Dada la necesidad de volver a lo humano, es decir a entender a la persona en la organización como un ser social, surge la teoría de las relaciones humanas, a partir del experimento de Hawthorne, realizado por Elton Mayo entre 1928 y 1932, que ratifica que el ser humano es productivo según las relaciones que establezca éste con el grupo al cual pertenece y no tanto a las condiciones físicas de trabajo (Dávila, 2001). Así, inicia el surgimiento de una serie de teorías que dignifican al ser humano en las organizaciones, como individuo pensante que puede aportar al logro de los objetivos organizacionales y que necesita para dar su máximo rendimiento, de la motivación y el cuidado de la organización a la que pertenece (Chiavenato, 2006; Dávila, 2001 & Certo, 2001).

Sin embargo, las anteriores teorías fueron criticadas en parte por su excesivo romanticismo, colocando demasiado énfasis en la persona y dejando de lado el logro de los objetivos de la organización y surge entonces un nuevo paradigma “el enfoque sistémico”, gracias a las consideraciones de Ludwig Von Bertalanffy que plantea que “la organización es un sistema compuesto de partes que se interrelacionan para lograr un propósito y que sostiene una relación dual con el ambiente” (Chiavenato, 2006, p.37), es decir que es un sistema abierto y como tal, debe mantenerse en equilibrio para sobrevivir a través de la adaptación y cambio continuos. La convergencia de estas teorías desde el homo economicus de la escuela clásica, el homo social de la escuela de las relaciones humanas y finalmente el hombre complejo de la escuela sistémica y los enfoques modernos, lleva a considerar la importancia del talento humano en los diferentes escenarios y prácticas de la organización. Actualmente el talento humano se ha convertido en el valor diferencial por excelencia en las organizaciones. Lo que sabe una organización y cómo lo usa constituye la única ventaja competitiva. Es por ello que cada vez más las organizaciones giran en torno a las personas con talento y sus necesidades; porque lo que diferencia a una empresa de otra es su capital humano y lo fundamental es saber gestionar ese talento, a través de prácticas que permitan atraerlo, desarrollarlo y retenerlo.

### Estrategia Organizacional

La gestión del talento humano debe cumplir un rol estratégico en la organización con miras a aportar al direccionamiento estratégico de la misma, a partir del monitoreo de una serie de factores claves de éxito, que según Wheelen y Hunger (2007) “son variables que afectan significativamente la posición competitiva general de las empresas en una industria específica” (p.91). Estos factores son decisivos para determinar la capacidad de una empresa para tener éxito en esa industria; los cuales dependen usualmente de las características económicas del sector, así como de las armas competitivas sobre las cuales las empresas de la industria han desarrollado sus estrategias. Jean Paul Sallenave en su libro gerencia y planeación estratégica (2002), plantea que existen seis factores fundamentales que determinan la permanencia de toda organización (p. 58 – 59):

*El producto:* si una empresa nace y crece con un solo producto, lo más seguro es que ésta muera con él; es decir que una empresa que dedica sus esfuerzos a un solo producto, tiene menos probabilidad de supervivencia que una empresa que se diversifica (Sallenave, 2002).

*El mercado:* cualquier cambio en la demanda amenaza la supervivencia de la organización. Un aumento en la demanda, hace que la competencia incremente su capacidad, por ende su oferta, lo que exige a la organización igualar a sus pares a través de un incremento en el capital de trabajo; por el contrario, una disminución de la demanda, implica menores ventas y por tanto un decremento de ingresos para la organización (Sallenave, 2002).

*La tecnología:* un atraso tecnológico puede llevar a una organización a perder posición en el mercado frente a sus competidores, posiblemente debido a que no cuenta con el capital suficiente para adquirir nueva tecnología o implementar nuevos procesos; un adelanto tecnológico, puede tener también un efecto negativo, si el mercado no estaba preparado para asumir dicha innovación (Sallenave, 2002).

*La competencia:* una organización no puede asegurar su supervivencia a menos que la estrategia industrial nacional frente a la competencia extranjera se lo permita. Por tal razón, es importante que la organización identifique claramente tanto su competencia más directa, es decir quienes producen sus mismos bienes, como su competencia indirecta, es decir aquellas organizaciones que producen bienes sustitutos del suyo (Sallenave, 2002).

*El capital:* algunos factores colocan en peligro la supervivencia de la organización, como son el sobre endeudarse, financiando activos con deuda a corto plazo; la falta de capital de trabajo, especialmente en los sectores en crecimiento; el costo de capital demasiado elevado; y los conflictos entre accionistas que pueden afectar la inversión (Sallenave, 2002).

*El personal:* determinante de la supervivencia de la organización, quienes pueden ponerla en peligro, ya sea porque no se adaptan a los cambios, convirtiéndola en lenta y con poca capacidad de reacción; o porque sus exigencias en cuanto al mejoramiento de condiciones sociales y económicas, destruyen la viabilidad económica de la organización (Sallenave, 2002).

#### Aspectos Generales del Departamento del Valle del Cauca

El departamento del Valle del Cauca cuenta con una extensión territorial de 22.140 Km<sup>2</sup>. Está ubicado al suroccidente del país. Limita por el norte con Chocó, Caldas y Quindío; por el este con Quindío y Tolima; por el sur con Cauca y por el oeste con el océano Pacífico y Chocó; cuenta con una población, según datos reportados por el censo 2005 de 4.161.425 personas. Según la Oficina de estudios económicos del Ministerio de Comercio, Industria y Turismo (2010) la base económica del departamento está sustentada en la prestación de servicios, seguida por industria y por las actividades agropecuarias. Entre los servicios más importantes se encuentran: comerciales, transporte, banca y comunicaciones. La agricultura por su parte es tecnificada, siendo el producto más relevante la caña de azúcar; y otros como: caña panelera, sorgo, yuca, algodón, soya, maíz, café, palma africana y cacao. La ganadería es principalmente vacuna.

En lo referente al sector industrial (Ministerio de Comercio, Industria y Turismo, 2010) se destacan alimentos, particularmente el procesamiento de azúcar, la producción de químicos, farmacéuticos, plásticos y editoriales. Entre los principales productos de exportación se encuentran: el azúcar de caña o de remolacha; oro en bruto, semilabrado o en polvo; artículos de confitería sin cacao; neumáticos nuevos de caucho; papel y cartón para escribir sin estucar ni recubrir; café; medicamentos; coques y semicoques de hulla; acumuladores eléctricos; ácidos carboxílicos, halogenuros, peróxidos y sus derivados; hilos, cables y otros conductores aislados para electricidad; productos usados como jabón; preparaciones y productos de higiene bucal o dental; papel y cartón de uso doméstico o higiénico y papel y cartón kraft, sin estucar ni recubrir en bobinas o en hojas.

En cuanto a las importaciones (Ministerio de Comercio, Industria y Turismo, 2010) se tiene que los principales productos que se traen al departamento, son, en su orden: aparatos receptores de televisión; automóviles de turismo para transporte de personas; neumáticos nuevos de caucho; alambre de cobre; maíz; abonos minerales o químicos nitrogenados; azúcar de caña o de

remolacha; conservas de pescado, caviar y sucedáneos preparados; trigo y morcajo; vehículos para transporte de mercancías; aparatos para producción de frío y bombas de calor; sangre para usos terapéuticos; polímeros de etileno en formas primarias; motocicletas y ciclos con motor auxiliar; manzanas, peras y membrillos frescos.

## **METODOLOGÍA**

El proyecto se desarrolló aplicando tanto la metodología cualitativa como la cuantitativa. El estudio cualitativo permitió obtener información en profundidad sobre la situación de las empresas objeto de estudio, en materia de gestión del talento humano, y orientar así el diseño del cuestionario aplicable en el estudio cuantitativo. El estudio cuantitativo posibilitó a su vez, identificar el nivel de las prácticas de gestión del talento humano en dichas empresas, para definir las problemáticas presentes cuando se realiza dicha gestión. El tipo de estudio fue descriptivo y se utilizó técnica estadística de muestreo aleatorio simple. La información se obtuvo por medio de un cuestionario aplicado a una población de 25 empresas de diferentes sectores de la economía, siendo un 60% empresas de la ciudad de Cali. El cuestionario contenía información respecto al rol del área de talento humano como socio estratégico del negocio, y los retos y procesos en la gestión del talento humano; que fue aplicado a jefes de recursos humanos, asistentes de recursos humanos y directores administrativos.

### Proceso Metodológico

La metodología utilizada para conocer cómo las organizaciones objeto de estudio realizan los procesos de gestión de su talento humano contiene las siguientes fases:

Objetivo 1. Caracterizar las empresas objeto de estudio.

Revisión de documentos institucionales

Diseño de cuestionario, formatos de sistematización y entrevistas.

Objetivo 2. Establecer como se realizan los procesos de gestión del talento humano en las empresas objeto de estudio.

Aplicación del cuestionario.

Tabulación de la información.

Objetivo 3. Proponer mejoras en los procesos de gestión del talento humano con miras al cumplimiento de su rol estratégico dentro de la organización.

Análisis de la información.

Sistematización de la información.

Informe y conclusiones finales.

## **RESULTADOS**

La investigación realizada se obtuvo gracias a la participación de 25 empresas pertenecientes a los sectores: producción de baldosas, cerámicas, mármol y pisos industriales; comercialización, construcción y mantenimiento de redes de gas natural; producción de papel; servicio y equipos de aire comprimido; productos químicos para la industria y aseo general; fabricación de carrocerías para vehículos; servicios públicos; producción y comercialización de azúcar; servicio de alarmas

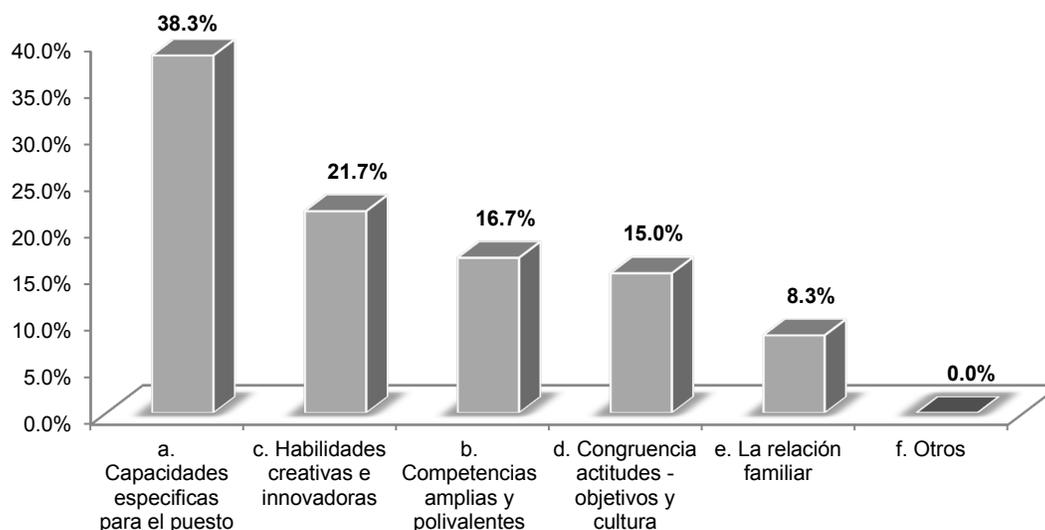

y sistemas de seguridad; supermercados; producción de grasas y productos; servicios de investigaciones de mercado; servicio de transporte; productos farmacéuticos para uso personal y hogar; y producción y comercialización de alimentos. Se presentan los hallazgos respecto a la forma como se llevan a cabo los procesos básicos del área de talento humano como son la incorporación, el desarrollo y la compensación.

### Incorporación

Pese a la situación económica de algunos sectores en la región, el flujo de empleados en las empresas encuestadas presentó el siguiente comportamiento durante los últimos tres años: en el 44% de las empresas permaneció igual, en un 35% de ellas aumentó y solo disminuyó en el 4% de las mismas.

Antes de hablar de reclutamiento es necesario abordar lo relacionado con el **diseño de cargos**, encontrándose que el 41.4% de las empresas participantes cuentan con un manual de funciones; que permite definir claramente las responsabilidades de cada puesto de trabajo. Al abordar el proceso de **reclutamiento** se encuentra que alrededor del 20% de las empresas utilizan las recomendaciones y referencias para cubrir tanto las vacantes de nivel directivo como las de otro tipo de profesionales. Una vez que se ha llevado a cabo el proceso de reclutamiento, se procede a la **selección** del personal, encontrándose que para el 38.3% de las empresas, los aspectos más relevantes a considerar en este proceso son las capacidades específicas para el puesto y que para el 21.7% son las habilidades creativas e innovadoras.

Figura 1: Aspectos Relevantes a Tener En Cuenta en la Selección de Personal

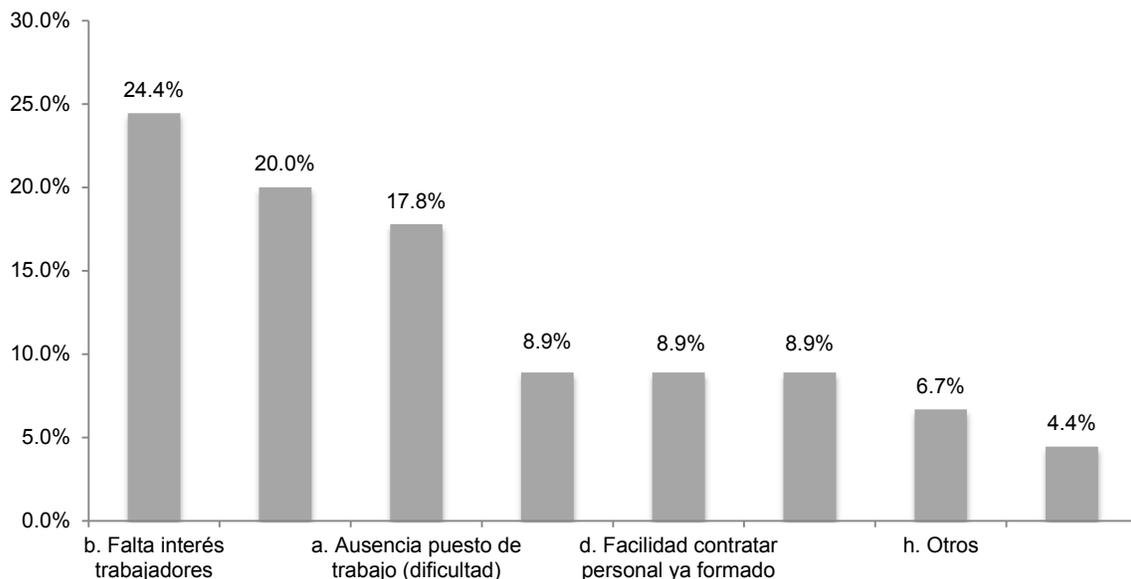

En esta figura se muestra qué aspectos son importantes en la selección del personal para las áreas de talento humano de las empresas objeto de estudio. La intención es evidenciar que es prioritario para estas empresas, al momento de seleccionar un candidato para un puesto determinado; dado que de dicha selección depende que se elija la persona idónea y que su desempeño sea el esperado, superando las expectativas. Se encuentra que para estas empresas, los aspectos más relevantes para seleccionar el personal, son en su orden: las capacidades específicas para el puesto, las habilidades creativas e innovadoras, las competencias amplias y polivalentes, la congruencia actitudes – objetivos y cultura, y la relación familiar. Fuente: Elaboración propia con base en los datos recolectados.

Una vez seleccionado y contratado el personal, se procede a realizar el proceso de **inducción**, hallando que el 64% de las empresas tienen un programa de inducción definido, mientras que el 16% carecen de éste.

### Desarrollo

Un 56% (15) de las empresas encuestadas manifestó tener un plan estratégico de capacitación, que orienta los esfuerzos en este aspecto, y de éstas solo el 21.4% tienen a su vez un plan de carrera y un plan de formación. Respecto al análisis de las herramientas utilizadas por las empresas participantes para el desarrollo del talento, se tiene que solo el 44% de las empresas cuenta con programas de formadores internos. En lo referente a los temas predominantes en las capacitaciones, se encontró que el 47.6% de las empresas forman en conocimientos técnicos y el 31% en lo relacionado con los comportamientos y competencias deseadas. Al averiguar acerca de los obstáculos que existen para llevar a cabo dicha formación, el 24.4% de las empresas consideran que es la falta de interés de los trabajadores y el 20% de las empresas, los costos elevados de la formación.

Figura 2: Obstáculos Existentes Para Realizar la Formación en la Organización

*En esta figura se muestra qué obstáculos se presentan en cada una de las empresas objeto de estudio para realizar la formación del personal; encontrándose que entre los principales están: la falta de interés de los trabajadores, los costos elevados de la formación, la ausencia o no existencia del puesto de trabajo, la dificultad en el desplazamiento del personal, la facilidad para contratar personal ya formado, y el no percibir resultados a corto plazo. La importancia de analizar este aspecto, radica en el*

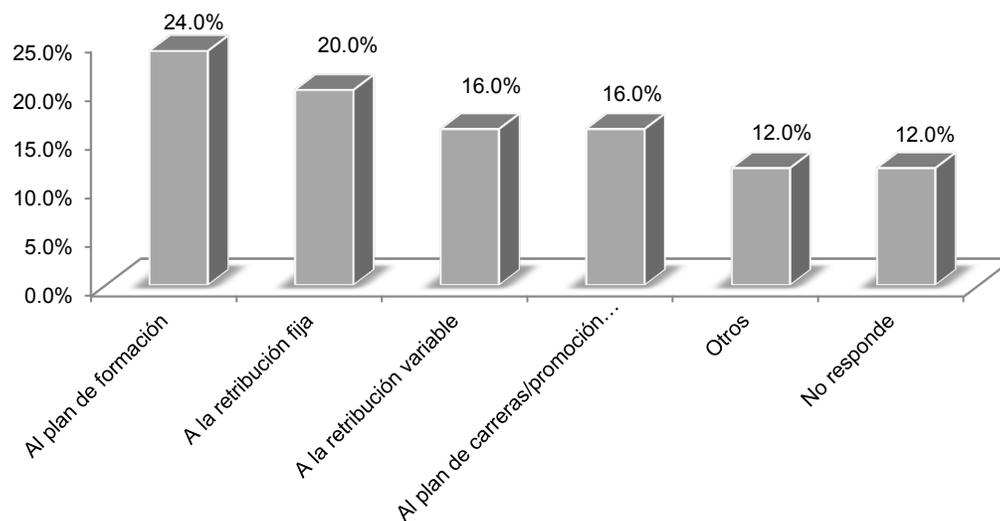

*impacto que tiene la formación del personal de una empresa en el logro de los objetivos organizacionales, y a su vez en la generación de mayor compromiso con la organización. Fuente: Elaboración propia con base en los datos recolectados.*

### Compensación

Las empresas participantes dieron cuenta de los sistemas de compensación que han implantado, destacando que el sistema más utilizado para retribuir tanto al nivel directivo, como medio y operativo es el sistema tradicional o salario fijo mensual. Así, el 36% de las organizaciones utiliza este sistema de compensación para el nivel directivo, el 16% una combinación entre el sistema tradicional y variable y el otro 16% mezcla el tradicional, variable y flexible. Se evidencia también que el sistema de compensación variable es utilizado por empresas que tienen un número considerable de empleados y un número mínimo de empleados; es decir que las empresas más propensas a establecer este tipo de incentivos son las que tienen más de 251 empleados y las que cuentan con un rango entre 10 y 50 empleados. Lo anterior se explica en el primer caso, por ser instituciones con un bagaje y experiencia que les permite adoptar formas diferentes de compensación; y en el segundo caso, porque son organizaciones pequeñas, cuya flexibilidad les permite adaptarse fácilmente a las nuevas condiciones del entorno, que incluyen nuevas formas de contratación y de remuneración.

La compensación necesariamente va de la mano con la **evaluación del desempeño**, verificando que un 68% de las empresas participantes cuentan con un método que les permite evaluar las tareas desempeñadas. El resto de las empresas lo hacen de manera informal o simplemente no cuentan con una herramienta que les permita evaluar el desempeño de los colaboradores. Sin embargo, de las empresas que si evalúan el desempeño de los colaboradores, el 60% manifiesta que utilizan indicadores de gestión objetivos mientras que el 40% plantean que no. El hecho de que la evaluación de desempeño esté ligada al sistema de recompensas o compensación de la empresa, tiene como fin reforzar los comportamientos que conducen a un buen desempeño. Como se muestra en la figura 3, la mayoría de las empresas participantes vinculan la evaluación del desempeño al plan de formación (24% de las empresas) y a una retribución fija (20%); resultados lógicos cuando se trata de utilizar la evaluación de los colaboradores para fomentar su participación y compromiso para con la organización.

Figura 3: Aspectos con los Cuales Está Vinculada la Herramienta Formal de Evaluación del Desempeño en la Organización

*En esta figura se muestra cuáles son los aspectos a los que está vinculada la herramienta formal de evaluación de desempeño en las organizaciones objeto de estudio. En la mayoría de ellas, el desempeño está vinculado al plan de formación del colaborador, seguido de la retribución, ya sea bajo la modalidad fija o variable y al plan de carrera o promoción interna existente. Se dimensionó la necesidad de indagar al respecto, dada la relación directa que existe entre formación, desempeño y retribución del personal de una organización. Fuente: Elaboración propia con base en los datos recolectados.*

## CONCLUSIONES

El reclutar personal a través de recomendaciones y referencias conlleva a un menor nivel de incertidumbre, dado el conocimiento previo que se tiene de la persona que es referenciada. Se evidenció que algunas empresas poseen programas de inducción solo para directivos o carecen de él. Aspecto que debe mejorarse dada la importancia de este proceso no solo para dar a conocer la organización sino también iniciar el lazo de conexión con el nuevo colaborador. Muchas empresas deben establecer criterios para determinar los rangos de los puestos de trabajo, así como los niveles salariales, factor determinante para la promoción del personal y la competitividad de la empresa para atraer talentos.

Las empresas participantes deben asegurar la relación directa existente entre los métodos para evaluar el desempeño y el sistema de clasificación de los puestos de trabajo; pues al estar bien definidos, se pueden determinar los niveles salariales y así mismo los criterios de evaluación de desempeño para futuras modificaciones en los puestos de trabajo y argumentos para la toma de decisiones en lo referente a capacitaciones y promociones del personal. En las empresas analizadas la formación está dejando de ser una actividad operativa para convertirse en un factor estratégico, de importancia relevante para el desarrollo organizacional, pues el 56% de ellas cuentan con un plan estratégico de capacitación. Por su parte, en lo que se refiere a las posibilidades de capacitación del personal, se encuentra que aunque existen posibilidades de convenios para desarrollar capacitaciones de diversa índole, las empresas no acuden mucho a éstos. Evidencia que permite establecer acciones conducentes a fortalecer los apoyos que brinda entidades como el SENA, y a desarrollar el talento a través de un mayor uso de los llamados “formadores internos”, colaboradores dispuestos a servir de mentores, fortaleciendo a su vez el trabajo en equipo y la promoción del personal.

Las empresas participantes reconocen la importancia de formar a los colaboradores, sin embargo, no se cuenta aún con herramientas suficientes para evaluar el impacto de la formación en las

tareas diarias de cada empleado. Cuando se evidencia que uno de los mayores obstáculos para realizar la formación del personal es la falta de interés del trabajador, se ratifica la importancia de la motivación, como factor que impacta directamente en el clima organizacional y que es reconocido por el 52% de las empresas objeto de estudio. Las empresas que más acogen el sistema de compensación variable son las que tienen un número considerable de empleados (más de 251) y un número mínimo de empleados (entre 10 y 50). Lo anterior se explica en el primer caso, por ser instituciones con un bagaje y experiencia que les permite adoptar formas diferentes de compensación; y en el segundo caso, porque son organizaciones pequeñas, cuya flexibilidad les permite adaptarse fácilmente a las nuevas condiciones del entorno, que incluyen nuevas formas de contratación y de remuneración. En suma, los resultados de la investigación permiten concluir que las empresas necesitan tener una nueva visión (estratégica) en la forma de gestionar el talento, que permita asegurar y mejorar su actual capacidad competitiva en un entorno empresarial tan cambiante.

# HISTORIA INDUSTRIAL Y EMPRESARIAL DEL OCCIDENTE DE MÉXICO: PROYECTO DE SEMINARIO PERMANENTE

Carlos René de León Meza, Universidad de Guadalajara  
Patricia Gutiérrez Moreno, Universidad de Guadalajara

## RESUMEN

*En México y en general en América Latina se ha avanzado muy lentamente en el desarrollo de la historia económica a través de sus disciplinas la historia empresarial y de empresas, sin embargo, los pocos estudios realizados en México reflejan el interés por conocer las historias de algunas de las grandes empresas mexicanas que existen o existieron y que marcaron en gran medida el avance económico, político y social de nuestro país. Con éste propósito se propone la realización de un seminario permanente sobre Historia Industrial y Empresarial para exponer los casos exitosos de empresas visto desde diversos aspectos y enfoques; así mismo, también se analizarán los casos de fracaso empresarial los cuales aportarán importantes enseñanzas para que los participantes puedan proponer soluciones a los problemas empresariales actuales.*

**PALABRAS CLAVE:** Historia Empresarial, empresas, éxito empresarial.

## INDUSTRIAL AND BUSINESS HISTORY THE WEST OF MEXICO: PERMANENT PROJECT SEMINAR

### ABSTRACT

*In Mexico and Latin America in general has been slow progress in developing economic history through its corporate history disciplines and companies, however, the few studies reflect the interest to know the stories of some of the large companies Mexican exist or existed and that marked progress largely economic, political and social development of our country. With this purpose we propose the realization of a permanent seminar on Industrial and Business History to expose business success stories seen from various aspects and approaches, etc., and also analyze the cases of business failure which provide important lessons for participants to propose solutions to current business problems.*

**JEL:** N86, N96

**KEYWORDS:** Business History, Business, Business Success

## INTRODUCCIÓN

Desde hace bastantes años, las principales escuelas de negocios en el mundo han implementado una serie de medidas para rescatar la historia industrial y empresarial de sus países ante la certeza de que conocer las experiencias de industrias, empresas y empresarios permitirá a no solo a las Universidades, tomadores de decisiones o empresarios, analizar y realizar propuestas a partir de hechos problemáticos a los que una empresa, un industrial, un capitalista o un empresario han tenido de que enfrentarse. Para ello, estas escuelas de negocios han creado cursos, diplomados así como la edición de revistas especializadas en este tema. Quizá la más representativa o importante

de todas ellas sea la de Harvard que desde 1926 edita el Business History Review. Además tiene un centro de estudios sobre las empresas y los empresarios que publica la revista Explorations in Entrepreneurial History.

Con éste avance de iniciativas, es que se pretende realizar un Seminario Permanente sobre la Historia Industrial y Empresarial en el Occidente de México, con el objetivo de abonar al estudio de las experiencias de industrias, empresas y empresarios, acotándolo en un principio al Occidente de México y continuando quizá a largo plazo con las demás regiones, con el que se propone transmitir el conocimiento de éstas experiencias a los participantes y que se genere conocimiento nuevo de innovación y de gestión empresarial para el éxito de las empresas e industrias existentes.

En los siguientes apartados se expondrán algunos de los antecedentes de la historia empresarial y, posteriormente se presentan argumentos que sustentan la propuesta. También se mostrarán algunos de los temas ya seleccionados organizados del tal forma que se puedan cubrir los campos del conocimiento que se ofertan en el Centro Universitario de Ciencias Económico Administrativas de la Universidad de Guadalajara, tratando de cumplir con el principio de la vinculación Universidad-Empresa. Finalmente se mencionarán algunos de los resultados esperados.

#### Antecedentes del Estudio Empresarial

En la segunda mitad del siglo XX este campo de investigación se desarrolló con más profundidad en países como Inglaterra, Alemania, Francia, Italia y España. Posteriormente en Latinoamérica tomó auge este tipo de trabajos, destacando en particular el caso de Argentina. En México este proceso ha sido más lento aunque en los últimos años han aparecido importantes trabajos de investigadores como Carlos Marichal y Mario Cerutti que han influido en otros historiadores por lo que este campo de investigación se ha fortalecido de manera notable y ejemplo de ello son algunas asociaciones de investigadores especializados en el tema. Para el caso de Jalisco a pesar de la relevancia de muchas de sus industrias y empresas, los estudios respecto a estos temas son muy escasos y no se vislumbra desafortunadamente, un cambio en esta tendencia. En este sentido y como bien menciona Marichal (2007) en las universidades públicas y privadas debe promoverse la investigación sistemática sobre la historia de las empresas mexicanas y utilizar la valiosa bibliografía existente para la docencia.

Estamos ciertos del potencial de temas que se pueden investigar respecto a la historia de la industria y las empresas en Jalisco. Por ejemplo, a la fecha no se tiene registrado algún estudio sobre la industria azucarera del estado o de la industria lechera, del trigo, del transporte, de la construcción, de la cervecera, de la maquila, telefónica, etc. etc. etc. En Jalisco han existido y existen una gran cantidad de empresas que han dejado profunda huella en la vida de muchos de los habitantes pero desconocemos su historia como Embotelladora la Favorita, Chocolatera Ibarra, Calzado Canadá, Motorola, Grupo Urrea, Dulces de la Rosa, Albarrán, Euzkadi, panificadora El Panqué, Farmacias Guadalajara, etc., etc., etc. Y qué decir de empresarios e industriales? La lista quizá sea más grande que las dos anteriores.

Es aquí, donde surge la necesidad, de estudiar a profundidad desde diferentes perspectivas el éxito o fracaso empresarial, analizando si la planeación administrativa, la planificación fiscal, el entorno económico, la gestión política del momento o el uso de la ley aplicable en su momento, fueron factores que le permitieron acceder a mercados más competitivos y contar con un lugar privilegiado en la historia.

No así, los casos de empresarios y empresas que no fueron prósperos tendrán también su enseñanza y su experiencia, la cual fortalecerá el aprendizaje de las buenas o malas prácticas empresariales que contribuyan a forjar nuevas generaciones exitosas de empresas. Es por ello, que reviste de especial importancia llevar a cabo la presentación de estos estudios de caso y darlos a conocer, al menos dentro de la comunidad de alumnos de CUCEA, que les permita reforzar su aprendizaje y formación profesional.

### Objetivos de Crear un Seminario Permanente de Historia Industrial y Empresarial

La creación de un Seminario Permanente de Historia Industrial y Empresarial podrá generar la difusión de las investigaciones sobre las historias de empresas, empresarios e industrias con el propósito de que los interesados, sean alumnos del CUCEA, investigadores o tomadores de decisiones de las empresas, encuentren en ellas numerosos ejemplos ya sea de éxito o de fracaso y con ello analizar a través de la metodología del estudio de caso las circunstancias particulares que vivieron cada uno de ellos para que de esta forma tengan diferentes perspectivas al momento de realizar su investigación o proyecto de investigación contribuyan con propuestas y planteamientos que resuelvan los problemas empresariales actuales. Con la realización de este Seminario se propiciará la investigación pues se crearán centros de investigación, se promoverá la extensión del conocimiento en todas sus áreas, se publicarán libros con los trabajos desarrollados y se ampliará la gama de bibliografía en la materia.

### Temática

Los temas generales con los que se propone abordar este seminario permanente serán aquellos relacionados con la gran empresa y de sus empresarios, de la industria, de las Pymes y de aquellos casos de éxito empresarial que han sido importante influencia de la región, de la economía o que han propiciado la innovación en donde no existía; aquellas que han generado un impacto ambiental positivo, aquellas que han sabido incluir la Responsabilidad Social Empresarial en su quehacer diario y hasta aquellas que han sido influenciadas políticamente pero que han impactado económicamente en su región.

### **METODOLOGÍA**

Se iniciará convocando a un encuentro nacional sobre La Historia de la Empresa y la Industria en México para reunir a los investigadores más destacados en el tema y a través de sus ponencias conozcamos los avances que se han logrado en los últimos años en este campo de investigación. Se buscaría traer como invitados a dos de los más destacados profesores nacionales que han sido iniciadores o pilares en este tipo de estudios para que impartan una conferencia magistral de inauguración y de clausura del evento. (Carlos Marichal, Mario Ceruti, Leonor Ludlow, Manuel Miño, Sandra Kuntz).

En las reuniones mensuales del Seminario, se tiene contemplado combinar para una sesión a un investigador consolidado y en la siguiente a otro que va iniciando con ideas y propuestas novedosas pues este seminario tiene como objetivo también, el de cobijar y dar oportunidad a nuestros jóvenes estudiantes de posgrado. Hasta el momento, tenemos a cinco investigadores que han aceptado presentar sus estudios de caso con temas sobre la industria azucarera en Ameca, la textil en Tepic, sobre la minería en el estado de Jalisco, la historia actual de un exitoso empresario

del diseño de modas del vestir y otro más sobre las Pymes en Jalisco desde la perspectiva del pago de impuestos. Cada estudio de caso se publicará como libro con una extensión de 70 a 80 cuartillas. Se pretende que haya una publicación constante que con el tiempo llegue a formar una colección titulada “Historia Industrial y Empresarial del Occidente de México”. Las obras podrían ser editadas exclusivamente por CUCEA o bien, coeditadas con una o varias instituciones.

### Colaboración Interinstitucional

Este proyecto puede ser llevado a cabo exclusivamente por CUCEA pero en términos cualitativos su impacto y difusión se incrementará considerablemente si se establece un convenio de colaboración con otras instituciones como la Cámara de Comercio de Guadalajara, la Secretaría de Cultura del Estado de Jalisco y con otras Universidades.

### **RESULTADOS ESPERADOS**

*Aportación a la ciencia con trabajos originales de investigación en el área de la historia industrial y empresarial. Participación de investigadores reconocidos en el ámbito académico, aportando sus experiencias en el estudio de la historia empresarial, lo cual será de gran utilidad a los estudiantes sobre todo a nivel posgrado que preparan sus tesis de investigación. Publicación de los trabajos presentados que integrarán una colección titulada “Historia Industrial y Empresarial del Occidente de México”. Difusión a través de entrevistas en estaciones de radio, televisión Fomentar en los estudiantes de las carreras afines a los negocios a incursionar en los procesos de investigación. Establecer relaciones de trabajos interinstitucionales e interdisciplinarios entre los distintos académicos que participen en los seminarios.*

# EXPORTACIONES HORTOFRUTÍCOLAS MEXICANAS EN EL TLCAN: ¿VENTAJA COMPARATIVA?

Jaime Meuly Rosalina, Universidad del Estatal de Sonora

## RESUMEN

*Este artículo observa algunos de los obstáculos que el subsector exportador Mexicano de frutas y verduras enfrenta en el marco Tratado de Libre Comercio de América del Norte. Los beneficios y dificultades que la política comercial norteamericana genera en el desempeño del sector exportador agrícola mexicano son analizados bajo el argumento de que la ventaja comparativa por dotación de factores no es la explicación al comportamiento de las exportaciones agrícolas mexicanas hacia Estados Unidos, éste depende en mayor medida de la economía política del sector que de las condiciones de mercado, la productividad y la competitividad de los productores de ambos países.*

**PALABRAS CLAVE:** ventaja comparativa, comercio de frutas y verduras, TLCAN

## Mexican horticultural exports in NAFTA: comparative advantage?

### ABSTRACT

*This article analyzes some of the problems faced by the Mexican fruit and vegetable exports sub-sector under the NAFTA. The American trade policy generates a series of advantages as well as difficulties to the Mexican agricultural exporting sector; these are analyzed based on the argument that comparative advantages do not explain the behavior of Mexican agricultural exports to the United States. Such behavior depends largely on the political economy of the sector and not so much on market conditions or producers' productivity and competitiveness in both countries.*

### INTRODUCCION

El supuesto de que los subsectores exportadores no competitivos frente a su símil de un país distinto deben desaparecer para abaratar costos internos, atender a la demanda y disminuir precios locales parece no Cumplirse en procesos de intercambio de algunas mercancías agrícolas entre México y Estados Unidos. Como explicaremos más adelante, la ventaja comparativa que México puede explotar gracias a su dotación de factores, su ubicación geográfica, la productividad de los cultivos de exportación y la rentabilidad de los mismos no está siendo suficientemente aprovechada gracias a las reglas de intercambio entre ambos países en el marco del TLCAN. Algunos de los productos que Estados Unidos produce no tienen ventaja comparativa capaz de limitar el flujo de entrada de los productos mexicanos, y sin embargo, las Exportaciones mexicanas se enfrentan a múltiples restricciones que desvanecen sus posibilidades de incrementar

tanto el flujo de mercancías como la ganancia derivada del libre comercio. La situación del comercio agrícola mexicano no es particular, se desarrolla dentro de la lógica de funcionamiento del comercio mundial de este sector. Una de las principales características del actual comercio mundial de frutas y legumbres es la contra estacionalidad de país a país. and vegetable trade, NAFTA.

### **REVISIÓN DE LITERATURA**

El concepto tradicional de ventaja comparativa implica que la dotación natural de factores para la producción de ciertas frutas y legumbres en Estados Unidos genera altos costos de producción durante todo el año, razón por la que México presentaría una ventaja comparativa sobre tales productos. Sin embargo, aún cuando en México los costos de producción tiendan a ser menores e incluso similares (sin contar los costos de transporte), la organización del mercado hortícola, en el marco del Tratado de Libre de Comercio de América del Norte (TLACAN), impiden que esto se cumpla. México exporta los mismos productos en otra época del año y pueden resultar de igual precio, e inclusive con menor valor agregado. Las externalidades (la tecnología principalmente) juegan aquí un papel importante, puesto que el comercio se realiza con base en condiciones exógenas al mercado.

Estas condiciones se refieren a que el flujo de intercambio de mercancías no depende del todo de la cantidad demandada y ofertada, las determinaciones de la política para el sector exportador de los países participantes pueden afectar el proceso de intercambio. Si observamos la composición del comercio mundial hortofrutícola se explican las tendencias mencionadas en cuanto a que las ventajas comparativas no son las que rigen totalmente este segmento. Lo más destacable es la contraestacionalidad del comercio, en el sentido de la asignación de factores y dotación de tecnología. Son precisamente estas contratendencias las que han motivado la amplia gama de controversias dentro del comercio agrícola regulado, entendiéndolo el problema dentro de la determinación de las ventajas comparativas por dotación de factores naturales. Es decir, los países pueden ser productores, consumidores, exportadores e importadores de un mismo producto en distinta época del año, a pesar de que “naturalmente” no estén dotados para generar la oferta suficiente e inclusive excedente exportable.

Una forma de protección de estos subsectores no competitivos, que generalmente se refieren a hortalizas, es la legalización de las barreras no relacionadas directamente con la productividad de la actividad. Al existir una clara y amplia brecha de ésta entre exportaciones e importaciones, la política tributaria de “gravar la calidad” del producto es un instrumento que en el pasado salía de las reglas del comercio mundial, pero que desde la Ronda de Uruguay de 1994 se ha discutido como forma de “legalizar” esta baja competitividad. Con relación al tema de la arancelización, abordado en el apartado anterior, encontramos que la Organización Mundial de Comercio trata de legalizar estas prácticas de las barreras no arancelarias que se deben, en palabras de COOK (1998) “a los diferentes niveles de relativa competencia entre productores de un producto similar o igual durante la misma estación” .

En este contexto, las principales características del comercio hortícola México-Estados Unidos, son resultado de los problemas derivados de la tendencia mundial a la contra estacionalidad. Esta última es responsable de la modificación de la ventaja comparativa de ambos países basada en la tecnología disponible y, el control de los mecanismos de comercialización. La ventaja comparativa El concepto tradicional de ventaja comparativa implica que la dotación natural de factores para la producción de ciertas frutas y legumbres en Estados Unidos genera altos costos de producción durante todo el año, razón por la que México presentaría una ventaja comparativa sobre tales productos. Sin embargo, aún cuando en México los costos de producción tiendan a ser

menores e incluso similares (sin contar los costos de transporte), la organización del mercado hortícola, en el marco del Tratado de Libre de Comercio de América del Norte (TLACAN), impiden que esto se cumpla. México exporta los mismos productos en otra época del año y pueden resultar de igual precio, e inclusive con menor valor agregado. Las externalidades (la tecnología principalmente) juegan aquí un papel importante, puesto que el comercio se realiza con base en condiciones exógenas al mercado. Estas condiciones se refieren a que el flujo de intercambio de mercancías no depende del todo de la cantidad demandada y ofertada, las determinaciones de la política para el sector exportador de los países participantes pueden afectar el proceso de intercambio. Si observamos la composición del comercio mundial hortofrutícola se explican las tendencias mencionadas en cuanto a que las ventajas comparativas no son las que rigen totalmente este segmento. Lo más destacable es la contra estacionalidad del comercio, en el sentido de la asignación de factores y dotación de tecnología. Son precisamente estas contra tendencias las que han motivado la amplia gama de controversias dentro del comercio agrícola regulado, entendiendo el problema dentro de la determinación de las ventajas comparativas por dotación de factores naturales. Es decir, los países pueden ser productores, consumidores, exportadores e importadores de un mismo producto en distinta época del año, a pesar de que “naturalmente” no estén dotados para generar la oferta suficiente e inclusive excedente exportable. Uno de los temas de mayor conflicto en el intercambio agrícola entre México y Estados Unidos es el comercio de hortalizas de invierno. Históricamente, el destino de las exportaciones hortícolas mexicanas ha sido el mercado de Estados Unidos.

Concentradas en los llamados vegetales de invierno por sus ventajas comparativas, las exportaciones mexicanas han sido una de las principales proveedoras de frutas y verduras en fresco. Antes de 1961 Cuba era el principal proveedor de frutas y verduras frescas (tomates y pepinos). A partir de la imposición del embargo norteamericano hacia la isla en ese año, México se convirtió en el proveedor de más de la mitad del consumo total de vegetales y melones, la mayoría en fresco y en segundo lugar en forma congelada. (LUCIER, POLLACK y PÉREZ, 1997). El mayor empuje a la importación desde México inicia en la década de 1980 debido al incremento del consumo norteamericano de vegetales. Contrario a la tendencia, ante las perspectivas de mejora de la demanda norteamericana, los productores mexicanos no pudieron hacer frente a la demanda creciente en los Estados Unidos, principalmente por razones climáticas, las importaciones de Estados Unidos desde otros países crecieron junto con las ventas al mayoreo y menudeo. (CALVIN y LUCIER, 1997). Al mismo tiempo el inicio, en algunos países, y la consolidación en otros de los procesos de apertura comercial, permitió que otras naciones accedieran al mercado norteamericano. Durante la década de 1980 e inicio de 1990, China, Suecia y Costa Rica se han consolidado dentro de los 5 mayores proveedores de productos en fresco para Estados Unidos, después de México y Canadá. (LUCIER, POLLACK y PÉREZ, 1997).

Desagregando por tipo de verduras y frutas se encuentra otra clasificación. En 1996, México exportó a Estados Unidos 67% de sus importaciones de vegetales, incluyendo melones y 22% de fruta fresca. En plátano, Costa Rica, Ecuador y Honduras contribuyeron con el 67% del total de importaciones. Chile aporta cerca del 29% de importaciones de uvas, kiwi y otras frutas (COOK, 1998). Aún cuando, México es el primer proveedor de frutas y verduras hacia Estados Unidos en fresco, se enfrenta a otros países competidores, como Chile, Israel o Perú, principalmente en uvas de mesa, espárrago y aguacate fresco. Las exportaciones norteamericanas están dirigidas hacia Canadá, UE-15, Japón y Hong Kong, abarcando el 75% de ellas diversificadas en lechugas, cebolla, tomate, brócoli, manzanas, naranjas y uvas. Sin embargo, Estados Unidos es importador neto de frutas y verduras debido al incremento del consumo interno de vegetales frescos. El

United States Department of Agricultural reporta, para 1997, un consumo per cápita de 72 kg de frutas frescas y 79 kg si se incluye el consumo de jugo de naranja (COOK, 1998).

De acuerdo con el Sistema Económico Latino Americano (SELA) la base de negociación del comercio agrícola norteamericano para con sus distintos socios comerciales es una división que obedece a las ventajas comparativas que sus cultivos tienen. La división es la siguiente: 1. Grupo de productos básicos: que conforman las cosechas de la zona templada, renglones en los que Estados Unidos es un productor y exportador altamente competitivo. Ejemplos relevantes son el trigo, el maíz, la soya y el arroz, la carne de cerdo, los productos avícolas, el algodón y los alimentos procesados. La mayoría de estos productos tienen ventajas comparativas absolutas frente a los importadores y, por tanto, no significan un problema en las negociaciones para Estados Unidos, pero sí para la Unión Europea, puesto que son el grupo en el que ésta tiene un alto grado de protección de sus productores frente a las importaciones norteamericanas. 2. Productos tropicales o semi tropicales: café, cacao, plátano, piñas, mangos y nueces. Estos productos son objeto de pocas barreras en el mercado estadounidense y constituyen una parte considerable de las exportaciones de productos agrícolas de Centroamérica, el Caribe y parte de América del Sur. 3. Productos de los cuales Estados Unidos es a la vez productor e importador: flores, jugos de frutas, cacahuete, azúcar, tabaco y ciertas frutas y vegetales como tomates y pimientos). Este grupo puede ser considerado como el más protegido de la producción agrícola y del total de productos, exceptuando la industria textil y del vestido. Las barreras que enfrentan los exportadores, principalmente latinos, son más bien altas y se incluyen aranceles, cuotas, “tariff-rate quotas” y medidas de salvaguarda. En 1997, Estados Unidos importó, desde México \$1.7 billones de dólares, 70% de ellos corresponden a vegetales, y exportó hacia México \$146.4 millones de dólares concentradas en frutas. (COOK, 1998). Esta magnitud del comercio explica el interés de la política comercial norteamericana en el comercio con México. Situación que no se deriva directamente de la firma del TLCAN. Según GARY WILLIAMS (1998), existen 3 razones por las que se han incrementado los flujos de exportaciones hacia México: A. Entre los últimos 5 y 10 años, México abrió unilateralmente sus mercados. Antes de mediados de los ochenta, México cobraba aranceles aduaneros de hasta 100% sobre muchas importaciones agrícolas, como parte de una estrategia general de desarrollo económico basada en la sustitución de importaciones. B.

Las barreras comerciales se están eliminando poco a poco a lo largo de cinco, diez o quince años, dependiendo del producto. Además, el TLCAN contempla salvaguardas especiales en contra de irrupciones en la importación, para proteger algunos de los productos más importantes del comercio entre los dos países. C. Muchas de las barreras no arancelarias que restringen el comercio agrícola entre Estados Unidos y México no se contemplan explícitamente en el TLCAN. Las políticas que pudieran distorsionar el comercio incluyen los apoyos para los precios al productor y los subsidios, diferencias entre clasificaciones y estándares en productos de ambos países, reglamentos sobre el uso de químicos, reglamentos sobre residuos en los alimentos, estándares sobre el control de insectos y enfermedades, reglamentos sanitarios y fitosanitarios, y reglamentos similares, así como medidas para su cumplimiento. En términos generales el análisis del comportamiento del comercio exterior en cualquiera de los subsectores de exportación de cultivos en fresco existen cuatro elementos centrales de los cuales dependen los flujos de exportaciones hacia Estados Unidos en cada temporada:

- a. los movimientos del tipo de cambio;
- b. la demanda en el país de destino;
- c. la producción interna en el mercado de destino; y
- d. el grado de competitividad de los bienes exportables, con relación a otros países

exportadores.

El mercado de hortalizas en fresco es especialmente sensible a los dos primeros factores. Los productos en fresco son altamente elásticos, por lo que un movimiento brusco en el tipo de cambio favorece la exportación. Durante los períodos de grandes devaluaciones del peso mexicano en 1982, 1987 y 1994, la cantidad de frutas y hortalizas que Estados Unidos importó desde México creció casi en el doble; tomando en cuenta que es una industria altamente protegida y que la reglamentación de comercio bilateral establece cuotas de entrada y un impuesto extra si se sobrepasan éstas. Después de la devaluación de 1994, las importaciones norteamericanas desde México pasaron de 12.2% en 1993 a 13.6% en 1996 (LUCIER, POLLACK y Pérez, 1997). Aunado a los movimientos del tipo de cambio se encuentran las consecuencias de éste al interior de la economía mexicana. La contracción de la demanda interna por la crisis económica en 1995, fueron determinantes para que durante los primeros tres años del TLCAN la exportación de vegetales creciera. Con la devaluación y la contracción del mercado interno, los precios en Estados Unidos se hacen más atractivos para los productores mexicanos. El ejemplo más representativo se encuentra en los productores de Sinaloa, quienes producen para el mercado interno y externo. Al momento de la devaluación, el mercado norteamericano supera las expectativas de ganancia de la comercialización interna (CALVIN y LUCIER, 1997). El segundo factor, la demanda en el país de destino, se caracteriza por el cambio en los patrones de consumo que se ha modificado en los últimos 15 años.

## METODOLOGÍA

Para la elaboración del presente estudio se tomaron en consideración datos e información de diversas fuentes estadísticas y bibliográficas. Se utilizaron datos de Bancomext, FAO, FAOSTAT, SAGARPA, Secretaria de Economía y USDA. Este análisis se realiza por medio de una medición empírica de la competitividad, el cual mide indirectamente la competitividad en este caso de productos hortícolas y su tendencia en el tiempo a través de estadísticas corrientes de comercio. Lo cual permite analizar las dificultades a la exportación a Estados Unidos. La selección de estos cultivos se debe a que del universo de productos en fresco que México exporta al mercado norteamericano, los tres representan casos distintos en el manejo de la política comercial dentro del mercado regional expresado en el TLCAN. Las hortalizas analizadas están dentro de la clasificación de productos de invierno. Por definición los flujos de comercio se incrementan o disminuyen dependiendo de la época del año en la que varía la producción norteamericana. Estos tres cultivos son representativos de algunos de los problemas que presenta la exportación de hortalizas. Identificamos 3 características del comercio correspondientes a cada uno de los cultivos:

1. Complementario estacional: chile bell que se exporta a Estados Unidos para complementar la oferta doméstica. Los períodos del año en los que México incrementa sus flujos reflejan la baja en la producción de Florida.
2. Abastecedor parcial: el espárrago verde importado desde México cubre casi el 60% de la oferta total durante todo el año.
3. Complementario parcial: la sandía exportada a Estados Unidos representa menos del 10% de su oferta doméstica total anual de dicho país.

Como vemos, se abarcan los principales puntos de resolución en los que México tuvo poco que ver frente a las condiciones productivas de Estados Unidos. Con excepción del espárrago, el factor común en ellos es, en primer lugar, que las condiciones de producción interna han sido, en algún momento, obstáculo para entrar al mercado de exportación. Para el chile bell, la problemática ha sido manejada, y como se ve más adelante, se han logrado superar las condiciones de la producción norteamericana. La sandía tiene graves problemas de financiamiento que se acrecentaron con la crisis económica 1994. Asimismo, la estructura de mercado corresponde al oligopsonio en todos los casos, lo que prácticamente elimina la expansión de las zonas productoras en el territorio nacional. Para explicar la demanda de exportaciones norteamericanas desde México, se realizó una medición por medio de un análisis econométrico bajo el método de mínimos cuadrados ordinarios. El cálculo muestra la elasticidad precio de cada cultivo.

A continuación se explica la metodología y organización de los datos para los tres cultivos al realizar la medición. Tomando la información disponible de los tres cultivos seleccionados se formuló una ecuación de demanda de las exportaciones de México hacia el mercado de Estados Unidos para cada uno de ellos. El objetivo fue correr una regresión aplicando logaritmos para medir la elasticidad precio de la demanda de dichos cultivos en el mercado de estadounidense. La medición se realizó en los mismos términos para todos los cultivos esto debido a la falta de información serial referente a los costos de producción en ambos países. De existir una desagregación para series de tiempo sería posible armar una ecuación distinta para cada cultivo, dependiendo de sus particularidades tanto, del comportamiento del mercado como de las condiciones de producción en ambos países. Pese a esta limitante, el cálculo de los valores estimados nos proporciona una visión general útil al establecer las señales por las que las exportaciones mexicanas hacia Estados Unidos se han comportado a lo largo de 26 años. Por un lado, al correr la regresión, para el caso del espárrago, se obtuvieron estimadores estadísticamente significativos. Las regresiones correspondientes al chile bell y la sandía no arrojaron estimadores confiables. Como veremos más adelante, la explicación acerca de los factores determinantes de las exportaciones de ambos cultivos hacia los Estados Unidos tienen que ver más con las variables cuantificables utilizadas son: cantidad exportada desde México hacia Estados Unidos, diferencia de precios entre México y Estados Unidos, volumen de la producción en Estados Unidos, consumo per cápita en ese mismo mercado y el tipo de cambio del peso mexicano frente al dólar. Las series de datos utilizadas corresponden a las publicadas por el Departamento de Agricultura de los Estados Unidos (USDA) y para las exportaciones mexicanas hacia Estados Unidos se utilizó la información publicada por el INEGI. Ambas fuentes cubren el período 1973-1997. El método utilizado fue el de Mínimos Cuadrados Ordinarios; las pruebas aplicadas para comprobar la veracidad de los valores estimados fueron la F y la Durbin-Watson. La ecuación para los tres cultivos es:

$$QXM = \alpha (Y_{EU} + PMex-EE.UU + CEE.UU + T + e)$$

Donde:

QXM = Cantidad exportada hacia Estados Unidos

YEE.UU = Cantidad producida en Estados Unidos

PMex-EE.UU = Diferencia de precios México-Estados Unidos

CEE.UU = Cantidad consumida en Estados Unidos

T = Tipo de cambio (peso/dólar)

Los precios están dados en dólares, el consumo en kilogramos, y la cantidad exportada y producida en toneladas.

$$Qxm = a + b1 YEE.UU + b2 PMex-EE.UU + b3 CEE.UU + b4T + e$$

Para el análisis de los valores estimados se consideraron también algunas condiciones específicas tales como la estacionalidad, tan importante en el comercio exterior de productos en fresco, y a partir de ésta el que cada cultivo está sujeto a distintas reglamentaciones que limitan o incrementan el flujo de comercio entre los dos países en el manejo de la política comercial, que con las variables que aquí se proponen como determinantes Dentro de este panorama general del comportamiento de cada cultivo, algunas consideraciones, al establecer dicha ecuación, valen para los tres cultivos y son las siguientes:

Por definición, las exportaciones hortofrutícolas mexicanas hacia Estados Unidos tienen un mercado estacional establecido. En este sentido, la dificultad de consultar series de información de las variables seleccionadas con periodicidad mensual impide medir la variación exacta del volumen exportado durante todo el año. Es por esto, que se utilizó la información anual disponible, lo que permite conocer las determinantes del total de la oferta norteamericana y en particular el papel de las importaciones mexicanas en ésta.

Para los tres cultivos, el papel que cumplen en la oferta dentro del mercado norteamericano no incide en el nivel de abasto del mercado mexicano, es decir, que los niveles de consumo se vean disminuidos por el incremento de las exportaciones hacia Estados Unidos. Así, la medición de la elasticidad precio de la demanda es válida para períodos anuales en el sentido de que la cantidad demandada por los consumidores norteamericanos está compuesta, en alguna proporción, por las importaciones provenientes de México. Con base a los cálculos realizados, a continuación explicamos la posición dentro del comercio exterior mexicano para cada cultivo.

## RESULTADOS

Estados Unidos tiene una competitividad importante a nivel mundial en sus exportaciones hortícolas comparado con México. Sin embargo, durante el periodo analizado, México presenta menor competitividad sobre Estados Unidos en cuanto a la producción y exportación de espárrago. El consumo per cápita de naranja en Estados Unidos y México disminuyó durante el periodo de estudio. Sin embargo, el aumento de la demanda en ambos países se debe a la creciente demanda a nivel mundial. Consecuencia de la gran popularidad que éste producto a tenido en los últimos años. Por esta razón, Estados Unidos ha incrementado sus exportaciones para abastecer el mercado mundial, principalmente el mercado . Esto se refleja en el aumento de producción y exportación de espárrago por parte de México hacia Estados Unidos. Los resultados obtenidos de las regresiones aplicadas a los tres cultivos seleccionados permiten concluir que:

Las exportaciones mexicanas de chile bell, espárrago, sandía hacia Estados Unidos están determinadas, en mayor medida, por la producción interna de los Estados Unidos, ya sea porque es insuficiente o inexistente para cubrir la demanda interna, o porque sus productores no son competitivos frente a la producción mexicana.

La liberación del comercio agrícola para México no significó, al menos en el subsector exportador de verduras, el cumplimiento de las reglas naturales de intercambio asociadas a las ventajas comparativas por dotación de factores. El libre comercio regulado, es decir, el establecimiento de reglas de funcionamiento que pueden llegar a ser restrictivas a los flujos de intercambio dependiendo de los acuerdos que los países involucrados tomen en el proceso de negociación atendiendo a las necesidades de sus productores y no de sus consumidores, impide

que estas ventajas, cuando existen, funcionen por sí solas. Esto queda evidenciado especialmente en los casos del chile bell, espárrago y sandía

## CONCLUSIONES

La firma del TLCAN ha sido un catalizador de las diferencias existentes. Dado que las ventajas comparativas de México en el Los cultivos de exportación analizados, están dentro del grupo que la política comercial norteamericana considera como estratégica para el desarrollo y crecimiento de sus productores, de tal manera que las negociaciones del TLCAN favorecieron las condiciones bajo las cuales los productores norteamericanos se desarrollan independientemente de la estacionalidad, la productividad y la ventaja comparativa, estas condiciones pueden ser contraproducentes para los productores exportadores mexicanos. En los tres casos aquí presentados, la producción mexicana de exportación está dirigida al mercado de invierno, situación que incrementa la concentración de la producción interna en aquellos productores que cuentan con capital suficiente para reconvertir sus cultivos con tecnología avanzada, o se integran a mecanismos de producción y comercialización con empresas norteamericanas. En ese sentido, los efectos multiplicadores de la apertura comercial para este subsector exportador mexicano son localizados y limitados. Los productores aprovechan su ventaja comparativa en la medida que la política comercial norteamericana lo permite a través de las reglas de funcionamiento del TLCAN. Los resultados obtenidos de las regresiones aplicadas a los tres cultivos seleccionados permiten concluir que:

Las exportaciones mexicanas de chile bell, espárrago, sandía hacia Estados Unidos están determinadas, en mayor medida, por la producción interna de los Estados Unidos, ya sea porque es insuficiente o inexistente para cubrir la demanda interna, o porque sus productores no son competitivos frente a la producción mexicana.

La liberación del comercio agrícola para México no significó, al menos en el subsector exportador de verduras, el cumplimiento de las reglas naturales de intercambio asociadas a las ventajas comparativas por dotación de factores. El libre comercio regulado, es decir, el establecimiento de reglas de funcionamiento que pueden llegar a ser restrictivas a los flujos de intercambio dependiendo de los acuerdos que los países involucrados tomen en el proceso de negociación atendiendo a las necesidades de sus productores y no de sus consumidores, impide que estas ventajas, cuando existen, funcionen por sí solas. Esto queda evidenciado especialmente en los casos del chile bell, espárrago y sandía. subsector hortícola se transforman en el sentido de que la mejora tecnológica potenció la ventaja natural de la dotación de factores, las viejas reglamentaciones en materia de intercambio se transformaron también.

La reglamentación por cuotas y estacionalidad ya existía, sin embargo, lo que el TLCAN otorga a Estados Unidos es un plazo para reconvertir a sus sectores no competitivos frente a su símil mexicano.

## RESUMEN

*Cuando las decisiones que se toman a diario no resultan como se esperaban o las cosas toman otro cauce, comienza a tomar fuerza la idea de que otros elementos no considerados se posicionan con características propias y mayor peso que aquellos incluidos en los modelos clásicos a la hora de tomar decisiones sobre consumo, ahorro, inversión y financiación. Es entonces cuando los estudiosos de la teoría de la decisión abordan teorías relacionadas con la conducta y la psicología del decidor, su educación y la formación, teorías que otorgan un peso relativo distinto a cada variable de acuerdo al tipo de decisión llevada a cabo en el momento de decidir; influenciado por el modelo de decisión psicológico, las características propias de cada decidor, las condiciones ambientales, los sesgos y heurísticas. El trabajo indaga sobre las diversas teorías y los mecanismos psicológicos sobre cognición, la teoría de aprender a aprender que proviene del campo de la docencia y que se considera pieza fundamental para lograr la satisfacción del ser humano y se ponen en ejecución cuando el ámbito deja de ser el cotidiano, el de todos los días, para tomar decisiones que requieren de la creación y se desarrollan en condiciones de riesgo e incertidumbre.*

**PALABRAS CLAVE:** Psicología cognoscitiva, psicología económica, aprender a aprender, racionalidad, problemas de decisión

## BETWEEN RATIONAL TRAINING AND LEARNING TO LEARN

### ABSTRACT

*When actions that we take daily do not have the expected results, the idea that certain items not properly accounted for in the classical decision making models used to make decisions on sensitive issues such as consumption, saving, investing and financing. This is when the scholars of decision theory address issues such as the behavior and psychology of the decider or his education and training. This theories give different relative weights to each variable according to the type of decision required, influenced by the psychological decision making model, the characteristics of the people involved, environmental conditions and biases. This work explores the various theories and psychological mechanisms of cognition, the theory of "learning to learn" that originated in the field of teaching and which is considered a cornerstone in the path of human beings development. They are implemented when the field in question behaves unexpectedly to make decisions that require creativity and are executed in conditions of risk and uncertainty.*

## INTRODUCCIÓN

La forma en que el ser humano aprende ha sido tema de debate e investigación desde los albores mismos de la humanidad, y debido a que los grandes avances en la ciencia y la tecnología han producido un enorme caudal de conocimiento e información que –como ha señalado Edgar Morín–, la lógica disciplinar ha fragmentado tanto los conocimientos, resulta dificultoso comprender la complejidad de los fenómenos que ocurren. De allí la importancia de lograr que el ser humano adquiera la capacidad de aprender a aprender, como herramienta válida para su desarrollo presente y futuro. Según Díaz Barriga (s/d) se ha conseguido identificar la posibilidad de obtener resultados satisfactorios, a partir de las situaciones didácticas a las que se han enfrentado las personas; y que muchas veces han aprendido a aprender porque quienes desarrollan ciertos procesos cognitivos.

Hay consenso que los trabajos relativos a la teoría clásica se inician en forma sustantiva con el trabajo pionero de Bernoulli (Plata y Mejía, 2012; Pascale y Pascale, 2007) con la idea de maximizar la riqueza como medida de racionalidad en la decisión, para continuar luego mediante las extensiones de la obra de John von Neumann y Oskar Morgenstern de 1944, quienes propusieron una teoría axiomática de la decisión bajo riesgo e incertidumbre, denominada Teoría de la Utilidad Esperada (TUES) que enfatizó sensiblemente la interpretación normativa (Plata y Mejía, 2012; Scarano, 2008; Vidal de la Rosa, 2008; Pascale y Pascale, 2007) y la interpretación de la maximización de la ganancia –no ya de la riqueza según Bernoulli– como objetivo de racionalidad.

Más tarde, con la incorporación de los psicólogos cognitivos, se incorporan las variables subjetivas al análisis en la toma de decisiones; Daniel Kahneman y Amos Tversky presentan su aporte, consecuencia de años de trabajo, orientados en tres líneas de investigación, en la primera de ellas tuvo por objeto de estudio las heurísticas y los sesgos; el segundo sobre la teoría prospectiva como modelo de elección ante situaciones de riesgo y por último sobre el estudio sobre los efectos marco para los modelos de agente racional (Kahneman, 2003).

## REVISIÓN LITERARIA

El trabajo investiga sobre dos vértices bien definidos, por un lado la educación desde la visión del aprender a aprender (Díaz Barriga, s/d; gov. vasco, 2012) y por el otro lado la psicología económica utilizada en la toma de decisiones, analizada esta última en las críticas que los autores de origen latino realizan sobre los trabajos de investigadores anglosajones que trabajaron en la construcción de la teoría clásica de decisión y sus extensiones hasta los trabajos de Kahneman y Tversky, sumado a las teorías cognitivas más importantes de la psicología económica (Alcalá Villarreal, 2011; Becerra et al, 2011; Hernández Ramírez, 2009; Zuluaga Montaña y Ramírez Maya, 2006; Cortada de Kohan, 2008) y en la visión que aporta la docencia desde la perspectiva del aprender a aprender (Díaz barriga, s/d; gov. Vasco, 2012). Se recupera para la investigación de la psicología de la economía y los procesos de cognición, decisión y racionalidad el legado del psicólogo francés Gabriel Tarde quien presentó una teoría sobre la forma en que los individuos realizan los procesos de cognición basado en la imitación y la creación, siendo esta última propia del ser humano (López y Sánchez-Criado, 2006; Nocera 2006; Denegri Coria, s/d). El análisis del modelo conductual de Tarde (Latour, Lépinay, 2008; López y Sánchez-Criado, 2006; Denegri Coria, s/d) tiene relación con el modelo de los dos sistemas, denominados S1 y S2 por Stanovich y West (2000), respaldado en modelos de racionalidad que se validan con la justificación que les otorga el sustento correspondiente. (García Campos, 2008, 2009; Stanovich y West, 2000, 2003; Vieira Cano, 2008; Estrada Gallego, 2006) y se complementan con distintas visiones y objetivos del aprender a aprender.

## METODOLOGIA

De acuerdo a las características de un trabajo de investigación teórica, el marco metodológico utilizado principalmente es la recopilación de *papers* de psicólogos que han trabajado en el comportamiento económico y de académicos de las ciencias económicas realizando investigaciones en economía conductual. Es en esencia un trabajo descriptivo que intenta ofrecer respuestas en el marco de la exploración académica, dentro de los mapas conceptuales propios de la cultura latina. La búsqueda bibliográfica fue conducida en el ámbito de revistas académicas de prestigiosas universidades Latinoamericanas en especial, mediante la técnica de búsqueda ciega, orientada en palabras clave. Si bien es una investigación cualitativa desde el punto de vista del estudio del hecho puntual, dichos hechos no nacen de la empírea sino que son producto de observaciones de trabajos primigenios luego desarrollados a través del filtro de la visión cultural de los autores latinos.

## RESULTADOS

### El Modelo del Comportamiento de Gabriel Tarde

Según Denegri Coria (s/d., p. 10), “para Tarde, el comportamiento social se explica mediante los conceptos complementarios de imitación e invención. La imitación es el fenómeno crucial para explicar, partiendo de los individuos, las relaciones humanas. Es una especie de estado hipnótico que lleva a los individuos a repetir en forma automática, las conductas desarrolladas previamente por modelos. La imitación es el procedimiento psicológico por el cual las ideas se repiten y propagan en la sociedad y comienza a partir de estados internos como las creencias y los deseos”.

La imitación se interpreta como la situación que le permite a Tarde afirmar que la realidad social es el resultado de estados psicológicos, que se dan como resultado de la asociación de los individuos permitiendo construir una representación psicológica grupal, entonces el nivel de realidad son los individuos agrupados y el efecto colectivo sobre la conciencia individual (López Parra, 2008). Por lo tanto, la construcción grupal de la realidad psicológica condiciona a los integrantes de cada grupo en un marco de referencia actitudinal y sentimental dentro del cual toman decisiones individuales. El concepto de invención es mucho más importante para el desarrollo del ser humano, ya que permite evolucionar desde una situación dada y conocida (por la imitación) hacia una realización (invención) nueva, permitiendo de este modo a las sociedades avanzar. No solo crecer a nivel sociedad sino también grupal, para cada actividad o disciplina en particular.

### El Modelo Didáctico de Aprender a Aprender

Los nuevos retos originados en la sociedad del conocimiento y de la información –en el contexto de la globalización– requieren desarrollar cierta capacidad de adaptación que en el plano personal, exige a cada individuo la característica de seguir aprendiendo a lo largo de la vida, con el objetivo de mantener su empleo y el acceso a consumos básicos, garantizar la participación ciudadana en la sociedad y evitar la exclusión social. Es en este contexto que aprender a aprender se convierte en la herramienta fundamental que garantiza la educación y la capacitación a lo largo de la vida para toda la ciudadanía, incluyendo a las personas con pocas oportunidades, en cualquier ámbito, y para todos los escenarios posibles de aprendizaje. Aprender a aprender implica la capacidad de reflexionar en la forma en que se aprende para luego actuar en consecuencia, autorregulando de esta manera el propio proceso de aprendizaje –autoaprendizaje-

mediante el uso de estrategias flexibles y adaptativas apropiadas que se transfieren y se adaptan para enfrentar nuevas situaciones (Diaz Barriga, s/d).

#### El Modelo de Racionalidad Limitada de Herbert Simon

Simon se dedicó al estudio de la teoría de las organizaciones de los procesos de toma de decisiones y de solución de problemas y las implicaciones de los procesos para las instituciones humanas, permitiendo un acercamiento desde la economía a la psicología a partir de los años cincuenta. Partiendo de la observación empírica del funcionamiento de las organizaciones, se revelan las pruebas de los límites de la racionalidad individual completa. Sus investigaciones lo llevaron a proponer el famoso concepto de racionalidad limitada (*bounded rationality*) en oposición al concepto neoclásico del hombre racional, dando lugar de esta forma a un comportamiento satisfaciente y no maximizante (Vieira Cano, 2008; Pascale y Pascale 2007; Estrada Gallego, 2006). Para Simon el principal objetivo es interpretar la racionalidad humana, entendida ésta como determinados niveles de satisfacción individual más que organizacional, destacando que el método utilizado para su estudio fue la observación experimental de los fenómenos psicológicos en los individuos y la forma en que éstos resuelven sus problemas. Algunas veces la gente responde preguntas difíciles por analogía a través de otras más simples, donde la percepción, la intuición y la experiencia juegan un papel más importante que la utilización de modelos racionales de maximización.

#### El Modelo de Razonamiento Dual (o de los dos Sistemas)

En el campo de la psicología cognitiva se desarrolló una teoría denominada dual de sistemas que logró captar la atención de un grupo importante de psicólogos, y se desarrolló con fuerza especialmente a partir de la década del noventa del siglo pasado. Esta teoría postula el supuesto de dos procesos de razonamiento distintos que conviven dentro del cerebro humano, denominados S1 y S2 por Stanovich y West (2000, 2003). Estos autores adjudican al sistema S1 una capacidad de rápida respuesta, gran capacidad operativa (capacidad computacional), que permite dar una respuesta inmediata incluso a complejos problemas de razonamientos, el inconveniente es que no siempre las respuestas son correctas. Se considera que este sistema es innato en el ser humano y antiguo en términos de evolución (García Campos, 2008, 2009). Por otra parte, S2 es, siguiendo a Stanovich y West (2000, 2003), un sistema de razonamiento más lento pero capaz de cumplir con determinados requisitos normativos que llevan a una respuesta más acertada en términos de racionalidad. Según García Campos (2008) S2 está gobernado por reglas explícitas, es más moderno en términos evolutivos y requiere para su funcionamiento de una mayor capacidad cognitiva, además este sistema tiene la capacidad –hasta cierto punto– de controlar los outputs de S1 e incluso inhibirlos.

Una definición importante llegada a este punto es el concepto de racionalidad, para el cual se asume la postura de Stein, quien citado por García Campos (2009) la ha llamado la “visión estándar de la racionalidad”. “De acuerdo a esta visión, ser racional es razonar en concordancia con los principios del razonamiento fundados en las reglas de la lógica, la probabilidad y así sucesivamente. Si la visión estándar del razonamiento es correcta, los principios normativos de razonamiento, esto es, son los principios con los que debemos razonar” (Stein, citado por García Campos, 2009, p. 66).

#### El Modelo de Racionalidad Limitada de Kahneman y Tversky y la Teoría Prospectiva

Daniel Kahneman y Amos Tversky adhieren al modelo de razonamiento dual y su aporte fue la consecuencia de años de trabajo orientados en tres líneas de investigación, la primera de ellas tuvo por objeto el estudio de las heurísticas y los sesgos; la segunda línea sobre la teoría prospectiva como modelo de elección ante situaciones de riesgo y por último la investigación orientada sobre los efectos marco para los modelos de agente racional (Kahneman, 2003). Estos autores consideran un tercer elemento: la intuición, que significa tener “acceso directo” a interpretaciones mentales que de otra manera deberíamos descifrar mediante el uso de algún modelo de razonamiento que sea justificado epistemológicamente, del tipo de racionalidad limitada de Simon (Vieira Cano, 2008; Pascale y Pascale 2007; Estrada Gallego, 2006) o la visión estándar de la racionalidad de Stein (García Campos, 2009, p. 66). Un modelo de tres sistemas:

Kahneman observa un modelo constituido por tres sistemas cognitivos, integrados por 1) la percepción que se vincula directamente con la respuesta a los estímulos, 2) la intuición o sistema1 (S1), asociado a representaciones conceptuales y 3) el razonamiento o sistema2 (S2), también asociado a representaciones mentales. Las diferencias entre la intuición y el razonamiento, también obedece a las diferencias halladas en S1 y S2, la intuición es un sistema de respuestas rápido, automático, sin esfuerzo, trabaja por asociación y tiene contenido emocional, mientras que el razonamiento es trabajoso, lento, controlado, regido por normas (Kahneman, 2003, pp. 184/6). Uno de los principales aportes de Kahneman y Tversky a la teoría de la decisión se deben a la crítica que hacen del modelo de decisión de Bernoulli –al que Kahneman denominó “el error de Bernoulli”- y hace referencia a que los agentes no toman decisiones tratando de maximizar su riqueza (aumentar sus activos), sino que la principal fuerza impulsora está dada por los resultados que obtienen (Kahneman, 2003). Esta afirmación la sustentan en una serie de ejercicios psicológicos que llevaron adelante y les sirvió para demostrar que si bien el modelo bernoulliano es compatible con la hipótesis económica que lo racional es la maximización de la riqueza, ellos descubrieron que los agentes económicos anteponen el corto plazo y las ganancias al aumento de la riqueza. En la escolaridad se inicia el ciclo de educación formal, a través de la adquisición de nuevos conocimientos que requieren el esfuerzo del intelecto; por ejemplo para la lectura, S2 debe participar activamente para traer a la mente un conjunto de símbolos y comenzar a armar el rompecabezas de sus conjunciones, y es allí cuando los niños comienzan a palabrear pero no entienden ni saben que han leído, pues aún no han pasado a S1 el proceso de lectura y por lo tanto, siguiendo a Kahneman (2003) al no tener capacidad suficiente para realizar dos actividades cognitivas a la vez que requieren esfuerzo, como la lectura y la comprensión, entonces no pueden entender lo leído; solo cuando el procedimiento de lectura haya pasado a S1 y el niño realice este proceso sin esfuerzo podrá comenzar el camino de la comprensión del contenido. Idéntica vía para las siguientes etapas de escolarización y contenidos de la educación formal y aprendizaje de los oficios.

En niveles elevados de educación –especialización y máster- se instruye a los estudiantes, ya profesionales prácticos, a trabajar con modelos que tienen su justificación en programas que responden a su entendimiento de racionalidad, tal como lo pregonan el modelo estándar. El ámbito de excelencia de los claustros académicos facilita las creencias en niveles de S1 de los modelos cuando resulta complejo interpretar conceptualmente sus desarrollos, entonces es cuando la fuerza de la imitación permite aplicar modelos complejos aprehendidos y alojados en S1 para solucionar problemas de otra índole pero se observan elementos que justifican su uso, ya sea por la alta notabilidad o por su accesibilidad (Kahneman, 2003). Es de alguna manera el *animal spirit* de Keynes llevado por los practicantes al mercado financiero: ante señales del mercado operan rápidamente (S1) para ganarle al mismo mercado, ya que son las respuestas que asimilaron, aprendieron y aprehendieron ante la ocurrencia de determinados eventos observados en función de su notabilidad. De alguna manera la aplicación del stop loss es un ejemplo del animal spirit en

los programas de computación que operan en los mercados de capitales: determinada la tasa máxima aceptable de pérdida, cuando ésta ocurre se acciona un mecanismo (como el S1 en el ser humano) que opera automáticamente en los inversores del mercado, acentuando bajas y pronunciando subidas para el caso de las alzas. Solo unos pocos podrán separarse del resto para observar cosas que los demás no vislumbran (Latour, Lépinay, 2008), son aquellos que a juicio de Tarde marcarán el camino que los demás seguirán, los líderes, los que tienen capacidad para crear con la ayuda –y no las limitaciones- de los saberes aprendidos.

## CONCLUSIONES

El ser humano nace en el seno de una determinada sociedad con ciertas costumbres que absorbe desde que nace y es muy fuerte y lo condiciona para el resto de su vida, recibiendo un marco de referencia social, económica y cultural que como un iceberg se mantendrá oculto para salir a relucir ante determinadas situaciones o cuando algún evento extraordinario así lo requiera. Está innato en él y a través de la socialización y la educación formal e informal irá sumando modelos de solución de problemas, desde S2 a S1, para dar respuestas rápidas y casi siempre correctas a problemas complejos y aprendiendo a aprender para aumentar sus respuestas y mantenerse al corriente de las nuevas tendencias y avances en ciencia y tecnología, en sociedad e inclusión. Por lo tanto, la interpretación de la realidad económica o social dará fundamento a la respuesta que será debidamente justificada por el criterio que corresponda de acuerdo al tipo de racionalidad empleada.

Durante la educación se produce el proceso de formalización del comportamiento y se adquieren herramientas apropiadas para la resolución de problemas, pero la interpretación que hagan de la realidad tomará del conjunto de creencias aquellas que respalden las soluciones justificadas en entornos complejos y desconocidos. La racionalidad acotada de Simon es una base para edificar la forma que se toman decisiones en cualquier nivel, desde un inversor hasta un político, sesgado por su sistema de creencias, valores y principios, innatos y adquiridos, y la manera que adquiera nuevas habilidades. Incluso en mercados tan formalizados como los financieros se habla del humor de los inversores y el sentimiento del mercado, para buscar que orientación puede seguir el índice bursátil cuando su evolución no respeta los cánones de la lógica, las matemáticas, la probabilidad y la teoría de la decisión.

## LA INNOVACION DE PROCESOS COMO VENTAJA COMPETITIVA EN LA INCUBACION DE PYMES: CASO DITEMCO S.A. DE C.V.

Blanca Esthela Zazueta Villavicencio, Instituto Tecnológico de Agua Prieta  
Nahúm Ledezma Mercado, Instituto Tecnológico de Agua Prieta  
Eduardo Rodríguez Leyva, Instituto Tecnológico de Agua Prieta  
Víctor Manuel Valenzuela Alcaráz, Instituto Tecnológico de Agua Prieta

### RESUMEN

*Las pequeñas y medianas empresas (PyMES) en el país son una fuente de empleos así como de generación de riqueza y es a través de las incubadoras de empresas reconocidas por la Secretaría de Economía de México, quienes han sido de gran ayuda para lograr la inserción de las Pymes dentro del mercado de los negocios, generado su modelo y plan de negocios así como estrategias para posicionarse y mantenerse en el mercado de los consumidores de bienes y servicios. La empresa DITEMCO S.A de C.V, quien se encuentra en proceso de incubación en el Instituto Tecnológico de Agua Prieta, Sonora, México, ha identificado una necesidad real y actual que consiste en el diseño de un programa de modificación de conducta incluyendo una herramienta en una de sus fases o etapas que trabaja sobre los principios psicológicos conductistas del condicionamiento operante; con el objetivo de administrar contingencias ante la emisión o no de una conducta a través del tiempo. El dispositivo temporizador electrónico será de apoyo en el tratamiento del proceso de modificación de la conducta pensado principalmente para niños y jóvenes diagnosticados con TDAH (trastorno por déficit de atención e hiperactividad) a los cuales les ayudara en actividades que inciden en su desempeño académico y de autoestima, pero además podría ser utilizado por personas con problemas de terapias del habla, cuestiones farmacológicas, adultos con problemas de la memoria, por médicos especialistas como herramienta de apoyo en sus pacientes. El aporte importante de esta investigación es demostrar que la Incubadora de empresas del Instituto Tecnológico de Agua Prieta está logrando contribuir a la creación de empresas de tipo pequeñas y medianas con procesos innovadores que les dan una ventaja competitiva y que además aportan a la sociedad productos y/o servicios que cubren necesidades imperantes para nichos de mercados bien identificados como lo es el dispositivo temporizador electrónico de DITEMCO.*

## PROCESS INNOVATION AS COMPETITIVE ADVANTAGE IN THE INCUBATION SMEs: CASE DITEMCO SA DE CV

### ABSTRACT

*Small and medium enterprises (SMEs) in the country are a source of employment and wealth generation is through business incubators recognized by the Ministry of Economy of Mexico, who have been of great help to achieve the inclusion of SMEs in the business market, generated your model and business plan and strategies to position and stay in the market for consumer goods and services. The company DITEMCO SA de CV, who is in the process of incubation in the Technological Institute of Agua Prieta, Sonora, Mexico, has identified a real and current design*

*consists of a behavior modification program including a tool in a of the phases or stages working on behavioral psychological principles of operant conditioning, with the aim of managing the issuance contingency conduct or not over time. The electronic timer device will support the process in the treatment of behavior modification intended primarily for children and young people diagnosed with ADHD (attention deficit hyperactivity disorder) to which help them in activities that affect their academic performance and self-esteem, but also could be used by people with speech therapy, pharmacological issues, adults with memory problems, by specialists as a support tool in their patients. The important contribution of this research is to demonstrate that the business incubator of Agua Prieta Institute of Technology is making contribute to the creation of companies small and medium type with innovative processes that give them a competitive advantage and also provide products and society / or services that meet pressing needs for clearly identified niche markets such as the electronic timing device DITEMCO.*

## INTRODUCCION

Antes de identificar la importancia de la PyMES (pequeñas y medianas empresas) en México, comenzaremos por analizar su significado:” Una Unidad Económica de Producción y Decisiones que, mediante la Organización y coordinación de una serie de Factores (Capital y Trabajo), persigue obtener un beneficio produciendo y comercializando productos o prestando servicios en el mercado”. (Andersen, 1999). Desde hace mucho tiempo las PyMES han constituido los ingresos principales de muchas familias mexicanas, ya que de ellas una familia puede sostenerse, sin necesidad de realizar algún trabajo adicional, además es de considerarse que constituyen un apoyo para las siguientes generaciones de empresarios, por la transmisión de los secretos de la empresa familiar, contribuyendo al crecimiento y desarrollo de las empresas mexicanas, de una manera empírica en la mayor parte de los casos.

El mayor problema que han tenido que superar las PyMES es la Globalización, situación que de entrada provocó que muchas empresas tuvieran que cerrar por el gran número de empresas transnacionales que llegaron a nuestro país. La Pequeña y Mediana Empresa (PyME) en México tiene un gran potencial de desarrollo, ya que según las más recientes cifras que genera la Secretaría de Economía existen cerca de 4'000,000 de empresas catalogadas como PyMES, lo que representa el 99.8% del total de las empresas que operan en nuestro país, y que además dan empleo al 72% de la población económicamente activa, generando aproximadamente el 52% de participación del PIB nacional. Las empresas PyMES se catalogan tradicionalmente basándose en dos rubros principales, por el número de empleados que tiene la empresa, y/o bien por el monto total facturado en el año. Una clasificación de este tipo la podemos observar en la Tabla No. 1.

Tabla 1: Nueva Clasificación de Micro, Pequeñas y Medianas Empresas a Partir del 30 De Junio de 2009 Por Secretaria de Economía

Tipo De Industria	Personal	Ventas (En Mdp)
Micro Industria	0-15	\$30.00
Industria Pequeña	15-100	\$400.00
Industria Mediana	100-250	\$1,100.00

*Clasificación utilizada para determinar el tamaño de las empresas de acuerdo a su número de empleados y sus ventas.*

Hoy día, los gobiernos de países en desarrollo reconocen la importancia de las Pymes por su contribución al crecimiento económico, a la generación de empleo, así como al desarrollo regional y local. Es importante reconocer que la mayoría de las empresas logran con mucho esfuerzo que sus productos tengan un nivel de calidad aceptable en su mercado y cumplan con las expectativas de sus clientes, lo cual es efectuado con elevados re-procesos y desperdicios en algunos casos, aun cuando no tienen en general sistemas de aseguramiento de la calidad formales implantados, lo cual, les permite seguir operando pero con muchas oportunidades de mejora. Por lo que de manera muy general todas las pequeñas y medianas empresas (PyMES) comparten casi siempre las mismas características, por lo tanto, se podría decir, que estas son las características generales con las que cuentan las PyMES (Méndez, 1996). En general carecen de un plan de negocios formalmente definido, no se tienen establecidos objetivos de ventas, utilidades, productividad, ni enunciados de Misión, Visión, Política de Calidad, etc., lo que no les permite desarrollarse más y mejor. En algunos casos la situación de la empresa no es completamente favorable, ya que tienen problemas principalmente financieros por falta de capital de trabajo, o por una baja en la captación de clientes, lo anterior debido a una falta de planeación y de definir estrategias tanto de producción, como de ventas y recuperación de cartera entre otras.

Es una tarea de Instituciones de Educación Superior a través de las Incubadoras de Empresas, empresarios, las Cámaras, así como de la sociedad en su conjunto, contribuir con el gobierno para establecer y ejecutar políticas públicas que sienten condiciones adecuadas para alentar la competitividad de las empresas, especialmente de las PyMES. Es indispensable apoyarlas para seguir creciendo pero sobre todo para fortalecerse, tecnificarse e integrarse de mejor manera en el aparato productivo nacional, tal es el caso de la Pyme DITEMCO S.A de C.V, ubicada en Agua Prieta, Sonora, Mexico, que a través de visualizar una necesidad real y demandante para niños y jóvenes con TDAH (trastorno por déficit de atención con hiperactividad) que es el desorden neuroconductual más común en la infancia (Ahumada, 2008). Se presenta mayormente en grado escolar primaria y secundaria y bajo este indicador se crea un dispositivo electrónico temporizador como apoyo en el proceso de modificación de conducta; Consiste en el diseño de un programa de modificación de conducta incluyendo una herramienta en una de sus fases o etapas que trabaja sobre los principios psicológicos conductistas del condicionamiento operante, con el objetivo de administrar contingencias ante la emisión o no de una conducta a través del tiempo para fijarla como un hábito. El dispositivo será el estímulo generador de la conducta a desarrollar, fomentando la autonomía y la responsabilidad. El TDAH es un síndrome conductual, es un trastorno muy prevalente que, según estimaciones, afecta entre un 5 % y un 10 % de la población infanto-juvenil (Ahumada, 2008).

Se trata de un trastorno del comportamiento caracterizado por distracción moderada a grave, períodos de atención breve, inquietud motora, inestabilidad emocional y conductas impulsivas. El Trastorno por Déficit de Atención e Hiperactividad (TDAH) es una condición reconocida por la Organización Mundial de la Salud. Esta oportunidad de negocios tiene amplio mercado ya que la utilidad del producto de la empresa DITEMCO que elabora dispositivo electrónico temporizador en forma de reloj, contribuye a mejorar la estancia académica, así como la calidad de vida del niño o joven en el sector primaria y secundaria respectivamente. En la Actualidad se encuentra en trámite de registro ante el IMPI (Instituto Mexicano de la Propiedad Industrial) como modelo de utilidad.

## **REVISION LITERARIA**

En la actualidad el 99.8% de las empresas mexicanas son Micro, pequeñas y medianas, de este monto el 90% son microempresas, la totalidad de MIPYMES dan empleo al 70% de la población

económicamente activa ya que “el nuevo orden económico resulta de la acción de miles de empresas -la mayoría pequeñas- que tratan nuevas ideas, nuevos productos, nuevos servicios, nuevos procesos en un mercado cambiante” (Varela R, 2008). Agua Prieta cuenta con una población aproximada de 80,000 habitantes de los cuales cerca de 35,000 personas conforman la población económicamente activa. Por lo que una tarea de las Instituciones de Educación Superior, empresarios, las cámaras de comercio, así como de la sociedad en su conjunto, es exigir que el gobierno establezca y ejecute políticas públicas que sienten condiciones adecuadas para alentar la competitividad de las empresas, especialmente de las PyMES. La confianza en las autoridades responsables es fundamental para que las políticas públicas den lugar a mayores inversiones privadas. Es indispensable apoyarlas para seguir creciendo pero sobre todo para fortalecerse, tecnificarse e integrarse de mejor manera en el aparato productivo nacional.

La tendencia de la economía global trae como consecuencia grandes oportunidades de negocios no solo para las grandes corporaciones sino también para las pequeñas empresas que actualmente han cambiado la imagen tradicional que se tenía de ellas de negocios domésticos al considerar como sus más grandes desafíos el crecimiento de grandes comercios, el avance de las tecnologías de la información y telecomunicaciones y la misma globalización (Longenecker, 2001). Las Pymes deben destacar en al menos una ventaja competitiva para poder captar un mercado meta identificado previamente y poder mantenerse en el gusto y preferencia de sus clientes, logrando un crecimiento gradual y sostenido.

En los Estados Unidos de Norteamérica y Canadá el fomento a las PYMES se ha dado a través de incubadoras de empresas, su éxito ha sido debido a que las empresas que apoyan demandan poca infraestructura y es una barrera contra la globalización ya que paradójicamente son los países menos globalizados. En México también se ha copiado esta forma de hacer negocios y las incubadoras de Empresas son programas que actualmente llevan algunas Universidades, Institutos Tecnológicos y Fundaciones de Gobierno, que apoyan a los emprendedores a diseñar desde la constitución del plan de negocios, apoyo en asesoría para la constitución legal de la empresa y otros tantos aspectos importantes para crear, una empresa que en términos generales, minimicen el riesgo en la inversión, ya que el capital en la actualidad es demasiado escaso y bien vale la pena realizar una inversión bien planeada. La ubicación de Agua Prieta al noroeste del estado de Sonora, su ubicación fronteriza, con una gran riqueza cultural y posición cerca de un comercio emergente como lo es el de Estados Unidos de America, representa un espacio de privilegio para el trabajo y la exportación de productos, abriendo una posibilidad para la creación de PyMES con giros económicos tanto de servicios como de productos. Destacandose el estado de Sonora cómo semillero de líderes, de hombres y mujeres emprendedoras, independientes, forjados en una autonomía.

## DEMOGRAFÍA

El comportamiento de la población según los censos de 2000, 2010 elaborados por el INEGI, presenta lo siguiente:

Tabla 2: Población y Tasa de Crecimiento de Agua Prieta, Sonora

Población		Tasa de Crecimiento %)	
2000	2010	diferencia	2000-2010
61,944	79,138	17,194	No proporcionada

Fuente: INEGI Censo General de Población y Vivienda 2000-2010

### Aspectos Demográficos

En este municipio son relevantes la Agricultura, la Ganadería, la Apicultura, la Explotación Forestal en baja escala y la Industria, básicamente Maquiladora. En 1997 la infraestructura turística, constaba de 10 hoteles y moteles con 316 habitaciones. Actualmente existen 14 establecimientos que ofrecen 455 habitaciones. La localización geográfica de Agua Prieta es un punto clave para el desarrollo de la industria maquiladora, lo cual le permite tener acceso rápido a los estados del sureste y de la costa del pacífico de la Unión Americana. Se encuentra a 322 Km. de la ciudad de Phoenix, capital de Arizona y a 377 Km. De Hermosillo, capital del estado de Sonora. Al este de Agua Prieta se encuentra Ciudad Juárez, Chihuahua que a su vez es frontera con la ciudad del Paso, Texas centros urbanos que en los últimos años han tenido un crecimiento económico de primer orden. Para el logro del objetivo planteado para el desarrollo regional, las estrategias regionales que marcarán la acción del gobierno estatal son:

- Impulso a la incubación de empresas
- Reconversión y diversificación productiva.
- Incremento en la competitividad.
- Reactivación de las actividades y economías regionales.
- Especialización selectiva en áreas con ventajas competitivas.
- Desarrollo de encadenamientos productivos, especialmente en las actividades primarias.
- Impulso, transferencia y difusión de la investigación y de la tecnología.
- Programas de inversión y financiamiento a las actividades productivas.
- Impulso a las actividades turísticas.
- Vinculación y capacitación educativa para actividad económica.

Las Instituciones de educación superior como lo es el Instituto Tecnología de Agua Prieta, saben del compromiso que se tiene en contribuir con su parte al logro de metas y objetivos en beneficio de la comunidad, regios y país.

Tabla 3: Características de Agua Prieta

<b>Población</b>	<b>79,138 habitantes</b>
Agencias Aduanales	8 oficinas
Compañías de transporte de carga	6 compañías
Compañías de auto transporte	6 compañías
Puerto de altura	600 Km.
Altitud	1,402 metros sobre el nivel del mar
Derechohabientes del IMSS	18,000 personas
Economía manufacturera	208 unidades, 9,225 empleados
Economía comercio	790 unidades, 1990 empleados
Inversión en vivienda (Infonavit)	10, 660 m.n.
Alumnos inscritos	13,578
Maquiladoras	30 industrias

*Fuente: [www.ceesonora.org.mx](http://www.ceesonora.org.mx) Como se muestran en la tabla 3 Agua Prieta cuenta con todas las características relevantes para ser un gran centro de comercio así como de generación de PyMES, ya que el terreno es suficiente y los servicios de comunicación y transporte son relevantes.*

Entre los principales aspectos que inciden en la economía de Agua Prieta, están su cercanía con los Estados Unidos de Norteamérica y con ello, su importancia en el contexto internacional. La globalización de la economía ha ocasionado un importante tránsito de mercancías y personas con la economía más poderosa del mundo. Esta debe ser una de las principales motivaciones para hacer de Agua Prieta, una ciudad fronteriza moderna, conectada y comunicada. Se cuenta con tres carreteras que dan acceso a la ciudad con el resto del estado, se cuenta también con transporte ferroviario de carga y una pista local para la aviación menor, principalmente. La principal actividad industrial son las maquiladoras, cuyos giros principales son: prendas de vestir, muebles de madera, electrónica, material y equipo para hospitales, deportivos, componentes para computadoras, para radio comunicación y de televisión, entre otros.

La incubadora de empresas del Instituto Tecnológico de Agua Prieta, brinda el servicio de apoyar a los emprendedores y las Pymes con el desarrollo y seguimiento de su idea empresarial plasmada en su modelo de negocios hasta diseñar su plan de negocios, sirviéndole como instrumento para su desarrollo y gestión de recursos de diferentes fuentes y/o financiamientos en los programas de incubación y emprendimiento de carácter Federal, estatal o municipal, pudiendo ser nacionales o internacionales con la finalidad de generar empresas y empleos. La incubación de empresas se manifiesta en la puesta en marcha de una idea de negocios con potencial de generar empleos y utilidades como es el caso de la empresa DITEMCO S.A de C.V, que con la innovación de procesos en modificación de la conducta (lo que el ser humano hace, piensa y siente) crea una ventaja competitiva como parte de una visión empresarial, captando un nicho de mercado que demanda el producto emanado de su operación ya que se extiende la aplicación de la modificación de conducta a áreas como el deporte, la empresa, la educación, esto es, se extiende su uso a áreas no clínicas, y se desarrollan las técnicas aplicadas a la psicología de la salud.

DITEMCO S.A. de C.V se encuentra en etapa de preincubación, nace de una necesidad real de una madre de familia con un hijo de 9 años diagnosticado con TDAH (trastorno por déficit de atención con hiperactividad) que se manifiesta por dificultades en regular el nivel de actividad, dificultades en el control de los impulsos y requería de un dispositivo que le ayudara a controlar la enuresis diurna a través de emisiones de sonidos, imágenes o movimientos y los dispositivos electrónicos que existen en el mercado como teléfonos celulares, ipad, timbres, entre otros, no cumplían cabalmente su cometido puesto que no están diseñados para esa necesidad específica y ocasionaban la distracción del niño.

La aplicación de este dispositivo en la etapa 4 del proceso de modificación de la conducta, puede ser para: enuresis diurna, terapia del habla, administración de apoyos farmacológicos, programa de modificación de conducta, generador de hábitos y en adultos mayores en afectaciones de la memoria. El mercado que se visualiza es amplio y el aporte que brinda para los especialistas conductuales, maestros y padres de familia principalmente, tiende a facilitar en gran medida la pronta respuesta en un proceso de modificación de conducta bajo un seguimiento de monitoreo, evaluación y retroalimentación, como se muestra en la figura 1.

Figura 1: Diagrama de proceso de modificación de la conducta

*En esta figura se muestran las etapas y la secuencia que deben ser llevadas por los especialistas en la materia para la obtención de resultados acorde a la problemática identificada. En la etapa 4 se aplica el dispositivo como apoyo a este proceso.*

## METODOLOGÍA

La metodología utilizada para el desarrollo de la investigación se basó en muestreo estadístico aleatorio simple, la segmentación se hizo conforme a las variables predeterminadas para tal fin, los instrumentos utilizados fueron encuestas y entrevistas diseñadas en base a las necesidades de la información que se necesitaba para ser utilizada por los organismos involucrados en este proyecto, que son: Instituto Tecnológico de Agua Prieta y EDIA Consultores de la Cd. de Hermosillo, Sonora, México. Su aplicación se hizo a través de un despliegue de encuestadores capacitados para tal fin, dicho mecanismo fue llevado a cabo en el transcurso de ocho semanas.

Para el análisis e interpretación de la información, se desarrolló una plataforma informática que nos permitió generar de manera ordenada y confiable los resultados obtenidos, que fue de utilidad para definir estrategias de DITEMCO. Su innovación, la cual será una ventaja competitiva es incluir dentro del proceso de modificación de conducta, un dispositivo temporizador, con funciones de recordar distintos eventos a pacientes con problemas de conducta, con el fin de habituarlos a ejercer dichos eventos conductuales, temporizados o cronometrados, en sus vidas cotidianas ( ver figura 2), para ello el dispositivo consta de lo siguiente: un microcontrolador Arduino, dispositivo en forma de reloj conteniendo iconos de los distintos eventos a señalar, iluminados por LED's, donde se programan los distintos eventos temporizados cada uno según sea la necesidad del individuo ejemplo: ir al baño, hacer tarea, medicamento, lectura entre otros. Al final se obtuvo un sistema Integrado, que complementa a la aplicación del Reloj, que controla la ejecución de eventos programados en el dispositivo microcontrolador convirtiéndose en una interface hombre-máquina.

Figura 2: Diagrama de proceso de integración del dispositivo DITEMCO

La figura muestra el diagrama de comunicación del dispositivo DITEMCO que podrá ser utilizado como apoyo en la terapia conductual del sujeto. La imagen como reloj al final del proceso es el resultado visual del dispositivo el cual se diseñó de material no invasivo, ergonómico y programable solo por los especialistas, padres o maestros de los niños y jóvenes.

## RESULTADOS

La Incuación de la PyME DITEMCO S.A. de C.V. ubicada en Agua Prieta, Sonora México, contribuyó al diseño de su modelo de negocios y lo transformó en un plan de negocios realista pero visionario, lo que permite facilitar la gestión de recursos para su operación ante instituciones y/o organismos para tal fin. El proceso de modificación de la conducta propuesto por DITEMCO generó información de primera mano, si bien no en su totalidad, pero de la obtenida se pudieron formular estrategias de solución que permitirán su mejoramiento y comercialización.

Este proceso de modificación de conducta que incluye una herramienta en una de sus fases o etapas que trabaja sobre los principios psicológicos conductistas del condicionamiento operante, con el objetivo de administrar contingencias ante la emisión o no de una conducta a través del tiempo para fijarla como un hábito, la ventaja resultante incide en la disminución de tiempo del proceso y la autonomía e incremento del autoestima del paciente. Fue avalado por especialistas en la materia pertenecientes a EDIA Consultores (Estudios de desarrollo integral del alumno) de Hermosillo Sonora, quienes esperan su lanzamiento al mercado y proponerlo a sus pacientes además de darlo a conocer a su gremio para su pronta incorporación en sus tratamientos conductuales quienes determinarán el tiempo y modo de uso del dispositivo DITEMCO.

La prueba piloto se llevó a cabo en una escuela primaria de la ciudad de Agua Prieta, Sonora, México, con niño de 9 años diagnosticado con TDAH que presentaba un cuadro de enuresis diurna, lo que ocasionaba problemas de autoestima y académicos en el aula. La implementación de DITEMCO bajo el seguimiento de los especialistas y maestros del colegio dieron como resultado la generación del hábito a través de la modificación de la conducta en el alumno en un periodo aproximado de 60 días, mejorando su desempeño académico y social del estudiante.

## CONCLUSIONES

Del análisis de la información se visualiza que la PyME DITEMCO S.A. de C.V. identificó una necesidad imperante para un sector de mercado muy amplio, haciendo con esto una aportación significativa en el mejoramiento de la calidad de vida de las personas que necesiten un tratamiento de modificación de conducta, pudiendo ser TDAH o presentar otro tipo de problema

derivado de lo conductual. Necesitará seguir avocándose a la búsqueda de procesos de mejoramiento continuo de su capacidad de gestión de los factores de producción. Por ende, también, el mejoramiento de la productividad y la competitividad, como toda empresa innovadora, emprendedora, moderna y flexible.

Dados los resultados de la aplicación del mecanismo de recolección de información, se concluye que mediante el análisis de los datos y resultados obtenidos de la presente investigación, se puede:

Identificar las oportunidades de mercado para esta empresa con una idea innovadora de procesos.

Definir al menos dos estrategias de consolidación para DITEMCO S.A. DE C.V.

Búsqueda de posibles inversionistas.

Contribuir en la calidad de vida de niños y jóvenes en su desarrollo académico, personal y social.

Registro de patente ante el Instituto Mexicano de la Propiedad Industrial (IMPI), como modelo de utilidad el cual se encuentra en trámite.

# **CAMPAÑA DIGITAL COMO ESTRATEGIA DE EDUCACIÓN CONTINUA PARA EL MANEJO ADECUADO DE MATERIALES DE REÚSO PROVENIENTES DEL PROCESO DE RECICLAJE**

Lourdes Aide Pintor Rodríguez, Universidad Autónoma de Baja California  
Hildelisa Karina Landeros Lorenzana, Universidad Autónoma de Baja California  
Norma Candolfi Arballo, Universidad Autónoma de Baja California  
Carolina Trejo Alba, Universidad Autónoma de Baja California

## **RESUMEN**

*El Centro de Ingeniería y Tecnología (CITEC) de la Universidad Autónoma de Baja California (UABC), es un centro de enseñanza de nivel profesional localizado en Valle de las Palmas, donde los alumnos reciben enseñanza, tanto teórica como práctica, además de una formación integral la cual se basa en la importancia de la difusión de valores. La conciencia ecológica y compromiso social, son valores claves para la institución, principalmente en el campus Valle de las Palmas, al encontrarse en una zona urbana con un giro de desarrollo "Sustentable". En el presente trabajo se desarrolla una estrategia comunicacional (campaña) digital de educación continua con la comunidad Universitaria que tenga impacto en la adecuada implementación de la separación de residuos inorgánicos en CITEC dirigida a la comunidad universitaria, así como sensibilizar a la comunidad a manejar correctamente los residuos inorgánicos que generan, además de disminuir la cantidad de basura, puede surgir la oportunidad de realizar propuestas de ECODISEÑO o simplemente el hecho de destinar residuos a un segundo propósito en lugar de ir directo a la basura, puede ser un gran avance para la institución.*

**PALABRAS CLAVE:** Educación Continua, Reciclar, Campaña Digital

## **DIGITAL CAMPAIGN STRATEGY AS CONTINUING EDUCATION FOR THE PROPER MANAGEMENT OF MATERIALS FROM REUSE RECYCLE PROCESS**

### **ABSTRACT**

*The Engineering and Technology Center ( CITEC ) of the Autonomous University of Baja California ( UABC ) is an educational professional level located in Valle de las Palmas (Tijuana, Baja California), where students learn theoretical and practical way, in addition to training comprehensive which is based on the importance of the spread of values . Environmental awareness and social commitment are key values for the institution, primarily in the Valle de las Palmas campus , being in an urban area with a turn of development " Sustainable " .In this paper, a digital communications strategy ( campaign ) develops continuing education with the University community to have an impact on the proper implementation of the separation of inorganic waste CITEC directed to the university community and sensitize the community to properly manage inorganic waste generated , in addition to reducing the amount of waste , may arise the opportunity to make proposals for Ecodesign or just enjoy spending waste a second purpose instead of going straight to the trash can be a breakthrough for institution.*

**JEL:**

**KEY WORDS:** Continuing Education, Recycle, Digital Campaigning

## INTRODUCCIÓN

*Problemática:* El Centro de Ingeniería y Tecnología (CITEC) de la Universidad Autónoma de Baja California, es un centro de enseñanza de nivel profesional localizado en Valle de las Palmas, donde los alumnos reciben enseñanza, tanto teórica como práctica, además de una formación integral la cual se basa en la importancia de la difusión de valores. La conciencia ecológica y compromiso social, son valores claves para la institución, principalmente en el campus Valle de las Palmas, al encontrarse en una zona urbana con un giro de desarrollo “Sustentable”, por lo que difundir y promover una cultura de conciencia ecológica es indispensable. En la actualidad, el CITEC cuenta con trece licenciaturas y una totalidad de 2410 alumnos las cuales generan una gran cantidad de residuos sólidos inorgánicos, resultante de materiales utilizados en prácticas y proyectos. Así mismo, no cuenta con una estrategia de separación y/o abastecimiento de basura.

### Justificación

El objetivo de la Universidad Autónoma de Baja California de impulsar y difundir una cultura de conciencia ecológica (UABC, 2011), lo cual puede verse plasmado en un esfuerzo inicial por la capacitación a la comunidad y como resultado obtener una apropiada disposición de sus propios residuos; Al menos en CITEC, gran parte de los residuos pueden ser separados y reutilizados fácilmente por un programa reúso. A la fecha los esfuerzos para la separación de material no han cobrado la importancia necesaria y se han obstaculizados por no tener el diseño formal campaña que ayude a educar a la comunidad a entender y apoyar el propósito. Al sensibilizar a la comunidad a manejar correctamente los residuos inorgánicos que generan, además de disminuir la cantidad de basura, puede surgir la oportunidad de realizar propuestas de ECODISEÑO o simplemente el hecho de destinar residuos a un segundo propósito en lugar de ir directo a la basura, puede ser un gran avance para la institución.

*Objetivo Generales:* Desarrollar una estrategia comunicacional (campaña) digital de educación continua con la comunidad Universitaria que tenga impacto en la adecuada implementación de la separación de residuos inorgánicos en el Centro de Ingeniería y Tecnología (CITEC) de la Universidad Autónoma de Baja California (UABC) dirigida a la población estudiantil.

### Objetivos Específicos

*Medir el conocimiento de los términos de reutilización y reciclaje en la población estudiantil de CITEC. Proponer un esquema de difusión sobre separación de residuos inorgánicos. Medir resultados de la funcionalidad de la campaña. Evaluar las conductas pro-ambientales de cada persona de la comunidad de CITEC. Analizar las causas por las cuales no se pone en práctica los conocimientos adquiridos sobre cuidados ambientales del estudiante y personal de CITEC. Investigar sobre los materiales de mayor uso en las carreras de CITEC.*

### Antecedentes

La creación de campañas sociales, así como estrategias y programas sobre el cuidado del medio ambiente ha sido un tema transversal en instituciones educativas, debido a que por la naturaleza de las actividades se tiene un gran potencial de aprendizaje. En España en el año de 1997, la

Universidad Autónoma de Madrid aprobó “La carta de compromiso ambiental con la Agenda 21” (Ostolaza, 2002), en la cual se crean estrategias que permiten mejorar la gestión ambiental en ámbitos de minimización de residuos peligrosos, pacificación del tráfico, entre otras cosas, así como impulsar la participación de la comunidad universitaria. Por otro lado, en el continente Americano, se cuenta a su vez con algunos casos de éxito, como es el caso de los Autores (Alvira, Hernando, & Mejía, 2012) Gómez Alvira, Hernando Blanco y Mejía Fernández de la Universidad Nacional de Colombia quienes logra implementar un programa de reciclaje que se ha convertido en modelo para varias regiones e instituciones educativas del país. Este programa consiste en la clasificación de residuos y su desintegración. La Universidad Nacional Autónoma de México (UNAM) creó un programa de reciclado de poliestireno siendo la primera institución de Latinoamérica en contar una iniciativa de este tipo (UNAM, 2012). Ahora bien, en Baja California en la UABC campus Tijuana, la Facultad de Ciencias Químicas e Ingeniería desarrollan un proyecto ecológico enfocado al reciclaje de residuos urbanos no peligrosos con estudiantes de la licenciatura en Químico Farmacobiólogo (Alvira, Hernando, & Mejía, 2012).

### Marco Teórico

#### Diseño Gráfico y Estrategias Comunicacionales

El diseño gráfico es una herramienta que permite satisfacer la necesidad de la sociedad de comunicarse a través de medios visuales procurando mensajes significativos bien estructurados. Influye en la actitud y comportamiento de los seres humanos, por tal motivo el diseño gráfico es una actividad que tiene una gran responsabilidad social que va en busca de mejorar la calidad de vida trabajando ecológica, cívica y lo más humanamente posible. Está en las manos de los diseñadores crear e innovar diseños que solucionen problemas sociales que se están viviendo actualmente, aprovechándose del poder que tienen de entrar y permanecer en la mente de la gente utilizando un arma muy poderosa la cual es el lenguaje bimedia, que es el empleo de imágenes y textos para la transmisión de mensajes (Costa, 2012).

El diseño es un proceso de creación visual con un propósito, a diferencia de la pintura y de la escultura, que son la realización de las visiones personales y los sueños de un artista, el diseño cubre exigencias prácticas. Una unidad de diseño gráfico debe ser colocada frente a los ojos del público y transportar un mensaje prefijado. Un producto industrial debe cubrir las necesidades de un consumidor (Wong, 2009).

Según Wuicius Wong (Wong, 2009), los elementos prácticos son de suma importancia dentro de cualquier del diseño estos elementos son: la representación que exprese ideas o ambientes a los espectadores, y estos pueden ser representativos o abstractos pero siempre relacionados al segundo elemento que es el significado, el cual consiste en generar códigos visuales que sean fáciles de entender, y ayuden a la correcta trasmisión de mensajes o que ya cuenten con una alfabetidad visual establecida, como sucede con los colores del semáforo, o los colores que se han utilizado para la separación de residuos, en los cuales ya existe información establecida, y por último la función que se hace presente cuando un diseño cumple con los objetivos específicos para los cuales fue propuesto.

Realizar campañas sustentadas en los principios de la mercadotecnia social con el fin de modificar conductas e ideas negativas y transformarlas en actitudes positivas para crear un beneficio a la sociedad es de lo que hemos estado hablando, responsabilidad social del diseñador. Participar desarrollando campañas sociales entorno al impacto ambiental es una excelente forma para comenzar. Pero para adentrarnos a estos tipos de campañas, es necesario entender el concepto de conciencia ambiental tanto como educación ambiental. La primera es tener presente

que debemos respetar la naturaleza y por lo tanto necesitamos conocerla para poder cuidarla. La segunda es actuar para revocar los problemas ambientales una vez adquirida una conciencia sobre el medio. Relativamente estos dos conceptos no tienen mucho dentro del vocabulario de la sociedad. Todo nace a partir de la llegada de la industrialización en los países desarrollados originando una acelerada intervención del hombre sobre su entorno provocando la degradación de su medio ambiente así como una modificación en la actitud de la sociedad.

El desarrollo masivo de campañas sociales sobre el cuidado del medio ambiente tiene apenas unas décadas cuando la naturaleza comenzó a tener cambios climáticos muy severos, especies de flora y fauna comenzaron a extinguirse, resumiendo cuando comenzó a alterarse el funcionamiento natural de la biodiversidad.

## **METODOLOGÍA**

### Definición de Modelo Metodológico de la Campaña Digital

FASE I. Identificar y definir el problema, para identificar el problema, se debe confiar en los datos sobre manejo de residuos, comportamientos observados y otras cuestiones actuales. FASE II. Analizar el contexto, un análisis de los contextos generales y específicos en los que aparece el problema indicarán si la campaña puede o debe combinarse con otras acciones o programas. FASE III. Localizar socios y partes interesadas e implicarlas, dichos socios y partes interesadas pueden ser autoridades públicas y/o organizaciones privadas. Su participación puede ser de carácter económico, logístico o de otro tipo. FASE IV. Elaborar el presupuesto, debe definir el presupuesto estimado o real de la campaña, incluyendo los gastos de investigación y evaluación. FASE V. Convocar a los socios de campaña para una reunión inicial, definir el objetivo general de la campaña, así como tratar la estrategia de campaña, para conocer cuáles son sus necesidades. Basándose en estas necesidades, debe reunirse con los socios de campaña a fin de identificar los recursos de que ya dispone y aquellos que tendrá que localizar en otros lugares. Deberá redactar la primera versión del informe creativo, con toda la información que se ha recogido hasta este momento. Dicho informe constituirá el documento de referencia central de la campaña y se actualizará a lo largo del proceso de campaña.

FASE VI. Concurso de ofertas y constitución del equipo de campaña, El equipo de campaña debería incluir a personas de la organización promotora, los socios de campaña, y cualquier agencia externa y proveedores contratados tras un concurso de ofertas. Los licitantes podrán incluir a agencias de publicidad, producción y medios, relaciones públicas e investigadores. La participación de investigadores externos puede ser necesaria o no, dependiendo de si existe un departamento interno de investigación en la organización promotora. No obstante, se recomienda que la evaluación sea realizada por un agente externo, siendo esencial para mantener la objetividad.

### Análisis Situacional

Se debe realizar un análisis pormenorizado del problema, sus posibles soluciones y la audiencia objetivo. Esto le permitirá definir los objetivos específicos de la campaña, ayudarlo a diseñar el mensaje y preparar la evaluación de la campaña.

### Análisis Exhaustivo del Problema y Posibles Soluciones

Estudios cualitativos y cuantitativos que analicen el comportamiento problemático en profundidad;

Investigaciones sobre modelos teóricos que expliquen las motivaciones subyacentes al comportamiento;  
Campañas y otras acciones pasadas;  
Estudios de marketing sobre la audiencia objetivo.

*Segmentar la audiencia:* Determine si la audiencia objetivo necesita estar segmentada o no. A menudo lo mejor es segmentar la audiencia para abordar las necesidades diferentes y características de subgrupos concretos (estilo de vida, cultura, etc.). Una vez definidos los subgrupos, evalúelos y seleccione uno o más como objetivo de la campaña. Además del grupo objetivo más obvio (el grupo cuyo comportamiento necesita cambiar más, o audiencia primaria) puede ser útil intentar alcanzar una segunda audiencia que podría influir sobre la audiencia primaria. A continuación necesita determinar cómo llegar a la audiencia o audiencias objetivo y sus subgrupos concretos basándose en la información obtenida previamente.

### Determinar Cómo Actuar Sobre las Motivaciones Principales y Llegar a la Audiencia

Factores que contribuyen al comportamiento problemático identificado. Primeramente, pregúntese si el comportamiento de su público es intencionado, en una segunda fase es importante comprender los motivos que subyacen a dicho comportamiento inseguro. En algunos casos esta información no estará disponible, haciendo que sean necesarios estudios adicionales. En concreto, será necesario realizar estudios adicionales si se aplica alguna de las siguientes condiciones: ¿Dispone de amplia información sobre las principales variables dependientes del problema y/o comportamiento seguro pero desea saber qué es lo que más pesa en el grupo objetivo?; ¿Ha encontrado información y sabe que faltan ciertos elementos; o bien No dispone de información sobre las principales variables dependientes. Basándose en los resultados de estos estudios, podrá elegir el modelo teórico adecuado sobre el que construir su estrategia de campaña. Este puede ser o bien un modelo teórico establecida o uno creado por usted. En cualquier caso, el modelo debe contener los principales determinantes del comportamiento de su audiencia particular.

*Definir los objetivos específicos de la campaña:* Este mini-paso consiste en desglosar el objetivo general de la campaña en objetivos específicos, concretamente:

*Objetivos primarios:* defina qué comportamiento ha de adoptar la audiencia objetivo para alcanzar el objetivo general de la campaña.

*Objetivos secundarios:* identifique otros factores que pueden contribuir a lograr los objetivos primarios como conocimientos, actitudes y normas.

*Recopilar información de evaluaciones de campañas anteriores y otras acciones:* Debe seleccionar una metodología de evaluación apropiada para cada uno de los objetivos específicos que ha definido previamente. En este caso, puede ser muy útil utilizar la información proporcionada por las investigaciones apropiadas realizadas en el pasado.

*Diseño De La Campaña Digital:* Como actividades principales al iniciar la planeación de la campaña, es conveniente el ejercicio de responder a las siguientes preguntas: ¿Qué debemos hacer? ¿Cómo debemos hacerlo? y ¿Cómo sabremos si la campaña funciona o no?

*Desarrollar la estrategia de campaña:* La estrategia de campaña se debe basar en sus objetivos específicos, que definen cómo lograr el objetivo general de la campaña de forma operativa. La estrategia de campaña determinará cómo influirá sobre la audiencia objetivo para cambiar o inculcar conocimientos, creencias y/o conductas, y se basará en modelos teóricos.

*Definir la estrategia:* Aquí se incluye el tipo de campaña (campaña de comunicación, combinada, integrada) y su alcance (local, regional y/o nacional), dependiendo de las zonas en las que aparece el problema, así como la audiencia objetivo y cómo se puede llegar a ella. Debería además estudiar las campañas y acciones anteriores para obtener directrices que sirvan para el desarrollo de su estrategia. Una vez definida la estrategia de campaña, el informe creativo debe actualizarse añadiendo componentes nuevos.

Desarrollar el contenido del mensaje. Aquí incluimos el contexto, estructura y estilo del mensaje que ha definido en el informe creativo. Para ello será preciso establecer un procedimiento claro y un debate con la agencia de publicidad y el promotor de la campaña. El mensaje debe ser tan concreto y comprensible como sea posible. Debe usar una estrategia de marketing social y considerar los objetivos específicos de la campaña, las características del comportamiento problemático y su correspondiente comportamiento seguro, las principales variables dependientes del comportamiento problemático para la audiencia objetivo (frecuencia y lugar), los beneficios y costes percibidos de adoptar un comportamiento seguro, el lugar y momento en el que se debe adoptar el comportamiento seguro, las características de la audiencia objetivo, los factores ambientales, y las características del remitente. Para desarrollar el contenido del mensaje y la estrategia de ejecución se podrán usar estudios cualitativos, como entrevistas individuales, grupos muestra o sesiones de creatividad. Temas de impacto a tratar en la campaña:

- Cuidas el planeta
- Cuidar el medio
- Reusar material (beneficios)
- Reducir el consumo de materiales (se genera menos contaminante)
- Energía—CO2 papel. – Tala de árboles
- Impacto directo a la economía

Elegir los identificadores de la campaña. Estos son elementos visuales o sonoros que aportan consistencia a una campaña o grupo de campañas; también añaden identidad a una campaña y señalan a las organizaciones implicadas. Como identificadores de campaña se pueden usar portavoces, logotipos, mascotas y marcas. Seleccionar los medios y definir el plan de medios. El plan de medios se debe definir conforme al presupuesto de la campaña, su calendario y duración, las tarifas de publicidad en cada medio y vehículo (periódico, programa de radio, etc.), las estadísticas demográficas de cobertura, y las aberturas

Desarrollar y probar los mensajes y eslóganes en su contexto. Sometiendo el mensaje a prueba conseguimos saber más sobre sus puntos fuertes y débiles y sobre si puede llegar a la audiencia seleccionada. Puede haber herramientas (por ejemplo, la Escala de diagnóstico de conductas de riesgo) que nos ayuden a mejorar y optimizar el mensaje antes de la puesta en marcha de la campaña.

*Ejecución de la campaña:* La elección del momento de lanzamiento es muy importante ya que genera oportunidades únicas de conseguir publicidad gratuita para la campaña. En aquellos casos en los que la campaña está combinada con otras acciones, es importante que se coordinen cuidadosamente todas las actividades a fin de asegurarse de que cada componente se lleva a la práctica según se ha programado. Para ello se precisa una organización muy estricta y una buena

comunicación entre el promotor de la campaña y sus socios y mediadores. Controlar la publicación de materiales de campaña y posiblemente información recibida sobre pasos previos.

*Evaluación de la campaña:* La evaluación se debe diseñar con tanto cuidado como la propia campaña, para ello se considera: Definir los objetivos de la evaluación. La evaluación de su campaña debe, como mínimo, permitirle determinar si la campaña funciona o no, y si es rentable. Más específicamente, debe identificar asimismo qué aspectos de la campaña funcionan y cuáles no, y descubrir los posibles motivos. Cada uno de estos objetivos se corresponde con un tipo distinto de evaluación –un proceso, resultado o evaluación económica. Elegir el diseño y muestra de evaluación. Debe elegir un diseño de evaluación adecuado con al menos una medición previa y posterior y, de ser posible, usar un grupo de control o comparación. Elija la muestra que encaje en el calendario, presupuesto, tamaño y tipo de audiencia objetivo, tema de la campaña y cualquier actividad de apoyo. Desarrollar medidas de evaluación. (datos sobre accidentes en carretera, comportamientos observados, datos propios y datos sobre costos). Definir métodos y herramientas para recopilar datos. Seleccione los métodos (cualitativos o cuantitativos) y las herramientas necesarias para la evaluación, en consideración de su viabilidad, el tiempo y los recursos que precisan. Someter a prueba previa las herramientas de evaluación es especialmente recomendable. La recogida de datos se debe realizar de la misma forma en cada fase. Planificar la evaluación. Organice la evaluación Para determinar si la campaña que ha puesto en marcha ha sido eficaz, debe completar la evaluación de campaña comparando las medidas tomadas antes y después de la campaña. También recomendamos realizar una medición mientras la campaña está en marcha. El análisis de los datos recogidos en estos momentos le dirá si la campaña ha tenido efecto y en qué dimensiones. Independientemente de la existencia de repercusión, se deben comunicar los resultados. La evaluación debe ser independiente y no debe ser objeto de ningún tipo de influencia o parcialidad. El comité de evaluación debe salvaguardar la objetividad de la evaluación, aunque la absoluta imparcialidad no se puede garantizar nunca.

## CONCLUSIONES

Se considera la Campaña Digital como estrategia de Educación Continua a la comunidad estudiantil en materia de reciclaje y reúso de materiales, partiendo de la idea que un buen diseño es la mejor expresión visual de la esencia de "algo", ya sea esto un mensaje o un producto, para hacerlo fiel y eficazmente, el diseñador debe buscar la mejor forma posible para que ese "algo" sea conformado, fabricado, distribuido, usado y relacionado con su ambiente. Su creación no debe ser sólo estética sino también funcional, mientras refleja o guía el gusto de su época (Wong, 2009). Es por eso que en la era digital, el diseño se ha adaptado a las nuevas tecnologías de la información y se ha desarrollado como un agente de interacción humana, que refleja las tendencias sociales de comunicarse de manera visual. Los usuarios diseño gráfico en la actualidad se han incrementado, debido a la promoción de la imprenta el conocimiento pudo llegar a cada vez más personas, pero en la era digital este crecimiento ha sido superado, actualmente la comunicación visual sustituye al papel por dispositivos electrónicos, y el lenguaje cada vez es más visual e interactivo. También las tareas que cumple esta comunicación visual ha crecido, y el uso de dispositivos móviles ha facilitado la rápida propagación de información visual. Siendo el Reciclaje un tema de necesidad mundial es conveniente aprovechar las ventajas tecnológicas, el desarrollo del diseño grafico y los modelos actuales de difusión de la información para la formación de nuestra comunidad.

# EDUCACIÓN SUPERIOR EN BAJA CALIFORNIA: ANÁLISIS DE LAS NECESIDADES FÍSICAS Y HUMANAS PARA UNA MATRÍCULA EN CRECIMIENTO

Manuel Muñoz Aguilera, Universidad Autónoma de Baja California  
María Belén Murillo Pedraza, Universidad Autónoma de Baja California  
Olga Lidia Gutiérrez Gutiérrez, Universidad autónoma de Baja California

## ABSTRACT

*En el caso de Baja California, se percibe como una entidad que se encuentra por encima de la media nacional, de hecho en los primeros lugares, en lo que respecta a indicadores educativos como el número máximo de años estudiados y la tasa analfabetismo. Sin embargo u sobre todo a nivel superior se sigue percibiendo una capacidad física insuficiente para una población con educación superior creciente. Habrá que agregar que al encontrarse en una zona privilegiada dado su cercanía con California, se tiene un mercado educativo y laboral competitivo por lo que se hace necesario seguir ampliando los accesos a la educación superior de la población Bajacaliforniana y de aquellos que emigran de otras zonas del país. Así pues el problema que se pretende analizar es una matrícula en crecimiento del nivel superior es la escasez de espacios educativos y de personal calificado que absorba y atienda a ese nivel educativo.*

## HIGHER EDUCATION IN BAJA CALIFORNIA: ANALYSIS OF HUMAN AND PHYSICAL HUMAN NEEDS FOR REGISTRATION GROWTH

*This research analyses the impact of adequate infrastructure to support increase enrollment in Baja California*

### Se Plantearan el Siguiete Objetivo

Determinar el impacto del crecimiento poblacional en la educación superior en Baja California para el período 2010-2030. Habría que agregar que la hipótesis que se plantea en este documento es que la demanda en educación superior crecerá de forma sostenida en los próximos 20 años lo que dará lugar a un incremento significativo en la presión por la apertura de nuevos espacios físicos y recurso humano para la atención de ese nivel. La educación superior en el plan de desarrollo 2007-2013, tenemos que solo se capta a uno de cada cuatro jóvenes de entre 18 y 22 años de edad es decir solo un 25% de cobertura. Según el PND (2007:179) esta escasa cobertura es el resultado de rezagos e ineficiencias en los niveles previos, a la pobreza de las familias y a las características propias de las instituciones de educación superior, puesto que muchas e ellas operan por debajo de su capacidad, dada la concentración de la demanda educativa. Asimismo la la educación superior en el entorno global, generalmente se asume que una población con altos niveles educativos y de capacitación puede resultar en un elemento importante que genera impactos positivos en el bienestar económico y social de aquellos países que cuenten con una población altamente calificada. La evolución de la educación superior en el marco global, se ha presentado en los últimos 30 años un aumento de los índices educativos a nivel internacional en los países desarrollados así como también en países en desarrollo, así por ejemplo:

La composición en 1997 de los niveles educativos promedios alcanzados por la población de los países miembros de la Organización para la Cooperación y el desarrollo Económico (OCDE) era del 37% de la población no había completado la educación preparatoria (secundaria y menos), 43% había terminado su educación preparatoria y el 20% restante alcanzaba niveles de educación superior (OCDE 2009:28).

En el caso de México, donde más de dos terceras partes de la población no ha alcanzado ni completado la educación preparatoria. En la educación superior en Baja California, siendo uno de los estados punteros a nivel nacional en términos de crecimiento económico y poblacional por encima de la media nacional.

En Baja California la matrícula en educación superior ha pasado de solo 24200 alumnos en el ciclo escolar 1990-1991, hasta 81223 alumnos en el ciclo 2009-2010. En relación a la infraestructura, en el ciclo escolar 1990-1991, solo existían 36 instituciones de educación superior, hasta alcanzar un total de 97 instituciones en el ciclo escolar 2008-2009. Para la predicción de los valores de oferta y demanda de la educación superior, en la metodología se utiliza básicamente un enfoque, donde se utilizan los valores estimados de la población estimada realizados por el Consejo Nacional de Población para Baja California disponibles en su sitio web a esta estimación posteriormente se le aplica los distintos indicadores educativos (eficiencia terminal y absorción) para proyectar la matrícula del nivel de educación superior en los próximos 20 años. La proyección de la demanda de educación superior 2010-2030, de la matrícula en Baja California, comportándose para el ciclo escolar 2005-2006 de casi 75000 estudiantes, esta alcanzarán valores de 183043 para el ciclo 2020-2021, y de 233673 en el ciclo 2030-2031 lo que representa incrementos de este indicador del orden de 172% y de 212% respecto a los valores al inicio del periodo de estimación. Para hacer frente al crecimiento que se muestra anterior, es necesario determinar si las instituciones educativas y el Gobierno Estatal, podrán incrementar y/o mantener sus niveles actuales de generación de infraestructura, así como de formación de docentes, que permitan el que la población escolar pueda acceder a un espacio de educación superior.

### RESUMEN

*El objetivo de este trabajo buscó describir diversos desafíos a los que se enfrenta la mujer empresaria al iniciar y desarrollar su empresa buscando la relación con aspectos culturales de educación familiar así como la relación con el contexto en el que participa. Este estudio se desarrolló con 17 empresarias- propietarias que empleaban 238 trabajadores a mayo de 2012, predominantemente casadas, con hijos, con estudios de licenciatura, integrantes de una Asociación (Deriva del Proyecto de Investigación con registro de la DGEST No. AGS-MCA-LA-IGEM-2011-102) que contaba con 42 empresarias asociadas. La muestra representó el 40.48% de la población de estudio, propietarias de micro, pequeñas y medianas empresas (MiPyME), de la ciudad de Aguascalientes, México. Los resultados muestran que rara vez, se enfrentan a discriminación, envidias, represiones y acoso moral. En cuanto a los factores culturales predominantes están de acuerdo en que la mujer es cuidadora del bienestar familiar y preparada psicológicamente para ser madre. En la prueba Rho de Spearman se obtuvieron correlaciones significativas positivas entre el desafío de formar y educar a los hijos y los factores culturales de renunciar a su profesión y permanecer en el hogar, además del hallazgo de que a mayor acoso laboral, son menores los ingresos y tienen menos posibilidades de acceder a cargos directivos.*

**PALABRAS CLAVE:** Desafíos, mujer empresaria, factores culturales familiares, propietarias, MiPyME.

## CHALLENGES OF WOMEN ENTREPRENEURS AND THEIR RELATIONSHIP WITH FAMILY CULTURAL FACTORS

### ABSTRACT

*The aim of this study was to describe various challenges facing women entrepreneurs to start and grow your business to pursue the relationship with cultural aspects of family education and the relationship with the context in which it participates. This study was conducted with 17 entrepreneurs - owners employing 238 workers to May 2012, predominantly married, with children, with a bachelor's degree, members of an association that entrepreneurs had 42 partners. The sample represented 40.48 % of the study population, owners of micro, small and medium enterprises (MSMEs) in the city of Aguascalientes, Mexico. The results show that rarely face discrimination, envy, repression and harassment. Regarding cultural factors prevailing agree that women are caregivers of family welfare and psychologically prepared for motherhood. The Spearman rho test significant positive correlations were obtained between the challenge of training and educating children and cultural factors give up his profession and remain in the home, in addition to finding that greater workplace harassment are lower income and have less access to leadership positions.*

## INTRODUCCIÓN

La organización de este estudio se presenta en cuatro secciones. En la primera sección se incluye la revisión de la literatura planteando argumentos que sustentan los desafíos y obstáculos a los que se enfrentan las mujeres empresarias al iniciar y desarrollar su empresa, así como los aspectos culturales de educación familiar tomando en cuenta el contexto organizacional en el que participan. En la segunda sección se incluye la metodología aplicada para llevar a cabo el estudio, tomando como marco de referencia las empresarias integrantes de una asociación, con muestreo no probabilístico, representando el 40.48% de la población de estudio. En la tercera sección se presentan los principales resultados de la hipótesis de estudio planteada y en la cuarta y última sección se integran las conclusiones, limitaciones y futuras líneas de investigación en la búsqueda de conocimiento y desarrollo de la mujer empresaria mexicana.

## REVISIÓN LITERARIA

Las crisis contemporáneas de trabajo como el déficit estructural y creciente de empleo, la precarización del trabajo con trabajos temporales, contratos de corta duración, trabajos forzados de tiempo parcial, así como el incremento de capacidades exigidas en la actividad profesional sin reconocer esas capacidades a través de niveles más altos de salarios, han generado en las mujeres la necesidad de crear y desarrollar empresas (Bouffartigue, 1997 en Sánchez-Apellániz, M., 1999). En este estudio se planteó el objetivo de identificar los desafíos que enfrentan las mujeres empresarias que se relacionan con factores culturales familiares en el contexto organizacional de micro, pequeñas y medianas empresas. (MiPyMEs).

### Desafíos y Obstáculos a los Que se Enfrentan las Mujeres Empresarias en el Ámbito Internacional

En el análisis del empresariado femenino en Aragón, realizado por Blasco, M.P., Brusca, I, Condor, V., Esteban, M.L. y Labrador, M. (s/f:1-15), argumentan que las mujeres son más propensas a recibir una mayor discriminación, fueron las que habían trabajado previamente como empleadas por cuenta ajena en empresas privadas. En el caso de Junquera (2004:961), en cambio realizó un estudio destacando los factores determinantes de éxito de empresas dirigidas por mujeres. Y en el estudio realizado por Navarro, Gámez y Alvarado, 2008, p. 14), identificaron barreras y obstáculos a los que se enfrentan las mujeres ejecutivas empresarias de Chile, como son discriminación laboral, envidia, represiones, acoso moral, mobbing organizacional, techo de cristal y en ocasiones, jefes misóginos. Además, en el trabajo de Daeren (2000, p. 6) uno de los desafíos que enfrentan es el *techo de cristal*.

### La Mujer Empresaria en el Ámbito Mexicano

En México, según Camarena A., M.E. y Hernández G., C. (2005), la mujer mexicana y latinoamericana ha experimentado la historia del feminismo con características diferentes. Si bien ha mejorado su salud, y las posibilidades de estudiar y trabajar fuera de casa, aún perdura su condición de mujer como servidora del hombre. De acuerdo a Hernández y Camarena (2004

en Hernández y Camarena, 2005), lo que ha marcado el ingreso de la mujer a puestos de toma de decisiones han sido el incremento en los niveles de escolaridad y los cambios en la manera en que la sociedad percibe el trabajo femenino.

### Factores Culturales Familiares de la Mujer

De acuerdo con Zabludovsky, G. (2007, p. 14) argumenta que “desde la infancia, hombres y mujeres aprenden a separar sus mundos sociales dando lugar a dos culturas diferentes que marcarán su comportamiento futuro.” En tiempos recientes la mujer ha incrementado su coparticipación en el sustento familiar, que ha ocasionado incompatibilidad entre las esferas doméstica y extra-doméstica del trabajo (Oliveira y Ariza, 2006 en Zabludovsky, 2007, p. 16)

En América Latina la “gran mayoría de las mujeres empleadas, empleadoras, micro-empresarias, profesionales, etc., tienen que combinar las responsabilidades de su trabajo remunerado con sus responsabilidades familiares y reproductivas que –según las pautas sociales y culturales – son impuestas unilateralmente a las mujeres como una responsabilidad biológica o “natural” mientras que ello no es el caso para los hombres”

De acuerdo a Navarro C., G., Gámez G., R. y Alvarado A. S. (2008), algunos aspectos culturales de educación que prevalecen actualmente en las mujeres son: sumisa, abnegada, cuidadora del bienestar familiar, humilde, discreta, prudente, depender económicamente de los demás, renuncia a su profesión, sacrificio de la individualidad, el hombre debe ser el proveedor y permanecer en el hogar, de los cuales es necesario obtener evidencia empírica si se presentan esos factores en la mujer empresaria.

### **METODOLOGÍA**

Esta investigación se realizó en la ciudad de Aguascalientes a mujeres empresarias pertenecientes a una Asociación, de septiembre de 2011 a mayo de 2012. Se desarrolló un diseño no experimental, de corte transversal, de carácter exploratorio, descriptivo y correlacional. Las variables de estudio fueron: *desafíos y obstáculos, factores culturales familiares y contexto organizacional* de las MiPyMEs, como variable de control, la muestra fue no probabilística, específica de las integrantes de una asociación, tomando como criterio del investigador la disponibilidad de las empresarias, solicitada a través de convenio de colaboración y en su Asamblea General de Socias. La recolección de datos fue aplicando las técnicas de la entrevista semi – estructurada y un cuestionario, obteniendo la muestra de 17 empresas que emplean a 238 trabajadores. La hipótesis planteada es la existencia de relaciones significativas positivas entre los desafíos y obstáculos que enfrenta la mujer empresaria y los factores culturales familiares que aún se aplican en su familia en un contexto de MiPyMEs. Las dos variables de estudio se sometieron al análisis de confiabilidad por el método Alfa de Cronbach, obteniendo valores de confiabilidad de .772 con 11 ítems para la variable de *Desafíos y obstáculos que enfrenta la mujer empresaria*, con escala de totalmente en desacuerdo a totalmente de acuerdo; y de .817 con 12 ítems para la variable *Factores culturales familiares*, con escala de nunca a siempre.

### **RESULTADOS**

Con base en la metodología aplicada, la mujer empresaria de la muestra tiene edades de 51 a 70 años (53%); y el 47% de 30 a 50 años; es casada, 52.9%; el 35.3% soltera y sólo el 11.8% divorciada. En su formación escolar, el 41.2% cuenta con licenciatura, el 17.6% especialidad y el 11.8% con maestría. La relación que tiene la pareja en su empresa es 23.5% propietario, 17.6%

colaborador, pero el 47.1% no cuenta con ninguna relación. El 70.6% de las mujeres empresarias tiene hijos y sólo el 29.4% no. El 64.7% de la muestra administran empresas micro, el 23.5% pequeña, y el 11.8% mediana; 35.3% tiene de 6 a 10 años de antigüedad en el mercado, el 23.5% de 11 a 20 años y el 17.6% de 21 a 30 años. La relación del gerente es familiar en 82.4% y el 52.9% atiende mercado regional.

En el análisis descriptivo de frecuencias realizado, se argumenta que rara vez, los desafíos a que se enfrentan las mujeres empresarias son discriminación 41.2%, envidias 41.2%, represiones 41.2%, acoso moral 41.2%, acoso laboral 11.8%, techo de cristal el 11.8%, menos ingresos que el hombre 11.8%, jefes misóginos 11.8%, menos posibilidades de acceder a cargos directivos 5.9%, relaciones familiares 35.3%, relaciones con el esposo 17.6%, formación y educación de los hijos 11.8%. Además siguen siendo amas de casa el 58.8% en actividades diarias que realiza como las tareas domésticas en el hogar, el 35.3% de ellas se dedica al cuidado de los hijos, atención escolar, educación y formación de los mismos como madre de familia. En cuanto a los factores culturales educativos de la mujer que aún se aplican en su familia, se argumenta que sólo el 11.8% está de acuerdo en la sumisión o acatamiento, subordinación manifiesta con palabras o acciones; 23.6% está de acuerdo a totalmente de acuerdo en ser abnegada o resignada; el 47.1% está totalmente de acuerdo en ser cuidadora del bienestar familiar; el 58.8% está de acuerdo a totalmente de acuerdo en ser humilde, modesta; el 29.4% en ser discreta, prudente y reservada; el 29.4% en depender económicamente de los demás; el 27.4% en renunciar a su profesión; el 27.7% en el sacrificio de la individualidad; el 29.4% están de acuerdo en que el hombre debe ser el proveedor de la familia; el 11.8% está de acuerdo en permanecer en el hogar y el 47% está de acuerdo en estar preparada psicológicamente para ser madre. En el análisis de correlación que se realizó para probar la hipótesis planteada aplicando la prueba Rho de Spearman, únicamente se obtuvo evidencia significativa positiva como se muestra en la Tabla 1.

Tabla 1: Resultados del Análisis de Correlación con Prueba Rho de Spearman

VARIABLE: DESAFÍOS Y OBSTÁCULOS	FACTORES CULTURALES FAMILIARES	
	Renunciar a su profesión	Permanecer en el hogar
Formación y educación de los hijos	.484*	.504*
	.049	.039

\*\* La correlación es significativa al nivel 0.01 (bilateral); \* la correlación es significativa al nivel 0.05 (bilateral). Solo se obtuvo evidencia parcial de las relaciones entre la variable desafíos y obstáculos que enfrenta la mujer empresaria en cuanto a la formación y educación de los hijos y los factores culturales familiares de renunciar a su profesión y la decisión de permanecer en el hogar. A mayor desafío y obstáculo para formar y educar a los hijos, más renuncian a su profesión y toman la decisión de permanecer en el hogar. Además se encontró una relación significativa positiva entre los desafíos y obstáculos de que a mayor acoso laboral o mobbing, mayor techo de cristal (.874\*\*), menores ingresos (.866\*\*), y menos posibilidad de acceder a cargos directivos (.876\*\*)

## CONCLUSIONES

Al ser un estudio exploratorio en las variables de *desafíos y obstáculos de la mujer empresaria y su relación con factores culturales familiares*, se obtuvo un acercamiento al identificar diversos desafíos que se le presentan, aunque manifiestan que rara vez, a pesar de que en esta muestra las mujeres empresarias cuentan con mayores niveles educativos como son la licenciatura, especialidad y maestría. Uno de los principales desafíos que enfrenta la mujer empresaria mexicana es la formación y educación de los hijos, y por ello, la influencia de los factores culturales familiares de renunciar a su profesión y de permanecer en el hogar para brindar esa formación y educación. Aunque también se vislumbró con una mayor correlación significativa positiva el hallazgo de que a mayor acoso laboral que se le presenta a la mujer empresaria, son menores los ingresos, tienen menos posibilidades de acceder a cargos directivos y mayor techo de

crystal. Por lo que se argumenta y aporta evidencia empírica coincidiendo con Navarro, Gámez y Alvarado (2008, p. 14) en cuanto al mobbing organizacional o acoso laboral y el techo de cristal. Sin embargo se requiere mejorar la muestra, abarcar un mayor número de entidades para que estas evidencias sean representativas y se puedan generalizar.

# **EL PERFIL DEL EMPRENDEDOR DE LA ZONA SUR DEL ESTADO DE YUCATÁN: CARACTERÍSTICAS, FACTORES DE VOCACIÓN Y FUENTES DE INSPIRACIÓN**

Mario René Chan Magaña, Universidad Tecnológica Regional del Sur

## **RESUMEN**

*Un elemento clave de la innovación es el empresario, pues éste es quien realiza las innovaciones hasta obtener nuevos productos y/o servicios, por lo que es considerado como el motor del cambio tecnológico según Schumpeter. Empero, el estudio del impacto de las actividades desarrolladas por este tipo de agentes es relativamente reciente, los primeros estudios se centraron en las características personales del empresario; sin embargo, la evidencia y hallazgos obtenidos permiten concluir que lo que realmente diferencia al empresario emprendedor es un proceso caracterizado por la innovación constante. Es por esto que, los trabajos recientes, proponen considerar al proceso emprendedor como un conjunto de funciones, actividades y acciones asociadas con la percepción de oportunidad y la creación de la organización para explotarla. En este contexto, el objetivo de este trabajo es conocer e identificar las principales características que poseen los emprendedores de la zona sur del estado de Yucatán, para que estos puedan desarrollar productos o servicios innovadores. Entre los resultados obtenidos se encuentra las principales fuentes de inspiración que contribuyeron a generar su negocio, los factores que determinaron su vocación emprendedora y los principales atributos y hábitos que poseen.*

**PALABRAS CLAVE:** Emprendedor, Empresario, Innovación

## **THE ENTREPRENEUR PROFILE OF THE SOUTH STATE OF YUCATAN: FEATURES, VOCATION FACTORS AND SOURCES OF INSPIRATION**

### **ABSTRACT**

*A key element of the innovation is the entrepreneur, because this is who makes innovations to develop new products and/or services, so it is considered as the engine of technological change according to Schumpeter. However, the study of the impact of the activities developed by such agents is relatively recent. Early studies focused on the personal characteristics of the entrepreneur. However, the evidence and findings obtained indicate that what really differentiates the enterprising entrepreneur is a process characterized by constant innovation. For this reason, recent work, propose to consider the entrepreneurial process as a set of functions, activities and actions associated with the perception of opportunity and the creation of the organization to exploit. In this context, the aim of this work is to find and identify the main features that entrepreneurs have in the southern state of Yucatán, so that they can develop innovative products or services. Among the obtained results are the main sources of inspiration that contributed to generate your business, the factors that determined their entrepreneurial spirit and the main attributes and habits they have.*

## INTRODUCCION

La generación de emprendedores es de vital importancia para un país debido a los beneficios que esto genera en el ámbito económico, tales como el crecimiento de la economía, la generación de empleos, el crecimiento del PIB, y mayores inversiones extranjeras dentro del país que mejores resultados económicos refleje. A pesar de estos beneficios existen diversas barreras que impiden el desarrollo de un espíritu emprendedor dentro de una sociedad. En el caso particular de México se realizan proyectos emprendedores que nunca llegan a culminarse, debido a que se desconocen las fuentes de financiamiento, o que el emprendedor no tiene el suficiente conocimiento técnico sobre como allegarse de recursos.

Durante las últimas décadas se ha observado un creciente interés de parte de varios analistas, investigadores y funcionarios en el fenómeno del empresario emprendedor, y en particular, de su manifestación más conspicua: la emergencia de empresas innovadoras. Este interés surge de la evidente contribución que dichos agentes han hecho al crecimiento económico y a su efecto sobre el rejuvenecimiento del tejido productivo, el relanzamiento de los espacios regionales y la generación de nuevos empleos (OCDE, 1999 y 2001). Gracias a ello el debate sobre empresariedad ha registrado una notable evolución: desde quienes intentan definir quien es un emprendedor —y por tanto indagan en los aspectos de su personalidad (Frese y Rauch, 2001)— hasta los que se concentran en el proceso empresarial como un fenómeno más complejo en el que intervienen e interactúan factores situacionales, sociales, culturales y económicos (Smith, Glasson y Chadwick, 2005).

Dentro de éstos últimos es posible observar perspectivas que se diferencian según el énfasis que se haga en el plano individual frente al papel del entorno social, llegando algunos a sostener la necesidad de concebir el fenómeno de la empresariedad como de naturaleza colectiva, tal y como Fairlie y Woodruff (2005) proponen para explicar el caso mexicano. En la búsqueda de los factores que explican las variaciones del fenómeno emprendedor, los primeros estudios se centraron en las características personales que diferenciaban los emprendedores de los que no son. Pero dada la diversidad y complejidad de la realidad emprendedora, los resultados no fueron muy productivos. Gartner (1985) plantea que la complejidad y variedad de los emprendedores hizo imposible lograr caracterizar un emprendedor promedio y por ende la construcción de una base teórica común a este tema (Bygrave, 1989).

En respuesta a esta situación, Bygrave y Hofer (1991) proponen que la delimitación del campo de conocimiento del espíritu emprendedor se amplíe y que además del estudio de las características personales y las funcionales del emprendedor incluya el estudio del proceso emprendedor y sus características. Estos autores proponen considerar el proceso emprendedor como un conjunto de funciones, actividades y acciones asociadas con la percepción de oportunidad y la creación de la organización para explotarla. Como punto de partida, Gartner (1985) propone considerar como elementos esenciales del estudio del emprendedor: a) el entorno, b) las características del individuo, c) el proceso, y d) la organización creada. Por su parte, Martinelli (2001) nota que para varios autores (e.g., Baumol, 1968; Kirzner, 1973; Thornton, 1999) hay dos aproximaciones al concepto de empresarios/emprendedores. Por el lado de la oferta existe el estudio de aquellos factores que influyen, propician y/o determinan su formación, y por el lado de la demanda está el análisis de los factores que influyen sobre la solicitud de las capacidades del empresario/emprendedor dentro del sistema económico.

Así, de acuerdo con Martinelli, existen dos dimensiones que subyacen en este enfoque: variables del sistema y variables de los agentes, que se pueden concebir como dos aproximaciones

equivalentes y contrapuestas: a) modelos macroanalíticos contra modelos microanalíticos y b) variables estructurales contra variables culturales. En cuanto a los rasgos que caracterizan la personalidad del empresario/emprendedor, el trabajo de McClelland (1961) es una referencia clásica. Para este autor las experiencias adquiridas durante la niñez crean en ciertos individuos un factor psicológico particular, al cual McClelland llama “la necesidad por logros” (the need for achievement, o n-achievement). De acuerdo con McClelland, la inculcación de la necesidad por logros es resultado de las prácticas de crianza que subrayan los estándares de excelencia, el entrenamiento de la autosuficiencia, el calor maternal y la poca dominación paterna. Lo interesante, como menciona el autor, es encontrar menos gentes con alta necesidad por logros en los países en desarrollo, además de que los que hay tienden a irse a otros campos distintos de los negocios o la industria

Después de analizar toda la información anterior podemos entender el porqué es importante conocer cuál es la personalidad de los emprendedores que han logrado realizar proyectos productivos, y las más interesadas en conocerlo son las universidades ya que requieren inculcar el perfil de emprendimiento entre sus alumnos. Es por ello que esta investigación analizara las características de los emprendedores de la zona sur del estado de Yucatán, específicamente de los municipios de Oxcutzab, Tekax y Ticul, zonas de alto crecimiento comercial en esa zona de nuestro estado, cercanas a donde se encuentra ubicada la Universidad Tecnológica Regional del Sur (UTRSUR), la cual cuenta entre su matrícula con estudiantes de los municipios mencionados. El resultado de este estudio nos permitirá saber las características de los emprendedores de la zona sur, y se propondrán a través de las academias y cuerpos académicos de investigación, estrategias para inculcarlas a los alumnos de la UTRSUR. De igual manera se llevarán los resultados a la incubadora de negocios para su análisis y diseño de estrategias de fortalecimiento.

### Planteamiento del Problema

Un elemento clave de la innovación es el empresario, ya que este es la persona que realiza las innovaciones hasta obtener nuevos productos y/o servicios, por lo que es considerado como el motor del cambio tecnológico (Schumpeter, J. A. 1997). Empero, el estudio del impacto de las actividades desarrolladas por este tipo de agentes es relativamente reciente, los primeros estudios se centraron en las características personales del empresario; sin embargo, la evidencia y hallazgos obtenidos permiten concluir que lo que realmente diferencia al empresario emprendedor es un proceso caracterizado por la innovación constante. Es por esto que, los trabajos recientes, proponen considerar al proceso emprendedor como un conjunto de funciones, actividades y acciones asociadas con la percepción de oportunidad y la creación de la organización para explotarla. La Universidad Tecnológica Regional del Sur (UTRSUR se crea en el año 2000 en el municipio de Tekax, y entre sus propósitos está el formar gente emprendedora que pueda desarrollar negocios y contribuir al crecimiento económico de la zona sur del estado de Yucatán. Debido a que la UTRSUR se localiza en el cono sur del estado de Yucatán, a pocos kilómetros de los municipios de Oxcutzab, Tekax y Ticul; en el presente trabajo se pretende analizar las principales características inherentes al emprendedor de estos municipios mencionados, así como de igual manera conocer cuáles fueron los principales factores que determinaron su vocación emprendedora y sus fuentes de inspiración.

### Objetivo General

Determinar las principales características de los emprendedores de los municipios de Oxcutzab, Tekax y Ticul del estado de Yucatán.

Objetivos Específicos

1. Determinar cuales son las principales características del emprendedor de los municipios de Oxcutzcab, Tekax y Ticul.
2. Identificar los factores que determinaron su vocación emprendedora.
3. Identificar sus principales fuentes de inspiración para crear su propio negocio.

### Justificación

La industria reclama al sistema educativo la responsabilidad de formar a los jóvenes en competencias metodológicas y habilidades sociales y desarrollar competencias tales como: interés por la calidad, capacidad de innovar, responsabilidad ante las propias decisiones y actuaciones, familiarizarse con el entorno, capacidad para trabajar en equipo y cooperar, pensar en positivo y capacidad de aprender. Es muy importante para nuestro estudio, conocer las principales competencias o características de la gente emprendedora de los municipios de Oxcutzcab, Tekax y Ticul, esto nos dará los elementos necesarios para establecer estrategias que coadyuven en la adecuada formación emprendedora de nuestros estudiantes tomando como base este estudio. El conocer los resultados de este proceso, nos permite sentar las bases e identificar las áreas de oportunidad en este sentido, de manera que podamos ser congruentes en nuestros estilos de enseñanza y técnicas didácticas aplicadas, buscando que se produzca un mejor efecto formativo en nuestros alumnos.

### **REVISION DE LA LITERATURA**

Emprender es un concepto con múltiples acepciones, de hecho, dependiendo del contexto en que se utiliza es la connotación que se le da, por ejemplo, para el ámbito empresarial el emprendedor es un empresario, es decir es sinónimo de propietario de una empresa comercial con fines de lucro, como es el caso de Finley (1990), quien lo describe como alguien que se aventura en una nueva actividad de negocios o Say (1800), citado por Drucker (1989), quien lo clasifica como un “buen administrador”.

Para el académico en cambio, emprender denota más un perfil, un conjunto de características que le hacen actuar de una manera determinada y que le permiten mostrar ciertas “capacidades” para visualizar, definir y alcanzar objetivos, tal como lo señalan Ely y Hess (1937), citados por Ronstadt (1985). De la misma manera, Shefsky (1997) y Baumol (1993), éste último citado por Ibáñez (2001), señalan que el término es utilizado para describir a cualquier miembro de la economía cuyas actividades son, de alguna forma, novedosas, quienes en definitiva huyen de rutinas y prácticas mayoritariamente aceptadas, por tanto es definido en términos de su capacidad para crear, innovar, salir de la rutina, hacer cosas diferentes, mejorar lo existente. Morris y Kuratko (2002), ubican al Emprendedor como una persona que además de hacer uso óptimo de los recursos disponibles y utilizarlos en combinaciones que maximizan los resultados factibles de dichas combinaciones, “agrega valor” a todo proceso o actividad en la que interviene. De la misma manera, Hernández (1992), señala que el emprendedor es una persona capaz de concentrar su mente en ciertos aspectos del medio que le rodea e ignorar otros, lo que les permite aplicar su tiempo y esfuerzo en la búsqueda y materialización de oportunidades; así mismo, Hernández cita a Hawkins y Turla (1991), quienes señalan que el emprendedor es un alquimista peculiar que toma un sueño particular propio y lo transforma en algo esplendido y real, por lo que tiene “dinamismo creativo”.

Así pues, existen diversas formas de definir y entender el término emprendedor, sin embargo en lo que coinciden diversos autores es en que el término Emprendedor se deriva de la palabra Entrepreneur, que a su vez se origina del verbo francés: “Entreprendre”, que significa *encargarse de*, tal como lo señala Jennings (1993), en su libro “Multiple perspectives of Entrepreneurship”. De la misma manera, Jennings cita a Joseph Schumpeter (1934), quien afirma que la innovación se desarrolla a partir de la capacidad para emprender, por tanto, los emprendedores no son necesariamente capitalistas, administradores o inventores, ya que finalmente se trata de personas

con una capacidad para “combinar” los factores de producción existentes y obtener mejores resultados de dicha forma de utilizarlos, es decir, de *innovar*.

Sin embargo hay un acuerdo generalizado en que emprender involucra la toma de decisiones y en particular implica contar con las “competencias” necesarias para poder tomar dichas decisiones de la manera correcta, y esto abarca diversos aspectos o elementos a considerar, tal como lo señalan VanderWerf y Brush (1989), en su revisión de 25 definiciones de Emprender, quienes afirman que Emprender es una actividad de negocios que consiste en una intersección de las siguientes conductas:

1. Creación: establecimiento de una nueva unidad de negocios
2. Administración general: dirección apropiada para una buena utilización de recursos
3. Innovación: generación y explotación comercial de nuevos productos, servicios procesos, mercados, sistemas de organización, etc.
4. Aceptación del riesgo: la capacidad para manejar el riesgo de fallas potenciales al tomar decisiones o realizar acciones
5. Mejor desempeño: el intento por lograr altos niveles de desempeño o de crecimiento.

Burch (1986), agrega a la lista:

6. Trabajadores: trabajo-adictos que se enfocan a sus metas y trabajan incansablemente para alcanzarlas
7. Optimistas: consideran que cualquier cosa es posible y que el momento es inmejorable para alcanzar metas y logros
8. Orientación a la excelencia: su deseo de logro los lleva a hacer las cosas al mejor nivel posible para sentirse aún más orgullosos y satisfechos de lo alcanzado.

Por otra parte las características más señaladas por los autores localizados (más de 50, que a su vez citan a más de 150 autores y sus correspondientes estudios), fueron un total de 60, sin embargo aquellas en las que coincidieron el mayor número de autores y que fueron seleccionadas por ser las mencionadas más recurrentemente y que se diferenciaban claramente unas de otras, fueron:

1. Creatividad
2. Iniciativa
3. Auto-confianza (confianza en sí mismo)
4. Energía y capacidad de trabajo
5. Perseverancia
6. Liderazgo
7. Aceptación del riesgo
8. Necesidad de Logro
9. Tolerancia al cambio
10. Manejo de Problemas

Así pues, tal como puede observarse de esta revisión de autores y definiciones, el emprendedor es en última instancia una persona con una serie de características que le permiten detectar oportunidades, generar conceptos de negocio a partir de la creación, innovación o mejor utilización de recursos, para alcanzar logros, asumiendo el riesgo inherente a su toma de decisiones y la puesta en marcha de las mismas. El siguiente y fundamental paso es entonces tratar de determinar cuáles son esas características que lo hacen exitoso, revisar si son

desarrollables o factibles de ser mejoradas, así como establecer un sistema de medición que permita determinar el éxito con que estas son promovidas o reforzadas.

## METODOLOGIA

Este estudio es no experimental, ya que las se analizaran las principales características de los emprendedores, las cuales no son objeto de manipulación, es transaccional ya que se recolectara datos en un tiempo determinado y descriptivo ya que se describirá a los sujetos de estudio en base a sus características de emprendimiento Se analizaron los municipios de Oxcutzcab, Tekax y Ticul del estado de Yucatán, distinguiendo a los potenciales empresarios/ emprendedores dentro de la población en general, a través de un criterio de selección basado en que el respondiente hubiera iniciado una empresa o negocio en el pasado reciente o de estar en vías de hacerlo en el futuro próximo. En otras palabras, el ayuntamiento de los municipios seleccionados nos proporciono una lista de su padrón de empresas y tomando como base sus ingresos y número de empleados se seleccionaron 40 empresas las cuales fueron visitadas en su totalidad, ya que por el número reducido de las mismas se optó por censarlas. De igual manera se aplicó una encuesta que permitió conocer, aparte de las características de los emprendedores, los principales factores que determinan la vocación emprendedora, sus principales fuentes de inspiración para crear sus empresas, la importancia de algunos determinantes de la cultura emprendedora en México, así como las fuentes de financiamiento que conocen y que han utilizado.

El trabajo de campo se realizó de mayo a agosto del 2013. El instrumento utilizado para medir las características de emprendimiento es el de “Inventario de perfil del emprendedor” elaborado por el Ing. Rafael Alcaraz, del tecnológico de monterrey, el cual consiste en un cuestionario de 20 ítems, contestado en una escala de Likert del 1 al 5, donde 1 es “Definitivamente no” y 5 es “definitivamente si”. Las preguntas nos permitirán conocer dimensiones o características del emprendedor como: creatividad, Riesgo, iniciativa, autoconfianza, energía y capacidad de trabajo, perseverancia, liderazgo, capacidad para afrontar el riesgo, necesidad de logro, tolerancia al cambio y manejo de problemas.

## RESULTADOS

A continuación se presentan los resultados obtenidos en el presente trabajo de investigación: En la siguiente tabla 01, se muestran las evaluaciones promedio del instrumento “Inventario del perfil del emprendedor” que respondió la muestra de 40 empresarios innovadores de los municipios de Oxcutzcab, Tekax y Ticul:

Tabla 1: Valoración Promedio del Cuestionario “Inventario del Perfil del Emprendedor”

PREGUNTAS	Valoración promedio
1.-Frecuentemente tengo ideas originales y las pongo en practica	4.5
2.-Cometo errores y me equivoco, pero se que puedo hacer bien las cosas	4.6
3.-Cuando quiero algo insisto hasta que lo consigo	4.5
4.-Cuando invierto mi dinero prefiero arriesgarlo en algo que pueda darme mas ganancias, que en un deposito a plazo fijo	4.7
5.-No me resulta difícil encontrar varias soluciones a un mismo problema	4.3
6.-Puedo resolver problemas rápidamente , incluso bajo presión	4.1
7.-Veo posibilidades creativas (de innovación) en cada cosa que hago	4.3
8.-Creo firmemente que tendré éxito en todo lo que me proponga hacer	4.5
9.-Creo firmemente que si la primera vez no lo logro, debo de intentarlo una y otra vez	4.2
10.-Me considero una persona ingeniosa, especialmente cuando se presentan soluciones difíciles	4.5
11.-Disfruto buscando nuevas formas de ver las cosas, en lugar de guiarme por las ideas ya conocidas	4.3
12.-Considero que el riesgo es estimulante	4.5

13.-Estoy convencido de mis capacidades y se muy bien como explotarlas	4.6
14.-Creo en el dicho “El que no arriesga no gana”	4.7
15.-Estoy seguro de mis propias ideas y posibilidades	4.7
16.-Me entusiasma cosas nuevas e inusuales	4.7
17.-Creo que en la vida hay que tomar riesgos para ganar mas o alcanzar metas mas altas	4.8
18.-Frecuentemente encuentro soluciones rápidas y eficaces a los problemas	4.2
19.-Soy bueno enfrentando una gran cantidad de problemas al mismo tiempo	4.0
20.-Considero que la perseverancia (constancia) es importante para llegar al éxito	4.9

*Esta tabla muestra el promedio de cada uno de los ítems del instrumento del inventario del perfil del emprendedor obtenido por la participación y respuesta de la población de empresarios objeto del estudio. Fuente: Elaboración propia con base en trabajo de campo (2013).*

Como podemos observar la mayoría de los ítems esta por encima de la valoración de 4, es decir, todos los encuestados coincidieron en mencionar que poseen las características mencionadas en el instrumento utilizado. Tomando como base la tabla anterior se obtuvo la puntuación total de cada una de las dimensiones, sumando el valor promedio de cada ítem correspondiente. Se comparo con el máximo valor que marca el instrumento y en base a ello se determino el nivel de evaluación de las respuestas por dimensión (alto, medio, bajo). Una vez obtenida esta información se establecieron comentarios y sugerencias del resultado.

**Tabla 2: Determinación del Nivel de Evaluación de Cada Dimensión del “Inventario del Perfil del Emprendedor”**

Dimensiones (Características)	Puntuación total	Puntuación encuesta	Diferencia	% relativo	Evaluación	Comentarios y sugerencias del instrumento
Creatividad	25.0	22.3	-2.7	89%	Nivel alto	Eres una persona que cuenta con sensibilidad para analizar los problemas, originalidad para resolverlos, flexibilidad, evaluación y capacidad de análisis y síntesis, te gusta promover un ambiente de innovación y eres un generador constante de ideas originales. Continúa reforzando estas características.
Seguridad personal	35.0	32.0	-3.0	91%	Nivel alto	Tienes seguridad en la toma de decisiones, consideras las capacidades y aptitudes que posees para salir adelante en cualquier situación. Te conoces a ti mismo y sabes cuales son tus limitaciones, no te afecta las críticas de los demás ya que tienes la certeza de tus cualidades. Trata de aplicar esta característica en todas las áreas de tu vida.
Aceptación del riesgo	20.0	18.5	-1.5	92%	Nivel alto	Estás convencido que el riesgo es algo inherente al éxito, ya que evalúas el riesgo en función al tamaño de su meta y confías en tus capacidades para afrontarlo. Crees que el riesgo es un catalizador, la adrenalina que te mueva a actuar con más ahinco. Continúa reforzando esta característica.
Manejo de problemas	20.0	16.6	-3.4	83%	Nivel alto	Identificas claramente discrepancias entre un estado actual y uno deseado y actúas para resolver tal discrepancia. Este proceso de solución te orienta a superar los obstáculos y vencer las dificultades que impiden lograr un objetivo. Escuchas la opinión de aquellos que entienden un problema de manera diferente a la propia, es esencial que sigas fortaleciendo esta característica.
Perfil completo	100%	89.4%	-10.6			

*Esta tabla refleja la puntuación promedio obtenida en cada una de las dimensiones del instrumento así como la representación porcentual con respecto a la puntuación máxima lo que permitió determinar el nivel promedio obtenido. Fuente: Elaboración propia con base en trabajo de campo (2013).*

Como podemos observar en la tabla 2 la mayoría de los encuestados obtuvo una alta puntuación en las características de creatividad, seguridad personal y aceptación del riesgo, todas entre el rango de 83% y 92%; pero en la de manejo de problemas se obtuvo únicamente el 83% de la misma. A pesar de que el instrumento lo evalúa como de nivel alto, seria bueno trabajar en este

punto para que fortalezcan su habilidad de identificar claramente el problema, vencer los obstáculos para lograrlo y el hecho de aceptar opiniones que contribuyan a su solución. Un tema de importancia para el presente análisis lo constituye la evaluación de los factores que inciden en la determinación de la vocación emprendedora fundada en cada una de las encuestas aplicadas a los empresarios. La tabla 3 refleja los resultados obtenidos:

Tabla 3: Evaluación de los Factores Que Determinan la Vocación Emprendedora

FACTORES	%
Motivación personal	40
Espíritu emprendedor	25
Oportunidad de negocios	20
Tradición familiar	08
Autoempleo	07
TOTALES	100

*Esta tabla muestra la jerarquización obtenida en el procesamiento de la información del trabajo de campo acerca de los factores que los emprendedores consideran relevante y que contribuyeron a determinar su vocación de emprendimiento. Fuente: Elaboración propia con base en trabajo de campo (2013).*

De acuerdo con los respondientes, la motivación personal pesa mucho en la decisión de volverse emprendedor, mientras que el autoempleo es, paradójicamente, el factor menos importante. Cabe mencionar que el espíritu emprendedor es el factor en segundo orden de importancia por encima de la oportunidad de negocios y la tradición familiar. Esta última antes de iniciar este estudio, es la que se presumió que iba a prevalecer como el factor determinante, ya que la zona sur del estado de Yucatán es de empresas prácticamente familiares.

En el tema de la cultura empresarial del país, el 90% de los entrevistados dijo que si existe tal cultura en México y el 10% opinó lo contrario. También se les preguntó a los entrevistados en que medida estaban de acuerdo con seis preposiciones que explican la existencia de dicha cultura emprendedora en el país. Las respuestas se reflejan en la siguiente tabla:

Tabla 4: Importancia de Algunos Determinantes de la Cultura Emprendedora en México

FACTORES	%
Para ser emprendedor hay que tener vocación	32
Ser emprendedor es cuestión de personalidad	28
En la escuela se enseña a ser emprendedor	18
La sociedad valora a la empresas generadoras de empleo	16
Existen políticas que incentivan la creación de empresas	4
El gobierno incentiva la creación de changarros	2
TOTALES	100

*Esta tabla muestra la jerarquización obtenida en el procesamiento de la información del trabajo de campo acerca de los indicadores más importantes que los emprendedores consideran relevante y que determinan la cultura emprendedora en México. Fuente: Elaboración propia con base en trabajo de campo (2013).*

Como se observa en la tabla 4, el 32% de los respondientes estuvo de acuerdo en pensar que para ser emprendedor hay que tener vocación, mientras que el 98% de los entrevistados estuvo en desacuerdo en que el gobierno incentiva o facilita la creación de changarros. En términos del sexo de los respondientes, se destaca que existió una diferencia estadísticamente significativa entre las respuestas dadas por los hombres y las mujeres en cuanto a la pregunta de que para ser emprendedor hay que tener vocación, en virtud de que el 88% de los hombres estuvo de acuerdo con esta aseveración, mientras que solo el 50% de las mujeres también lo estuvo. Con respecto a la aseveración de que para ser emprendedor es cuestión de personalidad, estadísticamente hablando no hubo diferencia, ya que el 72% de los hombres aceptó la propuesta mientras que el 75% de las mujeres lo hizo. Otra de las preguntas que se les hizo a los encuestados es de qué fuentes se habían inspirado para formar las empresas que crearon. La tabla 5 reporta la proporción de esas fuentes:

Tabla 5: Fuentes de Inspiración Para la Creación de Nuevas Empresas

FACTORES	%
Observación de las necesidades del mercado	22
Identificación de nichos de mercado	18
Observación de cambios en la demanda	16
Desarrollo tecnológico propio	15
Visitas a ferias y exposiciones	13
Otros - Iniciativa propia	11
Oportunidades vistas en otras empresas	5
TOTALES	100

*Esta tabla muestra la jerarquización obtenida en el procesamiento de la información del trabajo de campo acerca de los indicadores más importantes que los emprendedores consideran relevante y que consideraron como las principales fuentes en las cuales se inspiraron para crear sus empresas. Fuente: Elaboración propia con base en trabajo de campo (2013).*

Como se observa en la tabla anterior, el 22% de los respondientes se inspiró a través de la observación de las necesidades del mercado, seguida de la identificación de nichos de mercado y la observación de cambios en la demanda. Es de resaltar que la explotación del desarrollo tecnológico propio representó un porcentaje relativamente bajo (15%) del total de los entrevistados, dejando ver la baja propensión que tienen los emprendedores innovadores de esta muestra de la zona sur del estado.

## CONCLUSIONES

De acuerdo al objetivo 01 el cual se refiere a la determinación de las principales características de los emprendedores de la zona sur del estado de Yucatán, específicamente Ticul, tekax y oxcutzcab, podemos mencionar que son la creatividad, la seguridad personal, aceptación del riesgo y manejo de problemas. Cabe mencionar que las tres primeras dimensiones o características la poseen los emprendedores en un alto porcentaje (89%, 91 y 92% respectivamente). La cuarta dimensión a pesar de que el instrumento la señala como de alto nivel, su porcentaje es del 83%, por lo que se recomienda identificar con mayor claridad discrepancias entre un estado actual y uno deseado y actuar de manera más oportuna para resolver tal discrepancia. Tratar de escuchar la opinión de aquellos que entienden un problema de manera diferente a la propia, es esencial que se fortalezca esta característica.

De acuerdo al objetivo 02, acerca de cuales son los factores que determinaron la vocación emprendedora de los sujetos del presente estudio, se llegó a la conclusión de que la motivación personal pesa mucho en la decisión de volverse emprendedor, mientras que el autoempleo es, paradójicamente, el factor menos importante. Cabe mencionar que el espíritu emprendedor es el factor en segundo orden de importancia por encima de la oportunidad de negocios y la tradición familiar. Esta última antes de iniciar este estudio, es la que supusimos que iba a prevalecer como el factor determinante, ya que la zona sur del estado de Yucatán es de empresas prácticamente familiares.

