# COMPETITIVE INTELLIGENCE FRAMEWORK FOR PRODUCT DEVELOPMENT: AN ANTIDOTE TO MANUFACTURERS' PENETRATION OF NIGERIAN CONSUMER MARKET

Iyke C. Agboh, Federal College of Education, Eha-Amufu, Enugu State, Nigeria

## ABSTRACT

*The purpose of this work was to identify the competitive intelligence framework needed to develop and launch a product successfully in Nigeria consumer market. Three research questions were developed in line with the major purpose of the study. The study tested two null hypotheses at 0.05 level of significance. It adopted a research and development design. The population for the study consisted of 242 research and development and marketing managers of 121 Manufacturing companies registered with Manufacturers Association of Nigeria. A total of 228 copies of the questionnaire out of 242 administered were returned and used for analysis. Frequency and mean statistics were used to answer the research questions, while t-test statistic was used in testing the two hypotheses. It was found that competitive intelligence framework for idea generation was a major requirement needed by manufacturers to successfully launch their new products in the market. It was concluded that successful launching of product in Nigeria consumer market required manufacturers to continually monitor and analyze external influences that affect consumer choice, consumer needs and expectations. The author recommends competitive intelligence framework for product development as a guide to successful launching of new product in Nigeria consumer market.*

**JEL: M3**

**KEYWORDS:** Competitive Intelligence, Competitive Intelligence Framework, Product Development, Manufacturer, And Consumer Market

## INTRODUCTION

Competitive intelligence (CI) is the knowledge one develops about a company's external operating environment which aids competitive advantage. Prior (2008) defined CI as a systematic and ethical program for gathering, analyzing and managing any combination of data, information and knowledge concerning the business environment in which a company operates, and which when acted upon will confer a significant competitive advantage for sound decision. The aim of CI is the provision of warning signals for opportunities and threats in an evolving business landscape and to evaluate their impacts. The evaluation of these impacts aids the dictation of competitive threats, elimination or reducing of surprises, enhancing competitive advantages and finding new opportunities. Unlike business intelligence, CI is analytical thus requires human effort to extract the implications of the generated information. In other words, CI is not only concerned with electronic transformation of data/information, but requires that such data be processed, synthesized and merged with personal experience, collective expertise and knowledge gathered through contacts (Gross, 2000). A structure or system which collates, processes, and synthesizes electronic generated information with human experience of a company's external environment for competitive advantage is referred to as Competitive Intelligence Framework (CIF).

However, product development refers to the whole process of bringing a new product or service to bear - to the knowledge of the consumer thereby gaining her patronage. Dougherty (2007) defined product development as the whole process of bringing a new product or service to the market, and which includes product conceptualization, design and development, production or operationalization, marketing,

distribution, and selling. Rainey (2006) opined, product development is the over-arching management framework for making incremental changes and improvements to products, services, and processes that runs the gamut from improving existing products to discovering entirely new ways of satisfying customers and stakeholders. Though the angle the definition may be taken, the development of a product is never complete until it gets to the final consumer. Thus, the aim of developing an intelligence framework for a product is to gain competitive advantage. That is, such advantage which will enable a manufacturer's product to outweigh that of other competitors' products in gaining consumer patronage.

Every manufacturer targets the consumer market which in most cases has several likes of the brand of goods or services the manufacturer intends to launch. It then becomes increasingly necessary that the manufacturer develop strategies to enable it stay competitive. Kim and Mauborgne (2005) opined that competition has been at the heart of corporate strategy in the last few decades that manufacturers who intends to launch a product in the market can hardly discuss its strategies without putting competitors first. Though competitors are vital threat to focus, other factors as stakeholders (regulators), related industry and external infrastructure, suppliers, distributors, available technology (internet), and the consumer, equally influences the competitiveness and survival of the manufacturer, especially today that the whole world has formed a global village due to Information and Communications Technology (ICT). As a result of ICT, customers are presently more informed and have started evaluating the products and services of manufacturers based on convenience and comfort. Consequently, any manufacturer who delves into production without detailed intelligence study of the external environment of operation, market, technology, customers and competitor is likely to fail.

In Nigeria like most other developing nations of the world, available research findings showed that over 70% of their manufacturers do not conduct meaningful research before commencing the actual production. Manufacturers Association of Nigeria (2012) classified the state of the Nigerian manufacturing companies as 30% closed down, 60% ailing and 10% operating at a sustainable level, and attributed this poor state of the manufacturing sub-sector to poor evaluation of the business environment before engaging in actual production. Eneh (2011) observed that 97.6% of Nigerian Industrial and Manufacturing sub-sectors are made up of Micro-cottage, Small and Medium Scale Enterprises (MSMSE's), and that 3 out of 4 of these firms fail every year; while 9 out of 10 prospective entrepreneurs fail to venture into the business. This precarious situation is suggestive of the fact that Nigerian manufacturers do join the business without proper research and development though the high competitive nature of today's business environment. Owing to these problems facing Nigerian manufacturers, this study seeks to determine CIF required by manufacturers for product development and successful penetration of Nigerian consumer market. Specifically, the study determined:

- CI required by manufacturers to obtain data for product development;
- CI required by manufacturers to evaluate the data obtained for product development;
- CI required by manufacturers for successful product launch in Nigeria consumer market.

In the process of analysis, two null hypotheses were formulated for the study, thus:

- Ho<sub>1</sub>: There is no significant difference in the mean responses of Research and Development (R&D) managers and marketing managers on the CI required by manufacturers to obtain data for product development.
- Ho<sub>2</sub>: There is no significant difference in the mean responses of the R&D and marketing managers on the CI required by manufacturers to evaluate data obtained for product development.

## LITERATURE REVIEW

Evidence from literature shows an agreement that CI is the study of the entire business external environment, the opportunities and threats, future events that may impact on performance, competitors and their future plans and strategies, all targeted at eliminating or lessening surprises that will impede the company's competitive advantage (Prior, 2008; Gross, 2000; Johnson, 2000; Richards, 2005; and Global Intelligence Alliance {GIA}, 2004). The result of CI is the understanding of customers' needs as a prelude to producing highly competitive product (Rainey, 2006; and Kotler and Armstrong, 2008). Bhuiyan (2011) observed that successful businesses are those with a dedication towards the voice of the customer. Richards (2005) argued that, since the majority of new product opportunities are market driven, that it makes sense to put customers first while generating data for product development.

Product development process according to Rainey (2006) has four major stages, namely: idea generation and screening, concept development and selection, product design and development, and pre-commercialization and launch. A structure that portends intelligence generation of competitive driven data at each level of the product developmental stage is what is referred to as CIF (Shapira-aronovic, 2008; Berg, 2004; Bhuiyan, 2011; and Rainey, 2006). Shapira-aronovic (2008) categorized CIF into five major competitive activities, namely: Market Intelligence, Partner Intelligence, Competitor Intelligence, Technical Intelligence, and Customer Prospect Intelligence. Porter (1980) developed a competitive framework for analyzing industry's or companies competitive strategy. This strategy is referred to as Porter's five forces competitive model. The five-force competitive model was developed by Michael Porter in 1980, and has remained an important tool for analyzing an organization's industry structure in strategic process. It is based on the assumption that corporate strategy should meet the opportunities and threats in the external environment which was divided into five categories, namely: buyer's power, the supplier's power, threat of New, threat of substitute, and competitive rivalry. Proper analysis of the five-force competitive model avails a company the opportunity of developing a competitive intelligence strategy or framework for penetrating the consumer market.

The competitive intelligence framework for penetrating consumer market according to Rainey (2006) are classified under CI required for idea generation and product innovation, CI required for product development, and CI required for product launch. Idea generation according to Rainey represents the beginning of the competitive intelligence process. Bhuiyan (2011) sees idea generation as the conceiving, development, maturation and birth of a concrete idea from which the company can select the most feasible and promising ones. Berg (2004) reported that one brain storming session for a prudential insurance company came up with 1,500 ideas and only 12 were considered useable. The implication is that a greater chance of finding a successful new product idea partly depends on the number of ideas that such a company was able to generate. Bhuiyan argued that for the identified ideas to be meaningful, it must be described in a standard form so that they can be assessed by New Product Committee.

According to Toubia and Flores (2007), the New Product Committee reviews the new product against the following set criteria: does the product meet a need?; would it offer superior value?; can it be distinctively advertised?; does the company have the necessary knowhow and capital?; and would the new product deliver the expected sales volume, growth and profit? This review aims at understanding the manufacturer, the competitor, and the customer in order to develop a highly competitive and successful product. The theory which this study is based was the Sun Tzu Theory of War of the 500 BC. The theory postulates that, if one knows the enemy and oneself; in a hundred battles, he will never be in peril. When one is ignorant of the enemy but knows oneself, the chances of winning and losing are made equal. But, if one is ignorant of both the enemy and oneself, you are certain in every of such battle to be in peril. Thus, prior knowledge of a company, the company's competitors and her customers is seen as the first mark of product

development success, and cannot be achieved through any other means than CIF for product development. This theory is replicated in all the empirical studies reviewed in this work.

Fred (2001) conducted a study on CI activities among small firms. The findings of the study revealed that the inability of small organizations to conduct intelligence gathering on competitors before commencing business has hampered their successes. It also revealed that lack of formal process of sharing information, lack of resources and inability to generate information prevented small organizations from performing better intelligence gathering and analysis.

Gordon, Musso, Rebentisch and Gupta (2009) investigated the path to successful new product development. The purpose of their study was to find out why businesses with the best new product development track records more success than their peers. The study revealed that businesses with the best product-development track records do three things better than their less successful peers, namely: creating a clear sense of project goals at the beginning of the new product development; nurturing a strong project culture in their workplace; and maintaining close contact with customers throughout a product's duration.

Pugh (1996) found that Research and Development and Engineering staff can provide insights about the competitor's design by tearing the product down to its basic components and using the concept of "reverse engineering" to discover the product's design, characteristics, functionality, cost structure and even improve upon it. Rainey (2006) in her work observed that continuous changes in the business environment create new opportunities and such changes have to be monitored and identified as sources of new product ideas. Rainey's study also revealed that in generating new product ideas, the new product development team needs to identify their competitors' current products and future product plans as a standpoint for future product improvement. Global Intelligence Alliance (2012) emphasized that, to gain sustained competitive advantage, there is the need to secure partnership with the product suppliers and distributors at the product development phase, to understand the supply and distribution network capacity to support the new product. From the foregoing review of literature and related empirical studies, the researcher developed the below CIF for product development for Nigerian manufacturers' penetration of the consumer market:

## METHODOLOGY

A Research and Development (R&D) design was considered the most suitable approach to this study in view of the nature of the problem being investigated. This design was adopted as the study is meant to discover new knowledge to meet specified standard. Gall, Gall and Borg (2007) viewed that, the primary purpose of R&D design is to discover new knowledge and bridge the gap that frequently exist between educational research and practice. A structured questionnaire was used for data gathering. The questionnaire was divided into four sections. Section A captured personal and demographic information regarding the manufacturing company and the respondents – the R&D and Marketing managers. Section B captured information on CI required for idea generation. Section C sought to identify the CI required to evaluate obtained data for product development; while section D captured information on the CI required for product launch. The last three sections used a five point Likert Scale battery where respondents were asked to indicate the extent to which they agree or disagree with the various item statements. The five point Likert's Scale having the ratings of between "strongly agree" (5) and "strongly disagree" (1) were used.

### Data Collection

The study sample consisted of 242 R&D and Marketing managers selected from the 121 Manufacturing Companies in Anambra State, Nigeria, that registered with Manufacturing Association of Nigeria (MAN). The study area was imperative because of the high concentration of manufacturers and industrialists in the State. Out of the 242 questionnaires administered on 242 respondents, 168 representing 69.42% were

returned and used for the analysis. Data was collected over a period of three months, commencing from the third week of August to second week of November, 2013. Statistical Package for Social Sciences (SPSS) version 17.0 was used as the statistical analysis tool, while descriptive statistics were computed and used in the interpretation of findings.

### Analysis and Interpretation of Results

Factor analysis was performed with 30 statements related to critical success factors on CIF for product development. The Kaiser-Meyer-Olkin (KMO) measure of sample adequacy was .679 and significant. Bartlett's Test of Sphericity supported the use of factor analysis in order to extract independent variables associated with product development. The degree of common variance among the thirty variables is "mediocre" which reflects fair but not substantial amount of variance. The instrument was therefore considered reliable.

Question 1: What are the CIs required by manufacturers to obtain data for product development?

From Table 1, the mean score of all the 10 items ranged from 4.08 to 4.44 above the cut-off point of 3.50 implying that all the items were ways of generating data for product development. The standard deviation of items also ranged from 0.76 to 0.91, indicating that the mean scores were not far from the mean, and that the respondents have similar opinion. The t-test analysis presented in Table 2 shows that t-calculated value of 1.57 is less than the t-critical or table value of 1.96 at  $p = 0.05$  level of significance, indicating a no significance difference to the mean responses of the R&D and marketing managers on the CI required for idea generation for product development.

Question 2: What are the CIs required by manufacturers to evaluate the obtained data for product development?

In Table 3, the mean ratings of the respondents for the 13 items ranged between 4.01 and 4.27, which were all above the cut-off point of 3.50. This implies that all the item statements were accepted by the respondents as competitive intelligence required in product development in order to penetrate Nigerian consumer market. The standard deviation ranged from 0.88 to 0.97, indicating that the opinion of the respondents was similar. The t-test analysis presented in table 4 showed that t-calculated value of 2.51 is higher than t-critical value of 1.96 at  $p = 0.05$  level of significance. This indicates a significant difference in the mean responses of R&D and marketing managers on the CI required to evaluate the obtained data for product development. Therefore the null hypothesis of no significant difference for hypothesis 2 is rejected.

Question 3: What are the CIs required by manufacturers in launching a new product in Nigerian consumer market?

From Table 5, it could be deduced that all the 12 CI items were required in new product launch as the respondents mean scores were ranged between 4.04 and 4.51 and above the cut-off point of 3.50. The standard deviation of the mean scores of the item in Table 5 ranged from 0.88 to 1.00, indicating that the mean scores were not far from the mean and that the respondents had similar opinion on CI required for product launch in Nigerian consumer market.

## **DISCUSSION**

The study indicated that consumer related forces play a vital role in identifying new product opportunities. This conclusion was supported by Kotler and Armstrong (2009) which equally stated that the greatest

opportunities and highest leverage with new products are found by uncovering the best possible set of unmet customer and stakeholders' needs and expectations. The study also discovered that in generating new ideas, that there is the need for consumer goods manufacturers to understand the stakeholders' requirements and expectations as well as the innovations in technology. That is, significant changes in the business environment especially with regards to regulatory agencies and other laws; should form a source for new ideas. Rainey (2006) opined that continuous changes in the business environment create new opportunities and such changes have to be monitored and identified as sources of new product ideas. The study also revealed that in generating new product ideas, the new product development team needs to identify their competitors' current products and future product plans. This finding conforms to that of Pugh (1996) which found that Research and Development and Engineering staff can provide insights about the competitor's design by tearing the product down to its basic components and using the concept of "reverse engineering" to discover the product's design, characteristics, functionality, cost structure and even improve upon it.

In terms of competitive intelligence required in product development Rainey (2006) said that if discrepancies or changes in the business environment develop during the new product development program, that the product design process and overall development of the product need to be modified to accommodate the new conditions. The present study indicate that the new product team need to continuously monitor the environment in order to develop new products that are based on market realities for easy marketability. The study also found the need for the new product development team to know the available sales channels, the suitability of such channel, as well as the available suppliers and their financial capability in keeping pace with the expected supply needs. These findings agree with that of Global Intelligence Alliance (2012), which emphasizes the need to secure partnership with the product suppliers and distributors at the product development phase, to understand the supply and distribution network capacity to support the new product.

Finally, the study showed that it is necessary to find out if there are any recent significant changes in customer needs and wants, also the stakeholders' expectations and requirements while preparing to launch the new product in the market. It also advocate the need to find out any shift or shifts in existing external barriers that could make success difficult. This is important because no matter how fast a new product is developed in line with the current trend, it is possible for change to occur between the time of conceptualization and the development phases. However, Gordon, Musso, Rebentisch and Gupta (2009) contrarily reported that creating a clear sense of product's goal at the beginning of the new product development will always place a product above that of its peers. Consequently, though finding out the changes that may have occurred in the business environment during the process of development of the product before its launch is important, the most vital phase is the development and generation of ideas to develop a needed product.

## CONCLUSION

The author concludes that successful product development and launch in Nigeria consumer market require that prospective manufacturers conduct a detailed CI research on the intending company's operating environment. It equally require manufacturers to continually monitor and analyze external influences that affect consumer choice, consumer needs and expectations; also obtain and analyze relevant data on competitors strategies, strengths and weaknesses. These will aid the development of a product based on realities of the time, thus promote sustained competitive advantage.

## APPENDIX

Table 1: Mean ratings and Standard deviations of Respondents on Competitive Intelligence Required by Manufacturers to Obtain Data for Product Development

S/N	Item Statement	$\bar{X}$	SD	Remark
1	Knowledge of customers likes and dislikes in competitors' products	4.20	0.85	Agree
2	Knowledge of competitors distribution channels and market coverage	4.44	0.76	Agree
3	Knowledge of competitors promotion channels and program	4.13	0.77	Agree
4	Knowledge of competitors industry reactionary pattern to new product	4.13	0.77	Agree
5	Knowledge of competitors industry reaction pattern to price cut and price war	4.10	0.87	Agree
6	Knowledge of deficiencies of existing competitors products	4.19	0.88	Agree
7	Knowledge of unmet customer needs and wants	4.20	0.85	Agree
8	Knowledge of regulatory agencies regulations and laws	4.08	0.91	Agree
9	Knowledge of competitors future product production plans	4.14	0.89	Agree
10	Knowledge of innovations in technology	4.08	0.92	Agree

# EVIDENCE THAT TRAVEL PRODUCT KNOWLEDGE INCLUDES FAMILIARITY WITH TRAVEL PRODUCTS AND DESTINATIONS

Michael Conyette, Okanagan College

## ABSTRACT

*Prior product knowledge has been defined either in terms of what people perceive they know about a product or in terms of what knowledge the individual has stored in memory. Product knowledge is intricately linked to involvement. A consumer's level of involvement and knowledge clearly influence many purchasing decisions. The knowledge deficit regarding these factors is that no studies can be found that evaluate online travel planning in the leisure sector with regards to consumers' travel knowledge. A valid question to ask for instance is what constitutes travel product knowledge? Qualitative research discovered that respondents used the terms 'travel products' and 'travel destinations' interchangeably when referring to their knowledge of travel. To examine travel knowledge more closely, a survey was designed including six questions about travel knowledge with some questions referring to 'products' and others to 'destinations'. Confirmatory factor analysis of the construct travel product knowledge was used to assess the underlying variable that is reflected when respondents refer to knowledge of travel products and destinations.*

**JEL:** M31, D10, D81, D83

**KEYWORDS:** Decision Process, Factor Analysis, Leisure Travel, Product Knowledge, Travel Products

## INTRODUCTION

Studies on product knowledge revolve around comparisons of expert versus novice consumers, how they vary in their information search behavior, their differing priorities and attitudes to advertisements (Chuang, Tsai, Cheng, & Sun, 2009; Hadar, Sood, & Fox, 2013; Myungwoo, Jing, & Lee, 2012). The role of memory in knowledge acquisition, a means-end chain in forming personal relevance, and the interconnections of involvement are other concepts frequently discussed in further research papers (Long-Yi & Chun-Shuo, 2006; Clarkson, Janiszewski, & Cinelli, 2013). Despite these investigations, very few studies examine online travel planning in the leisure sector and none can be found with regards to consumers' travel product knowledge in particular. In this paper, the author uses factor analysis of the construct travel knowledge to establish that respondents equate knowledge about travel products with knowledge about destinations. This appears to be a unique contribution to the field of travel research. The next section of this paper describes some relevant literature, followed by a discussion of the data and methodology used in the study. The results are presented and the paper closes with concluding remarks.

## LITERATURE REVIEW

Clarkson, Janiszewski, & Cinelli (2013) found that novice consumers usually have no prior consumption experience in a product category and consequently have little knowledge about the array or range of experiences available within a domain. Expert consumers on the other hand should already have fairly broad consumption knowledge and therefore should prefer to enhance their depth of consumption knowledge in a product category. Researchers conducted several experiments to demonstrate that

consumers try novel consumption experiences to build their experiential consumption knowledge, knowledge they believe will enhance their appreciation of future consumption experiences. Novice consumers selected consumption experiences that provided valuable breadth consumption knowledge whereas expert consumers chose consumption experiences that provided depth consumption knowledge.

Jensen, J. (2012) conducted an Internet survey based on a questionnaire about travel purchases. Travel experience was shown to be the main predictor of online travel shopping (search and purchase). Travel experience acts directly through its influence on the traveler's perceived risk of online purchasing and indirectly through its influence on a traveler's orientation toward personalizing the travel product. Data analysis shows that more experienced travelers need less information before buying their vacation. Furthermore, the high-experienced traveler is more interested in personalizing the travel product, perceives less risk in doing so, and they are more likely to be a frequent traveler.

Prior product knowledge has been defined either in terms of what people perceive they know about a product (subjective knowledge) or in terms of what knowledge the individual has stored in memory (objective knowledge) (Brucks, 1985; Rao and Munroe 1988). Past studies reveal that knowledgeable consumers are more likely to search for new information before making a decision (Duncan & Olchavsky, 1982; Johnson & Russo, 1984; Punj & Stalein, 1983). Less knowledgeable consumers are more likely to rely on attributes such as brand name, price (Park & Lessig, 1981) or opinions of others (Brucks, 1985; Furse, Punj and Stewart, 1984). Consumers can combine the three types of product knowledge to form a simple associative network called a means-end chain (Guttman, 1982). A means-end chain typically links consumers' knowledge about product attributes with their knowledge about consequences and values. The means-end chain model proposes that the meaning of a product attribute is given by its perceived consequences (Mehrotra & Palmer, 1985). Means-end chains help marketers understand consumers' feelings of personal relevance for a product because they clearly show how consumers' product knowledge is related to their knowledge about self (Walker & Olson, 1991).

The type of means-end knowledge activated in the situation determines the level of product involvement a consumer experiences during decision-making. Consumers will feel more involved with the product if they believe product attributes are strongly linked to important end goals or values. Consumers who experience little or no involvement with the product believe the product attributes are not associated with any relevant consequences. Involvement refers to consumers' perceptions of importance or personal relevance for an object, event, or activity (Krugman, 1965). Involvement is a motivational state that energizes and directs consumers' cognitive and affective processes and behaviors as they make decisions (Cohen, 1982). Involvement has also been referred to as an internal state variable that indicates the amount of arousal, interest, or drive invoked by a particular stimulus or situation (Andrews, Durvasula, and Akhter, 1990). Consumers who perceive that a product has personally relevant consequences are said to be involved with a product and have a personal relationship with it. Cognitively, involvement includes the means and knowledge about important consequences produced by using the product.

People may express stronger affective responses such as emotions and strong feelings if product involvement is high. Highly involved consumers constantly collect information about a product of interest (Bei & Widdows, 1999). A person's level of involvement is influenced by two sources of self-relevance: intrinsic and situational. Intrinsic self-relevance is based on consumers' means-end knowledge stored in memory (Block, 1982). As consumers use a product or observe others using it they learn that certain product attributes have consequences that help achieve important goals and values. Because this means-end knowledge is stored in memory, it is a potential intrinsic source of involvement. If this involvement is activated in a decision situation, the consumer would experience feelings of personal relevance or involvement with the product. Aspects of the immediate physical and social environment that activate

important consequences and values, determine situational relevance thus making products and brands seem self-relevant.

A key to good marketing management comes from understanding a consumer-product relationship and when marketers understand this relationship they will be able to segment the market accordingly. Different marketing strategies are necessary to address the unique types of product knowledge, intrinsic self-relevance, and involvement of consumers in different market segments. A consumer's level of involvement and knowledge clearly influence all purchasing decisions. The knowledge deficit regarding these factors is that none of the studies on these topics evaluate online travel planning in the leisure sector. Neither do they assess the construct of travel product knowledge to determine whether people equate knowledge about travel products with knowledge about destinations.

## DATA AND METHODOLOGY

Qualitative research with focus groups, personal interviews, and case studies revealed that respondents used the terms 'travel products' (hotels, airlines, cruises, tours, etc.) and 'travel destinations' interchangeably when referring to their knowledge of travel (Conyette, 2010). To confirm whether this is the impression consumers have of travel knowledge, data was collected using an online questionnaire to test the construct of travel product knowledge and determine if respondents were referring to the same thing. A common approach for data reduction is the factor analysis method that seeks to determine the underlying unobservable (latent) variables that are reflected in the observed (manifest) variables. In designing a survey questionnaire to examine the factors influencing online travel purchasing behavior, questions about travel knowledge referred to 'products' and then also to 'destinations'. Confirmatory factor analysis of six Likert scale questions from the questionnaire using the data gathered from 1198 respondents was performed with SPSS. The six travel knowledge questions from the survey are shown in Table 2 below. Table 1 and Figure 1 also show components resulting from factor analysis.

For a product class knowledge scale, three items from Park, Mothersbaugh & Feick (1994) were used on a 7-point Likert scale ranging from very familiar to very unfamiliar. Some items were merged due to the low number of responses in that category. Merging categories is sometimes done to more evenly distribute data so that it reflects a meaningful distinction between categories in practical terms. Categories in the other variables were unchanged. Thus, the first two 'knowledge' questions - How much do you feel you know about travel products? And compared to your friends and acquaintances? used five categories 1= very familiar, 2=familiar, 3=a little familiar, 4=neutral, 5=a little unfamiliar. The third knowledge question (comparing to a travel agent) kept all seven categories, 1= very familiar, 2=familiar, 3=a little familiar, 4=neutral, 5=a little unfamiliar, 6=unfamiliar, 7=very unfamiliar.

Table 1: Total Variance Explained

Initial Eigenvalues		
Total	% of Variance	Cumulative %
4.320	71.995	71.995
.637	10.617	82.612
.468	7.792	90.404
.272	4.534	94.938
.175	2.921	97.859
.128	2.141	100.000

*This table shows Extraction Method: Principal Component Analysis.*

Figure 1: Scree Plot

*This figure shows one dominant component.*

Table 2: Component Matrix<sup>a</sup>

	Component
	1
Compared to your friends and acquaintances, how much do you feel you know about travel destinations?	.873
Compared to a travel agent, how much do you feel you know about travel products?	.865
Compared to a travel agent, how much do you feel you know about travel destinations?	.863
Compared to your friends and acquaintances, how much do you feel you know about travel products?	.846
How much do you feel you know about travel destinations?	.839
How much do you feel you know about travel products?	.803

*This table shows Extraction Method: Principal Component Analysis, with 1 component extracted. A Rotated Component Matrix<sup>a</sup> indicates that only one component was extracted. The solution cannot be rotated.*

Table 3: KMO and Bartlett's Test

<b>Kaiser-Meyer-Olkin Measure of Sampling Adequacy.</b>		<b>.824</b>
Bartlett's Test of Sphericity	Approx. Chi-Square	5648.306
	df	15
	Sig.	.000

*This table displays Kaiser-Meyer-Olkin 0.824.*

Table 1 reveals that one key factor explained 72% of the variance; this dominance is clear in Figure 1. Table 2 shows that the six items all relate to one component, knowledge of travel. Since one component is extracted the solution cannot be rotated. An examination of the Kaiser-Meyer Olkin measure of sampling adequacy suggests that the sample was factorable (KMO = 0.824) above the recommended value of 0.60. Bartlett's test of sphericity (Table 3) was significant ( $C^2 = 5648.306$ ,  $p < 0.001$ ).

## RESULTS

Analysis indicates that respondents were not confused with the six questions asking their knowledge of travel products and destinations. They showed consistent responses demonstrating they equate knowledge about travel products with knowledge about destinations. Factor analysis of the construct product knowledge confirmed this assertion as can be seen in the total variance and scree plot above. The factor

knowledge of travel is the same as knowledge about travel products and about destinations. Factor analysis is appropriate for the data and reveals useful insights into the construct of travel knowledge.

## CONCLUSION

There are no known studies that have evaluated online travel planning in the leisure sector with regards to consumers' travel knowledge. Travel knowledge was deemed an important variable in explaining online leisure travel booking behavior (Conyette, 2010; Conyette 2011). Since respondents during qualitative research used the terms 'travel products' and 'travel destinations' interchangeably when referring to their knowledge of travel, it was thought to check this through confirmatory factor analysis. An online survey was used to gather data required for assessing the construct of travel knowledge. Factor analysis suggests that respondents are referring to the same thing when they describe their familiarity with travel; it is the same as knowledge about travel products and destinations. This research makes a contribution to the body of knowledge by offering some understanding of what constitutes travel product knowledge.

## BIOGRAPHY

Michael Conyette is a business Professor with the Okanagan School of Business at Okanagan College 7000 College Way, Vernon, British Columbia, Canada, V1B 2N5, Email mconyette@okanagan.bc.ca. He teaches numerous marketing and management business courses. Prior to working in academia he operated various businesses including an import and distribution company, and some Internet ventures. His research appears in various journals such as the International Journal of Management and Marketing Research, International Journal of Trade, Economics and Finance and he has presented at conferences.

# AN ASSESSMENT OF EMOTIONAL INTELLIGENCE UNDERSTANDING IN THE FIELD OF REAL ESTATE

Andree Swanson, Ashford University

Brand Bowler, Ashford University

Paula Zobisch, Ashford University

## ABSTRACT

*The purpose of this research is to provide a pilot study to assess the current level of understanding of emotional intelligence in the field of real estate. Having competency in emotional intelligence has been proven to be an effective skill, in part, to an individual's overall success in the workplace. When dealing with clients, awareness and proper application of emotional intelligence would benefit the realtor. To complete this study, an online survey instrument was made available in commonly used social media sites. The survey addressed 23 questions ranging from the acknowledgement of the rules of engagement to denoting an agent's gender. A total of 18 real estate professionals participated in the study. Thus far, survey results support the conclusion that an awareness of emotional intelligence, among licensed real estate professionals, but the majority have not been formally trained. As emotional intelligence, is partly, a learned behavior, training would benefit the real estate agent professionally and the industry overall. By noting the benefits of being aware of emotional intelligence and providing the appropriate application training, better financial returns, for the agent, and greater customer satisfaction can be obtained.*

**JEL:** Z00

**KEYWORDS:** Emotional Intelligence, Real Estate Professionals, Realtor™, Pilot Study

## INTRODUCTION

In the business environment, the first and foremost objective, among the majority of individuals in the workplace, is to receive fair and appropriate compensation for a fair day's work. In addition, success and promotion, within the work environment depends upon many factors. Among them is the ability to get along with management, peers and if applicable, clients. Akin to merely getting along with others, are possessing the necessary skills that can be associated with education and training. Regardless of the chosen field, the understanding and effective application of a discipline, known as Emotional Intelligence, has been proven to be an effective tool in providing positive benefits in the workforce in general (Kidwell, Hardesty, Murtha, & Sheng, 2011; Lam & Kirby, 2002; McCoy, 1997)). In keeping this study manageable, the researchers have focused in the field of real estate sales, as there is a clear and undeniable relationship between the real estate sales professional and his or her client. By possessing the necessary skills, one can achieve greater financial success and yielding a greater agent-customer experience. The purpose of this qualitative study is to assess the current level of understanding of emotional intelligence amongst real estate professionals. Having an emotional intelligence competency has proven to be an effective skill for sales people. Emotional intelligence can also benefit real estate professionals. Using emotional intelligence will quantifiably improve Realtors'™ efficiency and effectiveness with clients and coworkers.

The significance of this study is to assess the levels of emotional understanding among those in the real estate field. This understanding and application of emotional intelligence will benefit the real estate sales professionals who want to maximize their earning potential. Real estate professional competencies include the wisdom to recognize the limitations of that knowledge and promote ethical relationships. Emotional recognition of the client is crucial in understanding the client's motivation and feelings about his or her

finances as related to real estate transactions. Emotional awareness is a key component of being an effective real estate sales professional. Upon preliminary research, few peer-reviewed journal articles were found on emotional intelligence and real estate sales professionals. Because of the lack of research on the topic, the completion of this pilot study was necessary. Several studies have been published on how individuals with high emotional intelligence can enhance and increase the potential for positive outcomes (Carmelli, 2003; Deeter-Schmelz & Sojka, 2003; Landy, 2005; Sojka & Deeter-Schmelz, 2002). Real estate sales professionals could work to increase their emotional intelligence to be successful when working with clients (Crant, 1995; Cross, Brashear, Rigdon & Bellenger, 2007; Kidwell, Hardesty, Murtha, & Sheng, 2011; Rozell, Pettijohn, & Parker, 2004). Emotional intelligence is a learned and practiced skill (Goleman, 1998). The results of this pilot study may benefit the field of real estate and in a greater sense may significantly change the landscape of communications and relationships in both business and academia as a whole.

## LITERATURE REVIEW

The purpose of this literature review was to identify what is available in current literature in the field of emotional intelligence and real estate professions and sales, in general. The research took place using EBSCOHost, ProQuest, and Google Scholar. Emotional intelligence as it relates to real estate sales has only briefly been discussed in scholarly literature. Most of literature found related to sales, in general. Braidfoot and Swanson (2013) wrote on the history of emotional intelligence:

*Emotional Intelligence (EI) was first used in an English doctoral dissertation in 1983 (Payne, 1983/1986). The term was actually derived prior though in 1966 by B. Leuner in a German article titled "Emotional Intelligence and Emancipation" (translated) to describe women who, because of perceived low Emotional Intelligence, rejected their social roles (Leuner, 1966). Salovey and Mayer (1990) further developed the concept. EI is the capacity to perceive emotions, assimilate emotion-related feelings, understand the information of those emotions, and manage them (Mayer et al., 1999). (p. 1)*

Howard Gardner (1983, 1993) introduced the theory of multiple intelligences and claimed humans were intelligent far beyond the traditional concept of math and language. Gardner's definition of intelligence was "the ability to solve problems, or to create products, that are valued within one or more cultural settings – a definition that says nothing about either the sources of these abilities or the proper means of 'testing' them" (p. x). Gardner declared that people must broaden the concept of human intelligence by including a wider set of competencies.

Gardner suggested eight intelligences (1999): (1) verbal-linguistic intelligence, the ability to possess spoken and written language skills (lawyers, speakers, educators); (2) logical-mathematic intelligence, the ability to analyze problems logically and carry out mathematical operations, and conduct scientific inquiry (mathematicians, statisticians, scientists); (3) musical intelligence, appreciation and recognition of rhythm and musical patterns (musicians, composers, performers); (4) bodily-kinesthetic intelligence, the ability to use part of all of one's body to solve problems (athletes, dancers, surgeons, mechanics); (5) spatial intelligence, the ability to view and manipulate wide areas of space (navigators, pilots, graphic artists, architects); (6) interpersonal intelligence, the ability to understand the motivation and feelings of others (educators, salesperson, religious leaders, political leaders); (7) intrapersonal intelligence, the recognition and understanding of one's own emotions and desires and the "ability to use the information in productively regulating one's life" (p. 43).; and, naturalist intelligence, the recognition of flora and fauna (environmentalist, gardener, botanist, scientist).

Although the verbal-linguistic and logical-mathematical are the only typical intelligences assessed in school, Goleman (1995) declared emotional intelligence, Gardner's intrapersonal intelligence, as the ability to motivate oneself and continue in the face of frustrations, to control impulse and delay gratification, and

to regulate one's moods. Beyond the traditional intelligence quotient (IQ) that measures verbal-linguistic and logical-mathematical intelligences as a predictor of academic success (and federal funding), Goleman believed IQ only contributed about 20% to the factors determining life success, while 80% of contributions were in other influences (McCoy, 1997, p. iii).

McCoy (1997) stated people who were aware of their feelings and have the ability to manage those feelings would enjoy a more satisfying and rewarding career and life. For this reason, it is critical for sales people, Gardner's intrapersonal and interpersonal intelligences, have a high emotional intelligence and not be discouraged or despair of frustrating circumstances frequently encountered during the sales process. Deeter-Schmelz and Sojka (2003) conducted a study that indicated a strong link between a salesperson's emotional intelligence and sales performance. A high level of intrapersonal was identified as important, as well as interpersonal included in emotional intelligence. Goleman (1995) posited that interpersonal intelligence is the ability to perceive and relate to the emotions of others. Both intrapersonal and interpersonal skills are key in successful and productive salespeople.

Doing a Google search for Goleman's statement on Emotional Intelligence resulted in finding 2570 sites that had this quote exactly or a variation of it. McCoy (1997) quoted Goleman as saying, "That IQ contributes 20% to the factors that determine life success, which leaves 80% to other forces, ranging from social class to luck. People who cannot control their emotions fight inner battles that sabotage their ability for focused work and clear thought" (p. abstract). So, what controls the 80% of these other forces? Kraus (2008) stated, "Researchers have found evidence that emotional intelligence as measured by the MSCEIT relates to the personality constructs defined by the Big Five" (p. 4).

Kidwell, Hardesty, Murtha and Sheng (2011) discovered that emotional intelligence definitely relates to a positive performance with real estate agents. Tasso (2009) discussed a sensitive trust that related to emotional intelligence. Much like emotional intelligence, the ability to sell is not innate or inherent. A successful Realtor™ understands the needs of the client and the clients themselves. Peter Drucker (n.d.) stated, "The aim of marketing is to make selling superfluous. The aim is to know and to understand the customer so well that the product or service fits him/her and sells itself." Connect with this knowledge and connect it with the importance of emotional intelligence. Mayer and Salovey (1997, p. 103) called it, "The ability to perceive, integrate, understand and reflectively manage one's own feelings and other people's feelings." Research revealed a connection between emotional intelligence and performance.

Golis (2011) discussed the relationship between emotional intelligence and the intelligence quotient (IQ) and their relationship to success. Although there appears to be disagreement among individuals regarding the importance of emotional intelligence in success, many sales professionals have been trained with no real credit given to the study of emotional intelligence. Golis promoted that establishing better relationships can develop, thus increasing sales. Developing open relationships is a key factor in sales success. McCoy (1997) credited Daniel Goldman that IQ accounts for only 20% of the factors that determine life success. While many other factors exist, the factors that contribute most to success are establishing good relationships with others.

Doing better and becoming more successful are tied to having a high level of emotional intelligence. Management guru, Peter Drucker, has recognized that emotional maturity is necessary to deal with the high rate of stress and change in today's business environment. McCoy (1997) showed that people often become enraged over trivial events. Goleman called an emotional hijacking where one's emotions take over the entire experience and create a bigger situation than really exists. Real estate decisions are made based on elements out one's control, such as the economy or the fiscal cliff. Clients turn to Realtors™ for answers and may get emotional when considering items that are beyond their control, thus creating an emotional meltdown or an emotional hijacking.

Kokemuller (2014) described the careers where individuals, with high emotional intelligence, often times achieve positive results. Kokemuller described the suitable careers such as social work, selling, management, and psychology/psychiatry. Working well with others, controlling emotions and having empathy, for others, are paramount. Weisinger (2012) described the importance of emotional intelligence as it specifically applies to Realtors™. In particular, as emotional intelligence relates to their individual success. Topics include discussions on the advantages of becoming emotionally intelligent, adding value to the profession, and increasing a salesperson's return on investment. Being able to be willing to develop your emotional intelligence, Weisinger stressed the need of becoming self-aware, of understanding your abilities, and knowing one's, as well as others', emotional state. Various recommendations and applications were presented to achieve greater emotional intelligence, thereby increasing one's chances to succeed.

The importance of emotional intelligence in the post-recession era is essential; IQ is not enough ("Emotional intelligence trumps IQ", 2011). A Career Builder Survey was sent to 2600 hiring managers and human resource professionals which fostered the importance of emotional intelligence primarily due to five factors. One factor was whether professionals are more likely to stay calm under pressure. Survey respondents also noted that they measured emotional intelligence by observing a variety of behaviors, including whether they admitted to mistakes. Kemp (n.d.) described the discipline of emotional intelligence as a field of psychology, which in practical terms, teaches us to remain calm and centered when others are not, help others remain calm, and make good choices under stress. As Realtors™ deal often with change, such as divorce, marriage, changing careers, and relocations. Being emotionally intelligent can benefit individuals in other matters, such as trust, quality, and negotiations. Kemp asserted that an emotionally intelligent real estate agent will get more clients, have greater advantages, and will positively contribute to one's success.

Naghavi and Redzuan (2011) stated that emotional intelligence has been associated with satisfaction, adaptability, overall intelligence, personality, and emotional disorders. Naghavi and Redzuan described the difference between the genders, male and female. Research supported that females are higher, than males, in emotional intelligence. However, research suggests that high emotional intelligence in males provides a better predictor of achievement and success than in females. Ritter (2011) defined emotional intelligence by beginning to define emotional quotient (EQ), as Goleman has questioned whether IQ alone determines success. IQ is no longer the absolute indicator of overall success. Unlike IQ, EI can be improved by learning about it, practicing it, and improving it.

Blocker (2010) described the quality of emotional intelligence between agents and their clients that promotes specifically, that emotional intelligence can produce a negative effect impact on sales performance. Noting a two-sided study, Blocker found that being on the same emotional wavelength, with their clients, is an important factor to creating value and promoting positive relationships. Real Estate Agents and their clients showed that the party possessing the most (strongest) emotional intelligence determined in part, the success of a transaction. Training was emphasized to correct imbalances. Sarkar (2010) conducted a study that attempted to account for the other 80% of the factors that contribute to overall success. Sarkar attempted to better understand emotional intelligence and that spiritual intelligence are related.

Doehrman (2003) focused on the training and development in fostering true leaders (their ability to motivate others) involved effective communication, mainstream emotional intelligence, and the appreciation of one's own, as well as others' intelligence and the ability to leverage strengths and minimize drawbacks. Doehrman supported the idea that leadership requires seasoned maturity, experience, and emotional intelligence in order to develop time leadership. Doehrman fostered the notion that individual professional promotion depends on emotional dependency.

Lam and Kirby (2002) discussed the importance of emotional intelligence and its relation to performance and productivity. As an increasingly popular consulting tool, emotional intelligence accounts for increases in individual cognitive based performance over and above the level attributed to traditional general intelligence. Emotional intelligence was broken down into three components: perceiving, understanding, and regulating.

## DATA AND METHODOLOGY

The researchers conducted a pilot study using an online survey instrument. Survey research is commonly used in applied social research (Trochim, 2006). Kelley, Clark, Brown and Sitzia (2003, para. 1) stated that,

*...its roots lie in the social surveys conducted in Victorian Britain by social reformers to collect information on poverty and working class life (e.g., Charles Booth [1] and Joseph Rowntree [2]), and indeed survey research remains most used in applied social research.*

The pilot study was conducted using an Internet survey tool called Survey Monkey. Using an online survey instrument allowed for the ability of participants to remain anonymous while completing the survey. Participants were able to take the online survey at their own residence or office and would not be influenced by other participants. One of the benefits of the survey methodology was the ability to create anonymity and reduce the chances of participants to influence other participants. The pilot study was conducted with 18 participants. Van Teijlingen, Rennie, Hundley, and Graham (2001) stated,

*The term pilot study is used in two different ways in social science research. It can refer to so-called feasibility studies which are "small scale version[s], or trial run[s], done in preparation for the major study" (Polit et al., 2001: 467). However, a pilot study can also be the pre-testing or 'trying out' of a particular research instrument (Baker 1994: 182-3). One of the advantages of conducting a pilot study is that it might give advance warning about where the main research project could fail, where research protocols may not be followed, or whether proposed methods or instruments are inappropriate or too complicated. In the words of De Vaus (1993: 54) "Do not take the risk. Pilot test first."*

Braidfoot and Swanson (2013) and Zobisch and Swanson (2013) used a similar research survey serving as a Pilot Study for this activity too.

## RESULTS AND DISCUSSION

The first question addressed the understanding of the rules to participate in this survey with 100% of participants responding that they were at least 18 years old. In question two, the participants were asked if they were currently a licensed real estate sales agent. Seventeen of 18 participants were currently licensed. Further in question two, participants were asked where they received their license. Participants were licensed in 11 different states: Colorado (five), Arizona (three), California (one), Illinois (one), Iowa (one), Louisiana (one), Maryland (one), Oklahoma (one), Oregon (one), Tennessee (one), and Washington (one). In question four, participants indicated that most of them (14 of 18) had a clear understanding of emotional intelligence. Two appeared to be unsure and two did not have a clear understanding. In question five, participants were asked if they had formal training in emotional intelligence as part of their real estate licensing. Only two participants had this training. In question six, eight participants had been trained in emotional intelligence as a part of another field of study. In question seven, 15 participants agreed that emotional intelligence may be useful in the real estate profession. Three remained neutral. In question eight, the majority of participants (12) do not believe that emotional intelligence is a talent that you are born

with. In question nine, the majority of participants (12) do not believe that emotional intelligence is only a learned behavior. In question ten, the majority of participants (15) believe that emotional intelligence is both a talent that you are born with and a learned behavior. In question 11, all participants (18) believe that using emotional intelligence in their work as a realtor could improve their job performance.

In question 12, all participants (18) agreed that they use emotional intelligence when working with clients. In question 13, the majority of participants (11) responded that emotional intelligence could be included in the primary curriculum real estate licensing. In question 14, the majority of participants (12) should be included as a continuing education unit (CEU) for real estate professionals. In question 16, the majority of participants (12) responded that they felt comfortable with dealing with an emotionally distraught client. In question 17, the majority of participants (15) responded that that felt that training in emotional intelligence would benefit them. In question 18, the majority of participants (16) responded that if training on emotional intelligence could increase productivity by 25% or more that they would be interested in receiving that training.

In question 15, the majority of participants (16) responded that when meeting with clients, they have experienced a situation where a client became distraught or emotionally upset. Participants expanded on this response and provided examples from divorcing clients, when a client has a debilitating illness, or even when they have to move to another city due to a job loss or a planned job move. In question 22, the majority of participants (14) have over four years of experience. In question 23, eight (8) participants were male and ten (10) participants were female.

## CONCLUDING COMMENTS

The understanding and the application of emotional intelligence is shown to be an effective tool in providing positive benefits in the workplace. By possessing the necessary skills, in this discipline, one can increase their chances of greater financial success and improvements in interpersonal skills. This study has shown that there is a positive relationship between these skills and realtor economic rewards and client satisfaction. In this pilot study, licensed realtors were provided an online survey, addressing 23 questions that were employed among various social media sites. Although the researchers found that there is a strong awareness of emotional intelligence, among the realtors that completed the survey, little or no training had been received to sharpen the necessary emotional intelligence skills. As emotional intelligence has been shown to be a partially learned skill, the researchers believe that formalized training would have positive consequences for the realtor, both in maintaining a strong client base and having greater financial rewards. Further research will be done in the area of emotional intelligence and real estate professionals.

Her Master of Business Administration with an emphasis in Marketing and her Bachelor of Science in Business are from the University of Central Oklahoma. Dr. Zobisch has over 20 years experience in the marketing field and has worked in business-to-business industrial sales and as a director of marketing for a 3M distributor. She teaches marketing management, consumer behavior, and marketing research courses at Ashford. Dr. Zobisch says, “I am a perfect example of how an adult can be successful and grow while attending school. I earned all of my degrees while working full time and raising a family, in addition to maintaining a home as a single parent. It seems the more I learn, the more I am aware how much there still is to learn.” She resides in north Texas and has two adult sons and four grandchildren. Dr. Zobisch enjoys outdoor activities and is currently working on her black belt, second level, in the Executive Black Belt Club in Tae Kwon Do. - See more at: <http://www.ashford.edu/community/business-paula-j-zobisch.htm#sthash.k18DxW3e.dpuf>

# THE BENEFITS OF DOING GOOD – THE RELATIONSHIP BETWEEN AWARDS, CUSTOMER BRAND PERCEPTION AND MEDIA COVERAGE

Michael Stradner, RWTH Aachen University  
Malte Brettel, RWTH Aachen University

## ABSTRACT

*A good reputation is one of companies' most important intangible assets. A particularly strong signal of 'doing good' is provided by reputation awards such as Fortune magazine's 'Most Admired Companies'. However, little is known about the relationship between reputation awards and customer perception of distinguished brands, and the factors influencing this relationship. This study analyzes the relationship of reputation awards, customer brand perception, and media coverage. Thereby, we advance marketing research in three ways: Firstly, we introduce awards as indicator for customer brand perception. Secondly, we examine the effects of award announcements on customers. Thirdly, we introduce media coverage as moderator. This study is also of high practical relevance, as it provides an understanding of the information embedded in awards and the role of media in the award/customer relationship. Methodically, our study applies multiple approaches: The authors conduct mean-comparison analysis, event studies and regression analysis to examine the relationship between awards and customers. Furthermore, content analysis and moderation are used to analyze the role of media coverage. This study is based on a unique dataset from multiple sources for customers (YouGov BrandIndex, 5,000 interviews daily, >1,000 brands), media (traditional, social) and awards (Fortune's 'Most Admired Companies'), covering 2008-2011.*

**JEL:** M30, M31

**KEYWORDS:** Customer Brand Perception, Awards, Media

## INTRODUCTION

A good reputation and satisfied customers are among the most important intangible assets affecting firm performance (Srivastava, Shervani and Fahey, 1998). Besides these important performance implications, reputation and customer perception share one notable characteristic: Both are intrinsic and invisible to the public, making it difficult for companies to measure and leverage one's performance along these dimensions. A particularly strong and reliable signal of 'doing good' is provided by reputation awards, as for example the annual Fortune magazine's 'Most Admired Companies' ranking. Despite some academic research in the field of awards, the relationship between reputation awards and customer brand perception has not been addressed so far. Furthermore, acknowledging the importance of media coverage in shaping public perceptions (McCombs and Shaw, 1972), the currently unknown role of media in the link between awards and customers should be addressed as well.

This study seeks to advance marketing research and is also of high practical relevance: Regarding academic contribution, we introduce reputation awards as indicators for customer brand perception. Also, we examine the direct effects of award announcements on changes in customer brand perception and aim to unveil the award characteristics most relevant for driving this change (e.g. brand ranking score). Furthermore, we introduce media coverage as a moderator in the relationship between awards and customers. Regarding practical relevance, by understanding both the information content embedded in awards and award

announcements' potential impact on customers, managers are provided an external yardstick to evaluate their customer base. Furthermore, the relevance of media coverage in this relationship becomes more transparent. The balance of this paper is structured into four sections. Firstly, we highlight the relevant literature for this study. Secondly, we explain the data and methodology used in this study. Thirdly, we present and discuss first findings of our research. Fourthly, we conclude this paper by stating the contribution of this study and avenues for further research.

## LITERATURE REVIEW

This study is based on the theoretic foundations provided by previous academic research on awards, customers, and media.

*Awards:* Awards symbolize the recognition or a signal of notably performance in the awarded dimension. This paper focuses on awards for corporate reputation, using Fortune Magazine's annual 'Most Admired Companies' ranking, which has a long-standing tradition and is published since 1983 (Filbeck and Preece, 2003). In academia, awards are mainly used to examine their direct impact, as e.g. the effects of winning quality awards on abnormal stock returns (Hendricks and Singhal, 1996), or as indicator for a certain characteristic, as e.g. Fortune's 'Most Admired Companies' for customer satisfaction (Luo and Bhattacharya, 2006). However, academia has still a limited understanding of the information contained in reputation awards and its relationship with customer brand perception.

*Customers:* Drawing on the Marketing-Finance interface, intangible 'market-based' assets like customer satisfaction are an important determinant of firm performance (Srivastava, Shervani and Fahey, 1998). Srinivasan and Hanssens (2009) state that several studies found empirical evidence for the proposed link between customer satisfaction, profitability and market value. Acknowledging the difficulty to evaluate and measure intangible assets, it is important to understand if and to which degree reputation awards like Fortune's 'Most Admired Companies' both reflect and influence customer brand perception.

*Media:* Media coverage is an important driver in shaping public opinion (McCombs and Shaw, 1972). As Tetlock (2007, 2011) outlines in his studies on stock market activities, media actively influences respondents of news and their behaviour. Furthermore, scholars found that media coverage itself is influenced by important events, as e.g. in the case of product recalls (Zavvalova et al. 2012). However, it is unclear if and to what extent media coverage affects, and potentially moderates, the relationship between reputation awards and customer brand perception.

To the best of our knowledge, this study is the first to examine the relationship between reputation awards and customer brand perception, and to examine the moderating role of media coverage. Thereby, we aim to contribute both to marketing research and to provide important practical insights for managers.

## DATA AND METHODOLOGY

### Data

This study is based on a unique dataset, combining multiple sources for awards, customer brand perception, and media coverage, for the four-year period 2008-2011. The gathered dataset provides data for >1,000 brands from a wide range of industries on a daily basis.

*Awards:* Fortune's 'Most Admired Companies' rankings are gathered for the years 2008-11. Besides stating the company name, Fortune provides further details on the respective brands, as e.g. ranking score and

industry. Furthermore, Fortune features particularly distinguished brands prominently, namely the Top-20 (2008-09) and Top-50 (2010-11).

*Customers:* Data on customer brand perception is provided by YouGov BrandIndex. The YouGov Group measures the customer perception of >1,000 brands along multiple dimensions, such as customer satisfaction, perceived quality or general brand impression. By conducting 5,000 interviews daily from a panel size of 1,500,000, this dataset provides the unique ability to measure both the short-term and long-term effects of customer brand perception, and was recently applied successfully by marketing scholars (Luo, Raithel and Wiles, 2013).

*Media:* This study examines the coverage of brands in traditional and social media. Data on traditional media coverage (e.g. press articles) is gathered through LexisNexis news database. Regarding social media, we gather social media sentiment (e.g. blog entries, twitter messages) by using social media analytic tools.

## METHODOLOGY

Based on the theoretic foundation outlined above, the authors developed a research model and apply multiple methods to examine the relationship between awards, customers, and media.

*Awards and customers:* The relationship between awards and customers is examined in three steps: Firstly, we conduct mean-comparison analysis of the level of customer brand perception per award categories ('Top', 'Follower', 'None'). Secondly, by applying event studies (McWilliams and Siegel, 1997) and mean-comparison analysis, we examine the immediate impact of award announcements on a change in customer brand perceptions on a daily basis. Thirdly, we analyze the relationship between specific award characteristics (e.g. rank, score, year-on-year changes) and customer brand perception through regression analysis.

*Awards, customers and media:* Building on the link between awards and customers established previously, we examine the role of media coverage in this relationship. By conducting content analysis, the volume of media coverage is determined. Afterwards, we examine the moderating effects of media coverage in the relationship between awards and customers.

## RESULTS AND DISCUSSION

To validate our results, we are currently in the process of analyzing the gathered data. First results seem promising to validate the stated research questions: Regarding the relationship between awards and customer, first results indicate strong support for our assumptions. Current empirical evidence confirms the hypothesis that the level of customer brand perception differs significantly among the three defined award categories (Figure 1). Notably, also the degree of customer brand perception volatility seems to differ substantially. Furthermore, current results also indicate that customer brand perception is indeed unaffected by the award announcement itself. Event studies conducted so far do not reveal a significant change in customer brand perception following award announcements. We aim to further examine these immediate effects in more detail before stating a final conclusion. Regarding the analysis of the relationship between award characteristics and customers, we are still in the process of analyzing the relevant data and have not reached a conclusion yet.

Figure 1: Customer Brand Perception Per Award Category

*This figure shows the mean customer brand perception per award category for the time period 2008-2011. Brands are assigned to each category based on each brand's Fortune category in a given year.*

Concerning the role of media, we are currently still in data gathering process. Thusly, the empirical evidence for confirming the moderating role of media coverage is still outstanding.

