculo de chi-cuadrado) Elaborado por: El autor

Fueron consideradas como fortalezas 14 de las variables analizadas; la primera variable que es considerada como tal “que tiene cierto grado de relación con la mayoría de las otras” pertenece al área de mercado y se refiere a la clara identificación del tipo de consumidores del negocio, seguida por la facilidad de acceso a materias primas de cualquier origen; en tercer lugar por tener personal capacitado su gestión. En cuanto a las oportunidades que fueron identificadas se destaca en primer lugar el desempeño económico del país, seguido por apoyo que reciben por parte de organismos fundamentalmente de los gremios a los que pertenecen y a los que se encuentran afiliados en su mayoría; luego el acceso a los servicios básicos y a las diversas fuentes de financiamiento que disponen; y finalmente por las perspectivas de ampliación.. Sus debilidades son menores y de éstas la más relacionada hace referencia a la parte administrativa, particularmente a la limitada estructura organizacional, la ausencia de planificación, seguida por el aspecto tecnológico que se constituye en una fuerte debilidad; en la parte financiera se destaca las tasas de interés, que en general son altas y que tienen relación con las entidades que les financian y el riesgo de la operación en función de su calificación como sujeto de crédito, aspecto en donde necesariamente se deberá plantear estrategias de mejora.

Finalmente en cuanto a las 5 amenazas la que se relaciona con un mayor número de variables es la referida al tema impositivo que fue identificado como uno de los mayores problemas que tenía los pequeños y medianos productores; la seguridad jurídica, el clima político y la inseguridad que afecta a todos. En general, estos han sido los hallazgos más importantes de la investigación que se encuentran respaldados en la encuesta realizada.

## CONCLUSIONES

Al analizar los resultados sobre la posición competitiva de las pequeñas y medianas empresas en la ciudad de Cuenca podemos concluir que si bien son reducidas en número se constituye en un aporte para la economía local en cuanto a la generación de empleo y generación de ingresos; sin embargo su posición competitiva no es de las mejores lo que le impide crecer y abrirse a nuevos mercados y poder constituirse en un referente del austro del país. Sus dificultades no solo se evidencian en su estructura interna, en donde determinados factores propios de la dinámica del negocio no son manejados adecuadamente, sino en la influencia del entorno que limita su consolidación y expansión, situación que va de la mano de las decisiones políticas y económicas por parte del gobierno. El área administrativa es una de sus mayores fortalezas, basadas en una presencia en el mercado de muchos años, una adecuada capacitación del personal y sobre todo posibilidades de especializarse en determinadas áreas; se destaca la formalidad con la que llevan adelante sus negocios, sin embargo se refleja la ausencia de herramientas básicas de planificación y especialización. Si bien cuentan con herramientas para el apoyo de su gestión financiera que posibilite llevar adelante una estructura de costos que permite conocer la rentabilidad de los bienes y servicios que ofrecen, el tema financiero es uno de sus limitantes al no contar con un oportuno apoyo sobre todo de la banca pública. Las pequeñas y medianas empresas cuentan con un mercado reducido enfocado casi exclusivamente al ámbito local y nacional, no tienen visión de exportación y peor aún, no cuentan con posibilidades efectivas en el corto plazo para exportar, al no contar con los recursos tecnológicos y de producción para lograrlo.

El área de producción se ve influenciada negativamente por la aplicación de una tecnología no adecuada; una limitada renovación de sus equipos, lo que repercute en la capacidad de producción, si a ello le sumamos su escasa aplicación de normas internacionales de calidad y en procesos reglamentados de seguridad y salud ocupacional, les resta competitividad en el mercado. El entorno no colabora adecuadamente en el desarrollo de estos sectores productivos, ya que el ambiente político, jurídico y, sobre todo, la inseguridad les afectan ostensiblemente. En términos generales la ausencia de innovación y el aporte de valor agregado es una constante en las unidades productivas analizadas y la adopción de correctivos a su manejo interno se vuelven acciones improrrogables en el corto plazo.

# **ANÁLISIS DE LAS ESTRATEGIAS DE MERCADERO DE LA EXPERIENCIA IMPLEMENTADAS POR LAS MARCAS DE PRENDAS DE VESTIR DIRIGIDA AL TARGET JOVEN, EN DOS CENTROS COMERCIALES DE LA CIUDAD DE CALI – COLOMBIA**

Carmen Elisa Lerma Cruz, Universidad Autónoma de Occidente Cali – Colombia

## **RESUMEN**

*El mercadeo de la experiencia corresponde a la etapa del marketing en la cual la demanda del consumidor respecto a las marcas y la forma de relacionarse con las mismas se ha transformado. Así pues, en el mercado existe un gran abanico de marcas que ofrecen al consumidor beneficios similares; por tanto la búsqueda y obtención de la fidelidad es un reto muy grande para las marcas. De acuerdo con lo descrito, se evidencia que el cliente no elige un producto o servicio sólo por la relación costo - beneficio, sino que lo elige por la vivencia que ofrece antes y durante la compra. Por lo tanto, los productos ya no son un conjunto de características funcionales sino medios para facilitar experiencias al cliente y fortalecer la relación con estos. El presente estudio tuvo como objetivo identificar las estrategias de mercadeo de la experiencia implementadas por las marcas de prendas de vestir, tanto nacionales como internacionales, ya fuera, en forma estratégica o intuitiva, Así también, se identificaron los estímulos que excitan cada uno de los sentidos, para finalmente, determinar el nivel de estimulación a cada sentido por cada marca, el nivel de involucramiento emocional y establecer el promedio de estimulación de la categoría. Entre los hallazgos más destacados de esta investigación se encuentran los siguientes: primero, las marcas, especialmente las internacionales no solo implantan estrategias de marketing de la experiencia en sus tiendas, sino que también a nivel online. Segundo, en una escala de 1 a 5, las marcas implementan un nivel de experiencia en promedio de 3,2. Tercero, el órgano sensorial más estimulado en puntos de venta es el visual, olvidando un poco los demás, lo cual impide la vivencia de una experiencia integral de marca.*

**PALABRAS CLAVES:** Mercadeo de la experiencia, niveles de experiencia, impacto sensorial, involucramiento emocional

## **ANALYSIS OF THE MARKETING EXPERIENCE STRATEGIES IMPLEMENTED BY CLOTHING BRANDS FOR THE YOUNG IN TWO SHOPPING CENTER IN CALI CITY**

### **ABSTRACT**

*Marketing experience corresponds to a stage of marketing in which consumer demand towards brands and the way as the consumer relates to them has changed. So, in the market there is a wide range of brands that offer similar benefits to the consumer. Therefore, the search and retrieval of fidelity is a big challenge for brands. According to this description, it appears that the customer doesn't choose a product or service just for the cost benefit, but I choose the experience that offers before and during purchase. Therefore, the products aren't a set of*

*functional features, but that they are means for facilitating customer experiences and strengthen the connection with these. The aim of this study was to identify the marketing experience strategies implemented by clothing's brands, both national and international, either strategic or intuitively. So also, were identified stimuli that excite each of the organs of the senses, finally, was identified the level of stimulation to each organ of the senses, and de level of emotional involvement by brand and establish the average stimulation of the category.*

*Among the most significant findings of this research are the following: first, the marks, especially internationally, are only implemented marketing strategies experience in their stores, but also online at. Second, on a scale of 1 to 5, marks an experience level implanted in average of 3.2. Third, the more stimulated sensory organ selling points is the visual, forgetting some others, which prevents living a holistic brand experience.*

**JEL:** M3, M31, M37

**KEYWORDS:** Marketing experience, levels of experience, sensory impact, emotional involvement

## INTRODUCCIÓN

Actualmente las marcas de prendas de vestir se han visto en la necesidad de diversificar sus estrategias de mercadeo y publicidad para superar las expectativas de los actuales consumidores, quienes han transformado su demanda debido a la cantidad de opciones presentes en el mercado, la variedad de tendencias y modas a las que tienen acceso, y el contacto con marcas internacionales a precios accesibles.

Adicionalmente, hay que reconocer la importancia que tienen los centros comerciales en la vida del target joven, quien acude a estos lugares no solo con el ánimo de realizar comprar, sino de socializar y de realizar una gran variedad de actividades en las cuales invierten la mayor parte de su tiempo libre.

Además, es sorprende ver en los centros comerciales la variedad de estrategias a las que recurren las diferentes marcas, con el fin de lograr la atención y la posterior conquista del cliente, tratando de orientar su decisión de compra, en especialmente con el target joven. Sin duda alguna, alcanzar este objetivo no es fácil, más aún, cuando los jóvenes se identifican con estilos, tendencias y modas nacionales o extranjeras, que tienen una representación subjetiva, pero basada en tendencias colectivas.

Esta investigación se llevó a cabo en los Centros Comerciales Chipichape y Unicentro ubicados en la ciudad de Cali y la elección de dichos sitios tuvo como base la publicación en la revista "Acción" de la Cámara de Comercio de Cali en su Edición No. 126 de octubre de 2010. En dicha publicación se reconocen estos centros comerciales como los de mayor recordación y posicionamiento en la ciudad. Adicionalmente, en la observación preliminar no estructurada se logró establecer que las marcas de prendas de vestir tienen tiendas en estos dos centros comerciales. Por otra parte, es claro que la experiencia es un nuevo estadio en la progresión de valor agregado que ofrecen las marcas, y esta propuesta estratégica descansa sobre la capitalización del significado que el consumidor atribuye a dicha experiencia. Teniendo en cuenta lo anterior, esta investigación tuvo como pregunta problema la siguiente: ¿Qué características tienen las variables del mercadeo de la experiencia implementadas por las marcas de prendas de vestir dirigida al target joven, en los centros comerciales Chipichape y Unicentro de la ciudad de Cali? El estudio en una primera etapa, identificó si las tiendas de ropa de marcas dirigidas al target joven implementaban estrategias de mercadeo de la experiencia, ya fuera en forma

planeada; estratégicamente determina en la búsqueda de objetivos de mercadeo o si las implementaban en forma intuitiva. En una etapa posterior se identificaron los sentidos que se privilegiaban en estas estrategias, lo cual permitió determinar un nivel de impacto sensorial, el nivel de involucramiento emocional generado por las mismas, para posteriormente determinar el nivel de experiencia generada por la marca. Lo que finalmente conduciría a la experiencia de marca, lo que implica analizar las estrategias de mercadeo de la experiencia desde el consumidor. Por lo tanto, la experiencia de marca podría ser conceptualizada como el conjunto de sensaciones, sentimientos, cogniciones y conductas provocadas por los estímulos sensoriales diseñados por la marca a través de los diferentes elementos de la comunicación de marca: diseño de marca, empaques, estrategias de merchandising y vitrinismo y otras comunicaciones a través de diferentes entornos.

## REVISIÓN LITERARIA

El marketing de la experiencia es un concepto nuevo y excitante, a tal punto que entender las experiencias del consumidor es la esencia de las actividades de la investigación del consumidor. Aunque, la experiencia como concepto y como fenómeno empírico no está aún tan fuertemente establecido como otros conceptos de marketing o de investigación del consumidor. Como lo planteó Chris Janiszewski en el discurso presidencial en la conferencia de la Asociación de Investigación del Consumidor en el 2009 (Schmitt, 2011): en esta área de investigación, la oportunidad es estudiar la experiencia de consumo, la cual se convierte en una ventaja diferencial, pues en este momento lo más importante no son los beneficios de los productos, sino la experiencia de consumo o sea el valor subjetivo que el consumidor le atribuye al consumo. Así, el estudio de la experiencia es beneficiado por el hecho de que múltiples disciplinas realizan investigaciones sobre el efecto de la experiencia. Por ejemplo el comportamiento del consumidor tiene tres áreas fundamentales de especialización: los procesos de información, la teoría de la decisión comportamental y la teoría de la cultura del consumo.

Ahora bien, empecemos por el concepto de experiencia: ¿qué es experiencia? El término experiencia puede ser definido de varias formas, pero todas estas definiciones pueden ser reunidas en dos categorías: las que se refieren al pasado; como conocimiento y experiencia acumulada en el tiempo y la otra hace referencia a las percepciones y sentimientos en curso y que pueden ser observados directamente. Esta investigación está focalizada en el marketing de la experiencia, el cual se refiere a la experiencia en el aquí y el ahora; en las percepciones, sentimientos y pensamientos que las estrategias de marketing pretenden generar en el consumidor cuando éste se encuentra con el producto, con la marca en el punto de venta y se dispone a las actividades de consumo y también, al recuerdo de estas experiencias. La experiencia en la gestión de marketing: mientras el marketing tradicional está orientado a los beneficios y características del producto o marca y asume que los consumidores toman decisiones racionales, identificando el máximo de beneficios que derivan de la comparación entre diferentes productos o marcas. El marketing de la experiencia, en contraste, asume que los consumidores desean ser estimulados, entretenidos, educados y retados por los productos que ellos compran. Así, los consumidores buscan las marcas que les proveen experiencias memorables.

De acuerdo con lo expuesto anteriormente en el mercadeo tradicional, las estrategias de branding son usadas para crear conocimiento y atención. Y en marketing de la experiencia, la actividad central es desarrollar formas eficientes para crear y entregar experiencias. El marketing de la experiencia, contrario al marketing tradicional, no está centrado en los beneficios de producto

sino en la situación de consumo y en cómo los productos y las marcas pueden mejorar la experiencia de consumo. Así, el marketing de la experiencia es ampliamente definido como cualquier tipo de actividad de marketing enfocada al cliente que crea una conexión con el consumidor. Basados en este planteamiento, las experiencias pueden ser evocadas por productos, interacciones dentro de la tienda, relaciones de venta, eventos. Ellas pueden ocurrir como resultado de actividades online u off line.

Algunos autores ven el marketing de la experiencia o la experiencia de consumo de una forma más estrecha y aplican el concepto de experiencia solamente a las interacciones, las relaciones o eventos dentro del contexto. Dentro de este enfoque están las afirmaciones de Pine and Gilmore (1999) quienes se refieren a la experiencia como aquellos eventos que involucran individuos de forma personal. Gentile et al (2007, pág. 397) consideran que la experiencia de consumo se origina a partir de un conjunto de interacciones entre un consumidor y un producto, una compañía, o parte de ella, lo cual provoca una reacción. Esta experiencia es estrictamente personal e implica un involucramiento del consumidor en diferentes niveles: racional, emocional, sensorial, física e intelectual. Esta evaluación depende de las expectativas del consumidor y del estímulo que proviene de la interacción con la compañía y su oferta, en correspondencia con los diferentes momentos de contacto.

Por lo tanto, se denomina Mercadeo de la Experiencia al proceso holístico que se inicia desde la sensación (contacto de los órganos de los sentidos con el estímulo), continua con la percepción, donde se involucran la interpretación y la valoración emocional de la experiencia, dando como resultado una vivencia. Este concepto abarca el marketing sensorial, de los sentidos y emocional, porque reconoce los impulsores racionales y emocionales y asume la experiencia como resultado de vivir una situación.

Así, lo importante del Mercadeo de la Experiencia es el significado que el consumidor atribuye al producto con la vivencia de la marca, convirtiéndose, desde lo comercial, en el mayor valor percibido por el cliente. Cuando un cliente compra un producto, lo que busca es disfrutar de él; lo que compra es la experiencia que le proporciona el producto. No se venden productos, se venden experiencias.

Lo difícil es evaluar lo intangible de la experiencia. Además, hay que tener en cuenta que las experiencias siempre son diferentes para el consumidor y cada vez que el consumidor está frente a un producto, desarrolla un momento de verdad. Lo clave es igualar y/o superar las expectativas en cuanto a calidad de la experiencia vivida. El marketing experiencial, también conocido como marketing sensorial, marketing poli-sensorial y marketing emocional y definido como “última frontera del marketing”, nació al comprobar que los consumidores no se comportan siempre de forma racional, por lo tanto, la implementación de este enfoque implica una verdadera revolución interna; *es necesario emocionar al cliente*: todos los estímulos deben proyectar los valores de la marca en un círculo auto-referencial que implique e involucre al cliente. Las actividades de marketing y de gestión de los clientes se centran en la búsqueda de nueva fuente de ventajas competitivas basadas en la diferenciación e implicación emocional de los clientes y en la creación de experiencias positivas ligadas a la marca y/o establecimiento. Los consumidores comparan la experiencia percibida con sus expectativas. Si el cliente percibe que su experiencia es inferior a las expectativas se genera desinterés hacia la marca. Brend Schmitt (1999) – Acuñó el concepto de Mercadeo de la experiencia. Proponiendo cinco formas de promover la experiencia, a través de lo:

*Sensorial – Sense (percepción) – Mercadeo de los sentidos*

*Emocional – Feel (sentimiento) – Mercadeo Emocional*

*Físico y estilo de vida – Act (actuación)*

*Cognitivo y creativo – Think (pensamiento)*  
*Identidad social – Relate (relación) – Mercadeo relacional.*

En la misma línea, Brakus et al. (2009) definen la *Experiencia de Marca* como un conjunto de respuestas internas subjetivas y de comportamiento suscitado o provocado por los estímulos relacionados con la marca que forman parte de su diseño, identidad, presentación, comunicación y entorno de venta. A partir de la pertinente revisión de trabajos en distintas disciplinas (filosofía, ciencia cognitiva, gestión, marketing experiencial) categorizan estas respuestas en 5 dimensiones (sensoriales, afectivas, de pensamiento, sociales y de actuaciones) que están muy estrechamente relacionadas con los módulos experienciales propuestos por Schmitt (1999, 2000) para crear experiencias de marca:

*La dimensión sensorial:* apela a las respuestas relacionadas con los sentidos (vista, oído, tacto, gusto y olfato) y pueden venir provocadas no sólo por elementos de la identidad visual de la marca (símbolos visuales, color, eslogan, música, diseño, etc.) sino también por los aspectos sensoriales del producto físico y del núcleo de un servicio.

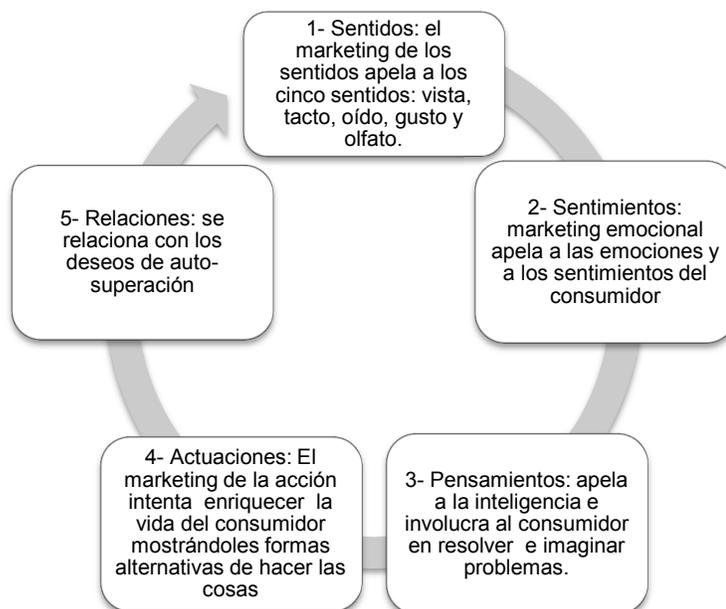

*La dimensión afectiva:* tiene que ver con los sentimientos y emociones más internos del sujeto y varían desde la dirección positiva hasta la negativa. Además se vinculan fuertes emociones a la marca como: la alegría, diversión u orgullo, nostalgia, frustración, etc.

*La dimensión de pensamiento:* está relacionada con experiencias que invitan al consumidor a pensar y que despiertan su creatividad y su curiosidad.

*La dimensión social o de relaciones:* apela a las experiencias relacionadas con la interacción con otros e implica una conexión con otras personas, grupos sociales, de referencia o una entidad social

*La dimensión de actuaciones:* tiene que ver con las experiencias relacionadas con el cuerpo, pautas de comportamiento más a largo plazo e imitación de modelos y estilos de vida.

Figura 1: Cinco Tipos de Experiencias del Marketing Experiencial

Fuente: elaboración propia

Sin duda, hoy día las empresas del mundo están siendo participes del nacimiento de una nueva era, en la cual la economía desempeña papeles diferentes pero adaptados a roles más integrales y analíticos de la organización; prácticamente todas las empresas, independientemente de cuál sea su categoría deben enfrentarse a los efectos del cambio acelerado y la nueva competencia, buscando conseguir, a toda costa, la fidelidad de sus clientes. En este sentido es importante resaltar que para conservar y fomentar la fidelidad de los consumidores se necesita más que generar una satisfacción profunda con un producto o servicio; es decir, el servicio no garantiza el compromiso por parte de los clientes. Se evidencia, entonces, la necesidad de algo más; una conexión que eleve la relación cliente - empresa a una dimensión más allá de lo racional y funcional: se está haciendo referencia a una dimensión afectiva.

En el mundo de los negocios dicha relación establece una fuente de valor, una conexión que, de una u otra forma, ofrece al consumidor cada vez más posibilidades de encontrar lo que necesita, como lo necesita y al precio que puede pagar. Por su parte, el empresario encuentra opciones de reconocimiento, posicionamiento y, por qué no decirlo, rentabilidad, cuando puede satisfacer la expectativa del consumidor que da por sentado el estándar de calidad y proclama por encontrar identidad, arraigo, algo de exclusividad. Las experiencias siempre han formado parte de la vida de las personas, y para el caso que nos ocupa, de los consumidores, por lo que esta nueva tendencia denominada *Mercadeo de la Experiencia* podría definirse como la búsqueda de una conexión sostenible que lleva a los clientes a sentirse atendidos, valorados, consentidos y cuidados, respondiendo con una actitud de lealtad cuando así se requiera. Lo que implica reconocer que el ser humano posee la facultad de asociar y relacionar las sensaciones procedentes de cada uno de sus sentidos, relacionándolas con ideas y conceptos que, a su vez, generan emociones y sentimientos, haciendo de sus vivencias experiencias memorables.

## DISEÑO METODOLÓGICO

El presente estudio requirió el abordaje desde un enfoque de investigación mixto, dadas las fases que tuvieron curso durante el proceso. En una primera etapa se realizó un censo en los centros

comerciales para identificar la presencia de locales comerciales con marcas de prendas de vestir dirigidas al target joven, en total se identificaron 32 puntos de venta en cada centro comercial. Posteriormente se efectuó observación libre de vitrinas e interiores de los almacenes. Esta etapa de tipo exploratorio permitió identificar las marcas de prendas de vestir que implementaban estrategias de marketing de la experiencia. Finalmente, al seleccionar las marcas (muestra) de la investigación, se procedió a realizar entrevistas en profundidad con administradores de los almacenes y gerentes de mercadeo y a efectuar la observación sistemática en los locales comerciales y en los sitios web de las marcas con la implementación de una plantilla para el registro de los datos. Y por último se realizaron entrevistas a compradores de las marcas.

Para el análisis de los resultados se establecieron las dimensiones de las variables de mercadeo de la experiencia implementadas por las tiendas en los dos centros comerciales, pudiendo, a partir de un análisis estadístico, determinar el peso de las variables a partir de las tácticas implementadas. Las variables asociadas con cada uno de los sentidos se operacionalizaron, estableciendo indicadores de su presencia. Adicionalmente, se ponderaron las variables a través de indicadores de impacto sensorial, involucramiento emocional y nivel de experiencia. Las ponderaciones dispuestas en esta investigación se basaron en los siguientes indicadores de impacto de experiencia desde lo sensorial.

- a. La ponderación de cada variable se estableció de 0 a 5 siendo; 0 Inexistente, 1 Muy Bajo, 2 Bajo, 3 Neutra, 4 Alto, 5 Muy Alto. Para explicitar estas ponderaciones se consideraron los siguientes enunciados.
- b. El desglose de las variables ponderadas con los valores arriba mencionados se les asignó un peso porcentual según el impacto en el desarrollo del estímulo, los resultados que arrojó cada una de las variables se totalizaron y se promediaron generando como resultado la incidencia de cada uno de los estímulos tipificados en sentidos de la siguiente manera:

Sentido Visual: En esta categoría se encuentran todos los estímulos que afectan la visión (colores, formas, tamaños, iluminación).

Tabla 1: Variables visuales

Variables visuales	Colores	Material predominante	POP	Señalética	Decoración	Accesorios	Estantería	Maniquies	Vestier	Iluminación	Fachada/aviso	Vendedores
Porcentajes	5%	5%	18%	5%	11%	2%	10%	5%	9%	12%	12%	6%

*Fuente: elaboración propia*

Sentido Auditivo: En esta categoría se encuentran todos los estímulos que afectan el oído (música, aislamiento de ruido, verbalizaciones de personal de la tienda)

Tabla 2: Variables Auditivas

Variables auditivas	Musica	Ritmos musicales	Volumen de la música	Discurso empleado	Aislamiento ruidos
Porcentajes	35%	20%	10%	20%	15%

Fuente: elaboración propia Sentido Olfativo: En esta categoría están incluidos los estímulos asociados a las fragancias utilizadas por las tiendas.

Tabla 3: Variables Olfativas

Variables olfativas	Existencia de olor	Tipo de olor	Intensidad del olor	Aplicación olor
Porcentajes	60%	20%	5%	15%

Fuente: elaboración propia Sentido del tacto: Se incluyeron en la estimulación de este sentido la interacción del consumidor con las prendas y la regulación de la temperatura de la tienda.

Tabla 4: Variables Táctiles

Variables Táctiles	Interacción con las prendas	Control de temperatura
Porcentajes	70%	30%

Fuente: elaboración propia Sentido Gustativo: Se incluyen en esta categoría el ofrecimiento de bebidas o golosinas ofrecidas o a disposición del cliente.

Tabla 5: Variables Gustativas

Variables Gustativas	Bebidas	Dulces
Porcentajes	60%	40%

Fuente elaboración propia La anterior ponderación fue aplicada a las más de 142 variables sensoriales agrupadas en clusters descriptivos para cada uno de los sentidos (vista, oído, olfato, tacto y gusto), en donde cada una aportaba a visión cuantitativa global con el fin de determinar:

- Nivel de Experiencia por sentido; que se extrae de la sumatoria de las ponderaciones de las variables de cada sentido en donde:  $\Sigma = (sv + so + sg + st + sa)$

Sv= Sentido Visual Sa=Sentido Auditivo St=Sentido Táctil So=Sentido Olfativo  
Sg=Sentido Gustativo

- Nivel de Involucramiento Emocional; valor estimado a partir del grado de impacto sensorial expuesto de cada una de las tiendas a partir de los sentidos y como estos refuerzan una imagen asociativa en la mente del consumidor. Esta ponderación surge la extracción del nivel de experiencia por sentido multiplicado por el porcentaje de peso de cada sentido de involucramiento emocional según la siguiente tabla de valores:

Tabla 6: Ponderaciones De Los Sentidos En Relación Al Nivel Involucramiento Emocional

Sentidos	Sentido de la vista	Sentido del oído	Sentido del olfato	Sentido del tacto	Sentido del gusto
Involucramiento sensorial	30%	10%	50%	8%	2%

Fuente: elaboración propia

Fórmula:  $ie = (s * \%)$  Dónde:  $ie$  = involucramiento emocional  $S$  = Total Sentido Nótese que el sentido del olfato es tipificado por ser el sentido que más involucramiento emocional ofrece para reforzar la recordación de una marca (Lindstrom 2008); así mismo las tiendas que invierten dinero en el desarrollo de un aroma distintivo para su marca, así como el olor del pan caliente asociado a la sensación de placer en el paladar de las personas que circulan cerca de una panadería, el impacto de una esencia u aroma impregnado y asociado a un producto es uno de los estímulos más predominantes para las estrategias de marketing de la experiencia. El rango de análisis de esta variable va de 0,00 como muy bajo a 1,00 como muy alto.

- *Nivel de Impacto Sensoria*: valor estimado a partir del grado de impacto sensorial expuesto de cada una de las tiendas teniendo como referencia el nivel de estímulos que reciben los sentidos, siendo el sentido de la vista el que recibe el peso de la mitad del involucramiento emocional, nótese como la marca, la decoración de la vitrina, la iluminación, los avisos de ofertas y promociones en material P.O.P son denotativos del involucramiento de este sentido. Esta ponderación surge la extracción del nivel de experiencia por sentido multiplicado por el porcentaje de peso de cada sentido de impacto sensorial según la siguiente tabla de valores:

Tabla 7: Ponderaciones de los Sentidos en Relación al Nivel Impacto Sensorial

Sentidos	Sentido de la vista	Sentido del oído	Sentido del olfato	Sentido del tacto	Sentido del gusto
Impacto sensorial	60%	30%	10%	8%	2%

Fórmula :  $is = (s * \%)$ . Dónde:  $is$  = impacto sensorial  $S$  = total Sentido

El sentido de la vista es tipificado por ser el sentido que más impacto sensorial que ofrece para reforzar la recordación de una marca para este caso la influencia publicitaria desde lo gráfico y lo iconográfico es relevante; así mismo las tiendas invierten mucho dinero en publicidad y promoción ya que el impacto visual es uno de los estímulos más predominantes para las estrategias de marketing de la experiencia. El rango de análisis de esta variable va de 0,00 como muy bajo a 1,00 o superior como muy alto.

## RESULTADOS

Una vez ponderadas las variables y agrupadas por clusters para complementar una perspectiva global por cada uno de los estímulos sensoriales se encontraron frecuencias que marcaban indicadores de experiencia y que aportaban a la construcción de una percepción de la marca. Las variables si bien pueden ser interpretadas de manera individual, vistas en conjunto favorecen la labor concluyente sobre el grado de experiencia por marca en cada uno de los centros comerciales

objetos de este estudio. Los rangos de interpretación corresponden a los resultados consolidados de todas las tiendas evaluadas en Unicentro y Chipichape según el siguiente Tabla:

Tabla 9: Promedio Total Experiencia en Dos Centros Comerciales

Sentidos	Sentido de la vista	Sentido del oído	Sentido del olfato	Sentido del tacto	Sentido del gusto
Promedio total marcas	0.45	1.15	0.56	0.34	0.73

Es importante destacar que el promedio de experiencia de las tiendas de prendas de vestir dirigidas al target joven los dos centros comerciales de 3.2 en una escala de 1 a 5. Posteriormente la sumatoria de las frecuencias arrojó como resultado final el nivel de experiencia por marca y el nivel de experiencia en cada centro comercial. El estudio finalmente arrojó ponderaciones a partir de la sumatoria y el peso de cada una de las variables designadas para cada sentido y permitiendo mapear el estado de la marca y el centro comercial en grado de influencia. La siguiente tabla organiza el total de las marcas en función de los sentidos en cada centro comercial, destacando el impacto de cada uno de los sentidos

Tabla 10: Experiencia Sensorial de las Marcas en el Centro Comercial Unicentro y Chipichape Cali

UNICENTRO	SENTIDO VISTA	SENTIDO AUDITIVO	SENTIDO OLFATO	SENTIDO TACTO	SENTIDO DEL GUSTO	TOTAL SENTIDOS	
TOTAL SENTIDO	5,47	13,33	11,19	3,58	7,11	40,69	<b>Total Experiencia</b>
PROMEDIO SENTIDO	0,55	1,33	1,12	0,36	0,71	4,07	<b>Promedio experiencia</b>
CHIPICHAPE	SENTIDO VISTA	SENTIDO AUDITIVO	SENTIDO OLFATO	SENTIDO TACTO	SENTIDO DEL GUSTO	TOTAL SENTIDOS	
TOTAL SENTIDO	6,37	17,86	10,88	2,23	10,19	47,54	<b>Total Experiencia</b>
PROMEDIO SENTIDO	0,49	1,37	0,84	0,17	0,78	3,66	<b>Promedio experiencia</b>

Fuente: Los autores.

## CONCLUSIONES

A nivel general el aporte de las marcas internacionales con presencia en los centros comerciales al desarrollo de estrategias de marketing de la experiencia ha sido positiva para las marcas nacionales. El presente estudio aborda 9 marcas de tiendas de ropa internacionales y 4 marcas de tiendas de ropa nacionales. Donde se puede destacar que el desarrollo de estrategias de marketing de la experiencia por parte de marcas nacionales puede llegar a ser mucho más fuerte y planificado que el de las mismas marcas internacionales presentes. El estudio finalmente arrojó ponderaciones a partir de la sumatoria y el peso de cada una de las variables designadas para cada sentido y permitiendo mapear el estado de la marca y el centro comercial en grado de influencia. La estrategia del mercadeo de la experiencia más utilizada por todas las marcas objeto de estudio, es el uso de elementos visuales; la exhibición y decoración de las prendas de las marcas en las vitrinas. Dentro de los elementos visuales se destacan: los accesorios decorativos, mobiliarios, iluminación y los colores representativos en la identidad de la marca. La musicalización en las tiendas de prendas de vestir se caracteriza por el uso de determinados géneros musicales, dependiendo del estilo de la marca y público al cual va dirigido. Las marcas dirigidas al target

joven observadas no utilizan mucho la ambientación olfativa en las tiendas de prendas de vestir, sólo en dos de las marcas actualmente aplican aromas definidos como elemento corporativo.

# CARACTERIZACIÓN DE LAS PEQUEÑAS Y MEDIANAS EMPRESAS EN LA REGIÓN COSTA SUR DE JALISCO, MÉXICO

Myriam Arias Uribe, Universidad de Guadalajara  
Marcela de Guadalupe Pelayo Velázquez, Universidad de Guadalajara

## RESUMEN

*El presente trabajo incluye un análisis de las características de las micro, pequeñas y medianas empresas que se localizan en la región Costa Sur de Jalisco, en México. El estudio de estas unidades económicas ha cobrado importancia a través del tiempo, su dinámica difiere de la gran empresa, ya que enfrentan condiciones diferentes en cuanto a organización interna, procesos productivos y recursos. Derivado de lo anterior, los aspectos relacionados con el ambiente externo, tales como mercados, ambiente político, económico, social y tecnológico representan retos diferentes para este tipo de organizaciones.*

**PALABRAS CLAVE:** PyMEs, Factores de la empresa, factores del entorno

## CARACTERIZATION OF SMALL AND MEDIUM ENTERPRISES IN REGION COSTA SUR OF JALISCO, MÉXICO

### ABSTRACT

*This paper presents an analysis of characteristics of small and medium enterprises located at Costa Sur of Jalisco, México. The study of these business units has gained importance through time, their dynamic is different from big companies, and they face unique conditions related to internal organization, productive processes and resources. The aspects related with external environment, such as, markets, political, economic, social and technological environment, represent a challenge for them.*

**JEL:** M10

**KEYWORDS:** SMEs, Firm factors, External factors.

## INTRODUCCIÓN

Las micro, pequeñas y medianas empresas desempeñan un papel fundamental en la economía mexicana. El 99% de las unidades económicas en México pueden clasificarse como PyMEs, estas son generadoras de empleo y riqueza, teniendo un impacto en especial en el desarrollo regional. El estudio de las características de estas unidades económicas ha cobrado importancia a través del tiempo, su dinámica difiere de la gran empresa, ya que enfrentan condiciones diferentes en cuanto a organización interna, procesos productivos y recursos. Derivado de lo anterior, los aspectos relacionados con el ambiente externo, tales como mercados, ambiente político, económico, social y tecnológico representan retos diferentes para este tipo de organizaciones. Es por ello que resulta importante analizar las condiciones en las que operan estas unidades económicas, el ambiente que enfrentan, así como, los recursos con los que cuentan para la realización de sus operaciones, considerando la tasa de mortalidad elevada que tienen las mismas. El objetivo que persigue este

trabajo es analizar las características de las micro, pequeñas y medianas empresas en la región Costa Sur de Jalisco, con el fin de identificar aquellos factores internos y externos que afectan su desarrollo. Con el fin de cumplir el objetivo se diseñó un instrumento para ser aplicado a una muestra de 320 empresarios de la región.

El documento se organiza como sigue, a continuación se presenta una revisión de la literatura relacionada con estudios sobre las condiciones de la micro, pequeña y mediana empresa; en el siguiente apartado se define la metodología empleada para realizar la investigación. En la tercera sección se presentan los resultados para posteriormente concluir.

## REVISIÓN LITERARIA

Aun cuando las PyME revisten de gran importancia para la economía de un país, no existe una definición única que comprenda a este tipo de entidades. La clasificación de las micro, pequeñas y medianas empresas atiende a diversos criterios, tales como ingresos o personal ocupado. Existen criterios que consideran a la microempresa como un término independiente de las PyME, sin embargo esto no es universal (Pavón, 2010). Para el caso del presente trabajo se incluye dentro del término PyME a las microempresas. Según la clasificación de INEGI, que atiende al número de trabajadores por empresa; el 95% de las unidades económicas pueden considerarse como microempresas, con un número de trabajadores que oscila entre 0 y 10. El 4% de las empresas se clasifica como pequeñas (11-50 trabajadores), en el rango de empresas medianas se encuentra el 0.8% de las entidades (51-250 empleados) y como empresas grandes (mas de 251 trabajadores) se clasifica solo el 0.2% de las compañías. Como puede verse en la tabla 1, el 99.8% de las empresas mexicanas se considera como PyME, su producción bruta es menor que la de las grandes empresas, aun cuando el personal ocupado por estas pequeñas unidades representa el 73% del personal ocupado total.

Tabla 1: Tamaño, Personal Ocupado y Producción Bruta de las Empresas en México

Personal ocupado	% de unidades	Producción bruta	Personal ocupado
0-10	95%	8.3%	41.8%
11-50	4%	9.0%	15.3%
51-250	0.8%	17.4%	15.9%
251 y mas	0.2%	65.3%	27.0%

Fuente: INEGI, Censos económicos 2009.

El tamaño promedio de las unidades económicas en México, atendiendo al personal ocupado es de 5.4 personas, la industria manufacturera ocupa en promedio a 10 personas por unidad, mientras que el comercio ocupa 3.3 personas (Censos económicos, 2009). Las PyME han sido estudiadas a lo largo del tiempo como unidades homogéneas, sin embargo, debe ponerse especial atención a sus características particulares, que las hacen diferentes a las grandes empresas y a la vez distintas entre sí; comprendiendo que el término abarca unidades económicas con características propias que han sido agrupadas en razón de tamaño. Las PyME operan en un contexto empresarial, en donde generalmente la dirección y la toma de decisiones le competen al propietario o a un líder administrador (Mintzberg, et al, 1996).

Cuentan con una estructura organizacional simple que les permite una mayor agilidad en la toma de decisiones (Pavón, 2010). Sin embargo este factor puede jugar en contra de ellas, al incrementar el riesgo de fracaso debido a la poca profesionalización de las actividades administrativas, problemas en el área de producción, falta de acceso a financiamiento; aspectos

que se ven reflejados en la elevada tasa de mortalidad de estas empresas (Tan, et al, 2007). El carácter familiar de la PyME ha sido analizado como un factor importante en el desempeño de la misma, los resultados no han sido concluyentes, si bien algunos estudios señalan una ventaja para aquellas empresas de propiedad familiar cuya administración recae en un miembro de la familia fundadora, otros autores señalan esto como una desventaja con relación a la rentabilidad (Sánchez, et al, ). Aragón y Rubio (2005) consideran que la competitividad de una PyME depende tanto de factores internos, tales como recursos físicos, habilidades y conocimientos; como de factores externos que derivan del entorno de actuación de la empresa, entre ellos están los factores políticos, económicos y sociales. Si bien el desempeño empresarial se analiza desde diferentes dimensiones, tales como, supervivencia, rentabilidad, incremento de las ventas, número de empleados, reputación, entre otros (Islam, et al, 2011); existen diversos enfoques para analizar los aspectos que inciden en el desempeño empresarial (Di Tomasso y Dubinni, 2000). Para Zevallos (2006) las áreas consideradas como relevantes o problemáticas en el desarrollo de las PyMEs son el área financiera, la infraestructura (servicios públicos), la política, los problemas sociales y culturales, el mercado interno, el comercio exterior, la tecnología y la información, el medio ambiente.

Bechetti y Trovato (2002) analizan el crecimiento de las pequeñas empresas contrastando la edad y tamaño de las mismas con aspectos externos como los subsidios que otorga el estado, la capacidad exportadora y el racionamiento del crédito. Dussel (2004) señala el crecimiento económico y mercado interno, la sobrevaluación del tipo de cambio y la falta de acceso y elevado costo del financiamiento como factores críticos para el desarrollo de las PyMEs. Para Rutherford y Oswald (2000) el desempeño de las pequeñas empresas se clasifica en tres categorías de antecedentes: Las características individuales del empresario/gerente; las características de la empresa y los aspectos ambientales.

La figura del empresario es importante en las pequeñas empresas, su comportamiento y decisiones influyen en el desempeño empresarial (Di Tomasso y Dubinni, 2000, Velarde, *et al*, 2013). Atributos como la edad, género, educación, know how gerencial, experiencia y habilidades del empresario o director han sido analizados en estudios recientes (Islam, et al, 2011; Capeller y Greene, 2008). Otro aspecto que ha sido considerado en el análisis del desempeño es la propiedad familiar tiene un impacto en la toma de decisiones y el rumbo que seguirán las organizaciones (Sánchez Gardey, et al, 2009).

En este contexto se identifica al financiamiento como un factor un factor determinante para el crecimiento y desarrollo empresarial en empresas localizadas en países emergentes (López, 1999; López-Gracia y Sogorb-Mira, 2008). Aspectos relacionados con la dificultad de las empresas de obtener recursos financieros debido a elevadas tasas de interés, exceso de garantías colaterales que exigen las instituciones crediticias, numerosos trámites, costos de capital, entre otros (Zevallos, 2006) consisten barreras para que la PyME busque financiamiento proveniente de la deuda, por lo que limita su crecimiento y desarrollo al limitarse al empleo de recursos propios, ya sea generados internamente por la empresa o bien provenientes del capital del empresario (Psillaki y Daskallaris, 2009).

## **METODOLOGÍA**

El presente trabajo se basa en información obtenida de una muestra de empresas que operan en los seis municipios que integran la región Costa Sur del estado de Jalisco: Autlán de Navarro, Casimiro Castillo, Cuautitlán de García Barragán, La Huerta, Villa de Purificación y Cihuatlán. Para obtener los datos se diseñó un instrumento conformado por 80 ítems basados en escala líkert,

agrupados en 5 bloques, relacionados con el perfil del empresario y empleados, la actividad innovadora desarrollada por la empresa, los procesos internos y tecnología, aspectos de mercado y financiamiento de la inversión. El instrumento se validó con el Alfa de Cronbach con un resultado de 0.74.

Con el objetivo de definir la muestra objeto de estudio se solicitó en el registro público de comercio los datos de las licencias municipales de las empresas que operan en cada uno de los municipios. Estos padrones de licencias fueron analizados y depurados con el fin de eliminar de la población total los registros duplicados, giros negros, entidades de reciente creación o registros menores a los cinco años de antigüedad. Una vez depurados los padrones de licencias, se definió el tamaño de la muestra en 320 unidades económicas. Se empleó un muestreo aleatorio estratificado. La tasa de respuesta fue de 67% en promedio, siendo más alta en el municipio de Autlán de Navarro y Villa de Purificación.

Se logró entrevistar en total a 210 empresarios y administradores de empresas en seis municipios de la región. La muestra se compone de 98 empresas del sector comercio, 25 empresas industriales y 87 empresas de servicios.

Tabla 2: Número de Empresas Que Componen la Muestra

Municipio	Clasificación sectorial		
	Comercio	Industrial	Servicios
Autlán	38	9	32
C. Castillo	14	3	4
Cihuatlán	18	1	16
Cuahtitlán	2	0	0
La Huerta	15	11	18
Purificación	11	1	17

Las empresas que conforman la muestra tienen una antigüedad mínima de 5 años, la más antigua en la que se aplicó el cuestionario ha operado por 70 años. El número de empleados va desde micro negocios sin empleados hasta empresas con 99 empleados a tiempo completo. A continuación se presentan los resultados obtenidos del análisis de la información proporcionada por los empresarios de la región empleando el programa SPSS versión 20.

## RESULTADOS

La muestra se compone de micro y pequeñas empresas que en su mayoría son de propiedad familiar, en donde las actividades de dirección y gestión recaen en manos de miembros de la familia, así como las actividades operativas en algunos casos. El nivel de formación de los administradores/propietarios oscila desde formación básica hasta universidad. Considerando el género de la persona que realiza las actividades de dirección, se encuentra para el caso de empresas comerciales que las mujeres tienen un nivel educativo más alto que los hombres, de igual manera sucede para las empresas del sector industrial. En el caso de las empresas del sector servicios los hombres que llevan a cabo las tareas de dirección son quienes tienen un nivel educativo mayor (tabla 2).

Tabla 2: Características del Director General/Administrador de la Pyme

Género del director general	Nivel de Formación	Sector		
		Comercial	Industrial	Servicios

Femenino	Básica	8.3%	66.7%	29.7%
	Bachillerato	16.7%	0.0%	21.6%
	Técnico	16.7%	16.7%	5.4%
	Universidad	58.3%	16.7%	43.2%
Masculino	Básica	33.3%	60.0%	21.3%
	Bachillerato	22.2%	30.0%	4.3%
	Técnico	11.1%	0.0%	10.6%
	Universidad	33.3%	10.0%	63.8%

Sin embargo, las actividades de dirección/administración recaen mayormente en personas que no tienen una formación profesional en el área económico – administrativa, especialmente en los casos en los que son los propietarios quienes dirigen la empresa. Se encontró con administradores/propietarios con formación profesional diversa, desde médicos veterinarios, abogados, ingenieros en sistemas, agrónomos, entre otras. Algunos señalan haber iniciado con la empresa como una opción de autoempleo, en donde lograron insertarse en una actividad económica como alternativa a la búsqueda de un empleo en el área de su formación.

Tabla 3: Nivel de Formación de Administradores/Propietarios y Tipo de Propiedad

Nivel de formación	Propiedad		
	Familiar	Propietario único	Sociedad
Básica	31.4%	29.8%	16.7%
Bachillerato	12.9%	21.1%	0.0%
Técnico	11.4%	7.0%	8.3%
Universidad	44.3%	42.1%	75.0%

Si se considera el tipo de propiedad, en las empresas constituidas como personas morales el nivel educativo de las personas que realizan la función de administrador es más alto, el 75% de ellas cuenta con estudios universitarios, en comparación con las empresas familiares y las de propietario único. La mayoría de las empresas entrevistadas señalan percibir problemas con respecto a las condiciones del mercado. El área de operación de las mismas es mayormente local, el 3.6% señala operaciones a nivel estatal, 0.7% operan a nivel nacional y el 4.3% a nivel internacional. Cabe señalar que estas últimas se ubican en el sector turismo. Las empresas entrevistadas financian sus actividades de inversión mayormente con recursos propios, una minoría señala recurrir a financiamiento proveniente de deuda, ya sea con instituciones bancarias, cajas populares o bien de crédito con proveedores. Se les preguntó a los empresarios si conocen programas de financiamiento a lo que el 56.1% señala que si y el 43.9% señala no conocer ningún programa. Los entrevistados que señalaron tener conocimiento de la existencia de programas de apoyo a las PyME ubicaron el programa denominado FOJAL, solo el 8% de los entrevistados han aplicado para un crédito de este tipo.

Los entrevistados tienen preferencia por el empleo de recursos propios, solo el 46% ha solicitado algún crédito en los últimos cinco años, el 53.2% restante no ha solicitado financiamiento externo durante la vida de su empresa. Los motivos más comúnmente señalados para no recurrir a algún préstamo son el exceso de trámites, el desconocimiento de los tipos de productos que ofertan las instituciones crediticias y la desconfianza en el entorno económico. De los entrevistados que solicitan crédito de manera regular la mayor parte lo hace recurriendo a Instituciones de Crédito Popular. La percepción de los empresarios sobre la situación económica en la región es mala. Señalan percibir una disminución en sus ventas durante el 2011 y 2012. Sin embargo, no todos los empresarios tienen la misma percepción. Aquellas empresas que realizaron cambios en sus procesos productivos o de servicios, reportan una mejora en sus ventas con respecto al año anterior. En especial las empresas del sector turismo que mejoraron o ampliaron sus instalaciones,

perciben un incremento en el volumen de clientes en el año inmediato a la inversión. Sin embargo es de hacer notar que al cuestionarles sobre el comportamiento de sus ventas en los años de 2008 a 2012 ninguna empresa señala un nivel excelente. Con respecto a la contratación de personal durante el 2012, los entrevistados en su mayoría señalan no haber contratado personal. Aquellas empresas que realizaron alguna inversión que incrementó su capacidad de atención, si realizaron alguna contratación, el promedio es de 1.5 nuevos empleados.

## CONCLUSIÓN

Las empresas de la región costa Sur de Jalisco son organizaciones familiares en las cuales las actividades de dirección son realizadas por los propietarios o miembros de la familia de estos. El nivel educativo promedio es de bachillerato. Las organizaciones constituidas como personas morales con un nivel mayor de formalidad en su estructura son dirigidas en su mayoría por personas con formación universitaria, aun cuando no necesariamente esta formación es en el área económico – administrativa. Las empresas han financiado sus actividades de inversión con recursos autogenerados, existe una renuencia a emplear financiamiento externo, debido a las condiciones económicas o a la percepción del empresario con respecto a las entidades financieras. Es necesario el apoyo encaminado a lograr la formalización de la operación de este tipo de entidades, que son generadoras de empleo, pero que enfrentan un ambiente dinámico que puede incrementar su probabilidad de fracaso.

Una limitante que debe considerarse es el acceso a la información, el ambiente de inseguridad que se percibe en algunos municipios generan desconfianza y renuencia a compartir información relacionada con sus finanzas o producción. En el presente trabajo se considera la percepción del empresario sobre ciertos aspectos, no se tuvo acceso a datos contables.

# RELEVANCIA VALORATIVA DE LA INFORMACIÓN FINANCIERA EN LAS EMPRESAS QUE COTIZAN EN LOS MERCADOS EMERGENTES DE MÉXICO Y BRASIL

Marcela De Guadalupe Pelayo Velázquez, Universidad De Guadalajara

## RESUMEN

*En este trabajo se muestra que la relevancia de la información financiera ha sufrido cambios en el transcurso del tiempo. En el marco de valoración de Ohlson (1995), el patrimonio neto y los resultados han sido sugeridas como dos variables contables fundamentales para tratar de explicar el precio de los títulos de las empresas que cotizan en los mercados de capitales de México y Brasil, por consiguiente el propósito del estudio sigue la perspectiva valorativa de explicar el valor intrínseco de la compañía y evaluar en que grado las variables contables pueden ser utilizadas para la evaluación del precio de mercado. Para lograr nuestro objetivo, se mostrarán y compararán los resultados que se desprenden de la aplicación dos metodologías alternativas. La primera de ellas toma como medida de relevancia el coeficiente de determinación ( $R^2$ ) de una regresión en la que el resultado y el valor contable figuran como variables independientes y, como variable dependiente, el precio de mercado; la segunda, los modelos se estimaran para las muestras de corte temporal y de sección cruzada conjuntamente (panel de datos).*

**PALABRAS CLAVES:** Modelo de Ohlson, relevancia valorativa, precio de la acción

## VALUE RELEVANCE OF THE FINANCIAL INFORMATION ON LISTED COMPANIES IN THE EMERGING MARKETS OF MEXICO AND BRAZIL

### ABSTRACT

*In this study it is shown that the value relevance of the financial information has changes over time. In the Ohlson valuation framework (1995), earnings and book value have been suggested as two fundamental accounting variables to try to explain the stock Price of the companies listed on capital markets of Mexico and brazil, therefore the purpose of the study is the evaluative perspective to explain the intrinsic value of the company and assess to what degree the accounting variables can be used to evaluate the market price. To achieve our goal, we show and compare the results arising from the application two alternative methodologies. The first measure of relevance taken as the coefficient of determination ( $R^2$ ) from a regression in which the outcome and the book value listed as independent variables and the dependent variable, the market price and the second, the models were estimated for cutting samples and cross-sectional time together (panel data).*

**JEL:** G15, M16, M41

**KEYWORDS:** The Ohlson model, value relevance, stock market price

## INTRODUCCIÓN

La investigación contable de los Mercados de Capitales surge en la década de los sesenta, siendo su principal objetivo evaluar en qué medida la información contable es útil para la toma de decisiones de inversión, ello hace que los investigadores se centren en un grupo concreto de usuarios, los inversores en el mercado de valores. Además, incide sobre una de las características cualitativas de la información financiera, su relevancia o capacidad para predecir o corregir expectativas (García Meca y Martínez, 2003). Por tanto, con la finalidad de entender el funcionamiento de los mercados de capitales, es importante reconocer que los estados financieros proporcionan datos sobre las actividades económicas de las empresas y los inversores confían en estos estados financieros para evaluar los planes y rendimientos de las compañías. Sin embargo, ¿cómo podemos medir la relevancia de los mismos sobre los precios de los títulos en el mercado de valores? En los estudios contables, los estudios de relevancia valorativa son utilizados para este propósito. En un contexto contable, cuando hablamos de relevancia valorativa, nos referimos a la habilidad de los números contables para explicar las diferencias en el precio de mercado de las acciones de las empresas. Si el importe de las cifras contables presenta relación con el valor de los títulos durante un periodo determinado, aceptaríamos la idea de que la información contable posee valor relevante para el inversor ya que es tenida en cuenta en el proceso de toma de decisiones.

Los estudios de relevancia valorativa tratan, por tanto, de ver si la información financiera recoge acontecimientos de interés para el mercado, analizando entre otros aspectos, cuales son las variables contables más relevantes para la valoración de los títulos. Estos estudios se consolidan bajo el amparo del trabajo de Ohlson (1995), quien proporciona el sustrato teórico contable necesario para el desarrollo de los estudios de medición o valoración, ofreciendo un modelo teórico de valoración basado en datos contables conocidos y no en expectativas, y además, revelando la necesidad del análisis fundamental para determinar el valor, condición necesaria para el análisis. En el marco de valoración de Ohlson (1995), el patrimonio neto y los resultados han sido sugeridas como dos variables contables fundamentales para tratar de explicar el precio de los títulos en los mercados de capitales. Por consiguiente, el objetivo principal del presente estudio es el análisis de la evolución temporal de la relevancia valorativa de la información contable en México y en Brasil. De acuerdo con el objetivo fundamental que se pretende alcanzar, a continuación se describen los objetivos concretos del estudio empírico:

- Analizar la relación que existe entre las variables contables, resultado y valor contable del neto patrimonial, y el valor de mercado de las empresas mexicanas así como de las empresas brasileñas
- Evaluar en qué medida un componente del resultado, en concreto el “Resultado Operativo”, puede presentar mayor relevancia valorativa que la variable “Resultado Neto”.

## REVISION LITERARIA

El modelo propuesto por Ohlson (1995) ha sido el modelo más utilizado en los estudios de relevancia, marcando un hito en la investigación contable basada en el mercado de capitales al considerar la información financiera como un componente de valor y proporcionar el sustrato teórico contable necesario. Este modelo resume las propuestas teóricas hechas por Peinreich (1938), Edwards y Bell (1961) y Peasnell (1982), convirtiéndose en un modelo de valoración completo ya que valora la empresa no sólo con base a su patrimonio y su capacidad de generar beneficios futuros, sino también considerando aquellos aspectos de la compañía no identificados

en sus estados financieros y relacionados fundamentalmente con los factores clave de creación de valor.

Según Aboody *et al.* (2002), dentro de los de estudios que han servido como patrón a la mayoría de los estudios de relevancia valorativa en los años recientes se encuentran aquellos que se basan en: 1) la relevancia valorativa de los resultados y el patrimonio neto (e.g. Collins, *et al.* 1997; Lev y Zarowin, 1999, o Francis y Schipper, 1999, entre otros); 2) la relevancia valorativa del valor intrínseco del resultado (e.g. Frankel y Lee, 1998). Aunque los resultados de estos estudios han sido, en algunos casos, ambiguos, parecen sugerir que en las últimas décadas se ha producido un deterioro en la asociación entre el valor del mercado de las empresas y diversas cifras contables. En este sentido, Lev (1997) y Francis y Schipper (1999), entre otros, han sugerido que en el mercado americano el poder explicativo de las cifras contables ha decrecido significativamente en las dos últimas décadas, comprobándose una relación con los precios menos significativa que en años anteriores. Uno de los estudios pioneros es el de Collins *et al.* (1997), quienes investigaron la relevancia valorativa de los beneficios y el valor contable a través del tiempo usando el marco teórico de valuación proporcionado por Ohlson (1995) en un período de 41 años (1953-1993). Sus resultados sugerían que la relevancia valorativa conjunta de las cifras de beneficios y el valor de Fondos Propios no había disminuido a lo largo del tiempo, al contrario, aprecian que ha tenido un pequeño incremento. Además, mientras el poder explicativo de los beneficios declina, se incrementa el poder explicativo del valor contable. Esta evidencia la explican por un aumento en las empresas con pérdidas, un aumento en la presencia de intangibles, de partidas excepcionales y a un mayor número de empresas de menor tamaño.

Francis y Schipper (1999) elaboraron modelos utilizando medidas sobre la relevancia valorativa que analizan la capacidad de los beneficios, del neto y de ambos para explicar el valor del mercado de la compañía, en el periodo 1952-1994. Sus resultados muestran un declive en la relevancia de los beneficios y un incremento en la relevancia de los Fondos Propios para explicar el valor de mercado de la empresa. Nuevamente una evidencia consistente con la de Collins *et al.* (1997).

Core *et al.* (2003), realizaron su estudio durante el periodo de 1975-1999 en los Estados Unidos. Sus resultados determinaron que el poder explicatorio ha declinado en las empresas de la Nueva Economía. En el estudio realizado por Dontoh *et al.* (2004), los resultados indican que los estados financieros han perdido su relevancia valorativa debido a un cambio de una economía de capital a una economía de alta tecnología orientada al servicio, basándose en estudios que encuentran un declive temporal en la asociación entre los precios y la información contable. En otros países, Cañibano *et al.* (2000) analizan la relevancia valorativa de los beneficios y el valor contable sobre los precios en el mercado de capitales español durante el periodo de 1983-1997. Los resultados indican que el valor en libros parece haber perdido relevancia, pero los beneficios capturan información de utilidad en la valoración de la empresa, resultados contrarios a las evidencias obtenidas en otros mercados, principalmente el americano. En México, Duran *et al.* (2007) analizan la relevancia valorativa de las cifras contables en la Bolsa Mexicana de Valores durante los años 1991 a 2003. Sus resultados proporcionan evidencia de que el patrimonio neto y los beneficios son relevantes para la valoración de empresas mexicanas y además, de los resultados obtenidos con el modelo de Ohlson (1995), se presenta evidencia de un modelo alternativo que arroja mayor poder explicativo incorporando como tercera variable explicativa los flujos de caja.

## METODOLOGÍA

El objetivo de este estudio es proporcionar evidencia sobre la relevancia valorativa de la

información contable para la formación de los precios de las empresas que cotizan en la Bolsa Mexicana de Valores y en el mercado de valores en Brasil. En este sentido, las hipótesis planteadas para ser contrastadas son las siguientes:

### Hipótesis

H1: Las variables contables fundamentales, resultado y Fondos Propios, no son relevantes en la valoración bursátil de empresas cotizadas en los mercados de capitales de México y Brasil.

H2: La variable “Resultado Neto” es más relevante en la formación de los precios que la variable “Resultado operativo”.

### Modelo Empírico

Las medidas contables que más atención han recibido en el estudio de la relevancia de la información han sido la cifra de resultados y el neto patrimonial, en gran medida apoyadas por el marco conceptual de valoración que resurge desde la publicación del trabajo de Ohlson (1995). En este contexto son innumerables los trabajos (Lev y Zarowin, 1999; Collins et al., 1997; Francis y Schipper, 1999), que tratan de determinar la relevancia de las variables contables utilizando regresiones del precio de mercado sobre estas dos variables contables, considerando la siguiente regresión de niveles:

$$MV_{it} = \beta_0 + \beta_1 BV_{it} + \beta_2 X_{it} + \varepsilon_{it} \quad (1)$$

Siendo,  $MV_{it}$  el valor de mercado de la empresa  $i$  en el tercer mes posterior al cierre de ejercicio (El periodo de carencia de 3 meses tiene como finalidad garantizar la disponibilidad de la información por parte de los inversores.),  $BV_{it}$  el valor contable de los Fondos Propios de la empresa  $i$  en el periodo  $t$ ;  $X_{it}$ , es el valor del Resultado Neto del ejercicio para la empresa  $i$ . Por lo anterior, la relevancia valorativa de las cifras contables queda definida como la capacidad de éstas para resumir información que influye o afecta a los precios del mercado. Para medir esta capacidad se utilizará un análisis de regresión que combina como explicativas de los precios estas dos variables; los Fondos Propios y la cifra de resultados, con base en modelos empíricos aplicados anteriormente por otros autores (Joos y Lang 1994; Collins, *et al*, 1997; Francis y Schipper, 1999). Con el fin de analizar la capacidad explicativa de una medida de resultado distinta al Resultado Neto, se llevará a cabo el análisis de regresión en el que la variable Resultado Neto se sustituirá por la variable  $EBIT$ , midiendo como tal el valor del resultado operativo antes de partidas extraordinarias del ejercicio para la empresa  $i$  en cada periodo, tal y como se recoge en la siguiente expresión:

$$MV_{it} = \beta_0 + \beta_1 BV_{it} + \beta_2 EBIT_{it} + \varepsilon_{it} \quad (2)$$

La estimación de las regresiones se realizará para las muestras de corte temporal y de sección cruzada conjuntamente. Además, para la depuración de datos atípicos que pudieran influir en los resultados de las estimaciones fueron eliminadas las observaciones para las que los residuos estandarizados de la regresión son superiores a tres desviaciones típicas. Con la finalidad de mitigar los inconvenientes de potenciales efectos de escala en las estimaciones de este tipo de modelos de precios, las regresiones son reestimadas deflactando todas las variables por el valor

del Activo Total (Brown, *et al.*, 1999; Dantoh, *et al.*, 2004), por tanto la ecuación de regresión queda finalmente definida como sigue:

$$\frac{MV_{it}}{AT_{it}} = \beta_0 + \beta_1 \frac{BV_{it}}{AT_{it}} + \beta_2 \frac{X_{it}}{AT_{it}} + \varepsilon_{it} \quad (3)$$

Donde  $MV_{it}$  = Es el valor de mercado de la empresa  $i$  en el tercer mes posterior al cierre de ejercicio;  $AT_{it}$  = Es el valor del Activo Total de la empresa  $i$  al término del ejercicio cerrado en el periodo  $t$ ;  $BV_{it}$  = Fondos Propios de la empresa  $i$  en el periodo  $t$ ,  $X_{it}$ , es el valor del Resultado Neto del ejercicio para la empresa  $i$  al término del ejercicio cerrado en el periodo  $t$ . Variables utilizadas en el estudio empírico Las variables independientes utilizadas en este estudio son las siguientes: Fondos Propios “*Book Value*” y Resultado Neto “*Earnings*” y “Resultado operativo” “*EBIT*”. La variable dependiente utilizada es el Valor de Mercado “*Market Value*”. Selección de la muestra La muestra objeto de estudio está constituida por empresas cuyos títulos han sido públicamente negociados durante el periodo 1990-2011 en los mercados de valores de México y Brasil. Para la selección de las empresas y su posterior clasificación se utilizó la base de datos ECONOMÁTICA. De ellas se eliminaron las empresas para las que no se dispone de información contable (cifra de resultados y Fondos Propios) durante el periodo analizado y aquellas que presentan un valor negativo de los Fondos Propios, así como aquellas empresas que pertenecen al sector financiero. Los datos se obtuvieron en miles de dólares a valor constante. Finalmente se eliminaron aquellas observaciones atípicas para cada variable. Como resultado de este proceso de selección la muestra final ha quedado compuesta por un total de 101 empresas mexicanas y 334 empresas brasileñas.

Análisis de resultados obtenidos El análisis que se presenta a continuación va a tratar de determinar la relación que existe entre el valor de mercado de los títulos de las empresas que componen la muestra y dos variables independientes, los Fondos Propios y el Resultado Neto de las empresas de la misma muestra. Para ello, el primer modelo que se estima es el que se corresponde con la ecuación:

$$MV_{it} = \beta_0 + \beta_1 BV_{it} + \beta_2 X_{it} + \varepsilon_{it} \quad (1)$$

Las estimaciones se realizan para el conjunto de años del período utilizado y se lleva a cabo la prueba de corte temporal y sección cruzada 1990-2011. Tomándose los datos una vez que se eliminaron observaciones para los residuos estandarizados de la regresión superior a tres desviaciones típicas, quedando conformada la base de datos por 22 años y con 1149 observaciones para las empresas mexicanas y 1391 observaciones para las empresas brasileñas. Dichos resultados evidencian que las variables independientes utilizadas son relevantes en las empresas seleccionadas, siendo estadísticamente significativas al nivel del 1% y mostrando un  $R^2$  de 36.7 % para las empresas mexicanas y en las empresas brasileñas se observa un  $R^2$  13.4%, la variable de patrimonio es significativa al 1% y la variable de Resultado neto no es significativa.

Tabla 1: Resultados de la Estimación de la Ecuación 1

País	Año	$R^2$	Variables Independientes	Coefficiente	T-stat	Sig.
México	1990-2011	36.7%	$BV_{it}$	0.320	10.926	0.000
			$X_{it}$	0.101	3.435	0.001

Brasil	13.4%	$BV_{it}$	0.144	4.850	0.000
		$X_{it}$	-0.027	-0.918	0.359

En el siguiente paso del estudio, se reestiman las ecuaciones deflactando las variables por el Activo Total, con el objetivo de tratar de mitigar los problemas derivados de las diferencias de escala. Por lo tanto, las tres variables del modelo son deflactadas por el valor del Activo Total quedando definida de la siguiente manera:

$$\frac{MV_{it}}{AT_{it}} = \beta_0 + \beta_1 \frac{BV_{it}}{AT_{it}} + \beta_2 \frac{X_{it}}{AT_{it}} + \varepsilon_{it} \quad (2)$$

Se realizó la prueba de corte temporal y sección cruzada 1990-2011. Cabe mencionar que se eliminaron observaciones para los residuos estandarizados de la regresión superior a tres desviaciones típicas, quedando conformada con 1152 observaciones para las empresas mexicanas y 1356 observaciones para las empresas brasileñas.

Tabla 2: Resultados de la Estimación de la Ecuación 2

País	Año	R <sup>2</sup>	Variables Independientes	Coefficiente	T-stat	Sig.
México	1990-2011	2.5%	$BV_{it}$	0.013	0.407	0.684
			$X_{it}$	0.017	0.531	0.595
Brasil		10.2%	$BV_{it}$	0.013	0.395	0.693
			$X_{it}$	-0.109	-3.333	0.001

Los resultados obtenidos proporcionan evidencia de que los coeficientes asociados a la variable Fondos Propios deflactados por el Activo Total Resultado Neto deflactado por el Activo Total no son estadísticamente significativos y se obtiene un R<sup>2</sup> del 2.5% para las empresas mexicanas y las empresas brasileñas obtienen un R<sup>2</sup> del 10.2% y únicamente la variable de resultado neto deflactada por el activo es significativa al 1%. Realizando un análisis global a los resultados obtenidos al aplicar los diferentes modelos (sin deflactar y deflactados) se detecta que los valores obtenidos por las regresiones el valor del R<sup>2</sup> ajustado es mayor en el modelo sin deflactar y la variable de Resultado Neto es significativa al 1%.

Para probar la hipótesis 2 que dice que la variable “Resultado neto” es más relevante en la formación de los precios que la variable “Resultado operativo” realizamos un análisis de los datos obtenidos al aplicar el modelo de la ecuación (1), modificado por el *EBIT*.

Es importante considerar que el resultado neto incorpora los componentes transitorios que pueden inducir a equivocarse a los inversores a la hora de valorar las acciones y tomar decisiones (Collins et al., 1997; y Hand y Landsman, 1999; Barth et al., 1998). Sin embargo, es pertinente mencionar que la definición de partidas extraordinarias es coincidente en todos los países lo que podría beneficiar el resultado. Pero por otro lado, la definición de resultado operativo capta mejor el componente permanente de los resultados. En base a estos argumentos, se ha realizado la sustitución del resultado neto por el resultado operativo para comparar los resultados obtenidos.

Así pues, el próximo paso es analizar los resultados arrojados por el modelo de la siguiente ecuación:

$$MV_{it} = \beta_0 + \beta_1 BV_{it} + \beta_2 EBIT_{it} + \varepsilon_{it} \quad (3)$$

Donde sustituimos la variable de resultado neto “ $X_{it}$ ” por la variable de resultado operativo “ $EBIT_{it}$ ”. Los resultados proporcionan evidencia de que los coeficientes asociados a la variable Fondos Propios es estadísticamente significativo al 1%, no así la variable de resultado operativo “ $EBIT$ ” y se obtiene un  $R^2$  del 28.3% para las empresas mexicanas y las empresas brasileñas obtienen un  $R^2$  del 14.5% y las variables utilizadas en el modelo son estadísticamente significativas al 1%..

Tabla 3: Resultados de la Estimación de la Ecuación 3

País	Año	$R^2$	Variables Independientes	Coefficiente	T-stat	Sig.
México	1990-2011	28.3%	$BV_{it}$	0.245	6.021	0.000
			$EBIT_{it}$	0.233	1.295	0.196
Brasil		14.5%	$BV_{it}$	0.110	3.881	0.000
			$EBIT_{it}$	0.064	2.252	0.024

Con respecto a los resultados obtenidos por las variables deflactadas por el activo total (ecuación 4), se observa que en las empresas mexicanas evidencian un  $R^2$  de 6.4% y sólo los Fondos propios deflactados por el activo total de la empresa son estadísticamente significativos al 1%. Sin embargo, las empresas brasileñas muestran un  $R^2$  del 16.9 y a diferencia de las empresas mexicanas, la variable de resultado operativo es estadísticamente significativa al 1%.

$$\frac{MV_{it}}{AT_{it}} = \beta_0 + \beta_1 \frac{BV_{it}}{AT_{it}} + \beta_2 \frac{EBIT_{it}}{AT_{it}} + \varepsilon_{it} \quad (4)$$

Realizando un análisis global a los resultados obtenidos al aplicar los diferentes modelos (sin deflactar y deflactados) se detecta que los valores obtenidos por las regresiones, el valor del  $R^2$  ajustado es mayor en el modelo sin deflactar y con respecto a las variables son estadísticamente significativas en forma contraria, es decir, la variable de fondos propios es estadísticamente significativa para las empresas mexicanas y la variable de resultado operativo es estadísticamente significativa para las empresas brasileñas.

Tabla 4: Resultados de la estimación de la ecuación 4

País	Año	$R^2$	Variables Independientes	Coefficiente	T-stat	Sig.
México	1990-2011	6.4%	$BV_{it}$	0.000	-0.005	0.996
			$EBIT_{it}$	0.065	2.022	0.043
Brasil		16.9%	$BV_{it}$	-0.007	-0.273	0.785
			$EBIT_{it}$	-0.167	-6.099	0.000

## CONCLUSIONES

En este trabajo se ha analizado la importancia de la relevancia valorativa de la información contable en la formación de precios de los títulos de empresas en dos países emergentes. De esta

manera, los resultados obtenidos permiten extraer las siguientes conclusiones, como resultado de contrastar las hipótesis planteadas en el trabajo. Se rechaza la hipótesis de que las variables contables fundamentales no son relevantes en la valoración bursátil de empresas cotizadas en los mercados mencionados (H1). La relevancia valorativa muestra que los coeficientes asociados a las variables fundamentales presentan una relación estadísticamente significativa con los precios de los títulos.

Los resultados arrojados por la prueba de corte temporal y sección cruzada 1990-2011 proporcionan evidencia de que las variables fundamentales utilizadas son relevantes en las empresas, siendo estadísticamente significativas al nivel del 1%. Para el caso de H2, esta hipótesis no es rechazada. Al llevar a cabo el análisis a los resultados arrojados al sustituir la variable de Resultado Neto por la variable de Resultado Operativo, se evidencia que las empresas obtienen mayores valores en los  $R^2$  ajustados del Resultado Neto en las empresas mexicanas, pero la significatividad asociada a los coeficientes es similar en ambos casos. Con respecto a las variables deflactadas, en términos generales podemos decir que obtienen mejores resultados en los  $R^2$  obtenidas al sustituir el modelo con el resultado operativo.

# INDICADORES DE DESEMPEÑO CON ENFOQUE DE EFICIENCIA Y EFICACIA APLICADOS A LA PEQUEÑA EMPRESA AGRICOLA MEXICANA BENEFICIADOS CON FINANCIAMIENTO DEL GOBIERNO

Sandra Cobián Velasco, Universidad de Guadalajara

## RESUMEN

*El Sector Agrícola, y en especial las pequeñas empresas, han ido experimentado mejoras, debido a que el gobierno les ha apoyado a través de programas de financiamiento. Los programas de financiamiento que el gobierno ofrece al sector agrícola son de gran importancia, porque de ello depende que este mejore, ya que es uno de los sectores muy importantes debido a que nos proveen de el recurso necesario tan indispensable como es la producción de alimentos. De tal manera que es fundamental que se de a conocer que se aprovecha al máximo este recurso cuando se otorgan diferentes financiamientos a los agricultores. Por otra parte, surge la necesidad de que los resultados que se obtienen se comprueben que realmente se mejoraron a través de la aplicación de indicadores. Por lo anterior, se parte de la necesidad de medir la evaluación del desempeño de los programas de Financiamiento al sector agrícola en el contexto mexicano a través de la aplicación de indicadores. Por tanto, el presente trabajo pretende aplicar indicadores (previamente diseñados) de evaluación del desempeño de los proyectos de programas de financiamiento gubernamentales a nivel local para el desarrollo de pequeñas empresas agrícolas con enfoque de eficiencia y eficacia . La aplicación de estos indicadores posibilita que se realice un análisis y que se brinde mayor información, de tal manera que es muy útil conocer los resultados que se obtienen una vez aplicados estos indicadores, por lo tanto nos sirven de apoyo en la toma de decisiones para conocer que efectivamente se aprovecha el recurso y se logra que se asigne de una mejor manera estos financiamientos.*

**PALABRAS CLAVE:** indicadores del desempeño, programas de financiamientos Gubernamentales, pequeña empresa agrícola, eficiencia, eficacia

## PERFORMANCE INDICATORS WITH EFFICIENCY AND EFFECTIVENESS APPROACH APPLIED TO THE MEXICAN AGRICULTURAL BENEFIT SMALL BUSINESS WITH GOVERNMENT FUNDING

### ABSTRACT

*The agricultural sector, especially small businesses, have been experiencing improvements, because the government has supported through financing programs. Funding programs that the government offers to the agricultural sector are of great importance because it depends that this improves, as it is one of the important sectors because we provide the necessary resource is as indispensable as food production. Thus it is essential that becomes known that maximizes this resource when granting various financing to farmers. Moreover, the need arises that the results obtained are checked actually improved through the application of indicators. Therefore, it is*

*part of the need to measure the performance evaluation of financing programs for the agricultural sector in the Mexican context through the application of indicators. Therefore, this paper attempts to apply indicators (previously designed) performance evaluation of the draft programs of local government funding for the development of small agricultural enterprises with focus on efficiency and effectiveness. The application of these indicators makes it possible to perform an analysis and to provide more information, so it is very useful to know the results obtained after applying these indicators, therefore they support us in making decisions know that the resource is used effectively and is assigned is achieved in a better way this funding.*

**JEL:** O13, Q00, Q14

**KEYWORDS:** performance indicators, financing programs Governmental small agricultural enterprise, efficiency, effectiveness.

## **INTRODUCCIÓN**

En el siglo XXI, la agricultura continúa siendo un medio esencial para el desarrollo sostenible y la reducción de la pobreza. En México es un sector tan importante que el gobierno busca la manera de apoyarlo ofreciendo diferentes opciones, ya sea mediante la banca múltiple o la banca de desarrollo a través de programas de financiamiento que cubren la totalidad o parte de las necesidades requeridas para la producción de alimento, indispensables no sólo para reducir la pobreza sino también como fuente de crecimiento para la economía nacional. El Sector Agrícola, y en especial las pequeñas empresas, han ido experimentado mejoras, debido a que el gobierno les ha apoyado a través de programas de financiamiento. Los programas de financiamiento constituyen apoyos financieros otorgados por instituciones nacionales e internacionales a los agricultores, empresarios y emprendedores pequeños y medianos para beneficiarse de la economía de mercado. La economía de la región se sustenta principalmente en el sector agrícola y ganadero, así como en micro, pequeñas y medianas empresas, las cuales contribuyen generando empleos y riquezas. En este contexto, las empresas enfrentan situaciones económicas y sociales diferentes a las que se encuentran en la zona metropolitana.

## **REVISIÓN LITERARIA**

Los programas de financiamiento que el gobierno ofrece al sector agrícola son de gran importancia, porque de ello depende que este mejore, ya que es uno de los sectores muy importantes debido a que nos proveen de el recurso necesario tan indispensable como es la producción de alimentos. De tal manera que es fundamental que se de a conocer que se aprovecha al máximo este recurso cuando se otorgan diferentes financiamientos a los agricultores. Por otra parte, surge la necesidad de que los resultados que se obtienen se comprueben que realmente se mejoraron a través de la aplicación de indicadores. Las condiciones que enfrentan las pequeñas empresas las hacen vulnerables a los cambios en su ambiente de negocios, en este contexto el acceso al financiamiento se convierte en un recurso valioso para mejorar sus condiciones competitivas. Es importante señalar la importancia de estas empresas para el desarrollo local, nacional y global (Di Tomasso y Dubbini, 2000) y por lo tanto la importancia de crear políticas que impulsen el desarrollo de las Pymes y las fortalezcan. En la administración pública el desempeño es un concepto relativamente nuevo. Según (Hernández, 2002) “desempeño implica la consideración de un proceso organizacional, dinámico en el tiempo y refleja modificaciones del entorno organizativo, de las estructuras de poder y los objetivos”.

El concepto de desempeño en el ámbito gubernamental normalmente comprende la eficiencia y la eficacia de una actividad o de un proyecto específico de carácter gubernamental. En este contexto la eficiencia se refiere a la habilidad para desarrollar una actividad o programa al mínimo costo posible, en tanto que la eficacia mide si los objetivos predefinidos para la actividad o programa se están cumpliendo. El concepto de eficacia equivale al “cumplimiento de metas y objetivos o a la satisfacción de la necesidad que motivó el diseño y desarrollo de la iniciativa, sin importar los costos y el uso de recursos (Mokate, 2001).

La eficiencia es la relación entre resultados e insumos. Esta relación se puede medir desde dos ángulos distintos:

- a) Si se está produciendo la mayor cantidad de productos o prestaciones posibles ante el nivel de recursos de que se dispone
- b) Cómo alcanzar un nivel determinado de servicios utilizando la menor cantidad de recursos posibles.

El indicador de eficiencia por tanto relaciona resultados contra gastos; además de estas dos dimensiones tradicionales Juan Cristóbal Bonnefi incorpora dos dimensiones del desempeño público: desempeño presupuestario y calidad en la prestación de los servicios públicos (Bonnefi y Armijo, 2005). La evaluación del desempeño encuentra su escenario en indicadores que son capaces de medir el grado de cumplimiento o no de las principales acciones de estos programas, precisamente en el siguiente epígrafe se hace un análisis de los mismos en su concepción teórica. Los indicadores de desempeño son instrumentos de medición de las principales variables asociadas al cumplimiento de los objetivos, que a su vez constituyen una expresión cualitativa o cuantitativa concreta de lo que se pretende alcanzar con un objetivo específico establecido. (Bonnefi y Armijo 2005). La evaluación del desempeño se asocia al juicio que se realiza una vez culminada la acción o la intervención. Busca responder interrogantes claves sobre cómo se ha realizado la intervención, si se han cumplido los objetivos (concretamente, la medida en que éstos han sido cumplidos), el nivel de satisfacción de la población objetivo, entre otras. En suma, se busca evaluar cuán bien o cuán aceptable ha sido el desempeño de determinado organismo público con el objetivo de tomar las acciones necesarias para perfeccionar la gestión” (Ministerio de Economía y Finanzas del Perú , 2000).

## **METODOLOGÍA**

La introducción de indicadores de evaluación del desempeño genera múltiples puntos de apoyo para la implementación de una gestión orientada a los resultados. En primer lugar, los indicadores apoyan el conocimiento y el aprendizaje del accionar que a menudo se desarrolla en forma bastante irreflexiva y rutinaria. Si el proceso de construcción de los indicadores se realiza en forma amplia y participativa, tanto los directivos públicos como los funcionarios inician un proceso de reflexiones e introspección acerca del quehacer institucional que los lleva a determinar las fortalezas y debilidades de los resultados de cada unidad y de la institución en su conjunto. Este proceso de aprendizaje tiene su vertiente más rica en el cambio del eje de análisis que realizan los funcionarios desde una visión centrada en los procesos hacia una visión que se orienta a los resultados e impactos del accionar institucional.

El apoyo que proveen los indicadores para adoptar medidas de mejoramiento que se refieren al rediseño de los programas modificando sus estrategias. De igual modo, las conclusiones que emanan de la evaluación del desempeño permiten realizar ajustes en la operación y valorar la

pertinencia de las acciones realizadas en pos del logro de los objetivos propuestos. Otro punto de apoyo es que la utilización de los indicadores favorece la competencia por recursos públicos. Con la finalidad de romper la inercia presupuestaria, los distintos programas y sectores compiten en igualdad de condiciones para obtener fondos durante la fase de formulación presupuestaria. Si bien la contestabilidad en el ámbito público inicialmente se concentró en el uso de proveedores privados para entregar bienes y servicios, recientemente se ha incorporado la noción de comparar los impactos y gestión entre distintos servicios públicos como un medio de utilizar en forma más eficiente los recursos.

Finalmente, el último punto de apoyo tiene relación con la transparencia y rendición de cuentas. La búsqueda de la eficiencia no se puede desatender de la participación ciudadana, particularmente en lo que se refiere a los niveles de cobertura y criterios de focalización de los programas públicos. Existen muchas técnicas para la generación de índices de desempeño y la mayoría de ellas se apoya en los juicios de expertos para la determinación de los pesos relativos de los indicadores dentro de la formación del índice. (Arriagada, 2002). Los indicadores que se aplicaron fueron previamente diseñados y tomados de un trabajo de investigación (Cobián 2012). En este contexto dichos indicadores se aplicaron en un proyecto de financiamiento en donde se apoyó a la pequeña empresa agrícola para la instalación de un sistema de riego tecnificado por goteo, siendo los siguientes:

Indicadores de Eficacia:

Nombre del indicador: Incremento de la producción de caña por hectárea

Fórmula de cálculo:

$$IPch = P_{c1} - P_{c0} / HBRT$$

Dónde:

$IP_{ch}$  = Incremento de la producción de caña por hectárea

$P_{c1}$  = Producción de caña real.

$P_{c0}$  = Producción de caña según proyecto.

HBRT: hectáreas beneficiadas con riego tecnificado.

Interpretación: Expresa los volúmenes en que se ha incrementado la producción de caña de azúcar por 1 hectárea beneficiada con el riego tecnificado.

Unidad de medida: t/ h.

Fuente informativa: Beneficiarios del proyecto y proyecto archivado en SAGARPA.

Usuarios: SAGARPA.

Indicadores de eficiencia:

Nombre del indicador: Incremento de ventas sobre insumos.

Fórmula de cálculo:

$$IVI = V_1 - V_0 / In_1 - In_0$$

Dónde:

IVI= Incremento de las ventas sobre insumos.

$V_1$ = Ventas del año real.

$V_0$ = Ventas anuales según proyecto.

$In_0$ = Insumos proyectados.

$In_1$ = Insumos reales.

*Interpretación:* Expresa los volúmenes en que se han incrementado las ventas por peso gastado y como resultado del beneficio con el riego tecnificado.

*Unidad de medida:* pesos.

*Fuente informativa:* Beneficiarios del proyecto y proyecto archivado en SAGARPA.

Usuarios: SAGARPA.

*Nombre del indicador:* Resultado bruto del financiamiento.

Fórmula de cálculo:

$$RBF = V_1 - V_0 / F$$

Dónde:

RBF= Resultado bruto del financiamiento.

$V_1$ = Ventas reales acumuladas.

$V_0$ = Ventas anuales acumuladas según proyecto.

F= Monto del financiamiento recibido.

*Interpretación:* Expresa los volúmenes en que se han incrementado las ventas por peso de financiamiento recibido.

*Unidad de medida:* pesos.

*Fuente informativa:* Beneficiarios del proyecto y proyecto archivado en SAGARPA.

Usuarios: SAGARPA.

## RESULTADOS

### Cálculo de los Indicadores al Cierre del Año 2011

Indicadores de eficacia:

Incremento de la producción de caña por hectárea

$$IPcp = P_{C1} - P_{C0} / HBRT = 487,5 - 463,2 / 3,86 = 6,30t / h$$

Como se observa se ha incrementado en 6,30 t la producción de caña de azúcar prevista en el proyecto por 1 hectárea beneficiada con el riego tecnificado lo cual es favorable.

Indicadores de eficiencia:

Incremento de ventas sobre insumos

$$IVI = V_1 - V_0 / I_{n1} - I_{n0} = 331500,00 - 185280,00 / 89362,50 - 107362,50 = (8,12) \text{ pesos}$$

Tabla 1: Datos del Proyecto de Financiamiento

UM: pesos mexicanos

No	Conceptos de insumos	Año 2011	Proyecto
1	Requerimiento de mano de obra	\$ 18 000,00	\$ 36 000,00
2	Costo de producción	71 362,50	71 362,50
	TOTAL	\$ 89 362,50	\$ 107 362,50

Como se observa se han incrementado las ventas en \$ 8,12 por cada peso de disminución del gasto insumido y como resultado del beneficio con el riego tecnificado, o sea el riego tecnificado ha provocado una disminución de los insumos al tener que contratar menos empleados por \$18 000,00 y un incremento de las ventas en \$ 146 220,00.

Resultado bruto del financiamiento

$$RBF = V_1 - V_0 / F = 331500,00 - 185280,00 / 78513,00 = 1,86 \text{ pesos}$$

Se han incrementado las ventas en \$ 1,86 por peso de financiamiento recibido en relación con lo proyectado, lo cual es favorable.

## CONCLUSIONES

La pequeña empresa agrícola mexicana tiene un bajo nivel de éxito empresarial, donde influye la falta de financiamientos y la dificultad de acceder a las fuentes de financiamientos tradicionales, por lo que constituye una necesidad y una oportunidad aprovechar los programas de financiamientos gubernamentales existentes en la agricultura, mediante un uso eficiente y eficaz del mismo. La aplicación realizada de indicadores, permite que las instituciones gubernamentales especializadas en otorgar estos financiamientos creen sus grupos de expertos y especialistas que evalúen periódicamente el desempeño de estos financiamientos, buscando las causas de las desviaciones negativas que le permitan asesorar adecuadamente a los beneficiarios, amén de ser un criterio valorativo para otorgar nuevas ayudas.

# **LA RELACION DE LA GESTION DE LA CADENA DE SUMINISTRO Y LAS TECNOLOGIAS DE LA INFORMACION Y COMUNICACIÓN EN LOS PROCESOS PRODUCTIVOS PARA UNA MAYOR COMPETITIVIDAD DE LA PYME MANUFACTURERA EN MEXICO**

Luis Aguilera Enríquez, Universidad Autónoma De Aguascalientes  
Octavio Hernández Castorena, Universidad Autónoma De Aguascalientes  
Oscar Pérez Veyna, Universidad De Zacatecas

## **RESUMEN**

*En el presente trabajo de investigación, con los resultados obtenidos se muestra claramente que existe una relación clave para la competitividad de la Pyme manufacturera entre la Gestión de la Cadena de Suministro y el uso de las Tecnologías de la información y comunicación en los Procesos Productivos, puesto que en la actualidad, no solamente las empresas tienen el objetivo de elegir un buen proveedor sino que es elemental que la comunicación y gestión con ellos sea efectiva, y para ello, es necesario que se comparta información para que los suministros estén siempre disponibles y con las características que las empresas siempre requieren. En este sentido, a través del tratamiento estadístico de ecuaciones estructurales utilizando el software EQS versión 6.1, se obtuvieron resultados obtenidos de los datos facilitados por los empresarios a través de una encuesta personalizada en un periodo entre marzo y abril del 2012 que determinan que la Pyme manufacturera en Aguascalientes, es Competitiva al tener una estrecha relación de parte de los procesos productivos con la GCS y uso adecuado de las TIC's. Para esta investigación se ha utilizando una muestra de 120 empresas las cuales contienen de 11 a 250 trabajadores.*

**PALABRAS CLAVES:** Gestión de la Cadena de Suministro, Tecnologías de la Información y Comunicación, Procesos Productivos, Competitividad, Pyme Manufacturera.

## **RELATIONSHIP OF SUPPLY CHAIN MANAGEMENT AND INFORMATION TECHNOLOGY AND COMMUNICATION IN PRODUCTION PROCESSES FOR GREATER COMPETITIVENESS IN MANUFACTURING SMEs IN MEXICO**

### **ABSTRACT**

*This research work, with the obtained results shows clearly that a relationship key to the competitiveness of manufacturing SMEs between the management of the supply chain and the use of information and communication technologies in productive processes, since currently, companies not only have the goal of choosing a good provider but it is elementary that the communication and management with them be effective, and so, it is necessary that will share information so that the supplies are always available and with the features that businesses always need. In this sense, through the statistical treatment of structural equations using the EQS software version 6.1, were results of the data provided by employers through a survey in a period*

*between March and April 2012 that determine that manufacturing SMEs in Aguascalientes, is competitive to have a close relationship on the part of production processes with the GCS and proper use of information and communication technologies. For this research has been using a sample of 120 companies which contain 11 to 250 employees.*

## INTRODUCCION

En la actualidad, la integración de las Tecnologías de la Información y Comunicación (TIC's), en la Pequeña y mediana empresa (PYME), del sector manufactura, permite que áreas importantes como los procesos productivos, sean elemento clave para que los niveles de competitividad en este tipo de organizaciones sean mayores (Radu, Ursacescu, Vladeanu, Cioc, y Burlacu 2005; Velarde, Araiza, Hernández y Tobías 2011). Para ello es importante que los empresarios tengan el enfoque de mejorar la dinámica operativas dentro de la organización para que los procesos productivos se vean beneficiados con la integración y correcto uso de las TIC's, asimismo, que el beneficio se comparta con los sistemas de suministro que de alguna manera no están al margen de los objetivos empresariales por mantener en óptimas condiciones el flujo y manejo de los recursos materiales (Gonzalvez-Gallego, Soto-Acosta, Trigo, Molina-Castillo, y Varajao, 2010; Porter, 2001)

En el presente trabajo de investigación, se tiene como objetivo analizar la relación que existe en la Pyme manufacturera al estudiar la relación de la GCS y la integración de las TIC's en los procesos productivos para obtener mejores índices de Competitividad. Para ello, es importante que el empresario se cuestione con las siguientes preguntas: ¿Qué impacto tiene la GCS en los procesos productivos para poder obtener mejores índices de Competitividad en la Pyme Manufacturera?, ¿Qué tanto impacta la relación de las TIC's en los procesos productivos para su mejor eficiencia operativa?, ¿Tener Procesos productivos controlados y abastecidos, permite a la Pyme manufacturera ser más competitiva?. Por lo tanto, la investigación realizada en el presente trabajo, muestra importantes resultados en los cuales se refleja con apoyo del tratamiento estadístico del software EQS 6.1 (Análisis de Ecuaciones Estructurales), los efectos positivos que tiene la relación de la GCS y las TIC's en los Procesos Productivos para una mayor Competitividad en la Pyme manufacturera en Aguascalientes la cual ha trabajado con una muestra de 120 empresas a través de una encuesta personalizada con los gerentes de las organizaciones.

## REVISIÓN DE LA LITERATURA

### La Gestión de la Cadena de Suministro y los Procesos Productivos

Considerando que en los años 80's se le dio una especial importancia a definir los conceptos sobre la cadena de suministro y su relación con áreas específicas dentro de las organizaciones, la Pyme manufacturera en México integró de inmediato su interés por maximizar el valor agregado en el manejo de los recursos materiales a través de un adecuado control de los costos de operación, una controlada gestión en la cadena de suministro (GCS) y una relación estrecha con las actividades operativas en base a las necesidades de los planes de producción (Maldonado, Hernández y Aguilera et al., 2012). Y para ello, la GCS desde un punto administrativo y

operativo requiere tener comunicación y coordinación con los actores involucrados en el manejo de los suministros desde la proveeduría, el servicio outsourcing si es que se requiere, con los apoyos de las políticas públicas y con el responsables de los procesos productivos (Aguilera, Hernández, López, 2012; Delgado, Portillo y Burciaga, 2012).

### Las Tecnologías de la Información y Comunicación en los Procesos Productivos

Para la Pyme manufacturera hoy en día, el uso de las TIC's es básico puesto que su integración permite darle mayor efectividad a la actividad operativa en empresas de este importante sector, en especial con proveedores y clientes, sin dejar a un lado detallistas, servicio outsourcing y mayoristas (Bocanegra y Vázquez, 2010). Para ello, la aplicación y uso de las TIC's a través de redes de comunicación, permite a las empresas involucradas en el manejo y suministro de los recursos materiales mejorar la gestión que se tenga con la proveeduría con la finalidad de no tener problemas de demora o paro de actividades en los procesos productivos (Clemons y Kimbrough, 1986; Porter, 1998). Desde luego es necesario para este tipo de organizaciones que el personal involucrado con el manejo y aplicación de las TIC's esté capacitado puesto que el uso de las TIC's no solo se integra en la parte administrativa y de gestión sino también en los procesos productivos directamente en los equipos o en los sistemas de información que deben manejarse para eficientar el suministro de los recursos materiales (Mora, Lerdon, Torralbo, Salazar, Boza y Vázquez 2012; Gómez, Salazar y Vargas, 2012).

### Los Procesos Productivos y la Competitividad

Desde siempre ha sido importante para la Pyme manufacturera, que los procesos productivos tengan controles con la finalidad de tener un mejor sistema administrativo para que aspectos relacionados con el control de inventario y con los planes de producción estén controlados de manera coordinada con los responsables de los suministros y así evitar al máximo las demoras de materiales y de paros de línea (Daniel y Rajendran, 2005), en este sentido, los empresarios deben tener claro que es necesaria la coordinación entre los suministros de los recursos materiales y la capacidad de los procesos productivos, con ello, el una relación positiva entre los procesos productivos y la mejora en las ventajas competitivas, permitirá a este tipo de empresas cumplir con los objetivos de suministro que tenga con sus clientes (Blumenfeld, Burns, Daganzo, Frick y Hall 1987; Arntzen, Brown, Harrison y Trafton 1995). Considerando que para la Pyme manufacturera es importante que la GCS sea elemento clave para que los procesos productivos no tengan problemas de cumplimiento y de productividad (Ramírez y Peña, 2011; Kadadevaramath, Mohanasundaram, Sarath Chandra y Rameshkumar, 2008; Singh y Urvashi, 2010), se plantea la siguiente hipótesis:

***H<sub>1</sub>***: A mayor GCS, mejor eficiencia de los Procesos Productivos en la Pyme manufacturera.

Así mismo, para la Pyme manufacturera es importante que el uso y adopción de las TIC's permita que los procesos productivos sean confiables y eficaces (Gonzalez, et al., 2010; Bardhan, Whitaker y Mithas 2006), y para ello, se plantea la siguiente hipótesis:

***H<sub>2</sub>***: A mayor integración y uso de las TIC's, mayor eficiencia de los Procesos Productivos de la Pyme manufacturera. Finalmente, es importante resaltar que en la Pyme manufacturera, su competitividad en gran medida se presenta por tener un mejor control y eficiencia de los

procesos productivos (Maldonado et al., 2012; Cho *et al.*, 2008; Gardiner, Martin y Tyler, 2004), y para ello se plantea la siguiente hipótesis:

**H<sub>3</sub>:** A mayor control y eficiencia de los Procesos Productivos, mayor Competitividad en la Pyme manufacturera.

## METODOLOGÍA

En el presente trabajo de investigación, se analiza la relación que tiene el uso de las Tecnologías de la Información y Comunicación y la Gestión de la Cadena de Suministro en los procesos productivos en la Pyme manufacturera de Aguascalientes para que se continúe con altos índices de competitividad. Para llevar a cabo el presente trabajo de investigación se tomó de referencia la base de datos que ofrece el Directorio Empresarial de Aguascalientes (SIEM, 2010) el cual refiere que en Aguascalientes, se cuenta con el registro de 8661 empresas en donde 584 son PYME manufacturera. El trabajo es de carácter empírico con una muestra de 120 Pymes del sector manufacturero donde se aplicó un instrumento de medición tipo encuesta personalizada para los gerentes o responsables de la actividad operativo de este tipo de organizaciones.

En el instrumento de medición, se utilizaron 3 bloques con escala Likert 1-5 los cuales refieren desde total desacuerdo hasta total acuerdo descritos de la siguiente manera: Bloque de Gestión de la Cadena de Suministro (GCS) con 20 ítems de Wisner (2003). El segundo bloque de Tecnologías de la Información y Comunicación (TIC's) compuesto por 10 ítems de Gonzalvez et al., (2010). El tercer bloque está compuesto por 3 secciones las cuales son: la automatización de los procesos compuesto por 6 ítems; la confiabilidad de los procesos de producción compuesto por 8 ítems; el control administrativo compuesto por 8 ítems y 4 ítems de desarrollo de personal de operaciones, adaptada de Machorro et al. (2007). Y por último, para el tercer bloque, la medición de la escala de la competitividad se tomo en cuenta tres factores elementales: desempeño financiero compuesto por 6 ítems; la reducción de los costos de las compras compuesto por 6 ítems; y el uso de tecnología compuesto por 6 ítems, adaptada de Buckley, Pass y Prescott (1988) y Chang, Lin, Chen y HUang (2005). Así mismo en el presente trabajo de investigación, se realizó un Análisis Factorial Confirmatorio (AFC) con la finalidad de evaluar la fiabilidad y validez de las escalas de cada uno de los bloques. Para ello, se utilizó un Modelo de Ecuaciones Estructurales, para comprobar si la estructura del Modelo teórico está correctamente diseñado, con el apoyo del software EQS versión 6.1; para ello, la fiabilidad se ha evaluado considerando el coeficiente  $\alpha$  de Cronbach y del índice de fiabilidad compuesta (IFC) (Bagozzi y Yi, 1988).

## CONCLUSIONES PRE-ELIMINARES

Las empresas manufactureras como la Pyme, en la actualidad requieren de implementar estrategias que les permita tener mejores gestiones con la proveeduría para evitar tener problemas de consideración en sus procesos productivos y con las entregas a los clientes. Para ello, es importante que el manejo de los recursos materiales sea eficaz y justo a tiempo ya que una falla en el manejo de los materiales, además de generar paros de producción, genera costos de importancia que con seguridad pondrían en riesgo el aspecto competitivo de este tipo de organizaciones. Desde luego, que los empresarios tendrían problemas serios con el suministro, con la confiabilidad a la proveeduría, con los clientes y con los aspectos de distribución de materiales con todos los actores involucrados en el proceso de suministro.

En este sentido, es importante que los gestores tengan especial atención en atender los detalles relacionados con la Gestión de la cadena de suministro y su relación con los procesos productivos. Para ello, es necesario que toda la estrategia de distribución este centrada en la gestión con la proveeduría, con sus capacidades de abastecimiento, con los controles logísticos y de transporte, con el control de los costos de operación, con la integración de actores externos como es el caso del servicio outsourcing y con el manejo claro de la información con respecto a las necesidades de los Procesos productivos para que la Gestión del suministro sea confiable y en tiempos solicitados de entrega de los recursos materiales.

# ASPECTOS CONCEPTUALES Y METODOLÓGICOS PARA MEJORAR LAS HABILIDADES DE COMUNICACIÓN DE LOS ALUMNOS COMO PARTE DE UNA EDUCACIÓN INTEGRAL

Beatriz Eugenia Flores Hahn, Universidad Autónoma de Querétaro  
Margarita Espinoza Arreola, Instituto Tecnológico de Querétaro

## RESUMEN

*El presente trabajo se ha realizado con el objetivo de tener un mejor desarrollo de las habilidades de comunicación entre los alumnos y los docentes, prevaleciendo el dialogo, sus derechos y el reconocimiento de la diversidad de los alumnos del nivel universitario, reconociendo las barreras que les impiden lograr una comunicación eficaz y desarrollando herramientas que faciliten un mejor proceso de comunicación alumno-docente. Comprender los términos de desarrollo, calidad, motivación, inclusión y reconocimiento, en la educación superior universitaria requiere una explicación de las dimensiones y los ejes fundamentales, en donde la comunicación juega un papel medular en un sistema educativo. Esto implica reconocer que en lugar de un problema teórico, nos enfrentamos con el paradigma de distinguir que el reconocimiento de los problemas de comunicación en el proceso de enseñanza-aprendizaje, es parte ineludible del compromiso profesional académico, a fin de brindar una educación integral e inclusiva, la cual debiera estar a la búsqueda permanente de la calidad, de la equidad, y de poner a disposición de los responsables de la toma de decisiones, información actualizada para mejorar los procesos de comunicación en las aulas, y contribuir a la excelencia del proceso educativo. En el proceso de investigación e interacción con los alumnos de nuevo ingreso al nivel universitario se detecta que **no tienen aún las suficientes** habilidades de comunicación eficaz, lo que es causa de problemas en sus procesos de aprendizaje y desarrollo, por lo que se pueden establecer estrategias por parte de los docentes para mejorar la comunicación y la motivación en las aulas, siendo importante que los directivos puedan aplicarlas dentro de los programas académicos para mejorar la calidad de la educación integral e incluyente que como compromiso tenemos que ofrecer a los alumnos .*

**PALABRAS CLAVE:** Educación, comunicación, diálogo, motivación, desarrollo, inclusión, reconocimiento.

## CONCEPTUAL AND METHODOLOGICAL ASPECTS TO IMPROVE STUDENTS' COMMUNICATION SKILLS AS PART OF AN INTEGRAL EDUCATION

### ABSTRACT

*This work has been carried out in order to have a better development of communication skills between students and teachers, dialogue prevail, their rights and recognition of the diversity of students in the college level , recognizing the barriers that impede effective communication and developing tools to facilitate a better process student-teacher communication . Understand the terms of development, quality, motivation , inclusion and recognition in university education requires an explanation of the dimensions and the fundamental , where communication plays a*

*central role in the education system . This means recognizing that instead of a theoretical problem , we are faced with the paradigm of distinguishing that recognition of the problems of communication in the teaching-learning process is an inevitable part of the academic professional commitment , in order to provide a comprehensive education and inclusive , which should be in constant search of quality , equity , and make available to those responsible for making decisions , updated information to improve communication processes in classrooms, and contribute to the excellence of educational process . In the process of research and interaction with new students at the university level is detected still have not enough skills of effective communication , which is causing problems in their learning and development , so that strategies can be drawn by teachers to improve communication and motivation in the classroom and it is important that managers can apply within academic programs to improve the quality of comprehensive and inclusive education as a commitment that we have to offer students .*

**KEY WORDS :** Education, communication, dialogue, motivation, development, inclusion, recognition.

## **INTRODUCCIÓN**

El problema general de la comunicación ha sido abordado desde la antigüedad por diversas disciplinas, entre ellas la filosofía, psicología, sociología y administración. En cada una se la estudia de acuerdo con su objeto peculiar y en correspondencia con el enfoque o modelo adoptado. Si se tiene en cuenta la complejidad que involucra un proceso que focaliza en personas, significados y símbolos, es comprensible que en torno al concepto de comunicación no exista unidad de criterios, por el contrario, hay discrepancias a partir de los enfoques generales de los que se parte.

## **REVISIÓN DE LITERATURA**

El concepto de comunicación se asocia a diferentes términos que contribuyen a su definición, no sin discrepancias por parte de algunos investigadores, como por ejemplo, mutualidad, reciprocidad, comunión, comunidad, posesión de algo en común, participación, transmisión, información, contaminación, expresión, codificación, accesibilidad, decodificación, similitud, trato, expansión, sociabilidad, afabilidad, afectividad, regulación y simpatía. Estos términos no son sinónimos, pero permiten describir mejor la compleja fenomenología comunicativa, pues solo existe comunicación cuando entre los sujetos ocurre un continuo, ininterrumpido y mutuo intercambio, no solo de mensajes, sino de cierta afectividad y afinidad. Comunicar, según indica la Real Academia Español es: hacer a otro partícipe de lo que uno tiene. De ahí la gran importancia de la academia en relación a dar lo mejor que tenemos de nuestros conocimientos, ideas y vivencias a nuestros alumnos. Las concepciones más recientes de la comunicación educativa la definen como un proceso inseparable de la actividad docente, donde intervienen diversas prácticas de interacción.

El lenguaje de los alumnos tiene dos formas de manifestación, en dependencia de donde transcurre la actividad del alumno: en el salón de clases o en el círculo de sus iguales. Es frecuente encontrar contradicciones entre el lenguaje de los alumnos y el contenido en el currículum oficial. En el proceso docente los alumnos aprenden a expresar el tipo de comportamiento lingüístico que se espera de ellos y que puede ser muy diferente del aprendido en su grupo social. La educación tradicional limita las posibilidades de expresión propia de los

educandos, los cuales dicen aquello que quiere oír el maestro, responden a sus preguntas, pero raras veces dicen lo que piensan, se expresan con sus propias palabras. El uso por el docente de códigos desconocidos para los alumnos da lugar a barreras que dificultan el aprendizaje. El lenguaje es indispensable para la producción del pensamiento. Entre ambos existe un círculo genético tal, que uno de ambos términos se apoya necesariamente en otros en una formación solidaria y en una perpetua acción recíproca. (J. Piaget, 1970, p80).

## METODOLOGIA

El presente trabajo se ha realizado con el objetivo de favorecer un mejor desarrollo de las habilidades de comunicación entre los alumnos y los docentes, prevaleciendo el dialogo, sus derechos y el reconocimiento de las formas diversas que tienen los alumnos y docentes del nivel universitario, a través de identificar la serie de formas de comunicación y cuáles son las barreras que les impiden lograr una comunicación eficaz, desarrollando herramientas que ayuden a facilitar un mejor proceso de comunicación alumno-docente, promoviendo que el nivel directivo pueda aplicarlas dentro de un marco curricular para mejorar la calidad de la educación integral e incluyente que como compromiso tenemos que ofrecer a los alumnos . Este proyecto se ha realizado en la Facultad de Contaduría y Administración de la Universidad Autónoma de Querétaro, durante los años, 2011, 2012 y 2013, con una parte de la comunidad académica seleccionada: alumnos de nuevo ingreso del nivel superior de las carreras de contaduría, administración y administración financiera.

Tiene como objetivo general: que los alumnos de nuevo ingreso al nivel universitario, mejoren sus habilidades de comunicación, a través de identificar las barreras que les impiden lograr una comunicación eficaz, desarrollando herramientas que les faciliten el proceso de comunicación alumno-docente. Al inicio del curso el docente deberá realizar una serie de dinámicas para: conocer a sus alumnos, identificar hasta donde sea posible sus características y formas de cómo realizan la comunicación. Estas actividades deben ser vivenciales, aprovechando la relación que se tiene con el alumno al ser su maestro y tutor, lo que te permite tener una mayor cercanía con el alumno. Posteriormente y habiendo detectado la situación de los alumnos, se programan diversas actividades para mejorar la comunicación y propiciar el dialogo docente-alumno, como dinámicas, talleres, ejercicios y juegos, mejorando sustancialmente las practicas académicas, reconociendo la importancia que merecen los alumnos, buscando mejorar las formas de comunicación que permitan una mayor convivencia, motivación y desarrollo de alumno.

Así mismo con estas acciones el docente tendrá una visión más amplia del alumno y su interacción dentro del grupo social de convivencia, buscando el manejo adecuado de la inclusión, respeto y tolerancia. A fin de lograr el desarrollo de competencias: se efectúan otras actividades de apoyo con el personal especializado de la propia facultad y grupos relacionados con las habilidades sociales, realizando actividades relacionadas para mejorar la comunicación, la autoestima personal, el desenvolvimiento entre su grupo, las habilidades de búsqueda de información, de diálogo, de participación social, de trabajo en grupo, etc. Con estas estrategias se intenta lograr que los estudiantes alcancen mejores niveles de comunicación, desarrollando aún más sus habilidades de comunicación, que les permita conseguir metas comunes con una mejor convivencia, motivación y desarrollo en su proceso académico. Finalmente se efectúa la integración del reporte final de resultados que contemple la serie de propuestas que se sugieren para mejorar el proceso de comunicación alumno-docente, mismas que se presenta a los

directivos de la institución, promoviendo que se permitan el desarrollo permanente de alguna de las herramientas propuestas, como enlace al proyecto integral de educación que actualmente se brinda en la institución, mejorando aún más la calidad de la educación que como compromiso tenemos que ofrecer a los alumnos de la facultad.

## RESULTADOS

Un proceso realmente educativo y no meramente instructivo sólo tiene lugar cuando las relaciones entre profesor y alumnos no son únicamente de transmisión de información, sino de dialogo, de intercambio, de interacción e influencia mutua, de reconocimiento y de respeto a sus derechos. La falta de una buena comunicación entre los estudiantes hace posible que no se pongan de acuerdos sobre determinados puntos a la hora de desarrollar un tema específico, ocasionando un bajo rendimiento académico, frustración, pérdida de la materia y muchas veces hasta el abandono de la carrera. Se debe privilegiar en las aulas los criterios de equidad, respeto, tolerancia en términos de tener una educación de todos y para todos, incluyente y de calidad con miras a potenciar al máximo el desarrollo integral los alumnos más allá de los contenidos curriculares. Con la implementación de este tipo de programas se tiene que: Los alumnos se desarrollan mejor y van perfeccionando el manejo de la comunicación eficaz en la medida que uno como docente esté interesado en el manejo de nuevas ideas, técnicas y dinámicas. Se genera la comunicación y convivencia en armonía, en valores de igualdad, libertad, con la aplicación de este proyecto el trabajo en las aulas se convierte en un espacio de interrelación muy importante. Las actividades deben de ser de manera continua y permanente inclusive agregarlas como una actividad curricular como paso obligatorio de los alumnos al inicio de sus carreras profesionales, manejar temas de comunicación, motivación socialización, tolerancia y respeto, etc., buscando en un futuro que algunos de estos temas se incluyan en la currícula académica básica. Además, para que este proceso sea realmente útil, se considera pertinente la difusión y el compartir los procesos y resultados con otros docentes. Llevar incluso las ideas y propuestas a las academias, para su análisis y complemento de más ideas relacionadas, que permitan mejorar este proyecto. A continuación, se presenta una síntesis con algunas de las propuestas recopiladas a través de los trabajos desarrollados en las aulas para este trabajo:

- Se propicia el desarrollo de una educación en armonía y convivencia, con un manejo de estrategias para enfrentar y manejar los conflictos y mejorar su convivencia en el aula.
- Se fomenta la participación e implicación de integrantes de la comunidad educativa en las iniciativas del docente, para mejorar los procesos enseñanza-aprendizaje y convivencia, fomentando modelos de intervención educativa exitosa en el aula, modelos cooperativos y vivenciales.
- Se deberá renovar periódicamente el material de las dinámicas a fin de estar actualizados en estos procesos
- Se deberá permitir como parte de su desarrollo integral de los alumnos y docentes la realización de actividades como intercambios entre grupos, participaciones en muestras, lecturas de artículos y revistas actualizadas, juegos de interacción, participación en congresos, foros y jornadas de análisis y reflexión.
- Se deberá mantener informado de manera permanente a los directivos de estas acciones así como a las academias, dando la difusión de actividades realizadas y de los resultados a fin de que

la comunidad académica y estudiantil las conozcan y se interesen, de tal forma se vaya creciendo en la aplicación de estos programas. La educación del estudiante requiere la participación y compromiso de todos los actores fundamentales de la educación universitaria: los docentes, las redes de apoyo, orientadores, entre otros, ya que la comunicación juega un papel fundamental tanto en la identificación de problemas educacionales como en reconocimiento de sus causas. Así mismo es tarea de los directivos y docentes crear instancias para propiciar el desarrollo de una mejor comunicación que propicie el diálogo entre los alumnos y los docentes.

## CONCLUSIONES

Con la realización de este proyecto tenemos puntos importantes que resaltar: El proceso de enseñanza- aprendizaje es un proceso eminentemente interactivo y comunicativo. La comunicación eficaz, permite garantizar el contacto psicológico real con los alumnos, formar una motivación positiva hacia el aprendizaje, crear las condiciones psicopedagógicas para la búsqueda colectiva y las reflexiones conjuntas, a fin de brindar una educación integral, inclusiva, de equidad y de calidad. Comprender los términos de desarrollo, calidad, motivación, inclusión y reconocimiento, en la educación superior universitaria requiere una explicación de las dimensiones y los ejes fundamentales, en donde la comunicación juega un papel medular en un sistema educativo. Esto implica reconocer que en lugar de un problema teórico, nos enfrentamos con el paradigma de distinguir que el reconocimiento de los problemas de comunicación en el proceso de enseñanza-aprendizaje, es parte ineludible del compromiso profesional académico, a fin de brindar una educación integral e inclusiva, la cual debiera estar a la búsqueda permanente de la calidad, de la equidad, y de poner a disposición de los responsables de la toma de decisiones un marco de acción para mejorar los procesos de comunicación en las aulas, y contribuir a la excelencia del proceso educativo. Practicar la comunicación eficaz y la motivación en la educación en las aulas, nos permite colaborar en el desarrollo de un mundo mejor.

# **FACTORES DE RETENCIÓN DE CAPITAL HUMANO EN LOS HOTELES DE CUATRO ESTRELLAS DE LA CIUDAD DE ENSENADA, BAJACALIFORNIA.**

Perla Teresa Valenzuela Cosio, Universidad Autónoma de Baja California  
Ma. Enselmina Marín Vargas, Universidad Autónoma de Baja California

## **RESUMEN**

*Los hoteles hoy en día se concentran en tener en su plantilla laboral al personal que brinde el mejor servicio al cliente, y así lograr una mayor presencia en el mercado y en el competitivo mundo del sector turismo. La presente investigación se plantea como objetivo caracterizar los Factores de Retención de Capital Humano aplicados por los hoteles de cuatro estrellas de la ciudad de Ensenada, Baja California, y a su vez conocer la perspectiva de la Gestión de Recursos Humanos respecto a ello, ya que es en esta área donde se generan las estrategias para conservar a los empleados. Para alcanzar este propósito, se diseñó un estudio exploratorio descriptivo donde se elaboraron y validaron instrumentos de recolección de datos que se aplicaron a una muestra de 51 empleados y 2 gestores de los hoteles objeto de estudio. Los resultados preliminares arrojan que existen factores relevantes para que los empleados permanezcan en su trabajo, tales como la relación con el supervisor, trabajo en equipo, balance entre vida laboral y personal. Siendo estos hallazgos de importante relevancia para conclusiones y recomendaciones.*

## **RETENTION FACTORS OF HUMAN CAPITAL APPLIED BY 4-STAR HOTELS IN THE CITY OF ENSENADA, BAJA CALIFORNIA**

### **ABSTRACT**

*Hotels nowadays concentrate in having in their workforce personnel that brings the best customer service, that way a bigger presence in the market and in the competitive world of tourism is accomplished. This investigation has the objective of characterizing the Retention Factors of Human Capital applied by 4-star hotels in the city of Ensenada, Baja California; and in turn to know the perspective of Human Resources management on the subject, seeing how in this department is where strategies to conserve employees are generated. In order to reach this goal, a descriptive exploratory study was designed where data-gathering instruments were elaborated, validated, and implemented to a study group sample of 51 hotel employees and 2 hotel managers. Preliminary results suggest that there are relevant factors concerning employees staying in the company: Employee-supervisor relation, team work, and a balance between work life and personal life. These findings are relevant for conclusions and recommendations.*

## INTRODUCCIÓN

Dentro de la organización, el recurso humano representa la vida de la misma, donde éste es quien opera a los otros recursos de la empresa, técnicos, materiales o financieros, y juntos se encaminan hacia el logro de objetivos. El capital humano como recurso vivo, aporta innumerables factores intangibles a la empresa tales como, ideas, destrezas, actitudes, valores y el conocimiento mismo, para así lograr un óptimo desempeño. Los recursos materiales, son un medio para alcanzar metas y encaminarse a un fin, pero son las personas quienes los convierten en realidad, son quienes le dan sentido a las empresas, ahí radica la importancia retener al capital humano para el éxito de las compañías (Werther, 2008).

Por tal motivo retenerlo en las organizaciones, crear sentido de pertenencia, desarrollarlo, capacitarlo y optimizar sus recursos evitando la rotación, genera un interés por caracterizar las técnicas que la gestión de recursos humanos aplica a sus empleados para incentivar su permanencia y lograr resultados organizativos a corto, mediano y largo plazo (Bateman, 2009). La hotelería tiene como objetivo el dar un excelente servicio al cliente, por tal razón se torna primordial tener entre sus filas al personal que mejor realice estas acciones. Ya que de esto depende el crecimiento y supervivencia de la organización, lo cual genera una ocupación más elevada y permite obtener una mayor participación en el mercado (Libro blanco del turismo, 2008). Los datos arrojados por ésta investigación, dejarán de manifiesto conocimiento para que los hoteles de cuatro estrellas objeto de estudio, puedan aprovechar la información generada para conocer a fondo cómo se encuentra la plantilla laboral creando estrategias de mejora, cambio y seguimiento para lograr una retención efectiva. Esto a través del instrumento aplicado que abordó el estudio de diez variables que son: capacitación, desarrollo, salarios, relación empleado supervisor, evaluación del desempeño, participación del empleado, comunicación, trabajo en equipo, relación con compañeros de trabajo y balance entre vida laboral y personal.

El presente artículo está distribuido de la siguiente forma: en el apartado de la revisión de la literatura, se define el concepto de retención, capital humano, hotel de cuatro estrellas y las características para su clasificación, contexto del turismo, así como la mención de la gestión de recursos humanos, que es la teoría que le da sustento a la investigación. En la metodología se indican los criterios utilizados para definir la población, muestra, tipo de estudio, la confiabilidad y descripción general de la recolección de datos. Para concluir se indican los resultados y conclusiones de esta investigación.

## REVISION DE LA LITERATURA

En el inicio del presente siglo, se da la transformación de la sociedad de una era industrial a una era del conocimiento y con esto un nuevo enfoque de la gestión de las organizaciones, como resultado de las nuevas realidades, tanto en el mundo del trabajo y en los perfiles de las competencias laborales (Werther, 2008). En la actualidad se presenta una constante y es cómo tener en las organizaciones y a su vez retener a los mejores empleados. En un mundo donde la competitividad se ha vuelto una realidad apremiante, las empresas entran en la guerra por el talento. En primer lugar se debe saber claramente que los empleados juegan un papel primordial

para el éxito de las compañías. Querer conservar a los mejores da pie a establecer estrategias para lograrlo (Dibble, 2001).

Las organizaciones deben permitirse tener un enfoque para potenciar y desarrollar al capital humano, pues el tener una plantilla laboral comprometida, desarrollada y capacitada permite ser una empresa competitiva y con clientes satisfechos (Valencia, 2005). Las habilidades, conocimientos y aptitudes son distintivos y particulares en cada individuo, lo cual permite, estimular la innovación y por ende proporciona un impulso hacia la creación de satisfactores. En el instante en que un empleado opta por abandonar una empresa, ésta se ve afectada ya que pierde conocimientos que le fueron enseñados y es aún más perjudicial si éste decide irse a laborar con la competencia, pues ahora todo lo que se invirtió en él, el competidor será el que aproveche la formación del empleado sin invertir en ello. Situación que representa costos futuros para la empresa que pierde un elemento pues invertirá nuevamente en reclutar, seleccionar y capacitar a alguien más (Capelli, 2003).

Para Friedman, Hatch, Walker (2000), los seres humanos son considerados como objetivos de inversión en anticipación de unos beneficios. En macroeconomía, los gobiernos intervienen en educación y formación anticipando beneficios con un mayor empleo u otros signos de progreso. En microeconomía, las empresas intervienen en programas para el personal anticipado beneficios como un precio más alto de sus acciones en el largo plazo u otros indicadores de valor de la empresa.

Los empleados que las empresas buscan retener, son aquellos talentosos y que aportan valor a la organización, donde aparte de las cuestiones técnicas den algo más, ya sea compromiso con la empresa, propongan mejoras, soluciones, aporten ideas, trabajen equipo, lo cual influirá positivamente en los clientes, accionistas y compañeros de trabajo (Dibble, 2001). Según Friedman, *et.al.*, (2000), la retención se refiere a la capacidad de evitar que algo se pierda o alguien se vaya. En gestión de recursos humanos, la ausencia de bajas en un puesto o puestos de trabajo durante un tiempo determinado. La Organización para la Cooperación y el Desarrollo Económicos (OCDE), define el capital humano como los conocimientos, habilidades, competencias y atributos incorporados en los individuos y que facilitan la creación de bienestar personal, social y económico.

La Gestión de Recursos Humanos, es el conjunto de políticas y prácticas necesarias para dirigir los aspectos de los cargos gerenciales relacionados con los recursos humanos, incluidos reclutamiento, selección, capacitación, desarrollo, recompensas, evaluación del desempeño y retención de los empleados (Chiavenato, 2000). Para fines de esta investigación se tomará en cuenta sólo la clasificación de 4 estrellas. Para que un hotel ostente estas insignias, es preciso cumplir con ciertas características. La clasificación internacional de los establecimientos hoteleros, dicta que para que sea considerado de 4 estrellas debe de tener servicio de comida permanente diurno y nocturno. Contar con personal altamente calificado que posea título o certificado. Ser bilingües, dominar aparte del español otro idioma, de preferencia el inglés. Con instalaciones impecables. A demás de permanecer lejos de fábricas que generen ruido u olores desagradables. Tener estacionamientos a razón de un cajón por cada cuatro habitaciones. Tener un vestíbulo con materiales de mármol u otro tipo de finos materiales. Puede contar con bar y salas de fiestas, con estilos lujosos (Lambertine, 1988).

En México, la autoridad oficial en materia de turística, es la Secretaría de Turismo, quien brinda estadísticas y monitorea las actividades de los hoteles. Desde el año 1993, esta institución ha estado ausente en la clasificación de la calidad. Ahora sólo reporta porcentajes de ocupación,

vaciándola en su sistema de estadistas DataTur. Existe una asociación sin fines de lucro llamada Calidad Mexicana Certificada, A.C. Calmecac, quien certifica a los hoteles con su sistema de estrellas y diamantes. Las primeras se asignan por la infraestructura y los diamantes por el servicio que oferta. La Secretaría de Turismo indicó que en 2011 México recibió cerca de 20.811 millones de llegadas internacionales de turistas, lo cual dejó una derrama económica de 11.868 millones de dólares, siendo la tercera fuente de captación de divisas para el país. El turismo aporta cerca del 9% al Producto Interno Bruto (PIB). La estructura del PIB del sector turístico se compone por la actividad de otros sectores: 28.1% transporte, 20.4% hospedaje y alojamiento, 19.7 servicios inmobiliarios, manufacturas 16.2%, 6.2 comercio, 3.2% construcción y esparcimiento 1.5%.

Datos de la Secretaría de Turismo (2012), estiman que el sector turismo genera 10 millones de empleos, 2.5 directos y 7.5 indirectos, del cual el 20.4 % trabaja en el área de hospedaje. México cuenta con más de 17 mil hoteles y más de 650 mil cuartos de alojamiento. Existen 1,860 establecimientos de clasificación 4 estrellas con un total de 126,347 cuartos de hospedaje. El Turismo en Baja California genera el 7.5 % de los empleos (Guía de Inversión Turística, 2010). Se cuenta con un diverso número de elementos que a la vez, potencian, dinamizan su desempeño económico lo que se manifiesta en flujos crecientes de recursos humanos (Barajas, 2009). Actualmente en Baja California, se tiene una oferta de 43 establecimientos de hospedaje de categoría 4 estrellas lo que se traduce a 3,805 cuartos (Sector, 2011). En Baja California en el 2009 según datos de la Confederación Nacional Turística, 2170 personas en hoteles categoría 4 estrellas, lo cual ha favorecido de ventajas comparativas derivadas de su ubicación geográfica y de su capacidad de atraer inversión. Datos de la Secretaría de Economía indican que el sector servicios aporta un 64% al PIB estatal. Este sector emplea al mayor porcentaje de la población total ocupada con 61.4% (Secretaría de Desarrollo Económico, 2012).