De acuerdo al objetivo 03, en el que se menciona el identificar sus principales fuentes de inspiración para crear su propio negocio, se concluye que la cuarta parte de los respondientes se inspiró a través de la observación de las necesidades del mercado, seguida de la identificación de nichos de mercado y la observación de cambios en la demanda. Es de resaltar que la explotación del desarrollo tecnológico propio representó un porcentaje relativamente bajo (15%) del total de los entrevistados, dejando ver la baja propensión que tienen los emprendedores innovadores de esta muestra de la zona sur del estado.

## **ABSTRACTO**

*Las diferentes tecnologías existentes en el mercado son aplicadas diariamente con el objetivo de resolver problemas de la sociedad, las organizaciones y las personas; al hacer uso de ellas se alcanzan ventajas competitivas con eficiencia y flexibilidad ante los cambios que enfrenta el entorno competitivo del mundo globalizado. Gracias a ellas se permite una rápida reacción ante los mercados actuales logrando que empresas (especialmente micros, pequeñas o medianas) tengan la capacidad humana, tecnológica y administrativa (logística) en la cadena de valor para colaborar y competir con las grandes empresas transnacionales que acaparan el mercado. El comercio electrónico (electronic commerce - e-commerce) consiste en la compra y venta de productos o de servicios a través de medios electrónicos, principalmente la venta de bienes y servicios a través de internet, usando como forma de pago medios electrónicos como tarjetas de crédito, débito, transferencias entre cuentas bancarias de empresas, efectivo a la entrega o cheque. El correcto uso de los medios electrónicos, el adecuado trato, atención y soporte personalizado a los clientes permitirán alcanzar la satisfacción y lealtad de los clientes al ofrecer cualquier bien o servicio en el desarrollo de la industria en línea en la región.*

**PALABRAS CLAVE.** Comercio Electrónico, Cliente, Tecnologías de Información, Satisfacción

## **ABSTRACT**

# **E-COMMERCE MANAGEMENT IMPACT IN BUSINESS PERFORMANCE**

*The available technologies are applied daily in order to solve society problems to make them efficiently, achieving competitive advantage with flexibility in the competitive globalized world environment. Allows quickly response to current market making firms they have capabilities in the value chain to collaborate and compete with large corporations. E-commerce is the buying and selling of products or services through internet, as payment using electronic media such as cards credit, debit, transfers between bank accounts of companies, cash on delivery or check. The correct use of electronic media, the proper treatment, care and personalized customer support will be vital for the development of the online industry in the region. This research aims to develop a strategic model to support Mexican companies over the Internet in a way that their use Information Technology solutions that lead to success depending on many factors that are impacted when interacting with customers online to obtain the satisfaction and loyalty.*

**KEYWORDS:** E-Commerce, Customer, Information Technologies, Satisfaction

## **INTRODUCCION Y REVISION BIBLIOGRAFICA**

El comercio llevado a cabo electrónicamente ha crecido extraordinariamente pese al colapso de las cifras económicas en todo el planeta con aumentos de hasta un 39% en el 2009 y de un 27% en los primeros trimestres del 2010; en el último bimestre; gracias en parte a la propagación de internet en los últimos años y el internet como canal de distribución de productos y servicios a consumidores siguió a la alza con 150 millones de usuarios de habla hispana y unos 40 de ellos con acceso a banda ancha. Brasil continua a la cabeza pero México viene creciendo constantemente teniendo actualmente un 12% de participación en negocios con clientes (B2C - Business to Customer) ya sea en la región o desarrollando servicios especiales para clientes internacionales (La fuerza del e-commerce, 2010).

Más del 45% de los usuarios de Internet se encuentran en Asia, le siguen con un 22% Europa y otro 22% América; México representa el 1.5% de ese total por lo que el margen con respecto al total no es tan significativo, pero la oportunidad de entrar a competir en ese mercado de casi 2 billones y medio de personas en el mundo que cuentan con acceso a internet es asombroso e interesante (Internet World Stats, 2013). La globalización no ha influido de manera semejante a todos los países por lo que la difusión de las innovaciones y la convergencia de tecnologías desempeñaran un papel clave en la aceleración del proceso y las personas que compran en México a través de internet ha crecido considerablemente en los últimos 2 años pues en el 2009 se tenían 4.7 millones y en el 2011 ya eran 7 millones (e-Readiness en América Latina, 2012). Adicionalmente el crecimiento se ve claramente representado en los más de 6,000 millones de dólares que se mueven en el mercado Mexicano con 40.6 millones de usuarios y más de 14,2 millones de ellos (35%) ya haciendo compras por internet El 63% de los usuarios se encuentran entre los 18 y 34 años de edad y el 80% de ellos entre los 18 y los 44 años, mitad de ellos hombres y la otra mitad mujeres (AMIPCI, 2012). Latinoamérica es una de las regiones que sigue creciendo a doble dígito año con año y es por ello que nuestro país que forma parte de ella se ve beneficiado pues el número de internautas ha sido del 16% durante el último año, el mayor porcentaje a nivel mundial en base a la información que esta compañía especializada en performance marketing ha presentado recientemente sobre el estado de internet y comercio electrónico (Matomy, 2013).

El poder de compra de los compradores y la fuerza que ahora ellos tienen, junto con los factores de desarrollo en la industria y tendencias en variables de consumo como el día de la semana en el que con mayor posibilidad el internauta podrá comprar, el tiempo promedio que ahora él dedica a medios electrónicos con más de 3:32 horas al día y el uso cada vez más popularizado de redes sociales da claras muestras de las tendencias a seguir en mercadotecnia para alcanzar a ese nuevo mercado que está esperando detrás de un medio electrónico para ser seducido por una buena propuesta de compra-venta de productos y/o servicios a través de internet en la región pues 6 de cada 10 mexicanos hace uso de redes de este tipo (AMIPCI, 2011). En el 2012 el 46% de los internautas ha comprado algún producto y/o servicio por internet con lo que la cifra aumentó en un 18% con respecto al 2011. La razón por la que en este año los Mexicanos estamos comprando en internet es por practicidad y asegurar el producto y/o servicio; sin dejar a un lado el ahorro de tiempo, el ahorro de costo y la variedad de productos y/o modelos encontrados en línea. Cabe mencionar que el 97% de quien compra en internet en México tiene la intención de volver a hacer otras compras (AMIPCI, 2012).

Según IDC, un estudio de la agencia de publicidad Nazca Saatchi&Saatchi y la AMIPCI hay 34.9 millones de usuarios de Internet en México en 2010 (49% son mujeres y 51% hombres, de los cuales cerca de 30 millones de internautas mayores a 6 años se encuentran en zonas urbanas); la mayoría de ellos con 12 a 34 años de edad en promedio (AMIPCI, 2011). Los pagos electrónicos han crecido significativamente añadiendo \$983,000 millones de dólares americanos entre el 2008

y el 2012 en países evaluados, siendo Brasil, Argentina y México (en ese orden con \$51,300 MUSD, \$8,100 MUSD y \$7,800 MUSD) los países con mayor contribución en el desarrollo económico de América Latina; a su vez han estimulado el crecimiento económico en Estados Unidos, de las tarjetas de crédito, reduciendo los costos de transacciones, etc. (Valerie, 2013). El auge y crecimiento genera ventajas que son aprovechadas por emprendedores en el área, pero las oportunidades se convierten también en amenazas crecen, un ejemplo de ello es la cantidad de hackers que buscan alternativas para cometer fraudes.

Para el 2015 las tarjetas de crédito y débito contarán con microcircuitos integrados de seguridad (chip) que minimizarán la posibilidad de fraudes por clonación, pero ello abre oportunidades al medio electrónico que deberá fortalecerse para no ser presa de defraudadores. Es importante evitar compartir datos de tarjetas y no perder de vista las tarjetas al pagar en comercios y restaurantes tradicionales pues internet no es en sí un canal de riesgo, sino que el problema es el robo de datos. Es por ello que los procesos para reforzar la autenticación de las compras en línea, así como el análisis y validación de manera automática de las transacciones para generar seguridad pero a la vez conveniencia en el proceso de compra sean vitales; pues ello ocasiona que la experiencia de compra del cliente sea la esperada (Cybersource, 2013). Casi el 50% de la población en México usa Internet, (56.5 millones de usuarios en Internet, de una población de 116 millones), de ellos más del 60% de los usuarios de Internet tienen entre 12 y 34 años, casi todos ellos de la Generación Y (1982-1994), algunos pocos de la Generación Z (1995-2004) y muy pocos de la Generación X (1970-1981); es por ello que se deben diferenciar las estrategias a seguir para cada tipo de cliente y dependiendo de su rango de edad enfocar los esfuerzos para atenderlo y generar una experiencia de compra adecuada (E-Marketer, 2013).

Para que todos estos factores interactúen armónicamente es necesario que tanto portales, tiendas, malls y supermercados, así como bancos, gobierno, empresas de telecomunicaciones, proveedores de medios de comunicación y proveedores de servicios de internet colaboren con un fin común de desarrollar y fomentar el uso del comercio electrónico pues el crecimiento tanto en dispositivos fijos como móviles se estima en más de 443 billones de US dólares para el 2016, de ese total se espera que tan solo en comercio a través de dispositivos móviles sea de 31 billones de US dólares (Mulpuru, 2011); por lo que el mercado está creciendo exponencialmente y el pedazo de pastel que aplica a la región de Saltillo y sus alrededores debe ser mejor aprovechado.

## **METODOLOGÍA**

En la Figura 1 se muestran los 7 pasos utilizados en la investigación empleando el método de investigación descriptiva, donde se recolectan datos básicos o de fuentes primarias y se procesan para luego ser interpretados dentro del marco de la estadística no paramétrica.

Figura 1: Diseño de la Investigación.

*Esta Figura muestra el análisis de esta investigación y su orden de realización. Se demostrará la confiabilidad de las respuestas a las encuestas aplicadas a través del coeficiente Alfa de Cronbach y la concordancia o no de las respuestas a través del coeficiente de Kendall.*

El objetivo del trabajo es determinar las causas del comportamiento de los clientes y del mismo negocio al momento de interactuar en un proceso de compra en línea de un producto o servicio a partir de la revisión de los antecedentes bibliográficos consultados, en resultados de estudio de casos, análisis de mercado y las buenas prácticas de la gestión de procesos de tecnologías de información; con el objetivo de alcanzar la satisfacción del cliente, alcanzar su fidelidad y lealtad por último generar una identidad de marca e imagen a la empresa. El descubrimiento de relaciones causales entre las variables objeto de estudio y el análisis de las variables analizadas en las ciencias sociales a través de modelos de ecuaciones estructurales son una herramienta útil para el estudio de tipo lineal que expliquen los fenómenos a estudiar; con lo que la toma de decisiones se hace más sencilla al rechazar las hipótesis causales al revisar los datos y entender las correlaciones entre las variables.

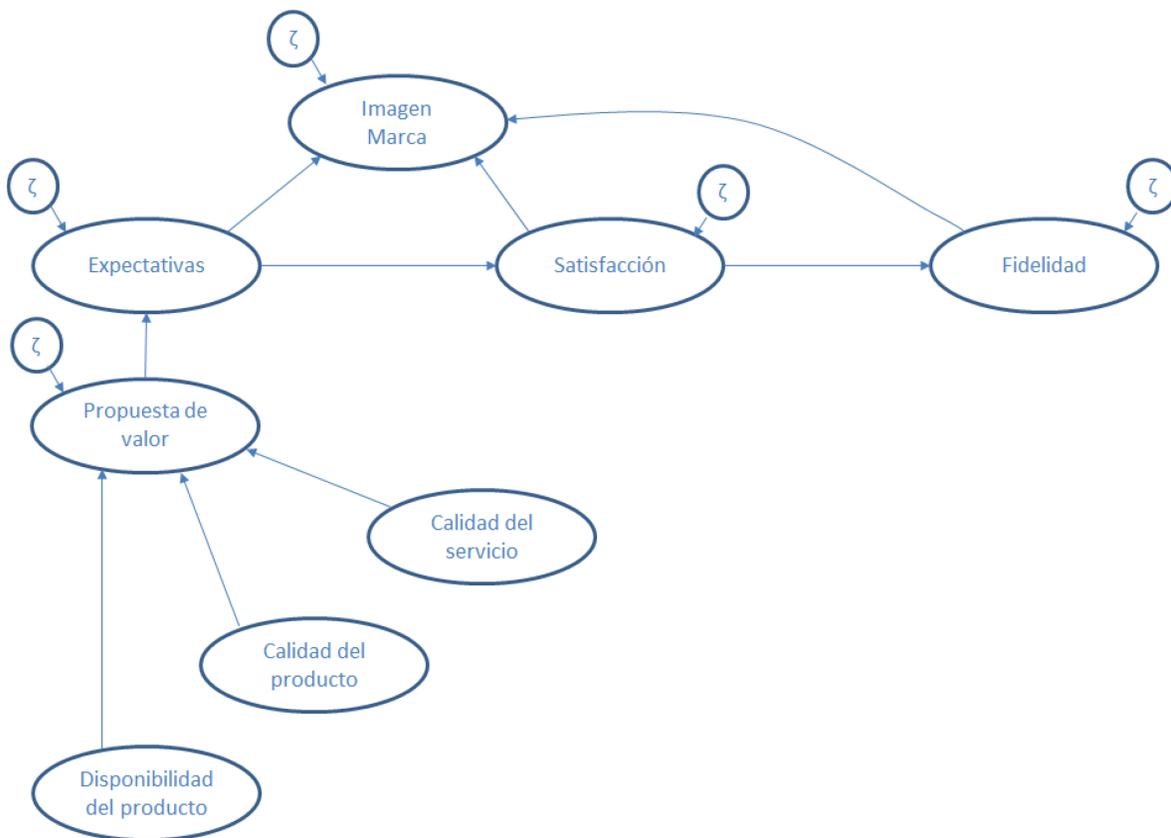

A través de análisis de alternativas (path-analysis) se estudian los efectos directos e indirectos en las variables observadas, se asumen relaciones lineales entre ellas, la definición de los errores de regresión y la ausencia de errores de medición de las variables; se estudian los efectos de unas variables consideradas “causa” (variables independientes, exógenas o explicativas) sobre otras variables que denominaremos “efecto” (variable dependiente, endógena o explicada). Se buscará establecer los factores en el Comercio Electrónico que impactan la conducta del consumidor, por lo que se cubrirán las necesidades de los clientes a través la confiabilidad, seguridad, métodos de pago y la atención adecuada que genere una experiencia de compra extraordinaria para generar una sinergia de clientes leales y potenciales. Con ello se desarrollará un modelo estratégico que apoye a las empresas que ofrecen productos y/o servicios a través de internet de manera que eficienten el uso de sus tecnologías de información.

Al entender al cliente y usar estrategias diferenciadas para cada generación (X, Y, Z) y así captar su atención dependiendo del segmento de edad se crearán una relación de factores que deriven en el éxito y/o fracaso organizacional a través del uso de Tecnologías de Información para la compra de productos y/o servicios en Saltillo y su área metropolitana a través de internet; siempre retroalimentando aquellos aspectos que generen beneficios y permitan a las empresas saber qué

hacer y cómo enfocar sus esfuerzos y que Tecnologías usar con diferentes tipos de clientes. Se generarán propuestas y soluciones a programas aplicados en el Gobierno, Universidades e Iniciativa Privada para gestionar estrategias que fortalezcan la compra de productos y/o servicios en medios electrónicos a través de un modelo dinámico que se adapte a los cambios recurrentes en la tecnología (Torres, 2011).

Ese modelo permitirá mejorar la toma de decisiones en relación a la clasificación de los clientes por sexo, edad, estudios, tiempo dedicado a internet, cantidad de compras en línea, factores de compra y razones que los hacen dudar de comprar debido a la falta de confianza, su capacidad de compra y los métodos de pago preferidos por cada uno de los rangos de personas y así encontrar la manera idónea para llegar al cliente (Yoon, 2009).

Modelo Conceptual

Las variables latentes y sus relaciones causales en el modelo son:

*Satisfacción: variable que evalúa el estado psicológico del cliente tras su experiencia de compra o la actitud que asumirá hacia la empresa de la que recibió el producto/servicio (Variable principal). Imagen: evalúa la marca o prestigio que tiene el cliente en relación a la empresa en su conjunto y los productos o servicios que ofrece. Tiene un efecto directo sobre las otras variables e incide en la fidelidad a largo (Variable exógena o independiente). Expectativas: referencia de lo que espera el cliente que adquiere un producto o servicio antes de efectuar la compra. La expectativa produce un efecto directo sobre la propuesta de valor. La calidad del producto: es la calidad percibida del producto físico o servicio en cuanto a las características genéricas que se ofrecen pues influye en la satisfacción directa en función de la evaluación de la durabilidad y calidad del producto/servicio que reciba el cliente. La calidad del servicio: determina la satisfacción del cliente según la forma en la que experimentó el servicio; aspectos específicos de la prestación del servicio como la cortesía, rapidez, atención personalizada, servicios posventa, etc. Propuesta de valor: es lo que hace diferente a comprar a esta empresa o hacerlo con otra, es el enfoque en el costo, métodos de entrega o pago, diseño o innovación, mercadotecnia que diferencia o da ese plus extra; actuando como variable que influye entre la calidad percibida y las expectativas del cliente. Fidelidad o lealtad: rendimiento del índice de satisfacción del cliente que mide la capacidad que tiene la empresa de retener a sus clientes, en función de la buena relación calidad-precio que el cliente percibe, de la capacidad de lograr que el cliente regrese a comprar nuevamente en el sitio y a la utilización de tus medios electrónicos de información para disparar futuras compras.*

Cada una de las variables latentes son evaluadas a través de indicadores que fueron establecidos en una encuesta realizada a los usuarios y empresarios para entender el comportamiento y lo que genera una satisfacción total en el proceso de compra. En donde el coeficiente de regresión “ $\gamma$ ” relacionan las variables latentes y las variables observadas entre sí y el término de perturbación “ $\zeta$ ” incluye los efectos de las variables omitidas, los errores de medida y la aleatoriedad del proceso especificado. Las ecuaciones estructurales propuestas para el modelo serían las siguientes:

- Disponibilidad del producto = Disponibilidad del producto
- Calidad producto = Calidad producto
- Calidad servicio = Calidad servicio
- Propuesta de valor =  $\gamma_{23}$  Disponibilidad del prod +  $\gamma_{24}$  Cal producto +  $\gamma_{25}$  Cal servicio +  $\zeta_5$
- Expectativa =  $\gamma_{12}$  Propuesta Valor +  $\zeta_4$
- Satisfacción =  $\gamma_{61}$  Expectativas +  $\zeta_3$
- Fidelidad =  $\gamma_{76}$  Satisfacción +  $\zeta_2$
- Imagen =  $\gamma_{01}$  Expectativas +  $\gamma_{06}$  Satisfacción +  $\gamma_{07}$  Fidelidad +  $\zeta_1$

Tabla 1. Factores del Comportamiento del Cliente al Comprar Por Internet en las Organizaciones en México

Variabes latentes	Indicadores
Satisfacción: Variable principal	Cumplimiento de la expectativas
Imagen/Marca: Variable exógena	Confianza / Seguridad
Expectativas del cliente	Tecnología
Disponibilidad del producto	Presencia / Tiempo en internet
	Interés por comprar
	Expectativa creada en calidad y atención
	Diversidad de oferta
	Variedad
	Características
	Tipos/Modelos
Calidad del producto	Durabilidad
Calidad del servicio	Garantía
	Cortesía
	Excepciones
	Rapidez de transacción
	Servicio posventa
	Atención personalizada
	Lenguaje
Propuesta de valor	Diseño / Ingeniería / Innovación
	Costo
	Entrega
	Métodos de pago
	Producto / Servicio
	Mercadotecnia / Ofertas / Descuentos
Fidelidad / Lealtad	Buena relación calidad-precio
	Cliente que vuelve a comprar
	Uso / Utilización del sitio para decidir

Además existen varios factores externos al negocio y al mismo cliente que influyen de manera directa en la decisión y son: Leyes y regulaciones, globalización, accionistas y alianzas entre empresas, mercadotecnia y economía que van de la mano con el efecto país y el efecto sector. Mientras que las variables relacionadas con el efecto empresa son en las que nos enfocaremos.

## RESULTADOS Y CONCLUSIONES

A partir de gran cantidad de artículos, estudios, investigaciones, análisis e interpretaciones acerca del comportamiento de los clientes al momento de tomar la decisión de compra; así como las causas que derivan en comportamientos contrarios a lo esperado y formas de atender a ese cliente dependiendo de su rango de edad y vinculación con la tecnología se recopilan y procesan las causas. Después de analizar los resultados y compararlos con la información recopilada en las encuestas, encontramos que existe una oportunidad muy grande en la cantidad de gente que cuenta con tarjetas de crédito, generando un sinfín de alternativas adicionales de métodos de pago que complican la administración de un negocio en línea, además de que gran parte de la población no cuenta con el conocimiento para llevar a cabo una compra por este medio pues argumentan no saber. Esta es un área de oportunidad a la mejora de la estabilidad de las empresas mexicanas que deberá analizarse y explotarse, misma que no forma parte de este trabajo de investigación pero que deberá atenderse. Si no se previenen las causas, será muy difícil y costoso el enfrentar las consecuencias de la forma de proceder de los clientes en los negocios en línea mexicanos.

Aunque pudiera parecer que el precio es el detonante, los resultados demuestran que es la disponibilidad del producto y las especificaciones o personalizaciones aplicables al mismo las que hacen que un cliente decida comprar en un lugar en específico.

El modelo estará basado en métricas apropiadas enfocadas en el negocio con el que se pueda asegurar que la base es la generación de valor y no la exigencia técnica por alcanzar un valor como fin mismo. El factor que hace la diferencia para que el Comercio Electrónico no detone y se desarrolle es la falta de confianza y seguridad que el cliente percibe; y es debido a mal uso que se hace de la información confidencial del cliente, especialmente de quienes la manejan en las empresas que venden a través de internet, ello genera un dilema en el cliente y se resiste a brindar datos personales en línea, el mal uso de tarjetas, funcionarios que crean falsas alarmas a través de comentarios en medios de comunicación, etc.

Es por ello que enfocar esfuerzos en fortalecer el correcto uso de la información y el apego a las políticas y procedimientos en las empresas será crítico y el estudio de los factores éticos de quienes atienden y soportan una compra por internet será vital.

Es importante ofrecer seguridad en el pago ofreciendo información detallada de los productos, así como simplicidad y una interface amigable, con tiempos de entrega oportunos y un servicio de post-venta constante que haga sentir al cliente que será respaldado por una organización seria, honesta y experta en lo que hace (Chen, 2008). Algunas estrategias que se pueden seguir para generar confianza en medios electrónicos de la localidad es uso de innovadores conceptos en el cobro a través de negocios electrónicos, uno de ellos es el llamado cobro al momento de la entrega (Cash On Delivery - COD), con lo cual se pueden atacar nichos de mercado más amplios, ya que no solo se enfocaría en las personas que tienen tarjeta de crédito; e incluso algunos clientes recibían sus pedidos de esta forma y cuando ya “confien” del sitio pueden hacer uso de su tarjeta de crédito en la segunda compra; así se podría eliminar la gran desconfianza de las personas, y del miedo o inseguridad de que legalmente no tengan alternativas de defender sus derechos ante un fraude (La fuerza del e-commerce, 2010).

Con ello se buscará eficientizar un modelo de gestión de las Tecnologías de Información que garanticen una alineación entre los procesos de gestión en el área, costos específicos, calidad de los servicios, entrega oportuna de soluciones, mitigación de riesgos asociados; siempre alineados con las metas del negocio. Aún existen muchos cabos sueltos que se deben atar para que la sensibilización del público en general en el área de comercio electrónico se dé, sin embargo, las ventajas que ofrece la tecnología nos pueden hacer la vida más fácil. Algunos de los problemas

que las organizaciones enfrentan actualmente pueden ser surcados gracias a estrategias de este tipo, tal es el caso de la eliminación de barreras tradicionales a los productos mexicanos (calidad-precio, capacidad-inventarios, financiamiento-utilidad-inversión). Entrar lo más pronto posible al mercado electrónico es vital, pues como dice el viejo y conocido refrán “el que pega primero, pega dos veces”, así es que no queda de otra, como lo dice Bill Gates en su libro "Business at the Speed of Thought: Using a Digital Nervous System" (Los Negocios a la Velocidad del Pensamiento: Usando un Sistema Nervioso Digital), es necesario y oportuno entrar rápidamente a los comercios electrónicos, pues debemos estar atentos y reaccionar a los posibles errores: “no creer nada de lo que escuchas, creer la mitad de lo que veas y aplícalo en internet”.

# ANALISIS DE RIESGO EN LAS EMPRESAS DEL SECTOR TURISTICO DE LA ZONA SUR DEL ESTADO

Mario René Chan Magaña, Universidad Tecnológica Regional del Sur  
Fernando Jorge Gameros Cámara, Universidad Latino  
Juan Francisco Balam Mena, Universidad Tecnológica Regional del Sur

## RESUMEN

*Se cree que los administradores financieros deberían estar enfocando sus esfuerzos de gestión empresarial a la búsqueda permanente de solución a los problemas citados por Montaña, Pérez y De la O (2011) al menor costo posible, con el objeto de alcanzar beneficios razonables a su riesgo inherente.*

*El presente trabajo de investigación se enfoca en conocer la percepción de riesgo de negocio que tienen las empresas ubicadas en la región sur del estado de Yucatán, México, cuyo giro está enmarcado dentro del sector turístico, así como algunas de las acciones de control interno que los empresarios de éste sector llevan a cabo para minimizar el impacto que pudiese tener la ocurrencia de alguna de las dimensiones relacionadas con los riesgos de operación, financiero, tecnológico, de información, de recurso humano y del entorno externo.*

**PALABRAS CLAVE:** Riesgo, riesgo de negocio, administración de riesgo, control interno

## RISK ANALYSIS OF THE TOURISM SECTOR COMPANIES IN THE SOUTH OF THE STATE OF YUCATAN

### ABSTRACT

*It is believed that financial managers should be focusing their efforts on business management to the permanent search of solution to the problems cited by Montaña Pérez de la O. (2011) at the lowest possible cost in order to achieve reasonable benefits to their inherent risk. This research work is focused on determine the degree of business risk with companies located in the southern region of Yucatán state, México, whose line is framed within the tourism sector as well as some of the internal control actions that employers in this sector carry out to minimize the impact that might have the occurrence of any of the dimensions related to the operation risks , financial, technological, of information, human resource and environment.*

**JEL:** G01, G11, G110, G32

**KEYWORDS:** Risk, business risk, risk management, internal control

### INTRODUCCIÓN

Como consecuencia de la crisis económica internacional de los años 2008 y 2009, el sistema económico mundial se vio afectado por un descenso en la actividad económica, cuyos efectos fueron percibidos en indicadores económicos tales como el aumento del desempleo, la disminución de inversiones, el incremento en el riesgo e incertidumbre de empresarios y

consumidores, así como severas fluctuaciones en los tipos de cambio, generándose así un incierto panorama económico y los peores resultados de la economía mundial registrados en la última década (Montaño, Pérez y de la O, 2011)

La crisis económica del 2009 deprimió el sistema económico mundial afectando a la industria turística, por lo que se presume que las empresas que se encuentran en este sector y ubicadas en el sur del estado enfrentan problemas en relación a su rentabilidad. Se sabe que el turismo es una de las actividades económicas más importantes a nivel mundial, sujeto a muchos factores tanto endógenos como exógenos que la pudieran afectar, siendo estos factores los riesgos que pudieran ser determinantes en la permanencia del negocio en el mercado.

De acuerdo a las cifras estadísticas del Instituto Nacional de Estadística Geografía e Informática en su anuario estadístico Yucatán 2011, la contribución del estado al Producto Interno Bruto (PIB) nacional por sector económico fue de aproximadamente 117,436 millones de pesos (a precios del 2003) representando el 1.5% del indicador. La actividad económica más importante del estado es el sector terciario, correspondiente al área de servicios, donde la actividad turística juega un papel importante, motor principal del presente estudio de investigación. Por lo anterior se establece el problema general de investigación ¿Cuál es el riesgo de negocio e impacto percibido entre los inversionistas del sector turístico en la zona sur del estado de Yucatán? Las preguntas específicas de investigación son:

1. ¿Qué dimensión de riesgo de negocio endógeno y exógeno tienen mayor impacto dentro de las empresas objeto del estudio?
2. ¿Qué acciones de control interno establecen para minimizar el riesgo del negocio?
3. ¿Qué giro del sector turístico conlleva un mayor riesgo de negocio?
4. ¿Cómo está conformada la estructura financiera de las empresas objeto del estudio?

Delimitaciones del estudio: Sujetos empresarios del ramo turístico Lugar: Zona sur del estado de Yucatán, en ella se encuentra enclavada la zona arqueológica de Uxmal, declarada por la UNESCO como patrimonio cultural de la humanidad, en específico en el municipio de Santa Elena.

Las hipótesis de investigación que se pretenden comprobar son:

Hi: La distribución que presenta el nivel de riesgo es distinta al normal

Hi: El riesgo de negocio percibido por los empresarios turísticos en la zona sur de Yucatán es considerado (mayor a 3, en el instrumento de investigación)

La percepción a que se refiere el problema de investigación, se refiere a la probabilidad de pérdida o perturbación que existe cuando los controles internos establecidos no son adecuados, para su minimización. La presente investigación pretende demostrar que una adecuada administración de los riesgos contribuye a incrementar el valor empresarial de las organizaciones de este sector, considerando la forma en que toman sus decisiones actuales sobre los riesgos, y midiendo su impacto bajo este esquema.

## REVISION LITERARIA

Rodríguez Valencia (2002) define empresa como una entidad económica destinada a producir bienes y servicios venderlos y obtener con ello un beneficio; por su parte Parkin, (2008) la ley la reconoce y autoriza para realizar determinada actividad productiva que de algún modo satisface

las necesidades del hombre en la sociedad del consumo de la actualidad; es una entidad económica porque debe buscar el manejo eficiente de los recursos escasos de los que dispone para la consecución de sus fines. Con base a la definición de Rodríguez Valencia(2002) de empresa, la del ramo turístico está definida por el tipo de consumidor a la cual se dirige, o sea el turista, persona que se traslada de su lugar de origen por motivo de ocio y que Ribeirinho (2010) en su tesis doctoral señala que el turismo es la “concreción del descanso físico, mental, espiritual u ocio de personas que viajan a lugares distintos de su casa diseñándoles una oferta de productos y servicios que los ayude a vivir bien el ocio en sus vacaciones” (p. 10)

De conformidad con el artículo 4º. De la Ley Federal de Turismo en México, los servicios turísticos prestados por empresas de este sector se clasifican en:

- I. *Hoteles, moteles, albergues y demás establecimientos de hospedaje, así como campamentos y paradores de casas rodantes que presten servicios a turistas;*
- II. *Agencias, subagencias y operadoras de viajes;*
- III. *Guías de turistas, de acuerdo con la clasificación prevista en las disposiciones reglamentarias;*
- IV. *Restaurantes, cafeterías, bares, centros nocturnos y similares que se encuentren ubicados en hoteles, moteles, albergues, campamentos, paradores de casas rodantes a que se refiere la fracción I de este artículo, así como en aeropuertos, terminales de autobuses, estaciones de ferrocarril, museos y zonas arqueológicas; y*
- V. *Empresas de sistemas de intercambio de servicios turísticos.*

Para efectos de este trabajo las empresas objeto de estudio, forman parte de los apartados I, II y IV de la Ley Federal de Turismo los de aspecto legal, recurso naturales, demográficos, sociológicos y económicos.

Por su lado Zvaigzne (2010 citado por Zvaigzne, en 2012) define riesgo como la posibilidad de que uno o varios eventos ocasionales puedan ocurrir causando efectos positivos o negativos, en especial a negocios del ámbito turístico trayendo consecuencias económicas benéficas o perjudiciales. Según Zvaigzne (2012) el riesgo tiene cuatro funciones importantes para los negocios: Regulación, protección, innovación y analítica. Por su parte, Cañas (2009) establece que las metodologías de gestión del riesgo son:

1. AS/NZS 4360:1999, Estándar Australiano para la Administración de Riesgos.
2. Metodología de Riesgos U.S. Federal Reserve Banks. (1994 revisión más reciente)
3. Gestión de Riesgos Corporativos – Marco Integrado, COSO-ERM
4. Basilea II: Nuevo enfoque basado en tres pilares

Para propósitos de la investigación se utilizará el enfoque FRB o sea el del Banco de la Reserva Federal de Estados Unidos.

## **METODOLOGÍA DE LA INVESTIGACIÓN**

El estudio está dirigido a empresas del sector turístico de la zona sur del estado de Yucatán pues es uno de los sectores de mayor relevancia e importancia económica en la entidad. El trabajo de campo se realizó de agosto a octubre del 2013. La elección de la población ha seguido el criterio de seleccionar todas las empresas del sector turístico que forman del padrón empresarial de los

diferentes municipios que conforman la región 9 de Yucatán de la zona sur del estado. Un dato importante es que el número total de empresas del padrón de cada uno de los municipios referidos es solamente de 65 (fuente: Secretaria de Fomento Turístico del Estado de Yucatán, SEFOTUR, 2013) en vista de que, a pesar de todos los atractivos culturales y naturales que existen en la zona, no existe una inversión representativa por parte de empresarios del giro. La determinación de la muestra será utilizando el muestreo aleatorio simple, en el cual se puede numerar a las empresas de acuerdo al padrón (de los diferentes municipios que conforman la región 9 y aplicar el programa de cálculo de números aleatorios ubicado en <http://nosetup.org/>, lo cual permitiría que todas las empresas que forman parte de la población, tengan la misma probabilidad de ser seleccionadas dentro de la muestra. A pesar de que el tamaño de la población es pequeño, es decir de 51 empresas, se dar por hecho que el resultado de la muestra será mayor a 30 empresas lo cual de acuerdo al teorema del límite central, la mayoría de las distribuciones  $n > 30$  dará una distribución de muestreo que es casi normal. El tamaño de la muestra se calculó con 90% de confianza y 5% de error de estimación.

Con base en la Metodología de identificación de riesgos de negocio mediante el análisis PEST y la de Cañas (2009) se elaboró un instrumento de autoría propia, el cual fue validado a través de un jueceo y confiabilizado vía pilotaje arrojando un Alpha de Cronbach superior al 70%. Debido a las características del estudio, la encuesta se presentaba como el instrumento para la obtención de información más apropiado ya que permite obtener información específica para la investigación que no es posible obtener de las bases de datos públicas. Las variables de investigación objeto del estudio son: riesgo de negocio (dependiente) y riesgo de tipo operacional, financiero, tecnología de la información, información para toma de decisiones, recursos humanos y medio ambientes (independientes).

## RESULTADOS

El 49% de los entrevistados fueron establecimiento de hospedajes (25 de 51), le siguen los establecimientos de alimentos y bebidas con el 45.1% (23 de 51). Ticul y Oxcutzcab son los municipios que más contribuyeron al estudio con el 49.1%, es decir, 14 y 11 encuestados respectivamente de un total de 51. Cabe destacar que el primero genera empleos básicamente con su actividad principal, la venta de calzado a nivel nacional. El segundo tiene como actividad preponderante la venta de frutas y verduras.

A continuación se presenta en la tabla 1 los indicadores endógenos que los encuestados consideran más riesgosos:

Tabla 1: Indicadores de Mayor Riesgo Percibido en los Factores Endógenos

FACTORES ENDOGENOS					
Riesgo	Indicador de mayor riesgo	Media	Mediana	Desv estándar	Interpretación
Operaciones	Riesgo de la impartición de un mal servicio	3.78	4.00	0.673	El servicio es la operación que consideran de mayor riesgo (media de 3.78 de un máximo de 4) y que por cierto tiene la menor variabilidad con 0.673 y 17.8% de coeficiente de variación que es considerado mínimo. Los empresarios ven la satisfacción del cliente como una estrategia para cautivarlo.
Financiero	Riesgo de incumplimiento en sus obligaciones con base a financiamiento por capital	2.76	3.00	0.651	El mayor riesgo financiero que perciben los empresarios es perder el capital que tienen si el negocio no funciona, puesto que su promedio fue de 2.76 de un máximo de 4 ; una desviación estándar de 0.651 con un coeficiente de variación de 23.5%
Tecnología de la información	Riesgo de dar un mal servicio con el uso del software	2.43	3.00	1.237	Existe un mayor riesgo de otorgar un mal servicio por el uso de software, (2.43 de 4 posible) y una desviación estándar elevada de 1.23 y un coeficiente de variación de 50.9% Existe una gran similitud entre los riesgos percibidos en toma de decisiones

Información para toma de decisiones	Riesgo de que la información financiera no se realice según normas	2.18	2.00	1.367	El mayor riesgo en toma de decisiones es que la información no se presente de acuerdo a las Normas de Información financiera (NIF), con un promedio de 2.18; aunque su variabilidad es alta de 1.367. El cumplimiento de las NIF reviste la importancia de obtener información confiable y certera para la toma de decisiones.
Recursos humanos	Riesgo de que el personal contratado no se desempeñe eficazmente?	2.92	3.00	1.163	El mayor riesgo en recursos humanos es que el empleado no se desempeñe eficazmente, con un promedio de 2.92 de 4 posible; aunque su variabilidad es alta de 1.16 y un coeficiente de variación de 39.7%. Los empresarios confían en sus contadores ya que el menor riesgo es que la información financiera no se realice según normas con 2.18 de 4 posible.

*Esta tabla refleja los indicadores de mayor riesgo considerados por los encuestados de cada una de las dimensiones endógenas con sus respectivos cálculos de media, mediana y desviación estándar cuyos resultados sirvieron de base para la interpretación de cada uno de ellos.*

De igual manera en la tabla 2 se puede observar los indicadores exógenos que los encuestados consideran más riesgosos así como amenazas para la empresa y la interpretación respectiva de cada uno de ellos:

Tabla 2: Indicadores de Mayor Riesgo Percibido en los Factores Endógenos

FACTORES EXOGENOS					
Riesgo	Indicador de mayor riesgo	Media	Mediana	Desv. estándar	Interpretación
Económico	Riesgo percibido en depreciación de la moneda	3.12	4.00	1.107	En este rubro económico, el indicador de mayor riesgo es la depreciación de la moneda ya que tiene un promedio de 3.12 y una mayor variabilidad de 1.107 con un coeficiente de variación de 35.4%. Vinculado con el control interno que refieren los participantes la cobertura cambiaria es prioritaria de igual manera.
Legal	Riesgo percibido en la reforma fiscal	2.94	3.00	1.066	El mayor riesgo percibido en el rubro de aspectos legales es en la reforma tributaria o hacendaria ya que en promedio tuvo un puntaje de 2.94, una desviación estándar de 1.06 y un coeficiente de variación de 36.2%. Los empresarios ven como una inversión el capacitar a su personal contable en reforma hacendaria para una adecuado calculo y entero del mismo.
Social	Riesgo percibido en delincuencia	3.02	4.00	1.140	El mayor riesgo social percibido lo es la delincuencia, (asaltos, pandillerismo), con un promedio de 3.02 de un máximo de 4 puntos y una desviación estándar de 1.14 y coeficiente de variación de 37.7%.
Educativo	Riesgo de no formar profesionales que requiere el campo laboral	2.59	3.00	1.203	Respecto al riesgo de que las instituciones de educación superior de la zona no formen profesionales que la industria necesita, los empresarios tuvieron en promedio 2.59 puntos de 4 y una desviación estándar 1.20 y un coeficiente de variación de 46%. Concluyéndose que los empresarios tiene mucha variación en sus opiniones
Demográfico	Riesgo percibido en cambios poblacionales	2.65	3.00	1.074	Los cambios poblacionales tuvieron una percepción de riesgo de 2.65 puntos y una desviación estándar de 1.07 teniendo como coeficiente de variación resultante de 40%, lo que indica que existe una alta variación en las opiniones respecto al tema
Natural	Riesgo percibido de huracanes	3.25	4.00	1.036	Los huracanes tuvieron el mayor riesgo pues 3.25 puntos de 4 máximos; se tuvo una desviación estándar elevada de 1.03 y u coeficiente de variación de 31.6%
Cultural	Cambios en los gustos y				El riesgo percibido por cambios en los gustos y preferencia de los consumidores tiene un promedio de 3 puntos y una

---

preferencias del consumidor	del	3.00	3.00	1.095	desviación estándar de 1.09 lo que da un coeficiente de variación de 36.3%. Los empresarios buscan estrategias de fidelidad hacia sus productos y servicios.

Riesgo moderadamente alto	Recuento		25	21	2	3	51
	% dentro de Riesgo ponderado nuevo		49.0%	41.2%	3.9%	5.9%	100.0%
	% dentro de Giro de la empresa		100.0%	100.0%	100.0%	100.0%	100.0%
	% del total		49.0%	41.2%	3.9%	5.9%	100.0%

*Esta tabla muestra el porcentaje de riesgo ponderado versus el porcentaje de giro de las empresas encuestada con el propósito de visualizar de manera adecuada qué giro del sector turístico conlleva un mayor riesgo de negocio. (fuente: elaboración propia, trabajo de campo 2013)*

La tabla 4 refleja que el 49% los encuestados (25 de 51) fueron hoteles, dentro de ellos (9 de 25) tiene la percepción de haber un riesgo de negocio moderadamente alto. Esto quizá se deba a que este giro depende casi exclusivamente de la actividad turística, mientras que los restaurantes y bares pueden tener clientes locales. Respecto a los porcentajes de financiamiento vía deuda y capital: La media de la deuda es del 35% y la de capital es casi del 65%, La deuda tiene un 64% de coeficiente de variación lo que es respaldado por un 23% de desviación típica, la mitad de los encuestados tienen financiamiento vía deuda de un 30% (mediana). Por otra parte, el coeficiente de variación de financiamiento vía capital tiene menor variación respecto a deuda ya que solo es del 35.7%, y la mitad de los entrevistados tiene 70% de financiamiento vía capital (mediana). Se puede concluir que los entrevistados por cada 3 pesos de financiamiento 2 son por capital y uno vía deuda

### Comprobación de Hipótesis

Tabla 5: Prueba de Normalidad Para Nivel de Riesgo Percibido a Través de la Prueba Kolmogorov-Smirnov (KS) Para una Muestra

Prueba de KS para una muestra		
N	Riesgo del negocio	51
Parámetros normales <sup>a,b</sup>	Media	84.43
	Desviación típica	14.504
Diferencias más extremas	Absoluta	.116
	Positiva	.072
	Negativa	-.116
Z de Kolmogorov-Smirnov		.825
Sig. asintót. (bilateral)		.503
a. La distribución de contraste es la Normal.		
b. Se han calculado a partir de los datos.		

*Esta tabla muestra la si la distribución que presenta la percepción de riesgo de negocio es distinta a la normal*

Se realizó la prueba de KS para una muestra ( $n > 50$  elementos) para identificar si la distribución que presenta el nivel de riesgo de negocio percibido por las empresas del sector turístico del sur del estado de Yucatán bajo la contratación de la hipótesis:

#### Prueba de hipótesis 1

Hi: La distribución que presenta el nivel de riesgo es distinta al normal

Regla de decisión: Rechazar la hipótesis nula si  $p$  valor  $< 0.05$

Nivel de significancia: 5%

Como  $p$  valor =  $0.503 > 0.05$  entonces no se rechaza la hipótesis nula por lo que se puede concluir con 95% de confianza de que no existe evidencia estadística para aceptar que la distribución que presenta la percepción de riesgo de negocio es distinta a la normal

Tabla 6: comprobación de hipótesis 2 a través de la prueba Z para una muestra

	T	gl	Sig. (bilateral)	Diferencia de medias	95% Intervalo de confianza para la diferencia	
					Inferior	Superior
Riesgo de Negocio	-3.459	50	.001	-.314	-.50	-.13

*Esta tabla muestra la probabilidad de ocurrencia de medición de riesgo percibido por los encuestadores y que sirve de base para aceptar o rechazar la hipótesis nula.*

## Prueba de hipótesis 2

Hi: El riesgo de negocio medido por la probabilidad de ocurrencia es percibido por los empresarios turísticos en la zona sur de Yucatán como alto (mayor a 3)

Regla de decisión Rechazar  $H_0$  si  $Z > 1.645$  (prueba de una cola)

Nivel de significancia  $\alpha = 0.05$

$Z = -3.4 < 1.645$  entonces no se rechaza la nula por lo que se puede concluir con 95% de confianza que no existe evidencia estadística para aceptar que el nivel de riesgo de negocios en los empresarios turísticos de la zona sur de Yucatán es alto.

## CONCLUSIONES

Después de haber analizado la información obtenida se presentan las conclusiones de la investigación: La dimensión de riesgo que tiene mayor impacto dentro de las empresas es el natural, en especial por los huracanes considerando que la península de Yucatán es un paso natural de fenómenos meteorológicos de este tipo que durante los meses de junio a noviembre pueden azotar la zona donde se encuentran establecidos los negocios. Las acciones de control interno que los empresario utilizan para minimizar el riesgo son: en cuanto lo operativo, un estricto control del registro de las operaciones mensuales, respecto al financiero, elaboración y análisis de flujos de efectivo de la empresa; tecnológico, respaldo de información cuando la tienen; toma de decisiones, auditoría interna; recursos humanos, la motivación a sus colaboradores. El giro de establecimientos de hospedaje es el que tiene mayor riesgo de negocio por su temporalidad y dependencia casi estricta a los turistas que visitan la zona *Puuc* de Yucatán. La estructura financiera de las empresas de la región está conformada por un 65% de financiamiento vía capital y un 35 % vía deuda. Esto significa que las empresas de este sector no tienen problemas graves de endeudamiento, es decir, cuentan con el respaldo de su capital propio y ganado. El riesgo de negocio percibido presenta una distribución normal, tanto que al realizarse la prueba KS para una muestra no se rechazó la hipótesis nula. En términos generales se puede decir que existe un riesgo de negocio moderadamente alto en las empresas turísticas de la zona sur del estado de Yucatán.

# IMPACTO DE LA GESTIÓN DE LA CADENA DE SUMINISTROS SOBRE EL DESEMPEÑO COMPETITIVO DE EMPRESAS MANUFACTURERAS DE AGUASCALIENTES, MÉXICO

Carmen Estela Carlos Ornelas, Instituto Tecnológico de Aguascalientes  
Jorge Alberto Rodríguez Steffani, Instituto Tecnológico de Aguascalientes  
Ma. del Carmen Liquidano Rodríguez, Instituto Tecnológico de Aguascalientes  
María de los Angeles Silva Olvera, Instituto Tecnológico de Aguascalientes  
Yolanda González Adame, Instituto Tecnológico de Aguascalientes

## RESUMEN

*Se analiza la relación entre la gestión de la cadena de suministros y el desempeño competitivo de 60 empresas del estado mexicano de Aguascalientes. Las dimensiones de la gestión de la cadena de suministros consideradas fueron: enfoque al cliente, cooperación, integración, coordinación, desarrollo, gestión de la información y mejora continua, mientras que las dimensiones del desempeño competitivo fueron: desempeño competitivo en costos, desempeño competitivo en flexibilidad, desempeño competitivo en calidad y desempeño competitivo en capacidad de innovación. Los datos se analizaron mediante cuatro análisis de regresión lineal múltiple, en los que las variables dependientes fueron las dimensiones del desempeño competitivo. Las dimensiones de la gestión de la cadena de suministros no explicaron el desempeño competitivo en costos, pero explicaron el 10.5% de la variabilidad en desempeño competitivo en flexibilidad, el 26.4% de la variabilidad del desempeño competitivo en la capacidad de innovación y el 12.3% de la variabilidad del desempeño competitivo en calidad, justificando así los recursos que las empresas aplican a esas prácticas.*

**PALABRAS CLAVE:** Gestión De La Cadena De Suministros, Desempeño Competitivo, Empresas Manufactureras

## IMPACT OF THE MANAGEMENT OF THE SUPPLY CHAIN ON THE COMPETITIVE PERFORMANCE OF MANUFACTURING COMPANIES IN AGUASCALIENTES, MEXICO

### ABSTRACT

*We analyze the relationship between the management of the supply chain and competitive performance of 60 companies in the Mexican state of Aguascalientes. The dimensions of the management of the supply chain were considered: customer focus, cooperation, integration, coordination, development, information management and continuous improvement, while the dimensions of competitive performance were cost competitive performance, competitive performance flexibility, quality and competitive performance in competitive performance in innovation capacity. Data were analyzed using four multiple linear regression analysis in which the dependent variables were the dimensions of competitive performance. The dimensions of the*

*management of the supply chain explained not cost competitive performance, but accounted for 10.5 % of the variability in competitive performance in flexibility, 26.4 % of the variability of competitive performance in innovation capacity and 12.3 % of the variability of competitive performance in quality, justifying the resources that companies apply to those practices.*

**JEL:** M1

**KEYWORDS:** Supply chain management, competitive performance, manufacturing companies.

## INTRODUCCIÓN

La gestión de la cadena de suministros, se refiere a la combinación del uso de la tecnología disponible y la aplicación de las mejores prácticas de negocios existentes en los procesos de una cadena de suministros, con la finalidad de implantar acciones que permitan alcanzar mayores ahorros y beneficios mediante la mejora de los procesos, manejo eficiente de productos y/o servicios, así como el correcto intercambio de información de negocios que permite que generen competitividad y ganancias. (Cai, Liu, Xiao, y Liu, 2008).

## REVISIÓN LITERARIA

### La Gestión De Cadena De Suministros

En la revisión de literatura, se identificaron como las prácticas de gestión de la cadena de suministro más significativas al enfoque al cliente, la cooperación, la integración, la coordinación, el desarrollo, la gestión de la información y la mejora continua. El enfoque al cliente refleja el compromiso de la compañía con la satisfacción de las necesidades del cliente (Kanji y Wong, 1999), a través de actividades planeadas y organizadas para la mejora de procesos. La satisfacción del cliente es un atributo absolutamente necesario para que las empresas puedan mantenerse al día en el entorno competitivo, lo cual sólo puede lograrse mediante la rápida respuesta a las necesidades del cliente (Borade y Bansod, 2008).

Para que las empresas puedan ser plenamente eficaces en el entorno competitivo actual, deben ampliar su comportamiento integrador para incorporar tanto a clientes como proveedores (Bowersox y Closs, 1996, en Mentzer et al., 2001). Esta extensión de los comportamientos integradores, a través de la integración externa, es la base de gestión de la cadena de suministro. La aplicación de la filosofía de gestión de la cadena de suministros se realiza mediante una serie de actividades acordes a un esfuerzo organizado entre los socios de la cadena de suministro, tales como proveedores, transportistas y fabricantes, para responder dinámicamente a las necesidades del cliente final (Greene, 1991, en Mentzer et al., 2001). Kannan y Tan (2005) aseguran que la coordinación entre empresas está relacionada positivamente con el desempeño operativo organizacional, y agregan que las organizaciones deben participar proactivamente en las decisiones de sus proveedores acerca del origen de los componentes y/o materias primas.

El enfoque de la gestión de cadena de suministros busca la integración de los proveedores en el desarrollo de productos (Kannan y Tan, 2005), ello implica su participación desde comienzos del proceso de desarrollo de productos para aprovechar sus capacidades y experiencia (Ragatz, Handgeld y Scannell, 1997). Por otro lado, las prácticas de intercambio de información, tales como el sistema de inventario gestionado por proveedor, herramienta conocida como *VMI* por sus siglas en inglés (*Vendor-Managed Inventory*), proporcionan a los socios fabricantes de una cadena de suministros, la facultad de tener acceso a la información más precisa de la demanda

(Borade y Bansod, 2007). Kanji y Wong, (1999) coincide con ello al señalar que el intercambio de información entre los miembros de una cadena de suministros facilita su operación. La mejora continua hace un fuerte énfasis en el uso de procedimientos robustos para el diseño o introducción de productos y servicios nuevos o mejorados, así como al diseño de procesos que satisfagan y excedan los requerimientos de calidad establecidos por el cliente (Rodríguez, 2007). Por otro lado, Anumba et al., (2000) sostienen que es importante incorporar los nuevos productos al mercado lo más rápido posible; cuidar las fechas calendario se ha vuelto el principal recurso por ser optimizado o reducido, más que los mismos costos. Skinner (1969) identificó cuatro criterios de desempeño relacionados con la puesta en marcha de una filosofía de SCM entre los que se incluye calidad, costo, tiempo y flexibilidad. Posteriormente Leong, Snyder y Ward (1990) añaden la innovación como indicador del desempeño de las empresas. En este estudio se propone que el desempeño competitivo depende de las prácticas de gestión de la cadena de suministros.

## METODOLOGÍA

El diseño de investigación se caracterizó como cuantitativo y transversal. Su alcance fue exploratorio por la escasez de estudios previos en el contexto de estudio. La muestra de empresas manufactureras estudiadas fue de 60. Las unidades de análisis fueron elegidas por conveniencia. Las empresas fueron identificadas en un directorio publicado por el Instituto Nacional de Estadística y Geografía. Los datos se recolectaron mediante un cuestionario contestado por un directivo de cada empresa. El cuestionario estuvo integrado por 75 reactivos tipo Likert de 7 puntos, diseñados por Rodríguez (2011). En la Tabla 1 se presentan los bloques de reactivos utilizados para medir las variables así como el número de reactivos con los que se integraron. Las prácticas de la gestión de la cadena de suministros consideraron por separado la cooperación, la coordinación la integración, el desarrollo y la gestión de la información, cuando éstas tenían lugar con los clientes y con los proveedores. En la misma tabla se presentan los coeficientes alfa de Cronbach que dieron cuenta de la adecuada confiabilidad del instrumento.

Tabla 1: Resultados de Alfa de Cronbach

NOMENCLATURA	DIMENSIÓN	NÚMERO DE REACTIVOS	COEFICIENTES ALPHA DE CRONBACH
EC	Enfoque con los clientes	4	0.69
CPC	Cooperación con los clientes	5	0.84
CPP	Cooperación con los proveedores	5	0.85
INC	Integración con los clientes	5	0.87
INP	Integración con los proveedores	5	0.85
CRC	Coordinación con los clientes	4	0.80
CRP	Coordinación con los proveedores	4	0.82
DEC	Desarrollo con los clientes	4	0.83
DEP	Desarrollo con los proveedores	4	0.86
GIC	Gestión de la información con los clientes	3	0.68
GIP	Gestión de la información con los proveedores	3	0.76
MC	Mejora continua	6	0.88
DCC	Desempeño competitivo en costos	4	0.78
DCF	Desempeño competitivo en flexibilidad	5	0.89
DCCAL	Desempeño competitivo en calidad	4	0.88
DCCI	Desempeño competitivo en capacidad de innovación	8	0.84

*Los coeficientes Alfa de Cronbach con los que se verificó la confiabilidad de los bloques de reactivos con que se midieron las 12 prácticas de la gestión de la cadena de suministros y los cuatro componentes del desempeño competitivo, tuvieron valores entre 0.69 y 0.89.*

La hipótesis general que dirigió el estudio fue:

H0: El desempeño competitivo en costos es independiente a las prácticas de la gestión de la cadena de suministros.

HA: El desempeño competitivo en costos depende de las prácticas de la gestión de la cadena de suministros

## RESULTADOS

La hipótesis general fue desglosada, para ser sometida a prueba, en cuatro particulares:

H1: El desempeño competitivo en costos depende de las prácticas de gestión de la cadena de suministros

H2: El desempeño competitivo en flexibilidad depende de las prácticas de gestión de la cadena de suministros.

H3: El desempeño competitivo en calidad depende de las prácticas de gestión de la cadena de suministros

H4: El desempeño competitivo en capacidad de innovación depende de las prácticas de gestión de la cadena de suministros. Las cuatro hipótesis particulares fueron sometidas a prueba mediante un análisis de regresión múltiple para cada una. El modelo de regresión en el que la variable dependiente fue el desempeño competitivo en costos no se presenta debido a que en la corrida de la rutina de regresión no encontró ninguna relación entre las variables independientes y la dependiente que fuera estadísticamente significativa al 95%. La Tabla 2 presenta el modelo correspondiente a la prueba de la hipótesis 2, en la que se rechazó la hipótesis nula que sostenía la independencia entre el desempeño competitivo en flexibilidad y las prácticas de la gestión de la cadena de suministro, ya que la  $R^2$  del modelo indica que el 10.5% de la variación del desempeño competitivo en flexibilidad (DCF) es explicada por la práctica de gestión de la cadena de suministro llamada coordinación con el cliente (CRC).

La Tabla 3 presenta el modelo correspondiente a la prueba de la hipótesis 3, en la que se rechazó la hipótesis nula que sostenía la independencia entre el desempeño competitivo en capacidad de innovación y las prácticas de la gestión de la cadena de suministro, ya que la  $R^2$  del modelo indica que el 26.4% de la variación del desempeño competitivo en capacidad de innovación (DCCI) es explicada por la práctica de gestión de la cadena de suministro llamada cooperación con el cliente (CPC). La Tabla 4 presenta el modelo correspondiente a la prueba de la hipótesis 4, en la que se rechazó la hipótesis nula que sostenía la independencia entre el desempeño competitivo en calidad y las prácticas de la gestión de la cadena de suministro, ya que la  $R^2$  del modelo indica que el 12.3% de la variación del desempeño competitivo en capacidad de innovación (DCCI) es explicada por la práctica de gestión de la cadena de suministro llamada cooperación con el cliente (CPC).

Tabla 2: Modelo De Regresión 2

R	0.324
T (variable CRC)	(2.610)**
R cuadrada	0.105
F	6.810
FIV	1.000

La ecuación del modelo ajustado es:  $DCF = 3.778 + 0.265 CRC$

*\*\*Significativo al 5%. La  $R^2$  del modelo indica que el 10.5% de la variación del desempeño competitivo en flexibilidad (DCF) es explicada por la coordinación con el cliente (CRC).*

Tabla 3: Modelo de Regresión 1

R	0.525
T (variable CPC)	(4.703)***
R cuadrada	0.264
F	22.10
FIV	1.000

La ecuación del modelo ajustado es:  $DCCI = 3,238 + 0.319 CPC$

\*\*Significativo al 1%. La  $R^2$  del modelo indica que el 26.4 % de la varianza del desempeño competitivo en capacidad de innovación es explicado por la cooperación con el cliente.

Tabla 4: Modelo de Regresión 3

R	0.351
T (variable CPP)	(2.857)**
R cuadrada	0.123
F	8.162
FIV	1.00

La ecuación del modelo ajustado es:  $DCCAL = 3.864 + 0.263CPP$

\*\*Significativo al 5%. La  $R^2$  del modelo indica que el 12.3 % de la varianza del desempeño competitivo en calidad es explicado por la cooperación con el proveedor.

## CONCLUSIONES

Las prácticas de gestión de la cadena de suministro llamadas cooperación con el cliente, coordinación con el cliente y cooperación con el proveedor fueron las únicas capaces de explicar el desempeño competitivo en flexibilidad, el desempeño competitivo en capacidad de innovación y el desempeño competitivo en calidad. Lo anterior sugiere que los recursos que las empresas aplican a las prácticas de gestión de la cadena de suministros, se justifican por su impacto en su desempeño competitivo. Queda para futuras investigaciones el análisis de la relación de la gestión de la cadena de suministro y en costos. Finalmente, los resultados deben tomarse con cautela por el pequeño tamaño de la muestra y su carácter no aleatorio.

# LA ELABORACIÓN DE BEBIDAS ESPIRITUOSAS COMO ACTIVIDAD PRODUCTIVA EN LAS COMUNIDADES MARGINADAS CASO ZAPOTITLÁN DE VADILLO

Adriana del Carmen Bautista Hernández, Universidad de Colima  
Jesús Otoniel Sosa Rodríguez, Universidad de Colima  
Yesbek Rocío Morales Paredes, Universidad de Colima

## RESUMEN

*La presente investigación se basa la elaboración del destilado artesanal Tuxca en la región de Zapotitlán de Vadillo y la situación de esta bebida espirituosa como una actividad productiva para esta comunidad. La información se obtuvo a través de investigación de campo y se llegó al siguiente resultado: La elaboración de este destilado artesanal es una actividad que genera ingresos para sus habitantes, sin embargo los canales de comercialización y distribución no son favorables para incrementar sus ingresos y por lo tanto generar un mayor impacto en la comunidad. Al obtener los resultados, se presentan algunas opciones de comercialización y distribución que no se adecúen a la naturaleza artesanal de dicho producto de agave.*

**PALABRA CLAVE:** Bebida Espirituosa, Actividad Productiva, Comercialización, Distribución

## THE PRODUCTION OF SPIRITS AS A PRODUCTIVE ACTIVITY IN MARGINALIZED COMMUNITIES CASE ZAPOTITLÁN DE VADILLO

### ABSTRACT

*This paper is about the development of the crafting process of distillate Tuxca in the region of Zapotitlán de Vadillo and the location of this spirits as a productive activity for this community. The information was gathered through field research and came to the following results: the elaboration process of this craft distillate is an activity that generates income for this particular inhabitants, but the marketing and distribution channels are not favorable to increase their income and therefore have a significant impact in the community. The results presented are some options of marketing and distribution that does not suit the artisanal nature of this agave product.*

### INTRODUCCIÓN

La destilación como se conoce en la actualidad es un proceso Europeo que encuentra sus orígenes en España, en el siglo XVI y que fue introducido a México por los migrantes árabes. Para el siglo XVIII dicho proceso era comúnmente utilizado en la fabricación y producción de alcoholes en nuestro país. México cuenta con una amplia diversidad de plantas de agave cada una con características específicas ubicadas en distintas regiones del país; siendo la región norte,

específicamente los estados de Coahuila, Sonora y Chihuahua en donde se ubica una de las mayores concentraciones de este tipo de maguey. Hallazgos arqueológicos han constatado la importancia que la fibra de agave tuvo para las poblaciones del sur de Jalisco en el año 74 d.C al emplearlas como parte de su vestimenta y para la elaboración de implementos agrícolas como el abono. Del mismo modo para las comunidades asentadas a las faldas del volcán de Colima entre los años 500 a.C. y 1500 d.C, el agave se empleaba en la elaboración de alimentos y bebidas fermentadas con fines ceremoniales. El historiador Joseph Dacosta en el siglo XVI nombra al maguey como el “Árbol de las maravillas” ya que proporcionaba alimento, bebida, medicina además de ser empleado para elaboración de fibras, jabón y materiales para la construcción. (Benet Manuel, 2012) Cosechado a las faldas del volcán de Colima en las inmediaciones del estado de Jalisco, en la localidad de Zapotitlán de Vadillo es posible encontrar un tipo de agave de la variedad cenizo conocido como maguey Tuxcacuesco con características muy particulares. Producto de este maguey endémico se obtiene el Tuxca, un destilado elaborado en forma artesanal, de sabores y aromas empíreumáticos, buena graduación alcohólica y color cristalino, todas las anteriores cualidades reconocidas como deseables en un destilado de buena calidad que puede comercializarse a un precio elevado.

Este destilado no es tan popular en el mercado por lo que suele ser confundido con el Tonayán un subproducto que resulta de una primera destilación de la caña de azúcar y cuyo precio oscila en los 25 pesos el litro. Esta confusión dificulta la comercialización del Tuxca además de generar en los consumidores una resistencia a la compra y aceptación de un destilado artesanal poco conocido. En la actualidad la comercialización de los destilados, se ha visto afectada por distintos factores entre los principales se distinguen los elevados costos de la materia prima y la constante inserción al mercado nacional de destilados o licores importados a menor costo. Aún destilados consagrados en el gusto del consumidor como el Tequila, han sufrido algunos estragos lo cual infiere que el impacto negativo ha sido aún mayor para aquellas bebidas de producción artesanal elaboradas en localidades marginadas. Nuestro país cuenta con una amplia variedad de bebidas destiladas, muchas de ellas elaboradas de manera artesanal, sin embargo la mayoría carece de campañas de difusión, incluso se tiene poca información documentada de aquellas de menor popularidad o de producción local, lo que las pone en riesgo inminente de desaparecer. Tal es el caso del Tuxca cuya producción significativa se encuentra en una localidad alejada de las urbes y enclavada en las faldas del volcán de Colima.

## REVISIÓN LITERARIA

Las bebidas espirituosas se definen como aquellas bebidas alcohólicas obtenidas mediante la destilación de una materia prima de origen agrícola, son aptas para consumo humano, contienen una graduación mínima de 15%vol. algunas son adicionadas con aromas, azúcares o edulcorantes. México es un país rico en bebidas destiladas muchas de ellas elaboradas de manera artesanal no obstante solo algunas cuentan con reconocimientos o distinciones que faciliten su difusión y mercadeo a continuación se presentan algunos ejemplos:

*Tequila:* destilado de agave originario del municipio del mismo nombre ubicado en el Estado de Jalisco; esta bebida se elabora a partir de la destilación y fermentación del “jugo” del agave variedad azul llamado

*Tequilana Weber:* Este destilado tiene una denominación de origen en cinco Estados de la República Mexicana: Michoacán, Guanajuato, Tamaulipas, Nayarit y por supuesto el estado de Jalisco, acorde a la Norma Oficial Mexicana (NOM-006-SCFI-2005) las instalaciones de la fábrica de un productor autorizado deben estar dentro del territorio comprendido en la

declaración, la materia prima y su proceso también están normados. Según datos del informe anual que realiza el Consejo Regulador del Tequila, en las tequileras hay registrado un inventario de 315,8 millones de litros de tequila cifra que proporciona una idea de los volúmenes de comercialización de dicho destilado.

*Sotol*: uno de los destilados mexicanos más reconocidos producto de la agavácea *sereque* que crece en el norte de México principalmente en los estados de Chihuahua, Durango y Coahuila. Desde el año 2002 cuenta con denominación de origen y desde el 2004 una regulación de su producción bajo la Norma Oficial Mexicana NOM-159-SCFI- pese a esto no tiene gran producción comercial y continua fiel a su naturaleza artesanal. Su textura y sabor es parecido al Tequila con propiedades menos dulces y más fuertes.

*Charanda*: bebida espirituosa originaria de Michoacán, su nombre es de origen purépecha y significa tierra colorada. Su proceso de elaboración es muy parecido al del ron no obstante lo que hace especial a este destilado es su materia prima ya que está elaborado con caña de altura cultivada en tierras altas y con clima templado. Cuenta con Denominación de origen desde el 2003 la cual marca que ningún destilado de caña en el mundo a excepción del que se produce en Michoacán con caña de su cultivo y agua de manantial de la región puede ser llamado Charanda.

*Bacanora*: destilado artesanal originario de Sonora con características muy marcadas como su alta graduación alcohólica, licor incoloro elaborado a base de Agave *vivípara* (también conocido como agave yaquiana o agave pacífica). Debido a la reducida producción la comercialización se dificulta, por eso compañías productoras de destilados consideran viable el proyecto de industrializar la producción de este producto.

*Xtabentún*: bebida espirituosa de origen maya, de producción artesanal elaborada a base de miel fermentada de abejas que solo consumen la flor del Xtabentun y anís. Es una bebida originaria de Yucatán y su origen es maya. Zapotitlán de Vadillo es una población situada en el centro sur del estado de Jalisco, en la parte poniente del Volcán y Nevado de Colima, de clima semi seco y suelo accidentado; la mayor parte de éste último destinado al uso agropecuario ya que por sus características el terruño es ideal para la siembra de diferentes frutos, vegetales, plantas y árboles, entre los que destacan, principalmente, el maíz, frijol, semilla de calabaza, chile y el maguey variedad cenizo. Su población actual es de 6685 habitantes. La principal actividad de los habitantes de este municipio es la producción del Tuxca : la siembra, el traslado de las piñas, la cosecha, la jima, la fermentación, la cocción y la destilación son las distintas actividades productivas para el 70% de las familias que trabajan dentro de la población. Comparado con otros destilados el Tuxca es de producción local, reconocido por los oriundos de la localidad, existe la necesidad de documentar este destilado y generar un mayor interés no solo en la población sino en los visitantes.

## METODOLOGÍA

El objetivo principal de esta investigación es identificar la situación actual de las bebidas espirituosas como una actividad productiva para las comunidades marginadas estudiando el caso específico del destilado de agave cenizo *tuxcacuezo* en la región de Zapotitlán de Vadillo, Jalisco, proporcionar una información más detallada del Tuxca además de documentar su proceso de elaboración. El planteamiento de ciertas incógnitas permite construir un esbozo de la situación. ¿Cuál es el proceso de elaboración del destilado? ¿Puede el Tuxca ser considerado un destilado de alta calidad de acuerdo a sus características? ¿Cuál es la importancia de la estandarización de los procesos? ¿Cuales son las principales formas de comercialización? El cumplimiento de los

objetivos y la resolución de los cuestionamientos planteados para la investigación infieren que una estandarización en los procesos y métodos de elaboración del Tuxca además de los adecuados procesos de obtención y destilación permitirá obtener la calidad buscada en un destilado adecuado para la comercialización y venta, contribuyendo en la búsqueda del posicionamiento, promoción y reconocimiento del Tuxca. La investigación tendrá un enfoque cualitativo y la investigación de campo será la principal fuente de obtención de datos.

El estudio se basa en la aplicación de instrumentos de medición, como lo son entrevistas a los productores con respecto al proceso de elaboración del Tuxca, entrevistas a expertos en el tema de los destilados para valorar las características de este producto así como su posicionamiento en el mercado y entrevistas a la población para conocer su participación en los distintas etapas del proceso de producción del destilado. Es necesario mencionar que son 30 familias con parentescos en diferentes grados las que se incluyen en uno o más procesos de la elaboración del destilado en dicha comunidad.

## RESULTADOS

La producción del Tuxca en esta comunidad se rastreó hasta cuatro generaciones atrás, lo que se traduce en más de 30 familias beneficiadas con la venta del mismo, solo una taberna de la región conserva el proceso de elaboración tal cual se ha llevado a cabo por generaciones. Los productores no poseen una cifra exacta en litros al mes pero se obtienen aproximadamente 400 litros de Tuxca en cada destilación, y se en promedio 4 destilaciones al mes. Para el comercio cada uno de los integrantes de la taberna se lleva a casa un garrafón de veinte litros para poder comercializar. La venta del producto es a granel y solo puede comprarse cerca de la región a menos de que alguno de los productores y vendedores salgan del pueblo en sus días libres para venderlo a otras personas y lugares y que de esta manera se da a conocer el producto. El clima, la temperatura, el suelo y el espacio de plantación son lo más apto para la producción del agave Tuxcacueco un factor diferencial para esta planta es que tiene que estar expuesta todo el tiempo al sol y necesita precipitaciones abundantes durante las etapa de crecimiento; todas estas características se cumplen en esta región.

El maguey Tuxcacueco alcanza su edad reproductiva entre los 3 y 5 años y al año puede tener entre uno y dos hijuelos posterior al brote de hijuelos es necesario cuidar la planta siempre ya que su proceso de maduración es lento y va de los 8 a los 10 años. Cuando la planta alcanza los 9 años ya está lista para que se extraiga y la piña pueda convertirse en destilado. Una vez que la planta da un tallo y florea, muere por lo que la jima de la piña debe de hacerse antes de esto. El proceso de producción del Tuxca inicia con la jima la piña se extrae y se traslada a la taberna que es el lugar donde se elabora el destilado. Las piñas se queman o “tatemán” en un tepetate que es un hoyo profundo cavado en la peña donde se colocan piedras calientes que cubren las piñas, se cubren con lonas y tierra para conservar el calor.

Una vez que las piñas están tatemadas se trocea o “maja” la planta para obtener su mosto. La fermentación se lleva a cabo en agujeros cavados en la peña calafateados con arcilla blanca llamados vasijas; toma de dos a tres semanas para que el mosto esté listo para ser destilado; este proceso se lleva a cabo en un horno de piedra y cazo de cobre; y se requiere una doble destilación para que este producto sea apto para consumo humano. Todos los destilados de buena calidad se evalúan en base a tres características: el aroma, el aperlado y la retroflación. Concordando con esto el Tuxca es cristalino a la vista, con un perlado que oscile entre los 20 a 30 segundos, con aroma primario a maguey cocido y secundarios empíreumáticos como ahumado y madera, sus sabores en boca son piña con toques de agave. La comercialización del destilado

Tuxca en Zapotitlán de Vadillo es informal, el proceso de elaboración es artesanal, al igual que el envasado que se limita solo a recipientes cerrados que eviten la evaporación del alcohol. Las mujeres son las que se dedican al comercio del destilado desde sus casas, son los mismos pobladores los que asesoran a los visitantes o algunos compradores que usan el destilado como materia prima para la elaboración de otras bebidas. Es necesario mencionar que este destilado también es la materia prima de los Ponches de Comala bebida popular elaborada a base de leche o frutas y Tuxca. Los productores de ponche sostienen que el destilado es de muy buena calidad y consideran una ventaja el poder conseguirlo en una comunidad cercana y a un costo tan accesible.

Otra forma que los habitantes de Zapotitlán de Vadillo han encontrado para comercializar el Tuxca es venderla en otros municipios, de casa en casa y recientemente instalarse en el tianguis de productores que se organiza dos veces al mes en la cabecera municipal de Colima. La desventaja de esta comercialización es que debido a lo informal del producto, el poco conocimiento que se tiene del mismo y la falta de normatividades o respaldo de alguna organización especializada en los destilados el precio de comercialización oscila entre los 70 y los 100 pesos por litro dependiendo de la maduración del agave y de lo dulce que sea el destilado.

### **CONCLUSIONES**

A lo largo de la investigación se pudo constatar que el Tuxca es una bebida artesanal ancestral, de la que se conoce poco, que hasta hoy se comercializa de manera informal y directamente de los productores. Todas estas condiciones no son coherentes con las cualidades que posee y que la ubican a la altura de destilados de agave de muy alta calidad. Más aún al ser producido en una comunidad alejada de centros de consumo y urbes su forma de comercialización lo confina a ser un producto de bajo costo y del cual el consumidor muy probablemente tenga una idea errónea, y por lo tanto enfrente una inminente desaparición. Se reconocen como posibles acciones las siguientes: la estandarización de los procesos y productos para la búsqueda de alguna normatividad o distinción aplicable al Tuxca, la elaboración de una campaña de difusión del producto dando a conocer las cualidades del destilado recalando el trabajo de los habitantes de la comunidad de Zapotitlán de Vadillo, diseñar estrategias que faciliten la comercialización como el diseño de imagen, la capacitación a productores, la venta del producto al consumidor final para crear un reconocimiento del Tuxca como ha sucedido con otros destilados locales. Todas estas acciones orientadas al producto impactarán de manera directa e indirecta a la población de Zapotitlán de Vadillo lo que contribuirá a hacer de la producción de una bebida espirituosa, una actividad productiva para esta comunidad alejada.

# ANÁLISIS DEL RÉGIMEN DE PEQUEÑOS CONTRIBUYENTES EN RELACIÓN A SU ELIMINACIÓN EN MÉXICO PARA 2014

Eduardo Aceves Haro, Universidad de Guadalajara  
Patricia Gutiérrez Moreno, Universidad de Guadalajara  
Ramiro Torres Torres, Universidad de Guadalajara

## RESUMEN

*El Régimen de Pequeños Contribuyentes (REPECOS) se eliminará en 2014 y pasarán a formar parte de un nuevo régimen llamado de Incorporación, al igual que los contribuyentes dados de alta como intermedios. Esta iniciativa tiene su fundamento en la premisa de que este régimen contribuye en gran medida a la evasión tan alta existente en México, según estudio realizado por el Tecnológico de Monterrey en 2011. Pero no se toma en cuenta la afectación social y económica que esto conlleva en este tipo de contribuyentes. Desde una perspectiva económica, social y fiscal se analizará el régimen de pequeños contribuyentes con el fin de vislumbrar el escenario en el que se verán inmersos para 2014 y las posibles afectaciones que pueda generar esta reforma fiscal de tipo recaudatoria.*

**PALABRAS CLAVE:** Reforma Fiscal, REPECOS, Afectación Económica, Evasión

## SMALL TAXPAYERS SYSTEM ANALYSIS REGARDING DISPOSAL IN MEXICO FOR 2014

### ABSTRACT

*Small Taxpayers system (REPECOS) disposed of in 2014 and will become part of a new scheme called Incorporation, as taxpayers discharged as intermediates. This initiative is based on the premise that this system greatly contributes to evasion as high existing in Mexico, according to study by the Tecnológico de Monterrey in 2011. But do not take into account social and economic involvement that entails in such taxpayers. From an economic perspective, social and fiscal analyze small taxpayers regime in order to envision the scenario where you will be immersed in 2014 and the possible effects that can generate this kind of revenue-raising tax reform.*

**JEL:** M48, P43, P48,

**KEYWORDS:** Fiscal reform, REPECOS, economic involvement, evasion

### INTRODUCCIÓN

Dado el tipo de economía existente en México y su modelo económico los negocios emergentes y pequeños se han tenido que abrir espacio en una economía que es bastante precaria debido a las condiciones de mercado; así mismo, su incorporación al sistema tributario ha sido una de las medidas ejercidas por las autoridades hacendarias para disminuir la evasión fiscal, aumentar su número de contribuyentes activos, además de incrementar los ingresos tributarios a un bajo costo. En 1998 se creó el Régimen de Pequeños Contribuyentes, como medida de simplificación

administrativa del régimen anterior, el de contribuyentes menores, adicionalmente a la de combatir la evasión generada en sus operaciones y, fue aplicable para cualquier operación empresarial y no solo a las de venta al público en general. Después de un largo proceso de cambios estructurales y de imposición fiscal, con la incorporación en 2004 del pago de Impuesto al Valor Agregado (IVA), en el 2008 la obligación adicional del pago del Impuesto Empresarial a Tasa Única ( IETU), el régimen llega en la actualidad a un estado de confort fiscal pues se puede pagar a través de una cuota fija integrada al Estado o con la aplicación de un 2 por ciento sobre los ingresos disminuidos de cuatro veces el salario mínimo general del área geográfica del contribuyente elevado al mes y se mantiene ahí siempre y cuando no rebase el límite de ingresos de dos millones de pesos. Pero se dice de confort fiscal, porque al realizar operaciones con el público en general y expedir comprobantes simplificados de acuerdo con el Código Fiscal de la Federación (CFF) y su Reglamento, además de calcular su impuesto conforme a una estimativa conjunta de los tres impuestos (ISR, IVA, IETU), el régimen se presta a que los contribuyentes puedan realizar una manipulación fiscal a tal grado que la evasión del pago de impuesto llega a grandes niveles en el país.

### REVISIÓN LITERARIA

Un estudio realizado por el Tecnológico de Monterrey en 2011 titulado “Estudio de evasión fiscal en el Régimen de Pequeños Contribuyentes”, revela que estos contribuyentes han encontrado la forma de evadir el pago de impuestos en una magnitud alarmante bajo los siguientes esquemas:

1. *La subdeclaración de ingresos, es decir, que omiten declarar sus ingresos reales, con el fin de caer en un rango menor de impuesto.*
2. *La atomización de ingresos, concepto utilizado en el estudio del Tec de Monterrey para ejemplificar la división entre otros sujetos la percepción del ingreso.*
3. *No declaración, que quiere decir que dejan de pagar y evaden totalmente la obligación fiscal.*
4. *Los no registrados. Personas sujetas al régimen por sus operaciones, pero que no están dadas de alta.*

Con todo este panorama, el estudio de evasión concluye que el porcentaje de evasión se ubica por encima del 90% desde el año 2002 y llega al máximo de 98% entre 2004 y 2005, considerando sobre todo las variaciones de la recaudación potencial, que son las que explican el comportamiento errático en los porcentajes. A continuación se muestran los resultados en el siguiente cuadro:

Figura 1: Resumen de la Evasión Fiscal de REPECOS Impuesto Total (Incluye IVA E ISR) en Millones de Pesos Corrientes Para Todo el País

Período	Potencial	Recaudado	Evasión	%Evasión sobre Impuesto Potencial	% Evasión sobre el PIB	PIB
2000	22,363	2,302	20,061	89.71%	0%	6,031,868
2001	9,183	1,645	7,538	82.09%	0%	6,367,438
2002	14,088	969	13,119	93.12%	0%	6,859,204
2003	17,717	1,315	16,402	92.58%	0%	7,555,803
2004	77,051	1,065	75,985	98.62%	1%	8,561,305
2005	80,104	998	79,105	98.75%	1%	9,220,649
2006	70,857	1,705	69,151	97.59%	1%	10,344,065
2007	74,303	2,111	72,192	97.16%	1%	11,290,752
2008	71,597	2,538	69,059	96.46%	1%	12,153,436
2009	84,915	2,611	82,304	96.92%	1%	11,844,514
2010	71,537	2,700	68,837	96.23%	1%	13,028,132

Fuente: Fuentes C., Hugo J. (2011) "Estudio de evasión fiscal en el Régimen de Pequeños Contribuyentes".

Estos resultados y algunas otras inconsistencias en el régimen que crean desigualdad entre las mismas Personas Físicas, son las determinantes que sustentan la eliminación de su régimen para 2014, y la de su inclusión al Régimen de Incorporación que en términos generales es con base a flujo de efectivo, cedular, con obligaciones formales como la expedición de comprobantes fiscales y pagos bimestrales sobre la utilidad fiscal. Con la finalidad de no afectar la economía de estos contribuyentes la autoridad ha propuesto que tengan una reducción gradual del impuesto para que a 10 años se incorporen totalmente al régimen general de las personas físicas con actividades empresariales y profesionales. Ésta reducción aplica como se muestra en la siguiente tabla:

Tabla 1: Reducción del Impuesto Sobre la Renta a Pagar en el Régimen de Incorporación

Años	1	2	3	4	5	6	7	8	9	10
Por la presentación de información de ingresos, erogaciones y proveedores	100 %	90%	80%	70%	60%	50%	40%	30%	20%	10%

Fuente: Deloitte (2013), "Reforma fiscal 2014, de la aprobación a la aplicación".

Pero no todo es malo en el régimen y en cualquier negocio que se considere pequeño o mediano, de acuerdo con la clasificación empresarial. Sabemos que nuestro país necesita ser más competitivo y que los negocios generen bienestar tanto económico como social. Los negocios pequeños ayudan a que muchas familias en nuestro país puedan tener el sustento diario para sobrevivir y, en otros de los casos pueden generar fuentes de trabajo a menor escala, pues muchos de ellos no son formales. Pero existe algo importante de considerar y es que la economía en México no llega a la recuperación tan esperada y crea un engranaje que no necesariamente se complementa para generar riqueza o bienestar, si no que al encontrarse en determinado momento generan efectos negativos que retardan la posibilidad de la recuperación económica.

Figura 2: Efectos Negativos de la Economía Mexicana

Fuente: Elaboración propia

Desafortunadamente las autoridades fiscales aplican medidas ortodoxas y heterodoxas para hacer frente a las crisis, perdiendo de vista, según Lomelí y Murayama (2009), el *principio de manejo responsable de la economía, el equilibrio fiscal, pues se le confiere a éstas medidas, la reactivación económica*, situación que está muy lejos de existir, ya que otros factores que se le suman como la baja capacidad recaudatoria de los distintos órdenes de gobierno que, además permite ver deficiencias administrativas por la costosa gestión de cobro de los impuestos, así como una ineficiencia en la forma de programar, ejercer y hacer transparente el gasto público. Si a la actuación del gobierno le agregamos la baja educación cívica básica, en temas de tributación, que posee la población mexicana, el asunto se agrava más pues se percibe una crisis de confianza en sus instituciones que no permiten el aumento en la recaudación, sino todo lo contrario, la evasión aumenta.

## METODOLOGÍA DE LA INVESTIGACIÓN

Con el fin de conocer la opinión de algunos contribuyentes pequeños principalmente de los municipios de Guadalajara, Zapopan, Tlaquepaque y Tonalá de la Zona Metropolitana de Guadalajara, se aplicaron encuestas (treinta por municipio) que en general abordaron los temas sobre el conocimiento de la reforma fiscal, la opinión de su actual régimen y de las acciones futuras que emprenderán para no verse afectados en su economía. La presente investigación sólo mostrará los resultados de la zona de Zapopan, pues a la fecha del envío de este trabajo aún no se contaba con los resultados totales.

## RESULTADOS

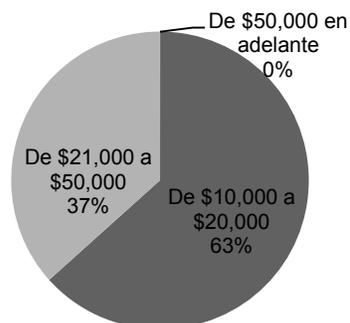

En el análisis de los resultados resaltan cuestiones interesantes e importantes de mencionar. En la figura 3 se puede ver la antigüedad en el mercado de los contribuyentes encuestados que en su mayoría se encuentra entre los 8 y 10 años, mostrando que son negocios maduros empresarialmente hablando. En la figura 4 se puede apreciar que sus ingresos rondan mayormente entre los 10 a los 20 mil pesos, nada malos pues son establecimientos acientados derivado de su antigüedad.

Figura 3: Antigüedad Como REPECO

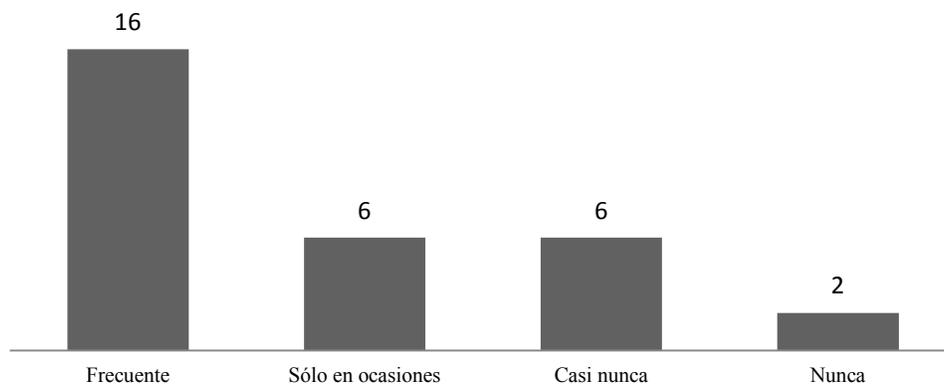

Fuente: Elaboración propia con datos de las encuestas aplicadas.

Figura 4: ¿Cuántos Ingresos Percibe al Mes?

**Figura 4: ¿Cuántos ingresos percibe al mes?**

Fuente: Elaboración propia con datos de las encuestas aplicadas.

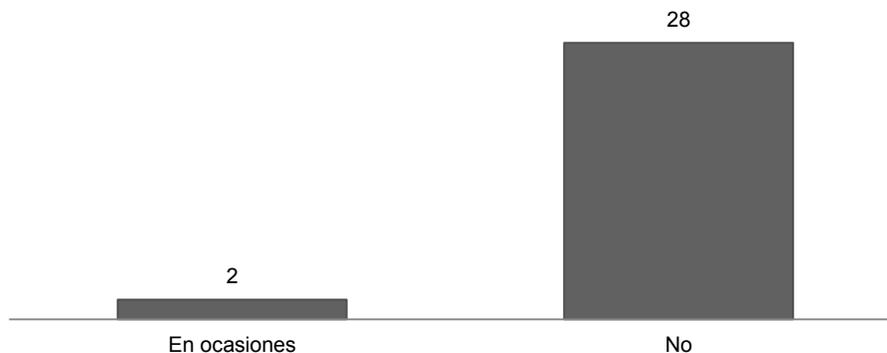

Otros datos importantes son que el 70% eran hombres cabezas de familia, el 60% tiene más de dos dependientes económicos, el 83% mencionó que la actividad que realizan es su única forma de obtener ingresos y el 60% le da trabajo a dos o más empleados, el 50% considera que la forma en que pagan sus impuestos es uno de los beneficios del régimen, el resto no le ve beneficios más que el de tener un ingreso diario que les permita sobrevivir.

**Figura 5: Según su experiencia, considera que los REPECOS evaden sus obligaciones fiscales de manera**

Fuente: Elaboración propia con datos de las encuestas aplicadas.

De los contribuyentes encuestados el 53%, consideró que las obligaciones fiscales las evaden frecuentemente por las facilidades detectadas en el sistema para realizarlo (ver figura 5). No así, cuando se les pregunta sobre su conocimiento acerca de la reforma fiscal se pudo observar que no estaban lo suficientemente informados pues el 63% contestó que no conocía bien la propuesta de reforma tributaria ni los efectos que surtirían en su régimen. Sin embargo, cuestionándolos sobre si el régimen de REPECOS desapareciera y el nuevo régimen fuera más rígido ¿continuarían con su negocio?, el 43% dijo que no continuaría, y de éstos el 63% dijo que lo haría en la informalidad. Finalmente, el 93% de los encuestados consideró que el gobierno no toma en cuenta las necesidades reales de la población pues sólo están preocupados por el poder y el dinero, así como también consideraron que el pueblo no exige lo suficiente como debiera, (ver figura 6).

Figura 6: ¿Considera Usted que el gobierno toma en cuentas las necesidades reales de la población?

Fuente: Elaboración propia con datos de las encuestas aplicadas.

## CONCLUSIONES

Definitivamente un pueblo sin educación a cualquier nivel no podrá avanzar ni económico ni socialmente. La gestión del gobierno requiere un gran esfuerzo para concientizar a la población en los beneficios reales de contribuir pagando sus impuestos, pero será una labor que deberá realizar a la par con el uso eficiente y racional de los recursos con el objetivo de ganar terreno en la confianza perdida en los gobernantes y sus instituciones. Como dicen Lomelí y Murayama (2009), *México necesita una política fiscal basada en reglas de balance estructural, que impidan el dispendio en periodos de auge y los recortes en tiempos de crisis*. Con lo analizado anteriormente, se puede considerar que la resistencia al pago de impuestos no solo responde a la crisis de confianza en la autoridad sino en la injusticia que se percibe en el sistema tributario pues si todos contribuyeran apegados a un esquema de legalidad, es decir que todos contribuyeran de acuerdo a su capacidad tributaria, no habría cabida a la informalidad ni a la evasión.

# LA GESTIÓN DEL CONOCIMIENTO EN LA PEQUEÑA Y MEDIANA EMPRESA MANUFACTURERA DE MORELIA MICH., MEXICO

Gerardo Gabriel Alfaro Calderón, Universidad Michoacana de San Nicolás de Hidalgo.  
Víctor Gerardo Alfaro García, Universidad de Barcelona

## RESUMEN

*El objetivo del presente trabajo es describir la forma en que se desarrolla la Gestión del Conocimiento para las Pequeñas y Medianas Empresas Manufacturas de la Cd. de Morelia Michoacán México, el método de investigación utilizado, está encuadrado en una investigación no experimental, de corte transversal en donde se hace una contrastación empírica del modelo observado, mediante estudios exploratorios, Análisis descriptivos, estudios correlacionales y análisis multivariado, a fin de conocer el comportamiento de las variables del modelo, para con ello hacer las recomendaciones a este tipo de empresas a fin de lograr ventajas competitivas.*

**PALABRAS CLAVE:** Gestión del Conocimiento, Pymes, Capital Estructural, Capital Relacional, Capital Humano

## KNOWLEDGE MANAGEMENT FOR SMALL AND MEDIUM ENTERPRISES MANUFACTURING MORELIA MICH., MEXICO

## ABSTRAC

*The aim of this paper is to describe how it develops Knowledge Management for Small and Medium Enterprises Manufactures of the City of Morelia Michoacán México, the research method used, is framed in non-experimental research, cross-sectional where is an empirical model observed through exploratory studies, descriptive analysis, correlational and multivariate analysis in order to understand the behavior of the variables of the model, to thereby make recommendations to these businesses in order to competitive advantage.*

**JEL:** M14, M21

**KEYWORDS:** Knowledge Management, SMEs, Structural Capital, Relational Capital, Human Capital

## INTRODUCCIÓN

Para el país la existencia de las Pequeñas y Medianas Empresas (PyMES) son un soporte invaluable en su economía ya que más del 95 % de todas las empresas establecidas en México corresponden a esta categoría, ocupan el 64% del personal de la planta productiva, su consumo en conjunto de este tipo de empresas es mayor que el de las consideradas grandes empresas y tienen una participación en el PIB del 40% (fuente Secretaria de Economía), por lo anterior se hace necesario el fortalecimiento de las mismas ya que enfrentan un ambiente globalizado e incierto, retos que solamente aquellas que sean capaces de generar ventajas competitivas logran

mantenerse y crecer en el mercado. Los desafíos que enfrentan los directivos de empresa son cada vez más exigentes, la globalización que se encuentra presente en casi todas las actividades significativas de negocio, ha dado como resultado una mayor intensidad y diversidad de competencia, lo que ha provocado una gran incertidumbre para las empresas y en mayor medida para las Pequeñas y Medianas empresas (PyMES) manufactureras, es por ello que estas empresas deben buscar nuevas alternativas a fin de lograr ventajas competitivas respecto a sus similares.

En las PyMES desconocen que es la gestión del conocimiento, que beneficios pudieran obtener por el uso de la gestión del conocimiento, que elementos le permitirían favorecer la gestión del conocimiento, es por ello la importancia del estudio exhaustivo de la gestión del conocimiento a fin de que este tipo de empresas utilicen esta herramienta para potenciar el mejor desempeño y que esto contribuya para que tenga un mejor posicionamiento en el mercado. Consideramos que las PyMES es uno de los estratos empresariales que puede esperar mejores resultados de la Gestión del conocimiento (GC), al contar con un modelo que le permita aprovechar su conocimiento en la consecución de ventajas competitivas. Objetivo: Identificar y contrastar el modelo de Gestión del Conocimiento para las Pequeñas y Medianas Empresas Manufacturas de la Cd. de Morelia Michoacán México, que le permita a los gestores-propietarios gestionar el conocimiento en la generación y sostenimiento de ventajas competitivas en el mercado global.

## REVISION DE LITERATURA

En la actualidad en un entorno competitivo, globalizado, incierto y con impresionantes desarrollos en diferentes campos de la ciencia y de la tecnología, ha propiciado que los ciclos de vida de los productos sean mas cortos, así como el surgimiento de una nueva economía basada en el conocimiento Druker P. (1993), donde este no solo es un recurso que hoy se suma a los factores tradicionales de la producción (tierra, trabajo y capital), sino que es el más importante para el apalancamiento de la innovación, es decir para la supervivencia y el crecimiento de las organizaciones. En una economía cuya única certidumbre es la incertidumbre, la mejor fuente para obtener ventajas competitivas es el conocimiento. Cuando de la noche a la mañana cambian los mercados, proliferan las tecnologías, se multiplican los competidores, y los productos quedan obsoletos, solo alcanzarán el éxito las empresas que de un modo consistente creen nuevo conocimiento, lo difundan por toda la empresa y lo incorporen rápidamente a las nuevas tecnologías y productos. Estas son actividades que definen a la empresa creadora de conocimiento, donde todo negocio gira sobre la innovación continuada, (I. Nonaka 1999).

### La Economía Basada en el Conocimiento

El conocimiento ha sido siempre fundamental para el desarrollo económico, las empresas tradicionalmente han venido gestionándolo, mas sin embargo, a lo largo del tiempo ha ido cambiando el objeto sobre el que se aplica el conocimiento gestionado. Si en la era agrícola el recurso central fue la tierra y en la era industrial fue la maquinaria (capital físico), en la nueva economía que se está configurando, el conocimiento y su distribución entre las distintas unidades que componen el sistema económico es el elemento clave para la creación de la riqueza. La evolución de la importancia de estos factores a lo largo de las tres etapas en que se ha dividido la historia de la humanidad. Estas tres etapas o eras son cronológicamente la era agraria, la industrial y la del conocimiento.

### La Gestión del Conocimiento

En la literatura existente sobre el presente trabajo y especialmente en este apartado se aborda en base a dos conceptos como administración del conocimiento y gestión del conocimiento, hemos optado por llamarle gestión del conocimiento apoyados en Koontz (1995), el cuál define el término gestión como “el proceso mediante el cual se obtiene, despliega o utiliza una variedad de recursos básicos para apoyar los objetivos de la organización”, en este caso el recurso es el conocimiento. La gestión del conocimiento es un proceso dinámico e interactivo a fin de detectar, Generar, Codificar, transferir, capturar y usar el conocimiento para lograr los objetivos y resolver los problemas que enfrenta la organización así como la generación de ventajas competitivas.

#### Modelos de Gestión del Conocimiento

En el presente apartado se presenta una serie de modelos que proporcionan las pautas a seguir para la aplicación de un sistema de gestión del conocimiento a una organización, así como los agentes implicados y su importancia siendo: Proceso de creación del conocimiento (Nonaka & Takeuchi): La creación del conocimiento para estos autores tiene su origen en dos espirales de contenido epistemológico (el conocimiento se origina de la separación del sujeto y el objeto de percepción) y ontológico (el conocimiento es solo creado por individuos) basadas en un proceso de interacción dinámica y continua entre dos tipos de conocimiento denominados tácito y explícito.

El conocimiento tácito movilizado se amplifica organizacionalmente a través de las cuatro formas de conversión de conocimiento y cristalizado en niveles ontológicos más altos. A esto le llaman espiral de conocimiento, donde la escala de interacción del conocimiento tácito y el explícito se incrementará conforme avanza por los niveles ontológicos. Así, la creación de conocimiento organizacional es un proceso en espiral que inicia en el nivel individual y se mueve hacia adelante pasando por comunidades de interacción cada vez mayores y que cruza los límites o fronteras de las secciones, de los departamentos, de las divisiones y de la organización. Modelo Arthur Andersen: Andersen A.

(1999), sostiene que existe la necesidad de acelerar el flujo de la información que tiene valor, desde los individuos a la organización y de vuelta a los individuos, de modo que ellos puedan usarla para crear valor para los clientes. El modelo KMAT (Knowledge Management Assessment Tool): El KMTA es un instrumento de evaluación y diagnóstico construido sobre la base del Modelo de Administración del Conocimiento Organizacional desarrollado conjuntamente por Arthur Andersen y la American Productivity & Quality Center (APQC) El centro del modelo KMAT es el conocimiento organizacional el cual se identifica, se crea, se organiza, se aplica y se comparte. En el Proceso, se definen los pasos mediante los cuales la organización establece las brechas del conocimiento, lo captura, lo adapta y lo transfiere para agregar valor cognoscitivo al usuario y potenciar los resultados de utilización del conocimiento. Para favorecer el proceso de administrar el conocimiento organizacional, el KMAT propone cuatro elementos facilitadores: Liderazgo, Cultura, Tecnología y Medición.

Modelo de Gestión del Conocimiento de KPMG Consulting (Tejedor & Aguirre 1998): Este modelo pretende hacer una exposición clara y práctica de los factores que condicionan la capacidad de aprendizaje de una organización, así como los resultados esperados del aprendizaje y los procesos de gestión del conocimiento. Una de las características esenciales del modelo es una visión sistémica que permite una interacción de todos los elementos de gestión que afectan directamente a la forma de ser de una organización: cultura, estilo de liderazgo, estrategia, estructura, gestión de las personas y sistemas de información y comunicación en la búsqueda de unos objetivos específicos y comunes, observando que estos no son independientes sino que están conectados entre sí, la siguiente figura ilustra los conceptos básicos expuestos por este modelo.

Modelo de Crecimiento de Conocimiento de Kogut y Zander (1992): Es un modelo dinámico de crecimiento del conocimiento de la empresa. En el que los individuos poseen el conocimiento, centrándose esta teoría que es la propia empresa la encargada de crear y transferir el conocimiento y que las empresas son comunidades sociales en las cuales las acciones individuales están ligadas a un conjunto de principios organizativos. Estos principios protegen las capacidades organizativas de la misma manera que la estructura protege las relaciones entre los individuos y los grupos.

#### Modelo de Gestión del Conocimiento Para las Pymes Manufactureras de la Cd. de Morelia Mich.,

Mex.: Una vez analizado los modelos más representativos de Gestión del conocimiento y de acuerdo al objetivo planteado en la presente investigación construimos el modelo propuesto de Gestión de conocimiento para las PyMES manufactureras a partir de: Conceptualización de la gestión del conocimiento y los modelos más representativos consideramos: Kogut & Zander (1992), el conocimiento que se encuentra en la empresa reside en los recursos humanos coordinados, y las empresas son comunidades sociales en las cuales las acciones individuales están ligadas a un conjunto de principios organizativos. fracasos de la organización Von Krogh, et al. (2001). La fuente principal del conocimiento radica en las personas y la relación entre ellas Tejedor & Aguirre (1998). El proceso de creación del conocimiento expuesto por Nonaka & Takeuchi (1999), como un proceso que se amplifica organizacionalmente el conocimiento es creado por los individuos y los solidifica como parte de la red de conocimiento de la organización. Proceso sistémico que permite la interacción de todos los elementos de gestión que afectan directamente a la forma de ser de una organización: cultura, estilo de liderazgo, estrategia, estructura, gestión de las personas y sistemas de información en la búsqueda de los objetivos específicos y comunes Tejedor & Aguirre (1998), Andersen A. (1999).

El compromiso por parte de la administración al fortalecimiento de la cultura y políticas hacia la gestión del conocimiento. Tejedor & Aguirre (1999). Proceso dinámico en el cuál el conocimiento va de las personas hacia la organización y de vuelta a las personas, Andersen A. (1999). En cuanto a las características de las PyMES La alta motivación del gestor propietario y su grado de influencia en la organización así como la relación proveedores y clientes. Habilidad de cambiar y ajustarse hacia la innovación. Su flexibilidad. En relación a los factores de éxito de este tipo de empresas: Habilidades personales del gestor propietario; La habilidad del gestor propietario hacia la gestión y liderazgo efectivo, habilidad de establecer a una cultura organizativa adecuada, capacidad de obtener y utilizar diversos recursos y de aprovechar las oportunidades. Compromiso por el éxito de la empresa por parte del gestor propietario. Experiencia, Capacidad y conocimiento para el desarrollo de las actividades de su trabajo Saber lo que se quiere. Creer en si mismo (Tenacidad). El liderazgo y la habilidad para motivar a otros. Comunicación y relación efectiva con empleados, proveedores y clientes. Capacidad de resolver problemas técnicos y la capacidad de innovar. Fortaleza de la asociación entre los miembros fundadores de la empresa, basada en el respeto y la confianza recíproca. Facilitar la acumulación de conocimientos que se origina en la interacción de las habilidades y actitudes de los miembros de la organización y de las oportunidades que surgen en el entorno. Habilidades de los empleados de la empresa. Capacidad de resolver problemas técnicos.

*Las habilidades y actitudes que determinan la calidad del producto y la posibilidad de innovar. Experiencia, Capacidad y conocimiento para el desarrollo de las actividades de su trabajo. Compromiso por el éxito de la empresa. Comunicación y*

*relación efectiva con el gestor propietario, empleados-empleados, empleados-clientes y empleados-proveedores.*

Elementos que conforman modelo de gestión de conocimiento para las PyMES manufactureras. El modelo propuesto tiene un enfoque sistémico en donde todos y cada uno de los elementos que lo integran están relacionados y su influencia de estos se explican a continuación: Cultura: A fin de que se desarrolle la Gestión del Conocimiento en la empresa, es necesario que el gestor propietario cree o alinee la cultura hacia el aprendizaje continuo y a gestionar lo aprendido. Una cultura compatible con el conocimiento es una de las condicionantes más importantes que conducen el éxito de un proyecto, ya que como afirman O'Dell & Grayson (1998) las empresas con una cultura abierta, que motiven a compartir el conocimiento tendrán más éxito en su transferencia, Ruggles (1997) menciona que una de las principales barreras para la transferencia del conocimiento es la falta de una cultura abierta y que apoye a sus miembros, por lo que una comunicación intensiva y una cultura que acepte nuevas ideas y esté preparada para soportar la exploración de sus procesos y actividades, favorece la Gestión del conocimiento. Andersen A. (1999), Tejedor & Aguirre (1998), mencionan que la cultura es un elemento facilitador de la Gestión del conocimiento ya que esta favorece el aprendizaje y la innovación incluyendo las acciones que refuerzan la actitud abierta al cambio.

El gestor propietario deberá aprovechar la flexibilidad, la capacidad de innovación que caracterizan a su empresa y con base a sus habilidades de liderazgo, crear una cultura que: movilice los recursos humanos en la identificación de problemas y búsqueda de soluciones creativas, mejore el trabajo individual y grupal, rediseñe los procesos de aprendizaje en concordancia con los valores deseados, como sostén de la visión, trabajar en consenso por medio de la participación, cree un clima de confianza y compromiso por el éxito de la empresa a fin que esta cultura propicie la gestión del conocimiento.

*Estilo de dirección:* Castells (1999) afirma que el proceso de la gestión del conocimiento requiere la plena participación de todos los integrantes de la organización, de tal forma que los individuos compartan lo que saben con los demás, Ruggles (1998) menciona que la falta de apoyo de la alta administración es una barrera significativa para la gestión del conocimiento. Andersen (1999), menciona que para el reforzamiento de capacidades críticas de la empresa es necesario un liderazgo que defina la estrategia de cómo la organización define el objetivo y uso del conocimiento, Tejedor & Aguirre (1998), mencionan que las condiciones organizativas pueden actuar como obstáculos al aprendizaje organizacional, bloqueando las posibilidades de desarrollo personal, de comunicación, de relación con el entorno, de creación, etc. Todo ello al no existir un clima favorable en la organización que le corresponde al gestor propietario propiciar.

El conocimiento radica y es generado por las personas que trabajan en la empresa, el reconocimiento por parte de la alta administración es vital, y deberá utilizar un conjunto de métodos y procedimientos para dirigir la empresa hacia la Gestión del Conocimiento ya que de no hacerlo tal como menciona Davenport & Prusak (2001), El mayor activo de una empresa es su conocimiento, la empresa que no pueda generar conocimiento nuevo posiblemente dejará de existir. Por todo lo anterior consideramos el estilo de dirección como elemento facilitador del proceso de gestión del conocimiento debe de estar en el modelo propuesto. Capital estructural Representa al conocimiento estructurado por la empresa y recogido en sistemas de información y comunicación utilizados para almacenar y transmitir la información, generalmente se conforma por activos de propiedad intelectual como son las marcas registradas, patentes, stocks de conocimientos, derechos de autor, tecnología disponible, procesos de trabajo, sistemas de gestión, etc. Según Stewart (1997) este capital sirve a dos propósitos: reunir stocks de conocimientos para

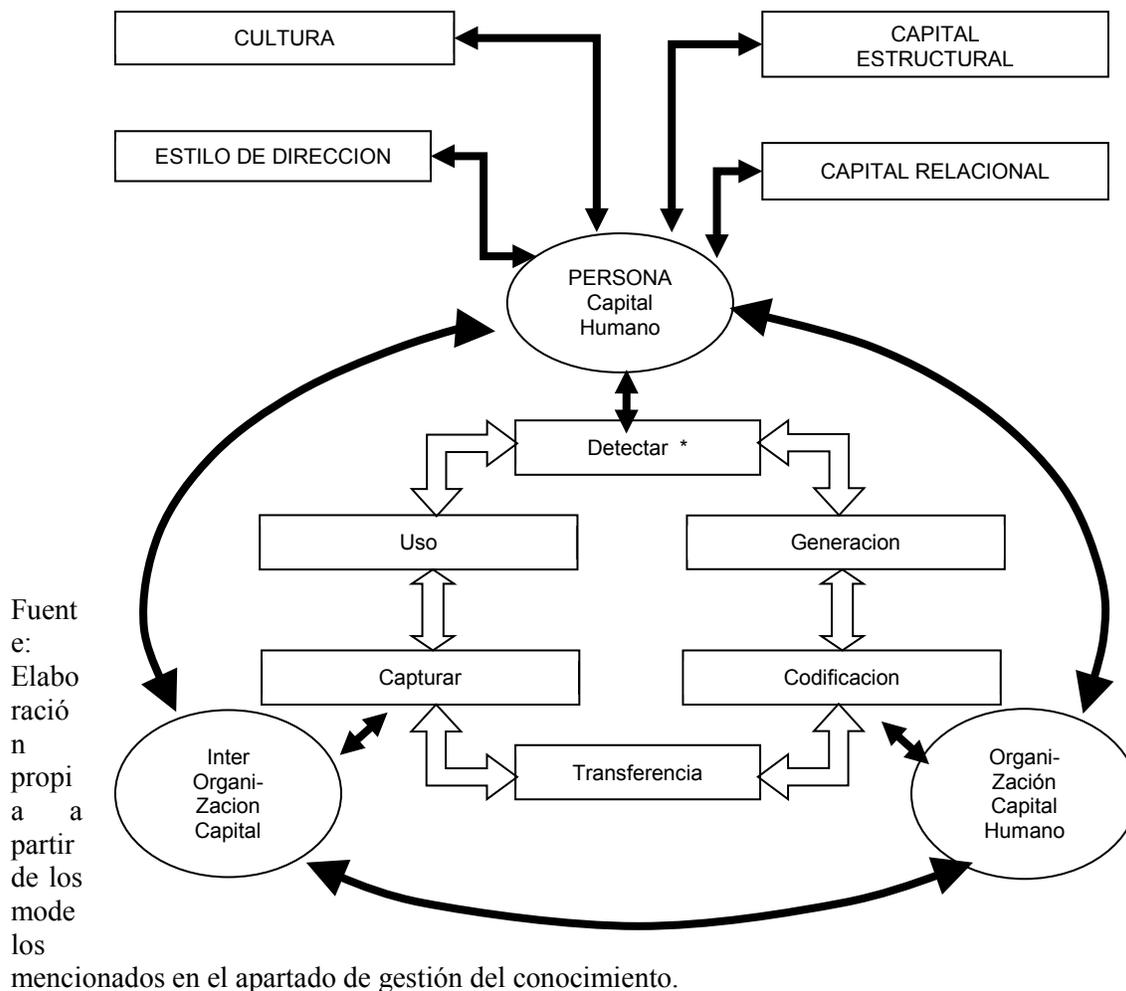

sustentar el trabajo que valoran los clientes y acelerar el flujo de la información dentro de la empresa, todo con la finalidad de ser usado y para crear valor. Por lo anterior este capital deberá estar perfectamente integrado a fin de permitir una óptima gestión del conocimiento.

### Capital Relacional

Este elemento como facilitador de la gestión del conocimiento es de importancia ya que estima y valora la capacidad que tiene una organización para mantener y promover relaciones con el exterior a ella. Haciendo mención a clientes y proveedores factores que se pueden evaluar lealtad de clientes, su satisfacción, la notoriedad de la marca o las alianzas estratégicas entre otros. La retroalimentación que la empresa obtiene del producto por parte del cliente le permitirá incrementar su base de conocimiento en la innovación del mismo producto, es por ello la importancia de la inclusión de este elemento en el modelo de propuesta de Gestión del Conocimiento. Proceso de la gestión del conocimiento. En el marco teórico presentado, obtuvimos una definición propia de la gestión del conocimiento que nos sirve como mecanismo para que los protagonistas del proceso de la gestión del conocimiento sean capaces de generar y utilizar el conocimiento. “Proceso dinámico e interactivo a fin de detectar, generar, codificar, transferir, capturar y usar el conocimiento para lograr los objetivos y resolver los problemas que enfrente la organización así como la generación de ventajas competitivas”.

El proceso es dinámico y continuo, ya que este nunca se detiene; no hay un inicio y un fin, en donde esta implícita la teoría de creación del conocimiento propuesta por Nonaka & Takeuchi (1999), en la PyME dada su estructura simple que poseen y en ocasiones informal en lugar de ser una desventaja se convierte en una ventaja a fin de implementar un proceso de gestión del conocimiento. Al integrar los elementos mencionados tales como Cultura, Estilo de dirección, Capital estructural, Capital relacional, elementos generadores y el proceso de gestión del conocimiento obtenemos el modelo de Gestión de Conocimiento propuesto para las PyMES manufactureras de la Cd. de Morelia, Mich., México. Este modelo tiene un enfoque sistémico, ya que permite la interacción de los elementos que intervienen en el proceso de la gestión del conocimiento, observando que estos no son independientes sino que están conectados entre sí.

Figura. 1. Modelo propuesto de gestión del conocimiento para la PyMES manufactureras de la Cd. de Morelia Michoacán México.

## METODOLOGÍA

A fin de verificar si el modelo de Gestión del Conocimiento propuesto es aplicable a las pequeñas y medianas empresas manufactureras de la cd. de Morelia Michoacán, contestar las preguntas de investigación surgidas del problema identificado, verificar las hipótesis planteadas y lograr cumplimentar los objetivos establecidos, nos trazamos el método de investigación a seguir, cuyo diseño está encuadrado en una investigación no experimental, de corte transversal en donde se hace el análisis de las variables identificadas mediante los estudios exploratorios, Análisis descriptivo, estudio correlacional y el análisis multivariado. Para lo anterior nos dimos a la tarea de identificar las empresas manufactureras de la ciudad de Morelia que cumplieran el requisito de ser PyME, para que una vez con esta población obtener el tamaño de muestra que nos permitiera hacer inferencia hacia la población.

Una vez con las empresas seleccionadas que fueron objeto de estudio se les aplicó un cuestionario previamente elaborado, el cual fue verificado su confiabilidad y validez. Teniendo la información recopilada procedimos a realizar el análisis descriptivo de cada una de las variables para dar respuesta a las preguntas respectivas de la investigación, realizamos el estudio de correlación de las variables identificadas, a fin de conocer la relación existente entre estas variables y la variable gestión del conocimiento objeto de nuestro estudio y realizamos por último un estudio

multivariado a fin de conocer la causalidad de las variables independientes con la variable gestión del conocimiento.

## RESULTADOS

Se cumplió el objetivo general dado que:

- a) Se diseñó una propuesta de un modelo conceptual de Gestión de Conocimiento para las PyMES manufactureras de la Cd. de Morelia Mich., Mex.
- b) Se confirmó empíricamente la propuesta del modelo conceptual de Gestión del Conocimiento para las PyMES manufactureras de la Cd. de Morelia Mich., Mex.
- c) En cuanto a el estudio correlacional del modelo propuesto las variables consideradas explican en un 100% la variabilidad de la Gestión del Conocimiento, así mismo se encontró los coeficientes de regresión que maximizan la Gestión del conocimiento tal como se observa en la siguiente ecuación:  

$$G.C. = -4.66 E-14 + X_1 + X_2 + X_3 + X_4 + X_5 + X_6 + X_7 + X_8 + X_9 \quad (1)$$
 Donde  $X_1$  es cultura,  $X_2$  detección,  $X_3$  generación,  $X_4$  codificación,  $X_5$  transferencia,  $X_6$  captura,  $X_7$  utilización del conocimiento,  $X_8$  capital estructural y  $X_9$  capital relacional.

Respecto a la caracterización de las PyMES manufactureras de la Cd. de Morelia Michoacán., México, el comportamiento de las variables incluidas en el modelo es el siguiente:

- a) Se identificó que la cultura residente en este tipo de empresas es un elemento que facilita y propicia la Gestión del conocimiento, con respecto a la correlación entre estas dos variables se observa que la cultura explica en un 64% la variabilidad de la Gestión del conocimiento.
- b) Del análisis de la afectación del estilo de dirección en el proceso de gestión del conocimiento, podemos decir que el estilo de dirección propicia la generación, transferencia y uso del conocimiento, mientras que ocasionalmente influye en la detección, captura y codificación del conocimiento, al observar que este proceso debe ser un proceso integral podemos decir que en la PyMES manufactureras de la Cd. de Morelia Michoacán, existe pérdida de conocimiento que no es detectado, codificado y capturado en la consecución de ventajas competitivas. En cuanto al estudio correlacional de esta variable encontramos que el estilo de dirección explica en un 97.6 % el proceso de gestión del conocimiento, así mismo se logró encontrar los coeficientes de regresión para la maximización del proceso de gestión en función del estilo e dirección en función del estilo de dirección como se describe a continuación:  

$$Y_i = 1.97 + 1.35X_1 + 1.22X_2 + 0.96X_3 + 1.83X_4 + 0.90X_5 + 1.05X_6 \quad (2)$$
 Donde:  $X_1$  detección,  $X_2$  generación,  $X_3$  codificación,  $X_4$  transferencia,  $X_5$  captura,  $X_6$  utilización del conocimiento.
- c) En el análisis de la variable Capital estructural se observa que en PyMES manufactureras de la Cd. de Morelia Michoacán, se procura fortalecer la inversión de medios de almacenamiento y flujo de información. En relación a la documenta que soporta las actividades de este tipo de empresas, se observa que está en muy poca, lo que conlleva que este conocimiento radique en las personas y que este no sea propiedad de la

- organización, en consecuencia que la ventaja competitiva pueda no ser sostenible con el paso del tiempo.
- d) Se detecta que la relación con el entorno (proveedores, clientes, gobierno, cámaras empresariales etc.), de este tipo de empresas es buena lo que propicia una retroalimentación de sus productos, permitiéndole a este tipo de empresas incrementar el conocimiento hacia la mejora y la obtención de ventajas competitivas.
  - e) El proceso de gestión del conocimiento en este tipo de empresas como proceso integral no se desarrolla en su totalidad, ya que las actividades tales como: generación, transferencia y uso del conocimiento se realizan frecuentemente, caso contrario con la detección, captura y codificación que se desarrollan de manera esporádica aunque existe evidencia de una tendencia a realizar estas actividades frecuentemente. De lo que podemos deducir que el proceso de gestión del conocimiento forma parte de las actividades cotidianas de este tipo de empresas pero de manera parcial, lo anterior se observó al operacionalizar las variables en forma independiente, mas sin embargo al operacionalizar estas en conjunto se observó que la práctica de gestión del conocimiento se realiza ocasionalmente.
  - f) Este tipo de empresas aprovecha el conocimiento residente a fin de solucionar los problemas que enfrenta, esto por la práctica de la generación, transferencia y uso del conocimiento, por consiguiente si bien la gestión del conocimiento se da en forma parcial estas empresas aprovechan el conocimiento gestionado.
  - g) La transferencia del conocimiento en este tipo de empresas se realiza principalmente por medio de la comunicación cara a cara, así como la capacitación entre los mismos compañeros de trabajo (mentoring), estos procesos antes mencionados se ven favorecidos por la misma distribución de espacios físicos de la empresa y la facilidad que otorga el gestor propietario.

## CONCLUSIONES

La utilización de modelos de gestión de conocimiento para las empresas les proporciona una ventaja competitiva, consideramos que la aplicación del modelo propuesto para las PyMES manufactureras de la cd. de Morelia Mich., Mex., de igual manera permitirá la generación de ventajas competitivas para este tipo de empresas. De los elementos facilitadores de la gestión del conocimiento, se observa la necesidad de contar con una cultura organizativa abierta, donde el gestor propietario de este tipo de empresas motive a los miembros de la organización a buscar nuevas formas de hacer las cosas, dé valor a la transmisión del conocimiento, concientizando al personal de que el verdadero poder no es la información sino la sinergia que produce el compartir el conocimiento útil que se posee. Para ello habrá que diseñar sistemas de reconocimiento a la transmisión del conocimiento individual y a la configuración de un conocimiento colectivo. Es necesario una cultura organizativa basada en valores como la confianza, la transparencia, la honestidad, la participación, la responsabilidad y la tolerancia, que fomente el incremento e intercambio de los conocimientos de los empleados, que otorgue fuerza a los compromisos individuales y que dé sentido a las actuaciones colectivas (trabajo en equipo), que cree el contexto necesario para la interacción social necesaria y determinante para que en una organización se produzca la detección, generación, creación, transmisión codificación y utilización del conocimiento.

## RESUMEN

*El problema económico para muchas empresas públicas, encargadas de prestar el servicio de abastecimiento de agua a concentraciones humanas es de alto riesgo. Las debilidades y fortalezas del organismo y las amenazas y oportunidades que el medio ambiente ofrece, requieren de un análisis detallado para la toma de decisiones. Por lo que se refiere, al establecimiento del nivel de crecimiento del Organismo Operador de Agua Potable, Alcantarillado y Saneamiento (OOAPAS) deberá sustentarse de tal manera que disminuya sus riesgos. El proceso de descentralización y desincorporación de este tipo de organismos públicos ha propiciado condiciones totalmente nuevas a las empresas de agua. Este proceso implica llegar paulatinamente a la autonomía de los organismos públicos. En este trabajo se pretende mostrar un análisis financiero de un organismo operador de agua potable que sirva de base para lograr un crecimiento sustentable.*

**PALABRAS CLAVES:** Crecimiento, sustentabilidad y liquidez.

## ECONOMIC OUTLOOK FOR SUSTAINABLE GROWTH IN PUBLIC WATER UTILITIES

### ABSTRACT

The economic problem for many public companies, responsible for providing the water service to human concentrations is high risk. The weaknesses and strengths of the organization and the threats and opportunities that the environment offers, require detailed analysis for decision making. In regards to the establishment of the level of growth of the Utility of Water and Wastewater (OOAPAS) shall be supported so as to reduce their risks. The process of decentralization and divestiture of public bodies such conditions has led to completely new water companies. This process involves gradually reaching autonomy of public agencies. This paper aims to show a financial analysis of a body of water operator as a basis for achieving sustainable growth.

**JEL:** D24, G28, H41, H44

**KEYWORDS:** Growth, sustainability and liquidity

Fundamentos de la Investigación

Para el desarrollo de la investigación se emplea una metodología de tipo descriptiva, es decir, se realiza una caracterización del evento de estudio dentro de un contexto particular. Por medio de un ejemplo se pretende realizar el análisis de toma de decisiones, para la cual se considera un caso general de un Organismo Operador de Agua Potable, Alcantarillado y Saneamiento (OOAPAS). Para ello la sustentabilidad se convierte o habrá de convertirse en un factor de sobrevivencia, caracterizado por la capacidad que el organismo tenga de aprender y adaptarse (NAFIN-IMEF, 1994). Este organismo presenta recaudación con crecimiento “lento”, expansión en términos de cobertura “limitada” e indicadores de gestión financiera con fuerte “deterioro” (Moreno, 1990). Los coeficientes de liquidez apuntan a una caída sostenida en los últimos años, situación contraria a los índices de endeudamiento que crecen de manera sostenida. Todo lo anterior se manifiesta en la falta de liquidez del organismo. El adecuarse a los cambios económicos, tecnológicos, financieros, administrativos y políticos de las empresas y de la sociedad en general, estaremos en condiciones de satisfacer sus necesidades de información, a través de un adecuado registro y valuación de las transacciones realizadas, correctamente presentadas y expresadas por medio de estados financieros que contengan tanto información financiera y económica como de otro tipo, que sea el sustento para la toma de decisiones acertadas para lograr los objetivos (Romero, 2004).

### El Problema de Liquidez

Para hacer frente a sus necesidades cotidianas y de inversión el OOAPAS deberá disponer de dinero, lo cual se conoce como liquidez. La falta de liquidez significa para la empresa la pérdida de su independencia en la toma de decisiones. Una manera simple de expresar la liquidez es por medio del flujo de caja, éste tiene como principal fuente el pago que realizan los usuarios por el servicio. La entrada de recursos puede verse incrementada por ampliaciones en el servicio, en la recaudación, nuevos créditos, ventas de activos que no sean de utilidad para la empresa y subsidios. Las salidas o egresos más significativos en este tipo de empresas lo conforman los pagos a proveedores a través de cuentas por pagar, los salarios y los gastos por explotación (producción). Existen otros factores que no necesariamente se refieren a la explotación del recurso, como lo son el pago de impuestos, los intereses y las inversiones en activos. Es importante identificar en primera instancia cual es la situación que guarda el OOAPAS con respecto al flujo de caja. Para ello se recurre al indicador de gestión financiera de liquidez, que relaciona el superávit de los activos a corto plazo sobre los pasivos a corto plazo con el flujo de caja bruto de explotación.

$$\frac{\text{Activo circulante} - \text{Pasivo circulante}}{\text{Ventas}} = 100 \%$$

A la relación anterior, expresada en porcentajes, se la conoce como indicador de capital de trabajo sobre ventas. Los indicadores de liquidez pudiesen ser engañosos, sobre todo cuando se manejan de manera aislada o puntual. Consideremos, por ejemplo, el caso de los organismos donde el crédito del proveedor en muchas ocasiones es mayor a los que el OOAPAS tiene por el pago de los consumidores. En este caso, el indicador no refleja plenamente la verdadera posición en que se encuentra la empresa. Tres de las soluciones más comunes a un problema semejante al que se plantea, cuando los resultados buscados no se centran en el crecimiento y la oportunidad que cada alternativa ofrece al crecimiento sustentable son las siguientes. Primera solución.- Reducir créditos en el corto plazo. El organismo no deberá permitir que haya más créditos a corto plazo. Por medio del manejo eficiente de recursos, se deberá reducir el número de créditos. Segundo solución.- Reducir inversiones en el activo circulante. Es recomendable que esta reducción sea

absoluta, o en un porcentaje menor que los ingresos por el pago del servicio. Tercera solución.- Incorporar obligaciones a largo plazo. La forma de incorporar pasivo a largo plazo es por medio de créditos del mismo organismo o bien por el incremento de capital.

La opción de reducir los activos circulantes con respecto a los ingresos por el pago del servicio, requiere de ejercer presiones sobre el consumidor, caso que no siempre es posible aplicar cuando la fuente de consumo es comunitaria, o los niveles de pobreza de los consumidores son de subsistencia y no es posible exigirles un sacrificio extra o, en su caso, cuando predomina la cultura del no pago.

Respecto a la posibilidad de incrementar los fondos a largo plazo, debe tomarse en cuenta que las condiciones no permitirán el pago de créditos si los indicadores de gestión de liquidez muestran una baja constante. Los planteamientos tradicionales aquí presentados señalan si acaso soluciones a corto plazo, con un enorme riesgo para la sobrevivencia financiera del organismo. A continuación se presenta una propuesta para que el OOAPAS busque su crecimiento sustentable desde la perspectiva financiera.

### crecimiento

Cuando se hace referencia a la sustentabilidad de un OOAPAS, se habla antes que nada de su equilibrio financiero. Desde esta perspectiva, el crecimiento deberá asociarse de manera armónica a los activos y, por supuesto, a los beneficios. Una de las primeras controversias en las empresas encargadas de prestar un servicio público, y en especial las empresas del agua, es el crecimiento y el desarrollo. No es posible hablar de economías de escala cuando una buena parte de la población no dispone del servicio o cuando la cobertura se ve desfasada por el crecimiento de la mancha urbana. Por lo anterior, es necesario que los OOAPAS amplíen coberturas, modernicen equipo e instalaciones, desarrollen y apliquen programas para hacer más eficientes los procesos, atiendan de manera sistemática las necesidades de operación y mantenimiento, dinamicen su estructura administrativa e incrementen la recaudación mejorando el servicio. Por supuesto que todo esto requiere de recursos financieros que los OOAPAS generalmente no disponen. Desde una perspectiva financiera, el Organismo Operador deberá buscar de inmediato la sustentabilidad en el equilibrio concordante con los activos y con los beneficios.

El crecimiento del organismo, habrá de manifestarse en un incremento tanto en el activo circulante como en el pasivo circulante. Para definir los activos se recurre a los estados financieros, que son las herramientas de análisis financiero de cualquier empresa. De una manera simple se puede decir que los usos de los recursos son los activos y las fuentes los pasivos. De manera generalizada, se presenta en la Tabla 1 un ejemplo típico del balance de un OOAPAS

Tabla 1: Balance General

Activo Circulante	Caja
	Bancos (existencias)
	Deudores por consumo (Cuentas por cobrar)
	Almacén
Activo fijo	Terrenos
	Edificios
	Equipo de transporte
	Equipo de cómputo
	Depto. de sistema
	Planta de tratamiento

Pasivo circulante	Depto. del equipo de detección de Fugas Sistema de alcantarillado Depto. del sistema de distribución
Créditos a largo plazo	Acreedores diversos Impuestos por pagar IVA por pagar
Recursos Propios	Capital

El balance General se compone de cinco rubros fundamentales para los OOAPAS: Activo circulante, Activo fijo, Pasivo circulante, Créditos a largo plazo y Recursos propios. Fuente: Elaboración propia.

En un sentido estricto, a lo que toda empresa privada aspira, y también las empresas publicas que obtienen recursos por sus actividades productivas, es a lograr beneficios por el mayor tiempo posible. Para su identificación, se recurre al Estado de Pérdidas y Ganancias, que es el identificador de ingresos y gastos totales en un periodo. De igual manera, es el enlace con el balance de apertura y cierre de un periodo contable. En la Tabla 2 se presenta un ejemplo donde se aprecian los elementos más significativos de un estado de pérdidas y ganancias para un OOAPAS.

Tabla 2: Estado de Pérdidas y Ganancias o de Resultados

<b>+ Ingresos</b>	
	+Ingresos operativos
	Ingresos por servicios de agua potable y alcantarillado Contratos Instalación de aparatos medidores Multas Reconexiones
	+Otros ingresos
	Rendimientos sobre inversiones Aportación para obras
<b>- Egresos</b>	Servicios de personal Abastecimiento y suministros Conservación y mantenimiento Energía Eléctrica
Utilidades	-Intereses -Impuestos
Utilidades netas	

El estado de Resultados o de Pérdidas y Ganancias identifica los Ingresos, Egresos y la Utilidad. Fuente: Elaboración propia.

Del estado de pérdidas y ganancias se pueden identificar cuatro apartados que relacionan la forma en que se distribuyen los beneficios. Un concepto alternativo al planeamiento clásico para la determinación de los beneficios, se presenta en la Tabla 3:

Tabla 3: Determinación de los Beneficios Retenidos

<b>Ingresos totales</b>
- Gastos totales

	<ul style="list-style-type: none"> <li>- Intereses</li> <li>- Impuestos</li> <li>- Dividendos</li> </ul>
= Beneficios Retenidos	

Los beneficios retenidos son los ingresos después de pagar dividendos. Fuente: Elaboración propia.

### Sustentabilidad

Los elementos críticos del principio de equilibrio, como se ha venido manejando, son las ventas, el activo circulante y los beneficios retenidos (Lesur, 2010). Entre ellos existen fuertes interrelaciones que definen la problemática. Para lo anterior, es necesario recurrir a los siguientes indicadores de gestión:

$$\left( \frac{\text{Beneficios retenidos}}{\text{Ventas o ingresos operativos}} \right) = \text{Beneficios retenidos respecto a los ingresos por servicios}$$

$$\left( \frac{\text{Activo Circulante}}{\text{Ventas}} \right) = \text{Asociación del activo circulante con las ventas}$$

La relación de estos dos indicadores genera otro, llamado indicador de crecimiento en el activo circulante, mismo que bajo la preceptiva de crecimiento puede financiarse directamente con la retención de beneficios.

$$\frac{\left( \frac{\text{Beneficios retenidos}}{\text{Ventas}} \right)}{\left( \frac{\text{Activo Circulante}}{\text{Ventas}} \right)} (100) = \text{Indicador de Crecimiento anual}$$

Este índice refleja el porcentaje de crecimiento del organismo que se ha financiado con recursos propios.

Otro indicador de importancia para establecer los criterios de crecimiento para el OOAPAS, es el crecimiento histórico anual de recaudación, conocido como crecimiento histórico de las ventas.

$$\left( \frac{\text{Ventas (al final)}}{\text{Ventas (al inicio)}} \right)^{\left( \frac{1}{n} \right)} = \text{factor historico del crecimiento anual de las ventas durante el periodo (n)}$$

Con los índices antes determinados es posible asociar los tres elementos críticos: las ventas, el activo circulante y los beneficios retenidos, con el fin de determinar la posición de flujo de caja (P). El indicador queda definido de esta manera:

$$\frac{\left(\frac{\text{Beneficios retenidos}}{\text{Ventas}}\right)}{(\text{Crecimiento hist3rico anual de las ventas}) \left(\frac{\text{Activo Circulante}}{\text{Ventas}}\right)} = P$$

Se tienen establecidas tres situaciones para expresar la condici3n de la empresa en funci3n del flujo de caja misma.

Flujo de caja positivo > 1, la disponibilidad de recursos es superior a los compromisos y necesidades.

Flujo de caja neutro = 1, Se generan recursos s3lo para pagar la Operaci3n.

Flujo de caja negativo > 1, no se generan los suficientes recursos que financien las operaciones del organismo. Del problema presentado para los OOAPAS, se plantean diversas estrategias de soluci3n que puede basarse en la modificaci3n particular o conjunta de las tres situaciones. Claro est3 que cada organismo presenta sus propias caracteristicas y desarrollo hist3rico, y por supuesto que cada uno afronta una problem3tica particular. Para generalizar el 3ndice, se parte de la condici3n de que el flujo de caja es neutro (P=1), esto es, que en el OOAPAS se est3n generando los recursos necesarios para pagar la operaci3n:

$$\frac{\left(\frac{\text{Beneficios retenidos}}{\text{Ventas}}\right)}{(\text{Crecimiento anual}) \left(\frac{\text{Activo Circulante}}{\text{Ventas}}\right)} = 1$$

Despejando el crecimiento, se tiene que:

$$\frac{\left(\frac{\text{Beneficios retenidos}}{\text{Ventas}}\right)}{\left(\frac{\text{Activo Circulante}}{\text{Ventas}}\right)} = \text{Crecimiento anual}$$

Como se dijo antes, el problema estudiado presentaba caracteristicas propias, y en esa direcci3n se hizo el planteamiento. Ahora se pretende generalizar, y para ello se hace necesario hacer un par de consideraciones: Primero, permitir un financiamiento equilibrado, sujetando cr3ditos a capital e Incluir todos los activos que se ven afectados por el crecimiento.

El crecimiento afecta de manera directa no solo a los activos a corto plazo, sino a los de un periodo mayor. Se pretende as3 establecer un 3ndice que relacione el endeudamiento permisible con los beneficios retenidos.

$$\frac{\left(\frac{\text{Beneficios retenidos}}{\text{Ventas}}\right)}{\left(\frac{\text{Capital}}{\text{Ventas}}\right)} = \text{Crecimiento anual}$$

Lo anterior podr3 responder una pregunta fundamental con respecto a la cantidad permisible de endeudamiento, considerando el crecimiento de la recaudaci3n y ajust3ndose al crecimiento que presentan los activos fijos como circulantes. En este caso, se hace la consideraci3n de que para el financiamiento del crecimiento no es v3lido recurrir a fondos superiores al capital. Para ilustrar

esto, se presenta un ejercicio basado en los datos reales de los estados financieros de un OOAPAS.

Por razones obvias, se presenta tan solo la información requerida. El balance resumido del organismo se encuentra en la Tabla 4:

Tabla 4: Balance General Practicado al 31 de Diciembre de 2012 de un OOAPAS

AÑO 2012			
ACTIVO		PASIVO	
Activo circulante	\$ 21'248,559.68	Pasivo circulante	\$ 3'714,369.34
Activo fijo	155'367,264.13	Créditos a largo plazo	4'732,972.68
Total activo	\$ 176'615,823.81	Recursos propios (capital)	168'168,481.79
		Total pasivo mas capital	\$ 176'615,823.81

*El Balance General muestra los cinco rubros fundamentales para los OOAPAS: Activo circulante, Activo fijo, Pasivo circulante, Créditos a largo plazo y Recursos propios. Fuente: Elaboración propia.*

En cuanto al Estado de Pérdidas y Ganancias se presenta el arreglo que establece la determinación de beneficios retenidos, en la Tabla 5:

Tabla 5: Estado de Resultados del 1° de Enero al 31 de Diciembre de 2012 de un OOAPAS

<b>Ingresos totales</b>	<b>39'137,992.07</b>
-Gastos totales	34'977,623.51
- Intereses	861,035.82
-Impuestos	1'580,940.05
-Dividendos	915,281.08
Beneficios retenidos	803,111.61

*Concepto alternativo a la determinación clásica, para determinar los beneficios retenidos. Fuente: Elaboración propia.*

Para la determinación del crecimiento, se recurre a la información histórica de las ventas. La información disponible data de 2008 y se presenta de la Tabla 6:

Tabla 6: Comportamiento Histórico de las Ventas

Año	Ventas
2008	30'260,187.16
2009	31'621,895.60
2010	32'791,905.72
2011	36'005,512.48
2012	39'137,992.07

*Crecimiento de las ventas de los últimos cinco años de un OOAPAS. Fuente: Elaboración propia.*

El crecimiento del organismo se determina recurriendo a la información del crecimiento histórico de las ventas, y con la aplicación de la siguiente fórmula:

$$\left( \frac{\text{Ventas (al final)}}{\text{Ventas (al inicio)}} \right)^{\left(\frac{1}{n}\right)} = \left( \frac{39'137,992.07}{30'260,187.16} \right)^{\left(\frac{1}{4}\right)} = (1.293)^{\left(\frac{1}{4}\right)} = 1.06634 = 6.634\%$$

Lo anterior significa que el OOAPAS tiene un crecimiento anual del 6.634% en ventas. El resto de los indicadores de gestión relacionados a las ventas se pueden ver a continuación:

$$\left(\frac{\text{Beneficios retenidos}}{\text{Ventas}}\right) = \frac{803,111.61}{39'137,992.07} = 0.0205$$

$$\left(\frac{\text{Activo Circulante}}{\text{Ventas}}\right) = \frac{21'248,559.68}{39'137,992.07} = 0.5429$$

Los beneficios retenidos con relación a las ventas significa que por cada peso de ventas (ingresos por pago del servicio) se generan 0.0205 pesos de beneficios retenidos, que van a parar al pasivo del balance.

Cada peso extra de ventas requiere de 0.5429 pesos, por lo que se requieren 0.4571 pesos de ventas de este año para financiar un peso de ventas extras el próximo año. Al relacionar ambos factores se tiene que:

$$\frac{\left(\frac{\text{Beneficios retenidos}}{\text{Ventas}}\right)}{\left(\frac{\text{Activo Circulante}}{\text{Ventas}}\right)} (100) = \frac{0.0205}{0.5425} (100) = 3.77\%$$

El indicador de crecimiento en el activo circulante que puede financiarse directamente con la relación de beneficios, señala que el 3.77 % puede hacerse con recursos propios. Como se pudo apreciar en el índice de crecimiento anual, de un 6.634%, se desprende que un 2.864% del crecimiento se ha financiado con créditos externos. Ahora se aplica la ecuación de crecimiento:

$$\frac{\left(\frac{\text{Beneficios retenidos}}{\text{Ventas}}\right)}{(\text{Crecimiento histórico anual de las ventas}) \left(\frac{\text{Activo Circulante}}{\text{Ventas}}\right)} = P$$

Al sustituir las tres relaciones críticas antes vistas en la ecuación del crecimiento equilibrado, se tiene que:

$$P = \frac{0.0205}{(0.06634)(0.5429)} = 0.5692$$

Debido a que el flujo de caja es negativo ( $P < 1$ ), significa que no se están generando los suficientes recursos que financien las operaciones del organismo. El valor de 0.5692 es la parte del crecimiento que se está financiando por la retención de beneficios.

## CONCLUSIONES

Para dar respuesta a la creciente demanda de los servicios de agua potable y alcantarillado por parte de las concentraciones urbanas, se requiere de cuantiosas inversiones económicas en los

Organismos Operadores de Agua Potable. Para el logro de la sustentabilidad que permita la ampliación de la cobertura, la mejora y eficiencia del servicio de agua potable y alcantarillado, así como la profesionalización del personal técnico y administrativo encargado de la operación y mantenimiento, se requiere como condición inicial que el Organismo Operador de Agua Potable mantenga un sistema financiero sano y estable, que garantice por sí mismo su crecimiento y desarrollo. Sin duda, muchos son los cambios y condicionantes requeridos en el orden técnico, administrativo y legal que deberán realizarse dentro de los OOAPAS para afrontar este formidable reto.

# LA IMPORTANCIA DE LA EDUCACIÓN EN EL PROGRESO SOCIAL

Juan Manuel Chávez Escobedo, Universidad Autónoma de Nuevo León  
Juan Guadalupe Martínez Macías, Universidad Autónoma de Nuevo León  
Jesús Osorio Calderón, Universidad Autónoma de Nuevo León

## RESUMEN

*Las competencias educativas que se trabajan en la educación contemporánea incluyen además de fuertes contenidos temáticos, aspectos de tecnología que día a día están presentes en la sociedad en general y que en el ámbito educativo sirven para preparar a los futuros profesionistas para el desarrollo social en el mundo contemporáneo. La Educación es un importante medio para el progreso social, hablar de la educación en todos los países debe ser de interés público, ya que es un patrimonio individual y colectivo de la humanidad, debido a ella un pueblo puede progresar en su colectividad y proporcionar bienestar a sus habitantes. En nuestros tiempos enfrentamos crisis financieras, problemas de seguridad pública, pero sobre todo tenemos una crisis educativa, los pueblos deben entenderse mejor con mayor educación, con adecuada planeación social que involucra precisamente el campo educativo podemos dar pasos firmes hacia un mejor país y hacia una mejor convivencia en nuestra aldea global.*

**PALABRAS CLAVE:** Competencias, Educación, Evaluación, Tecnología

## THE IMPORTANCE OF EDUCATION IN SOCIAL PROGRESS

### ABSTRACT

*The Educational skills that work in contemporary education also include strong thematic content, aspects of everyday technology that are present in society in general and to the field of education includes the development of this aspect for the contemporary world. Education is an important means of social progress, talk about education in all countries should be in the public interest, as it is an individual and collective heritage of mankind, because it can progress a people in their community and provide welfare its inhabitants. In our times we face financial crises, public safety issues, but mostly we have an education crisis, people must be better understood with more education, with adequate social planning that involves precisely the educational field can take firm steps towards a better country and made a better living in our global village.*

**JEL:** I2, I20, I21, N3, N36

**KEYWORDS:** Competencies, Education, Evaluation, Technology

### INTRODUCCIÓN

El Propósito de este trabajo es compartir con colegas profesores y estudiantes una experiencia de investigación educativa que coadyuve al análisis reflexivo de aspectos educativos contemporáneos y despertar en los estudiantes que lo lean el interés por la temática tratada. El Progreso Social de un país va de la mano con su sistema educativo, con sus maestros, estudiantes

y comunidad escolar en general, los padres de familia y los medios de comunicación son también pilares importantes de dichos procesos.

La percepción de la sociedad sobre la educación es en relación del progreso y de la mejoría de una comunidad, esto debe ser una política de estado para cualquier nación que aspire a ser mejor.

## **REVISIÓN DE LITERATURA**

La Educación tiene una gran relevancia en los humanos, ya que adquirimos con el paso del tiempo conocimientos, pero estos sólo se impregnan en nosotros si tienen una relevancia, es decir si para cada uno de nosotros son significativos y útiles en nuestra vida cotidiana, así mismo la enseñanza de los docentes debe ser valiosa, significativa para los tiempos actuales, pertinentes para que sea eficiente y atractiva para los estudiantes, está inmersa en una política de bienestar y es un brazo ejecutor de el plan nacional que debe preocuparse por la ciudadanía y su bienestar colectivo.

El foro de Dakar de hace diez años mencionaba que un país sin educación es el que enfrenta retos mas fuertes, ya que no tiene un rumbo educativo cierto, y sus recursos humanos no son competitivos en la aldea global, esto trae consigo pobreza, explotación, problemas de salud pública, desesperanza, suicidios a la alza y problemas de paz social entre otras situaciones que pueden disminuir considerablemente con educación de calidad al pueblo.

La cobertura es un problema real para países en vías de desarrollo como el nuestro, ya que aunque existen escuelas con infraestructura de buen nivel con computadoras, proyectores, Internet, clima, pizarrón, entre otros, existen también lugares en zonas rurales adaptadas para ser la escuela, donde la carencia de servicios primarios es evidente, las condiciones de iluminación no son óptimas y que por el difícil acceso se enfrenta también el problema de que maestros de la ciudad no están dispuestos a ir a estos lugares, y los maestros son entonces escasos para las zonas rurales, ahora bien esto se convierte en un círculo des-educativo, ya que los pobladores de estas zonas al no tener educación, dependen del exterior, llámese gobierno a través de los programas de desarrollo social, de la secretaría de educación que les envíe maestros, ya que en el pueblo no hay quien sea maestro que ejerza en dicho lugar su profesión, y cuando llega a haber un maestro del pueblo, pide su cambio para mejorar su nivel de vida, ya que no comparte muchas ideas de los lugareños, debido en ocasiones a la gran disparidad en educación, ahora bien habría que hablar de los riesgos que corren los docentes ciudadanos al ir a las comunidades rurales, tales como acoso sexual sobre todo si quien es el maestro es de sexo femenino, infecciones estomacales al cambiar de hábitos alimenticios, diarreas, entre otros, problemas de espalda por las condiciones inapropiadas de las camas, soportar el calor o el frío sin las comodidades de la infraestructura ciudadana.

La cobertura debe ampliarse, esto es vital para el progreso social, una forma excelente de trabajar a distancia son los programas en línea, a distancia o bien los combinados llamados semi-presenciales, si el gobierno invierte un poco en foto celdas para alimentar las computadoras y con Internet satelital, se puede hacer mucho para el progreso educativo y social, de hecho se han realizado esfuerzos con televisión satelital, pero debe darse ya el siguiente paso, el Internet, se puede hacer un proyecto educativo de cobertura social desde niveles básicos hasta posgrados.

## **METODOLOGÍA**

Para realizar este proyecto de investigación se utilizará el método de grupo focal y encuestas a maestros de distintos niveles educativos, desde el preescolar hasta profesional que prestan sus servicios en escuelas de nuevo león, además de experiencias propias comentadas. Ejercicio reflexivo, analítico y hermenéutico que el espíritu humano a través de la palabra puede hacer gala para su expresión, así mismo se pretende sembrar la inquietud en el lector para su posterior profundización.

## RESULTADOS, TEMATICA

La recolección de encuestas se realizó en 2 grupos de Maestría en educación donde confluyen alumnos que tienen en común la carrera de la docencia, son educadores que participan en escuelas públicas y privadas, desde niveles preescolares hasta profesional.

### Encuesta Tipo

- 1-¿Cree usted que a mayor educación habrá bienestar social?  
 Si-----No-----No Existe relación entre ambas
- 2-¿En su experiencia personal ha encontrado bienestar con educación?  
 Sí-----No-----No hay relación entre ambas
- 3-¿Considera importante la educación para el progreso del país?  
 Si-----No----- Es indiferente
- 4-¿México debe preocuparse por un buen sistema educativo?  
 Sí-----No-----En la actualidad está bien el sistema
- 5- ¿La cobertura educativa es suficiente?  
 Sí-----No-----Debe incrementarse

Por su participación; Gracias. Esta es la encuesta que se aplicó, por razones de tiempo y muestreo se hizo con 2 grupos en forma escrita se presentó la encuesta y así mismo se recolecto. El grupo Focal se realizó con 2 grupos de maestría con maestros que laboran en el estado de nuevo león. Descripción de sesión: Se acomodaron por equipo los maestros distribuidos en mesas para que pudieran trabajar en el tema con las siguientes premisas: Tiempo: 2 horas Participantes por grupo: 25 (total 2 grupos=50 personas) Tema: La importancia de la educación en el progreso social. Con este tema se dejó en libertad a los participantes a que discutieran entre sí y obtuvieran conclusiones sobre este tema. En el salón de clase se cuenta con clima para que la estancia sea cómoda y puedan concentrarse en su trabajo. Procesamiento de datos Primarios y Secundarios, Cualitativos y Cuantitativos. Número de encuestas: 50 A la pregunta: ¿Cree usted que a mayor educación habrá bienestar social? 45 encuestados respondieron que sí y 5 respondieron que no existe relación entre ambos. A la pregunta: ¿En su experiencia personal ha encontrado bienestar con educación? 45 respondieron que sí y 5 que no existe relación entre ambas. A la pregunta: - ¿Considera importante la educación para el progreso del país? 50 respondieron sí. A la pregunta: ¿México debe preocuparse por un buen sistema educativo? 50 respondieron que sí. A la pregunta: ¿La cobertura educativa es suficiente? 10 contestaron que sí y 40 contestaron con No.

*Grupo focal:* En este se recogieron inquietudes de los docentes sobre la importancia y pertinencia de la educación para el progreso social. Los grupos llegaron a las siguientes conclusiones: La educación por sí misma es un paso adelante, pero debe ser integral y acompañada de valores

fundamentales como la disciplina, ética y autodeterminación de los actores del desarrollo para darse cuenta de su potencial y de echar las redes para pescar conocimiento y hacerse de él, lograr usar dicho conocimiento en la vida cotidiana para elevar su condición social y mejora el estilo de vida propio, el de sus familias y por ende de las comunidades que conforman la sociedad.

Se comentará adicionalmente un caso de experiencia tutorial. Luis y José son hermanos entre sí, hasta nivel de secundaria cuentan con los mismos antecedentes académicos, estudiaron en la misma escuela, muchos de los maestros que tuvieron les impartieron clase a los dos, lo interesante es que en la preparatoria uno de ellos reprobó y no quiso seguir estudiando, se puso a trabajar y empezó a ganar dinero, mientras que el otro siguió en la preparatoria, terminó y estudio una licenciatura, al término de sus estudios comenzó a trabajar ejerciendo su profesión, y ahora el que estudio tiene mejor nivel de vida, está contento con su trabajo, labora de lunes a viernes, mientras que su hermano trabaja arduamente y se arrepiente de no haber seguido estudiando, su nivel de satisfacción laboral no es muy bueno, este caso podrá ser aislado, sin embargo existen muchos casos similares a este, es entonces que podemos analizar y pensar que si hubiese estudiado este familiar, tal vez estaría en un trabajo que si le permitiera satisfacer su vida.

## CONCLUSIONES

Al analizar los resultados de esta investigación que se suma a un trabajo arduo con más instrumentos se observa en esta fotografía investigativa la importancia de la educación para el bienestar social, y que también es necesario desarrollar competencias tecnológicas en las personas, ya que la tecnología educativa sirve como medio para para impulsar la educación y ampliar la cobertura educativa en el país y en las provincias. Como se visualiza en la información obtenida existe una clara relación entre educación y desarrollo social, esto debe estar de relieve en la sociedad y en el gobierno para darle importancia y ejecutar planes de acción que lleguen a la sociedad para su educación y desarrollo. Desde que en los inicios de los años sesenta se acuñara el término «capital humano» como la capacidad productiva del individuo incrementada por factores como la educación, la teoría económica ha buscado evidencia empírica sobre la relación entre educación y crecimiento económico. Como ejemplo de la importancia de la educación está el modelo japonés, caracterizado por el impulso a la educación como elemento clave para el desarrollo económico.

## RESUMEN

*En la presente investigación se realiza un análisis de México y diversos países de Latinoamérica en materia de rendición de cuentas. Se incluyen temas que giran en torno a la rendición de cuentas, como la fiscalización, acceso a la información pública, transparencia y democracia. Se inicia con antecedentes generales de diversos países, incluyendo los históricos, la definición de rendición de cuentas. La forma como la rendición de cuentas se utiliza como freno del abuso de poder y corrupción. La participación de Instituciones Públicas o Gubernamentales en la materia de estudio. La regulación de la rendición de cuentas en México y Países de Latinoamérica, sobresaliendo el marco jurídico o normativo de la misma. Se hace mención a los diversos organismos internacionales que intervienen en materia de transparencia y lucha contra la corrupción. Con el fin de lograr un análisis sobre la rendición de cuentas en México y países de latinoamericanos, previamente, se hace un estudio comparado, de toda la temática arriba mencionada, tanto de México, como de los países latinoamericanos. Lo anterior, con el fin de obtener sus semejanzas y diferencias, por medio de la técnica de investigación de derecho comparado y se concluye con el objeto de estudio del presente trabajo, es decir, el análisis de la rendición de cuentas en México y diversos países latinoamericanos.*

**PALABRAS CLAVES:** Rendición de Cuentas, Fiscalización, Acceso a la Información Pública, Transparencia, Democracia, Abuso de Poder y Corrupción

## ANALYSIS OF ACCOUNTABILITY IN MEXICO AND LATIN AMERICAN COUNTRIES

### ABSTRACT

*In this research, an analysis of Mexico and other Latin American countries in terms of accountability. It includes topics that revolve around accountability, as the audit, access to public information, transparency and democracy. It begins with general background of various countries, including the historic, defining accountability. The way accountability brake is used as abuse of power and corruption. The participation of public or governmental institutions in the field of study. The regulation of accountability in Mexico and Latin American countries, highlighting the legal or regulatory framework thereof. Mention is made of the various international organizations involved in transparency and anti-corruption. In order to achieve an analysis of accountability in Mexico and Latin American countries, above, is a comparative study of all the issues mentioned above, both of Mexico, and Latin American countries. The above, in order to get their similarities and differences, through the technique of comparative law research and concludes with the object of study of this paper, that is, the analysis of accountability in Mexico and several Latin American countries.*

**JEL:** H83

**KEYWORDS:** Accountability, Audit, Access to Public Information, Transparency, Democracy, Abuse of Power and Corruption.

## **INTRODUCCIÓN**

La presente investigación se basa principalmente en el tema de rendición de cuentas del poder público y diversos temas que giran en torno a él, como lo es fiscalización, acceso a la información pública, transparencia, democracia, abuso de poder y corrupción en México y países de Latinoamérica. Dentro del trabajo se hace una revisión de literatura en donde se definen las palabras claves y se desarrolla un tema en relación a él. La rendición de cuentas en América Latina de países como México, Argentina y Brasil presentaron avances en materia de fiscalización y acceso a la información y organizaciones sociales de Chile y Colombia los cuales presentan trabajos sobre transparencia y ejercicio del derecho de acceso a la información. Existen organizaciones internacionales que participan con los países latinoamericanos en materia de corrupción, como la Organización de Naciones Unidas (ONU), la Organización de Estados Americanos (OEA) y la Organización para la Cooperación y el Desarrollo Económico (OCDE).

En el caso México se hace referencia a la Secretaria de la Función Pública en materia de Políticas de Transparencia y Cooperación Internacional sobre temas de anticorrupción y el Instituto Federal de Acceso a la Información y Protección de Datos (IFAI) el cual tiene como misión garantizar el derecho a los ciudadanos a la información pública gubernamental y a la privacidad de sus datos personales, así como promover en la sociedad y en el gobierno la cultura del acceso a la información, la rendición de cuentas y el derecho a la privacidad. Se hace referencia a la Auditoría Superior de la Federación (ASF) la cual se encarga de fiscalizar, de manera externa, el uso de los recursos públicos federales en los tres Poderes de la Unión. En Costa Rica se cuenta con iniciativas en el ámbito de la transparencia y la rendición de cuentas como la red Interinstitucional de Transparencia. El Salvador cuenta con el Portal de Transparencia Fiscal del Ministerio de Hacienda del Gobierno de Salvador. Guatemala cuenta con la Comisión Extraordinaria Nacional por la Transparencia.

Por su parte Honduras creo el Consejo Nacional Anticorrupción y por su parte Nicaragua que es uno de los países más corruptos de Centroamérica cuenta con una iniciativa social digitalizada de Ética y Transparencia en colaboración con Transparencia Internacional. Panamá creo el Consejo Nacional de Transparencia y contra la Corrupción. Venezuela cuenta con la Asociación Civil denominada Transparencia Venezuela. Colombia en el tema de rendición de cuentas se refiere a la democratización, la modernización y la lucha contra la corrupción. En Perú existe el capítulo peruano de Transparencia Internacional. En Brasil se cuenta con un Tribunal de Cuentas y en Argentina existe un grupo de organización de la sociedad civil sobre la plena vigencia de una Ley Nacional de Acceso a la Información Pública. En Chile en materia de rendición de cuentas ha prevalecido una visión de ritual durante el tiempo que ha transcurrido desde la implementación de las leyes al respecto y en Febrero del 2011 se aprobó una Ley de Participación Ciudadana. La metodología que se aplica principalmente es el enfoque cualitativo basado en observaciones explicativas. Bajo las perspectivas descriptiva y explicativa. Sobresaliendo el marco teórico y las técnicas de investigación, como la documental. En resultados se muestra el ranking de países según su índice de percepción de corrupción (IPC) de diversos países latinoamericanos y se presenta una comparación de encuestas de Global Barómetros en relación al apoyo y confianza en la democracia.

## **REVISIÓN DE LITERATURA**

En la literatura sobre el tema se define lo que es rendición de cuentas. Entre las más sobresalientes se encuentra la señalada por (López Ayllón, Merino y Cejudo, 2010) En principio, sabemos que rendir cuentas significa literalmente entregar o dar cuentas ante alguien. De ahí que rendir cuentas sea siempre una acción subsidiaria de una responsabilidad previa, que implica una relación transitiva y que atañe a la manera en que se dio cumplimiento a esa responsabilidad. El término fiscalización de acuerdo a la Academia Mexicana de la Lengua Española, es criticar y traer a juicio las acciones u obras de alguien, en el caso que nos ocupa sería aplicado al sector público. Y democracia es el predominio del pueblo en el gobierno político de un Estado. Una de las Instituciones que participan activamente en contra la de la corrupción a nivel internacional es Transparencia Internacional (TI), el cual es la única organización no gubernamental a escala universal dedicada a combatir la corrupción, congrega a la sociedad civil, sector privado y los gobiernos en una vasta coalición global. Quizás la principal herramienta en la lucha contra la corrupción sea el acceso a la información y el Índice de Percepción de Corrupción (IPC), es la medida más utilizada para la corrupción en los países aquí analizados.

El Banco Mundial ha participado en el combate a la corrupción, el cual de acuerdo a información del mismo Banco, señala que ha puesto el problema de la corrupción en el centro del debate hasta convertirlo en un tema del desarrollo, tanto dentro como fuera de la institución. Cada país Latinoamericano presenta sus propias Políticas e Instituciones de Gobierno, en materia de rendición de cuentas, transparencia y estrategias contra la corrupción. En cuanto a la Transparencia de acuerdo a Gascó (2005, citado por Criado y Corojan, 2010) se dice que identificamos los gobiernos transparentes como aquellas 'instituciones abiertas que proporcionen suficiente información sobre los asuntos públicos' y sin que haya ocultación alguna. Ello implica tener acceso a todo aquello que permita conocer y juzgar a una institución' Jiménez (2009, citado por Criado y Corojan).

Por otra parte y en relación al tema de la corrupción, de acuerdo a la Real Academia Mexicana de la Lengua, se define que en las organizaciones, especialmente en las públicas, es la práctica consistente en la utilización de las funciones y medios de aquellas en provecho, económico o de otra índole, de sus gestores. Ligado con dicha definición se encuentra lo que se entiende por abuso de poder o de derecho, como el ejercicio de un derecho en sentido contrario a su finalidad propia y con perjuicio ajeno.

Los instrumentos internacionales multilaterales que se han elaborado por los distintos gobiernos del orbe para combatir globalmente la corrupción son:

Sobre la corrupción mencionada existen convenios a nivel internacional en los que México ha participado, tales como: La Convención de las Naciones Unidas contra la Corrupción (UNCAC), también conocida como la Convención de Mérida, por haber sido adoptada en esa ciudad de México, en diciembre de 2003, entró en vigor el 14 de diciembre de 2005, al reunir las 30 ratificaciones requeridas. Actualmente, se integra por 126 Estados miembros y sus dentro de sus objetivos, se encuentra: Fomentar la cooperación internacional y la asistencia técnica en la prevención y la lucha contra la corrupción y promover la integridad, la obligación de rendir cuentas y la debida gestión de los asuntos y bienes públicos. Asimismo la Organización de Estados Americanos en la Convención Interamericana contra la Corrupción la cual fue adoptada en Caracas, Venezuela el 29 de marzo de 1996, establece en referencia a la democracia y a la corrupción, que considerando que la democracia representativa, condición indispensable para la estabilidad, la paz y el desarrollo de la región, por su naturaleza, exige combatir toda forma de corrupción en el ejercicio de las funciones públicas, así como los actos de corrupción específicamente vinculados con tal ejercicio.

Por otra parte la Organización para la Cooperación y el Desarrollo Económico (OCDE) establece la Convención para Combatir el Cohecho de Servidores Públicos Extranjeros en Transacciones Comerciales Internacionales (Organización para la Cooperación y Desarrollo Económicos) como un acuerdo internacional suscrito por países que establecen medidas para disuadir, prevenir y penalizar a las personas y a las empresas que prometan, den o encubran gratificaciones a funcionarios públicos extranjeros que participan en transacciones comerciales internacionales.

Por otra parte, es importante mencionar que en materia de acceso a la información pública en México, existe el Instituto Federal de Acceso a la Información y Protección de Datos (IFAI) el cual tiene como misión garantizar el derecho de los ciudadanos a la información pública gubernamental y a la privacidad de sus datos personales, así como para promover en la sociedad y en el gobierno la cultura del acceso a la información, la rendición de cuentas y el derecho a la privacidad. El Marco Normativo del IFAI otorga el derecho de acceso a la información que favorece la transparencia en el gobierno y la rendición de cuentas de todos los servidores públicos, lo cual mejorará la eficiencia de las instituciones federales y la calidad de sus servicios. A partir del 12 de junio del 2003, la Ley Federal de Transparencia y Acceso a la Información Pública Gubernamental obliga a todas las dependencias y entidades del gobierno federal a dar acceso a la información contenida en sus documentos, respecto, entre otras cosas, a su forma de trabajo, al uso de los recursos públicos, sus resultados y desempeño. Cualquier persona puede solicitar información a las instituciones federales y obtenerla en forma rápida y sencilla, sin necesidad de identificarse, ni justificar el uso que dará a la misma.

Cabe agregar que en el caso de México y en lo que respecta al tema de fiscalización existe la Auditoría Superior de la Federación (ASF) se encarga de fiscalizar, de manera externa, el uso de los recursos públicos federales en los tres Poderes de la Unión; los órganos constitucionales autónomos; los Estados y Municipios; y en general cualquier entidad, persona física o moral, pública o privada que haya captado, recaudado, administrado, manejado o ejercido recursos públicos federales. La fiscalización está sujeta, por ley, a los principios de anualidad y posterioridad. La anualidad se refiere a que la institución revisa las cuentas correspondientes a un año fiscal en específico, y la posterioridad implica que esta revisión se lleva a cabo una vez que los gastos fueron efectuados.

Por otra parte, existe en los países centroamericanos la corrupción como problema general en las instituciones centroamericanas. La preocupación por la corrupción y su entrada en la agenda gubernamental se hizo factible a partir de la Cumbre de las Américas celebrada en 1994. Parrado (2007, citado por Criado y Corojan, 2010). La necesidad de replantear los mecanismos de la transparencia de los gobiernos se ha recordado por la preocupante percepción de los ciudadanos con respecto al tema que se confirmó con los informes y estudios de Organización Transparency Internacional. De acuerdo a información de Transparencia Internacional (TI), Transparencia Mexicana, es la Delegación Nacional de Transparencia Internacional en México, que surge en 1999. En el 2001 es publicado el Índice Nacional de Corrupción y Buen Gobierno (INCBG) el cual sirvió para medir experiencias y percepciones sobre la corrupción. En el año 2009 Transparencia Mexicana creó la Iniciativa para el Fortalecimiento de la Institucionalidad de los Programas Sociales, a través de éste las dependencias federales y estatales rinden cuentas de sus programas sociales.

Criado y Corojan (2010) indica respecto lo siguiente de diversos países centroamericanos: Costa Rica cuenta con iniciativas en el ámbito de la transparencia y la rendición de cuentas como la Red Interinstitucional de Transparencia la cual fue creada en el año de 2004 por la Dirección de Control de Gestión Administrativa de la Defensoría de los Habitantes de la República de Costa

Rica. El Salvador por su parte cuenta con el Portal de Transparencia Fiscal del Ministerio de Hacienda del Gobierno de Salvador se fomenta una transparencia donde, se publican los aspectos más relevantes de las Finanzas Públicas de El Salvador. El portal tiene como objetivo ayudar al desarrollo de una cultura de transparencia y de acceso público a la información fiscal.

Guatemala cuenta con la Comisión Extraordinaria Nacional por la Transparencia (Acuerdo Legislativo 05-2005) es el principal órgano en el que se basa la lucha contra la corrupción y el desarrollo de la transparencia en las gestiones públicas. Para combatir y mejorar la situación de alta corrupción el Gobierno de Honduras creó el Consejo Nacional Anticorrupción (CNA) (mediante Decreto Ejecutivo 015-2001). Según el último informe de Transparencia Internacional TI (2009), Nicaragua tocó fondo en la lista de Países más corruptos de Centroamérica y es uno de los cuatro países más deshonestos de Latinoamérica. En Nicaragua no se ha podido apreciar iniciativa concreta que promueva la transparencia y la rendición de cuentas de los gobernantes lo que pone más en entredicho la predisposición de los actores implicados de gobernar y actuar conforma a los valores democráticos.

Panamá en cuanto a las iniciativas digitales para el aumento de la transparencia desde el gobierno nacional se creó el Consejo Nacional de Transparencia y Contra la Corrupción, adscrita al Ministerio de la Presidencia, con el principal objetivo de diseñar e implantar iniciativas nacionales para promover la transparencia en la administración pública.

En Venezuela existe la Asociación Civil denominada Transparencia Venezuela es una asociación civil que defiende el derecho de cada venezolano a vivir en un país libre de corrupción. Es el capítulo venezolano de Transparencia Internacional. Previene y disminuye la corrupción a través de distintos proyectos: Acceso a la información pública, Monitoreo de la corrupción, Gobierno sin corrupción, Educación Anticorrupción y Negocios sin corrupción.

En Colombia, Restrepo (2012) señala que el tema de la rendición de cuentas en Colombia ha trasegado por tres momentos: la democratización, la modernización y, hoy en día, la lucha contra la corrupción, dijo Marcela Restrepo, directora de la organización civil Área Sector Público, durante el panel sobre rendición de cuentas en Perú y Colombia dentro del Seminario Internacional Desafíos de la Rendición de Cuentas en América Latina. A principios del año 2000 en Perú Rotta (2012), de Proteica, capítulo peruano de Transparencia Internacional impulsó la rendición de cuentas. En 2002, se dio el principio de participación, que incluía la obligación de transparencia, se dio el código de ética de la función pública.

En Brasil de acuerdo a Fuentes (2012), cuenta con un Tribunal de Cuentas los cuales no imponen sanciones a los funcionarios ni a los gestores públicos que manejan o utilizan fondos o bienes públicos. Cuando se detectan irregularidades en la gestión, éstas se ponen de manifiesto en el correspondiente Informe, junto con la recomendación de las medidas que deben adoptarse para subsanarlas. En Argentina, Manchinelly (2011) en relación al tema de rendición de cuentas, señala que un grupo de organización de la sociedad civil que trabaja para la plena vigencia de una Ley Nacional de Acceso a la Información Pública en Argentina, lanzó la campaña “Saber es un derecho, ¡Que ahora sea ley!” para involucrar a la ciudadanía en el reclamo de su derecho de saber. En Chile para, Cunill (2012), asesora especial del Centro Latinoamericano de Administración para el Desarrollo (CLAD), en la rendición de cuentas en Chile “ha prevalecido una visión de ritual” durante el poco tiempo que ha transcurrido desde la implementación de las leyes al respecto.

## **METODOLOGÍA**

El desarrollo metodológico se enfoca en la perspectiva cualitativa principalmente en observaciones explicativas. No obstante, aunque no se presentan métodos cuantitativos en el estudio, los hallazgos son igualmente válidos, independientemente de su carácter predominante cualitativo. King y Sartori (1994, 1970, citados por Criado y Corojan, 2010) Dentro de este apartado se hace referencia a la selección de métodos y técnicas. Al definir como se trabajara el objeto de estudio, que es el análisis de la rendición de cuentas en México y países Latinoamericanos, se señala que se aplica el Método Cualitativo, el cual parte de la realidad a la teoría y trata de crear nuevas teorías, se tiene una visión interpretativa, el cual se realiza bajo las perspectivas: Descriptiva, ya que se trabaja sobre realidades de hecho y sus características fundamentales es la de presentar una interpretación correcta. Tal como se presenta en el objeto de estudio del presente trabajo de investigación. En donde el propósito básico es que el investigador describe situaciones y eventos. En el estudio que nos ocupa, se describe un acontecimiento sobre la rendición de cuentas en México y diversos países latinoamericanos y varios temas o tópicos que giran en torno al mismo, como lo es la corrupción y la transparencia.

La técnica de investigación utilizada presenta la estructura por medio de la cual se organiza la presente investigación. La técnica es la documental o teórica, ya que a través de la recopilación de información se utiliza para enunciar las teorías que sustentan el estudio de los fenómenos y procesos del tema aquí investigado. Incluyendo el uso de instrumentos definidos según la fuente documental consultadas a que se hace referencia (Leyes, Libros relacionados con el tema de investigación, Tesis Doctorales, Publicaciones, Revistas Especializadas, Documentales e Investigación de páginas de internet confiables científicamente) Mediante la mencionada investigación documental se elabora el marco teórico o jurídico conceptual para formar un cuerpo de ideas sobre el objeto investigado.

## RESULTADOS

Los resultados de la investigación antes desarrollada, se basan en lo expuesto por Emmerich (2004) el cual señala que desde el nacimiento mismo de los regímenes democráticos, la transparencia y la rendición de cuentas se han concebido como base de los mismos. Cuando, como quiere la doctrina democrática, el pueblo es soberano, los asuntos públicos deben estar abiertos al escrutinio social, y aquellos que los manejan deben rendir cuentas en forma oportuna y confiable. La transparencia y la rendición de cuentas dan legitimidad y credibilidad al sistema político democrático, permiten vigilar que éste sirva al bien común, y contribuyen a que gobernantes, legisladores y funcionarios públicos atiendan al interés general antes que a sus intereses particulares. En lo que respecta a los grados de corrupción de los países latinoamericanos se presenta la siguiente tabla.

Tabla 1: Ranking de Países Según Su Índice de Percepción de Corrupción (IPC)  
Publicado Por Transparencia Internacional

Posición 2010	País	Índice 2010	Índice 2009	Índice 2008	Índice 2007	Índice 2006	Índice 2005	Índice 2004	Índice 2003	Índice 2002
24	Uruguay	6.9	6.7	6.9	6.7	6.4	5.9	5.5	5.1	5.1
73	El Salvador	3.6	3.4	3.9	4.0	4.0	4.2	3.7	3.4	3.2
78	Colombia	3.5	3.7	3.8	3.8	3.9	4.0	3.8	3.7	3.6
78	Perú	3.5	3.7	3.6	3.5	3.3	3.5	3.5	3.7	3.4
91	Guatemala	3.2	3.4	3.1	2.8	2.6	2.5	2.2	2.4	2.5
98	México	3.1	3.3	3.6	3.5	3.3	3.5	3.6	3.6	3.6
105	Argentina	2.9	2.9	2.9	2.9	2.9	2.8	2.5	2.5	2.8

146	Paraguay	2.2	2.4	2.4	2.6	2.1	1.9	1.6	1.7
164	Venezuela	2.0	1.9	2.0	2.3	2.3	2.3	2.4	2.5
--	Belice		2.9	3.0	3.5	3.7	3.8	4.5	
69	Brasil	3.7	3.7	3.5	3.5	3.3	3.7	3.9	4.0

Fuente: Elaboración propia basada en la organización internacional Transparencia Internacional publica desde 1995 el Índice de percepción de la corrupción que mide, en una escala de cero (percepción de muy corrupto) a diez (percepción de ausencia de corrupción), los niveles de percepción de corrupción en el sector público en un país determinado y consiste en un índice compuesto, que se basa en diversas encuestas a expertos y empresa. Refiriéndose a países latinoamericanos del Índice 2002 al 2010.