## CONCLUDING COMMENTS

Overall, the authors aim to shed light on the relationship between reputation awards, customer brand perception, and media coverage. To the best of our knowledge, this study is the first to analyze the relationship between awards and customers as well as the first to examine media's moderating role. Thereby, we seek to contribute to both academia and practice. Regarding academic contribution, this study advances marketing research in three ways: Firstly, we show the importance of awards as indicators for customer perception of the distinguished brands. Secondly, by applying the concept of event studies to customer brand perception, this study shows that awards are mainly a reflection of the customer brand perception and do not alter customer brand perceptions through the award announcement itself. Also, by unveiling the explanatory power of award characteristics, we further enrich the understanding of the relationship between awards and customers. Thirdly, we introduce media coverage as moderator and determine its explanatory power in the context of the award/customer relationship.

Furthermore, this study is also of high practical relevance: In today's competitive business world, companies benefit from a good reputation, satisfied customers and strong media exposure. However, these factors are difficult and costly to monitor and measure. Awards might provide a helpful alternative: By understanding the information contained in awards, managers may use awards as one yardstick in their efforts to gain insights about their customer base. Furthermore, this study further sheds light on the importance of media coverage in affecting customers, specifically in the context of awards. We encourage further research on two key topics: Firstly, we encourage examining the relationship between other types of awards which might contain valuable information about a firm's intangible assets. Secondly, further studies might also address the role of media in shaping the perception of customers, either in the case of awards, or in the aftermath of other events that might be relevant for customers (e.g. professional misconduct, product recalls). Concluding, this study examines the relationship between awards, customers, and media. The authors are currently in the process of analyzing the data, and find first empirical support for the stated relationship. This study will be further elaborated to fully test the stated hypotheses empirically.

# BRAND IMAGE VOLATILITY AND STOCKMARKET PERFORMANCE – HOW DO FLUCTUATING CUSTOMERS' PERCEPTIONS IMPACT ABNORMAL RETURNS?

Lukas Traub, RWTH Aachen  
Malte Brettel, RWTH Aachen

## ABSTRACT

*the significance of brand image and its dispersion for valuation of companies is shown in various studies. surprisingly, the effects of brand image volatility have not been in focus of empirical research yet. however, effects on financial performance, similar to the effects of dispersion, are hypothesized. for practitioners, brand image volatilities are important to determine the optimal marketing strategy (e.g., big bang advertising vs. customer irrigation). additionally, the visibility of the brand image as moderating factor needs to be considered. consequently, we aim to close these gaps and contribute to both academia and practice. this study enhances current research twofold: firstly, to our best knowledge this is the first study to examine the role of brand image volatility as new marketing metric. secondly, we contribute to the marketing-finance interface by introducing media coverage as new moderator. for practitioners, brand image volatility helps to better understand and manage the effects of brand perception. methodologically, we determine abnormal returns (carhart four-factor-model) and apply content analysis to measure the amount of media (print and social) coverage. based on daily data on brand image (5,000 interviews daily; >1,000 brands) we determine its volatility and apply time series analyses.*

**JEL:** G17, M31

**KEYWORDS:** Brand Image, Volatility, Abnormal Returns

## INTRODUCTION

Generally, the world has become more volatile during the last years and specifically the financial markets have been confronted with faster and more pronounced movements. Therefore, indicators to better understand and forecast financial performance are highly sought after. One of these indicators that proved its significance for the valuation of companies is the level and trend of brand image. Most recently, it was also shown that the dispersion of brand image, i.e. The distribution in brand lovers and haters, has an impact on the valuation of companies (Luo, Raithel and Wiles, 2013). Despite theoretical effects on firm valuation, similar to those accounted to dispersion, effects of brand image volatility have not been in the focus of research yet. Brand image volatility, this new marketing metric, has the potential to better understand and forecast firm valuations and thereby complementing the Marketing-Finance framework. Furthermore, brand image volatility is an important metric for practitioners to determine the optimal marketing strategy (e.g., big bang advertising vs. Customer irrigation).

Additionally, we analyze the role that media, both print and social, play in the relationship between marketing and finance. We hypothesize a moderating role for the visibility of the brand image and its volatility on firm valuation and therefore include the degree of media coverage in our research framework. Our paper is arranged as follows: We start with an overview of the existing literature of brand image and its indicating function for financial performance. Then, we describe the used data and methodology and depict our first results. Finally, we summarize our conclusion.

## LITERATURE REVIEW

In the following we summarize existing research regarding the effects of changes in brand image and their effects on firm valuation, as well as the role of media for financial markets. Brand image volatility has not been in focus of research as a specific metric yet, therefore we broaden the review to variation and trends in brand image. Several studies examined the effects of brand image on firm valuation. In one of the first studies Simon and Sullivan (1993) showed that there is an empirical link between the value of brand equity and the financial market value of the specific firm. Barth et al. (1998) strengthened this link with a sample of more than 1,200 brands and showed that brand values are reflected in share prices. In 2003, Kim, Kim and An analyzed the dimensions of consumer-based brand equity in the hotel industry and found that brand image is significantly related to financial performance. In a recent study, Luo, Raithel and Wiles were the first to examine the effects of brand dispersion on a daily basis on stock market performance across different industry sectors. They found evidence for a relation between increasing brand dispersion and decreasing abnormal returns and decreasing risk metrics.

Regarding the role of media for firms and especially financial markets, Tretlock (2007) found evidence for a link between media coverage and trading activities. Adding to that, Clark, Thrift and Tickell (2010) concluded that “media have become a key means of coordination in the financial markets” and “a crucial intermediary between both consumers and producers”. The importance of media for transporting information regarding firm valuation was also shown by Fang and Peress (2009) with their study indicating “a significant return premium on stocks with no media coverage”. Our study complements existing research by analyzing the fluctuations of brand image and its effects on firm valuation. Thereby, we add a new metric to the Marketing-Finance interface (Srivastava, Shervani and Fahey, 1998) that is important for academia and practice. Furthermore, this study sheds further light on the role of media for financial markets.

## METHODOLOGY

We use a combination of several approaches in this study to analyze the indicating power of brand image volatility on firm valuation and the moderating effects media coverage. Firstly, we determine the abnormal returns and stock volatility for each firm using established models: the standard CAPM (Sharpe 1964), the Fama-French-3-factor model (Fama and French 1993) and the Carhart four-factor-model (Carhart 1997), following the approach of Madden, Fehle and Fournier (2006). Secondly, we calculate the implied volatility of brand image per firm, by analyzing the daily customer data. Subsequently, we compare the abnormal returns and brand image volatility. We use time-series-analyses with different lags to determine the indicating power of brand image volatility on stock performance and volatility. In our last step, we determine the amount of media coverage regarding brand image per firm. To allocate press releases and articles in social media to specific firms we apply content analysis. This method is commonly used to determine the volume of press releases and social media activity (Tetlock 2007).

### Data

Different datasets for stock market performance, brand image and media coverage are combined for this study, creating a unique dataset covering a 4-year time period from 2008-2011. The analyzed sample consists of listed companies with well-known brands from different industry sectors. Stock market performance: We use daily financial data provided by Thomson Reuters Datastream. Stock market data is used to determine the abnormal returns and stock volatility for each company.

*Brand image:* We use daily data provided by YouGov BrandIndex for the US market. Based on a panel size of 1,500,000 consumers the data is retrieved from 5,000 interviews a day resulting in scores for

different dimensions, including brand image. The sample covers more than 1,000 main brands and ~400 companies across different industry sectors.

*Media coverage:* We use different databases for press media and social media. For press media coverage we use LexisNexis, a database in which all major business, economic and financial periodicals and press releases are included. For social media coverage we evaluate blogs and twitter entries, using social media analysis tools.

## RESULTS AND DISCUSSIONS

Our first step is a model-free analysis of the relation between the level of volatility of brand image and the abnormal return of the respective stock. Generally, the average abnormal returns, after controlling for risk and Fama-French-factors, for all analyzed groups are negative during the analyzed time frame. We compare the average abnormal returns for firms with the highest and lowest brand image volatility. First results indicate that the higher the volatility, the higher (and therefore less negative) the abnormal return (see Figure 1).

Figure 1: Average Abnormal Return (2008-2011) for Firms With High and Low Brand Image Volatility

*This figure shows the average daily abnormal returns for firms with different brand image volatility for 2008-2011. The left bar shows the abnormal returns for the 5% of firms in our sample with the lowest brand image volatility and the right bar for the 5% of firms with the highest brand image volatility.*

Further analysis is needed to verify the initial findings and also more elaborated models, such as VAR-models, need to be used to strengthen the evidence. Based on the initial findings, one could argue that brand image volatility weakens the value of brand image as intangible asset for the firm. To compensate for this lower valuation and higher fluctuations investors ask for return premiums. This could explain the higher abnormal returns for firms with higher brand image volatility.

## CONCLUSION

Marketing metrics as indicators for financial performance have been increasingly more important and the emergence of the Marketing-Finance interface has strengthened the link between marketing and financial markets. Complementing the existing research on the Marketing-Finance interface, this study introduces brand image volatility as new marketing metric and analyzes the effects on stock market performance. This

is not only an important extension of current research but also helps practitioners to better understand and manage the effects of brand perception.

Furthermore, this study contributes to the Marketing-Finance interface by introducing media coverage as new moderator. Thereby, it helps to better understand how customer data and financial markets are linked and helps practitioners to better calibrate and use the role of media for firm valuation. Future research is encouraged to further detail the relation between brand image volatility and financial performance. Additionally, the moderating role of media can be further analyzed, as this study only measures the volume of media coverage. Future studies could break down the importance of the tone and timing of media coverage and analyze the effects of different strategies regarding exposure to media coverage. In conclusion, we examine the relationship between brand image volatility and firm valuation and how media coverage moderates this relationship. We found first empirical evidence to support this relationship. However, the data has to be further evaluated and more elaborated models to be applied to strengthen the evidence.

# AN EXAMINATION OF TAX EVASION BY SMALL CASH BUSINESSES

Taylor Harris, Zebra Technologies  
Sara Linton, Roosevelt University

## ABSTRACT

*This paper explores the ethical dilemma concerning underreporting of income, for the purposes of evading taxes, by small cash business owners and the cooperation received from their accountants. It examines the role of the government, income source, the taxes most avoided, methodologies for tax evasion, and the hiding and/or dispersal of the resulting surplus cash, often in frivolous ways. The nature and extent of these frivolous purchases makes one wonder why they bother. It also addresses the perception of ethics, specifically, the rationalization for this behavior, by both the business owners and the accountants involved.*

**JEL:** H2, K4, M4

**KEYWORDS:** Ethical Dilemma, Ethics, Sales Taxes, Payroll Taxes, Tax Evasion, Small Cash Businesses

## INTRODUCTION

Many small business owners have created clever schemes to avoid paying taxes, particularly the sales tax. From seeking out creative accountants to recording fictitious transactions, some small cash business owners have become experts at evading taxes. According to the United States government and supported by several experts, many business owners fail to pay all their taxes (Morse, Karlinsky and Bankman, 2009). Morse et al. (2009, p. 37,38) state “The government estimates that the annual tax gap equals \$345 billion. About \$109 billion of this is attributable to underpayment of taxes on business income by individuals...small business owners report less than half of their income”. An interview with a certified public accountant (CPA) supports the claim. Interviewer: Studies show that small cash businesses report about 50% of their gross income. Is that your experience?

Accountant: 50%? No. I'd say 33%.

Interviewer: Do your clients ever get caught?

Accountant: Oh, yes, the SBE [California State Board of Equalization] comes in and says you bought too many goods to have grossed what you grossed. Then they recalculate the profit. (Morse et al., 2009, p. 52).

### Small Cash Businesses

Typically, small cash business owners are offenders, due to opportunity and lack of internal controls. A small cash business is one that uses cash frequently to execute transactions. Small cash business include but are not limited to hair salons, restaurants, independent jewelry stores, gardeners, small construction firms, and small stores. Morse et al (2009) contended income source is an imperative factor of tax law compliance. Small business owners can evade taxes easily when cash transactions occur. Tax evading

business owners are well aware of the “paper trail” that goes along with credit card payments. As a result, they would rather not run the risk of being caught evading taxes where there are records of payment. However, cash receipts carry no such trail and leave the door open for tax evasion. Studies further support the claim that, “...taxpayers are more likely to report income received in check form than income received in cash.” (Morse et al., 2009, p. 40.) Many small cash businesses such as jewelry, antique, and trophy shops who are paid by check will sign over the checks to their suppliers for new inventory, thus, eliminating the trail of revenues. (Morse et al., 2009, p. 50).

### Focus on Sales Taxes

Morse et al. (2009) discovered many small cash business owners who evade paying taxes do are specifically motivated by the sales tax. Morse and her colleagues interviewed several small business owners and one owner declared, “Sales tax. Six percent doesn’t sound like a lot, but it’s thousands every month and it’s on the gross” (Morse et al., 2009, p. 49). Morse learned from her interviews, small cash business owners believed underreporting was necessary for them to remain in business and sales tax was the tax to avoid. An overwhelming number of small cash business owners evaded sales tax because it was applicable to gross revenue and reduced net income. Morse et al., (2009, p. 49) stated, “Sales tax applies even to unprofitable businesses and individuals with unrelated losses and no tax due (Morse et al., 2009, p. 49).” Furthermore, Morse et al., (2009, p.40) suggests tax evasion occurs because it is a normal practice amongst small cash business owners and because of the opportunity.

*What I do is, people come in and buy stuff. If they pay with check or Visa, I record it. Guy comes in and if I am there and he spends over \$40 [in cash], it’s entered into the computer as an invoice-in-progress. End of the day I get a set of [receipt] print out [of] all the invoices-in-progress, and they’re erased from memory. I take the cash home. Never deposit the cash, ever. (Morse et al., 2009, p. 50).*

### Sales Taxes Are Not a Tax on the Business

What is terribly disturbing about this is the attitude among the business owners that sales tax is a tax on the business, paid as an expense. It is not. Sales taxes are NOT part of gross sales. Rather, the sales taxes are taxes paid by the customer which are collected by the seller, who holds them as trustee for the appropriate state and sometimes local governments. It is possible that this misunderstanding may come from the bookkeeping involved with sales taxes. While accounting students are taught that the proceeds taxable sales ought to be recorded as the sales price going into revenues and the sales tax portion being applied to a “Sales Taxes Payable” account (since they are separately stated on a receipt, this seems obvious), many bookkeeping systems record the gross amount received, including sales taxes collected, as sales. Allegedly when periodic sales tax submissions are due, the amount of sales taxes is “backed out” of sales with a simple calculation. For example, consider a sale of \$100 subject to a six percent sales tax. The business records the transaction as a sale of \$106. When sales taxes are due, the business divides sales by 1.06, resulting in a “true” sales figure of \$100, with the remaining \$6 as sales taxes to be paid.

There are similarities to the employee paid portion of withholding tax. The amounts are expensed and deducted by the employer, who ostensibly holds them as trustee for the state and federal governments to be submitted periodically on the employee's behalf. With regard to the federal government, section 7701(a) of the Internal Revenue Code (2013) states that “Whenever any person is required to collect or withhold any internal revenue tax from any other person and to pay over such tax to the United States, the amount of tax so collected or withheld shall be held to be a special fund in trust for the United States.”

A number of other Internal Revenue Code sections provide substantial penalties for any failure to pay. IRC section 6672 (2013) provides a 100% penalty, regardless of any intent to defraud. IRC section 7202 (2013) states

*Any person required under this title to collect, account for, and pay over any tax imposed by this title who willfully fails to collect or truthfully account for and pay over such tax shall, in addition to other penalties provided by law, be guilty of a felony and, upon conviction thereof, shall be fined not more than \$10,000, or imprisoned not more than 5 years, or both, together with the costs of prosecution.*

And per section 3571 of the Crimes and Criminal Procedure (Title 18) of the US Code (2013) law outside the tax code, a fine of as much as \$250,000 could be levied.

### How and Why They Do It

Morse's findings imply small business owners believe bank transactions such as withdrawals and deposits, are more visible than cash, but less visible than credit card transactions. As previously discussed, many small cash business owners prefer cash, and at times check, transactions over credit/debit transactions. Each business owner has his/her way of soliciting cash or check payments over credit/debit payments. One of the most common methods employed is to offer a percentage off of all cash purchases. The "percentage off" method is quite common in jewelry and construction businesses (Morse et al., 2009, p. 51). The last quote from the business owner in the "Focus on Sales Taxes" section is quite poignant. It is distressing to get inside the mind of a tax evader. The small cash business owner openly admitted to eradicating all records of cash receipts. But it is even more alarming to know this behavior is "normal" for many small business owners. Morse stated the above-described behavior is by no means abnormal; other small cash business owners employ their own tactics for evading taxes (Morse et al., 2009). Hair salons often neglect to record walk-in customers or even erase previously set appointments from their books. Jewelry owners often give a discount on cash purchases and never record the transactions in their books.

One small business owner interviewed by Morse declared, "Never do anything with deductions" (Morse et al., 2009, p. 51). He continued, "If you are going to cheat, cheat on the income side or cheat on the deduction side, but not both" (Morse et al., 2009, p. 51,52). The owner disclosed a strategy employed to creatively avoid paying taxes. Unfortunately, he is not alone. Several small cash business owners interviewed shared the same sentiment. McGuire, Omar and Wang (2012), citing Maydew & Shackelford (2007, p. 327), believe that "From a tax consulting perspective, the presence of an overall industry expert is potentially associated with increased tax avoidance because overall experts likely combine their financial expertise and tax expertise to develop tax strategies that allow clients to more fully recognize the financial statement benefits of tax avoidance". McGuire, et al. (2012, p. 977) supported the claim that tax-specific preparers aid their clients in tax evasion. McGuire continued by declaring tax preparers who have expertise, in this case small cash businesses, often times create strategies that intentionally avoid paying taxes. Morse's studies further support the claims of Maydew et al. (2007). Morse discovered the small cash business owners she interviewed actively sought tax preparers that would assist in their evasion. Many business owners were quoted saying, "[I would like a preparer] who understands cash businesses, will be comfortable with me, [and be] creative" (Morse et al., 2009, p. 57).

Cash business owners know other cash business owners; thus, finding a creative accountant is usually not too difficult. Even if business owners did not rely on their network of evaders, locating a tax preparer that is willing to work unethically is surprisingly easy. "My approach is that I tell them what I need and say that if they are not comfortable with me or with being creative, we won't work out" (Morse et al., 2009, p. 57). The same business owner claimed most accountants she encountered did not refuse or even convey discomfort (Morse et al., 2009, p. 57). One may wonder why an accountant would risk losing their

credentials to earn a few bucks? There are several reasons why; however, external factors tend to have the greatest impact. Consider this- a college graduate lands a job at a large accounting firm. Several years pass and he slowly begins to earn more income. He gets married and learns a new addition will soon join him and his wife. With external pressures mounting, he may be tempted to “look the other way” or take the “I didn’t hear that” approach in order to keep a client happy. Otherwise, he could lose the client to another accountant. Morse referred to this type of preparer as a “don’t ask, don’t tell” preparer (Morse et al., 2009, p. 59). She maintained that preparers who end up in these situations uphold attitudes of “I didn’t see that” or “You didn’t tell me that” (Morse et al., 2009, p. 59).

*Similarly, another CPA called it ‘human nature’ to cheat and said that his clients ‘hide whatever they can.’ He said that he doesn’t ask questions unless he sees funds going through a client’s checking account. If he does see such funds, he encourages clients to report that revenue since the I.R.S. might discover it. He also explains to his clients that they need to show enough income to cover their cost of living. (Morse et al., 2009, p. 59). According to Morse, there are some preparers who are extremely involved in assisting their clients avoid paying taxes. Such preparers have made a deliberate choice to aid their clients and have committed unethical acts.*

Interviewer: Worry about getting caught?

Storekeeper: I do, that’s why, the first ten years I was totally cheating. Honest, at that time everything was just pulled out of thin air, kind of just looked at what I wanted to pay, just made up figures. Now I really got it under control, can back it up.

Interviewer: Suppose you’re audited?

Storekeeper: I did get audited actually, but it was only over a couple of items. Bottom line is my accountant makes up all this backup information. So when they ask him a question, bang it’s there. He goes over all the deposits, makes them reconciled with the sales. (Morse et al., 2009, p. 12). (Morse et al., 2009, p. 61) claimed she heard some preparers disclose industry averages, profit margins, and other standard practices to business owners who wish to evade taxes. This is an extreme case when a preparer has exploited his/her expertise to assist someone conduct unethically. Creative accountants who disclose this type of detailed information to business owners do so at a higher cost. For example, a creative accountant will charge \$200 for standard “slightly” creative information, but for \$2,000 the creative accountant will divulge much more. Information that may come at the higher price might also include lower of cost or market method (LCM). Morse claims you achieve this by reporting low values for end-of-year inventory. She continued by declaring this would increase the cost of goods sold and lower gross profit and taxable income (Morse et al., 2009, p. 61).

Surprisingly, many tax preparers who assist their clients evade taxes do not believe they aid evasion. According to Morse’s findings, only a few were actually aware enough to realize they were behaving unethically (Morse et al., 2009). The tax preparers simply see their behavior as industry standard and assume other preparers are doing the same. If they do not assist their clients, they risk losing their clients to other preparers. Moreover, tax preparers are losing market share to tax preparation software and some are willing to operate unethically in order to retain their clients. There is one significant problem small business owners who evade taxes must consider, all the extra cash. Since they have been evading taxes, they are left with a surplus of cash and must find ways to use it. The evaders must be careful how they use the money, as they do not want to call attention to a lifestyle that exceeds their proceeds. The small cash business owners Morse interviewed generally agreed that the extra cash must never be deposited, as deposits leave paper trails (Morse et al., 2009). The business owners listed three strategies for dealing with the extra income: spend it, hoard it, and/or invest it in the business.

The spending strategy usually involved purchases of personal property. Items such as: jewelry, expensive rugs, antiques, designer clothing, and furniture were quite popular. Several interviewed also reported spending cash at restaurants and hotels. One business owner disclosed to Morse, "...cash business taxpayers often have homes whose modest exteriors belie their expensive contents- clothing, jewelry, artwork, rugs, and furniture which may be valued at two or three times the value of the structure and land" (Morse et al., 2009, p. 53,55). The previous is a bold and telling statement. Small business owners who evade taxes may have enough cash to purchase goods that may be worth more than the home and land. Such extravagant purchases still may not absorb all the unreported cash. Small cash business tax evaders interviewed by Morse reported spending one to five thousand dollars per month on personal property, hotel, and restaurant visits (Morse et al., 2009, p. 53,54). These numbers are baffling. A number of small business tax evaders have so much cash that they are spending thousands on frivolous goods.

Several small cash business tax evaders are spending their surplus on much more than exotic rugs and fine dining. Morse reports that one can only purchase so much jewelry. If the tax evader has reached his/her capacity in rugs and jewelry, he/she may progress to larger purchases. Items such as: boats, planes, luxury vehicles, and financial instruments are common amongst career tax evaders (Morse et al., 2009, p. 55). However, such purchases do not accurately reflect the reported income of the tax evader, thus drawing attention to one's self. In addition to drawing attention via high priced items, the purchase of such goods leave paper trails. Vehicle titles, brokerage firm agreements and account records, property tax assessments and other transaction records are directly connected to the tax evader and raise suspicions about revenue reporting practices. Acquiring such high priced items significantly increases the chance of getting caught. Another popular strategy amongst small cash business tax evaders is hoarding. Hoarding the surplus of cash would seem to be a fairly safe way to retain the surplus. A number of small cash business owners would collect the cash and place it in a safe deposit box (Morse et al., 2009, p. 54). The evaders deemed the safe deposit box as a viable alternative to depositing the surplus in to an account. Many would also house the cash in the home in a secret location.

Several small cash business owners used the surplus to invest in the business (Morse et al., 2009, p. 54). The tax evaders would go to suppliers and purchase inventory or make improvements to the business via cash financing. These actions may also raise a red flag because if the tax evader's reporting of income were accurate, he/she would not have the resources to purchase an abundance of new inventory or make dramatic improvements to the business. The ethical dilemma of the small cash business owner is quite complicated. He/she believes the government should allow him/her certain subsidies, as farmers receive, and believe large banks received a bail out, so why shouldn't they? As innovative as small cash business owners are when it comes to tax evasion, usually they are incapable of executing an evasion strategy without assistance. They solicit information from other tax evaders or hire creative accountants who have expertise in cash businesses. The ethical dilemma is not only applicable to small cash business owners, but also to the creative accountant. Looking the other way and ignoring red flags in order to retain clients are common practices of the creative accountant. Tax cheating is a result of opportunity, lack of internal controls, and is shaped by peer influence.

# IMPACT OF SARBANES-OXLEY ACT ON SEASONED EQUITY OFFERING BY CANADIAN CROSS-LISTED FIRMS: EVIDENCE FROM BOUGHT DEALS VS. FIRM COMMITMENT

Arturo Rubalcava, University of Regina

## ABSTRACT

*This paper examines the impact of the Sarbanes-Oxley Act on the market reaction and underwriting fees of two methods of choice for underwriting seasoned equity offerings: Bought deals and firm commitment, by Canadian firms cross-listed on major U.S. exchanges. After controlling for offer and firm characteristics, it finds the market reaction to offer announcements is more positive for bought deals than for firm commitment during the pre-Sarbanes period only. This shows that bought deals lost their indirect cost advantage after the passage of the Act. On the other hand, the underwriting fees are lower for bought deals than for firm commitment during the pre-Sarbanes period only. This shows that bought deals also lost their fees cost advantage after the passage of the Act.*

**JEL:** G24, G32

**KEYWORDS:** Sarbanes-Oxley Act, Seasoned Equity Offerings, Cross-Listed, Market Reaction, Underwriting Fees, Bought Deals, Firm Commitment

## INTRODUCTION

The Sarbanes-Oxley Act (SOX) is a federal law passed by the U.S. Congress in 2002 to restore investor confidence in U.S. capital markets dishonored by major corporate fraud. Research studies report that SOX has resulted in compliance costs higher than their expected benefits, mainly for companies subject to SOX from developed countries (Amaoko-Adu and Baulkaran, 2008; Bris, Cantale and Nishiotis, 2007; Li, 2011; Litvak, 2007, 2008). Eckbo, Masulis and Norly (2007) suggest that it would be relevant to explore the effects on issuing costs of important regulatory changes such as SOX. Two important costs associated to underwriting seasoned equity offerings are the market reaction to the offer announcement (indirect cost) and the underwriting fee (direct cost). Both types of cost are not trivial. Empirical evidence shows the average market reaction to offer announcements is around -2 percent and the underwriting fee around 4 to 5 percent of gross offering revenue.

Following Eckbo, Masulis and Norly (2007), this paper fills the gap by examining the effects of the Act on the market reaction and underwriting fees of seasoned equity offerings of bought deals and firm commitment, respectively, by Canadian firms cross-listed in major U.S. exchanges. After controlling for firm and offer characteristics, it finds bought deals show indirect and direct cost advantage to firm commitment during the pre-SOX period only. This reveals bought deals lost their cost advantage after the passage of SOX. Our results do not support the underwriting *certification* hypothesis for bought deals of Pandes (2010) after the passage of the Act. This hypothesis states the backing by underwriters on bought deals should result in lower market reaction to offer announcements and lower underwriting fees than firm commitment. The reminder of the paper is as follows. Next section provides a background on bought deals and firm commitment offers and literature review. The next section describes the data and methods. The following section reports the empirical results. The last section reports the conclusions.

## BACKGROUND AND LITERATURE REVIEW

This section provides a summary of the main features that distinguish bought deals and firm commitment as underwriting methods of seasoned equity offerings (SEO). In addition, it examines the relevant literature on both underwriting methods and the impact of Sarbanes-Oxley Act (SOX) on seasoned equity offerings by Canadian firms cross-listed in the U.S. Bought deals (accelerated offers or shelf registered offers in the U.S.) and firm commitment offers (marketed offers or non-shelf registered offers in the U.S.) are two methods of choice used by companies to issue seasoned equity offerings. In both cases, the underwriter – typically an investment bank – buys the shares of common stock from the issuing company and resells them to investors at a predetermined offering price. The underwriting fee compensates the investment bank for helping the company in the equity offering.

Some distinguishing characteristics of bought deals and firm commitment offers are as follows. The time and requirements to register the SEO with regulators and exchanges are less for bought deals compared with firm commitment. In addition, the underwriting agreement of the seasoned equity offering, the issue price and offering size are determined around the announcement date for bought deals. The announcement date is the same as the issue date for bought deals unlike firm commitment, which is determined several days after the announcement. Bought deals, unlike firm commitment, have no *market out clause*. This means cancellation of the offer cannot occur if market conditions decline – that is, the investment banks assume all price risk. Bought deals, unlike firm commitment, do not include book building or road show. Briefly, this refers the procedure followed to gauge the demand for the equity offering among potential investors (mainly institutional investors). It also includes information about the issue to help decide the proper offering size and price. This results in faster completion and reduced marketing and distribution costs. Since the nineties bought deals have surpassed firm commitment as method of choice for underwriting seasoned offerings (Bortolotti, Megginson and Smart, 2008; Autore, Kumar and Shome, 2008; Pandes, 2010).

Empirical research on which underwriting method is cheaper reports no agreement. For example, Denis (1993) and Sherman (1999) report not difference in underwriting fees for shelf-registered offers (bought deals) and non-shelf registered offers (firm commitment) in the United States. Similarly, Bortolotti, Megginson and Smart (2008) do not find difference in market impact of accelerated deals (bought deals) and non-accelerated deals (firm commitment) for a sample of U.S. and non-U.S. seasoned equity offerings. On the other hand, Pandes (2010) reports lower underwriting fees and more positive price impact for bought deals than firm commitment during the period 1995-2005 for Canadian issuers. Pandes (2010) argues these lower costs are consistent with the certification incurred by underwriters on bought deals unlike firm commitment offers.

This paper extends the work of Rubalcava (2012, 2013) who examines the impact of the Sarbanes-Oxley Act on the market reaction to seasoned equity offering announcement and underwriting fees by Canadian cross-listed firms, respectively. Specifically, Rubalcava (2012) finds the price reaction to offer announcement of Canadian firms cross-listed in major U.S. markets has been more negative after the passage of the Act. This suggests the Act has been harmful for Canadian cross-listing issuers. On the other hand, Rubalcava (2013) finds the underwriting fees of seasoned equity offerings of Canadian cross-listing issuers did not change significantly after the passage of the Act. Both studies do not distinguish the impact of the Act on the market reaction and underwriting fees of firm commitment and bought deals. This paper examines this issue.

## DATA AND METHODOLOGY

The sample consists of 233 seasoned equity offerings (SEO) by Canadian cross-listed firms, from May 1995 to July 2008. The pre-SOX period (May 1995-December 2001) includes 144 SEO, 81 bought deals and 63 firm commitment. The post-SOX period (January 2003-July 2008) includes 89 SEO, 52 bought deals and 37 firm commitment. The sample does not include eighteen offerings on the year of the Sarbanes-Oxley Act. This is to get clean and more transparent evidence on the difference on impact costs for firm commitment and bought deals during the pre-post SOX periods, respectively. The FP Advisor database and the Canadian Financial Markets Research Centre (CFMRC) are the source for the seasoned equity offerings and their determinants of the market reaction and underwriting fees. Statistics Canada (CANSIM) and the Center for Research in Security Prices (CRSP) are also sources of relevant market data. All seasoned equity offerings include shares of common stock only.

This paper uses an international Asset Pricing Model (IAPM) to examine the market reaction - abnormal return around the announcement of seasoned equity offerings - as in Foerster and Karolyi (1999). The model controls for domestic and U.S. market risks for the exposition of Canadian cross-listed issuers to both markets. The cross-sectional model that examines the relation between the abnormal return or *CAR* and the expected determinants is as follows:

$$CAR_i = a_0 + (a_1 + \delta_{DumBD}DumPostSOX)DumBD + (a_2 + \delta_{RUNUP}DumPostSOX)RUNUP_i + (a_3 + \delta_{RELOFFER}DumPostSOX)RELOFFER + \dots + (a_{n-1} + \delta_{DumGLO}DumPostSOX)DumGLO + a_nDumYear_{t=1995} + \dots + a_{n+13}DumYear_{t=2008} + \varepsilon_i \quad (1)$$

Equation (1) estimates the coefficients for the overall sample period and simultaneously for the pre and post SOX periods for firm commitment and bought deals, respectively. The model includes determinants well documented in the SEO literature. The variables in equation (1) are as follows. *CAR<sub>i</sub>* is the three-day abnormal return for the SEO announcement window [AD-1, AD+1] for firm commitment offers of firm *i* from an IAPM model. We use an adjusted version of *CAR* (*CAR<sub>adj</sub>*) for bought deals as in Pandes (2010). Specifically, the *CAR<sub>adj</sub>* is equal to  $(1/(1-\alpha))CAR + (\alpha/(1-\alpha))[Pb-Po]/Pb$ , where  $\alpha$  is the number of shares issued divided by the total number of shares outstanding after the issue. *Pb* is the shares price before the SEO announcement; *Po* is the offering price. This formula removes the discount impact on the *CAR* for bought deals. The price discount is determined at the offer announcement for bought deals and before the closing date of the issue for firm commitment. The price discount or underpricing occurs when the offer price is lower than the closing price on the day before the issue date.

(This paper does not examine the price discount, which is also an important direct cost for bought deals and firm commitment offers.) *DumBD* is a dummy variable that equals one if the SEO's method of choice is a bought deal and zero if it is firm commitment. *DumPostSOX* is a dummy variable that equals one during the time after the SOX and zero before (*DumPreSOX*). *RUNUP* is the abnormal return for the SEO pre-announcement window [AD-26, AD-2] from an IAPM. *RELOFFER* is the ratio of the size of the offering to the total number of shares outstanding pre-announcement. *DumOAO* is a dummy variable that equals one if the SEO has an overallotment option and is zero otherwise. *BETA* is the coefficient of the Canadian market risk premium estimated from the IAPM model; it measures firm's systematic risk. *BRUNNERS* is the number of times an investment bank appears as a book runner in a SEO, it measure underwriter reputation. *DumXY* is a dummy variable that equals one if the SEO is for a firm cross-listed on the NYSE and AMEX and zero on NASDAQ (*DumQ*). Reason for using one dummy for firms listed on the NYSE and AMEX, and the other dummy for NASDAQ is as follows.

The NYSE/AMEX and NASDAQ are different the trading mechanisms with firms having different trading behaviors. In addition, both trading mechanisms are geared to different company clientele. *DumGLO* is a

dummy variable that equals one if the SEO is issued simultaneously in other countries (mostly U.S.) and Canada, and zero in Canada only.  $DumYEAR_{\tau}$  are dummy variables that control for annual economic conditions from 1995 to 2008. A cross-sectional regression of underwriting fees on expected determinants uses also equation (1). FEES is the cash fee as a percent of gross proceeds, that is the gross offering revenue, paid by the issuing firm to the underwriter(s).  $Ln(GPROCEEDS)$  is the natural log of gross offering revenue in Canadian dollars of July 2008. It measures economies of scale involving a negative relation between fees and offer size (Smith, 1977). PRICE is the stock price 2 days before the announcement day of the SEO as in Butler, Grullon and Weston (2005) in Canadian dollars of July 2008. SYNCH is an acronym for synchronicity and is equal to the natural log ratio between the Adjusted R square and (1-Adjusted R square) following Teoh, Yang and Zhang (2009); it measures earnings uncertainty. CHTURNOVER is the change in the average value of shares (volume) turnover between the period [AD-120, AD-61] and [AD-60, AD-2], where AD is the announcement date of the offer. Share turnover is equal to the ratio of shares volume to the total number of shares outstanding.

CHTURNOVER measures price uncertainty as in Dichev, Huang and Zhou, 2011. RSEC\_OFFER is the ratio of number of shares sold by current shareholders to the total number of shares offered as in Lee and Masulis (2009). The FEES regression includes determinants from the CAR model such as DumOAO, BETA,  $Ln(BRUNNERS)$ , DumGLO and DumXY. The model include dummy variables that classify the purpose of the offer as follows: D0 (unknown), D1 (working capital), D2 (capital investment), D3 (general corporate) and D4 (debt reduction).  $\epsilon_i$  is the error term that is assumed to be independently and normally distributed; that is,  $\epsilon_i \sim N(0, \sigma^2)$ .

## EMPIRICAL RESULTS

### Abnormal Returns for Seasoned Equity Offerings of Bought Deals and Firm Commitment

Table 1 reports the mean (median) cumulative average abnormal return (CAAR) values for seasoned equity offerings (SEO) during the overall period and pre and post-SOX periods. It also includes the mean (median) values in those periods for bought deals and firm commitment, respectively. Based on columns (2), (3) and (4) of Table 1, show the mean CAAR value of bought deals is slightly higher than firm commitment (p-value of difference is 0.0770) for the overall period. However, the cost advantage is slightly significant (p-value of 0.0895) during the pre-SOX period only. This preliminary result shows that bought deals lost indirect cost advantage after the passage of SOX.

Table 1: Mean (Median) CAAR Values for Seasoned Equity Offerings

Period	(1) All SEO (233)	(2) Bought Deals (133)	(3) Firm Commitment (100)	(4) P-value difference BD vs. FC Mean (Median)
1995-2008	1.88% (-2.27%)	-1.05% (-1.76%)	-2.99% (-2.96%)	0.0770* (0.2568)
Pre-SOX	-0.81% (-1.60%)	-0.306% (-1.27%)	-2.25% (-2.13%)	0.0895* (0.3735)
Post-SOX	-3.61% (-3.75%)	-3.16% (-2.99%)	-4.24% (-3.93%)	0.4098 (0.4613)

*This table reports the mean (median) cumulative average abnormal returns (CAAR) for seasoned equity offerings (SEO) during the overall, pre and post-SOX periods for bought deals (BD) and firm commitment (FC), respectively. The first row reports the number of SEO in parentheses. \*\*\*, \*\* and \* denote significance at the 1, 5 and 10 percent levels.*

This section examines whether bought deals show indirect cost advantage on firm commitment after controlling for offer and firm characteristics. It also explores whether the determinants of bought deals and firm commitment are the same for the pre- and post-SOX period, respectively. Table 2 reports various

regressions of cumulative average abnormal return (CAAR) around the announcement date of seasoned equity offerings on expected determinants.

This table reports the cross-sectional regression results between abnormal returns and expected determinants for the overall sample of seasoned equity offerings (SEO) by Canadian cross-listed issuers on major U.S. exchanges at the announcement date. The abnormal returns are regressed on determinants such as price run-up (RUNUP), ratio of offer size to shares outstanding (RELOFFER), stock's beta (BETA), number of times an underwriter appears as a book runner (BRUNNER). It also includes the dummy variables DumBD (bought deals), DumPostSOX (post-SOX period), DumOAO (overallotment option), DumXY (NYSE/AMEX cross-listing venue), DumGLO (global issuance). The first row show the number of SEO in parentheses. \*\*\*, \*\* and \* denote significance at the 1, 5 and 10 percent levels.

Regression (1) reports the coefficient of DumBD is positive and significant at the 10 percent level. It shows bought deals have more positive market reaction than firm commitment offers during the overall period. In addition, the market reaction to all offers is more negative during the post-SOX period as shown by the significant and negative coefficient (-0.027) of DumPostSOX. This is consistent with the results in Table 1. Regressions (2) and (3) report the estimated coefficient of DumBD is positive and significant during the pre-SOX period only. The results show bought deals have more positive market reaction than firm commitment offers during the pre-SOX period only, after controlling for other determinants.

Regressions (4) and (5) of Table 2 show the determinants of CAAR for bought deals and firm commitment for the pre- and post-SOX periods, respectively. Based on regression (4), price run-up (RUNUP) and the overallotment dummy variable (DumOAO) are positively related to CAAR for the pre-SOX period only. On the other hand, the coefficient of DumXY is negative and significant during the pre-SOX period only. This shows a negative price impact occurs at the offer announcement date for Canadian firms cross-listed in NYSE/AMEX during the pre-SOX period. Even though the coefficient of the interaction variable for the post-SOX period, RUNUP\*DumPostSOX (DUMAO\*DumPostSOX) is negative and significant at 5 percent (10 percent), their coefficients are not significant for the post SOX period based on unreported regression results. Regression (5) reports the indicator variable for global offers (DumGLO) is the only significant determinant for firm commitment offers and for the pre-SOX period only. Based on an unreported regression the coefficient estimate of DumGLO is not significant for the post-SOX period. This

shows firm commitment global offers had positive market reaction during the pre-SOX period only. None of the coefficients for the dummy years is significant for firm commitment and bought deals, respectively. Overall, the results overall show no determinants of abnormal returns for bought deals and firm commitment offers are significant during the post-SOX period. In sum, different determinants affect bought deals and firm commitment offers for the pre-SOX period only.

### Underwriting Fees for Seasoned Equity Offerings Of Bought Deals and Firm Commitment

Table 3 reports the mean (median) underwriting fee values for seasoned equity offerings (SEO) during the overall, pre and post-SOX periods and distinguished by bought deals and firm commitment, respectively. Columns (2), (3) and (4) of Table 3 show the mean fee value of bought deals (4.5%) is significantly lower than firm commitment (4.94%) (p-value of difference is 0.0077) for the pre-SOX period. However, the cost advantage of bought deals disappears during the post-SOX period as reported by the non-significant p-value of 0.8261. This early result shows that bought deals lost their fee cost advantage after the passage of SOX.

Table 3: Mean (Median) Underwriting Fees for Seasoned Equity Offerings

Period	(1) All SEO (233)	(2) Bought Deals (133)	(3) Firm Commitment (100)	(4) P-Value Difference BD Vs. FC Mean (Median)
1995-2008	4.70% (4.29%)	4.58% (4.02%)	4.87% (4.65%)	0.0208** (0.0282)**
Pre-SOX	4.69% (4.27%)	4.5% (4%)	4.94% (4.64%)	0.0077*** (0.028)**
Post-SOX	4.71% (4.56%)	4.70% (4.50%)	4.74% (4.65%)	0.8261 (0.5827)

*This table shows the mean (median) underwriting fees for seasoned equity offerings (SEO) during the overall, pre and post-SOX periods for all SEO, bought deals (BD) and firm commitment (FC), respectively. The first row reports the number of SEO in parentheses. \*\*\*, \*\* and \*denote significance at the 1, 5 and 10 percent levels.*

This section examines whether bought deals report lower underwriting fees than firm commitment after controlling for firm and offer characteristics. The sample includes only 2004 seasoned equity offerings due to missing or error data in expected determinants such as synchronicity (SYNCH). These reduced data produce similar results as those reported in Table 1. The section also explores whether the same determinants affect firm commitment and bought deals for the pre- and post-SOX period, respectively. Table 4 reports cross-sectional regressions of underwriting fees on offer determinants by Canadian cross-listed issuers on major U.S. exchanges. Regression (1) reports a negative and significant coefficient (-0.2589) of DumBD for the overall period. This result shows bought deals report lower fees than firm commitment during the overall period. However, the coefficient of DumBD is only significant for the pre-SOX period as reported in regressions (2) and (3). This reveals the fees advantage of bought deals on firm commitment disappeared after SOX, after controlling for firm and offer characteristics.

R2 Adj	0.535	0.542	0.590	0.541	0.693

This table reports the cross-sectional regression on underwriting fees on expected determinants of seasoned equity offerings (SEO) by Canadian cross-listed issuers on major U.S. exchanges. The expected determinants are change on value of shares turnover (CHTURNOVER), stock's beta (BETA), natural log of number of times an underwriter appears as a book runner (Ln(BRUNNERS)), share price two days before SEO announcement (PRICE), natural log of gross proceeds (Ln(GProceeds)), synchronicity (SYNCH) as a proxy for earnings uncertainty, RSEC\_OFFER is the ratio of secondary offering (non-capital raising) to offer size. It includes the dummy variables DumBD (bought deals), DumPostSOX (post-SOX period), DumOAO (overallotment option), DumXY (NYSE/AMEX cross-listing venue), DumGLO (global issuance). Dummy variables indicating the SEO purpose are D0 (unknown), D1 (working capital), D2 (capital investment), D3 (general corporate) and D4 (debt reduction). The first row shows the number of SEO in parentheses. \*\*\*, \*\* and \* indicate significance at the 1, 5 and 10 percent levels.

Columns (4) and (5) of Table 4 report the regression results of underwriting fees for bought deals and firm commitment, respectively. Regressions (4) and (5) show Ln(GProceeds) (proxy for economies of scale between fees and dollar offer size) and DumGLO (global offer) are the only common determinants of fees for bought deals and firm commitment offers and for the pre-SOX period only. The negative coefficient of Ln(GProceeds) shows underwriting fees decreases with offer size for the pre-SOX period. Similarly, the positive coefficient of DumGLO shows underwriting fees increases with global offerings for the pre-SOX period. Based on an unreported regression, the coefficient of Ln(GProceeds) of -0.3680 [which is equal to the coefficient of the Ln(GProceeds), -0.3897, and the interaction terms Ln(GProceeds)\*Ln(GProceeds), 0.0211] is highly significant (p-value of 0.0029) during the post-SOX period for bought deals. Following similar procedure, the coefficient of DumQ (NASDAQ cross-listing issuer) is negative and significant for the post-SOX period for bought deals. These results show underwriting fees for bought deals are decreasing with gross proceeds and for offers of cross-listing firms in NASDAQ, during the post-SOX period.

Regression (5) reports the determinants, other than  $\ln(\text{GProceeds})$  and  $\text{DumGLO}$ , that are significant for firm commitment offers, for the pre-SOX period. For example, the coefficient of  $\text{PRICE}$  is negative and significant showing underwriting fees are decreasing with share price consistent with Buttler, Grullon and Weston (2005). The coefficient of  $\text{SYNCH}$  is negative and slightly significant suggesting lower fees for firms with higher earnings uncertainty, following Teoh, Yang and Zhang (2009). The coefficient of  $\text{BETA}$  is positive and significant suggesting higher fees for firms with higher systematic risk. Similarly, the positive and significant coefficient of  $\text{DumQ}$  shows offerings of firms cross-listed in NASDAQ report higher fees than those cross-listed in NYSE/AMEX. The coefficients of the dummy variables for the purpose of the offer such as  $\text{D1}$  (working capital) and  $\text{D3}$  (general corporate) are positive and significant. This implies that fees are increasing on working capital and general corporate purposes, during the pre-SOX period. Based on an unreported regression,  $\text{SYNCH}$  is the only determinant that is significant for firm commitment offers during the post-SOX period. The coefficient of  $\text{SYNCH}$  is negative and significant (-0.2666, p-value of 0.0120), showing firms with lower earnings uncertainty report lower fees for firm commitment offers during the post-SOX period.

In short, regressions (4) and (5) of Table 4 show natural log of gross proceeds is the only common determinant of underwriting fees for bought deals and firm commitment offers for the pre-SOX period only. On the other hand, the determinants of fees for bought deals and firm commitment are different during the post-SOX period. Even though the underwriting fees of firm commitment and bought deals are not significantly different during the post-SOX period, their fees respond to different set of determinants.

## CONCLUDING COMMENTS

Empirical evidence shows the Sarbanes-Oxley Act (SOX) of 2002 has resulted in compliance costs higher than their benefits mostly from firms subject to the Act from well-governed countries. The purpose of this paper is to examine the effects of SOX on issuing costs of two underwriting methods for seasoned equity offerings (SEO): bought deals and firm commitment, by Canadian firms cross-listed on the NYSE, AMEX, and NASDAQ. Two important issuing costs are the market reaction to the offer announcement (indirect cost) and the offer underwriting fees (direct cost). The analysis here shows the market reaction to offer announcements is more positive for bought deals than firm commitment for the pre-SOX period only, after controlling for offer and firm characteristics. Similarly, the underwriting fees are lower for bought deals than firm commitment also during the pre-SOX period only, after controlling for offer and firm characteristics. These results reveal bought deals lost their indirect and direct cost advantage after the passage of SOX. In addition, the issuing costs of bought deals and firm commitment offers respond to different sets of determinants before and after SOX.

These findings suggest the certification hypothesis of bought deals of Pandes (2010), does not hold for Canadian cross-listed firms after the passage of the Act. This hypothesis assumes the certification incurred by underwriters on bought deals should result in lower price reaction to SEO announcements and lower underwriting fees compared to firm commitment. Pandes' paper includes all offers by publicly traded Canadian firms during the period 1993-2005. It also does not distinguish between non-cross-listed and cross-listed firms. Our findings suggest the Act may have made irrelevant the certification for bought deals by Canadian cross-listed firms. Some drawbacks of this paper are as follows. It omits determinants that may give insights on the market reaction to offer announcements and underwriting fees, for example, insider ownership of the firm and financial institution shareholdings. In addition, it does not examine the price discount effect, which is also an important issuing cost for bought deals and firm commitment offers. A research topic worth examining is whether the findings and implications of this paper are generalisable for similar underwriting methods of seasoned equity offerings in the U.S. by U.S. and non-Canadian cross-listed firms.

# ETHICS WITHOUT (ENFORCEABLE) PRINCIPLES: ROOM FOR IMPROVEMENT IN THE U.S. ACCOUNTANTS' PROFESSIONAL CONDUCT CODE

Albert D. Spalding, Jr., Wayne State University

## ABSTRACT

*The American Institute of Certified Public Accountants has recently codified its Code of Professional Conduct. The revised Code adds a protocol for resolving ethical conflicts and broadens the “threats and safeguards” approach to addressing potential Code violations. The revision also highlights the differences between the ethical challenges faced by accountants in public practice, as compared to those faced by accountants employed by business and other organizations. Despite these improvements, the revised Code continues the tradition of allowing for disciplinary actions only in cases where rules, as such, have been violated, even if the Code’s larger principles are not adhered to. This paper summarizes the strengths and continued weaknesses of the AICPA Code as recently revised.*

**JEL:** J44; M4; M49

**KEYWORDS:** Code of Conduct; Code of Ethics; Accountants; Professional Ethics

## INTRODUCTION

This paper examines recent changes in the *Code of Professional Conduct* of the American Institute of Certified Public Accountants (AICPA), and questions whether the recent effort by the AICPA to reorganize and reformat the *Code* represents a missed opportunity. In particular, this paper considers whether the continuation of the AICPA policy of enforcing rules and interpretations of rules while disregarding the authoritativeness of its own ethical principles make sense. I conclude by suggesting that some of the recent changes, such as the adoption of a conceptual framework for the analysis of ethical issues, would be strengthened and enhanced if those changes were made applicable to the principles of the AICPA *Code* as well as the rules.

### Background: Rules-Based Ethics

A code of ethics or a code of conduct is an essential component of any profession. Indeed, Garcia & Lampe (2011), Higgs-Kleyn & Kapelianis (1999) and others have observed that a code of ethics or similar set of standards has helped to establish the accounting profession itself. The history of the AICPA is, in part, the story of how the accounting profession in the United States engaged in an intentional and carefully focused project of self regulation that has included rules of behavior that are enforced by the profession itself. There is much to be said, and much has been said, about what such a code of conduct or code of ethics should look like and tends to look like. The literature in this area is robust and extensive. There are studies such as that of Gaumnitz and Lere (2002) that have examined the contents of codes of ethics of business organizations in the United States, as well as cross-country comparisons (see, e.g., Jaubowski *et al*, 2002). These codes are more than just public relations statements; they are enforced through disciplinary sanctions and help to remediate deficiencies in professional service (Moriarty, 2000). Some codes of conduct, like that of the AICPA, are rules-based. That is, they establish parameters for determining how individuals should act by prohibiting impermissible behaviors. Other codes, which tend to be designated as codes of

ethics rather than codes of conduct, emphasize general principles which adherents strive to maintain. As Allen (2010) observed, the *Code of Ethics for Professional Accountants* established by the International Ethics Standards Board for Accountants (IESBA), an arm of the International Federation of Accountants (IFAC), is by comparison, represents more of a principles-based set of ethical standards. The IESBA Code applies a “conceptual framework” protocol to measure compliance with the fundamental principles whenever accountants know (or should know) that circumstances or relationships may compromise their compliance with the principles.

Despite the robust and wide ranging literature on the subject of codes of ethics and codes of conduct generally, and the AICPA *Code* in particular, very little of the literature has concerned itself with the essential structure and design of the *Code* itself. This is important, because the design and structure of a code of ethics or code of conduct can inform its effectiveness, its understandability, and its enforceability. As Dienhart (1995) has observed, a code that is essentially rules-based tends to replace creative thinking about moral responsibility with efforts to “game the rules.” On the other hand, codes that are more principles-based, and that engender critical thinking about ethical dilemmas on a case-by-case basis, can have more impact and can result in participation by members of the organization in a common project of continual improvement. This paper examines the AICPA *Code* in light of Dienhart's analysis of rules-based *versus* principles-based codes of ethics and codes of conduct.

#### The Aicpa Rules-Based Code of Professional Conduct

The initial version of the current *Code of Professional Conduct* of the AICPA was promulgated in 1917 by the AICPA's predecessor organization, the American Institute of Accountants. It consisted of eight rules. By 1922 the code had grown to twelve rules (Stephens, 2012). The current version, that is, the version that is being codified by the AICPA, dates back to 1988, with various minor modifications since that time and consists of twelve rules supported by approximately twenty interpretations. The current AICPA *Code* consists of two parts, the Principles of Professional Conduct, and the Rules of Professional Conduct. The Principles are general statements about the ethical objectives and values that the accounting profession believes should inform the behavior of its members.

For example, in its articulation of the responsibilities of accountants to society and to the public at large, the Principles assert that this implies a continuing responsibility of accountants to cooperate with each other to improve the art of accounting, maintain the public's confidence, and carry out the profession's special responsibilities for self-governance. Similarly, the Principles acknowledge that ethical conflicts can arise as a result of conflicting pressures as accountants serve their clients and employers, on the one hand, and maintain their obligations to society at large on the other. The Principles offer the general observation that, in the end, when accountants fulfill their responsibility to the public, clients' and employers' interests are best served. The principles also set forth the ethical values that are intended to inform the Rules of Professional Conduct. For example, the principles observe that the notion of integrity requires every accountant to be, among other things, honest and candid within the constraints of client confidentiality. Similarly, the principle of objectivity imposes the obligation on accountants to be impartial, intellectually honest, and free of conflicts of interest. Competence and diligence, in turn, impose the responsibility to render services promptly and carefully, to be thorough, and to observe applicable technical and ethical standards.

Although the Principles speak to large and significant notions of ethical values, the Rules and Interpretations are much more specific and also much more narrow. Whereas, as noted above, the notion of integrity requires every accountant to be among other things honest and candid, Rule 102, Integrity and Objectivity, merely requires accountants to “not knowingly misrepresent facts.” as it happens, honesty and candidness are often insufficiently served by the avoidance of our right misrepresentations or lives. Honesty

and candidness often require, in addition to the avoidance of misrepresentation of facts, a certain forthcomingness and an effort to avoid misleading someone through vagueness, lack of disclosure, intentional obfuscation, or other means of deception that do not necessarily involve an actual misrepresentation of facts. The the principle is large, but the rule is small. And even though some Interpretations of the Rule expand the understanding of Rule 102 so that it is understood to, in specific situations, prohibit anything that is misleading or deceptive, the general Rule itself is much more narrow than the Principle that the Rule is intended to serve.

At first impression, these differences between the principles and the rules might not appear to be significant. But they are significant because at the end of the day, when it comes to enforceability, the rules matter in the principles do not. This differentiation is embedded in the way that the AICPA handles disciplinary actions toward its members. The AICPA bylaws specifically state that members are required to follow the rules of professional conduct, and can be disciplined by the organization if they do not. If violation of a Principal, while being in technical compliance with the Rules, is not grounds for organizational discipline or sanctions. A member can violate the Principle of “candidness,” for example, without fear of disciplinary action so long as the member meets the technical requirements of Rule 102 (that is, the member avoids an actual misstatement of facts).