## METODOLOGÍA

La metodología utilizada en este estudio se basó en el diseño, validación y aplicación de un cuestionario. De acuerdo a Hernández, Fernández y Baptista (2006), la investigación posee un enfoque cuantitativo descriptivo, no experimental de corte transversal fundado en la recolección de datos numéricos que han sido estudiados y examinados mediante pruebas estadísticas, donde no se manipularon los datos ni se tuvo influencia sobre ellos, recabándolos en un solo periodo de tiempo. La elección de esta muestra se realizó de manera no probabilística por bola de nieve, la cual consiste en localizar a algunos individuos, los cuales conducen a otros, y estos a otros, y así hasta conseguir una muestra suficiente (Hernández *et.al.*, 2006). Lo anterior porque se propuso la idea a 14 hoteles de cuatro estrellas de la ciudad de Ensenada, que es el sector de interés, y esto llevó a si se rechazaba la aplicación del estudio en un hotel, se contactaba a otro y así hasta conseguir el mayor número de empresas, que finalmente fueron dos las que accedieron a la aplicación del estudio.

Para la recolección de datos se elaboró un instrumento de 25 reactivos. Aplicado a una muestra de 51 empleados y 2 gestores de los hoteles objeto de estudio. Midiendo 10 variables: capacitación, desarrollo, salarios, relación con el supervisión, evaluación del desempeño, participación del empleado, comunicación, trabajo en equipo, relación con compañeros de trabajo y balance entre vida laboral y personal. La categoría de respuestas fue en escalamiento numérico tipo Likert de cinco valores, donde (1) corresponde a totalmente en desacuerdo y (5) a totalmente de acuerdo. La aplicación del instrumento se llevó a cabo en el primer trimestre de 2013. Los valores del coeficiente Alfa de Cronbach arrojan un resultado global de .930, lo que revela que las variables sí miden lo que indican medir y arrojan datos confiables (Blanco, 2000). Para la

presentación de resultados, se utilizó el programa estadístico “Statistical Package for the Social Sciences” (SPSS) en su versión 20, donde se hicieron pruebas con estadísticos descriptivos.

## RESULTADOS

En el trabajo de campo se encontraron datos oportunos, que permitieron conocer los factores de retención relevantes para los empleados y para los gestores. En primera instancia se hace mención los datos demográficos los cuales indican que de los 51 empleados encuestados, el 31.4% son del género femenino; el 66.7% son del género masculino. En cuanto a la edad el mayor porcentaje lo tienen las personas con un rango de edad entre 26 a 34 años, representado por un 27.5% y equivalente a 14 personas, seguido de un 21.6% en el rango de 18 a 24 años, lo que se traduce en 11 personas, indicando que es una población joven. La categoría de antigüedad de los empleados en los hoteles corresponde en su mayoría al rango de 1 a 3 años, con un 45.5% constituido por un total de 23 personas. Se observó que un 66.7% de la muestra labora en el turno matutino, representado por 34 personas.

Los factores más relevantes para los empleados son, en primer lugar, la relación empleado-supervisor, donde con una frecuencia de 47 empleados e igual a 92.1% de ellos, manifiestan que su relación con su jefe está en un alto nivel. Por el contrario, los gestores indican que esta se encuentra en un nivel medio. Lo cual es un hallazgo importante. El segundo puesto es para el trabajo en equipo, el 80.3% de la muestra correspondiente a 41 personas, aseguran que este aspecto se encuentra en un alto nivel, concordando con la opinión de los gestores. En tercer lugar se encuentra la participación del empleado, 40 personas traducido a un 78.4% afirman que la empresa sí pone una elevada atención en esta área. Con el mismo número de personas y de porcentaje está el balance entre vida laboral y personal, no obstante la organización indica que dicho aspecto está en un nivel medio. Los tres factores con porcentajes más bajos de un total de diez, son el desarrollo donde un 52.9% equivalente a 27 personas, consideran que la empresa sí brinda un alto desarrollo a sus empleados. De igual forma la Evaluación del desempeño con el 54.9% constituido por 28 personas, indican que los hoteles cuentan con un óptimo y eficiente sistema de evaluación del desempeño. Con el mismo número de porcentaje está el salario. Los gestores indican que esta variable tiene un nivel medio.

## CONCLUSIONES

La investigación realizada para determinar los factores de retención conlleva a afirmar que los hoteles tienen enormes posibilidades de aplicar estrategias para conservar a los empleados. Las principales prácticas para ello permiten ver un panorama diverso y con una tendencia cambiante hacia el valor que le otorga la gestión de recursos humanos. En base a los resultados se pudo observar que una relación adecuada con el supervisor genera y dinamiza un efecto positivo en la retención del trabajador, estudiado en este caso desde la perspectiva de una relación mutua basada en la ayuda, responsabilidad y respeto así como en la claridad con la que se presentan los objetivos de trabajo.

Ya que el líder ejerce su papel como interlocutor directo entre organización y empleado en tanto es él quien gestiona las recompensas vinculadas al rendimiento en el puesto y quien ofrece oportunidades de formación y carrera, así como apoyo emocional a su equipo (Mondy, 2010). Trabajar en equipo genera una influencia efectiva en la retención, con componentes en esta variable, que permiten ser de utilidad, tales como la colaboración, aportación de ideas. De acuerdo con Buller, (1986), (citado por Spector, 2002), los equipos se crean con el propósito de

enriquecer las labores en la empresa, asignando diversas tareas, proyectos, actividades para hacerlas de manera conjunta y lograr objetivos organizacionales.

La participación del empleado arroja resultados concluyentes en base a su repercusión en la retención de los empleados, lo que tiene un gran impacto y permite incentivar los aspectos estudiados en este constructo, incluye el requerimiento y valoración de la opinión del colaborador para tomar ciertas decisiones y la posibilidad de sugerir mejoras relacionadas con el trabajo

Las estrategias conciliación entre vida laboral y personal brindadas por la empresa, hacen que los empleados de la organización consideren como uno de los aspectos más relevantes el tener ese equilibrio, visto desde aspectos como flexibilidad en los horarios, facilidades para atender necesidades familiares y la propia percepción de si existe este balance. Mediante esta vía los empleados sienten bienestar y perciben a la organización de manera positiva. Las prácticas de desarrollo del empleado, se estudiaron a través de la formación, promoción y compromiso de la empresa con este aspecto. Los resultados obtenidos permiten concluir que cada uno de los componentes estudiados en esta variable, no son significativos para potenciar la permanencia de los trabajadores. Se infiere que es porque no se considera una necesidad real o porque la formación no está perfectamente orientada a las características de los empleados y sus requerimientos específicos, o porque los empleados consideran insuficiente lo hecho hasta el momento por la organización en materia de desarrollo.

El departamento de recursos humanos debe tomar especial atención en este tópico ya que los beneficios de contar con programas de desarrollo dentro de las empresas, es que las vacantes que se presenten pueden ser conectadas dentro de la misma, sin necesidad de captar capital humano externo. De igual forma fomentar el conocimiento del personal y mantener una baja tasa de rotación (Werther, 2008). El desarrollo tiene el potencial de ser a largo plazo, atravesando las fronteras de la rutina diaria de trabajo, donde la organización y el empleado deben ir a un mismo paso para el logro de objetivos (Mondy y Robert, 2005). El sistema de evaluación del desempeño, visto desde tres ángulos, como el brindar estímulos e incentivos, así como la mejora en el desempeño y la retroalimentación, esto da pie a concluir que este no es uno de los factores que retienen en su totalidad a los empleados. Creando un cuestionamiento sobre qué tan eficaces son los programas de evaluación de desempeño, pues si se cuenta con ello, pero no están asegurando la retención de los empleados. El salario, analizado desde tres vertientes, prestaciones de ley, equidad retributiva y diseño equitativo de salario según funciones desempeñadas. Los resultados, indican que si se tiene la firme intención de retener al capital humano, es necesario considerar la percepción de los empleados a través de estos resultados, puesto este aspecto no es del todo un agente determinante en la permanencia de los trabajadores, no es el factor más atractivo. Lo cual hace ver que los empleados tienen otros lazos con la organización, fundamentalmente con el supervisor con los retos y beneficios que implica laborar en equipo, así como con el balance entre vida personal y laboral.

### Limitaciones

Dentro de las limitaciones de este estudio se resaltan, en primer lugar el número reducido de empresas a las que se pudo tener acceso para la aplicación del instrumento, de igual forma se eliminó la información recabada en un hotel al evaluar con expertos, que los datos tenían un sesgo importante y que afectaría de manera considerable los resultados. Se espera que en futuras investigaciones se integren un mayor índice de hoteles de cuatro estrellas.

## RESUMEN

*El Régimen de aseguramiento obligatorio, regulado en la Ley del Seguro Social, contempla el diseño de un sistema de naturaleza mixta, que permite al trabajador seguir cotizando al Seguro Social. Este sistema híbrido llamado Continuación voluntaria en régimen obligatorio; contempla la opción que tienen los trabajadores que han concluido una relación laboral y desean seguir acumulando cotizaciones semanales necesarias para obtener, los derechos de los seguros, de invalidez y vida, como los de cesantía en edad avanzada y vejez contemplados en la ley del seguro social de 1973.*

**PALABRAS CLAVES:** Trabajador, Continuación voluntaria, relación laboral.

## THE VOLUNTARY CONTINUATION IN THE OBLIGATORY REGIMEN OF THE SOCIAL SECURITY LAW

### ABSTRACT

The Regime of obligatory insurance, regulated by the Law of the Social Insurance, contemplates the design of a system of mixed nature, which allows for the worker to continue quoting to the Social Insurance. This hybrid system called voluntary Continuation in obligatory regime; contemplate the option that there have the workers who have concluded a labour relation and want to continue accumulating weekly contributions necessary to obtain, the rights of the insurances, of invalidity and life, as those of unemployment in advanced age and oldness contemplated in the law of the social insurance of 1973.

**JEL:** K1, K31, K34

**KEYWORDS:** Worker, Voluntary Continuation, Labour Relation

### INTRODUCCIÓN

La presente investigación tiene como principal objetivo, analizar el seguro de continuación voluntaria en el régimen obligatorio, contemplado en la Ley del Seguro Social, siendo éste; un sistema híbrido, el cual permite a los trabajadores que se han quedado sin empleo seguir cotizando, para seguir acumulando las cotizaciones semanales necesarias para la obtención tanto de los derechos de los seguros de invalidez y vida, así como los de cesantía en edad avanzada y

vejez. (Pérez, Fol 2011) El seguro social cubre las contingencias y proporciona los servicios que se especifican a propósito de cada régimen particular, mediante prestaciones en especie y en dinero, en las formas y condiciones previstas por la ley del seguro social y sus reglamentos. Es así como la Ley del Seguro Social de 1973 vigente hasta el 30 de junio de 1997, ya contemplaba el otorgamiento de protección a futuro, a través del seguro de pensiones, mediante las modalidades de cesantía en edad avanzada y vejez. Esta ley, promulgada en 1973, contempla que existe una cesantía en edad avanzada, cuando el asegurado quede privado de trabajos remunerados después de los sesenta años de edad. La contingencia que cubre este seguro, obliga al Instituto Mexicano del Seguro Social al otorgamiento de las siguientes prestaciones:

- a) Pensión.
- b) Asistencia médica
- c) Asignaciones Familiares
- d) Ayuda asistencial.
- e) Aguinaldo anual.

Una de las situaciones a las que se enfrenta el trabajador al quedar desempleado, es ver afectada la cotización y acumulación de semanas cotizadas para poder ejercer el derecho a una pensión por cesantía en edad avanzada y vejez; y es precisamente el seguro a la continuación voluntaria al régimen obligatorio, contemplado en la Ley del Seguro Social de 1973 y la de 1997 la que permite salvaguardar los derechos mínimos garantizados por la Constitución Política de los Estados Unidos Mexicanos, en su artículo 123 fracción XXIX el cual establece que: "Se considera de utilidad social el establecimiento de cajas de seguros populares de invalidez, de vida, de cesación involuntaria del trabajo y de otras con fines análogos, para lo cual el gobierno federal, como el de cada estado, deberán fomentar la organización de instituciones de esta índole, para difundir e inculcar la previsión popular." Así se crearon en diferentes fechas institutos especializados para la atención de los trabajadores, que de acuerdo al tipo de empresa en la que laboraban, era la naturaleza de la institución que los respaldaba. De esta forma nace el Instituto Mexicano del Seguro Social, el cual es un organismo autónomo, encargado de proporcionar tanto las prestaciones económicas así como en especie; a todos los trabajadores que son sujetos de una relación laboral entre particulares.

## **METODOLOGÍA**

La metodología utilizada consistió en una investigación documental, analizando la Ley del Seguro Social de 1973 y 1997, Los Reglamentos aplicables, Doctrina y los Acuerdos del Consejo Técnico máxima autoridad del IMSS; éste análisis permitió conocer el seguro voluntario llamado continuación voluntaria en el régimen obligatorio; así como los beneficios que tiene éste seguro, el cual permite al trabajador que ha quedado desempleado, seguir cotizando para acumular las semanas necesarias para ejercer sus derechos a los diferentes seguros que contempla la Ley del Seguro Social, así mismo se conoció el costo económico que tendría que pagar el trabajador al ser sujeto de la continuación voluntaria en el régimen obligatorio.

## **RESULTADOS**

La continuación voluntaria en el régimen obligatorio, es clasificada por el Instituto Mexicano del Seguro Social (IMSS) como la modalidad 40; ésta modalidad permite a los trabajadores, lograr completar las semanas necesarias para la obtención de una pensión por invalidez, cesantía en edad avanzada y vejez. El trabajador podrá obtener uno de estos tipos de pensión en los siguientes supuestos:

- a) Invalidez; el cual se otorga por la pérdida de la capacidad del trabajo.
- b) Por cesantía en edad avanzada; se otorga por la privación del trabajo remunerado a partir de los 60 años.
- c) Por vejez; se otorga a los 65 años y al tener reconocidas 500 semanas de cotización.

El trabajador para poder ser sujeto de la continuación voluntaria en el régimen obligatorio debe reunir las siguientes características:

1.- Debe tener como mínimo cincuenta y dos cotizaciones semanales, acreditadas en el régimen obligatorio, en los últimos cinco años al ser dado de baja.

2.- Puede continuar en los seguros conjuntos de invalidez y vida así como de retiro, cesantía en edad avanzada y vejez, quedando inscrito con el último salario o superior al que tenía en el momento de la baja del régimen obligatorio.

3.- Las cuotas de financiamiento de este régimen se pagarán por mensualidades adelantadas; El derecho establecido a elegir la opción de continuar voluntariamente cotizando en el régimen voluntario, se pierde si no se ejercita mediante solicitud por escrito dentro de un plazo de cinco años a partir de la fecha de baja. El costo económico de esta modalidad de aseguramiento se integra de la siguiente manera:

1.- Las cuotas de financiamiento ascienden en su totalidad a 10.075% sobre el salario base de cotización y está integrada de la siguiente manera;

- a) Para el seguro de invalidez y vida el 1.75% más el 0.0625%, dando un total de 2.375% sobre el salario base de cotización.
- b) Para el seguro de cesantía en edad avanzada y vejez el 2.0% más el 4.27% dando un total de 6.275% sobre el salario base de cotización.
- c) Para las prestaciones en especie de pensionado el 1.425%.

Como es de apreciarse en el párrafo que antecede solamente se cubren las cuotas referentes al seguro de invalidez y vida, cesantía en edad avanzada y vejez y las prestaciones en especie del pensionado, por lo que prácticamente existe un ahorro para el trabajador, en el costo fiscal que tendría el recibir un salario, como es el Impuesto Sobre la Renta, Impuesto Sobre Nóminas y el INFONAVIT. La continuación voluntaria en el régimen obligatorio se termina; en el momento en que el trabajador lo manifieste por escrito, deje de pagar las cuotas durante dos meses consecutivos o sea dado de alta nuevamente en el régimen obligatorio, al momento de estar sujeto a una relación laboral. El seguro de continuación voluntaria en el régimen obligatorio, como se ha analizado, permite al asegurado que ha sido dado de baja, continuar cotizando de manera voluntaria en el régimen obligatorio. Al ejercer este derecho, el asegurado obtiene los siguientes beneficios:

- a) Seguir cotizando dentro del régimen obligatorio, aun sin estar bajo la subordinación de un patrón.
- b) Cotizar en el régimen obligatorio, con un salario igual o mayor con el que venía cotizando.

- c) Al poderse dar de alta con un salario mayor al que venía cotizando, le permite al asegurado poder anticiparse a obtener un mejor monto de pensión a la hora de ejercer ese derecho, de ahí la conveniencia de cotizar bajo este régimen, puesto que se puede planear que monto de pensión desea obtener a un futuro.
- d) El costo financiero que tendría es mucho menor al que se pagaría como trabajador, por lo que es conveniente ya que las cuotas de financiamiento totales ascienden a 10.075% sobre el salario con el que cotice en este régimen.
- e) El asegurado puede adquirir el seguro familiar ya que el régimen de continuación voluntaria en el régimen obligatorio no incluye la asistencia médica, por lo tanto puede comprar el seguro familiar para él y sus familiares. Este seguro cubre las prestaciones en especie por enfermedades y maternidad, como son atención médica, quirúrgica, farmacéutica y hospitalaria.

La continuación voluntaria en el régimen obligatorio, como se ha analizado solamente contempla los seguros de invalidez y vida, cesantía en edad avanzada y vejez, dejando fuera las prestaciones en especie del seguro de enfermedades y maternidad, lo que significaría para el trabajador que opte por esta modalidad, el no recibir atención médica ni las prestaciones en especie; para ésta situación, se contempla en la Ley del Seguro Social el seguro de salud para la familia; los sujetos que cubre este seguro son: El asegurado, la esposa, hijos y padres. El seguro de salud para la familia solo cubre las prestaciones en especie por enfermedades y maternidad, como son la atención médico quirúrgica, farmacéutica y hospitalaria. Las cuotas de financiamiento para éste seguro se establecen por cada miembro de la familia tomando en cuenta la edad de cada uno. Que va de 0 a 19 años una anualidad de \$1,320.80 y de 60 años en adelante una anualidad de 3,472.10. El seguro de salud para la familia puede contratarse de forma individual, es decir por cada uno de los miembros de la familia; o de manera colectiva, es decir por toda la familia. Los requisitos para la contratación individual son:

1. Suscribir un convenio con el Instituto Mexicano del Seguro Social
2. La solicitud puede realizarse durante todo el años, pagando la anualidad correspondiente
3. La renovación se tendrá que realizar dentro de los 30 días anteriores a la fecha de vencimiento de la anualidad contratada
4. El inicio del servicio será a partir del día primero del mes de calendario siguiente al de la incorporación individual.

Para la contratación de manera colectiva deberá reunir los siguientes requisitos:

1. Comprenderá un mínimo de 50 personas
2. Se deberá suscribir un convenio con el Instituto Mexicano del Seguro Social
3. La primera inscripción deberá realizarse dentro de los 30 días naturales posteriores a la firma del convenio
4. La renovación deberá efectuarse dentro de los 30 días anteriores a la fecha de vencimiento de la anualidad contratada del convenio
5. El inicio de los servicio será a partir del día primero del mes de calendario siguiente al de la incorporación colectiva.

## CONCLUSIONES

Como se ha abordado, existe la alternativa de aseguramiento para el trabajador que ha quedado sin empleo alternativas contempladas en la Ley del Seguro Social, que le permiten al trabajador asegurado no ver obstaculizados sus derechos a la seguridad social, con respecto a la obtención de una pensión por Cesantía en Edad Avanzada y Vejez, conforme a la Ley del Seguro Social; así para poder tener acceso a este beneficio, el trabajador deberá reunir cada uno de los requisitos mencionados en la propia Ley. Bastará que el trabajador ejerza sus derechos, en tiempo y forma para no ver afectada su situación económica, una vez concluida su vida laboral.

# ESTUDIO DEL IMPACTO DE LOS VALORES ÉTICOS EN EL DESEMPEÑO DE LAS EMPRESAS FAMILIARES

María de los Ángeles Monterde Valenzuela, Universidad Estatal de Sonora.

## RESUMEN

*El objetivo de este trabajo es realizar una investigación documental para determinar el impacto de los valores éticos en el desempeño de la gestión de las empresas familiares mexicanas, contextualizadas en la ciudad de Hermosillo, Sonora. La investigación es de carácter descriptivo. Se consultaron diferentes fuentes teóricas y empíricas referentes a la cultura empresarial, así como realizado su análisis en el ámbito de la empresa familiar sonorenses. La problemática observada refiere a diversas crisis existenciales de las empresas, derivadas de prácticas anti-éticas que irrumpen la armonía familiar y empresarial, ocasionando serias consecuencias económicas y emocionales para sus socios; y con ello afectan seriamente su desempeño y posibilidad de continuidad. Los resultados muestran que esta cultura influye de manera importante en el comportamiento gerencial de las empresas familiares.*

**PALABRAS CLAVE:** Valores Éticos, Empresa Familiar, Gestión Y Continuidad

## IMPACT STUDY ETHICAL VALUES IN THE FAMILY BUSINESS PERFORMANCE

### ABSTRACT

*The aim of this paper is a literature search to determine the impact of ethical values in the performance of the management of family businesses in Mexico, contextualized in the city of Hermosillo, Sonora. The research is descriptive. Different sources were consulted concerning theoretical and empirical corporate culture and analysis conducted in the field of family business Sonora. The problems observed existential crises refers to various companies, resulting from unethical practices that break family harmony and business, causing serious economic and emotional consequences for its members, and thus seriously affect its performance and ability to continue. The results show that this culture has a significant influence on the behavior management of family businesses.*

**JEL:** M12, M14

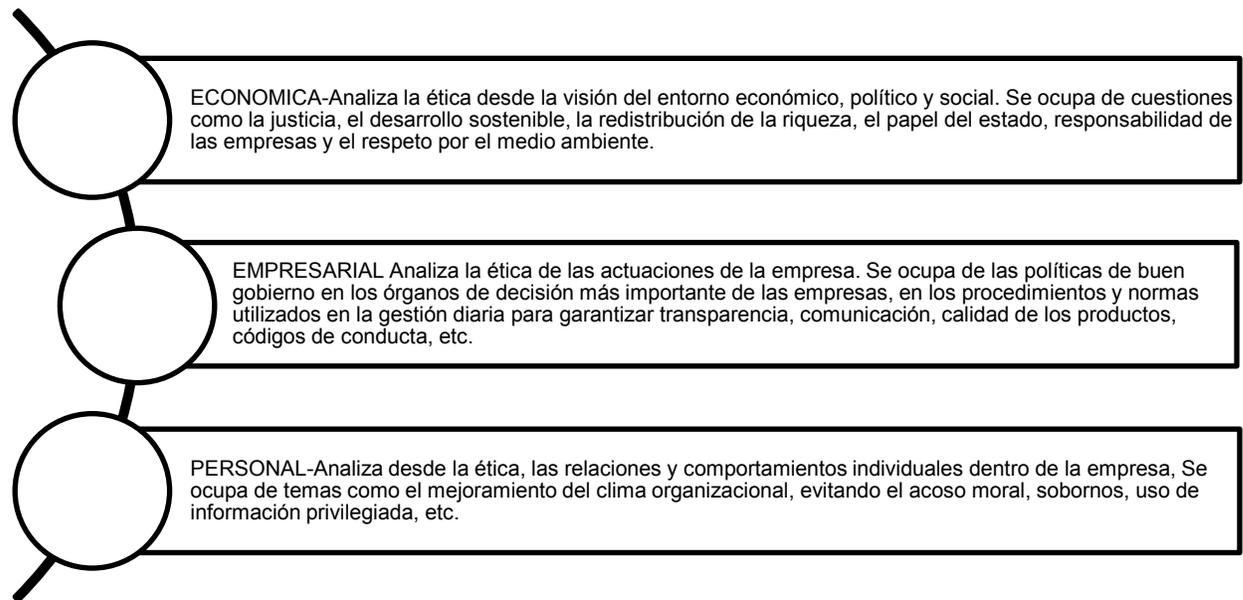

**KEYWORDS:** Ethical values, family business, management and continuity

## INTRODUCCIÓN

Los clientes, los ciudadanos y la sociedad en general, demandan a las empresas que se comporten de forma transparente, que se comprometan con el desarrollo de sus entornos, que sean honestas y responsables en sus comportamientos. Experiencias de especulación, corrupción, intoxicación alimentaria, desastres medioambientales, falta de veracidad en la publicidad, han develado a la sociedad la necesidad de que las empresas actúen conforme a principios y valores éticos. La ética

es una disciplina filosófica, cuyo objeto de estudio es la moral. Para la Real Academia de la Lengua es la parte de la filosofía que trata del bien y del fundamento de sus valores. Para la European Business Network (EBEN), la ética en los negocios es una reflexión sobre prácticas que implican normas y valores de los individuos, empresas y sociedad

Figura 1: Tipos de Ética, según su Cobertura

Es generalizada la idea de que la ética en los negocios es muy diferente a la ética personal. Por ejemplo, se suele afirmar que «yo soy muy ético, nunca robaré ni mentiré como persona; ahora bien, en la empresa puedo robar y mentir porque el entorno de la misma es propicio a la corrupción, además: todos lo hacen». Esta actitud avala el riesgo de actuar con frecuencia con comportamientos no éticos. La ética no debe consistir en el conjunto de prohibiciones, reglas y regulaciones impuestas por un código ético, por una autoridad religiosa, o por ley; sino por un compromiso genuino y voluntario con el bien común. Actualmente las grandes empresas y corporaciones definen sus propios códigos y comportamientos éticos, motivados por la necesidad de frenar los abusos y estafas que se han prodigado recientemente en todos los países, y que impactan negativamente en los resultados económicos de las mismas; razón poderosa que las impulsa a no ser perdedoras.

En América Latina, 9 de cada 10 empresas son familiares, 2 de cada 3 fracasan. En México, aproximadamente el 95% de las empresas son familiares, 8 de cada 10 empresas mexicanas mueren antes de los 2 años de vida. Entendemos por empresa familiar aquel negocio cuya propiedad pertenece –en su totalidad o en su mayoría- a miembros de una sola familia. Este tipo de negocios se caracteriza particularmente por vivenciar valores como la colaboración, lealtad, compromiso, flexibilidad y adaptación rápida ante los cambios; y en base a esto erigen su principal fortaleza empresarial. La ética en la empresa familiar se refleja en sus acciones con valor. El cuidado y mantenimiento de esos valores inculca a cada organización su propio sello. Proyecta a su vez los principios y valores de su fundador.

Esta investigación exploró fuentes teóricas y empíricas, y culminó siendo de tipo descriptiva. También se validó con investigación de campo enfocada en comprender la necesidad que tienen

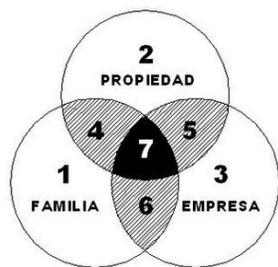

las empresas familiares de Sonora en mejorar su desempeño ético para ser rentables y competitivas. Para ello, se trabajó en el ambiente natural de 22 empresas familiares, elegidas al azar; dada la dificultad mostrada ante el tema ético. El resto de esta investigación está organizada como sigue. En la sección de revisión literaria se presentan aportaciones de autores como Belausteguigoitia Rius, Sabater Sánchez, Ruiz Mercader, Carrasco Hernández, y J. Poza. En la sección de metodología, se describe claramente el procedimiento seguido y las herramientas de investigación utilizadas para validar hipótesis y análisis de datos. Finalmente, aparecerán los resultados y conclusiones obtenidas, en las cuales se enuncian los principales hallazgos derivados de esta investigación.

### REVISIÓN LITERARIA

La cultura de la empresa familiar es el producto de sus creencias, valores y metas integradas en su historia y lazos sociales. Algunos estudios previos muestran que los diferentes comportamientos en este tipo de empresas se encuentran relacionados con variables como la cultura de la empresa familiar (Belausteguigoitia, 2006), en donde los miembros de la familia ejercen una fuerte influencia sobre el comportamiento de la empresa (Astrachan, 1988). Partiendo de estos argumentos se han planteado las siguientes preguntas de investigación: ¿Existe diferencia en la cultura de una empresa familiar y la empresa no familiar? ¿Por qué razón, la empresa familiar es más abundante en la comunidad empresarial? ¿Cuáles son las principales problemáticas de las empresas familiares que afectan su continuidad? El término cultura empresarial familiar se puede considerar como la ideología básica seguida por la familia propietaria, que se caracteriza por los valores, las normas y tradiciones o formas de actuar en la vida (Sabater Sánchez, Ruiz Mercader y Carrasco Hernández, 2003).

Poza (2009) define la cultura de la empresa familiar como la colección de valores definidos por comportamientos que existen en una empresa como resultado del liderazgo que proveen los miembros de la familia, tanto en el pasado como hasta nuestros días. La unidad familiar y la relación natural entre la familia y los negocios también definen a la cultura de la empresa familiar. Ésta juega un factor crucial en la determinación del éxito del negocio y puede manifestarse en aspectos intangibles tales como la forma de vestir, el lenguaje y los rituales; en el conjunto de ideas y acciones que un individuo utiliza para hacer frente a una situación problemática; en valores como la honestidad y el servicio al cliente, entre otros; finalmente, en los supuestos básicos del grupo que son las premisas sobre las que los grupos basan su forma de ver la vida (Belausteguigoitia, 2006). Existe una gran diferencia entre la empresa familiar y la no familiar. La empresa familiar tiene tres componentes activos que son la familia, la empresa y la propiedad.

Figura 2: Modelo de los 3 Círculos de Davis y Tagiuri, desarrollado en 1982.

La figura 2, muestra las intersecciones de los tres círculos; que representan los tipos de relaciones de los miembros que se colocan en esas áreas. Ejemplo: área numero 7 indica que la persona

labora en la empresa, es accionista y pertenece a la familia. La 4 indica que la persona aquí ubicada es miembro de la familia y accionista, pero no labora en la empresa, la 5 indica que la persona labora en la empresa y tiene acciones, pero no es familiar. La 6 indica que la persona trabaja en la empresa y pertenece a la familia, pero no posee acciones. La empresa es el conjunto de capital, administración y trabajo dedicados a satisfacer una necesidad en el mercado. La Comisión de la Unión Europea la define como una entidad independiente de su forma jurídica que ejerza actividad económica de forma regular a través de sociedades de personas sin consanguinidad ni lazos emocionales. La tabla 1 muestra datos cualitativos que señalan la relevancia de las Empresas Familiares en México. Podemos ver que el 90% de los negocios en México se manejan a nivel familiar, generan entre aproximadamente el 78.5% del empleo y aportan 52% del Producto Interno Bruto (PIB), Mas del 90% de emisoras en BMV tienen clara representación familiar, el 78.5% de los empleos en México los generan las Micro, Pequeñas y Medianas empresas, y el 80% de los nuevos empleos en la última década han sido creados por empresas familiares; según estudio realizado por Urzúa consultor de la empresa KPMG México en Enero 2012.

Tabla 1: Datos Cuantitativos de las Empresas Familiares en México

**Datos cuantitativos que muestran la relevancia de las Empresas Familiares en México**

El 90% de empresas mexicanas son familiares - EU reporta más del 95%  
 Las Micro, Pequeñas y Medianas empresas generan el 52% del PIB en México  
 Más del 90% de emisoras en BMV tienen clara representación familiar  
 El 80% de los nuevos empleos en la última década han sido creados por Empresas Familiares  
 El 78.5% de los empleos en México los generan las Micro, Pequeñas y Medianas y son Empresas Familiares  
 70% de empresas de reciente creación no durarán más de 3 años.  
 Solo 13.9% de las empresas Mexicanas obtuvieron un crédito  
 7 de cada 10 empresas familiares desaparecen en primer cambio generacional  
 Esperanza de vida de empresa familiar es de 25 años – Contrario a gestión institucional que es de 50 años.

*Fuente: KPMG. 2009. Estudio de las Empresas Familiares en México.*

Una preocupante situación es la alta tasa de mortalidad de las empresas, pues 7 de cada 10 empresas de reciente creación no duran más de 3 años, proporción similar que se da en las empresas familiares que tienden a desaparecer en el primer cambio generacional; siendo la esperanza de vida promedio de 25 años, mientras que las empresas que tienen una gestión más institucionalizada es de 50 años en promedio.

La tabla 2 nos indica la clasificación que hace la Secretaría de Economía Mexicana, por estratos o tipos de empresa; en la cual se aprecian las características de cada uno en cuanto a número de trabajadores y monto de ventas anuales. En esta clasificación están incluidas Empresas Familiares en una proporción del 90% de este censo.

Tabla 2: Estratificación Empresarial En México

Estratificación en México. Secretaría de Economía 2009.

Tipo	Sector	Trabajadores	Ventas Anuales
Micro	Todos	hasta 10	Hasta 4 millones
Pequeña	Comercio	11 a 30	de 4 a 100 millones
	Industria/Servicios	11 a 50	
Mediana	Comercio	31 a 100	de 100 a 250 millones
	Servicios	51 a 100	
	Industria	51 a 250	

*Fuete: KPMG. 2009. Estudio sobre Empresas Familiares en México*

Para efectos de esta investigación, el conocer cómo están distribuidas las empresas familiares, dentro de la economía, muestra una clara idea de la relevancia de atenderlas para conservarlas y desarrollarlas debido al fuerte aporte al Producto Interno Bruto Nacional. Según datos del Instituto Nacional de Estadística, Geografía e Informática (INEGI), el 95.2% de las empresas familiares están clasificadas como micro, y generan el 45.6% del empleo formal. Tabla 3.

Tabla 3: Datos Generales México INEGI 2009

<b>Datos Generales México INEGI 2009</b>				
<b>Tipo</b>	<b>%</b>	<b># Empresas</b>	<b>%</b>	<b>Empleos</b>
	<b>Total</b>		<b>Empleo</b>	<b>(millones)</b>
Micro	95.2	4,897,142	45.6	12.6
Pequeña	4.3	221,194	23.8	6.6
Mediana	0.3	15,432	9.1	2.5
Grande	0.2	10,288	21.5	6.0
Total	100%	5,144,056	100%	<b>27.7</b>

Fuente: KPMG. 2009. Estudio sobre Empresas Familiares en México.

La Tabla 3, también muestra que el tipo de empresas familiares Mediana y Grande son las que menos proporción representan en este estudio; figurando con un 0.3 y 0.2% respectivamente, lo que hace suponer un gran reto para la administración de empresas en el sentido de desarrollarlas, conservarlas y prevenir posibles riesgos y conflictos con el fin de lograr que las Empresas Familiares en México lleguen a ser Medianas o Grandes. Es importante subrayar que la economía de un país depende en gran medida de las empresas familiares; y que las familias, dependen de las empresas que funcionan en un país; por lo tanto, el bienestar social estará en manos de las empresas. Ahora bien, relacionar el impacto que tienen los valores éticos en la gestión de las empresas familiares implica visualizar tanto el presente como el futuro de los negocios; y determinar qué sucede a favor y en contra de estas empresas, y con ello ilustrar las mejores prácticas a realizar. Entre los principales las problemáticas que afectan la continuidad de las empresas familiares están el no tener claridad en lo que corresponde a cada uno de los sistemas (familia-empresa), lo cual obliga a tomar decisiones inadecuadas que generan tensiones y bajo rendimiento empresarial, que también transitan en el camino de la ética empresarial. Imanol Belausteguigoitia devela algunos conflictos que suceden en la empresa familiar, como es el juego de roles inadecuado dentro de la empresa; es decir, los miembros de una familia tienden a interactuar de la misma manera y bajo los mismos patrones que se dan en la familia, sin considerar los escenarios en que se encuentren, y subrayando lo curioso que es el comportamiento de las personas dependiendo la naturaleza del grupo en que se desarrollan, y su contexto axiológico.

## METODOLOGÍA

La investigación es documental y de campo; de tipo cualitativa, es un método de investigación basado en principios teóricos de interacción empresarial, empleando métodos de recolección de datos que son no cuantitativos, con el propósito de explorar las relaciones humanas de las Empresas Familiares y describir la realidad tal como la experimentan sus correspondientes protagonistas. La investigación cualitativa requirió de un profundo entendimiento del comportamiento humano y las razones que lo gobiernan. Combinó la forma de interrelacionar la investigación documental y las acciones humanas en 22 empresas familiares de la ciudad de Hermosillo, Sonora. Se acudió a bases de datos de CANACINTRA (Cámara Nacional de la Industria de la Transformación) Sonora, que contiene un universo de 890 empresas, de las cuales sólo registra a 47 empresas familiares. La mayor dificultad presentada para seleccionar la

muestra de 22 empresas fue la aceptación de los sujetos de estudio. Tabla 4. Muestra la información demográfica de la muestra objeto de estudio para medir el impacto de los valores éticos en el desempeño de las empresas familiares de Sonora.

Tabla 4: Información Demográfica de la Muestra

Giro/Edades	Directivos entrevistados para conocer aspectos Éticos de las Empresas Familiares								TOTAL
	HOMBRES (17)				MUJERES (5)				
	30-39	40-49	50-59	60 y más	30-39	40-49	50-59	60 y más	
Comercio	1	2	3	2	3	2	0	0	13
Industria	1	2	1	2	1	0	0	0	7
Servicios	0	1	1	0	0	0	0	0	2
Total	3	5	5	4	3	2	0	0	22

Fuente: Creación Propia.

El 77 % de la muestra corresponde a hombres y el 23 % a mujeres. El 59% se dedica al sector comercio,

23% a la industria, y el 18% a los servicios. La mayoría de los hombres están entre los 40 y 60 años.

El 23% de las mujeres están entre 30 y 50 años y se dedica al comercio.

En la Tabla 5, pueden apreciarse tres tipos de clasificación: por tamaño de empresas, destacando las micro empresas; proporción conservada igual que a nivel nacional. Además se tiene otra clasificación denominada por Permanencia, en la cual destacan los Comercios que tienen aproximadamente de 16 a 20 años en el mercado, seguidas de algunas Industrias que tienen de 21 a 25 años de edad; y finalmente la Etapa de Continuidad en la que se encuentran, clasificación que también señala al sector Comercio con mayor incidencia en etapa de Fundadores, seguida por Industrias que se encuentran integrando a su primera generación al negocio familiar, entre los datos más relevantes encontrados en la muestra.

Tabla 5: Información Cualitativa De Las Empresas Que Componen La Muestra Objeto De Estudio Del Impacto De Los Valores Éticos En El Desempeño De Las Empresas Familiares

**Información cualitativa de Empresas Familiares de Sonora, objeto de estudio sobre impacto de los valores éticos en el desempeño.**

Giro	Tamaño (# de empleados)			Permanencia				Etapa de continuidad			
	Micro	Pequeñas	Medianas	10 a 15 años	16 a 20 años	21 a 25 años	más de 26	Fundadores	1era. Gen.	2da. Gen.	3era. Gen.
Comercio (13)	6	5	2	1	8	2	2	9	4	0	0
Industria (07)	1	4	2	1	0	4	2	1	6	0	0

Tabla 6: Sondeo Realizado a Colaboradores de las Empresas Familiares Estudiadas

Sondeo realizado a colaboradores de las 22 empresas familiares estudiadas	Comercio 13		Industria 07		Servicios 02		Total
	SI	NO	SI	NO	SI	NO	
¿Tienen código de ética?	8	5	3	4	2	0	22
¿Declaran públicamente sus valores?	5	8	3	4	2	0	22
¿Perciben coherencia en decir y actuar?	3	10	2	5	1	1	22
¿Definen su visión?	7	6	5	2	1	1	22
¿Comparten su visión empresarial?	3	10	5	2	0	2	22
¿Declaran su misión?	8	5	5	2	1	1	22
¿Comprenden todos la visión?	3	10	2	5	2	0	22
¿Comprenden todos la misión	5	8	2	5	1	1	22

Fuente: Creación Propia con base de datos de CANACINTRA HERMOSILLO 2011

La Tabla 6, muestra lo expresado por 67 colaboradores de las empresas objeto de estudio, mediante focus group. Se obtiene que solo 60% de las empresas familiares tienen establecido un código de ética, siendo 8 empresas de 22 ubicadas en el sector Comercio las que lo asumen. Seguido se observa que el 45% de las empresas familiares en cuestión declaran públicamente sus valores, y sólo un 27% de ellas proyecta coherencia entre lo que dice y hace; mientras que el 60% solamente han definido su visión. Respecto a compartir su visión empresarial con los colaboradores, existe un 37% de las empresas que si lo hace. Dato relevante de este sondeo es que un 63% de las empresas tienen declarada su misión, y sólo el 36% de las empresas se han asegurado de que todos sus colaboradores la comprendan; porcentaje relativamente bajo, si se considera que la misión implica todo el quehacer empresarial. De esta situación, se desprende una incógnita planteada en el objetivo de esta investigación, en el sentido de saber cuáles son las problemáticas de las empresas familiares que dificultan su continuidad.

Tabla 7: Razones por las Que Existen más Empresas Familiares en México

¿Por qué razón considera usted que existan más empresas familiares en México?	Porcentaje
Porque el desempleo impulsa este tipo de emprendimientos	33
Porque las familias continúan la tradición ancestral	18
Porque es una tendencia natural de la sociedad mexicana	25
Porque la familia mexicana es altamente solidaria y emprendedora.	24
<b>Total</b>	<b>100 %</b>

Fuente: Creación propia.

En la Tabla 7, se presentan las razones por las cuales existen más Empresas Familiares en México, destacando en primer lugar el desempleo que impulsa este tipo de emprendimientos con un 33% de las menciones, seguido de la afirmación de que la existencia de las Empresas Familiares en México es una tendencia natural de la sociedad con el 25% y finalmente porque la familia mexicana es altamente solidaria y emprendedora; afirmaciones que denotan valores como la solidaridad, tradición y laboriosidad inmersos en esta cultura.

Tabla 8: Información Sobre Gestión Empresarial con Valores

Concentrado de información recabada del cuestionario aplicado a empresarios.	1 NUNCA	2 RARA VEZ	3 A VECES	4 CASI SIEMPRE	5 SIEMPRE	TOTAL
¿Paga usted horas extras a sus trabajadores?	3	8	7		4	22

¿Cumple oportunamente el pago a proveedores?				11	11	22
¿Es veraz en su comunicación con el cliente?		10		9	3	22
¿Cumple con sus obligaciones fiscales?			4	8	10	22
¿Cuida el medio ambiente en que se desenvuelve su actividad empresarial?	2	3	5	6	6	22
¿Se ocupa del desarrollo humano de sus colaboradores?	8	2	2	6	4	22

Fuente: Creación Propia.

En la Tabla 8, se califican mediante escala de Likert, una pequeña serie de cuestiones que demuestran que algunas gestiones empresariales no son del todo coherentes con la visión y misión de las empresas estudiadas. En el caso del pago de tiempo extra a los trabajadores, aproximadamente el 50% de los empresarios no paga esta compensación laboral. La cultura financiera respecto al pago de proveedores es excelente puesto que el 50% paga a tiempo y el otro 50% casi siempre (salvo alguna situación especial). Igualmente esta cultura de pago de impuestos podemos calificarla como muy buena.

Ahora bien, en cuanto a la veracidad en la comunicación con el cliente, existe una gran área de oportunidad, puesto que el 45% dice que a veces comunica toda la verdad a su mercado. Respecto al cuidado del medio ambiente, las empresas mostraron todavía ambivalencia, pues algunas lo hacen por cumplir con la normatividad impuesta, y muy pocas por conciencia ecológica (45%). Un dato bastante pesado es saber que el 55% de estas empresas no se ocupan plenamente del desarrollo humano de sus colaboradores; y esta situación puede desatar errores y falta de interés hacia los asuntos de la empresa.

Tabla 9: Estrategias de Formación Empresarial Que Impulsen los Valores Humanos

Investigación sobre Estrategias de Formación Empresarial que impulsen los valores humanos detectados en la muestra	SI	NO
¿Tiene su empresa una declaración de valores que fortalezca la gestión humana	10	12
¿Existe en su empresa un incentivo motivador del actuar ético?	5	17
¿Su empresa tiene un programa de inducción que permita al personal conocerla?	8	14
¿Está considerado dentro de su plan de capacitación, enseñar el código de ética a sus colaboradores?	3	19

Fuente: Creación propia.

En la Tabla 9 se observa claramente que el 54% de las empresas estudiadas no tiene una declaración de valores que fortalezca la gestión humana; y el 78% de las mismas, no tiene un incentivo motivador del actuar ético. Además un 64% de estas empresas no tiene un programa de inducción al personal que le permita conocerla para garantizar su óptimo y correcto desempeño laboral. Un dato verdaderamente alarmante es el que resultó al preguntar si está considerado dentro de su plan de capacitación, enseñar el código de ética a sus colaboradores, pues un 86% aseguró no tenerlo considerado.

Tabla 10: Problemas Empresariales Derivados Del Comportamiento No Ético

¿Qué problemas ha tenido su empresa, derivados del comportamiento humano no ético en el último año?	Núm. Empresas de la muestra	Monto Estimado (2011)
Fraude	20	\$1,500,000
Pérdida de clientes	22	2,000,000
Problemas con personal	19	800,000
Otros	8	500,000
<b>Total estimado</b>		<b>4,800,000</b>

*Fuente: Creación propia.*

En la Tabla 10, se mencionan los problemas más frecuentes que se derivan del comportamiento humano no ético. Y el porcentaje mayor (100%) de casos corresponde a la pérdida de clientes, que tiene relación directa con la falta de veracidad en la comunicación que tienen estas empresas con su mercado. Seguido del fraude, que tiene un 91% de las menciones; complementando esta afirmación algunos comentarios hechos al margen, acerca de la comprensión de la visión y misión de la empresa; así relacionarse con otras variables analizadas como son la falta de programas de desarrollo humano y la falta de un incentivo motivador del actuar ético. Otro problema importante se da en la interacción de personas; ya que la falta de valores éticos en el actuar de los colaboradores origina fricciones y problemas entre ellos y representan un 86% de los casos; y que en conjunto ocasionan la elevación de pérdidas.

## RESULTADOS

El presente análisis surge por la necesidad inminente de recrear un modelo motivador hacia a las personas que trabajan en las organizaciones, en el sentido de alcanzar la consecución de la estrategia empresarial de manera ética; y en especial a las empresas familiares debido a que son éstas las que tienen mayor participación dentro del número de empresas que conforman la economía, Adicionalmente son las que más influyen en la comunidad debido a la mayor proporción de empleo que generan en el mundo.

La investigación realizada en las 22 empresas familiares de Hermosillo, Sonora, develaron hallazgos interesantes, como el hecho de ser negocios que se incubaron en el seno familiar, y que sólo entre sus miembros se da importancia a la vivencia de los valores. Incoherencia detectada al entrevistar a sus colaboradores y afirmar que un alto porcentaje de ellos no cuentan con un incentivo motivador del actuar ético, así como un 86% no tiene considerado en su plan de capacitación enseñar el código de ética a sus colaboradores. Otros datos interesantes encontrados fueron que más del 50% de los entrevistados afirmaron no recibir pago justo del tiempo extra laborado; y que aproximadamente un 23% de las empresas se ocupan del cuidado del medio ambiente. Además, sólo el 50% se ocupa del desarrollo humano de sus colaboradores.

Aspecto curioso encontrado al iniciar la investigación, fue la actitud temerosa de los empresarios al presentarles la intención de este estudio, pues pensaban que la empresa sería auditada y sentenciada y algunos se negaron a participar; y por esta razón la muestra se configuró de solo 22 empresas familiares. Se queda pendiente estudiar el desempeño en valores que se viven al interior de la familia empresaria, y que para este análisis fue prácticamente imposible medir. Respecto a los problemas empresariales derivados del comportamiento no ético de los colaboradores, sean familiares o no, más del 86% de las empresas estudiadas sufrieron fraudes, pérdidas de clientes y problemas con el personal que han significado cuantiosas pérdidas; lo que demuestra el alto impacto que tienen los valores éticos en el desempeño de las empresas, y que en la medida en que se trabaje en la formación humana en valores, la gestión empresarial se verá protegida y beneficiada, hasta el punto de poder afirmar que el actuar ético incentiva la rentabilidad empresarial.

La sociedad empresarial, está viviendo sistemas perversos centrados exclusivamente en el resultado y en el objetivo, se olvida completamente de la ética, de que ocasiona daños a las personas y a su entorno.

La dirección por valores, virtudes y principios consiste en adoptar una filosofía de gestión moral y empresarial hasta convertirla en estilo de vida para todos sus miembros, sean familiares o no. Una cultura coherente con los valores, virtudes y principios de una empresa incrementa la capacidad de supervivencia de la misma en el largo plazo. Dentro de esta filosofía los valores, virtudes y principios representan los pilares necesarios para mantener la unidad de la organización, y son el faro que las orienta en una tormenta; y también son la catapulta que las impulsa hacia mejores escenarios.

## CONCLUSIONES

Durante los últimos años, se ha descubierto en diversos estudios la influencia de los valores en las empresas familiares, siendo ampliamente aceptado que la unidad familiar y el compromiso de la familia con sus empresas constituye la ventaja competitiva de las empresas familiares exitosas, al igual que la confianza reinante entre la familia o el denominado “Familyness” que las hace diferenciales e incluso las lleva a obtener un mejor desempeño frente a las empresas no familiares. Por esta razón, es importante que

las familias establezcan y den a conocer sus valores, y de esta forma poder enfocar sus esfuerzos en mantenerlos vigentes en la vida de sus miembros. Es muy probable que los valores fundamentales sean los mismos de los fundadores así como su capacidad para crear legados familiares. También hay que reconocer que los valores del fundador tienen una gran importancia en el día a día de las empresas familiares, al igual que en la alineación de su cultura, pero debemos aclarar que las familias deben saber cuáles valores y principios deben resaltar en cada ámbito, para que de esta forma se puedan obtener mejores resultados. El ideal sería lograr transmitir los valores a todos a lo largo de las generaciones, pero debemos ser conscientes que en el camino encontraremos nuevas personas, y con ellas nuevos valores que redefinirán a la familia; y muy posiblemente ayuden a mejorar la actuación de la familia empresaria.

## RESUMEN

*En esta investigación se analizaron las dimensiones del desarrollo sustentable, desde la perspectiva de la comunalidad, en servicios y actividades de ecoturismo de 35 comunidades indígenas de México. Se incluyó desarrollo local como dimensión económica, sustentabilidad comunitaria como dimensión social y la dimensión ambiental. Con base a indicadores de desarrollo local propuestos por Bañuelos Flores & Salido Araiza (2007), ambientales propuestos por la Secretaría de Turismo de México (SECTUR, 2013), de sustentabilidad comunitaria desarrollados por Velázquez-Sánchez, Gómez-Velázquez, & Solana Vásquez, (2013) se diseñó y aplicó un cuestionario con 118 ítems a habitantes-participantes en proyectos de ecoturismo indígena en 13 estados de la república mexicana. Los resultados mostraron la definición de cinco categorías de desarrollo local, dos categorías ambientales y cuatro categorías de sustentabilidad comunitaria. Desde la perspectiva comunitaria, en el ecoturismo indígena, en los resultados se observó que existe relación positiva de las tres dimensiones del desarrollo sustentable. Este estudio provee una alternativa metodológica para el análisis del ecoturismo y del desarrollo sustentable.*

**PALABRAS CLAVE:** Desarrollo sustentable, ecoturismo, sustentabilidad comunitaria, desarrollo local, ambiente

## ECONOMIC INDICATORS, ENVIRONMENTAL AND SUSTAINABILITY OF ECOTOURISM IN MEXICO

### ABSTRACT

*In this research we examined the dimensions of sustainable development from the perspective of commonality in ecotourism services and 35 indigenous communities in Mexico. It included local development as economic, community sustainability and social dimension and the environmental dimension. Based on environmental indicators proposed by the Ministry of Tourism of Mexico (Tourism Secretary, 2013), community sustainability developed by Velazquez - Sanchez, Gomez - Velazquez, & Solana Vasquez, (2013) and local development proposed by Bañuelos Flores & Salido Araiza (2007), was designed and applied a questionnaire with 55 items to people - participants in indigenous ecotourism projects in 13 states of the Mexican Republic. The results showed the definition of local development five categories, two categories four categories of environmental and community sustainability. From the community perspective, the results show that the positive relationship exists indigenous ecotourism of the three dimensions of sustainable*

*development. In this study we propose an alternative methodology for the analysis of ecotourism and sustainable development*

**JEL:** L83, O13, F18, A13.

**KEYWORDS:** Sustainable development, ecotourism, community sustainability, local development environment.

## INTRODUCCIÓN

Desde la perspectiva del desarrollo sustentable, los indicadores ambientales, económicos y la sustentabilidad comunitaria son factores necesarios para evaluar la pertinencia del establecimiento de destinos de ecoturismo. El problema que se analiza en esta investigación es la falta de definición de indicadores ambientales, económicos y de sustentabilidad comunitaria para la evaluación de los proyectos de ecoturismo indígena de México. De acuerdo a Velázquez-Sánchez, Gómez-Velázquez, & Solana Vásquez (2013) la autorización de proyectos de ecoturismo en comunidades indígenas, no contempla la evaluación de los efectos en la sustentabilidad comunitaria, en la conservación del ambiente y en el desarrollo en términos de lo local.

En el contexto mexicano se localizan 650 destinos de ecoturismo (SECTUR 2013). Para la Comisión para el Desarrollo de los Pueblos Indígenas 106 destinos que ofrecen ecoturismo se encuentran en comunidades indígenas (CDI, 2012) y se distribuyen en 29 de los 32 estados mexicanos. El ideal del ecoturismo es ser una actividad que represente generación de ingresos para la comunidad y conservar el ambiente y la cultura (CDI, 2012). En la realidad no existen criterios que evalúen la pertinencia del ecoturismo en términos de indicadores ambientales, de sustentabilidad comunitaria y desde la perspectiva del desarrollo local. En la publicación TIES (2013) de la Sociedad Internacional de Ecoturismo, mencionan el potencial que el ecoturismo ofrece en la conservación de los espacios naturales y el alivio a la pobreza para las comunidades locales, sin embargo, el estudio no provee los indicadores empleados para evaluar tal aseveración.

En estudios realizados tanto por Daltabuit-Godás y por Valenzuela-Valdivieso (2010) y Coca-Pérez (2007) se observa la importancia de incluir lo comunitario en el desarrollo de destinos ecoturísticos. En el estudio de Rainforest Alliance (2013) concluyeron que el cuidado del ambiente en el destino turístico, contribuye a la preferencia de viajeros frecuentes de México. Al respecto Velázquez-Sánchez, Gómez-Velázquez, & Solana Vásquez (2013) encontraron que los visitantes de destinos eco turísticos, en la región de la costa oaxaqueña, aprecian principalmente la presencia de habitantes nativos. Sin embargo, hasta el momento no se localizaron estudios que analicen los indicadores ambientales, de sustentabilidad comunitaria y de desarrollo local en destinos eco turísticos.

En este documento se presenta organizada la información como sigue. En la sección de revisión de literatura se presenta el análisis de los conceptos y estudios en ecoturismo, sustentabilidad comunitaria, indicadores ambientales y desarrollo local. Se incluye el análisis y la comparación de los indicadores disponibles en la literatura con los validados con este estudio. En el apartado de metodología se integran la descripción de la población y la muestra, la definición de las variables y su operacionalización, la estructura del cuestionario y el procedimiento de validez por medio de análisis factorial. En los resultados podrá apreciar tablas para facilitar el resumen de los datos y la explicación de los mismos en comparación con el objetivo planteado. En conclusiones

y limitaciones se comparan los resultados con la literatura revisada y se mencionan los alcances y posible continuidad de esta línea de investigación.

## REVISIÓN DE LITERATURA

El término desarrollo sustentable es una propuesta para la adecuación del modelo económico a acciones de cuidado del ambiente y responsabilidad social (Brundtland, 1987). A partir de la presencia del concepto desarrollo sustentable, se aprecian posiciones discursivas desde alguno de los tres ejes económico, ambiental, social. En los análisis desde la perspectiva económica Martínez Negrete, De Ita Martínez, Laviano & Ortíz (2009), consideran al ambiente y a la sociedad como elementos subordinados del crecimiento económico y mencionan los beneficios del desarrollo tecnológico para atender los posibles deterioros. En la visión económica el desarrollo local es un parámetro para evaluar las condiciones de las regiones. De acuerdo a Wong (2000) y comparado con Martínez-Luna (2010), para analizar el desarrollo local, se debe tener la responsabilidad de incluir la interpretación de los habitantes y del espacio armónico en el que conviven con la naturaleza y su cultura. A través del método de fenomenología Velázquez-Sánchez, et al (2013) caracterizaron con cinco categorías el desarrollo local desde la perspectiva de la comunalidad.

El eje social del desarrollo sustentable, contempla los elementos culturales como necesarios una definición local. De acuerdo a Díaz (2004), los aspectos culturales son observados desde la perspectiva de la comunidad. En los textos de Martínez (2003) y Robles Hernández & Cardoso Jiménez (2009), se encuentran las características que definen la sustentabilidad de las comunidades y en Velázquez-Sánchez y Solana (2013) los indicadores y operacionalización de los mismos. El eje ambiental es considerado para caracterizar el ecoturismo por (SECTUR, 2013). El ecoturismo de acuerdo a la Secretaría de Medio Ambiente y Recursos Naturales (SEMARNAT, 2009), es la alternativa de turismo que se caracteriza por el desarrollo de actividades de recreación en entornos naturales con la vigilancia necesaria para la protección del ambiente y el respeto a las expresiones culturales de los habitantes de las comunidades anfitrionas. La SECTUR (2010), define ecoturismo como una alternativa del turismo tradicional con el agregado de ofrecer al visitante la apreciación del medio natural y la convivencia con la comunidad para observar la cultura de la mismas.

Para Daltabuit-Godás y Valenzuela-Valdivieso (2010), el ecoturismo es “una opción planteada para alcanzar el desarrollo sustentable con la participación directa de la comunidad rural organizada”. Al respecto Coca-Pérez (2007) menciona que para estudiar el ecoturismo y la sustentabilidad es importante tomar en cuenta lo comunitario para poder comprender la cosmovisión. Velázquez-Sánchez, et al (2013), proponen los indicadores de desarrollo local para integrar la dimensión económica a una definición del desarrollo sustentable. Para Rainforest Alliance (2013), el 84% de clientes de Expedia, se interesaron en destinos sustentables y el 59% de visitantes de Travelocity en la distinción de cuidado del ambiente, para escoger un destino para esparcimiento. De acuerdo a la Sociedad Internacional de Ecoturismo, el ecoturismo tiene el potencial de ayudar en la conservación de espacios naturales, alivio a la pobreza y bienestar de las comunidades locales (TIES, 2013). Sin embargo, hasta la fecha en la literatura, no existen estudios que analicen y definan los indicadores económicos, ambientales y la contribución de los factores culturales como elemento del desarrollo sustentable.

## METODOLOGÍA

En esta investigación empírica se analizaron los indicadores económicos, ambientales y de sustentabilidad comunitaria en el ecoturismo de 35 comunidades indígenas de 13 estados de México. En la Tabla 1: Se presenta la operacionalización de desarrollo local con base en las categorías (trabajo, negocio, productos, transporte y construcción) propuestas por Bañuelos Flores & Salido Araiza (2007). Ambiente se definió con las categorías valoración de los recursos naturales y participación comunitaria en las acciones de conservación propuestas por CESTUR (2013) y Sustentabilidad comunitaria se definió con base a las categorías contempladas por Martínez (2003) y se incluyeron los indicadores validados por Velázquez-Sánchez, Gómez-Velázquez, & Solana (2013).

Tabla 1: Operacionalización de las Variables Ambiental, Económico-Desarrollo Local y Social-Sustentabilidad Comunitaria Que Definen Desarrollo Sustentable en Comunidades Indígenas con Ecoturismo

VARIABLES	CATEGORIAS	INDICADORES/ítems
<b>Desarrollo Sustentable</b>		
Dimensión Económica	Trabajo	Puestos de trabajo (3)
Desarrollo Local	Negocios	Negocios nuevos (3)
	Productos	Abasto (5)
	Transporte	Número de camiones (3)
	Construcción	Casas y remodelaciones (5)
	Valoración de los recursos naturales de la comunidad	Relevancia que otorgan a los recursos naturales de la comunidad (7)
Dimensión Ambiental	Acciones para la conservación de los recursos naturales de la comunidad	Acciones de conservación implementadas (20)
Dimensión Social Sustentabilidad comunitaria	Cultura propia	Tecnología (7)
		Conocimiento (8)
		Producción (5)
		Normatividad Social (7)
	Adecuación	Originalidad (4)
		Valores (4)
		Armonía (3)
	Cultura	Medicina (4)
		Comida (5)
		Creatividad (4)
	Cosmovisión (6)	
	Materiales (4)	
	Herramientas (5)	
	Tecnología propia	Relación hombre-tierra

En la tabla 1: se observa la operacionalización de las variables. Para desarrollo local con las categorías de Bañuelos Flores & Salido Araiza (2007) e indicadores propuestos por Velázquez-Sánchez, Bohorquez Canseco, & Solana Vásquez (2013); la dimensión ambiental con las categorías que considera CESTUR (2013) y sustentabilidad comunitaria con las categorías que mencionan Martínez Luna (2010) y Robles Hernández & Cardoso Jiménez (2009), con los indicadores diseñados por Velázquez-Sánchez et al (2013) con el número de ítems diseñados. Fuente Elaboración propia

### Diseño del Cuestionario

Para el diseño del cuestionario se tomaron como base las categorías e indicadores que se muestran en la Tabla 1: Se incluyeron 19 ítems para desarrollo local, 27 ítems para indicadores ambientales y 72 ítems para sustentabilidad comunitaria, en total 118 ítems. Se consideró para la muestra a la tercera parte de los 106 destinos de ecoturismo indígena que considera la CDI (2013). El diseño de la muestra con 35 habitantes-participantes de trece estados de la república mexicana: Campeche (3), Colima (2), Chiapas (4), Durango (1), Estado de México (4), Hidalgo

(3), Michoacán (1), Morelos (2), Nayarit (3), Oaxaca (2), Querétaro (3), Quintana Roo (2) y Veracruz (5).

### Análisis de los Datos

Se aplicó un piloto y se realizó prueba de validez por medio análisis factorial con rotación varimax. Se observó la agrupación de los indicadores en once factores y se adecuaron los ítems a los términos empleados entre los habitantes de las comunidades indígenas mexicanas. Con los resultados del análisis factorial se integraron las categorías para este estudio y se compararon con las categorías e indicadores disponibles en la literatura. De acuerdo al diseño de la muestra se realizó la encuesta. Por medio de correlación se analizó la relación entre las categorías de las variables del desarrollo sustentable a través de las dimensiones; económica (desarrollo local), ambiental y social (sustentabilidad comunitaria).

## RESULTADOS

En la Tabla 2: se presentan las categorías y los indicadores validados de la dimensión Económica en términos de desarrollo local en el ecoturismo indígena: Categoría Trabajo; Indicador trabajos generados para la comunidad. Categoría Negocios; Indicador negocios establecidos en la comunidad. Categoría Productos; Indicador disponibilidad de productos básico. Categoría Transporte; Indicador incremento de corridas de autobuses. Categoría Construcción; Indicadores remodelación, adecuación, mejoras y construcción de viviendas de los habitantes y espacios comunes. Destacaron las categorías construcción y trabajo.

En la dimensión Ambiental del ecoturismo indígena validaron: Categoría Valoración de los recursos naturales de la comunidad; indicadores, medidas de prevención establecidas y brigadas de vigilancia. Categoría Acciones para la conservación de los recursos naturales de la comunidad; indicadores acciones incluidas en reglamento, relevancia que otorgan a los recursos naturales de la comunidad y acciones de conservación implementadas. En la dimensión Social en términos de sustentabilidad comunitaria validaron: Categoría Cultura propia y Cultura se integraron con los indicadores de tecnología tradicional incluida en el ecoturismo, conocimiento tradicional, producción artesanal, local, normatividad social para la organización, medicina tradicional, comida tradicional, creatividad en expresiones artesanales y cosmovisión del entorno natural. Categoría Adecuación; indicadores originalidad en servicios y actividades, valores comunitarios y armonía comunidad-comunalidad. Categoría Tecnología Propia; indicadores materiales en construcción y preparación, herramientas en cultivos y preparación y relación tierra-hombre.

Tabla 2: Indicadores Económicos, Ambientales y Sociales Para el Desarrollo Sustentable Desde la Perspectiva Comunitaria en los Servicios de Ecoturismo en México

VARIABLES	CATEGORIAS	INDICADORES/ (ÍTEMS)
<b>Desarrollo Sustentable</b>		
Dimensión Económica	Trabajo	Trabajos generados para la comunidad
Desarrollo Local	Negocios	Negocios establecidos en la comunidad
	Productos	Disponibilidad de productos básicos
	Transporte	Incremento de corridas de autobuses
	Construcción	Remodelación, adecuación, mejoras y construcción de viviendas de los habitantes y espacios comunes

Dimensión Ambiental	Valoración de los recursos naturales de la comunidad Acciones para la conservación de los recursos naturales de la comunidad	Medidas de prevención establecidas Brigadas de vigilancia Acciones incluidas en el reglamento Relevancia que otorgan a los recursos naturales de la comunidad Acciones de conservación implementadas

	Adecuación	
	Tecnología propia	

En la tabla 2: resultados del análisis factorial practicado a los datos de los treinta y cinco cuestionarios aplicados a habitantes-participantes de destinos eco turísticos localizados en trece estados de la república mexicana. El análisis factorial resultó en cinco factores para la dimensión económica (desarrollo local), dos factores para la dimensión ambiental y cuatro factores para la dimensión social (sustentabilidad comunitaria). En esta tabla se pueden apreciar a detalle los indicadores resultados y el número de ítems validados. Fuente. Elaboración propia.

En la tabla 3: Se pueden observar los resultados de los 35 Estados mexicanos analizados. Se observó agrupación, un primer grupo Campeche, Chiapas, Hidalgo, Michoacán y Oaxaca que se caracterizan por su población indígena en los destinos de ecoturismo, mostraron más consistencia en las categorías de sustentabilidad comunitaria. En el segundo grupo Estado de México, Nayarit y Veracruz se observaron categorías de las tres variables pero destacan las de ambiente. El tercer grupo Colima, Durango, Morelos Querétaro y Quintana Roo destacaron en las categorías de desarrollo local y mostraron el menor número de indicadores de las categorías de sustentabilidad comunitaria.

Tabla 3: Indicadores Económicos, Ambientales y Sociales Observados Desde la Comunalidad Como Desarrollo Local, Ambiente y Sustentabilidad Comunitaria en Comunidades con Ecoturismo en 13 Estados de la República Mexicana

ESTADOS/ Número de	DESARROLLO LOCAL	AMBIENTE	SUSTENTABILIDAD COMUNITARIA
destinos Grupo 1	Categoría/Elementos Construcción. (Mejoras, nuevas viviendas y espacios comunes).	Categoría/Elementos Valoración de los recursos naturales de la comunidad. (Medidas de Prevención establecidas. Brigadas de vigilancia)	Categoría/Elementos Cultura propia. (Tecnología tradicional incluida en ecoturismo. Conocimiento tradicional. Producción artesanal y local. Normatividad Social para la organización. Medicina tradicional. Comida tradicional. Creatividad en expresiones artesanales. Cosmovisión entorno natural)
Campeche 3	Trabajo. (Trabajos en los que participan los habitantes).	Acciones para la conservación de los recursos naturales de la comunidad. (Relevancia que otorgan a los recursos naturales de la comunidad. Acciones de conservación implementadas)	Adecuación. (Originalidad en servicios y actividades. Valores comunitarios. Armonía comunidad-comunalidad) Tecnología propia. (Materiales en construcción y preparación. Herramientas en cultivos y preparación. Relación hombre-tierra)

Normatividad Social para la organización. Medicina tradicional. Comida tradicional. Creatividad en expresiones artesanales. Cosmovisión entorno natural) Adecuación. (Originalidad en servicios y actividades.) Tecnología propia. (Materiales en construcción y preparación)
Estado de México	4		
Nayarit	3		
Veracruz	5		
Grupo 3	Negocios. (Negocios establecidos en la comunidad. Productos. (Disponibilidad de productos básicos) Transporte. (Incremento de corridas de autobuses) Construcción. (Remodelación, adecuación, mejoras y construcción de viviendas de los habitantes y espacios comunes)	Acciones para la conservación de los recursos naturales de la comunidad. (Acciones de conservación implementadas)	
Colima	2		
Durango	1		
Morelos	2		
Querétaro	2		
Quintana Roo	3		

En la tabla 3: Se pueden observar los resultados del análisis por estado mexicano. Se agruparon de acuerdo a la frecuencia en la que se presentaron las categorías e indicadores. En un primer grupo se agruparon los estados con más participación de los habitantes y con más población indígena. En un segundo grupo los estados agrupados tienen habitantes indígenas pero no participan directamente en los destinos ecoturísticos. El grupo tres es el que mostró menos participación de habitantes locales en las actividades de ecoturismo. En el primer grupo se observó más frecuencia de los indicadores de sustentabilidad comunitaria, en el segundo se observó frecuencia en los indicadores de las tres variables, pero solo en algunas categorías y el tercer grupo mostró menos frecuencia en las categorías de sustentabilidad comunitaria. Fuente: Elaboración propia.

Los resultados mostraron que el grupo integrado por los estados de Campeche, Chiapas, Hidalgo, Michoacán y Oaxaca se observa relación positiva significativa (\*\*.826) entre las categorías Adecuación y Valoración de los recursos naturales de la comunidad. (\*\*.739) entre Adecuación y Acciones para la conservación de los recursos naturales de la comunidad. (\*.523) entre Adecuación y Trabajo. (\*.458) Adecuación y Negocios. (\*.423) Adecuación y Productos y (\*.623) entre Adecuación y Construcción. También se observó relación positiva (\*\*.612) entre *Cultura Propia* y Valoración de los recursos naturales de la comunidad. (\*\*.628) *Cultura Propia* y Acciones para la conservación de los recursos naturales de la comunidad. (\*.421) *Cultura Propia* y Trabajo. (\*.629) *Cultura Propia* y Construcción. (\*.529) *Tecnología propia* y Valoración de los recursos naturales de la comunidad. (\*.517) *Tecnología propia* y Acciones para la conservación de los recursos naturales de la comunidad. (\*.723) *Tecnología propia* y Trabajo. (\*.529) *Tecnología propia* y Negocios. (\*.459) *Tecnología propia* y Productos y (\*.604) *Tecnología propia* y Construcción.

Tabla 4: Relación de las Categorías de las Variables del Desarrollo Sustentable en Comunidades Indígenas Mexicanas con Ecoturismo.

AMBIENTE	SUSTENTABILIDAD COMUNITARIA	DESARROLLO LOCAL
Categorías	Categoría	Categoría

En la tabla 4: se pueden observar las relaciones entre las categorías de las variables incluidas en este estudio. Destaca la categoría Adecuación porque mostró más consistencia con las categorías de la variable ambiental y la variable desarrollo local.

### CONCLUSIONES

Los resultados permiten observar que en el ecoturismo de comunidades indígenas, las cuatro categorías de desarrollo local propuestas por Bañuelos Flores & Salido Araiza (2007), pueden explicar la dimensión económica de desarrollo sustentable. Para dimensión ambiental los resultados coinciden con las categorías propuestas por la CESTUR (2013), lo que plantea revisar los resultados de Velázquez-Sánchez & Ramos (2013). Para sustentabilidad comunitaria validaron las cuatro categorías probadas por Velázquez, et al (2013). A diferencia de los servicios turísticos tradicionales, el ecoturismo en comunidades indígenas ha logrado integrar los aspectos de comunalidad y ambiente a los servicios que ofrecen; los resultados coinciden con Velázquez-Sánchez, Gómez Velázquez y Solana (2013). Los sitios de ecoturismo evaluados en esta investigación permiten concluir que el ecoturismo es una forma de adecuar el desarrollo a la cosmovisión de comunidades indígenas y probar la estrategia de resistencia llamada adecuación propuesta por Martínez Luna (2010) para expresarlo como desarrollo local y así integrar la dimensión económica, ambiental y social del desarrollo sustentable. Los resultados vertidos en este documento contribuyen al estudio del ecoturismo en comunidades indígenas. De una forma empírica aporta datos, prueba indicadores y establece relación entre categorías de las tres dimensiones del desarrollo sustentable para contribuir al desarrollo de índices para la evaluación del sector turístico y para la planificación de sitios de ecoturismo. *Este estudio provee una alternativa metodológica para el análisis de las dimensiones del desarrollo y turismo sustentable en comunidades indígenas.*

### Limitaciones

Las limitaciones de los resultados obtenidos en esta investigación, se deben a las categorías evaluadas y a la organización de los datos en tres grupos. Falta revisar los indicadores para integrar índices y para probar la correlación por dimensión del desarrollo sustentable. También se pueden revisar las categorías en otro tipo de comunidades.

## **DIFERENTES REDES SOCIALES EN LAS MIPYME LOCALIZADAS EN PUEBLA, MÉXICO**

María Antonieta Monserrat Vera Muñoz, Benemérita Universidad Autónoma de Puebla

Rafaela Martínez Méndez, Benemérita Universidad Autónoma de Puebla

José Gerardo Serafin Vera Muñoz, Benemérita Universidad Autónoma de Puebla

### **RESUMEN**

*En este trabajo se presenta un análisis de las diferencias y particularidades de los nodos que integran las redes sociales en las MIPYME localizadas en Puebla, México. Para lo cual, se parte de la revisión de algunos autores que han realizado estudios acerca de las redes sociales en las Micro Pequeñas y Medianas Empresas (MIPYME) localizadas en diferentes partes de la República Mexicana. La muestra se integra por dos grupos de empresas el primero fue 341 empresas representadas por su propietario o administrador, se aplicó un cuestionario de 10 preguntas; es importante señalar que la investigación de campo se realizó en una sola etapa, con duración de tres semanas; en la primera semana se aplicaron 91 cuestionarios, en la segunda semana se aplicaron 50 cuestionarios y en la tercera semana 200 cuestionarios. El segundo grupo lo integran 114 micros y pequeños empresarios. El objetivo del trabajo es indagar las diferencias que existe en de las Redes Sociales creadas por las MIPYME poblanas respecto al entorno en que se encuentren y de acuerdo con ello varia el intercambio de conocimientos que les apoyan para su permanencia en el mercado, mejoras en su producto y procesos y en acciones de innovación. La investigación da respuesta a la pregunta ¿Cuáles son los intercambios de conocimientos que han tenido las MIPYME poblanas, de que tipo y con quiénes de acuerdo al entorno en el que se encuentran?*

**PALABRAS CLAVE:** Redes de conocimiento, MIPYME

## **DIFFERENT NETWORKS IN MSMEs LOCATED IN PUEBLA, MEXICO**

### **ABSTRACT**

*This paper presents an analysis of the differences and particularities of the nodes that make up the social networks in SMEs located in Puebla, Mexico. Which, be part of the review of some authors who have made studies about social networking in Micro small and medium enterprises (SMEs) located in different parts of the Mexican Republic. The sample is made up of two groups of companies the first was 341 companies represented by their owner or administrator, a 10-question questionnaire; It is important to note that field research was carried out in a single stage, with duration of three weeks; 91 questionnaires were applied in the first week, second week 50 questionnaires were applied and in the third week 200 questionnaires. Make up the second group 114 micro and small entrepreneurs. The objective of the work is to investigate the differences that exist in social networks created by poblanas SMEs with respect to the environment in which they find themselves and accordingly various knowledge exchange that support them to remain on the market, improvements in its product and processes and innovation actions. Research is the answer to the question What are the exchanges of knowledge that MSMEs have poblanas , what type and who according to the environment in which they find themselves ?*

**KEYWORDS:** Knowledge Networks, MSME

## INTRODUCCIÓN

El objetivo de la presente investigación es indagar los beneficios de las Redes de conocimiento o Redes Sociales en las MIPYMEs poblanas como facilitadoras de conocimientos que les apoyan para su permanencia en el mercado, mejoras en su producto y procesos y en acciones de innovación. Para ello, se parte de que las redes sociales son un factor indispensable de la actividad empresarial, y que es a través de éstas como se puede tener acceso a diferentes recursos, entre otros a diferentes conocimientos: tecnológicos, administrativos y empresariales, que de otra forma no sería posible Basaldúa (2005). Asimismo, para llevar a cabo el estudio, se retoma el concepto de redes de conocimiento propuesto por Casas (2003), quien señala, que estas redes se construyen mediante intercambios entre un conjunto de actores que tienen intereses comunes en el desarrollo o aplicación del conocimiento científico, tecnológico o técnico para un propósito específico, sea este científico, de desarrollo tecnológico y de mejoramiento de procesos productivos. Para responder a la pregunta de investigación ¿Cuáles son los intercambios de conocimientos que han tenido las MIPYME poblanas, de que tipo y con quiénes de acuerdo al entorno en el que se encuentran? El trabajo se estructura de la siguiente forma: Revisión de la literatura, donde se integra el concepto de las redes sociales o de conocimiento, en México y los modelos de redes, así como información de las MIPYME, entre otros puntos. La investigación de campo se integra por dos grupos, de empresas representadas por su propietario o administrador, el primero tiene 341 y el segundo por 114.

## REVISIÓN DE LA LITERATURA

### Definiciones De Las Redes De Conocimiento

De acuerdo a Saexenian (1990): Las redes de conocimiento constituyen un conjunto formado por: instituciones académicas, industriales, políticas y agentes de enlace que colaboran conjuntamente, mejorando el trabajo científico, debido a que posibilitan el libre flujo de información e impulsan las condiciones locales para la innovación y que tienen por objetivo la construcción y difusión del conocimiento. Lara (2007); Anunziata y Macchiarola (2010) explican las redes de conocimiento como individuos, grupos o instituciones, asociados con un fin en común y señalan que las redes de conocimiento son asociaciones entre individuos, grupos o instituciones que tienen una agenda común en torno a intereses diversos tales como: dar solución a problemas, compartir recursos e infraestructura, propiciar la cooperación, la solidaridad social, como así también el intercambio de información y conocimientos y la transferencia de tecnología. Casas (2001; citado por Prada, 2005) menciona que, estas redes implican desde redes profesionales, hasta redes de entretenimiento, pero también abarcan la transmisión de conocimientos o innovaciones que dan lugar a la formación de espacios regionales de conocimiento.

Red es aquella relación de los grupos humanos que sostienen dos o más personas con el propósito de ayudarse, realizar negocios o llevar a cabo cualquier actividad relacionada con sus intereses, van surgiendo relaciones que pueden ser de carácter formal o informal (Tapia y Tapia, 2010). Para fines de esta investigación se define a las redes de conocimiento como el conjunto de individuos, empresas, asociaciones y agentes de

conexión que colaboran para la generación del conocimiento mediante el intercambio de información y la transferencia de tecnología con fines de innovación, de acuerdo a su entorno.

### Formación de Redes de Conocimiento

Las redes de conocimiento, están integradas por el elemento humano, así como por factores tecnológicos y sociales. Prada (2005) hace énfasis en cuatro elementos necesarios para la creación de Redes de Conocimiento, entre los cuales menciona: a) Comunidades y equipos expertos, b) Comunidades de conocimiento, c) El conocimiento, como la relación entre el sujeto y el objeto: d) Conocimiento e innovación. Existe una vasta literatura sobre la noción de red, las principales aportaciones han surgido de las disciplinas sociales, todas ellas han contribuido a enriquecer el marco teórico - conceptual, dando lugar a una taxonomía que incluye redes de intercambio y redes de poder (Knoke, 1990), de información y de colaboración (Freeman, 1991), de producción (Saxenian, 1991), de innovación o de innovadores (De Bresson y Amesse, 1991) y redes sociotécnicas (Callon, 1989).

Siguiendo a Casas (2001), se tiene que: estas formas de intercambio pueden concebirse como un proceso de transacción de conocimiento, aunque no en términos económicos, ya que una gran parte del conocimiento que se transmite en estas redes se hace por vía tácita y no mediante la compra – venta del mismo. Sin embargo estas formas de intercambio pueden llegar a tener un costo o beneficio económico. Las redes se construyen con las relaciones que se van creando entre los diferentes actores involucrados en una relación (Granovetter, 1973). Además, de los aspectos considerados sobre las redes de conocimiento, Casas (2003), señala que en el análisis de redes es necesario tomar en cuenta las siguientes dimensiones: 1) El contexto institucional de la colaboración entre los sectores público y privado; 2) La estructura o morfología de las redes; 3) La génesis, desarrollo y dinámica de las redes; 4) El contenido y/o los insumos que se intercambian y, 5) Los resultados de las redes y del intercambio de conocimientos. Estas dimensiones incluyen un conjunto amplio de características, que se sintetizan en la tabla .1.

Tabla 1: Dimensiones Para el Análisis de las Redes Sociales

<b>Contexto institucional</b>	<b>Estructura o morfología de las redes (Integrantes)</b>	<b>Dinámica: direccionalidad, duración, frecuencia comunicación y alcance</b>	<b>Contenido: formas de intercambio e insumos que circulan</b>	<b>Resultados de las redes y del intercambio de conocimiento</b>
Presencia de Instituciones de Educación Superior (IES), centros públicos de investigación, asociaciones empresariales, instituciones mixtas público-privadas.	Noción de red: los nodos representan a los actores y las áreas que conectan los nodos representan las relaciones entre los actores. Las redes involucran flujos de información entre varios de los nodos de la red. Las redes son el elemento crítico de la formación de mercados, mediante su contribución al aprendizaje. El desarrollo de la red es un proceso evolutivo	Direccionalidad, durabilidad, intensidad y frecuencia. Dinámica formal o informal. Dinámica horizontal y vertical. Los procesos de comunicación. El alcance espacial o territorial.	Sobre la idea de conocimiento: tácito y codificado; intercambio de conocimiento. Flujos e insumos de conocimiento: endógeno y exógeno. Tipos de conocimiento: científico, tecnológico, empresarial. Fuentes: acceso a fuerza de trabajo altamente capacitada, universidades locales e internacionales, competidores, alianzas, incentivos gubernamentales, prensa y artículos sobre comercio, eventos locales e internacionales. Canales para cruzar fronteras: contratación de nuevo personal, publicaciones, reuniones, modos informales de comunicación, movilidad de personas entre organizaciones. Extensión de fronteras: relaciones	Innovaciones radicales o incrementales. Generación de capacidades en las empresas. Generación de conocimiento. Resultados sociales, económicos y/o políticos. Creación de redes de conocimiento.

	detonado por la innovación, en el que el aprendizaje es el aspecto central de la red.	personales informales.
--	---	------------------------

*Esta tabla muestra las dimensiones que permiten analizar las redes sociales desde el contexto, la estructura, formas de intercambio e insumos que circulan.*

Un aspecto más sobre el que es necesario abundar, es naturaleza formal o informal de las relaciones que conforman la red. Las redes formales, según Birley (citado en Levanti, 2001: 1046), se componen de los bancos, las agencias locales o nacionales, así como las cámaras y otras representaciones oficiales. Las redes informales se refieren a todas las relaciones personales del empresario, principalmente la familia, los amigos y los contactos de negocios. Para Tapia y Tapia (2010), existen dos tipos de relaciones en las redes: a) las redes formales.-Se componen de las instituciones bancarias, las agencias locales o nacionales, las incubadoras y otras representaciones oficiales, b) las redes informales.- Se refiere a todas las relaciones personales del empresario, principalmente la familia, los amigos y los contactos de negocios, esta red informal de acuerdo a autores como Vera (2007), juega un papel fundamental en los procesos de creación de una empresa y son la primera fuente de ayuda del emprendedor.

#### Modelos Para el Desarrollo de las Redes de Conocimiento

Lara (2007) muestra cinco modelos de redes de conocimiento, los cuales brindan alternativas de interacción diferentes para la creación de conocimiento: 1. Modelo del ágora. Establece el espacio en el cual investigadores y destinatarios de proyecto establecen mecanismos de interacción y desarrollo, el espacio puede ser físico o virtual (recordemos que las TIC's permiten romper las barreras del tiempo y del espacio). Este tipo de modelo presenta una auto-organización y una autorregulación, lo cual disminuye la jerarquía organizacional. 2. Modelo de Agregación. Éste modelo está centrado en la satisfacción del cliente, para lo cual se hace uso de un agente de enlace entre el grupo de investigación y el usuario de la información, lo cual agrega un valor de la demanda y permite un control jerarquizado. 3. Modelo de Cadenas de valor. Éste modelo requiere de un agente integrador, el cual se encuentre en contacto con un grupo de investigadores innovadores, el cual se encarga del diseño, producción y distribución de productos o servicios. Creando soluciones de acuerdo a las problemáticas planteadas por los solicitantes.

En cada etapa del proceso se añade valor, puesto que cada proyecto es ajustado a las necesidades del cliente. En este modelo se tiende un control jerárquico elevado. 4. Modelo de Alianza. Se da entre comunidades con la finalidad de obtener un bien común, por lo tanto se sustentan principalmente de las relaciones entre los colaboradores (individuos, comunidades u organizaciones). Con este modelo se busca con alto nivel de integración con el mínimo nivel jerárquico. 5. Modelo de Red distributiva. Este modelo integra a las demás redes, propone la distribución del conocimiento entre las mismas. Ésta se transfiere mediante el uso de un sistema de gestión de conocimiento en las redes de alta velocidad. Los modelos propuestos muestran diferentes formas que permiten hacer uso de las redes de conocimiento, la elección de un modelo a seguir dependerá del contexto en el cual se desarrolla la investigación así como de las necesidades de conocimiento y sobre todo de la percepción y preferencias de los actores de la red.

#### Las Redes De Conocimiento en las MIPYME

En la actualidad las micro, pequeñas y medianas empresas (MIPYME), representan una sólida opción tanto para la creación de empleos y producción de artículos diversos, para responder a los

requerimientos de la globalización. Dentro del desarrollo día a día de las MIPYME se puede identificar la importancia que para ellas tienen las redes de conocimiento, es decir, aquellos vínculos tanto formales como informales que se van construyendo entre la empresa y un conjunto de agentes como proveedores, clientes, instituciones de gobierno, por mencionar algunos. Estas redes sirven de acceso a diferentes recursos y conocimientos (Tapia y Tapia, 2010).

Un primer intento para proponer un marco de referencia que tome en cuenta la importancia que tiene las redes sociales en el proceso de consolidación de las MIPYME ha sido el de Vera (2007; citado por Tapia y Tapia, 2010). Uno de los aspectos que llama poderosamente la atención en el desempeño de las MIPYME en general, son las redes sociales, es decir, aquellos lazos tanto formales como informales que se van generando entre la empresa – vía la figura del dueño, empresario y/o directivo - y los proveedores, clientes gobierno, etcétera. Estas redes tal y como lo señala Basaldúa (2005) son el vehículo para que la empresa pueda tener acceso a diferentes recursos, entre otros a distintos conocimientos que de otra forma no sería posible o muy difícil.

### Mipyme

Las MIPYMEs se clasifican de acuerdo a diversos puntos de vista tal y como se muestra en la tabla 2. Las MIPYME en Puebla México son importantes al contribuir con fuentes de empleo. El Gobierno actual del Estado en el plan de Desarrollo 2011-2017 apoya a las MIPYME, con un programa de microcréditos y capital semilla. Su presencia es importante al encontrarse tal y como se señala en el siguiente Tabla 3.

Tabla 2: Clasificación de Empresas

Tamaño	Sector	Rango de número de trabajadores	Rango de monto de ventas anuales (mdp)
<b>Micro</b>	Todos	Hasta 10	Hasta \$4
<b>Pequeña</b>	Comercio	Desde 11 hasta 30	Desde \$4.01 hasta \$100
	Industria y servicios	Desde 11 hasta 50	Desde \$4.01 hasta \$100
<b>Mediana</b>	Comercio	Desde 31 hasta 100	Desde \$4.01 hasta \$250
	Industria	Desde 51 hasta 100	
	Servicios	Desde 51 hasta 250	

*Esta tabla muestra la clasificación de las empresas según sector económico por rango de número de trabajadores y monto de ventas.*

Tabla 3: Datos Económicos de Mipymes

Empresas por tamaño en los sectores manufacturero, comercio y servicios en Puebla										
Personal ocupado	Unidades económicas	Unidades económicas %	Personal ocupado Miles	Personal ocupado %	Salario miles millones	Producción de Miles millones	Producción de %	Promedio de trabajadores por empresa	de Salario promedio	productividad
Micro (0 a10)	207.1	97.0	455.6	57.1	4.0	31.7	10.2	2.2	0.01	0.1
Pequeña (11 a 50)	5.3	2.5	106.5	13.3	4.5	29.3	9.4	20.1	0.04	0.3
Mediana (51 a 250)	1.1	0.5	114.8	14.4	7.0	57.8	18.6	103.4	0.06	0.5
Grande (+ 250)	0.1	0.1	121.2	15.2	13.8	191.4	61.7	830.2	0.11	1.6
Total	213.6	100	798.1	100	29.3	310.2	100	3.7	0.04	0.39

*Esta tabla muestra el número de unidades económicas, producción, salarios promedio según clasificación de las empresas*

*Características generales de las MIPYME:* Entendiendo las características generales de la empresa, podemos detallar algunas características que expresen la naturaleza de las MIPYME

(Roldan, 2013). Primero, el capital es proporcionado por una o más personas que establecen una empresa. Segundo, los propios dueños dirigen la marcha de la empresa; su administración suele ser empírica. Tercero, utilizan más maquinaria y equipo, aunque se sigan basando más en el trabajo que en el capital. Cuarto, dominan y abastecen un mercado más amplio, aunque no necesariamente tiene que ser local o regional, ya que muchas veces llegan a producir para el mercado nacional e incluso para el mercado internacional. Quinto, está en proceso de crecimiento, la pequeña tiende a ser mediana y está aspira a ser grande. Sexto, obtienen algunas ventajas fiscales por parte del Estado que algunas veces las considera causantes menores dependiendo de sus ventas y utilidades.

## METODOLOGÍA

El estudio se enfoca a identificar los beneficios de las redes sociales o de conocimiento en las MIPYME localizadas en Puebla, México. Considerando como variables de investigación las siguientes: relación de las MIPYME con clientes, proveedores e intercambio de conocimientos. El marco muestral se construyó con las unidades y marcos siguientes ver Tabla 4:

Tabla 4: Determinación de la Muestra

Unidad de análisis	MIPYME (Administradores y/o Dueños)	MIPYME (Administradores y/o Dueños)
Tamaño del universo	207000	207000
Tamaño de la muestra	*114	**384
Instrumento	Cuestionario	Cuestionario
Periodo de aplicación	Noviembre - diciembre 2012	Febrero 2013 (tres semanas)
Cuestionarios aplicados	Respondidos 114 No respondidos 0	Respondidos 341 No respondidos 43
	* Muestra a conveniencia del investigador	** Muestra determinada con formula estadística

*Esta tabla muestra la población estudiada y el tamaño de la muestra del objeto de estudio*

La aplicación de los cuestionarios se realizó por cuota; asignándole a cada encuestador que aplicará un determinado número de cuestionarios. Integrando una muestra definitiva 341 empresas eliminando 44 cuestionarios que no fueron contestados en su totalidad, cantidad inferior a la muestra determinada y que al aplicarla formula señala una muestra de 384 elementos, considerando una población de 207000 empresas. Para determinar el tamaño de la muestra se utilizó la siguiente fórmula:

$$n = \frac{Z^2 p q N}{Ne^2 + Z^2 p q} \quad (1)$$

Donde:

n=?

e= 5%

N = la población = 207000 empresas

Z = nivel de confianza 95%=1.96

p = 0.50

q = 1-.50

Sustituyendo los valores en la fórmula tenemos:

$$n = \frac{(1.96)^2 (0.50) (1-0.50) (207000)}{(207000)(0.05)^2 + 1.96^2 (0.05) (1-0.50)} = 384$$

La aplicación de cuestionarios se realizó en una sola etapa en el mes de febrero 2013, con duración de tres semanas; en la primera semana se aplicaron 91 cuestionarios, en la segunda semana se aplicaron 50 cuestionarios y en la tercera semana 200 cuestionarios.

## RESULTADOS

Previo a la aplicación del cuestionario se utilizó una pregunta filtro para tener la certeza de que la empresa estuviera dentro de las MIPYME. La pregunta fue la siguiente: ¿ Cuantos trabajadores tiene la empresa? Tomando como referencia la clasificación de las MIPYME por el número de trabajadores, obteniendo los resultados que se presentan en el Tabla 5.

De la aplicación del cuestionario a una muestra de 341 y 114 Personas propietarios o administradores de MIPYME, se obtuvieron los resultados que a continuación se presentan: Las preguntas 1, 2, 4 y 8 se concentran en la Tabla 6.

1.- ¿Desde cuándo está funcionando la empresa? Como se observa en la Tabla 6 en la primera muestra las empresas sesgan su madures en 43% a 2 a 5 años y en la segunda muestra el 59% de las empresas entrevistadas tienen una madurez de 5 años, las empresas más jóvenes en la primera muestra integran un 21% y en la segunda muestra el 9% tienen menos de un año.

2.- ¿Qué tiempo tiene participando como dueño o directivo en la empresa? La Tabla 6 muestra, en el primer grupo que la participación de los entrevistados es de 2 a 5 años, esa misma experiencia resulta en la segunda muestra, pero no de manera dominante, ya que hay participación muy similar en otros intervalos de tiempo.

4.- ¿Desde cuándo se da el intercambio? La antigüedad de la red se aprecia para la primera muestra a se aprecia entre 1na 2 años y en la segunda se observa un ligero predominio desde el inicio de la empresa, Tabla 6.

8.- ¿Desde cuándo se da el intercambio? La antigüedad de la red entre los proveedores y la empresa es para la primera muestra desde el inicio y para la segunda muestra, preponderantemente entre 1 a 2 años.

Tabla 5: Diversidad de Empresas Que Integran la Muestra

Tipo de empresa	Número de empresas participantes primer grupo ( noviembre- diciembre 2012)	Número de empresas participantessegundo grupo ( febrero- marzo 2013)
Micro	74 ----- 65%	160 ----- 47%
Pequeña	32 ----- 28%	164 ----- 48%
Mediana	8 ----- 7%	17 ----- 5%
Total	114 ----- 100%	341 ----- 100%

*Esta tabla muestra la integración de la muestra por número de Micro, Pequeñas y Medianas empresas que participaron en la respuesta a los cuestionarios.*

Las respuestas las preguntas antes relacionadas se concentran en la Tabla 6.

Tabla 6: Concentrado De Respuestas A Las Preguntas 1,2,4 Y 8 Que Se Refieren A Datos Cronologicos

Variable	Inicio de la empresa		Menos de 1 año		1-2 años		2-5 años		Más de 5 años		No contesto	Total	
	Nov-dic 2102	Feb-mar 2013	Nov-dic 2102	Feb-mar 2013	Nov-dic 2102	Feb-mar 2013	Nov-dic 2102	Feb-mar 2013	Nov-dic 2102	Feb-mar 2013		Nov-dic 2102	Feb-mar 2013
1.- Funcionamiento de la empresa	0%	0%	21%	9%	7%	11%	43%	21%	29%	59%	0%	100%	100%
2.- Antigüedad del propietario o administrador	0%	0%	21%	21%	7%	25%	43%	27%	29%	23%	4%	100%	100%
3.- Antigüedad de la red con Clientes	12%	28%	5%	0%	42%	27%	16%	21%	25%	16%	8%	100%	100%
4.- Antigüedad de la red con Proveedores	81%	23%	2%	0%	4%	26%	6%	24%	7%	13%	14%	100%	100%
Sumas	93	51	49	30	60	89	108	93	90	111	26		

La Tabla refleja respecto a las 4 variables que la integran los mas altos porcentajes en el rango mas de 5 años; de que se generó la actividad (1 y 2) o relación (3 y 4) considerada en las variables.

La pregunta 3, 6, 7 y 10 se concentran en la Tabla 7.

3.- ¿Tiene o ha tenido intercambio de conocimientos y/o experiencias con sus clientes? La Tabla 7, muestra claramente la existencia de la red conformada entre las MIPYME y los clientes, tanto en el primero como en el segundo grupo.

6.- ¿Ha aplicado en la empresa alguna acción derivada del intercambio de conocimientos y experiencias con sus clientes? Las empresas como se aprecia en la Tabla 7 si han tenido intercambios de conocimientos con sus clientes y la aplicación de los mismos.

7.- ¿Tiene o ha tenido intercambio de conocimientos y/o experiencias con sus proveedores? La Tabla 7 exhibe la existencia de la red entre los proveedores en 80% y el 73% de las empresas del primero y segundo grupo respectivamente.

10.- ¿Ha aplicado en la empresa alguna acción derivada del intercambio de conocimientos y experiencias con sus proveedores? Las empresas han establecido intercambio de de experiencias y conocimientos con los proveedores y aplican el producto de este intercambio.

Tabla 7: Concentrado de respuestas a las preguntas 3,6,7 y10 que se refieren a datos afirmativos o negativos

Variable	Si		No		No contesto		c	
	Nov-dic 2102	Feb-mar 2013						
Red de conocimiento con Clientes	80%	83%	20%	16%	0%	1%	100%	100%
Intercambio de experiencias y/o conocimientos con Clientes	60%	78%	40%	18%	0%	4%	100%	100%
Red de conocimiento con Proveedores	80%	73%	20%	26%	0%	1%	100%	100%
Intercambio de experiencias y/o conocimientos con Proveedores	63%	68%	37%	26%	0%	6%	100%	100%
Red de conocimiento con entidades de Gobierno	95%	0%	5%	100%	0%	0%	100%	100%
Intercambio de experiencias y/o conocimientos con Entidades de Gobierno	100%	0%	0%	100%	0%	0%	100%	100%

Sumas	478	302	122	286	12
-------	-----	-----	-----	-----	----

La Tabla refleja respecto a las 4 primeras variables que la integran los mas altos porcentajes en las respuestas afirmativas, lo que permite aseverar la existencia de redes de conocimiento con clientes y proveedores e intercambio de conocimientos con los mismos. No así para el segundo grupo de empresas en lo referente a las 2 ultimas variables, de acuerdo a las respuestas, este grupo no tiene como integrantes de su redes al Gobierno.

La pregunta 5 presenta sus resultados en la Tabla 8. La pregunta 9 integra resultados en la Tabla 9.

5.- ¿Qué tipo de experiencias y/o conocimientos se han intercambiado? Predomina el intercambio de Conocimientos y experiencias de gustos y preferencias del producto o servicio como se puede observar en la tabla 8. El total de respuestas no suma 114 y 341 debido a que algunos de los encuestados señalaron como respuesta más de una opción.

Tabla 8: Tipos de intercambio con clientes

	Nov-dic 2102	Feb-mar 2013
Conocimientos y experiencias de gustos y preferencias del producto o servicio	63	233
Conocimientos y experiencias sobre nuevos mercados	43	131
Conocimientos y experiencias respecto al empaque del producto	22	53
Otros intercambios	13	30
	Servicios, especificaciones, actualizaciones, sistemas, procedimientos, calidad en el servicio, información fiscal, información laboral, precios.	Servicios, especificaciones, actualizaciones, sistemas, procedimientos, calidad en el servicio, información fiscal, información laboral, precios.
No Contesto	0	37

Esta tabla muestran los diferentes tipos de intercambio entre clientes y la empresa. Resaltando prioritariamente el intercambio de experiencias y conocimientos de gustos y preferencias del producto o servicio.

9.- Qué tipo de experiencias y/o conocimientos se han intercambiado? El intercambio entre los proveedores y las empresas se da en forma equilibrada en los tres primeros puntos del Tabla 9. El total de respuestas no suma 114 y 341 debido a que algunos de los encuestados señalaron como respuesta más de una opción.

Tabla 9: Tipos de intercambio con Proveedores

	Nov-dic 2102	Feb-mar 2013
Conocimientos y experiencias de gustos y preferencias del producto o servicio	57	123
Conocimientos y experiencias sobre	99	122

nuevos mercados		
Conocimientos y experiencias respecto al empaque del producto	25	95
Otros intercambios	54	30
	Servicios, tiempos de entrega, actualizaciones, sistemas, procedimientos, calidad en el servicio, información fiscal, información laboral, precios, nuevas marcas mercados y costos	Servicios, tiempos de entrega, actualizaciones, sistemas, procedimientos, calidad en el servicio, información fiscal, información laboral, precios, nuevas marcas mercados y costos.
No Contesto	0	67

*Esta tabla muestra los diferentes tipos de intercambio entre proveedores y la empresa. Resaltando prioritariamente el intercambio de experiencias y conocimientos de gustos y preferencias del producto o servicio.*

Como se pudo apreciar los resultados obtenidos muestran la presencia de las redes de conocimiento en las MIPYMEs. Retomando lo señalado por Lara (2007) y Anunziata y Macchiarola (2010), las redes son asociaciones entre individuos con una agenda común. También es notoria la diversidad de redes Casas (2003), en las MIPYME poblanas con sus clientes, proveedores y Gobierno, así como la existencia de intercambio de conocimientos a través de esas redes. El intercambio se da en primer lugar respecto a conocimientos y experiencias de gustos y preferencias del producto o servicio por parte de los clientes y proveedores, lo que permite a la empresa satisfacer las necesidades de los clientes; en segundo lugar se nota la presencia de intercambio de conocimientos sobre nuevos mercados a los que las MIPYME se pueden acercar por las referencias e informes que les hacen llegar los clientes y proveedores y finalmente en tercer lugar se nota la presencia de un intercambio de conocimientos y experiencias referido al empaque de los productos.

El trabajo de investigación permitió conocer la existencia de Redes sociales o de conocimiento y la formación de las mismas entre la empresa y diferentes actores como son sus clientes y sus proveedores, y gobierno, entre ellos se da el intercambio de experiencias y conocimientos. Las redes con los clientes y con los proveedores por su duración se encuentran maduras. El intercambio con los clientes se enfoca más al conocimiento de experiencias sobre gustos y preferencias del producto o servicio, a diferencia con los proveedores que intercambio es más intenso en diferentes aspectos. Las dimensiones para el análisis de las redes de conocimiento señalado por Casas (2003), se presenta de forma sintética conjuntando los resultados de los dos grupos de empresa con los que se trabajó, en la Tabla 8.

La Tabla 9 muestra de forma detallada con apoyo en la dinámica de las redes (Casas, 2003) los resultado que contiene la tabla 8.

Tabla 8: Existencia de las Redes de Conocimiento en las MIPYME Poblanas

Concepto	Si aplica Clientes	Si aplica Proveedores	Si aplica con Gobierno
Existencia de la Red de Conocimientos.	Si	Si	Si
Elementos de la Red de Conocimientos. (elemento humano, así como por factores tecnológicos y sociales)	Si	Si	Si
Formación de la Red de Conocimientos. (Relación del empresario con clientes y Proveedores)	Si	Si	Si
Dimensiones de la Red de Conocimiento. Análisis :			
1) El contexto institucional de la colaboración entre los sectores público y privado;	Si	Si	Si
2) La estructura o morfología de las redes;( los nodos representan a los actores y las áreas que conectan los nodos representan las relaciones, es decir los integrantes)	Si	Si	Si
3) La génesis, desarrollo y dinámica de las redes (Dinámica: direccionalidad, duración, frecuencia comunicación)	Si	Si	Si

4) El contenido y/o los insumos que se intercambian ( Sobre la idea de conocimiento: tácito y codificado; intercambio de conocimiento, Flujos e insumos de conocimiento: endógeno y exógeno, Tipos de conocimiento: científico, tecnológico, empresarial, Fuentes: acceso a fuerza de trabajo altamente capacitada, universidades locales e internacionales, competidores, alianzas, incentivos gubernamentales, prensa y artículos sobre comercio, eventos locales e internacionales, Canales para cruzar fronteras: contratación de nuevo personal, publicaciones, reuniones, modos informales de comunicación, movilidad de personas entre organizaciones Extensión de fronteras: relaciones personales informales.	Si	Si	Si
5) Los resultados de las redes y del intercambio de conocimientos. (Innovaciones radicales o incrementales, Generación de capacidades en las empresas, Generación de conocimiento, resultados sociales, económicos y/o políticos y Creación de redes de conocimiento.	Si	Si	Si

*Esta tabla muestra la existencia de las redes de conocimiento en las MIPYME poblanas desde diferentes puntos de vista.*

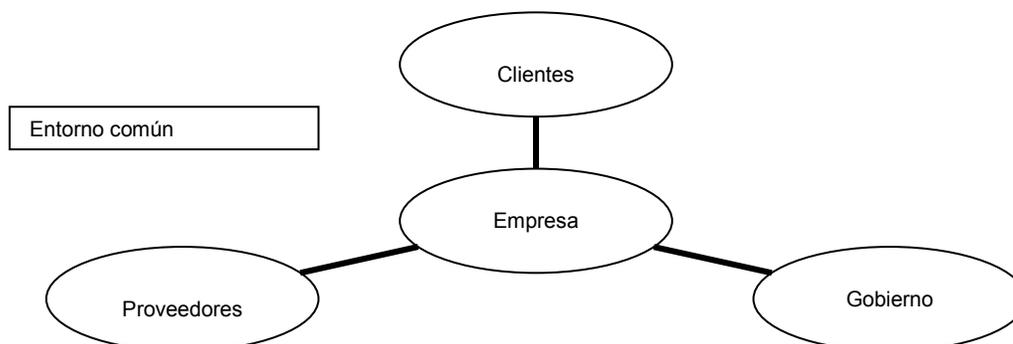

Tabla 9: Dinámica de las Redes de Conocimiento en las MIPYME Poblanas

Estructura o morfología de las redes (Integrantes)	Dinámica: direccionalidad, duración, frecuencia comunicación y alcance	Contenido: formas de intercambio e insumos que circulan	Resultados de las redes y del intercambio de conocimiento
<b>Instituciones de Educación Superior IES</b>	Contactos personales del personal directivo de la empresa. Se observa una direccionalidad de ambas partes, una durabilidad que tiene su origen después de la formación de la empresa.	<b>Información</b> con respecto a diferentes apoyos financieros. <b>Acceso a recursos</b> , en este caso sobre infraestructura necesaria para que la empresa inicie y mantenga su actividad.	Generación de conocimiento sobre aspectos productivos. Información sobre tecnología.
<b>Empresarios</b>	Contactos personales del personal directivo de la empresa. Se observa una direccionalidad de ambas partes, una durabilidad que tiene su origen después de la formación de la empresa. Construcción de la relación por interés de ambas partes. El inicio de la relación coincide con el inicio de las operaciones de la empresa.	<b>Información</b> con respecto a diferentes apoyos financieros. <b>Acceso a recursos</b> , en este caso sobre infraestructura necesaria para que la empresa inicie y mantenga su actividad.	Generación de conocimiento sobre prácticas empresariales.
<b>Proveedores</b>	Contacto personal del de los directivos de la empresa. Construcción de la relación por interés de ambas partes. Se observa un intercambio frecuente de información y conocimientos sobre las características de calidad de los insumos y productos. Y al igual que la relación anterior, el inicio de la relación coincide con el inicio de las operaciones de la empresa.	<b>Conocimientos</b> , específicamente respecto a la tecnología e insumos. <b>Acceso a recursos</b> , en este caso a materias primas y maquinaria.	Maquinaria acorde a las necesidades y exigencias de los productos solicitados por los clientes, así como insumos.
<b>Clientes y usuarios</b>	Contactos personales y página web. Por interés de ambas partes hay un intercambio cotidiano de información y este vínculo ha existido desde que inició operaciones la empresa.	Información sobre gustos y preferencias de sus clientes y cumplimiento de códigos de conducta y requisitos de producción. No Aplica	Productos que cumplen con las exigencias de los clientes.
<b>Asociaciones empresariales</b>	No Aplica	No Aplica	No Aplica
<b>Entidades de gobierno</b>	Es una relación que surge como resultado de los contactos personales de la persona que dirige la empresa a través de diferentes programas estatales y regionales Se trata de una relación que surge por interés de ambas partes, pero en la que se observan intercambios esporádicos y que al igual que las otras relaciones surge después del inicio de la empresa.	Beneficios financieros.	Disposición de efectivo para la estructura de la empresa. Disposición de mejores flujos de efectivo.

*Esta tabla muestra la existencia de las redes de conocimiento en las MIPYME poblanas con los diferentes actores involucrados en ellas.*

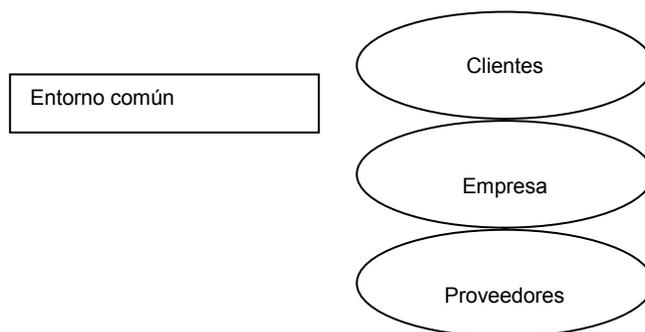

De forma ilustrativa se presentan los resultados en los dos grupos de empresas a las que se les aplicaron los cuestionarios, marcando las diferencias y similitudes encontradas respecto a los tipos de redes. Figura 1 y 2.

Figura 1: Red Empresa grupo Nov. – Dic. 2012

*Esta Figura muestra la existencia de las redes de conocimiento en las MIPYME poblanas con la integración de 4 actores. Tomando como base el modelo Alianza Lara, 2007.*

## CONCLUSIONES

Los estudios realizados por diferentes autores en materia de redes sociales permitieron definir las redes de conocimiento, sus elementos, como se integran, sus dimensiones y conocer su presencia en las MIPYME.

Identificar además la existencia de diferentes tipos de redes como son las redes formales e informales y remarcar la presencia de redes semiformales como una aportación de la presente investigación al considerar a las relaciones establecidas por parte de la empresa con clientes, proveedores y gobierno; que se han mantenido en el tiempo creando confianza y amistad entre los actores que forman esos lazos de la red. Cabe resaltar que la presencia de las redes es eminente en las MIPYME, pero el entorno que en el que se encuentran inmersas influye en la conformación de las mismas, respecto a los actores que participan. Para cerrar las conclusiones se menciona que se da respuesta a la interrogante formulada señalando la existencia de las redes de conocimientos entre las MIPYME localizadas en la ciudad de Puebla, México, con clientes, proveedores y gobierno en las que se nota la influencia del entorno en el que se encuentran las empresas.

## RESUMEN

*La alineación entre el Negocio y las Tecnologías de Información y Comunicación (TIC) se ha convertido en una de las prioridades de las organizaciones hoy en día. Para afrontar esta problemática se han centrado los esfuerzos de esta investigación en relacionar las dimensiones de un Modelo para identificar el nivel de madurez de la Alineación Estratégica de las TIC's con las variables propuestas en el Manual Administrativo de Aplicación General en materia de Tecnologías de Información y Comunicaciones (MAAGTIC), que es un marco regulatorio desarrollado por el Gobierno mexicano. En la metodología para la recolección de datos se elaboró un constructo basado en los procesos correspondientes a los niveles de gestión de los cuales se obtiene un conjunto de 120 subprocesos propuestos en el MAAGTIC. El constructo inicial se colocó en un sitio web para facilitar el acceso y la rapidez en las respuestas. Se seleccionaron los expertos y se calculó para los mismos Coeficiente de competencia K a partir del ( $K_a$ ) coeficiente de argumentación y el coeficiente del conocimiento ( $K_c$ ). En la validación del constructo se obtuve un Alpha de cronbach de .984. El estudio Kaiser-Meyer-Olkin (KMO) y Esfericidad de Bartlett para probar y avalar la factibilidad de la reducción fue .726. Con la finalidad de evaluar la correlación existente entre las variables, se utilizó el Análisis de Correspondencias (múltiple), Árboles de decisión con el método de crecimiento CHAID exhaustivo y Análisis discriminante. Una vez que se redujeron las variables quedó un constructo que se evalúa con ecuaciones estructurales para su aplicación en una organización donde se obtuvo la evaluación del nivel de madurez de la alineación entre las TIC's y el negocio.*

**PALABRAS CLAVES:** Tecnologías de Información y Comunicación, Alineación estratégica, Ecuaciones Estructurales

## DESIGN AND VALIDATION OF A METHODOLOGY FOR ASSESSING THE LEVEL OF MATURITY OF STRATEGIC ALIGNMENT OF INFORMATION TECHNOLOGY

### ABSTRACT

*Alignment between Business and Information and Communication Technologies (ICT ) has become one of the priorities of organizations today. To address this problem have focused the efforts of this research to relate the dimensions of a model to identify the level of maturity of the Strategic Alignment of ICT with the variables proposed in the Administrative Manual of General Application in Technology Information and Communications ( MAAGTIC ), which is a regulatory*

*framework developed by the Mexican government . The methodology for data collection developed a process-based construct corresponding to the levels of management which yields a set of 120 threads proposed in MAAGTIC . The initial construct was placed on a website for easy access and speed of responses. Experts were selected and calculated for the same competition coefficient  $K$  from  $K_a$  argument coefficient and the coefficient of knowledge ( $K_c$ ). In the validation of the construct obtained a Cronbach 's alpha of .984 . The study Kaiser -Meyer- Olkin (  $KMO$  ) and Bartlett sphericity to test and guarantee the feasibility of the reduction was .726 . In order to evaluate the correlation between variables was used Correspondence Analysis (multiple), decision trees with Exhaustive CHAID growing method and discriminant analysis. Once the variables were reduced was a construct structural equation is evaluated for application in an organization where you obtained the assessment of the level of maturity of the alignment between business - TIC's.*

## INTRODUCCION

Los Sistemas de Información Empresariales han evolucionado de un nivel de baja complejidad y operaciones rutinarias, a niveles que representan un alto grado de complejidad e integración, convirtiendo a los mismos en instrumentos estratégicos. No es exagerado decir que actualmente lo que hace esencialmente la diferencia en una organización, es su capacidad para convertir los datos y la información en conocimiento aplicado a las decisiones.

La alineación estratégica del Negocio con las Tecnologías de Información (TI) han sido utilizada por las organizaciones para crear y mejorar la eficiencia, reducir costos, mejorar la relación comprador-proveedor, y para crear nuevos productos y soluciones para el negocio, Nadali et al. (2011); para Hair & Anderson (2010), la alineación Negocio-TI significa el grado en el cual la misión, objetivos y planes de las TI están soportados por la misión, objetivos y planes del Negocio. Según Burlton (2010), “La alineación estratégica se define como la justa vinculación de las prioridades de la organización y los procesos empresariales que permiten una continua y una eficaz acción para mejorar el rendimiento empresarial.”

Algunas de las razones primarias en el análisis de la Literatura de la baja tasa de éxito en la alineación del Negocio y las TI, es la falta de una definición uniforme de la alineación, la búsqueda de una estrategia para la alineación, y la falta de una herramienta apropiada para medir el éxito de la misma. (Baets, 1992; Lee, 2013; Siurdyban, 2012).

Haciendo uso de las mejores prácticas, modelos de gobierno, marcos de referencia y normas metodológicas las organizaciones están buscando soluciones de TI que les permitan alinear sus operaciones con sus objetivos de negocios y así evaluar el impacto de implementar nuevas aplicaciones al crecimiento del negocio y a los planes futuros de las organizaciones.

Con la finalidad de alinear los modelos de procesos de negocio con las TI, se tiene como necesidad el homologar y soportar a las mismas, a través de las mejores prácticas, explorando las aplicadas actualmente en las organizaciones y adaptándolas a la organización permitiendo con ello el brindar elementos certeros para el soporte de los procesos de negocio, teniendo como fin establecer estrategias que permitan dar esa ventaja competitiva, a través de los servicios de TI

que contribuyan a la alineación de los objetivos, ofreciendo elementos estratégicos claves como apoyo y soporte a la alta dirección para la toma de decisiones.

Entre los Modelos de Alineación de las TI con las estrategias del negocio ha sido de gran repercusión el modelo de Henderson & Venkatraman (1993), de alineación de la estrategia de TI-Negocio (Strategic Alignment Model-SAM), que está constituido por cuatro elementos: estrategia de negocio, estrategia de TI, procesos e infraestructura organizacional y procesos e infraestructura de TI.

Luftman & Kempaiah (2007), desarrollaron un modelo para identificar el nivel de madurez de la alineación entre el negocio y las TI, el Modelo de Madurez de la Alineación Estratégica (Strategic Alignment Maturity Model - SAMM).

En México, el Manual Administrativo de Aplicación General en Materia de Tecnologías de la Información y Comunicaciones, de ahí sus siglas MAAGTIC fue desarrollado por la Secretaría de la Función Pública como una estrategia del Gobierno Federal mexicano para mejorar la gestión pública, al estandarizar las actividades de las Unidades de Tecnologías de Información y Comunicaciones (UTIC's) de todas las instituciones de la Administración Pública Federal. Con estas acciones se busca además incrementar la transparencia y capacidad de las UTIC's.

MAGTIC es una propuesta que integra diferentes marcos de referencia y buenas prácticas de las Tecnologías de información como son: ITIL, COBIT, CMMI, ISO 27000, RUP, Administración basada en el PMBoK e ISO 20000. Fue propuesto en septiembre del 2009 y la primera versión fue liberada en el mes de julio de 2010, entrando en vigor en el mes de agosto del mismo año, la versión más actual fue liberada en Noviembre del 2011.

El propósito de esta investigación es por tanto diseñar y validar una herramienta que integre los Modelos internacionales de Alineación de las Tecnologías de la Información con el MAAGTIC.

La estructura en la que se desarrolla a continuación una síntesis de este resultado de investigación es la siguiente: la Revisión de Literatura que contiene los aspectos más relevantes acerca de la importancia de la Alineación de las Tecnologías de la Información con las estrategias del negocio y sus Modelos, la Metodología empleada para sustentar con Modelos matemáticos las decisiones en cuanto a la reducción de variables y el planteamiento de un Modelo Teórico basado en ecuaciones estructurales, los resultados finales del diagnóstico efectuado en una organización no identificada por razones de confidencialidad, Conclusiones y Referencias Bibliográficas.

## **REVISIÓN DE LITERARIA**

La creciente dependencia de las tecnologías de información (TI) en las organizaciones, han provocado que éstas, enfrenten situaciones complejas del cómo alinear y adaptar las Tecnologías de Información a los procesos de negocio de la organización, con la finalidad de tener un soporte tecnológico, operativo y estratégico, que brinde esa ventaja competitiva, asumiendo como premisa la optimización de recursos y generación de valor a través de ellas. Luftman & Kempaiah (2007).

Una encuesta reciente a 243 compañías realizada por Luftman & Ben-Zvi (2010), muestra que dentro de las principales preocupaciones de los directivos de TI están: a) Productividad del Negocio y reducción de costos; b) Alineación del Negocio y TI; c) Agilidad y velocidad en el Negocio; d) Reingeniería de Procesos de Negocio, todas estas listadas en ese orden. Aunado a

que la globalización ha impulsado aún más en la necesidad de que las organizaciones incrementen la eficiencia, velocidad y flexibilidad de sus procesos.

Esta problemática es una de las principales preocupaciones que los directivos han referido en las organizaciones, quienes en su rol de decisores en materia de TI tienen dificultades para identificar la incorporación de las TI mismas como generadora de valor para el negocio. López Paz et al. (2010).

Con base en esta necesidad, muchas organizaciones diseñan e implementan proyectos orientados a resolver el problema de mantener sus procesos estratégicos a través de las tecnologías de información (TI). La alineación entre los objetivos del negocio y los servicios de TI es una de las estrategias claves que las organizaciones necesitan implementar para manejar sus negocios de forma exitosa.

La esencia para la integración de los procesos de negocio y las Tecnologías de la Información (TI), es que la incorporación de las TI, sea generadora de valor para el negocio en todo el proceso de incorporación tecnológica. Sin embargo, la misma por sí sola no es generadora de valor para la organización, incluso, no se mantiene neutral pues, decisiones equivocadas en incorporar a las Tecnologías de Información llegan a convertirse en una fuente de destrucción del valor para la organización. Son, Gladyszewski, & Weitzel (2006)

Para ello los procesos tienen que ser diseñados, ejecutados, administrados y medidos de acuerdo a las prioridades y situaciones estratégicas específicas del negocio. Las organizaciones constantemente se esfuerzan para maximizar el uso de recursos y obtener una mayor devolución sobre la inversión, mediante la optimización de la integración de las TI y el negocio con respecto al proceso, funciones, tecnologías, sistemas y recursos humanos.

Ahuja (2012), infiere en que la evolución de las TI las ha convertido en una unidad primaria del negocio como diferenciador estratégico. Debido a su integración simbiótica entre el Negocio y las TI, lo cual hace cada vez más importante esta alineación de las funciones de TI con las de los procesos del negocio, para permitir a la organización obtener ventajas estratégicas.

Para articular dichas estrategias existen una serie de marcos de referencia a través de mejores prácticas, herramientas y estándares como lo son: ITIL V3, COBIT 5, ISO 2000, IEC/27002, CMMI, RUP, PMBoK y MAAGTIC, que permiten normar, organizar y controlar la gestión de servicios de TI como soporte a los procesos de negocio de las organizaciones. (OGC & ITGI, 2008; Secretaria de la Función Pública, 2011; Strahonja, 2009)

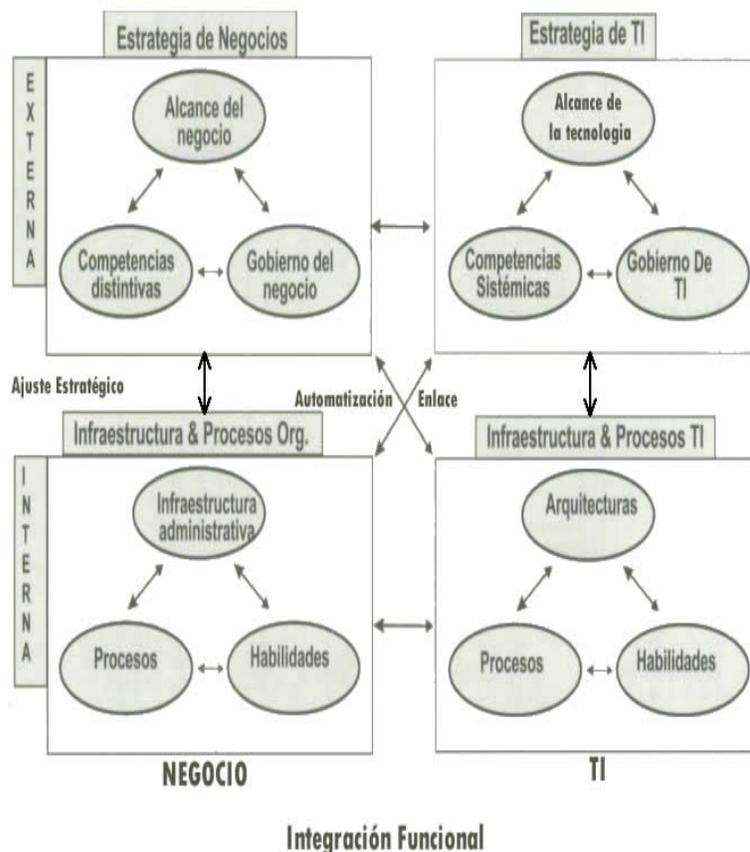

El modelo de Henderson & Venkatraman (1993), de alineación de la estrategia de TI-Negocio (Strategic Alignment Model-SAM), está constituido por cuatro elementos: estrategia de negocio, estrategia de TI, procesos e infraestructura organizacional y procesos e infraestructura de TI. En la figura 1, se observa el modelo gráfico aportado por los autores donde se muestra cómo la alineación estratégica se lleva a cabo a través de dos bloques constructivos; el ajuste estratégico (dominios interno y externo) y la integración funcional (dominios del negocio y TI), teniendo en cuenta las relaciones existentes de los elementos, por lo que se definen 4 perspectivas dominantes a tener en cuenta por las organizaciones que deseen implementar una alineación estratégica del negocio y de las TI.