En cuanto a la relación entre corrupción y falta de confianza en las instituciones democráticas. Ferreiro (1999, citado en Emmerich, 2004) señala que “el mayor costo político de la corrupción es el daño que provoca a la confianza pública en las instituciones y representantes, soporte fundamental de todo sistema político democrático” (Emmerich, 2004) Para verificar lo anterior es posible utilizar datos proporcionados por Latinobarómetro, organización chilena que realiza encuestas de opinión pública semejantes en la mayoría de los países latinoamericanos, con el objeto de medir los valores democráticos (o la falta de ellos) entre la población general. En la Tabla No. 2 se muestra diversas regiones en donde se compara el apoyo y la confianza a la democracia.

Desde sus primeras constituciones, América Latina adoptó el tipo de concepciones de división de poderes y de gobierno responsable. Sin embargo, no ha sido infrecuente en la región que la división de poderes se haga irrelevante por el predominio de los ejecutivos, y que gobernantes y legisladores (además de funcionarios designados) ejerzan sus funciones de manera irresponsable. La corrupción lisa y llana es una de la consecuencia de esta situación. (Emmerich, 2004)

Los gobernantes, mientras están en el ejercicio de su cargo y los legisladores no han tenido responsabilidad política alguna. En general, una vez elegidos pueden confiar en que, salvo situaciones verdaderamente extraordinarias, continuarán en sus cargos hasta el fin de sus mandatos, hagan lo que hagan, o no hagan nada. De ese modo, la rendición de cuentas que se establece en algunas legislaciones latinoamericanas (por ejemplo, los informes presidenciales) se convierte a menudo en meros informe sin ninguna trascendencia. (Emmerich, 2004)

Tabla 2: Comparación de Encuestas de Global Barómetros 2001

Región	Apoyo a Democracia (%)	Confianza en Democracia (%)
Unión Europea	78	53
Africa	69	58
India	60	40
Europa del Este	53	29
América Latina	48	25

Fuente: Elaboración propia basada en Latinobarómetro (2001). En la que se especifica por región el porcentaje de apoyo a la democracia y la confianza en la democracia.

## CONCLUSIONES

Existen diversas acepciones de la definición de rendición de cuentas, mas sin embargo, todas se refieren a rendir cuentas a alguien. En el sector gubernamental, es la obligación que tienen los gobernantes de rendir informes y que exista transparencia sobres sus actuaciones hacia sus gobernados. Los gobiernos transparentes son aquellas instituciones abiertas que proporcionan suficiente información sobre los asuntos públicos y sin que haya ocultación alguna. Sobre la corrupción, a nivel internacional existen diversos convenios o acuerdos en materia anticorrupción en los que participan los diversos países latinoamericanos. Entre los que se encuentra la ONU, OEA, OCDE y el Banco Mundial.

En México las principales Dependencias Federales que intervienen en la materia son la Secretaría de la Función Pública, El Instituto Federal de Acceso a la Información y Protección de Datos (IFAI) y la Auditoría Superior de la Federación (ASF). Una de las Instituciones que participan activamente en contra la de la corrupción a nivel internacional es Transparencia Internacional (TI), el cual es la única organización no gubernamental a escala universal dedicada a combatir la corrupción, congrega a la sociedad civil, sector privado y los gobiernos en una vasta coalición global. Los diversos países que pertenecen a Latinoamérica como lo es México, Brasil, Venezuela, Chile, El Salvador, Costa Rica, entre otros, todos tienden a combatir la corrupción, que exista la transparencia y la rendición de cuentas cada uno desde sus propias organizaciones civiles y públicas, perspectivas y normatividad.

A efecto de hacer un análisis comparativo de México y países Latinoamericanos, nos referimos a la tabla No.1 la cual demuestra el ranking de países latinoamericanos, según su índice de percepción de corrupción de los años del 2002 al 2010. En el año 2002 el más corrupto es Guatemala y el menos es Uruguay. En el año 2003 el más corrupto es Paraguay y el menos es Uruguay. En el año 2004 el más corrupto es Paraguay y el menos es Uruguay. En el año 2005 el más corrupto es Paraguay y el menos Uruguay. En el año 2006 el más corrupto es Paraguay y el menos Uruguay. En el año 2007 el más corrupto es Venezuela y el menos Uruguay. En el año 2008 el más corrupto es Venezuela y el menos es Uruguay. En el año 2009 el más corrupto es Venezuela el menos es Uruguay. En el año 2010 el más corrupto es Venezuela y el menos es Uruguay. Con lo anterior concluimos que el país que resulto más corrupto en diversos años lo fue Paraguay seguido de Venezuela y el menos Uruguay. Los países como México, Argentina, Brasil y Colombia al compararlos con los de más alto índice y el más bajo, se encuentran en términos medios de corrupción.

La tabla No. 2, se refiere a la comparación de encuestas que otorga Global Barómetro en donde la región de América Latina es la que presenta un menor porcentaje de apoyo y confianza a la democracia, con un 48% y 25% respectivamente. Y la de mayor porcentaje es la Unión Europea con un 78% y un 53% de apoyo y confianza a la democracia, respectivamente. La rendición de cuentas, el acceso a la información pública, transparencia, democracia y corrupción son temas y prácticas que se dan en todos los países. Y en el caso que nos ocupa los países latinoamericanos, por lo que de acuerdo a la investigación, cada uno dentro de sus posibilidades y proyectos factibles deberán de combatir la corrupción y lograr que en forma eficaz se dé la rendición de cuentas, la transparencia y la información pública, con el fin de que se vean fortalecidos en su democracia.

# **TURISMO SOSTENIBLE Y EL USO DE ENERGÍAS RENOVABLES COMO ALTERNATIVA DE APOYO A LOS PUEBLOS INDÍGENAS DE MÉXICO**

Zeltzin Minerva Gutiérrez Rivera, Universidad Nacional Autónoma de México  
Luis Enrique Villalobos Contreras, Universidad Nacional Autónoma de México

## **RESUMEN**

*México es un país donde los pueblos indígenas representan las raíces de su historia, costumbres, tradiciones y cultura; desde un enfoque turístico, los pueblos indígenas ofrecen todas sus cualidades y riqueza natural a los visitantes a través del turismo indígena y del turismo alternativo. En las últimas décadas México ha vivido una etapa de reformas jurídicas en materia de derechos indígenas y de igualdad de oportunidades. El sistema jurídico mexicano reconoce los derechos individuales y colectivos de los pueblos y comunidades indígenas determinando las políticas necesarias que garanticen su bienestar e impulsar el desarrollo regional de las zonas indígenas con el propósito de fortalecer las economías locales y mejorar las condiciones de vida. El turismo es la tercera fuente de divisas para México, sólo superado por la exportación de petróleo y las remesas de los trabajadores mexicanos en el extranjero. En México el Turismo Alternativo se presenta como una actividad económica con gran potencial y que aún no ha sido suficientemente desarrollada. La riqueza natural de México permite el desarrollo de energéticos renovables que permitirán al país contar con una mayor diversificación de fuentes de energía, ampliar la base industrial en un área que puede tener valor estratégico en el futuro, y atenuar los impactos ambientales ocasionados por la producción, distribución, uso final de las formas de energía convencionales así como la generación de empleo y disminución de costos indirectos en comunidades locales.*

**PALABRAS CLAVE:** Turismo Sostenible, Turismo Indígena, Turismo Alternativo, Pueblos Indígenas, Energías Renovables, Medio Ambiente

## **SUSTAINABLE TOURISM AND THE USE OF RENEWABLE ENERGY AS AN ALTERNATIVE TO SUPPORT INDIGENOUS COMMUNITIES IN MEXICO**

### **ABSTRACT**

*Mexico is a country where indigenous people represent the roots of our history, customs, traditions and culture. Indigenous communities offer all its qualities and natural beauty to visitors through the Indigenous tourism and alternative tourism. In recent decades, Mexico has experienced a period of legal reforms, indigenous rights and equity of opportunities. The Mexican legal system recognizes the individual and collective rights of indigenous people and determines the policies needed to ensure their welfare and promote regional development of some indigenous areas in order to strengthen local economies and improve the living conditions of their communities. Tourism is the third largest source of foreign investment in Mexico, surpassed only by oil exporting and remittances from Mexican natives working abroad. Alternative Tourism in Mexico is presented as an economic activity with great potential that has not been developed. The natural wealth of Mexico allows the development of renewable energy that will allow the*

*country to diversify energy sources , expanding the industrial base in an area that can have strategic value in the future, and mitigate the environmental impacts caused by the production , distribution, ending the use of conventional energy forms, the generation of employment and reduce indirect costs in local communities.*

**KEYWORDS:** Sustainable Tourism, Indigenous Tourism, Alternative Tourism, Indigenous Communities, Renewable Energy, Environment.

## INTRODUCCIÓN

El turismo es un fenómeno de gran importancia y magnitud a nivel económico, social, cultural y político. El modelo de desarrollo turístico mexicano ha manifestado como premisa fundamental la búsqueda del beneficio de las localidades receptoras y obviamente de su población; sin embargo, durante los últimos 25 años en México se ha considerado planear el apoyo de la población para el desarrollo turístico cuando en realidad lo que se requiere es planear el desarrollo de las localidades mediante de la actividad turística.

México tiene varias zonas turísticas donde podemos encontrar destinos de playa o ciudad, en los cuales es notable el crecimiento de la población, y el crecimiento de la misma localidad receptora con las actividades económicas complementarias a la actividad turística, sin embargo también tiene algo más que ofrecer y es la diversidad cultural principalmente originaria de los pueblos indígenas, en México existe alrededor de 65 pueblos indígenas, pueblos que representan las raíces de los mexicanos con su cultura, historia, tradiciones y costumbres, donde su modo de vida depende íntimamente de los recursos naturales. Sin embargo la escasez de recursos e información induce su desaparición, pues muchos tienden a migrar de su localidad en busca de oportunidades y la modernización eventualmente penetra estas regiones dañando el medio ambiente.

Por esta razón, la siguiente investigación se enfoca en cómo se puede apoyar a los pueblos indígenas, y así mismo a comunidades rurales mediante la planeación y ejecución de la actividad turística pero de manera sostenible, es decir, protegiendo los recursos naturales generando un bajo impacto sobre el medio ambiente y preservando la cultura de esta población, al mismo tiempo se contribuye a generar ingresos y empleo para la población local, así como también el papel que juegan el uso de energías renovables en los proyectos de turismo sostenible. Esta investigación se presenta organizada de la siguiente manera: en la sección de revisión literaria se plantean los argumentos que sustentan la ejecución de programas de turismo sostenible y uso de energías renovables como apoyo a los pueblos indígenas que pertenecen a comunidades rurales. Posteriormente se presenta la metodología utilizada, en donde se identifican los beneficios y las razones de cómo las actividades de turismo sostenible pueden apoyar a esta población, así como qué tipo de energías renovables son viables en cada zona de la República Mexicana. Seguidamente de los resultados y conclusiones.

## REVISIÓN LITERARIA

En México, el 9.54% de la población es indígena, esto significa que 9 854 301 millones de personas son descendientes directos de linajes originarios. Mismos linajes ancestrales que a la fecha se recuerdan como tiempos de esplendor de civilizaciones mesoamericanas. La presencia de pueblos y comunidades indígenas, se concentran en el sur y sureste del país principalmente, con 46 grupos étnicos de los 65 que habitan en México y concentra el 74% de dicha población, de los cuales 6,986,413 de habitantes hablan alguna lengua indígena. El territorio de los pueblos

indígenas es un referente necesario para cualquier política que busque desarrollar la cultura, los recursos naturales y el bienestar de los pueblos indígenas. Cabe mencionar que México es uno de los 12 países con más diversidad en el mundo que albergan entre 60 y 70 % de la biodiversidad total del planeta, por ello los pueblos indígenas han sido reconocidos como sujetos sociales centrales para la conservación y el desarrollo sustentable.

En las últimas décadas México ha vivido una etapa de reformas jurídicas en materia de derechos indígenas y de igualdad de oportunidades. A partir de la reforma constitucional de 2001, el sistema jurídico mexicano reconoce los derechos individuales y colectivos de los pueblos y comunidades indígenas. El derecho al desarrollo y a la participación en las políticas y acciones de Gobierno está previsto en el apartado B del Artículo Segundo de la Constitución Política de los Estados Unidos Mexicanos. Dicho artículo establece que la Federación, los Estados y los Municipios promoverán la igualdad de oportunidades para los indígenas y buscarán eliminar cualquier práctica discriminatoria, determinando las políticas necesarias que garanticen su desarrollo e impulsar el desarrollo regional de las zonas indígenas con el propósito de fortalecer las economías locales y mejorar las condiciones de vida de sus pueblos indígenas. El Turismo sostenible es una alternativa para apoyar a los pueblos indígenas. México es un país donde los pueblos indígenas representan las raíces de su historia, costumbres, tradiciones y cultura; desde un enfoque turístico, los pueblos indígenas ofrecen todas sus cualidades y riqueza natural a los visitantes a través del turismo indígena y del turismo alternativo.

El turismo Indígena es aquel que se práctica en los territorios indígenas y en el cual las tradiciones, la cultura, los usos y las costumbres, o parte de ellas se encuentran presentes, es, asimismo, manejado, monitoreado y administrado por hombres y mujeres pertenecientes a un pueblo indígena, en este tipo de turismo los y las anfitrionas comparten con el visitante la riqueza natural y cultural, a través de actividades de recreación, esparcimiento y descanso, y en cuya distribución de los beneficios se encuentra la madre tierra, siempre viendo hacia el tan anhelado auto desarrollo, buen vivir y la revaloración cultural tanto al interior como al exterior de nuestros pueblos y comunidades.

Los Pueblos Indígenas destacan entre los protagonistas del medio ambiente en México. Su modo de vida depende íntimamente de los recursos naturales. Su economía está ligada a la naturaleza para la obtención de otros bienes, tales como alimentos, vivienda, medicamentos y productos de intercambio. Bajo estas condiciones, la supervivencia de los indígenas y la continuidad de su cultura, dependen absolutamente de la preservación de los recursos naturales. Para las empresas indígenas y rurales incursionar en la actividad turística representa entrar a un proceso continuo y permanente de desarrollo de habilidades y estrategias específicas, pues se reconoce que existe una lucha constante para tratar de no ser excluidas del mercado y, aunque su mayor fortaleza está en la diferenciación de lo que ofrecen y comparten con el turista, esta ventaja no es decisiva en el posicionamiento de la empresa, pues causas como la falta de ingresos constantes, de promoción, difusión y planeación, pueden reducir su tiempo de vida. Durante los últimos años surgen en el léxico y en la práctica del desarrollo turístico mundial pero en sentido comunitario, nuevos conceptos y experiencias denominadas “Turismo de base comunitaria”, “Turismo Indígena”, o “Turismo Comunitario”; que refieren en principio, a un nuevo paradigma de gestión turística, que se ha venido gestando a partir de la incorporación de nuevos actores en la actividad turística: las comunidades indígenas, campesinas y urbanas.

## **METODOLOGÍA**

En México, la Comisión Nacional para el Desarrollo de los Pueblos Indígenas (CDI), tiene como

misión formular e instrumentar la política gubernamental, para la promoción y defensa de los derechos y el desarrollo integral de los pueblos indígenas, promoviendo la participación social organizada y el respeto a sus culturas. Así mismo, gestiona recursos fiscales ante el Gobierno Federal y los instrumenta a través de Programas, Proyectos y Acciones sustantivas en beneficio de las colectividades indígenas. En este marco que, mediante el Programa de Turismo Alternativo en Zonas Indígenas (PTAZI), se atienden las solicitudes de apoyo presentadas por los núcleos agrarios, organizaciones y grupos de trabajo indígenas, para instrumentar o reforzar sus iniciativas en materia de ecoturismo.

#### Programa de Turismo Alternativo en Zonas Indígenas (Ptazi):

Este programa beneficia a núcleos agrarios (Ejidos, comunidades), organizaciones y grupos de trabajo conformados por indígenas. Y tiene como objetivo contribuir al desarrollo de la población indígena, mediante la ejecución de acciones en materia de turismo alternativo, en especial de ecoturismo y turismo rural, aprovechando el potencial existente en las regiones indígenas. Otorga apoyos para elaborar y ejecutar proyectos encaminados a la revaloración, conservación y aprovechamiento sustentable de sus recursos y atractivos naturales, y de su patrimonio cultural, así como para coadyuvar a la mejora de sus ingresos. El Tipo de apoyo que se otorga puede ser para infraestructura y equipamiento de sitios de Turismo Alternativo, para elaboración de un proyecto integral para nuevos sitios, para la elaboración de estudios, y/o pago de permisos ambientales, cuando se requieran, para la formación y fortalecimiento de capacidades para la operación, administración y procesos de certificación, de los núcleos agrarios, organizaciones y grupos de trabajo que cuenten con sitios de turismo alternativo de inicio, continuidad, o que se encuentran en operación y, para la ejecución de proyectos de difusión y promoción (comercialización) de sitios de turismo alternativo.

Los Núcleos Agrarios (ejidos y comunidades), organizaciones y grupos de trabajo, deben ser conformados por indígenas; entre los requisitos que deben presentar es una Solicitud de apoyo para proyectos de turismo alternativo que contenga: datos generales de los interesados, ubicación, nombre del proyecto, el monto de recursos solicitado para la elaboración o desarrollo del proyecto, desglosando los conceptos de inversión, etc.; también un documento que acredite su personalidad jurídica, en términos de la legislación aplicable; un documento que acredite la propiedad o posesión legal del o de los predio(s) involucrado(s), donde se llevará a cabo el proyecto, así como su extensión y límites geográficos; además se establecerá la temporalidad en la cual se planea desarrollar y operar el proyecto de turismo alternativo, de tal forma que den certidumbre jurídica a la población objetivo solicitante de los apoyos, además deben presentar un documento donde se manifieste la declaración expresa de los beneficiarios, por conducto de su representante, de que no han recibido apoyo económico de la CDI ni de otras dependencias de gobierno, para aplicar en los mismos conceptos para los que se solicita apoyo en el presente ejercicio fiscal y en años anteriores, así como el padrón de beneficiarios y una carta compromiso.

Existen asociaciones civiles en México trabajando a favor del turismo sostenible. La Red Indígena de Turismo Alternativo (RITA), por ejemplo, es una asociación civil de empresas diversas cuyo propósito es hacer que sus asociadas y asociados avancen y progresen mediante el ejercicio pleno de los derechos fundamentales y específicos de los pueblos indígenas, reconocidos en los ámbitos económico, social, cultural, ambiental y político. Integrando participativamente estrategias de fortalecimiento humano, social, económico y productivo. RITA, tiene como objetivo destacar la importancia de este tipo de propuestas para el desarrollo de las localidades y

de qué manera condicionan el desarrollo de este tipo de iniciativas en espacios rurales y como impulsan uno de los pilares de la economía en México, el turismo. Además se trabaja para impulsar a las empresas turísticas de RITA, a través de la gestión y administración de planes de negocios, diseño de productos de turismo indígena, calidad y comercialización, para lograr su fortalecimiento y consolidación.

La actividad turística se considera una ventana a través de la cual es posible identificar espacios de convivencia holística más allá de las actividades recreativas, los territorios donde se asientan las comunidades y pueblos indígenas tienen una gran riqueza cultural, paisajística y de biodiversidad que los hace únicos, por lo que representan una oportunidad de dar a conocer las formas en que la gente de esos lugares afronta realidades diversas, como resuelve problemas de alimentación, vivienda, energía, manejo de basura, etc. Por lo que es necesario contar con un área que aborde y desarrolle este enfoque. La actividad en espacios rurales necesita especial atención ya que siguen ligadas a actividades primarias, con esta propuesta se pretende continuar con los apoyos a este sector para que mejore su productividad y promueva su sustentabilidad. La práctica del turismo alternativo permite a los visitantes conocer las zonas rurales y apreciar los recursos naturales de los pueblos indígenas.

Para el desarrollo de Proyectos de Turismo Sostenible, las energías renovables juegan un gran papel. México cuenta con un gran potencial en cuestión de recursos energéticos renovables, cuyo desarrollo permitirá al país contar con una mayor diversificación de fuentes de energía, ampliar la base industrial en un área que puede tener valor estratégico en el futuro, y atenuar los impactos ambientales ocasionados por la producción, distribución y uso final de las formas de energía convencionales. Lo anterior permite reflexionar sobre los considerables beneficios ambientales que se pueden producir con el uso de energías renovables; el uso de la energía renovable económica y tecnológicamente viable, incluyendo una reducción en mantenimiento y en una mayor eficiencia energética.

Los programas de energía renovable son de fácil adopción por los Municipios y se pueden implementar en pueblos indígenas. Debe haber participación económica de los beneficiarios, para involucrarlos en la pertenencia de la tecnología y debe conjuntarse el trinomio: Institución, Beneficiario y Proveedor; con el fin de compartir esfuerzos y beneficios. Tomando como ejemplo los Ayuntamientos Municipales, hoy en día, su principal problema económico es el pago de la nómina, y en segundo lugar, generalmente, aparece el pago de la electricidad. Con el uso de energías renovables se obtienen ahorros sustanciales en el pago por consumo de energía eléctrica, lo que permitirá una mejoría en las finanzas públicas de los Ayuntamientos Municipales. La situación actual permite generar electricidad para autoconsumo, y en su caso vender el excedente; la tecnología con la que hoy se cuenta, a su vez, permite generar electricidad de diferentes fuentes y a costos muchos menores que hace apenas algunos años.

Es por ello que buscando aprovechar lo que hasta hoy sólo es un potencial, se plantea la necesidad de orientar a los Ayuntamientos Municipales para que exploren la posibilidad de suplir su propia demanda energética, contribuyan a la disminución de gases efecto invernadero y fomenten actividades productivas para un creciente progreso y a su vez, atiendan a sus comunidades rurales y pueblos indígenas apoyándolos para que integren las energías renovables en su localidad. Existen varios tipos de energías renovables con diferentes características, que aportan grandes beneficios y algunos de ellos pueden ser usados para el apoyo de los pueblos indígenas, donde es de vital importancia el cuidado y conservación de los recursos naturales, disminuyendo el impacto en el medio ambiente y garantizando su preservación para futuras generaciones. Dentro de la Guía de Programas de Fomento de Energías Renovables que publicó

la Secretaria de Medio Ambiente y Recursos Naturales (SEMARNAT), se hace referencia a las energías renovables a las que una población puede recurrir dependiendo de sus características dentro de las cuales mencionan: biogás de tiraderos municipales (En poblaciones de medianas a grandes), desarrollo del potencial de plantas mini hidráulicas, mayor uso de residuos agropecuarios para generación de electricidad, instalación de celdas fotovoltaicas y la energía eólica.

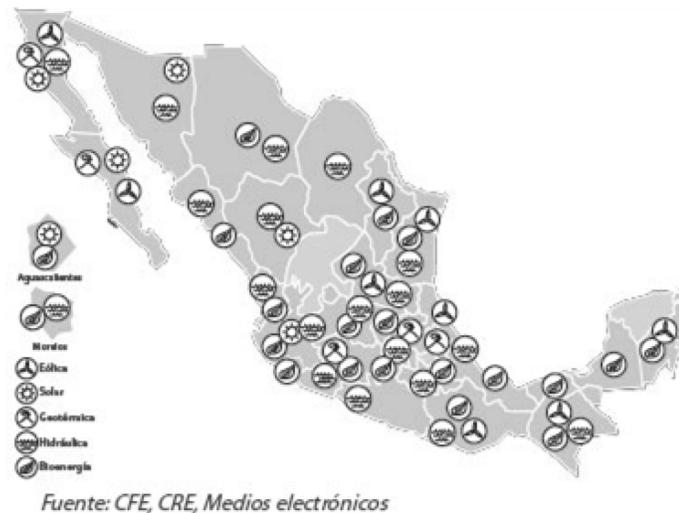

Cabe resaltar que cada tipo de fuente de energía no es limitativa de otra, en una zona geográfica pueden converger diversidad de recursos naturales que potencialicen la obtención de energía, lo que en suma resultaría en un incremento en la capacidad de generación, haciendo que la localidad no dependa de los recursos no renovables (generalmente combustibles fósiles) para obtener energía eléctrica, la cual es indispensable para el crecimiento y desarrollo de la comunidad. Adicionalmente, en función del tipo de energía renovable que se explote, se puede generar energía térmica que complementa las necesidades propias de las industrias o comercios que existan en los alrededores.

## RESULTADOS

Actualmente, varias Instituciones gubernamentales y no gubernamentales en México, promueven programas enfocados al desarrollo de proyectos de turismo sostenible, ofreciendo oportunidades a los pueblos indígenas para adoptarlos y de igual forma existen programas que apoyan la viabilidad del uso de energías renovables. Una problemática detectada en México, es la falta de información que los pueblos indígenas tienen sobre estos programas, es decir, tienen todas las cualidades para desarrollar proyectos de ésta índole y las tierras donde habitan, sin embargo muchos desconocen los programas e incluso no saben a qué instituciones dirigirse. Existen comunidades indígenas donde incluso varios integrantes, conservan su lengua y no hablan español, por tanto su desenvolvimiento se ve limitado. Las comunidades indígenas se interesan en nuevas alternativas para el cuidado del medio ambiente y otras alternativas que les permitan seguir su forma de vida de manera sustentable; muchos de ellos tienen el interés y disposición e investigan sobre dichos programas, acuden y los solicitan a las instituciones, también requieren de capacitación para implementarlos puesto que se trata de algo nuevo para ellos técnicamente pero también en el aspecto administrativo, pues se pueden generar empresas indígenas donde será necesario aplicar cuestiones administrativas para dirigirlos.

Se propone hacer difusión de los programas existentes en el campo de turismo sostenible y de energías renovables, que sean viables en los pueblos indígenas, recalando los beneficios que se producirían con proyectos de turismo sostenible tanto en el medio ambiente como económica y socialmente. El propósito es que los pueblos indígenas fortalezcan su comunidad y tengan oportunidades de integrarse al mercado en el sector turístico que hoy en día produce actividades económicas que más desarrollo tendrán en los años siguientes para México y muchos otros países del mundo. Se propone conjuntar la ética, la ciencia y la prosperidad económica, asociar estos tres elementos de forma eficaz como propósito del desarrollo sustentable en cualquier sector. La aceptación que tienen las energías renovables en comunidades rurales y pueblos indígenas las convierten en una opción atractiva para ser vista como una opción de desarrollo, la generación de empleo, la disminución de costos en los ayuntamientos locales y la disminución del impacto ambiental son algunos de los beneficios a corto y mediano plazo que podrían arrojar los primeros resultados. La propuesta para el desarrollo de energías renovables en el país no puede tener la misma estrategia en todas sus regiones ya que las condiciones climatológicas no son las mismas en el norte y en el sur del país. La figura 1 muestra las entidades federativas con capacidad instalada para generación de energía eléctrica de fuentes renovables.

Figura 1: las Entidades Federativas con Capacidad Instalada Para Generación de Energía Eléctrica de Fuentes Renovables

*En El Norte Del País Es Clima Desértico Y La Fuerte Reflexión Solar La Hacen Propicia Para La Captación A Través De Paneles Solares, Mientras Que En El Sur Las Ventajas Eólicas E Hidroeléctricas Son Las Predominantes. El Objetivo De Analizar Las Cuestiones Climatológicas Es Identificar La Viabilidad Para La Creación De Ciertos Proyectos De Energía Renovable De Acuerdo A Las Condiciones Que Prevalecen En La Región.*

## CONCLUSIONES

Crear proyectos de turismo sostenible es una alternativa de impulso al desarrollo de los pueblos indígenas, ya que busca generar ingresos económicos que intervengan positivamente en el nivel de bienestar de la población, promover la organización comunitaria, fortalecer el vínculo de las colectividades indígenas con sus territorios, y propiciar la revaloración, la conservación y el aprovechamiento sustentable de los recursos y atractivos naturales, así como del patrimonio cultural de los pueblos y comunidades indígenas.

Es posible establecer la conformación de circuitos y rutas de ecoturismo indígena para mejorar el posicionamiento de estas actividades en el contexto del mercado turístico nacional; y fortalecer las capacidades de las comunidades para que realicen el proceso de reconversión productiva (nuevas habilidades para la operación, administración y comercialización de productos y servicios) y que tengan condiciones de convertir al ecoturismo en una opción para el desarrollo. Con los proyectos de turismo sostenible los pueblos indígenas, pueden avanzar con un impacto económico como generador de empleos, fuentes de ingresos al recibir visitantes; así mismo se genera un impacto social al compartir con los visitantes su riqueza natural y cultural, se apoya a la conservación de costumbres y tradiciones además de darles difusión para no perder lo que es parte de nuestras raíces e historia. En cuanto a los recursos naturales, se tiene menor impacto sobre el medio ambiente, protegiendo y generando una consciencia de importancia y responsabilidad ante estos lugares. Los proyectos de turismo sostenible en los pueblos indígenas y comunidades rurales deben incluir actividades de turismo alternativo y turismo indígena, así como contar con la infraestructura para desarrollarlos y fomentar las actividades económicas necesarias para la actividad turística. Dichos programas combinados con la instalación de energías renovables en estas localidades coadyuvaran al desarrollo sostenible que hoy en día se busca no solo en México si no en muchos países alrededor del mundo.

## RESUMEN

*Hoy en día, es común escuchar sobre la nueva Reforma Educativa, propuesta por el titular del poder ejecutivo federal Enrique Peña Nieto el 11 de diciembre del 2012, en México. Esta propuesta reforma y adiciona diversas disposiciones de la Constitución Política de los Estados Unidos Mexicanos en materia de Educación, contempla elementos que podrían marcar un antes y un después. Además, esta reforma contempla la responsabilidad social y la innovación (de productos, de servicios, de sistemas, de marcas, de la estrategia mercadológica, etc) cuestiones importantes, que influyen para llegar a otros mercados y beneficiar a nuestro país fenómenos importantes que influyen y benefician a nuestro país.*

*Tomando en cuenta que la historia de México en educación ha sido marcada por los intereses políticos de sus gobernantes, que ellos deciden, lo que deben saber los Mexicanos; aparte de no permitir el ingreso de Universidades extranjeras al país.. Ahora con esta reforma se pretende una mejora soportada en cuestiones como: Responsabilidad social, educación basada en competencias y la innovación; que es reconocida como el primer punto de oportunidad en nuestros mercados globalizados, para estar dentro de la agresiva competencia que implica la misma globalización. Entonces podríamos resumir la reforma educativa propuesta cómo: Desarrollo Sustentable, como resultado de aplicar la responsabilidad social empresarial, la competencia de las personas y la innovación.*

**PALABRAS CLAVE:** Reforma Educativa, Responsabilidad Social E Innovacion

## EDUCATION REFORM THE NEW MEXICAN AN OPTION FOR GROWTH OF MEXICO IN INNOVATION AND SOCIAL RESPONSIBILITY

### ABSTRACT

*Today, it is common to hear about the new educational reform, proposed by the holder of the federal executive Enrique Peña Nieto on December 11, 2012, in Mexico. This proposal reform and adds various provisions of the political Constitution of the Mexican United States in education, includes elements that could mark a before and an after. In addition, this reform provides social responsibility and innovation important phenomena that influence and benefit our country. Taking into account that the history of Mexico in education has been marked by political interests than their rulers in the last century it was considered that it is the best. Now this reform is to a remarkable improvement in the corporate social responsibility and invest in innovation, which is what a country needs for economic growth.*

## **ANTECEDENTES**

La Educación en México podría decirse que se divide en tres grandes etapas fundamentales:

Primera: La de 1921 a 1940 que podríamos llamarla rural o pos-revolucionaria.

Segunda: La de 1940 hasta 1976 que es la urbana capitalista.

Tercera: De 1976 hasta 2007 que corresponde a la globalización.

Cada período o etapa educativa ha correspondido estrictamente al modelo económico y político que se ha impuesto en el país obedeciendo siempre a los cambios nacionales sobre todo en las primeras dos y a los cambios internacionales para la tercera etapa, sobre todo a partir de 1940 y la segunda guerra mundial.

Podemos pensar que el proceso educativo mexicano sólo obedeció a la “supuesta” realidad nacional, dado que la economía del país, por lo menos desde 1940 ha sido muy dominada por el gobierno e inversionistas extranjeros y esta dependencia ha impuesto modelos económicos y valores culturales, la educación se subordinó La falta de competencia de los diseñadores de los programas educativos y la poca conciencia de los funcionarios públicos así como la presencia del sindicalismo al servicio de sus mismos líderes, el desinterés del gobierno por cuestiones educativas y el entorno social sin interés en la formación, sumando todo lo anterior ha repercutido al estancamiento y la caída de la educación mexicana; sin embargo no podemos culparlos solo a ellos, pues hay otros fenómenos de mayor peso que han determinado el rumbo y los retrasos educativos. Muchos países, como México, vivieron aislados del contexto internacional hasta la Segunda Guerra Mundial y del surgimiento de organizaciones internacionales como la ONU; por eso pudieron aplicar políticas que obedecían a sus dinámicas internas. Luego de los acuerdos internacionales, la suscripción de “apoyos” y préstamos, así como de objetivos y programas educativos que decimos educativos porque obedecían a intereses de países más poderosos. “Capitalismo”, llevaron a cambios esenciales a los que México no pudo, ni quiso, aislarse. Más bien aquellas recomendaciones internacionales se vieron como muy modernas.

Más bien aquellas recomendaciones internacionales se tomaron como observaciones importantes para la educación en México. La Educación Mexicana en sus primeros años de 1921 a 1940. Casi el 80 por ciento de la población vivía en el campo, y por eso recibía una educación que respondía a esas necesidades. Los planes, los programas, las asignaturas, giraban en torno al trabajo y a las necesidades de los hombres del campo. Las ideas de los funcionarios de gobierno y de los profesores obedecían a las necesidades de la agricultura. El profesor, el cura y el medico llegaron a representar la esperanza de los indios y campesinos. En los años 40, durante el gobierno del Presidente Ávila Camacho, se empezaron a registrar cambios educativos radicales que obedecieron esencialmente a circunstancias internacionales. En México cambió la orientación política del gobierno; en 1943 se transformó el texto del artículo 3 constitucional quitándole el objetivo “educación socialista” para ponerle “educación democrática”. Asumió Torres Bodet la secretaría de Educación y se fundó el Sindicato Nacional de Trabajadores de Educación (SNTE). Al concluir la segunda guerra mundial se creó la ONU y en 1946 se instrumentó la UNESCO. Las ciudades empezaron a crecer aceleradamente al mismo ritmo en que las inversiones en la

industria, el comercio, las carreteras y los transportes. Durante el gobierno de Miguel Alemán, en estrecha alianza con los inversionistas extranjeros, Los planes y los programas educativos, así como la orientación de los profesores, se fueron adecuando a las necesidades de estos.

La educación en México recibió un gran impulso educativo en los años sesenta con el Plan de Once Años de Torres Bodet (1959-1970) en la época del Presidente López Mateos y el segundo empuje de la época Echeverrista (con la creación e impulso a escuelas como: CCH, UAM, Bachilleres); sólo pusieron al día a la educación nacional que requería la industria del capitalista, para su desarrollo. La realidad es que lo único que se buscaba era capacitar mano de obra barata para integrarla a la producción a las incipientes industrias mexicanas y corporativos extranjeros (maquiladoras) y al mismo tiempo frenar la gran demanda educativa nacional en la escuela primaria de los sesenta y media superior y superior de los setenta. En aquellos sexenios el gobierno pudo frenar una parte del descontento que se estaba presentando, aunque el movimiento de 1968 anunció que algo grave pasaba. La tercera etapa es el proyecto neoliberal privatizador que se inicia con la gran producción petrolera, la crisis en 1981 y la firma en 1982 con la privatización de la banca. La educación de ahora sólo responde a los intereses el gran capital internacional que mediante la reconversión industrial impone la competitividad subordinada.

Las universidades desarrollaron sus planes y programas para beneficio de sus empleadores quienes obtuvieron una rentabilidad económica. A partir de 1982 con la imposición del neoliberalismo político y económico, la educación pública comenzó a desplomarse para dar paso a la educación privada. Con el proyecto de privatización de la educación (que no se ha consumado hasta ahora), que se inicia con el presidente De la Madrid, y se profundiza con los mandatos de Salinas, Zedillo, Fox y Calderón. Se buscaba identificar a la sociedad con los empleadores que son quienes con sus requisitos productivos, imponen el proyecto educativo. Logran que los profesores y los investigadores obedezcan a criterios de mercado, a lo que se llama criterios de rentabilidad económica. Con el argumento de que todos los egresados deben lograr empleo se orientan todas las carreras universitarias a las necesidades del mercado laboral y se abandona lo humanístico.

Con la carrera magisterial y los contratos de investigación con empresas privadas, se hizo a un lado la lucha colectiva y las batallas sindicales por conquistas comunes. En México desde 1984, junto con la firma del Tratado de Libre Comercio, se creó el CENEVAL con el argumento de que las evaluaciones ayuden a unificar programas y conocimientos con otros países. El centro de evaluación se convirtió en un gran negocio multimillonario privado al mismo tiempo que ha servido para rechazar de la escuela pública a millones de estudiantes y, al mismo tiempo encaminarlos a los negocios de los colegios privados.

### Reforma Educativa

Actualmente empieza una nueva etapa en la educación de México con la nueva reforma educativa se pretende: Primero. Crear el Sistema de Servicio Profesional Docente, el cual estará integrado por concursos de ingresos para docentes y para la promoción a cargos con funciones de dirección y de supervisión en la educación básica y media superior. Con dicha creación se estarían fijando los términos para el ingreso, la promoción y la permanencia en el servicio. Los criterios para determinar la promoción o el sistema de reconocimientos corresponderán exclusivamente al mérito y a la preparación de cada maestro. Como se sabe, este esquema hoy es manejado por el Sindicato Nacional de Trabajadores de la Educación (SNTE), mismo que determina plazas, salarios, cargos, etcétera. El Instituto Nacional para la Evaluación de la Educación (INEE) tendrá atribuciones para evaluar el desempeño y resultados del Sistema Educativo Nacional. Para esto, la reforma busca dotarlo de autonomía constitucional y con ello otorgarle facultades para diseñar y

realizar los cambios necesarios que vaya requiriendo el sistema educativo. Se buscará que el INEE esté formado por personas con reconocida capacidad y que sea un cuerpo colegiado el que realice la selección de estas, aunque el presidente de la junta de gobierno del INEE será propuesto ante el Senado de la República por el titular del Poder Ejecutivo nacional.

Segundo. Se busca que la evaluación magisterial, en primer lugar, no sea potestativa o voluntaria, sino obligatoria para todos los maestros. (Y solo con el fin, de encontrar puntos de oportunidad y practicar la mejora continua). Tercero. Que la evaluación no sea pactable. Se crean las escuelas dignas y escuelas de tiempo completo con criterios de calidad, equidad y autonomía de gestión de las escuelas, es decir, se busca darle a cada escuela, los medios necesarios para que cada director haga las mejoras de infraestructura, compre los materiales didácticos, equipe a las escuelas, etcétera. (A través de la construcción de un sistema de gestión de la calidad educativa, implementado por el mismo personal de la escuela). Cuarto. Se crea el Sistema de Información y Gestión Educativa. Este tiene como propósito realizar un censo de escuelas, profesores y alumnos, con el fin de corroborar datos, porque por increíble que parezca no se sabe con exactitud cuántas escuelas, alumnos, o maestros hay en el sistema educativo mexicano. Quinto. Se quiere impulsar el suministro de alimentos nutritivos y prohibir la comida que no favorezca a la salud de los educandos. Los alimentos que se proveerán tendrán que cumplir con las normas oficiales de la Secretaría de Salud. Además, por mandato constitucional se busca prohibir la comida 'chatarra'. Sin duda esto es una de las más grandes e históricas reformas de México. En esta reforma se modificaron los artículos 3°. Fracciones III, VII y VIII, y el artículo 73, fracción XXV; así como se adiciona la fracción IX al artículo 3°, de la Constitución Política de los Estados Unidos Mexicanos. Estos son algunos cambios que propone el Ejecutivo además de la evaluación docente:

- 1.- Servicio profesional Docente.
- 2.- Dotar de autonomía al Instituto Nacional para la Evaluación de la Educación.
- 3.- Crear un sistema de Operación y Gestión Operativa.
- 4.- La creación de hasta 40 mil escuelas de tiempo completo.

#### Postura del SNTE Por la Nueva Reforma Educativa

El dirigente del Sindicato Nacional de Trabajadores de la Educación (SNTE), Juan Díaz de la Torre, refrendó la conciencia de responsabilidad social del magisterio, su compromiso con el desarrollo nacional y respaldo a la reforma educativa. Los docentes de México están a favor de la reforma educativa, que concilie la mejora de la calidad de la enseñanza con el respeto a sus condiciones laborales y profesionales.

Durante una reunión con los secretarios generales de las secciones 8 de Chihuahua, Alejandro Villarreal Aldaz, y de la 37 de Baja California, José Alberto Martínez Carrillo, aseguró que los mentores están conscientes de su responsabilidad social y su alto compromiso con el desarrollo nacional. Díaz de la Torre destacó que el concurso de maestros, padres de familia, alumnos y la sociedad en general son indispensables para elevar la calidad de la educación, objetivo de la reforma, para que responda a las expectativas sociales. En un comunicado, el SNTE refirió que en el encuentro también se habló sobre la aspiración magisterial de contar con programas permanentes de actualización y superación profesional, prioritarios para cumplir de mejor manera la misión educadora y enlazar esquemas de revaloración social y retribución económica. Al final de la reunión, ambos secretarios generales expresaron su respaldo a Díaz de la Torre, y sostuvieron que es momento de demostrar la unidad y cohesión que ha caracterizado al gremio magisterial.

### La Reforma Educativa y la Reponsabilidad Social

México es un ejemplo donde las crisis económicas han provocado problemas de hambre y pobreza, el gobierno ha asumido el compromiso de emprender proyectos sociales en conjunto con la sociedad civil.

Con la nueva reforma educativa concatena muy claro la Responsabilidad Social, ya que plantea dos grandes objetivos, la calidad y la equidad en la educación, dando prioridad a las comunidades en condiciones marginadas y pobreza buscando disminuir las diferencias sociales en nuestro país. Calidad en la educación es hacer efectivo que los alumnos tengan mejores maestros que estén más tiempo en los planteles para que su formación sea más completa, que tengan acceso a una alimentación sana y nutritiva, que cuenten con mejores libros de textos y materiales educativos, que sus escuelas tengan instalaciones adecuadas y en buen estado. Es importante contar con políticas publicas que fortalezcan el sistema de los esquemas de Ciencia y Tecnologia, la capacidad de I+D+i (Invesigación, Desarrollo tecnológico e innovación), de las instituciones educativas publicas y privadas y el desarrollo y formacion del capital humano que puedan definir el éxito con que una economía absorbe un nueva reforma. Todavía existen innumerables cosas que resolver en Mexico, pero una forma de reducir la pobreza es generando riqueza, conocimiento y competencia, se necesita generar empleos, por lo tanto la seamos socilamente responsables y desde nuestras trincheras, hay que ayudar a generalos.

### La Reforma Educativa y la Innovacion

Historicamente la innovacion y creatividad se han vistos afectados por la inestabilidad de las politicas, sobre todo en al ambito presupuestario, donde distintos componentes adquieren mayor o menor relevancia a medida que cambian los gobiernos, y eso sucede con I+D+i; muy pocos presidentes en México han impulsado a la ecuación, sin embargo, ahora es una cultura de la globalización, dónde se sabe perfectamente que el negocio de la Innovación representa el 80% de los negocios de la globalización.

Aunado esto se ve un circulo vicioso en donde no hay demanda de tecnologia por parte de las empresas, y al mismos tiempo las Instituciones Educativas se alejan de la investigacion aplicada. Tomando en cuenta que las Instituciones Educativas tienen un papel protagonico en la gestion del conocimiento y si el sistema productivo y las empresas no lo demandan, seguiremos viviendo en la indiferencia.

En paises como Mexico los procesos de innovación son mas bien de adaptacion y de mejoras incrementales, con bajo peso en descubrimientos científicos y casi siempre sin propiedad intelectual.

La reforma educativa, tendrá un impacto positivo en los programas de investigación para la enseñanza de la ciencia dirigida a los niños y jóvenes, impartidos por Inovec (Innovación en la Enseñanza de la Ciencia), por la apertura que representará a los proyectos de este rubro en las escuelas. “La reforma es muy importante, porque ampliará las condiciones académicas de las escuelas y nos permitirá llevar los programas de ciencia y tecnología a más estados. Queremos que los niños puedan aprender y para eso hace falta que los maestros estén bien preparados para trabajar”, indica Fernández en entrevista para *Forbes México*. Existen algunos programas son voluntarios, en los estados se abre una convocatoria para las escuelas a través de la Secretaría de

Educación Pública (SEP), con el propósito de incorporar a sus planes de estudios los proyectos de ciencia y tecnología.

Con esta reforma se crean nuevos centros. Fumec por medio de Innovec ofrece el desarrollo de estos programas, impulsados con el financiamiento del gobierno federal que proporciona el 50% del mismo, en tanto que el gobierno estatal el 50% restante. El reto: combatir estereotipos y trabajar fuertemente para lograr la ecuación I+D+i. De acuerdo con OCDE, México ocupa el lugar número 40 en el ranking mundial en desarrollo de tecnología e innovación, en este sentido, el especialista afirma que el principal reto es evitar caer en estereotipos, impulsar ideas originales y creer en el talento mexicano. Asimismo, considera que es prioridad que el tecno Pyme posicione su marca dentro del mercado internacional, pues "la internacionalización significa una gran oportunidad, pero también un gran compromiso. Una empresa necesita estudiar e interactuar con personas que se manejen en otros mercados para conocer sus oportunidades de crecimiento, pero también sus deficiencias, a fin de ajustarse a las necesidades del mercado extranjero". "Los mexicanos tenemos un gran potencial en el mercado tecnológico, pero debemos creer que podemos hacer bien las cosas".

### Situacion Actual

La nueva reforma educativa, pretende elevar el nivel de la educación, es excelente esta propuesta, solo que hay un punto que falta evaluar. " Los padres de familia " con toda la historia redactada anteriormente donde observamos que cada etapa de la historia la educación ha sido dirigida de acuerdo a los gobernantes en turno, y al contexto internacional, así como a los sindicatos, considero que no podemos culparlos el 100%, ya que el principal apoyo para un estudiante es en casa, los profesores no podrán hacer nada si tienen estudiantes con hambre, con traumas psicológicos, etc. Cuando un alumno se encuentra en un ambiente hostil, donde los docentes están descontentos y la sociedad critica su actuar, el desempeño del estudiante y maestro es menos exitoso, por el contrario, si se encuentran en un entorno positivo, generan relaciones de confianza, transparencia, estables, permite entonces que la educación sea exitosa y el desarrollo sustentable para la educación.

### **CONCLUSION**

Como conclusión, para lograr un crecimiento concatenando, educación, responsabilidad social e innovación se debe tener una coordinación con políticas económicas y sociales y políticas educativas, para obtener un capital humano calificado y ser congruente con las exigencias de la estructura productiva y la demanda del sector privado. La batalla por una buena educación es tarea de todo el pueblo Mexicano y, para ello tenemos que trabajar todos en conjunto, como lo observamos anteriormente la historia nos dice que cada gobierno ha propuesto un modelo de educación diferente de acuerdo a lo que se cree más conveniente en el contexto político, internacional etc., Pero los padres, la familia tenemos la responsabilidad y la obligación que a pesar de cada sexenio cambien políticas educativas, seamos guías para la buena educación de nuestros hijos. La reforma va permitir la construcción de bases sólidas para que los niños al incorporarse a la sociedad tengan una visión de un mundo competitivo, globalizado, creativo, innovador y tendrán un esquema bien diseñado de la responsabilidad social con ellos mismos, con su medio ambiente y su propio país.

## **RESUMEN**

*La presente investigación es sobre las Micro, Pequeñas y Medianas Empresas, dedicadas a la construcción de viviendas en Mexicali, Baja California. Es un estudio de tipo descriptivo en el cual se identifican los factores que impactan la competitividad de las citadas empresas. Las variables estudiadas son la gestión estratégica y la competitividad. En la gestión estratégica se estudian la planeación, la organización, la dirección y el control. En la competitividad se estudian los distintos propulsores de la competitividad, las oportunidades, las fortalezas, las debilidades y las amenazas de las empresas. El propósito de este estudio es proporcionar información actualizada a los empresarios que pretenden establecer una empresa de este tipo, para que tomen medidas precautorias y las consideren en su plan de negocios. También se pretende que este estudio sea de utilidad para que los empresarios que actualmente tienen una empresa constructora puedan establecer un plan económico administrativo eficiente. Para lograr el propósito anterior, se entrevistan encargados de la Cámara Mexicana de la Industria de la Construcción en Mexicali, y se estudia una muestra no probabilística de 25 empresas constructoras de esta localidad. Los datos obtenidos se analizan a través de estadística descriptiva. Los resultados del estudio permiten plantear conclusiones.*

**PALABRAS CLAVE:** Competitividad, Empresas Constructoras

## **FACTORS THAT IMPACT THE COMPETITIVENESS OF HOME CONSTRUCTION BUSINESSES IN MEXICALI, BAJA CALIFORNIA, MEXICO**

### **ABSTRACT**

*This research is about the Micro, small and medium-sized enterprises, engaged in the construction of housing in Mexicali, Baja California. It is a descriptive study which identifies the factors that impact the competitiveness of these quoted companies. The variables studied include strategic management and competitiveness. Strategic management focuses on planning, organization, direction and control of the businesses. Competitiveness explores different propellers of competitiveness, opportunities, strengths, weaknesses and threats from the companies. The purpose of this study is to provide up-to-date information to entrepreneurs seeking to set up a business of this type, so that they may take precautionary measures and consider them in their business plan. It is also intended that this study will be useful so that employers who currently have a construction company can establish an efficient administrative economic plan. To achieve the previous purpose, interviews to managers of the Mexican*

*Chamber of the industry of construction in Mexicali are done, and a non-probability sample of 25 local construction firms is studied. The data obtained are analyzed through descriptive statistics. The results of the study allow to draw some conclusions.*

**JEL:** M10

**KEYWORDS:** Competitiveness, Construction Business

## INTRODUCCIÓN

Dadas las condiciones económicas de incertidumbre que se presentan en la actualidad en México, las empresas nacionales han tenido que establecer medidas que permitan sostener su crecimiento y, en algunos casos, permitir su subsistencia; sin embargo, tratándose de las micro, pequeñas y medianas empresas (MIPYMES), estas condiciones del mercado producen un alto riesgo de generar la desaparición de ellas. A decir de Horcasitas (2001) en la industria de la construcción al igual que en cualquiera de los sectores productivos en México, participan empresas familiares, las cuales nacen, se desarrollan y en ocasiones desaparecen sin alcanzar sus objetivos planteados a largo plazo, con la consecuente pérdida de recursos económicos, humanos y tecnológicos. Según datos proporcionados por el Instituto Nacional de Estadística Geografía e Informática [INEGI] (2011), la población total de empresas constructoras en México era en 2009 de 4363, mientras que según INEGI (2013), la población total de empresas constructoras en México en 2011 descendió a 3594, lo que refleja una disminución de 769 empresas. Es decir, hubo una disminución de 18% con respecto al año 2009.

El cierre de estas empresas pone de manifiesto que existen factores que inciden en su permanencia en el mercado. Por tanto resulta evidente que existe la necesidad de identificar estos factores para que las citadas MIPYMES puedan estar preparadas para anticiparse a estas problemáticas de una manera efectiva.

Las causas de esta mortandad de empresas podrían ser muy variadas. Factores tanto económicos como administrativos podrían haber repercutido. Según datos de la Cámara Mexicana de la Industria de la Construcción [CMIC] (2013), el índice de la actividad de la construcción ha registrado una variación porcentual real de 5.4 en (enero-marzo) 2012 a -2.3 en (enero-marzo) 2013. El citado organismo señala que esta disminución “fue reflejo de una caída en la demanda de materiales de construcción” (párr.1). Por otra parte la falta de una planeación estratégica de las empresas que conforman la industria de la construcción, puede también dar pie a la desaparición de las mismas. Al respecto, Quijano, Magaña y Argüelles (2013) señalan que...

El 90.3% de los socios fundadores han alcanzado una licenciatura como nivel máximo de estudios, donde predomina la profesión de ingeniero civil, no aplican la administración estratégica en sus empresas, lo que puede originarse de un conocimiento mínimo sobre administración empresarial (p.13).

Resulta evidente que la falta de una filosofía, misión, visión y objetivos que dirijan los pasos de las empresas constructoras puede llevarlas a una baja competitividad y eventualmente al colapso, pues no les permite prever los efectos de los diversos cambios económicos, que repercuten directamente en sus costos y gastos administrativos, afectando en mayor grado a las MIPYMES. Dado lo anterior, el presente trabajo se realiza con el propósito de proporcionar información actualizada a los empresarios que pretenden establecer una empresa de este tipo, para que tomen medidas precautorias y las consideren en su plan de negocios. Asimismo se pretende que este estudio sea de utilidad para que los empresarios que actualmente tienen una empresa constructora

puedan establecer un plan económico administrativo eficiente. El estudio se presenta a través de una sección de revisión literaria en donde se retoman algunas publicaciones sobre gestión estratégica, sobre competitividad y sobre los propulsores de la competitividad. Asimismo se presenta un apartado de metodología en donde se describen los sujetos de estudio, así como los materiales utilizados y el procedimiento empleado. Finalmente se presentan los resultados y conclusiones derivados del estudio.

## REVISIÓN LITERARIA

Para comenzar este recuento se inicia por definir qué son las micro, pequeñas y medianas empresas (MIPYMES) dedicadas a la industria de la construcción. A decir de INEGI (2013) son... la unidad económica y jurídica que bajo una sola entidad propietaria o controladora se dedica principalmente a la ejecución de obras de construcción, tales como: edificación residencial, ya sea vivienda unifamiliar o multifamiliar; a la edificación no residencial, como naves y plantas industriales, inmuebles comerciales, institucionales y de servicios; a la construcción de obras de ingeniería civil, como suministro de agua, petróleo, gas, energía eléctrica, telecomunicaciones, urbanización, puentes, carreteras, presas, vías férreas, centrales eléctricas y puertos; a la realización de trabajos especializados, como cimentaciones, montaje de estructuras prefabricadas, trabajos de albañilería, instalación en construcciones de equipos y materiales prefabricados, acabados en edificaciones, demolición, relleno de suelo, movimientos de tierra, excavación, drenado y otras preparaciones a los suelos (p. 3).

Sobre el tema de las MIPYMES dedicadas a la industria de la construcción se han realizado algunas investigaciones previas. Se encontró el estudio realizado por Quijano, Medina y Argüelles (2013) en la ciudad de Campeche, quienes comentan que para que las empresas logren sus objetivos, necesitan establecer planes estratégicos que les permitan integrarse al constante cambio empresarial que hoy día viven las empresas, los investigadores realizan un estudio sobre el nivel de conocimientos que poseen los propietarios de empresas constructoras familiares sobre administración estratégica y llegan a la conclusión de que los empresarios no elaboran planes estratégicos de negocios por lo que no cuentan con metas y objetivos definidos. Otro estudio realizado sobre el tema en comento, fue el llevado a cabo por Morales y Blanco (2007) el cual tuvo como objetivo determinar las necesidades y proyectos de infraestructura en las empresas constructoras, su financiamiento y las decisiones de las mismas. Los autores de este estudio llegaron a la conclusión de que no existe un predominio de los criterios técnicos y económicos en materia de infraestructura prevaleciendo los criterios políticos con los que se toman determinaciones que afectan gravemente la visión de la infraestructura que necesita el país.

Así también se revisó el estudio realizado por Gaytán (2003) sobre las grandes empresas constructoras de Monterrey en México, el cual es un estudio de tipo no paramétrico de consistencia en las determinantes de la productividad. El objetivo del estudio fue “determinar si las empresas constructoras grandes en el área metropolitana de Monterrey son consistentes entre sí al determinar la importancia de los diversos factores que se relacionan con la productividad (calidad, tecnología, administración y los recursos humanos)” (p.1). Algunas conclusiones a las que se llegaron en este estudio fueron que las empresas constructoras más importantes de Monterrey si son consistentes al considerar qué factores son importantes para la productividad, entre los que se encontraron “calidad, tecnología, recursos humanos y administración” (p. 61).

### Gestión Estratégica

La revisión de investigaciones previas realizada, dejó claro que las empresas requieren establecer planes estratégicos que las ayude a sobrellevar el vertiginoso y competitivo mundo empresarial. Sobre la gestión estratégica se encontró que De Gregorio (2003) afirma que... el principio que guía la gestión estratégica de la organización es el de maniobrar en el espacio delimitado por las oportunidades que facilita el entorno y las capacidades de la organización. El margen de maniobra incluye tanto la adaptación de la organización a su entorno como la capacidad de la organización para modificarlo. De esta manera, la capacidad que las organizaciones tengan para adaptarse a su cambiante entorno determina su supervivencia. Al hablar de las organizaciones, De Gregorio (2003) señala que “las organizaciones competitivas—no tan sólo en el sentido de mercado— destacan por su capacidad para definir con claridad sus finalidades y por implicar a todos sus miembros en su consecución” (p. 11). En el mismo sentido, Betancourt (2006) comenta que “Es importante señalar que la Gestión Estratégica es realmente una habilidad y una responsabilidad que debe poseer cada miembro de la organización en función gerencial” (p.27). De Gregorio (2003) precisa que la organización debe ser capaz de definir sus fortalezas y debilidades, o de lo contrario no podrá diferenciarse respecto de otras ofertas; he ahí la importancia de la realización de un diagnóstico interno. El antes citado autor destaca que “el contraste entre las capacidades de la organización y el análisis del entorno delimitará el espacio donde se deberán determinar las finalidades” (p. 15). De esta manera se facilita la estructuración de la organización y también su gestión. A partir del conocimiento de sus capacidades y del análisis de su entorno y mediante la gestión estratégica, la organización puede definir y sintetizar claramente sus finalidades, tomando en cuenta los cambios de su entorno. Este dinamismo de las finalidades fijadas supone una adaptación a las nuevas realidades que se presenten. Betancourt (2006) analiza dos estrategias que se requieren aplicar en la organización: las estrategias adaptativas y las estrategias anticipativas. De las primeras comenta que son aquellas que le permiten sobrevivir a la organización, pues suponen un mecanismo de reacción al entorno. De las segundas comenta que son estrategias que permiten a la organización ser competitiva, pues suponen la realización de procesos de anticipación a los cambios del entorno. Por tanto, Betancourt (2006) define a la gestión estratégica como “Arte y/o ciencia de anticipar y gerenciar el cambio, con el propósito de crear permanentemente estrategias que permitan garantizar el futuro del negocio” (27).

### Competitividad

Aunque podría pensarse que la competitividad es un fenómeno reciente ligado a la globalización, a decir de Hernández Laos (2000), se han encontrado como sus antecedentes el concepto de ventaja absoluta propuesto por Adam Smith en 1776 y a la teoría de la ventaja competitiva propuesta por David Ricardo en 1887. Con el transcurso del tiempo se ha buscado definir qué es competitividad, sin embargo a decir de Hernández Laos (2000), “no existe una definición universalmente aceptada de competitividad” (p. 23). El *World Economic Forum* a través del *Global Competitiveness Report*, un indicador de competitividad muy difundido internacionalmente, ha definido a la competitividad como “el grupo de instituciones, políticas y factores que determinan el nivel de productividad de un país.” (Sala-I-Martin, Blanke, Hanouz, Geiger y Mia, 2009, 4). Algunos otros estudiosos del tema han definido a la competitividad como “el motor del crecimiento, progreso económico y social” (Banco Interamericano de Desarrollo, 2001).

Hernández Laos (2000) identifica tres elementos existentes en las definiciones de competitividad “a) mantener —o acrecentar— la participación en el mercado; b) sin reducir utilidades; y c) operar en mercados abiertos y competidos” (p. 23). Asimismo el antes citado autor distingue dos tipos

de competitividad a nivel nacional, la del orden productivo y la del orden financiero. La primera “refleja la capacidad del país para competir efectivamente con su producción local de bienes y servicios vis a vis la oferta externa, tanto en los propios mercados como en el exterior” (Hernández Laos, 2000, p.40). La competitividad financiera por su parte “refleja la capacidad del país para atraer capital del exterior y retener al capital local dentro de las propias fronteras” (Hernández Laos, 2000, p.40). Por su parte la Organización para la Cooperación y Desarrollo Económico [OCDE] (2007) ha señalado que...

Las economías regionales dependen de la interacción entre diferentes factores. Algunos de estos factores son: la base de los recursos naturales, las infraestructuras físicas, el medioambiente, las empresas existentes y emergentes y, la capacitación de la población (p. 22).

En la actualidad, México ofrece a la industria mundial ventajas competitivas muy importantes, tales como bajos costos de fabricación, transporte y distribución eficiente como resultado de su ubicación estratégica, así como excelentes condiciones para elevar la calidad de la producción. La competitividad de las empresas mexicanas ha ido en aumento. Sin embargo, “según Porter, las naciones registran condiciones competitivas sólo en algunos sectores, en los cuales tienen éxito exportador y muestran condiciones dinámicas de productividad y eficiencia” (Hernández Laos, 2000, p. 22). Vistas de esta manera las naciones, se puede afirmar que nunca son competitivas de manera general, sino sólo en partes.

Según Deloitte (2010) existen diez propulsores en la competitividad manufacturera, los cuales reflejan la interacción esencial entre las fuerzas del mercado y gubernamentales. Los propulsores son: 1) innovación impulsada por talento; 2) costo de mano de obra y materia prima; 3) costo y políticas de energía; 4) sistemas económicos, comerciales, financieros y fiscales; 5) calidad de la infraestructura física; 6) inversión gubernamental en manufactura e innovación; 7) sistema jurídico y normativo; 8) red de proveedores; 9) dinámica local de negocios; 10) calidad y disponibilidad de la atención médica. Según la antes citada fuente, la innovación impulsada por el talento, se refiere a la calidad y a la disponibilidad de grupos de expertos en el país. Los grupos incluyen trabajadores capacitados, científicos, investigadores, ingenieros y maestros, quienes, en conjunto tienen la capacidad de una innovación continua, de lograr una mejora en la eficiencia de la producción.

Los costos de mano de obra y materia prima son dos factores importantes de producción, que incluyen todos los costos de desarrollo, cumplimiento normativo y prestaciones a los empleados, junto con el costo total de los materiales, que incluye costos de logística y de obtención de la materia prima. Este propulsor sigue siendo vital para la competitividad de la industria manufacturera. El costo y políticas de energía es también un propulsor importante en la actualidad. Así también en los próximos años el liderazgo particularmente en energía limpia y sustentable, será un componente destacado de la competitividad manufacturera de un país. Los sistemas económicos, comerciales, financieros y fiscales realizan un papel muy importante. Es evidente que la normatividad y políticas adecuadas en torno a sistemas fiscales, comerciales, de banca central y financieros en el ámbito corporativo, propician el clima de negocios necesario para que los sectores industriales de un país se desarrollen.

La calidad de la infraestructura física es otro propulsor de la industria de los países, pues se encuentra estrechamente vinculada con la calidad de su infraestructura física para el comercio. Así la disponibilidad eficiente en la transmisión de energía e información es un propulsor para que se integre el mercado local y para que éste se integre con mercados internacionales. La

inversión gubernamental en manufactura e innovación promueven la generación y difusión de conocimientos y ejercen un fuerte y positivo impacto en la competitividad a largo plazo del sector manufacturero. Aquí se incluyen por tanto, las inversiones gubernamentales en ciencia y tecnología, así como el apoyo a instituciones dedicadas a la investigación. Así también Deloitte (2010) sostiene que un sistema jurídico y normativo ejerce una influencia positiva en la productividad y eficiencia de las operaciones, pero precisan que en el mismo sentido, “un sistema jurídico y normativo complejo y gravoso, con altos costos de cumplimiento o una protección deficiente a la propiedad intelectual crea un obstáculo a la competitividad del sector manufacturero” (p. 12).

La red de proveedores es otro propulsor que contribuye de manera muy significativa al valor agregado del sector manufacturero. Los proveedores actualmente son de gran importancia como activos esenciales para la compañía manufacturera, pues promueve procesos que expanden la colaboración y el trabajo conjunto entre proveedores altamente calificados y fabricantes. La dinámica local de negocios es un propulsor que en años recientes cobra vital importancia para la industria manufacturera, dado el ambiente de incertidumbre actual. Para tener éxito, no sólo se requiere sobrevivir, sino también buscar de manera proactiva la eficiencia y la productividad, así como la innovación, elevando el nivel para la entrada de competidores futuros. Finalmente Deloitte (2010) señala que la calidad y disponibilidad de la atención médica es otro propulsor para la competitividad de la industria manufacturera, pues es esencial para que la fuerza laboral sea eficiente y productiva. Se ha visto que el ausentismo ocasiona pérdidas y una fuerza laboral inadecuada, así como un obstáculo para la competitividad.

## METODOLOGÍA

Es un estudio de tipo descriptivo en el cual se identificaron los factores que impactan la competitividad de las empresas constructoras de vivienda. Los sujetos de estudio fueron las empresas constructoras de vivienda ubicadas en Mexicali, Baja California. Se tomó una muestra no probabilística de tipo por conveniencia. Se realizó una encuesta a 25 empresas que aceptaron participar en este estudio. Las variables estudiadas son la gestión estratégica y la competitividad. En la variable gestión estratégica se estudiaron dimensiones como la planeación, la organización, la dirección y el control. En la variable competitividad se estudiaron dimensiones como los distintos propulsores de la competitividad, las fortalezas, oportunidades las debilidades y las amenazas de las empresas. Se realizó una revisión documental sobre el contexto de la industria constructora y de los estudios previos realizados sobre el tema en cuestión. Posteriormente se diseñó y aplicó un instrumento de investigación conformado por 41 preguntas, de las cuales 40 fueron preguntas cerradas dicotómicas y de opción múltiple. Asimismo se incluyó una pregunta abierta la cual dio pie a una entrevista, y de esta manera se pudo obtener información más amplia sobre la percepción de los encuestados. La encuesta se realizó de manera telefónica y personal, durante los meses de octubre y noviembre de 2013. Los datos se procesaron a través del programa *Statistical Package for the Social Sciences* (SPSS) y se analizaron a través de estadística descriptiva, aplicando medidas de tendencia central, como lo es la media. Con los resultados obtenidos se establecieron algunas conclusiones.

## RESULTADOS

Los resultados de la presente investigación se presentan de acuerdo a ocho categorías de análisis, a saber: planeación, organización, dirección, control, fortalezas, oportunidades, debilidades y amenazas.

### Planeación

Los resultados obtenidos a través de la encuesta realizada a empresas constructoras ubicadas en Mexicali, Baja California, mostraron que 88% cuenta con una filosofía propia y que el 88% aplica esta filosofía en sus actividades cotidianas. El 88 % manifestó que todos los empleados conocen su filosofía. El 84 % de los encuestados manifestaron que cuentan con una misión y 72 % dijo que su misión es conocida por sus empleados. El 68 % expresó que todos sus empleados buscan alcanzar la misión de la empresa. Por su parte 72 % respondió que la constructora cuenta con una visión. El 60% manifestó que todos sus empleados conocen la visión de la empresa y el 76 % dijo que la empresa verifica el logro de la misma. Asimismo 88 % de los encuestados manifestaron que cuentan con objetivos definidos. El 76 % dijo que verifica el logro de sus objetivos y 72 % manifestó que el objetivo general de la empresa es conocido por todos sus empleados.

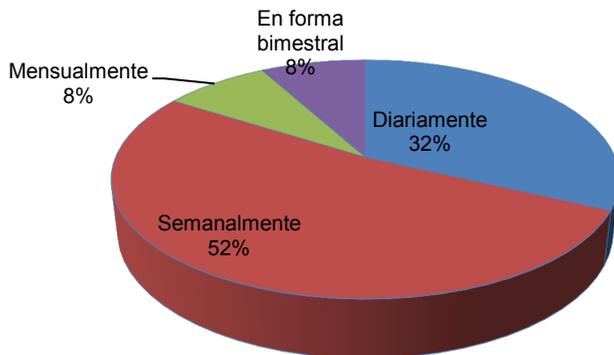

### Organización

En cuanto a su organización se obtuvo que 76 % contestó que la estructura organizacional de la empresa se encuentra definida en un organigrama. En tanto que 76 % manifestó que todos los empleados conocen la estructura organizacional de la empresa y el 84% expresó que todos sus empleados siempre respetan esta estructura organizacional. El 48 % manifestó que la empresa cuenta con un manual de funciones y el 84 % expresó que todos sus empleados conocen sus funciones. En congruencia con lo anterior, 88 % dijo que todos sus empleados cumplen con sus funciones.

### Dirección

El liderazgo ejercido en más de la mitad de las empresas encuestadas es autocrático, pues 56 % de los encuestados manifestó que la comunicación al interior de la empresa se da sólo de manera descendente. Esto podría significar que existe poca participación de los empleados en la toma de decisiones y en la consecución de las finalidades de la empresa. Sin embargo, se observa que para una gran mayoría el liderazgo se realiza buscando motivar a sus empleados, ya que 32% expresó que los directivos de la constructora consultan frecuentemente a los empleados para la toma de decisiones. El 76% manifestó que otorga beneficios adicionales a los estipulados por la Ley para motivar a sus empleados. El 68% manifestó que el principal medio por el que se comunica la gerencia de la constructora con sus empleados es la comunicación móvil, seguida por el correo electrónico con un 12%, altavoces internos con un 8% , de otras maneras como por ejemplo de manera personal verbal 8% y memorándums con un 4%. El resultado anterior no resulta consistente con la respuesta dada a la pregunta en torno a la periodicidad con que se reúne la gerencia con sus empleados, a la cual 52% de los encuestados contestó que lo hace semanalmente (Ver Figura 1).

Figura 2: Periodicidad Con Que Se Reúne la Gerencia con Sus Empleados

*En esta figura se muestra que en la mayoría de las empresas encuestadas existe una comunicación frecuente entre la gerencia y sus empleados.*

Si 32% de los encuestados se reúne diariamente y 52% lo hace cada semana, entonces el principal medio por el que se comunica la gerencia de la constructora con sus empleados debería ser el personal verbal.

Los resultados obtenidos dejaron claro que existe una estrecha comunicación entre los directivos de la empresa y sus empleados, lo anterior se confirmó ya que 56 % de los encuestados dijo que los directivos fomentan la participación de sus empleados en el logro de los objetivos de la empresa. Lo anterior también pone de manifiesto la existencia de un liderazgo democrático o participativo. El liderazgo democrático participativo resulta congruente con la existencia de empleados motivados para permanecer en la empresa. En este caso se observó que 64 % considera que sus empleados se encuentran siempre motivados para permanecer en la empresa. El 92 % manifestó que el factor que más motiva a sus empleados para desempeñar un mejor trabajo es el otorgamiento de beneficios económicos, como bonos, becas y demás.

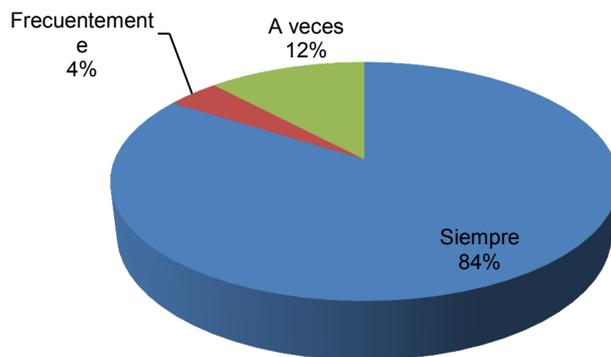

### Control

En relación a los controles operacionales que realiza la empresa, 52 % considera que siempre se lleva a cabo un control diario de las actividades realizadas por los empleados de cada área (Ver figura 2).

Asimismo 44% dijo que el encargado de vigilar la obra siempre elabora un reporte diario de incidencias.

Figura 2: Periodicidad Con Que El Área de Recursos Materiales Monitorea la Proveeduría de Material

de Insumos Necesarios Para la Actividad Diaria de la Empresa

En esta figura se observa que 12% de los encuestados manifestó monitorear sólo a veces la proveeduría de material e insumos, lo que puede provocar serios problemas en la actividad diaria de la empresa.

En cuanto a controles estratégicos, 56 % mencionó que la empresa aplica un sistema de monitoreo de logro de su visión, misión y objetivos. En tanto que 76 % de las empresas encuestadas dijo que aplica un sistema de control para el logro de los objetivos de planeación financiera. Los resultados en este rubro revelan que si bien en la mayoría de las empresas se realizan controles estratégicos, esta resulta una tarea perfectible. En cuanto a controles tácticos, 68% contestó que la empresa aplica un sistema de evaluación de desempeño de sus empleados. El 84% dijo que el área de recursos materiales monitorea la proveeduría del material e insumos necesarios para la realización de la actividad diaria de la empresa (Ver Figura 2). Asimismo 80% de los encuestados manifestó que el área contable siempre lleva controles sobre la fluidez de los recursos financieros necesarios para el trabajo diario de la empresa. Mientras que 68 % expresó que el área de obra y supervisión siempre aplica controles de diseño de proyectos y avances de obra.

*Fortalezas:* A decir de los encuestados la fortaleza más importante de la empresa es el prestigio, pues 64% así lo manifestó, seguida por experiencia 20%, equipo 12% y otra 4%.

*Oportunidades:* El 60% de los encuestados manifestó que las políticas de obra pública fomentan el desarrollo de su empresa constructora. El 76 % de los encuestados contestó que los proveedores de su empresa representan una oportunidad por su cercanía.

*Debilidades:* Los encuestados manifestaron que la debilidad más crítica de la empresa es la solvencia económica, pues 44% así lo manifestó. El 20% respondió que su debilidad más crítica es el prestigio, mientras que para el 12% de los encuestados es el equipo y para un 20% existen otras debilidades.

*Amenazas:* El 72% de los encuestados considera que la situación económica imperante en el país no impulsa el crecimiento de su empresa. El 76% señaló que las leyes fiscales no propician el crecimiento de su empresa. En tanto que 40% manifestó que las políticas de obra pública no fomentan el desarrollo de su empresa.

## CONCLUSIONES

La encuesta y entrevistas realizadas a los gerentes de las empresas constructoras, permitieron establecer las conclusiones que a continuación se presentan: La gestión estratégica que se realiza en las empresas constructoras encuestadas es en términos generales adecuada. La revisión

literaria mostró que las empresas que desean ser competitivas deben definir con claridad sus finalidades e implicar a todos sus miembros en su consecución. En el apartado de resultados se mostró como el 88% de las empresas tienen sus objetivos establecidos y el 72% cuenta con una visión definida. En el mismo sentido se observó que 72% de las empresas manifestó que todos sus empleados conocen el objetivo general y 60% dijeron que todos sus empleados conocen la visión. Asimismo se pudo observar que 68% de las empresas manifestaron que todos sus empleados buscan alcanzar la misión de la empresa.

El liderazgo que realizan las empresas estudiadas resulta ser consistente con la competitividad, pues los resultados del presente estudio muestran que sí existe un liderazgo participativo en donde se toma en cuenta a los empleados en la toma de decisiones y donde se tiene una comunicación muy frecuente con ellos, lo que favorece el involucramiento de todos en la consecución de las finalidades de la empresa.

Los controles estratégicos, tácticos y operativos resultan ser tendientes hacia la competitividad, sin embargo se observa que este rubro puede ser un área de oportunidad para las empresas. Se pudo observar que sólo 56% de las empresas dijo aplicar un sistema de monitoreo de logro de su visión, misión y objetivos; sólo 52 % manifestó que siempre se lleva a cabo un control diario de las actividades realizadas por los empleados de cada área; y únicamente 44% dijo que el encargado de vigilar la obra siempre elabora un reporte diario de incidencias

Los factores que impactan la competitividad de las empresas materia de estudio resultan ser diversos. El estudio mostró que las empresas constructoras en primer lugar consideran a la competencia como factor que impacta la competitividad de sus empresas; sobre todo la competencia desleal impacta de manera negativa, pues en ocasiones el abaratamiento al que algunas constructoras recurren sacrificando la calidad, provoca que los clientes por ahorrar un poco las prefieran, dejando a algunas empresas fuera del mercado. Por otro lado, la existencia en la región de constructoras con trayectoria más larga en el mercado, genera una fuerte competencia, con la consecuente preferencia dentro de la obra pública y privada. De ahí que para algunas empresas el prestigio se convierte en su principal fortaleza o su principal debilidad, como se observó en el apartado de resultados.

En segundo lugar consideraron como un factor muy importante al sector público, pues reconocen que es el motor que los mueve. Así lo reconoció 60% de los encuestados, al manifestar que las políticas de obra pública fomentan el desarrollo de su empresa constructora. Lo anterior cobra sentido si recordamos que uno de los propulsores de la competitividad es precisamente un adecuado sistema jurídico y normativo, pero como se mencionó en la revisión literaria, cuando este sistema se torna complejo y gravoso, con altos costos de cumplimiento o una protección deficiente a la propiedad intelectual se convierte en un obstáculo en lugar de propulsor de la competitividad.

También consideraron los entrevistados que un factor que impacta directamente a su competitividad es el factor económico. En el apartado de resultados se pudo observar que para un 44% de los encuestados la debilidad más crítica de la empresa es precisamente la solvencia económica y que para un 72% la situación económica imperante en el país no impulsa el crecimiento de su empresa. Los entrevistados mencionaron que si se quiere ser competitivo, hay que ofrecer un buen producto, para ello se requieren buenos materiales y esto conlleva a tener que lidiar con los altos costos de los mismos, con la consecuente disminución de sus utilidades. La creatividad y el buen manejo de recursos se torna, en consecuencia de vital importancia. Otro factor que impacta la competitividad de sus negocios, es la calidad del producto y del servicio especializado que ofrecen. A decir de los entrevistados el ofrecer trabajos de buena calidad

realizados con profesionalismo provoca que los clientes los prefieran. Sin embargo, reconocen que el bajo control de calidad de algunas empresas y su falta de visión, hace que los precios bajen en la industria de la construcción y disminuyan sus ganancias. Este factor está muy vinculado con otro factor que identifican, que es la experiencia. Los entrevistados consideraron que el tener experiencia en la construcción de vivienda impacta también en la competitividad, pues logra que los clientes los prefieran al ofrecerles un mejor servicio, al trabajar en tiempo y forma y al ofrecerles calidad y especialización de sus trabajadores.

Al llegar al término del presente estudio se hace la reflexión que el tema en comento presenta aún interesantes líneas de investigación. Futuras investigaciones podrán determinar cuáles han sido los problemas que han llevado a la quiebra a un gran número de empresas constructoras en los últimos años, o podrán identificar qué estrategias han puesto en práctica las empresas que aún se mantienen en el mercado, para poder sobrevivir, o tal vez describir las problemáticas que enfrentan las empresas pequeñas a diferencia de las empresas grandes. También sería interesante determinar si los factores que impactan la competitividad de las empresas constructoras son los mismos en todo el país.

### Limitaciones

Dentro de las limitaciones del presente estudio hay que resaltar, por una parte, que no existe un padrón de las empresas constructoras que se han ido a la quiebra, por lo que no fue posible entrevistarlas para poder ver las dos caras de la moneda. Asimismo se reconoce como limitante el que se tuvo que realizar un muestreo no probabilístico, ya que dadas las condiciones de criminalidad e inseguridad que imperan en México, no fue fácil que las empresas aceptaran dar información de su empresa.

# CULTURA DE INNOVACIÓN EN LAS PEQUEÑAS EMPRESAS CONSTRUCTORAS DE PUEBLA, MÉXICO

Rafaela Martínez Méndez, Benemérita Universidad Autónoma de Puebla  
María Antonieta Monserrat Vera Muñoz, Benemérita Universidad Autónoma de Puebla  
José Gerardo Serafín Vera Muñoz, Benemérita Universidad Autónoma de Puebla

## RESUMEN

*La presente investigación es de tipo descriptivo, en el cual se realizó un estudio acerca de la percepción que tienen los administradores y/ o dirigentes de las pequeñas empresas constructoras ubicadas en Puebla México acerca de la innovación. A fin de caracterizar la variable innovación, como sustento teórico se analizaron diversos autores relacionados con el tema para después considerar algunos aspectos que fueron medidos a través de un cuestionario de 35 ítems en escala de likert a una muestra de 64 administradores de pequeñas empresas. El objetivo de la investigación fue analizar las percepciones que tienen los administradores, dirigentes o propietarios de las pequeñas empresas constructoras ubicadas en Puebla sobre la innovación y el desarrollo. Entre los hallazgos relevantes encontrados fue que los administradores consideran el área más importante para la innovación en de las pequeñas empresas constructoras es la de procesos.*

**PALABRAS CLAVE:** Innovación, Barreras de la Innovación, Pequeñas Empresas

## ABSTRAC

*This research is descriptive, in which we performed a study on the perception of administrators and / or managers of small construction companies located in Puebla Mexico about innovation. In order to characterize the variable innovation as theoretical support discussed various authors related to the topic and then considers some aspects that were measured via a questionnaire of 35 Likert scale items with a sample of 64 managers of small businesses. The objective of the research was to analyze the perceptions of administrators, managers or owners of small construction companies located in Puebla on innovation and development. . Among the relevant findings was that the administrators consider the most important area for innovation in small construction companies is the process.*

**KEYWORDS:** Innovation, Barriers to Innovation, Small Businesses

## INTRODUCCIÓN

Ante la acelerada ola de cambios, en las últimas décadas, como la apertura comercial entre las naciones, las empresas se encuentran inmersos en un contexto altamente competitivo, lo que está obligando a las mismas a replantear sus estrategias para poder cumplir con las expectativas que demanda el mercado nacional e internacional. En este contexto la innovación y desarrollo dentro de las pequeñas y medianas empresas en México, se ha convertido en una de las áreas prioritarias por considerarse como herramienta estratégica para optimizar su crecimiento y competitividad. Por lo tanto, la presente investigación tiene como objetivo; analizar la percepción que tienen los administradores, dirigentes o propietarios de las pequeñas empresas

constructoras ubicadas en Puebla México sobre la innovación. Dada la importancia de la pequeña y mediana empresa en México, debido a su valor colectivo con las micro empresas que suman el 99.8% de todas las empresas a nivel nacional y proporcionan el 72.1% de los empleos formales en México, aportando 52% del PIB de acuerdo a la Secretaría de Economía (SE) y el Instituto Nacional de Estadística y Geografía e Informática (INEGI).

La innovación y el desarrollo (i-d) es tema de estudio a partir de los primeros trabajos de Schultz (1953) y Griliches (1958) citados por Álvarez, et.al (2011:142). Desde entonces se ha generado un considerable volumen de trabajo empírico y teórico al respecto. En varios modelos teóricos recientes se ha atribuido un papel protagónico a la misma en el impulso de la productividad y, por ende, del crecimiento económico (Romer, 1990; Grossman y Helpman, 1991; Rivera-Batiz y Romer, 1991; Aghion y Howitt, 1992). En este contexto en México, Morales Estrella, Ruiz Heriberto y Corona Abraham (2003), abordan la experiencia de Japón sobre el desarrollo y la innovación, el caso de México en las manufacturas del Estado de Hidalgo. Guerra Pablo (2010), quien analizó las percepciones que tienen los dirigentes de las pequeñas y medianas empresas sobre innovación y desarrollo.

En este contexto la presente investigación está dividida en los siguientes apartados: en el primero trata de los aspectos teóricos de la innovación, tamaño e innovación, competitividad e innovación y pequeña empresa; en el segundo apartado se presenta el marco contextual del sector de la construcción en México; en el tercer apartado se presenta la metodología aplicada en este estudio; en el cuarto apartado se presentan los resultados del estudio empírico y por último las conclusiones.

## **REVISION LITERARIA**

### Conceptualización de Innovación

Al referirse sobre innovación tecnológica es sabido que trata de la transformación de ideas en nuevos y útiles productos y/o procesos, así como al mejoramiento tecnológico significativo de los ya existentes. Para realizar innovación, es necesaria la inversión en investigación, desarrollo, pruebas y mercadeo. La inversión a su vez debe promover otra clase muy importante de insumo, un insumo creativo y talentoso, el capital humano. Para Schumpeter (1912), citado por Guerra (2005: 246), consideró a la innovación “como el motor que dinamiza la economía en su trayectoria hacia el progreso constante”, y que el sistema económico tenía que basarse en la competencia y en la libertad, que éste no podía ser estacionario, que debía evolucionar hacia nuevos productos, hacia nuevas formas de producción, hacia lo que él denominó “el procesos de destrucción creadora”. El manual Oslo (OECD 2006), citado por Morales, et.al (2013:4), define a la innovación como “la introducción de un nuevo o significativamente mejorado producto (bien o servicio), de un proceso, de un nuevo método de comercialización o de un nuevo método organizativo en las prácticas internas de la empresa, la organización del lugar del trabajo o las relaciones exteriores”.

Resulta importante mencionar el concepto de innovación que presentan los investigadores Corona y Jaso (2005) que refiere, que las empresas abarcan tanto novedades como adaptaciones simples y complejas, de productos o ideas que se dirigen a un nuevo mercado. En un sentido amplio, la innovación está en todas partes, afirma Godin (2008), citado por Albornoz (2009:10) Está en el mundo de los bienes (tecnología) pero también en el mundo de las palabras: la innovación es discutida en la literatura científica y técnica, pero también en ciencias sociales como la historia, la sociología, la administración y la economía. La innovación es también una

idea central en el imaginario popular, en los medios y en la política pública. . En síntesis la función de Investigación y Desarrollo puede ser definida como una actividad productiva que apoya el crecimiento y el fortalecimiento de la empresa a través de beneficios tangibles y cuantificables. Una gestión que no sea efectiva, podría debilitar las oportunidades de permanencia y consolidación de la empresa en el mercado haciéndola perder participación en el mismo, lo cual la conduciría a disminuir sus ganancias y eventualmente a desaparecer.

### Tamaño E Innovación

La innovación se ha convertido en una importante variable empresarial estratégica. La necesidad de adaptarse a los cambios, e incluso generarlos a través de una política agresiva de innovación, la han convertido en una actividad determinante para la obtención de importantes ventajas competitivas. Esta circunstancia ha obligado a las organizaciones a introducir dicha variable dentro de sus planes estratégicos, de forma que permita la consecución de la necesaria competitividad para operar en el contexto actual. No obstante que los empresarios están conscientes de la necesidad de innovar, muchas de ellas encuentran grandes barreras al desarrollo de este tipo de actividades.

Esta situación se agrava en el caso de las pequeñas empresas, con reducida capacidad financiera y escaso personal calificado para llevar a cabo el proceso innovador. En este sentido, no se puede afirmar que las pequeñas empresas son menos innovadoras que las grandes, aunque sí podemos anticipar que su comportamiento es distinto en materia de innovación. Respecto a la relación entre el tamaño de empresa e innovación, se perfilan principalmente dos posturas. Por una parte están aquellos autores que, siguiendo una de las hipótesis planteadas por Schumpeter (1944) citado por González A. et al (1997: 94) y desarrollada posteriormente por Galbraith (1956), consideran que las grandes empresas presentan un comportamiento más innovador. De otro lado encontramos aquéllos que resaltan determinadas características de las pequeñas empresas que las hacen más adecuadas para la introducción de cambios. Su estructura organizativa flexible les permite experimentar y actuar como pioneras en la introducción de novedades tanto en el interior de la organización como en el mercado, (Quinn, 1986; Abernathy y Utierback, 1976; Fernández y Fernández, 1988).

Los diferentes esfuerzos que buscan establecer tipologías de las empresas innovadoras, se pueden ubicar en dos grupos (Perez H. 2008: 135):1) Basados en las encuestas de innovación y que usan análisis de cluster: a) Cessaratto y Mangano (1993) consideran únicamente los indicadores de innovación y realizan una caracterización de las empresas manufactureras en Italia.; b) Arundel, Paul, y Soete (1995) analizan los resultados de las encuestas a grandes empresas transnacionales europeas. Usan el análisis de cluster para clasificarlas con respecto a los indicadores de innovación y las fuentes de conocimiento; c) Arvanitis y Hollenstein (1988) analizan los datos de la Community Innovation Survey, de las industrias manufactureras Suizas y determinan tipos de innovación usadas: 2) Basado en encuestas de innovación y empleando modelos econométricos; a) Terziovski (2001), empleando los resultados de las Encuestas de Innovación de Australia para pequeñas empresa realiza un análisis factorial para extraer factores y a partir de éstos efectúa una regresión múltiple; b) Estrada y Terrés (2003) con base en los resultados de la encuesta de innovación de las empresas en Guanajuato construyen una variable denominada conducta innovadora y efectúan un análisis factorial para estimar un modelo logístico.

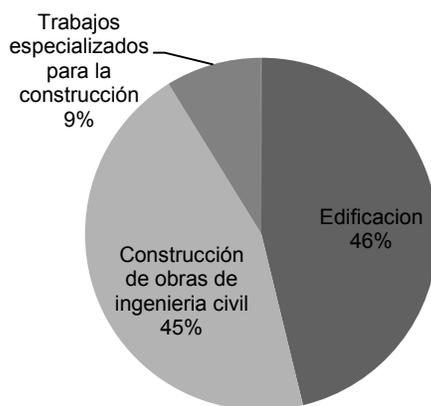

### La Competitividad y la Innovación

Para Schumpeter (citado por Morales, et.al.:4) competitividad es la capacidad y velocidad organizacional de aprender para innovar, por lo que innovación es la utilización productiva de un invento para lo cual nos menciona 6 tipos de innovaciones: a) Introducción de nuevos bienes o bienes sensiblemente diferenciados con nueva calidad.; b) Introducción de un nuevo método productivo; c) Apertura de un nuevo mercado; d) Nuevas fuentes de materias primas; e) Nuevas materias primas; f) Establecimiento de una nueva organización. En definitiva, nos encontramos en un entorno donde la evidencia de la globalidad de los mercados y los recursos es cada vez más notable, el fenómeno de la globalización junto con el paradigma tecno-productivo (C+I+D+i) ha puesto sobre el mismo terreno de juego a las empresas de todos tamaños y todos los lugares del mundo, al eliminarse las barreras económicas y los nichos geográficos. De tal forma, que el objetivo central de toda organización productora es la de hacer negocio a través de la generación de valor, donde la innovación junto con el conocimiento, la investigación y el desarrollo es determinante, para poder aportar al mercado productos, concepto y servicios nuevos, con alto valor agregado; lo que implica poner al consumidor siempre en el centro de nuestros planteamientos, desarrollos y evoluciones.

### La Industria Constructora en México

En este apartado se presentan datos estadísticas relevantes de la industria constructora en México proporcionados por el Instituto Nacional de Estadística, Geografía e informática (INEGI). Como se puede observar en el Figura 2, El valor de la obra construida por las empresas constructoras se concentró en Edificación con 46.2%, construcción de obras de ingeniería civil 45% y trabajos especializados para la construcción 8.8%..

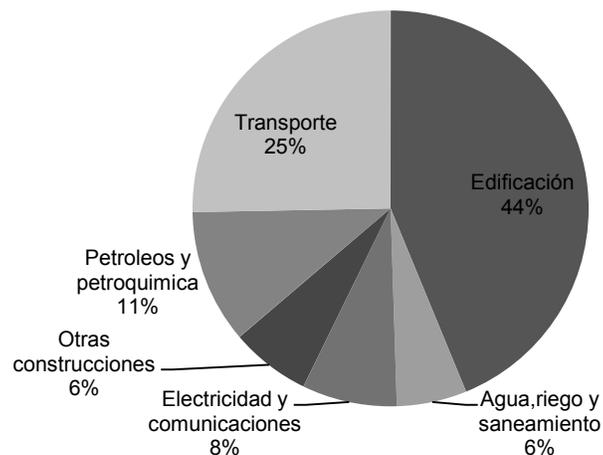

Figura 2: Composición de la Construcción Por Subsector, Durante Agosto 2013

*Esta figura muestra la distribución de la construcción por subsector en México en el cual se encuentran los trabajos especializados para la construcción, la construcción de obras de ingeniería y la que concentra una mayor participación es la edificación.*

Por tipo de obra, la edificación en general aportó como se puede ver en la Figura3, 42.9% del valor total, 24.8% , agua, riego y saneamiento 5.6% , electricidad y comunicaciones 7.6% Otras construcciones 8.4% y petróleo y petroquímica 10,7%.

Figura 3: Composición de la Construcción Durante Agosto 2013 Por Tipo de Obra

*Esta figura muestra la distribución de la construcción por tipo de obra destacando la edificación y el transporte representan en forma conjunta el 68% del valor total.*

## METODOLOGÍA

Esta investigación es de tipo descriptivo, en la cual se aplicó la investigación de documental para sustentar el marco teórico, conceptualizando la variable: innovación. Así como la investigación directa utilizando la encuesta para el estudio empírico Rojas Soriano (2008: 41). Para la recopilación de datos del estudio empírico; se utilizó un cuestionario con la finalidad de conocer la percepción que tiene los directores y /o dueños de las pequeñas empresas constructoras en Puebla, México, se diseñó un instrumento con 40 ítem en escala de Likert (1-5). Una vez diseñado el cuestionario fue necesario, antes de aplicar la encuesta, hacer una prueba piloto, que consistió en la aplicación de algunas encuestas al segmento de interés o grupo de estudio, a fin de verificar si el cuestionario se diseñó en forma correcta, así como estimar el tiempo de aplicación. Por lo tanto el cuestionario se aplicó primero a 10 directores de pequeñas empresas, encontrándose errores de semántica e interpretación que se corrigieron a la brevedad, eliminando 5 preguntas, por lo tanto el cuestionario que finalmente aplicado contenía 35 ítems. Se midió la fiabilidad del instrumento para lo cual se calculó Alpha de Cronbach utilizando el programa estadístico SPSS, de 0.884 que considera muy buena fiabilidad. La población objeto de estudio fue de en el Municipio de Tehuacán Puebla con datos del Instituto Nacional de Estadística Geografía e Informática (INEGI). La encuesta se aplicó a 64 pequeñas empresas.

## RESULTADOS

A continuación se presentan los resultados de la encuesta aplicada a 64 directores o dueños de las pequeñas empresas constructoras de Puebla, México.

Al preguntar, ¿Que lo motiva para ser innovador? Como se puede observar en la tabla 3, destacando para incrementar los ingresos, con media de 4,25 y desviación estándar 0.748, seguido de para maximizar el crecimiento del negocio con media de 4.17 y desviación estándar de 0.658 y el de menor promedio 2.15 y desviación estándar de 1.164 para tener un desafío.

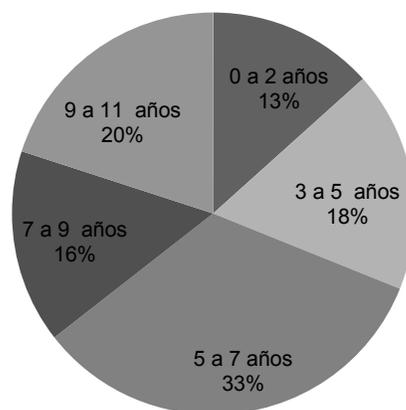

Tabla 3. Media y Desviación Estándar

Variable	Media	Desviación estándar
Para incrementar los ingresos	4,25	0.748
Para maximizar el crecimiento del negocio	4,17	0.658
Para incrementar las ventas y ganancias	4,04	1.155
Para ser más competitivos	3.47	1.070
Para dar un valor agregado a los productos	3,31	1.045
Para ser más eficientes	3,21	1.123
Para ser más productivos	3,21	1,012
Para tener reconocimiento público	3,03	1.056
Para tener un desafío	2,15	1.164
Otra	1,17	1,067

Esta tabla muestra, que para los encuestados lo que motiva a ser innovador es incrementar sus ingresos, con media de 4.25, en contraste con media de 2.15 para tener un desafío.

Al preguntar sobre el tiempo que han sido innovadores, como se puede observar en la Figura 4, el 33% de los encuestados respondió de 5 a 7 años, el 20% de 9 a 11 años, el 18% de 3-5 años, 13% de 0 a 2 años.

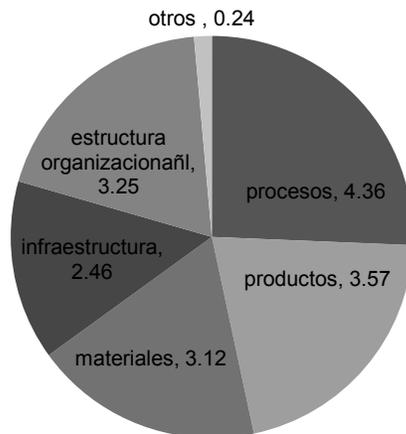

Figura 4: Años de Innovación

Esta figura muestra el tiempo en el que han sido innovadores los encuestados, el mayor porcentaje se encuentra entre 5 a 7 años, en contraste el 13% de 0 a 2 años.

Al preguntar sobre el área de más importancia para la innovación en su empresa, como se puede observar en la Figura 5, el promedio más alto corresponde a procesos de 4.36, seguido de producto con media de 3,57 como las más importantes.

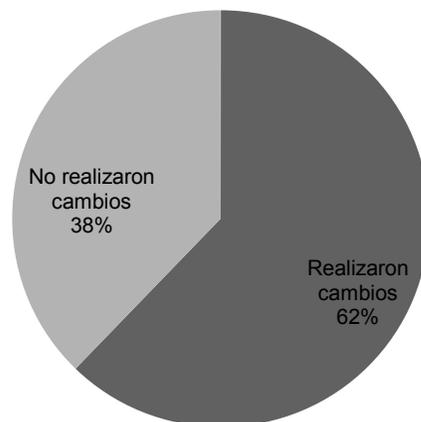

Figura 5: Áreas de Importancia Para la Innovación

*Esta figura muestra las áreas sobre las que consideran los encuestados en que se lleva a cabo la innovación, que es en procesos con una mayor media.*

Al preguntar sobre la situación de las empresas constructoras en cuanto a la realización de cambios en su estructura organizacional. Como se puede observar en la Figura 6, el 62% realizaron cambios en su estructura organizacional y el 38% no realizó ningún cambio.

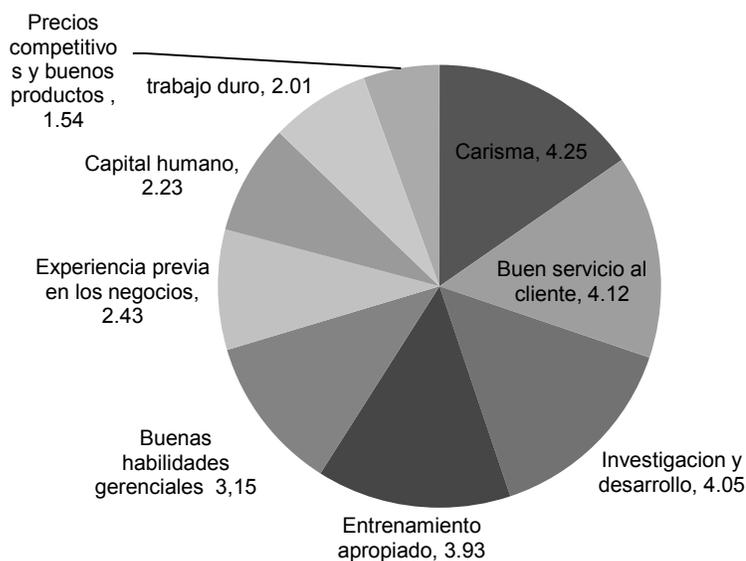

Figura 6: Cambios en la Estructura Organizacional

*Esta figura muestra si en las pequeñas empresas constructoras se han realizado cambios en su estructura organizacional*

Otra de las preguntas a los encuestados ¿Cuales son los factores que contribuyen para la innovación? Como se puede observar en la Figura 7., en las respuestas de los encuestados sobresale carisma con media de 4.25, seguido de buen servicio al cliente con media de 4,12 y con menor media de 1,54 precios competitivos y buenos productos.

Figura 7: Factores Que Contribuyen Para La Innovación

*Esta figura muestra que el factor que contribuye a la innovación en las pequeñas empresas constructoras es el carisma de los dirigentes.*

En lo que se refiere a los factores que contribuyen a la innovación, pudo observarse que la orientación al cliente es de interés en pequeñas empresas textiles, el carisma y el buen servicio al cliente es importante. Este se considera otro hallazgo importante ya que la mercadotecnia centrada en el cliente es un recurso de frecuente utilización en estas empresas. Al concluir el trabajo de campo pudo experimentarse que los administradores encuestados tuvieron la confianza en expresar su posición frente a la cultura de innovación sus respuestas nos muestran su percepción sobre lo que puede motivar como desmotivar la innovación en sus procesos operativos.

## CONCLUSIONES

Por último, en este apartado se discuten las principales implicancias teóricas y empíricas derivadas de la presente investigación. El objetivo que se planteó al inicio de esta investigación fue analizar la percepción que tienen los administradores, dirigentes o propietarios de las pequeñas empresas constructoras ubicadas en Puebla sobre la innovación y desarrollo, misma que se alcanzó como puede observarse en el apartado de resultados. En este sentido el desarrollo de esta investigación permitió apreciar la disponibilidad de los administradores y líderes de pequeñas empresas hacia la cultura de innovación, lo cual es consistente con el estado del arte (Morales et.al, 2003), (Lavia C., Otero B. Olazarán M.: 2011), la innovación es un elemento estratégico para detonar espacios territoriales competitivos. Por lo cual se sugiere que las pequeñas empresas constructoras impulsen las actividades de innovación como estrategia competitiva.

Por último, futuros trabajos podrían retomar esta investigación para abordar elementos que quedan pendientes de analizar, como la percepción de la cultura de innovación predominantes en el conglomerado de la micro, pequeña y mediana empresas (mipymes) del la industria de la construcción en el Estado de Puebla y en cada sub sector específico de actividad. O bien, se podría revisar y discutir la relación que se estudio en esta investigación, tomando como unidad de análisis cada sector o el tamaño de las empresas (micro, pequeñas o medianas); así como añadir variables de control, como el género de los líderes

## RESUMEN

*Esta investigación aborda el análisis de las fortalezas, oportunidades, debilidades y amenazas (FODA) de las micro, pequeñas y medianas empresas, como una estrategia administrativa recomendable para permanecer en el mercado y lograr un sano crecimiento y desarrollo. De acuerdo con los estudios realizados por diversos investigadores, nueve de cada diez empresas que se crean, no logran permanecer o sobrevivir el quinto año de existencia, de ahí la importancia de recomendar la aplicación de esta herramienta administrativa que permita a las empresas un sano crecimiento y además, ser competitivas. El presente estudio se desarrolló a través del método cuantitativo, es de tipo descriptivo, tiene como objetivo dar a conocer la importancia de aplicar el análisis FODA. Los sujetos de estudio fueron las micro, pequeñas y medianas empresas de Mexicali, Baja California, México, se determinó una muestra por conveniencia no probabilística, se entrevistaron a 65 empresarios quienes en forma voluntaria participaron. Se elaboró un instrumento de medición para recabar la información de campo, mismo que fue validado en su confiabilidad a través del programa estadístico alfa de Cronbach, la información obtenida se procesó mediante el programa Statistical Package for the Social Sciences (SPSS), se aplicó estadística descriptiva, los resultados permiten hacer recomendaciones.*

**PALABRAS CLAVES:** Análisis de Fortalezas, Oportunidades, Debilidades, Amenazas, Empresas

## ANALYSIS STRENGTHS, OPPORTUNITIES, AND THREATS WEAKNESSES IN BUSINESS, AS A STRATEGY FOR GROWTH AND DEVELOPMENT

### ABSTRACT

*This research addresses the analysis of the strengths, weaknesses, opportunities and threats (SWOT) of micro, small and medium enterprises, as a management strategy recommended to stay in the market and achieve a healthy growth and development. According to studies conducted by various researchers, nine out of ten companies created, do not remain or survive the fifth year of existence, hence the importance of recommending the implementation of this management tool that allows companies to healthy growth and also be competitive. This study was conducted through the quantitative method, is descriptive, and aims to raise awareness of the importance of*

*applying the SWOT analysis. The study subjects were the micro, small and medium enterprises in Mexicali, Baja California, Mexico, was determined non-probabilistic convenience sample, were interviewed 65 entrepreneurs who participated voluntarily. Developed a measurement instrument to collect field data, it was validated for reliability by Cronbach's alpha statistical program, the information obtained was processed using the Statistical Package for Social Sciences (SPSS) was applied statistical descriptive, the results can be recommended.*

**JEL:** M14

**KEY WORDS:** Analysis of Strengths, Weaknesses, Opportunities, Threats, Companies

## INTRODUCCIÓN

En la economía mexicana las micro, pequeñas y medianas empresas (MIPYMES), juegan un papel determinante para lograr un mayor crecimiento e incrementar el Producto Interno Bruto (PIB) del país. Sin embargo, Los constantes y sorprendentes cambios que sufren hoy en día los diferentes sectores económicos representan un reto para empresas e instituciones. En México la mayoría de las MIPYMES, utilizan una administración a nivel familiar basados en la experiencia del jefe de familia, quienes en la mayoría de los casos no se encuentran preparados para detectar los factores económicos internos y externos que repercuten e impactan su economía. De acuerdo con Ángeles (2007) las MIPYMES son una fuerza activa que apoya e impulsa el desarrollo económico de un país, organizadas en pequeños grupos de empresarios que unen sus esfuerzos para subsistir y participar con sus bienes y servicios en el mercado, a través de sus propios medios.

Estas empresas en la actualidad son las principales generadoras de empleo, además de contribuir con el pago de impuestos de acuerdo a lo establecido en las leyes tributarias, esto permite que el gobierno cuente con recursos económicos para satisfacer las necesidades de la población y mejorar el nivel de calidad de vida de los ciudadanos. Por consiguiente es necesario dar a conocer estrategias administrativas que ayuden a su permanencia y además coadyuven a que estas empresas sean más productivas y puedan competir en una economía globalizada. En la medida que se logre que las MIPYMES puedan crecer y desarrollarse, será el crecimiento y desarrollo de la economía mexicana y en consecuencia un mayor bienestar para la sociedad mexicana. Sin embargo, respecto de la sobrevivencia de la MIPYMES en México comenta Soriano (2005) que: “para Francisco Yañez (México) al cumplir 10 años, “solamente el 10% de las empresas maduran, tienen éxito y crecen”. De acuerdo con Cetro-Crece, también de México, “el 75% de las nuevas empresas mexicanas debe cerrar sus operaciones apenas después de dos años en el mercado. Para degerencia.com: “la experiencia demuestra que el 50% de las empresas quiebran durante el primer año de actividad, y no menos del 90% antes de cinco años”.

Por su parte Marker (2013) comenta que: “de acuerdo a las cifras difundidas por el Centro para el Desarrollo de la Competitividad Empresarial (CETRO-CRECE), sólo el 10% de las PyMEs mexicanas llegan a los diez años de vida y logran el éxito esperado, mientras que el 75% de las nuevas empresas del país fracasan y deben cerrar ...” Considerando las investigaciones anteriores, este estudio tiene como objeto dar a conocer los elementos esenciales que todo empresario debe analizar de su negocio, para que pueda tomar decisiones con base en el comportamiento real de las finanzas de su compañía. Por consiguiente, es necesario saber si ¿el empresario conoce y aplica el análisis FODA en apoyo a la permanencia y desarrollo económico de su empresa? El objetivo de esta investigación es recomendar a las MIPYMES en Mexicali, la realización del análisis de sus fortalezas, oportunidades, debilidades y amenazas (FODA), como una herramienta

administrativa que les permita permanecer en el mercado, ser competitivas y lograr un sano desarrollo y crecimiento.

## REVISIÓN LITERARIA

La falta de contar con una administración adecuada, pone de manifiesto lo vulnerable de estas empresas a los efectos negativos de los desajustes del mercado. Es necesario que se el empresario participe en programas de capacitación, que le den a conocer, orienten y apoyen, en la aplicación de herramientas financieras que les permitan conocer cuáles son sus ventajas, oportunidades, debilidades y amenazas; para que tome medidas precautorias y logre permanecer y aprovechar las ventajas de la economía global.

Entre los autores que exponen la aplicación de estrategias administrativas, se encuentra Celaya (2012) quien apoya la aplicación de la planeación estratégica matricial, al considerar que las MIPYMES tienen fortalezas y debilidades, mismas que al utilizarse en forma estratégica permitirán aprovechar oportunidades y a la vez disminuir amenazas, siempre y cuando se conozcan los factores que les dan origen. De acuerdo con Díez, García, Martín y Periañez (2001), La aplicación de la matriz Debilidades, Amenazas, Fortalezas y Oportunidades (DAFO), es de gran importancia pues busca combinar los factores internos de la empresa, para fortalecer las estrategias que se tienen establecidas en cada una de sus áreas, es de utilidad también para detectar amenazas o debilidades, con la finalidad de establecer nuevas estrategias que permitan alcanzar los objetivos. En el mismo sentido Thompson, Strickland y Gamble (2008), Consideran que el análisis FODA es de gran importancia para la empresa, le ayuda a conocer el comportamiento de los diferentes factores que la integran y su situación actual. Con el resultado del análisis de los factores se pueden establecer nuevas estrategias y tomar decisiones para disminuir las debilidades y amenazas, aumentar la competitividad y lograr los objetivos establecidos; lo anterior no fuera posible realizarlo sin llevar a cabo el análisis FODA.

Por su parte García y Valencia (2012) coinciden en que el análisis DOFA es esencial, describen las fortalezas y debilidades como factores intrínsecos de las empresas, que la identifican con relación a la competencia, además consideran las oportunidades y amenazas como factores externos no controlables. De la aplicación del análisis DOFA se recomienda establecer nuevas estrategias para aprovechar las oportunidades y fortalezas y mediante estas, minimizar las amenazas y debilidades de la empresa. En su aportación Hitt, Duane y Hoskisson (2008), destacan la importancia de realizar el análisis FODA, consideran que conocer los elementos internos y externos de la empresa, es la forma correcta para comprender su presente y contar con elementos suficientes para prever el futuro. Comentan que las oportunidades son condiciones presentes que deben ser explotadas por la empresa para generar estrategias competitivas. Si la empresa no cuenta con capacidades para obtener ventajas competitivas, debe adquirir los recursos que le permitan crear las competencias y las capacidades que necesita; como resultado verá disminuidas las amenazas y debilidades de la organización.

Como puede observarse los estudiosos del tema coinciden en la importancia de realizar el análisis FODA para las empresas. Aseguran que al conocer las fortalezas, oportunidades, debilidades y amenazas de la organización, se estará en la posibilidad de establecer estrategias de acción que de manera conjunta formen la sinergia que se requiere para lograr la apertura del mercado, potenciar las oportunidades y fortalezas y a través de éstas lograr disminuir las debilidades y amenazas. Por consiguiente la aplicación del análisis FODA, constituye una importante herramienta administrativa, permite conocer la situación actual de la empresa, establecer medidas correctivas, y establecer nuevas estrategias.

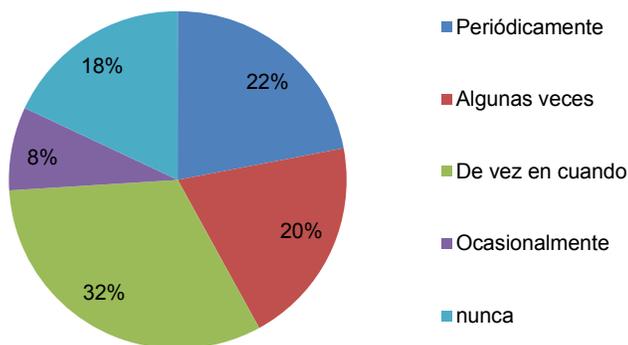

## METODOLOGÍA

El presente estudio es de corte cuantitativo, de tipo descriptivo documental, se obtuvo información sobre el comportamiento y situación actual de MIPYMES en México, la se revisaron libros de especialistas en administración para conocer su opinión sobre la aplicación del análisis FODA, la población de estudio se encuentra integrada por empresas de los diversos sectores económicos, se elaboró y aplicó un instrumento de medición para obtener la información, que permita saber si estas empresas realizan el análisis (FODA), mismo que fue validado mediante el programa estadístico Alfa de Cronbach, el cual se aplicó a 70 empresas en la ciudad de Mexicali. La información obtenida fue procesada a través de estadística descriptiva, se aplicó el programa, Statistical Package for the Social Sciences (SPSS) por sus siglas en inglés. Los resultados obtenidos fueron revisados e interpretados, se adquirieron elementos suficientes para recomendar a las MIPYMES realizar éste análisis administrativo.

## RESULTADOS

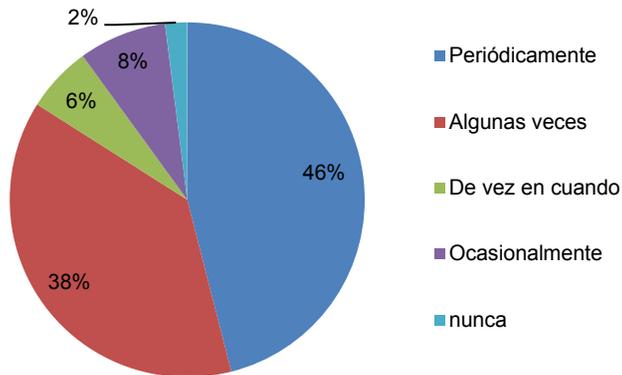

Una vez procesada la información obtenida a través de cuestionarios, se aplicó estadística descriptiva a variables representativas del análisis FODA, para conocer de manera directa en qué medida los Micro, Pequeños y Medianos Empresarios conocen y aplican este análisis, como una herramienta administrativa. A continuación se presentan algunas variables analizadas en este trabajo de investigación.

Tabla 1: en Mi Empresa Se Realiza el Análisis de Fortalezas y Debilidades

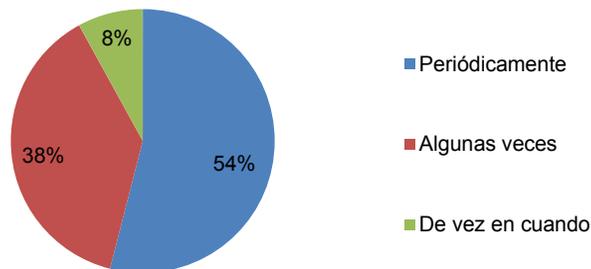

La tabla 1 muestra que del total de encuestados solo el 22% contestó que periódicamente realiza el análisis de fortalezas y debilidades en su empresa, un 20% más coincidió en que realizan este tipo de análisis algunas veces, mientras que un 32% coincidió en que lo realizan de vez en cuando, un 8% manifestó realizarlo ocasionalmente y el 18% restante dijo no realizarlo nunca.

Tabla 2: Necesito Capital Para Desarrollarme

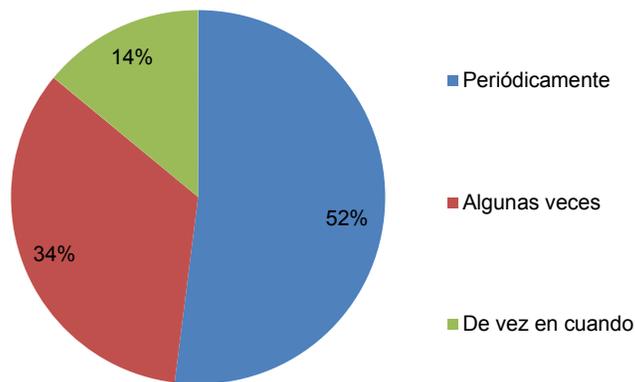

En la tabla 2 muestra que un 46% de los encuestados contestó que periódicamente necesita capital para desarrollar su actividad, un 38% más coincidió en que algunas veces requiere de capital, mientras que un 6% lo requiere de vez en cuando, un 8% lo requiere ocasionalmente y el 2% restante nunca requiere de capital para desarrollar su empresa.

Tabla 3: Tengo Experiencia Para Visualizar Oportunidades O Cualquier Falla en la Empresa

La tabla 3 muestra que un 54% de los entrevistados consideró que periódicamente su experiencia le permite visualizar oportunidades o cualquier falla en su empresa, mientras un 38% consideró que algunas veces su experiencia le permite visualizar estos eventos, por su parte el 8% restante manifestó que de vez en cuando su experiencia le permite percibir las oportunidades o fallas en la empresa.

Tabla 4: Estoy Atento a los Cambios de Política Fiscal

La tabla 4 muestra que el 52% de los entrevistados contestó que periódicamente está atento a los cambios de política fiscal, un 34% manifestó que en algunas veces está atento a este tipo de cambios, mientras que el 14% restante coincidió en estar atento a este tipo de cambios de vez en cuando.

## CONCLUSIONES

Los resultados del estudio muestran que solo el 22% de Micro Pequeños y Medianos Empresarios realizan de manera periódica el análisis FODA en su empresa; lo anterior permite concluir que a este porcentaje se reduce el número de empresarios que cuentan con información financiera oportuna y confiable, con la cual pueden establecer estrategias de desarrollo que les permita permanecer en el mercado, ser competitivos y lograr un crecimiento; esta es una de las debilidades que más pesan sobre las MIPYMES, mismas que luchan por sobrevivir. En cuanto a la necesidad de capital para el desarrollo de su actividad, puede observarse que un 46% de los entrevistados de manera periódica necesita capital y un 38% más lo requiere de vez en cuando, esta información permite deducir la escasez de fuentes de financiamiento para este tipo de empresas, mismas que por falta de recursos financieros están limitadas en su desarrollo y su permanencia en el mercado es todo un reto. Una de las fortalezas encontradas en este grupo de empresas es la experiencia de sus propietarios para desarrollar su actividad, esto se pone de manifiesto al haber afirmado el 54% que de manera permanente confía en su experiencia para manejar su empresa, mientras que un 38% más, manifestó que algunas veces se basa en su experiencia para detectar oportunidades o fallas en el desarrollo de su actividad; la experiencia de estos empresarios es una de las fortalezas que más contribuyen a que permanezcan en el mercado. Los cambios o fenómenos económicos externos tienen un efecto determinante en el desarrollo de este tipo de empresas, al respecto el 52% de los entrevistados manifestó estar periódicamente atento a los cambios de política fiscal, mientras un 34% más coincidió en estar atento algunas veces a este tipo de cambios. Lo anterior demuestra la preocupación constante del empresario a los cambios externos que pueden afectarle en el desarrollo y crecimiento de su empresa. En los resultados obtenidos, se aprecia un panorama económico no muy favorable para la mayoría de este tipo de empresas, determinado por algunas debilidades como son: la falta de una adecuada administración y de capital para desarrollar su actividad. Por tal motivo, se coincide con los datos presentados en este estudio de investigadores sobre la situación actual de las MIPYMES en México. Para que las MIPYMES puedan lograr su permanencia, desarrollo y además sean competitivas, se recomienda como una medida administrativa indispensable, realicen de manera permanente el análisis de sus fortalezas, oportunidades, debilidades y amenazas; como un primer paso para establecer estrategias de operación y evitar su desaparición.

## RESUMEN

*La asociación empresarial es una figura que pretende elevar la competitividad de las empresas y convertirse en un mecanismo que les permita a las micro y pequeñas empresas (MIPES) permanecer en el mercado. Se realizó una investigación descriptiva transversal, con el objetivo de analizar la situación de la asociación como estrategia empresarial en la micro y pequeña empresa del sector industrial en Mexicali, Baja California, México, se aplicó un cuestionario a una muestra de 64 empresas, la información obtenida se procesó y analizó estadísticamente. Los resultados muestran una diferencia significativa, por tamaño de empresa, ya que la estrategia de asociación empresarial es más utilizada en la pequeña industria, con la intención de hacer frente a un mercado cambiante, demostrando con la asociación la reducción de costos y el incremento en ventas.*

**PALABRAS CLAVE:** Asociación, estrategia, MIPES

## THE ASSOCIATION AS A STRATEGY IN MICRO AND SMALL INDUSTRIES IN MEXICALI, BAJA CALIFORNIA, MEXICO

### ABSTRACT

*The business association is a figure that aims to increase the competitiveness of companies and become a mechanism that allows them to micro and small enterprises (MIPES) remain on the market. A descriptive investigation was conducted in order to analyze the situation of the association as a business strategy in the micro and small enterprises in the industrial sector in Mexicali, Baja California, Mexico, a questionnaire to a sample of 60 companies was applied, the information obtained was processed and analyzed statistically. The results show a significant difference, by company size, since the strategy of business association is used in small industry, with the intention of dealing with a changing market, demonstrating the association with reduced costs and increased sales.*

**KEYWORDS:** Partnership, Strategy, MIPES

### INTRODUCCIÓN

El desarrollo económico de México se ve afectado por la expansión del libre mercado, la eliminación de políticas proteccionistas, la liberalización y la volatilidad de los mercados financieros. Las micro y pequeñas empresas (MIPES) participan en estos fenómenos, como resultado de la globalización y apertura económica que han experimentado la mayoría de los

países; todo esto obliga a las empresas a cambiar sus esquemas de trabajo, a buscar nuevas formas de producción, subcontratación y asociación, que les permita mayor flexibilidad y competitividad ante las transnacionales y multinacionales que convergen en el mercado.

A nivel internacional las micro, pequeñas y medianas empresas tienen una amplia participación en la economía ya que representan el 95% de total de las empresas de acuerdo a datos de la Organización para la Cooperación y Desarrollo Económico (OCDE). A nivel Nacional la participación es similar, de acuerdo al Instituto Nacional de Estadística, Geografía e Informática (INEGI) en base al censo económico 2009 el 99% de los establecimientos son micros, pequeños y medianos los cuales demandan acciones para impulsarlos y ser más competitivos ya que es indudable la participación de estas empresas en el Producto Interno Bruto (PIB) y el empleo.

La información de los censos económicos 2009 indicaba que el sector manufacturero en México, es el más importante en la generación de producción bruta total con un 43.3%, concentrando el 10.9% de la unidades económicas y daba empleo a una de cada cuatro personas ocupadas; esto evidentemente demuestra su alta participación en el PIB y su importancia en la generación de empleo. Este sector se caracteriza por ser diversificado donde coexisten actividades altamente concentradas como la siderúrgica y la automotriz, a la par de actividades atomizadas, como lo son la fabricación de productos de herrería y elaboración de pan, entre otras.

En cuanto al tamaño de las empresas en la industria manufacturera, el comportamiento es similar que el resto de los sectores, existe una alta concentración de empresas micro y pequeñas; pero contribuyen poco a la producción total del sector.

Así como en el resto del país la micro y pequeña empresa en Mexicali es muy importante para el desarrollo económico, y en especial el sector industria, ya que se pretende que al integrarse a través de encadenamientos productivos, con la industria mediana y grande, genere un mayor desarrollo económico.

En la actualidad la falta de vinculación con los instrumentos para el desarrollo y la innovación tecnológica, el debilitamiento y desarticulación de cadenas productivas, son elementos que disminuyen la competitividad de la micro y pequeña industria, por lo que es necesario cambiar las formas de trabajo y asociarse como estrategia para permanecer en el mercado. El objetivo de esta investigación fue determinar si los esquemas de asociación empresarial, son utilizados en las micro y pequeñas empresas del sector industrial de Mexicali, así como identificar los elementos que motivan a participar en relaciones de asociación y cooperación.

## **REVISIÓN LITERARIA**

### La Estrategia

Sometidas a la competición internacional, las empresas locales se desarrollan en un marco que deben implementar estrategias para sobrevivir y crecer, al mismo tiempo que los consumidores reciben información global actualizada, con estilos de vida similares que ocasionan una amenaza y una oportunidad para las empresas.

En este marco de competición, Drucker (2003) enuncia el efecto de turbulencia en el que un empresario que a pesar de su talento y experiencia no logra conducir sus empresas sin riesgos y problemas en una zona de tormenta. La turbulencia en los negocios está compuesta por una serie de factores que traen inestabilidad y cambios. La intensidad y velocidad del cambio afectan a las

micro y pequeñas empresas, que tienen que tratar de dominar la turbulencia y aprender a crecer en ella; o simplemente mantenerse.

D'Aveni (1996) señala que existen diversas teorías, modelos y técnicas que definen la estrategia y su campo, ejemplo de estas son las competencias estratégicas y el modelo de fuerzas de Porter (1999), sin embargo, ninguna estrategia es sustentable, ya que el cambio en las organizaciones se presenta al desarrollar las situaciones y contextos actuales en lo que se conoce como esfera de influencia, presión competitiva, configuración competitiva, sistemas de poder. Dentro de la esfera de influencia se encuentran las alianzas a través por ejemplo de licencias, o franquicias a las que les llama “posiciones delanteras”.

Porter define la estrategia “como la creación de una posición singular y valiosa que requiere un conjunto de actividades diferentes al de los otros competidores. La esencia de la estrategia radica en decidir que no se va a hacer”(Porter, 1999).

La visión a largo plazo de cualquier empresa debe ser mantenerse en el mercado para posteriormente crecer, en el caso de las micro y pequeñas empresas es esencial el mantenerse en el mercado, por lo que la administración de las mismas implica tomar decisiones inmediatas o en el corto plazo. Tal como lo define Longenecker, Moore, Petty y Palichh (2010) “Una estrategia es en esencia un plan de acción que coordina los recursos y compromisos de una empresa para mejorar su desempeño”. Lo que implica acciones y actividades a realizar en el corto plazo.

El mercado no es un sistema predecible sino que es inestable y que cualquier equilibrio que se alcance en el largo plazo es el resultado de una gran cantidad de adaptaciones de corto plazo, lo cual para el mercado representa su fortaleza (Drucker, 2003).

Actualmente el mundo de los negocios caracterizado por crisis, desaceleración económica e inestabilidad, donde la preocupación de las empresas es la de mantenerse en el mercado y lograr continuidad, ha hecho que las empresas cambien sus formas de trabajo; y en lugar de ver a otras empresas como rivales en un determinado mercado, promuevan la idea de asociarse y conjuntar esfuerzos con la finalidad de sobrevivir en una creciente competitividad internacional.

Ante esta situación se requiere explorar formas de cooperación y colaboración empresarial, para hacer frente a la competitividad internacional. Marín, de la O y López (2009) mencionan que las relaciones de colaboración entre empresas van desde una actividad específica en un proyecto determinado, que puede convertirse en una relación estratégica, con posibilidad de llevar a la fusión de las empresas involucradas.

Los procesos cooperativos son visualizados estratégicamente como una oportunidad de realizar nuevos negocios, para disminuir la intensidad de las amenazas que una empresa puede enfrentar (Cleri, 2001).

### Modelos de Asociación

La asociación es la acción que realizan dos o más entidades para lograr un objetivo común, mediante la colaboración. A nivel macroeconómico la asociación puede ser la unión de países, o de organismos, a nivel microeconómico es la unión de empresas. El término asociación se considera como sinónimo de integración.

De acuerdo a López (2007) la integración es la acción de unirse dos o más entidades con el fin de hacer frente a distintas situaciones que ponen en riesgo su estabilidad en el mercado. La integración de empresas se da de manera lineal, horizontal y vertical.

Las empresas, sobre todo cuando su operación es estable y el entorno económico es favorable, tienen objetivos de crecimiento, para hacerlo se dispone de diversas alternativas o modelos.

La cooperación empresarial se refiere al establecimiento de relaciones de largo plazo entre las empresas, fundadas en la reciprocidad, beneficio mutuo y la consecución de un objetivo común (Lanusse 2001, en Arroyo 2002).

Schmitz (2000) establece que la cooperación tiene efectos positivos, como el aprendizaje a través de la interacción, permitiendo mejorar significativamente los resultados en las regiones de países desarrollados, y en países en desarrollo.

Existe un sinnúmero de estrategias de asociación y en última instancia tienen como finalidad el mejorar el desarrollo de las empresas, y en ese sentido, cuando se abordan los modelos de asociación se abordan también de forma implícita, las estrategias de desarrollo. El proceso de asociación empresarial se puede realizar mediante diferentes esquemas o modelos, entre los que destacan las empresas integradoras, cadenas productivas, clúster o distritos industriales y las redes de empresas.

## **METODOLOGÍA**

El método que se utilizó en esta investigación fue descriptivo transversal, ya que se analizó la situación actual y perspectivas de desarrollo de asociación empresarial en la micro y pequeña industria de Mexicali, y los datos se recolectaron en un solo momento. Se obtuvo la información mediante investigación documental y de campo.

La población de estudio está conformada por todas las micro y pequeñas industrias establecidas en la ciudad de Mexicali, que están incluidas en los directorios de CANACINTRA y el padrón del Sistema de Información Empresarial Mexicano 2011 (SIEM). La selección de la muestra corresponde a un diseño muestral probabilístico estratificado (Hernández et al. 2010) con la finalidad de que todos los giros estén representados, para la determinación de la muestra se utilizó la fórmula de poblaciones finitas con un nivel de confianza del 95% y un margen error de 5%. Determinándose un tamaño de muestra de 64 empresas.

Debido a las características de la investigación, se diseñaron dos instrumentos para recolectar la información en campo, con el propósito de identificar tanto los valores cuantitativos y cualitativos que la investigación encierra dentro de la comunidad de micro y pequeñas empresas industriales, los modelos de asociación utilizados, las expectativas de la asociación en el sector industrial y la participación de los organismos involucrados del sector empresarial y gubernamental. Se desarrolló una entrevista estructurada con personajes clave expertos en el tema, también se elaboró un cuestionario que se aplicó a la muestra seleccionada de la población de estudio.

Los cuestionarios y entrevistas se aplicaron con los sujetos de estudio, como los gerentes o dueños de las empresas y los líderes de cámaras empresariales, los informantes son personas relacionadas con el tema de investigación conocedoras y con amplia experiencia en la actividad que desempeñan, lo que proporcionó validez y confiabilidad a los datos recabados.

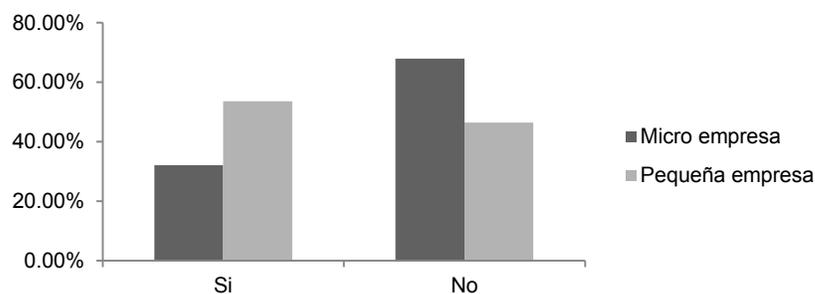

## RESULTADOS

A continuación se presenta el análisis de los resultados obtenidos en la aplicación del instrumento:

El 57% de los encuestados reconoce que las políticas del gobierno han permitido la asociación o integración de las empresas, el 43% no lo considera así, manifestando que no se ha promovido la asociación empresarial. Sin embargo el deseo de cooperación y la acción de asociarse debe ser un acto voluntario de las empresas participantes, surge como una estrategia empresarial con un objetivo específico y una planeación, no por promoción del gobierno. En contraste para poder colaborar y asociarse las empresas deben conocer las figuras o modelos de asociación de asociación, al respecto el 57% de las empresas menciona no conocer las figuras de asociación o cooperación empresarial.

El comportamiento por tamaño de empresa muestra una variante en la microempresa donde existe mayor desconocimiento de las formas de integración, como se refleja en la figura 1.

Figura 1: Conocimiento de las Figuras De Asociación Empresarial

Fuente: Elaboración propia

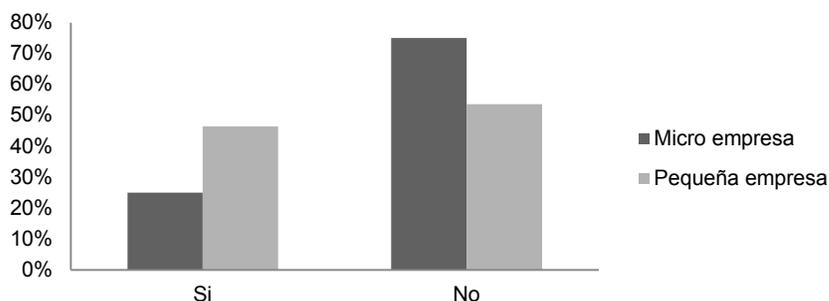

Esto reafirma el hecho de que las empresas no consideran a la cooperación y a la asociación con otras empresas, como una estrategia adecuada para incrementar sus clientes, siendo el motivo el desconocimiento de las figuras de asociación e integración empresarial, que se refleja principalmente por la microempresa.

Por lo que las empresas de mayor tamaño, en este caso la pequeña, por su estructura administrativa y conocimiento de los modelos de asociación estaría en mejor posibilidad de establecer relaciones de cooperación. La mediana y la pequeña empresa son las que realizan con mayor frecuencia alianzas y acuerdos de cooperación (Hernández y Sánchez, 2010).

En relación al establecimiento de alguna forma de asociación se tiene que el 36% del total de las empresas han realizado alguna forma de asociación o cooperación empresarial, lo que muestra un interés en integrarse con otras empresas para mejorar alguna área de su empresa, o con la intención de hacer frente a un mercado cambiante.

En cuanto a la participación por tamaño de empresa, la pequeña empresa muestra una diferencia significativa, ya que en el 46% de los casos ha realizado asociación con otras empresas, y la microempresa únicamente en 25% de los casos se ha asociado. Coincide con Schmitz( 2000), Hernández y Sánchez (2010) las empresas de mayor tamaño son las que realizan alianzas y acuerdos de cooperación.

Figura 2: Relaciones de Asociación

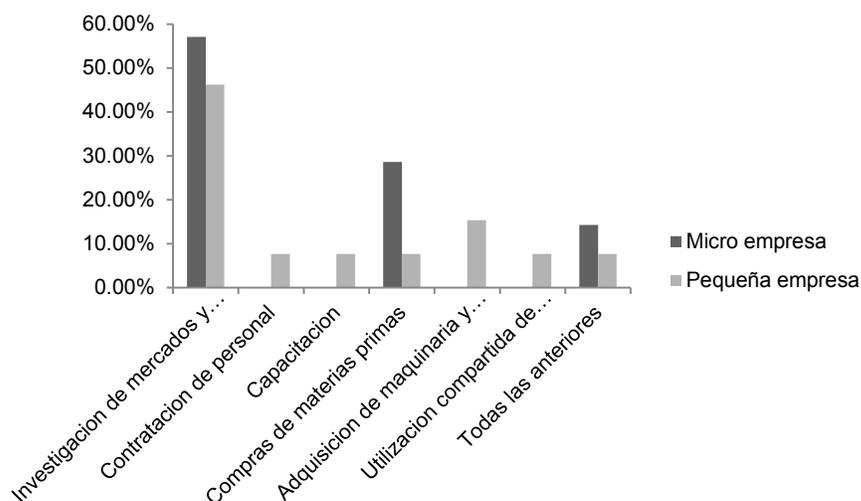

Fuente: Elaboración propia

En cuanto a las actividades realizadas en la asociación o integración empresarial, en el total de las empresas predomina la investigación de mercados y ventas con un 50%, seguido de compra de materias primas con 15%, adquisición de maquinaria y equipo con 10%, y un 10% de las empresas han cooperado en todas las actividades mencionadas.

Este resultado concuerda con lo que establecen Hernández y Sánchez (2010), los acuerdos y alianzas de cooperación que las MIPyMES mexicanas aplican en mayor medida son los relacionados con las compras y los orientados a la comercialización de productos.

Por tamaño de empresa el comportamiento es similar al general de empresas, existiendo variante en la compra de materia prima que es más utilizada en la microempresa, y la adquisición de maquinaria en la pequeña empresa como se muestra en la figura 3. Siendo la investigación de mercados y ventas la actividad donde han participado más las empresas asociadas, demuestra la preocupación de las mismas por mantenerse en el mercado y buscar un desarrollo y crecimiento. Al pertenecer a los estratos de micro y pequeña industria, las hace más flexibles y les permite más rápidamente adaptarse para aprovechar condiciones de mercado analizadas o estudiadas. Asimismo el comprar materia prima en asociación para obtener mejores precios, pretende reducir costos y manejarlo como ventaja.

Figura 3: Actividades en asociación por tamaño de empresa

Fuente: Elaboración propia

En cuanto al tipo de encadenamiento que ha predominado ha sido la subcontratación de servicios en un 35%, subcontratación para maquilar producción 25%. También se ha realizado integración horizontal en 20%, además de integración hacia enfrente con distribuidores en 10%. Coincide con Cleri (2001), que establece que la cesión a especialistas de aspectos del proceso productivo potencian la productividad y con ello la posibilidad de competir. La subcontratación es una forma de organización en red.

Las figuras formales de asociación que se han utilizado por el total de las empresas, que han buscado la asociación como estrategia, son empresa integradora 35%, unión de crédito 20%, subcontratación 20% y asociación en participación 15%. En cuanto al tamaño de empresa las variantes son que las figuras más utilizada por la microempresa son empresa integradora y unión de crédito, siendo empresa integradora y asociación en participación las utilizadas en la pequeña empresa.

Los objetivos que han motivado a las empresas a asociarse o realizar cooperación empresarial son diversos, siendo el principal la reducción de costos con 50%, el poder acceder a mercados internacionales 10%, poder de negociación con proveedores 10%, mejorar la calidad del producto 10%.

El comportamiento por tamaño de empresa es similar al general, siendo la variante que la micro empresa busca tener poder negociador con los proveedores, y el acceder a mercados internacionales no lo considera como un buen motivo para asociarse.

El objeto de la asociación no permite establecer comportamientos generales (Cleri, 2001) ya que depende del aspecto en que la empresa necesita la cooperación. También la asociación permite a las empresas mayor volumen de producción, mejores posibilidades de financiamiento y obtención de apoyos gubernamentales.

El 80% del total de empresas reporta mejoras significativas en la producción y el proceso productivo, como consecuencia de la asociación realizada, el 20% manifestó no tener mejoras en la producción. Por tamaño de empresa sustancialmente las mejoras en la producción han beneficiado a la pequeña en 92%, y a las micro solo en un 57%.

Se comprueba que la producción es el primer factor que se considera por las empresas para realizar alianzas, además de permitir la incorporación de innovación tecnológica con el objetivo de perfeccionar la capacidad de producción (Cleri, 2001). Al mismo tiempo con las alianzas y cooperación interempresarial se fomenta el aprendizaje que mejora los procesos (Schmitz, 2000).

En relación a la reducción en costos como resultado de la asociación se obtuvo que del total de empresas que se han asociado la mayoría obtuvo reducción de costos de producción y operación, el 40% en el rango de 10 a 20%, un 30% de 20% a 40% y el 10% de las empresas en el rango de 40 a 60%. Esto demuestra que la asociación cumplió su objetivo, ya que el motivo de reducción de costos fue el principal para buscar la asociación.

En lo concerniente a si las empresas mantienen la asociación se tiene que del total de empresas que han realizado algún tipo de asociación, el 90% continúa con la asociación y mantiene la colaboración, el 10% ya no sigue con la asociación.

Este resultado manifiesta que la asociación y cooperación tiene ventajas y efectos positivos, ya que las empresas continúan con la asociación. Es importante resaltar que el mantener la asociación requiere de habilidades administrativas (Schmitz, 2000) y fomentar los elementos de capital social sobre todo la confianza.

Los factores que han permitido el éxito de estas empresas al realizar cooperación empresarial son el tener un objetivo común 45%, reglas claras del manejo de la asociación 14%, y coordinación y comunicación entre los asociados 13%.

## CONCLUSIONES

La estrategia de asociación empresarial no es muy utilizada en la micro y pequeña industria de Mexicali, los esfuerzos de integración y cooperación no son suficientes ya que la mayoría de las empresas trabaja individualmente por desconocer las figuras de asociación.

Se encontró diferencias significativas por tamaño de empresa, siendo la pequeña empresa la que ha participado más en actividades de asociación, reflejo mayor crecimiento y obtuvo mayor beneficio al asociarse ya que aprovecho la reducción en costos. Lo que indica que la estructura administrativa y operativa formal y estructurada es un elemento importante al implementar la asociación como estrategia.

A pesar de mostrar interés en integrarse con otras empresas para mejorar alguna área de la empresa, o con la intención de hacer frente a un mercado cambiante, se carece de una visión a largo plazo y una planeación que permita establecer claramente el crecimiento de la empresa mediante la asociación y cooperación con otras empresas.

Siendo la investigación de mercados la actividad más recurrida por las empresas asociadas, esto no ha cristalizado en acceder a mercados internacionales, no se ha intentado la exportación de productos, por lo que es indispensable fomentar la exportación mediante los esquemas de asociación y cooperación empresarial, que traería oportunidades de crecimiento y desarrollo regional.

Al igual que en el sector empresarial en el gobierno no existe una visión y planeación a mediano y largo plazo, no hay continuidad en los programas, no se da seguimiento a los mismos para

determinar logros y fracasos, para en base a ello replantear un programa adecuado; acorde a las características de la micro y pequeña industria y a las necesidades del mercado.

La asociación y cooperación empresarial es resultado de varios factores como la confianza que debe existir entre las empresas, el tener un objetivo común, coordinación y comunicación entre los asociados, tener una cultura de asociación y un liderazgo que se realice una planeación a largo plazo y lleve a cabo los cambios necesarios.

## RESUMEN

*La presente investigación aborda desde una perspectiva cuantitativa el tema de la acreditación de los programas académicos de educación superior, considera la importancia que la certificación tiene para las instituciones educativas en México. Sin embargo, es necesario conocer cuál es la percepción del empleador sobre la competitividad de los alumnos que estudian programas educativos certificados, si considera que un programa educativo reconocido les proporciona mejor preparación, desempeño, seguridad y conocimientos actualizados, forma al estudiante más competitivo para el desarrollo de su trabajo. El presente estudio es de tipo descriptivo documental. Esta investigación es de utilidad para el empresario, para el estudiante y para la institución educativa. La población sujeta a estudio en esta investigación son despachos de contadores públicos de la ciudad de Mexicali, por ser el vínculo natural entre el aprendizaje académico y la aplicación de los conocimientos adquiridos de manera profesional. Se elaboró un instrumento para recabar la información de campo, mismo que fue validado a través del programa estadístico alfa de Cronbach, aplicado en 70 despachos, los datos se procesaron mediante el programa Statistical Package for the Social Sciences (SPSS), mismos que fueron analizados mediante estadística descriptiva, los resultados permiten hacer conclusiones y recomendaciones a las interesadas.*

## ABSTRACT

### PERCEPTION OF EMPLOYERS ON COMPETITIVENESS OF STUDENT WHO ARE STUDING AT COLLEGE TO ACCREDITED PROGRAMS

## ABSTRACT

*This research addresses from a quantitative perspective the issue of accreditation of academic programs in higher education, considers the importance of the certification is for educational institutions in Mexico. However, it is necessary to know the perception of the employer on the competitiveness of students studying educational programs certificates, if it considers that an educational program recognized provides better preparation, performance, safety and knowledge updated, so the student more competitive for development of their work . The present study is descriptive documentary. This research is useful for the employer, for the student and to the school. The subject populations studied in this research are public accounting firms in the city of Mexicali, as the natural link between academic learning and applying the knowledge gained in a professional manner. An instrument was developed to collect field data, it was validated through Cronbach's alpha program, implemented in 70 offices, the data were processed using the*

*Statistical Package for Social Sciences (SPSS), which were analyzed using descriptive statistics, the results allow to make conclusions and recommendations to the stakeholders.*

## **INTRODUCCIÓN**

Como una medida para demostrar que se está brindando un servicio de calidad y adquirir prestigio en el ámbito académico, las instituciones de educación superior buscan obtener la certificación de sus programas educativos. La certificación otorga el reconocimiento a las universidades de que sus programas educativos son de calidad, que están actualizados y acordes a las necesidades sociales, además confirma la existencia de instalaciones, equipo y tecnología apropiados para el desarrollo de las actividades educativas, así mismo garantizan la existencia de un grupo de docentes bien preparados y organizados para la enseñanza. Es necesario que los programas educativos estén actualizados, acordes a los constantes cambios sociales y económicos que experimentan los países hoy en día. Se requiere lograr una vinculación directa con los diversos sectores productivos, pues son precisamente éstos los receptores de los futuros profesionistas que se forjan en las aulas.

De acuerdo con los comentarios hechos por Morales, Torres, Zueck y Ramírez (2005), desde mediados de los setentas, las instituciones de educación superior, reunidas en la Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES), en su lucha constante por ofrecer programas de calidad a la sociedad, planearon llevar a cabo la evaluación de sus programas en beneficio de cada institución y en conjunto de todo el sistema de educación superior. Acorde con lo anterior en 1978 se constituyó el Sistema Nacional de Planeación Permanente de la Educación Superior (SINAPPES), mismo que sirvió de punto de partida en esta importante meta. Más tarde en el periodo (1989-1994) se creó el Programa para la Modernización Educativa (PME) el cual incluyó a propuesta de la ANUIES la idea concretada en la Comisión Nacional de Evaluación de la Educación Superior (CONAEVA, 1989), consistente en fomentar la autoevaluación institucional y establecer procesos de evaluación interna y externa que permitan a las instituciones impulsar la calidad de la educación superior.

En el mismo contexto, de acuerdo con Rosario, Marúm, Vargas, Arroyo y González (2005), la acreditación y certificación de los programas académicos de las Instituciones de Educación Superior (IES), tiene como antecedente inmediato en México, el Encuentro Internacional para la Acreditación y Certificación de la Educación: Experiencias, Realidades y Retos para las IES, realizado en la ciudad de Guadalajara en Noviembre de 2005, convocado por un grupo de universidades del país. Este encuentro tuvo como objetivos: propiciar el diálogo entre los actores de la certificación y acreditación, analizar y compartir experiencias, promover la actualización, documentar los resultados obtenidos en materia de acreditación, hacer propuestas que contribuyan a mejorar en los proceso de acreditación y certificación.

Hoy en día las mejores universidades tanto públicas como privadas han logrado la acreditación de sus programas educativos, en beneficio de la comunidad académica y en general de la sociedad. Sin embargo, es necesario saber si: ¿el empleador conoce la existencia de programas académicos certificados?, ¿sabe en qué consiste la certificación académica?, ¿sabe si los estudiantes de programas educativos certificados están mejor preparados, si están más seguros de su trabajo, si tienen un mejor desempeño, si cuentan con conocimientos actualizados, si son más competitivos? Tanto para la institución educativa como para el alumno es muy importante conocer el punto de

vista del empresario o funcionario, pues, por una parte, entre la universidad, empresas e instituciones se fomenta la vinculación con los diferentes sectores económicos y por la otra, el alumno tendrá la seguridad de aplicar los conocimientos adquiridos en apoyo de la sociedad. Esta investigación tiene como objetivo principal determinar si desde la percepción del empleador los estudiantes universitarios que cursan programas educativos certificados cuentan con una ventaja competitiva para ser contratados al momento de buscar empleo.

## REVISIÓN LITERARIA

La acreditación de programas académicos es un medio a través del cual se reconoce la calidad de los programas que han cumplido con los estándares establecidos para tal efecto por organismos nacionales e internacionales, quienes se encargan de llevar a cabo la evaluación y hacer las recomendaciones pertinentes en su caso. Como es el caso de los Comités Interinstitucionales para la Evaluación de la Educación Superior (CIEES), el cual se forma de nueve cuerpos colegiados que abarcan las diferentes áreas educativas, integrados por docentes de las diferentes instituciones de educación superior del país, los cuales gozan de un alto reconocimiento de su labor profesional. Estos comités desempeñan su función con base en criterios por áreas disciplinarias.

La acreditación de los programas educativos es un anhelo que persiguen las instituciones educativas en México. A medida que logran este objetivo, están en posibilidad de obtener la certificación como unidades académicas. De acuerdo con Gil (2006), las instituciones educativas han buscado la certificación de sus programas como una forma de verificar la calidad de los mismos, sin embargo, se espera a mediano plazo que sirva de medio para propiciar nuevos programas, que promuevan la movilidad e intercambio entre el alumnado a nivel nacional o internacional, así como entre el profesorado de las instituciones. De acuerdo con la Asociación Nacional de Universidades e Instituciones de educación superior (ANUIES, 2010), la acreditación es una forma que permite a la sociedad reconocer la calidad de los programas educativos que ofrecen las IES, principalmente públicas, pues éstas no recurren a estrategias de mercadotecnia de otras instituciones que crean falsas expectativas entre los aspirantes a educación superior. Por consiguiente la acreditación de programas educativos es de gran importancia y da seguridad a la sociedad respecto de la calidad de los programas e instituciones.

Otro aspecto importante para las instituciones para acreditar sus programas, es la presión que ejerce el gobierno federal a las Instituciones de Educación Superior (IES), al establecer la posibilidad a un programa que ha sido evaluado y acreditado a tener acceso a mayores recursos financieros a través de programas creados para tal propósito de manera específica. En este sentido, si la condición para obtener mayores recursos es el acreditamiento de los programas, de ahí el gran interés de evaluarse. Comenta Gil que las universidades se han visto obligadas a cuidar más la forma que el fondo y a maquillar los procesos para alcanzar los estándares, situación que no propicia un cambio auténtico en la calidad de los programas. En el mismo sentido Rosario (2012), comenta respecto de los procesos de acreditación, la necesidad de revisarlos y repensarlos con base en las acciones que deben realizarse para obtenerla. Comenta la necesidad de tomar en cuenta la finalidad de los procesos de acreditación, consistentes en establecer procesos de evaluación para las instituciones de educación superior, a través de los programas educativos, con la finalidad de verificar el cumplimiento de sus fines fundamentales, respaldados con recursos que les permitan continuar cumpliéndolos en el futuro.

De acuerdo a lo escrito por los autores anteriores, la acreditación es de gran importancia para el gobierno, y para las IES; quien obtiene la acreditación de sus programas educativos, adquiere a la vez el reconocimiento de calidad de sus programas, además de recursos financieros para el programa acreditado. Sin embargo, ningún autor relaciona la acreditación con el empleador de los estudiantes o profesionistas formados por la institución educativa, ¿cuál es su percepción sobre la acreditación de los programas y su relación con la competitividad de los estudiantes que cursan esos programas, tienen alguna ventaja o preferencia al solicitar un empleo?

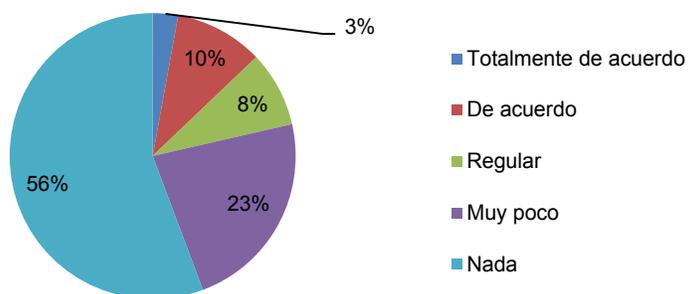

## METODOLOGÍA

La presente investigación es de tipo descriptivo documental, La población de estudio está constituida principalmente por los despachos de contadores públicos de la ciudad de Mexicali, los cuales fueron seleccionados al azar para recabar la información. Se investigó en libros que abordan el tema de la acreditación para conocer la opinión de expertos al respecto, se elaboró un instrumento de medición para recabar la información de campo, el cual fue validado en cuanto a su confiabilidad a través del programa estadístico Alfa de Cronbach, mismo que fue aplicado a 70 participantes. La información obtenida fue procesada a través del programa *Statistical Package for the Social Sciences* (SPSS), se analizó la información mediante estadística descriptiva para obtener los resultados de la investigación. Lo anterior permite contar con información confiable para emitir conclusiones y recomendaciones a los actores.

## RESULTADOS

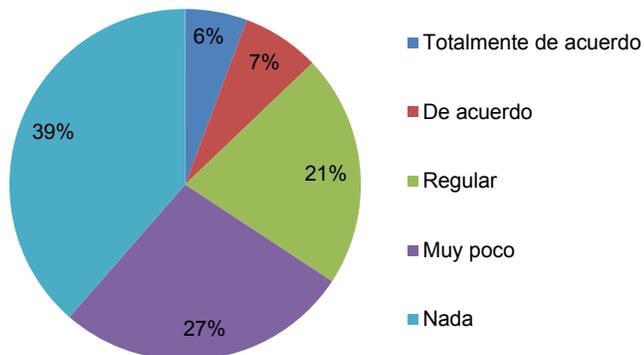

En este apartado se presentan los resultados obtenidos de la investigación de campo de algunas de las variables analizadas, sobre la percepción del empleador de la acreditación de los programas educativos, así como de la competitividad de los alumnos que estudian los programas mencionados.

Tabla 1: Conozco la Importancia de la Acreditación Académica

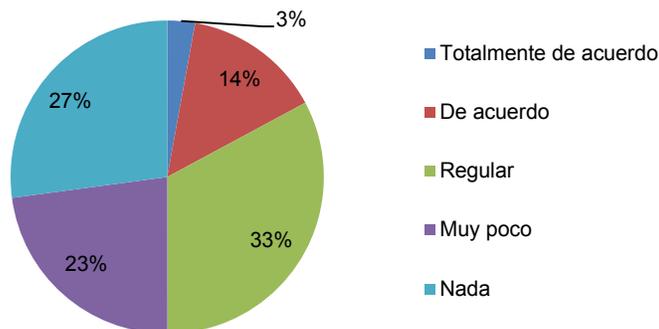

La tabla 1 muestra que del total de empleadores encuestados solo el 3% mencionó estar totalmente de acuerdo en conocer la importancia de la certificación académica, seguidos de un 10% más que aseguró estar de acuerdo en que saben la importancia de la certificación, mientras que un 8% dijo conocer de manera regular su importancia, el 23% coincidió en conocer la importancia muy poco, mientras que el 56% restante manifestó no conocer la importancia de la certificación académica.

Tabla 2: Conozco en Que Consiste la Acreditación Académica.

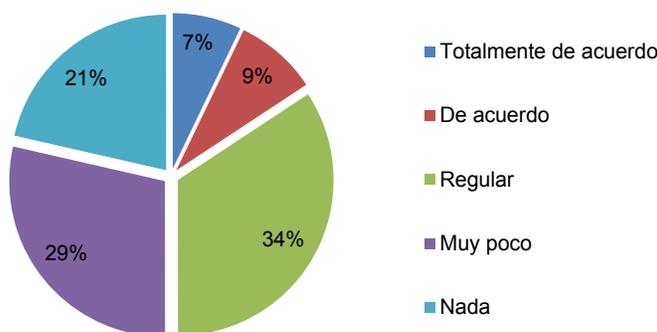

La tabla 2 muestra que solo el 6% de los empleadores encuestados aseguró saber totalmente en qué consiste la certificación académica, un 7% más dijo estar de acuerdo en saber en qué consiste, un 21% dijo saberlo en forma regular, en tanto un 27% dijo saber muy poco al respecto y el 39% restante dijo desconocer en qué consiste la certificación académica.

Tabla 3: Identifico las Universidades Que Tienen Sus Programas Académicos Acreditados

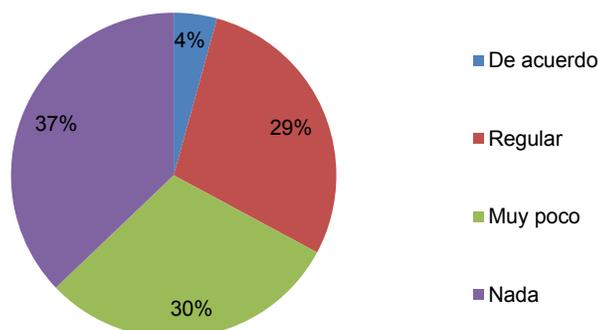

La tabla 3 muestra que de los empleadores, solo el 3% dijo identificar totalmente que universidades tienen sus programas académicos certificados, un 14% más dijo estar de acuerdo en identificarlas, mientras que un 33% las identifica de manera regular, un 23% las identifica muy poco y el 27% restante no las identifica.

Tabla 4: de Preferencia Contrato Estudiantes de Programas Educativos Certificados

La tabla 4 muestra que de los empleadores, el 7% afirmó estar totalmente de acuerdo en contratar de preferencia estudiantes de programas educativos certificados, un 9% más estuvo de acuerdo en preferirlos, para el 34% su preferencia es regular, mientras que un 29% tiene muy poca preferencia por estos estudiantes, por último, para el 21% restante de los empleadores entrevistados manifestó no tener preferencia por estos estudiantes.

Tabla 5: Recomendando la Contratación de Estudiantes de Programas Educativos Certificados

En la tabla 5, de los empleadores entrevistados el 4% dijo estar de acuerdo en recomendar la contratación de estudiantes de programas educativos certificados, un 29% los recomendaría de manera regular, mientras que un 30% los recomendaría muy poco y el restante 37% no los recomendaría.

## CONCLUSIONES

Una vez analizados los resultados de las variables en estudio se concluye que los empleadores de estudiantes de programas acreditados en instituciones de educación superior, desconocen en un alto porcentaje (82%) la importancia de la certificación académica; por consiguiente, también desconocen en que consiste la certificación académica, pues solo un (13%) contestó de manera afirmativa; en el mismo sentido los empleadores desconocen qué instituciones de educación superior tiene sus programas académicos acreditados, las respuestas afirmativas al respecto se limitaron al (17%); en cuanto a la preferencia por contratar estudiantes de programas de estudios acreditados, en respuesta a que pudieran estar mejor preparados o contar con mayores conocimientos, solo el (16%) manifestó tener preferencia por estos estudiantes; en correlación con lo anterior, solo el (4%) de los empleadores coincidió en recomendar a estos estudiantes para su contratación.

Los resultados de esta investigación realmente sorprenden. Por una parte se pone de manifiesto que el empresario está inmerso en el desarrollo de su actividad económica; por consiguiente, es mínimo el interés que tiene por el desarrollo de la educación superior y por los beneficios que ésta contiene para la sociedad. Por otra parte, se deja ver el gran reto que tienen las instituciones de educación superior, en el área de vinculación con los sectores productivos y la sociedad en general, de acuerdo al resultado de este estudio, aun cuando éstas logren acreditar sus programas educativos y así lo exterioricen, existe un enorme vacío de potencial desaprovechado,

precisamente por la falta de vinculación con los diferentes sectores de la sociedad, misma que es indispensable reforzar, en beneficio de la sociedad, del estudiante, del profesionista y de la propia institución académica.

## RESUMEN

*Este trabajo es parte de una investigación que se encuentra en desarrollo la cual tiene como objetivo determinar si los puntajes obtenidos en el EGEL-CONTA aplicado por CENEVAL a los potenciales a egresar de la Licenciatura en Contaduría, influyen para su contratación en empresas del sector servicios en Mexicali, Baja California. El diseño de investigación es descriptivo, no experimental, transversal. Utilizando como instrumento de medición un cuestionario el cual fue sometido a pruebas estadísticas a través del alfa de Cronbach para determinar su confiabilidad. Los participantes de la investigación a los cuales fue aplicado el instrumento son los empleadores de despachos contables. El número de cuestionarios analizados para la presentación de este trabajo fue de sesenta empleadores. En este avance se presentan los principales resultados obtenidos hasta el momento derivado de los cuestionarios aplicados, encontrando que en más del 65% de los casos, los empleadores no consideran los puntajes obtenidos en la aplicación de dicho examen para determinar la contratación de los egresados, derivado de ello es necesario establecer estrategias encaminadas a que los empleadores soliciten la acreditación del mismo para que los egresados se preparen de mejor manera y se preocupen por su aprobación.*

**PALABRAS CLAVES:** Empleadores, egresados, EGEL-CONTA, CENEVAL.

## IMPACT OF THE RESULTS OF THE EGEL-CONTA OF THE GONE AWAY ONES FROM MASTER IN THE EMPLOYERS OF THE SECTOR SERVICES

### ABSTRACT

*This work is part of an investigation that is being developed which aims to determine whether the scores obtained in the EGEL - CONTA CENEVAL applied potential to graduate from the Bachelor of Accounting, influence recruitment for service sector firms in Mexicali, Baja California. The research design was descriptive, non-experimental, cross. Using as a questionnaire measuring instrument which was subjected to statistical tests through Cronbach's alpha to determine reliability. The research participants to which was applied the instrument are the employers of accounting firms. The number of questionnaires analyzed for the presentation of this work was sixty employers. In this process presents the main results obtained so far derived from questionnaires and found that over 65 % of cases, employers do not consider scores on the application of this test to determine the recruitment of graduates, derived from it is necessary to*

*establish strategies for employers seeking accreditation of the same so that graduates are prepared to better and care about your approval.*

## INTRODUCCIÓN

En la actualidad se ha incrementado el número de jóvenes egresados de una licenciatura que buscan ser contratados inmediatamente en lugares donde puedan desarrollarse profesionalmente. Los despachos contables están considerados como una oportunidad de poner en práctica lo aprendido durante sus estudios, por lo que regularmente es su primera opción de trabajo. Por lo tanto los empleadores buscan a aquellos jóvenes que puedan demostrar su competencia para realizar las actividades propias de su profesión. El compromiso de una universidad es ofrecer a la comunidad, profesionistas con un alto nivel académico, por lo que se establecen estrategias para apoyarlos a sobresalir en el mundo laboral. Es común que los empleadores tomen como referencia los resultados obtenidos por los egresados en las diferentes evaluaciones aplicadas a los mismos, como un marco de referencia para su contratación, siendo uno de estos mecanismos los resultados obtenidos en el EGEL-CONTA (Examen General de Egreso de la Licenciatura en Contaduría) aplicado y valuado por el organismo denominado CENEVAL (Centro Nacional de Evaluación para la Educación Superior). La justificación para esta investigación se basa en el impacto que los resultados del EGEL-CONTA tienen en los empleadores al momento de seleccionar a egresados para su contratación.

### objetivo

El objetivo principal de la investigación es:

“Determinar si los puntajes obtenidos en el EGEL-CONTA por los egresados de la licenciatura en Contaduría, influyen para su contratación en empresas del sector servicios en la ciudad de Mexicali, Baja California, México”.

## REVISIÓN LITERARIA

El Centro Nacional de Evaluación para la Educación Superior, A.C. (CENEVAL) surge en 1994 - por mandato de la Asociación Nacional de Universidades de Educación Superior (ANUIES)- esta creación surge ante la necesidad de contar con un instancia de evaluación externa que ayude y promueva la mejora de la calidad educativa, mediante la generación de evaluaciones validas que contribuyan en los procesos de toma de decisiones de alto impacto de los centros escolares.

Desde su creación el centro de evaluación se ha caracterizado por ser una institución eminentemente técnica, la misión que ha desarrollado es promover la calidad de la educación mediante evaluaciones validas, confiables y pertinentes. Es importante resaltar que sus actividades se orientan, primordialmente, a evaluar los conocimientos y habilidades adquiridos por los individuos a través de procesos de enseñanza-aprendizaje formales o no formales de los sistemas de educación media superior y superior, esto según CENEVAL, A.C. Así mismo busca ofrecer servicios a instituciones educativas, organizaciones de profesionistas, así como a entidades privadas y gubernamentales con el afán de brindarle el mejor de los servicios posibles. El CENEVAL rige sus actividades con los siguientes principios básicos que le ayudan para cumplir con su misión:

- a) Imparcialidad: El centro no favorece a ninguna persona, organismo o institución en particular.
- b) Calidad técnica: Los procesos de diseño, construcción, aplicación, calificación y reporte de resultados de los exámenes están apegados a estándares de calidad reconocidos por agencias de evaluación nacionales y de otros países para garantizar su validez y confiabilidad.
- c) Actualidad: El centro busca que los exámenes sean revisados continuamente para ajustar los contenidos y que se evalúen los cambios que sobrevienen en las áreas disciplinares o profesionales.
- d) Confidencialidad: Para el cumplimiento de esta virtud, las personas y las instituciones evaluadas tienen derecho a que sus resultados no sean revelados sin su consentimiento.
- e) Transparencia: Los procesos concernientes a la elaboración, aplicación y calificación de los exámenes están abiertos a escrutinio, siempre y cuando no se contrapongan al principio de confidencialidad.

Como se menciona en la encuesta nacional para la validación social de los perfiles profesionales de los Exámenes Generales para el Egresado de la Licenciatura (EGEL), a partir de 2007 se inicia en el centro un intenso proceso de revisión y actualización de los 33 exámenes generales para el egreso de la licenciatura (EGEL) que venían operando y se fija el nuevo enfoque metodológico para su diseño y elaboración. Este nuevo enfoque se centra, básicamente, en la identificación de los puntos de encuentro entre los requerimientos del ejercicio de la profesión (mundo del trabajo) y las características y contenidos de los programas de las licenciaturas que administran las instituciones de educación superior (oferta educativa). En él se toman en cuenta, como en el enfoque anterior, los aspectos en común de los currículos de las licenciaturas vigentes pero teniendo como eje lo que las personas hacen al enfrentar y resolver situaciones y problemas característicos en el ejercicio de la profesión, un aspecto crucial de este método es la aplicación de una encuesta de validación social de los perfiles profesionales asociados a cada EGEL, en la que los profesionistas en ejercicio emiten su opinión sobre diversas tareas profesionales que pueden ser consideradas para la delimitación del contenido del EGEL.

#### Definición de los Perfiles Profesionales de los EGEL de Nueva Generación

Como se menciona por parte de Hernández y Maldonado en la encuesta nacional para la validación social de los perfiles profesionales, el EGEL de cada carrera profesional se diseña y elabora a partir de atributos de carácter cognoscitivo ligados a la competencia profesional del egresado. Esto es más que nada con un enfoque específico de los conocimientos y habilidades que se consideran esenciales o imprescindibles para el inicio del ejercicio profesional y que son resultado del aprendizaje de una formación profesional particular. Por lo que dichos atributos, no pueden ser identificados exclusivamente con los aspectos comunes de los perfiles profesionales de egreso, de la estructura disciplinaria de la profesión o del contenido de los planes y programas de estudio, sin considerar su influencia efectiva en el desempeño de las tareas características de la práctica profesional. En la siguiente tabla se muestran las definiciones y la estructura semántica con base a las cuales se llevó a cabo el proceso de identificación de cada uno de los aspectos del quehacer profesional relacionado con los EGEL en operación y en proceso de construcción.

Concepto	Definición	Pregunta guía	Estructura semántica
Función profesional	Conjunto de actividades profesionales, relativamente autónomas, con valor y significación precisas en el ejercicio de la profesión.	¿Cuáles son los ámbitos de actuación en que actualmente está organizado el ejercicio de mi profesión?	Sustantivo o verbo sustantivado

Actividad profesional	Desempeños complejos (procesos o procedimientos) que se involucran (que se desagregan) en diferentes tareas, aplicables a diversos contextos, susceptibles de ser observados, registrados y medidos.	¿Qué es lo que hace típicamente el profesionista en el ejercicio de la función?	Verbo en infinitivo + sujeto + complemento (contexto o condición)
Tarea profesional	Acciones que forman parte de lo que hace una persona para llevar a cabo una actividad y tienen un significado en sí mismas. Cada tarea tiene un significado discreto y diferenciado de cualquier otra y son esenciales para la realización de la actividad.	¿Qué acciones son indispensables que lleve a cabo el profesionista para realizar la actividad?	Verbo en presente + sujeto + complemento (contexto o condición)

Fuente: Exámenes del CENEVAL

### Características

La mayoría de los exámenes que desarrolla y aplica el CENEVAL son evaluaciones de alto impacto: las personas que los sustentan afrontan consecuencias directas de los resultados que obtienen. Esta particularidad compromete al centro a que cada uno de sus instrumentos de valuación cumpla con las siguientes propiedades:

**Validez:** Los instrumentos se diseñan y construyen para medir un dominio claramente identificado.

**Confiabilidad:** Los resultados de la evaluación son consistentes, de tal forma que diferentes puntajes reflejan diversos niveles de competencia de los sustentantes.

**Equidad:** Los instrumentos de medición se construyen de forma tal que no benefician a un grupo determinado, se establecen las medidas necesarias para evitar sesgos culturales.

**Pertinencia:** Los instrumentos de medición cuentan con un marco de referencia conceptual que sustenta la definición del constructo medido y cubre de manera representativa los dominios definidos como objeto de evaluación.

**Objetividad:** El concentrado de respuestas de los sustentantes se califica siguiendo el algoritmo autorizado para cada examen.

### Metodología CENEVAL

El CENEVAL se dio a la tarea de formalizar el modelo de evaluación institucional, recuperando lo hecho por las diferentes áreas de la organización y enriqueciéndolo con los conocimientos emanados de la literatura especializada. Entre los años 2001 y 2005 un proyecto conjunto del personal técnico tuvo la finalidad de compartir las prácticas de trabajo, y el resultado fue una primera documentación de los procesos inherentes a la construcción de los exámenes. El mayor impulso para la concreción de una metodología propia se ha desplegado en los últimos años. La normativa del CENEVAL se apega a las recomendaciones emanadas de entidades académicas como, American Educational Research Association (AERA), American Psychological Association (APA), National Council on Measurement in Education (NCME) y el Joint Committee on Standards for Educational Evaluations.

### El papel de las instituciones educativas

Es importante destacar que el sistema educativo Mexicano juega un papel fundamental en la transformación cultural y el desarrollo productivo del país, por ello es necesario identificar la problemática que emerge del binomio empleo-desempleo, así como la relación entre la formación profesional y la demanda laboral, entre otros factores. Derivado de esto, la pertinencia social es uno de los principales retos a los que se enfrenta la universidad, las demandas de agentes externos como los sectores social y productivo exigen a las instituciones de educación superior servicios

educativos de calidad que proporcionen a sus egresados una formación integral, basada en sólidos valores y conocimientos generales, disciplinares y tecnológicos.