### The Codification of the Aicpa Code

On January 28, 2014, the AICPA's ethics committee adopted a revised version of the AICPA *Code of Professional Conduct*. The organization reformatted the *Code* in an effort to make it more user-friendly and to conform it more closely to international standards. Prior to the codification, it was organized by a rule, and the rules were in many cases supplemented by interpretations and ethics rulings. The new version is separated into three major divisions based on the type of accounting practice in which a member may be engaged: public practice, business, and other. Within each such line of business, there are topics and subtopics. The rules and interpretations are retained, but are organized within the various topics. The substance of the previous version was maintained but was supplemented by the inclusion of a "conceptual framework" protocol that had been developed in prior years but that had not been elevated to the level of authoritativeness. The conceptual frameworks make use of a "threats and safeguards" protocol that is provided so that members can make ethical decisions in cases where no guidance in the code addresses the particular situation. This approach has been developed as early as 1988 by the AICPA, but until now had been applied only with respect to independence. Upon adoption of the codification, it now applies to all of the Rules rather than only Rule 101, Independence. The conceptual framework approach requires AICPA members to identify threats to their compliance with the rules, and to determine the extent to which those threats are significant. In cases where the member decides that a threat is not at an acceptable level, members required to apply safeguards to eliminate the threats or to reduce them to accept the level.

### Retention of Rules-Based Approach

As noted above, the AICPA *Code* is seen as a rules-based approach to ethics, in a manner that is somewhat inconsistent with the emphasis of the IFAC *Code of Ethics for Professional Accountants*. In fact, IFAC is an organization comprised of professional accounting organizations including the AICPA. As a requirement of its membership in IFAC, the AICPA is mandated to make sure its own ethical standards are at least as strict as that of the IFAC. The fact that the AICPA maintains a rules-based *Code* does not by itself mean that the AICPA's *Code* is necessarily less strict in any way than that of the IFAC. However, this incongruence increases the possibility that the application of one of its rules might turn out to be less strict than the application of a more all-encompassing principle under the IFAC approach.

This recent codification of the AICPA *Code* provided an opportunity for the AICPA to revisit its emphasis and reliance on ethical rules, and to adjust the ethical requirements of its *Code* so that they would have

more convergence and compatibility with those of the IFAC. It could have done this by making two changes. First, the AICPA could have changed its bylaws so that members would be required to comply with the entire *Code of Professional Conduct*, rather than compliance only with the Rules portion of the *Code*. Second, the AICPA could have mapped its conceptual framework protocol to the Principles, in a manner similar to that of the IFAC, rather than to the Rules.

By gravitating away from a reliance on rules, the AICPA could also have minimized or mitigated some of the problems inherent with rules-based codes as described by Dienhart (1995). According to Dienhart, a code of concrete rules with specific behavioral expectations tends to be incomplete because it is not possible to anticipate all possible situations (p. 431). On the other hand, codes that operate in terms of principles tend to encourage judgment, and need to be supported with processes that allow adherents to arrive at ethically appropriate outcomes. Based on Dienhart's analysis, a principles-based code such as that of the IFAC works best when protocols such as the conceptual framework approach help adherents understand and apply the principles. To overlay a conceptual framework on a rules-based code, on the other hand, renders the code incoherent, and does not make sense. Yet that is what the AICPA has done.

## CONCLUSION

The AICPA's revised *Code of Professional Conduct* continues the tradition of allowing for disciplinary actions only in cases where rules, as such, have been violated, even if the Code's larger principles are not adhered to. For the moment, the AICPA has chosen not to converge its ethical standards with those of the IFAC, even though by its membership in IFAC the AICPA is committed to at least some level of such convergence. Perhaps once the current revision is fully completed and implemented the AICPA will recognize the opportunity to complete the task of elevating its *Code* so that its members will find themselves gravitating toward the adoption of broader and more comprehensive principles of ethics, rather than mere compliance with rules.

# GAME-THEORETIC AND LIVING LAB APPROACHES TO INNOVATION POLICY AND PRACTICE IMPROVEMENT

Elias Carayannis, The George Washington University  
Igor Dubina, Altai State University

## ABSTRACT

*This paper addresses a complex problem of finding optimal or sub-optimal strategies and business decisions of 1) entrepreneurs, inventors, innovators and other “economic actors” who are engaged, or want and can be engaged, in innovation activities, and 2) policymakers who want to secure both stability and development of a national or regional political and economic system. In contrast to many papers which separately discuss innovation behavior and innovation policies, our research aims to fill such a gap and show how these aspects are integrated. The authors suggest and present both qualitative and quantitative approaches using game-theoretic analysis and living lab simulation what triggers, catalysts and accelerators for entrepreneurial and innovative action and results can be better supported by policy and practice.*

## INTRODUCTION

In an emerging economy such as Russia's, entrepreneurs face many of the same questions as do their counterparts in advanced economies. Should I start a new business? Should I invest in new machinery or technologies? Should I spend more money on research and development? But unlike entrepreneurs in countries such as the United States, where rules and regulations governing business activities tend to be stable and predictable, entrepreneurs in Russia are confronted with an often shifting and unpredictable set of government directives and priorities.

In such a situation, with all its dynamic change, complexity, risk and uncertainty, how should creators, inventors, innovators and entrepreneurs in Russia as well as other transitioning and emerging economies make business decisions? More particularly, how should they decide whether, when and how to develop, produce, and commercialize new products, new services, new technologies, new models to ensure best possible results across a triple bottom line set of considerations (social, financial and environmental)? In short, how should they decide whether, when and how to *innovate* in the face of a policy environment that is prone to abrupt, inconsistent and unpredictable changes driven by both endogenous and exogenous factors and dynamics? On the other hand, there are policymakers who often are not at all certain about which innovation policy could be best in terms of maximizing social welfare or according to other criteria or priorities. And they are also confronted by challenges about their best possible strategies as well as how they should go about creating, evaluating and piloting an array of alternatives for their policy options horizon. In other words, what may be the more efficacious incentives for creators, inventors, innovators and entrepreneurs? What policies should be put in place, in general, and what priorities and stimulus conditionalities should be framed and embedded in the innovation policies, so as to most effectively and efficiently trigger, catalyze and accelerate socio-economic development (smart, sustainable and inclusive growth) through innovation-focused and innovation-driven behavior of economic agents and stakeholders?

### Problem Statement and Research Aims

In this paper we address those very questions mentioned in the introduction section. Therefore, we address a double-sided problem:

the problem of establishing optimal or sub-optimal strategic business and technology choices for entrepreneurs, inventors, innovators and other “economic actors” who are engaged, or want and can be engaged, in innovation activities in a dynamic, complex, multi-level, multi-modal, multi-lateral and volatile environment fraught with risk (known unknowns), uncertainty (unknown unknowns) and unpredictability (unknowables) across diverse and different communities of interest and practice; the problem of formulating optimal or sub-optimal strategies and policies for policymakers who want to secure both high levels of *stability* and high rates of *development* of the national or regional political and economic system which is still in an *emerging* economy status, that is an immature socio-economic ecosystem fraught with risk, uncertainty, unpredictability.

The problem of fostering innovative entrepreneurial behavior is closely linked, inter-dependent and inter-active with the problem of innovation policies. In contrast to many papers which separately discuss innovation behavior and innovation policies, our research aims to fill such a gap and show how these aspects may be integrated. Specifically, this research aims to elucidate the following:

*how and why strategic continuity and clarity needs to trade-off against strategic ambiguity in innovation policy and strategy making; whether, when, how and why the “valley of death” that is intrinsic in the process of technology innovation can be leveraged and possibly “abridged”; what may serve as the triggers, catalysts and accelerators for entrepreneurial and innovative action and results and how could these be more efficaciously supported by policy and practice; how to best foster a more effective, efficient and transformative dialog among key stakeholders of the innovation and entrepreneurship ecosystem (government, university, industry and civil society) on a cross-sectoral and cross-disciplinary basis; how to best identify “win-win-win” overarching goals and opportunities for all public and private sector stakeholders of the innovation and entrepreneurship ecosystem in question.*

### Problem Background: the Case of Russia

The stated problem is highly relevant and presents a particular challenge for entrepreneurs in Russia today, as well as in a number of other emerging economies. In the case of Russia, there are many government-level declarations about the transition from a “natural resource economy” to an “innovation economy”. The necessity for such transition is clear and present, but the ways and means to implement this transition have been widely discussed by Russian scholars, economists and politicians for the last two decades, but still, these ways and mechanisms still seem not to be clear for the government so far. Consequently, Russia has a rather inconsistent innovation policy, as many experts admit. As a distinct example, the “strategic vectors” (i.e. the goals and priorities set by the government for innovative development of the country) outlined in many documents are changed frequently (sometimes in the opposing directions and within comparatively short time frames) and abruptly. In particular, there are a number of strategic documents which regulate the innovation activities in Russia currently:

Strategy for Innovative Development towards 2020 (approved in 2011). A shorter version of the title is “Innovative Russia 2020”;

Concept Document on the Long-term Social and Economic Development of the Russian Federation towards 2020 (approved in 2008, significantly revised in 2011). A shorter version of the title is “Strategy 2020”;

Strategy for the Development of Science and Innovation towards 2015 (approved in 2006) as well as a number of earlier documents.

Those documents (especially those of 2006 and 2008) were rather ambitious and their aim was that Russia should get a leading position in a number of priority science and technology fields like aerospace, nanotechnology, nuclear technology, energy, and biotechnology (so called “critical technologies”) by 2020. However, the level of the implementation of those ambitious plans currently lies around 40% on average against the initially planned progress to date based on specific chosen indicators. Ros Business Consulting, a Russian economic information agency, characterizes this situation as “innovation imitation” (Sokolov, 2013). According to the government's official innovation strategy stated in the mentioned documents, the majority of funds allocated for promoting innovation should support the development of “the critical technologies” mainly based in large innovation clusters like Rusnano and Skolkovo which got, in fact, an exclusive (i.e. monopolistic) “right to innovate”. Rusnano is a joint-stock corporation owned by the Russian government (100% of the shares are government property). It was created in 2007 by the government for the creation by 2015 of a nano-industry in Russia, that will make marketable products worth \$30 billion. The company has got from the federal budget a total of \$1-2 billion annually.

However, from 2011 it has been closing several big-scale investment projects for various reasons including a shortage of money and the rejection of co-investors. Recently, there is a plan to make 40% of the company private. The Skolkovo Innovation Center is a planned high technology business area being built near Moscow with the aim to encourage science and technology companies to develop and market technology startups in five “clusters” specializing in “priority” areas, namely IT, Energy, Nuclear Technologies, Biomedicine and Space Technologies. The Skolkovo project was started in 2010 and was to be financed primarily from the Russian federal budget in the amount of \$0.5-0.7 billion annually.

However, the results from such funding have been clearly unsatisfactory, first of all, in terms of the low economic impact of many projects. In the Russian “real economy” that still greatly (over 50%) depends on oil and gas, there is still insufficient demand and absorptive capacity for “ultra” high-tech innovation.

At the same time, while heavily investing in a few “critical” technology industries, innovation projects in “traditional” (“non-critical”) industries (agriculture, manufacturing, transport, etc., which can provide higher demand for innovation) were not supported enough as we can see in many Russian regions. And, consequently, the economic growth (if any) in such industries was also rather insignificant. The annual growth rate of the Russian GDP has been continuously decreasing from 10% in 2000 to 1.3% in 2013, although oil prices have been continuously and dramatically increasing from \$25 per barrel in 2000 to \$105 per barrel in 2013 (Rosbalt, 2014).

Note that the investments to R&D in Russia in 2012 amounted to just 1.68% of GDP (0.56% from the federal budget and 1.12% from businesses). In 2003, the federal budget contribution was 0.31% and the private sector invested 1.29%. Therefore, total investments into R&D remained at almost the same level for the past 10 years. However, the number of personnel engaged in R&D decreased by 18.1% in 2012 against 2000 and twice against 1992. In per capita terms, Russia spends on R&D approximately five times less than developed countries do. It is interesting to note, that many high ranked government officials, e.g. the First Vice-Premier Igor Shuvalov, have been considering the high price of oil as a barrier (or crowding out factor) for innovative development of Russia, since it does not stimulate the demand for innovation (Interfax, 2013). The concept of the “oil curse” is not new for Russia. But this may well be a misleading and even risky misconception. The assertion that a low price for energy is a precondition for innovative development cannot be easily validated. This may well be an attempt to cover for the lack of an appropriate innovation policy in the country. For instance, in the 1990s, oil was cheap, but this did not prove to be a stimulus for innovation in Russia.

High quality innovation – namely one that leads to smart, sustainable and inclusive growth requires patient and sustained investments in human, financial, social and intellectual capital and not just money. Just on the financial frontier, if the prices of oil and gas fall, then Russia will not have money for innovation let us alone the development of the other needed types of capital mentioned above. A similar idea, although in a paradoxical and humorous form, is attributed to Viktor Chernomyrdin, Russian Prime-Minister from 1993 to 1998: “We do not need innovation, while we have high price for oil, but we do not have money for innovation when the price is low.”

The opportunity for innovation took place in the 2000s and the window of opportunity may still be open now, as long as Russia has resources to invest to develop the requisite conditions for high quality innovation. But most policies to date have not managed to drive innovation and instead seem to be hindering innovation. In particular, Russia needs to diversify the sources and resources dedicated to support innovation and thus stop allocating “innovation monopoly rights”, increase its funding for traditional industries and create stable and high demand for innovation. Otherwise, key innovation agents and stakeholder, public and especially private sector, local and global, will deem it useless to invest heavily in “critical” and very expensive, high risk (and potential pay-off) technologies.

The government may finally be in the process of understanding this need now, as it seems to be reconsidering and diversifying priorities for investing into innovation. As an example, President Putin announced in the Presidential Address to the Federal Assembly on 12.12.2013 that the Government should adjust priority directions of science and technology development (Putin, 2013), that actually meant a change of the areas that would get funding and amount of funding for some of those areas which had a “a priority status” before. This message, in particular, de facto confirmed the plans of cutting funding of the most noted, expensive and ambitious Russian innovation megaprojects like Rusnano and Skolkovo by 30% in 2014 (Marchmont (2013)).

Moreover, changes in strategy often take place in the context of limited information regarding objectives and criteria. Under such conditions, innovation activity as a whole and creating new ventures in particular, seem difficult for both residents and non-residents of the country. Many Russian actual and potential “innovation agents” (innovative firms and organizations, including educational and research institutions) lack a clear vision of their strategic priorities in the context of unpredictable and volatile policy-maker strategies, since their activities may greatly depend (in terms of getting financial, administrative and other support) on priorities set by the government and are controlled by the government to certain extent.

## METHODOLOGY

Our research is based on a series of game-theoretic models, or mathematical equations, that represent the decision-making process of innovators, entrepreneurs and policymakers. In our models, they make decisions according to what economists call game theory; in other words, they make decisions in reaction to or in anticipation of the decisions of other participants (or “actors”), playing a “game” (hence, game theory) whose object is to maximize profits, market share or social welfare. The core of such an approach is the conception of “Allocentrism” and the Nash Equilibrium concept.

Let us briefly explain these conceptions. Allocentrism is a personal attribute whereby people center their interest, attention and actions on other people rather than themselves, and thus exhibit a capacity for empathy. A Nash equilibrium is a game-theoretic configuration (a set of players’ strategies) in which no player has anything to gain by changing only his own strategy, that is no player has an incentive to change the chosen strategy. John Nash, a Nobel Prize Winner in Economics, proved a theorem that every game with a finite number of players and finite numbers of their strategies has a Nash equilibrium. From a practical point of view, this means that when we have a good sense of the incentives and other behavioral

determinants of the involved innovation agents and policymakers, we can deduce their best strategies in terms of a Nash equilibrium configuration.

As a second methodological approach, a series of living labs experiments, business management games and other experiential learning and immersion in policy and practice modalities based on real and hypothetical case-studies and a game-theoretic approach was designed and conducted. In particular, these living labs and innovation games involve entrepreneurs, venture capital firms, university academics, government officials and other expert practitioners involved in research, development and innovation activities. Specifically, we apply both qualitative and quantitative approaches using simulation and game theoretic analysis as well as surveys to observe, capture and analyze behavioral patterns, interests and incentives of entrepreneurs and innovators in different policy environments. This way, we simulate open innovation collaboration and interaction and insert the results of the project in the emerging policy and cutting-edge practices in innovation and entrepreneurship.

## RESEARCH FINDINGS

To begin with, we formalized the interrelations of an innovation policymaker and an innovation agent as a two player game. In a particular case, the policy mechanisms regulating innovative entrepreneurial activity may include taxation, credits and subsidies, as well as administrative mechanisms that determine the complexity of the “entry” in the entrepreneurial business. In order to study the functioning of innovation agents under such a policy, we use a simple mathematical model that includes a strategic variable of the agent,  $x$  (investment into innovation activity, or R&D intensity) and strategic variables of the policymaker,  $s$  (tax rate) and  $f(x)$  (subsidies for innovative and R&D activities). Thus we consider a case when the policymaker seeks to enhance the innovative activity of the agent, namely its investment in new technology R&D. This may be accomplished, for example, by reducing the basic rate of tax and \ or allocating additional funds to entrepreneurs from the budget. This situation can be formalized as the following game:

$$\begin{aligned} M_0 &= sU(x, \xi) - f(x) \rightarrow \max_{s, f(x)} \\ M_1 &= (1-s)U(x, \xi) + f(x) \rightarrow \max_x \end{aligned} \quad (1)$$

Here  $M_0, M_1$  are payoffs of the policymakers and the agent correspondingly,  $U$  is the expected agent activity outcomes,  $\xi$  is a random variable representing the uncertainty and unpredictability of the innovation processes and outcomes. The analysis of this model shows that in a case when the players are not certain about intentions and strategies of each other (they do not have a binding treaty), they find themselves embedded in a game theoretic configuration similar to the “Prisoners’ Dilemma” game, the most known canonical example of a game that shows why two players might not cooperate, even if it appears that it is in their best interests to do so. To illustrate this finding, let us consider a simplified game where the innovation agent has a set of 3 actions (no R&D intensity, low R&D intensity, and high R&D intensity) and the innovation policymaker has also a set of 3 actions (no tax, low tax, and high tax). This game can be represented in a normal form as follows (Table 1).

Table 1: a Simple Game-Theoretic Illustration of an “Innovation Game”

Strategies	No Tax	Low Tax	High Tax
No R&D intensity	0; 0	0; 0	<b>0; 0</b>
Low R&D intensity	0.5; 0	0.25; 0.25	-0.25; 0.5
High R&D intensity	1; 0	<b>0.5; 0.5</b>	-0.5; 1

*This table shows the players’ payoffs in the strategic situations of an “innovation game”.*

As we can see from the payoffs matrix, there is only one configuration which can be considered a Nash equilibrium (high tax – no R&D intensity) in this game, since none of the players in this case, has any incentive to change his strategy while staying in this configuration. There is also a Pareto optimal strategic situation in this game, when it is impossible to make any one player better off without making another player worse off. This is a “win-win” situation (low tax – high R&D intensity), but it is not feasible under conditions of uncertainty. The game analysis shows that the innovation policymaker has always an incentive to raise taxes, and thus potential innovation agent activity can be stifled. The innovation agent will be forced to “not innovate” (no R&D intensity) strategy. Therefore, innovation activity is not possible in an environment with “perfect uncertainty” (“perfect imperfectness”). Theoretically, it means that, innovative activity is not possible at all in an organizational system with the absence of a clear and binding policy.

Similarly to the “Prisoners’ Dilemma” and despite the availability of a strategic configuration where both players can get a better result than they have in a Nash equilibrium, this configuration is practically not available because of its instability. As is well known, the players in the “Prisoners’ Dilemma” can arrive at a Pareto-optimum solution through negotiations or repeating the game. Similarly, to find a way out of such an impasse in this situation, it is necessary to a) directly negotiate taxation or subsidies and reach a binding agreement, or b) construct the player relations as a hierarchical and dynamic principal-agent game. In practice, the first case is not always possible, since a policymaker does not necessarily co-ordinate his decisions with entrepreneurs, but just officially informs them about the policy. So, we consider the second case, namely hierarchical interrelations and interactions.

From a game theoretic point of view, hierarchical relations in such a system mean that the policymaker is a first-move player. He makes a decision regarding his strategy and announces it for the agent who, in his turn, makes a decision regarding his own strategy under the conditions designed and announced by the policymaker. Using model (1), theoretically it is possible to define a policymaker’s optimal strategy, namely tax rate ( $s$ ) and subsidies ( $f(x)$ ) for any organizational system, if we can correctly identify all key parameters of the system and the agent’s activity. However, practically it is not possible because of the variety and unpredictability of many of such parameters. Nevertheless, in our research we used this model in order to compare different taxation strategies for innovation, namely percentage taxation and flat taxation. The first taxation scheme is a proportional scheme when the policymaker informs the agent on the percentage of his revenue that should be paid as a tax. This scheme is actually represented by model (1). Another scheme represents taxation when the policymaker informs the agent on a fixed payment of tax depending on the agent’s actions or outcomes. For example, the policymaker can inform the agent that he should pay tax  $x_1$ , if his income is more than  $U_1$ . If not, the agent will pay nothing (or some other value identified by the policymaker). This implies that the agent’s tax payment ( $T_a$ ) is as follows:

$$T_a(x_1, U_1, U) = \begin{cases} x_1, & U \geq U_1 \\ 0, & U < U_1 \end{cases}.$$

Subsidies for startups can be also organized in a similar way. For example, the agent gets  $x_2$  from the policymaker, if the agent’s result from R&D investment is more than  $U_2$ , and nothing if not:

$$f(x_2, U_2, U) = \begin{cases} x_2, & U \geq U_2 \\ 0, & U < U_2 \end{cases}.$$

In that case, the basic game model is transformed into the following game:

(games with complete and perfect information; games with incomplete and imperfect information about the players' strategy and outcomes, but certain policy; games with incomplete and imperfect information as well as uncertain policy).

One of our more interesting findings was that the behavior of the players in games with both complete and incomplete information generally corresponds to "theoretical" predictions from game theory (e.g. from such classical game-theoretic cases, like "Bertrand's paradox", "Price war", "Prisoners' Dilemma", etc). This finding can be interpreted as a validation of game-theoretic models for the analysis of an innovation market under uncertainty and unpredictability. Another important finding from the "serious games" we played is the policymaker's tendency to support an innovator (a startup) in terms of lower taxation and other privileges at a few initial iterations of the game, and then, as the innovator's level of maturity rises, the policymaker creates conditions similar to "established" competitors.

## CONCLUSION AND RECOMMENDATIONS

Both innovation policymakers and innovators face an unfolding set of challenges. Below we systematize and summarize some of these challenges in the context of our research and provide some preliminary conclusions from our research-in-progress project.

A game-theoretic approach as a way of policymaking Game theory is a powerful instrument for decision-making in the situations of risk, uncertainty and unpredictability, and it should be used more actively in the analysis and development of innovation policy.

An innovation policymaker should take into account possible reactions and behavior of innovators and develop his strategy in order to maximize social welfare anticipating and considering innovators' reaction.

An innovation policymaker and innovators per se should look for strategies getting them to "win-win" situations which are effective in terms of Nash equilibrium and Pareto optimality game-theoretic configurations.

Nash-equilibrium game-theoretic configurations may be a good reference point as an outcome of the policy however, an innovation policymaker should secure the ways and means required for its feasibility.

A clear and stable innovation policy Both innovators and innovation policymakers closely deal with risks, unpredictability and uncertainty, so it is not easy for them to have a clear vision and a detailed roadmap. But if an innovator who is looking for new opportunities for business can be guided by (that is he can afford) the principle "if you don't know where you're going then any road will get you there" and he can thus apply a trial-and-error strategy, an innovation policymaker should be more certain and less ambiguous, since his errors cost much more at the macro level than the innovation agent's micro level "trial and error" failures.

The policymaker should be guided, at least as a worst case scenario, by the principle "if you are lost and do not know where to go, you should go straightforward and never alter your direction".

A policymaker should not be like the Tsar of Russian lore who commanded so: "go there - I do not know where - and find that - I do not know what".

When the innovation policymaker establishes policy guidelines, he should not change them very often.

Highly volatile and ambiguous policy is disruptive for innovation. In a turbulent environment and when confronted with challenges regarding the promotion of innovation, a policymaker has “a temptation” to change or “improve” the policy hoping to design better conditions and incentives for innovators. But such an intention that appears to be quite reasonable per se, is often not good for innovation as it introduces higher levels of unpredictability and discontinuity. Innovation investments are *a priori* risky. If in addition, the “game rules” are changed often and abruptly, risk and uncertainty are introduced that discourage innovation investments. Strategic ambiguity is a symptom of “a death valley” for innovation and should not be endorsed or deployed as part of innovation policy making (Carayannis, GWU Lectures and private discussions, March 2014).

A clear and stable innovation policy is a crucial factor for stimulating innovative activity. “Win-win” situations are not feasible in an uncertain and turbulent environment. A policy should also be “binding” for both policymakers and innovative entrepreneurs in term of their commitment for a certain period to the rules of the “game”.

If an innovation policy is clear on a federal level, regions and cities can develop their effective policies and strategies to innovate based on the national innovation policy making context. When innovators have a clear vision and understanding of the national and regional innovation policy makers, it is easier for them to develop their own innovation strategies.

Communication, cooptation, coordination, learning from experience and learning by doing Game theory clearly demonstrates, that communication, cooptation and coordination between innovators and policymakers help overcome different barriers and impasses (similar to the “Prisoners’ Dilemma”). So innovators should actively look for partners, and a policymaker should stimulate cooperation. Such an approach is introduced, for example, in the case of the recently founded Russian Science Foundation, a new R&D funding agency established in November 2013.

A policymaker should publicly address barriers for innovation (legal, bureaucratic, economic, cultural, etc.) and openly discuss them with the public (a civil society).

A policymaker should secure transparency of his decision making, as well as prompt and clear communication between all participants of an innovation market.

Openness to criticism is a key for an effective policymaking as well as a readiness and willingness to learn from experience as well as learn by doing.

A trade-off against prioritization and diversification A policymaker should find a balance (compromise or trade-off) between prioritization and diversification. He should prioritize promising opportunities for innovators to be supported. There should be a finite number of priorities for break-through problems or outcomes, potential technologies, or high-growth sectors and there should also be development and support for special incentives, on both the supply as well as the demand side. Innovation priorities when developed should be frozen for certain period to allow the innovation ecosystem and its stakeholders to digest the new rules of the “game” and adjust / optimize their behaviors.

At the other side, the diversification of the support for innovation activity is required. The support should be focused not just on a few “critical” technologies and a number of state-owned (i.e., in fact, monopolistic or oligopolistic) corporations. It is necessary to promote investments and subsidies to businesses that are “on the periphery” and foster their growth by paying part of their initial investments and lowering their taxes via R&D tax credits (a good example of such policies is the US and Israel). Some of the priority should be given to the existing sectors and technologies, but for those which are potentially well-positioned

for future growth. High-potential innovative firms already established in some industries can drive economic growth. Some of the priorities should focus on brand new sectors and startups as great business opportunities.

**Ambitions, feasibilities and consistency** An innovation policy should strike a balance between being ambitious and aggressive enough on the one hand and realistic and feasible on the other.

Innovative development requires a long-term view, so an innovation policy should be consistent during a long period.

The German, Scandinavian and perhaps Japanese models of innovation promotion are good examples for these scenarios.

**Innovative climate, innovative culture and demand for innovation** Creating stable and high demand for innovation is a key prerequisite for moving from “economic stability” to achieving “smart, sustainable and inclusive growth.” This is one of the most challenging issues for a policymaker.

A policymaker should focus on creating a favorable environment and culture for innovation, not just on investments.

**Taxation and subsidies** A discriminatory taxation policy for innovation agents is required. Taxation should be different for startups and established businesses.

A multi-level progressive and regressive taxation and subsidies policy is effective for stimulating innovative entrepreneurial activities, especially for rather “predictable” incremental innovations.

However for “radical” innovations with very uncertain and unpredictable outcomes, a simple, clear and easily understood proportional taxation scheme with a comparatively low rate provides a better stimulus than a sophisticated model.

**Social capital** An innovation policy should not focus on just economic priorities, goals and outcomes, but on social capital as well. Social capital should be as important a measure of success of innovation as economic growth and productivity. A policymaker should adopt a measure of social capital as a key indicator of policy effectiveness. As history shows, if a country fails in this, it pays the social and economic costs for many years to come.

# INFORMATION TECHNOLOGY EXPANSION AND COMMUNICATION BETWEEN SMALL FIRMS.

María del Carmen Domínguez Ríos, BUAP

Michele Alexandra Corona Dominguez, BUAP

Maricela Resendiz Ortega, BUAP

## ABSTRACT

*Internet use allows new forms of commerce and trade, so the relationships between producers and other economic agents changed dramatically. This research presents the results of a survey applied to a sample of small firms that export manufactured products in Mexico. The purpose of the survey is to analyze the use of Internet in the commercialization process. The proposed hypothesis is that small firms can benefit from the internet growth. This technological tool can give this kind of firm better operating conditions and improve their adaptation ability. As a result these firms can benefit more from it. The creation of a web page can make the process of exportation and access to new markets easier. However the main variable to sell in foreign markets is associated to micro and macroeconomic conditions. This kind of export firm has changed since the implementation of Internet and e-mail. The answers reveal the integration of new equipment and technology. Moreover, the use of the web has reduced some costs. It allows the design and promotion of new products. Customer service becomes more personalized. Productivity develops with these tools. But this new modalities requires more educated employers and new systems of internal control therefore training has to be constant and quality has to be assured with the required certifications.*

**KEYWORDS:** Information Technology, Communication, Small Firms

## INTRODUCTION

Expansion of the internet has allowed incorporate new trading varieties of the products, changing relationships between producer agents. In this paper it will be shown the investigations results of a representative sample of exporter small business (SB), in the manufacturer industry, related to using of the internet with trading proposes. It is part of the hypothesis that the SB would take advantage of the increase of the net of nets. Because they could access to better operation conditions, which it is necessary they have big capacity of adaptation and taking advantage of this new technologies. The possibilities that offer a web side without a doubt could contribute in a significant way to the exportation process, and accessing to new companies markets. Even though, the keys to trade in external markets are associated to the macroeconomic and microeconomic conditions. The use on the Internet and electronic trading by the exporter SB has influenced the reconvention of their equipment, incorporating new machines and technologies; the rationalization in the production processes, reducing varieties operations costs, the development and preferred attention to new products, the constant and systematic enable to the human resources to develop their productivity, and the implementation of the own control and saving systems of quality, certifications included.

### Internet and Electronic Trading in the Exporter Small Business in Mexico

Expansion of the internet has allowed incorporate new trading varieties of the products, changing relationships between producer agents. The big wronging of the Internet identified as mass media, since second half of the 90s the new period of the Internet expansion happened based in Electronic Trade (ET). Added to the ones existed, this new way of red use have given new incentives and high dynamic. Even though, Internet has not been a base to the digital communications systems. Basically, it is a tool of communication that it can used to inform, as entertainment, and trading. Some factors influence the

expansion of the Internet in every country; some of them are the incomes, level education, use of computers, connection cost, telecommunication market structure, and the telecommunications infrastructure state. The use of the Internet with trade proposes is conditioned by the law framework to electronic transactions, and other additional costs that the online condition imply to the companies, as the commands creation, web side design, support and updating. Specially, the last element would be so expensive to the Small Business. In the international level, the wronging of the Electronic Trade is just in acceleration face. Currently, it is estimated that this media move transactions higher to 150,000 millions of dollars, concerning to two three part to business – business types operations, and the other tree part to companies consumer sales. In 2009 in these types of trading it was earned 2.8 billions of dollars. Latin America has been one of the most dynamics places, in the same year the electronic trade earned 8,000 millions of dollars in this region (Sahlman, W. 1999).

### The Electronic Trade and Its Law Framework. Economic Factors

The division of communication and trade in Internet is crucial to evaluate the evolution of the ET and its economic significance. If is true that exist a develop and fluent digital information flow, and an important number of agents who are communicated by Internet, it does not mean transaction or trade operations at all. Definitely, communication is different that trading. If the use of Internet is restricted to pre and post sale faces, which the principal function is to be in contact between the agents, it not seems properly to define it as an ET operation, because the substantive face in economic terms: the sequence of the formal order, the payment, and the transfer guaranties of property, they are happening in the traditional way. Currently, in the last case the predominant configuration in the world level, it should be mention that the trade aspect is in the beginning face of development.

The impact of Internet into trade practices and the transformations which will be boosted in the economic structure will travel in two paths: Improving in communications forms and advance in autoimmunization of the processes OECD Workshop (2009). The possibility of increasing in advance the level of autoimmunization in the production and the services are the others significance elements that coming with the Internet, and it could have a big impact in the economic structure. The fluent interchange of information between the agents that take part in the economy could come as a first consequence the reduction of the commercial cycle, the reduction of the stock lists, and the possibility of making more exactly predictions about the evolution of demand and offer. For this advances can be completed well used it is required a high level of modernization in the communication infrastructure and a social context, habits, laws, propitious institutions to its adoption. For first it could be affirmed that the impact of these tendencies for economic sectors is strong determinate by the possibility of become its products in the digital format. In this sense, the principal advantage of the digitalis items is that, in fact, its distribution and reproduction has no cost. It is possible to distinguish three types of transaction modalities: minorities (business to consumer), intercompany (business to business), and which involve the buys of the State (business to government) Intercompany transactions promises to be the ones with high economic relevance, not only by its relative volume in fact by the impact in the commercial market, and it influence the transformation in the production and business.

Especially the Small business could take advantage of the growing of the net of the networks, because they could access to operation conditions, until a little reserved to the big companies. For that, it is necessary that they has a big capacity of adaptation, and take advantage to the new technologies; the small business will able to compete with the big companies. However, it survives such elements that straight asking these asseverations. (Sahlman, W. 1999) In the same time, the examples of goods or services that have, really, economic signification, and that, in the same time, could be distributed in the network without any type of legal or cultural restriction, are not many. (European Commission (2009)

Possibilities that give a web side without a doubt can contribute in a significance way to the exportation process, and to new markets of the companies. If the quality, cost and characteristics of the product are not better than the rest of the offer, it is difficult that they would be chosen by the consumers, or they will take the place of their competitors. The keys to sell in outside markets will continue being associated with the macroeconomic conditions and the environment, and the microeconomics that are known. For example, the studies made about the small business exporter in Latin American countries point out that the principal restrictions that face the firms are related with the lack of financing (In the results of the investigation mentioned in this paragraph it is observed that the 70% of the small business don't finance their exportations with outside credits, and in fact, a high percentage emphasize the difficulties in the interest rate, and the procedures to obtain credits. In this way the firm exportations find a close limit in the capacity of the auto financing.), to the outside sales, the level of the change type, the highest cost of the customs, harbors, public services handled by private sector, and the inadequate form of transport.

About the future impact in the cost of the service, as a result of the liberalization of the moneylenders market and de income of new operators, the difference in the incomes level will continue implied a very important breach, in terms of the spend power between the costs of connection and local communications. The effect of the trade development, and one of the principal restrictions faced nowadays, is the lower number of Latin cybernauts (Price and Cooke, 1995). In the other hand, once this process advance, the difference in the level incomes between Mexico and the development countries will continue implied a very important breach, between the costs of connection and local communication, and that ones faced by the north American users, Canadians or Europeans. Also, the rate of penetration of the PC in the houses is being still lower, especially for economic reasons. (United Nations, 2009) The aspects mentioned until here affect the diffusion of the use of Internet and the development of the electronic trade, more exclusive and substantial, in the last is about:

The existence of an adequate law framework that guarantee the operations.

The development of safe, useful, and economic payments.

In the case of physical goods the delivery capacity of the merchandise, obtained without delay in a reasonable cost.

The necessity of the adequate domestic systems of the firm, and the installation of a logistic system to do deliveries.

Table 1: Important Law Aspects to the Development of the Electronic Trade

The jurisdiction of the firm, which make the electronic sale and the costumer, in view of define the laws and regulations inside are legislated these operations

The establishment of a system that allows solves the conflicts caused by the collision between the URLs of the Internet.

The establishment of security and evaluation forms

A law framework to handle bank uses of electronic trade

Payment ways can be used to do electronic trade transactions

The way and place where it will be solved the eventual conflicts  
 The establishment of conceptual and rule laws about digital sign

The establishment of protocols in security systems.  
 Effective control of author rights

Tax matters like taxes

Do not issue specific regulations instead spreading the application of the trade of finance law, regulating a particular aspect, try that this regulation will be homogenous among the countries and consistent with the current practices, with the propose of do not inhibit the electronic trade. The recognition of same validity between traditional sign and print documents in paper imply a higher law security to these types of transactions (D'Alessio and Harris, 2000)

#### Practices of Electronic Commerce Develop by the Exporter Mexican Small Business

In this section it is written an analysis of the main evidences given in the studio of around 120 exporters SB, because its performance in the last years related with its continuity and dynamic exporter processes, diversification, and complexity of the markets, which are supplied by them. These SB have shown a positive performance during the last 10 years, a high exporter level in total sales, and a high diversification of outside markets. This company group is characterized by its productive career on average 15 years, and they have developed strong relationships with others local firms, which provided a big part of its consumables. In order to face the restrictions that they have, these companies have implemented strong productive and organize transformations, among them are distinguished the reconverting of its equipment adding new machines and technologies; rationalization of its production processes, reducing diverse operate costs, the development and preference attention to new products, increasing the margins of relative contribution, the systematic qualification of its personal developing its productivity and implementation of domestic control systems and guarantee quality included in the certifications. Also these companies have improved its capacity of service in presale, post sale and delivery periods. Another characteristic of this strategy of these firms is the importance that they give to the management of outside commerce. Besides to guarantee satisfaction with quality conditions and delivery periods to outside clients, they have personal especially dedicated to outside sales and the development of those markets, and they practice a permanent campaign of promotion by different paths (pamphlets, web side, presence in internationals trade fairs and to be in contact with clients, in presence or by email.

#### Electronic Commerce Practices

It seems that the companies asked in this study have not developed effective a model of virtual business with clear proposes, and they do not show a higher level of compromise with the new implemented practices. In this point it is important to mention among the reasons that influence to the firms insert in this new channel of sales and communication, the stress of the competition that come in to the virtual world, and the psychological stress that the supposed according with the companies that do not access quickly to the business inside the internet they will be outside to the discussion and fight for new markets and its staying in the existence ones. According with a survey done by Kite to some firms (Chappell, C. y Feindt. S. 1999) the best performance of the firms have are joining in the virtual business, they are related to a big compromise by the firm with the new practices. This is the development of the specific business model, targets clearly defined, understandable and a strong support to the use of internet: at the same time, it is essential too the integration of the activities implemented through the web with the rest of the own processes to the firm. In order to develop these actions, it comes up as vital an important initial investment and the offer into the web side of different free services. Relatively not much of these characteristics are shown in

the polled Mexican companies. A comparative analysis about the Small Mexican Business, American's and European's. In this analysis is considered two fields well different:

The familiarity and the knowledge development by the companies related to the possibilities of the internet, except the ET strictly speaking. This leads us to consider in one side, the specific technology environment where the firm operates (use of PC, internet and email); in the other hand, the purpose and results of its incursion in Internet, this is the analysis of the information and the actions that present and do inside the web sides.

The done practices related to ET developed by these firms, considering as well the local transaction as those made by the rest of the world. This point leads us to analyze too the possibilities of the rolled companies to a close development of ET.

### The Technological Environment

According to data obtained in the field, this group of Mexican firms operating with a fairly familiar with the new information technologies. There is widespread use of information tools in digital formats, the Internet and email, both for commercial purposes such as to improve communications and relationships with suppliers and customers. Shown in Diagram 1 as widespread as the use of computers and access to email and the Internet from sales and administrative staff working in SMEs surveyed. The signatures are relatively informed about what is happening in foreign markets using the Internet or information stored in digital formats, 56% and states use information and data on foreign trade through these formats. 32% know the status of electronic business practices conducted by the firms competing in its main export market, while 24% of firms know that external information about competitors who export their second largest export market in order of importance.

Internet appears as an instrument which is used in the detection of business opportunities abroad. Only 5.1% of firms said the new tool used for such purposes. In analyzing the use of email, it appears that this is a widespread practice in the employer. The vast majority of firms use the Internet said in the company. Of these firms, most are using this communication tool to search various types of information necessary for the company, to conduct market research done that it is a way of finding information for a more smoothly with customers and suppliers to promote products and new marketing strategies. Moreover, a smaller network that states use to conduct transactions online, whether purchases or sales. Andalusia consulting firms on the implementation of Internet banking, positive responses were obtained by a minor portion of the signatures (This lack of positive responses is partly explained by the fact that 28% of respondents said not knowing if your company carries out exchange of information on-line or transactions with banks that offer the possibility of operating online, probably because this type of operation is performed by staff that staff minor respondent.)

### The Development of Web Pages

Forty nine percent of the sample declared to have carried out site. Most of these firms have developed the site in order to publish their products so as to provide institutional information on the firm, obtaining good results in both cases. As for firms that did so in order to create a new channel to market and to sell products at lower prices than in the traditional way, the results have been much more disappointing. Firms that developed pages driven improvements in customer relationships and provide more and better after-sales service have not achieved the expected results.

This demonstrates the degree of prematurely purely commercial practices in electronic form, while highlighting the developments are more widespread and the results obtained in terms of flows of

information. Seen with another glass, you could say that the fact that a considerable number of firms have designed their website in order to market products, shows that these SMEs are already entering a phase in which the benefits provided by the hand of the "second generation" Internet applications that is, electronic sales, ignoring the presence related to marketing or advertising the signing of "first generation", adopted as an experimental site of the raid. The U.S. firms, however, appear more likely to promote the pages of pay, mainly through the delivery of coupons and discounts on-line, providing many benefits to visitors and more frequent advertising campaigns outside the network.

The graph of the frequency of updating the web Europe shows great concern for European firms to "refresh" the contents of Internet sites. The content also appears as a success-measured in terms of traffic sailing through the page and understands these as potential buyers. In the case of virtual business-oriented customers and consumers, the content must always offer something new and different to visitors. In turn, the targeted sites to suppliers of goods or services, it would be advisable to include among its contents the possibility of making business more quickly, easily and with lower costs. The data presented in the survey of SMEs exporting to Mexico are quite similar those shown in the European case. European Commission (2009).

#### Firms That Perform E-Mail

According to information disclosed between SMEs are scarce, and volume of trading practices in electronic form. In fact, only a smaller percentage of firms surveyed performed sales and purchases in a virtual way and, likewise, is very low volume and relative share of such transactions. In this case is explained by the unique signature of the sample, which offers the possibility of the whole operation online. It should be emphasized that, although the effective development here seems very insipient expectations of SMEs that have already entered into the EC on future expansion of this channel are quite promising, particularly with regard to purchasing and supply. 43% of firms expect to make an electronic form over 50% of their purchases in the domestic market by 2005, the proportion of firms is 50% if the expectations are computed by electronic actions. The projections are less encouraging when considering the electronic sales: just 22% of SMEs considered expects through the web over 50% of its exports in 2008 and the percentage is even lower compared with transactions on the wings domestic market. But the inquiry into the development potential of the CE should ask about the expected benefits from it. According to a survey by the consulting firms KPMG14 in relation to the benefits accruing from the implementation of an EC system. In the case of European SMEs KITE as the main barriers or constraints faced by firms for the development of the EC, would be given by:

The high investment required to implement a system to conduct business operations in electronic form.

Problems and cultural adaptation of population to the new medium, much greater than that expressed by the firms, despite the increased penetration of the Internet and information technology in the old continent;

The need for more infrastructure, answers related to Internet access technologies used in Europe than ever in the opinion of the signatures are considered to be slow and costly;

The Internet security, inconvenience, as KITE, be positioned in Europe and it would be just a psychological issue for the portion of Internet users and The costs of access for consumers, but lower in Europe highlighted in a greater proportion of European SMEs.

## CONCLUSIONS

In principle, the main contribution of the Electronic Commerce (EC) is associated with a predictable decline in transaction costs. On the one hand, firms may come into contact with a virtually unlimited number of potential customers and on the other, inter-business relations could be granted greater flexibility and agility and greater adaptability to changing market. It is therefore not only incorporating a new and powerful marketing channel, but also to introduce greater automation in the production and distribution cycle. The reduction of transaction costs, the application of the potential market and cheaper and faster communication with customers and suppliers are extremely important for the performance of SMEs. These factors are mainly based on the favorable impact of the EC in such businesses. And so, it is considered that the spread of electronic transactions can mitigate the barriers or constraints that SMEs face normally react to the abrupt changes in demand conditions, or to compete in markets relatively unknown. While recording a very dynamic growth, the operations of the EC at the international level are still clearly marginal: not only depend on the degree of diffusion of the Internet and computerization in general, but the establishment of a very favorable environment and appropriate in terms of services financial, communications and logistics. To the extent that this "environment" does not have a sufficiently developed, the potential benefits of EC will be diluted. In this case, SMEs, once again, can be practically affected by the costs of installation, maintenance and operation of the channel.

In Europe, for example, only a very minor proportion of SMEs operating effectively at present and EC, in turn, between businesses electronic transactions represent a marginal proportion of total turnover. In the perception of European SMEs, the costs associated with infrastructure make the service both for firms and consumers, restricting further dissemination of the CE. However, whether these considerations, firms engaging in CE, a defined business model and commitment to align their organizational processes to the requirements of the new practices.

While the sample surveyed for this study can not be considered representative of the SME universe and that, therefore, any generalization is unwarranted, is not to draw attention to other lines in general the relative size of e-business and perception of positive and restrictive factors is quite similar among exporting SMEs are considered and their European peers. The technological environment in this specific group of companies does not constitute a major limitation. Electronic communication with customers and suppliers and to find information about different aspects of your business that you are by the same token, highly diffused among these companies. At the same time the cost of installation of an electronic criminal market, either established or provided by third parties by personal signature, does not seem to be an excessive expense and therefore does not emerge as a significant limiting factor.

The general environment for the development of EC in contrast, appears as the most limiting factor. The costs of communication, recognition and comparatively high in our country limit Internet use for potential customers to businesses offering goods and services. The weak development of an efficient logistics distribution and delivery make the transaction costs and adversely affects their terms of specificity. Ignorance of the legal validity of digital signatures and certainty in the law so specified for the purposes such as tax litigation, which reaches to such transactions, discouraging interest of companies to develop other operational mode. The change in this context to mean cheaper CE operating system and access for customers, facilitate the cancellation of on-line transactions, to provide security operations and transparent regulatory framework, should be a specific objective policy, if SMEs are to benefit from these new technological possibilities, and at the same time, a strong incentive for the dissemination of EC. It can be assumed that in this environment friendlier, those SMEs that, as discussed in this opportunity, have the basic technology, they will be encouraged to adequately and permanently update its bid for the channel, define a specific business model for this channel and adapt their internal organizational processes to maximize its potential.

# ASSET RETURNS PREDICTABILITY AND PORTFOLIO SELECTION: HEDGE FUNDS VS. EQUITIES

Moatlhodi Sebabole, University of Essex

## ABSTRACT

*We examine the time-series predictability of hedge fund and equity index returns, and apply an econometrically robust approach of myopic portfolio asset allocation to select optimal portfolio policies whose investment weights are proportional to levels of predictive or conditioning factors. The investable CSFB/Tremont ten strategy-based hedge fund monthly returns are predicted using eight Fung & Hsieh (2004a, b) asset-based risk factors, whilst the S&P 500 monthly return is predicted by the dividend yield. We find weak statistical predictability in both hedge funds and equity returns, with evidence of higher degree of uncertainty in hedge funds than in equities distribution of returns. We conclude that the equity oriented risk factors are more significant for the equity oriented universe of hedge funds; the bond oriented risk factors are significant for the fixed income funds; the trend following factors have more influence on the trend following funds; while emerging markets funds get hit the most by market downturns but tend to outperform in stable periods. Our next paper series will examine the economic significance of predictability and estimation risk in optimal portfolio decisions for an investor who chooses between investing in the traditional equity and hedge fund indexes.*

**KEYWORDS:** Predictability, Risk-Factors, Returns

## INTRODUCTION

In this paper, we examine the statistical significance of asset predictability in making optimal allocation decisions. We assume an investor who is faced with an investment choice between equities in the traditional framework and hedge funds in the alternative framework. Originating works on predictability of asset returns was undertaken by Merton (1969, 1971, and 1973) and Samuelson (1969). They show how stochastic opportunity set affects optimal portfolio strategies at different investment horizons. Campbell and Vicera (1998), Barberis (2000) and Campbell et al (2000) build on this classical work and use a simple setting to construct optimal portfolio decisions which account for presence of predictability in returns. Conversely, Brandt (1999) and Ait-Sahalia and Brandt (2001) use a general non-parametric approach in making optimal allocation decisions in the presence of return predictability.

The motivation of our paper owes its origin to the optimization problem setting in Barberis (2000) who compute optimal asset allocation decisions which account for both predictability in equity returns and estimation risk. We use the widely applied dividend yield as the predictor variable for equity returns, and the Fung and Hsieh (2004) risk factors in the hedge fund framework. Much of the empirical work on predictability is based on the traditional framework, while a similar interrogation within the hedge fund industry only emerged in the past decade. Amenc, Bied and Martellini (2002), hereafter referred to as ABM (2002), documents first evidence of predictability in hedge fund returns by using a simple multi-factor model which does not account for uncertainty risk Fung & Hsieh (2004) indicate that while investors in hedge funds look for consistency between the historical and future hedge funds returns, the hedge fund returns do not behave in a similar manner to traditional asset returns. They identify and model hedge fund returns using asset-based risk factors and construct a widely applied model which is often termed Fung and

Hsieh (2004) seven risk factor model. We apply an extension of this model which includes the recently added emerging market risk factor. We find that in-sample, the emerging market factor and equity risk factor pose a problem of multicollinearity and therefore do not simultaneously use these two factors. We apply a fully specified multifactor model:

$$R_t = \alpha + \sum \beta_k F_{k,t} + e_t$$

$R_t$  is the excess return of the fund at time  $t$ ,  $F_{k,t}$  are the asset based eight risk factors,  $\beta_k$  are the factor loadings while  $e$  is the residual. The Fung and Hsieh (2004) model is selected due to its wide application in research. The risk factors are namely: equity market factor, size spread factor, bond market factor, credit spread factor, bond trend-following, currency trend-following, commodity trend-following factor and emerging market factor. As in Fama and French (1992, 1993, 1996), the multifactor model represents the returns, dependent on the factors which capture the cross sectional and time-series variation in returns. The linear regression model provides a decomposition of hedge fund returns into several components as per each risk factors such that:

$$R_{it} = \alpha_i + \beta_{i1} Riskfactor_{1t} + \dots + \beta_{ik} Riskfactor_{kt} + \varepsilon_{it}$$

The alpha,  $\alpha$ , is usually perceived as manager specific and Lo (2008) warns that this does not imply that the unique source of alpha is riskless, but that sources of expected returns can be distinguished by risk factors associated with them. We apply a parametric approach which has advantages of being parsimonious and robust since it bypasses the estimation of the conditional return distribution. This is not the case for a Markowitz mean-variance efficient framework as it postulates a two-step conventional approach of estimating expected returns and covariance of matrix of returns. The Markowitz framework obligates modelling first and second moments of returns and the covariances such that with  $N$  financial assets, there is modelling of  $N$  first and  $(N^2 + N)/2$  second moments of returns. While ABM (2002) use a static mean-variance framework to test economic significance of predictability, we use a more robust approach by testing predictability in time varying mean-variance setting. Assessing portfolio choice in time-varying mean was first introduced by Brennan, Schwartz and Lagnado (1997). They ignored estimation risk in their problem setting. Conversely, the importance of uncertainty risk in portfolio allocation was first documented by Kandel and Stambaugh (1996). The rest of the paper is organized as follows: Section I gives the literature review; Section II outlines the data and methodology; in Section III we give the empirical findings and discussions, while Section IV concludes.

## LITERATURE REVIEW

The widely applied multifactor setting of financial assets relate economic variables to returns. These settings generate forecasted returns based on the economic variables which have significant explanatory power. Fama and French (1989) show that several variables of dividend-price ratio, short term interest rate, term spread and credit spread, can be useful in predicting bond returns. Similarly, the predictive power of these variables in stock market returns is reported in Keim and Stambaugh (1986), Fama and French (1988, 1989), Cambell and Shiller (1988) and Fama (1990), among others. The predictive power of several risk factors on hedge fund returns has also been tested by several academics; including Fung & Hsieh (2004) who documents the seven asset-based risk factors which have predictive power on hedge fund returns. These risk factors broadly range across equity oriented factors, bond oriented factors and trend following factors. Brandt and Santa-Clara (2006) apply a parametric approach in selecting optimal portfolio policies which are not dependent on the distribution of returns.

They consider a portfolio that invests an amount proportional to the level of the predictor variable such that the weight invested in each strategy-based asset at any point is a linear function of the pre-determined variables. They use the predictor variables of dividend-price ratio, short term interest rate, term spread and credit spread in a dynamic portfolio choice among stocks, bonds and cash. In a similar manner, Brandt, Santa-Clara and Valkanov (2009) examine a parametric portfolio policy with a view to optimize portfolios with large number of assets. They use the stock characteristics or anomalies of market capitalization (size), book-to-market ratio (value) and lagged return (momentum) as predictive variables.

The portfolio weight in each asset parameters is obtained by optimizing an investor's average utility function over the sample period. Cenesizoglu & Timmerman (2011) use different time-varying mean models and constant return distribution models to assess the economic significance of predictability in stock returns. They use four predictor variables which are also used in Brandt and Santa-Clara (2006). They conclude that for an investor with power utility, significant improvements in economic predictability exist for time-varying models, while models with constant mean overestimate the right tail of the return distribution by over allocating to stocks and thus resulting in low average utility of risk-averse investors. In the hedge fund framework, ABM (2002) predict hedge fund returns using ten variables of: short term interest rate, dividend yield, default spread, term spread, implicit volatility, market volume, oil price, US equity factor, world equity factor and currency factor.

They find evidence of significant predictability in hedge fund returns and large benefits in tactical style allocation portfolio even when accounting for transaction costs. Pillonel and Solanet (2004) find evidence of predictability in hedge fund index returns due to persistence in hedge fund style persistence. They assess portfolio optimization problems by assessing the two benchmarks of buy-and-hold strategy and equally likely strategy and find that several investment constraints hinder optimal tactical asset allocation in fund of hedge funds. Bae, Baik, & Kim (2011) use the quarterly equity holdings of hedge funds and find that both the level and change in stock holding of hedge funds strongly predict future returns whilst other institutional investors have little forecasting ability. They also show that information asymmetry is positively correlated to return predictability.

Even though much of the consensus point towards economic variables' ability to significantly predict asset returns, there are other school of thoughts who critic this wide tenet. These include Bossaerts and Hillion (1999), Ang and Bekaert (2003). They all assess the out-of sample performance of dividend yield in predicting asset returns and find poor performance of this factor. Rapach and Wohar (2006), and Goyal & Welch (2008) test the predictive significance of several economic variables and the latter argues that the finance industry is yet to establish a variable with robust forecasting power for the equity premium. They detect a weakness or failure of some of the variables in predicting returns in the out-of sample. They argue that predictability is also not strong when looking at periods of distress such as the 1973-1975 Oil shock. In this paper, we find weak statistical predictability in both hedge funds and asset returns, and evidence of higher degree of uncertainty in hedge funds, than in equities distribution of returns.