Las perspectivas se dividen en cuatro dominios a analizar: a) Estrategia de negocio, b) Estructura de negocio, c) Estrategia TI y d) Estructura TI. Las relaciones cruzadas entre estos dominios matizan diferentes tipos de integración y alineación que se pueden abordar en la organización.

Luftman & Kempaiah (2007), desarrollaron un modelo con el cual es posible realizar un diagnóstico que permite identificar el nivel de madurez de la alineación entre el negocio y las TI, el Modelo de Madurez de la Alineación Estratégica (Strategic Alignment Maturity Model - SAMM). La estructura del modelo consta de 6 criterios de alineación, presentes en cada uno de los 5 niveles de madurez.

Tener un conocimiento claro del nivel de madurez con el que la organización cuenta en relación a su alineación estratégica hace posible la identificación de brechas que impiden la correcta alineación entre el negocio y las TI, a su vez también ayuda a conocer la madurez con la que las decisiones estratégicas son tomadas y de alguna manera saber cómo y dónde está ubicada la organización, permitiendo saber en qué manera puede mejorar la relación Negocio / TI. (Luftman, Brown, & Balaji, 2011; Luftman & Kempaiah, 2007; Vargas, Boza, & Cuenca, 2011); Para proveer una herramienta de medición del nivel de madurez de la alineación Negocio y TI en una organización fue desarrollado el Modelo de Madurez de la Alineación Estratégica (Strategic Alignment Maturity Model - SAMM) (Ahuja, 2012; Baets, 1992; David & Robert, 1992; Kaplan & Norton, 2008; López Paz, Maciá Pérez, & Gilart Iglesias, 2009; Luftman & Kempaiah, 2007; vom Brocke, 2010)

Figura 1 Modelo de Alineación Estratégica (SAM)

*Fuente: (Henderson & Venkatraman, 1993)*

El modelo SAMM propone que el nivel de madurez de la alineación del Negocio y las TI puede ser medido a través de seis componentes: Comunicación, Valor de TI, Gobierno de TI, Relaciones con el negocio, Arquitectura y Habilidades. (Luftman & Kempaiah (2007).

Una vez aplicado el diagnóstico a partir del modelo SAMM los resultados permiten ubicar a la organización en uno de los cinco niveles de madurez siguientes: Nivel 1: Inicial, hay una comunicación pobre entre el negocio y TI y del valor y contribución que proveen. Nivel 2: Comprometido, las organizaciones han empezado a mejorar sus relaciones entre el negocio y TI. Nivel 3: Enfocado, Los niveles de gestión alto y medio entienden el negocio y comienza a surgir la comprensión de las TI por parte del Negocio. Nivel 4: Mejorado y administrado, Las organizaciones administran los procesos que necesitan para el alineamiento estratégico con la empresa. Una de las principales características de este nivel es que la brecha entre las TI y el Negocio se ha cerrado. Nivel 5: En este nivel las organizaciones han optimizado la alineación estratégica entre el Negocio y las TI a través de rigurosos procesos de negocio que integran los planes estratégicos del Negocio y los planes de TI.

### **METODOLOGÍA**

Con la finalidad de agilizar el proceso de diseño y validación de la metodología fue necesaria la elaboración de un sistema web el cual no solo se facilita el proceso de ajuste del constructo y su aplicación dentro de la organización sino que brinda una manera simple de recolección y procesamiento de datos, ya que toda la información es guardada dentro de una base de datos que es utilizada en el procesamiento con las técnicas de apoyo a las decisiones descritas a continuación.

Para la resolución del constructo se dio relevancia al criterio experto. Fueron seleccionados 60 expertos (45 por parte del negocio y 15 de TIC). El Alpha de Cronbach calculado resultó en .984 y se evaluó la posibilidad de reducir el conjunto de variables mediante el estudio Kaiser-Meyer-Olkin (KMO) y esfericidad de Bartlett con resultado de .726 el cual excede el nivel de .5 recomendado para la factibilidad de la reducción, en la prueba de esfericidad de Bartlett se obtuvo una significancia igual a .0001, lo que indica que existe suficiente correlación entre las variables para proceder, a la reducción ya que la misma propone que valores más cercanos a cero son más idóneos a la misma.

Se utilizó Análisis de Correspondencia (múltiple), como técnica estadística multivariante para analizar las relaciones de dependencia e independencia de un conjunto de variables categóricas a partir de los datos del estudio Rodríguez & Mora (2001), y la técnica de árboles de decisión permitió obtener una visión de múltiples variables al mismo tiempo y se ajustaron criterios en la opción CHAID (CHi-squared Automatic Interaction Detector), el estadístico de Chi-cuadrada a razón de máxima verosimilitud. Se seleccionó un método de crecimiento del árbol adecuado para nuestro estudio. Aunque existen en el SPSS cuatro posibilidades de algoritmos de crecimiento para los árboles de decisión se decidió hacer uso del CHAID Exhaustivo con máxima verosimilitud como el método de Crecimiento, dadas las características de nuestro estudio y los datos recolectados, descartando CRT (Classification and Regression Trees) y QUEST (Quick, Unbiased, Efficient, Statistical Tree) Berlanga et al (2013). La razón fundamental de esta decisión es lograr la mayor sensibilidad posible en nuestro análisis para las categorías de las variables de caracterización de la muestra (grupos de procesos, procesos, subprocesos y factores críticos) además de que el modo de cálculo de las combinaciones de las categorías de las variables predictoras es más completo Fuentes & González (2006).

Con la finalidad de validar los resultados obtenidos por las técnicas anteriores y asegurarnos que los análisis previos han dado resultados certeros se aplicó un análisis discriminante seleccionando como variable de agrupación los subprocesos del MAAGTIC. Una vez se tiene integrado el MAAGTIC con el modelo SAMM se puede crear un modelo de ecuaciones estructurales, en donde se visualice la relación existente entre las variables así como la asociación de los subprocesos con los criterios de alineación. La fiabilidad del modelo puede ser examinada por medio de un análisis factorial confirmatorio a través de las ecuaciones estructurales y sus índices de ajustes, los que se muestra en detalles en el trabajo en extenso, mientras que en esta versión resumida solo se muestran los resultados finales de la aplicación.

## RESULTADOS

El modelo final ajustado permitió visualizar las variables, es decir, los subprocesos que cuentan con mayor significancia para la organización. Se puede ver el listado de estos 18 subprocesos en la tabla 1.

Tabla 2: Listado de Subprocesos con Mayor Significancia

Subproceso	Criterio	Descripción	
OMS2	Comunicación	Establecer los tipos, estados e información mínima de las Solicitudes de servicio	
THO3		Ejecutar el Programa de proyecto de transición a la operación y soporte	
ADT4		Revisar los estándares tecnológicos establecidos	
ACMB5		Valor	Evaluar y coordinar el cambio
OSGP1	Gobierno	Establecer los repositorios de activos del proceso y métricas de los procesos	
ANS1		Definir y actualizar los acuerdos de niveles de servicio y operacionales	
DSTI5		Administrar la continuidad de servicios de TIC	
DDT3		Establecer y actualizar el Programa de tecnología	
MI1		Elaborar y dar seguimiento al Programa de aprovisionamiento de la infraestructura tecnológica	
MI2		Mantener los recursos de infraestructura tecnológica y su disponibilidad	
APP1		Establecer directrices para la gobernabilidad y evaluación del portafolio de proyectos de TIC	
AO2		Programar y ejecutar las tareas de la operación	
ATC2		Asociación	Participación en el procedimiento para la contratación de soluciones tecnológicas de TIC
AAF1		Arquitectura	Diseñar el centro de datos
AAF2	Implementar controles de seguridad física en el centro de datos		
AAF3	Administrar las instalaciones físicas del centro de datos		
APC2	Habilidades	Integrar la propuesta de acciones de capacitación	
APC1		Identificar las necesidades de capacitación de los empleados de la UTIC	

*Esta tabla muestra los 18 subprocesos que quedaron después de cuatro ajustes al Modelo de Ecuaciones Estructurales. Representan los subprocesos que mejor describen la alineación de las Tecnologías de la Información con las estrategias del negocio.*

El resultado final en la aplicación del Modelo propuesto se muestra en la Tabla 2.

Tabla 2: Listado De Los Criterios De Alineación y Su Respectivas Medias

Criterio Alineación	Media
Comunicación	2.79
Valor	2.83
Gobierno	2.80
Asociación	2.90
Arquitectura	3.15
Habilidades	2.47
Total	<b>2.82</b>

*Esta tabla muestra que tan alejado se encuentra cada criterio de un nivel aceptable. Siendo el criterio de Arquitectura la más destacada (Media = 3.15) y el criterio de Habilidades el más débil (Media = 2.47).*

## CONCLUSIONES

Las Tecnologías de Información no generan valor por sí mismas. Es preciso lograr para ello, que exista una Alineación de su uso con las estrategias del negocio.

Complementar el modelo SAMM con MAAGTIC resulta efectivo, ya que el primero muestra las características de alineación pero no especifica las actividades a realizar para su implementación y el segundo muestra las actividades a realizar pero no define la manera en la cual ayudan en la alineación estratégica de la organización. Es así como una fusión de ambos permite crear un instrumento que mide la alineación entre el Negocio y las TI, y a su vez otorga el listado de actividades a realizar para cubrir las brechas que impiden la misma.

Incluso en grandes organización que han realizado cuantiosas inversiones en la adquisición implantación de Tecnologías de Información (TI) es probable que no exista un alto nivel de madurez en lo concerniente a la Alineación de las mismas con las estrategias del negocio, dado que es necesario potenciar una mayor intensidad en las interrelaciones entre la estructura y la estrategia del negocio con la estructura y la estrategia de las TI, así como desarrollar los procedimientos requeridos en las dimensiones establecidas: Comunicación, Valor de TI, Gobierno de TI, Relaciones con el negocio, Arquitectura y Habilidades.

Esta investigación determinó los subprocesos relevantes del MAAGTIC para diagnosticar y emprender las acciones de mejora necesarias en las dimensiones anteriormente mencionadas.

# **GRADO DE FAMILIARIDAD QUE TIENEN LOS PROFESORES, ESTUDIANTES Y PROFESIONALES CON RELACIÓN A LA POSIBLE ADOPCIÓN DE LAS NORMAS INTERNACIONALES DE INFORMACIÓN FINANCIERA**

Rafael Marrero Díaz, Universidad de Puerto Rico, Recinto de Río Piedras

## **RESUMEN**

*Esta investigación cualitativa estudió el nivel de familiaridad que tienen los profesores, estudiantes y profesionales de Puerto Rico en el área de contabilidad con relación a los acuerdos de convergencia entre la Junta de Normas de Contabilidad Financiera (FASB por sus siglas en inglés) y la Junta de Normas de Contabilidad Internacional (IASB por sus siglas en inglés). Además, estudió y evaluó el nivel de familiaridad que estos grupos tienen con las normas internacionales de información financiera (NIIF) ante la posible adopción de las mismas en Estados Unidos y por ende en Puerto Rico. Se utilizó un cuestionario que permitió mediante el uso de programas estadísticos estudiar el nivel de familiaridad de los grupos que participaron en la encuesta. Se utilizaron las pruebas de Kruskal-Wallis, la prueba de Dunn y la prueba t de promedios para estudiar e interpretar los resultados. Se compararon las medianas resultantes de los tres grupos para determinar si los resultados de las medianas eran estadísticamente similares. Entre los resultados obtenidos se destaca que, en términos de familiaridad, el grupo de profesores es el más familiarizado con la convergencia y las NIIF. En términos generales, este grupo está entre neutral y familiarizado con los acuerdos de convergencia y las NIIF. Los grupos compuestos por estudiantes y profesionales resultaron no estar familiarizados con el acuerdo de convergencia y las NIIF.*

**PALABRAS CLAVES:** Contabilidad, Normas Internacionales de Información Financiera, Convergencia, Principios de Contabilidad, Puerto Rico, Profesores, Estudiantes Y Profesionales de Contabilidad.

## **HOW FAMILIAR ARE PROFESSOR, STUDENTS, AND PROFESSIONAL ACCOUNTING WITH THE INTERNATIONAL FINANCIAL REPORTING STANDARDS IN PUERTO RICO?**

### **ABSTRACT**

*This qualitative research examined the level of familiarity of professor, students, and professionals in the area of accounting from Puerto Rico with the agreements of convergence between Financial Accounting Standard Board and International Accounting Standard Board. Also studied and evaluated the level of familiarity that these groups have with the international financial reporting standards and the possible adoption in the United States and therefore in Puerto Rico. Questionnaire was used to obtain the data of this study. The data was analyses and interpret using the Kruskal-Wallis test, Dunn test, and t-test. The medium resulting from the survey of the three groups was compared to determine statistical similarity. The results highlighted that in terms of familiarity, the group of professor was the most familiar with the convergence and International Financial Reporting Standard (IFRS). This group is between*

*neutral and familiar with the agreements and IFRS convergence. The groups composed of students and professionals were not familiar with the agreement of convergence and IFRS.*

**KEYWORDS:** Accounting, International Financial Reporting Standards, Convergence, Generally Accepted Accounting Principles, Puerto Rico, Professor, Students And Accountant Professional.

## INTRODUCCION

El surgimiento de la globalización presenta nuevos retos y oportunidades para las empresas. Una de estas oportunidades es poder participar de un mercado financiero global (Fernández, Fernández, y Olmedillas, 2007). Las empresas se benefician de esta apertura del mercado financiero ampliando las posibilidades de obtener financiamiento de proveedores de capital extranjero (IFRS USA, 2012). A su vez los inversionistas alrededor del mundo también se benefician al tener opciones de inversión en empresas a nivel global (Djatej, Duanning, Gorton y McGonigle, 2012). Para atender las necesidades de estos proveedores de capital es necesario un formato de información que permita la comparabilidad y promueva la competitividad estimulando la inversión de capital a nivel mundial (Lew, 2005). Los líderes de las naciones más desarrolladas han señalado que unas normas uniformes de contabilidad promoverán la confianza de los inversionistas y estimularan el mercado de capital, algo necesario para que las naciones puedan superar la crisis financiera de los últimos 10 años (Financial Accounting Standards Board, 2012). Además, según un estudio de PwC (2012), la globalización de los negocios y las finanzas ya han promovido la adopción en masa de las normas internacionales de información financiera (NIIF) en más de 12,000 empresas alrededor del mundo.

Wolosky (2008), señala que el uso de las NIIF reduce las barreras internacionales para competir por el capital y permite a los inversionistas evaluar distintas opciones de inversión a nivel internacional participando de mercados de capital globales. Esto a su vez promueve la competitividad ya que los inversionistas pueden evaluar y entender mejor la información que las empresas le comunican (Bolt-Lee y Smith, 2009). Por otro lado las empresas pueden competir en la obtención de capital al presentarse ante los mercados usando unas normas uniformes (Gannon, 2010).

En un estudio realizado por “*Internacional Federation of Accountants*” y citado por el American Institute of CPA's, se encontró que la mayoría de los líderes de contabilidad en el mundo están de acuerdo en que solo debe existir una organización que promulgue normas de contabilidad de alta calidad global. Incluso la FASB (2012) ha expresado que los usuarios estarían mejor servidos si se logra esto. Solo de esta manera se puede asegurar que la información que reciben los usuarios reúne las cualidades y características necesarias (FASB, 2012).

La Junta de Normas de Contabilidad Financiera (FASB por sus siglas en inglés) y la Comisión de Cambios y Valores (SEC, por sus siglas en inglés), suscriben la misma necesidad condicionada a que las normas uniformes que se promulguen sean de la más alta calidad. Este reclamo de alta calidad ocasiona que los representantes de la Junta de Normas de Contabilidad Internacional (IASB por sus siglas en inglés) y los líderes europeos piensen que para lograr la calidad que reclaman la FASB y la SEC será necesario cambiar de una base de principios a una de reglas y normas como las que existen en Estados Unidos de América (Cohn, 2012).

## REVISIÓN DE LITERATURA

Los estudios encontrados sobre este tema comienzan a partir de 2008, ese año la Comisión de Cambios y Valores (SEC por sus siglas en inglés) hace una convocatoria pública para recibir reacciones a la posibilidad de permitir el uso de las normas internacionales de información financiera (NIIF) para las empresas de Estados Unidos de América (EUA) posterior al año 2015. En ese año KPMG en combinación con la Asociación Americana de Profesores de Contabilidad (AAA por sus siglas en inglés) realizaron una encuesta a más de 500 profesores para conocer qué acciones se estaban tomando en las universidades para familiarizar a los estudiantes con las NIIF. Los resultados indicaron que el 62% de los profesores no habían realizado acciones significativas para incorporar la discusión sobre las NIIF en sus cursos (KPMG-AAA, 2008; Shinn, 2009; Bradshaw, Ciesielki, Gordon, Hodder y Hopkins, 2010). Un 32% respondió que esperaban que para el 2011 los estudiantes estuvieran más preparados sobre el asunto. Esto viene acompañado de que es a partir de 2011 que esperaban que los libros de texto de contabilidad de EUA comenzaran a incorporar temas de las NIIF (Shinn, 2009). PwC, ErnstYoung, KPMG, Deloitte y otras firmas grandes también han llevado a cabo estudios en distintas universidades de EUA y Canadá para determinar cuánta conciencia existía sobre el uso de las NIIF y cómo las universidades se estaban preparando para este cambio (PriceWaterhouseCoopers, 2012; Deloitte IFRS E-Learning, 2012). La Fundación de Caridad de PriceWaterhouseCoopers ha provisto de más de \$1 millón en donaciones a 38 propuestas dirigidas a respaldar iniciativas de profesores para incorporar las NIIF a los cursos universitarios lo que demuestra que las firmas están pensando en el desarrollo de futuros contadores con conocimientos sobre las NIIF (PriceWaterhouseCoopers, 2012). En la investigación realizada en el 2010 por Moqbel y Bakay se formularon tres preguntas de investigación:

1. ¿Existen diferencias de percepción entre académicos y practicantes al evaluar si EUA está listo para usar las NIIF?
2. ¿Existen diferencias entre las personas más familiarizadas con la convergencia y aquellos no familiarizados, con respecto a las consecuencias severas que tendrá la posible adopción de las NIIF?
3. ¿Existen diferencias entre practicantes y académicos relacionados al plan de transición hacia el uso de las NIIF?

Para contestar estas preguntas Moqbel y Bakay (2010) adaptaron algunas de las preguntas de una investigación realizada por Rezae, Smith y Szendi (2010). El cuestionario se distribuyó por correos electrónicos a estudiantes de contabilidad sub-graduados, graduados y practicantes de contabilidad y finanzas egresados de la Universidad Internacional Texas A&M. El cuestionario de los autores contiene 4 secciones, la primera recoge información demográfica, las otras secciones están relacionadas a las preguntas de investigación. Moqbel y Bakay usaron una prueba t ("t test") para examinar las respuestas.

Se obtuvieron 28 respuestas de la academia y 35 de profesionales practicantes. Menos de la mitad respondieron estar familiarizados con las NIIF con una media de 2.43 para los académicos y 2.40 para los practicantes basados en una escala Likert de 5 puntos (1 para no familiarizados y 5 como familiarizados). La diferencia en resultados de la academia y los practicantes no fue significativa.

Los resultados del estudio reflejan que los participantes no estaban familiarizados con las NIIF. Para la pregunta 2, también, se utilizó una escala Likert de cinco puntos. Los autores concluyen que existe una diferencia significativa entre los que están familiarizados y los no familiarizados con respecto a las consecuencias severas de la convergencia. Para la pregunta 3 relacionada al plan para preparar a los usuarios con el uso de las NIIF, las respuestas también están divididas entre los que están familiarizados con las NIIF y los que no lo están. Para aquellos

familiarizados, el 80% entiende que el plan debe ser preparar a los inversionistas para entender las NIIF. Para los no familiarizados, el resultado fue de 50%. Los autores concluyen que no hay diferencia significativa en la percepción del plan para prepararse para el uso de las NIIF ya que las otras preguntas vinculadas al plan tienen resultados estadísticamente similares. Rezaee, Smith y Szendi (2010) realizaron un estudio más largo, complejo y con un número mayor de participantes. Las preguntas del estudio son las siguientes:

1. ¿Existirán diferencias en las perspectivas de practicantes y académicos relacionadas a las consecuencias de la convergencia hacia las NIIF?
2. ¿Pensarán los más familiarizados con las NIIF que la convergencia tendrá consecuencias más severas que aquellos que no están familiarizados?
3. ¿Crearán aquellos que piensan que la convergencia ocurrirá tarde o temprano que la misma tendrá consecuencias más severas?

Se enviaron cuestionarios por correo electrónico a 500 profesores de contabilidad y finanzas seleccionadas al azar, usando el directorio de profesores de Hasselback's 2007-2008 (Accounting Faculty Directory). Otra muestra al azar de 500 Oficiales Ejecutivos de Finanzas (CFO por sus siglas en inglés) se seleccionó utilizando una base de datos del Financial Executives International. Se recibieron 124 cuestionarios contestados de profesores y 120 de los CFO. Se aplicó el "chi-square test of independence" y se usó el análisis no paramétrico de Kruskal-Wallis.

Entre los hallazgos del estudio se resume que un promedio de 3.6, de una escala Likert de 5 puntos, del grupo de profesores, contestaron estar familiarizados con las NIIF y el resultado de los profesionales practicantes fue 2.76. La diferencia sobre la familiaridad de los profesores y los profesionales practicantes resultó estadísticamente significativo con un nivel de 0.01. En otras preguntas de la investigación no se encontraron diferencias significativas entre las respuestas de los profesores y los profesionales practicantes. Los resultados obtenidos confirman otros estudios realizados (Rezae, Smith y Szendi, 2010). En otro estudio de naturaleza empírica realizado por Djatej, Zhou, Gorton y McGonigle (2012), en el año 2012, se examina la intención de la adopción temprana de las NIIF usando cuatro constructos. Los constructos estudiados son: actitud, normas subjetivas, control percibido e intención. Los datos fueron recopilados a través de un cuestionario, 138 profesionales participaron del estudio, todos contadores profesionales, Contador Público Autorizado (CPA) de firmas grandes y regionales. Los autores concluyeron que los profesionales en el ámbito de contabilidad de EUA creen que las NIIF se van adoptar en EUA (Djatej, Duanning, Gorton y McGonigle, 2012). La mayoría de los CPA de la nación piensan que las NIIF se van a adoptar en EUA y que es necesario comenzar a prepararse para el cambio que se avecina. Además, el estudio atribuye a las normas substantivas y control de ambiente y no a presión social como lo que está influenciando a los CPA.

El Instituto Americano de Contadores Públicos Autorizados (AICPA por sus siglas en inglés) ha realizado estudios semi-anales desde septiembre de 2008 hasta noviembre de 2011 a los que ha llamado *IFRS Readiness Tracking Survey* (AICPA, 2011). El propósito del estudio era determinar el grado de familiaridad que tenían los diversos grupos. En el estudio efectuado en septiembre de 2011 se recibieron 1,241 respuestas de las cuales 1,100 se consideraron válidas, distribuidas de la siguiente manera: 163 provenientes de empresas americanas que venden valores al público, 163 de empresas americanas que no venden valores al público, 50 de empresas extranjeras que venden valores al público, 41 de empresas extranjeras que no venden valores al público, 20 de entidades sin fines de lucro o entidades educativas y 662 respuestas de practicantes de la contabilidad pública.

En esta encuesta se destacan los siguientes resultados: 1. La familiaridad con las NIIF de los diferentes grupos se ha mantenido estable desde el 2010; 2. La mayoría (54%) respalda que la SEC le permita a las empresas la opción de utilizar las NIIF; 3. Un 60% entiende que la FASB no debe hacer cambios para parecerse a las NIIF si la SEC decide aceptar las mismas; 4. Las empresas de EUA continúan posponiendo sus planes y su preparación para la adopción de las NIIF; 5. La mayoría de los encuestados respaldan la adopción de las NIIF, sin embargo señalan que primero es necesario lograr una mayor convergencia entre la Junta de Normas de Contabilidad Financiera (FASB por sus siglas en inglés) y la Junta de Normas de Contabilidad Internacional (IASB por sus siglas en inglés); 6. La mayoría de los encuestados están conscientes del acuerdo de convergencia entre la FASB y la IASB. Las encuestas del AICPA desde septiembre de 2008 hasta septiembre de 2011 también, estudian el nivel de familiaridad que tienen los grupos estudiados clasificados entre las categorías de: ninguna, básica, alguna, avanzada y experta. Las encuestas reflejan que la familiaridad básica es la respuesta de la mayoría y en términos generales no ha cambiado mucho en los últimos dos años. Los resultados del estudio del estudio del AICPA de 2008 al 2011 concluyeron que los grupos estudiados solo tenían una familiaridad básica.

La relevancia de este estudio es que permite comparar los resultados de Puerto Rico (PR) con los obtenidos por el AICPA. No se encontraron los estudios correspondientes a marzo y septiembre de 2012. En la revisión de literatura se limitó a buscar estudios que guardaran relevancia con el tema de familiaridad de los procesos de convergencia entre los distintos sectores o partes afectadas. Liu (2010) reseña que en los resultados de varias encuestas, los ejecutivos de las empresas están conscientes de la alta probabilidad de utilizar las NIIF. Sin embargo, no están tomando acción o no han desarrollado ningún plan al respecto. En relación a esto, Liu continúa diciendo que un estudio realizado por la firma de CPA, Grant Thornton, dirigida a los oficiales ejecutivos en el 2009 indicó que el 40% de estos pensaba que las NIIF nunca iban a ser requeridas, un 39% indicó que este proceso demoraría entre 3 y 5 años, un 14% entendía que el proceso tardaría 5 años o más y solo un 7% pensaba que el uso de las NIIF sería inmediato. Liu, usando otro estudio de PwC del año 2009, nos comunica que el 41% del grupo estudiado entendía que el proceso para la posible adopción de las NIIF estaba bien encaminado, el 26% opinaba que era demasiado rápido y el 18% indicó que era demasiado lento. Otro de los estudios presentados por Liu es el de Deloitte 2009, donde se preguntó a los participantes en qué fecha la SEC va a permitir el uso de las NIIF en EUA? De los encuestados, el 19% entendía que para el año 2014, el 51% para el año 2015 y un 30% para una fecha posterior.

Para lograr la transición de principios de contabilidad generalmente aceptados (GAAP por sus siglas en inglés) a NIIF es necesario identificar quienes tienen la responsabilidad de promover la misma. En estudios sobre la adopción de las NIIF mencionan que la principal responsabilidad recae en dos grupos, estos son la academia representada por profesores y estudiantes y los profesionales representados por los CPA, las firmas de CPA, los contadores, los auditores y los analistas financieros (Moqbel y Bakay, 2010.. Las cuatro firmas grandes se han destacado en promover y apoyar las iniciativas de las universidades de EUA dirigidas a la incorporación de las NIIF en sus currículos de enseñanza (Deloitte IFRS E-Learning, 2012). En las universidades de EUA se han incorporado temas de contabilidad internacional a los cursos e incluso han añadido cursos de contabilidad internacional a los currículos (Kroll 2009). Un cambio como este requiere de una transición ordenada y el éxito de la misma dependerá de que las partes antes señaladas se preparen para entender y usar las NIIF.

Una convergencia y eventual adopción de NIIF efectiva requiere que todas las partes interesadas, incluyendo las empresas, los usuarios, los ejecutivos, auditores, actuariales, contadores, CPA, analistas financieros y educadores estén familiarizados con las diferencias entre los GAAP de EUA y las NIIF (Rezae, Smit, Szendi, 2010). Sin embargo, en las investigaciones obtenidas en la revisión de literatura se demuestra que menos del 50% de los encuestados están familiarizados con las NIIF. Por la proximidad de la adopción de las NIIF en EUA es necesario examinar la situación de PR. Conocer la familiaridad de los profesores, estudiantes y profesionales practicantes nos va a permitir identificar que necesidades existen en estos grupos de manera que en PR se pueda planificar una transición ordenada hacia el uso de las NIIF.

## METODOLOGÍA

El enfoque metodológico de esta investigación es cualitativo y va dirigido a identificar el grado de familiaridad que tienen los profesores, los estudiantes y los profesionales de contabilidad con relación a (1) la convergencia entre la Junta de Normas de Contabilidad Financiera (FASB por sus siglas en inglés) y la Junta de Normas de Contabilidad Internacional (IASB por sus siglas en inglés) y (2) el uso de las normas internacionales de información financiera (NIIF) en Estados Unidos de América (EUA) y Puerto Rico (PR). Además, se identifica el plan de transición que los encuestados entienden se debe seguir y el parecer de los encuestados sobre lo que deben hacer las universidades de PR y los profesionales practicantes para encaminarse hacia la futura adopción a las NIIF. La investigación es de carácter exploratoria porque es la primera de su clase en PR. Por tal razón en lugar de presentar hipótesis del estudio, se seleccionaron 6 preguntas de investigación que identificamos con las siglas de PQ y se formula una hipótesis nula para la pregunta que consiste en no hallar significancia estadística entre las respuestas de los tres grupos. Se utilizó un cuestionario. La naturaleza de este estudio es cualitativa, el uso de números es para poder usar programas estadísticos que permitan evaluar datos. Las variables se consideran independientes y los valores discretos. Por tratarse de medidas no paramétricas el análisis apropiado es mediante el uso de medianas y la búsqueda de significancia estadística en la distribución de sus valores. Debido a que se trabajó con tres grupos independientes se utilizó la prueba Kruskal-Wallis, se realizaron pruebas para comparar las medianas de los tres grupos y determinar si existe significancia estadística. En aquellas preguntas donde las medianas presentaron distribuciones de valores estadísticamente significativos se rechazó la hipótesis nula de la pregunta y se realizó la prueba de parejas de Dunn. Las preguntas del cuestionario se identifican por las siglas CQ. En la pregunta CQ10, conocida como prueba de validación se realizó un examen a los encuestados para conocer el grado de familiaridad que tienen con el acuerdo de convergencia.

Se trató de 6 preguntas que se corrigieron para determinar cuántas respuestas eran correctas. A los resultados se les realizó prueba t de promedios para evaluar e interpretar los datos. La muestra usada en este estudio consiste de 36 profesores, 46 estudiantes y 38 profesionales practicantes. La muestra no es aleatoria y se obtuvo por conveniencia. Para contactar a profesores y profesionales se usó el correo electrónico como la primera estrategia. Para obtener la muestra de estudiantes se visitaron 3 secciones de contabilidad para estudiantes clasificados en tercer año o más. El grupo de profesionales practicantes se logró invitando a exalumnos graduados participantes en la red social conocida como *Facebook*. Entendemos que el tamaño de la muestra se asemeja a otros estudios como el de Moqbel y Bakay (2010), que ya se ha citado antes.

El cuestionario tiene 10 preguntas. Se realizó una prueba piloto con 20 estudiantes matriculados en el tercer curso de intermedia (CONT4003). Con el estudio piloto evaluamos la claridad del

instrumento y el tiempo que demoraban los participantes en contestar el mismo. El estudio piloto y la encuesta a todos los participantes se sometió a dos pruebas de validación de instrumentos conocidas como prueba-reprueba (*test re-test*) y la prueba de pares y nones. No se encontró significancia estadística en la distribución de valores para ninguna de las preguntas del instrumento, esto probó confiabilidad y consistencia del cuestionario. Todas las preguntas del cuestionario fueron cerradas. Las preguntas de la 3 a la 10 contienen sub-categorías que vamos a identificar con las siglas  $c_x$ . Además, contiene una sección final que recoge la información demográfica de los participantes. Para las primeras tres preguntas, se les pidió a los participantes indicar el grado de familiaridad que tienen con respecto a las aseveraciones y premisas que se les presentaron. Para las preguntas 4 a la 9, se les solicitó evaluar el nivel de importancia que tienen los factores, estrategias, argumentos y razones, según sea el caso en particular.

Se usó una escala de 5 puntos para las primeras 9 preguntas. En la pregunta 10 del cuestionario se les pidió a los encuestados que determinaran la etapa de convergencia de varios temas. Las preguntas CQ 2 y CQ 3 están relacionadas y solicitaron que los encuestados indicaran el nivel de familiaridad que tenían con respecto al uso de las NIIF y el nivel de familiaridad que según ellos tienen los demás grupos estudiados. De esta forma la pregunta 3 nos ayuda a ver si existe consistencia dentro del instrumento. Este trabajo examinó 6 preguntas de investigación y estudio las respuestas de los tres grupos antes mencionados. La hipótesis nula para las 6 preguntas del estudio consiste en probar que la mediana que se obtenga de la encuesta no presenta significancia estadística y se acepte como el resultado de los tres grupos. En la Tabla 1 se presenta la relación entre las preguntas del estudio (PQ) y las preguntas del cuestionario (CQ).

En la Tabla 3 se presenta el perfil de cada grupo participante. El grupo de profesores estuvo compuesto por 13 instructores, 10 catedráticos auxiliares, 5 catedráticos asociados y 8 catedráticos. En el grupo de estudiantes 9 estaban clasificados en tercer año, 23 en cuarto año y 14 en quinto año o más. En términos de los profesionales practicantes el grupo quedó distribuido en 6 contadores no CPA, 8 auditores no CPA, 12 contadores CPA y 12 auditores CPA.

Tabla 1: Relación Entre Preguntas del Estudio y Preguntas del Cuestionario

Pregunta del Estudio (PQ)	Pregunta del Cuestionario
PQ1 ¿Cuál es el nivel de familiaridad que tienen los profesores, estudiantes y profesionales de PR con el acuerdo de convergencia?	CQ1 Indique el nivel de familiaridad que tiene con relación al acuerdo de convergencia entre la FASB y la IASB.
PQ2 ¿Cuál es el nivel de familiaridad que tienen los profesores, estudiantes y profesionales de PR con las normas internacionales de información financiera?	CQ10 Usando la siguiente lista de temas seleccione los que están siendo objetos de proceso de convergencia entre la FASB y la IASB.
PQ3 ¿Cuál es, según los participantes de este estudio, el plan apropiado y necesario para lograr la transición de las empresas de EUA del uso de los principios de contabilidad de aceptación general al uso de las normas internacionales de información financiera?	CQ2 Indique el nivel de familiaridad que tiene con relación al uso de las normas internacionales de información financiera.
PQ4 ¿Qué deben hacer, según los encuestados, las universidades para preparar a los futuros profesionales en el uso y entendimiento de las normas internacionales de información financiera?	CQ3 Indique el nivel de familiaridad con las NIIF que usted entiende posee cada uno de los siguientes grupos.
PQ5 ¿Qué deben hacer, según los encuestados, los profesionales practicantes para prepararse en el uso y entendimiento de las normas internacionales de información financiera?	CQ5 Indique el nivel de importancia de cada una de las siguientes estrategias para lograr un plan apropiado de transición de manera que las empresas de EUA puedan adoptar las NIIF.
	CQ7 Clasifique las estrategias que las universidades deben implantar para preparar a los futuros profesionales en el uso y entendimiento de las NIIF.
	CQ8 Clasifique las estrategias que los profesionales practicantes deben seguir para prepararse para el uso y entendimiento de las NIIF.

PQ6 ¿Qué factores, según los encuestados, debe considerar EUA a la hora de decidir si adopta las normas internacionales de información financiera?

CQ4 Indique el nivel de importancia de cada uno de los siguientes factores para facilitar la convergencia entre las NIIF y los principios de contabilidad generalmente aceptados de EUA.

CQ6 Indique el nivel de importancia de cada uno de los siguientes argumentos para justificar la adopción de las NIIF.

CQ9 Clasifique las razones que tiene EUA para interesarse en el uso de las NIIF.

La Tabla 2 Resume La Composición De La Muestra De Este Estudio.

Tabla 2: Composición de la Muestra

Muestra Inicial	Cuestionarios administrados	310	100%		
Participantes en la muestra	Total de cuestionarios recibidos	126	41%		
	Menos :				
	Cuestionarios incompletos	(6)	2%		
	Total cuestionarios validos	120	39%		
Participantes por grupo y Género	<b>Grupo</b>	<b>Total</b>	<b>%</b>	<b>Femenino</b>	<b>Masculino</b>
	Profesores	36	30	21	15
	Estudiantes	46	38	20	26
	Profesionales	38	32	11	27
	Total	120	100	52	68
	Porcentaje por Género			43%	57%

## RESULTADOS Y CONCLUSIONES

En la Tabla 4 se presentan las estadísticas descriptivas de todas las preguntas del cuestionario y su relación con las subcategorías. Estas están identificadas como CQ1, CQ2, CQ3, CQ4, CQ5, CQ6, CQ7, CQ8 y CQ9 con sus respectivas subcategorías identificadas con c<sub>x</sub>.

Tabla 4: Perfil de Cada Grupo

Profesores	Rango	Participantes	Porcentaje %
	Instructor	13	36
	Catedrático auxiliar	10	28
	Catedrático asociado	5	14
	Catedrático	8	22
	Total	36	100
Estudiantes	<b>Año de Estudio</b>	<b>Cantidad</b>	<b>Porcentaje %</b>
	Tercer año	9	20
	Cuarto año	23	50
	Quinto año o más	14	30
	Total	46	100
Profesionales	<b>Categoría</b>	<b>Cantidad</b>	<b>Porcentaje %</b>
	Contador no CPA	6	15
	Auditor no CPA	8	21
	Contador CPA	12	32
	Auditor CPA	12	32
	Total	38	100

Tabla 4: Estadística Descriptiva de la Muestra y su Relación con las Subcategorías (120 Participantes)

Sub-categorías	Mínimo	Máximo	Mediana	Promedio	Desviación Estándar
----------------	--------	--------	---------	----------	---------------------

CQ1, c <sub>1</sub>	Nivel de familiaridad con acuerdo de convergencia entre el FASB y IASB <sup>a</sup>	1	5	4	3.45	1.020

CQ 1-3; 1= no familiarizado; 2= poco familiarizado; 3= neutral; 4= familiarizado; 5= muy familiarizado

CQ 4-9; 1= no importante; 2= poco importante; 3= importante; 4= muy importante; 5= sumamente importante

<sup>a</sup> Se refiere a familiaridad. <sup>b</sup> Se refiere a factores

## Resultado Pregunta De Investigacion PQ1

La mediana que se obtuvo de la muestra completa para esta pregunta fue de 4 usando la pregunta del cuestionario identificada como CQ1. Esto significa que los encuestados están familiarizados. Al usar la prueba Kruskal-Wallis se determinó que existía significancia estadística entre los tres grupos estudiados y por lo tanto se rechazó la hipótesis nula para esta pregunta. Esto quiere decir que el resultado no es estadísticamente similar para los tres grupos estudiados. Se realizó la prueba de Dunn para parejas. El resultado fue que el grado de familiaridad de los profesores que participaron en el estudio es mayor al de los estudiantes y profesionales practicantes de contabilidad que contestaron la encuesta. La Tabla 5 presenta los resultados de la PQ1 usando la pregunta del cuestionario CQ1.

Tabla 5: Prueba de Dunn Para Parejas con Relación a Convergencia

Pareja	Prueba estadística	Error estándar	Prueba Estadística Estándar	Valor P
Profesores/Estudiantes	20.248	7.322	2.765	0.017**
Profesores/Profesionales	26.455	7.653	3.457	0.002***

Estudiantes/Profesionales	6.207	7.213	0.861	1.000 <sup>ns</sup>
---------------------------	-------	-------	-------	---------------------

\*\*\*  $\alpha = 0.01$  \*\*  $\alpha = 0.05$  ns = no significativa

Al usar los resultados de la pregunta del cuestionario CQ10, conocida como prueba de validación, encontramos que efectivamente el resultado de los tres grupos no es similar estadísticamente. La Tabla 6 presenta los resultados de los tres grupos, promedios y porcentaje de acierto. Además, se presentan los resultados individuales para cada grupo.

Tabla 6: Resultados PQ1, CQ10, Familiaridad con la Convergencia (Prueba de Validación)

Sujetos	Promedio	% correcto	Mínimo	Máximo	Desviación estándar	Varianza
Todos (120)	3.20	53	0	6	2.02	4.22
36 Profesores	4.11	69	0	6	1.72	2.96
48 Estudiantes	2.67	45	0	6	1.87	3.51
38 Profesionales	2.97	50	0	6	2.19	4.78

Para determinar si el promedio de los tres grupos es similar, realizamos una prueba t. Como demuestra la Tabla 7, los promedios no son iguales y existe significancia estadística en los valores, por lo que se rechaza la hipótesis nula en términos de promedio.

#### Resultado Pregunta De Investigacion PQ2

La prueba Kruskal-Wallis aplicada al resultado de la pregunta del cuestionario CQ2, nos demuestra que la distribución de valores de mediana de los tres grupos no es igual debido a que una pareja presenta significancia estadística en la distribución de sus valores con respecto a los demás. En la Tabla 8 se presentan los resultados obtenidos y un análisis de parejas usando la prueba de Dunn.

De los resultados obtenidos se destaca que los profesores presentan una mediana de 4 lo que significa que están familiarizados con las NIIF. Los otros dos grupos presentan medianas de 3, lo que significa que no están familiarizados con las NIIF. La pregunta del cuestionario identificada como CQ3 está relacionada a la CQ2 que acabamos de evaluar. En esta ocasión se les pidió a los encuestados otorgaran el grado de familiaridad correspondiente a cada grupo. Se destaca que la mediana correspondiente a los profesores en la pregunta de cuestionario CQ2, fue de 4 y la percepción de todos los grupos con relación a la familiaridad de los profesores con las NIIF, en la pregunta CQ3, también es 4. Este resultado valida la conclusión de la pregunta CQ2. Usando la prueba Kruskal-Wallis encontramos que la mediana de los tres grupos no es similar al evaluar el nivel de familiaridad de los profesores, contadores no CPAs, contadores CPAs, auditor no CPAs y auditores CPAs. Esto es cierto para todo valor  $\alpha = (0.1; 0.05; 0.01)$ . Debido a esto, se rechaza la hipótesis nula. La evaluación de los tres grupos con respecto a de la familiaridad de los estudiantes con las NIIF presenta una distribución de valores que no es estadísticamente significativa. En el caso de los profesionales los auditores CPAs presentan una mediana de 4 y así los perciben los demás participantes del estudio.

\*\*\* $\alpha = 0.01$  \*\* $\alpha = 0.05$  <sup>NS</sup> = no significativa

### Resultado Pregunta De Investigacion PQ3

La Tabla 9 resume los resultados de esta pregunta que fue contestada mediante la pregunta del cuestionario CQ5. Las respuestas obtenidas de los tres grupos encuestados no presentaron diferencias estadísticas significativas y se acepta la hipótesis nula para la pregunta.

### Resultado pregunta de investigacion PQ4

El resultado de las cinco estrategias preguntadas en la CQ7, usando un intervalo de confianza  $\alpha = 0.01$  no presento significancia estadística por lo que se acepta la hipótesis nula y se concluye que excepto el uso de libros que presentan temas de contabilidad internacional que es considerado muy importante, las otras cuatro estrategias se consideran sumamente importante.

### Resultado Pregunta de Investigacion PQ5

La Tabla 10 presente un resumen del resultado obtenido de la pregunta de investigacion PQ5 y la pregunta del cuestionario CQ8. En esta ocasión se rechaza la hipótesis nula de la pregunta en dos sub-categorías y se acepta la hipótesis nula en las otras dos.

Tabla 9: Estrategias Que las Universidades Deben Implementar Para Preparar a los Futuros Profesionales en el uso Y Entendimiento de las NIIF

### Resultado Pregunta de Investigacion PQ6

El primer grupo de respuestas que se analizó fue el que se identifica con la pregunta de cuestionario CQ4. En un nivel de confianza  $\alpha=0.01$ , la prueba de Kruskal-Wallis nos indica que no existe significancia estadística para ninguno de ellos. Solo el factor conocido como: Nivel de educación, entendimiento y experiencia que fue catalogado como sumamente importante, los otros siete factores fueron considerados como muy importantes. Continuando nuestra discusión y análisis, evaluamos ahora la pregunta del cuestionario identificada como CQ6 y sus sub-categorías c<sub>22</sub> a c<sub>26</sub>. La prueba Kruskal-Wallis cuando usamos un valor  $\alpha=0.01$  nos indica que no existe significancia estadística para ninguna de las sub-categorías. En esta ocasión los argumentos: Promover comparabilidad y uniformidad en los informes de auditoría fueron considerados como sumamente importante, los otros factores fueron clasificados como muy importantes. Para finalizar la parte relacionada a la pregunta de estudio PQ6, examinamos la pregunta del cuestionario CQ9 y sus sub-categorías que van de la c<sub>36</sub> a la c<sub>42</sub>. La Tabla 11 nos resume los resultados obtenidos.

Para analizar los resultados obtenidos usamos la prueba Kruskal-Wallis con un intervalo de confianza  $\alpha=0.01$ . Encontramos que las primeras 6 sub-categorías tienen una distribución de valores que se considera no significativa. Para esas primeras seis razones podemos aceptar la hipótesis nula antes mencionada. Sin embargo, si usamos valores  $\alpha$ , menos confiables, encontramos que existe significancia estadística para cuatro de las de las 7 razones evaluadas.

Tabla 11: Razones Que Tiene EUA Para Interesarse en el Uso de las NIIF

Razones	Mínimo	Máximo	Mediana	Promedio	Valor p
CQ9, c <sub>36</sub> Promover comparabilidad	2	5	5	4.47	0.947 <sup>NS</sup>

## LA DISCREPANCIA FISCAL Y SU CONSECUENCIA COMO DELITO FISCAL EN MÉXICO

Silvia Cartujano Escobar, Universidad Autónoma del Estado de Morelos  
Crisóforo Álvarez Violante, Universidad Autónoma del Estado de Morelos  
Selene Viridiana Pérez Ramírez, Universidad Autónoma del Estado de Morelos  
Paula Ponce Lázaro, Universidad Autónoma del Estado de Morelos  
Roque López Tarángo, Universidad Autónoma del Estado de Morelos

### RESUMEN

*En la presente investigación se analiza el tema de la discrepancia fiscal en México y su consecuencia de convertirse en delito fiscal. El Estado Mexicano ha establecido mecanismos tales como la discrepancia fiscal para la comprobación del correcto cumplimiento de las obligaciones fiscales. La discrepancia fiscal se ha convertido en un procedimiento que consiste en revisar a aquellas personas físicas que en un ejercicio fiscal realizaron erogaciones superiores a los ingresos declarados en ese mismo periodo. El objetivo de este trabajo es analizar a la discrepancia fiscal en México, se revisará antecedentes, marco jurídico, las herramientas de la autoridad y su consecuencia como delito fiscal. Este es un estudio de corte cualitativo de tipo documental que analiza la normatividad vigente, así como los informes tributarios presentados por el Servicio de Administración Tributario. El resultado de esta investigación es una reflexión de la discrepancia fiscal, su impacto en la recaudación y el peligro de convertirse como delito fiscal.*

**PALABRAS CLAVES:** Impuesto, ingresos, recaudación, delito fiscal

## THE TAX DISCREPANCY AND ITS CONSEQUENCE AS TAX FRAUD IN MEXICO

### ABSTRACT

*This research analyses the topic about tax discrepancy in Mexico and its consequence when it becomes a tax fraud. The Mexican Government has established some mechanisms, such as: the tax discrepancy to verify the correct compliance with tax obligations. The tax discrepancy has become a procedure that involves reviewing those individuals who have made expenditures exceeding revenues in the same period in a fiscal year. The objective of this study is to analyze the tax discrepancy in Mexico. We will review background, legal framework, tools of the authority and its consequence as a tax fraud. This is a study of qualitative cutting of documentary type that analyzes the current regulations, as well as tax reports submitted by the Tax Administration Service. The result of this research is a reflection of the tax discrepancy, its impact on tax collection and the danger of becoming a tax fraud.*

**JEL:** H20, H26, K34

**KEYWORDS:** Tax, revenue, tax collection, tax offenses

## INTRODUCCIÓN

De acuerdo con Flores Zavala en su obra *Finanzas Públicas Mexicanas* (1981, p.3), el hecho de convivir en colectividad, nacen ciertas necesidades que por tener características propias es difícil que el hombre las pueda suplir aisladamente. Las necesidades colectivas pueden ser satisfechas en ocasiones por la actividad particular actuando libremente, pero en la mayor parte de los casos ocurre que no interesa a la iniciativa privada la satisfacción de estas necesidades, o bien que interesándole no le resulta costeable, o bien, porque es más conveniente para la colectividad que esa necesidad se encomiende a organismos públicos, dando así nacimiento a los servicios públicos que constituyen la parte más importante de las obligaciones del Estado, dando como consecuencia que el Estado tenga la atribución del cobro de contribuciones y con esto a los ingresos públicos. Por lo cual desde los años 80, las autoridades fiscales en México han buscado mecanismos para detectar la omisión de ingresos y por lo tanto aumentar su recaudación y a lo largo de estos treinta y tres años han eficientado estos mecanismos. A partir de 1979 se ha buscado una nueva metodología para la revisión del contribuyente en función a los signos externos de riqueza, por lo que se creó un mecanismo aparentemente no agresivo, pero que coadyuvara a la recaudación.

De ahí que nace la discrepancia fiscal. El tema de discrepancia fiscal es de gran trascendencia y de profundo interés, ya que a pesar que se encuentra contemplado como una realidad dentro la legislación tributaria mexicana a través de la ley del Impuesto Sobre la Renta y que solo se aplica a personas físicas, hasta el momento no se han evaluado los efectos financieros y penales para las Personas Físicas, únicos sujetos de esta medida, y los beneficios para el Estado como fuente de recaudación. Para la autoridad fiscal existe un foco rojo en las personas físicas que llama su atención, y es el relativo a aquellos signos externos de riqueza que presuponen que al contribuyente persona física cuenta con recursos suficientes para darse tal calidad de vida, ante tal situación no existe problema alguno cuando el origen de dichos recursos ha cubierto las contribuciones respectivas, caso contrario reviste un papel fundamental dicha figura de la discrepancia fiscal.

## REVISIÓN LITERARIA

La palabra discrepancia significa: “Diferencia o desigualdad que resulta de la comparación de las cosas entre sí” (Real Academia Española). Por lo que Discrepancia Fiscal es la diferencia que existe entre los datos que manifiestan los contribuyentes y la información con que cuenta la autoridad fiscal al momento de comparar los ingresos y los egresos que el contribuyente declaró o no declaró. En México actualmente este tema se encuentra regulado en el artículo 107 de la Ley del Impuesto Sobre la Renta vigente en el 2013, donde se contempla el procedimiento que debe seguir la autoridad cuando se encuentre con el supuesto de discrepancia fiscal; esta facultad es aplicable únicamente a personas físicas, ya que las personas morales no están contempladas en este procedimiento, dicho artículo dice lo siguiente: “Cuando una persona física, aun cuando no esté inscrita en el registro federal de contribuyentes realice en un año de calendario erogaciones superiores a los ingresos que hubiere declarado en ese mismo año, las autoridades fiscales procederán como sigue:

Comprobarán el monto de las erogaciones y la discrepancia con la declaración del contribuyente y darán a conocer a éste el resultado de dicha comprobación. El contribuyente, en un plazo de quince días, informará por escrito a las autoridades fiscales las razones que tuviera para inconformarse o el origen que explique la discrepancia y ofrecerá las pruebas que estimare convenientes, las que acompañara a su escrito o rendirá a más tardar dentro de los veinte días

siguientes. en ningún caso los plazos para presentar el escrito y las pruebas señaladas excederán, en su conjunto, de treinta y cinco días.

Si no se formula inconformidad o no se prueba el origen de la discrepancia, ésta se estimará ingreso de los señalados en el Capítulo IX de este Título en el año de que se trate y se formulará la liquidación respectiva.”

En el sentido estricto de la ley del Impuesto Sobre la Renta (ISR), si una persona física eroga más de lo que declara por concepto de ingresos en un ejercicio fiscal, significa que probablemente está obteniendo recursos que no considera en la determinación de su base para el pago anual de su Impuesto Sobre la Renta (ISR), por lo tanto, incurre en una discrepancia fiscal.

### Personas Físicas Que Incurren en Discrepancia Fiscal

El artículo 107, primer párrafo y fracción I, de la ley del Impuesto Sobre la Renta vigente en el 2013 en México dispone que “cuando una persona física, aun cuando no esté inscrita en el Registro Federal de Contribuyentes, realice en un año de calendario erogaciones superiores a los ingresos que hubiere declarado en ese mismo año, las autoridades fiscales procederán como sigue:..” De lo anterior mencionado podemos observar que el concepto de ingreso es un elemento sustantivo para la determinación de la base, por lo que procederemos a su análisis.

### El Ingreso, Elemento Sustantivo Para la Determinación de la Base

De conformidad con el Consejo Mexicano para la Investigación y Desarrollo de Normas de Información Financiera (CINIF) en la NIF A-5 numeral 43 se define: “Un ingreso es el incremento de los activos o el decremento de los pasivos de una entidad, durante un periodo contable, con un impacto favorable en la utilidad o pérdida neta o, en su caso, en el cambio neto en el patrimonio contable y, consecuentemente, en el capital ganado o patrimonio contable, respectivamente”. Por lo tanto el ingreso es toda cantidad que produzca una modificación positiva neta en el patrimonio de una persona física. La parte medular de la discrepancia fiscal es la hipótesis de realizar erogaciones superiores a los ingresos declarados, aquí el legislador previo un supuesto, que le da potestad a la autoridad fiscal a determinar una diferencia con el contribuyente. Se presume y estima que el contribuyente está evadiendo el pago de impuestos al no declarar la totalidad de sus ingresos. Es común desafortunadamente que algunas personas físicas realicen sus actividades sin expedir comprobante alguno u obtengan algún ingreso que no estén manifestando (tales como donativos, herencias, premios, etc.) por lo que sus gastos son mayores a los ingresos reportados ante el fisco, por lo que el Servicio de Administración Tributaria (SAT) podrá revisar si existe o no una discrepancia fiscal.

### Ejemplo de Determinación de Discrepancia Fiscal

En la Tabla 1: se ilustra un Caso de Discrepancia Fiscal, con Información Pertenciente a un Ejercicio Fiscal, de un Contribuyente Persona Física

Tabla 1: Ejemplo de Determinación de Discrepancia Fiscal

Concepto	Ingreso	Erogaciones
Ingresos declarados	\$1,100,000.00	
Depósitos bancarios		\$350,000.00
Adquisición de un vehículo		\$400,000.00
Otras deducciones		\$ 100,000.00

Inversiones financieras		\$850,000.00
Total ingresos	\$1,100,000.00	
Total erogaciones		\$1,700,000.00
Discrepancia fiscal	\$600,000.00	

En el ejemplo se muestra que el contribuyente obtuvo erogaciones mayores a los ingresos declarados, en cantidad de \$ 600,000.00, determinando así una posible discrepancia fiscal al encontrarse en la hipótesis normativa de ley, ya que sus erogaciones fueron superiores a los ingresos declarados.

## METODOLOGÍA

El diseño de la investigación fue no experimental de corte cualitativo del tipo descriptiva que aplica métodos de investigación documental, tomando referencias de libros, revistas y consultas en la red internet, para afianzar datos e información sobre el tema investigado; así como también, sitios y/o bases de datos oficiales

## RESULTADOS

### La Discrepancia Fiscal Como Delito de Defraudación Fiscal

El Código Fiscal de la Federación mexicano en su fracción I del artículo 109, que dispone “Sera sancionado con las mismas penas del delito de defraudación fiscal: aquella persona física que perciba dividendos, honorarios o en general preste un servicio personal independiente o esté dedicada a actividades empresariales, cuando realice en un ejercicio fiscal erogaciones superiores a los ingresos declarados en el propio ejercicio y no compruebe a la autoridad fiscal el origen de la discrepancia en los plazos y conforme al procedimiento señalado en la Ley del Impuesto Sobre la Renta”. El artículo 108, párrafos cuarto y quinto, del Código Fiscal de la Federación 2013 encontramos que el delito de defraudación fiscal se sancionará con las pena de prisión. Por cual es sumamente preocupante que un descuido por no manifestar correctamente nuestros ingresos, trae como consecuencia caer en el supuesto de delito fiscal.

### Herramientas y Medios de la Autoridad Para Obtener Información

El Estado a través del SAT puede obtener información por diversos medios como los siguientes: Declaraciones informativas de notarios, clientes y proveedores, pagos y retenciones de personas físicas, operaciones celebradas en efectivo superiores a \$100,000.00, padrón del IMSS, INFONAVIT, información del sistema financiero mexicano, Registro Público de la Propiedad y Comercio, instituciones bancarias, a través del impuesto a los depósitos en efectivo recaudado, entre otras.

## CONCLUSIONES

El tema de discrepancia fiscal es de gran trascendencia y de profundo interés dado que se observa que la autoridad cada día hace uso de esta figura jurídica contemplada para personas físicas en la Ley del Impuesto Sobre la Renta, únicos sujetos de esta medida, y los enormes beneficios para el Estado como fuente de recaudación. Actualmente todas las personas físicas, inscritas o no, en el Registro Federal de Contribuyentes, estamos en la mira permanente de las autoridades fiscales, quien conocen absolutamente todos nuestros movimientos a través de sus mecanismos de información, por lo que cualquier irregularidad es detectada, con el enorme peligro de que dicha

irregularidad se convierta en un delito fiscal, como lo prevee el Código Fiscal de la Federación mexicano.

En México las personas físicas inscritas en el Registro Federal de Contribuyentes (RFC), deben declarar ingresos suficientes que justifiquen el nivel de vida que están llevando y derivado de ello también logren solventar las erogaciones que efectúen, principalmente las que puedan ser verificables, como son las operaciones celebradas ante fedatario público, adquisiciones de automóviles, los depósitos en cuentas bancarias las inversiones financieras llevadas a cabo etc. En la actualidad pocos contribuyentes personas físicas llevan contabilidad formal, y ni siquiera se preocupan por determinar el origen de las cantidades que depositan en sus cuentas bancarias ni establecer un control sobre las erogaciones llevadas a cabo y si a esto le sumamos el paso del tiempo es casi imposible recordar la operación y mucho menos sus características. Por lo que se recomienda que las personas físicas inscritas al RFC deban cuidar que las erogaciones que realicen en un año de calendario nunca sean superiores a sus ingresos declarados en ese mismo año, para no incurrir en discrepancia fiscal y en caso de que así sea, exista una explicación del origen de esa diferencia. En México las personas físicas inscritas en el Registro Federal de Contribuyentes (RFC), deben declarar ingresos suficientes que justifiquen el nivel de vida que están llevando y derivado de ello también logren solventar las erogaciones que efectúen, principalmente las que puedan ser verificables, como son las operaciones celebradas ante fedatario público, adquisiciones de automóviles, los depósitos en cuentas bancarias las inversiones financieras llevadas a cabo etc. Así también se recomienda que todas las personas físicas que realizan alguna actividad económica, deban de actuar bajo el marco jurídico fiscal aplicable, para lo cual deberán estar inscritos en el RFC, estar cumpliendo puntualmente con sus obligaciones fiscales, declarar la totalidad de los ingresos obtenidos y pagar los impuestos correspondientes.

## RESUMEN

*Este trabajo aborda el caso del Instituto Profesional de la región Sur ( IPRES ), institución de educación superior de la Universidad Autónoma del Estado de Morelos; con el objetivo de mostrar resultados de la medición del clima organizacional antes y después del cambio de director, para conocer algunas características internas y describir su clima organizacional a partir de las percepciones que tienen los trabajadores en una etapa de transición, además se analiza la influencia del liderazgo de la actual directora en el logro de las metas organizacionales y de qué manera la percepción del clima organizacional o ambiente laboral puede ser afectado por el liderazgo femenino. En México cada vez son más las mujeres que dirigen diversas organizaciones, entre ellas las que pertenecen al ámbito educativo y las universidades no son la excepción, por otra parte el tipo de liderazgo que se ejerce puede ser promotor u obstáculo para el buen desempeño de la institución y puede ser un factor de distinción e influencia en el comportamiento de quienes la integran, por lo tanto, su conocimiento proporciona retroalimentación acerca de los procesos que determinan los comportamientos organizacionales y que determinan el clima laboral.*

## FEMALE LEADERSHIP AND ORGANIZATIONAL CLIMATE IN A UNIVERSITY INSTITUTE

### ABSTRACT

*This paper addresses the case of the Professional Institute of the South ( IPRES ), institution of higher education in the University of the State of Morelos , with the aim of showing the measurement results of the organizational climate before and after the change of manager to know some internal features and describe their organizational climate from the perceptions of workers in a transition stage , and analyzes the influence of the leadership of the current director in achieving organizational goals and how the perception of climate organizational or work environment can be affected by female leadership. In Mexico more and more women directed various organizations, including those belonging to the field of education and universities are no exception, otherwise the type of leadership can be exercised promoter or impede the proper performance of the institution and may be a factor of distinction and influence the behavior of those who integrate, therefore provides feedback about*

*their knowledge of the processes that determine organizational behavior and determine the working environment.*

**KEYWORDS:** Organizational Climate, Perceived, Female Leadership, Leadership Styles

## INTRODUCCIÓN

El clima organizacional impacta directamente en el desarrollo de las funciones de cualquier organización dicho en otros términos, la percepción que tiene el trabajador del ambiente en el que labora influye en su comportamiento, de tal manera que contar con un instrumento nos permitirá evaluar el clima y establecer mecanismos de mejora del ambiente laboral. Por otra parte el ambiente laboral se ve influenciado por varios factores: los factores que han sido identificados como como constituyentes de la realidad objetiva del desarrollo organizacional, se refieren a la estructura organizativa, las políticas y los procedimientos, las relaciones interpersonales y grupales, la tarea y el medio físico en el que se desarrolla el liderazgo (Alves J. 2000) y es precisamente la influencia del factor de liderazgo lo que se analiza en relación con el clima organizacional en el presente trabajo. Es indudable que el estilo de liderazgo que ejercen los directivos influye en la percepción que tienen los trabajadores del clima organizacional, en el presente trabajo se muestra resultados de la medición del clima laboral durante la gestión del (2008 -2011) y el periodo del (2011 al 2014), con el objetivo de observar si existe alguna modificación en la percepción del ambiente laboral a partir del liderazgo femenino que actualmente se ejerce en el Instituto Profesional de la Región Sur.

## REVISION DE LA LITERATURA

El clima o ambiente organizacional se refiere a un conjunto de características del lugar de trabajo, percibidas por los individuos que laboran en ese lugar y sirven como fuerza primordial para influir en su conducta en el trabajo (Hodgetts y Altman, 1981). Existen varios factores que contribuyen al clima organizacional, sin embargo los diferentes autores no se han puesto de acuerdo en cuanto al tipo de dimensiones que tienen que ser evaluadas a fin de tener una explicación lo más exacta posible del clima (Brunet, 2011). Entre estos múltiples factores se encuentra el estilo de dirección o liderazgo como principal determinante del clima, sin embargo es importante aclarar que existe polémica respecto a la afirmación anterior, no obstante de que comúnmente se acepta que el clima organizacional está fuertemente determinado por el estilo de liderazgo (Brunet, 2011) que se ejerce en la organización.

Para establecer la relación clima organizacional y liderazgo en los siguientes párrafos se mencionan las principales teorías sobre el liderazgo. El campo constituido por el liderazgo es muy diverso e incluye un amplio espectro de teorías, entre las más conocidas se encuentran: la teoría de los rasgos de los líderes como por ejemplo las teorías del gran hombre o los modelos conductuales como los de la Universidad de Ohio (Stogdill, Good & Day, 1962) a modelos situacionales tales como la teoría del intercambio líder seguidor (Schriesheim, Castro & Cogliser, 1999), la teoría de la contingencia (Fiedler, 1967), el modelo camino meta (Evans, 1970; House, 1971; House & Dessler, 1974; House & Mitchell, 1974), el modelo de liderazgo situacional (Hersey & Blanchard, 1982), entre otros los cuales tomaban en cuenta para su análisis las variables del ambiente y de la persona (Yukl, 2002). A partir de los estudios del comportamiento para analizar el liderazgo, surgen una serie de teorías que describen los estilos de liderazgo “todas ellas reconocieron principalmente dos tipos generales de comportamiento: 1. Los orientados hacia las tareas y 2. Los orientados hacia las personas.” (Ayoub, 2010).

## METODOLOGÍA

### La Población

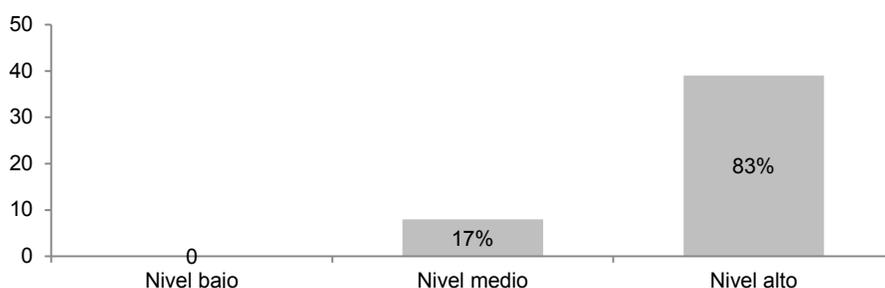

Para determinar la situación del clima laboral del Instituto Profesional de Región Sur (IPReS), se aplicó un instrumento al personal que labora en el plantel, por primera vez en el año 2009 a 47 trabajadores y posteriormente en el año 2012 a 51 trabajadores. En el 2013 se diseñó un instrumento para evaluar la gestión de la directora e identificar las características del liderazgo que ejerce en el instituto, mismo que fue aplicado a 55 trabajadores. El instrumento para medir el ambiente laboral, el instrumento que se utilizó fue el denominado: Escala de Clima Organizacional (EDCO). Se decidió usar este instrumento fundamentalmente debido a las características de la población, porque nos permite establecer una escala de medición uniforme y "libre de muestra" que pueda aplicarse a individuos y grupos de muy diversos niveles de habilidad y que permita probar como se encuentra el clima laboral de las organizaciones.

## RESULTADOS

Los resultados que se muestran en este apartado corresponden al instrumento aplicado en el año 2009, correspondiente al periodo de gestión (2008-2011) y fueron los siguientes:

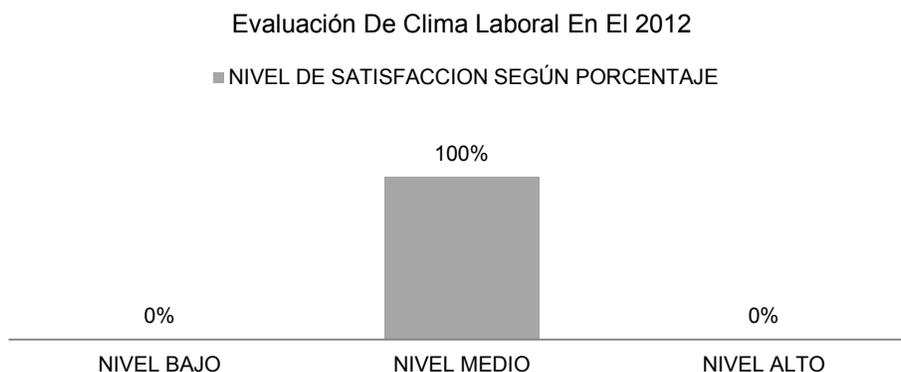

Figura 1: Primera Medición del Clima Laboral del (Ipres)

Evaluación de Clima Laboral en el 2009

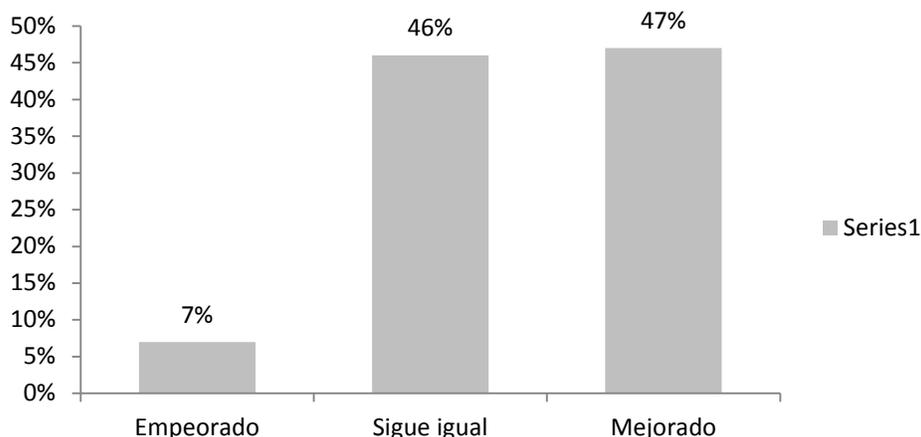

Como se puede observar el 83% de la población encuestada califica el clima organizacional en un nivel alto lo que significa que la mayoría de los trabajadores, tienen una percepción favorable con respecto a las reglas, políticas y estilo de liderazgo de su jefe, Por lo que se refiere al tipo de liderazgo en ese periodo los encuestados refieren que el líder no se involucraba directamente en las tareas, no existía supervisión de las mismas y mostraba una personalidad despreocupada, por lo que consideramos que este estilo se apega al denominado *laissez-faire* y reconocieron que este estilo conducía a un funcionamiento ineficiente. En la segunda medición del clima la encuesta se aplicó a 51 trabajadores, por otra parte es importante resaltar que los resultados que se muestran corresponden a la gestión de la directora que fungirá por el periodo del 2011 al 2014 y que al momento de la medición llevaba 7 meses dirigiendo la institución.

Figura 2: Segunda Medición del Clima Laboral del (IPRES)

En esta ocasión los trabajadores del IPRES calificaron el clima organizacional en un nivel medio, lo que demuestra que la percepción de los trabajadores cambió y percibieron un clima laboral menos favorable en comparación al 2009. Los resultados en la segunda medición mostraron que la percepción de los trabajadores cambió y entre otros factores influyó el cambio del titular en la dirección y como consecuencia el cambio en el estilo de liderazgo, En este segundo periodo analizado con respecto al estilo de liderazgo se observó lo siguiente: las políticas y las técnicas de trabajo son planeadas, delegadas y supervisadas directamente por el líder de la organización, algunas veces permite la discusión de las decisiones al interior del grupo, aunque mayoritariamente es el líder quien toma las decisiones, dejando un escaso margen a sus subordinados. Aunque algunos reconocen que algunas veces promueve el bienestar del grupo y solicita consejo. En el año 2013 con el objeto de identificar las características de liderazgo femenino en la institución se diseñó y aplicó un instrumento que nos permitió medir la calidad y el nivel de comunicación, relaciones, manejo del conflicto entre otros, con el objetivo de identificar las diferencias entre el director anterior y la directora que actualmente dirige la institución De acuerdo a los resultados obtenidos por el instrumento en términos generales se concluye que la percepción de los trabajadores respecto a la gestión de la directora en el Instituto Profesional de la Región Sur es más eficiente en las tareas de la organización ya que el 47% de los encuestados opina que el funcionamiento de la institución ha mejorado en comparación al directivo anterior, como se muestra en la figura 3.

Figura 3: opinión de los encuestados sobre el funcionamiento del (IPRES)

No obstante de que los trabajadores reconocen que el funcionamiento ha mejorado consideran que la comunicación es deficiente, lo cual genera conflictos, e insatisfacción en el personal, docente y administrativos, los cuales se sienten desplazados y poco valorados, comportamiento que se refleja en el 46% de la población encuestada quienes consideran que la institución sigue igual en términos de eficiencia. Por otra parte respecto a las cualidades del líder el 42 % aseguró que escucha con respeto y acepta las opiniones de sus subordinados, además de que se considera que es una líderesa que enfrenta y resuelve el conflicto.

## CONCLUSIONES

Los resultados demuestran que la percepción de los trabajadores sobre el clima organizacional se ve altamente influenciada por el estilo de liderazgo, como se puede observar en los resultados; el clima laboral ha ido disminuyendo de un nivel alto a medio lo que implica una baja en el nivel de satisfacción de los trabajadores y que algunas características del estilo de liderazgo que actualmente se ejerce deben ser analizadas. Además se puede observar en el presente caso que el *estilo laissez-faire* afecto las tareas y los resultados organizacionales aunque influyo en sentido positivo, con respecto al hecho de que la mayoría de los sujetos de estudio percibieran un clima altamente favorable. En la segunda medición del clima laboral la combinación del estilo de liderazgo autocrático y democrático, influenció la percepción de los trabajadores en sentido negativo, lo que hizo que los encuestados en esta ocasión evaluaran el clima laboral en un nivel medio, no obstante de que 47 % de la población encuestada reconoce que el funcionamiento de la organización ha mejorado en comparación al periodo anterior donde existía menor supervisión, en las tareas. El liderazgo femenino en este caso particular, mostro mejores resultados en el enfoque de tareas pero deficiencias en la comunicación y motivación de los trabajadores del IPRES.

# LOS BENEFICIOS DE LA CONTABILIDAD AMBIENTAL EN UNA EMPRESA CON SISTEMAS DE PRODUCCIÓN DE BUENAS PRÁCTICAS AGRÍCOLAS

Mónica Araceli Reyes Rodríguez, Universidad de Guadalajara  
Genoveva Rosano Ortega, Universidad Popular del Estado de Puebla  
Martha Sheila Gómez González, Universidad de Guadalajara

## RESUMEN

*El objetivo de este estudio fue identificar los beneficios de la contabilidad ambiental en una empresa agrícola que realiza buenas prácticas agrícolas. La investigación abordó un estudio de caso de una empresa agrícola ubicada en el Valle de Aatlán de Navarro Jalisco, para identificar (1) los costos y beneficios en los sistemas de producción con buenas prácticas agrícolas, (2) los impactos económicos de su sistema de producción y (3) el sistema de contabilidad ambiental que permite comunicar la sostenibilidad de una empresa agrícola. La identificación de los beneficios del sistema de contabilidad ambiental se llevó a cabo mediante cuestionarios aplicados al empresario agrícola y los resultados se presentan en cuadros que evalúan los resultados de la empresa con un sistema de contabilidad tradicional y uno ambiental. En conclusión, el sistema de contabilidad ambiental demuestra que la empresa es sustentable y tiene beneficios económicos, sociales y ambientales.*

## THE BENEFITS OF ENVIRONMENTAL ACCOUNTING IN A COMPANY PRODUCTION SYSTEMS WITH GOOD PRACTICES

### ABSTRACT

*The aim of this study was to identify the benefits of environmental accounting in an agricultural company that makes good agricultural practices. The research addresses a case study of a farm located in the Valley of Aatlán of Navarro Jalisco, to identify (1) the costs and benefits in production systems with good agricultural practices, (2) the economic impacts of its system production and (3) environmental accounting system that allows communicating the sustainability of an agricultural enterprise. Identifying the benefits of environmental accounting system carried out by the farmer questionnaires and the results are presented in tables that assess the results of the company with a traditional accounting system and an environmental. In conclusion, the accounting system environment shows that the company is sustainable and has economic, social and environmental.*

**JEL:** M41, Q56

**KEYWORDS:** Environmental Accounting, Good Agricultural Practices

### INTRODUCCIÓN

La calidad del medio ambiente es una de las actuales preocupaciones mundiales, algunas empresas agrícolas ubicadas en Autlán de Navarro, Jalisco. México, ya empiezan a establecer vinculaciones entre los aspectos económicos, sociales y ambientales, aunque de manera incipiente la contabilidad ambiental puede informar las actividades ambientales que la empresa realiza, para evaluar su sostenibilidad y comunicar los costos y beneficios de esta actuación. Algunos de los problemas ambientales de la región Valle de Autlán son causadas por las explotaciones agrícolas debido a una falta de cultura ambiental, por lo que en este trabajo se hace una aportación para demostrar que los procesos de producción con buenas prácticas agrícolas contribuyen a mejorar la calidad del medio ambiente, aunque tengan mayores costos pero también tienen más beneficios económicos, sociales y ambientales, esto es novedoso, ya que se demuestra por medio de un sistema de contabilidad ambiental que en México ya hay empresas con tendencias globales y se espera que este trabajo motive a otras empresas del sector agrícola a hacer conciencia y adoptar nuevos mecanismos de producción.

La contabilidad proporciona información económica, social y ambiental, es un error considerar que la contabilidad no tiene ningún papel en las actividades ambientales, por lo que se entiende a la contabilidad ambiental como el sistema de información que permite determinar el costo-beneficio de la actuación de la empresa con respecto al medio ambiente, fue necesario adecuar los estados financieros tradicionales y configurarlos con nuevos elementos, para identificar y clasificar las partidas ambientales en las cuentas de activo, pasivo y capital, también en los costos y gastos, lo anterior para relacionar lo financiero con lo ambiental y proporcionar informes de sostenibilidad.

#### **REVISIÓN DE LITERATURA**

Las empresas deben producir bienes sin perder de vista el medio ambiente, esto implica pasar de un desarrollo basado en el crecimiento económico a uno en donde se establecen estrechas vinculaciones entre aspectos económicos, sociales y ambientales, capaz de aprovechar las oportunidades que supone avanzar simultáneamente en estos tres ámbitos, sin que el avance de uno signifique ir en deterioro del otro (Division for Sustainable Development, 2009). Los problemas ambientales son complejos y múltiples sus causas y alcances, para su explicación se requiere de los fundamentos teóricos y estructuras metodológicas de diversas ciencias, entre las cuales se encuentra la contabilidad. Esta disciplina se concibe como una herramienta que genera información útil para la toma de decisiones; para ello debe considerar la base conceptual que surge de la relación, hasta hace poco ignorada, de las empresas con el ambiente en el cual interactúan. (Ablan y Méndez, 2004). La información contable debe reflejar la realidad económica y ésta se ve afectada por los impactos en el medio ambiente, los cuales deberán tasarse para dar una información útil para la toma de decisiones. (Pahlem, 1997).

La contabilidad está sufriendo una continua transformación para poder satisfacer estas nuevas exigencias del entorno empresarial, que demanda a la organización un desempeño respetuoso con el medio ambiente (De la Rosa, 2005). Referente a la problemática medio ambiental que tiene la región de El Valle de Autlán obedece a las explotaciones agrícolas que se dan a consecuencia de este tipo de cultivos. El Valle de Autlán es un área importante para el análisis de la agricultura principalmente por dos razones: La agricultura es una actividad central en la economía regional y ha sido uno de los factores más significativos de cambio ambiental en el último medio siglo en la región, debido a la deforestación, tecnologías agrícolas mal utilizadas, uso excesivo de agroquímicos, pesticidas, contaminación por materia orgánica, desechos industriales, contaminación atmosférica por quemas agrícolas y el uso intensivo de maquinaria agrícola.

(Jardel, 2000). Este impacto ambiental se presenta de forma indirecta por las actividades agrícolas debido a una falta de cultura ambiental y en un problema de salud pública.

(Gómez, 2012). La sociedad actual reclama la implicación de todos los agentes económicos en la adopción de las medidas que eviten un mayor deterioro del medio ambiente. Entre ellos se encuentran las empresas, sus gestores y los profesionales de la contabilidad. La contabilidad ha seguido, con respecto a la cuestión ecológica, la misma senda que la economía establecida: el impacto medioambiental de las actividades productivas permanece fuera de los cálculos de las empresas que no lo incorporan a su función de producción de bienes y servicios y queda como un problema macroeconómico a resolver por el conjunto de la sociedad. De ahí la necesidad en la actualidad de buscar alternativas para lograr internalizar las externalidades empresariales y su reflejo en la información contable (Pelegrin, Reyes, & Campos, 2010). Concepto de la Contabilidad Ambiental, términos empleados y sus beneficios La Contabilidad Ambiental de la Empresa entendida en un sentido amplio, como el conjunto de sistemas e instrumentos útiles para básicamente medir, evaluar y comunicar la actuación ambiental de la empresa.

(Ludevid, 1999). La Contabilidad Ambiental es aquella parte del sistema contable que tiene el propósito de proveer información sobre el impacto financiero de aspectos medioambientales a través de las cuentas anuales auditadas, también incluye información específica en aspectos financieros de la actuación medioambiental de la empresa, relacionadas con activos, pasivos, capital, gastos, ingresos e inversiones medioambientales. (Lamorú, 2011) La contabilidad ambiental se define como la técnica que se utiliza para producir sistemática y estructuralmente información cuantitativa, al analizar, clasificar y registrar las operaciones expresadas en unidades monetarias de las acciones y transacciones que realiza una entidad económica y de ciertos eventos económicos y medioambientales identificables y cuantificables que le afectan, con objeto evidenciar la acción de la empresa a favor del medio ambiente y facilitar a los diversos interesados la toma de decisiones en relación con dicha entidad y con el medio ambiente. (Vera M et al 2012) Como se ha comentado, en este punto se identifica a la contabilidad ambiental como el sistema de información que permite determinar el costo-beneficio de la actuación de la empresa con respecto al medio ambiente. Para desarrollar la actividad de la contabilidad ambiental, se requiere del manejo de algunos términos comunes como son:

Actividades ambientales.-Tienen como objetivo principal prevenir, reducir o reparar el daño al medio ambiente. Activos ambientales.- Aquello bienes que son incorporados al patrimonio de la entidad de forma duradera con la finalidad de reducir o controlar el impacto ambiental existente o futuro; y aquellos bienes que son recursos naturales, los cuales son propiedad de la nación y utilizados en procesos productivos de la entidad. Bienes (inventarios, propiedad, planta y equipo, cargos diferidos) propiedad de la empresa e inversiones realizadas con el propósito de proteger y preservar el ambiente. Pasivos ambientales.- Son pasivos estimados y contingentes, no se conoce con claridad al reclamante, ya que puede ser cualquier persona que se vea afectada por las actividades de la entidad. La estimación realizada varía constantemente, por lo que hay que realizar una permanente revisión de la estimación. Respecto de los pasivos contingentes y las estimaciones, las Normas de Información Financiera (NIF) apoyan al contador. Capital natural.- Se presenta cuando los recursos naturales son mayores que sus activos, por lo que es el factor menos cuantificado de la producción, es muy difícil asignarle un valor a los recursos naturales, los cuales no tienen precio en el mercado Costos y Gastos Relacionados con medidas ambientales.- Son los gastos devengados, de las actividades medioambientales realizadas o que deban realizarse para la gestión de los afectos medioambientales de las operaciones de la empresa, así como los derivados de los compromisos medioambientales de la misma (Ablan y Méndez, 2004).

Algunos de los beneficios de la contabilidad ambiental son que facilita la incorporación de información medioambiental en los informes financieros y la incorporación de información financiera en los informes medioambientales, permite interrelacionar los informes financieros y medioambientales de forma efectiva y permite proporcionar informes de sostenibilidad. La integración de estas información es recomendable porque representan no sólo una forma de incrementar la contabilidad de la información que la empresa suministra, sino también una forma de proporcionar la imagen fiel de la situación financiera y medioambiental de la empresa. (Lamorú, 2011) Las buenas prácticas agrícolas, la inocuidad y calidad alimentaria Los gobiernos de los países desarrollados han propuesto varias iniciativas relacionadas con inocuidad y calidad alimentaria. En 1997 el gobierno de Estados Unidos a través del presidente William Clinton anuncio la iniciativa conocida como “Inocuidad Alimentaria del campo a la mesa” la cual derivo meses más tarde en otra iniciativa que tiene como propósito el asegurar la inocuidad de los productos hortofrutícolas que consume el pueblo Estadounidense, trátase de productos cultivados internamente o que sean importados de otros países. (FAO, 2003). Al respecto, la Secretaria de Agricultura Ganadería, Desarrollo Rural, Pesca y Alimentación (SAGARPA), consciente de los riesgos que esta iniciativa pudiera tener para los productores hortofrutícolas nacionales que exportan hacia ese mercado, para la misma balanza comercial con ese país y para la población en general, se dio a la tarea de convocar a principios de 1998, a los representantes de los sectores públicos y privados para presentar una propuesta de estrategia que sobre inocuidad alimentaria, que habría de instrumentar el Gobierno Federal.

Así mismo, y con objeto de reforzar esta Estrategia, en Junio de 1998 los Secretarios de Agricultura y Salud del país, firmaron con sus homólogos estadounidenses en el marco de la Reunión Binacional México–Estados Unidos, la “Declaración Conjunta sobre Inocuidad Alimentaria” en donde se establece el interés de ambos gobiernos en trabajar coordinadamente para lograr la inocuidad en todos los alimentos, tanto domésticos como importados y minimizar la inocuidad de enfermedades asociadas al consumo de productos agroalimentarios. Por otra parte, los consumidores cada vez tienen mayores exigencias hacia la calidad de los alimentos que en conjunto con los requerimientos y compromisos internacionales, los gobiernos están implantando métodos más estrictos para lograr que los productos frescos y procesados estén libres de contaminantes físicos, químicos o microbiológicos. Para ello se están instalando sistemas de evaluación y certificación de productos y plantas empacadoras que cumplan con los estándares de calidad, incluyendo inocuidad, requeridos por los consumidores.

Dado esto y debido al peligro de contaminación constante de las hortalizas frescas, existen tres empresas ubicadas en Autlán de Navarro, Jalisco, México, que producen hortalizas frescas bajo los lineamientos y procedimientos de Buenas Prácticas Agrícolas y de Manejo establecidos por SENASICA”. El concepto de Buenas Prácticas Agrícolas (BPA) ha ido evolucionando con el transcurso de los últimos años en el contexto de una economía alimentaria rápidamente cambiante y globalizadora, como resultado del interés y del compromiso de una amplia gama de partes interesadas en torno a la producción alimentaria, a la seguridad, calidad alimentaria y a la sostenibilidad ambiental de la agricultura. Las BPA aplican las recomendaciones y los conocimientos disponibles para la sostenibilidad ambiental, económica y social de procesos de producción in situ y de posproducción, que terminan en productos agrícolas alimentarios y no alimentarios seguros y saludables. (ADRS, 2012).

El Plan Nacional de Desarrollo 2007-2012, establece como una de sus estrategias (8.1), proteger el país de plagas y enfermedades y mejorar la situación sanitaria, mediante la aplicación de la normatividad en materia de sanidad e inocuidad agroalimentaria, por lo que El Gobierno Federal

mediante SAGARPA, y la Dirección General de Inocuidad Agroalimentaria, Acuícola y Pesquera cuentan con el programa del Servicio Nacional de Sanidad, Inocuidad y Calidad Agroalimentaria, (SENASICA) que tiene los lineamientos generales para la operación y certificación de Sistemas de Reducción de Riesgos de Contaminación (SRRC) en la producción primaria de alimentos de origen agrícola los cuales son voluntarios y buscan minimizar la contaminación física, química y microbiológica en las operaciones de campo y empaque de los productos hortofrutícolas.

## METODOLOGÍA

Se ha derivado información a profundidad sobre las experiencias que, en términos de la gestión administrativa siguen empresas que han tenido la instauración de una nueva mentalidad de sostenibilidad, con una certificación de empresa con buenas prácticas agrícolas y como marco la implementación de un sistema de contabilidad medioambiental. Para la realización de este trabajo se utilizó un diseño de investigación no experimental, específicamente se utilizó un diseño transaccional descriptivo. Según Hernández (2008) una investigación es no experimental cuando se realiza sin la manipulación deliberada de las variables (independientes) y en las que se observan los fenómenos en su estado natural para después analizarlos. Dado que no fue posible la conformación de grupos artificiales en el experimento, el grupo se integró de manera dirigida, no intervino ningún proceso de selección probabilístico, ya que se trata de un estudio de caso. En este estudio se aplicaron en total 2 tipos de cuestionarios; el primer cuestionario llamado “CUESTIONARIO 1” Este cuestionario recogió información relacionada con la experiencia de tener un proceso de producción de buenas prácticas agrícolas y en la aplicación de un sistema de contabilidad ambiental. El segundo cuestionario llamado “CUESTIONARIO 2” realizado con el fin de identificar los costos y los beneficios de una empresa agrícolas sustentable.

Recordemos que este trabajo es de corte metodológico cualitativo, que en lugar de buscar exactitud (como su contraparte la investigación cuantitativa) en los resultados obtenidos: se trata de obtener un entendimiento lo más profundo posible de la problemática que implica el intentar aplicar una gestión administrativa sustentable y para dar cabida a un sistema de contabilidad ambiental que soporte y registre las decisiones ambientales que desde esa perspectiva se vienen tomando en la empresa.

## RESULTADOS

Para detectar los costos y gastos ambientales así como los beneficios que ha logrado la empresa Agrícola La Tunita, S.P.R. de R.L. al ser una empresa sostenible, se realizó un análisis de la empresa desde que inició operaciones, para conocer el estado de resultado, el flujo de efectivo y el estado de posición financiera de los años 2009 al 2014. se hace una proyección de 2 años para demostrar la rentabilidad económica con el paso de los años. La empresa Agrícola La Tunita S.P.R. de R.L. Se constituye el 9 de enero del año 2009, con capital social de \$250,000.00 de los cuales \$ 82,500.00 fueron en mobiliario en equipo de oficina, equipo de cómputo, equipo de transporte, y gastos de constitución y \$ 167,500.00 en efectivo para los gastos iniciales.

Tabla 1: Estado de Resultados

	Año	2009	2010	2011	2012	2013	2014
	Ventas	-	555,347	1,213,453	1,418,805	1,850,000	2,120,000
Menos:	Costo de Producción	-	82,672	208,258	141,086	158,656	173,717
Menos:	Costos Ambientales	-	14,050	178,835	153,609	161,290	169,354

Fuente: Elaboración propia

El Estado de Resultado de la empresa muestra los ingresos, costos, gastos así como las utilidades que ha generado por año, la empresa en sus primeros años resulta con utilidades negativas, ya que al iniciar operaciones realizó inversiones para habilitar el área de producción y sus gastos son más altos, debido a las erogaciones por la certificación como una empresa con buenas prácticas agrícolas pero se puede demostrar que con el paso de los años se convertirán en utilidades y se demuestra que una empresa responsable con el medioambiente también puede ser rentable.

Los costos de producción que la empresa realiza para producir las hortalizas son; por ejemplo la preparación del suelo, la compra de semilla, las mangueras y conexiones, la rafia etc. estos se presentan en este cuadro por cada año, se identifica como costos ambientales los fertilizantes ya que solo se adquieren los autorizados por la empresa certificadora y se usa solo en las cantidades autorizadas, para la cual la empresa lleva una bitácora para el control de estos productos. Los gastos ambientales que son realizados por la empresa para operar son; las nóminas y todos los gastos relacionados por tener empleados, como IMSS, INFONAVIT, etc., honorarios, mantenimiento de maquinaria, energía eléctrica, las depreciaciones y amortizaciones, lo novedoso de este cuadro son los gastos ambientales, que tradicionalmente las empresas en su contabilidad no las identifican, en este caso la empresa La Tunita realiza gastos de asesoría para lograr la certificación para lograr la inocuidad en sus productos, el sueldo del gerente de inocuidad, los análisis de laboratorio, los gastos en productos para proteger al medioambiente o en su caso remediar posibles daños, así como las depreciaciones y provisiones ambientales.

Fuente: Elaboración propia

El flujo de efectivo se presenta con una retrospectiva de los años 2009, 2010, 2011, 2012, y una proyección del 2013 y 2014 para identificar los beneficios futuros, las ventas de la empresa se han incrementado para el primer año el 119%, para el segundo 155%, para el tercero el 233% y el cuarto el 282%, se puede observar en sus flujos de efectivo de cada año que no hay una tendencia constante de crecimiento, y esto se debe a que la empresa los primeros 5 años han sido para habilitar el invernadero y la nave del empaque, inversiones fuertes que solo se hacen una vez, y que los siguientes años ya no habrá esas salidas de efectivo y se puede demostrar en los dos últimos años.

Permite efectuar un análisis comparativo de la situación financiera de la empresa a una fecha determinada, se muestran los activos, pasivos y capital, en el caso de los activos ambientales que son utilizados para disminuir el impacto ambiental se demuestra que al iniciar operaciones no contaba con ninguno, en el segundo año tiene el 41%, en el tercero el 92%, en el cuarto el 92% en el quinto el 100%, y en el sexto año el 74%, esto debido a que la empresa hace una inversión fuerte en la construcción de un empaque, para que la empresa realice el empaque del producto que cultiva y de esa manera la empresa puede vender a un precio de venta más alto, ya que antes de tener el empaque su producto al ser vendido se le disminuía el costo por ser empacado, con esto la empresa tendrá más ingresos y más utilidades.

El sistema de contabilidad ambiental desarrollado en este trabajo fue con base a la literatura y a los elementos que integran la certificación de buenas prácticas agrícolas, así como la aplicación de un estudio de caso de la empresa Agrícola La Tunita S.P.R. de R.L. Las prácticas ambientales que la empresa realiza son de manera voluntaria con el objetivo de lograr el proceso de certificación así mismo el sistema de contabilidad que permite informar su actuación ambiental, así como los costos y beneficios de este procedimiento.

Tabla 4: Identificación de los Costos-Beneficios de una Empresa Certificada Por Buenas Prácticas Agrícolas

## CONCLUSIONES

La contabilidad medioambiental por sí sola, no parece suficiente para ejercer un verdadero y real control sobre las responsabilidades medioambientales, pero es una manera que contribuir a que se informe lo que algunas empresas ya están haciendo acciones a favor del medio ambiente. El sistema de contabilidad medioambiental, como ha quedado claro, es un elemento específico, de suma utilidad en términos de lo que a la técnica contable aporta, pero que de manera aislada no haría más que registrar los gastos operativos en los que la empresa incurre en aras de mejorar sus productos, o sacar al mercado productos inocuos reportando el costo de las materias primas canalizadas a los procesos, pero permite demostrar a diferencia de otra, que una empresa es responsable con el medioambiente y es más rentable que otra que no lo es. Existen solo tres empresas en la región del Valle de Autlán que cumplen con la normatividad en materia de sanidad e inocuidad agroalimentaria, los cuales hasta el momento son voluntarios y buscan minimizar la contaminación física, química y microbiológica y están diseñados para informar a otros acerca de su actuación, atienden las recomendaciones y comunican mediante informes su actuación ambiental, económica y social de sus procesos de producción, que terminan en productos agrícolas seguros y saludables, lo que les permite tener ventajas competitivas a diferencia de otras empresas que no realizan estas prácticas; pueden ser exportadores mexicanos, dar más fuentes de empleo, percibir divisas que contribuyen a la economía nacional, flujos de efectivo mas altos.

Mediante el sistema de contabilidad ambiental se puede demostrar que la empresa realiza actividades para el cuidado del medioambiente de manera precisa. La información que conforman los estados financieros con datos ambientales, traducen en términos monetarios las acciones que muestran a la empresa como socialmente responsable con el medioambiente, situación que no se puede identificar en los estados financieros tradicionales, por lo anterior se considera que la contabilidad ambiental fomenta el desarrollo sustentable de la empresa.

Paula Ponce Lázaro, Universidad Autónoma del Estado de Morelos.

## RESUMEN

*Los Estados democráticos se caracterizan por la participación de sus ciudadanos en la gestión de los asuntos públicos, consiguiendo que las instituciones y administraciones sean consideradas como propias, cercanas y abiertas a sus necesidades y aspiraciones; pero sobre todo que adquieran la legitimación social de su quehacer. Para lograrlo, resulta indispensable el establecimiento de mecanismos que hagan posible la apertura de las instituciones a la ciudadanía, y contribuyan a ganar la confianza ciudadana. En el Estado de Morelos, el 27 de agosto del año 2003, se promulga la Ley de Información Pública, Estadística y Protección de Datos Personales. Derivado de ello, se crea la obligación para todas las entidades públicas estatales y municipales de garantizar el ejercicio del derecho de acceso a la información pública, a través de su correspondiente Unidad de Información Pública. Después de una década de la promulgación de la ley antes citada, resulta pertinente evaluar los avances logrados en este rubro; en virtud de que, debemos tener presente, que la implementación de una política pública de transparencia tiene un coste económico, pues se debe invertir en estructuras administrativas, recursos humanos y materiales, formación de personal, difusión de la información, etc, que deben preverse y asumirse para evitar que el contenido de la ley quede en un discurso retórico o como contenido programático.*

**PALABRAS CLAVE:** Estado democrático, transparencia, información pública, política pública, unidad de información pública.

## EXPERIENCES AND CHALLENGES IN THE UNITS OF PUBLIC INFORMATION IN MORELOS, MÉXICO

### ABSTRACT

*Democratic states are characterized by the participation of its citizens in the management of public affairs, getting institutions and administrations are considered as itself, nearby, and open to their needs and aspirations, but over all to acquire social legitimacy of their work. To achieve it, is essential for the establishment of mechanisms to allow the opening of the public institutions, and contribute to win public trust. In the State of Morelos, on 27 August 2003 promulgating the Law on Public Information, Statistics and Data Protection. Derived from this, is an obligation for all state and local public entities to ensure the exercise of the right of access to the public information, through its corresponding Public Information Unit.*

*After a decade of enactment of the law cited above, are relevant to assess the progress made in this area, by virtue of that, we must remember that the implementation of a public policy of transparency has a cost, the you should invest administrative structures, human and material resources, staff training, dissemination of information, etc., and assumed to be provided to prevent the content of the law remains a rhetorical or programmatic content.*

**KEYWORDS:** Democratic state, transparency, public information, public policy, public information unit.

## **INTRODUCCIÓN**

La organización de la sociedad actual, se fundamenta en los derechos humanos internacionalmente reconocidos, que la mayoría de los estados contemporáneos se han comprometido a respetar, proteger, garantizar y promover al firmar la Declaración Universal de los Derechos Humanos de 1948. El artículo XIX de la Declaración Universal de los Derechos Humanos instituye el derecho de la ciudadanía al acceso a la información, el cual, en los últimos quince años se ha venido desarrollando en las legislaciones nacionales y a la fecha, más de 60 países han aprobado leyes al respecto. En el caso de México, el derecho de acceso a la información es relativamente nuevo; la Ley Federal de Transparencia y Acceso a la Información Pública Gubernamental entró en vigor en el año 2002. Dicha ley es de competencia federal; por lo que las entidades federativas han tenido que promulgar sus respectivas leyes estatales.

El Congreso de nuestra entidad, incorporó el referido derecho, en los artículos 2º y 23-A de la Constitución del Estado; y, posteriormente, el 27 de agosto del año 2003, se promulga la Ley de Información Pública, Estadística y Protección de Datos Personales. Derivado de la legislación antes citada, se crea la obligación para todas las entidades públicas estatales y municipales de garantizar el ejercicio del derecho de acceso a la información pública, a través de su correspondiente Unidad de Información Pública (UDIP).

## **REVISIÓN DE LA LITERATURA**

La legislación del Estado de Morelos establece la existencia de un órgano garante del derecho de acceso a la información pública: El Instituto de Información Pública y Estadística (IMIPE), el cual cuenta con un índice de indicadores (Índice Integral de Transparencia en Morelos), mediante el cual evalúan el grado de cumplimiento de las Unidades de Información Pública de cada uno de los sujetos obligados. Periódicamente, el IMPE realiza evaluaciones a cada una de las UDIP's para determinar el grado de avance en el cumplimiento de sus obligaciones relacionadas con la transparencia y rendición de cuentas.

## **METODOLOGÍA**

El presente trabajo comprende el análisis de las evaluaciones realizadas a las Unidades de Información Pública, en los tres últimos periodos de las administraciones municipales pasadas, esto es, durante los trienios 2003- 2006, 2006 – 2009 y 2009 – 2012. La muestra de los sujetos obligados, está compuesta por las UDIPS de los 33 municipios que conforman el Estado de Morelos; por lo que no forman parte del estudio, los demás sujetos obligados.

## RESULTADOS

Tomando en consideración la metodología señalada, podemos observar el grado de avance de la UDIP's, respecto a su obligación de garantizar el derecho de los ciudadanos a acceder a la información pública que se encuentra en resguardo de las administraciones municipales, en los periodos antes señalados:

**I.-** Respecto al establecimiento de las Unidades de Información Pública, en todos los municipios se han presentado errores de origen; por ejemplo en el acuerdo de creación de uno de los municipios se establecieron veinte titulares de la Unidad de Información Pública; además señalaba nombres de los servidores públicos y no el de los cargos; por lo que al ya no estar laborando las personas mencionadas para éste ayuntamiento, dicho acuerdo carece de validez legal. La misma situación prevalecía respecto al Acuerdo de creación del Consejo de Información Clasificada.

**II.-** Por cuanto a la integración del Catálogo de Información Clasificada y el Catálogo de Información de Datos Personales, aún cuando la mayoría de las UDIP's los tienen integrados, en muchos casos no están actualizados. Aunado a lo anterior, existe la tendencia de las autoridades municipales a integrar al Catálogo de Información Clasificada, aquella información que por alguna razón no es su deseo poner a disposición de los particulares, aún cuando no cumpla los requisitos de ley para clasificarla como confidencial o reservada.

**III.-** Es importante señalar que el IMIPE evalúa las instalaciones y atención al ciudadano; por lo que existen varios rubros que se deben atender; tales como:

a) La oficina debe contar con un espacio suficiente para que el usuario redacte su solicitud. Al respecto, podemos afirmar que en la mayoría de los casos, la UDIP's no cuentan con las condiciones óptimas.

b) Debe haber formatos de solicitudes de información disponibles y a la vista del público. Por lo general es el IMIPE, quien proporciona los formatos a cada una de las entidades obligadas.

c) También deben existir señalizaciones visibles para ubicar la Unidad de Información Pública dentro de la institución. La mayoría de las UDIP's no cumplen con esta obligación.

d) Es obligatorio colocar tanto en el palacio municipal, como en la misma oficina de la Unidad de Información Pública, material que promueva el ejercicio del derecho de acceso a la información, tales como carteles, lonas, pósters, trípticos, folletos, etc. Al respecto, la publicidad utilizada es la elaborada, difundida y proporcionada por el IMIPE.

**IV.-** Para garantizar el ejercicio del derecho a la información pública, es necesario contar con un sistema de organización y sistematización de la información, mediante el cual se haga visible dicha información, razón por la cual con fecha 31 de diciembre del año dos mil ocho, se publicaron en el Periódico Oficial del Estado de Morelos "Tierra y Libertad" número 4671, los Lineamientos Archivísticos para los Sujetos Obligados en Términos de lo que dispone la Ley de Información Pública, Estadística y Protección de Datos Personales del Estado de Morelos. En cuyo artículo 12 establece la obligación a las entidades públicas de conformar un Área

Coordinadora de Archivos determinada por el titular de la entidad. El Área Coordinadora de Archivo es la encargada de implementar el sistema de control archivístico del Ayuntamiento, el cual debe contener tres apartados:

- \*Archivo de Gestión o de Trámite.
- \*Archivo de Transferencia Concentración.
- \*Archivo Histórico.

La mayoría de los municipios no cuentan con un área que específicamente se encargue del manejo del archivo municipal, situación que incide de manera negativa en varios aspectos. En consecuencia, es necesario llevar a cabo el establecimiento del Área Coordinadora de Archivos; el acuerdo en el que se nombre, se debe publicar en el Periódico Oficial del Estado de Morelos “Tierra y Libertad”. El sistema archivístico, entendido como aquel que tiene por objeto la gestión integral de los documentos públicos, constituye la premisa indispensable para la operatividad y efectividad del propio derecho de acceso a la información; pues las condiciones para garantizar el derecho de acceso a la información son:

- Que el documento exista.
- Que sea localizable por la propia entidad pública.
- Que sea identificable por la población.

La problemática a la que se enfrenta el ciudadano para obtener la información de una UDIP en el Estado de Morelos, en algunos casos, no es la negativa de los servidores públicos, sino la imposibilidad de la propia administración para la localización de los documentos, debido a la falta de la organización y sistematización del archivo municipal.

V.- En cuanto al funcionamiento cotidiano de las UDIP's, es de resaltarse que no tienen implementado un adecuado seguimiento a las solicitudes de información pública presentadas por la población, tanto de las recibidas por escrito en la oficina, como de las recibidas a través del Sistema INFOMEX. Derivado de lo anterior, la mayoría de los municipios tienen recursos de inconformidad interpuestos en su contra ante el IMIPE. Uno de los aspectos más importantes que derivan de las obligaciones de transparencia, es el referente a la obligación de los sujetos obligados a contar con un portal de internet, en el que se publique la información conforme a los indicadores establecido en la Ley de Información Pública, Estadística y Protección de Datos Personales del Estado de Morelos; El Reglamento de dicha Ley; y el Índice Integral de Transparencia en Morelos. Sobre el particular, se observa que un alto porcentaje de los municipios no tienen actualizada la información; además, no la publican en términos de lo establecido en los documentos antes referidos. También es indispensable considerar que el nombramiento de los titulares de las UDIP'S es producto de compromisos políticos o promesa de campaña, que trae aparejados serios inconvenientes, tales como que el servidor no cuente con el perfil adecuado, con todo lo que ello representa.

Además, que la Unidad de Información Pública en ocasiones resulta ser el “incómodo” de la administración municipal, al que no lo proveen de recursos financieros, materiales o humanos indispensables para el desempeño de la función. El mayor de los desafíos está en la implementación de la ley de transparencia y acceso a la información pública y en la consolidación de la autonomía de los órganos garantes; en consecuencia, resulta imprescindible replantear la naturaleza jurídica de las UDIPS como órganos autónomos de la administración municipal.

El servidor público, titular de la Unidad de Información Pública enfrenta un dilema cuando existe el interés de los funcionarios del Ayuntamiento de ocultar cierta información. En este sentido, para garantizar la efectividad del derecho de acceso a la información, sería conveniente pensar que la Unidad de Información Pública no se encuentre sometida funcional ni orgánicamente la Administración Pública Municipal, para que el titular pueda actuar con independencia. Su diseño y su concepción debe ser órganos especializados, técnicos, imparciales y cuya operación debe garantizar la imparcialidad y compromiso, no con quien lo designa y mantiene en el cargo, sino con el cumplimiento de la ley.

Otro de los desafíos es resolver el problema de límites, es decir, de establecer la frontera: hasta donde debe extenderse la publicidad y a partir de dónde debe preservarse el secreto, la confidencialidad. En cuanto al problema de la frontera ente lo público y lo privado, considero que la respuesta debe buscarse en el equilibrio o armonización de la realidad, pues cada caso presenta particularidades que deben tomarse en cuenta; por lo que la jurisprudencia será la que se encargue de ir fijando los criterios que orienten a los operadores jurídicos.

## CONCLUSIONES

El derecho de acceso a la información pública, constituye una característica fundamental de todo gobierno democrático, en México tiene su fundamento en el artículo 6º de la Constitución Política de los Estados Unidos Mexicanos. En concordancia con lo anterior, el Congreso de nuestra entidad lo incorporó en los artículos 2º y 23-A de la Constitución del Estado; y, posteriormente, el 27 de agosto del año 2003, se promulga la Ley de Información Pública, Estadística y Protección de Datos Personales. Una sociedad es democrática cuando sus ciudadanos están más y mejor informados; es decir, tienen garantizado el derecho de acceso a la información y la libertad de expresión; en este sentido, la transparencia se convierte en una herramienta para evitar el uso de información privilegiada,

Los gobiernos municipales han fracasado en su intento de cumplir con la transparencia a la que están obligados por ley, entre los principales obstáculos a los que se enfrentan, tenemos: la falta de participación ciudadana, la secrecía y le ocultamiento de información pública por parte de los servidores públicos municipales, malas prácticas o resistencias a cumplir las resoluciones de los órganos garantes, no existe una verdadera voluntad política para que la transparencia sea una realidad.

Precaria difusión del derecho de acceso a la información. Es importante tener en cuenta que una Ley de Acceso a la Información, por muy liberal y progresista que se diseñe no garantizará a los individuos su derecho a acceder a la información pública, sino que en la realidad debe constituir una verdadera herramienta para la instrumentación de una política pública de transparencia real y efectiva, que aunada a una voluntad política auténtica impulsora del principio de transparencia. Sobre esa nueva base, se requerirá bastante voluntad, recursos, infraestructura y capacidad para construir muchas políticas de transparencia, tantas como la diversidad de nuestros municipios.

La implementación de una política pública de transparencia tiene un coste económico, pues se debe invertir en estructuras administrativas, recursos humanos y materiales, formación de personal, difusión de la información, etc, que deben preverse y asumirse para evitar que el contenido de la ley quede en un discurso retórico o como contenido programático. Las entidades públicas, no proporciona la información completa, y en general la ofrecida no es detallada, ni puesta al público con la oportunidad y periodicidad necesarias; por lo que prevalece el espíritu del

corporativismo o marketing sobre el de la rendición de cuentas. Por lo que el desafío es la implementación de una cultura política para que existan gobernantes comprometidos con la transparencia. Deben existir incentivos atractivos que motiven la capacitación permanente de los responsables de resguardar, administrar y liberar la información.

# COMPETITIVIDAD DE LAS EMPRESAS FAMILIARES DEL SECTOR ALIMENTOS DE TIPO GOURMET EN LA CIUDAD DE ENSENADA, BAJA CALIFORNIA

Sandra Millán Núñez, Universidad Autónoma de Baja California  
Ma. Enselmina Marín Vargas, Universidad Autónoma de Baja California

## RESUMEN

*El constante auge a nivel mundial sobre la comida saludable, y el ambiente competitivo que se vive en la región de Ensenada por acaparar al turismo local y extranjero, provoca que cada día surjan más familias dedicadas a la producción de alimentos cultivados de manera orgánica. Con este tipo de productos algunas familias se han convertido en proveedores locales de los restaurantes que han adoptado el concepto de comida gourmet, incluso han llegado a crear sus propios restaurantes ofreciendo platillos preparados artesanalmente y con insumos de la región. Una problemática que se ha observado es, el constante cierre y apertura de empresas que se dedican a este giro y que son atendidas por las mismas familias productoras. Parte de esta investigación pretende caracterizar a las empresas familiares de tipo gourmet, además de establecer la relación existente entre el alcance de la competitividad de estas empresas y la gestión de liderazgo desarrollada en la administración de dichos negocios. Para el logro de los objetivos, se diseñó un estudio descriptivo correlacional, donde se adecuó y validó un instrumento de recolección de datos, que se aplicó a una muestra de quince negocios. Los resultados preliminares arrojan que existe estrecha y significativa relación entre la gestión de liderazgo y la competitividad de estas empresas.*

**PALABRAS CLAVE:** Empresa Familiar, Competitividad, Gestión de Liderazgo, Gourmet

## COMPETITIVENESS OF FAMILY-OWNED BUSINESSES IN THE GOURMET FOOD SECTOR IN ENSENADA, BAJA CALIFORNIA

### ABSTRACT

*The constant global increase in healthy food consumption and the competitive environment for attracting local and foreign tourists in Ensenada every day cause more families to dedicate themselves to the production of organically grown food. Some of these families have become the food suppliers for restaurants that have adopted the gourmet food concept; others have even opened up their own restaurants, offering homestyle food cooked with locally grown produce. The continuous opening and closing of such family-owned gourmet restaurants, however, has become a problem. Part of this research aims to characterize these family businesses and to establish the relation between the extents of their competitiveness and the leadership management in their administration. For this, a descriptive correlational study was designed, where a data collection instrument was adapted and validated, and later applied to fifteen businesses. The preliminary results show that there is a significantly close relationship between leadership management and business competitiveness.*

**JEL:** L21, M10, M20

**KEYWORDS:** Family Business, Competitiveness, Management Leadership, Gourmet

## INTRODUCCION

Una situación inquietante de las empresas familiares de tipo gourmet en la región de Ensenada es que, a pesar de ir en crecimiento, abriendo cada día nuevos lugares, igualmente también han cerrado rápidamente. Debido a esto es que surge el interés de analizar porque algunas empresas no tienen la capacidad de permanecer en el mercado y se ven forzadas a cerrar. El principal objetivo de este estudio es hacer un análisis a este tipo de empresas para identificar las características de este tipo de empresas que pueden ayudar o dificultar en éxito de las mismas; también se pretende analizar si hay relación entre la competitividad de las empresas y la gestión de liderazgo desarrollada en este tipo de negocios. Finalmente en esta investigación se presentan los resultados encontrados y las conclusiones a las cuales se llegaron con el análisis de los resultados obtenidos.

## REVISIÓN DE LA LITERATURA

La globalización es un tema del cual se habla diariamente, y como empresa no se debe hacer caso omiso a esto. La globalización está haciendo que los mercados sean cada vez más competitivos, y que los consumidores sean más exigentes con la calidad de los productos y servicios. Debido a esto los encargados de las empresas deben estar siempre a la vanguardia de la información y procedimientos para lograr competitividad en el mercado. A nivel microeconómico son los sectores, empresas y productos en los que se evalúa la competitividad. Este nivel de análisis es evaluado por lo que se podría llamar, la aproximación moderna de la competitividad. Algunas formas de medir y definir la competitividad en este nivel, se basen cuantitativamente en la participación en el mercado, indicadores de productividad y/o costo, márgenes de ganancia y/o beneficios netos (Lombana, Gutiérrez & Rozas, 2009).

Actualmente en Ensenada se está presentando un aumento en el establecimiento de empresas nuevas dedicadas a brindar el servicio de alimentos, administradas por una sola familia o por personas con lazos familiares. La empresa familiar, es la figura empresarial dominante en la estructura económica de la mayoría de los países occidentales. Estudios realizados en Europa, Estados Unidos y América Latina señalan que las empresas familiares llegan a suponer entre el 70% y 90% del total de empresas en un país (Amat 2000). Dentro de las empresas familiares en el sector alimentos que se encuentran en la región, están algunas que se dedican a la elaboración de productos de tipo gourmet. Según La Real Academia Española Gurmé se refiere a una adaptación gráfica propuesta para la voz francesa Gourmet, la cual define a “persona que gusta de comer y beber exquisitamente”. Lo Gourmet por lo tanto está asociado a lo más excelso de la gastronomía. Para fines de este estudio se entiende como productos Gourmet, a los alimentos preparados con insumos seleccionados cuidadosamente y de la mejor calidad, además de haberse producido principalmente de manera orgánica dentro de la región de Ensenada, Baja California.

Toda empresa necesita una persona capacitada que se encuentre al frente de ella, con los conocimientos apropiados para tomar decisiones y acciones en beneficio del negocio. Según Bateman & Snell (2009) existen diferentes tipos de liderazgo como el estilo autocrático y el democrático. El estilo democrático aporta una mejor participación y aceptación del grupo lo que es favorable por la disposición de las personal a alcanzar los objetivos. Por otro lado el estilo

autocrático obtiene como resultado más resistencia por parte del grupo, por sentir imposición y poca participación en las decisiones del negocio.

En este estudio se plantean dos objetivos: la caracterización de la empresa familiar de tipo gourmet y determinar si hay relación en el logro de la competitividad de este tipo de empresa, con la manera en que se desarrolla la gestión de liderazgo en el establecimiento.

## METODOLOGÍA

Con el fin de alcanzar los objetivos antes planteados, se realizó un estudio descriptivo correlacional. En este tipo de estudios, se analiza un fenómeno a partir de una variable dependiente y otra independiente, para dar respuesta al problema planteado. La recolección de datos numéricos del objeto de estudio y sus variables, se realizó a través de una encuesta tomada y adecuada a partir del Mapa de Competitividad desarrollado por el Banco Interamericano de Desarrollo (BID). Para este estudio se tomó una muestra de quince restaurantes; seis del Valle de Guadalupe y nueve de la zona urbana de Ensenada, Baja California. Para caracterizar a las empresas familiares de tipo gourmet, se utilizó la prueba de estadística descriptiva; mientras que para determinar si existe relación entre competitividad y la gestión de liderazgo se aplicó el análisis de correlación bivariada de Spearman. Estas pruebas se llevaron a cabo en el programa Statistical Package for the Social Sciences (SPSS).

### Análisis de Datos

La caracterización de las empresas se realizó a través del análisis estadístico de los datos sociodemográficos recolectados durante el trabajo de campo, los aspectos incluidos fueron: puesto y escolaridad de quienes contestaron la encuesta, tiempo en funcionamiento y número de empleados de las empresas objeto de estudio. La determinación de la correlación entre competitividad y gestión de liderazgo se realizó a través del cálculo del coeficiente rho de Spearman. En la Tabla 1 muestra los rangos de relación estadística entre las variables para la escala de medición según Martínez et al. (2009).

Tabla 1: Rangos de Relación Estadística Entre Variables

Un valor <i>rho</i> entre	Indica una relación de:
0 y .25	Escasa o Nula
.26 y .50	Débil
.51 y .75	Entre Moderada y Fuerte
.76 y 1	Entre fuerte y Perfecta 5

*En esta tabla se describen los rangos de intensidad de relación entre variables para la escala de medición rho de Spearman. Fuente: elaboración propia.*

## RESULTADOS

Una vez aplicada la metodología descrita y analizados los datos sociodemográficos de las empresas los resultados obtenidos para la caracterización de las empresas familiares de tipo gourmet se muestran a continuación:

### Puesto de Quien Contesto la Encuesta

Los propietarios que contestaron la encuesta representaron el 20 % que equivale a 3 personas, dos personas representadas por el 13.3% tenían el puesto de chef, el 26.7% de los encuestados

manifestaron ser los gerentes del restaurant que representan a 4 personas, 4 personas más de las encuestadas representadas con 26.7% dijo tener otro tipo de puesto y el 13.3% que representan 2 personas no contesto el tipo de puesto que desempeñaba en la empresa.

*Escolaridad de quien contesto la encuesta:* La escolaridad de los encuestados se encuentra mayormente concentrada en el nivel de licenciatura representando el 60% que equivale a 9 personas, seguido de esto se situó el nivel de escolaridad en preparatoria con el 26.7% equivalente a 4 personas, una personas cuentan con un posgrado y correspondiente al 6.7 % de los encuestados y el 6.7% restante contesto que tiene algún otro tipo de escolaridad, equivalente a una persona.

*Tiempo en Funcionamiento de las Empresas Objeto de Estudio:* Se encontró que las empresas objeto de estudio en su mayoría tienen funcionando en el mercado cuatro años o más, y representan el 53.3% equivalente a 8 empresas del total de las encuestadas, las empresas de reciente creación que tiene menos o hasta un año de funcionamiento se sitúan en segundo lugar con el 33.3% correspondiendo a 5 de ellas, con el 6.7% equivalente a una empresa tiene de un a dos años en funcionamiento, el 6.7% restante corresponde a una empresa con un tiempo de funcionamiento de dos a tres años en el mercado.

#### Número de Empleados de las Empresas Objeto de Estudio

En el caso del número de empleados de las diferentes empresas encuestadas, el 33.3% que equivalen a 5 empresas tienen de once a quince empleados, el 13.3% que equivalen a 3 empresas tienen 16 o más empleados, el 26.7% equivalente a 4 empresas cuenta cinco a diez empleados, otra de las empresas que representan el 6.7% tiene de uno a cinco empleados, y por último el 13.3% que equivalen a 2 empresas no contestaron. Se analizaron las variables de Competitividad y Gestión de Liderazgo con la prueba estadística antes descrita, en la Tabla 2 se presentan los resultados de correlación entre estas dos variables, donde muestra que la correlación que se da se encuentra en un rango de 0.845 con un nivel de significancia del 0.000 a un nivel de confianza del 99%, lo que nos indica que la relación existente es entre fuerte y perfecta.

Tabla 2: Correlación Entre las Variables Competitividad y Gestión de Liderazgo

Variables	Método de Estimación	Competitividad	Gestión de Liderazgo
Competitividad	<i>rho</i> Spearman Sig. (2 colas)	1	0.845** 0.000
Gestión de Liderazgo	<i>rho</i> Spearman Sig. (2 colas)	0.845** 0.000	1

*Esta tabla nos presenta el nivel de correlación entre las variables de Competitividad y Gestión de Liderazgo. \*\* Correlación significativa a un nivel de 0.01 (2 colas) lo que nos señala una confianza del 99%.(Martínez et al. 2009) Fuente: Elaboración propia con resultados de trabajo de campo.*

## CONCLUSIONES

Con base en el análisis de los resultados se logró la caracterización de las empresas familiares de tipo gourmet, obteniendo que, en su mayoría, las personas que cuentan con la información más importante sobre el funcionamiento de la empresa tienen el puesto de gerente, mostrando que no basta con ser el empresario y propietario de un restaurante de este tipo para conocer bien a la empresa, se necesita tener un acercamiento más profundo tanto con los empleados como con las demás actividades que en ella se realizan para mantener la empresa en correcto funcionamiento. Es notable que los resultados muestren que la mayoría de las personas encuestadas tienen un

nivel de escolaridad de licenciatura, que aunado a la experiencia son factores de especial importancia para que una empresa tenga éxito.

Esto parece indicar que una persona con nivel de licenciatura posee los conocimientos necesarios para poder manejar una empresa, dependiendo del área de formación puede tener mayores bases sobre algún campo u otro del conocimiento, pero es un hecho que han desarrollado habilidades importantes para manejar una empresa con éxito. Otro aspecto importante es que las empresas en su mayoría llevan en operación cuatro años o más, obteniendo así experiencia suficiente para mantenerse a flote en los mercados cada día más competitivos. Las empresas encuestadas en su mayoría mantienen en nómina de 11 a 15 empleados, un indicador más de que las empresas de tipo gourmet se encuentran dentro de las favoritas de la región. Por lo que se han visto en la necesidad de crecer y aumentar los esfuerzos por ofrecer el mejor servicio con la mejor calidad en sus productos.

Finalmente, en cuanto a la relación entre la competitividad de las empresas familiares de tipo gourmet y la gestión de liderazgo, se encontró que existe una estrecha relación entre estas dos variables. Lo que indica la importancia del líder dentro de la empresa, la manera en cómo se dirija a sus empleados y como aborde los temas relevantes para la empresa es lo que indicara el rumbo de la misma.