En cuanto a la relación educación-empleo está determinada por estructuras sociales y políticas, situadas en espacios geográficos determinados, donde el mercado local e internacional se convierte en uno de los indicadores más importantes en la orientación de las demandas hacia la educación superior. En este sentido Díaz Barriga señala que “el adecuado funcionamiento del sistema educativo se refleja en la preparación puntual de sus egresados, de acuerdo con las exigencias de cada puesto en el mercado de trabajo” (Díaz Barriga, 2000). Hoy más que nunca la educación superior tiene como reto atender las demandas sociales: “se puede afirmar que el mercado de trabajo profesional es imperfecto, ya que la formación que se genera en el nivel superior es un proceso lento e independiente del mundo laboral” (Mungaray, 2001). Esto constituye un reto más para las instituciones de educación superior ya que enfrentan el compromiso de formar profesionales calificados en las distintas áreas del conocimiento, replanteando o generando nuevas carreras basadas en modelos educativos innovadores que coadyuven a la formación integral del educando.

### Opinión de Empleadores

Ángel Díaz Barriga, junto con otros autores, realizaron una investigación con empleadores de universitarios, por medio de una entrevista a profundidad aplicada a 60 empresas (1988 y 1990). Deseaban detectar los criterios y valoraciones que utilizan las empresas en la contratación, y encontraron que los criterios de selección en distintas empresas resultan ser variados, además de distinguir entre los egresados de universidades públicas y los de universidades privadas. Otra investigación relacionada con el estudio de empleadores aborda en particular el impacto de los posgraduados empleados en organizaciones sociales (Baz y Téllez, en Ortega 2001) desarrollada mediante un análisis cualitativo a partir de la técnica Grupo Focal. Se detectó que los posgraduados tienen mayor impacto en el ámbito académico y de investigación; sin embargo, en el sector industrial no parece una discriminación suficiente entre las ventajas comparativas de una formación de licenciatura comparada con una de posgrado. En el artículo presentado por la revista *Expansión* (2002) titulado “¿Cuál es el perfil ideal de los egresados?”, se pretendió conocer la opinión de los empresarios sobre el perfil de los egresados de carreras administrativas. Muestran resultados interesantes, según los empleadores, por encima del currículo y procedencia académica, buscan características y valores que son responsabilidad exclusiva de la persona, como el liderazgo, la creatividad, la ética, la flexibilidad, el conocimiento teórico y técnico, entre otros. Por lo que hay que considerar de vital importancia brindar una formación universitaria con calidad, que apoye en la incorporación oportuna al campo laboral. Esto solo podrá ser posible mediante una estrecha vinculación entre la universidad y el sector productivo a nivel regional y estatal.

### **METODOLOGIA**

La investigación que se presenta es no experimental, con un diseño de tipo transaccional o transversal. Esta investigación es no experimental en virtud de que no existe una manipulación de las variables, lo cual es una de las características de este tipo de investigación de acuerdo a lo establecido por Hernández & Fernández (2006) que definen a la investigación no experimental como cualquier investigación en la que resulta imposible manipular variables o asignar

aleatoriamente a los sujetos o las condiciones. Señalando que en un estudio no experimental se observan situaciones ya existentes, no provocadas intencionalmente por el investigador. Asimismo el diseño es de una investigación transaccional o transversal, es decir, los datos se recolectaron en un solo momento, es decir en un tiempo único, con el propósito de describir las variables y posteriormente analizar su interrelación.

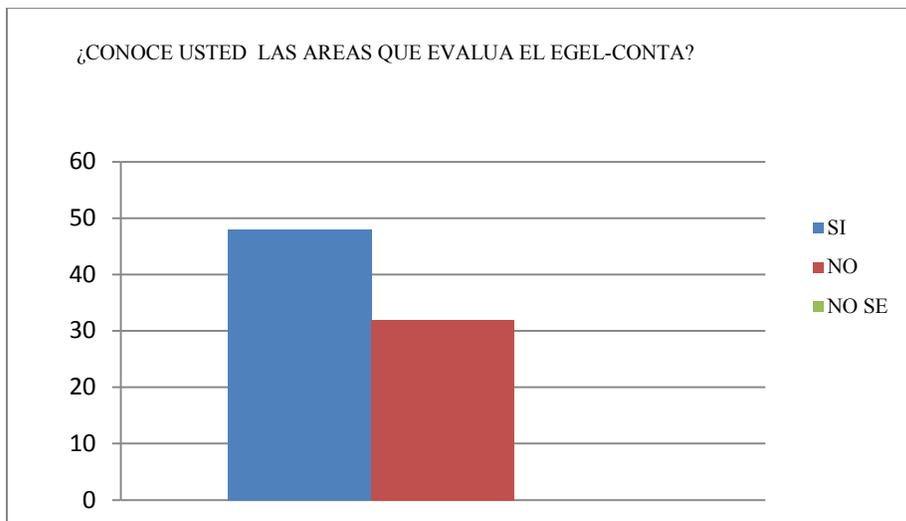

La metodología empleada para el desarrollo de esta investigación se efectuó en dos etapas, en la primera parte se llevó a cabo la revisión y análisis de bibliografía en libros, revistas, periódicos, bases de datos y documentos electrónicos relacionados con el tema de estudio, en base a esa revisión se elaboró el marco de referencia y el establecimiento de la hipótesis de investigación. En la segunda parte se realizó un estudio de campo, mediante la aplicación de un cuestionario a las personas a cargo de la administración y funcionamiento de las empresas, el cual se elaboró tomando como referencia la información obtenida en la revisión documental. En esta fase una vez elaborado el instrumento se llevó a cabo su pilotaje para determinar si la estructura, validez y confiabilidad eran adecuadas. Después de esta prueba se hicieron correcciones al instrumento principalmente de forma, el cual una vez modificado, se aplicó a los empresarios que cumplieran con las características del objeto de estudio. Una vez aplicadas las encuestas a los participantes de la investigación, los datos fueron capturados y analizados a través de pruebas estadísticas con el sistema estadístico SPSS.

El instrumento de medición que se elaboró para medir las variables fue un cuestionario, constituido en su mayoría por preguntas cerradas con respuestas de opción múltiple. El instrumento del cuestionario se aplicó a empresas que actualmente se encuentran en el sector servicios bajo el rubro de despacho contable, siendo los participantes los propietarios, socios, administradores, contadores o encargados que operan estas entidades ya que son estos quienes tienen el conocimiento y la experiencia de las operaciones, recursos, información y conocen la forma en que se toman las decisiones sobre su funcionamiento. Los informantes son personas relacionadas con el tema de investigación conocedoras y con amplia experiencia en la actividad que desempeñan, lo que proporcionó validez y confiabilidad a los datos recabados.

## RESULTADOS

A continuación se presenta el análisis de los resultados obtenidos en la aplicación del instrumento:

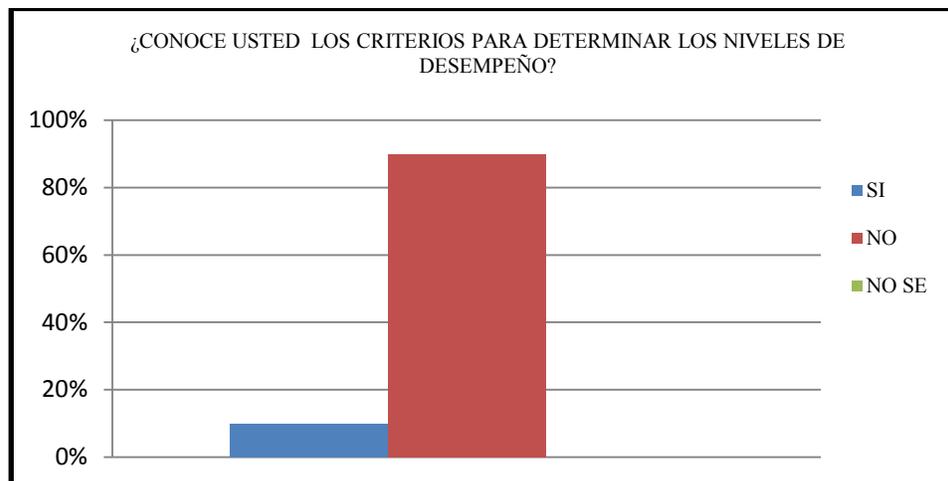

Figura 1: Conocimiento de Áreas EGEL-CONTA

Fuente: Elaboración Propia

En lo que se refiere al grado de conocimiento de las áreas que evalúa el examen EGEL-CONTA los encuestados reflejan que el 60% si tiene un previo conocimiento de ellas, mientras el 40% restante muestra un desconocimiento, considerando que un alto porcentaje de los contadores tienen relación directa con la formación académica de los egresados.

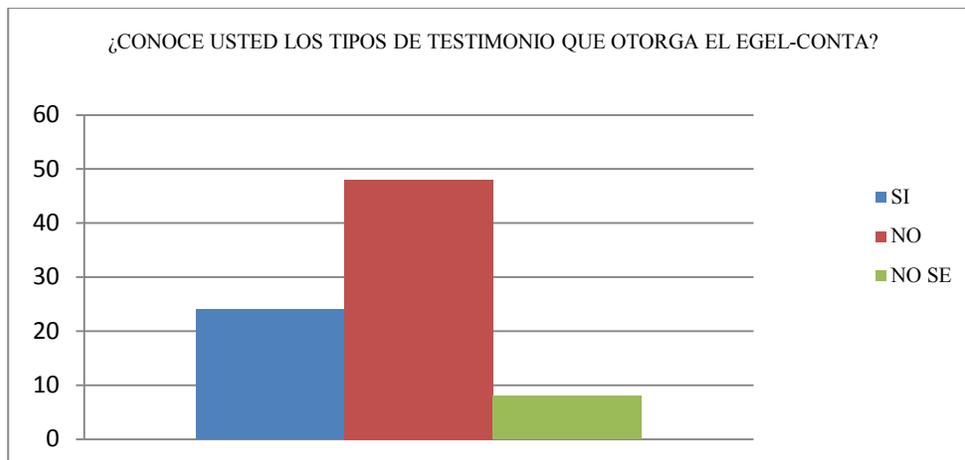

Figura 2: Criterios Para Determinar Niveles de Desempeño EGEL-CONTA

Fuente: Elaboración Propia

En cuanto al conocimiento con el que cuentan los empresarios sobre los criterios que se utilizan para determinar el nivel de desempeño en el EGEL-CONTA, el 90% muestra un desconocimiento mientras solo el 10% tiene una referencia de los mismos.

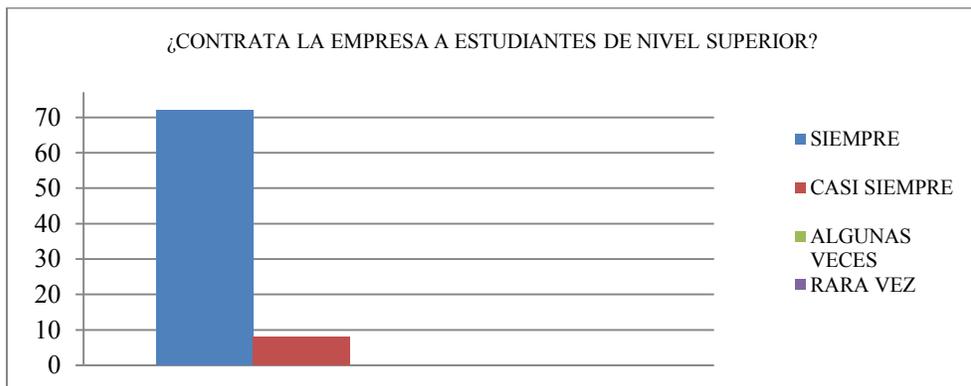

Figura 3: Testimonios EGEL-CONTA

Fuente: Elaboración Propia

El resultado refleja un 60% de desconocimiento por parte de los empresarios en cuanto al tipo de evidencia testimonio que maneja la evaluación presentada, el 30% si cuenta con el conocimiento de los tipos de testimonios que se entregan y el 10% restante manifiestan un desconocimiento de indiferencia ante la situación.

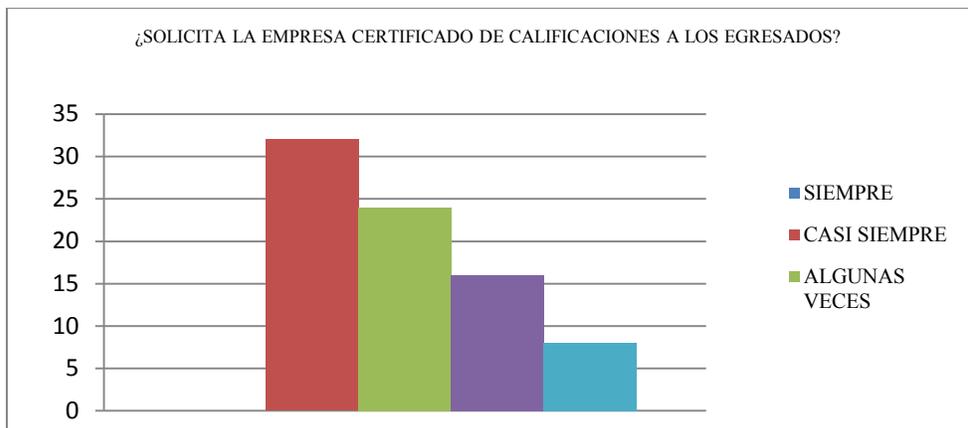

Figura 4: Contratación de Estudiantes de Nivel Superior

Fuente: Elaboración Propia

La tendencia de los empresarios demuestra que en un 90% de los encuestados siempre enfoca su contratación con preferencia a estudiantes de nivel superior y solo un 10% no tiene ese enfoque para tomar la decisión de contratación en las organizaciones que representan.

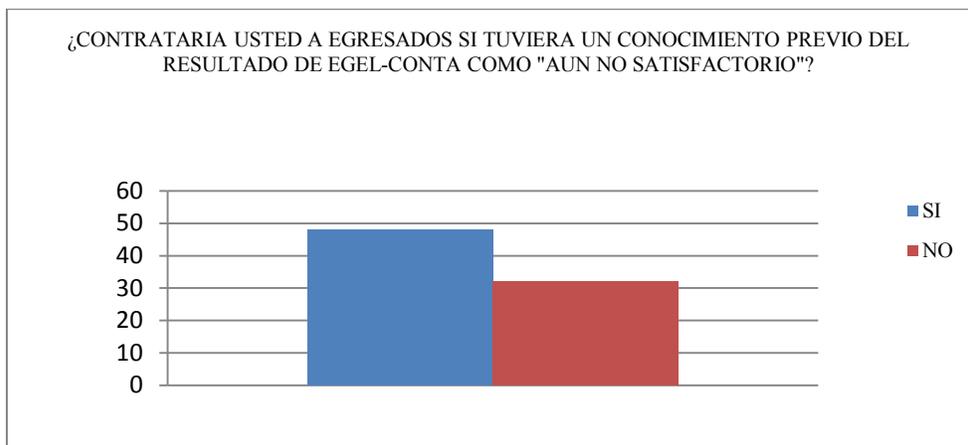

Figura 5: Solicitud de Certificado de Calificaciones

Fuente: *Elaboración Propia*

El resultado que nos arroja este cuestionamiento indica que el 40% de los empresarios siempre busca tener un conocimiento del certificado de estudios como un indicador para la contratación, mientras que algunas veces en un 30% se considera, rara vez representa un 20% de la muestra y solo un 10% nunca lo considera como parte del proceso de contratación.

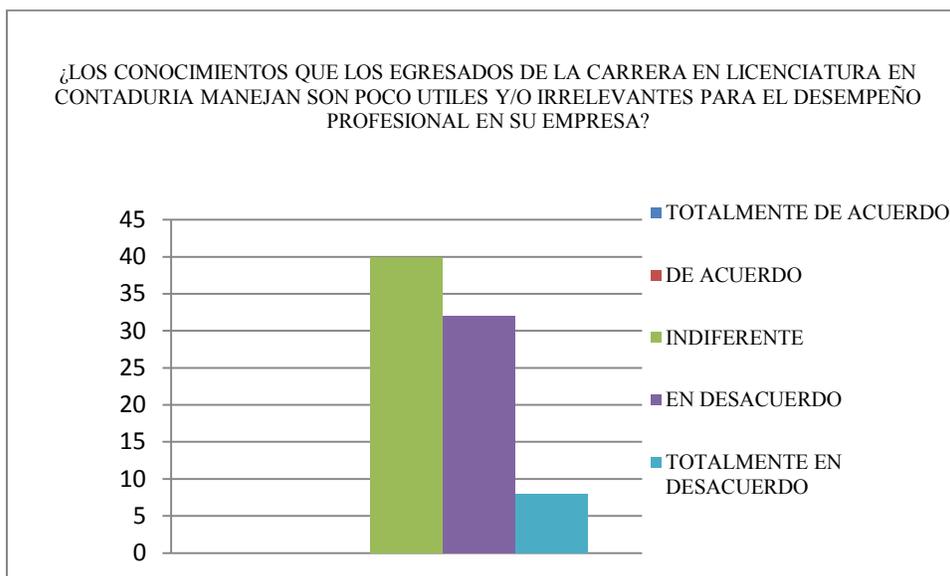

Figura 6: Contratación de Egresados con Conocimiento Previo de EGEL-CONTA

Fuente: *Elaboración Propia*

Se puede observar que un 60% de la muestra indica que a pesar de tener un conocimiento previo del resultado no satisfactorio del examen los empresarios seguirían tomando la consideración de la contratación, mientras que un 40% si lo reconsideraría como un factor decisivo para la toma de decisión de contratación del egresado. El resultado refleja que existe un 50% de los empresarios a los cuales les parece indiferente el hecho que los egresados cuenten con conocimientos previos para poder ejercer su profesión de manera eficiente, mientras el 40% está en desacuerdo con esta aseveración y solo un 10% se muestra totalmente en desacuerdo con esta cuestión por lo que si valoran el conocimiento que posee el egresado.

Figura 7: Los Conocimientos de los Egresados

Fuente: Elaboración Propia

## CONCLUSIONES

En la actualidad es de vital importancia que exista una vinculación entre las entidades de educación superior y las empresas, ya que son estas últimas las que día a día requieren de personal con conocimientos y habilidades bien definidas, es decir, con un amplio bagaje en su haber. Comúnmente los estudiantes consideran al EGEL solo como un requisito que cumplir para poder egresar de una universidad y a su vez, los empleadores no le dan la importancia necesaria a los resultados obtenidos en el examen mencionado. Sin embargo, surge la necesidad imperante de que los jóvenes egresados tomen conciencia de la importancia de los resultados y sobre todo del testimonio que obtienen después de aplicado el EGEL-CONTA, ya que estos dan una idea del aprovechamiento que estas personas tuvieron en su desarrollo académico. La tendencia de los empleadores está encaminada a presentar un mayor interés y aplicación a los testimonios y puntajes obtenidos en el examen, al momento de la selección y contratación de personal para sus empresas. Aun cuando los resultados de la investigación hasta este momento no son satisfactorios en cuanto a la importancia que los encargados de entidades del sector servicios, específicamente despachos contables, le otorgan a la información que les proporciona el EGEL-CONTA, la línea a seguir es que para la contratación de empleados, las entidades solicitarán y darán una consideración importante a los resultados que muestren las constancias del CENEVAL.

## RESUMEN

*La tendencia de formar emprendedores involucra en México organismos gubernamentales, cámaras empresariales e Instituciones de Educación Superior. Los índices de sobrevivencia de las empresas en México, la contribución de los pequeños negocios al PIB Nacional, son solo algunos factores que favorecen esa corriente. Este trabajo presenta un análisis descriptivo de los proyectos presentados en la Expo Emprendedora en los últimos dos años en la Facultad de Economía, Contaduría y Administración de la Universidad Juárez del Estado de Durango (UJED), para identificar las temáticas de negocios que se generan, impacto económico entre otros elementos, comparándolas con las directrices del Instituto Nacional del Emprendedor y del propio Modelo Educativo de la UJED y determinar así su pertinencia. Los hallazgos deberán ser considerados para reorientar contenidos curriculares, particularmente en términos de competencias empresariales.*

**PALABRAS CLAVE:** Emprendimiento, Competencias, Empresarial

## ENTREPRENEURSHIP FROM AN INSTITUTION OF HIGHER EDUCATION IN MEXICO

### ABSTRACT

*The tendency to form and develop enterprising people in Mexico, involves government organisms, chambers of commerce and Superior Education Institutions. The Mexico's businesses survival index, the small businesses contribution to the National's Gross Domestic Product (PIB) are just some of the few factor that favors that trend. This research presents a descriptive analysis of the projects presented at the Enterprising Expo in the last 2 years at the Facultad de Economía, Contaduría y Administración of the Universidad Juárez del Estado de Durango (UJED), to identify the generated businesses issues and the economic impact among other elements comparing them to the National Enterprising Institute directives and own Educational Model of the UJED in order to determine its relevance. These findings should be considered to redirect curricular contents, particularly in terms of managerial competencies.*

**JEL:** M10, M14, M19

**KEY WORDS:** Enterprising, Competencies, Managerial

### INTRODUCCION

El emprendimiento empresarial, es la respuesta de moda a los problemas del mundo, como consecuencia o causa de la globalización. La pirámide de la riqueza versus el número de personas que la poseen y enfrentado al número de empresas que la generan, plantea la necesidad de iniciar con velocidad y precisión nuevas ideas de negocio exitosas. Esta tarea, pareciera depender del esfuerzo individual, de las características del espíritu emprendedor, por ejemplo ser innovador y tener metas creativas. Sin embargo en México, la estadística no está a favor de estas iniciativas y muestra que es más fácil que las empresas pequeñas y medianas que hoy se están creando, pese a su contribución con la riqueza y la generación de empleos, estén destinadas a perecer en dos años. Por eso más allá del emprendedor, hay que observar el ecosistema que este necesita para sobrevivir. Las Universidades juegan un papel prioritario en este hábitat empresarial pues es ahí donde se pueden desarrollar competencias empresariales y la capacidad emprendedora, es decir destrezas para saber y saber hacer. A nivel nacional, la Secretaría de Economía, a través del Instituto Nacional del Emprendedor (INADEM), reconoce la labor de las incubadoras de negocios, mediante las cuales opera sus directrices de crecimiento regional. El INADEM ha identificado sectores claves y estratégicos para cada estado, así como las áreas de negocio que se podrán desarrollar en el futuro. Las Incubadoras, deben favorecer la gestación de planes de negocios con esas directrices.

La Facultad de Economía, Contaduría y Administración de la Universidad Juárez del Estado de Durango, tiene como objetivo estratégico, desarrollar habilidades empresariales a través de su Centro de Desarrollo Empresarial (CDE). Adicionalmente, desde el 2002, ha venido realizando esfuerzos sistemáticos para fomentar el emprendimiento hasta la realización de una Feria Expo FECA Creatividad Empresarial, a la que los alumnos conocen como EXPO FECA. Desde el 2010, se premia a los proyectos ganadores con una beca para llevar a cabo su proyecto en la Incubadora de Negocios de la propia universidad. Este estudio, es un análisis descriptivo que plantea las siguientes preguntas de investigación: ¿Qué perfil de proyectos se generan en la Expo FECA Creatividad Empresarial? ¿Qué elementos muestran coincidencia con las directrices del INADEM para considerarlos proyectos susceptibles de ser incubados? ¿El perfil de los proyectos, responde a las necesidades detectadas por el INADEM para el Estado de Durango? Se tomaron en cuenta los proyectos presentados por los estudiantes de las licenciaturas de Administración y Contador Público generados durante los años 2012 y 2013. Los resultados de la investigación, son en este momento de suma importancia, ante la tarea de la FECA de replantear su Plan de Estudio de un sistema de enseñanza Tradicional a uno basado en Competencias, como lo sugiere el Modelo de la UJED y que a su vez atiende al llamado internacional, nacional y estatal de formar emprendedores.

## REVISION LITERARIA

Emprender proviene del latín coger o tomar e inicialmente tenía relación con la aventura, hasta evolucionar a lo que hoy se define como emprendedor. Su uso mas común es en el ramo de la economía donde se piensa que un emprendedor debe tener al menos tres características: a) actividad empresarial, b) creación de valor y c) propuestas innovadoras. (Castañeda, 2013). La discusión sobre si hay que formar emprendedores o estos nacen como tales, tiene muchas respuestas. Desde la perspectiva del Dr. Luis Aguirre Torres, quien fue reconocido en 2012 por Barak Obama como Champion of Change: connecting the Americas, cofundador de varias startups e Israel, Singapur, Estados Unidos y México, no es suficiente nacer con liderazgo, capacidad creativa e innovadora. Es necesario soportar a estos personajes con un Ecosistema. Entendiendo este último como una “red de colaboración y confianza entre personas y organismos, tanto públicos como privados... con el fin de favorecer la actividad emprendedora” (Peralta, 2013).

El Ecosistema del Emprendedor incluye: instituciones de apoyo como incubadoras, otras empresas, las universidades, los centros de investigación y desarrollo tecnológicos, al gobierno y a los medios de comunicación. En el caso de las universidades según Jorge Peralta, tienen un doble papel: “formar a los emprendedores y a los tecnólogos y ser el espacio natural para que surjan talentos y se generen conocimientos” (Peralta, 2013). Con todo esto, en México formar emprendedores es una tarea que tiene ecos desde los organismos gubernamentales, medios de comunicación, cámaras empresariales y universidades entre otros. Para 2002, se estimó que existían 130 programas dedicados dar algún tipo de apoyo a las pequeñas y medianas empresas (PyMEs). Apoyos que van desde servicios de consultoría hasta financiamientos (Tan & Lopez, 2005). Para la economía mexicana, las PyMEs representan el 99% de las empresas, aportan el 52% del PIB y generan el 72% de los empleos (OCDE, 2013). Esta política de crear nuevas empresas, ocurre en el mundo como efecto dominó, pues sería imposible dejar de reconocer la contribución que las pequeñas y medianas empresas hacen a las economías mundiales. En abril de este año, en Doha, Qatar, se afirmó que una “economía diversificada, basada en un tejido de muchas PyMEs en varias industrias, es más resistente a los vaivenes de los mercados internacionales erráticos”. (Arzeni, 2013).

Por otro lado hay varias razones para entender que los esfuerzos por generar proyectos empresariales factibles no deben verse solamente desde el individuo. El primero de ellos es que el INEGI reporta que cada año nacen alrededor de 200 mil empresas y según Tan y López solo 35 mil sobreviven sus primeros dos años de vida (Tan & López-Acevedo, 2009). El segundo dato indica que para el tercer trimestre del 2013, la tasa de desempleo para México es de 5.2%. (INEGI, 2013) El desempleo en México, tiene una característica relacionada con el nivel educativo. Según la Encuesta Nacional de Ocupación y Empleo, en 2009, las personas con educación media y superior tienen una tasa de desempleo del 6.19%, por encima del 5.16% promedio. (Heath, 2012) . Por último, según datos citados por Creadores de Exitos, en el 2013, el 40% de los egresados universitarios están desempleados, 5 de cada 10 personas con estudios carecen de empleo y mientras que hace 50 años un egresado tenía 3 ofertas de empleo, desde 1990, solo hay un trabajo disponible por cada 4 egresados. (Creadores de éxitos, 2013).

El Instituto Nacional de Emprendimiento, es la iniciativa del actual gobierno federal para el apoyo de los pequeños negocios y tiene por objeto “instrumentar, ejecutar y coordinar la política nacional de apoyo incluyente a emprendedores” (INADEM, 2013). En esa misma línea, el Fondo de Apoyo para la Micro, Pequeña y Mediana Empresa (FONDO PYME) es un mecanismo para brindar apoyo a las empresas haciendo énfasis en empresas pequeñas y a los emprendedores a través de financiamientos de carácter temporal a “programas y proyectos que fomenten la creación, desarrollo, viabilidad, productividad, competitividad y sustentabilidad de las micro, pequeñas y medianas empresas” (FONDO PYME, 2013). Otras iniciativas como ProMexico y Nacional Financiera también están en esta tarea. El INADEM, a través de un estudio realizado por el Instituto Tecnológico y de Estudios Superiores de Monterrey (ITESM) hace un listado de los Sectores estratégicos actuales y futuros para cada estado de la república. En la Tabla 1, se puede ver que para el Estado de Durango, los sectores clave son el Metalmecánico, la Maderera y Agroindustrial, siendo el segundo el que más genera empleos y el primero el que conserva una mejor calidad del empleo. Los sectores futuros, según este análisis, son: a) servicios de investigación, b) turísticos, c) energía renovable, d) tecnologías de la información y e) logística. (INADEM, 2013)

Tabla 1: Durango, Sectores Clave. Inadem

---

Sectores Clave

---

Cluster	Calidad del Empleo	VACB	Empleo	Productividad	Remuneraciones
Metalmecánica	138	2,615,477	3,354	780	462,396
Productos de madera	43	2,579,802	22,726	114	966,265
Agroindustrial	42	498,920	10,935	456	458,822

*Fuente: INADEM 2013. La calidad del empleo, se refiere a la remuneración promedio que recibe el empleado del sector. VACB es el valor agregado Censal Bruto, significa el valor agregado que se le da a los insumos primarios para convertirlos en productos terminados. El Empleo se refiere a la cantidad de personas de 12 años o más que se encuentran laborando. La Productividad, es el indicador que mide con que efectividad el trabajador obtiene un producto terminado. Remuneraciones son los pagos normales y extraordinarios, tanto en dinero o en especie antes de cualquier deducción.*

Por otro lado, el sector empresarial ha fomentado programas como los Centros México Emprende, dedicados a ser un enlace entre los emprendedores y los organismos gubernamentales, brindando asesoría y espacios virtuales, entre otros servicios, en todo el país. Otras iniciativas tienen que ver con la gestión de modelos de negocios como los Startup Weekend o los Startup Nights. Muchos de estos esfuerzos confluyen en 234 incubadoras y 21 aceleradoras de negocios reconocidas por INADEM (García Fuentes, 2013). La mayoría de estas se encuentran hospedadas en Universidades públicas y privadas. El ITESM, ha sido pionero en la creación de nuevos negocios desde las aulas y ha llevado este tema hasta el emprendimiento social, plasmado en su misión y en su declaración de principios y estrategias. Desde 1978 ha incorporado en sus planes de estudio el Programa Empresario, que más tarde se conoció como Programa Emprendedor (ITESM, 2011). Nuevo León, el segundo estado más competitivo de México, según el Instituto Mexicano para la Competitividad (IMCO, 2012) cuenta con ocho incubadoras y tres aceleradoras. La mitad se encuentran en las IES tanto públicas o privadas. El Estado de México, tiene 22 Incubadoras y 2 Aceleradoras. 12 de estas incubadoras son dirigidas por la Universidad Autónoma del Estado de México (INADEM, 2013). Además todas pertenecen a la Asociación Mexicana de Centros para el Desarrollo de Pequeñas Empresas (AMCDPE) y cuentan con la certificación del modelo SBDC. (Small Business Development Centers), iniciativa del Gobierno de Estados Unidos fomentado por la Universidad de Texas en San Antonio (AMCDPE, 2013). En el Estado de Durango, que ocupa el lugar no. 20 en el Índice de Competitividad Estatal 2012 (IMCO, 2012), se cuentan con cuatro incubadoras de negocios, dos de ellas instaladas en la UJED y las otras dos están albergadas en los Tecnológicos Superiores, también IES. En el caso de la UJED, el Modelo Educativo vigente a la fecha, ha incorporado la visión del Plan de Desarrollo Estatal Durango 2005-2010, en el que se menciona que “sus recursos maderables se considera una reserva forestal nacional y ocupa el segundo lugar, en lo que se refiere a esta industria, después de Chihuahua”. Se hace alusión al potencial agrícola, minero y al sector ganadero. En la generación del PIB del Estado, la industria manufacturera ocupa el primer lugar y el segundo el comercio, restaurantes y hoteles”. (UJED, 2006). Mas adelante el mismo documento, hace referencia a la tasa de desempleo del Estado la cual lo coloca en el tercer lugar nacional. (UJED, 2006).

Esta misma visión para el Estado de Durango, proponía desde entonces algunas directrices para la educación superior, que incluyen “formar ciudadanos con visión humanista, carácter emprendedor y nivel competitivo tanto local como global”. (UJED, 2006). A lo largo del Modelo Educativo, se propone desde diferentes perspectivas, promover un ser humano que se adapte a diferentes circunstancias, que cambie su entorno desde una actitud emprendedora. La UJED cuenta con una dirección de Vinculación y Desarrollo Empresarial, dentro de la cual desde hace 6 años, existe una Incubadora de Negocios, miembro de la AMCDPE y certificada en el modelo SBDC.

La Incubadora de Negocios de la UJED sigue el Modelo de Negocios del ITESM. Dentro del Plan de Negocios se cubren aspectos básicos como mercadotecnia, técnicos y financieros. Además de la Naturaleza del negocio, recursos humanos y requerimientos legales del proyecto.

Los emprendedores en la incubadora pasan por un proceso de asesoría, donde construyen sus planes de negocio y una vez aprobado se hace el trámite para concursar el proyecto y ser susceptible de que se asignen recursos por parte de Secretaría de Economía. El Fondo más recurrente es el de Capital Semilla. Una vez que el emprendedor recibe el recurso se incuba el negocio por hasta un año.

En la Facultad de Economía, Contaduría y Administración (FECA) de la UJED, se reconoce como un objetivo estratégico de Extensión, Difusión y Vinculación “ofrecer programas de Desarrollo Empresarial donde los alumnos, los docentes e investigadores colaboren activamente”. Actualmente esta facultad esta rediseñando su Plan de Estudios para trasladarse a uno Basado en Competencias. La FECA cuenta con un Centro de Desarrollo Empresarial CDE que tiene dentro de sus tareas formar habilidades empresariales y entre sus programas se brinda consultoría a nuevos empresarios y se imparten talleres como el YO EMPRENDO, programa auspiciado por la Secretaría de Economía, en el que se atienden a estudiantes universitarios y al público en general. Los proyectos de negocios nuevos generados en el CDE, se transfieren a la Incubadora de Negocios.

La FECA pertenece a la Asociación Nacional de Facultades y Escuelas de Contaduría y Administración (ANFECA) la cual lleva a cabo una Feria Anual de Emprendimiento. En la Tabla 2 se puede ver cuáles son las categorías y conceptos que esta Feria considera como pertinentes. Cabe la anotación de que las primeras tres categorías son las que utiliza el INADEM para clasificar a las Incubadoras de Negocios según el tipo de proyectos que atiende.

Tabla 2: Categorías ANFECA Para Clasificar Planes de Negocios

Categorías	Descripción	Ejemplo de Empresas
Tradicional	Apoya la creación de empresas innovadoras de sectores tradicionales cuyos requerimientos de infraestructura física y tecnológica no tienen un proceso productivo.	Compra venta alimentos, ropa, calzo y servicios en general, entre otros.
Tecnología Intermedia	Apoya la creación de empresas innovadoras con mecanismos semi-especializados	Dulces artesanales, procesamiento de alimentos, desarrollo software, animación, multimedia
Alta Tecnología	Apoya la creación de empresas en sectores especializados, tales como Tecnologías de Información y comunicación, microelectrónica, sistemas micro-electromecánicos y farmacéuticos.	Nueva patentes 3D, ciencia médica aplicada, desarrollo de software de alta especialización
Proyectos sociales sustentables	Apoya la creación de empresas innovadoras enfocadas a la contribución social, a la sustentabilidad, cuidado el medio ambiente, desarrollo comunitario con o sin fines de lucro.	Material de construcción, tratamiento de aguas, comercialización de productos biodegradables, apoyo y crecimiento de grupos vulnerables.

*Las cuatro categorías que se muestran en la tabla, representan la clasificación que la ANFECA hace de los Planes de Negocios que se reciben en la Feria Anual de Emprendimiento. La categoría Tradicional, alberga proyectos de compra venta y servicios generales, los de Tecnología Intermedia son proyectos productivos con un nivel de especialización. Los de Alta Tecnología, tienen que ver software, patentes y medicina. Los proyectos sociales sustentables, son la categoría que alberga proyectos de cualquier naturaleza, siempre que estén incrustados en el enfoque de ayuda a grupos vulnerables como indígenas, madres solteras, niños en situación de calle.*

Por su parte la FECA, realiza dos veces al año, al final de cada semestre la Feria Expo FECA Creatividad Empresarial mejor conocida entre los estudiantes como Expo Emprendedora. En ella participan los estudiantes de noveno semestre de las licenciaturas de Administración (LA) y de Contador Público (CP). Los proyectos que se evalúan provienen de la asignatura “Formulación y Evaluación de Proyectos de Inversión”, dentro de la Academia de Finanzas. Esta materia, tiene duración de un semestre, tiempo en el cual el alumno debe formular un estudio de mercado, un estudio técnico y otro financiero, para evaluar la viabilidad y factibilidad de una idea de negocio.

Además de esta asignatura, los alumnos han cursado antes cinco clases de finanzas y al menos 2 de mercadotecnia, dependiendo de la licenciatura. Como materia optativa, es decir no obligatoria, se ofrece un curso de “Programa Emprendedor” (Facultad de Economía, Contaduría y Administración, 2008)

## METODOLOGÍA

El estudio hace una descripción del tipo de proyectos que se construyen desde las aulas de la FECA en la asignatura de Evaluación de Proyectos de Inversión y que se presentan en la “Expo FECA Creatividad Empresarial” para relacionar estas propuestas con las directrices que marca el INADEM y el propio Modelo Educativo de la UJED. También hace un análisis de lo que por su parte ha realizado el CDE y lo que genera la Incubadora de Negocios de la UJED, como los organismos que atienden emprendedores en procesos de Consultoría y Asesoría. Los Proyectos deben cumplir los requisitos de ser susceptibles de incubación, es decir, ser viables y factibles. Viables desde el punto de vista de mercado y técnico y factible desde la perspectiva financiera. Toda la información se procesó en SPSS 19.0. Los proyectos que se tomaron en cuenta para esta investigación, se realizaron en 2012 y en 2013. Antes de esta fecha, no se tienen bases de datos que registren nombres de los proyectos, el giro o algún dato adicional. Por otro lado, el proyecto se presenta en la Feria solo con un resumen ejecutivo. Se da por hecho que el Proyecto de Inversión o Plan de Negocios se entrega solo al profesor que imparte la cátedra.

Tabla 3: Historia y Evolución de la Expo FECA Creatividad Empresarial

Fecha	Evento
Antecedentes	En materias como Mercadotecnia, Evaluación Financiera, se presentan proyectos ya sea de negocios o de inversión, sin exposición formal o prototipos.
2002	Se inicia el proceso de acreditación de la FECA ante CACECA y se cumple con una de las sugerencias, de realizar eventos donde se evidencie la formación empresarial. Se realiza la primer Expo FECA Creatividad Empresarial
2002-2011	Se realiza la Expo FECA Creatividad Empresarial, con un promedio de 25 proyectos al semestre, es decir 50 al año. Los jueces son profesores de la FECA
2007	Se realiza la primera EXPO NACIONAL EMPRENDEDORA, ANFECA. Con etapas regionales por zona.
2009	La primera generación de economistas realiza proyectos de inversión. Son alumnos de 5o. Semestre, por eso quedan excluidos de la Feria.
2010	Se invita por primera vez a jueces externos. Empresarios locales y tutores de la Incubadora de Negocios de la UJED
2012	Se inicia la base de datos de proyectos de la Feria Expo Emprendedora. Se estandarizan los criterios del Resumen Ejecutivo y de la Presentación ante jueces. A partir de ese año, se ofrece una Beca de Incubación para los nueve proyectos ganadores por parte de la Incubadora de Negocios.

*Fuente: Datos recabados entrevistas a tres ex directivos de la FECA. Esta tabla contiene un resumen de los principales hechos relacionados con la Feria Expo FECA Creatividad Empresarial, mejor conocida como EXPO Emprendedora. Esta se realiza dos veces al año, al final de cada semestre. Antes de ello, proyectos de inversión o ideas de negocio eran presentados en forma aislada en el salón de clase. Hoy en día los estudiantes presentan su proyecto ante un jurado, integrado por empresarios reconocidos y tutores de la incubadora de negocios.*

Los proyectos que se evaluaron, son 38. Se descartaron resúmenes ejecutivos que no contenían al menos el 50% de la información solicitada en el Reglamento de Operación de la EXPO FECA

Creatividad Empresarial. Los equipos deben participar según lo describe la Tabla 4, con un Resumen Ejecutivo, una Presentación Ejecutiva, Diseño y presentación de Stand. La etapa de premiación se menciona en el Reglamento de Operación del evento, mencionando las categorías sin descripción adicional o definición. De 65 resúmenes ejecutivos, solo se conservaron el 58.46%

Tabla 4: Etapas de la Expo FECA Creatividad Empresarial

Etapa	Descripción
Resumen Ejecutivo	3 días antes de la presentación ejecutiva, los equipos entregan a la Coordinación de Logística Académica, un Resumen Ejecutivo que contiene debe contener los siguientes datos: Factibilidad, viabilidad y vulnerabilidad del proyecto. Valor agregado del proyecto. Información relevante de cada etapa del proyecto: Finanzas, Técnico, Económico y Mercadológico. El documento debe ser presentado en no más de 7 cuartillas en una redacción clara y concisa.
Presentación Ejecutiva	Los equipos preparan una Presentación de no más de 10 diapositivas y que no exceda de 7 minutos ante un jurado.
Presentación Stand	Los equipos diseñan y montan un "Stand", donde atenderán al público en general sobre el producto o servicio que ofrecen.
Resultados y Premiación	Las categorías que se premian son: Mejor proyecto Proyecto más factible Proyecto con mayor impacto Proyecto más innovador Proyecto más creativo Mejor stand Mejor presentación Mejor producto Mejor servicio

*Fuente: (FECA, 2012). Según el Reglamento de Operación de la Expo FECA Creatividad Empresarial, los estudiantes inscriben proyectos que antes deben haberse gestado en un curso, dentro de la currícula oficial. Los Elementos del Resumen Ejecutivo, son los principales aspectos que cubre un Plan de Negocios. Las Categorías que se premian son nueve y tal como los elementos del resumen ejecutivo, se enlistaron tal y como aparecen en el citado reglamento.*

Los proyectos se clasificaron de acuerdo a su giro, de acuerdo al tipo de incubación que solicitarían (Clasificación de Incubadoras de INADEM o de Negocios de ANFECA). Se relacionó el giro con el sexo de los integrantes del proyecto. Se identificó el perfil de los indicadores financieros como la TIR, el Periodo de Recuperación, la Inversión Inicial. Datos de Mercadotecnia fueron descartados al no incluir la mayoría información consistente como el tipo de mercado al que van dirigidos. (Clase social). Aspectos técnicos fueron descartados al no encontrarse información homogénea como número de empleados, localización de la planta, entre otros que pudieran compararse. Para entender estas diferencias, se elaboró la Tabla 5, donde se identifican los elementos de la Formulación y Evaluación de un Proyecto de Inversión, los requisitos de la convocatoria de ANFECA y los de la Secretaría de Economía, a través de las Incubadoras de Negocios y que responden a las directrices del INADEM. Importante destacar que la calificación que obtiene el alumno no está relacionada o no toma en cuenta el resultado de la Expo FECA Creatividad Empresarial.

Tabla 5: Aspectos de Diferenciación Entre un Plan de Negocios, un Proyecto de Inversión y la Convocatoria de ANFECA Para el Emprendimiento

Formulación y Evaluación de Proyectos de Inversión	ANFECA	INCUBADORA-SECRETARIA DE ECONOMIA-INADEM
Estudio de Mercado	Resumen Ejecutivo	Resumen Ejecutivo
Estudio Técnico	Naturaleza del Proyecto	Definición y Justificación del Negocio
	Mercado	Mercadotecnia e Imagen
	Producción	Producción Operación
		Administración de Recursos Humanos

Estudio Financiero	Finanzas	Contabilidad y Finanzas
	Aspectos Legales	Aspectos legales
	Impacto social y/o ambiental	
	Anexo	Anexos
	Fuentes	Plan de Trabajo grafica GANTT Canvas Business Model

*En esta Tabla, se muestran las diferencias de contenido general, entre la Formulación y Evaluación de un Proyecto de Inversión que por lo general solo contiene esos tres aspectos, la Convocatoria ANFECA para la Feria Nacional de Emprendimiento, y el guión para elaborar el plan de negocios de la Secretaría de Economía y que se opera en las Incubadoras de Negocios reconocidas por INADEM, donde además se incluye por ejemplo el lienzo estratégico o CANVAS Business Model. Y la Grafica de Gantt para visualizar el Plan Maestro del proyecto.*

En la tabla 5, se manifiestan requisitos entre un tipo de proyecto y otro. No significa que existan más elementos. El estudio técnico por ejemplo, puede incluir la parte de Recursos Humanos.

## RESULTADOS

Retomando las preguntas de investigación. ¿Qué perfil de proyectos se generan en la Expo FECA Creatividad Empresarial? ¿Qué elementos muestran coincidencia con las directrices del INADEM para considerarlos proyectos susceptibles de ser incubados? ¿El perfil de los proyectos, responde a las necesidades detectadas por el INADEM para el Estado de Durango?

### Perfil de los Proyectos

Los proyectos están integrados por estudiantes de noveno semestre, cursando la materia de Formulación y Evaluación de Proyectos de Inversión. Se forman grupos de 4 a 6 estudiantes y algunas veces hasta 8. Los estudiantes tienen la facilidad de formar equipos con estudiantes que cursan la materia, aunque sea con otro profesor o pertenezcan a otra carrera. En la Tabla 6, se puede observar de acuerdo al giro del negocio, el tipo de proyectos que se generan. No hay una tendencia contundente. Los proyectos de Alimentos y Servicios se consideran de Incubación Tradicional, mientras que los de manufactura de Tecnología Intermedia. Como se puede observar no hay proyectos de giro agrícola.

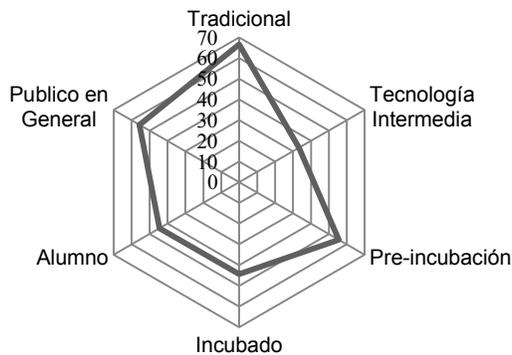

Tabla 6: Giro de los Proyectos

Giro	Año			Total	
	2012	2013			
Alimentos	3	8	11	29%	
Manufactura	6	7	13	34%	
Servicios	5	9	14	37%	
	14	24	38		

*En esta figura se observa que no hay una tendencia marcada de acuerdo al giro de los proyectos. Se mantiene el mismo comportamiento. Todos estos proyectos entrarían en un Modelo de Incubación Tradicional a excepción de los de Manufactura que solo representa un 34 % y que entrarían en Tecnología intermedia.*

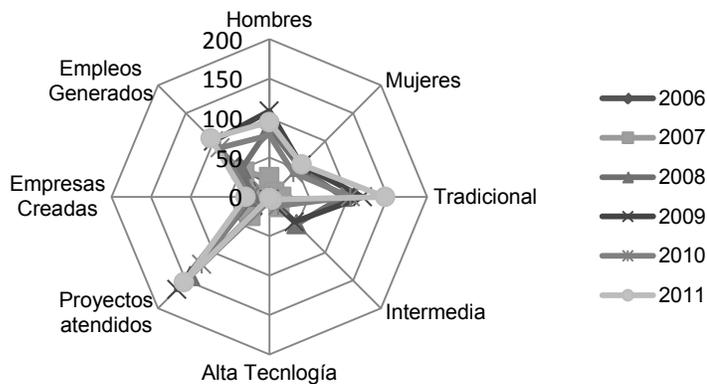

Las Figuras 1 y 2, por su parte muestran el comportamiento de los proyectos atendidos por el Centro de Desarrollo Empresarial y por la Incubadora de Negocios de la UJED respectivamente. Igual que en la Expo FECA Creatividad Empresarial, los proyectos que se generan son de tipo Tradicional. Datos proporcionados por la Incubadora de Negocios, confirman que desde que esta inició solamente 15 proyectos han sido “atendidos” en la Incubadora, provenientes de la FECA. Ninguno de estos proyectos ha surgido de la EXPO FECA.

Figura 1: Tipos de Proyectos Atendidos en el CDE 2012-2013

Esta figura muestra la tendencia del tipo de proyectos que se generan en el CDE. Las dos categorías son tradicional y de tecnología intermedia, siendo 66.6% para la primera. Es decir la mayoría son comercios y servicios que no requieren especialización. En cuanto a la relación, este factor nos indica que la tendencia es atender poco mas de 50% al público en general y el resto a alumnos de la FECA. El otro factor comparable es el status. El 55.5% de los proyectos estan en etapa de pre-incubación, es decir estan recibiendo algún tipo de asesoría para terminar de construir el plan de negocios y acceder a un crédito. El resto ya estan en etapa de incubación, es decir en marcha.

Figura 2: Tipos de Proyectos Atendidos en la Incubadora de Negocios 2006 A 2011

*Fuente: (UJED VyDE , 2013) La figura nos muestra el comportamiento de la generación de negocios de la Incubadora de Negocios desde 2006 hasta 2011. Datos de 2012 a la fecha aún no han sido publicados. La tendencia es atender a mas hombres que mujeres y a generar mas negocios de tipo tradicional. La tecnología intermedia queda en segundo lugar y los proyectos de Alta Tecnología, no son representativos. Aunque ha habido años en que se atienden casi 180 ideas de negocios, el promedio es de 21 empresas creadas para esos años. Los empleos generados en cambio si ienen una evolución, siendo el 2009, el año en que mas impacto se tuvo en este ramo.*

La siguiente asociación tiene que ver con el sexo de los generadores de proyectos. En la Incubadora de Negocios, son los hombres los que generan más proyectos de incubación que las mujeres. En la FECA, hay solamente 2 proyectos para los periodos analizados, donde la participación de las mujeres es menor al 33%. La tabla 7 muestra esa asociación. La tendencia tampoco muestra un comportamiento específico, solo en el caso de que el equipo está conformado por solamente mujeres, estas tienden a elaborar más proyectos de Alimentos, que entrarían en la clase de Tradicional.

Tabla 7: Participación de Mujeres Vs. Giro de Negocios

% de mujeres	Giro		
	Alimentos	Manufactura	Servicios
0%	0	1	0
25%	0	0	1
33%	1	2	0
50%	1	1	3
57%	0	0	1
60%	0	1	1
67%	1	1	2
71%	0	0	1
75%	0	1	0
80%	1	1	0
.83%	0	1	3
100%	5	2	2
Sin Inform	2	2	0
	11	13	14

*La tabla muestra que tampoco hay una tendencia contundente que refleje el tipo de proyectos que se generan respecto al número de participantes mujeres. El genero no es determinante. Cuando las mujeres son la mayoría se generan proyectos de Alimentos y cuando no existe participación femenina, o esta es menor al 33%, se generan proyectos de Manufactura o Servicios sin que esta asociación sea definitiva.*

### Análisis E los Elementos Evaluables en los Proyectos

La tabla 8 muestra un análisis que pretende identificar asociaciones y tendencias en cuanto al tipo de proyecto y el análisis que financiero que de él se hace. La mayoría de los proyectos concentran una inversión inicial menor a un millón de pesos o en la categoría de más de 1 millón y menos de 10 millones. Si bien cada proyecto debe manejar su propia Tasa de Rendimiento (TIR), algunos de los proyectos presentan niveles poco probables.

### Relación Entre los Negocios Propuestos y las Necesidades del Estado

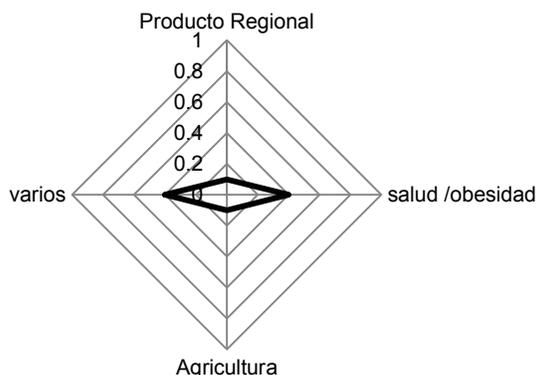

El siguiente análisis, se enfoca a identificar, independientemente de la factibilidad, las ideas de negocios formuladas y evaluadas en el proyecto de inversión y su relación con los Clúster identificados por INADEM y el Modelo Educativo de la UJED.

Tabla 8: Comparativo del Análisis Financiero de los Proyectos

GIRO	Per.R ecup	Inversión inicial																	más de 100'	
		Sin dato	1 a 10'				10' a 100'		a 1'								TIR			
		TIR	TIR				TIR		TIR											
		Sin dato	Sin dato	10 a 20%	20 a 30%	50 a 100 %	Sin dato	10 a 20%	Sin dato	10 a 20%	20 a 30%	30 a 40%	40 a 50%	50 a 100 %	55%	a 10	mas de 100	más de 100		0.1 millo nes

	3 a 5	0	0	0	0	0	1	0	0	0	0	0	0	0	1	1	0	0	0	3
	a 3	0	0	0	0	0	0	0	1	0	0	0	0	0	0	0	0	0	0	1
	más de 5	0	0	1	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	1
		1	1	4	4	5	1	1	5	1	1	1	1	3	1	1	1	5	1	38

Esta compilación de datos, arroja frecuencias y asociaciones entre el Giro del Proyecto, la TIR (rendimiento del proyecto) y periodo de recuperación y el monto de la inversión. Hay frecuencias muy altas relacionadas con una ausencia de datos. No hay una tendencia en montos de inversión y hay periodos de recuperación que se analizan en más de cinco años. Los Negocios de Manufactura, tienen inversiones menores a 10 millones.

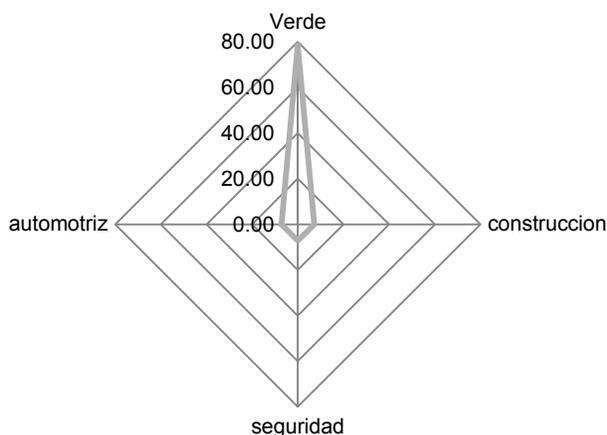

Figura 3: Temas de los Proyectos de Alimentos. (Tradicionales)

La figura muestra la tendencia de los temas de los proyectos de Alimentos. El 40% de ellos tiene que ver con negocios para combatir la obesidad y o bien temas relacionados con la salud. Alimentos que ofrecen productos del campo solamente aparece uno en todos los proyectos revisados. Los Productos regionales, se consideraron alimentos como dulces tradicionales. En el de varios, se encuentran diversas temáticas sin relación con los anteriores y sin tendencia marcada entre ellos.

En la figura 3, se toman en cuenta solo proyectos de la rama de Alimentos. Solo un proyecto tiene temática de producto Agroindustrial. Se ofrece un alimento con un recurso natural típico de la región. Sin embargo el tema recurrente es la salud. Alimentos dietéticos, altos en fibra, directamente relacionados con el combate a la obesidad, se encuentran aquí. En Varios no hay homogeneidad ni tendencia temática.

Figura 4: Temas de Proyectos de Manufactura. (Tecnología Intermedia)

En esta gráfica, se puede apreciar que la mayor tendencia en los proyectos e Tecnología Intermedia, en este caso de manufactura, son con tendencia ecológica. Las otras clasificaciones, como la automotriz, la construcción y la seguridad contribuyen con menos de un 10%. Los proyectos ecológicos tienen que ver con lámparas solares, cargadores solares, productos con materia prima que proviene del reciclaje de cartón, llantas y PET

La figura 4, tiene como propósito mostrar el tema de los proyectos de Tecnología Intermedia. La tendencia clara es participar con proyectos ecológicos con temáticas que van desde los cargadores solares hasta el reciclaje del PET. El INADEM identifica por su parte como un sector clave en el futuro las energías renovables. Esta es por lo tanto una tendencia que se manifiesta en los proyectos estudiantiles. En cuanto a los negocios de servicios, estos presentan una temática heterogénea que incluye restaurantes, entretenimiento, deportes, zoológicos y un metro como

medio de transporte por ejemplo. No se identificó una tendencia que pudiera relacionarse con las directrices que se analizan.

## CONCLUSIONES

El Perfil de Proyectos de Inversión, presentados en la Feria EXPO Creatividad Empresarial, para los años revisados, no arroja una tendencia clara como preferente, a excepción de los proyectos de Manufactura, donde más de un 78% tiene una temática ecológica. Sin embargo no hay respuestas metalmecánicas, madereras, o agroindustriales. Tampoco turísticas, de investigación, tecnologías de información o logística. Por lo que no hay relación con los Sectores Estratégicos marcados con INADEM ni tampoco con la vocación económica del Estado de Durango, plasmada en el Modelo Educativo de la UJED. La característica más rescatable es que la mayoría de los Proyectos, de incubarse requerirían de una Incubación Tradicional. Es decir, se comercializan productos y servicios pero no se genera riqueza en activos.

La integración de los Proyectos de inversión, no es consistente con los elementos que marca INADEM a las Incubadoras de Negocios. Los datos analizados muestran frecuencias altas precisamente en donde no se presentó dato o este no estaba claro. Esto significa que los proyectos que se generan en las aulas no están listos para incubarse. Y esto coincide con los datos de la Incubadora de Negocios en la que se refleja que aún con la Beca de Incubación, ningún proyecto sale de la feria. Sin embargo no se puede afirmar que ningún proyecto se haya llevado a cabo, pues no se tiene un seguimiento sistemático. Si hay negocios en marcha, ninguno ha pasado por la Incubadora.

Algunos factores que pueden determinar la falta de efectividad de los proyectos, tiene que ver con el trabajo organizado en el aula. La UJED como parte de ese ecosistema emprendedor, debe guiar proyectos que aborden la temática del INADEM. La razón es simple, la misión de una IE es egresar personas que cambien el entorno. Si el alumno no es guiado, se puede generar una idea de negocio pero no llegar a serlo. También se debe tomar en cuenta los reglamentos de las Ferias de Emprendimiento. No están alienadas ni siquiera con lo que ANFECA solicita, en las Ferias Nacionales y Regionales de Emprendimiento. Se puede seguir reconociendo la innovación o la creatividad, siempre que estén enmarcadas o en las categorías de los Clúster del INADEM o bien dentro del tipo de Incubación que se requiere, como lo hace ANFECA. Finalmente el hecho de que durante muchos años los proyectos fueran evaluados por profesores de la institución, pudo limitar la evolución o exigencia de los mismos al no recibir retroalimentación que proviniera de la vinculación con el sector empresarial. Como un punto a considerar en el rediseño del Plan de Estudios de Tradicional a uno Basado en Competencias, este tipo de clases, debe encontrarse al menos dos semestres más abajo. La Facultad tendría cautivo al alumno un año más, para trabajar su plan de negocios desde el CDE y pasar a la Incubadora o a su puesta en marcha incluso antes de egresar. Tal como está ahora en noveno semestre, parece según los datos, un poco tarde para formar emprendedores.

Hay una diferencia académica entre Formular y Evaluar Proyectos de Inversión y Diseño de un Plan de Negocios. La diferencia está en el valor agregado, en las competencias blandas. Más allá de los elementos que integran uno y otro documento, en el primero se pretende desarrollar competencias técnicas y en el segundo competencias de ejecución. Luego entonces la Feria Expo FECA Creatividad empresarial, no necesariamente debe seguir ligada a la materia de Formulación y Evaluación de Proyectos de Inversión. Se puede concluir también que la preocupación de los estudiantes además de los proyectos ecológicos, está en los proyectos orientados a combatir problemas de salud como la obesidad. Aunque el primero puede

relacionarse con el tema de energía renovable, sector clave en el futuro para Durango, no necesariamente llegan a ser el tipo de proyectos del nivel deseable. Por otro lado el tema de la obesidad, es una preocupación nacional, así que este tipo de proyectos debe seguir fomentándose.

El emprendimiento empresarial, está siendo atendido desde la Incubadora de Negocios en la UJED y desde el CDE en la FECA, que a su vez transfiere los proyectos a la Incubadora. Es decir funciona como una ventanilla o extensión al menos en ese aspecto. El número de proyectos de la FECA no rebasa 15. Comparado con el número de proyectos generados al año, por la feria, que pueden ser por lo menos 40 al año, si el 10% de estos se incubara, desde el 2006, que comenzó a operar la incubadora, habría 28 proyectos en marcha. También es importante señalar que si durante 10 años, el evento Expo FECA solo ha servido como un escaparate pero no como una plataforma de creación de negocios, es momento de pensar en otra estrategia distinta para promover el emprendimiento. Metodologías innovadoras como los fines de semana Startup, o las sesiones de estrategia empresarial con empresarios de la región como mentores y profesores como asesores, pueden resultar mucho más efectivas. El nuevo plan de estudios debe fortalecer la relación del estudiante con los servicios extracurriculares de la FECA, para que independientemente de la clase, el alumno pueda ir identificando su hábitat para emprender.

Finalmente, documentar las experiencias de emprendimiento, integrar las temáticas regionales a los planes de estudio, alinear la exigencia de mecanismos como la Feria Expo Emprendedor y el CDE para lograr generar proyectos de emprendimiento real y proponer nuevas estrategias innovadoras para la creación de negocios, dentro o fuera de la currícula, son solo alguna de las tareas para responder a las demandas económicas de sociedad de la región.

## RESUMEN

*Este trabajo tiene como objetivo comprobar si la comercialización del mezcal duranguense para su exportación a Tokio, Japón, representa una ventaja comparativa en el Comercio Internacional del Estado de Durango. México es un país rico en recursos naturales los cuales han sido desaprovechados para producir bienes de calidad que permitan fomentar su participación en el comercio internacional y utilizar la herramienta de comercialización como un factor para el desarrollo económico de la sociedad. Miles de familias campesinas habitan en ecosistemas donde no llueve la mayor parte del año y por ello no hay bosques maderables ni posibilidad de agricultura rentable. Uno de los productos endémicos de esta región que deja mayor beneficio económico es el Maguey (Agave-Mezcalero), fuente de materia prima para productos con alto valor agregado como los mezcales. Este trabajo está dirigido a evaluar la viabilidad de la comercialización del mezcal duranguense para su exportación a Tokio, Japón, para comprobar si representa una ventaja comparativa en el Comercio Internacional del Estado de Durango. La metodología utilizada en este análisis, fue estudio de caso, a través de una investigación documental y de campo con instrumentos de recopilación de datos como información documental, entrevistas y observación directa. Los resultados de este trabajo confirman que derivado de una ventaja competitiva de la región, garantizan una adecuada inserción en los mercados internacionales.*

**PALABRAS CLAVES:** Comercialización Internacional, Mezcal, Ventaja Competitiva

## DURANGO'S MEZCAL EXPORTATION TO TOKYO, JAPAN

### ABSTRACT

*This research's objective is to check to prove if the commercialization of Durango's Mezcal for its exportation to Tokyo, Japan, poses a comparative advantage to Durango's State International Commerce. Mexico is a country rich in national resources which have been wasted or misused to produce quality goods that allow to promote its participation in the international commerce and utilize the commercialization tools as a factor in its society's economic development. Thousands of farmer's families live in ecosystems with little to no rain throughout the year, that's why its forest's wood cannot be commercialized and there is no possibility for profitable agriculture. One of the endemic products for this region is the Maguey (Agave Mezcalero), a source of raw material for products with added value like the mezcales. This research aims to evaluate the viability of the commercialization of Durango's Mezcal for its exportation to Tokyo, Japan, to see if it has a comparable advantage to Durango's State International Commerce. The methodology utilized in this analysis was a case study through a field and documentary investigation using data recompilation such as documental information, interviews and direct observation. The*

*results of this research indicate that because a competitive advantage in the region guarantees an adequate insertion into international markets.*

**JEL:** F44, F63 y F23

**KEYWORDS:** Competitiveness, International Business, Competitive Advantage, International Competitiveness, Mezcal

## INTRODUCCION

México es un país rico en recursos naturales los cuales no han sido bien utilizados para producir bienes con valor agregado, que permitan fomentar su participación en el comercio internacional y así aprovechar la comercialización como un fuente de divisas e impacto económico para la sociedad. Hoy en día nuestro país cuenta con la mayor cantidad de tratados de libre comercio pactados en diferentes partes el mundo, con un total de 43 países y tres continentes, representando ésta, una oportunidad única en el comercio exterior ya que abre la puerta a mercados de millones de consumidores. Nuestro país, paga un costo de oportunidad muy alto al no hacer uso de las ventajas que estos nos brindan.

México se encuentra dividido por dos zonas importantes, la Neartica y la Neotropical, lo que permite tener una variada gama de vegetación, tanto de zonas templadas como de zonas áridas y semiáridas. Miles de familias campesinas habitan en ecosistemas donde no llueve la mayor parte del año dando como resultado que en estas zonas no hay bosques maderables ni posibilidad de agricultura rentable. Por esta razón, se han buscado diversas estrategias de aprovechamiento de los recursos forestales no maderables, los cuales involucran varias especies, entre ellas el orégano, la lechuguilla, la candelilla entre otras. Pero sin duda, el que deja mayor beneficio económico es el Maguey (*Agave-mezcalero*), existen más de 120 especies de Agave, fuente de materia prima para productos con valor agregado como los mezcales. Hoy en día, se ha convertido en tema de interés de académicos, empresarios y políticos la agroindustria derivada de los agaves donde se visualizan excepcionales planes de desarrollo.

Durango debe aprovechar esta tendencia donde el gobierno estatal, ha colocado a la cadena maguey-mezcal, en la lista de prioridades de Desarrollo Estatal. La Cadena Agave-mezcal, es de Importancia Socioeconómica y de competitividad para el Estado de Durango, esta cadena se ubica en el cuadrante de Impulso para el Estado de Durango, al representar una alternativa de reconversión productiva para zona agrícola de bajo potencial. (SAGARPA, Desarrollo de Capacidades Innovación Tecnológica y Extensionismo Rural, 2011) Las agaváceas se hallan desde el nivel del mar, donde crecen sobre dunas costeras, hasta bosque mesofilo de montaña a los 3300 metros; sin embargo, su abundancia es mayor entre los 800 y los 2500 metros sobre el nivel del mar. La familia agavácea, solo se desarrolla en forma natural sobre América (García Mendoza, 2002). En México se localizan principalmente sobre regiones de clima árido y semiárido entre los 1,700 y los 2,600 msnm. En suelos generalmente erosionados, formando matorral rosetofilo y se asocia con material microfilo y crasicaule en zonas de baja precipitación pluvial. Se localiza principalmente en los Estados del centro del país como lo son: México, Tlaxcala, Hidalgo, Puebla y Querétaro; en el sur de Oaxaca y Yucatán; en el Bajío en Guanajuato, San Luis Potosí, Jalisco, Colima y Aguascalientes, en el norte lo encontramos en Zacatecas, Coahuila y Durango, (SAGARPA, PLAN RECTOR DEL SISTEMA PRODUCTO DIAGNÓSTICO DEL AGAVE., 2004). La superficie plantada de Agave se ha incrementado significativamente en los últimos años. En 2005 alcanzo una superficie de 173,841 hectáreas, distribuidas 156,801 de agave Tequilero y 17,040 de Agave Mezcalero. Una proporción

importante de esta superficie ya alcanza los años necesarios para su cosecha (SAGARPA, Programa Sectorial de Desarrollo Agropecuario y Pesquero 2007-2012, 2007).

Para definir que es el mezcal debemos tomar la definición etimológica que viene del náhuatl Melt e Ixcalli que significa “agave cocido al horno”, aunque en otros diccionarios la palabra Mezcal proviene del náhuatl mexcalmetl, que significa “agave”, por otro lado tenemos la definición científica que se encuentra expresada en la Norma Oficial Mexicana del Mezcal, “bebida alcohólica que se obtiene por la destilación y rectificación de los mostos (jugos) preparados directamente con los azúcares extraídos de las cabezas maduras de los agaves, mismas que son previamente cocidas y sometidas a fermentación alcohólica”. El Mezcal, al igual que el Coñac, el Champagne y el Oporto solo es posible obtenerlo en una región, la cual fue registrada el 9 de Marzo de 1995 por la Organización Mundial de la Propiedad Industrial (OMPI) con sede en Ginebra Suiza. En la declaración de protección, Denominación de Origen Mezcal, se establece como región geográfica las comprendidas por los Estados de: Oaxaca, Guerrero, San Luis Potosí, Zacatecas y Durango.

La bebida a pesar de ser regional, se ha introducido al sur de los Estados Unidos y se ha reconocido como un excelente y principal sustituto del Tequila con características organolépticas distintivas de sabor, olor, cuerpo y color, además lo mencionado anteriormente con respecto a su denominación de origen representa una ventaja legal ya que su denominación reconocida internacionalmente significa que a nivel mundial se debe tener la seguridad de que el mezcal es un producto original, producido y envasado en México. Así mismo, al interior del país, el mezcal se rige bajo la Norma Oficial Mexicana (SECOFI, 1994), que dicta la regularización de la producción de esta bebida exige su envasado de origen lo que garantiza la calidad y originalidad ya que solo existirá el mezcal producido y envasado en México.

Posterior a la resolución de la Denominación de Origen en 1994, la elaboración de Mezcal retoma importancia en el estado de Durango, principalmente en los municipios de Durango, Nombre de Dios y el Mezquital. Cada región productora de mezcal impregna su propia cultura, conocimientos y gusto en la realización de su mezcal. Dicha bebida puede considerarse en los mercados internacionales como un producto diferenciado/distintivo así como una bebida exótica, con un sabor único y condiciones especiales, lo cual no tienen otras bebidas, brindando una ventaja comparativa y competitiva a este producto sobre las demás bebidas.

El gusto y la preferencia de los destilado de agave se ha multiplicado en los últimos 15 años, derivado del éxito internacional de la introducción del Tequila en los mercados internacionales, donde el consumo de ésta bebida marcó un hito de crecimiento preferencia y consumo a nivel internacional. El dinamismo mostrado por la demanda de Tequila a nivel mundial impulsó un crecimiento extraordinario de empresas y marcas en la industria. Sin embargo, pese a la mayor presencia del Tequila en el mercado de las bebidas, esta agroindustria no se ha logrado consolidar, por lo que no ha respondido de manera eficiente a la creciente demanda nacional e internacional. Es decir, la planeación entre la producción de agave y la industrialización de tequila ha sido su talón de Aquiles, teniendo constantes periodos de sobreoferta seguidos por otros de escasez de materia prima. Dicha falta de coordinación ha tenido consecuencias lamentables como enfrentamiento y pérdida de oportunidades para los actores. Tal es el caso de lo que sucede actualmente, cuando la escasez en la oferta de agave ha ocasionado que se desaproveche una demanda creciente al no tener la capacidad de satisfacerla. (Macias Macias, 2001)

Con base a lo descrito anteriormente y considerando que el Mezcal al igual que el Tequila son destilados de agave sustitutos perfectos con un perfil del consumidor muy similar se busca impulsar y posicionar internacionalmente al tequila, considerando la experiencia y problemática del Tequila en los mercados internacionales, estableciendo la siguiente hipótesis: “La comercialización del Mezcal duranguense para su exportación a Tokio, Japón, representa una ventaja comparativa en el Comercio Internacional del Estado de Durango.” Con las siguientes preguntas de investigación: ¿Qué factores de la producción intervienen en la exportación del Mezcal Duranguense a Japón?, ¿Cómo es el comportamiento de la demanda en Japón? ¿Cómo es el comportamiento de los costos de comercialización y exportación?, ¿Qué efecto tiene la exportación del Mezcal Duranguense a Japón en el desarrollo económico y en su participación en el comercio exterior? La metodología utilizada en este trabajo, fue estudio de caso, a través de una investigación de tipo documental e investigación de campo con instrumentos de recopilación de datos como información documental, entrevistas y observación directa.

## REVISIÓN LITERARIA

### Mezcal

El Mezcal objeto de este estudio de exportación es una bebida alcohólica regional y con denominación de origen elaborada a partir de la destilación y rectificación de mostos preparados con los azúcares extraídos de las cabezas maduras de los agaves, el mezcal es un destilado de agave característico de México y particularmente de regiones semiáridas o de bajo desarrollo económico, el cual surgió a partir de la fusión de la tradición prehispánica en cuanto al uso del maguey y la técnica de destilación traída por los españoles. El mezcal es un líquido transparente con cualidades organolépticas particulares de olor y sabor característico de acuerdo al tipo de agave utilizado y el proceso con el que es elaborado, es incolora o ligeramente amarilla si esta añejado, reposado o abocado.

La materia prima utilizada en la elaboración de mezcal es el agave que recibe el nombre común de maguey y que pertenece a la familia Agaváceas el cual es quizá el término más conocido debido a las importantes relaciones etnobotánicas que se han originado entre sus elementos y las diversas culturas del continente americano. Su uso milenario se conoce a través de los códices y escritos antiguos que narran la riqueza cultural encontrada por los españoles en México. Dentro de esta familia se encuentra el Agave Duranguensis una de las principales especies en el estado de Durango debido a su importancia económica en la sustentación de una industria regional en la elaboración del mezcal, esta especie pertenece a la sección Ditepalae la cual se caracteriza por incluir plantas de pequeñas a grandes, con rosetas glaucas brillantes, productoras de semillas, con hojas firmes a rígidas, con panículas generalmente abiertas, yemas florales generalmente rojizas, flores maduras amarillas, tépalos dimórficos, los externos más grandes y sobre poniendo los internos, generalmente rojos en la punta.

En el estado de Durango es el Agave Duranguensis o Cenizo. Esta especie pertenece a la sección Ditepalae, la cual se caracteriza por incluir de acuerdo con (Gentry, 1982) plantas, de pequeñas a grandes, con rosetas glaucas brillantes, productoras de semillas (existen especies de Agave que no producen semillas y su reproducción es básicamente vegetativa), con hojas firmes y rígidas, con panículas generalmente abiertas, yemas florales generalmente rojizas, flores maduras amarillas,

tépalos dimórficos, los externos más grandes y sobreponiendo los internos, generalmente rojos en la punta.

### Internacionalización

La internacionalización de la empresa es un fenómeno económico de sumo interés para la investigación. Donde se explica el fenómeno de la internacionalización de las empresas, como el conjunto de operaciones que facilitan el establecimiento de vínculos más o menos estables entre la empresa y los mercados internacionales, a lo largo de un proceso de creciente implicación y proyección internacional. Otra perspectiva que ha estado revolucionando el estudio de las empresas internacionales es la investigación en el ámbito de la de la exportación y productividad a nivel micro, es decir específicamente en datos de la empresa. Uno de los principales resultados de este tipo de investigaciones ha sido que, las empresas exportadoras, muestran mejores niveles de desempeño, en términos de productividad, tamaño, supervivencia, salarios pagados, intensidad de capital y sofisticación tecnológica que las empresas no-exportadoras (Gopinath, Sheldon, & Echeverria, 2007) (Aw & Hwang, 1995) (Bernard & Jensen, 1997).

Por una parte, se argumenta que las empresas exportadoras logran mejoras en sus resultados como consecuencia del proceso de aprendizaje que se genera en los mercados internacionales (hipótesis de aprendizaje por la exportación). Y por otra parte, se sostiene que es el éxito competitivo en el mercado doméstico el que provoca que una empresa sea capaz de exportar. (Delgado, Fariñas, & Ruano, 2002).

Analizando los posibles factores de éxito de empresas exportadoras éstas deben poseer algún tipo de ventaja competitiva exclusiva. Dicha ventaja competitiva puede tener su origen en la producción, en la tecnología, en la organización, el estilo de dirección o la comercialización, ventaja de ser un producto con denominación de origen, entre otras. Lo que implica que estas empresas pueden competir con empresas extranjeras en sus propios mercados. En su tesis (Hymer, 1976) examina qué tipo de ventajas pueden poseer o adquirir las empresas de exportación, así como el tipo de sectores industriales y las estructuras de mercado en las que es más probable que se concentre la, ya que la existencia de tales ventajas competitivas. Una empresa puede tener una ventaja competitiva tal que le permita superar los inconvenientes de ser foránea y, por lo tanto, resultarle lucrativo explotarla en otros países.

### Ventaja Competitiva

Para dejar claro que es una ventaja competitiva, es importante que se comience por contestar a la siguiente respuesta, ¿Qué quiere decir ser competitivo? de acuerdo al Dr. Santiago Garcia Echevarria de la Universidad Alcala de Henares establece que una empresa debe contar con 3 aspectos básicos para ser competitivos, los cuales son: racionalidad económica, productividad, capacidad de coordinación y adecuación con el entorno y calidad de dirección y organización, finalmente concluye que ser competitivo implica crear, permanente barreras rente a los competidores. Así podemos decir que *“una ventaja competitiva constituye una destreza o habilidad especial que logra desarrollar una empresa y que la coloca en una posición de preferencia a los ojos del mercado.”* (Bravo, 1997). Para entender mejor el concepto de ventaja competitiva, podemos decir que una empresa vende sus productos o servicios no porque tenga una infraestructura física, disponga de personal, de productos en existencia, sucursales, proveedores, maquinaria o profesionistas para dirigirla, sino porque existe un grupo de consumidores o usuarios que por alguna razón prefieren sus productos o servicios que los de otra marca o empresa. Finalmente cabe destacar, que en base a la internacionalización de la empresa,

se considera que la exportación de Mezcal a Tokio Japón, representa una ventaja competitiva tanto en base a la especialización del producto como de su denominación de origen.

## **METODOLOGÍA**

Una vez que se ha establecido el fundamento teórico, se describe el procedimiento que se seguirá en este estudio para dar solución al problema y comprobar la hipótesis. El objetivo de este estudio es comprobar la hipótesis y preguntas de investigación que se proponen: Hipótesis: “La comercialización del Mezcal duranguense para su exportación a Tokio, Japón, representa una ventaja comparativa en el Comercio Internacional del Estado de Durango.” Preguntas de investigación: ¿Qué factores de la producción intervienen en la exportación del Mezcal Duranguense a Japón?, ¿Cómo es el comportamiento de la demanda en Japón?, ¿Cómo es el comportamiento de los costos de comercialización y exportación?, ¿Qué efecto tiene la exportación del Mezcal Duranguense a Japón en el desarrollo económico y en su participación en el comercio exterior?

Estudio de caso: Para este estudio se contempló la investigación documental e investigación de campo así como la observación practicada al personal de la Planta productora de Nombre de Dios, Durango. Ingenieros, químicos, equipo de apoyo, personal de la empresa, proveedores de insumos que intervienen en la producción del mezcal, consumidores de destilados de agave, productores de mezcal artesanal, vinatas y dependencias de gobierno. Instrumentos de recopilación de datos: Información documental, entrevistas y observación directa. Se practicaron encuestas que permitieron conocer la apertura del mercado meta hacia los destilados de agave, para conocer con este estudio el comportamiento del mercado respecto al sustituto perfecto del Mezcal que es el Tequila. Para este estudio se realizó una muestra por conveniencia, debido al difícil acceso a un mayor número de tokiotas, complicaciones con el idioma y la diferencia de horarios complican un estudio con el muestreo más amplio. Se utilizó la escala de Likert. Finalmente el método de observación directa se aplicó en las vinatas artesanales y en la planta productora del Mezcal de Nombre de Dios, para conocer el proceso productivo y sus implicaciones.

## **RESULTADOS**

Se determinó la existencia de una ventaja competitiva de la exportación de Mezcal, destilado de agave, a Tokio, Japón, considerando los resultados obtenidos en el estudio. A nivel macro los inventarios de agave en México, según datos de la Servicio de Información Agroalimentaria y Pesquera SAGARPA (SIAP) 2010, muestran que el agave se cultivó en una superficie total de 162,388.89 ha., sin embargo solo se cosecharon 15,880.20, estas en Jalisco; el volumen es pequeño comparado con el resto de la superficie sembrada, la explicación de dicha situación radica en que el agave -como materia prima para la producción de mezcal- tiene un proceso de recolección a partir de plantas silvestres, particularmente en Estados como Oaxaca, Guerrero, San Luis Potosí y Zacatecas, y por lo tanto, no requieren de cosechar el producto. En este rubro, productores de Guerrero, Oaxaca y Zacatecas y Durango. Indica la importancia del agave para la economía de los productores, industrializadores y comercializadores que integran la cadena agroalimentaria Agave - Mezcal.

La evolución de la superficie sembrada con agave a nivel nacional desde el año 2000 al 2010, muestra que el año 2000 marcó un crecimiento de la superficie sembrada con agave, particularmente de la variedad Tequilana Weber (destinado a la producción de Tequila) ya que existía un desabasto de materia prima para atender las necesidades de la industria. Será necesario

mantener el crecimiento en cultivo y reforestación, ya que es indispensable la protección de la denominación de origen de los productos elaborados a partir del agave: Sotol, Tequila, Mezcal y Bacanora en el marco de los acuerdos comerciales que tiene México con regiones económicas importantes en el mundo, tal es el caso del Acuerdo Asia Pacífico. El Estado de Durango sensible a ésta necesidad proyecta la reforestación en base a un programa de comercialización internacional del Mezcal previo.

En el Estado de Durango, México, donde por años se ha aprovechado el agave sin límite, se requiere de la atención en el cultivo y reforestación de las áreas naturales de producción del agave cenizo, principal materia prima del Mezcal. Ya que actualmente estas sólo reproducen los hijuelos que en la mejor de las circunstancias se desarrollarán y en su momento también serán explotadas. De lo que se desprende que la población endémica silvestre de agave tipo cenizo, básicamente, de no establecerse un plan serio de reforestación combinado con el programa de plantaciones tecnificadas, a largo plazo, el agave silvestre irá declinando y desapareciendo de las superficies que hoy lo cobijan. El sobre pastoreo de ganado acaba también con los hijuelos de agave. Es por ello que SEMARNAT a partir del año 2000 se ha interiorizado del asunto para gradualmente ir estableciendo parámetros de manejo sustentable para la especie de interés. Otra de las ventajas competitivas que tiene el Mezcal, es que es una bebida con Denominación de Origen, actualmente una figura jurídica reconocida internacionalmente para garantizar a los consumidores la autenticidad del producto y para salvaguardar los derechos de los productores contra la competencia desleal. La denominación de origen es aquella que utiliza el nombre de una región o lugar geográfico de un país para designar un producto originario, cuya calidad o características se deben exclusivamente a ese medio geográfico, resultado de factores naturales y humanos.

En México es el gobierno el titular de estas y quien autoriza su uso a productores que cumplan con las disposiciones establecidas, pero ambas partes obtienen reconocimiento a nivel nacional e internacional. En México hay catorce productos que poseen denominación de origen, entre los que se encuentran cinco bebidas destiladas que son el mezcal, el tequila, bacanora, sotol y charanda. Los tres primeros son mezcales y se encuentran protegidos y registrados en la Organización Mundial de la Protección Intelectual y en el caso específico del Mezcal bajo el número 731 del 9 de marzo de 1995. Las denominaciones de origen se encuentran reguladas por las normas oficiales mexicanas, para la operación de estas existen organismos de certificación acreditados que verifican y vigilan que el producto efectivamente mantenga los estándares de calidad requeridos en lo cual también colabora la PROFECO, así en 2003 se creó el Consejo Mexicano regulador de la Calidad del Mezcal A.C.

La tendencia internacional de consumir bebidas alcohólicas orgánicas y con características organolépticas especiales trae consigo otra ventaja de éxito para el Mezcal. En los últimos años, el Mezcal ha cobrado importancia en los mercados nacional y extranjero. En México y en otros países hay un creciente interés por esta bebida. De acuerdo con datos del Consejo Mexicano Regulador de la Calidad del Mezcal, en 2010 se produjeron más de un millón 530 mil litros de mezcal y se exportó casi la tercera parte. En 2010, se exportaron más de 422 mil litros de mezcal, 96% más que en 2005 y 54% más que en 2009. De acuerdo al Consejo Mexicano Regulador de la Calidad del Mezcal (COMERCAM), los centros de consumo que expenden Mezcal en la capital mexicana aumentaron en 660 % en el último año (2013). La tendencia en exportaciones es a la alza, el auge del mezcal se manifiesta de forma más evidente en las exportaciones, que según el organismo experimentan un crecimiento de entre el 35% y el 40 % anual. "En la actualidad, del 60% al 65 % de la producción anual, de poco menos de un millón de litros, se va

al extranjero, principalmente a Estados Unidos y otros países como: Canadá, Guatemala, Reino Unido, España, Italia, Turquía, Japón y Taiwán.

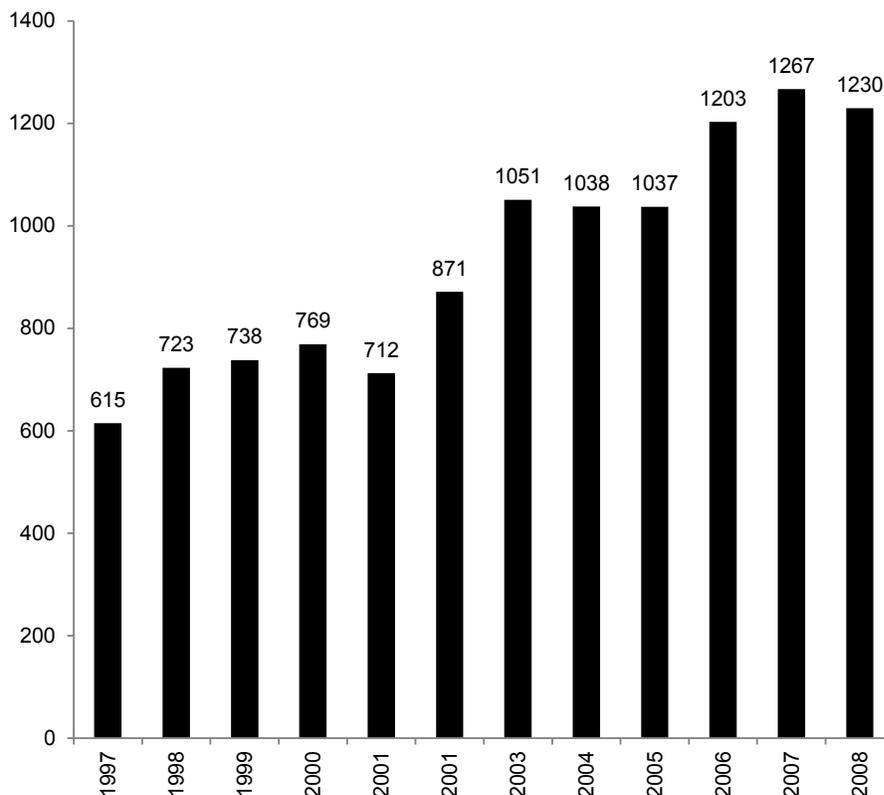

Una vez analizado el contexto de nuestro producto así como su participación en el mercado local e internacional, fue necesario encontrar el destino que reuniera con las características necesarias para posicionar el mezcal Duranguense, atendiendo a la satisfacción de los consumidores potenciales en el país elegido. De acuerdo a la exploración de oportunidades de mercadeo que brinden un escenario favorable para llegar a un determinado grupo de consumidores y generar ventas plenamente identificables.

Considerando los factores de la producción que intervienen en la exportación del Mezcal Duranguense a Japón, se identificaron las siguientes: Las características que distinguen el género Agave son el arreglo radial de las hojas, la presencia de dientes a lo largo de las mismas, una espina terminal en las hojas, cutícula cerosa, inflorescencias grandes que pueden ser racimosas o paniculadas, frutos dehiscentes en formas de capsulas y numerosas semillas negras. De la gran cantidad de especies de agave existentes, la especie utilizada para la elaboración de mezcal

En el estudio, se incluyó un análisis realizado para determinar el envase, embalaje y empaque de nuestro producto, tomando en cuenta las características particulares que debe reunir de acuerdo a la imagen que se pretende proyectar al exigente consumidor final al que está destinado, el envase y embalaje debe ser de alta calidad y diseñado tomando en cuenta el largo trayecto que deberá recorrer el producto antes de llegar a su punto de venta. Se realizó un análisis logístico de desplazamiento desde la Planta Productora de Mezcal, Nombre de Dios, Tradición Mezcalera S.A de C.V. en el Estado de Durango hacia el puerto de Los Ángeles y posteriormente su embarque con destino a Tokio Japón. En todo este apartado se consideraron las Normas Oficiales Mexicanas para el envasado y etiquetado de nuestro producto, en conjunto con las Normas Oficiales del país destino.

En relación a la segunda pregunta de investigación ¿Cómo es el comportamiento de la demanda en Tokio Japón? Para dar respuesta a esta interrogante se inició con una descripción del ciudadano japonés conociendo tanto sus compartimientos como gustos y preferencias para definir cómo se comporta el mercado de bebidas alcohólicas en el país de destino y así desarrollar una estrategia de posicionamiento en el mercado internacional. Se determinó la viabilidad de exportación del mezcal ya que esta bebida espirituosa se ha ido abriendo paso en el mercado internacional a través del tiempo. A veces lo confunden con una de sus variedades como lo es el Tequila; sin embargo el Mezcal, ha tenido su nicho de mercado entre los paladares más exigentes del mundo. La búsqueda de mercados ha llevado a productos como el mezcal a la internacionalización. Este proceso ha tenido que recurrir a las características intrínsecas que lo determinan y que marcan su diferencia con otros productos.

Figura 1: Importación de Destilados de Agave a Japón

*Fuente: ProMéxico Japón con datos del Ministerio de Finanzas de Japón. En la gráfica nos muestra el comportamiento de las importaciones de Destilados de Agave a Japón, mostrándose una tendencia a la alza de su consumo y una mayor aceptación. Estos datos aunados a la aceptación del consumo personal fortalecen la hipótesis de posicionamiento en el mercado con ventaja competitiva para México.*

Para la determinación del mercado meta se utilizó la metodología propuesta por BANCOMEXT y utilizado por Alejandro Lerma Kichner, (Lerma & Marquez Castro, 2010) ambas complementarias y útiles para determinar nuestro mercado meta. Se tomaron en cuenta en primer término los países con los que México sostiene acuerdos comerciales con preferencias arancelarias, obteniendo información de los países más accesibles e interesantes. Posterior a esta primera revisión, se resaltaron elementos específicos como: aspectos culturales, costumbres y sobre todo hábitos de consumo de bebidas alcohólicas. En esta primera revisión, se identificaron tres posibles mercados. Como primer paso para preseleccionar los posibles mercados, definimos que los consumidores que lo conformen deben reunir algunas características como a continuación se menciona: 1.- Las personas deben tener la necesidad de un determinado producto 2.- Las personas deben tener la capacidad de adquirir el producto y 3.- Los posibles consumidores deben estar dispuestos a usar su poder adquisitivo. Se realizó una selección con los requerimientos de mercado eligiendo tres países, España, Japón y China. (ver tabla 1).

Los factores decisivos para definir estas tres entidades, fueron los siguientes: ubicación, magnitud del mercado, productos o servicios que consume, ingreso per cápita, política proteccionistas, perfil de consumidores, riesgo país, entre otros. Una vez revisados estos elementos, el factor preponderante de decisión fue la tendencia de crecimiento de la economía japonesa gracias a su estabilidad en las variables micro y macroeconómicas, así como la tendencia que muestra hacia la

importación de bebidas y alimentos. Sin perder de vista que es un mercado que tiene un alto índice de consumo de bebidas alcohólicas así como gusto por las bebidas exóticas importadas. A partir de esa elección preliminar, se realizó una evaluación, tomando en cuenta; hábitos de consumo, perfil de consumidores, población económicamente activa, ingreso per cápita, redes de distribución, moneda, infraestructura, etc. Como resultado de esta última evaluación se definió a Tokio, Japón, como mercado meta, se tuvieron diferentes consideraciones, predominando el ingreso per cápita y sobre todo el hecho de que se considera a Tokio como una ciudad cosmopolita con actividades primordialmente financieras, comerciales, turísticas y de ocio, con gustos y preferencias dirigidas al trabajo y al esparcimiento con actividades lúdicas, favoreciendo este último al consumo de bebidas alcohólicas.

Tabla 1: Matriz Para la Selección del Mercado Objeto

Parámetros	España	Japón	China
Población	47,021,031	126,874,000	1,339,724,852
PIB (MD)	1,438,356	5,390,897	5,878,000
PIB Percapita	29,925	33,668	4,382
Valor en volumen de importación de México – } País (DlIs)	97,702	1,034	210
Tendencias del mercado	Productos Orgánicos	Productos orgánicos y consumo de bebidas alcohólicas	Incremento de consumo de bebidas alcohólicas
Barreras arancelarias	Libre de aranceles	Libre de aranceles	
Tratados de libre comercio	TLCUE	AAE	No Existe
Intensidad de la competencia	Alta	Media	Media
Estabilidad social y política	Media	Alta	Alta
Afinidad Cultural (idioma, religión costumbres)	Mismo idioma y culturas similares	Baja afinidad, idioma y cultura diferentes	Baja afinidad, idioma y cultura diferentes
Canales distribución del producto	Mediana – baja, hay intermediarios para entrar al mercado	Múltiples etapas de mayoristas y distribuidores	Ventas a través de HORECA (intermediarios) que incrementan el precio del producto
Ferias del sector	Alimentaria Barcelona 2012	FOODEX Japan 2012	FHC China 2012
Familiaridad del consumidor con el producto	Mediana – Alta a través del Tequila y Mediana baja por el mismo consumo de Mezcal	Mediana – Alta a través del Tequila y Mediana baja por el mismo consumo de Mezcal	Mediana – baja a través del tequila y baja por el mismo consumo de Mezcal

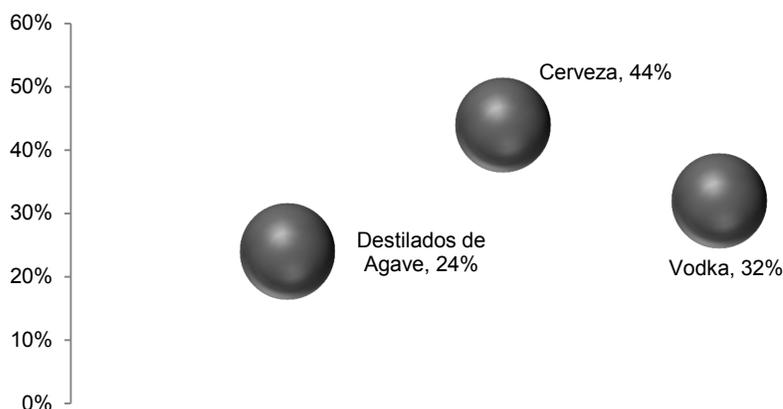

*La Matriz elaborada en base a la Metodología de Alejandro Lerma Kichner, muestra los elementos de mercado más importantes en cada uno de los mercados preseleccionados. A partir de esa elección preliminar, se realizó una evaluación, tomando en cuenta; hábitos de consumo, perfil de consumidores, población económicamente activa, ingreso per cápita, redes de distribución, moneda, infraestructura, etc. Como resultado de esta última evaluación se definió a Tokio, Japón, como mercado meta.*

Una vez determinado el mercado meta, se realizó una segmentación en la que se especificó el perfil del mercado al que va dirigido nuestro producto, concluimos que las personas idóneas deben ser adultos mayores a los 20 años ya que es la edad mínima de consumo de bebidas alcohólicas en Japón va dirigido tanto a hombres como mujeres y otro aspecto interesante por el cual fue decisivo al elegir el mercado es que el mercado asiático sus habitantes no tienen una religión o creencias muy estrictas que les prohíban o limiten el consumo de alcohol, nos enfocamos en personas económicamente activas, de clase media o alta, con un estilo de vida actual y moderno con un amplio gusto por las bebidas alcohólicas y con una actitud con tendencia a probar nuevos productos y vivir nuevas experiencias.

El resultado de la encuesta para el estudio por conveniencia realizado, se basó en la aplicación de 25 encuestas, tomando en cuenta el perfil definido para nuestro mercado meta. Hombres y

mujeres tokiesas entre 25 y 65 años de edad. La encuesta se diseñó con la finalidad de conocer los gustos y preferencias del mercado meta respecto al consumo de bebidas alcohólicas, buscando conocer la aceptación y preferencias que se tienen hacia el tequila, tomando éste como base para nuestro estudio debido al posicionamiento con el que cuenta en este mercado. Respecto a la preferencia de bebidas alcohólicas listadas en la encuesta se obtuvo los destilados de agave, se encontraron en tercer lugar de preferencia por los tokiesas, con un 24% respecto a otras bebidas que predominaron como la cerveza y el vodka, como se muestra en la gráfica.

Figura 2: Preferencia de Consumo de Bebidas Alcohólicas en Tokio

*Elaboración propia. Encuesta realizada sobre la preferencia de bebidas alcohólicas donde los destilados de Agave se encuentran entre una de las bebidas preferentes en un 24%. Resultados que apoyan a sustentar la hipótesis. Estas bebidas se encuentran en el gusto y preferencia del mercado meta, situación que es considerada como una gran ventaja para el Mezcal.*

En la tercera pregunta ¿Cómo es el comportamiento de los costos de comercialización y exportación? Para dar una respuesta se realizaron análisis financieros, presupuestos de ventas para el primer, segundo y tercer semestre, así como un presupuesto de producción. En el cálculo de ventas, se determinó la determinación del precio de exportación, ya que dentro de este estudio se determinó los inventarios promedios mensuales, tanto de materia prima como de insumos principales y accesorios. Como segundo paso, se analizaron los presupuestos de producción y operación así como el de materia prima y mano de obra, tomando en cuenta en este último, actividades previas como lo son, la selección de la materia prima, el proceso de preparación para su introducción a la planta productora, el traslado, el proceso productivo en cada una de sus etapas, envasado, embalaje, carga y descarga y almacenamiento de producto terminado. Posterior a esto, se elaboraron los presupuestos de gastos de venta, gastos de administración y gastos financieros, finalmente se realizó el cálculo de contribuciones al comercio exterior, fletes seguros, gastos conexos para concluir con la determinación del precio de exportación. Este precio nos muestra un margen de utilidad del 30%, dato que identifica y promueve que si tenemos ventajas competitivas para

De acuerdo a los resultados anteriores nos revela que la hipótesis: “La comercialización del mezcal duranguense para su exportación a Tokio, Japón, representa una ventaja comparativa y competitiva en el comercio internacional del Estado de Durango”. La hipótesis se ve fortalecida en el análisis de resultados y tiene aún mayor reafirmación con la evaluación económica y financiera que se realizó. Es decir, en primer término la aportación de pruebas realizadas en el desarrollo de los capítulos respalda y apoya el contenido de la hipótesis, de acuerdo a que la exportación del mezcal representa una ventaja comparativa. Lo anterior se demuestra a través del

análisis financiero derivado de los resultados de la evaluación económica del negocio de exportación se consolida la aceptación de la hipótesis. En seguida se determinó el punto de equilibrio, se calculó el Valor Presente Neto (VPN) y la Tasa de Rendimiento (TIR) para reconocer si los flujos esperados realmente satisfacían las necesidades financieras de inversión y de utilidades, situación que resulto favorable para la empresa.

## CONCLUSIONES

Como resultado del estudio realizado se concluye que la exportación del Mezcal de Durango a la ciudad de Tokio, Japón, representa una ventaja comparativa en el Comercio Internacional del Estado de Durango. Se analizó el proceso de producción del Mezcal para tomar en cuenta todos los elementos que lo componen desde la primera etapa de recolección de la materia prima hasta la preparación para su comercialización, activos fijos, mano de obra, etc. Al analizar la situación actual de la industria del Mezcal para identificar su posicionamiento nacional e internacional y evaluar su comportamiento permitió conocer la oportunidad de mercado que representa para éste destilado la demanda internacional.

Como primera etapa de éste proceso se seleccionaron tres posibles destinos los cuales fueron enfrentados con sus características generales para determinar cuál reunía las características más atractivas, teniendo como resultado que Tokio es el lugar indicado para iniciar la exportación y así introducirse al mercado asiático quien muestra un gusto especial por los destilados de agave. Se determinó que Tokio como ciudad cosmopolita por excelencia con una economía estable, siendo uno de los centros urbanos más importantes del planeta cuenta un poder adquisitivo que permite que nuestro mercado meta designe una parte de su ingreso al consumo de bebidas exóticas como lo que representa el Mezcal para el mercado Nipón. Estimándose una demanda basándose en el consumo aparente de las bebidas alcohólicas por parte de los tokiotas y el incremento poblacional en el rango de edades de nuestro mercado meta, sin dejar de lado el incremento en las tasas de turismo en la metrópoli de Tokio, quienes sin duda alguna serán parte de ese mercado que queremos penetrar. Finalmente se concluye que éste proyecto es realizable, fundamentándonos en las principales teorías de ventajas comparativas, además de un estudio de aceptación del mercado, considerándose que es viable y factible como unidad de negocio además de generar beneficios adicionales como impacto en la región productora, bienestar social y económico en las comunidades productoras agregando un valor agregado importante, creando una nueva industria para la región y un impacto favorable en los indicadores macro del Estado de Durango.

## RESUMEN

*En el presente artículo se abordarán algunos conceptos relacionados con el trabajo cooperativo/colaborativo, como apoyo para la mediación de las TIC en los procesos de enseñanza y aprendizaje en la educación superior. Dichos conceptos se relacionan con algunos hallazgos, identificados en la investigación “Caracterización de experiencias significativas mediadas por las TIC en educación superior virtual, investigación realizada por Piedad María Metaute, Paul Andrés Rugeles y Beatriz Mora González, para optar el título de Magister en Educación y Desarrollo Humano. Durante el desarrollo del artículo se hará referencia a aspectos como: el papel de la sociedad del conocimiento, la ética en el trabajo cooperativo y la brecha digital en el aprendizaje cooperativo, adicionalmente, se pretende elaborar una reflexión en torno al trabajo cooperativo y su importancia en la formación del ser, en su desarrollo emocional, entendido como el conjunto de habilidades que contienen la capacidad de motivación, de resistirse ante las frustraciones, de controlar los impulsos y la demostración de empatía hacia el otro.*

**PALABRAS CLAVE:** Trabajo cooperativo, TIC, Sociedad del conocimiento, nativo digital, brecha digital

## COLLABORATIVE WORK IN HIGHER EDUCATION MEDIATED TECHNOLOGIES INFORMATION AND COMMUNICATION

### ABSTRACT

*This article will address some concepts related to cooperative or collaborative work, as support for the mediation of information and communication technologies in the teaching and learning in higher education. These concepts will be related to partial findings identified in the research: “Characterization of meaningful experiences mediated by information and communication technologies in higher education”<sup>2</sup> during the development of the article will refer to aspects such as the role of the knowledge society, the cooperative work ethic and the digital divide in cooperative learning, in addition, is to develop a reflection on cooperative work and its importance in the formation of self, emotional development, understood as the skill sets that contain the ability to motivate, to resist to the frustrations, to control impulses and demonstrating empathy for the other.*

**KEYWORDS:** Cooperative Work, Information Technology and Communication, significant experience, knowledge society, digital divide.

## INTRODUCCIÓN

Para ubicar el tema del trabajo colaborativo, es importante situar las condiciones sociales e históricas en las que nos encontramos. Castell (2002) afirma que cuando se habla sobre el futuro de la sociedad del conocimiento se refiere a un código para hablar de una transformación sociotecnológica, debido a que todas las sociedades son del conocimiento y que en todas las sociedades conocidas históricamente, la información y el conocimiento han permitido la toma de decisiones en relación al poder, la riqueza y las organizaciones sociales. Lo anterior permite hacer la precisión de que se trata de una sociedad en la que la generación de conocimiento y procesamiento de la información han sido alterados por una revolución tecnológica que tiene su centro en el procesamiento de información y las tecnologías, lo que lleva a pensar que la tecnología se desarrolla en relación a los contextos sociales, económicos, culturales e Institucionales, lo que es corroborado en los hallazgos de la investigación en la que los diferentes actores ven la posibilidad real de articular los procesos académicos con otros sectores, entre ellos el productivo donde se da solución a problemas reales, además de la posibilidad que tiene la institución de servir a la sociedad propiciando una educación virtual que apoya el desarrollo de las competencias de los estudiantes, llegando a personas que quizás el único medio que tengan para acceder a esta información es a través de las tecnologías de información y comunicación, sea por su ubicación o porque puedan estar impedidos físicamente de llegar hasta una Institución de educación.

En los últimos quince años, lo que hace diferente este acontecer en las tecnologías de la información y la comunicación es un cambio de paradigma similar al que ocurrió con la sociedad industrial, pero con la diferencia de que este paradigma acontece con la participación de todos los procesos de la sociedad, la política, la economía y son afectados por la capacidad de procesamiento de información en todas las actividades humanas.

Krüger (2006) define el término sociedad del conocimiento como un factor del cambio social. La expansión de la educación, por ejemplo, se constituirá en la base de los procesos sociales en diversos ámbitos funcionales de las sociedades. En lo referente al término conocimiento, no se puede hablar de la sociedad del conocimiento en relación únicamente al hecho de producir cada vez más conocimiento en términos de número de personas con estudios de doctorado, sino como sistema de producción de conocimiento en donde se ponen en interrogante las suposiciones, percepciones y expectativas, en donde se incrementan las interacciones que propician el crecimiento del ser social. Es en este punto donde el trabajo cooperativo cobra gran importancia, una vez que, de acuerdo con Mercer (1997), se considera que el trabajo de forma cooperativa debe ser generador de nuevas ideas en el que la comunicación sea frecuente, permanente y rápida, exista un contacto continuo entre los miembros, exposición de ideas claras y fácilmente compartidas para lograr evaluaciones oportunas y conjuntas, con elaboración de argumentaciones que apoyen la construcción de conocimiento a través de críticas constructivistas con el aporte de cada uno de los miembros del equipo, se justifiquen de forma abierta los razonamientos que van realizando los diferentes actores y el establecimiento de roles claros desde el inicio del trabajo, en especial, los facilitadores reconocen y resaltan la importancia que tiene generar conocimiento

compartido aprendiendo de otros en las participaciones son virtuales y presenciales en eventos y ferias regionales, nacionales e internacionales.

El fenómeno tecnológico actual obliga a que el trabajo cooperativo desarrolle un tratamiento especial a la gran cantidad de información que proporciona internet, su evolución genera oportunidades para trabajar con muchas personas en espacios diversos tanto de ubicación geográfica como de ubicación temporal; se habla entonces de un panorama sociocultural que lleva a la realización de replanteamientos de las estrategias pedagógicas y formas de comunicación e interacción que obligan a la adquisición de nuevas competencias o a desarrollar otras, tales como la iniciativa, la autonomía, el emprendimiento, la innovación, la autogestión y el auto direccionamiento de procesos de aprendizaje personales en los que se deben tomar decisiones de forma ágil.

### El Trabajo Colaborativo y El Proceso De Enseñanza y Aprendizaje

Para el desarrollo del tema, se retoman las ideas de autores que han venido profundizando en el trabajo colaborativo y su relación con otros aspectos en los procesos de enseñanza y aprendizaje, tal es el caso de la relación que hace Calzadilla (2002) entre el trabajo cooperativo y el constructivismo, quien referencia a Piaget (1992). Calzadilla arguye que existen cuatro factores que atraviesan las estructuras cognitivas, estos son: la maduración, la experiencia, el equilibrio y la transmisión social, cada uno de los cuales se puede potenciar por medio del trabajo colaborativo.

De otro lado, en la teoría constructivista de Vigotsky, (1974), se afirma que el aprendiz requiere la acción de un agente mediador para acceder a la zona de desarrollo próximo. Éste será responsable de tener un andamiaje que proporcione seguridad y permita que aquél se apropie del conocimiento y lo transfiera a su propio entorno.

Por su parte, Coll y Solé (1990) definen la enseñanza como «un proceso continuo de negociación de significados, de establecimiento de contextos mentales compartidos, fruto y plataforma, a su vez, del proceso de negociación», (p.332), lo anterior a su vez permite la mediación de procesos de aprendizaje para validar las interconexiones donde se evidencian que los individuos que intervienen en el proceso se impactan y afectan mutuamente a través del intercambio de ideas, proyectos, vivencias y expectativas que aportarán a su crecimiento.

De acuerdo a Guitert & Jiménez (2006), existe un trabajo cooperativo cuando se presenta una reciprocidad entre un número de individuos que tienen la capacidad de diferenciar y contrastar sus diferentes puntos de vista hasta lograr generar un proceso de construcción de conocimiento, este es un proceso en el que cada persona aprende más de lo que podría aprender de forma individual, con el acompañamiento del facilitador que permanentemente como mediador posibilita un diálogo constructivo y la solución de conflictos entre los integrantes de los grupos.

Específicamente, el trabajo colaborativo propone que el trabajo en equipo es el logro de un objetivo común a través del intercambio que incluye el trabajo individual y el trabajo compartido, lo que requiere poner en escena tres aspectos fundamentales: actitudes, habilidades y conocimientos (Guitert & Jiménez, 2006). Esto, a su vez, demanda que la comunicación tenga una frecuencia adecuada, un contacto continuo entre los miembros del equipo, las afirmaciones y los aportes tienen que ser respetuosos, constructivos y argumentados.

En este punto es importante enunciar algunas herramientas, conceptualizadas en el Foro Educativo: Metas Educativas 2021 (2010), que aportan a la producción de aprendizajes colaborativos, estas son:

Identificar claramente las capacidades de los diferentes integrantes de los equipos, conocer las potencialidades individuales para que cada uno aporte el máximo.

Establecer metas de forma conjunta que a la vez tengan en cuenta las metas individuales.

Diseñar, establecer y elaborar una planeación que permita visualizar que resultados se esperan, definiendo responsabilidades particulares.

Realizar seguimiento permanente a los resultados parciales

Poner especial cuidado a las relaciones socios afectivas que apoyen el sentido de pertenencia que se tenga por el grupo.

En términos de Casanova (2008), el aprendizaje colaborativo es considerado como una metodología de enseñanza o técnica didáctica que se basa en la creencia de que cuando los estudiantes desarrollan destrezas cooperativas para aprender y solucionar problemas y acciones educativas en las que se ven inmersos, se incrementa el aprendizaje cooperativo. Según Cabero (2004), se asume que el aprendizaje y la cognición conforman una actividad social que es el resultado de la interacción entre las personas, los medios y los ambientes. Ahora bien, teniendo claras las metas y objetivos a lograr por los equipos, es importante garantizar que el dominio de los contenidos ha sido adquirido por cada uno de los integrantes (Guitert y Jiménez, 2006).

De igual forma en esta técnica didáctica se debe evidenciar una correspondencia entre los integrantes del equipo al resolver y contrastar diferentes puntos de vista en relación a una temática específica, lo que para Guitert y Jiménez (2006), permite un proceso de generación de conocimiento nuevo o con argumentaciones que generen la potenciación de ideas que ya existen, obteniendo sinergias que solo se pueden dar cuando existe una interacción entre varios individuos, dicho trabajo cooperativo tiene resultados más enriquecedores que si se suman los trabajos individuales de diferentes actores.

De lo expuesto por los autores relacionados, se puede concluir que un trabajo cooperativo no es la suma de trabajos individuales que se unen, sino que obedece a una estructura organizacional que produce un resultado conjunto partiendo de ideas claras y comunes en el que cada individuo aporta al crecimiento del grupo y a su propio crecimiento, existe una interacción permanente entre los miembros, y se involucran unos con otros para lograr un proyecto común.

En el mismo sentido, los resultados exitosos del equipo solo se logran si todos los miembros tienen claros los objetivos y las estrategias planteadas para lograrlos, en el que cada uno da lo mejor de sí, aportando con sus habilidades y conocimientos. Bajo estas premisas, se podrán obtener resultados mucho más favorables no sólo a nivel grupal sino también individual.

No queda duda entonces, que las Instituciones de Educación superior se convierten cada vez más en los “lugares de encuentro” en los que confluyen estudiantes de todas las edades con formaciones y experiencias previas, de diferentes contextos; todo esto bien direccionado puede permitir y generar dinámicas de trabajo y aprendizaje colaborativos cuyo aporte a la solución de problemas de forma interactiva permita el desarrollo de habilidades personales y profesionales.

Finalmente, es importante resaltar que, según Calzadilla (2002), el aprendizaje colaborativo permite la inserción eficiente de los procesos educativos al interior de los propios proyectos de vida de los estudiantes y puede potenciar el desarrollo personal, el desarrollo de comunidad y el desarrollo de país a través de una cohesión y una visión sistémica en donde no solo se ven las partes, sino que se puede tener un acercamiento a un todo entre aspectos como: Formación, familia, sociedad, desempeño y evolución, haciendo un intento por que vayan desapareciendo las formas memorísticas y repetitivas que han estado en nuestros centros de educación por años. Todo lo anterior, implica estimular la transición hacia procesos de socioconstrucción en los que la tolerancia que hace parte de la diversidad sea uno de los elementos a trabajar por los diferentes equipos, al igual que la ayuda y el interés por el otro como ser.

Lo valioso en este tipo de aprendizaje dialógico es que bien direccionado puede ser facilitador del desarrollo de procesos de conocimiento para la construcción social del conocimiento a partir de la construcción individual, soportado en la motivación que sienten los estudiantes por el apoyo Institucional que reciben a nivel personal.

#### El Trabajo Cooperativo y La Mediación De Las Tecnologías De Información y Comunicación

De acuerdo a lo definido por Casanova (2008), el trabajo cooperativo mediado por las tecnologías de información y comunicación es el encuentro de dos tendencias: la primera es la incorporación de las TIC en la sociedad, y la segunda es el enfoque del aprendizaje que suscita las interrelaciones entre pares mediados por la cooperación y la colaboración. Sin embargo, no debemos desconocer que el aprendizaje cooperativo no es un término nuevo, previamente hay una tradición de investigaciones y experiencias, por ejemplo Barbera (2001) hace alusión a dos aspectos de gran importancia en el trabajo colaborativo, en primera instancia el aprendizaje cooperativo es una manera diferente de entender la colaboración, refiriéndose a la propuesta de una actividad puntual de enseñanza en un contexto virtual de aprendizaje y, en segunda instancia, afirma que hay dos funciones que se diferencian claramente en el trabajo colaborativo en ambientes virtuales: la primera función es entender la interacción como sinónimo de interacción social que promueva la construcción cooperativa del conocimiento y, la segunda, es la contraposición que existe entre la cooperación y el trabajo independiente, es decir es la construcción de significados compartidos con otros y que a la vez permiten la interdependencia de los aprendizajes de acuerdo a las individualidades de los actores.

De manera concreta, las herramientas TIC como géneros dialógicos y de generación de experiencias es abordado por Sánchez (2010), para quien pasar de la relación a la interacción es “el aspecto central de toda experiencia educativa, sobre todo cuando se intenta promover el desarrollo del pensamiento crítico y reflexivo mediante diversas estrategias, con el fin de que la comunicación sea sistemática y estructurada”. (p, 85). A continuación se muestran algunos argumentos definidos en relación con las herramientas que propician la mediación entre los diferentes actores del proceso enseñanza aprendizaje:

El chat en el ámbito académico, según Sánchez & Puerta (2010), no es en sí mismo un espacio que pueda reemplazar la clase; es el tipo de comunicación que permite el desarrollo de orientaciones puntuales y complementarias surgidas a partir de lecturas y actividades alrededor de un núcleo. A través de su uso se favorece un contacto sincrónico que permite saber que al otro

lado tenemos un ser humano que nos escucha, que nos habla y al que le podemos hablar, aunque no lo veamos.

En el Foro, según Yus (2001), se evidencian “los valores compartidos por un grupo de personas cohesionadas por un interés común” (p.11). Asimismo, el foro según Contin (2003) es “un espacio de interacción discursiva en el cual sujetos con diferentes niveles de experiencia cultural y lingüística se presentan a sí mismos, negocian su imagen y sus propósitos comunicativos” (p. 269). Esta herramienta de apoyo al trabajo cooperativo tiene un enorme potencial y permite junto a otras herramientas la construcción de conocimiento a través de la negociación.

El correo electrónico en el que “las competencias de redacción se hacen necesarias para lograr establecer una comunicación efectiva y son aún más importantes si dicha comunicación la establece en el contexto de educación virtual”, según Monserrat Casanovas (2003), permite: fortalecer la competencia comunicativa, promueve la producción lingüística y temática y hacer la realimentación individualizada (que luego podrá ser socializada en espacios colectivos como el foro y el chat).

Para la utilización del correo electrónico como herramienta me debo apropiarme no solo de conocimientos técnicos, sino también de competencias en el ser que me permitan tener presente que en la distancia tengo otro ser humano con expectativas, necesidades y creencias, un ser humano que requiere de una formación orientada a su desarrollo integral, al descubrimiento de sus capacidades e intereses que le permitan tomar decisiones, asumir posiciones y gestionar su propio proyecto de vida, siendo éste el centro del proceso activo de aprendizaje.

Otras herramientas útiles en el trabajo cooperativo, según Guitert y Jiménez (2006) son: Documentos compartidos (Google docs) a través de ellos se puede trabajar la información de forma reflexiva y con un alto grado de profundización.

Encuentros virtuales: son encuentros que se pueden establecer de forma periódica y fija con asignación de trabajos entre los integrantes del equipo y hacer un seguimiento constante de su evolución y lograr que todos compartan toda la información y que se tengan en cuenta las sugerencias y recomendaciones de todos apoyando así elementos para la reflexión.

Para mejorar las competencias en la utilización de las tecnologías de información y comunicación antes vistas, estas deberán ser incorporadas y utilizadas en su doble función, tanto de transmitir información como la de generación de información y conocimiento, utilizándolas de forma crítica y analítica a través del trabajo autónomo y del trabajo colaborativo de forma sincrónica y asincrónica estableciendo y participando en redes de relaciones cada vez más amplias.

Es importante destacar que el estudiante ve la educación virtual como un espacio, donde puede optimizar su tiempo, teniendo la oportunidad de plantear de forma libre inquietudes y opiniones, utilizando como mediadores herramientas TIC como foros, correos electrónicos con el fin de abordar temas sugeridos o libres, compartiendo aspectos personales y académicos.

### La Ética En El Trabajo Cooperativo

Es de gran importancia considerar que la relación con el estudiante debe ser una relación ética, donde se asuma un verdadero compromiso con éste y sea de aporte en su formación y crecimiento como ser humano, haciendo todo lo posible por potenciar sus valores, como el respeto por el otro, la posibilidad de exponer sus puntos de vista, el desarrollo de su sentido crítico y analítico, sin que con ello se vea amenazado por ser criticado ni señalado”, Lévinas (1991, se debe intentar llegar a los otros desde sus vivencias, sus modelos, sus paradigmas, y en ocasiones de sus

necesidades, porque siempre deberíamos preocuparnos por el otro y no verlo como alguien enfrentado ya que, al fin y al cabo, hay yo, porque hay responsabilidad, pues el yo es el resultado de que alguien nos haya cuidado, nos ha orientado y gracias a esto podemos sentirnos insustituibles, porque detrás de mí hay otros que no son yo, por ello Lévinas propuso un humanismo del otro, de aquel que se hace responsable y responde totalmente por el otro, desde este punto de vista, el papel del facilitador tiene gran importancia al pensar en ese otro como parte de su responsabilidad como formador y propiciador de espacios de reflexión y verdadero aprendizaje. En este sentido es importante destacar la importancia del acompañamiento de los facilitadores como potenciadores del pensamiento crítico y reflexivo, como mediadores para que haya diálogo, posibilitando de esta forma la solución ante conflictos, indagando por las experiencias previas de los estudiantes, responsabilizándose de alguna forma por hacer sentir al estudiante como un ser valorado; de otro lado este facilitador promueve el trabajo en equipo permitiendo al estudiante que sustente y argumente sus puntos de vista aplicando la metodología de aprendizaje basado en problemas.

Existen otros aspectos éticos que deben tenerse en cuenta en el trabajo cooperativo, los cuales según Guitert y Jiménez (2006) son:

La responsabilidad individual y grupal durante todo el proceso y esto de parte de todos los actores del proceso educativo: estudiantes, facilitadores y personal administrativo

Las autoevaluaciones permanentes de los aportes tanto individuales como grupales, es decir fomentar la autorreflexión y hacer una valoración de la medida de implicación dentro de la dinámica del trabajo cooperativo, fomentando la reflexión del autoproceso y la capacidad para compartirlo con el resto del equipo.

El fomento del apoyo mutuo, de tal forma que permita el desarrollo de una vivencia de grupo.

El impulso por parte de los facilitadores y personal administrativo de habilidades del trabajo en equipo, la negociación, la paciencia, la espera de turnos, instruir a los participantes en pautas para comunicarse de forma oportuna, y la integración de materiales de trabajo que potencien el trabajo en equipo.

La promoción de una interdependencia positiva haciendo que el logro de los objetivos sea visto como un trabajo conseguido por todos.

El establecimiento de reglas claras de trabajo que favorezcan la dinámica del mismo.

El impulso al valor de cada integrante como persona, hacerlo sentir parte esencial del equipo para el logro de los objetivos.

## CONCLUSIONES

Los valores éticos y morales, el estilo de aprendizaje, las estrategias curriculares, el proyecto educativo Institucional y el modelo pedagógico, son factores esenciales en la construcción de experiencias significativas en el trabajo colaborativo.

En el trabajo colaborativo debe existir una reciprocidad al establecer la relación de equipo para potenciar las diferentes capacidades en pro de un objetivo común que es además de la construcción de conocimiento y la construcción de relaciones que pueden aportar al desarrollo individual y grupal. En el trabajo colaborativo, es visible la necesidad de desarrollar competencias actitudinales y comunicacionales, donde se pueda dar cuenta de la participación, la

autonomía, la innovación, la autogestión y el autodireccionamiento para la toma ágil de decisiones.

En tiempos de cambio, suscitados por el uso y apropiación de las TIC, puede observarse que las experiencias educativas mediadas por las TIC en educación superior virtual, el trabajo colaborativo potencia las posibilidades de aprendizaje de los estudiantes al proporcionar oportunidades tangibles que lo estimulan a hacerse responsable de su propia formación, autogestor de sus aprendizajes, crítico, analítico y reflexivo, un ser social que requiere interacción con el otro e intercambio de ideas todo ello encaminado al desarrollo de su personalidad e intereses que le permitirán orientar su propio proyecto de vida y el proyecto de vida de otros.

En el trabajo colaborativo, la interacción con herramientas TIC, facilitan el auto aprendizaje, la autodisciplina, la investigación formativa y la interacción con pares y facilitadores, en razón a que cada estudiante puede utilizar los materiales más acordes con su estilo de aprendizaje y sus circunstancias personales, en las que se establecen relaciones con comunidades e instituciones que propician el compartir experiencias y aprender de otros.

# NUEVA LEY DEL IMPUESTO SOBRE LA RENTA EN MÉXICO. RÉGIMEN DE INCORPORACIÓN FISCAL PARA PERSONAS FÍSICAS

Edelmira Sánchez Delgado, Universidad Autónoma de Ciudad Juárez

## RESUMEN

*El presente artículo está basado en una investigación relacionada con las nuevas disposiciones fiscales del Impuesto sobre la Renta que entrarán en vigor en México a partir del 2014 a través de un nuevo régimen opcional para las Personas Físicas denominado "Régimen de Incorporación Fiscal" y está dirigido a quienes realicen únicamente actividades empresariales, que enajenen bienes o presten servicios por los que no se requiera para su realización título profesional mismas que podrán optar por pagar el impuesto sobre la renta en los términos establecidos en el citado Régimen, siempre que en el ejercicio inmediato anterior, sus ingresos propios no hubieran excedido de la cantidad de dos millones de pesos. El nuevo régimen se establecerá en la Nueva Ley del Impuesto Sobre la Renta (LISR) y sustituirá a los Regímenes Fiscales llamados "Intermedio" y Régimen de Pequeños Contribuyentes REPECOS con ingresos anuales actuales de hasta cuatro y dos millones de pesos respectivamente.*

**PALABRAS CLAVES:** Impuesto Sobre la Renta, Régimen de Incorporación Fiscal, Personas Físicas

## NEW LAW ON THE TAX ON THE INCOME IN MEXICO. REGIME OF INCORPORATION TAX FOR INDIVIDUALS

### ABSTRACT

*This article is based on an investigation related to the new provisions of the income tax that will take effect in Mexico from 2014 through a new system optional for individuals called "Regime of incorporation Fiscal" tax and is directed to Implementers only business activities, which alienated goods or provide services that is not required to carry out same professional title may choose to pay the tax on income in the terms established in the aforementioned scheme, provided that in the period immediately preceding, their income had not exceeded the amount of two million pesos. The new regime established in the new law of the tax on the income and replace regimes tax called 'Intermediate' and small taxpayers REPECOS regime with current annual revenues of up to four and two million pesos respectively.*

**KEYWORDS:** Regime of incorporation Attorney, natural persons, income tax

### INTRODUCCI ÓN

En México, uno de los objetivos prioritarios es incrementar la capacidad de crecimiento a largo plazo a través del ensanchamiento de la base productiva en la que participen todos los sectores de la población, siendo necesario para ello, abatir el fenómeno de la informalidad por medio de un sistema fiscal simplificado que facilite el cumplimiento de las obligaciones tributarias.

## REVISIÓN LITERARIA

La Nueva Ley del Impuesto Sobre la Renta vigente en México a partir de 2014 en su Título IV Capítulo II "De los Ingresos por actividades empresariales y profesionales" se dividirá en dos secciones:

- Sección I. De las Personas Físicas con actividades empresariales y profesionales
- Sección II. Régimen de Incorporación Fiscal

### Régimen De Incorporación Fiscal

El Régimen de Incorporación Fiscal será optativo y podrán pertenecer a él las Personas Físicas que reúnan los siguientes requisitos:

*Que únicamente realicen actividades empresariales, es decir, comerciales, industriales, agrícolas, ganaderas, de pesca o silvícolas. Enajenen bienes o presten servicios por los que no se requiera para su realización título profesional. Hayan obtenido en el ejercicio inmediato anterior ingresos propios de su actividad empresarial que no hubieran excedido de dos millones de pesos.*

En el caso de las Personas Físicas antes mencionadas, que inicien actividades en el 2014 y estimen que sus ingresos no excederán de dos millones, podrán elegir la opción de tributar en éste Régimen. Cuando en el ejercicio citado realicen operaciones por un periodo menor de doce meses, para determinar el monto señalado, dividirán los ingresos manifestados entre el número de días que comprende el periodo y el resultado se multiplicará por 365 días; si la cantidad obtenida excede del importe citado, en el ejercicio siguiente no podrán tributar conforme al Régimen de Incorporación Fiscal. Asimismo, cuando los ingresos propios de la actividad empresarial obtenidos por las Persona Físicas en el periodo transcurrido desde el inicio del ejercicio y hasta el mes de que se trate, excedan la cantidad de dos millones, deberán abandonar el régimen a partir del mes siguiente a aquel en que excedieron el monto señalado y no podrán en ningún caso volver a tributar en este Régimen. Las Personas Físicas que se encuentren en los siguientes supuestos, no podrán pagar el Impuesto sobre la Renta conforme al Régimen de Incorporación Fiscal:

*Los socios, accionistas o integrantes de personas morales o cuando sean partes relacionadas, o exista vinculación con personas que hubieran tributado en el Régimen de Incorporación Fiscal. Aquellos contribuyentes que realicen actividades relacionadas con bienes raíces, capitales inmobiliarios, negocios inmobiliarios o actividades financieras, salvo que únicamente obtengan ingresos por la realización de actos de promoción o demostración personalizada a clientes personas físicas para la compraventa de casas habitación o vivienda, y dichos clientes también sean personas físicas que no realicen actos de construcción, desarrollo, remodelación, mejora o venta de las casas habitación o vivienda. Las personas físicas que obtengan ingresos por concepto de comisión, mediación, agencia, representación, correduría, consignación y distribución, salvo tratándose de aquellas personas que perciban ingresos por concepto de mediación o comisión y estos no*

*excedan de 30% de sus ingresos totales. Las retenciones que las personas morales les realicen por la prestación de este servicio, se considerarán pagos definitivos para esta sección. Las personas físicas que obtengan ingresos por concepto de espectáculos públicos y franquiciatarios. Los contribuyentes que realicen actividades a través de fideicomisos o asociación en participación.*

Los contribuyentes que opten por pertenecer a éste Régimen calcularán y enterarán el Impuesto Sobre la Renta en forma bimestral a más tardar el día 17 de los meses de marzo, mayo, julio, septiembre, noviembre y enero del año siguiente, mediante declaración que presentarán a través de los sistemas que disponga el Servicio de Administración Tributaria (SAT) en su página de internet, el cual tendrá el carácter de definitivo. Para estos efectos, la utilidad fiscal del bimestre de que se trate se determinará restando a la totalidad de los ingresos por las actividades ya comentadas obtenidos en dicho bimestre ya sea en efectivo, en bienes o en servicios, las deducciones autorizadas en la Ley que sean estrictamente indispensables para la obtención de los ingresos a que se refiere este Régimen así como las erogaciones efectivamente realizadas en el mismo periodo para la adquisición de activos, gastos y cargos diferidos y la participación de los trabajadores en las utilidades de las empresas pagada en el ejercicio, en los términos del artículo 123 de la Constitución Política de los Estados Unidos Mexicanos. Asimismo, cuando los ingresos percibidos, sean inferiores a las deducciones del periodo que corresponda, los contribuyentes deberán considerar la diferencia que resulte entre ambos conceptos como deducibles en los periodos siguientes. Se prevé que dicho régimen sea de carácter temporal por un período de diez años. En el primer año, estos contribuyentes no pagarán ISR, en los siguientes nueve años el descuento irá disminuyendo paulatinamente. A partir del onceavo año deberán tributar conforme al régimen de personas físicas con actividades empresariales y profesionales a que se refiere la Sección I del Capítulo II del Título IV de la Nueva Ley del Impuesto sobre la Renta pagando el 100% del impuesto. Lo anterior se detalla en la siguiente Tabla:

Tabla 1: Reducción Del Impuesto Sobre la Renta a Pagar en el Régimen de Incorporación Fiscal

Años	1	2	3	4	5	6	7	8	9	10
Por la presentación de información de ingresos, erogaciones y proveedores:	100%	90%	80%	70%	60%	50%	40%	30%	20%	10%

*Esta tabla presenta el beneficio fiscal de la reducción del Impuesto sobre la Renta del que gozarán los contribuyentes del Régimen de Incorporación Fiscal.*

Para evitar abusos de aquellos contribuyentes que ya estando en la formalidad, con el ánimo de obtener los beneficios de la reducción en el pago, deseen trasladar sus unidades de negocio a este régimen, entre ellos, condiciona los descuentos a la entrega regular al SAT de la información del total de sus ingresos y erogaciones, incluyendo los relacionados a interacciones con contribuyentes que pertenecen al régimen general. El cumplimiento de estas obligaciones se realizará a través de las herramientas electrónicas que, para ese fin, diseñará el SAT. Dichas herramientas además auxiliarán a los pequeños negocios en su contabilidad. Las obligaciones a las que estarán sujetas las Personas Físicas que pertenezcan al Régimen de Incorporación Fiscal serán las siguientes:

Solicitar su inscripción en el Registro Federal de Contribuyentes (RFC) Conservar comprobantes que reúnan requisitos fiscales, únicamente cuando no se haya emitido un comprobante fiscal por la operación. Registrar en los medios o sistemas electrónicos a que se refiere el Artículo 28 del Código Fiscal de la Federación (CFF), los ingresos, egresos, inversiones y deducciones del ejercicio correspondiente. Entregar a sus clientes comprobantes fiscales Efectuar el pago de las erogaciones relativas a sus compras e inversiones cuyo importe sea superior a \$2,000.00, mediante cheque, tarjeta de crédito, débito o de servicios. Presentar a más tardar el día 17 del mes inmediato posterior a aquel al que corresponda el pago, declaraciones bimestrales. Efectuar retenciones por pago de salarios y conceptos que se asimilan a salarios, conforme a las disposiciones previstas en la misma y en su Reglamento, y efectuar bimestralmente, los días 17 del mes inmediato posterior al término del bimestre, el entero por concepto de ISR de sus trabajadores conjuntamente con la declaración bimestral que corresponda. Pagar el Impuesto sobre la Renta en los términos de la Sección II Capítulo II Título IV de la Nueva Ley del Impuesto sobre la Renta, siempre que, además de cumplir con los requisitos establecidos en ésta, presenten en forma bimestral ante el Servicio de Administración Tributaria, en la declaración a que hace referencia el párrafo quinto del artículo 111 de la LISR, los datos de los ingresos obtenidos y las erogaciones realizadas, incluyendo las inversiones, así como la información de las operaciones con sus proveedores en el bimestre inmediato anterior.

## **METODOLOGIA**

Esta investigación se lleva a cabo a través del seguimiento al proceso de aprobación del Paquete Económico 2014 que el 8 de septiembre del actual, el Ejecutivo Federal a través de la Secretaría de Hacienda y Crédito Público (SHCP) entregó al Congreso de la Unión la iniciativa de Ley de Ingresos, el Proyecto de Presupuesto de Egresos y las iniciativas de reformas legales relativas a las fuentes de ingresos para el 2014, lo anterior en cumplimiento de lo dispuesto en el artículo 74, fracción IV de la Constitución Política de los Estados Unidos Mexicanos.

## **RESULTADOS**

El 17 y 31 de Octubre de 2013 las Cámaras de Diputados y de Senadores, respectivamente, aprobaron el Proyecto de iniciativa de la Ley de Ingresos de la Federación 2014 de conformidad con el artículo 42, fracción IV de la Ley Federal de Presupuesto y Responsabilidad Hacendaria LFPRH.

## **CONCLUSIONES**

Con el Régimen propuesto se pretende que la incorporación a la formalidad atraiga esencialmente a quienes hoy ya realizan una actividad empresarial, enajenan mercancía o prestan servicios y no cumplen con sus obligaciones fiscales. El Régimen de Incorporación fiscal es transitorio pero a la vez otorga certeza, al ofrecer un tratamiento especial por diez años a los contribuyentes que opten por éste régimen, condicionando sus beneficios graduales al cumplimiento permanente, de tal manera que una vez que éste alcance la madurez y estabilidad fiscal, transite al régimen general aplicable a todos los contribuyentes.

## RESUMEN

*La presente investigación es una investigación no experimental de corte transversal, descriptiva y correlacional, cuyo objetivo busca identificar según el modelo psicológico social de Veblen y el Modelo contemporáneo de O'Shaughnessy, las variables (internas y externas) que inciden en la compra de bienes y servicios por medio de Internet en jóvenes estudiantes de una Universidad pública de la ciudad de Tijuana, Baja California México. Soportado en la investigación documental que se realizó, se describieron las variables con cada uno de sus indicadores "comportamiento del consumidor" y "caracterización producto/servicio del sitio o página web". Aun cuando no se tienen resultados preliminares que permitan hacer una aproximación de comportamiento de la población estudiada, se cree que el consumo va a estar estrechamente ligado a las variables sociodemográficas, pero sobre todo a las de seguridad y confiabilidad del sitio o página web donde se desea adquirir el producto/servicio. En el corto plazo se tendrán los resultados que permitan comprobar tales hipótesis.*

**PALABRAS CLAVE:** Comportamiento del consumidor, intención de compra, consumo por medio de Internet

## CONSUMER BEHAVIOR FACTORS AFFECTING THE PURCHASE THROUGH INTERNET

### ABSTRACT

*This research is an experimental investigation of cross-sectional descriptive correlational aim is to identify as the social psychological model of Veblen and contemporary Model O'Shaughnessy, variables (internal and external) affecting the purchase of goods and services through Internet in young students in a public college in the city of Tijuana, Baja California Mexico. Supported on documentary research was conducted, variables were described with each of its indicators "consumer behavior" and "product characterization/service and the site or web page". Even when there are no preliminary results for making the behavioral approach of the study population, it is believed that consumption will be closely linked to sociodemographic variables, but especially to the safety and reliability of the site or web page where you to purchase the product/service. In the short term will results needed to verify these hypotheses.*

**JEL:** L1

**KEYWORDS.** Consumer behavior, purchase intent, consumption through Internet

## INTRODUCCIÓN

El impacto que ha tenido Internet en los últimos años, ha propiciado que cambie en gran medida el comportamiento del consumidor. Hoy por hoy las empresas le sacan provecho a todas las bondades que generan las operaciones de compra y venta por este medio, y una buena cantidad de consumidores y en función de los nuevos esquemas culturales y sociales surgidos con ocasión de cambio del estilo de vida, encuentran una buena opción para adquirir prácticamente cualquier satisfactor para sus distintas necesidades. El generar este conocimiento es pertinente e importante para las empresas, ya que el tener una sólida comprensión de la conducta del consumidor, ayudaría a identificar los elementos y factores que son importantes para los individuos, y al mismo tiempo permitiría dar respuesta a muchas interrogantes que se hacen los empresarios sobre qué compran los consumidores, por qué compran, cada cuánto compran, y todas las variables que influyen en su decisión de consumo. Adicionalmente podría significar una información de valor, sobre la cual los proveedores de bienes y servicios podrían diseñar una estrategia específica para maximizar las ventas a través de Internet y al mismo tiempo identificar grupos de referencia en los cuales pudiera trabajar independientemente.

En el presente artículo se hace un planteamiento teórico de la investigación, es decir, se abordan los antecedentes existentes en la temática, y las bases teóricas que se utilizan y delimitan el comportamiento de un consumidor hacia las compras de bienes y servicios a través de Internet. Asimismo, se hace un bosquejo de las variables que se utilizarán en el estudio.

## REVISIÓN DE LITERATURA

*Antecedentes:* Al desarrollar la investigación documental, se pudo concluir que este es un tema al cual han dedicado muchos esfuerzos en el continente Asiático, especialmente en China y Malasia. Dan cuenta de ellos las investigaciones realizadas por Yulihisri, Islam y Ku Daud (2011); Jun y Ismawati (2011); Jusoh y Hai Ling (2012); Guo, Choon y Liu (2012) y Gong, Stump y Maddox (2013). También en Estados Unidos, una desarrollada por Brivin Corp (2013) y otra desarrollada en Chile, aunque esta última no generó conclusiones de soporte para esta investigación. A continuación se hace el breve detalle de las mismas. Yulihisri, Islam y Ku Daud (2011) realizaron una investigación cuyo objetivo fue estudiar los factores que influyen en los jóvenes estudiantes de una institución de educación en Malaysia para realizar sus compras por medio de Internet. Sustentaron su estudio en la Teoría de la Acción Razonada (TRA) y llegaron a la conclusión de que la facilidad de uso y la

utilidad son los factores más destacados. Además de éstos últimos, consideran que la compatibilidad y la seguridad son predictores significativos de una actitud positiva hacia las compras en línea. Jun y Ismawati (2011) desarrollaron un estudio sobre la actitud de los consumidores en lo que respecta a las compras en línea en China. Partiendo del enfoque percibido por los compradores, tomaron en consideración las variables: la accesibilidad para el uso del sitio, la seguridad y privacidad del mismo, el servicio post-venta ofrecido, la estrategia de marketing mix aplicada en el negocio y la reputación del proveedor. Los resultados arrojaron que hay relaciones medias entre el uso, la seguridad, la privacidad y el servicio post-venta con la actitud de los consumidores para realizar compras en línea.

Mientras que la estrategia de marketing mix y la reputación del proveedor, afectan significativamente la actitud para fomentar este tipo de compra. Jusoh y Hai Ling (2012) también

desarrollaron una investigación sobre los factores que influyen en la actitud de las personas para hacer compras en línea. Se plantearon como objetivo identificar la actitud de los compradores hacia las compras en línea desde la perspectiva de las variables sociodemográficas, la percepción del producto, el servicio al cliente, el riesgo y la cantidad de horas por semana dedicadas a navegar en la red. Sus resultados demuestran que la edad, la ocupación, la clase/tipo de producto, las horas de uso de Internet, la percepción de los productos, el servicio al cliente y el riesgo no son variables que incidan significativamente en la actitud hacia las compras en Internet; mientras que el nivel de ingresos y las experiencias pasadas en compras por Internet sí influyen significativamente. Guo, Choon y Liu (2012) desarrollaron una investigación para determinar los factores que influyen en la evaluación de la satisfacción del consumidor hacia las compras en línea en China. Al aplicar 350 encuestas a compradores en línea, concluyeron que el diseño de la página web, la seguridad que proyecta y ofrece el sitio, la calidad de la información ofrecida, las formas y opciones de pago, la calidad del servicio online, la calidad del producto, la variedad de productos ofrecidos y la prestación de servicios se relacionan positivamente con la satisfacción del consumidor hacia las compras en línea en este país. Gong, Stump y Maddox (2013) desarrollaron una investigación para identificar los factores que influyen en los consumidores chinos para hacer compras en línea desde la perspectiva de las características demográficas y las características del uso de medios de comunicación. Después de llevar a cabo un estudio exploratorio llegaron a la conclusión de que los ingresos, la educación, el estado civil y la utilidad percibida, son predictores significativos de la intención de compra en línea. Consideran que en posteriores estudios se deberían incorporar otras variables asociadas a las características del producto y las influencias ambientales, entre otras.

Según un estudio realizado por la Brivin Corp en el año 2013, los diez factores que más influyen en la decisión de compra a través de Internet son: la calidad del producto (56%); envíos gratis (49%), devoluciones (35%), valoraciones de otros clientes (33%), búsqueda visual (30%), gran navegación a través del sitio de Internet (26%), el poder hacer pedidos con facilidad (24%), el que tengan opciones múltiples para el cliente (24%), el tamaño especial (12%) y el tener nuevos productos (10%). Consideran que es importante recalcar que para tener éxito en la comercialización en la red se debe tener un buen producto/servicio aunado a un sitio de red que facilite tales operaciones.

### El Comportamiento del Consumidor

Los factores que pueden afectar el qué, cómo y para qué los clientes toman decisiones de compra son extremadamente complejos. El estudio del comportamiento del consumidor está estrechamente relacionado con la psicología y la sociología. De hecho Rivera, Arellano y Molero (2009) mencionan que el comportamiento del consumidor como tal surgió a la sombra de otras disciplinas como la psicología (estudio del individuo), la sociología (estudio de los grupos), la psicología social (la forma en que un individuo se interrelaciona dentro del grupo), la antropología (influencia de la sociedad sobre el individuo), y la economía. Debido a que cada persona es diferente, no es fácil explicar cómo se toman las decisiones de compra. Por esto según Rivera, *et al* (2009, 34) se impulsó dentro de la rama del marketing el estudio del comportamiento del consumidor con el objetivo de proporcionar un instrumento que permitiese prever cómo reaccionarían los consumidores a los mensajes promocionales y comprender los motivos por los que se toman las decisiones de compra. Algunos autores clásicos y contemporáneos, abordan el concepto de comportamiento del consumidor de la siguiente manera:

*W.L Wiilkie (1994) citado por Mollá (2006), menciona que: “el comportamiento del consumidor se puede entender como el conjunto de actividades que realizan las personas cuando seleccionan,*

compran, evalúan y utilizan bienes y servicios, con el objeto de satisfacer sus deseos y necesidades, actividades en la que están implicados procesos mentales y emocionales, así como acciones físicas” (p. 18).

*Mientras que Rivera, et al (2009), lo definen como el: ... “proceso de decisión y la actividad física que los individuos realizan cuando buscan, evalúan, adquieren y usan o consumen bienes, servicios o ideas para satisfacer sus necesidades” y “hace referencia a la dinámica interna y externa del individuo – o grupo de individuos – que se origina cuando éstos buscan satisfacer sus necesidades mediante bienes y servicios” (p. 36). De las definiciones anteriores, se puede rescatar que el estudio del comportamiento del consumidor busca identificar cómo reaccionan los clientes a los esfuerzos de mercadotecnia desarrollados por el proveedor; cuál es el motivo por el que se compra, utiliza y evalúa un bien o servicio; y cuáles son los deseos y necesidades que se requieren satisfacer en el medio ambiente.*

## METODOLOGÍA

La investigación que se presenta es una investigación no experimental de corte transversal, descriptiva y correlacional, cuyo objetivo busca identificar según el modelo psicológico social de Veblen y el Modelo contemporáneo de O’Shaughnessy, las variables (internas y externas) que inciden en la compra de bienes y servicios por medio de Internet en jóvenes estudiantes de una Universidad pública de la ciudad de Tijuana, Baja California, México. Asimismo, se busca obtener información que favorezca el uso de Internet como mecanismo de consumo. Estas variables tienen que ver con la caracterización del sitio o página web, la caracterización del producto/servicio y la percepción que se tiene del proveedor de los mismos. La investigación contempla la aplicación de una encuesta debidamente validada en su constructo, validez y confiabilidad entre el último trimestre del 2013 y el primero del 2014 a una muestra representativa de la población estudiantil de dicha casa de estudios. De las aportaciones realizadas por Kotler, Lane y Keller (2009) y López (2008) se han identificado dos dimensiones y cuatro indicadores para la variable comportamiento de consumidor:

Factores externos		Factores internos	
Factores culturales	Factores sociales	Factores personales	Factores psicológicos
–Cultura –Sub cultura –Clase social	–Grupos de referencia –Familia –Factores demográficos y económicos	–Edad –Ocupación –Estilo de vida: actividades, intereses y opiniones	–Motivación, necesidades y deseos –Percepción –Creencias y actitudes –Aprendizaje –Personalidad

Otra de las variables se ha denominado para efectos de ésta investigación: “caracterización del producto/servicio y del sitio o página web”. Para dicha variable se han diseñado tres indicadores:

Caracterización de producto/servicio ofertado en el sitio o página web	Caracterización del sitio o página web	Percepción del proveedor del producto/servicio
Percepción del producto/servicio Riesgo del producto/servicio Calidad del producto Variedad de productos	Facilidad de uso Utilidad Seguridad – Riesgo de web Privacidad Diseño de la Web Servicio al cliente durante el proceso de compra	Reputación de proveedor Envíos gratis Valoraciones de otros clientes Servicio post-venta

## RESULTADOS Y CONCLUSIONES

El comportamiento del consumidor es un fenómeno factorial que debe ser estudiado de forma continua y detallada. Agregando los factores asociados al uso de Internet, es un universo de información para las empresas que sin duda alguna definirán una nueva directriz respecto a la forma de comercializar los bienes y servicios. Aun cuando no se tienen resultados preliminares que permitan hacer una aproximación de comportamiento de la población estudiada, se cree que el consumo va a estar estrechamente ligado a las variables sociodemográficas, pero sobre todo a las de seguridad y confiabilidad del sitio o página web donde se desea adquirir el producto/servicio. En el corto plazo se tendrán los resultados que permitan comprobar tales hipótesis.

# COMPETENCIAS DIRECTIVAS PARA PYME: UNA EVALUACIÓN DIAGNÓSTICA EN EL SECTOR SERVICIOS EN SALTILLO COAHUILA

Melchor David Elizondo Sandoval, Universidad Autónoma de Coahuila. México  
María del Carmen Armenteros Acosta, Universidad Autónoma de Coahuila. México  
Víctor Manuel Molina Morejón, Universidad Autónoma de Coahuila. México

## RESUMEN

*El modelo de perfil de competencias directivas permite una administración y gestión más efectiva que impacta al talento organizacional y el desempeño empresarial. El objetivo del trabajo es efectuar una evaluación diagnóstica de las competencias directivas en las PYME del sector Servicios, en Saltillo, Coahuila. La metodología de investigación fue de tipo exploratoria, descriptiva y explicativa. La estimación del tamaño de la muestra se obtuvo a partir de un muestreo probabilístico estratificado, con un nivel de confianza del 95%. Se aplicaron 300 encuestas a socios, gerentes y supervisores. Para el análisis se utilizó la clasificación de las competencias directivas del modelo de Psico Consult A.C. "Rueda de competencias" (2001). La confiabilidad y validez del instrumento de investigación se determinó mediante el Alfa de Cronbach con un resultado de 0.80. Como resultado las competencias directivas más desarrolladas son la gerencia de conflictos, desarrollo de la gente y la planeación; mientras que el trabajo en equipo, motivación y el seguimiento las más débiles. La competencia directiva de comunicación es la de menor fortaleza y en específico la competencia de redacción resultó ser la de mayor desarrollo y la más débil la presentación de informes. Los datos aportados servirán para el diseño y aplicación de un modelo de competencias directivas para PYME del sector servicios que influyan en la disminución de la tasa de mortandad y la estabilidad en el desempeño económico y financiero.*

**PALABRAS CLAVE:** Competencias directivas, desempeño empresarial, PYME servicios

## MANAGEMENT COMPETITIONS FOR SMEs: DIAGNOSTIC EVALUATION IN THE SERVICE SECTOR IN SALTILLO COAHUILA

### ABSTRACT

*The profile model management competitions allows more effective administration and management talent that impact the organizational and managerial performance. The objective of this work is to evaluate diagnostic management competitions in SMEs in the Services sector, in Saltillo, Coahuila. The research methodology was exploratory, descriptive and explanatory. Estimating the size of the sample was obtained from a stratified probability sampling, with a confidence level of 95%. 300 surveys were applied to partners, managers and supervisors. For the analysis we used the classification of management competitions Consult Psycho model AC "Wheel of competences" (2001). Cronbach Alpha assessed the reliability and validity of the research instrument with a score of 0.80. As a result the management competitions with more development are The Conflict Management, People Development, and Planning. Meanwhile, Teamwork, Motivation, and Following are the weakest. The administrative managerial*

*competence is the least strong and specifically the redaction competition was the most developed and the weakest was the Data Presentation. This work will be the basis for the design and implementation of a competence model policy for SMEs in the service sector that influences the reduction of the death rate and the stability of the economic and financial performance.*

**KEYWORDS:** Management Competitions, Business Performance, SME Services

## INTRODUCCIÓN

La información y el conocimiento como factores claves en todos los procesos, materiales de producción y distribución, generando innovaciones tecnológicas, organizacionales, de mercadotecnia, financieras, sociales y jurídicas, que impactan a las organizaciones es característico del tránsito hacia la Sociedad del Conocimiento. Por ello, la capacidad para generar riqueza se fundamenta de manera sustancial en la generación de activos intangibles y la clave del desarrollo y de la competitividad está en la capacidad de obtener, procesar y generar información y conocimiento de forma rápida y flexible. El conocimiento y su gestión se configuran como el recurso estratégico principal de la sociedad global. Se trata de crear buenas prácticas profesionales, encontrando eficaces formas de trabajar y aprender en base al desarrollo de la capacidad de dirección. Crear un perfil de competencias gerenciales que responda al constante cambio para la gestión del factor humano, que sea una herramienta que incremente la capacidad de dirección que hoy requieren las organizaciones y que consideran al capital humano como un factor estratégico competitivo, permite incrementar la creación de valor y competitividad en las organizaciones. La propuesta innovadora del trabajo por competencias directivas en las organizaciones requiere por consecuencia un enfoque que sea parte de la estratégica de la organización.

La CEPAL (2010) señala que durante el primer año mueren aproximadamente el 50% de las PYME, durante el segundo año otro 25%, y antes del quinto año se muere otro 15%, sólo sobreviviendo y madurando el 10% de la población inicial. Estas cifras nos confirman que el principal problema existe durante el nacimiento de las PYME hasta su segundo aniversario. FAEDPYME (2011) en su análisis estratégico para el Desarrollo de la MIPYME en Iberoamérica, estudio realizado a partir de una muestra de 3,871 empresas, en nueve estados mexicanos, evaluó de mayor a menor las principales dificultades para el desarrollo de las PYME, entre ellas destaca situación financiera, problemas burocráticos con la Administración, limitada profesionalización de la dirección, insuficiencia de recursos tecnológicos e innovación, debilidades de organización y dirección; insuficiente cualificación de recursos humanos, entre otros. Además en el estudio realizado en el contexto del

Estado de Coahuila, Molina et al (2011) resalta entre las debilidades que más afectan la sobrevivencia de las PYME las cuestiones referidas al mercado, operación, financiero y destaca el lugar de la organización y administración incluyendo la formación y capacitación de los recursos humanos como el factor con mayor valor en todas las etapas del desarrollo de las mismas. Por ello el problema planteado son las ineficiencias en la administración y gestión de las MIPYME en la región, como factor que incluye en el éxito y competitividad, para lo cual el objetivo del presente trabajo de investigación es mostrar los resultados de la evaluación diagnóstica de las competencias directivas en las PYME del sector servicios, en Saltillo, Coahuila como punto de partida para identificar un modelo de gestión para la administración de las PYME. El desarrollo del trabajo se estructura en tres partes: referentes teórico–metodológicos mediante la revisión de la literatura, la metodología utilizada en el estudio empírico, y el análisis de los resultados en

cuanto al nivel de desarrollo de las competencias directivas en las PYME del sector servicios y las conclusiones.

## REVISIÓN DE LITERATURA

Adams (1996) confirma que durante veinte años, más de cien investigadores han producido un total de 286 modelos de competencia genéricos, dos terceras partes son norteamericanos, y el resto se extendió sobre veinte países. Cada modelo tenía entre tres y seis agrupaciones o clusters con dos a cinco competencias por agrupación, con tres a seis indicadores de comportamiento, que demuestran la competencia en el puesto. De este total de modelos se hizo un análisis comparativo y resultaron 21 competencias, con 360 indicadores que fueron plasmados en un diccionario de comportamientos para una gestión efectiva. A partir de este resultado Hay McBer. Spenser y Spenser (1993) lista 21 competencias básicas las cuales integra en 6 grupos: Logro y acción, Apoyo y servicio humano, impacto e influencia, gerencia, cognitivo y efectividad personal. Chinchilla (1999) señala que las empresas que logren desarrollar competencias en sus directores estarán preparadas para enfrentar los retos del entorno, la globalización, la mayor utilización de las tecnologías en los procesos de producción y administración.

Por otra parte Chinchilla afirma que existen dos tipos de competencias directivas: las competencias estratégicas necesarias para el logro de resultados económicos y las competencias intratégicas que se requieren para el logro de la unidad. El tercer grupo de las competencias de eficacia personal, que son aquellos hábitos que facilitan una relación eficaz de la persona con su entorno (Covey, 1993). Estas competencias miden la capacidad de autodirección, capacidad imprescindible para dirigir a otras personas. Rodríguez (1999) comenta: dado que el número de Competencias y sus formas de agrupación son enormes, y depende de cada autor. Por un lado, está la Rueda de las Competencias Gerenciales Psico Consult (2001) que incluye 40 Competencias. Desde el centro hacia la periferia se identifican tres tipos de e Competencias: Personales, Administrativas - Gerenciales y Técnicas - Funcionales, que se asocian a la clasificación más usual de Básicas, Genéricas y Específicas. En el segundo nivel, identificadas con letras, se incluyen nueve competencias, que luego se subdividen en 40.

Chinchilla (2001) explora y describe un análisis sectorial en su estudio sobre competencias directivas y comenta que algunas de las diferencias que aparecen respecto a la valoración de las diferentes competencias se deben a las características propias de cada sector. Así, el hecho, por ejemplo, de que la orientación al cliente -muy valorada en todos los sectores- aparezca en el puesto número 10 en el caso del sector de alimentación y tabaco, puede deberse a que estas empresas no tratan directamente con el cliente final, por lo que la vocación de servicio no está tan clara. Del mismo modo, la visión de negocio - entendida como conocimiento y aprovechamiento de las oportunidades y los peligros que repercuten en la competitividad y la efectividad del negocio - aparece en puestos más bajos en la consultoría, donde esta competencia no es realmente clave. El análisis intersectorial de las competencias permite, además, observar algunos hechos curiosos, que en el análisis general quedaban encubiertos. Por ejemplo, La orientación interfuncional aparece en un puesto relativamente alto de la clasificación general (el doce) y, sin embargo, en el análisis intersectorial observamos que sólo aparece en el sector químico, y con una valoración de 6. Esto significa que se trata de una competencia que, si bien se tiene en cuenta, su valoración es bastante baja, lo que explica que aparezca en el ranking general.

En otras palabras, ha sido valorada por muchas empresas, pero como poco relevante. Por otra parte, aparecen competencias cuya valoración es muy similar en todos los sectores: liderazgo, trabajo en equipo, iniciativa, creatividad, honestidad y credibilidad. Chinchilla considero los

cinco sectores de mayor importancia para establecer un perfil del directivo. En un estudio complementario al ranking anterior llamado las competencias directivas más valoradas concluye que los tres tipos de competencias directivas: estratégicas, intratécnicas y de eficacia personal son tan valoradas que no hay diferencias significativas en cuanto a su valoración. Sin embargo permite ratificar la idea que surgía de la observación a los resultados donde las intratécnicas tienen un peso importante en esta clasificación. Esto significa que las empresas buscan directivos capaces de crear equipo, desarrollar a sus colaboradores, con cualidades para el liderazgo y la motivación. (Chinchilla, 2001).

Alles (2004) reflexiona en su artículo “Perfil del puesto por Competencias” ¿Cómo aplicar la metodología de competencias en el proceso de selección?, propone la identificación de las competencias dominantes y señala que en las organizaciones la evaluación de destrezas y conocimientos es más sencilla, que lo complejo es evaluar los comportamientos. La empresa debe definir su modelo de competencias sin importar el tamaño o sector al que corresponda. Alles sugiere la definición de un perfil del puesto por competencias y define dicho perfil como un modelo conciso, fiable y efectivo para predecir el éxito de una persona en su puesto. Si la empresa ha implementado un esquema de gestión por competencias, se partirá del descriptivo de puestos donde junto a otro tipo de información estarán consignadas las diferentes competencias y los niveles o grados requeridos para cada una. En México su metodología es reconocida y aplicada en los procesos de factor humano basados en competencias como herramienta estratégica de dirección por tratarse de una de las escritoras más importantes del habla hispana sobre recursos humanos Martínez R, Abando C. y Mata A. (2010) en su investigación un modelo causal de competitividad empresarial planteado desde la teoría de los recursos: capacidades directivas, de innovación, marketing y calidad que las capacidades directivas conforman los activos intangibles de la empresa, asociado al capital humano que integran las personas que ocupan cargos gerenciales a nivel estratégico y táctico de la organización, desplegadas a través de sus conocimientos, habilidades, capacidades, actitudes y comportamientos. Su sustento teórico está en las investigaciones (Pfeffer, 1994; Becker y Gerhart, 1996; Aragón et al., 2003; Landeta et al., 2007, entre otras) desde un enfoque basado en los recursos y capacidades en la creación y mejora de ventajas competitivas y sostenibles.

Sin las competencias directivas no es probable lograr ventajas competitivas sostenibles (Barney, 1991). Los directivos juegan el papel primordial de elegir el camino que sigue una empresa (firm's path), la combinación de recursos que ésta desplegará y fomentará, y los mercados en los cuales participará (Castanias y Helfat, 1991; Mahoney y Pandian, 1992; Kor y Mahoney, 2000; citado por Martínez Santa María et al, 2010). Según Barney (1991), el conjunto de conocimientos y habilidades del directivo se pueden clasificar en tres grupos: (1) la formación y desarrollo formal del directivo; (2) aspectos innatos o cognitivos; y (3) la experiencia acumulada que disponga el directivo en su haber. Por su parte, Kor (2003) propone un modelo de competencias directivas formado por tres niveles: (1) experiencia directiva específica a la empresa; (2) experiencia compartida específica del equipo directivo; (3) experiencia directiva específica de la industria. Citado por Martínez Santa María et al, 2010). Las capacidades directivas superiores constituyen el factor determinante, catalizador para el desarrollo de capacidades de innovación, de marketing y de calidad superiores, y no la posesión de las mismas.

Rubio y Aragón (2002) en la explicación de los factores para el éxito competitivo de las MIYME dentro de la revisión bibliográfica idéntica las capacidades directivas en la gestión, junto con 10 factores más, a partir de los siguientes autores: Huck y McEwen, 1991; Viedma, 1992; Acar, 1993; Yusuf, 1995; Luk, 1996; Puig, 1996; Camisón, 1997; Lin, 1998; European Foundation for Quality Management, 2000; Monfort, 2000; Donrosoro et al., 2001, resaltando la capacidad del

directivo para influir en el comportamiento de los demás con el fin de conseguir los objetivos organizacionales, individuales o personales . Psico Consult C.A. ha desarrollado un marco conceptual y metodológico que adapta la teoría a las necesidades particulares de la cultura de cada organización, logrando modelos únicos que se diseñan tomando en cuenta la dinámica, los procesos, los productos y las perspectivas de cada cliente, asegurando la practicidad y utilidad del sistema.

Psico Consult C.A. es una empresa venezolana con 25 años de trayectoria que desarrolla a mediados de los noventa el software PsicoMet 1.0 sistema innovador en la aplicación de baterías y emite informes asociados de evaluación de candidato lo cual le permite ser innovadora y vanguardista, actualmente se encuentra en México, Costa Rica, Panamá y Colombia. Es una empresa que mediante una robusta plataforma en internet administra y aplica diferentes productos y servicios a nivel internacional y tiene el enfoque de consultoría de gestión humana que ofrece soluciones de medición y desarrollo humano para eficientar el desempeño de las personas y organizaciones.

La Rueda de las Competencias Gerenciales Psico Consult (2001) que incluye 40 Competencias. Desde el centro hacia la periferia se identifican tres tipos de Competencias: Competencias Técnicas y funcionales (Conocimientos específicos del cargo y conocimientos genéricos), Competencias personales (cognoscitivas, motivación y compromiso, y personales) y administrativas y gerenciales (comunicación, con la gente, administrativas y liderazgo). En lo que respecta a las administrativas y gerenciales en las cuales se centra nuestro estudio la competencia general de comunicación tiene cuatro específicas: escucha, presentación de informes, redacción de informes y búsqueda de información. La competencia general con la gente tiene integradas tres específicas: gerencia de conflicto, relaciones personales y trabajo en equipo. La competencia general administrativa está integrada por cuatro específicas: seguimiento, efectividad de recursos, organización y planeación. Por último la competencia general de liderazgo tiene integradas: desarrollo de la gente, delegación, control, motivación, estilo e impacto de liderazgo. En el entorno de las MIPYME siempre existe la gran interrogante de si formar o no a sus directivos y administradores, por la alta rotación; sin embargo un directivo o administrador no formado carecerá de los hábitos y comportamientos necesarios para el logro y eficiente desempeño de la PYME y así lograr su estabilidad, crecimiento y competitividad.

Las PYME de éxito suelen estar dirigidas por líderes que se caracterizan por ser grandes profesionales con experiencia y por poseer un gran conocimiento del mercado, del entorno, de los recursos humanos y de sus recursos tecnológicos. El éxito competitivo es un término relativo (AECA, 1988b; Dehesa, 1988; Viedma, 1992; Salas, 1992; Cuervo, 1993; Gómez, 1997; Alonso y Barcenilla, 1999), donde la posición relativa frente a la competencia se constituya como uno de los indicadores determinantes del éxito o fracaso de la empresa. (Limitaciones para acceso a balances y cuentas de pérdidas y ganancias de las empresas). Este indicador global de éxito es una variable de naturaleza cualitativa que integra las variables calidad de los productos o servicios, introducción de innovaciones, productividad de la mano de obra, satisfacción de los empleados, satisfacción de los clientes con los productos de la empresa, rapidez de respuesta a las demandas de los clientes, e incremento de la cuota de mercado. Para confeccionarla se ha recogido información sobre cada uno de los indicadores con respecto a la competencia. Este indicador fue el resultado de sumar el valor medio de las puntuaciones obtenidas por cada una de las siete variables señaladas. Así como la media para el resultado global (Rubio Aragón).

## **METODOLOGÍA**

El diseño de la investigación, de tipo exploratorio y descriptivo, permite “facilitar una mayor penetración y comprensión del problema que enfrenta el investigador” (Malhotra, 1997: 87). En una primera etapa de la investigación se aplicó una prueba piloto de julio a octubre de 2012. Para la validación de las competencias del modelo de la rueda de Psico Consult A.C., en cuanto a la validación del constructo la confiabilidad del instrumento se realizó por medio del coeficiente Alfa de Cronbach obteniendo el valor de 0.836 considerándose como un valor bueno. En una segunda etapa se realizó el trabajo empírico. La población objeto del estudio está constituida por todas las empresas pequeñas y medianas del sector servicios (1,075) del Municipio de Saltillo en el estado de Coahuila (INEGI, 2012) La estimación del tamaño de la muestra se obtuvo a partir de un muestreo probabilístico estratificado, con un nivel de confianza del 95% mediante varianza máxima, con una muestra de 284.

Los sujetos de estudio fueron los dueños, gerentes y supervisores de las PYME sector servicios en Saltillo Coahuila, a quienes se les preguntó su percepción de cada pregunta, con una escala de Likert. Se aplicaron 300 encuestas de manera directa en el período de junio a agosto de 2013. La confiabilidad del instrumento se realizó por medio del coeficiente Alfa de Cronbach obteniendo el valor de 0.80 considerándose como un valor bueno. El instrumento utilizado es resultado del estudio de la bibliografía, siendo en lo fundamental la Rueda de competencias del Modelo de Psico Consult (2001) que fue validado en la prueba piloto, el cual fue complementado con preguntas ya validadas del cuestionario del Desarrollo Estratégico de las MIPYME en cuanto al uso de sistemas de control interno formal y entorno sectorial (FAEDPYME; 2009; Medina 2011; Martínez Serna, et al, 2012 ) y el desempeño empresarial basado en las variables de rendimiento propuestas por Quinn y Rohrbaugh (1983).

Tabla 3: Operacionalización de Variables de Estudio

VARIABLE	INDICADORES	ITEMS	ALFA*
Competencia comunicación	Escucha, informes, redacción y búsqueda de información	10	0.782
Competencia con la gente	Gerencia de conflicto, relaciones personales y trabajo en equipo	8	0.801
Competencia administrativa	Seguimiento, efectividad de recursos, organización y planificación	12	0.836
Competencia liderazgo	Desarrollo de la gente, delegación, control, motivación, estilo e impacto de liderazgo	19	0.912
Entorno competitivo sectorial	Facilidad para entrada de empresas, competencia del sector, poder de negociación de los clientes y proveedores y servicios sustitutos	5	0.714
Desempeño Empresariales	Procesos internos, sistema abierto, sistema racional y recursos humanos	13	0.805
Sistemas de Control interno	Calidad del servicio, flujo de efectivo, presupuestos, análisis económico-financiero y sistema de calidad	6	0.774

\*El Alfa de Cronbach por debajo de 0,5 muestra un nivel de fiabilidad no aceptable; si se situara entre 0,7 y 0,8 se estaría ante un nivel aceptable como muestra la casi totalidad de las variables, excepto la competencia de liderazgo que obtuvo valor de 0,912 que sería excelente.

El instrumento incluyó variables de control de carácter socio demográfico como edad, sexo, escolaridad y puesto del encuestado, así como antigüedad, tamaño, subsector de la empresa. Para el procesamiento de los datos se utilizaron técnicas estadísticas descriptivas la prueba de Chi cuadrada determinar el nivel de significación con un 90, 95% y 99% de confianza en la comprobación de las hipótesis. Para el análisis de la variable rendimiento se usaron las variables propuestas por Quinn y Rohrbaugh (1983), midiéndolas en una escala Likert del 1 (desfavorable) al 5 (favorable).

## RESULTADOS

### Descripción Socio Demográfica

Las características de los dueños, directores - gerentes y supervisores que conforman la muestra es la siguiente: El 74% se desempeña como jefe/supervisor, de ellos un 63% tienen una antigüedad de 1 a 4 años, una formación universitaria con grado profesional el 49% y 17% de posgrado, mayoritariamente de sexo masculino (51%) y con una edad de menos de 40 años (78%) y de 40 a 55 años (20%). Ocupan el cargo de director/gerente de la empresa el 15%, en un 82% de género masculino y con experiencia en cargos de dirección de 1 a 4 años el 29%, de 5 a 9 años el 28% y más de 10 años el 27%.

Las PYME del sector servicios del municipio de Saltillo Coahuila que participaron en el estudio empírico pertenecen al subsector de servicios educativos en un 22%, servicios profesionales 19% y apoyo a negocios 17%. El tamaño de mediana empresa es más representativo con un 52% y en cuanto a su madurez, en etapa consolidada 45% y desarrollo 33%.

#### Nivel de Desarrollo de las Competencias Directivas

Tratándose de la autoevaluación de competencias directivas de los dueños, gerentes y supervisores de las PYME las 3 competencias directivas específicas mejor autoevaluadas de mayor a menor son: motivación, desarrollo de la gente y delegación. La competencia directiva genérica “liderazgo” con la mejor autoevaluación. Con respecto a las competencias directivas con menor ponderación de menor a mayor se infiere que son: seguimiento, efectividad de recursos e impacto de liderazgo. La competencia directiva genérica administrativa resultó ser la de menor autoevaluación. Fuente: elaboración propia. Al analizar los resultados de nuestro estudio con respecto al ranking de las competencias directivas de Chinchilla (2001) encontramos que existen una competencia que ocupó el mismo lugar “efectividad de recursos” (16) y la competencia de comunicación con similar resultado en dos específicas (4 y 6). Las competencias genéricas mejor valoradas son de mayor a menor: liderazgo, comunicación, con la gente y administrativas. Lo anterior nos permite inferir que las PYME del sector servicios prefieren directivos, jefes y supervisores con competencias directivas específicas que desarrollen a sus subordinados, controlen los procesos y gente, deleguen con efectividad, motivando con un estilo de liderazgo que impacte a los objetivos de la organización. Recordando que Chinchilla concluyó que las empresas buscan directivos capaces de crear equipo, desarrollar a sus colaboradores, con cualidades para el liderazgo y la motivación.