## DATA AND METHODOLOGY

### Data

The hedge fund framework is represented by the Dow Jones Credit Suisse (DJCS) hedge fund indexes, while the traditional market is proxied by Standard & Poor 500. The excess returns are calculated using the risk-free rate of return being the Fama-French one month Treasury bill rate which is obtained from *WRDS*. The equity index returns and the hedge fund returns are all obtained from *DataStream*. The DJCS hedge fund indices constitute of ten sub-indices which are based on strategies of: convertible arbitrage, dedicated short bias, emerging markets, equity market neutral, event driven, fixed-income arbitrage, global macro,

long/short equity, managed futures and multi-strategy. We employ an extended Fung & Hsieh (2004) factor model which incorporates eight asset based risk factors. The eight factors are namely; equity market, size spread, bond market, credit spread, emerging market factor and the three lookback straddles or trend-following risk factors of bond, currency and commodity. The *equity market factor* is proxied by the Standard & Poor 500 index monthly return, *size spread factor* is obtained by Russell 2000 index monthly total return minus Standard & Poor 500 index monthly return whilst the *emerging market factor* is proxied by MSCI Emerging Market index monthly total return. These index returns are all obtained from DataStream. The *bond market factor* is the monthly change in the 10-year treasury constant maturity yield whilst the *credit spread factor* is obtained by the monthly change in the Moody's Baa yield less 10-year treasury constant maturity yield, and both of the yields are obtained from *Fred Economic Data* (FRED). The *lookback straddles on bond; currency and; commodity* have been constructed by Fung & Hsieh (2001). They are updated quarterly (with a six month lag) in the Fung & Hsieh data library and have been downloaded from <http://faculty.fuqua.duke.edu/~dah7/DataLibrary/TF-Fac.xls>.

Our analysis is limited to the dividend yield as a predictor variable in the equity market and the eight FH factors in the hedge fund framework. Our sample data period runs from January 2004 to December 2011 and we thus run a cumulative recursive test to determine any structural breaks in our data, and accordingly divide sample periods into pre-crisis, during crisis and recovery period in order to establish effect of financial turbulences on predictability of asset returns.

## METHODOLOGY

We apply a *parametric* model by imposing a formal structure which is fully described by a finite set of parameters. We first test the statistical evidence of time-series predictability of hedge fund returns and equity returns using the FH asset-based risk factors and dividend yield respectively. Substantial work has been undertaken in evaluating hedge fund performance; however, there is no consensus on the best model to use in modeling hedge fund returns as these is often found difficult to model due to several biases and characteristics as discussed in Wermers (2011). We apply an extension of the popular Fung & Hsieh (2004) seven factor model (which has a recent addition of the emerging market factor);

$$r_t = \alpha + \beta_1 \cdot rSP_{t-1} + \beta_2 \cdot SMB_{t-1} + \beta_3 \cdot rMSCI_{t-1} + \beta_4 \cdot \Delta 10yrTrs_{t-1} + \beta_5 \cdot \Delta(Baa - 10yrTrs)_{t-1} + \beta_6 \cdot BONDPTFS_{t-1} + \beta_7 \cdot CURRPTFS_{t-1} + \beta_8 \cdot COMMPTFS_{t-1} + u_t \quad (1)$$

Where *rSP* and *rMSCI* are respective monthly total returns of S&P 500 and MSCI emerging market index, *SMB* is the size spread factor proxied by Russell 2000 monthly total return less S&P 500 monthly total return, *Δ10yrTrs* is the bond market factor or the monthly change in the 10-year treasury constant maturity yield (month end-to-month end), *Δ(Baa – Trs)* is the credit spread factor or the monthly change in the Moody's Baa yield less 10-year treasury constant maturity yield (change in credit spread), whilst *BONDPTFS*, *CURRPTFS* and *COMMPTFS* are the respective returns of the bond lookback straddle, currency lookback straddle and commodity lookback straddle. Equation (1) uses eight hedge fund risk factors, being; Fung & Hsieh (2001) three trend following risk factors (bond, commodity and currency lookback straddle), equity-oriented risk factor, size spread factor, bond market factor, credit spread factor and emerging market risk factor. The OLS regression that we investigate for predictability in traditional equity market return is as follows:

$$rSP_t = \alpha + \beta \cdot \left(\frac{d}{p}\right)_{t-1} + e_t \quad (2)$$

where  $rSP_t$  is the real return of the Standard & Poor 500 index in month  $t$ , and  $(d/p)_{t-1}$  is the S&P 500 monthly dividend yield or dividend-price ratio defined as the 12 month dividend per share/current market price. We use Equation (1) and (2) to establish the statistical evidence of predictability in hedge fund returns and equity returns respectively.

## RESULTS AND DISCUSSION

Our sample period includes one of the most catastrophic financial turmoil's and we therefore investigate our data for any structural breaks. We use the recursive-based process of *cumulative sums* (CUSUM) or cumulative recursive residuals which uses a generalized test framework. We test the null hypothesis of “no

$$H_0 : \beta_i = \beta_0 (i = 1, \dots, n)$$

structural change”:

against an alternative that the coefficient vector varies over time;

$$\beta_i \neq \beta_0$$

The structural change test uses recursive residuals, where the OLS residuals are given as:  
With the variance estimate of:

$$\hat{\mu}_i = y_i - x_i^T \hat{\beta}^n$$

$$\hat{\sigma}^2 = \frac{1}{n-k} \sum_{i=1}^n \hat{\mu}_i^2$$

We conduct cumulative residual test on the parameters which generate S&P 500 excess returns and; hedge fund index returns respectively. Although results are not presented here, in both cases we reject the null of ‘no structural change’ as the CUSUM test statistic shows evidence of several fluctuations in the parameters. We find evidence of several periods of structural break in both the traditional and alternative asset framework (equity and hedge fund, respectively). In alternative framework, the first structural break in FH seven factors occur in the last quarter of 2007. In traditional framework, distinct and longer lasting departure of the CUSUM statistic from zero occurs in mid-2006 with a trough in the last quarter of 2008 and second structural is observed in the last quarter of 2009. The period between 2007 and 2009 encompass many financial events in the world which could explain the observed structural breaks in the parameters which independently model the hedge fund returns and equity returns.

We also conduct a Chow breakpoint test of the stability of the parameters which also rejects the null of no structural break at the 5% significance level. The 2010 US National Bureau of Economic Research (NBER) report shows that the official crisis period as December 2007 to June 2009. This period is in tandem with the structural breaks observed in our CUSUM tests and we accordingly break our data into sub periods which span from the pre-crisis period of 2004:01 – 2007:12, crisis period of 2008:01 – 2009:06 and recovery period of 2009:07 – 2011:12. Prior to determining the statistical significance of predictability in asset returns, we establish pairwise correlations between the FH eight risk factors to determine if there are any problems of multicollinearity. The results are presented in Table 1 which shows a strong positive relationship between the monthly return of S&P 500 and MSCI Emerging Market index. The two index

returns have a correlation of 0.82 which is proximal to 1. These variables pose a multicollinearity problem and we therefore refrain from using them simultaneously in predicting hedge fund index returns.

Table 1: Correlation Matrix for the Eight FH Risk Factors

	Rsp	SMB	Rmsci	YCHANGE	SCHANGE	PTFSBD	PTFSFX	PTFSCOM
rSP	1.00							
SMB	0.47	1.00						
RMSCI	<b>0.82</b>	0.41	1.00					
YCHANGE	0.18	0.07	0.12	1.00				
SCHANGE	-0.44	-0.23	-0.43	-0.51	1.00			
PTFSBD	-0.37	-0.28	-0.31	-0.39	0.30	1.00		
PTFSFX	-0.26	-0.10	-0.22	-0.16	0.40	0.33	1.00	
PTFSCOM	-0.20	-0.11	-0.16	-0.20	0.23	0.26	0.49	1.00

*The correlations are for monthly data from January 2004 to December 2011. This table reports the relationship between the eight risk factors which are used in the hedge fund predictive model. rSP, and rMSCI are the total monthly returns of Standard & Poor 500 and MSCI Emerging Market index respectively, SMB (small minus big) is the size spread factor which calculates the difference between the monthly total return of Russell 2000 index and Standard & Poors 500, YCHANGE and SCHANGE are the bond market factor (monthly change in 10-year treasury maturity yield) and credit spread factor (monthly change in Moody's Baa yield less 10-year treasury maturity yield) respectively, while PTFSBD, PTFSFX and PTFSCOM are Fung & Hsieh's constructed bond trend following, currency trend following and commodity trend following portfolios respectively.*

The rest of the pairwise correlation appears low enough to pose any problems of multicollinearity. We therefore decide to use the FH seven factor model which excludes the emerging market factor. We proceed to examine the statistical evidence of predictability of hedge fund returns using the FH seven asset-based risk factors. Investors in hedge fund strategies portfolio are primarily concerned with the overall risk of the investment and we first establish how much of the portfolio's risk can be explained by the seven FH asset-based risk factors. We proxy a hedge fund portfolio with the Dow Jones Credit Suisse (DJCS) Investable index and apply Equation 1 to model the index's excess returns. Estimates of the slope coefficients in Equation 1 are presented in Table 2. The statistical significance of the lagged seven risk factors in predicting current DJCS investable hedge fund returns is examined across the full sample and sub periods of stable and crisis periods. Of the seven risk factors, only the equity risk factor (monthly returns of S&P 500) has a significant effect on the conditional mean in all four periods, while the credit spread factor is significant in all periods except when markets were becoming nascent post the crisis. The intercept and the 10-year treasury constant maturity yield appear significant only in the pre-crisis period at a 10% significance level. The rest of the risk factors do not depict any statistical significance in predicting the conditional mean of the DJCS investable index.

As a result, we conclude that there is evidence of weak predictive power of the seven risk factors over the conditional mean or returns of the assessed investable index. Barberis (2000) finds a middle ground for opposing camps which might arise due to weak evidence of predictability by incorporating estimation risk in portfolio choice. They argue that weak evidence of predictability could result in some investors arguing that returns are unpredictable, while others might assume true predictive model of returns and ignore the uncertainty surrounding the predictor variables. In all periods, the  $R^2$  are high ranging between 61% and 81% and we subsequently focus on the discussion of directional exposure of the index to each of the risk factors at different periods. The index has positive exposure to the intercept and the equity factor in all periods, although this observed exposure weakens during crisis period (and strengthens during market recovery times). Defining alpha as in Fung & Hsieh (2004), the observed intercept could be interpreted to imply that the fund managers are able to create alpha in the bull market and unable to maintain a positive and significant alpha in the bear market, which could be seen as an 'alpha illusion'. In the full sample period, the index has negative exposure to the six factors of market capitalization (size spread factor), bond market, credit spread and the three portfolio straddles of bonds, commodity and currency.

Table 2: Regression of the Excess Credit Suisse Investable Index Monthly Returns on Seven Risk Factors in the Full Sample Period and Three Sub Periods

Parameter	2004:01 - 2011:12 (Whole Period)	2004:01 - 2007:12 (Pre-Crisis)	2008:01 - 2009:06 (Crisis Period)	2009:07 - 2011:12 (Recovery Period)

<b>Δ(Baa - 10yrTrs)<sub>t-1</sub></b>	-0.10796	-0.07746	-0.19114	0.00678
<b>BONDPTFS<sub>t-1</sub></b>	(0.02357)*** -0.00530 (0.01231)	(0.02264)** 0.02010 (0.01210)	(0.06631)** -0.03845 (0.05396)	(0.04995) -0.01733 (0.01938)
<b>CURRPTFS<sub>t-1</sub></b>	-0.00415	0.00846	-0.02890	0.03155
<b>COMMPPTFS<sub>t-1</sub></b>	(0.00924) -0.00592 (0.01084)	(0.00574) -0.00128 (0.00713)	(0.04170) 0.02382 (0.05432)	(0.03140) -0.02205 (0.02785)
<b>R<sup>2</sup></b>	0.65	0.61	0.81	0.62

Heteroscedasticity-consistent standard errors are in parenthesis. The table reports the exposure of the investable index's return to the seven asset-based Fung & Hsieh risk factors. The second column is for full sample results, third column reports for pre-crisis period between January 2004 and December 2007, column four is the crisis period of January 2008 – June 2009 while the last column reports the results for the recovery period which is observed between July 2009 and December 2011. rSP = monthly return of Standard & Poor 500; SMB = Russell 2000 monthly return – Standard & Poor 500 monthly return; Δ10yrTrs = monthly change in the 10-year treasury maturity yield; Δ (Baa - 10yrTrs) = monthly change in Moody's Baa yield less 10-year treasury maturity yield; BONDPTFS, CURRPTFS and COMMPPTFS = return of a portfolio of lookback straddles on bond futures, currency (foreign exchange) and commodity futures respectively. Note: \* significant at 10% level, \*\* significant at 5% level in one-tailed test and \*\*\* significant at 1% level in one-tailed test.

We thus conclude that whenever a negative exposure occurs, an increase (decrease) in any of the risk factors results in a decrease (increase) in the index return. We establish that in contrast to an expectation of contraction of the S&P 500 monthly returns (equity market factor) directional exposure to the hedge fund index in a bear market, the exposure remains relatively the same throughout the economic cycle. However, the bear market effect is realized by the change in 10-year yield which gets more negative in the crisis period at -0.093. The more negative beta during the crisis period indicates a larger exposure of the investable index to bonds as a result of the inverse price-to-yield relationship. The beta of the currency trend following factor becomes more negative during crisis period at -0.029 and intuitively suggest high correlation of financial markets during stressful times. Alternatively, the increase in the exposure to the commodity trend-following factor during crisis depicts the bear market. Fung & Hsieh (2001) suggests that the increase in exposure to commodity trend-following factor could mean that investors increase bets against potential equity market declines as trend-following strategies tend to outperform in times of turmoil in the equity market. Therefore, for an investor with a diversified portfolio, a portfolio of commodity straddles could provide a safe cushion during market downturns.

We further examine the predictive power of the seven risk factors on each of the ten DJCS sub-indexes for the full sample period and although the results are not presented here, they are available upon request. In contrast to the results obtained for the investable index, we find that the predictive power of the risk factors increase when assessing the strategy based sub-indexes. At the conventional significance levels, the commodity trend following factor is the only risk factor which never become significant in predicting the returns of any of the sub-indexes.

We also find weak evidence of predictability in the returns of the trend following strategies of managed futures and global macro sub-indexes, with the only significant variables being the credit spread factor and the portfolio straddles of bonds and currency. We further establish that the equity oriented indexes of: long/short equity; dedicated short bias and; equity market neutral have negative intercepts and statistically significant exposure to the equity oriented risk factors of S&P500 monthly returns and the size spread factor (Russell 2000 – S&P 500). The S&P 500 is still significant for the returns of all the sub-indexes. The 10-year maturity yield and the credit spread factor which are both bond oriented risk factors are significant for the conditional mean of the fixed income oriented indexes, namely; convertible arbitrage and fixed income indexes. The exposure to stock market is positive for nine strategies and only negative for the dedicated short bias fund. As in Fung and Hsieh (2004), we find evidence of strong evidence of statistical significance of the asset-based risk factors in explaining strategy based hedge fund returns. Even where we establish weak predictive power, the  $R^2$  is reasonably low at 16% and 21%. We therefore conclude that the equity oriented risk factor of equity market and size spread are more significant for the equity oriented universe of equity market neutral and long-short equity, the bond oriented risk factors are significant for the fixed income funds, whilst the trend following factors have more influence on the trend following funds. We also assess evidence of statistical predictability in traditional equity returns by applying Equation 2. The regressand is given as S&P 500 excess monthly return. We apply the regression on the full sample period from January 2004 to December 2011, and sub-periods of: pre-crisis, crisis period and recovery period. Our results are presented in Table 3.

In the full sample, the coefficient on the dividend yield is not significant and the  $R^2$  is extremely close to 0. The dividend yield does not appear to have any predictive power on the conditional mean of the equity returns. However, a positive relationship is observed between the dividend yield and the returns and thus a fall in the dividend yield will result in a fall in the expected returns. The positive relationship between the dividend yield and the S&P 500 returns is also observed across all sub periods. The coefficients of the dividend yield are significant at 7.48 and 6.34 during stable and recovery period respectively. In the traditional framework, we only find statistical evidence of predictability during the pre-crisis period and the recovery period with  $R^2$  of 7% and 11% respectively. We subsequently conclude that the dividend yield has weak predictive power over traditional equity returns.

Table 3: Predictive Model of Dividend Yield on Monthly Returns of Standard & Poor 500

	2004:01 - 2011:12 (Full Sample)	2004:01 - 2007:12 (Pre-Crisis)	2008:01 - 2009:06 (Crisis)	2009:07 - 2011:12 (Recovery Period)
<b>Intercept</b>	-0.00322 (0.02234)	-0.12749 (0.07095)*	-0.12313 (0.08055)	-0.11866 (0.07195)
<b>Yield</b>	0.13661 (1.09179)	7.48017 (4.07189)*	3.67953 (3.01154)	6.33713 (3.50914)*
<b>R<sup>2</sup></b>	0.0002	0.0698	0.0853	0.1043

*Heteroscedasticity-consistent standard errors are in parenthesis. The table reports the exposure of the Standard & Poor 500 index's return to the dividend yield. The second column is for full sample results, third column reports for pre-crisis period between January 2004 and December 2007, column four is the crisis period of January 2008 – June 2009 while the last column reports the results for the recovery period which is observed between July 2009 and December 2011. Note: \* significant at 10% level, \*\* significant at 5% level in one-tailed test and \*\*\* significant at 1% level in one tailed test*

## CONCLUSION

In this paper, we show time-varying statistical evidence of predictability of hedge fund returns and traditional equity returns. Our results further supports existing evidence of the ability of FH risk factors in predicting hedge fund returns based on the sub-index strategy. We also show that the statistical predictability is mostly weak during crisis period which motivates our next paper series where we will

examine the economic significance of the predictability and estimation risk in optimal portfolio decisions for an investor who chooses between investing in the traditional equity and hedge fund indexes.

# SERVICE CHAIN COORDINATION IN THE PRESENCE OF EXOGENOUS PRICING

Andrew Manikas, University of Louisville  
Michael Godfrey, University of Wisconsin Oshkosh

## ABSTRACT

*This paper introduces a new coordinating mechanism for a two-echelon service chain with a single service retailer and multiple suppliers. The retailer sells a bundled product to the end customer that has perishable demand. The suppliers must have components available and the retailer must acquire capacity, both prior to the selling season. The bundle components consist of service capacity at the retailer and products from suppliers. We demonstrate our mechanism using the example of a travel agency that provides vacation packages that include airline, hotel, and rental car items not owned by the travel agency. Our mechanism is simple to calculate and does not require the use of burdensome revenue sharing contracts.*

## INTRODUCTION

Retailers in the service industry may sell a combination of tangible and intangible goods. For example, in a restaurant, the server and chef intangible capacities are combined with the tangible components of a steak and a glass of wine. In a service supply chain, when all these elements need to exist in concert to provide a complete customer experience, the quantities of each need to be coordinated. If the package or bundle to be provided by the retailer consists of an item that has a short life cycle, it can be modeled as a single-period problem. Tangible items may be sold at a reduced price after the selling season ends (or may require a disposal fee). If the components are intangible/perishable (e.g., an unused seat on an airplane), then salvage value may be zero. Each firm in the service chain will want to balance its own costs of having too much capacity or goods on hand, with the costs of lost profit. In addition to the lost profit, each unfilled customer demand could affect the retailer's brand and reputation (i.e., goodwill) negatively. If the retailer and all component suppliers were owned by a single firm, that firm would choose the stocking quantity (capacity and components) to maximize the expected profit of the system. However, with different owners, each company is likely to optimize locally, potentially resulting in a lower expected profit for the entire service chain.

## LITERATURE REVIEW

Due to the presence of many stakeholders, each with their own localized objectives, these service environments are difficult to manage. Fugate, Sahin, and Mentzer (2006) note that often in business, each member attempts to optimize locally without considering the entire service chain. Maximum efficiency can be achieved by a central decision maker, but many participants are unwilling to give up their control. As a result, many of these systems operate in a decentralized manner, which results in a significant loss in overall efficiency even with full information available to all players. To overcome this inefficiency, it is necessary to identify mechanisms that give the participants control over their local entity and, simultaneously, enable them to make decisions that achieve the centralized efficiency. As noted in Lau, Lau, and Wang (2007), a manufacturer/retailer channel has difficulties in fully realizing the profit potential of the market. The inefficiency caused by decentralized control was named double marginalization by Spengler (1950). To eliminate double marginalization, Pasternack (1985) proposed a coordination

mechanism that provides partial credit to the retailer for unsold goods. Since then, a number of authors have identified other contracts that can achieve coordination in supply chains. Examples include buy-back contracts (He, Chin, and Zhu, 2006), revenue sharing contracts (Cachon & Lariviere, 2005; Dana & Spier, 2001), and mid-term returns (Taylor, 2001).

All these contracts were developed with a two-stage serial system (similar to the one in Bollapragada, Rao, and Zhang, 2004) as the basic service chain setting. There is a dearth of literature related to service industry coordination, although supply chain literature can be modified with assumptions for perishable service capacity versus inventory on hand. The extant Assemble-To-Order (ATO) coordination literature will be used for our service coordination model. Gerchak and Wang (2004) argued that a revenue sharing contract alone does not coordinate an ATO service chain. They proposed a subsidy mechanism by which the retailer helps the two suppliers with the excess inventory at their locations by partially paying suppliers for unsold delivered components. In their system, the retailer does not face any uncertainty and is a market price taker, while the suppliers set prices of their components. Bernstein and DeCroix (2006) analyzed a three-player ATO service chain in a multi-period setting and established the effectiveness of a mechanism in which subsidies flow from the retailer to the suppliers, and transfer payments flow from the suppliers to the retailer. Our model allows capacity uncertainty for the retailer and for exogenous prices at both echelons (i.e., the suppliers cannot alter selling prices arbitrarily as a coordination mechanism). In this setting, the subsidies can flow in either direction, or concurrently in both directions.

Our paper extends the existing literature on coordination contracts from ATO supply chains to the service industry where all prices are exogenous and revenue sharing is not necessary by design. All of the players make their decisions simultaneously before the selling season. We model a service chain for which the retailer faces uncertainty and must make a capacity acquisition decision at the same time that the suppliers must make their component quantity availability decisions. If the retailer has sufficient bundling capacity, there is an insignificant lead time to create the final vacation packages upon demand realization (similar to the assumption in Wang and Gerchak, 2003)—their mechanism coordinates with a non-zero revenue sharing arrangement and a subsidy. Given the high administrative burden of a revenue-sharing contract (Cachon & Lariviere 2005) and the ability of retailers to “cheat” (Wang, Jiang, & Shen, 2004), we provide a method that does not require revenue sharing to coordinate the service chain.

For this type of service chain to achieve coordination, we propose a *salvage manipulation* mechanism for which the higher ratio (as defined by cost of underage divided by cost of overage) participants support the lower ratio participants by promising additional salvage value for their leftover inventories (or unutilized capacity). We provide a simple computational mechanism (by solving a set of simultaneous linear equations) to obtain the exact magnitudes of the salvage manipulation flows across the service chain.

The rest of this paper is organized as follows. In the next section, we provide details of the specific service chain setup we analyze. We then analyze the centralized and decentralized control settings. After that, we apply our salvage manipulation mechanism in the Coordinated Decentralized Service Chain section. We conclude with a discussion of the contribution of our paper.

### Model and Notation

We investigate a service chain with a single retailer (assembler) that provides a finished package upon realized customer demand. Only the demand distribution is known when the quantity allocation decisions (at the suppliers) and the capacity acquisition decision (at the retailer) are made simultaneously prior to the selling season. The actual value of demand is unknown until it occurs. The components (without loss of generality one each) from  $n$  suppliers comprise the bundle sold by the retailer (possibly including material

and labor from the retailer). The components in the service chain have a single selling period and must be salvaged (potentially at zero value) at the end of the season. Although, at first, the single period assumption appears to be very restrictive, it is valid for many products that have a well-defined selling season such as vacation travel packages and holiday spa packages. We assume that a single bundle is sold to consumers at a fixed market price that is exogenously specified for a single selling season.

### Sequence of Events

In our model, the sequence of events for the service chain members is as follows: Before the selling season:

The forecasted demand distribution is viewed by all members.  
The retailer decides how much capacity (bundling and selling) to buy, and then acquires it.  
Each supplier determines its component quantity allocation for the retailer and has those components available at the retailer.

During the selling season:

Actual end customer demand  $x$  is realized at the retailer, and the finished good bundles are sold to customers. Any unmet customer demand incurs a goodwill penalty at the retailer.  
Salvage values, if any, are recovered at the suppliers and the service retailer.

### Model Assumptions

We assume that the production costs, selling prices, and salvage values for all the components and the final product are exogenously given and known to all participants in the service supply chain. The customer demand distribution parameters are known at the beginning of the season by the retailer and all suppliers. This is similar to Moon and Silver (2000) where they solved a multi-item newsvendor problem with end item demands assumed to be known. However, they imposed a total acquisition budget where we assume consigned inventory. We further assume that, for each of the suppliers, the component selling price to the retailer must be greater than the unit cost to ensure a positive profit margin. The capacity acquisition cost for the retailer is known to all the participants. Complete information regarding supplier costs is not unheard of in world class firms. Anecdotally, the Vice President of Supply Chain, Direct Supply, Inc. notes “[Our personnel] track most/all relevant raw materials and have experts on staff who have a good handle on what goes into a supplier’s product cost” (Email from Brian Rouse, personal communication, April 3, 2012). Further, we assume that the suppliers of the package components participate in vendor-management inventory (VMI). Because the suppliers manage the stock levels in the case of tangible components, the amount used by the retailer (assembler) will be known to the suppliers without the opportunity for the retailer to report a lower number artificially.

### Model Notation

The following notation is used in the model:

$i$	Index, for the suppliers ( $i = 1, \dots, n$ ), for the service retailer ( $i = 0$ )
$x$	Random variable for final product demand from end customers
$\mu$	Mean of demand $x$
$q_i$	The quantity of the component that supplier $i$ ( $i = 1, \dots, n$ ) makes available, and the package assembly capacity at the service retailer ( $i = 0$ )
$m$	The minimum quantity available from all suppliers and the service retailer, i.e., the minimum of $q_i$ , $i = 0, \dots, n$
$p$	The selling price of a finished good bundle to the end customer

$c_i$	The cost of one unit at supplier $i$ ( $i = 1, \dots, n$ ), and the cost to acquire one unit of assembly capacity at the service retailer ( $i = 0$ )
$w_i$	The selling price of one component from supplier $i$ to the service retailer
$s_i$	The salvage value of one unsold unit at supplier $i$ ( $i = 1, \dots, n$ ), and the salvage value of one unit of capacity at the retailer ( $i = 0$ ). This term is included for completeness only; salvage value is zero in many service environments.
$\pi$	The lost goodwill cost for the retailer (assembler) of not having a complete bundle to provide to the customer when demanded, $\pi \geq 0$
$\delta_i$	The salvage manipulator from the retailer to supplier $i$ ( $i = 1, \dots, n$ )

Based on our discussion above, all the costs must be non-negative and satisfy the following conditions to make sense in a business context:

$$p > w_i > c_i > 0 \quad (i)$$

The retailer must stand to make a profit above its capacity acquisition cost plus the supplier components' costs to remain in business.

$$p > \left[ c_0 + \sum_{i=1}^n w_i \right] \quad (ii)$$

### Centralized Vs. Decentralized Service Chain Operation

In this section, we determine the optimal inventory control policies when this service chain is operated under both centralized control and decentralized control. First, we explain the centralized control operation scenario.

#### Centralized Control Operation

Solving the centralized setting enables us to determine the maximum expected service chain profit that we use as a baseline for evaluating the performance of the decentralized service chain. The retailer (assembler) decides on a single quantity of each component and the equivalent bundling capacity to create a set number of finished packages that the customer may buy.

*Proposition 1:* The total service chain profit can be maximized only when all players select the same quantity.

*Proof:* By contradiction. Assume that  $\{q_0, q_1, \dots, q_n\}$  with  $q_i \neq q_j$ , for some pair  $i, j$  be an optimal solution. Let  $m$  be the minimum of  $\{q_0, q_1, \dots, q_n\}$ . Consider an alternate solution where every player in the service chain acquired only  $m$  units. The revenues associated with this new solution would be no different than the revenues associated with the original solution. However, the costs associated with the new solution would be lower than those associated with the original solution. Thus, either (i) the solution in which every player orders  $m$  units is an alternate optimal solution; or (ii) the original solution was not optimal, implying a contradiction. The total expected profit of the centralized service chain,  $E[\Pi_C]$ , can be computed as:

$$E[\Pi_C] = -q_c \sum_{i=0}^n c_i + \int_{-\infty}^{q_c} \left( \sum_{i=0}^n s_i - \pi \right) (q_c - x) + px \Bigg) f(x) dx + pq_c \int_{q_c}^{\infty} f(x) dx \quad (iii)$$

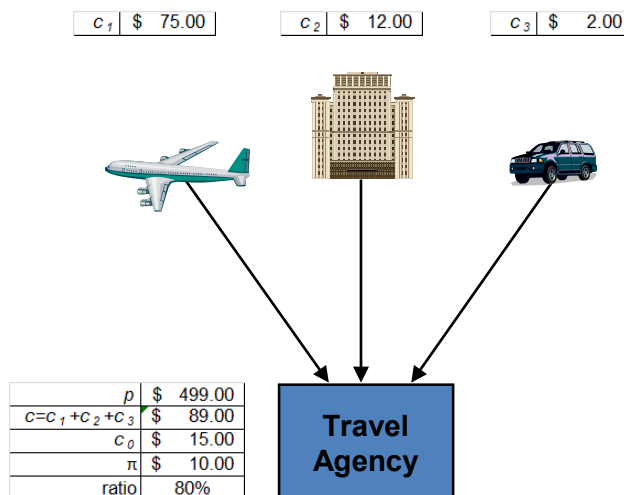

The first term in (3) represents the component costs and the capacity acquisition cost at the retailer. In the second term in (3) within the parentheses, the brackets house the capacity and component salvage value and goodwill penalty for shorting customer demand, and the last term within the parentheses is the retailer revenue when demand is less than  $q_c$ . The final term in (3) represents the retailer revenue when demand is greater than or equal to  $q_c$ . We take the first derivative of (3) with respect to  $q_c$  and set it to zero to give the critical fractile shown below, where  $q_c^*$  is the optimal order quantity for the centralized system and  $F(q_c^*)$  is its corresponding CDF of the demand.

$$F(q_c^*) = \frac{p - \sum_{i=0}^n c_i + \pi}{p - \sum_{i=0}^n s_i + \pi} \quad (\text{iv})$$

The ratio in (4) is always less than 1.0 given the conditions in (1). The second derivative of (4) is negative, indicating a concave profit function. As an illustration of a service supply chain, in Figure 1 we model a travel agency (the service retailer that “assembles” vacation packages) with three component suppliers that it also owns; an airline, a hotel, and a rental car company. The travel agency is the retailer that will incur a goodwill penalty if a complete package is not available to fill customer demand. This retailer must acquire capacity to bundle and sell vacation packages prior to actual demand realization. The three suppliers provide perishable components of the package. Because an unused airline seat on a flight cannot be resold the next day, we set salvage values for components and unutilized retailer capacity to zero in this example.

Figure 1: Service Supply Chain – Centralized Control

At the top of this figure are the supplier costs per unit. At the bottom are the price per vacation package, the combined cost per unit from the suppliers, the cost per unit at the retailer, the lost goodwill cost per unit for the retailer, and the calculated critical fractile ratio.

For this service chain, if the demand were distributed uniformly between 0 and 100, using (4) provides a critical fractile ratio of 0.80 and  $q_c^* = 80$ . Using (3), the total expected profit would be \$15,592.72, given the values for  $p$ ,  $c_i$ , and  $\pi$  as shown in Figure 1. Similar results come from analyzing normal and exponential demand distributions, but we used a uniform distribution here because we felt it is easiest to understand and

to enable other researchers to replicate our results quickly. In the expected profit function above, we used the subscript  $C$  to denote centralized control. Later in the paper, we use the subscripts  $D$  to denote the decentralized case, and  $M$ , to denote the salvage manipulator coordination mechanism. It is interesting to note, as done in Benzion, Cohen, and Shavit (2010) that knowing the demand distribution does not necessarily lead players to make decisions that improve profits. It might be that knowledge of the exact shape of the customer demand distribution is less important than prior research suggests.

### Decentralized Control Operation

We now look at the case where all component suppliers and the retailer act independently to maximize their local profits without implicit or explicit agreements between them. Assume the same travel agent model as in the centralized control case, but now the suppliers are neither owned nor controlled by the travel agency; e.g., a small travel agency that wants to provide a vacation package to its customers using components from Delta Airlines, Marriott hotels, and Hertz rental cars. The retailer's objective is to maximize its profit by selecting the capacity to acquire ( $q_0$ ), with known values for all other variables except demand.

$$E[\Pi_0] = -q_0 c_0 + \left( p - \sum_{i=1}^n w_i \right) \int_{-\infty}^{q_0} x f(x) dx + \left( p - \sum_{i=1}^n w_i \right) q_0 \int_{q_0}^{\infty} f(x) dx + [s_0 - \pi] \int_{-\infty}^{q_0} (q_0 - x) f(x) dx \quad (v)$$

Taking the first derivative of the above profit function with respect to  $q_0$  and setting it to zero allows us to solve for the critical fractile; hence, the optimal capacity  $q_0^*$  to maximize the retailer's expected profit equals:

$$F(q_0^*) = \frac{p - \sum_{i=1}^n w_i - c_0 + \pi}{p - \sum_{i=1}^n w_i - s_0 + \pi} \quad (vi)$$

Because  $w_i > c_i > s_i$  from the assumptions in (1) and (2), the ratio in (6) may be more or less than the ratio in (4). That is, depending on the values of the parameters, the retailer may have a higher or lower ratio under decentralized decision-making than under centralized control. The suppliers need to determine their allocation quantities prior to the retailer's selling season. However, the retailer will pay for the units it needs only after the demand for customer finished goods bundles is realized. A supplier may receive a salvage value ( $s_i < c_i$ ) for each unsold unit at the end of the selling season (e.g., in addition to a hotel room, if a welcome fruit basket is part of the package and the fruit can be sold after the selling season at a reduced price). Assuming that the retailer has sufficient capacity to use any quantity that each supplier has available, the supplier  $i$ 's expected profit is:

$$E[\Pi_i] = -q_i c_i + w_i \int_{-\infty}^{q_i} x f(x) dx + s_i \int_{-\infty}^{q_i} (q_i - x) f(x) dx + w_i q_i \int_{q_i}^{\infty} f(x) dx \quad (vii)$$

Taking the first derivative of (7) with respect to  $q_i$  and setting it equal to zero allows us to solve for the supplier's critical fractile; hence, the optimal production quantity  $q_i^*$  for each supplier in the decentralized situation is calculated as:

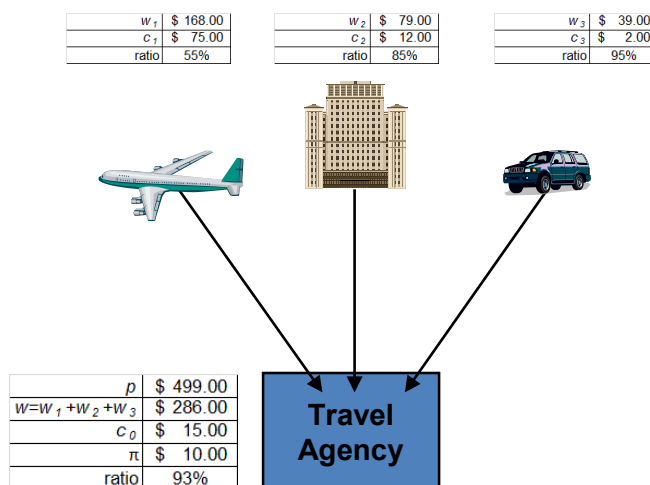

$$F(q_i^*) = \frac{w_i - c_i}{w_i - s_i} \quad (\text{viii})$$

Providing that the service retailer makes its quantity decision  $q_0^*$  based on (6) and each supplier makes its quantity decision  $q_i^*$  based on (8), the quantity of complete packages that the retailer can bundle and sell will be the minimum of those two values, denoted as  $m$ . The total expected profit for the decentralized service chain is:

$$E[\Pi_D] = -\sum_{i=0}^n mc_i + p \int_{-\infty}^m xf(x)dx + pm \int_m^{\infty} f(x)dx + \left[ \sum_{i=0}^n s_i - \pi \right] \left( \int_{-\infty}^{\infty} (m-x)f(x)dx + \int_m^{\infty} (x-m)f(x)dx \right) \quad (\text{ix})$$

Figure 2 shows the same service chain as in Figure 1, but under decentralized decision-making. The service retailer has a ratio of 93% (determined using (6)), which is higher than any of the suppliers' ratios. The suppliers' ratios are determined using (8). The retailer's quantity given a  $U[0, 100]$  demand distribution equals 93, while the quantities for the suppliers equal 55, 85, and 95, respectively. Therefore, this travel agency would like to acquire capacity to bundle and sell more packages than the suppliers may want to provide components to build. Notice that the airline supplier has a localized ratio of 55%; thus, it is the limiting factor in this service chain. The other suppliers need not make extra components available beyond the number of seats available from the airline (55). It takes one of each supplier component, and one unit of bundling capacity at the service retailer to fulfill one customer demand in the example shown below.

Figure 2: Service Supply Chain – Decentralized Control

At the top of this figure are the supplier costs per unit, their selling price per unit to the retailer, and their critical fractile ratios. At the bottom of this figure are the price per vacation package, the combined price per unit from the suppliers, the cost per unit at the retailer, the lost goodwill cost per unit for the retailer, and the calculated critical fractile ratio for the retailer.

Given uniform demand  $[0,100]$ , total service supply chain profit calculated with (9)  $= E[\Pi] = \$14,116.50$ . This expected profit assumes that each player is rational and will maximize its expected profit with full knowledge of the other players' information (as done in Cachon and Lariviere, 2001). We also analyzed the case in which the participants did not know the costs of the other participants. The performance of the decentralized service chain without use of knowledge of other players' information is worse (expected profit  $= \$13,106.49$ ). If each player makes a quantity corresponding to its ratio, rather than on a  $q$  based on the lowest ratio of all players, profit is lower since there will be unmatched components/capacity that increase cost but not potential sales of bundles. By assuming common knowledge of cost parameters, we estimate only a lower bound on the performance of the salvage manipulation mechanism (explained below).

*Proposition 2:* The expected decentralized profit will be lower than the profit under centralized control if the localized player ratios are not equivalent.

*Proof:* It is well understood that either (i) all the localized critical fractiles are equal to the centralized critical fractile; or (ii) one or more of the localized critical fractiles is lower than the centralized critical fractile. This leads to the observation that  $m$  must be lower than  $q_0$ . Because the expected profit function is concave and its maximum occurs at  $q_0$ , the decentralized supply chain must have lower profits than the centralized supply chain when  $m < q_0$ .

### Coordinated Decentralized Service Supply Chain

It is not realistic to assume complete vertical integration is possible or desirable in all service chains. If a single entity owned and controlled the complete service chain, coordination is not needed. More commonly, all players will remain decentralized decision makers, each with its local profit function. However, the decentralized expected profit has been shown to be lower than the expected profit under centralized control. It would be desirable to have a mechanism that enables all the decision makers to optimize their local expected profit functions, yet make decisions that lead to globalized efficiency. This is the concept of service chain coordination, and we achieve that here with a method we call salvage manipulation. Prior research has used a combination of subsidy and revenue sharing to motivate individual decentralized players to select the same quantity (required for optimal profit per Proposition 1).

To overcome the deficiency of revenue sharing, researchers such as Gerchak and Wang (2004) add in a subsidy. Using revenue sharing and a subsidy as two dependent levers is more complex than using a single mechanism is. Additionally, revenue sharing has the previously-noted issues of cheating and high administrative burden. We propose a salvage manipulation mechanism that is a form of a subsidy that gives the proper amount required between each retailer/supplier pair such that each player may set its quantity to that quantity determine in the centralized supply chain, thus always obtaining the optimal expected supply chain profit. Our method is simple to understand and use. We believe it is practical because it uses a single parameter and avoids using revenue sharing.

In effect, participants that would want higher inventory and capacity available for potential customer sales will promise salvage manipulation to those participants that would favor lower quantities. By doing so, all players in the decentralized setting may improve their expected profit. Let us denote by  $\delta_i$  the additional salvage value that the retailer promises to supplier  $i$  for the leftover inventory at its location. Notice that  $\delta_i$  can be either positive or negative. If it is negative, the retailer would want to select a capacity quantity higher than the supplier  $i$  wants to provide components; and if it is positive, the converse is true. For the coordinated case, the expected profit for supplier  $i$  is:

$$E[\Pi_i] = -q_i c_i + w_i \int_{-\infty}^{q_i} x f(x) dx + (s_i + \delta_i - \pi) \int_{-\infty}^{q_i} (q_i - x) f(x) dx + w_i q_i \int_{q_i}^{\infty} f(x) dx \quad (x)$$

To determine the maximum profit, we take the first derivative of (10) with respect to  $q_i$  and set it equal to zero. Then, we re-arrange the result to solve for the salvage manipulator ( $\delta_i$ ) for each supplier as shown below:

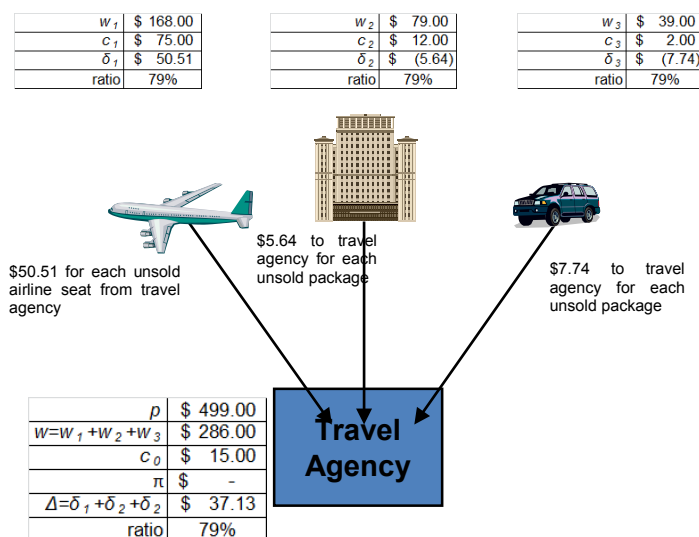

$$\delta_i = \frac{c_i(p + \pi) - p s_i - \pi s_i + (s_i - w_i) \sum_{i=0}^n c_i + (w_i - c_i) \sum_{i=0}^n s_i}{p - \sum_{i=0}^n c_i + \pi} \quad (xi)$$

Note that in our assumptions, the retailer selling price ( $p$ ) has to be greater than the capacity acquisition cost plus the sum of supplier wholesale prices so that the retailer makes a profit on each unit sold. Because the component price is greater than the cost at each supplier, the denominator of the above equation must be greater than zero. Therefore, we are assured that the salvage manipulator never will be undefined. The expected profit for the retailer, where  $m$  is the chosen quantity, is:

$$E[\Pi_0] = -m c_0 + \left( p - \sum_{i=1}^n w_i \right) \int_{-\infty}^m x f(x) dx + \left( s_0 - \sum_{i=1}^n \delta_i - \pi \right) \int_{-\infty}^m (m - x) f(x) dx + \left( p - \sum_{i=1}^n w_i \right) m \int_m^{\infty} f(x) dx \quad (xii)$$

*Proposition 3:*  $E[\Pi_M] = E[\Pi_C]$ . The proposed salvage manipulation mechanism coordinates the service chain.

Figure 3: Service Supply Chain Coordinated Via Salvage Manipulation

This figure shows the  $\delta$  term for each player. This agreement amount turns each individual ratio from those seen in Figure 2 into the same ratio as we had in Figure 1. In effect, each player making local decisions achieves the optimal profit as if a single entity controlled all players.

*Proof:* The  $n$  salvage manipulators were designed to produce the same critical ratio at each supplier and the retailer as found in the centralized control case. Therefore, if salvage manipulators are used, the

quantities selected by all players equal  $q_C$  from the centralized case, ensuring equivalent expected total service chain profit.

Given uniform demand  $[0, 100]$ , total service supply chain profit  $= E[\Pi] = \$15,592.72$  using salvage manipulators and the optimal number of packages to sell equals 79. The expected profit using salvage manipulators is identical to the profit under centralized control. Recall that in Figure 2, the service retailer had a ratio of 93%, and the suppliers had ratios of 55%, 85% and 95%, respectively. Because the service retailer wants more airline seats to be made available than the airline would normally choose (79 seats), it offers a promise of additional salvage for any unsold units at the end of the selling season. For example, the retailer offers a promise, in the form of salvage manipulation, of \$50.51 per unit to supplier 1 (airline) for each unsold airline seat, which induces that supplier to select a quantity that is 24 units more than it would otherwise (79 – 55 seats). On the other hand, the hotel supplier would offer the service retailer a promise of \$5.64 per unit for unsold packages, and the car supplier would offer the service retailer a promise \$7.74 per unit for unsold packages. The net effect to the retailer is a  $\$50.51 - \$5.64 - \$7.74 = \$37.13$  promised per unsold package.

Our salvage manipulation promise allows each decentralized player to achieve the same quantity locally (decentralized decision making) that would have been selected globally (centralized decision making) if a single firm owned all players. Any firm that has a locally higher ratio than the centralized ratio promises salvage manipulation to those firms with lower ratios, all through the retailer as the touch point. Table 1 demonstrates how our coordination mechanism optimizes the decentralized control service supply chain with three suppliers (e.g., airline, hotel, and rental car). In theory, there are  $\delta_i$  such that the solution is not Pareto optimal. In the instance where decentralized expected profit for any player is higher than its profit under salvage manipulation, that player may either 1) not participate in the salvage manipulation contract (Minimum option), or 2) utilize a post-demand transfer payment to use the service chain profit increase to offset its loss. In our travel agency example, all players increase their expected profit by participating in salvage manipulation. It may be that all players deem it equitable to achieve their pre-coordination share of the total expected service chain profits. Table 1 shows that the retailer expected to receive 54% of the total profit if it selected the minimum ratio rather than engage in coordination. However, after coordination, it expects to receive only 50% of the total profit. The transfer payment arrangement would stipulate post-profit realization splitting of achieved profits per the minimum ratios. Transfer payments also would be of benefit if any single player would expect a lower salvage manipulation profit than to the minimum option.

Table 1: Centralized, Decentralized and Coordinated Profits

	Centralized CSC		Minimum DSC		Salvage Manipulation		Transfer Payment	
	Ratio	Profit	Profit	%	Profit	%	Amount	Profit
Service Retailer	79%	\$15,592.72	\$ 7,642.28	54%	\$ 7,816.10	50%	\$ 625.37	\$ 8,441.47
Supplier 1			\$ 2,553.42	18%	\$ 3,671.20	24%	\$ (850.76)	\$ 2,820.44
Supplier 2			\$ 2,480.45	18%	\$ 2,644.84	17%	\$ 95.00	\$ 2,739.84
Supplier 3			\$ 1,440.35	10%	\$ 1,460.58	9%	\$ 130.39	\$ 1,590.97
		<b>\$15,592.72</b>	<b>\$ 14,116.50</b>	<b>100%</b>	<b>\$ 15,592.72</b>	<b>100%</b>		<b>\$ 15,592.72</b>

*This table shows how our salvage manipulation mechanism can allow all players to achieve the optimal profit as would be found if all players were owned by a single entity under centralized control.*

Because the salvage manipulator value is a subsidy (positive or negative) for each player to achieve the centralized ratio, the net effect is that subsidies flow from players that would locally select higher quantities (due to the cost ratio of underage and overage) to players that would normally select smaller quantities. In other words, the service retailer allows the flow of promised subsidies between all players indirectly.

## DISCUSSION AND CONCLUSIONS

Centralized control results in the highest expected profit for the  $n$ -supplier and one retailer service chain. However, it typically is not desirable or feasible to have a single company that owns or controls the entire service chain. In the service industry, often the retailer does not own all the suppliers of the required components (e.g., hotel, rental car, airline) to make complete packages for the customer. Therefore, a decentralized service chain is the business setting in which the retailer and suppliers of components have to operate. With each player acting independently, we have shown that the expected profits of the total service chain may be reduced due to asymmetries in the critical ratios amongst the players, even with perfect information availability. We have introduced a new coordinating mechanism called salvage manipulation that allows the service chain to obtain the same expected profit as under centralized control. Our contribution comes from eliminating the need to use revenue sharing, combined with subsidies to coordinate a service chain. Revenue sharing alone cannot coordinate all service chains, and the administrative burden and ability to cheat make it unappealing regardless. Our simple mechanism, salvage manipulation, is a promise (from the more profitable participants) to offset costs of overage (of the less profitable members), but does not result in cash flow if demand is not less than the decision quantity. It is possible that a full application of salvage manipulation makes one or more players worse off than under decentralized control.

If this is the case, players may choose to stay with decentralized quantities or select a contract involving transfer payments (to ensure no player is worse off after coordination). Our contribution comes from coordinating a service supply chain without requiring the burden of revenue share administration. Our model accommodates cases where prices at both echelons are exogenous. Prior research required suppliers to be able to set prices (ignore market prices for their goods) while the retailer had to adhere to market prices. An interesting future research extension could be looking at performance of our mechanism where the end customer demand distribution was unknown as done in Benzion, Cohen, and Shavit (2010). Eliminating the demand distribution shape as a required input would enhance the appeal of any coordination mechanism for implementation.

# DISCUSSION ON THE INDEPENDENCE OF CHINESE STATE AUDIT BASED ON AUDIT MODEL

Tao Yang, North China Electric Power University  
Zhicheng Wang, North China Electric Power University

## ABSTRACT

*Nowadays, China is in the exploration stage of reform. Audit model, which has great influence on the independence of Chinese state audit, is closely related with the political system. This paper discusses the classification of audit model, and then explores factors which affect independence of Chinese state audit based on administrative audit mode. Finally, considering China's current situation, recommendations are proposed to help maintain the independence of Chinese state audit.*

**JEL:** M42

**KEY WORDS:** audit mode, China, the state audit, independence

## INTRODUCTION

Audit is required to be "independent" since its birth (ref.). In the long history of evolution from ancient audit to modern audit, independence of the audit has been constantly enriched and developed. Audit originated from the establishment of legal relation between client and trustee. State audit was the first produced from the audit system, providing an opportunity for the development of internal audit and civil audit.

## LITERATURE REVIEW

### The Definition of State Audit

He Chang (2012) considers that there is no complete, scientific and accurate definition of state audit in either Chinese audit law system or academic theory. Xing Mingchun (2006) found that state audit, responsible to the taxpayers, is a way of national supervision, which examines the state of cost accounting and realizes the effectiveness of public finance. Considering china's situation, this paper gives the definition as follows: state audit, also called government audit, generally refers to the audit process which is organized and implemented by the state. Specifically, it is implemented by national special audit organizations which are on behalf of the state audit. State audit is a part of national superstructure, whose essence is reacting to the economic basis to serve the public through supervision.

### The Measure of Independence

Kell (1986) thinks that independence refers to the ability to maintain integrity and objective behavior. Arens A. A. (1997) finds that audit independence centered on unprejudiced standpoint during audit testing, evaluating results and expressing an audit opinion. From the domestic research, Zhu Rongen (1997) introduced that the independence of the audit includes the independence of organization relationship, family relationship, financial relationship and operation relationship. Cai Chun (2001) thinks, the audit independence can be measured from three aspects, namely status, spirit operation and ethics. To sum up, the author thinks independence can be described as follow, the audit independence refers to the condition that audit institutions and auditors keep neutral attitudes towards auditees. Therefore, no stake exists between auditors and auditees apart from the agreement, ensuring objectivity and impartiality. The audit independence includes two meanings. The first one is independence of the form which means there is no interest and economic relations between the auditors and auditees and whose contents are the independence

of organization, job, money and so on, namely everything that the audit institutions can directly get is independent. The second is independence of the essence which means audit institutions in the process of implementation of the audit business should be impartial and honest to perform business. The main contents include the objectivity and fairness of the spirit, which requires auditors' high capability and noble occupation morality.

### The Comparison of the State Audit Independence under Different Audit Modes

State audit model, which refers to the state audit system of leadership, is the general term of system including the affiliation of main audit institutions and power division. Nowadays, almost all countries in the world apply the state audit system. However, because of the different cultural development of social system, economic imbalance and huge regional, national and historical differences, state audit modes show diversity in different countries, which essentially leads to the difference of the audit independence. The specific circumstances of each audit mode are shown in the table below.

Table 1: Comparison of Audit Mode

Type	Structure	Characteristic	Typical Country
Legislation Mode	The state audit institutions are subordinate to the legislative department	Exercise powers independently; be responsible to the Congress or parliament; Not controlled or interfered by administration agencies	United Kingdom America
Judicial Mode	The state audit institutions encompass the Department of Justice	Bear both audit and economic judicial functions	France Italy Spain
Independent Mode	State audit organizations do not belong to any national institutions	Three independent branches: legislative, executive, and judicial	Germany Japan
Administration Mode	The state audit institutions are subordinate to the government administration department	Be responsible to the government institutions; Ensure the tight implementation of the government's financial policies, laws, planning and budget	China Korea

In the four audit modes, Independent model is the most independent audit mode. In this audit mode, audit, being independent from three powers and a neutral position, is implemented without any inference to protect national best interest. Judicial mode, whose audit institutions have certain judicial authorities and judicial functions, emphasizes the investigation on the auditees' financial obligations and highlights the authority of audit. The legislation mode balances the normal operation of the whole country by law and guarantees legitimacy and independence of audit institutions through the method of strengthening the service. The independence of the audit organs is the weakest in administration mode. In this mode, audit institutions mainly service government departments to work, so the government influences scope of work and process of audit to a large extent.

### Influencing Factors Of Chinese State Audit Independence

Different state audit modes lead to differences in audit independence, producing a variety of factors influencing independence. China is a socialist country, whose government bears the responsibility to regulate and control the entire national economy. China's legislature has relatively small power and lacks the ability to use public resources, so it is not able to supervise government. In this political system, the auditing institution belongs to the government only, and serves to control national economy, so China uses the administration mode. According to Chinese specific situation, this paper explores the factors influencing the independence of Chinese state audit in administration mode as follow.

### System of Leadership

As far as state in administration mode is concerned, the auditing work may be influenced because the auditor and auditee both work for the government. The auditees may use government as an excuse to put pressure on the audit institution. The position of audit institutions is relatively low. Chinese state audit institutions

mainly audit the financial revenue and expenditure of central and provincial governments. Chinese state audit institutions mainly audit the finance of the central committee and governments at various levels. From the organizational structure, the central committee and the governments at various levels are under supervision of audit institutions which, at the same time, are lead by the central committee and governments at various levels. Under such situation, Chinese state audit with the nature of internal audit is not independent to a great extent, which absolutely has great influence on the supervision of audit institutions.

*Appointment:* According to the relevant provisions of "Constitution" and the "Audit Law" in China, auditor general is nominated by Premier and decided by the National People's Congress and the length of his term of office is the same as that of the National People's Congress. This shows that Chinese audit institutions is a part of government but the position of auditor head is relatively low, so it is impossible for audit institutions to carry out the work on one's own.

*Audit scope:* According to the international general principles, audit institutions should decide the audit scope, audit procedures and audit methods. However, the audit scope is restrained by administrative departments in China. For example, though nowadays the performance auditing has become the mainstream of the state audit around the world, Chinese audit institutions only audit reality and compliance of government departments and state-owned enterprises, without implementing performance audit.