## RESUMEN

*Dentro del contexto global los gobernantes han establecido una serie de leyes internacionales, nacionales, estatales y locales, las cuales se han cumplido parcialmente y esto ha permitido que los habitantes de las comunidades, no tengan claramente identificados cuales son los problemas, elementos y los factores que provocan daño al medio ambiente. Es por ello que esta investigación que se realizó en el Municipio de Ayapango, Estado de México, presenta una problemática que se viene originando desde hace varios años atrás la cual es la deficiencia en la cultura ecológica, que como se sabe no es otra cosa que el no separar la basura orgánica de la inorgánica, siendo esta última la que provoca grandes daños ecológicos al medio ambiente. Por lo anteriormente mencionado la investigación tiene como objetivo dar propuestas para implementar una cultura ambiental, la cual facilitaría la recolección de todos los residuos sólidos como papel, cartón y PET, entre otros, generados por los mismos habitantes del municipio, además de cumplir con los objetivos establecidos dentro del capítulo II y IV del Bando Municipal 2011, así mismo, el trabajo en conjunto con el municipio aledaño, existe un relleno sanitario intermunicipal Juchitepec – Ayapango mismo que tiene como misión poner a disposición final y controlar los residuos sólidos urbanos. La finalidad proponer Estrategias de Cultura Ecológica Ambiental sobre Residuos Sólidos (Caso: Municipio de Ayapango Estado de México), permitió lograr la vinculación de un trabajo en conjunto entre habitantes y el Gobierno del Municipio. También consintió que la forma de recolección de la basura a los domicilios de cada una de las familias del municipio y de su delegación se da una vez por semana, lo cual es llevada a cabo por el recorrido del carro recolector de residuos asignado. Cabe recalcar que para lograr una Reducción en los Residuos Sólidos, se debe de iniciar por una cultura ecológica eficiente, en la cual se le obligue a los habitantes en caso de ser necesario y aplicando la ley a separar la basura orgánica de la inorgánica para ello, es de suma importancia motivarlos a cooperar a través de la información, beneficios y el objetivo de implantar dicha cultura.*

**PALABRAS CLAVES:** Cultura Ecológica Ambiental, Residuos Sólidos, Legislación Municipal.

## ABSTRACT

*Within the overall context rulers have established a number of international laws, national, state and local, which have been partially implemented and this has allowed the residents of the communities, which do not have clearly identified the problems, elements and factors causing harm to the environment. That is why this research was conducted in the municipality of*

*Ayapango, State of Mexico, presents a problem that has been causing a number of years ago which is the deficiency in ecological culture, which as we know is nothing that not to separate organic waste from inorganic, the latter being the major causes ecological damage to the environment. By the above research aims to give proposals to implement an environmental culture, which would facilitate the collection of all solid waste such as paper, cardboard and PET, among others, generated by the inhabitants of the municipality, in addition to meeting the objectives within Chapter II and IV of the Municipal Bando 2011, also, working together with the adjacent town, there is a municipal landfill Juchitepec - Ayapango same mission is to make available to end and solid waste control. The purpose Ecological Culture propose Environmental Strategies Solid Waste (Case: Ayapango Township Mexico State), allowed the adherence of a joint work between people and the Government of the Municipality. Also agreed that the form of garbage collection to the homes of each of the families of the municipality and its delegation is given once a week, which is conducted by the carriage path assigned garbage collector. It should be noted that to achieve a reduction in solid waste , should be initiated by efficient ecological culture in which he forces the population when necessary and applying the law to separate organic waste from inorganic to do, is very important to motivate them to cooperate through information , benefits and in order to implement that culture.*

## **INTRODUCCIÓN**

La cultura ecológica de las personas no está determinada por su estatus social, su religión, o su grado de educación, pues depende en gran parte de la persona misma y de la participación que se tenga hacia el tema, aunque si bien es claro que la ideología, forma de vivir o pensar en una comunidad no se puede cambiar de la noche a la mañana, pues se necesita de perseverancia, paciencia y un gran trabajo en equipo entre las partes gubernamentales, sociales y educativas, con el propósito de poder lograr los cambios significativos en pro del medio ambiente. Cuando se inicia la investigación mediante el proceso de observación participante se encuentra que en el municipio de Ayapango Estado de México, se hace notorio que existe esa falta de prioridad hacia el tema del medio ambiente que se ve reflejado en el Plan de Desarrollo Municipal o bien llamado Bando Municipal (BM) del periodo 2009 - 2012 (el estudio se realizó en el año 2011), porque las propuestas por mejorar estas deficientes condiciones ambientales no han sido tan eficaces y, no solo porque se deba al gobierno y a las instituciones educativas, sino que finalmente quienes deben participar en dichas acciones es la comunidad, que es la que tiene uno de los roles más importante para mejorar la situación del problema de la basura. Por lo que, al hacer un adecuado uso de los Residuos Sólidos (RS) basados en una cultura ambiental, donde se lleve a cabo la separación de los mismos, se puede obtener un resultado de hasta el 80% de su aprovechamiento a un bajo costo en su proceso de separación. Por otro lado si los RS son mezclados se le da paso a lo que se conoce comúnmente como basura, teniendo como resultado el aprovechamiento de solo un 30% de toda esa basura generada y el proceso de separación tendría un costo más elevado. Por lo anterior, en ambos caso se requiere de una Cultura Ambiental (CA), basada en Políticas Ambientales Gubernamentales (PAG), y en especial a las establecidas en el BM del Municipio de Ayapango Estado de México.

## **REVISIÓN LITERARIA**

La cultura ecológica se puede definir como la acción de separar los residuos generados en cualquier ambiente espacial en la que el ser humano pueda generarlos, basándose en principios que la misma sociedad adopte de manera formal o informal. Para Steward (1972), define a la ecología cultural y/o cultura ecológica como una serie de principios, metodologías y conceptos que se aplican en diferentes condiciones espaciales y temporales al estudio del hombre, su sociedad y su cultura. Por lo que la cultura ecológica se logra a través de una lucha constante de adoptar prácticas que le permitan al hombre tomar conciencia de la importancia que esta implica; dependiendo de su entorno sociocultural. Por lo que el objetivo primordial de la cultura ecológica es estudiar los diferentes procesos en los cuales el ser humano pueda y logre adaptarse a un entorno sociocultural en relación a su ambiente, además de explicar cómo un grupo de personas se comportan de acuerdo al grupo al que pertenecen, ya sea de nivel educativo o en su defecto nivel social. Así mismo, la cultura es un aspecto que va definir en gran medida la forma en que el ser humano puede adaptarse a un grupo social, y la forma en que estos se adaptan a su entorno; de esta forma es como la cultura ecológica influye en gran parte en la relación del hombre con el ambiente. Las características de la cultura basado en los autores Lichtinger W. Víctor, Arriaga B. Raúl E., Bolaños-Cacho R. Jorge A. Y Aguilar E. Juan M. en su Guía para la Gestión Integral de los residuos sólidos municipales (2001); para lograr una cultura ecológica ya sea en un grupo social o comunidad es necesario considerar las siguientes características, que deben de ser:

*Aprendida:* La cultura ecológica deber ser aprendida desde una educación formal o informal; es decir la primera se puede lograr a través de una institución educativa la cual, se pueda formar desde el nivel básico y continuar con ella a través del avance del nivel educativo; mientras que la informal se logra por una unión social la cual fomente la participación social de una comunidad.  
**Compartida:** La cultura ecológica solo se puede lograr a través de una unificación como sociedad, al no ser un atributo que se busque de forma individual.

*Comprenderla:* Para formar parte de un grupo social con cultura ecológica se debe de comprender los términos básicos que faciliten la acción de cada uno de los planes propuestos por diferentes miembros de la comunidad.

*Realista:* Lo que realmente se debe de hacer y, que los planes de acción que se piensen ejecutar estén dentro del alcance de la comunidad a fin de evitar un problema ambiental o su caso detener o disminuir si este ya existe.

*Adaptiva:* Toda la comunidad participativa se debe de adaptarse a las políticas propuestas para logara el objetivo planteado inicialmente. Por otro lado al hablar de Residuos, se toma en consideración al autor (Castells, 2000). “Residuo; es aquella sustancia u objeto generado por una actividad productiva o de consumo, de la que hoy desprenderse por no ser objeto de interés directo de la actividad principal. Otra definición de residuo es la siguiente: dentro de la Ley General para la Prevención y Gestión Integral de los Residuos, publicada por la *Nueva Ley DOF 08-10-2003*, dentro del artículo 5° define que se entiende por:

*XXIX. Residuo:* Material o producto cuyo propietario o poseedor desecha y que se encuentra en estado sólido o semisólido, o es un líquido o gas contenido en recipientes o depósitos, y que puede ser susceptible de ser valorizado o requiere sujetarse a tratamiento o disposición final conforme a lo dispuesto en esta Ley y demás ordenamientos que de ella deriven. Mientras que por RS urbano se entiende como:

*XXXIII. Residuos Sólidos Urbanos:* Los generados en las casas habitación, que resultan de la eliminación de los materiales que utilizan en sus actividades domésticas, de los productos que

consumen y de sus envases, embalajes o empaques; los residuos que provienen de cualquier otra actividad dentro de establecimientos o en la vía pública que genere residuos con características domiciliarias, y los resultantes de la limpieza de las vías y lugares públicos, siempre que no sean considerados por esta Ley como residuos de otra índole. Por lo que se define como RS, a aquellas sustancias, productos o sub-productos en estado sólido de los que su generador dispone, o está obligado a disponer, de acuerdo a ley, o por los riesgos de salud y ambiente que originan. Por **Residuos Sólidos Municipales (RSM) son todos aquellos que son** de origen domiciliario, limpieza de calles, instituciones y afines, y se clasifican de acuerdo a los autores Tegobanoglous G., Theisen H. Vigil S., que en su libro “Gestión Integral de Residuos Sólidos” vol. I; la clasificación de los residuos se da en base a su uso y manejo, pues hay tipos de residuos que requieren de un manejo especializado por su origen, además de evitar mezclarlos ya que podría ocasionar grandes perjuicios si estos no son tratados de forma adecuada y correcta.

Por último se menciona las leyes del BM que se vinculan con la Cultura Ecológica Ambiental (CEA), RS y leyes municipales, donde en su **CAPÍTULO II AGUA POTABLE Y DRENAJE, ARTÍCULO 71.-** Se prohíbe el depósito de residuos o lodos al drenaje a los particulares que realicen actividades de lavado de hortalizas, y deberán contar con los medios necesarios para evitar el ensolvamiento de este servicio, tales como desarenadores y rejillas hacia la descarga. **CAPÍTULO IV RECOLECCIÓN DE RESIDUOS SÓLIDOS URBANOS, Y LIMPIEZA DE ÁREAS PÚBLICAS ARTÍCULO 76.-** El Servicio de Recolección de Residuos Sólidos Urbanos y su disposición final estará a cargo del Organismo Público Descentralizado encargado de Operar el Relleno Sanitario Regional Juchitepec - Ayapango, que coordinará las actividades correspondientes a la recolección de residuos sólidos urbanos a nivel domiciliario, comercial e industrial. **ARTÍCULO 77.-** El Servicio de Limpieza de Áreas Públicas estará a cargo de la Dirección de Servicios Públicos y se encargará del barrido y la limpieza permanente de las áreas designadas como espacios públicos municipales.

El Servicio de Recolección de Residuos Sólidos Urbanos, se encargará de la recolección de residuos sólidos urbanos, debiendo depositarlos en el Relleno Sanitarios Regional Juchitepec - Ayapango, de acuerdo a la Norma Oficial Mexicana NOM-083-SEMARNAT-2003, a la Ley General para la Prevención y Gestión Integral de los Residuos, al Código para la Biodiversidad del Estado de México y demás disposiciones oficiales vigentes en la materia. **ARTÍCULO 78.-** Serán remitidas a las autoridades competentes y sujetas a la sanción correspondiente, las personas que se sorprendan tirando basura, animales muertos, escombros, desechos o cualquier contaminante en las barrancas, canales de desagüe, canales, caños, pozos de visita, áreas o vías públicas, así como en la propiedad de terceros y del municipio. **ARTÍCULO 79.-** Los vecinos, transeúntes y visitantes deberán observar las disposiciones del Reglamento de Recolección de Residuos Sólidos Urbanos y

Limpieza de Áreas Públicas y demás disposiciones oficiales vigentes en la materia, con el fin de mantener limpias las calles, caminos, barrancas, carreteras y cualquier otra área dentro de la municipalidad. **ARTÍCULO 80.-** Las personas que ejerzan el comercio en el mercado municipal, tianguis o la vía pública, son responsables de mantener y dejar limpio el espacio que ocupan, depositando los residuos al final de su jornada en los lugares designados para tal efecto, de acuerdo a lo que señale el Reglamento de Recolección de Residuo Sólidos Urbanos y Limpieza de Áreas Públicas y demás disposiciones oficiales vigentes en la materia. **CAPÍTULO XII DEL EQUILIBRIO ECOLÓGICO Y LA PROTECCIÓN AL AMBIENTE ARTÍCULO 99.-** Se declara del interés público la protección, conservación y restauración del ambiente, así como la prevención y corrección de los procesos de deterioro de los ecosistemas que se encuentren dentro del territorio municipal, por lo cual, queda prohibida la tala de árboles y el pastoreo en zonas en donde la autoridad así lo determine o cuando la zona ya haya sido reforestada. **ARTÍCULO 100.-**

Las disposiciones en materia ecológica, contenidas en este Bando y en el Reglamento Municipal para el Equilibrio Ecológico y de Protección al

Ambiente, son de aplicación y cumplimiento obligatorio en el territorio municipal, sin perjuicio y en complemento de la observancia de las disposiciones estatales y federales en la materia. **ARTÍCULO 101.-** Son facultades del Ayuntamiento en materia de ecología y medio ambiente: **I.** Expedir el Programa de Ordenamiento Ecológico Municipal, en concordancia con los programas de ordenamiento ecológico estatal y los de carácter regional; **II.** Expedir, con fundamento en el artículo 15 de la Ley General de Desarrollo Forestal Sustentable vigente y previo a su instalación, las licencias o permisos, para el establecimiento de centros de almacenamiento o transformación de materias primas forestales; **III.** Dar aviso a las autoridades ambientales de las obras y actividades públicas o privadas que puedan causar perjuicio al ambiente; **IV.** Denunciar a personas físicas o morales que sin autorización de la autoridad federal, estatal o del Ayuntamiento, descarguen aguas residuales que contengan contaminantes, desechos materiales peligrosos o cualquier sustancia potencialmente dañina a la salud de las personas, la flora o la fauna del municipio; **V.** Denunciar y dar seguimiento, ante las autoridades correspondientes, a las personas que incurran en los delitos ambientales previstos en el Código Penal Federal, el Código Penal del Estado de México, la Ley General del Equilibrio Ecológico y la Protección al Ambiente, el Libro Cuarto del Código Administrativo del Estado de México y sus Reglamentos respectivos; **VI.** Vigilar, en coordinación con las autoridades competentes, que los residuos sólidos peligrosos que se generen dentro del municipio sean manejados de acuerdo con la Ley General para la Prevención y Gestión Integral de los Residuos; **VII.** Aplicar acciones para corregir los efectos adversos que cause cualquier tipo de contaminante al ambiente y a las personas; **VIII.** Celebrar convenios con el Gobierno Federal, el Gobierno del Estado de México y con otros municipios para llevar a cabo acciones que mejoren el ambiente del municipio; y el **XI.** Expedir los reglamentos y disposiciones a fin de conservar el equilibrio ecológico y la protección al ambiente en la jurisdicción municipal. **ARTÍCULO 102.-** En el derecho que asiste al Ayuntamiento como órgano colegiado, aplicará y sancionará las disposiciones contenidas en el Bando y los Reglamentos en materia de equilibrio ecológico y protección al ambiente, para lo cual estará facultada el área de ecología a través de su titular para llevar a cabo los procedimientos respectivos y aplicar las sanciones cuando cualquier persona física o moral transgreda los ordenamientos señalados.

## METODOLOGÍA

La investigación presenta una metodología de tipo cualitativa, ya que para su elaboración se ha tomado en cuenta diferentes apoyos teóricos según cada una de sus autores así, como también el comportamiento en el manejo de los RS generados dentro del municipio de Ayapango; es decir si llevan a cabo una CEA que, a pesar de existir políticas para su aplicación esta se maneje de forma deficiente provocando el problema de la basura. El estudio que se llevó a cabo es bajo un nivel descriptivo al describir las causas por las cuales hasta la fecha no se ha manejado una CEA correcta, además de explicar las causas por la cual este problema se ha manejado de forma deficiente por los habitantes y el gobierno del municipio. Presenta un diseño de tipo no experimental transversal al plantear Estrategias de CEA sobre RS en el municipio, para lo cual se establecen herramientas básicas y sencillas que favorecerán a la reducción del problema de la basura pero, que por sencillas que parezcan no se llevan a cabo (como lo es el simple hecho de separar todos los desechos generados) ya sea por falta de interés de los habitantes, de su gobierno o en su caso de ambas partes.

## CONCLUSIONES

Se puede concluir que la cultura ecológica de las personas no está determinada por su estatus social, su religión, o su grado de educación, sino que depende en gran parte de sí mismo y de la participación que tenga en su comunidad, como se relacione con su entorno y cómo conozca y respete las leyes que rigen a los RS. Así mismo hay que tomar en consideración y de debe quedar muy claro que la idolología, forma de vivir o de pensar de una comunidad no se puede cambiar de la noche a la mañana, pues se necesita de perseverancia, paciencia y un gran trabajo en equipo entre la parte gubernamental, social y educativa para lograr cambios significativos en pro del medio ambiente. Se hace notorio que en Municipio de Ayapango el tema del medio ambiente en el periodo 2009 – 2012, no era tan prioritario, debido a que las propuestas por establecer y mejorar la CA sobre RS es deficiente y no han sido tan eficaces, por lo que no solo se deba al gobierno, pues finalmente debe participar la comunidad y determinar la forma de como juega un rol importante para mejorar la situación del problema de la basura. Es por lo anterior, que en ambos caso se requiere de una CA, basada en PAM.

## RESUMEN

*En este trabajo se aborda el análisis a la iniciativa de decreto en México, por el que se reforman, adicionan y derogan diversas disposiciones de la Ley del Impuesto al valor agregado correspondiente al año de 2013, para aplicarse en el periodo fiscal 2014. Estos cambios comprenden la eliminación del tratamiento a la región fronteriza, de una tasa preferencial de 11%, a 16%, lo cual resulta inequitativo frente a las operaciones similares que se realizan en el resto del territorio nacional, afectando en su economía a 7.5 Millones de habitantes de esta región, de acuerdo a datos de (INEGI, 2009). La eliminación de las exenciones a un gran número de regímenes especiales, para ampliar la base gravable del IVA, como la compra, renta y pago de hipoteca de casa habitación; los servicios de enseñanza; limitar la exención en materia de transporte público terrestre de personas, para dejarlo únicamente al servicio de transporte prestado en áreas urbanas, suburbanas o zonas metropolitanas, entre otras, lo mas trascendental es el gravar las importaciones temporales del régimen de la industria manufacturera de exportación (IMMEX), que antes estaba exento, así como el depósito fiscal automotriz y el caso del recinto fiscalizado y recinto fiscalizado estratégico.*

**PALABRAS CLAVES:** IVA, Fiscal, Exenciones

## PERSPECTIVES OF TAX LAWS REFORM TO THE VALUE ADDED TAX 2013, IN MEXICO

### ABSTRACT

*On this paper the analysis for the Mexican revenue bill will be covered. This initiative discusses why the reform, adds and derogate a number of la dispositions regarding the value-added tax laws to the year 2013, to be issued during the fiscal year of 2014. These changes cover the elimination of the bordering areas preferential treatment and change it form 11% to 16%, which ultimately means and increase concerning similar operation throughout the nation, affection the economy of 7.5 million inhabitants of this region, information provided by (INEGI, 2009). The removal of this fiscal exemption to a great number of specialized regimes, to apply the value-added tax, in values such as shopping, renting, and mortgage payments; the schooling services; will limit the exemption for public transportation, to be left un touched only in Metropolitan areas among others. The most transcendental of the tax increase, for the short term, will affect the Manufacturing and exporting industry (IMMEX in Spanish) which was not coves in the tax revenue in the past. This will also affect the car industry as we as the fiscal premises and the strategic fiscal premises.*

**JEL:** G1, H2, H3

**KEY WORDS:** VAT, Fiscal, Exemptions

## INTRODUCCIÓN

La reforma hacendaria constituye una gran reforma social que pretende acelerar el crecimiento y la estabilidad económica de México, en pos de garantizar a los mexicanos una gran red de protección social, presentada al Congreso de la Nación por el presidente Enrique Peña Nieto el 8 de Septiembre de 2013, para su discusión y análisis. Muchas de las disposiciones fiscales se aplicarán sobre el sector formal de la economía, sin que se contemplen medidas efectivas para reducir de forma significativa la actividad informal, que incluso podría verse incrementada, advirtió el economista en jefe de Scotiabank México, Mario Correa. Uno de los temas relevantes de la propuesta de reforma fiscal para 2014 en México, se refiere entre otras a la ley del Impuesto al Valor Agregado, que entró en vigor en el año de 1980, y que abrogó a la entonces Ley Federal sobre Ingresos Mercantiles (ISIM).

El ISIM gravaba las operaciones mercantiles durante las etapas que había entre la producción del artículo y su comercialización, generando efectos acumulados y en cascada en los precios; es decir el impuesto se arrastraba de etapa en etapa, ocasionando que el costo y el precio del bien aumentarían; en consecuencia, el consumidor final recibía todo el impacto económico acumulado de este gravamen, además, el impuesto era de difícil control contable y producía efectos negativos sobre todo en las pequeñas y medianas empresas, que tienen una capacidad contributiva menor. La estructura de la actual Ley del Impuesto al valor Agregado, impide la fácil aplicación de sus disposiciones y genera confusión en cuanto a la forma de interpretar algunas partes de la misma, todo ello producto del gran número de modificaciones y reformas de que ha sido objeto, sin que se haya mejorado la recaudación ni la simplificación de las obligaciones fiscales, por lo que se puede considerar que este gravamen cuenta con una estructura con nivel de eficiencia no optimizado. Lo anterior, se traduce en incertidumbre jurídica para los contribuyentes, lo que se considera como un obstáculo al potencial recaudatorio de dicha contribución, toda vez que se implementó con el propósito de mejorar la recaudación del país lo cual desde el punto de vista técnico, permitiría que el país alcanzara los niveles requeridos de recaudación en el marco de los principios jurídicos tributarios de equidad, justicia y proporcionalidad.

## REVISIÓN DE LITERATURA

Por tratarse de un tema que se relaciona con reformas a las leyes que rigen a México, en este caso a la Ley del Impuesto al Valor Agregado (LIVA), se enfoca la revisión documental de las disposiciones que se relacionan con la misma, esto se refiere a las iniciativas de decreto impuestas por el Ejecutivo (Presidente), de México, además los resultados de las Comisiones Dictaminadoras del Senado y del Congreso de la Unión, conjuntamente con las fuentes periodísticas y dependencias de gobierno que manejan información como el INEGI, la Secretaría de Hacienda y Crédito Público, Secretaría de Economía, así como los organismos empresariales como son CANACINTRA, COPARMEX, CONCANACO. La estructura tributaria es un sistema financiero que limita o contrae el gasto privado permitiendo con ello el gasto público; la manera en que este sistema financiero extrae los recursos de los agentes privados es mediante el establecimiento de diversos impuestos que pueden gravar en términos generales la renta o el consumo.

Si se parte de la idea de que cualquier impuesto disminuye el bienestar de la sociedad o impone costos adicionales a sus actividades, dependiendo de cuál sea su base gravable, se puede concluir que los impuestos son malos; no obstante si se piensa desde una óptica diferente, asumiendo que los recursos que el gobierno retira de la economía, son devueltos vía bienes y servicios, se estaría dando sentido a la función tributaria del gobierno pensando que lo que hace es coordinar de manera estratégica la canalización de recursos con fines sociales y económicos para lograr: mejores niveles de vida, crecimiento económico y una redistribución del ingreso y la riqueza en una proporción "justa".

En la exposición de motivos que se señalan en la Iniciativa de Decreto por el que se reforman, adicionan y derogan diversas disposiciones de la Ley del Impuesto al Valor Agregado, se menciona que el impuesto al valor agregado (IVA) representa la segunda fuente de ingresos tributarios en México; sin embargo, cabe destacar que a nivel internacional su recaudación resulta ser una de las más bajas. Muestra de lo anterior es que mientras que en México en 2012 la recaudación del IVA fue de 3.74% del producto interno bruto (PIB), en promedio en los países de América Latina y en los países miembros de la Organización para la Cooperación y el Desarrollo Económicos (OCDE) era de 6.5% y 6.9% del PIB, respectivamente.

Así, de manera comparativa, la recaudación del IVA en México es inferior en 56% a la que en promedio se registró en Argentina, Chile y Uruguay, cuya recaudación asciende a 8.0%, 7.7% y 9.7% del PIB, respectivamente (8.5% del PIB en promedio). El bajo potencial recaudatorio del IVA en México se explica fundamentalmente por la aplicación de diversos regímenes especiales como lo son la tasa del 0% a un amplio número de bienes y servicios, así como la aplicación de una tasa reducida en la región fronteriza. Estas tasas, además de erosionar la base gravable dificultan su administración, ya que dan lugar a un gran número de solicitudes de devolución, las cuales demandan de parte de la administración tributaria importantes recursos, tanto materiales como humanos, para revisar la veracidad de la información, documentación y operaciones reportadas en dichas solicitudes.

Durante más de 30 años de aplicación en nuestro país del IVA se han realizado reformas que han erosionado sensiblemente su base gravable, de tal forma que la proporción del consumo gravado pasó de 72% a 54% de 1980 a 2013; lo que implica una disminución de 18 puntos porcentuales. La Ley del Impuesto al Valor Agregado establece que las operaciones realizadas por los residentes de la región fronteriza, objeto de dicho impuesto, están gravadas a una tasa preferencial de 11%. Este tratamiento resulta inequitativo frente a las operaciones similares que se realizan en el resto del territorio nacional. La aplicación de una tasa reducida en dicha región, además de implicar una menor recaudación, dificulta la administración y el control del impuesto, por lo que se abren espacios para la evasión y elusión fiscales.

Se considera que los factores que justificaron, en su momento, la aplicación de un tratamiento preferencial en materia del IVA en la mencionada región fronteriza, han desaparecido, por lo que ya no se justifica mantener dicho tratamiento y se estima necesario que, en términos de la obligación prevista en el artículo 31, fracción IV de la Constitución Federal, todos los contribuyentes paguen el impuesto a una misma tasa, eliminando privilegios, lo que generará que la tributación sea más justa al sujetarse todos a la misma tasa impositiva. La OCDE publicó en Octubre del 2010; Perspectivas OCDE: México Políticas Clave para un Desarrollo Sostenible, entre las cuales una de las Recomendaciones clave de la OCDE, se detalla a continuación:

• Ampliar la base fiscal eliminando los subsidios, exenciones, excepciones y privilegios fiscales ineficientes y mejorando los incentivos para operar en la economía formal; revisar la eficiencia del gasto y eliminar los subsidios a la energía. Sin embargo señala también que a mediano plazo, una reforma que contribuya a ampliar la base fiscal debe incluir medidas para aumentar la eficiencia en el gasto público, limitar o idealmente eliminar los subsidios a la energía y mejorar la recaudación de impuestos, así como reforzar los incentivos para que las empresas y los trabajadores se incorporen al sector formal.

## METODOLOGÍA

En el presente estudio, se procedió a revisar documentalmente las disposiciones legislativas que se relacionan con la reforma hacendaria relativa a la Ley del Impuesto al Valor Agregado, así como las sucedáneas a la misma. El resultado obtenido consiste en un análisis objetivo de las expectativas que de manera a priori se perfilan como posibles de suscitarse, por lo que el método cualitativo predomina como básico, para el desarrollo de este trabajo. Se trata pues de establecer un criterio sustentado en opiniones de especialistas y de probables situaciones que se presentarán una vez que entre legalmente en operación las reformas fiscales que en este caso corresponde a la Ley del Impuesto al valor agregado, que conjuntamente con la miscelánea de orden fiscal integral, permeará y propiciará un panorama fiscal a partir del 1° de Enero del 2014. Es entonces a partir de esa fecha cuando se inicie el conteo numérico de los resultados de la implementación de la reforma hacendaria. Los comentarios resultantes a la fecha del presente trabajo, si bien se fundamentan en la revisión literaria de referencia, no incluyen el resultado de la realidad cuantitativa de los resultados fiscales, ya que esta se presentará durante el avance y duración del proceso de implementación de los puntos revisados en el apartado de resultados, parte siguiente del presente trabajo.

## RESULTADOS

Los países desarrollados decidieron hace tiempo gravar con un Impuesto al Valor Agregado (IVA) a todos los productos y servicios que se enajenan, algunos de ellos gravan todo lo que se vende a una sola tasa, mientras que otros gravan a distintas tasas, de acuerdo a la naturaleza de dichos productos y servicios, existen casos de países donde aparecen ciertos productos exentos del pago del IVA, como sucede en México con los alimentos y medicamentos. Islandia es el país donde más alta es la tasa del IVA: 25.5%, pero también existen tasas como 7%, para gastos de calefacción, materiales impresos, gastos en restaurantes, en la hotelería, y casi todos los alimentos.

Existen países que cobran un IVA de hasta un 10% como son: Andorra 4.5%, Japón, Taiwán y la Isla de Jersey de 5%; Panamá, Singapur y Tailandia 7%; Liechtenstein 7.6%; Suiza 8%; y Egipto, Corea del Sur, Líbano, Malasia, Australia, Indonesia, Paraguay y Vietnam 10%. Otros países del mundo cobran el IVA que va del 11% al 15%: Ecuador, Guatemala, Kazajastán, Filipinas, Sri Lanka y Venezuela 12%; Bolivia, El Salvador y Nepal 13%; India 13.5%; Sudáfrica 14%; Palestina 14.5%; y Etiopía, Mauricio, Nueva Zelanda, Fidji, Trinidad y Tobago, Chipre y Luxemburgo 15%.

Gravan el IVA del 16 al 20%: Colombia, Jordania, Kosovo, Perú, Guyana, Israel, Pakistán, México y República Dominicana 16%; Montenegro, Saint Kitts y Nevis, Bosnia y Herzegovina y China 17%; Barbados 17.5%; Georgia, Rusia, Azerbaijón, Macedonia, Serbia, Turquía y España 18%; Chile, Alemania y Holanda 19%; Francia 19.6%; Austria, Bulgaria, República Checa, Estonia, Italia Eslovaquia, Eslovenia, Reino Unido, Uzbekistán, Marruecos, Albania, Armenia,

Ucrania, Bielorrusia y Moldavia 20%. Otros países que gravan el IVA de más de 20%: Bélgica, Lituania, Irlanda y Argentina 21%; Letonia y Uruguay 22%; Croacia, Finlandia, Grecia, Polonia y Portugal 23%; Rumania 24%; Noruega, Suecia, Dinamarca y Hungría 25%; Islandia 25.5%.

Como se observa, en los países donde se grava el IVA, se encuentran diferentes tasas que reflejan las variaciones señaladas, resaltando que aquellos que presentan más desarrollo, presentan tasas reducidas para muy pocos rubros, siendo la tasa porcentual promedio el 16.05%, tasa que en la medida se aplica actualmente en México, considerando también que en la región o zona fronteriza se grava el 11%, por lo que en resumen se observa que en algunos países hay tasas reducidas de IVA para ciertos productos y servicios, en otros hay tasa cero.

La Ley del Impuesto al Valor Agregado contempla en el territorio nacional el cobro generalizado el 16%, excepto en la región, zona o franja fronteriza, donde se grava el 11%. Esta iniciativa se concretó con fecha 31 de Octubre de 2013, al homologarse la aplicación de la contribución generalizada en todo el país, incluidas las partes del territorio donde aparecía la tasa del 11%. Es importante resaltar que México y Estados Unidos comparten alrededor de 3,000 km de frontera. A lo largo de esta frontera se han ido desarrollando zonas metropolitanas internacionales desde Tijuana-San Diego en el oeste, hasta Matamoros-Brownsville en la desembocadura del Rio Bravo.

Dichas ciudades hermanas comparten, entre otras muchas cosas, “compradores”. Gracias a las mejores condiciones de precios en numerosos productos, gran parte de la población mexicana hace las compras del otro lado de la frontera, desde la leche para el desayuno hasta aparatos electrónicos y objetos de gran valor. El costo de transporte es mínimo (incluido el costo social de la fila para cruzar) y el ahorro es mucho. De ahí que les sea difícil a los empresarios mexicanos competir en igualdad de circunstancias.

El impacto de esta medida es inminente, puesto que la faja, regiones y zonas fronterizas están conformadas por 7.5 millones de habitantes (INEGI, 2009), que están siendo afectados con la homologación del impuesto, que si se hubieran efectuado las negociaciones entre la clase política y los diferentes sectores de las regiones fronterizas, se habrían utilizado estrategias como el aplicar el incremento de manera escalonada, a fin de observar poco a poco los efectos que se irían presentando en la economía de regiones importantes en el país como son las ciudades fronterizas de Nogales, Tijuana, Mexicali, Nuevo Laredo y Ciudad Juárez claves en el desarrollo del país dentro de las actividades del comercio internacional con Estados Unidos y otros países del mundo.

Se estima, de acuerdo a lo anterior, que se presentará un efecto inflacionario importante y consecuentemente afectará a la economía de estas regiones, independientemente de lo que los sectores productivos vayan a pagar más del impuesto, por lo que su flujo de efectivo se va ver afectado. En referencia a gravar las importaciones temporales del régimen de la industria manufacturera de exportación (IMMEX), que de acuerdo al Decreto correspondiente estaba exento, inicialmente el Poder Ejecutivo había planteado gravar al 16%, lo cual se eliminó de acuerdo a la modificación de ley correspondiente, por lo que las empresas que tengan un programa de importación temporal, tendrán un año para certificarse y comprobar que lo que realmente se importa temporalmente, sea utilizado o empleado en la producción de la industria manufacturera de exportación, para ser retornado al extranjero.

Analizando las nuevas cargas fiscales se contempla un eventual golpe a la industria maquiladora nacional, la Secretaría de Hacienda informó que sólo las 100 mayores empresas exportadoras de

México serán certificadas de inmediato para que queden exentas del pago del IVA a importaciones temporales. De esta forma, de un total de 6,250 empresas maquiladoras en México que el SAT tiene contabilizadas, sólo algunas serán beneficiadas, lo que sin duda ocasionará desempleo en México y fuga de capitales hacia países más amigables a la inversión cuando las empresas no sean capaces de lograr la certificación, cuyos términos en este momento se desconocen.

Según el SAT la medida de aplicar el IVA a las importaciones temporales obedece a que se ha detectado entre las maquiladoras diversas prácticas de elusión y evasión del pago del IVA. De acuerdo con Aristóteles Núñez, jefe del SAT, “alrededor de 60% de lo que se exporta a través de las maquiladoras lo hacen 100 empresas y esas 100 empresas podrían ser sujetas a certificados; las demás tendrán que asegurarnos que están haciendo la debida exportación”. Se debe mencionar que las empresas automotrices y maquiladoras tendrían así tres opciones respecto del IVA en importaciones temporales: 1) pagar el impuesto y luego recuperarlo; 2) a través de una fianza, gastando sólo en la prima, o 3) exentar esa contribución con el esquema de certificación

Sin embargo, no se desdeña el hecho de que la homologación del 16% del IVA en las fronteras, aunado a la eliminación del mismo impuesto en las importaciones temporales de las maquiladoras exportadoras tendrá un impacto en dichas regiones, ya que precisamente las empresas situadas en ellas, son las que más generan IVA en el país, aportando aproximadamente un monto superior al 40% de lo recaudado a nivel nacional, es importante agregar a lo anterior que la participación en la creación de empleos, con 12 millones de plazas directas. (INEGI, 2009). Aunado a lo anterior, aún cuando no es parte del tema a tratar en este trabajo, es pertinente mencionar lo relativo al incremento al Impuesto sobre la Renta, sus modificaciones y ajustes para empresas maquiladoras de exportación y en general para todas, de acuerdo con corridas efectuadas por Rodrigo Alpizar, de la Cámara Nacional de la Industria de Transformación, (CANACINTRA, 2013), Juan Pablo Castañón de Consejo Patronal de la República Mexicana (COPARMEX, 2013) y Jorge Dávila de la Confederación de Cámaras Nacional de Comercio (CONCANACO, 2013), hacen ver que en cada mes, unas 20 empresas regresarán a su país de origen. En tres años más de 800 compañías ya no tendrían operaciones en territorio nacional, lo que se traduciría en la pérdida de de más de tres millones de empleos tan solo en la zona fronteriza.

De acuerdo a lo anterior, lo que representaba un golpe enorme para la industria maquiladora de exportación, se convierte ahora en un paliativo ya que se decide que para el año 2014, las empresas pertenecientes a este gremio podrán certificarse y comprobar que son maquiladoras de exportación puras, contándose con el plazo conveniente para hacerlo al inicio del próximo año, con fechas tentativas de término del plazo pendiente de indicarse por parte de la autoridades fiscales. En otro contexto de la reforma a la Ley del Impuesto al Valor Agregado (LIVA), La Comisión de Hacienda de la Cámara de Diputados aprobó mantener la exención del impuesto a los servicios educativos, espectáculos públicos, rentas, ventas e hipotecas de casa habitación, sin embargo, aprobó gravar con 16% el chicle, los alimentos para mascotas, la venta de perros y gatos y especies pequeñas, como fue la propuesta del

Ejecutivo Federal. Las nuevas disposiciones fiscales contemplan gravar además con el IVA, a la goma de mascar, por lo que se estima que con ello, se va a generar una pérdida anual de mil 300 millones de pesos entre las empresas productoras, bajo la premisa de que el chicle no goza de las características de un alimento, la Secretaría de hacienda y Crédito Público a cargo del Secretario Luis Videgaray, le impuso el gravamen del 16%, por lo que los efectos se pueden bosquejar atendiendo las expresiones de representantes del gremio: “afecta principalmente a trasnacionales como Mars, de Silvia Dávila, con marcas como Orbit y Wrigley; Mondelez, que lleva Roberto

Soto con productos como Bubbalo, Trident y Clorets; PepsiCo, de Pedro Padierna, con la línea de Sonrics; la mexicana Canel's del potosino Roberto Navarro, y más pequeños como Consorcio Chiclero de Manuel Aldrete. Se calcula que el negocio del chicle ronda los 8 mil 200 millones de pesos al año". (El Imparcial, 2013).

Respecto a los regímenes aduaneros: Depósito Fiscal Automotriz, Recinto Fiscalizado y Recinto Fiscalizado Estratégico, la Comisión Dictaminadora del Congreso y del Senado de la República que en lo sucesivo se denominará en este trabajo "La Comisión", considera acertada la propuesta del Ejecutivo Federal de eliminar la exención que prevé la Ley del Impuesto al Valor Agregado (LIVA), en las importaciones temporales de mercancías, por lo que estima conveniente realizar diversas adecuaciones a la citada ley, a efecto de que se pague el IVA en la introducción de bienes a los regímenes aduaneros de importación temporal para elaboración, transformación o reparación en programas de maquila o de exportación; de depósito fiscal para someterse al proceso de ensamble y fabricación de vehículos; de elaboración, transformación o reparación en recinto fiscalizado y de recinto fiscalizado estratégico.

Con el fin de ampliar lo anteriormente expuesto, La Comisión propone que quienes introduzcan los bienes a los regímenes aduaneros que se propone gravar, puedan obtener una certificación por parte del Servicio de Administración Tributaria (SAT), cuando reúnan los requisitos que mediante reglas de carácter general que al efecto emita dicho órgano desconcentrado, y que permitan un adecuado control de las operaciones realizadas al amparo de los regímenes mencionados. La certificación permitirá a las empresas contar con un crédito fiscal consistente en una cantidad equivalente al 100% del IVA que deba pagarse por la importación temporal, el cual se podrá aplicar contra el IVA que deba pagarse por las citadas actividades. En ese sentido, La Comisión estima que es conveniente diferir, hasta un año después de que se haya publicado en el Diario Oficial de la Federación las reglas sobre certificación, la entrada en vigor de la citada obligación, a fin de dar tiempo a que las empresas puedan obtener la citada certificación antes de la entrada en vigor de las nuevas disposiciones.

La Comisión que dictamina coincide que con esta propuesta se solucionarán los problemas de control que en la práctica genera este régimen como consecuencia de la flexibilidad que paulatinamente se dio en su marco regulatorio, situación que modificó substancialmente el régimen originalmente otorgado en materia de IVA, lo que incentivó prácticas de evasión y elusión fiscales que, en el extremo incluyen la introducción al país de mercancías para fines de venta sin cumplir con el pago de impuestos correspondiente y la solicitud de devolución de IVA de insumos importados temporalmente sin este impuesto. Tomando en cuenta que la reforma hacendaria despierta expectativas, el Banco de México levanta cada mes la "Encuesta sobre las Expectativas de los Especialistas en Economía del Sector Privado" y contempla un sondeo a expertos independientes y de grupos financieros más relevantes, los resultados a la encuesta de Octubre de 2013, refleja entre otros, el siguiente:

La probabilidad que más creció en la encuesta respecto a la pregunta ¿"Cuál es la probabilidad de que en algunos de los próximos trimestres se observe una reducción respecto del trimestre previo en el Producto Interno Bruto (PIB), real ajustado por estacionalidad?" La respuesta fue que creció en un 29% la probabilidad de que el dato del PIB del tercer trimestre de 2013, sea negativo, lo cual resulta interesante en virtud de que han aparecido durante dos trimestres consecutivos datos de crecimiento negativo, lo cual tiene que ver probablemente con la entrada en vigor de los nuevos impuestos, atendiendo además del IVA, con el resto de las contribuciones contempladas.

En el orden, las respuestas más trascendentes son: “la debilidad del mercado externo y la economía mundial 22%; la política fiscal que se está instrumentando 17%; la incertidumbre sobre la situación económica interna, 14%; De lo anterior llama la atención lo referente a la política fiscal que hace un año aparecía con un 2% de las respuestas y a Octubre del presente aparece con un 17% (Banco de México, 2013). Interpretando esto último, significa que existen analistas que no confían en que durante el gobierno de Peña Nieto, la política fiscal vaya a ser contracíclica, en el entendido de que los nuevos impuestos y el crecimiento del déficit podrían obstaculizar el crecimiento del país. De acuerdo a esto, se puede concluir en lo siguiente: “Las políticas fiscales contracíclicas deben aplicarse como cuando uno bebe tequila: En moderación”. Las palabras de Agustín Carstens en el Buttonwood Gathering of the Economist son importantes en un momento en que el Gobierno Federal en México pretende aplicar políticas fiscales contracíclicas sin moderación. (Sarmiento, 2013).

En el Sector Turismo esta medida también tendrá su impacto al ser aprobado el incremento del IVA del 11% al 16%, ya que se estima que los precios tendrán un aumento generalizado del 4.5%, que repercutirá a este sector y a los habitantes de estas áreas que verán mermados sus ingresos reales. Con base en estudios recientes elaborados por la Escuela de Turismo y el Centro Anáhuac de Investigación en Turismo, se prevé una caída en el consumo de los turistas que llegan por avión a México a través de los aeropuertos de Cancún, Cozumel y Los Cabos.

El 55.5% de los visitantes que llegan vía aérea a México, lo hacen por estos tres aeropuertos, teniendo que el incremento del IVA se traspasara necesariamente a los visitantes. Efecto similar ocurrirá con los pasajeros de los cruceros, a través de lo cual el 66.8% del total llega a Cozumel, el 10.2% a Ensenada; el 9.7% a Majahual y el 3.4% a Los Cabos, teniendo consecuencias negativas para los destinos señalados y la actividad turística. Como comentario final se puede afirmar que de acuerdo a los datos preliminares de los efectos y expectativas de la reforma hacendaria en cuestión del IVA y demás contribuciones en México, el sentir general de los sectores afectados por estas modificaciones contributivas pasan de la etapa del optimismo a la del escepticismo con respecto a la economía mexicana.

## CONCLUSIONES

De acuerdo a las señales enviadas por organismos internacionales como la OCDE y la CEPAL, la reforma fiscal en México, presenta indicadores de ser agresiva y altamente recaudatoria, dado que en general, además de la homologación del IVA, se contemplan incrementos en el ISR, IEPS, atenuado con la derogación del Impuesto Especial a Tasa Única (IETU), así como del Impuesto a los Depósitos en Efectivo (IDE). La política hacendaria de 2013 para aplicarse a partir del 1 de Enero de 2014, presenta los cuestionamientos naturales que se pueden considerar inusuales para una Secretaría de Hacienda y Crédito Público que tradicionalmente ha sido muy profesional, el Presidente Enrique Peña Nieto no practica la revisión de sus iniciativas al interior de su gabinete presidencial, ya que las reformas se han planteado y tomado decisiones a la luz de la minoría de los secretarios de las dependencias involucradas.

Se estima que la homologación del 16% de IVA en las zonas, regiones y franja fronteriza propiciará un efecto inflacionario importante que afectará a la economía de dichas regiones, como es el caso del sector manufacturero, sector turismo y el sector bancario que consecuentemente verá reflejado un alza en los servicios financieros que están sujetos al impuesto. Se presentan facilidades administrativas para que las empresas que se certifiquen de conformidad con las reglas de carácter general que emita el Servicio de Administración Tributaria (SAT), puedan aplicar un crédito equivalente al monto del IVA que deban pagar en la importación temporal,

estableciéndose que la certificación tendrá una vigencia de un año y podrá ser renovada. Del análisis de la reforma propuesta, observamos que se trata de uno de los planteamientos más agresivos, con fines exclusivamente recaudatorios, que hemos visto en muchos años. Al decir del propio Secretario de Hacienda y Crédito Público, Dr. Luis Videgaray, con estas medidas se busca una recaudación adicional de 240 mil millones de pesos. Correspondiendo al renglón del Impuesto al Valor Agregado 54 mil millones de pesos.

La problemática que observamos es que se espera que estos recursos adicionales provengan de los mismos contribuyentes a los que tradicionalmente se ha venido gravando y que actúan en la economía formal. De esta propuesta de reformas no se desprende que existan medidas que coadyuven a una reactivación de la economía, al fomentar la inversión y el empleo y si fomentar que se siga presentando la economía informal. Los efectos esperados ante esta reforma es que se afecte la política de promoción de la industria maquiladora y con ello la afectación al empleo de este sector productivo la cual genera 12 millones de empleos directos y generando más del 40% del IVA recaudado en el país. Existen muchas dudas sobre el futuro de la economía mexicana, que involucra a la política fiscal, aprobada por el Congreso de la República, misma que en principio está diseñada para apoyar al crecimiento del país, se va a conformar un historial de fracaso o éxito al interior de las economías emergentes.

Consideramos que la mejor manera de incrementar la recaudación de un país no solo debe basarse en Reformas Hacendarias que incrementen las tasas impositivas o la generación de nuevos impuestos, es importante llevar a cabo una reactivación económica, mediante la cual se generen más trabajos formales, permitiendo que las actividades informales puedan cumplir con sus obligaciones fiscales. Desgraciadamente mientras las políticas tributarias se mantengan más que pro-cíclicas, y exista el ánimo de mantener la disciplina fiscal, las posibilidades de crecimiento son insuficientes.

## RESUMEN

*La Secretaría de Hacienda y Crédito Público tiene facultad para inspeccionar y vigilar permanentemente el manejo, transporte o tenencia de mercancías en los recintos fiscales y fiscalizados, las aguas territoriales y playas marítimas, la zona económica exclusiva adyacente, el mar territorial, los aeropuertos, una franja de doscientos kilómetros de ancho paralela y adyacente a las fronteras y una franja de cincuenta kilómetros de ancho a la paralela y adyacente a las playas. Dentro de estos lugares, la tenencia, transporte o manejo de mercancías de procedencia extranjera deberá ampararse en todo tiempo con alguno de estos documentos como lo son el pedimento de importación o factura legalmente expedida. Las facultades de comprobación en materia de comercio exterior ejercidas por la autoridad aduanera, implican la revisión de todos aquellos actos que los contribuyentes realizan o han realizado con motivo de sus operaciones de introducción al territorio nacional de mercancías o por la extracción de las mismas, poniendo particular interés en que se cumpla con todas las obligaciones que dispone la legislación aplicable vigente, así como las contraídas por terceros. Ahora bien, si la autoridad aduanera detecta irregularidades de carácter formal establecidas en la Ley Aduanera, procederá a iniciar un Procedimiento Administrativo en Materia Aduanera, de lo cual dicho procedimiento en la mayoría de las veces, carece de los requisitos establecidos en la Constitución Política de los Estados Unidos Mexicanos, en la Ley Aduanera, o en el Código Fiscal de la Federación; no debiéndose confundir el término “constitucionalidad”, con el de “legalidad”.*

**PALABRAS CLAVE:** Procedimiento en Materia Aduanera, Constitucionalidad, Legalidad

## CONSTITUTIONALITY AND LEGALITY OF THE ADMINISTRATIVE PROCEDURE IN CUSTOMS MATTERS

### ABSTRACT

*The Secretariat of Finance and Public Credit has the authority to inspect and monitor permanently the handling, transport or possession of goods in the enclosures and audited fiscal, territorial waters and sea beaches, the exclusive economic zone adjacent, the territorial sea, the airports, a band of two hundred kilometers wide parallel and adjacent to the borders and a stretch of fifty kilometers wide in the parallel and adjacent to the beaches. Inside of these places, possession, transport or handling of goods of foreign origin must rely on all the time with any of these documents as they are the weighs legally import or invoice issued. The powers of checking in the field of foreign trade carried out by the customs authority, involve the review of all those acts that the taxpayers are doing or have done on the occasion of its operations for the introduction of the national territory of goods or by the removal of the same, with a particular interest in compliance with all the obligations that you have the relevant legislation in force, as*

*well as the contracted by third parties. The powers of checking in the field of foreign trade carried out by the customs authority, involve the review of all those acts that the taxpayers are doing or have done on the occasion of its operations for the introduction of the national territory of goods or by the removal of the same, with a particular interest in compliance with all the obligations that you have the relevant legislation in force, as well as the contracted by third parties. However, if the customs authority detects irregularities of a formal nature laid down in the Customs Act, shall initiate an administrative procedure in Customs Matters, which the procedure in most of the times, lacks the requirements established in the Constitution of the United Mexican States, in the Customs Act, or in the Tax Code of the Federation; should not confuse the term "constitutionality", with the "legality".*

**KEY WORDS:** Procedure in Customs Matters, Constitutionality, legality

## **INTRODUCCION**

La Secretaría de Hacienda y Crédito Público tiene facultad para inspeccionar y vigilar permanentemente el manejo, transporte o tenencia de mercancías en los recintos fiscales y fiscalizados, las aguas territoriales y playas marítimas, la zona económica exclusiva adyacente, el mar territorial, los aeropuertos, una franja de doscientos kilómetros de ancho paralela y adyacente a las fronteras y una franja de cincuenta kilómetros de ancho a la paralela y adyacente a las playas. Dentro de estos lugares, la tenencia, transporte o manejo de mercancías de procedencia extranjera deberá ampararse en todo tiempo con alguno de estos documentos como lo son el pedimento de importación o factura legalmente expedida.

Los créditos fiscales es todo aquél pasivo del contribuyente a favor del fisco, es decir, son sanciones económicas impuestas por la autoridad fiscal por el incumplimiento de las obligaciones fiscales, de las cuales dichas sanciones se encuentran fundamentadas en las leyes fiscales.

Tales créditos fiscales proceden en virtud de haber omitido alguna obligación fiscal, y por ende, la autoridad fiscal está facultada para imponer dicha sanción, basándose en la constitucionalidad y legalidad para imponerla y recuperarse del perjuicio causado por el contribuyente, al no cumplir una obligación fiscal. En materia de comercio exterior, toda persona que traiga consigo mercancías de comercio exterior deberá importarlas o en su defecto mostrar el documento que ampare la legal estancia en el país, al no hacerlo, la autoridad fiscal está facultada para hacer un acto de molestia hacia la persona y exigirle que presente el pedimento de importación o factura legalmente expedida. Si la persona no presenta los documentos antes mencionados, la autoridad fiscal procederá a embargar precautoriamente dichas mercancías mediante un procedimiento llamado procedimiento administrativo en materia aduanera en donde la autoridad fiscal manifiesta que se intervino a una persona en posesión de mercancías extranjeras y por virtud de la cual dicha persona no mostró el documento legal que ampare dichas mercancías, ya sea pedimento o factura legalmente expedida. En Ensenada poco se sabe acerca de este procedimiento administrativo, en virtud de lo cual las personas que son molestadas por la autoridad, desconocen los alcances de dicha autoridad y, sobre todo, que dicho procedimiento debe de cumplir una serie de requisitos y formalidades para poder proceder contra los gobernados. En el presente trabajo se analiza la Constitución Política de los Estados Unidos Mexicanos, Ley Aduanera y el Código Fiscal de la Federación con el fin de proporcionar al gobernado un instructivo en donde pueda consultar, de manera clara y detallada, la constitucionalidad y legalidad del procedimiento administrativo en materia aduanera.

## REVISION LITERARIA

### Antecedentes

La gran mayoría de los procedimientos administrativos en materia aduanera, emitidos por la autoridad fiscal, carecen de requisitos constitucionales y legales que restringen los derechos de los contribuyentes. En la actualidad los contribuyentes se encuentran en una situación de constantes cambios jurídico-fiscales, por virtud de lo anterior, requieren de información acerca de sus derechos y alcances de la autoridad fiscal; es el caso del procedimiento administrativo en materia aduanera en su etapa más temeraria que es el embargo de bienes por no tener solvencia económica, ya que el momento en que la autoridad hacendaria ejerce su facultad coactiva para cobrar lo que se debe, por haber causado un daño en perjuicio al fisco federal. Con lo antes mencionado, es necesario dar a conocer al gobernado la forma de cerciorarse que la autoridad fiscal está actuando conforme a la Constitución y a las leyes dentro del procedimiento administrativo en materia aduanera, para que de esta manera los contribuyentes estén en aptitud de una mejor defensa fiscal en consecuencia de un acto de autoridad anticonstitucional o ilegal.

### Justificación

La presente investigación tiene gran importancia porque se basa radicalmente en los actos de autoridad por parte de la autoridad fiscal hacia los gobernados, derivándose actos administrativos que carecen muchas veces de valor constitucional y legal, resultando actos viciados que afectan los derechos y en consecuencia el patrimonio de los gobernados. Dentro del procedimiento administrativo en materia aduanera, la mayoría de las veces, la autoridad fiscal actúa de forma arbitraria violentando las garantías individuales de los gobernados consagradas en los artículos catorce y dieciséis constitucionales, consistentes en que nadie podrá ser privado de la libertad o de sus propiedades, posesiones o derechos, sino mediante juicio seguido ante los tribunales previamente establecidos, en el que se cumplan las formalidades esenciales del procedimiento y conforme a las leyes expedidas con anterioridad al hecho, así como también nadie puede ser molestado en su persona, familia, domicilio, papeles o posesiones, sino en virtud de mandamiento escrito de la autoridad competente, que funde y motive la causa legal de procedimiento.

### Objetivo General de Estudio

Proporcionar al contribuyente un material de consulta claro y detallado, recopilando fundamentos jurídicos establecidos en la Constitución Política de los Estados Unidos Mexicanos, las leyes y en la jurisprudencia, mediante el cual se especifica cómo debe de actuar la autoridad fiscal aduanera tratándose de un procedimiento administrativo en materia aduanera, los medios de defensa fiscal y administrativa con que cuenta el gobernado, con el fin de que el particular tenga conocimiento de cómo se realiza un acto de autoridad en materia de comercio exterior y posteriormente o durante el acto de molestia, interponga algún medio de defensa legal.

Para el logro de los objetivos planteados, en este trabajo se aplicará la metodología cualitativa, con un enfoque en la investigación acción en donde un contribuyente es intervenido por la autoridad fiscal y, por consecuencia, se buscan las vías de solucionarlo con diversos procedimientos de acción constitucional y legal, para una defensa fiscal oportuna y adecuada. En este orden de ideas, esta investigación será descriptiva, dado que se necesitará describir el problema, para después analizar y dar una correcta interpretación, en un marco legal, que a su vez necesitará de explicación, El alcance de este trabajo se basa en los actos administrativos

realizados por las autoridades fiscales en la circunscripción de la ciudad de Ensenada, Baja California.

## MARCO TEORICO

### Concepto de Estado como órgano regulador fiscal

El Estado realiza diversas actividades para la ejecución de sus finalidades. A través del Poder Ejecutivo desarrolla una actividad que se encamina a la realización de los servicios públicos y a la satisfacción de las necesidades generales, siendo esto así, es lógico que la administración de un Estado tenga que utilizar medios personales, materiales y jurídicos para lograr el cumplimiento de sus fines. De donde resulta que uno de los sectores más importantes de la actividad administrativa está constituido precisamente por la gestión de intereses económicos. Esta actividad, que tiene una importancia primordial en el Estado moderno, ha recibido el nombre de actividad financiera, la cual, según Donato Giannini, la cumple el Estado para administrar el patrimonio, para determinar y recaudar los tributos, para conservar, destinar o invertirlas sumas ingresadas, y se distingue de todas las demás en que no constituye un fin en sí misma, o sea en que no atiende directamente a la satisfacción de una necesidad de la colectividad, sino que cumple una función instrumental de fundamental importancia, siendo su normal desenvolvimiento una condición indispensable para el desarrollo de todas las restantes actividades.<sup>1</sup>

El origen de la palabra fisco se encuentra en el vocablo latino *fiscus*, que se utilizaba entre los romanos para llamar al tesoro del soberano en contraposición al *erario*, que era el tesoro del Estado; posteriormente se hizo excesivo el vocablo *fisco* para comprender el tesoro del Estado también, cuando los príncipes llegaron a tener disposición del tesoro público. Las antiguas leyes castellanas dieron el nombre de *fisco* o cámara del rey al tesoro o patrimonio de la casa real y el de *erario* al tesoro público o del Estado. Tanto en España, como en América, hoy día, ambos vocablos se consideran sinónimos.<sup>2</sup> La voz *hacienda* tiene su origen en el verbo latino *facera*, aun cuando algunos sostienen que deriva del árabe “*ckásena*”, que significa cámara del tesoro. Con el adjetivo de pública significa, toda la vida económica de los entes públicos y en sentido estricto hace mención a los ingresos, pertenecientes y gastos de las entidades públicas. La Hacienda Pública, como organismo y como concepto en el derecho positivo español, aparece por primera vez al crear Felipe V la Secretaría de Hacienda, dentro de la organización administrativa del reino español. De ahí pasa a América Latina, y a México, donde la dependencia del Gobierno Federal encargada de realizar la actividad financiera estatal se ha conocido tradicionalmente como Secretaría de Hacienda, agregándosele posteriormente la innecesaria expresión “y Crédito Público”.<sup>3</sup>

<sup>1</sup> *Achille Donato Giannini, I concetti fondamentali di diritto tributario, Italia, 1956.*

<sup>2</sup> *Sergio Francisco de la Garza, Derecho financiero mexicano, México, 1979*

<sup>3</sup> *Sergio Francisco de la Garza, Derecho financiero mexicano, México, 1979*

La palabra *fisco* significa en México, según la Suprema Corte de Justicia de la Nación, como “la parte de la Hacienda Pública que se forma con las contribuciones, impuestos y derechos, siendo autoridades fiscales las que intervienen en la cuestión de mandato legal, dándose el caso de que haya autoridades hacendarias que no son autoridades fiscales, pues aun cuando tenga la facultad de resolución en materia de Hacienda, carecen de esa actividad en la recaudación, que es la característica de las autoridades fiscales, viniendo a ser el carácter de autoridad hacendaria el género y de autoridad fiscal la especie”.

Existe obligación tributaria constitucional, en su artículo 31 fracción IV, mencionando: “son obligaciones de los mexicanos, contribuir para los gastos públicos, así de la Federación, como del Distrito Federal o del Estado y Municipio en que residan, de manera proporcional y equitativa que dispongan las leyes”.

Este dispositivo no sólo es el fundamento constitucional de las obligaciones tributarias de los mexicanos, comprende, además, a los extranjeros y a las personas jurídicas denominadas “morales”, nacionales o extranjeras, cuando sus actividades correspondan a las hipótesis contempladas por las normas fiscales. El texto constitucional diseña las reglas aplicables a la materia tributaria, de acuerdo con los siguientes principios: el destino de las contribuciones, la justicia tributaria y la formalidad fiscal. Dentro del mismo derecho constitucional, los tributos solo pueden destinarse a sufragar el gasto público de la Federación, de las entidades federativas (Distrito Federal y estados) y del municipio en que resida el contribuyente. En consecuencia, carece de validez un impuesto o contribución cuando no se destina a cubrir la prestación de los servicios públicos o los gastos relativos al desarrollo de las atribuciones, de los proyectos y de los programas públicos. En todos los sistemas jurídicos han existido, y existen, las obligaciones tributarias; desde luego que el hecho se debe a la necesidad de subsistencia del Estado y de la organización social. Esta necesidad existencial de recaudar tributos, impuso la obligación de definir la manera de hacerlo. Los tributos no pueden establecerse de forma arbitraria; siempre se someten a ciertas reglas de equidad, de las que destacan dos imperativos que obligan a los órganos creadores de los impuestos, derechos, productos y aprovechamientos, de la siguiente manera: toda carga fiscal debe ser proporcional y equitativa. La Constitución exige la proporcionalidad y la equidad en las cargas tributarias; el criterio de la equidad es lo que Aristóteles definió como proporcionalidad geométrica; en la aritmética la proporción es numérica, cuantitativa y omisa en considerar las cualidades de la persona o del bien que se pretende beneficiar o afectar, por ello el principio aristotélico de la justicia distributiva ordena tratar proporcionalmente igual a los iguales y desigualmente a los desiguales, porque el trato uniforme a los desiguales es injusto.<sup>4</sup>

<sup>4</sup> Sergio Francisco De La Garza, *Derecho Financiero Mexicano*, México, 1979.

En México, constitucionalmente el único sujeto activo de la obligación fiscal es el Estado, ya que el artículo 31 fracción IV de la Constitución Política de los Estados Unidos Mexicanos (CPEUM), al establecer la obligación de contribuir para los gastos públicos, únicamente menciona a la Federación, los estados y los municipios. De los sujetos activos previstos en la legislación mexicana, únicamente la Federación y los estados tienen plena potestad jurídica tributaria, es decir, no solamente pueden disponer libremente de las contribuciones que recaudan, sino que pueden dárselas así mismos a través de sus legislaturas respectivas. En cambio los municipios únicamente pueden administrar libremente su hacienda, pero no establecer sus contribuciones, tarea que está encomendada a las legislaturas de los estados. El sujeto pasivo es la persona que conforme a la ley debe de satisfacer una prestación determinada a favor del fisco, ya sea propia de un tercero, o bien se trate de una obligación fiscal sustantiva o formal. Al estudiar al sujeto pasivo de la obligación contributiva se encuentra que no siempre es la persona a quién la ley señala como tal, sino que en ocasiones es una persona diferente quién funge como tal.

## METODOLOGIA

En este tipo de investigación se aplicó la metodología cualitativa, con enfoque en la investigación acción en donde en un colectivo social se identifica un problema y se buscan las vías de solucionarlo con diversos procedimientos de acción sistemática y reflexión, para la

transformación de una situación específica en un colectivo social, siendo este colectivo, los contribuyentes de esta ciudad, los cuales constituyen la fuerza de trabajo de la sociedad, personas morales y personas físicas. En este orden de ideas, esta investigación fue descriptiva, dado que se necesitará describir el problema, para después analizar y dar una correcta interpretación, en un marco legal, que a su vez necesitará de explicación, todo esto basado en un método bibliográfico documental apoyado de leyes, libros de Derecho Fiscal, Aduanero y Administrativo, tesis de nuestro supremo tribunal, para hacer un trabajo de análisis, presentando el fin a la problemática. Primeramente se identifica el problema, de cómo el contribuyente se cerciora que el Procedimiento Administrativo en Materia

Aduanera se ha sujetado a lo dispuesto a nuestra Ley Fundamental y posteriormente a las leyes, por lo que se basa en la lectura como instrumento de recolección de información, esta lectura debe hacerse de modo científico, sistemático, objetivo, replicable y válido. Por lo que se dará lectura la Constitución Política de los Estados Unidos Mexicanos, al Código Fiscal de la Federación, a la Ley Federal del Procedimiento Contencioso Administrativo, a la Ley Aduanera y a diversos libros de Derecho Administrativo y Fiscal, también investigaciones realizadas sobre el Procedimiento Administrativo en Materia Aduanera. Como se mencionó anteriormente, el colectivo social que presenta la problemática de esta investigación, lo constituyen los contribuyentes de esta ciudad, los cuales constituyen la fuerza de trabajo de la sociedad, personas morales y personas físicas, que ascienden en esta ciudad a la cantidad de 60,000 contribuyentes.

## RESULTADOS

Del análisis la Constitución Política de los Estados Unidos Mexicanos, se determina que todos los actos de autoridad que vulneren o restrinjan la esfera jurídica del gobernado, deberá estar fundado y motivado, así también deberá estar firmado por el funcionario competente para emitir dicho acto de autoridad. De la Ley Aduanera y el Código Fiscal de la Federación, se desprenden las formalidades a seguir dentro del procedimiento administrativo en materia aduanera, cumpliendo con la legalidad de este procedimiento. De la Ley Federal de Procedimiento Contencioso Administrativo, existen varios medios de defensa para hacer valer frente a la autoridad, cuando ésta, arbitrariamente o con fundamento, se encuentra afectando los intereses de los contribuyentes, en específico dos, el recurso de revocación y el juicio de nulidad. De la Ley de Amparo, se desprende que este medio de control constitucional, se hace valer cuando la autoridad administrativa atente contra las garantías individuales (hoy llamados derechos humanos) dentro del proceso administrativo en comento.

El Procedimiento Administrativo en Materia Aduanera es conjunto de actos previstos en la Ley Aduanera, ligados en forma sucesiva, con la finalidad de emitir una resolución condenatoria o absolutoria, derivada de las incidencias detectadas por la autoridad aduanera en el ejercicio de sus facultades de comprobación en operaciones de comercio exterior, respetando las garantías del particular al valorar las probanzas y analizar las argumentaciones que pretendan acreditar la legal introducción, posesión, tenencia o estancia de las mercancías de procedencia extranjera en el territorio nacional o la salida de éste de mercancía nacional, en donde concurren toda una serie de actos que lastiman la esfera patrimonial de los contribuyentes, por ende, como ya se comprendió en la presente investigación, no hay verdad absoluta, se puede combatir a la autoridad para evitar un crédito fiscal en la que carece muchas veces de valor constitucional y legal, resultando actos viciados que afectan los derechos y en consecuencia el patrimonio de los gobernados. Ésta defensa legal, que consiste primeramente en suspender el embargo precautorio de las mercancías, para posteriormente pagar o analizar el crédito fiscal para su posible cancelación, está prevista en medios que se deben de conocer, para efecto de que el combate con la autoridad, al igual que los

actos de ésta, estén cuidadosamente llevados con apego a la ley.

Resultando el recurso de revocación y/o juicio de nulidad como los medios de defensa fiscal idóneos, para la solución de la problemática, traduciéndose en la mejor forma de suspender el procedimiento administrativo en materia aduanera para que no se embargue, esto en virtud de que según el Código Fiscal de la Federación puede interponerse dicho recurso de revocación y/o juicio de nulidad, pudiendo optar por interponer éstos al mismo tiempo, o uno u otro, que protegen a los contribuyentes de la imposición de la autoridad.

## CONCLUSIONES

Es potestativo analizar los actos de autoridad, atendiendo a lo dispuesto en nuestra Carta Magna, que todo acto de autoridad debe estar fundado, motivado y firmado por el funcionario competente, de las cuales el contribuyente la mayoría de las veces, al estar ante la presencia de una autoridad, se intimida, y esto no debería ser de esta manera, ya que se deben conocer nuestros derechos humanos para hacerlos valer ante el Poder Judicial de la Federación. Se recomienda que se tenga que tomar en cuenta lo estipulado en la Ley Aduanera y en el Código Fiscal de la Federación, para cerciorarse de que la autoridad administrativa además de apearse a la Constitución, (tratándose de un acto de autoridad), se apege a éstos ordenamientos, ya que en éstos están tipificadas las formalidades a cumplir en este tipo de procedimiento. En la Ley Federal del Procedimiento Contencioso Administrativo, los cuales permiten que con motivo del procedimiento seguido ante un tribunal fiscal contencioso administrativo, interpuesto para impugnar un crédito fiscal, de las cuales la autoridad llegó a esa determinación, que por lo general son multas estratosféricamente exorbitantes, de las cuales afecta la esfera jurídica patrimonial del gobernado.

En la actualidad la mayoría de las personas físicas y morales lamentablemente desconocen el procedimiento administrativo en materia aduanera, lo que los hace vulnerables a los actos de la autoridad fiscal, porque una vez iniciado el procedimiento administrativo en materia aduanera la autoridad tendrá que resolver la situación fiscal del intervenido, dictando así una resolución administrativa en donde se impondrá una multa notoriamente excesiva, y en el último de los casos el embargo de bienes por no tener liquidez monetaria. El sistema fiscal mexicano es inquisitorio, no obstante con la alta carga tributaria que tiene que soportar el contribuyente, la autoridad fiscal siempre buscará la forma de intervenir a los contribuyentes por medio de los actos de molestia, actos que la Constitución se los permite, siempre y cuando reúnan los requisitos que ella misma establece, en caso contrario, estarían atentando contra los derechos humanos, de lo cual el gobernado debe de conocer nuestros derechos fundamentales, así como también las leyes que se deben de cumplir para dar formalidad a dichos actos de molestia. Aunado a esto, si la autoridad fiscal cumple lo establecido en nuestra Carta Magna para molestar al gobernado, dicho gobernado debe de analizar si el procedimiento instaurado en su contra es legal, es decir, que cumpla con lo estipulado en la ley, por consecuencia, no se debe de confundir el término de “constitucionalidad”, con el término “legalidad”.

## RESUMEN

*El objetivo de esta investigación es conocer la importancia de la participación que tiene el Comisario en una Sociedad, las funciones y responsabilidades en aspectos legales, penales y fiscales a los que está sujeta la figura del comisario. Asimismo cumplir con requisitos para que funja como comisario de una Sociedad Mercantil. Su función es vigilar e inspeccionar las operaciones realizadas en una empresa, para conocer y analizar su participación ya que de él derivan una serie de responsabilidades que podría desconocer. Se ha planteado en varios países el control a través de un órgano especializado, en este caso adaptando la situación en México específicamente Monclova, Coahuila en el 2013 donde se realiza esta investigación debido a la insuficiente o nula vigilancia que ejerce el comisario sobre los administradores de la sociedad. Cuando el comisario conozca sus funciones, responsabilidades, derechos y obligaciones estará en posibilidades de aceptar el cargo sin riesgo a ser persuadido. Al encuestar a 30 comisarios de esta ciudad se obtiene como resultados que el 70% desconocen las responsabilidades que tienen y aceptan el cargo sin conocer los efectos.*

**PALABRAS CLAVE:** Comisario, Sociedad Mercantil, Responsabilidad

## COMMISSIONER, DISCLAIMER OF ITS LIABILITY IN THE FAMILY BUSINESS TRADING COMPANY IN

### ABSTRACT

*The objective of this research is to understand the importance of having the Commissioner participation in a society, the roles and responsibilities in legal, criminal and tax issues which is subject to the figure of the commissioner. Also meet requirements to act as commissioner of a trading company. Its function is to monitor and inspect the operations in a company, to meet and discuss their participation because it leads to a series of responsibilities that may not know. It has been raised in several countries control through a specialized organ, in this case adapted specifically the situation in Mexico Monclova, Coahuila where this research takes place due to insufficient or no supervision exercised by the Commissioner on the directors of the company. When the commissioner knows their roles, responsibilities, rights and obligations will be in a position to accept the position without risk of being persuaded. By surveying 30 commissioners of the city is obtained a result that 70% does not known as the responsibilities and accept the position without knowing the effects.*

**KEYWORDS:** Commissioner, Commercial Society, Responsibility

## INTRODUCCION

El objetivo de esta investigación es la magnitud legal que la empresa familiar le confiere al comisario y el pleno desconocimiento del impacto legal sobre la actuación del comisario dentro de la vigilancia de la sociedad mercantil, de acuerdo a la Ley General de Sociedad Mercantil en su artículo 164 menciona: “la vigilancia estará a cargo de uno o más comisarios”, así mismo en artículo 165 establece: quienes no podrán ser comisarios y en el artículo 166 establece las facultades y obligaciones de los comisarios, que si bien es cierto en la mayoría de los casos los comisarios no son expertos contables, ni fiscalistas, sin embargo al artículo 169 ordena que para el cumplimiento de su encomienda podrán apoyarse de los servicios técnicos y profesionales independientes, mismos que pueden ser contratados por el mismo comisario. La existencia y designación del comisario está sustentada en la Ley General de Sociedades Mercantiles, considerada como uno de los problemas que enfrentan las empresas constituidas porque los propietarios o accionistas desconocen cuál es su función e importancia dentro de la sociedad mercantil y con frecuencia designar a una persona que generalmente carece del perfil y por ende no cumple con la función encomendada como es la inspección y vigilancia de las operaciones de la sociedad, se destaca la presencia y participación en las sociedades de comercio por que se encargan de revisar el balance de la sociedad y elaborar un informe con respecto a los movimientos financieros, fiscalizar la actuación de los administradores. Los comisarios de Francia, Italia, Brasil, Argentina y México, están reconocidos y reciben atribuciones generales y permanentes de vigilancia y control.

Estas se sintetizan en la siguiente forma: a) Atribuciones específicas de revisión y de inspección de la contabilidad y de los bienes sociales, como la de cerciorarse de la regularidad de los libros de contabilidad y de verificar la caja y los valores que por cualquier concepto posea la sociedad. (Francia Art. 32, Italia Art. 2406). b) Atribución específica de asistir, con voz pero sin voto, a las asambleas de accionistas y a las juntas del consejo de administración. (Italia Art. 2405, Brasil Art. 127, fr. III). c) Atribución específica de rendir un informe a la asamblea conteniendo un dictamen del balance y las observaciones relativas a las irregularidades en la administración que hayan llegado a su conocimiento. (Francia Art. 34, Italia art. 2432), d) Atribución específica de convocar a una asamblea ordinaria o extraordinaria en caso de omisión de los administradores y cuando se juzgue de urgencia. (Francia Art. 32, Italia Art. 2406), e) Atribuciones genéricas y amplias de control sobre los administradores en la mayoría de las legislaciones, desde el punto de vista de la observancia de las disposiciones legales y estatutarias, como desde el punto de vista del cumplimiento del deber de diligencia que les incumbe. (Francia Art. 32, Segundo párrafo)

En la sección de literatura se fundamenta la designación del comisario en una Sociedad Mercantil, se parte de la razón del ser mismo, su naturaleza, nombramiento, capacidad, atribuciones, duración en el cargo y su responsabilidad, así como algunas referencias históricas para comprender la figura del comisario. En Metodología se utilizó el método cualitativo aplicando un instrumento de 12 reactivos a 30 personas que fungen como comisarios de empresas familiares.

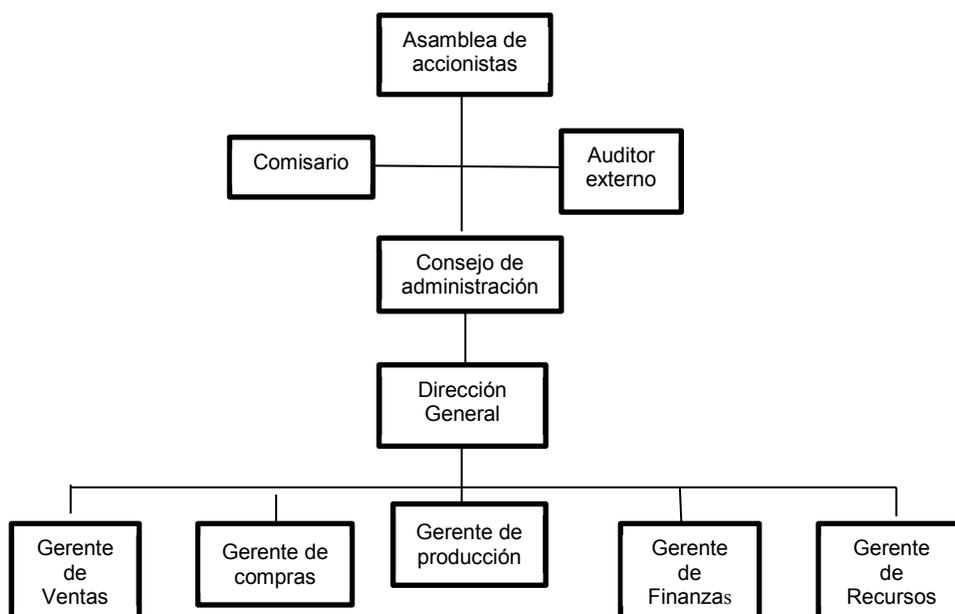

## REVISION DE LITERATURA

La Real Academia de la Lengua Española, define comisario: “persona que tiene poder y facultad de otra para ejecutar alguna orden o entender en algún negocio”. El derecho mercantil define al comisario como “un órgano necesario en una sociedad mercantil, el cual desempeña funciones

temporales, revocables y remuneradas, su designación corresponde a la asamblea de accionistas". A esta figura se le ha llamado el ojo de la asamblea que vigilara de una manera continua la actividad de los administradores, se encause dentro de las normas legales y estatutarias, y siguiendo lineamientos fijados por la asamblea general y los principios de una gestión diligente y honrada. (Brunetti, 1948) Las empresas familiares con fines de lucro se constituyen con la finalidad de maximizar y eficientar los recursos económicos, tecnológicos y humanos para obtener utilidad. En el inicio compran, producen y venden, de ahí que se desprende una actividad que asegure la veracidad de los resultados de la propia operación y administración de la empresa, que se define como la "Vigilancia".

La vigilancia de una empresa consiste en salvaguardar el patrimonio de los accionistas y garantizar un uso adecuado de los recursos de la empresa. Consiste en supervisar y comprobar, principalmente, la existencia de sistemas y controles adecuados en toda la organización. Controles que permitan generar confianza en los diversos niveles directivos, entre otros aspectos del cumplimiento de los objetivos, planes, metas, programas, presupuestos, proyectos. Nace así la figura del Comisario, que se define como el encargado de vigilar y cerciorarse que la operación y los resultados son reales, apegados a derecho y a la normatividad contable y fiscal. En la figura 1 se presenta la estructura legal de una empresa familiar en la que el comisario es parte de la asamblea de accionistas, de la cual se deriva el consejo de administración y la dirección general, así como las diferentes gerencias que forman parte de la empresa.

Figura 1: Estructura Legal de una Empresa Familiar

*En la figura se presenta la estructura legal de una empresa familiar en la que el comisario es parte de la asamblea de accionistas, de la cual se deriva el consejo de administración y la dirección general, así como las diferentes gerencias que forman parte de la empresa. El comisario es llamado el ojo de la asamblea que vigilara de una manera continua la actividad de los administradores, se encause dentro de las normas legales y estatutarias, y siguiendo lineamientos fijados por la asamblea general y los principios de una gestión diligente y honrada.*

#### Antecedentes de la Figura del Comisario

La figura del comisario nace en el año de 1888 en la Ley de Sociedades Mercantiles, en su artículo 37, que dice: “La vigilancia de la sociedad anónima debe ser confiada a uno o varios socios que se llamarán Comisarios”, dicho artículo se transcribe en el Código de Comercio del año 1889, en el artículo 91 donde se indica que: “la escritura constitutiva debe contener el nombramiento de uno o varios comisarios”, para efectuar la vigilancia ilimitada de las operaciones del negocio. Posteriormente en 1934 se modifica la LGSM quedando como se conoce actualmente.

#### Fundamento Legal de la Ley de Sociedades Mercantiles

Artículo 164. La vigilancia de la sociedad anónima estará a cargo de uno o varios Comisarios, temporales y revocables, quienes pueden ser socios o personas extrañas a la sociedad. Artículo 166. Son facultades y obligaciones de los comisarios:

- I. Cerciorarse de la constitución y subsistencia de la garantía que exige el artículo 152, dando cuenta sin demora de cualquiera irregularidad a la Asamblea General de Accionistas;
- II. Exigir a los administradores una información mensual que incluya por lo menos un estado de situación financiera y un estado de resultados.
- III. Realizar un examen de las operaciones, documentación, registros y demás evidencias comprobatorias, en el grado y extensión que sean necesarios para efectuar la vigilancia de las operaciones que la ley les impone y para poder rendir fundadamente el dictamen que se menciona en el siguiente inciso.
- IV. Rendir anualmente a la Asamblea General Ordinaria de Accionistas un informe respecto a la veracidad, suficiencia y razonabilidad de la información presentada por el Consejo de Administración a la propia Asamblea de Accionistas. Este informe deberá incluir, por lo menos:
  - A) La opinión del Comisario sobre si las políticas y criterios contables y de información seguidos por la sociedad son adecuados y suficientes tomando en consideración las circunstancias particulares de la sociedad.
  - B) La opinión del Comisario sobre si esas políticas y criterios han sido aplicados consistentemente en la información presentada por los administradores.
  - C) La opinión del comisario sobre si, como consecuencia de lo anterior, la información presentada por los administradores refleja en forma veraz y suficiente la situación financiera y los resultados de la sociedad.
- V. Hacer que se inserten en la Orden del Día de las sesiones del Consejo de Administración y de las Asambleas de Accionistas, los puntos que crean pertinentes;
- VI. Convocar a Asambleas ordinarias y extraordinarias de accionistas, en caso de omisión de los Administradores y en cualquier otro caso en que lo juzguen conveniente;

- VII. Asistir, con voz, pero sin voto, a todas las sesiones del Consejo de Administración, a las cuales deberán ser citados;
- VIII. Asistir, con voz pero sin voto, a las Asambleas de Accionistas, y
- IX. En general, vigilar ilimitadamente y en cualquier tiempo todas las operaciones de la sociedad.

Artículo 167. Cualquier accionista podrá denunciar por escrito a los Comisarios los hechos que estime irregulares en la administración, y éstos deberán mencionar las denuncias en sus informes a la Asamblea General de Accionistas y formular acerca de ellas las consideraciones y proposiciones que estimen pertinentes. Los comisarios son individualmente responsables para la sociedad por el cumplimiento de las obligaciones que la ley y los estatutos les imponen. Podrán, sin embargo, auxiliarse y apoyarse en el trabajo de personal que actúe bajo su dirección y dependencia o en los servicios de técnicos o profesionistas independientes cuya contratación y designación dependa de los propios comisarios de acuerdo al artículo 169 LGSM

#### Responsabilidad Solidaria

Exigir a los administradores la información financiera mensual que incluya un estado de situación financiera y un estado de resultados, como parte fundamental analizar y evaluar todas las operaciones de la sociedad, así como la de la documentación, registros y demás evidencias comprobatorias que den como resultado una opinión fundada y apegada al marco legal sobre la administración de la sociedad. En consecuencia como se dispone en la misma ley de Sociedades mercantiles, puede atribuirse al comisario Responsabilidad Legal, en tres aspectos: individual, solidaria y civil. La responsabilidad penal, solo en el caso de que el comisario tenga una conducta desleal a su cargo, como cómplice o encubra alguna actividad ilícita o fraude. (Art. 167 LGSM) Las personas designadas como comisario, deben ser conscientes del cargo conferido por sus obligaciones, alcances y responsabilidades, para ejercer de manera puntual su cargo y de ser posible lo acepten o rechacen según el desempeño de la administración en función de la sociedad.

#### **METODOLOGIA**

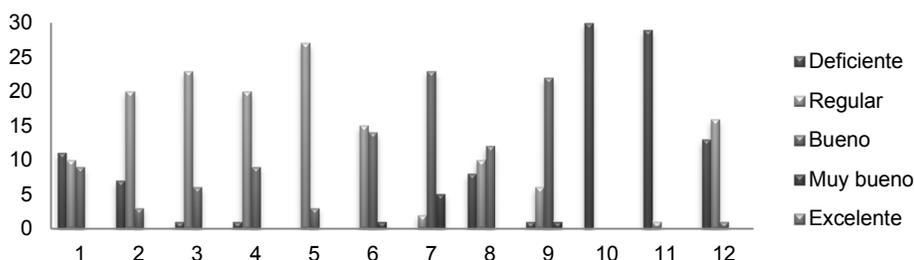

La presente investigación es de carácter cualitativo, en el trabajo desarrollado el principal objetivo es conocer la importancia de la participación que tiene el Comisario en una Sociedad, las funciones y responsabilidades en aspectos legales, penales y fiscales a los que está sujeta la figura del comisario. En esta investigación se utilizó la ley General de Sociedades Mercantiles como fundamento legal y fuentes información secundaria como libros, revistas, páginas web. Se aplicó un instrumento con 12 reactivos según Tabla 2, a 30 comisarios de empresas familiares, se seleccionaron en base a la Estadística de la tabla 1 del municipio de Monclova, Coahuila. Para validar el objetivo de la investigación utilizando la escala de Linkert, es un conjunto de ítems que se presentan en forma de afirmaciones ante las cuales se pide la reacción de los participantes, es decir se presenta cada afirmación y se solicita al comisario que externé su reacción eligiendo uno de las cinco categorías de la escala. A cada categoría se le asigna un valor numérico, así el participante obtiene una puntuación respecto a la afirmación, la cual puede tener dirección: positiva y negativa, esta dirección es muy importante para saber cómo se codifican las alternativas de respuesta. Si la afirmación es positiva significa que califica favorablemente al

objetivo de la actitud, de este modo, cuanto más de acuerdo con la afirmación estén los participantes su actitud será igualmente más favorable. (Hernández R., Fernández C, 2006)

**RESULTADOS**

Se presentan los resultados en la figura 2 del instrumento de la tabla 2 que se aplicó a 30 comisarios de empresas familiares del municipio de Monclova, Coahuila los cuales fueron seleccionados del estadístico de la tabla 1, donde muestra que existen 63 empresas medianas y grandes.

Figura 2: Resultado del Instrumento

En la figura 2 se obtienen los resultados del instrumento de la investigación de los 30 comisarios encuestados el 70% desconoce las funciones y responsabilidades en aspectos legales, penales y fiscales a los que está sujeta la figura del comisario. El 28% conoce parcialmente y solo el 2% de los encuestados tiene conocimiento de su función como comisario.

Tabla 1: Estadísticas del Municipio de Monclova, Coahuila Por Sector y Tamaño de Empresa

Tamaño de la empresa	Sector Productivo			Total 502
	Industria	Comercial	Servicios	
Micro	99	114	79	292
Pequeñas	90	32	25	147
Medianas	23	15	4	42
Grandes	7	8	6	21
<b>Totales</b>	<b>219</b>	<b>169</b>	<b>114</b>	<b>502</b>

La presente tabla es proporcionada por la Secretaría de Economía (2008), muestra que existen 502 empresas en el municipio de Monclova, Coahuila, las cuales están divididas en los siguientes sectores: industrial 219, comercial 169 y de servicios 114. A su vez también muestra la división por tamaño de empresa en cada sector. De las sesenta y tres empresas medianas y grandes se extrajo la muestra de 30 que representa el 48%

En el municipio de Monclova, Coahuila, existen 502 empresas las cuales están divididas en los siguientes sectores: industrial 219, comercial 169 y de servicios 114. A su vez también muestra la división por tamaño de empresa en cada sector. De las 63 empresas medianas y grandes se seleccionó una muestra de 30 comisarios de encuestados que representa el 48%. (Tabla 1)

Tabla 2: Instrumento

Instrumento	Deficiente	Regular	Bueno	Muy bueno	Excelente
1. El Comisario conoce por que aceptó el cargo.					
2. Conoce el Comisario sus responsabilidades.					
3. El Comisario conoce lo que implica aceptar el cargo.					
4. Cuenta el Comisario con experiencia en aspectos financieros y mercantiles.					

5. El Comisario sabe interpretar los estados financieros de las empresas.
6. Valida el Comisario actos o actividades que realiza la empresa.
7. El Comisario elabora correctamente el reporte anual.
8. Cuenta con conocimientos de auditoria.
9. El Comisario conoce lo que es la vigilancia.
10. Presenta el Dictamen de la empresa en que es Comisario.
11. Conoce las sanciones al incumplir con sus responsabilidades.
12. Tiene expertos que asesoren su actividad.

**Escala de evaluación**

Deficiente	1
Regular	2
Bueno	3
Muy bueno	4
Excelente	5

*La tabla presenta, el instrumento que se aplicó a 30 comisarios de empresas familiares, que consta de 12 reactivos en los que se utiliza la escala de Linkert para validar el objeto de la investigación que es conocer la importancia de la participación que tiene el Comisario en una Sociedad, las funciones y responsabilidades en aspectos legales, penales y fiscales a los que está sujeta la figura del comisario.*

En la tabla 2 se presenta el instrumento que se aplicó a 30 comisarios de empresas familiares medianas y grandes (Tabla 1), que consta de 12 reactivos en los que se utiliza la escala de Linkert para validar el objeto de la investigación que es conocer la importancia de la participación que tiene el Comisario en una Sociedad, las funciones y responsabilidades en aspectos legales, penales y fiscales a los que está sujeta la figura del comisario. En la figura 2 se obtienen los resultados de la participación de los 30 comisarios encuestados, el 70% desconoce las funciones y responsabilidades en aspectos legales, penales y fiscales a los que está sujeta la figura del comisario. El 28% conoce parcialmente y solo el 2% de los encuestados tiene conocimiento de su función como comisario.

**CONCLUSION**

Se identifica que existe un pleno desconocimiento de las obligaciones y responsabilidades del comisario que va a aceptar el cargo y de los accionistas de las empresas mercantiles que lo designaran. Estrictamente esta figura debe conocer y cumplir sus obligaciones para que este en posibilidades de expresar su opinión respecto a las operaciones financieras y en si todos los documentos de la compañía que reporta en la asamblea de accionistas. Se recomienda que antes de aceptar el cargo los candidatos a comisario deben recibir asesoría de expertos como son: administradores de empresas, contadores, abogados y notarios públicos para evitar caer en actos que violen las leyes mexicanas como el artículo 16 de la Constitución Política de los Estados Unidos Mexicanos que menciona: “nadie puede ser molestado en su persona, familia, domicilio, papeles o posesiones, sino en virtud de mandamiento escrito de la autoridad competente, que funde y motive la causa legal del procedimiento”. De acuerdo al porcentaje obtenido en el resultado del desconocimiento de las obligaciones, se propone al congreso de la unión integrar un apartado en la Ley para la designación del comisario que establezca: los requisitos indispensables para cumplir y evitar caer en delitos.

## RESUMEN

*En la actualidad los avances tecnológicos y el uso de las nuevas tecnologías han dejado atrás a muchas organizaciones de tipo público y privado, que si no tienen los recursos humanos, financieros, tecnológicos e instalaciones presupuestados, no les permitirá crecer y ser productivos, por lo tanto no pueden ser competitivos en los mercados y en las poblaciones. El Marketing 3.0 (MKT 3.0), es una herramienta que busca tener un contacto directo entre las autoridades municipales y la población, que les permite a los gobiernos locales comunicar a los ciudadanos su Política Pública (PP) por medio del uso de las nuevas tecnologías (teléfonos móviles, internet, las redes sociales, páginas Web, etc.), para cumplir con los objetivos y metas establecidas en el Plan Municipal de Desarrollo (PMD), llamado Bando Municipal (BM), donde se establecen los lineamientos generados de la PP, y así poder impactar positivamente las percepciones sociales con el fin de lograr moldear y generar una opinión favorable de parte de la ciudadanía respecto de su gobierno y sus acciones y estar enfocados a beneficiar a la comunidad que integra dicha localidad, proyectando una Responsabilidad Social (RS) basada en Valores (V) y donde exista un proceso de co-creación, es decir, que se tome en consideración la participación de la sociedad para la elaboración, implementación y evaluación de la PP y así saber cuál es el impacto que tiene o tuvo esta misma, saber si ha funcionado y en qué medida lo ha hecho, de manera que la sociedad sea tomada en cuenta en los procesos creativos que presentan las autoridades municipales basada en la PP, es decir, en los productos y/o servicios que se ofertan, como apoyar el desarrollo y posicionamiento de la comunidad en la región, y que tipo de campañas publicitarias se deben concretar para promover al Municipio en la región, estado, país y a nivel internacional, de tal forma que se conozca cuál es la opinión de la ciudadanía y cuáles son los sentimientos que le genera dicha PP, en la población y así mismo conocer las sugerencias de mejora continua, donde se logre el posicionamiento de la entidad. Por lo que el objetivo de la investigación es proporcionarles a las autoridades municipales la herramienta de MKT 3.0, como una herramienta de comunicación de la PP, para lograr la satisfacción en la población, mediante los productos y/o servicios que se brindan, cumpliendo con los lineamientos establecidos en el Plan Nacional de Desarrollo, Plan Estatal de Desarrollo y el BM.*

## PUBLIC POLICY FROM THE MARKETING 3.0 IN THE AYAPANGO MUNICIPALITY OF MEXICO STATE

### ABSTRACT

*Currently, technological advances and the use of new technologies have left behind many organizations public and private type that if they have the human, financial, technological and facilities budgeted, will not allow them to grow and be productive, so therefore can not be competitive in the markets and in populations. The Marketing 3.0 (MKT 3.0), is a tool that aims to have a direct contact between the municipal authorities and the population, which allows local governments to communicate to citizens the Public Policy (PP) through the use of new technologies (mobile phones, internet, social networks, websites, etc.), to meet the objectives and targets set out in the Municipal Development Plan (MDP), called Municipal Bando (MB), which sets the guidelines generated from the PP, so we can positively impact social perceptions in order to achieve shape and generate a favorable opinion from the public about their government and its actions and be focused to benefit the community which includes the town, projecting a Social Responsibility (SR) values from (V) and where there is a co-creation process, that is, to take into consideration the participation of society in the development, implementation and evaluation of the PP and so know the impact that has or had the same, tell if it worked and to what extent it has, so that society is taken into account in the creative processes that present municipal authorities from the PP, that is, in the products and / or services offered, such as supporting the development and positioning of the community in the region, and that type must be specified advertising campaigns to promote the municipality in the region, state, country and internationally, so that ascertaining the views of the public and what feelings it generates said PP, population and likewise meet continuous improvement suggestions, which achieves the positioning of the entity. So the aim of the research is to provide municipal authorities MKT 3.0 tool as a communication tool for PP, for attaining satisfaction in the population through the products and/or services provided in compliance with the guidelines established in the National Development Plan, National Development Plan and the MB.*

KEY WORDS: Public Policy, Marketing 3.0, Local Government

## INTRODUCCIÓN

Según los expertos, Kotler & Kartajaya (2011), establecen que el Marketing 1.0 se centraba únicamente en el producto, con una comunicación unidireccional, y el 2.0 tenía como eje al consumidor destacando la interacción, el 3.0 toma en cuenta lo que piensa y requiere el consumidor para ofrecer productos basados en los valores. “A partir de ahora las propuestas que surjan deben cubrir varios aspectos del consumidor, incluyendo sus emociones”. En un artículo establece Pachini, (2013) que el Marketing 3.0 es un marketing basado en una consciencia mundial por ser mejores personas entre nosotros y para con el mundo. De la misma manera el Marketing 3.0 se basa en los valores que tiene la marca y que a la vez se los transmite a sus consumidores, al igual que una correcta responsabilidad social y con el medio ambiente, humanizando a la marca, haciéndola más amigable y lo principal, generando más confianza. Esta nueva visión es descrita por Kotler como “el conocer al cliente es mucho más que una persona interesada en un producto, sino también la participación de la empresa en preservar el mundo de una mejor manera”. En una palabra, Kotler lo define como “cuidado del planeta”. Entonces el Marketing 3.0 es el que toma en cuenta los valores de la marca, producto o servicio, en este tipo de mercadotecnia es donde se debe definir la Misión de la organización, ya que desde aquí se deben empezar los esfuerzos para acercarnos al consumidor (Ramírez, 2013).

Es por eso que si es congruente con la Misión de la organización, se puede dar a conocer y transmitir los valores a las personas, teniendo mayor porcentaje de aceptación y convencimiento de su parte para, finalmente, llegar a tener un ciclo mercadológico de éxito, en el que la persona

se transforma en un cliente y no solo eso, sino que además queda cautivo al sentirse satisfecho con el producto o servicio que se ofrece y regresa a “nosotros” quedando satisfecho (Ramírez, 2013). Castellanos (2010) establece que el Marketing 3.0 surgió como respuesta ante varios factores: las nuevas tecnologías, los problemas potenciales de la globalización y el interés de los individuos por expresar su creatividad, sus valores y su espiritualidad. El Marketing 3.0 toma en cuenta de manera continua, en todo momento lo que piensa y requiere el consumidor para ofrecer productos y/o servicios basados en valores con una responsabilidad social. El nuevo marketing está en función de las nuevas tecnologías y las necesidades del cliente. El cliente es el que nos dirá que es lo que quiere. Estas nuevas tecnologías, redes sociales y la globalización han tenido un gran impacto en cómo los consumidores y las empresas interactúan. Hoy, el consumidor está mucho más informado y conectado. Por lo tanto, el proceso de creación de *marketing* debe ser más abierto y de colaboración horizontal. (Hatch, 2012). El desarrollo de las Tecnologías de la Información y la Comunicación (TIC), y más concretamente de Internet y la World Wide Web (WWW), hacen posible la interacción entre actores, en cualquier parte del mundo, en tiempo real y a bajo coste.

En el mundo global de la actualidad, las TIC, en conjunto con la web 2.0 (aplicaciones digitales que generen colaboración y de servicios que reemplacen las aplicaciones de escritorio... redes sociales, blogs), juegan un papel fundamental. Estas nuevas herramientas han fundado las redes, la viralidad y la interrelación entre consumidores y usuarios... (Chávez, 2012). Estas nuevas herramientas han venido a revolucionar nuestras formas de interacción con las personas, las empresas no se quedan atrás, estas deben buscar al consumidor para poder estar en contacto con él. El consumidor no sólo compra, también opina; crea marcas, productos, conceptos; da ideas; concursa y gana para campañas publicitarias, productos, servicios. Se concibe al consumidor como persona, un ser integral con mente, corazón y espíritu. (Chávez, 2012). Es por eso que las organizaciones deben de estar en estrecha relación y comunicación con el consumidor debido a que el consumidor es el que hace a la marca, a los productos, se escucha la opinión de los ellos y así la empresa saber cómo llegar a él y como penetrar en la mente, en el corazón y en el espíritu del consumidor. Por lo tanto, en la actualidad el Marketing 3.0, en tiempos de redes sociales, ya no basta con presentar los productos con publicidad clásica.

Las personas no son vistas ya sólo como consumidores, sino como “personas completas” con “espíritu humano”, que quieren que el mundo se haga mejor. Desean que los productos y los servicios que eligen les llenen no sólo a nivel funcional y emocional, sino también a nivel espiritual. De esta manera las redes sociales son el intermediario de comunicación directa entre la organización y el consumidor o viceversa, permitiendo tener un contacto directo entre ambos. Ramírez (2011) en su artículo “Marketing 3.0, del cliente a la persona”, menciona que Kotler establece que, de nada servirá el “marketing más bonito”, mientras que los valores no se vivan primero por la dirección de la empresa y después formen parte de su ADN. Estos valores hay que traspasarlos también a los empleados, sólo así el consumidor será a largo plazo el “nuevo propietario de la marca”. El marketing 3.0 puede ser aplicado en diferentes sectores, uno de ellos es en los gobiernos locales, en donde por medio de su política pública pueden transmitir, por medio de las nuevas tecnologías y aplicaciones, valores, la responsabilidad social que tiene el municipio con la comunidad, tener un proceso de co-creación en donde el ciudadano forme parte de los procesos creativos del municipio y forme parte de esa política pública.

Según Joan Subirats (2009), la Política Pública es “la norma o conjunto de normas que existen sobre una determinada problemática así como el conjunto de programas u objetivos que tiene el gobierno en un campo concreto”. Mény&Thoenig (2009), establecen que las políticas públicas son “las acciones de las autoridades públicas en el seno de la sociedad y que ésta se transforma en

un programa de acción de una autoridad pública”. Las políticas públicas para Aguilar (1992), son “las decisiones de gobierno que incorporan la opinión, la participación, la corresponsabilidad y el dinero de los privados, en su calidad de ciudadanos electores y contribuyentes.” De acuerdo a Austin Ranney (1967), toda política pública presenta las siguientes características: Primero, pretende alcanzar un fin o meta determinada. Segundo, provee un curso deseado del evento. Tercero, plantea una línea de acción preferida. Cuarto, contiene una intención manifiesta. Finalmente, contempla la implementación o puesta en operación de dicha acción.

La creación de valores dentro de la organización ayuda a que esta tenga más claro de que es lo que busca y estos valores deben de ser transmitidos a los trabajadores, a proveedores, clientes y a todo aquello que le rodea, así la organización está comprometida con la sociedad y con sí misma. Las redes sociales son el intermediario perfecto para transmitir los valores hacia los clientes y estos últimos puedan identificarse con la marca o la organización. En la generación de políticas públicas se debe de armonizar los valores económicos con los valores sociales, de manera que más allá de alcanzar importantes objetivos (incremento de la recaudación fiscal, ser más competitivos a nivel internacional, fomentar directrices que promuevan la creación de crecimiento de empresas con altos niveles de utilidades o de erradicar el número de gente desempleada, entre otros), éstos se pueden integrar a los valores sociales que han de fundamentar el mejoramiento de los problemas de la población, en lo cual coinciden tanto las empresas privadas como los organismos gubernamentales. La responsabilidad social es un compromiso que los miembros de una sociedad, ya sea como individuos o como miembros de subgrupos, tienen con la sociedad en su conjunto; es decir, un compromiso que implica la consideración del impacto, positivo o negativo de una decisión o acción. (REFERENCIA). La Responsabilidad Social es otro elemento que forma parte del marketing 3.0 y que toda organización debe de tener con hacia la sociedad, utilizando algún recurso para transmitirla. Una de las actividades y áreas estratégicas de todo gobierno es la de comunicación, entendida ésta no sólo como la oficina, las políticas, las acciones o el gabinete de comunicación social, sino también todo aquello que el gobierno hace o deja de hacer y que también comunica, como puede ser el carácter del gobernante o la falta del mismo, la calidad de los servicios o su ausencia y, en general, los actos rutinarios de todo gobierno, así como sus omisiones. (Valdez & Huerta, 2011). Según establecen Valdez & Huerta (2011), que la comunicación en un gobierno local se enfoca, principalmente, a impactar positivamente las percepciones sociales con el fin de lograr moldear y generar una opinión favorable de parte de la ciudadanía respecto de su gobierno y sus acciones.

La comunicación de las políticas públicas está presente en el proceso de diseño, construcción, implementación y evaluación de las mismas. Es por eso que en todo proceso de las políticas públicas debe de haber comunicación entre los actores involucrados, es decir entre el gobierno y la población, para que en primer lugar se pueda conocer a profundidad la problemática que intenta solucionar o el efecto que pretende generar, mismo que sólo es posible conocerlo a través de una adecuada comunicación entre estos. En segundo lugar para implementar una política pública viable y trascendente se tiene que contar con la participación activa de la sociedad, misma que se puede lograr, siempre y cuando exista una adecuada y pertinente comunicación. Por último, para poder realizar una adecuada evaluación de la política pública, (saber si ha funcionado y en qué medida lo ha hecho) se requiere conocer la opinión de la población, saber sobre el impacto que tiene o tuvo la política pública, las opiniones y sentimientos que le genera dicha política hacia la población y así mismo conocer las sugerencias de mejora.

Es decir, debe haber un proceso de co-creación en donde la sociedad sea quien dice que es lo que quiere, en donde la sociedad forma parte en la elaboración de las políticas públicas con base a las necesidades que ellos tienen, de la misma manera ellos pueden evaluar las políticas públicas

establecidas por los gobiernos locales. Por lo tanto, de acuerdo a Valdes & Huerta (2011) la política pública en materia de comunicación busca, en primer lugar, que la gente conozca lo que el gobierno está haciendo, el porqué de sus acciones y la forma cómo lo está realizando, es decir, comunicar las acciones y logros del gobierno, así como el llamar la atención de los ciudadanos para que estos vean y tomen conciencia acerca de lo que sus representantes hacen en su beneficio.

En segundo lugar, el objetivo de la comunicación es moldear la percepción social, de tal forma que se mejore la imagen y la reputación de los actores e instituciones gubernamentales, ya sea por dar cumplimiento cabal a compromisos de campaña, generar acciones y obras que benefician a la sociedad o, en general, por realizar actos que generan respaldo y apoyo por parte de la sociedad. Por otro lado, las TIC son herramientas que permiten a los poderes públicos presentar con mayor transparencia sus proyectos, iniciativas y políticas de manera que podamos conocer las prioridades y objetivos gubernamentales y exigir la rendición de cuentas de las actuaciones o inacción de los gobiernos. (Echevarría, 2001). El buen uso y aprovechamiento del potencial de las TIC en la organización y funcionamiento de las Administraciones Públicas, es de vital importancia ya que de esta manera se sitúan como organizaciones prestadoras de servicios de calidad, eficaces, eficientes y en continua adaptación a los cambios para responder a las necesidades sociales en las mejores condiciones posibles. Las TIC pueden ser un magnífico aliado y motor de cambio en la medida en que los Gobiernos y Administraciones Locales lideren procesos de democracia participativa a escala local. Es decir, cómo los gobiernos locales pueden ampliar las posibilidades de decisión y participación de los ciudadanos en la toma de decisiones, en la medida en que tecnológicamente es posible y los ciudadanos cuentan con más medios para informarse y crearse una opinión propia. Es por eso que las TIC pueden ser un nuevo factor de cambio para la organización y el funcionamiento de las Administraciones Públicas. Ello debido a su novedad y a las posibilidades que éstas incorporan para innovar la gestión:

- Agilizando la comunicación e intercambio de datos;
- Desarrollando estructuras horizontales;
- Permitiendo trabajar a distancia y crear espacios virtuales de generación de ideas, debate y conocimiento.

¿Cómo una organización pública municipal puede hacer Marketing 3.0? Para que un municipio esté involucrado en el marketing 3.0 debe de tomar en cuenta la participación de la población ya que es relevante debido a que los ciudadanos deben de estar incluidos en los procesos creativos de la organización, es decir, proceso de diseño, construcción, implementación y evaluación de las Políticas Públicas basadas en un Plan Municipal de Desarrollo, en las campañas publicitarias del municipio, en la toma de decisiones, hasta poder ayudar a crear un hashtag exitoso en las redes sociales. Al aplicar un Marketing 3.0 las organizaciones públicas se deben preocupar por todos los agentes involucrados y que están interesados en todo su entorno: empleados, la ciudadanía, clientes, proveedores y colaboradores, etc.

Los gobiernos locales deben de poseer una política de puertas abiertas, estando listos para escuchar propuestas, iniciativas y comentarios de quienes están involucrados.

De la misma manera el Municipio debe de reflejar esa responsabilidad social que tiene el gobierno con la misma sociedad, así la población se sentirá identificada y se sentirá parte del mismo gobierno, haciendo las cosas con transparencia y responsabilidad. La nueva tendencia se une además a una serie de conceptos que están surgiendo en el mundo empresarial y que buscan resaltar, más que nunca, los valores que cualquier organización debe manejar, practicar y difundir. Y cuyo objetivo es “hacer del mundo un mejor lugar”, (Philip Kotler, 2011). Es por eso

que un gobierno municipal debe de crear valores basados en una responsabilidad social, de manera que el municipio los maneje, practique y los difunda.

## **METODOLOGÍA DE LA INVESTIGACIÓN**

*Tipo de Investigación:* La investigación es de tipo cualitativa debido a que se enfrenta con problemas de comunicación de la Política Pública a la comunidad en donde al proponer estrategias idóneas se pueda llevar a cabo una comunicación eficiente y eficaz de la Política Pública entre el Municipio y la Sociedad, proyectando valores basados en una responsabilidad social, siendo el uso de las nuevas herramientas tecnológicas el intermediario de comunicación.

*Nivel de investigación:* La investigación de Política Pública basada en el marketing 3.0 en el municipio de Ayapango Estado de México es una investigación descriptiva ya que busca especificar propiedades, características y rasgos importantes de cualquier situación que se analice. Describe elementos que integran a la Política Pública y al Marketing 3.0. Y esta investigación es descriptiva porque solo será una propuesta de estrategias para poder desarrollar la Política Pública basada en el Marketing 3.0.

*Diseño de la investigación:* La investigación no experimenta son estudios que se realizan sin la manipulación deliberada de variables y en los que sólo se observan los fenómenos en su ambiente natural para después analizarlos, es por ello que esta investigación es no experimental ya que a través de la observación del sujeto y del entorno se identifican los problemas que se tienen al comunicar la Política Pública. Es una investigación transversal que a través de las variables establecidas, tanto independiente como dependiente y por medio de los indicadores que las integran y definen se obtienen datos para poder llevar a cabo la comunicación de la Política Pública a la población con valores basada en una responsabilidad social por medio de las nuevas tecnologías en el municipio de Ayapango Estado de México.

## **RESULTADOS**

La investigación se encuentra en fase de análisis y desarrollo, por lo que hasta el momento no se pueden dar resultados finales.

# DETRIMENTO PATRIMONIAL POR HURTO VEHÍCULOS EN COLOMBIA

Jorge Aníbal Restrepo Morales, Tecnológico de Antioquia  
Santiago Medina Hurtado, Universidad Nacional de Colombia  
Alejandro Bedoya, Universidad Nacional de Colombia

## RESUMEN

Este trabajo formula un modelo basado en concepto de riesgo operativo para estimar el detrimento patrimonial para propietarios y las pérdidas estimadas por compañías aseguradoras por el hurto de vehículos en Colombia. Se recurre a la información histórica de hurtos durante los periodos 2006-2012, tanto para las empresas aseguradoras, como de los siniestros asumidos por los ciudadanos. El artículo muestra estadísticas de este problema social y calcula algunos indicadores que relacionan este fenómeno con el desempleo. También se caracterizan las distribuciones de pérdidas agregadas DPA, por compañía de seguros, por ciudad y la distribución para la pérdida patrimonial de los ciudadanos. A partir de procesos de convolución basado en simulación Montecarlo se agregan las distribuciones de frecuencia y severidad obtenidas a partir de los datos históricos sobre pérdidas por hurto de vehículos en Colombia. Para las compañías de seguros se estima la exposición a riesgo del capital por hurto vehículos y para los ciudadanos se estima el detrimento patrimonial por siniestros de vehículos no asegurados. La información de pérdidas calculadas para un periodo de tiempo a un nivel de probabilidad permite desarrollar políticas y estrategias de cubrimiento, mitigación o la formulación de planes de mejoramiento de la gestión del riesgo en las operaciones relacionadas con el fraude y el hurto calificado de vehículos a nivel de las compañías de seguros, a nivel político o social. Se propone una base formal para el establecimiento de un enfoque cuantitativo del análisis de pérdidas para la supervisión de la gestión del riesgo operativo en las empresas del sector asegurador, así como la estimación de pérdidas esperadas para los ciudadanos.

**PALABRAS CLAVE:** Hurto Vehículos. Riesgo, Riesgo Operacional, Exposición Del Capital

## ABSTRACT

*we present a model for estimating the patrimonial detriment of citizens and losses estimated by insurers for theft of vehicles in Colombia. Use the historical information on thefts in 2006-2012 periods, both for insurers, of claims made by citizens. The article shows statistics of this social problem and calculate some indicators that relate this phenomenon with unemployment. LDA aggregate loss distributions, are also characterized by insurance company, city and distribution for patrimonial loss of citizens. From processes of convolution based on simulation Monte Carlo add frequency and severity distributions obtained from historical data on losses by theft of vehicles in Colombia. For insurance companies estimated the exposure to risk of the capital by theft vehicles and for citizens deemed the patrimonial detriment for claims of non-insured vehicles. The information loss calculated for a period of time to a level of probability allows you to develop policies and strategies of covering, mitigation, or the formulation of plans to improve the management of risk in operations related to the fraud and theft qualified vehicles at the level of the insurance companies, at the level political or social. Proposes a formal basis for the establishment of a quantitative approach to the analysis of losses for the monitoring of the*

*management of operational risk in the companies in the insurance sector, as well as the estimate of losses expected for the citizens*

**KEY WORDS:** Risk, operational risk, capital charge

## INTRODUCCIÓN

La gestión, medición y valoración de riesgo en los mercados financieros y posteriormente en el total de las empresas que estructuran la economía, se focaliza en la generalidad de las propuestas realizada por el Comité de Basilea (Basilea I-II-III) y en la norma ISO 31000, donde se manifiesta la importancia de los conceptos asociados al proceso de gestión, cuantificación y de riesgos de mercado, crédito, operativos, entre otros. En el contexto de los riesgos operacionales, determinar las pérdidas esperadas, generadas como resultado de los diferentes eventos posibles, requiere la elaboración de algoritmos que, a un nivel de confianza deseado, determinen la severidad de las pérdidas esperadas y permita soportar la toma de decisiones tales como las estrategias de cubrimiento o las decisiones asociadas a definir los límites de tolerancia al riesgo, etc. El riesgo se define como la probabilidad de que suceda un evento, impacto o consecuencia adversa y en específico el riesgo operativo está anclado en todas las actividades normales de cualquier empresa u organización, toda empresa en la ejecución de las actividades normales del negocio, no está exenta de sufrir fallos operativos (Restrepo & Medina, 2012) (Smithson, Smith, & Wilford, 1998). La dinámica actual de los mercados asociada a procesos de globalización y tratados comerciales, exige que toda firma desarrolle un sistema de gestión de riesgos que permita identificar, cuantificar, controlar y monitorear los riesgos del negocio, con el propósito de anticipar el capital necesario o las estrategias de cobertura necesarias para cubrir las pérdidas potenciales.

En este artículo se analiza el caso del riesgo operativo asociado al hurto de vehículos para el sector asegurador en Colombia, aunque no hay cifras concretas respecto al detrimento patrimonial de los propietarios por el hurto calificado de vehículos, se estima que la gran mayoría de estos hurtos se realizan con fines comerciales y son los propietarios sufren la pérdida directa. No obstante, independientemente del motivo del hurto, es un fenómeno que por sus repercusiones en las dimensiones política, económica y social, se ha considerado como un problema de interés público. Este artículo tiene como objetivo proporcionar una base de conocimientos para construir una visión sistemática del análisis cuantitativo del riesgo operacional como base para la supervisión y la gestión. El enfoque sistémico se aborda desde tres partes, la primera se centra la atención en los conceptos y definiciones de riesgo operacional genéricos, a la luz de los criterios del Comité de Basilea, el numeral 2 presenta el estado actual del sector asegurador de vehículos en Colombia, mostrando estadísticas asociadas al robo y pago de primas entre 2006-2102 así como aspectos regulatorios y de supervisión del sector, el numeral 3 se muestran las aproximaciones teóricas en cuantificación de riesgos. En el numeral 4 se realiza el análisis estadístico y cuantificación del detrimento patrimonial asociado al hurto de vehículos. Por último se indican las conclusiones y trabajos futuros.

### Sector Asegurador

(Pinzón, 2012), muestra como la actividad de la industria aseguradora ha sido fuertemente influenciada por el comportamiento global de la economía, donde aspectos como la crisis de la Zona Euro y el riesgo de abismo fiscal en Estados Unidos, han hecho que la economía mundial se encuentre debilitada. Para 2013, aunque los riesgos de una recesión en USA y Europa son altos,

situaciones como la reactivación del mercado inmobiliario en Norteamérica, los incentivos fiscales y monetarios en China y ligeros cambios en la Zona Euro, permiten esperar una recuperación de la economía, con una tasa de crecimiento más fuerte a la registrada en el 2012, una inflación controlada y que la tasa de desempleo mundial disminuya gradualmente. La industria aseguradora presenta un rol protagónico en la economía del país, en primera instancia por su presencia como inversionista institucional que promueve el ahorro personal, resguarda el patrimonio de las personas naturales y jurídicas, salvaguarda el nivel y la capacidad de producción de las empresas en eventos fortuitos de alta siniestralidad y pérdidas severas y en segunda instancia por su alta participación en el Producto Interno Bruto (PIB); Según la Federación de Aseguradores Colombianos (FASECOLDA), entidad gremial sin ánimo de lucro que aglutina a las compañías de seguro y las sociedades de capitalización en Colombia, La industria aseguradora registró un crecimiento real del 10.6% en el 2012. Las primas de seguros alcanzaron el 2.6% del PIB, una penetración cercana a la del promedio latinoamericano. No obstante, (Salazar, 2013) argumenta como el sector asegurador carece de innovación y socialización de los seguros, plantea como la penetración es muy baja y los indicadores ubican al país por debajo del promedio latinoamericano y muy lejos de economías como la chilena, esta es una oportunidad del negocio, una vez que si tuviésemos los índices de la región, el mercado asegurador colombiano produciría 20 billones de primas al año, esto es cinco billones de pesos adicionales. Igualmente, considera que el reto más grande del sector es que los clientes dejen de percibirlo solo en el aspecto de transferencia de los riesgos y más en la gestión de riesgo.

Según (Libreros, 2013), el hurto de vehículos es una actividad ilícita que se realiza con tres objetivos diferentes. El primero, son vehículos hurtados por diversión y sin fines directamente comerciales, no existe predilección especial por la marca o el modelo y por lo general son abandonados luego de usarlos, la mayoría de las veces con severamente dañados. El segundo tipo de hurto, utiliza los vehículos en actividades ilegales como el transporte de objetos robados, de bienes ilícitos o para realizar actividades terroristas. El tercer tipo de hurto, se caracteriza por obtener beneficios económicos derivados de la venta por partes o en su estado integral luego de remover sus números de identificación. En este grupo participan las bandas organizadas, que reúnen una serie de conocimientos y redes para robar, transportar y modificar los vehículos para su venta, ya sea entero o desguazado, esta modalidad presenta interés por determinadas marcas y modelos de vehículos que el mercado demanda más.

(El País, 2013), exhibe como en Cali, durante el primer trimestre del 2013, se hurtaron 993 automotores, entre carros y motocicletas, cuyo costo comercial fue estimado en \$39.680 millones (USD). Esos hurtos fueron superiores en 2 % respecto a los de igual período del 2012, cuando habían sido 971 unidades. La Asociación del Sector Automotriz y sus Partes (Asopartes), arguye un detrimento patrimonial de los ciudadanos de la ciudad de Cali, porque el 65 % de esos automotores no estaban asegurados, y por lo tanto la pérdida para la ciudad ascendió a \$25.820 millones. El 35 % restante contaba con pólizas, lo que permitió a los ciudadanos recuperar alrededor de \$13.860 millones con las compañías de seguros.

Un estudio de la Cámara de Automóviles de FASECOLDA y retomado por el Instituto Nacional de Investigación y Prevención del Fraude (INIF), dejar ver como de enero a diciembre de 2012 – Tabla 3- el gremio asegurador vio desaparecer en el país un total de 6.451 vehículos por un valor aproximado de 162.428.335 millones de pesos de 2012 (USD) y 163.591.697 millones de pesos de hoy (USD).

Fuente: FASECODPA Datos para 2012, actualizados a 2013 según el IPC

La estimación de las pérdidas esperadas y el detrimento patrimonial de la propiedad en este estudio, se ejecuta para 14 empresas aseguradoras de Colombia y para las tres principales ciudades del país: Bogotá, Medellín y Cali. Los datos para vehículos hurtados y asegurados corresponden al periodo 2006-2012 suministrados por las bases de datos de FASECOLDA. Los hurtos de vehículos no asegurados se desprenden de las bases de datos de ASOPARTES y corresponden al periodo 1992-2012.

### Marco Teorico

El comité de Basilea , propone tres metodologías para la estimación de la perdida económica por riesgo operativo enmarcadas en el enfoque de los modelos AMA (Advanced Measurement Approach), las cuales se resumen:

Cuadros de mando o scorecards

El modelo de medición interna, cuyas siglas son IMA

El modelo de distribución de pérdidas agregadas DPA

No obstante que el Comité de Basilea inclinará la balanza hacia los modelos IMA para cuantificar el capital económico por exposición al riesgo operacional, en la literatura y en la práctica el modelo DPA se ha posicionado como una metodología adecuada para estimar las perdidas esperadas. (Bühlmann, 2005), remonta la génesis del método DPA en las aplicaciones actuariales, emprendidas por el sector asegurador durante varios lustros, su efectividad la mimetizo como una de las técnicas importadas de los modelos actuariales, de alta predilección para ser aplicada en contextos específicas para cuantificación del riesgo operacional, y particularmente cuando la base de datos existente es relativamente pobre.

Es así como el modelo DPA, entrega un estimado del riesgo operacional de una organización y a sus unidades de negocio, con base en una distribución de pérdida que expresa los datos de pérdidas subyacentes. El gran potencial del método DPA radica en que se focaliza en los datos de pérdidas históricas (frecuencia y severidad), que normalmente se presentan y registran a nivel interno en las organizaciones y que se pueden complementar con datos externos. La técnica del DPA ha sido ampliamente utilizada en la literatura con alto acierto en la modelación de las distribuciones de pérdidas, fundamentales para el desarrollo de la matriz propuesta por Basilea, se presenta un resumen cronológico de los trabajos consultados: Restrepo, 2011; Aue y Kalkbrenner, 2007; Akkizidis y Bouchereau, 2006; Dutta y Perry, 2006; Böcker, 2006; Medina, 2006; Nešlehová et al, 2006; Chernobai y Rachevt, 2006; Degen et al, 2006; Shevchenko, 2005; Frachot et al, 2004; Frachot et al, 2003; Frachot et al, 2002; Cruz, 2002; Lee, 2001. Con la distribución de

pérdidas, se procede a simular los eventos para determinar la exposición al riesgo para la siguiente unidad de tiempo.

La simulación ha sido ampliamente aceptada en el ámbito académico y empresarial, para explicar, predecir, entrenar y ayudar a determinar soluciones óptimas., una vez que brinda profundidad a los análisis cuando se trata de evaluar situaciones con alto grado de incertidumbre, además de brindar una visión completa de la situación, supera limitaciones del análisis con base en datos históricos cuando describe el comportamiento de las variables en términos de una distribución de probabilidad y por tanto considera las probabilidades de ocurrencia de los eventos asociados con variables aleatorias. Para una aproximación exitosa a los modelos de simulación, es importante identificar, en primera instancia, las distribuciones de probabilidad adecuadas a la situación de análisis y posteriormente definir las interdependencias que permiten describir el comportamiento esperado de las variables a través de análisis y definición de covarianzas y correlaciones entre ellas.

(Evans, 1998) define la simulación como el proceso de construir un modelo lógico-matemático de un sistema o proceso de decisión, y experimentar con él para comprender el comportamiento del sistema o ayudar en la toma de decisiones. (Fiorito, 2006), muestra como la simulación es particularmente útil en problemas o situaciones que involucran incertidumbre y como un modelo es inservible si no ayuda al usuario a comprender el problema. Por ello, el punto principal en la simulación está puesto en conducir experimentos con el modelo y analizar los resultados. El modelo propuesto, fundamentado en información histórica de 2006 a 2012, será un modelo estadístico sobre la frecuencia y el monto de los eventos de pérdida con el objeto de estimar la provisión que las empresas deben realizar para el periodo 2013

Modelación de la severidad: En general, el modelo parte en primera instancia de ajustar diferentes distribuciones de probabilidad a la serie datos históricos de pérdidas operacionales desagregadas por tipología para cada línea de negocio y evento de pérdida. En este caso, será el hurto de vehículos por ciudad. En síntesis, es necesario hallar la distribución de probabilidad con mejor ajuste a los datos observados y estimar sus parámetros. Algunos autores como Lee, 2001; Cruz, 2002; González, 2004; Shevchenko y Donnelly, 2005 y Carrillo y Suárez, 2006, proponen la distribución Lognormal o la de Weibull como las más recomendables para modelar la severidad, no obstante, en la práctica es difícil que una distribución simple se ajuste a los datos de forma adecuada; por tanto, es recomendable recurrir a un abanico de distribuciones para variables aleatorias continuas. La modelación de la severidad, en términos generales se expresa, así: sea ( $X$ ) el monto de la pérdida en la celda ( $ij$ ) de la matriz de pérdidas (severidad del evento), una variable que con una distribución de probabilidad  $F_{ij}(x)$  definida con la ecuación 3.

$$F_{ij}(x) = P(X_{ij} \leq x) \quad (1)$$

Modelación de la frecuencia: Por su parte, la frecuencia se define como una variable aleatoria discreta que simboliza el número de eventos ocurridos en un período de tiempo determinado, con una probabilidad de ocurrencia establecida. Restrepo, 2011; Lee, 2001; Cruz, 2002; González, 2004 y Shevchenko, 2005, expresan la distribución de Poisson como la más adecuada para modelar dicha variable, sin descartar otras distribuciones alternas como la binomial o la binomial negativa.

Sea  $K_{ij}$  una variable aleatoria que representa el número de eventos de riesgo en la celda ( $ij$ ) de la matriz de eventos (frecuencia de los eventos). Dicha variable se determina por una distribución de probabilidad

$P_{ij}(n)$  definida como:

$$P_{ij}(n) = P(K_{ij} = n) \quad (2)$$

Independiente de las distribuciones de probabilidad elegidos para modelar la frecuencia y la severidad, es importante establecer las diferentes pruebas de bondad de ajuste, tales como Chi-cuadrado, Anderson-Darling (A-D), Kolmogorov-Smirnov (K-S), necesarias para cada distribución.

Obtención de la distribución de pérdidas agregada: Posterior a la caracterización de las distribuciones para la frecuencia y la severidad, el diagrama de flujo establece como paso siguiente obtener la distribución de pérdidas agregadas (DPA), lo que exige la combinación de las dos distribuciones mediante un proceso estadístico conocido como convolución.