Tabla 4: Autoevaluación de Competencias Directivas de Socios / Gerentes y Supervisores de Pyme Sector Servicios

competencia directiva generica	competencia especifica directiva	media	sig.	lugar
c o m u n i c a c i ó n	escucha	3.00	0.007*	12
	informes	2.99	0.175	13
	redacción	3.12	0.001*	4
	búsqueda de información	3.05	0.001*	6
c o n   l a   g e n t e	conflictos	3.05	0.001*	7
	relaciones personales	3.03	0.876	9
	trabajo en equipo	2.98	0.012*	14
	seguimiento	2.80	0.856	17
a d m i n i s t r a t i v a	efectividad de recursos	2.82	0.048*	16
	organización	3.04	0.001*	8
	planeación	3.11	0.008*	5
	desarrollo de la gente	3.19	0.036*	2
l i d e r a z g o	delegación	3.14	0.057	3
	control	3.03	0.001*	10
	motivación	3.22	0.001*	1
	estilo de liderazgo	3.00	0.011*	11
	impacto de liderazgo	2.97	0.085	15

Teniendo en cuenta el valor de la significación con  $\alpha = 5\%$ , en los restantes los valores son  $>0,05$ . Se hallan valores significativos en 12 de las 17 competencias específicas (70.58) y que puede estar relacionada la gerencia de conflictos con la competencia de escucha por la forma de planear y organizar las actividades complementado con el control y motivación de los gerentes y supervisores en las PYME del sector servicios.

Tabla 5: Comparativo Contra Ranking de Chinchilla

competencia directiva generica	competencia especifica directiva	lugar chinchilla	lugar investigacion
c o m u n i c a c i ó n	escucha		12
	informes		13
	redacción	6	4
	búsqueda de información		6
c o n l a g e n t e	conflictos	23	7
	relaciones personales	19	9
	trabajo en equipo	5	14
a d m i n i s t r a t i v a	seguimiento		17
	efectividad de recursos	16	16
	organización		8
	planeación		5
l i d e r a z g o	desarrollo de la gente		2
	delegación	20	3
	control		10
	motivación		1
	estilo de liderazgo		11
	impacto de liderazgo	2	15

La competencia general de liderazgo tiene de las primeras diez competencias específicas mejor valoradas cuatro: motivación, desarrollo con la gente, delegación, y control. Con respecto a las menos valoradas se encuentran en la competencia general administrativa; seguimiento y efectividad de recursos. Se infiere que los encuestados no perciben como competencias específicas importantes el seguimiento, efectividad de recursos, impacto de liderazgo y trabajo en equipo; y esto puede estar relacionado con los numerosos problemas administrativos que originan una pobre cultura de trabajo en equipo y dificultades de comunicación en las PYME del sector servicios.

En el trabajo de Gálvez (2012), sobre el impacto de la innovación sobre el rendimiento de la MIPYME, obtuvo los resultados de que a medida que se mejoran los procesos productivos o se adquieren nuevos equipos, en las MIPYMEs de mediana y alta tecnología de Cali se mejora significativamente su desempeño en cuanto a: 1) la satisfacción de los clientes, la rapidez de adaptación a las necesidades del mercado, y en imagen de la empresa y sus productos o servicios; 2) en cuanto a su cuota de mercado, rentabilidad y productividad; y 3) en cuanto a su rendimiento global.

Tabla 7: Percepción de Resultados Empresariales de las PYME Sector Servicios

eje	resultados	media	desv. típ.	varianza
procesos internos	calidad del servicio	2.95	1.523	2.319
	proceso operativo interno	3.05	1.324	1.753
	organización de las tareas del personal	2.99	1.149	1.321
sistema abierto	satisfacción de los clientes	3.08	1.382	1.909
	rapidez de adaptación de las necesidades del mercado	2.86	1.253	1.570
sistema racional	imagen de la empresa y de sus servicios	3.15	1.390	1.932
	participación en el mercado	2.95	1.342	1.800
	rentabilidad	2.92	1.328	1.763
recursos humanos	productividad	2.75	1.248	1.558
	motivación de los trabajadores	3.03	1.185	1.404
	satisfacción de los trabajadores	3.04	1.151	1.326
	permanencia del personal	2.71	1.191	1.417
	asistencia y puntualidad del personal	2.98	1.260	1.588

*La percepción sobre su desempeño empresarial en comparación con los competidores oscila entre malo (2) y regular (3). Es la imagen de la empresa y sus servicios, satisfacción de los clientes y proceso operativo interno las consideradas con valores más altos y las de menor ponderación: permanencia del personal, productividad y rapidez de adaptación de las necesidades del mercado. Lo cual significa que un problema en los resultados del sector es la estabilidad del personal y el desempeño en los procesos productivos. Modelo de resultados de Quinn y Rohrbaugh (1983). Fuente: elaboración propia.*

## CONCLUSIONES

En este trabajo de investigación se efectuó una evaluación diagnóstica de las competencias directivas en las PYME del sector Servicios, en Saltillo, Coahuila. La metodología de investigación fue de tipo exploratoria, descriptiva y explicativa. La estimación del tamaño de la muestra se obtuvo a partir de un muestreo probabilístico estratificado, con un nivel de confianza del 95%. Se aplicaron 300 encuestas a socios, gerentes y supervisores en 67 PYME. En la autoevaluación de competencias directivas de los dueños, gerentes y supervisores de las PYME las 3 competencias directivas específicas mejor autoevaluadas de mayor a menor son: motivación, desarrollo de la gente y delegación. La competencia directiva genérica “liderazgo” con la mejor autoevaluación. Con respecto a las competencias directivas con menor ponderación de menor a mayor resultaron: seguimiento, efectividad de recursos e impacto de liderazgo. La competencia directiva genérica administrativa resultó ser la de menor autoevaluación.

Las competencias directivas más requeridas en la administración y gestión de las PYME y que deben tener sus directivos, jefes y supervisores son que desarrollen a sus subordinados, controlen los procesos y gente, deleguen con efectividad, motivando con un estilo de liderazgo que impacte a los objetivos de la organización. En el entorno competitivo sectorial existe una competencia de nivel medio en donde las empresas consideran que el factor de mayor competitividad de la industria es el relativo a la rivalidad entre competidores existentes, seguido del poder negociador de los clientes. Por otra parte el factor competitivo menos valorado por las empresas se refiere al poder negociador de los proveedores, seguido de la amenaza del factor facilidad de entrada de nuevas empresas y nuevos competidores.

La percepción del entorno competitivo en el sector de servicio de las PYME es valorado como que existe una competencia que oscila en la escala de 3.30 a 3.70. Pudiéramos decir que es un competencia de nivel medio, siendo la más alta la propia rivalidad competitiva entre empresas y la más baja el poder negociación con los proveedores. En la percepción del desempeño empresarial con respecto a sus competidores existe una baja evaluación entre mala y regular siendo la imagen de la empresa y sus servicios, satisfacción de los clientes y proceso operativo interno las consideradas con valores más altos y las de menor ponderación: permanencia del personal, productividad y rapidez de adaptación de las necesidades del mercado. Lo cual significa que un problema en los resultados del sector es la estabilidad del personal y el desempeño en los procesos productivos. Al analizar el nivel de desarrollo de las competencias directivas con relación a las etapas de madurez de las PYME no se encontraron valores significativos aunque las competencias genéricas de gerencia de conflictos, desarrollo de la gente y motivación puede estar relacionada con las debilidades de estructura, problemas de operación y grado de motivación de los sujetos por desarrollar su trabajo dentro de la PYME.

Al analizar los resultados del nivel de desarrollo de las competencias directivas y su relación con el tamaño de las PYME sólo se hallan valores significativos en redacción de informes y control que puede estar relacionada con la interacción cercana por el tamaño del personal de las PYME y la supervisión directa del gerente en el estilo de liderazgo hacia el subordinado para el cumplimiento de las tareas. Se encontró asociación entre el nivel de competencias directivas y los sub sectores de las PYME en el 88% de las variables, de 15 de las 17 competencias directivas.

El estilo de liderazgo tiene la significancia más importante que puede estar relacionada con la organización y el control lo cual es una consecuencia de la toma de decisiones oportunas y la organización de tareas. Las de mayor significancia son: estilo de liderazgo, organización y control; y la competencia genérica de liderazgo permite el mejor desarrollo de la competencia genérica administrativa.

Existe además una fuerte asociación entre el nivel de competencias directivas y los resultados empresariales en los procesos internos calidad en el servicio, eficiencia en el proceso operativo y la organización de tareas en el 100% de las variables; y los resultados empresariales para el sistema abierto que es la satisfacción de clientes, la adaptación a las necesidades del mercado y la imagen de la empresa y servicio en un 94% de las variables; y los resultados empresariales racionales en la participación del mercado, rentabilidad y productividad en el 100% de las variables; y los resultados empresariales para recursos humanos referente a la motivación, satisfacción, permanencia, asistencia y puntualidad del trabajador en un 94% de las variables, por lo que se acepta en general la hipótesis de la asociación en el desarrollo de las competencias directivas y los resultados empresariales.

Las de mayor significancia son: organización y control en los resultados empresariales de sistema abierto y nuevamente control y escucha para los resultados empresariales del sistema abierto control y estilo de liderazgo en los resultados empresariales racionales, repitiendo control y motivación para los resultados empresariales de recursos humanos: por lo que el nivel de desempeño de las competencias directivas impacta a los resultados empresariales. Una de las limitaciones de este estudio es que aborda el sector servicios que es heterogéneo como algo homogéneo. La investigaciones de Chinchilla sobre los perfiles de competencias por sectores sirve como un antecedente que nos ayuda para continuar profundizando en el perfil de competencia para los subsectores más representativos: Servicios educativos, servicios de alojamiento y alimentos, servicios financieros, servicios de salud y asistencia, servicios profesionales y servicios de apoyo a negocio. Será una tarea importante realizar un análisis por los subsector educativo para obtener el perfil de competencias directivas del subsector educativo.

En la revisión de la literatura los estudios realizados se centran en el sector industrial o manufacturero y no se encontraron estudios específicos para el sector de servicios que es el objeto de estudio de esta investigación lo cual es importante por el papel creciente que ha tenido este sector en los últimos veinte años en particular el subsector educativo en que las investigaciones se enfocan al nivel básico y no superior que un sector considerado en nuestra investigación. El gran reto es diseñar un perfil de competencias directivas para Socios, Directivos, gerentes, jefes y supervisores del sector servicios en el Municipio de Coahuila y la metodología de implantación de ese modelo de gestión que impactaría a la estabilidad y sobrevivencia de las PYME.

# SELECCIÓN BAJO INCERTIDUMBRE DE PORTAFOLIOS DE GENERACIÓN ELÉCTRICA

Roberto José Taboada González, Universidad Michoacana de San Nicolás de Hidalgo  
Gerardo Gabriel Alfaro Calderón, Universidad Michoacana de San Nicolás de Hidalgo  
Federico González Santoyo, Universidad Michoacana de San Nicolás de Hidalgo

## RESUMEN

*El presente trabajo tiene por objeto realizar un análisis de la cartera de centrales de generación en México, utilizando el modelo de portafolio de Markowitz, con objeto de coadyuvar a la planeación de Centrales de Generación Eléctricas en el país. Se presentan los conceptos fundamentales de la Teoría Moderna de Portafolio, así como su aplicación a dos escenarios: un ejemplo acotado a siete tecnologías de generación, sin restricciones de capacidad contrastado con otro escenario con restricciones de capacidad. El resultado es que al aplicar esta herramienta se puede disminuir el riesgo y aumentar los rendimientos, no se pretende que sustituya a ningún método de planeación actual sino de ser una herramienta adicional para la toma de decisiones.*

**PALABRAS CLAVE:** Portafolio, Riesgo, Incertidumbre, Inversión, Planeación

## PORTFOLIO SELECTION UNDER UNCERTAINTY OF POWER GENERATION

### ABSTRACT

*This paper is intended to make an analysis of the power plant generation portfolio by the Markowitz portfolio model, for planning Electric Power Generation in Mexico. It presents the fundamental concepts of modern portfolio theory and the application a seven-dimensional example generation technologies with and without constraints. The result is that by applying this tool can reduce risk and increase returns, are not intended to replace any current planning method without being an additional tool for decision making*

**KEYWORDS:** Portfolio, Risk, Uncertainty, Investment, Planning

**JEL:** C, G, H, M

### INTRODUCCIÓN

La teoría de portafolio fue desarrollada por Harry Markowitz en 1952 en su artículo “Portfolio Selection” y después ha sido enriquecida por otros autores como Sharpe y Tobin, solo por mencionar algunos, siendo el enfoque principal la conformación de portafolios de activos financieros, (acciones, bonos, papel de deuda, etc.). Ésta establece la creación de portafolios de instrumentos financieros con un mínimo riesgo a un nivel de rendimientos esperado. En el presente trabajo se muestra una aplicación para la selección de centrales de generación, utilizando siete tecnologías y un periodo de 20 años de datos estadísticos de cada una, el resultado obtenido es un portafolio de tecnologías de generación que minimiza el riesgo a un rendimiento dado, comparándose con el portafolio planeado por la Comisión Federal de Electricidad (CFE) para el año 2026.

## REVISIÓN LITERARIA

La preocupación por encontrar la forma eficiente de diversificar los activos de generación ha dado lugar a la escritura de numerosos trabajos que abordan el tema bajo diferentes enfoques, en este apartado se describen los trabajos relacionados más importantes. Shimon Awerbuch ha sido uno de los principales impulsores de la aplicación de la teoría de portafolio de media varianza en el proceso de selección de tecnologías de generación. En el año 2000 publicó un artículo donde realiza un ensayo para los Estados Unidos utilizando las dos tecnologías dominantes en ese país gas natural y carbón y utiliza los costos de combustible exclusivamente y toma como activo libre de riesgo a la energía eólica el resultado es que al considerar una energía cara como la eólica el riesgo y el costo de variable de generación disminuyen.

En 2003 Awerbuch y Berger (2003) publicaron un artículo con el objetivo de mejorar políticas de diversificación y seguridad energética en la Unión Europea, utilizando también la teoría de portafolio de Markowitz. La diferencia con el método tradicional de costo mínimo es la necesidad de incluir el riesgo de la generación de energía, medido por la variabilidad en el precio de la generación de energía para obtener la frontera eficiente del portafolio de generación. Como resultado de este estudio es que un portafolio de tecnologías de generación con diferentes características financieras puede ser menos costoso a lo largo del tiempo que un portafolio que solo se base en tecnologías de costo mínimo como las basadas en combustibles fósiles. Stirling (2008) hace un estudio profundo de las características de un sistema de energía diverso e identifica tres propiedades de la diversidad (variedad, balance y disparidad).

Basado en dicha descomposición para el concepto de diversidad, desarrolla un marco para cuantificar la diversidad de un sistema de energía. Bolinger and Wiser (2008) se concentran en la fuente principal de riesgo para los inversionistas en el sector de generación, riesgos del precio de combustible y sus relaciones con los precios de la energía. Estos autores argumentan que la volatilidad del precio de los combustibles fósiles, especialmente el gas, debería ser tomada en cuenta en las decisiones de inversión y selección de la tecnología. Bazilean y Roques (2008) abordan la diversidad en términos de riesgo y detallan los diferentes tipos de riesgo que afectan a las decisiones. Ilustran el potencial de la teoría de portafolio de la media varianza, para balancear los beneficios de la reducción de riesgos de varios portafolios tecnológicos.

Blyth (2008) explora el potencial de las opciones reales para complementar el análisis de la teoría del portafolio. La teoría de las opciones captura el impacto en la oportunidad de inversión y la flexibilidad en la administración de la valuación de las inversiones. Esto da un conjunto diferente de visiones de políticas. El problema aquí no concierne tanto con una definición de arriba hacia abajo de una mezcla óptima sino de un entendimiento de abajo hacia arriba de los incentivos que enfrenta una inversión individual bajo incertidumbre. Jensen y Beurskens (2008) presentan un portafolio de activos de generación para Holanda para el año 2030. Este trabajo se enfoca en la dimensión del costo-riesgo de la cartera holandesa de tecnologías de generación en lugar de rendimiento-riesgo para el despliegue potencial adicional de las tecnologías de generación renovable. El resultado muestra que la energía renovable reduce el riesgo con un pequeño impacto en el costo de la cartera.

Doherty et al. (2008) Realizó un caso de estudio para un sistema de electricidad aislado en Irlanda, tomando en cuenta el porcentaje máximo de participación de tecnologías con

intermitencia de generación para garantizar la seguridad de suministro del sistema. Los portafolios resultantes son examinados con respecto al impacto de los costos del carbón sobre el desarrollo de plantas de generación eólicas. Krey & Zweifel (2008) se concentró en las maneras de mejorar la estabilidad de las correlaciones entre diferentes precios de combustibles y como robustecer la teoría de portafolio. Utiliza un enfoque econométrico, para filtrar los componentes sistemáticos de la matriz de covarianzas. Aplica su enfoque a computar portafolios de generación para Suiza y Estados Unidos.

Van Zon and Fuss (2008) determina un portafolio óptimo para el Reino Unido con volatilidad en los precios del combustible e incertidumbre concerniente al progreso tecnológico en un contexto cambios técnicos e inversiones irreversibles. Combina teoría de portafolio con aspectos de programación dinámica. Este modelo es ilustrado en el contexto de políticas públicas actuales en el Reino Unido y demuestra que la reducción del riesgo incrementa el costo. Delarue, et al, (2008) presentan el modelo de portafolio distinguiendo entre capacidad instalada, energía y la energía instantánea real entregada. De esta manera, la variabilidad de las energía del viento y los límites de rampa de las plantas convencionales son correctamente incluidos en la optimización de la inversión. Los resultados muestran que la introducción de las centrales eólicas pueden bajar el riesgo del costo de generación.

Florian Kienzle et al, (2007) Analizan la eficiencia del portafolio de generación de la empresa de electricidad BKW, una de las mayores empresas de Suiza. Aplican la teoría de portafolio media - varianza a las mezclas actual y futura y se derivan las respectivas fronteras eficientes. El análisis se basa en cambios relativos en los costos de generación complementado por un análisis de costos reales. Gustavo A. Marreiro et al: (2011) Presentan un trabajo para evaluar la política de energía de Brasil. El análisis utiliza la teoría de portafolio media – varianza para evaluar la eficiencia de la mezcla de generación de energía, en términos de costos y riesgos. El portafolio de generación de Brasil está cercano a la frontera eficiente debido a la hidroelectricidad aporta el 79% de la generación, en Brasil la tendencia de la diversificación es aumentar la participación de plantas de combustible fósil, pero si se introduce un precio al CO<sub>2</sub> puede ser una opción para promover fuentes renovables de generación y reducir el nivel de activismo discrecional del gobierno.

## METODOLOGÍA

En la investigación se aplica el método científico, con un diseño de investigación no experimental, de corte transversal y de tipo correlacional causal debido a que los datos que se utilizan ya ocurrieron y por lo tanto no son manipulados, son éstos a una fecha determinada y describen las relación entre las variables: rendimiento, riesgo, generación eléctrica, costo nivelado y precio de venta. El método que se utiliza se desprende de la Teoría de Portafolio, desarrollada por H. Markowitz, planteada como un modelo de optimización restringida, cuya función objetivo consiste en la maximización de los rendimientos, sujeta a un riesgo determinado por el planeador.

El problema consiste en determinar la mezcla óptima de tecnologías de generación que maximice el rendimiento sujeto a un riesgo dado medido por la desviación estándar de los rendimientos o que minimice el riesgo dado un rendimiento requerido, a que la suma de las participaciones de las tecnologías sea igual a 1 y a las restricciones de generación de las tecnologías. Los datos de entrada del modelo son los costos nivelados de generación de cada una de las tecnologías para producir la energía eléctrica, así como el precio medio de venta del MWh de energía eléctrica de cada uno de los años del análisis, el horizonte de tiempo analizado comprende 20 años de 1992 al

año 2011. Los rendimientos se obtienen restando del precio medio de venta el costo de generación para cada tecnología utilizando la siguiente fórmula:

$$r_{ij} = \frac{PV_j - C_{ij}}{C_{ij}}$$

Donde:

$r_{ij}$  = Rendimiento de la tecnología  $i$  en el periodo  $j$

$PV_j$  = Precio medio de venta en el periodo  $j$

$C_{ij}$  = Costo de la tecnología  $i$  en el periodo  $j$

Planteamiento Matemático

Las variables de decisión son:

$w_i$  = participación de la tecnología  $i$  en el portafolio de generación (dada en fracción del portafolio total).

$$\sum_{i=1}^N w_i = 1$$

$$w_i \geq 0$$

$i$  = TC, CC, CAR, NUC, GEO, HIDRO, EOL

TC = Térmica Convencional (Combustóleo)

CC = Ciclo Combinado (Gas natural)

CAR = Carbón

NUC = Nuclear

GEO = Geotérmica

HIDRO = Hidráulica

EOL = Eólica

Función Objetivo

La varianza de los rendimientos del portafolio mide el riesgo total del portafolio

$$\text{Min } \sigma_p^2 = \sum_{i=1}^n \sum_{j=1}^n w_i w_j \sigma_{ij} = \mathbf{w}^T \mathbf{V} \mathbf{w}$$

Esta función desarrollada queda de la siguiente manera:

$$\begin{aligned} \text{minimizar } z = & w_{TC}^2 \sigma_{TC}^2 + w_{CC}^2 \sigma_{CC}^2 + w_{CAR}^2 \sigma_{CAR}^2 + w_{NUC}^2 \sigma_{NUC}^2 + w_{GEO}^2 \sigma_{GEO}^2 + w_{HID}^2 \sigma_{HID}^2 \\ & + w_{EOL}^2 \sigma_{EOL}^2 + 2w_{TC}w_{CC}\sigma_{TC-CC} + 2w_{TC}w_{CAR}\sigma_{TC-CAR} + 2w_{TC}w_{NUC}\sigma_{TC-NUC} \\ & + 2w_{TC}w_{GEO}\sigma_{TC-GEO} + 2w_{TC}w_{HID}\sigma_{TC-HID} + 2w_{TC}w_{EOL}\sigma_{TC-EOL} \\ & + 2w_{CC}w_{CAR}\sigma_{CC-CAR} + 2w_{CC}w_{NUC}\sigma_{CC-NUC} + 2w_{CC}w_{GEO}\sigma_{CC-GEO} \\ & + 2w_{CC}w_{HID}\sigma_{CC-HID} + 2w_{CC}w_{EOL}\sigma_{CC-EOL} + 2w_{CAR}w_{NUC}\sigma_{CC-NUC} \\ & + 2w_{CAR}w_{GEO}\sigma_{CAR-GEO} + 2w_{CAR}w_{HID}\sigma_{CAR-HID} + 2w_{CAR}w_{EOL}\sigma_{CAR-EOL} \\ & + 2w_{NUC}w_{GEO}\sigma_{NUC-GEO} + 2w_{NUC}w_{HID}\sigma_{NUC-HID} + 2w_{NUC}w_{EOL}\sigma_{NUC-EOL} \\ & + 2w_{GEO}w_{HID}\sigma_{GEO-HID} + 2w_{GEO}w_{EOL}\sigma_{GEO-EOL} + 2w_{GEO}w_{EOL}\sigma_{GEO-EOL} \\ & + 2w_{HID}w_{EOL}\sigma_{HID-EOL} \end{aligned}$$

El rendimiento del portafolio queda determinado por el rendimiento esperado de cada tecnología

$$\mu_p = E[r_p] = \sum_{i=1}^n w_i E[r_i] = \sum_{i=1}^n w_i \mu_i$$

En forma matricial se tiene:

$$\mu_p = \mathbf{w}^T \mathbf{e} \quad \text{Donde} \quad \mathbf{e} = \mathbf{E}[\mathbf{r}] = \begin{bmatrix} \mu_1 \\ \mu_2 \\ \cdot \\ \cdot \\ \mu_n \end{bmatrix}$$

El rendimiento del portafolio es establecido de antemano de acuerdo al rendimiento deseado por la Subdirección de Programación. Este rendimiento es una de las restricciones del modelo. El modelo puede plantearse como la maximización de los rendimientos esperados, como función objetivo sujeta a una varianza del portafolio determinada por el planeador, además de todas las demás restricciones mencionadas para el anterior modelo.

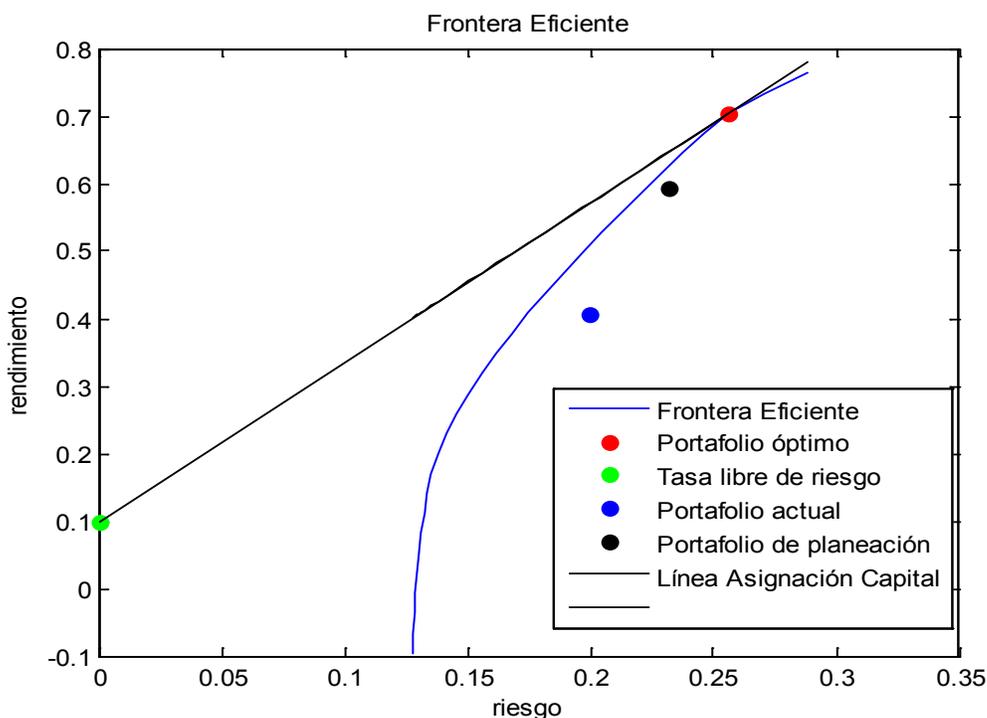

## RESULTADOS

Se realizó una primera corrida en MATLAB solo con la restricción de que la suma de los porcentajes para cada tecnología debe ser uno, el resultado que se obtuvo se muestra tanto en la tabla 1 como en la figura 1. Podemos observar que solo con dos tecnologías se llega al portafolio óptimo, pero existen restricciones impuestas por el entorno tales como la disponibilidad de combustibles, metas de generación con energía limpia, reducción de consumo de algún combustible, entre otras, que deben ser consideradas.

Tabla 1: Frontera eficiente sin restricciones

Indice Sharpe	Riesgo	Rendimiento	TC	CCC	CARB	NUC	GEO	HIDRO	EOLO
2.3586	.2562	.7042	0	.756	.244	0	0	0	0

Figura 1 Frontera eficiente sin restricciones.

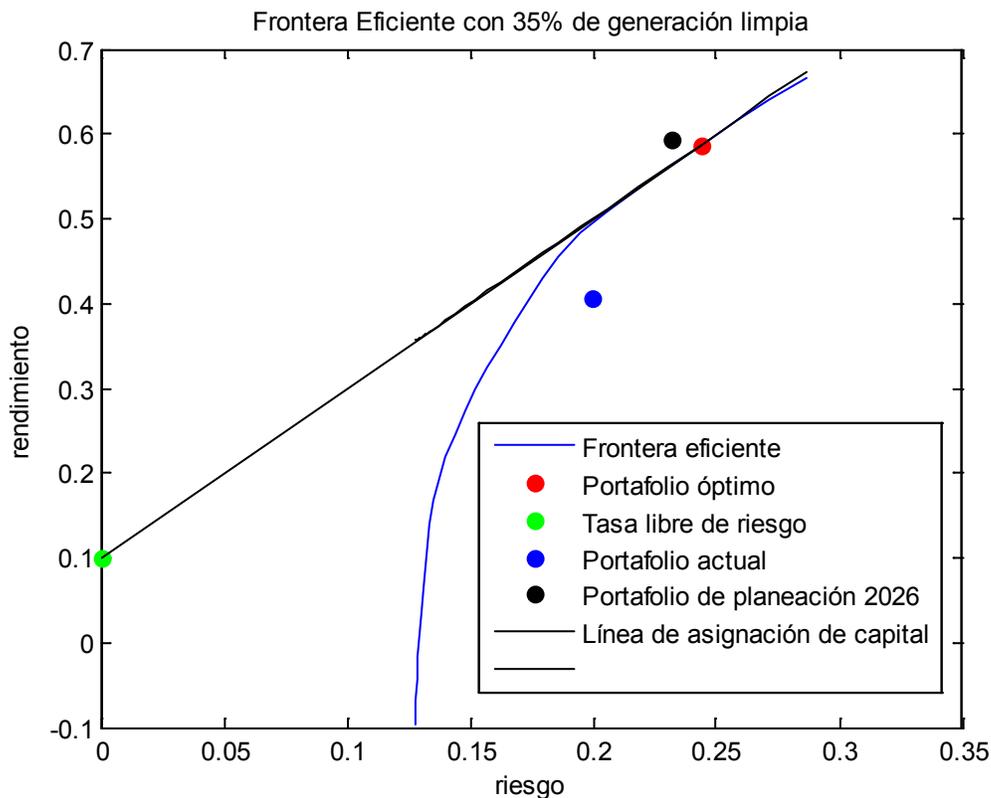

En la figura 1 se observa el portafolio óptimo en la intersección de la frontera eficiente y la línea de asignación de capital, así mismo podemos ver que tanto el portafolio actual como el portafolio de planeación para el 2026 no están en la frontera eficiente.

Tabla 1 Frontera eficiente 35% energías limpias

Indice Sharpe	Riesgo	Rendimiento	TC	CCC	CARB	NUC	GEO	HIDRO	EOLO
2	0.244	0.587	0	0.65	0	0	0.186	0.164	0

La tabla 1 nos muestra los resultados de generar con energías limpias cuando menos el 35% para el año 2026, obsérvese que en este caso el portafolio se distribuye sólo en tres tecnologías, 65% centrales de ciclo combinado, 18.6% en geotermia y 16.4% en centrales hidroeléctricas. Este portafolio resulta no factible debido a que no se cuentan con las reservas de vapor geotérmico necesarias para generar tal resultado ni tampoco la capacidad hidroeléctrica. En la Figura 2 se observa que el portafolio de planeación para 2026 se encuentra por arriba de la frontera eficiente, esto debido principalmente a que dicho portafolio no cumple con la restricción del 35% de energía limpia.

Figura 2: Frontera Eficiente con 35% de Generación Limpia

## CONCLUSIONES

Las conclusiones que pueden sacarse de los resultados obtenidos son:

- El portafolio actual no se encuentra en la frontera eficiente en ninguno de los casos.
- El aplicar el modelo de Markowitz a portafolios de activos de generación nos indica donde se encuentra la mezcla de activos seleccionada respecto a la frontera eficiente.
- Que es posible aplicar el modelo de Markowitz como una herramienta de planeación.

### RESUMEN

*El presente estudio realiza un análisis de las condiciones en que laboran los micro empresarios que se encuentran dentro de los mercados informales del sur oriente de Ciudad Juárez; así mismo, aborda la problemática que enfrentan ante la falta de atención de las autoridades gubernamentales a este tipo de trabajadores. En la primera parte de la investigación, es presentado un panorama general del fenómeno de los trabajadores informales y los objetivos de la misma. En la segunda parte, se presentan las aportaciones de los principales teóricos de la informalidad, así como las opiniones de los expertos en el estudio de la micro empresa. En la tercera parte de la investigación, se presentan las estrategias y la metodología utilizada para recabar la información necesaria para el estudio, así como el contexto en que se desarrollan las labores del equipo de trabajo. En la última parte, se presentan los alcances de los objetivos, la respuesta a las preguntas de la investigación, dando a conocer el número, características y clasificación del micro empresarios de los mercados informales. Las gráficas indican los resultados duros de las variables del estudio. Las conclusiones y recomendaciones del estudio, se presentan al final del reporte.*

**PALABRAS CLAVE:** micro empresa, informalidad, capacitación, comunicación, desarrollo.

## INFORMAL MARKETS: LODGING OF MICROCOMPANIES?

### ABSTRACT

*The present study accomplishes an analysis of the conditions in which they labor them microcomputer businessmen that find within the informal markets of the south Orient of Ciudad Juárez; that's right, go aboard the problems that they confront before the lack of attention of the governmental authorities this type of workers. In the first part of investigation, a panorama of the phenomenon of the unreliable workers and the objectives of the same is presented same. In the second part, show up the contributions of the main theoreticians of informality, as well as the opinions of the experts in the study of the microcomputer company. In one third of the investigation, strategies and the methodology used to procure the necessary information for the study, as well as the context in which the works of the task force develop show up. In the last part, the reaches of the objectives, the answer to the questions of investigation show up, disclosing the number, characteristics and classification of the bus businessmen of the informal markets. Graphics indicate the hard results of the case-study variables. Findings and case-study recommendations show up at the end of the report.*

**KEYWORDS:** Micro Companies, Informality, Training, Communication, Development

### INTRODUCCIÓN

El trabajo en la economía informal se distingue por sus reducidos y mal definidos lugares de actividad, condiciones inseguras y poco saludables, bajos niveles de competencias, productividad e ingresos, extensas jornadas laborales y restricciones al acceso al crédito. Asimismo, los trabajadores de la economía informal no son reconocidos, no se encuentran inscritos y sus actividades productivas no están reglamentadas ni protegidas por la legislación laboral y de la seguridad social (Apella, I., 2009). En el 2000, el INEGI señaló que el subsector informal no incluye la denominada economía subterránea, ni actividades ilegales tales como la evasión fiscal, la piratería, la producción y tráfico de drogas, la usura, la reventa de taquilla, el comercio, el transporte de mercancías de contrabando o las intervenciones quirúrgicas desautorizadas, entre otras. En el mismo año, el organismo sostiene que en México las actividades informales se concentran en el sector institucional de hogares, y por sector económico en cinco grandes grupos de actividades: industria manufacturera, construcción, comercio y restaurantes, transporte y servicios personales. Cuando se analiza el subsector informal con relación a la producción nacional por sector de actividad económica, se observa que éste representa en promedio el 30.8 por ciento del comercio y restaurantes, el 11.5 por ciento de los servicios personales, 6.1 por ciento de la industria manufacturera, y en menor medida en el transporte y la construcción con un 4.6 y 3.3 por ciento respectivamente (INEGI, 2000). Desde el punto de vista económico, el sector informal se puede caracterizar como el sector no moderno o no capitalista de la economía, donde la utilización del capital es relativamente baja, predominan actividades económicas de pequeña escala (Kugler, B. 1986). Desde el punto de vista legal, el sector informal se distingue del formal y su diferencia radica especialmente en la naturaleza jurídica, es decir, en ella se encuentran los individuos y negocios que no cumplen con las normas establecidas por el Estado (Díaz, M., Ramales, M. 2005).

En la economía informal podemos encontrar actividades con una composición y condiciones económicas múltiples, esto es, podemos encontrar actividades con fines económicos distintos. Tal es el caso de Ciudad Juárez, en cuanto fenómeno socioeconómico de reordenación formal-informal de las relaciones de producción capitalista, la economía informal se ubica dentro de los marcos de la economía política en lo básico, como un problema de distribución (Pelayo y Parra, 1994). Las descripciones referidas a lo informal suelen ser de orden sociológico o económico, mientras que son de carácter jurídico las que se refieren a la ilegalidad, ocultación o falta de declaración (Daza, J., 2005). El Sistema de Cuentas Nacionales en México, en su informe 1998-2003, postula que las unidades de producción del subsector informal presentan los rasgos característicos de las empresas de los hogares. Los activos fijos y los activos de otra clase utilizados no pertenecen a las unidades de producción sino a sus propietarios. En México, el subsector informal incluye a empresas informales por cuenta propia donde el propietario puede trabajar individualmente o asociado con miembros del hogar o de otros hogares, y generalmente no está inscrito en los registros oficiales, fiscales o de seguridad social (SCNM, 1998-2003). Sin presuponer que la actividad económica informal tenga una relación directa con las actividades ilícitas, llamados giros negros o economía subterránea, actividades como el narcotráfico, la producción clandestina, la importación hormiga, se plantean como antecedentes de la economía informal.

Como imperativo económico, de su condición fronteriza, la fayuca y el contrabando subsisten, no obstante los programas fronterizos que a partir de 1963 se implementan con especial costo e impacto en esta ciudad fronteriza. Dos circunstancias son centrales en la expansión de la informalidad entonces y ahora: la primera, demográfica, el flujo intermitente de aspirantes a “mojados”, y la segunda es económica, la insuficiencia productiva y de empleo local, agravan la problemática económica económico-social; además, durante los años ochenta, promueven la

“formalización” y desarrollo acelerado del sector informal (Pelayo y Parra, 1994). De acuerdo a los indicadores de la ENAMIN se puede caracterizar al Subsector Informal: como ejemplo, a través de esta se sabe que del total de la población ocupada en negocios informales el 36% son mujeres y el 63.1 % son hombres, y que los motivos para iniciarse en alguna actividad informal son: 35.9% lo hacen para complementar el ingreso familiar, el 33.1% señaló que ganan más que como asalariados, el 13.6% porque no encontró empleo como asalariado, el 5.5% por tradición familiar, y el 11.9% del total de negocios informales por razones diversas, tales como horario flexible y pérdida de empleo, entre otras.(INEGI,2000). Aunque algunos autores coinciden en que la economía informal aparece como una válvula de escape para la clase obrera; donde su pequeño negocio, las ventas en las calles, cruceros o mercados ambulantes, representa un respiro en su economía y una forma de completar los gastos del hogar, o simplemente, subsistir. Por otro lado, Pelayo (1994) sostiene que la economía informal o subterránea hasta ahora indefinida en cuanto a su contenido y significado ha despertado una razonable inquietud entre teóricos y académicos. La situación de la indefinición de la economía informal, se debe a la inoperancia de los instrumentos y mecanismos teóricos que la explican. Las aproximaciones hipotéticas redundan en la forma de operación de sus diferentes manifestaciones: contrabando de mercancías, producción clandestina, servicios personales no registrados, evasión de impuestos.

## REVISION LITERARIA

Una característica común de todas las actividades informales es la baja productividad, por el uso de tecnologías obsoletas y trabajo no calificado (Castells, Portes y Benton, 1989; Rosenbluth, 1994; Tokman, 2001; Maloney, 2004). Los gobiernos deben promover el trabajo decente, esto requiere el desarrollo de métodos innovadores y nuevas herramientas que puedan ser utilizados por los ministerios del trabajo para promover el trabajo decente a través de asistencia técnica a las micro y pequeñas empresas, así como a los trabajadores independientes o por cuenta propia (Daza, 2005). Debe darse un compromiso real de los gobiernos, crear las herramientas, metodología y proyectos que como ejes articuladores de las economías, den sustento al desarrollo económico, social y humano de nuestros trabajadores. El clasificar a las empresas a través de lo mensurable casi siempre ha implicado una taxonomía basada en el tamaño de la empresa sustentado en el número de trabajadores contratados en esta. Por otro lado, se reconoce que las nuevas clasificaciones que se hace de las empresas comienzan a tener componentes vinculados con lo cualitativo. El agrupamiento de las empresas a través de lo cualitativo implica el desarrollo de conceptos intelecciones y comprensiones que parten de las pautas de los datos, generando así una clasificación holística sustentada en los efectos que produce las empresas en términos de sus características de composición y sus marcos de referencia.

En algunos países las medianas empresas son lo mismo que las pequeñas, con lo cual, las primeras son inexistentes, en función de que la clasificación agrupa a las pequeñas y medianas e un conjunto denominado PYMES que reconoce atributos idénticos en ambos casos. (Tunal, 2003). En el caso de las microempresas, el obstáculo - en su clasificación- radica en que la mayoría de estas están integradas al llamado sector informal, al menos en el llamado tercer mundo, lo cual provoca que la cuantificación sea solo una aproximación, y la clasificación se haga en términos cualitativos. Lo anterior resulta sumamente complicado precisamente porque la dinámica de las microempresas es demasiado heterogénea. Al implementar programas de financiamiento, optar por un tipo de gestión o decidir las estrategias de las empresas, se tiene que considerar: los datos y las pautas de estos, o bien, la distribución de tamaños, medios empresariales en cada país o región, los distintos regímenes jurídicos por los que se rige el mundo empresarial y las empresas en particular, el sector de actividad donde se ubica la empresa, el sistema de propiedad, el volumen de negocio o facturación desarrollado(García, 1997,p.29).

Esto nos indica que aun cuando las empresas se dediquen al mismo giro y sean del mismo tamaño se diferencian por el entorno en que se mueven, por lo que cada una debe ser evaluada de forma diferente de acuerdo con su potencial de desarrollo (Pomar y Rivera, 1998: p. 38). Neck 1997, p.10) indica que la mayoría de las clasificaciones de micro, pequeña y mediana empresa varían según los intereses y objetivos de quienes las elaboran y según la fase de desarrollo del medio particular en que se debe aplicar a la clasificación. Pomar y Rivera (1998, p.38) define a la microempresa como una organización en donde predomina un individuo y un grupo de ayudantes, se trata del modelo de hombre orquesta, sería la forma más simple de estructura organizacional, la cual permite cambiar su estrategia rápidamente si el cambio está dentro de la capacidad y los intereses de la persona. Sin embargo esta característica también aplica para las pequeña y medianas empresas. Rivero, Ávila y Quintana (2000) aseveran que el término de microempresa debe hacer referencia a una pequeña unidad socioeconómica de producción, comercio o prestación de servicios que para su creación no requiere de grandes inversiones de capital, con mucha adaptación al cambio y que pueden orientarse hacia el mercado con mayor rapidez y facilidad que otras empresas. Estos autores reconocen que el tamaño de las microempresas:

- 1.- incide en la productividad y eficiencia
  - 2.- le permite desarrollar capacidades innovadoras.
  - 3.- identificar nichos de mercado con mayor facilidad
  - 4.- facilita la adopción y la adaptación de nuevas tecnologías
  - 5.- al tener una buena gerencia tiene mayores posibilidades de crear ventajas competitivas
  - 6.- pueden competir en sectores de demanda insatisfecha con grandes ventajas
  - 7.- generalmente presta mejores servicios
  - 8.- potencializa el talento empresarial
  - 9.- Absorbe la fuerza de trabajo que no tuvo cabida en las empresas del sector formal.
- El error de esta definición, es tomar el tamaño de la empresa como condicionante de los nueve puntos mencionados por los autores, cuando estos dependen principalmente del tipo de administración.

Carpintero (1998) las define como pequeñas unidades de producción comercio o prestación de servicios, en las que se pueden distinguir elementos de capital, trabajo y tecnología, aunque todo ello este marcado por un carácter precario. La deficiencia en esta definición radica en la no inclusión de las llamadas estrategias de sobrevivencia, olvidando que la mayoría de las micro en el mundo, surgen en el ámbito de la informalidad, consecuentemente, como una estrategia de subsistencia. Si realizamos una actividad económica individual incidentalmente y no contamos con un mínimo de capital, trabajo, y tecnología que pueda distinguirse, no podemos decir que conformamos una Micro empresa, ya que los elementos esenciales para que exista una empresa, son precisamente el capital, el trabajo y la tecnología. Max-Neff (1993) usa el término micro organización para referirse a la microempresa y entiende a estas como entidades que se encuentran subordinadas al núcleo capitalista moderno y que las estructuras con que operan estas, generan diferencias de productividad y de ingresos que tornan poco atractivos los trabajos ejercidos en esos segmentos no institucionalizados, salvo para grupos de baja calificación y para personas con mayor dificultad para acceder al mercado formal. Lo anterior nos lleva a pensar que no existen dos empresas exactamente iguales, precisamente por la heterogeneidad que subyace en este tipo de empresas.

De acuerdo al Banco interamericano de Desarrollo (BID) las microempresas son negocios de pequeña escala en los cuales se destacan los siguientes aspectos y que los distinguen del resto de la economía:

- 1.- tienen menos de diez empleados
- 2.- no existe en muchos casos separación entre el presupuesto familiar y el de la microempresa.
- 3.- cuenta principalmente con empleados no asalariados y relacionados con la familia
- 4.- alto porcentaje de mujeres propietarias del negocio
- 5.- activos menores de 30,000
- 6.- escaso conocimiento de gestión
- 7.- limitado acceso al sector financiero formal
- 8.- falta de registro legal
- 9.- bajo nivel de tecnología

Asevera que una microempresa cuenta con empleados no asalariados y relacionados con las familias, resulta un error conceptual ya que si alguien efectúa un trabajo y no percibe un salario no puede llamarse empleado; por otro lado, existen empresas pequeñas y medianas que son consideradas familiares, luego entonces esta característica no es exclusiva de las microempresas (Tunal, 2003). La percepción internacional acerca de la pequeña empresa se ha modificado desde los ochenta Como consecuencia de los grandes problemas de inestabilidad económica, recesión y desempleo. En este contexto, la gran empresa experimento problemas para mantener sus economías de escala, canalizando procesos a pequeñas empresas bajo esquemas de subcontratación (Mungaray, 1997) con el objetivo de aprovechar su eficiencia colectiva, su potencial de innovación, su flexibilidad productiva y la capacidad de explotar redes o encadenamientos (Pratten, 1991).

Los cambios tecnológicos a favor de la pequeña escala se han hecho evidentes al observar tendencias recientes de la estructura empresarial y del empleo en países como Estado Unidos que muestran incremento de la participación de las empresas pequeñas (Acs y Audretsch, 1989). Otro hecho importante ha sido el desplazamiento de personal altamente calificado de empresas grandes que han emprendido negocios tecnológicos de escala reducida y se constituyen como agentes de cambio en la economía debido a sus actividades e innovación (Acs; 1992; Carree Y Thurik, 1998). En México, el sector empresarial se divide en cuatro grandes grupos con base en el número de empleados y sector de actividad económica donde operan según la clasificación oficial. Estos grupos se conforman en micros, pequeñas, medianas y grandes empresas. (Mungaray, 2007). Aun cuando su contribución productiva en términos de valor agregado es limitada. Las cifras de su participación en establecimientos, empleo y autoempleo en América Latina y en los países en desarrollo, ubican a este segmento empresarial como verdaderas opciones de desarrollo basadas en el mercado, para millones de familias que se encuentran en la línea de la pobreza. Carlson (1999), Bianchi (1999), Acs (1992), Harper (1984) y Yamamoto (1959) destacan que la emergencia competitiva de estas empresas puede mitigar los efectos de los ciclos económicos, favorecer una mejor distribución del ingreso y generar mejores condiciones de crecimiento y desarrollo. Estas posibilidades han llevado a organismos internacionales de desarrollo a incluir el fomento y apoyo a las microempresas como parte de un planteamiento estratégico sobre el papel que las fuerzas empresariales pueden tener en la búsqueda del crecimiento con equidad, si se convierten en entidades innovadoras vinculadas a la economía moderna (CEPAL, 1992).

## **METODOLOGIA**

Se propuso una investigación cuantitativa, con un diseño no experimental de tipo descriptiva; La recolección y análisis de información, se realizó a través de la aplicación del cuestionario dirigido a los potenciales micro empresarios; revisión de la literatura, datos y estadísticas proporcionados por las dependencias de gobierno, otros investigadores y organismos que estudien

el tema. Al inicio de la investigación se propuso una investigación cuantitativa, con un diseño no experimental de tipo descriptiva; se utilizó un instrumento de medición de la Encuesta Nacional de Micro negocios ENAMIN 2010, al cual se le sumaron algunas preguntas en el área de la comunicación. La recolección y análisis de información, se realizaron a través de la aplicación del cuestionario dirigido a los potenciales micro empresarios; revisión de la literatura, datos y estadísticas proporcionados por las dependencias de gobierno, otros investigadores y organismos que estudian el fenómeno.

Así mismo se planearon entrevistas con organismos de la Iniciativa Privada y con un grupo de potenciales microempresarios de los mercados informales del estudio. La presente investigación se desarrolló en Ciudad Juárez Chihuahua, México; como estrategia del estudio, se utilizó la zona suroriente de la Ciudad, que es la zona que alberga el mayor número de mercados informales, al mismo tiempo se definieron como puntos específicos los cinco mercados de mayor afluencia de vendedores y compradores. Se realizaron reuniones con los colaboradores del proyectos, becarios y encuestadores con la finalidad de elaborar una estrategia de rastreo de vendedores con características de microempresarios; características que fueron explicadas al equipo de rastreo para que tuvieran una definición exacta del objetivo a buscar. Una vez localizados se procedió a la capacitación del equipo de encuestadores, con los cuales se elaboró un cronograma de actividades de trabajo para las seis semanas de aplicación del instrumento de medición. El instrumento de medición tomó como muestra la encuesta aplicada por el ENAMIN 2010. De las variables encontradas en dicha encuesta se tomaron las de mayor importancia para el estudio; así mismo, se le incluyeron algunas preguntas sobre comunicación, con el afán de conocer que formas de comunicación utilizan para informarse, que medios de comunicación masiva son los más utilizados y a través de cuál de ellos prefieren que el gobierno les informe sobre las políticas públicas de atención a su problemática. Además se incluyeron variables para conocer los tipos de negocios, edades, género, antigüedad, capacitación, atención, entre otras. El estudio arrojó información que permite realizar análisis con mayor profundidad sobre el fenómeno de estudio; con la información recabada se podrán hacer cruces de variables que podrán enriquecer posteriores estudios en el área de micro negocios, sobre todo en el área de capacitación, comunicación y atención al sub sector.

Por otro lado se organizaron entrevistas con las organizaciones de la Iniciativa Privada, como la Cámara Nacional de Comercio (CANACO), la Cámara Nacional de la Industria de la Transformación (CANACINTRA). De las cuales, la única que aportó información, fue la CANACINTRA, a través de su Directora la Licenciada, Viridiana Vázquez. El estudio se limitó a la aplicación del instrumento de medición a los vendedores con potencial de desarrollo, en el área de alimentos y artesanías, encontrados en los cinco mercados utilizados como para el estudio, sin embargo existen más de setenta mercados localizados dentro de los límites de la ciudad. Por otra parte, la información proporcionada por los entrevistados fue muy limitada, no aceptaron hablar de ganancias en su negocio y algunos no contestaron sobre el origen de sus proveedores. Otra de las limitantes importantes, es lo difícil de la localización de los líderes de los mercados, debido a la situación de inseguridad, se esconden dentro de los mercados y por lo regular atienden diferentes personas, pocas veces fueron atendidos los encuestadores por los líderes. El cobro de cuotas que aún persiste en este tipo de mercados por parte de grupos delincuenciales, la presión ejercida por la autoridad federal que en ocasiones realizan operativos en contra de vendedores de mercancía de piratería e ilícita, inhibe la participación de los vendedores

## RESULTADOS

En primer lugar, la falta de personal designado a las labores de inspección y localización de vendedores informales señalan los responsables de la Dirección de Comercio que es la principal causa o motivo por el cual esta dependencia carece de alguna información relacionada con el subsector. Por otra parte, el número de informales se multiplica cada día, la falta de oportunidades en el sector formal de la economía se ha convertido en factor multiplicador de la informalidad; aunque las estadísticas del INEGI señalan que se han recuperado empleos en el Estado, la realidad nos indica que de más de sesenta mil empleos perdidos del 2007 al 2010 solo se han recuperado alrededor del cincuenta por ciento. Comercio Municipal indica que existen 8,632 vendedores ambulantes en la ciudad, de los cuales, 6,936 vendedores se encuentran en los 85 mercados informales localizados en la ciudad. En este caso, se otorgaron 1,672 nuevos permisos (Diario de Juárez, 2013). De acuerdo a los resultados arrojados por el instrumento de medición, los comercios informales no tienen un porcentaje real de desarrollo; los datos indican que aunque en algunos mercados informales se lograron localizar microempresarios con algún potencial de desarrollo, en general, los mercados informales no poseen actividades con posibilidades de crecimiento o desarrollo; la mayoría de los vendedores, únicamente ofrecen objetos de mediano uso: ropa, calzado, herramienta, utensilios para el hogar, bisutería, la mayoría de ellos procedente de la fayuca.

La Dirección de Comercio Municipal en Ciudad Juárez, caracteriza a los comerciantes informales, como personas que buscan el sustento diario ofreciendo un producto o servicios personales tratando de hacerlo de una forma legal; como lo señala Ramos (2006), quien caracteriza a la economía informal como: los individuos que buscan obtener un ingreso por vías legales y distintas al desempeño de una actividad económica y que caben en lo que se conoce como estrategias de supervivencia. Todos los establecimientos que no cumplen con permisos para laborar, los establecimientos que ofrecen alimentos elaborados en el hogar, o en el mismo lugar donde son ofrecidos al público, todo el establecimiento que no cuente con el título de propiedad que comprenda el área de venta, así mismo, todos los vendedores ambulantes a pie y de casa en casa. Los comerciantes que ofrezcan sus productos o servicios en su propio vehículo, y que el mismo no sea el apropiado para tal efecto. Aunque algunas de las características son propias de las características propuestas por los organismos internacionales, la Dirección de Comercio no cuenta con una estructura o un diagrama fundamentado en las características utilizadas por organismos nacionales o internacionales. De acuerdo a los resultados obtenidos en la investigación, se determina:

El comercio informal en Ciudad Juárez Chihuahua se encuentra en los parámetros de una clasificación con un enfoque Institucional-legal, debido a que los comerciantes informales son personas que consideran, que la formalidad como la informalidad traen consigo una excesiva carga normativa y que los costos de permanencia en la formalidad son demasiado altos en tiempo y costos; así también, poseen características del comercio informal de subsistencia, porque son sujetos con bajos recursos, sin acceso al crédito, que encuentran en la economía informal, por el momento, su única alternativa de empleo. Por otro lado, aunque el comercio informal presenta características similares a las propuestas por organismos internacionales, es importante remarcar que los comerciantes informales se encuentran en un nivel educativo de secundaria, y un considerable porcentaje de estos, tiene estudios de nivel preparatoria; debido a lo anterior, el autor del estudio disiente de Freije (2000) quien señala “los trabajadores que tienen mayores probabilidades de ingresar al sector informal son aquellos con menos experiencia y educación. El comercio informal, es un trabajo precario; son trabajadores independientes que comercian con productos básicos como los alimentos o prestan algún servicio personal en el hogar.

Tienen a familiares trabajando en el establecimiento, sin un salario o compensación, además de carecer de servicio médico. Los resultados del instrumento aplicado en los cinco mercados considerados de mayor afluencia de vendedores y público, arrojaron un número mínimo de posibles vendedores con potencial real de desarrollo. Entre estos, la mayoría vende alimentos que de acuerdo a los datos proporcionados por los mismos vendedores, su producción se ve limitada por la falta de créditos, equipo, publicidad y capacitación en el área de producción y administración. De entre los cinco mercados más populares, se encontraron solo cincuenta y cuatro posibles microempresarios.

El Gobierno Municipal, por un lado, señala que apoya a los comerciantes informales otorgando los permisos de venta a precios que están al alcance de los vendedores, así mismo los permisos para las personas de la tercera edad, se les otorga gratis el primer año. Por otro lado, El Municipio de Juárez, cuenta con los Centros Comunitarios, donde se le brinda capacitación en el área de la salud y elaboración para los comerciantes que trabajan con alimentos. El Gobierno del Estado, en conjunto con el Gobierno federal, a través de la Secretaria del Trabajo y Previsión Social, así como de la Secretaria de Comercio, están implementando programas de financiamiento y apoyo para los micro, pequeños y medianos empresarios, programas que ofrecen capacitación, equipamiento y microcréditos; sin embargo, según datos aportados por los microempresarios, la información sobre estos apoyos no está debidamente canalizada, ya que según su opinión, la mayoría de ellos no conocen sobre dichos apoyos. Por parte de las organizaciones de comerciantes como la Cámara Nacional de comercio en Ciudad Juárez, ofrece la información y apoyos, únicamente a sus agremiados, quienes no estén inscritos dentro de la CANACO, no reciben la información sobre convocatorias y apoyos gubernamentales para las microempresas.

## CONCLUSIONES

- 1.- La falta de personal por parte de la Dirección de Comercio Municipal, disminuye la posibilidad de atención al fenómeno de la informalidad; el número de inspectores de comercio que dedica la dependencia no es suficiente para atender las necesidades del subsector informal.
- 2.- Aunque existen programas de apoyo diseñados específicamente para la atención a los micro empresarios por parte de los tres niveles de gobierno, los resultados del estudio indican que existe un problema grave de comunicación entre gobierno e informales; esta falta de comunicación inhibe el que los micro empresarios sean beneficiados con apoyos gubernamentales, ya que la información únicamente llega a los agremiados a los organismos de comerciantes, como el caso de la Cámara Nacional de Comercio.
- 3.- Sin embargo, se reconoce que el número de micro empresarios encontrados en los cinco principales mercados informales del sur oriente de la ciudad, es muy limitado; los productos que ofrecen estos micro empresarios con posibilidades de desarrollo, son en su gran mayoría, de alimentos y objetos ornamentales. Los cuales solicitan el apoyo en capacitación y apoyos económicos para la adquisición de equipo que permita el desarrollo de su empresa.

# POLÍTICAS DE APOYO A LA INVERSIÓN DIRECTA AL EXTERIOR DE EMPRESAS MEXICANAS

Jorge L. Alcaraz Vargas, Instituto Tecnológico de Monterrey Campus Puebla

## RESUMEN

*El interés mostrado sobre la emisión de inversión directa al exterior de países en desarrollo ha sido muy poco, incluso cuando el envío de capitales de estos países ha incrementado durante la última década. En este sentido, no es sorprendente que la atención en el desarrollo de políticas dirigidas a promover e impulsar la emisión de este tipo de inversión en estos países ha sido escasa. La idea principal detrás del desarrollo de políticas en apoyo a la internacionalización de la empresa nacional a través de IED son los potenciales beneficios para la economía local. En otras palabras, la internacionalización de la empresa local contribuirá en la generación de mejores condiciones para competir con otras empresas tanto a nivel nacional como a nivel internacional. Además, esta internacionalización de la empresa local generará beneficios para la economía local; algunos de estos beneficios podrían ser el incremento en la renta nacional, transformación industrial, incremento de exportaciones, mejores condiciones laborales, entre otros. Esta investigación exploratoria considera la identificación, descripción y análisis de lo que ha sucedido en México en términos de políticas nacionales que promueven y apoyan la inversión directa al exterior de la empresa doméstica, encontrando con ello una escasez de información tanto a nivel gubernamental como académico, advirtiendo las implicaciones que estas carencias traen consigo.*

**PALABRAS CLAVE:** México, Inversión Extranjera Directa, Países en Desarrollo, Investigación Exploratoria

## POLICIES SUPPORTING MEXICAN ENTERPRISES DIRECT INVESTMENT ABROAD

### ABSTRACT

*The interest shown on outward foreign direct investment from developing countries has not been so relevant, not even when issuance of capitals from these countries have increased during the last decade. In this regard, is not surprising that attention in the development of policies addressed to promote and boost this kind of investments from these countries have been scarce. The main idea about the policies supporting home enterprise internationalization through FDI are the potential benefits on home countries. In other words, domestic enterprise internationalization will contribute with the development of better conditions to compete with other enterprises in both national and international level. Besides, this internationalization from home enterprises will create benefits for the local economy; some of these benefits could be the increase of national income, industrial transformation, exports increase, better labor conditions, among others. This exploratory research considers the identification, analysis and description of domestic policies in Mexico supporting home direct investment abroad, finding with it a lack of information at governmental and academic level and, pointing out what these lacks implies.*

**KEY WORDS:** Mexico, Foreign Direct Investment, Developing Countries, Exploratory Research.

## INTRODUCCIÓN

La emisión de Inversión Extranjera Directa (IED), durante décadas anteriores, ha recibido menos atención que la recepción de IED. Este comportamiento es aún más marcado en países en desarrollo, incluso cuando la inversión de estos países hacia el extranjero ha aumentado durante la última década. En este sentido, no es de sorprender que las políticas dirigidas a la promoción de emisión de IED en países en desarrollo han sido escasas. Una de las principales razones para que los gobiernos desarrollen políticas en apoyo a la inversión directa al exterior de empresas domésticas, son los beneficios potenciales en la economía local. Además, la expansión al exterior contribuirá en la generación de mejores condiciones empresariales para competir con otras empresas tanto a nivel nacional como internacional.

Estos beneficios potenciales y la carencia de atención en las políticas de apoyo para la expansión de las empresas locales a mercados externos, en el caso de países en desarrollo y particularmente en México, constituyen las motivaciones principales para realizar esta investigación exploratoria. La cual considera la identificación, descripción y análisis de lo que ha sucedido en México en términos de medidas políticas que promueven y apoyan la internacionalización de la empresa doméstica a través de IED. En el resto del documento se revisa literatura teórica y empírica relaciona con las medidas en cuestión. La sección II trata sobre la descripción de las políticas gubernamentales en México en apoyo a la inversión directa al exterior de la empresa doméstica. La sección III constituye el análisis e implicaciones para México. Las conclusiones será posible encontrarlas en la parte final del documento.

## REVISIÓN DE LITERATURA

Durante las últimas décadas, el comportamiento general acerca de las tendencias de internacionalización ha sido la continua expansión empresarial a países extranjeros. Esto sucede a nivel mundial y por supuesto incluyendo la creciente participación de empresas de países en desarrollo (Rasiah, Gammeltoft, & Jiang, 2010), (UNCTAD, 2011). Existen diferentes razones para la internacionalización de las empresas. Sin embargo, la decisión para expandirse al exterior también puede estar influenciada por instituciones. En este sentido, reglas políticas legales y sociales también son factores importantes (Peng, Wang, & Jiang, 2008). Empresas de países en desarrollo enfrentan carencias que les impiden la inserción en mercados extranjeros (Wang, Hong, Kafouros, & Wright, 2012) y la participación gubernamental ayuda para superar la escasez de información, costos de transacción y limitaciones en recursos durante el proceso de internacionalización (Khanna, Palepu, & Sinha, 2005).

En otro contexto, evidencia empírica sugiere a la internacionalización como una fuente de competitividad (Dunning & Lundan, 2008). En este sentido, algunos de los principales beneficios de las empresas cuando ingresan a mercados extranjeros a través de IED, son la adquisición o incremento de competitividad por la expansión internacional, reducción de costos de producción, experiencia por participación global, entre otros. Además, puede tener efectos positivos en el país local: transformación industrial, aumento del valor agregado, incremento de exportaciones,

incremento de la renta nacional, mejores condiciones laborales, efectos en otras empresas locales, etc. (UNCTAD, 2006).

Sin embargo, hay una gran cantidad de países que no prestan atención al desarrollo de políticas para promover la expansión al exterior de empresas locales (UNCTAD, 2007). Incluso cuando desarrollos recientes han surgido por parte de economías en desarrollo en apoyo a las empresas locales (Luo, Qiuzhi, & Binjie, 2010), estos comportamientos permanecen. En el caso de México, existe una importante carencia de estas políticas, y en relación a desarrollos académicos, la situación no es distinta.

### Políticas de Apoyo a la Inversión Directa en el Exterior

De acuerdo a UNCTAD, las medidas de apoyo para la expansión de las empresas al exterior, son instrumentos políticos, empleados por las empresas domésticas que eligen invertir en otros países, diseñados estos instrumentos para impulsar los flujos de IED hacia otros países (UNCTAD, 2001). Hasta ahora, no hay una clasificación estandarizada de estas medidas, de hecho, está continuamente cambiando (por ejemplo: UNCTAD (1995) y UNCTAD (2001)). Sin embargo, para el propósito de esta investigación, los instrumentos políticos en apoyo a la inversión directa al exterior se han dividido en cuatro grupos: medidas financieras, incentivos fiscales, seguro para inversión y asistencia técnica e información. En México, la institución gubernamental a cargo de fortalecer la participación de México en la economía internacional es ProMéxico. Uno de sus propósitos es promover y apoyar las exportaciones y la internacionalización de las empresas mexicanas (SEGOB, 2007). La misión de ProMéxico es “promover la atracción de inversión extranjera directa y las exportaciones de productos y servicios, así como la internacionalización de las empresas mexicanas...”

En el caso de los Lineamientos para la Operación de los Servicios y Apoyos ProMéxico 2012 (ProMéxico, 2012), en los objetivos específicos está considerada la internacionalización de empresas mexicanas, y en la sección de “Definiciones” el concepto de inversionista mexicano lo define como “la empresa mexicana interesada en internacionalizarse mediante inversiones en el extranjero”. Más aún, en ProMéxico existe un área especial denominada Coordinación de Procesos para la Internacionalización de la Empresa, y su objetivo es contribuir al incremento, expansión, avance, sustentabilidad y consolidación de las actividades de las empresas mexicanas en el exterior (ProMéxico, 2012). Sin embargo, la mencionada área depende de la Unidad de Promoción de Exportaciones.

Un último documento que sugiere el apoyo de las empresas locales en su expansión al exterior son los Estatutos Orgánicos de ProMéxico, los cuales tienen varios artículos (punto 3.2.2; artículo 5.II, 6.II, 12.VII, 14.III, 14.V, 15. I, 15.II, 15.IV, 15.V, 16.I, 16.III, 17.I, 17.II, 18.X, 20.II, 21.V, 25.VI) que manifiestan la promoción y apoyo para la internacionalización de la empresa mexicana (SEGOB, 2011). No obstante que la información anterior sugiere la existencia de políticas de apoyo para la inversión directa al exterior de empresas mexicanas, únicamente se ha ubicado una medida considerada técnica y estrictamente como política de apoyo en ProMéxico. Esta medida es llamada “*bolsa de viaje*” la cual es un reembolso financiero para viajes de negocios (ProMéxico, 2013).

De manera general, esta es la información disponible sobre las políticas de apoyo para la internacionalización a través de IED que ProMéxico provee. Sin embargo, ha sido identificado un documento que señala que instrumentos utilizados por ProMéxico para la promoción de exportaciones, son también utilizados por empresas mexicanas que buscan establecer sus actividades productivas en el extranjero (CEPAL, 2012). Este documento también menciona que la expansión de empresas mexicanas al exterior, hasta ahora, lo han realizado con ausencia de políticas específicas de apoyo, sin embargo, algunas iniciativas han comenzado a aparecer.

Otras política de apoyo consideradas en la clasificación antes mencionada, son aquellas relacionadas con aspectos fiscales. En México, una medida que pertenece a esta categoría son los Acuerdos para Evitar la Doble Tributación. En total, México tiene firmados acuerdos de este tipo con 45 países, aplicados en dividendos, intereses y regalías (SAT, 2013). De acuerdo a lo anterior y comparado con la clasificación de las políticas de apoyo a la internacionalización de las empresas, técnicamente México solo está ofreciendo una medida financiera (reembolso para viajes de negocios), y está cubriendo parcialmente los incentivos fiscales con los Acuerdos para Evitar la Doble Tributación.

### Análisis E Implicaciones

La información disponible hasta el momento revisada, permite observar que México tiene algunas medidas que se están utilizando para impulsar la expansión de empresas mexicanas en términos de inversión directa al exterior. No obstante la situación no refleja una política estrictamente desarrollada para este fin. Lo anterior es relevante, y también lo son las implicaciones que la carencia de estas políticas pueden tener para las empresas y la sociedad mexicana. De acuerdo con los beneficios teóricos generados por la internacionalización de las empresas, la falta de políticas orientadas a la expansión de la empresa doméstica al exterior, podría estar privando a empresas mexicanas de la adquisición de habilidades necesarias para competir en mercados extranjeros y también podría limitar la competitividad empresarial en el propio mercado local.

Esta situación es importante por sí misma, sin embargo, podría estar sucediendo algo más profundo haciendo referencia a empresas de Estados Unidos y España establecidas en México (de acuerdo con información disponible en UNCTAD, estos son los dos países más importantes con IED en México), ya que estos países sí cuentan con programas de apoyo dirigidos a la internacionalización de la empresa doméstica a través de IED. Y seguramente en México existen empresas que están siendo apoyadas por sus gobiernos, lo que significa una desigualdad de condiciones para empresas mexicanas en su propio país al contar con escaso acceso a herramientas que favorecen y promuevan el desarrollo de habilidades para competir con empresas extranjeras que estén siendo apoyadas por sus gobiernos en territorio mexicano.

También es importante tener en mente los posibles efectos positivos que empresas mexicanas con actividades en el exterior podrían tener en el país. Sin embargo, para realmente generar y obtener estos beneficios, el gobierno mexicano necesita crear los mecanismos a través de los cuales se puedan volver realidad. En este sentido, una manera de hacerlo sería a través de las políticas de apoyo, condicionando a las empresas beneficiadas a generar los potenciales efectos positivos. Otro punto importante a destacar es el siguiente. En términos generales, las grandes empresas mexicanas son las que están invirtiendo en mercados extranjeros (Basave & Gutiérrez-Haces, 2013). Relacionando esto con información teórica, estas empresas son las que están obteniendo mejores condiciones, competitividad y habilidades intrínsecas a las actividades de expansión a

otros países. Con este contexto, resulta aún más importante la intervención gubernamental para apoyar a Pequeñas y Medianas Empresas (Pymes) ofreciendo condiciones que promuevan su expansión al exterior, proporcionando con ello la oportunidad de mejorar sus habilidades internas y generando una situación un poco más equitativa.

Una situación más, basada en la premisa y la posibilidad de que algunos países no tienen institucionalizadas prácticas o programas en apoyo a la expansión de la empresa doméstica al exterior, lo cual podría ser el caso de México, y teniendo en mente el documento publicado por la CEPAL (2012), donde la única mención sobre este país y sus programas de apoyo a la internacionalización a través de IED está constituido únicamente por un par de párrafos, tiene implicaciones importantes. Una de estas implicaciones es el hecho de que el referido documento está mostrando a nivel internacional lo que actualmente está sucediendo en México. Por lo tanto, esta es otra razón relevante por la cual México debería regular sus políticas y programas para la promoción de inversión directa al exterior (si es el caso) y mostrar la preocupación y el interés que el país tiene en este tema relativamente nuevo y las repercusiones que tiene.

## CONCLUSIONES

Al parecer, el gobierno mexicano no cuenta con una política muy activa para promover y ofrecer mejores condiciones para empresarios domésticos al buscar la expansión al exterior a través de IED. De acuerdo con la clasificación general de las políticas de apoyo para la internacionalización de las empresas al exterior (incentivos financieros, incentivos fiscales, seguro de inversión y asistencia técnica y de información) y en línea con información revisada, México está aún muy lejos de cumplir con estos criterios. Algunas razones para desarrollar programas gubernamentales en favor de la expansión de la empresa doméstica a través de IED son los potenciales beneficios positivos que podría traer al país.

La carencia de este tipo de programas está limitando la competencia de empresas mexicanas no solo en mercados extranjeros, sino también en el propio país. Pero además, en cierto modo, se ha estado restringiendo a las empresas en relación a los beneficios potenciales que podrían tener, derivado de la internacionalización de empresas locales a través de IED. Con lo anterior en mente, en México, es notable la necesidad de desarrollar e institucionalizar un marco político relacionado con medidas en apoyo para la expansión de la empresa doméstica al exterior. En el mediano y largo plazo, este tipo de apoyo para las empresas podría significar una fuente que les provea de mejores condiciones para competir a nivel local y global, haciendo un ambiente empresarial más equitativo. Sin embargo, los políticos en el desarrollo de este “nuevo marco”, deben tener cuidado y asegurarse de que los beneficios potenciales de los programas de apoyo en cuestión, no solo van a tener un beneficio real para las empresas apoyadas, sino también tendrán impactos positivos para otras empresas nacionales así como para la sociedad en general.

Blanca Hortencia Morales Vázquez, Benemérita Universidad Autónoma de Puebla

## RESUMEN

*La propuesta de norma oficial mexicana (PROY-NOM-163) publicada el 12 de Julio de 2012 representa la primera regulación importante para el ahorro de combustible y las emisiones de CO<sub>2</sub> en toda Latinoamérica, constituye la primera medida trascendental de México para intentar mitigar las emisiones que generan el cambio climático para frenar el crecimiento en el consumo de petróleo de la nación, pretende definir de manera obligatoria los objetivos de emisiones CO<sub>2</sub> para vehículos nuevos de automóviles ligeros de pasajeros en el 2014 al 2016. Actualmente la propuesta está siendo evaluada por la Comisión Federal de Reforma Regulatoria –COFEMER-. En el presente trabajo se realiza un análisis multidisciplinario que evalúa tres distintos rubros: un análisis de esta propuesta normativa comparada con la robustez técnica de la CAFE (2012) de los Estados Unidos; una valoración de la propuesta de ley mediante un análisis cualitativo a partir de la percepción de los consumidores finales y su posible repercusión en los autofabricantes de la industria automotriz mexicana y finalmente un contraste con opiniones obtenidas de especialistas en la materia mediante entrevistas de carácter formal. Los resultados mostraron que la propuesta de Norma Oficial 163 no responde de manera holística a la demanda de la sociedad, ni tampoco contempla la economía del mexicano promedio, resultando ser una copia a medias de una estructura exitosa y robusta implementada en Estados Unidos. La evidencia muestra que no existen incentivos financieros a las empresas automotrices establecidas en México, mientras que el desarrollo de automóviles con tecnología de vanguardia describe una relación cuadrática originando un incremento colateral en el costo final del automóvil de poco más de 35 mil pesos.*

## MULTIDISCIPLINARY ANALYSIS OF PROY-NOM-163- SEMARNAT-ENER-SCFI-2012

### ABSTRACT

*The proposed Official Mexican Norm (NOM-163) issued on July 12, 2012 represents the first major regulation for fuel economy and CO<sub>2</sub> emissions in Latin America. It is the first transcendental measure of Mexico to try to mitigate the emissions that generate climate change and to slow the growth of oil consumption in the nation. This Norm defines a mandatory CO<sub>2</sub> emission targets for new light passenger vehicles starting from 2014 to 2016, currently, the*

*proposal is being evaluated by the Comisión Federal de Reforma Regulatoria-COFEMER. In this paper a multidisciplinary analysis evaluates this proposal with three different approaches: an analysis of this proposed legislation compared to technical robustness of U.S. CAFE (2012); a review of this proposal by a qualitative analysis based on the perception of final consumers and possible automakers' impacts on the Mexican automotive industry and finally a contrast with opinions obtained from experts in the field using formal interviews. Results showed that the proposed Legislation (NOM 163) does not holistically respond to the demand of Mexican society nor contemplates the average Mexican economy, resulting in an partial copy of a successful and robust structure implemented in the United States. The evidence shows that there is no financial incentives to automotive companies established in Mexico, while the development of vehicles with advanced technology describes a quadratic relationship causing a collateral increase in the final cost of the car just over 35 thousand dollars.*

## INTRODUCCIÓN

La industria automotriz a nivel mundial está comprometida a contribuir en un enfoque integrado para reducir las emisiones de carbono, principal causa del efecto de invernadero. Los fabricantes de autos están constantemente desarrollando motores más eficientes y trenes de transmisión para reducir el consumo de combustible, y es así como un amplio rango de tecnología sofisticada al control de emisiones colocan autos más limpios y verdes en todos lados. En muchos países, los autos son sometidos a procedimientos rigurosos estandarizados para evaluar su consumo de combustible. Estas mediciones generalmente son realizadas en pruebas con autos en marcha sobre un dinamómetro de chasis, sin embargo, muchos de los procedimientos incluyen ciclos de prueba, mismos que simulan un rango variado de condiciones de manejo (Dieselnet, 2012). Por su parte naciones como los Estados Unidos de Norte América, Europa y Japón han creado sus propios organismos y procedimientos de prueba para determinar el consumo de gasolina y la emisión de gases causantes del efecto invernadero (GEI) para automóviles nuevos. Estas pruebas de consumo de combustible difieren de región a región puesto que las condiciones de manejo también difieren por región donde diferentes factores afectan el consumo de combustible, en estos se incluyen patrones de manejo en ciudad, carretera, temperaturas de ambiente, uso de aire acondicionado, gadgets y demás. (Dieselnet, 2012). En la mayoría de los países los gobiernos confían en la información publicada por los fabricantes de automóviles acerca de la economía de combustible. El Foro Mundial para la Armonización de los Reglamentos sobre Vehículos de la Comisión Económica para Europa (UN/ECE/WP29) ha venido trabajando en un procedimiento unificado para ser adoptado a nivel mundial, sin embargo aún faltaran años para hacer esto una realidad.

### Estado del Arte

La Unión Europea (UE) fue la primera en introducir estándares de CO<sub>2</sub> para vehículos de pasajeros en 2009 (ICCT, 2010). La regulación en 2009 fijaba una meta de 130 g CO<sub>2</sub>/Km a alcanzar en 2015 para la flota promedio de todos los fabricantes combinados. (REPC, 23/Abril/2009). La regulación de CO<sub>2</sub> existente en Europa ha guiado a obtener resultados impresionantes: el promedio de niveles de emisión de CO<sub>2</sub> disminuyó de 160 g CO<sub>2</sub>/Km en 2006 a 136 g CO<sub>2</sub>/Km en 2011 (EPRR, 20/06/2012) medidas de Nuevo Ciclo de Conducción Europeo

-NDEC-, por sus siglas en inglés, (ICCT, 2010). La meta propuesta para 2020 es una reducción a 95 g CO<sub>2</sub>/Km. (European Commission, 2012). Una comparación con el estándar de emisiones de CO<sub>2</sub> propuesta por la unión europea con regulaciones similares alrededor del mundo – previamente unificadas en NEDC - muestra que Estados Unidos de Norteamérica obligará a los vehículos de pasajeros a emitir un máximo de 93 g CO<sub>2</sub>/Km para 2025 (ICCT, 2010), Japón 105 g CO<sub>2</sub>/Km para 2020 y China 117 g CO<sub>2</sub>/Km para 2020. (POLICY UPDATE, 12/07/2012).

De acuerdo a la Organización Mundial de Productores Automotores (OICA, por sus siglas en inglés) a finales de 2011, México supera a España para colocarse en octavo lugar del ranking mundial de fabricantes de vehículos automotores, año en que México fabricó 2 millones 680,037 autos. Producción de la cual 1,657,080 fueron automóviles y 1,022,957 vehículos comerciales, lo que representa un incremento del 14.4% con respecto al 2010. De esta cantidad total de producción, 2 millones 130,143 unidades se destinaron a exportación (AMIA, 2012), y según cifras del Instituto Nacional de Ecología (2012), México contribuye con el 1.6 por ciento de las emisiones globales totales de gases de efecto invernadero, siendo el sector autotransporte una de las principales fuentes emisoras, contribuyendo con el 20.4% del total de las emisiones del país.

Es así como surge la inminente necesidad de crear una propuesta de ley de carácter obligatoria para el control de emisiones de CO<sub>2</sub>. La propuesta de Norma Oficial Mexicana -NOM-163-SEMARNAT-ENER-SCFI-2012 establece los parámetros y la metodología para el cálculo de los promedios corporativos meta y observado de las emisiones de bióxido de carbono expresados en gramos de bióxido de carbono por kilómetro (g CO<sub>2</sub>/km) y su equivalencia en términos de rendimiento de combustible, expresado en kilómetros por litro (km/l), con base en los vehículos automotores ligeros nuevos, con peso bruto vehicular que no exceda los 3 857 kilogramos - con excepción de corporativos que comercialicen en total hasta 500 unidades por año modelo- que utilizan gasolina o diesel como combustible y cuyo año modelo sea 2014 y hasta 2016 que se comercialicen en México, misma que será de observancia obligatoria para los que comercializan vehículos automotores ligeros nuevos, cuyo peso bruto vehicular no exceda los 3 857 kilogramos (DOF, 12/07/2012).

Esta propuesta de regulación se encuentra incluida en varios instrumentos de política pública nacional; como el Plan Nacional de Desarrollo 2007-2012, la Ley General de Cambio Climático, meta 24 del Objetivo 2.2.1, el Programa Nacional para el Aprovechamiento Sustentable de la Energía 2009-2012 y dentro de los principales objetivos están el incrementar el rendimiento del parque vehicular para autos nuevos de 2014 a 2016 a una meta corporativa ponderada de 14.9 km/L, es decir un promedio de 2.6% de mejora por año (ICCT, 2010), así como la reducción directa de las emisiones de gases invernadero y algunos de sus beneficios colaterales son la mejora de la calidad del aire y la reducción de los impactos negativos en la salud de la población.

De acuerdo a cifras presentadas por el gobierno, esta norma permitirá que México reduzca 70 mil millones de litros en el consumo de combustible, 170 millones de toneladas de CO<sub>2</sub> y 4 mil 170 millones de pesos por beneficios en salud, por enfermedades y muertes en el periodo de 2013-2030. Es evidente que dicha meta se estableció para hacer coincidir la normatividad y el nivel de exigencia de la flota mexicana con la flota del resto de Norteamérica, puesto que el proyecto de NOM se basa en las ecuaciones contenidas en la regulación para vehículos ligeros nuevos años-modelo 2012-2016, desarrolladas por la Administración Nacional de Seguridad del Tráfico en Carreteras (NHTSA, por sus siglas en inglés) y la Agencia para la Protección Ambiental (EPA, por sus siglas en inglés) de Estados Unidos. A diferencia de los estándares europeos basados en flexibilidad de acuerdo al peso (ICCT, 2010), la principal flexibilidad de esta norma tiene que ver con la estructura de los estándares que se basan en la sombra del vehículo. Se prevé que los

paquetes tecnológicos para lograr el cumplimiento de los estándares no tengan costos elevados en los consumidores finales, recordando que México oferta numerosa gama de vehículos de distintos corporativos siendo los más importantes: Chrysler de México Chrysler (Dodge, Hyundai, Jeep) General Motors México –GMM- (Chevrolet, GM Daewoo, GMC, Opel) Fiat, Ford Motor Company de México, Honda, Mazda, Mitsubishi Motors de México, Nissan Mexicana, Peugeot, Renault, Subaru, Suzuki, Toyota, Volkswagen de México (SEAT, Volkswagen).

Con lo expuesto anteriormente este estudio se centrará en comparar la propuesta PROY-NOM-163-SEMARNAT-ENER-SCFI-2012 en México, contra la norma para el control de eficiencia de combustible en Estados Unidos de Norteamérica (CAFE), a través de un análisis multidisciplinario valorando la propuesta de ley mediante un análisis cualitativo a partir de la percepción de los consumidores finales y su posible repercusión en los autofabricantes de la industria automotriz mexicana.

## **METODOLOGÍA**

Mediante el desarrollo del presente trabajo de investigación se compara la propuesta PROY-NOM-163-SEMARNAT-ENER-SCFI-2012 en México contra la norma para el control de eficiencia de combustible en Estados Unidos de Norteamérica (CAFE) a través de un análisis multidisciplinario, así como valorar la propuesta de ley mediante un análisis cualitativo a partir de la percepción de los consumidores finales y su posible repercusión en los autofabricantes de la industria automotriz mexicana. Para realizar esta investigación se recopilaron de diferentes fuentes información como son: libros, manuales establecidos en las normas oficiales mexicanas y extranjeras, informes de entidades gubernamentales nacionales y extranjeros (norteamericanas), leyes aplicables en materia de reforma ambiental para el control de emisiones de CO<sub>2</sub> en vehículos de transporte ligero, periódicos nacionales, revistas especializadas, páginas web oficiales y otros medios de información electrónicos. Una vez recopilada la información necesaria sobre la propuesta PROY-NOM-163-SEMARNAT-ENER-SCFI-2012, procedimos a explorar y seleccionar dicha información, de tal forma que nos pudiera ofrecer directrices para la interpretación de indicadores en esta materia. Para el sondeo de las percepciones de los consumidores de autos se utilizó un enfoque mixto: en la parte cuantitativa de la investigación elegimos una muestra probabilística y de tipo estratificada. La muestra cuantitativa fue de 203 consumidores de autos, con modelos 2010-2013 elegidos por medio de una selección aleatoria. Los resultados se analizaron empleando el software SPSS (Statistical Product and Service Solutions) versión 20, con el objeto de encontrar relación entre la variables definidas para este estudio.

En la parte cualitativa se realizaron 8 entrevistas dirigidas y estructuradas a profesionistas con perfiles multidisciplinarios, los cuales están relacionados con el giro automotriz, desarrollo de tecnología, finanzas, economía, medio ambiente, servicio a clientes y desarrollo social, en su mayoría las entrevistas fueron realizadas a catedráticos altamente distinguidos que laboran actualmente en la Benemérita Universidad Autónoma de Puebla (BUAP), así como a gerentes de ventas de agencias automotrices como SEAT y Volkswagen de México. Los ejes centrales de estas entrevistas son: a) percepción de la industria automotriz en México b) capacidad de la economía mexicana para adquirir un auto nuevo c) opinión sobre la propuesta PROY-NOM-164-SEMARNAT-SCFI-2012 d) posible repercusión económica al usuario final e) facilidades a fabricantes automotrices para la adopción de la Ley f) situación actual del parque vehicular mexicano. Una vez seleccionada la muestra y terminada la exploración de la información, nos permitimos determinar nuestras variables dependientes e independientes. Esto se realizó mediante la lectura y análisis de los reportes anuales comprendidos en los años 2010 a 2012. Por tanto las

variables aplicables a nuestra investigación son: decisión de compra de un auto nuevo y grado de responsabilidad ambiental como variables dependientes; edad, precio de venta de los autos nuevos, seguridad del auto, rendimiento de combustible, tamaño y forma del auto y reputación de la marca del auto como variables independientes.

En el presente trabajo de investigación se analizaron los impactos benéficos y adversos que implica la oficialización de la propuesta PROY-NOM-164-SEMARNART-SCFI-2012 en México, haciendo un comparativo de diversos estudios realizados por organismos federales y extranjeros, los que se contrastan con opiniones obtenidas de especialistas en la materia mediante entrevistas de carácter formal. Además, se discute la propuesta mexicana de regulación de eficiencia ambiental analizando la normativa actual para control de gases efecto invernadero en Norteamérica (CAFE) identificando las bondades y deficiencias en materia legislativa mexicana. Finalmente, se evalúa la opinión pública realizando una encuesta electrónica a diversos grupos sociales, información que permite identificar praxis holísticas a los organismos federales mexicanos.

## RESULTADOS

### Comparación de CAFE Vs NOM 163.

El proyecto de norma de emisiones de CO<sub>2</sub> busca regular la emisión de gases de efecto invernadero de los vehículos automotores ligeros nuevos mediante su rendimiento de combustible promedio de 14.9 kilómetros por litro para el año 2016 utilizando una metodología de promedios corporativos ponderados observados (PCPO) basada en la norma americana de eficiencia de combustibles Corporate Average Fuel Economy (CAFE). Mientras tanto la norma CAFE de Estados Unidos establece una meta de rendimiento de 15 kilómetros por litro para 2016 y de 23 kilómetros por litro para el año 2030, la cual está siendo implementada en ese país, Canadá, Australia, China, Unión Europea, Corea del Sur y Japón.

Sin embargo en todos se establecen incentivos económicos para que los usuarios compren vehículos más eficientes, además de que consideran las diferencias orográficas, de altura, alternativas de combustibles disponibles y urbanas promedio. La propuesta de norma mexicana a diferencia de la americana no tiene mecanismos de cumplimiento como lo son créditos que pueden acordarse en él, sobre cumplimiento de la norma cinco años hacia adelante o tres años hacia atrás; la transferencia de créditos entre fabricantes (incluso de sus ahorros). Con esto, se observa la poca flexibilidad que existe en la Nom 163, incluso en comparación la norma es exigente para México, y que el impacto de su aplicación es tan alto en un automóvil nuevo que el usuario preferirá adquirir autos usados. Este impacto en términos económicos sería de entre 30 y 35 mil pesos en cada automóvil nuevo.

El proyecto de Norma 163 tiene resultados muy limitados en materia de mitigación de gases de efecto invernadero. La Asociación Mexicana de la Industria Automotriz (AMIA) calcula que las toneladas de CO<sub>2</sub> netas mitigadas con la regulación en los próximos 33 años sólo llega a 8.4 millones de toneladas, cantidad equivalente a las emisiones de CO<sub>2</sub> de los autos usados importados que han entrado a nuestro país en los últimos cuatro años, mientras que se calcula que las emisiones generadas por los vehículos usados importados al país representan 8 veces más que aquellas que se pretenden evitar con la aplicación del proyecto de Norma 163 en materia de mitigación de gases de efecto invernadero.

### Resultados de Encuestas

La edad promedio de la muestra es de 33 años, el 50% tiene menos de 31 años, el 48% son hombres y el 52% son mujeres, el 61% de los encuestados tiene automóvil; el 41% de estos tiene 1 automóvil, el 15% tiene dos automóviles, el 5% tiene 3 automóviles, 39% no tiene automóvil. En cuanto al grado académico, sólo el 2% de los encuestados tiene estudios de posgrado, 39% cuenta con licenciatura terminada y 25% tiene preparatoria terminada, 30% tiene nivel básico de estudios y 4% no tiene estudios.

El 38% de los encuestados ha escuchado hablar de PROY-NOM-163-SEMARNAT-ENER-SCFI-2012 y pero sólo el 23% la conoce. Respecto a la percepción que tiene la población sobre la PROY-NOM-163-SEMARNAT-ENER-SCFI-2012, el 25% considera que es una regulación estricta de emisión de CO<sub>2</sub> en el aire aunque necesaria. Por otro lado, el 73% considera que es una estafa más del gobierno para cobrar impuestos. Resalta el hecho que el 41% hace énfasis en la necesidad de regular la entrada de los autos chocolates sin embargo el 69% estaría dispuesto a comprar un auto usado americano en buen precio, pues el 86% opina que el transporte público es de mala calidad y el 94% de ellos prefiere ocupar su automóvil en vez del transporte público urbano.

En este orden de ideas se puede señalar que se debe primero trabajar en campañas efectivas de concientización en el cuidado al medio ambiente pues los resultados de este trabajo de investigación apuntan a que el 83% no recuerda una campaña relativa al tema de cuidado al medio ambiente y uso eficiente del automóvil, lo que significa que los esfuerzos realizados por parte de diferentes organismos gubernamentales y empresas privadas no han logrado crear una cultura de cuidado al medio ambiente. En este sentido es notable citar que el 72% señaló que no estaría dispuesto a pagar un promedio de 35,000 pesos más por cada automóvil nuevo aunque éste tenga un impacto favorable en el medio ambiente, salvo que existiera un esquema de descuentos o deducciones fiscales, es decir, sólo mediante la obtención de beneficios se podría influir en la decisión de compra de un automóvil que cumpla con las nuevas regulaciones de emisión de CO<sub>2</sub>. En contraste, el 89% afirmó sentirse mal al pensar sólo en su economía personal antes que en el cuidado del medio ambiente, empero el 97% de ellos cambiaría su respuesta de gozar con una economía saludable.

### Resultados de Entrevistas.

Los principales mercados automotrices están incrementando su eficiencia vehicular para depender menos del petróleo. Vemos que, por ejemplo, Europa para el año 2015 su meta será de 20.7 km/l, EUA 14.9 km/l en 2016, China 15.7 km/L, Japón 20.0 km/l y Canadá de 14.7 km/l. El resultado de las entrevistas conduce a tener opiniones contrarias, pues existen organismos internacionales como el consejo internacional sobre Transporte Limpio –ICCT- que son cartas fuertes sustentando la viabilidad a esta propuesta de proyecto de norma de la SEMARNAT. Mientras que algunos entrevistados concuerdan con los estudios, comentarios aprobaciones y estimaciones de la ICCT, algunos argumentan que no se está valorando por completo el panorama socioeconómico de México, concluyendo que hacer caso únicamente a un(os) organismo(s) de prestigio es cerrarse a ver la complejidad de la implementación de esta norma en México. Varios organismos como la AMIA y empresas como Toyota,

Chrysler y GM han presentado juicios de nulidad contra la NOM 163, la mayoría de los entrevistados concuerda que México sí se está rezagando en este tipo de reformas al existir bloqueos por parte de estos organismos privados, de no adoptar medidas urgentes como la creación de una norma de eficiencia energética para los autos nuevos, el escenario actual será

insostenible en pocos años acentúan. Sin embargo, también asienten que en otros países las reformas energéticas y de eficiencia vehicular han estado presentes desde ya más de una década, logrando cambios graduales impresionantes en la reducción de emisiones de CO<sub>2</sub>, resaltando así que México como país no está preparado para enfrentar estas Normas de eficiencia vehicular similares a las reformas más estrictas a nivel mundial, no al menos en un periodo relativamente corto como pretende la reforma destacan, pues coinciden no sólo es un simple paso más a la sostenibilidad en México, sino un salto cuántico en hábitos de compra de consumidores mexicanos de automóviles, de hábitos de conducción, de cambio de mentalidad y sobre todo de tecnología automotriz.

Las consecuencias recalcan y corroboran los especialistas, pueden ser más costosas y poco viables para el poder adquisitivo del mexicano promedio, ya que para cumplir con la norma de eficiencia mexicana, las armadoras estarían coaccionadas a introducir nuevas tecnologías en el motor, la transmisión, aerodinámica y reducción del peso vehicular para incrementar la eficiencia en el uso de combustible. Según los expertos entrevistados esta tecnología tendrá una repercusión final promediada de al menos 41 mil pesos en el precio final del auto, algo mayor lo estimado por la AMIA de 35 mil pesos.

De acuerdo a los 10 modelos actuales de mayor venta en el país durante el primer trimestre del 2012, cuatro son subcompactos (Aveo, Tsuru, Spark y March) y cuatro son compactos (Versa, Jetta Clásico, Tiida Sedán y Nuevo Jetta), analizan los expertos y concluyen que si bien estas ventas representan las preferencias del consumidor mexicano por vehículos más eficientes también reflejan el poder adquisitivo del mexicano promedio, mismo que refieren ser menor de un promedio de 180 mil pesos mexicanos por auto nuevo. En ese sentido, objetan que la norma de eficiencia ofrezca una garantía base a los compradores de automóviles nuevos respecto al gasto que realizarán en gasolina, en donde se estima que el ahorro en combustible a lo largo de la vida útil del vehículo sea de \$46,000 pesos, pues claramente mencionan que los automóviles de preferencia actual no poseen la carga tecnológica para lograr dicho objetivo. Añaden también que tampoco la calidad de combustible ofertada en México es la idónea, pues argumentan que está lejos de asimilarse a la ofertada por países desarrollados. El problema es la errada adopción de los altos precios de tecnologías automotrices de vanguardia así como copias de reformas energéticas de países desarrollados pero con políticas cortoplacistas, salarios y combustibles de países claramente tercermundistas. En contraste, todos los entrevistados están de acuerdo en que la Norma Oficial de eficiencia energética ayuda a reducir las emisiones contaminantes de los automóviles, lo cual resultará benéfico para la salud de la población, al tiempo que permite a los consumidores actuar realizando compras responsables y eficientes.

Los expertos se han pronunciado en contra de la importación irrestricta de autos usados procedentes de Estados Unidos, pues impugnan existir suficiente evidencia del grave impacto que está causando esta apertura comercial de automóviles en malas condiciones de operación, sin convertidor catalítico y con elevadas emisiones de gases contaminantes. Concurren que los mexicanos compraran vehículos en malas condiciones sin valorar la eficiencia, los costos de uso y mantenimiento, ni la vida útil del auto, pues deriva de la mala economía que se vive en el país, incluso debaten es un reflejo del mercado automotriz que se ha conformado en nuestro país, mismo parecer ajeno a los criterios de eficiencia vehicular, lo cual termina afectando a la industria automotriz en general subrayan.

El grupo de expertos entrevistado conviene que el sector automotor es consciente de que en ninguna parte del mundo existe una Norma Oficial para regular el consumo de combustible que integre a los automóviles usados y los nuevos, no obstante manifiestan que de ser aprobada la

propuesta de Norma de Eficiencia Energética para autos nuevos ayudará a generar una cultura de compra de vehículos con la cual los consumidores mexicanos valorarán progresivamente el alto costo que representa la ineficiencia. Es duramente vituperado el hecho que la Norma Oficial de eficiencia energética a pesar de definir una nueva estrategia para la reducción de emisión de CO2 utilizando una metodología vanguardia resulta ser una copia a medias de la CAFE actual vigente en EUA; en México únicamente se toma lo que les conviene subrayan los expertos contrastando a EUA, donde se incentiva a la industria automotriz para poder lograr las metas en el tiempo estipulado. Concurren que en México se olvidan del cómo lograrlo ya que no existen apoyos ni incentivos de ninguna índole a la industria automotriz para lograr entusiasmo en las empresas automotrices asentadas en territorio mexicano. Concuerdan no existir una idea clara de ganar-ganar ni para los mexicanos, ni las empresas transnacionales ni para el cuidado del medio ambiente.

Los expertos enuncian que es indispensable que en la norma se busque también una solución integral a la contaminación y al consumo de combustible de los autos usados de importación. Invitan a la SENER y a la SEMARNAT abrir diálogos con la AMIA para poder proponer y encontrar una solución integral a los vehículos nuevos y chatarra, conociendo perfectamente que no es posible impedir la importación de autos usados debido a acuerdos comerciales con estados unidos, los cuales reiteran deben de respetarse en todo momento, pero argumentan que se debe exigir más en términos de seguridad, consumo, emisiones contaminantes y cantidad de autos usados que ingresen por año al país. Finalmente retiran que las medidas de la NOM 163 deben de incorporar todas las características que permiten que actualmente la norma en Estados Unidos – CAFE- sea viable y exitosa, mas no sólo una parte que lejos de beneficios augura traer mayores repercusiones para los usuarios finales.

## CONCLUSIONES

La propuesta de NOM 163 es necesaria en México, pues evitará un rezago comparado con las tendencias de otros países hablando en términos de una reforma energética. Sin embargo, es necesario tomar en cuenta factores como la orografía del país, tipo de combustibles y el otorgamiento de créditos por sobre cumplimiento, a fin de ampliar los márgenes de acción a la industria automotriz local. Se requiere una solución integral basada en una política encaminada no sólo al mejoramiento de autos nuevos, sino de todos los vehículos en circulación, así como la generación de incentivos que promuevan la renovación del parque vehicular. La creación de campañas de conciencia ambiental y uso eficiente del automóvil debiera ser tema político de discusión así como una reforma que permita conseguir subsanar el poder adquisitivo del mexicano promedio, los resultados apuntan hacia que un poder adquisitivo mejor beneficiará la cultura del cuidado del medio ambiente. En cuanto al plazo para las automotrices, se observa apresurado el cambio y se recomienda la implementación de la norma hasta 2015. De igual manera se requiere adoptar legislaciones completas y adaptarlas a la situación de cada nación. Es necesario incluir incentivos para los autos de bajas emisiones (SULEV) y autos híbridos (SULEVH) en el alcance de la propuesta de Norma puesto que no se hace referencia en ningún apartado de ella. Finalmente, vemos como primera necesidad exigir más regulaciones en términos de seguridad, consumo, emisiones contaminantes y cantidad de autos usados que ingresen por año al país antes de invertir en propuestas mal logradas que tienen un impacto más adverso que beneficio para la sociedad mexicana.

# DETERMINACIÓN DE LAS DIFERENCIAS DE GÉNERO USANDO LAS ESCALAS DE LIMITACIONES EN EL TRABAJO (WLQ), COMPROMISO ORGANIZACIONAL (OC) Y MBI DE MASLACH EN UN GRUPO DE SERVIDORES PÚBLICOS DEL SECTOR SALUD

Blanca Rosa García Rivera, Universidad Autónoma de Baja California México  
Sonia Elizabeth Maldonado-Radillo, Universidad Autónoma de Baja California México  
María Concepción Ramírez Barón, Universidad Autónoma de Baja California México

## RESUMEN

*Este trabajo es una investigación de tipo descriptivo-correlacional, transversal con diseño no experimental sobre el impacto que tienen en el perfil sociodemográfico las sub-escalas del Modelo de Limitaciones en el trabajo, compromiso organizacional y MBI en un grupo de trabajadores que dan servicio al público en hospitales del sector de salud pública en México, entre los que se encuentran enfermeras, técnicos, recepcionistas, administrativos, etc. El objetivo principal fue identificar las diferencias en los niveles de compromiso organizacional, realización personal, despersonalización y agotamiento emocional, así como las condiciones de trabajo que impactan más; analizar las diferencias de género y detectar relaciones entre las subescalas. Se trabajó con una muestra de 200 empleados; en la recolección de los datos se utilizaron la escalas MBI de Maslach, Compromiso Organizacional de Allen y Meyer y El cuestionario de Limitaciones del Trabajo (WLQ), aunque debido a la baja confiabilidad que se obtuvo del MLQ, decidimos no incluir los análisis de éste en los resultados. Los resultados identificaron el estado que guardan las variables dentro de un nivel normal y que no existen diferencias en cuanto al género; además, se encontraron correlaciones fuertes, positivas y significativas entre las subescalas. Con ello se confirma la prevalencia de las perturbaciones afectivas emocionales (despersonalización, baja realización personal y agotamiento emocional) tal como se describe en estudios previos.*

**PALABRAS CLAVE:** Agotamiento Emocional, Burnout, Síndrome del Quemado, Despersonalización, Baja Realización Personal, Compromiso Organizacional, Condiciones de Trabajo, Enfermeras, Servidores Públicos

## ABSTRACT

*This study shows a descriptive, transversal research with a non-experimental design about the emotional affective state of public health workers. The main goal is to identify the levels of depersonalization, emotional exhaustion, personal achievement, organizational commitment related to the working conditions ; analyze gender differences and detect relationships between the subscales. We worked with a sample of 200 employees; in the collection of the data was used MBI, Organizational Commitment and Working Conditions scales. We decided not to include the results of the WLQ due to the low reliability value obtained in the questionnaire. The results identified the states within a normal level and no differences in gender, also found strong positive correlations between the subscales. This confirms the prevalence of emotional disturbances*

(*depersonalization, emotional exhaustion, personal achievement, commitment related to the working conditions*) as similar to previous studies.

**Keywords:** Burnout, Depersonalization, Emotional Exhaustion, Personal Achievement, Organizational Commitment, Working Conditions, Nurses

## INTRODUCCIÓN

El *burnout* y el compromiso organizacional han sido temas de gran interés en el mundo académico y profesional. En México, cada vez es más frecuente encontrar literatura que estudie este fenómeno, debido a la gran necesidad que existe de concientizar al sector salud público del riesgo que los trabajadores corren al estar expuestos a condiciones de trabajo que dañan su estado emocional y que impactan la productividad y calidad del servicio que ofrecen a los usuarios (Mendoza y García, 2011). Asimismo, el número de artículos publicados que se enfocan en estimar la carga económica que representa para la organización la enfermedad física y mental de los empleados ha ido en aumento, especialmente en servidores públicos, cuyo rendimiento impacta la calidad de atención que brindan al usuario. (Anis, Zhang, Bansback, Guh, Amarsi, y Birmingham, 2010; Health Canadá, 2003).

Los profesionales del sector salud que tienen que estar expuestos a precarias condiciones de trabajo, recursos limitados, imposibilidad de dar servicio a una población cada vez más demandante y creciente que está descontenta con el servicio que se presta en los hospitales públicos y que exige mejores servicios y más rápida respuesta a sus necesidades de salud, así como el contacto directo con pacientes en estado terminal afectan su salud emocional (Abreu, 2011, De Vargas y Dias, 2011). Estos padecimientos son comunes en servidores públicos de hospitales que han sido considerados como una profesión de prevalencias altas de trastornos psicológicos que, en cierta forma, repercuten negativamente en su salud y calidad de vida provocando ausentismo laboral y afectación en la calidad de su trabajo (Lerma-Martínez, Rosales-Arellano, y Gallegos-Alvarado, 2009).

En igual forma, el *burnout* es un trastorno del estado del ánimo que se presenta en los trabajadores de la salud que, al igual que el estrés, también afecta los resultados organizacionales, tales como: un aumento del ausentismo, antagonismo, falta de compromiso con la organización, insatisfacción en el trabajo o conflictos interpersonales (Flores-Villavicencio, Troyo-Sanromán, Valle y Vega-López, 2010, Gil-Monte, 2010). El *burnout* ha sido ampliamente estudiado a partir de Maslach en 1981, y su instrumento ha sido el más utilizado para medir este síndrome. El síndrome de *burnout* incluye las escalas de agotamiento emocional, despersonalización y baja realización personal y ocurre en individuos que dan servicio al público (Maslach & Jackson, 1986, p. 1). El agotamiento emocional es la variable que se refiere a sentimientos de estar drenado emocionalmente. La despersonalización se refiere a actitudes negativas, cínicas y de desprendimiento emocional hacia otras personas. Finalmente, la baja realización personal se refiere a una declinación en los sentimientos propios de competencia y valor, llevando a una tendencia de evaluarse negativamente en particular con respecto al trabajo de uno hacia otras personas (Cherniss, 1980; Freudenberger, 1974; Maslach, 1982).

A finales de la década de 1970, aparecieron los primeros estudios sobre profesiones relacionadas con la atención a pacientes (enfermería, medicina, etc.); dentro de éstos destacan investigaciones sobre el síndrome de desgaste profesional (*burnout*) las cuales giraron en torno al agotamiento profesional como resultado de las actividades propias de la prolongada prestación de servicios y

cuidado de personas con problemas de salud (Hurtado y Pereira, 2012). Al respecto, Garcés, (2002) citado en Miño (2012) sostiene que el síndrome se presenta debido a que las requerimientos del trabajo exceden los recursos que la persona posee para dicha actividad. A nivel internacional se tiene evidencia de numerosas investigaciones sobre los niveles emocionales del personal del sector salud (Alves, Alves y Pineda, 2007; Martínez, Centeno, Sanz-Rubiales y Del Valle, 2009; López, Zegarra y Cuba, 2006; Abreu, 2011). En México existen pocos estudios reportados (Flores-Villavicencio, et al., 2010; Enríquez, et al., 2011); sin embargo, considerando que el sistema de salud pública presenta una problemática muy grave por la falta de recursos y el creciente número de pacientes que demandan atención médica, es imprescindible dirigir la atención a la evaluación los factores que inciden en la salud de este tipo de profesionales.

Con referencia a las limitaciones del trabajo, estudios previos han demostrado que los servidores públicos que asisten al trabajo cuando no se sienten bien debido a problemas físicos o mentales como depresión, burnout, agotamiento emocional, estrés entre otros, presentan un bajo rendimiento, lo que significa altos costos y baja productividad en la organización (Sanderson et al., 2006). El interés por medir y contabilizar el efecto de la salud en la productividad organizacional ha resultado en el desarrollo de numerosos instrumentos para capturar este concepto. De acuerdo con Mattke et al. (2007), existen más de 20 instrumentos que asocian la productividad con los estados físicos y emocionales de los trabajadores, entre los que se encuentra el WLQ. Con referencia a la productividad, más de la mitad de trabajadores con problemas de salud mental como estrés o burnout reportan una productividad reducida, resultando en una pérdida promedio de 2.0 horas por día por trabajador (Meerding et al., 2004).

Asimismo, el compromiso organizacional ha sido asociado al burnout en servidores públicos y enfermeras de hospitales por autores tales como Leiter y Maslach desde la década de los ochentas. El compromiso organizacional ha sido definido como la identificación que el empleado siente hacia su organización (Mowday, Steers and Porter, 1979). Asimismo, en estudios previos se ha encontrado relación entre el compromiso organizacional y el agotamiento emocional. Se observa que un empleado con alto compromiso, sentirá mas apego a la organización y menor burnout (Price and Mueller, 1981; Steers, 1977). Esta investigación tiene como propósito identificar los niveles de Desgaste emocional y compromiso organizacional; analizar las diferencias de género, esto es, comprobar si el nivel de las subescalas mencionadas se ve influenciado por el hecho de que el trabajador sea hombre o mujer; y, adicionalmente, identificar si existen asociaciones entre las subescalas del burnout y las subescalas del compromiso organizacional. El logro de este propósito aporta elementos importantes para el diseño de estrategias de prevención adecuadas a las necesidades del colectivo de trabajadores del sector estudiado.

## MÉTODO

Esta investigación consiste en un estudio con diseño no experimental, transversal, identificado como descriptivo-correlacional; descriptivo por tener la intención de especificar el nivel de burnout, compromiso organizacional y las limitaciones de trabajo de los empleados del sector salud pública y correlacional por tener la finalidad de identificar la probable existencia de asociación entre las variables.

Participantes En este estudio participaron 200 empleados del sector salud de los cuales el 85.5% eran mujeres y 14.5% hombres; el 66% de los respondientes tenían más de 46 años de edad; el 53.5% eran casados Con relación a la escolaridad, el 58% eran técnicos en enfermería. Respecto al turno de trabajo, el 87% trabajaban en turno completo en hospital. Instrumento de medición Por lo que refiere al instrumento utilizado, éste es un paquete de tres escalas (de 24 ítems la de

limitaciones del trabajo, 22 la de burnout y 21 la de compromiso organizacional) de tipo Likert, ordinal de cinco puntos de severidad/frecuencia para medir la extensión de cuales estados han experimentado durante la semana pasada. **WLQ** (Work Limitations Questionnaire, Lerner et al, 2001) de 24 preguntas que contiene cuatro variables que miden las limitaciones del empleo, las cuales son: exigencias físicas (6 ítems), demanda de tiempo (5 ítems), exigencias mentales-interpersonales (9 ítems) y demanda de rendimiento (5 ítems).

La escala de respuesta que presenta este cuestionario de 1 a 5. Las puntuaciones se convierten numericamente de 0 a 120 de acuerdo al puntaje respondido. La consistencia interna que ha presentado este instrumento en estudios previos ha sido de Alfa de Cronbach para exigencias físicas de 0.89, demanda de tiempo de 0.89, exigencias mentales-interpersonales de 0.91 y demandas de rendimiento 0.88 (Lerner et al, 2001). Debido a que la consistencia interna que obtuvimos de este cuestionario fue negativa, decidimos no incluir los análisis en los resultados. Con respecto al **MBI** de Maslach, este instrumento se compone de 22 reactivos, 3 subescalas que presenta una escala de respuesta de 1 a 5, con una consistencia interna global de alfa entre 0.42 y 0.64 en la mayoría de estudios realizados. En este estudio, se obtuvieron los resultados que se muestran en la tabla de 1 de Confiabilidad. Asimismo, para medir el Compromiso Organizacional, se utilizó la escala de Allen y Meyer, 1990 (CO) que se compone de 21 reactivos con escalamiento Likert de 1 a 5, distribuidos en tres subescalas que miden el compromiso afectivo, el compromiso normativo y el compromiso de continuidad.

Tabla 1: Confiabilidad

VARIABLES		Alfa de Cronbach (unidad de análisis N=200)	Número de Ítem
COMPROMISO ORGANIZACIONAL	Compromiso Afectivo	0.694	7
	Compromiso Calculado	0.697	8
	Compromiso Normativo	0.775	6
	GLOBAL	0.526	21
M.B.I.	Agotamiento Emocional	0.706	10
	Despersonalización	0.417	5
	Logros Personales	0.527	7
	GLOBAL	0.516	22

Fuente: investigación propia.

Tratamiento de datos En el análisis de los datos se utilizó el paquete Statistical Package for the Social Sciences (SPSS) para frecuencias, estadísticos descriptivos, la confiabilidad ( $\alpha$  de Cronbach); otras técnicas utilizadas fueron U Mann-Whitney para muestras independientes, la cual se utilizó como una aproximación para establecer las desigualdades entre grupos, es decir, si existen diferencias significativas entre ellos. La determinación de la correlación entre las subescalas se realizó a través del cálculo del coeficiente y su interpretación se basó en la Tabla 2:

Tabla 2: Valores Para la Interpretación del Coeficiente de Spearman

RANGO		RELACION	
0.00	a	0.25	Nula o escasa
0.26	a	0.50	Débil
0.51	a	0.75	Entre moderada y fuerte
0.76	a	1.00	Entre fuerte y perfecta

Fuente: Martínez, et al. (2009)

Para realizar la identificación del Compromiso Organizacional se empleó una escala construida (Tabla 3) a partir del número de ítems de cada cuestionario, en donde cada pregunta tiene cinco alternativas y considerando que solo existe una alternativa de respuesta para cada ítem

Tabla 3: Baremo de Intensidad para Compromiso Organizacional

Rango			Categoría
1	→	35	Nulo
36	→	70	Medio
71	→	105	Elevado

Fuente: Elaboración propia

Tabla 4: Baremo de Intensidad Para Desgaste Emocional

Rango			Categoría
1	→	37	Normal
38	→	74	Medio
75	→	120	Severo

Fuente: Elaboración propia

Respecto a la identificación del Desgaste emocional (*Burnout*) se utilizó la escala construida (Tabla 4) a partir del número de ítems del cuestionario, en donde cada pregunta tiene cinco alternativas y considerando que solo existe una alternativa de respuesta para cada ítem:

## RESULTADOS

Antes de realizar las pruebas estadísticas, los datos se sometieron al cumplimiento de los requisitos para la aplicación de las pruebas paramétricas, recurriendo para ello a la identificación de la normalidad de los datos a través de la aplicación de la prueba de Kolmogorov-Smirnov. La hipótesis estadística ( $H_0$ ) fue “el Desgaste emocional (*Burnout*) y el Compromiso Organizacional pueden modelarse con una distribución normal”. La Tabla 5 muestra que el nivel p para la prueba de Kolmogorov-Smirnov es significativo (esto es,  $p < 0.05$ ) por tanto se rechaza la hipótesis de manera que, las variables no pueden modelarse con una distribución normal por lo que hay que recurrir a las pruebas no paramétricas.

Tabla 5: Pruebas de Normalidad

	Kolmogorov-SmirnovaShapiro-Wilk			
	Estadístico	gl	Sig.	Estadísticogl Sig.
DESGASTE EMOCIONAL GLOBAL	.163	200	.000	.910 200.000
COMPROMISO ORGANIZACIONAL GLOBAL	.368	200	.000	.598 200.000

Desgaste Emocional Global a. Corrección de la significación de Lilliefors

De acuerdo a su media ( $\mu=68.55$ ), la evaluación general (Tabla 6) del Desgaste emocional de los empleados del sector salud través de las tres variables (agotamiento, despersonalización y logros personales), muestra un nivel medio, aunque se encuentra en el umbral del nivel alto de acuerdo al baremo establecido (Tabla 4).

Para la identificación de la influencia del género sobre el desgaste emocional, la información recabada fue sometida a la prueba U Mann-Whitney para datos independientes. El valor de  $Z = -0.827$  asociado al valor  $p (.408)$  permiten afirmar que la distribución del Desgaste emocional es la misma entre las categorías de género (Femenino y Masculino; esto es no existen diferencias significativas entre los géneros; esto significa que el hecho de que los profesionales de la salud sean hombres o mujeres no influye en el desgaste que les genera el trabajo en la institución. Como previo a la identificación se determinaron los indicadores estadísticos; la Tabla 7 describe para cada género, los rangos promedio y la suma de rangos la media.

Tabla 7: Prueba de U Mann-Whitney. Rangos

VARIABLE	GENERO	N	Rangos promedio	Suma de rangos
Desgaste Emocional	Femenino	171	101.88	17422.00

Fuente: *Elaboración propia con resultados de trabajo de camp Compromiso Organizacional y género*

Para la identificación de la influencia del género sobre el compromiso organizacional, la información recabada fue sometida a la prueba U Mann-Whitney para datos independientes. El valor de  $Z = -2.85$  asociado al valor  $p (.004)$  permiten afirmar que la distribución del Compromiso Organizacional es diferente entre las categorías de género (Femenino y Masculino; esto es existen

diferencias significativas entre los géneros; esto significa que el hecho de que los profesionales de la salud sean hombres o mujeres influye en su compromiso con la institución. Como previo a la identificación se determinaron los indicadores estadísticos; la Tabla 9 describe para cada género, los rangos promedio y la suma de rangos la media.

Tabla 9: Prueba de U Mann-Whitney. Rangos

VARIABLE	GENERO	N	Rangos promedio	Suma de rangos
Compromiso organizacional	Femenino	171	104.94	17945.00
	Masculino	29	74.31	2155.00
	Total:	200		
U Mann-Whitney 1720 Z= -2.85, p = .004				

Fuente: Elaboración propia con datos de campo

*Determinación de las diferencias entre el género y las subescalas del Modelo de Desgaste emocional (Burnout) y Compromiso Organizacional.* Para comprobar si esas diferencias son estadísticamente significativas se aplicó la prueba de U de Mann Whitney, cuyos resultados se describen en la Tabla 10, ahí se aprecia que el valor p asociado a las variables Agotamiento emocional ( $p=.975$ ) son mayores a 0.05 por tanto no es significativo. Con base en estos resultados es posible afirmar que no existen diferencias significativas entre estas variables; es decir, el género no conduce a niveles estadísticamente diferentes de Agotamiento emocional. Lo cual significa que el género no tiene impacto significativo en esta variable.

Mientras que, en esa misma Tabla se observa que las variables Compromiso afectivo, Compromiso calculado, Compromiso normativo, Despersonalización y Logros personales tienen un valor p menos a 0.05, por tanto, el género tiene un impacto significativo en estas variables.

Tabla 10: Pruebas de Hipótesis/U Mann-Whitney

Hipótesis Nula	Valor p	Decisión
La distribución de AGOTAMIENTO es la misma entre las categorías de género	.975	Retener hipótesis nula
La distribución de la DESPERSONALIZACIÓN es la misma entre las categorías de género	.001	Rechazar la hipótesis nula
La distribución de la LOGROS PERSONALES es la misma entre las categorías de género	.000	Rechazar la hipótesis nula
La distribución del COMPROMISO AFECTIVO es la misma entre las categorías de género	.005	Rechazar la hipótesis nula
La distribución del COMPROMISO NORMATIVO es la misma entre las categorías de género	.001	Rechazar la hipótesis nula
La distribución del COMPROMISO CALCULADO es la misma entre las categorías de género	.005	Rechazar la hipótesis nula

## DISCUSIÓN

En este artículo se analizaron los niveles de burnout y compromiso organizacional que los empleados encuestados presentaron. El Desgaste emocional de los empleados del sector salud a través de las tres variables (agotamiento, despersonalización y logros personales), muestra un nivel medio, tendiente a alto, ya que se encuentra en el umbral del nivel alto de acuerdo al baremo establecido aunque el compromiso organizacional observado (Compromiso afectivo, de continuidad y normativo) en los empleados encuestados muestra un nivel favorable de compromiso, lo cual significa que el estado psicológico que caracteriza la relación entre los empleados y su organización es medianamente buena, estos resultados son inconsistentes con estudios previos (Rizzo et al., 1970; Greenhaus et al., 1989), ya que a pesar de que el compromiso de los empleados es aceptable, su nivel de agotamiento emocional tiene una tendencia alta. Esta característica se debe a que las organizaciones de salud públicas en México ofrecen estabilidad y mejores beneficios a los empleados, por lo que éstos se identifican rápidamente con la organización y una vez que ingresan no desean abandonar su empleo hasta su jubilación. Sin embargo, las sobrecargas de trabajo y los altos volúmenes de pacientes y exigencias mentales y físicas a que son sometidos, les ocasionan los niveles de agotamiento que se observan. A diferencia de otros estudios donde el agotamiento emocional y el compromiso observan una tendencia similar, donde la rotación de los empleados hospitalarios es alta y su nivel de burnout es alto. Asimismo, en todas las subescalas se observan diferencias significativas entre los géneros en la forma de experimentar las variables del estudio, excepto en el agotamiento emocional. En cuanto a la relación entre el agotamiento emocional y el compromiso organizacional, se observa una relación muy baja, solo en la subescala de realización personal es moderadamente significativa. Limitaciones y oportunidades de investigación futuras Primero, la muestra fue aplicada en un solo hospital público. Aunque la muestra fue considerablemente alta, se recomienda que se aplique simultáneamente en varios hospitales públicos para comparar los resultados. Segundo, los resultados en las pruebas de confiabilidad obtenidos para el instrumento de las Limitaciones del Trabajo (WLQ) fueron negativos, y los otros dos instrumentos presentaron confiabilidades muy bajas, por lo que se recomienda volver a aplicar los instrumentos cerciorándose de que no haya preguntas sin responder y que los empleados comprendan como contestar la encuesta.

### RESUMEN

*El comportamiento de viajeros de la tercera edad o adultos mayores se ha transformado en un área susceptible e interesante de investigar debido a su tamaño actual y a su crecimiento esperado. En Estados Unidos hay un mercado creciente de niños que viajan sin papás, no se confunda, Vacacionan los abuelos con los nietos. El propósito de la primera parte de este estudio es primero: determinar cuántos adultos mayores vacacionan con sus nietos y segundo: a dónde prefieren viajar y por qué. Estudios e investigaciones demuestran que México tiene una población importante de adultos mayores, misma que mostrará una tendencia creciente en número por varias décadas. Esto tiene implicaciones importantes para el Turismo, el mercadeo y el desarrollo de productos. El sustento teórico metodológico de la investigación cualitativa, el lograr la descripción del fenómeno de estudio resulta completa y muestra el entorno de los sujetos a medir, que reflejan la realidad en el momento histórico de cada sujeto, en donde la observación directa y participativa, la entrevista, la encuesta, el autorreportaje, nos dieron el preámbulo hasta este momento, sin embargo no hay que olvidar que como seres humanos, nos involucramos más de lo debido y trabajar de manera hermenéutica.*

**PALABRAS CLAVE:** Turismo, Adultos Mayores, Nietos, Implicaciones, Tendencia, Desarrollo, Mercadeo

## TRAVELING WITH MY GRANDPARENTS

### ABSTRACT

*The behavior of senior travelers has become a relevant area of interest because of its market size and potential of growth. In the United States there is a growing market of children going on vacation without parents. This is children who travel along with their grandparents. The aim of the first stage in this study is to highlight: first; how many senior travelers in Guadalajara Jalisco, México go on vacation along with their grandchildren, and two: know where they prefer to go and why. A questionnaire and interviews were held combining quantitative and qualitative data. According to research Mexico shows an important senior population which will grow for decades. This has important implications for tourism, marketing and product development. The theoretical basis of qualitative research methodology, achieving the description of the phenomenon of study is complete and shows the environment of the subject to be measured, which reflect the reality in the historical moment of each subject, wherein the direct and participant observation, the conversational interview, the survey, self-report, we received the preamble to this point, however we must not forget that as human beings, we engage more than they should and work hermeneutics.*

## INTRODUCCIÓN

Las personas de más de 60 años, también llamados en México personas de la tercera edad o adultos mayores, se han transformado en los representantes de un mercado potencial digno de tomarse en cuenta y al cual sin duda, habrá que dirigir la mirada dado su tamaño actual y su crecimiento pronosticado.

Las previsiones demográficas brindan la enriquecedora posibilidad de anticiparse a demandas que atañen a diversos sectores productivos. El Consejo Nacional de Población (CONAPO) de la Secretaría de Gobernación, en sus proyecciones de la población de México 2000-2050, indican que los adultos mayores crecerán de una población media de 6 870 753 personas en el 2000 a una media de 36 222 237 personas el 2050, es decir, entre 2000 y 2050 la proporción de adultos mayores en México pasará de 7 a 28 por ciento. En la actualidad hay en el mundo alrededor de 1824 millones de niños (0 a 14 años), de acuerdo con las proyecciones de población de las Naciones Unidas, de los cuales 89 por ciento vive en los países menos desarrollados. En Latinoamérica residen 168 millones de niños (9.2% de los niños del mundo). En México reside alrededor de 20 por ciento de los niños latinoamericanos y cerca de 2 por ciento del total del mundo (CONAPO, 2006).

La población México ocupa el lugar número 11 en el mundo, siendo el tercero en América, por debajo de Estados Unidos de Norteamérica y Brasil. En el año 2000 residían en México 6.9 millones de personas de 60 años y más, en 2030 serán 22.2 millones y se estima que para el 2050 se alcance la cifra de 36.2 millones de personas. En el año 2005, siete entidades concentran casi a la mitad de la población total del país, Jalisco entre ellas con 6.8 millones de personas. De acuerdo con los resultados del II Censo de Población y Vivienda 2005, el país registró 103.3 millones de habitantes; de los cuales, 51.3% son mujeres y 48.7% son hombres. Lo anterior indica una relación de 95 hombres por cada 100 mujeres, aspectos que pueden ser significativos al atender las preferencias o tendencias por género. El Instituto Nacional de Geografía y Estadística en México (INEGI), creado por decreto presidencial el 25 de enero de 1983. Indica que desde hace 35 años se empezó a notar un ligero incremento en la cantidad de mujeres respecto a los hombres. Advierte igualmente que en 2010, esta diferencia se ha acentuado hasta llegar a 2.6 millones más de mujeres que de hombres. Según el último censo de población al 2010, hay 95 hombres por cada 100 mujeres. Lo anterior adquiere una importancia relevante si se considera que los hombres mueren más que las mujeres en todas las edades. Tal evento suscita que haya más mujeres que hombres de edades avanzadas. El Consejo Nacional de Población por su parte indica asimismo, que este comportamiento es característico del proceso de envejecimiento en todos los países del mundo, pero que se acentúa en los países desarrollados.

Haciendo referencia a los grupos de edad que brinda el Censo de Población y Vivienda 2005 referido con anterioridad, poco menos de la tercera parte de la población son niños menores de 15 años (30.6%), los jóvenes (15 a 29 años) representan 26.3%, los adultos (30-59 años) 32.3% y los mayores de 60 años, 8.1 por ciento, 2.7% de los habitantes no especificaron su edad. Si se suma 30.6% de los menores de 15 años al 8.1 % de mayores de 60 años, resulta que un 38.7% sería el porcentaje de niños viajando sin papás, un mercado potencial digno de tomarse en cuenta. De

acuerdo con las proyecciones de población, a mediados de 2013 el país contará con 33.6 millones de personas menores de 15 años de edad, quienes representarán el 28.4% del total de la población en México; se estima que para 2020 la cantidad de niños disminuya a 33.1 millones, que representará el 26% de la población total. Por grupos de edad se tiene que, actualmente, los niños menores de un año representan el 1.9% de la población total, los que tienen entre uno y cinco años el 9.4% y quienes tienen entre seis a catorce años de edad representan 17.1%. Para 2020 se tiene proyectado que el porcentaje niños menores de un año, respecto a la población total, sea de 1.7%, que el grupo de uno a cinco años represente 8.7% y el de seis a catorce años el 15.7%. (CONAPO, 2013).

El Consejo Nacional de Población, advierte que en México, el proceso de envejecimiento avanza de manera vertiginosa, ya que actualmente hay unas seis millones de personas que son adultos mayores con un crecimiento del 3.5 % anual, cifra que se duplicará en 2020. Durante la presentación del Programa Nacional de Población 2008-2012, Vélez Fernández subrayó que dicho ritmo de crecimiento implicará que su número se duplicará cada 20 años, por lo que se espera que su crecimiento alcance el 4.2% anual en 2020. Las dos fuentes de información anteriores demuestran que México tiene una población importante de adultos mayores, misma que mostrará una tendencia creciente en número por varias décadas. Esto tiene implicaciones importantes para el Turismo, el mercadeo y el desarrollo de productos.

Según datos de la Secretaría de Turismo (SECTUR); el mercado doméstico es de gran importancia dentro del sector, ya que se estima que representa alrededor del 80% de la actividad turística de México.

Si a esto se le añade una actitud que se ha venido observando crecer en algunos países como Estados Unidos de Norteamérica por ejemplo; la de “viajar sin papás”, es decir ver que abuelos y nietos viajan juntos y disfrutan períodos vacacionales más y más cada día, hace pensar que en México se esté dando la misma tendencia, aunque muy probablemente, dadas las diferencias socioculturales, no con las mismas características. Para poder determinar las características de los adultos mayores en México que viajan con sus nietos, será necesario estudiar: los hábitos de viaje del adulto mayor (genérico) al vacacionar con sus nietos, las actividades que realizan, el nivel de gastos efectuados, los sentimientos que les provocan los viajes, las preferencias y las motivaciones que los inducen a viajar, y aspectos como: la duración, el destino y la procedencia del viaje por mencionar sólo algunos, son indudablemente aspectos y conductas que habrán de investigarse y no perder de vista.

### Objetivos

El objetivo principal es analizar el perfil y el comportamiento de los adultos mayores que viajan y hacen turismo doméstico. Es decir: que viajan con sus nietos sin salir de las fronteras del país. Esto servirá para evaluar de manera práctica el potencial que desde la perspectiva del turismo, por mencionar un eje disciplinar, tiene la unión de estos dos universos de la población mexicana, lo que puede provocar o ya esta provocando. Habrá que indagar cómo desarrollar, planear y comercializar para bien cuidar, lo que parece ser un segmento de mercado digno de ser considerado tanto por Gobiernos e instituciones, así como por diversas empresas del sector y desde luego por instituciones educativas.

Los objetivos particulares son:

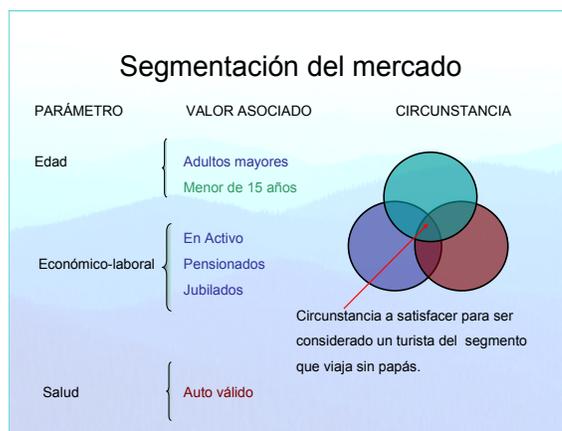

- Evaluar de manera práctica el potencial que desde la perspectiva del turismo, tiene la unión de estos dos universos de la población en la Región Valles y Guadalajara en Jalisco.

- Fundamentar el desarrollo, la planeación y la comercialización “sostenida” de este segmento de turismo.
- Diversificar la investigación en el segmento de Adultos Mayores.
- Comparar o constatar perfiles y comportamientos del Segmento Adultos Mayores en estudios o investigaciones hechas por diversas instancias investigativas.
- Averiguar si los adultos mayores de Guadalajara y Ameca, hacen turismo con sus nietos.
- Averiguar entre otros aspectos a dónde prefieren viajar, cuándo y por qué.
- Depurar instrumentos de captura de datos y datos para la siguiente fase de la investigación
- Detectar el género predominante en los adultos mayores las comunidades referidas anteriormente.

### Definición

Un adulto Mayor es: Toda persona mayor de 60 años: auto válida, que trabaja o bien tiene una jubilación o una pensión y que puede viajar con sus nietos menores de 15 años y pernoctar en un destino turístico. Ver Figura 1.

Figura 1: Muestra la Segmentación de Mercado

### Mercado Potencial

Entre 2000 y 2006 la población de adultos mayores creció en 1.5 millones de personas, al pasar de 6.7 a 8.2 millones, lo que representa un incremento de cerca de 20 por ciento. En el II Censo de Población y Vivienda 2005, el país registró 103.3 millones de habitantes:

*51.3% son mujeres.*

*48.7% son hombres.*

*30.6% son niños menores de 15 años (poco menos de la tercera parte de la población).*

Hay aproximadamente 84 hombres por cada 100 mujeres en edades avanzadas en México. 58% vive en ciudades con más de 15 mil habitantes. En 1 de cada 4 hogares vive un adulto mayor. 6.4% de los hogares está integrado exclusivamente por adultos mayores.

*En 2000 la proporción de adultos mayores fue de alrededor de 7.0 %. Se estima que en 2020 el porcentaje se incremente a 12.5 % y en 2050 alcance el 28.0 %*

*En 2000 había 20.5 adultos por cada 100 niños. Se espera:*

*que el número de adultos mayores sea igual al de niños alrededor de 2034*

*que el índice llegue a 166.5 adultos mayores por cada 100 niños en 2050.*

*Se espera que en 2050 haya poco más de 36 millones de adultos mayores, de los cuales más de la mitad tendrán más de 70 años.*

A través de la tabla 1, en 2013 se puede observar la información de índices demográficos 2010-2050:

Tabla 1: Muestra de Algunos Indicadores Demográficos

República Mexicana: Indicadores demográficos, 2010-2050					
Indicador	2010	2011	2012	2013	2014
Población a mitad de año	114,255,555	115,682,868	117,053,750	118,395,054	119,713,203
Hombres	55,801,919	56,519,798	57,174,268	57,810,955	58,435,900
Mujeres	58,453,636	59,163,070	59,879,482	60,584,099	61,277,304

Fuente: CONAPO. En: [http://www.conapo.gob.mx/es/CONAPO/De\\_las\\_Entidades\\_Federativas\\_2010-2050](http://www.conapo.gob.mx/es/CONAPO/De_las_Entidades_Federativas_2010-2050)

El Mercado Doméstico constituye alrededor del 80% de la actividad turística de México. Desde que en el año 2001 se llevó a cabo la Encuesta Urbana de Turismo Doméstico en Hogares, no se contaba con información sobre el comportamiento de los viajeros residentes de la República Mexicana. La Cámara de Comercio Servicios y Turismo de México, advierte que el estudio de Hábitos de Consumo del Turista Nacional se concretó a través de una encuesta a turistas reales de los tres mercados emisores de turismo doméstico: Ciudad de México, Guadalajara y Monterrey. Es de suma importancia considerar el factor salud a la hora de hacer turismo, ya que el incremento en la población de adultos mayores requiere de atenciones cada vez mayores y servicios oportunos para la prevención de enfermedades que permitan alcanzar una longevidad con calidad de vida. De acuerdo a estimaciones de la Encuesta Nacional de Salud y Nutrición 2006 (ENSANUT), el padecimiento más frecuente en personas de 65 años y más es la hipertensión (35 %), seguido por la diabetes (17), enfermedades del corazón con (10.0%), insuficiencia renal (2.1%) y cáncer (1.4%).

## METODOLÓGIA

La metodología para llevar a cabo la presente investigación; parte de un estudio realizado en 2006-2007 y se reforzará con una investigación durante 2013-2014 con el fin de hacer cruces de información una vez concluidas ambas investigaciones. Ambos esfuerzos; son investigaciones de corte cualitativo, que recurren a técnicas como la etnográfica, la entrevista, la encuesta y el cuestionario. El interés por investigar cualitativamente en a través de alumnos del Centro Universitario de los Valles encuentra fundamentado en la afirmación por parte de investigadores (Jesús Ibáñez, 1992; Jesús Galindo, 1994; Francisco J. Mercado, 1996; Rosanna Reguillo, 1996) en cuanto a que la investigación cualitativa es una de las actividades que ha generado un creciente interés en los últimos años. Se ha de confesar que la investigación cualitativa significa para mí un reto personal, que puede ser descrito fácilmente retomando las palabras de Rossana Reguillo cuando enfatiza que uno de los “problemas centrales de la metodología es el análisis interpretativo” (Reguillo, 2002, p. 36). Ese reto personal resulta apasionante precisamente por la dificultad que ofrece la interpretación de una determinada realidad. En este tenor se coincide

ampliamente y se afirma, al igual que Reguillo lo hace, que “la investigación no se agota con el registro de la realidad. Los datos no “hablan, se los hace hablar” (Reguillo, 2002, p. 36). Así pues el reto a vencer es lograr que los datos hablen.

### Cronograma

FASE I: (mayo/julio 06)

Acciones Metodológicas

Etnografía y entrevistas abiertas.

FASE II: (septiembre/noviembre 06)

Elaboración y aplicación de un cuestionario a residentes de la Región Valles y Guadalajara. (Estudiantes de 1° y 6° de Turismo en el área de Inglés).

FASE III: (enero/mayo 07)

Acciones Metodológicas

Interpretación de la información (posibles modificaciones o adaptaciones).

FASE IV: (mayo/julio 13)

Acciones Metodológicas

Etnografía y entrevistas abiertas.

FASE V: (septiembre/noviembre 13)

Elaboración y aplicación de un cuestionario a residentes de la Región Valles y Guadalajara. (Estudiantes de 1° y 6° de Turismo en el área de Inglés).

FASE VI: (enero/mayo 14)

Acciones Metodológicas

Interpretación de la información (posibles modificaciones o adaptaciones).

### **CONCLUSIONES**

A la fecha y de acuerdo a los resultados obtenidos a través de las primeras tres fases de la investigación; el tipo de turismo que hacen los nietos y los abuelos “*Viajando con mis Abuelos*”, debe considerarse en México como un mercado meta si se considera que es un país que envejece. Es necesario efectuar adecuaciones en paquetes turísticos, hoteles, agencias de viajes, líneas aéreas, etc. A fin de que abuelos y nietos puedan compartir tiempo de calidad en sus vacaciones en la medida de sus presupuestos. En México los adultos mayores viajan más que antes y también viajan con sus nietos. En México casi por regla general los abuelos comparten la vivienda con familiares (nietos entre ellos); de tal forma al vacacionar con ellos pareciera que simplemente modifican el espacio común e idealmente refuerzan el afecto y los lazos familiares que los unen. Por el número de habitantes de México, por el promedio de vida tanto de hombres como de mujeres y por el nivel de gasto que efectúa al salir de vacaciones; el adulto mayor mexicano que viaja con sus nietos puede llegar a ser un turista que las diversas empresas del ramo turístico no querrán desaprovechar.

Si el nuevo segmento de turismo diagnosticado; que hemos denominado “Viajando con mis Abuelos”, efectuado por abuelos y nietos se englobara dentro de la categoría Turismo Social; tendría que fomentar una actividad turística a bajo costo, propiciar que las personas de escasos recursos económicos conozcan su región, su estado, su país y al hacer turismo, y al cumplir con

sus propósitos personales al hacerlo disfruten, compartan experiencias y desde luego mejoren sus relaciones interpersonales, contribuyan al conocimiento de su identidad cultural y muy importantemente hagan consciencia y aprendan a valorar la necesidad de preservar la riqueza natural y cultural del mundo y no sólo de una región o de un país.

Al englobar este nuevo segmento de turismo en Turismo Gerontológico, habría que diagnosticar cuántos abuelo viajan con sus nietos y cuántos lo hacen sin ellos, e idealmente descubrir la razón de lo anterior.

## RESUMEN

*El ambiente competitivo en que viven las pequeñas y medianas empresas, hace presión para que ellas adopten tecnologías de información y comunicación con el fin de agilizar sus procesos, de participar en la generación de innovación, de obtener información más veraz, oportuna y confiable que conlleva a la creación de valor. Estas empresas constituyen más del 90% de las empresas en México, son una fuente de empleo y autoempleo, así como también albergan la mano de obra poco calificada. En este sentido, el objetivo de este trabajo es identificar el entorno en que se desarrollan las pequeñas y medianas empresas (PYMEs) con la adopción de las tecnologías de información y comunicación, especialmente en el caso mexicano. Los resultados revelan que las empresas mexicanas, especialmente las PYMEs, reflejan una mejora en la adopción de TICs, sin embargo, es notoria su inclinación por el uso de las TICs básicas, la PC, el Internet, el correo electrónico. Por tamaño de empresa se advierte una amplia brecha digital, siendo las grandes empresas las que mayor uso hacen de estas tecnologías y son las de menor tamaño quienes no aprovechan los beneficios que aportan estas tecnologías.*

**PALABRAS CLAVE.** TICs, PYMEs

## USE OF INFORMATION AND COMMUNICATION TECHNOLOGIES. CONTEXT FROM A CASE OF MEXICAN SMEs.

### ABSTRACT

*The competitive environment where the small and medium enterprises live presses for them to adopt information and communication technologies in order to streamline their processes, to participate in the generation of innovation, to obtain more accurate and reliable information that create value. These companies account for 90 % of companies in Mexico, they are a source of employment and self-employment. In this sense, the purpose of this work is to identify the environment in which the small and medium enterprises (SMEs) adopt information and communication technologies, especially in the Mexican case. The results reveal that Mexican firms, especially SMEs, reflect an improvement in ICT adoption, however, they use basic ICT, as PC, Internet, e-mail. By size of company, there are a wide digital divide, where the larger companies use most of these technologies and the smaller ones are those who do not take advantage of the benefits provided by these technologies*

**JEL:** M15, M13

**KEYWORDS.** ICT, SMEs

### INTRODUCCIÓN

El entorno empresarial cada vez más dinámico y complejo exige a las empresas la búsqueda de valor y estrategias y herramientas que permitan adaptación en un mercado global. Las tecnologías de información y comunicación como una parte importante del capital estructural que poseen las empresas ofrecen la posibilidad de agilizar los procesos, de participar en la generación de innovación, de obtener información más veraz, oportuna y confiable que conlleva a la creación de valor (Barney, 1991) y a la generación de conocimiento (Pérez y Dressler, 2007) para que la empresa no sólo sea competitiva en el corto, sino también en el largo plazo. En este entorno, ya difícil para el sector empresarial, se advierte aún más incertidumbre en torno a aquellas empresas que por su tamaño ya presentan una limitante; su gran representatividad en número, la aportación que hacen a la economía, la oportunidad que representan como fuente de autoempleo, además de dar albergue a la mano de obra no especializada, hacen que se muestre un particular interés por su estudio.

## REVISIÓN LITERARIA

### Tecnologías de Información y Comunicación

Las Tecnologías de información y comunicación (TICs) son múltiples herramientas tecnológicas dedicadas a almacenar, procesar y transmitir información; aunque no son una panacea ni representan una solución a un problema específico, si son mecanismos que agilizan la comunicación, eficientan la gestión administrativa, participan en los procesos de innovación, colaboran en la gestión del conocimiento, entre otras aportaciones, en una organización. The Global Information Technology Report 2003-2004, citado en Garduño (2004) con el uso de TICs, una empresa puede beneficiarse: 1) Reduciendo costos y haciendo más eficientes las operaciones al reemplazar los procesos manuales, 2) Incrementando ingresos mediante publicidad con su sitio Web, 3) Abarcando nuevos mercados nacionales e internacionales y clientes mediante el uso de Internet, 4) Facilitando la interacción con clientes, proveedores, empleados, accionistas, visitantes, etc. El convencimiento a las PYMEs sobre la adopción de TICs, implica mostrarles los beneficios que la inversión les retribuirá; así podemos encontrar estudios que desde diferentes ópticas pretenden reflejar esas ventajas. Las TICs aportan beneficios a la organización cuando a la par de su adopción se realizan inversiones complementarias en capacitación, cambios organizacionales e innovación, es decir, sin ellas, el impacto puede ser limitado (OCDE, 2002). Balboni, Rovira y Vergara (2011) estudian la adopción de las TICs y su resultado en la productividad y encuentran que efectivamente existe una relación, siempre y cuando incorporen otras variables como son calidad del capital humano, capacidades innovadoras y cambios organizacionales. Rohrbeck (2010) estudia los efectos que tienen las TICs sobre las ventajas competitivas sostenibles y llegan a la misma conclusión, el uso de las TICs no genera beneficios por el sólo hecho de adoptarlas.

Dibrell, Davis y Craig (2008) evidencian que el aporte esencialmente indirecto de las TICs al mejoramiento del desempeño de las empresas se da a través de las actividades de innovación. Las TICs generan mejoras en el desempeño empresarial, pero los resultados no se dan de forma automática por el sólo hecho de adoptarlas, su potencialización depende de que la introducción de estas tecnologías esté acompañada por cambios profundos en los procesos internos y en las relaciones de la empresa con proveedores, clientes y socios (OCDE, 2004). Balboni, Rovira y Vergara (2011) investigan el vínculo entre TIC y productividad en las empresas de Argentina, Chile, Colombia, Perú y Uruguay, poniendo énfasis en la complementariedad de las TIC con otros factores determinantes para el desempeño económico de las firmas, como la calidad del capital humano, las capacidades innovadoras y los cambios organizacionales. La adopción de las

TICs traerá beneficios a la empresa cuando ésta se acompañe de capacitación del capital humano por ser el principal elemento del que depende la capacidad de absorción (Cohen y Levinthal, 1990). La presión competitiva y la relación con clientes y proveedores, así como sus exigencias pueden influenciar positivamente la propensión hacia la incorporación y utilización de TICs en las empresas (Dutta y Evrard, 1999). Otro importante aspecto a considerar lo representa el marco normativo del país o región que exige a las empresas ciertas condiciones tecnológicas para dar cumplimiento, como es el caso, del desarrollo del e-government que ha motivado u obligado a las empresas a realizar trámites como la declaración de impuestos, declaraciones informativas, trámites de alta, baja o cambio de giro, trámites aduaneros, firma electrónica, facturación electrónica, entre otros (Ca'Zorzi, 2011; Arduini, Nascia y Zanfei, 2010) que requieren de otras tecnologías que garanticen la seguridad de la información (Rivas y Stumpo, 2011).

Por otra parte, la existencia de una diferencia relevante entre la incorporación de una determinada tecnología y el uso que se da a la misma, son aspectos asociados con las especificidades tanto sectoriales como empresariales; por ejemplo, existen sectores que intensifican más el uso de las TICs, tienen mayor conocimiento sobre ellas, que otros (Torrent-Sellens y Ficopal-Cusi, 2010). La competitividad del sector en que participan influye para que empresas de un mismo sector tiendan a adoptar tipologías de TICs similares, esto como un resultado de características y actitudes homogéneas con respecto a cómo asumen el cambio técnico, además de contar con empleados con actitudes también parecidas hacia la incorporación de nuevas tecnologías (Salmerón y Bueno, 2006). Para el caso de las tecnologías de comunicación, la banda ancha, la calidad de la conectividad y el grado de apropiación requieren complementarse con acciones que impulsen el desarrollo de los activos intangibles, en especial en innovación y recursos humanos y empresariales (Cimoli y Correa, 2010).

### Tecnologías de la Información y la Comunicación y las Pymes

La introducción de TICs en PYMEs ha evidenciado cómo el grado de adopción depende en gran medida de las propias características de la empresa y de sus competencias endógenas (Dutta y Evrard, 1999), como es el caso del tamaño de la empresa que ha sido una de las variables explicativas más analizadas en la literatura. Se usa el tamaño de la empresa como el indicador de los recursos propios; las grandes empresas disponen de una mayor cantidad de recursos materiales, financieros y humanos lo cual les permite invertir más en TICs, además de afrontar cualquier riesgo de manera más fácil que pudiera ser el resultado de la introducción de una nueva tecnología (Haller y Siedschlag, 2011; Arduini, Nascia y Zanfei, 2010; Boschma y Weltevreden, 2008; Lal, 2009).

Las TICs impactan al desempeño siempre y cuando vayan acompañadas de inversiones complementarias en capacitación, cambios organizacionales o innovación, es decir, sin ellas, el impacto puede ser limitado (OCDE, 2002). En este contexto se observa que las empresas de menor tamaño se encuentran en desventaja por la dificultad para acceder y retener trabajadores que poseen niveles elevados de conocimiento y de habilidades que permitan el aprovechamiento de las potencialidades de las TICs, problemática que se ve afectada aún más por la debilidad y baja eficacia de las políticas públicas en las áreas de formación y capacitación (OCDE, 2012) que ofrecen organismos gubernamentales en apoyo a la competitividad de este importante sector. Otra limitante, es la elevada centralización de procesos en la toma de decisiones, donde la actitud hacia las TICs y la familiaridad con las mismas por parte del propietario de la firma o de su administrador, influyen fuertemente en las posibilidades de incorporar estas tecnologías (Lal, 2009; Huaroto, 2012). Es latente que aquellas PYMEs que participan exclusivamente en el

mercado interno, con producción de bienes de bajo valor agregado e intensiva utilización de mano de obra poco calificada, también tienen una incorporación reducida de TICs (Katz, 2009).

## METODOLOGÍA

El estudio de las pequeñas y medianas empresas representa un conflicto por las diferencias que existen en cuanto a la clasificación que por su tamaño, cada país o zona geográfica define; realizan sus propias estratificaciones de acuerdo a número de empleados o de ingresos, situación que a veces hace difícil la comparación. Adicionalmente estas clasificaciones por tamaño incluyen otra, que se enfoca a cada sector de actividad. En México la estratificación de empresas publicada en el Diario Oficial de la Federación el 30 de marzo de 1999 se basa en el número de empleados, de esta manera se tiene para el sector manufactura: micro 0-10, pequeña 11-50, mediana 51-250, grande 251 en adelante; para el sector comercio: micro 0-10, pequeña 11-30, mediana 31-100, grande 101 en adelante; y para el sector servicios: micro 0-10, pequeña 11-50, mediana 51-100, grande 101 en adelante. El otro problema es el incipiente uso de las TICs que hacen las PYMEs; razones por las que esta investigación pretende hacer una aportación a la literatura mediante el objetivo: identificar el entorno en que se desarrollan las pequeñas y medianas empresas (PYMEs) con la adopción de las tecnologías de información y comunicación, especialmente en el caso mexicano; para ello se hace una revisión de la literatura, se acude a estadísticas y se realiza un análisis de la base de datos de INEGI en cuanto al uso que hacen de las TICs. En primer lugar se presentan los resultados por sector de actividad y en segundo por sector de actividad y tamaño de empresa.

## RESULTADOS

### Contexto de la Adopción de Tics en las Pymes Mexicanas

*Por sector de actividad:* El uso de las TICs en México es bastante limitado (Saavedra y Zúñiga, 2011), durante 2011, según el Módulo sobre disponibilidad y uso de las tecnologías de la información en los hogares, los usuarios de computadoras correspondieron a un 41.9%, de donde el 30% estaba en los hogares, el uso de internet fue de 37.2%, de donde el 23.3% también se identificó en los hogares. Las PYMEs utilizan de forma regular los medios más esenciales de TICs como son el correo electrónico, procesadores de textos, hojas de cálculo y en menor medida el uso de página de Internet, éste sólo para actividades de promoción de sus productos; específicamente para el sector manufacturero del estado de Coahuila, el 92% utiliza el correo electrónico, 37% tiene página de Internet, y por medio de ella el 87% se relaciona con sus clientes y proveedores (Hernández, De la Garza y Rodríguez, 2007).

En el caso de la industria manufacturera y maquiladora de la ciudad de Ensenada, Baja California, el 32% de estas empresas cuenta con una red de área local con acceso a Internet y el resto sólo tienen computadoras sin ninguna red, el 56% ha implementado sistemas ERP (Enterprise Resource Planning) y un 50% tiene sistemas de información de control de personal (López, et al., 2006). Esparza, Navarrete y Sansores (2012) realizaron un estudio en PYMEs del centro y sur del estado de Quintana Roo, ellos concluyeron que las empresas familiares utilizan con menor intensidad las TICs, a diferencia de aquellas que no son familiares; en estas últimas, sus propietarios o gerentes quienes poseen una mayor formación académica conocen los beneficios de la aplicación de las TICs, cuentan con un plan estratégico formal y se preocupan por la capacitación de sus trabajadores. En Aguascalientes, un estudio reveló que las micro, pequeña y medianas empresas con mayor grado de utilización de las TICs obtienen un mayor rendimiento, basado en medidas de eficiencia y productividad; su implementación generalmente

afecta favorablemente a todas las áreas funcionales de la organización permitiendo una mayor agilidad en la generación, acceso y distribución de la información, así como una mayor coordinación en la toma de decisiones, mejora en la conexión y asistencia a clientes y proveedores; la hipótesis permitió verificar que las TICs representan una gran oportunidad para que las empresas, especialmente para que las PyMEs mejoren su nivel de competitividad (Maldonado, et al., 2010).

Las principales causas que han impedido la adopción de las TIC en las empresas mexicanas son: 1) la baja percepción de los beneficios relacionados a la apropiación de TIC entre empresarios y en la población en general; 2) las barreras de entrada y rezagos regulatorios que inhiben una competencia más vigorosa en el sector de telecomunicaciones; 3) la desigualdad económica y social del país; 4) la falta de planeación y visión en las políticas públicas para impulsar la adopción de TICs (AMITI et al., 2006). De acuerdo al Censo Económico 2009, en la sección relacionada con la innovación tecnológica y su uso (INEGI, 2009:104-109), de las 70769 unidades económicas únicas y matrices, 79.5% utilizó computadoras en el desarrollo de sus actividades, de las cuales 96.7% empleo internet para la realización de sus labores. En cuanto al tipo de redes de comunicación utilizadas de las 70769 unidades económicas que utilizaron la computadora, 76.8% también utilizaron algún tipo de red (extranet, intranet o internet), en este contexto, 77.2% de las unidades económicas emplearon internet como herramienta de apoyo en sus actividades sustantivas, mientras que 20.6% contó con una red de intranet y sólo 5.9% con una de extranet. De las principales tareas en las que utilizaron internet, un poco más de 54000 unidades económicas utilizaron internet como complemento al desarrollo de sus actividades sustantivas. Cabe mencionar que: 1) 68.0% de las unidades económicas utilizaron internet para realizar búsquedas de información que coadyuvaran a mejorar sus procesos productivos o contactar clientes y proveedores; en este uso, nuevamente las actividades de los servicios destacaron con 13432 unidades económicas, de las cuales 48.7% formaron parte de los servicios de alojamiento temporal y de preparación de alimentos y bebidas; 2) 63.9% de las unidades económicas usaron internet para realizar operaciones bancarias y financieras; 3) 52.8% de las unidades económicas usaron internet para realizar trámites o gestiones gubernamentales; 4) 34.8% de las unidades económicas usaron internet para gestión de la empresa; 5) 34.7% de las unidades económicas usaron internet para comprar o vender productos (INEGI, 2009:104-109).

Las diferencias que existen en cuanto al uso de equipo de cómputo en las empresas evidencian una brecha digital variable que depende de los sectores económicos en donde operan las empresas y de las zonas geográficas del país. Según el censo 2003, INEGI reportó que en México en el sector comercio, el 9.3% emplea TICs para realizar procesos administrativos, 5.9% emplea Internet en sus relaciones con clientes y proveedores, 3.6% emplea equipo de cómputo en procesos técnicos o de diseño, 3.4% desarrolla programas o paquetes informáticos para mejorar sus procesos (Ver tabla 1).

Tabla 1: Empresas del Sector Comercio Que Usan Tics

Número de empresas	Emplea equipo de cómputo en procesos administrativos		Emplea internet en sus relaciones con clientes y proveedores		Emplea equipo de cómputo en procesos técnicos o de diseño		Desarrolla programas o paquetes informáticos para mejorar sus procesos	
	Si emplea	No emplea	Si emplea	No emplea	Si emplea	No emplea	Si desarrolla	No desarrolla
1580587	146226	1434361	93297	1487290	57356	1523231	53163	1527424
	9.3%		5.9%		3.6%		3.4%	

Fuente. Elaboración propia en base a INEGI (2004)

En el sector manufactura, el 12.3% emplea TICs para realizar procesos administrativos, 9.2% emplea Internet en sus relaciones con clientes y proveedores, 8.7% emplea equipo de cómputo en procesos técnicos o de diseño, 4.9% desarrolla programas o paquetes informáticos para mejorar sus procesos (Ver tabla 2).

Tabla 2: Empresas del Sector Manufactura Que Usan Tics

Número de empresas	Emplea equipo de cómputo en procesos administrativos		Emplea internet en sus relaciones con clientes y proveedores		Emplea equipo de cómputo en procesos técnicos o de diseño		Desarrolla programas o paquetes informáticos para mejorar sus procesos	
	Si emplea	No emplea	Si emplea	No emplea	Si emplea	No emplea	Si desarrolla	No desarrolla
328718	40576	288142	30398	298320	28561	300157	16185	312533
	12.3%		9.2%		8.7%		4.9%	

Fuente. Elaboración propia en base a INEGI (2004)

En el sector servicios, el 15.7% emplea TICs para realizar procesos administrativos, 10.3% emplea Internet en sus relaciones con clientes y proveedores, 8.5% emplea equipo de cómputo en procesos técnicos o de diseño, 5.9% desarrolla programas o paquetes informáticos para mejorar sus procesos (Ver tabla 3).

Tabla 3: Empresas del Sector Servicios Que Usan Tics

Número de empresas	Emplea equipo de cómputo en procesos administrativos		Emplea internet en sus relaciones con clientes y proveedores		Emplea equipo de cómputo en procesos técnicos o de diseño		Desarrolla programas o paquetes informáticos para mejorar sus procesos	
	Si emplea	No emplea	Si emplea	No emplea	Si emplea	No emplea	Si desarrolla	No desarrolla
1013743	159429	854314	104045	909698	85938	927805	59860	953883
	15.7%		10.3%		8.5%		5.9%	

Fuente. Elaboración propia en base a INEGI (2004)

Derivado de las tablas anteriores, se puede observar que el uso que le dan a las TICs por sector, se manifiesta:

1. En cuanto al empleo de equipo de cómputo en procesos administrativos, el primer lugar lo ocupa el sector servicios, el segundo el sector manufacturero y el tercer lugar lo ocupa el sector comercio.
2. En cuanto al empleo de internet en sus relaciones con clientes y proveedores el primer lugar lo ocupa el sector servicios, el segundo el sector manufacturero y el tercer lugar lo ocupa el sector comercio.
3. En cuanto al empleo de equipo de cómputo en procesos técnicos o de diseño, el primer lugar lo ocupa el sector manufactura, el segundo el sector servicios y el tercer lugar lo ocupa el sector comercio.
4. En cuanto al desarrollo de programas o paquetes informáticos para mejorar sus procesos el primer lugar lo ocupa el sector servicios, el segundo el sector s manufactura y el tercer lugar lo ocupa el sector comercio.

La adopción de las TICs depende en gran medida de la capacitación del personal (Cohen y Levinthal, 1990; OCDE 2002; OCDE 2012), y aunque en México, esta actividad es aún

incipiente, ya existen avances, de acuerdo a lo reportado por INEGI en el módulo de innovación e investigación del censo económico 2004. Se encuestaron 138492 empresas de donde se observa que la capacitación se da en el 56% de las empresas de manufactura, 47% en las empresas de servicios y 57% en las empresas de comercio; es el sector servicios quien está más rezagado. Del total de empresas que capacitan en el uso de nuevas tecnologías el sector manufactura participa con un 14%, servicios con 26% y el sector comercio con 60%, siendo este último el que despunta (Ver tabla 4).

Tabla 4: Empresas Por Sector de Actividad Que Capacitan al Personal en el Uso De Nuevas Tecnologías o Procesos de Trabajo 2003

Número de empresas	Sectores de actividad									Total que si capacita
	Manufactura			Servicios			Comercio

#### Por Sector de Actividad y Tamaño De Empresa

La brecha digital en el uso de TICs por tamaño de empresa es bastante amplia, de tal suerte que se puede observar que en el sector comercio, el empleo equipo de cómputo en procesos administrativos se da para las empresas grandes en un 95%, en las empresas medianas 93%, las empresas pequeñas 84% y 7% en las microempresas. El uso de Internet en sus relaciones con clientes y proveedores se da para las empresas grandes en un 80%, en las empresas medianas 74%, las empresas pequeñas 60% y 4% en las microempresas. El empleo de equipo de cómputo en procesos técnicos o de diseño se da para las empresas grandes en un 56%, en las empresas medianas 47%, las empresas pequeñas 35% y 3% en las microempresas. Y el desarrollo programas o paquetes informáticos para mejorar sus procesos se da para las empresas grandes en un 66%, en las empresas medianas 48%, las empresas pequeñas 35% y 2% en las microempresas (Ver tabla 5).

Tabla 5: Establecimientos Por Tamaño, del Sector Comercio Que Usan Tics

Aprovechar todas las ventajas que emanan del uso de las TICs, se limita cuando el personal no está capacitado, problema muy particular de las PYMEs. La brecha digital permanece también en este concepto y mantiene la misma tendencia por sector, siendo el tamaño el que delimita su mayor o menor uso, son las grandes quienes más capacitan a su personal y las microempresas las que menos realizan esta actividad. En el sector manufacturero las grandes capacitan un 83%, las medianas un 67%, las pequeñas 50% y las microempresas sólo capacitan a un 20% de sus trabajadores en el uso de nuevas tecnologías. En el sector servicios las grandes capacitan un 74%, las medianas un 72%, las pequeñas 59% y las microempresas sólo capacitan a un 29%. Por su parte en el sector comercio las grandes capacitan un 83%, las medianas un 70%, las pequeñas 60% y las microempresas capacitan a un 52% de sus trabajadores. Se observa que En este último sector la capacitación es más intensa en las microempresas, que en los sectores manufactura y servicios (Ver tabla 8).

Tabla 8: Empresas Por Tamaño del Establecimiento Que Capacitan al Personal en el Uso de Nuevas Tecnologías o Procesos de Trabajo 2003

Tamaño de empresa	Sectores de actividad

## CONCLUSIONES

Las PYMEs han incrementado el uso de TICs, sin embargo, es notoria su inclinación por el uso de las TICs básicas, la PC, el Internet, el correo electrónico. La literatura señala que, si bien las PYMEs han reducido la brecha en infraestructura de TICs básica, el rezago de este grupo de empresas aumenta de manera importante cuando se consideran las tecnologías de nivel más

complejo y sofisticado. Las TICs son usadas por PYMEs mexicanas con mayor intensidad en el sector servicios, el empleo de internet se encamina hacia la comunicación con clientes y proveedores y es el sector que más desarrolla programas o paquetes informáticos para mejorar sus procesos. De manera obvia, el sector manufacturero destaca en el empleo de equipo de cómputo en procesos técnicos o de diseño.

Por tamaño de empresa se advierte una amplia brecha, siendo las grandes empresas las que mayor uso hacen de estas tecnologías y son las de menor tamaño quienes no aprovechan los beneficios que aportan estas tecnologías. Para cerrar la brecha digital, es necesario resolver uno de los problemas clave en el sector empresarial que se representa con la baja percepción sobre las TIC como fuente de mejoras en la productividad y eficiencia de las empresas. Entre los principales retos está aumentar el número de empresas que realicen una planeación estratégica de sus inversiones en TICs, se requiere un esfuerzo adicional para que las empresas capaciten a su personal en el uso de estas nuevas tecnologías, que busquen nuevas formas de utilización. Esto refuerza la idea de que para aprovechar los beneficios potenciales de las TICs las empresas tienen que generar un sistema de relaciones en el cual haya sinergias entre las actividades de innovación, las capacidades de los trabajadores, los cambios organizacionales y las TICs. Reto importante que no sólo las empresas deben enfrentar, sino también el gobierno mediante políticas que den a conocer las ventajas que trae el uso de TICs, así como establecer programas de financiamiento que permitan a este importante grupo de empresas acceder de manera más rápida a la adopción de TICs.

# INDUSTRIAL SECTOR EXPORTS IN COLOMBIA: EFFICIENT FRONTIER ANALYSIS

Jorge A. Restrepo Morales, I.U. Tecnológico de Antioquia  
Lorenzo Portocarrero Sierra, I.U. Tecnológico de Antioquia  
Juan Gabriel Vanegas López, I.U. Tecnológico de Antioquia

## RESUMEN

*Este trabajo realiza un análisis comparativo entre los sectores industriales de Colombia más empleadores en el periodo 2000-2011. Se utiliza la simulación dinámica y se aplica la técnica DEA (Análisis Envolvente de datos), para obtener un índice global de eficiencia técnica de los sectores industriales en Colombia en el uso de sus recursos y establecer un ranking de la eficiencia de los sectores industriales para exportar. Este índice determina la presencia de recursos ociosos, información útil en el diseño de estrategias para apoyo a las exportaciones. Metodología: El análisis se fundamenta en un diagnóstico por medio de simulación dinámica de Montecarlo para determinar los valores promedios del periodo para las variables de entrada: número de establecimientos, personal ocupado, activos y energía consumida utilizados para producir las variables de salida: producción bruta y exportaciones. Se pretende contrastar la efectividad de los factores productivos para generar exportaciones y determinar las posibilidades de mejoramiento de los sectores ineficientes en aras de participar adecuadamente en los procesos de internacionalización.*

**PALABRAS CLAVE:** Simulación dinámica, Análisis Financiero, DEA, exportaciones

## ABSTRACT

*In this paper, a comparative analysis is carried out among the industrial sectors in Colombia that have the most employees during 2000-2011. A dynamic simulation is used, and a Data Envelopment Analysis (DEA) is applied in order to obtain an overall index of technical efficiency in Colombia's industrial sectors for the use of resources. Similarly, an industrial sector efficiency ranking for exports is drawn up. This index determines the presence of unused resources, which is useful to devise strategies to support exports. Methodology: The analysis is based on a Monte Carlo simulation forecast to determine the average values of the period for the input variables: number of businesses, employees, assets, and energy used to produce the output variables. That is, gross production and exports. The purpose is to compare the effectiveness of the factors of production to generate exports, and determine the possibility of improving inefficient sectors. The goal is to participate in the internationalization process in a proper way.*

**KEYWORDS:** Dynamic Simulation, Financial Analysis, DEA, Exports

## INTRODUCTION

DEA is an analysis model through which homogeneous decision making units can be compared with regard to inputs and outputs. This generates a production or relative efficiency measure. The basic principle is to calculate the relative technical efficiency of each unit by means of a ratio that results from the quotient between the weighted sum of the outputs and the weighted sum of the inputs. The weights are determined according to Pareto criteria, where each unit's efficiency, for the input version, must be less than or equal to the unit (Charnes et al., 1997:6). EfficiencyThe

word "efficiency" comes from the Latin word *efficientia*, which means: production, force, action. From a long-term point of view, the concept of efficiency involves getting the maximum profit at the lowest possible cost, Farrell (1957).

From an economic point of view, the concept takes into account the lowest amount of inputs (capital, raw materials, man hours, machine hours, and so on) to get to a certain amount of outputs (profits, production, value added, goals met, etc.). Therefore, efficiency involves using society's resources as efficiently as possible to meet individual wants and needs (Samuelson & Nordhaus, 2002). It also involves the best possible use that a society makes of limited resources (Gregory, 2004). Similarly, achieving the highest production at the lowest possible cost is considered efficiency (Pinzón, 2003), as well as the capacity of a system or economic agent to meet certain goals by using resources as little as possible (Simón, 2005).

According to management theories, on the other hand, the concept is approached as the proper use of resources or available means of production. It is expressed by means of the equation  $E=P/R$ , where P are the resulting products, and R the resources used (Chiavenato, 2004). It is also defined as the achievement of goals with the minimum use of resources (Koontz & Wehrich, 2004). In other words, getting the best results with the lowest investment (Robbins & Coulter, 2005), or working in such a way that resources are used more properly (Reinaldo, 2002).

The ideal condition is to be effective and efficient at the same time. Thus, the concept is made up of two elements: technical efficiency and allocative efficiency. The focus of the former is the use of human resources or capital in the production of goods and services (Trillo, 2002), whereas the latter considers the concept of maximizing profits and minimizing costs in a production unit (Hernández de Cos, et al., 1995).

Simulation Simulation is taken to mean the development of a system's logical-mathematical model to imitate the operation of a real process or system over time. The words "system" and "model" are very important in the previous definition. A system is understood as the collection of variables that interact with each other within certain limits to achieve a goal. On the other hand, the model is a representation of the system's objects, and it expresses the activities in which such objects are involved (Azarang & García, 2006). Simulation is a means that can adapt to the analysis of many situations. Therefore, the pros and cons of using simulations are detailed in Table 7.

Table 7: Pros and Cons of Simulation

<b>Models can be modified to analyze diverse scenarios.</b>	
<b>It is cheaper to improve a simulated system than a real system.</b>	
Pros	It is easier to understand and view simulation methods than purely analytical methods. Analytical methods involve many assumptions and simplifications, whereas simulation models analyze more complex or detailed systems. In some cases, simulation is the only way to get a solution. It takes a lot of time to develop and validate simulation models.
Cons

Data Envelopment Analysis – DEA Models DEA is a means to measure efficiency. It is based on the generation of an efficiency frontier whose starting point is a set of observations of a given event without the estimation of production functions. That is, a functional relation between inputs and outputs is not necessary. It becomes an excellent non-parametric alternative to obtain information from a set of observations. Parametric methods aim to obtain the best adjustment of the observations by generating a hyperplane. On the other hand, the purpose of DEA is to optimize each analysis unit's efficiency measure, and create an efficient frontier. Since it would

be based on real data, it would be efficient and feasible based on the Pareto criterion (Charnes *et al.* 1997). The procedure first involves creating an empirical production frontier, and then evaluating the efficiency of each observed unit that is not limited to the efficiency frontier. From this point of view, it is a parametric model because it does not assume the existence of an input/output functional relation. It is not statistical because it does not assume that efficiency adjusts to any sort of probability distribution as do the input and output consistency tests with the production frontier implemented by (Hanoach & Rothschild, 1972), and (Sengupta, 1987). The tests mentioned above have the sole purpose of proving the validity of certain hypotheses about the production function, such as quasi-concavity, monotonicity and homothety, based on the observations about inputs and data avoiding any parameterization of the production function (Hannoch & Rothschild (1972:256)).

The evaluation criterion is based on the hypothesis that a productive unit belongs to the production frontier when it generates more out of an output without producing less out of the rest, and without consuming more inputs. In other words, it is efficient when it uses less out of an input, without using more out of the rest, and it generates the same products (Charnes C. y Rhodes, 1981).

In the comparison, the efficient and technically homogeneous unit may not be real, but the linear combination of other real units. This characteristic is in line with what was proposed by (Farrell, 1957), and it features two assumptions: first, the possibility of using supplies continually. Second, the efficiency frontier is convex. The first assumption guarantees that the inputs are divisible, whereas the second guarantees that the linear combination of two or more units belonging to the feasible group also has this characteristic. The models have been widely implemented in multiple organizational and social scenarios. In finance, for instance, there is an application to measure the productivity efficiency of textile sector companies' current resources. The purpose is to devise plans to enlarge installed capacity and apply for credit from the financial sector (Restrepo & Vanegas, 2009).

In hospital management, the performance of 45 university hospitals in Brazil is analyzed in order to study the situation of such units through the technical efficiency achieved with a DEA model (Frainer, 2012). Likewise, the technical efficiency of primary care in Costa Rica during 2004 – 2010 is studied through traditional DEA models and Bayesian methods (Salazar, 2012). In the social sphere, a model to evaluate the impact of information asymmetries on the management of social organizations is developed. To this end, DEA models were assessed based on the pillars of information economics in order to express the goals of the members of an organization: principal and agent. The multipliers estimated are understood as assessments allocated by the director and the agent of the social processes. A DEA model with asymmetrical information (AI-DEA) was developed and applied to incorporate the differences in these assessments. It was applied to the system of federal universities in Brazil. The Ministry of Education (MEC) is the director, and the presidents of the universities are considered federal agents. It was found that the DEA model enabled the evaluation of the impact of information asymmetries on the management of federal universities (Franca, 2013).