#### Audit Results Announcement

Audit results announcement system is a common international practice, but in China it does not apply. Chinese audit institutions as a part of government department tends to provide information for the government to make decisions about macro-economy, while little information is available for the public. This is not conducive for the state audit under social supervision, so is independence of state audit.

*Funds:* It is important to have sufficient special funds for state institutions to keep independent. Both Chinese audit office and the finance department are under the State Council, but they are also the audit and auditee respectively. At present, the funds of Chinese audit institutions are approved by financial departments being supervised at the same level. Due to independence of funds, it is difficult for audit institutions to audit the financial department.

#### Recommendations on Improving Chinese State Audit Independence

China is at the stage of exploring system reform, methods should be traced back from the source to solve the problem on how to maintain and enhance the independence of state audit. Improve the laws and regulations of the state audit. Auditing pursuant to the law is one of the basic principles in the auditing work. At present china is subject to the "rule of man" rather than the "rule of law", which prompts China to speed up the legislative process, forming audit legalized system, the "Audit Law" as the core and audit standards and audit guidelines as the basis, which conforms to Chinese condition but also reflects the international practice. Regulations about exercising power independently, audit scope, audit supervisory authority and so on should be refined to ensure the work independence of state audit institutions and auditors. Deepen system reform and promote the establishment of National People's Congress accountability system. The audit department which is established under the people's congress at various levels should be directly responsible to the National People's Congress and the local people's congresses at various levels. Local audit institutions at various levels shall accept leadership of auditing body at the next higher level on implementing the vertical leadership in people, wealth, and finance and so on.

This reform is very thorough by this way, but it's too difficult and the scope of influence is too broad, so this reform should be carried out step by step. Judging from the current situation, the National People's Congress accountability system should be actively implemented. It's more conducive for the gradual reform to deal with the problems of audit severely, audit strictly the implementation of the government budget,

investigate relevant personnel responsibility and positively correct the problems from the audit in previous year, which can enhance the authority of audit institutions and guarantee the implementation of the audit more independent. Establish special funds of the state audit. Having sufficient special funds is the important guarantee for state audit institutions to maintain its independence. If state audit institutions want to give full play to the functions of audit. Independent sources of funds can be independently arranged to make use of and are not restricted by the administrative department and the finance department. It's necessary to promote the establishing the system of direct allocation of funds, in other words, total budget of central and local audit institutions at various levels is approved each year, and put into the unified budget of the central government. Then the ministry of finance directly allocate the funds to the national audit office as its special audit fees and the people's congresses at various levels allocates approved funds to the local audit institutions at various levels by degrees. In this way, audit institutions get rid of restrictions by the government at various levels on audit fee, which plays an important role in maintaining the independence of audit institutions.

## CONCLUSION

The independence of the state audit has great influences on the effective operation of the state machine. Audit mode is closely related with national regimes. The reform of the system will not be accomplished at one stroke, so it's a long way to go to maintain and enhance the independence of state audit. Chinese government should attach great importance to the state audit but also must take a positive action to promote the development of system, in order to ensure the independence of state audit and give full play to its supervision function.

# BIG DATA MANAGEMENT: RELATIONAL FRAMEWORK

Peter Géczy, National Institute of Advanced Industrial Science and Technology (AIST)

## ABSTRACT

*Volumes of available digital data have been significantly expanding over the past decade. Alongside the volume, diversity and complexity of digital data have also been growing. Contemporary systems and devices are capable of generating data vastly exceeding capabilities of organizations and information technologies to process it. Big, diverse and complex data presents novel challenges for organizations—but also opportunities. Big data enables tackling longstanding complex problems that would otherwise be out of reach. It also opens new scientific and commercial possibilities that could not exist without availability of data. Organizations utilizing large volumes of diverse data, however, face unique challenges. The challenges range from technological and processing issues to business and management matters. Organizations need to adopt appropriate management strategy in order to satisfactorily deal with the issues arising from utilization of big data. This necessitates understanding of relationships between the essential aspects of data and their consequences on managerial measures. We examine essential characteristics of big data and explore pertinent managerial implications.*

**JEL:** C8, C81, C82, C88, D7, D8, D81, M15

**KEYWORDS:** Big Data, Data Aspects, Processing Capabilities, Strategy, Actionable Knowledge, Information Technology Management, Management Of Information Systems

## INTRODUCTION

Organizations have been expanding their data collecting and processing methods. Expansion of data acquisition operations has led to rapid growth of data. Large data volumes demand significant computing power for processing. They also demand significant increases in storage capacity. Novel challenges have emerged—big data problems (Buhl et al, 2013; Hunter, 2013). Big data problems have arisen from the disproportionate growth between collected data and capabilities of organizations to process and manage it (Klein et al., 2013; Walsh et al., 2012). Data has been growing considerably faster than advances in processing technologies. Data volume, diversity and structure of data significantly affect processing and storage capabilities. Big data issues have become substantial.

### Relational Management Framework

Relational management framework draws from the presented relational perspective on the big data problems in organizations. This approach underscores the fact that various aspects of data affect various managerial domains. While the aspects of data and its management are clearly distinguishable, they are interlinked through their influences. It enables elucidation of both individual features and their influences. This approach allows identification of managerial domains that play key roles in effective management of big data issues. The pertinent managerial domains of the relational management framework arise from the interconnectedness of data aspects and relevant managerial activities. Four managerial domains are highlighted: adoption of data collection and processing methods and technologies, optimization of organizational resources with respect to big data issues, resolution of legal aspects related to acquisition and processing of sensitive data, and progressive innovation. It is important to note that these highlighted managerial domains focus on prioritization rather than completeness of the list. Different circumstances of each organization may result in a more extensive list of managerial domains.

## CONCLUSIONS

The presented approach to the issues with big data management accentuates the relationships between the aspects of data and capabilities to manage and process it. While data volume aspect is important, several other aspects play substantial roles. The aspects of data have influence on managerial issues. Hence, the emerging big data problem is expressed as a gap between required and available capabilities of organizations to adequately deal with the aspects of collected data and related management issues. This relational formulation of the big data problem distinguishes both managerial and data aspects. However, it also underscores interrelated influences between them. The presented framework underscores several core managerial domains: adoption of data acquisition and processing technologies, optimization of organizational resources, progressive innovation, and compliance with legal requirements.

# CUSTOMER SERVICES MULTICHANNEL MODEL A DISCRETE SIMULATION CASE STUDY

Jorge Aníbal Restrepo Morales, Institución Universitaria Tecnológico de Antioquia

Emerson Giraldo, Institución Universitaria Tecnológico de Antioquia

Lorenzo Portocarrero Sierra, Institución Universitaria Tecnológico de Antioquia

## ABSTRACT

*This project develops a model to determine the actual capacity of the system customer in an Institutional Health Services provider - IPS, in which users request service from 6:00 am to 6:00 pm Problem. The current care system works with users waiting for service at several stations and therefore subject to queue in multiple rows to complete the required services. In the first station, they wait in sample taking for the diagnostic aids; in the second station they wait for medical consultation and finally, they wait to receive the results. The institution considers an "estimated" time of about two hours for a full service; but the reality, frequently, shows that for a user the entire process takes up to 4 hours; causing strong and frequent discomfort and the increasement in costs, also a decreased perception of service quality and the constant discomfort of direct and indirect users who use the services of the IPS.*

**OBJECTIVE:** Analyzing the Phenomena of Waiting Using Discrete Simulation Which Occur in Customer Service Area, to Define Improvement Strategies for Perception of Attention and to Increase the Competitiveness of the IPS

**METHODOLOGY:** It Is An Analytical Research Using Work Measurement Techniques to Determine The Times of Processes, a Discrete Simulation to Analyze and Forecast the Demand and a Queuing Study to Design the System Capacity.

## INTRODUCTION

This is a business management project, applied to the field of health services, where there is an infinite range of opportunities for the application of modeling techniques such as simulation, queuing theory, methods and times, linear programming, among other. The value-added of this project underlies in the fact of applying techniques simultaneously when they are often applied separately, namely: time measurement, the study of demand, the study of the phenomena of waiting and discrete event simulation, for the simulation process the software ProModel will be used, for statistical analysis of information data Statgraphics will be used and Excel will be used to program macros with timing information and to model the probability distributions of customer service timing.

*Theoretical Framework:* This project is part of three theoretical models, commonly used in industrial engineering, for its development, the first part of the theoretical framework presents an approach to theories of work measurement; the second part deals with queuing theory and finally the guidelines of the discrete simulation.

*Measurement of work:* Work measurement is the application of techniques to determine the time spent by a qualified worker to carry out a defined task doing it according to a previously established execution rule (de Mena, et al, 2002). The time and motion studies help entrepreneurs and employees to understand the nature and the true cost of the work, and can develop strategies to reduce unnecessary costs (Alfaro, 1999).

Besides work standards support management in making smart decisions about hiring staff, purchasing equipment, division of labor and especially to determine the cost of the product or service (Meyers, 2000).

*Purpose of work measurement:* The study methods is classified as the main technique to reduce the amount of work and eliminate unnecessary movement of material or operators and to replace inadequate methods for more efficient ones. Work measurement, at the same time, is useful to investigate, reduce and ultimately eliminate downtime, i.e., the time during which no productive work is performed, for any reason whatsoever (Castanyer Figueras, 1988). In the same vein, it is argued that the object of the social sciences refers to activities that take place in the society and / or individuals who perform them, i.e., not only on just the activities, but on the rules, the principles and the pauses according to which these activities are linked, in this order of ideas, work measurement, is the means by which management of a company can measure the time it takes to execute an operation or a series of operations so that downtime stands out and makes it possible to separate it from uptime. Once the existence of downtime and its causes is determined it is possible to take measures for its reduction (Prieto, 2007).

Motion studies offer great saving potential for the company, it is possible to save the total cost of an item with its elimination, reduce it largely by combining elements of a task with elements of another. Rearranging or simplifying a task by placing components and tools near its point of use; simplification is the process that takes more time besides its saving is small compared to the elimination and combination of elements, but it can always be simplified, which is largely the technique used in this project: searching reduction by simplifying tasks, removing those that don't add value and combining those which allow it (Meyers, 2000).

*Steps to follow in the work measurement:* A general procedure for the measurement of work consists of 6 stages: selection of the task, recording of relevant information, critical analysis of data, measuring of the amount of work, compiling of standard times and finally, definition of the method of operation. It should be noted the strict compliance of the above steps when it comes to setting the standard time (Neira, 2006).

*Queuing theory:* The waiting lines are very common phenomena observed in various activities: the people who go to a bank to cash a check, customers who are going to pay the goods they have purchased, the orders arriving to be processed through different activities, the drivers arriving at a service station to fill up their cars tanks, among others (Calderón, 1979).

*Basic structure of queuing models:* The queue phenomenon is basically composed of six main elements: the population source, the way in which customers arrive at the service facility, the characteristics of the queue, how clients of the queue are selected, the characteristics of the service facility and the exit condition of the system by a customer (if the costumer returns or not to the population source) (De la Fuente, et al, 2006).

*Input source (potential population):* The population is the set of potential users of the system. The population size may be finite or infinite. If the population is finite, but large enough so that the arrival of a customer does not affect the value of the probability of another arrival it is considered infinite (Miranda, 2003).

*Queue:* The queue is where customers wait before being served. A queue is characterized by the maximum allowable number of clients that can be supported. Queues can be finite or infinite, depending on if this number is finite or infinite. The assumption of an infinite queue is the standard for most models, even in situations where in fact there is a greater amount (relatively large) on the allowed number of customers, managing such an amount may be a factor complicating the analysis (De la Fuente, et al, 2000). The queuing

systems in which the upper amount of clients is so small that is filled with some frequency, needs to assume a finite queue (Calderón, 1979).

*Queue discipline:* The queue discipline refers to the rule by which customers who are waiting in line will receive service (Render, 2006)

*Service mechanism:* The mechanism of service is defined as the process by which service is given to customers who request it. To fully determine the service procedure it is required to know the number of servers of the mechanism and the probability distribution of the time demanded by a server to complete a service (Abad, 2002). The time that passes from the start of service until its compliment in a facility known as service time (or length of service). To model a given queuing system, it is required to specify the probability distribution of the service time for each server (and perhaps for different types of customers), although it is common to assume the same distribution for all servers. The service time distribution more often used in practice (because it is more manageable than any other) is the exponential distribution (Hiller and Lieberman, 2002).

*Simulation:* Simulation is defined as the process of designing and developing a computer model of a system or process and conducting experiments with this model for the purpose of understanding the behavior of the system or evaluating various strategies which can operate the system (Coss Bu, 1993) (Banks, 2005). Another definition, argues how simulation is the set of logical relations, mathematics, and probabilistic that integrate the behavior of a system under study when certain event is presented (Dunna, et al., 2006). It is also defined as the process of building computer models that describe the essential part of the behavior of a system of interest, as well as designing and conducting experiments with such models in order to obtain conclusions from their results to support decision making (Blanco, 2003). Typically, it is used in the analysis so complex systems that it is not possible to treat them analytically nor its numerical analysis Simulation is nowadays an essential methodology experimentation in fields as diverse as economics, Statistics, Computer Science, Chemical Engineering, Ecology and Physics, with huge industrial and commercial applications, ranging from manufacturing system to the flight simulators, through computer games, stock market prediction and weather forecasting (Rios et al, 2009).

## METHODOLOGY

*The methodology consists of the following activities:*

*Developing diagnosis of the current situation.*

*Conducting a study of methods and times.*

*Analyzing the demand.*

*Study of queues.*

*Developing the simulation model.*

*Validating the simulation.*

*Experimenting with the simulation model.*

*Analyzing the results.*

*Hypothesis:* Preliminary analysis of the problem suggests several causes: the first is ignorance of the actual capacity of the system, among others because they have not determined the times of processes, both new and old; the second, refers to variability in the number and distribution of Physicians and shifts in the company, and finally, there is no demand studies which enable modeling.

*Fieldwork:* An analysis of the input data was conducted from a historical database an IPS, totaling 384,237 rows with customer information and examinations performed.

*Types of clients:* With the above information, ten types of customers and their possible combinations of tests, covering with this 80.25% of the customers' database and 69.78% of investigations of exams performed during a year.

*Times:* Due to the variability in the times, adjusting data to probability distributions for a faithful representation of the data collected was performed See Table 1. The procedure for the adjustment was: first, a descriptive analysis of the data, then an analysis of independence and finally adjusting the distributions.

Table 1: Variability of Time and Descriptive Analysis

577,318	577,32	9,622	427,647	843	148	11%	1	640,82	10,68	0,178	640,82	10,68

*This table shows the variability of the service times, suggesting the adjustment of data to probability distributions.*

*Statistical analysis of demand:* After obtaining information from the database the adjustment of the demands for each customer type is made. To model the demand by customer type, it was fractionated by the hour and every hour was adjusted to a probability distribution. 123 empirical distributions for its modeling and 12 probability distributions to model the behavior of the service times were used.

*Presentation of the model:* The design of the model has 48 locations distributed as follows: 1 queue of arrival, 3 cubicles for sampling, 6 cubicles visiometría and spirometry, 14 physician offices, three locations for audiometry's 1 weight scale to weigh patients, 1 place to measure patients, 4 lounges, and 15 locations for the auxiliaries.

*Entities:* The model has 10 types of entities that represent and match the type of clients defined above.

*Networks:* 36 networks to simulate all transport that occur in the area of customer service were created.

Networks were defined with speed and distance, requiring actual measurements between each work place through which patients, doctors and assistants circulate. Six networks for spirometry and visiometry assistants were defined, 3 networks for speech therapists, 14 networks for physicians, 3 networks for laboratory sampling and 10 networks for transportation of the patients to claim for the results.

*Resources:* 26 Resources equivalent to the service provider stuff inside the IPS facilities were modeled. These resources were modeled with a speed of 20 meters per minute. Six resources for visiometry and spirometry assistants were equally defined, 3 auxiliaries for laboratory sampling, 14 medical specialists and 3 speech therapists.

*Process:* In the process it is described for each type of customer the whole route done within the system Figure 1. The process varies depending on the type of client. In the process programming 341 lines of code

were required to model the complete system with 10 types of customers. Some additional codes to those of Promodel were also created to ensure that the model accurately represents the process to be modeled. Arrivals for each of the 10 types of selected customers were created, they arrive to a queue of arrival and additionally it contains arrival cycles which will be explained later. The frequency of arrivals is 24 hours. 8 types of shifts that are currently occurring in the IPS were defined.

Figure 1: Process Diagram and Layout of Customer Service Area

This figure describes the process for each client throughout the route made within the system. Source: Compiled by the authors

### Validation of the Model

To validate the model 30 independent routes of a year of duration were used and 30 different seeds were used. In each route the total arrivals of each of the 10 types of defined customers were counted, to then determine the mean and standard deviation of the total arrivals by customer type. It was worked with a 5% level of significance and for this case the value of N is 30.

### Validation

With the previous data the confidence interval for each type of client was developed and the expected value of each customer at each confidence interval was compared to verify its location within the limits built. 100% of the cases occurred within the limits of the confidence interval suggesting a behavior model in line with expectations.

## RESULTS

The simulation model for a year of operation, throw the following results: On average customers wait a total of 44.72 minutes to be served, either by visiometry and spirometry auxiliaries or by sampling auxiliaries. In the location to receive the results, the average time is 36.34 minutes. The highest waiting time is registers in the process of laboratory testing with a value of 64.45 minutes, very significant figure, once users remaining there have other tests done (spirometry or visiometría) whose wait time represents 44.72 minutes, which means that a user for laboratory examination and spirometry or visiometry waits in the system around 109.17 minutes, adding the delivery of results (36.4 minutes); we can conclude that a user remains waiting in the system 145.51 minutes, excluding the service times in the different processes. It is found how the type 7 and 9 guests are the ones with lower percentage of waiting time in the system, which is consistent with the number of processes performed. Meanwhile the client type 8 is the one having the highest waiting time percentage, 57%, as shown in Figure 2.

Figure 2: Waiting Time and Time Average in the System by Customer Type

This left chart shows how the type 7 and 9 clients are those who have lower waiting time percentage in the system, which is consistent with the number of processes performed. Meanwhile the client type 8 is the one with the highest waiting time percentage of 57%. The right graph shows how in average the clients present an uptime percentage of 59.6%, except customers 7 and 9 which are the ones showing the best assistance percentage.

With the results obtained in the simulation, the following improvement alternatives are proposed, seeking to reduce the waiting time percentage of users:

*Placing a messenger so the auxiliaries do not have to stop their activities:* This scenario was modeled, and the results showed an increase in the use of resources, because the downtime is removed, once the auxiliary do not suspend their activities to call a next user.

*Overlapping physicians' shifts:* This alternative allows greater availability of physicians in times of higher flow, according to the different runs of the simulation. With this scenario, the model exhibits a reduction in the ranks, and the percentage of usage of resources increases.

*Posting efficiency indicators to auxiliaries:* This alternative was suggested after a work session with the managers and after explaining the importance of having an instrument to measure, control and regulate the management of the auxiliaries.

*Assigning random quotes to mitigate the effect of demand:* Scenario of assigning doctor appointments was modeled under the assumption that the commercial area has to meet the minimum goal of 40% service under this system. With this scenario time in the system of users is notoriously decreased and the need for

physicians and auxiliaries is reduced which will not be removed from company but will be assigned to the new business unit to work under appointments.

*Placing an electronic equipment - a ticket machine:* to assign shifts and prevent physicians to move from their work place to call the next patient. This scenario was evaluated against the scenario of using an employee to perform functions of a messenger, in economic terms, the use of the equipment to assign turns exceeded the rates of use that are achieved with the messenger doing the labor of calling and placing clients; savings in time generates higher returns.

# THE EMPIRICAL ANALYSIS OF THE RELATIONSHIP BETWEEN THE DEGREE OF PRIMACY AND PRODUCTIVITY IN SOUTH KOREA

Jinwoo Dong, Pusan National University  
Young-duk Kim, Pusan National University

## ABSTRACT

*This study examines the relationship between the level of primacy (a level of dominance) and productivity of regional cities during 1995–2011 in South Korea using OLS and panel data models. The difference in its effect between regional primacy and the capital of South Korea (Seoul) is then analyzed. The results indicate (i) an inverted U-shaped relationship between the degree of primacy and productivity, (ii) the effect in the capital is larger than the other primacy cities. The evidence implies that the capital metropolitan area (the largest city in South Korea) concentrated to population and infrastructure undermines productivity of the other primacy cities in South Korea.*

**JEL:** M00

**KEYWORDS:** Productivity, Urban Primacy, Capital Primacy

## INTRODUCTION

The driving force of fundamental economic growth in urban area is associated with productivity growth affected by urban concentration (Henderson 2003). Black and Henderson (1999) states that localized information and knowledge accumulation strengthen in urban area and increase its productivity, when agglomeration is formed. The reason is government encourages industrial agglomeration. The central cities in local area of South Korea have a population of one million or more. The capital area (Seoul, the capital of South Korea), has the most populous and the highest concentration of labor and capital. (Korea Statistical Information Service. 2012) Unlike Henderson (2003), which defines urban primacy as the degree of concentration in urban area, This study defines primacy as: (i) capital primacy (the capital metropolitan area's concentration) and (ii) regional primacy (concentration of the regional center city) This study examines the relationship between the level of primacy (a level of dominance) and productivity of regional cities during 1995-2011 in South Korea using OLS and the panel data models.

The difference in its effect between regional cities and the capital of South Korea (Seoul) is then analyzed. The results indicate (i) an inverted U-shaped relationship between the degree of regional primacy and productivity. (ii) The effect in the capital is larger than the other primacy cities. The evidence implies that the capital metropolitan area (the largest city in South Korea) concentrated to population and infrastructure undermines productivity of the other primacy cities in South Korea. This study is the first study which examines the relationship between primacy (capital primacy and regional primacy) and productivity in South Korea and the difference in its effect between primacy cities and the capital is then analyzed.

## MATERIAL AND METHODS

This study utilizes the following Cobb-Douglas functional form to define productivity as labor effectiveness.

$$Y_i(t) = (A_i(t)L_i(t))^{1-\alpha} K_i(t)^\alpha \dots (1)$$

Where  $K_i(t)$  is capital in city  $i$  in time  $t$ ,  $L_i(t)$  is employment.  $A_i(t)$  is labor effectiveness and its natural log is defined as a residual term of Equation (2) (Hall and Jones 1990)

$$\ln(A_i(t)) = [\ln(y_i(t)) - \alpha \ln(k_i(t))] / (1 - \alpha) \dots (2)$$

Next issue is how to define regional primacy and capital primacy. Unlike Henderson (2003) that defines urban concentration as urban population to national population, this study define primacy or regional primacy as the population of central city to the regional population and capital primacy as the population of the capital area (Seoul and its periphery) to the national population. The following equation is used to examine the relationship between productivity and capital primacy or regional primacy. (Henderson 2003)

$$\ln(A_{it}) = (\gamma_1 + \gamma_2 \ln(\text{scale}_{it}) + \gamma_3 \ln(y_{it})) \text{Primacy}_{it} + \gamma_4 \text{Primacy}_{it}^2 + \gamma_5 \text{education} + \gamma_6 \text{Capital primacy}_t + \gamma_7 \text{Capital primacy}_t \times \text{Primacy}_{it} + \mu_i + \epsilon_{it} \dots (3) \quad (\text{J.Vernon Henderson 2003})$$

Where  $A_{it}$  is labor effectiveness, education is a basic explanatory variable (Henderson 2003), *Primacy* represents regional primacy, *Capital primacy* is The capital area concentration, *Capital primacy \* Primacy* represents Interaction between capital primacy and regional primacy, *primacy*<sup>2</sup> represents the square of *primacy*,  $\mu_i$  is time-invariant error term and  $\epsilon_{it}$  is a contemporaneous error term. Equation (3) states labor effectiveness in city is associated with primacy and the capital primacy. With  $\gamma_4 < 0$ , relationship between the degree of regional primacy and productivity indicate an inverted U-shaped, and hence, best primacy in the local area is given by

$$\text{primacy}^* = \frac{-(\gamma_1 + \gamma_2 \ln(\text{scale}_{it}) + \gamma_3 \ln(y_{it}) + \gamma_7 \text{Capital primacy}_t)}{2\gamma_4} \dots (4)$$

With  $\gamma_7 < 0$ , equation (4) shows that the degree of capital primacy undermines the optimal level of regional concentration (*primacy*<sup>\*</sup>) related to maximize productivity in regional cities.

## RESULTS

We use the panel data during 1995–2011 in South Korea (Korea Statistical Information Service. 2012) using the fixed effects model. The results are reported in Table 1: (1) OLS, (2) a fixed effect, and (3) a random effect model.

Table 1: panel, fixed effect

Dependent Variables: $\ln(A_{it})$	(1) Ols	(2) Fixed Effect	(3) Random Effect
primacy	12.331*** (4.090)	34.590*** (10.224)	12.331*** (4.090)
Primacy* ln(scale)	0.147** (0.066)	-1.466* (0.866)	0.147** (0.066)
primacy* ln(Y/N)	2.075*** (0.252)	1.490*** (0.311)	2.075*** (0.252)
Primacy^2	-5.479** (2.617)	-8.777 (8.317)	-5.479** (2.617)
edu2	0.263 (0.266)	0.072 (0.301)	0.263 (0.266)
Capital primacy	18.382*** (3.431)	24.706*** (4.657)	18.382*** (3.431)
Capital primacy*primacy	-5.479** (8.533)	-8.777 (11.425)	-5.479** (8.533)
_cons	-6.275*** (1.447)	-8.470*** (1.557)	-6.275*** (1.447)

\*  $p < 0.1$ , \*\*  $p < 0.05$ , \*\*\*  $p < 0.01$

(i) The coefficient of *primacy*<sup>2</sup> in column (1)-(3) is negative, which indicates an inverted U-shaped relationship between productivity and degree of regional primacy. It implies that the optimal level of primacy for maximizing productivity in local area exists. (ii) Term of *Capital primacy* is positive, however, (iii) Term of interaction between *Capital primacy* and *primacy* in column (1)-(3) is negative. Following equation (4) with  $\gamma_7 < 0$ , it indicates that the degree of capital primacy weakens the optimal level of regional primacy. This evidence implies that the capital metropolitan area concentrated to population and infrastructure undermines productivity of the other primacy cities in South Korea.

## CONCLUSION

This study empirically investigates the relationship between the level of primacy and productivity of regional cities during 1995-2011 in South Korea using OLS and the panel data models. The difference in its effect between primate cities in local area and the capital of South Korea (Seoul) is then analyzed. We found the following results. First, the relationship between productivity and regional primacy is inverted u-shaped. Second, the degree of capital primacy weakens the optimal level of regional primacy related to productivity. It implies the effect of the capital concentration undermines productivity of regional city.

# THE ART AND SCIENCE OF PUBLISHING PEER-REVIEWED RESEARCH

Terrance Jalbert, The University of Hawaii-Hilo

## ABSTRACT

### GETTING AN IDEA

1. Maintain a running list of your ideas.
2. Every time you have a few minutes, go to your list and ask yourself, in the next 30 minutes how can I advance one of these ideas.

### RESEARCH PARTNERS

#### Selecting a Partner

1. There are advantages to working on your own.
2. Select someone with the right characteristics
  - a. Hard Worker
  - b. Willing to do their share of the work
  - c. Someone with time to conduct research
  - d. Intelligent
  - e. Mutual Interests
  - f. Cooperative
  - g. Likely to reciprocate
3. Good research partners are hard to find. Don't abuse a good research partner.

#### Working with a Partner

1. Start only one paper at a time with a new research partner.
2. Be patient with your research partner. They have a life and due to births, illnesses and other life events, they may not be on your schedule.
3. Recognize on some projects you will do most of the work. On others, your partner may do most of the work.
4. Use caution when selecting one of the professors from your Ph.D. program as a research partner.

#### How Many Authors on a Paper?

1. Two or three authors are good.
2. Four authors is not good but can be ok.
3. More than four authors looks bad.

### WRITING YOUR MANUSCRIPT

#### Writing your Manuscript

1. Use only Microsoft Word to type your document.
2. Using free Word clones causes significant problems in the publication process.

3. Files created in another program and copied or saved as a Microsoft Word file cause significant problems in the publication process.
4. Unless the journal specifically requests otherwise, use the standard Microsoft Word equation editor.
5. Use only Microsoft spreadsheets and Microsoft
6. drawing programs.
7. Back up your files on a daily basis.

### Organizing your paper

1. Organization
2. Abstract
3. Introduction
4. Literature Review
5. Data and Methodology
6. Results
7. Concluding Comments

### Title

1. Descriptive and no more than 15 words.
2. Write a strong title
  - a. Strong Words:
    - i. Empirical, Evidence
  - b. Weak Words:
    - i. Analysis, Case
    - ii. Use Key Words from your Discipline
3. Think about what will look good on your vita.

### Abstract

1. General Introduction to your paper
2. The goal is to precisely communicate to the reader what the paper is about.
3. Not more than 200 words
4. Do not use acronyms
5. Generally do not cite other papers in the abstract

### Introduction

1. A brief introduction to the problem being addressed.
2. Include some summary statistics of the magnitude of the problem.
3. One paragraph discussion of the general state of the literature.
4. What you are going to do in the paper to advance the literature.
5. A few lines indicating how the remainder of the document is organized.

### Literature Review

1. As a general rule do not cite magazines.
2. Use scholar.google.com
3. Narrow your literature review down to those articles that directly relate to the issue you are addressing in your paper.
4. Make sure that everything that you cite in the text is included in your reference section.
5. Make sure that everything you reference is cited in the body of the text.

### Data and Methodology

1. Where the data was obtained from?
2. Time period covered in the analysis?
3. Frequency of the data observations?
4. Variables that the data were collected for?
5. Summary statistics.
6. Hypotheses that are being tested.
7. For regressions, specify the equation being estimated in the text of the document.
8. For Surveys indicate
  - a. Questions included in your survey? (Consider including the survey instrument as an appendix to the paper)
  - b. When was the survey conducted?
  - c. Where was the survey conducted?
  - d. What was the response rate?
  - e. What are the total number of usable observations?
  - f. Did you receive human subject research permission from your University?

### Results

1. Make sure to introduce each table and figure you present in the text of your document.
2. Walk the reader through the results.
3. Select an observation in your table and explain that observation to the reader.
4. Incorporate data into MS Word tables.
5. Segregate your data when possible to get additional results,
  - a. by gender, age, country, region, year, industry, before and after a crises.

### Tables

1. Don't create small one or two line tables.
2. Include information directly in the document text.
3. Combine several small tables into a single table with multiple panels.
4. Do not use exponential notation (3.2E-5).
5. Display appropriate precision
  - a. 0.0021, 1.134, 10.22, 100.6, 1,049.1, 10,432

### Table Description

1. Make sure to include a 3-6 line description below your tables. The reader should be able to understand what is contained in the table without referring back to the text of the document.
2. This description is not to replace the discussion in the text, but to supplement the discussion in the text.
3. Redundancy is ok in this case.
4. Example of Table Description

*This table shows the results of the regressions on CEO compensation using data from 2004. The estimated equation is:  $CEO\ Compensation = a + b_1(CEO\ age) + b_2(years\ with\ company)$ . The first figure in each cell is the regression coefficient. The second figure in each cell is the t-statistic. \*\*\*, \*\* and \* indicate significance at the 1, 5, and 10 percent levels respectively.*

### Concluding Comments

1. Reiterate the goal of your paper.
2. Briefly describe the test methodology and data.
3. Briefly summarize your major findings.
4. Discuss how managers might benefit from the results.
5. Discuss any limitations of your work.
6. Provide suggestions for future research.

### Acknowledgements

1. Do acknowledge anyone that has helped you with the paper.  
Colleagues, Administrators, Funding Agencies, Assistants, Reviewers, Editors.  
It is a nice courtesy to the reviewers and editor.
2. It subtly communicates to colleagues the journal is peer reviewed.
3. Few people will be insulted if you acknowledge them but should not have.
4. Many will be insulted if you do not acknowledge them but should have.
5. Acknowledgments-Make sure to indicate that any remaining errors are the authors responsibility.
6. If someone has contributed substantially to your paper consider making them a co-author on the paper rather than just acknowledging them.

### Biography

1. Your biography should indicate your employer, your publication history, contact information and any other important information.  
Tom Tetertall, Ph.D. is Professor of Management at the University of East Hawaii. He is also an arbitrator for the Human Ethics Commission. His research appears in journals that include: Diversity Review, Management Styles, and Latino Business Review. He can be contacted at: University of East Hawaii, COB, 400 W. 2nd St., Kauai Hawaii, 96333, USA, email: tomt@NHI.edu.
2. Do not make your biography excessively detailed.

### **FORMATTING**

1. Editors are looking for papers that are high quality. But they also look for papers that will not add an excessive burden to their work load.
2. They look for authors that will be pleasant to work with on revisions and in the publication process.
3. A properly formatted and written paper communicates to the editor that you will be pleasant to work with, thereby increasing your chance of publication.
4. Check the journal style guidelines to make sure you have the paper formatted properly.
5. Be sure figures and tables are editable in Word
6. Anything created or imported as an image is problematic.

7. Anything that is scanned needs to be recreated.
8. Make sure that figures and tables are legible.
9. If you are unable to edit it in MS Word it should be recreated.
10. When copying from Excel into word make sure to use the “Paste Special”, “Paste as Chart” Command so it can be edited in MS Word.
11. Avoid one-sentence paragraphs.
12. Avoid one-paragraph sections.
13. If you have subsections underneath a main section, start the main section by indicating how the subsections are laid out.
14. Bullet lists do not appear well in journals.
  - a. Longer lists should be placed in a table. Then reference the table in the text of the document.
  - b. Shorter lists should be incorporated directly into the text.
15. Make sure your references are formatted according to journal guidelines.
16. Do not use text boxes
17. Do not use section breaks.
18. Do not use text levels

## WRITING QUALITY

1. Use the grammar checker in MS Word.
2. Use an advanced writing editor:
  - a. Stylewriter \*\*
  - b. Whitesmoke.
3. Write in third person active voice when possible.
4. Give it to a friend to read.

## WORKING WITH THE EDITOR

### Submissions

1. Leave your document set for 1-2 weeks between completion and submission. Give the document a final read before submission.
2. Indicate in your submission correspondence that the paper is not under review elsewhere and has not been published elsewhere.
3. Never EVER submit a document to two journals simultaneously.

### Correspondence

1. Don't ask the editor every week for a status update. (every 2-3 months is sufficient)
2. If you are close to a tenure or promotion decision, do let the editor know. Editors are human and will commonly try to get the review completed prior to the promotion decision date.
3. Use submission numbers in all correspondences.
4. Be courteous when corresponding with the editor.
5. Publishing is to a certain degree political. Be willing to review papers for the journal.

### Reputation

1. Our industry is small. Editors remember if you were especially easy or especially hard to work with.

2. Your reputation is very important, so make sure you leave the best possible impression, even if your paper is rejected.

### Nonresponsive Editors

1. After 3 months, ask if there is any additional information you can provide.
2. After 6 and 9 months request that the editor send a reminder to the reviewers.
3. After 1 year send the editor a status check email.
4. After one year and two weeks, if the editor has not responded, send them a letter withdrawing your paper from publication consideration and try elsewhere.

### **REVIEWER AND EDITOR COMMENTS**

1. Respond to revise and resubmit requests as quickly as possible, but take sufficient time to complete the requested changes.
2. Set the revised manuscript down for a week and reread the paper before submitting it.
3. Do not send the exact same version back to the editor without having addressed the concerns of the reviewers.
4. Do not respond rudely.
5. Prepare a document that indicates how you have addressed each of the reviewers concerns.
6. Your document should review each change that the reviewer has requested and your response to each request individually.

Reviewer Comment: In your data section please indicate the number of observations.

Author Response: Thank you for your suggestion. We have incorporated a sentence indicating the number of observations on page 22 as follows. "The data included 2,436 usable observations."

7. In the event that you are not able to address a reviewers concern. Explain carefully why you are not making the changes, and request the reviewers understanding. Acknowledge the issue in the paper and note it as a limitation, or area for future research.

### **ACCEPTANCES**

1. Make sure to read the page proofs carefully.
2. Pay any fees due. Publishing is expensive, but it is a necessary evil. You have invested a great deal of your time in the research, the publication fee is a small part of your total investment in the project.
3. Expect some time between acceptance and publication.

### **REJECTIONS**

1. Rejections happen.
2. Don't be discouraged by a rejection. Rejections are part of the process.
3. Make any changes that the editor and reviewers suggest and submit the paper to a different journal.

# A REVIEW OF THE FACTORS AFFECTING BANK FINANCING OF NON-OIL EXPORT IN NIGERIA

Sama'ila Idi Ningi, Abubakar Tafawa Balewa University, Bauchi

Ado Ahmed, Abubakar Tafawa Balewa University, Bauchi

## ABSTRACT

*Export earnings assume vital importance not only for developing countries like Nigeria, but also for developed countries. In Nigeria exports are largely oil exports against non-oil exports. Non-oil export presupposes vital importance for development. And the development of the sector depends on bank financing among others factors. Bank credit to exports in general is very low. Bank financing of non-oil exports in Nigeria is affected by interest rate rises, deteriorating exchange rate (Naira/Dollar) and poor access to financial services. The banks have negative attitude to risk of financing the sector, they consider the sector very risky for investment. Using secondary data it is found that the under performance of the sector is partly as a result of factors stated above. Oil exports continue to dominate the export sector. The non-oil export improvement is not encouraged couple, with rising inflation that overstates the export figures. The firms should improve on efficient management of resources to be able to improve productivity, to cut cost and secure confidence of banks in granting loans. Government of Nigeria should through the regulatory role of CBN tackle the problem of rising interest rate and inaccessibility to financial services.*

**JEL:** D40, E40

**KEYWORDS:** Factors, Bank Financing, Non-Oil Export

## INTRODUCTION

Export earnings assume vital importance not only for developing countries like Nigeria, but also for developed countries. According to export-led growth hypothesis increased export can perform the role of “engine of economic growth” because it can increase employment, create profit, trigger greater productivity and lead to rise in accumulation of reserves allowing a country to balance their finances (Gibson and Michael, 1992; McCombie and Thirlwall, 1994; Emilio, 2001; Goldstein and Pevehouse, 2008 and Fakhri and Ilaha, 2010). In this context there are some challenges for countries with natural resource abundance such as oil (such as Nigeria) in comparison with other countries. The main point is that in parallel with windfall of oil revenues these countries have to pay more attention to the development of the non-oil sector as well as its export performance (Sorsa, 1999). Because, in most cases oil driven economic development leads to some undesirable consequences such as Dutch Disease in the oil rich countries. Therefore, Nigeria needs to pay more attention to the development of non-oil export sector to create the sorely needed growth and development. Therefore this study seeks to quantitatively review the factors affecting bank financing of non-oil exports of the Nigerian within the last six years.

## LITERATURE REVIEW

The Non-oil export sector of the Nigeria economy is faced with a lot of problems. For example, the export of non-oil commodities contribute only 4% of total exports (Okoh, 2004; Ogunkola, Bankole and Adewuyi, 2006) and the volume of non -oil export growth is very low (approximately 4% per annum) from the middle of 1965-1985 as asserted by Maidugu, Baba and Kaka (2003). One of the reasons for the declining growth is insufficient access to finance in general and bank finance in particular. Access to bank financial services for non-oil exporters is one of the major problems stifling the growth of the sector in Nigeria, because of

high interest rates and little disbursement in terms of the volume of credit (Ijaiya, 2003; Theodore, 2004; Sanusi, 2010a, 2010b). In Nigeria very insignificant portion of non-oil export was financed by bank credit. Export from Nigeria is largely crude oil which is funded from outside the country (CBN 2006). According to Ijaiya, (2003) Commercial bank credit to non-oil export sector has been very low. According to Odularu (2008), in Nigeria high cost of finance does not allow non-oil exporting industries to modernize outdated plants and machineries, which results in poor quality goods for non-oil exports. Banks are not willing to advance credit to the non-oil export sector as they consider the sector very risky for investment despite directives from NEPC to do so (Odularu, 2008). Another problem includes market determined interest rates (Ningi, Kurfi and Dutse, 2007) as against controlled low rates to boost non-oil exports in Nigeria.

The banks' lack of effectiveness in handling small, medium or long-term credit risk (lack of training of loan officers, lack of information on borrowers and absence of a reliable credit registry) results in the entrepreneurs being burdened with high requirements, such as up to three years of financial statements, enough collateral to cover both the loan principal and interest (including a cash deposit that may be up to 30% of the loans' net present value), and to provide every detail of the international trade transaction in question (Marc, 2007). The sector has been declining due to poor access to credit facilities at pre-shipment and post shipment stages as opposed to what is happening in other countries of the world (Azzam, 2000). There is also the problem of increased cost arising from exchange rate fluctuations which has been identified by Elumelu (2002). Some of the roles of NEXIM are purchase and sale of foreign currency, maintenance of a foreign exchange revolving fund for lending to exporters who need to import foreign inputs to facilitate export production. Exporters have access to these facilities only through commercial banks operating in the country (Theodore, 2004; Ijaiya, 2003 and NEXIM, 1997). However, the effect of NEXIM bank source of finance on export performance was not found to be significant and encouraging (Aworemi, Oyedokun and Odeyemi, 2011). According to Lawal (2009), the high interest rate charged by some of the banks in Nigeria makes producers and exporters not being able to compete favourably with their counterparts in other African countries like Ghana.

As a result of the adverse effects of the above factors, the non-oil exports dwindled. It is in view of that the banking sector being the major source of financing in Nigeria needs to be examined to ascertain the contribution of the sector to non-oil trade. The structure of financial system is conceptually viewed as the extent to which a country's financial system is bank-based or market-based. According to Levine (2009), a bank-based financial system relies largely on banks in mobilizing savings and financing corporate investment, while a market-based financial system relies on securities markets and equity financing. Financial sector requires the synchronization of objective of achieving financial stability with that of growth. This is because institutional weaknesses in the financial sector could cause or exacerbate systemic instability and undermine economic growth. Zhuang, Gunatilake, Niimi, Ehsan, Jiang, Hasan, Khor, Lagman-Martin, Bracey and Huang, (2009) note that maturity and currency transformation, and asymmetric information constitutes some of the features of banks that make them susceptible to distresses. A run on systemically important bank or financial institution could trigger a contagion that can metamorphose into a systemic banking crisis. Thus, developing the structure of the financial system must incorporate a framework that will ensure macroeconomic stability, effective regulation and supervision, and the elimination of other structural bottlenecks in the financial sector.

Many views abound on the sequencing of the structure of the financial sector and raise the question of whether the evolvement of banks should precede capital market development. This question would be on the relative importance of large and small banks. Lin (2009) recently argued that low income countries should make small, local banks the bedrock of their financial systems. The backdrop of his argument is centred on the seeming need to support the competitive sectors of the economy which according to Lin (2009) are not in congruence with the size and sophistication of financial institutions and markets in the developed world. Banerjee (2009) points to the possibility of too little risk-taking when banks are not nearly

that big. Small banks may be unable to supply risk capital but the stock market in principle could directly fund large firms to reach a global scale and by enabling a venture capital model of funding high risk new ideas. However, he argues that regulatory challenges to making a stock market efficient are daunting.

### Export Trade and Financial Development

The international trade literature focuses on factor endowments, technology and scale economies as sources of comparative advantage and therefore determinants of trade flows between countries. Theories, however, also suggest that the level of financial development may importantly influence the pattern of international trade flows (Beck 2002). Kletzer and Bardhan (1987) compliment the Heckscher-Ohlin (1933) trade model by incorporating a financial sector and show that financial sector development (for example development of the banking sector) gives countries comparative advantage in industries that rely more on external financing. Rajan and Zingales (1998), show that industries that use more external finance grow faster in countries with a higher level of financial sector development. Kletzer and Bardhan (1987) focus on the role of financial institutions and markets in channeling external finance to industries that are in need of it. They present two international trade models in the Heckscher-Ohlin tradition with two countries, two sectors and two factors. While both sectors depend on land and labor, one sector also depends on external finance for working capital. They show that the country with a lower level of credit market restrictions specialize in the sector that uses external finance. The country with the higher level of credit market restrictions faces either a higher price of external finance or credit rationing and will therefore specialize in the sector that does not require working capital or external finance.

Beck (2003) finds that the average 1980-1990 export share of industries that use more outside funds is higher in financially developed countries where there are well functioning banks, markets and other intermediaries. In another cross-sectional analysis for 1995, Becker and Greenberg (2004) reach a similar conclusion using different industry measures of fixed upfront costs. Similarly, Hur et al. (2004) show that a better financial environment (as well as many other institutions like banks) is associated with a larger 1980-1990 average shares of exports in sectors with fewer internal funds and hard assets. In particular, Rajan and Zingales (1998) and Braun (2003) argue that sectors intensive in external finance and intangible assets grow disproportionately faster in financially developed economies. Financial development affects export composition for the same reasons that it redistributes production across sectors. An important aspect of financial underdevelopment is poor financial contractibility, in the sense that financial contracts are less likely to be enforceable.

Asset structure matters in a financially underdeveloped environment because poor financial contractibility increases creditors' exposure to the risk of default. Tangible assets such as real estate, machinery and plants that can serve as collateral offer the financier protection and increase his willingness to invest. Thus, the poorer financial contractibility is, the more important asset hardness becomes for accessing external finance. Because industries differ in asset tangibility for technological reasons, in less financially developed countries investment, production and exports will be disproportionately shifted towards sectors endowed with harder assets (Claessens and Laeven, 2003; Braun 2003). The extent to which the export sector depends on external finance is similarly important. When the nature of the industry is such that, projects can be funded with internal cash flows, the level of financial development matters little since firms do not need to borrow from creditor banks and other sources. As the sector's dependence on external funds increases, the availability of outside capital becomes more relevant and the extent of financial contractibility more important.

In an environment with better functioning banks and capital markets, an entrepreneur of a given wealth level can secure more funding and enter a more external capital dependent industry (Rajan and Zingales, 1998 and Ningi and Dutse, 2009). A group of researchers in corporate finance like (Myers and Majluf

(1984) and Harris Raviv (1990) suggests that financing problems may be particularly acute for investments that are intangible or difficult to observe, or that are firm- or person- specific. One particular type of investment which fits this description is the up-front investments (fixed costs) required to export. There is considerable evidence that exporting firms face large fixed costs (Rogers and Tybout (1997), Bernard and Wagner (2001) and Bernard and Jensen (2004).

According to Becker and Greenberg (2005) financial development has a positive impact on the overall level of exports. Second, finance is particularly important where up-front costs are higher. Third, exports are less responsive to changes in the exchange rate in countries with poor financial systems.

Bank credit to exports in general is very low in Nigeria. Bank financing of non-oil exports in Nigeria is affected by interest rate rises, deteriorating exchange rate (Naira/Dollar) and poor access to financial services. The banks have negative attitude to risk of financing the sector, they consider the sector very risky for investment. The performance of the non-oil exports in Nigeria is presented in figure 1. The under performance of the sector is partly as a result of factors stated above.

#### Factors Affecting Bank Financing of Non-Oil Exports In Nigeria

In this section analysis of oil and non-oil exports, interest rate, exchange rate Naira/Dollar, oil exports/total exports, NEXIM bank loan disbursement and export sector credit as % of total credit to the economy are presented in tables and figures as factors affecting bank financing of non-oil exports in Nigeria for proper analysis.

Figure 1: Oil and Non-Oil Exports (Fob' Nm) in Nigeria 2006-2011

Source: Foreign Trade Summary, National Bureau of Statistics 2011, No501

Figure 1, displayed the oil and non-oil exports for 6 years 2006-2011 in Nigeria. In all the 6 years under consideration oil exports dominated the export sector of the country. Non-oil export trade drastically declined to about N817 billion in 2008 from N4 trillion in 2007, it peaked up in 2009 to reach N1 trillion. Non-oil export trade improved in 2010 to N3 billion and further increased to about N5 trillion in 2011. The non-oil export as a percentage of total export trade remains low but shows a significant improvement in 2011 by rising to about 28.8% of total export trade. Interest rate in Nigeria continues to be high, in 2006 it was as high as 17.15% before declining to about 16% in 2007. The interest rate declined further to about 15% in 2008, before rising high to about 19% in 2009. But, the rise did not continue in 2010, it rather declined to about 15%, a decrease of about 21%. In 2011, interest rate does not show any appreciable difference from what it was in 2010, because it remained at about 15%. See Figure 2

Figure 2: Interest Rate % (2006-2011) in Nigeria

Source: CBN Economic Report Various Years

Exchange rate Naira to dollar and many other foreign currencies has been at the detriment of the Naira for sometimes now in Nigeria. according to Figure 3 during the period under review the exchange rate Naira to Dollar was about N129/Dollar in 2006, it decline to N125/Dollar in 2007, decline further to N122/Dollar in 2008 before rising significantly to about N155/Dollar in 2009. The exchange rate decline to about N153/Dollar in 2010. It further increases in 2011to about N157/Dollar.

Figure 3: Exchange Rates Naira/Dollar (2006-2011) in Nigeria

Source: CBN Economic Report Various Years

Bank credit to exports in general is very low in Nigeria. Very insignificant portion of total exports was financed by bank credit. Both the supply and demand aspect of exports finance can be described as not available for financial intermediation in the country. Based on Figure 4 available data shows that, bank financed export to GDP remained very low less than 2% from 2006-2011. These indicate the low level of financing the export sector receives from the banking sector of the economy. Consistent with what is available in the literature high level of risk associated with non-oil export crowd-out non-oil exporting firms from benefiting from bank loans.

Figure 4: Credits to the Export Sector As Percentage of Total Credit to the Private Sector

Source: CBN Economic Report Various Years

Even with the NEXIM bank loan has been an insignificant source of finance to exporting firms. Available half year data indicated that as at June 2009 only N318.6 million was disbursed as loan to the export sector. This amount does not exclude the oil sector as most often about 20% of NEXIM loans goes to oil exports in the country. In 2010 and 2011, more than N7 and N13 billion respectively were disbursed as loans by the NEXIM bank (see Table 2). According to Figure 4, these happened when the credits to the export sector were 1.2, 1.4, 1.0, 0.5, and 0.6 and 0.5 percent of the total credit to the private sector in the 2006, 2007, 2008, 2009, 2010 and 2011 respectively. Total credit to the private sector averaged about 22% of the total credit by the deposit money banks (DMBs) in the country. This shows a serious under funding of the export sector by the banks during the period under consideration.

Figure 5: Access to Financial Services in Nigeria

Source: EFINA Access to financial services in Nigeria 2008 Survey

According to figure 5 only 1 in 5 Nigerian adults has a bank account and over half of the adult population (52.5%), equivalent to 46 million people, is financially excluded and non-oil exporting firms faces similar situation in Nigeria. According to EFINA (2010) in Nigeria, three factors in particular keep access levels low in rural areas: (i) the challenge of providing cost-effective distribution across great distances, (ii) a much poorer customer base and (iii) an economy dominated by agriculture. Barriers affecting bank customers in Nigeria may include socio-economic and cultural elements, challenges posed by the lack of formal identification systems, ability to track an individual's financial history, low levels of financial literacy, and the absence of appropriate consumer protection mechanisms.

Other barriers include effectiveness of deposit money banks' communication with the customers, and financial literacy in general. According to EFINA (2010) regarding the supply of financial services, the sector is clearly dominated by the 24 Deposit Money Banks (DMBs), with an asset base of N14.795 trillion at the end of 2009. The dominance of DMBs is illustrated by the fact that the more than 900 Microfinance Banks (MFBs) operating in the country have a combined asset base of N157.3 billion, which is equivalent to a little over 1% of the asset base of the 24 DMBs. Lending to the private sector reflects a serious problem - intermediation is highly skewed towards the public sector compared to other developing countries. The distribution of Deposit Money Banks (DMBs) branches remains extremely uneven, with a great concentration in the southern states. Access is therefore a problem in general to non-oil exporters in particular.

Table 1: Bank Credit Relative to GDP (%) – Country Comparisons (2003- 2007)

Country	2002	2003	2004	2005	2006	2007

Source: Fitch Ratings, Bank Systemic Risk Report, September 2007

In Nigeria most of the lending to the private sector usually goes to bigger companies and less to small businesses. In addition, there are high interest rates and short loan maturities which together made credit less easily accessible by small businesses. Although post-consolidation reform has contributed to improve this, compared to other developing countries intermediation is still highly skewed towards the public sector. For example in South Africa as shown in Table 2, private sector credit/GDP was 84.2% and 92.1% in 2006 and 2007 respectively compared to 21.5% and 31.4% in Nigeria. In addition CBN (2011c) said financial development is low in Nigeria. For example, financial deepening was less impressive in 2011, as the ratio of M2 to GDP stood at 36.4 per cent, down from 39.5 per cent at end-December 2010. Bank financing of the economy, measured by the ratio of private sector credit to GDP (CP/GDP) stood at 53.1 per cent at end-December 2011, compared with 58.8 per cent at end-December 2010. In addition, the intermediation efficiency indicator, as measured by the ratio of currency outside banks to broad money supply, at 9.4 per cent, remained the same as at end-December 2010.

\* Data is for half year (June ending 2009) Source: National Bureau of Statistics (NBS) 2012 [www.nigerianstat.gov](http://www.nigerianstat.gov) and CBN Economic Report Various Years

Because of the stated factors financing of the non-oil export sector suffers a serious setback. Oil exports continue to dominate the export sector of the Nigerian economy, for example between the period 2006 and 2011 oil exports ranges between 58.1% and 91.5% of total exports. Of particular interest is the year 2007 where non-oil export was only 8.5% of total exports. The total export has increased based on the year's figures, but the trend of heavy reliance on oil exports continued. In 2009, oil exports decreased to 84% of total exports. The interest rates declined from 17.2% in 2006 to 15.3% in 2008. In 2008, the exchange rate was N122/\$ corresponding to the period of decline in non-oil exports. The non-oil exports improved to 15.5% of total exports as the exchange rate depreciated to N155.26/\$ in 2009.

## CONCLUSION

Bank financing of non-oil exports is replete with a lot of problems from high interest, unfavorable exchange rate to poor accessibility and neglect because of risk perception. Oil exports continue to dominate the export sector. The non-oil export improvement is not encouraged couple, with rising inflation that overstates the export figures. The non-oil exporting firms should improve on efficient management of resources to be able to improve productivity, to cut cost and secure confidence of banks in securing loans. Government should work hard toward improving productivity and the financial sector of the economy should be worked upon to improve access and work to improve on supply of bank finance to the export sector by reducing interest rates.

# RING FENCING VOLCKER'S RULE? : THE LIIKANEN REPORT AND JUSTIFICATIONS FOR RING FENCING AND SEPARATE LEGAL ENTITIES REVISITED

Marianne Ojo, North-West University, South Africa

## ABSTRACT

*The predecessor paper to this publication, “Volcker/Vickers Hybrid”: The Liikanen Report and Justifications For Ring Fencing and Separate Legal Entities, considered the merits, objectives and cost-benefit attributes of respective models associated with the Vickers Report, Liikanen Report and Volckers Rule – by way of reference to the degree of separation of legal entities or banking activities involved, as well as whether an outright ban or prohibition on proprietary trading is involved. This paper is aimed at highlighting why ring fencing not only presents a more feasible and cost effective option to other models, but also why its degree of flexibility provides the more appropriate balance in a financial environment whose trend is increasingly inclined towards conglomeration.*

**JEL:** D02, E02, G01, G2, G15, K2

**KEY WORDS:** Vickers Report, Volcker’s Rule, Liikanen Report, Ring Fencing, Cross-Sector Services’ Risks, Liquidity Risks, Systemic Risks, Capital Requirements, Leverage Ratios

## INTRODUCTION

In assessing the need for re-structuring banks into separate legal activities, two considerations which have been given due attention are (See page i of the Liikanen Report (Final Report, 2nd October 2012)): The important role of recovery and resolution plans – whereby the decision on possible separation of bank entities was to be conditionally based on the assessment of such plans; The mandatory separation of banks' proprietary trading and other risky activities. The first of these considerations is justifiable on the basis of the lessons learned from Northern Rock. Northern Rock highlighted the important role of recovery and resolution plans and illustrates a situation where the Bank of England was unable to act as effectively to perform its traditional role as lender of last resort without such a role being made public. The Northern Rock crisis also highlighted problems which were inherent in the tripartite arrangement between the Treasury, the Financial Services Authority and the Bank of England for dealing with financial stability - which includes amongst others, the inability of the Bank to act as lender of last resort for a limited time without such a role being made public.