$K_{ij}$ , es una variable aleatoria que representa el número de eventos en la celda ( $ij$ ) de la matriz de eventos, para un plazo comprendido entre  $(t, t + \tau)$ , con una distribución de probabilidad asociada  $P_{ij}(k)$  y  $X_{ij}$  es otra variable aleatoria que expresa la cuantía de la pérdida para un determinado evento con una función de densidad asociada  $F_{ij}(x)$ . Entonces, asumiendo independencia entre la frecuencia y la severidad, la pérdida total para un tipo de evento en el intervalo temporal  $(t, t + \tau)$  adopta la expresión dada en la ecuación 2. Y con respecto a la función de distribución de la variable S se obtiene:

$$= \left\{ \sum_{n=1}^{\infty} P_{ij}(n) * F^{n*}(x) \text{ para } x > 0 \right.$$

$$S(x) = \{ P_{ij}(n) \text{ para } x = 0$$

Donde,  $F^{n*}(x)$  es la probabilidad de que la cantidad agregada de ( $n$ ) pérdidas sea ( $x$ ). El asterisco denota la convolución en la función  $F$ , y  $F^{n*}$  es ( $n$ )-veces la convolución de  $F$  consigo misma. Para obtener  $S(x)$ , la literatura presenta dos alternativas, este artículo desarrolla la Simulación Montecarlo que consiste en obtener escenarios de rendimientos o precios de un activo mediante la generación de números aleatorios correlacionados que repliquen las distribuciones de probabilidad o los procesos estocásticos definidos para cada uno de los factores de riesgo (Medina & Restrepo, 2013). Este método supera la complejidad del algoritmo de Panjer para realizar la convolución de las frecuencias y la severidad, luego de ajustar los modelos de frecuencia y severidad, es posible mediante SM estimar la distribución de pérdidas agregadas mediante el uso de un número adecuado de escenarios hipotéticos, generados aleatoriamente, a partir de las distribuciones de severidad y frecuencia. La SM es una forma simple y flexible para encontrar esa distribución y determinar la carga de capital.

## RESULTADOS

A continuación se ilustra la metodología básica utilizada para caracterizar la DPA de la aseguradora Suramericana, análisis semejantes se realizan sobre las 13 empresas restantes del gremio asegurador y se resume de manera práctica los resultados para el portafolio de aseguradoras vehiculares en Colombia.

Por otra parte para determinar el detrimento patrimonial por ciudad, debido a que no existe información sobre la severidad de la pérdida para los vehículos no asegurados, se recurrió a información secundaria con el fin de estimar el valor unitario de los vehículos hurtados y asegurados calculados mediante la DPA de las aseguradoras y se encuentra la distribución de mejor ajuste para los vehículos hurtados no asegurados y mediante la convolución del valor unitario y la frecuencia del hurto se determina el detrimento patrimonial. Los cálculos y análisis se soportan en el software @risk y en R. Análisis para el portafolio de aseguradoras A continuación se presenta un resumen de las funciones de probabilidad ajustadas para la frecuencia mensual y la severidad por compañía de seguros, se enfatiza en que los análisis abordados para su selección replican lo expuesto en el literal anterior. La Tabla 4 contiene la caracterización del hurto y severidad mensual de vehículos por empresa, como puede observarse, el valor-P de cada una de las distribuciones seleccionadas es mayor al nivel de significancia al cinco por ciento, esto permite afirmar que la distribución de probabilidad seleccionada se ajustan a los datos de la muestra.

Tabla 4: Caracterización del Hurto Mensual de Vehículos Por Empres

Aseguradoras	Frecuencia		Severidad	
	Distribucion	P-Value	Distribucion	P-Value
BBVA	Binomial neg.	0,914	Loglogistic	0,7452
Bolivar	Binomial neg.	0,9629	Weibull	0,9662
Colpatria	Binomial neg.	0,8165	BetaGeneral	0,9927
Colseguros	Binomial neg.	0,3744	Lognorm	0,7787
Equidad	Binomial neg.	0,6056	Loglogistic	0,6056
Estado	Binomial neg.	0,5227	Weibul	0,9662
Generali	Binomial neg.	0,1202	Invgauss	0,4238
Liberty	Binomial neg.	0,9579	Pearson	0,8913
Mapfre	Binomial neg.	0,018	Logistic	0,9927
Previsora	Binomial neg.	0,4162	Invgauss	0,881
QBE	Geometrica	0	Pearson	0,8685
Royal	Binomial neg.	0,941	Logistic	0,8913
Solidaria	Poisson	0,9207	Lognorm	0,8913
Suramericana	Binomial neg.	0,053	Loglogistic	0,2315

Las pruebas de bondad de ajuste se realizaron al 95% de confianza y como se indica en la tabla los P-Valor superan el 5% de significancia exceptuando las empresas Mapfre y QBE.

Con base en lo anterior se procesa a realizar el proceso de simulación Montecarlo descrito en el numeral XXX, con el fin de obtener el VaR mensual para cada una de las compañías de seguros. Los resultados se resumen en la Tabla 5. Este vector se tomara en cuenta posteriormente para el cálculo del valor en riesgo asociado en el portafolio asegurado.

Tabla 5: Var Al 95% Mensual Por Compañía en COP

Compañía	VaR al 95% (COP)
BBVA	250.769.925,67
Bolivar	1.294.883.198,89
Colpatria	784.922.270,14
ColSeguros	3.680.026.452,71
Equidad	543.720.270,57
Estado	871.202.793,09
Generali	478.221.554,20
Liverty	2.912.112.948,32
Mapfre	1.221.565.912,44
Previsora	1.538.818.691,37
QEB	631.062.459,23
Royal	801.692.514,99
Solidaria	1.383.515.272,47
Suramericana	6.111.343.071,18

Finalmente y aplicando el resultado expuesto en el literal XXX para la estimación del VaR se tiene que la pérdida máxima del portafolio de aseguradoras en un mes para un nivel de significancia del 95% es de 8.784.582.562,19 COP.

## RESUMEN

*Actualmente contar con fuentes de información primarias es una parte importante en las empresas ya que les permite contar con caminos a seguir más fundamentados en sus procesos y futuros proyectos. Según (Kotler 2006) la investigación de mercados que es considerada una herramienta fundamental para el proceso de recolección y uso de información para una mejor toma de decisiones en mercadeo, la cual permite conocer la pertinencia de algún nuevo proyecto. Por lo antes mencionado se realizó una investigación de mercados en la comunidad de Benito Juárez Sonora, México con las familias del área para proporcionar información precisa, para la toma de decisión acerca de la implementación del sistema de producción Acua – Agrícola a traspatio en los hogares de la región para que las mismas familias manejen y administren su producción, esta podría ser para autoconsumo, comercialización o recreación. De lo anterior surge la pregunta de investigación: ¿Es factible la implementación de un sistema de producción que se integre la actividad acuícola con la agrícola con las familias de Benito Juárez a traspatio?. Para dar respuesta a la pregunta de investigación se realizó una investigación de mercados donde se determinó la población a estudiar para posteriormente obtener una muestra y así recabar información para procesarla y llegar a las conclusiones de dicho proyecto.*

**PALABRAS CLAVE:** Investigación de mercados, producción Acua-Agrícola sustentable y Benito Juárez, Sonora México.

## MARKET RESEARCH TO IMPLEMENT A SUSTAINABLE BACKYARD ACUA-AGRICULTURAL PRODUCTION SYSTEM IN THE COMMUNITY OF BENITO JUAREZ, SONORA, MEXICO

### ABSTRACT

*Currently have primary information sources is an important part in business because it allows them to have more informed ways forward in their processes and future projects. According to (Kotler 2006) that market research is considered an essential tool for the process of collection and use of information for better decision -making in marketing, which allows to know the relevance of any new project. As mentioned above was conducted market research in the community of Benito Juarez Sonora, Mexico with area families to provide accurate information for decision-making on the implementation of the production system Aqua - Agricultural to backyard in homes of the region to manage families themselves and manage their production, this could be for self-*

*marketing or recreation. From the above research question arises: Is it feasible to implement a production system that integrates aquaculture with agricultural families Benito Juárez backyard?. To answer the research question we conducted a market research which determined the study population to subsequently obtain a sample and gather information and to process and come to the conclusions of the project.*

**JEL.:** M31, Q32, R51 y Q32.

**KEYWORDS:** Marketing Research, Production Aqua - Agricultural Sustainable and Benito Juárez, Sonora Mexico.

## **INTRODUCCIÓN**

El Sistema de Producción Acua – Agrícola, es un proyecto de la Universidad Estatal de Sonora UES, Unidad Académica Benito Juárez, que consiste en el desarrollo de producción de manera hidropónica, integrando la actividad acuícola con la hortícola el cual tiene cuatro años de investigación, dentro de sus procesos está la operación del sistema está a cargo de la Dirección de Unidad como administrador, un Coordinador General que es un docente de la misma universidad y alumnos que practican y desarrollan investigación como Encargados de Producción y Obreros. Según González L., (2013), el sistema integrado, es la fusión de la actividad acuícola con la actividad agrícola, mediante la cual se busca desarrollar en cultivo de peces dando la recirculación adecuada del agua para la producción de productos agrícolas, por consiguiente se busca incrementar una fuente de empleo e ingresos para la sociedad, así como productos libres de agroquímicos para una mejor calidad de vida. Como una alternativa para diversificar la actividad acuícola del Estado, el cultivo Acuapónico se presenta como una opción viable de desarrollo en la zona rural, sin embargo dado que en la mayoría de las veces se utiliza agua dulce para su cultivo, es de vital importancia que este se desarrolle de manera intensiva para optimizar el uso del agua, en Sonora como en muchas partes del país y del mundo, el agua dulce se ha convertido en un factor limitante para el desarrollo de esta actividad, es por ello que se han desarrollado sistemas de producción en los cuales, el agua que se desecha del cultivo de la tilapia es utilizada para cultivar y producir otras especies como hortalizas ya sea: Tomate, lechuga, pepino, chiles, albahaca, menta, etc., estos sistemas se denominan “Sistemas integrales o bien se les conoce como Aquaponia”.

## **REVISIÓN DE LITERATURA**

Actualmente los Agronegocios se han convertido en motores de la economía en el siglo XXI, representando un 50% del comercio global (Monterroso 2003), por lo que se considera como un conductor de desarrollo económico, mismos que estimulan a otros giros relacionadas con esta actividad. Según FAO (2013) se considera como Agronegocios la expansión de los negocios del sector agropecuario y rural y de sus cadenas, a partir de relaciones que involucran estructuras contractuales, alianzas o asociaciones ejecutadas principalmente por el sector privado a partir de los productores del sector agropecuario, sostenibles a largo plazo, que involucran, además de un conjunto asociado de agricultores, a diversos agentes exógenos o de las cadenas agroindustriales y que podrían contar o no, con el apoyo de las políticas públicas.

En la actualidad, los elementos administrativos claves de cualquier empresa u organización son los individuos, la estructura, la tecnología, el ambiente interno y externo, así como la información; los directivos requieren de ésta última como fundamento para enfrentarse y superar los cambios del entorno y sobre todo los que provoca la competencia y los que el fenómeno de la

globalización implica. Por otro lado los empresarios que no cuentan con la información necesaria para tomar decisiones adecuadas y oportunas, pondrán a su negocio en una posición de desventaja frente a sus competidores, además serán incapaces de resolver con bases sólidas la incertidumbre y los problemas de índole administrativa que se presenten, por tal motivo son necesarias y de vital importancia la realización de investigaciones de mercados como parte de la mercadotecnia de una empresa. La mercadotecnia según Kotler (2006), considerado como el padre de la mercadotecnia moderna, asegura que esta disciplina es un proceso social y administrativo mediante el cual grupos e individuos obtienen lo que necesitan y desean a través de generar, ofrecer e intercambiar productos de valor con sus semejantes. Y afirma que en la actualidad se puede hablar de Mercadotecnia en donde existen elementos enfocados para que el producto y los valores de éste fortalezcan en todos los niveles, el lazo con los consumidores y también con los inversionistas, empleados, distribuidores, proveedores y todo aquel que forme parte del equipo, pues su finalidad es generar una relación ganar-ganar. Sin embargo, son pocas las compañías que desarrollan Marketing. De la tal ciencia se desprende una rama muy importante como lo es la Investigación de Mercados que es considerada como el proceso de recolección y uso de información para la toma de decisiones en mercadeo (Kotler, 2006) y es una herramienta fundamental para mejor toma de decisiones, lo cual permite conocer la factibilidad de algún nuevo proyecto o un nuevo negocio. Actualmente, en Sonora la acuicultura se ha desarrollado principalmente en el cultivo de camarón, obteniendo una producción cercana a las 50,000 toneladas.

(INEGI 2013) Sin embargo es necesario que la acuicultura se diversifique ya que se han conjuntado una serie de factores que posibilitarán un explosivo despegue de cultivos agrícolas diferentes al del camarón, cuya actividad ya empieza a resentir los efectos de presión por condicionantes ambientales, enfermedades, competencia al acceso de recursos financieros y saturación de mercados. Como una alternativa para diversificar la actividad acuícola del Estado, el cultivo de la tilapia se presenta como una opción viable de desarrollo en la zona rural, sin embargo dado que en la mayoría de las veces se utiliza agua dulce para su cultivo, es de vital importancia que este se desarrolle de manera intensiva para optimizar el uso del agua, en Sonora como en muchas partes del país y del mundo el agua dulce se ha convertido en un factor limitante para el desarrollo de esta actividad. Es por ello que se han desarrollado sistemas de producción en los cuales, el agua que se desecha del cultivo de la tilapia es utilizada para cultivar y producir otras especies como hortalizas ya sea: Tomate, lechuga, pepino, chiles, albahaca, menta, etc. Estos sistemas se denominan “Sistemas integrales o bien se les conoce como Aquaponía” la cual se desarrolla Investigación en la Universidad Estatal de Sonora (UES) Unidad Académica Benito Juárez, a partir del 1º de septiembre de 2012, antes Centro de Estudios Superiores del Estado de Sonora (CESUES) con el proyecto productivo del Sistema de Producción Acua-Agrícola que se desarrolla por maestros investigadores de diferentes áreas.

Hoy en día es de gran importancia el contar con una sana alimentación ya que México ocupa uno de los primeros lugares en obesidad a nivel mundial (OMS 2013), por tal motivo se realizó una investigación de mercados con las familias de la comunidad de Benito Juárez en el Sur de Sonora para proporcionar información para la implementación del sistema de producción Acua – Agrícola en el traspatio de sus hogares. Este proyecto se basa en desarrollar un cultivo integral en Acuaponía, siendo este el principal objetivo del Sistema el compromiso social de promover la implementación de este tipo de sistemas de producción entre los habitantes de la comunidad, para contribuir al autoempleo, la producción y consumo de productos de calidad y orgánicos en beneficio de la salud y de la economía familiar, aparte de servir como terapia para los adultos mayores, jubilados o pensionados al momento de hacerse cargo del sistema promoviendo el uso sustentable de los recursos naturales y así garantizar una bienestar en general a la sociedad.

## MÉTODOLOGÍA

### Objetivo

Realizar una investigación de mercados en la comunidad del Municipio Benito Juárez mediante el diseño y aplicación de un instrumento de medición, que permita determinar si los habitantes de dicha población estarían dispuestos a implementar un Sistema de Producción Acua-Agrícola (SIPROAA) a traspatios para el cultivo de hortalizas y la crianza de peces.

### Delimitaciones

Para este proyecto, se desarrolla un sistema de producción que se busca sea eficiente en el manejo del recurso agua, combinando la actividad acuícola con la agrícola para producir de manera integral tilapia negra (*Oreochromis niloticus*) con cultivos hidropónicos de tomate bola (*Lycopersicon esculentum*) en un sistema de recirculación de agua dulce, dicho proyecto está implementado en la localidad de Villa Juárez, en la Universidad Estatal de Sonora, Unidad Académica Benito Juárez y se desarrolla sólo con recursos propios de la Institución y con apoyos Estatales y se están gestionando recursos Federales para su eficiente operación. Esta investigación presenta las siguientes delimitaciones:

Está enfocada sólo a la pertinencia del proyecto en la comunidad.

La profundidad del estudio está sujeta a la información disponible por los integrantes del proyecto.

La decisión de la implementación del estudio desarrollado, queda a discreción de las familias que estaría dispuesto a implementarlo y manejarlo por medio de un programa social.

Las familias serán responsables de administrar el proyecto asegurando producción que puedan servir de indicadores para ver la factibilidad del proyecto.

*Sujeto:* La presente investigación se realizó con las familias de la Comunidad de Benito Juárez, donde la Universidad Estatal de Sonora está desarrollando un Sistema de producción Acua-Agrícola en el que se integre la actividad acuícola con la agrícola, en donde los integrantes del proyecto proporcionaron información requerida para la investigación de mercados, dicho proyecto productivo es desarrollado por maestros investigadores de la universidad, esto es por el interés de la Institución por buscar nuevas alternativas que incrementen la producción y rentabilidad del campo agrícola, así como coadyuvar con productores de las comunidades rurales para que diversifiquen sus actividades tradicionales de agricultura temporal, y en la búsqueda de promover el autoempleo y la producción de alimentos libres de agroquímicos.

*Materiales:* Para la realización de esta investigación de mercados se diseñó un instrumento para la recolección de los datos, se organizó equipos para aplicar las encuestas, también se apoyó de entrevistas abiertas con los integrantes del proyecto, asesoría de maestros de la Universidad Estatal de Sonora y expertos en los temas abordados. El cuestionario constaba de preguntas de opción múltiple y una abierta las cuales estuvieron enfocadas a la situación actual y expectativas del proyecto, otro método al que se recurrió fue al de observación, y consultas de fuentes directas como libros y páginas Web cuyos autores y páginas se encuentran en la sección de bibliografía.

*Procedimiento:* Como inicio de la investigación se realizó una plática con el Coordinador general del proyecto y el Supervisor de producción para conocer la situación actual del Sistema de

Producción Acua-Agrícola, posteriormente se propuso el trabajo a desarrollar, el cual fue realizar una investigación de mercados que ayude a una toma de decisiones eficientes en la implementación del proyecto en el traspatio de las familias de Benito Juárez. En la realización de la investigación de mercados se realizaron los siguientes pasos: Determinar las necesidades de información, Hipótesis, Población, Cálculo del tamaño de la muestra, Cuestionario, Trabajo de campo, Procesar información, Informe de resultados y las Conclusiones y recomendaciones

## RESULTADOS

### Necesidades de Información

Se determinó investigar si las familias de la localidad de Villa Juárez, Sonora, que desean implementar el proyecto de “Sistemas de producción Acua-Agrícola” en el traspatio de su hogar como una alternativa de desarrollo de autoconsumo o de algún beneficio económico.

*Hipótesis (H1):* La hipótesis de la investigación es la viabilidad de implementar los sistemas de producción Acua – Agrícolas a traspatios en los hogares de la comunidad de Benito Juárez, una vez analizada la información, se podrá conocer la aceptación o rechazo del proyecto por parte de los habitantes de la localidad.

HA: La familias de la comunidad de Benito Juárez SI están dispuestas a implementar el Sistema de producción Acua – Agrícola a traspatio.

HO: La familias de la comunidad de Benito Juárez NO están dispuestas a implementar el Sistema de producción Acua – Agrícola a traspatio.

Población: La población de esta investigación será la localidad de Villa Juárez, Sonora, México que forma parte del municipio de Benito Juárez, Sonora, donde según el censo de población y vivienda del año 2010 mostrado por INEGI el total de familias habitadas hasta ese año fue de 5, 643 familias y por ello la población objetivo son aquellas madres amas de casa y adultos mayores que cuenten con tiempo libre para implementar y atender el desarrollo del proyecto.

*Calculo del tamaño de la muestra:* La fórmula para calcular el tamaño de la muestra cuando se conoce el tamaño de la población es la siguiente:

Dónde:

N= Tamaño de la población

Z= Nivel de confianza

P= Probabilidad de éxito o proporción esperada

Q= Probabilidad de fracaso

D= Precisión (Error máximo admisible en términos de proporción)

$$n = \frac{N \times Z^2 \times p \times q}{d^2 \times (N-1) + Z^2 \times p \times q} \quad n = \frac{5,643 \times 1.96 (2) \times 0.05 \times 0.95}{0.03 \times (5,643-1) + 1.96 (2) \times 0.05 \times 0.95} \quad n = \frac{1,029.71}{8.22}$$

$n = 125.56 \text{ Familias}$

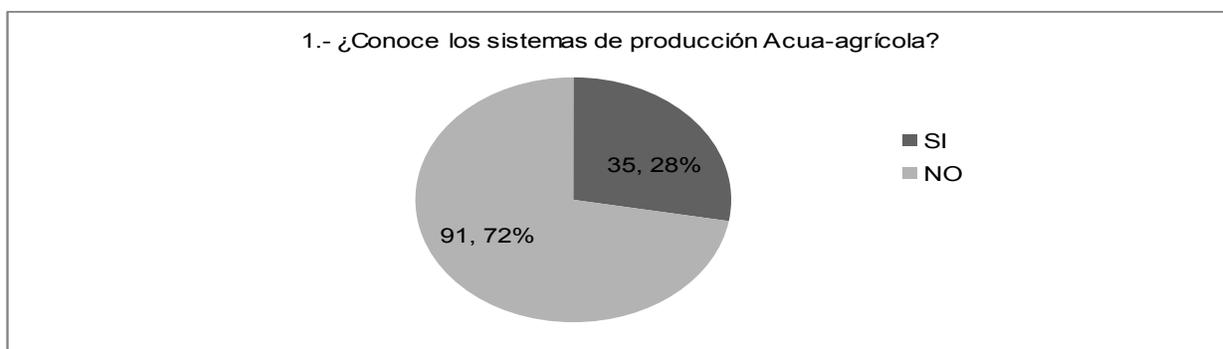

*Cuestionario:* Se formularon una serie de preguntas con el fin de recabar información precisa y sobre la aceptación del sistema en el traspatio de los hogares de las familias del municipio de Villa Juárez.

*Limitaciones:* La mayoría de las personas no tienen conocimiento alguno del funcionamiento de los sistemas de producción Acua-Agrícola, por otro lado al momento de aplicar la encuesta algunas personas no entendían palabras y por último algunas personas no les pareció que la encuesta tuviera doce reactivos y una sección de comentarios.

*Tabulación:* Se esquematizaron los datos obtenidos de las encuestas aplicadas mediante una hoja de cálculo de Microsoft Excel para obtener el total de datos precisos para graficar.

*Informe de resultados:* A continuación se muestran en representaciones graficas los resultados obtenidos en la aplicación de las encuestas.

Figura 1: Conocimiento de los Sistemas de Producción

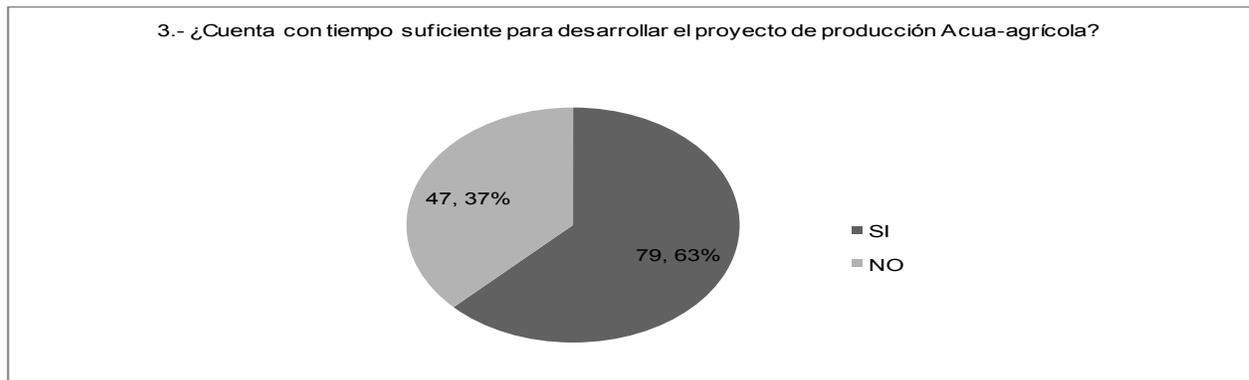

De un total de 126 personas encuestadas, el 28% de ellas contestaron que si cuentan con conocimiento de los sistemas de producción Acua – Agrícolas, mientras que el 72% restante no tiene conocimiento alguno de estos sistemas. De un total de 126 personas encuestadas el 65% de ellas si han escuchado alguna vez sobre los cultivos de productos orgánicos, mientras que el 35% restante no había escuchado hablar sobre ellos.

Figura 2: Conocimiento de los Productos Orgánicos

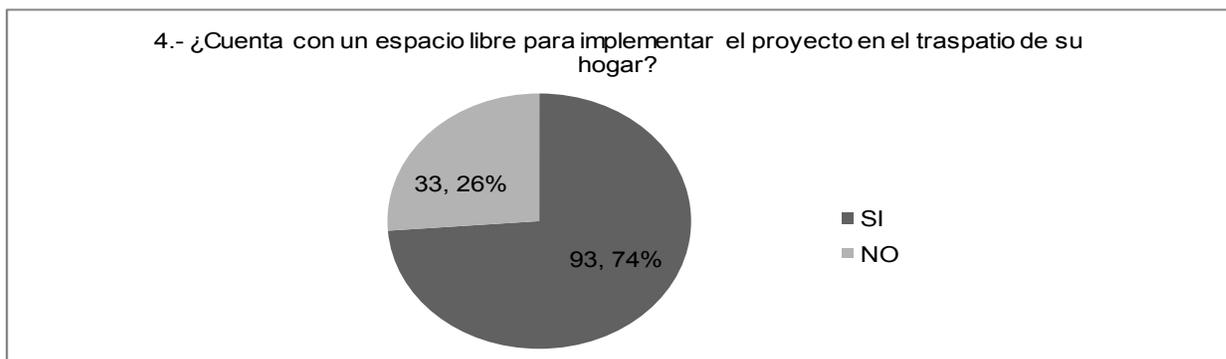

De un total de 126 personas encuestadas el 65% de ellas si han escuchado alguna vez sobre los cultivos de productos orgánicos, mientras que el 35% restante no había escuchado hablar sobre ellos.

Figura 3: Tiempo Para Desarrollar el Proyecto

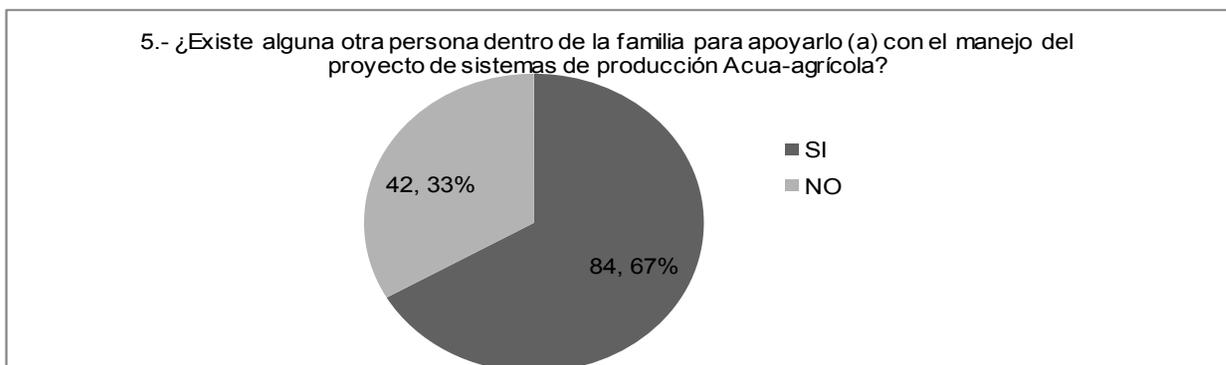

De un total de 126 personas encuestadas el 63% de ellas si cuentan con tiempo suficiente para desarrollar el proyecto de sistemas de producción Acua-Agrícola, mientras que el 37% restante no cuenta con tiempo suficiente.

Figura 4: Espacio Para Desarrollar El Proyecto

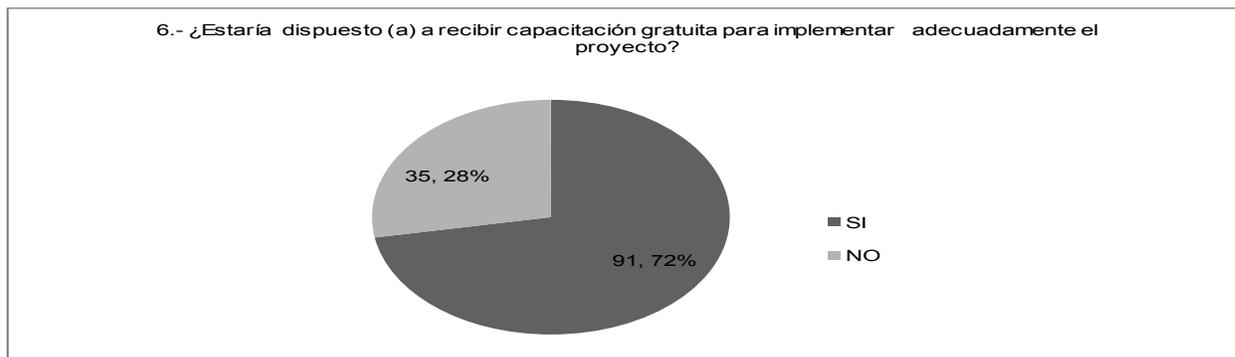

De un total de 126 personas encuestadas el 74% representantes de un total de 93 personas si cuentan con un espacio libre para implementar el proyecto en el traspatio de su hogar, mientras que el 26% de un total de 33 personas no cuentan con tiempo para implementarlo.

Figura 5: Apoyo Para Desarrollar el Proyecto

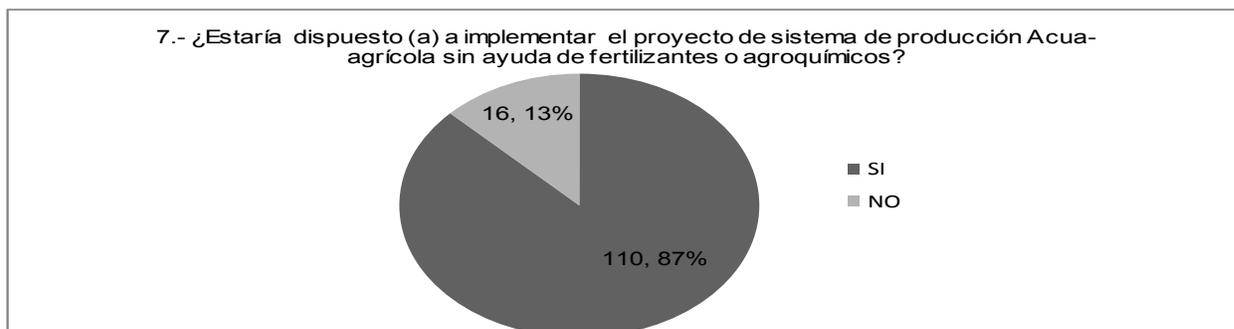

De un total de 126 personas encuestadas el 67% que representan un total de 84 personas si cuenta con alguna otra persona para que lo auxilie con el manejo del proyecto, mientras que el 33% restante equivalente a 42 personas no cuentan con una persona auxiliar.

Figura 6: Capacitación Para Desarrollar el Proyecto

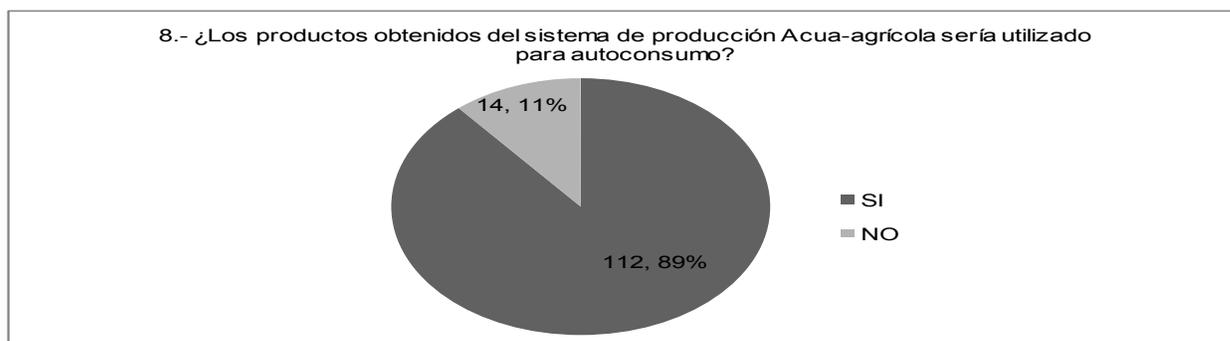

De un total de 126 personas encuestadas el 72% representadas de 91 personas si están dispuestos a recibir capacitación gratuita para implementar adecuadamente el proyecto mientras que el 28% restante equivalente a 35 personas no les gustaría recibir capacitación.

Figura 7: Uso de Fertilizantes Para Desarrollar el Proyecto

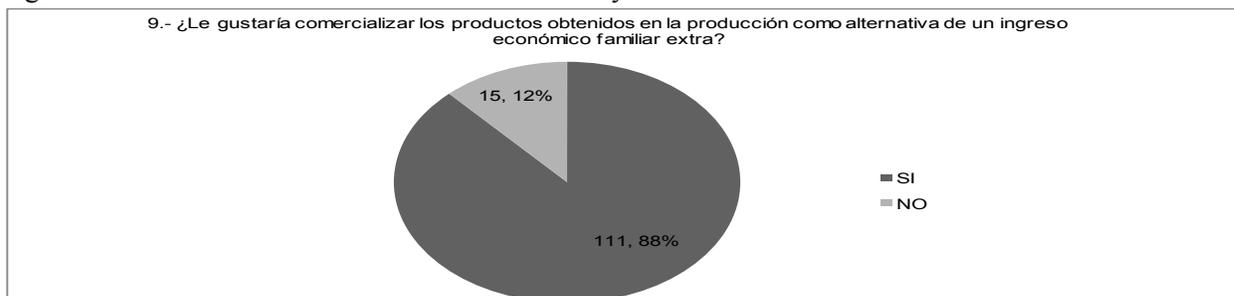

De un total de 126 personas encuestadas el 87% que representan a un total de 110 personas asumió que si estarían dispuestos a implementar el proyecto de sistemas de producción Acua-Agrícolas sin ayuda de fertilizantes o agroquímicos, mientras que el 13% restante equivalente a 16 personas no estarían dispuestos a hacerlo

Figura 8: Autoconsumo de los Productos del Proyecto

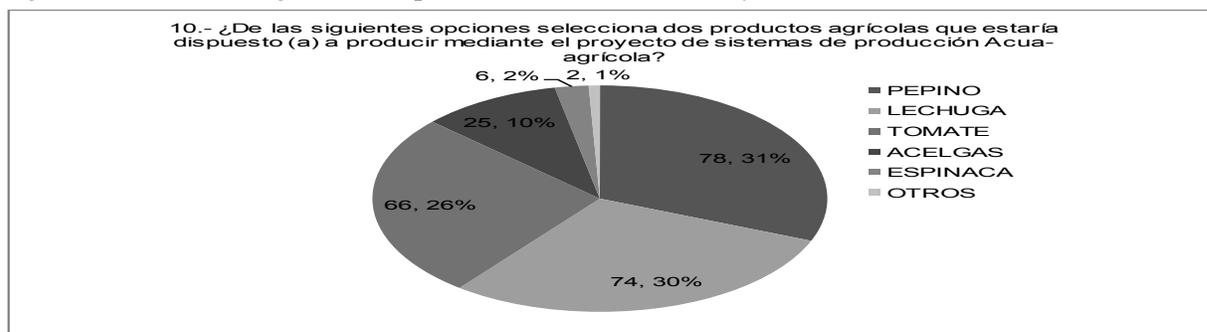

De un total de 126 personas encuestadas el 89% que representan a un total de 112 personas si estaría de acuerdo con que los productos obtenidos del sistema de producción Acua-agrícola los utilizarían para autoconsumo, mientras que el 11% restante equivalentes a 14 personas no lo utilizarían para autoconsumo.

Figura 9: Comercialización de los Productos del Proyecto

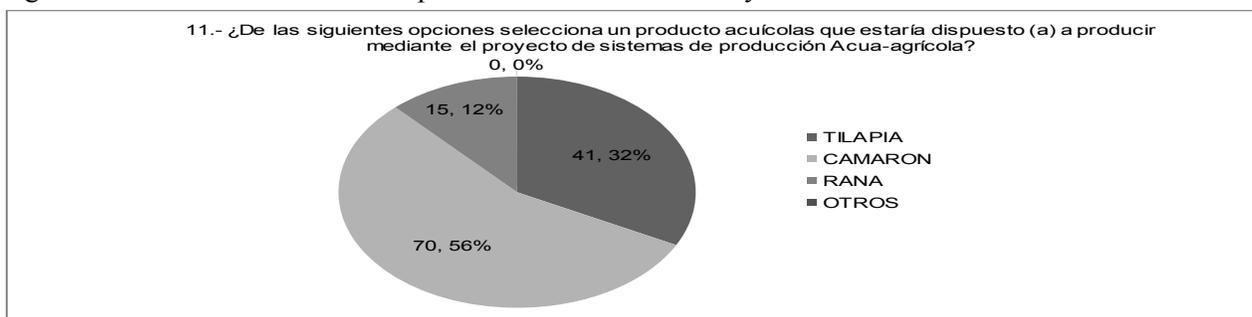

De un total de 126 personas encuestadas el 88% que representan un total de 111 personas si les gustaría comercializar los productos obtenidos en la producción como alternativa de un ingreso económico familiar extra, mientras que el 12% restante equivalente a 15 personas no les gustaría comercializar los productos.

Figura 10: Productos Agrícolas Dispuestos a Producir en el Proyecto

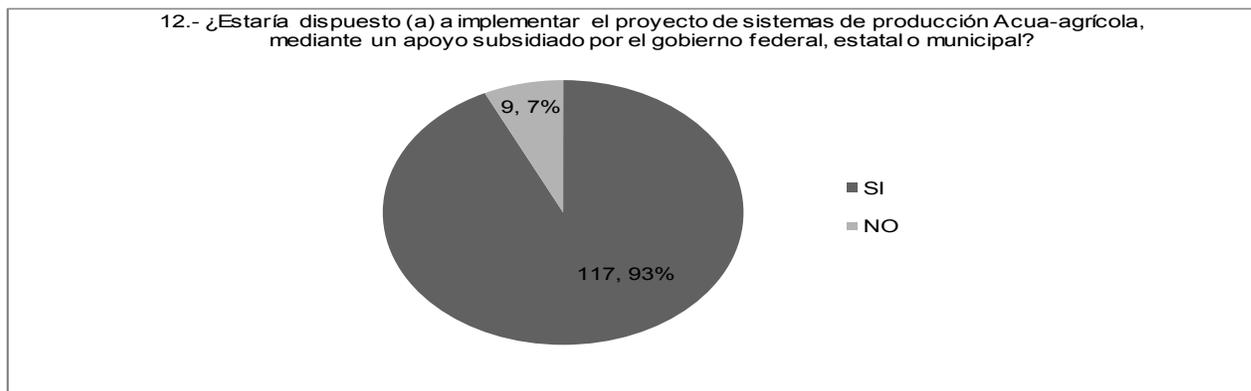

De un total de 126 personas encuestadas al 31% de las personas le gustaría que se produjera en el sistema de producción Acua-Agrícola pepino, el 30% le gustaría producir lechuga, al 26% le gustaría producir tomate, al 10% le gustaría producir acelgas, al 2% le gustaría producir espinacas y al 1% restantes le gustaría producir algún otro producto.

Figura 11: Productos Acuícolas Dispuestos a Producir en el Proyecto

De un total de 126 personas encuestadas al 70% equivalente a 70 personas le gustaría producir productos acuícolas como camarón, mientras que el 32% equivalente a 41 personas le gustaría producir tilapia y el 12% restante equivalente a 15 personas les interesa producir rana

Figura 12: Disposición de Implementar el Proyecto Por Medio de un Apoyo Gubernamental

De un total de 126 personas encuestadas el 93% que representan a un total de 117 personas si estarían dispuestos a implementar el proyecto de sistemas de producción Acua-Agrícola en el traspatio de su hogar, mientras que el 7% restante equivalente a 9 personas no estarían dispuestos a implementarlo.

## CONCLUSIONES

Al término de esta investigación de mercados se determinó la pertinencia de poner en marcha el sistema de producción Acua-agrícola en el traspatio de los hogares, así como también el impacto de los grandes beneficios que obtendrán del mismo. Con la implementación de las encuestas se obtuvo información relevante para saber si será aceptado el proyecto por las familias de la comunidad; aunque las encuestas arrojaron datos positivos acerca del proyecto, también, se tuvieron limitaciones como la falta de conocimiento en la sociedad acerca de los sistemas de producción Acua – Agrícola lo cual extendió el tiempo en la aplicación del cuestionario. Al término de la investigación de mercados y con la información obtenida, se llegó a la conclusión de que es un proyecto viable, ya que, las familias están dispuestas a implementar el sistema de producción Acua – Agrícola, por lo cual este proyecto les ayudara a mejorar su calidad de vida y obtener un ingreso extra mejorando su economía familiar y propiciar el consumo de productos orgánicos. Como recomendaciones surgen algunos puntos que a continuación se detallan: El proyecto debe implementarse, ya que la investigación arrojó resultados positivos, también al aplicar las encuestas las hortalizas más aceptadas son pepino y lechuga, los productos acuícolas con mayor grado de aceptación fueron el camarón y tilapia, la aceptación del proyecto fue en función de que el gobierno otorgara apoyo y por ultimo los encuestados a contribuir al cuidado del medio ambiente.

# **LA ESTRATEGIA DE COOPERACIÓN EMPRESARIAL: UNA ALTERNATIVA PARA FORTALECER LA VENTAJA COMPETITIVA EN LA MIPYME-CASO INDUSTRIA METAL MECÁNICA DEL SURESTE DE COAHUILA**

Baltazar Rodríguez Villanueva, Universidad Autónoma de Coahuila  
Rosalva Diamantina Vásquez Mireles, Universidad Autónoma de Coahuila  
Yolanda Mejía de León, Universidad Autónoma de Coahuila

## **RESUMEN**

La planta productiva de México está constituida en su mayoría por MiPyMes y presentan una serie de ventajas que las posiciona como un sector fundamental en la economía; sin embargo, también padecen de factores internos y externos que limitan y debilitan su competitividad. En un entorno globalizado, está demostrado que las Mipymes, no pueden acceder de manera individual fácilmente en ese ambiente. Actualmente, por lo tanto, es insostenible el “modelo” de “trabajar cada quien por su lado”, de “manera independiente”. Hoy, se requiere asociarse para trabajar en conjunto, en forma común, integrada, es decir, con nuevas estrategias de cooperación empresarial (algunas de las cuales han dado resultados exitosos). El objetivo central de la investigación es conocer y analizar si los esquemas de cooperación pueden ser una opción para consolidar la posición competitiva de la industria metal-mecánica (una de las principales actividades, por el clúster automotriz) de la región sureste del Estado de Coahuila.

Para lograrlo, se diseñó un instrumento de medición (encuesta), con escalamiento Likert, diferencial semántico y preguntas dicotómicas, considerando tres variables: La competitividad, la cooperación empresarial o asociacionismo, y los esquemas mentales o paradigmas. La encuesta se aplicó a 69 propietarios de micros y pequeñas empresas. El diseño de la investigación fue exploratoria, descriptiva y no experimental y en cuanto a la temporalidad de la recolección de los datos el estudio es transeccional o transversal. La hipótesis principal que se plantea es que la ausencia de una mentalidad de apertura, de confianza, de colaboración, de cooperación empresarial, impide que se comprenda los beneficios que se podrían obtener en la ventaja competitiva. Los resultados muestran que las empresas tienen un gran arraigo en la región, así como bastante experiencia y una alta preparación profesional de los empresarios quienes tienen una edad madura que puede limitar su cambio de mentalidad, necesario para participar en colaboración empresarial. Se detectó el grado de posición tecnológica y los factores de competitividad existentes. La desconfianza y el desconocimiento, son los motivos para no asociarse; no obstante, se identificaron áreas de interés de los empresarios para participar en esquemas de cooperación empresarial, como son la tecnología, las compras de insumos, el financiamiento, la calidad, la comercialización y las actividades de exportación. Derivado del análisis de la información, se concluye que los esquemas de colaboración empresarial son una alternativa viable que debe ser considerada por los empresarios, para fortalecer la competitividad en el mercado interno e internacional.

**PALABRAS CLAVES:** Cooperación Empresarial, Mipymes, Competitividad, Paradigmas, Empresarios

## THE STRATEGY OF BUSINESS COOPERATION: AN ALTERNATIVE TO FORTIFY THE COMPETITIVE ADVANTAGE IN THE MIPYME- CASE METAL MECHANICAL INDUSTRY IN SOUTHEAST IF THE STATE OF COAHUILA

### ABSTRACT

*The productive plant of Mexico is constituted by MSMEs and present some advantages that place them as fundamental sector in the economy; however, despite those advantages, the MSMEs have to deal with some internal and external factors that limit the competitiveness. In a globalized world, has ben showed that the MSMEs, can not get into this environment easily. Now days is hard to keep the “model” of “working everyone by itself”, in “an independent way”. Today we have to associate with someone else to work as a conjunct, for a common target, with new strategies of business cooperation (some them have had successful results). The main target of this investigation is to know and analyze if the schemes of cooperation that can be an option to consolidate a competitive position un the metal – mechanical industry (one of the main activities of the automotive cluster) in the southeast region of the state of Coahuila. To achieve this goal a measure instrument was designed (quiz) using the Likert scale, semantic differential and dichotomic questions considering three variables: cooperation between the companies, competitiveness and the mental schemes or paradigms. The quiz was applied to 69 owners of micro and small business. The design of the investigation was exploratory, descriptive, and not experimental, about the temporality of the data collection study, is transactional or transversal. The principal hypothesis that is proposed, is that the lack of an open mentality, confidence, teamwork, cooperation between companies, impede the comprehension of the benefits that could be obtained in the competitive advantage. The results show that the business have a big hold in the region, and a lot of experience and the professional knowledge from the businessmen needed to participate in the business collaboration. We detected the grade of technological position and the factors of competitiveness that existed. The mistrustfulness and ignorance, are reasons used as an excuse not to associate, however we identify some areas that resulted in a common interest in the businessmen to participate in schemes of cooperation, like the technology, purchase of inputs, funding, quality, marketing and exportation activities. Derived of the analysis of the information, the conclusion is that the schemes of teamwork between companies are the alternative that has to be considerate for the businessmen to fortify the competitiveness en the internal an international market.*

### INTRODUCCIÓN

Las micros, pequeñas y medianas empresas, en adelante (MiPyMes), han jugado un papel muy importante en la economía del país, sin embargo, las exigencias que plantean la apertura de la economía y la globalización de los mercados, tienden a debilitar su poder competitivo. En este escenario, no debe perderse de vista que lo único que eleva el nivel de vida en un país, es la productividad de sus empresas y en una época de la economía del conocimiento, resulta insostenible el “modelo” en el que hasta hoy han venido actuando la mayoría de este tipo de

empresas. Es decir, ante los grandes retos en materia de productividad y competitividad se agotó el tiempo de trabajar “cada quien por su lado”, “por su cuenta”, de manera “independiente”. Para mejorar las posibilidades de competencia en los nuevos mercados, hoy se requiere trabajar en conjunto, unidos, en forma común, de manera integrada. Es impostergable la participación de los empresarios en las diferentes formas de asociación y de cooperación empresarial. Sin embargo, hablar de esquemas asociativos o colaborativos, representa un reto, tanto por su complejidad intrínseca, así como por las múltiples formas en que se le puede abordar. El objetivo central de esta investigación es la revelación al planteamiento: ¿Los esquemas de cooperación empresarial, puede ser una opción para fortalecer la competitividad de las MiPyMes, en la industria metal-mecánica de la región sureste de Coahuila, afiliadas a Canacintra? Algunos de los objetivos particulares pretendidos son las respuestas a las siguientes interrogantes:

- ¿Qué factores de competitividad son importantes para el éxito y desarrollo de una empresa, desde el punto de vista del empresario?
- ¿En qué grado de posición tecnológica ubican los empresarios a su organización?
- ¿Cómo se consideran los empresarios con respecto a su competencia?
- ¿Existe disposición entre los empresarios para asociarse y cooperar estratégicamente?
- ¿Cuáles son las ventajas que consideran obtener los empresarios al agruparse?
- ¿Qué motivos son considerados para no agruparse y colaborar?
- ¿Qué áreas de interés se pueden distinguir para resolver problemas comunes?
- ¿Es posible presentar algunas consideraciones para la promoción y operación del **asociacionismo** empresarial para el tipo de empresas, objeto de la investigación?

Este trabajo está estructurado como sigue: en la primera parte se presenta el marco teórico referencial que brinda el soporte conceptual al tema central y a las variables o eventos: la competitividad, la ventaja competitiva, los esquemas de cooperación empresarial y los modelos mentales o paradigmas. Posteriormente se define el planteamiento del problema y la formulación de las hipótesis. Después se describe el diseño de la investigación, el tamaño de la muestra y de la población, así como las técnicas e instrumentos de medición y de recolección de los datos. Finalmente, se presentan y analizan los datos recabados para terminar con las conclusiones y recomendaciones, entre las que se puede mencionar que: La cooperación empresarial es una alternativa viable (de la industria metal-mecánica en Saltillo, Coah.) para hacerle frente a las amenazas o para aprovechar las oportunidades que, a nivel individual, resultarían difíciles de aprovechar.

## REVISION DE LITERATURA

### El Concepto de Competitividad

El término de competitividad está relacionado con la posibilidad de las empresas para competir y al mismo tiempo para generar utilidades, para Benavides E. (2001), la competitividad es...“la capacidad de las empresas o industrias de competir y posicionarse en los mercados y contextos de manera sostenible y a largo plazo.” Es importante por lo tanto, considerar el factor de rentabilidad para la permanencia de las empresas en los mercados. Pero la competitividad comprende muchos factores que relacionados tienen que ver con aspectos de calidad, de diseño del producto, de comercialización, con aspectos tecnológicos, de capital humano, etc. es decir, para comprender el concepto de competitividad, se necesita adentrarse en las interrelaciones que se dan en las áreas funcionales de la empresa, pero desde un punto de vista holístico, sistémico, integral. Por eso, es necesario saber la dimensión que las autoridades consideran al término de competitividad.

Al respecto, el artículo 2, fracción IV de la Ley para el desarrollo de la competitividad de las MiPyMes, publicada en el Diario Oficial de la Federación el 30 de Diciembre de 2002, reformada el 06 de Junio de 2006; señala que, se entiende por .....“Competitividad: la calidad del ambiente económico e institucional para el desarrollo sostenible y sustentable de las actividades privadas y el aumento de la productividad; y a nivel empresa, la capacidad para mantener y fortalecer su rentabilidad y participación de las MiPyMes en los mercados, con base en ventajas asociadas a sus productos o servicios, así como a las condiciones en que los ofrecen”.... Es evidente que el término competitividad es relativamente “nuevo” en la legislación del país y esto es importante porque se está reconociendo que los modelos económicos anteriores promovieron el proteccionismo como una acción del Estado que no consideró ni dimensionó las consecuencias y las tendencias hacia la globalización de la economía mundial.

### La Ventaja Competitiva

Otro de los conceptos que se debe comprender es el que se refiere a la ventaja competitiva, es decir cuáles son las características que hacen diferente e identifican a las empresas y organizaciones de las demás. La ventaja competitiva de acuerdo a Benavides E. (2001) hace referencia a las características y las condiciones propias de la organización que a diferencia de las ventajas comparativas, tienen muy bajas posibilidades de plagio o adquisición por parte de la competencia al menos a mediano plazo. Las MiPyMes se enfrentan a grandes retos para integrarse en el proceso de globalización mundial, pero una de sus principales limitantes es que generan muy poco valor agregado. En este sentido, es importante considerar que de acuerdo con Porter (2005) la ventaja competitiva de una empresa se origina fundamentalmente del valor que ésta sea capaz de crear y entregar a su mercado. Por otra parte, Shillito y de Marle, Flores Dávila (1999), mencionan que el valor creado es función del desempeño, precio y costo del producto que las unidades económicas sean capaces de ofrecer a sus clientes.

El generar poco valor agregado provoca que las empresas encuentren resistencia y rigidez en la estructura de precios (es decir, no pueden posicionarse con altos márgenes de utilidad), lo cual incide a su vez en que no estén en posibilidades de capitalizarse ni mucho menos de invertir o reinvertir en procesos tecnológicos que le permitan a su vez, fortalecer la ventaja competitiva. Esta situación lamentablemente se convierte en un círculo vicioso. Por otra parte, los administradores que no se esfuerzan por aprender y adaptarse a los cambios del entorno mundial, reaccionan, en vez de innovar, sus organizaciones dejan de ser competitivas y fracasan; es necesario entonces aprovechar eficaz y eficientemente los recursos para establecer una ventaja competitiva. En concordancia con Jones & George (2006) una ventaja competitiva es la capacidad que posee una organización para superar a otras produciendo bienes o servicios deseados, con más eficacia y eficiencia que sus competidores. Los cuatro elementos de la ventaja competitiva propuestos por estos autores son la superioridad en 1) la eficiencia, 2) la calidad, 3) la velocidad, flexibilidad e innovación, y 4) la sensibilidad a los clientes.

En este sentido, es sumamente importante considerar lo que Michael Porter (2005) aportó al respecto. La ventaja competitiva, menciona, es el aspecto esencial del desempeño en los mercados competitivos, y agrega “las estrategias de muchas empresas fracasan por la incapacidad de traducir una ventaja competitiva general en las medidas concretas necesarias para conseguirla”. De acuerdo con Porter, la ventaja competitiva proviene fundamentalmente del valor que una empresa logra crear en sus clientes. Puede traducirse en precios más bajos que los de sus competidores por beneficios equivalentes o por ofrecer beneficios especiales que compensan con

creces un precio más elevado. Una herramienta que este autor llama o identifica como la cadena de valores.

### Hacia La Estrategia de Cooperación Empresarial o Asociacionismo.

Entrar en un esquema de cooperación empresarial o de asociacionismo, exige un cambio de mentalidad importante en los empresarios, acostumbrados a trabajar individualmente. Este cambio de mentalidad se dificulta aún más por el hecho de que una asociación los invita a colaborar con sus competidores, aquellos a los que consideran sus “enemigos”. Participar en un modelo de asociación requiere de una mentalidad de apertura y colaboración, pero sobre todo es necesario que los empresarios comprendan que trabajando juntos pueden fortalecerse y subsanar algunas de las debilidades que les impiden alcanzar un mayor nivel de competitividad. Es decir, entrar en el asociacionismo significa entrar a un nuevo “modelo mental”, a un nuevo paradigma.

### Paradigma y Cambio de Mentalidad

Peter Senge (1998), considera los “modelos mentales” como la tercera disciplina de las organizaciones inteligentes (aquellas que aprenden), y menciona que nuestros “modelos mentales” no solo determinan el modo de interpretar el mundo, sino el modo de actuar. Los modelos mentales, señala, pueden ser simples generalizaciones, como “las personas son indignas de confianza”, o teorías complejas, tales como mis supuestos acerca de por qué los miembros de mi familia se conducen de tal manera. Pero lo más importante es que los modelos mentales son activos, pues moldean nuestros actos.

Una asociación fortalecerá y complementará la actividad productiva de los empresarios, a la vez, les permitirá mantener su individualidad al interior de sus empresas. Sin embargo, es necesario que los empresarios desarrollen y mantengan una actitud de apertura de su organización hacia el resto de sus socios en la asociación. De esta manera, se apoyarán y asesorarán mutuamente, ya que la fuerza de la asociación en el futuro, va a depender de la fuerza individual de cada una de las empresas que la integran.

Por otra parte, y tal como menciona Senge, los modelos mentales de conducta empresarial también están profundamente arraigados. Muchas percepciones acerca de mercados nuevos o de prácticas organizacionales anticuadas no se llevan a la práctica porque entran en conflicto con poderosos y tácitos modelos mentales. Una de las condiciones de la asociación empresarial que será necesario cumplir, por lo tanto, es la identificación y la construcción de lo que Senge llama la cuarta disciplina de las organizaciones inteligentes: una “visión compartida”, a la que considera como la generación de un interés común y la conceptualiza de la siguiente manera:

Una visión compartida es la respuesta a la pregunta: ¿Qué deseamos crear? Así como las visiones personales son imágenes que la gente lleva en la cabeza y el corazón, las visiones compartidas son imágenes que lleva la gente de una organización. Crean una sensación de vínculo común que impregna la organización y brinda coherencia a las actividades dispares. Una visión compartida es vital para la organización inteligente porque brinda concentración y energías para el aprendizaje. Una visión compartida es el primer paso para permitir que gente que se profesaba mutua desconfianza, comience a trabajar en conjunto, crea una identidad común. El propósito, la visión y los valores compartidos de una organización establecen el lazo común más básico.

Adicionalmente, la nueva filosofía empresarial exige el trabajo en equipo, con resultados inmediatos en una productividad mejorada. Según Gibson, Ivancevich, Donelli y Konospake (2006) la razón más importante por la que se forman los equipos es para mejorar la productividad

de la organización. Las organizaciones de todo el mundo se han percatado de que el desempeño de los equipos lleva a niveles más altos de productividad de los que se lograrían con muchos individuos que trabajaran en forma individual. Esto se debe sobre todo al hecho de que los equipos reúnen habilidades complementarias que pueden caer en una de estas categorías: experiencia técnica o funcional, solución de problemas y habilidades para tomar decisiones y habilidades interpersonales. Este concepto aplica perfectamente para el caso de la asociación. Los empresarios que participen en un modelo de asociación empresarial, deben descubrir y comprender cabalmente el significado de términos que tradicionalmente les han sido ajenos como cooperación, confianza, colaboración, participación, integración y apertura.

### Definición de Modelo de Cooperación Empresarial o Asociacionismo

Los modelos de cooperación empresarial o asociacionismo son una estrategia para que las empresas enfrenten situaciones, retos o problemas cuyas características y dirección requiere de esfuerzos conjuntos que generen sinergias. No existe una definición académica o científica de “asociacionismo empresarial”, sin embargo, para los objetivos propuestos y con la finalidad de tener una idea clara de lo que se pretende con el término de asociacionismo empresarial, se considera la definición que alguna vez se utilizó en Nacional Financiera, S.N.C., refiriéndose a “un conjunto de acciones voluntarias realizadas por los empresarios para alcanzar uno o varios objetivos comunes, de incremento en la competitividad como una alternativa para sobrevivir, crecer y desarrollarse como organización”.

El asociacionismo empresarial se convierte en un proceso y no en una figura legal o económica, sin que esto implique que dichas acciones puedan llevar a dichas figuras. Este proceso se puede dividir en cinco etapas sucesivas: la identificación, la promoción, el plan de negocio, la formalización y la administración.

### Información Estadística

Con respecto a la importancia del sector manufacturero (secundario) en la economía mexicana, tanto municipal, estatal, así como nacional, la estructura de la población ocupada, según sector de actividad, para el año 2011, la información es la siguiente;

Tabla 1: Estructura de la Población Ocupada, Según Sector de Actividad. 2011

Sector de Actividad	Nacional	Estatal	Municipal
	México	Coahuila	Saltillo
Sector Primario	13.9 %	5.9 %	0.8 %
Sector Secundario	23.4 %	32.9 %	36.3 %
Sector Terciario	62.0 %	60.5 %	62.3 %
No Especifica	0.7 %	0.7 %	0.6 %
Totales	100 %	100 %	100 %

*Fuente:* INEGI Instituto Nacional de Estadística, Geografía e Informática. *Perspectiva Estadística, Coahuila de Zaragoza. Marzo de 2012.*

Como puede observarse, el sector industrial o secundario, absorbe la tercera parte de la población ocupada en el Estado de Coahuila y el 36% en el caso de Saltillo, Coah. en ambos casos, superior a la media nacional (23.4%); la muestra de la industria metal-mecánica que se estudió, corresponde precisamente al sector secundario.

### **METODOLOGÍA**

El diseño de la investigación fue no experimental, ya que no se manipularon variables. En cuanto a la temporalidad de la recolección de los datos, el estudio es transeccional o transversal. Fue descriptivo, ya que solamente se analizaron cómo son y cómo se manifestaron algunos fenómenos y sus componentes.

La hipótesis principal que se plantea es que la ausencia de una mentalidad de apertura, de confianza, de colaboración, de cooperación empresarial, impide que se comprenda los beneficios que se podrían obtener en la ventaja competitiva. En la investigación se utilizó un instrumento de medición (encuesta o cuestionario) que incluyó 37 reactivos, los cuales se dividieron en 6 bloques: I.- Datos Generales y de Identificación de la Empresa. II.- Dirección Empresarial. III.- Competitividad. IV.- Tecnología, Innovación y Calidad. V.- Competencia. VI.- La cooperación empresarial o asociacionismo.

Para diseñar el instrumento se utilizaron varias técnicas, como el escalamiento tipo Likert, diferencial semántico y preguntas dicotómicas. Las variables identificadas para el estudio son la competitividad, los esquemas de cooperación empresarial y los modelos mentales (paradigmas). Con relación al universo o tamaño de la población, se tomó como base el Directorio Empresarial de CANACINTRA (Cámara Nacional de la Industria de la Transformación) Delegación-Salttillo, la cual divide a sus socios en 21 secciones (giros) y totaliza a 212 socios. La muestra seleccionada (69 empresas) fue no probabilística, es decir fue mediante muestreo dirigido, que selecciona sujetos típicos, se eliminaron deliberadamente empresas grandes y aquellas que no tuvieran en principio como actividad principal la metal mecánica, sin embargo, se evidenció que no era posible llegar a cubrir la muestra, por lo que tomando en cuenta la cadena productiva, se decidió incluir las empresas de la industria automotriz, fundición y de plásticos.

Los cuestionarios se levantaron en los meses de Agosto, Septiembre y Octubre de 2011. En el 2012, se revisó, analizó y organizó la información.

En el procesamiento de la información se utilizó el paquete Excel y el software estadístico SPSS en su versión 16. Se aplicaron fundamentalmente dos tipos de criterios; uno relativo a los ponderados que se usaron para verificar los resultados y otro para conocer los hallazgos con relación a los objetivos.

## RESULTADOS

Cabe aclarar que los resultados que se muestran a continuación se refieren exclusivamente al análisis del apartado de asociacionismo o de colaboración empresarial, ya que los demás resultados encontrados se han presentado con anterioridad en el trabajo denominado: “La gestión de calidad como herramienta esencial para la competitividad de las empresas de la rama metal-mecánica del sureste del Estado de Coahuila”, artículo de los mismos autores Rodríguez V. Vásquez y Mejía (2013), publicada en la Revista Global de Negocios. Se visitaron 69 empresas y presentan la siguiente distribución en cuanto a tamaño:

Tabla 2: Distribución de las Empresas Encuestadas Por Tamaño

TAMAÑO de LAS EMPRESAS	No. de EMPRESAS ENCUESTADAS	% PORCENTAJE
Micros	28	40.58
Pequeñas	33	47.83
Medianas	8	11.59
<b>TOTAL</b>	<b>69</b>	<b>100.00</b>

*Fuente; Elaboración propia con datos de CANACINTRA-Salttillo. Rodríguez Baltazar, Vásquez y Mejía 2010.*

Los negocios fueron creados entre 1964 y 2010, es decir la empresa con más antigüedad tiene 46 años en el mercado y la más reciente se creó en el 2010. Al agrupar las empresas en rangos de 5 años se observa que el 21.74% (15 empresas) se sitúa en el rango de 06 a 10 años; el 17.40% (12 empresas) en el de 11 a 15 años y la gran mayoría: 31 negocios (48.9%) tienen más de 17 años, lo que demuestra un gran arraigo en la localidad. Respecto a los esquemas de cooperación empresarial, el primer ítem en la encuesta fue identificar si el empresario consideraba que asociarse con otras empresas le redituaria ventajas competitivas, los resultados obtenidos fueron que solamente 14 empresarios (20.29 %), están convencidos de que el asociarse les genera ventajas competitivas, mientras que 29 de los empresarios (42.03 %) señalaron que probablemente si les conviene; 26 empresarios (37.68%) indicaron estar indecisos, contestaron probablemente no e incluso 5 entrevistados dijeron que definitivamente no les conviene.

A la pregunta de ¿con quién cree usted que le convendría asociarse? Las respuestas obtenidas fueron;

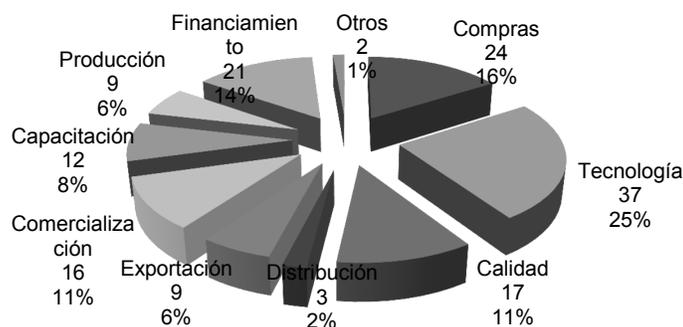

Tabla 3: Con Quien se Asociaría

¿Con quién se asociaría?	No. de Empresarios	%
Competidores	20	30.30
Proveedores	22	33.33
Clientes	19	28.80
Distribuidores	4	6.06
Otros	1	1.51
<b>TOTAL</b>	<b>69</b>	<b>100.00</b>

Fuente; Elaboración propia: Rodríguez Baltazar, Vásquez y Mejía 2010.

Con una ponderación relativamente similar los empresarios se asociarían el 33.33% con sus proveedores, el 30.30% con sus competidores, el 28.80% con sus clientes y el 6.06% con distribuidores. Otro de los puntos centrales de esta investigación es el referente a la detección de los objetivos (áreas de interés) para la posible participación en esquemas de asociación empresarial. Las respuestas a la pregunta ¿Cuál de los siguientes propósitos de asociación requiere usted? (Cabe mencionar que como se permitió más de una opción) fueron las siguientes:

Figura 1: Propósitos de la Asociación

Y finalmente, una de las preguntas fundamentales de esta investigación ¿porqué no se ha asociado con otras empresas? Cabe mencionar que aquí se exceptúan 7 empresarios que dijeron haber tenido asociaciones formales con otras empresas, por lo que la muestra se redujo a 62. Las respuestas

Tabla 4: Motivos Para No Asociarse

Motivos para no asociarse	No. de Empresarios	%
No Quiere	4	6.45
No le Interesa	16	25.80
No Confía	24	38.71
Desconoce	18	29.04
<b>TOTAL</b>	<b>62</b>	<b>100.00</b>

Es muy significativa la respuesta de “no confía”; el 38.71% de los empresarios 24 de 62 respondieron la desconfianza como un factor determinante para no asociarse; el 29.04% (18) porque desconocen los procedimientos, seguidos de un 25.8% (16) porque no les interesa y hubo 4 entrevistados que señalaron no querer asociarse, sino trabajar de manera solitaria.

## CONCLUSIONES

La edad promedio de las empresas es de 17.36 años, lo que demuestra un buen arraigo en la región. Se trata de empresarios “maduros” ya que el 67 % del total tienen más de 45 años. Esta condición resulta en una resistencia natural al cambio de mentalidad o de actitud (paradigma), necesario para participar en una asociación; sin embargo, tienen una gran experiencia y muestran una alta escolaridad. Se encontró una área de oportunidad para promover esquemas de asociación empresarial, ya que con respecto a la identificación de los factores de éxito, la respuesta de los empresarios fueron los siguientes: solo el 9 % contestaron como indispensable asociarse; el 17 % sumamente importante; el 33 % señaló que la asociación empresarial era de regular importancia y la gran mayoría, el 41 % indicaron como poco importante o no tomar en cuenta la asociación empresarial como factor de éxito. Los empresarios no consideran que el asociarse les genere ventajas competitivas, ya que solo el 20 % están convencidos, si bien es cierto que el 42 % de los empresarios señalaron que probablemente si les conviene, mientras que el 38 % indicaron estar indecisos, o contestaron probablemente no les conviene.

Uno de los principales hallazgos de la investigación, fue la revelación de los propósitos que tendrían los empresarios para asociarse. También se comprobó que la desconfianza es el principal factor para no asociarse, seguida del desconocimiento en los procedimientos. Se comprueba la hipótesis planteada en el sentido de que la ausencia de una mentalidad de apertura y de confianza, impide la comprensión de los beneficios que se podrían obtener con la estrategia de cooperación empresarial. Se detectó la coyuntura para que la Facultad de Ciencias de la Administración pueda participar en la identificación de las áreas de oportunidad, mediante diagnósticos integrales. No obstante todo lo anterior, cabe hacer las siguientes aclaraciones: La estrategia de cooperación empresarial o asociacionismo, no representa una solución válida para cualquier tipo de problema ni para todas las empresas y empresarios.

Detonar un esquema de asociacionismo implica enfrentarse a diferentes formas y manifestaciones de administrar, dirigir y liderar procesos productivos donde no resulta fácil conjugar los factores técnicos y humanos para alcanzar objetivos y metas comunes. Es un requisito indispensable que se induzca un cambio de mentalidad importante en los empresarios, acostumbrados a trabajar individualmente. Este cambio de mentalidad se dificulta aún más por el hecho de que la asociación los invita a colaborar con sus competidores, aquellos a los que consideran sus rivales o bien con sus clientes o proveedores. Por lo tanto, será necesario que los empresarios y sus organizaciones actúen de manera diferente, con una nueva mentalidad, que transiten hacia el desafío de un nuevo paradigma, que los unifique una visión compartida que posibilite el trabajo

en equipo. Por lo anterior se concluye que la estrategia de cooperación empresarial es una alternativa viable que debe ser considerada por la industria metal-mecánica en la región sureste de Coahuila, para consolidar y fortalecer su posición competitiva tanto en el mercado interno como en el internacional.

## **RESUMEN**

*En la actualidad vivimos en un mundo globalizado donde la tecnología juega un papel primordial para el desarrollo de las organizaciones, debido a que aquellas empresas que no ingresan al mundo tecnológico, se ven desplazadas por la competencia del mercado. Las unidades de producción de lácteos en México no son la excepción y particularmente las del Municipio de Ayapango estado de México, que tienen la necesidad de promocionar sus productos para posicionarse en los diferentes mercados locales, estatales, nacionales e internacionales, lo que va a permitir que sus productos sean conocidos y se posicionen en la mente del consumidor. El incremento de usuarios de internet demanda la atención de las empresas enfocando sus productos a este tipo de consumidores, para poder interactuar y comunicarse con ellos a través de la implementación de instrumentos que les permita una eficaz comunicación y estar presentes en su mente, por lo que hay herramientas tales como es el Social Media Marketing (SMM), que permite lograr dicho propósito. El SMM, combina los objetivos de marketing en internet con medios sociales como blogs, revistas, sitios de intercambio de contenidos, redes sociales y sitios de microblogging. Este tipo de marketing se centra en las comunicaciones, las marcas y la interacción social con los mercados objetivos. El posicionamiento en el mercado está enfocado en el lugar que ocupa el producto en la mente de los consumidores en relación de los productos de la competencia. El SMM tiene por objetivo primordial el escuchar, analizar, segmentar, conversar e involucrar a los clientes cautivos, proveedores y posibles clientes no cautivos para garantizar su preferencia y fidelidad de los productos y/o servicios que se ofrecen. Las unidades de producción de lácteos por medio de una buena estrategia de mercado que integre el uso del SMM les permitirá ampliar su cartera de clientes y tener información clave sobre la aceptación de los productos y de la empresa así como observar el comportamiento de los usuarios. El éxito de las empresas en el mundo digital dependerá de la publicación de contenido interesante, veraz e innovador. Es por ello que el objetivo que persigue la investigación es lograr mediante un diagnóstico formular estrategias basadas en el SMM, que le permitan a las unidades de producción de lácteos lograr su posicionamiento en los mercados locales, regionales, estatales, nacionales y hasta internacionales, detonando el territorio y buscando el mejorando la calidad de vida en la población.*

**PALABRAS CLAVES:** Social media marketing, Posicionamiento en el mercado, unidades de producción de lácteos

## SOCIAL MEDIA MARKETING AS A TOOL FOR POSITIONING THE MUNICIPALITY OF AYAPANGO, MEXICO STATE DAIRY PRODUCTION UNITS

### ABSTRACT

*Today we live in a globalized world where technology plays a key role in the development of organizations, because those companies that do not enter the world of technology, are displaced by market competition. The dairy production units in Mexico are no exception and particularly Ayapango Township Mexico state, which have the need to promote their products to position itself in the various local, state, national and international, which will allow that their products are known and are positioned in the consumer's mind. Increasing Internet users demand the attention of companies targeting products to these consumers in order to interact and communicate with them through the implementation of tools that allow effective communication and be present in your mind, so there are tools such as Social Media Marketing ( SMM ), which allows to achieve the purpose. The SMM combines the goals of internet marketing with social media such as blogs, magazines, content sharing site, social networks and microblogging sites . This type of marketing focuses on communications, branding and social interaction with the target markets. The market positioning focuses on the place of the product in the minds of consumers in relation to the competitive products. The primary aims SMM listening, analyzing, segmenting , converse and engage captive customers, suppliers and potential clients to ensure their non-captive preference and loyalty of the products and / or services offered . The dairy production units through a good marketing strategy that integrates the use of SMM them to expand their customer base and have key information about the acceptance of the products and the company and observe the behavior of users. Successful businesses depend on the digital world of publishing interesting content , accurate and innovative. That is why the objective pursued by the research is to formulate a diagnosis based on the SMM strategies that will enable dairy production units to achieve its position in local, regional, state, national and even international, detonating the territory and seeking to improve the quality of life in the population.*

**KEY WORDS:** Social Media Marketing, Marketing Position, Dairy Production Units

### INTRODUCCIÓN

En la actualidad el uso de las Tecnologías de Información y Comunicación (T.I.C) han cobrado gran importancia en el mundo de internet como es el uso de redes sociales como herramientas para interactuar y comunicarse con la sociedad y esto ha provocado el surgimiento de nuevas técnicas que implican el uso de internet para realizar actividades de marketing, tal es el caso del Social Media Marketing (SMM). El marketing es el proceso social y administrativo por el que los grupos e individuos satisfacen sus necesidades al crear e intercambiar bienes y servicios (Kotler, 2003). El SMM, combina los objetivos de marketing en internet con medios sociales como blogs, revistas, sitios de intercambio de contenidos, redes sociales y sitios de microblogging. Este tipo de marketing se centra en las comunicaciones, las marcas y la interacción social con los mercados objetivos. Ha sido tanto el impacto que han causado las redes sociales que se ha cambiado la forma de comunicación.

Afirma Oscar Rojas (2012) en su artículo que: en los próximos años veremos cambios significativos en las audiencias de redes sociales, lo cual va a representar retos importantes para los responsables de los programas de mercadotecnia y comunicación. México no se ha librado del impacto de internet y las redes sociales, pues han cobrado gran importancia con el paso del tiempo, en un estudio realizado por el Instituto Nacional de Estadística Geográfica e Informática (INEGI) sobre el aprovechamiento de las T.I.C en México plantea que el 32.2% de los hogares en México cuentan con una computadora y el 26% de los hogares cuenta con una conexión a internet, así mismo se plantea que la mayor parte de los usuarios de internet se concentran en jóvenes de 12 o 34 años de edad con una participación del 64%. INEGI (2012).

Facebook y Twitter son plataformas en internet gratuitas. Para poder acceder a estas es necesario la creación de una cuenta que incluye datos básicos sobre el usuario como: nombre, edad, sexo, ubicación e intereses, un usuario puede contar con una o más redes sociales dependiendo el fin que persiga, lo que provoca que la segmentación sea menos complicada. Facebook es un sitio de Internet que teje una amplia red de personas, instituciones, organizaciones sociales y escuelas, entre otras que quieren relacionarse, además de publicar fotos, eventos, enlaces, videos, comentarios y sugerencias, se puede mantener comunicación con compañeros de trabajo, amigos y familiares, cada día las 24 horas. La jornada (p.2011). Facebook se ha convertido en una de las redes sociales más populares en el país debido al tipo de contenido que se maneja, la accesibilidad y el hecho de que cada vez más personas se estén sumando a esta red. México ocupa el quinto sitio a nivel global por número de usuarios en Facebook, con 42 millones, Facebook es la plataforma, el puente que puede vincular exitosamente a las empresas con los consumidores" Facebook lanzó una plataforma para que las unidades productivas del país, sin importar su tamaño puedan conectarse al "social media con oportunidades enormes de negocio". (Alto Nivel 2013). Mientras que Twitter es una aplicación web gratuita que permite a sus usuarios estar en contacto en tiempo real con personas conocidas o afines en intereses a través de mensajes breves de texto. (Salinas 2012) Twitter cuenta con 500 millones de cuentas y México se encuentra en el top ten de los países que no sólo tienen más usuarios, sino también en cuanto a volumen de tweets. (El economista p2012) Con el incremento de usuarios en internet y en las redes sociales en México las empresas han empezado a preocuparse por introducirse al mundo del social media marketing para llegar a sus clientes a través de la creación de sus propios perfiles de usuarios en las redes de Facebook y Twitter. Particularmente las unidades de producción de lácteos del Municipio de Ayapango Estado de México, quienes tienen la necesidad de promocionar sus productos para posicionarse en los diferentes mercados tales como los locales, estatales, nacionales y hasta internacionales, lo que le van a permitir que sus productos sean conocidos y se posicionen en la mente del consumidor.

El municipio de Ayapango estado de México, se encuentra localizado en la zona oriente del Estado de México, entre las coordenadas, 19° 10' de latitud norte y 98° 45' de longitud oeste, se encuentra a una altura de 2,450 metros sobre el nivel medio del mar, el nombre de esta comunidad mexiquense, deriva del vocablo náhuatl ayáhuatl, que significa "lugar de neblinas en las alturas". Sus límites geográficos son: Al norte con Tlalmanalco, Amecameca y Tenango del Aire; al sur Juchitepec y Amecameca; al este Amecameca y al oeste Tenango del Aire y Juchitepec. Cuenta con una población de 8,864 de los cuales 4,511 son mujeres y 4,353 son hombres. Tiene una extensión superficial de 36.63 Km<sup>2</sup>. Su clima es subhúmedo con lluvias en verano, principalmente durante el mes de julio. (CODEMUN 2009). La industria más importante en el Municipio de Ayapango es la producción de los derivados de la leche.

De acuerdo con un estudio realizado por Social Center Selling, el 40% de los usuarios que utilizan el Social Media como herramienta de venta, aseguró que han cerrado entre dos y cinco

acuerdos gracias a las redes sociales; dejando a este medio como una de las principales herramientas para hacer y cerrar acuerdos comerciales. Gutiérrez (2013) El Posicionamiento es un principio fundamental del marketing que muestra su esencia y filosofía, ya que lo que se hace con el producto no es el fin, sino el medio por el cual se accede y trabaja con la mente del consumidor: se posiciona un producto en la mente del consumidor; así, lo que ocurre en el mercado es consecuencia de lo que ocurre en la subjetividad de cada individuo. (Arrubia 2013) El SMM tiene por objetivo escuchar, analizar, segmentar, conversar e involucrar a los clientes cautivos, proveedores y posibles clientes no cautivos para garantizar su preferencia y fidelidad de los productos y/o servicios que se ofrecen. Es por ello que se propone esta herramienta a los encargados las unidades de producción de lácteos, para poder posicionar sus productos dentro del mercado y satisfacer las necesidades de los consumidores a través el SMM

## METODOLOGÍA

La presente investigación es de tipo cualitativa ya que ha sido llevada a cabo mediante la recolección de datos que nos permiten conocer el significado y características primordiales del SMM, así como también el desarrollo y comportamiento que ha ido generando a lo largo del tiempo. Es descriptiva ya que el objetivo primordial es llegar a situaciones predominantes a través de la descripción del porque SMM puede ser considerada como una herramienta competitiva particularmente para las unidades de producción de lácteos del municipio de Ayapango Estado de México. La investigación también es de tipo no experimental ya que se basa fundamentalmente en la observación de hechos ya existente, su diseño es transversal ya que las observaciones y análisis del fenómeno se llevan a cabo en un momento determinado del tiempo El sector secundario o industrial del Municipio de Ayapango Estado de México está dedicado a la producción de derivados de la leche en la elaboración de quesos, mantequilla y requesón. De acuerdo con la información proporcionada por Darío Gabino Marcelo Silva Director Rural Agropecuario del Municipio actualmente se cuenta con 81 productores de lácteos los cuales carecen de una estrategia de marketing a través de redes sociales, es por ello que se propone al SMM como una herramienta para lograr posicionar sus productos a través de diversas plataformas en línea que les permitirán colocar sus productos y mantener su presencia en la mente del consumidor A través de SMM los productores tendrán la posibilidad de mantenerse en contacto con sus clientes, segmentar el mercado, brindarles información que les sea de utilidad acerca de sus productos y actividades que realizan. El éxito de las empresas en el SMM dependerá de la publicación de contenido interesante, veraz e innovador. Los usuarios generan gran cantidad de contenido relevante que se sitúa en un contexto determinado que lo lleva a establecer buenas conexiones entre gente afín y que conlleva a la creación de una comunidad alrededor que les permitirá a las unidades de producción de lácteos un acercamiento con la comunidad, obtener información valiosa de esta y así poder realizar acciones de acuerdo a sus perfiles y lograr su posicionamiento en la mente de los usuarios

social media marketing	
contenido conexión	contexto comunidad

*Fuente: elaboración propia*

Dichas unidades de producción, carecen de una estrategia a través de medios masivos de comunicación en línea, que les permita lograr una mejor imagen ante sus clientes, proveedores y

posibles clientes, es por ello que se propone brindar estas herramientas para realizar no solo el posicionamiento si no la permanencia en el mercado.

# UN ACERCAMIENTO AL PROCESO DE CONSTRUCCIÓN, DECONSTRUCCIÓN Y RECONSTRUCCIÓN DEL PENSAMIENTO ADMINISTRATIVO

Mary Luz Ordoñez Santos, Universidad de Pamplona  
Luz Stella Arenas Pérez, Universidad Francisco de Paula Santander

## RESUMEN

*Este artículo es producto del proyecto de investigación denominado Enfoques Cognitivos y modelos teóricos de los procesos investigativos en el campo de las Ciencias Administrativas; hace un recorrido por el desarrollo histórico en los aportes teóricos y la práctica administrativa desde la contribución de la corriente pragmática, en un intento de demostrar la producción de saberes en las ciencias administrativas. Abordar este análisis histórico documental, da respuesta sobre la forma como ha avanzado la disciplina y los determinantes que actúan simultáneamente o en varias direcciones, en coherencia con la pedagogía crítica y la construcción dialógica que privilegian la búsqueda y generación de un nuevo conocimiento en este campo. Los resultados dan cuenta de un auge en las llamadas modas administrativas a partir de las década de los ochenta con una amplia diversidad conceptual respecto al ideal de la práctica administrativa enfrentando las posturas de quienes defienden el carácter científico de la teoría para legitimar la generación de nuevos conocimientos en las ciencias administrativas.*

**PALABRAS CLAVES:** Teoría Administrativa, Modas En Administración, Pensamiento Administrativo

## AN APPROACH TO THE PROCESS OF CONSTRUCTION, DECONSTRUCTION AND RECONSTRUCTION THE ADMINISTRATIVE THOUGHT

### ABSTRACT

*This article is a product of the research project called cognitive approaches and theoretical models of the investigative proceedings in the field of administrative sciences; makes a journey through the historical development in the theoretical contributions and administrative practice from the contribution of the pragmatic stream; so, in an attempt to demonstrate the production of knowledge in administrative sciences. Addressing this historical documental analysis answers on the form as it has advanced the discipline and determinants that act simultaneously in several directions, in consistency with the critical pedagogy and the dialogic construction that privilege the search and generation of new knowledge in this field. The results give an account of a boom in the so-called fads administrative from the decade of the eighties with a broad conceptual diversity with respect to the ideal of the administrative practice facing the positions of those who defend the scientific character of the theory to legitimize the generation of new knowledge in administrative sciences.*

**JEL:** M10

**KEY WORDS:** Administrative Theory, Management Trends, Administrative Thought

## INTRODUCCION

Dentro del amplio marco de las Ciencias Administrativas se ha dado lugar a desarrollos teóricos con diversos enfoques, los cuales dan una manera de analizar la realidad, en este sentido la investigación busca presentar un estudio a partir de la literatura más relevante, la cual ayudará a abordar el análisis histórico de enfoques y modelos teóricos, que en ocasiones pareciera convertirse en polisemia terminológica desarrollada en la disciplina administrativa. Este artículo presenta un enfoque intradisciplinar con el objeto de entender los determinantes que actúan simultáneamente o en varias direcciones dependiendo de cada una de las posturas propuestas por los diversos autores, dada la no unicidad de modelos mentales, paradigmas o metáforas disciplinares.

La presente investigación tiene como punto clave, la determinación de cuáles son las tendencias sobre las que descansan los llamados libros de moda en el área administrativa, cuáles son las bases teóricas referenciadas en los libros clásicos que sustentan la práctica docente. De modo que en este marco, la comprensión general está encuadrada en una brecha que inicia con una apropiada dimensión material, sintáctica y semántica que suele resultar exitosa, tanto en países desarrollados como en vía de desarrollo y cuyo efecto se puede inferir de forma práctica en el notable efecto que en algunos espacios académicos suele causar esta información pragmática, la cual pareciera dar una orden, mandato o instrucción de cómo deben hacerse las cosas en forma mágica, provocando desplazamiento de procesos, hábitos y formas de trabajo dentro de las organizaciones, en un afán de hacer contacto con esa prometedora oferta que garantiza a través de un conocimiento y experiencia dada en otro lugar del mundo, el contacto con un augurio de éxito empresarial.

La investigación plantea las siguientes preguntas que permiten tener un panorama más preciso del objeto de estudio: ¿Cuáles son las tendencias teóricas utilizadas en el campo de las ciencias administrativas? ¿Cuáles son las modas, concepciones y enfoques teóricos que direccionan los procesos formativos en el campo de las ciencias administrativas? ¿Se está agotando la teoría administrativa? ¿Existe diversidad conceptual en el campo disciplinar? ¿Cuáles son los hitos históricos de las modas administrativas? ¿La moda administrativa aparece como resultado de un enfoque pragmático en la gerencia?

## METODOLOGÍA

En respuesta a los objetivos de la investigación, se utiliza la investigación cualitativa, con un enfoque en investigación documental, de tipo histórico hermenéutico a fin de favorecer la comprensión de textos, reconociendo las intencionalidades de los autores, desde una perspectiva crítica como opción epistemológica. El enfoque hermenéutico - crítico no se limita a la descripción, sino que asume las condiciones del contexto determinadas por factores sociales, culturales, económicos. La investigación considera importante identificar las escuelas de pensamiento que reflejan la identidad del *management*, en medio de una gran producción bibliográfica de modas administrativas. El proceso de construcción, deconstrucción y reconstrucción del pensamiento administrativo requiere reflexión sobre corrientes

epistemológicas subyacentes que permitan demostrar la relevancia de los modelos teóricos y el valor de los diversos enfoques conceptuales.

A fin de orientar la atención sobre el tema de estudio, se realiza una revisión bibliográfica, desde una perspectiva holística, a través de la indagación exhaustiva, sistemática y rigurosa, en el propósito de ampliar y profundizar el conocimiento sobre la evolución teórica de temas gerenciales, apoyados en el análisis de fuentes bibliográficas y documentales guiado por los enfoques, criterios, conceptualizaciones y comprensión subjetiva de las investigadoras, procurando el análisis inductivo, interactivo y estructural. Inevitablemente la investigación plantea un desafío, dado que se encuentra mediada por preconcepciones teóricas y visiones subjetivas del mundo, a través de las cuales se perciben los hechos y datos; encontrados y definidos en la aproximación al teorizar, desde una construcción epistemológica, basada en un enfoque positivista, cuya naturaleza legitima los supuestos y genera conocimiento científico; entendida en unas ocasiones como tradicionalmente un asunto positivista; en otras con un enfoque normativo que enfatiza en las experiencias, valores y percepciones. La recolección de información se realizó a través de fichas temáticas y matriz de síntesis en un proceso de interpretación y análisis de contenido. Al estudiar la información, se analizan los intereses teóricos dominantes de los autores en relación directa con la frecuencia de aparición en el corpus que se estudia.

## RESULTADOS

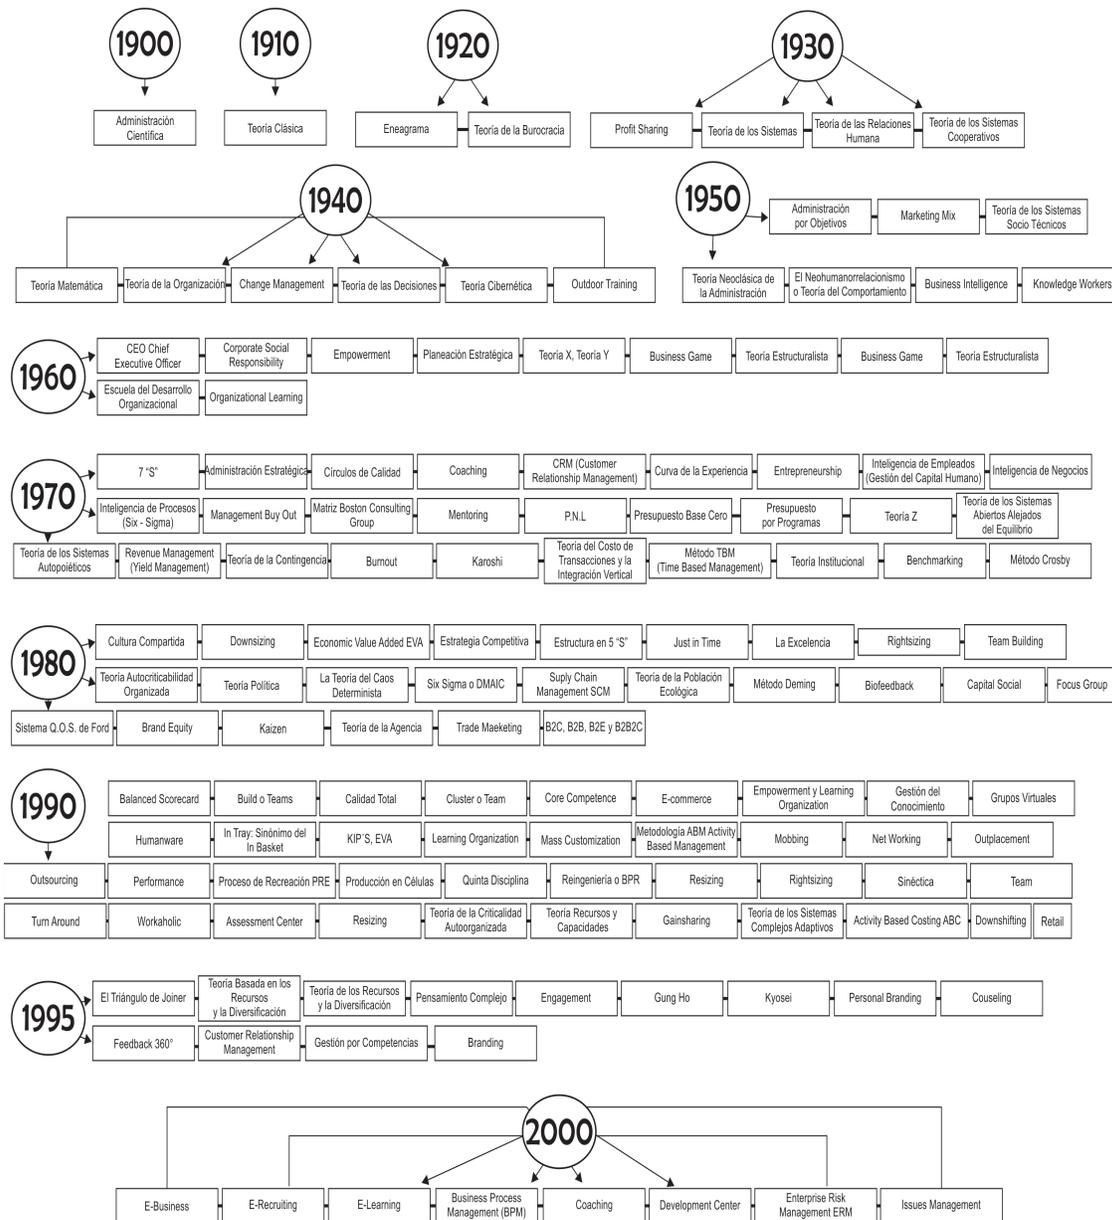

En tiempos modernos se reconoce que la enseñanza de la Administración incorpora contenidos relacionados con los componentes de formación que constituyen el foco orientador de las áreas de la organización, donde invariablemente articulan las posturas teóricas que defienden los antecedentes del quehacer de la disciplina. Consecuentemente, en ese marco de acción se estructura el devenir histórico del pensamiento administrativo, por ello una revisión de los textos expone desde los inicios, su construcción en la necesidad de dar respuesta a problemas de producción en las organizaciones, este enfoque se presenta en un periodo donde la revolución industrial marca un hito socioeconómico para los países que nos han heredado las diferentes concepciones que se defienden desde la rigurosidad científica y la práctica administrativa. La validación como corroboración del todo, en un enfoque holístico como mecanismo para derivar representaciones de constructos, bajo criterios de validez convergente, dada por las referencias de los conceptos, métodos, enfoques y modas encontradas en la investigación.

Otra consideración, evidencia la estrategia hemisférica para abordar el desarrollo del mapa de teorías, enfoques, conceptos, métodos y modas hacia un diseño orientado a la administración y organización empresarial que posibilita la búsqueda por encontrar lo mejor, combinando, mezclando y complementando en la finalidad de enriquecer el trabajo empresarial. Sin embargo, de manera individualizada, se ha profundizado en las fortalezas y debilidades, de tal manera que cada una –en ocasiones- solamente permite optimizar un uso adecuado y pertinente bajo un único modelo, en un área específica –talento humano, producción, mercadeo, etc. Finalmente, el tiempo de desarrollo de la disciplina administrativa no constituye una limitación sino un excelente espacio –aunque sin esperar demasiado, pues en ocasiones el pragmatismo empresarial no permite discurrir por la vía de la teoría del conocimiento- en la intención de ser una preocupación de investigadores y estudiosos por el desarrollo de teoría administrativa.

Como se indicó con anterioridad, las tendencias teóricas utilizadas en el campo de las ciencias administrativas, direccionan los procesos formativos al conceptualizar, contrastar y criticar desde

la estructura científica las premisas, que con el paso del tiempo se convierten en el discurso expandido para la comprensión de la realidad empresarial. Sin embargo, en la presente investigación se omitió el paradigma positivista según el cual las teorías nunca pueden mostrarse como verdaderas en tanto que no importa cuántas observaciones positivas son obtenidas en apoyo a la teoría, por ello, se consideró más útil

Figura 1: Devenir Histórico del Discurso Administrativo

*Escapando del debate realismo-antrealismo, en la Figura 1 se encuentra un recorrido histórico, desde una posición que sostiene que no hay ningún objeto espacio-temporal que no esté ligado a una red de relaciones causales con otros objetos y que da lugar a explicaciones, puesto que ninguna proposición es hecha verdadera por nada y puesto que ningún enunciado representa nada, todo los términos candidatos a la verdad están a la par con respecto a su relación en una realidad independiente, de modo que al estudiar el contenido denominado devenir histórico del discurso administrativo para un caso de arbitraje éste tiene meramente como propósito presentar cuestiones, términos, paradigmas, modas, enfoques y teorías disciplinares. Fuente: elaboración propia*

## RESUMEN

*El enfoque de género referido al empoderamiento económico resulta de gran interés a nivel regional. Por ello, la investigación tiene como objetivo hacer un análisis de la relación entre el perfil de las mujeres emprendedoras y el acceso al microcrédito, en el Estado Coahuila, México. La indagación empírica abarcó una muestra de 52 micro y pequeñas empresas en Saltillo, Coahuila, con la aplicación de una encuesta que mide la percepción de las empresarias en los sectores de industria, comercio y servicios. Como resultados se evidencia un predominio de la conjunción de motivos como la necesidad y oportunidad para emprender un negocio, mayor concentración en los sectores de comercio y servicios y que más del 75 % de las mujeres tiene dependientes económicos. No existe discriminación para el acceso al microcrédito, pero no se utilizan todas las posibilidades u ofertas existentes, lo cual está vinculado a los diferentes perfiles y sectores empresariales.*

**PALABRAS CLAVES:** Emprendedurismo Femenino, Empoderamiento Económico, Microcrédito

## RELATIONSHIP AMONG THE ENTREPRENEUR WOMEN'S PROFILE AND THE ACCESS TO MICROCREDITS: AN ANALYSIS IN MICRO CORPORATIONS OF SALTILLO, COAHUILA

### ABSTRACT

*The gender focus referred to the economic empowerment results of huge interest in a regional level. Therefore, the investigation has its objective to make an analysis of the relationship among the entrepreneur women's profile and the access to microcredit in the state of Coahuila, Mexico. The empiric question reached a sample of 50 micro and small corporations in Saltillo, Coahuila with the application of a survey that measures the perception of a business woman in the sectors of industry, commerce and services. As a result there is an evidence of the predominance of the conjunction of motifs just as the necessity and opportunity to start a business, major concentration in commerce and services sectors, and that more than 75% of women have economic dependents. There is no discrimination to the access to microcredit, however not all the possibilities or offers that exist are used, which is related to the different profiles and business sectors.*

## INTRODUCCIÓN

El incremento de la participación de la mujer en las actividades productivas, además de significar una ruptura con el paradigma social tradicional de la mujer relegada solamente a las tareas domésticas y al cuidado de la familia, ha impactado también en la economía nacional. Sin embargo su desarrollo laboral como empleada o como empresaria independiente continúa limitándose en función de estereotipos y comportamientos enquistados desde tiempo atrás. La mujer actual tiene que enfrentar diversos obstáculos en su participación laboral, a menudo encubiertos, y tratar de posicionarse al emprender un negocio, para poder acceder a las diferentes esferas del mundo empresarial. El emprendimiento requiere de una capacidad económica que en muchas ocasiones la mujer no tiene, y es así como en muchas ocasiones se requiere de obtener financiamiento por diversas vías.

Con la finalidad de propiciar el empoderamiento y las oportunidades económicas para mujeres y niñas en México, los gobiernos fortalecerán y apoyarán redes de empresarias y alianzas público-privadas que faciliten el intercambio de información, capacitación y mejores prácticas a fin de empoderar a las mujeres y que éstas se beneficien de las oportunidades en el ámbito económico; promoverán el acceso a la capacitación, a los mercados y a los mecanismos de financiamiento para mujeres empresarias, particularmente en la pequeña y mediana industria; desarrollarán acciones bilaterales para facilitar la vinculación económica de las mujeres, como un elemento central de las estrategias para incrementar la competitividad económica mutua; y alentarán la creación de oportunidades para las mujeres en todos los niveles del sector laboral formal, a fin de que puedan beneficiarse de la capacitación, de las oportunidades de desarrollo y de los programas de compensación y otorgamiento de beneficios. (INMUJERES, 2013)

En particular, en los últimos años se ha potenciado el incremento de las oportunidades para obtener créditos de diversas maneras, incluso dirigidos específicamente a mujeres, bien sea por las instituciones bancarias como por ejemplo la línea de MUJER-MUJER, o por otras instituciones sociales o gubernamentales que gestionan programas de microcréditos, que surgieron con defensores y detractores, como una forma de reducir la pobreza y dar esa facilidad a ciertos grupos que generalmente no son sujetos de crédito en instituciones bancarias. Estos programas han sido impulsados en México por varios organismos, y aunque no se sabe con precisión el número de entidades de ahorro y crédito popular que existen en México, se identifican como las redes más importantes a la Asociación Nacional de Microfinancieras y Fondos y Pro Desarrollo Finanzas y Microempresas.

La problemática del financiamiento de las MIPYME mexicanas está identificado como uno de sus problemas fundamentales en diversos estudios en la región (Molina Morejón, Armenteros Acosta, Elizondo, Barquero Cabrero, & Espinoza Arellano, 2011); FAEDPYME, 2011). Por ello en el informe MIPYME de México para el 2012 se plantea la necesidad de desarrollar e implementar mecanismos, procedimiento y políticas crediticias más adecuadas a las características estructurales de la MIPYME (Martínez Serna, et al, 2013). El financiamiento a las MIPYME puede provenir por parte de alguna institución bancaria o por algún apoyo de fondo gubernamental, este último además ofrece asesoría y capacitación para el acceso a las diversas fuentes de financiamiento, incluyendo los orientados a promover la innovación por parte del

CONACYT; en las cuales no se presentan rasgos de discriminación de género. Una de las formas de crecimiento de un negocio es a través del financiamiento, por lo que muchos negocios han podido incrementar sus ventas a través de las ayudas financieras bancarias y/o gubernamentales (Treviño Ayala, M. E.; Villalpando Cadena, P.; Lozano Treviño, D.F.; Treviño Ayala, R.; Barragán Codina, J. N.; Flores Estrada, M.A. (2012). Pero según el Banco Interamericano de Desarrollo en México y la Comisión Económica para América Latina y el Caribe ECLAC (2000-2011), existe la percepción de que el financiamiento es el principal obstáculo para el desarrollo de las empresas, pues cerca de las dos terceras partes de ellas enfrentan importantes restricciones para encontrar financiamiento. Derivado de lo anterior el objetivo del presente trabajo reside en analizar el acceso al microcrédito por las microempresas dirigidas por mujeres, y su relación con el perfil de las mujeres emprendedoras. La estructura del trabajo se presenta con una primera sección dedicada a la revisión de literatura especializada dónde se comienza por mencionar el avance que ha tenido la mujer en la armonización de roles, se analizan posibles fuentes de financiamiento, el origen, concepto, y papel de los microcréditos con diferentes ejemplos y resultados de estudios previos. Posteriormente se explica la metodología empleada para cumplir el objetivo propuesto. En Resultados y Discusión se analiza el perfil de las mujeres emprendedoras, el nivel de satisfacción con el acceso al microcrédito y la importancia que le conceden al crédito o apoyo financiero. Finalmente se ofrecen Conclusiones y Referencias Bibliográficas.

## REVISION DE LITERATURA

La mujer actualmente ha aprendido a armonizar sus roles de su actividad de madre, esposa y empresaria lo que le ha ido dando oportunidad de crecimiento en sus negocios los que pueden crecer con apoyos financieros gubernamentales que impulsan el emprendimiento femenino, sin embargo, a pesar de que en los últimos años se ha registrado un incremento constante de la participación de las mujeres en las actividades económicas, el acceso que ellas tienen para ser propietarias de una empresa es todavía mucho menor que el acceso con el que los hombres cuentan (INMUJERES, 2010)

En general, los estudios afirman que el financiamiento ha llegado a darse de diferentes formas: los propietarios han recurrido a sus ahorros personales con el fin de invertir en la empresa y mantenerla de pie y también se ha utilizado el financiamiento de personas que son consideradas cercanas al propietario (Arteaga & Lasio, 2009) o una combinación entre ahorros personales, préstamos de familiares y préstamos bancarios (Pushpakumar & Athula Wijewickrama, 2008, citado por Treviño Ayala, et al, 2012). Existen autores que establecen la deuda más común, y también la más cara, suele ser la que proveen las instituciones bancarias y la otorgada por compañías de préstamo comercial. Así mismo la tasa de interés y la burocracia en trámites y garantías que exige la banca; además del requisito de aval con solvencia económica son los obstáculos principales para la obtención de financiamiento bancario. (Martínez, A. G., de Lema, D. G., & Hernández, S. M. (2009).

Como una solución a las barreras existentes para la obtención de financiamiento bancario surgen los microcréditos como fuente de financiamiento para pequeños negocios, lo que ha tomado un gran auge en las últimas décadas. Uno de los primeros impulsores de este sistema fue el Grammen Bank o Banco de Aldea, en Bangladesh, fundado por el profesor Muhammad Yunus; y desde el principio, las mujeres fueron un componente esencial de su visión; en una sociedad dónde las mujeres son consideradas inferiores. (Fernández, 2010), (León, 2012) No existe un consenso en el esclarecimiento del concepto de microcrédito. La Conferencia Internacional sobre Microcrédito desarrollada en Washington DC en 1997, lo define de la siguiente manera: “Los

microcréditos son programas de concesión de pequeños créditos a los más necesitados de entre los pobres para que estos puedan poner en marcha pequeños negocios que generen ingresos con los que mejorar su nivel de vida y el de sus familias”. Desde ese mismo momento se hizo especial referencia a los microcréditos destinados a las mujeres porque se parte del supuesto que entre los más pobres en muchos casos están las mujeres. La definición sugerida por la Cumbre del Microcrédito establece que, además de que se trata de programas que proporcionan pequeños préstamos a personas muy pobres para proyectos de autoempleo generadores de renta, se puede encontrar una doble vertiente en el microcrédito: como un determinado instrumento financiero y como instituciones, que pueden adoptar formas jurídicas y organizativas muy distintas, que emplean mayoritariamente este instrumento. (Nieto, 2005) El estudio que se pretende desarrollar se enfoca en el microcrédito como instrumento financiero y su uso por las mujeres emprendedoras.

En México los microcréditos surgieron como apoyos para personas que perdieron sus negocios con el terremoto en 1985, aunque se reconoce que hay una tradición mexicana en este sentido que se remonta a los años 30 con las cajas de ahorro; y como política pública se reconocen en el 2000 y el 2001. (Díaz Amador, 2001) El Programa Nacional de Financiamiento al Microempresario (FINAFIN) en el período comprendido desde inicios del 2001 a julio del 2006 otorgó 1,187,412 microcréditos, el 53 % de ellos a mujeres. (Betancourt, 2008) En la actualidad, los mecanismos tradicionales implementados desde los gobiernos centrales para impulsar la economía ya no son suficientes para solucionar los crecientes problemas de los países en vía de desarrollo. Las expectativas para lograr economías con crecimiento en dichos países se han puesto sobre su capacidad para fomentar el empresariado y tienen, como una de sus principales herramientas, la posibilidad de acceso al microcrédito por parte de los sectores que demuestran más altos índices de desempleo, las mujeres cabeza de familia y los jóvenes que por primera vez intentan ingresar al mercado laboral. (Patiño Castro, 2010). Para la microempresa como cualquier negocio, el microcrédito es una puerta de acceso al financiamiento externo alternativo al sistema financiero tradicional. El estudio previo publicado por este equipo de investigación dos ciudades de Coahuila, México; arroja que son muy similares las características de las emprendedoras en las ciudades de Saltillo y Torreón, atendiendo a las dimensiones y variables analizadas.

A continuación se retoman las principales coincidencias y diferencias. El promedio de edad es menor en Saltillo (40) con respecto a Torreón (47); hay mayor porcentaje de mujeres emprendedoras en Torreón, con nivel universitario (68%), que en Saltillo (48%); en ambas ciudades predomina la conjunción de motivos para emprender (pero en Saltillo prevalece la necesidad y en Torreón, la oportunidad); el comportamiento en los sectores es similar, mayormente en comercio y servicios, y más de 75 % en ambos estudios tienen hijos menores o dependientes económicos. (Guerrero Ramos, L; Gomez Gutierrez, E; Armenteros Acosta; M.C (2013). En esta investigación se parte del supuesto de que el perfil de la mujer emprendedora determina el desarrollo del negocio que emprende y favorece el acercamiento de las diferentes instancias; públicas y privadas para acceder a los microcréditos que son una fuente importante de financiamiento para desarrollar y consolidar su empresa.

## **METODOLOGÍA**

La presente investigación es de carácter exploratoria y descriptiva acerca del acceso y resultados del microcrédito obtenido en las empresas creadas por mujeres emprendedoras. Para ello se aplicó un cuestionario que combina el instrumento sobre el perfil de las mujeres emprendedoras (Valencia Silva, 2010) validada por ESADE, España y en dos estudios previos en las ciudades de Saltillo y Torreón (Guerrero Ramos, et al, 2014) y el instrumento sobre el microcrédito en las

MIPYME (Patiño Castro, 2010) validada en Bogotá. Se combinaron ambos instrumentos dado el objetivo de presente trabajo de analizar la relación entre el perfil de mujeres y el acceso y resultados de los microcréditos. La fiabilidad del instrumento se comprobó a través del “ $\alpha$ ” Alpha de Cronbach de 0.926609192 aceptable. En la tabla No. 1 se muestran las variables del cuestionario que serán objeto de estudio en este trabajo así como Alpha de Cronbach de cada grupo de ítems. El estudio empírico se realizó con 52 mujeres en el periodo de septiembre-octubre del 2013 mediante entrevistas individuales a empresarias de micro empresas, de los sectores de comercio e industria, en su mayoría pertenecientes a la Confederación Nacional de la República Mexicana (COPARMEX Coahuila, Sureste). Para el procesamiento de los datos se utilizaron técnicas estadísticas descriptivas y se realizó contrastación correlacional mediante la prueba no paramétrica Kruskal Wallis teniendo en cuenta el tamaño de la empresa.

Tabla 1: Operacionalización de Variables Del Estudio

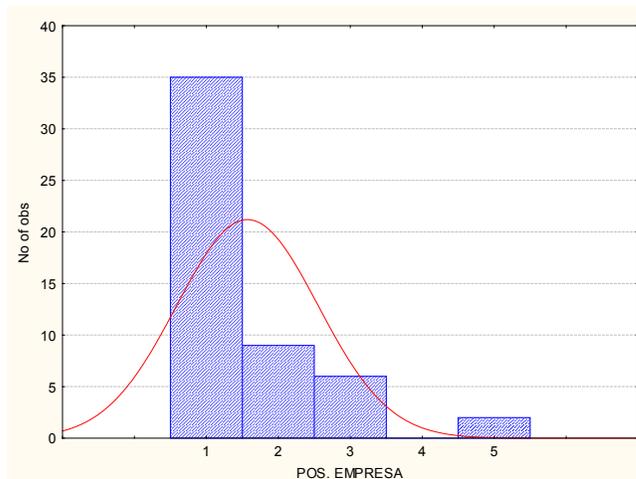

Variable	Definición operacional	Número de ítems	Alfa de Cronbach
Perfil de mujer emprendedora	Datos sociodemográficos de la mujer emprendedora.	5 ítems	Variables control
Colaboración familiar	El nivel de implicación y apoyo de los familiares desde creación y desarrollo de la empresa	5 ítems	.875
Resultados de innovación	Modalidades de innovación introducidas: Productos y servicios; Procesos y Sistema de gestión y sus diferentes tipos.	7 ítems	.907
Desempeño de la empresa	Indicadores para medir resultados tangibles e intangibles.	5 ítems	.860
Objetivos personales	Percepción del cumplimiento de objetivos tales como la conciliación de trabajo y vida personal, grado de satisfacción, autoestima, calidad de vida y relaciones con la familia	5 ítems	.842
Comportamiento del microcrédito	Valoración del comportamiento real de las características principales del microcrédito recibido.	12 ítems	.938
Impacto del microcrédito	Resultados reales del microcrédito en cuanto al desempeño económico y financieros.	6 ítems.	No aplica.

## RESULTADOS

### Perfil de Mujeres Emprendedoras.

Para la determinación del perfil de la mujer emprendedora se contempló la posición en la empresa, nivel de estudio, estado civil, No. de dependientes económicos y motivación en la creación de empresas, cuyos resultados presentamos a continuación.

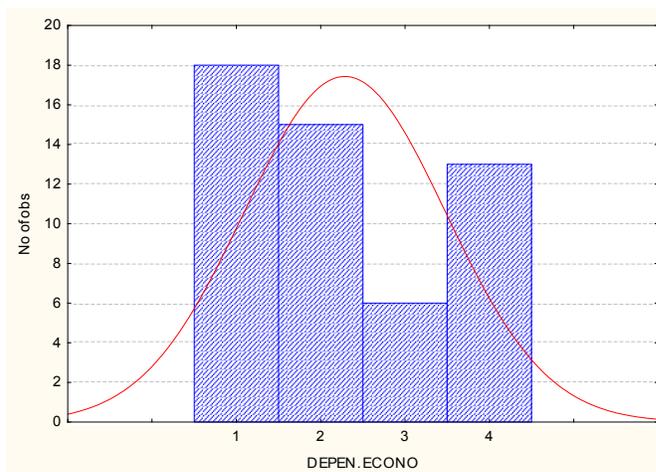

Figura No. 1: Posición en la Empresa

En la figura No.1 se marca una posición de la emprendedora como propietaria en un 67.31%, lo que determina el grado de compromiso de la misma en el desarrollo de la empresa a través de financiamiento como posibilidad.

El 75% de las mujeres emprendedoras de la muestra son casadas (2) y solo el 11.5% (1) y 13,5 % (3) son solteras y divorciadas respectivamente, lo que significa que en su mayoría existe una conciliación entre la vida familiar y empresarial. En cuanto al nivel de estudios de las mujeres empresarias que accedieron a apoyos financieros para su empresa; el 55.77% tiene estudios universitarios, el 25% estudios medios, 9.62% estudios elementales, 5.77% estudios de posgrado y 3.85% sin estudios. Lo que significa que el nivel de estudios de licenciatura tiene una relación directa con el acceso a apoyos financieros, lo que habla de la seguridad y decisiones que se requieren para el acercamiento a los órganos que lo otorgan

Figura No. 2: Dependientes Económicos

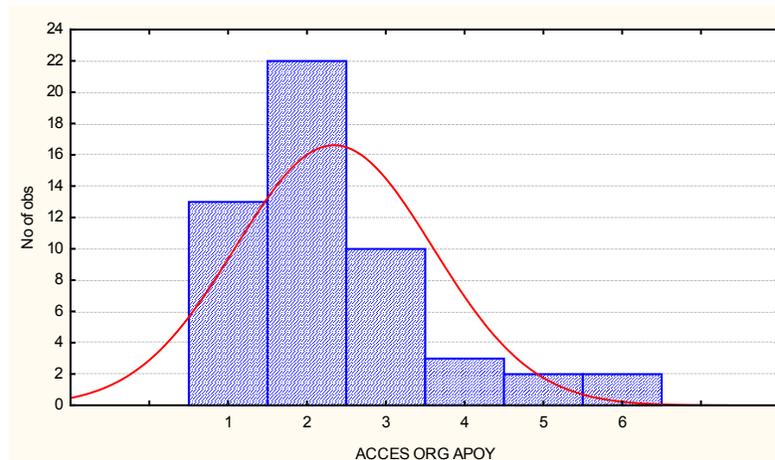

Se refleja que el 34.62% tienen dependientes hijos menores de 18 años, el 28.84% tienen dependientes hijos mayores de 18 años, el 11.54% son dependientes familiares mayores que en la mayoría son sus padres.

### Análisis Del Microcrédito Para Mujeres Emprendedoras

Dentro del estudio del microcrédito se analizó por una parte la importancia asignada a las características principales del microcrédito, como el acceso, uso y aplicación, el tiempo de

trámites, la seguridad en la gestión y la confianza en los organismos financieros, entre otros, lo cual se muestra en la Figura No.5.

Figura No. 3 Nivel de Satisfacción con el Acceso Al Microcrédito

En cuanto al acceso a los créditos y financiamiento; como puede observarse la gráfica muestra el 25% muy satisfactorio, el 42.30% satisfactorio, 19.23 indeciso y en el extremo contrario muestra solo un 3.84 extremadamente insatisfactorio.

El 48,07% de las mujeres emprendedoras han recibido microcréditos durante los últimos tres años, y su valoración tanto del comportamiento de las características como de sus resultados y cumplimiento de sus expectativas, se tiene una marcada tendencia que muestra un 40.38% de muy satisfecho, y un 40.38% satisfecha, un 13.47 indeciso, 1.92 insatisfecho y 3.85 extremadamente insatisfecho. Sobre el impacto en el acceso a las microcréditos recibidos podemos resaltar los siguientes aspectos: En general las mujeres empresarias que tuvieron acceso a los créditos muestran una mejoría en sus negocios en cuanto a ventas y utilidades de un 25.09%, lo que permitió establecer mayores relaciones comerciales, se abre la posibilidad de generar mayores empleos y aprendieron a manejar mejor su empresa.

Tabla No. 2: Importancia Del Crédito o Apoyo Financiero

	Media de la escala si se elimina el elemento	Varianza de la escala si se elimina el elemento	Correlación elemento-total corregida	Alfa de Cronbach si se elimina el elemento
importancia información	41.84	155.295	-.230	.949
importancia uso financiamiento	39.75	128.474	.878	.928
importancia acceso	39.94	122.616	.908	.926
importancia tiempo a tramites	40.00	126.640	.810	.930
importancia información apoyos	40.04	122.358	.880	.927
importancia accesibilidad instancias	40.18	121.868	.810	.930
importancia libertad decisión	40.18	121.788	.836	.929
importancia empeño gestión	39.80	132.801	.574	.939
importancia confianza organismos	39.47	132.134	.671	.935
importancia planeación estrategias	39.33	137.147	.551	.939
importancia canalización apoyos	39.71	130.572	.666	.935
importancia apoyo asociaciones	39.88	121.266	.913	.925

En la tabla No. 2 se muestra la relación positiva en cuanto a los apoyos financieros y se observa un Alfa de cronbach con un alto grado de confiabilidad; los resultados positivos en este bloque son los siguientes: el 51.92% consideran el acceso a la información para apoyos financieros muy satisfactorios, en cuanto al monto otorgado el 40.38% lo consideran muy satisfactorio, el acceso a los órganos de apoyo 42.31% satisfactorios, en cuanto al tiempo dedicado 42.31% muy satisfactorio, flexibilidad en el trato 46.15

*satisfactorio, requisitos y monto otorgado 38.46% satisfactorio, en cuanto a barreras y limitaciones 40.38% satisfactorio, seguridad en la gestión 36.54% muy satisfactorio, grado de confianza 40.38% satisfactorio. Cumplimiento de expectativas 40.38% muy satisfactorio, y retroalimentación de clientes y proveedores 51.92% muy satisfactorio.*

## CONCLUSIONES

En México y en otros países no se encuentran estudios sobre la relación que existe del perfil de las mujeres en el acceso al microcrédito. Se tienen estudios por separado sobre el perfil de las mujeres emprendedoras y sobre los microcréditos para MIPYME. El presente estudio empírico contribuye a establecer una relación y su importancia del perfil de las mujeres y su acceso al microcrédito, cuan determinante es su posición, educación, estado civil y número de dependientes en la participación y acercamiento a las distintas instancias que otorgan apoyos financieros a las micro y pequeñas empresas.

La posición de la emprendedora como propietaria en un 67.31%, determina el grado de compromiso en el desarrollo de la empresa, existe una conciliación entre la vida familiar y empresarial ya que un 75% son casadas y viven en pareja, mostrando un nivel de estudios universitarios en su mayoría y con dependientes económicos en línea ascendente y descendente, lo que incrementa el apoyo moral de la familia en su rol de empresaria. El 48,07% de las mujeres emprendedoras han recibido microcréditos durante los últimos tres años, y su valoración tanto del comportamiento de las características como de sus resultados y cumplimiento de sus expectativas, se tiene una marcada tendencia que muestra un 40.38% de muy satisfecho, y un 40.38% satisfecha, un 13.47 indeciso, 1.92 insatisfecho y 3.85 extremadamente insatisfecho. Los microcréditos recibidos según las mujeres encuestadas incidieron en el incremento de las ventas y las utilidades de sus negocios posibilitándoles mejores relaciones comerciales e impulsar el desarrollo de sus empresas.

# **ESTUDIO SOCIO ANTROPOLÓGICO DE LAS CONCEPCIONES, VALORES, PRÁCTICAS Y ACTITUDES SOBRE SEXUALIDAD Y GÉNERO DE LOS PRESTADORES DE SERVICIOS TURÍSTICOS DEL ESTADO DE SONORA PARA LA ATENCIÓN A CLIENTES DISIDENTES DE SEXO Y GÉNERO**

Laura Elena Woolfolk Gallego, Universidad Estatal de Sonora

## **RESUMEN**

*El turismo es un fenómeno social en constante transformación, siguiendo la dinámica de la sociedad. A partir de ahí surgen diferentes alternativas del turismo en las que se incluye el turismo gay, LGBTTTI (lesbiana, gay bisexual, transexual, transgénero, travesti e intersexual) o disidente de sexo y género, es decir, el turista con identidad sexual y de género distinta a las identidades sexo genéricas dominantes.*

*El presente trabajo refleja la revisión bibliográfica que será guía para realizar la investigación que pretende conocer si las reglamentaciones hegemónicas, es decir, las reglamentaciones heteronormativas, regulan las concepciones, valores, actitudes y prácticas de los prestadores de servicios del sector turismo del Estado de Sonora para la atención a clientes disidentes de sexo y género, obstaculizando la oferta de un servicio sin discriminación. En el marco de una investigación cualitativa se estudian las prácticas del servicio, protocolos institucionales, competencias laborales, concepciones y valores organizacionales, actitudes y percepciones del prestador del servicio de las empresas turísticas; partiendo de una revisión documental y utilizando etnografía (entrevista a profundidad y observación) como herramientas de investigación.*

## **INTRODUCCIÓN**

El turismo es un fenómeno económico-social en constante transformación. Una modalidad del turismo es el LGBTTTI (lesbiana, gay bisexual, transexual, transgénero, travesti e intersexual) o disidente de sexo y género, esto es, el turista con identidad sexual y de género distinta a la heterosexual. Este trabajo presenta el planteamiento de una la investigación que determinará la influencia de las reglamentaciones hegemónicas heteronormativas, en las concepciones, valores, actitudes y prácticas de los prestadores de servicios turísticos del Estado de Sonora en la atención a clientes disidentes de sexo y género. Y está estructurado de la siguiente manera: Primero se muestra la revisión literaria, en este caso revisión bibliográfica que dará pie a iniciar la investigación que nos ocupa. Se han considerado los siguientes ejes temáticos. El turismo y su impacto social y económico la modalidad del turismo LGBTTTI como respuesta a una dinámica social que se transforma. La sexualidad como construcción social, el campo sexual de Hermosillo y la historia del discurso de discriminación y heterosexista en el estado de Sonora.

Después se muestra el planteamiento del problema, la hipótesis y los objetivos tanto generales como específicos del proyecto de investigación. Para concluir con una serie de afirmaciones que se sostienen a partir de la revisión bibliográficas y sustentará estudio socio antropológico de las concepciones, valores, prácticas y actitudes sobre sexualidad y género de los prestadores de servicios turísticos del estado de Sonora para la atención a clientes disidentes de sexo y género

## **REVISION LITERARIA**

El turismo es un fenómeno cuyo desarrollo debe ser prioritario en todas las naciones, principalmente por generar ingresos y empleos, entre otros factores que impactarán la economía de un país; su relevancia estriba en el peso económico que este sector aporta a la dinámica pública y privada. Así mismo, es una actividad que en los últimos años ha representado una gran oportunidad de crecimiento y desarrollo, lo que permite elevar la calidad y el nivel de vida de los habitantes de las zonas turísticas por lo señalado anteriormente: generación de empleos, desarrollo e ingresos para la sociedad, las empresas, sus miembros y en general para el país.

No obstante, dada la importancia económica del turismo, ha obligado a instituciones e investigadores a direccionar su estudio desde una perspectiva unidireccional: el turismo como una actividad económica. El Dr. Albert Blasco Peris, coordinador de los estudios de turismo y del congreso de ocio y turismo OCITUR 2012, (Peris, 2012) señala que es necesario exponer los impactos macroeconómicos para evitar que el ciudadano crea que del turismo sólo se benefician unos cuantos; infiere que deben determinarse y cuantificar los puestos de trabajo directo, indirecto e inducido que representan esta actividad. Así mismo, debe informarse cómo los ingresos por turismo han ayudado y continúan haciéndolo año tras año, a reducir el déficit de la balanza de pagos de nuestro país, una balanza estructuralmente deficitaria; y debe explicarse también, entre otros puntos, el elevado efecto multiplicador que tiene para nuestra economía. En definitiva, tenemos que la actividad turística y los turistas que nos visitan han influido, en gran manera, a que hoy seamos un país desarrollado y que disfrutemos de la sociedad del bienestar.