### Materials and Methods

The DEA method will be used. With it, a concrete indicator of an economic unit (company or sector) can be obtained in relation to the best results from the rest of units in the group of observations. Setting a standard of comparison with the best results guarantees getting such results by improving a company's process and management. The units of measure are independent of the variables used in DEA models

In order to make the technique more operational, and adjust it to the reality of the problem addressed, the version suggested by (Banker, et al., 1984), known as the DEA-CCR input-oriented version, will be used. Below is the structure of the DEA-CCR mathematical model in order to be able to determine both the technical efficiency index of each sector, and the weightings allocated to the several inputs and outputs:

$$\text{Min}_{\theta, \gamma, \delta^+, \delta^-} Z_0 = \theta - \varepsilon(I\delta^+ + I\delta^-)$$

Subject to:

$$\gamma Y = Y_{0+} \delta^+ \quad (1)$$

$$\gamma X = \theta X_0 - \delta^-$$

$$\vec{1}\gamma = 1$$

$$\gamma, \delta^+, \delta^- \geq 0$$

The industrial sector is represented by the sub-index  $\theta$ .  $X$  and  $Y$  represent the input and  $i$  output  $r$  amounts of the sector  $j$  respectively.  $\lambda$  reflects the weightings (unknown) allocated to the input  $i$  and output  $r$  of the sector being evaluated. Finally,  $\theta$  represents the efficiency rate of the evaluated sample unit.

Data

#### Variables Used in the Input-Oriented DEA-CCR Model

In order to develop the proposed index, a relation needs to be established between the inputs (number of businesses, employees, assets, energy consumed) and outputs (exports, gross production of the industrial sectors that generate the highest rate of employment during 2000-2011). The variables used are described below:

Number of businesses (NB): the number of businesses registered in the country per industrial sector

Employees (E): the employees reported by the companies of each sector in the Annual Manufacturing Survey (AMS)

Assets (AT): the assets of the industrial sectors in thousands of millions of pesos

Energy Consumed (EC): the energy consumed in kW/h by the industrial sector as reported in the AMS

Exports (EX): the sector's exports in millions of dollars

Gross Production (GP): what each industrial sector produced in thousands of millions of pesos

In order to compare the industrial sectors in Colombia, information broken down by sector is needed. The information provided by DANE solves this need with the studies of companies. The data to develop the DEA were provided by the export reports per sector and the AMS of 2000-2011. The values were expressed in Colombian pesos, and the exports in dollars. Estimated DEA Model The DEA technique was used in order to find out each sector's export efficiency. Applying

the data envelopment analysis implies the definition of a utility function. That is, the description of two outputs and four inputs. For the outputs, the EX and GP variables were used. Regarding the inputs, they are incorporated as general factors that determine efficiency: number of businesses, employees, amount of assets, electric energy consumed.

Source: developed by the authors on Risk Simulator

Table 8 shows that the sectors CIIU15, CIIU18 and CIIU24 are on the production frontier. On the other hand, the sectors CIIU17, CIIU25, CIIU26, CIIU36 and CIIU28 have been inefficient during 2000-2011. It is important to note that CIIU22 is out of the efficiency frontier in 2011, and the improved efficiency of

CIIU36, which in the last five years reached levels of over 80%. For inefficient sectors, the probability mass function was determined in order to be able to perform the simulation. The results are shown in Table 3.

The sectors CIIU25, CIIU17, CIIU26, CIIU28, CIIU36 and CIIU22 have been inefficient in 2011. The efficiency was determined for the period 2000-2011. However, for illustration purposes, the results are presented in Table 9, but the analysis per sector is carried out for 2011, and only for CIIU17. The rest of the sectors are analyzed in a similar way. According to results which shows input and output information for 2011, CIIU17 has the following inputs: 419 businesses; 45,972 employees; assets are worth 4,635 million; and there was a consumption of 897,000 million in energy. This generated 564,000 million dollars worth of exports, and a gross production of 4,873 million. The results of the DEA model are shown in Table 9. According to these, sector 17 – highlighted in red – must have an NE input of 236 for it to reach the efficient border. Thus, the current basis is reduced by 43,73%, which means 183 fewer businesses. The number of employees must be about 18,688, which is a reduction of 59,35%. This is equivalent to the loss of 27,283 jobs in the sector. The total amount of assets must go from 4,635 million to 2,208. This is a reduction of 43,73%, which means 2,027 million less in assets. The EC would go from 897 to 321. This is a reduction of 62,52%, which means 576,000 million pesos less in consumption. The other sectors are analyzed similarly with the information in Table 8, Table 9 and Table 10.

Source: developed by the authors based on the data provided by AMS 2000-2011

Table 11 features the comparison of sectors. It shows that the efficient sectors have a value of 1.0 when cross-checked. On the other hand, the inefficient sectors are compared with the efficient ones. Thus, the degree of inefficiency of, for instance, sector CIIU17, becomes evident. It should adopt the administrative practices of CIIU24 to come close to the production frontier, since it is at 28,65% of CIIU24. Likewise, the chart on the right shows the efficiency results for CIIU17 during 2000-2011. It has always been below the efficiency frontier. It had values of over 80% in 2008, but in 2001, it sank to historical levels, and it has 56,27%. The charts for all the inefficient sectors can be viewed in Appendix 2. Conclusions and Recommendations In spite of the importance that the industrial sector has in the country's development, it has weaknesses related to technical efficiency that undermine its competitiveness. Similarly, these weaknesses increase the sector's vulnerability before new globalization challenges posed by the world's dynamics. This study provides entrepreneurs with elements to understand the importance of managing technical efficiency. Likewise, entrepreneurs will find its interpretation by means of efficiency indicators that provide information about the productivity of the sectors' current resources.

As shown, a high percentage of the sectors must reduce their inputs (NB, E, AT, EC) to reach the efficiency frontier of production, or increase their outputs without changing the combination of inputs. The data shown above are key to making plans to enlarge installed capacity, and applying for credit from the financial sector. It is imperative to check which resources are not used, and the impact they have on the generation of value. In view of the value generation concepts, every single inefficient sector is undermining the value of our economy. Despite the fact that EBITDA is deemed an appropriate measure to determine the generation of a company's value, problems arise when this is the only way to measure an organization's performance. One of the reasons is that it does not take efficiency into account. It is necessary to combine a company's financial performance with risk- and efficiency measures. This paper presents a non-parametric method to measure the latter. Risk-measurement is suggested as a complement to determine the real effect that it will have on value for stakeholders. Entrepreneurs must reflect carefully on the aspects mentioned above. They may be more important than the results obtained in the mere figure of cash flow and EBITDA.

## RESUMEN

*Las tendencias del comercio internacional han modificado la estructura de costos, precios, logística, cadenas de suministros y por consiguiente de las ventajas comparativas, estas tendencias de igual manera han definido la competitividad comercial de los países siendo cada vez más relevante el nivel de integración de las redes mundiales de transporte como factor impulsor del comercio internacional. En este trabajo se evalúa, a través del Análisis de Componente Principales, la competitividad del transporte aéreo y marítimo internacional considerando a su vez las variables más importantes que inciden en este sector y el desempeño de las economías respecto de dichas variables, estudiando la estructura del sistema de transporte aéreo y marítimo internacional para veintinueve países, entre ellos siete de América Latina. Los resultados mostrados en el índice de competitividad del transporte internacional, señalan que los países más competitivos en materia de transporte aéreo y marítimo internacional de acuerdo a las variables analizadas son, en orden descendente, Estados Unidos, China, Australia, Panamá, Alemania, Hong Kong, Chile, Singapur, Corea, Argentina, Bélgica, España, Canadá, Japón y Reino Unido. Destaca también que los países de América Latina con mayores puntuaciones en este rubro son Panamá, Chile, Argentina, Brasil, México, Perú y Costa Rica.*

**PALABRAS CLAVE:** Transporte aéreo internacional, transporte marítimo internacional competitividad, comercio exterior, Análisis de Componentes Principales.

## COMPETITIVENESS OF AIR AND MARITIME MEXICAN TRANSPORT UNDER THE FOREIGN TRADE

### ABSTRACT

*International trade trends have changed the cost structure, pricing, logistics, supply chain and hence comparative advantages, such trends have similarly defined the trade competitiveness of countries becoming more relevant the level of integration of global transport networks as a driver of international trade. In this paper we evaluate through Principal Component Analysis methodology the international transport competitiveness considering the most important variables that affect this sector and the economic performance of these variables on transportation, analyzing the structure of the international transport system of twenty-nine countries including seven Latin American countries. The results shown in the competitiveness index of international transport, indicate that the most competitive countries in the field of international aviation and maritime transport according to the variables analyzed are, in descending order, the United States, China, Australia, Panama, Germany, Hong Kong, Chile, Singapore, Korea, Argentina, Belgium, Spain, Canada, Japan and the UK. Also stresses that the*

*Latin American countries with higher scores in this category are Panama, Chile, Argentina, Brazil, Mexico, Peru and Costa Rica.*

**JEL:** F02, F40, F16, F12 y M16.

**KEY WORDS:** International air transport, International shipping competitiveness, foreign trade, Principal Component Analysis

## INTRODUCCIÓN

Actualmente la competitividad en los mercados internacionales ya no depende únicamente de las variables intrínsecas de los productos como calidad y precio, puesto que las exigencias del mercado, así como la propia globalización han hecho que factores dentro de la cadena logística por la que atraviesan los productos para poder llegar a los consumidores sean crucial en términos de competitividad.

Uno de los elementos clave de la logística del comercio internacional es sin lugar a dudas el transporte que habrá de utilizarse para hacer llegar la mercancía del almacén del exportador hasta las manos del consumidor. Por lo que, si se busca la competitividad de las economías en el marco del comercio global es necesario que los elementos que inciden tanto en el precio, como calidad y tiempos sean igualmente competitivos, de lo contrario tenderán a mermar el posicionamiento de los productos domésticos en los mercados foráneos.

El transporte internacional se puede dividir en cuatro rubros principales: transporte marítimo, transporte aéreo, transporte carretero y transporte ferroviario. Adicionalmente se puede considerar el transporte por ductos y cables para productos específicos. A pesar de que los cuatro tipos de transporte son sumamente relevantes, el presente trabajo se enfoca al estudio del transporte aéreo y marítimo únicamente, esto con el objetivo de hacer un análisis más profundo de los sectores mencionados.

En sus inicios el transporte aéreo no fue planeado como transporte de carga, debido al diferencial de costos respecto de otros tipos de transporte. No obstante, las ventajas que ofrece este medio de transporte aunadas a las exigencias del mercado han hecho que el transporte aéreo poco a poco se esté posicionando en el comercio mundial, y aunque actualmente solo mueve el 0.5 por ciento en volumen, mueve el 35 por ciento en valor (Oxford Economics, 2012). Entre las ventajas del transporte aéreo destacan: la rapidez de entrega, la seguridad (bajo índice de robos y/o hurtos), la puntualidad de entrega, bajos gastos de almacenaje y la continuidad de las rutas (OMC, 2012).

El transporte marítimo representa el 80 por ciento del volumen del comercio mundial, por lo que actualmente se considera la columna vertebral del transporte internacional, por lo cual en años recientes, los servicios marítimos han experimentado una considerable expansión impulsada por la mundialización. Muchas políticas marítimas restrictivas han desaparecido o se han dejado de aplicar. La revolución tecnológica del contenedor y los avances en buques de carga han acelerado el crecimiento de este transporte (ONU, 2013).

En este contexto, la finalidad del presente trabajo es determinar cuáles son las principales variables que inciden en los niveles de competitividad del transporte aéreo y marítimo internacional en los países con mayor participación en el comercio internacional, así como conocer el grado de competitividad de dichos países en materia de transporte aéreo y marítimo internacional; para lo cual se utiliza como herramienta metodológica el Análisis de Componentes Principales, la cual permite un análisis multidimensional y multivariante. Para el análisis empírico

fueron seleccionados 29 países, 25 países considerados por la Organización Mundial de Comercio (OMC) como los principales exportadores e importadores mundiales de mercancías (OMC, 2013) siendo estos: Alemania, Australia, Bélgica, Brasil, Canadá, China, Corea, Dinamarca, España, Estados Unidos, Francia, Hong Kong, India, Indonesia, Italia, Japón, México, Panamá, Reino Unido, Rusia, Singapur, Suiza, Suecia, Tailandia y Turquía. Adicionalmente se incluyeron en la investigación otros 4 países de América Latina con mayor flujo en su comercio exterior: Argentina, Chile, Costa Rica y Perú, con la finalidad de tener un mejor panorama de la situación de América Latina respecto del transporte aéreo y marítimo internacional como factor de competitividad del comercio exterior.

Este trabajo se divide en cinco secciones, incluida esta introducción. En la sección II se realiza una revisión de la literatura sobre la importancia del transporte internacional como factor de competitividad del comercio exterior. Mientras que, en la sección III se detalla la metodología utilizada y se presentan los datos empleados en el análisis empírico. En la cuarta sección se analizan los resultados obtenidos y en la quinta se resumen las principales conclusiones alcanzadas y algunas consideraciones pertinentes.

## REVISIÓN DE LITERATURA

Sin duda, el transporte internacional es un elemento clave en la logística del comercio exterior, puesto que es el que garantiza el desplazamiento físico del producto desde el lugar de generación del valor, hasta el mercado donde los consumidores están dispuestos a adquirirlo. Por lo que el estudio de las variables que determinan el papel del transporte internacional como factor de competitividad en el Comercio Exterior resulta trascendental si se busca hacer más eficiente la participación de los países y empresas en los mercados internacionales.

Existen diversos estudios que buscan analizar las variables determinantes del transporte de carga internacional entre los que destacan:

El estudio realizado por Chemonics International, Inc. donde analiza los componentes principales del sistema de transporte y la cadena logística marítima de Swaziland, particularmente revisando los factores que afectan la competitividad de la industria textil de la región. Dentro de los hallazgos derivados del estudio se concluyó que existen retrasos significativos en los tiempos estipulados y altos costos del transporte (Chemonics International, Inc., 2004).

Boske (2001); Boske y Harrison (1995); Buxbaum (2006); Herrera (2005); Kruse et al. (2004) y Mireles (2005) concluyen en sus estudios que la frecuencia del servicio, la flexibilidad de horarios, la infraestructura desarrollada y los plazos de ejecución son variables determinantes de la competitividad del sistema de transporte internacional.

De acuerdo con Fuller et al (2001) al realizar mejoras en el sistema sudamericano del transporte de exportaciones de maíz y frijol de soya, estas se incrementaron en un 8 y 2 por ciento respectivamente, las áreas optimizadas fueron seis: aumento de la eficiencia en los puertos, mayor navegabilidad en los ríos considerados clave (parte baja del Rio Paraná), aumento de la extensión del sistema ferroviario, mejora de caminos pavimentados y construcción de caminos pavimentados (carretera BR-163) y la privatización de algunas vías ferroviarias en Argentina y Brasil (Fuller, Yu, Fellin, Lalor, & Krajewski, 2001).

Smith, Miller y Parhizkar (2008) afirman que el mejorar los sistemas de transporte es un elemento crítico en el éxito de los negocios, comunidades y la gente; lo que conlleva a la mejora de la

competitividad internacional. En su estudio concluyen que, en cuanto al problema de la falta de competitividad del transporte, destacan: los elevados costos, la infraestructura del transporte (carretera, vías férreas y puertos).

La Comisión Económica de las Naciones Unidas para Europa en su estudio *Global Supply Chains, Transport and Competitiveness* (2009) considera al transporte como una de las fuerzas motoras del crecimiento económico y el desarrollo social. De tal forma, resulta crítico el estudio del transporte a fin de lograr incrementar su eficiencia. Este mismo estudio señala como los indicadores estadísticos más relevantes: los modales, de capacidad, de desempeño y del ambiente (Pesut, 2009).

Chow y Gill (2011), señalan que la infraestructura de transporte es uno de los componentes principales de los índices de competitividad logística internacional, donde considera como variables clave de la red de transporte el despliegue de contenedores, capacidad de contenedores, número de compañías de transporte, tiempo promedio y tiempo máximo de duración del transporte (Chow & Gill, 2011).

Ante un debilitamiento de la competitividad logística en el comercio exterior del Noreste Asiático, Song y Na (2012) buscan desarrollar una red de transporte más eficiente y confiable, al analizar la situación actual del sistema de transporte entre el Noreste Asiático y Europa y sus características técnicas, considerando el transporte marítimo y el ferroviario. Las variables utilizadas en este trabajo fueron las distancias, los días que toma realizar la traspotación, carga o tonelaje y los costos. Destaca entre sus conclusiones la importancia de la reducción de los tiempos requeridos para el transporte por lo que Song y Na realizan diversas propuestas de medidas en este sentido. Así mismo, los autores destacan la importancia de la eficiencia en el sistema de transporte internacional, particularmente el férreo para la integración de las regiones objeto de estudio (Song & Na, 2012).

## **DATOS Y PROCEDIMIENTOS METODOLÓGICOS**

El Análisis Factorial de Correspondencias, ideado por el estadístico francés Benzecri en 1973, fusiona al Análisis de Proximidades con el Análisis de Componentes Principales logrando un análisis de similaridad (Callealta, 2005).

El Análisis Factorial es una técnica estadística multivariante cuyo objetivo principal es la definición de una estructura subyacente en una matriz de datos. El análisis factorial permite resolver el problema del análisis de la estructura de las interrelaciones (correlaciones) existentes en un número elevado de variables y casos, definiendo un número de dimensiones comunes subyacentes, denominadas componentes.

Esta metodología ha sido utilizada en publicaciones reconocidas como lo son el cálculo del índice de competitividad de *The Global Competitiveness Report* del Foro Económico Mundial (*The World Economic Forum*), el cálculo del índice de competitividad del *IMD World Competitiveness Yearbook (WCY)*, publicaciones de la CONAPO y el CIDE entre otros.

Cabe destacar que existen diversos métodos de extracción de factores y la elección del modelo a utilizar depende de diversas cuestiones como son el objetivo de la investigación, el tipo de información a procesar. Dentro de la variedad de métodos de extracción de factores que existen destaca: el de Máxima Verosimilitud utilizado generalmente cuando los datos tienen el comportamiento de una distribución normal, otro método es el de Factores Principales, siendo

una modalidad el de Factores de Componentes Principales y otra la de Factores Principales Iterados; el primer método asume que las varianzas comunes son iguales a 1 y por tanto las varianzas únicas son cero y el segundo comienza con un procedimiento similar al de factores principales y se repite hasta que todas las cargas factoriales convergen.

No obstante, las bondades de los diferentes métodos de extracción de factores o estimación de cargas factoriales, se ha seleccionado el de componentes principales, puesto que se busca explicar la varianza total y no solamente la varianza común de la matriz de las variables originales ya que se consideran tanto la varianza total y estima los factores que contienen proporciones bajas de la varianza única, y en algunos casos la varianza del error.

Esta metodología estudia la dependencia entre las variables y la asociación entre atributos logrando una revisión de la intensidad de las atracciones y repulsiones entre las modalidades que pueden presentar las características cualitativas, realizándose a partir del estudio de las frecuencias conjuntas observadas y recogidas (Miquel, Bigné, Lévy, Cuenca, & Miguel, 1997).

Adicionalmente del análisis de atracción-repulsión entre modalidades de atributos (variables) diferentes, la técnica del Análisis Factorial de Correspondencias también permite realizar estudios de proximidad (similaridad/disimilaridad) entre las modalidades de una misma variable; es decir, permite evaluar la homogeneidad o sustituibilidad de las mismas. Para esto, se realiza la proyección de las modalidades sobre un espacio métrico en el que se aplica el Análisis de Componentes Principales para facilitar la interpretación causal simple de los comportamientos de similitud-atracción (Kim & Mueller, 1978).

El análisis de la similaridad (proximidad) existente entre las modalidades de un atributo (variable) -representadas por las respectivas distribuciones de frecuencias- condicionadas a su vez, por la distribución de modalidades de otro atributo, permite analizar la homogeneidad de éstos en dos espacios diferentes, uno de dimensión  $q$  y otro de dimensión  $p$ ; para lo que se introduce y emplea la distancia de Benzecri, que es una ponderación entre los puntos de manera inversamente proporcional a sus frecuencias (Castillo & Rodriguez, 2002). El análisis de la asociación entre modalidades de los dos diferentes atributos será el resultado de conectar estos dos espacios y en consecuencia, proyectarlos en un espacio común tridimensional donde la proximidad será interpretada como atracción y el alejamiento como repulsión, aplicando para esto el Análisis de Componentes Principales (Kruskal & Wish, 1981).

El Análisis Factorial de Correspondencias consta de cuatro fases principales: las pruebas de confiabilidad, el cálculo de una matriz que exprese la variabilidad conjunta de las variables, la estimación de las puntuaciones gráficamente, y la determinación del índice de competitividad.

## RESULTADOS Y DISCUSIÓN

Los primeros resultados de la investigación, se obtienen de la Matriz de Componentes Rotados, donde quedan ya claramente definidas las variables en un espacio (Pérez, 2006) y (Kendall, 1990). A fin de determinar la variables del transporte aéreo y marítimo que inciden en la política comercial, se agrupan las variables de la siguiente manera: en el factor uno, quedan alineadas las variables transporte aéreo de carga, número de aeropuertos, número de aeropuertos pavimentados y terminales portuarias; en el factor dos se localizan los indicadores puertos y aeropuertos distancia exportación (km), puertos y aeropuertos costos de exportación (USD), puertos y aeropuertos distancia importación (km) y puertos y aeropuertos costos de importación (USD); en el factor tres, tráfico de contenedores puerto (TEU), índice de conectividad del transporte

marítimo (valor máximo=100) y el comercio de mercancías (porcentaje del PIB); en el factor cuatro se encuentran los indicadores servicios de transporte (porcentaje de las importaciones, balanza de pagos), calidad de la infraestructura portuaria y calidad de actividades relacionadas con el transporte; en el quinto factor servicios de transporte (porcentaje de las exportaciones de servicios, balanza de pagos) y marina mercante; y, por último, en el factor seis, los indicadores puertos y aeropuertos plazos de ejecución exportación (días) y puertos y aeropuertos plazos de ejecución importación (días).

La matriz de componentes rotados, de manera adicional, da cuenta de la relación que existe entre las propias variables, puesto que aquellas que se encuentren correlacionadas o bien que de alguna manera tengan el mismo enfoque o perspectiva de la problemática a estudiar tenderán a agruparse en un mismo componente, lo que permite ver qué variables están interconectadas entre si y respecto del componente (véase tabla 2).

De acuerdo con los primeros resultados obtenidos, se agrupan las variables con aquellas que tengan más asociación y por el grado de la varianza que están explicando, de modo que en este caso las variables se agrupan en seis dimensiones. El primer factor agrupa a los indicadores relacionados con la infraestructura del transporte aéreo y marítimo internacional, distinguiéndose por ser las de mayor peso al explicar el 26.205 por ciento de la varianza. El segundo factor considera los indicadores que muestran las distancias y costos en el transporte aéreo y marítimo internacional cuya proporción de la varianza explicada es de 19.82 por ciento. El tercer factor tiene una varianza explicada de 10.89 por ciento con los indicadores vinculados en el tráfico y comercio de mercancías. El factor cuatro explica los indicadores que se relacionan con la calidad y transporte aéreo y marítimo siendo del orden del 10.336 por ciento de la varianza. El factor cinco toma los indicadores asociados a los servicios de transporte y marina mercante con una proporción de la varianza del 8.378 por ciento y el factor seis representa a los indicadores asociados con plazos de ejecución del transporte aéreo y marítimo internacional con el 6.309 por ciento (ver tabla 3).

Tabla 2: Matriz de Componentes Rotados, Transporte Aéreo y Marítimo Internacional

	Componente					
	1	2	3	4	5	6
Puertos y aeropuertos distancia exportación (km)	.033	.822	-.017	.091	.323	.109
Puertos y aeropuertos plazo de ejecución exportación(días)	.060	.108	.091	.233	.091	.869
Puertos y aeropuertos costos de exportación (USD)	-.092	.554	.485	.180	-.214	.335

*La rotación ha convergido en 7 iteraciones.*

*Fuente: Elaboración propia con base en los resultados obtenidos del Análisis Factorial de Correspondencias.*

Al analizar los resultados obtenidos por factores, se puede precisar con mayor detalle cuales son las áreas de oportunidad y las fortalezas para cada uno de los países analizados en materia de competitividad del transporte internacional. La determinación del índice de competitividad se deriva a partir de la información que se obtiene de las puntuaciones factoriales o factor scores (Cox y Cox, 1994). Para obtener las puntuaciones factoriales es necesario calcular un promedio ajustado de las cargas factoriales rotadas. Este promedio ajustado se obtiene de la suma de los valores absolutos de las cargas factoriales elevadas y divididas entre el número de variables con carga factorial en cada factor en cuestión; siempre y cuando estas variables estén altamente correlacionadas y no tengan alta correlación con otros factores distintos (Martínez, 2010).

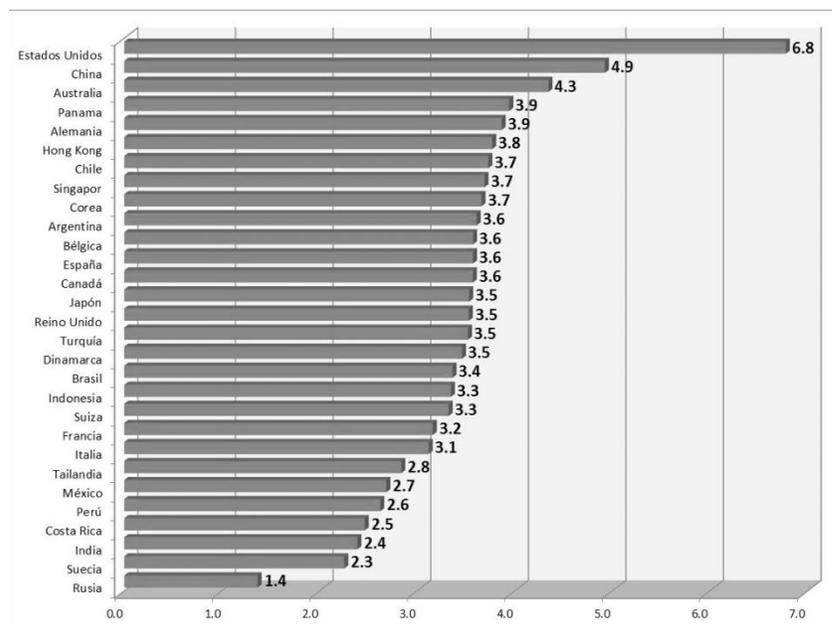

Tabla 3. Variables Agrupadas del Transporte Aéreo y Marítimo Internacional

Factor	Dimensión	Proporción de Varianza Explicada
Factor 1	Infraestructura del transporte aéreo y marítimo internacional	26.205%
Factor 2	Distancias y costos en el transporte aéreo y marítimo internacional	19.82%
Factor 3	Tráfico y comercio de mercancías	10.89%
Factor 4	Calidad y transporte aéreo y marítimo internacional	10.336%
Factor 5	Servicios de transporte de carga y marina mercante	8.378%
Factor 6	Plazos de ejecución del transporte aéreo y marítimo internacional	6.309%

Fuente: Elaboración propia.

El índice de competitividad de la variable transporte aéreo y marítimo internacional revela que el país más competitivo en materia de transporte aéreo y marítimo internacional es Estado Unidos, seguido en orden descendente de China, Australia, Panamá, Alemania, Hong Kong, Chile, Singapur, Corea, Argentina, Bélgica, España, Canadá, Japón y Reino Unido. En la parte media se encuentran Turquía, Dinamarca, Brasil, Indonesia, Suiza y Francia. Mientras que en la parte baja se localizan Italia, Tailandia, México, Perú, Costa Rica, India, Suecia y Rusia (ver figura 5).

Figura 5. Competitividad en el Transporte Aéreo y Marítimo Internacional

Fuente: Elaboración propia con base en los resultados obtenidos del Análisis Factorial de Correspondencias.

## CONCLUSIONES Y CONSIDERACIONES FINALES

En este trabajo se analizaron las principales variables que influyen en los niveles de competitividad del transporte internacional como factor determinante del comercio exterior y se presentó un índice derivado del análisis empírico del grado de competitividad de los 29 países objeto de estudio en materia de transporte internacional. Los resultados obtenidos a través del Análisis de Componentes Principales indican que si bien todas las variables incluidas en el estudio influyen en la competitividad del transporte aéreo y marítimo internacional, las variables con un mayor peso son la infraestructura del transporte aéreo y marítimo internacional (con el 26.205 por ciento de la varianza explicada) seguida de las distancias y costos en el transporte aéreo y marítimo internacional (19.82 por ciento).

El índice de competitividad del transporte internacional los países más competitivos en materia de transporte aéreo y marítimo internacional son en orden descendente Estados Unidos, China, Australia, Panamá, Alemania, Hong Kong, Chile, Singapur, Corea, Argentina, Bélgica, España, Canadá, Japón y Reino Unido. En la parte media se encuentran Turquía, Dinamarca, Brasil, Indonesia, Suiza y Francia. Resaltando que los países con mayores puntuaciones en este rubro de América Latina son Panamá, Chile, Argentina, Brasil, México, Perú y Costa Rica.

Si bien todavía queda mucho por examinar con respecto a la importancia del transporte internacional y particularmente del transporte aéreo y marítimo, sus variables y particularmente de la competitividad de este sector como parte del proceso de apertura comercial, este trabajo constituye un marco inicial dada la escasez de estudios sobre el tema particularmente en América Latina. Como es obvio, la profundización en esta área puede ser de gran ayuda para la comprensión de las diferencias regionales y la formulación de políticas comerciales.

Los resultados que aquí se presentan ofrecen un espacio para debatir sobre la importancia del transporte en el marco del comercio internacional, así como las variables que tienen una mayor incidencia en el flujo de bienes. Cabe señalar que los retos del sistema de transporte se han incrementado debido a una mayor demanda en la especialización de las unidades, a una tendencia acelerada hacia el apoyo de redes logísticas más flexibles, a la minimización de inventarios, al incremento de los requerimientos para aumentar la rentabilidad del servicio de transporte sobre grandes distancias, aunado a los incrementos del precio del combustible y los costos de transporte.

# PERCEPCIÓN DE LA CALIDAD DEL SERVICIO EDUCATIVO DOCTORAL

Oscar Reyes Sánchez, Universidad Autónoma de Baja California  
Marcela Reyes Pazos, Universidad Autónoma de Baja California

## RESUMEN

*Esta investigación tiene como objetivo analizar la percepción de la calidad del servicio educativo de los alumnos de un grupo de doctorado en educación de un Centro Universitario Particular, campus Mexicali, durante el cuatrimestre 2013-1. El estudio parte del análisis de las dimensiones: Elementos tangibles, confiabilidad, capacidad de respuesta, seguridad y empatía. Se aplica una versión modificada del SERVQUAL, el SERVQUALing, se trabajan los datos con las técnicas estadísticas descriptivas y multivariantes como la correlación de Pearson, regresión múltiple y reducción factorial, se realizan pruebas de validez y fiabilidad, como el coeficiente alfa de Cronbach, se utiliza el software SPSS versión 20.0 y se utilizan las técnicas de grupo focal, entrevista a profundidad, en el análisis cualitativo, apoyado con el software ATLAS.TI, versión 7.2, se categorizan y describen las relaciones conceptuales. El paradigma epistemológico utilizado es transparadigmático, en un estudio de caso, utiliza un traslape en el análisis cuantitativo y cualitativo que enriquecen los resultados y conclusiones obtenidas, para la contribución a la planeación estratégica, en el diseño e implementación de estrategias de mejora en la calidad de la educación superior de nivel doctoral.*

**PALABRAS CLAVE:** Servqual, Servqualing, satisfacción del cliente

## ABSTRACT

*This research aims to analyze the perception of the quality of education of students in a group of doctoral education of a Private University Center , Mexicali campus during the semester 2013-1 . The study of the analysis of the dimensions : Tangibles , reliability , responsiveness , assurance and empathy . It applies a modified version of SERVQUAL , the SERVQUALing , data is working with descriptive and multivariate statistical techniques such as Pearson correlation , multiple regression and factor reduction , are tested for validity and reliability , as Cronbach 's alpha coefficient was using SPSS version 20.0 software and techniques used focus groups, depth interviews , qualitative analysis , supported with ATLAS.TI software , version 7.2 , are categorized and described the conceptual relationships . The transparadigmatic epistemological paradigm is used in a case study using an overlap in the quantitative and qualitative analysis to enrich the results and conclusions obtained for the contribution to strategic planning in the design and implementation of strategies for improving the quality higher education doctoral level.*

**JEL:**123

**KEYWORDS:** Servqual, Servqualing, Customer satisfaction

## INTRODUCCION

Esta investigación es importante en la actualidad porque toca el concepto de la calidad del servicio percibido por el cliente como una de las estrategias que utiliza actualmente la administración para mejorar la producción de servicios en las empresas gubernamentales,

privadas, sin fin o con fin de lucro, con ello mantenerse y en lo posible liderar el mercado de servicios. Otro aspecto importante que se destaca en esta investigación es el estudiar la percepción de la calidad del servicio, al ser un elemento más complicado para su medición que la calidad del producto, ya que la calidad del servicio es doblemente abstracta o subjetiva debido a la percepción del cliente. Pero ha sido demostrado el hecho de ser confiable medir las percepciones con instrumentos como la escala de actitudes hacia el servicio llamada escala Likert o la escala de Diferencial Semántico. Además, el tema de la administración de la educación a nivel universitario resulta relevante y novedoso porque no es una acción cotidiana medir la percepción de la calidad del servicio educativo de sus clientes (estudiantes). La formulación del problema es ¿Qué relación existe entre la percepción de la calidad del servicio educativo y la importancia atribuida a las dimensiones que integran la calidad del mismo, de los estudiantes de la Generación 15 del Doctorado en Educación del Centro Universitario Tijuana Campus Mexicali?. Se plantea la hipótesis general: La percepción de la calidad del servicio educativo está relacionada con la importancia atribuida a las dimensiones que integran la calidad del mismo. El presente estudio es relevante al utilizar la propuesta de Parasuraman adaptada a la administración de la educación con el instrumento Servqual y Mejías, mide la calidad del servicio, denominado Servqualing. La calidad se determina por las interrelaciones entre los factores como el producto, usuario, y servicio. Se presenta un instrumento de investigación cuantitativo, en el cual se revelan nuevas dimensiones latentes en la percepción del servicio educativo universitario de estudiantes investigados, en este caso, de la generación 15 del doctorado en educación del Centro Universitario, Campus Mexicali. Es un instrumento confiable y válido para ser utilizado en contextos similares. Otro aporte sustancial es complementarlo con técnicas cualitativas para conocer más la singularidad de la percepción de la calidad del servicio educativo de los sujetos bajo estudio.

La propuesta metodológica es un avance epistemológico al ubicarse en el paradigma epistemológico multirreferencial que permite un estudio más completo del objeto en el proceso de investigación.

La escala cualitativa de medición “Likert” es un instrumento de apoyo para la toma de decisiones y la planeación estratégica del desarrollo institucional del Centro Universitario. Es una fuente bibliográfica y modelo de la utilización de técnicas de medición de la percepción de la calidad del servicio en general y la aplicación de los métodos estadísticos multivariantes como el coeficiente de fiabilidad alfa de Cronbach\* y el Análisis factorial (Reducción de factores) para el estudio de variables latentes, así como el uso de técnicas de investigación de carácter cualitativo, que permitirán conocer al objeto de estudio desde una perspectiva epistemológica multirreferencial. El objetivo general es analizar la relación que existe entre la percepción de la calidad del servicio educativo y la importancia atribuida a las dimensiones que integran la calidad del mismo. Esta investigación se delimita al estudio de caso de la población generación 15 del Doctorado en Educación del Centro Universitario, Campus Mexicali, utilizando muestras a conveniencia del investigador, por lo que los resultados obtenidos son de carácter descriptivo correlacional cuya aplicación a otros contextos será mediante el uso de analogías y no con el rigor científico de paradigma epistemológico cuantitativo.

## REVISIÓN DE LITERATURA

El análisis de la Calidad del Servicio se inicia formalmente en 1985 con los autores Parasuraman, Zeithami y Berry (1985), los cuales proponen un modelo de medición de la CS comparando las expectativas y las percepciones de los clientes, el cual es redefinido y denominado SERVQUAL por los mismos autores en 1988. Desarrollaron un modelo de medición de la calidad en el servicio en el que se presenta a ésta como un proceso multidimensional. Concluyen que: las percepciones

de calidad de los clientes están influenciadas por una serie de diversas diferencias que ocurren en el lado de quien ofrece el servicio y proponen la necesidad de examinar la naturaleza de la asociación entre la CS percibida por el cliente y sus determinantes (denominados gaps). Primero identifican 10 determinantes y después las reducen a 5 dimensiones. Concluyen que los factores encontrados son determinantes en la CS. Implican principalmente; comunicación y procesos de control que deben ser analizados a través de datos cuantitativos de estudios exploratorios. La mayoría de las investigaciones llevadas a cabo hasta ahora se basan en el trabajo original de Parasuraman et al. (1985, 1988). De una u otra forma, han criticado, han ampliado o por lo menos lo han tomado como punto de comparación. Este mismo trabajo es el principal sustento teórico en que se basa el modelo SERVQUALing propuesto por Mejías, A., (2006), Mejías, Reyes, Maneiro (2006), Reyes, M & Reyes, O., (2011), Reyes, O., Reyes, M. & Rodríguez P. (2011), Reyes, O., & Reyes, M. (2012), Reyes (2012), para medir la percepción de la Calidad del Servicio en las instituciones educativas, en las cuales no contaba con antecedentes formales, se adaptaron las dimensiones a la educación superior: Elementos Tangibles. *Apariencia de las instalaciones Físicas, Equipos, Personal y Materiales de Comunicación. Confiabilidad. Habilidad para ejecutar el Servicio Prometido de Forma Fiable y Cuidadosa. Capacidad de respuesta. Disposición y Voluntad del Personal de la Institución para ayudar al estudiante y proporcionar el servicio. Seguridad. Conocimientos y atención Mostrados por el personal de la institución y sus habilidades para inspirar credibilidad y confianza. Empatía. Atención individualizada que ofrece la institución a los estudiantes.*

Para mejorar la calidad en las instituciones de educación superior, enfocadas como empresas de servicios, es necesario cumplir con las peticiones de la sociedad, porque ella es la que decide ingresar a la mejor escuela para recibir una educación de calidad. Como consecuencia de los cambios socioeconómicos y tecnológicos analizados surge un nuevo paradigma organizacional y empresarial caracterizado precisamente por la forma en que aparecen esos cambios que no aparecen como hasta ahora de manera gradual y sobre todo predecible sino de forma compulsiva e inesperada. Por eso, si el entorno cambia y lo hace tan bruscamente y de manera tan inesperada, inevitablemente han de hacerlo las estructuras organizacionales, la configuración y diseño del producto o servicio que se ofrece en el caso educativo será intangible, pero perceptible- las formas de empleo y por supuesto la atención al cliente o usuario. (Tobón, et al, 2006). La percepción de la calidad del servicio por parte del estudiante es de gran interés para las instituciones de educación superior, porque en la actualidad existe más universidades tanto públicas como privadas que compiten por estar certificados con las normas ISO9000 y ofrecer el mejor servicio de educación pero no saben que es lo que piensan los usuarios al respecto.

Por lo tanto es importante hacer distinción entre calidad y evaluación, pues mientras la calidad de la educación implica un proceso de mejora continuo sobre sus elementos, también requiere necesariamente de la evaluación, Garduño (1999). Cabe mencionar que no todas las instituciones de educación superior en México públicas o privadas cumplen con los requerimientos de calidad y algún tipo de certificación por algún tipo de organismo acreditador u organización. También es indispensable conocer las necesidades que demandan los estudiantes, para que con ayuda de sus aportaciones, sirven para crear un instrumento que realice las mediciones de la calidad del servicio de acuerdo a lo que ellos piden. Conocer las características que los usuarios requieren en el servicio, para conocer si se cumple con lo que los alumnos solicitan. Una estrategia para incrementar la calidad en estas instituciones es satisfacer la demanda de servicio de los alumnos, con el fin de cumplir con esa parte donde la empresa tiene que satisfacer a su cliente y haciendo hincapié al mundo cambiante que se vive en la actualidad con la globalización, para que el día de mañana la universidad sea reconocida como una institución de buena calidad recomendada por los estudiantes, como clientes satisfechos.

## METODOLOGÍA

La presente investigación se delimitó al estudio de caso del universo de un Centro Universitario Particular Campus Mexicali, de un grupo del Doctorado en Educación. Se utilizó el Paradigma Epistemológico Transparadigmático sobreponiendo Paradigmas métodos y técnicas cuantitativas y cualitativas, utilizando muestras a conveniencia del investigador por lo que los resultados son de carácter descriptivo y descriptivo correlacional cuya aplicación a otros contextos será mediante el uso de analogías y no con el rigor científico de paradigmas epistemológico cuantitativo. El estudio de caso se inicia con el paradigma epistemológico cuantitativo, Hipotético Deductivo. Es un estudio correlacional. Este, es el procedimiento o camino que sigue el investigador cuantitativo para hacer de su actividad una práctica científica. El método hipotético-deductivo tiene varios pasos esenciales. Observación, del fenómeno a estudiar, creación de una hipótesis para explicar dicho fenómeno, deducción de consecuencias o proposiciones más elementales que la propia hipótesis y verificación de la verdad de los enunciados deducidos comparándolos con la experiencia. Este método obliga al científico a combinar la reflexión racional o momento racional (la formación de hipótesis y deducción) con la observación de la realidad o momento empírico (la observación y la verificación) Se continúa con el Paradigma Epistemológico Cualitativo, con el Método del Interaccionismo Simbólico y la Fenomenología de Schutz su esencia radica en conocer la subjetividad de los Sujetos. El Interaccionismo Simbólico, examina los significados dentro del lenguaje escrito y hablado y en el comportamiento en la interacción social, se analiza la acción humana abordándola como una ciencia interpretativa en busca de su significado y no como una ciencia natural, la cual busca leyes. La fenomenología tiene como sustento cuatro conceptos, la temporalidad se refiere al tiempo vivido la espacialidad el espacio vivido la corporalidad el cuerpo vivido y la racionalidad o la comunidad que se refiere a la relación humana, Álvarez- Gayou Jurgenson (2006)

A partir de la teoría de Alfred Schutz se interpretó la experiencia de los sujetos participantes en el P E-A, la acción social es descrita por los sujetos actores basándose en las distintas tipificaciones que le son provistas por su situación biográfica su acervo de conocimientos a mano y la intersubjetividad, Schutz (1993 y 1995). Para esta investigación se conoce el mundo de significados con respecto a la calidad del servicio educativo, universitario, expresados de acuerdo a sus opciones creencias y vivencias en el Centro Universitario Particular bajo estudio. Se utilizaron las técnicas de entrevista a profundidad y Grupos Focales “Focus Group”, se obtuvieron los documentos primarios respectivos y se procesarán en el software Atlas ti. Creando citas, códigos y memorándums, redes conceptuales o “networks” y a partir de ellos se generaron reportes que llevaron a la creación y/o confirmación de categorías conceptuales de la percepción de la calidad del servicio educativo universitario. Como punto de partida se utilizaron las categorías técnicas del SERVQUALing como categorías a priori, pero con la posibilidad de construir categorías a posteriori producto de la experiencia particular de esta investigación.

*Universo:* La población total de alumnos de este estudio es de 28 alumnos de un grupo de Doctorado en Educación de un Centro Universitario Particular, Campus Mexicali.

*Muestra:* Se trata de un estudio de caso de un grupo de 28 estudiantes. Se incluye una encuesta escala tipo Likert y una guía de entrevista a profundidad y para grupo Focal, los cuales permitieron el análisis de los datos generados mediante el uso de métodos estadísticos multivariantes y el análisis de contenido y construcción de conceptos con apoyo de Software Atlas ti. utilizado en la investigación cualitativa. Para esta investigación los criterios de inclusión es

todo el universo por su reducido tamaño. Se operacionalizaron las variables con su definición conceptual y operacional de cada una de ellas.

## RESULTADOS

Tabla 1: Estadísticos Descriptivos. Dimensiones Teóricas de la Calidad de Servicio Educativo

Dimensión	Media	Desviación estándar
Elementos tangibles	2.6696	0.748
Confiabilidad	3.0429	0.917
Capacidad de respuesta	3.2679	0.990
Seguridad	3.2679	0.907
Empatía	2.9929	0.826
Media general	3.0482	0.768

Se realizó la reducción factorial. Se calcularon las pruebas de adecuación muestral: Determinate,  $p = 0.000$ , Prueba de Kaiser-Meyer-Oklín 0.727 y Prueba de esfericidad de Bartlett, Chi-cuadrada 524.841 con un p-valor de 0.000, resultando adecuadas para el análisis factorial de la muestra (Visauta-Martori, 2003).

Tabla 2: Correlaciones Entre Dimensiones Teóricas de la Calidad de Servicio Educativo

Dimensión	Elementos tangibles	Confiabilidad	Capacidad de respuesta	de Seguridad	Empatía	Media general
Elementos tangibles	1	0.614**	0.692**	0.493**	0.529**	0.750**
Confiabilidad	0.614**	1	0.808**	0.724**	0.649**	0.877**
Capacidad de respuesta	0.692**	0.808**	1	0.816**	0.785**	0.947**
Seguridad	0.493**	0.724**	0.816**	1	0.852**	0.898**
Empatía	0.529**	0.649**	0.785**	0.852**	1	0.876**
Media general	0.750**	0.877**	0.947**	0.898**	0.876**	1

\*\* La correlación es significativa en el nivel 0,01 (2 colas).

Tabla 3: DIMENSIONES EMPÍRICAS o LATENTES

Estadísticos descriptivos		
Dimensión	Media	Desviación estándar
Atención empática	3.1389	0.88354
Confiabilidad responsable	2.9714	1.0121
Servicio eficaz	3.3643	0.86076
Horarios de atención	3	1.08866
Infraestructura y equipo	2.0357	1.00856
Media general	2.9021	0.6996

Atención empática. El personal brinda una atención con disposición y confianza.

Afirmaciones: 12, 13, 14, 15, 17, 20, 21 y 22.

Confiabilidad responsable. El personal ofrece un servicio cuidadoso y puntual.

Afirmaciones: 5, 6, 7, 8 y 11.

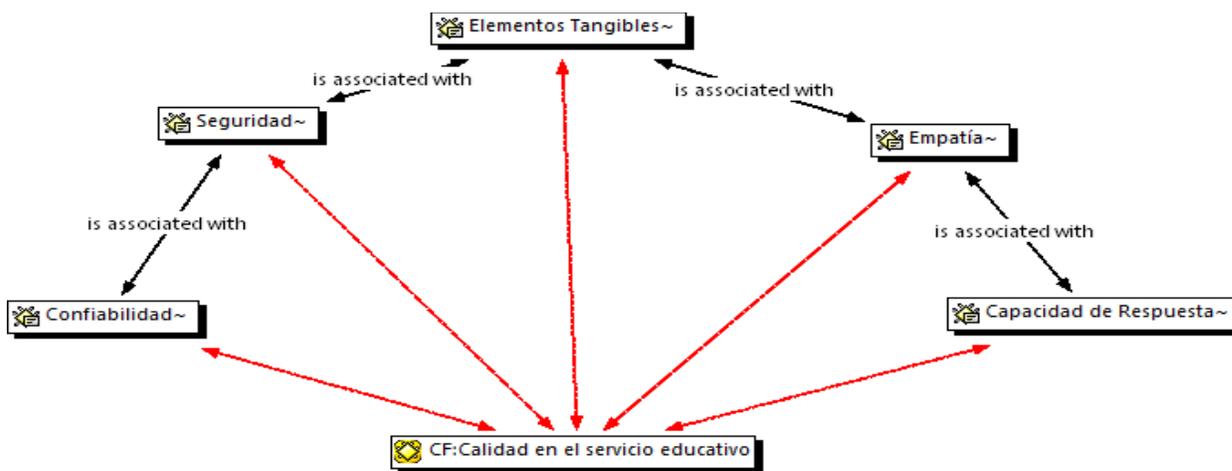

Servicio eficaz. El personal tiene buena apariencia, es amable, comunicativo y no comete errores.

Afirmaciones: 3, 4, 9, 10 y 16.

Horarios de atención. La institución tiene horarios de trabajo adecuados para todos sus estudiantes. Afirmación: 19.

Infraestructura y equipo. La institución tiene instalaciones físicas atractivas y equipos actualizados. Afirmaciones: 1 y 2.

Figura 1: Mapa Conceptual de la Relación Entre Dimensiones Teóricas de la Percepción de la Calidad del Servicio Educativo Doctoral

## CONCLUSIONES Y RECOMENDACIONES

1. Se confirmó la hipótesis de la asociación entre la percepción de la calidad del servicio educativo y la importancia atribuida a las dimensiones que integran la calidad del mismo, de los estudiantes de un grupo de Doctorado en Educación de un Centro Universitario Particular, Campus Mexicali.

2. Se partió de las dimensiones teóricas (a priori) de Parasuraman y Mejías y Reyes (Elementos

*tangibles, Confiabilidad, Capacidad de Respuesta, Seguridad y Empatía), se obtuvieron en los alumnos, a través del análisis de factores, análisis de los componentes principales y rotación Varimax y se obtuvieron las dimensiones empíricas (o subyacentes) de: atención empática, confiabilidad responsable, Servicio eficaz, horarios de atención e infraestructura y equipo de los estudiantes de Doctorado. Se analizó la correlación de cada una de las dimensiones con la media general de la calidad del servicio, obteniéndose los siguientes coeficientes de correlación de Pearson\* y su significancia  $p < 0.01$ . Elementos tangibles 0.750, Confiabilidad 0.877, Capacidad de Respuesta 0.947, Seguridad 0.898, Empatía 0.876, la correlación más alta se observó entre la capacidad de respuesta con la media general de la percepción de calidad de servicio educativo. La percepción de la calidad del servicio educativo de los estudiantes, obtuvo una media de 3.04, la cual significa que el estudiante no está ni de acuerdo ni en desacuerdo con el servicio educativo doctoral recibido. En los instrumentos cuantitativos propuestos por Parasuraman y Mejías, hacen énfasis en la apariencia, en cambio en los datos cualitativos recogidos en el grupo focal y entrevistas a profundidad, hacen más referencia a la cantidad y calidad de los elementos tangibles.*

En los resultados cualitativos, los estudiantes perciben que el personal administrativo da buena atención, es personalizada e inmediata, cuando no hay respuesta al momento le dan seguimiento hasta resolver el problema. Horario funcional, adaptable y adecuado. Pero en cuanto al equipamiento de las aulas no hay la misma atención. La institución no muestra interés en trabajar en grupo colegiado, esto demerita el servicio pues los estudiantes no aprovechan al 100% el trabajo cursado durante todo el postgrado. La atención de los docentes es profesional de tal forma que cubren las expectativas de los estudiantes en cuanto a la atención, sin embargo, la institución no produce investigadores y por ende conocimiento suficiente debido a que esta responsabilidad no es compartida, recae en el docente que imparte los seminarios de titulación. Esta falta de comunicación dentro de la institución y dentro del grupo de docentes es otro aspecto que no favorece la formación de investigadores y desarticula las materias.

La apariencia no es adecuada para una institución académica de este nivel y la limpieza de los inmuebles requiere más atención por razones de salud. Por otro lado el servicio de internet no es suficiente. Por último, la presentación del personal es adecuado. Se sugiere aplicar el instrumento de investigación aquí utilizado en otras instituciones similares dentro del contexto nacional y reafirmar su validez y confiabilidad.

# IDENTIFICACIÓN DE NUEVOS COSTOS DE OPORTUNIDAD DEL DESPERDICIO AUTOMOTRIZ CON DAÑO AMBIENTAL

Adriana Patricia Soto Aguilar, Benemérita Universidad Autónoma de Puebla

## RESUMEN

En este trabajo de investigación se analiza el papel que juegan los nuevos costos de oportunidad del desperdicio automotriz con daño ambiental, concretamente el reciclado de llantas dentro de la industria automotriz poblana a través de la empresa Tire Chip, teniendo como ejes la innovación tecnológica y la competitividad empresarial, los cuales tienden a generar una nueva cultura empresarial en materia de costos ambientales. La empresa Tire Chip es una entidad joven cuya actividad principal es el reciclaje de llantas. Actualmente depende financieramente de Industrias NORM empresa matriz, nace como una alternativa para el tratamiento integral de los neumáticos que se desechan en el Estado de Puebla, México, iniciativa de la planta armadora alemana Volkswagen, instalada en el estado, quien lanza la inquietud de no querer destinar las llantas a un mercado negro de refacciones por el costo ambiental y social que esto pudiera generar o bien tratar de disminuir los contaminantes atmosféricos que genera la quema clandestina de llantas.

**JEL:** M:11, M:21, O:14, Q:55.

**PALABRAS CLAVE:** Costo de oportunidad ambiental, desperdicio, contaminación,

## IDENTIFICATION OF NEW OPPORTUNITY COSTS OF ENVIRONMENTAL DAMAGE AUTOMOTIVE WASTE

### ABSTRACT

*In this research examines the role of new waste opportunity costs of environmental damage specifically automotive tire recycling within the automotive industry through the Puebla Tire Chip company, having as main technological innovation and business competitiveness of which generate a new corporate culture in terms of environmental costs. Chip Tire Company is an entity engaged primarily young tire recycling. Currently Industries Norm financially dependent parent company, was created as an alternative to the comprehensive treatment of discarded tires in the state of Puebla, the initiative of the German Volkswagen assembly plant who launched the concern of not wanting to spend the tires to a black market spare parts for the environmental and social costs that could generate either illegal burning of tires.*

**CONTRIBUTION COGNITIVE:** Identification of new environmental opportunity costs of automotive waste based on technological innovation and business competitiveness

**JEL:** M:11, M:21, O:14, Q:55

**KEYWORDS:** Environmental Opportunity cost, waste, pollution, technological innovation, competitiveness

## INTRODUCCIÓN

Los contaminantes son elementos químicos, biológicos, sonoros y visuales que afectan al ser humano y al medio ambiente, la Organización de las Naciones Unidas identifica al tráfico rodado como uno de los principales contaminantes del planeta, tan solo las emisiones de gases de efecto invernadero, en el ámbito urbano, se derivan en un 38% del sector transporte Rebossio, Alejandro (2012), cifra que ha superado los estándares permitidos por la Organización mundial de la salud. Una de las principales causas de la combustión de los hidrocarburos es la que emite la quema clandestina de los neumáticos, su quema produce bióxido y monóxido de carbono, metano, óxido de nitrógeno, y otros gases de menor densidad catalogados como peligrosos, SEMARNAT (2012) para la salud y medio ambiente, observar Tabla No. 1. Composición de Neumáticos

Tabla No. 1: Composición de Neumáticos

<b>70% Azufre, Cadmio, Plomo,</b>
Mercurio, Dioxin, Furanos.
Carbono, Hidrogeno (H) , Azufre (S) ,
Cloro (Cl), Fierro (Fe), Oxido de Zinc (ZnO),
Dióxido de Silicio, (SiO <sub>2</sub> ) 5, Cromo (Cr) ,
Níquel (Ni), Plomo (Pb), Cadmio, Talio, entre otros.

*Fuente: Datos Tire Chip. Nota: Los porcentajes de composición pueden variar según el tipo de neumático y el país de fabricación. Cuando se busca conocer el origen de la mala calidad del aire en una zona urbana, se hace un inventario de contaminantes criterio, que puede incluir monóxido de carbono (CO), óxidos de nitrógeno (NOx), óxidos de azufre (SOx), partículas (menores a 10 micrómetros -PM10- y menores a 2.5 micrómetros -PM2.5-), compuestos orgánicos volátiles (COV), hidrocarburos (HC), y plomo (Pb). Si lo que se quiere es conocer el origen de las emisiones que causan el cambio climático global, se hace un inventario de gases de efecto invernadero (GEI), que puede incluir el bióxido de carbono (CO<sub>2</sub>), el metano (CH<sub>4</sub>), óxido nitroso (N<sub>2</sub>O), entre otros.*

El constante crecimiento de la población y la demanda de automóviles anuales y de neumáticos (En México, la flota en circulación es alrededor de 23,000 000 vehículos y cada año se añaden más de un millón de nuevos vehículos ligeros, un millón de vehículos usados y 40,000 vehículos pesados), incurren en un aumento de contaminantes por desperdicio de industria automotriz incluyendo a los neumáticos conocidos comúnmente como llantas. De ahí nace la imperiosa necesidad de buscar alternativas económicas y ambientales para la reutilización de neumáticos dentro de la industria automotriz.

## REVISION LITERARIA

En la actualidad dado los grandes cambios vertiginosos que se presenta en la economía mundial generan nuevos conceptos económicos-administrativos producto del propio desarrollo empresarial, la macroeconomía y la microeconomía se unen en un nuevo concepto aplicado a la administración empresarial: los costos de oportunidad ambientales entendidos como parte de una estrategia empresarial y porque no social orientada hacia procesos productivos, productos y servicios que ayuden a fortalecer la competitividad empresarial mediante innovaciones tecnológicas, reducción de costos, y disminución de riesgos en aspectos de seguridad, salud humana y medio ambiente, en si la pregunta de investigación de la presente ponencia es *¿existen costos de oportunidad ambiental en base al reciclado e innovación en neumáticos dentro de la industria automotriz, que sean rentables en términos económicos, teniendo como referencia empresarial a Tire Chip?*

El presente trabajo de investigación tiene como objetivo general analizar si es aplicable el costo de oportunidad ambiental para la industria automotriz en base al reciclado, reutilización e innovación de nuevos productos en base al desperdicio de neumáticos. Mientras que los objetivos particulares tienden a identificar la generación de nuevos productos derivados del reciclado de llantas y la identificación de oportunidades comerciales para la industria automotriz.

Los referentes teóricos del presente reporte de investigación son la teoría de la economía social : *Theorie der gesellschaftlichen Wirtschaft*, (costo de oportunidad), publicada en el año 1914, publicada por Friedrich von Wieser, Teoría de la Innovación tecnológica, Joseph A. Shumpeter y la teoría de las tres dimensiones del desarrollo sostenible, mientras que el marco legal se basa en la política ambiental en México dentro del Plan Nacional de Desarrollo, Ley Federal de Protección al Ambiente, Ley General del Equilibrio Ecológico y la Protección al Ambiente así como la normalización ISO para la reducción de contaminantes.

## MARCO METODOLÓGICO

**Tipo de Investigación:** La presente investigación es de tipo descriptiva ya que pretende establecer si los costos de oportunidad ambiental tienen una alternativa social de negocios en base a la innovación tecnológica. **Método de Investigación:** El método que se utilizara para llevar a cabo esta investigación es el Método deductivo-descriptivo ya que se buscan conclusiones particulares a partir de conceptos generales, se aplicó una encuesta a los miembros de la agrupación empresarial Tire Chip. **Tipo de Estudio:** Como se indicó el estudio es descriptivo, ya que no se intenta cambiar ningún fenómeno, solamente es estudiarlo, analizarlo y explicarlo. **Alcances de la Investigación:** Aplicación del concepto costo de oportunidad ambiental en base a la innovación tecnológica como alternativa de negocios para los productos de desecho y re uso de la industria automotriz como una de las tantas opciones para mejorar las condiciones económicas empresariales y de vida para el conjunto de la sociedad. **Límites de la Investigación:** La investigación se concretara a describir y determinar los beneficios del costo de oportunidad ambiental en base a la evaluación de las características de los productos y sub productos del desecho de caucho y llantas automotrices que concuerden con los principios y requisitos de los estándares internacionales de calidad ambiental de la industria automotriz.

**Técnicas e instrumentos para recopilar la información:** Las técnicas de recolección de datos que fueron utilizadas en la presente investigación son la revisión documental, la observación directa y la encuesta. Para recoger datos e información relevantes, se utilizó como instrumentos de recolección de datos: **Aplicación de entrevista.** El cuestionario fue diseñado cuidadosamente para una máxima efectividad, previamente a este se aplicó una prueba piloto para determinar evaluar su efectividad. El cuestionario contiene preguntas cerradas y cuenta con un espacio abierto a comentarios y sugerencias, bajo la conceptualización teórica de empresa socialmente responsable.

## RESULTADOS

El término costo de oportunidad ambiental es aplicado a aspectos multidisciplinarios y multisectoriales sin dejar de ser un concepto eminentemente social y de innovación tecnológica, para colaborar lo antes expuesto nos basamos en el estudio de campo de la empresa Tire Chip ubicada en el corredor industrial 5 de mayo del Estado de Puebla, (Pertenece al grupo Industrias NORM. Fundada el 2 de Junio 2011. Tire Chip México S.A. de C.V., ubicada en Río Papaloapan No. 21 Col. Sanctorum, Corredor Empresarial Cuautlancingo, en Puebla, México). Figura No. 1. Publicidad Tire Chip. La empresa es una entidad joven, nace como una alternativa para el tratamiento integral de los neumáticos que se desechan dentro del sector automotriz, en el Estado

de Puebla, México. Tire Chip actualmente depende financieramente de Industrias NORM que es su empresa matriz y de la toma de decisiones ambientales de la armadora alemana Volkswagen quien lanza la inquietud de no querer destinar las llantas que deshecha a la quema o a un mercado negro de refacciones por el costo ambiental y social que esto pudiera generar, esto se une a las normativas ambientales que también son retomadas y reforzadas por la empresa armadora próxima a instalarse en Puebla AUDI. La función de Tire Chip comienza por promover en primera instancia la reutilización, luego la renovación, el reciclaje y en última instancia la cogeneración de los desechos provenientes de neumáticos, en base al concepto costo de oportunidad ambiental tan solo la industria del reciclado de llantas genera en promedio oportunidades económicas por 1.5 millones de dólares, esto sin dejar de lado la innovación de nuevos productos derivado del reciclado de neumáticos, Neohábitat y Recyhul (2008) En el mercado verde se reciclan llantas usadas y obtienen a cambio bonos verdes; la primera tuvo ventas por 1.5 m.d.d en 2007; la segunda recicla un millón de llantas anuales

Figura No. 1: Publicidad Tire Chip

Actualmente el desperdicio de llantas desechadas en México está estimado en unos 30 millones de unidades anuales, materia prima para la industria del reciclado que es suministrada a bajos costo o en el caso de Tire Chip a precio cero, Francisco Martha, (2012), señala que cada año en nuestro país se desechan 25 millones de llantas viejas (además de los que "entran" de EU clandestinamente) de las cuales, nueve de cada 10 son enviadas a tiraderos a cielo abierto o depósitos clandestinos, convirtiéndose en un grave problema de salud y una amenaza para el medio ambiente. Al realizar la investigación y aplicar las entrevistas se detecta que la Administración Gerencial de la empresa tiene identificado el siguiente mercado potencial en base a la innovación de sus procesos productivos y costo de oportunidad ambiental, en menos de tres años (Tabla No. 2 “*Mercados atractivos de Tire Chip para colocar el reciclado de llanta en base a la innovación y costo de oportunidad ambiental.*” y Tabla No. 3 “*Estrategias de Gestión empresarial Tire Chip*”

Tabla No. 2: Mercados Atractivos de Tire Chip Para Colocar el Reciclado de Llanta en Base a la Innovación y Costo de Oportunidad Ambiental

<ol style="list-style-type: none"> <li>1. <b>Llancreto: Es un nuevo concreto que sustituye la arena por el chip-producto base de la llanta- ayudando con esto a no mermar los recursos naturales (bancos de arena) y mitigar las emisiones de carbono del planeta. Actualmente se puede usar el .025% en la concentración del concreto pero esto puede subir hasta el 20%.</b></li> <li>2. Impermeabilizantes, actualmente se usa el polvo que sale del limado de llantas para producirlo. Tire chip, provee este polvo de las empresas que se encargan de revestir las llantas.</li> <li>3. Como medida de amortiguación de impactos, usado en puertos marítimos.</li> <li>4. Distintos usos ornamentales como tapetes caseros, tapetes de mouse, pisos para jardín, etc.</li> </ol>

Tabla No. 3: Estrategias de Gestión Empresarial Tire Chip

**Estrategias de Gestión**

4 ejes:

1. Reutilización
2. Renovado
3. Reciclar----chip--- crear mercado
4. Coogeneración (incineración) Aprovechar potencial energético.

Fuente: Tire Chip., enero 2013.

**Proceso de Producción de Tire Chip**

El proceso comienza con el acopio de las llantas de diversa índole las cuales son previamente clasificadas, las llantas con las que actualmente trabaja la empresa proceden una parte del desecho generado por la empresa Volkswagen de México, así como de un programa que trabajado conjuntamente con la Secretaría del Medio Ambiente, con el cual se promueve entre la población que las personas y empresa llevan las llantas que no utilizan para ser recicladas, evitar así disminuir contaminantes. Actualmente sólo las compra de la armadora alemana y las acopia de cualquier persona física o moral que quiera dar un buen destino a este residuo, en base a la cultura de cuidado ambiental. Hasta hace unos meses como una política de disminución de costos se decidió ya no pagar por el reciclado, es decir que se efectuara la donación voluntaria. Dado el tamaño de la maquinaria con la que cuenta no se reciben llantas de medidas grandes. La segunda fase implica la separación y clasificación de las llantas que se reciben para delimitar cuáles se podrán ocupar para el proceso productivo y cuales se destinan a otro confinamiento. *Ver Figura No. 2 selección neumáticos.* En esta etapa se separa la cara lateral de los contornos de las llantas llamados pisos, de modo tal que se pueden apilar y reducir el espacio utilizado para su almacenamiento. Cabe mencionar que los pisos son los materiales a los que actualmente se enfocan, dentro del proceso de producción, la separación de las caras y el piso se hace mediante maquinaria especializada que por medio de fuerza y fricción separa ambos componentes, para reducir costos. Tal como se observa en *la Figura No.3 separador de capas neumáticos.*

Figura No.2: Selección Neumáticos

Figura No 3: Separador de Capas

Fuente Tire Chip, 2012. Fuente Tire Chip, 2013.

Una vez separadas las caras de los pisos se apilan dentro de contenedores que facilitan su movilidad, la razón por la que se apilan en porque se aprovecha mucho mejor el espacio y se reducen inventarios, ver figura No. 4 selección de capas por grosor y Figura No. 5 selección de capas por tamaño.

Figura No. 4: Selección de Capas Por Grosor y Figura No. 5: Selección de Capas Por Tamaño

Fuente: Tire Chip 2012. Fuente: Tire Chip 2013.

Figura No. 6: Maquinaria de Trituración

Fuente: Tire Chip, 2013

Los pequeños cortes son vertidos en dos grandes bandas que los transportan a las trituradoras. Figura No. 7. Una vez en la trituradora el material es procesado y por succión de aire es encaminado a la segunda trituradora. Con cada paso por las maquinas las partículas se van haciendo más pequeñas favoreciendo la formación del chip, Figura No. 9

Figura No. 7: Banda de Trituración

Figura No. 8: Seleccionador de Partículas

Fuente: Tire Chip 2012.Fuente: Tire Chip 2012.

Cuando el material ha sido procesado por ambas trituradoras se vierte en un contenedor para separar la pelusa (que también se vende) que trae del resto del chip y finalmente se envasa en bolsas individuales para su venta al público. Figura No. 9: Conos de empaque y Figura No. 10: Fibra de llanta. Realmente los costos son de mano de obra, electricidad ya que comparten costos fijos con plantas automotrices instaladas en el corredor industrial 5 de mayo disminuyendo así sus costos de producción, aplicando el concepto económico de economías de escala.

Figura No.9: Conos de Empaque y Figura No. 10: Fibra de Llanta

Fuente: Tire Chip 2012.Fuente: Tire Chip 2012.

La segunda parte de la investigación se detectó los siguientes mercados potenciales del reciclado de llantas opcionales a la administración de Tire Chip, reforzando la aplicación del costo de oportunidad ambiental en base a la innovación tecnológica: 1.- Proveeduría para fabricar pasto sintético y otros materiales para canchas deportivas, por ejemplo, para una cancha de fútbol de 8,000 m<sup>2</sup>, se requieren unos 20,000 neumático de tamaño estándar, 2.- Impermeabilizantes o recubrimientos hechos de material reciclado, 3.-Bola de caucho de un milímetro que se mezclan con concreto, 4.-Recubrimientos para pisos (usados en hospitales y gimnasios, entre otros usos más). Polvo para fabricar balatas, 5.- Otros usos: Láminas de suela para calzado rudo, bolsos con cámaras de llanta, macetas, mangueras, juegos infantiles, lonas que sirven para proteger el alimento de los animales, caucho de las llantas puede convertirse en loseta para pisos con una apariencia muy agradable y de gran durabilidad, bloques que se pueden superponer para formar muros de contención en proyectos de construcción, construcción de muros sólidos, uniéndolos con varilla, puede ser aprovechado para la pavimentación de avenidas y carreteras, ya que la arena plástica obtenida de la trituración de la llanta mezclada con pavimentos, da como resultados

concretos de alta resistencia, para formar bordes en las carreteras, funciona como aislamiento acústico anti vibratorio y antisísmico La empresa se ubica en un estado de la República mexicana con alto poder adquisitivo a nivel local, está inmersa en nuevos mercados emergentes, en el continente americano, tiene opción a aplicar nuevos avances tecnológicos. Dentro de los planes de la empresa, en el mediano plazo, en base a los costos de oportunidad ambiental e innovación tecnológica se encuentran: a.-Encontrar y apertura de nuevos mercados para su chip, b.- Establecer alianzas estratégicas con productoras de llantas que a cambio de publicidad puedan avalar que tienen proyectos colaterales con un proceso verde, c.-Encontrar la forma de separar el acero y la pelusa que resulta del proceso para poder comercializarlos por separado, d.-Generar independencia financiera que les permita subsistir con medios propios.

### Comprobación de Hipótesis

Entre los factores económicos administrativos determinantes que contribuyen al crecimiento de las empresas tenemos los gastos de inversión, es decir los desembolsos en compra de bienes de capital y de todos aquellos insumos o factores que una empresa requiere para su operación. Sin embargo dentro de los costos de oportunidad ambiental la inversión en materia prima es en base al reciclado el cual se basa en gastos mínimos, la decisión de los inversionistas ambientalistas de realizar una serie de gastos para la producción de bienes y servicios con el objetivo de obtener una rentabilidad, será en base a la innovación de productos reciclados y no en la materia prima, para el proceso de producción. Para las empresas ambientalistas como Tire Chip existen una serie de elementos que inciden en el comportamiento de la inversión, por ejemplo el beneficio esperado en el corto y mediano plazo ya que es costoso tener elevados inventarios, en neumáticos no tratados. Lo cual va a depender del comportamiento del ingreso que tenga la economía del reciclado y de la demanda efectiva de los consumidores ambientalistas, la empresa ofrece todo aquel que le confina sus neumáticos un certificado que avala que ha depositado los desechos en un lugar de tratamiento adecuado, avalando que se trata de un proceso verde por ser amigable con el medio ambiente. En cuanto al nivel de gasto público para estas empresas los gobiernos están trabajando una serie de incentivos fiscales a través de los bonos verde, por lo cual el gobierno es un promotor y un fuerte estímulo para la asignación de capitales privados en proyectos de inversión ambientalista, generando así políticas incentivas para la actividad empresarial así como un marco legal, social y de derechos que garantice la confianza de sus ciudadanos y consumidores a través de las políticas ambientalistas, como lo promueve la ley de protección ambiental. El tamaño y poder de compra del mercado ambientalista, en base a los costos de oportunidad va a determinar en un futuro próximo los proyectos de inversión empresarial independientemente de su estatus social.

### **CONCLUSIÓN GENERAL Y RECOMENDACIONES**

Podemos observar que el concepto de costo de oportunidad ambiental, con aplicación multidisciplinaria y multisectorial esta encadenado a procesos transnacionales globales (industria automotriz transnacional), con aplicación local en pymes, (Tare Chip), con amplio mercado en crecimiento constante pero limitado por la demanda verde, sin embargo las empresas ambientalistas como Tare Chip tendrán que trabajar ejes temáticos como la administración ambiental vinculada a métodos estadísticos, mejoras continuas dentro de una administración integral para los residuos con daño ambiental, en aras de seguir promoviendo la producción ambiental. El reto de la aplicación de los costos de oportunidad ambiental está en las preferencias del consumidor por adquirir un producto derivado del reciclado e innovador en el mercado nacional.

# PSICOLOGÍA DEL INTRAEMPENDIMIENTO: UNA APROXIMACIÓN DESDE UN ESTUDIO DE CASO EN LA INDUSTRIA MAQUILADORA DE CD. JUÁREZ, MÉXICO

Oscar Javier Montiel Mendez, Universidad Autónoma de Ciudad Juárez  
Alejandra González González, Universidad Autónoma de Ciudad Juárez  
Diana Irasema Cervantes Arreola, Universidad Autónoma de Ciudad Juárez

## RESUMEN

El Emprendimiento va más allá de la creación de una empresa. El reconocimiento de oportunidades, la asunción de riesgos y la tenacidad para poner en práctica ideas innovadoras a pesar de los obstáculos, son características de la conducta empresarial que se está volviendo cada vez más importante en las organizaciones (Krauss, Frese, Friedrich, y Unger, 2005, Morris y Kuratko, 2002). El objetivo de esta investigación fue determinar cómo se ha llevado el proceso del emprendimiento interno en una planta maquiladora bajo la amenaza de cierre de sus operaciones por la sede central de la empresa, con el fin de aprovechar las oportunidades para renovar y revitalizar dicha planta. Se realizaron entrevistas con empleados de diferente nivel jerárquico. Los resultados muestran que el comportamiento individual de intraemprendimiento basado en un fuerte locus de control interno puede influir y cambiar la actitud de los miembros de una organización, construir un equipo y enfrentar con éxito no solo los retos de la dinámica de reestructura financiera y administrativa con el fin de evitar su cierre, sino convertir a la planta en un modelo de operaciones para toda la corporación.

**PALABRAS CLAVE:** Intraemprendimiento, psicología del emprendedor interno, industria maquiladora.

## ABSTRACT

*Entrepreneurship goes beyond the creation of a company. The recognition of opportunities, risk taking and tenacity to implement innovative ideas despite the obstacles, are characteristic of entrepreneurial behavior that is becoming increasingly important in organizations (Krauss, Frese, Friedrich, and Unger, 2005; Morris and Kuratko, 2002). The objective of this research was to determine how the intrapreneurship process in a maquiladora plant was taken under the threats of closure of its operations by the corporate headquarters, in order to seize opportunities to renew and revitalize it. Interviews were conducted with employees of different hierarchical level. The results show that individual intrapreneurship behavior based on a strong internal locus of control can influence and change the attitude in members of an organization, build a team and face the challenges of financial and administrative restructure dynamics in order not only to prevent its closure, but turn in it the plant in an operations model for the whole corporation.*

**KEY WORDS:** Intrapreneurship, Psychology of The Intrapreneur, Maquiladora Industry.

## INTRODUCCIÓN

Mientras que el término intraemprendimiento (intrapreneurship) o emprendimiento interno tiene ya más de 3 décadas, iniciando con conceptos como emprendimiento corporativo interno (internal corporate entrepreneurship, Schollhammer, 1982) y finalizando con Kuratko et al. (1990) quien acuñó dicho término haciendo referencia a diferentes aspectos del emprendimiento corporativo, los estudios de caso en la literatura se sugiere son escasos, incluyendo aquellos realizados en Latinoamérica (Una búsqueda en el buscador científico EBSCOHOST (15 de junio 2013) bajo las palabras “intrapreneurship case study” arrojó sólo 3 estudios de caso, mientras que “intraemprendimiento” e “intraemprendedor” no tuvieron. En la base de datos Redalyc bajo “Intraemprendimiento”, sólo se encontraron 3 y todos referentes a Colombia. No se encontró alguno relacionado con la psicología del emprendedor interno.) Reconocer las dinámicas emprendedoras dentro de las organizaciones es muy relevante en la actualidad ya que la innovación es esencial en éstas para poder sobrevivir (Borza, y Maier, 2012).

## REVISIÓN DE LA LITERATURA

### Emprendimiento Interno

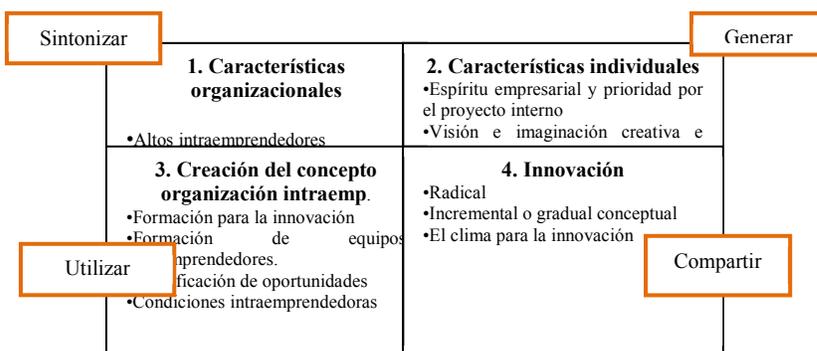

Pinchot (1985) menciona al Intraemprendimiento como la práctica de desarrollar una nueva empresa dentro de una organización existente para aprovechar una nueva oportunidad y crear así valor económico. Emprendimiento por el contrario, es el desarrollo de una nueva aventura fuera de una organización existente, y hay pruebas de que el intraemprendimiento ayuda a renovar y revitalizar a los administradores y sus negocios, innovando y mejorando el rendimiento (Kuratko et al. 1990).

Stevenson y Jarillo (1990) citado en Antoncic y Hisrich (2000), mencionan que el Intraemprendimiento puede ser abordado como el proceso por el cual los individuos al interior de las organizaciones persiguen oportunidades, y hacen cosas nuevas desviándose de lo habitual hacia la búsqueda de éstas (Vesper, 1990). El espíritu intraemprendedor se considera como una herramienta importante y valiosa para rejuvenecer y revitalizar las organizaciones (Dunlap-Hinkler, Kotabe, y Mudambi, 2010).

Romero, Fernández y Vázquez (2010), citado en Alipour, Idris, Arif, Anak y Karimi (2011) mencionan que las organizaciones han encontrado hoy en día el significado del intraemprendimiento como una estrategia corporativa y de desarrollo vitales para el funcionamiento de una organización, ya que para sobrevivir éstas necesitan adaptarse a los cambios y progreso. Garzón (2005) propone cuatro aristas (véase Figura 1) en un modelo teórico intraemprendedor: sintonizar, generar, utilizar y compartir.

El modelo teórico del intraemprendedor intenta predecir la incidencia de las variables independientes “características organizacionales”, “características individuales” y “creación del contexto organizacional intraemprendedor” sobre la variable dependiente “innovación en las organizaciones”. En el marco de la gestión del conocimiento, se concibe al modelo intraemprendedor para la variable “características organizacionales”, como el que permite sintonizar a la organización, en tanto que facilitando ésta es más fácil impulsar la innovación intraemprendedora. La segunda variable, “características individuales”, está orientada a generar actitudes en los intraemprendedores, la tercera variable busca utilizar los conocimientos para formar y conformar equipos e identificar oportunidades, y la cuarta variable que además es la dependiente, aborda la innovación radical, gradual, arquitectural y conceptual para compartir el conocimiento tácito, explícito y virtual (Garzón, 2005).

Figura 1. Modelo teórico del Intraemprendedor

Fuente: Garzón, 2005

Christensen (2005) citado en Trujillo y Guzmán (2008), sugiere que el comportamiento intraemprendedor puede ser fomentado por un sistema de incentivos basado en los resultados o relacionado con el desempeño de sus equipos, y en este sentido Hornsby et al. (2002) sostiene que para estimular la actividad emprendedora el sistema de incentivos debe ser claro y detallar los objetivos, los sistemas de retroalimentación, la responsabilidad individual y los resultados obtenidos.

Emprendimiento Interno e Innovación

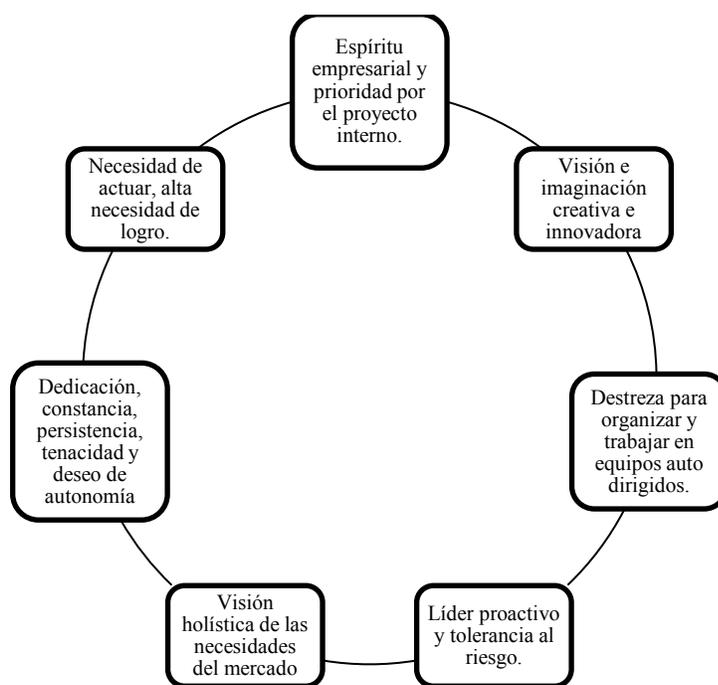

Seshadri y Tripathy (2006), señalan la importancia de la innovación como una de las estrategias para el éxito de la organización, así como la fuerte relación entre la innovación y los empleados que toman propiedad psicológica sobre el crecimiento de la organización y que manifiestan un comportamiento emprendedor, y en este sentido puede entenderse que el emprendimiento interno permite a los empleados participar en la generación de nuevas posibilidades para el crecimiento y mejoramiento de los negocios, y permitiría que las organizaciones movieran a sus empleados de una "perspectiva de empleado" a una "perspectiva intraemprendedora". La creatividad conduce a la innovación y el intraemprendedor lidera este proceso (Morris y Kuratko, 2002; citado en Moriano et al., 2009). Por lo tanto este puede realizar su trabajo de innovación con base en los recursos que tienen las organizaciones; como los económicos para el financiamiento de sus ideas (capital de riesgo), o la base tecnológica, ya que puede utilizar la planta instalada en su tiempo ocioso para producir un nuevo artículo o servicio (Pinchot, 1985). Para que el intraemprendedor surja se requiere que la organización genere una cultura organizacional que ofrezca a los empleados la posibilidad de encontrar las oportunidades de innovación, y a la vez satisfacer los deseos de sentirse propietarios de sus proyectos internos sin abandonar esta, transfiriendo el concepto a todas las personas de la organización (Drucker, 1992).

### Características del Intraemprendedor

Para conocer sobre la función del intraemprendedor (véase Figura 2) Garzón (2005) formula una lista de 35 características que después de un proceso de integración, unión y fusión se unificaron en siete, y que muestran la necesidad de su formación en las organizaciones y en los individuos para fortalecer este perfil y lograr impulsar la innovación en los individuos.

Los cambios estratégicos son liderados por los altos intraemprendedores, quienes crean y comparten con otros un nuevo modelo de éxito y desarrollan e implantan en la organización una visión a futuro, rastrean activamente el entorno para detectar señales tempranas de nuevas oportunidades y amenazas e intentan convertir éstas en oportunidades (Lombriser, 1994).

Figura 2. Características individuales del Intraemprendedor

Fuente: Garzón, 2005

A partir de lo planteado anteriormente, el foco o lugar de control interno (locus de control interno) permite encontrar la mejora de la organización a través de las aportaciones de sus empleados, generando en ellos otra forma de pensar, opinar y actuar, además influye en la búsqueda de información de su medio ambiente, mejorando así su condición de vida (Escovar, 1979). El locus de control interno y el comportamiento emprendedor tienen un lazo muy fuerte, pues el locus de control interno se relaciona con el estado de alerta, descubrimiento de oportunidades y confrontación de su entorno, encontrando la información necesaria que permita aprovechar sus oportunidades (Roig, Ribeiro, Torcal, De la Torre y Cerver, 2004), y mide la capacidad de control y autocontrol de nuestras conductas (Escovar, 1979).

Escovar (1979) y Kets (2005) señalan que las personas con un locus de control interno perciben que manejan su vida y son responsables de sus acciones. Además muestran una tendencia a ser proactivos, creativos e innovadores. En contraparte, las personas con un locus de control externo

suelen ser aquellos que se rinden fácilmente, sus acciones son influenciadas por otras personas, por lo que no confían en ellos y no son capaces de tomar sus propias decisiones.

Conforme a lo anterior el intraemprendedor surge cuando las personas poseen un locus de control interno, puesto que generan nuevas posibilidades de crecimiento y mejoramiento en los negocios o las empresas, ya que sus aportaciones, ideas, confianza en sí mismos, perseverancia y responsabilidad en sus actividades permiten el desarrollo del negocio (Escovar, 1979). Las personas que dirigen una empresa pueden marcar la pauta hacia un cambio organizacional, ya que si la empresa menciona Kets (2005), cuenta con un líder conservador y autocrítico, podría limitar el intraemprendimiento.

De acuerdo a Rotter y Mulry (1965), citado por Escovar (1979), el foco de control afecta la motivación, perseverancia y el autoestima del individuo. La confianza que deposita la organización en sus empleados permitirá un mejor desempeño laboral y personal, generando nuevos intraemprendedores. El objetivo central del presente estudio es determinar cuál fue el proceso del intraemprendimiento implementado por el gerente de planta y una aproximación de ello desde la psicología, con el fin de aprovechar las oportunidades para renovar y revitalizar a la misma.

## MÉTODO DE LA INVESTIGACION

La presente tiene un diseño no experimental, exploratorio, transaccional descriptiva. Utiliza la estrategia de investigación denominada estudio de caso. Yin (2003) menciona que el estudio de caso es sólo una de varias formas de hacer investigación de la ciencia social y es la estrategia preferida para preguntas de investigación del cómo o por qué, y cuando el investigador tiene poco control sobre los acontecimientos. La pregunta formulada es ¿Cómo fue el proceso de desarrollo de la conducta emprendedora interna en la planta maquiladora XY (nombre ficticio por acuerdos de confidencialidad) ubicada en Cd. Juárez?

La empresa participante del estudio de caso es productor líder de un amplio conjunto de accesorios para la industria automotriz y mobiliaria. Los productos incluyen: mecanismos de seguridad y controles, soportes para asientos de automóviles, bases de muebles y otros componentes para fabricantes de muebles de oficina. El corporativo cuenta con cerca de veinte plantas en 4 continentes. En Cd. Juárez la planta cuenta con aproximadamente 250 empleados, incluyendo personal administrativo y operativo. Se realizaron entrevistas semiestructuradas, siendo todos empleados que pertenecían a la empresa antes de que iniciara el proceso de intraemprendimiento.

## RESULTADOS

Se hicieron entrevistas a cuatro personas de la organización, el gerente de planta, el encargado del departamento de compras, la líder de una línea de producción y a un operador de producción. La Tabla 3 muestra los códigos teóricos concentrados en base a las entrevistas ya mencionadas.

Tabla 3. Códigos teóricos, Intraemprendimiento, Empresa XY

Códigos	(W)	(X)	(Y)	(Z)
<u>Intrapreneurship</u>				
Frecuencia en las entrevistas por participante (w, x, y, z)				

Falta de espíritu empresarial y prioridad por el proyecto interno (4,1,1,1)	“La administración que teníamos estaba orientada a los resultados personales más que en los resultados de la administración”.	“Antes no confiaba en nada, ni en proveedores ni en nosotros mismos”.	“Teníamos accidentes muy seguidos, acumulábamos material, la gente te daba carrilla por tener material acumulado, la empresa estaba muy fea, muy sucia”.	“Cuando yo entre, no teníamos casi personal administrativo y ahora ya, entonces sí ha cambiado mucho”.
Líder proactivo y tolerancia al riesgo (2,1,0,0)	“El corporativo estaba tomando la decisión de cerrar la compañía. Del 2008 para atrás, la planta estuvo en números rojos financieramente, a pesar de que se vendía lo suficiente, no alcanzaba para cubrir con los costos”.	“Había rumores de que se iba a cerrar la planta, realmente nunca lo hicieron oficial”.		
Dedicación, constancia, persistencia, tenacidad y deseo de autonomía (9,1,3,1)	“Hay gente muy capaz y es el principal recurso en la empresa, hay gente muy habilidosa, con mucha destreza, con mucho conocimiento y experiencia; quisimos tomar ese recurso, reforzarlo, entrenarlo en otras formas de trabajar y enfocarnos a ellos, les dimos básicamente la importancia de su trabajo”.	“Cuenta mucho la opinión de cada persona, así seas un operador, administrativo o gerente; toman mucho en cuenta la opinión de cada persona, y así hacen que cada persona se sienta comprometida y en confianza de comentar cualquier cosa que ellos ven mal”.	“Sobre todo que ponen atención en las sugerencias, si hay respuestas y estamos muy bien. En muchos aspectos hemos avanzado”.	“Pues sí, mi meta es ir mejorando más, ir aportando más ideas para así estar bien en mi trabajo”.
Visión holística de las necesidades del mercado (5,2,0,2)	“Es ver la visión de la empresa, hacia donde queremos ir, que queremos lograr de aquí a tres años; es cuando decimos: “Bueno en el 2013 queremos ser así” y debemos trabajar para lograr ese objetivo, entonces es ponerle la visión a la gente. La otra es fijar las metas correctas”.	“Pues empezamos a ver nuevos negocios, y esa fue una buena señal, en lo personal a mí me trajo tranquilidad al saber que tendría un trabajo estable, de cierta forma una economía también estable”.		“Sí, poco a poco si quisiera yo ir más arriba”.
Necesidad de actuar (3,0,1,1)	“Lo que hicimos aquí es “no escondas el problema”, si hay un problema en algún lugar, pues levántalo”.		“Operadores y líderes han dado muy buenas ideas y por medio de eso se han implementado las ideas y han dado resultados”.	“Antes en la línea se creaban demasiados scrap y se hicieron mejoras, y en un proyecto se pusieron unas regaderas que antes no teníamos y pudimos con eso, e inclusive fueron disminuyendo los gastos”.

Enfoque en los clientes (necesidad de logro) (5,0,0,1)	“Ahorita el personal de calidad va y visita a los clientes, si hay un problema es mejor conocer al cliente cara a cara y así es mucho más fácil resolver el problema, entonces por ello es muy importante siempre visitarlos”.	“Nos está llegando demasiado trabajo, nuestros clientes están satisfechos porque está muy bueno nuestro trabajo, está muy bien”.	“Y en otras áreas se crearon otros proyectos; y así ha venido mucha gente que uno ni conoce porque ha crecido mucho la planta”	
Proveedores Locales (visión holística de las necesidades del mercado) (2,1,0,0)	“Muchas empresas aquí en Cd. Juárez utilizan la misma tecnología que Canadá y Estados Unidos eso hace que como mexicanos y como juarenses que somos, generemos más empleo aquí en la ciudad”	“Tenemos planes a futuro de tener proveedores mexicanos, ayudar a la economía de la ciudad; desarrollamos proveedores mexicanos”.		
Destreza para organizar y trabajar en equipos autodirigidos (3,2,2,1)	“Les dimos la confianza, la oportunidad de que ellos hagan su trabajo sin necesidad de andar atrás de ellos. Lo que hicimos nosotros fue entrenar a la gente, a todos los niveles; los entrenamos en como tomar decisiones, como solucionar problemas, y eso hace que la gente se motive”.	“Hemos logrado ser un buen equipo de trabajo, la gente que trabaja aquí respeta mucho los espacios, cuidan cafetería, tratan de cuidar los baños y esto se da muy poco en las plantas maquiladoras”.	“Ahorita que estoy aquí en piso es algo totalmente diferente a cambiado mucho en cuanto a seguridad, materiales, limpieza, personal; en cuestión de medio ambiente muy bien, muy bueno”.	“Hay un trato muy bien, muy especial. Platicamos que ha cambiado mucho, porque nos facilitó mucho el trabajo a como estábamos antes, si estaba fácil el trabajo, pero no como ahorita”.
Visión e imaginación creativa e innovadora (1,0,2,2)	“El uso de herramientas como mejora continua han estado de moda en estos últimos años, y pues aquí lo implementamos”.		“En muchos aspectos hemos avanzado, porque antes trabajábamos a cincel y martillo y ahorita ya son muchas cosas modernas, mucha maquinaria más sofisticada y ayuda más al operador”.	“Una línea que se llamaba PFP antes tenía que perforar con taladro manualmente y ahorita tiene un tipo martillo pero de pistola de aire y así es más fácil que hacerlo manual; ahorita ya se hicieron muchas mejoras”.
Resultados Actuales (4,1,1,1)	“Empezamos a ser una planta de bajo costo, empezamos a mejorar la calidad de nuestros productos. En el 2011 ganamos 15 nuevos proyectos, y en lo que va del año llevamos ganado 3 proyectos. Ahora somos una planta que genera empleo, y eso es algo que buscamos siempre aquí en Juárez, y el resultado es “ganar, ganar”.	“Hemos crecido mucho, el negocio era muy diferente, empezamos a cambiar un poco el giro de la empresa”.	“Ahorita en producción nos llegó un jefe muy bueno, nos está enseñando muchas cosas y vamos para arriba, eso es lo bueno; nos está llegando mucho trabajo que es lo mejor de todo”.	“Ha cambiado todo desde que yo entre, ha cambiado mucho hasta ahorita. Pues yo la verdad me siento muy orgulloso de mi trabajo, porque si ha mejorado mucho”.

Resultados a futuro (2,1,0,1)	“Estamos proyectando que a principios del 2013 tenemos que ampliar la planta para poder caber con las nuevas líneas; en el 2011 cerramos con 140 empleados, ahorita somos 170 y planeamos cerrar el año con 210 empleados”.	“Buscar proveedores mexicanos, tenemos planes a futuro de tener proveedores mexicanos, ayudar a la economía de la ciudad”.	“Tener mucha comunicación con mis jefes y que ellos también me apoyen a mí en cuestión de mi trabajo”.
----------------------------------	---	--	--

## DISCUSIÓN

El gerente de la organización a través de las características individuales del intraemprendedor (Garzón, 2005), permitieron coadyuvar a rescatar la empresa. Dicho proceso inició desde que el individuo adquirió el espíritu empresarial y fomentó la motivación, visión, creatividad e identificación de oportunidades, perseverancia y destreza para trabajar, entre otras, las cuales fueron transmitidas al personal de la organización y en conjunto con su líder evitando el cierre de la misma.

Los intraemprendedores de la organización XY actuaron según lo comentado por Lombriser (1994), en el sentido de que el alto intraemprendedor (gerente) planificó la nueva estrategia, implicando al personal (intraemprendedores) directamente en la planificación de la estrategia, involucrando a todas las personas importante y con responsabilidad en la ejecución de ésta, desde administrativos hasta operativos, afirmando que la gente es lo más importante en cualquier organización.

Él, como eje central del movimiento intraemprendedor de XY, demostró tener aquellas características individuales del intraemprendedor según el modelo de Garzón (2005), y actuando acorde a Vesper (1990), desviándose de lo habitual hacia la búsqueda de oportunidades, liderando (Morris y Kuratko, 2002).

Respecto al modelo teórico del Intraemprendedor, los hallazgos mostraron que en XY fueron las características individuales las que iniciaron la dinámica, contrario a lo sugerido por Garzón en el sentido de que las características organizacionales son las que inician el proceso. Tomando en cuenta estas características propuestas por Garzón, la organización analizada sugiere que efectivamente el intraemprendedor es una persona con liderazgo, espíritu empresarial, con creatividad, con necesidad de actuar para enfrentar cualquier situación, alta necesidad de logro, posee destreza para organizar y dirigir equipos de trabajo, es proactivo y tolerante al riesgo. Gracias a estas cualidades que posee, fue capaz de implementar nuevas estrategias dentro de la organización y dirigirlas hasta lograr cambios significativos en todas las áreas. Este proceso de cambio fue muy importante para todos sus miembros, porque todas las estrategias implementadas mejoraron sus procesos y la forma de trabajar.

La dinámica intraemprendedora en la planta de XY en Cd. Juárez muestra una organización de aprendizaje, considerado ello como un privilegio importante en este mundo competitivo (Zare, Jajarmizadeh y Abbasi, 2010; citado en Harrim, 2008), porque las organizaciones necesitan aprender para esforzarse y así, superar las condiciones caóticas y de cambio (Borza y Maier, 2012). Aprendiendo, las organizaciones promueven la creatividad de la innovación y del empleado (Calantone, Cavusgil y Zhao, 2002; citado en Alipour, Idris, Arif, Anak y Karimi, 2011), y ello ayuda a mejorar el funcionamiento de una organización (Luo, Zhou, y Liu, 2005). Lo anterior se fundamenta en la planta de Cd. Juárez la cual, de estar a un paso de cerrar su

operación, hoy es una planta que ha ganado varios premios corporativos como la mejor planta en varios rubros.

El intraemprendimiento, como muestran los extractos de las entrevistas presentadas, puede también facilitar la distribución y la transferencia del conocimiento dentro de la organización (Jiang, 2008), lo cual es muy importante para el funcionamiento de ésta. XY ha encontrado hoy en día el significado del intraemprendimiento como una estrategia corporativa y de desarrollo vital para su funcionamiento (Romero, Fernández y Vázquez, 2010; citado en Alipour, Idris, Arif, Anak y Karimi, 2011).

Los hallazgos sugieren que el intraprendimiento en XY es de vital importancia para la perdurabilidad y el éxito organizacional así como para su desarrollo económico, y el involucramiento y cambios logrados en los trabajadores o empleados sin importar el nivel los alentó para transformarse en nuevos intraemprendedores de XY (efecto multiplicador), lo que a su vez se refleja en un incremento de utilidades y nuevas fuentes de trabajo, lo cual coadyuvó a evitar el cierre de la planta y fortalecer su viabilidad en el futuro.

El locus de control interno es un rasgo de la personalidad, el cual se presenta a través de los comportamientos que se tienen y ayuda a reafirmar la teoría de un enfoque basado en el comportamiento del emprendedor (Escovar, 1979). Los resultados obtenidos dentro de esta empresa se vieron reflejados en el momento en que la misma se dio cuenta de las acciones que podía ejecutar el emprendedor interno, mejorando la forma de trabajar y sus procesos, es decir, haciendo un énfasis a los comportamientos de los intraemprendedores.

Los hallazgos sugieren que el locus de control interno podría ser el catalizador detrás del modelo de características individuales del intraemprendedor planteado por Garzón (2005), y si la organización identifica estas características o elementos en sus empleados podrá desarrollar el intraemprendimiento en la misma.

## CONCLUSIONES

Se sugiere que las organizaciones deben de estar en continuo proceso de cambio, innovando su tecnología y procesos, entrenando y tomando continuamente en cuenta a sus empleados a fin de revitalizarse. Aquí es donde está la importancia de localizar, capacitar y dar seguimiento a aquellos candidatos a tomar el papel de intraemprendedores dentro de una organización.

Se sugiere en el futuro ahondar en un modelo de desarrollo y mantenimiento del locus de control interno enfocado a generar el modelo de las características individuales propuestas por Garzón en el capital humano de las organizaciones y hacia la elaboración de un análisis y construcción de un instrumento de medición del perfil psicológico del intraemprendedor.

## RESUMEN

*La industria maquiladora, una de las principales fuentes de ingreso de la economía mexicana, ha recibido variadas críticas través de los años, que van por ejemplo, desde las condiciones de vida de sus trabajadores (Sánchez, 1990) hasta la participación de las mujeres en los procesos de dicha industria (De la O, 2006). En la presente investigación se aborda la trayectoria laboral y personal de 2 gerentes de producción de la industria maquiladora localizados en Ciudad Juárez, cuyo desarrollo profesional ha estado siempre ligado a esta industria, y bajo un relato de vida comparten sus experiencias en un amplio espectro que va, desde la importancia de una correcta gestión de los sistemas de producción y del personal que participa directamente en el, las limitantes al implementar éstos, obstáculos culturales, satisfacciones que han obtenido, los sacrificios que conlleva esta industria tan demandante hacia el círculo familiar, y que les depara el futuro en el plano profesional una vez que alcancen una edad en donde ellos prevén ya no serán tomados en cuenta por esta industria.*

**PALABRAS CLAVE:** Sistemas De Producción, Industria Maquiladora, Relato De Vida

## ABSTRACT

*The maquiladora industry, a major source of income for the Mexican economy, has received mixed reviews over the years, ranging from the lives of their workers (Sanchez, 1990) to the participation of women in processes of the industry (De la O, 2006). The present investigation deals with the personal and professional path of two production managers of the maquiladora industry located in Ciudad Juarez, whose professional development has always been linked to this industry. Under a life story they share their experiences in a broad spectrum, from the importance of proper management of production systems and personnel directly involved in, the limitations in implementing these systems, cultural obstacles, achievements that they have obtained, the sacrifices involved within this industry like family time consumption, and what does the future holds for them as professionals once they reach an age where they shall not be taken into account by this industry.*

**KEYWORDS:** Production Systems, Maquiladora Industry, Life Story.

## INTRODUCCIÓN

Ciudad Juárez es la primera ciudad en empleos y producción en el ramo de la industria maquiladora de exportación al ofrecer el 20% del empleo de la Industria Maquiladora a nivel nacional, por lo que ocupa el primer lugar en empleos industriales per cápita (INEGI, Estadísticas

economicas, 2010). Operan en la ciudad alrededor de 308 plantas con más de 239 mil trabajadores y provee tres cuartas partes del empleo maquilador del estado y una quinta parte del total nacional, y de ellos un 75% corresponde a obreros, 16% a técnicos y 9% a empleados administrativos (Terrazas, 2008).

La inserción de la industria manufacturera en la ciudad fue el factor desencadenante de transformaciones urbanas, impulsando procesos de urbanización e industrialización, no solo aumentando su tamaño sino una recomposición social, una reorganización y nueva fisonomía del espacio urbano, nuevas dinámicas de circulación y polarización de las estructuras social y espacial (Rodríguez, 2002).

La maquiladora usa los insumos suministrados por el cliente y regresa la producción casi siempre al mismo cliente, por lo que la palabra maquiladora se emplea para una planta o fábrica donde se realiza la actividad de ensamblaje de partes generales importadas para su exportación (Wilson, 1996). La maquiladora es también conocida como plantas gemelas (*twins plants*) o de producción compartida (*production sharing*) los cuales se les denomina de esa manera debido al trabajo conjunto que realiza una planta del lado americano con una de lado mexicano (Terrazas, 2008).

Desde entonces la industria maquiladora ha experimentado una gran presión para sobrevivir, originada por los cambios en las características de los requerimientos, la constante competencia de empresas extranjeras y nacionales, y la demanda de compradores y consumidores industriales en incrementar la alta calidad de los productos (Terrazas, 2008; Wilson, 1996).

Por su parte un sistema de producción (Riggs, 2010) podemos entenderlo como un proceso de diseño mediante el cual los elementos son transformados en productos, un proceso es un procedimiento organizado para lograr la conversión de insumos en productos. Dentro de los sistemas de producción es común que encontremos el denominador 5M, que son 5 principales factores que impactan directamente a éste (materiales, maquinas, mano de obra, métodos y medios), y en donde se debe focalizar los esfuerzos para reducir la probabilidad de defectos (Velasquez, 2008). Los sistemas de producción constituyen una de las tareas más difíciles (Britto y Mejía, 2007).

## METODOLOGÍA DE LA INVESTIGACIÓN

“La historia de vida es una técnica de investigación que ilustra la transformación epistemológica de la relación entre el sujeto y el objeto por la de autor-lector o actor-testigo” (García, 2006, pág. 44). Como investigación cualitativa, sus datos provienen de la vida cotidiana, del sentido común, de explicaciones y reconstrucciones que el individuo efectúa diariamente (Ruiz, 2012) cuyo objeto principal es el análisis y transcripción que el investigador realiza a raíz de los relatos de una persona sobre su vida o momentos concretos de la misma (Martín, 1995). “El investigador es sólo el inductor de la narración, su transcriptor y también el encargado de “retocar” el texto para ordenar la información del relato obtenido en las diferentes sesiones de entrevistas” (Perelló, 2009, pág.192).

Es importante remarcar una primera diferencia que distingue a lo que se denomina la ‘historia de vida’ del ‘relato de vida’. La última es una entrevista con el objetivo de conocer el hecho social a través del individuo. Se basa en la experiencia del individuo, no teniendo que ser este último una persona en particular ni especial, ya que sólo le basta con ser parte de la comunidad bajo estudio (Bertaux, 1988; Ferrarotti, 1988) y se centra en algún momento o contexto en particular de su vida. Permite una amplia libertad de exposición y expresión de los actores sociales emergiendo la

propia conceptualización y visión sobre su vida personal y laboral consecuencia de su transitar en la industria maquiladora.

## RESULTADOS

### Antecedentes Pedro Martínez (PM) y Juan Solano (JS)

PM (su nombre real ha sido cambiado para guardar el anonimato del entrevistado) es Ingeniero con maestría en Ingeniería Industrial. Tiene 21 años de experiencia en el sector maquilador de Ciudad Juárez, y ha llevado varios cursos y certificaciones en China, Rusia, Japón, Alemania, Francia e Italia. Ha implementado diversos sistemas de producción en plantas de la localidad. Reconoce que todos los sistemas de producción tienen una área de oportunidad (problema), y son las responsabilidades de la gente la clave del éxito, si alguna de estas personas no realiza su labor dentro de su área de trabajo, el sistema no saldrá adelante.

JS (su nombre real ha sido cambiado para guardar el anonimato del entrevistado) es Ingeniero Mecánico Industrial con una maestría en Negocios Industriales. Oriundo de la vecina ciudad de El Paso Texas, E.U.A, vive y actualmente trabaja en su ciudad natal. Con experiencia en la industria maquiladora desde 1995, en la mayoría de las plantas ha ocupado puestos a nivel gerencial, encargándose de la planeación de los sistemas o las líneas de producción, y por su dominio del idioma español se le ha facilitado tomar cargos en países como México. La mayor parte de su carrera ha sido en la industria automotriz, y ha viajado a Alemania, China, Guatemala, Honduras, y gran parte de los Estados Unidos y México.

PM se ha encargado básicamente de la parte práctica en cuanto a la implementación de sistemas de producción, mientras que JS se encuentra más en el área de planeación y desarrollo de dichos sistemas.

### Sistemas De Producción

Para PM los principales problemas que se tienen en las organizaciones es la disfunción organizacional y la resistencia al cambio, y señala que en todos los países en que él ha estado se dan estos 2 problemas y en cada uno de ellos siempre hay un "huevo" u oveja negra". Por su parte PM hace mucho énfasis en la disponibilidad de la gente para realizar su trabajo, si no existe ésta, muy difícilmente se puede realizar la producción eficientemente.

Ambos coinciden en que las personas son la base de cualquier sistema de producción, y en ciertos lugares la resistencia a los cambios suelen ser más notables. JS hace énfasis que si bien México es uno de los mejores países por la disponibilidad de las personas, hay ciertas aéreas geográficas que son un poco renuentes al cambio, y se distingue porque son personas del sur del país en donde están más arraigados a sus costumbres, sin embargo no es impedimento, ya que con el transcurso del tiempo tienden a adaptarse.

*"Somos una gente muy noble, digo somos porque vuelvo a repetir, mis padres que son de México. Por eso le digo que somos, es una gente muy noble, muy adaptable, y lo he notado más en la gente del norte, gente del sur si es poquito, todavía poquito más pasiva y más esté, cerrada".*

PM menciona que una de las estrategias que le han funcionado al implementar un sistema de producción es iniciar de la mano con las personas, enseñarles paso a paso lo que se debe realizar: *"el darle el ejemplo a la gente me ha funcionado a que se lleve a cabo las cosas, si yo les*

*demuestro que yo lo puedo hacer ellos también lo pueden hacer, ¡hasta los operadores, eh!*". Dentro del proceso de planeación JS no difiere en cuanto al poner el ejemplo sin embargo, algo muy importante que se debe considerar es la seguridad, ya que en todo sistema de producción es una herramienta importante, la seguridad no solo del personal sino de todos los procesos a utilizar: *"la seguridad es muy importante, te ayuda a que puedas obtener algo mejor en tu sistema, en tu plan, sea el ramo que sea"*.

Menciona que en ocasiones simplemente no espera a que el problema se agudice, si él tiene manera de realizar la actividad o darle seguimiento únicamente lo realiza. Por su parte PM comenta: *"Yo no soy niñera de nadie, no tengo que andarle... diciendo qué hacer... jalando la... las orejas a la gente, ese es el principal problema que tenemos en cualquier sistema de producción"*.

El éxito de cualquier sistema de producción es la revitalización afirma PM *"La revitalización del sistema está en función del mercado, si el mercado cambia nosotros cambiamos"*. El manual de calidad le exige evaluar constantemente el sistema de producción, sin embargo, no sería posible sin el apoyo de la gente. Señala que un aspecto muy importante para la implementación de un sistema de producción es detectar las áreas de mejora, estudiarlo, determinar las ventajas, y sobre todo cuantificar los beneficios, posterior a ello es aprender el proceso para que el sistema de producción funcione de acuerdo a lo esperado. Un plan de control es importante desde el punto de vista de JS, sin ello cualquier sistema de producción no podría ser mejorado, ya que en todo proceso se debe realizar un análisis de variación para encontrar los defectos de inicio en una línea de producción y de esta manera controlar y mejorar.

PM comenta que la implementación de un sistema de producción en una organización trae muchos beneficios, uno de ellos desde el punto de vista cuantificable es la reducción de personal (mano de obra), que si bien es un beneficio para la industria por otra parte es una desventaja, ya que implementar un sistema conlleva la reducción de personal. Recuerda que en su planta contaba aproximadamente con 1500 personas en las diferentes áreas de producción y 89 ingenieros, sin embargo, debido a lo anterior actualmente cuentan con solo 240 personas en las áreas de producción y 14 ingenieros. En dicha área señala que el personal realiza sus actividades de manera autónoma, pero a la vez se encuentran atentos a las fallas que el sistema pueda tener.

Tanto PM y JS coinciden en que un sistema de producción debe generarle ganancias a la empresa y pocas pérdidas, sin embargo no garantiza no tener estas últimas y al final son parte de las mejoras que ayudaran a la revitalización del mismo, al identificar puntos críticos, deficiencias, y trabajar en ellas e iniciar las mejoras.

Algo que aprendió JS es a saber que cuando se trata de ir a un país a implementar o aprender un sistema de producción, el tiempo siempre será mayor al estimado, por lo que una semana en ocasiones se convierte en un mes: *"hay mucha similitud entre un sistema de producción y cada uno tiene su característica que lo hace importante y puedo hacer una combinación de varios, a diferencia de alguno que nada más conoce algún tipo de sistema"*.

### Limitantes En Sus Funciones

PM comenta que la principal limitante que él se ha topado es la del dinero, es decir, si el gasto que se va realizar en la implementación de algún equipo o mejora es elevado es lo primero que se le cuestiona, a lo cual el argumenta que siempre que pasan esas situaciones él les demuestra la

ganancia que va a generarse y esa limitante deja de serlo, ya que desde su punto de vista siempre el dinero va a ser la determinante de la aprobación de algún cambio en el sistema de producción.

Otra limitante es al implementar un sistema con las formalidades normas o reglas que deben seguirse, ya que comenta que en ocasiones tiende a hacer un poco *atrabancado* por saltarse quizá los pasos e ir directamente al paso final, sin embargo comenta que la empresa le pide seguir el protocolo o las normas que requieran, ya que parte de una implementación es detectar a tiempo fallas o posibles errores: *“Soy un poco ¡atrabancado! O soy muy desesperado a seguir las a.....las normas, las reglas”*. Para él, ser atrabancado no es una limitante quizá una debilidad, inclusive se ha hecho muy conocido dentro de la empresa: *“Soy muy conocido aquí en la empresa por esa forma de pensar de que me... A ver yo así le voy a hacer, hay esta ya el producto terminado, pero ¿como le hiciste?, aquí esta, lo que importa siempre es el resultado siempre he dicho yo y pues creo que es un... debilidades es lo que necesito trabajar más para hacerme más sistemático”*.

En el aspecto de la planeación y estudios de los sistemas de producción JS coincide que el factor dinero es una limitante de gran escala, así como la resistencia al cambio de las personas, sin embargo una limitante quizá no la más importante pero si una de gran escala, es el analfabetismo o falta de preparación académica y esto es lo mismo en cualquier cultura: *“No podían leer, eh pues fue en los 90’s, fue cuando empezó un gran desarrollo”*. Si bien un sistema de producción no solo es mano de obra ni maquinaria, ya que esas son herramientas necesarias para que se pueda llevar a cabo, el factor mano de obra es la base primordial para realizar las tareas, el que las personas puedan leer y sobre todo entender lo que se les está enseñando es lo más importante, saber el porqué, como y para que se realiza la actividad ayuda a que el personal se comprometa y se responsabilice con la parte que le corresponde de la línea de producción. El entendimiento se puede dar no solo de manera escrita, sino visual, y que a su vez la información se transforme acorde al país o a la persona que se quiera dirigir. *‘En mi opinión y siempre si ves los libros de liderazgo o de, o de mover el cambio, es de saber escuchar, saber escuchar, saber analizar observar y este, y adaptarse’*.

Para toda empresa menciona PM que los resultados son los que importan debido a que el producto se convertirá en dinero para la empresa, y señala que las decisiones que toma se deriva de la naturaleza del producto, si la empresa elaborara productos médicos se tendría que apegar más a los protocolos o reglas que se deriven para el desarrollo de los mismos: *“tengo que ser un poquito más precavido, a lo mejor si hiciéramos un producto medico pues no, no podría hacerlo así”*.

Ambos mencionan que otra de las limitantes es el tiempo, para que un buen sistema de producción funcione como debe ser lleva meses en lo que se realiza el piloto, ver las ventajas y posibles mejoras, ya que es imposible implementar un sistema de producción de la noche a la mañana. PM también se ha topado y enfrentado a las costumbres o creencias de las personas, ya que nos comenta que cuando se llega a necesitar que laboren en sábado o domingo la gente se niega porque tienen muy arraigadas sus creencias religiosas y no les es permitido laborar en estos días, por su religión o sus creencias culturales en este punto a la gente en ocasiones no les importa cuánto les pagues: *“si tú no tienes a la gente, no puedes hacer nada”*.

Entre los métodos de operaciones de PM está el entrenar a las personas de manera que sean multifuncionales y de esta manera tener la seguridad de que se tiene el personal necesario para laborar. *“Ser multifuncional requiere un alto grado de organización. Otro aspecto interesante es saber calcular el tiempo que nos toma completar cada tarea. Mucha gente piensa que para ser*

multifuncional se necesita algún don especial o nacer así”. Otra opción es la de realizar el trabajo de manera automática, para que esto no llegue a ser un impedimento a la hora de desarrollar éste.

### Experiencias Laborales

PM cuenta con una vasta experiencia en el ramo de la industria maquiladora, las experiencias que ha adquirido se debe al trato día a día que tiene con distintos tipo de personas, culturas, costumbres, si bien la experiencia de trabajar con personas es una de las tareas más difíciles ya que un sistema al final de cuentas es creado por un hombre, señala que una persona es infinitamente independiente una de otra, lo cual un buen sistema de producción no funcionaría sin la persona correcta para llevar a cabo la tarea asignada.

Una de sus mejores experiencias ha sido el ver un proyecto plasmado en un papel y después verlo reflejado físicamente: *“es un orgullo personal, una satisfacción personal pararse ahí en el Titanic, así le llamamos a una escalera que acabamos de poner, y todo lo que veas, todo lo que veas, es producto del trabajo de todos nosotros”*. *“Tan sencillo, un viernes te vas, se va la gente y regresa el lunes y aquí nos estamos los viernes, sábados y domingos hasta que terminamos los cambios, nos hemos ido de aquí a las seis de la mañana, salimos un rato y regresamos y regresa la gente y ¡a canijo! ¿Qué paso?, eso es, ese es el sentimiento que te da que se haya logrado”*.

Otro de los logros fue hacer un sistema semiautomático para un producto que era 100% artesanal y de esta manera sustituir a la gente y no depender de ellos, debido a que el costo para el entrenamiento era elevado ya que por lo crítico del proceso las personas permanecían por mucho tiempo, lo cual originaba la rotación constante de personal incluyendo los entrenamientos, con este proceso se evitó depender de personas, así como del costo de entrenamiento generando un ahorro para la empresa.

Su gran experiencia y compromiso hacia la empresa, así como factores externos como recortes de personal y costos, lo ha llevado a adquirir diversos conocimientos que le han permitido dirigir algunos departamentos dentro del sector industrial, actualmente tiene a su cargo 3 departamentos.

Por otra parte también ha ayudado a la empresa en un ahorro del 33% del costo de luz, con un curso que tomo en la CFE, todo esto le ayuda al momento de negociar con la empresa, ya que cada curso que él ha tomado le da más fuerza: *“Vender una idea es en cuestiones de dinero, necesito tanto, recuperas en tanto, inviertes tanto y ganas tanto”*.

Para JS la planeación para poder iniciar operaciones es sumamente relevante, ya que antes de abrir una planta visitan el lugar y hacen un listado de todo lo que el lugar tiene en cuanto a infraestructura, transporte, si cuenta con la mano de obra de acuerdo al perfil que se requiere, posterior a ello realiza el estudio para determinar los recursos económicos que se necesitarían y determinar si es costable o no abrir una planta en dicho sitio, ya que de nada serviría abrirla en donde por ejemplo no existe medio de transporte y las utilidades se tengan que emplear en medio de transportes más caros, ya que se busca siempre tener la mejor calidad, mejores utilidades, pero a un menor costo: *“Entonces ya teniendo todos esos pasos del rompecabezas, entonces ahora sí, ok”*.

### Propiedad Intelectual

PM reflexiona sobre patentar cada una de sus aportaciones: *“En nuestro contrato sí hay un cláusula que, que dice que, que todo lo, como es en horas de trabajo y recibimos un sueldo, estamos con la obligación de reportar y al eeh... Cualquier diseño o patente que se llegase a utilizar sería de la empresa”*. Sin embargo, asegura que si la empresa no tuviera esa cláusula en el contrato el patentaría todas las mejoras o inclusive los productos que se han generado con el paso del tiempo sumando a esto un mejor retiro llegado el momento. JS coincidió con PM, ya que menciona que todo lo que se crea con recursos de la organización por ende le pertenece y en los contratos existe una cláusula que impide poder patentar algún artículo que haya beneficiado a la empresa o se haya creado.

## **BARRERAS CULTURALES**

Sobre el porqué la necesidad de ir a otros países a aprender mejores técnicas y sistemas de producción y no obtener esos mismos recursos aquí en México, respondió que el principal problema es la educación ya que como hijos o padres lo hacemos y vemos como una obligación y no como lo que es, un beneficio para ambos, hoy en día la mayoría de los estudiantes *“solo estudian para pasar y no para aprender”*.

Si bien ha aprendido de los diferentes sistemas de producción en varios países, declara que Alemania es el país del cual más aprendió y ha admirado: *“Son muy organizados, son muy estruc... son muy buenos planeadores, yo creo que del 100% de un proyecto, se avientan como el 40% planeando y el no sé 20% ejecutando, 20% desarrollando, y cuanto llevo... 80% y 20% validando, y el rango más grande es la planeación, son muy buenos para planear, eeh son muy limpios para trabajar, tienen sistemas, yo creo que ellos mismos hasta me imagino que los inventan pero son excelentes para trabajar con los fierros, muy buenos planeadores y muy organizados”*. Ambos entrevistados coinciden que Alemania es uno de los países con el que mejor puedes trabajar, debido a su entrega, a su pasión, a buscar siempre tener calidad en cuanto sus productos y en general a todo lo que los Alemanes realizan: *“Son muy inteligentes, son muy sistemáticos y todo es basado en el análisis y, y este y cuestión de datos”*.

Sin embargo para JS como México no hay dos: *“El país que se me hace que es el que más ofrece, este... en cuestión de cultura y el factor laboral de la gente, la gente aquí en México es muy trabajadora, muy trabajadora, digo he andado en Centro América, en Canadá, Estados Unidos y fui brevemente a este.. a China, pero aquí lo que le aplicamos mucho es la cultura, la cultura y nuestras raíces que le ponemos sabor a todo lo que hacemos que yo por eso para mí mis respetos para México, creo que es un país que ofrece muchísimo”*. La gente es muy adaptable, sin embargo en el mismo país compara JS el norte con el sur, con las personas del norte expresa no hay problema puesto que son más abiertos a cambios, a trabajo sobre objetivos, la gente del sur por su parte son más arraigados a sus costumbres y se adaptan con el paso del tiempo: *“Ah más resistente al cambio, este lo que siempre yo dije la gente de Aguascalientes para acá siempre fueron más nobles, no sé si tenga algo que ver con la región, el clima, cultura no se verdad, pero siempre eran más accesibles, mas este dedicadas al trabajo y receptivos para aceptar opiniones, mente abierta”*.

### Aspecto Familiar

PM tiene una familia que consta de su esposa y un hijo, y al estar viajando para aprender sistemas en diferentes países ya mencionados ha tenido que sacrificar tiempo que podría estar con su familia, razón por la cual ha tenido reclamos con su esposa, lo cual el argumenta que está consciente, sin embargo cree que ese “sacrificio” lo compensa con el aspecto económico.

Siempre ha estado consciente del sacrificio que ha hecho con su familia, llegando inclusive a trabajar 36 horas seguidas por lo cual el ambiente familiar se pone tenso ya que a menudo escucha reclamos: *“Mi mujer dice que soy adicto al trabajo, que se la pasa uno trabajando y como te repito me gusta lo que hago, no se siente... yo no lo siento, de repente volteo y veo la hora y digo ¡ay hijo! ¡Hay que ir a comer!... y ella si lo siente”*.

Pese a la jornada normal de trabajo lleva casado 19 años, y considera que en el papel como padre quizá no ha dedicado el tiempo suficiente a su hijo, pero ha tratado de que no le falte nada, en este punto se le cuestionó si por parte de su hijo ha habido algún reclamo e indica que él considera que su hijo ha creado un modelo a seguir ya que está determinado a estudiar ingeniería en telecomunicaciones: *“Fijate que creo que hicimos un buen trabajo, irlo educando y bueno un muchacho como cualquiera, le gustan sus salidas poquito estricto, pero dicen que uno compensa de otra manera eso, tiene todo, no le falta nada y económicamente muy bien esta y pues no le falta nada, y de esa manera he compensado lo que no he estado verdad, yo sé que estoy mal pero para que trabaja uno”*.

Continuando con el aspecto familiar, reflexiona si realmente los sacrificios que ha hecho en su vida personal, familiar han valido la pena: *“Claro que sí... Este, yo digo que sí, a lo mejor mi mujer va decir que no verdad... este.... porque lo peor ya pasó que era ver crecer al muchacho y ahora hay que asegurarme el futuro, y es a lo que estoy ahorita, yo siento que tenemos como una, los que trabajamos como empleado una ¡rampa de crecimiento! Ahorita me siento que estoy acá (señala arriba) y pues hay que mantenerse porque entre más pasa el tiempo más viejo nos hacemos y empezamos a bajar, y entonces tengo que asegurarme el ultimo cacho de mi vida, a partir de los 40 a los 50 tenemos que trabajar para asegurar lo que vayamos a consumir de los 60 a los 70”*.

En muchos puntos coincide JS por ejemplo, dedicar más tiempo al trabajo que a su familia es uno de los sacrificios que no solo en esta carrera se hace, sino en cualquiera que tenga un grado de responsabilidad, el trabajar 14 horas o más los 7 días de la semana se hace una rutina de la cual no se da cuenta hasta que probablemente se tengan consecuencias, sin embargo este no es el caso, con 3 hijos señala que ha sabido equilibrar el trabajo con su vida personal, para él es importante dedicar el tiempo necesario a cada cosa que realiza y únicamente dedicarle el momento, en gran parte su equilibrio se debe a que su esposa es comprensiva y siempre cuenta con su apoyo: *“Algo se tiene que sacrificar y es donde en veces entra el balance de lo que se sacrifica, seas un atleta, seas un cantante, seas un gerente, director, vicepresidente o doctor, todos quieren su dedicación y entre más quieres alcanzar pos más vas a ir perdiendo en veces la otra parte de la moneda”*.

### Expectativas a Futuro

En algún momento de su vida PM ha pensado en la opción de asesorar a las empresas y esto lo realizaría en la última etapa de su vida laboral gracias a su experiencia de 20 años y a su capacitación expresa puede hacerlo, piensa que es allí donde él tiene mucha área de oportunidad, ya que como comentó la última parte de su vida por su vejez es muy probable que no tenga trabajo, sin embargo cree que en las asesorías está su futuro: *“Yo si he pensado en asesoría, a veces platicando con mis amigos, en lo que soy débil este, trato de incrementar, apuntalar mis habilidades. Me junto con otros compañeros y nuestras platicas mas es, son de que vamos a hacer ahora que vamos a brincarle a los 50, cómo vamos a mejorar nuestros últimos diez años de experiencia, como la ven si hacemos esto, una compañía de asesorías, si lo hemos platicado, yo creo lo más seguro es que terminemos así”*.

Comenta que cada cosa llegara en el momento adecuado, sin embargo, debemos forjar el camino para que las cosas que nos propongamos se realicen: *“No sé qué tanto, pero uno propone y Dios dispone, no sé qué vaya pasar, yo voy por algo más grande verdad, y espero que si me llega aquí pues mejor y si no pues en otra parte, pero..., creo que tenemos la capacidad para, para hacer un buen negocio”*.

JS por otro lado ha dedicado su vida en realizar las dos actividades, es decir ha trabajado para empresas y a su vez se ha dedicado a asesorías o se le ha requerido para llevar a cabo estudios e implementaciones de sistemas de producción. Para JS un sistema de producción conlleva muchas cosas, desde investigación, planeación, desarrollo e implementación, gracias a la experiencia que ha desarrollado se considera una persona con todas las capacidades para trabajar en una empresa o realizar sus actividades por cuenta propia.

## RESUMEN

*Las personas que terminan los estudios de doctorado adquieren un grado de preparación importante durante la construcción de sus trabajos de investigación, siempre bajo la guía y coordinación de varios tutores. La presente investigación muestra las experiencias de un grupo de doctores durante su proceso de estudio de dicho grado académico, algo escaso en la literatura, compartiendo su manera de ver las cosas después de haberlo terminado, qué experiencias les ha dejado, qué ha cambiado en sus vidas y en las de sus seres cercanos, tanto familiares como compañeros de trabajo, su apreciación de la educación, y entre otras cosas, su versión acerca de la formación recibida por parte de sus tutores.*

## METODOLOGÍA DE LA INVESTIGACIÓN

“La historia de vida es una técnica de investigación que ilustra la transformación epistemológica de la relación entre el sujeto y el objeto por la de autor-lector o actor-testigo” (García, 2006, pág. 44). Como investigación cualitativa, sus datos provienen de la vida cotidiana, del sentido común, de explicaciones y reconstrucciones que el individuo efectúa diariamente (Ruiz, 2012) cuyo objeto principal es el análisis y transcripción que el investigador realiza a raíz de los relatos de una persona sobre su vida o momentos concretos de la misma (Martín, 1995). “El investigador es sólo el inductor de la narración, su transcriptor y también el encargado de “retocar” el texto para ordenar la información del relato obtenido en las diferentes sesiones de entrevistas” (Perelló, 2009, pág.192).

Es importante remarcar una primera diferencia que distingue a lo que se denomina la ‘historia de vida’ del ‘relato de vida’. La última es una entrevista con el objetivo de conocer el hecho social a través del individuo (véase Tabla 1). Se basa en la experiencia del individuo, no teniendo que ser este último una persona en particular ni especial, ya que sólo le basta con ser parte de la comunidad bajo estudio (Bertaux, 1988; Ferrarotti, 1988) y se centra en algún momento o contexto en particular de su vida. Permite una amplia libertad de exposición y expresión de los actores sociales emergiendo la propia conceptualización y visión sobre su vida personal y laboral.

Tabla 1: Relato de Vida MRA, AJZ y MBX

<i>Asunto</i>	<i>MRA</i>	<i>AJZ</i>	<i>MBX</i>
<b>Principal motivo por el cual eligió hacer un doctorado</b>	Mmm... Bueno, en realidad fueron... fueron varias: La primera opción era el desarrollarme académicamente, eh... pues obviamente siempre me gustó la escuela y yo comencé a estudiar en una... En la primaria entré a los 4 años, entonces siempre me gustó mi escuela... La escuela, dice mi madre "que siempre me gustó tanto que sigo en ella", yo sigo metido en las escuelas. Entonces, para mí era importante, o sea, continuar creciendo y desarrollándome. Eh... aprender a investigar. Entonces, fue otra de las razones por las que también, eh... decidí tomar el doctorado.	Creo que fue motivos personales principalmente, pero es el gusto, la afición que tengo por los retos... ¡fue un reto personal!	Bueno, yo creo que el principal motivo es primero por desarrollo personal, ¿sí?, eh... creo que primero como ser humano siempre está la intención de seguir aprendiendo, ¿no?, eh... segundo, cuando tu entras a cualquier organización yo creo que todos debemos de tener la misma visión de crecimiento y desarrollo dentro de la misma, ¿no? Y una de las formas de desarrollarte dentro de una institución de educación superior pues es precisamente preparándote y obteniendo mayores niveles, este... de educación, ¿cómo en este caso los posgrados, ¿no?
<b>Las mayores dificultades al realizar su doctorado</b>	La primera, bueno fueron varias, la primera el desarrollar las habilidades de investigación porque es un proceso, no es tan fácil; crear un investigador lleva muchos años, hay quienes dicen que lleva una década ¡mínimo! Entonces este... esa fue una de ellas. La segunda el combinar mis actividades cotidianas-laborales, principalmente con la investigación. Esa fue otra y la tercera la distribución de tu tiempo entre tu trabajo, tu familia y el dedicar el tiempo a la investigación.	La mayor dificultad fue a veces estar en la misma sintonía con la que estaban mis tutores; dado que se trabaja con seres humanos. Entonces, este... no siempre estamos todos en el mismo canal.	¡Ay, yo creo que el tiempo! Primero que nada te enfrentas al tiempo, ¿no?, porque creo que para hacer un posgrado necesitas ser un muy buen administrador de tiempo y muchas veces esa falta de disciplina en ese aspecto es lo que nos cuesta mucho más trabajo, ¿no?, porque tienes que dejar de lado para ese tiempo aplicarlo en... en tu posgrado.
<b>Relación con sus compañeros durante su estancia en el doctorado</b>	Ah... muy buena, fue una relación muy cordial de... de equipo, de... de camaradería, de apoyo. ¡En general fue muy buena!	Fue bastante cordial, incluso hubo mucha solidaridad -creo yo-, entre todos los estudiantes, no nada más de esta institución. Habíamos doctorantes de varias instituciones a nivel nacional; cuando nos encontrábamos en los coloquios, por lo general siempre hubo bastante cordialidad.	Fijate que con los de mi generación fue muy buena, los que estaban antes que nosotros fueron mucho apoyo la verdad... mmm... ¡mucho, mucho apoyo!, este... tengo una vecina ahí de cubículo, que también ella me apoyaba mucho para la cuestión de eh... metodología. Ella iba poco más arriba que... que nosotros, ella era una generación anterior, entonces; como que siempre estarle preguntando y así a los que iban más arriba era con los que les preguntábamos, ¿no?; respecto a cómo manejarnos administrativamente ante la institución, cómo manejar la cuestión de... este... de cosas que van surgiendo, ¿no?

<p><b>Enseñanzas que le dejó el haber realizado el doctorado</b></p>	<p>Ah... pues, eh... fueron varias, la primera que... que todo se puede, todo se puede, este... de repente cuando algunos de... de mis alumnos dicen “¡no, es que trabajo y estudio!”, pues les contesto que “¡yo también trabajé y estudié!”, ¡verdad!; en la licenciatura, maestría y ahora el doctorado...</p>	<p>Me dejó una enseñanza muy importante, de que ¡todo se puede! A uno se le mete una idea en la cabeza, uno se propone hacerlo y todo es posible, hay que tener disciplina nada más.</p>	<p>Bueno, primero que nada el mismo doctorado pues te deja eh... te deja una gran enseñanza, ¿no?, de... mmm... aprendes a valorar muchas cosas...mmm... Yo aprendí a valorar más el tiempo que pasaba con mi familia, porque entonces, el poquito tiempo que me quedaba cuando estaba en el doctorado pues era más tiempo de calidad, porque cantidad de tiempo era difícil, ¿no? mmm... Sacrificas muchas cosas en el inter que vas caminando sobre el doctorado porque... pues tienes que dejar amigos, tienes que dejar familia, inclusive, muchas veces pareja... mmm... o sea, y no es que los descuides, sino que te absorbe tanto el tiempo que... para el doctorado que, pues bueno, eso se va quedando ahí, ¿no? Entonces, aprendes a valorar más a las personas, a la familia, al tiempo.</p>
<p><b>Material que revisó durante su doctorado</b></p>	<p>Pues otra vez, o sea, realmente el contenido es lo que tú desarrollas... mmm... Lo que tu desarrollas, lo que tu tutor te vaya dirigiendo, ¿eso es básicamente, ¿no? pues era necesario saber el protocolo, la candidatura y la defensa de grado.</p>	<p>Creo yo que sí fue necesario, pero, no todo el material apareció en la tesis al final de cuentas, mucho de este material, eh... ya no se incluyó porque posiblemente la temática ya se estaba abriendo un poco, de más, entonces fue necesario acotarlo.</p>	<p>Mmm... Yo creo que a lo mejor necesario para plasmarlo en la tesis, no... mmm... pero... yo creo que sí fue necesario para tu experiencia dentro del doctorado, porque aprendiste a hacer una selección de lo que sí servía y lo que no servía... mmm... pero lo que me dejaba a mi cada vez más claro era, ¿cuál era mi enfoque, ¿no?, entonces no tenía que perder la dirección, ¿no? Entonces te encuentras cosas muy interesantes en el camino, pero finalmente sabes que tienes que ubicarte hacia un objetivo y no te tienes que salir de ahí.</p>
<p><b>Opinión de sus familiares y amigos con respecto a la realización del doctorado</b></p>	<p>Pues hubo varias, desde... admiración por estarlo haciendo; respeto por la gente que ya... ya sabía lo que es un doctorado y... y verlo; eh... los compañeros de trabajo, pues obviamente algunos de aliento, otros de, pues así como que ¡no sabes en la que te estás metiendo! Eh... pero en general pues fueron buenas, ¿no?, o sea, ¡hubo de todo!</p>	<p>Bueno, yo creo que siempre fue una... una apreciación de... de apoyo, de... ánimo, nunca encontré... al menos en mi familia conflictos a pesar de que sí... afecta, sé que afecta sobre todo las relaciones, este... de pareja, pero al menos yo siempre tuve... siempre tuve apoyo.</p>	<p>Pues mira, son diferentes opiniones, o sea, lógicamente que quien nunca ha realizado un doctorado, ni tampoco tiene dentro de su plan de vida hacer un doctorado, tiene una opinión de que hacer un doctorado es lo... lo máximo... ¡es lo máximo, que la persona es súper dotada casi, ¿no? para poder realizarlo... mmm... pero no es cierto, cuando estás estudiando el doctorado, en lo personal, en mi opinión, yo siento que es exactamente lo mismo que cuando entras a una carrera de licenciatura... mmm... porque es algo que no viste, ¿sí?, que no sabes, estás aprendiendo algo nuevo, es normal, es un proceso de aprendizaje, la cuestión es que el esquema que... que se tiene en este doctorado pues es casi de autodidacta, ¿no?...mmm...y 100% investigación...investigación... porque en el caso, por ejemplo, volviendo a tu pregunta, en el caso de mis compañeros, obviamente todos estábamos sobre lo mismo, ¿no?</p>

<p><b>Sacrificios tuvo que hacer para realizar este doctorado</b></p>	<p>Son muchos, o sea, cuando estás en un doctorado y estás trabajando, este... siempre hay sacrificio, ¿no?; de tu tiempo libre, de tus aspiraciones personales. Desde el descanso, desde el relajamiento, desde el hacer cosas más placenteras que el llegar a las 10 de la noche y tener que abrir la computadora para empezar a investigar, porque esa era la única hora en que tenías más o menos tranquilo y no había ningún compromiso para poder hacerlo, ese es uno de ellos. La familia también, que de repente pues había que hacer algunas actividades. Entonces sí, sí hubo varios... varios sacrificios. El trabajo también, de repente pues, no estás al 100% porque estás metido en otra... en una investigación.</p>	<p>Si hubo bastantes sacrificios, entre ellos, principalmente personales, económicos a veces, incluso, este... hubo un sacrificio muy interesante de mi propia luna de miel, la tuve que sacrificar para ir a un coloquio en la ciudad de México, claro que a mi esposa no le gustó mucho la idea obviamente... nada más, este... se la... la retrasamos o la postergamos para poder atender ese pendiente.</p>	<p>Pues yo no lo vería como sacrificio... mmm... ¿yo más bien diría costo-beneficio, ¿no?... mmm... eh... yo creo que los costos que se pagan, este... llega un momento en que pueden... pueden ser altos, pero los beneficios... ajá... ¿también son buenos, ¿no?... ¡y son muy buenos! Entonces, el beneficio en el mediano plazo, en el largo plazo, pues es... eh... te paga todo el costo que pudiste haber absorbido durante el proceso del doctorado, ¿no?</p>
<p><b>Experiencias buenas al haber terminado el doctorado</b></p>	<p>¡No, pues muchas, muchas!, desde... la... vuelvo a repetir, la camaradería de... de los compañeros, el compartir la... la aventura juntos, no... mmm... El ir viendo como los que iban adelante lo iban logrando, el echarle ánimo a los que venían, se iban rezagando contigo y “¡órrole échale ganas y mira!” mostrarles con el ejemplo que sí se podía, que a pesar del trabajo, a pesar de las circunstancias se iba desarrollando. Este... el... el... el descubrir el secreto de la investigación en el sentido de... de lo bonito que se convierte en crear conocimiento, en generar un conocimiento nuevo, el sentirte hacedor de un nuevo enfoque, una nueva teoría, un nuevo modelo, una nueva... el delineamiento, una nueva disciplina, eso es muy satisfactorio. ¿Y obviamente el terminarlo, ¿no?, el... así es... el decir “con, sin y a pesar de, se logró el objetivo, ¡y se terminó!”. Son cosas muy satisfactorias.</p>	<p>Pues muchas, es difícil numerarlas, pero, más que nada... una experiencia que me ha dejado muy buena es que tener la humildad, uno tiene que aceptar que uno nunca... ¡nunca termina de aprender!... exactamente... nunca termina de aprender porque bien puede uno tener uno muchos posgrados, pero entre más nos vamos metiendo en los estudios, más cuenta nos vamos dando de que sabemos menos.</p>	<p>Pues yo creo que la buena experiencia más bien fue eso... mmm... el estudiar el doctorado, ¿no?... mmm... para mí de principio a fin fue la mejor experiencia, ¿no? mmm... Aparte porque tienes la oportunidad de viajar mucho, de... no solo dentro del país, sino fuera del país, a presentar tus avances de investigación. Entonces, eh... lo interesante de aquí es que empiezas a comparar cómo se comportan las personas, los investigadores dentro de México y cómo se comportan este... en otros países ¿no?... mmm... y ves como las actitudes de las personas donde tú estás presentando tus avances son completamente diferentes, ¿no?</p>

<p><b>Malas experiencias durante el proceso del doctorado</b></p>	<p>Bueno, que me hayan marcado no, pero si hay, ¿si hay experiencias este... amargas, ¿no?, desde... este, que no tienes tiempo o falta de colaboración de alguna gente que tu creías que sí te iba a apoyar con una entrevista, con facilitación de alguna información, eh... a veces, un poco incomprensión de la gente que está en tu entorno, ¡sí, si las hay obviamente, pero, una que me haya marcado, no!</p>	<p>Hubo, así como hubo buenas ¡abundaron las buenas experiencias!, también hubo malas experiencias ¡claro que sí!, hubo... diferencias que hubo con mis tutores, también este... hubo diferencias fuertes con algunos colegas de otras universidades.</p>	<p>Mala experiencia, yo creo que no es mala... mmm... pero, si fueron experiencias dolorosas... mmm... cuando presentaba los avances de investigación, sobre todo aquí dentro de México. Mmm... Yo creo que somos un poquito... bueno, ¡muy críticos!, pero con mucha falta de tacto para decirle a la persona eh... ¿cómo mejorar el trabajo, ¿no? Entonces, esas fueron experiencias dolorosas, pero sin embargo, que las agradeces mucho, porque independientemente de la forma en que te lo digan, pero, sabes que tienen razón. Entonces eso te permite mejorar el trabajo. Entonces, esa experiencia dolorosa finalmente se transportaba... se transformaba en una buena experiencia.</p>
<p><b>Principales obstáculos para que una persona estudie un doctorado</b></p>	<p>Mmm... Yo creo que la primera y la más fundamental es que... que se comprometa, o sea, parece sencillo, pero decir “¿bueno, te comprometes con estudiar un doctorado?” “no, pues que sí”, porque a partir de ahí pues ya, eh... van a desarrollarse todas las actividades. Segundo que... que tengas tiempo, o sea, que tengas tiempo realmente para dedicarle al doctorado, si no, va a ser muy complicado y te puedes meter en el infierno. Tercero que tengas, eh... la habilidad de... o al menos que te guste, ¡si tienes la habilidad qué bueno!, si no la tienes bueno, tienes que desarrollarla, aprenderla, ¡que te guste investigar, que disfrutes investigar!, y cuarto, que seas una persona sumamente eh... eh... constante, ¡hasta rallar en la... eh... testarudez si es necesario, ¿no?, por... por buscar lograr el objetivo. Y este... y obviamente sí, ¿pues qué lo quieras hacer, ¿no?... mmm... fundamentalmente.</p>	<p>Yo creo que lo primero es tiempo, hay que tener tiempo ¡bastante tiempo para... para ese proyecto!, y claro que también hay que tener recursos económicos, a pesar de que existen becas este... si se requiere tener ciertos ingresos fijos.</p>	<p>Fijate que yo creo que ninguno... mmm... ninguno...</p>

<p><b>Limitaciones de los programas u opciones de doctorado</b></p>	<p>Yo creo que sí, sí hay limitantes porque... este, ¿se podrían hacer algunos esquemas diferentes, ¿no?, ah... por ejemplo; este... este esquema el de la..., es un esquema donde ahí dependes completamente del individuo, ¿no?, o sea, ahorita ya lo mencioné anteriormente... mmm... y a lo mejor podría haber esquemas donde quizás hubiera un término medio, ¿no?, entre lo que hace... eh... la universidad, que te da ciertos cursos, avanza ciertas zonas, te asesora un poco, ¡no sé!. Yo creo que sí, si debe haber más diversidad, más diversidad que... que... porque es sumamente flexible el proyecto, pero, dependes completamente del individuo, y vuelvo a repetir, no toda la gente tiene disciplina para poder cumplirlo, entonces sí sería interesante que hubiera otros esquemas.</p>	<p>Sí, creo que... poco a poco se están abriendo más doctorados y con más variedad, pero también porque cada vez existimos mas profesionistas y existen más docentes que requieren especializarse</p>	<p>Yo me voy a ir así como que a la ley del mercado imperfecto, ¿no?, ¿el que se rige por la oferta y la demanda, ¿no?... mmm... el mercado es imperfecto desde el momento en que se rige por eso. Entonces, si no hay quien quiera estudiarlo, pues para qué lo... para qué lo ofertan, ¿no? mmm... Entonces, yo creo que primero ¿cómo me decías ahorita, ¿no?, hay que cambiar la cultura y hay que hacer una cultura de, de superación, de desarrollo, de la importancia de tener un posgrado, entonces, ya cuando la gente, eh... entienda la necesidad o entienda lo importante de tener un posgrado, no sé, pues... mmm... entonces hay que generarlo, ¿no?.</p>
<p><b>Actitud que debe tomar una persona que está realizando el doctorado</b></p>	<p>Una actitud de... de madurez, de madurez porque... eh... al, al ser creador de conocimiento tienes que entender, eh... que muchas veces es algo nuevo, que alguien va a criticar, que alguien quizás o algunos puedan no entender; porque es tan nuevo que no lo alcanzan a entender y a lo mejor se va a entender muchos años después o... o simplemente a veces tienen razón y... y la crítica es válida. Entonces, tienes que tener madurez para entender que cuando te hacen algún comentario respecto a tu investigación, no necesariamente es algo personal o están hablando de que... eh... te restan capacidades, habilidades o inteligencia, sino que tu trabajo a lo mejor no, no está siendo, eh... útil... mmm... o... el enfoque no es propio, o simplemente alguien piensa diferente a ti, ¿no? Entonces yo creo que es, es de madurez...</p>	<p>Es una cuestión, una actitud de humildad, de aprendizaje, este... insisto en esto, lo peor que uno puede hacer es no asumir que uno no sabe todo, los tutores están ahí para enseñarnos, para enseñarnos y este... hay que tener una... una actitud bastante abnegada en ocasiones y también bueno, también de humildad en el aprendizaje...</p>	<p>Yo creo que primeramente tienes que ser ah... ah... tienes que ser bien tolerante... mmm... y tienes que... ah, dejar que... que te dirijan, ¿sí?... mmm... porque cuando tienes, cuando comienzas un doctorado crees que, empiezas creyendo que lo vas a aprender todo, ¡que lo sabes todo, sí! Entonces, te empiezan a dirigir tus tutores y a veces te resulta difícil que te cambien lo que tú quieres estudiar, ¿no?, pero sí... si no te dejas dirigir nunca vas a salir del doctorado, o sea, tus tutores nunca van a decir, “estás listo, ya preséntate al examen”, o lo que sea ¿no? Entonces, primero que nada tienes que saberte... ¡tienes que dejarte dirigir!... así es... tienes que ser humilde también para saber aceptar las críticas, tienes que ser tolerante y no entrar en conflicto porque eso se da mucho, mucho, mucho.</p>

<p><b>Percepción en sí mismo al tener un doctorado</b></p>	<p>Percepción de mí mismo... así es... bueno, este... yo creo que no cambia, no cambia la percepción que ya tenía anteriormente de mí mismo, porque por ejemplo aquí en... en... en la última fase... Bueno, en la primera fase del doctorado yo estaba trabajando en una planta maquiladora, dirigía la planta, eh... daba clases aquí en la universidad y arranqué el doctorado. Entonces, era complicado pero al mismo tiempo, pues busqué, lo que había comentado anteriormente para poder hacerlo, eh... cuando dejo la planta, entonces tuve más tiempo para avanzarle al doctorado. Pero de repente me piden que me haga cargo del programa de administración... mmm... entonces volvió a complicarse nuevamente el asunto, porque era eh... este, dar clases, dirigir un... un programa de... de... una licenciatura y a su vez continuar con el doctorado.</p>	<p>Pues yo creo que yo sigo percibiéndome a mí mismo como... como lo que era antes sin doctorado, este... nada más que ahora me percibo. Bueno, lo único que varió fue esto de... darme cuenta de que sabía menos, entre más me fui adentrando, era, el... el universo... El abismo al conocimiento era aún más grande.</p>	<p>¿Qué percepción tengo de mí misma?, pues, yo creo que soy más crítica, más analítica, en ese aspecto, pero yo creo que... no me considero que haya despegado los pies del... del suelo, ¿no?. No soy una persona que se moleste porque no le digan “doctora” ¿sí me explico? No soy una persona que se moleste porque le digan “maestra” en lugar de “doctora”, como nos encontramos muchas personas por ahí ¿no?, que si no le dices “doctor”... mmm... ¡olvídate no!, o sea, se ponen colorados. Fíjate que es más bien eso, ¿no?, el nivel de análisis es diferente. Mmm... Eso es lo que yo puedo considero que es el cambio más grande, claro, conociste más acerca de algo, pero pues no lo puedes saber todo tampoco, ¿no? El hecho de que estudies un doctorado no te hace este... no te hace sabio ¿para comenzar, ¿no?...</p>
<p><b>Percepción hacia usted por parte de la gente al saber que tiene un doctorado</b></p>	<p>No tengo idea, no tengo idea.</p>	<p>Yo quiero pensar que la gran mayoría gente que me rodea... ya sea... otros colegas de la universidad, familia, amigos, vecinos y demás, quiero pensar que tienen una sensación agradable de que haya terminado yo mi doctorado... ¡Quiero pensarlo!...</p>	<p>Fíjate que no... No me he detenido a pensar jamás en la percepción que tengan hacia mí, pero... pero pues tampoco me... ¿no sé, será que no me... no es algo que me preocupe!, ¿sí me explico?... mmm... y no, no sé, realmente no sé qué percepción tengan.</p>
<p><b>Influencia del doctorado en su trayectoria profesional</b></p>	<p>Positivamente, porque aquí en la universidad económicamente cuando accedes al doctorado hay una re-categorización inmediata. Además, eh... el hecho de desarrollar investigaciones... eso es cuando te gusta, vuelvo a repetirlo, es satisfactorio, es bonito ver que vas creando algo. Entonces este... eh... ¡sí, yo creo que han sido... han sido buenas consecuencias, en el sentido profesional, en el sentido académico, en el sentido económico, han sido buenas!</p>	<p>En mi vida personal todo sigue exactamente igual, este... en mi vida familiar ¡y... bueno, todo bien!, en mi vida social ha sido exactamente igual, posiblemente en mi cuestión laborales hay un poco de reconocimiento, sobre todo porque estoy trabajando en la universidad o en universidades.</p>	<p>¿Cómo ha influido?, ¿no, pues, la ha impactado de manera muy, muy, muy positiva!, te comentaba ahorita de la razón costo-beneficio de estar en el doctorado, yo creo que los beneficios se... se ven de muchas formas ¿no? mmm... primero inmediatamente, pues se empiezan a ver económicamente, ¿no?... mmm... ahí tiene un impacto inmediato, ¿no? Pero los beneficios en cuanto a acceder a otro tipo de... eh... ¡vaya, de situaciones que son... que te dejan una satisfacción!, ¿sí me explico?... mmm... entonces, entras a otra dinámica muy diferente, ¿no?</p>
<p><b>Sentimiento hacia sus tutores</b></p>	<p>Bueno, hubo, eh... diferentes reacciones, eh... hubo una, mi tutora principal; muy comprometida, muy exigente, muy demandante, muy... ah... ¡demandante es la palabra!, eh... quería mucha precisión, eh... buscaba que el documento se mejorara bastante. Otro de los tutores, este... eh... involucraba distancia, respetando siempre la guía del tutor principal., y el otro pues aceptando la directriz de los otros tutores sin involucrarse al 100%. Entonces para los tres este... mi agradecimiento, ¿no? Porque los tres aportaron, eh... incluso el que</p>	<p>Bien, en términos generales me sentí bien, con la gran mayoría de mis tutores tuve una... una buena amistad... mmm... tuve diferencias y dificultades a veces con alguno de ellos, pero, nada que... que sea grave, este... logré amistad con bastantes de mis tutores, incluso uno de ellos pues lamentablemente falleció, que fue mi tutor principal, pero de mis demás tutores, pues fue una relación muy cordial.</p>	<p>Pues, yo creo que ah... pasamos como que... por etapas, ¿sí? Yo creo que en el principio te sientes un poco incomprendido... mmm... por lo que te comentaba ahorita, que entras con la idea de que “¡yo quiero esto, yo quiero estudiar esto, esto y esto!”, y empiezas a platicar con tus tutores y ellos que tienen una visión más amplia de las cosas porque, por la experiencia ¿no?, empiezan a ver tu... problema de investigación de una manera global y le ven cuáles van a ser las limitantes. O pueden ver cuál es la forma en que se puede mejorar, en mi caso fue para mejorar</p>

	no aportó tanto, aportó en dejar que los otros eh... externaran toda la dirección pues, o sea, mantenerse un poco no tan demandante. Entonces, ¡no, de agradecimiento es la actitud hacia ellos!		muchísimo el problema de investigación, o sea, me dejaron el mismo tema, pero el enfoque que le dieron fue muy diferente. Entonces te cuesta trabajo al principio dejarte dirigir, entonces te sientes un poco incomprendido, pero a medida como te digo, que tienes que ser humilde, tienes saber tomar la crítica de manera constructiva, tienes que dejarte dirigir, entonces, a medida que lo vas entendiendo vas con una excelente relación.
<b>Sentimiento al ser ahora tutor y doctor</b>	Bueno, comprendo al... al... tutorado, eh... porque entiendo que... que a veces no es fácil entender a dónde quieres llevar al tutorado, o sea, el tutorado no alcanza a entender a donde quiere el tutor llevarlo y trato obviamente de... de lo que yo sentí cuando de repente había cierta ah... eh... persistencia, terquedad de alguno de los tutores; entenderlo y... y tratar de no, no hacer sentir al tutorado de esa misma manera, ¿no?; yo creo que eso es bueno, es bueno es este... es positivo.	Bueno, ahorita todavía no me han asignado un alumno tutorial... mmm... ¿verdad?, este... pero... me siento igual en el sentido físico, me siento igual que cuando era licenciado, me siento igual que cuando era maestro, un poco más gordito nada más.	Pues mira, yo creo que... pasar por las experiencias que ya pasaste como estudiante te permite entender más a los... a las personas que estás asesorando, ¿no? porque de cierta manera te ves reflejado... mmm... tratas de explicar de la mejor manera posible, eh... ¡vaya!, la asesoría que les estás dando para que no lo sientan... ¿A lo mejor en mi caso, no?, como en el momento yo me sentía algo incomprendida, tratas de explicarle por qué a veces tiene que hacer cambios, por qué a veces la crítica es dolorosa, ¿pero, también les dices cuáles son los beneficios, ¿no?
<b>Remuneración del doctorado</b>	Si lo es.	La remuneración es tan relativo como la riqueza y la pobreza, este... si no tenemos un punto de comparación entonces no vamos a saber si está bien remunerado o no. Sí hay un incremento, sí hay un incremento, este... en lo que son las percepciones de una persona trabajando como académico, porque si usted trabaja en una empresa en la que no le requieren un grado de doctorado, pues, muy probable se le haga un aumento...	Yo considero que sí y no solamente en cuestión económica... mmm... sí, yo creo que la satisfacción que te deja el mismo grado obtenido, pues ya, ya es bastante.
<b>Motivación a sus hijos para que estudien un doctorado</b>	Solo si les gusta investigar. La verdad no, ¡yo no me atrevería a decir, a exigirles!, motivarlos, eh... solamente si yo veo en ellos las características de investigadores, sí.	¡Sí, claro que sí... claro que sí!, creo que este... la educación continua no es algo que... que deban hacer nada más un programa en las universidades. La educación continua uno la debe de... de expresar también hacia su familia definitivamente.	Primeramente a mis hijos... mmm... sí, a ellos, a mi familia no ¡pero sí, a mis hijos sí! ¡Claro que sí!

<b>Campo para ejercer el Doctorado</b>	Solamente académicamente, laboralmente no... No, no se demanda, las empresas no demandan doctores.	¡Sí, claro que sí!.. Las ciencias administrativas por lo general son muy amplias entonces; este... este doctorado tiene muchas áreas en donde se puede desempeñar el egresado.	Fíjate que es un doctorado relativamente nuevo, ¿sí?... mmm... que como te comentaba, tenemos que crear también la necesidad para que... mmm... para que sea cotizado, en las instituciones de educación superior. Definitivamente sí, si te vas al ámbito organizacional, a las empresas en particular es, pues, yo considero que no mucho todavía y menos con la situación de crisis que ahorita se está viviendo, lo que quieren las empresas es pagar los sueldos más bajos y pues ellos lo que quisieran es tomar a los estudiantes cuando recién salen, para tener los sueldos más bajos, para formarlos de acuerdo a la filosofía de la empresa, ¿no?... que son los que más fácil se dejan dirigir. Entonces si tú agarras un doctor y lo llevas a una empresa, para empezar le vas a tener que pagar un sueldo muchísimo más alto que el de un estudiante recién salido de licenciatura, eh... y después para que lo hagas que se amolde a la empresa, pues va a ser poquito más difícil.
<b>Repetición de los mismos esquemas a los que fue sujeto durante su doctorado</b>	No, la idea es la mejora continua ¿no?, y lo que se alcanzó a percibir que no era adecuado, bueno, se... se modificaría.	¿En el entendido de que si yo fuera tutor... ajá... haría lo que mis tutores hicieron?... Yo creo que sí, sí, básicamente este, algunos tutores eh... fueron un poco más enérgicos en materia de la... forma de la redacción, de la sintaxis; otros, por lo general se enfocaron más hacia lo que... fue la metodología cualitativa o cuantitativa, pero básicamente me gustó el formato como trabajaron, y ¡creo que sí, yo me convertiría en un repetidor de lo que ellos hicieron!	Te decía que sí, yo creo que sí, pero... pero con esas variantes, ¿no? De que no, las cosas que yo sufrí no me gustaría que los tutorados las sufrieran...mmm... ¡para nada!
<b>Clave para tener éxito en el doctorado</b>	La constancia, la persistencia y encontrarle gusto a la investigación.	Constancia... constancia... constancia y disciplina.	Yo creo que fue la constancia y saber administrar el tiempo, eh... ser perseverante, siempre estar enfocada en el objetivo, ¿no?... mmm... para que en ningún momento, ¡en ningún momento yo pensara en desertar!, sí, yo creo que más bien fue eso.
<b>¿Volvería a hacer un doctorado?</b>	Ah... no creo, una estancia posdoctoral sí, otro doctorado no creo.	¡Claro que sí!, ¡sí, si lo volvería a hacer!, este... Dejaría que pasara un tiempo porque la verdad es de que (hice el doctorado, bueno...) hice mi licenciatura, ¡terminé!; empecé casi de inmediato la maestría, descansé muy poco tiempo; y luego empecé el doctorado.	Por el momento no, no... En este momento no, yo creo que como te decía se sacrificó tiempo, familia, se sacrificaron muchas cosas, por el momento no lo haría, tal vez una estancia posdoctoral, algo así sí, pero meterme a un doctorado, doctorado en este momento, no.

<p><b>Mensaje a los alumnos para motivarlos a realizar un doctorado</b></p>	<p>El mensaje que doy a todos mis alumnos “¡no permitan que nadie les robe sus sueños... y si su sueño es obtener un doctorado, háganlo!”; ese será el mensaje.</p>	<p>Un doctorado, una maestría, cualquier licenciatura, así como el trabajo que ustedes van a hacer; tienen que dedicarse a hacer lo que más les apasiona, piensen lo siguiente: ¿Cuál es su hobby? Bueno, ese hobby es el que pensaron, imaginen que se van ustedes a dedicar a estudiarlo, a analizarlo o a ejercerlo de por vida.</p>	<p>Pues, básicamente que el... ser humano es curioso por naturaleza y yo creo que siempre deberíamos de estar en... en constante desarrollo ¿no?, en constante superación y... un doctorado te deja cosas muy valiosas, ¿sí?, el conocimiento, una experiencia de vida, entonces; yo lo que sí les diría es que siempre, siempre se sigan preparando, se sigan superando porque eh... antes cuando tu solicitabas un empleo verdad, tener una licenciatura era lo máximo, ¿no?, entonces, dentro de las personas que lo solicitaban era aquél que tenía la licenciatura, o ¡vaya, estudios de educación superior!, ¿era el candidato ideal, ¿no?... mmm... ahorita ya vemos que ni siquiera con maestría es suficiente... mmm... yo creo que el mercado laboral está muy competido y en la medida que te vayas preparando más, ya sea con un posgrado, con idiomas, con herramientas de tecnología de información, o sea, en el manejo de tecnología de investigación, pues, vas a ser mejor cotizado.</p>

# EL COMPORTAMIENTO DEL CONSUMIDOR DE SERVICIOS CULTURALES OFRECIDOS POR LAS ENTIDADES PARAESTATALES EN LA CIUDAD DE TIJUANA, B.C.

Claudia Karina Garcia Vargas, Universidad Autónoma de Baja California  
Omaira Cecilia Martínez Moreno, Universidad Autónoma de Baja California

## RESUMEN

*Afirmar que las instituciones que brindan servicios culturales dirigen sus esfuerzos hacia un mercado en específico es un tanto complicado, no es muy común encontrar datos que permitan tanto la identificación del cliente como los hábitos que generalmente posee al hacer uso de las actividades que realiza en las mismas. En el presente artículo se busca caracterizar el perfil sociodemográfico del consumidor, y a su vez relacionarlo con su comportamiento actual y nivel de satisfacción con respecto a los servicios culturales que son ofrecidos por las entidades paraestatales en la ciudad de Tijuana; partiendo de la raíz del problema el cual precisa la inexistencia de información sobre la cual los organismos encargados de impulsar y promover la actividad cultural se puedan apoyar para la toma de decisiones estratégicas.*

**PALABRAS CLAVE.** Comportamiento del consumidor, hábitos de consumo, nivel de satisfacción, perfil sociodemográfico.

## CONSUMER BEHAVIOR OF CULTURAL SERVICES OFFERED BY AGENCIES IN TIJUANA, BC

### ABSTRACT

*Affirm that institution providing cultural services focus their efforts towards a specific market is kind of difficult, it is unusual to find data such as customer identification as habits that usually has to make use of the activities of the thereof. This article seeks to outline the sociodemographic profile of the consumer, and in turn relate current behavior and its level of satisfaction with cultural services that are offered by the agencies in the city of Tijuana, starting from the root of the problem wich states the inexistence of information about agencies that are in charge of promote cultural activity able to support strategic making decisions*

**JEL:** L1

**KEYWORDS.** Consumer behavior, consume habits, satisfaction level, socio-demographic profile.

### INTRODUCCIÓN

Al crear un perfil del consumidor actual de las personas que asisten a las actividades que se realizan en las entidades paraestatales enfocadas al arte y cultura, los datos generados por la presente serán de utilidad tanto para el diseño de planes estratégicos por parte de promotores turísticos y

culturales en la ciudad de Tijuana, Baja California, como para las empresas de iniciativa privada enfocadas al mismo sector y las actividades realizadas por iniciativa de los habitantes tijuanaenses.

La organización del presente artículo se encuentra distribuida de la siguiente manera: en la revisión de la literatura se define el concepto de servicios culturales, abordando la clasificación de los mismos; se define también que es una entidad paraestatal y se hace mención de las existentes en la ciudad de Tijuana; y finalmente se aborda el tema del comportamiento del consumidor, dentro del cual se derivan los hábitos de consumo y el nivel de satisfacción. En el apartado de metodología se precisan los criterios para definir la población y se muestra la ficha técnica de investigación. Por último, se hace hincapié en el estado actual de la presente investigación, la cual será concluida en diciembre de 2013.

## REVISIÓN DE LITERATURA

### Los Servicios Culturales

Definir el concepto de servicios culturales como tal, se torna un tanto complejo debido a la insuficiente bibliografía y las escasas que han sido las investigaciones en este ámbito; sin embargo, para Cuadrado y Berenguer (2002) un servicio cultural, es una actividad que únicamente es consumida al momento de su exhibición, por lo que conllevan una asistencia por parte del espectador o visitante a un recinto escénico o área de exhibición, espacios que generalmente no tienen fines lucrativos. Ambos autores clasifican la naturaleza de las artes en actividades culturales de la siguiente manera:

Figura 1 Clasificación de los Servicios Culturales

Fuente: elaboración propia a partir de Cuadrado y Berenguer (2002)

### Las Entidades Paraestatales en México

Uno de los criterios para la clasificación de las empresas es el origen del capital, y a su vez se dividen en públicas o privadas; las primeras mencionadas se rigen bajo la Ley Federal de las Entidades Paraestatales (2012), dentro de la cual, en el artículo 11 se establece que las entidades paraestatales poseen autonomía de gestión para cumplir los objetivos señalados en sus programas. Asimismo, una entidad paraestatal surge de la necesidad de dar solución a problemas sociales con una coparticipación del estado y los particulares para producir bienes y servicios, conforme el artículo 14 de la presente Ley, los organismos descentralizados tienen por objeto la realización de actividades correspondientes a las áreas estratégicas.

En la ciudad de Tijuana los espacios que reúnen las características descritas con anterioridad son: en el ámbito federal, de acuerdo al Marco Jurídico de Actuación (2006-2012) el Centro Cultural Tijuana (CECUT). Conforme al artículo 1 de la Ley del Instituto de Cultura de Baja California (ICBC) en el cual se declara que es un “organismo público descentralizado, con personalidad jurídica y patrimonio propio” (2003), el Centro Estatal de las Artes (CEART) de reciente creación es apoyado por el gobierno estatal. Finalmente, en el artículo 1 del Reglamento Interior del Instituto Municipal de Arte y Cultura (IMAC), declara que es un organismo descentralizado de la Administración Pública Municipal, con personalidad jurídica, administrativa y patrimonios propios, organismo del cual se derivan tres Casas de la Cultura (Tijuana, Playas y Pípila) y el Antiguo Palacio de Gobierno

### El Comportamiento del Consumidor

Es definido por Rivera, Arellano, y Molero (2009) como el “proceso de decisión y actividad física que los individuos realizan cuando buscan, evalúan, adquieren y usan o consumen bienes, servicios o ideas para satisfacer sus necesidades (p.36). Para comprender el comportamiento del consumidor, es necesario hacer hincapié en los actos que lo componen, estos consisten en la mayoría de las ocasiones en que la persona busca satisfacer una necesidad, seguida de la comparación entre algunas alternativas identificando riesgos y beneficios del producto deseado, buscar consejos u opiniones de personas conocidas sobre el mismo y finalmente obtener su propia opinión por medio de la experiencia adquirida con la compra. Por lo tanto el comportamiento del consumidor, se compone de tres conjuntos de factores relacionados de acuerdo con Fischer (2011), los cuales son “Actividades: actos, procesos y relaciones sociales. Personas: individuos y organizaciones. Experiencias: obtención, uso y conciencia.” (p.69).

Los hábitos de consumo, de acuerdo con Herrero (2007) son “determinados modos de proceder de los consumidores al realizar sus compras, hábitos adquiridos por la repetición de actos iguales o semejantes originados por costumbres, usos y tendencias instintivas” (p.32-33). El conocer el perfil del consumidor e identificar cuáles son sus perspectivas con respecto a los productos o servicios que ofrece una organización, trae consigo grandes beneficios para la misma; Alonso y Grande (2010) afirman que “el estudio de esta disciplina se traduce en un mejor conocimiento de las necesidades de los consumidores y de oportunidades de mercado” (p.36).

El nivel de satisfacción del cliente es analizado por Lane y Kotler (2009) quienes afirman que es una “sensación de placer o de decepción que resulta de comparar la experiencia del producto (o los resultados) con las expectativas de beneficios previas” (p. 144). Por lo tanto si la oferta es menor a las expectativas del cliente el resultado será bajo, si la organización ofrece justo lo que el consumidor espera éste quedará satisfecho, en cambio si la empresa supera lo que el cliente espera encontrar, el nivel de satisfacción será superado. Los clientes se forman expectativas en relación a una empresa, producto o servicio por varias razones, entre ellas es posible encontrar: compras anteriores o consumos previos, recomendaciones de terceros, publicidad misma de la empresa, etc.

### **METODOLOGÍA**

La metodología utilizada en el mencionado estudio, consistió en el diseño y aplicación de cuestionarios durante el segundo y tercer trimestre del año 2013, por lo cual el enfoque de acuerdo con Hernández, Fernández y Baptista (2006) es cualitativo puesto que se basa en recolectar datos y comprobar hipótesis por medio del análisis estadístico. Asimismo tiene un alcance correlacional al asociar las variables sociales y demográficas con los hábitos de consumo

y nivel de satisfacción, no experimental de corte trasversal al recolectar datos no manipulables en un solo periodo de tiempo.

Se establecieron los siguientes criterios a) Residir en la ciudad de Tijuana. b) Encontrarse haciendo uso de algún servicio cultural dentro de las entidades paraestatales sujetos de estudio. c) No asistir en grupos guiados (paseos escolares o *tours*). d) Mayores de 12 años. La ficha técnica de la investigación se muestra en la Tabla 1.