The rationale for the second consideration, that is, the mandatory separation of banks' proprietary trading and other risky activities, however, appears less convincing given the challenges attributed to shadow banking activities, as well as the corresponding difficulties in achieving what could effectively be regarded as a separation of banks' proprietary trading and other risky activities. As indicated in the predecessor paper to this paper, arguments which increasingly favour a more flexible model and which are directed in favour of ring fencing, arise from the inherent difficulties in the definitions attributed to financial and non-bank financial companies – as well as certain ambiguities presented through these definitions. Furthermore, the extent to which „completely“ separate legal entities and activities can be achieved, as well as cost implications involved, provide greater justifications for the adoption of a more flexible model directed at ring fencing.

## LITERATURE REVIEW

### Purpose of Ring Fencing

According to Vickers Report (pages 35, 36), the purpose of ring fencing is “to isolate those banking activities where continuous provision of service is vital to the economy and to a bank’s customers in order to ensure, first, that this provision is not threatened as a result of activities which are incidental to it, and second, that such provision can be maintained in the event of the bank’s failure without government solvency support.”

### Justifications For Ring Fencing

Why should jurisdictions which have invested so much in restructuring their regulatory systems to cope with particular risks (for instance, cross sector services risks associated with conglomeration), be compelled into imposing further laws aimed at facilitating the restructuring of the legal entities of their banks? If further restructuring were to occur, should the rules governing such restructuring be so draconian such that they allow for little scope and flexibility – a situation which appears to be similar to that presented under the Volcker Rule model? Whilst the Volcker Rule model certainly has its merits, it has been argued by many that a number of ring fencing objectives might not be achieved if the mere prohibition of just certain activities under the Volcker rule were only taken into consideration. Arguments in favour of the adoption of the Ring Fencing Model, as highlighted in the predecessor paper are as follows (The Independent Commission on Banking (ICB), Final Report, Recommendations, September 2011 at pages 12, 26, 59 and 65.):

*Ring fencing should generate „significantly lower economic costs” than full separation;*

*Ring fencing would secure principal benefits such as guarding against certain contagion risks;*

*The fact that challenges encountered by ring fencing are manageable and not materially greater than those of full separation;*

*Legal impediments which exist with full separation;*

*It is not certain whether total separation would necessarily facilitate greater financial stability*

*That total separation is harder to enforce under European Union Law inasmuch as universal banks in other member states remain entitled to own UK retail banking operations.*

*The „workability” and „practicability” of ring fencing and the fact that ring fenced banks would be easier to monitor, supervise and manage than universal banks „other things being equal.”*

*The argument that it can be „robustly” implemented within the current EU framework and the difficulty in securing changes to relevant EU Law;*

*Legal obstacles which persist with „full separation” particularly since European Law places constraints on the degree to which ownership of companies can be controlled;*

*That ring fenced banks should be able to engage in effective risk management. “*

## METHODOLOGY

This paper adopts an approach which compares and analyses three models based on the Vicker's Report, Liikanen Review and Volcker's Rule. Furthermore, in arriving at a conclusion,

- i) it makes reference to a predecessor paper on which the present paper is based,
- ii) reviews past and present developments,
- iii) as well as observations and conclusions from other authorities and references on the topic.

The Liikanen Review considered a “hybrid” model which embraces features of models presented by Volcker's Rule and the Vicker's Report. In so doing, it does not impose such stringent requirements as those applicable under Volcker's Rule whilst not being as flexible as the ring fencing recommendations in the Vicker's Report. Preference for a combination of measures which consists of imposing a non-risk weighted capital buffer for trading activities and the operation of the separation of activities conditional on supervisory approval of a recovery and resolution plan, rather than a mandatory separation of banking activities, under the Liikanen Report, also appears to offer a more flexible route - even though this is still not as flexible as the model under the Vicker's Report. Such a flexible preference appears more feasible than a mandatory separation of banking activities given:

*The costs associated with mandatory separation of banking activities The difficulties of achieving what is reasonably considered to be an effective and acceptable degree of separation of banking – owing to the rise of the conglomeration over the years.*

## RESULTS

In view of the previously mentioned attributes of ring fencing (as stated under the Literature Review section), and given the need to consider the increased trend towards conglomeration, ring fencing would appear to be the most economic, appropriate and more time-relevant model to adopt. Whilst commending Volcker's Rule, some flaws identified by Sheel and Ganguly as being associated with the Rule are as follows (A Sheel and M Ganguly “Ring Fencing Wall Street” <http://www.indianexpress.com/news/ringfencing-wall-street/1210651/0>): The fact that Volcker's Rule “merely prohibits an entity that accepts public deposits from undertaking certain types of trades – and that even as it prohibits, proprietary trading, it allows hedging and market making. The inability of efforts aimed at separating banking (from trading activities) to guarantee that commercial banking is more immune from risky lending practices.

In addressing Sheel and Ganguly's question as regards whether Glass-Steagall would have prevented the global financial melt-down of 2008, it needs to be remembered that the financial environment has evolved over the years. More complex forms of risks have evolved over the years and the firewall which existed with Glass-Steagall could not reasonably be expected to cope with the less advanced and less complex risks which existed some decades ago. Credit risk is certainly a major risk to be addressed – however so are counter party risks. Furthermore, other numerous types of risks have manifested themselves in recent years. Other risks emanating from complex OTC derivatives trading and shadow banking further complicate the problem. Ultimately, the distinction between commercial banking, insurance and securities sectors has become more blurred as a result of the rise of conglomerates. Hence the Glass-Steagall Act would not have effectively addressed these developments – as well as the more complex forms of risks which have resulted from OTC derivatives trading and other cross services sector risks – for which the adoption of integrated regulation (single financial services regulation) in many Scandinavian countries, Germany and the UK has been commended.

## CONCLUSION

Whilst the Liikanen Report highlights why there is need for re-structuring of banks into separate legal entities – as a means of achieving ring fencing activities, the mandatory separation of banks' proprietary trading and other risky activities, such as that opted for under the Liikanen Report could be distinguished from the position under Volcker's Rule in the sense that it does not impose such stringent requirements as those applicable under Volcker's Rule – whilst not being as flexible as ring fencing recommendations proposed in the Vickers Report. However the level of flexibility – such as that offered in the Vickers Report recommendations, or the second option under the Liikanen Report consisting of a preference for a combination of measures – leaving the separation of activities conditional on supervisory approval of a recovery and resolution plan, is to a large extent, necessary given the cost-benefit considerations involved in facilitating a mandatory separation. Having regard to the need to manage cross sector services' risks, the extent to which conglomeration has assumed control over the structure of many bank entities and enterprises, justifications for consolidated regulation of financial services' sectors, as well as the questioning of the logic to reverse efforts aimed at effectively managing evolving risks within the financial environment, ring fencing appears to be the most favourable, more feasible and cost-effective option.

# AUDITS, AUDIT QUALITY AND SIGNALLING MECHANISMS: CONCENTRATED OWNERSHIP STRUCTURES

Marianne Ojo, North-West University, South Africa

## ABSTRACT

*Do jurisdictions with concentrated ownership structures require less reliance on audits as corporate governance mechanisms and devices? Why do concentrated ownership structures still prevail in certain jurisdictions which are considered to be “market based corporate governance systems”? More importantly, if failures and causes of recent financial crises are principally attributable to the fact that market based corporate governance mechanisms, such as financial regulators, are not optimally performing their functions, why is the role of audits still paramount in such jurisdictions? These are amongst some of the questions which this paper attempts to address. The ever increasing growth of institutional investors in jurisdictions – particularly those jurisdictions with predominantly concentrated ownership structures, with their increased stakes in corporate equity, also raises the issue of accountability and the question as regards whether increased accountability is fostered where institutional investors assume a greater role – as opposed to position which exists where increased stake of family holdings (family controlled structures) arises.*

**JEL:** K2, M41, M42,

**KEY WORDS:** Audit Quality, Corporate Governance, Concentrated Ownership Structures, Capital Market Economies, Institutional Investors

## INTRODUCTION

### Audits as Vital Signaling Devices in Capital Markets

The audit serves (and should serve) as a vital capital market signaling mechanism that conveys quality information to the markets, investors and other users of financial information, that information provided by the financial statements, financial reports of an enterprise, through its management, is relatively reliable. From this perspective, it may be asked whether accurately conveying information about the financial situation or position of a firm to investors, prevents or mitigates the likelihood of the occurrence of systemic risks. Further, would the mitigation of information asymmetries within capital markets and the financial industry as a whole, reduce the possibility of systemic risks occurring? It could be argued that conveying accurate and credible information about the financial situation of a firm or enterprise to its investors, could actually trigger bank runs – if the audit generates a negative signal – that is, if the auditor issues a qualified opinion about the financial statements. The manner whereby the opinion is conveyed to the investors then becomes crucial in preventing bank runs. Even timely information could trigger bank runs – the “when” then probably becomes as important as “how” the information is handled. Whilst the level of inaccuracy or accuracy of the information conveyed by audits certainly has its repercussions, their role in addressing information asymmetries is quite evident. If audits are as reliable as they should be, whether or not they generate negative or positive signals, the timeliness, completeness and accuracy levels of such information – as well as the manner with which such information is handled, will be crucial to the triggering or avoidance of systemic risks. In this sense, a clear link between the quality of information, informational asymmetries and systemic risks can be established.

## LITERATURE REVIEW

### Audit Quality and Concentrated Ownership Structures

In matters relating to information asymmetries, it may appear that audits and audit quality, play a more vital role in capital market based dispersed ownership systems than concentrated ownership structures. According to Goshen and Hamdani (2013:6), „control matters for entrepreneurs because it allows them to overcome asymmetric information vis-à-vis investors and pursue their business idea in whatever manner they see fit, thereby securing their ability to capture the idiosyncratic value that they attach to their execution of their business idea.“ However, as commented by Clarke and dela Rama (2008:7). ..... „the belief in the disappearance of the control by proprietary interests of the largest corporations, is to be questioned, not only given the patterns of ownership holdings within and between corporations“, but also because of „the extent of interlocking directorships, connections with banks and other financial institutions, as well as their real owners, and wider networks or ownership and influence.“

This is further illustrated by the situation with the United States, the „archetype of the market based corporate governance system“, whereby it is revealed that i) 59% of listed US corporations have a controlling shareholder – a situation considered higher than that which exists in Japan; ii) that 36% of US corporations family-controlled (a situation which is similar to the position which exists in Germany, but higher than the situation which exists in the UK, France or Japan); and iii) that 24% of US corporations are controlled and managed by a family – a similar situation to that which exists in East Asia (Clarke and dela Rama, 2008:7,8; Gadhoum et al: 2008, cited).

As well as the increased role assumed by institutional investors (as opposed to individual investors), the controversial nature and difficulty of distinguishing between ownership and control is further illustrated by Clarke and dela Rama (2008:9), who highlight the fact that even though ownership and management may comprise of different people, they may not be separate. The ever increasing role of institutional investors in jurisdictions with concentrated ownership structures, with their increased stakes in corporate equity, also raises the issue of accountability and the question as regards whether increased accountability is fostered where institutional investors assume a greater role – as opposed to increased stake of family holdings. Goshen and Hamdani (2013: 4) argue that unlike diversified minority shareholders, a controlling shareholder „typically shoulders the costs of being largely undiversified and illiquid.“

In trying to reason why the controlling shareholder chooses to retain control, they respond to this by adding that agency costs, „the availability of private benefits of control“, provided a key solution to this reasoning, since in their opinion, the controlling shareholder could implement the dominant position to „consume private benefits“ such as self-dealing transactions, the employment of family members, at the expense of minority shareholders.“

The success, survival and resilience of many family controlled enterprises is evidenced in the U.S – as well as several parts of continental Europe. A factor which could be attributed to this is that such structures compel a higher degree of accountability than that which is typically manifested by dispersed ownership structures in marked based corporate governance structures or those concentrated ownership structures which are largely governed by institutional investors. Such level of accountability and commitment to the firm also constitutes a plausible explanation for the requirement and proposals that management of several enterprises retain blocks of shares for a reasonable period of time – a demonstration of their loyalty, as well as their commitment to the interests of the firm. The “unlocking” and discernment of owners in complex ownership structures will certainly provide a means to greater fulfillment of the goals of Board independence – a key feature in jurisdictions such as the UK where the distinction between the Board of directors, non-executive directors and chairmen of the company, has become paramount – particularly since the introduction of the Cadbury Report in 1992. The Cadbury Report has certainly paved the way for greater

reforms which have resulted in a more refined Combined Code of Corporate Governance – as evidenced by the Higgs Report. As well as directing attention to the importance of the definition of the role of the Board, the Higgs Report also accords great focus to the distinction between the roles of the chairman, chief executive and non-independent executive directors.

## METHODOLOGY

In arriving at a conclusion, the following approach has been adopted, namely a balancing of goals and objectives of dispersed ownership structures against those of concentrated ownership structures. Furthermore, findings from the report prepared by Oxera for the European Commission, were also taken into consideration.

### Which Risks Are Worth Bearing? Balancing Goals and Objectives of Dispersed Ownership Structures and Concentrated Ownership Structures

Goshen and Hamdani (2013:30) state that: with concentrated ownership structures, investors face the risk that although the entrepreneur will efficiently manage the firm and realize the idiosyncratic value, there also exists the risk that commitment to share residual cash-flows pro-rata will be avoided and that private benefits of control will be eliminated. Should job security (a feature and goal which many concentrated ownership structures defend) preside over the goal of profit maximization (or the need to secure the highest dividend payouts)? Clearly there should be a balance between these objectives – another possible explanation for the support towards the move to commitments aimed at embracing wider stakeholders and corporate social responsibility. The need to balance goals and objectives, however, should also be complemented by weighing the devastating impact of firms' collapses and the consequences of such collapses on wider stakeholders.

Even though it has been argued by several commentators that sanctioning role played by regulatory bodies and financial markets in sanctioning management, constitute flaws which have contributed to the recent Financial Crisis, the role played by audits and auditors, however, have definitely also played a crucial role in contributing to many of the recent financial and corporate collapses. Even though joint audits (that is, mid-tier firms carrying out joint audits with Big Four firms, as a means of increasing their presence at international level,), has been proposed and regarded as “the priority step in tackling the concentration issue” (European Commission, 2011 at page 6 of 11), whether such audits can also facilitate greater levels of audit independence also constitutes an interesting matter.

### Ownership Rules of Audit Firms and Audit Market Concentration

The focus on ownership rules of audit firms, derives not only from consequences emanating for audit market concentration, but also from the impact generated on auditor independence. Employee ownership, as well as “the resulting profit sharing amongst senior auditors” serves as good signaling mechanism of the quality of audit services to the market (European Commission, 2007: page 88). The importance of retaining audit quality is also a concern in the bid to provide greater access, expansion and entry to the audit market. Would the admission of more players from the mid-tier audit firms into the audit market generate more positive impacts and consequences for audit independence? It is certainly the case that increased audit concentration within the audit market certainly has consequences for audit independence since there is less choice and competition between the firms in the market, as well as devastating consequences, in respect of systemic risk, if the demise of another Big Four audit firm, should occur.

According to a report prepared by Oxera for the European Commission (2007), it was highlighted that “the key question to be answered, is to what extent the corporate structures adopted by audit firms, whether

driven by rules or by commercial factors, affect the market's ability to deliver a more open configuration that would reduce some of the concerns expressed about concentration and choice in the audit market.” Main findings of the Report, as illustrated under the subheadings below, are as follows:

Current ownership rules and opportunities created by their potential relaxation

That a relaxation of current ownership and/or management rules might not result in immediate change in ownership structures of audit firms, but that it would, however, create a real possibility and provide incentives – such that alternative structures might emerge over time.

Impact On Access To Capital

That there exists evidence from current literature that several aspects of the employee-owned corporate form of ownership adopted by audit firms are likely to increase required rates of return of audit firms, as well as restrict their ability to access capital initially.

Impact on entry and expansion into the market for large audits

That restrictions on access to capital represents one of several potential barriers to entry into the market for large audits and particularly, capital was found to be critical only for those firms seeking to expand into the market for larger audits.

Impact on auditor independence

That main rationale for ownership and management restrictions is related to their impact on the independence of auditors from potentially negative outside influences.

## RESULTS

From the above findings, the link between audits, audit quality and audit independence can be illustrated. Audit quality certainly has immense and considerable consequences – particularly in matters relating to audit concentration and moral hazard. The significance of the exit of another “Big Four” audit cannot be over emphasized. Hence greater appreciation should be accorded to the contribution made by mid-tier audit firms, as well as their potential in facilitating more objectivity and greater independence – particularly where they are involved in collaborations such as joint audits.

## CONCLUSION

### Sending the Right Signals to the Market

Sending the right signal to the markets – that no firm, and certainly, no Big Four audit firm, is “too big to fail” is of immense importance in addressing the issue of moral hazard. In this sense, greater acknowledgement is to be given to mid-tier audit firms through an appreciation of their ability to contribute to audit quality. Whilst adequate and appropriate punitive sanctions should be directed at the management of a firm, audit firms and their roles in corporate collapses, constitute ever increasing focal points – particularly given the recent trend demonstrated by concentrated ownership structures – a move towards capital market based governance structures.

Even though family owned structures are to be commended in fostering greater accountability and commitment, an increased trend towards the growth of institutional investors and the need for increased monitoring – both internally and external to the corporate structures, warrants an effective corporate

governance device which would not only enhance greater transparency, but also facilitate greater disclosure within corporate structures (and particularly, complex corporate structures).

The lack of adequate mandatory audit firm rotation is also a feature and element which has affected audit quality over the past years. Whilst it is certainly beneficial to retain the services of an audit firm for a certain period of time – given benefits which accrue from having acquired in-depth knowledge about the client firm, disadvantages could arise owing to impaired judgment and the ability to objectively approach a matter as independently as is expected of such an audit firm. Familiarity or an undue degree of familiarity with the records of a client firm, could also facilitate cover-ups and creative accounting practices which have been so evident from recent and previous financial crises.

Up till 2013, there had been no requirement at European level for the mandatory rotation of audit firms – even though some member states had gone further than Article 42 of Directive 2006/43/EC in requiring mandatory audit firm rotation. This however, has changed with mandatory requirement – pursuant to a draft law that would “require public-interest entities such as banks, insurance firms, and listed companies to rotate audit firms every 14 years”(and such period could be extended to 25 years when certain safeguards are put into place). Other notable features of the Draft Law also include (Tysiac, 2013):

Prohibition of “Big Four-only” contractual clauses that require a company’s audit to be done by one of the Big Four accounting firms (Deloitte, Ernst & Young, KPMG, and PwC).

Requirement that auditors of public-interest entities (PIEs) publish audit reports according to international standards and provide shareholders and investors with a detailed understanding of what the auditor did and an overall assurance of the accuracy of the company’s accounts.

Prohibition of audit firms from providing non-audit services that could jeopardize independence.

Proposals, legislation and efforts aimed at encouraging partnerships between Big Four audit firms and mid-tier firms are also welcomed, as well as external investments in mid-tier audit firms – provided that audit quality is retained. Reducing the audit expectations gap is another aspect which needs to be accorded greater focus as this would contribute immensely towards addressing informational asymmetries between users of information conveyed about the financial statements and reports (and principally stakeholders of firms) and the management of a firm. Whilst conveying the most accurate information is certainly not guaranteed to ensure that bank runs will not occur, the manner in which such information is handled could prove crucial in averting devastating consequences of systemic risks. In this sense, the auditor bears the responsibility of ensuring that audits are properly carried out whilst management needs to ensure that such information conveyed by audits is dispersed in a manner which not only serves the best interests of shareholders, but that of the market as a whole.

# ESTIMATING THE DEMAND FOR DOMESTIC AIR TRAVEL IN THE UNITED STATES

E. M. Ekanayake, Bethune-Cookman University  
John R. Ledgerwood, Embry-Riddle Aeronautical University

## ABSTRACT

*The main objective of the paper is to analyze the demand for domestic air travel in the United States. The study will focus on both business and leisure travelers and uses quarterly data on number of passengers, airfare, and other relevant variables for the period from 1993 to 2013. The research methodology that will be used for this purpose is the recently developed panel unit root and panel cointegration techniques. In addition, in order to estimate both long-run and short-run elasticities, the study also uses the method of bounds testing or the Autoregressive Distributed Lag (ARDL) approach to cointegration analysis. The sources of the data include the Research and Innovative Technology Administration (RITA) of the U.S. Department of Transportation and the U.S. Bureau of Economic Analysis.*

**JEL:** R41, L93

**KEYWORDS:** Demand for Air Travel, Panel Cointegration, Demand Elasticities

## INTRODUCTION

Domestic air travel within the U.S. on leisure or business trips are crucial to our national, state, and local economies. Analyzing air travel market is an integral part of an airline's corporate plan that reflects the capacity utilization, manpower requirements and financial projections for the operating capital projects. It helps make decisions regarding the development of infrastructure facilities, thereby ensures the improvement of services to air passengers. Moreover, it helps to reduce the airline company's risk by objectively evaluating the demand side of the air transport business. The aim of the study is to provide domestic air travel demand elasticity estimates to ensure that policy decisions related to issues such as airport charges, taxation, emissions schemes, are made on the basis of appropriate and reliable evidence. This study attempts to provide estimates of price elasticity of demand, income elasticity of demand, and cross-price elasticities of demand for U.S. domestic air travel. The main objective of the paper is to analyze the demand for domestic air travel in the United States. The study uses market and carrier fare information for top 1,000 contiguous state city-pair markets for the period from 1993:Q1 to 2013:Q4 to estimate the price and income elasticities of demand both in the long-run and the short-run.

## METHODOLOGY

### Model Specification

This section discusses the model specifications to examine the relationship between tourism development and economic growth. In examining factors affecting demand for air travel in the US, we modify a theoretical framework developed by Chi and Baek (2012), which can be specified in a log linear form:

$$\ln(AT_t) = \beta_0 + \beta_1 \ln(P_t) + \beta_2 \ln(Y_t) + \beta_3 \ln(BUS_t) + \beta_4 \ln(RAIL_t) + \beta_5 DUM + u_t \quad (1)$$

where AT is the air traffic volume, P is the real price of air fare, Y is the real personal income in constant 2005 U.S. dollars, BUS is the real price of bus fare, RAIL is the real price of rail fare, and DUM is a dummy variable capturing market shocks. The data is compiled within a panel data framework in light of the relatively short time span of the data. Assuming (1) to be linear in logs, the estimated model can be written as:

$$\ln(AT_{it}) = \beta_0 + \beta_1 \ln(P_{it}) + \beta_2 \ln(Y_{it}) + \beta_3 \ln(BUS_{it}) + \beta_4 \ln(RAIL_{it}) + \beta_5 DUM + u_t \quad (2)$$

where  $i = 1, 2, 3, \dots, N$  for each state city-pair markets in the panel and  $t = 1, 2, 3, \dots, T$  refers to the time period. Our panel data set includes 1,000 state city-pair markets and covers 84 quarters from 1993:Q1 to 2013:Q4.

### Panel Unit Root Tests

Before proceeding to cointegration techniques, we need to verify that all of the variables are integrated to the same order. In doing so, we have used panel unit roots tests due to Im, Pesaran, and Shin (2003) (hereafter, IPS). These tests are less restrictive and more powerful than the tests developed by Levin and Lin (1993) and Levin, Lin, and Chu (2002), which do not allow for heterogeneity in the autoregressive coefficient. The tests proposed by IPS permit to solve Levin and Lin's serial correlation problem by assuming heterogeneity between units in a dynamic panel framework. The IPS test will be considered more important because it is appropriate for a heterogeneous regressive root under an alternative hypothesis. The basic equation for the panel unit root tests for IPS is as follows:

$$\Delta y_{i,t} = \alpha_i + \beta_i y_{i,t-1} + \sum_{j=1}^p \rho_{ij} \Delta y_{i,t-j} + \varepsilon_{i,t} \quad i = 1, 2, 3, \dots, N \quad t = 1, 2, 3, \dots, T \quad (3)$$

where  $y_{i,t}$  stands for each variable under consideration in our model,  $\alpha_i$  is the individual fixed effect, and  $p$  is selected to make the residuals uncorrelated over time. The null hypothesis is that  $\beta_i = 0$  for all  $i$  versus the alternative hypothesis that  $\beta_i < 0$  for some  $i$ . The IPS statistic is based on averaging individual Augmented Dickey-Fuller (ADF) statistics and can be written as follows:

$$\bar{t} = \frac{1}{N} \sum_{i=1}^N t_{iT} \quad (4)$$

where  $t_{iT}$  is the ADF t-statistic for country  $i$  based on the country specific ADF regression, as in Eq. (3). IPS show that under the null hypothesis of non-stationary in panel data framework, the  $t$  statistic follows the standard normal distribution asymptotically. The standardized statistic  $t_{IPS}$  is expressed as:

$$t_{IPS} = \frac{\sqrt{n} \left( \bar{t} - \frac{1}{N} \sum_{i=1}^N E[t_{iT} | \rho_i = 0] \right)}{\sqrt{\frac{1}{N} \sum_{i=1}^N \text{Var}[t_{iT} | \rho_i = 0]}} \quad (5)$$

### Panel Cointegration Tests

We investigate the existence of cointegrating relationship using the standard panel tests for no cointegration proposed by Pedroni (1999, 2004). These tests allow for heterogeneity in the intercepts and slopes of the cointegrating equation. Pedroni's tests provide seven test statistics: Within dimension (panel tests): (1) Panel  $V$ -statistic; (2) Panel Phillips–Perron type  $\rho$ -statistics; (3) Panel Phillips–Perron type  $t$ -statistic; and (4) Panel augmented Dickey–Fuller (ADF) type  $t$ -statistic. Between dimension (group tests): (5) Group Phillips–Perron type  $\rho$ -statistics; (6) Group Phillips–Perron type  $t$ -statistic; and (7) Group ADF type  $t$ -statistic. These statistics are based on averages of the individual autoregressive coefficients associated with the unit root tests of the residuals for each country in the panel.

Equation (1) shows the long-run relationships among the dependent and independent variables in our model. Given the recent advances in time-series analysis, in estimating the long-run model outlined by equation (1), it is now a common practice to distinguish the short-run effects from the long-run effects. For this purpose, equation (1) should be specified in an error-correction modeling (ECM) format. This method had been used in many recent studies including Bahmani-Oskooee and Hegerty (2009), Bahmani-Oskooee and Wang (2008, 2009), Bahmani-Oskooee and Mitra (2008), Bahmani-Oskooee and Kovryalova (2008), and Bahmani-Oskooee and Ardalani (2006). According to Bahmani-Oskooee and Wang (2008), such an approach is warranted given that some of the variables in equation (1) are stationary while the other variables are non-stationary. Therefore, following Pesaran, Shin, and Smith (2001) and their method of bounds testing or the Autoregressive Distributed Lag (ARDL) approach to cointegration analysis, we rewrite equation (1) as an error-correction model in equation (6) below.

$$\begin{aligned} \Delta \ln AT_t = & \alpha_0 + \sum_{i=1}^n \beta_i \Delta \ln AT_{t-i} + \sum_{i=0}^n \gamma_i \Delta \ln Y_{t-i} + \sum_{i=0}^n \delta_i \Delta \ln P_{t-i} + \sum_{i=0}^n \phi_i \Delta \ln BUS_{t-i} \\ & + \sum_{i=0}^n \varphi_i \Delta \ln RAIL_{t-i} + \lambda_0 \ln X_{t-1} + \lambda_1 \ln Y_{t-1} + \lambda_2 \ln P_{t-1} + \lambda_3 \ln BUS_{t-1} + \lambda_4 \ln RAIL + \omega_t \end{aligned} \quad (6)$$

Where  $\Delta$  is the difference operator and the other variables are as defined earlier. Pesaran, Shin, and Smith's (2001) bounds testing approach to cointegration is based on two procedural steps. The first step involves using an F-test or Wald test to test for joint significance of the no cointegration hypothesis  $H_0 : \lambda_0 = \lambda_1 = \lambda_2 = \lambda_3 = \lambda_4 = 0$  against an alternative hypothesis of cointegration,  $H_1 : \lambda_0 \neq 0, \lambda_1 \neq 0, \lambda_2 \neq 0, \lambda_3 \neq 0, \lambda_4 \neq 0$ . This test is performed using equation (6). The advantage of this approach is that there is no need to test for unit roots, as is commonly done in cointegration analysis. Pesaran, Shin, and Smith (2001) provide two sets of critical values for a given significance level with and without time trend. One assumes that the variables are stationary at the levels or  $I(0)$ , and the other assumes that the variables are stationary at the first difference or  $I(1)$ . If the computed F-values exceed the upper critical bounds value, then  $H_0$  is rejected signaling cointegration among the independent variables. If the computed F-value is below the critical bounds values, we fail to reject  $H_0$ . Finally, if the computed F-statistic falls within the boundary, the result is inconclusive. After establishing cointegration, the second step involves estimation of the long-term elasticities and the error-correction model.

# THE DETERRENT IMPACT OF PUBLIC DISCLOSURE: AN AUSTRALIA/NORWAY COMPARISON

Ken Devos, Monash University

## ABSTRACT

*An examination of the tax compliance literature reveals that tax authorities around the world have attempted to tackle tax evasion in a number of ways. A combination of both persuasive and enforcement measures have been applied with varying degrees of success. With increasing pressure upon governments to raise revenue in the current economic climate it is timely to assess which compliance measures are having the greatest deterrent effect. This preliminary paper will present and analyses the strategies adopted by both the Norwegian and Australian tax authorities with regards to the public disclosure of tax information and the likely deterrent impact upon taxpayers. In Norway there is evidence of improved revenue figures through increased disclosure on the internet, whereas in Australia they have banned the reporting of tax evaders in the Commissioners annual reports some years ago and deterrence is achieved via various media outlets amongst other avenues. It is suggested that this comparative analysis will provide useful insights of how limited public disclosure of tax information may increase deterrence and potentially supplement other revenue strategies and improve overall compliance.*

**JEL:** K2, K4

**KEYWORDS:** Public Disclosure, Deterrence, Tax Compliance

## INTRODUCTION

The debate over whether public disclosure of tax information or tax privacy promotes greater deterrence and consequently improves taxpayer compliance is as old as the income tax itself (Bittker, 1981). There has been a large volume of research and investigation done in determining what factors act as the greatest deterrent in tax compliance Kirchler et al., (2008), Slemrod, (2007), Raskolnikov, (2006), Feld and Frey, (2003), Dubin et al, (1987) with public disclosure also being employed as a key variable. Arguably, while there is evidence of public disclosure at the corporate level limited findings have appeared with regards to individual income tax reporting. A key reason for this is that very few countries practice public disclosure of tax information at the individual level (Slemrod et al., 2013).

The objective of this paper is to compare two countries which are relatively at the extremes with respect to individual income tax reporting and disclosure and make some tax policy recommendations as to which system or combination thereof would improve overall taxpayer compliance. The comparison encompasses the Norwegian system, where public disclosure of individual tax information is now accessible via the internet and the Australian situation, where privacy principles still protect this information from disclosure. It is envisaged that while the paper may show how public disclosure indirectly improves compliance in the setting of one country, it will also indicate that some derivation of disclosure may supplement other compliance strategies in another country.

## Background and Literature Review

The implications of public disclosure as another form of deterrent is central to this paper. In particular Coricelli et al (2010) investigated the influence of emotions on tax evasion. Employing an experiment comprising two groups of students, where one groups cheating behaviour was publically revealed resulted

in a reduced level of evasion for that group. It was found that a strong physiological impact of public display of evaders' pictures created emotional arousal on tax evasion. An environment where deception was made public, favoured tax compliance, relative to an environment where fraud was only punishable by monetary sanctions. Laury and Wallace (2005) also employed experimental methods to analyse the relationship between the perception of confidentiality and taxpayer compliance and found some evidence that suggested that when individuals perceive a breach in confidentiality (disclosure) they increase their level of compliance. Two treatments were employed including, full and partial confidentiality (i.e. no shaming mechanism was used). It should be noted that while the level of reported income was higher in the partial confidentiality sessions these differences were quite small.

Lenter et al, (2003), provided a brief history of the US federal tax disclosure laws and then debated the advantages and disadvantages of public disclosure. The arguments in favour of disclosure included; aiding regulators to police corporate governance, improving the functioning of financial markets, promoting tax compliance and applying political pressure for good tax policy. The disadvantages put forward were that disclosure violates confidentiality, may create confusion with regards to transparency, provides too much power to the Federal government and may have unintended behavioural responses, such as, increasing the cost of business. Overall, the authors did not support full disclosure but were sympathetic to partial disclosure. In particular, disclosure of total tax liability alone, or along with a small number of bottom line items or public reconciliation between tax and book concepts of income.

Opposed to public disclosure have been the defenders of tax privacy. Blank (2011) argued that tax privacy enables the US government to inflate taxpayers' perceptions of the probability of detection and the expected costs of non-compliance. On the other hand, public disclosure could lead to tax –enforcement weaknesses and lower individuals' perceptions of the magnitude of penalties (Blank 2013). Blank's paper proposed that a 'strategic- publicity function' would support two models of taxpayer behaviour. Firstly, a traditional deterrence model of taxpayer behaviour where individuals weighted up the expected costs and benefits. Secondly, a reciprocity model of behaviour where individuals were happy to contribute to the public good if they believed others were doing the same. Overall, the author concluded that individual tax return information should remain private other than when enforcement action is instituted against an individual taxpayer. It was suggested that the government could employ the strategic- publicity function' of tax privacy to increase voluntary compliance.

On the other hand, many scholars have questioned the hypothesis that, in the absence of tax privacy individuals would withhold important personal information from the revenue authority (Kornhouser, 2005, Linder, 1990, Mazza, 2003, Schwartz, 2008, Thorndike, 2009 and Bernasek, 2010). Several of these scholars have suggested that tax privacy no longer plays as critical a role in fostering tax compliance as it did in the past (Kornhouser, 2005, 101-103, Thorndike, 2009, 691 and Schwartz, 2008, 895-896.) By lifting the curtain of tax privacy these scholars argue that public access to tax return information would cast "millions of eyes" on tax returns serving as an "automatic enforcement device." (Bernasek, 2010) In particular, Kornhouser (2005), revaluated publicity as a tax compliance tool in light of legal and social changes regarding privacy that had occurred over time. It was suggested that a redefined concept of publicity would be a better tool to attack both intentional and unintentional non-compliance. A moderate approach that minimizes the invasion of privacy while still publicizing enough information to promote increased compliance was recommended.

A modern day "pink slip" was suggested that incorporated the taxpayer's name, a non-specific address, gross and taxable income within narrow income ranges, any capital gains, particular deductions and credits and finally the taxpayer's marginal and effective tax rates. As much of the publicity was considered educational only, it encroached far less on privacy than traditional publicity. A sense of wider and more effective dissemination of information was the aim while advocating for limited disclosure. Mazza (2003)

was also an advocate for limited disclosure. A thorough review of the literature revealed that restricted disclosure of return information for narrow purposes can be part of an effective compliance strategy while at the same time preserving taxpayers' reasonable expectations of privacy. Empirical evidence suggested that publicity could play a positive role in discouraging non-compliant behaviour and increasing the public's commitment to the system. In particular, Mazza proposed disclosure exceptions authorising the IRS to publicize its enforcement efforts aimed at three specific types of non-compliance including; criminal tax evasion, failure to pay assessed taxes and investments in abusive tax shelters. Mazza, believed that the benefits to government in each case of disclosure would outweigh any threats to taxpayer privacy interests. Taking a slightly different perspective to public disclosure by the tax authority was the situation of increased disclosure by taxpayers' themselves, as advocated by Pearlman (2002). Pearlman indicated that mandatory tax disclosure of information relating to tax –relevant transactions may serve three enforcement and compliance functions. First an audit function, where information would assist the IRS to evaluate the effect of a transaction on a disclosing party's tax liability. Second, a tax policy function, where disclosure could provide important information regarding administrative and legislative responses to current law. Third, a deterrence function which discouraged taxpayer investment in particularly questionable transactions. Supporting the later was the apparent strong association between public information disclosure (i.e. non-tax information reporting by public companies) and high compliance.

#### The Deterrent Impact of Public Disclosure of Tax Information Globally

As there are various forms and levels of disclosure of tax information, it is apparent that this may result in varying degrees of deterrence that ultimately impact upon compliance. However, the experience of public disclosure on a global scale has been limited (Slemrod et al, 2013). At one extreme we have the Nordic countries where personal level public disclosure is displayed with Norway leading the way. At the other extreme we have the majority of western countries with some exceptions in Europe and the US which has trialed limited spells of public disclosure. In between the extremes, other countries have adopted and then discarded various forms of disclosure or are about to adopt limited disclosure measures, such as, in Australia. Investigating both Sweden and Finland as fellow Nordic countries it is apparent that both corporate and personal level disclosure exists. In Finland not only can one apply to the tax authority for information about individuals but the media also publishes the top 1000 income earners and provides personal details including how much tax has been paid as a portion of salary, Catanzariti, (2004).

There are also boutique publications that publish guides on everyone who earns about 40,000 Euros, but otherwise it is just a long list of people the Fins would know of. Given there are only 5 million people in the country and very few foreigners, it is highly likely that many tax evaders would be known or identified. Consequently, the transparency in the Finnish system appears to be having a positive effect on compliance rates. Other European countries such as Italy and France have experienced short spells of public disclosure. For example, in Italy in 2008 the tax authorities put all 38.5 million tax returns for 2005 up on the internet before being blacked out following wide spread protest (Slemrod et al, 2013). No doubt the taxpaying culture in Italy had an impact upon this compliance measure which potentially could have produced exaggerated revenue results. Providing details of tax evaders has been another popular form of disclosure. Under Greek law the presentation of a new budget is accompanied by the names of tax evaders in the previous year compiled by the finance ministry (Slemrod et al, 2013). However, given the culture of taxpaying in Greece as evidenced by the recent European financial crisis and austerity measures put in place by the EU, there is limited evidence that the disclosure of these tax evaders has had a deterrent impact upon non-compliant behaviour.

The issue of disclosing tax evaders as a tax compliance tool has also been adopted with varying success in other Commonwealth countries. Up until the early 2000's the Commissioner of Inland Revenue in New Zealand, regularly released a document entitled "Tax Evaders Gazette" which listed those taxpayers who

had either been prosecuted or had penalty tax imposed for evading their tax obligations. Since 1997 the Commissioner was able to publish the names of those taxpayers involved with “abusive tax avoidance” (Slemrod et al, 2013). Surprisingly this measure has now been withdrawn despite fulfilling a deterrent role and assisting the generally high taxpaying culture evident in New Zealand. The motivations of the IRD in this regard were not clear or justified. Despite obvious privacy issues around releasing taxpayer details, the naming and shaming of offenders has been successful both as a deterrent and a revenue raiser in Portugal for example. In April 2010, the Portuguese Government officially announced that it had recovered more than a thousand million Euros due to publication of the list of taxpayers (individuals and corporations) with tax debts. This has received support in the literature (Braithwaite, J and Drahos, 2002).

In contrast, the Canadian Customs and Revenue Agency compliance strategy involved publicizing court convictions for tax fraud and releasing the names of offenders. In Ireland a list of tax defaulters was formally published on an annual basis in the Revenue Commissioners Annual Report, but recently the list is published on a quarterly basis in *Iris Oifigiúil* (the official newspaper of record in Ireland) in which several legal notices including insolvency notices, are required by law to be published and reported in the national and local newspapers. According to the tax agency this measure “aims to raise the profile of compliance and provide a continuous deterrent to other potential tax evaders. Frequently taxpayers make a full disclosure of irregularities to auditors at the commencement of an audit to avoid the possibility of being punished for tax offences.” Moreover, the well –publicised quarterly list is “more likely to be spotted by suppliers, customers, business associates and friends” and would need to be avoided at all costs. (Slemrod et al, 2013).

In the US the history of public disclosure of tax information has been gradual. Initially disclosure laws of one form or another were enacted in 1862, 1864, 1909, 1924 and 1934 demonstrating that confidentiality as a general rule is a relatively recent phenomenon. The shift came in 1976 following allegations that the Nixon Administration had improperly used tax return information against political opponents. Since 1976 as per s 6103 of the Internal Revenue Code, disclosure of return information is forbidden, except under limited circumstances. Public disclosure rules of tax information for corporations at the state and local levels have nevertheless been permitted in Massachusetts, West Virginia and Kansas since the 1990s. The IRS has also occasionally in the past made public the names of tax offenders (Lenter et al, 2003). Whether the deterrent impact of this limited form of disclosure has been effective in influencing compliance over the years is uncertain and continues to be challenged.

#### Deterrent Measures/Public Disclosure Adopted in Australia

The disclosure of individual taxpayer information has generally been non-existent in Australia. Other than the public having access to tax information via court records and other documents in the public domain it is difficult to acquire knowledge of a taxpayer’s dealings. Access could be sought under the *Freedom of Information Act 1982* but this is limited somewhat by the National Privacy Principles. In particular, *National Privacy Principle Number 2– Use and disclosure* indicates in 2.1 (a) that an organisation must not disclose personal information about an individual for a purpose (the secondary purpose) other than the primary purpose of collection unless (a) both of the following apply: (i) the secondary purpose is related to the primary purpose of collection and if the personal information is sensitive information, directly related to the primary purpose of collection, (ii) The individual would reasonably expect the organisation to use and disclose the information for the secondary purpose or (b) the individual has consented to the use or disclosure... This severely limits the tax authority in divulging any type of personal tax information unless as per 2.1(f) the organisation has reason to suspect that unlawful activity has been, is being or may be engaged in and uses or discloses the personal information as a necessary part of its investigation of the

matter..... Also 2.1(h) where the organisation believes that the use or disclosure is reasonably necessary for... (i) prevention, detection, investigation, prosecution or punishment of criminal offences, breaches of law imposing a penalty or sanction..... (iii) the protection of the public revenue....Consequently, we see the Australian Taxation Office (ATO) and other government agencies publish the details of tax evaders who have been caught, via media releases and press outlets in an effort to get the message out and create a general deterrent. How effective this has been is arguable, given its indirect and somewhat adhoc occurrence. Further invasion of individual taxpayer information is protected by the *Tax Laws Amendment Bill (2013)* which was introduced to increase the disclosure of company information. Specifically, *Chapter 3: Improving the transparency of Australia's corporate tax system* Paragraph 3.10 indicated that the government is committed to maintaining the confidentiality of taxpayer information of natural persons. The amendments contain express protections for natural persons. This was in line with the *Statement of Compatibility with Human Rights (Parliamentary Scrutiny) Act 2011*, paragraph 3.74 which indicates that information is not capable of being used to identify an individual... recognises the importance of affording privacy to individuals personal affairs ... and promote the prohibition on interference with privacy under article 17 of *International Covenant on Civil and Political Rights*. As indicated in the Explanatory Memorandum to the *Privacy Amendment (Privacy Alerts) Bill 2013* Second Reading Speech, the right of an individual to control what happens with his or her personal information is an important aspect of the right of privacy.

Similar to the situation with individuals, the disclosure of corporate tax information in Australia up to now has been limited but this has changed recently with the introduction of the *Tax Laws Amendment Bill (2013)* since 1 July 2013. The main objectives of the new legislation were to discourage aggressive tax avoidance practices, promote greater tax policy debate, and enable better public disclosure of aggregate tax revenue collections despite taxpayers being potentially identified and to allow improved sharing of tax information between government agencies. Specifically, the new legislation aims to improve the transparency of Australia's business tax system by publishing certain information from tax returns where the corporate has a total income of \$ AUS100 million or more for an income year. Separately, the Commissioner will also have a duty to publish the final amount of the entity's annual Minerals Resources Rents Tax (MRRT) or Petroleum Resources Rent Tax (PRRT) payable, regardless of total income. Importantly, the second measure amends the taxpayer confidentiality provisions to ensure publication of aggregate tax information to fulfil its financial reporting obligations, unless the entity is an individual. The third measure enhances information sharing between government agencies by allowing a tax officer to disclose confidential taxpayer information to the Treasury with regards to decisions concerning the *Foreign Acquisitions and Takeovers Act (1975)* or Australia's Foreign Investment Policy.

The implications of the new disclosure legislation will vary for Australian listed entities, privately held large businesses and Australian subsidiaries of foreign owned multi-national groups. It will also depend on the cash tax profiles of the large businesses. From a deterrent perspective, public perception issues may arise from the disclosures. For example, if businesses have low cash tax payable due to factors such as carry-forward losses or R&D deductions, increased queries may arise in the absence of full information, from analysts, the public or social welfare groups (Ernst & Young, 2013). Another danger for business is that mandatory disclosure of tax information may adversely affect consumers' buying behaviour (Similar to the recent protests directed at Starbucks in Britain). In addition, government themselves are large consumers of goods and services and may take information on tax contribution into account when making purchasing decisions. There have also been reports about ethical investors" who ignore purchasing shares in companies that are not viewed as tax compliant (Grieve et al, 2013).

To gauge the benefit and effectiveness of the improved disclosure requirements by corporations involves considering factors other than just increased revenue. Importantly the new legislation will update Australia's tax rules to be able to cope with the modern global economy. In the digital age the ability to

conduct business over the internet anywhere in the world has highlighted the inadequacy of the residency and source rules. The new disclosure measures may be a first step to diagnosing deficiencies in the tax system and pave the way to aligning it to a digital and global economy (Grieve et al, 2013).

To some extent the new legislation also replaces the deterrent that was removed from individuals in the late 1990s. That is, the “naming and shaming” of large businesses and multi-national taxpayers that do not pay their fair share of tax in Australia. The bad publicity could have financial implications and may influence the investment decisions of companies currently operating in Australia and those considering establishing a business in Australia. In this regard, it is vital corporations review the appropriateness of their business and entity structures and transfer pricing policies so that they are not exposed to legitimate criticism. Potentially the legal costs of large business and multi-nationals will rise if they need to take advice on whether disclosure under the new legislation breaches any legal or commercial confidentiality obligations. Consequently, one danger the more onerous disclosure obligations could bring is a “race to the bottom,” as enterprises discover they are paying more tax than their competitors (Grieve et al, 2013). This could negate the overall benefits derived from increased disclosure.

Apart from improving corporate compliance the revenue projections of the new legislation are nevertheless important to government. In this regard it was impossible to obtain any information (statistical data) directly from the ATO with regards to the projections of future disclosure requirements. However, an inspection of the 2011-12 Commissioner’s Annual Report did reveal a trend in company profits and income tax payable since 2002 giving some idea of past performance. A comparison of the profits and net income tax reported in corporate tax returns with a corporate profit estimate from the Australia Bureau of Statistics (ABS) indicated that overall company tax performance was generally in line with improving profits. Further to this, the ATO’s 2012-13 Compliance Program revealed that the companies income tax reporting was generally accurate. Large business in 2011–12 accounted for 36% of total ATO collections. Based on these past figures it is suggested that the increased disclosure requirements may have an even greater impact upon future revenue projections as the majority of corporate taxpayers choose to comply. However, because of the strict privacy principles in place with respect to the disclosure of individual tax information it is suggested that there will be little, if any deterrent impact and consequential improvement in compliance on this level. The only exceptions to limiting the public disclosure of tax information by the revenue authority, is in cases of unlawful activity or criminal offences. Consequently, this may affect future revenue collections and impact upon taxpayer behaviour negatively. In particular it may send mixed messages to taxpayers who attempt to comply with their tax obligations by giving them the freedom to exercise their own level of disclosure.

#### Deterrent Measures/Public Disclosure Adopted in Norway

The main tools available for the Norwegian Tax Administrations are numbers and types of audits, and information and guidance efforts. However, disclosure of tax data is determined by law and is therefore outside the direct control of the Norwegian Tax Administration and has thereby not been part of the Tax Administration's efforts to increase compliance. A long standing tradition in Norway, as well as in other Nordic countries, is openness in public affairs/administration (*offentlighetsprinsippet*). It basically means that all public documents should be available for the public, if the document is not deemed confidential.

Taxation in Norway is levied by the central government, the county municipality and the municipality. The tax level in Norway is high. In 2012, the total tax revenue was 42.0% of the gross domestic product (GDP). The most important taxes, in terms of revenue, are income tax and Value added tax (VAT). Most direct taxes are collected by the Norwegian Tax Administration and most indirect taxes are collected by the Norwegian Customs and Excise Authorities. Since the middle of the nineteenth century there has been public disclosure of tax information in Norway. It has historical roots and it cannot be solely contributed to

tax compliance. Public disclosure of tax data should therefore be seen in the light of freedom of information. In the latest revision of the *Tax Assessment Act (1980)* it was argued that public disclosure of tax lists is contributing to transparency in the tax assessment, and to the fairness of the system. Increased compliance was actually not explicitly mentioned.

Information on Norwegian taxpayers' taxable income, paid taxes and wealth has been available in the tax lodgers located at the local tax office since the early 20<sup>th</sup> century, so anyone interested could access the information. Arguably, most people actually did not visit the local tax office for a manual search of the tax lists. But in a number of municipalities tax information about local residents was widely distributed through sales of paper copies of the tax lists. The sale was usually a fundraising activity for local soccer teams or other local associations. Unfortunately, there is no measure as to how widespread these were, but since most of the municipalities with sales of paper copies were small, it can be assumed the penetration in most cases was fairly high (Slemrod *et al.* 2013).

In 2001, the tax lists were distributed electronically and newspapers started to present searchable lists on their websites. Basically anyone with internet access could obtain information on taxable income, paid taxes and taxable wealth for any individual Norwegian taxpayer. The organization of the tax data is search friendly since it was organized by individuals' names, zip codes and city. The transition from paper to electronic distribution was not primarily driven by concern about compliance, but rather as a consequence of the Norwegian government's digitalization strategy. However, it raised a debate on privacy, but no serious study on the effect has actually been done until Slemrod *et al.* (2013). Slemrod's study showed that compliance increased more in municipalities where tax information was not distributed widely through paper catalogues. On average Slemrod *et al.* found that publication of tax lists increased compliance by around 3%. Assuming a change in policy to disclose tax information has had the impact suggested by Slemrod *et al.* upon compliance this would have resulted in an increase in tax revenue of 100 billion Norwegian Krona NOK, (approx. 15 billion Euros) since the opening of the tax lists. In the last ten years Norway has also had an increase in the number of self-employed persons. Significantly, Slemrod *et al.* study shows a slightly higher compliance effect on self-employed persons rather than regular employees. The effect on tax revenue and compliance might therefore be higher still.

There are also reasons to believe there would be some dynamic effect over time. However, Slemrod *et al.*, do not discuss the issue of psychological changes in taxpayer behaviour. While on one hand the probability of public detection increases the more years tax lists are published, but on the other hand disclosure of income, wealth and taxed paid may provide incentives to "hide" income and wealth to avoid public scrutiny and thereby decrease compliance. In line with the openness for individual taxpayers, annual reports for all registered companies are public. For a fee (approx. USD 10) any annual report is available for download from the national register. This register and most of the national registers are administrated by The Brønnøysund Register Centre. This has been in the Norwegian legislation since their independence from Sweden 1905. This practice was not considered controversial and has not been debated. However, it has been argued that the access to annual reports makes it easier for foreign companies to analyze and eventually enter the Norwegian market. It is also argued that a possible compliance effect is primarily on small companies and this decreases with an increase in the size of the company, but there are no studies which confirm that perception.

In Norway, as in other countries there is a lot of focus on tax payments from multinationals. There have been very limited attempts to compile tax data for multinationals, although it is publicly available in Norway. The recent international debate on tax avoidance and multinational corporations has resulted in attempts to estimate tax payments from large Norwegian corporations. The issue is also being addressed in the on-going Norwegian Public Inquiry on Corporate Taxation. However, up to now it is considered to be outside the role of the Norwegian Tax Administration to compile lists of taxes paid by corporations.

Overall, the current disclosure requirements for Norwegian taxpayers may be subject to change in the near future. A recent change in government (in October 2013) has again raised the issue of limiting the internet access to individual tax data. In addition to privacy arguments, reports indicate that tax information has been used for criminal purposes. Furthermore, the expected effect on compliance has been uncertain. Other than Slemrod's *et al* (2013) study there has been no strong evidence for a link between public disclosure of tax data and compliance. Several models for limiting internet access have been discussed. The most likely outcome being that the taxpayer will be alerted (for instance electronically to their personal e-tax account) as to who is looking into his or her tax information. An alternative is that media outlets will only be able to publish searchable lists, under certain conditions. Consequently, the expected compliance impact is uncertain. Likewise, public disclosure of tax data is outside the scope of the traditional components of compliance strategies – audits, simplifications and guidance. Although public disclosure is assumed to generate a substantial number of tips, as the Tax Administration does not investigate the origin of the tips it is impossible to know what role public disclosure has played. The system of public disclosure of tax data on the internet has been in place for twelve years in Norway and while there is evidence it actually increases compliance, further studies need to be undertaken on the subject to increase validity and reliability. On the other hand there is only antidotal evidence of negative effects (i.e. criminal activity) of the disclosure with the main argument for "closing" the tax lists being privacy.

## CONCLUSIONS

Advocates of publicity see disclosure as increasing taxpayer confidence in the tax system which in turn has the salutary effects of increasing compliance and revenues. The visibility of information improves transparency and the ability to be accountable. Likewise publicity can improve taxpayers' knowledge of tax law which in turn can diminish both intentional and unintentional non-compliance (Kornhauser, 2005). As ignorance and laziness when it comes to carrying out legal obligations should not be tolerated, disclosure may be able to assist when it comes to facilitating a system of voluntary compliance as exists in most modern economies. The prefilling of tax returns certainly alleviates the taxpayer from potential incorrect returns. Also taxpayers may think twice before engaging in more tenuous legal tax avoidance because of the shaming which follows.

That is, as everyday taxpayers have access to this information the detection if not enforcement function is increased as the public may discover schemes not caught by tax officials. Despite the resource capacity of the revenue agency being limited non-compliant activity could nevertheless be revealed. As most compliance strategies embrace a combination of both persuasive and punitive measures, it is suggested that disclosure should sit alongside these measures and act like a back-up or supplement. Particularly where resources are limited, disclosure offers the opportunity of public involvement to enhance detection, and increase public stigma of non-compliers and tax evaders. Targeted disclosure also has the capacity to improve education and tax knowledge as advocated by Kornhouser (2005) and Mazza (2003). The media exposure employed to enhance a general deterrent can be amplified through disclosure of tax evaders such as the issuing of a "dirty dozen: list of scams" and highlighting the tax fraud of high profile individuals in the community Blank, (2013). These and other benefits lead to some specific tax policy recommendations advocating a limited form of disclosure for individual taxpayers following the successful implementation of disclosure for corporate taxpayers in Australia in 2013.

Despite legitimate concerns over taxpayer privacy and the standards that must be adhered to under the National Privacy Principles, there appears to be a valid case for increasing disclosure requirements in Australia for individuals. Apart from supplementing other compliance strategies as indicated above the bold

move to full disclosure of corporate taxpayers should be accompanied by some increased exposure of individuals. In the interests of increasing transparency and accountability as was found in other countries, and particularly in advocating an openness of public affairs and administration as illustrated in the Norwegian experience Australia would do well to follow suit. In this regard a limited form of exposure as suggested by Kornhouser (2005) that minimized the evasion of privacy while still publishing enough information to promote increased compliance is recommended.