Sin embargo, es importante no solo considerar al turismo como un fenómeno con repercusiones económicas relevantes; es imprescindible resaltar la otra serie de beneficios y/o consecuencias que conlleva el desarrollo de la actividad turística; como consecuencia del turismo se estrechan los lazos de amistad y/o desacuerdos entre pueblos y personas de distintas regiones del planeta, tejidos culturales que se entrelazan; también se modifican la producción y la naturaleza del arte y artesanía local. Por lo que es importante, como señala Miguel Matute Peña, el hecho de que se haga necesario estudiar profundamente su impacto a niveles macrosocial y comunitario, debido a que el turismo puede provocar y causa determinados perjuicios y molestias a nivel comunitario, que pueden llegar a repercutir a nivel macrosocial y además existen posibilidades de potenciar la acción comunitaria en aras de aumentar la calidad de la oferta turística. (Matute Peña, Aguilar Macias , & Asanza Rubio , 2013)

Siendo el turismo un modelo para la promoción del desarrollo regional en países como México y por consiguiente en cada una de sus entidades federativas, tal es el caso del estado de Sonora; es indudable que su auge ha sido posible porque ha coincidido con la aparición de profundos cambios en la composición de la demanda turística, lo cual ha influido en cambios de políticas públicas y privadas en su práctica. La época de los 80's trajo consigo grandes cambios en la industria del turismo, las políticas neoliberales en México fijadas en el sexenio de Carlos Salinas de Gortari, trajeron grandes cambios en donde se enfatizaba la búsqueda por la inserción en el mercado mundial a través del apoyo a las políticas de turismo (Molina, 2012). De acuerdo a ese modelo de promoción del desarrollo regional de un país o una entidad federativa, el fenómeno del turismo ha adoptado diferentes vertientes o modalidades, según los estilos de vida y preferencia de los individuos que lo practican. En la época de los 80's el turismo de sol arena y playa seguía siendo la noción general del turismo; sin embargo, diversas modalidades empezaron a surgir, tales como el ecoturismo, los turismos de aventura, étnico, cultural, de salud, el sexual, entre otros (Molina, 2012).

Estas nuevas modalidades del turismo, en donde la evolución en los estilos de vida fueron provocados por el fenómeno de la modernidad, han creado nuevos patrones de consumo y éstos, nuevas formas de producción; podemos agregar que los estilos de vida evolucionan tras la incesante búsqueda de nuevas sensaciones, de objetos que producen satisfacción, de obtener lo anhelado, lo inalcanzable, de sentir el poder, de los aspectos provocados por la transformación misma, de cambios sociales que han motivado entre otras cosas, a una transformación de las relaciones de pareja y que cada vez sea mayor el número de personas que se identifican entre la diversidad, su identidad sexual y de género; por consiguiente, se define y establece un segmento de mercado significativo, esto llega a ser especialmente evidente en el mundo de los viajes y el turismo, por lo que surge el *Turismo Rosa*, también denominado *Turismo Gay*, *Turismo LGBT* o *Turismo LGBTTTI* ( El termino LGBTTTI es un acrónimo cuyo significado es el siguiente: lesbiana, es la personas gustan por tener parejas afectivas y sexuales del mismo sexo (mujer); gay, persona que gusta por tener parejas afectivas y sexuales del mismo sexo (hombre); bisexual, Hombre y mujer que tiene relaciones sexuales y afectivas con personas ambos sexos (mujer y hombre); transexual, persona con deseo de modificar rasgos sexuales primarios; transgénero personas que además de involucrar la imagen a través de la vestimenta implica la modificación de los rasgos sexuales secundarios; travesti, persona que manifiesta transgresión social, en la vestimenta y en los complementos de la misma, del género esperado socialmente en virtud a su sexo biológico; Intersexual , persona que nace con características sexuales cromosómicas, gonadales, genitales u hormonales que no coinciden con las categorías sexuales binarias de macho y hembra humano) (Núñez Noriega, 2011); en esta noción de turismo se busca satisfacer las necesidades de clientes cuya identidad sexual, forma de vivir y gozar su sexualidad disienten

del modelo hegemónico de la heterosexualidad construidas bajo el influjo del patrón binario (hombre-mujer).

Por lo que es factible suponer que el turismo LGBTTTI es una modalidad que no encaja dentro de las categorías de las normas sociales aceptables, todo esto se debe a que nuestras actuales instituciones sociales y políticas, fuertemente influenciadas por lo religioso, nos han enseñado a no reconocer y aceptar a las personas que se salen del patrón binario mencionado; dicho lo anterior, el turismo LGBTTTI hasta cierto punto ha sido sujeto de luchas constantes en la búsqueda de una igualdad política y social para el pleno goce de sus derechos humanos y reproductivos; por lo que se les define como *Turistas Disidentes de Sexo y Género*. Se estima que entre el 10 y 11% de la población nacional se identifica como LGBTTTI (Anodis, 2012) lo que significa que de cada 100 personas 11 se encuentran en alguna de las representaciones LGBTTTI; esto no significa que hoy en día las lesbianas, los homosexuales, los bisexuales, los transexuales, los transgénero, los travestis y los intersexuales se hayan multiplicado, simplemente se puede apreciar una interrelación social en donde las representaciones hegemónicas tienden a transformarse y dan paso a una interrelación social de respeto y apertura, esto conlleva si no a poner fin, por lo menos a minimizar la exclusión social histórica sufrida por hombres y mujeres en relación a su identidad sexual, su identidad de género y su orientación sexual.

En este sentido sería conveniente explorar si las transformaciones de esa interrelación social en donde las representaciones hegemónicas y los esquemas de comportamientos hetero-normativos se fracturan, son suficientemente sólidas para dar soporte a una sociedad que conciba a la sexualidad desde un enfoque basado en los derechos para el desarrollo, en lugar de reforzar las normas sociales que atenten contra los derechos humanos esenciales, que es la capacidad de decidir sobre su propia vida y cuerpo.

Se puede señalar que la cultura sonorenses ha mostrado eventos de rechazo a lo largo de la historia; usando como eje temático la negación del “otro” por el poder. En esta parte del estudio, los “otros” son los sujetos sociales proscritos en su momento por el estado político en Sonora tales como: jesuitas, españoles, filibusteros, yaquis, sacerdotes y chinos. Sujetos que por acciones deliberadas del estado y sus agencias, fueron materia de exclusión y escarmiento por considerarlos amenazantes a lo que los grupos de poder consideraban una sociedad ideal. (Grajeda Bustamante, 2003)

En Sonora, aun podemos observar y presenciar una ola de rechazo y repudio hacia las personas que disfrutan su sexualidad en formas distintas a la heteronormatividad. Cotidianamente escuchamos expresiones “no te vistas de rosita, te vas hacer puto”, “no llores, no seas marica”, “Ay florecita”, “no te pongas pantalón pareces machorra”, “primero muerto que puñal”. En algunos ocasiones podemos escuchar frases como la siguiente: A mi no me importa tu vida privada, ¡Ah, pero si te gusta la “chingadera” que yo no te vea!” Las expresiones anteriores pudieran reflejar el sentimiento que prevalece en nuestra sociedad en donde el problema es “el otro”; el otro que es el portador de los males, él inexistente. Esa división entre “nosotros” y ellos” está en la base de todos los actos de discriminación que seguimos presenciando en el día a día con las minorías sociales. La intención de plasmar estos antecedentes es la de asentar el maltrato y el abatimiento a la dignidad humana en las formas Estatales de operación, aunque también se muestran las resistencias de las actitudes del trato con el “otro”, de las experiencias de comprensión del “yo”; condicionadas a la comprensión de los demás como seres distintos, como minorías sin derechos civiles, y lo que es peor, sin derechos humanos.

Derechos humanos que se pueden ver violentados por el hecho de pertenecer a una minoría, a la minoría de las personas con identidad sexual distinta a la heteronormativas, dado que Guillermo Núñez Noriega en su obra *Sexo entre Varones Poder y Resistencia en el Campo Sexual* (1999); trabajo etnográfico realizado en Hermosillo Sonora, en donde significa los proyectos de la modernidad y posmodernidad que terminan construyendo identidades del otro sobre la cultura sexual, las prácticas homoeróticas y las relaciones de poder y resistencia que se tejen alrededor de la sexualidad; de igual forma, reconoce al conjunto de prácticas culturales elaboradas por individuos que participan en contactos eróticos con varones y se considera su importancia como elementos de resistencia en el medio cultural adverso. Así mismo, se reconoce la manera de representar la existencia sexual en las posiciones privilegiadas por los discursos hegemónicos, las heterosexuales y las formas de vivir la sexualidad de los grupos disidentes de sexo y género. Sin embargo, es importante mencionar que dicha investigación se realizó en un periodo comprendido de 1993 a 1999 y desde entonces no se han hecho estudios al respecto. Es un hecho que se han logrado cambios de repercusión social y política en el campo sexual de Hermosillo y sus representaciones hegemónicas pero por lo pronto es un estudio que constituye un referente importante para tomar en cuenta en este proyecto de investigación Estudio socio antropológico de las concepciones, valores, prácticas y actitudes sobre sexualidad y género de los prestadores de servicios turísticos del estado de Sonora para la atención a clientes disidentes de sexo y género.

De la misma forma, es importante examinar si los prestadores de servicios del turismo visualizan esta coyuntura de respeto y apertura, y a través de sus prácticas empresariales intentan emplear sus recursos administrativos para la generación y satisfacción de necesidades para el consumidor envueltos en actitudes hedónicas resultante de un proceso de modernización; de tal manera se implica que las personas LGBTTTI empiezan a obtener el reconocimiento de las organizaciones que regulan la práctica turística.

Tal como lo expone la Organización Mundial del Turismo (OMT), la cual durante los últimos tres años ha emitido “El reporte global del turismo LGBT”, y en el volumen 3 Javier Blanco, director del documento y miembro de la OMT sostiene:

*“Como los artículos de nuestros colaboradores demuestran en los últimos años muchos se han logrado avances en la legislación de todo el mundo para otorgar igualdad de derechos a las personas LGBT, lo que resulta en beneficios económicos a una gama de sectores, no menos importante al turismo. En efecto, el Código Mundial de la OMT para el turismo deja claro el turismo es un factor insustituible de auto educación, tolerancia mutua y aprendizaje sobre los diferencias legítimas entre los pueblos, las culturas y su diversidad. Sin embargo, no olvidemos que muchas más personas LGBT en todo el mundo siguen siendo víctimas de la represión y la homofobia.” (World Tourism Organization, 2012)*

Es esta última frase de Javier Blanco “Sin embargo, no olvidemos que muchas más personas LGBT en todo el mundo siguen siendo víctimas de la represión y la homofobia.” una de las razones principales de la presente investigación, porque la homofobia, la represión y la opresión que sufren las personas diversas en sexo y género son elementos que influyen en el campo sexual de los individuos; estos a su vez, pueden influenciar en las concepciones, valores y actitudes implantadas por los prestadores de los servicios turísticos del estado de Sonora.

El turismo ha sido considerado como un fenómeno estrechamente vinculado a un proceso de Desarrollo Regional, es decir, al crecimiento de una región, de una localidad o de una comunidad,

debido a su aporte en los indicadores económicos, políticos y sociales que se desarrollan dentro de la actividad turística, los cuales se ven reflejados en el progreso permanente y cambio social sostenido de cada individuo que reside en ella; razón por la cual es importante dar paso a una interrelación social de respeto, apertura y solidaridad a la diversidad sexual, lo que repercutirá en la disminución de la exclusión social histórica sufrida por hombres y mujeres en relación a su identidad sexual y de género, así como su orientación sexual, ya que sin este respeto y apertura es una quimera lograr el desarrollo de una región.

En lo anterior radica la relevancia de reconocer si la evolución, los cambios sociales y el propio desarrollo social han sido detonantes para un cambio progresivo en las prácticas administrativas del prestador de servicios de la industria turística del estado de Sonora o si las concepciones, valores y actitudes sobre sexualidad y género de los mismos, están diseñadas por las hegemonías de la heteronormatividad y el integrismo de género. En la actualidad, los empresarios están en constante evolución de sus prácticas administrativas en cuanto a la apertura de nuevos mercados o modificaciones de uso de un mercado existente, sin embargo, no hay investigación científica que señale específicamente cual es la influencia del discurso hegemónico del campo sexual, entendido esto la heteronormatividad y el integrismo de género, en la implantación de concepciones, valores, actitudes y prácticas las cuales organizan las prácticas de atención al cliente disidente en sexo y género.

Una narrativa histórica que da cuenta del maltrato y la quiebra a la dignidad humana del “otro”, en relación al “yo” ideal; hechos que aseguran que los sonorenses han sido testigos y partícipes en la historia de esta exclusión social de las minorías en el estado de Sonora; un fenómeno económico y social, denominado Turismo, inexplorado en la academia cuando se trata de las concepciones, valores, actitudes y prácticas empresariales del prestador de servicios turísticos en el estado de Sonora ante la atención del turista LGBTTTI, el conocimiento de cómo se desarrolla el campo sexual en Sonora, entre otras cosas, que señala que la forma única de representar la existencia sexual es la heterosexual, cuyo fin único es la reproducción. Son algunas de las razones principales para explorar esta temática en la búsqueda de soluciones ante sufrimientos innecesarios

De lo expuesto se derivan una serie de interrogantes que serán igualmente exploradas en el proceso de investigación, tales como: a) ¿Cuáles son los discursos o ideologías sexuales y de género presentes en los prestadores de servicios turísticos?; b) ¿Permiten estos discursos e ideologías la atención adecuada de sus clientes disidentes de sexo y género, sin discriminación?; c) ¿Qué experiencias de turismo de clientes disidentes en sexo y género han existido en el estado de Sonora?

#### Planteamiento del Problema

*Enunciado del problema:* El tema del *Estudio socio antropológico de las concepciones, valores, prácticas y actitudes sobre sexualidad y género de los prestadores de servicios turísticos del estado de Sonora para la atención a clientes disidentes de sexo y género* (Para fines de este trabajo se utilizará el término “disidente de sexo y género” para referir a las personas que precisan una lucha constante en la búsqueda de un plano de igualdad social y legal en oposición de la respuesta cultural social y política dentro del campo sexual concebido dentro del binarismo sexual de género y erotismo) se abordará desde los siguientes ejes temáticos: a) La discriminación por razones de disidencia sexo-genérica a nivel estatal; b) Las concepciones, valores y actitudes presentes en los empresarios que les permiten a los responsables de las instituciones

gubernamentales, generar políticas públicas adecuadas para la atención sin discriminación a los clientes disidentes de sexo y género .

### Preguntas de Investigación

*Las preguntas de investigación que acompañarán el presente estudio son:* ¿Cuáles son las concepciones, valores y actitudes de los prestadores de servicios turísticos hacia la sexualidad y el género y la disidencia sexo-genérica? ¿Las concepciones, valores y actitudes de los prestadores de servicios turísticos hacia la sexualidad y el género y la disidencia sexo-genérica organizan las prácticas de atención al cliente disidente en sexo y género? ¿Cuál es la influencia que tiene el discurso hegemónico del campo sexual, entendido como esto la heteronormatividad (Heteronormatividad: es un concepto de Michael Warner según lo cita Valeria Flores y hace referencia “al conjunto de las relaciones de poder por medio del cual la sociedad se normaliza y se reglamenta en nuestra cultura y las relaciones heterosexuales idealizadas se institucionalizan y se equiparan con el significado de ser humano y comprende ...”aquellas instituciones, estructuras de comprensión y orientaciones prácticas que hacen no solo que la heterosexualidad parezca coherente –es decir, organizada como sexualidad– sino también que sea privilegiada. Su coherencia es siempre provisional y su privilegio puede adoptar varias formas(que a veces son contradictorias):pasa desapercibida como lenguaje básico sobre aspectos sociales y personales; se la percibe como un estado natural; también se proyecta como un logro ideal o moral. No consiste tanto en normas que podrían resumirse en un corpus doctrinal como en una sensación de corrección tacita e invisible– que se crea con manifestaciones contradictorias –a menudo inconscientes–, pero inmanentes en las prácticas y en las instituciones” (Flores, 2008)) y el integrismo de género, en la implantación de esas concepciones, valores y actitudes? ¿El discurso hegemónico actual del campo sexual permite a los prestadores de servicios turísticos emplear los recursos empresariales en la generación y satisfacción de necesidades para el turista disidente de sexo y género?

### Hipótesis de Investigación

El estudio se desarrollará desde una perspectiva antropológica, lo que permitirá tener una visión completa de las ideologías y pensamientos de los sujetos dedicados a la industria turística; por lo que intentará sustentar el supuesto de Investigación: Las concepciones, valores, actitudes y prácticas sobre sexualidad y género de los prestadores de servicios turísticos reproducen los discursos hegemónicos del campo sexual, esto es la heteronormatividad y el integrismo de género. Esto les impide atender de manera adecuada a los turistas con una identidad sexual o de género disidente.

### Objetivos

*Objetivo general:* Analizar la influencia que tiene el discurso hegemónico del campo sexual en la implantación de las concepciones, valores y actitudes sobre sexualidad y género que rigen las prácticas de los prestadores de servicios turísticos para la atención al cliente disidente en sexo y género en el estado de Sonora.

*Objetivos Específicos:* Describir las concepciones, valores y actitudes de los prestadores de servicios turísticos hacia la sexualidad y el género y la disidencia sexo-genérica. Describir experiencias concretas existentes en el estado de Sonora del turista disidente en sexo y género. Identificar la influencia que tiene el discurso hegemónico del campo sexual en la implantación de las concepciones, valores y actitudes sobre sexualidad y género que rigen las prácticas de los

prestadores de servicios turísticos para la atención al cliente disidente en sexo y género en el estado de Sonora Analizar los elementos del discurso hegemónico del campo sexual que puede influenciar en las concepciones, valores y actitudes implantadas en los prestadores de servicios turísticos.

*Los resultados de este estudio permitirían:* Precisar las competencias necesarias de los empresarios del sector turismo para la atención y servicio al turismo disidente en sexo y género. Desarrollar protocolos estandarizados para la atención y servicio cubriendo las expectativas de un turismo disidente sexo-genérica; además de diseñar estrategias administrativas adecuadas para su práctica, los cuales darán oportunidad en colocar al estado de Sonora como un estado abierto a los nuevos circuitos de la dinámica del turismo. Sentar las bases para diseñar políticas públicas que permitan un crecimiento óptimo a la industria del turismo, así como el diseño de leyes que favorezcan al individuo en el reconocimiento de un ente social digno sin importar su diversidad sexual y cultural.

## **METODOLOGÍA**

Tal como se señaló en el planteamiento en el apartado anterior, el objetivo de este trabajo, considerado bajo el paradigma de la investigación cualitativa, es analizar la influencia que tiene el discurso hegemónico del campo sexual en la implantación de las concepciones, valores y actitudes sobre sexualidad y género que rigen las prácticas de los prestadores de servicios turísticos para la atención al cliente disidente en sexo y género en el Estado de Sonora y para conseguirlo se realizará investigación cualitativa, utilizando la etnografía como método de investigación y como técnicas se utilizará observación, observación participante y entrevista semiestructurada. Las Unidades de estudio serán las practicas del servicio administrativo, protocolos institucionales, concepciones valores, actitudes, percepciones del prestador de servicio de las empresas turísticas.

La población a considerar son prestadores del ramo hotelero-restauranero, bares y discotecas de los siguientes municipios, Hermosillo, Guaymas y Puerto Peñasco. Una vez delimitando nuestro campo de acción es importante señalar que se realizará la investigación en las siguientes unidades de análisis: las empresas de los prestadores de servicios del sector turismo del estado de Sonora. Se tomará como base el 5% de hoteles y equipamientos turísticos ( como restaurantes, discotecas/bares y agencias de viajes). Es importante aclarar que ese porcentaje de muestra podrá variar (disminuir o aumentar) hasta lograr el punto de saturación, es decir, cuando a partir de una cantidad determinada de unidades y sujetos de estudio los nuevos casos tiendan a repetir –saturar- el contenido del conocimiento anterior. Los sujetos de estudio de los hoteles son: meseros, recepcionistas, camaristas jefe de reservaciones, gerentes de hoteles; de los restaurantes: hostess meseros, gerentes; de discotecas y bares: meseros, gerentes, personal de seguridad y los Turistas LGBTTI. El análisis se hará a través de un análisis manual de los reportes de notas descriptivas, y notas analíticas

## **CONCLUSIONES**

De la revisión bibliográfica que se realizó para construir el Estado del Arte del proyecto de investigación y dar inicio a la misma se puede concluir lo siguiente: El turismo es un fenómeno social y económico con relevante importancia para la economía de una región así como para la dinámica de las relaciones interpersonales que influye a los procesos de aculturación tanto como para el visitante como para la comunidad receptora. Así mismo, el turismo es un fenómeno en constante transformación, siguiendo la dinámica de la sociedad. Como resultado de estos cambios

surgen diferentes alternativas del turismo en las que se incluye el turismo LGBTTTI (lesbiana, gay bisexual, transexual, transgénero, travesti e intersexual) o disidente de sexo y género, esto es, el turista con identidad sexual y de género distinta a la heterosexual. El turismo LGBTTTI es una modalidad de turismo con relevante derrama económica para la entidad receptora. Un eje esencial para el análisis del turismo homosexual es: la sexualidad la cual es una construcción social y tiene una importancia fundamental que esta intrínseca en la vida de todos los seres humanos; es mucho más que el acto sexual, se trata de una constelación de significados y prácticas que son parte de nuestra experiencia cotidiana del mundo la sexualidad; no es algo fijo o igual para todas las personas es inherentemente social en forma de muchos factores, que incluyen las creencias religiosas, las leyes, los contextos históricos, culturales, económicos y sociales en que las personas viven sus vida.

En Hermosillo municipio del estado de Sonora existe un discurso hegemónico construido por discursos ortodoxos de tintes médicos-religiosos en el campo sexual, al cual se le oponen algunos otros discursos heterodoxos procedentes de las vanguardias artísticas o de organizaciones sociales que enarbolan una noción de derechos sexuales. El amor y el enamoramiento tienen un carácter exclusivamente heterosexual en las representaciones hegemónicas; el único fin válido para satisfacer el deseo sexual es la reproducción y la heterosexualidad es la única relación normal para ello. El estado de Sonora es un región en donde aún se puede observar y presenciar una ola de rechazo y repudio hacia las personas que disfrutan su sexualidad en formas distintas a la heteronormatividad debido a que existe una división entre “nosotros” y ellos” está en la base de todos los actos de discriminación que seguimos presenciando en el día a día con las minorías sociales. Con los hallazgos encontrados en la revisión bibliográfica nos permite adentrarnos a esta investigación y determinar si las concepciones, valores, actitudes y prácticas sobre sexualidad y género de los prestadores de servicios turísticos reproducen los discursos hegemónicos del campo sexual, esto es la heteronormatividad y el integrismo de género. Esto les impide atender de manera adecuada a los turistas con una identidad sexual o de género disidente.

Alejandra Carrillo Puente, Universidad Autónoma de Coahuila-México

## RESUMEN

*El presente trabajo de investigación se llevó a cabo con la finalidad de conocer la relación que existe entre el clima organizacional y la satisfacción laboral de los trabajadores administrativos y operativos de una Pequeña Empresa Familiar de la industrial metal-mecánica ubicada en Monclova, Coahuila, a fin de proporcionar al directivo de la empresa, sugerencias de cambio, de reforzamiento y/o de mejora.*

*Para la realización de este estudio se determinó que la Muestra fuese por consenso, formada por 20 trabajadores a quienes se les aplicó un cuestionario estructurado, tipo escala de Likert, para diagnosticar el clima organizacional se utilizó el Modelo Organizacional de Seis Casillas de Weisbord (1976), compuesto por 35 ítems correspondiente a 7 variables, y para medir la satisfacción laboral se rediseño el instrumento de JSS de Spector (1985), que consta de 40 reactivos considerándose 10 variables. El análisis de fiabilidad de los cuestionarios arroja un coeficiente de alpha de Cronbach para la escala de satisfacción laboral y de clima organizacional de 0.89 y 0.851 respectivamente.*

*Una vez tabulados los datos, el tratamiento estadístico consistió en calcular Frecuencias, Medias, Coeficientes de Contingencia y Niveles de Significancia, usando el programa SSPS (versión 17.0).*

**PALABRAS CLAVE:** Satisfacción, Satisfacción Laboral, Motivación, Clima Organizacional

## RELATIONSHIP OF ORGANIZATIONAL CLIMATE AND JOB SATISFACTION IN A SMALL FAMILY BUSINESS

### ABSTRACT

*The present research work was carried out in order to know the relationship between organizational climate and job satisfaction of administrative and operational workers a Small Family Business of the metalworking industry located in Monclova, Coahuila, in order to provide the company's management, suggestions for change, strengthening and / or improvement. For this study the sample was determined by consensus was formed by 20 workers who were administered a structured questionnaire, Likert-type scale to diagnose organizational climate Organizational Model was used Weisbord Six Casillas (1976), consisting of 35 items corresponding to 7 variables, and to measure job satisfaction JSS redesign the instrument Spector (1985), consisting of 40 reagents considered 10 variables. Reliability analysis of questionnaires yielding a Cronbach's alpha coefficient for the scale of job satisfaction and organizational climate of 0.89 and 0.851 respectively. Once tabulated data, statistical treatment consisted of calculating frequencies Stockings Contingency Coefficients and Significance Levels using the SSPS software (version 17.0).*

**KEYWORDS:** Satisfaction, Job Satisfaction, Motivation, Organizational Climate

## INTRODUCCIÓN

El clima organizacional en la actualidad es de interés para casi todas las empresas familiares, por su influencia en los procesos organizacionales y psicológicos como la comunicación, la toma de decisiones, la solución de problemas, el aprendizaje, la motivación y, por ende, su influencia en la eficiencia de la organización y en la satisfacción de sus miembros. Por ello, es necesario que éstas se encuentren en óptimas condiciones desde el interior de las mismas, en donde exista satisfacción de su personal, y que impacte en la productividad. Chiang et al (2010) refiere que el clima organizacional y la satisfacción laboral son variables que se relacionan con el bienestar de las personas en su trabajo, su calidad de vida laboral y que, en consecuencia afectan su desempeño. Algunas investigaciones han señalado que es más probable obtener mejores resultados laborales en alto desempeño, compromiso o cooperación, cuando las personas se sienten parte de un grupo de trabajo con un clima organizacional satisfactorio, y perciben que tienen las competencias adecuadas para desarrollar su trabajo y cuando son recompensadas y reconocidas como agentes significativos de los resultados organizacionales.

El realizar un diagnóstico de Clima Organizacional, permite generar conocimientos de utilidad en la implementación de cambios planificados que impacten en las actitudes y conductas de los integrantes, como en la estructura organizacional. Ya que el Clima organizacional influye en la actuación de los integrantes de la empresa, a través de la perspicacia que tienen de múltiples factores de la realidad laboral, como pueden ser los niveles de autoridad, comunicación, colaboración, condiciones de trabajo, entre otros. El tema de esta investigación está centrado en conocer la relación del clima organizacional y la satisfacción laboral de los trabajadores administrativos y operativos de una Pequeña Empresa Familiar de la industrial metal-mecánica ubicada en Monclova, Coahuila.

## REVISIÓN LITERARIA

La pequeña empresa en estudio, es de origen familiar la cual fue fundada en el año de 1998, y a la fecha está conformada por 20 trabajadores; 4 de ellos es personal administrativo y 16 operativos; a nivel gerencial existe un Director (fundador y dueño de la empresa), el cual se apoya de su hijo quien es soporte en las actividades claves de la organización. Navarrete (2008) expresa que en una empresa familiar es “la propiedad que está en manos de uno o más miembros de un grupo familiar y en consecuencia, su dirección y la sucesión estarán influenciadas por dicha familia”. Ramírez y Fonseca (2010) la describen como una organización donde la familia posee todas las partes, los miembros familiares ocupan posiciones gerenciales y donde miembros de varias generaciones se encuentran involucrados en el negocio. La investigación del clima organizacional ha adquirido gran importancia en nuestros tiempos, nos permite examinar situaciones para lograr el máximo beneficio para la empresa y el trabajador. En este sentido, en las empresas familiares debe prevalecer un clima organizacional en el que el ambiente de trabajo permita a los trabajadores sentirse satisfechos por su labor en la empresa; así, estos establecen un compromiso más fuerte hacia la organización.

### Clima Organizacional

Salgado, et al (1996) exponen que en los últimos treinta años ha sido publicada una considerable cantidad de investigaciones sobre el Clima Organizacional y la Satisfacción Laboral (ver Locke, 1976, 1984; Brunet, 1983) y que tal volumen de estudios se justifica, entre otras razones, por la relación entre el Clima Organizacional y la Satisfacción Laboral de los empleados con la

productividad. La teoría de Litwin y Stringer (1968) intenta explicar importantes aspectos de la conducta de los individuos que trabajan en una organización utilizando los conceptos como motivación y clima. Los autores tratan de describir los determinantes situacionales y ambientales que más influyen sobre la conducta y percepción del individuo. El clima organizacional para García (2003) representa las percepciones que el individuo tiene de la organización para la cual trabaja y la opinión que se ha formado de ella en términos de variables o factores como autonomía, estructura, recompensas, consideración, cordialidad, apoyo, apertura, entre otras.

### Satisfacción Laboral

Peiró (2000) citado por Cuadra y Veloso (2007) menciona que la satisfacción laboral es la actitud ante el trabajo que más atención ha recibido por parte de la investigación y aunque el estudio de su naturaleza y sus causas comienzan en 1935 con Hoppock. Así, el estudio de la satisfacción laboral se enmarca en la concepción de las actitudes hacia el trabajo junto con el compromiso organizacional y la implicación laboral, aseguran Peiró, González R., Bravo y Zurriaga (1995) quienes la definen como una actitud o conjunto de actitudes desarrolladas por la persona hacia su situación de trabajo Chiang y Ortega (2011).

La motivación es anterior a la satisfacción al ser previa al trabajo, pero una vez que este se realiza, el grado de satisfacción que reporte influirá en la dinámica interactiva de la motivación; a su vez, ésta, como orientadora de la acción, incide en la satisfacción laboral en tanto se relaciona las expectativas con los resultados de la conducta laboral y se evalúe su grado como suficiente y satisfactorio. Ramírez, et al (2008).

### Modelos de Diagnostico Organizacional

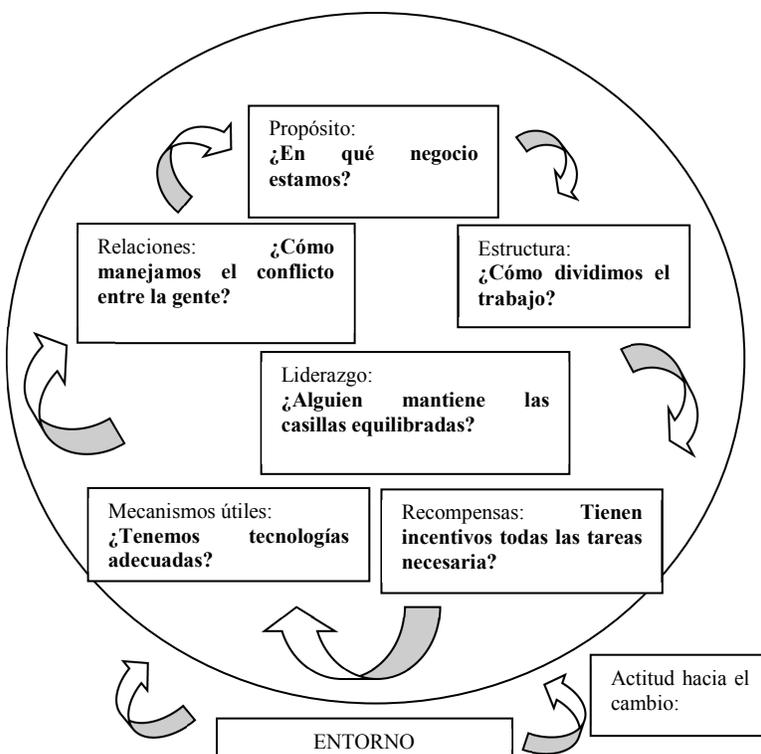

Chagala (2011) señala que los modelos de diagnóstico buscan estructurar el estudio de la organización. El modelo tiene el propósito de explicar el funcionamiento de la organización, de sus elementos centrales y de las formas de relación entre estos elementos. “Un modelo se encuentra formado por un conjunto de variables y conceptos interrelacionados de tal forma que permite dar una explicación coherente del funcionamiento organizacional” Rodríguez, (2001) citado por Chagala (2011). Para fines de estudio solo se tomaran en cuenta los modelos que están orientados al comportamiento humano. “Esos modelos tienen como misión comprender lo que los empleados hacen o dejan de hacer, no lo que realizan otros recursos como las máquinas” (Burke, 1988). Los modelos orientados al comportamiento humano: Modelo de seis casillas de Marvin Weisbord, Modelos de Congruencia de David Nadler y Michael Tushman, Modelo pragmático emergente de Harvey A. Hornstein y Noel M. Tichy, Modelo de contingencia de Paul Lawrence y Jay Lorsch, Modelo de desempeño organizacional de David Hanna y Modelo de las 7 S. Para efectos de esta investigación y debido a las necesidades de la organización se selecciona el Modelo de Weisbord porque facilita el diagnóstico de Clima Organizacional. El Modelo de las seis casillas de Marvin Weisbord se describe “como una pantalla de radar, señales luminosas que nos hablan de los puntos sobresalientes de la organización y de sus aspectos buenos y malos y sobre todo nos ayuda a visualizar la realidad”. (Burke, 1988).

### Teorías de Motivación

La motivación laboral ha sido objeto de estudio constante desde unos años antes que la satisfacción laboral; en los años cincuenta surgen teorías sobre la motivación hoy fuertemente consolidadas, mientras que hasta los años sesenta no hay un desarrollo significativo del estudio sobre la satisfacción laboral SATW (1984) citado por Ramírez, et al (2008). Unas de las teorías

motivacionales que nos ayuda a interpretar la satisfacción laboral del personal de la empresa objeto de estudio, es la teoría de Motivación e Higiene de Herzberg. Salgado, et al. (1996) realizaron una investigación sobre la satisfacción laboral y el clima organizacional de una pequeña empresa española, los resultados encontrados sugieren que, los estudios de diagnóstico del clima organizacional se investiguen y analicen separadamente clima y satisfacción ya que podrían tener efectos diferenciales sobre la productividad laboral (rendimiento, abstención, rotación, accidentes, etc.). Juárez-Adauta (2012) realizó una investigación en determinar la relación entre el clima organizacional y la satisfacción laboral en el personal de una institución de salud, se encontró que ambos índices presentaron alta correlación positiva entre la satisfacción laboral y mejor clima organizacional. Es decir, que un clima organizacional favorable va a condicionar una mayor calidad en la vida de los integrantes de la institución de salud y por ende, una mejora sustancial en la prestación de servicios al derechohabiente.

Figura 1: Modelo de las Seis Casillas de Marvin Weisbord

En esta figura se muestra el Modelo de las Seis Casillas de Marvin Weisbord donde se citan las seis variables que se miden: Propósitos, Estructura, Relaciones, Recompensas, Liderazgo y Mecanismos auxiliares; y incluyendo una variable adicional llamada Actitud hacia el cambio, formula preguntas clave de diagnóstico para cada una de las variables.

## METODOLOGÍA

El diseño metodológico corresponde a una investigación de campo, transversal, mixta (cuantitativa y cualitativa) y de tipo descriptivo. La Muestra se determinó por consenso ya que incluye a la población total de los trabajadores de una pequeña empresa familiar de la industria metal - mecánica objeto de estudio: un total de 20 sujetos (4 del personal administrativo y 16 del personal operativo). Para realizar el diagnóstico de clima organizacional el instrumento que se usó es el Modelo de Weisbord (1976) compuesto por 35 ítems correspondiente a 7 variables. A continuación se presenta en la tabla 1 la operacionalización de las variables.

Tabla 1: Operacionalización de Variables del Clima Organizacional

Variable	Indicadores	Preguntas
Propósito	Claridad de la meta y si los trabajadores apoyan el propósito de la organización.	1, 8, 15, 22, 29
Estructura	Es la disposición y orden de las partes dentro de un todo.	2, 9, 16, 23, 30
Liderazgo	Aceptación del jefe, reconocimiento de ser competente, trato justo, atención en sentimientos de sus subordinados.	3, 10, 17, 24, 31
Relaciones	Relaciones cordiales, vínculos amistosos, reconocimiento y respeto de la personalidad humana.	4, 11, 18, 25, 32
Recompensas	La recompensa es a través de incentivos o en su caso un castigo.	5, 12, 19, 26, 33
Mecanismos Útiles	Planeación, control, presupuestos y los demás sistemas de información, como las Tic's.	6, 13, 20, 27, 34
Actitud hacia el Cambio	Organizaciones que son capaces de cambiar en un futuro, implementar un sistema de administración, mejoramiento de la calidad.	7, 14, 21, 28, 35

En esta tabla se muestra la Operacionalización de variables consideradas en el instrumento de medición del clima organizacional

Para medir la satisfacción laboral se aplicó como instrumento de medición una escala que se rediseñó en base al JSS, Job Satisfaction Survey de Spector (1985) que consta de 36 ítems, 4 de cada una de 9 variables, a la que se le agregó una variable denominada *Condiciones del área de trabajo* que contiene 4 reactivos, ya que el cuestionario de Spector no incluye este factor, considerado importante. Así pues, el instrumento modificado y elaborado, es estructurado, tipo escala de Likert, que consta de 40 reactivos correspondientes a 10 variables. La operacionalización de las variables se presenta en la tabla 2.

Para determinar la confiabilidad de los instrumentos los resultados fueron sometidos a la prueba Alfa de Cronbach, obteniéndose el 0.851 y 0.89, para el clima organizacional y la satisfacción laboral respectivamente. El objetivo de la presente es conocer la relación que existe entre el clima organizacional y la satisfacción laboral de los trabajadores administrativos y operativos de una Pequeña Empresa Familiar de la industrial metal-mecánica ubicada en Monclova, Coahuila. Una vez tabulados los datos, el tratamiento estadístico consistió en calcular Frecuencias, Medias, Coeficientes de Contingencia y Niveles de Significancia, usando el programa SSPS (versión 17.0).

## RESULTADOS

En respuesta a los reactivos de las características demográficas se procedió, en primera instancia, a establecer los rangos de edad, de antigüedad y de nivel de estudios, calculando las frecuencias; observándose que el 50% de los trabajadores se encuentran en el rango de 31 a 50 años; mientras que el 35% con una antigüedad de 3 a menos de 5 años de servicio; y con respecto al nivel de estudios, se encontró que el 40% de los trabajadores han cursado la carrera Técnica seguidos por 30% de trabajadores cuenta con estudios de Secundaria.

Tabla 2: Operacionalización de Variables de la Satisfacción Laboral

Variable	Indicadores	Preguntas
Sueldos / Salario	Pago otorgado por el trabajo realizado, que sea justo y congruente con la valorización del mismo, oportunidad de aumento salarial.	1, 11, 21, 31
Promoción	Oportunidades y frecuencia de ascenso y de progreso.	2, 12, 22, 36
Supervisión	Aceptación del jefe, reconocimiento de ser competente, trato justo, atención en sentimientos de sus subordinados.	3, 13, 23, 33
Beneficios	Otorgamiento equitativo de bonos de despensa, premios de asistencia y puntualidad, prestaciones y otros.	4, 14, 24, 32

Recompensas Contingentes	Aprecio, reconocimiento y recompensas por el buen trabajo.	5, 15, 25, 35 6, 16, 26, 34
Políticas y Procedimientos operativos	Políticas, reglas y procedimientos operativos.	
Compañeros de trabajo	Relación con las personas con quienes trabaja.	7, 17, 27, 37
El trabajo en sí	Significado, gusto y orgullo por el trabajo que se realiza.	8, 18, 29, 38
Comunicación	Formas de Comunicación establecidas dentro de la organización, con directivos, jefes y compañeros.	9, 19, 28, 39
Condiciones en el área de trabajo	Condiciones de seguridad, de equipo, herramientas, instalaciones eléctricas, iluminación y ventilación.	10, 20, 30, 40

*En esta tabla se muestra la Definición y Operacionalización de variables consideradas en el instrumento de medición*

Facilitar el análisis de los resultados de este estudio, se dispuso determinar rangos a las 6 opciones de respuesta (1 y 2- Desacuerdo; 3 y 4-Levemente De Acuerdo; 5 y 6-De Acuerdo), para el clima organizacional y la satisfacción laboral. Como se puede observar, las Medias globales de las siete Variables comprendidas en el cuestionario de Weisbord para diagnosticar el clima organizacional aplicado a los 20 sujetos que conforman la Muestra de la pequeña empresa objeto de estudio, se presentan en la Tabla 3, es decir que el promedio de respuestas dadas por el personal de la pequeña empresa, fue estar *Levemente de acuerdo*. Las Medias más altas corresponden a las variables de *Relaciones, Estructura y Liderazgo*, mientras la variable con la Media más baja es la de *Actitud hacia el Cambio*. Así pues, las Medias de la mayoría de los factores se ubican en la categoría de *mediana satisfacción*, ya que la variable *El trabajo en sí* seguida por la de *Promoción* son las que más influyen en el nivel de satisfacción y se encuentra en los factores motivadores. Y en cuanto a los factores higiénicos la variable que más influye es la de *Sueldos/Salarios* seguida por la de *Supervisión*.

En cuanto los coeficientes de contingencia indican que existe una relación significativa entre la variable de *Estructuras* y la variable *Recompensas Contingentes*, lo cual muestra el trabajador conformidad respecto a las prestaciones otorgadas voluntariamente por el patrón y está conforme con la división del trabajo. Por otro lado, se aprecia que hay una asociación entre la variable *Recompensas* y las variables de *Promoción* y *Compañeros de Trabajo*, lo cual revela que el trabajador está satisfecho con las oportunidades de ascenso y percibiendo adecuadas relaciones con las personas con quienes convive en el trabajo. Por último se observa que existe una relación significativa entre la *Actitud hacia el Cambio* y la variable *Comunicación*, esto es indicativo de que el trabajador considera favorable las formas de comunicación utilizadas en la relación con directivos, jefes y compañeros; por lo cual esto motiva a aceptar los cambios que se presenten en la empresa

## CONCLUSIONES

Los resultados obtenidos en la presente investigación reportan que los trabajadores administrativos y operativos de la empresa objeto de estudio, presentan, en general, perciben el clima organizacional, en el cual reportan que cuentan con la herramienta, maquinaria y equipo necesarios para hacer las tareas que les corresponden y que comprenden la distribución de actividades, responsabilidades y funciones entre todos los niveles del personal, así como están de acuerdo con las formas de ejercer la autoridad. En cuanto a la satisfacción, se puede apreciar que los trabajadores manifiestan estar a gusto y orgullosos por el trabajo que realizan y que éste es importante, que los sueldos que perciben son los adecuados y que el reconocimiento que reciben por su desempeño proviene tanto de parte de los compañeros como del jefe. Tienen más

posibilidades y oportunidades de obtener un ascenso (probablemente debido a que el personal operativo tiene experiencia en las tareas a desempeñar y que no son muy específicas).

A su vez, reportan que la está bien definida la distribución de las tareas, responsabilidades y funciones a llevar a cabo cada trabajador en todos los niveles; los beneficios que reciben (paquete de gratificaciones y los sistemas de incentivos) son de acuerdo a los niveles de cada uno de los trabajadores, así como las oportunidades de obtener un ascenso; y la comunicación con los compañeros son adecuadas y que el reconocimiento que reciben por su desempeño proviene tanto de parte de los compañeros como del jefe. Por último proporcionar retroalimentación a los directivos de la empresa objeto de estudio, se entregará un informe con los resultados obtenidos de acuerdo a las respuestas otorgadas por los trabajadores. Se incluirá, además, una propuesta con estrategias de mejora, de reforzamiento y/o de cambio, aprovechando las áreas de oportunidad.

# ESTUDIO DE FACTIBILIDAD FINANCIERA EN UNA EMPRESA MAQUILADORA DE PLÁNTULAS DE SANDÍA EN EL VALLE DEL YAQUI

Roberto Quintana Jaime, Universidad Estatal de Sonora  
Daniel Paredes Zempual, Universidad Estatal de Sonora  
Arturo Sandoval Mariscal, Universidad Estatal de Sonora

## RESUMEN

*En la actualidad para la implementación de cualquier negocio es necesario llevar a cabo algunos análisis de tipo cuantitativos que sirven para determinar su rentabilidad y en base a ello, tomar una decisión de aceptar o rechazar un proyecto para su inversión. La presente investigación se realizó en una empresa productora de plántulas de sandía en el Valle del Yaqui para conocer la viabilidad, técnica, económica y financiera de un proyecto de inversión y al mismo tiempo contribuir a solventar las necesidades de material vegetativo a los productores de estas hortalizas para llevar a cabo sus siembras con oportunidad. Con el propósito de incursionar en el mercado de la producción de plántulas de sandía, así como la de contar con los elementos suficientes para conocer la factibilidad técnica, económica y financiera y competir con éxito en el mercado de las hortalizas, surge la siguiente interrogante: ¿Cuál es la viabilidad técnica, económica y financiera para un proyecto de producción de plántulas de sandía en el valle del yaqui?. Para dar respuesta a la pregunta se realizó un análisis hacia el exterior, donde se detectaron las necesidades de un mercado potencial insatisfecho en la adquisición de plántulas de sandía, y un análisis al interior de la empresa para determinar los costos de producción, ingresos por ventas y precio por unidad para elaborar un plan financiero dando como resultado indicadores positivos que determinaron la viabilidad técnica, económica y financiera del presente proyecto.*

**PALABRAS CLAVES:** Factibilidad Económica y Financiera, Valor Presente Neto, Tasa Interna de Retorno, Índice de Rentabilidad, Valle del Yaqui

## FINANCIAL FEASIBILITY STUDY ON A FACTORY-WORK COMPANY OF WATERMELON SEEDLING IN THE YAQUI VALLEY

### ABSTRACT

*Nowadays, for the implementation of any business is necessary to execute some quantitative type analysis used to determine its profitability, based on that make a decision to accept or reject a project for investment. This research was conducted in a company which produces watermelon seedlings in the Yaqui Valley for the feasibility, technical, economic and financial management of an investment project, at the same time contribute to solve the needs of vegetative material to the producers of these vegetables to carry out their sowings with opportunity. With the purpose of inroad the market of the production of watermelon seedlings, as well having the enough elements to know the technical, economic and financial feasibility, and also compete successfully into the vegetables market, the following questions arises: ¿ Which is the technical, economic and financial feasibility for a production project of watermelon seedlings in the Yaqui Valley?. In response to this question, an outwards analysis was performed, where the unfulfilled needs of a*

*potential market were detected of the watermelon seedlings acquisition, and an inward analysis at the company to determine production costs, sales revenue and unit per price to elaborate a financial plan giving as a result positive indicators which defines the technical, economic and financial feasibility of this project.*

**JEL:** Q14, R11

**KEYWORD:** Financial Economic Feasibility, Net Present Value, Internal Rate of Return, Profitability Index and Yaqui Valley

## **INTRODUCCIÓN**

En la actualidad existen varias herramientas que nos ofrece la tecnología para hacer negocios y en cualquier lugar donde se encuentre uno, siempre hay a la mano una serie de productos o servicios proporcionados por el hombre. Todos y cada uno de estos productos y servicios antes de ser comercializados, tienen que ser evaluados desde varios puntos de vista, con un objetivo final, la de satisfacer una necesidad humana. Después de ello, alguien tiene que realizar una inversión económica para producirlo en masa, por lo tanto, siempre que exista una necesidad humana de un bien o servicio habrá necesidad de llevar a cabo algunos análisis exhaustivos para determinar si es rentable económica y así poder tomar la decisión de realizar o no una inversión.

Las buenas oportunidades para los Agronegocios en México se encuentran en cultivos que generan mayor valor y rendimiento por hectárea, ya que los tradicionales, como el trigo, maíz, cártamo, tienen bajos rendimientos y requieren de grandes extensiones agrícolas además, que tanto las frutas y hortalizas son las que representan buenas oportunidades de negocios debido a que se pueden obtener excelentes rendimientos en pequeñas parcelas y son intensivas en la generación de mano de obra, aspecto positivo para cualquier país. (Agro Sonorense revista. 2009). El cultivo de la sandía son las opciones representativas de siembras en el valle del yaqui, valle del mayo y Guaymas-Empalme siendo éste último donde se concentra el mayor número de hectáreas por ciclo agrícola en el estado de Sonora. La comercialización se realiza al mercado de consumo nacional e internacional.

## **REVISIÓN DE LITERATURA**

La sandía es originaria del Este de África (Valle del Nilo), donde es muy valorada y utilizada como fuente de líquido en estaciones secas cuando hay poca disponibilidad de agua, se cultiva en todos los países del mundo que poseen climas cálidos y pocos lluviosos, siendo los principales países productores la República Popular China, Honduras, Costa Rica, Guatemala, Brasil, España, Egipto, Irán, Israel y Marruecos. (FAO, 2012). Menciona además que el nombre científico es: *Citrillus lanatus*, *Citrillus vulgaris*, pertenece a la familia de las Cucurbitáceas, dicotiledónea, planta anual, monoica cubierta de vello de tallo herbáceo tendido, hojas esparcidas, ásperas, lobadas u oblonga de 10 a 12 centímetros de longitud. Sus flores son axilares color amarillo y tamaño mediano, solitario y unisexual en la misma planta, sus frutos grandes de 10.5 a 20 kgs. Color verde brillante, alargados o redondos, su pulpa roja o amarilla olorosa y acuosa con semillas de color negro, blancas abundantes.

En la actualidad toda empresa moderna tiene propósitos fundamentales que se enmarcan en los sectores económicos y sociales dentro de los cuales se puede mencionar la maximización de los beneficios y minimización del riesgo, preservar su situación y crecer a través del uso de sus

propios beneficios, servir a la sociedad, es decir satisfacer necesidades de sus clientes con trato justo con sus proveedores, pagar impuestos al estado para contribuir al desarrollo del mismo y el más importante que es la Rentabilidad. (Gitman,2007). Los gerentes de empresas tienen la responsabilidad primordial de generar recursos así como la de dirigir proyectos que maximicen el valor de la organización por lo que ellos echan mano de la administración financiera la cual constituye un desafío con diversas oportunidades profesionales en los campos de la administración financiera corporativa, la banca de inversión, el análisis y manejo de inversiones y el manejo de cartera y que el éxito o fracaso de un negocio dependen en gran medida de la calidad de sus decisiones financieras. ( Moyer *et al*, 2005).

Presupuesto de capital es el término con el que se conoce a la función financiera relacionada con la toma de decisiones de una propuesta de inversión. Según Ochoa (2009), una vez que se tiene la información se puede evaluar el atractivo de las diferentes alternativas. La decisión de inversión será simplemente aceptar o rechazar la propuesta y agrega que para la toma de decisiones se aplican diferentes métodos que facilitan la toma de decisiones, algunos de ellos son:

Valor presente neto (VPN)

Tasa interna de retorno (TIR)

Índice de rentabilidad (I.R)

Periodo de recuperación de la inversión (PRI)

El valor presente neto (VPN), es la suma algebraica del valor presente de los flujos de una inversión, descontada con una tasa de rendimiento mínima aceptable o TREMA. Por este método se descuentan todos los flujos de efectivo a valor presente, utilizando como tasa de descuento la tasa de rendimiento mínima aceptable (TREMA) que se determina a partir del rendimiento requerido por los accionistas y los acreedores de recursos con costo, como el banco que cobra intereses a la empresa por los recursos que le otorga en préstamo. (Ochoa, 2009).

$$VPN = \sum_{T=0} \frac{A_t}{(1+r)^T}$$

r = tasa de rendimiento requerida

A<sub>t</sub> = Cada uno de los flujos de efectivo del proyecto

T = período en el que se obtiene cada flujo

Además, refiere que el criterio de decisión para rechazar o aceptar aquellos proyectos en los que el Valor Presente Neto de los flujos de efectivo es por lo menos igual al valor presente de los flujos negativos, en otras palabras, un proyecto es aceptable si su VPN= 0, si el VPN= Positivo, el proyecto está dando un valor agregado a los inversionistas, más allá de sus requerimientos mínimos. Para Van Horne y Wachowicz (2010), el Valor presente neto (VPN) de una inversión es el valor presente de los flujos de efectivo netos de un proyecto de inversión menos su flujo de salida inicial de esa propuesta y lo expresa con la siguiente fórmula:

$$VPN = \frac{FE_1}{(1+K)^1} + \frac{FE_2}{(1+K)^2} + \frac{FE_3}{(1+K)^3} + \dots + \frac{FE_n}{(1+K)^n} - FSI$$

La tasa interna de rendimiento o de retorno (TIR), según Van Horne y Wachowicz (2010), es la tasa de descuento que iguala el valor presente neto de los flujos de efectivo netos (FE) futuros de un proyecto de inversión con el flujo de salida inicial (FSI), del proyecto, y lo representa con la fórmula:

$$FSI = \frac{FE_1}{(1+r)^1} + \frac{FE_2}{(1+r)^2} + \dots + \frac{FE_n}{(1+r)^n}$$

$$(1+TIR)^1 \quad (1+TIR)^2 \quad (1+TIR)^n$$

Para Ochoa (2009), el periodo de recuperación de un proyecto indica cuánto tiempo es necesario para recuperar la inversión y se calcula por medio de los flujos de efectivo o entradas, los recursos invertidos al inicio del proyecto, es decir, la inversión inicial. Si los flujos de efectivo son iguales a cada año, el periodo de recuperación se calcula dividiendo el desembolso inicial entre los flujos anuales, si son diferentes, se suman hasta acumular el desembolso inicial su fórmula es:

$$\text{Período de recuperación} = \frac{\text{Desembolso inicial}}{\text{Flujos anuales}}$$

El periodo de recuperación es un indicador que se utiliza para evaluar las inversiones propuestas en un tiempo requerido para que la empresa u organización recupere la inversión inicial en un proyecto, calculado a partir de las entradas de efectivo y se considera una técnica rudimentaria porque no se considera explícitamente el valor del dinero en el tiempo. (Gitman y Chad. 2012).

## PLANTEAMIENTO DEL PROBLEMA

En los Valle del Yaqui - Mayo, Guaymas y Empalme, se localiza un segmento de mercado que corresponde a pequeños productores de sandía cuyas siembras las realizan a cielo abierto y que no es atendido al cien por ciento en cuanto a las necesidades de plántulas que se les presenta al momento de sembrar, representando una considerable superficie de aproximadamente entre 2,500 a 3,000 hectáreas potenciales para este mercado de un total de 7,000 hectáreas que se siembran en el sur de Sonora. Con el fin de incursionar en el mercado de producción de plántulas de sandía, así como a contribuir a solventar las necesidades de material vegetativo que se les presenta a los productores al momento de realizar sus siembras, la empresa busca contar con los elementos necesarios y suficientes que le permita conocer la rentabilidad financiera para competir con éxito en el mercado, por tal motivo nace la siguiente interrogante: ¿Es viable económicamente un proyecto productivo para la producción y venta de plántulas de sandía en el Valle del Yaqui?

## JUSTIFICACIÓN

Actualmente los esfuerzos de la investigación están orientados a mejorar la calidad y uniformidad del producto en función de la adquisición de semillas mejoradas o en la adquisición de plántulas de buena calidad para evitar así, pérdidas en la producción. Los productores han rebasado la etapa de conocer los factores que determinan la producción vegetal; ahora están aprendiendo a manejar las nuevas herramientas que ofrece la tecnología para modificar dichos factores para así obtener plantas de alta calidad y con las especificaciones deseadas. La importancia de poner a disposición los servicios de maquila de plántulas a los productores, es la de ofrecer mayor certidumbre en el proceso de siembra de melón y sandía posicionándolo en la etapa de crecimiento de una plántula generada con la mejor calidad, sanidad y experiencia, garantizándole mejores resultados al momento de la cosecha reflejándose en una mejor producción con una relación beneficio/costo representativa para los productores.

Eventualmente la siembra de hortaliza puede volverse no redituable si no se toman las medidas pertinentes para la optimización del proceso de producción. La producción de la plántula es un proceso muy especializado, delicado e importantes para tener éxito en la al momento de la cosecha. En caso de no contar con un proveedor de plántula que ofrezca sus servicios de calidad, higiene y disponibilidad de plántulas en tiempo y forma, los productores se verán en desventaja para realizar sus siembras a tiempo, reflejándose en la producción con pérdidas económicas

considerable, por otro lado, la empresa se verá favorecida al contar con un mercado disponible y potencial para satisfacer sus necesidades, así como contar con los recursos suficientes para seguir creciendo y contribuir al desarrollo de la región con la generación de mano de obra e impactando en un mejor nivel de vida de los habitantes de la comunidad.

### objetivo

Analizar la factibilidad económica mediante indicadores financieros, para determinar la rentabilidad en una empresa productora y comercializadora de plántulas de sandía en el valle del yaqui.

### **DELIMITACIONES**

La empresa donde se pretende llevar a cabo el presente proyecto se localiza en el nuevo Centro de Población Ejidal “Lic. Miguel de la Madrid hurtado y sus Anexos” en la fracción Sureste del Lote 36 y la Fracción Suroeste del Lote 37 de la Manzana 1528 del Fraccionamiento Richardson del Valle del Yaqui en los paralelos 27°14'40.85” Latitud Norte y 109°44'11.37” Longitud Oeste y a 56 m.s.n.m.

### **MÉTODOLOGIA**

#### Sujeto

El presente trabajo de investigación se realizó en una empresa Productora y Comercializadora de plántulas de sandía bajo invernadero denominada “Sociedad Cooperativa de Responsabilidad Limitada Graft & Plant”, Ubicada en el Valle del Yaqui, Sonora la cual factura un promedio de 31,500 Charolas equivalente a 6'300,000 plántulas en un ciclo operativo de nueve meses.

#### Materiales

Para la realización del análisis de factibilidad económica de la empresa Graft & Plant, se tomó en cuenta un documento elaborado en Excel denominado “Plan Financiero”, conformado a su vez con apartados en hojas de cálculo con sus respectivas fórmulas siendo estos los siguientes: conceptos de inversión, mezcla de financiamiento, tabla de amortización, presupuesto de operación, flujo de efectivo, balance general y razones financieras, permitiendo con esto trasladar en forma sistematizada y automatizada la información e impactar en los formatos subsecuentes elaborados como herramientas que sirvieron para determinar la situación financiera y la viabilidad de la inversión para de la empresa motivo de estudio.

#### Procedimiento

Primeramente se determinaron los costos de producción considerando la materia prima y el volumen de producción de plántulas, ingresos por ventas de plántulas, y el precio de venta. Los resultados obtenidos se llevaron a un registro de control como fueron la materia prima utilizada (composta, fungicidas, vermiculita, mano de obra), que intervino en la producción con el fin de conocer el costo por unidad (Plántula o charola). Seguidamente se realizó un análisis para conocer las necesidades reales de inversión determinándose los conceptos a solicitar vía crédito como inversión para lo cual se obtuvieron los precios unitarios a través de cotizaciones elaborada por las casas comerciales de la localidad correspondientes para este fin. Una vez obtenidos los

datos, se trasladaron a un programa elaborado en Excel denominado Plan Financiero donde se vació a un formato en hojas de cálculo denominado estructura de Inversiones con los montos de cada uno de los conceptos a financiar.

Posteriormente, se alimentaron los formatos conceptos de inversión, mezcla de financiamiento con los datos del monto del crédito a solicitar, tabla de amortización, presupuesto de operación y al realizar la corrida con toda la información antes mencionada se generaron automáticamente: Los flujos de efectivo, el balance general, el estado de resultados (proyectados a 5 años), y el formato de las razones financieras.

Se analizaron varias alternativas de fuentes de financiamiento para el proyecto, siendo la más viable para la empresa la Del Instituto Nacional para la Economía Social ( INAES), siendo la aportación de los recursos financiados a fondo perdido, y amortización, únicamente del capital sin considerar el costo del financiamiento. bSeguidamente para la obtención de los indicadores financieros considerados para este trabajo de investigación, se alimentaron los formatos en Excel: Mezcla de financiamiento y presupuesto de operación, generándose automáticamente el formato de evaluación financiera el cual contempla los flujos de operación actualizados dando origen al valor presente neto ( VPN ), tasa interna de rentabilidad ( TIR ), y al índice de rentabilidad ( I.R.).

Paso seguido, se aplicaron fórmulas matemáticas en forma manual para determinar el punto de equilibrio para ventas y número de unidades, y por último, se hizo una corrida en hojas de cálculo para determinar el periodo de recuperación de la inversión y el análisis de sensibilidad para conocer cuánto afecta a la TIR ante cambios de variables para evaluar el riesgo del proyecto.

## RESULTADOS

Tabla 1: Ingresos Por Ventas de Plántulas

Conceptos	No. De Unidades	Cavidades	Total de plántulas	Precio unitario/plántula	Ingreso total
Charolas	31,500	200	6'300,000	\$ .35	2'205,000
<b>Total:</b>					<b>\$2'205,000</b>

*Aquí se describen los resultados del volumen de producción anual de charolas y plántulas de hortalizas donde se obtuvieron los ingresos totales por ventas*

Tabla 2: costos de producción

Costos fijos	Costos variables	Costos totales
\$290,230.00	\$1'260,000	\$ 1'550,230.00

*Aquí los costos totales se desglosan en dos rubros que son: costos fijos correspondientes al pago de (un administrador, un contador, combustibles, lubricantes y los costos variables a siembra, sustratos, vermiculita, perlita, costo de agua y mano de obra.*

Tabla 3: Proyección de los Ingresos y Egresos

Año	Ingresos	Egresos
1	2'205,000	1'550,230
2	2'205,000	1'550,230
3	2'205,000	1'550,230
4	2'205,000	1'550,230
5	2'205,000	1'550,230

*Flujos de efectivo proyectados a cinco años.*

Tabla 4: Mezcla de Financiamiento

Conceptos:	Monto	Financiamiento	Crédito
------------	-------	----------------	---------

Inventarios	1'220,000	0	0
Inversión fija	700,000	100%	700,000
Inversión total	1'920,000	100%	700,000

*Derivado de un análisis hacia el interior de la empresa se determinó las necesidades reales de los conceptos de inversión y la mezcla de recursos a solicitar vía crédito como inversión..*

Una vez que se alimentaron los formatos con los datos requeridos, se generaron automáticamente la corrida financiera dando como resultados los valores del valor presente (VPN), la Tasa interna de retorno (TIR), índice de rentabilidad (R.I) y el punto de equilibrio (P.E) como se demuestran en la tabla 5 y 6 respectivamente.

Según los resultados obtenidos en la evaluación financiera, los datos de los indicadores económicos del valor presente neto (VPN), la tasa interna de retorno (TIR), el índice de rentabilidad (IR), se presentan en la tabla 5.

Tabla 5: Indicadores económicos

indicadores financieros	valores obtenidos
vpn	\$459,467
tir	25.74%
índice de rentabilidad	1.239
costo de capital	15.89%

*Valores obtenidos de los indicadores financieros mediante la aplicación del programa plan financiero Excel*

Con el fin de conocer la sensibilidad del proyecto, se llevó a cabo una corrida financiera donde se manipularon cada una de las variables que intervinieron en el análisis, obteniéndose los resultados como se presentan en la tabla 6.

Tabla 6: Análisis de Sensibilidad de Costos e Ingresos

incremento del 11% de los costos		disminución del 6.0% de los ingresos	
indicadores	valores	indicadores	valores
v p n	\$4,434	v p n	\$49,701
tir	15.98%	tir	16.99%
costo de capital	15.89%	costo de capital	16.99%
i.r.	1.002	i.r.	1.026

*Valores obtenidos de las variables con la aplicación de un aumento en los costos manteniéndose constante los ingresos y una disminución de los ingresos permaneciendo constante los costos.*

Para determinar el periodo de recuperación de la inversión del presente proyecto, se tomó en cuenta los datos obtenidos del formato en Excel denominado presupuesto de operación obteniéndose los resultados que se presentan en la tabla No. 7

Tabla 7: Presupuesto de Operación

concepto	periodo 0	periodo 1	periodo 2	periodo 3	periodo 4	periodo 5
(+) resultado ejercicio		495,995	495,995	495,995	495,995	495,995
(+) depreciación		60,000	60,000	60,000	60,000	60,000
(-) inv. inicial	1'920,000					
flujo neto	1'920,000	555,995	555,995	555,995	555,995	555,995

*Valores obtenidos con la aplicación el plan financiero*

$$\text{FORMULA P R I} = \frac{\text{INVERSIÓN INICIAL}}{\text{PROMEDIO FLUJO EFECTIVO}} = \frac{1'920,000}{724,770} = 2.64$$

Tabla 9: Periodo de Recuperación de la Inversión

AÑOS	MESES	DIAS
2	12 X.64	
2	1	30 X.36
2	1	11

*De acuerdo a los resultados en la presente tabla se obtiene que la recuperación exacta de la inversión es: 2 años, 1 mes y 11 días*

## CONCLUSIONES

En base a los resultados obtenidos de los indicadores económicos del proyecto, éste revela que es rentable debido a que se obtuvieron los siguientes indicadores: Valor Presente Neto (VPN) es Positivo, lo cual indica que durante la vida útil del proyecto, a una tasa de actualización del 15.89%, se obtiene una utilidad de \$4,434.00 que en términos absolutos representan en pesos y centavos a los accionistas cumpliéndose la condición que sustentan los autores mencionados en este proyecto de que el valor presente neto debe ser mayor o igual a cero por lo que se acepta la inversión.

La Tasa Interna de Retorno (TIR) es positiva, lo que indica que durante la vida útil del proyecto a cinco años, se recupera la inversión total y se obtiene una rentabilidad del 25.74% siendo esta mayor que la tasa de rentabilidad mínima aceptable (TREMA) 15.89% por lo que el proyecto bajo estas condiciones se acepta. Índice de Rentabilidad (I.R.), expresa que durante la vida útil del proyecto a una tasa de actualización del 15.89%, por cada peso invertido se obtienen de \$.239 pesos de beneficios cumpliendo con la condicionante que el índice de rentabilidad es mayor o igual a uno.

Durante la vida útil del proyecto se obtuvieron en promedio anuales de una producción de 6'300,000 plántulas de sandía y un punto de equilibrio de 1'935,000 plántulas, lo cual genera una ganancia en producción de plántulas de sandía, después del punto de equilibrio de 4'365,000 plántulas, que traducidos en pesos equivalen a \$1, 527,750 de utilidad bruta aproximadamente y un punto de equilibrio en pesos de \$677,000.00 aproximadamente, cantidad que iguala a los costos totales. El análisis de sensibilidad una vez que se hicieron las corridas financieras, arrojó que a pesar de un incremento del 11.0 % en los costos totales de producción, manteniéndose constantes los ingresos, o una disminución del 6.0% en los ingresos totales, manteniéndose constantes los costos totales, el proyecto sigue siendo redituable como lo demuestran los indicadores financieros. Una vez analizado cada uno de los indicadores de rentabilidad financiera, así como la capacidad que tiene la empresa para generar utilidades y cumplir con los compromisos contractuales, de manera general, se concluye que el presente proyecto es viable técnica y económicamente, ya que sus indicadores cumplen con sus condicionantes y además cuenta con el personal técnico especializado, infraestructura y mano de obra especializada para este fin.

## RECOMENDACIONES

Con el propósito de lograr atender a un mayor número de pequeños productores que se dedican a la siembra del cultivo de sandía, así como la de mantener la sostenibilidad de la empresa, se recomienda a la Sociedad Cooperativa "GRAFT & PLANT", lo siguiente:

- 1) Se recomienda a la empresa que realice las acciones pertinentes relacionado con en el Plan de las Proyecciones Financieras.

- 2) Que las utilidades netas que se obtienen año con año se reinviertan en activos fijos para crecer e incrementar su capacidad instalada y así ampliar el mercado potencial que se presenta en Sonora.
- 3) Por último, consolidar la estructura organizacional mediante la incorporación de personal capacitado con el fin de llevar a cabo campañas de promoción para dar a conocer el tipo de producto que se está ofertando en el mercado de plántulas.

## RESUMEN

*En el presente trabajo presentamos los conceptos y herramientas que se utilizan en el campo de la Investigación Comercial dentro del ámbito del Marketing empresarial. Como experiencia práctica hemos analizado la imagen de la Red de Supermercados EROSKI en el País Vasco (Norte de España) para conocer los niveles de satisfacción de sus clientes actuales y potenciales y tratar de alcanzar unas conclusiones que nos permitan formular una serie de recomendaciones que puedan servir de guía y estímulo a la dirección del Grupo con el objetivo último de mejorar su imagen y posicionamiento en el mercado. El estudio se ha realizado durante los meses de mayo y Junio de 2012.*

**PALABRAS CLAVES:** Investigación comercial, Posicionamiento, Supermercado

## COMERCIAL RESEARCH: SUPERMARKETS GROUP POSITION EROSKI

### ABSTRACT

*In this paper we present the concepts and tools used in the field of Commercial Research in the field of business marketing. As practical experience we have analyzed the image of Eroski Supermarket Network in the "Vasco Country" (northern Spain) for satisfaction levels of their customers and prospects and reach conclusions that allow us to formulate a set of recommendations that can provide guidance and encouragement to the direction of the Group with the ultimate goal of improving its image and market positioning. The study was conducted during the months of May and June 2012.*

**KEYWORDS:** Business Research, Positioning, Supermarket

### INTRODUCCION

Para apoyar la tarea de gestión en un entorno complejo y cambiante, no basta con proveer a los decisores con información de forma esporádica. Es necesario garantizar un flujo constante de información conveniente y hacerla llegar a aquellos que la necesiten en el momento preciso. Las profundas transformaciones ocurridas en el entorno desde finales de los sesenta abren un nuevo panorama para las empresas que la hacen requerir cada vez más de nuevos métodos para la obtención de información y formas para procesarla y analizarla. En este marco la investigación

comercial ha ido ganando en importancia en la empresa y ensanchando su campo de aplicaciones. En principio se centró en la eficacia de las actividades de comunicación, esencialmente publicidad, pero ya en la actualidad la Universidad y la Empresa la integran formalmente en sus áreas de actividad, se crean departamentos e institutos de investigación comercial, y se estudian actitudes, creencias, comportamientos y motivaciones que permitan a las empresas mejorar su posicionamiento en el mercado y su mezcla de mercadotecnia. ([Esteban & Fernández, 2009](#)) La dirección, por tanto, ha de configurar un método que le permita reunir y analizar el enorme volumen de información que se relaciona con la organización. El Sistema de Información de Marketing (SIM) constituye una estructura cuya finalidad es generar, registrar, clasificar, analizar, valorar y distribuir a tiempo la información demandada para orientar las actividades estratégicas de marketing y facilitar la toma de decisiones inherente a toda política comercial. (Bello, Vázquez, & Trespacios, 1996)

El SIM ha sido objeto de numerosas definiciones de la que destacamos la siguiente: “es el conjunto de personas, equipos y procedimientos capaces de recoger, clasificar, analizar, evaluar y distribuir la información oportuna y precisa que necesitan los responsables de marketing para la toma de decisiones”. (Kotler, 1999) El SIM es mucho más que una base de datos. Es todo un conjunto de recursos, datos y personas debidamente organizados para satisfacer las necesidades de información propias de la gestión comercial. Los distintos elementos o subsistemas que componen el S.I.M. son, según Kotler, los siguientes Sistema de datos internos, Sistema de Inteligencia de Marketing, Sistema de Apoyo a las Decisiones de Marketing, Sistema de Investigación de Marketing. Este trabajo se enfoca en la contextualización, herramientas y una aplicación de la Investigación Comercial que es vital para cualquier Empresa como elemento que rige el Sistema de Información de Marketing. (Kotler, 2002) Para ello se presenta en primera instancia una breve revisión de literatura sobre la investigación comercial, se muestra la metodología aplicada en una investigación comercial realizada en el Grupo Supermercados Eroski, se ofrecen los principales resultados y recomendaciones obtenidos; y se finaliza con la Bibliografía utilizada.

## REVISIÓN DE LITERATURA

La información es un elemento básico para la toma de cualquier decisión. En el caso de una organización (pública, privada o sin ánimo de lucro) orientada al mercado necesita información acerca del mismo con el fin de dirigir acertadamente sus acciones en ese mercado. ([Maqueda Lafuente, 2010](#)) Un factor clave en el éxito de muchas organizaciones es ofrecer al mercado lo que éste demanda, siendo la satisfacción de las necesidades de los clientes un objetivo prioritario. Uno de los propósitos de la investigación de mercados es obtener información sobre los problemas y necesidades de los clientes, lo que ayuda a las organizaciones alcanzar dicho objetivo así como implantar una Orientación al mercado. Los motivos que han hecho imprescindible realizar investigaciones de marketing en las organizaciones son, entre otras las siguientes:

La situación de madurez y el aumento de la competencia en muchos mercados, que hace necesario disponer instantáneamente de información sobre los cambios introducidos por los competidores.

El crecimiento de las organizaciones y el acceso a mercados más extensos y diversos, lo cual implica mayores problemas para conocer a su público objetivo, si no se recurre a la investigación.

Los costes de llevar a cabo acciones de marketing, ya sea de lanzamiento de un producto, diseño de sistemas de distribución o políticas de comunicación, exigen tomar medidas para garantizar el éxito y actuar con mayor seguridad. Dado que toda empresa dispone de recursos escasos, tomar decisiones comerciales incorrectas puede atentar contra su existencia.

La necesidad de conocer, e incluso prever los cambios que continuamente se producen en el entorno.

La preocupación reinante por la calidad en el consumo de bienes y la prestación de servicios, que se concreta en un control y seguimiento de las acciones de las instituciones públicas, organizaciones de consumidores y demás grupos del público general.

La información existente, por un lado no suele satisfacer las necesidades de las organizaciones por no ajustarse a lo que precisan. Por otra parte, cada vez resulta más necesario sistematizar, ordenar y sacar provecho de la gran cantidad de información que se genera. (Luque, 1997)

Todas estas razones adquieren mayor importancia cuanto mayor sea la dimensión de la empresa. La división de tareas entre muchas personas, el aumento de clientes, del surtido y de los mercados, segmentos, etc., obligan cada vez más a sistematizar la recogida y el análisis de la información del entorno. Por tanto, cualquier tipo de organización que esté buscando tomar una buena decisión deberá acudir a la Investigación Comercial. Son numerosas las definiciones que se han dado sobre investigación comercial de entre todas ellas destacamos por su brevedad y concreción la propuesta por (Green, Tull, & Albaum, 1988) para quienes la Investigación Comercial es: “la búsqueda y análisis sistemático y objetivo de la información relevante para la identificación y solución de cualquier problema en el campo del marketing”. De esta definición podemos destacar las siguientes características: Búsqueda y análisis: no solamente los va a recoger o buscar, también se van a analizar.

Sistemático y objetivo: existen una serie de pasos a seguir de forma ordenada, procurando dejar poco sitio a la improvisación y a las subjetividades. Es decir debe ser neutral, sin sesgos personales ni prejuicios.

Información relevante: La información que se analiza debe ser de interés y pertinente para cada investigación.

Identificación y solución de problemas de marketing: problemas que no tienen que tener siempre una connotación negativa.

Finalmente hay que destacar el carácter puntual de las investigaciones comerciales, como se ha explicado en el apartado anterior. Este aspecto permite hablar, más que de una investigación genérica, de proyectos de investigación comercial que se realizan en una organización. La esencia u objetivo básico de la Investigación Comercial es la obtención de información para poder adoptar decisiones comerciales correctas logrando reducir la incertidumbre. Es decir, la IC sólo puede reducir el riesgo y no eliminarlo totalmente por cuatro razones:

Porque el sujeto de análisis es siempre un “ser humano”, una “persona”, y ésta es complicada de estudiar: porque es cambiante y, si bien puede ser analizada en cuanto a opinión, imagen, actitud y comportamiento... no es posible estudiar sus predicciones con certeza absoluta.

Porque el modelo económico es cambiante. Hoy tenemos una situación del mercado totalmente explorada y conocida, pero entre hoy y el momento en que se va a tomar una decisión va a transcurrir un tiempo y durante este intervalo las propias circunstancias pueden haber cambiado: la competencia puede alterar el marco de la oferta, o las propias circunstancias coyunturales que pueden incidir en este lapso de tiempo que pueden haber alterado este cuadro de opiniones y expectativas de nuestro mercado. Todo esto podría ser evitado si el estudio se hiciera en el momento instantáneo “t”, si en este mismo momento se tomara la decisión y si en este mismo momento se produjeran los efectos de la decisión.

Porque los instrumentos también tienen sus limitaciones: los métodos utilizados son imperfectos, ya que el elemento básico recolector de la información es el cuestionario y se utilizan generalmente métodos de muestreo que en sí comportan sus propios errores estadísticos, al margen de que, en ocasiones, la propia falta de información sobre el universo impide diseñar muestras probabilísticas, que es la única forma de poder obtener datos fidedignos y representativos.

Porque independientemente de lo dicho, el decisor, con su problemática, sus condicionantes y su propia cultura, infiere y condiciona esta toma de decisiones, pudiendo hacerla incluso errónea o, por lo menos, no la más indicada. (Ferré, 1997)

No obstante, a pesar de lo anterior, el investigador cuenta con suficientes instrumentos para medir el tamaño de los errores que se cometen en la investigación y garantizar la exactitud de los resultados de la misma. Un segundo objetivo, que es a la vez una condición, es que la IC sea susceptible de influir en la decisión. De nada sirve una información si sólo tiene posibilidades de confirmar, pero no modificar una decisión ya tomada, con independencia de los resultados de la investigación.

En tercer lugar, todo trabajo de IC deberá justificar su coste: El valor o rentabilidad que proporcione la información ha de ser siempre superior al coste (en tiempo y dinero) que suponga su realización. Es decir la IC debe ser eficiente. Respecto al alcance de la IC como herramienta útil para el Marketing, ésta se puede aplicar en múltiples campos o áreas. Sin ánimo de ser exhaustivos, recogemos a continuación las áreas de aplicación más significativas:

a) Investigación sobre el comportamiento del consumidor:

- *Motivaciones de compra:* → ¿Por qué se compra? Habrá que identificar los motivos por los que se adquiere un producto concreto: necesidad, apariencia, buena relación calidad/precio, diseño del envase, influencia del color, etc.

*Personas que influyen y deciden en la compra:* → ¿Quién compra? Para esto habrá que delimitar claramente las distintas actitudes hacia el proceso de decisión que pueden ser tomadas: iniciador, influyente, decisor, comprador, consumidor o usuario y pagador. Estos son datos importantes a la hora de diseñar, por ejemplo, una campaña publicitaria.

*Hábitos de compra:* → ¿Cuándo, cómo y dónde se compra?

*Estilos de vida:* El estilo de vida lo determina las formas en que se emplea el tiempo, la jerarquía de valores, y las opiniones que los individuos tengan sobre sí mismos y sobre el mundo que les rodea.

*Segmentación y tipología de los consumidores:* → Grupos homogéneos.

Hay que recordar que el marketing no crea necesidades; las supone como dadas y lo que sí crea son formas para satisfacerlas. De allí la importancia que tiene conocer bien las necesidades, así como también el comportamiento de compra, los usos, etc.

b) Investigación sobre la demanda y las ventas:

- Demanda total del mercado de un producto.
- Demanda total del mercado de un grupo de productos afines o de un sector.
- Participación de las marcas en el mercado (cuotas de mercado).
- Determinación de la demanda por zonas geográficas y tipos de consumidores.
- Determinación de los índices de capacidad de compra.
- Previsiones de ventas.

c) Investigación sobre productos:

- Creación, modificación o eliminación de productos. Investigaciones encaminadas a ayudar en decisiones para el mantenimiento de la gama de la empresa.
- Test de concepto.
- Test de producto.
- Test de mercado.
- Test de nombre.
- Estudios sobre imagen y posicionamiento de marcas:

d) Investigación sobre las actividades de comunicación:

- Influencia de la publicidad en el comportamiento de los consumidores: Se intentarán medir aspectos tales como la modificación de actitudes.
- Determinación de la audiencia de los medios y soportes: Análisis cuantitativo (número de personas) y análisis cualitativo (perfil de esas personas). Estos dos aspectos serán importantes para insertar nuestra publicidad.
- Medida de la eficacia publicitaria: Realización de los pretests y postests.
- Relación entre inversión publicitaria y ventas.
- Actitud de los consumidores ante las promociones
- Evaluación de los incentivos y los programas promocionales.
- Control de los resultados de las promociones.

e) Investigación sobre la distribución:

Elección de los canales de distribución.

- Determinar la amplitud de productos y marcas trabajadas.
- Actitudes y motivaciones de los intermediarios hacia las actuaciones de los fabricantes.
- Análisis de la influencia de los intermediarios en la elección de las marcas por los consumidores.

f) Investigación sobre el entorno económico, jurídico y tecnológico:

- Previsiones a largo plazo.
- Posición presente y futura de la competencia.
- Influencia de la tecnología en el mercado.
- Repercusiones legales o de acuerdos internacionales, etc.

El Proceso De Investigación Comercial Todo trabajo de Investigación comercial puede describirse en líneas generales en las siguientes etapas:

- 1º.- Análisis de la situación inicial.
- 2º.- Determinación de los objetivos del trabajo.
- 3º.- Recogida de información.
- 4º.- Análisis cualitativo.
- 5º.- Preparación y realización del trabajo de campo.
- 6º.- Depuración, codificación y tabulación.
- 7º.- Análisis de la información y conclusiones.

*1º.- Análisis de la situación:* El proceso de investigación se inicia reconociendo algún problema u oportunidad comercial. La definición del problema de la investigación es la parte más importante del proceso, hasta el punto de que sólo cuando se haya hecho correctamente, se podrá diseñar y desarrollar ésta. De otra forma, continuar con las etapas siguientes supondría derrochar recursos y tiempo. Precisamente, corresponde a los decisores describir exhaustivamente los problemas a los que desean encontrar respuesta. En esta primera etapa, se producen los primeros contactos y reflexiones entre el investigador y el directivo que servirán para precisar el contenido de la investigación.

El análisis de la situación de partida da lugar en muchos casos a un *estudio exploratorio*, cuyo único objetivo es profundizar en la comprensión de la situación o problema del trabajo. Por ello, se suelen hacer trabajos exploratorios cuando sea necesario definir el problema de manera más precisa, identificar los cursos de acción relevantes o conocer otros aspectos del problema antes de definir los objetivos del trabajo. Estudios exploratorios que se pueden concretar en la obtención de datos secundarios, conversaciones con las personas que toman las decisiones o que puedan aportar ideas, investigaciones cualitativas (entrevistas con expertos y conocedores del tema en cuestión) o analizando casos de situaciones similares. No importa que la información del estudio exploratorio no sea precisa. Incluso, el proceso seguido no tiene por qué tener una estructuración elaborada.

*2º.- Determinación de los objetivos del trabajo:* Una vez analizada la situación y definido claramente el problema, éste deberá traducirse en objetivos específicos de la investigación. En esto existen diferencias entre la forma de entender el problema por parte de la Dirección comercial, y los investigadores. *Así, los problemas de la dirección están orientados a las acciones posibles a realizar, como por ejemplo: ¿debería realizarse la segmentación de una nueva forma? ¿Debería incrementarse el presupuesto para hacer promociones? ¿Deberían rebajarse los precios en el nuevo producto?*

*3º.- Recogida de información secundaria disponible:* En la primera etapa ya se ha recogido cierta información. No obstante una vez determinados los objetivos del estudio, los encargados de realizarlo comenzarán por recoger toda información que pueda servir para la obtención de los mismos. Ello implica recopilar toda información útil disponible en ese momento. A toda información que ya existe en el momento de iniciar un trabajo de investigación se le conoce como *información secundaria*.

*4º.- Análisis cualitativo:* En las etapas iniciales del trabajo de investigación, al mismo tiempo que se va recogiendo información secundaria útil, se irán formulando las primeras hipótesis (proposiciones o suposiciones aún no probadas) o respuestas de los problemas planteados. Precisamente, esta labor se puede facilitar mucho con técnicas de recogida y análisis de información cualitativa, que veremos más adelante. Por otro lado estas técnicas, ayudan a delimitar y a orientar el proceso de recogida de la información cuantitativa necesaria.

5º.- *Preparación y realización del trabajo de campo:* Normalmente la información secundaria disponible resulta insuficiente y poco adaptable para hallar las respuestas del trabajo de investigación. En tal caso, deberá diseñarse e implementarse un proceso de recogida de *información primaria*. Se entiende por ésta toda aquella información no disponible al inicio del trabajo de investigación, que resulta necesaria para alcanzar los objetivos marcados y que requerirá de un *trabajo de campo* para su recogida.

La preparación y realización del trabajo de campo consiste en una sucesión de tareas encaminadas a recoger aquella información primaria que la investigación requiera para llegar a las conclusiones. Las distintas sub-tareas de esta etapa varían dependiendo del tipo de información requerida y del tipo de público, si bien, normalmente son las siguientes: Definición de la población objeto de estudio y selección de la muestra, elaboración del soporte a emplear para la recogida de los datos (cuestionario, normalmente), recogida de datos propiamente dicha o *trabajo de campo*.

6º.- *Depuración, codificación y tabulación:* Una vez cumplimentados los cuestionarios se procede a controlar que no haya errores y que la información recogida sea veraz. Se corrigen defectos u omisiones en las respuestas. En algunos casos, no habrá más remedio que eliminar entrevistas que tengan errores no subsanables. En otros casos, únicamente se elimina la variable con error y se toma por válido el resto. Seguidamente, la información recogida pasa a ser codificada y dispuesta en tablas con el objeto de poder ser analizada mediante las técnicas que se elijan. Existen distintas modalidades de tablas dependiendo de cuál sea la técnica a emplear.

7º.- *Análisis de la información y conclusiones:* Se emplean aquí técnicas numéricas o estadísticas que intentan básicamente resumir la información para llegar a conclusiones objetivas. Asimismo, en esta fase el investigador también deberá ocuparse de elaborar y presentar el informe de todo el trabajo realizado.

## **METODOLOGÍA**

Se realizó este trabajo de Investigación Comercial sobre el Grupo Eroski para conocer la satisfacción del cliente. Es decir, hemos tratado de averiguar las motivaciones de compra del cliente. Para ello construimos un cuestionario de 36 preguntas enfocadas tanto a la relación calidad-precio de los productos como a la amplia variedad de productos y servicios.

Este trabajo se realiza como parte de una red interorganizacional que desarrolla este tipo de investigaciones para varias empresas como se muestra en un reciente estudio publicado. (Maqueda Lafuente & Barquero Cabrero, 2013) El cuestionario fue aplicado en tres áreas de Bizkaia, las cuales son Getxo, Txorierra y Mungialdea. De esta manera podemos observar la valoración del cliente de Eroski en cada zona. Por otra parte, también hemos tratado de coger una muestra representativa de toda la población realizando cuestionarios a personas de distintas edades. El objetivo de este trabajo no es solo conocer la satisfacción del cliente de Eroski sino que mediante las respuestas de los ciudadanos podemos conocer los aspectos a mejorar o nuevas oportunidades del Grupo. Se realizó la Investigación Comercial de Eroski a una muestra de 380 personas y se analizaron los datos obtenidos. Se muestra en el Anexo 1 el Modelo de cuestionario utilizado.

## **RESULTADOS**

La investigación comercial se realizó tomando como Caso Práctico El Grupo Eroski, que nace en 1969 por una iniciativa, cuando diez cooperativas de consumo formadas por consumidores y trabajadores deciden unirse. En 1978 Eroski lanzó sus primeros productos marca Eroski que hoy en día alcanzan los 10.000. Este mismo año Eroski decidió dirigirse a los clientes en su misma lengua y para ello introdujo la información de los productos en cuatro lenguas. En 1981 se abrió el primer hipermercado en Vitoria para ofrecer el mejor precio al mayor número de clientes. En 1996 Eroski integra el programa Travel Club para ofrecer a sus clientes canjear puntos por diferentes premios. En el año 2000 nace el supermercado Eroski online. Tres años después Eroski lanza la tarjeta de pago de Eroski Red. El año pasado (2011) llegó a recaudar 8427 millones de euros. Más allá de su historia, Eroski no es solo una empresa de distribución alimentaria, Eroski da importancia a sus productos blancos y para ello ha creado un laboratorio propio para garantizar dicha calidad. Por ello, es la única empresa de distribución española que ofrece doble garantía. Siguiendo con el lema de la calidad colabora con fabricantes que poseen certificados que los acreditan. Eroski contribuye con el desarrollo social y por esta razón ofrece productos de comercio justo y se responsabiliza del medio ambiente (empresa pionera en retirar sprays de CFC, bolsas reutilizables...). Actualmente, Eroski invierte el 10% de sus beneficios en actividades sociales, ayuda a la comunidad y al consumidor. Una vez aplicado el cuestionario se muestran a continuación los resultados fundamentales obtenidos:

La mayoría de los encuestados coinciden en que la razón de comprar en Eroski es la cercanía del establecimiento. Estos son clientes habituales y suelen realizar sus compras una o más veces por semana en centros Eroski Center, Centros Comerciales y Aliprox. También le dan importancia a que el grupo Eroski sea del País Vasco. Aunque más de la mitad de los encuestados están contentos con la calidad-precio que ofrece Eroski, las secciones peor valoradas son la pescadería, la frutería y la gama textil. La variedad es otro aspecto negativo a destacar puesto que el cliente exige un estándar de calidad alto en los productos frescos. Como último punto del análisis interno, cabe mencionar que todos los clientes están totalmente satisfechos respecto al trato y colaboración del personal. Para finalizar, analizaremos algunos de los servicios adicionales que ofrece Eroski.

El servicio de compra por Internet no es muy conocido y además no es de uso habitual, únicamente una de las personas encuestadas ha utilizado este servicio. Muchas de las actividades de Eroski son desconocidas para el público en general, tales como: la Fundación Eroski, Inmobiliaria, Seguros y la tarjeta Eroski Red. Otras, en cambio, son conocidas y muy valoradas, entre ellas se encuentra la tarjeta Travel Club que es de uso habitual ya que muchos clientes se benefician de su programa por puntos. Por todo ello, destacamos que aunque el Grupo tiene clientes fieles, en caso de no poder realizar la compra en Eroski, la mayoría de los encuestados escogerían el Supermercado BM (muy diferenciado), seguido de Simply y Carrefour.

## CONCLUSIONES

Una vez analizados los resultados y las conclusiones de las 380 encuestas realizadas se podrían hacer las siguientes recomendaciones:

Labor de comunicación y promoción porque tiene notoriedad por la alimentación y no por otros productos.

Dar a conocer y publicitar la tarjeta Eroski Red y sus ventajas.

Dar a conocer su fundación para que los clientes perciban que se trata de RSE (Responsabilidad Social Empresarial).

Incentivar o motivar el uso de las compras por Internet (no cobrar gastos de envío...).

Formar más adecuadamente a su personal en la atención a los clientes.

Realizar campañas de comunicación más agresivas que les diferencien de su competencia.

Facilitar y simplificar los envíos de pedidos a domicilio.

# MULTIMEDIA EDUCATIVA COMO MEDIO DE INSTRUCCIÓN EN LA ENSEÑANZA DEL DISEÑO GRÁFICO

Gloria Azucena Torres de León, Universidad Autonoma de Baja California  
Isabel Salinas Gutiérrez, Universidad Autonoma de Baja California  
Hildelisa Karina Landeros Lorenzana, Universidad Autonoma de Baja California

## RESUMEN

*Este artículo estudia la problemática de la incorporación de multimedia educativa, desde el desarrollo de tecnologías, en procesos de instrucción y específicamente dirigidos a la enseñanza del diseño gráfico.*

*La formación académica dirigida a partir del desarrollo de tecnología, sugiere la búsqueda de consensos sobre lo adecuado a los modelos de enseñanza – aprendizaje en que pueden verse inmersos el desarrollo de los contenidos. En este caso se plantean las recomendaciones para el profesor de diseño gráfico de tal manera que permita la propuesta de un instrumento de carácter audiovisual como una herramienta para la instrucción del tema Elementos básicos del diseño.*

**PALABRAS CLAVE:** Educación, Desarrollo de Tecnologías, Herramientas de Instrucción

## EDUCATIONAL MULTIMEDIA INSTRUCTION AS A TEACHING GRAPHIC DESIGN

### ABSTRACT

*This article studies the problem of incorporating educational media, from the development of technologies, and instructional processes specifically aimed at graphic design education. The academic training directed from technology development suggests the search for consensus on the appropriateness of the models of teaching - learning that can be immersed in the content development. In this case raises the recommendations for graphic design teacher so as to allow the proposal of a visual character instrument as a tool for the instruction of Basic Elements of design topic.*

**JEL:** A2, I2, I21, Y20, Y90, Z00

**KEYWORDS:** Education, Technology Development, Instructional Tools

### INTRODUCCIÓN

El desarrollo de nuevas tecnologías, al formar parte de la vida cotidiana desde la primera infancia, impactan las formas de aprendizaje y privilegian, ante todo, la percepción visual a través de la presentación de imágenes y texto. Esto implica que diversos efectos se desplieguen a gran velocidad asociados al uso de Internet o a las alternativas de comunicación satelital, vía los teléfonos celulares y discos versátiles digitales (DVD), entre otras formas de acceso a los recursos disponibles en las sociedades de información y del conocimiento. “Los jóvenes desarrollan costumbres como cambiar los canales de televisión con el control remoto, observando sólo fragmentos breves e inconexos; visitar páginas de Internet y brincar de una a otra, hasta encontrar

la información buscada; mantener conversaciones simultáneas con más de diez personas a través de servicios de mensajería en computadora, o marcar mensajes ágiles y abreviados en el teléfono celular”. (Dede, 2007, p.56) Sin duda, efectuar estas acciones de acceso y control sobre los medios tecnológicos implica el desarrollo de habilidades específicas para ello y, a su vez, ocasiona que algunas formas de enseñanza que antiguamente resultaban exitosas ahora sean consideradas poco efectivas para el logro de los aprendizajes. Por ello, la institución educativa debe apropiarse de estas nuevas formas de promover el proceso educativo, para incorporarlas a los modelos escolares de manera dirigida hacia el logro de los conocimientos adecuados. Adicionalmente, es importante contextualizar todos estos cambios, respecto al uso de la tecnología ya que en la mayor parte de los países de habla hispana, la relación con la tecnología suele ser considerada como un medio para el desarrollo de habilidades educativas y presenta ciertas restricciones ya que es importada como un referente desde los países con un alto desarrollo de infraestructura. En este sentido no sólo se incluyen los aparatos electrónicos y el software, sino también contenidos y formas de ver el mundo. Esta investigación presenta la alternativa para el desarrollo de multimedia educativo dirigido a la enseñanza de temáticas específicas como son las referidas al diseño gráfico, pone a prueba la oportunidad de sumar una serie de recursos, en diversas dimensiones, integrados al entorno de enseñanza- aprendizaje, de tal manera que permiten innovar en este campo a partir de la tecnología en un contexto didáctico, dirigida al logro de conocimientos, habilidades y actitudes.

## REVISIÓN DE LITERATURA

La terminología asociada a multimedia comienza a ser popular en los años noventa, su utilización es sinónimo de vanguardia, tecnología, productividad. De hecho el término multimedia, se emplea como adjetivo para múltiples servicios y productos; por ejemplo, empresas multimedia se denominan empresas desarrolladoras de productos especializados o empresas que poseen medios de comunicación. En este sentido un ordenador multimedia es un ordenador que posee una serie de características de hardware que permiten ejecutar en buenas condiciones los propios software multimedia. Puede considerarse que una aplicación multimedia, es un programa que integra y maneja distintos tipos de información (Fidalgo, 2009). Se considera multimedia la incorporación tanto de imágenes, como de videos, y bases de datos, entre otros recursos. Puede considerarse que existe más de una manera de incorporar la computadora a la educación y es indispensable que ésta incorporación se haga de manera reflexiva y crítica.

Tradicionalmente el uso de la computadora en la educación se redujo al uso de los denominados pasa páginas, muy populares durante los últimos diez años, esta es una actividad que se reduce a ir de una pantalla de texto a otra. Así es posible llenar pantallas y pantallas de texto, a veces con gráficas de baja resolución. Evidentemente, no hay nada malo en ello, salvo que no se usan a fondo las particularidades de un multimedios. En este sentido el análisis de los materiales y los paradigmas en que son propuestos requiere la atención no sólo de la idea general sino en la aplicación dirigida y el objetivo de aprendizaje que se persigue, al respecto podemos considerar que: “Los materiales multimedia educativos, como los materiales didácticos en general, pueden realizar múltiples funciones en los procesos de enseñanza y aprendizaje. Las principales funciones que pueden realizar los recursos educativos multimedia son las siguientes: informativa, instructiva o entrenadora, motivadora, evaluadora, entorno para la exploración y la experimentación, expresivo-comunicativa, proveedora de recursos para procesar datos, innovadora, apoyo a la orientación escolar y profesional, y gestión de centros.” (Marquès, 1999, p.32).

## METODOLOGIA

Para enfatizar el uso de estos recursos teóricos y los aspectos comunicacionales que se utilizaron como base del producto multimedia que se desarrolla en el presente proyecto se subraya la incorporación de aquellos elementos que son considerados como imágenes visual, textual, sonora, animación y movimiento. Ya que se pretende que el material presentado atraiga la atención del usuario. Protocolo de planeación para productos multimedia educativos. Este apartado señala la serie de elementos básicos considerados para la presentación del proyecto multimedia que se propone, recursos de elaboración (Tabla 1) , costo de elaboración (Tabla 2) y siguiendo el formato de descripción de contenidos y planteamiento de la etapas para el desarrollo del mismo.

Tabla 1: Recursos de Elaboración

Recursos Disponibles	
<b>I.</b>	<b>Recursos humanos</b> Gloria Torres, diseñador gráfico (creador del proyecto de multimedia educativa)
<b>II.</b>	<b>Recursos materiales</b> Computadora Internet Micrófono Cámara fotográfica
<b>III.</b>	<b>Recursos económicos</b> Los necesarios para concluir el proyecto.
<b>IV.</b>	<b>Recursos tecnológicos</b>
IV.1	<i>Para la producción</i> Computadora con software de producción para audio y video Cámara de video Cámara fotográfica
IV.2	<i>Para la utilización</i> Servicio de conexión a <i>Internet</i> Computadora con software de producción para audio y video Cámara de video Cámara fotográfica Servicio de conexión a <i>Internet</i>
<b>V.</b>	<b>Recursos temporales</b> Cámara de video

Tabla 2: Costos de Elaboración

Análisis costo-beneficio
<b>Beneficios esperados</b> Que el producto multimedia una vez concluido sea material de apoyo para maestros que imparten materias de diseño.
<b>Costos esperados</b> \$ 4,000 aproximadamente.

La planeación al detalle para el desarrollo de este proyecto de multimedia educativo se plantea estableciendo básicamente tres etapas (Tabla 3) a partir de las cuales se forma parte: análisis, diseño y desarrollo. Estos elementos darán cuerpo y contenido al desarrollo de productos y a la comprensión del producto en el formato propio que se propone a continuación.

## RESULTADOS

En este apartado se definen algunos lineamientos necesarios para el desarrollo óptimo del producto multimedia educativo. Es decir la especificación de cómo se presenta un producto cuya aspiración es desarrollar contenidos de enseñanza – aprendizaje. Tipos de Producto. Cada uno de los archivos desarrollados contiene la misma información teórica para adaptarse a cualquier dispositivo electrónico personal.

(1) Producto de textos con extensión .pdf. Este archivo es un documento de lectura y contiene información referente al tema *Elementos básicos del diseño*.

(1) Producto de Audio con extensión .mp3. Este archivo es un documento de audio y contiene información referente al tema *Elementos básicos del diseño*.

(1) Producto Audiovisual con extensión .pptx. Este archivo es un documento audiovisual y contiene información referente al tema *Elementos básicos del diseño*.

(1) Producto Interactivo con extensión .pptx. Este archivo es un documento interactivo y contiene preguntas del tema *Elementos básicos del diseño* para responder en falso y verdadero.

Interactividad. El alumno visualiza el tema al iniciar cada producto. En el instrumento interactivo el alumno tiene una participación en una evaluación personal de tipo preguntas con respuestas, éstas en verdadero y falso, y a este se le considera interactivo ya que el usuario es dueño de la secuencia y tiempo dedicado al contenido del instrumento. Motivación. El usuario integra las tecnologías que usa en su vida diaria en el manejo de los contenidos de sus clases teóricas. Puede tener acceso a estos documentos en cualquier dispositivo electrónico ya que el material de los archivos se encuentra disponible en varios tipos de extensiones. Estándares de estilo. En este apartado se analizan los siguientes puntos, pues se considera que la descripción de estos puede ayudarnos a crear la idea de diseño general del producto, es establecer la duración de los productos desarrollados.

Tabla 3: Etapas de Desarrollo del Producto

etapa	entregables o subproductos	responsable	fecha límite
<b>análisis</b>	en esta etapa se realizará un previo estudio de los conocimientos, habilidades y actitudes del grupo de personas a las que va dirigido este material multimedia, para poder tomar decisiones más asertivas al momento de desarrollar el material.	gloria torres	2 de mayo de 2012
seleccionar contenidos	se seleccionarán con cuidado los contenidos más adecuados para abordar el tema de una manera integral, pero sin divagar en detalles sin relevancia.	gloria torres	2 de mayo de 2012
definir perfil de usuario	se elabora un estudio del auditorio al que va dirigido el producto multimedia.	gloria torres	2 de mayo de 2012
elaborar fundamentos	se elige estratégicamente el método de instrucción con el que se quiere ilustrar el tema para que el concepto a tratar quede claro.	gloria torres	2 de mayo de 2012
seleccionar medios	se selecciona el medio con el que se quiere transmitir el mensaje, tomando en cuenta que éste será o no atractivo para el usuario.	gloria torres	2 de mayo de 2012
seleccionar modalidad	se establece la modalidad de la exposición del tema.	gloria torres	2 de mayo de 2012
seleccionar forma de distribución	da a conocer el producto multimedia, es decir cómo será difundido el mensaje que se ha elaborado.	gloria torres	2 de mayo de 2012
<b>diseño</b>	planeación de la preproducción del producto multimedia.	gloria torres	12 de mayo de 2012
bosquejo	se realizará el "borrador" del storyboard del proyecto.	gloria torres	12 de mayo de 2012
estándares	se expondrá la pauta de nuestro proyecto los estándares tendrán que ser muy claros .	gloria torres	12 de mayo de 2012
diseño final	se realiza el storyboard final del proyecto.	gloria torres	12 de mayo de 2012
<b>desarrollo</b>	producción del proyecto.	gloria torres	16 de mayo de 2012

etapa	entregables o subproductos	responsable	fecha límite
elaborar contenidos	producción de los contenidos por separado del proyecto (audio, imagen, texto)	gloria torres	1 de junio de 2012
integrar	se integran los contenidos realizados por separado para armar el producto.	gloria torres	4 de junio de 2012
revisar y probar	revisión del funcionamiento del producto adecuadamente.	gloria torres	9 de junio de 2012
liberar	el producto sale al consumidor o usuario.	gloria torres	16 de junio de 2012

*Producto de Texto:* El documento contiene 7 cuartillas, la duración del archivo será la que el usuario tarde en realizar la lectura.

*Producto de Audio:* Este documento tiene una duración de 3 minutos con 33 segundos.

*Producto Audiovisual:* Este documento tiene una duración de 4 minutos con 2 segundos.

*Producto Interactivo:* Siendo este producto interactivo el usuario es dueño de la secuencia y tiempo dedicado a contestar el cuestionario.

Redacción y gramática. Como consideración de uso de lenguaje se decide si se hablará al usuario de tú o de usted. Una recomendación general es que se hablará al usuario de tú, esto con la finalidad de romper las barreras que puedan existir a través de la pantalla de la computadora. El hablar de tú no rompe en ningún momento con el respeto, con esto sólo se pretende que el trato sea más personal. Se usará forma impersonal, porque en ningún momento se pretende dar una orden. El interesado es libre de hacer o no uso de los productos. Imagen visual fija. Por su parte la elaboración y/o selección de imágenes se pueden considerar como puntos básicos ya que las imágenes que se usaron serán de tipo fotografías en situaciones específicas para ilustrar algunos ejemplos. Imagen sonora. Se ha determinado que el material será redactado por un locutor de género femenino, tanto en el material audiovisual como en el audio. Animaciones. Cada animación de diapositiva va apareciendo conforme avance la redacción del tema. Distribución de los elementos. Los elementos están distribuidos de manera que no se distraiga la atención del usuario, para que éste comprenda y aprenda los contenidos, pues se pretende que el principal foco de atención sean los conceptos del tema.

Colores. Los colores elegidos para el documento son azules en su mayoría, pertenecen a la gama de los fríos, que motivan sensaciones de equilibrio, serenidad, sobriedad y tranquilidad, esto con la finalidad de mantener al usuario en un ambiente de calma y de éste modo no sobre exaltar sus sentidos y pueda mantener su atención durante la presentación del audiovisual. Tipografía. La tipografía usada en los documentos será de tipo sanserif *Calibri* para facilitar su lectura porque es una letra ligera y de fácil lectura que no cansa al usuario. La selección de contenidos. Se considera que las palabras y los usos del lenguaje incorporados en el desarrollo de producto multimedia, está en función del tipo de alumnos, y que de acuerdo a los objetivos de aprendizaje y en concordancia con la meta de la producción multimedia se establecen de tal manera que se puede aplicar las recomendaciones expuestas en este trabajo (Marqués, 1999) considerando oportunidades y desventajas en su desarrollo. Un ejemplo de esto se señala en la Tabla 4, que presenta una secuencia de selección de contenidos de acuerdo al tema, el objetivo, el medio, la modalidad y la forma de distribución.

Tabla 4: Selección de Contenidos

Tema	Objetivo particular	Medio	Modalidad	Forma de
------	---------------------	-------	-----------	----------

				distribución
Elementos conceptuales	Que el alumno comprenda y aprenda significativamente los elementos conceptuales del diseño	Producto multimedia de carácter visual, audio y audiovisual	Escolarizada	Plataforma Blackboard
Elementos visuales	Que el alumno comprenda y aprenda significativamente los elementos conceptuales del diseño	Producto multimedia de carácter visual, audio y audiovisual	Escolarizada	Plataforma Blackboard
Elementos de relación	Que el alumno comprenda y aprenda significativamente los elementos conceptuales del diseño	Producto multimedia de carácter visual, audio y audiovisual	Escolarizada	Plataforma Blackboard
Elementos de practicos	Que el alumno comprenda y aprenda significativamente los elementos conceptuales del diseño	Producto multimedia de carácter visual, audio y audiovisual	Escolarizada	Plataforma Blackboard

El perfil del usuario. En este punto de consideración para el desarrollo del producto multimedia aquí presentado es importante considerar que el estudiante al que se dirige es el situado en la materia de teoría del diseño I. En este sentido se espera que cuente preferentemente con el siguiente perfil académico.

Conocimientos básicos en geometría, investigación, aritmética, historia del arte y dibujo. Habilidades y destrezas para coordinación visual-manual, expresar ideas utilizando su imaginación y creatividad, desarrollo de trabajo intelectual y manual, trabajar en equipos interdisciplinarios, ser observador, analítico y capaz de sintetizar y explicar problemas, lectura y expresión correcta en forma verbal y escrita, organizarse y trabajar en equipo. En complemento las consideraciones del producto aquí presentado se refieren a alumnos de nivel superior que se forman en carreras cuya base es el dibujo, diseño o similares.

## CONCLUSIONES

El producto multimedia dirigido a los alumnos de teoría del diseño I en el nivel superior, permite la exploración de diversas estrategias para el desarrollo didáctico de materiales multimedia que en nuestra propuesta facilitan el desarrollo tanto de conocimientos, como habilidades y actitudes respecto a la comprensión de los procesos de formación profesional. En un inicio se presentó la problemática de que el desarrollo de productos multimedia podía representar para todo docente un ventaja competitiva para el diseño de procesos educativos. Si bien es un trabajo dirigido a un grupo específico, con perfiles de profesionalización altos. Las recomendaciones que se han seguido (Marqués, 1999) respecto a la clasificación de los materiales, las funciones y las ventajas e inconvenientes son interesantes para el proceso de planeación. Por su parte el cuidado de atención respecto a los estándares de la estructura educativo, el estilo y formato de presentación de los materiales propuestos, implican una estructura de organización de contenidos bajo estrategias que pueden mejorar los procesos de comunicación en el aula. Finalmente la propuesta de seguimiento de un protocolo de planeación para productos multimedia educativos.

## RESUMEN

*El aseguramiento de la calidad educativa en las Universidades Públicas de México requiere de un proceso de evaluación y acreditación por parte de un organismo reconocido por el Consejo para la acreditación de la Educación Superior (COPAES). Los programas que ofrece la dependencia objeto de estudio, la cual pertenece a una Universidad Pública, acreditó sus programas ante este organismo en el 2005, y obtuvo la re-acreditación en 2011. El presente estudio evalúa el impacto de la acreditación desde la percepción de los estudiantes que integran la comunidad estudiantil. Para ello se obtuvo información cuantitativa de 241 estudiantes mediante un cuestionario estructurado, el cual posterior a su análisis arroja información sobre la percepción estudiantil respecto a su institución, los planes y programas, los docentes, los recursos y su autopercepción respecto al desarrollo de habilidades entre otros, así como el grado de satisfacción con la formación recibida y la carrera de estudio.*

**PALABRAS CLAVE:** Calidad Educativa, Evaluación y Acreditación de Programas Académicos, Impacto

## THE ASSESSMENT AND ACCREDITATION OF ACADEMIC PROGRAMS AND THEIR IMPACT FROM THE STUDENT PERCEPTION

### ABSTRACT

*The educational quality assurance in the Public Universities of Mexico requires an assessment and accreditation process by an agency recognized by the Council for the accreditation of superior education. The programs that the agency offers, which belong to a Public University, were accredited on 2005 and obtained the re-accreditation on 2011. The present study evaluates the impact of the accreditation from the perception of the students that belong to the student community. For that, quantitative information from 241 students were obtained via a structured questionnaire, which subsequently to its analysis produces information about the student's perception regarding its institution, the plans and programs, the professors, the resources and its auto-perception regarding the skills development among others, as well as the level of satisfaction with the received training and with the professional career.*

**KEY WORDS:** Educational Quality, Academic Programs of Assessment and Accreditation, Impact

## INTRODUCCIÓN

En los últimos años las Universidades Públicas de México, al igual que otras instituciones de educación superior han recurrido a la evaluación y acreditación de organismos externos en busca de la mejora de la calidad en la educación, ya que la sociedad demanda que se rindan cuentas sobre su desempeño y a la vez se contribuya de manera óptima al desarrollo económico, social, político y cultural del país, del que es parte activa el egresado universitario. El Consejo para la Acreditación de la Educación Superior, A.C. (COPAES), fundado el 24 de octubre de 2000, es la única instancia validada por la Secretaría de Educación Pública (SEP) para conferir reconocimiento oficial a los organismos acreditadores de los programas académicos que se imparten en este nivel educativo en México. Ese reconocimiento permite la regulación de los organismos acreditadores y los procesos de acreditación en las diversas áreas del conocimiento, con el objeto de evitar posibles conflictos de intereses y de informar a la sociedad sobre la calidad de un programa de estudios de nivel superior, particularmente a los posibles alumnos, padres de familia y a los empleadores (COPAES, 2012).

Los programas académicos de la dependencia de estudio fueron evaluados por los Comités Interinstitucionales para la Evaluación de la Educación Superior (CIEES) encargados de realizar una evaluación diagnóstica, a través de la cual después de atender una serie de recomendaciones se obtuvo el nivel 1 que es considerado el pertinente para solicitar la evaluación. Posteriormente los programas fueron evaluados y acreditados en el 2005 por El Consejo para la Acreditación de la Educación Superior, A. C. (COPAES) y re-acreditados en el 2011.

Considerando a los actores participantes en esta labor, tanto del gobierno, como la institución y la dependencia en particular, los recursos empleados y esfuerzos realizados, es necesario evaluar el impacto que esta tarea ha generado a través de la percepción que tiene el estudiante de algunos indicadores de su facultad que han sido evaluados y acreditados. Para este estudio se consideraron: los planes y programas académicos, los profesores, la dependencia, los recursos y la autopercepción del estudiante, con el objetivo de contribuir al conocimiento develando su percepción, considerando que el tiempo de maduración del proceso de aseguramiento de la calidad lleva ocho años es posible describir y analizar ciertos aspectos al respecto, los cuales podrán ser utilizados por la dependencia de estudio para continuar con la ineludible labor del aseguramiento de la calidad.

## **REVISIÓN LITERARIA**

### Calidad

El concepto de calidad ha sido ampliamente debatido y existen numerosas interpretaciones que conllevan distintos modelos de análisis. Entre otros, señala González (2008) que se ha identificado la calidad como sinónimo de perfección o consistencia, la calidad como el cumplimiento óptimo de las especificaciones dadas, como algo asociado al valor o al precio, o bien a la capacidad de generar valor agregado a lo que se produce. A estas opciones se agrega la complejidad en el caso educativo de las condicionantes valóricas que orientan toda acción pedagógica. En el informe sobre la Calidad en Latinoamérica, Toro define la calidad de la enseñanza superior “como la medida del logro de la consistencia interna y externa” (2012, p.191) entendiendo la consistencia interna como el cumplimiento de los propósitos institucionales y la externa como aquella que cumple las demandas de la sociedad.

Así mismo, la Organización Internacional de la Normalización define la calidad de la educación superior como el “especificar objetivos de aprendizaje que impliquen estándares académicos que

involucren el cumplimiento de las expectativas de la sociedad, las aspiraciones de los estudiantes, demandas del gobierno, empresas industrias y las necesidades de las instituciones profesionales” (ISO, citado en Martínez, 2008 p.3) La garantía de calidad según Zedillo (2010) puede ser definida como aquello que desencadena un proceso para que los actores involucrados en la educación tengan confianza en que la provisión del servicio cumple con sus expectativas y se alcanzan los estándares mínimos esperados. Esta definición pone de relieve los distintos aspectos de garantía de calidad que se refieren a los insumos, procesos y resultados, y es relevante recordar que la sociedad demanda esos estándares, ya que es una herramienta que permite dar señales al mercado laboral sobre las habilidades y competencias de los graduados. Para González (2008) el concepto de calidad educativa es considerado relativo, como un término de referencia de carácter comparativo que permite establecer comparaciones, en relación a un patrón de referencia real o utópico que se desea lograr, por otra parte Arrien (1996) lo establece como un concepto dinámico, diverso, multidimensional y total ya que cambia con el tiempo, porque varía según los contextos de los países, es producto de diversas condiciones y es total, dado que implica atención en diferentes dimensiones del aprendizaje. Para conocer los estándares mínimos esperados, para realizar las comparaciones pertinentes de lo real o utópico, es necesarios que las Instituciones de Educación Superior soliciten al COPAES la evaluación y acreditación de la institución y de los programas académicos.

### Evaluación y Acreditación

Evidentemente la acreditación de programas educativos se sustenta, o debe sustentarse, en una evaluación. El diseño y la ejecución de la evaluación que sustenta un sencillo padrón de acreditación es relativamente simple: se definen los criterios, se convoca a los aspirantes, se coteja la información y cuando procede se expide la acreditación (González, 2008). Eduardo Zedillo, director general del COPAES, cita que “la evaluación es un proceso integral y continuo que tiene propósitos de diagnóstico y de formulación de recomendaciones encaminadas a elevar la calidad de las instituciones y de los programas académicos” (COPAES, 2010), mientras que la acreditación es un procedimiento que implica contrastar programas o instituciones con estándares establecidos por los organismos externos, lo cual permite asegurar y desarrollar la calidad de la educación.

La acreditación “consiste en dar fe pública de cumplimiento con los estándares establecidos, tanto para las instituciones como para sus programas académicos” (González, 2008, p.12). Zapata y Tejeda (2009) definen la acreditación como un conjunto de políticas, procedimientos normas y prácticas que promueven estándares de calidad y transparencia del sistema, y de esta forma se privilegia procedimientos de evaluación permanentes asociados con verificar y certificar públicamente que se cumplen ciertos criterio de calidad. Arirén (1996), alude a que es opinión generalizada que toda universidad en razón de los recursos que recibe de la sociedad, debe de rendir cuentas a través de mecanismo apropiados de desempeño. La acreditación siempre será un marco referencial importante para procurar un desempeño eficiente así como para disponer de parámetros con los cuales rendir cuenta a la sociedad.

Considera que son los procesos internos de acreditación los que redundan en impactos más profundos y permanente en el mejoramiento de la calidad. La acreditación es una carta de solvencia académica de una universidad. Es necesario e indispensable contar con ella. Esos resultados, impactos, efectos de la acreditación empezaron a evaluarse en algunas instituciones que requerían tener conocimientos de los avances obtenidos con el proceso llevado a cabo y con el trabajo de seguir manteniendo esa acreditación, pues en el caso de México, se realizar visitas posteriores a la acreditación evaluando avances de las recomendaciones emitidas por los

organismos externos, y cada 5 años se vuelven a evaluar todos los indicadores y si existe cumplimiento de los estándares establecidos se re-acreditan los programas académicos.

### Impacto

El diccionario de la lengua española define la palabra impacto como “el efecto producido en la opinión pública por un acontecimiento, una disposición de la autoridad, una noticia, una catástrofe, etc.” Libera (2007) menciona que hay impacto cuando una acción o actividad produce una alteración, favorable o desfavorable en el contexto o medio y componentes en el cual se desenvuelve dicha actividad, y que la evaluación de impacto trata de establecer cuáles son los posibles efectos-consecuencias del objeto evaluable en una población amplia de una organización, de una comunidad o un país y las personas asociadas al usuario. La opinión de Calvo es que la evaluación de impacto, mide los cambios en el bienestar de los individuos que pueden atribuirse a un programa o a una política específica y establece que los objetivos de este tipo de evaluación son proveer información y ayudar a mejorar su eficacia (2006). Se han privilegiado estudios sobre impactos de la acreditación que describen cambios ocurridos en las instituciones tras los procesos de evaluación (Castillo, 2010; Del Castillo, 2004; González, 2008; López, 2007; Salas, 2013; Solano, 2004) o bien el impacto recibido por los diversos actores institucionales (Scharager y Aravena, 2010; Torre y Zapata, 2012; Zapata y Tejeda, 2013). En un estudio realizado por Reguroti y Bon (2012) destaca el que los estudiantes perciben la calidad académica por tener buenos maestros, buenos contenidos académicos y buenas instalaciones así como el que se brinde herramientas para la profesión, que se preparen bien a los estudiantes y que los maestros tengan experiencia. Vale la pena mencionar algo que no se encuentra en la literatura y se refiere a los que comenta Stensaker: la acreditación mantiene dificultades para proveer evidencia sustancial a lo que resulta más importante, el impacto en la calidad del proceso enseñanza-aprendizaje (2008).

### **METODOLOGÍA**

El trabajo de investigación que se llevó a cabo es de tipo cuantitativo, descriptivo y transversal. La población objeto de estudio fueron 241 estudiantes de tres carreras diferentes, los cuales cursan del 5 a 10 semestre y pertenecen a una dependencia de una Universidad Pública, mismos que fueron encuestados durante el mes de septiembre del 2013. El instrumento utilizado fue un cuestionario proporcionado por el CINDA, constituido por 38 ítems, medidos a través de la escala de Likert (5 a 1 de mayor a menor). Considerando el 5 como excelente o muy adecuado, el 4 como bueno o adecuado, 3 como regular o más o menos, el 2 como malo o inadecuado y el 1 como no sé o no responde. Por lo tanto, lo señalado en el 5 y 4 se valora como alta (favorable), el 3 mediana (poco favorable) y el 2 baja (desfavorable). Los datos cuantitativos se procesaron a través del paquete estadístico SPSS, con la finalidad de encontrar y evaluar la percepción del estudiante respecto a su facultad, los planes y programas, los docentes, la autopercepción de sus capacidades, así como el grado de satisfacción con la formación recibida y la carrera de estudio.

### **RESULTADOS**

Respecto a la muestra, se puede observar en la tabla 2 el género de los estudiantes en el cual predomina el femenino, el porcentaje de estudiantes que trabaja es de 46.1% y el que solo estudia es el 33.6%. La carga de materias que tienen oscila de 24 a 30 horas a la semana, observándose que la que mayor incide es la que corresponde a 28-30 horas semanales, con el 43% de los encuestados.

Tabla 2: Variables Dependientes: Género, Distribución Del Tiempo y Carga Horaria

Género	Porcentaje
Masculino	22%
Femenino	78%
<b>Distribución del tiempo</b>	
Trabaja jornada completa	46.1%
Trabaja media jornada	12.4%
Trabaja de 5 a 10 semanales	7.9%
No trabaja	33.6%
<b>Carga horaria</b>	
28-30 semanales	43%
25-27 semanales	39 %
20-24 semanales	18%

La muestra de estudiantes revela la incidencia del género femenino, la ocupación laboral en jornada completa de los estudiantes que representa el mayor porcentaje, así como la carga horaria que tienen por semana.

En la tabla 2, se pueden identificar la percepción de los alumnos respecto a los indicadores de la variable profesores a través de los porcentajes señalados. La que perciben como favorable la mayoría es la de asistencia y puntualidad docente con 72.2% en cambio la edición de apuntes de clase, el 46% la consideran favorable y el 44% la percibe como menos favorable.

Tabla 2: Indicadores y Frecuencias de la Variable Profesores

VARIABLE DEPENDIENTE	INDICADORES	5 %	4 %	3 %	2 %	1 %	MEDIA
PROFESORES	Edición de apuntes de clase	5.8	40.2	44.4	8.4	1.2	3.41
	Entrega de programa detallado de cada actividad docente.	10.0	51.5	32.4	4.1	2.1	3.63
	Calidad del cuerpo docente	11.2	51.5	29.9	7.1	0.4	3.66
	Atención recibida por profesores fuera de horas clase	16.2	44.8	29.5	8.7	0.8	3.67
	Disposición e interés para relacionarse informalmente	11.7	47.7	30.7	9.1	0.8	3.60
	Procedimientos para evaluar aprendizajes	07.9	49.8	37.8	4.1	0.4	3.61
	Asistencia y puntualidad docente	14.5	57.7	24.5	3.3	0.0	3.83

La percepción de los indicadores que conforman esta variable muestra una media de 3.64 en promedio.

Sobre los planes y programas, en la tabla 3 se observa que la que consideran más favorable es la de la coherencia entre la concepción educativa y planes y programas, con un 61.4%, mientras que la incidencia que tiene la opinión de estudiantes en la revisión de planes y programas presenta la un 44.6% favorable y un 38.8% menos favorable.

Tabla 3: Indicadores y Frecuencias de la Variable Planes Y Programas

VARIABLE DEPENDIENTE	INDICADORES	5 %	4 %	3 %	2 %	1 %	MEDIA
PLANES Y PROGRAMAS	Coherencia entre la concepción educativa y planes y programas	10.9	50.6	33.2	4.1	1.2	3.66
	Incidencia que tiene la opinión de estudiantes en la revisión de planes y programas	5.8	38.8	38.8	13.7	3.3	3.30
	Inclusión de actividades obligatorias y optativas	8.3	46.9	36.1	6.6	2.1	3.53
	Fijación adecuada entre teoría y práctica	6.6	50.6	34.9	7.5	0.4	3.56

Los indicadores de esta variable presentan una media de 3.51 en promedio.