Tabla 1. Ficha técnica de la Investigación

Universo	Consumidores de servicios culturales en las instituciones culturales
Población	Personas mayores de 12 años, que residan en la ciudad de Tijuana y se encuentren haciendo uso de un servicio cultural
Tamaño Muestral	Finita por definir
Margen de Error	Nivel de confiabilidad del 95%
Método	Muestreo Estratificado entre las entidades paraestatales
Periodo del Trabajo de Campo	Julio-Octubre 2013
Instrumento	Cuestionario con opciones de respuesta abiertas y cerradas

Fuente: Elaboración propia

Tamaño de la muestra para población finita y conocida

$$n = \frac{Z_{\alpha}^2 \cdot N \cdot p \cdot q}{i^2 (N - 1) + Z_{\alpha}^2 \cdot p \cdot q}$$

## RESULTADOS Y CONCLUSIONES

En el desarrollo del estudio de campo que abarca el segundo y tercer trimestre del 2013, se ha detectado una gran área de oportunidad sobre la cual diseñar una estrategia que permita incentivar y mantener el consumo de este tipo de servicios. Aun cuando no se tienen resultados preliminares de la población objeto de estudio – puesto que la investigación aún se encuentra en la fase de recolección de información–, se considera que el comportamiento del consumidor apunta a una demanda sostenida de los servicios culturales ofrecidos por las entidades paraestatales en la ciudad de Tijuana, con un alto grado de satisfacción en los mismos y una tendencia homogénea con inclinación al incremento en la medida en que se diversifique la oferta. Se estima que para el momento en el cual se lleve a cabo el evento, se tendrán los resultados cualitativos y cuantitativos que permitan respaldar tales aseveraciones

# **DEFINICIÓN DE UN MODELO DE GESTIÓN DE CALIDAD PARA PROMOVER EL DESARROLLO ACADÉMICO Y LA EVALUACIÓN DEL DESEMPEÑO DE LOS PROFESORES DE LA UNIVERSIDAD CATÓLICA DE COLOMBIA**

Camilo Jiménez Barrera, Universidad Católica de Colombia  
Carlos Alberto González Camargo, Universidad Católica de Colombia  
Jorge Enrique Celis Giraldo

## **RESUMEN**

*Este artículo presenta el diseño de un modelo de gestión de calidad en conformidad con las dimensiones teóricas y la práctica efectiva del Sistema de gestión para el desarrollo académico y evaluación del desempeño de los profesores definido por la Universidad Católica de Colombia. A partir de la evaluación de la propuesta conceptual de la universidad sobre dicho sistema, y el cotejo de la información obtenida con las experiencias sobre diversos modelos de gestión existentes que se han diseñado con el fin de promover el mejoramiento continuo de las organizaciones, se presenta a través del modelo de gestión diseñado una adaptación teórico-práctica para el desarrollo académico y la evaluación docente. Además, este modelo se construye a partir de un análisis comparativo en el que se involucraron los sistemas encontrados junto con las normativas y lineamientos exigidos, a los cuales debe adecuarse para su posterior aplicación en la Universidad Católica de Colombia. En el artículo se define el modelo de gestión de calidad y se describen los principios y conceptos básicos, los objetivos y principios que direccionan su aplicación, los resultados esperados, el proceso evaluativo y los requerimientos generales que son necesarios para ponerlo en funcionamiento.*

**PALABRAS CLAVE:** Gestión de la calidad, desempeño docente, gestión universitaria, acreditación.

## **DEFINITION OF A QUALITY MANAGEMENT MODEL TO PROMOTE ACADEMIC DEVELOPMENT AND PERFORMANCE EVALUATION OF TEACHERS OF THE CATHOLIC UNIVERSITY OF COLOMBIA**

### **ABSTRACT**

*This paper presents the design of a quality management model in accordance with the theoretical dimensions and effective practice of the management system to promote academic development and performance evaluation of teachers at the Catholic University of Colombia. From the evaluation of the conceptual proposal of the university on the system, and the comparison of the information obtained with the experiences of various existing management models that have been designed in order to promote continuous improvement of organizations, through the management model designed a theoretical and practical adaptation is present for the academic development and teachers evaluation. In addition, this model is constructed from a comparative analysis that*

*encompassed the systems found with required regulations and guidelines, which should be appropriate to the management model designed and its subsequent application in the Catholic University of Colombia. The article defines the quality management model and describes the principles, basic concepts and objectives that address its application, as well as the expected results, the evaluation process and the general requirements that are necessary to operate it.*

**JEL:** I21, I29, M420, M10, M11

**KEYWORDS:** Quality management, teacher performance, university management, accreditation.

## INTRODUCCION

La Universidad Católica de Colombia, con el fin de buscar y mejorar los estándares de calidad y de una manera responsable con los compromisos implícitos adquiridos con la sociedad y el Estado, se ha preocupado por diseñar e implementar mecanismos que faciliten el funcionamiento de un sistema que promueva la educación de alta calidad. En este sentido, el diseño de programas y modelos está encaminado a mejorar la experiencia educativa de aprendizaje y de enseñanza al adoptar sistemas de desarrollo académico y de evaluación para el cuerpo docente, los cuales fomenten la participación de la comunidad académica y contribuyan al proyecto de vida de sus estudiantes y profesores. Las metodologías y estrategias propuestas van de la mano con el sistema de promoción y evaluación de los profesores diseñado por la Decanatura Académica de la Universidad Católica de Colombia, el cual debe estar en conformidad con los lineamientos establecidos en el Plan de Desarrollo Institucional (Universidad Católica de Colombia, 2012). Además, este sistema debe incluir la definición y formalización de un modelo para administrar un sistema de gestión de calidad que involucre los objetivos y metas propuestos por la universidad, así como las expectativas y concepciones que se formulan sobre el tema a nivel nacional e internacional.

El sistema de promoción y evaluación de los profesores, es una apuesta por mejorar la educación desde la experiencia docente, ya que se reconoce que el profesorado es la base para afianzar la enseñanza de los estudiantes y lograr los estándares de calidad exigidos por el Estado. A partir de los resultados obtenidos en los procesos de evaluación de la institución y los docentes, es imprescindible establecer mecanismos de retroalimentación que fomenten la integración de la comunidad académica con el propósito de superar las dificultades, los obstáculos y las falencias encontradas. Para que esto se cumpla, el proceso debe sustentarse y complementarse con un nuevo modelo de gestión de calidad que permita garantizar la objetividad e imparcialidad de los resultados y promueva una mejor calidad en cada docente y en la institución en general; de igual forma, generar procesos que inicien en lo micro para que incidan en lo macro, fomentar relaciones y compromisos en todo el cuerpo docente y establecer mecanismos que generen sentido de pertenencia hacia la institución.

Por consiguiente, la investigación realizada es un ejercicio que aporta soluciones concretas y efectivas a la falta de un modelo con capacidad fáctica y ejecutable, lo cual le permitirá a la institución trascender de las propuestas conceptuales y teóricas hacia las prácticas y operativas. Para que el modelo diseñado contribuya a entrar en los procesos de certificación y acreditación y superarlos, de acuerdo con los lineamientos y exigencias de los estándares establecidos a nivel nacional e internacional, debe apoyarse y articularse con las propuestas vigentes y en estado de ejecución dentro de la institución. Los resultados obtenidos en el desarrollo de la propuesta para el diseño del modelo del sistema de gestión de calidad permiten establecer mejoras y ajustes a las

prácticas internas de enseñanza y evaluación docente, así como entrar en procesos de articulación con las exigencias internacionales y los estándares de calidad. Esto en consideración al interés que existe por ser competentes con las ofertas educativas a nivel nacional y con aquellas que se realizan fuera del país.

## REVISIÓN LITERARIA

Durante la investigación se analizaron una serie de modelos que brindan las bases para diseñar y poner en marcha una propuesta organizada para el establecimiento y desarrollo de un Modelo de Gestión de Calidad. De igual forma se revisó la literatura de algunos de los modelos de calidad, de excelencia de calidad y de acreditación más reconocidos a nivel mundial –incluyendo implícitamente el enfoque a la gestión por procesos–, como referencias útiles para ser tenidas en cuenta en el desarrollo de la propuesta.

Para todos los efectos relacionados con términos y definiciones se utilizarán las provistas en el documento de Celis y Duque (2011) Consideraciones para el diseño de un sistema de desarrollo académico y evaluación del desempeño de profesores de la Universidad Católica de Colombia; y en la Norma ISO 9000:2005 Sistemas de gestión de la calidad. Fundamentos y vocabulario (Instituto Colombiano de Normalización y Certificación, 2006, p. 36).

## METODOLOGIA

Para realizar este trabajo se empezó con una evaluación de la propuesta conceptual de la universidad sobre el Sistema de desarrollo académico y de evaluación del desempeño docente elaborado por la Decanatura Académica, con el fin de conocer los aportes hechos, las necesidades y falencias encontradas, las metodologías propuestas y establecer su capacidad operativa. La información obtenida se cruzó con las experiencias sobre diversos modelos de gestión existentes que se han diseñado con el fin de promover el mejoramiento continuo de las organizaciones, buscando una adaptación teórico - práctica para el desarrollo académico y la evaluación docente.

La metodología implementada durante el proceso de definición del modelo para el sistema de gestión de calidad estuvo dividida en ocho fases, cada una de las cuales se construyó siguiendo y acoplado modelos investigativos con resultados de aplicaciones prácticas. Las principales actividades desarrolladas fueron: la consolidación del marco conceptual; la realización de un estado del arte sobre el tema mediante la indagación por modelos de gestión implementados en diversas organizaciones (no solo a nivel de instituciones educativas); el análisis comparativo de la información recogida y sistematizada; la definición del modelo de gestión que se formuló incorporando las normas estatales, los lineamientos internacionales y el plan de desarrollo institucional, incluyendo los principios y valores de la institución; y, por último, el diseño de un esquema de las actividades y procesos requeridos para su implementación.

Posteriormente se presentó el modelo frente a la Decanatura Académica y dos profesionales de reconocida trayectoria en el ámbito, con el fin de recibir aportes y elementos valiosos para su aprobación y validación. A partir de esto se concluyó la documentación del modelo requerida y, finalmente, se hizo un ejercicio de proyección y preparación para su posterior implementación, en el cual se incluyeron las actividades de socialización y capacitación que serán requeridas para la formación de auditores internos y evaluadores. Los resultados obtenidos permitieron finalizar el

diseño del modelo de gestión de calidad en conformidad con las normas y requerimientos necesarios para impulsar, contribuir y acompañar los procesos emprendidos por la Universidad Católica de Colombia. El modelo se encuentra complementado por los insumos necesarios y concernientes para llevar a cabo su implementación, los cuales son: los lineamientos para la elaboración del manual del sistema de gestión, los procedimientos asociados, los instructivos y formatos necesarios para su aplicación y los requisitos para capacitar al personal encargado de implantar el sistema y a los usuarios del mismo.

## RESULTADOS

El modelo que se propone se asume desde la perspectiva del enfoque de gestión por procesos, proveído por los modelos estudiados. Dichos modelos demuestran una clara necesidad de integración de las metodologías funcionales dentro de los procesos, con la necesidad de una revisión de la estructura jerárquica de la universidad. El modelo se basa en este enfoque ya que suministra las herramientas de administración eficiente para lograr el resultado esperado, además de la mejora de la competitividad, la satisfacción de los clientes y del marco conceptual que propone la institución. De esta forma se define un modelo de gestión de calidad que 1. Identifique adecuadamente los procesos que se deben consolidar para llevar a la práctica de manera eficiente el Sistema de Gestión para el Desarrollo y la Evaluación del desempeño de los profesores; 2. Asuma adecuadamente una metodología sistemática para la gestión y que garantice el logro del desarrollo profesional de los docentes, entendiéndolo como todas las actividades que adelanta la Universidad en todos los niveles con el fin de apoyar a los profesores, de forma que estos logren los desempeños esperados de manera sobresaliente en sus diferentes roles de enseñanza, investigación, servicio y gestión, entre otros, a lo largo de su carrera académica (Celis y Duque, 2011, p.

9), 3. Permita desarrollar y hacer seguimiento efectivo a todas las dimensiones del desarrollo académico: de descubrimiento, de integración, de aplicación y de enseñanza, así como gestionar el control de los indicadores relacionados, los cuales garanticen el logro de los objetivos establecidos en el modelo conceptual; y 4. Le ofrezca a la Universidad Católica de Colombia la posibilidad de consolidarse como una organización educativa que requiere de profesores con unos perfiles claramente definidos, con el propósito de cubrir de esta manera el rango de actividades establecidas para su desarrollo de acuerdo con las dimensiones mencionadas. Como consecuencia de la investigación previa resulta fundamental el objetivo expuesto en la propuesta conceptual de Celis y Duque (Celis y Duque, 2011), en torno a los modelos de calidad, de excelencia de calidad y de acreditación que han tenido un mayor reconocimiento a nivel mundial. Aspectos Generales del Modelo Propuesto El modelo provee una adecuada participación de la alta dirección de la Universidad Católica y de las partes interesadas, propiciando canales de comunicación entre el proyecto, el proceso, la gerencia y los stakeholders, de manera que se han definido los roles y las responsabilidades para cada etapa.

### Objetivo del Modelo

El sistema tiene como objetivo central proponer una metodología sistemática, certificable y/o acreditable que le permita a la Universidad Católica de Colombia contar con herramientas para contribuir al desarrollo del proyecto de vida de los profesores, asegurando el desarrollo continuo de su desempeño en torno a sus actividades académicas en el marco de la filosofía, las políticas institucionales y la viabilidad financiera, y así consolidar una comunidad académica con altos niveles de desempeño que contribuya al bien social y al perfeccionamiento personal y académico de todos sus miembros.

### Beneficios del Modelo

Los beneficios del modelo son 1. Provee una definición clara de su propia razón de ser, su funcionamiento y su aplicación. Se establece con un inicio planificado, sistemático y debidamente organizado, asegurando que exista una clara convicción frente a sus ventajas de aplicación, y asegurando de antemano que todas las personas y los recursos necesarios se encuentren disponibles; 2. Permite una implementación organizada y controlada, asegurando que su eficacia se mantenga a lo largo de cada una de las etapas, así como que el trabajo realizado sea controlado y evaluado durante toda su operación; 3. Garantiza el logro de los objetivos presupuestados de manera efectiva, de tal manera que la tendencia natural que se deriva en la etapa operativa del proceso sea debidamente controlada. Para esto, cuenta con revisiones periódicas de los progresos, con flexibilidad en las decisiones, con control gerencial en caso de desviación del plan original y, por último, con una adecuada comunicación entre el proyecto, el proceso, la dirección y el resto de la organización.

### Principios del Modelo de Gestión

*Liderazgo Rectoral:* Según Celis y Duque (2011) el liderazgo rectoral provee los principios del sistema que alinean a toda la comunidad hacia el logro de los resultados esperados. Define los objetivos y los métodos necesarios de aplicar para su consecución, propiciando una cultura de cooperación y exploración de metas comunes.

*Enfoque al logro de los objetivos:* El camino hacia la excelencia está marcado por las necesidades del cliente y sus usuarios. Deben establecerse metas que sean apropiadas a las necesidades y expectativas de los stakeholders y medir su logro frente al cumplimiento de lo que ha sido planificado.

*Mejora continua:* El enfoque hacia la mejora continua requiere de la búsqueda permanente del desarrollo del personal docente, el establecimiento de métodos y planes de desarrollo y evaluación de sus resultados, en donde se propicien formas novedosas de trabajo que los impacten. La mejora debe constituirse en parte del trabajo diario del docente universitario y de todas las personas de las diferentes áreas de universidad que están directamente relacionadas con dicha función, buscando prevenir y corregir los problemas que afecten el desempeño y la calidad del trabajo, identificando las oportunidades para mejorarlo.

*Autoevaluación:* La revisión permanente de lo realizado en relación a lo que ha sido presupuestado debe ser continua. La institución debe implementar mecanismos que le permitan asegurar el mejor desempeño y el logro de los resultados, y debe ser capaz de tomar decisiones flexibles a tiempo, de manera que corrijan el rumbo en caso de que el proceso se desvíe.

### Criterios Generales del Modelo

*Funcionalidad:* Este criterio representa el conjunto de características que hacen que el modelo sea práctico y utilitario. Es la capacidad que debe tener el modelo de gestión de calidad para proporcionar las funciones que satisfagan las necesidades específicas ya mencionadas en el documento conceptual que se han tomado como referente.

*Fiabilidad:* Representa la confianza en el buen funcionamiento del modelo de calidad y su capacidad para mantener el nivel de desempeño esperado sin afectar los desempeños y funciones cotidianas de la universidad.

*Eficiencia:* Representa la capacidad del modelo de gestión de calidad para proporcionar a la institución herramientas para el logro de los objetivos sin afectar el uso de sus recursos.

*Eficacia:* Representa la capacidad del Modelo de gestión de calidad para garantizar la satisfacción de las necesidades de los clientes y de los usuarios.

*Mantenibilidad:* Representa la capacidad que posee el Modelo de Gestión de Calidad para ser flexible según las necesidades que se presenten y los cambios que se deben dar para mejorar continuamente. Esta evolución debe incluir el análisis de las acciones tomadas para la corrección de fallos en su implementación y aplicación, mejoras, adaptación del modelo causado por cambios en el entorno institucional, transformaciones en las prácticas y en los requisitos legales o reglamentarios.

*Aplicación:* El modelo propuesto puede ser aplicable en cualquier institución de educación, sin importar el nivel de educación al que se dedique. Puede ser usado con fines de certificación y/o acreditación, bajo otros modelos o normas certificables y/o acreditables. A la vez, puede ser implementado en otras áreas o niveles dentro de la institución.

*Mejora continua:* La propuesta posee en su configuración el proceso de mejoramiento continuo, el cual está basado en el enfoque de procesos y manejo de proyectos.

*Complejidad de las Instituciones:* Capacidad del Modelo de Gestión de Calidad que le permite administrar las necesidades de las personas que lo conforman, para interactuar con la dinámica requerida para el logro de las metas, objetivos y fines.

#### Requisitos del Modelo de Gestión y sus Directrices de Aplicación

*Enfoque, objeto y campo de aplicación:* Este modelo establece los requisitos para que la universidad pueda desarrollar de manera sistemática los procesos relacionados con el desarrollo académico y la evaluación de desempeño de los profesores, logrando como resultado la certificación de estos frente a requisitos específicos, y atendiendo a los principios establecidos y fundamentados en los pilares del sistema de desarrollo académico y de evaluación de desempeño de los docentes.

*Directriz 1:* Debe entenderse el modelo como punto de partida para que la universidad institucionalice las actividades propias del desarrollo y evaluación docente como un conjunto de preceptos orientados a mejorar la excelencia. Para tal efecto se asumen los principios del sistema concebidos en la investigación Definición de un modelo de gestión de calidad para promover el desarrollo académico y la evaluación del desempeño de los profesores de la Universidad Católica de Colombia.

*Directriz dos:* La universidad establece el perfil del profesor con el que desea contar, describiendo de manera detallada cada uno de los aspectos que son considerados relevantes para que una persona interesada pueda optar por dicho reconocimiento. El perfil de ingreso se asume como el conjunto de aquellos atributos mínimos que debe tener un profesional interesado en ingresar a la carrera docente en una universidad: formación, experiencia y producción en

investigación, experiencia en gestión curricular, experiencia en gestión de la calidad y experiencia profesional diferente a la universitaria (Celis y Duque, p.43).

*Directriz tres:* Las quejas, reclamos y apelaciones deben ser usados como fuentes de información para el manejo de posibles inconformidades del sistema y la toma de decisiones flexibles. La utilización de las herramientas definidas para garantizar el desarrollo continuo del sistema y su eficiencia son necesarias para aplicar acciones correctivas, de mejoramiento y de mitigación, minimizando los errores y sus consecuencias.

*Directriz cuatro:* Los procesos relacionados con la promoción docente y las compensaciones deben incluir una metodología sistemática que permita acceder a los interesados a los programas de promoción, ajustada a las políticas de compensación de la Universidad. Para tal efecto la metodología debe incluir como mínimo el reconocimiento y la compensación (reconocimiento de los logros); y la promoción que reconoce el compromiso no solo en el presente, sino también en el futuro del académico.

*Directriz cinco:* Los procesos relacionados con la vinculación y desvinculación de los profesores de la universidad deben estar enmarcados en metodologías claras, bajo responsabilidades debidamente definidas que correspondan a las necesidades de la institución, garantizando transparencia y objetividad, e incluyendo la definición de tiempos de prueba y la evaluación de continuidad. Al momento de surgir la necesidad de vincular un nuevo profesor o reemplazar uno que se retira, debe establecerse le metodología que permita la conformación del comité ad-hoc, el cual estará encargado de estudiar los candidatos, presentarlos al decano y dar una recomendación. La responsabilidad final de contratación del docente es exclusiva del decano de la facultad. De acuerdo con las políticas institucionales, la contratación debe estar debidamente sustentada en el plan de desarrollo de la facultad y en el perfil de profesor.

*Sistema de Calidad:* La universidad debe establecer y documentar un sistema de gestión que cubra todos los requisitos de este modelo, así como debe asegurarse de la aplicación de los requisitos aquí incluidos; es decir, el sistema debe ser debidamente implementado en las áreas interesadas. En este sentido, la universidad debe establecer un procedimiento que le permita el adecuado control de los documentos y de los registros generados.

*Directriz seis:* Debe existir un procedimiento para la revisión de las actividades de autoevaluación, el cual debe incluir: 1. Frecuencia de realización, 2. Desempeño de las actividades desarrolladas, 3. Gestión de indicadores 4. Acciones de mejoramiento tomadas y puntos de decisión flexibles, 5. Propuesta de mejoramiento.

*Directriz siete:* En las auditorías internas, deben considerarse como mínimo los siguientes aspectos:

*Objetivo de la auditoria:* El auditor no es un evaluador o calificador de lo hecho: no pretende implementar la auditoria como un ejercicio cuya intención es otorgar reconocimientos adicionales a la empresa. Por el contrario, busca ser un punto de referencia que le permita a la universidad reflexionar sobre su manera de pensar, y así generar conocimiento sobre la manera de aplicar dichas reflexiones en su interior en torno a la adaptabilidad y al manejo de su organización.

Los principios básicos del sistema son a) las organizaciones debe ser entendidas como seres vivos, como un todo, y no como la suma de partes independientes; b) las organizaciones deben ser entendidas como una serie/conjunto de redes dispuestas para la administración de la

información y la conectividad; c) las organizaciones deben ser entendidas como una fuente permanente de innovación; d) Las organizaciones deben ser entendidas como un conjunto de miembros/personas que manifiestan una gran diversidad de ideas y pensamientos; e) las organizaciones deben ser entendidas como un conjunto de sistemas complejos o instrumentos generadores de conocimiento y transformación permanente; y f) las organizaciones deben ser entendidas como un sistema autoorganizado que trabaja por la adaptabilidad al cambio y la sostenibilidad.

*Aspectos de competencia de los auditores:* Para que sea posible trabajar una auditoría fundamentada en la nueva realidad de las empresas, los auditores deben contar con una serie de conocimientos previos que faciliten su actuación y que a la vez sean los dinamizadores del valor agregado que deben dar a las organizaciones. El nuevo enfoque de auditoría exige que se trabaje desde la no linealidad de las organizaciones, apartando su cometido de la corriente de pensamiento con el que en la actualidad se gestionan las empresas, donde predomina el pensamiento lineal “considerado como un conjunto de ideas, en donde toda causa tiene un efecto, en donde el efecto permite predecir el fenómeno y en donde el fenómeno tiene un mismo sentido” (Palmas, 2005).

*Conocimientos del auditor:* Los tres ejes sobre los cuales deberá fundamentarse el saber y la experiencia de los auditores, entendiendo que las empresas se comportan según Maldonado (2005) como Sistemas Adaptativos Complejos, son a) el auditor debe ser capaz de entender la complejidad de las organizaciones en medio de su entorno (debe conocer la realidad de la universidad, su entorno local, los sucesos que puedan afectarla a nivel global, y la manera como se adaptan a las nuevas realidades); b) debe ser capaz de comprender cómo actúan las organizaciones en medio de su complejidad, en torno a lo que genera conocimiento, y la articulación del mismo a través de la comunicación y del adecuado manejo de la información; c) debe analizar el dominio de la complejidad de las organizaciones: la implementación de las nuevas maneras y formas de operar y de adaptarse al cambio, el manejo de problemas y la confiabilidad que dichos ajustes proveen a la organización.

*El criterio fundamental de la auditoría:* La razón fundamental de la organización es el cliente y su satisfacción. Sin clientes no hay organizaciones, razón por cual la auditoría debe fijarse especialmente en el siguiente criterio: cómo logra la universidad garantizar la satisfacción de los clientes y cómo se aplica desde allí su sostenibilidad. Es importante resaltar –para todos los efectos prácticos–, que los clientes de la universidad en la aplicación del presente modelo son los profesores. Los objetivos de la institución deben ser evaluados en el corto plazo; la implementación del nuevo conocimiento debe ser ágil, dinámica y eficaz, y el auditor debe generar una reflexión en torno a la manera en que se desarrolla este proceso. Su función no se basa en evaluar la manera en que se planifican los resultados, pues no se trata de valorar cifras cuantificadas de cumplimiento, sino de analizar la adaptación y la sostenibilidad, verificando el cumplimiento de los requisitos legales.

*Cómo se hace la auditoría:* A partir del nuevo enfoque mencionado, la auditoría se basa en la realización de un ejercicio práctico de reflexión sobre el nuevo conocimiento, las redes de manejo de información, la cohesión de todos los miembros de la organización y la adecuación de los recursos y de los esfuerzos realizados frente a la adaptación. Para el desarrollo de esta nueva auditoría no se establecerán tiempos fijos, pues se contará con el mínimo requerido dependiendo de las necesidades de la universidad. Adicionalmente, no se adelantará el ejercicio de auditoría con fines de certificación o atestiguamiento por parte de terceros, independientes o no. El auditor planteará una conversación abierta, sin restricciones o condicionamientos entre los

miembros/sujetos de la comunidad, en la cual se reflexionará sin categorizar importancias o predefinir orden en los temas.

La conversación girará en torno a a) manejo de la incertidumbre, de las variaciones internas y de la multiplicidad de ideas y conocimientos y sobre la manera de la organización para adaptarse a estas variables; b) el mantenimiento de la satisfacción de sus clientes y sobre las maneras de la organización para tratar la evolución de sus necesidades. Esta abstracción deberá concluir en un ejercicio de autoanálisis organizacional que propenda por nuevas y mejores formas de evolución para hacer las cosas; c) el análisis del auditor deberá estar centrado en la consideración de las redes de conectividad para el flujo de la información y sobre la participación de cada uno de los miembros del colectivo; d) lo que sucede en el entorno sobre los cambios reales y de tendencia que muestra el mercado local y global (como conclusión se deberán lograr propuestas de mejoramiento frente a la adaptación que requiere la empresa para no sucumbir ante el cambio); e) se pensará reflexivamente sobre la frecuencia de los cambios y el efecto de los mismos al interior de la universidad; f) se contará con la participación de otras partes interesadas: comunidad, clientes y proveedores (cuando sea requerido, también los representantes de los entes de vigilancia y de control, con el ánimo de comunicar los cambios que se presentan en las necesidades colectivas de la universidad.

Conclusión de la auditoría. En términos generales, el nuevo enfoque desde el cual se consolida la auditoría debe ser capaz de a) proponer aproximaciones interdisciplinarias al interior de la universidad, mejorando las redes de información que buscan incorporar la integración de todos los miembros de la comunidad organizacional, las actividades y los conocimientos tanto de la comunidad receptora, como de la comunidad productora; b) analizar la organización como un elemento constitutivo de un sistema complejo, promoviendo su integración con la comunidad y con la sociedad, con base en su sostenibilidad dentro del mercado; c) promover el mejoramiento real de la organización y su capacidad para administrar los problemas, constituyéndose como un agente dinamizador en las decisiones de cambio y adaptabilidad, de frente a las nuevas tendencias de la sociedad; y d) promover la cultura de la innovación para lograr la adaptación al medio y a sus necesidades en permanente evolución.

*Directriz ocho:* El conjunto de actividades requerido para la autoevaluación y la auditoría interna debe ser capaz de reconocer que las actividades propias de la universidad constituyen un sistema adaptativo complejo, compuesto por redes de comunicación para el mejoramiento. La retroalimentación surge como agente que garantiza la conectividad y la capacidad de generar circuitos de manejo de información, comunicación y conexión entre profesores, clientes, proveedores, competidores y el entorno social.

*Subcontratación:* Cuando la universidad decida subcontratar algún trabajo relacionado con la evaluación del desarrollo y desempeño de sus docentes, se debe establecer un acuerdo formalmente documentado que incluya los temas pactados y la confidencialidad necesaria. Además, debe prevenir la aparición de conflictos de intereses. Debe así mismo existir un procedimiento documentado que le permita a la universidad asegurar la efectividad de las compras y la subcontratación, garantizando el adecuado control de las actividades subcontratadas y la adecuación de los productos comprados que son requeridos para la gestión del sistema. Debe así mismo evaluar permanentemente el desempeño de los proveedores de productos y servicios, tomando las acciones necesarias para garantizar su continuidad como proveedores.

*Procedimientos e instructivos:* La universidad debe establecer los procesos propios para desarrollar las actividades que conduzcan a garantizar el desarrollo y la evaluación de los

profesores. En este contexto, deben existir como mínimo: 1. Un manual de calidad en el que la empresa represente las políticas, objetivos, procesos y compromisos con la calidad que adquiere para llevar a cabo de manera sistemática los procesos relacionados con el desarrollo y evaluación docente; y 2. La identificación de los procesos propios del sistema, en donde se incluyan los indicadores de implementación y verificación de a) el proceso de liderazgo de la Rectoría; b) El proceso de desarrollo de los profesores; c) Modelo de desarrollo profesional, incluyendo la promoción y compensaciones, categorías de profesores, evaluación de la enseñanza y productos e indicadores según dimensión de desempeño; c) procedimientos y registros requeridos; d) métodos para la evaluación de la efectividad, indicadores de gestión, metas y frecuencias de medición; e) mejoramiento continuo, acción correctiva/preventiva; d) revisión por la Rectoría y auditorías Internas; y e) definición de perfiles de competencia de las personas que operan el sistema de gestión basados en educación, formación y experiencia.

## CONCLUSIONES

El modelo que se ha propuesto tiene repercusiones positivas en los estándares de calidad de la Universidad Católica de Colombia, ya que los diversos factores y procesos que hacen parte de la vinculación y de la labor docente se encuentran controlados por un sistema, a través de mecanismos de retroalimentación que fomentan la integración y la participación de la comunidad académica, con la intención de superar las dificultades, los obstáculos y los problemas encontradas. En efecto, el modelo de gestión de calidad, a partir del continuo seguimiento y la evaluación en torno a las actividades desarrolladas por la institución, permite referenciar a tiempo los problemas y las equivocaciones, para así solucionarlas y lograr el mejor desempeño posible, cumpliendo en los plazos establecidos los objetivos que fueron trazados. Otro de los aspectos relevantes del modelo de gestión de calidad que se ha propuesto, es garantizar la objetividad e imparcialidad de los resultados, evitando que los procesos se encuentren sesgados por intereses personales, de manera que se promueva la transparencia en la gestión basada en la ética y en los valores. De esta forma, a partir del modelo es posible lograr una mayor calidad en cada docente, lo cual se verá reflejado en un crecimiento en la calidad académica de la institución en general. Además, a través de dicha integración se promueve la aplicación de estrategias y soluciones conjuntas para solucionar los problemas y desarrollar acciones que tiendan a mejorar la situación académica y formativa de la universidad.

Como se ha establecido en el desarrollo del presente estudio, el modelo de gestión de calidad que se ha proyectado para la Universidad Católica de Colombia está diseñado para mejorar el rendimiento y el desarrollo de la institución en dos sentidos. En primer lugar, frente a los retos que impone el Estado para la certificación y acreditación académica de la institución y sus planes curriculares, por lo que resulta imprescindible evaluar el desempeño docente y la capacidad de aprendizaje de los estudiantes durante su paso por la universidad. En segundo lugar, para satisfacer las exigencias de una sociedad sujeta a continuas transformaciones, que cada vez demanda más la necesidad de profesionales preparados para asumir no solo los retos concernientes a sus carreras y a su desempeño laboral, sino también a la construcción de una sociedad mejor para todos, más justa y equitativa.

## IMPACTO SOCIOECONOMICO DE LOS NEGOCIOS INTERNACIONALES

Juan Cortés Botello, Universidad Autónoma de Baja California  
Olga Lidia Gutiérrez Gutiérrez, Universidad Autónoma de Baja California  
María Belén Murillo Pedraza, Universidad Autónoma de Baja California

### RESUMEN

*El trabajo plantea conocer las acciones utilizadas por las empresas ubicadas en la ciudad de Mexicali, México que operan en mercados internacionales mediante actividades de exportación, importación, operación en mercados o plazas de geografía internacional. Permitiendo fortalecer el programa de estudio de Lic. En Negocios Internacionales de la Universidad Autónoma de Baja California primero atendiendo a la necesidad permanente de evaluar el programa de estudio, haciéndolo cada vez más pertinente a las necesidades del mercado de trabajo, sea este de carácter local, regional, nacional o internacional, garantizándole al mercado laboral un recurso humano altamente calificado que pueda coadyuvar de manera interdisciplinaria a resolver los retos que cada vez con mayor incertidumbre se vienen planteando a las empresas y gobiernos con economías abiertas. El reto es complejo ya que actualmente ha tomado un impulso muy notorio la necesidad de que las empresas e instituciones se constituyan en organismos Socialmente Responsables por lo que deben de dar respuesta rápida y oportuna para detener el deterioro de los ecosistemas de las plazas donde llevan a cabo sus actividades, así como ser más empáticos e impulsores de soluciones de las necesidades de la población, sean de seguridad, salud, educación, recreación y cultura. La presente investigación está en proceso.*

## THE SOCIO-ECONOMIC IMPACT OF INTERNATIONAL BUSINESS

### ABSTRACT

*This work aimed at ascertaining the actions used by companies located in the city of Mexicali, Mexico operating in international markets through export activities, import, market operation and international geography spaces. Allowing strengthen the curriculum of Bachelor in International Business from the University of Baja California first response to the continuing need to evaluate the program of study, making it increasingly relevant to labor market needs, be it at the local regional, national or international labor market guaranteeing highly qualified human resource that can assist in an interdisciplinary way to solve the challenges increasingly been raising uncertainty for companies and governments with open economies. The challenge is complex because it has now taken a very noticeable boost the need for companies and institutions are formed in Socially Responsible bodies so must give prompt and timely response to stop the deterioration of the ecosystems of the places where they carry operate, and how to be more empathetic and drivers of solutions to the needs of the population, are security, health, education, recreation and culture. The present investigation is ongoing*

## INTRODUCCION

El trabajo plantea conocer las acciones utilizadas por las empresas ubicadas en la ciudad de Mexicali, México que operan en mercados internacionales mediante actividades de exportación, importación, operación en mercados o plazas de geografía internacional. Permitiendo fortalecer el programa de estudio de Lic. En Negocios Internacionales de la Universidad Autónoma de Baja California primero atendiendo a la necesidad permanente de evaluar el programa de estudio, haciéndolo cada vez más pertinente a las necesidades del mercado de trabajo, sea este de carácter local, regional, nacional o internacional, garantizándole al mercado laboral un recurso humano altamente calificado que pueda coadyuvar de manera interdisciplinaria a resolver los retos que cada vez con mayor incertidumbre se vienen planteando a las empresas y gobiernos con economías abiertas. El reto es complejo ya que actualmente ha tomado un impulso muy notorio la necesidad de que las empresas e instituciones se constituyan en organismos Socialmente Responsables por lo que deben de dar respuesta rápida y oportuna para detener el deterioro de los ecosistemas de las plazas donde llevan a cabo sus actividades, así cómo ser más empáticos e impulsores de soluciones de las necesidades de la población, sean de seguridad, salud, educación, recreación y cultura.

La globalización, de los procesos productivos y de las relaciones humanas en todas sus manifestaciones que van desde lo económico, cultural, político y artístico entre otras formas en que se manifiestan las relaciones sociales del ser humano en la actualidad han generado una sociedad del conocimiento y de la información, y de cambios científico-tecnológicos acelerados que han modificado sustancialmente la vida del hombre y por supuesto el ámbito laboral y académico. Estas dos últimos conceptos son el motivo del presente trabajo. En estos tiempos la creación de riqueza depende de la aplicación en el trabajo de un conocimiento de alta especialidad, por lo que las instituciones de educación tienen el reto de modificar su vida académica, es decir sus estructuras y procesos de tal manera que atiendan de manera eficiente las necesidades que se derivan de ese nuevo ordenamiento de la producción laboral y de las relaciones entre los pueblos del mundo. Lo anterior plantea la necesidad de nuevas políticas públicas para que las IES y los egresados puedan responder de manera dialéctica a lo que el mundo productivo, tecnológico y científico está demandando. El presente trabajo es de orden exploratorio y aproximativo al interior de las empresas que contratan licenciados en Negocios Internacionales egresados de la Facultad de Ciencias Administrativas de la Universidad Autónoma de Baja California. El carácter exploratorio y aproximativo se debe al objetivo de la investigación ya que por recomendaciones de CACECA que es el Consejo de Acreditación en la Enseñanza de la Contaduría y Administración hemos pretendido apartarnos de los tradicionales estudios de egresados y de empleadores para abocarnos si al estudio de estos pero ahora adentrándonos un poco más a lo que sucede al interior de las empresas al momento de tomar las decisiones que repercutirán en la economía de la misma.

La presente investigación está en proceso. La educación mexicana se enfrenta a una demanda creciente de egresados altamente especializados que satisfagan los requerimientos que hacen tanto el sector productivo como la sociedad. La información sobre estas demandas pretendemos conocerlas a través de lo que se denomina estudio de egresados y estudio de empleadores, ya que

son estos últimos los que pueden generar la información pertinente que permita retroalimentar a las IES en lo referente al planteamiento y contenido de los planes de estudio de las carreras que imparten, aunque en el caso que nos ocupa solamente se hace el estudio para los egresados y empleadores de Lic. En Negocios Internacionales.

A través de la opinión de los egresados y empleadores es posible detectar las necesidades en cuanto a conocimientos, habilidades, actitudes y valores que ellos requieren de los egresados pero más aún se puede conocer el grado de aplicabilidad de los conocimientos adquiridos en el aula y el impacto económico y productivo que estos tienen para la empresa, siendo esto último el eje toral de la presente investigación y no precisamente como lo plantea el título de la presente ponencia, en realidad no se pretende conocer lo ya conocido y que es el impacto o nivel de importancia que tienen los negocios internacionales y en específico las empresas multinacionales en la actividad económica internacional está ampliamente documentado en lo referente al volumen de producción, ventas, utilidades, empleo y otros efectos colaterales que traen consigo sus operaciones, pero valga decir que si se hace mención de lo anterior en la presente investigación. Por lo anterior queda establecido que se toma al mercado de trabajo como fuente primaria de información. La presente investigación que se realiza en la Facultad de Ciencias Administrativas de la Universidad Autónoma de Baja California también pretende dar respuesta a variables que los diversos organismos acreditadores de las IES como son el Consejo para la Acreditación de la Educación Superior (COPAES) y en especial de CACECA mencionado anteriormente han planteado para la carrera de Lic. En negocios Internacionales.

#### Justificación

Los cambios económicos, sociales, científicos, tecnológicos plantean a la exigencia de formar al egresado en un ámbito que le permita adquirir nuevas competencias, conocimientos, habilidades y actitudes, más amplias y globales, para integrarse y mantenerse en los actuales y futuros mercados laborales. Por lo anterior se reconoce la necesidad de realizar una investigación sobre la opinión que los empleadores tienen acerca de sus colaboradores formados académicamente en la Facultad de Ciencias Administrativas de la UABC y espera que los resultados de la investigación contribuyan a dar respuestas a algunas de las interrogantes institucionales, como son: ¿Hacia dónde se dirige la construcción del conocimiento de las carreras objeto de este estudio?, ¿Cuáles son las tendencias y perspectivas futuras de las carreras que se ofertan en la FCA, desde el punto de vista del mercado laboral? y ¿Cómo construir e incorporar un currículo pertinente a las carreras de la FCA? .

Con la dinámica tan cambiante de la sociedad, se obliga a las Instituciones de Educación Superior (IES) a estar en permanente observancia y alerta de la pertinencia en la calidad de la educación que imparten, así como de las carreras que ofertan para no verse desfasadas por los nuevos requerimientos de los sectores productivos y sociales, de su región, de su país y del ámbito externo el cual cada vez juega un papel más importante en la construcción de las diferentes políticas públicas de las naciones. Es por ello que estudios como el que nos ocupa deben constituirse en programas de investigación institucionales por parte de las IES, así como ya lo es de la UABC y de la FCA. Este tipo de estudios se constituyen arrojan información para la mejora y actualización permanente de los planes y programas de estudio, para la definición de políticas de desarrollo institucional en los niveles estatal, regional y nacional, para la ampliación de la oferta educativa, para conocer el desempeño de sus egresados y tener así una vía de aproximación a la realidad de los campos profesionales, para realizar ejercicios de reflexión y autoevaluación con la finalidad de redefinir el rumbo y visión institucional y, finalmente, lograr con esto una mayor vinculación y pertinencia social.

### Objetivo Principal

El objetivo principal es evaluar la correlación del perfil profesional del egresado de la carrera de Negocios Internacionales de la FCA de acuerdo a su opinión y a la opinión de los empleadores respecto a variables como las funciones, actividades y tareas que el ejercicio profesional les exige a los LNI de la FCA, así como también las habilidades y actitudes que poseen. Objetivos Particulares:

1. Caracterizar las competencias profesionales del egresado de la FCA en función de la opinión de los empleadores;
2. Medir la satisfacción de los empleadores respecto al cumplimiento del desempeño profesional del egresado de la FCA;
3. Determinar la pertinencia del currículo con las necesidades de los empleadores e;
4. Conocer las materias de mayor aplicabilidad en el campo laboral según los egresados.
5. Conocer el grado de participación en la resolución de problemas y de la planeación que realiza la empresa para llevar a cabo sus planes de negocio, y
6. Conocer el grado de satisfacción laboral del egresado de LNI de la FCA.

Los objetivos específicos del estudio son:

1. Apoyar el diseño y revisión de planes y programas de estudio de la carrera de LNI
2. Conocer el desempeño profesional del egresado
3. Consolidar una diferente línea de investigación de egresados y empleadores.
4. Conocer las exigencias formativas que el empleador exige del egresado de LNI de la FCA.
5. Conocer la opinión de los empleadores sobre los criterios y valoraciones que utilizan en el proceso de selección y contratación de los egresados de LNI.

### **METODOLOGÍA**

Dado que la investigación es de carácter exploratorio y de aproximación para en estudios posteriores adentrarnos en la operatividad misma de las empresas, por esta ocasión no se plantean hipótesis y tan solo se circunscribe a un estudio descriptivo

Se entrevistarán a 50 empleadores de empresas de Mexicali que sus empresas realizan negocios internacionales, los cuales serán seleccionados aleatoriamente partir de los directorios empresariales de la ciudad de Mexicali.

Directorio de CANACINTRA, y  
Directorio de la Industria de la Maquiladora.

Por lo que respecta al estudio de egresados de LNI se aplicó un muestreo probabilístico a 734 egresados que tiene la carrera hasta el año 2013-1. La aplicación de los instrumentos será vía electrónica y en caso de tener poca respuesta entonces se procederá a aplicar la encuesta en los propios lugares de trabajo.

En el caso de los egresados de LNI se utilizó la fórmula para muestreo de William G. Cochran con los siguientes valores:

$$Z = 90 \%$$

$$P = 5 \%$$

$$Q = 5 \%$$

$E = 5 \%$

Los anteriores valores una vez aplicado el factor de corrección finito arrojo una muestra de 198 egresados a encuestar.

## MÉTODOS Y TÉCNICAS

La metodología empleada en el presente estudio incluyó el cuestionario “Opinión de Empleadores” el cuál fue diseñado por la ANUIES y la UABC, lo único que se hizo fue ajustarlo a las necesidades de la FCA. El cuestionario a Empleadores consta de 25 preguntas en su mayoría de opción múltiple.

Los apartados que contiene esta encuesta son: Datos Generales de la Empresa; Opinión sobre el Egresado de LNI y Datos laborales de la Empresa. El cuestionario de egresados contiene 29 preguntas en su mayoría de opción múltiple. Los apartados que contiene el cuestionario son: Datos Generales de la Empresa; Funciones Laborales del Egresado; desempeño Laboral de la Empresa y Datos Generales del Egresado. Pasos a seguir en la presente investigación:

2.1 Integración del directorio de CANACINTRA Y EL DE MAQUILADORAS

2.2 Identificación de la población de Egresados de LNI.

2.3 Diseño de los cuestionarios.

2.4 Elaboración de la muestra para egresados.

2.5 Aplicación del cuestionario

2.6 Diseño de sistema de base de datos (spss)

2.7 Captura de datos

2.8 Interpretación y presentación de resultados en gráficas.

### Discusion: Actividades de las Multinacionales

Buena parte del mundo marcha al ritmo que imponen las empresas que realizan negocios internacionales y como ya se mencionó esto tiene que ver con ámbitos productivos, tecnológicos, científicos, culturales etc. Así pues, la sociedad tiene nuevas demandas y oportunidades de ampliar su horizonte mejorando su calidad de vida o de estancarse viendo como su esperanza de vida se ve acotada por falta de acceso a bienes y servicios necesarios para ampliar su visión de la vida. La aseveración anterior se debe al papel que desempeñan las multinacionales y como trastocan la vida social del mundo y de los países donde realizan sus negocios. Según Rafael Ortiz “Los negocios internacionales son el estudio de las transacciones que tienen lugar en el extranjero para satisfacer las necesidades de los individuos y organizaciones. Estas actividades económicas son operaciones comerciales, como en el caso de exportar o importar bienes, la inversión directa de fondos en compañías internacionales. [Además en los negocios internacionales] cerca del 80% de la inversión directa la realizan las 500 empresas más grandes del mundo, representan más de la mitad del comercio internacional...

Estas organizaciones representan la mayor parte de la inversión y el comercio a escala mundial.” P1 (Ortiz; octubre 2001) Aunque el dato es de hace 12 años en la actualidad con mayor razón los negocios que realizan las multinacionales afectan toda esfera de la vida humana pasando desde los patrones de consumo que nos imponen a través de la publicidad, hasta la aspiración educacional que deseamos para nuestros hijos y para nuestro país. Por eso la necesidad de que las IES se adentren en la planeación estratégica haciendo cada vez más pertinente el modelo educativo, el ejemplo nos lo dan las propias empresas para ellas “el tema de la dirección estratégica - acciones gerenciales que incluyen formulación, instrumentación, evaluación y

control de estrategias- abarca una amplia gama de actividades, entre ellas el análisis ambiental de las condiciones internas y externas y la evaluación de las fuerzas y debilidades de la organización. (Ortiz; 2001; P4) De igual manera las políticas públicas y las IES deben tener en presente que el fin último de su política es la de mejorar la vida económica, política y social de la población a través de una educación de calidad y estímulo empresarial y acorde a las necesidades de los diferentes sectores. Es decir, debemos estar a la par de los países emergentes como China , India Vietnam entre otros que aprovechan sus ventajas comparativas como es el valor de su mano de obra cada vez más calificada lo cual les está permitiendo tener crecientes participaciones de mercado en la producción de ensamblajes, industria liviana y otras industrias intensivas en mano de obra. Para darnos una idea del tipo de recurso humano que deben estar formando las IES y en particular las carreras de LNI veamos lo que dice María del Refugio Mendoza Quiñonez en su trabajo “Los Factores del Medio Ambiente Global y su influencia en el Comercio Internacional” Ella menciona que las empresas participan en el comercio internacional con la finalidad de:

- Expandir las ventas: interés, disposición y capacidad adquisitiva del consumidor.
- Adquirir recursos: Capital, tecnología, e información.
- Minimizar el riesgo: Búsqueda de mercados extranjeros para sortear los ciclos económicos.
- (Mendoza Quiñonez: P1)

La misma autora dice que las empresas multinacionales toman en cuenta “las medidas del impacto social [las cuales] pueden incluir las políticas de gestión laboral de la empresa y el enfoque de la igualdad de oportunidades y los derechos humanos, así como el impacto directo que sus actividades tienen en la comunidad local.” (Mendoza Quinonez;P2) [y continua mencionando que] “los gerentes pueden usar 5 estrategias políticas básicas para afrontar la turbulencia en sus ambientes de negociación, cabildeo , alianza representación y socialización. (Mendoza Quiñonez;P7) México esta consiente de los retos que plantea el nuevo modelo económico de economía abierta y en donde las grandes empresas impulsan los cambios que a ellas les parecen pertinentes es por eso que desde el primero de Enero de 1989 entro en vigor el acuerdo comercial entre México, Estados Unidos de Norteamérica y el Canadá con la finalidad de intercambiar bienes y servicios aprovechando sus ventajas comparativas y donde una de las principales variables seria la eliminación progresiva de los aranceles al comercio. De entonces a la fecha “México ha trabajado arduamente por fortalecer sus relaciones comerciales con otros países.

Esto se ve reflejado en los once tratados de libre comercio firmados con 32 países, superando incluso a países como Estados Unidos y Brasil, convirtiéndose en un país de gran apertura comercial. México sabia de la enorme importancia que tenía el integrarse al TLCAN para poder convertirse en un país emergente y esto se lograría por medio de la exportación de productos, especialmente a un país que poseía un gran potencial de mercado para las empresas mexicanas.” (Herrera y otros; 2012; p8) Cuales han sido algunos de los resultados a 10 años de haber entrado en vigor el TLCAN según el estudio de Herrera y otros, ellos mencionan entre otras cosas que “la teoría plantea que la inversión extranjera ayuda, a los países receptores, al fomento del desarrollo económico, por medio del empleo y el comercio exterior, además de la difusión de nueva tecnología que ayuda a incrementar la productividad. Sin lugar a dudas, la inversión extranjera ha crecido de manera fulminante en los tres países. En nuestro país, dicha inversión, al igual que el comercio internacional, se ha incrementado exponencialmente. En 1994, se invirtió en el país, un total de 10,972 millones de dólares, después de 10 años de la implementación del tratado, entró al país inversión de origen estadounidense y canadiense con un promedio anual de 9 mil millones de dólares. En años más recientes, la inversión extranjera sigue en aumento, el año

con mayor penetración internacional fue el 2007 con un total de 31,313.40 millones de dólares, y el año con menos inversión se registró en el 2009 con solo 15,959.00 mdd. (Herrera y otros;2012;p9).

Pero también mencionan que “las empresas locales se han visto afectas debido a la competencia que surge a raíz de la IED, y esto se debe a que gran porcentaje del flujo de inversión proveniente del extranjero se concentra en las grandes empresas internacionales instaladas en el país, que se dedican principalmente a la exportación de bienes, esto conlleva a que el capital insertado no cause el impacto esperado en la económica nacional. Se tenía la idea que con la gran actividad provocada con la IED en el país, se obtendría un impacto positivo en la productividad interna y por consecuencia, en la generación de empleos. No obstante, esta inversión se ha basado principalmente en la compra de activos financieros, y no en la instalación de nuevas empresas como se esperaba. P9 Con la apertura comercial en América del norte solo se maximizaron las ganancias para Estados Unidos y las empresas trasnacionales (ETN) y no se favoreció el desarrollo nacional, ya que cerca de dos tercios de las exportaciones mexicanas son de empresas trasnacionales. (Herrera y otros;2012;P10).

Lo anterior explica como algunos de los estudios mar recientes en materia de empleo mencionan que para el caso de México las empresas multinacionales con una gran actividad de importación solo generan 20 empleos por cada millón de dólares que obtienen por concepto de ventas, es decir cada empleado les representa \$ 50,000 dólares de venta anuales a la empresa multinacional. (Félix Heriberto; La Jornada 2009; p:28) En otro orden de ideas el manejo actual que llevan a cabo las multinacionales dentro de sus actividades de producción, administración, ventas, mercadotecnia, logística, cabildeos, análisis de ambientes tanto internos como externos etc. Obligan a repensar tanto los conocimientos como habilidades, actitudes y aptitudes que deben de tener cada elemento (recurso humano) que labora en ese tipo de empresas y aun en la de menor tamaño las Mipymes aunque realicen o no actividades de negocios internacionales ya que algo incontrovertible es que ambos grupos de empresas se enfrentan a una fuerte competencia dentro de sus mercados y que para poder sobrevivir y crecer es fundamental un recurso humano altamente capacitado y adaptable a cualquier tipo de cambio que exija el mercado o exijan los ambientes superestructurales como lo son cambios en la leyes laborales o no, en la política en la cultura en los ecosistemas etc. Por lo anterior el egresado de la carrera de LNI debe ser formado además de una visión integral u holística en los ambientes de negocios, con las habilidades y aptitudes que le permita ir reaprendiendo los conocimientos, técnicas y métodos requeridos en cada fase del desarrollo de las fuerzas productivas emanadas del mercado de trabajo, para de esta manera resolver las situaciones rutinarias y las contingenciales a las que se enfrenta la empresa en su esfuerzo por crecer y mantenerse en el mercado. Por ello es necesario que tanto IES, Empresas y Estado encuentren los equilibrios entre lo humano deseable y lo empresarialmente rentable.

Una de las maneras para que se logre lo anterior es necesario que fluyan expeditamente en calidad y cantidad convenios de colaboración entre empresas e IES que permitan la transferencia de conocimientos de última generación tanto en los procesos administrativos de planeación y toma de decisiones, así como de transferencia tecnológica y en casos pertinentes financiera. La empresa no puede quedarse en su papel primigenio de expoliadora de capital constante, variable y de capital físico (recursos naturales), debe asumir como ya lo han venido haciendo un buen número de empresas una conducta Socialmente Responsable primeramente con el país y comunidad en la que se encuentra enclavada realizando sus actividades de producción y de comercialización de sus productos y servicios y en segundo lugar asumir su corresponsabilidad social ante el entorno global. Mientras tanto las IES y el Estado Mexicano deben de orientar su

voluntad al cambio respecto a políticas tanto presupuestales como a la implementación de estructuras evaluativas que garanticen equidad y justicia en pro de la calidad formativa.

## CONCLUSION

Como se dijo, el presente estudio no trata específicamente del impacto económico y social de las empresas que realizan negocios internacionales aunque bien es cierto que se hace uso de algunos datos cuantitativos y cualitativos sobre esta temática. Lo principal que va a destacar esta investigación es la aportación que a partir de su formación realiza el egresado de LNI al ámbito económico y de toma de decisiones de la empresa, así como, el nivel de aptitud de parte de la empresa en lo que se refiere a su participación para resolver asuntos sociales y/o ambientales de la comunidad en que se ubica y de la visión que tiene la empresa sobre su recurso humano de LNI. En el presente estudio subyacen conceptos muy relevantes para caracterizar la simbiosis educación-empresa, conceptos tales como ética y los negocios donde la primera es primordial y sustantiva para la segunda. Otros conceptos son pensamiento y actitud responsable tanto de los sistemas educativos, egresados y empresas como una fórmula importante para que la sociedad obtenga los beneficios que busca cada uno de sus integrantes; la empresa rentabilidad financiera y reconocimiento ante la sociedad, el recurso humano una mejor calidad de vida que le permita ser cada vez más feliz en su entorno.

Dentro del concepto de responsabilidad se encuentra el de empresa de responsabilidad social la cual genera innovación y conlleva una buena imagen de la empresa. La educación debe contribuir de manera significativa a generar tolerancia, igualdad, justicia, democracia, inclusión social, responsabilidad ambiental y respuestas acertadas al cambio. Es evidente que el logro de lo anterior no es tarea de unos cuantos grupos de la sociedad sino de la mayoría de los grupos que la conforman y la definen, en lo que concierne a este asunto hoy solo tratamos acercarnos de primera instancia a lo que se puede hacer a través de la formación de los LNI y de las empresas en que ellos laboran.

# COMPETITIVIDAD Y SUPPLY CHAIN MANAGEMENT EN LA INDUSTRIA EXPORTADORA DE AGUACATES EN MÉXICO

Marco Alberto Valenzo-Jiménez, Universidad Michoacana de San Nicolás de Hidalgo

Evaristo Galeana-Figueroa, Universidad Michoacana de San Nicolás de Hidalgo

Jaime Apolinar Martínez-Arroyo, Universidad Michoacana de San Nicolás de Hidalgo

## RESUMEN

*La presente investigación tiene la finalidad de mostrar como se encuentra el Supply Chain Management (SCM) en las empresas exportadoras de la industria aguacatera ubicadas en el Estado de Michoacán, México y de que manera incide en la Competitividad del sector de tal manera que permita a dichas empresas lograr transformarse en empresas competitivas en el mercado de los Estados Unidos. El objeto de esta investigación se basa en las empresas dedicadas a la exportación de aguacates ubicadas en el estado de Michoacán especialmente al mercado de los Estados Unidos, se aplico un cuestionario de 137 preguntas en donde se analizan factores como la administración de las relaciones con los clientes y proveedores, la administración del retorno y aspectos como la administración de la demanda, el cumplimiento de los pedidos, la administración del flujo de fabricación, la administración de inventarios, la comercialización, y administración del transporte. Los resultados obtenidos dan cuenta de la situación que guardan las empresas exportadoras de aguacates ubicadas en el estado de Michoacán, ubicándose éstas en la escala tipo Likert en un rango de Regular Competitividad en la Administración de la Cadena de Suministro con 446.0 unidades, lo que representa que las empresas analizadas en su conjunto solamente alcanzaron el 69 por ciento de los niveles de competitividad esperados.*

**PALABRAS CLAVE:** Competitividad, Administración de la Cadena de Suministro, Industria Exportadora

# COMPETITIVENESS AND SUPPLY CHAIN MANAGEMENT EXPORT INDUSTRY AGUACATES IN MEXICO

## ABSTRACT

*This research aims to show how to find the Supply Chain Management (SCM) in the exporting companies avocado industry located in the State of Michoacan, Mexico and how affect the competitiveness of the sector in a way that allows these companies achieve business become competitive in the U.S. market. The purpose of this research is based on companies engaged in export of avocados located in the state of Michoacan especially to the U.S. market, was applied a questionnaire of 137 questions which analyzes factors such as relationship management with customers and suppliers, and return management aspects such as demand management, compliance orders, manufacturing flow management, inventory management, merchandising, and transportation management. The results obtained show the situation that avocados exporting companies located in the state of Michoacan, placing them on the Likert scale in a range of Regular Competitiveness Management Supply Chain with 446.0 units, representing the companies analyzed as a whole reached only 69 percent of expected levels of competitiveness.*

## INTRODUCCIÓN

Hoy en día las organizaciones centran su atención en mejorar los niveles de competitividad, en donde les permita superar o mantener su distancia en relación a sus competidores. Esto entendido en el marco de la globalización e inmersos en el duro clima económico, se hace evidente la necesidad de afrontar nuevos retos, donde los mercados en crecimiento son pocos y éstos están muy alejados unos de otros, aunado a esto cada día surgen nuevos competidores locales que hacen más difícil esta búsqueda; es por esto que los empresarios de México y el mundo necesitan más herramientas que permitan incrementar la competitividad en el sector en el que se encuentran. Una de estas herramientas que han tomado mayor énfasis en el ámbito empresarial, es la denominada Supply Chain Management (SCM), ya que como afirma Ballou (2004), está es una de las áreas que se ha observado que absorbe entre un 60 por ciento y un 80 por ciento de cada dólar que vende una empresa, es por ello que se convierte en parte esencial en la estrategia competitiva, en la generación de ingresos y por consecuencia trae mejoras en los niveles de competitividad a nivel empresarial. El SCM es un asunto de interés y de importancia entre los gerentes e investigadores ya que es considerada como fuente de ventaja competitiva (Christopher, 1998), (Giménez & Ventura, 2003) (Giménez, 2005) y además esta es una de las áreas del conocimiento que ha recibido una enorme atención en las revistas de investigación internacional.( Journal of Supply Chain Management, International Journal of Physical Distribution & Logistics Management, Journal Operations Management, International Journal of Logistics Management, Journal of Business Logistics, International Journal of Operations and Production management, Industrial Marketing Management, Management Science, Decision Sciences) así como en la industria y en empresas dedicadas a la consultoría (Christopher, 1998), (Lambert & Cooper, 2000), (Sandberg, 2006).

La cadena de suministro ha tomado gran importancia en diferentes sectores e industrias tanto a nivel nacional como internacional, el estudio del SCM también se da en los productos agrícolas, y uno de ellos es el aguacate, el cual tiene una alta participación en los mercados internacionales, especialmente en los Estados Unidos, es por ello que se pretende investigar cómo se encuentra este sector. Según estimaciones de la Food and Agriculture Organization (FAO), la producción mundial de aguacate ha crecido fuertemente, para el año 2005 superó las 3 millones de toneladas. Y las principales regiones productoras son América Latina y el Caribe, no obstante, en los últimos años se ha acelerado la producción en Asia, principalmente en Singapur y China (INFOCIR, 2006). México es el principal productor, exportador y consumidor de aguacate en el mundo, con una producción de más de un millón de toneladas al año, produce el 42 por ciento del aguacate que se cultiva a nivel mundial (Agropecuaria, 2008). Las exportaciones de aguacate para los años de 2006, 2007, 2008, 2009, 2010 fueron las siguientes 208,346; 310,260; 326,670; 398,153; 277,442; 369,297 toneladas respectivamente. Se observa un crecimiento constante en la exportación, del cual para el año 2010 el 77.8% fue enviado a los Estados Unidos, el 6.8% a Japón, 5.6% Canadá y el resto se reparte en otros países (IQOM, 2007). Los principales estados productores de aguacate en el país son: Michoacán, Morelos, Nayarit, Edo. de México y Jalisco, de los cuales el Estado de Michoacán es líder de producción y exportación de aguacate con una participación del 83.2 %, de la producción total de aguacate del país, los municipios que destacan son Uruapan que participa con un 18.5%, seguido por Tancítaro, Peribán, Tacambaro y Ario de

Rosales con un 16.7%; 13.6%;10.6%; 9.5% respectivamente (Martinez, Bonales, Pedraza, & Valenzo, 2011).

## REVISIÓN DE LA LITERATURA

La competitividad es usada frecuentemente por los gobiernos, empresas y los medios de comunicación como un concepto “vago”. Sin embargo, aún en los investigadores existe la ausencia de un consenso en cuanto al concepto de competitividad lo cual ha propiciado que los estudiosos hayan abordado dicho concepto desde distintas perspectivas teóricas (Valenzo, Martinez, & Bonales, 2010). Ambastha y Momaya (2004), definen la competitividad como la capacidad de competir. Es decir la capacidad de diseñar, producir, y ofrecer productos superiores en el mercado, a los ofrecidos por los competidores, considerando el precio. Por lo tanto una organización, es competitiva ante los ojos de sus clientes si ésta puede entregar un mejor valor comparado con el de sus competidores, logrando precios más bajos con beneficios equivalentes o superiores a las de sus competidores. El valor del cliente por lo tanto, se puede considerar como la ventaja percibida en lo referente a lo que este exige. En la revisión de diferentes perspectivas teóricas que estudian y conforman el supply chain management (Los estudios revisados fueron: (Newman, Hanna, Gattiker, & Huang, Spring 2009), (Simchi-Levy, Philip, & Simchi-Levy, 2008), (Elmuti, Minnis, & Abebe, 2008), (Long, 2007), (Bowersox, Closs, & Cooper, 2007), (Chopra & Meindl, 2007), (Hinrichs, Rittscher, & Lankmann, 2007) (Lejeune & Yakova, 2005), (Lambert, Garcia-Dastugue, & Croxton, 2005), (Ayers, 2004), (Hugos, 2003), (Giménez & Ventura, 2003), (Roberts, 2003) (Shah, Meyer-Goldstein, & Ward, 2002), (Tang & Tang, 2002), (Mojica Palacios, 2002), (Olhager, Persson, Parburg, & Rusen, 2002), (Frohlich & Westbrook, 2002), (Hill & Scudder, 2002), (Barratt & Oliveira, 2001), (Frohlich & Westbrook, 2001), (Brewer, Button, & Hensher, 2001), (Dewett & Jones, 2001), (Mentzer, y otros, 2001), (HKANA, 2000), (Simchi, Kaminsky, & Simchi-Levi, 2000), (Mentzer, Foggin, & Golicic, 2000), (Handfield & Nichols, 1999), (Carter & Ellram, 1998), (Lambert, Cooper, & Janus, 1998), (Christopher, 1998), (Cooper, Lambert, & Pagh, 1997), (Boyer, Leong, Ward, & Krajewski, 1997), (Das & Handfield, 1997), (Giunpero & Brand, 1996), (The Global Supply Chain Forum, 1996), (Towill, Naim, & Wikner, 1992), (Cavinato, 1992), (Novak & Simco, 1991), (Scott & Westbrook, 1991), (Christopher M. , 1982), (Forrester, 1961).), se realizó un análisis exploratorio y de frecuencia consistió en la realización de un cotejo de variables empleadas en los diversos estudios empíricos y las variables sugeridas a ser empleadas en los estudios teóricos se lograron identificar 95 variables de las cuales se lograron agrupar en las cuatro siguientes:

Administración de las relaciones con los proveedores (ARP)

Cadena de suministro interna(CSi) integrada por: Administración de la Demanda, cumplimiento de los pedidos, administración del flujo de fabricación, administración de inventarios, comercialización y finalmente administración del transporte.

Administración de las relaciones con sus clientes (ARC)

Administración del retorno (AR)

El análisis exploratorio y de frecuencia consistió en la realización de un cotejo de variables empleadas en los diversos estudios empíricos y las variables sugeridas a ser empleadas en los estudios teóricos, ver figura # 1.

El Council of Supply Chain Management Professionals (2008), define a la administración de la cadena de suministro como: “Cadena de suministro abarca la planeación y la administración de todas las actividades involucradas en la compra de componentes, la consecución, conversión, y todas las actividades de la administración de la logística. Es importante, también incluir la

coordinación y la colaboración con los socios del canal de distribución, los cuales pueden ser proveedores, intermediarios, o proveedores de servicios contratados externos, y los clientes. En esencia, la administración de la cadena de suministro integra la demanda y la provisión dentro y a través de las compañías”.

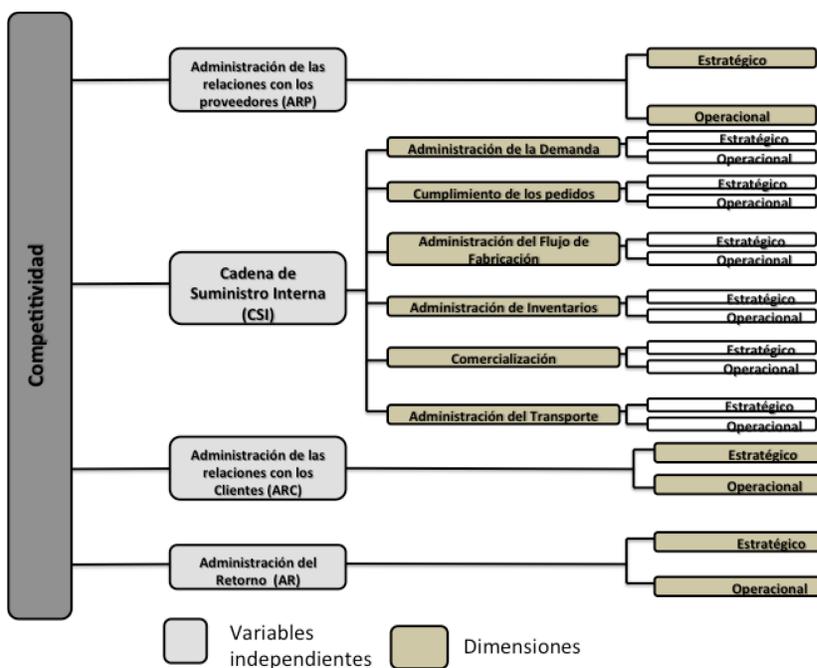

Administración de Relaciones Con los Proveedores (ARP)

Para Lambert, (2004), el proceso de ARP, provee la estructura de cómo las relaciones con los proveedores son desarrolladas y mantenidas. Como su nombre lo sugiere este proceso es un espejo de la administración de relaciones con nuestros proveedores. Y como es el caso para la ARP este envuelve un desarrollo cercano de las relaciones con un subconjunto pequeño de proveedores basados en el valor que estos proveedores dan a la empresa todo el tiempo. Las relaciones a largo plazo proveen un ganar- ganar para ambas partes. Para cada proveedor clave, la empresa deberá negociar y llegar a un acuerdo sobre el producto o servicio prestado y definir claramente los términos de la relación.

Cadena de Suministro interno (CSi)

Esta variable se forma de las siguientes dimensiones: administración de la demanda, el cumplimiento de los pedidos, la administración del flujo de fabricación, la administración de inventarios, la comercialización, y administración del transporte, todas estas dimensiones entendidas como el proceso interno bajo la cual se desarrolla las actividades de la cadena de suministro al interior de las empresas.

Figura 1: Determinación de Variables Que Inciden en la Competitividad en la Administración de la Cadena de Suministro

Fuente: Elaboración propia con base en la Investigación Teórica.

## METODOLOGÍA

Este artículo contiene un enfoque de investigación mixto, con un diseño descriptivo-relacional el cual incluye mediciones estadísticas que permiten mostrar diferentes perspectivas para la medición del fenómeno, es decir, como se encuentra el Supply Chain Management y su relación con la competitividad en la industria exportadora de los aguacates en el Estado de Michoacán con la finalidad de responder la pregunta de la investigación y a su vez, llevar a cabo la prueba de hipótesis. Para la conformación del modelo utilizado en la investigación, se obtuvo principalmente de las revisiones de la literatura, lo que permitió un mayor entendimiento teórico entre las variables propuestas. Se consideraron como variables independientes a la Administración de las Relaciones con los Proveedores (ARP), Cadena de Suministro interna(CSi), Administración de las Relaciones con sus Clientes (ARC) y la Administración del Retorno (AR) y su relación con la variables dependiente competitividad. Con los antecedentes de la problemática del sector exportador de aguacates y el marco teórico descrito, se propone en la presente investigación lo siguiente:

### Objetivo General

Identificar las variables que conforman el supply chain management y en qué medida éstas explican la competitividad en las empresas exportadoras de aguacates al mercado de los Estados Unidos.

### Hipótesis General

La administración de las Relaciones con los Proveedores (ARP), la Cadena de Suministro interna (CSi), la Administración de las Relaciones con los Clientes (ARC) y finalmente una Administración del Retorno (AR) son las principales variables que nos permiten determinar el nivel de Competitividad en la Administración de la Cadena de Suministro en las empresas exportadoras de aguacate en el estado de Michoacán.

### Cuestionario

De acuerdo con la técnica de escalamiento propuesta por Likert (Este método fue desarrollado por Rensis Likert en 1932 y publicó su documento denominado método de evaluaciones sumarias a pesar de que fue realizado a principios del siglo pasado es un enfoque vigente y bastante popularizado principalmente en los estudios de las ciencias sociales.) La cantidad total de empresas exportadoras de aguacates son 34, de las cuales 30 aceptaron participar en el estudio. Cabe indicar que se elaboraron preguntas accesibles e interesantes para el empresario. La entrevista se envió previamente por correo electrónico para que las empresas la conocieran, posteriormente se establecieron reuniones con las empresas in situ y se mantuvo el contacto de los entrevistados por si tenían dudas al respecto. A los ítems elaborados se les asignaron cinco posibles respuestas de las cuales sólo se podía escoger una. A cada respuesta se le asignó un valor numérico máximo de (5) si la respuesta representaba un fuerte impacto en la competitividad en la cadena de suministro y un valor numérico (1) si su impacto era mínimo o nulo. El cuestionario se integró de 137 preguntas con cinco alternativas para cada una en donde se exploraron cada una de las variables Administración de las Relaciones con los Proveedores, Cadena de Suministro Interna, Administración de las Relaciones con los Clientes y finalmente la Administración del Retorno.

### Medición de la Confiabilidad

El método utilizado, por las características de la investigación, fue el coeficiente Alfa de Cronbach que requiere sólo la administración del instrumento de medición a toda la población de empresas exportadoras de aguacates ubicadas en el Estado de Michoacán. Primeramente se muestran los resultados de la prueba de confiabilidad para cada variable como lo siguiere Rivas (2009), la recomendación es medir, siempre que sea posible, el Alfa por variable ya que esto permite conocer la consistencia del instrumento en general y la consistencia de cada variable en particular.

Tabla 1: Prueba de Confiabilidad Por Variable

No.	Variables independientes	Alfa de Cronbach
1	Administración de las relaciones de los proveedores (ARP)	0.905
2	Cadena de suministro interna (CSi)	0.933
3	Administración de las relaciones de los clientes (ARC)	0.867
4	Administración del retorno (AR)	0.866
No.	Variable Dependiente	Alfa de Cronbach
1	Administración de la cadena de suministro (SCM)	0.952

Fuente: Elaboración propia con base en los datos obtenidos del trabajo de campo

## RESULTADOS

El análisis de las respuestas obtenidas de la instrumentación de los cuestionarios aplicados a las empresas exportadoras de aguacates ubicadas en el estados de Michoacán, dan cuenta de la situación que guarda este sector en términos de la competitividad en la cadena de suministro. La competitividad en el SCM se mide considerando las variables en estudio, que incluyen las 137 preguntas del cuestionario y la totalidad de los entrevistados, resultando la mediana de 446 unidades que ubicadas en la escala muestran la opinión generalizada de que es regular competitividad en la administración de la cadena de suministro en las empresas exportadoras de aguacate.

Tabla 2: Rango de Escalas Para La Investigación de la Competitividad del SCM

Muy Baja Competitividad en el SCM	Baja Competitividad en el SCM	Regular Competitividad en el SCM	Alta Competitividad en el SCM	Muy Alta Competitividad en el SCM
137	246.6	356.2	465.8	575.4
685				
446.00				

Fuente: Elaboración propia con base en la Investigación de Campo

La tabla 2 se construye utilizando la puntuación máxima y mínima con la finalidad de obtener rangos de escalas iguales, el procedimiento para calcular el valor máximo es el siguiente; primero se toma en cuenta que (5) es el máximo valor a obtener en la escala tipo likert posteriormente es multiplicada por el número de ítems (137) el valor obtenido es de 685 y al mismo tiempo se obtiene el valor mínimo (1) de la escala likert que multiplicado por los 137 preguntas el valor que se obtiene es de 137, una vez calculados estos valores se procede a realizar un diferencia entre el valor máximo y el valor mínimo y posteriormente se divide entre los cinco rangos de la escala likert y se obtienen rangos iguales de 109.6 puntos cada uno, enseguida se hace una sumatoria del valor mínimo y el rango y de esta manera se van creando cada uno de los rangos que se pretenden medir.

Tabla 3: Índice de Competitividad Por Variable

Variables	Puntaje alcanzado	Puntaje Esperado	Índice de Competitividad SCM
Administración Relaciones con los Proveedores	2808	4200	66.85%
Cadena de Suministro interna	8160	11400	71.57%
Administración Relaciones con los Clientes	2321	3150	73.68%
Administración del Retorno	895	1800	49.72%
Total	14184	20550	69.02%

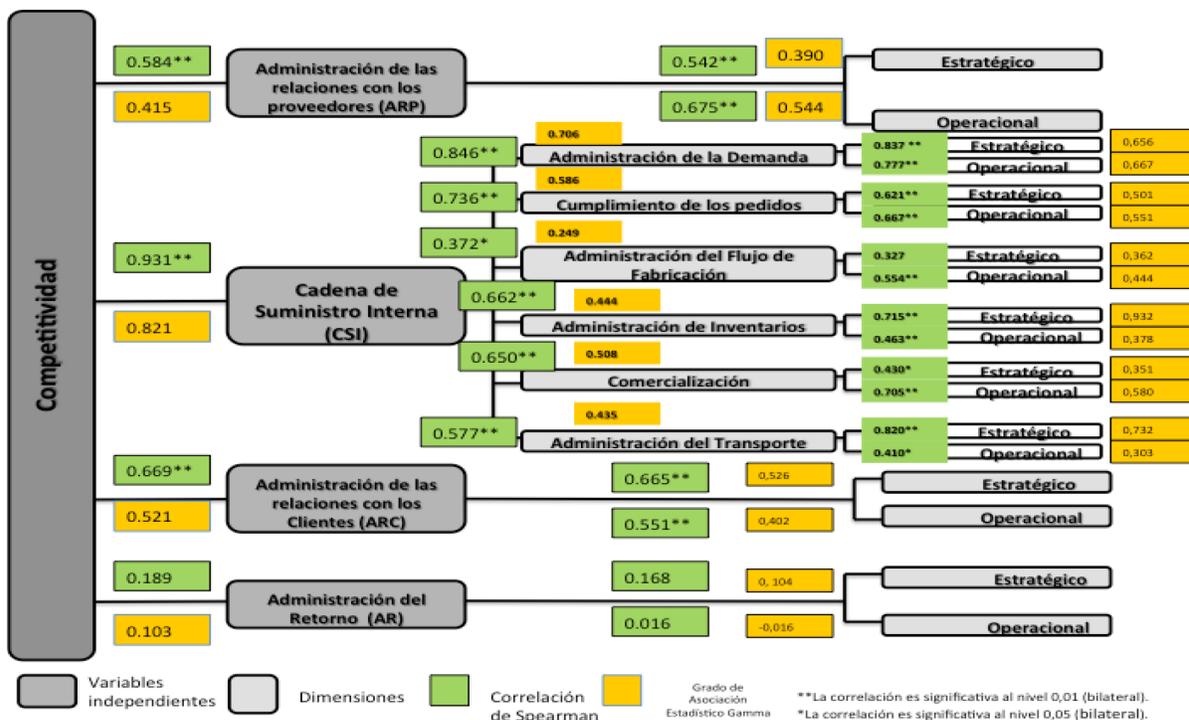

Fuente: Elaboración propia con base en el Trabajo de Campo.

La tabla 3, se contruye tomando en cuenta al número de empresas encuestadas (30), el número de ítems (137) y el valor máximo de la escala tipo likert que es de 5 puntos, de tal manera que el puntaje maximo a obtener es  $(30) (137) (5) = 20,550$ ; de lograrse esta máxima puntuación se podría afirmar que las empresas exportadoras de aguacates manejan adecuadamente su supply chain management e incide en la competitividad del sector exportador. Sin embargo, los resultados generaron un puntaje de 14,184 puntos, lo que equivale al 69% del resultado esperado. Los datos obtenidos en el trabajo de campo se procesaron utilizando los programas SPSS versión 20.0 para Windows, Microsoft Word, y Excel que permitieran probar el grado de asociación utilizando el estadístico gamma entre las variables independientes, dimensiones contrastado con la variable dependiente, además se obtuvo el coeficiente de correlación de Spearman y los resultados se aprecian en la figura siguiente:

La figura 2 muestra los resultados encontrados para cada una de las variables independientes encontradas en la revisión de la literatura que explican el Supply Chain Management integrados por: la Administración de las Relaciones con los Proveedores, cadena de suministro interna, administración de las relaciones con los proveedores y la administración del retorno y su efecto en la Competitividad en las empresas exportadoras de aguacate ubicadas en el estado de Michoacán, para llevar a cabo este análisis se utilizaron las pruebas para el tipo de datos ordinales, es decir, el coeficiente de correlación de Spearman y el grado de asociación del estadístico gamma Se puede apreciar que la variable cadena de suministro interna es la variable que la mayor correlación de 0.931 con la competitividad, seguida por la ARC con 0.669 y su asociación de 0.52; La AR es la que presenta una correlación muy baja con 0.189 y una muy pobre asociación 0.103 Mientras que el coeficiente de determinación de 0.51, nos dice que en un 51%, la competitividad en la Administración de la Cadena de Suministro se explica por la Administración de las Relaciones con los Proveedores.

En lo relacionado con la cadena de suministro interna y la competitividad, muestran un coeficiente de correlación de Spearman de 0.931, y un grado de asociación de 0.821 lo que nos indica que existe una correlación positiva muy fuerte entre estas dos variables. Por lo que respecta a los resultados para la administración de las relaciones con los clientes y competitividad, presentan un coeficiente de correlación de Spearman de 0.669, que indican una alta relación entre estas dos variables. El coeficiente de asociación fue de 0.521, el cual expresa una alta asociación del 52 % con la competitividad. El ARP presenta una correlación moderada 0.584 y un grado de asociación de 0.415. Finalmente, en los que se refiere a los

Figura 2: Coeficiente de Correlación de Spearman y el Grado de Asociación Utilizando el Estadístico Gamma y su Incidencia en la Variable Competitividad

Fuente: Elaboración propia con base en el Trabajo de Campo.

resultados para la Administración del Retorno y la Competitividad, muestran un coeficiente de correlación de Spearman de 0.189 lo que nos dice que existe una correlación positiva debil. El coeficiente de asociación fue de 0.103, lo cual indica que la competitividad se explica en un 10.3 % por parte de la administración del retorno.

### Prueba de Hipótesis

Para llevar a cabo la prueba de hipótesis en donde se asume que existe una asociación positiva entre las variables la ARC, CSi, ARP y AR con el competitividad en las empresas exportadoras de aguacate a continuación se presenta una serie de pruebas estadísticas generalmente utilizadas con variables ordinales y de tipo Likert. Para mostrar el grado de asociación utilizamos el estadístico de Gamma que es una medida del grado y tipo de asociación, entre dos variables cualitativas en una escala ordinal y toma valores entre -1 y +1. Valores próximos a 1 indican fuerte asociación positiva; a medida que aumentan los valores de una variable, aumentan los de la otra; por el contrario, valores próximos a -1 indican fuerte asociación negativa, es decir, a medida que aumenta una variable disminuye los de la otra. Valores próximos a 0, indican no asociación, lo que significa que no puede existir otro tipo de asociación (Ferran, 1996).

Como se observa en la figura # 2, se presentan diferentes grados de asociación para cada una de las variables, las que presentan mayor grado de asociación son cadena de suministro interna y administración de las relaciones con los clientes pero de manera general podemos afirmar que el modelo propuesto se aprueba.

Para llevar a cabo, otra forma de llevar a cabo la comprobación de la hipótesis se aplicaron la prueba de Chi cuadrado utilizando el procedimiento de tablas de contingencia. Podemos apreciar que la variable administración de relaciones con los proveedores se aprueba con valor de 439.33 y una significancia de ,002 (ver tabla #4), para la cadena de suministro interna podemos afirmar

que muestra una asociación positiva en donde se muestra un valor de 450 con una significancia de ,006 por lo que también se aprueba (ver tabla #5), en el análisis de la variable de administración de relaciones con los clientes se observaron valores 366.66 con una significancia de ,002 por lo que también se aprueba (ver tabla #6), la variable administración del retorno presento valores 463.33 y una significancia de ,000 por lo tanto, también se aprueba (ver tabla #7).

Tabla: 4: Prueba de Chi Cuadrado del Procedimiento Tablas de Contingencia (Administración de Relaciones con los Proveedores y la Competitividad).

Elaboración propia con base en el análisis de los resultados del trabajo de campo.

## CONCLUSIONES

Los resultados obtenidos, en lo que respecta a la competitividad del SCM, el promedio de las empresas exportadoras de aguacates se ubica en 446.00 puntos, es decir, recayó en el rango de regular eficiencia en la competitividad en la Administración de la Cadena de Suministro. Ninguna empresa calificó con baja o muy baja competitividad del SCM, es decir ninguna obtuvo las calificaciones del rango 137 a 356.2 puntos. Por lo tanto, se puede concluir que el modelo propuesto para medir la competitividad del SCM, es aprobado en las variables independientes, (Cadena de Suministro Interna, Administración de las Relaciones con los Proveedores, y en la Administración de las Relaciones con los Clientes) y ello representa elementos importantes para poder medir cualquier industria que tenga Administración de Relaciones con sus Proveedores, aquella que tenga una gestión de la Cadena de Suministro Interna, es decir, aquellos que manejen conceptos como Administración de la Demanda, cumplimiento de pedidos, flujo de fabricación, administración de inventarios, comercialización, administración del transporte y una administración del servicio al cliente, igualmente aquellas que cuenten con una Administración de las Relaciones con los Clientes.

# PERCEPCIÓN ACTUAL DE LA SEGURIDAD DE LA INFORMACIÓN EN LAS ORGANIZACIONES DEL MUNICIPIO DE TECOMÁN, COLIMA.

Arquímedes Arcega Ponce, Universidad de Colima  
Jesús Martín Santos Virgen, Universidad de Colima  
Oscar Mares Bañuelos, Universidad de Colima  
Alfredo Salvador Cárdenas Villalpando, Universidad de Colima

## RESUMEN

*Internet se ha consolidado como medio de interconexión global en las organizaciones. Así mismo la información se ha convertido en unos de los activos principales de estas y por ende una progresiva dependencia hacia sus sistemas de información. De ahí la gran importancia que se debería conceder a la seguridad de la información en las organizaciones implementando medidas que preserven su confidencialidad, integridad y disponibilidad. El presente trabajo de investigación tiene como objetivo analizar y evaluar nivel de importancia y conocimiento destinado a la seguridad de la información en las organizaciones públicas y privadas en el municipio de Tecomán.*

**PALABRAS CLAVES:** Información, Seguridad y organización.

## ABSTRACT

*Internet has become global interconnection medium in organizations. Also information has become one of the main assets of these and thus a progressive dependence on their information systems. Hence the great importance should be given to information security in organizations implementing measures to preserve its confidentiality, integrity and availability. This research aims to analyze and evaluate the level of importance and intended for information security in public and private organizations in the town of Tecoman knowledge.*

**JEL :**L8, L5, M1,O2, O3.

**KEYWORD:** Information, Security, Organization, Systems

## INTRODUCCIÓN

En la actualidad nadie pone en duda que la información se ha convertido en uno de los activos principales de las organizaciones. De ahí la gran importancia que se debería conceder a la seguridad de la información en las organizaciones implementando medidas que preserven su confidencialidad, integridad y disponibilidad.

El estandar ISO/IEC 27001 define la seguridad de la información como la preservación de su confidencialidad, su integridad y su disponibilidad así como los sistemas implicados en su tratamiento, dentro de la organización. La información es confidencial cuando se asegura que es accesible solo a usuarios autorizados; es íntegra cuando hay garantía de exactitud al almacenarse, procesarse o transmitirse en una sistema informático; esta disponible cuando se asegura que los usuarios autorizados tengan acceso a ella cuando la necesitan.

Además, dependiendo del tipo de información manejada y de los procesos realizados por la organización, ésta podrá conceder más importancia a garantizar la confidencialidad, a la integridad o a la disponibilidad entre sus activos de información.

Esta investigación se enfoca principalmente a analizar y evaluar la percepción actual de la seguridad de la información en las organizaciones públicas y privadas del municipio de Tecomán, conocer el grado de importancia que le dan a esta área, que técnicas o herramientas usan para prevenir algún tipo de ataque, que nivel de concientización existe en los empleados en cada una de las organizaciones.

Antecedentes

De acuerdo a diversos estudios realizados a nivel internacional, la percepción de la seguridad de la información tiene sus variantes bien definidas. En un estudio técnico realizado en 2008 en el Reino Unido por el Departamento de la reforma regulatoria de las empresas (BERR, Business, Enterprise & Regulatory Reform, 2008) da a conocer que el 97% de las organizaciones tienen conexión de banda ancha a Internet, el 81% de los directivos asignan una prioridad alta a la seguridad de la información, el 77% de las organizaciones ven la protección de datos de sus clientes como de alta prioridad, el 98% de las organizaciones cuentan con un software para detectar spyware y el 95% escanean el correo de entrada contra virus. Así mismo en este estudio evalúa la evolución que ha tenido la seguridad en los últimos seis años. En el 2002, únicamente el 27% de las organizaciones tenían implementadas políticas de seguridad, y en el 2008 el 55% las han implementado. En lo que respecta a la puesta en marcha de un programa de concientización en los empleados, en el 2002 solo el 20% lo implementaban, y en el 2008 el 55%.

En lo que respecta a estudios nacionales, uno de ellos llevado a cabo en el año 2012 por la Asociación Mexicana de Internet (AMIPCI) dio a conocer que el 28% de las organizaciones no pudieron definir lo que es un dato personal y el 44% no poseen el conocimiento necesario sobre la ley federal de protección de datos personales en posesión de particulares y el 32% no saben que acciones implementar para el cumplimiento de esta ley y solo el 26% ha escuchado sobre la LPDPPP. En otro estudio nacional (percepción de la seguridad de la información 2011), realizado en el año 2011 por la empresa JFS (Join Future Systems), dio a conocer que la mayor preocupación de las organizaciones en México en lo que respecta a la seguridad de la información, es mantener la confidencialidad e integridad de la información con un 76.5% con respecto a otros parámetros como son el robo de identidad, extracción de la información, pérdida de información e Internet. Otro dato interesante que da a conocer este estudio, es de que el personal responsable del área de informática en las organizaciones, el 78% no conoce ninguna norma o estándar para su regulación y solo el 20.5% conocen sobre los estándares ITIL, COBIT e ISO 27001 pero no la aplican.

### La Seguridad De La Información En Las Organizaciones

En la actualidad el entorno empresarial sigue avanzando hacia plataformas estructuradas con una arquitectura centralizada e integradora, donde los puntos de la seguridad de la información son imprescindibles para asegurar las posibles fallas de los sistemas. Sin duda alguna un elemento de gran importancia e impulsor de las nuevas organizaciones es la información, cualquiera que fuese su naturaleza, productos, servicios, ventas la relación con los clientes, el marketing. Es por eso que es importante contar con la eficiencia y eficacia con que se protege, y se administra la información en relación con la visión y misión de todos sus objetivos definidos. Cabe señalar que varias organizaciones especializadas están creando nuevos enfoques con el objetivo de

ofrecer “seguridad y disponibilidad de los recursos de la red simultáneamente”, con lo que se pretende que cada entidad adopte una posición equilibrada que permita asumir un rango de riesgos aceptables para mantener una estabilidad apropiada. (García, 2011)

En cuanto a la protección de las organizaciones es bastante amplia ya que no sólo se conforman con incorporar un simple antivirus o un sistema de detección de intrusos. Si no que habitualmente encuentran opciones más seguras para evitar, proteger y prevenir imprevistos. Ya que al perder información puede ocasionar grandes pérdidas de dinero en la organización. Esto abre una gran oportunidad en el mercado para los emprendedores del sector de software ya que las principales organizaciones interesadas en la seguridad informática la conforman los bancos, las organizaciones gubernamentales y organizaciones de todos los sectores. Además, en la última década se han integrado las pymes para las cuales, han tenido conocimiento que va en aumento los siniestros y las infiltraciones es importante tener resguardados los recursos informáticos (Turabian, 2004).

## **METODOLOGÍA**

La planeación del estudio se dividió en cuatro etapas. La primera etapa contempló la estructuración del marco teórico con base al análisis de diversas fuentes de información (Libros, sitios especializados, artículos referentes a la investigación) que sirvieron de apoyo para la fundamentación de este trabajo de investigación. La segunda etapa comprendió momentos de reflexión y pensamientos más profundos para definir el rumbo de nuestra investigación y lograr formular el Objetivo general, el planteamiento del problema, plantear preguntas de investigación, definición del objeto de estudio, determinación de objetivos general y específicos, formulación de hipótesis y la elaboración de la justificación, conforme a los lineamientos para la titulación en educación superior (Universidad de Colima, 2007). En la tercera etapa se define el diseño y planteamiento de las preguntas que debe tener el instrumento para la recopilación de datos (Cuestionario y encuesta), determinación del tamaño de la muestra para la aplicación del mismo, además de la realización del análisis estadístico de la información recolectada. La cuarta etapa y final, consiste en la interpretación de los resultados, realización de las conclusiones obtenidas para completar el documento final.

### Determinación De La Muestra

Por las características del estudio, se determino que para la selección de la muestra fuera de tipo no probabilístico, denominada también muestra dirigida. Su utilidad permitió que el estudio tuviera una cuidadosa y controlada elección de casos con ciertas características específicas para formar parte de la unidad de análisis.

## **RESULTADOS**

Podemos observar que las organizaciones públicas y privadas si tienen presente la posibilidad de perder información, el 100 por ciento respondieron que si están conscientes que la información se puede dañar o borrar (Ver Figura 1).

Para conocer que tan dedicados están en la protección de la información, mostramos los resultados obtenidos, tras las preguntas sobre seguridad básica. Tomando como seguridad básica el uso de antivirus, la periodicidad con la que son actualizados y el uso de no-break.

Conforme a los resultados obtenidos el 80% de las organizaciones públicas cuentan con un antivirus corporativo en cambio el 20% aun no cuentan con antivirus corporativo. Y en las organizaciones privadas el 100% cuentan con antivirus. Sin embargo no pagaron licencias para obtenerlos.

Figura 1. Porcentaje de posibilidad de pérdida de información

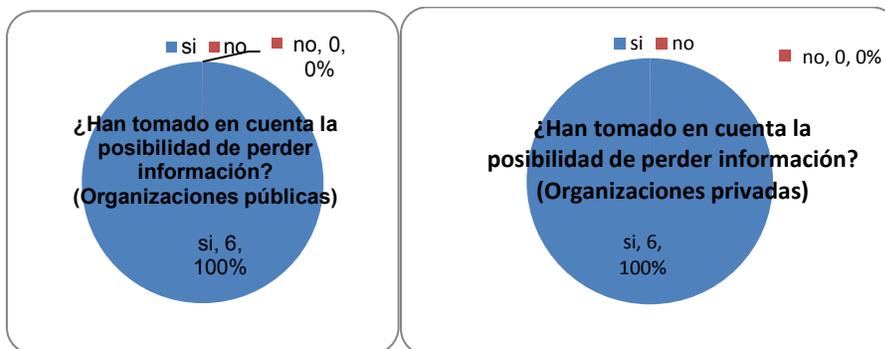

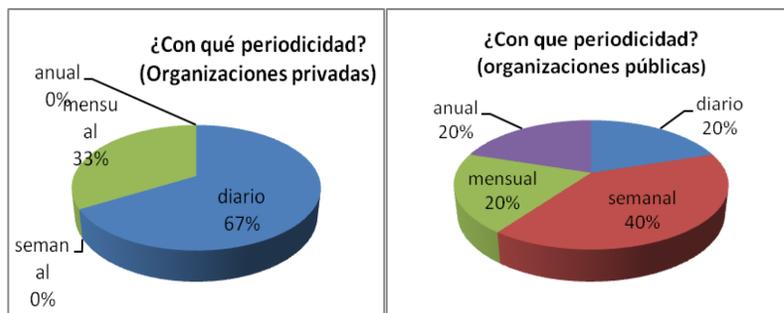

Figura 2. Porcentaje de actualización de antivirus.

En lo que respecta a la actualización de sus antivirus en las organizaciones públicas lo realizan 20% de forma diaria, 40% semanalmente, 20% mensual y 20% anual. Y por parte de las organizaciones privadas lo actualizan un 67% diario y un 33% mensual.

De acuerdo a las encuestas el 20% de las organizaciones no tienen instaladas fuentes de alimentación redundantes en sus servidores con dichas fuentes se evitarían las posibles afectaciones en los equipos de cómputo. Y el 80% de organizaciones públicas tienen instalados fuentes de alimentación redundantes. Mientras que en las organizaciones privadas son 50% las que si tienen y el otro 50% no tiene. El 80% de las organizaciones públicas Tienen instalados Sistemas de Alimentación Ininterrumpida mientras que el 20% no tienen instalados dichos sistemas. Por parte de las organizaciones privadas se encuentran sin ningún tipo de sistema que les permita seguir su funcionamiento a pesar de la falta de energía eléctrica.

En la parte de seguridad media de la empresa, se cuestionó si en la organización contaban con restricciones, para acceso a los recursos, contraseña en el servidor y contraseña en cada equipo de la empresa.

En el 80% de las organizaciones el acceso a los recursos está limitado por usuario mientras que en el 20% de las empresas no cuentan con dichas restricciones lo cual vuelve vulnerable sus sistemas. En las organizaciones privadas el 67% si tiene restricciones por usuario, el resto el 33% no tiene limitación alguna con sus empleados.

Figura 3. Porcentaje de sistemas de alimentación redundante

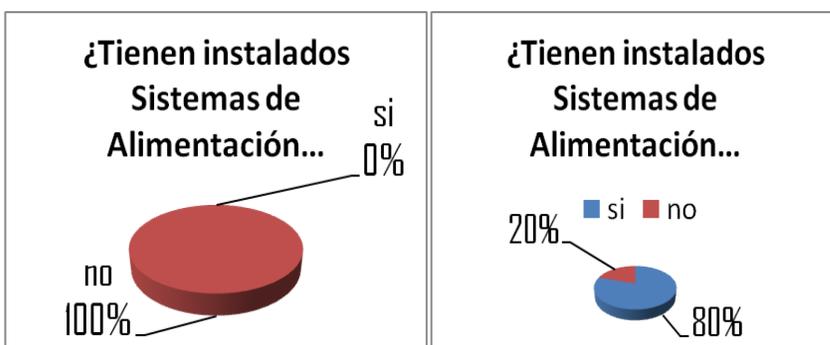

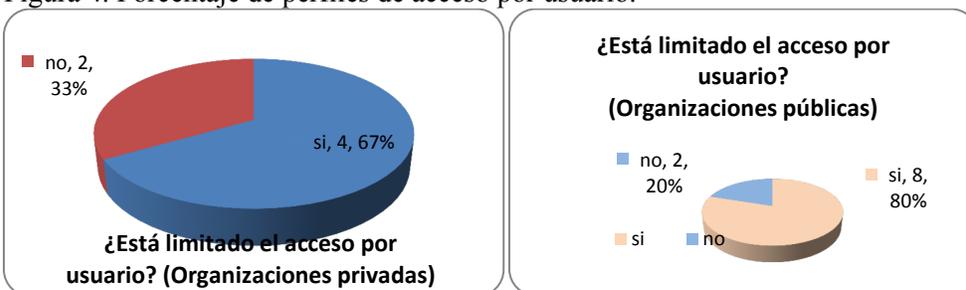

Figura 4. Porcentaje de perfiles de acceso por usuario.

El 80% de las organizaciones públicas de Tecomán utilizan controles para el acceso a sus recursos, mientras que en el otro 20% de las organizaciones no tiene contemplado dichos controles. Nuevamente los números son muy similares en las dos instancias pues el 83% si tiene accesos por contraseñas, mientras que el 17% no tiene, esta medida de seguridad.

Figura 5. Porcentaje de controles de acceso a los recursos.

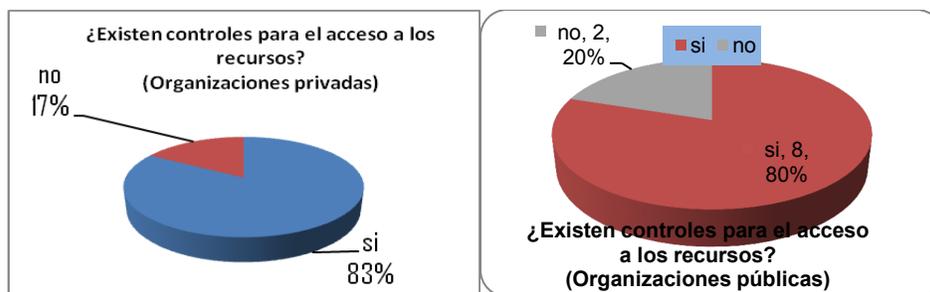

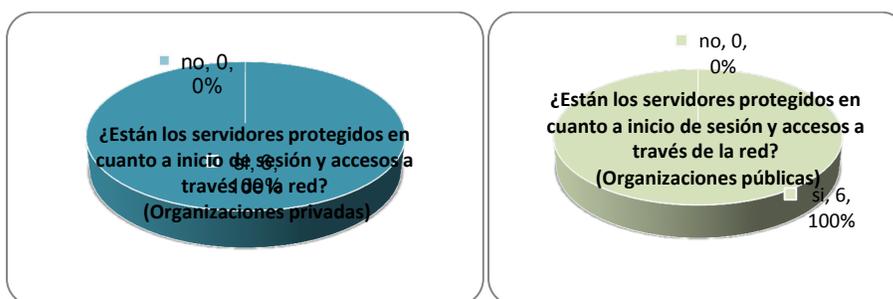

Figura 6. Porcentaje de políticas de seguridad en los servidores

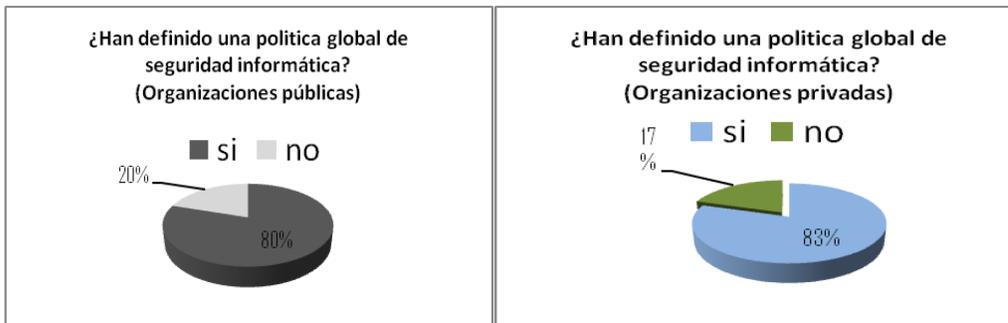

En el 100% de las organizaciones públicas y privadas de Tecomán han tomado en cuenta el proteger los servidores en cuanto a inicio de sesión y acceso a través de la red. Teniendo así al menos una relativa seguridad para la integridad de la información que los servidores contienen.

Como medidas de seguridad altas, se tomaron en cuenta si contaban con un trabajador dedicado al área informática, las políticas de seguridad, plan de seguridad, personal dedicado al área de seguridad informática.

Como se puede apreciar en la grafica un 80% de las organizaciones encuestadas si tienen bien definida una política de seguridad en la empresa, mientras que el otro 20% de las organizaciones no han definido una política global de seguridad. Mientras que en las organizaciones privadas el 83% si tiene definida una política y el 17% no, es decir en ambas organizaciones en su mayoría ya tienen estructurada una política, donde hace restricciones y recomendaciones sobre el uso de los recursos en las organizaciones.

Figura 7. Porcentaje de políticas de seguridad globales.

Los resultados obtenidos en las encuestas nos señalan que el 80% de las instituciones tienen almacenada alguna copia de sus datos fuera de los locales de trabajo, mientras que el otro 20% no almacenan una copia fuera del lugar del trabajo. Así como las organizaciones privadas el 17% no tiene información fuera de su lugar de trabajo, aunque el 83% que es la mayoría si tienen copias fuera de la organización.

Figura 8. Porcentaje de implementación de respaldos fuera de la empresa.

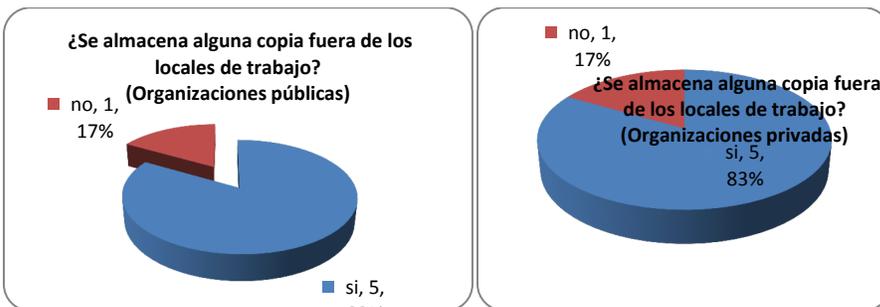

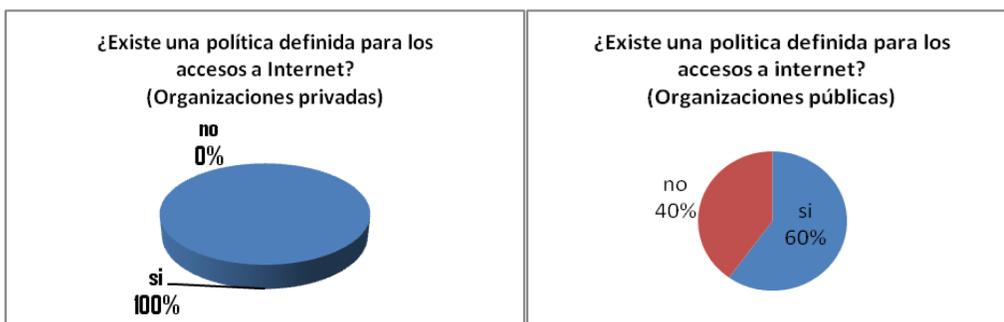

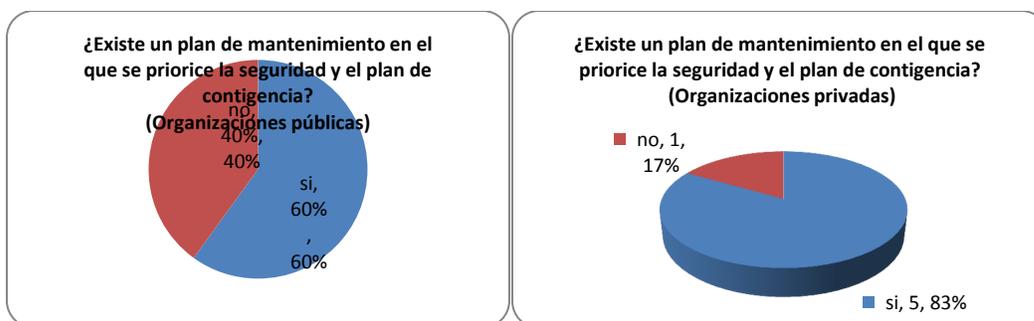

Figura 9. Porcentaje de implementación de políticas de acceso a Internet.

De acuerdo a la muestra el 60% de las instituciones tienen definida una política para los accesos a internet, mientras que el 40% de las instituciones públicas de Tecmán no tienen definidas estas políticas. En las organizaciones privadas en un 100% si tienen políticas de internet, es lo ideal.

De acuerdo a los resultados obtenidos el 40% de las organizaciones tienen un contrato de mantenimiento en el cual se priorice la seguridad y el plan de contingencias mientras que el 60% no cuentan con tal contrato. A diferencia las organizaciones privadas cuentan un 83% con contratos de esta naturaleza. Se debe recordar que estos planes son solo utilizados en caso de que fallen las políticas y los sistemas de seguridad implementados en las organizaciones. No por eso pierden importancia, sino todo lo contrario, son los encargados de proporcionarnos la última seguridad.

Figura 10. Porcentaje de implementación plan de mantenimiento y contingencia

## CONCLUSIONES

El presente trabajo de investigación se realizó con el objetivo de conocer la situación actual de la seguridad informática en las instituciones públicas y privadas del municipio de Tecmán, investigando la importancia que tenía para la institución o dependencia la información, además de las herramientas, medidas y personal especializado en este rubro. Pues a medida que sigue pasando el tiempo la necesidad de tener todo digitalizado se va obligando a actualizar las medidas de crear, organizar, almacenar y trasladar la información. Es por ello que tomó relevancia un estudio de esta índole en la región, para despertar interés en los empresarios, así como en las dependencias públicas y privadas.

Como hipótesis se consideró que más del 80% de los encuestados, si creían en la importancia de la seguridad de la información, no obstante menos del 60% tienen políticas de seguridad bien definidas o planes de contingencia. No cuentan en su mayoría con personal dedicado a la seguridad informática.

La hipótesis planteada, fue positiva pues el 100% de los encuestados cree, que la seguridad informática es importante, aunque mostraron ciertas deficiencias para tener una seguridad informática plena, el primer paso esta dado, pues la concientización de los involucrados en sus respectivas instituciones saben la relevancia que tiene el resguardo de la información. Más del 70% tiene herramientas básicas de seguridad como son el uso de contraseñas y antivirus en cada equipo de cómputo utilizado en sus redes locales. En las afirmaciones “más del 60% tiene respaldo de su información fuera de su lugar de trabajo” y “más del 40% tiene personal con conocimientos básicos de seguridad o contrato dedicado”, también resultó verdadera. Como la hipótesis que menos del 60% de los encuestados tiene política de seguridad bien definida, era esperado el resultado.

Se podría decir que la seguridad, no es una preocupación nueva y menos cuando se trata de información importante dentro de una institución, por eso no fue sorprendente el tener como resultado la unanimidad de los encuestados concordando con que es un tema demasiado relevante, con esta simple respuesta uno se puede aventurar a creer que estarían dispuestos invertir tiempo y dinero para conseguir una red totalmente segura.

# MÉXICO: POLÍTICA FISCAL Y SISTEMAS TRIBUTARIOS QUE GARANTICEN LA PROGRESIVIDAD FISCAL

Patricia Carmina Inzunza Mejía, Universidad Autónoma de Sinaloa

## RESUMEN

*Esta investigación se deriva de una serie de planteamientos que sugieren conocer la estructura del sistema tributario en México; así como la incidencia de la política fiscal en el crecimiento. La principal motivación de emprender esta investigación sobre política fiscal y sistemas tributarios, radica en lo interesante que resulta alentar y proponer el debate político-académico, con pensamientos y propuestas, en torno a temas de una agenda de políticas públicas basadas en aspectos fiscales y hacendarios para el desarrollo económico del país. El objetivo es incitar la discusión de los temas de política fiscal, que se orientan tanto al fortalecimiento de las finanzas públicas y a la sustentabilidad del desarrollo económico y social. En esta propuesta se plantea exponer las discusiones teóricas sobre política fiscal y sistemas tributarios, poniendo énfasis en la disciplina fiscal como esquema de tributación especial.*

**PALABRAS CLAVE:** Política Fiscal, Sistemas Tributarios, Progresividad Fiscal, Disciplina Fiscal

## MEXICO FISCAL SYSTEM

### ABSTRACT

This research stems from a number of approaches that suggest about the structure of the tax system in Mexico, and the impact of fiscal policy on growth. The main motivation to undertake this research on fiscal policy and tax systems lies in how interesting it is to propose and encourage the political and academic debate, with thoughts and proposals on issues of public policy agenda based on fiscal issues and tax for economic development. The aim is to encourage discussion of the issues of fiscal policy, which is aimed at strengthening public finances and sustainability of economic and social development of both. This proposal raises expose theoretical discussions about tax policy and tax systems, with emphasis on fiscal discipline as special taxation scheme.

**KEYWORDS :** Fiscal Policy, Tax Systems , Tax Progressivity , Fiscal Discipline

### INTRODUCCIÓN

Si bien, resulta fácil observar el aumento de personas sin empleo y el escaso crecimiento de México, basta con recorrer las calles de la ciudad y analizar las estadísticas de finanzas públicas, de pobreza y de ingreso-gasto de los hogares mexicanos. Hoy sabemos que han sido los principales costos del capitalismo que floreció en estos magros y adversos resultados. Lo complicado es evidenciar las causas entre la política fiscal y el crecimiento económico, debido a la diversidad de eventos que los interrelacionan; sin embargo, en este trabajo referimos los primeros acercamientos entorno al tema. Es seductor encontrar respuestas que mitiguen la

pobreza, aceleren la economía para propiciar condiciones de empleo. De ahí que resulta interesante destacar la literatura reciente que enfatiza en políticas complementarias contra la crisis, la pobreza, el desempleo y la insolvencia financiera.

Reconocemos las causas del actual escenario económico y financiero mexicano, y se han observado los efectos adversos que han generado esas causas. Ahora la tarea es analizar los efectos adicionales de la política fiscal para lograr el crecimiento de México, y orientar la economía hacia el desarrollo y hacia un mundo justo y pacífico.

Parece haber un consenso creciente de que es posible potencializar el crecimiento de las economías en desarrollo y aumentar las ganancias de productividad mediante el mejor aprovisionamiento de bienes públicos, permitiendo disminuir la pobreza, aumentar el empleo, elevar el crecimiento económico y solventar las finanzas públicas. A su vez, con base a los reportes que en el año 2013 ofrece la CEPAL, en América Latina la evolución de las finanzas públicas abren oportunidades inéditas para la construcción de una arquitectura fiscal contracíclica, que permita suavizar la excesiva volatilidad macroeconómica.

Lo que estimuló los primeros acercamientos sobre política fiscal y sistemas tributarios, radica en lo atractivo que es propiciar el debate político-académico constructivo, que va más allá de la confrontación de la “realidad oficial”. De ahí, la mitigación por estudiar con pensamientos y propuestas, en torno a temas de una agenda de políticas públicas basadas en aspectos fiscales y hacendarios para el desarrollo económico del país.

Es menester finalmente enfatizar la relevancia del nivel y la composición de gastos e ingresos públicos en los objetivos de crecimiento económico, equidad distributiva, e inclusión social. La política fiscal aplicada hasta ahora en México, ha propiciado una caída en la capacidad recaudatoria del Estado (obtención de ingresos), pasando de la petro-dependencia fiscal a la dependencia de los impuestos al consumo, de la disminución de las barreras arancelarias a los grandes volúmenes en los productos importados que representan una fuerte competencia para las empresas mexicanas que producen para el mercado interno, impidiéndoles ser motores de desarrollo. Además, de procurar que de las derivaciones y conclusiones a las que se lleguen sean de utilidad para quienes dirigen el rumbo de la política económica del país, pese a que sus decisiones suelen estar sesgadas por los compromisos partidistas e interés personales, esperamos que los resultados sean bases que orienten mejor su quehacer legislativo.

### El Contexto De La Economía Del Sector Público De México

En las últimas tres décadas, la economía del sector público, amplió su espectro debido a las nuevas actividades que el Estado desarrolla. Este conjunto de actividades son reconocidas por diversos autores como Finanzas Públicas, de ahí que también se utilicen términos como Política Fiscal o Economía del Sector Público, términos que se caracterizan de acuerdo al modelo económico que se esté aplicando en el país, como estrategia de crecimiento y desarrollo económico. Son la economía del sector público y las finanzas públicas, las encargadas de estudiar los efectos derivados de las políticas del Estado como consecuencia del gasto que realiza y de los tributos que establece o en su caso de los recursos que obtiene para financiarlo.

El grado y nivel de intervención del Estado en la Economía es un tema polémico. En términos generales podemos descifrar que aquellos que tiene una actitud más próxima a las ideas socialistas defienden que el Estado intervenga regulando los mercados, disminuyendo las diferencias en la renta, asistiendo a los más necesitados y en su defecto, pugnan por que se tomen

medidas para mitigar los fallos del mercado. En cambio, los que tienen una inclinación ideológica más cercana al liberalismo, defienden que el Estado intervenga lo menos posible y que se deje a los mercados actuar libremente.

No obstante, no podemos quedarnos con una idea general entre una ideología y otra, ya que en el último siglo se observa por un lado que los mercados, aunque se reconocen sus fallos, también se reconoce que han sido más que un instrumento económico, un medio para hacer que la economías desarrolladas funcionen; pero también el Estado ha ampliado sus funciones y ha dejado de ser solo el guardián de la seguridad nacional. Actualmente nos encontramos que la realidad económica demanda y exige un sector público que potencie y resguarde el buen desarrollo de la actividad económica, de tal suerte que se convierta en un agente económico que corrija las fallas del mercado. De ahí que el análisis de la intervención del Estado en la economía nos refiere que no hay una conducta lineal; sino más bien, que se ha dependido tanto de los ciclos económicos, como de los ciclos políticos. Con ello se busca la progresividad tanto del gasto como del ingreso público.

Es común que en épocas de crisis que viven los países subdesarrollados como México, la intervención del Estado se tiende a acentuar. Bajo cualquier caso, sea económico o político, la orientación debe ser en beneficio de la sociedad; donde el debate se orienta a una mayor intervención del Estado, con una mayor acentuación de los gastos de carácter social (por ejemplo, salud, educación, pensiones, vivienda, rescates bancarios, entre otros), y de los gastos productivos (inversión física, proyectos productivos); o en contraparte, suele suceder que en países desarrollados el debate se vuelva a una mayor dosis de liberalismo económico, con menos regulación, mas apertura comercial y financiera, más impuestos al consumo, mayor contención del gasto entre otros; esta situación es algo que permanece abierto y en constante debate, dejando de lado la búsqueda de la progresividad y los beneficios de la política fiscal, y con ello de los sistemas tributarios que robustecen de regímenes fiscales que obligan a personas físicas y sociedades a tributar en diversos esquemas. Ante este general escenario y la diversidad de regímenes especiales fiscales, que vienen a beneficiar a las grandes empresas trasnacionales, iniciamos el análisis de la discusión partiendo de los planteamientos históricos de la economía del sector público, así como la derivación de las finanzas públicas que se tienen en México.

## REVISION LITERARIA

Como antes lo hemos expresado, los acontecimientos ocurridos en 1929 que ocasionaron “La Gran Depresión”, fueron hechos que determinaron el papel del Estado en la Economía. Con razones contundentes se demostró que los mercados estaban fallando, lo que obligó al Estado a hacer algo. Jhon Maynard Keynes (1945), creía que el Estado debía y podía intervenir para hacer frente a las depresiones económicas, en la idea de que únicamente el Estado a través de su actividad económica podría estabilizar la economía del sector público.

En este sentido, la economía del sector público comprende una parte relevante de los recursos económicos de una sociedad, factores productivos y de la producción que son de apropiación pública, incluye todos los departamentos y empresas públicas. Consideramos que la importancia del sector público radica precisamente en el gasto y el ingreso público, pero antes de abordar a profundidad esta temática, se abordan otras perspectivas para puntualizar entre otras cosas, la concepción de la economía del sector público, así como las actividades y funciones del Estado.

De acuerdo con Stiglitz (2000: 24-25), “la economía del sector público en esencia tiene su papel central en el bienestar de los ciudadanos, y estudia cuestiones económicas fundamentales tales como el describir las actividades que realiza el Estado”, así como analizar sus consecuencias,

evaluar las distintas medidas posibles e interpretar las fuerzas políticas que condicionan a las decisiones que toman los Gobiernos.

Desde la opinión de Martínez Álvarez (2000:44), “la economía del sector público no puede separarse del mercado, dado que a través de la acción colectiva, se generan coaliciones de distribución, presionando con legislaciones, la percepción de los ingresos que serán distribuidos a través del gasto”. Sin embargo, desde la perspectiva de Albi et al (2001:7), “la teoría y la práctica de la economía del sector público forman parte del tronco común de la economía como ciencia social, por lo que define a la economía del sector público como un área de la economía que se centra en la adopción de decisiones colectivas sin la ayuda del mercado”, en la actividad de la administración pública y en su financiarización. Desde otra perspectiva y siguiendo a Ayala Espino (2005:25-29), “el sector público es la autoridad formal para tomar decisiones que trascienden a los grupos privados y al mercado, lo cual le da un importante poder e influencia sobre la economía”; y comprende una parte relevante de los recursos económicos de una sociedad, los factores productivos y de la producción que son de apropiación pública.

El surgimiento de la actuación del Estado, mostró que el desarrollo económico no sólo depende de las transacciones económicas en el mercado y el comportamiento del sector privado de la economía, sino también de los bienes y servicios, de las leyes y normas, del bienestar social y de la infraestructura y demás servicios que el Estado brinda a la sociedad...Fuera de cualquier consideración política e ideológica, se ha reconocido que el sector público ha realizado invariablemente un conjunto de funciones, cuya importancia sólo cambia de acuerdo a la orientación de la política económica, pero lo que sí es concurrente, es el destacado papel del Estado en el desarrollo económico...(Ayala Espino, 2005).

Mientras que para Fenochietto (2006:1-2), “la economía del sector público, comprende el estudio de la elección de cuales actividades y de qué manera deberían ser desarrolladas por el Estado y cuales por el sector público”, para después avanzar al estudio de forma en que la acción del Estado afecta la asignación y la distribución del ingreso, analizando para ello, las necesidades del gasto público de un país, de acuerdo a su naturaleza política, economía y social, además de determinar qué recursos son más idóneos para financiar los déficit. Como podemos ver, el papel del Estado en la economía es un tema de amplia discusión, dado que conlleva implicaciones económicas, políticas e ideológicas; sin embargo, bajo estas perspectivas teóricas, se observa que el eje central de la economía del sector público es el bienestar de la sociedad, a través de la captación y distribución de la renta, en el que deben complementarse tanto el sector privado como el público; dando, desde mi opinión, un papel central al Estado en lo referido al ingreso-gasto del gobierno. Consideramos que para explicar los fenómenos económicos que inciden negativamente en el estado de bienestar, es fundamental entender el papel del Estado en la economía como un ente inversionista, y más aún, si hablamos de una economía mixta como la mexicana, es necesario priorizar la actuación del Estado para encontrar respuestas a la desaceleración de crecimiento económico, las elevadas tasas de desempleo y los constantes déficits comerciales y financieros en los que ha incurrido México las últimas tres décadas.

### Actividades Económicas del Estado

Dentro de las actividades que el Estado realiza en la economía se encuentra la asignación de recursos en aquellas áreas cuya producción y provisión de bienes y servicios, el mercado no provee a ningún precio, como son la seguridad pública, infraestructura física e hidráulica, educación, salud etc., ante lo cual, una de sus principales funciones es establecer el marco jurídico bajo el cual se realizan todas las transacciones y actividades económicas. De acuerdo a

Stiglitz (2000:36), “las actividades del Estado se dividen en cuatro clases: a) la producción de bienes y servicios; b) la regulación y la concesión de subvenciones a la producción privada; c) la compra de bienes y servicios, desde misiles hasta la recolección de basura; y d) la redistribución de la renta, es decir, la realización de transferencias como las prestaciones por desempleo”. Dado que la influencia del Estado en la economía depende de las actividades que desarrolla, es importante señalar que, para que influya en la economía, es imprescindible que diseñe una política fiscal y un marco jurídico regulatorio de esas actividades, ya que una sola cifra no puede indicar con exactitud su influencia en la economía. Por su parte Richard y Peggy Musgrave (1992), señala que en la economía del sector público son tres las funciones que el Estado debe desarrollar:

- a) La recaudación de impuestos para poder cumplir con sus objetivos.
- b) La asignación de bienes y servicios a través de la política presupuestaria.
- c) La distribución, generada a partir del cobro de los impuestos en los sectores con mayor capacidad para

contribuir y la ejecución del gasto, dirigido a quienes no tienen capacidad económica para adquirir determinados bienes y servicios.

No se trata de tres funciones independientes la una de la otra, sino entrelazadas o relacionadas entre sí, de forma tal que, un determinado gasto o un impuesto es probable que en los hechos pueda efectuar a más de una de ellas. A continuación se desarrolla con más detalle estas tres funciones:

- a) Función de Recaudación.
- b) Función de Asignación: Esta función implica la provisión de bienes públicos mediante la ejecución del presupuesto del Estado, proceso diferenciado y alejado de los mecanismos del mercado.
- c) Función de Distribución: Toda política de distribución realizada por el Estado genera pérdida de eficiencia, lo cual debe considerarse con carácter previo a su ejecución.

Las políticas distributivas, tanto impositivas como de gasto, generan un costo de eficiencia ya que desalientan la producción y el trabajo. Pese a esto, existe cierto consenso en cuanto a que el Estado debe ejercer esta función de distribución a través tanto del gasto como de los impuestos, al menos con el fin de atenuar los niveles de pobreza, garantizando la igualdad de oportunidades.

Dentro de las distintas áreas de la economía del sector público, “encontramos las actividades exclusivas, mismas que comprenden la prestación de servicios que solo el gobierno puede realizar como el cobro de impuestos, la seguridad pública, la regulación y la educación pública” (Ayala Espino; 2005:36). Como podemos observar desde estas bases teóricas, el sector público, se desarrolló significativamente a lo largo del siglo XX, su papel trascendió a la administración de las finanzas públicas.

De los planteamientos vertidos por los investigadores Irma Manrique (2006), Arturo Huerta (2009 y 2009b), Eugenia Correa (2009 y 2010), Alicia Girón (2010), y otros; se hace eco y se coincide en comprender que: Con la elevada liberalización y desregulación se afectan la soberanía nacional, lo que significa una reducción sustancial de la soberanía financiera y fiscal. Transfiriendo parte de ésta a los mercados financieros mundiales donde domina el conglomerado financiero, con este alto mando de autoridades y organismos financieros (Correa, 2009:29). Ante esto, discernimos en que se requiere una recaudación que permita elevar ingresos públicos

tendientes a atender la insuficiencia en el gasto social y el desarrollo de sectores como el agropecuario, educativo y de salud; pero no mediante el incremento de impuestos y el fomento de la tributación al consumo, sino mediante otras áreas de oportunidad que ofrece precisamente el sector extranjero, como por ejemplo el gravar el flujo de capital extranjero, eliminar los regímenes especiales de tributación, bajo los cuales se otorgan beneficios fiscales a los inversionistas extranjeros y desde luego gravar a los grandes capitales. Por ende, de las diez orientaciones económicas del “Consenso de Washington”, para efectos de esta investigación se estudian seis de ellas; de las cuales, 3 orientaciones se considera que incidieron de manera adversa en las otras 3; es decir, el estudios de: 1) la liberalización del Comercio, 2) la liberalización de los flujos de inversión extranjera (liberalización financiera) y 3) la privatización de las empresas públicas, incidieron de manera antagónica en 4) la obtención del ingreso público, 5) la disposición del gasto y 6) el resultado presupuestario. Las primeras tres variables nos ayudarán entender sus efectos y transformaciones en las finanzas públicas de la economía mexicana a raíz del modelo liberalizador.

### La Economía y Las Finanzas Públicas

En la economía, las finanzas públicas son una parte fundamental de la actividad económica del sector público, dada su peculiar estructura que se vincula con la economía del mercado. En opinión de Dino Jarach (2003:41-43), “es posible generar una teoría general de las finanzas públicas, partiendo de la única premisa de la existencia de una organización humana llamada Estado, con funciones distintas, según sus condiciones y fines, de acuerdo con las fuerzas políticas que predominan en cada país”. Aun y cuando el papel del Estado es motivo de diversos debates, su importancia cobra fuerza en la actualidad, debido a que es considerado el sujeto activo de la actividad financiera.

De ahí, que la evidencia doctrinal que reconoce a las finanzas públicas como una actividad económica del Estado, da origen a la teoría de las finanzas públicas, partiendo de las premisas marginalistas, como: Sax, Pantaleoni, De Viti de Marco, Mazzola, Wicksell y Lindahal. Por otra parte, las doctrinas que también consideran al Estado como un sujeto de las finanzas públicas son la doctrina Keynesiana, la de Hansen y la de Lerner, no obstante, dan mayor peso al papel regulador de la actividad financiera del Estado que a la función de producir servicios públicos (Flores Zavala, 2001).

Es común que en las doctrinas económicas de las finanzas públicas, se conciba al Estado como un instrumento destinado a satisfacer ciertas necesidades de carácter público o social, pero debe ser claro que no son las necesidades públicas los que determinan sus cometidos; es decir, el concepto de necesidad pública no preexiste a la existencia del Estado. En sí, existe una simbiosis entre las necesidades públicas y su existencia. Como podemos apreciar, la relación entre las finanzas públicas y la economía, comprende aspectos de la actividad financiera del Estado; por un lado, la producción de bienes y servicios, y por otro, la política económica, con la finalidad de la redistribución del ingreso, la estabilización y el desarrollo económico, de ahí que, la estructura de las finanzas públicas es concebida como el sistema económico del sector público, formado por la concepción de un Estado protagonista de las finanzas públicas; es decir, bajo la perspectiva de la influencia que el Estado tiene en la sociedad al desarrollar sus funciones económicas, políticas y sociales.

Bajo los planteamientos de Dino Jarach (2003: 55), “el gasto público consiste en la erogación que el Estado realiza para adquirir bienes intermedios y factores de producción, a fin de combinarlos adecuadamente para la producción de bienes y servicios públicos o en su caso para adquirir

directamente bienes en el mercado destinados a asumir la función de bienes públicos”. Aunque el gasto público puede perseguir finalidades diferentes a la producción de bienes y servicios públicos, es importante destacar que estos, son parte fundamental del sistema económico del sector público y en la estructura de las finanzas públicas, es uno de los componentes del proceso recursos-gastos que caracterizan la actividad financiera del Estado.

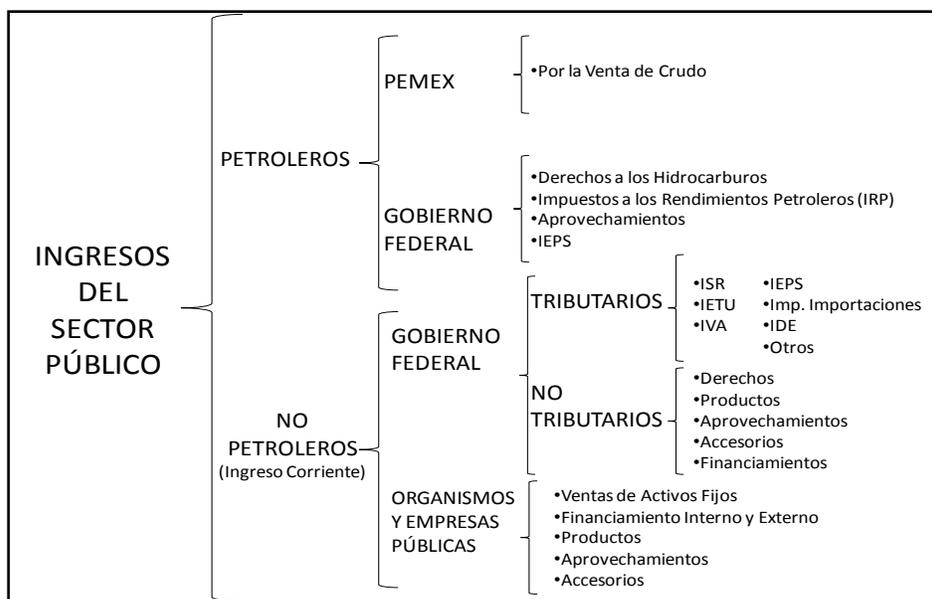

### El Sistema Económico De Las Finanzas Públicas En La Economía De Mercado

El sistema económico del sector público interfiere con el sistema de la economía de mercado, y es precisamente el gasto el que directamente penetra este, ya que los bienes intermedios y los factores de la producción que el Estado transforma en bienes y servicios públicos, constituyen una parte de la demanda global de bienes y servicios en el mercado.

En contraparte, los ingresos actúan alterando desde afuera la demanda o la oferta de bienes y servicios en el mercado, mediante su acción sobre las cantidades ofrecidas o demandadas. Dentro de los ingresos del sector público presupuestario, los conceptos incluidos en el Artículo 1 de la Ley de Ingresos de la Federación puede clasificarse en dos grande categorías: los ingresos petroleros y los ingresos no petroleros, cada categoría se compone de otros conceptos.

La configuración del ingreso del sector público la podemos apreciar en el siguiente esquema (figura no. 8), que muestran cada uno de los componentes del ingreso del sector público.

Figura No. 1: Esquema Del Ingreso Del Sector Público Mexicano

Fuente: Elaboración propia, con datos de la Dirección General de Planeación Hacendaria

y el Banco de México

La Ley de Ingresos, explicita los ingresos que se clasifican por tipo de contribución y sus accesorios de acuerdo con lo establecido en el Código Fiscal de la Federación (CFF), incluye además, los ingresos provenientes de la contraprestación por los servicios que presta el Estado en sus funciones de derecho privado, así como por el uso, aprovechamiento o enajenación de bienes del dominio privado; los ingresos derivados de financiamientos.

Los ingresos del sector público están compuestos por los ingresos petroleros y los ingresos no petroleros dentro de los que se encuentran los impuestos, derechos, productos, aprovechamientos, ingresos derivados de la venta de bienes y servicios del Sector Paraestatal; e ingresos por financiamiento interno y externo. El efecto de los ingresos en la economía no son fácil de discernir, pero su conocimiento es de fundamental importancia, porque actúan sobre las finanzas públicas, lo mismo que el gasto público, así como sobre la economía de mercado.

El gasto público tiene, finalmente, efectos redistributivos que son buscados por el Estado de diversas formas (una de estas formas es a través de la recaudación de impuestos), incidiendo en la composición del ingreso nacional y el bienestar social. Sin embargo, en este rol el Estado asume los efectos del gasto, lo que significa que no pueden aislarse de los efectos de los ingresos, que son el elemento fundamental con los que se financia la actividad económica del sector público.

### LA POLÍTICA FISCAL DE CONTENCIÓN DEL GASTO Y DISCIPLINA FISCAL

A partir de la década de los setentas, se imprimió un hito en el comportamiento de las finanzas públicas, evidente por los constantes desequilibrios registrados en 15% del PIB. Ante esto, se impuso de manifiesto la necesidad de instrumentar un proceso de ajuste macroeconómico que permitiera como objetivo fundamental sanear las finanzas públicas, sometiéndolas a la dura disciplina fiscal como eje principal de ahorro y crecimiento económico.

Los actuales gobiernos de México, siguen pensando que es necesario continuar con la estrategia de “disciplina fiscal” para lograr el equilibrio macroeconómico, e incluso han llegado a proponer como objetivo de corto plazo alcanzar superávit en las cuentas fiscales. Mucho se ha argumentado, que con las finanzas públicas “sanas”, se garantizaría el crecimiento, o en su caso se detendría el estancamiento; sin embargo, los resultados obtenidos durante estos años de neoliberalismo, en términos de crecimiento económico, dejan ver que las finanzas públicas han estado asfixiadas e imposibilitadas de ser bujías que detonen mayor inversión productiva, y por tanto, mayor crecimiento.

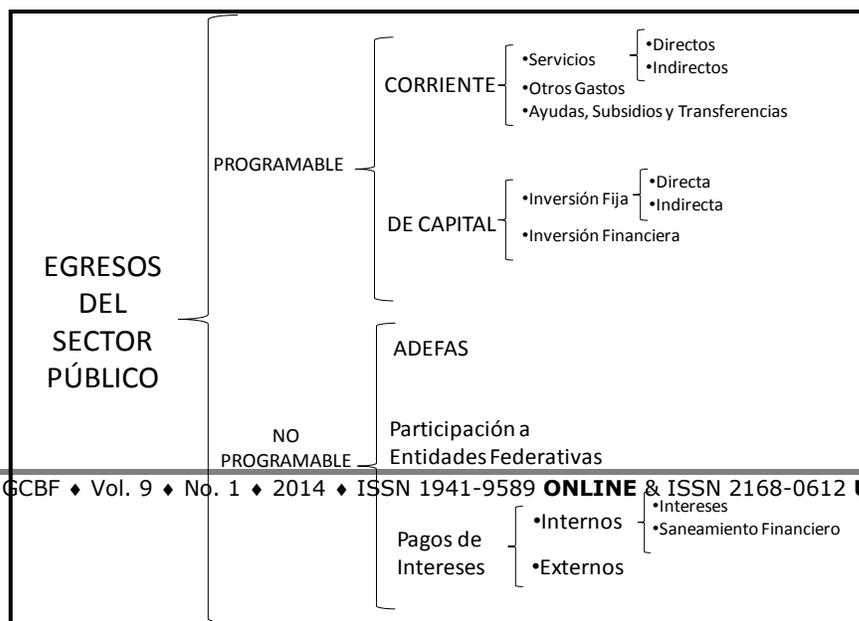

Figura 2: Esquema Del Gasto Del Sector Público Mexicano

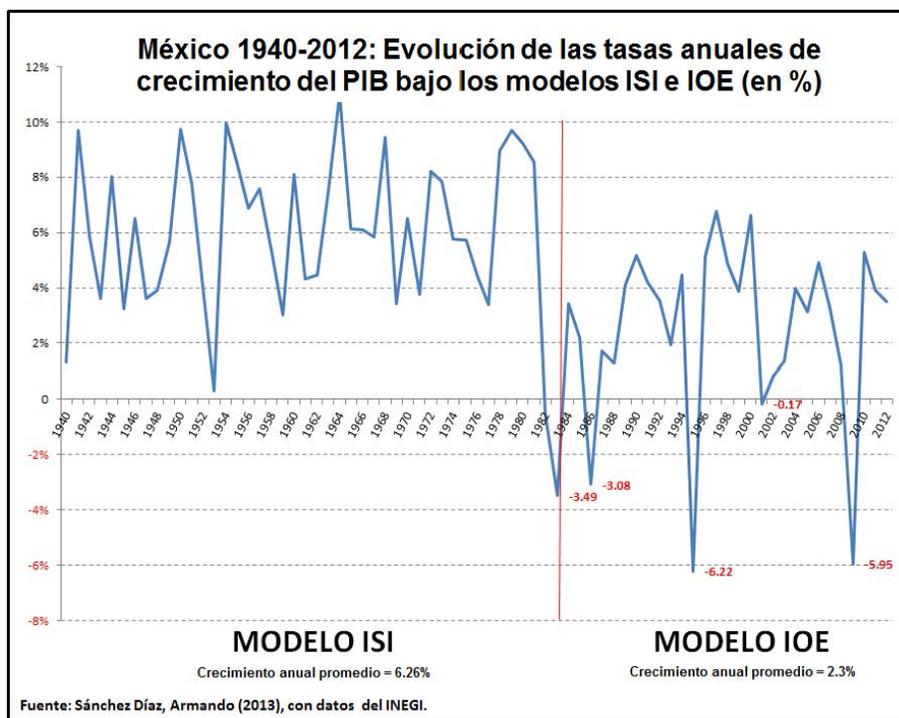

*Fuente: Elaboración propia, con datos de la Dirección General de Planeación Hacendaria*

En este sentido, después de tres décadas, la política fiscal se ha reorientado a la disciplina fiscal, lo que ha implicado que la prudente política fiscal aplicada en México ha permitido argumentar que el país tiene finanzas públicas “sanas” y una progresividad reflejada en una trayectoria sustentable en materia fiscal y la reducción de la vulnerabilidad externa de la económica, pero también esto ha permitido ver que se ha subestimado la aplicación de una política fiscal contracíclica, toda vez que en México, existen sobradas evidencias de retraso económico, desaceleración y estancamiento financiero.

En la gráfica no. 1 podemos observar que en los años de 1940 a 1982, se crecía a tasas promedio anual del 6.6%, en cambio con el actual modelo neoliberal se observa que después de los años de las crisis económicas, en México se tuvieron tasas negativas de crecimiento en 1983 se registra una tasa de -3.49%, en 1987 se registra una tasa del -3.08, en 1995 se tuvo una tasa de -6.22, para el 2002 se registró una tasa del -0.17% y para el año del 2009 un -6.54%.

Podemos ver que en los años en que se aplicaba el modelo ISI, no se tenían tasa negativas, y con la aplicación del modelo IOE, la economía crece por debajo de su potencias, apenas llega al 1.95% de crecimiento promedio anual. Sin duda, estos resultados de bajo desempeño económico, son atribuidos a las políticas de apertura comercial que México ha adoptado desde el Consenso de Washington, en donde la desaceleración de la demanda agregada ha sido permanente, y la falta de inversión en el sector productivo ha sido una constante.

Figura 3: Mexico 1940-2012 Evolución de la Tazas Anuales de Crecimiento

Es evidente que el actual modelo económico impacta negativamente al crecimiento económico y al aumento del ingreso público, en tanto el gobierno mexicano opta por la vía más fácil de política fiscal: contención del gasto público a fin de mantener finanzas públicas sanas, tasas impositivas más altas al consumo, nuevos impuestos, regímenes especiales al capital financiero y desgravación de aranceles; se impide que el Estado disponga de recursos suficientes para invertir en infraestructura, educación y salud; y por consiguiente se clausura el desarrollo del país.

## CONCLUSIONES QUE DEMUESTRAN EL IMPACTO DE LA PROGRESIVIDAD FISCAL

La falta de liquidez en las finanzas públicas del país, obedece en gran medida a la endeble estructura fiscal que le impide gastar e invertir en las magnitudes que reclama la realidad económica, justificando con ello la necesidad de incrementar los ingresos tributarios de México y gravar principalmente al consumo, dado que los fines sociales y productivos reclaman y justifican una recaudación significativamente mayor, sin que el Gobierno Federal quiera apreciar y reconocer que a quienes más afectan este tipo de políticas económicas es a la mayoría de mexicanos.

Así bien; en materia de ingresos público, de acuerdo con lo señalado por Manrique (2005), cuando imperaba el modelo ISI, los ingresos tributarios en materia de comercio exterior, proveían al gobierno de un 30% del Producto Interno Bruto (PIB) en la década de 1960, y un 20% del PIB en la década de los setenta, sin embargo, como producto de la liberalización comercial, estos ingresos tributarios no representan ni la quinta parte del PIB.

En los datos que nos ofrece el Instituto Nacional de Estadística, Geografía e Informática, vemos que a inicio de los años 80s, la inflación paso del 30% al 63%, con una devaluación diaria sostenida que alcanzo el 581% en 1982; entre otros, estos fueron importantes indicios con los que

los gobernantes de México hicieron creer que el modelo ISI se había agotado, a fin de justificar el cambio de política económica.

En 1982, la economía de México se colapsó ante la evolución acelerada del déficit en cuenta corriente, la debilidad del mercado petrolero y la enorme deuda externa acumulada. La deuda externa ascendía a 80 millones de dólares, y representaba un determinante del déficit en cuenta corriente, dado que el pago de intereses era mayor que disponibilidad neta de recursos provenientes de la cuenta comercial. Con todo esto, México al ser un país eminentemente necesitado del financiamiento externo, no pudo quedarse al margen de continuar las medidas del “Consenso”, que prometían condiciones para un crecimiento sostenido, entonces adoptó una política fiscal austera en las finanzas públicas: contención del gasto público, restricción crediticia, ajuste del tipo de cambio, prioridad al pago de la deuda y control a las importaciones. Parte de los cambios de política económica de México, han tomado especial fuerza a partir de los procesos de ajuste y políticas de liberalización que surgieron del “Consenso de Washington”. Es bajo estos acuerdos que se concibieron y gestaron una serie de medidas de política económica para orientar a los gobiernos de países en desarrollo, a mitigar su déficit económico, en el momento de solicitar apoyo financiero a organismos internacionales. Claro fue que bajo la función de la valoración que estos organismos internacionales harían respecto a los avances económicos de países que solicitaría más financiamiento.

Con esta referencia contextual, se dio la renegociación de la deuda externa en la década de los 80's, lo que representó para México adoptar una serie de políticas macroeconómicas para lograr la estabilización económica y financiera. Entre estas políticas de desprotección del mercado interno, de desregulación del comercio y las operaciones financieras, y de desestatización al privatizar las empresas públicas, se destaca la nueva forma que debiese adoptar la política fiscal. Bajo el modelo neoliberal, la política fiscal se ha orientado con base a tres ejes fundamentales: 1) La disciplina fiscal, 2) Prioridades en el gasto público y 3) Las reformas fiscales y tributarias. En este apartado de los lineamientos del consenso de Washington, se argumentó que se requería mitigar el déficit fiscal mediante la modificación y recortes de los componentes del gasto público; esto garantizaría mantener las finanzas públicas del país sanas. El proceso de arranque de una política fiscal disciplinada, prometía un crecimiento en todos los sectores de la economía, lo que permitiría mejorar la distribución del ingreso y un mayor desarrollo económico y social del país. La realidad ha demostrado que las consecuencias derivadas de la aplicación de estas políticas, deja mucho que desear en América Latina y en especial en México, ya que han ocasionado un sentir generalizado de insatisfacción entre la población y los actores sociales.

En este sentido, de acuerdo con Pagaza (2008), entendemos que se ha acentuado la dependencia de las finanzas públicas respecto al ciclo económico, lo que genera inestabilidad en el gasto productivo y con ello vulnerabilidad en la política fiscal fortalecida por la caída de los ingresos públicos, el déficit y la deuda pública, situación que obliga a modificar el esquema de equilibrio fiscal. La disciplina fiscal en el México actual, tiene un sesgo depresivo y anti-acumulativo, que descansa en el aumento de impuestos al consumo y la reducción del gasto público. Al respecto, en cuanto a los efectos de la política fiscal sobre el crecimiento económico, Johansson et al. (2008) y Romero-Ávila y Strauch (2008) señalan que a partir de una muestra de países de la OECD y de la Unión Europea, que el mayor efecto distorsionante y regresivo de la política fiscal corresponde al impuesto de sociedades, seguido del impuesto a la renta personal mientras que los del consumo son los menos perjudiciales.

Por su parte Harju y Kosonen (2012) exponen que cuanto mayor es la progresividad de los impuestos mayor es su efecto negativo sobre el esfuerzo de los emprendedores y el crecimiento

económico. Así también, aunque pareciera absurdo, pero en el estudio realizado por Keane (2011), determina que los impuestos sobre las rentas del trabajo reducen la oferta de trabajo y también la inversión en capital humano. Conforme a este estudio, podemos que del análisis de la literatura disponible, Salinas y Delgado (2012) sistematizan los principales resultados y extraen las siguientes conclusiones para los estudios en países de la OCDE: 1) En general se observa un efecto negativo entre impuestos y crecimiento económico, 2) Además, la mayor parte de los estudios revisados concluyen una relación de signo negativo. Aunque el número de trabajos analizados es reducido, 4 de los 6 estudios sostienen esa conclusión, mientras que los dos restantes no llegan a un resultado estadísticamente significativo. Martner et al (2013), encuentra estudios que sostienen un consenso en las repercusiones del grado de progresividad del sistema tributario sobre el crecimiento económico y destaca que de los 6 trabajos en esta materia se coincide en una relación negativa, es decir, a mayor progresividad de los sistemas tributarios, menor crecimiento económico. También hay unanimidad en los estudios que analizan el impacto de un cambio en la estructura tributaria (o tax mix) consistente en el incremento del peso de la imposición indirecta (impuestos que gravan el consumo) en detrimento de la directa (impuestos sobre la renta de empresas e individuos). Los trabajos revisados prevén mejoras de crecimiento económico con este cambio.

Tabla 1: Literatura Empírica Sobre La Relación Entre Impuestos y Crecimiento Económico: Principales Resultados

<b>LITERATURA EMPIRICA SOBRE LA RELACION ENTRE IMPUESTOS Y CRECIMIENTO ECONOMICO: PRINCIPALES RESULTADOS</b>			
Número de estudios	Número y porcentaje de estudios que concluyen relación positiva	Número y porcentaje de estudios que concluyen relación negativa	Número y porcentaje de estudios que concluyen relación no significativa
Estudios sobre impuestos (21)	1 (4.8%)	13 (61.9%)	7 (33.3%)
Progresividad (6)	0 (0%)	6 (100%)	0 (0%)
Cambio de impuestos: impuestos indirectos en deterioro de directos (5)	5 (100%)	0(0%)	0 (0%)

Fuente: Salinas y Delgado (2012)

El efecto redistributivo de la acción fiscal directa depende del nivel, composición y grado de progresividad de cada componente de impuestos y transferencias. Estas tres dimensiones definen las características del país y su política fiscal (Joumard et al., 2012) Impuestos y transferencias directas tienen un impacto redistributivo significativo en los países de la OCDE; la desigualdad en el ingreso disponible después de impuestos y transferencias es 30% menor que la desigualdad antes de impuestos y transferencias. Medida por el índice de Gini, la reducción es de 15 puntos en promedio en la OCDE.

ii) Los países de la OCDE que tienen una distribución más desigual del “ingreso de mercado” (previo a impuestos y transferencias) tienden a redistribuir más. Los casos extremos son Italia, Inglaterra y Finlandia, cuyos coeficientes de Gini pasan de 0,55 a 0,35, de 0,50 a 0,32 y de 0,48 a 0,25, respectivamente. Un caso especial es Corea, que tiene un bajo coeficiente de Gini (0,34) previo a la acción fiscal, y de 0,31 luego de ella. Aunque este país carece de transferencias directas significativas a los hogares y tiene una presión fiscal reducida, la igualitaria distribución

primaria del ingreso puede asociarse al tremendo salto en educación de los últimos treinta años, pues más de un 65% de la generación de 25-34 años posee educación terciaria, en contraste con algo más de 10% de la generación de 55-64 años.

iii) En los países de la OCDE, las transferencias directas reducen más la dispersión del ingreso que los impuestos; tres cuartos de la reducción en la desigualdad entre el ingreso de mercado y el ingreso disponible pueden atribuirse a las transferencias, y el resto a los impuestos.

iv) Al tratarse esencialmente de pensiones en sistemas de reparto, en el promedio de países OCDE las transferencias reducen sobre todo la inequidad para los mayores de 65 años, pasando el coeficiente de Gini de 0,70 a 0,29 para este grupo etario. En cambio, para la población en edad de trabajar el coeficiente se reduce de 0,41 a 0,31. En países con sistemas públicos de pensiones maduros, los mayores de 65 años son pobres en términos de rentas de mercado y las pensiones públicas son su principal fuente de recursos. En cambio, en los países de América Latina y principalmente en México, la distribución del ingreso, es muy desigual antes de impuestos y transferencias directas, mejora sólo levemente por la acción fiscal directa. Lustig et al. (2013) localizan que la magnitud de la reducción de la desigualdad inducida por impuestos directos y transferencias en efectivo, es muy acotada en México (2% en promedio). El nivel de impuestos y su progresividad impacta también indirectamente sobre la distribución del ingreso. Por tanto, la capacidad del sistema tributario para corregir distribuciones desiguales dependerá del volumen recaudado y de la estructura de tasas según niveles de ingresos, pero también de la evasión del impuesto a la renta y del número de exenciones. A mediano plazo, el sistema tributario puede tener influencia sobre la oferta de trabajo (por ejemplo si existen muchas cargas asociadas al empleador), el esfuerzo individual y el tamaño de las familias, todos asuntos que inciden en la evolución del coeficiente de Gini.

En México, la evidencia empírica reciente revela que las políticas fiscales han afectado significativamente la distribución del ingreso, directamente por el gasto social y la progresividad tributaria, e indirectamente por la calidad de la educación y de las instituciones. Asimismo se subraya el papel primordial de los ingresos laborales en las mejoras recientes a través de la intervención del Estado.

Enrique Macías Calleros, Universidad de Colima  
Juan Alfredo Lino Gamiño, Universidad de Colima

## RESUMEN

*En este trabajo se analizan las técnicas de motivación como fuente de desarrollo y aumento de productividad de las empacadoras de limón de la ciudad de Tecomán, Colima, tomando las actitudes de los trabajadores y su respuesta al uso de incentivos motivantes adecuados a las necesidades de cada individuo. Para lograr lo anterior se utilizó el Método descriptivo, permitiendo realizar un análisis de los factores de motivación de los empleados en las empacadoras. Esta investigación fue satisfactoria ya que se detectaron las técnicas de motivación más utilizadas en las empacadoras y de igual forma las que dan los mejores resultados para alcanzar los objetivos planteados por la empresa.*

**PALABRAS CLAVE:** Técnicas de motivación, desarrollo, actitudes y productividad.

## ABSTRACT

*In this research work has as its main topic of attention to the analysis of motivational techniques as the main source of development and increased productivity of lemon packing Tecomán City, Colima. Subsequently analyze the attitudes taken by workers to be objective motivating the use of incentives tailored to the needs of each individual and how they influence positive or negative performance of workers. To achieve the above was used a method called "descriptive method", this allows us to perform an analysis of the motivating factors used in the packaging or in breach of those not using them, and deduce the reasons for the lack or achievement motivation in employees, and observe the positive or negative effects that these techniques in the employment and that they impact on the company.*

**KEYWORDS:** Motivational techniques, Attitudes, Development, Productivity.

## INTRODUCCIÓN

El desempeñar o realizar un trabajo de la manera correcta no solo comprende factores laborales, sino que también tiene una estrecha relación con aspectos económicos, sociales, legales y psicológicos. Herzberg (1968), en una de las investigaciones realizadas, sostiene que la motivación es un tema elusivo en virtud de las múltiples diferencias que existen entre las personas acerca del trabajo y del valor que a éste le asignan en sus vidas. En este sentido existirían dos tipos de individuos: Aquéllos que sólo buscan evitar el dolor y, primordialmente, satisfacer sus instintos básicos tales como: alimentación, abrigo y seguridad. Y los que piensan que el trabajo es la principal fuente a partir de la cual satisfacen sus necesidades de crecimiento

personal y de trascendencia en la vida. En esta investigación se llevo a cabo un análisis de los conceptos de la motivación y su influencia en el ambiente laboral dentro de la organización, en especial de las técnicas de motivación que se emplean en las empresas en la actualidad, si es que emplean algunas.

## REVISION LITERARIA

Se dice que los primeros intentos realizados con la finalidad de poder entender la motivación en el ser humano provienen del tiempo de los filósofos Griegos, estos se basaron en un concepto llamado hedonismo como la principal razón que da origen a un determinado comportamiento (Steers, Mowday y Shapiro, 2004, citado por Arrieta, 2008).

De acuerdo a estos estudios a mediados del siglo XX surgieron algunas teorías que estudiaban diferentes aspectos referentes a la motivación, con la aparición de estas teorías se comenzó a relacionar la motivación del empleado con su rendimiento en el ámbito laboral y su satisfacción personal. Estos estudios arrojaron como conclusiones que un trabajador motivado es más eficaz y responsable y además parte fundamental para el origen de un buen clima laboral. (Steers, Mowday y Shapiro, 2004, citado por Arrieta, 2008)

El presente estudio se inclina por considerar a la *motivación* desde una mirada de orientación cognitiva – conductual, es posible entenderla como “una causa hipotética de la conducta inducida por las condiciones ambientales o que se puede inferir de las expresiones conductuales, fisiológicas y de auto- informe” en este sentido, el estudio de la motivación puede ser entendido como “la búsqueda de las condiciones antecedentes al comportamiento energizado y dirigido” (Reeve, 1994, citado por Espinoza, 2006).

### Motivación En El Entorno Laboral

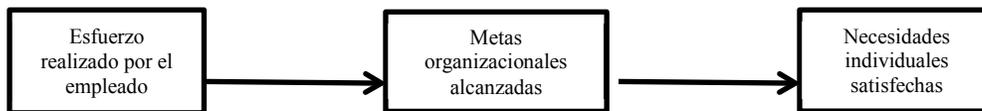

La motivación es un elemento fundamental para el éxito de las empresas, ya que de ella depende en gran medida el cumplimiento de los objetivos de la misma. En distintos sectores no han considerado la importancia de la motivación y siguen haciendo uso de recursos que no traen los resultados necesarios y los cuales no le dan la debida importancia al factor humano, (Strauss, 1991). . También es de gran importancia que la gerencia sepa transmitir adecuadamente el proyecto empresarial para hacer sentir a los empleados y empleadas que forman parte, por tanto participen en su desarrollo. (Sayles, 1991).

### Proceso De La Motivación

Una definición más descriptiva de la motivación plantearía que es la disposición para hacer algo, en donde la habilidad de la persona para satisfacer alguna necesidad condicione algo. (Robbins, 2001).

La motivación al empleado se puede definir como la disposición de un individuo para esforzarse en lograr las metas de la organización, con la condición de que esta habilidad para trabajar satisfaga su propias necesidades. Entonces, inherente a esta definición se encuentran tres componentes: esfuerzo, las metas organizacionales y las necesidades individuales. (Maslow, 1943).

Figura 1: Componentes de la motivación.

Fuente: Maslow (1943)

### Ciclo Motivacional

El ciclo motivacional empieza con el surgimiento de una necesidad. La necesidad es una fuerza dinámica y persistente la cual da origen al comportamiento. Cuando surge una necesidad, esta rompe el estado de equilibrio del organismo, produciendo un estado de tensión, insatisfacción, incomodidad y desequilibrio. Este estado lleva a que el individuo tenga un comportamiento o reacción, capaz de liberar tensión o de liberarlo de la incomodidad y del desequilibrio. (Chiavenato, 2007).

Figura 2: Ciclo motivacional.

Fuente: Chiavenato (2007).

A medida que este ciclo se repite los comportamientos se vuelven más eficaces para la satisfacción de ciertas necesidades. Una vez satisfecha la necesidad deja de motivar el comportamiento, ya que no ocasiona tensión ni incomodidad. (Chiavenato, 2007).

### Modelo E-R-C de Alderfer

Clayton Alderfer, realizó una revisión de las necesidades de Maslow con el fin de superar algunas de sus debilidades, y estimó que existía una jerarquía con tres grandes niveles de necesidades:

1) Necesidades de existencia (E): incluyen las fisiológicas y de seguridad: se refiere a la provisión de los elementos básicos para la supervivencia humana y alude a aquellas que Maslow denominaba fisiológicas o básicas y de seguridad.

2) Necesidades de relación (R): incluyen las sociales y de reconocimiento externo: corresponden al deseo personal de establecer vínculos de importancia y son el paralelo de las necesidades sociales y de estima descritas por Maslow.

3) Necesidades de crecimiento (C): incluyen las de autorrealización y autoestima: estas aluden al anhelo de desarrollo individual, o en otras palabras, de autorrealización (Robbins, 2004).

### Teoría de las expectativas de Vroom

Esta perspectiva, que inicialmente propuso el autor Víctor Vroom (1992) y que luego fue complementando con los aportes de Lawler III, afirma que “la fuerza de una tendencia a actuar de una manera depende de la fuerza de una expectativa de que al acto seguirá cierto resultado que el individuo encuentra atractivo” Los trabajadores se sentirán motivados para aumentar su desempeño, si estiman que ello traerá como resultado una buena evaluación del mismo, inadecuadas recompensas organizacionales y satisfacción de metas personales (Robbins, 2004).

### Efectos de la motivación en el desempeño y productividad laboral.

“Existen muchas pruebas de que el desempeño aumenta con los incrementos en la magnitud de la recompensa ofrecida por un desempeño productivo; sin embargo, algunos investigadores han demostrado disminuciones en el desempeño bajo altos niveles de motivación.”(Vroom, 1992)

Esta teoría se apoya en los siguientes aspectos:

Se dice que una persona bastante motivada puede confundirse y solo llevar a cabo indicaciones que le sean de utilidad para la realización de sus metas u objetivos personales.

Una alta motivación puede llegar a producir una fuerte ansiedad que puede llegar a perjudicar la salud emocional del empleado y por tanto su desempeño.

### La competencia

Esta forma de motivación consiste en aumentos de sueldo y ascensos, que se destinan únicamente a los que cumplen adecuadamente con su trabajo. La competencia ofrece diversas formas de satisfacer las necesidades de los empleados en el que aumentan la perspectiva de ganar una promoción o una alza de salario lo cual forma una meta significativa para el trabajador, el llegar al cumplimiento de esta meta significa para el empleado disfrutar de la recompensa económica, como también llegar a un sentido de realización y cumplimiento, un sentido de progreso y mayor reconocimiento frente a sus compañeros. (Sayles, L, 1991)

### Motivación interiorizada

Consiste en proporcionar oportunidades para la satisfacción de necesidades por medio del desempeño del trabajo y así interiorizar la motivación, de modo que el trabajador disfrute de hacer un buen trabajo.

En este método se utilizan los motivadores de Herzberg (1987), según esta teoría, las personas están influenciadas por dos factores:

La satisfacción que es principalmente el resultado de los factores de motivación. Estos factores ayudan a aumentar la satisfacción del individuo pero tienen poco efecto sobre la insatisfacción.

La insatisfacción es principalmente el resultado de los factores de higiene. Si estos factores faltan o son inadecuados, causan insatisfacción, pero su presencia tiene muy poco efecto en la satisfacción a largo plazo. (Herzberg, 1987).

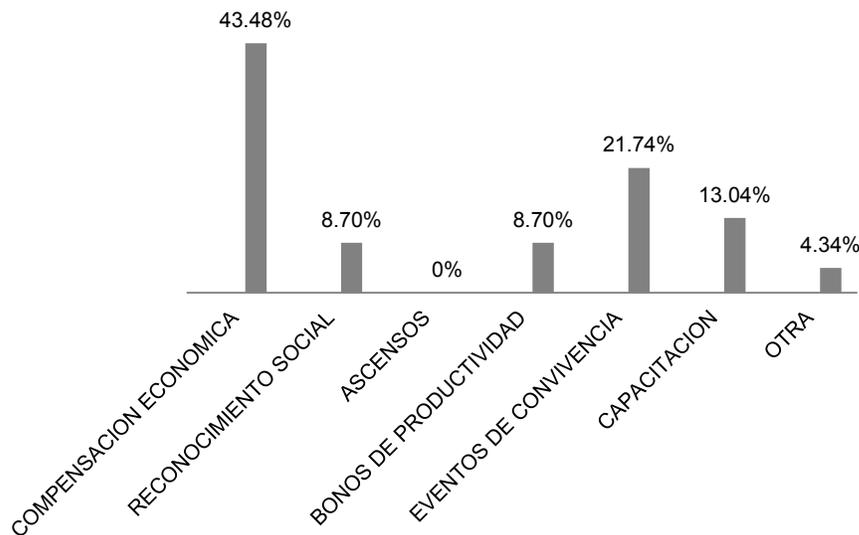

## **METODOLOGÍA**

Se aplicó un cuestionario a los administradores de 16 empacadoras de la ciudad de Tecomán, de un total de 17 Colima, el cual permitió obtener información acerca de los tipos de técnicas de motivación, satisfacción laboral, ventajas o desventajas, así como los diferentes factores que influyen en la motivación de los empleados de estas empresas, con el fin de lograr una investigación confiable.

## RESULTADOS

Se presentan los resultados obtenidos de la realización de encuestas a los gerentes de las diferentes empacadoras de limón de la ciudad de Tecomán, sobre la aplicación de las técnicas de motivación, así como la representación Figura de los datos obtenidos:

Figura 3: ¿Qué Técnicas De Motivación Utilizan?

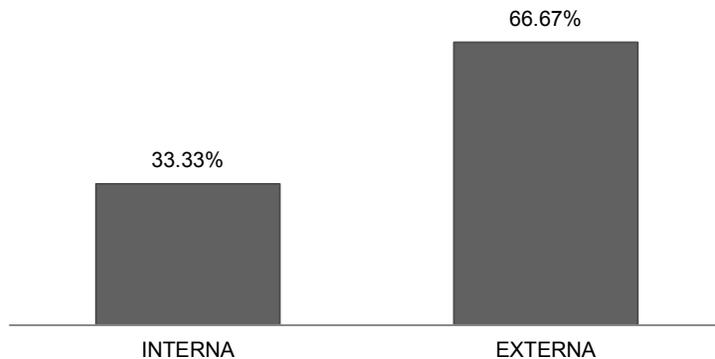

Fuente: Elaboración propia

Según la información recabada en esta pregunta se puede mencionar que la principal técnica de motivación que se emplea es la compensación económica, esto debido a que la mayoría de los empleados se esfuerza en sus labores diarias para obtener un mejor salario que beneficie a sus familias.

Figura 4: Clasificación de la motivación que se utiliza en las empacadoras (interna o externa)

4.- ¿QUÉ TIPO DE MOTIVACIÓN ES LA QUE MEJORES RESULTADOS LE PROPORCIONA?

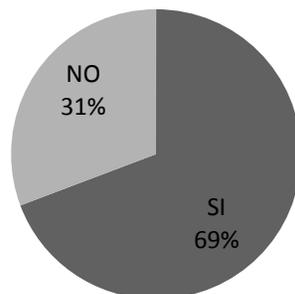

Fuente: Elaboración propia

Esta información viene a corroborar lo ya antes mencionado las empresas se enfocan en ofrecer al trabajador una motivación de tipo monetaria, que posiblemente es la que mejor reciben los empleados.

En este apartado se cuestiona a los gerentes de las emparadoras su opinión sobre las expectativas de sus empleados en el sentido monetario.

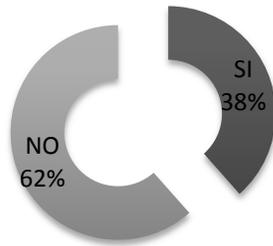

Figura 5: Considera Que Los Sueldos y Salarios Son La Principal Motivación De Sus Empleados?

Fuente: Elaboración propia

De acuerdo a los resultados de este cuestionamiento se logra apreciar que más del 50% de los gerentes opinan que sus empleados se sienten motivados al recibir compensaciones económicas, algunas veces simplemente recibiendo su salario base, el cual ayude para el sustento de su familia. En cuanto a la relación de los conocimientos técnicos del trabajador y el tipo de motivación ideal para este.

Figura 6: ¿Piensa Que La Elección De Una Técnica Debe De Ir De Acuerdo Al Grado De Estudio De Los Trabajadores?

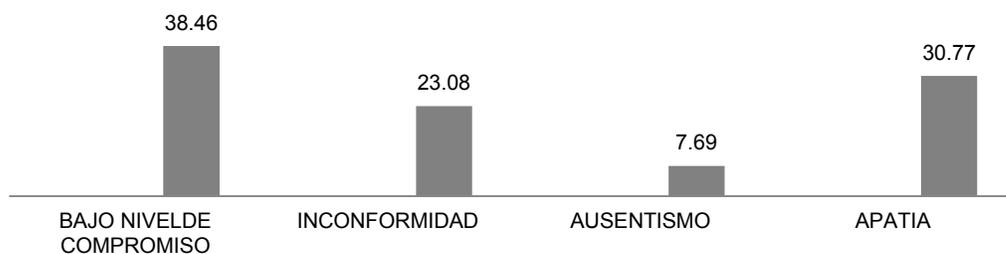

Fuente: Elaboración propia

En esta pregunta la mayoría de los encuestados respondió que NO debido a que muchos de los trabajadores de esos lugares no tienen los suficientes conocimientos académicos pero que con base a sus esfuerzos han logrado ascender. Con la siguiente pregunta se pretende saber que reacciones tienen los trabajadores que no son sujetos a ninguna forma de ayuda para mejorar su calidad de vida y por tanto la calidad de su trabajo.

Otro resultado de la falta de motivación es que el trabajador se vuelve apático en la realización de sus labores, muestra un mal desempeño, que no tenga una buena productividad y no le interese el mejorar su calidad de vida (30.77%).

En esta última pregunta se presentan dos opciones para el gerente sobre dos tipos de técnicas más usuales que se emplean en la motivación del empleado.

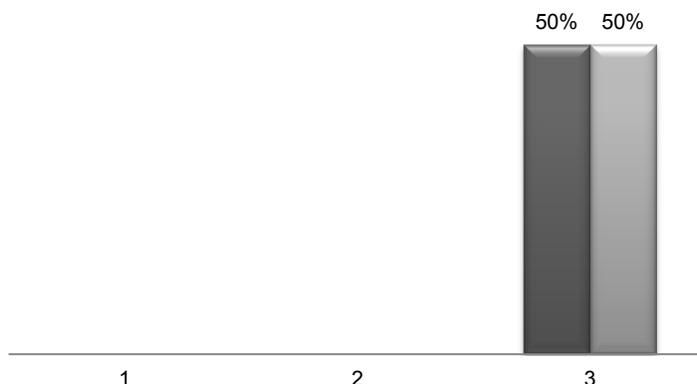

Figura 7: ¿Qué Reacciones Tienen Los Trabajadores Que No Reciben Alguna Técnica De Motivación?

Fuente: Elaboración propia

Figura 8 : ¿Cual Técnica Le Gustaría Desarrollar De Acuerdo Al Perfil De Sus Empleados?

■ RECONOCIMIENTO SOCIAL ■ RECONOCIMIENTO MONETARIO

*Fuente: Elaboración propia*

El 100% de los gerentes de las empacadoras coinciden en que para ellos sería importante llevar a cabo una combinación entre esas dos técnicas de motivación, ya que éstas contribuyen al desarrollo del empleado y de la empresa de una manera parecida y su unión podría tener un importante efecto para el progreso del empleado y de la empacadora.

## CONCLUSIONES

Las hipótesis en su mayoría resultaron ser ciertas ya que las empacadoras que utilizan la motivación como un técnica si aumenta la productividad de los empleados así como de sus empresas. Además también se demostró, que la motivación extrínseca, muestra un resultado mayormente satisfactorio a la hora de utilizarla, ya que tiene una mayor influencia en los trabajadores para que estos se motiven positivamente.

La investigación realizada muestra que las empacadoras del municipio de Tecomán aplican una gran variedad de técnicas de motivación para sus empleados con el fin de aprovechar al máximo sus habilidades, al ver que la empresa se compromete con ellos, estos realizan un mayor esfuerzo para superar las metas personales y por tanto de la empresa. También se demostró que la motivación extrínseca resulta más satisfactoria para los trabajadores que ninguna otra técnica, por ello todas las empacadoras la incluyen en sus técnicas para motivar.

Algunas otras formas de motivación que se encontraron fueron los bonos por la productividad, estos se refieren a algún tipo de vales para intercambiarlos por alimentos. Los eventos de convivencia forman parte también para motivar los cuales se realizan con el fin de que allá una mayor integración de todos los trabajadores de la empacadora.

Con respecto a la hipótesis N°5 el resultado fue que la mayor parte de los gerentes o encargados de estas empacadoras de limón de Tecomán, aceptan la importancia de que el trabajador este contento con su trabajo, que se le tome en cuenta en los objetivos de la empresa pero no solo como objeto de trabajo, si no como una persona que necesita de cierto empuje, apoyo, entusiasmo, para contribuir al desarrollo de la empresa, la mayoría de estos empresarios así lo entienden, y los que han dado una respuesta negativa no es por falta de interés, sino por falta de presupuesto para destinar dichos apoyos o incentivos laborales.

De acuerdo a los resultados arrojados por esta investigación se propone a los gerentes de las distintas empaadoras, el utilizar la técnica de motivación extrínseca hacia sus trabajadores, haciendo un análisis de costo-beneficio, el cual les mostrara las ganancias que se podrán obtener, al tener en cuenta esta herramienta también implica un gasto, pero a su vez originaria una alta productividad en los trabajadores, lo que sin duda resultaría un gran beneficio para las empresas.

# DISEÑO Y APLICACIÓN DE UN MODELO DE MEDICIÓN DEL RIESGO OPERACIONAL UTILIZANDO REDES BAYESIANAS

Fernando Esteban Posada Espinal, Universidad de Antioquia  
Sergio Botero Botero, Universidad Nacional de Colombia

## RESUMEN

*El presente trabajo propone una metodología para la cuantificación de del nivel de exposición al riesgo operativo en una entidad financiera colombiana utilizando un modelo redes bayesianas (causales) para los factores establecidos por Basilea como claves, los cuales se evidencian en una de las líneas de negocio de esta entidad. El riesgo operativo o riesgo operacional es uno de los riesgos financieros que ha sido estudiado a mayor nivel de detalle en la última década tanto a nivel internacional como en el ámbito local, permitiendo que de este estudio se desprendan la adopción de diversas metodologías para su comprensión, cuantificación y gestión.*

**PALABRAS CLAVES:** Riesgo operativo, redes Bayesianas, modelación de riesgos

## DESIGN AND IMPLEMENTATION OF A MODEL OF OPERATIONAL RISK MEASUREMENT USING BAYESIAN NETWORKS

### ABSTRACT

*This paper proposes a methodology for quantifying the level of operational risk exposure on a Colombian financial institution using a Bayesian network model (causal model) to the factors set out by Basel as keys, which are evident in one of the lines business of this entity. Operational risk or operational risk is one of the financial risks that have been studied in greater detail in the last decade both internationally and locally, allowing this study arising adopting various methodologies for understanding , quantification and management.*

**JEL:** G17, G32

**KEY WORDS:** Operational risk, Bayesian networks, risk modeling

### INTRODUCTION

El proceso de gestión de riesgos, el cual consiste en identificar, cuantificar, gestionar y monitorear los riesgos actuales y futuros que afronta una entidad, ha sido implementado por un gran número de empresas financieras y no financieras. El primer tipo de riesgo en ser analizado por las empresas, en este caso financieras, fue el riesgo crediticio. Con este fin, el Comité de Basilea estableció en 1988 los requerimientos de capital mínimo y prácticas internas de gestión que todos los bancos deberían implementar para el manejo de este tipo de riesgo.

En la siguiente década se iniciaron los esfuerzos para la identificación, cuantificación y cubrimiento del riesgo de mercado, es decir, el relacionado con variables internas y externas de

mercado que afecten los precios y por tanto el valor de los activos, algunas de estas variables pueden ser: tasas de cambio, tasas de interés, precios de acciones y materia prima (commodities).

A partir del año 2000, las empresas han enfocado su atención al manejo del riesgo operativo (RO), un tipo de riesgo que había sido considerado por muchas instituciones financieras como no cuantificable. El Comité de Basilea, ha venido elaborando los cimientos para un Nuevo Acuerdo, cuya versión final fue publicada hacia fines del año 2004

El objetivo del presente estudio es profundizar en la implementación de nuevas metodologías de cuantificación del nivel de exposición de capital a las pérdidas potenciales por RO así como la determinación de los requerimientos mínimos de este capital para afrontar estos riesgos.

Para este fin se propone realizar una revisión de los diferentes modelos de medición propuestos a niveles internacionales y validados y reconocidos por el ente de regulación financiero nacional (Superintendencia Financiera de Colombia), partiendo, por supuesto de los acuerdos internacionales desarrollados por el Banco Internacional de Pagos, BIS, por sus siglas en inglés.