The recommendation for a modern day pink slip which included, the taxpayer's name, a non-specific address, gross and taxable income within narrow income ranges, any capital gains, particular deductions and credits and finally the taxpayer's marginal and effective tax rates is suggested. This could then be assessed at a later date to gauge its effectiveness not just in terms of increased tax dollars but also taxpayer education. Against the introduction of increased disclosure also comes the warning from the Norwegian experience that tax information may be used for criminal purposes (although only anecdotal evidence) and that there needs to be more evidence to improve reliability and validity that disclosure increases compliance. Public disclosure should be part of an integrated compliance strategy as ultimately it will be the fine balancing of a mix of compliance tools which will have the greatest deterrent effect and potential for increasing taxpayer compliance.

# A CROSS-COUNTRY ANALYSIS OF THE IMPACT OF CULTURE AND ECONOMIC FACTORS ON THE IMPLEMENTATION OF IFRS

Rogelio J. Cardona-Cardona, University of Puerto Rico-Río Piedras

Karen C. Castro-González, University of Puerto Rico-Río Piedras

Carmen B. Ríos-Figueroa, University of Puerto Rico-Río Piedras

## ABSTRACT

*This paper examines the effect of culture and other economic factors on a country's decision to implement International Financial Reporting Standards (IFRS). This work extends the previous literature by using a methodology that assigns an implementation score in different countries and its association with Hofstede's cultural dimensions and economic factors. The results suggest that certain cultural dimensions and economic factors may affect a country's decision to implement IFRS.*

**JEL:** F23, F60, M41

**KEYWORDS:** International Financial Reporting Standards, Accounting Standards, Implementation, Convergence Or Adoption, Cultural Dimensions; Economic Factors

## INTRODUCTION

Economic transactions are measured with accounting standards that vary from country to country but the global economy has created the need for uniform standards. Differences in culture may affect a country's desire to join a globalized economy (Ding Jeanjean and Stolowy, 2005; Ramanna and Sletten, 2009, among others). Prior studies on the adoption of IFRS consider a country's culture, the barriers to adoption, and the impact of the adoption of IFRS on financial reporting. Callao-Gastón, Jarne-Jarne, and Laínez-Gadea (2007), Callao-Gastón, Ferrer-García, Jarne-Jarne, and Laínez-Gadea (2010), Ramanna and Sletten (2009), Armstrong, Barth, Jagolinzer, and Riedl (2010) examine the degree of convergence or adoption of IFRS in Europe, the European Union (E.U.) and the United States (U.S.), respectively.

Our study presents an alternative empirical methodology that considers the effect of culture and economic factors on a country's IFRS implementation decision. The databases used were a survey made by PricewaterhouseCoopers, LLP (PwC) in April 2012 (*IFRS Adoption by Country*), Hofstede's (1980, 2001) cultural dimensions, and The Global Competitiveness Report for 2011-2012 published by The World Economic Forum (WEF). Using the aforementioned databases we designed a grading system based on PwC's survey that assigns an IFRS implementation score to each country. A country's IFRS implementation decision is expected to have an indirect impact on the required disclosure of financial information by listed companies in each country. Appendix A presents the questions included in PwC's survey regarding the current stage of the IFRS adoption or conversion process in each country. The next section provides a brief overview of the institutional background and relevant literature. The literature review is followed by the sample selection procedure, the data analysis, and the research methodology. The final section presents the results and our conclusions.

## CONCLUDING COMMENTS

Prior research (Ding et al., 2005; Hope et al., 2006; and Clements et al., 2010, among others) suggests that differences in culture, country size, economic and political factors may influence the adoption and implementation of IFRS. Ramanna and Sletten (2009) observe that language, economic, geographical, and political characteristics and common trade agreements influence a country's implementation decision. Hope et al. (2006) also note that other economic factors, such as the existence of investor protection mechanisms and unlimited access to capital markets, may also have an impact on a country's implementation decision. Initially we find that none of the cultural dimensions seem to have a significant impact on a country's implementation decision. Our second model considers the effect of certain economic factors on a country's implementation decision. The results obtained suggest that countries with better protection of minority shareholders' interests and a larger foreign market size are less inclined to implement IFRS. These results partially support our research hypothesis that economic factors are inversely related to the possibility of implementation.

Our third model includes Hofstede's cultural dimensions, economic factors and the implementation scores by country. The results suggest that countries that tend to be more individualistic are more inclined to implement IFRS. These results do not support our expectation that highly individualistic countries will have lower implementation scores. With respect to economic factors, the evidence obtained suggests that countries with better protection of minority shareholders' interests and a larger foreign market size are less inclined to implement IFRS. These results support our hypothesis that higher values for economic factors are inversely related to a country's implementation score.

The expected benefits from the use of alternative empirical methodology in estimating how countries implement IFRS may assist standard setters and researchers develop mechanisms to facilitate this process and should outweigh the aforementioned limitations. The decision to implement IFRS is also expected to have an indirect impact on the required disclosure of financial information by listed companies in each country. This study has several limitations. First, the grading system used to construct an implementation score represents a researcher induced bias. A second limitation is that the impact of culture was measured using only four of the six cultural dimensions developed by Hofstede because the values for the fifth and sixth cultural dimensions (long-term versus short-term orientation and indulgence versus restraint, respectively) are not available for the countries in our study sample. In addition, the selection of the proxies used as economic factors (obtained from the WEF Report) is another element of researcher induced bias. Future research should consider other methodologies that can measure the extent to which countries have implemented IFRS.

# COMPARISON OF WOMEN ENTREPRENEURS PROFILES IN COAHUILA, MEXICO AND SAN JUAN, PUERTO RICO

Liliana Angélica Guerrero Ramos, Universidad Autónoma de Coahuila

Elizabeth Robles Maldonado, Universidad de Puerto Rico

Edgar Fernando Martínez Hernández, Universidad Autónoma de Coahuila

## ABSTRACT

*As part of a research project on autonomy and economic empowerment of women, this study compares the profile of women entrepreneurs in two cities of Coahuila, Mexico and the city of San Juan, Puerto Rico. The methodology was based on the application of a self-administered questionnaire adapted from a doctoral thesis defended at ESADE, Spain, to 89 women entrepreneurs in San Juan, Puerto Rico, in the period of October 2013 to February, 2014. Surveys were processed in the SPSS software. The following results were obtained: the area of greater overlap among the cities was age and conjunction of motives to undertake, which is in the trading and services sectors; and more than 60 percent of entrepreneurs have dependents in the three studies. Differences observed were mainly in the variable behavior of university education, significantly higher in the study of San Juan, 95%, and 48% of women surveyed in San Juan said to belong to a professional association, while in the study of the two cities of Coahuila, Torreón participation was very low, and Saltillo had a difference of 17% below, compared to San Juan. A higher percentage of companies in San Juan made business plans while companies in Saltillo and Torreón have greater seniority, even exceeding 20 years.*

**JEL:** M1, J16

**KEY WORDS:** Gender, Entrepreneurship, Economic Empowerment.

## INTRODUCTION

During the 80s took place an interesting controversy about gender concept, promoted by the Anglo feminism "genre" as an analytical tool in the social sciences. From that time until the present, these studies have an important milestone in investigations. (Ponceta Fernández). Many of the studies in Mexico and in Latin America in general, focus on violence, gender discrimination, particularly against women; as well as the study of social exclusion, occupational segregation and the participation of women in politics and governance structures, among others.

The study of the participation of women in productive activities and their economic empowerment has been developed as a strategy to reduce poverty, and also as a way to reduce the inequality gap between men and women, which is precisely the basis for certain unjust structures of power within the family and other social institutions. The creation of new companies has historically been a work done by tradition and culture of men as "heads of households," but as known, family types have changed a lot today, and women increasingly become independent, and often are responsible for providing for their family everything they need. Derived from these realities it is interesting to know what are the traits or characteristics of women starting new businesses, which are their motivations for doing so and what performance levels do they achieve in their businesses, among other topics.

In Mexico, the First National Meeting of Women Entrepreneurs, organized by the National Women's Institute (Instituto Nacional de las Mujeres, INMUJERES) was performed in November 2003. In this

framework a questionnaire was applied to 178 women from all parts of the country, the majority (64.6%) in the center area. Some of the results of this study revealed: the majority of companies (41%) were in the services sector, followed by trade (27%); predominance of women microentrepreneurs (55%), four out of five companies created by women were founded by them, only 13.9% was inherited from parents; and the predominant reason for undertaking is necessity (42%). Most entrepreneurs claimed to be members of the company (55%), especially with family members, while 45% are sole proprietors of their company. (Instituto Nacional de las Mujeres, México).

A previously identified profile of 66 women entrepreneurs in the city of Torreón (Guerrero Ramos, L., et. Al, 2013), is then compared with a group of entrepreneurs in the city of Saltillo, Coahuila (Guerrero, Gómez & Armenteros, 2014). (Studies are still currently being developed in this research project). The study of women entrepreneurs of SMEs has been carried throughout the State of Coahuila, seeking gradually to identify for each of the areas surveyed the significant differences that may exist. Therefore, the objective of this work is to identify the similarities and differences of the profile of women entrepreneurs in two regions of the state: Saltillo and Torreón and compare it to another country in the Caribbean region, of San Juan, Puerto Rico.

The results obtained here reveal aspects that were unknown about entrepreneurs in Torreón, Saltillo, Coahuila; and San Juan, Puerto Rico. They are shown below in the following structure: A literature review to show the most significant bibliographic sources located, the methodology, the characterization obtained in two dimensions: entrepreneurial: sociodemographic characteristics; environment and organization, economic performance and motivational and social issues. At the end, the limitations, conclusions, references and acknowledgements are presented.

## LITERATURE REVIEW

According to The GEM Global Women's Report in 2012, an estimated 126 million women were starting or running new businesses in 67 economies around the world and an estimated 98 million were running established businesses. These women are creating jobs for themselves and their co-founders and also employ others. GEM projected that 48 million female entrepreneurs and 64 million female business owners currently employ one or more people in their businesses. The study of the profile of women entrepreneurs takes us from the point of view of basic theoretical support to the concepts of gender and entrepreneurship. Entrepreneurial activity of women is diverse and covers almost all sectors of economic activity; however, gender differences are still important, especially when the motivation for entrepreneurship is measured (Minniti, M., Bygrave WD & E. Autio (2006).

The participation of women as entrepreneurs has grown in recent years. This is reflected in data from the United States, with 45% of women business owners; Spain which hovers around 25% and Mexico, with just over 16% (SCOTUS, 2006). Another study in Spain revealed that fourteen out of a hundred women employed (in paid employment) have created their own job, their own business. The purpose of the study was to make a thorough analysis of the obstacles women face when creating their companies, profile, gender differences and support policies. (Chambers of Commerce. INCYDE Foundation. Studies Service, 2007). This justifies the issue addressed in the present research aimed to identify the characteristics that distinguish women entrepreneurs regionally.

Some studies of women entrepreneurs focus on skills such as: Commitment (Business Strategy oriented toward organization and relationships rather than technological innovations and the tendency to seek cooperation more than competition), Participation (Teamwork), Intuition (Vision) creativity (ability for planning and flexibility), Adaptability (ability to balance work and activities), reflection (determined in decision-making), timely attitude (Facility for interpersonal communication), Independence (Leadership),

hardworker (negotiation and effective communication and search for effectiveness and efficiency), self-assurance and independence (Great ability to delegate authority and frustration tolerance). (Romo Rojas Suárez Salazar, Batres & Llamas, 2007).

Referring to the construction of profiles of women entrepreneurs, Argentina focused on the following personal characteristics: self-efficacy, locus of control, need for achievement, the presence and degree of involvement of mentors in the personal and professional development; and cultural variables. (Rabago, D' Annunzio, & Monserrat) A study in Chile suggests that the experience, property and the type of business project women currently have (able to explain 21.93% of the profile) shows the existence of women with high entrepreneurial work experience; sociodemographic characteristics (able to explain a 13.69% of the profile) present women with high socioeconomic and educational level, over 30 years old and married, actively participating in entrepreneurship; education, age and head of entrepreneurial (able to explain the profile 11.59%) shows two opposite profiles; and, education, region and affiliation to groups and societies (able to explain 9.93% of the profile) also shows two antagonistic profiles (S. Pizarro, E. Amorós, G. Guerra, R. & Leguina, 2009).

The First National Meeting of Women Entrepreneurs in Mexico, organized by the “Instituto Nacional de las Mujeres” (INMUJERES), established a precedent in studying women entrepreneurs (Zabludovski, 1993). The limitation of the sample size is recognized, and after an increased participation of women in managerial positions, it is stated that in the early 1990's, a significant improvement was observed in the presence of women as staff members in the private sector groups, as it rose from 14.8% in 1991 to 19.6 in 1995 and 24.6% in 2000 (Zabludovski, *Las mujeres en los cargos de dirección en México*).

According to Santiago-Castro and Pisani (2011) generally, the economic environment in Puerto Rico is conducive to business start-up. In addition, the World Bank (2011) ranked the Island in 2010 as the easiest place in Latin America to start a business and sixteenth easiest for business start-up globally (of 183 countries, World Bank, 2011). In Puerto Rico the percentage of women entrepreneurs is increasing dramatically. According to the Census (2010) there are 38,000 women entrepreneurs or self-employed. This represents 22% of all people working in this way (Census, 2010). According to Santiago-Castro (2010), the business women owners in Puerto Rico, in general, are sole owners, have many competitors, and do not export. Their primary reason for pursuing business is to take advantage of an opportunity and the most important motive for pursuing that opportunity is obtaining greater independence, followed by increasing personal income.

## METHODOLOGY

This research is quantitative. It started from a previous study for the city of Torreón in the questionnaire proposed by the doctoral thesis defended at ESADE entitled: “Factores que influyen en las nuevas empresas creadas por mujeres, ” (Factors influencing the new companies created by women). (Valencia Silva, M.M., s.f.). The same questionnaire was administered to women entrepreneurs in Saltillo making a total of 95 entrepreneurs (66 in Torreón and Saltillo 29), in the period from January to June 2012. In addition, it was applied to 89 women entrepreneurs in San Juan, Puerto Rico in the period of October 2013 to February 2014.

For processing and obtaining univariate graphics the Excel program was used. Later this database was exported to IBM SPSS Statistics 19 software, in order to reclassify the data and perform other statistical analysis. A descriptive analysis of the variables that includes the instrument was used for the analysis of results, in particular, of the 15 indicators that qualify in "success" or affecting the results of new businesses created by women entrepreneurs; processing variables that allow us to implement bivariate correlations "Pearson," specially with continuous variables - family enterprise performance and business objectives. In

addition, Cronbach's alpha was used for the validation and feasibility of the correlation of these variables, which justifies treating the analysis in groups, averaging the results to have reliability in treating information items.

## RESULTS

### The Women Entrepreneur: Demographic Characteristics

Generally, the first variable analyzed in these types of studies is the entrepreneur age. The Global Entrepreneurship Monitor (GEM) performs and processes worldwide surveys on attitudes, activities and aspirations of entrepreneurs since 2002. In 2010, GEM surveyed 175,000 entrepreneurs in 59 economies. When GEM analyzes the issue of age suggests that the age group of 44 years old is the category most prevalent in driven innovation global economies. The prevalent age in Saltillo was 40 years and in Torreón 47 years. The mean of these two results is 43.5. Moreover, the average age of San Juan, in Puerto Rico is 45.7 years; being within the age ranges of the two cities of Coahuila. It would be worthwhile further investigation, as the innovation-driven economies are more associated with developed countries in general, which is not the case in Mexico.

According to a CEPAL study, the largest group of women entrepreneurs in Mexico has between 31 and 45 years old. Is in this range that productive and reproductive age are juxtaposed. The percentage of married women is higher among entrepreneurs (62%) than among employed women in general (38%), which would support the view that entrepreneurship provides greater opportunities to reconcile personal and family life. Meanwhile, this and other studies noted that “entrepreneurs have a higher educational level than their male counterparts” (Heller, 2010).

In the Saltillo sample greater representativeness is obtained between the ages of 31-39 years and 48-55 years old, both with 24% each. Only 4 people were identified within the dynamic of young entrepreneurs with a range between the ages of 24 and 31 years and 5 of those were adults over 55 years old. The average age of respondents is 40 years. This allows us to think that they are mature entrepreneurs. In the study conducted in Torreón, representativeness was obtained between the ages of 40 and 47 years old with 33%, followed by 24% for ages of 31-39 years old. (Guerrero Ramos, Armenteros Acosta López Chavarria, Canibe Cruz Reyna & García, 2012). The sample of San Juan has a mean age of 45.7 years whereas the representativeness of women ranging in age of 31 to 55 years old are dominant, with 70% of the women tested, the second range is 56 years and over, which corresponds to more than 21%. Young women aged 20 and 30 years were only 8 participants, or 9%.

In the 80s, socio demographic studies on the inclusion of women in the workforce show that their participation was when they were young and single. Nowadays there has been changes since women that are older and married with children have increased their incorporation to the workforce; while sectoral changes focused on the characteristics of the industrial sector (García, B., M. E. White & Pacheco, 1998).

Regarding marital status, this research found that, for Saltillo, 62% of the sample were married or cohabiting, while 7 % were single, 24% divorced or separated, and 7% widowed. In the case of Torreón city, 59% are married or living with a partner, while 21% are single, 14% divorced or separated, and 6% widowed. In both cases, 76 % say they have children while 24% do not. In the city of San Juan, 45% of women surveyed were married or cohabiting, 29% were single, 21% are separated or divorced while 2% are widowed. These results correspond to previous studies of entrepreneurs profiles: married with children. (Valencia Silva M. M.).

The results of this study agree with others in saying that the level of education has a positive impact on the initial entry of a company and its future results and the baseline study as in that study, 65% of entrepreneurs have superior education coinciding with the Spanish average (Valencia Silva MM). In the study for Saltillo, 48% of the sample has this type of university studies, completing 86% when considering middle-level studies (38%). The study found 68% in Torreón with 21% college educated and middle-level, for a total of 89%. In San Juan, 95% of the sample had a university degree, demonstrating the higher educational background of the Puerto Rican women followed by 2% of middle-level. This is a very different data to what is handled at the two main cities of Coahuila.

According to Sánchez-Apellániz (2003), the level of training of women entrepreneurs in Andalucía is not very high, being the majority in primary education or higher education. Those with university studies are usually younger, who preferably work in the service sector. Their main obstacles to creating companies are financial, lack of an entrepreneurial culture, lack of training, considering entrepreneurship a hard task with few rewards and little propensity to take risks. The general profile of women entrepreneurs in Chile has an older age compared to other countries in the GEM environment. They mostly have higher education and are married or cohabiting. Without this representing a categorical fact, the women entrepreneurship could be related to family stability itself. (Amoros & Pizarro, 2006).

Valencia Silva states that in general, the reason for entrepreneurs to start a business is to take advantage of a business opportunity, being a minority those who do it out of necessity; though it is observed that the percentage of necessity entrepreneurs increases in low-income countries. Their study in Spain revealed that 29% have done so much by necessity as for opportunity, and only 8% do so by necessity. (Valencia Silva M. M.)

The reality is quite different in Latin America. This is confirmed by a study conducted in 2010 for Latin America, where it is recognized that in most cases, women become entrepreneurs out of necessity rather than vocation, and the biggest challenge they face is overcoming the lag in several areas, mainly in the reconciliation of family and work. Thus, it is recommended that the type of public policy should be differentiated to boost the SMEs of men and women. (Secretaría Permanente del SELA, 2010).

For both cities, Saltillo and Torreón, the combination of motives of “necessity and opportunity” predominate to undertake; 41% and 47% respectively. It happen the same with San Juan city which was 47%. In the separate analysis item by item, the “opportunity” motive (31%) is higher by 7% compared to that of “necessity” (24%) in the case of Saltillo. For Torreón the motive is “necessity” (27%) and “opportunity” (23%). For the city of San Juan, 11% is for the field of “necessity” and 37% is for “opportunity.”

Some women entrepreneur personal characteristics such as marital status or if there are people who depend on them are also factors that affect their motivations. The sample of entrepreneurs in Saltillo, 45% of women have children under 18 years of age, 31% have children over 18 and 21% have older relatives. In Torreón, only 15 of the 66 women surveyed have no dependents, unlike in San Juan where 39% of the 89 women surveyed do not have any financial dependents and 61% do. A comparative summary of these analyzed aspects is shown in Table 1.

Billing levels were not analyzed in detail because the data collected were not reliable. However, the analysis of the evolution (improvement) of invoicing of the companies in Saltillo since its founding, 77% answered yes, 11% irregular/inconstant, and the remaining 4% in each of the following answers has remained the same, says no, and others. While in Torreón, 40% answered yes, another 40% negative, and 20% say it has stayed the same or unresponsive. When analyzing the sample of San Juan, 40.4% of women saw that the billing levels has evolved successfully, 12.4% responded negatively and 17% see it is irregular.

Table 1 - Comparative Summary Profile of Women Entrepreneurs in Saltillo and Torreon, Coahuila, Mexico, with San Juan, Puerto Rico. Entrepreneurship Dimension

CHARACTERISTIC	SALTILLO	TORREÓN	SAN JUAN
AVERAGE AGE	Average age - 40	Average age - 47	Average age - 45.7
EDUCATION	69% of 31 to 55 years, 14% of 24 to 31 years, 14% over 55 years. 48% have college degrees, surpassing performance levels of high-income countries.	77% of 31 to 55 years, 33% of 40 to 47 years. 68% have college degrees, surpassing performance levels of high-income countries.	70% of 31 to 55 years, 21% of 56 to 67 years, and 9% of 20 to 30 years. 95% have college degrees, surpassing performance levels of high-income countries.
MOTIVATIONS	Predominates by 41% the conjunction of motives, followed by Opportunity (31%).	Predominates by 47% the conjunction of motives, followed by necessity (27%).	Predominates by 47% the conjunction of motives, followed by opportunity (37%).
BUSINESS SECTOR	Trade (39%), services (25%), 36% (Industry).	Services (41%), Trade (33%).	Services (57%), industry (29%), trade (11%).
ECONOMIC DEPENDENTS	76% of women entrepreneurs have dependents. (Younger or older children).	77% of women entrepreneurs have dependents. (Children or family).	61% of women entrepreneurs have dependents. (Younger children, older or elderly relatives).

Table 1. Shows the behavior of the characteristics observed in the entrepreneurial dimension of the three cities.

Regarding the affiliation with professional associations, of 29 women entrepreneurs surveyed in Saltillo, 31% considered their active participation in business associations, in Torreón, only 5 of the respondents (to 7.5%), while in San Juan 43 (48% ) of the 89 women surveyed expressed belonging to some professional association, showing that the Puerto Rican woman is interested in their business environment.

Global Entrepreneurship Monitor found that companies that exceed 3 years of operations can be considered as consolidated. The 29 companies studied in Saltillo are micro enterprises. The analysis of its age shows that 80 percent are companies that can be considered consolidated as they have over 3 years; even 17% have 11 years up to more than 20 years established. There are three of them with more than 20 years old, representing 10% of the sample; 28 companies have more than 3 years but less than 19 years. This speaks highly of Saltillo entrepreneurs since they have managed to consolidate their microenterprises when it is known that the most serious problem with SMEs lies in its ephemeral existence. In the case of Torreón, from the total selected sample of 66 entrepreneurs, in the question about the age of the company, 19 people did not answer this reactive, it shall be represented by a "sub-sample." However, Saltillo has 47 companies, 23 of them with more than 20 years old, representing 49% of the "sub-sample," 20 companies have more than 3 years and less than 19 years old. (GEM). The sample of the city of San Juan is represented by 86 women where three did not answer the question. From 86 companies, 47 companies (54.6%) have 3 years or less, i.e., these are companies that just constituted themselves; 39 companies (45.3%) have more than 3 years constituted and 8 consolidated microbusinesses with over 20 years of experience in the market, which made up 9.3% of the sample.

Finally, the activities conducted prior to the establishment of the company are analyzed. A crucial element is the creation of a business plan for the company. It is amply demonstrated in the literature that women entrepreneurs generally do not develop a business plan. Another aspect studied in the process is the definition of business objectives as there is a consensus that women prioritize objectives that are not economic. In this study, 79.3 % of Saltillo respondents did not develop a business plan, while 3.4% did not answer this question which is equivalent to one respondent. In Torreón, 67% of the respondents did not develop a business plan. It is important to notice that in the case of San Juan, 56.2 % of the 89 women surveyed indicated developing a business plan, while 41.6% did not.

In processing the comparison of the results obtained in the city of Saltillo, Torreón and San Juan, there is justification, see Table 2. The averaged validation of the Cronbach's alpha for the economic, personal and social results allows us to infer that the results arising from the comparative has a good level, as it is in the interval confidence of 0.8 to 0.9.

Table 2. Comparative reference of Cronbach's alpha regarding the results.

Results	Economic: **These results are formed by 5 items: "Sales;" "Benefit;" "Market share;" "products or services offered" and "Overall results."	Personal: **These results are made up of 6 items: "Personal satisfaction;" "Self-esteem;" "Quality of personal life;" "Family Relationship;" "Emotional relationship" and "Reconciling professional life."	Social: **These results are made from 3 items: "Social relations;" "Public visibility" and "contribution to society."
* Cronbach's alpha in the processing of Saltillo.	0.844	0.722	0.767
* Cronbach's alpha in the processing of Torreón.	0.938	0.925	0.900
* Cronbach's alpha processing in San Juan	0.892	0.875	0.836
<b>Average</b>	0.891	0.840	0.834

\* Cronbach's alpha below 0.5 shows an unacceptable level of reliability; if it takes a value between 0.5 and 0.6 could be considered as a poor level; whether it be between 0.6 and 0.7 will be at a weak level; between 0.7 and 0.8 would refer to an acceptable level; in the range 0.8-0.9 could qualify as a good level, and if you took a value greater than 0.9 would be excellent; in terms of the Pearson correlation between items. \* Correlation is significant at the 0.01 level (unilateral). \*\* Correlation is significant at the 0.05 level (unilateral).

The results of the enterprises were assessed by their owners. They considered how they had been in the last three years through 14 items, which were distributed in frequency tables; to be empowered to obtain the correlation between the 14 items grouped into three types of results: Economic, Social and Individual with the validation of Alpha Cronbach (Table 2).

## LIMITATIONS OF THE STUDY

The study has a small sample. Women entrepreneurs have little time available. It was very hard to get them to reply to phone calls, to appointments to deliver the questionnaires and in turn answered them. Also, this is a sample selected by choice, not at random; therefore, the results are restricted to it.

## CONCLUSIONS

There are no recent studies in Mexico to define and systematize a profile of women entrepreneurs. The antecedents found in 1993 established a profile from a questionnaire administered to 178 women entrepreneurs, mostly from central Mexico, who attended the first meeting of Women Entrepreneurs. Researching entrepreneurship of women is an indicator of economic growth and social development. Thus, the present empirical study contributes to understanding the role of women entrepreneurs and display data that are useful for both: people who study entrepreneurship as a whole, as well as for public, educational or social institutions who seek to impact through policies, programs and initiatives that encourage and support entrepreneurial activity of women and improve gender equity indicators in the country and its regions.

The research may give a better perspective if it elaborates into gender inequalities that exist within the business and the broader context of women in positions of management on priority areas in each of the region sectors. The study, however, allows us to state that, in general, the characteristics of women

entrepreneurs are very similar in the cities of San Juan, Puerto Rico, Saltillo and Torreón, by size and analyzed variables. Following the main similarities and differences are taken up.

The average age of women entrepreneurs is more similar between Torreón and the cities of San Juan (47 and 45.7 years respectively), and slightly different from that observed in the city of Saltillo, which was 40 years. The percentage of women with university studies is significantly increased in the research conducted in San Juan, 95%; whereas in previous studies, in Torreón was 68%, and in Saltillo was much lower, 48%.

In all the studies conducted by the authors for the three cities, there is predominance of the conjunction of motives for undertaking, followed by the necessity in the case of Torreón, and opportunity in the capital cities of Saltillo and San Juan. The Trade and service sectors are where most women undertake according to previous studies which are confirmed in the three cities compared. A high percentage of women entrepreneurs (more than 76% in Torreón and Saltillo), and over 61% in San Juan, have dependents.

In terms of membership in associations the behavior was very irregular in the three studies. In Saltillo 31% considered their active participation in business associations, in Torreón, only 5 of the respondents (for 7.5%), while in San Juan behavior was much more favorable. A total of 43 women, 48% of the 89 women surveyed expressed belonging to some professional association.

Regarding the age of the companies, the percentage of firms with more than 20 years was very significant in the study of Saltillo, where 49% of companies had more than 20 years old. In the study of Torreón companies with more than 20 years was 17%, whereas this percentage is reduced to 9.3% in the city of San Juan.

As for the development of a Business Plan, the behavior was similar in the cities of Coahuila, Torreón 67% and Saltillo 79.3% did not develop a Business Plan. However, the study results of San Juan impact favorably. Fifty six point two percent (56.2%) of the 89 respondents indicated that they developed a Business Plan. Not developing a business plan is an international problem for SMEs. It will be recommended to study that practice from the city of San Juan to encourage better development of entrepreneurs in Coahuila and Mexico in general, where a problem in this regard has been detected.

To generalized results is required to expand the samples probabilistically by sector, covering other cities in the state, which we will continue to do as part of the research project we are developing. However, the results presented here are useful, as is the capital of Saltillo and Torreón being one of the fastest developing cities in Mexico, as is San Juan, the capital of Puerto Rico. In addition, behavior analyzed generally coincides with previous studies and corroborate them.

# INTEGRATING REAL-LIFE DATA, COMPETENCY-BASED EDUCATION AND TECHNOLOGY WHEN TEACHING STATISTICS

Juan Rositas-Martínez, Universidad Autónoma de Nuevo León

Joel Mendoza Gómez, Universidad Autónoma de Nuevo León

## ABSTRACT

*This research focuses on proposing answers to crucial questions for improving statistics teaching. There is a perception not yet overcome that statistics is abstract, not useful, rigid, that generates anxiety and negative attitudes especially in management science and socials students. Neumann, Hood and Neumann (2013) provide an overview of recent research on teaching and learning statistics. Makar & Ben-Zvi (2011), Garfield & Ben-Zvi (2007) and Sheaffer (2001) have suggested teaching approaches that include more real-life data and less theory, more data analysis and intuition-based knowledge building supported on active student participation and suitable technology and software. Research findings on how student learns, competency-based education, teamwork and communications and information technologies provide the platform to device and test new answers. Our study reports results achieved in our university (UANL) from a pilot sample. We share these results with all those statistics teachers, instructors in business and industry organizations facing these challenges.*

**JEL:** A20

**KEYWORDS:** Statistics Education Research, Teamwork, Competency-based Education, Statistics Software

## INTRODUCTION

Modern societies need competent employees and citizens that may function properly in our information-laden organizations. One critical skill that competent citizens (and future competent citizen, i.e., students) should achieve is statistical literacy. In regard with this concept, statistical literacy is the ability to understand and think critically about data, statistical methods, and results interpretation as “basic skills” or minimal knowledge achieved by all citizens. These skills also include desired habits of mind, attitudes and general awareness, since data variation and chance are omnipresent in modern life (Gal, 2004).

We should expand the statistical literacy concept to include the ability to understand and critically evaluate findings from recent research discussed in newspapers, magazines and journals that can make a substantive difference in personal, professional and policy-making decisions, and in quality of life (Wallman, 2003). Watson (1997) detailed what statistical literacy should include: 1) a basic understanding of probabilistic and statistical terminology; 2) an understanding of statistical language and concepts when they are embedded in the context of wider social discussion; and 3) a questioning attitude one can assume when applying concepts to contradict claims made without proper statistical foundation. A more advanced set of statistical knowledge and skills beyond basic literacy may and should achieve by some people such as college and graduate students, and even technicians or incumbents of certain industries job, such as manufacturing.

There is a perception not yet overcome that statistics is abstract, not useful, rigid, that generates anxiety and negative attitudes especially in management science and socials students (Neumann, Hood and Neuman,

2013). Our exploratory in-class research focuses on proposing answers to overcome these crucial perceptions and questions when teaching statistics.

## BACKGROUND AND LITERATURE REVIEW

This section summarizes the background or context of this pilot exploratory research and the previous studies related with crucial questions in reference with challenges when teaching Statistics and efforts to improve it.

Context or Background of this exploratory research: The background or context of this exploratory research is a statistical analysis course taught in a school of business named FACPyA UANL, a university located in Monterrey, México ([www.uanl.mx](http://www.uanl.mx)). This course is pursuing a competency-based education model. Some relevant details of this course are the following.

### Course: Statistical Analysis in Management Process Course

Purpose: This course will help FACPYA student achieve correct applications of statistical analysis in the management process and its environment, supporting the general and specific professional competencies as stated in UANL educational model.

Specific Competency Supported by This Course: This course supports the specific competence related to the optimal resource management of any organization through the responsible use of innovative technologies and processes in decision-making, performing advisory functions or specialized consulting to help create value and improve its competitive position.

### Course Expected Outcomes

The student will identify the fundamental concepts of statistics, data description, through the effective management of data grouping and presentation techniques and analysis of measures of location and dispersion.

The student will demonstrate the understanding of concepts of probability, its rules, as well as some discrete distributions for the proper handling of the normal distribution as a tool for parameter estimation and hypothesis testing (mean, proportion, correlation methods and regression coefficients).

The student will demonstrate the understanding of concepts of correlation and regression between two variables applied to a specific problem.

The student will present a research project with information from a real company in which he/she applies the acquired knowledge in this course.

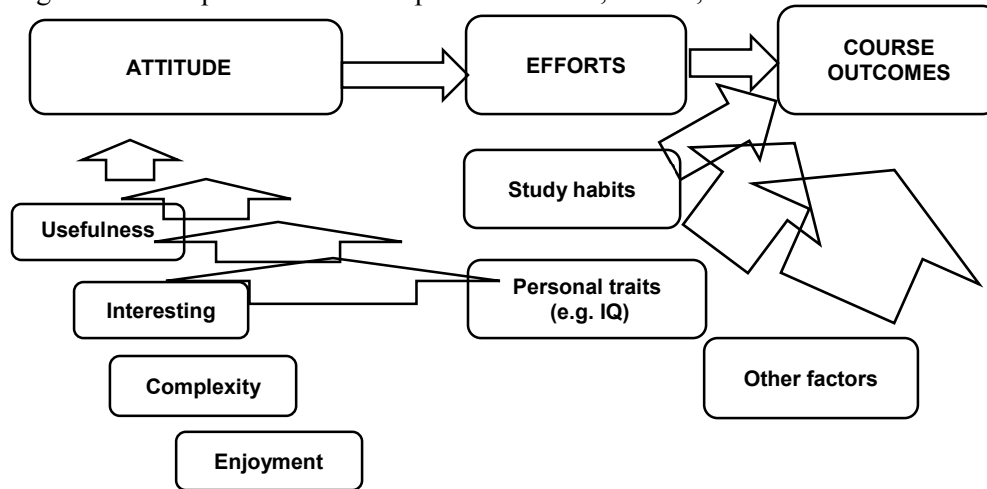

In line with recent research on teaching and learning statistics, in this course we promote the use of real-life data when teaching statistics, since several researchers have been suggested implementation of teaching approaches that include more real-life data and less theory (Gardfield and Ben-Zvi, 2007, Scheaffer, 2001, Makar and Ben-Zvi, 2011, Neumann, Hood, and Neuman, 2013).

### Conceptual Model: Factors Impacting Course Outcomes

We show in Figure 1 the model that we are using to understand and improve teaching statistics process.

Data collection and statistical analysis in this exploratory research were a collaborative effort done during class sessions.

Figure 1: Conceptual Model of Impact of Attitude, Efforts, and other factors in Course Outcomes.

*This figure shows the relationship of effort and other factors in course outcomes, and the attitude components on effort.*

Attitude is very important for attaining outcomes but we have inserted effort as an intermediate variable between them, as seen in Figure 1. Setting goals, or expected outcomes, plus motivation reflected in efforts, leads to developing strategies for achievement, i.e., good grades and skill development. These strategies involve the student in the design processes for monitoring progress or problems solutions for the achieving of those goals. The difference between successful students from unsuccessful students, it is often that successful students set goals, or expected outcomes (Zimmerman, 1989).

Csikszentmihalyi (2013, p. 44) points out that anxiety occurs when the task, or expected outcomes involves a very high challenge, with a very low performer skills, whether the person is a student, a worker, or just any person (See Figure 2). To avoid anxiety, challenge should increase incrementally, but accordingly the confidence and capability of the performer, and at the same rate. The flow state begins to be experienced when these two variables, challenge and capability, are above average and keep increasing in a balanced way. The state of maximum flow occurs when these two variables are located in extremely high levels. Regarding the impact of goals on improving students' attention and greater involvement, i.e., efforts, the author of the theory of flow has declared that "when the goals are clear, the feedback relevant, and challenges and skills are balanced, attention becomes focused and full strength (Csikszentmihalyi, 1997, p. 31).

### Desirability of flow state

The flow state tends to occur when a person's skills are fully involved in overcoming a challenge that he or she may face. Optimal experiences usually involve a delicate balance between the capabilities we have to act and the opportunities available for action (Figure 2). If the challenges are too high, we are frustrated, worried and finally anxious. If the challenges are too low relative to our capabilities or skills, we felt relaxed and then bored. If we perceive challenges and skills have a low level, we are apathetic. In the contrary when

we have to face a high level of challenges that involve the application of a high level of skills, we probably have a deep involvement. This is what separates the states of flow from the ordinary experiences. A climber will experience this state of flow when the mountain demands full force and concentration; a singer when the song calls for the full range of her or his vocal abilities; a surgeon, when the operation involves new procedures or require an unexpected variation. The experiences allow flow states that provide flashes of intense living against a matte background. Right and upper zone of Csikszentmihalyi model (Figure 1). A normal day, with no induced flow states, produces boredom and even frustration and anxiety.

Figure 2: Quality of experience according to challenge and capacity levels.

		Quality of Experience			Quality of Experience
CHALLENGE Level	High	III - ANXIETY	Excitement	IV – FLOW	
	Avg.	Worriiness		Control	
	Low	II - APATHY	Boredom	I – RELAXATION	
		Low	Avg.	High	
		CAPABILITY level			

*Based on Csikszentmihalyi (1997, p. 31), this figure shows the relationship of Capability level and Challenge level that induce quality experiences in work, study, sports, artistic or other activities. The ideal path when designing learning activities is to prepare capabilities level of students in order to start from relaxation, then to induce a sense of control (self-esteem,, and finally increase the challenge level to induce flow.*

A person who experiences a state of flow is completely focused and engaging with extreme psychic energy. His or her mind does not leave any room for distracting thoughts or irrelevant feelings. In this case, self-consciousness disappears (rapture or *arrobamiento* in Spanish), but one feels stronger than normal. The sense of time is absent and hours seem like minutes. In extreme state of flow, one feels as if the time would not be elapsing (Csikszentmihalyi, 2013). When the whole being of a person expands into a fully functioning body and mind, anything you do is worthwhile by itself; living becomes its own justification. In this harmonic convergence of physical and mental energy, life finally takes his own sense (Frankl, 2006).

Flow states inducement in oneself or in people with whom we have contact, is important in several areas:

- 1) In everyday life because we improve the quality of life and well-being, also called euphoria,
- 2) In education, besides making it more enjoyable or pleasant, flow states impact intensity and duration of the student's attention favorably,
- 3) In work, since it improves the quality of life at work, beneficial psychological states are experienced, and most likely, following the HR model of Hackman and Oldham (1976), flow could also increases job performance.

4) In cultural activities, such as arts, or in leisure and hobbies flow may boost creativity and performance. It shows up when a musician, for example, he/she wonders and enjoys bright performances in such a way as becoming ecstatic or in rapture, or experiencing euphoria.

The orientation towards competency approach, high involvement, meaningful learning and group collaboration, implies that the professor designs a working structure in which students organize and develop their work as part of a team or a group (Fink, 2004).

In teamwork literature, a distinction between group and team is done by identified the interdependence of the members of the group with respect to the task. Thus, the greater the interdependence the greater the need for interaction between members, i.e. the closer the interaction, and they will be identified as a team (Fink, 2004, Salas, Rosen, Burke and Goodwin, 2009).

Related to this, the attaining of a common result, i.e., a collective product from pursued by the team, is another relevant feature of teamwork. To walk this step from group to team, instructional strategy requires a strong emphasis on the learning and application of concepts, i.e., that the activities of the teams of students engage them in these aspects (Michaelsen and Knight, 2004). For this, the implementation of activities in each topic of the course program should be increasingly oriented from a simple approach to a more complicated level. This promotes learning and allows teams a great cohesion, a situation that can make them more productive for next steps (Birmingham and McCord, 2004).

Behind the whole work, on one hand there is a highly meaningful learning because team members can provide more volume and/or a great diversity of inputs. On the other hand, it can be achieved a remarkable development of the group by increasing the interaction between group members (Birmingham and McCord, 2004, Bonals, 2013).

In following this approach, teaching of statistics, in our case, collaborative and teamwork applies from the basic concepts of learning and data generation, throughout its collection and processing, analysis and interpretation, done by students but coached by the professor. An example is to develop a small survey in class in reference to students opinions about usefulness, complexity, like/dislike, interest in the subject, and personal characteristics of students and environment, and go through the full experience up to results interpretation, keeping in mind one or more hypotheses. With an increased confidence in this process and a feeling of purpose and quality control, students expand the sample interviewing schoolmates in other statistical classes.

Another example is the team's division of labor and competition when throwing (dropping) a "dart" to a "100" line level marked in green and 80 and 120 in red on a 1millimeter precision graph paper board, because one student drops the dart, a second student reads the result, and a third one registers results and input them at a PC. By the way, the "dart" is made from pencil with a needle inserted in pencil eraser. Besides that there is an in-focus projector connected to the PC and Excel applications developed for this purpose, and the group can watch right away the normal curve that shows up when the full collection of data are processed and displayed. Thereafter it is the proper time to explain the normal curve full topic at class, now that they are relaxed, feeling that they have control and ready for higher understanding challenges, i.e. we are moving bottom up in right sides quadrants in Csikszentmihalyi's model (Figure 1). You may see this process via our DropBox link. [www.dropbox.com/sh/emvwi5dg3megg1ns/1oy5PScX6-](http://www.dropbox.com/sh/emvwi5dg3megg1ns/1oy5PScX6-)

## DATA AND METHODOLOGY

In this section, we explain the methodology, based in our teaching experience and Csikszentmihalyi ideas, to conceptually define negative perceptions and operational levels found for them, and actions to overcome

those negative perceptions about Statistics learning, though competency-based learning, teamwork and use of accessible communication and information technology. We also present the instruments and statistical methods used to collect and process data and ascertain the impact of efforts in course outcomes. The explanation of this is via the following tables. As we can see, in Table 1, we have listed negative perceptions, and we have proposed actions to revert the negativity of them. We include also some examples to do so. In Table 2 and Table 3, we define the meaning of outcomes and efforts, since we will be using regression analysis methods to capture the impact of efforts in outcomes. This, as a first approach to a structural equation model emerging from our conceptual schema depicted in Figure 1.

Table 1: Negative perceptions in reference to Statistics, and overcoming actions and examples

Perception to change	Actions to change perception	Examples
Statistics is abstract.	Generate and analyze concrete real-life data.	Students measure their body weights, heights and calculate body mass indexes. Visualize used car prices as a function of car millage using an Excel scatter diagram. Each student analyzes a different car.
Statistics is not useful.	Scatter diagram of car prices versus millage from data published in my local area newspaper.	How much to pay for a used car, today and in my city.
Statistics generates anxiety.	“Play with darts” and compete in-class teams to get as many 100s as possible. Try to get them close to the 100 mark; as many as possible.	Generate the corresponding distribution curve for each team using Excel. Calculate and interpret average and variance, and percentage in $100 \pm 5$ interval. Check how close is each team to a bell-shaped normal distribution curve.
	Throw two dices and register sums resulting by teams.	Compare how close is each team outcome to a triangular distribution.
Other negative attitudes	As needed.	As needed.

*This table lists in first column three of the most cited negative students perceptions in literature associated with Statistics learning effort, In second column our suggestions to design learning activities to overcome the negativity of each perception, and some examples of those actions in column 3.*

Table 2: Statistics course outcomes

Outcome level	Meaning in survey	Outcome level tag for researchers only
1	I did not meet my objective. For example, “my objective was to get a 100”, or “my objective is just to pass” or “get a good grade” but I did not achieve it.	Very low
2	I got my objective just partially or less than expected. For example, “I got a good grade in concepts but I just passed in problems section”.	Low
3	I just met my objective. For example, “I got almost what I was expecting”.	High
4.	I exceeded my objective. For example, “I got a higher grade than expected”.	Very High

*This table describes the meaning of each course outcome level, as a semantic scale. This scale is included in questionnaire. The third column shows a short tag for each level code. These tags are not shown to respondents so they may be induced to read the meaning of each level and choose carefully.*

Table 3: Student Efforts in Statistical Course

Effort level	Meaning in survey	Effort level tag for researchers only
1	My effort was minimum or scarce.	Very low
2	I made good effort but I did not take my effort forward when difficulties arose.	Low
3	I worked hard even when difficulties arose.	High
4.	I followed all the recommendations made by my professor for a careful exam preparation. I surmounted any difficulty.	Very High

*This table describes the meaning of each course effort level, as a semantic scale. This scale is included in questionnaire. The third column shows a short tag for each level code. These tags are not shown to respondents so they may be induced to read the meaning of each level and choose carefully.*

We also should have to keep in mind that in a real world job as in classroom activities, experiential activities must have the characteristics of sports groups: clear goals, joint tasks, timely feedback and recognition for group for individual contributions to the achievements.

## RESULTS AND DISCUSSION

In our case, a statistics teaching class, collaborative and teamwork applies, from data generation through their collection, processing, analysis and interpretation as experiential activities for students. An example is to develop surveys in class and go through the experience of collecting information, capture, process, interpret and write results using information and communication software and classroom equipment, keeping in mind one or more hypotheses all the way.

Shown next are the main findings when applying the methods we have suggested for teaching Statistics, explained in previous section. We have used codes from level 1 to 4 for a semantic scale; and in general, code 1 is for very low level, code 2 for low, 3 for high, and 4 for very high level.

Results in reference to the usefulness of statistics are that 71% of the group or class said that it is substantial (Code 3) or very useful in her/his life (code 4). Considering the intensity of scale as metric, the hypothesis that what is being learned is not useful, it is rejected with  $t = 11.09$  and  $p\text{-value} = 0.000$ , reaching the limits between 2.8 and 3.6 at 95% confidence, which confirms the substantial usefulness deemed by students.

Regarding on how interesting or uninteresting is Statistics, as it is being taught, results are favorable to interesting side since 65% think it is considerably interesting (Code 3) and 29% as very interesting (code 4). Only 6% said it was just some interesting or nothing interesting at all. The hypothesis that Statistics is not interesting is rejected with  $t = 16$  and  $p\text{-value} = 0.000$ , reaching the limits between 2.9 and 3.5 at 95% confidence, which confirms the inference that is considerably or high interesting.

In reference to Complexity/simplicity, only 18% felt that the approach of the course was complex or very complex. Favoring simplicity 82% declared that it was simple (Code 1) and understandable (Code 2). The hypothesis that the subject is complex is rejected with  $t = 12.5$   $p\text{-value} = 0.000$ , reaching the limits between 1.5 and 2.2 at 95% confidence.

With respect to enjoyment of statistics as the course is conducted, students said that enjoyment was little, considerably or much, with percentages of 47%, 35% and 18% correspondingly.

An important additional factor, which could influence results, is the method of study performed outside the classroom. The opinion that their method was not considerably good at all accounted for 18% of students; 24% of the class said that methods could be improved. Although 58% considered they have a good method anyway it could be better, they said. No student said she/he has a very good method. In reference to the impact of effort on course outcome that we have proposed in the conceptual model on Figure 1, we have found relevant and statistical significant impact as shown in Figure 3.

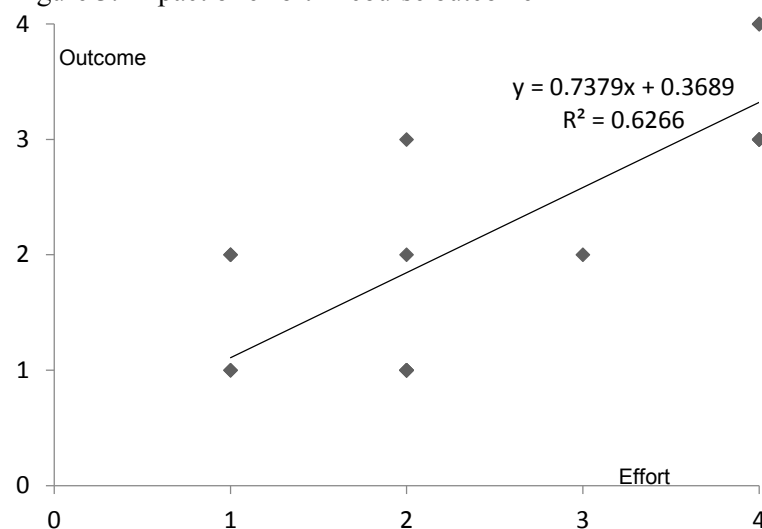

The regression equation found i

$$\begin{aligned} Outcome &= 3.69 + 0.738 * Effort \\ t &= 5.02, p = 0.00 \end{aligned} \quad (1)$$

The 95% confidence interval for  $R = 0.79$  has a low limit of 54%, and 93% as an upper limit. Furthermore, as we can see in Figure 3, the confidence interval is substantial since it explains 63% of outcome. Outcome levels had assigned codes according to table 2. The correlation coefficient between grades and outcomes was 0.81.

The correlation coefficient between grades and outcomes was 0.81, which shows that students opinion on outcomes are consistent with grades.

Figure 3: Impact of effort in course outcome

*This figure shows the impact of effort on course outcomes, the trend line, the regression equation, the correlation and coefficient of determination, estimating that 63% of outcome variance*

## CONCLUDING COMMENTS

Our research focus on proposing answers to crucial questions for improving statistics teaching. On the one hand, there is the traditional perception that statistics is abstract, not useful, rigid, and that generates anxiety and negative attitudes especially in management science and socials students.

On the other hand, there is the belief in society and its decision-makers that there should be a statistical literacy among its citizens for a better quality of life and better decisions-making processes.

In this pilot study, we have tried to give the study of statistics an interesting approach, with meaningful learning, useful and with an existential or experiential approach to understanding, more accessible and even fun. We have been adopted a model to try to induce Csikszentmihalyi flow experiences among students.

With this new approach via a meaningful and competence based learning, teamwork and using modern information technologies, we are getting encouraging and statistically significant results. Based on a questionnaire applied to students, with the new approach the most of them (96%) consider Statistics interesting or very interesting, 82% deem that is understandable and even simple, and 53% that is enjoyable or very enjoyable, and 71% that Statistics is useful or very useful.

We have also proposed a conceptual model that connects attitudes, efforts and results. With information from these same students, we have found that 63 % of the variance in course outcomes is explained by efforts, notwithstanding other matters as luck or other factors which we also will continue researching. The correlation between efforts and results is 0.79, with a 95 % confidence that this correlation parameter, in similar populations, may be located between 0.54 and 0.93.

## BIOGRAPHY

Dr. Juan Rositas-Martínez has a BA in Economics UANL, MBA from Monterrey Institute of Technology (ITESM), Masters Degree Program in Econometrics UANL, Ph.D. in Management, FACPYA-UANL; he also took a Total Quality Management Seminar in Yokohama, Japan, and Seminars in Advanced Research at Georgia State University (Structural Equation Modeling) and Intercultural Competences in University of Arizona. In addition to the Spanish language, he also cultivates English, French and Mandarin.

He has extensive experience as executive in various areas of FEMSA-Monterrey Industrial Group. He has been consultant in the private sector, independently and through ITESM, in the areas of labor compensation, and statistical quality management; in the public sector, through INAP (National Institute of Public Administration-México), and in the educational sector, independently. He has participated as a speaker at various national and international conferences and published articles, books and educational materials in his areas of specialty.

He currently serves as professor and researcher, teaching in BA, Master and Doctoral Programs in CEDEEM - FACPYA Graduate Business School, UANL, with recognition by the SEP-PNPC, participating in various committees to support educational management and as coordinator of a Faculty Research Team with acknowledgement of the Secretary of Public Education (SEP-México) .

# MOBILISING PRIVATE FINANCING FOR DEVELOPING THE SOLAR ENERGY POTENTIALS OF NORTHERN NIGERIA FOR ELECTRICITY GENERATION: A REVIEW

Ado Ahmed, ATB University, Bauchi Nigeria  
A.Q. Ibrahim, Police Academy, Wudil, Nigeria  
Sama'ila Idi Ningi, ATB Univerisyt, Bauchi

## ABSTRACT

*Nigeria is hugely endowed with a variety of economic resources capable of launching its economy on to the orbit of sustainable growth and development comparable to the standard of the industrialised nations of the world. Though an energy deficient nation, Nigeria is blessed with various energy resources ranging from fossil energy resources such as petroleum, natural gas, coal, lignite, tar sands and renewable energy resources such as hydropower, solar radiation, wind, fuel wood, animal waste and crop residue that could potentially and sufficiently support the energy quests for a fast growing 21st century economy. The paper discusses the abundant solar energy potentials of Nigeria and demonstrates how it can be used to meet the electricity generation needs of Nigeria. Central to the theme of the paper also is the discussion of the mobilization strategies for attracting private financing for the solar electricity. The paper notes current government policy on fuel mix diversification in the generation of electricity in Nigeria and the opening up of the electricity sector for private financing of electricity generation infrastructure and concluded that the abundant solar energy potential of the Northern Region can best be developed through mobilising private financing.*

**JEL:** G10

**KEYWORDS:** Solar Energy, Private Financing, Electricity Generation, Economic Growth and Development, Northern Nigeria

## INTRODUCTION

While Nigeria has abundant renewable energy potentials, the nation (despite its energy shortage) is yet to tap its renewable energy resources to provide for its expanding electricity needs. Present energy quests in Nigeria bring a lot of harmful environmental costs. According Akintola and Alamu(2010) significant sources of energy consumption in Nigeria come from firewood and fossil fuels such as coal and oil which inevitably lead to continuing deforestation, depletion of other energy resources and the emergence of adverse environmental impacts. Therefore bringing renewable energy resources to augment energy supply from fossil fuel energy resources will enhance energy availability with minimum environmental costs (Ilenikhena and Ezemonye (2010).

In view of the quantum of funds needed for investment in the renewable energy sector and budgetary constraint, governments are increasingly turning to the private sector for investment in renewable energy. Additionally the reform of the Nigerian electricity supply industry and the avowed commitment of the Federal Government of Nigeria to diversify the fuel mix of electricity generation by including the renewable resources meant that the private investment will play greater role in the utilization of the renewable energy particularly solar energy for electricity generation.

The private sector stands to contribute towards the development of renewable energy resources of the country considering the increased demand for electricity supply, the widening supply deficit and the willingness of Nigerians to pay for higher electricity supply (Adenikinju, 2005) and activities of institutional investors in the Nigerian investment landscape, (with Pension Funding reaching almost 3 Trillion Naira for example), (Egwautu, 2014).