En cuanto a la percepción que tienen de la dependencia en particular se puede observar en la tabla 4, una muy favorable a como se cataloga la educación que se imparte ya que el 87% la considera excelente y buena, así como la consideración del status de su dependencia que el 21.6% lo considera excelente y el 60.2% buena. Por el contrario la más desfavorable es hacia el grado y forma de participación de estudiantes en toma de decisiones, pues el 33.6% la consideran menos favorable y el 12% desfavorable.

Tabla 4: Indicadores y Frecuencias de la Variable Dependencia

VARIABLE DEPENDIENTE	INDICADORES	5 %	4 %	3 %	2 %	1 %	MEDIA
DEPENDENCIA	Como se cataloga la educación que se imparte	20.8	66.4	12.0	0.8	0.0	4.07
	Opinión sobre la misión	26.1	57.3	14.1	0.4	2.1	4.05
	Metas a corto y mediano plazo del personal administrativo y docente	10.8	49.8	30.3	3.7	5.4	3.57
	Consideración del Status	21.6	60.2	17.0	1.2	0.0	4.02
	Flexibilidad reglamentaria para adecuarse a situaciones imprevistas de los estudiantes	11.2	43.6	34.0	10.4	0.8	3.54
	Políticas de distribución de carga horaria	14.6	47.7	26.1	9.1	2.5	3.63
	Criterios de exigencia y calidad académica	10.8	54.4	29.0	5.8	0.0	3.70
	Cumplimiento de planes y programas de estudio	12.9	45.6	33.6	7.1	0.8	3.63
	Grado y forma de participación de estudiantes en toma de decisiones	10.4	38.2	33.6	12.0	5.8	3.35

*En esta variable formada por 9 indicadores se establece como la media de 3.56 como promedio.*

Referente a la autopercepción de los estudiantes, se observa en la tabla 5, que los indicadores evaluados más favorables son el de la adquisición de conocimientos útiles, ya que el 84.7% los consideran muy adecuados y adecuados. El grado de satisfacción con la carrera, y hacia la formación que reciben con una media de 4.11, equivalente al 80.9% y el 76.4% respectivamente. Por otra parte la que se percibe menos favorable en esta variable es la auto-perfección en temas o materias específicas, pues el 45.3% la considera regular.

Tabla 5: Indicadores y Frecuencias de la Variable Estudiantes

VARIABLE DEPENDIENTE	INDICADORES	5 %	4 %	3 %	2 %	1 %	MEDIA
ESTUDIANTES	Grado de satisfacción con la carrera	31.1	49.8	18.3	0.8	0.0	4.11
	Desarrollo de capacidad para interpretar información	15.8	62.7	19.9	1.2	0.4	3.92
	Desarrollo de capacidad para extraer conclusiones	10.8	63.5	23.7	1.7	0.4	3.83
	Adquisición de conocimientos útiles	30.3	54.4	14.5	0.4	0.4	4.15
	Resolución de problemas con prontitud	17.0	58.5	22.4	1.7	0.4	4.02
	Auto-perfección en temas o materias específicas	6.2	44.0	45.3	4.1	0.4	3.51
	Grado de conocimientos sobre estatutos y reglamentos	11.2	36.1	33.6	16.2	2.9	3.37
	Nivel de satisfacción respecto a la formación que se recibe	19.5	56.9	19.1	4.1	0.4	4.11
	Conocimiento y asimilación de planes y programas de estudios	10.0	51.5	32.8	5.4	0.4	3.65

*El promedio de la media de estos indicadores es de 3.85*

En la tabla 6, se puede apreciar que dentro de los indicadores el que perciben desfavorable un 49.4% ya que califican como malo, es la disponibilidad para acceder a internet, y en el de cantidad de software para apoyar la docencia, el 36.1% de la muestra coinciden en que es regular. Por el contrario la calidad de la biblioteca en relación a los requerimientos y la disponibilidad de material bibliográfico, es la que presentan las medias más altas con un 3.71 y 3.68 respectivamente.

Tabla 6: Indicadores y Frecuencias de la Variable Recursos

VARIABLE DEPENDIENTE	INDICADORES	5 %	4 %	3 %	2 %	1 %	MEDIA
RECURSOS	Disponibilidad de material bibliográfico	17.0	43.6	31.5	5.8	2.1	3.68
	Disponibilidad para acceder a internet	5.7	11.2	21.6	49.4	14.1	2.41
	Cantidad de software para apoyar la docencia	6.2	22.4	36.1	32.0	3.3	2.96
	Calidad de la biblioteca en relación a requerimientos	19.9	41.1	30.7	6.2	2.1	3.71
	Adecuación en cantidad y calidad de laboratorios	7.1	42.7	38.6	8.7	2.9	3.42
	Actualización de las bibliotecas	15.4	39.4	36.5	7.5	1.2	3.60

Cantidad de material audiovisual para atender a los estudiante	14.1	37.3	34.0	13.8	0.8	3.50
--	------	------	------	------	-----	------

*En esta tabla se puede observar que los indicadores presentan una media en promedio de 33.2%*

## CONCLUSIONES

Los resultados obtenidos permiten identificar las principales características de la población de estudio, la que se distingue por ser mujeres (78%), por laborar en otras empresas jornadas completas y medias jornadas (58.5%) y tener una carga horaria de 28-30 horas por semana (43%). Las cuales como variables dependientes del estudio, no mostraron ninguna asociación significativa con las variables independientes. Para tener programas acreditados por organismos externos, se han buscado estrategias e implementado acciones, para el aseguramiento de la calidad durante 8 años y aún se continúa trabajando en ello, sin embargo, el trabajo agobiante que representa el evidenciar cada una de las acciones, descuida la retroalimentación de los efectos o impactos que produce en los diferentes actores del proceso.

La variable que tiene la media más alta es la de estudiantes, ya que se percibe un grado de aceptación favorable sobre la satisfacción que tienen con su carrera, así como con la formación que reciben y el desarrollo de capacidades para interpretar información, adquirir conocimientos útiles y resolver problemas con prontitud. Definitivamente que esos indicadores se relacionan con todo lo elementos que integran su facultad, y muchos de los indicadores evaluados presentan áreas de oportunidad en la constante labor del aseguramiento de la calidad. En orden descendente, después de los indicadores de estudiantes, se tiene el de profesores con una media de 3.64, le sigue el de la dependencia con una media de 3.56, los planes y programas con una de 3.51 y para finalizar, la de recursos con un promedio de 33.2 de media. En términos generales se aprecia que ninguna de la variables de estudio muestra ser excelente, sin embargo el de estudiantes y profesores se pueden apreciar como buenos, el de planes y programas y dependencia se encuentran más distantes de alcanzar esa connotación, y el que se aprecia como regular es la variable de recursos, en la que es necesario prestar atención en algunos indicadores que se muestran deficientes, como son el acceso a internet, y la cantidad de software para apoyar la docencia. Este estudio permitirá la búsqueda de nuevas estrategias y acciones en la búsqueda del aseguramiento de la calidad a través de los procesos de evaluación y acreditación, los cuales de acuerdo con Caudillo (2010), deben enfatizar la mejora de la calidad por encima de la sola rendición de cuentas, que el enfoque sea más educativo que administrativo y se apunten los esfuerzos al cumplimiento de las misiones institucionales.

# DISCRIMINACIÓN SALARIAL POR GÉNERO DEL SECTOR TURÍSTICO DE MÉXICO: UNA REVISIÓN

Denisse Gómez Bañuelos, Universidad Estatal de Sonora  
Luis Huesca Reynoso, Centro de Investigación en Alimentación y Desarrollo  
Jorge Enrique Horbath Corredor, El Colegio de la Frontera Sur

## RESUMEN

*El presente documento muestra una revisión de la literatura reciente sobre la discriminación salarial existente en el sector turístico de México y de diferentes países. La diferencia salarial entre hombres y mujeres es la brecha o desigualdad en el salario medio de trabajadores y trabajadoras con iguales o diferentes dotaciones de características personales y laborales. En cambio, la discriminación salarial, alude a la parte de la diferencia salarial que tiene su fundamento en motivaciones estrictamente discriminatorias, es decir, aquella parte de la brecha salarial que no puede justificarse por razones distintas al sexo de la persona ocupada. El objetivo general es identificar las características del fenómeno, las hipótesis abordadas, las fuentes de información utilizadas, así como los modelos econométricos empleados en la metodología. Los resultados nos darán la pauta para conocer las posibles líneas de investigación en el tema, así como las aportaciones que han resultado de estos trabajos.*

**PALABRAS CLAVE:** diferencia salarial, discriminación salarial, mercado laboral y sector turístico.

## GENDER WAGE DISCRIMINATION OF MEXICO TOURISM SECTOR: A REVIEW

### ABSTRACT

*This document presents a review of recent literature on wage discrimination in the tourism sector in Mexico and other countries. The pay gap between men and women is the gap or inequality in the average wage of workers with the same or different personal characteristics and labor. In contrast, wage discrimination, refers to the part of the wage gap that is based on purely discriminatory reasons, is that part of the wage gap that cannot be justified for reasons different than the sex of the person employed.*

*The overall objective is to identify the characteristics of the phenomenon, hypotheses, the sources of information and the econometric models used in the methodology. The results give us an idea for possible lines of research on the topic as well as the contributions that have resulted from this work.*

**JEL:** J4, J7, J31

**KEYWORDS:** wage gap, wage discrimination, labor market and tourism.

### INTRODUCCION

La realidad económica del país durante los últimos años, ha mostrado un cambio vertiginoso en todos sentidos, uno de los cuales consiste en la manera como mujeres y hombres participan en el mercado laboral. La inserción de las mujeres en el trabajo extradoméstico se ha incrementado notablemente y su papel ha sido más activo y creciente: ahora incluso ocupan cargos tradicionalmente asignados a hombres. No obstante, el porcentaje de participación femenina representa sólo la tercera parte dentro del total de la población económicamente activa (Instituto Nacional de las Mujeres México, 2003).

Según la encuesta Nacional de Ocupación de Empleo, el total de población económicamente activa al primer trimestre del 2013, es de 50, 246,878 personas que representan el 43% de la población total. De la población económicamente activa, las mujeres representan el 38% con un total de 18,978,385 (Secretaría del Trabajo y Previsión Social, 2013).

Entre los elementos que pueden explicar la creciente participación femenina en el mercado laboral están los factores estructurales a largo plazo, como es el hecho de que la mujer tenga mayor nivel educativo, cambios culturales a favor de la inserción de la mujer en actividades laborales extradomésticas, reducción del número de hijos y un crecimiento de actividades económicas con un perfil favorable para el trabajo femenino. Por otro lado, también se encuentra la caída del poder adquisitivo del ingreso familiar, bajo el modelo organizativo de un solo proveedor, lo que obliga a que en mayor medida se requiera la participación de más de un miembro de la familia en el mercado laboral, con la finalidad de mantener el mismo ingreso real familiar (Castro y Huesca, 2007).

La participación femenina crece y aumenta el número de mujeres ocupadas con nivel superior, pero todavía no ejercen presión representativa en el sector privado de la economía. No hay aumento significativo de mujeres en posiciones jerárquicas altas ni en puestos de decisión, como tampoco se observan grandes cambios en la reducción de la desigualdad salarial (Cacciamali y Tatei, 2013). Podemos darnos cuenta que a pesar de la creciente incursión de la mujer en el mercado laboral y el incremento de mujeres calificadas, existen numerosos estudios que han confirmado que el salario de los hombres es superior, en promedio, al que perciben las mujeres y se han ocupado de medir el alcance de la diferencia entre ambos (De Cabo y Garzón, 2007).

Por lo anterior, pretendemos realizar esta investigación con el objetivo de identificar las características del fenómeno, las fuentes de información, modelo econométrico utilizado y los resultados que nos permitirán conocer las aportaciones hasta el momento y las posibles líneas de investigación para trabajos futuros. Específicamente, nos enfocaremos en el sector turístico, por ser una industria que se ha posicionado como una de las principales empleadoras de mujeres, donde la proporción entre ambos géneros casi se iguala y además se encuentra en constante crecimiento.

### Marco Teórico

Los diferenciales de salario entre hombres y mujeres, así como las diferencias en la manera en que unos y otros se incorporan al mercado laboral, constituyen una de las expresiones de la desigualdad entre los sexos (Secretaría de Turismo y Colegio de México, 2011). Al estudiar el mercado laboral, en especial la disparidad salarial, nos damos cuenta que a nivel internacional, el crecimiento de la desigualdad parece ser una constante en la mayoría de los países desarrollados y en desarrollo (Castro y Huesca, 2007). Es importante distinguir la diferencia entre ambos

conceptos, utilizados en los estudios que versan sobre la diferencia y/o la discriminación salarial de la mujer.

La diferencia salarial entre hombres y mujeres es la brecha o desigualdad en el salario medio de trabajadores y trabajadoras con iguales o diferentes dotaciones de características personales y laborales. En cambio, la discriminación salarial, alude a la parte de la diferencia salarial que tiene su fundamento en motivaciones estrictamente discriminatorias, es decir, aquélla parte de la brecha salarial que no puede justificarse por razones distintas al sexo de la persona ocupada. (De Cabo y Garzón 2007). Según McConnell, et.al., (2003) “Existe discriminación económica cuando los(as) trabajadores(as) pertenecientes a grupos minoritarios, con idéntica capacidad, nivel de estudios, formación y experiencia que el grupo mayoritario, recibe un trato inferior en la contratación, el acceso a una ocupación, los ascensos, el salario o las condiciones de trabajo”.

Lo anterior, refuerza la idea de que la diferencia salarial entre hombres y mujeres es una realidad del mercado laboral, donde el salario de los hombres es superior, en promedio, al que perciben las mujeres. Sin embargo, existe discriminación salarial cuando una mujer gana menos, por el simple hecho de pertenecer al sexo femenino. Aunque se ha tratado de alcanzar un desarrollo análogo entre hombres y mujeres, existen varios trabajos empíricos sobre el tema que han analizado los mercados laborales de países tanto desarrollados como subdesarrollados, sin encontrar un solo país en donde las remuneraciones promedio de las mujeres hayan resultado más altas o iguales a las de los hombres.

La misma situación se presenta aun cuando se toma en cuenta el nivel de educación: en la mayoría de los países, a un mismo nivel educativo, las mujeres ganan menos que los hombres y ocupan posiciones menos favorecidas. Los primeros trabajos que analizan las cuestiones de género en el sector turístico no aparecen hasta mediados de la década de los noventa con la publicación de tres recopilaciones de artículos sobre esta materia. La primera de ellas fue publicada por Kinnard y Hall en 1994, la segunda correspondiente a un volumen especial de *Annals of Tourism Research* publicado en 1995 y la tercera publicada por Sinclair en 1997. Estas recopilaciones definen el marco conceptual amplio en el cual enmarcar el análisis de las cuestiones de género en el sector turístico y presentan una serie de casos de estudio que analizan, desde distintas perspectivas, los efectos del desarrollo turístico.

Centrándose específicamente en las diferencias entre hombres y mujeres en el sector turístico, la mayor parte de los trabajos presentes en las anteriores colecciones, así como los publicados a partir de entonces se centran en la descripción de las condiciones particulares de las mujeres en el mercado laboral turístico. Aparece la evidencia de una mayor precariedad laboral, menores remuneraciones, y de segregación ocupacional. Sin embargo sólo Sparrowe e Iverson (1999) tratan de analizar con mayor profundidad las causas de las diferencias salariales por razón de género en el sector turístico. En México, solo se ha realizado una investigación en el sector turístico que mide la discriminación salarial por género y se realizó en el 2011 por la Secretaría de Turismo y el Colegio de México. El principal beneficio de la investigación fue obtener un diagnóstico del mercado laboral en las diversas ramas y empresas turísticas que permita tener un panorama de la situación actual de la participación de las mujeres y hombres. El estudio muestra que el sector turístico es el que presenta mayores diferenciales salariales entre hombres y mujeres. En 2010, los hombres tienen un ingreso promedio por hora de 27.80 pesos, en contraste con los 20.97 pesos que ganan las mujeres. La fuente de información utilizada fue la base de datos de la Encuesta Nacional de Ocupación y empleo.

## **METODOLOGÍA**

Para la presente investigación se utilizó la revisión de la literatura sobre temas relacionados con la diferencia y discriminación salarial en el sector turístico. Esto con la finalidad de situar la investigación en una panorámica general de las metodologías, resultados y conclusiones de las investigaciones realizadas a nivel nacional e internacional y realizar una mejor interpretación de los resultados obtenidos en el análisis econométrico.

## RESULTADOS

Llama la atención que, a pesar de la relevancia reconocida de la industria turística como motor de desarrollo y generadora de empleo, sea escasa la literatura que analiza los efectos sociales y económicos del sector. Existen estudios en la literatura académica turística que se han dedicado a estudiar las tendencias del turismo, sobre todo las relacionadas con el turismo alternativo, o ecoturismo como muchos lo han llamado, así como investigaciones de desarrollo turístico sustentable. Sin embargo, hacen falta estudios del turismo que midan o evalúen el impacto de este sector en la economía, sobre todo los relacionados con las diferencias de género.

## CONCLUSIONES

En México, la incorporación creciente de las mujeres en la vida económica, política y social, ha impulsado y favorecido la perspectiva de género e igualdad de oportunidades como una forma de desarrollo y constante evolución de la sociedad mexicana, favoreciendo la visión que concibe a la mujer como sujeto de desarrollo sobre aquella que se les asigna un papel de inferioridad y subordinación. En este contexto la Secretaría de Turismo y sus organismos sectorizados se comprometen a provocar los cambios necesarios para alcanzar la igualdad entre mujeres y hombres, convencidos de que se está contribuyendo a consolidar la democracia de nuestro país. Sin embargo, es una realidad que aún existen diferencias salariales entre hombres y mujeres, y lo más preocupante que se sigue dando el fenómeno de la discriminación salarial por género. De aquí la importancia de seguir evaluándolo, que permitan proponer estrategias y política pública que ayude a solucionar un problema de la mujer en el mercado laboral.

## **RESUMEN**

*Las principales consideraciones del modelo de calidad en la educación en México explican los factores principales de la gestión de la calidad en las instituciones de educación, así como las acciones realizadas para elevar la calidad en la educación superior. Se hace énfasis en la interpretación de la competitividad académica a través del reconocimiento de la calidad de los programas educativos por medio de una organización de acreditación reconocida por el Consejo para la Acreditación de la Educación Superior (COPAES) o evaluadas por el nivel superior de los Comités Interinstitucionales para la Evaluación de la Educación Superior (CIEES), así como la certificación de proceso estratégicos por medio de la norma mexicana NMX-CC-9001-IMNC-2008 y sus normas complementarias. La contribución de la investigación permite visualizar la integración de los aspectos de la competitividad académica al Sistema de Gestión de la calidad bajo la norma ISO 9001:2008. Plantea el impacto del sistema integrado en la calidad en la educación de la Universidad Estatal de Sonora (UES) y los aspectos importante para determinar la competitividad de una institución de educación superior*

## INTRODUCCIÓN

Pérez (1996b) señala que la evaluación es un ingrediente básico en la planeación educativa y en la formulación de políticas de mejoramiento educativo y de financiamiento de este servicio, en el caso de Yzaguirre (2005) nos dice que la evaluación es un importante factor de calidad, y para que un sistema educativo que ha planeado como meta la calidad en la educación es necesario que se establezcan mecanismos de evaluación en su conjunto para analizar el aprendizaje de los estudiantes, los procesos educativos, el currículo, los profesores, y las escuelas. Por otra parte los criterios del Consejo Superior de Educación para las Universidades de Marzo de 1996 mencionan que la institución debe evaluar periódicamente el grado de concreción de su declaración de misión y usar los resultados de esa evaluación para mejorar su desempeño. Actualmente, la Universidad Estatal de Sonora (UES) ha definido su Sistema de Gestión de Calidad (SGC) basado en lineamientos de normas internacionales y nacionales de calidad, como son: la norma mexicana NMX-CC-9001-IMNC-2008 (Requisitos para un sistema de gestión de calidad); y la NMX-CC-9004-IMNC-2009 (Desarrollo sostenible).

Por otra parte al implementar el SGC, los procesos académicos no son abarcados totalmente en su alcance, detectándose la importancia de integrar la evaluación por los Comités Interinstitucionales para la Evaluación de la Educación Superior (CIEES) y la acreditación por los organismos del Consejo para la Acreditación de la Educación Superior (COPAES), a través del Consejo de Acreditación en la Enseñanza de la Contaduría y Administración (CACECA). Al considerar que la mayoría de los programas educativos pertenecen a las áreas de conocimientos de ciencias sociales y administrativas según la Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES), La inclusión de la evaluación y autoevaluación de los programas educativos permitirá tanto documental como operativamente, verificar la congruencia entre las actividades relacionadas con la gestión institucional y los procesos educativos que impactan a la comunidad académica.

“La evaluación y autoevaluación deben apreciarse como una oportunidad para mejorar las condiciones en que operan nuestras instituciones de educación superior, de modo que maestros, estudiantes, autoridades, funcionarios y personal de apoyo técnico, administrativo y manual realicen sus trabajo de una manera más productiva y satisfactoria” (Pérez, 1996a). La evaluación permite monitorear las condiciones de las actividades, procesos y clientes, con el único objetivo de converger en sus necesidades o superar sus expectativas con los recursos disponibles. El proceso de acreditación de los programas educativos consiste en la verificación de una serie de criterios aplicados a las instituciones de educación superior para demostrar su cumplimiento y emitir las recomendaciones que contribuyan a la mejora continua. En caso del Consejo de Acreditación en la Enseñanza de la Contaduría y Administración (CACECA), el manual se conforma de las siguientes variables: Profesores; Estudiantes; Programa de Licenciatura;

Formación Integral; Recursos Financieros; Recursos-Eficiencia; Extensión-Investigación e Información adicional.

La norma NMX-CC-9001-IMNC-2008 es un modelo de calidad utilizado para incrementar la eficacia de los procesos, actualmente es aplicada para el desarrollo de los SGC en las instituciones de educación superior, su esquema principal es conformado por los siguientes apartados: Introducción; Objeto y campo de aplicación; Referencias normativas; Términos y definiciones; Sistema de gestión de la calidad; Responsabilidad de la dirección; Gestión de los recursos; Realización del producto o servicio; y Medición, análisis y mejora. Dicha norma permite en su apartado 0.4, la compatibilidad con otros sistemas de calidad existentes para fortalecer y consolidar los requerimientos o particularidades de las instituciones de educación superior.

## REVISIÓN LITERARIA

### Importancia de la Mejora Continua en las Instituciones de Educación Superior en México

La mejora continua de los elementos que caracterizan a una institución de educación superior reconocida por su buena calidad considerada por la Secretaria de Educación Pública (SEP) a través de la Secretaria Educación Superior (SES) “está compuesta por dos vertientes principales, la oferta educativa de buena calidad y la gestión institucional competente” (Guía PIFI, 2012). La oferta educativa de buena calidad se caracteriza por la alta capacidad y competitividad académica, para esta última, se enfoca en la acreditación o evaluación de los programas educativos por su buena calidad por los esquemas y procedimientos del sistema nacional de evaluación y acreditación, y el porcentaje que representa su matrícula total, en el caso de la gestión institucional competente se describe como la certificación de procesos estratégicos bajo las normas ISO 9000:2008.

Donde la función de los procesos estratégicos certificados debe representar una estrategia para mejorar la oferta educativa de calidad, sin embargo debido a que no existen lineamientos para la definición de procesos estratégicos por las dependencias correspondientes, se aprecia en el manual de calidad de la UES que la selección de procesos y procedimientos para el SGC no impacta directamente a los aspectos relacionados a la competitividad académica, provocando una diferenciación entre los modelos de acreditación-evaluación-certificación en la institución. “El enfoque de las normas ISO 9000 aplicadas a los servicios educativos, se entiende en dos vertientes principales. Primero como forma de organizar la administración de la calidad, mediante un sistema adaptada internamente y segundo, como una asignatura dentro del currículo escolar. Sin embargo, no pueden disociarse, la educación deber ser integral, teoría y práctica cotidiana” (Oria, 1998). Por esta razón, el SGC bajo las normas ISO 9000:2000 debería considerar procesos que impacten actividades relacionadas a la competitividad académica, contribuyendo a la supervisión e identificación de áreas de mejora de los procesos estratégicos.

“En general, podría afirmarse que las prácticas de aseguramiento de la calidad en México aún se encuentran dispersas en una serie de componentes que no integran un todo coherente, visto desde una perspectiva sistémica, el mecanismo actual de calidad es complejo y no es aun suficiente en términos de rendición de cuentas ante la sociedad mexicana” (OCDE, 2006). Los sistemas de gestión de calidad basados en las normas ISO 9000:2000 están fundamentados por el principio de enfoque de sistema, para el caso de la UES, establecer los aspectos relacionados a la competitividad académica proporcionará un enfoque sistémico en toda la institución, atendiendo las actividades relacionados a los estudiantes, y al personal docente, administrativo y directivo.

La norma ISO 9001:2000 “es una herramienta, un medio que evidencia de manera sistemática y metódica las áreas de oportunidad que las organizaciones educativas tienen en torno al desempeño de sus procesos” (Yzaguirre, 2005).

“Aunque no hay una receta ni patrones que mencionen el cómo debe estar organizada una escuela u oficina de gestión desde un modelo propio de calidad educativa, si hay aspectos que el modelo de gestión de calidad en ISO 9001:2000 incluye a manera de asegurar la calidad de los servicios que presta. La implementación de un sistema de gestión de la calidad es un buen comienzo para reorganizar la tarea educativa desde la instancia gestora y las escuelas” (Yzaguirre, 2005). Las actividades relacionadas a la competitividad académica representan el fundamento para que el SGC considere en su alcance los procesos académicos y administrativos, evitando que los procesos se encuentren basados en el cumplimiento de actividades en sus procedimientos con un impacto bajo en los actividades relacionadas a la evaluación y acreditación de los programas educativos.

“Considerar los estándares como un requisito mínimo que los competidores pueden alcanzar. Son plataformas precompetitivas a partir de las cuales cada compañía en particular puede contribuir sus propias ventajas competitivas” (González, 2003). Lo que permite utilizar los lineamientos de los organismos de evaluación y acreditación reconocidos por COPAES para mejorar internamente o complementarlos con los propios estándares. Al considerar a las normas ISO 9000:2000 como “una filosofía de la administración total de calidad con un mayor énfasis en la satisfacción de clientes y la efectividad de los procesos orientados hacia el enfoque del desempeño mejoramiento continuo” (Chan, 2002), contemplando que “una organización de educación superior en relación al sistema de calidad y los programas deben ser diseñados para demostrar que es un sistema de manera holística, abierto, en constante cambio, interactivo y con características adheridas” (Mizikasi, 2006).

### Gestión de la Calidad en las Instituciones de Educación Superior en México

Es evidente que hoy en día las instituciones u organizaciones buscan hacer eficientes las actividades para obtener un beneficio de alto impacto que se manifiesta en ahorro de costos, tiempo, energía, esfuerzo, espacio o capacidad. Los cambios constantes en el entorno provocan que las organizaciones adquieran la habilidad de tener la pro-acción en adecuarse a los cambios derivados del ambiente donde se encuentran interactuando. El enfoque de calidad en las diferentes perspectivas que pueda visualizarse en las organizaciones es una de las estrategias principales para monitorear constantemente los requerimientos exigidos por los clientes, así como la definición correcta de las especificaciones de los procesos y las condiciones en que se brinda el producto o servicio al cliente. La calidad es un término utilizado de una manera general como la satisfacción de los requisitos de los clientes, por otro lado, “la calidad no es únicamente la calidad del producto terminado o el servicio entregado, si no la calidad de los procesos que va hacia estos productos o servicios” (Imai, 1997).

Por tal motivo el enfoque de la calidad debe estar centrado en lograr administrar o gestionar la calidad en las organizaciones, tanto en los procesos como en la perspectiva del cliente. “La educación debe transformarse para enfrentar retos de la sociedad actual. Hoy en día directivos de las instituciones educativas se enfrentan a cada vez mayores exigencias, provenientes ya sea de autoridades gubernamentales, sectores patronales o las familias” (Huerta 2001). Por tal motivo, las instituciones educativas deben de tener como fin principal la generación de valor agregado para los alumnos, personal académico y administrativo, los empleadores y la sociedad, buscando establecer una imagen institucional de prestigio que refleje las ventajas competitivas, la flexibilidad a las necesidades de la comunidad, el desarrollo de investigación y vinculación para

la generación de innovación y el establecimientos de estándares institucionales de calidad que aseguren la perduración del mejoramiento diario de sus actividades en beneficio de la sociedad. “La evaluación educativa debería partir de un criterio de calidad bajo un criterio suficientemente amplio como para abarcar todos los aspectos significativos del sistema: gestión y administración; políticas y programas; recursos y eficiencia; capacitación de los maestros; acceso y permanencia de los alumnos; aprendizajes y habilidades adquiridas; impacto en las vidas de los individuos y en la sociedad en su conjunto; etcétera” (González, 2005).

Al hablar de calidad en la educación se puede abundar extensivamente sobre ello, por tal motivo es importante primeramente definir la administración o gestión escolar, definiéndola como una función que considera los aspectos administrativos y académicos para establecer un cambio significativo en la forma de atender a las necesidades presentes y futuras de las instituciones educativas, a través de la óptima administración de los recursos en beneficio de la comunidad escolar. Esto implica el desarrollo de liderazgo y participación de toda la institución para desarrollar proyectos que aporten en la transformación de las instituciones, así como la consideración de las tendencias de las políticas educativas en el ámbito nacional e internacional.

“El sistema de gestión es un sistema holístico, que aglutina estrategia y gestión con un sentido global y participativo, ajustándose perfectamente a los nuevos conceptos en recurso humano, y que da respuesta a la lucha permanente de las instituciones educativas en la búsqueda de la eficiente para ofrecer mayor calidad en la enseñanza, y en la búsqueda de la eficacia para que el estudiante alcance el éxito en su formación” (Fernández, 2001).

### La Perspectiva de la Calidad de la Educación Superior en México

Hablar de calidad de la educación incluye varias dimensiones o enfoques, complementarios entre sí (Yzaguirre, 2005):

1) La eficiencia entendida como una educación de calidad que logra que los alumnos aprendan lo que se supone que deben aprender, aquellos que están establecidos en los planes y programas curriculares. Esta dimensión pone en primer plano los resultados de aprendizaje efectivamente alcanzados por la acción educativa.

2) Está referida a los que se pretende en el sistema y a su pertinencia en términos individuales y sociales. En este sentido la educación de calidad es aquella que responde adecuadamente a lo que el individuo necesita para desarrollarse como personal intelectual, efectivo, moral, físicamente, y poder interactuar en los ámbitos económicos, políticos y sociales. Es dimensión poner en primer plano la acción académica y su realización en el diseño y contenidos curriculares.

3) Se refiere a los procesos y medios que el sistema brinda al alumno para el desarrollo de su experiencia educativa. En esta perspectiva una educación de calidad es aquella que le ofrece al estudiante un contexto físico adecuado para el aprendizaje, un docente convenientemente preparado para la tarea de enseñar, buenos materiales didácticos y de trabajo, estrategias adecuadas de aprendizaje. Esta dimensión pone en análisis los medios empleados para la acción educativa. Es importante considerar otros aspectos con relación al aprendizaje del estudiante para ampliar el enfoque sobre la educación de calidad, los siguientes factores contribuyen a la calidad de los centros de enseñanza (Graells, 2002):

La infraestructura: aulas de clase, aulas de recursos, biblioteca, laboratorios, patio, instalaciones deportivas y mobiliario.

La competencia de los recursos humanos: nivel científico y didáctico del profesorado, experiencia y actitudes del personal en general, capacidad de trabajar en equipo, alumnos/profesor, tiempo de dedicación a la instrucción, los servicios y las actuaciones que realizan las personas son algunos de los factores que determinan la calidad de toda organización.

La dirección y gestión administrativa y académica del centro: planeación, labor directiva, organización, funcionamiento de los servicios, relaciones humanas, coordinación y control.

Aspectos pedagógicos: Proyecto Educativo de Centro (PEC), Proyecto Curricular de Centro (PCC), evaluación inicial de los alumnos, adecuación de los objetivos y los contenidos, tratamiento de la diversidad, metodología didáctica, utilización de los recursos educativos, evaluación, tutorías y logro de los objetivos previstos.

Métodos evaluativos: la evaluación del sistema se suele abordar desde dos perspectivas metodológicas contrapuestas:

- *Los métodos cualitativos se orientan a la búsqueda de pautas para la mejora de la calidad; subyace en ellos la incidencia en las políticas educativas de mejora.*
- *Los métodos cuantitativos se centran fundamentalmente en el análisis de los rendimientos escolares del alumnado como indicador de la calidad. predominan la orientación estadística y la aplicación de evaluaciones periódicas, esta tendencia ha experimentado mejoras definitivas en los últimos tiempos; actualmente se atiende a la mejora de los rendimientos como elemento de equidad, puesto que la evaluación rigurosa de los rendimientos es el primer paso para el logro de una educación de calidad para todos.*

La calidad bajo diferentes aspectos, enfoques y dimensiones, nos llevan en su objetivo final que es la formación de los alumnos, y en caso de México no es la excepción, los elementos para dar seguimiento a la calidad en las IES, a través de los objetivos estratégicos de las propias IES y articulados al Programa Nacional de Educación 2007-2012 continúan siendo:

- *Capacidad académica: Los profesores de tiempo completo con posgrado (Doctorado, Maestría y Especialización), la productividad académica de la planta docente por adscripción al Sistema Nacional de Investigadores (SNI) y la consolidación de cuerpos académicos. El programa de mejoramiento del profesorado (PROMEP) es una de las estrategias principales para la habilitación de profesores en posgrado.*
- *Competitividad académica: El incremento de matrícula en programas educativos de buena calidad en base a parámetros nacionales. Evaluación de los Comités Interinstitucionales para la Evaluación de la Educación Superior (CIEES), acreditación por organismos reconocidos por el Consejo para la Acreditación de la Educación Superior (COPAES), programas de posgrado en el Padrón Nacional de Posgrado (PNP) y en el Programa Institucional de Fortalecimiento de Posgrado (PIFOP).*
- *Gestión Institucional: Certificación de procesos administrativos y académicos bajo la norma NMX-CC-9001-IMNC-2000.*
- *Planeación y evaluación: Contar con una estructura colegiada y participativa de planeación estratégica y auto-evaluación que construya mecanismos de seguimiento de*

*metas e indicadores para mejorar en forma efectiva la administración, el liderazgo, los sistemas de información y la comunicación, así como los diferentes mecanismos de financiamiento.*

La calidad ha estado en el centro del debate a nivel nacional e internacional sobre la educación superior. Al respecto ANUIES, “considera necesario precisar su posición de la manera siguiente. De entrada, la calidad se entiende como la eficiencia de los procesos, la eficacia en los resultados y la congruencia y relevancia de estos procesos y resultados con las expectativas y necesidades de la sociedad. Es un ideal que nunca se alcanza plenamente, pero se constituye como un punto de reflexión y búsqueda permanente para las instituciones de educación superior en docencia, investigación y la difusión. La calidad no puede entenderse de manera separada de la pertinencia social, es decir, la responsabilidad social como valor que sustenta a la educación superior. La ineludible referencia a la responsabilidad social de las IES se expresa permanente con compromiso, el desarrollo nacional y el bienestar de la población” (ANUIES, 2006).

En el documento de política y la educación superior en México 1995-2006: Un balance, del autor Julio Rubio Oca en el 2006, podemos observar en el apartado de mejora y aseguramiento de calidad en la educación superior, los aspectos del sistema de evaluación y acreditación de la educación superior, así como la mejora y aseguramiento de calidad de la educación superior como los vértices principales sobre la percepción de la calidad en las IES. Referente al sistema de evaluación y acreditación de la educación superior, el principal organismo impulsor de esta actividad es el COPAES, que busca regular los procesos de acreditación y dar certeza de la capacidad técnica y operativa de las organizaciones especializadas y dedicadas a la acreditación de programas académicos y como objetivos particulares: promover la superación constante de los umbrales de calidad de los programas de educación superior, mediante el desarrollo de procesos de acreditación eficaces y confiables; coadyuvar con las autoridades educativas en su propósito de elevar y asegurar la calidad de la educación superior; propiciar un mejor conocimiento del tipo educativo mediante la difusión de los casos positivos de acreditación; orientar a la sociedad sobre la calidad de los programas; dar seguimiento a los organismos que logren el reconocimiento del consejo, e intervenir como mediador de buena fe en controversias entre los organismos acreditadores y las instituciones.

## **METODOLOGIA**

La metodología de investigación realizada en este trabajo es basado en el método científico que es un “procedimiento riguroso, válido, y fiable para adquirir conocimiento acerca de las leyes que siguen los hechos las ideas” (Mercado, 2003). Considerando que la existencia de dos paradigmas diferentes en el método científico como son el positivismo (cuantitativo) y la fenomenología (cualitativa), se determinó que el estudio cumple con las características cualitativas, considerando que la “tarea del científico social no debe ser reunir hechos y medir que tan frecuente ocurren algunos de ellos, sino apreciar las diferentes construcciones y significados que la gente tiene de su experiencia” (Marcos, 1998).

Uno de los aspectos en la investigación cualitativa “es que el investigador estará muy involucrado en el estudio, considerando libremente los intereses, su relación sistémica, y su contribución basada en la inducción” (Marcos, 1998). La primera parte es el análisis documental de la competitividad académica de la UES, seguido el análisis del sistema de gestión de la calidad con respecto a la competitividad académica, después es la aplicación de los métodos de investigación como son las entrevistas y observación para interactuar con los involucrados en el estudio y finalmente la integración del caso de estudio. Al aplicar la metodología de investigación

se proporcionará el impacto de la integración de los aspectos con la competitividad académica en el sistema de gestión de la calidad basada en las normas ISO 9000:2000 en la calidad de la educación en la UES.

### Planteamiento del Problema

El SGC basado en las normas ISO 9000:2000 de la UES tiene un alcance limitado hacia los procesos administrativos y un impacto menor a los procesos educativos, existiendo una necesidad en la institución para consolidar y mejorar los indicadores relacionados con la competitividad académica. La competitividad académica se refiere a la evolución del número y matrícula de programas educativos de licenciatura reconocidos por su buena calidad por los esquemas y procedimientos del sistema nacional de evaluación y acreditación, sin embargo para su cumplimiento es necesario considerar la administración de la calidad en los aspectos relacionados al financiamiento, adquisiciones, personal académico, atención y formación académica de los alumnos, investigación, extensión, y la revisión, administración e impacto que tienen los programas educativos de ciencias sociales y administrativa de la UES. Por tal motivo, es necesario determinar el impacto de la integración en el esquema de evaluación, acreditación y certificación a través de su SGC, donde refleje la interacción de una manera armónica para mejorar la competitividad académica.

### Definición De Factores Para Investigar

- 1) La interpretación de la calidad de la educación.
- 2) La evaluación competitividad.
- 3) La verificación de los aspectos relacionados a la competitividad.
- 4) La estructura orgánica del Sistema de Gestión de Calidad.
- 5) El alcance del Sistema de Gestión de Calidad en los procesos administrativos y académicos.
- 6) La revisión de los aspectos relacionados a la competitividad académica en el Sistema de Gestión de Calidad.
- 7) El impacto actual del Sistema de Gestión de Calidad en los aspectos relacionados con la competitividad académica.
- 8) La integración en el Sistema de Gestión de Calidad y los aspectos relacionados con la competitividad académica.
- 9) La eficacia de las actividades en el Sistema de Gestión de Calidad considerando los aspectos relacionados a la competitividad académica.
- 10) El impacto de la integración de los aspectos relacionados en el Sistema de Gestión de Calidad para consolidar la calidad de la educación.

*Investigación de campo:* Por medio de la observación directa y al análisis documental de la situación bajo estudio.

*Análisis de datos y creación del producto final:* Analizar los datos que componen el caso de estudio de la UES con respecto a la competitividad, extendiendo recomendaciones y comentarios alineados al objetivo de la investigación

*Contribución del estudio:* El impacto de la integración de los aspectos de la competitividad académica en el sistema de gestión de la calidad basados en ISO 9000.

*Diseño de la investigación:* La metodología que se desarrolló es la fenomenología (cualitativa) debido a que permitió apreciar las diferentes construcciones y significados de la gente que tiene

experiencia sobre el área de estudio, con el propósito de encontrar las respuestas a las preguntas del tipo cómo, por qué, de qué manera.

## MÉTODOS DE INVESTIGACIÓN

1) Estudio del Caso de estudio. Consiste en el establecimiento de la pregunta de estudio, considerado “el objetivo de la investigación; es decir, qué se pretende lograr con el estudio” (Marcos, 1998), por otra parte se establece la unidad de estudio que es “el elemento base por estudiar cómo es un individuo, un grupo de individuos, una empresa o un grupo de empresas” (Marcos, 1998). La unidad de estudio investigación será representado por el personal directivo e involucrado en las actividades relacionadas a la competitividad académica dentro del sistema de gestión de la calidad de la UES.

Sin embargo para la recopilación de datos se consideran los métodos de la entrevista, la observación y el análisis de documentos, para posteriormente realizar el análisis de datos con la utilización de herramientas cualitativas.

2) Entrevistas. La entrevista se realizará de forma grupal para los integrantes del grupo interdisciplinario de calidad de la UES, y se realizará de manera individual los sujetos de estudios. El tipo de entrevistas realizada es de manera semi-estructurada donde el investigador (entrevistador) “pregunta al entrevistado su opinión sobre una serie de ideas generales referente al tema de estudio” (Marcos, 1998).

La población es la estructura directiva y apoyo al Sistema de Gestión de calidad es: Unidades Académicas: 2 directores de unidad académica, 2 enlaces del Sistema de Gestión de Calidad, 5 representantes de dirección de unidad académica, 8 auditores internos. Dirección General: 1 Director general, 3 Secretarios Generales, Secretario técnico, Director de área, 4 Representantes de dirección general, 1 Coordinador de área y 4 Auditores internos.

La muestra que se utilizará es no probabilística, ya que la selección de los elementos no depende de la probabilidad sino de las características de la investigación (Hernández, Fernández y Baptista, 2002). Se aplicaran 17 encuestas considerando la estructura de la parte directiva y apoyo principal del SGC, desagregada del siguiente manera: 1 Director General; 1 Director de Unidad Académica; 3 Secretarios Generales; 1 Secretario técnico, 1 Director de área; 2 Jefes de carrera, 1 Coordinador de área, 1 Enlace del SGC; 2 Representantes de dirección general, 2 Representantes de dirección de unidad académica y 2 Auditores internos. En este estudio se seleccionaron específicamente las personas mencionadas anteriormente debido al conocimiento y funciones para administrar el Sistema de Gestión de Calidad, con el fin de validar los elementos importantes que debe considerar el modelo propuesto, y en caso de ser necesario aportar otros elementos relevantes para su integración.

Instrumentos de medición. Se desarrollaron guías de entrevistas, realizando un estudio piloto para validar el instrumento de medición y posteriormente el instrumento (Anexo 6) se aplicará a la muestra seleccionada de la población del estudio, la información detallada se menciona en el apartado. Para su diseño se tomó por una parte los aspectos relacionados con la competitividad académica y considerando la auto-evaluación de las guías del ISO/IWA-2:2002, Comité de ciencias sociales y administrativas de CIEES, y Consejo de Acreditación en la Enseñanza de la Contaduría y Administración-(CACECA).

El cuestionario es “un conjunto de preguntas organizadas con una secuencia lógica, los cuales, de acuerdo con su forma, pueden llamarse encuestas o guías para entrevistas”. El instrumento empleado tiene 12 preguntas de las cuales se desglosa de la siguiente manera:

1 pregunta cerrada para conocer las actividades que impactan directamente en los aspectos de la competitividad académica por parte del personal directivo del Sistema de Gestión de Calidad de la UES.

11 Preguntas abiertas para obtener información que contribuyan a contestar las preguntas específicas de investigación.

Aplicación y recolección de datos. Después de haber determinado el instrumento de medición definitivo, se visitó con fecha programa, a las áreas de trabajo de manera individual. La recolección de los datos se realizó simultáneamente durante la entrevista, asegurando la obtención de la información oportunamente.

## RESULTADOS OBTENIDOS

Al aplicar los métodos de investigación se obtuvo de manera general la siguiente información para la integración del Sistema de Gestión de la Calidad:

Demostración documental como operativamente verificar la congruencia entre las actividades relacionadas con la gestión institucional y los procesos educativos que impactan a la comunidad académica. Atención oportuna de las necesidades presentes y futuras de las instituciones educativas y la disminución de la gestión educativa de lenta capacidad de respuesta, con insuficiencia de infraestructura para el desarrollo de las tareas educativas e Insuficiencia de recursos económicos públicos y privados destinados a la educación., a través de la óptima administración de los recursos en beneficio de la comunidad escolar, así como la convergencia entre las necesidades o superación de las expectativas de los clientes con los recursos disponibles. Optimización y mejoramiento de las condiciones de la institución mediante un proceso de toma de decisiones adecuado y basado en un enfoque de mejora en los procesos de enseñanza del alumno.

Compromiso firme, decidido y contenido para influir en la responsabilidad de cada persona en los procesos para satisfacer necesidades y expectativas de los consumidores y clientes. Instituciones que cuesten menos, reduciendo el gasto que no agrega valor para ofrecer mayores beneficios a la sociedad. Cambio de cultura hacia el trabajo, con un compromiso de la alta dirección sobre el quehacer y los compañeros de equipo mejorando la transformación de los procesos. Comunicación efectiva, para diseñar, transmitir, supervisar la implementación de planes estratégicos que transforman la misión y valores institucionales en acciones concretas y establece estándares de desempeño para conseguir las metas y resultados educacionales y financieros de la institución. La operación de una estructura colegiada y participativa de planeación estratégica y auto evaluación que construya mecanismos de seguimiento de metas e indicadores para mejorar en forma efectiva la administración, el liderazgo, los sistemas de información y la comunicación, así como los diferentes mecanismos de financiamiento.

Impulso a las actividades de investigación, para la realización de actividades y la participación como pares académicos en evaluaciones extensa, para consolidar la calidad en la producción académica de los profesores-investigadores. Detección y gestión los recursos para el mejoramiento de los docentes a través de la realización de estudios de posgrados en universidades de excelencia para contribuir al mejoramiento de las instituciones de educación superior y de la sociedad a través de promoción de investigadores. Actualización de la normativa institucional para el cumplimiento de los requisitos del cliente. Atención de problemas estructurales que

ponen en riesgo su viabilidad académica y financiera y la creación de modelos eficaces para la rendición de cuentas, entre otros aspectos.

Nueva cultura de la evaluación y de hacer del aseguramiento de la calidad parte integral de su operación. En términos de procesos administrativos, un enfoque más claro y sistemático a la operación educativa, afirmando que este enfoque científico, es un instrumento central, efectivo y probado de la administración que proporciona la reacción progresiva en cuanto a las escuelas y su personal que realiza la administración, y que este enfoque eficaz lleva a la mejora continua. Evaluación de maestros y desempeño de estudiantes para proveer energía en la enseñanza y el aprendizaje. Identificación y gestión de numerosas actividades relacionadas entre sí, a través de la dirección y operación de una gestión sistemática y visible, con la intención de liderar a la organización hacia la mejora del desempeño considerando el seguimiento de la satisfacción del cliente mediante la evaluación de la información relativa a la percepción del cliente acerca de si la Institución ha cumplido sus requisitos.

Aseguramiento que los altos ejecutivos puedan influir que el personal entiendan la importancia de conocer los requerimientos del cliente. Disminución de la gestión educativa de lenta capacidad de respuesta, con insuficiencia de infraestructura para el desarrollo de las tareas educativas e Insuficiencia de recursos económicos públicos y privados destinados a la educación. Identificación de los procesos y procedimientos para desarrollar y mejorar la eficacia y la eficiencia del sistema de gestión de la calidad a fin de satisfacer las expectativas de todos los grupos interesados en la educación. El uso del auto evaluación para la identificación de debilidades y asegura el logro de las metas. Las instituciones no sólo deben adoptar la autoevaluación sino además desarrollar un modelo efectivo y flexible que represente en forma precisa la misión y las metas, que identifique los procesos claves y relevantes y que enfatice las relaciones entre los factores del sistema, sus procesos y sus resultados.

## CONCLUSIONES

Es evidente que entre mayor sea el alcance del sistema de gestión de la calidad, los procesos y procedimiento enfocados a la competitividad académica, mayor será su impacto en la calidad institucional. Para proporcionar el impacto es importante tomar en cuenta los comentarios realizados en las entrevistas, las percepción de la calidad en la educación y el análisis de la documentación del sistema de gestión de la calidad de la UES, considerando a los clientes finales identificados en los procesos orientados a los clientes como son la demanda de las instituciones de media superior (aspirantes y alumnos), egresados, empleadores, y comunidad en general, así como los clientes identificados en los procesos de soporte. En la actualidad la educación es base fundamental para el desarrollo de la sociedad, a través de la permanencia de la Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES), el Consorcio de Universidades Mexicanas, la participación de Proyectos.

Integrales de Fortalecimiento Institucional, la evaluación y acreditación de organismos reconocidos por el Consejo para la Acreditación de la Educación Superior (COPAES) las instituciones educativas pueden compararse, retroalimentarse y tomar acciones para lograr el nivel de calidad educativa que tienen otras instituciones. La utilización de modelos de calidad en la educación superior contribuye a disminuir las brechas que existen entre universidades, agregando estrategias de planeación, organización y evaluación a las instituciones educativas, con el fin de generar valor agregado para los alumnos, personal académico y administrativo, los empleadores y la sociedad, buscando establecer una imagen institucional de prestigio que refleje las ventajas competitivas, la flexibilidad a las necesidades de la comunidad, el desarrollo de

investigación y vinculación para la generación de innovación y el establecimientos de estándares institucionales de calidad que aseguren la perduración del mejoramiento diario de sus actividades en beneficio de la sociedad. Sin embargo, para su implementación es necesario considerar el análisis del contexto aplicación, buscando la adecuación correcta y el aprovechamiento máximo del esfuerzo y recursos necesarios, evitando el rechazo derivados de interpretaciones erróneas, incredibilidad y decepción en la operación.

Al analizar la interpretación de la mejora continua de los elementos que caracterizan a una institución de educación superior reconocida por su buena calidad considerada por la Secretaría de Educación Pública, abarca la oferta educativa de buena calidad que impacta a los aspectos relacionados a la competitividad académica, y la gestión institucional competente relacionado a los procesos certificados bajo las normas ISO 9000:2008. Sin embargo es necesario definir los procesos estratégicos que deben ser certificados o administrados bajo esquemas de calidad con el propósito de impactar directamente a las actividades de competitividad académica, evitando la implementación aislada de un sistema de gestión de la calidad con visión académica o administrativa, escasas interrelación sistémica entre estas dos visiones, y enfoques unilaterales sobre estas visiones que pueden resultar brechas significativas y polarizar el concepto de la calidad total. Por otro lado, es necesario que el alcance del sistema de gestión de la calidad sea definido de una manera homologada y diseñado en todos los niveles de la institución, evitando producir logros individuales que son apreciados de manera limitada.

La implementación norma ISO 9001:2008 y la atención a las recomendaciones de IWA2 en las instituciones de educación superior contribuyen a la consolidación de las actividades que impactan a la competitividad académica, asegurando un enfoque integral del desempeño institucional y permite alinearse a los criterios de los organismos reconocidos por el COPAES. En la UES los programas educativos de buenas calidad se incrementaron de 0 en el 2005 a 18 en el 2011, representando el 100% de los programa evaluables y acreditables, la matrícula general atendida representa el 100% (7,723 alumnos). Con el propósito de contribuir a estos logros, la implementación del sistema de gestión de la calidad a través de las actividades de documentación de procedimientos, control de registros y documentos, revisiones por la dirección, control y seguimiento de las actividades, atención de retroalimentaciones de los alumnos y maestros, auditorías internas, utilización de acciones correctivas y preventivas y un enfoque integral de la mejora continua en el desempeño institucional, apoyará a las actividades relacionadas a la competitividad académica para mantener las acreditaciones y evaluaciones de buena calidad, atender adecuadamente a las recomendaciones por los organismos reconocidos por el COPAES, promover la cultura de la mejora continua en todas las actividades, apoyar a otros programa educativos y unidades académicas en la implementación de modelos de calidad aplicables con mayor facilidad y encontrar flexibilidad en la adaptación de cambios exigidos por el entorno.

Al utilizar un sistema de gestión de la calidad de manera integral sobre todos los procesos que intervienen en la competitividad académica, permite visualizar la planeación, organización y evaluación de las actividades, y sobre todo la aplicación de recursos en la operatividad y en las acciones de mejora. Información que contribuye a la rendición de cuentas ante organismos externos, internos y la sociedad en general. Considerando la mejora continua de los elementos que caracterizan una institución de educación superior reconocida por su buena calidad (PIFI, 2012), y el sistema de gestión de la calidad bajo las normas ISO 9000 con los aspectos relacionados a la competitividad académica, podemos observar la importancia de la definición de los procesos estratégicos enfocados a la adecuada identificación de procesos de soporte y orientados al cliente.

# PROPUESTA METODOLÓGICA PARA EL DISEÑO DE UN MODELO DE DIAGNÓSTICO DE INTERVENCIÓN ORGANIZACIONAL, BASADO EN LA NORMA ISO 9001:2008 Y EL ENFOQUE SISTÉMICO

Luz Mercedes Ruiz García, GMA  
Jesús Manuel Velázquez Castellanos, Universidad Estatal de Sonora

## RESUMEN

*En la ciudad de Hermosillo, Sonora, México; se realizó un proceso de consultoría en una empresa de medios masivos de comunicación, en medios impresos, por cuestiones de confidencialidad no se menciona el nombre de la organización, sin embargo esto no es impedimento para que se pueda plasmar de forma general la metodología utilizada en el diagnóstico de la misma. Durante una década se ha brindado apoyo a diversas organizaciones que requieren realizar cambios, en todo este tiempo no se ha encontrado un documento que presente una metodología para realizar diagnóstico, las referencias encontradas señalan los puntos a evaluar, las herramientas que se pueden utilizar, objetivos, filosofía, mucha información, pero no los pasos o el cómo realizarlo. El presente estudio busca entregar una propuesta sencilla, amigable, a todos aquellos profesionales de la administración que tienen la necesidad de realizar un diagnóstico organizacional basado en la norma ISO 9001:2008 y con un enfoque sistémico.*

**PALABRAS CLAVES:** Diagnostico organizacional, enfoque sistémico e ISO 9001:2008

## METHODOLOGY PROPOSAL FOR MODEL DESIGN ORGANIZATIONAL INTERVENTION DIAGNOSTIC, BASED INTERNATIONAL STANDARD ISO 9001:2008 AND FOCUS SYSTEMIC

## ABSTRACT

*In Mexico, Sonora, Hermosillo City, performed consultancy process in the company about communication and newspaper, for situations of confidentiality can't mention the name company, but isn't problem to describe the methodology applicable for diagnostic. During a decade was provide support to several companies that needs change, in this time not found mythology document for performed diagnostic, the reference describe evaluation points, tools administrative, objectives, philosophy, a lot information but don't describe the fundamental steps for perform organizational diagnostic. This Study attempts to provide simple form proposal for the professional administration that necessity to do organizational diagnostic base international Standard ISO 9001:2008 and focus systemic.*

**JEL:** L15, M10

**KEYWORDS:** Organizational Diagnostic, focus systemic and ISO 9001:2008

## INTRODUCCIÓN

El pensar que en la actualidad podamos crecer o desarrollarnos de forma aislada es inconcebible, necesitamos estar enlazados, interconectados con otros sistemas que nos apoyen y permitan no sólo mantenernos, sino crecer, mejorar cada día. Como nunca antes, nuestra visión del mundo es holística.

Así como necesitamos de otros sistemas hacia el exterior, al interior pasa lo mismo, es necesario utilizar diversos sistemas que permitan que la organización no sólo sobreviva, sino que tenga un crecimiento sostenido. Para utilizar los sistemas adecuados, es necesario partir de un diagnóstico lo más exacto y preciso posible, ya que será la base fundamental para determinar cuáles serán los sistemas a implementar.

El intervenir una organización es como el médico que interviene un cuerpo, para eliminar la enfermedad requiere identificar dónde está el problema, que lo origina y así poder otorgar el o los medicamentos que ayudarán al paciente a recuperarse; en las organizaciones pasa igual, para poder utilizar el o los sistemas que apoyarán a la empresa o institución no sólo sobrevivir, sino crecer, se requiere de un buen diagnóstico. El trabajar desde hace doce años con organizaciones tanto públicas, como privadas, nos permite asegurar que para consolidar procesos de cambio dentro de éstas, es necesario partir de un diagnóstico real, completo y basado en normas internacionales, como lo es la ISO 9001:2008. Durante este tiempo la metodología que será expuesta en el presente trabajo de investigación, ha sido probada por diversas generaciones, ya que se ha compartido con estudiantes de la Maestría en calidad, en la Universidad del Estado de Sonora. En cada ocasión se ha podido mostrar la importancia de conocer la situación real que guarda la organización, antes de implantar cualquier proceso de cambio planeado.

Un elemento fundamental en la propuesta metodológica es que se combina la parte “dura” o “fría” con la parte humana, ya que se revisa la atención a los puntos de las normas ISO, además del “sentir” de la organización. Ambos puntos tienen como posición de partida la necesidad sentida del cliente, es decir, se parte del problema presentado por la persona que solicita el servicio de consultoría. La expresión del problema por parte del Directivo de la organización no sólo es la manifestación de que hay algo que mejorar, sino la oportunidad de establecer un compromiso con él para que ese proceso de cambio planeado cuente con buenos cimientos, de lo contrario será una estrategia más que terminará siendo un gasto y no una inversión con ganancias claramente visibles. Hasta el momento, la aplicación de la presente metodología ha permitido observar como las organizaciones intervenidas han podido atender sus diversas problemáticas y hacer frente a las situaciones que les aquejaban, para efectos de compartir este procedimiento se tomó como ejemplo una empresa de medios masivos de comunicación, de la cual se omite el nombre con el fin de guardar la confidencialidad de la misma.

## REVISIÓN LITERARIA

El contenido de este documento, de los apartados del 2.1 al 2.4, están fundamentadas en la teoría de Kubr Milan plasmada en su libro la consultoría de empresas. Guía para la profesión, 2002; texto que se consideró básico para el procesos de consultoría. De forma breve se presentan conceptos que son básicos para una comprensión de la metodología que se presentará en el siguiente apartado.

### Definición y Enfoques de la Consultoría

*Kubr (2002) define la consultoría de las empresas como:* Ante un método para mejorar las prácticas de gestión, este puede ser empleado por una empresa privada independiente, una empresa dependencia interna de consultoría (o algo análogo), en una organización privada o pública, un instituto de perfeccionamiento del personal de dirección, de productividad o de fomento de la pequeña empresa, un servicio de extensión o un particular (por ejemplo, un consultor independiente o un catedrático universitario). Incluso un gerente o director puede actuar como consultor, si proporciona asesoramiento a sus colegas o subordinados (p.XXI).

Más adelante para continuar ampliando el concepto de consultoría Kubr (2002) cita a Fritz Steele, Peter Block, Larry Greiner y Robert Metzger de la siguiente manera:

Fritz Steele quien define la consultoría como sigue: “ Por proceso de consultoría entiendo cualquier forma de proporcionar ayuda sobre el contenido, proceso o estructura de una tarea o de un conjunto de tareas, en que el consultor no es efectivamente responsable de la ejecución de la tarea misma, sino que ayuda a los que lo son”. Asimismo cita a Peter Blockel cual sugiere incluso que “se actúa como consultor siempre que se trata de modificar o mejorar una situación, pero sin tener control directo sobre la ejecución”. Larry Greiner y Robert Metzger quienes señalan que “la consultoría de empresas es un servicio de asesoramiento contratado por y proporcionado a organizaciones por personas especialmente capacitadas y calificadas que prestan asistencia, de manera objetiva e independiente, a la organización cliente para poner al descubierto los problemas de gestión, analizarlos, recomendar soluciones a esos problemas y coadyuvar, si así se les solicita, en la aplicación de soluciones (p.3),

#### La Consultoría y el Cambio de la Organización.

Kubr (2002, p. 79) comenta que el cambio es la razón de ser la consultoría de empresas. Si las diversas tareas de consultoría tienen alguna característica en común, es la de que contribuyen a la planificación y aplicación de cambios en las organizaciones clientes.

*Kurb(2002) comenta en su libro que:* Las organizaciones no cambian por cambiar, pero como forman parte de un proceso más amplio de desarrollo y tienen que reaccionar ante los nuevos cambios, trabas, exigencias y oportunidades del medio ambiente, se ven permanentemente obligadas a adaptarse al medio en el que existen y funcionan. Los cambios pueden referirse a cualquier aspecto o factor de una organización. Por tanto, pueden afectar a los productos y los servicios, las tecnologías, los sistemas, las relaciones, la cultura de la organización, las técnicas y el estilo de dirección, las estrategias aplicadas, las competencias, los rendimientos y cualquier otra característica de una empresa. Afectan asimismo a las transformaciones de la estructura básica de la organización, con inclusión de la índole y el nivel de la actividad empresarial, las disposiciones jurídicas, la propiedad, las fuentes de financiamiento, las actividades y repercusiones internacionales, la diversificación, las fusiones y las alianzas con nuevos asociados y cuestiones análogas (p.81).

*La Consultoría y el Cambio en las Personas:* En el cambio de una organización es fundamental el factor humano, Kubr (2002) señala que Las personas que trabajan en la organización – su personal directivo, técnico y sus trabajadores – son las que determinan en última instancia con su comportamiento cuáles cambios se pueden introducir en la organización y que beneficios reales se van a obtener de ellos. La empresa y las organizaciones son, por encima de todo, sistemas humanos. El personal debe entender, desear y poner en práctica cambios que, a primera vista, pueden parecer únicamente tecnológicos o estructurales, y competencias exclusivas de la alta

dirección, pero que en la práctica repercutirán en las condiciones de trabajo, intereses y satisfacción de muchas otras personas. Para realizar un cambio en la organización, el personal tiene que cambiar también: debe adquirir nuevos conocimientos, absorber más información, abordar nuevas tareas, perfeccionar sus conocimientos técnicos, renunciar a lo que preferiría conservar y, muy a menudo, modificar sus hábitos de trabajo, sus valores y las actitudes que tiene con respecto a la forma de actuar en la organización. Los cambios de valores y actitudes son esenciales. Probablemente no haya ninguna modificación real y duradera sin un cambio de actitudes (p.82).

*La consultoría y la cultura organizacional:* Antes de iniciar un proceso de consultoría, es necesario tomar en cuenta la cultura de la empresa para poder apoyar a la misma, si el consultor violenta esta cultura es casi seguro que no logre el cambio que busca porque la resistencia del personal será fuerte. Kinicki, Kreitner (2003, p.30) definen la cultura organizacional como el conjunto de supuestos compartidos e implícitos, que dan por sentado, en un grupo, el cual determina la manera en que el grupo percibe sus diversos entornos, piensa respecto de ellos y reacciona a ellos mismos.

Robbins, Judge (2009, p.551) presentan el concepto de cultura organizacional para referirse a un sistema de significado compartido por los miembros, el cual distingue a una organización de las demás.

*Kubr (2002) expresa que:* Las organizaciones tienden también a tener su cultura propia: una mezcla peculiar de valores, actitudes, normas, costumbres, tradiciones, comportamientos y rituales que, en su totalidad, son específicos de la organización de que se trate. Algunas organizaciones están conscientes de su cultura y la consideran como un poderoso instrumento estratégico, que utilizan para orientar a todas sus dependencias y miembros hacia objetivos comunes, movilizar la iniciativa de los empleados, asegurarse de su lealtad y facilitar la comunicación. Tienden a crear una cultura propia y asegurarse de que todos los empleados la comprenden y se adhieren a ella (p.120).Kubr (2002, p. 125) El consultor tiene que hacer uso de toda su experiencia y talento para aprender lo suficiente acerca de los factores culturales que pueden ser pertinentes para su cometido. En algunos casos, será perfectamente aceptable preguntar directamente acerca de los valores imperantes, cómo se hacen normalmente las cosas en la organización del cliente y qué trampas se han de evitar, en particular si el cliente desea obtener una solución técnicamente válida y es también consciente de las diferencias entre culturas.

*Desarrollo Organizacional (D.O.):* El Desarrollo Organizacional (D.O.) como una herramienta dentro de las organizaciones es aún incipiente en nuestro País, es a finales del siglo pasado, en la década de los 60's que en México se habla por primera vez de este concepto, en realidad es una corriente nueva, aún no explorada por muchas empresas, sobre todo en las pequeñas y medianas que al tener poco personal consideran improbable el contar con un área que se encargue de implementar esta herramienta. Lo anterior es más por desconocimiento porque puede ser desarrollada por la misma persona que administra la organización.

*Definiciones del D.O:* Hasta el momento hemos visto cómo evolucionó el concepto en nuestro País ¿pero qué es el D.O.? Tomaremos como base las definiciones que nos presenta Guízar (2008):

- Implica el estudio de los procesos sociales que se dan dentro de una empresa con el objetivo de ayudar a sus miembros a identificar los obstáculos que bloquean su eficacia como grupo y

a tomar medidas para hacer óptima la calidad de sus interrelaciones, para influir de manera positiva y significativa en el éxito de los objetivos de la empresa. (Alejandro Guzmán de la Garza)

- Es la tendencia al mejoramiento de las relaciones interpersonales como medio para impulsar a la empresa (Harris).
- Es una respuesta al cambio, una estrategia de carácter educacional que tiene la finalidad de cambiar creencias, actitudes, valores y estructuras de las organizaciones de modo que puedan adaptarse mejor a las nuevas tecnologías, a los nuevos desafíos y al ritmo vertiginoso del cambio (Bennis).
- Es un esfuerzo planeado que abarca desde arriba toda la organización administrativa para aumentar su eficiencia y su salud mediante intervenciones planeadas en los procesos organizacionales y que emplea los conocimientos de las ciencias del comportamiento. (Beckhard).

*Importancia y necesidad del D.O:* La importancia del DO radica en que es una herramienta que potencia el conocimiento y la experiencia que tiene el capital humano, además de que al complementarse con otras herramientas como la planeación estratégica y sistemas de calidad, ayuda a marcar una dirección clara del rumbo y a caminar seguros hacia esa meta.

El D.O. permite a los administradores obtener mejores resultados, a ser más eficaces mientras se cuidan las relaciones entre el personal; es una herramienta que sirve de apoyo en estos momentos en donde la única constante es el cambio, en donde el aprendizaje es tan acelerado que como dijo Alvin Toffler en su libro La tercera Ola: “Los iletrados no serán aquellos que no puedan leer o escribir. Sino aquellos que no puedan aprender, desaprender, y re aprender. Al momento de intervenir una empresa, un consultor está apoyando a que la organización viva su proceso de Desarrollo Organizacional, ese proceso de cambio planeado que lo llevará a caminar de forma sustentada y por un camino menos escabroso a un éxito futuro. El consultor al momento de entrar a la empresa genera una catarsis que debe provocar cambios favorables para la empresa, esto será posible si es un profesional que es experto en la esfera de la gestión que esté interviniendo: gestión general y estratégica, gestión financiera, gestión de la comercialización y la distribución, en la dirección de la producción, en la esfera de la administración de los recursos humanos, entre otras. Si es un experto, sólo entonces podrá generar ese cambio favorable, será una inversión de la empresa... si no sólo será un consultor que pasó a generar un gasto.

### Comportamiento organizacional

El objetivo de implementar un cambio organizacional es el mejorar los resultados de la operación y de las condiciones de las personas que conforman la organización. Para estructurar un plan de acción que conlleve un cambio significativo, primeramente se debe estudiar el comportamiento organizacional.

La filosofía del comportamiento organizacional (CO) tiene un enfoque de apoyo y está orientada a los recursos humanos. El CO investiga el impacto que los individuos, los grupos y la estructura tienen sobre el comportamiento dentro de las organizaciones, con el propósito de aplicar tal conocimiento al mejoramiento de la eficacia de la organización.

Entre las variables que se toman en cuenta en el estudio del CO destacan: productividad, ausentismo, personalidad, valores, comportamiento en grupo y satisfacción en el trabajo. (Internet). Robbins et al. (2009), definen el Comportamiento Organizacional como: Un campo de estudio que investiga el efecto que los individuos, grupos y estructuras tienen sobre el comportamiento dentro de las organizaciones, con el propósito de aplicar dicho conocimiento

para mejorar la efectividad de las organizaciones. El comportamiento organizacional es un campo de estudio, lo que significa que es un área distinta de experiencia con un cuerpo común de conocimiento. ¿Qué es un área distinta de experiencia con un cuerpo común de conocimiento? ¿Qué estudia? Estudia determinantes del comportamiento en las organizaciones: individuos, grupos y estructura. Además, el CO aplica el conocimiento que se obtiene sobre individuos, grupos y el efecto de la estructura sobre el comportamiento, para hacer que las organizaciones trabajen con más eficacia. El CO se ocupa del estudio de lo que hacen las personas en una organización y de cómo afecta su comportamiento al desempeño de ésta. Y como el CO estudia en específico las situaciones relaciones con el empleo, no es de sorprender que haga énfasis en que el comportamiento se relaciona con los puestos, trabajo, ausentismo, rotación de los empleos, productividad, desempeño humano y administración (p.10).

### Cambio Planificado

El hablar de que las organizaciones planificaran su cambio significa que primero deben conocer la situación actual, es decir, conocer que fortaleza tienen al interior, que debilidades les impiden o disminuyen sus resultados; así como las amenazas y oportunidades que hay en su entorno. Algunos investigadores manejan que el cambio planeado debe iniciar identificando las fuerzas impulsoras y las fuerzas restrictivas de la organización, independientemente de la palabra que se use, el concepto es el mismo, iniciar ese proceso de cambio planificado, partiendo de donde estoy, cuál es mi realidad. Una vez que ya sé dónde estoy, debo de marcar el rumbo hacia donde me dirijo, para esto es fundamental el tener una filosofía (Misión, Visión y unos valores) En este trayecto del hoy hacia ese futuro esperado, el D.O será fundamental, constituirá la herramienta que a través de sus diversas intervenciones (procesos humanos, equipo, tecnoestructurales) logrará una mayor eficacia y eficiencia, en un ambiente sano.

Se dice que los procesos de cambio se consolidan en 20 años, pero si partimos de que la dinámica en la que vivimos es de contante cambio, lo que hoy es vanguardia, seguramente en pocos años será algo obsoleto, así que hablar de que un proceso de cambio se consolida en 20 años es definitivamente poco viable. Los procesos de cambio deben de ser trabajados con la visión de la planeación estratégica, es decir a los 5 años. El administrador de este proceso de cambio deberá ser alguien que tenga, no sólo la formación, sino también el carácter para poder ser un facilitador del proceso de cambio, ya que las resistencias que encontrará serán diversas, deberá saber identificarlas y tomar las medidas adecuadas para disminuirlas.

### Evaluación Integral

Fleitman (2007, p.1) La evaluación integral es una metodología por medio de la cual se estudian, analizan y evalúan las fuerzas, debilidades, amenazas y oportunidades de las empresas; sirve como instrumento por medio del cual se analiza y evalúa el entorno de un organismo, su base legal, organización, estructura, políticas, planes, programas, sistemas, procesos y controles. La propuesta de diagnóstico se fundamenta en la visión de sistemas con el fin de auxiliar el cumplimiento del desarrollo administrativo. La selección de un modelo de diagnóstico, la combinación de varios de ellos o la construcción de uno diferente dependerá del problema derivado del juicio del administrador y su conocimiento acerca de las circunstancias de su trabajo, con objeto de que el modelo que se elija cumpla significativamente sus requerimientos y se integre al diagnóstico administrativo de acuerdo con la visión de sistemas.

El diagnóstico es un proceso en el cual se detecta la problemática con sus causas y efectos y nos induce a la decisión de tomar alternativas de apoyo de solución para el mejoramiento

administrativo, abarca una serie de actividades destinadas a auxiliar al administrador y sus equipos de trabajo a describir y evaluar su sistema institucional. Para explicarlo utilizaremos el símil de un paciente y un médico. El modelo del diagnóstico se aplica en los siguientes propósitos:

- a) Generar retroinformación en los administradores que tienen a su cargo el sistema operativo, con base en conocimiento, experiencia y observación.
- b) Visualizar para dar solución a los males obedeciendo a una necesidad del director o directrices de momento que viven la institución, como dice (Fleitman Jack, 2007).

Según la Norma ISO 9001:2008, un sistema de gestión de calidad es un conjunto de elementos mutuamente relacionados o que interactúan para establecer la política y los objetivos, su énfasis principal son los principios de calidad, el enfoque basado en procesos y la administración total de la calidad, por tal motivo, toda la información obtenida en el diagnóstico organizacional proporcionan las bases para el desarrollo de la implementación del Sistema de Gestión de la Calidad basado en la Norma ISO 9001:2008, debido a que su alcance impacta a los requisitos relacionados a la documentación, planificación de la calidad, gestión de recursos, realización del producto o servicio y mejora continua. Con los resultados del diagnóstico se aprecia las fortalezas y debilidades sobre los requisitos de cumplimiento con el propósito de establecer acciones inmediatas de atención.

## **METODOLOGIA**

### Sujetos y Escenario

El presente trabajo de consultoría fue desarrollado en una empresa de medios masivos de comunicación, en forma impresa, la cual se ubica en la ciudad de Hermosillo, Sonora; México. Esta empresa está dirigida por directivos expertos en su actividad, cuando se fundó, se buscó que los mejores de cada profesión estuviera trabajando en ella, sólo que al carecer de una administración profesional, poco a poco el personal empezó a emigrar a otras empresas, aun así, su nivel profesional es alto.

### Planteamiento del Problema

La empresa carece de elementos de gestión administrativa y de calidad que le permitan eliminar los problemas existentes y mejorar su productividad.

### Instrumentos

Cada etapa en el proceso de consultoría es fundamental, sólo que en lo particular la búsqueda de información la considero básica para una consultoría profesional. Esta etapa es el cimiento de las siguientes ya que si los resultados no son verdaderos, las correcciones tampoco; además de que es posible que algunas personas se vean afectadas por los resultados y por lo mismo se cuestionen la veracidad de los mismos. Si una de las herramientas está mal diseñada o aplicada, los resultados carecerán de validez y correos un riesgo alto de perder el proceso de consultoría. Buscando que no quede ninguna duda de los resultados es que es muy importante seleccionar por lo menos dos fuentes de información, y diseñarlas para confirmar la problemática de la empresa.

El presente trabajo se realizó utilizando cinco instrumentos para recopilar información, mismos que partían del modelo de diagnóstico y buscaban identificar las fortalezas y debilidades de la empresa.

El primer instrumento diseñado fue la guía de entrevista a nivel directivo, este buscaba identificar cuál es el problema o los problemas que adolece la empresa, según el nivel más alto de arquitectura organizacional. La información obtenida en esta reunión es determinante, ya que se buscará desechar o confirmar las posibles causas al problema o problemas que presenta el Director de la empresa.

De esta reunión saldrán los datos iniciales que apoyaran al diseño del modelo de diagnóstico y al resto de los instrumentos para recopilar información. El segundo instrumento fue el cuestionario para los colaboradores. Una vez que se analizó la información obtenida por los directivos, se estructuró el cuestionario partiendo de los resultados de la entrevista. Este instrumento se diseñó sabiendo que la tendencia de las personas es buscar el punto medio, por lo que las opciones de respuesta eran cuatro, en donde dos de ellas definían la fortaleza (totalmente de acuerdo y de acuerdo) mientras que las otras dos establecían la debilidad (medianamente de acuerdo y totalmente en desacuerdo).

El valor que tenían las opciones eran cuatro, tres, dos y uno respectivamente. Así, si el personal decía que estaba de acuerdo era capturar un valor tres y sería una fortaleza, mientras que si optaban por un medianamente de acuerdo sería un valor dos siendo esta una debilidad. En el cuestionario se colocaron dos reactivos, mismos que se colocaron aleatoriamente, cuidando que no quedan juntos para que el personal o pudiera identificar que se evaluaba, además para confirmar la respuesta. Al momento de diseñar el cuestionario se cuidaba la redacción de cada ítem, entre los elementos que se cuidaba era que se redactaran como afirmaciones, además de que no evaluaran dos variables y también que fueran en positivo. Al final cada ítem se leyó cuidando que su respuesta fuera acorde a las opciones presentadas.

El tercer instrumento que se definió fue la lista de verificación, está buscaba corroborar aquellos puntos que era necesario confirmar después de la entrevista a directivos y la aplicación del cuestionario a colaboradores. El cuarto instrumento utilizado fue el *sensing* bien es cierto no tiene un cuerpo tan definido como los anteriores instrumentos, también es cierto que permite recopilar información y en algunos casos es muy valioso para establecer conclusiones. Este instrumento sigue teniendo como base el modelo de diagnóstico, sólo que su forma de recabar son los sentidos del consultor. El quinto y último instrumento que se diseñó fue el análisis de productividad de la empresa con relación a los ingresos y egresos, y el aprovechamiento de los recursos. Aplicando herramientas de manufactura esbelta para detectar desperdicios en los procesos productivos.

### Recolección de datos

La recopilación de los datos se realizó buscando que fuera una representación lo suficientemente alta que permitiera tener información confiable, y así disminuir el margen de error, se utilizó un mínimo de 50%. El ejercicio se dio en varios momentos, en todos ellos se buscó crear un clima de confianza, de apertura y respeto a la opinión de cada uno de los integrantes del equipo de trabajo. En un primer momento se obtuvo información de los dueños de la empresa, los datos obtenidos por ellos permitieron diseñar el modelo de diagnóstico que fue la brújula durante todo el proceso de consultoría. Este tiempo sirvió para recolectar los datos de la dirección, para lo cual se

estableció contacto con el Director General para concertar el día y la hora en que se aplicaría la entrevista tanto a él como el Administrador General.

Como ya se mencionó anteriormente, el resultado de estas entrevistas es fundamental para precisar el modelo de diagnóstico, por lo que con los datos obtenidos en estas entrevistas, se vuelve a revisar el modelo de diagnóstico y se cuida que no quede ningún ámbito que impacte en el problema, fuera del modelo. Una vez que ya se tenían las bases firmes se procedió a recopilar la opinión del personal técnico, utilizando el cuestionario. En un segundo momento se llevó a cabo una reunión con el personal de niveles técnicos – operativos, para lo cual fue necesario que previamente se acordara con el director administrativo el día y la hora en que se podía disponer del personal, el lugar que se estableció para tal fin fue la sala de juntas de la empresa. En el caso de los cuestionarios que se aplicaron al personal técnico, se les citó a todos los colaboradores y se les explicó que era fundamental que respondieran con sinceridad los reactivos, se hizo una analogía con un revisión médica señalando la importancia de que para hacer un buen diagnóstico de la enfermedad y dar la medicina adecuada era necesario que la información de obtenida por los análisis al cuerpo fueran reales, sólo así la medicina podría ser efectiva.

El cuestionario se aplicó al 50% del personal, quienes en todo momento mostraron una actitud receptiva, motivada, dispuestos a colaborar, sólo que en algunos momentos hicieron comentarios que permitieron observar que había inconformidad con la empresa. Si el colaborador tenía dudas de algún reactivo preguntaba y se le aclaraba, ya que concluía salía a su lugar de trabajo. En un tercer momento y ya con datos recabados, se realizó una visita en campo para confirmar la existencia de algunos registros y/o documentos. En el caso de la herramienta llamada lista de verificación, fue necesario establecer el día y la hora en que se podría visitar las instalaciones de la empresa para poder identificar los registros que mostraran o evidenciaran que existía o se carecía del punto evaluado. Durante el recorrido se fue tomando nota de las evidencias mostradas durante la revisión. La recopilación mediante el instrumento del *sensing* fue permanente, desde el primer momento que se visitó la empresa se estuvo percibiendo información que era utilizada para alimentar los datos hasta este momento obtenidos. El quinto instrumento fue las visitas al área de producción, ya que se realizaron una serie de recorridos a las áreas productivas para determinar los tiempos antes, durante y después de la producción, recolectando datos en las bitácoras y apuntando las áreas de oportunidad de aprovechamiento de recursos y eliminación de desperdicios.

### Análisis de la Información

Para poder hacer el análisis de la información primeramente se tomó como base el modelo de diagnóstico, que es la parte medular del mismo, ya que si no se cuenta con un modelo es muy probable que el consultor se pierda en el mar de información que está obteniendo. Durante las primeras visitas realizadas a la empresa se pudo detectar que carecían de algunas herramientas administrativas, así que era necesario confirmar la apreciación para poder apoyarla. En el caso de esta empresa, se diseñó un modelo que permitiera confirmar si la falta de herramientas de gestión administrativa y de calidad era lo que tenía a la empresa en la situación actual, por lo que el modelo utilizado se diseñó basado en un enfoque sistémico, buscando conocer las fortalezas y debilidades de la misma. El modelo de diagnóstico se dividió en 5 subsistemas, cada subsistema a su vez estaba dividido en ámbitos o indicadores, cada uno de los ámbitos tenía tres puntos a evaluar. Este equilibrio es fundamental para obtener resultados que no estén cargados a una parte del sistema. El modelo que se utilizó en esta empresa fue el siguiente:

*Subsistema:* Administración

*Ámbito: Personal:* \_Contrataciones, Sueldos y salarios; Prestaciones e incentivos.

*Ámbito: Arquitectura Organizacional:* \_Estructura organizacional, Descripción de puestos y Evaluación del desempeño

*Ámbito: Sentido de pertenencia:* Satisfacción en el trabajo, Seguridad en el empleo y Igualdad en el empleo.

*Subsistema:* Equipos De Trabajo

*Ámbito: Al interior:* Énfasis en objetivos, Facilitación del trabajo y Apoyo al interior del departamento.

*Ámbito: Entre departamentos:* Reuniones, Facilitación del trabajo y Apoyo entre departamentos

*Ámbito: Integración Informal:* Formación de equipos, Relaciones informales y Comunicación

*Subsistema:* Infraestructura

*Ámbito: Espacios:* Espacios adecuados, Mobiliario y Herramientas y equipo

*Ámbito: Tecnología:* Aprovechamiento de la tecnología, Equipo e Innovación y creatividad.

*Ámbito: Seguridad:* Instalaciones, Manejo de equipo de seguridad y Seguridad e higiene personal.

*Subsistema:* Procesos

*Ámbito: Anticipación a los procesos:* Establecimiento de objetivos, Diseño del trabajo, Planeación estratégica.

*Ámbito: Procesos:* \_Definición de procesos, Servicio al cliente interno y Medición de resultados del proceso.

*Ámbito: Calidad del producto:* \_Percepción del empleado con respecto al producto, Percepción del empleado con respecto al servicio, Calidad y productividad.

**SUBSISTEMA:** LIDERAZGO

*Ámbito: Dirección:* \_Énfasis en objetivos, Dirección, Apoyo por parte de la Dirección

*Ámbito: Supervisión:* \_Apreciación del rendimiento, Normas del rendimiento y Tensión

*Ámbito: Manejo del personal:* \_Comunicación, Manejo de conflictos y Toma de decisiones.

El diseño del modelo se conforma de dos vertientes, una de ellas es la necesidad sentida que presentan los niveles Directivos y partiendo de ellas el grupo consultor, mediante una lluvia de ideas, establece las posibles causas por las que se está presentando el o los problemas que presenta el cliente. Una vez que se tienen las ideas, se procede a agruparlas por subsistema y ámbito, así se va formando el modelo de diagnóstico con la primera vertiente; la segunda vertiente se forma cuando a cada ámbito se le asigna la norma y el punto de la norma a la cual impacta. Con el modelo de diagnóstico ya definido, se procede a diseñar las herramientas que se utilizarán para recopilar la información, para lo cual se cuidó en todo momento que los ámbitos

evaluados fueran cruzados con al menos dos herramientas. Por ejemplo: si en el cuestionario se evaluaba comunicación, en la entrevista también.

Cada uno de los instrumentos fue analizado de forma independiente, el resultado de este se plasmaba en la tabla cruzada que contenía todos los ámbitos de la evaluación y los instrumentos definidos para recopilar los datos. Primeramente se analizó los datos obtenidos en la **entrevista a directivos**. Al ser dos directivos, cada uno de ellos significaba el 50% de la información, por lo que las respuestas que brindaron se tradujeron en un porcentaje, además las respuestas solamente podían ser traducidas en que existía o no existía el elemento evaluado, por ejemplo, existía o no existía la estructura organizacional. Lo anterior se traducía en fortaleza o debilidad.

Posteriormente se revisaron los resultados obtenidos de la aplicación de **cuestionarios**. Los cuestionarios se diseñaron con cuatro opciones de respuesta, previendo que los colaboradores no se fueran por un punto medio, que es probable cuando se presentan tres opciones de respuesta. Cada una de las respuestas tenía un valor: totalmente de acuerdo valía cuatro puntos, de acuerdo, valía tres puntos; medianamente de acuerdo equivalía a dos puntos y totalmente en desacuerdo un punto. Los cuestionarios se capturaron en el programa SPSS, lo que permitió identificar claramente aquellos valores que eran fortaleza y debilidad. Como cada pregunta evaluaba un ámbito, y existían dos preguntas por ámbito, al final se promediaron, en el caso de que existiera un número fraccionado, es decir que quedara un valor como 2.5, 3.5, etc. Se consideraba como menor, es decir, se le daba un valor de 2, o 3.

Para poder analizar la información obtenida a través de la **lista de verificación** fue necesario establecer previamente que si existía la evidencia se manejaba como una fortaleza, si no mostraban el registro era debilidad. Una vez que se obtuvieron los resultados de estas tres herramientas se procedió a analizar los datos obtenidos hasta este momento, para determinar si el ámbito evaluado era una fortaleza o una debilidad para la empresa, para lo cual se diseñó una tabla que tenía como base los ámbitos del modelo de diagnóstico y ahí se fue concentrando los resultados obtenidos en cada herramienta, el sensig ayudaba a precisar los resultados. Del resultado de las visitas al área de producción se obtuvo información como: volumen de producción diaria, desperdicios por día, tiempos de producción y costos de producción, esta información se obtuvo de un mes completo. Una vez que se obtuvieron los datos, se procedió a realizar un informe de costeo de desperdicios, lo que permitió concluir que si la empresa continuaba trabajando así, en un año tendría desperdicio de varios millones de pesos. Con todo este análisis de la información obtenida de las diversas herramientas, se pudo concluir que era indispensable mejorar el aprovechamiento de los recursos y la eliminación de desperdicios con el propósito de mostrar a la empresa lo que representaba en costos las prácticas administrativas y operativas actuales.

## RESULTADOS DEL DIAGNÓSTICO

Los resultados fueron desfavorables para la empresa. Al ser 47 ámbitos evaluados y tener debilidad en 38 fue necesario hacer una presentación en Power Point que tuviera todos los vínculos necesarios para soportar los resultados. A continuación se presenta una parte de los resultados del modelo de diagnóstico.

Tabla 1: Describe los Resultados de Diagnóstico Aplicado

D= Debilidad; F=Fortaleza

ADMINISTRACION	Encuesta	Entrevista	Visita de campo	Resultado
Personal	D	F	D	D
Contrataciones	F	No aplica	D	D
Sueldos Y Salarios	D	F	D	D
Prestaciones E Incentivos	D	F	D	D

*Tabla de auditoría propia que ordena los diferentes formas de análisis del diagnóstico y los resultados por ámbito.*

## CONCLUSIONES

Hoy en día es imprescindible trabajar de manera interrelacionada para potencializar los resultados, el laborar de forma aislada ya es imposible. Lo anterior es también para la investigación, el querer solucionar problemáticas sociales, organizacionales, del área que sea, basados en una sola visión, una sola vertiente o enfoque es una pérdida de recursos. Actualmente no es posible querer mantener una organización Pública o Privada operando, además siendo productivos y rentables, si dentro de la misma se implementa sólo un sistema de gestión. Necesitamos como administradores o asesores tener un enfoque sistémico de la empresa y buscar la implementación de todos aquellos sistemas de gestión que nos ayuden a optimizar los recursos de la misma. Será fundamental que estos sistemas de gestión estén interrelacionados, que sea un solo modelo, utilizando las gestiones necesarias, no como sucede frecuentemente, un modelo de gestión bajo la norma ISO 9001:2008, que trabaja de forma independiente a otro modelo gestión bajo la norma de seguridad industrial o de desarrollo humano.

Bajo el enfoque anteriormente descrito es que desarrollo la propuesta metodológica que se expuso en el presente documento. Es el resultado de más de una década de experiencia, la cual ha sido enseñada y aplicada a alumnos de la Maestría en calidad en la Universidad del Estado de Sonora. Varias generaciones han probado que funciona, que es valiosa en la obtención de resultados reales y que además les ha permitido entender más sistemas de gestión de forma aislada no comprendían, que si operaban, pero porque estaba establecido por escrito, pero que carecía de un sentido real en su labor cotidiano.

Esperamos que sea de utilidad para aquellos que aún no han encontrado una forma práctica de realizar un diagnóstico que contemple las diversas variables que intervienen en un problema organizacional. Esta propuesta es la base para que otros profesionales puedan mejorarla o utilizarla tal cual se propone, ya que no buscamos descubrir el hilo negro, sino generar sinergia con ellos.

## RESUMEN

*El proyecto tiene como objetivo general continuar con la segunda etapa de “La Guelaguetza de acervo bibliográfico para municipios marginados en el estado de Oaxaca” misma que por la necesidad de obtener recursos económicos para continuar operando, participó en la convocatoria del Programa de Fomento a la Investigación (PROFI 2013) de la Universidad Autónoma “Benito Juárez” de Oaxaca (UABJO) del cual salió beneficiario. La metodología consiste en motivar a la comunidad universitaria y a la sociedad en su conjunto para donar libros que tienen almacenados en casa y no utilizan, sin importar el nivel académico ni el grado de deterioro en el que se encuentren, ya que se ingresan al hospital del libro ubicado en la Dirección de Servicios Editoriales de la misma universidad, los cuales son restaurados y catalogados en bloques de 500 a 600 unidades, entregándose a las autoridades municipales de las poblaciones con características de marginación. Los resultados obtenidos en la primera etapa contempló la entrega de cinco acervos bibliográficos, la cual fue superada al entregarse ocho, beneficiando a una población aproximada de 25,000 usuarios.*

**PALABRAS CLAVES:** Responsabilidad Social, Municipios marginados, Educación.

## WE REASSESS THE UNIVERSIDAD AUTÓNOMA "BENITO JUÁREZ " OF OAXACA, A PROPOSAL FOR UNIVERSITY SOCIAL RESPONSIBILITY

### ABSTRACT

*The project's general objective is to continue with the second stage of "La Guelaguetza bibliographic for marginalized municipalities in the state of Oaxaca" same as by the need for financial resources to continue operating , participated in the announcement of the Program for the Promotion of Research (PROFI 2013) of the Universidad Autónoma "Benito Juárez" of Oaxaca (UABJO) which came beneficiary. The methodology is to motivate the university community and society at large to donate books that are stored and used at home , regardless of academic level or degree of impairment in which they are, as they enter the hospital Workbook on the Publishing Services Division of the university , which are restored and cataloged in blocks of 500-600 units , giving municipal authorities populations with characteristics of marginalization . The results obtained in the first stage looked at the delivery of five library collections, which was overcome by surrendering eight benefiting a population of approximately 25,000 users.*

## INTRODUCCIÓN

Revaloremos la UABJO una propuesta de Responsabilidad Social Universitaria es la segunda parte del Proyecto denominado de “La Guelaguetza de acervo bibliográfico para municipios marginados en el estado de Oaxaca” el cual emana de la presentación, discusión y realimentación de algunos trabajos expuestos durante el desarrollo del Primer Congreso Internacional, Investigación, Desarrollo Sustentable y Entorno Cultural del Área Económico Administrativa 2012” organizado por los Cuerpos Académicos de emprendedores e Innovación Mercadológica de la Facultad de Contaduría y Administración y realizado en las instalaciones de la UABJO. El objetivo central es la obtención de los recursos económicos necesarios para continuar operando, participando en la convocatoria del Programa de Fomento a la Investigación (PROFI 2013) de la UABJO del cual salió beneficiario. En esta segunda fase se contempla trabajar de manera conjunta a través de los investigadores Carmen Eloísa Cruz Robles y Abraham Espejo Martínez integrantes del cuerpo académico Innovación Mercadológica UABJO-CA-45 y Ana Luz Ramos Soto del cuerpo académico Emprendedores UABJO-CA-46 como una forma de incentivar el trabajo colaborativo sin menoscabo de los demás investigadores y estudiantes que durante su desarrollo deseen unirse al proyecto con la finalidad de obtener resultados similares a los alcanzados durante la primera fase denominada “Red Colecta Libros” que fue respaldada por la Agencia de Desarrollo Integral UABJO-SEDESOL.

## REVISIÓN LITERARIA

Tomando como marco el Plan Institucional de Desarrollo (PID) 2012-2016 de la UABJO, el cual plantea la revaloración de la relación de la Universidad con los Gobiernos Federal, Estatal y Municipal que permita dejar atrás el paradigma [...] de ver a la Universidad como parte de la problemática que debían atender los gobiernos y emerja el paradigma de ver a la Universidad como parte de la solución de la problemática que deben atender éstos (PID, 2012-2016); situación presente en la misión al indicar que [la universidad] debe vincularse sólidamente con la sociedad, e incluirla con responsabilidad social (RS) actuando siempre bajo la ética y la congruencia. De ahí que este proyecto se basa como lo establecen Campos y Sánchez, (2005) en la vinculación como conjunto de relaciones que existen [...] entre la universidad y la sociedad de la cual forma parte, [considerada aquella] como una función deseable o un elemento de “virtud” en las instituciones de educación superior para a través de la motivación a la comunidad y sociedad en su conjunto se brinde apoyo a las poblaciones marginadas del estado de Oaxaca; tomando en cuenta que como lo establecen Moreno y Maggi (s.f) “las universidades constituyen hoy en día los espacios por excelencia para la generación y aplicación del conocimiento, principal factor de desarrollo económico de la sociedad actual”.

Existe una corriente de investigadores como Leonel Corona y un grupo de investigadores del doctorado en Economía de la Tecnología, de la Universidad Nacional Autónoma de México (UNAM) que han sembrado la inquietud de que la vinculación es realmente una *nueva función de la universidad moderna* y no una subfunción derivada de las actividades sustantivas tradicionales [y] colocan el concepto de la vinculación en el sentido de la “agencia”; es decir, si bien puede ser importante el papel de ciertos individuos en particular, es más importante el impacto que pueden tener los agentes institucionales articulados en una red que, en conjunto, resuelva el problema de la vinculación a través de los avances de la investigación (Campos y Sánchez, 2005). Hasta ahora se plantea que las universidades tienen tres funciones sustantivas: la docencia, la investigación y la extensión. Sin embargo, cada vez es más necesario ampliar este horizonte de funciones hacia la vinculación [a la cual] se le considera un eje estructurador de la planeación académica, esto es, que las funciones de docencia e investigación universitarias encuentren mecanismos y formas de

articulación de manera más estrecha y efectiva con la sociedad y la economía, salvando el carácter asistencial que hasta antes prevalecía. Este cambio significa además el establecimiento de un nuevo contrato social entre la academia y la sociedad, el cual requiere de un amplio y fuerte apoyo gubernamental, de acuerdo con el papel que se le ha asignado a la investigación en el nuevo modelo económico (Campos y Sánchez, 2005). También se ha definido a la vinculación como “el proceso integral que articula las funciones sustantivas de docencia, investigación y extensión de la cultura, así como los servicios de las instituciones de educación superior, para su interacción eficaz y eficiente con el entorno socioeconómico” (Gould, 2002). La vinculación es una función que permite a las universidades realinear sus objetivos y visiones a futuro [...] como instituciones interesadas en participar en la solución de las problemáticas que enfrentan los ciudadanos de las regiones en las cuales están localizadas o de la sociedad en general. (Campos y Sánchez, 2005) Por lo tanto la relación entre universidades y [sociedad] debe renovarse y convertirse en una parte esencial de la vida académica de las instituciones educativas del nivel superior, para responder a los requerimientos del contexto social e impactar en los [pueblos marginados] en un marco de beneficio mutuo y de comprometida RS (Moreno y Maggi, s.f.) Las relaciones entre la Universidad y la Sociedad se suceden de diferentes formas.

En algunas oportunidades se desarrollan procesos que no necesariamente involucran los proyectos curriculares, o por lo menos no los afectan directamente; en otras, las vinculaciones surgen dentro de los programas académicos y comprometen el conjunto del proyecto curricular. De allí que se pueda hablar de una perspectiva social, cuando la Universidad favorece la vinculación con sectores sociales vulnerables, impulsa la extensión solidaria e investiga para elevar la calidad de vida del conjunto de la población. (Malagón, 2006). La importancia del carácter social de la vinculación universidad y sociedad radica precisamente en que, sin desconocer la necesidad de una sólida formación técnica y científica de los estudiantes, el propósito de formación apunta a dar una formación integral que le permita a la institución intervenir en el entorno con las herramientas necesarias para generar dinámicas de cambio hacia una sociedad más justa y solidaria (Malagón, 2006).

En estos tiempos de crisis y desigualdades sociales, tanto a nivel mundial como nacional, las instituciones y organizaciones de diversa índole, que forman parte de una sociedad, están acogiendo los principios de la RS, concepto que ha venido asumiendo el sector empresarial. Hoy día ha surgido la necesidad de redefinir y activar las nuevas dimensiones de ésta obligación, como referente socioeducativo en las Instituciones de Educación Superior (IES), de tal manera que comprende una visión y misión de gestión institucional con sentido ético, susceptible de expresarse principalmente fuera del ámbito universitario a través de la Función Extensión, mediante diferentes formas o modalidades y de acuerdo a las particularidades de cada institución (Bustos e Inicarte, 2012). De tal manera, que han sido muchas las acepciones que se le han venido dando a la RSU a lo largo de la historia, pero independientemente de cómo se le llame y las diversificaciones que el concepto pueda tener, siempre se llega a la conclusión que es un compromiso institucional con la comunidad, que se realiza a través de las tres funciones básicas universitarias, pero primordialmente mediante la Extensión Universitaria, que ha sido el término mayormente utilizado por las universidades y otras instituciones de educación superior (Bustos e Inicarte, 2012).

En este sentido el Artículo 6 ley orgánica de la UABJO establece que: [...] las Instituciones Universitarias [entiéndase facultades, escuelas e institutos] tenderán a desarrollar en los miembros de la comunidad [universitaria] una conciencia crítica social, comprometida con el pueblo, que atienda al avance reclamado por la entidad dentro del contexto histórico social, y que proponga alternativas de solución para los diferentes problemas regionales y nacionales. Más adelante en el

Artículo 7 menciona que: Son fines de la universidad: [...] III. Organizar y desarrollar la investigación científica, aportando a la sociedad proyectos adecuados para la solución de sus necesidades; finalizando en este sentido el Artículo 10 establece que: son funciones de la Universidad: [...] II.- La docencia, la investigación científica y social. III.- La extensión universitaria y la difusión de la cultura hacia la comunidad (LOUABJO,1988) .

Producto de la interacción universidad-comunidad, se derivan demandas y exigencias que obligan a la institución a la renovación y actualización permanente, para responder al entorno social y nutrirse de los cambios presentes en la sociedad, lo que conlleva a que la Extensión Universitaria y la RSU representen un binomio inseparable en las IES, que se fortalece al (Bustos e Inicarte, 2012) relacionarse con la problemática del entorno social. (Díaz, 2012). Las Instituciones de Educación Superior (IES), [por tanto] desempeñan un decisivo papel social y moral tanto en la formación profesional como en la transformación de su entorno. [...] Fundamentalmente deben establecer relaciones con la sociedad que les permita consolidar su quehacer docente e investigador, el que a la vez ve aumentar el interés que genera en diferentes personas, grupos, el Estado, el Mercado y la Sociedad Civil. [...] Resulta necesario señalar en función de lo que la RSU representa, que esta no puede ser una tarea de desempeño de la función extensión, ni vista de manera simplista como asunto de proyección social, su enfoque es más complejo y debe abarcar de manera transversal todas las funciones propias de las IES es decir: docencia, investigación, extensión y gestión. [...] De allí que las IES, como instituciones sociales ejercen funciones estratégicas para el desarrollo cultural, científico y tecnológico y para los proyectos de consolidación de una sociedad (Aristimuño, 2012). En ese sentido, es también responsabilidad de las instituciones académicas generar soluciones para los problemas contemporáneos, así como constituirse en difusores de pensamiento crítico que contribuyan al bienestar de la sociedad (Sánchez-Castañeda y Caballero, 2003).

Se pretende entender que la responsabilidad social de la Universidad como servicio para la sociedad, es fruto de una gestión basada en la ética y la eficiencia, que supera la mera filantropía y la gestión organizacional. De ahí que la RSU pueda entenderse como una mística que trasciende la esfera del conocimiento y la investigación para concretarse en la utilidad de la sociedad (Rodríguez, 2012). De igual forma las universidades deben reconocer los límites de sus capacidades así como sus fortalezas y debilidades, pues solamente así serán capaces de seleccionar adecuadamente los proyectos que son capaces de desarrollar exitosamente. La selección de proyectos también debe tener como punto de referencia el potencial [...] para contribuir a la enseñanza dentro de la universidad. Asimismo, los proyectos deben ser aceptados por [la comunidad] de las instituciones de educación superior, toda vez que son ellos quienes tendrán la responsabilidad de desarrollarlos (Sánchez-Castañeda y Caballero, 2003).

La Organización de las Naciones Unidas para la Educación, la Ciencia y la Cultura (UNESCO) recomienda a las universidades fortalecer las funciones de servicio a la sociedad, especialmente aquellas orientadas a erradicar la pobreza, la intolerancia, la violencia, el analfabetismo, el hambre, el deterioro del medio ambiente y las enfermedades. (UNESCO, 1998). Esto es, vincular el proceso formativo y de generación y distribución del conocimiento que realizan las IES con las necesidades y requerimientos presentes y futuros de las organizaciones productivas y sociales en general (Padilla y Marúm, 2004). El gran fracaso de la democracia moderna es no haber podido todavía suprimir los privilegios sociales, reducir las grandes iniquidades y asegurar una calidad de vida decente y autónomamente decidida para la mayoría de la población mundial, dentro del respeto de las diferencias culturales, la democracia avanza, pero la pobreza y la injusticia siguen presentes. Sin embargo, los últimos estudios sobre los procesos de desarrollo eficientes tienden a resaltar la importancia del capital humano y del capital social en las experiencias exitosas. Por lo

tanto, no es utópico pensar que el principal pilar de un desarrollo sostenido y sostenible sea la formación de los profesionales con un enfoque de desarrollo social. Todo lo que nos falta es el sentimiento de urgencia para que esta meta reoriente rápidamente la formación académica actual. (Vallaey, 2012). Cada cierto tiempo la humanidad cae en la cuenta que debe ser mejor. Los hombres pensantes intensifican su búsqueda en las razones para tener una vida de calidad y los prácticos se detienen a pensar en aquello que daría más calidad a la vida. Se va tomando conciencia que lo hecho hasta ahora pudo haberse realizado mejor y más aún cuando es de utilidad para el ser humano y la sociedad.

El movimiento de la RS también ha llegado a la universidad, haciéndonos recordar hasta qué punto cumple su misión, haciéndonos reflexionar que la RS es un aspecto propio de la Universidad porque está orientada a servir a la sociedad desde la ciencia, la investigación y el conocimiento; de ahí nuestra postura de que la RSU es inherente a la naturaleza y misión de la universidad. La RSU es un enfoque ético del vínculo mutuo entre universidad y sociedad. Se trata de un compromiso moral irrenunciable que, a la par que genera nuevo conocimiento relevante para la solución de los problemas sociales, permite la aplicación directa del saber científico y tecnológico, así como una formación profesional más humanitaria. La RSU como nuevo paradigma implica el abordaje de temas de carácter pedagógico ético y filosófico del propio entorno de la universidad. Además de enfatizar el trabajo de extensión universitaria y proyección social y de articular las estrategias del proceso de formación académica y producción científica, exige calidad de gestión que supere la esfera de una mera filantropía o asistencialismo, lo que no siempre es aceptado en la comunidad universitaria, dado que exige una conciencia autocrítica que motiva a la transformación de la Universidad. Así, la RSU va más allá de la extensión universitaria; la precisa y supera, dado que sitúa a la universidad en un mismo movimiento de coherencia organizacional, ofrece herramientas de gestión que permiten medir los avances, implica la participación y el diálogo con todas las partes interesadas dentro y fuera de la Universidad (Vallaey y Sasia, 2012).

“implica que los centros de educación superior se comprometen no sólo a formar buenos profesionales, sino también personas sensibles a los problemas de los demás, comprometidas con el desarrollo de su país y la inclusión social de los más vulnerables, personas entusiastas y creativas en la articulación de su profesión con la promoción del desarrollo participativo de su comunidad” (UDLAP, 2013). Otro de los aspectos sobre los que ha basado el proyecto que nos ocupa es la Mercadotecnia Social [...] tendencia que tiene como característica aplicar las tecnologías del marketing comercial al desarrollo de programas diseñados para influir en el comportamiento voluntario de determinados destinatarios con el fin de mejorar el bienestar de la sociedad en general. El lado filantrópico de la mercadotecnia es algo real y vanguardista, es considerada la filosofía más fresca dentro de la Mercadotecnia que [...] ahora va más allá de considerar los fines lucrativos para tener como fin principal el beneficio social; propone la utilización responsable del marketing, surgido en los años 70 y que hoy ha sido adicionado con una nueva pregunta: ¿Por qué no puede venderse la solidaridad como se vende algún producto? (Pimentel, 2010) Es por tanto que unidas estas tres directrices: vinculación, RSE y Mercadotecnia han dado origen a este proyecto sustentable que permite beneficiar a las poblaciones marginadas del estado de Oaxaca, México.

## METODOLOGÍA

En esta fase del proyecto se pretende motivar a la comunidad universitaria y a la sociedad en su conjunto para donar libros que tienen almacenados en casa y no utilizan, sin importar el nivel académico de los mismos ya que son catalogados e integrados a los acervos bibliográficos que se

entregan a las autoridades de los municipios beneficiados verificando que cada uno de dichos acervos contenga material bibliográfico de los diferentes niveles con la finalidad de que sean útiles a todos los pobladores de las comunidades. De igual forma el grado de deterioro en el que se encuentren no resulta ser un obstáculo para su recepción ya que se ingresan al hospital del libro ubicado en la Dirección de Servicios Editoriales de la misma universidad, para ser restaurados y como se dijo anteriormente debidamente catalogados, para más adelante ser integrados en bloques que oscilan entre las 500 a 600 unidades para finalmente entregarse a las autoridades municipales de las poblaciones con características de marginación. Para la selección de municipios sujetos a beneficiar se toma en cuenta a aquellos con más alto grado de marginación (GM) y menor Índice de Desarrollo Humano (IDH) para confirmar que los acervos se entreguen a quienes más necesidades de mejora posean. La entrega de los acervos bibliográficos se realiza por el rector de la UABJO firmándose para tal efecto un acta de entrega que ampara lo ejemplares que conforman los mencionados acervos de tal forma que ambas partes cuenten con el soporte documental correspondiente.

## RESULTADOS

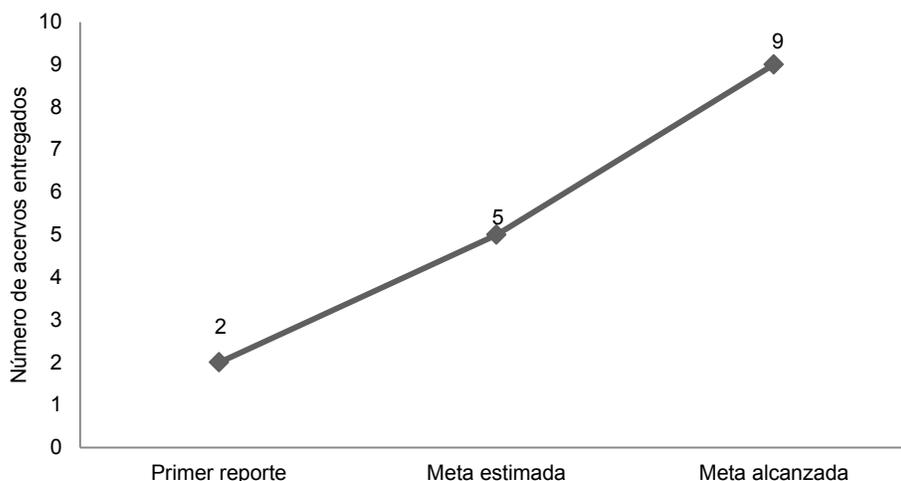

Desde la fecha de la puesta en marcha del proyecto en su primera etapa se han recolectado 5,400 libros entre los cuales se encuentran ejemplares de nivel preescolar, primaria, secundaria y bachillerato así como libros de nivel profesional y de tipo general como novelas, cuentos, leyes, entre otros. Otro aspecto de mencionar son los bloques de revistas tanto populares como de carácter científico que fueron recibidas y entregadas cuya cantidad oscila entre la 2,475 unidades. Dentro de los resultados obtenidos en las entregas realizadas durante la primera fase y que inspiran a los investigadores para seguir trabajando en el proyecto cuantitativo se mencionan los siguientes:

Figura 1: Cantidad De Libros Entregados Por Municipio

Fuente: Elaboración propia con resultados de la investigación

Figura 2: Comportamiento de Entrega de Acervos Bibliográficos

Fuente: Elaboración propia con resultados de la investigación

Con lo anterior se pone de manifiesto que todo proyecto que persiga el beneficio de la sociedad puede tener resultados benéficos de manera colateral como se pueden palpar en este.

Tabla 1: Resumen Acumulativo de Beneficiarios

Municipio	Población beneficiada	Población acumulada
San Pedro y San Pablo Ayutla	5,602	5,602
San Martín Peras	11,361	16,963
San Juan Bautista Jayacatlán	1,462	18,425
San Juan Tepeuxila	2,773	21,298
Santo Domingo Tlatinalgo	791	21,989
Santiago Apóstol	4,220	26,209
San Pedro Apóstol	1,544	27,753
Yogana	1,308	29,061
El Círuelo Pinotepa Nal.	2,185	31,246
<b>Población beneficiada total</b>	<b>31,246</b>	

Fuente: Elaboración propia con resultados de la investigación

## CONCLUSIONES

La vinculación como factor de enlace entre la universidad y la sociedad permite apoyar a ésta con proyectos que incidan directamente en el desarrollo regional. La RSU es una forma de establecer vínculos que permiten a la universidad ir más allá de su labor de formación de profesionistas incidiendo directamente en la problemática de las comunidades de escasos recursos con proyectos que encadenan otras actividades como los planes de desarrollo y la obtención de recursos para actividades específicas de cada uno. Los proyectos de RS colaboran a que las comunidades marginadas obtengan un apoyo adicional para su desarrollo a través de proyectos como el mencionado. Los congresos permiten la vinculación de investigadores, académicos y la sociedad en general para a través de ellos identificar problemáticas en las cuales intervenir a través de la creación de proyectos elaborados de acuerdo a las necesidades detectadas.

*“La educación es fundamental para la felicidad social; es el principio en el que descansan la libertad y el engrandecimiento de los pueblos”.*

Leonor Mireles Falcón, Universidad Autónoma de Coahuila  
Ma. Zóchitl Araiza Garza, Universidad Autónoma de Coahuila

## RESUMEN

*La competitividad es un aspecto que adquiere cada vez mayor relevancia, debido a que es la capacidad de obtener éxito respecto a otras organizaciones con ganancias por encima de la media del mercado. Debido a lo anterior, este trabajo presenta un análisis comparativo de los factores que influyen en la competitividad de las pymes en los estados de Colima, Durango y Veracruz en México. Para lograr el objetivo, se identificaron las investigaciones que han estudiado dichos factores, tanto conceptual como empíricamente y que han aplicado la misma metodología. Los resultados obtenidos muestran cuatro factores sobresalientes que son determinantes en el nivel de competitividad de las empresas: Recursos humanos, innovación, tecnologías de información y comunicación y aspectos contables y financieros. Los autores concluyen que para realizar un mejor análisis de los factores de competitividad es necesario incluir aspectos tanto cuantitativos como cualitativos.*

**PALABRAS CLAVE:** Competitividad, Recursos Humanos, Innovación, Tecnologías de Información y Comunicación, Aspectos Contables y Financieros

## COMPARATIVE ANALYSIS OF COMPETITIVE FACTORS OF THE SMEs FROM THE STATES OF COLIMA, DURANGO AND VERACRUZ

### ABSTRACT

*This paper presents a comparative analysis of the factors influencing the competitiveness of SMEs in the states of Colima, Durango and Veracruz in Mexico. To achieve the goal, the researches that have studied the factors were identified, both conceptually and empirically and have applied the same methodology. The results show four outstanding factors that are decisive in the level of competitiveness of companies: human resources, innovation, information and communication technologies and financial and accounting aspects. The authors conclude that for a better analysis of the competitiveness factors is necessary to include both quantitative and qualitative aspects.*

**KEYWORDS:** Competitiveness, Human Resources, Innovation, Information and Communication Technologies, Financial and Accounting Aspects

## INTRODUCCIÓN

En la actualidad las Pymes necesitan adaptarse a los cambios que el proceso de globalización ha provocado, el cual se caracteriza por los avances tecnológicos, nuevos mercados y la integración de las economías de todo el mundo, logrando consecuencias como la formación de grandes bloques económicos, donde su principal objetivo es sobrevivir ante la competitividad de los países, de sus economías y sus empresas, siendo este un aspecto que ha impactado en México. De esta manera, la búsqueda e identificación de factores competitivos en las Pymes representa un tema de actualidad y de mucha importancia para la teoría de la economía de negocios, ya que la capacidad para competir es lo que permite a las empresas ser exitosa, pues de esa capacidad proviene el crecimiento económico, lo que deriva en empleos y un mejor nivel de vida de la población (Cervantes, et al. 2012). Debido a eso, esta investigación se concentra en un análisis comparativo de los factores competitivos de las pymes de los estados de Colima, Durango y Veracruz, aprovechando los resultados que se han logrado en dichos estados en materia de competitividad. Como criterio para determinar si los factores de las Pymes de los tres estados participantes tienen un nivel de competitividad aceptable, los investigadores de este estudio consideraron un valor del 70%. Con el objeto de analizar dichos factores, este trabajo se ha estructurado de la siguiente manera: en la sección de revisión literaria, se definen los factores utilizados en las diferentes investigaciones consultadas; posteriormente se muestra la metodología empleada y finalmente se presentan los resultados, las conclusiones y posibles líneas de investigación de los aspectos considerados en este estudio.

## REVISIÓN LITERARIA

Actualmente las empresas se encuentran inmensas en una compleja economía mundial, por lo que se hace necesario tener un conocimiento de las organizaciones y de cuáles son las variables o factores, que se convierten en aspectos clave para su éxito competitivo. Cómo lograr posicionarse de forma competitiva en un determinado mercado y qué hacer para sostener o mejorar esa posición que constituye un tema central en la dirección de la empresa (Martínez et al, 2008). Según Aragón y Rubio (2006), el éxito competitivo de una empresa se debe al conjunto de recursos y capacidades que ésta posee que le permita conseguir una posición competitiva favorable, mantener y aumentar su posición en el mercado y obtener unos resultados superiores que la hacen diferente a los demás competidores del sector.

### Recursos Humanos

Algunos de los principales factores explicativos de la competitividad empresarial son los relacionados a los recursos humanos de la empresa. Los conocimientos, habilidades y actitudes de los trabajadores y la forma de cómo estos trabajan son aspectos cada vez más importantes para las empresas debido a que las fuentes tradicionales de rentabilidad, tecnología y productos, mercado, recursos financieros y economías de escala, son menos poderosas de lo que una vez lo fueron (Pfeffer 1994). No dar el valor requerido a la gestión de los recursos humanos constituye una de las principales causas de fracaso en las Pymes (McEvoy, 1984).

### Innovación

Vermeulen (2004), menciona que la innovación permite a las empresas obtener ventajas competitivas sostenibles a lo largo del tiempo y representa un factor determinante del crecimiento económico. En una muestra de 918 empresas británicas se encontró que las empresas medianas con una intensa actividad de innovación son las que realmente consiguen incrementar sus márgenes de beneficios (Hughes, 2001).

### Tecnologías de Información y Comunicación (Tics)

Las pyme deben desarrollar TICs que les permita ser competitivas, para lograr, la interacción entre los empleados, favorecer la comunicación, almacenar y transmitir el conocimiento generado por los individuos que forman parte de la empresa. Por otro lado, el acceso y uso de las nuevas tecnologías ligadas a internet les puede permitir competir en un mercado cada vez más abierto y competitivo, generar autonomía y aumentar el aprendizaje colectivo, entender mejor el entorno y por tanto adaptarse y aprovechar mejor las oportunidades que este ofrece (Tetteh y Burn, 2001).

*Aspectos contables y financieros:* La literatura muestra que el mantenimiento de buenos estándares financieros, a través de una adecuada gestión financiera, es uno de los principales factores resaltados como necesarios para alcanzar el éxito competitivo en las Pymes. En este sentido, es necesario implantar y controlar sistemas de contabilidad de costos, realizar análisis de la situación económico financiera e intentar, en la medida de lo posible, utilizar fuentes de financiamiento propias (Birley y Westhead, 1990).

### **METODOLOGÍA**

Con el propósito de identificar los factores competitivos estudiados y analizados de manera previa en la literatura, se llevó a cabo un análisis de contenido de varios documentos académicos publicados en Internet, con énfasis en aquellos que consideraban factores comunes de competitividad. Finalmente se seleccionaron las investigaciones denominadas: Análisis estratégico para el desarrollo de la micro, pequeña y mediana empresa (mipyme), que publicaron la información de las Pymes de los estados de Colima, Durango y Veracruz y que siguieron la misma metodología. El trabajo que se presenta en esta investigación es de tipo descriptivo, en la cual los datos se agruparán en cada uno de los factores para poder comparar entre sí los resultados de los tres estados participantes.

### **RESULTADOS**

Al realizar el análisis, se encuentran los siguientes resultados en cada uno de los factores competitivos de los tres estados participantes.

#### Recursos Humanos

En este factor se trata de conocer, el grado de aplicación que hacen las Pymes de las tres entidades de los principales procesos o prácticas de Recursos Humanos: reclutamiento y selección de personal, sistemas de evaluación del rendimiento/desempeño, capacitación del personal, promoción del personal y sistemas de pago variable (incentivos).

Tabla 1: Porcentaje de Empresas de los Estados de Colima, Durango y Veracruz Que Realizan las Siguietes Prácticas de Recursos Humanos

<b>Prácticas</b>	<b>Colima</b>	<b>Durango</b>	<b>Veracruz</b>
Reclutamiento y selección de personal	74.2	69.6	56.5
Evaluación del rendimiento / desempeño	70.8	70.1	56.0
Capacitación del personal	81.7	81.2	56.6
Promoción del personal	56.5	52.2	37.7
Sistemas de pago variable (incentivos)	73.6	68.1	54.7

*Esta tabla muestra el porcentaje de empresas de los tres estados que realizan prácticas de recursos humanos. La cual nos indica de manera general que en el estado de Colima es donde más se utilizan estas prácticas.*

Respecto a la utilización de cada una de las prácticas de recursos humanos (Tabla 1) en las empresas de las tres entidades, la “capacitación del personal” aparece como la más utilizada (81.7%, 81.2% y 56.6% respectivamente), seguida de “reclutamiento y selección de personal” sólo en Colima y Veracruz (74.2% y 56.5%), con una variación en el estado de Durango el cual tiene en segundo lugar la evaluación del rendimiento/desempeño con un 70.1%. Como menos utilizada, figura la promoción del personal en los tres estados (56.5%, 52.2% y 37.7%). También se puede observar que en relación a los estados de Colima y Durango, el estado con más baja aplicación de las prácticas de recursos humanos es Veracruz.

### Innovación en la Empresa

Los resultados en las tres entidades muestran que la importancia media que las empresas otorgan a estos tres tipos de innovación (Tabla 2), sitúan por delante a las innovaciones relacionadas con los productos y servicios que ofrece al mercado, a una distancia poco significativa de las relacionadas con la gestión de la empresa y, después, las vinculadas con procesos productivos. En cualquier caso, la importancia de los tres tipos de innovación para las empresas de las tres entidades en general es elevada.

Tabla 2: Importancia Media de Diferentes Tipos de Innovación Para la Empresa de las Tres Entidades (Escala 1-5)

Tipos de innovación	Colima	Durango	Veracruz
Innovaciones relacionadas con procesos productivos	2.93	3.34	3.07
Innovaciones relacionadas con los productos/servicios	3.89	3.65	3.75
Innovaciones relacionadas con la gestión de su empresa	3.29	3.38	3.47

*En esta tabla se muestra la importancia que le asignan las empresas a los diferentes tipos de innovación. En donde se observa que las más importantes son las innovaciones relacionadas con los productos/servicios.*

Si analizamos detalladamente cada uno de los tipos de innovación de manera comparativa, en las tres entidades de estudio, nos encontramos lo siguiente: En cuanto a las *Innovaciones relacionadas con procesos productivos*, podemos mencionar que las empresas del estado de Durango, son las que figuran con una cantidad mayor. Caso contrario es el mostrado por las empresas del estado de Colima. Respecto a las *Innovaciones relacionadas con los productos/servicios*, aparece que las empresas del estado de Colima, son las que esencialmente le dan una mayor importancia a este tipo en sus procesos de innovación. También, se puede visualizar en la tabla que las empresas del estado de Durango, son las que menos importancia le dan. Con relación a las *Innovaciones relacionadas con la gestión de su empresa*, las empresas del estado de Veracruz son las que primordialmente valoran el uso de ellas, con un valor de 3.47; no así las empresas del estado de Colima.

### Tecnologías de Información y Comunicación

Las Tecnologías de Información y Comunicación (TIC) están logrando incrementar el desarrollo eficaz y productivo en la pyme. Su utilización y aplicación aporta una serie de ventajas competitiva en todas las áreas funcionales de la empresa, permitiendo una mayor agilidad en la generación, acceso y distribución de la información, una mayor coordinación en la toma de decisiones, una mejora en la conexión y asistencia a clientes y proveedores.

Tabla 3: Porcentaje de Empresa de los Estados de Colima, Durango y Veracruz con Implantación de las Tecnologías de Información y Comunicación

<b>Tecnología</b>	<b>Colima</b>	<b>Durango</b>	<b>Veracruz</b>
Dispone de correo electrónico	83.5	82.6	50.0
Dispone de página Web	40.4	35.4	21.0
Relaciones con clientes y proveedores a través de Internet	77.3	26.8	42.0
Realizar mercadotecnia usando Internet	46.9	32.2	25.0

*Esta tabla indica los porcentajes de empresas en los tres estados que tienen implantadas las TICs. Donde el estado con mayor implantación de estas tecnologías es el estado de Colima.*

Al comparar el grado de implantación de las TICs en las tres entidades de la Tabla 3, se muestra que las Pymes del estado de Colima son las que más han invertido en tecnologías de información y comunicación, seguidas por las pymes del estado de Durango y en menor medida el estado de Veracruz.

Donde sobresale la implantación de la herramienta Correo Electrónico, seguido por la Relaciones con clientes y proveedores a través de Internet.

### Aspectos Contables y Financieros

La fuerte competencia que en la actualidad provoca la globalización de los mercados y el cambio tecnológico, está motivando a las Pyme a desarrollar e implantar en sus organizaciones, modelos económico-financieros y contables que se ajusten a las necesidades actuales. En la práctica pueden crear una ventaja competitiva, puesto que aportan información útil y eficaz para la toma de decisiones en la organización.

### Grado de Utilización de las Técnicas Económico Financieras

Este indicador hace referencia a la habitualidad en la utilización de las técnicas económico-financieras, como el análisis financiero, los presupuestos de ingresos y egresos y la situación económico-financiera.