Adicionalmente se profundizará en la cuantificación del RO a través de la metodología de Redes Bayesianas evaluando las aproximaciones teóricas a los modelos y decantando en las posibles aplicaciones que en diferentes contextos se hayan realizado, proponiendo para un Banco comercial de importante trayectoria en Colombia un modelo de medición y cuantificación del nivel de exposición de su capital a las pérdidas por riesgo operativo.

## **REVISIÓN LITERARIA**

En este trabajo de investigación se propone utilizar una metodología eficaz que permitirá cuantificar el nivel de exposición al riesgo operativo ya sea de una entidad financiera o real, con datos exactos obtenidos de bases de datos ciertos, o de una entidad ficticia con datos simulados o estimados construidos de manera artificial.

Se utilizó la metodología de las redes bayesianas dado que este es un modelo bastante poderoso cuando los datos históricos existentes sobre la variable de interés son pocos, poco confiables o de difícil modelación con otro tipo de técnicas, dado que estos datos, antes de ser considerados, son previamente validados por expertos con el fin de parametrizar su posible comportamiento (distribuciones o probabilidades a priori) (Yasuda, 2003)

La principal diferenciación a favor de utilizar esta metodología se basa en la simplificación en la aplicación del modelo, se propone una serie de pasos o fases sistemáticas para su implementación (Mendoza 2004) pasando desde la definición de las variables o factores de riesgo operativo a medir en la entidad financiera, hasta la validación de las probabilidades a priori una vez la información histórica de la entidad lo permita.

Estos resultados, así como las conclusiones que de él se deriven son válidos en las condiciones y realidades propuestas y tendrán así mismo una vigencia temporal dada.

Una vez validado el modelo con las pruebas de escritorio que revisaron la consistencia y parametrización de éste y a la par con la realización de la simulación y definición de la carga de capital a provisional por cada factor de riesgo, por unidad de negocio y total para la entidad, se procedió a determinar las probabilidades a posteriori de ocurrencia de eventos de riesgo operativo en la entidad. Para esto se tomó la base de datos históricas de eventos en los cuales se ha

presentado evidencia de pérdidas asociadas a factores de riesgo operacional en cada uno de los niveles determinados contra la totalidad de operaciones o transacciones por cada línea y se incorporaron estas probabilidad en el modelo (evidencia) lo que generó un nuevo resultado para la simulación.

Queda faltando únicamente un contraste entre los resultados del modelo bayesiano con el propuesto por la entidad de supervisión y control financiero (Superintendencia Financiera de Colombia) para determinar la carga de capital expuesta a riesgo operacional.

## METODOLOGÍA

En esta sección se busca implementar una metodología que permita identificar y cuantificar la exposición de una entidad financiera que presente una estructura de líneas de negocios de acuerdo con las definidas por el comité de Basilea, al riesgo operativo. Teniendo en cuenta la escasez de información histórica por la falta de documentación y sistematización de estos eventos de pérdida debidas al riesgo operativo que se presenta en la mayor parte de las entidades financieras colombianas, se debe desarrollar una metodología que tenga en cuenta la información cualitativa que se puede obtener por fuentes externas (expertos) de una manera estructurada pero que, al mismo tiempo, sea capaz de incorporar los eventos de pérdida debidos al riesgo operativo, en la medida que éstos se vayan presentando.

Así, la metodología que se desarrolla y se explica en este modulo permite tener en cuenta las cuatro fuentes de información identificadas en el capítulo anterior para la medición del riesgo operativo en entidades financieras, las cuales son: eventos de pérdida internos, eventos de pérdida externos, indicadores de riesgo y juicios de los expertos.

La metodología consta de 9 etapas o pasos los cuales se presentan a continuación.

Tabla 1: Etapas a seguir para implementar el modelo de medición de exposición al riesgo operativo en cada línea de negocio

No	Etapas
1.	Selección de la línea de negocio de la entidad
2.	Categorización de los posibles eventos de pérdida
3.	Definir niveles de severidad para los eventos de pérdida
4.	Identificar indicadores de riesgo
5.	Establecer relación entre indicadores y eventos
6.	Construir el modelo de red bayesiana
7.	Validar el modelo de red bayesiana
8.	Obtener la distribución de pérdidas agregadas
9.	Calcular la provisión de la entidad para la línea de negocio

*En esta tabla se describe la secuencia de pasos que se deben implementar para la medición determinación y cuantificación del riesgo operativo asociado a cada uno de los factores establecidos en Basilea. Fuente: Elaboración propia*

## RESULTADOS

Consideraciones generales sobre la recolección de la información

El proceso de selección y clasificación de los datos para el desarrollo del modelo se convierte en un elemento fundamental del proceso, uno porque de la disponibilidad de esta información se

podrán realizar las pruebas que nos permitan determinar las distribuciones de probabilidad a priori sobre las que se fundamenta la técnica de modelación Bayesiana y dos porque de esta información se desprenden los controles que conllevan en la entidad financiera a implementar el Sistema de Administración de Riego Operativo en su etapa de gestión de riesgos.

Las fuentes de información sobre las cuales se realizara la toma de datos se clasifican en dos dimensiones (internas y externas) de las entidades objetos de intervención, a saber:

Fuentes internas:

Eventos de pérdidas asociados a RO, Información de severidad de las pérdidas ocasionadas por RO

Fuentes Externas:

Bases de datos teóricas de eventos y severidad construidas por la entidad de regulación y control, Juicios de expertos consultados sobre eventos y severidad, Indicadores de riesgo estándar utilizados a nivel nacional e internacional

La primera fuente de información está representada por los datos sobre las pérdidas debidas a eventos internos y externos. De acuerdo con el Comité de Basilea estos datos están conformados tanto por los eventos de alta frecuencia y bajo impacto económico como por eventos de baja frecuencia y alto impacto económico.

#### ETAPA 1: Seleccionar las Líneas de Negocio

La línea de negocio seleccionada fue Banca Empresarial. Esta línea de negocios se encuentra orientada a las personas jurídicas que utilizan la entidad financiera para realizar sus actividades de inversión y financiación mediante una variada cantidad de productos financieros como cuentas de ahorro, cuentas corrientes empresariales, CDT's , tarjetas de crédito empresariales y líneas de crédito como capital de trabajo, leasing y fiducréditos, así como servicios adicionales para el manejo de los recursos de manera rápida y eficiente mediante una sucursal virtual mediante la instalación de un software al cliente, que le permite realizar consultas y transacciones financieras, desde su propia oficina, sobre los diferentes productos y servicios que tiene con el banco, respondiendo a sus necesidades de información de manera eficiente y segura.

#### ETAPA 2: Categorizar los Posibles Eventos de Pérdida

El grupo de trabajo de Banca Empresarial seleccionó las siguientes categorías de eventos de pérdida, definidas por el Comité de Basilea, para tenerlas en cuenta en la identificación y cuantificación del Riesgo Operativo:

Fraude Interno, Fraude Externo, Prácticas de Empleo y Seguridad del área de Trabajo, Clientes, Productos y Prácticas del Negocio, Interrupción del Negocio y Fallas en los Sistemas de información, Ejecución y Manejo de Procesos

#### ETAPA 3: Definir Niveles de Severidad para los Eventos de Pérdida

El grupo de trabajo de Banca Empresarial definió los siguientes niveles de severidad para los eventos de pérdida:

Nivel 1: pérdidas entre \$0 y \$50.000.000

Nivel 2: pérdidas entre \$50.000.000 y \$100.000.000

Nivel 3: pérdidas entre \$100.000.000 y \$200.000.000

Nivel 4: pérdidas entre \$200.000.000 y \$500.000.000

Nivel 5: pérdidas entre \$500.000.000 y \$1000.000.000

#### ETAPA 4: Identificar Indicadores de Riesgo

Para la identificación y definición de los indicadores se siguieron cada uno de los pasos sugeridos por la metodología para esta etapa:

El grupo de trabajo de Banca Empresarial identificó indicadores de riesgo para cada una de las categorías principales de eventos de pérdida. Las siguientes tablas muestran los indicadores identificados para cada una de las categorías. Adicionalmente, las Tablas presentan una descripción de cada indicador, los posibles niveles definidos por el grupo de trabajo de Banca Empresarial, y el nivel en el cual el grupo cree que se encuentra ubicado el Banco actualmente, a continuación se presenta un ejemplo del procedimiento establecido para determinar niveles y subniveles de indicadores para el factor de riesgo Fraude interno.

Tabla 2: Clasificación de los indicadores y sub indicadores por categoría de evento asociado a riesgo operativo

CATEGORÍA	INDICADORES			SUB-INDICADORES		
	INDICADOR	DESCRIPCION	NIVEL	SUB-INDICADOR	DESCRIPCION	NIVEL
Fraude Interno	1. Seguridad en el envío de Claves	Nivel de eficiencia y seguridad en la entrega de claves a nuestros clientes	1. BAJO 2. MEDIO 3. ALTO	Generación de claves	Personas que intervienen en la generación de claves	1. UNA PERSONA 2. VARIAS PERSONAS
				Seguridad en la recepción de las claves por parte del cliente	Nivel de privacidad en el correo de los clientes que reciben las claves	1. BAJO 2. MEDIO 3. ALTO
	2. Restricciones en la asignación de códigos de convenios	Nivel de restricción en la asignación de cuentas en el momento de habilitar la opción de pagos a terceros	1. BAJO 2. MEDIO 3. ALTO			
	3. Supervisión	Existencia de supervisión al procesos de asignación de claves	1. NO 2. SI			
	4. Confidencialidad de la información	Manejo adecuado de la información de los clientes	1. NO 2. SI			
5. Calidad del personal	Calidad del personal Relacionado con la Terminal	1. MALO 2. REGULAR 3. BUENO	Antecedentes disciplinarios	Reseña en Entidades Judiciales del personal	1. NO TIENEN 2. TIENEN	
			Nivel de Vida	Forma y estilo de vida	1. BAJO 2. MEDIO 3. ALTO	

*Se construyó una matriz que permitiera asociar los diferentes eventos de exposición a R.O con indicadores y sub indicadores de nivel.  
Fuente: Elaboración propia*

#### ETAPA 5: Establecer la Relación entre los Indicadores de Riesgo y los Eventos de Pérdida

Al igual que en el paso anterior, se definió un orden de importancia entre los indicadores para identificar cuáles de ellos eran más importantes para explicar la ocurrencia los eventos de pérdida, adicionalmente, se definió la relación entre los indicadores y los eventos de pérdida relacionados:

#### ETAPA 6: Construir el Modelo de Redes Bayesianas

La construcción del modelo de Redes Bayesianas se realizó en dos pasos: Definición de Variables y Estimación de las Probabilidades Condicionales, para la definición de variables en la Red Bayesiana se consideraron para las diferentes categorías de eventos de pérdida, los indicadores y sub-indicadores de Riesgo definidos en estas.

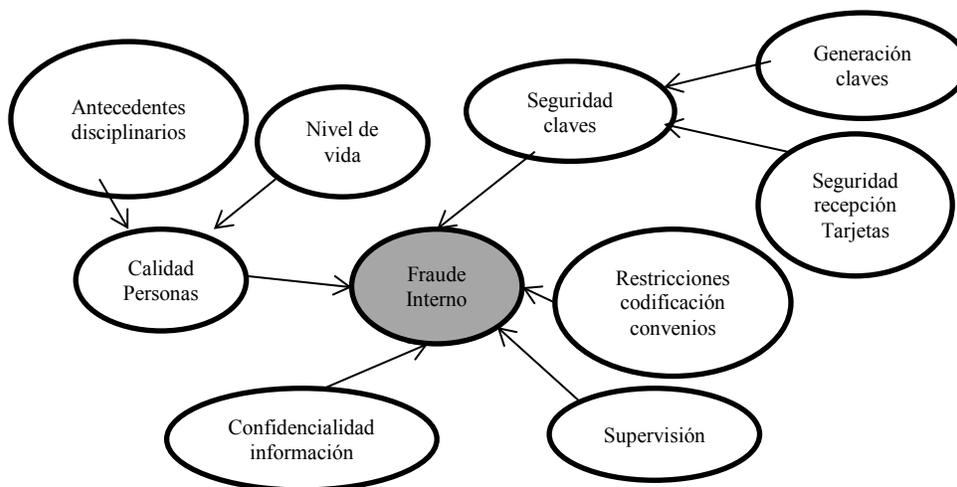

Con la ayuda del software Hugin Lite 7.6 se construyó la red Para cada uno de los sub-indicadores o indicadores que no dependen de otros indicadores, se debe fijar el nivel en el cual se encuentra actualmente el banco, de acuerdo con lo definido por el grupo de trabajo. Esto es importante ya que nos presenta la evidencia necesaria para construir las probabilidades a priori entre cada indicador construido y el factor de riesgo al cual se encuentra asociado.

Tabla 3: Relación evento de pérdida – Indicador asociado para su cuantificación

CATEGORÍA	INDICADOR	NIVEL	RELACIÓN CATEGORÍA - INDICADOR
FRAUDE INTERNO	1. Seguridad en el envío de Claves	1. BAJO 2. MEDIO 3. ALTO	Si existe más seguridad en el envío de claves, disminuye la posibilidad de que ocurran pérdidas debidas a Fraudes Internos.
	2. Restricciones en la asignación de códigos de Convenios	1. BAJO 2. MEDIO 3. ALTO	Si aumentan las restricciones en la asignación de códigos de convenio, disminuye la posibilidad de que ocurran pérdidas debidas a Fraudes Internos.
	3. Supervisión	1. NO* 2. SI	Si aumentan los niveles de supervisión, disminuye la posibilidad de que ocurran pérdidas debidas a fraudes Internos.
	4. Confidencialidad de la información	1. NO 2. SI	Si se mantiene la confidencialidad de la información, disminuye la posibilidad de que ocurran pérdidas debidas a Fraudes Internos.
	5. Calidad del personal	1. MALO** 2.REGULAR 3. BUENO	Si el producto es manejado por un personal de alta calidad, disminuye la posibilidad de que ocurran pérdidas debidas a Fraudes Internos.

En esta tabla se hace una clasificación de cada uno de los niveles asociados a los indicadores que serán utilizados para la medición de los eventos de riesgo operativo, en algunos casos la escala es binomial (\*) para asignar uno o cero de acuerdo con la presencia o ausencia del control respectivo, en otros casos se clasifica en una escala mayor (\*\*) por ejemplo en alto, medio y bajo cuando los controles existen y se implementan pero no en una forma eficiente. Fuente: Elaboración propia

Figura 1: Esquema del modelo de red bayesiana para la cuantificación de riesgo operativo en la entidad financiera

Esquema del modelo de red bayesiana asociado al factor fraude interno. Fuente: Elaboración propia, en el cual se pueden observar 5 niveles (Calidad de las personas, Confidencialidad de la información, Supervisión, Restricciones en la codificación de convenios y seguridad en el manejo de claves) a su vez este último nivel tiene dos subniveles (Generación de claves y Seguridad en la recepción de las tarjetas). Fuente : Elaboración propia apoyada en el software Hugin Lite 7.6 para la modelación de la red

Estimación de las Probabilidades Condicionales: las probabilidades condicionales se estimaron con base en el orden de importancia y las relaciones entre sub-indicadores e indicadores y entre indicadores y categorías de eventos de pérdida, definidos en las etapas 4 y 5. Para ello, inicialmente, se estimaron las probabilidades condicionales para los indicadores que dependían de sub-indicadores, para ello, se estimó la probabilidad de ocurrencia de cada nivel del indicador principal dados los diferentes niveles en los sub-indicadores de los cuales dependía. Por ejemplo, en el caso del indicador Seguridad en el Envío de Claves, para el cual se definieron dos sub-indicadores y se estimaron las siguientes probabilidades

Tabla 4: Calculo de las probabilidades condicionales Para el indicador Seguridad en el manejo de claves

Generación de claves	Seguridad en la recepción de claves					
	Baja		Media		Alta	
	Una Persona	Varias Personas	Una Persona	Varias Personas	Una Persona	Varias Personas
Baja	0.2	0.4	0.1	0.4	0.2	0.3
Media	0.5	0.5	0.2	0.3	0.2	0.5
Alta	0.3	0.1	0.7	0.3	0.6	0.2

*La construcción de las probabilidades condicionales fue realizada con el aporte de los expertos de la entidad, estas probabilidades deberían ser revisadas posteriormente con la evidencia que se obtiene en campo. Fuente: Elaboración propia apoyada en el software Hugin Lite 7.6 para la modelación de la red*

De esta manera, si la seguridad en la recepción de claves por parte del cliente es baja y la generación de claves en el banco es realizada por una sola persona, entonces el grupo de trabajo estimó que la Seguridad en el Envío de Claves será baja con una probabilidad de 0.2, media con probabilidad de 0.5, y alta con probabilidad de 0.3.

Las probabilidades condicionales para las demás categorías de eventos de pérdida, se estimaron de manera similar.

#### ETAPA 7: Validar el Modelo de Redes Bayesianas

Debido a la ausencia de información histórica sobre eventos de pérdida, no fue posible validar las probabilidades condicionales definidas en el paso 6. Sin embargo, el modelo planteado permite actualizar fácilmente las probabilidades en caso de que se cuente con nueva información.

Después de aplicar las primeras 7 etapas de la metodología se obtiene la distribución de probabilidad para cada una de las demás categorías de eventos de pérdida.

Finalmente el modelo general se detalla en la siguiente tabla, en la que se observa por ejemplo que la probabilidad de que se presente una pérdida de nivel 1 (bajo) en el factor riesgo interno es del 67,8%.

Tabla 5: Cálculo de las probabilidades a posteriori asociadas con los factores de riesgo operativo para la línea de negocio Banca Empresarial

Probabilidad de ocurrencia de un evento de riesgo operativo asociado a cada factor						
Pérdida de nivel	Fraude interno	Fraude externo	Práctica empleados	Clientes / Productos	Interrupción y fallos servicio	Procesos
1	67.89	80.39	72.40	80.00	75.00	72.20
2	13.02	7.84	16.10	15.00	15.00	14.60
3	7.80	4.90	5.50	5.00	5.00	5.20
4	7.22	3.92	3.60	0.00	5.00	5.10
5	4.10	2.94	2.40	0.00	0.00	2.90

De acuerdo con lo anterior los eventos de pérdida de mayor nivel tienen una menor probabilidad de ocurrencia según el modelo, quedando aún por reevaluar de acuerdo con la evidencia. Fuente: Construcción propia

### ETAPA 8: Obtención de la Distribución de Pérdida

El grupo de expertos estableció que por cada uno de los clientes de la línea de negocio Banca Empresarial se podían presentar los distintos eventos de pérdida definidos en la etapa 2. De esta manera, para cada una de las categorías de eventos, el número de operaciones sujetas a pérdida es igual al número de clientes, que actualmente en la compañía para esta línea de negocio es de 5638. Teniendo en cuenta las distribuciones de probabilidad estimadas en el paso anterior, se plantea un modelo, el cual se muestra en la Tabla 28, para obtener la distribución de pérdidas por cliente para Banca Empresarial durante un año.

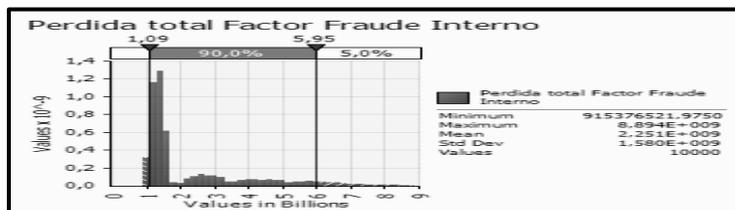

Tabla 6: Distribución de las pérdidas asociadas a cada nivel de severidad

Simulación de las Pérdidas para cada evento de Riesgo Operacional					
Nivel de Pérdidas	Distribución de Probabilidad	Mínimo	Máximo	Media	Desviación
Nivel 1	Uniforme [0, 50.000.000]	-	50.000.000	25.000.000	14.433.756
Nivel 2	Uniforme [50.000.000 , 100.000.000]	50.000.000,00	100.000.000	75.000.000	14.433.756
Nivel 3	Uniforme [100.000.000 , 200.000.000]	100.000.000,00	200.000.000	150.000.000	28.867.513
Nivel 4	Uniforme [200.000.000 , 500.000.000]	200.000.000	500.000.000	350.000.000	86.602.540
Nivel 5	Uniforme [500.000.000 , 1000.000.000]	500.000.000,00	1.000.000.000	750.000.000	144.337.567

Todos los niveles se modelaron con una distribución uniforme, en vista de que no se tenía información previa sobre el comportamiento de esta variable. Fuente: Construcción propia

Utilizando el paquete de simulación @Risk, se encontraron tras una corrida con 10.000 iteraciones, las distribuciones de probabilidad para los factores de riesgo operativo asociado a la línea de negocios Banca Empresarial y las distribuciones de probabilidad para los niveles de pérdidas observables, como ejemplo se muestra la distribución de pérdidas del factor fraude externo.

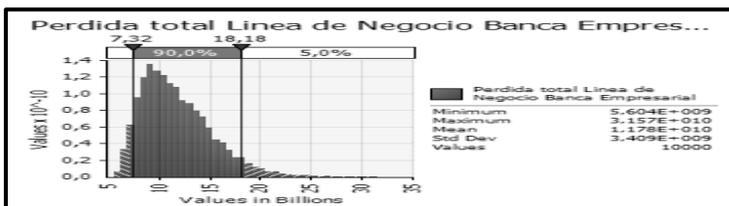

Figura 2: Distribución de probabilidades del factor fraude interno

Un intervalo de confianza del 9= establece una pérdida asociada a fraude interno de entre 1,09 y 5,99 billones de pesos. Fuente: Construcción propia apoyada en el software @Risk.

Luego de realizar una simulación con 10.000 iteraciones se encuentra la distribución de probabilidad de las pérdidas agregadas para cada factor de riesgo y la distribución de perdidas agregadas para la línea de negocios Banca Empresarial, se muestra gráfica del factor Fraude interno.

Figura 3: Pérdida agregada para la línea de negocio Banca empresarial

La distribución de pérdida total para la línea de negocio Banca Empresarial, muestra que la pérdida anual esperada es de \$11.780 millones. La variabilidad de esta pérdida, es alta aunque disminuye con respecto a la variabilidad de las categorías individuales.

Teniendo en cuenta las distribuciones de pérdida, se puede calcular la pérdida no esperada o Valor en Riesgo (VaR) para cada una de las categorías como la diferencia entre el percentil correspondiente al 95% y la pérdida esperada. La siguiente tabla muestra la pérdida esperada y la pérdida no esperada para cada una de las categorías de eventos de pérdida.

Tabla 7: Cuantificación de las pérdidas Obtenidas de acuerdo con el modelo de red Bayesiana propuesto

	Pérdida esperada	Pérdida no esperada
Factor Fraude Interno	\$2.250.223.000	\$5.917.107.089
Factor Fraude Externo	\$1.908.038.000	\$5.323.537.846
Factor Practicas de Empleo y seguridad en el ambiente de trabajo	\$ 1.992.582.000	\$5.008.415.602
Factor Clientes/Productos	\$ 1.687.430.000	\$3.280.690.298
Factor Interrupción en el Servicio	\$1.889.213.000	\$4.606.901.855
Factor Procesos	\$2.052.879.000	\$5.465.198.939
Línea de Negocios Banca Empresarial	\$ 11.780.360.000	\$18.271.787.677

Finalmente, con base en la distribución de la pérdida anual total de la línea, se calcula la provisión anual que el banco debe hacer para cada línea de negocios, en el caso de la línea Banca Empresarial, el valor de esta provisión corresponde a la pérdida no esperada.

$$\begin{aligned} \text{Provisión} &= \text{Pérdida 95\%} - \text{Pérdida Esperada} \\ \text{Provisión} &= \$18.271,78 \text{ millones} - \$11.780,36 \text{ millones} \\ \text{Provisión} &= \$6.491,42 \text{ millones} \end{aligned}$$

ETAPA 9: Calcular la Provisión Total

Debido a que en este caso se aplicó la metodología solamente en una línea de negocio, no se puede calcular el nivel de exposición al riesgo operativo de todo el banco, no obstante el procedimiento sigue la misma dinámica.

CONCLUSIONES

La identificación, medición, cuantificación y gestión de los diferentes tipos de riesgo en las entidades financieras y no financieras es un tema particularmente relevante para el desarrollo y funcionamiento de las mismas. Dicha gestión se requiere de la vinculación de gran parte del capital humano, técnico y económico de la organización para su realización.

Los eventos de pérdida que se pueden presentar asociados a la exposición al riesgo operativo pueden tener un alto impacto en el funcionamiento de las empresas, incluso poner en riesgo la continuidad del negocio financiero. Por esta razón, el proceso de gestión del riesgo operativo es un tema de estudio reciente a nivel mundial, que actualmente es relevante para las entidades financieras más importantes del mundo y para entidades reguladoras como el Comité de Basilea.

El proceso de obtención, sistematización y análisis de la información, tanto cualitativa como cuantitativa, es de particular importancia para la aplicación de esta metodología. Por un lado, debido a la necesidad de definir categorías de eventos de pérdida, indicadores de riesgo y relaciones entre éstos, el grupo de personas que suministren esta información debe conocer detalladamente el funcionamiento de la línea de negocio que esté siendo evaluada no solo en la entidad sino en general en una entidad financiera cualquiera. Por otro lado, para tener en cuenta la información histórica sobre los eventos de pérdida se debe contar con unas bases de datos confiables y bien organizados, a pesar de haber sido diseñada para entidades financieras, la metodología puede aplicarse en otro tipo de entidades realizando ajustes en algunas de las nueve etapas propuestas.

Esta metodología representa un soporte importante para la etapa de Identificación y Cuantificación de las Exposiciones de la Metodología general de Administración de Riesgo propuesta por Smithson (1998), y presentada en el Capítulo 3, página 13 de su libro.

Silvia Cartujano Escobar, Universidad Autónoma del Estado de Morelos

## **RESUMEN**

*Se realizó un estudio cuantitativo, no experimental, transversal y descriptivo con el objetivo de*

*analizar las percepciones y actitudes de los profesores abogados del Instituto Profesional de la Región Sur (IPReS) de la Universidad Autónoma del Estado de Morelos (UAEM), hacia las Nuevas Tecnologías de Información y Comunicaciones (NTIC). La investigación se llevó a cabo por medio del método de encuesta y la recolección de información a través de la aplicación del Cuestionario de Actitudes de los Maestros hacia las Computadoras derivado del instrumento Teacher's Attitudes Toward Computers de Knezek y Christensen (1996), al total de docentes con licenciatura en derecho que laboran en el instituto. Las dimensiones implicadas en el cuestionario fueron: gusto/utilidad, correo electrónico, frustración/ansiedad, aprendizaje/productividad e impacto negativo. Los resultados proyectados en el estudio reflejaron que los profesores tienen una actitud positiva (de media a favorable) con respecto a la computadora y correo electrónico. Además, los resultados mostraron la inexistencia de docentes con sentimientos de angustia, nerviosismo o temor al utilizar la computadora.*

**PALABRAS CLAVES:** Tecnología Educativa, profesorado, abogados, actitudes y percepciones.

## **THE LAWYERS AND THEIR PERCEPTIONS AND ATTITUDES TOWARDS NEW INFORMATION AND COMMUNICATION TECHNOLOGIES: CASE STUDY PROFESSIONAL INSTITUTE OF THE SOUTHERN REGION FROM AUTONOMOUS UNIVERSITY OF THE STATE OF MORELOS**

### **ABSTRACT**

*We performed a quantitative, non-experimental, cross-sectional and descriptive with the aim of analyzing the perceptions and attitudes of teachers Professional Institute attorneys in the Southern Region (IPReS) of the Autonomous University of the State of Morelos (UAEM), to the New Information and Communications Technologies (NTIC). The research was carried out by the method of survey and collection of information through the application of the Questionnaire of Attitudes of Teachers towards Computers derivative instrument Teacher's Attitudes Toward Computers of Knezek and Christensen (1996), the total lawyers teachers who work in high school. The dimensions involved in the questionnaire were: taste/utility, email, frustration/anxiety, learning/productivity, and negative impact. The results projected in the study reflected that teachers have a positive attitude (medium to favorable) with respect to the computer and email. In addition, the results showed the absence of teachers with feelings of anxiety, nervousness or fear of using the computer.*

**JEL:** M10

**KEYWORDS:** Educational Technology, Teachers, Lawyers, Attitudes and Perceptions

### **INTRODUCCIÓN**

En las últimas décadas del siglo pasado, aparecieron las llamadas “nuevas tecnologías”, que al incorporarse en la vida del ser humano, determinaron una serie de cambios y transformaciones en todos los ámbitos de su vida, dando origen al advenimiento de una nueva era en configuración de la sociedad, a la que conocemos como la “Sociedad del Conocimiento” (SC), identificada por la posibilidad de acceder a una cantidad y variedad inimaginable de información y mantenerse en

contacto con grandes colectividades, traspasando las barreras del tiempo y el espacio. Las instituciones de educación superior también han sufrido estas transformaciones al incorporar las nuevas tecnologías de información y comunicación (NTIC), sin embargo, habrá que señalar que para que exista una adecuada inserción de las mismas, se debe tomar en cuenta las percepciones y las actitudes que tenga el personal docente hacia ellas. En el IPReS actualmente se imparten las carreras de Contaduría, Administración y Derecho, cada una de las cuales tiene adscritos profesores cuya carrera profesional es la de licenciado en Derecho. Este estudio tuvo la intención de analizar las percepciones y actitudes de los profesores abogados hacia las nuevas tecnologías.

Atento a lo anterior, cabe preguntarse, ¿cuáles son las percepciones que tiene el profesor abogado del Instituto Profesional de la Región Sur?, ¿qué actitud tienen con respecto a la computadora y correo electrónico?, ¿tienen sentimientos de angustia, temor o nerviosismo al utilizar una computadora? En el presente estudio se muestra de la siguiente manera. En la sección de revisión de la literatura se plantean argumentos que señalan la importancia de las percepciones y actitudes de los docentes hacia las TIC, para que se logre una correcta incorporación en las aulas; además de la reflexión en relación a la reticencia al uso de las computadoras por parte de los abogados. Posteriormente se presenta la metodología utilizada, en donde describe el enfoque, alcance y diseño del estudio, así como el instrumento empleado para la recolección de los datos. Seguidamente se presentan los resultados de la investigación. Finalmente, las conclusiones y recomendaciones.

## REVISIÓN DE LITERATURA

Existen investigaciones que señalan que para que se logre una exitosa incorporación de las TIC en el aula es necesario primero, conocer qué piensa el profesor respecto a estas herramientas, si las cree de utilidad o por el contrario, las perciben como un impedimento que dificulta su trabajo como docente. Considerando que la percepción y expectativa influirá en la aceptación o rechazo que tengan de las mismas, en su satisfacción personal como docentes y en la difusión que realicen entre profesores, alumnos y autoridades de sus instituciones (Bañuelos, 1999). Ha este respecto se señala que son las experiencias del sujeto, sus vivencias y su concepción los que dan la pauta y orientan el uso de las computadoras (Campos et al., 2000). Es decir, las actitudes de los docentes hacia las TIC afectarán su integración de manera positiva o negativa según el caso en sus prácticas de enseñanza (Valdes-Cuervo, Arreola-Olivarria, Angulo-Armenta, Carlos-Martínez, & García-Lopez, 2011). Una percepción puede definirse como un proceso por el cual los individuos organizan e interpretan sus impresiones sensoriales a fin de darle un significado a su ambiente (Robbins, 1999). Los individuos interpretamos nuestro entorno y con base en ello nos comportamos. Características del que percibe tales como intereses, aficiones, inclinaciones, experiencias y expectativas, así como las características del objeto observado y el contexto en el cual se observa influyen en gran medida en nuestra percepción. Las actitudes son conceptualizadas como patrones de sentimientos, creencias y tendencias de comportamiento dirigidas de manera específica hacia personas, grupos, ideas, temas u objetos (Hellrieger & Slocum W., 2009). Las actitudes son el segundo componente importante de la conducta individual, son lo que una persona siente de otras, o de los sentimientos que guarda hacia la gente, los objetos, los sucesos o las actividades. Estas sensaciones pueden ser positivas o negativas y casi siempre se aprenden a lo largo de un tiempo dado (Hodgetts & Altman, 1990). Las actitudes son enunciados o juicios de evaluación (ya sean favorables o desfavorables) respecto a los objetos, la gente o los eventos. (Robbins, 1999). Una vez que interpretamos el mundo que nos rodea (percepción), estamos en condiciones de tener una actitud (positiva o negativa), la cual se reflejará en tres niveles: cognoscitivo, afectivo y comportamental.

Estos tres componentes de las actitudes: afectivo (emociones, sentimientos, sensibilidades, disposición de ánimo); cognoscitivo (creencias, conocimientos y opiniones) y el conductual (inclinación para actuar de una forma específica, según una evaluación favorable o desfavorable de algo), se interrelacionan funcionando entre sí, de tal manera que una actitud es la fusión de emociones, creencias y formas de actuar respecto a una situación, fenómeno u objeto. Para esta investigación, el poner nuestro foco de atención hacia los docentes con la profesión inicial de Licenciados en derecho, es interesante, ya que es bien sabido que el derecho y la tecnología no han ido siempre de la mano, los licenciados en derecho de generaciones pasadas tenían cierta reticencia al uso de las nuevas tecnologías. “Los abogados son, en general muy reacios al uso de las nuevas tecnologías. No es algo reciente; se ha dado siempre. Los abogados casi siempre llegan tarde a los desarrollos que se producen en otras ramas del conocimiento. Esa reticencia o falta de espíritu abierto a la innovación es algo que afecta profundamente al derecho, para cuya actualización a veces hay que esperar demasiados años. El mundo cambia y los abogados parecen querer resistirse a verlo, o tomar medidas para poder seguirle el paso a la fluctuante realidad” (Carbonell, 2011).

Ha este respecto, Pérez-Luño, nos dice que “La coyuntura presente, reclama de los juristas, los filósofos y los teóricos del derecho una consciencia tecnológica, es decir, una actitud reflexiva, crítica y responsable ante los nuevos problemas que en las diversas esferas del acontecer social suscita la tecnología y ante los que ni el Derecho, ni quienes lo aplican o lo estudian pueden permanecer insensibles”. Dado los elementos conceptuales antes mencionados, surgió la necesidad de conocer, que piensan, que sienten y cuáles son las ideas y formas de actuar de los profesores abogados, respecto a las tecnologías, en virtud de que son las experiencias del sujeto, sus vivencias y su concepción los que dan la pauta y orientan el uso de las computadoras (Campos et al., 2000).

## **METODOLOGIA**

En este estudio se utilizó un enfoque cuantitativo, con un alcance descriptivo y un diseño transversal, ya que se analizaron las percepciones y actitudes en un periodo determinado. La investigación se llevó a cabo por medio del método de encuesta y la recolección de información a través de la aplicación del Cuestionario de Actitudes de los Maestros hacia las Computadoras derivado del instrumento Teacher’s Attitudes Toward Computers de Knezek y Christensen (1996), al total de docentes abogados (15), que laboran en el instituto. De los 15 profesores encuestados un 40% fueron mujeres y un 60% hombres. La edad fluctuó entre 25 y 67 años. Las dimensiones implicadas en el cuestionario fueron: gusto/utilidad, correo electrónico, frustración/ansiedad, aprendizaje/productividad e impacto negativo.

## **RESULTADOS**

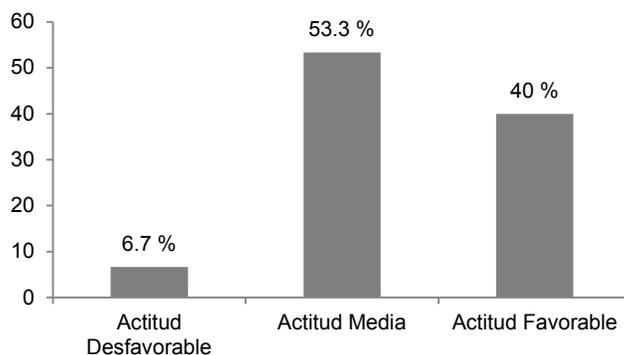

A continuación se muestran los resultados para cada una de las dimensiones implicadas en esta investigación.

### Gusto/Utilidad

En la Figura 1 se observan los resultados en cuanto a las actitudes que tienen los profesores de gusto y motivación para aprender mediante la computadora, así como la facilidad y utilidad que

esta representa tanto en la práctica docente como en la vida cotidiana. A este respecto, un 53.3% de los profesores a los cuales se les aplicó el instrumento de recolección de datos muestran una actitud media, el 40% una actitud favorable y solo un 6.7% manifestó tener desagrado y no encontrar utilidad en el uso de la computadora.

Figura 1: Actitudes de los Profesores en Relación a la Dimensión Gusto/Utilidad

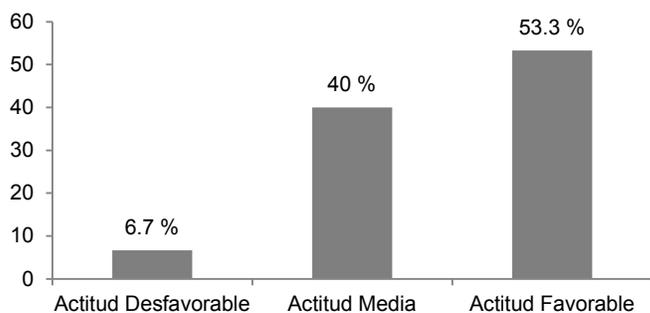

*Esta figura representa la percepción que tienen los profesores de gusto y motivación para aprender mediante la computadora, además de la facilidad y utilidad que esta representa tanto en la práctica docente como en la vida cotidiana. Fuente: elaboración propia.*

### Correo Electrónico

En cuanto a la dimensión Correo Electrónico, que está determinada por la percepción de los sujetos acerca del correo electrónico, como un buen medio de aprendizaje, de difusión, útil y práctico dentro del salón de clases se observa que el 53.3% de los profesores tienen una actitud favorable, un 40% manifiesta una actitud media y solo 6.7 de los encuestados presenta una actitud desfavorable. (Ver Figura 2.)

Figura 2: Actitudes de los Profesores en Relación a la Dimensión Correo Electrónico

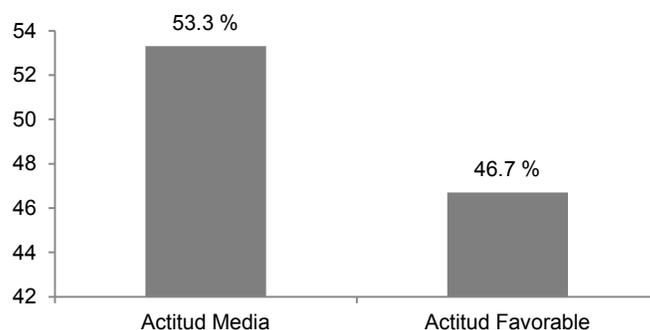

*Esta figura muestra la percepción de los sujetos acerca del correo electrónico, como un buen medio de aprendizaje, de difusión, útil y práctico dentro del salón de clases y como un buen motivador ya que propicia la interacción entre los estudiantes y también entre estudiantes y maestros. Fuente: elaboración propia.*

### Frustración/Ansiedad

La Figura 3, nos permite visualizar las actitudes que tienen los docentes en cuanto a la dimensión frustración/ansiedad y reconocer si el profesor tiene sentimientos de amenaza, temor, dependencia, nerviosismo, angustia, frustración y ansiedad al trabajar con una computadora. El 53.3% de los profesores presenta una actitud media y el 46.7% una actitud favorable. Ninguno de los docentes manifestó tener sentimientos de temor o angustia al trabajar con una computadora.

Figura 3: Actitudes de los Profesores En Relación a la Dimensión Frustración/Ansiedad

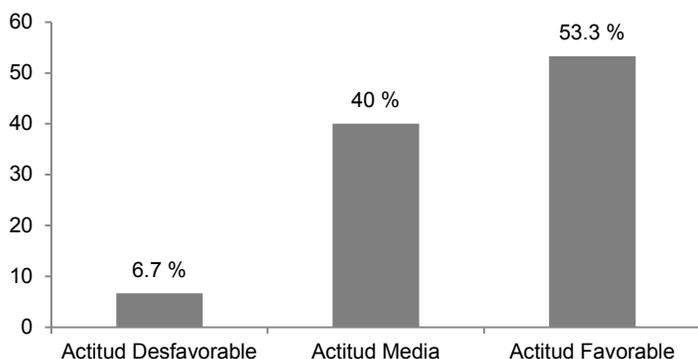

*En esta figura están representados los resultados en relación a sentimientos de amenaza, temor, dependencia, nerviosismo, tensión, angustia, frustración y ansiedad, ante el hecho de trabajar con una computadora, así como la percepción de poca utilidad y baja productividad en la práctica profesional. Fuente: elaboración propia.*

### *Aprendizaje/Productividad*

En la Figura 4, se observan las actitudes de los profesores en aspectos relacionados con la utilidad y la alta productividad dentro y fuera del salón de clases a través del uso de la computadora, en ella se observa que el 53.3 % de los docentes tiene actitudes favorables, el 40% actitudes medias y sólo un 6.7% manifestaron tener actitudes desfavorables.

Figura 4: Actitudes de los Profesores en Relación a la Dimensión Aprendizaje/Productividad

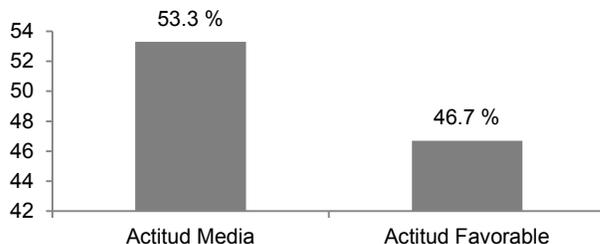

*Esta figura muestra la percepción de utilidad y alta productividad en las actividades en el salón de clases y en la vida cotidiana a través del uso de la computadora. Fuente: elaboración propia.*

### Impacto Negativo

La dimensión Impacto negativo se observa en la Figura 5, en ella se revelan las actitudes de los profesores en aspectos relacionados con la deshumanización y frialdad en las interacciones entre las personas que utilizan una computadora. En esta dimensión podemos ver que el 53.3 % de los docentes tiene actitudes medias y el 46.7% actitudes favorables. Ninguno de los profesores atribuye un impacto negativo a la computadora.

Figura 5: Actitudes de los Profesores en Relación a la Dimensión Impacto Negativo

*Esta figura muestra la percepción de deshumanización y frialdad en las interacciones entre las personas que utilizan una computadora tanto en la práctica profesional como en la vida cotidiana. Fuente: elaboración propia.*

## CONCLUSIONES

De manera general, en esta investigación se concluye que los profesores con profesión de abogados tienen percepciones y actitudes de medias a favorables (positivas), hacia la computadora y correo electrónico. Lo anterior arroja un hecho interesante, ya que es bien sabido que el derecho y la tecnología no han ido siempre de la mano, los licenciados en derecho de generaciones pasadas tenían cierta reticencia al uso de las nuevas tecnologías. “Los abogados son, en general muy reacios al uso de las nuevas tecnologías. No es algo reciente; se ha dado siempre” (Carbonell, 2011). Se puede concluir además, que no existen profesores con sentimientos de nerviosismo, frustración o ansiedad al usar una computadora y que ninguno le atribuye un impacto negativo. Lo anterior puede ser aprovechado por las autoridades del IPReS para generar estrategias que permitan una incorporación efectiva de las nuevas tecnologías al interior del salón de clases.

# PROTECCIÓN DEL PATRIMONIO CULTURAL DE LAS TRADICIONES OAXAQUEÑAS: UN CASO PRÁCTICO LA CALENDIA

Sandra Beatriz Zavaleta Herrera, Universidad Autónoma “Benito Juárez” de Oaxaca  
Pedro Antonio Canseco López, Universidad Autónoma “Benito Juárez” de Oaxaca  
Miryan Castillejos Allard, Universidad Autónoma “Benito Juárez” de Oaxaca

## RESUMEN

*“Oaxaca, como la reserva espiritual de México”, es la depositaria de esta maravillosa tradición de cohesionar y sensibilizar a sus pueblos a través de la realización de un calendario, que hoy se nos antoja muy saturado de fiestas, pero que indiscutiblemente para la Cultura Madre resulta muy escuálido en comparación al tiempo antes de la invasión y colonización en la que los Viejos Abuelos tuvieron que adaptarse al nuevo orden.*

## PROTECTION OF CULTURAL HERITAGE TRADITIONS OF OAXACAN A CASE "LA CALENDIA"

## ABSTRACT

*" Oaxaca, as the spiritual reserve of Mexico " , is the custodian of this wonderful tradition to unite and raise their peoples through the implementation of a calendar, which today seems to us highly saturated party , but arguably for Culture mother is very skinny compared to the time before the invasion and colonization in which the old grandparents had to adapt to the new order . In the more than seven millennia in the " own - our " Anahuac civilization developed , the parties were the social tool that allowed strengthen and expand the spiritual energy generated by human groups in this type of activity . At least three thousand years before the conquest and colonization, the peoples of what is now the Mexican territory formed , maintained a variegated, complex and saturated party calendar . Well had 18 months of 20 days and usually had more than four parties a month . Some larger and more lavish , more small and austere . At least three thousand years before the conquest and colonization, the peoples of what is now the Mexican territory formed , maintained a variegated, complex and saturated party calendar . Well had 18 months of 20 days and usually had more than four parties a month . Some larger and more lavish , more small and austere . But all parties.*

## INTRODUCCIÓN

En los más de siete milenios en que se desarrolló la civilización “propia-nuestra” del Anáhuac, las fiestas fueron el instrumento social que permitía el potenciar y expandir la energía espiritual que generan los grupos humanos en este tipo de actividades.

Por lo menos en los tres mil años antes de la conquista y colonización, los pueblos de lo que ahora conforma el territorio mexicano, mantenían un abigarrado, complejo y saturado calendario de fiestas. Pues tenían 18 meses de 20 días y generalmente tenían más de cuatro fiestas al mes. Unas más grandes y pródigas, otras más pequeñas y austeras. Por lo menos en los tres mil años antes de la conquista y colonización, los pueblos de lo que ahora conforma el territorio mexicano,

mantenían un abigarrado, complejo y saturado calendario de fiestas. Pues tenían 18 meses de 20 días y generalmente tenían más de cuatro fiestas al mes. Unas más grandes y pródigas, otras más pequeñas y austeras. Pero todas fiestas.

Objetivo General. Preservar las tradiciones de nuestra cultura Oaxaqueña, con la Celebración de una Calenda por la conclusión del plan de Estudios del Doctorado en Ciencias de la Administración agosto 2011 Julio 2013

Objetivos específicos: Preservar las tradiciones culturales del estado de Oaxaca  
Convivir el grupo de egresados de la segunda generación del Doctorado en Ciencias de la Administración, en la convivencia Calenda de fin de cursos.  
Participar al pueblo en general, el inicio de los actos de clausura de la segunda generación, del Doctorado en Ciencias de la Administración de la FAC de la UABJO.

Hipótesis: Proteger el patrimonio cultural de las tradiciones oaxaqueñas, asegurará la vigencia del folklore, alegría, folklore, indumentaria, gastronomía, música y sentimiento a través de la calenda oaxaqueña

Variables Manifestaciones populares, políticos y religiosos.  
Fenómenos naturales  
Logística

Misión: Conservar una de las tradiciones especiales que tiene la cultura oaxaqueña, su alegría, folklore, indumentaria, gastronomía, música y sentimiento a través de la calenda oaxaqueña.

Visión: Preservar y proteger el patrimonio cultural de las tradiciones oaxaqueñas, para futuras generaciones, reproduciendo el encanto de “Oaxaca, como la reserva espiritual de México”, es la depositaria de esta maravillosa tradición de cohesionar y sensibilizar a sus pueblos a través de la realización de la Calenda Oaxaqueña

## **CALENDA**

La calenda (en ocasiones calinda) es un baile de origen africano, específicamente de la costa de Guinea, que se extendió por el Caribe como consecuencia del tráfico de esclavos, y formaba parte del conjunto de bailes que los negros de Nueva Orleans ejecutaban en Congo Square, en la primera mitad del siglo XIX, como la bamboula y otras.

Las primeras referencias a esta danza se recogen en Martinica, donde se bailaba los domingos, acompañada de percusión, aunque su mayor popularidad la alcanzó en Luisiana. En la primera mitad del siglo XX aún se bailaba en la propia Martinica, en Haití y en Trinidad. En Cuba se llamó caringa, y existen testimonios de observaciones de este mismo baile en lugares tan alejados como Montevideo.

Algunos autores, como William Francis Allen, consideraron a la calenda una contradanza. Parte del martirologio que recoge los nombres y hechos de los santos, así como las fiestas de cada día.

Es la anunciación de que inician las festividades, pueden ser varias.

Tipos de Calendas o festividades

Religiosa: aquella que celebra un santo, patrono o Iglesia

Guelaguetza: Anuncia el inicio de las festividades del lunes del cerro, con el paseo de las delegaciones que participaran.

Congresos: Convoca al inicio de cualquier evento importante.

Académicos: Termino o culminación de estudios de licenciaturas

Bodas: Al término de la celebración religiosa, inicia el festejo de la boda

Relatoría : Es difícil saber el origen de la costumbre colonial de nombrar padrinos del Niño Dios en las fiestas de la Natividad y la Epifanía. Lo que sí es indudable es que no podía existir templo o capilla que contase con la imagen del Niño Dios y que no lo festejase en ambas ocasiones y el día de la Candelaria. La costumbre ordenaba que por lo menos tres días antes de la Navidad, los padrinos se llevaran "el niño" a su casa donde se le colocaba en el nacimiento, realizando un tributo con el rezo del Rosario a las 8:00 de la noche, concluido esto se ofrecía a los asistentes cigarros, bebidas y alimentos.

El día 24 por la mañana se colocaba al niño en una charola de plata o en una canastilla arreglada exprofeso, hacia las 3:00 de la tarde, llegaba la música a la casa y comenzaba a interpretar sus melodías, al anochecer se congregaban los vecinos que acompañarían en la calenda, los padrinos, para agradecer su presencia les brindaba atole de leche y tamales. De acuerdo con la distancia al centro de la ciudad y al templo se determinaba la hora en que partiría la calenda. Llegado el momento de partir se distribuyen a los asistentes faroles con los colores del barrio, silbatos y luces de bengala. Inicia la calenda, la estrella con el nombre del barrio, los coheteros, la banda de música, el vecindario con faroles y la madrina acompañada de San José y la Virgen, ángeles y pastores; dependiendo de la economía la madrina se traslada a pie o en carro alegórico. La cita común, era alrededor del Zócalo, al que por costumbre se tenía que darle tres vueltas y regresar hacia el templo; generalmente la misa de gallo se celebraba a las 12:00 de la noche, momento en que todas las campanas de la ciudad repicaban y se quemaban cohetes y coheteros al unísono. Al terminar la misa la madrina "daba a besar al niño" en la puerta del templo repartía la colación. No importaba la presencia de recursos, lo más importante, era que toda la ciudad supiera que el niño Dios había tenido padrinos y calenda.

Todas las fiestas patronales en los Valles de Oaxaca, se inician con "La Calenda". Es la manera en que se "anuncia y se invita" a todo el pueblo a la fiesta. Es un desfile de colores y formas en el que los amigos y vecinos participan en la fiesta.

Ejemplo. Con fe y devoción, la Calenda religiosa recorre la capital del estado y templos alternos en la majestuosa calenda en honor a la patrona de los Oaxaqueños, Nuestra Santísima Virgen de La Soledad. Las festividades de la Virgen de La Soledad comenzaron; sin duda alguna una de las fiestas más grandes en el Estado de Oaxaca. El 16 de diciembre en punto de las 7 de la noche se iniciara la calenda, recorrerán como todos los años desde el atrio de la Basílica Menor y que congrega a cientos de personas que, unidas con su fe y devoción, recorrerán durante toda la noche las calles de la Verde Antequera "Honorable Ayuntamiento de la Ciudad de Oaxaca de Juárez, Oaxaca". Encabezando la calenda con las marmotas de la Basílica de La Soledad, los monos de calenda y una enorme mojiganga; seguido por un grupo de personas que bailan al ritmo de la banda de música; las chinas oaxaqueñas de Doña Genoveva Medina con sus vistosas canastas de flores en forma de liras, media luna y de la Virgen de La Soledad darán paso al grupo de personas con canastas, flores, faroles y un carro alegórico (alusivo a la virgen). Detrás las chinas oaxaqueñas de Doña Casilda Flores con sus canastas de luces envolviendo de diversos colores las calles oaxaqueñas; para finalizar la calenda se encontraran con la delegación de San Sebastián

Tutla, quienes al ritmo de la banda de música no dejan de gritar sus tradicionales vivas. (Viva la Virgen de la Soledad, Viva la Reyna de los Oaxaqueños, etc.).

Así es como la enorme calenda recorrerá la iglesia del Ex Marquesado, San Francisco de Asís, Catedral, Carmen Alto, Guadalupe, Jalatlaco y demás iglesias de la capital, culminando en la Basílica Menor de la Virgen de la Soledad para así dar paso a los días principales de la fiesta.

### Organización De La Calenda

Lleva por delante a la Chirimía y el Tambor: reminiscencias milenarias que esencialmente recuerdan un rito ancestral a pesar de todo el sincretismo con el que ahora las apreciamos y nos recuerdan el origen espiritual de estas fiestas.

Después vienen los coheteros, verdaderos “especialistas” que van tirando cuetes y cohetones, que anuncian la cercanía de la procesión. Los primeros se arrojan al cielo con la mano y los segundos, más potentes, se lanzan desde una base que permite poner distancia al encender la mecha. Los cuetes y cohetones son indispensables en las fiestas oaxaqueñas y su cuidadoso manejo se les deja a un grupo de “expertos” que saben dónde, cuándo, cantidad, ritmo y son quienes cuidan de que no causen accidentes, tanto en los participantes como en las casas del pueblo.

Los Gigantes o Marmotas siguen en la calenda. Están hechas con un armazón de carrizo, su ropa de tela y su cabeza con papel. Generalmente son cargados por niños y jóvenes, por lo que es común ver a unos “Gigantes chiquitos”. Cuando se tocan los sones y bailan las Chinas, estos formidables personajes las acompañan en el baile, dando vertiginosas vueltas, perdiendo la vertical sin caer y llevando sus brazos como remolino de colores. Los personajes son producto del imaginario colectivo.

Después sigue la banda de música que tocará durante toda la calenda. Las bandas de aliento llegaron a Oaxaca y México, con la invasión francesa. Los oaxaqueños, especialmente se apropiaron de esta organización orquestal y la han hecho propia. La cultura popular tiene como base de expresión una banda de aliento. En Oaxaca se supone que existen más de cinco mil bandas.

El cortejo continuo con la imagen del Santo Patrón o el símbolo de la fiesta.

Las “Chinas Oaxaqueñas” siguen en la comitiva. Mujeres que llevan cargando sobre sus cabezas canastas con bellos arreglos florales. Para hacer la calenda los mayordomos seleccionan a una “madrina principal”, quien a su vez tendrá que ir a invitar a señoras de la comunidad para que participen como Chinas oaxaqueñas con sus canastas. Todo esto implica, tiempo, dinero y un esfuerzo físico, pues las canastas son pesadas y costosas. Algunas mujeres participaron con canastas con fuegos de artificio. Verdadera proeza de valor y entusiasmo.

### Logística del Recorrido de la Calenda Religiosa

Todo se inicia en la casa de la Madrina Principal, quien tendrá que ofrecer mezcal, rompopo, refrescos y galletas mientras se congregan las canastas. Después llega la música y ameniza la espera. No importa que llueva o relampaguee, la gente del pueblo ira llegando. La comitiva sale hacia la casa de los mayordomos. Donde se les bailará un son y de ahí parte la comitiva al templo

del pueblo donde en el atrio se baila algunos sones y de ahí se parte a los puntos que cada comunidad ha tomado como tradicionales.

Generalmente a las casas de ex-mayordomos, donde existe una capilla o cruz, algún templo o barrio, en estos lugares se organiza una recepción en la que no falta la comida (tamales, tepache, tortas, café, dulces regionales, galletas) y la bebida (mezcal, rompopes, anís) para todos los participantes.

La calenda termina en el templo del pueblo, donde las chinas dejarán su ofrenda de flores al Santo Patrón o Virgen de la comunidad. Acto seguido en el atrio del templo se inicia la quema y baile de las canastas con fuegos artificiales, los toritos y si se puede, al final los Castillos.

Las mujeres son las que “bailan” las canastas. Remolino de luz y fuego que enciende las emociones de toda la concurrencia. Las mujeres siempre son asistidas por sus esposos o novios y ellos bailan con ellas cuando las luces iluminan de colores el entorno. Los jóvenes y los hombres bailan “los toritos”, en lances que agitan a la concurrencia, pues generalmente despiden unas luces de colores que cruzan veloces entre las piernas de los espectadores. La calenda termina en la casa del mayordomo con una cena para todo el pueblo, por supuesto que acompañados por la banda de música.

## CONCLUSIÓN

Las calendas son un producto de la cultura mexicana que siguen vivas y palpitante en los Valles de Oaxaca. La calenda es participación, encuentro, apoyo, fiesta, sacrificio físico, económico, tiempo, amistad, fraternidad y comunitariedad.

En la calenda con un poquito de mezcal y cerveza de piña, los problemas interfamiliares e interpersonales, se aflojan, se minimizan, encuentran cauces de comunicación y solución. La fiesta es pretexto para que se restablezca la armonía y la amistad. Es momento para refrendar la amistad, el compadrazgo y la unión de la familia amplia. Es gusto y entusiasmo, necesidad de compartir lo más profundo y lo más íntimo, de continuar con la tradición.

Las calendas universitarias, se llevan a cabo cuando se conmemoran los días feriados del estudiante, del contador, administrador o cuando concluyen a nivel Licenciatura, no se ha realizado en nivel Maestrías y Doctorados. Es la primera vez que una generación de Doctorado, realiza una Calenda de termino de cursos, cabe señalar que esta celebración no participarán solo los alumnos, sino también los familiares, amigos, alumnos de la Licenciaturas y pueblo en General

## GESTIÓN DE COMPETENCIAS DIRECTIVAS EN UN HOSPITAL DE SALUD PÚBLICA

Laura de Lourdes Cano López de Nava, Universidad Autónoma de Coahuila  
Claudia Berenise Cano López de Nava, Universidad Juárez del Estado de Durango.  
Rosa Martha Ortega Martínez, Universidad Juárez del Estado de Durango.  
Claudia Nora Salcido Martínez, Universidad Juárez del Estado de Durango.  
José Gerardo Ignacio Gómez Romero, Universidad Juárez del Estado de Durango.

### RESUMEN

*En este trabajo se analizan las competencias gerenciales en un hospital de salud pública. El objetivo fue diagnosticar y evaluar las competencias más importantes del hospital para la elaboración de un perfil, para mejorar el desempeño. Se trata de un estudio de caso, no experimental, transversal, con enfoque cualitativo y cuantitativo. Se aplicó una metodología tipo Delphi con 20 expertos y una evaluación de 360° de las competencias de los directivos. El resultado fue un perfil de 32 competencias a evaluar. Se hizo el diagnóstico en los directivos del hospital, posteriormente se inició una estrategia de formación continua, de acuerdo a las necesidades encontradas, de motivación y concientización para autodesarrollo y capacitación, en cursos de desarrollo gerencial, con las herramientas que proporciona la institución, mejorando las competencias con una brecha mayor al deseado y reforzando las que se encontraron bien. Se realizó una evaluación posterior, comparándola además con la satisfacción del usuario, encontrando un mejor resultado y las quejas disminuyeron. Este hospital es una organización de gran importancia para la comunidad, por lo que el haber obtenido mejores resultados con la implementación de las competencias, se traduce en un mejor servicio a la sociedad.*

**PALABRAS CLAVES:** Competencias directivas, aprendizaje organizacional, organización de salud pública.

# INFLUENCIA DEL PLACEMENT EN LAS PELÍCULAS SOBRE LA MEMORIA EXPLÍCITA E IMPLÍCITA: ESTUDIO DESDE LA PERSPECTIVA DE LOS CONSUMIDORES

Leslier Valenzuela Fernández, Universidad de Chile  
Carolina Martínez Troncoso, Universidad Finis Terrae  
Felipe Yáñez Wieland, Universidad de Chile

## RESUMEN

*El uso del placement en el mundo se ha incrementado en los últimos años como una herramienta de comunicación en marketing. Sin embargo, aún no existe consenso en cuál podría ser la manera más apropiada de medir su influencia en los consumidores. El presente estudio busca indagar sobre la efectividad del placement en las películas y su influencia en las memorias explícita e implícita de las audiencias. Se realiza un estudio experimental a una muestra de 205 universitarios chilenos, 91 hombres y 114 mujeres, quienes son expuestos a películas que contienen distintos tipos de placement. Se halla que mientras mayor es el grado de integración de la marca con la trama, mayor es la probabilidad de estimular la memoria explícita de los participantes y con esto el recuerdo y reconocimiento de marca. Se observa además que el placement consigue estimular la memoria implícita de los participantes a través de un incremento en la intención de compra de las marcas que utilizan placement.*

**PALABRAS CLAVE:** placement, memoria explícita, memoria implícita, reconocimiento de marca, intención de compra.

## THE INFLUENCE OF PRODUCT PLACEMENT IN MOVIES ON EXPLICIT AND IMPLICIT MEMORY: A STUDY FROM THE CONSUMERS PERSPECTIVE.

### ABSTRACT

*The use of product placement in advertising has increased in the recent years as a marketing communication tool. However, there is still no consensus on what might be the most appropriate way to measure their influence on consumers. This study seeks to investigate the effectiveness of product placement in movies and their influence on explicit and implicit memory of the audience. An experimental study is performed on a sample of 205 Chilean university, 91 men and 114 women,*

*who are exposed to films containing different types of product placement. The results indicate that the prominence of the brand influence explicit memory, brand recall and recognition. In addition, the product placement stimulates implicit memory through an increase in purchase intent for brands that use this type of tool.*

**JEL:** M37.

**KEYWORDS:** Product placement, explicit memory, implicit memory, brand recall, purchase intention.

## INTRODUCCIÓN

Debido a la amplia oferta publicitaria existente en televisión y su disminución en la eficacia para llegar a los mercados objetivos, a la que se enfrentan las marcas hoy en día, sumado a la falta de interés por parte de las audiencias y el mayor control sobre lo que ven dado el desarrollo tecnológico, existe un mayor interés por buscar maneras más efectivas de dirigirse a los consumidores y promover las marcas fuera de los espacios publicitarios tradicionales, por ejemplo, a través del product placement (Smit, van Reijmersdal, y Neijens 2009). El product o brand placement ha sido definido como “La inclusión pagada de productos de marca o identificadores de marca, a través de medios de audio y/o visuales, dentro de la programación de los medios masivos de comunicación” (Karrh 1998, p.33). Este concepto implica la integración planificada de un mensaje comercial en el espacio de entretenimiento de los medios de comunicación y pretende ser discreto o no obstructivo, de modo que los consumidores no lo perciban como un intento de influencia comercial explícito y la aparición de la marca sea más creíble (Balasubramanian 1994). Su uso se ha incrementado rápidamente alrededor de todo el mundo como una estrategia de comunicación integrada de marketing (Eisend 2009) y actualmente, se puede apreciar en una gran variedad de medios de comunicación, tales como radio, internet, juegos de video, libros o canciones, pero por sobre todo, se puede encontrar en las películas y programas de televisión (Stephen y Coote 2005).

Diversas son las maneras en las que se pueden categorizar los tipos de placement en las películas, por ejemplo, según el formato en que es presentada la marca (verbal, visual o audiovisual) (Gupta y Lord

1998), grado de integración con la trama (Russell 1998; d'Astous y Séguin 1999), notoriedad en la escena (sutil o prominente) (Gupta y Lord 1998) y su relación con el personaje principal o estrella de cine (si es o no usado por este) (Murdock 1992). Últimamente, los autores Yang y Roskos-Ewoldsen (2007) han clasificado el placement visual en tres diferentes niveles según el grado de integración de la marca con la trama. En primer lugar, la marca puede presentarse como parte del fondo, expuesta en una escena con un personaje, pero sin ser utilizada; puede ser usada por un personaje principal, pero no de una manera relevante en el argumento; o estar conectada con la historia, funcionando como una parte integral en el desarrollo de la película. Los autores basaron estas definiciones en el modelo landscape, que expone los patrones de activación de la información en la memoria de los individuos, como parte del proceso de comprensión (van den Broek et al. 1996, 1999).

Los beneficios de esta práctica usada en los largometrajes, son importantes tanto como para los productores o directores de cine, a través de una manera de obtener apoyo financiero y aumentar el realismo de sus películas, como también para las empresas y la exposición que pueden lograr con sus marcas (McKechnie y Zhou 2003). A pesar de que aún no existe consenso en cuál podría ser la manera más apropiada de medir la efectividad del placement, las tareas utilizadas más comunes son las medidas de memoria basadas en el tipo de procesamiento utilizado por el consumidor (explícito o implícito) y la naturaleza de las tareas que se requieren para medir estas memorias (Duke y Carlson 1993).

Cuando un consumidor recurre a la memoria explícita para recuperar información sobre un anuncio o exposición a un evento pasado, incurre en un proceso consciente o reflexivo por parte del consumidor, que implica un esfuerzo deliberado o intencionado para intentar acceder a la información previa (Shapiro y Krishnan 2001). Law y Braun (2000) concluyen que dos procesos cognitivos, el recuerdo y el reconocimiento de marca, afectan al mismo tipo de memoria (explícita) y que el impacto del product placement en las películas, se puede medir mediante las pruebas de memoria explícita. Por otra parte, Shapiro y Krishnan (2001) explican la memoria implícita como un proceso de recuperación automático o a nivel inconsciente, que no se basa en una búsqueda intencional en la memoria para acceder a la información a la que se estuvo expuesto previamente y que como mencionan Law y Braun (2000),

generalmente es medida solicitándoles a los consumidores que completen o terminen palabras después haber estado expuestos a un mensaje, o a través de tareas conductuales de elección de marcas e intención de compra, sin hacer referencia al episodio previo de exposición. Estos procesos que afectan la memoria subconsciente de los consumidores, juegan un rol importante influenciando el consumo (Krishnan y Trappey 1999), ya que influyen el comportamiento de los consumidores, sin la necesidad de que estos estén conscientes de la exposición anterior a un evento (Goode 2007).

En Chile, el placement se ha realizado principalmente en los programas de televisión, teleseries y reality shows, y es una industria que todavía se encuentra en desarrollo (Uribe y Campo 2008). No obstante, en los últimos años se ha extendido también hacia los largometrajes y series chilenas. Un ejemplo reciente es el de la película “Stefan v/s Kramer” (2012), en la que aparecen más de 20 marcas, como Citroën, Nokia, Apple o Sony, y que según el productor y director ejecutivo de la película, financiaron alrededor del 80% del filme (Salazar 2012).

La presente investigación busca entonces estudiar la influencia del placement en las películas sobre la memoria explícita (recuerdo espontáneo y reconocimiento de marca) y memoria implícita (intención de compra) de una muestra de consumidores chilenos, según los distintos tipos de placement en las películas identificados por los autores Yang y Roskos-Ewoldsen (2007), (1) marcas como parte del fondo, (2) usadas por un personaje principal, y (3) conectadas con la historia. En base a las observaciones halladas, los encargados de marketing pueden disponer de evidencia empírica respecto a cómo se ve influenciada una muestra de universitarios chilenos, tomando en cuenta que la mayoría de los estudios se han realizado con consumidores estadounidenses (McKechnie y Zhou 2003). Esto podría ser de ayuda para las marcas nacionales por ejemplo, a la hora de evaluar el empleo de sus presupuestos comunicacionales en la utilización de placement en producciones chilenas, dada la escasa información y evidencia que existe en Chile sobre la efectividad de esta herramienta.

La revisión de literatura investigada, evidencia la presencia de un efecto del placement en la memoria explícita de las audiencias, usando tareas de recuerdo espontáneo, recuerdo sugerido y reconocimiento de

marca (Gupta y Lord 1998; Law y Braun 2000; Brennan y Babin 2004). En relación a los tipos de placement, se ha encontrado que marcas altamente integradas con la trama se recuerdan y reconocen mayormente (Russell 2002; Lehu y Bressoud 2009), al igual que para placement acompañados de un personaje principal (d'Astous y Chartier 2000). Apoyando estos hallazgos, Yang y Roskos-Ewoldsen (2007) ratifican el mayor impacto en el reconocimiento de la marca usada por un personaje principal y conectada con la historia sobre el placement de marca como parte del fondo. Las hipótesis 1 y 2 son formuladas entonces con el propósito de confirmar el grado en cada uno de los tipos de placement influencia el recuerdo espontáneo y reconocimiento de marca posterior de los participantes.

H1: La tasa de recuerdo espontáneo para los participantes expuestos al placement en las películas es mayor en el placement de marca conectada con la historia, seguido del placement de marca usada por un personaje principal, y por último el placement de marca como parte del fondo.

H2: La tasa de reconocimiento para los participantes expuestos al placement en las películas es mayor en el placement de marca conectada con la historia, seguido del placement de marca usada por un personaje principal, y por último el placement de marca como parte del fondo.

A pesar de que existe una menor evidencia en cuanto a la memoria implícita, diversos autores han confirmado una posible influencia en las audiencias, utilizando tareas en que los participantes deben completar palabras, elegir marcas o mencionar su intención de compra (Chung y Szymanski 1997; Law y Braun 2000; Morton y Friedman 2002; Cholinski 2012). Sin embargo, en relación a los tipos de placement la evidencia no es clara. Law y Braun (2000) y Chung y Szymanski (1997) por ejemplo, hallan en sus estudios que el placement visual consigue un mayor impacto en tareas de memoria implícita que el placement de audio, mientras que Yang y Roskos-Ewoldsen (2007) no encuentran diferencias significativas entre el placement de fondo, utilizado por un personaje o conectado con la historia. La hipótesis 3 es expuesta con el objetivo de corroborar el efecto general del placement en la tarea de intención de compra implícita posterior al experimento, comparándolo con el grupo de control. De manera más específica, la pregunta de investigación 1 pretende identificar si existe alguna relación entre los efectos de cada uno de los tipos de placement sobre la intención de compra, y el modelo landscape, debido a que en este caso no se ha observado fundamento en la literatura sobre una posible relación significativa.

H3: La exposición de los participantes al placement en las películas influye positiva y significativamente en la intención de compra posterior de las marcas.

PI1: ¿Posee la tarea de intención de compra rendimientos diferentes según el tipo de placement al que son expuestos los participantes?

## **MÉTODO**

### Participantes

Se selecciona una muestra no probabilística por conveniencia de 205 alumnos de diferentes universidades de la Región Metropolitana de Chile, de ambos sexos (44% hombres y 56% mujeres) y de edades entre 19 y 26 años. Se excluyen los sujetos pertenecientes a las carreras de publicidad, marketing o cine, y que podrían haber inferido en los propósitos de este estudio.

Como información adicional, alrededor de un 80% de la muestra menciona asistir al cine entre una y dos veces al mes, y un 72% dice ver en promedio una a dos películas a la semana, principalmente a través de Internet (online), Televisión de Pago y en el cine. Los géneros de películas mayormente indicados como favoritos son la comedia, acción, drama y el suspenso.

### Procedimiento

El experimento se realiza durante los meses de enero y febrero en un ambiente de laboratorio (Malhotra, Dávila y Treviño 2004), disponiendo de salas aisladas y sin mayores distractores, donde se asignan los participantes aleatoriamente a uno de los tres grupos experimentales según los tres tipos de placement identificados. Cada encuestado observa un video editado que exhibe extractos de diferentes películas en un lapso de 14 minutos y que contiene dos marcas de categorías de producto diferentes y solo uno de los tres tipos de placement visuales.

Los tres videos seleccionados son mostrados, previamente a la realización de los experimentos, a dos académicos de marketing de la Facultad de Economía y Negocios de la Universidad de Chile, junto con las definiciones correspondientes a cada uno de los tres tipos de placement, con el propósito de que estos juzguen si efectivamente el placement exhibido se adecuaba a la definición otorgada y de esta forma

asegurar la validez interna de las películas elegidas, tal como lo hacen en su estudio Hong, Wang y De

Los Santos (2008). Además, se aprueba que las audiencias de las películas seleccionadas son correspondientes a la población definida para este estudio.

Inmediatamente después de haber visto los videos, se les proporciona a los encuestados una hoja que

contiene una pregunta abierta no estructurada, con el fin de tener una medida del recuerdo espontáneo

sobre las marcas presentes en las películas vistas. Solo esta pregunta se encuentra presente en la hoja y se

entrega separada del resto del cuestionario. Posteriormente, se les proporciona a los encuestados el resto

del cuestionario, en donde se presentan en una primera página, doce imágenes con distintas marcas, dos

de las cuales aparecen en la películas vistas y diez marcas distractoras, con el propósito de identificar si

los integrantes del estudio son capaces de reconocer las marcas colocadas en el tratamiento experimental.

Las marcas exhibidas para esta tarea, son mostradas en distintos órdenes para los individuos del estudio a

través de tres versiones distintas del cuestionario, de manera de controlar el sesgo de orden (Churchill

2001). Luego de acabar con las pruebas de memoria explícita, se exhibe un formulario de hábitos de

consumo de Cine y datos demográficos, como una tarea de distracción antes de la prueba de memoria

implícita. Completada esta sección, se retira el cuestionario.

Finalmente y ya cuando los encuestados piensan que ha finalizado el experimento, se les proporciona una

última tarea, en la que se presentan dos categorías de productos, cada una con cuatro marcas. Solo una de

estas marcas para cada categoría, había aparecido en las películas a las que el participante estuvo expuesto. De esta manera, se intenta medir la intención de compra, solicitándoles a los integrantes que

elijan las marcas que estarían dispuestos a comprar en un centro comercial o supermercado para consumo

personal o regalo. Para esta tarea, no se les menciona a los encuestados el experimento anterior, con el fin

de medir el impacto en la memoria implícita que produce el placement. Al igual que en la tarea de reconocimiento, se realizaron tres versiones distintas de esta prueba para controlar el sesgo de orden.

Como último paso, se responden las inquietudes sobre el experimento y se les entrega un pequeño snack

en señal de agradecimiento por la disposición y tiempo.

### Instrumento

En el estudio se miden tres variables dependientes y unidimensionales, el recuerdo espontáneo y el reconocimiento, que representan el efecto cognitivo que produce el placement en la memoria explícita de los consumidores; y la intención de compra, que representa el efecto conductual en la memoria implícita. Como ha sido demostrado por numerosos estudios de manera empírica, estas variables parecen verse influenciadas por el placement en las películas, que en este caso será la variable independiente de marketing manipulada para analizar el efecto en los consumidores.

### Análisis de datos

Para el análisis de datos, se aplica en una primera fase el procedimiento de la Regresión Logística Binaria, con el objeto de evaluar si los tipos de placement predicen o se relacionan con las variables dependientes mencionadas. En una segunda fase, se utiliza el test de la varianza ANOVA, con el propósito de identificar diferencias entre los grupos experimentales y de control. Los datos fueron analizados mediante el programa estadístico SPSS, versión 19.

## **RESULTADOS**

### Memoria Explícita

Para analizar si los tipos de placement predicen y se relacionan con las variables de recuerdo espontáneo y reconocimiento de marca, se aplica el procedimiento de la Regresión Logística Binaria (RLB). En este caso, se define la variable dependiente y dicotómica “recuerdo”, que puede tomar el valor “1” cuando el participante recuerda al menos una marca y “0” en caso contrario. Luego, para identificar la proporción de las marcas que aparecen en las películas y que son correctamente recordadas o reconocidas por los participantes para cada uno de los tipos de placement, y analizar si existen diferencias estadísticamente significativas entre los tres grupos experimentales, se utiliza el análisis de la varianza ANOVA de un factor. Previo a la realización del test, se calcula para todos los participantes la “tasa de recuerdo espontáneo”, sumando el número de aciertos (marcas que el participante es capaz de recordar) y dividiéndolo por el total de marcas que aparecen en las películas. De esta manera, se obtiene una variable medida en escala de intervalo, la cual resulta útil para aplicar el test ANOVA. El mismo procedimiento es usado para la tarea de reconocimiento.

### Tarea de Recuerdo Espontáneo de Marca.

El análisis de la RLB para la variable dependiente “recuerdo”, señala la presencia de un modelo significativo y la existencia de una relación estadísticamente significativa con la variable “tipo de placement” ( $p = 0,000$ ), por lo que se puede mencionar que el recuerdo espontáneo de las marcas que aparecen en las películas se puede predecir según los distintos tipos de placement y existen diferencias dependiendo de si la marca es parte del fondo, usada por un personaje principal o se encuentra conectada con la historia. Posteriormente, el análisis ANOVA para la tarea de recuerdo arroja un  $F(2, 147)$  de 39,169 estadísticamente significativo ( $p = 0,000$ ), por lo que se puede señalar al igual que en la RLB, que existen diferencias significativas entre los rendimientos de los tres grupos experimentales. Para identificar si las diferencias son significativas en todas las combinaciones de grupos, se realizan las pruebas post hoc. Debido a que la prueba de homogeneidad de varianzas indica un estadístico de Levene no significativo ( $p = 0,058$ ), se acepta la hipótesis de igualdad de varianzas poblacionales y los principales estadísticos para esta condición (Tukey, LSD, Bonferroni, etc.) arrojan diferencias estadísticamente significativas ( $p < 0,05$ ) para todas las combinaciones entre los tres grupos experimentales. La tasa de recuerdo para el grupo expuesto a la marca conectada con la historia fue de 68%, lo que indica la proporción de las marcas que son recordadas y escritas correctamente por los participantes. Esta tasa es bastante superior a la arrojada por el grupo expuesto a la marca usada por un personaje principal (30%), y a la vez ambos grupos obtienen mayores tasas al de marca como parte del fondo (15%). La hipótesis 1 que indica el grado en que el recuerdo espontáneo es influenciado por cada uno de los tipos de placement, es apoyada. Tarea de Reconocimiento de Marca.

El análisis de la RLB para la variable dependiente “reconocimiento”, señala la presencia de un modelo significativo y la existencia de una relación estadísticamente significativa con la variable “tipo de placement” ( $p = 0,000$ ), por lo que se puede mencionar que el reconocimiento de las marcas que aparecen en las películas se puede predecir y presenta diferencias según los distintos tipos de placement. El análisis ANOVA en este caso, arroja un  $F(2, 147)$  de 46,597 ( $p = 0,000$ ), por lo que se puede mencionar que existen diferencias significativas entre las medias de las tasas de reconocimiento para los tres grupos experimentales, tal como resulta en la RLB. Siguiendo los pasos de la tarea de recuerdo espontáneo, se obtiene un estadístico de Levene significativo ( $p = 0,000$ ), por lo que en este caso se usan los estadísticos

Tamhane, Dunnett y Games-Howell, los que arrojan diferencias estadísticamente significativas ( $p < 0,05$ ) entre los rendimientos para la marca conectada con la historia y los dos grupos restantes. Sin embargo, no se encuentran diferencias significativas ( $p > 0,05$ ) entre la marca usada por un personaje principal y la marca como parte del fondo. Para el placement de marca conectada con la historia, la tasa de reconocimiento es de 96%, lo que indica una elevada proporción de marcas que son correctamente reconocidas por este grupo. Para la marca usada por un personaje principal, el rendimiento es inferior con una tasa de reconocimiento de 58%, y en menor medida para la marca como parte del fondo, con una tasa de 44%. Debido a que no se puede corroborar en los test anteriores la diferencia estadística entre el placement de marca usada por un personaje principal y el de marca como parte del fondo, la hipótesis 2 que indica el grado en que el reconocimiento es influenciado por cada uno de los tipos de placement, es parcialmente apoyada.

### Memoria Implícita

#### Tarea de Intención de Compra.

En el caso de la tarea de intención de compra, se utiliza el procedimiento de la RLB para analizar si la existencia de placement en las películas se relaciona y predice el comportamiento de la intención de compra de las marcas posterior al experimento. Para esto, se define la variable dependiente “intención de compra”, que puede tomar el valor “1” cuando el participante elige al menos una de las marcas que aparecen en las películas y “0” en caso contrario. La variable independiente o explicativa corresponde al grupo al que fue asignado cada encuestado (grupo experimental o grupo de control). Luego, se utiliza el test ANOVA de un factor para comparar las respuestas entre los grupos experimentales y grupo de control, y de esta forma, identificar el efecto real del placement sobre la intención de compra de los participantes (Pope 2002). Además, se utiliza el test para contrastar los rendimientos entre los tres grupos experimentales y analizar si existen diferencias significativas entre los tipos de placement y la elección de las marcas que aparecen en las películas respectivas.

El análisis de la RLB para la variable dependiente “intención de compra”, señala la presencia de un

modelo significativo y la existencia de una relación estadísticamente significativa según el grupo al que fueron asignados los participantes ( $p = 0,03$ ) y según los tipos de placement ( $p = 0,000$ ). En este sentido, se puede mencionar que el grupo que estuvo expuesto al placement en las películas posee una mayor influencia en la intención de compra comparada con el grupo de control y que esta variable se puede predecir según los distintos tipos de placement. El test ANOVA realizado entre los participantes del grupo experimental y grupo de control, para analizar el efecto del placement en la intención de compra (Hipótesis 3), arroja un estadístico F (1, 313) de 10,108 significativo ( $p = 0,002$ ), por lo que se puede admitir la existencia de diferencias significativas entre las medias de las tasas de intención de compra para los grupos experimentales y de control, apoyando los resultados de la RLB. La tasa de intención de compra en el grupo experimental es de 36%, superior al rendimiento obtenido en el grupo de control (24%). Es decir, la proporción de las marcas que aparecen en las películas y que son elegidas por los participantes, fue un 12% superior a la proporción de estas mismas marcas elegidas por el grupo de control, el cual no había estado expuesto previamente al placement. La hipótesis 3, que asevera una influencia en la intención de compra de los participantes previa exposición al placement en las películas, es entonces apoyada.

Para analizar la existencia de diferencias entre los tres grupos experimentales (PI1) se genera una nueva variable, “tasa de variación en la intención de compra”, con el propósito de poder hacer efectiva la comparación entre los tres tipos de placement (debido a que el efecto real del placement se consigue por el nivel de variación en cuanto al grupo de control). El análisis ANOVA arroja un F (2, 147) significativo de 4,244 ( $p = 0,016$ ), lo que implica la existencia de diferencias entre los promedios de variación de la intención de compra de los tres grupos. Observando las pruebas de comparaciones múltiples, la única relación significativa ocurre entre la marca usada por un personaje principal (22% de variación en la intención) y la marca como parte del fondo (5% de variación). No se hallan resultados significativos para la marca conectada con la historia (8% de variación) y los demás grupos. En relación a la pregunta de investigación PI1 entonces, se puede mencionar que el placement de marca usada por un personaje

principal posee un mayor impacto en la variación de intención de compra, en comparación a la marca como parte del fondo, sin embargo no se presentan relaciones significativas con la marca conectada con la historia.

## CONCLUSIONES

Los resultados obtenidos en esta investigación resultan importantes, ya que son indicios de que el placement en las películas podría ser una herramienta de marketing efectiva, en cuanto a la influencia que provoca la exposición de marcas en las memorias explícita e implícita de los participantes chilenos.

Un primer hallazgo del estudio corresponde al grado en que los tipos de placement parecen influenciar la memoria explícita de los consumidores chilenos. Basado en el modelo landscape, que explica los niveles de activación de la información en la memoria en los procesos de comprensión (van den Broek et al.

1996, 1999), se puede fundamentar el hecho de que el placement de marca conectada con la historia haya

obtenido los mejores rendimientos en las dos pruebas realizadas para medir la memoria explícita, consistente a los resultados obtenidos por Russell (2002) y Lehu y Bressoud (2009). Con tasas menores,

le sigue la marca usada por un personaje principal, que actúa como facilitador o apoyo para darle sentido

a una escena, por lo que se encuentra en un nivel intermedio de activación en la memoria explícita, tal

como sucedió en la tarea de recuerdo y reconocimiento. Por último, se encuentra la marca como parte del

fondo, que incorpora la información que no es necesaria para la comprensión del argumento y que por lo

tanto es la que representa el menor nivel de activación en la memoria explícita, acorde con el rendimiento

en la tarea de recuerdo espontáneo y los resultados obtenidos por Yang y Roskos-Ewoldsen (2007).

En este sentido, utilizar el placement en las películas y específicamente la marca conectada con la historia, podría ser una buena estrategia para los encargados de marketing o avisadores que deseen

fortalecer la conciencia de sus marcas en la mente de los consumidores, ya que implica una mayor

probabilidad de estimular la memoria explícita y con esto el recuerdo y reconocimiento de las marcas.

Los productos o identificadores de marcas que pertenecen a este tipo de placement representan información fundamental para la comprensión y desarrollo de la película, por ejemplo, ayudan al protagonista a resolver un problema o lo rescatan de una situación difícil. Es por esto que los consumidores expuestos a este placement tendrían una mayor probabilidad de recordar explícitamente

estas marcas en el futuro (Yang y Roskos-Ewoldsen 2007). Este podría ser el caso recomendado, por

ejemplo, a las marcas nuevas en el mercado, que necesiten generar conciencia o respuestas cognitivas, de manera que los consumidores sean capaces de recuperar o identificar las marcas a las que estuvieron expuestos (Hong et al. 2008; Ho, Lin, y Yang, 2011), o también en categorías de productos de alto involucramiento para los consumidores, que requieran un mayor esfuerzo para obtener información previa, como podrían ser las decisiones que implican un alto riesgo, costo o importancia para el consumidor (Shapiro y Krishnan 2001).

Una segunda observación comprende el efecto que parece producir el placement en la memoria implícita de los consumidores, lo que es demostrado para los participantes de este estudio a través de una prueba de intención de compra que no hace referencia a la exposición previa del estímulo. Los rendimientos son significativamente superiores a los obtenidos en el grupo de control, consistente con las observaciones de Law y Braun (2000); Morton y Friedman (2002). En cuanto a los tipos de placement, solo se identifica una influencia significativa mayor en la marca usada por un personaje principal, en comparación al placement de marca como parte del fondo. Se ha mencionado que placement sutiles podrían influir mayormente en las tareas implícitas, como explicaron Ho et al. (2011) en su estudio de placement para videojuegos, sin embargo, en esta investigación los resultados fueron contrarios. En este sentido, no se encuentra una relación con el modelo de comprensión de la información que propone el modelo landscape (van den Broek et al. 1996, 1999), lo que es consecuente con la evidencia que soporta que la memoria implícita no se vería influenciada por el modo en que se procesa la información en la memoria (Yang y Roskos-Ewoldsen 2007). Una posible explicación podría ser que cuando la marca es usada por un personaje, aumenta el sentido de familiaridad (Yang y Roskos-Ewoldsen 2007), lo que podría funcionar como una heurística al momento de elección de las marcas.

De esta forma, utilizar el placement en las películas y específicamente la marca utilizada por un personaje principal, es recomendado también como una buena estrategia para estimular la memoria implícita cuando los productos son existentes en el mercado, de manera de reforzar las respuestas conductuales de los consumidores como la intención o compra efectiva, (Ho et al. 2011), por ejemplo, en situaciones de bajo involucramiento o compras impulsivas, donde el consumidor emplea un bajo esfuerzo cognitivo para tomar una decisión y tiende a usar reglas de decisión simples o heurísticas, como elegir la

marca que capta la vista o que sobresale visualmente entre los competidores (Chung y Szymanski 1997).

En estos casos, el consumidor podría recuperar de manera automática o inconsciente los estímulos a los que estuvo expuesto durante el placement y verse influenciado el consumo (Shapiro y Krishnan 2001; Krishnan y Trappey 1999).

Los resultados obtenidos en la presente investigación complementan los hallazgos que observaron los autores Yang y Roskos-Ewoldsen (2007), en relación a los tipos de placement visuales y su influencia en las audiencias, consiguiendo establecer una tendencia clara y significativa entre el grado de integración de la marca con la trama y la probabilidad de activación de la información en la memoria explícita (en la tarea de recuerdo espontáneo), lo cual no fue posible establecer en su totalidad en el estudio de los autores mencionados. Por otro lado, se confirma también una influencia del placement en la memoria implícita para los participantes de esta investigación y se entregan precedentes sobre una mayor influencia en la memoria implícita cuando se usa la marca usado por un personaje principal, de lo cual no se ha encontrado evidencia en la literatura, y que podría orientar futuras investigaciones, incluyendo nuevas variables explicativas de este suceso, como la empatía hacia los personajes, la familiaridad de marca o la empatía y actitudes hacia la marca.

Una de las limitaciones que presenta esta investigación se relaciona con el diseño muestral utilizado. La muestra en cuestión no se recolecta de manera probabilística, por lo que los resultados no son generalizables a la población de universitarios chilenos. En cuanto a la metodología usada, se miden los efectos inmediatos en los participantes, mediante tareas que son proporcionadas seguidamente a la exposición al placement en las películas. Interesante podría ser el análisis de los efectos del placement luego de semanas realizada la exposición a los estímulos. Otras limitaciones podrían relacionarse con el número de marcas evaluadas o las categorías de productos utilizadas, donde se podrían integrar también comparaciones entre productos con o sin carga ética, de bajo o alto involucramiento, etc.

Desafíos para futuras investigaciones incluyen incorporar un mayor número de variables para el entendimiento de la memoria implícita y la mayor influencia hallada cuando la marca es usada por un personaje principal, por ejemplo, tiempos de exposición de las marcas, experiencias de consumo previo y

familiaridad de marca, la empatía hacia los personajes o variables individuales. Debido a que el uso del placement se está incrementando cada vez más en Chile, otro desafío a futuro podría ser el hecho de expandir el estudio a otras medidas de efectividad del placement, por ejemplo, desde el punto de vista financiero de una empresa, usando medidas como el cambio en el valor del precio de la acción para las marcas que aparecen en las películas chilenas o el crecimiento en las ventas posterior al estreno.

Finalmente, otra sugerencia se presenta en la toma de datos de la muestra, la cual podría realizarse mediante una investigación de campo, por ejemplo, a la salida de los cines, teniendo en cuenta que la mayoría de los estudios en este ámbito se realizan en ambientes de laboratorio. De esta forma, podría mejorarse la validez externa de los experimentos.

# LOS EFECTOS DEL EMPLAZAMIENTO DE LA MARCA EN ADVERGAMES DE PROMOCIÓN TURÍSTICA SOBRE LA RECORDACIÓN, LA CONSCIENCIA DE LA MARCA Y LA ACTITUD HACIA LA MARCA

Alejandro Alvarado Herrera, Universidad de Quintana Roo  
César Augusto Pineda Cervantes, Universidad de Quintana Roo

## ABSTRACT

*El uso de advergames -videojuegos concebidos y desarrollados específicamente para dar a conocer, posicionar y/o promover una marca o producto determinado en el mercado meta vía su emplazamiento en el contenido multimedia-, constituye un esfuerzo de los anunciantes para alcanzar consumidores cada vez más sofisticados y renuentes a la publicidad tradicional dada la saturación y diversificación de los medios de comunicación tradicionales. Esta herramienta les permite adaptarse y aprovechar la evolución de las tecnologías de la información y comunicación y supone, además de ser un elemento diferenciador, ser capaz de influir en el comportamiento de los consumidores. En el ámbito turístico, algunas organizaciones encargadas de promover destinos han incursionado en este terreno intentando obtener ventaja competitiva sobre el resto. Sin embargo, las investigaciones empíricas sobre la efectividad de los advergames en general y de los de promoción turística en particular son muy escasas. En consecuencia, se propone la realización de un experimento verdadero con grupo de control post test basado en la exposición de un advergame desarrollado específicamente para esta investigación que permita manipular la variable independiente Tipo de emplazamiento para conocer sus efectos sobre las variables dependientes Recordación, Conciencia y Actitud hacia la marca de los sujetos de estudio.*

**JEL:** M3

**KEYWORDS:** Advergames, Turismo, Emplazamiento.

## INTRODUCCIÓN

La saturación y diversificación publicitaria de los medios de comunicación tradicionales, la variedad de los medios utilizados y la fragmentación de audiencias, ha ocasionado que los consumidores exijan experiencias de marketing cada vez más personalizadas y únicas, al mismo tiempo que los consumidores son cada vez más sofisticados y renuentes a la publicidad tradicional (Martí, Currás y Sánchez, 2010).

De manera casi análoga, el evidente crecimiento de la industria turística, considerada como la segunda actividad económica más importante a nivel mundial (Rubio, 2003, Sancho, 2006), se ha enfrentado a un sinnúmero de desafíos (Ritchie y Crouch, 2000). Para el marketing turístico, entendiéndolo a través de la presente adaptación de la definición dada por la American Marketing Association (2013) como: “actividad, conjunto de instituciones y procesos para crear, comunicar,

entregar e intercambiar ofrecimientos turísticos que tengan valor para consumidores, clientes, socios y la sociedad en su conjunto”, la promoción de los destinos turísticos hace frente a cambios producidos por las Tecnologías de la Información y la Comunicación (TIC), y a partir de su evolución se generan nuevos retos en las condiciones de mercado para las organizaciones turísticas (Buhalis y Law, 2008).

Las TIC brindan una gama amplia de dispositivos, hardware y software, y han provocado un cambio en la forma en la que, tanto la información como ellas mismas son utilizadas (Oladipo y Andrew, 2012). Así, su potencial para el marketing de destinos turísticos supone la consecución de ventajas competitivas, no sólo a través de la reducción de costos asociados a los canales de distribución respecto a los medios tradicionales, sino también en cuanto a las posibilidades de manejo de información se refiere (Bigne, Font, y Andreu, 2000). Algunos investigadores sostienen que los impactos de las TIC han despertado la necesidad, hoy crítica, de re-elaborar los productos turísticos de una manera proactiva (Buhalis y Law (2008).

En efecto, el uso de Internet ha transformado las maneras en que las personas se comunican, buscan información e interactúan tanto con la información como entre personas (Winer, 2009). La transición de información estática y unidireccional a dinámica y colaborativa –esta última también conocida como Web 2.0- ofrece a los usuarios alternativas tales como el uso de redes sociales, blogs y foros. Adicionalmente, las búsquedas en Internet a través de comunidades de viajeros en línea permite a los consumidores, actuales y potenciales, obtener información acerca de destinos que podrían seleccionar (Casaló, Flavián, y Guinalú, 2010). Mas aun, el incremento en la accesibilidad a dispositivos móviles capaces de aprovechar estas tecnologías abre las puertas a otras estrategias de comunicación de marketing (Buhalis y Law, 2008). Y es que, tal como aclara Porter (2001), las TIC no son la vía del marketing a tomar por su simple uso ya que el éxito de su aprovechamiento depende de una adecuada planeación estratégica.

Esta situación ha llevado a los profesionales del marketing a desarrollar estrategias alternativas de promoción turística que utilizan el emplazamiento marcas, productos o destinos en películas, programas televisivos y videojuegos que resultan atractivos para el consumidor (Moore, 2006), no obstante, los efectos de su utilización sobre distintas variables del comportamiento del turista permanecen aún poco explorados y la investigación empírica al respecto en el ámbito del marketing turístico es, en el mejor de los casos, escasa ya que si bien se ha identificado un interés creciente en la investigación de marketing turístico, éste no se ve reflejado, con en la misma intensidad, en los trabajos que poseen un vínculo directo con las nuevas tecnologías (Bigné, Andreu, García y Alvarado, 2008).

Luego, con el objetivo de conocer los efectos que los distintos tipos de emplazamiento pueden tener sobre variables selectas del comportamiento del consumidor turístico, tradicionalmente asociadas a aspectos publicitarios y promocionales, se diseñó y se lleva a cabo una investigación cuantitativa de sección transversal ad hoc basada en un experimento verdadero con grupo de control post test usando como elemento audiovisual un advergame desarrollado propiamente para ello, el cual que permita manipular la variable independiente Tipo de emplazamiento (TE) para conocer sus efectos sobre las variables dependientes Recordación (RM), Conciencia (CM) y Actitud hacia la marca (AM) de los sujetos de estudio. En este documento se presenta el diseño experimental del estudio en curso.

## REVISIÓN DE LA LITERATURA

### Emplazamiento de Marca

El emplazamiento de marca en medios dedicados al entretenimiento ha sido utilizado como una forma efectiva para hacer llegar mensajes publicitarios a los consumidores y relacionarse con ellos (Moore, 2006). A diferencia de los medios publicitarios tradicionales tales como la televisión, la radio y los materiales impresos, el emplazamiento de marca se integra con el contenido donde ocurre, sin interrumpir la experiencia de la audiencia, pudiendo incluso no ser percibido como publicidad (Nelson, Keum, y Yaros, 2004) y, en algunos casos, mejorando la experiencia de los sujetos al dotar de realismo a las obras.

Una clasificación de los tipos de emplazamiento que es útil para los efectos de esta investigación es la propuesta por Russell (1998) la cual se fundamenta en sus variaciones de modalidad y reconoce además las de intensidad. Según sus postulados existen tres tipos distintos de emplazamientos: el primero -emplazamiento visual- se da mediante la simple aparición de la marca en escena, en donde el producto o la marca es colocado como parte del entorno; el segundo tipo -emplazamiento auditivo- se basa en la mención sonora de la marca, ya sea como parte de los diálogos de los personajes o mediante la inclusión de algún sonido que sea fácilmente identificable por la audiencia como representativo de una marca; y finalmente, el tercer tipo de emplazamiento -de argumento-, es aquel en que se da a la marca o producto un papel importante en la trama misma de la obra y se asocia, frecuentemente, a inserciones mixtas (tanto visuales y auditivas) procurando una conexión más estrecha con el argumento. En los tres casos, la intensidad puede variar de baja a alta dependiendo, principalmente, del lugar que ocupa el emplazamiento en la escena, del número de veces que la marca aparece o es mencionada y del énfasis de la inserción o de la mención.

Estos tipos de emplazamientos también pueden ser identificados en los videojuegos en general y en los advergames en particular ya que han sido aprovechados por la industria de desarrollo de videojuegos y sus costos pueden variar según su interactividad y visibilidad (Nelson et al., 2004).

### *Advergames*

Martí, Sanz, y Ruiz (2012) reconocen el origen del término advergame de la siguiente manera: “Etimológicamente el término advergame es un neologismo inglés acrónimo de *advertisement* (anuncio) y *game* (juego) cuya filiación no está exenta de cierta controversia” (p. 73). Por otra parte, Selva (2009:151) define advergame como “un videojuego financiado por un anunciante y creado para un producto o marca con un determinado objetivo publicitario”, y si bien el término ha sido referenciado también como “publijuego” (Lenderman y Sánchez, 2008), su forma anglosajona ha tenido más aceptación en la comunidad científica. En cualquier caso para que un videojuego pueda ser considerado un advergame, su esencia debe girar en torno a la marca, y la forma en la que ésta es emplazada puede variar en modo, frecuencia e intensidad (Nelson et al., 2004), luego, los advergames son una forma especial de videojuegos centrada en la marca o producto que promocionan o anuncian.

Los videojuegos tienen la característica de estar dirigidos a públicos de distintas edades y no únicamente al segmento infantil (Tapscott, 2009), un estudio publicado por la Junta de Clasificación de Software de Entretenimiento (Entertainment Software Rating Board, n.d.) indica que la edad promedio de los jugadores de videojuegos en Estados Unidos en 2010 era de 34 años. De hecho, los advergames han probado ser una herramienta de marketing que ejerce una influencia poderosa en jóvenes (Van Reijmersdal, Jansz y Peters, 2010) y adultos (Celtek, 2010); y si bien los niños no son quienes suelen tener la decisión de compra pues todas sus necesidades

son cubiertas por los padres, se reconoce que éstos tienen un rol considerable como influenciadores para quien adopta esta decisión (Loudon y Della, 1995).

Por lo general, los advergames suelen ser de naturaleza más sencilla que los videojuegos tradicionales. Así, los primeros tienen características más rudimentarias, animaciones más simples y una trama menos elaborada que los segundos (Grossman, 2005). Sin embargo la integración de la marca es fundamental para que los advergames logren su propósito, y esta puede ser a través de elementos con los cuales el jugador interactúa como parte de la trama (Moore, 2006), como un elemento visible en el fondo de la pantalla o una combinación de ambos en varias formas, tipos y momentos del juego.

El uso de advergames en el marketing ofrece ventajas, tanto para consumidores como para las empresas; Los primeros obtienen un producto que, además de ser gratuito para ellos, tanto en sus versiones en línea (Grossman, 2005) como en aplicaciones móviles, puede resultarles más interesante que un programa de televisión o cualquier otra producción similar ya que interactúan y se entretienen jugando (Afshar, Jones y Banerjee, 2004; Nelson, Keum, y Yaros, 2004). El tipo de interacción que se puede lograr con los videojuegos es una ventaja clara sobre los medios tradicionales de publicidad al involucrar activa y ampliamente al consumidor (Moore, 2006) y, a diferencia de lo que ocurre con los televidentes, los jugadores usan el advergame de manera voluntaria (Lenderman y Sánchez, 2008). Por su parte, las empresas pueden aprovechar formatos de aplicaciones susceptibles de ser utilizadas en cualquier momento y lugar (Martí et al., 2012) captando la mayor parte de la atención del consumidor a través de la interactividad de la cual los medios tradicionales de comunicación publicitaria carecen (Winer, 2009).

En efecto, si bien los altos precios de los dispositivos móviles capaces de ejecutar juegos y otras aplicaciones habían sido una limitación (Celtek, 2010) para usuarios y productores ya que eran distribuidos por las compañías de telecomunicaciones, actualmente han alcanzado costos accesibles y la navegación en Internet y el uso de tiendas de aplicación son formas estándar de descargar contenidos a éstos dispositivos (Feijoo, Gómez-Barroso, Aguado, y Ramos, 2012) que permiten a las empresas ofrecer a sus consumidores contenidos de carácter lúdico como los advergames (Selva, 2009).

Parte esencial de los advergames es lograr que los emplazamientos permitan a los jugadores reconocer y ser conscientes de la marca por lo que ésta debe ser claramente visible para ellos (Gross, 2010). La exposición a mensajes publicitarios tiene un impacto en la memoria explícita, la cual implica que el consumidor realice un esfuerzo en recordar un anuncio para recordar la información. La memoria explícita puede ser medida a través de pruebas de reconocimiento o de recordación libre, siendo la primera utilizada cuando el tiempo entre la prueba y la exposición no son inmediatas (Shapiro y Krishnan, 2001). Adicionalmente, en lo que a la actitud hacia la marca se refiere, los resultados de investigaciones recientes sobre los efectos que el emplazamiento de marca en videojuegos tienen sobre esta variable, contradicen postulados teóricos en el sentido de que la publicidad refuerza las actitudes hacia la marca cuando el consumidor tiene conocimiento previo de la misma (Mackay, Ewing, Newton, Windisch, 2009) por lo que, la corrección de dichas afirmaciones permanece en duda en el ámbito de los advergames y constituye un llamado a ampliar los estudios al respecto en medios de publicidad emergentes (Mackay et al., 2009).

Adicionalmente, aun cuando los sitios Web han basado parte de su éxito en diseños atractivos capaces de llamar la atención de los usuarios (Tang, Jang, y Morrison, 2012), los advergames consiguen ir más allá logrando una mayor exposición e interacción con la marca y han encontrado así un mercado reciente en los usuarios de dispositivos móviles. Una aplicación más reciente de

los advergames ha tenido su origen en “ayuntamientos y oficinas de turismo” interesados en crear una relación con los consumidores que aprovechan Internet para realizar búsquedas y contrataciones de servicios turísticos (Martí et al., 2012), en el entendido de que los advergames de promoción turística permiten ofrecer información valiosa acerca de los destinos y además educan al turista de una manera entretenida (Celtek, 2010), lo que los hace útiles para fomentar la industria turística a aprovechar las ventajas de llevar a cabo estas prácticas (Celtek, 2010).

Ahora bien, aun cuando algunos estudios han demostrado que las aplicaciones móviles pueden tener efectos sobre la conciencia de marca (Celtek, 2010, Gross, 2010, Nelson, 2002, Okazaki y Yagüe, 2012, Selva, 2009, Svahn, 2005, van Reijmersdal, Jansz y Peters, 2010), las actitudes (Gross, 2010, Martí et al., 2012, Okazaki y Yagüe, 2012, Redondo, 2010, Selva, 2009, Svahn, 2005, van Reijmersdal, Jansz y Peters, 2010) y la recordación de marca por parte de los consumidores (Gross, 2010, Nelson, 2002, Okazaki y Yagüe, 2012, van Reijmersdal, Jansz y Peters, 2010), hasta donde llega nuestro conocimiento, los efectos de los distintos tipos de emplazamientos incorporados a un advergame sobre estas variables permanecen sin estudiar y menos aun en un advergame de promoción turística.

## EXPERIMENTO PROPUESTO

En el presente apartado se detalla la propuesta metodológica que pretende llevarse a cabo para analizar los efectos del tipo de emplazamiento de una marca en advergames de promoción turística sobre la recordación de marca, conciencia de marca, actitud hacia la marca. En consecuencia, se describen la naturaleza de la investigación, el tipo de investigación, las técnicas y las herramientas a utilizar.

Dada la naturaleza del trabajo de investigación se realizará una investigación causal que permita deducir y determinar las relaciones entre los distintos tipos de emplazamiento de marca en un advergame de promoción turística y sus efectos sobre la recordación de marca, conciencia de marca y actitud hacia la marca (Malhotra, 2008). Se realizará un experimento verdadero con grupo de control sólo posterior a la prueba basándose en la exposición de un videojuego desarrollado específicamente para esta investigación el cual permitirá la manipulación de la variable TE en el mismo ambiente de un advergame, lo que permitirá maximizar su validez interna. Este diseño fue seleccionado por ser el que ofrece un mayor control de las fuentes de invalidez tanto interna como externa (Malhotra, 2008). Así, se pretende manipular el TE de marca para medir el efecto las variables dependientes seleccionadas (v.g. RM, CM y AM). Otras variables extrínsecas como el tiempo de exposición, la dificultad del juego, la intensidad de cada emplazamiento individual, el tamaño de la imagen de la marca y el género del juego, se mantendrán uniformes para cada uno de los grupos. Se controlará también el entorno de los sujetos a través de un ambiente artificial, que simule las condiciones del entorno de una sala de estar de una casa habitación, de manera que los factores ambientales como los niveles de temperatura, iluminación y ventilación, o cualquier distractor, no afecten la experiencia del jugador durante el experimento.

El experimento manejará tres tipos de emplazamientos: en el primero, se emplazará la marca de manera visual exclusivamente, en el segundo, la marca se emplazará de manera auditiva exclusivamente y en el tercero se conjugarán creando un emplazamiento audiovisual.

Se utilizarán cuatro grupos de estudio correspondiendo: los tres primeros a sendos grupos experimentales para cada uno de los tipos de emplazamientos a emplear y un cuarto grupo (grupo de control) que estará expuesto al advergame pero sin emplazamiento alguno. Para asegurar la homogeneidad de los grupos, los sujetos serán elegidos al azar para la conformación de cada grupo y, de igual manera se seleccionará de manera aleatoria el tipo de tratamiento que corresponderá a cada uno de estos. La observación se realizará mediante la aplicación de una encuesta a los sujetos de los cuatro grupos para obtener las medidas de post test sobre la recordación de marca, consciencia de marca y actitud hacia la marca, el grupo de control servirá para medir la eficacia de cada tipo de emplazamiento de marca. El esquema propuesto se sintetiza como sigue:

GE1	(R)	X1	O1
GE2	(R)	X2	O2
GE3	(R)	X3	O3
GC	(R)		O4

En lo relativo a la muestra, se propone seleccionar personas cuyas edades estén comprendidas entre 18 y 48 años de edad. Esto obedece a dos razones: la primera se relaciona con cuestiones éticas en los estudios con experimentos, pues si bien individuos menores de 18 años pueden ser un mercado que disfruta de los videojuegos, consideramos que es preferible excluirlos para evitar conflictos de esta naturaleza; la segunda razón está basada en que se conoce que las personas nacidas a partir de 1965 tienen una afinidad mayor hacia el uso de diversos medios entre los que se encuentran los videojuegos que aquellas nacidas con anterioridad a ese año (Tapscott, 2009).

En lo que al advergame a desarrollar se refiere, se optó por usar las imágenes, actividades y marca de un destino existente pero del cual los sujetos de estudio no tuvieran un conocimiento previo para evitar sesgos derivados de su eventual reconocimiento. Por ello, se solicitó y obtuvo el apoyo de la Dirección General del Parque Nacional Volcán Nevado de Colima (México) y se realizó un trabajo de campo preparatorio para construir un acervo fotográfico específico y se propuso un storyboard para el desarrollo del juego, el cual se muestra en la Figura 1 a continuación. Las cuatro versiones del juego tendrán la misma historia y dinámica y únicamente variarán en el tipo de emplazamiento empleado en cada una de ellas. En el caso del grupo de control no se realizará emplazamiento alguno.

Figura 3: Storyboard del Advergame De Promoción Turística

Pantalla de inicio muestra una imagen del Volcán Nevado de Colima, en un costado se aprecia la imagen desvanecida del Rey Colimán. El título del juego se lee en fuente grande con tipografía estilo aventura y detalles de naturaleza. Al iniciar el juego, aparece la instrucción de proporcionar el nombre de la persona. La redacción del juego siempre será por su nombre o en segunda persona. Música de fondo con tono de aventura similar al tema de la película "La isla".

Descripción: Se presenta una imagen de uno de los inicios de un sendero para caminata. A la vista están dos compañeros esperando a que estés listo para salir a la caminata. Dinámica del juego: encuentra los elementos necesarios para tu caminata (la pista se basa en la forma de los objetos). Por cada artículo encontrado se proporcionará información de su importancia para dicha actividad.

Instrucción: Te encuentras en "La Joya" listo para emprender tu aventura. Prepara tu mochila con el equipo básico para empezar tu aventura: encuentra los elementos de la lista para agregarlos a tu mochila.

A lo largo de la caminata se observan paisajes de bosques encino, pino, oyamel y aile. El texto lee una explicación de la vegetación y los tipos de aves de la zona.

Instrucciones: Utiliza tus binoculares para encontrar las cinco aves listadas y tómalas una fotografía.

De manera casi discreta un ave sobresale de las demás.

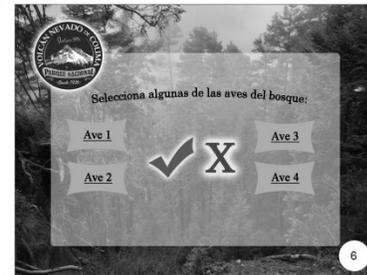

Es un Ergaticus Ruber. El nivel no puede continuar hasta tomarle una foto. Ocurre un diálogo entre el ave y el jugador.

El ave se transforma en una hermosa criatura, la hija del Rey Colimán. La criatura explica que el Volcán (el Rey Colimán) yace dormido en protección de la riqueza del área, lo asombroso de la vida silvestre y su fragilidad. Imágenes desde puntos más altos del lugar aparecen mientras sucede la explicación. La criatura le invita a seguir un poco más para ser testigo de tal majestuosidad.

Aparece un collage con aves y mamíferos terrestres características del área en forma de rompecabezas. El usuario deberá completar el rompecabezas para avanzar. Al completarlo se le felicita y se muestran los detalles de las aves (nombre y características).

En la última escena el usuario deberá completar cuestionarios interactivos para poder avanzar. La información de los cuestionarios será basada en la información proporcionada durante el juego.

Tras completar el cuestionario con un puntaje alto, aparecerá la princesa para felicitar al jugador por su interés y explicarle todos los beneficios del lugar. Encomendando el tesoro del rey colimán, educar a las personas para la conservación y preservación de la biodiversidad que en el volcán hábitat.

El storyboard del advergame que se muestra en la Figura 1 detalla una historia que lleva al jugador a través de una serie de dinámicas de juego donde se llevará a cabo la manipulación de la variable independiente como se estableció en párrafos precedentes.

## CONCLUSIÓN

El presente trabajo forma parte de una investigación en proceso y a través del mismo se somete a la consideración de la comunidad académica la propuesta metodológica para la realización de un experimento que permita conocer y determinar, empíricamente, los efectos que los distintos tipos de emplazamiento de marca realizados en un advergame en general, y de promoción turística en particular, puedan tener sobre la recordación, la consciencia y la actitud hacia la marca de los consumidores. Se espera que los resultados obtenidos del estudio generen nuevos conocimientos respecto al uso de advergames como herramienta de marketing de promoción de destinos

turísticos y que brinden, en consecuencia, una mayor claridad en la toma de decisiones a los responsables de promover y posicionar un destino.

# CONTRATOS INTERNACIONALES: RESPONSABILIDAD CONTRACTUAL

Gabriel Alfonso Rodríguez González, Benemérita Universidad Autónoma de Puebla

## RESUMEN

*La globalización de las relaciones mercantiles ha hecho necesaria la adopción de normas jurídicas que rijan las transacciones internacionales con independencia de la nacionalidad de las partes. El derecho privado actual, ligado al marco normativo de cada uno de los países, se vislumbra como un orden jurídico que tiene plena aplicación a la circunscripción territorial de cada uno de éstos, sin embargo, en un mundo con fronteras bien limitadas (como el nuestro), pareciera que ésta metodología es aceptable. Sin embargo, ante el incremento de transacciones comerciales internacionales entre los distintos países y, la apertura de fronteras a fin de contener con el flujo (o incrementarlo) de operaciones comerciales, el Derecho Privado (limitado a un territorio y Estado) resulta insuficiente. Lo anterior es así, ya que el ámbito contractual supera en demasía la normatividad interna de cada uno de los países y/o entes contratantes, por lo tanto, la responsabilidad contractual es hoy una figura fundamental en el Derecho. Su uso es extenso y su campo de acción ha ido evolucionando con las nuevas necesidades que van surgiendo a partir de recientes hechos y realidades. Por todo lo anterior, el presente trabajo sólo buscar hacer notar a todos los participantes del “quehacer” jurídico, la Responsabilidad, ética, moral y contractual que se deposita en nuestras manos, de tal forma que nos sujetemos a los cuerpos normativos que regulan la actividad comercial internacional y, sólo apliquemos y respetemos las normas jurídicas internacionales*

**PALABRAS CLAVE:** Contratación Internacional, Derecho, Buena fe, Ética, Abogado.

## INTERNATIONAL CONTRACTS: CONTRACTUAL LIABILITY

### ABSTRACT

*The globalization of market relations has necessitated the adoption of legal rules governing international transactions regardless of the nationality of the parties. The current private law, linked to the regulatory framework of each country, is seen as a legal system that is fully applicable to the territorial jurisdiction of each of these, however, in a world with limited boundaries well (like ours), it seems that this approach is acceptable. However, with the increase in international trade transactions between countries and the opening of borders in order to contain the flow (or increase) in trade, private law (limited to a territory and state) is insufficient. This is so, because the contractual scope exceeds too much the internal regulations of each country and / or contracting entities, therefore, the contractual liability is now a key figure in the law. Its use is widespread and its scope has evolved with the new needs emerging from recent events and realities. Given the above, this paper only seek to point out to all participants in the legal "work" Responsibility, ethical, moral and contractual deposited in our hands, so that subject ourselves to regulatory bodies governing international business and just apply and respect international legal norms.*

**JEL:** K22, K23

**KEYWORDS:** International Contracts, Law, Good Faith, Ethics, Lawyer

¿Qué es un Contrato Comercial Internacional?

Ahora bien, bajo éste orden de ideas, podríamos iniciar con la explicación de qué se entiende por contrato “internacional”, para luego aterrizar la idea de la responsabilidad contractual de los partícipes de los contratos. Sin embargo, “contratación internacional” y “responsabilidad social” para algunos significarían polos jurídicos opuestos, ya que el común denominador de los contratantes internacionales, no siempre velan por los intereses colectivos, sino que velan por los intereses personales, los cuales, no siempre van ligados a la responsabilidad contractual a la cual se hacen acreedores por el simple consentimiento del instrumento.

A manera de aclarar lo antes comentado, pudiéramos entender por “contratación internacional” cualquier contrato que no sea estrictamente nacional (a *contrario sensu*) y, que haga que los criterios de nacionalidad de las partes, lugar de residencia o de establecimiento, afecte el comercio internacional o, en su caso, planteé un conflicto de leyes nacionales aplicables, siendo considerado como un contrato internacional (acorde a los PICC). Por otro lado, es necesario referirnos a éstos Principios y, concluir: ¿Qué es un contrato “comercial”?, refiriendo que es cualquier contrato que no haya sido hecho para fines de consumo inmediato, sin considerar si las partes son o no “comerciantes”, acorde a las categorías de Derecho Mercantil de cada uno de los estados contratantes.

Pero a todo esto, ni los comentarios ni mucho menos las reglas contenidas en los Principios, explican que debe entenderse por “contrato”, limitándose a explicar los adjetivos “internacional” y “comercial”, sin que se remita al sustantivo “contrato”, lo cual, nos limita a resolver nuestro cuestionamiento en la Teoría General del Contrato, sin embargo, no existe una teoría general del contrato universalmente admitida y, por consiguiente, no existe una noción común o general de Contrato (al menos no a nivel internacional). Por consiguiente, si bien es cierto que todo jurista (o estudioso del Derecho) sabe lo que es un contrato, también es cierto que hay diferentes conceptos de contrato en las diferentes tradiciones jurídicas contemporáneas.

Pero a todo esto, en ¿Dónde queda la responsabilidad contractual de cada uno de éstos instrumentos?, ya que podríamos seguir notando diferencias en el concepto de contrato con el mero expediente de reunir información sobre otros derechos nacionales de la tradición civilística y, complicar aún más el concepto de contrato si lo contrastáramos contra otro tipo de tradiciones jurídicas como la islámica, rusa, china o, incluso la hindú, sin embargo es de considerarse abordar en primer instancia, un concepto internacional de contrato, concluyendo así que la responsabilidad contractual sería más fácil de explicar, ya que ha sido en un mayor número de temas de conversación la responsabilidad contractual y la buena fe de los instrumentos a nivel internacional.

Sin embargo, concluimos que NO es meramente académico la intención de conceptualizar la definición de contrato, ya que éste depende de los actos jurídicos que sean regulados por cada cuerpo normativo y, aquellos que no los sean, podríamos señalar que no cumplen con el requisito de responsabilidad contractual que cada uno de éstos debería de tener. Sin embargo, cuestiono si seríamos capaces de imaginar que cada jurista de cada país interpretara la palabra contrato y responsabilidad contractual conforme a su propia tradición.

Hasta este momento, nos ha quedado un poco más claro que connotación se le da a “comercial” e “internacional” (hablando de contratos), así como la importancia de generar un concepto general

del mismo, sin embargo, a lo largo de éste trabajo analizaremos que en los PICC no existe expresamente la definición de “contrato”, por el contrario, existe un significado implícito de la palabra “contrato”, el cual, aparece un sinnúmero de ocasiones en el documento de referencia, visto desde esta forma, existe un problema de interpretación de éstos principios, debiéndose resolver conforme a las reglas de interpretación que se prevén en su artículo 1.6 (Interpretación e integración de los principios), el cual, en su párrafo primero señala que la interpretación debe hacerse tomando en cuenta “su carácter internacional, así como sus propósitos, incluyendo la necesidad de promover la uniformidad en su aplicación”.

Por todo lo anterior, se infiere que el contrato se produce por el libre consentimiento de las partes, sin necesidad de ningún requisito formal o causal. Pero el consentimiento no es el contrato, como lo demuestra la distinción que se hace en los mismos Principios entre el momento de perfeccionamiento del contrato y el momento de cumplimiento de las obligaciones; el contrato nace en cuanto se produce el consentimiento, se extingue cuando se cumplen las obligaciones y, como su vida se da entre estos dos momentos, no puede el contrato ser el puro consentimiento, como tampoco una persona es su puro nacimiento. Lo que perdura una vez que se integra el consentimiento y hasta que se da el cumplimiento son las obligaciones. El contrato subsiste como obligación, es decir, siguiendo los conceptos de los Principios, como un deber judicialmente exigible de proporcionar un resultado o de poner los medios necesarios para conseguirlo.

#### El Contenido del Contrato. El Concepto de Buena Fe

Concatenando lo anterior, con el perfeccionamiento de un negocio jurídico las partes contratantes buscan satisfacer una determinada necesidad de tipo práctico y establecer las principales reglas de conducta que habrán de regir en el futuro su particular relación. El negocio jurídico se celebra con el fin de producir unos determinados efectos que son intencionalmente queridos por las partes. Dicha regulación, por regla general, entrará en vigor inmediatamente se perfeccione el consentimiento o, excepcionalmente, lo hará en un momento posterior, al vencerse el plazo convenido o acaecer la condición suspensiva acordada. Lo convenido entre las partes será una “ley” para ellas, en el sentido de que las partes estarán constreñidas al cumplimiento, más no en cuanto a una pretendida generalidad que sólo tiene la ley en sentido material, pues como sabemos, la regulación contractual sólo afecta, en principio, el reducido círculo de las partes contratantes.

La regulación establecida por las partes en los contratos, es una regulación que se puede llamar “autónoma”, en el sentido de que son las partes quienes en ejercicio del poder autorregulador que el ordenamiento les brinda determinan el contenido que en principio deben tener las reglas contractuales. Sin embargo, la citada regulación contractual realizada por las partes no tiene la aptitud para contemplar todos los aspectos y detalles de su futura relación (de ahí la importancia de la existencia de diversos cuerpos normativos –incluso internacionales-). Ninguna capacidad de previsión podría contemplar la totalidad de eventos que se pueden presentar en la ejecución de una relación contractual, ni establecer, de antemano, las soluciones a toda posible controversia.

Pero a través de ésta operación mental que hemos realizado, pudiéramos indicar que hemos hecho una interpretación del negocio jurídico o integración del contenido contractual, distinguiéndose una y otra actividad, toda vez que mientras la interpretación atiende al contenido de la declaración de voluntad, la integración va dirigida a completar los efectos jurídicos del negocio, sin embargo, la integración tiene como presupuesto que se haya verificado la interpretación y que ésta se muestre suficiente o completa.

Pero a todo esto, se entiende que en la interpretación e integración del negocio jurídico y/o contenido contractual, la buena fe debe guiar la celebración y cumplimiento de los Contratos Internacionales, independientemente que, el concepto de buena fe sea uno de los más difíciles de precisar en el derecho, pues se trata de una de las nociones que mayor amplitud y alcance que ha adquirido desde que fue concebida y desarrollada por los juristas de Roma. No obstante su complejidad, es menester reconocer de antemano que la importancia de la buena fe es hoy en día de tal magnitud que ella es la base de un principio general de derecho, que incluso se ha llegado a calificar por la doctrina como “supremo” y “absoluto”, máxime que el principio de buena fe es utilizado como eje del sistema de obligaciones y contratos en la regulación de los contratos internacionales y en los proyectos de armonización legislativa que se han propuesto a lo largo del mundo, tal y como sucede en los PICC (art. 1.7). Ahora bien, estos principios, contribuyen a integrar el contenido contractual, con fundamento en que la confianza que debe presidir las relaciones jurídicas, le da legitimidad a las expectativas que cada parte se forma respecto del comportamiento de su contraparte durante la vida de una particular relación contractual.

Teniendo en cuenta el panorama que se ofrece al jurista sobre las distintas aplicaciones que en los PICC se realizan sobre la buena fe, y que nos indicarían que ésta, en todo caso, tiene su fundamento en la actitud o comportamiento honesto y recto del sujeto, resulta importante señalar que el orden jurídico y, particularmente, el orden jurídico privado, no está fundamentado en el “personalismo ético” sino que es imprescindible contar con un elemento ético-social, el cual se logra incorporar al ordenamiento por la vía de la buena fe.

Siguiendo a Karl Larenz en este punto, podemos señalar que la buena fe descansa en la consideración de que la convivencia social se conseguirá cuando la confianza que se deben dispensar las partes en una relación, no será defraudada sino, por el contrario, confirmada.

En todo caso, es conveniente reiterar que, por lo general, el concepto de buena fe no hace referencia a una percepción íntima que deba ser desentrañada de la conciencia de cada sujeto, sino que, por el contrario, la buena fe es susceptible de ser objetivada, de tal manera que el modelo de conducta ideal corresponda a unos parámetros socialmente aceptados.

La función del Abogado en la celebración de contratos internacionales –Responsabilidad Contractual-

En una sociedad basada en el respeto al Estado de Derecho, el Abogado cumple un papel esencial. Sus obligaciones no se limitan al fiel cumplimiento de lo encomendado por su cliente, entendiéndose que el mismo debe servir los intereses de la Justicia así como los derechos y libertades que se le han confiado para defenderlos y hacerlos valer. Su deber no consiste únicamente en abogar por la causa de su cliente sino igualmente, en ser su asesor; sin embargo, el abogado se encuentra sometido en su actuación profesional a diversos catálogos de conducta, entre los que se encuentra inicialmente su deontología jurídica que estudia en este caso, la debida actuación profesional del abogado, que deviene justa, obligatoria y, adecuada por sí misma.

Entendemos entonces que, Moral, Ética y Deontología Jurídica fluctúan en la búsqueda del deber ser profesional, teniendo como norte la especial misión que cumple el actor y/o estudioso del derecho: el respeto por la Justicia, traducida en su actuación con apego a los cuerpos normativos, sujeto a principios y deberes que guían el ejercicio de la profesión, sin embargo, el abogado como parte toral en la celebración de Contratos Internacionales, deberá de vigilar y hacer cumplir los cuerpos normativos, lo anterior, en el ánimo de pensar y/o evitar cualquier tipo de controversia que se pudiera suscitar por la celebración del mismo.

Sin embargo, la buena conducta o, en su caso, la buena fe en los actos que realizamos como operadores del Derecho, se tendrán que ver integrados en diversos catálogos deontológico-normativos, que nos indiquen los límites de nuestras actuaciones, ya que bajo la máxima jurídica de “*PERMITTIUR QUOD NON PROHIBETUR*”, nos vemos en la penosa necesidad de consagrar una serie de disposiciones por medio de las cuales se inspira la conducta profesional del abogado y se perfilan los lineamientos que guían la naturaleza de la relación jurídica del abogado como representante de una persona (física o jurídica) con su cliente comercial.

Pero a todo esto, nosotros como abogados, nosotros como partícipes del quehacer jurídico tendríamos que tener entre otras, la función social de colaborar con las autoridades en la conservación y perfeccionamiento del orden jurídico de cada uno de nuestros países, en la realización de una recta y cumplida administración de justicia, afirmándose como principal misión del abogado la defensa justa de los derechos de la sociedad y de los particulares, asesorando, asistiendo, patrocinando la ordenación y desenvolvimiento de las relaciones jurídicas interpersonales y, con el Estado.

Sin embargo, la doctrina y legislación comparadas acogen como principios deontológicos del abogado pautas de conducta relacionadas con su dignidad profesional: la independencia, la libertad y el decoro profesional y, las exigencias de orden ético, deontológico y normativo propias de la prestación de los servicios de abogado se reflejan en códigos nacionales o internacionales de ética profesional, es decir, estos catálogos nutren el escenario del actuar profesional, dentro de esa órbita en la que el derecho valora al ser humano en torno a principios de libertad y responsabilidad. Ello nos conduce a una conclusión anticipada: la conducta de quienes ejercen la profesión está gobernada, en primer lugar, por una serie de cánones que la sociedad espera y exige como conducta mínima de operadores de la justicia, en adelante, se concreta el entramado normativo que se impone a su actuar profesional, de conformidad con la naturaleza de la relación jurídica y su contenido prestacional, en el caso del ejercicio profesional particular; y de acuerdo con el ámbito de sus competencias, en el caso de servidores públicos.

Pero, con este conjunto de valores, principios y normas se inspira el bloque normativo que regula el ejercicio profesional del abogado, hasta concretar la tipología de sus obligaciones, como prevalentemente de medios, que determinan para el profesional la ejecución óptima de la prestación debida, como corresponde en especialidad. Con esa finalidad, sin que se comprometa ni garantice el resultado predeterminado, es posible esperar legítimamente determinadas conductas, toda vez que son preordenadas por la ley y que las actuaciones en pos de la justicia están reguladas mediante especialidades y vías procesales.

Por tanto, los actores del Derecho hemos instruido diversos cuerpos normativos que necesariamente nos tiene que “recordar” que debemos de actuar con ética profesional; entendiéndose que, no somos capaces de actuar de forma voluntaria para respetar el Estado de Derecho, sino que tenemos que supeditar nuestra actuación a Códigos que nos recuerden la existencia de la buena fe en la actividad de los juristas y, que del cumplimiento de nuestra obligación persistirá una correcta funcionalidad de las leyes. ¿Curioso, no?

## CONCLUSIONES

Expuesta la reflexión que se propuso, planteamos a modo de conclusión que la conducta de quienes ejercen la profesión de abogado, como profesional independiente o como representante de una persona jurídica, está gobernada, en primer lugar, por una serie de cánones que la sociedad espera y exige como conducta mínima de operadores de la justicia. El principio general de buena

fe se ha convertido en la piedra angular del derecho privado (internacional) moderno. Sus aplicaciones son variadas e, importantes los efectos que de ellas se derivan para la vida de la comunidad.

En el campo pactado destacamos la importante función que la buena fe cumple en la integración del contenido contractual, enriqueciendo el programa de derechos y deberes establecido por las partes, con otros derivados de la necesaria corrección y lealtad que debe presidir las relaciones entre particulares.

Sin embargo, a estas alturas no podemos confundir la norma jurídica con el mandamiento moral, debiéndose hacer mención que tampoco tendría por qué existir una distancia entre una y otra, ya que entendemos que existe un punto de conexión o simpatía entre ambos polos, de ahí que se haya asociado, la validez del derecho a la moral que con él se favorece, se pretende o se hace posible, de tal forma que, si los individuos estuviesen capacitados para aplicar a su vida cotidiana los principios morales que suscriben, entonces tendrían una obligación de aplicar tales principios en todas sus acciones –cualesquiera que sean–.

Asimismo, no hay que olvidar que los individuos no pueden imaginar o contemplar todas las consecuencias distributivas de cada curso de acción que deciden realizar y, justo es ahí en donde los cuerpos normativos hacen su aparición y regulan el actuar de las partes, es decir, necesariamente tienen que existir Leyes que “nos recuerden” que tenemos que actuar de buena fe o, en su caso, que nos indiquen los lineamientos o consecuencias jurídicas suscitadas por el no cumplimiento de una obligación. Por tanto, justificamos así la existencia del derecho contractual y, de la participación de los abogados para el correcto cumplimiento del mismo.

Otra corta reflexión sobre la responsabilidad contractual de las partes, es asumir las consecuencias de sus decisiones en la medida en que causen perjuicios a terceros y, en su caso, repararlos; lo anterior, se desprende de la idea de compromiso con la sociedad, entendiéndose que dicho compromiso no es una construcción propia de la modernidad, es una reflexión que el hombre ha perfeccionado con el tiempo, presentándose en diferentes manifiestos que de una u otra forma conducen a proteger, defender o amparar a todos nosotros como integrantes de la sociedad.

Por todo lo señalado a lo largo de éste trabajo, concluimos que, la ética y buena fe del abogado, debe converger con rectitud, honradez, nobleza, honestidad, lealtad, respeto y fraternidad con todos los partícipes del Derecho. En tal sentido, ser abogado no es saber el Derecho, sino conocer la vida. El derecho positivo está en los libros, pero lo que la vida reclama no está escrito en ninguna parte. Quien tenga previsión, serenidad, amplitud de miras y de sentimientos para advertirlo, será Abogado; quien no tenga más inspiración ni más guía que las leyes, será un desventurado mandadero.

## **RECONOCIMIENTO**

El autor agradece el apoyo brindado por la Benemérita Universidad Autónoma de Puebla, México. Asimismo, agradece los comentarios de los árbitros y editores del IBFR, los cuales contribuyeron a mejorar la calidad esta investigación.

# **RUTA SEDUCTORA HACIA LA CONVERGENCIA DIVULGACIÓN: NIIF PARA PYMES**

Aida R. Lozada Rivera, University de Puerto Rico

## **RESUMEN**

*Los esfuerzos por uniformar las normas de contabilidad han sido notables desde el 1973, con la creación del Comité Internacional de Normas Contables. En el 2001 se crea la Junta de Normas de Contabilidad Internacional (IASB, en inglés). Entidad que actualmente regula las Normas Internacionales de Información Financiera para las empresas públicas, NIIF completas. Estas, van dirigidas principalmente, a satisfacer las exigencias de los inversionistas en los mercados de valores internacionales. Sin embargo, existe otro sector que también exige divulgación estandarizada y de calidad. Los acreedores, gobierno y reguladores pertenecen al grupo de usuarios que necesitan información financiera uniforme, que les permita valorar las empresas, analizar la divulgación y tomar decisiones oportunamente. Para atender el reclamo de estos, en el 2009 la IASB, crea las NIIF para Pequeñas y Medianas Empresas (PYMES) o NIIF pequeñas. El principal atractivo para su adopción, es que poseen exigencias mínimas de implantación y divulgación. Es pertinente investigar si estos requisitos son un elemento seductor que motive a las empresas a adoptarlas. Se enfatiza en los requisitos de divulgación y se establece una comparación que evidencia la simplicidad en la aplicación de las NIIF pequeñas. La tendencia de adopción varía entre los continentes. Se abunda en las ventajas y desventajas de la adopción de las NIIF pequeñas. Se muestran estadísticas de adopción en los países. Se presentan ideas para futuras investigaciones y recomendaciones sobre la implantación de las normas.*

**PALABRAS CLAVES:** NIIF, PYMES, NIIF Completas, NIIF pequeñas, IASB

## **SEDUCTIVE ROUTE TOWARDS CONVERGENCE DISCLOSURE: IFRS FOR SMEs**

### **ABSTRACT**

*Efforts to standardize accounting standards have been relevant since 1973, with the creation of the International Accounting Standards Committee (IASC). International Accounting Standards Board (IASB) was created in 2001. This entity currently regulates the International Financial Reporting Standards for public companies or full IFRS. These are mainly aimed at satisfying the demands of investors in international stock markets. However, there is another sector that also requires standardized and quality reporting. Creditors, government and regulators belong to the group of users that need uniform financial information, enabling them to rating companies, analyze disclosure and make decisions. Addressing the claim of these, in 2009 the IASB, creates the IFRS for Small and Medium Enterprises (SMEs) or little IFRS. The main attraction for adoption is that they have minimum requirements for implementation and disclosure. It is pertinent to investigate whether these requirements are a seductive element that motivates companies to implement them. The study emphasized the disclosure requirements and a comparison that shows the simplicity in the application of the little IFRS. The trend of adoption varies between continents. The advantages and disadvantages of these rules are listed. The study presents statistics of adoption in the countries. In addition, are presented ideas for further academic research.*

**JEL:** M40

**KEYWORDS:** IFRS, IFRS for SMEs, Converge Route

## **INTRODUCCIÓN**

La globalización es un fenómeno que ha influido en todos los aspectos de una empresa. En términos contables esta, promueve la armonización de divulgación financiera, permitiendo brindar información comparable para facilitar su interpretación y análisis rápidamente. El flujo de información financiera es necesario para la integración de los países. El aumento de las empresas multinacionales (MNE, en inglés) ha generado un incremento en las transacciones comerciales internacionales. En el 2009 (United Nations World Investment Report, 2011) reportó alrededor de 82,000 MNE con más de 810,000 afiliadas en el exterior. Además, la Organización Mundial del Comercio (OMC) reportó 511 acuerdo, 319 están en vigor (World Trade Organization, 2013). Esto ha ocasionado un aumento en la cantidad de individuos que invierten local e internacionalmente que exigen información uniforme y oportuna (Del Valle et al., 2010). El intercambio de información es evidenciado en las distintas bolsas de valores alrededor del mundo, a junio de 2012, un promedio de 10,500 empresas domésticas y extranjeras habían cotizado en las bolsas de valores de América, 22,700 en Asia y 13,300 para el continente europeo y africano respectivamente (World Federation of Exchanges, 2012).

El intercambio de información lo generan principalmente las MNE, sin embargo, el sector de las PYMES es uno muy amplio, estas generan gran actividad comercial en los países (Pacter y Scott, 2012). La mayoría de las instituciones financieras hacen préstamos y operan en ámbito internacional. Las PYMES hacen uso de este servicio para adquirir capital. Las entidades financieras utilizan los informes contables para establecer los colaterales y las tasas de interés. Además las agencias de calificación crediticia internacionales, inversionistas y los proveedores buscan información financiera de las PYMES (IFRS, 2009). Los usuarios de los estados financieros de las PYMES han comenzado a demandar información más especializada. La IASB comenzó a atender este sector en el 2009 con la creación de las NIIF pequeñas, casi 4 décadas después que iniciara sus esfuerzos de uniformidad contable para las empresas que cotizan. La literatura contable dirige principalmente sus investigaciones a la divulgación que generan las empresas públicas. Por lo que la divulgación de las PYMES usando las NIIF no ha sido estudiada con amplitud. Este estudio presenta la divulgación requerida por la IASB a las PYMES y la compara con la requerida a empresas que cotizan, con el fin de presentar la simplicidad que representa la implantación y la divulgación de las NIIF pequeñas.

Los sistemas contables permiten el intercambio de información financiera entre los usuarios internacionales. El objetivo de estos es proveer una divulgación útil para la toma de decisiones. Las normas de contabilidad llevan más de un siglo generando información pertinente (AICPA, 2013). Esto le permite al usuario obtener información sobre una empresa. Mediante la identificación, medición y análisis, la empresa cumple con el objetivo de brindar información fidedigna y confiable. A través de los años, cada país ha establecido organismos contables que ha permitido establecer un sistema de comunicación efectivo entre las empresas y los usuarios. En el 1854 se crea el Instituto de Contadores de Escocia y en el 1880 el de Inglaterra, en Francia para el 1881, Austria en el 1885 y EE.UU en el 1887. Sin embargo, además de estos esfuerzos individuales ha sido necesaria una coordinación para la armonización contable global. La internacionalización de los mercados de valores, productos y servicios, además de los avances tecnológicos ha generado la necesidad de usar un sistema uniforme de contabilidad que permita

la divulgación financiera global. Con la creación de las NIIF pequeñas las PYMES se unen a los esfuerzos de convergencia contable a nivel mundial.

Los reclamos de armonización contable se han originado en distintos sectores. En el 1976 la Organización de las Naciones Unidas (ONU) propuso la creación de un grupo especialista en el tema de normas internacionales. Más adelante la Organización para la Cooperación y el Desarrollo Económico (OCDE), a través de un Grupo de Trabajo de Normas Contables publica en el 1979, prácticas contables en los países miembros que componían el grupo. La ley del 1996 (National Securities Markets Improvement Act - NSMIA) y la Organización Internacional de Comisiones de Valores (International Organization of Securities Commissions, IOSCO) promueven la convergencia, y su principal argumento es aumentar la eficiencia en el proceso de atraer capital (SEC, 2000). Las NIIF son utilizadas por más de 100 países en la actualidad (IFRS, 2012). Además, la IASB ha atendido las demandas de los acreedores y otros usuarios creando unas normas más simples y especializadas, dirigidas a atender las necesidades de los usuarios de la información de la PYMES.

Según Briciu, Groza y Ganfalean (2009) las PYMES se ven como el motor de la economía en diferentes países. Inglaterra posee 5 millones aproximadamente de las cuales el 99.6% poseen menos de 100 empleados, Brasil 6 millones. Chile posee 700,000 de las cuales el 1% posee ventas mayores de \$3 millones (Pacter y Scott, 2012). En el 2011, se estableció en EE.UU un récord de exportaciones con 302,000 empresas, de las cuales el 97% corresponde a las PYMES. Estas reportaron un 33% de las exportaciones en ese país (International Trade Administration, 2011). Para el 2010 del total del comercio en los países miembros de la Unión Europea (UE) el 55% (importaciones) y el 47% (exportaciones) corresponde a las PYMES, de 0 a 249 empleados, (European Commission, 2010). Para desarrollar un análisis adecuado, a continuación se presenta una revisión de la literatura relacionada a las NIIF completas y NIIF pequeñas.

## Fundamentos Teóricos y Revisión de Literatura

### Creación de las NIIF

Luego de la creación del IASC, más adelante en el 1977 se forman el Consejo del IASC con el propósito de aprobar las normas contables. En el 1981 surge el grupo consultor del IASC para proveer asesoramiento profesional. El comité tuvo vigencia hasta el 2001, para dar paso a la IASB cuya vigencia sigue actualmente. La IASC emitió las Normas Internacionales de Contabilidad, NIC y con la desaparición de este Comité, la IASB comienza a emitir las NIIF hasta el presente. Estas son un conjunto de normas basadas en principios que establecen guías generales y tratamientos en específico. Su composición es la siguiente: Normas Internacionales de Información Financiera (Normas después de 2001), Normas Internacionales de Contabilidad (Normas antes de 2001), Interpretaciones NIIF (Normas después de 2001), Interpretaciones de las NIC (Normas antes de 2001).

### Definición de las PYMES

Las PYMES difieren en tamaño, cantidad de ingresos, activos y número de empleados, principalmente. Estos pueden ser los indicadores para la definición de las PYMES, sin embargo, cada país define las PYMES de acuerdo a sus criterios ([http://pdf.usaid.gov/pdf\\_docs/PNADM845.pdf](http://pdf.usaid.gov/pdf_docs/PNADM845.pdf), Booklet for estadarized small and medium enterprise definition.). La IASB define las PYMES como entidades que no tienen responsabilidad pública y divulgan estados financieros de uso general. El objetivo de los estados

financieros con propósito de información general es brindar información sobre la posición financiera, el rendimiento y los flujos de efectivo que sea útil para la toma de decisiones a los usuarios que no exigen informes a la medida de sus necesidades específicas de información (IFRS, 2009).

### Aumento en PYMES

EE. UU. posee 27 millones de PYMES y en contraste solo 17,000 empresas están registradas en la Comisión de Valores e Intercambio (SEC, en inglés). Las PYMES representan el motor de la economía americana (Love, 2007). En la Unión Europea (UE) existen 21 millones de empresas públicas y privadas de las cuales solo 5 millones se les requieren el proceso de auditoría y la aplicación de las NIIF completas. Sin embargo, el 76% o 16 millones de empresas aplica las normas locales (Needles y Powers, 2013). De acuerdo con la IASB el 95% de las empresas de los países desarrollados y no desarrollados son elegibles para aplicar las NIIF pequeñas. Asimismo, en la actualidad algunas empresas han mostrado resistencia a la adopción, ya que entienden que estas normas exceden sus capacidades y necesidades. Además, de que no ayudan en el proceso de toma de decisiones de los acreedores. Sin embargo, la IASB expone que la simplicidad de las NIIF pequeñas en comparación con las NIIF completas y las US GAAP representan un atractivo para que los países le requieran a las empresas la aplicación de las NIIF pequeñas para propósitos estatutarios (Pacter y Scott, 2012).

### NIIF Para PYMES

La IASB atiende el reclamo de las PYMES y de los usuarios de su información. Estos exigen unas normas simples y de aplicación global (Vasek, 2011). En el 2007 la IASB emite un borrador o “Exposure Draft” luego de consultar a más de 100 PYMES en 20 países (Needles y Power, 2013). Más adelante en julio de 2009, cinco años más tarde de que comenzara el proceso en el 2004 con el “Discussion Paper” la IASB publicó la versión de las NIIF pequeñas. En el 2010 se crea el grupo de implantación de las NIIF para PYMES (SMEIG en inglés). En mayo de 2012 la Financial Accounting Foundation (FAF) de EE.UU. estableció el Private Company Council (PCC) con el objetivo de hacer recomendaciones a la FASB en el proceso de creación y revisión de las NIIF pequeñas. En la actualidad se han traducido a 26 idiomas. La IASB prohíbe a una entidad que cotiza la aplicación de las NIIF pequeñas. Además, lo prohíbe a las empresas que manejan activos de otra empresa en calidad de fiduciario, como los bancos, compañías de seguro y corretaje, fondos mutuos, entre otros.

Las NIIF pequeñas son una versión simplificada pero creada sobre la base y el marco conceptual de las NIIF completas. Están diseñadas específicamente para las PYMES y son de reconocimiento internacional. Para implantar las normas se le requiere a las empresas una declaración explícita de cumplimiento con las NIIF para PYMES. No obstante, según (Sanders et al., 2013) las empresas privadas en EE. UU. han sido lentas en el proceso de adopción, en gran parte debido a que todavía el Proyecto de Convergencia entre la IASB y la FASB no ha culminado. EE. UU. prohíbe el uso de las NIIF a empresas locales que cotizan, sin embargo, permite la aplicación de las NIIF pequeñas (PWC, 2012). La IASB desea fortalecer el ofrecimiento a los usuarios de las NIIF pequeñas y en junio de 2012 hace una consulta al público en busca de obtener la opinión de estos (IFRS, 2012). En junio 26 de 2012 la IASB publica “Request for Information Comprehensive Review of the IFRS for SME” como primer paso en la revisión desde que se emitieron en el 2009 (Mackenzie, et al., 2013).

### Objetivos de las NIIF Para PYMES

Los objetivos de la IASB al promover las NIIF pequeñas son: proveer unas normas simples que sean de utilidad solo a empresas privadas, crear uniformidad, hacer accesible normas de calidad a los distintos países, aumentar la calidad de la contabilidad en economías emergentes, permitir la movilidad de los profesionales de la contabilidad alrededor del mundo aplicando un solo formato contable, brindar estados financieros de uso general preparados a la medida para un sector en particular. Se resume la simplificación de las NIIF para PYMES en 2 categorías: eliminación y reducción de alternativas. La tabla 2 presenta una comparación de los temas que se requieren en la aplicación de las NIIF completas y NIIF pequeñas. De estas últimas, se excluye la divulgación de información, como lo es la divulgación de segmentos e información interina para las PYMES. Se reducen las opciones en métodos contables en la aplicación de las NIIF pequeñas. También se simplifica la medición y el reconocimiento de las transacciones contables y la presentación de los estados financieros en comparación con las NIIF completas.

### Debate Internacional

Para la IASB el tamaño de la empresa no es un factor determinante para aplicar las NIIF pequeñas. Todas las empresas que no cotizan, pueden adoptar las normas. Las subsidiarias pueden aplicar las NIIF pequeñas en sus estados financieros no consolidados. Además, la mayoría de las empresas registradas en las bolsas de valores internacionales poseen menos de 100 empleados (Sanders et al., 2013). El debate internacional dirige la discusión para que sea el gobierno de cada país y la entidad reguladora de normas local, quienes decidan qué empresa debe aplicar las NIIF pequeñas. Por otro lado, los usuarios de la información financiera de las PYMES argumentan que solo necesitan información a corto plazo sobre los flujos de efectivo y la solvencia. Por lo que aplicar las NIIF completas produce exceso de información que solo es de interés para los inversionistas de capital (Pacter, 2009). En Inglaterra hace una década que se aplican unas normas para las PYMES, Financial Reporting Standards for Smaller Entities (FRSSE), estas se han revisado en varias ocasiones, asimismo, en el 2009 se consideró adoptar las NIIF pequeñas, en la actualidad las normas locales es la opción más usada. (Mackenzie et al., 2013). Por otro lado, el estudio de Grant Thornton llevado a cabo en el 2009 en Australia, reflejó que el 83% de los encuestados se mostraron a favor de las NIIF pequeñas. Estos resultados no sorprenden ya que Australia fue uno de los primeros países en adoptar las NIIF completas.

Tabla 2: Comparación Parcial de Temas Entre NIIF Completas y NIIF Para PYMES

TEMA	NIIF COMPLETAS	NIIF PARA PYMES
Divulgación de Segmento	Requerido	Excluido
Divulgación Interina	Requerido	Excluido
Ganancia Por Acción	Requerido	Excluido
Activos para la venta	Requerido	Excluido
<b>OPCIONES: Elección en Método</b>		
Categorías de las Inversiones	Se mantiene igual	Se reducen
Inversiones: Opción de Valor en el Mercado	Se mantiene igual	Se elimina
Derivados	Se mantiene igual	Se elimina
Revaloraciones de Activos	Se permiten (varios métodos)	Se elimina
Subvenciones gubernamentales (algunas opciones)	Se mantiene igual	Se elimina
<b>SIMPLIFICACIÓN: Medición y Reconocimiento</b>		
Instrumentos Financieros:	Se mantiene igual	Se reducen las categorías
“HedgeAccounting” (cobertura)	Requerido	Se elimina
Menoscabo de Plusvalía (cuando aplique)	Se mantiene igual	Se simplifica
Investigación y Desarrollo	Una Porción se capitaliza	Se simplifica en gasto
Costos Iniciales “Borrowing	Capitalizables	Se simplifica en gasto

Planes de beneficio definido: no diferimiento	Se puede diferir	Se simplifica el cómputo de la obligación.
Adopción por primera vez	Se mantiene igual	Se reduce la información de años anteriores.
<b>PRESENTACION DE ESTADOS FINANCIEROS</b>		
Comparativos	Se permite formato interino	Un año de comparación
Divulgación	Todos los Estados Financieros	No existe el ingreso abarcador
Cambios en Patrimonio	Se mantiene igual	Se puede omitir

*Esta tabla presenta los temas, opciones, métodos y divulgación que se excluyen en las NIIF pequeñas. Se establece una comparación con los requisitos impuestos a las empresas públicas.*

### Motivaciones Para la Adopción

Las NIIF pequeñas mejoran la eficiencia de la distribución y el precio del capital. Esto beneficia a los proveedores de financiamiento a través de deuda y de capital y a los que buscan dicho capital. Esto porque se reducen los costos de cumplimiento y los riesgos asociados. Además, mejoran la coherencia en la calidad de las auditorías. Facilitan la educación contable y el adiestramiento profesional (IFRS, 2009).

Canadá ha expresado su positivismo de aceptar las NIIF pequeñas las cuales son unas normas de alta calidad (Seifert y Lindberg, 2010). Las NIIF pequeñas representan una opción más simple para sus usuarios. Las guías de las NIIF pequeñas contienen alrededor de 300 páginas en comparación con 3,700 de las NIIF completas (IFRS, 2013) y 15,000 páginas de codificación, 25,000 páginas de normas, interpretaciones, enmiendas y otros en comparación con los US GAAP (Miller 2010). Esto representa un elemento seductor para que las PYMES adopten las NIIF pequeñas por la simplicidad que estas representan. Para Neag, Masca y Pascan (2009) estas facilitan el proceso de evaluación de otras empresas. Pacter (2009) argumenta que las NIIF pequeñas mejoran la comparabilidad de la información financiera. Estas permiten además, que se generen sistemas informáticos estandarizados y consolidación de información simplificada. Para Meeks y Swann (2009) las normas uniformes reducen las barreras de entrada a otro país. Hail et al. (2010) concluye que los costos de evaluar las empresas con el propósito de invertir y hacer alianzas disminuyen. Needles y Powers (2013) concluyen que las ventajas de adopción incluyen que será más fácil para las empresas en crecimiento acceder a mercados internacionales en su búsqueda de oportunidades.

### Oposición Internacional

Love (2011) plantea que las empresas americanas no deben usar las NIIF pequeñas. Esto porque no se deben usar normas diferentes a las que utilizan las empresas que cotizan. Según el autor se generan problemas de aceptabilidad, comparabilidad y duplicidad de esfuerzos. Para (Sharp, 2009) las NIIF para PYMES no son la mejor opción en Inglaterra y otros países de Europa. El autor argumenta que en estos países, la intención es usar las NIIF pequeñas para las empresas grandes y medianas, (Non-publicly accountable entities) y mantener las empresas pequeñas usando las normas locales o los Financial Reporting Standards for Small Entities (FRSSE). Para Neag et al. (2009) la opción de utilizar las NIIF pequeñas no es nada simple ya que conlleva un proceso de adaptación. Heffes (2009) argumenta que la eliminación de ciertas alternativas que producen ventajas contributivas hace difícil la adopción por parte de las PYMES. En EE. UU. se plantea el hecho de que es necesario primero educar a los principales usuarios de los estados financieros y luego que se comiencen la aplicación de las NIIF pequeñas, Needles y Powers (2013). El proceso de adopción conlleva que las PYMES realicen cambios en la estructura del negocio y de estrategias. Además, de incurrir en costos iniciales de reconciliación de información y costos de adiestramiento. Estos cambios pueden resultar onerosos para las PYMES. Estas

deberán determinar cuál es el valor añadido que representan unirse a la convergencia de normas contables.

Globalmente 20 países le requieren a las PYMES que apliquen las NIIF. Venezuela ha impuesto algunas excepciones. En el Caribe 5 países requieren la aplicación. América Central y Sur 3 y 2 respectivamente. En el continente asiático 6 países. En Europa solo Serbia requiere su uso. En África se les requiere a 3 países, en Australia y Oceanía no se le requiere a ningún país. Además, a 30 países se les permite el uso de las NIIF pequeñas globalmente. De estos Costa Rica, Argentina, Bostwana y Kosovo han impuesto algunas excepciones. En América del Norte, Estado Unidos es el único país que permite el uso, en el Caribe 6 países, Centroamérica 3, y en América del Sur 3. En Europa 2 países. En el continente asiático 4 países permiten el uso, y las han adoptado sin excepciones. En África 11 países permiten el uso. Para el continente australiano y en Oceanía ningún país permite el uso.

Actualmente en América 20 países le requieren a las empresas la aplicación de las NIIF completas. El Salvador y Uruguay las requieren pero ciertas excepciones aplican. Permiten su uso Antigua y Barbuda, Bermuda e Islas Caimán. En Asia 23 países requieren el uso de las NIIF completas, *Uzbekistán* y Vietnam las requieren pero con excepciones. Hong Kong, India, Japón y Gaza permiten la aplicación. En África 16 países requieren la aplicación sin modificación alguna solo Libia y Marruecos permiten la aplicación. En Europa 39 países requieren la aplicación, Suiza ha impuesto algunas modificaciones, Isla de Man, Bosnia y Herzegovina permiten la aplicación. En el continente australiano y Oceanía solo 4 países lo requieren: Nueva Caledonia, Nueva Zelanda, Papúa Nueva Guinea y Australia.

## METODOLOGÍA

Según los directivos de la IASB, las NIIF pequeñas proveen beneficio a los usuarios, ya que estas proveen uniformidad y permiten mejor distribución de los recursos (IFRS, 2009). Asimismo, algunos países están experimentando con la aplicación de estas normas. Canadá es uno de los países que recientemente ha emigrado de las normas locales a las NIIF completas y pequeñas, esto porque le brindan mayor utilidad al usuario (Seifert y Lindberg, 2010). La IASB estima que existe un amplio mercado para la implantación de las NIIF pequeñas ya que la mayoría de las empresas de los países son elegibles para aplicarlas. Basado en estos planteamientos, se espera un aumento en la adopción de las NIIF pequeñas en los diferentes países alrededor del mundo.

*H1*: Ceteris paribus, los países que han adoptado las NIIF completas tienen una tendencia a adoptar las NIIF pequeñas en los distintos continentes. Para probar esta hipótesis se preparó la tabla 4, en la que resume las tendencias de los países a adoptar ambas normativas contables.

*H2*: Ceteris paribus, los requisitos de divulgación e implantación de las NIIF para PYMES son sustancialmente menor en comparación con las NIIF para empresas que cotizan. Para probar esta hipótesis se preparó la tabla 3, que compara los requisitos de aplicación y divulgación contable para las empresas públicas y las PYMES.

### Selección de la Muestra

El estudio consiste en revisar la literatura sobre la adopción de las NIIF y NIIF para PYMES en diferentes países. Además se utilizan las guías de implantación para las NIIF pequeñas creadas por la IASB. Se utiliza la *Lista de Comprobación de Información a Revelar y Presentar: NIIF para PYMES* y se preparará la tabla 3. La tabla compara diversos tópicos contables y su

aplicación usando las NIIF completas vs las NIIF pequeñas. Se presenta un análisis comparativo de los requerimientos de información a revelar. Además se explica porque las NIIF pequeñas representa una opción más sencilla que las NIIF completas. También, se prepara el Apéndice I, el mismo se preparó resumiendo el informe: *IFRS Adoption by Country, 2012* de la empresa de auditoría, PricewaterhouseCoopers (PWC). Se construyó el Apéndice en forma de tabla en donde se resume si los países de todos los continentes, le requieren (R) o le permiten (P) a sus empresas aplicar las NIIF completas y pequeñas. Se presentan los resultados en la tabla 4 por continentes. Además se generan estadísticas de los países que han adoptado ambas normativas.

### Estrategia de Recolección de Datos

La tabla 3 se preparó usando *Lista de Comprobación de Información a Revelar y Presentar: NIIF para PYMES*, publicada por la IASB. La lista es presentada en 35 secciones y provee información que comienzan con información relacionada a las PYMES y termina con la transición a las NIIF pequeñas.

La tabla 3 muestra como los requisitos entre ambos grupos de empresas difieren sustancialmente. La misma comienza definiendo ambos grupos de empresas. El contraste es significativo, la MNE deben someter estados financieros auditados, esperar por la aprobación de la Comisión de Valores e Intercambio Local, además, de mercadear sus acciones en las bolsas de valores internacionales, mientras que a las PYMES no les aplica. Los usuarios de las PYMES por lo general es un grupo local pequeño y especializado, mientras que para una MNE los usuarios son muchos e internacionales, la información que demandan estos varía de acuerdo a la empresa. Una empresa PYME someterá a las partes interesadas un grupo de estados directamente una vez al año o cuando sea solicitado. Sin embargo, los usuarios de una MNE exigen mayor cantidad de información constantemente. Además los usuarios de las empresas públicas cambian con regularidad. De igual forma las NIIF completas son actualizadas y modificadas constantemente. Es más fácil la adaptación de los usuarios de las NIIF pequeñas: contadores, gerencia, bancos y otros ya que estas normas se revisan de cada 3 años. En la presentación de los Estados Financieros una entidad cuyos estados cumplan con la *NIIF para las PYMES* efectuará en las notas, una declaración, sobre el cumplimiento con estas. Los estados financieros no deberán señalar que cumplen con la *NIIF para las PYMES* a menos que cumplan con todos los requerimientos. Luego de la adopción por primera vez de las NIIF para PYMES la empresa explicará cómo se afectó sus flujos de efectivo, su situación y rendimiento financiero al emigrar de su normativa contable a las NIIF para PYMES.

Tabla 3: Comprobación de Información a Presentar NIIF pequeñas vs NIIF completas

<b>NIIF: PYMES</b>	<b>NIIF: MNE</b>
<b><u>DEFINICIÓN</u></b> No hay obligación de rendir cuentas y publicar estados financieros de uso general. No es factible desarrollar pruebas de tamaño cuantificadas que sean aplicables y duraderas en muchos países.	<b><u>DEFINICIÓN</u></b> sus instrumentos de deuda o de patrimonio se negocian en un mercado público o están en proceso de emitir estos instrumentos para negociarse en un mercado de valores público. una de sus principales actividades es mantener activos en calidad de fiduciaria para un amplio grupo de terceros: bancos, las cooperativas de crédito, las compañías de seguros, los intermediarios de bolsa, los fondos de inversión y los bancos de inversión.
<b><u>USUARIOS</u></b> proveedores, banqueros y propietarios.	<b><u>USUARIOS</u></b> accionistas
<b><u>TIPO DE INFORMACIÓN SOLICITADA</u></b> Los usuarios de los estados financieros de las PYMES tienen interés en: los flujos de efectivo a corto plazo la liquidez y solvencia la cobertura de los intereses	<b><u>TIPO DE INFORMACIÓN SOLICITADA</u></b> Los usuarios de los estados financieros de las MNE públicas tienen interés en: los flujos de efectivo a largo plazo valor de la firma

<p><b><u>OBJETIVO DE LA DIVULGACIÓN</u></b> Proveer información general: los estados financieros se preparan sobre una base que está diseñada para brindar información útil a una amplia gama de usuarios que no están en condiciones de exigir informes a la medida de sus necesidades específicas de información.</p> <p><b><u>FORMA DE DIVULGAR</u></b> La entidad envía directamente sus estados financieros a los usuarios principales.</p> <p><b><u>GUIAS</u></b> 230 páginas aproximadamente</p> <p><b><u>REVISIONES DE LAS NORMAS</u></b> cada 3 años</p> <p><b><u>INFORMACION A REVELAR Y PRESENTAR</u></b> En la mayoría de los casos, la NIIF no especifica si la información a revelar debe incluirse dentro de los estados financieros o en las notas.</p> <p><b><u>Adopción por primera vez</u></b> La NIIF para las PYMES no requiere un estado de situación financiera al principio del primer periodo comparativo.</p> <p><b><u>Bases de elaboración y políticas contables</u></b> Los Estos estados financieros consolidados se han elaborado de acuerdo (NIIF para las PYMES) emitida por (IASB).</p> <p><b><u>PRESENTACIÓN, MEDICIÓN Y VALORACIÓN</u></b></p> <p><b><u>ACTIVOS</u></b> No existe la clasificación (separado para la venta)</p> <p><b><u>PROPIEDAD, PLANTA Y EQUIPO</u></b> Se anotan a costo menos la depreciación acumulada. No se permiten las revaloraciones.</p> <p><b><u>INTANGIBLES</u></b> Los activos de vida indefinida incluyendo la plusvalía se amortizan. (se utilizan 10 años si la empresa no tiene un estimado) No se permiten las revaloraciones de intangibles.</p>	<p><b><u>OBJETIVO DE LA DIVULGACIÓN</u></b> Proveer información que facilite la toma de decisiones. Además, permita estimar los flujos futuros de efectivo. Permita identificar los recursos y sus obligaciones y los cambios que estos sufren. Facilite el proceso de valorar la empresa.</p> <p><b><u>FORMA DE DIVULGAR</u></b> Publicación del Informe Anual.</p> <p><b><u>GUIAS</u></b> 2,500 páginas aproximadamente</p> <p><b><u>REVISIONES DE LAS NORMAS</u></b> anualmente</p> <p><b><u>INFORMACION A REVELAR Y PRESENTAR</u></b> NIC 1 Presentación de Estados NIC 24 Informaciones a Revelar sobre Partes Relacionadas NIC 32 Instrumentos Financieros: Presentación e Información a Revelar NIIF 7 Instrumentos Financieros: Información a Revelar</p> <p><b><u>Adopción por primera vez</u></b> NIIF 1 : Adopción, por Primera Vez, de las Normas Internacionales de Información Financiera</p> <p><b><u>Bases de elaboración y políticas contables</u></b> Los Estos estados financieros consolidados se han elaborado de acuerdo NIIF emitida por (IASB).</p> <p><b><u>PRESENTACIÓN, MEDICIÓN Y VALORACIÓN</u></b></p> <p><b><u>ACTIVOS</u></b> NIIF 5 Activos no Corrientes Mantenidos para la Venta y Operaciones Discontinuas medidos al menor entre el importe en libros y el valor razonable menos los costos de venta. ## RESULTADOS

*Metodología: Prueba de la H1:* La H1 sugiere que los países que han adoptado las NIIF completas tienen una tendencia a adoptar las NIIF pequeñas en los distintos continentes. La tabla 4 muestra los resultados del proceso de adopción por continente. Para analizar esta hipótesis se preparó una tabla 4, en la cual se presentan los países, clasificados por continente. Se recopiló la información mediante 3 preguntas las cuales se contestaron utilizando R= Requerido/ R\* = Requerido con algunas excepciones/ P= Permitido/ P\*= Permitido con algunas excepciones/ Pr= Prohibido/ N/A = No aplica.

*Hallazgos Para la Prueba H2:* En total 111 países aplican las NIIF completas, 50 países aplican las NIIF pequeñas ya sea porque se les requiere o se les permite. Cuando se comparan ambas cantidades resulta que cerca de la mitad de los países que le permiten el uso de las NIIF a las empresas que cotizan también le permiten lo mismo a las empresas privadas (50/11) 45%. El porcentaje de adopción es mayor en el continente americano 74%. De los 31 países en América 23 aplican las NIIF pequeñas. Por otro lado EE.UU. que aún se encuentra en el proceso de converger con las normas internacionales permite la aplicación de las NIIF pequeñas. En Asia de los 33 países en el estudio, 27 ó (81%) usan las NIIF completas y 10 usan las NIIF pequeñas, esto representa un 37% (10/27) cuando se compara con los países que aplican las NIIF completas. Prácticamente todos los países europeos usan las NIIF completas, y cerca del 100% prohíbe el uso de las NIIF pequeñas. Esta última tendencia se repite en Australia y Oceanía. En África 18 países de 33 (55%) usa las NIIF completas, el 78% (14/18) usa las NIIF pequeñas.

*Metodología: Prueba de la H2:* La H2 sugiere que los requisitos de divulgación e implantación de las NIIF para PYMES son sustancialmente menor en comparación con las NIIF para empresas que cotizan. La tabla 3 muestra la comparación de la aplicación contable de las NIIF para las MNE y las PYMES. Para analizar esta hipótesis se preparó la tabla 3 y se establece una comparación para ambos grupos de empresas. Las comparaciones incluyen: requisitos de divulgación, valoración de las diferentes partidas y tratamientos contables.

*Hallazgos para la Prueba H2:* Del análisis de la Tabla 3 se desprende que las alternativas para aplicar métodos se reducen significativamente. La NIIF 1 requiere que se reclasifiquen los componentes de los estados financieros reconocidos según las normas aplicadas anteriormente de acuerdo a las NIIF. La NIIF para PYMES no requiere un estado de situación financiera al principio del primer periodo comparativo. La NIIF 2 consiste en especificar la información financiera que ha de incluir una entidad cuando lleve a cabo una transacción con pagos basados en acciones, requiere que la entidad reconozca las transacciones con pagos basados en acciones en sus estados financieros. Se simplifica la alternativa para las PYMES ya que por lo general se contabiliza la transacción como transacción con pagos basados en acciones liquidadas en efectivo. La NIIF 5 adopta la clasificación de “mantenidos para la venta” e introduce el concepto de grupo de activos para su disposición. Se reducen las alternativas y en las NIIF pequeñas no existe la clasificación separados para la venta. NIIF 7 requiere a las entidades que, en sus estados financieros, revelen información que permita a los usuarios evaluar la relevancia de los instrumentos financieros en la situación financiera y en el rendimiento de la entidad y la naturaleza y alcance de los riesgos procedentes de los instrumentos financieros. La NIIF 10 establece los principios para la presentación y preparación de estados financieros consolidados cuando una entidad controla una o más entidades distintas. Otras normas han sido adaptadas para atender las necesidades de los usuarios de los estados financieros de las PYMES. Esto representa un atractivo para que los usuarios adopten las NIIF pequeñas. Esto concurre con Seifert y Lindberg (2010).

## IMPLICACIONES Y CONCLUSIONES

Esta investigación demostró que la ruta creada por la IASB parece seducir a los países para que requieran a las PYMES el uso de las NIIF pequeñas, el porcentaje de adopción se acerca a 50%. Esto es así cuando se comparan la aplicación de ambas normativas en los países del estudio. Los países de América, Asia y África muestran mayor inclinación a adoptar las normas. Se observa una tendencia de rechazo en los países europeos. El mercado potencial para las NIIF pequeñas es amplio especialmente en Europa el cual lleva 9 años aplicando las NIIF completas y en el cual todavía no se aplican las NIIF pequeñas.

Se desprende de la investigación que los métodos contables más complicados han sido eliminados para adaptarlos a las necesidades de los proveedores y evaluadores de crédito principalmente. La simplicidad que proveen estas normas les permite a los usuarios evaluar de una forma directa y los flujos de efectivo, la liquidez y solvencia de la empresa. A través de la investigación se concluye que las NIIF para PYMES representan un conjunto de normas de fácil aplicación. Además, su adopción conlleva menos requisitos de divulgación y aplicación contable que las NIIF para empresas públicas. Este estudio concuerda con Pacter y Scott (2012) que argumentan que el impacto y la acogida de las NIIF pequeñas es de gran importancia.

También las conclusiones de esta investigación son similares a las expresiones realizadas por los directivos de la IASB, los cuales concluyen que las NIIF pequeñas brindan uniformidad en la

divulgación. Los costos de educación y de implantación son elementos claves que las PYMES deben tener en consideración al implantar las NIIF. La uniformidad permitirá que se reduzcan las barreras de entrada a mercados internacionales lo que permitirá a las PYMES crear alianzas en otros países y obtener capital extranjero y otras oportunidades. El tema es amplio y genera implicaciones para los reguladores de normas ya que deberán tener en consideración múltiples exigencias globales. Los países deberán brindar apoyo a las empresas en la fase de adopción, lo que implica que deben contribuir con fondos y adiestramiento que ayude en la implantación. Con estos beneficios las PYMES enfrentan el cambio de una cultura local a una cultura globalizada. De esta manera comienza su verdadera ruta hacia la convergencia.

*Contribuciones:* Esta investigación contribuye a la literatura de la contabilidad realizando una comparación en la divulgación de las NIIF pequeñas y las NIIF completas. Además, provee estadísticas de los países que han adoptado ambas normas. El estudio sirve de referencia a las PYMES que desean aplicar las NIIF. Se les resumen los requisitos de implantación contable y se les brinda una explicación pertinente que sirve de guía. El estudio es útil a la academia ya que mediante la comparación de los requisitos de ambas normativas se puede estudiar las ventajas y desventajas de estas. Además permite generar discusiones entre profesores y alumnos con el fin de analizar las implicaciones económicas de la aplicación de las NIIF en diferentes países. Para los profesionales de la contabilidad y otros sectores el estudio le permite actualizar los temas sobre este particular.

*Sugerencias para investigaciones futuras:* En estudios futuros se pueden analizar el impacto socioeconómico de la adopción de las NIIF pequeñas en diferentes países. El estudio puede realizarse a nivel país “country level” y determinar cuántas PYMES han adoptado las normas. Se sugiere hacer el estudio a nivel de empresa “firm level” y medir las implicaciones de la implantación en el ingreso neto. También se puede estudiar los costos asociados a la adopción. Una comparación entre las normas locales de los países y las NIIF para PYMES permitirá comparar las cifras en los estados financieros. Mediante una muestra en diversos países y la aplicación de un instrumento se puede investigar cuántas empresas se han internacionalizado o tiene planes luego de la adopción de las NIIF pequeñas.