Tabla 4: Grado de Utilización de las Técnicas Económico-Financieras (Escala 1-5)

<b>Técnica</b>	<b>Colima</b>	<b>Durango</b>	<b>Veracruz</b>
1. Implantación y control de un sistema de contabilidad de costos	3.70	3.37	2.97
2. Establecimiento de presupuestos de ingresos y gastos anuales	3.77	3.62	3.27
3. Análisis de la situación económico-financiera	4.02	3.80	3.45

*Esta tabla muestra el grado de utilización de las técnicas económica financieras, donde se observa que el estado que más utiliza estas técnicas son las empresas del estado de Colima.*

En la Tabla 4, denominada el grado de utilización de técnicas económico-financieras, en general se observa que el estado que muestra un mayor uso de las mismas es Colima, seguido por Durango y el estado que menos grado de utilización tiene de las técnicas es Veracruz. Respecto a la utilización de cada una de las técnicas, en las empresas de las tres entidades, el análisis de la situación económico-financiero aparece como el más utilizado (4.02, 3.80 y 3.45 respectivamente), seguido de los presupuestos de ingresos y gastos anuales y por último la implantación y control de un sistema de contabilidad de costos.

*Nivel de desempeño de los factores que inciden en la competitividad:* Al medir el nivel de desempeño de cada uno de los factores de competitividad en los tres estados participantes (Tabla 5), se observó a lo largo de esta de investigación, que solamente los factores que presentan un nivel de competitividad del 70% ó más, es el factor de recursos humanos (en Colima) y aspectos contables y financieros (en Colima y Durango). Y los que presentaron un porcentaje menor al

70% en los tres estados, fueron los factores de Innovación y tecnología de información y comunicación (TIC's).

Tabla 5: Nivel de Desempeño de los Factores Que Inciden en la Competitividad

Factor	Tiene nivel de competitividad al menos de un 70% ó más		
	Colima	Durango	Veracruz
1. Recursos humanos	Si	No	No
2. Innovación	No	No	No
3. TICs	No	No	No
4. Aspectos contables y financieros	Si	Si	No

*Esta tabla muestra el nivel de desempeño de los factores que inciden en la competitividad. Se observa que las empresas del estado de Colima son las que superan en más de un factor el nivel de competitividad del 70% o más, el cual fue definido como aceptable por los investigadores.*

### Análisis Comparativo de Factores Que Afectan la Competitividad Entre los Tres Estados Participantes.

Al realizar el análisis comparativo de los factores que afectan la competitividad entre empresas de los tres estados (Tabla 6), se observó que tienen el mismo nivel de competencia en innovación y TICs, y difieren en recursos humanos y en aspectos contables y financieros.

Tabla 6: Análisis Comparativo de Factores Que Afectan la Competitividad Entre los Tres Estados

Factor	¿Tienen el mismo nivel de competencia los tres estados?
1. Recursos humanos	No
2. Innovación	Si
3. TICs	Si
4. Aspectos contables y financieros	No

*Esta tabla muestra el nivel de competencia de los factores en los tres estados. En la que se observa que tienen el mismo nivel en innovación y los aspectos contables y financieros.*

## CONCLUSIONES

La dinámica economía actual, se caracteriza principalmente por la intensidad de la competencia en los mercados de productos y servicios, de los mercados de capital y por un espectacular desarrollo tecnológico. Todo esto lleva a crear un entorno incierto y considerablemente competitivo, para lo cual las Pymes tendrán que hacer cambios radicales enfocados principalmente a los factores de: recursos humanos, innovación, tecnológico y a los aspectos contables y financieros, pues es en éstos donde las empresas pueden alcanzar una gran ventaja competitiva, es por ello, la importancia de conocer y analizar los esquemas empresariales, para poder evolucionar, crecer, ser productivos y por lo tanto ser competitivos (Eliseo y Montejo, 2010). De este modo, los diversos factores de competitividad analizados en este estudio, permiten identificar fortalezas y debilidades que muestran los estados de Colima, Durango y Veracruz al compararlos unos con otros. Por lo que se puede concluir que, las Pymes del estado de Colima, son las que tienen implantado un mejor esquema empresarial de desarrollo y crecimiento, ya que

son las que aplican en mayor grado las principales prácticas de recursos humanos, las que cuentan con una mayor implantación de TICs y también son las que en mayor medida utilizan las técnicas económico financieras, caso contrario son las empresas del estado de Veracruz las que presentan los niveles más bajos de competitividad en los diferentes factores analizados.

En cuanto a la importancia que las empresas otorgan a los tipos de innovación las Pymes de Durango se posicionan en primer lugar con una mínima diferencia respecto a las Pymes de Colima y Veracruz. Como resultado de este trabajo de investigación han surgido nuevas líneas de investigación que a continuación se describen: Llevar a cabo el estudio utilizando los mismos factores en otras empresas de otros estados del país, así como tratar de ampliar el estudio de competitividad con políticas de gobierno, aplicando el modelo de competitividad sistémica, el cual se refiere al esfuerzo colectivo de las empresas, las asociaciones, el Estado y otros actores sociales, con cuatro niveles económicos y sociales. Micro, macro, meta y meso, que pueden conducir a un desarrollo más acelerado de las ventajas competitivas (Esser et al., 1996).

## LA COOPERACIÓN INTEREMPRESARIAL EN MICROEMPRESAS DE AGUASCALIENTES

Teresa Valdez Silva, Instituto Tecnológico de Aguascalientes  
María de los Angeles Silva Olvera, Instituto Tecnológico de Aguascalientes  
Carmen Estela Carlos Ornelas, Instituto Tecnológico de Aguascalientes  
Ma. Zóchitl Araiza Garza, Universidad Autónoma de Coahuila

### RESUMEN

*La cooperación en el entorno actual, se ha convertido en un imperativo para todas las empresas, sean pequeñas, medianas o grandes y su difusión ha promovido su realización (Gómez, 2005 en Araiza, Velarde y Zarate, 2008). El estudio realizado tuvo como objetivo el identificar y analizar la cooperación interempresarial de las microempresas del estado de Aguascalientes, bajo la siguiente pregunta de investigación: ¿Cuáles son los tipos de cooperación inter-empresarial que se presentan en las micro empresas del estado de Aguascalientes? Fue del tipo cuantitativo, descriptivo, transversal y no experimental. El tipo de muestra fue no probabilística y las unidades de análisis fueron las microempresas que recibieron apoyo de la secretaría de economía, ubicadas en el estado de Aguascalientes y que participaron en el Foro Pyme 2012. Se utilizó el instrumento diseñado por Araiza, Velarde y Zarate (2010) para medir los tipos de cooperación interempresarial y el diseñado por Silva (2010) y modificado por Parga en (2012) para medir el perfil del emprendedor. La confiabilidad del instrumento según el coeficiente de alpha de cronbach, fue de 0.956. Los resultados de la estadística descriptiva muestran que el 44.4% de las empresas realizan cooperación, el 40% lo hace de tipo formal y 60% informal. Respecto al perfil del emprendedor, predomina aquellos que ocupan puestos de gerente general, cuya edad sobrepasa los 46 años, con una escolaridad de licenciatura y siendo en su mayoría del género masculino y casados. En cuanto a la cooperación (para el mercado, innovar, producir y administrar) los promedios oscilan entre 7.8 y 8.4 respectivamente.*

## THE INTERMANAGERIAL COOPERATION IN AGUASCALIENTES'S MICRO BUSINESS

### ABSTRACT

*The cooperation in the current environment, has become an imperative for all companies, whether small, medium or large and dissemination has promoted its implementation (Gómez, 2005 in Araiza and Velarde, 2008). The study was aimed to identify and analyze the inter-firm cooperation of micro enterprise in the state of Aguascalientes, under the following research question: What are the types of inter-company cooperation that are presented in the micro-businesses in Aguascalientes state. It was the quantitative, descriptive, transverse and non-experimental. The type of the sample was not probabilistic and the units of analysis were the micro that received support from the secretariat of economy, located in the state of*

*Aguascalientes and participated in the SME Forum 2012. The instrument used was designed by Araiza (2010) to measure the types of inter-firm cooperation and designed by Silva in (2010) and modified by Parga at (2012) to measure the profile of an entrepreneur. The reliability of the instrument according to the Cronbach's alpha coefficient, was 0.956. We used descriptive statistics, the results show that companies are located in Aguascalientes state capital of 44.4 % which made cooperation, 40 % do and 60 % formal type casual. Regarding the profile of the entrepreneur, predominantly those in positions. The results of the descriptive statistics show that 44.4 % of the companies realizes cooperation, 40 % does it of formal informal type and 60 %. With regard to the profile of the entrepreneur, it prevails those that occupy positions of general manager, whose age exceeds 46 years, with an education of master and being in the main of the kind masculine and married. As for the cooperation (for the market, to innovate, to produce and to administer) the averages they range between 7.8 y8.4 respectively.*

## INTRODUCCIÓN

En la actualidad la mayoría de las empresas muestran una gran preocupación por permanecer en los diferentes mercados locales, regionales, nacionales, internacionales y mundiales, debido a los cambios globales que viven día tras día las empresa se obligan a elaborar y ofertar un bien o servicio de mejor calidad posible, para satisfacer las necesidades presentes y futuras de los clientes actuales y potenciales.

Las redes empresariales buscan la manera de que las empresas se integren, vinculen, cooperen y coordinen, para que entre las mismas logren eficiencia colectiva, resuelvan problemas comunes y conquisten mercados a los que no podrían acceder de forma individual. La cooperación interempresarial (CI) ha sido estudiada como un tipo de redes entre empresas, que se presenta como una posibilidad de desarrollo y crecimiento con innumerables ventajas para el sector de pequeñas empresas, ya que estas generan mecanismos de promoción de capacidades productivas, desarrollo local y la generación de empleo e ingresos dentro del exigente mundo globalizado en el que vivimos.

## REVISIÓN LITERARIA

### Cooperación Interempresarial

El presente estudio pretende contribuir a generar conocimiento sobre la cooperación interempresarial (CI) en el micro empresas del estado de Aguascalientes, específicamente mediante la creación de una tipología de la CI en base a las necesidades que impulsan a las empresas a colaborar. En los últimos años han reaparecido los acuerdos de CI, estos cobran gran protagonismo desde la década de los setenta y con mayor intensidad en la de los ochenta, pues son consideradas como una forma más eficiente de adquirir determinadas habilidades para penetrar en mercados desconocidos y/o en nuevos negocios, proporcionar mayor eficiencia, fluidez y flexibilidad a las nuevas estructuras y aumentar la capacidad innovadora (Hamel, Doz y Pahalad, 1989). En el entorno actual, según Gómez (2005 citado por Araiza et al 2008) la cooperación se ha convertido en un imperativo para todas las empresas, sean pequeñas, medianas o grandes y su difusión ha promovido su realización; las alianzas estratégicas son formas de cooperación que implican, entre otras cosas, la conjunción de conocimientos y habilidades para superar obstáculos que son más difíciles de lograr si se actúa de manera aislada.

La cooperación interempresarial es definida por Araiza et al (2008) como la interacción de las Pymes independientes con un propósito específico, que les permiten intercambiar recursos que mutuamente las benefician. La cooperación sugiere que una buena parte de la ventaja competitiva esta fuera del ambiente interno de las empresas. Esto significa cambios gerenciales, las exigencias son mayores, teniendo en cuenta que, nuevos paradigmas son creados. La cooperación crea nuevos papeles para el gobierno, para las instituciones de apoyo y por eso sus influencias son decisivas y necesarias, principalmente en nivel microeconómico (Fernández, 2005). Según Araiza, Velarde y Zarate (2010), la cooperación es un proceso difícil de lograr, ya que en las PyMES se percibe una baja inclinación a la asociación y cooperación. Desde hace años en países como México, la creación, consolidación y fortalecimiento de las PyMES es fundamental para dinamizar el crecimiento económico, generar empleos permanentes y conservar los que ya existentes (Simón y Rueda, 1998).

## METODOLOGÍA

El estudio realizado tuvo como objetivo el identificar y analizar la cooperación interempresarial de las microempresas del estado de Aguascalientes, bajo la siguiente pregunta de investigación: ¿Cuáles son los tipos de cooperación inter-empresarial que se presentan en las micro empresas del estado de Aguascalientes? El tipo de investigación fue de cohorte cuantitativo, descriptivo, transversal y no experimental. El tipo de muestra fue no probabilística y las unidades de análisis fueron las microempresas que recibieron apoyo de la secretaría de economía, ubicadas en el estado de Aguascalientes y participaron en el Foro Pyme 2012 y Foro Hispano 2012. Se utilizó el instrumento diseñado por Araiza et al (2010) para medir los tipos de cooperación interempresarial y el diseñado por Silva en (2010) y modificado por Parga en (2012) para medir el perfil del emprendedor. Dicho instrumento se aplicó a 18 empresas.

## RESULTADOS

Se analizaron los 18 casos recolectados, con los cuales se presentan el análisis de confiabilidad y la validez del instrumento. Después se complementa con resultados preliminares de datos descriptivos del perfil del emprendedor y de la empresa. El 40% han sido actividades cooperativas formales y el 60% informales.

### Confiabilidad

La confiabilidad del instrumento Alpha de Cronbach es considerada aceptable, conforme a Kline citado por Tejada (2004 en Araiza y Velarde, 2012), quien indica la siguiente interpretación de los índices de confiabilidad “coeficientes de confiabilidad de alrededor de 0.90 se consideran excelentes, valores alrededor de 0.80 muy buenos, valores alrededor de 0.70, como adecuados, aquellos menores de 0.50 indican que al menos la mitad de la varianza observada puede ser debida a error al azar, y medidas tan poco confiables deberían de ser evitadas.

Tabla 1: Resultados de Alfa de Cronbach

Variable	Reactivos Utilizados	Reactivos analizados	Primer análisis de Alpha de Cronbach
Cooperación para producir	14	103,104,105,106,107,108,109,110,111,112,113,114, 115,116	.952

Cooperación para innovar	12	117,118,119,120,121,122,123, 124,125, 126,127	.944
Cooperación para el mercado	14	129,130,131,132,133,134,135,136,137,138,139, 140,141,142	.962
Cooperación para administrar	16	143,144,145,146,147,148,149,150,151,152,153, 154,155,156,157,158	.952

La tabla 1 muestra los resultados del coeficiente de Alfa de Conbach, cuyo valor global fue de: 0.956, por lo que se considera elevada la confiabilidad, según lo expuesto anteriormente por Kline citado por Tejada (2004) en Araiza, Z. y Velarde, E. (2012). Cabe señalar que no se eliminaron reactivos ya que el análisis es aceptado tal y como se muestra en la tabla anterior.

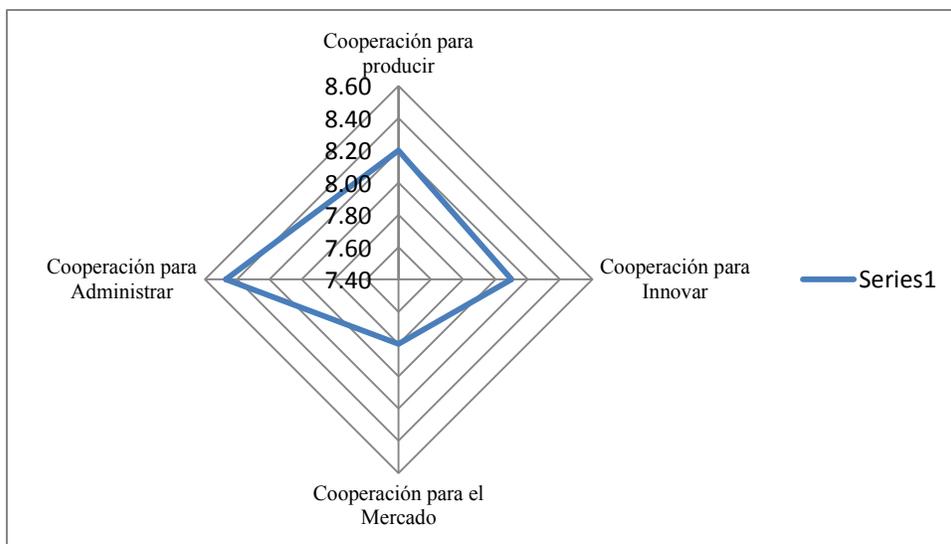

### Descriptivos de los Datos Demográficos

Los resultados del perfil del emprendedor muestran una tendencia clara del puesto del respondiente tiende a desempeñarse en el puesto de gerente general, con una escolaridad de licenciatura (50%), en su mayoría el que predomina es el sexo masculino y casados (72% en ambos). La edad que se presenta con mayor frecuencia es la de mayor de 46 años.

### Análisis la Cooperación Interempresarial

La cooperación interempresarial ha tomado gran relevancia en la época actual, como podemos observar la mayor ponderación la tiene la cooperación para producir con un promedio de 8.2, mientras que en la cooperación para innovar se obtuvo un promedio de 8.1, por otro lado la cooperación para administrar alcanzó un promedio de 8.4 y finalmente la cooperación para el mercado un promedio de 7.8.

Grafico 1: Tipos de Cooperación

Fuente: Elaboración propia

### **CONCLUSIONES**

El presente trabajo de investigación nos ha permitido un acercamiento a las determinantes que influyen en la cooperación inter-empresarial entre microempresas, sin embargo se debe considerar la posibilidad de aplicar a otras áreas de actividad económica como lo es el de sector turístico, por poner algún ejemplo, esto con el fin de conocer la existencia de redes de cooperación empresariales que se presentan en esta rama de la economía. Desde el punto de vista

práctico, esta investigación ha permitido realizar una compilación de literatura que pretende abordar la problemática de la escasa cooperación entre empresas; así mismo se dio evidencia que es necesario que las empresas trabajen de manera conjunta, y se puedan palpar los resultados en todas las áreas de la organización que considera el estudio de la cooperación interempresarial. Así mismo, el estudio tiene aplicaciones no solo para las empresas que realizan algún tipo de cooperación, sino también generalmente para las pequeñas y medianas empresas. El marco en el que se presentan los diferentes tipos de cooperación, ofrecen posibilidades de un análisis riguroso a los profesionales y empresarios de todo tipo de organizaciones, en un ámbito en el que se hace cada vez más necesaria la vinculación entre estas empresas.

# COMPETITIVIDAD DE LAS PYMES EXPORTADORAS DEL ESTADO DE COLIMA

Jesús Otoniel Sosa Rodríguez, Universidad De Colima

Óscar Bernardo Reyes Real, Universidad De Colima

Noé López Alvarado, Universidad De Colima

## RESUMEN

*En este artículo investigamos acerca de la competitividad de las PYMES exportadoras del Estado de Colima, enfocado en sus sistemas de calidad, competitividad internacional, innovación y estrategias de mercadotecnia. La competitividad refleja la medida en que una nación, en un sistema de libre comercio y condiciones equitativas de mercado, puede producir bienes y servicios que superen la prueba de los mercados internacionales, al tiempo que mantiene e incrementa el ingreso real de su población a largo plazo. Colima es un estado en constante crecimiento económico, una tierra de desarrollo y ventajas competitivas por su privilegiada ubicación geográfica, el dinamismo de su población, su sólida y creciente infraestructura, su enorme riqueza natural, así como las crecientes actividades comerciales, portuarias y extractivas que contribuyen a fortalecer una economía diversificada. Debido a esto se eligió por hacer un estudio y determinar la Competitividad de las PyMES del estado de Colima por su relevancia y dinamismo para la economía del estado.*

**PALABRAS CLAVE:** Competitividad, pymes, exportadoras, estrategias.

## THE COMPETITIVENESS OF SMALL AND MEDIUM ENTERPRISES IN COLIMA

### ABSTRACT

*This paper investigates the performance of SME exporters in the State of Colima, focused on quality systems, international competitiveness, innovation and marketing strategies. The competitiveness reflects the extent to which a nation, in a system of free trade and fair market conditions, can produce goods and services that meet the test of international markets while maintaining and increasing the real income of its population long term. Colima is a state in constant economic growth, a land development and competitive advantages for its privileged location, the dynamism of its population, its strong and growing infrastructure, its enormous natural wealth and growing business, port and extractive help strengthen a diversified economy. Because of this they chose to do a study and determine the competitiveness of business SMEs Colima State for their relevance and dynamism to the state's economy.*

### INTRODUCCIÓN

De acuerdo con datos del Instituto Nacional de Estadística y Geografía, en México existen aproximadamente 4 millones 15 mil unidades empresariales, de las cuales 99.8% son MIPYMES que generan 52% del Producto Interno Bruto (PIB) y 73% del empleo en el país. Ruiz (2002)

comenta que; “hoy en día, los gobiernos de países en desarrollo reconocen la importancia de las PyMES por su contribución al crecimiento económico, a la generación de empleo, así como al desarrollo regional y local. Sin embargo, las PyMES tienen algunas dificultades en virtud de su tamaño: acceso restringido a las fuentes de financiamiento; bajos niveles de capacitación de sus recursos humanos; limitados niveles de innovación y desarrollo tecnológico; baja penetración en mercados internacionales; bajos niveles de productividad; baja capacidad de asociación y administrativa”.

No obstante sus limitaciones, el papel de las PYMES en la economía de los países ha sido un factor que ha generado incrementos en la producción, valor agregado, aportaciones fiscales, fortalecimiento del mercado interno, incremento de exportaciones, etc., por lo que han sido motivo de diseño de políticas encaminadas a promoverlas y apoyarlas para elevar su competitividad y enfrentar la competencia de un mundo globalizado, sin olvidar el mundo de los emprendedores, donde las empresas líderes son aquellas que adoptan modelos de subcontratación y alianzas estratégicas con PYMES, que gracias a su adaptación y flexibilidad crecen en mundo en constante cambio, demostrando además que cuando se organizan pueden superar las aparentes limitaciones de su tamaño. Son varias las debilidades que presentan las PYMES en México, entre ellas son: la falta de actualización y capacitación, desconocimiento de mercados, falta de fuentes de financiamiento y desconocimiento de procesos de certificación de la calidad, etc. Las pequeñas y medianas empresas del sector exportador en el estado de Colima, no son la excepción. El estudio de campo realizado en esta investigación revisa los factores que debilitan la competitividad de las pymes en el estado de Colima y demuestra campos de acción para mejorar su rentabilidad, competitividad y permanencia en el estado.

## REVISIÓN LITERARIA

Según Moreno (2009) “la clasificación de las Pymes varía dependiendo del país. En general los países tienden a seguir un patrón, en el cual se consideran los siguientes criterios: número de trabajadores, volumen de ventas anuales y valor de sus activos”. En México, la Secretaría de Economía (SE) y la Secretaría de Hacienda y Crédito Público (SHCP) modificaron la clasificación para las, Pequeñas y Medianas Empresas (PyMES), con el fin de ampliar el acceso a los programas diseñados para estas unidades. "La estratificación busca evitar la discriminación en el sector, para que empresas con intensiva mano de obra y aquellas que tienen ventas significativamente altas puedan participar en los programas de apoyo para las PyMES", señaló la SE en un comunicado. Las Pymes en sus tres sectores, comercio, servicios e industria, son en su mayoría operadas por una sola persona que funge como administrador, técnico, comercializador, financiero y fiscalista, por consiguiente, enfrentan una serie de problemas; laborales, fiscales, financieros y de regulación, que frenan su desarrollo dejándolas indefensas ante la competencia nacional, al hacerle frente a las grandes firmas nacionales e internacionales. Con base en lo expuesto por Dávila (2010) México tiene una base aproximada de 4 millones de empresas pequeñas y medianas de los sectores industriales, comercio y servicios, se encontró que:

- El 65% de las pymes en México son de carácter familiar,
- Más de 80% no cuenta con algún tipo de certificación;
- Cerca de 50% no utiliza técnicas en calidad o productividad;
- Sólo 24 % maneja alguna licencia o patente
- El 83% no realiza actividad alguna para consolidar su presencia en el exterior.
- Dentro del sector manufacturero se destaca que el 35% de los negocios no realizó ninguna inversión.

Cabe hacer mención que en la actualidad, en el estado de Colima, el tema de las MIPYMES ha ido tomando cada vez mayor importancia, por sus aportaciones a la producción, distribución de bienes, el gran potencial de generación de empleos y porque representan un excelente medio para impulsar el desarrollo económico y una mejor distribución de la riqueza en el estado. La clasificación publicada en el Diario Oficial de la Federación del 30 de junio de 2009 establece que el tamaño de la empresa se determinará a partir del obtenido del número de trabajadores multiplicado por 10%; más el monto de las ventas anuales por 90%. Esta cifra debe ser igual o menor al Tope Máximo Combinado de cada categoría, que va desde 4.6 en el caso de las micro, hasta 250 para las medianas.

Tabla 1: 1 Estratificación

tamaño	sector	rango de número de trabajadores	rango de monto de ventas anuales (mdp)	tope máximo combinado*
micro pequeña	todas	hasta 10	hasta \$4	4.6
	comercio	desde 11 hasta 30	desde \$4.01 hasta \$100	93
	industria y servicios	desde 11 hasta 50	desde \$4.01 hasta \$100	95

\*Tope Máximo Combinado = (Trabajadores) X 10% + (Ventas Anuales) X 90% Fuente: Diario Oficial de la Federación del 30 de junio de 2009.

Las PYMES son entidades que incluyen a las pequeñas y medianas empresas. Los micros se clasifican por tener hasta 10 trabajadores, 4 mdp. Millones de pesos en ventas; las pequeñas llegan hasta 50 trabajadores y 100 mdp en ventas, finalmente las medianas empresas que llegan a tener hasta 250 trabajadores y 250 mdp en ventas. Su principal función es a dedicarse a las siguientes actividades: producción, transformación, el comercio, la agricultura, y los servicios. Por la importancia de las PYMES, es importante instrumentar acciones para mejorar el entorno económico y apoyar directamente a las empresas, con el propósito de crear las condiciones que contribuyan a su establecimiento, crecimiento y consolidación. El estado de Colima además de ser uno de los estados con una de las posiciones geográficas estratégicas para el intercambio de bienes y servicios ya que, cuenta con uno de los puertos más importantes a nivel nacional, se encuentra ubicado en el municipio de Manzanillo que es un puente estratégico para el desarrollo de relaciones comerciales con diferentes países, impactando en el sector del comercio exterior, lo que conlleva a convivir en dentro de un puerto concebido comercialmente.

La competitividad es la capacidad que tiene una empresa o país de obtener rentabilidad en el mercado en relación a sus competidores. La competitividad depende de la relación entre el valor y la cantidad del producto ofrecido y los insumos necesarios para obtenerlo (productividad), y la productividad de los otros oferentes del mercado. (Gómez 2005) Para poder hacer negocios en el exterior, las pequeñas y medianas empresas denominadas pymes en la presente investigación, se han visto en la necesidad de implementar acciones y revisar procesos para facilitar el proceso y la mejora de la exportación de sus productos.. En el estado de Colima, el crecimiento de pequeñas y medianas empresas que se dedican a la exportación ha ido ha sido favorable, no obstante también se enfrentan a la situación generalizada de las pymes en México, en la cual se desconocen los mercados, fuentes de financiamiento, estrategias mercadotécnicas, etc. Por lo anterior, surge la necesidad de estructurar un panorama de la competitividad de las empresas y las mejoras que podrían realizar para que ser más competitivas en el sector exportador.

## METODOLOGÍA

El objetivo principal de esta investigación es revisar y analizar la competitividad de las PyMes para poder ofrecer alternativas que les permita tener una mejoría en su posicionamiento a nivel nacional e internacional. Además se pueden enlistar algunos objetivos específicos que se cumplirán al término de la investigación: indagar sobre las prácticas actuales para competir a nivel nacional e internacional como pymes exportadoras del Estado de Colima y determinar si han funcionado. Examinar sus estrategias y mercados de exportación. El cumplimiento de los objetivos planteados, así como la resolución a las preguntas elaboradas para la investigación, conducen una hipótesis general: las micro, pequeñas y medianas empresas exportadoras del estado de Colima no aplican todos los elementos y recursos que les permitirían mejor su posicionamiento y competitividad a nivel nacional e internacional.

En el transcurso de la investigación se determinará la cantidad de Pymes exportadoras del estado de Colima, y al tenerlas plenamente identificadas se realizará una investigación campo. La investigación tendrá un enfoque cuantitativo ya que para comprobar la hipótesis, el estudio se basará en los instrumentos de medición aplicados, dichos instrumentos son cuestionarios que se podrán tabular de manera estadística, a través de herramientas informáticas como el Excel. La información de las empresas exportadoras del estado de Colima no se encuentra concentrada en una sola base de datos, si no que se obtuvo de una fusión de información obtenida en PROMÉXICO, Secretaría de Economía (SE) y Secretaría de Fomento Económico del estado de Colima. Cabe hacer mención que la información analizada fue obtenida de una encuesta que se aplicó al total de las empresas exportadoras en el estado de Colima (60), sin importar su tamaño, es decir, se realizó un censo. Sin embargo, solo se consideraron los datos obtenidos de las 45 Pymes que resultaron de dicha investigación de campo, por ser el objeto de estudio de la presente tesis. La investigación de campo se realizó durante el 2012.

## RESULTADOS

Con base en información proporcionada en el censo de unidades económicas de la Secretaría de Fomento Económico del estado de Colima, PROMEXICO y SE, se aplicaron un total de 60 cuestionarios, de los cuales solo 45 fueron contestados completamente porque el objeto de estudio eran solamente las Pymes y no todas las empresas exportadoras, cabe hacer mención que se hace la consideración de empresa pyme, por la cantidad de empleados que laboran en ellas y por su volumen de ingresos, Al realizar las encuestas, arrojó como resultado que el 76 % de las pymes exportan a América del Norte (Estados Unidos y Canadá), esto debido al TLCAN y a la cercanía que tenemos con el mercado más grande del mundo, mientras el que el resto 22%, se divide entre Sudamérica y Europa y un 2% a otros destinos del mundo.

El 100% de las empresas colimenses que participan en el proceso de exportación y que fueron encuestadas, están de acuerdo que elevan su competitividad debido a que tienen contacto con clientes más exigentes, que exigen excelente servicio y calidad óptima. Solo el 32% de las pymes en Colima hacen investigación de mercados para incursionar en el sector exportador, el 68% dice no realizar estudio de mercado, pues les compran en planta la producción. Cabe hacer mención que el principal motivo para realizar las exportaciones, de las pymes de Colima es el precio de venta de sus productos, e indican que es alrededor del 30% de incremento, comparado con el precio de venta nacional. Un elemento que será necesario mejorar para elevar la competitividad es el tiempo de entrega ya que el 64% de las empresas encuestadas afirma cumplir con sus pedidos de manera periódica, sin embargo el 36% restante no lo hace por falta de capital para invertir en la empresa.

También será necesario pensar en capacitar a las empresas, para que puedan realizar un plan de mercadeo, pues solo el 44% de las empresas tiene un plan de marketing para realizar sus exportaciones debido a que la mayoría usa intermediarios los cuales se encargan de la comercialización. El otro 56% que no cuentan con un plan de marketing debido a que dicen no necesitarlo o no contar con presupuesto destinado para ello. En cuanto a la administración financiera, el 40% de las pymes acepta haber tomado algún apoyo gubernamental para realizar sus exportaciones, sin embargo, el 60% afirma no tener acceso a los mismos, por el excesivo papeleo y burocracia para someter los proyectos. Además el 28% de las pymes dice que sí ha sido fácil obtener financiamiento pero el 72% restante dicen que es casi imposible, pues no saben hacer proyectos de inversión y son requeridos por las autoridades gubernamentales y empresariales. Se plasma y confirma la hipótesis principal, ya que se comprueba que las Pymes exportadoras en Colima, no aplican todos los elementos y recursos que les permitirían mejor su posicionamiento y competitividad a nivel nacional e internacional.

## CONCLUSIONES

Debido a los resultados que confirman la hipótesis de la investigación, se propone que se deberían tomar los siguientes lineamientos para mejorar la competitividad de las pymes exportadoras del estado de Colima: Debe realizarse una revisión de la estructura interna, ya que el 85% de las empresas son familiares y carecen de un estructura organizacional que permitirá alcanzar los objetivos trazados, así como canalizar y guiar las actividades de su personal. Además, resulta fundamental que las diferentes áreas de la empresa estén involucradas y comunicadas entre sí (producción, compras, ventas, mercadeo, entre otros. Resulta indispensable incorporar en el estilo gerencial y una cultura de organización, con enfoque a mercados internacionales. De lo contrario, cualquier actividad realizada para fomentar el crecimiento en ésta área, será esfuerzo desperdiciado.

Las empresas deberán realizar y en su caso definir la estructura u organigrama, para definir funciones y acciones con base en los requerimientos de conocimientos técnicos y de capacitación que se necesitarán para ajustar el recurso humano disponible, a la orientación de la empresa de exportación. La adecuada gestión financiera es el último punto a recomendar, sin embargo, resulta el principal, pues en el estudio demuestran la carencia de recursos económicos para cumplir con compromisos, falta de capital para expandir los mercados, falta de presupuesto para realizar estudios de mercadeo o marketing. Definitivamente, las pymes exportadoras del estado de Colima, tampoco hablan de innovación, pues la mayoría de ellas apenas incursiona en el ámbito de exportación con los productos que vende también en el mercado nacional.

# **PROPUESTA PARA APLICACIÓN DE LA METODOLOGÍA DE SEIS SIGMAS EN LOS PROCESOS DE LA UNIVERSIDAD ESTATAL DE SONORA**

Jesús Manuel Velázquez Castellanos, Universidad Estatal de Sonora

## **RESUMEN**

*Las instituciones de educación superior pública se encuentran afectadas por los factores sociales y económicos que vive en la actualidad México, la exigencia de la pertinencia y factibilidad de la oferta educativa cada vez se hace evidente, así como la cobertura en áreas especializadas para los sectores productivos y sociales. Por otro lado, el presupuesto asignado por entes gubernamentales se encuentra reducido tanto en los subsidios ordinarios como los extraordinarios. Los retos de las universidades deberá enfocarse en establecer o consolidar sus estructuras administrativas, operativas y principalmente directivas hacia la administración de la calidad procurando fundamentar esquemas orientados a la productividad y eficiencia que demuestren un ahorro, aprovechamiento de recursos y reducción de desperdicios con el propósito de re-direccionar recursos hacia las prioridades que determinen las instituciones de educación superior en sus planes de desarrollo. La Universidad Estatal de Sonora preocupada ante esta situación, retoma las acciones realizadas en el Sistema de Gestión de la Calidad para fortalecer el requisito de Medición, Análisis y Mejora con proyectos de Seis Sigmas que pueda mejorar el ejercicio y aprovechamiento presupuestal en las actividades académicas y administrativas hacia los estudiantes. La metodología seis sigmas tiene como objetivo determinar las causas raíces de los problemas por medio de acciones factibles y viables, considerada una técnica bondadosa para las empresas que requieren potencializar la utilización de los recursos.*

**PALABRAS CLAVES:** Seis Sigma, Mejoras, Desperdicios, Aprovechamiento de recursos

## **PROPOSAL FOR APPLICATION OF SIX SIGMA METHODOLOGY IN SONORA STATE UNIVERSITY PROCESS**

### **ABSTRACT**

The public universities are affected by social and economic factor that Mexico live today, the programs academics requirement about relevance and feasibility is becoming evident, also public and private necessity of specializes knowledge area. On other hand, the proportionate budget for federal and state government is decrease as ordinary as extraordinary subsidies. The universities challenge must to focus in establish o consolidate administrative, operative and fundamentals strategic organizational structure to Quality Management for base strategic about efficiency and productivity as decrease waste, avail and save resources with propose of provide resource to university priorities describe in develop plan. The Sonora State University interested for this situation, take action in the Quality Management System for consolidate the measurement, analysis and improve requirement with Six Sigma projects that improve budget avail in academic and administrative focus students. The Six Sigma Methodology has objectives for determine

roots causes of problems and action feasible and viable, considered softhearted technic for companies that require improve to use resources.

**JEL:** L15, M10

**KEYWORDS:** Six Sigma, Improve, Waste, Avail resources

## INTRODUCCIÓN

En un mundo tan dinámico y competitivo, la relación oferta y demanda, la exigencia de los clientes hacia la excelencia, y el aprovechamiento de los recursos cada vez se vuelve un tema cotidiano en el sector privado, sin embargo esta preocupación se ha trasladado al Sector Público debido a que los proyectos y programas de los gobiernos federales, estatales y municipales se ponen en riesgo cada vez por falta de recursos en la operación. Para estas entidades gubernamentales, la eficacia es una opción de subsistencia, pero no suficiente, se requiere llegar a la eficiencia en los términos de lograr lo mismos o mejores resultados con menos recursos. Esta situación no es un caso atípico de las Universidades de México de carácter público, actualmente los recursos son limitados, algunos fondos de subsidios se han disminuido o desaparecidos, a nivel general el país redujo en su gasto corriente la inversión a la educación y los retos de competitividad en la educación a nivel nacional e internacional son desafiantes según lo exige la Organización de las Naciones Unidas para la Educación, la Ciencia y la Cultura (UNESCO) y la Organización para la Cooperación y Desarrollo Económicos (OCDE).

Las políticas de austeridad en el poder ejecutivo del país ha permeado las instituciones de educación superior, obligando a replantear proyectos, suspender actividades, buscar alternativas de subsidios, entro otras actividades para mantener los niveles de calidad, equidad y cobertura. Ante la interacción de estos escenarios poco favorables de desarrollo, las instituciones de educación deben encaminar sus esfuerzos a determinar acciones diferentes, comenzando con un cambio de actitud, compromiso, dinamismo e innovación que permite establecer y operar estrategias que conlleven a la eficiencia de los recursos, la participación del personal directivo, administrativo, académico y operativos será la principal fortaleza para lograr los resultados deseados.

La implementación de la filosofía en Seis Sigmas para la generación de proyectos de mejora permitirá orientar los esfuerzos de las Universidades hacia un ambiente de eficiencia y productividad en la utilización de los recursos para lograr o superar los resultados esperados. Las ventajas de implementar seis sigma es alcanzar y analizar la información disponible, plasmar un proyecto y tomar decisiones en mediciones y análisis de datos para determinar la causa raíz de los problemas, Esta metodología nos aporta una filosofía para optimizar los insumos y resultados de los procesos bajo diferentes ópticas que considera como principal fundamento el ahorro de costos o incrementos de ingresos. Para fines de este trabajo, esta metodología se observará aplicada en la Universidad Estatal de Sonora, institución que actualmente tiene un Sistema de Gestión de la Calidad, acreditaciones de programas educativos y una gestión estratégica que permite con facilidad lograr la implementación de estas buenas prácticas administrativas.

## REVISIÓN LITERARIA

Determinación y Administración de los Recursos en las Universidades Públicas en México

Las instituciones de educación superior públicas dependiendo su tipo y subsistema operan con subsidios ordinarios o extraordinarios tanto federales como estatales, en ambos casos tienen diferentes políticas de austeridad: Ley del Presupuesto Egresos de la Federación, Capítulo II, de las disposiciones de austeridad, ajuste del gasto corriente, mejora y modernización de la gestión pública. Artículo 16. Las dependencias y entidades se sujetarán a las disposiciones de austeridad, ajuste del gasto corriente, mejora y modernización de la gestión pública que se establezcan en los términos del Título Tercero, Capítulo IV, de la Ley Federal de Presupuesto y Responsabilidad Hacendaria, las cuales son de manera general: a) incremento de plazas, b) aumentos de sueldos, c) adquisición y los arrendamientos de inmuebles, d) la remodelación de oficinas, no procederá la adquisición de vehículos, e) la contratación consolidada de materiales y suministros; servicios, incluyendo telefonía, mantenimiento de bienes muebles e inmuebles, fotocopiado, vigilancia, boletos de avión, vales de despensa, medicamentos, seguros sobre personas y bienes entre otros, siempre y cuando se asegure la obtención de ahorros y de las mejores condiciones para el Estado en cuanto a calidad, precio y oportunidad disponibles.

Las políticas de presupuestación y programación del gobierno del Estado de Sonora, Ante las previsible limitaciones fiscales que condicionan la integración del Proyecto del Presupuesto de Egresos para el ejercicio fiscal, la Secretaría, da a conocer a las dependencias y entidades de la Administración Pública Estatal, las siguientes disposiciones que habrán de contribuir en la conformación de un presupuesto que haga énfasis en la austeridad y disciplina fiscal, lo cual supone un esfuerzo que se realiza desde las instituciones de gobierno, para mantener el equilibrio de las variables económicas y financieras del Estado, a fin de que sobre esa base continuemos el crecimiento económico sostenido. Las normas presupuestales que rigen la aplicación de los recursos públicos, se han diseñado para el ejercicio del presupuesto en condiciones que se consideran como “normales”, dentro de un marco de austeridad, por lo cual hemos de suponer que su estricta aplicación no incide mayormente en la eficiencia y eficacia del gasto público. Los lineamientos estatales y federales de racionalidad y austeridad tienen como base establecer las disposiciones y medidas administrativas dictadas por los órganos de gobierno, con el objeto de racionalizar el gasto destinado a las actividades administrativas, los lineamientos de racionalidad y austeridad presupuestaria deberán garantizar que los recursos se privilegien para lograr las actividades prioritarias de las entidades públicas.

Según fuente de información del Periódico la Jornada, México, El Secretario General Ejecutivo de la Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES), Enrique Fernández Fassnacht, mencionó “el monto destinado en el proyecto de Presupuesto de Egresos de la Federación (PEF) 2014 está bien, a secas, pues implica un crecimiento real de 3.3 por ciento respecto de 2013. No obstante, la verdadera preocupación reside en los fondos extraordinarios, donde hay una importante diferencia a la baja, pues son mil 800 millones de pesos menos en relación con el año anterior”. Esto nos lleva a reflexionar que los recursos para las universidades cada vez son escasos y se requiere determinar nuevas formas para el aprovechamiento de los recursos disponibles.

### Seis Sigma una Estrategia Idónea Para Aprovechar los Recursos

Seis Sigma es una herramienta que proviene del uso complejo de la estadística aplicado a problemas o proyectos de eficiencia y productividad, para muchas empresas transnacionales se convierte en la mejor herramienta competitiva en el mercado, principalmente cuando las empresas se encuentran en la necesidad aprovechar los recursos disponibles para lograr los resultados esperados. Seis Sigma es una métrica que representa una forma de medir el comportamiento de un proceso con relación a su nivel de productos o servicios fuera de

especificación, como meta para tener un nivel de clases mundial al lograr no producir servicios o productos defectuosos (hasta 3.4 parte por millón), y como una filosofía de mejoramiento continuo de procesos y productos apoyado de herramientas estadísticas.

Seis Sigma es “un sistema de calidad destinado a mejorar la satisfacción del cliente y, reducir tanto los niveles de defecto como el tiempo total del ciclo. De tal forma se hace factible cumplir con los objetivos organizacionales, logrando una ventaja competitiva sostenible y mejores niveles de rendimientos sobre la inversión” (Lefcovich, 2009). La importancia de seis Sigma es la implementación en todos los niveles de la organización con apoyo del liderazgo, organización y trabajo en equipo. Por otra parte, seis sigma es “una herramienta que articula diversos enfoques como son la utilización de un estándar que permite medir el proceso analizado en relación con 3.4 partes por millón, y una serie de herramientas propias de la gestión de la calidad, el control estadístico y el diseño de experimentos; que combinadas con la medición del grado de desempeño facilita centrarse en mejoras focalizadas y puntuales sobre los procesos o en toda la organización; lo que se evidencia en mejoras económicas en el contexto donde se implemente” (Fontalvo, 2010). La técnica de seis sigmas tiene un enfoque especialista en el sentido de aplicar herramientas estadísticas, mediciones, recolección y análisis de la información sobre los productos, procesos y el cliente. Los esfuerzos de seis sigmas se dirigen a tres áreas principales: Mejorar la satisfacción del cliente; Reducir el tiempo de ciclo; y Reducir los defectos. Las mejoras en estas áreas representan grandes ahorros de costos para las empresas, incluyendo las oportunidades para conservar a los clientes, absorber nuevos mercados y consolidar una reputación de empresa por productos y servicios de alta calidad. La aplicación de seis sigmas es tan compleja como el área de oportunidad detectada, lo importante es desarrollar una cultura de análisis y determinación de acciones concretas de contención y solución de problemas. Sin embargo es necesario considerar algunos elementos antes de implementar seis sigmas (Fontalvo, 2010):

*Definir previamente el proceso y los resultados esperados al aplicar este tipo de programas, de igual forma se requieren: Verificar con claridad el impacto que generarían los resultados en relación con los objetivos esperados.*

*Determinar si la aplicación del programa Seis Sigma se realizará sobre toda la organización, en un proceso o en diversos procesos.*

*Evaluar previamente los beneficios generados por la implementación de un programa o proyecto de Seis Sigma.*

Las características para desarrollar un proyecto de seis sigmas debe estar relacionado a las prioridades de la empresa y al cliente, a la razón de empresa, a su alcance y límites, la empatía entre los miembros de una organización hacia el logro de los objetivos, métricas adecuadas, apoyo de las autoridades y la validación del impacto en la situación de la empresa. Algunos ejemplos que pueden aplicarse seis sigmas: Horas extras; Reclamos; Reducción de tiempos de ciclos; Reducción de tiempo de contratación; Procesos o equipos con tiempos “muertos”; Reducción de ausentismo; Reducción costos de consumo energético; Reducción de tiempo para introducir órdenes de compra; entre otros.

Podemos observar que la metodología de seis sigmas se encuentra relacionado al ciclo administrativo, ciclo de calidad por Deming o ciclo de control por Shewart, la metodología seis sigma “permite centrarse sobre una o varias variables de un proceso para que a través de la consolidación de un grupo de trabajo, se puedan generar mejoras por proyectos en la organización propendiendo por el cero defecto; lo anterior se logra con el enfoque de Definir Medir, Analizar, Mejorar y Controlar, desarrollando lo anterior con una fuerte fundamentación estadística y

paralelamente se trabaja con un enfoque gerencial que permita generar resultados y beneficios económicos con un enfoque estratégico y focalizado, apoyándose en herramientas y enfoques de calidad existentes.

En cierta medida es una herramienta semejante al Enfoque Sistémico Convergente de la calidad con la limitación de que las cinco macro actividades sobre las que se centran (Definir, Medir, Analizar, Mejorar y Controlar), limitan su aplicación a enfoques de mejoramiento que no tengan que ver con la medición, de igual forma su enfoque es bastante general” (Fontalvo, 2010). La metodología es compatible con muchas filosofías de calidad, como Kaizen, Administración Total de la Calidad, ISO 9001:2008, Lean Manufacturing, entre otros, su grado de especialización y su determinación puntual de acciones la hace una metodología precisa y con resultados muy tangibles con el involucramiento de todo el personal, “esta forma de pensar y actuar no es privativa de gerentes e ingenieros, sino que incluye a los supervisores y empleados jerarquizados o no. Además de poner el sentido común en práctica, se trata de la necesidad de desarrollar una organización de aprendizaje que permita lograr cada día metas más elevadas” (Garza, 2006). Seis sigmas es una metodología general que puede considerar diferentes técnicas, herramientas, métodos, entre otros mecanismos para las etapas de definición, medición, análisis, mejora y control. Entre ellas podemos mencionar (Lefcovich, 2009):

*La tormenta de ideas, diagrama de afinidad, estructura en árbol, mapa de proceso a primer nivel, diagrama de flujo de proceso y diagramas de causa-efecto (espina de pez).*

*En cuanto a las herramientas para la obtención de datos tenemos: el muestreo estadístico, VDC (métodos para obtener la voz del cliente), hojas y gráficos de control, análisis del sistema de medida. Si de herramientas para el análisis del proceso y de los datos se trata, podemos mencionar entre las más utilizadas: el análisis del flujo del proceso, análisis del valor añadido, diagrama y gráficos, diagrama de Pareto, histogramas, gráfico de tendencias y diagrama de dispersión. Luego tenemos las herramientas para el análisis estadístico, y las herramientas para la implementación y gestión de los procesos. Entre éstas últimas herramientas se encuentran: los Métodos de Gestión de Proyectos, el Análisis de Problemas Potenciales, el Análisis del Modo de Fallo y sus Efectos (AMFE), Análisis de los grupos afectados, Diagramas de Campo de Fuerzas, Documentación del proceso, Cuadro de Mando Integral e indicadores del proceso.*

#### Condiciones de la Universidad Estatal de Sonora Ante la Implementación de Seis Sigmas.

En el 2005, Rectoría recibe su certificado de conformidad con la Norma ISO 9001:2000 avalados por la casa certificadora Det Norske Veritas de México. En el 2008 recibe el refrendo de su certificado con tres sitios, Rectoría, DES Hermosillo y DES Magdalena. Durante el 2009 se trabaja en la transición a la nueva versión de la norma la ISO 9001:2008. En el 2010 se certifican las DES San Luis Río Colorado, Navojoa y Benito Juárez. Las características principales de mantener certificado nuestro Sistema de Gestión de Calidad (SGC) radica en incorporar los criterios establecidos por las organizaciones de acreditación avaladas por el COPAES, con el objetivo de generar un impacto en las actividades administrativas y académicas relevantes de la institución en cuanto al aseguramiento de servicios de calidad de los PE. Actualmente la certificación representa una de las estrategias más importantes para lograr y mantener la competitividad académica. La UES en el 2012 mantiene y refrenda el distintivo de ISO 9001 hasta el 2014, al certificar Rectoría y la totalidad de las DES, representa 60 procesos y 150 procedimientos. En las dos últimas revisiones la casa de certificación Det Norske Veritas de México reconoce en su informe como un esfuerzo sobresaliente los logros del Modelo

Educativo y el impacto del Sistema de Gestión de Calidad hacia la competitividad académica en la acreditación y evaluación de los PE. Como se describe en el impacto de la certificación en la competitividad académica, el costo beneficio es alto, las mejoras detectadas en los ejercicios internos y externos, así como en las buenas prácticas que realizan los responsables de procesos durante el desarrollo sus actividades han generado un ambiente participativo y activo hacia un enfoque de mejora que se ve reflejado en el mantenimiento y en compromiso para elevar la calidad en los servicios académicos y administrativos. El reto que presenta el sistema de gestión de la calidad es continuar con los refrendos del certificado de conformidad con la Norma ISO 9001 por medio del seguimiento oportuno, auditorías, formación, la implementación de buenas prácticas, y el impacto de los procesos y procedimientos en aquellas recomendaciones e indicadores tanto de los CIEES como de los organismos del COPAES con apoyo de la formulación de procesos estratégicos. Con apoyo del Sistema de Gestión de la Calidad se han desarrollado diferentes buenas prácticas, Con referencia a los ejes de sustentabilidad que tienen la UES y para fines de la aplicación de la metodología de seis sigmas se han definido los siguientes costos:

Tabla 1: el Impacto de la Certificación en la Competitividad Académica

Año	Conceptos					
	No. Proceso	No. DES	Énfasis de Sistema de gestión de calidad	Nivel de madurez del SGC	% PE con calidad Reconocida	Principales beneficios
2005	8	1	Gestión administrativa; Atención al estudiante en control escolar; Biblioteca, Carga académicas de los profesores; Servicio Social, y Centro de cómputo.	1 de 4	28 (5 PE)	Se formalizan las actividades por medio de documento oficial para el desarrollo de las actividades.
2006	16	3	No existió variación en el énfasis con respecto al año anterior.	1 de 4	44 (4 PE)	Se agilizan los servicios de atención de los estudiantes y se mejora su infraestructura.
2007-2009	29	3	Adicionalmente a lo mencionado en los años anteriores, se incluye las actividades tutorías. Se priorizan los esfuerzos para lograr con éxito la transición de la norma ISO a la versión 2008.	3 de 4	89 (16 PE)	Se fortalece el seguimiento de la operación del programa institucional de tutorías.
2010	5	5	No existió variación en el énfasis con respecto al año anterior.	3 de 4	100 (18 PE)	Se consolida el Sistema de gestión de la calidad bajo un enfoque integral hacia la gestión académica y administrativa.
2011	57	5	Adicionalmente a lo mencionado en los años anteriores, se incluye el seguimiento a las actividades de los profesores y académicas; las prácticas de laboratorio; soporte de tecnología de la información; y actualización de acervo bibliográfico.	3 de 4	100 (18 PE)	La satisfacción del estudiante se mantiene favorable en el 81%, al brindar mejor seguimiento en las condiciones académicas y administrativas.
Ambito de la planeación						

2012	58	Será prioritario incluir procesos que refuercen la actividad de investigación, extensión y vinculación de las DES, y sea congruente en desarrollo de la capacidad académica institucional.	4 de 4	100 (18 PE)	Se deberá medir el impacto del SGC para mejorar la capacidad académica de la institución.
------	----	--	--------	-------------	---

*Tabla de auditoría propia que ordena la cronología del avance de los procesos certificados.*

**Tabla 2: Costos Definidos Para Intervención con la Metodología Seis Sigma**

Descripción del rubro	2011	2012	2013
Papel para impresión tipo Bond	147,135	238,125	208,235
Materiales para impresión y reproducción (Tintas, tóner, entre otros)	374,041	295,832	232,930
Combustibles, lubricantes, aditivos, carbón y sus derivados adquiridos	2,034,386	1,747,753	1,822,149
Energía eléctrica	5,801,276	5,123,336	5,175,328
Agua	533,115	292,645	565,489
Total	8,889,953	7,697,691	8,004,131

*Tabla de auditoría propia, fuente Presupuesto Institucional de la UES*

Esta información son los gastos ejercicios en los diferentes rubros, para la determinación del número de sigma en que se encuentra operando el aprovechamiento de los recursos en estos rubros, se comparó con el cumplimiento en la programación presupuestal, dando los siguientes resultados:

**Tabla 3: Cumplimiento Presupuestal en los Rubros Para Determinar la Sigma**

Descripción del rubro	2011	2012	2013
Papel para impresión tipo Bond	Cumple	Cumple	Cumple
Materiales para impresión y reproducción (Tintas, tóner, entre otros)	No cumple	Cumple	Cumple
Combustibles, lubricantes, aditivos, carbón y sus derivados adquiridos	Cumple	No cumple	Cumple
Energía eléctrica	Cumple	Cumple	No cumple
Agua	Cumple	Cumple	Cumple

*Tabla de auditoría propia, fuente Presupuesto Institucional de la UES*

Con la información de la tabla 2, conocemos los rubros en que efectivamente no existió un sobre paso presupuestal con relación al recurso otorgado originalmente. Al calcular el estimado de la sigma del comportamiento de estos costos podemos ver que es el 4 sigmas ( $([3 \text{ No cumple} / 15] * 100)$ ), lo que equivale trabajar a un 96% de eficiencia en el ejercicio presupuestal. Si lo comparamos a la suma del presupuesto de estos 3 años (\$24, 591,774 pesos mexicanos) podemos ver que representa a 400,000 pesos (mexicanos). Los recursos no aprovechados o administrados acorde a lo programado representan 80 libros en biblioteca, 1,282 licencias para el sistema de aprendizaje de inglés de los estudiantes o 31 computadoras para los estudiantes. El alcance del proyecto de seis sigmas buscará impactar adicionalmente a otros rubros presupuestales conforme se madure la aplicación de la metodología con apoyo de la estructura del sistema de gestión de la calidad. La Universidad Estatal de Sonora al aplicar estas herramientas buscará alinearse de forma eficiente a las políticas de racionalidad y austeridad en el presupuesto general de la Universidad Estatal de Sonora.

**Tabla 4: Presupuesto Ejercido en el Gasto Corriente de la Institución (Millones De Pesos)**

Concepto	2007	2008	2009	2010	2011
	Monto	Monto	Monto	Monto	Monto
Servicios básicos (Energía, Agua, Teléfono, Internet)	5.75	6.50	5.76	6.44	8.21
Gastos de Operación (sin incluir servicios básicos)	50.35	47.96	72.93	69.56	90.15

*Tabla de auditoría propia, fuente Presupuesto Institucional de la UES*

Considerando una aplicación en todos los gastos de operación de la Universidad Estatal de Sonora, la metodología puede buscar alcanzar un ahorro de más de 4 millones de pesos en un año, lo que impacta en la consolidación de las prioridades institucionales presentadas a continuación:

1. Pago de servicios básicos (luz, agua, teléfono, entre otros)
2. Reparaciones y pintura a paredes de salones, laboratorios y espacios comunes para los estudiantes.
3. Reparación de mobiliario de aulas.
4. Reparación de instalaciones eléctricas de aulas, laboratorios y espacios comunes para los estudiantes.
5. Adquisición de pintarrones y materiales para los docentes en el aula.
6. Reparación de puertas de acceso a las aulas, laboratorios y espacios comunes para los estudiantes.
7. Limpieza de las aulas, laboratorios y espacios comunes para los estudiantes.
8. Iluminación y ventilación de las aulas, laboratorios y espacios comunes para los estudiantes.
- 9- Practicas de campo y viajes de estudios.
10. Eventos académicos de los programas educativos.
11. Promoción del programa educativo.

Para la implementación se necesitan varios factores como el compromiso, concientización, enfoque al cliente, apoyo de la dirección, entusiasmo del personal, cambio de cultura y un clima de organizacional adecuado, dichos factores se encuentran favorables para aplicación del proyecto seis sigmas en la Universidad Estatal de Sonora.

## **METODOLOGIA**

La metodología utilizada para la realización de esta Investigación es Six Sigma con un enfoque cuantitativo y cualitativo, tiene el carácter de ser explicativa debido a que abarca las causas del problema y las condiciones que se encuentra actualmente. Los métodos de investigación que se consideran son: el análisis documental sobre la información de la institución sobre la mejora continua, los documentos de programación y ejercicio presupuestal, manual de calidad, interrelación de procesos, procedimientos documentos, proyectos de mejora aplicados, normatividad aplicable, entre otros, otro método es la observación directa que buscar conocer el comportamiento de los procesos con relación a los costos seleccionados en el proyecto, también se incorporan técnicas y herramientas de la administración de la calidad y productividad como son el análisis de costos, diagrama de pescado, paretos, histogramas, diagrama de Gantt, entre otros.

Planteamiento del problema: La Universidad Estatal de Sonora es una Institución de Educación Superior de carácter público que se considera una Universidad de Apoyo Solidario. A partir del 2012, los costos operativos comienzan a incrementarse y los ingresos se disminuyen por las políticas de racionalidad y austeridad de los gobiernos federal y estatal, actualmente se tiene un sistema de gestión de la calidad que se enfoca hacia la competitividad y capacidad académica, su alcance no contempla en gran escala el impacto en el aprovechamiento de los recursos. Por tal motivo se requiere incorporar metodologías de mejora continua que permitan a los procesos generar productividad y eficiencia en las actividades con el propósito de reducir desperdicios, aprovechar los recursos y redistribuir los recursos a las prioridades institucionales.

Investigación de camp: Por medio de la observación directa y al análisis documental de la situación bajo estudio.

Análisis de datos y creación del producto final: Analizar los datos que componen el caso de estudio de la UES con respecto al comportamiento de los procesos en materia de aprovechamiento de recursos, generación de desperdicios, detección de buenas prácticas administrativas y eficiencia en la aplicación del presupuesto.

Contribución del estudio: El ahorro del presupuesto de egreso de la institución a nivel del 6 sigma, logrando alcanzar una eficiencia del cumplimiento de las prioridades de la institución al 99.999%.

Diseño de la investigación: La metodología Six Sigma tiene 5 pasos, Definir, Medir, Analizar, Mejorar y Controlar. Esta metodología mide el desempeño histórico de una situación específica, analiza las principales áreas de oportunidad para mejorar cada métrico, hace mejoras por medio de proyectos formalmente establecidos.

Los pasos (Lefcovich, 2009) se mencionan a continuación: Definir el problema: ¿Debe definirse claramente en que problema se ha de trabajar?, ¿Por qué se trabaja en ese problema en particular?, ¿Quién es el cliente?, ¿Cuáles son los requerimientos del cliente?, ¿Cómo se lleva a cabo el trabajo en la actualidad?, ¿Cuáles son los beneficios de realizar una mejora?, Siempre debe tenerse en cuenta que definir correctamente un problema implica tener un 50% de su solución. Un problema mal definido llevará a desarrollar soluciones para falsos problemas.

Medir: El medir persigue dos objetivos fundamentales: 1. Tomar datos para validar y cuantificar el problema o la oportunidad. Esta es una información crítica para refinar y completar el desarrollo del plan de mejora. 2. Nos permiten y facilitan identificar las causas reales del problema. El conocimiento de estadística se hace fundamental. “La calidad no se mejora, a no ser que se la mida”.

Analizar: El análisis nos permite descubrir la causa raíz. Para ello se hará uso de las distintas herramientas de gestión de la calidad. Ellas son las siete herramientas estadísticas clásicas y las nuevas siete herramientas. Las herramientas de análisis deben emplearse para determinar dónde estamos, no para justificar los errores. Al respecto cabe acotar que el Diagrama de Pareto es a los efectos de darle prioridad a los factores que mayor importancia tienen en la generación de fallos o errores, pero no debe significar dejar de atender las demás causas. Al respecto Crosby señala que “a los numerosos pero triviales ni siguiera les hacen caso; les dejan que envenenen el producto o servicio para el consumidor. Consideran que no vale la pena dedicar tiempo a solucionarlos. En cambio para un auténtico enfoque de cero defectos, todos los elementos son importantes”.

Mejorar: En esta etapa asume una preponderancia fundamental la participación de todos los participantes del proceso, como así también la capacidad creativa, entre los cuales se encuentran el uso de nuevas herramientas como el Pensamiento Lateral y la Programación Neuro-Lingüística (PNL). La fase de mejora implica tanto el diseño como la implementación. En esta fase de diseño es muy importante la actividad de benchmarking a los efectos de detectar en otras unidades de la misma empresa o en otras empresas (competidoras o no) formas más efectivas de llevar a cabo un proceso.

Controlar: Es necesario confirmar los resultados de las mejoras realizadas. Debe por tanto definirse claramente unos indicadores que permitan visualizar la evolución del proyecto. Los

indicadores son necesarios pues no podemos basar nuestras decisiones en la simple intuición. Los indicadores nos mostrarán los puntos problemáticos de nuestro negocio y nos ayudarán a caracterizar, comprender y confirmar nuestros procesos. Mediante el control de resultados lograremos saber si estamos cubriendo las necesidades y expectativas de nuestros clientes. Es además primordial verificar mediante el control la estabilidad de los procesos. Distintos indicadores vinculados a Seis Sigma pueden y deben ser articulados en los Tableros de Comandos o Cuadros de Mando Integral a los efectos de permitir un monitoreo constante en la evolución de los mismos por parte de los diferentes funcionarios y responsables de los procesos productivos y de mejoras.

## RESULTADOS OBTENIDOS

La metodología aplicable a la Universidad Estatal de Sonora se puede describir de manera general de la siguiente manera:

Se clarificó la situación actual y se identificó las necesidades de mejora en los procesos relacionados al consumo de papel para impresión tipo Bond, materiales para impresión y reproducción (tintas, tóner, entre otros), combustibles, lubricantes, aditivos, carbón y sus derivados adquiridos, utilización de energía eléctrica y agua. Por medio del análisis del programa operativo anual, manual de calidad, diagrama de procesos, procedimientos y normatividad aplicable en el ámbito presupuestal. Se realizaron cursos para promover esta herramienta en beneficio de la de comunicación, ayudando a vender la idea y obtener el apoyo de otras personas. Se analizaron los diagramas de cascada  $Y=f(x)$ , diagrama de flujo, mapa del Proceso, diagrama Causa Efecto y diagrama de Pareto sobre la situación de la reducción de desperdicios y aprovechamiento de los recursos. Por medio de las metas del programa operativo anual, los informes de los avances presupuestales, los documentos contables y financieros, y la información de los procedimientos operativos se pudo recolectar los datos de interés del caso de estudios. El análisis de información por medio de la estadísticas descriptiva como la media, moda, mediana y desviación estándar para conocer situaciones específicas del fenómeno de estudio. Estandarizar en el Sistema de Gestión de la Calidad de la institución como una metodología continua que promueva la utilización efectiva de las acciones correctivas y preventivas detectas en los procesos.

## CONCLUSIONES

La estrategia de algunas empresas comprometidas con la satisfacción del cliente es implementar Seis Sigma como filosofía de mejora continua y como subsistencia de negocio. La competitividad no solo se basa en ser eficaces (cumplimiento de lo planeado), se traslada a que tan dinámico puedes atender las necesidades presentes y futuras de los clientes considerando las barreras presupuestales y la escasez de recursos. Con la aplicación de Seis Sigma en la Universidad se encamina el sistema de gestión hacia mejoras que representan grandes ahorros de costos, así como oportunidades para retener a nuestros estudiantes, mejorar la cobertura y atención a nuestros estudiantes, y construirse como una universidad con excelente nivel académico. Por otra parte, otro impacto que nos brinda la aplicación de seis sigma en la Universidad Estatal a fortalecer la intención de la norma ISO 9001:2008 en materia de planificación para implementar los procesos de seguimiento, medición, análisis y mejora necesarios que demuestren la conformidad con los requisitos del estudiante, asegurarse de la conformidad del sistema de gestión de la calidad, mejorar continuamente la eficacia del sistema de gestión de la calidad. Esto debe comprender la determinación de los métodos aplicables, incluyendo las técnicas estadísticas, y el alcance de su utilización. Así como la Mejora continua

que busca eficacia del sistema de gestión de la calidad mediante el uso de la política de la calidad, los objetivos de la calidad, los resultados de las auditorías, el análisis de datos, las acciones correctivas y preventivas y la revisión por la dirección.

Por otro lado, estas buenas prácticas administrativas contribuyen al eje de la gestión educativa de calidad del programa de desarrollo institucional de la Universidad Estatal de Sonora, su intención es lograr sistemas de planeación y programación estrictamente centrados en la mejora y aseguramiento de la calidad, los que permitan fortalecer los planes institucionales de acreditación de los programas que integran la oferta educativa. Igualmente busca consolidar la práctica de la planeación y evaluación institucionales, privilegiando su carácter constructivo para acceder a los propósitos educativos definidos. Los proyectos que son consolidados son: La certificación de procesos académicos y administrativos; Actualización de la normatividad; Planeación y evaluación operativa institucional; Planeación y organización institucional; Consolidar el sistema de información institucional; Rendición de cuentas.

Por último, la implementación de la metodología Seis Sigmas contribuye al cumplimiento de la normatividad de racionalidad y austeridad que marca el Gobierno del Estado de Sonora y el Gobierno Federal.

# ASPECTOS FISCALES EN MÉXICO, DEL DERECHO A LA SALUD COMO DERECHO HUMANO

Rigoberto Reyes Altamirano, Universidad De Guadalajara.

## RESUMEN

*Este trabajo, examina el aspecto fiscal del derecho a la salud, como derecho humano. Consideramos como aspecto fiscal en México, los gastos directos presupuestados para el año 2013, para atenderlo que incluye, entre otros pago de honorarios a médicos, enfermeras, investigadores y personal relacionado con el sector salud y como indirectos (gastos fiscales), los consistentes en las erogaciones realizadas para cubrir los beneficios fiscales que se otorgan a los contribuyentes, relacionados con el derecho a la salud, así como las deducciones o exenciones o impuestos especiales que las leyes fiscales mexicanas prevén, para hacer posible y viable, el referido derecho.*

**PALABRAS CLAVES:** Derechos Humanos, Derecho a la Salud, Aspectos Fiscales, Enfermedades, Gastos Fiscales, Tratados Internacionales

## TAX ISSUES IN MEXICO, THE RIGHT TO HEALTH AS A HUMAN RIGHT

### ABSTRACT

*This paper examines the fiscal aspect of the right to health as a human right. We consider fiscal aspect in Mexico, direct expenditures budgeted for 2013, to serve you including; payment of fees to physicians, nurses, researchers and staff involved in the health sector, the indirect (tax expenditures), consisting of the expenditures made to cover the tax benefits granted to taxpayers regarding the right to health, well as tax deductions or exemptions or special Mexican tax laws provide, to make possible and feasible that right.*

**JEL:** I1, I18, I31, I38

**KEYWORDS:** Human Rights, Right to Health, Fiscal Aspects, Diseases, Tax Expenditures, International Treaties

### INTRODUCCIÓN

En la presente investigación analizamos el aspecto fiscal del derecho a la salud, como derecho humano, partiendo de la premisa que en México existe un problema grave de salud pública por la obesidad y el sobrepeso y que debe tomarse en cuenta que “el costo total de tratamiento de enfermedades relacionadas al sobrepeso y la obesidad se duplicó entre 2000 al 2008, de \$35,000 millones de pesos, a \$67,000 millones de pesos, este gasto aumentará a \$150,000 millones de pesos en 2017, cifra equivalente a 5 veces el presupuesto de la UNAM en 2012 (\$32,000 millones de pesos). (Alianza para la salud, 2013). Para el “Acuerdo Nacional para la Salud Alimentaria: Estrategia contra el sobrepeso y la obesidad”, “el costo directo estimado que representa la atención médica de las enfermedades atribuibles al sobrepeso y la obesidad asciende a por lo menos 42,246 millones de pesos”. (Gaceta Parlamentaria 3887-IX)

Además de que no toda la población tiene acceso a los servicios de salud de las instituciones gubernamentales y para ello destacamos que según el Instituto Nacional de Estadística y Geografía e Informática (INEGI) el XII Censo General de Población y Vivienda 2000 y el Censo de Población y Vivienda 2010, en el año 2010, el 64.6 por ciento de la población es derecho habiente en los sistemas de salud del gobierno mexicano, mientras que el 33.8 por ciento, no lo es. ( INEGI aclara que estos porcentajes no suman el 100% porque hay rubros no especificados). (INEGI, 2010)

En otro segmento del derecho a la salud, encontramos que en México, el año 2010, existían 5 739 270 de personas con discapacidad física o mental. El mayor porcentaje de discapacidad, como lo es el 58.3 por ciento se refiere a la dificultad o imposibilidad para caminar o moverse y en segundo lugar, en un 27.2 por ciento es la incapacidad para ver. (INEGI, 2010). Otras de las complicaciones para dar plenitud al derecho a la salud “se refiere a la necesidad de mejorar el surtimiento de medicamentos de los afiliados al Sistema de Protección Social en Salud. El mayor problema en este sentido se encuentra en los hospitales. Este hallazgo obliga a revisar la política de medicamentos del Sistema de Protección Social en Salud, siendo asimismo pertinente impulsar las reformas legales necesarias que permitan hacer eficiente la compra y distribución de insumos para la salud, aprovechando la experiencia federal y la obtención de mejores condiciones por volúmenes de compras a nivel nacional”. (Gaceta Parlamentaria 3857-M, 2013)

Por ello ello destacamos que el concepto de Derecho a la Salud de la Organización Mundial de la Salud (OMS), en el sentido de que constituye “el estado completo de bienestar físico, mental y social y no solamente la ausencia de afecciones o enfermedades; y el logro del grado más alto posible de salud es un objetivo social de la mayor importancia”, (Roccatti, M., s.f.), no es recogido por el artículo 12, del Pacto Internacional de los Derechos Económicos, Sociales y Culturales (PIDESC), sino que “se reconoce que el derecho a la salud abarca una amplia gama de factores socioeconómicos que promueven las condiciones merced a las cuales las personas pueden llevar una vida sana, y hace ese derecho extensivo a los factores determinantes básicos de la salud, como a la alimentación y la nutrición, la vivienda, el acceso a agua limpia potables y a condiciones sanitarias adecuadas, condiciones de trabajo seguras y sanas y un medio ambiente sano”. (Comisión de Derechos Económicos Sociales y Culturales, 2000). En complemento al derecho a la salud, existe la propuesta de crear “mecanismos de protección que les permitan contar con un nivel de vida digno y puedan cubrir sus necesidades durante la vejez o ante la eventualidad del desempleo” y para ello se propone reformar los artículos 4o., 73 y 123 de la Constitución Política de los Estados Unidos Mexicanos, en materia de seguridad social universal. (Gaceta Parlamentaria 3857-H, 2013)

Bajo estas connotaciones, en este trabajo, estamos considerando los gastos directos y los indirectos (gastos fiscales,) (SHCP, 2012) que realiza el Estado Mexicano para atender el derecho a la salud. En el aspecto directo acudimos al Presupuesto de Egresos de la Federación 2013 (PEF, 2013) y lo comparamos con el proyecto de Presupuesto de Egresos de la Federación para el año 2014, con el fin de señalar los montos que se destinan para atender y fortalecer el derecho a la salud en México. En el apartado de gastos indirectos o gastos fiscales, examinamos, entre otras cuestiones, las exenciones o tasas especiales referidas al tema del derecho a la salud, en el impuesto sobre la renta (ISR) y en el impuesto al valor agregado (IVA), así como las tasas específicas del impuesto especial sobre producción y servicios (IEPS) para combatir adicciones que provocan enfermedades físicas o mentales, como son los casos de las bebidas alcohólicas y cerveza, el tabaco y el cigarro y el juego con apuestas y sorteos.

Hemos incluido también en este documento, la propuesta en México, de crear para el 2014, nuevas tasas en el IEPS, para combatir la obesidad y el sobrepeso a través de gravar la enajenación de alimentos no básicos con alta densidad calórica y de las bebidas saborizadas. (Gaceta Parlamentaria 3887-IX, 2013).

Ambas tasas especiales en el IEPS, seguramente tienen como origen que según la Organización Panamericana de la Salud (OPS), el mayor número de muertes por enfermedad en el período 2000-2010, se deriva de la diabetes mellitus, tipo 2, cuyo origen preponderante es el sobrepeso y la obesidad. (OPS, 2012)

## REVISIÓN DE LITERATURA

### El Marco Jurídico Internacional y Nacional Del Derecho a la Salud

Como literatura jurídica obligatoria para el estudio del derecho a la salud, en la categoría de los derechos sociales, consideramos los textos de los artículos 1 y 4, de la Constitución Política de los Estados Unidos Mexicanos (CPEUM), el artículo 12 del PIDESC, así como el artículo 10 del Protocolo Adicional a la Convención Americana sobre Derechos Humanos en Materia de Derechos Económicos, Sociales y Culturales, (Protocolo De San Salvador). Complementariamente también se reconoce en el inciso iv) del apartado e) del artículo 5 de la Convención Internacional sobre la Eliminación de todas las Formas de Discriminación Racial, de 1965; en el apartado f) del párrafo 1 del artículo 11 y el artículo 12 de la Convención sobre la eliminación de todas las formas de discriminación contra la mujer, de 1979; así como en el artículo 24 de la Convención sobre los Derechos del Niño, de 1989. Comisión de Derechos Económicos Sociales y Culturales, Observación General N° 14, (2000), CUESTIONES SUSTANTIVAS QUE SE PLANTEAN EN LA APLICACIÓN DEL PACTO INTERNACIONAL DE DERECHOS ECONÓMICOS, SOCIALES Y CULTURALES. El artículo 10 del Protocolo de San Salvador, señala los siguientes lineamientos del Derecho a la Salud:

#### Artículo 10 Derecho a la Salud

1. *Toda persona tiene derecho a la salud, entendida como el disfrute del más alto nivel de bienestar físico, mental y social.*
2. *Con el fin de hacer efectivo el derecho a la salud los Estados partes se comprometen a reconocer la salud como un bien público y particularmente a adoptar las siguientes medidas para garantizar este derecho:*
  - a. *la atención primaria de la salud, entendiendo como tal la asistencia sanitaria esencial puesta al alcance de todos los individuos y familiares de la comunidad;*
  - b. *la extensión de los beneficios de los servicios de salud a todos los individuos sujetos a la jurisdicción del Estado;*
  - c. *la total inmunización contra las principales enfermedades infecciosas;*
  - d. *la prevención y el tratamiento de las enfermedades endémicas, profesionales y de otra índole;*
  - e. *la educación de la población sobre la prevención y tratamiento de los problemas de salud, y*
  - f. *la satisfacción de las necesidades de salud de los grupos de más alto riesgo y que por sus condiciones de pobreza sean más vulnerables.*

Mientras que el artículo 4, párrafo quinto, CPEUM, sólo establece el marco regulatorio del derecho a la salud, al señalar que “Toda persona tiene derecho a la protección de la salud. La Ley definirá las bases y modalidades para el acceso a los servicios de salud y establecerá la concurrencia de la Federación y las entidades federativas en materia de salubridad general, conforme a lo que dispone la fracción XVI del artículo 73 de esta Constitución”.

Es decir, para una regulación integral del derecho a la salud tendríamos que acudir a los tratados internacionales que es más completa frente al artículo 4, CPEUM. En efecto la Segunda Sala de la Suprema Corte de Justicia de la Nación (SCJN) determina que no es necesario acudir a los tratados internacionales si la regulación es integral en la CPEUM, pero es el caso, como ya lo dijimos que precisamente son los tratados internacionales los que establecen un panorama más integral del derecho a la salud. la tesis que comentamos tiene el título “derechos humanos. su estudio a partir de la reforma al artículo 1o. constitucional, publicada en el diario oficial de la federación el 10 de junio de 2011, no implica necesariamente que se acuda a los previstos en instrumentos internacionales, si resulta suficiente la previsión que sobre éstos contenga la constitución política de los estados unidos mexicanos. (scjn, 2012). décima época, semanario judicial de la federación y su gaceta, tomo: libro viii, mayo de 2012, página: 1348 Una vez ubicado el derecho a la salud como integrante de los derechos sociales consagrados en la CPEUM, en el PIDESC y en el “Protocolo De San Salvador” nos abocamos al examen de los gastos directos y gastos fiscales que el gobierno federal mexicano ha destinado para cumplir con el mandato de hacer posible y viable el Derecho a la salud.

#### Los Ordenamientos Presupuestales y las Leyes Fiscales y su Incidencia en el Derecho a la Salud

En materia de gasto directo para atender el derecho a la salud, examinamos el Presupuesto de Egresos de la Federación de los años 2013 (PEF, 2012) y el proyecto de Presupuesto de Egresos de la Federación para el año 2014. (Gaceta Parlamentaria 3857-B, 2013). Referente a los gastos indirectos o gastos fiscales, estamos revisando a la Ley del Impuesto sobre la Renta (LISR), en cuanto a las deducciones que permite aplicar por las donaciones que se realicen a instituciones autorizadas y que atiendan al sector salud (artículo 31, fracción XXII, LISR) y la deducción por los pagos de honorarios médicos y dentales, así como gastos hospitalarios (artículo 176, fracción I, LISR). Tratándose de la ley del Impuesto al Valor Agregado (LIVA), analizamos: la tasa del 0% por la enajenación de medicinas de patente (artículo 2-A, fracción I, inciso b), LIVA) y la exención por la prestación de servicios profesionales de medicina, así como los hospitalarios, de radiología, de laboratorios y estudios clínicos. (artículo 15, fracción XIV y XV, LIVA). Como medidas impositivas para atender problemas específicos de salud pública, analizamos a la Ley del Impuesto Especial Sobre Producción y Servicios (LIEPS), que establece tasas especiales para combatir la adicción a bebidas alcohólicas y cerveza, al tabaco y al cigarro (artículo 2, fracción I, incisos A y C, LIEPS), así como la adicción al juego con apuestas y sorteos (artículo 2, fracción II, inciso B, LIEPS) Incluimos, en esta investigación, la propuesta en México, de crear para el año 2014, una tasa especial en el IEPS, que pretende combatir la obesidad y el sobrepeso, para gravar la enajenación de alimentos no básicos con alta densidad calórica, así como las bebidas saborizadas. (Gaceta Parlamentaria 3897-X, 2013).

#### **METODOLOGÍA**

Utilizamos la investigación cuantitativa y cualitativa para determinar los montos de los recursos económicos que se destinan a los gastos directos e indirectos (gastos fiscales) en el estado mexicano, así como cuáles son los instrumentos jurídicos que las leyes fiscales aplican para tal fin. En materia cuantitativa, para conocer en millones de pesos, los gastos directos que el

gobierno mexicano realizó tomando en cuenta el PEF, 2013, comparado con el proyecto de presupuesto de egresos para el año 2014, (Gaceta Parlamentaria 3857-B, 2013), consultamos los referidos ordenamientos y para determinar a que rubro o concepto se destina el mayor número de recursos económicos, se presenta el esquema siguiente:

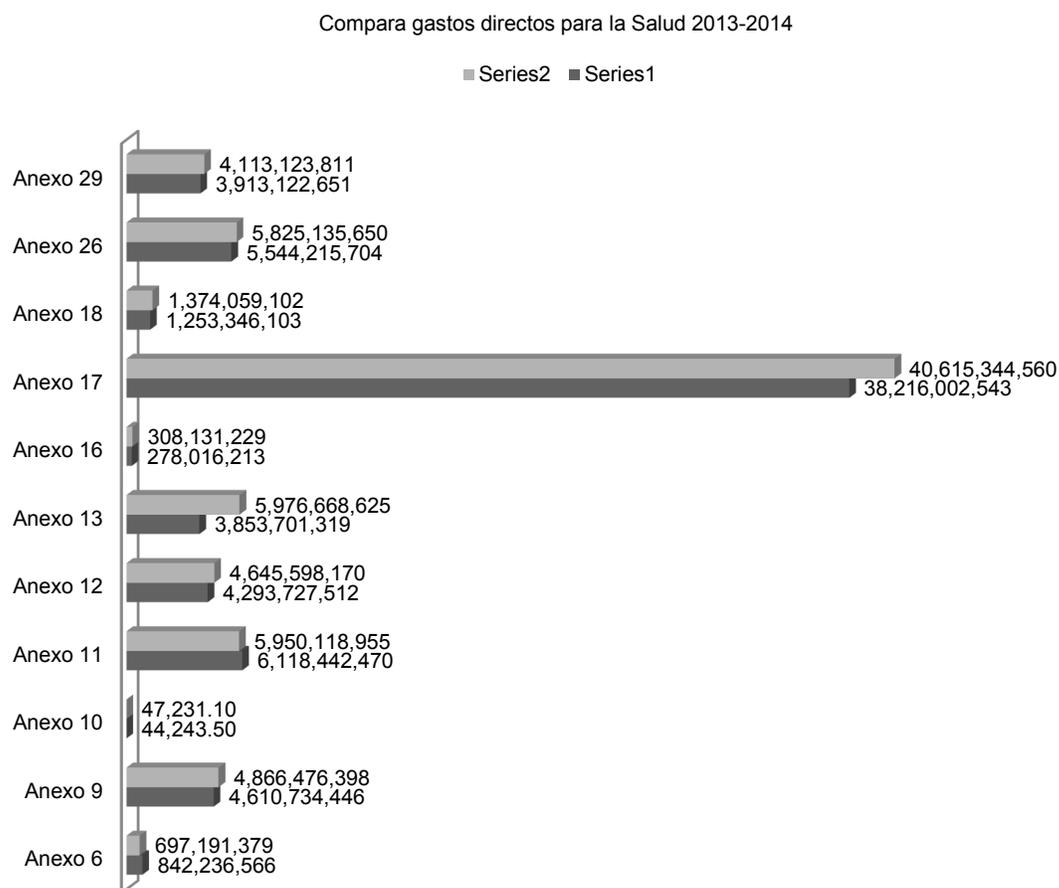

Figura de elaboración propia. En este se refleja que el rubro que mayor recursos recibe es para la atención de niñas, niños y adolescentes (Anexo 17), le sigue la atención para grupos vulnerables (Anexo 13), después se ubica el programa de ciencia, tecnología e innovación, y el cuarto en importancia es el relativo al programa de desarrollo humano.

Tratándose de gastos indirectos, en materia de exenciones o tasas especiales en el ISR e IVA, en millones de pesos, tenemos los resultados siguientes: (SHCP, 2012)

GASTOS FISCALES PARA ATENDER EL DERECHO A LA SALUD				
Concepto	Año 2012	Año 2013	PIB 2012	PIB 2013
Exenciones en gastos de honorarios médicos, dentales y otros gastos hospitalarios (ISR)	3,967,	4,113	0.0258	0.0249,
Exenciones en primas de seguros de gastos médicos (ISR)	1,507	1,569	0.0098	0.0095
Tasa 0% en enajenación de medicinas (IVA)	14,222	15,279	0.0925	0.0925
Exención el pago del IVA por servicios profesionales de medicina	2,491	2,676	0.0162	0.0162

Tabla de diseño propio. En ésta encontramos que el mayor gasto fiscal se refiere al subsidio a la tasa del 0% (en el IVA la tasa general es del 16%) que corresponde a la enajenación de medicinas.

Respecto a tasas especiales impositivas para combatir adicciones, encontramos que en la Ley de Ingresos de la Federación para el ejercicio fiscal del 2013 (LIF, 2012), en comparación con el

proyecto de la LIF para el año 2014, (Gaceta Parlamentaria 3897-X) se estimaron recaudar en millones de pesos, las cantidades siguientes:

INGRESOS A RECAUDAR POR TASAS ESPECIALES EN EL IEPS PARA COMBATIR ADICCIONES		
Concepto	Año 2013	Año 2014
Por enajenar bebidas con contenido alcohólico y cervezas	33,143.0,	36,752.0
Por enajenar Tabacos labrados	35,379.1	37,208.4
Por juegos con apuestas y sorteos	2,360.6.	3,012.2

Por lo que se refiere a la propuesta de crear para el año 2014, una tasa especial del 8% en el IEPS, para gravar la enajenación de alimentos no básicos con alta densidad calórica, se tiene programado recaudar, la cifra de 5,600.0., mientras que por las denominadas bebidas saborizadas se proyecta la cantidad de 12,455.0, ambas en millones de pesos. (Gaceta Parlamentaria 3897-X, 2013) Por la investigación cualitativa, descubrimos que el gobierno federal a través de los denominados gastos fiscales, establece instrumentos financieros en materia fiscal para fortalecer el derecho a la salud, que consisten en exenciones, tasas especiales y hasta impuestos específicos para tal fin. La explicación de éstos se plasma en los resultados.

## RESULTADOS

### Deducciones en el Impuesto Sobre la Renta (ISR) en Materia Del Derecho a la Salud

La regulación normativa se encuentra en los artículos 31, fracción XXII y en el 176, fracción I, LISR. Estos gastos fiscales apoyan y fortalecen el derecho a la salud de los contribuyentes que realicen pagos por prestación de servicios médicos y dentales, incluyendo prótesis y lentes ópticos graduados para corregir defectos visuales, o bien, que donen mercancías a instituciones autorizadas para atender requerimientos de salud.

*Tasa 0% y exención en el IVA, en materia del derecho a la salud:* Tratándose de este tributo, como se verá enseguida, son dos instrumentos que se utilizan para fortalecer el derecho a la salud, la enajenación de medicina que está sujeta a tasa 0% (la tasa general es del 16%) y la exención en su pago, tratándose de servicios profesionales de medicina .

*Tasas especiales para combatir adicciones en el IEPS:* Su regulación es el artículo 2, fracción I, inciso A y C y fracción II, LIEPS. Las tasas específicas se refiere al combate a las adicciones a las bebidas alcohólicas y cerveza (que van del 25 al 50%) , tabacos y cigarros (que van del 30.4 al 160%) y al juego con apuestas y sorteos (con una tasa del 30%)

Propuestas De Tasas Especiales Para El Año 2014, Para Combatir La Obesidad Y El Sobrepeso. (Gaceta Parlamentaria 3897-X, 2013).\_Para el año 2014, existen las propuestas de crear tasas especiales en los productos siguientes:

A.- Bebidas saborizadas, (artículo 2, fracción I, apartado G, LIEPS) que propone una cuota de \$1.00 por litro. Dentro de dicho concepto se contemplan a “*concentrados, polvos, jarabes, esencias o extractos de sabores, que al diluirse permitan obtener bebidas saborizadas; y jarabes o concentrados para preparar bebidas saborizadas*”.

B.- Alimentos no básicos con alto contenido calórica, con una tasa del 8%, (artículo 2, fracción I, apartado J, LIEPS), entre éstos se incluyen a las *Botanas, productos de confitería, Chocolate y demás productos derivados del cacao, Flanes y pudines, Dulces de frutas y hortalizas, cremas de*

*cacahuates y avellanas, Dulces de leche, alimentos preparados a base de cereales y Helados, nieves y paletas de hielo.*

Aspectos negativos de algunos programas de gobierno en materia tributaria que consideramos como obstáculos para el pleno desarrollo del derecho a la salud. Contrario a las políticas públicas del gobierno mexicano, de fortalecer el derecho a la salud y procurar una vida digna para los trabajadores a través de gastos fiscales, existen medidas tributarias que entran en contradicción con las antes analizadas, como es el caso de no establecer exenciones en el pago del IVA a la enajenación de artículos o productos para personas con discapacidad, como pueden ser sillas de ruedas, andaderas, prótesis y aparatos ortopédicos.

Igualmente el artículo 15, fracción XV, LIVA, si bien considera exentas, la prestación de servicios profesionales de medicina, hospitalarios, de radiología, de laboratorios y estudios clínicos, también existe como obstáculo que impide la plena realización del derecho a la salud, que no están exentos los servicios hospitalarios, de radiología, de laboratorios y estudios clínicos que presten los particulares.

## CONCLUSIONES

Regulación jurídica en Tratados Internacionales y en la CPEUM del Derecho a la Salud Estimamos que para una regulación integral del derecho a la salud tendríamos que acudir a los tratados internacionales frente a la contenida en el artículo 4, CPEUM, bajo los lineamientos de la Segunda Sala (SCJN) que determina que no es necesario acudir a los referidos instrumentos internacionales si la regulación es más completa en la CPEUM, pero es el caso, como ya lo dijimos que precisamente son los tratados internacionales los que establecen un panorama más integral del derecho a la salud.

Los ordenamientos fiscales que inciden en fortalecer y proteger el derecho a la salud La legislación fiscal mexicana, tales como la LISR y LIVA, establecen deducciones, exenciones y tasas especiales, para apoyar a los contribuyentes cuando realicen gastos médicos, hospitalarios, de radiología o para la compra de medicinas los cuales fortalecen el derecho a la salud entre la población.

Así también las políticas públicas en este ámbito persiguen erradicar adicciones como aspectos negativos del derecho a la salud y para ello se crearon tasas especiales, en el IEPS. Estas adicciones van referidas al consumo de bebidas alcohólicas y cervezas, tabaco y cigarros y al juego con apuestas y sorteos. La preocupación del gobierno mexicano de combatir la obesidad y el sobrepeso, para el año 2014, a través de instrumentos fiscales. Efectivamente, para el año 2014, (Gaceta Parlamentaria 3897-X, 2013), existe la propuesta de establecer nuevas tasas en el IEPS para combatir la obesidad y el sobrepeso, a través de gravar los alimentos no básicos con alta densidad calórica y las bebidas saborizadas.

En el primer rubro se proyecta recaudar la cifra de 5, 600.0., mientras que por el segundo, se estima la cantidad de 12, 455.0, ambas en millones de pesos. (Gaceta Parlamentaria 3897-X, 2013) La propuesta puede ser muy positiva para atender el derecho a la salud, siempre que estos ingresos tributarios se destinen directamente para atender estas enfermedades. Lo anterior es importante destacar, ya que tratándose de las tasas especiales en el IEPS para combatir, por ejemplo, la adicción al tabaco y al cigarro, no existen evidencias que así haya sido.

*El gasto público en salud como porcentaje del gasto público total:* A decir de la OPS, (2012), el gasto público en salud como porcentaje del gasto público total, en el año 2010, fue del 15.3 y en porcentaje del Producto Interno Bruto (PIB) del 3.1. Este gasto público total, suponemos que incluyen los gastos directos y los gastos fiscales que el gobierno mexicano destina para atender al derecho a la salud.

### Los Rezagos en el Derecho a la Salud en México

Según cifras oficiales, (INEGI, 2010), en el año 2010, el 64.6 por ciento de la población es derecho habiente en los sistemas de salud del gobierno mexicano, mientras que el 33.8 por ciento, no lo es, lo que implica que existe un porcentaje considerable de la población mexicana que no encuentra amparo para atender sus enfermedades en centros hospitalarios y de que existe desabasto en medicinas, por lo que existe una propuesta de reforma a la ley general de salud, para corregir estas desviaciones, existe la propuesta de reformar la Ley General de Salud en México. (Gaceta Parlamentaria 3857-M, 2013) Como claroscuros de las herramientas fiscales para fortalecer el derecho a la salud, tenemos que no se prevén incentivos o exenciones para la compra de artículos destinados a la población que tiene discapacidad y que los servicios hospitalarios, de radiología, de laboratorios y estudios clínicos, no están exentos cuando los prestan los particulares, por lo cual se impide la plena realización del aludido derecho humano.

# TURISMO, ACTIVIDAD ECONÓMICA QUE COADYUVA A ELEVAR LA CALIDAD DE VIDA DE LOS SONORENSES

Adrialy Perez Gaxiola, Universidad Estatal de Sonora  
Mario Camberos Casto, Centro de Investigación en Alimentos y Desarrollo, A.C.  
Emilio Hernández Gómez, Universidad Autónoma de Baja California

## RESUMEN

*El bienestar es el proceso tendiente a mejorar la calidad de vida de una población en un espacio territorial determinado, que comprende los aspectos económicos y sociales ligados al desarrollo de las capacidades de los individuos y a la expansión creciente de sus libertades. El objetivo de este artículo es evidenciar la importante participación del turismo como fuente generadora de desarrollo económico para el estado de Sonora, así como poner de manifiesto el impacto que dicha actividad puede tener sobre el bienestar económico y social de los sonorenses, si fuera sustentablemente maximizada su explotación.*

**PALABRAS CLAVES:** Turismo, Bienestar Económico, Bienestar Social, Turismo En Favor De Los Pobres

## TOURISM, ECONOMIC ACTIVITY WHICH HELPS TO RAISE THE QUALITY OF LIFE OF SONORENSES

### ABSTRACT

*Wellness is the process to improve the quality of life of a population on a given territory, which includes economic and social aspects related to the development of the capacities of individuals and the growing expansion of their liberties. The aim of this paper is to demonstrate the important role of tourism as a source of economic development for the state of Sonora, as well as to highlight the impact that the activity may have on the economic and social welfare of Sonora, if sustainably maximized their exploitation.*

**JEL:** 130, 131, 138

**KEYWORD:** Tourism, economic welfare, social welfare, tourism for the poor

### INTRODUCCIÓN

La prioridad para los gobiernos del mundo y específicamente de los países latinoamericanos ha sido que sus gestiones como líderes, contribuyan a mejorar el bienestar económico y social de sus ciudadanos, situación que no es ajena a México ya que sus gobernantes tienen como principal responsabilidad garantizar el pleno ejercicio de los derechos sociales consagrados en la Constitución Política de los Estados Unidos Mexicanos, asegurando el acceso de toda la población al desarrollo social". Considerando la importancia económica del turismo en la economía del país, es conveniente señalar que el impacto del turismo se mide, no sólo por la satisfacción de los turistas con los distintos servicios, calidad total, sino también por la contribución del turismo al bienestar económico y social de las regiones; ya que como señala

Camberos, (2011), la búsqueda de la satisfacción de las necesidades materiales y sociales crecientes de los individuos, las familias y los hogares para lograr el máximo bienestar ha sido el objetivo perseguido por todas las naciones a lo largo del desarrollo económico.

Por ello es necesario conceptualizar el termino bienestar, al respecto Huesca, Camberos, y Calderón, (2011) refieren el bienestar como un proceso tendiente a mejorar la calidad de vida de una población en un espacio territorial determinado, que comprende los aspectos económicos y sociales ligados al desarrollo de las capacidades de los individuos y a la expansión creciente de sus libertades. En este sentido, en el presente artículo se sustenta la idea de que el turismo puede contribuir a elevar el nivel de vida de los sonorenses, el desafío que se plantea es vincular el desarrollo del turismo en la lucha contra la pobreza, considerada esta como la ausencia de bienestar, en particular la pobreza extrema (pobreza alimentaria), a partir de estrategias integrales, incluyentes, sostenibles y participativas, mediante la construcción de una nueva ruta estratégica del turismo en Sonora.

### Panorama del Turismo a Nivel Mundial y Nacional

Según la Organización Mundial del Turismo, el turismo comprende las actividades que realizan las personas durante sus viajes y estancias en lugares distintos al de su entorno habitual, por un período consecutivo inferior a un año y mayor a un día, con fines de ocio, por negocios o por otros motivos. (wikipedia, 2011)

### Panorama Mundial del Turismo

La Secretaria de Turismo, SECTUR, (2013) señala que el turismo representa el 9% del Producto Interno Bruto (PIB) mundial con más de 1 millón de millones de turistas en 2012 y generó ingresos por un billón 75 mil millones de dólares en el mismo año. Según un comunicado de prensa de la OMT (2013), *en la ciudad de Madrid, la demanda turística internacional supero las expectativas en la primera mitad del 2013 llegando a un 5% durante la primera mitad de 2013, en comparación con el mismo periodo de 2012, llegándose a los casi 500 millones.* Los destinos turísticos del mundo recibieron en los seis primeros meses de 2013 alrededor de 494 millones de visitantes que pernoctaron, según la edición preliminar del *Barómetro OMT del Turismo Mundial*. Estas cifras significan un crecimiento del 5% o 25 millones de turistas internacionales más que en el mismo periodo de 2012. El crecimiento fue más significativo en los destinos de economías emergentes (+6%) que en las avanzadas (+4%), una tendencia que ha caracterizado al sector durante muchos años.

La Organización Mundial del Turismo (2013) en su libro llamado Panorama OMT del Turismo Internacional, señala lo siguiente:

- Las llegadas de turistas internacionales (visitantes que pernoctan) en todo el mundo superaron por primera vez en su historia los mil millones en 2012, 1.035 millones de turistas cruzaron fronteras frente a los 995 millones de 2011.
- La región de Asia y el Pacífico registró el mayor crecimiento de todas las regiones de la OMT con un incremento del 7% o, lo que es lo mismo, 16 millones de llegadas de turistas internacionales más. África obtuvo un aumento del 6%, equivalente a tres millones de turistas más, alcanzando por primera vez en su historia los 50 millones. Las Américas también experimentaron un crecimiento sostenido con un 5% de aumento en las llegadas, es decir 7 millones de llegadas más.

- En Europa, la región más visitada del mundo, que representa más de la mitad del total mundial, logró un aumento del 3% o 18 millones de llegadas. Oriente Medio (-5%) todavía no ha logrado retornar al crecimiento, a pesar de que algunos destinos tuvieron, de hecho, unos resultados bastante buenos y otros consiguieron una recuperación moderada.
- El crecimiento de los ingresos por turismo internacional, creció un 4% en términos reales, es similar al crecimiento de las llegadas.
- En 2012, los ingresos por turismo internacional alcanzaron 1 billón 75 mil millones de dólares de los EE.UU.
- En 2012 China se convirtió en el primer mercado del mundo en gastos por turismo internacional con 102.000 millones de dólares.

Se espera que el crecimiento continúe en 2013 con valores situados entre el 3% y el 4%, ligeramente por debajo del resultado de 2012 y en consonancia con las previsiones de la OMT a largo plazo. Por regiones de la OMT, las mejores perspectivas en 2013 son para Asia y el Pacífico (entre el 5% y el 6%), seguida de África (entre el 4% y el 6%), las Américas (entre el 3% y el 4%), Europa (entre el 2% y el 3%) y Oriente Medio (entre el 0% y el 5%). (UNWTO, 2013) La OMT, (2013) estima que para el 2020, Las llegadas de los turistas internacionales alcanzarán los 1000 millones, La industria turística generará uno de cada 12 empleos y que las llegadas internacionales puedan alcanzar los 1.600 millones, de estas llegadas en todo el mundo, 1.2 millones serán intrarregionales y 378 millones serán viajeros de largo recorrido.

En cuanto a las llegadas totales de turistas por regiones para el 2020, se estima que las tres primeras regiones receptoras serán Europa (717 millones, Asia Oriental y el Pacífico (379 millones) y las Américas (282 millones), seguidas por África, Oriente Medio y el Sur de Asia. Leclercq & Buchner, (2011) señalan en su escrito titulado “Turismo en favor de los pobres: Ampliación de oportunidades, reducción de la pobreza de los países en desarrollo a través del turismo”, que el Consejo Mundial de Viajes y Turismo prevé que el sector será uno de los que registre más rápido crecimiento a escala mundial entre 2011 y 2021, creando unos 66 millones de puestos de trabajo y contabilizando el 9,6% del PIB (a partir del 9,1%).

### Panorama Nacional del Turismo

Para muchos países del mundo, como España o Italia, el turismo se encuentra entre las primeras actividades económicas de importancia por su aportación al PIB y a la generación de empleo de dichas naciones; en especial en aquellos países ricos en recursos naturales y culturales, tal es el caso de México, donde el turismo significa uno de los sectores de la economía más importantes, ubicándose solo detrás de los ingresos petroleros y de las remesas de los mexicanos en el exterior. (Enríquez & Méndez, 2012) Datos del primer informe de actividades de la SECTUR (2013), describen, que de acuerdo a información publicada en junio de 2013, por la OMT correspondiente al cierre de 2012, que con excepción de Estados Unidos, México es el país más visitado del continente americano (23.4 millones de visitantes), al recibir 43% más turistas que Canadá, así como un 48% más turistas que los que llegan conjuntamente a Brasil, Argentina y República Dominicana.

México es uno de los tres países de la OCDE que mayores beneficios económicos obtiene de su actividad turística. La Industria turística en México emplea 2 millones 420 mil personas, lo que lo sitúa como el 8vo país de la OCDE cuya actividad turística emplea al mayor número de personas respecto de la ocupación total de cada nación. (International social Tourism Organisation, 2011).

Datos de la importancia del turismo para el 2012 nos indican que el sector turístico es la tercera fuente de ingresos para el país, México es el octavo país más visitado a nivel mundial; recibe más de 20 millones de turistas al año. (Actividades Económicas, 2011), y el primero más visitado en América Latina (C.C., 2012) El turismo contribuyó en el 2012 con el 8.5% del PIB nacional, su aportación al PIB generó 2.5 millones de empleos directos y 5.0 millones de indirectos. El porcentaje de participación del PIB turístico en el total nacional en México, es mayor al de países como Austria y Nueva Zelanda. (notimex, 2013).

En lo referente a estadísticas de la participación del turismo en la economía nacional para el 2013, el Instituto Nacional de Estadística y Geografía (INEGI) presento los resultados de los indicadores Trimestrales de la Actividad Turística (ITAT) para el trimestre de enero-marzo del 2013. En los resultados se pueden apreciar que el PIB Turístico creció 2.1% en términos reales respecto al mismo periodo de un año antes, producto del aumento en la demanda de los servicios turísticos. (Tabla 1)

En cuanto al Indicador Trimestral del Consumo Turístico Interior avanzó 2.2% comparado con el mismo trimestre del 2012. El consumo del turismo interno se incrementó 2.7%, en tanto que el del turismo receptivo disminuyó (-) 0.8 por ciento. (Tabla 1)

Tabla 6: Indicador Trimestral del PIB Turístico y Consumo Turístico Interior, Durante el Primer Trimestre de 2013. (Variación Porcentual Real Respecto al Mismo Trimestre de un Año Antes)

PIB Turístico			Consumo Turístico Interno		
Total	Bienes	Servicios	Total	Interno	Receptivo
2.1	(-2.6)	2.8	2.2	2.7	(-0.8)

(INEGI, 2013)

Según datos de SECTUR, (2013), entre enero y junio de 2013 la captación de ingresos por visitantes internacionales a México sumó 7 mil 119 millones de dólares. El gasto medio de los visitantes internacionales ascendió a 185.7 dólares durante los primeros seis meses de 2013. El mismo autor señala, que durante los primeros seis meses de 2013, el superávit de la balanza turística se ubicó en 3 mil 130 millones de dólares, como resultado de los ingresos generados que sumaron 7 mil 119 millones de dólares, y de egresos que alcanzaron un monto de 3 mil 989 millones dólares. Dicha cifra representó un incremento de 9.7% en comparación con el saldo de 2 mil 854 millones de dólares observado durante el primer semestre de 2012. (SECTUR, 2013)

#### Turismo, Actividad Económica Alternativa Que Coadyuva a Elevar la Calidad de Vida de los Sonorenses

La industria turística está adquiriendo un papel cada vez más importante en la economía mundial y en la particular de cada país. En el mundo desarrollado uno de sus principales atractivos radica en su gran potencial de generación de empleo, mientras que en los subdesarrollados, se le pudiera considerar como una solución rápida a su problema de atraso económico; de ahí que el enfoque de este artículo sea en pro de considerar al turismo como actividad económica complementaria que contribuya a mejorar la calidad de vida de los sonorenses. Brida, Pereyra, Such, & Pulina, (2012), señalan que uno de los temas más ampliamente estudiados y discutidos en la economía del turismo es la relación entre este sector y el crecimiento de una economía, tanto mundial, nacional como estatal. En la actualidad es ampliamente aceptado que el turismo tiene un efecto positivo en el desarrollo económico de largo plazo a través de distintos canales. Los mismos autores señalan, que el turismo es un sector que estimula otras actividades económicas industriales a través de efectos directos e indirectos.

Un incremento en el gasto turístico produce un aumento en la actividad de las industrias relacionadas, y la variación global será mayor que la inyección de gasto inicial. Considerando la importancia económica del turismo, es conveniente señalar que el impacto del turismo se mide, no sólo por la satisfacción de los turistas con los distintos servicios, calidad total, sino también la contribución del turismo al bienestar económico y social regional. El desarrollo del turismo sostenible es uno de los desafíos que actualmente enfrentan muchos países en el Hemisferio Occidental, para quienes puede constituir una herramienta eficaz para el combate a la pobreza, aunque si bien se reconoce que el turismo, como actividad generadora de riqueza, contribuye significativamente al crecimiento económico de muchos países, el crecimiento económico no necesariamente aumenta el bienestar.

Para la Organización de los Estados Americanos, OEA, el éxito en el mantenimiento de los beneficios de turismo para contribuir a la mitigación de la pobreza, sólo se puede lograr a través de la continua diversificación, innovación y actualización del producto de turismo, así como el fortalecimiento de capacidades e instituciones. (OEA, 2012) La Organización de las Naciones Unidas, (2012), establece que el concepto turismo a favor de los pobres es reciente; el Departamento para el Desarrollo Internacional (DFID) del Reino Unido acuñó la frase en los años noventa y varios Organismos de las Naciones Unidas la adoptaron en este siglo. (ONU, 2012)

Si bien hay algunas pruebas empíricas que apoyan el nexo entre crecimiento del turismo, la expansión económica y en general la reducción de la pobreza, la evidencia de esta relación en América Latina y el Caribe, en el mejor de los casos, es escasa. (OEA, 2012). En este contexto el pasado 14 de octubre del 2013, Sánchez Estrada, subsecretario de Planeación Turística de México, afirmó que el turismo es un poderoso instrumento para generar crecimiento económico y fortalecer el desarrollo de las regiones, Sánchez Estrada, destacó, que este sector es también un factor de igualdad que fomenta la inclusión y el desarrollo de grupos sociales en condiciones menos favorables. Estrada, manifestó que la Política Nacional Turística, instrumentada por el Gobierno de la República, tiene la finalidad de aprovechar el potencial turístico de México, generar una mayor derrama económica en el país, y hacer del turismo una verdadera palanca de desarrollo y bienestar social. (Notimex, 2013)

En este sentido, la finalidad del presente artículo es poner de manifiesto que Sonora cuenta con los elementos necesarios, para que a través de un adecuado aprovechamiento de sus recursos naturales, culturales, humanos, materiales; mediante el turismo, pueda contribuir a disminuir la pobreza que aqueja al estado, es decir, el desafío del artículo, es poner de manifiesto vínculos que evidencien el potencial que el turismo puede tener en la lucha contra la pobreza en Sonora, entendida esta como la pérdida de bienestar, en particular la pobreza extrema (pobreza alimentaria). En referencia al tema de la pobreza, Sonora ocupa el lugar número 30 a nivel nacional, (selección de más pobre a menos pobre), el 29.1 % de su población vive en pobreza, lo que equivale a decir que 821 mil personas sufren este mal social, por otro lado el 5.0% de los sonorenses viven en pobreza extrema, es decir, que 139 mil sonorenses no tienen ni siquiera para comer. Si analizamos estos números y los comparamos con los de Chiapas, estado que presenta el mayor número de pobres (74.7%. (3,782.3), las cifras no son tan alarmantes, pero el solo hecho de que aun exista en nuestra sociedad personas que mueren de hambre, debe de preocupar y ocupar a nuestras autoridades; en este sentido, el sector servicios, específicamente la actividad económica del turismo presenta una alternativa viable y real, mediante la cual el Estado puede contribuir a disminuir la pobreza. (INEGI, 2013). Desde esta perspectiva, la importancia del turismo en la generación de bienestar económico y social para los sonorenses no puede ni debe sobreestimarse.

Por otro lado, según datos del Informe sobre la pobreza rural 2011 del Fondo Internacional de Desarrollo Agrícola, (IFAD, 2011) dos tercios de quienes sufren pobreza o pobreza extrema viven en zonas rurales; en este sentido, Sonora tiene áreas de oportunidad para el desarrollo del turismo como fuente generadora de bienestar, ya que según datos del INEGI (2013), el 14% de la población del estado vive en áreas rurales, es decir 372,607 sonorenses, aunado a lo anterior, la Organización Mundial del Turismo, (2012), puntualizó, que las preferencias y gustos de los turistas han sufrido cambios, en la actualidad los turistas buscan atracciones culturales y naturales en zonas rurales, prefieren un turismo de contacto, basado en experiencias, lo que amplía el alcance de reducción de la pobreza en zonas con población menor a 2500 habitantes (áreas rurales). Por otro lado es importante mencionar que el turismo requiere un alto coeficiente de mano de obra y ofrece posibilidades de empleo incluso a personas poco calificadas, en este sentido, Sonora, presenta áreas de oportunidad que pueden ser utilizadas en pro de la población menos favorecida o vulnerable a pobreza de capacidades (Sen,1995) ya que el 3.04% de la población según datos del INEGI para el 2010, son analfabetas, el 33.51% de la población masculina esta en rezago educativo, así como, el 31.66% de la población femenina.

Además, la OMT, (2012) sostiene que, proporcionalmente, más mujeres desfavorecidas encuentran trabajo en el sector turismo, en este sentido, según datos del INEGI, (2013) en Sonora, el 49.7% de la población son mujeres, lo que representa un total de 1,322,868 fémias, de esas 447, 352 se encuentran laborando y el 74.73% lo hacen dentro del sector terciario. Por otro lado 41,791 mujeres sonorenses están desocupadas, ya sea porque no desean trabajar o por que buscan trabajo y no encuentran o bien porque, no existen oportunidades laborales acorde a sus capacidades, sea cual sea la situación, sin lugar a duda, las facilidades que ofrece el turismo para incorporar a este segmento tan discriminado en nuestra sociedad, son relevantes y deben de ser consideradas. (Rodriguez & Castro, 2004)

Esta dimensión de género puede ser particularmente importante: según el PNUD, los datos empíricos señalan que los países en desarrollo con menor desigualdad de género tienden a tener tasas de pobreza más bajas. El trabajo remunerado de las mujeres disminuye la desigualdad y la pobreza total. De hecho, la eliminación de obstáculos en la participación de la mujer en el empleo remunerado (como es típico en el sector del turismo) tiene un efecto mucho más fuerte sobre la pobreza y el crecimiento económico que la erradicación de la discriminación salarial. (International Labour Organization, 2013) Por otro lado, es bien sabido que Sonora tiene un gran potencial turístico, que de explotarse adecuadamente proveería de oportunidades excepcionales para la expansión del sector, con efectos multiplicadores en la economía y el bienestar regional. Pese a ello, es reconocido que esta industria está siendo subutilizada en el Estado y en consecuencia, no aporta todo el potencial que posee en generación riqueza y bienestar.

Sonora, es uno de los 31 estados que junto con el Distrito Federal conforman las 32 Entidades Federativas de México, colinda con los estados de Chihuahua al este, Sinaloa al sur y Baja California al noroeste; al norte comparte una extensa frontera con el estado de Arizona y una más pequeña con el de Nuevo México de Estados Unidos y hacia el oeste colinda con el Mar de Cortés o Golfo de California. El estado se divide en 72 municipios y ocupa el segundo lugar nacional en extensión (el primer lugar lo tiene Chihuahua), con un 9.2% del total del territorio mexicano. La población de Sonora representa el 2.4% de la población total nacional en el 2012. Sus principales actividades económicas son: minería, agricultura, ganadería y pesca. (Instituto Tecnológico de Estudios Superiores de Monterrey, 2010).

Gracias a su privilegiada ubicación geográfica, Sonora es considerado un gran destino turístico por su diversidad de paisajes, etnias, cultura y el color de sus hermosas playas que contrastan con

la majestuosidad del desierto, combinación difícil de encontrar en México, situación que privilegia áreas de oportunidad para posicionar a Sonora como uno de los destino turístico favorito de México para el mundo. Según datos de PROMEXICO, (2013), el turismo en Sonora, representa un motor de crecimiento económico y fuentes permanentes de empleo para sus habitantes. En el estado el servicio turístico es demandado principalmente por turistas de origen nacional, los cuales representaron el 89.8% de las visitas del 2012; siendo su estancia promedio de 1.7 días, similar a la de los visitantes extranjeros. Por su parte, los turistas extranjeros que visitan la entidad, tienen una estancia promedio de 1.59 días. En cuanto a la visita de turismo extranjero a Sonora, el estado tiene una evidente ventaja competitiva debido a que el estado cuenta al norte con una extensa frontera con los estados de Arizona y Nuevo México, Estados pertenecientes al territorio Estadounidense, país que según datos de la sector, (2011), es de donde provienen el mayor número de turistas extranjeros que visitan México (57.4%).

Según datos de la secretaria de egresos de Sonora, (2011), el turismo contribuyo con el 17.56% del PIB, lo que representa \$13,333.4 millones de pesos y genero un total de 55,616 empleos. Por mencionar algunos indicadores turísticos, se señala, que el gasto promedio de turistas nacionales en el 2011 fue de 789.50 pesos, por otro lado el gasto promedio de los extranjeros fue de 1,168.50 pesos. En el análisis de la afluencia turística para el mismo año, la secretaria de egresos de sonora, (2011), señala que fue de 3,304, 539 turistas nacionales en contra de 1, 188,965 internacionales; la estancia promedio de los turistas nacionales fue de 3.3 días y de los extranjeros de 3.4. La derrama económica generada por los turistas nacionales para el año en cuestión fue de \$8,609.7 millones de pesos, mientras que la generada por los turistas extranjeros alcanzo la cantidad de \$4,723.7 millones de pesos. En los siguientes párrafos se enlistan algunas de las razones por las cuales en Sonora, el turismo debe de ser considerado como un motor importante para contribuir a la reducción de la pobreza y por ende aumentar el bienestar, que se verá reflejada en una mejor calidad de vida de los sonorenses.

- *La Organización Internacional del Trabajo ha concluido que un empleo en el sector del turismo principal crea cerca de un puesto y medio de trabajo adicional (indirecto) en la economía asociada al turismo. (OIT, 2013).*
- *La mitad de los trabajadores del sector tienen 25 años o menos. Las mujeres constituyen entre el 60 y el 70 por ciento de la mano de obra del sector. (OIT, 2013).*
- *En el segmento de hotelería del sector a nivel mundial, hay en promedio un empleado por habitación de hotel. Asimismo, hay tres trabajadores que dependen indirectamente de cada trabajador de hotel. (International Labour Organization, 2013).*
- *Según un estudio realizado por el Foro Económico Mundial (FEM) sobre viajes y turismo, el sector del turismo genera la mayoría de los nuevos puestos de trabajo en los países en desarrollo, como es el caso de México. El turismo también es el principal exportador de servicios para varios países en desarrollo y tiene un gran potencial para brindarles ventajas competitivas. (Blanke & Thea, 2013)*
- *Los mismos autores señalan, que el turismo en los países en desarrollo está creciendo rápidamente, para un tercio de estos países, el turismo ya es la fuente de ingresos principal, así como también la principal fuente de divisas extranjeras en 46 de los 49 países menos adelantados. Asimismo, en más de 50 de los países más pobres del mundo, es el primero, segundo o tercer sector de la economía más importante. En comparación, el turismo representa entre el 3 y el 10 por ciento del PIB de las economías desarrolladas y hasta el 40 por ciento de la economía en los países en desarrollo.*
- *El turismo es una fuente básica de empleo y un eje importante de la economía, el mismo dispone de un gran potencial para contribuir aún más a la calidad de vida de las*

*personas de escasos recursos, sobre todo de aquellas que viven en los alrededores de los complejos turísticos. Al hacerlo, las empresas turísticas pueden contribuir con las metas económicas nacionales sin comprometer sus intereses comerciales. Lo que ayudaría al sector a mejorar su propia seguridad y su entorno operativo, y potenciar las opciones de actualización del producto y optimización de la calidad de la vivencia turística. (Ashley, Goodwin, Scott, & Chaves, 2006)*

- *Los mismos autores comentan, que el desarrollo turístico genera una mejor infraestructura: agua potable, mejores vías de acceso, drenaje, electricidad, telecomunicaciones, etc. El turismo puede contribuir a fomentar que las autoridades den acceso a las comunidades locales a estas facilidades.*

Como se puede ver, el estado de Sonora cuenta con los recursos, que lo potencializan como destino turístico de calidad, por lo que es importante considerar al turismo, cada vez más, como una fuente importante de crecimiento económico y generador de bienestar para la entidad, para ello se requiera que los tomadores de decisiones del estado y del país contribuyan en la generación de estrategias integrales, incluyentes, sostenibles y participativas, mediante la construcción de una nueva ruta estratégica del turismo en Sonora. Por último, es pertinente mencionar, que aun cuando los gobernantes están conscientes de la significativa contribución del turismo al crecimiento económico, hasta la fecha, el vínculo entre el turismo y la lucha contra la pobreza no ha sido bien enfocado en los planes de desarrollo de nuestro país. No obstante, como ya se mencionó anteriormente, el crecimiento económico no necesariamente reduce la pobreza. Del mismo modo, mientras que se han desarrollado muchos proyectos a pequeña escala para vincular a la lucha contra la pobreza con el turismo, la reducción de la pobreza a gran escala a partir del turismo depende de estrategias claras, consultadas, articuladas y supervisadas mediante planes estratégicos de reducción de la pobreza nacional.

# CARACTERIZACIÓN DE LAS PRÁCTICAS DE TALENTO HUMANO EN EMPRESAS DEL VALLE DEL CAUCA

Beatriz Eugenia Agudelo Orrego, Universidad Autónoma de Occidente

## RESUMEN

*Las organizaciones de este siglo deben caracterizarse por su adaptación al medio en el que compiten, gracias a las habilidades que su talento humano coloca en práctica en el ejercicio de sus funciones. De allí la importancia de conocer a través de esta investigación, de tipo descriptivo, cómo la organización realiza los procesos de gestión de su talento humano, con el fin de definir acciones de mejoramiento tendientes a que ésta cumpla un rol verdaderamente estratégico. Al aplicar entonces el cuestionario a 25 empresas del Valle del Cauca se obtuvieron entre otros hallazgos, que la mayoría de las empresas cuentan con un plan estratégico formal pero no con uno de gestión humana; el rol del área de gestión humana sigue siendo operativo; no existe una cultura de atracción y retención de buenos talentos; y por tanto se hace necesario que las empresas adopten una visión más holística respecto a la forma de gestionar el talento.*

**PALABRAS CLAVES:** Talento humano, gestión, prácticas, desarrollo de personas.

## CHARACTERIZATION OF HUMAN TALENT PRACTICES IN COMPANIES OF VALLE DEL CAUCA

### ABSTRACT

*This century's organizations must be characterized for their adaptation to the field in which they compete, thanks to the skills that their human talent put into practice when exercising its functions. Hence the importance of knowing, through this descriptive-type research, how the organization carries out the management processes of human talent, in order to define improvement actions with the purpose for the latter to fulfill a strategic role. Then, when applying the questionnaire to 25 companies in Valle del Cauca, the result was that most of the companies count on a formal strategic plan but not one on human management; the role of human management area is still operational; a culture of attracting and retaining new top talents, doesn't exist; therefore it is necessary that the companies adopt a holistic vision in regards to the way of managing the human talent.*

**JEL:** M12, M53.

**KEYWORDS:** human talent, management, practices, development of people.

### INTRODUCCIÓN

El desarrollo histórico de la humanidad ha conllevado a cambios en todos los ámbitos: sociales, económicos, tecnológicos, culturales, entre otros; lo que directamente ha afectado a las organizaciones y su dinámica interna, pero sobre todo en lo relacionado con una de las áreas estratégicas de la organización, que es la de talento humano; pues de su gestión depende la sostenibilidad y competitividad de las organizaciones, pues en últimas son las personas, las que

hacen posible el logro de los objetivos organizacionales. A partir de allí, se identifican varios elementos que clarifican el rol estratégico del área de talento humano: la consideración de las personas como elementos decisivos en la competitividad de las organizaciones, la visión sistémica de la gestión del talento humano y la necesidad de que exista coherencia entre la gestión del talento humano y la estrategia organizacional. Surge así la necesidad de indagar acerca de cómo algunas organizaciones, en este caso 25 empresas ubicadas en el departamento del Valle del Cauca, pertenecientes a diferentes sectores económicos, llevan a cabo sus procesos de gestión del talento humano; además de la forma cómo su cultura está alineada con la estrategia del negocio, para así identificar aspectos de mejora que permitan, que el área de gestión humana deje su énfasis en lo operativo y asuma el rol estratégico que le corresponde.

Dentro de los hallazgos encontrados aparece que, las organizaciones objeto de estudio desarrollan la mayoría de actividades inherentes a los procesos de gestión del talento humano, como la permanencia y contratación de nuevos empleados; el reclutamiento a través de recomendaciones y referencias; la selección de los aspirantes preponderando sus capacidades para el puesto; la existencia de un plan estratégico de capacitación; y la utilización del salario fijo mensual como medio de pago. Sin embargo, se evidencia la necesidad de mejorar en algunos aspectos, entre los cuales se encuentran el establecimiento de programas de inducción formales; de niveles salariales acordes con las labores realizadas y el mercado; y el fortalecimiento de la capacitación del personal a través de convenios con entidades externas.

## **REVISIÓN LITERARIA**

Los referentes conceptuales de esta investigación se centran en la evolución de la gestión del talento humano y los aspectos relevantes del departamento del Valle del Cauca, ubicación de las empresas objeto de estudio.

### Evolución de la Gestión del Talento Humano

La evolución de la humanidad ha conllevado a cambios en la forma como las organizaciones de todo tipo conciben y gestionan el talento humano; a partir de modificaciones en la estructura organizacional y su manera de funcionar, como son la reducción, el outsourcing, las fusiones, el trabajo en red, el trabajo por procesos, los sitios alternativos de trabajo, los equipos autónomos y la flexibilidad laboral; que han permitido que las personas sean más autónomas, proactivas, automotivadas y con gran capacidad de logro. Esta nueva forma de trabajo ha sido el fruto del surgimiento de un sinnúmero de teorías organizacionales basadas en paradigmas que hacen énfasis en la tarea como en el caso de las teorías clásicas, especialmente la teoría de la organización científica de Frederick Taylor y la teoría de la organización industrial de Henry Fayol (Aktouf, 2002), en las que la racionalidad de la persona se concibe como el elemento dominante de la actividad humana, y por tanto como básico para la organización del trabajo, reduciendo en buena parte la concepción del hombre a la de homo economicus (Concepción consistente en plantear como hipótesis sobre la naturaleza humana, la simple creencia de que el ser humano solo está motivado e interesado por el deseo de maximizar racionalmente sus ganancias materiales (Aktouf, 2002, p.63)). Estas teorías se inclinaron por la organización formal, mecanizada, cerrada, que debía funcionar en forma estandarizada a partir de la definición estricta de tiempos, movimientos y herramientas de trabajo para lograr los objetivos sobre todo de productividad a partir de la gestión eficiente de las diferentes áreas organizacionales. Esta visión de lo formal no consiguió dar un trato sistémico al comportamiento humano y a la interacción de grupos y personas y mucho menos a la comprensión de los conflictos intraorganizacionales.