This study adds on the previous studies on renewable energy utilization for electricity supply in Nigeria in many important ways. First the study like others, accepts the need for exploiting renewable energy potentials of Nigeria as a way of reducing energy poverty in the country. It also accepts the need for private sector investment as a catalyst towards enhancing the utilization of renewable energy potentials of Nigeria. The paper goes a step forward by emphasising on the centrality of the private sector in the development of solar energy potentials of Nigeria for electricity generation. The study directs its focus on the solar energy potentials of Northern Nigeria, a region that currently contributes little to the generation pool in Nigeria though the region houses the largest proportion of renewable energy potentials of the country.

## **LITERATURE REVIEW AND THEORETICAL FRAMEWORK.**

### Empirical Review

The campaign for renewable energy resources utilization is based on three considerations which include the finite nature of fossil fuel energy resources as well as the greenhouse gases emission which many scientists believe cause global warming (Nwoke et al, 2008). It is also based on the increasing costs of providing energy especially electricity through conventional fossil fuel (Oluwole, et al 2012).

Generating electricity through solar radiation has been an attractive option for many countries because the fuel is free, its use in the generation of electricity reduces operating costs and also reduces green house gas emission by displacing fossil fuel use for electricity generation (Baker, 2013). Okoro and Madueme (2004) conclude that on the whole, solar energy remains the most attractive and efficient way of electricity generation in a developing economy like Nigeria where there is alarming over dependence on fossil fuel. Solar energy can be used to generate power through solar thermal conversion and solar electric photo voltaic conversion.

Investment in the low carbon sector has not been an attractive one for the private sector due to a number of challenges. Which include regulatory uncertainty, distorted price signals, lack of commercially attractive low carbon project, difficulty in assessing low carbon investment, inadequate access to finance, and insufficient risk adjusted returns (Withana, et al, 2011). The high upfront costs of renewable projects and the high interest rate (over 20%) charged in Nigeria also remain some of the significant investment deterrents in private sector investment in the renewable sector of the Nigerian economy. (Newsom, 2012). Additionally Wiser and Pickle, (1997) report that renewable projects face greater challenges accessing financing.

### Nigeria's Electricity Industry Supply Industry.

The Nigerian electricity supply industry has failed to meet the electricity needs of Nigerians, generating less than 4000 MW of electricity.. Figure 1 indicates the capacity utilization in the industry hovers around an average of 40 % for the most parts of the period 1970-2004 which is indicative of the crisis in the industry.

Consequently majority of Nigerians lack access to electricity and those served receive very irregular service and are short of power for more than 60% of the time (World Bank, 2003; Okoro and Maueme 2004).

*The Solar Energy Potentials of Nigeria:* Nigeria is a tropical country and lies approximately between 4o and 13o with landmass of  $9.24 \times 10^5$  km<sup>2</sup> enjoys an average daily sunshine of 6.25 hrs, ranging between about 3.5 hrs at the coastal areas and 9.0 hrs at the far northern boundary. The sun is the most readily and widely available renewable energy source that is capable of meeting the energy needs of the world without polluting the environment. It can provide more power than any fossil fuel on the planet (Rochelle, 2010).

Figure1: Indicators of Electricity Crisis 1979-2004

Source: Iwayemi, (2008)

*Imperatives of Solar Energy Utilization for Electricity Generation in Nigeria:* The imperative for the utilization of solar radiation in electricity generation has to do with the wide availability of the resource, the need for the actualization of energy security, diversification of fuel mix, climate change mitigation and sustainable development (Chendo ,2002; ECN, 2003; ; FGN, 2010; Hope, 2013).

*Theoretical Framework on Private Sector Financing of Renewable Electricity:* Many theories have been forwarded by scholars to rationalise the inclusion of renewable energy such as solar, wind biomass, hydro etc in the portfolio of energy resources utilized for electricity generation of a country. Some of the theoretical issues discussed in the paper include Portfolio Theory (Awerbuch and Berger, 2003), the Peak Oil Theory((Mediavilla, Miguel and Castro,2008) and the Economic Transaction Costs( Williamson, 1975, 1985; Fabrizio, 2012 )

*How Private Sector Finances Renewable Electricity Project:* Renewable energy projects are capital intensive and require huge quantum of funds to execute. Generally renewable energy financing takes two major forms: the on balance sheet and off balance sheet financing also referred to as project financing (DTI, 2000).

#### Strategic Options for Mobilizing Private Sector Investment in Solar Electricity Generation in Nigeria.

Some of the investment incentives used to promote investment in renewable energy includes: Renewable Portfolio Standards (RPS). This mandates that electricity distributors must include a minimum of renewable

electricity in the total electricity they sell to the public. Renewable Feed in Tariff. This establishes minimum prices for energy from renewable energy injected into the grid. It is also meant to give renewable energy producers long-term contracts that guarantee access to the electricity grid at a constant price. Subsidies and Investment credits. Subsidies are considered as very important incentives and are attractive to investors for their simplicity. However they must be strictly monitored against abuse and to ensure that project costs are not artificially inflated (Righter, 1996; Wiser et al., 1998; Wohlgemut, 2000)

Introduction of Carbon Price. This is meant to penalize fossil fuel generators for polluting the environment (Bushnell, 2010; Drake, 2010; Aflaki and Netessine, 2011).

Facilitating Access to Finance. Renewable electricity generation projects are capital intensive projects that require large upfront costs (beyond the financial capacity of the project promoters) and long construction cost. Additionally the financial community consider such projects to be highly risky and unattractive (Wiser, 1997). Renewable electricity projects therefore require preferential financial considerations in the forms of concessionary financing terms such as lower interest rates, longer repayment period etc.

Structuring Power Purchase Agreement. Closely related to the above is the need for a workable power purchase agreement (PPA). The PPA contract indicates how reliable and stable the long term revenue stream of the project is. Since renewable projects are generally considered risky by financial institutions (Delphi International, 1997), PPA contract could enhance the attractiveness of such projects within the financial markets (Wohlgemut, 2000).

Clean Technology Fund. As part of encouraging private sector investment for renewable electricity generation especially solar and wind the Clean Technology Fund (CTF), part of the Climate Investment Fund was introduced.

## CONCLUSION AND RECOMMENDATIONS

We wish to recommend the following as important initiatives in addition to the existing programmes that could help mobilize the private sector investment for solar electricity generation in Nigeria. Government needs to evolve a robust policy aimed at mobilizing the private sector for investment in the abundant solar energy potentials of northern Nigeria. To encourage private investment flow government needs to develop a package of incentives and guarantees to encourage private investment and provide the necessary guarantees needed to shore up the confidence of the investing community in the Nigerian electricity supply industry. The need for regulatory credibility cannot be over emphasised. There is therefore the need for the development of a robust regulatory structure that is transparent, credible and predictable. Regulatory institutions must be independent and free from political interference.

Financing renewable energy is expensive requiring huge upfront cost which may not be easily met by the project promoters. Such projects are also considered risky and unattractive by the financial market. There is therefore the need for the government to sensitize the financial community about the benefits of solar electricity projects for banks to key into the financing of such projects. Project bankability is surely based on the off take arrangement and the Power Purchase Agreement. Government must effectively ensure that a credible off take arrangement is structured with the distribution companies and a favourable PPA is structured to enhance the attractiveness of investment in the abundant solar energy potentials of the country.

# GAAP VS. IFRS TREATMENT OF LEASES AND THE IMPACT ON FINANCIAL RATIOS

Thomas A. Buchman, University of Colorado  
Peter Harris, New York Institute of Technology

## ABSTRACT

### CASE DESCRIPTION

*As of January 1, 2013, most of the world financial market economies are using International Reporting Standards (IFRS) as the required framework for financial statements. A non-comprehensive listing includes the European Union Countries, Canada, Australia, Japan and New Zealand. In the United States, US Generally Accepted Accounting Principles (GAAP) is still required but adoption of IFRS has support of many accounting firms and professional organizations and is under consideration by the SEC. This case study focuses on differences in the treatment of leases and the impact of these differences on financial statements and selected financial ratios. Students take GAAP financial statements and prepare an IFRS based balance sheet, cash flow statement and income statement. It is necessary to understand both GAAP and IFRS rules regarding leases to address this case study. This case study is suitable for use at both the undergraduate and graduate levels. It may be used in an Intermediate Accounting II, Accounting Theory, Financial Statement Analysis or an International Accounting class, as well as an Investment Finance course. The case can be offered as an individual case study or as a group project.*

### CASE INFORMATION

ACE Corporation (ACE), a publically traded NASDAQ company (symbol ACE), is a manufacturer of electrical automobiles. It is based in Detroit, Michigan and the company has been operating since 1996. The company sells their electrical automobiles to auto manufacturers as well as the retail market on a worldwide basis. Its major clients are Ford, General Motors and Toyota. ACE has captured about 10 percent of the world market of the electrical automobile sales. Its stock sells at 25 US Dollars per share, and its 52-week price range is between 19.75 and 27.15 US Dollars, with a market cap of 10.6 billion dollars.

Their financial statements presented below for the year ending December 31, 2012 has been prepared using GAAP. The controller would like to see the effect of IFRS treatment of leases on the financial statements; you have been assigned this task. In particular, the controller would like to see the impact GAAP and IFRS differences have on balance sheet, income statement, cash flow statement and selected financial ratios. The company would like to adapt IFRS by as early as next year as it is considering a new stock issue in the Tokyo Stock Exchange, which requires IFRS compliance.

Cash paid for interest		\$ 4,000

**ADDITIONAL INFORMATION**

- ACE entered into a noncancelable lease on January 2, 2012 with the following terms:
  - ACE leased specialized machinery manufactured by the lessor, Bell Corp., which enables ACE to manufacture their electric cars in a much more efficient manner. This machinery does not have a resale market and was made specifically for ACE to meet its specifications.
  - The lease term is for 3 years with an annual lease payment of \$10,000. Payment is due on December 31 of each year, with the first payment due on December 31, 2012. At the end of the lease term, ownership reverts to the lessor. There is no option for ACE to buy the equipment.
  - The lessee will pay all executor costs of \$1,500/year which is included in 2102 selling and administration expenses.
  - The estimated useful life of the lease is 49 months (4 1/12 years.)
  - The fair market value of the equipment is \$30,000 on January 1, 2012.
  - The implicit rate of Bell Corp. is 6 percent, and the lessee, ACE, knows this.
  - ACE's incremental borrowing rate is 7 percent.
- ACE Corporation did not sell any plant assets; however plant assets with a cost of \$36,000 and accumulated depreciation of \$6,000 were destroyed in a hurricane. Insurance proceeds of \$10,000 were collected by the company.
- Two million shares of common stock were issued at the beginning of 2012.

4. Securities available for sale were purchased on December 31, 2012.
5. Cash dividends were paid during 2012.
6. ACE's bonds payable have several covenants that involve net income and cash from operating activities. The controller is especially concerned that IFRS treatment of leases does not violate those covenants. She is concerned that renegotiating the debt covenants will be costly to ACE.

## QUESTIONS

- 1- Differentiate between an operating lease and a capital/ financing lease for financial reporting purposes.
- 2- Under GAAP, has this been treated as a capital lease / financing lease or an operating lease by ACE? Why?
- 3- Under IFRS, should this lease be classified as an operating or a financing lease? Why?
- 4- Describe the different reporting results between GAAP and IFRS and make the necessary adjusting entries to conform the financial statements to IFRS compliance for 2012.
- 5- In answering the following parts, keep in mind companies usually prefer to report higher net income and higher cash from operating activities (although accounting research has identified exceptions to this).
  - A. Prepare an income statement under IFRS for 2012.
  - B. Prepare balance sheet under IFRS on December 31, 2012.
  - C. Prepare a cash flow statement under IFRS for 2012.
- 6- Compute the following ratios for 2012, under both IFRS and GAAP reporting:
  - Current Ratio
  - Quick Ratio
  - Cash Ratio
  - Times Interest Earned
  - Debt to Capital Ratio
  - Debt to Shareholder Equity Ratio
- 7- Comment on your findings in 6 above.

# GAAP VS. IFRS TREATMENT OF LEASES AND THE IMPACT ON FINANCIAL RATIOS

## TEACHING NOTES

### CASE DESCRIPTION

This case focuses on GAAP and IFRS differences in the treatment of leases and the grounds for classification as an operating or capital lease. It is designed to have students conduct research on GAAP and IFRS pronouncements. They must compare and contrast the differences in the treatment of leases under the two frameworks. It also requires students to prepare the adjusting entries for the conversion to IFRS. They will prepare IFRS statements, and compute and compare financial ratios for both GAAP and IFRS statements. Finally, they will discuss the status of IFRS lease adoption and the impact of its adoption in the US.

Since this case requires research into GAAP and IFRS pronouncements, it is most appropriate for students who have completed or are currently enrolled in intermediate financial accounting II. It can be used at the graduate or undergraduate levels in a variety of additional financial reporting courses including accounting theory, international accounting, and financial statement analysis, as well as an investment finance course.

### CASE LEARNING OBJECTIVES

The case is designed to have students identify reporting issues and apply U.S. and international authoritative accounting literature by researching the FASB Accounting Standards Codification and the International Financial Reporting Standards (IFRS).

The specific learning objectives are for the student to:

- a) Identify differences in GAAP and IFRS treatment of leases:
- b) Prepare adjusting entries to convert GAAP based financial statements to IFRS income statement and balance sheet,
- d) Prepare an IFRS income statement, cash flow statement and balance sheet and
- e) Calculate several ratios to illustrate the impact adopting IFRS accounting for leases could have on them.

### Suggested Teaching Approach

The case may be offered as an individual case study or as a group project. For more advanced accounting students, this case should be an individual project. It could have a weight of 10-15 % of the final course grade. When offered as an individual project, students will need three to six hours to research and prepare the case solution.

For less advanced students, the case may be offered as a collaborative group project. This would enable students to demonstrate and develop team-working skills. The case presents an opportunity to discuss the status of IFRS implementation in the US and the impact IFRS had on ACE Corp. The in-class review of the solution and case discussion can be completed as part of a 50-minute class.

In grading the case write-ups, instructors should evaluate the identification of relevant issues, proper accounting for the IFRS conversion and computation of the ratios including the computational accuracy of numbers, quality and depth of research as evidenced by proper citations of the literature. We suggest that the instructor explain the basis for grading at the outset.

Pointers for Classroom Discussion.

After the review of the IFRS statements, the instructor may wish to discuss the impact of IFRS. Suggested questions to ask the class are: What impact will IFRS have on ACE Corp.'s income statement, cash flow statement and balance sheet? What are the benefits of adopting IFRS? What are the disadvantages of IFRS?

You may wish to have students research the status of the FASB/IASB discussions on leases..

**SUGGESTED SOLUTION****Question 1: Differentiate between an operating lease and a Capital/ Financing Lease for financial reporting purposes.**

**Solution 1:** Operating lease payments are treated as rent expense and recorded on the income statement. An operating lease is an off balance sheet transaction and is preferred by companies because it lowers liabilities, the debt ratio and does not result in “frontloading expenses” in the early years as does a capital lease.

A GAAP capital lease is treated as a purchase of Property, Plant and Equipment and, therefore, capitalized on the Balance Sheet. Capital leases are termed “financing (or finance) leases” under IFRS. The present value of minimum lease payments required on the lease are recorded as a liability on the balance sheet. The discount rate is the lessee's incremental borrowing or the implicit rate of the lease, if it is lower and known by the lessee. The liability is separated into its current and long-term components, which affects the current ratio.

Pointers for Classroom Discussion

Discuss the differences between rules based US GAAP versus principles based IFRS requirements for distinguishing between operating versus capital/financing leases.

**Question 2: Under US GAAP, is the lease treated as a capital lease / financing lease or an operating lease?**

**Solution 2:** Under GAAP, if the lessee has a noncancelable lease and meets at least one of the four tests listed below, the lease is treated as a capital lease; otherwise, it is an operating lease.

Test 1: Transfer of Ownership Test: If at the end of the lease term, ownership transfers to lessee, then this test is satisfied. Test 1 is not met in this case, as there is no transfer of ownership at the end of 2014.

Test 2: Bargain Purchase Option: If the lessee has the option to purchase the lease at a bargain purchase price, then this test is satisfied. In this case, there is no purchase option (bargain or not), so test 2 is not met.

Test 3: Economic Life Test: If the lease term is equal to or greater than 75% of the economic life of the asset, it is a capital lease. In this case, the lease term is 36 months divided by the economic life of 49 months, yields 73%; Test 3 is not met.

Test 4: Economic Recovery Test: If the present value of the minimum lease payments is 90 percent or greater of the fair market value of the asset then it is a capital lease. In this case, the present value of the minimum lease obligation is \$26,730 (see Table 3). This divided by the fair market value of the leased asset of \$30,000 is 89 percent; just shy of the 90% requirement. Test 4 is not met.

Since none of the four tests is met, the lease is treated as an operating lease to the ACE Corp. under US GAAP. Note should be made that ACE just missed some of these tests by fractional amounts.

Table A Minimum Lease Payments

<u>Date:</u>	<u>Payment</u>	<u>Interest (6%)</u>	<u>Principal</u>	<u>Liability Balance</u>
Jan. 2, 1012				\$ 26,730
Dec. 31, 2012	\$ 10,000	\$ 1,604	\$ 8,396	18,334
Dec. 31, 2013	10,000	1,100	8,900	9,434
Dec. 31, 2014	10,000	566	9,434	0
Totals	<u>\$ 30,000</u>	<u>\$ 3,270</u>	<u>\$ 26,730</u>	N/A

Table A shows the interest and principle payments for each year of the lease. It also shows the liability at the end of each year. The interest expense is the beginning of the year lease obligation multiplied by the 6% interest rate.

### Pointers for Classroom Discussion

Discuss why a corporation has an incentive for making a lease classification as operating rather than capital. The reasons, as discussed above are avoiding recording current and noncurrent liabilities and the frontloaded expenses in the early years; however, there is one positive aspect of a capital lease – under operating leases, the lease payment is classified as an operating cash payment which reduces cash from operating activities. As a capital lease the interest part of the lease payment is classified as an operating activity but the principal reduction payment is classified as financing. Treatment under IFRS of the cash payment on a finance lease is the same.

### **Question 3: Under IFRS, should this lease be classified as an operating lease or a financing lease?**

**Solution 3:** Under IFRS, this lease is clearly a financing/capital lease as the criteria of lease type is based on principles, and not rules. Under IFRS, if the lessee assumes the economic benefit and risks of the leased asset, and the facts of the situation are such that the lease resembles a financing lease, then it is treated as a financing lease. The fact that this machine is specialized in nature for ACE's use, and many of the tests under GAAP are nearly met are indicators of a finance lease rather than operating lease. The lessor manufactured this equipment to ACE's specifications and in effect transferred the risk to ACE upon the inception of the lease. Further, ACE was able to circumvent the capital lease rules under GAAP by making estimates work to its advantage.

### **Question 4: Describe the different reporting results between GAAP and IFRS and make the necessary adjusting entries to conform the financial statements to IFRS compliance for 2012.**

**Solution 4:** In each of the three years of the lease, GAAP treats the operating lease payment of \$10,000 as rent expense on the income statement and no liability is recorded on the balance sheet.

A: Year of lease Inception (2012):

Under IFRS, the financing/ capital lease is treated as a purchase of property, plant and equipment and capitalized on the balance sheet as such for \$26,730. Additionally, the minimum lease obligation is shown on the balance sheet as a liability of \$18,334 (\$26,730 less the year 1 payment of \$8,396). Of this amount, \$8,900 is classified as a current liability and \$9,434 is classified as a long term liability. On the income statement, depreciation expense is \$8,910 (26,730 divided by the lease term of 3 years) and interest expense is \$1,604, for a total of \$10,514.

B: Subsequent to Year of Inception - 2013 and 2014 of lease payments:

IFRS: The \$10,000 lease payment is treated as an interest expense as calculated above; \$1,100 in 2013 and \$566 in 2014 in addition to a depreciation expense of \$8,910. Over the 3-year period, the total expense will be the same (\$30,000) under both methods of reporting (operating v. capital/financing.)

### ADJUSTING ENTRIES 2012 TO CONFORM TO IFRS

- 1- This is a summary journal entry that records the leased asset as a capital lease, records the current and noncurrent portions of the lease liability (as of December 31, 2012), and “reclassifies” the December 31, 2013 lease payment from rent expense to interest expense and a reduction of the lease liability.

<b>Lease asset</b>	<b>26,730</b>
Interest expense	1,604
Lease obligation – current liability	8,900
Lease obligation – noncurrent liability	9,434
Selling and administrative expenses	10,000

- 2- This entry records the leased asset amortization expense for 2012. using straight line amortization.

<b>Amortization expense</b>	<b>8,910</b>
Accumulated amortization	8,910

3. This entry reclassifies the extraordinary loss into the body of the income statement, see the discussion below (in 4) for the reason. The income tax effect of the loss is also discussed in 4, below.

<b>Loss from hurricane</b>	<b>20,000</b>
Extraordinary loss from hurricane	20,000

There is no prompt in the case for the reclassification in 3. Students must demonstrate critical thinking by identifying that IFRS does not allow for the use of an extraordinary item. It is important to point out that we should not be so focused on one issue (lease treatment) that we overlook other issues that should be apparent.

- 3a. Entry 3 assume that ACE made the following entries during 2012 when the loss, insurance recovery and related tax savings were recorded:

<b>Cash</b>	<b>10,000</b>
Accumulated depreciation	6,000
Extraordinary loss from hurricane	20,000
Property, plant and equipment	36,000
Income tax payable	6,000
Tax savings from hurricane loss	6,000

The tax savings was netted against the extraordinary loss on the US GAAP.

4. This entry reclassifies taxes saved from the hurricane loss (which GAAP netted with the extraordinary loss, but IFRS would include with income tax expense); the entry also records the deferred tax effect of switching to IFRS for public reporting purposes, but not switching for income tax purposes.

<b>Tax savings from hurricane loss</b>	<b>6,000</b>
Deferred income taxes	154
Income tax expense	6,154

Adjusting entry 4 assumes ACE made the following summary entry to record income taxes in 2012:

<b>Income tax expense</b>		<b>15,000</b>
Deferred income taxes		1,000
Tax savings from hurricane loss		6,000 (netted against the hurricane loss)
Income taxes payable		1,000
Cash		7,000

It also assumes that ACE would continue to report the lease as a operating lease for income tax purposes, therefore the tax ACE owed for 2012 would not change, but there would be a reduction of deferred income taxes for the tax rate times the difference between the expenses reported under a financing lease (amortization expense plus interest expense) and the rent expense reported under an operating lease  $[30\% * (8,910 + 1,604) - 10,000]$ .

### Pointers for Classroom Discussion

Show that under capital/financing lease treatment, the expense will be greater in the early year(s), resulting in lower income, and lower in the latter year(s), showing a higher income. In the entire term of the lease, each method will yield identical expense totals. Use of the amortization schedule will illustrate this clearly. However, it is worth pointing out that the IFRS treatment of a financing lease is favorable to the company's reported cash from operating activities on the cash flow statement.

**Question 5A: Prepare an Income Statement under IFRS for 2012. Assume that the net income remains the same under IFRS as it does for GAAP and any difference is reconciled in the tax expense and tax payable accounts.**

### **Solution 5A:**

Table B ACE Corp. IFRS Income Statement for the year ended December 31, 2012

ACE Corporation		
Income Statement (in 000, except per share data)		
For the Year Ended December 31, 2012		
Sales		\$270,000
Cost of goods sold		(175,000)
Gross profit		95,000
Selling and administrative expenses	$\$ 31,000 - 10,000(1) = 21,000$	
Amortization and depreciation expense	$10,000 + 8,910 (2) = 18,910$	
Interest expense	$4,000 + 1,604 (1) = 5,604$	
Loss from hurricane	(3) 20,000	(65,514)
Income before taxes		29,486
Income tax expenses	$15,000 - 6,154 (4) =$	(8,846)
Net Income		<u>\$ 20,640</u>
Earnings per share:		\$1.03

Table B shows the impact on the income statement of the conversion to IFRS. The numbers in parenthesis refer to the adjusting entry made to record the conversion to IFRS.

**Question 5B: Prepare a Balance Sheet under IFRS for 2012.**

**Solution 5B:**

Table C ACE Corp. IFRS Balance Sheet as of December 31, 2012.

ACE Corporation Balance Sheet (in 000 except par value) using IFRS As of December 31, 2012 and 2011

### Question 6: Ratio Calculations on December 31, 2012

#### Solution 6:

	GAAP	IFRS
Current Ratio=current assets/current liabilities	2.70	2.21
\$108,000/\$40,000   \$108,000/\$48,900		
Quick Ratio=current assets-inventory/current liabilities	1.45	1.19
(108,000-50,000)/40,000   (108,000 - 50,000)/48,900		
Cash Ratio=cash/current liabilities	0.83	0.67
33,000/40,000   33,000/48,900		
Times Interest Earned =EBIT/ Interest Expense	8.50	8.83
34,000/4,000   49,486/5,604		
Debt to Capital Ratio=Total Liabilities/Total Assets	0.45	0.50
90,000/200,000   108,180/217,820		
Debt to Shareholder Equity Ratio=Liabilities/Shareholder' Equity	0.82	0.99
90,000/110,000   108,180/109,640		

### Question 7: Comments

**Solution 7:** The ratios clearly indicate that IFRS rules result in more conservative ratio results with respect to the current and long-term creditor when compared to US GAAP. Every liquidity ratios is lower under IFRS and the differences are significant. Similarly, all long-term ratios are also more conservative when compared to US GAAP. The implications here is that IFRS will have far greater negative implications on

bond covenant agreements as well as other long and short-term creditor legally binding agreements than US GAAP.

## CONCLUSION

IFRS is the future of worldwide financial reporting and should be included as a major part of any accounting and/or business curriculum in the US, as well as the rest of the world. This case illustrates a situation where a Balance Sheet and Income Statement is prepared using GAAP as a basis and converted to IFRS for comparison purposes, with the focus being from the creditor point of view. In this case study, IFRS rules are discussed, and key lease GAAP and IFRS accounting similarities and differences are addressed and the implications on the corporation's creditors.

## BIOGRAPHY

Thomas Buchman is an Associate Professor of Accounting at the Leeds School of Business, University of Colorado at Boulder. He has over 30 years of teaching experience in the USA, Europe and Asia. He has published articles and presented papers on auditor decision making and corporate financial reporting. He can be reached at buchman@colorado.edu.

Peter Harris is a Professor and Chair of the Accounting and Finance department at the New York Institute of Technology. Previously, he has worked for Ernst and Young LLP. He is an author of over 40 refereed journal articles and over 100 intellectual contributions. He has presented and continues to present seminars to nationally and globally audiences on topics relating to financial reporting and taxation. He is a member of several professional organizations. # INPATRIATION IN GERMAN MNCs: A KNOWLEDGE-BASED VIEW

Torsten M. Kühlmann, University of Bayreuth, Germany

## ABSTRACT

*Acknowledging and integrating the knowledge residing in different organizational units that are dispersed across national borders is a key resource for multinational companies (MNCs) to obtain sustainable competitive advantage in the global market. International assignments represent an important channel for the flow of subsidiary knowledge to the parent company and vice versa. The primary objective of our paper is to explore how inpatriates adopt and disseminate knowledge during their assignments in German MNCs. Using ten focus group interviews with inpatriates and their German colleagues we developed a research framework of knowledge sharing from an individual point of view. Based on this framework we conducted a quantitative survey to test its propositions. Our results suggest that the level of knowledge dissemination conducted by inpatriates heavily depends on the language skills of the inpatriates and on the multiplicity of communication channels that are available. In addition, organizational standards promoting and valuing knowledge sharing between inpatriates and their German colleagues support inpatriates in receiving host country knowledge and providing home country knowledge. As other individual- or organizational level factors do not have a significant impact on knowledge sharing, the possibilities to intentionally manage this process appear to be restricted.*

**JEL:** M00

**KEYWORDS:** Knowledge Transfer, Inpatriation

## INTRODUCTION

Accessing and combining the knowledge residing in different organizational units and across national borders is a major source for MNCs to obtain sustainable competitive advantage in the global market. (Argote and Ingram, 2000; Foss, 2007; Gupta and Govindarajan, 2000). MNCs can develop knowledge in one unit, transfer it across other MNC units located in different countries, and exploit it outside the unit/country of origin. The importance of knowledge transfer as a key organizational resource has triggered considerable research on how to explain and facilitate the flow of knowledge within MNCs (Björkman, Barner-Rasmussen and Li, 2004; Foss and Pedersen, 2002; Minbaeva, 2007). That stream of research has found that knowledge is difficult to transfer across borders. Much of the knowledge to be exchanged between the MNC units is highly contextual, personal, complex, and tacit (Foss, Minbaeva, Pedersen and Reinholt, 2009; Riusala and Suutari, 2004). These characteristics require that knowledge exchange involves person-to-person encounters between the senders and the recipients of knowledge. Additionally, knowledge senders and recipients are rooted in different cultural and institutional contexts that are conceived as sources of friction in the bidirectional flow of knowledge (Gerhart, 2009).

## LITERATURE REVIEW

So far, conceptual models as well as empirical research on knowledge sharing in MNCs are to a large extent limited to the exchange of knowledge between different organizational units (Mäkelä, 2005). The exchange of knowledge on the level of the individual, i.e. from person to person has been widely ignored. We do not know much about how people in geographically dispersed organizational units acquire knowledge from each other and pass their knowledge on to others (Michailova and Mustaffa, 2012; Reiche, Kraimer and Harzing, 2011). The limited amount of research and literature that deals with the role of international assignees as carriers of knowledge has focused on expatriate assignments. (e.g. Bonache and Zárraga-Oberty, 2008; Minbaeva and Michailova, 2004; for a review see Reiche, Kraimer and Harzing, 2009). Our study, however, tries to understand the role that inpatriates play in the knowledge transfer process. Inpatriates are host country nationals who have been moved from foreign subsidiaries to the parent company on a temporary basis. Continuous knowledge sharing is an important aspect of the inpatriate assignment. On the one hand, inpatriates are supposed to acquire knowledge about products, quality standards, production processes and build relationships with parent company members. On the other hand, they are expected to provide their colleagues at headquarters with their specific and often tacit knowledge about business operations, markets, and culture in their countries of origin.

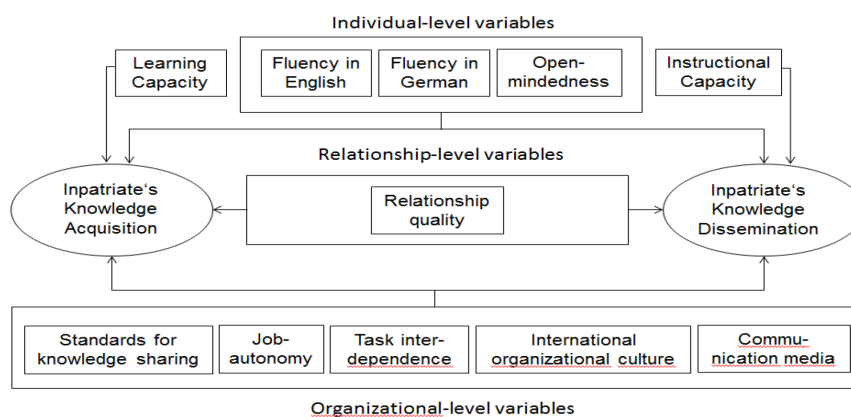

## METHODOLOGY

This study aims to identify factors that support or hinder knowledge sharing of inpatriates and the parent company's domestic colleagues in the working context. Our research approach was divided into two phases: First, we conducted 10 explorative focus group interviews with either groups of inpatriates or their domestic colleagues from three German MNCs operating in different industries as well as from one German university. The focus group interviews were transcribed and subjected to content analysis. Based upon these interviews organizational as well as individual factors influencing the knowledge exchange between inpatriates and their domestic colleagues were summarized in a conceptual model on knowledge sharing between inpatriates and their local colleagues. Following this tentative framework factors on the individual level such as attitudes toward non-nationals or language skills combine with relational characteristics and

organizational level factors such as human resource management and organizational culture to impact on the effectiveness of interpersonal knowledge sharing (see Figure 1).

We conceptualize knowledge sharing as a two-way flow from inpatriates to domestic staff and vice versa. Inpatriates as well as domestic staff simultaneously act as senders and receivers of knowledge. Yet, given the complex and multilevel phenomenon of knowledge sharing our primary research focus is limited to the inpatriate's role in sharing knowledge. Another boundary we drew around knowledge sharing is our focus on the workplace the inpatriate has been assigned to, although we acknowledge that inpatriates can also share knowledge with others outside their work unit or company. Further, at this point we exclude from our discussion the important dimension of implicit vs. explicit knowledge - properties of knowledge, that have been extensively discussed in the literature (for a review see Argote, Mc Evily and Reagans, 2003).

Figure 1: Framework on Knowledge Exchange Between Inpatriates and Their Domestic Colleagues In MNCs.

In the second phase we tested the model via a quantitative survey of 107 inpatriates from different countries. We proposed 12 hypotheses about the influence that individual factors, the quality of the relationship between inpatriates and their domestic colleagues, and organizational context variables have on the sharing of knowledge.

## RESULTS AND DISCUSSION

Major insights from the interviews circled around types of knowledge that are shared between inpatriates and domestic staff, the ways in which they share knowledge during daily work routine, and enabling respectively hindering factors in knowledge exchange. The analysis of our focus group interviews revealed that all the aforementioned three types of knowledge - *know what*, *know why*, and *know how* – are exchanged between inpatriates and their German colleagues. The topics addressed in knowledge exchange include both work- related practice and private /family life. *Know what*-type of knowledge that is exchanged mainly deals with routines and regulations existing in their respective home countries and organizational units. Within the domain of *know why*-type of knowledge inpatriates and German colleagues provide each other with the country-specific values, norms and assumptions governing their actions and traditions. The *know how*-type of knowledge identified in our interviews mainly addresses ways of communicating effectively with members of the respectively other cultural group.

The tests of hypotheses were conducted using hierarchical regression analysis. The majority of independent variables did not account for significant variance in knowledge sharing beyond the variance explained by

the control variable (time on assignment). Only the hypotheses suggesting that the inpatriates' English language skills, the availability of multiple communication channels at the workplace and organizational standards promoting and valuing knowledge sharing between inpatriates and their German colleagues positively relate to knowledge dissemination and adoption, were supported. The results reported here suggest that MNCs are heavily restricted in their chances to support knowledge sharing between inpatriates and domestic colleagues. Most inpatriate characteristics, which might be affected by selection procedures, training efforts or incentive mechanisms are not significantly related to knowledge dissemination. Also, just two variables related to the organizational context and the inpatriate's working conditions – multiplicity of communication channels and organizational standards for knowledge sharing – could be successfully identified as starting points for improving the exchange of knowledge. Therefore, our results contradict many results obtained in previous research about the significance of individual and organizational determinants of knowledge sharing in MNCs.

In particular, our results do not support the notion that a close and trustful relationship between knowledge sender and recipient is of utmost importance for knowledge sharing. An important conclusion from our study, then, is that knowledge exchange involving inpatriates and domestic colleagues seems to be distinctively different from knowledge sharing between other actors within MNCs. The findings lead to several implications for managerial practice. Acknowledging that a multitude of ways to communicate fosters knowledge sharing is a key factor contributing to knowledge sharing, suggests that the work environment should not only enable work-related communication but also allow for private exchange besides work. Both inpatriates and domestic colleagues have to be prepared for communicating in English. English language proficiency should become part of the hiring criteria for inpatriates and – equally important – govern the selection of the domestic colleagues the inpatriate has to collaborate with. Even if the lingua franca in the receiving parent company is English, inpatriates should be provided with training of the local language (in our study German) to get along in the host country outside the workplace. Finally, our findings point to the influence that organizational standards have on the intensity of knowledge sharing. Obviously, formal standards supporting knowledge sharing were a rather effective attempt to sending the signal that adoption as well as dissemination of knowledge is expected from the inpatriate. In order to improve adaptation to these standards the importance of knowledge sharing should be underlined by task descriptions as well as by communication with superiors.

## CONCLUSION

Still, our understanding of how knowledge is exchanged between inpatriates and domestic staff remains fairly limited and remains at an exploratory stage. We have contributed to this emerging field of research by identifying some possible enablers and barriers of individual-level knowledge sharing. Future research should link back knowledge sharing at the individual level of analysis with the flow of knowledge across organizational units of MNCs.

# ANALYSIS OF THE CRITICAL ASPECTS OF THE GENERATIONAL TURNOVER IN FAMILY SMEs

Elena Cristiano, University of Calabria

## ABSTRACT

*Family businesses, which aim at surviving today, have to deal with a precise modality: to ensure their continuity, entrepreneurs have to ensure the transfer of leadership from one generation to another inside of them. We do believe that this matter is worth being analyzed, since the succession, from one generation to another, can be considered a crucial variable in maintaining family SMEs over time. Therefore, after investigating the main features, problems and factors leading to the succession processes, in the second part of this paper an empirical analysis will be carried out, by comparing several European countries on the basis of data from the European Commission. This paper contributes to enrich, from a theoretical point of view, the conceptual framework used for investigating the dynamics in the continuity of SMEs. Moreover, empirically, it contributes to the increasing literature on family businesses, by comparing several European countries in order to understand what originates the longevity of family SMEs.*

## INTRODUCTION

The family business has attracted much research in the recent decades. One of the most relevant issue researchers dealt with is the theme of succession. In fact, it is up to the entrepreneur and to his ability the most relevant advantage and one of the most incisive factors of success for the business itself. The family businesses have to deal also with other delicate issues. In the paper, therefore, we refer to the transition processes, such as the managerialization, the professionalization of the Board of Directors (BoD) and the management, the succession of the entrepreneur, the transfer of the enterprise. In this paper, after having briefly going through the literature on the issue, attention will be paid on the factors which cause the process of generational turnover and on the aspects which characterize it. In the second part of the work, there will be an illustration of the results of an empirical analysis conducted on a sample survey of businesses, on the basis of the data provided by the Italian Observatory on the Family Businesses (the definition of which is “AUB”, Aidaf (Italian Association of Family Businesses), Unicredit and Bocconi University) and of the data provided by the European Community. This work aims at contributing to the studies relating to the dynamics of the family businesses, both from a theoretical and from an empirical point of view.

## LITERATURE REVIEW

The current wide and rich literature relating to the family businesses has highlighted different issues which the studies deal with, such as the *generational turnover* (Schillaci, 1990; Piantoni, 1990; Demattè-Corbetta, 1993), the *understanding of the success and development factors* (Tomaselli, 1996); the *modalities and peculiarities of the models of management* (Corbetta, 1995), the *corporate governance* (Montemerlo, 2000), the *orientation towards the value and the valuation of family businesses* (Tiscini, 2001; Viganò, 2005), the *specificity of the small and medium-sized enterprises* (Compagno, 2003). In retracing the literature with regard to these issues, attention will be paid on the aspects relating to the main matter of this study, that is the generational turnover. With reference to the question of the business succession, the positions of the scholars converge in considering it as a process which requires an accurate planning (Barach and Gantisky,

1995; Ip and Jacobs, 2006), the purpose of which is guaranteeing the continuity of the business. The generational turnover is a process through which a new generation takes the place of an old one, a generation intended as a group of people *with values, needs, conducts, experience, culture and behavior patterns which are relatively homogeneous inside the group, but significantly different from the other similar groups* (Dell'Atti, 2007). Much research, which is carried out both in Italy (Devecchi, 2008; Corbetta and Lassini, 2002; Gnan and Montemerlo, 2003), and all over the world (Beckhard and Dyer, 1983; Le Breton-Miller et al., 2004), identifies the high risk of business closing down in the phase of the business succession to the second family generation and, still more, to the third one. Nevertheless, the processes of business succession may guarantee the continuity of the business activity but not necessarily inside the same original family.

In fact, in order to guarantee the survival of the business, the entrepreneur might also consider as necessary (for scarcity of financial resources and/or in the absence of a valuable successor) or favorable (in case of an advantageous transfer price and/or in case of low income prospects) to decide to sell the whole business to third parties (Lassini, 2005). In this situation, the business continuity is ensured by the business transfer, but it implies the interruption of the relationship with the family. Therefore, the success of the generational turnover is the result of the capacity of the family business to keep existing with the passing of time, thanks to the succession in the control of the business of one or more heirs of the same family (Corbetta, 1995). In the medium and big-sized family enterprises the succession may also imply the entry of some external managers who may be in charge of the business management totally or in part (Compagno, 1999). Instead, in the small family businesses, for economic and emotional reasons, generally, the entrepreneur carries out the generational turnover by transferring the ownership and control of the business to his/her son/daughter or to his/her children in general, identified as his/her successors, on the capacities of whom the income prospect of the business and its survival depend.

Therefore, in the small-sized family businesses, led by an entrepreneur, the process of generational turnover depends essentially on the entrepreneur himself/herself (Beckhard, Dyer, 1983) and on his/her business idea (Sorci, 2002). The leading role of the entrepreneur, together with the scarcity of financial resources, does not facilitate the carrying out of a planning of this particular time of the business activity (Compagno, 2003; Piantoni, 1990; Schillaci, 1990), which represents the most important challenge that such businesses have to take on (Le Breton-Miller et al., 2004). For the generational turnover the figure of the successor is fundamental and his/her personal experience is relevant in the process of succession. In this respect, it is still more necessary (more than in other businesses, which are more structured and less centralized) that the entrepreneur is fully aware of the risks relating to this period of the business activity. These risks have to be promptly faced, thanks to an appropriate planning to be carried out in a long term and not necessarily only formally (Barach et al., 1988; Corbetta, 1995; Dascher and Jens, 1999; Piantoni, 1990; Rovaris, 2001; Sheperd, Zacharakis, 2000; Ward, 2000). In this respect, it is believed that, in a small family business, the success of a generational turnover depends essentially on the entrepreneur's capability to transfer, to his successor, through various modalities of preparation of the succession, the capital of intangible resources (often tacit and non-transferable), which are part of him (Barach, Ganistsky, 1995; Kelly et al., 2000; Le Breton, Miller et al., 2004; Sorci, 2002).

Even though, in many cases, the succession causes the decline, it may also represent an occasion of development for the family business which, by using the new successor's skills, may carry out those innovations of product, process or organization which are made necessary by the changes in the competitive environment and which are essential to keep or increase the business competitiveness in the time (Devecchi, 2007; Mastroberardino, 1996). Undoubtedly some characteristics of the small family business increase the risks that the generational turnover, inside the family, produces negative effects on the capacity of the business to create long-lasting value. In fact, if on the one hand, it is acknowledged that the family businesses, also the small ones, have some characteristics for their success, such as their adaptability and, above all, the creation of distinctive skills, which may not be easily imitated and "seized" by the competing

undertakings (Corbetta, 1995), on the other hand, it is necessary to be also aware that such strong points may represent some durable sources of competitive advantage only if a process of transmission of the entrepreneurial know-how is carried out *vis-à-vis* the successive generations and if the risk factors, linked to the existing relationship among family, business and entrepreneur, are appropriately coped with. Such relationship characterizes mainly the small-sized family business, led by an entrepreneur, thus making it exposed to influences and conflicts (Miller *et al.*, 2006).

## METHODOLOGY

The methodology, which was used, is based on a critical analysis of the literature existing on the complex issue of the generational turnover in family businesses, with reference both to the definition aspects and to the characteristics which are typical of such process. For this paper, a specific definition has been adopted. According to this definition, a business is a family one when one family or few families, linked by close family ties or affinities, own a risk capital share which is sufficient to guarantee the control of the business, in which at least two members of the family work, and when there is the will of keeping the ownership and the management inside the family, through some processes of generational turnover. Moreover, attention is exclusively focused on the processes of succession which imply the continuity of the business activity within the ambit of the family.

In this respect, there is agreement as to the definition of the generational turnover, as a process through which a new structure of ownership of the capital risk and/or of the business management is created, led by the subject or more subjects belonging to the same family (Corbetta and Preti, 1988). Consistent with most research conducted on the succession in the family businesses, the methodological approach, based on the qualitative analysis of different business cases, allows to investigate a complex and well-structured phenomenon, as the one which is the object of this paper, thus allowing to understand some aspects, which are not only business and economic ones, but also emotional ones, linked to the strictly family dynamics. A reflection is, therefore, implicit. From a quantitative point of view, research is based, on the one hand, on the analysis of a sample composed of medium and big-sized enterprises, on the basis of the data present in the annual reports drawn up by the *AUB* Observatory and, on the other hand, on the data provided by the European Commission relatively to different Countries, such as Spain, Germany, Italy, France, Finland, Austria, The Netherlands, Denmark, Greece, Ireland. Consequently, the conclusions are the result of considerations on the study of different cases of family businesses. This study allowed to acquire some information on the characteristics of the succession and to identify not only the common aspects, but also some peculiarities.

## RESULTS AND DISCUSSION

The family businesses already represent the most widespread typology in the developed economies. Nevertheless, the studies which have been conducted in the various European and extra European countries show their high mortality rate (Tomaselli, 1996). The process which aims at ensuring the continuity to the family businesses, concerns the generational turnover. The business transfer to another person is, of course, one of the most important events in a business activity and it would be opportune to arrive to this event gradually. The outgoing entrepreneur has to create the most favorable conditions in order to avoid an interruption of such continuity. Continuity means the long-lasting relationship between the business and the founding family in the time, whereas the interruption in the continuity of the family businesses may be caused by some factors, such as the operating loss of the business; the mistakes in the management of the family dynamics and of the relationships between business and family; the absence of motivated heirs (Corbetta, 1998). The process of the generational turnover is considered a valiant one when it allows to safeguard the business continuity, considering the fact that it is better to transfer the control to some subjects who, even if they are not part of the family, demonstrate they have managerial skills. This is better rather

than leaving the control to some family's members who are not very qualified or, still worse, who are inappropriate to play some managerial roles, because of their age, ethical principles and expertise. The life cycle of the family business coincides with the entrepreneur/founder's one and it may often happen that, when he/she retires, for age limits or for death, there is not a continuity of the business, but its dissolution or, even if it is more rarely, the acquisition by third parties. In particular, the business activity transfer implies a high *cost* in terms of accumulation of expertise and *know-how*, which is as higher as longer the business life is.

Through the process of the generational turnover the capital transfer and, consequently, the transfer of the responsibilities in the management are made from the existing generation to the future one, in order to guarantee the continuity of the business in the time. Only if it is intended as a process, the generational turnover does not cause any traumatic events for the business. This process has to be opportunely planned: subdivided, as it is, in some phases, which are depending among themselves and which have some different characteristics and forms in relation to the specific business. These phases usually concern a long period of time, but a detailed analysis of the planning phases is out of the scope of the paper. One of the most relevant phase is the detailed analysis of the characteristics and of a critical evaluation of the current and potential skills of the successor (or of the successors). These elements have to be compatible with the context, inside of which the business operates, and with the needs and objectives to be reached through the process of the generational turnover. Generally speaking, the successor is a member of the family, but nothing forbids that he/she may be chosen among the subjects who are external to the family and among the subjects who are internal and external to the business.

The choice of some subjects, rather than of others, depends on the entrepreneur, who is in charge of the succession process, and who, on the basis of his/her goals, objectives, values, will decide whether his/her successor has to belong or not to the family clan. Of course, it is necessary to train the potential successors; therefore, the appointed successor, before his/her assignment, must have overcome all the stages of the training path indicated in the family's strategic plan. The training of the successor is the acquisition of the skills necessary to reach the business standard, not only through an appropriate path of studies (often it is the case of the university degree and, sometimes, also of some post-degree courses, of the knowledge of the foreign languages), but also through a period of internship in other businesses. The experience in other businesses, different from the paternal one, is considered very important, since it allows to acquire not only the skills, but also a certain professional discipline, which will turn out to be useful in the successive years. The choice of a candidate not belonging to the family clan might cause some disagreements with the family's members, who feel as excluded people, thus compromising the success of the process of the generational turnover.

Nevertheless, in case these disagreements are overcome, the choice of a successor external to the family may imply a series of advantages, that is the successor's acknowledged competence and ability and a full satisfaction for the human resources who work in the business. The succession process ends with the transfer of power from the current entrepreneur to the successor: this happens when the successor really runs the business, thus succeeding in imposing his/her power on the rest of the family business and on the other external forces interested in it, overcoming the resistance and creating some conditions of stability. The *generational turnover intended as a process*, rather as a goal, allows to deal with this phenomenon in a different way. Considering the generational turnover as a process, in fact, implies a greater flexibility which, starting from the existing information, allows to achieve the prefixed result through the evaluation of some situations which arise as the above said process "takes its shape". In this perspective, the process of the generational turnover takes place thanks to the gradually acquired knowledge, by respecting the evolution of people and the family and business' conditions, by monitoring each phase of the process and, consequently, by planning the successive phase by reducing, as much as possible, the mistake margin. The generational turnover may be structured in a different way, according as the business operates in a single

activity (*a mono-business enterprise*) or in more activities (*a multi-business enterprise*). In the mono-business enterprise the entrepreneur, who, the first, conceived it, is focused on his/her vision and he/she is not inclined to the innovation, especially if positive financial flows are registered. Therefore, in the succession process, the heir may represent an element of innovation which may either improve the business activity or declare its decline, depending on the entrepreneur's attitude. In the *multi-business* enterprises, in which a certain number of activities are carried out (each of them in correspondence of a business strategic area (*ASA*)), the process of generational turnover may turn out to be rather complex. Another remarkable factor, which is considered as influential in the generational turnover, is the *business dimension*; the positions of the doctrine at issue may be different on the basis of the parameter used in the definition of the business dimension. Generally, the *ideal* dimension of the business is represented by that dimension in which a number of working positions is available, a number which is equal to the number of the aspiring successors. In such a context it is easy to imagine the implementation of a transition process in an atmosphere of continuity and harmony among the members.

The effectiveness of the turnover process is surely influenced by *environmental* and *organizational* factors. The outgoing entrepreneur and his/her successor, who interact with the context, and, consequently, with all the elements which are part of it, have the delicate task of understanding what the surrounding environment suggests them. It follows that greater the affinity of opinions in interpreting such factors is, greater is the sharing of strategies to be implemented and of the objectives to be reached. The business operational rules and the succession process are strongly influenced also by the territory in which the business activity is carried out. The entrepreneurial spirit is surely favored by a territory which is economically, culturally and socially developed. The atmosphere of sharing and solidarity created by this context will positively influence the process of the generational turnover.

Also the organizational structure of the business is remarkably important not only for the space-temporal arrangement of the resources, but also for all the human relationships which originate among the members-managers being part of it. When the business dimensions increase, the organizational structure evolves from simple patterns to more well-structured and complex ones. In the businesses where there is a more complex organizational structure, the placement of the successor will be less difficult, since, differently from the person who preceded him/her, he/she will not have to perform all the organizational functions but exclusively those relating to the business management issues. The business culture is not less important. The successor will have the demanding task not only of safeguarding the existing culture, but, at the same time, of making some little and frequent changes, which have to be opportunely widespread and shared. Also the relationship between the family and the business is important: they represent two institutions which are different but interdependent.

The management of the family dynamics and of the relationships between the business and the family is, therefore, very delicate. The resource which, since always, has been considered, *par excellence*, crucial for the competitive superiority is knowledge and, consequently, its use. Knowledge becomes a critical factor of success and, therefore, a resource generating an economic value, if intended as the capacity of finding the information necessary to make some decisions. The management of knowledge becomes a nodal point in the process of the generational turnover, in consideration of the fact that the entrepreneur concentrates, in his/her hands, an enormous heritage of knowledge, ascribable both to the business and to all the relationships with the outsiders. Consequently, it is opportune that a system of knowledge management develops so as to formalize and transfer it. Though the process of transition to the management role involves the whole organization, the two subjects who are mostly concerned are the outgoing entrepreneur and his/her successor. Between the two subjects a relationship of knowledge exchange is established. On the one hand, there is the consolidated experience of the outgoing entrepreneur, which is the result of many years spent in the business (relationships with the business employees, with the clients, with the suppliers, with the managers; the adopted marketing policies, as well as the solution to the various business problems);

on the other hand, there are the innovative ideas or, however, the ideas which are oriented to the change, the educational experience and, sometimes, the professional experience acquired by the successor.

The studies, which were conducted with regard to the small and medium-sized family businesses, in Italy, (Annual Report 2011 *AUB* Observatory on all the medium and big-sized family businesses), attest that less of one third survives to the second generation and that only 15% of them succeed in efficiently completing the generational turnover. A similar situation may be found in the Countries of the European Union, where it is estimated that between 5% and 15% of these businesses survive to the third generation and that, in a period of ten years, almost one third of them will be transferred to new owners. Of these transfers about 300 thousand concern the SMEs with employees and 310 thousand the SMEs without employees. As it is possible to observe (Figure 2), the number of transfers, in terms of percentages, is registered at higher levels in Spain (39.6%), Germany (18.70%), Italy (17.40%) and France (11.40%); then, The Netherlands (5.3%), Denmark (2.6%), Finland (2.3%), Austria (1.5%) and, finally, Luxembourg (0.10%) follow. In Greece and Ireland there are not any transfers. Therefore, on the basis of these studies, only 30% of the family businesses succeed in overcoming the passage to the second generation. Moreover, considering the “average age” of the family businesses and considering that the generational turnover takes place about every twenty-five years, in the next years the problem of the succession may be one of the highest risk element for the business continuity. Consequently, it appears still more evident the fact that it is necessary to plan the transition in order to safeguard the tangible and intangible patrimony of the family business.

Fig.1: Transfers of Business In Terms of Percentages – Data of the European Commission

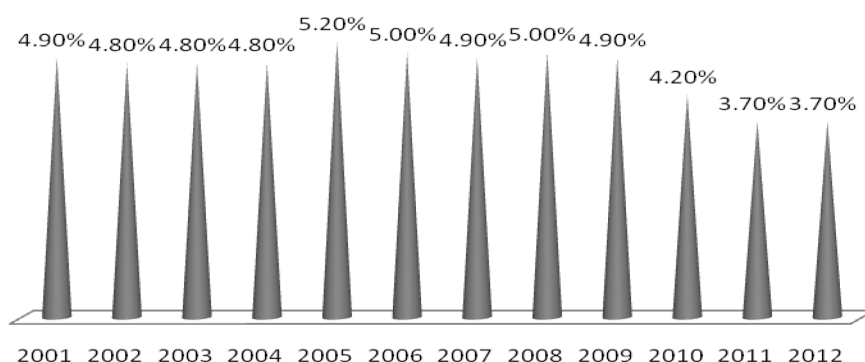

*This figure shows the number of the transfers, in terms of percentages, intended as the transfers of ownership of the family business to another person or business that will ensure the business continuity. This may happen either inside the family or through the transfer to managers or employees not belonging to the family structure or through some sales to third parties (outsiders or existing companies).*

The Italian family businesses still appear to be reluctant to the change. Research, which was conducted on a sample of 4.249 family businesses, with a turnover superior to 50 million Euros (*AUB* Observatory, 2013), shows a negative downturn, in terms of percentages, in the overall successions of the last three years, during which there was a difficult economic trend.

Nevertheless, regardless of this above represented figure, it may be noticed how the succession, at the top management positions, takes place, more frequently, in those businesses with more financial difficulties, that is, in those which registered a negative return on investment (ROI).

Figure 2: the Overall Successions of the Italian Businesses in the Years 2001-2012

*In terms of percentages, this figure shows the overall successions, in Italy, in the years 2001- 2012 on a sample of businesses – Data processing of the AUB Observatory.*

Figure 3: The Successions in the Italian Businesses With More Financial Difficulties in the Years 2005-2012

*This figure shows the successions in Italy in the years 2005- 2012 on a sample of businesses with more financial difficulties – Data processing of AUB Observatory.*

Considering the data on the successions to the top management positions, relating to the models of individual leadership, also in 2012 a trend was confirmed: it was registered in the preceding years, too, and it concerned the adoption of policies relating to the entry of a non-family leader into the business. Moreover, should a non-family leader succeed to his/her charter member, his/her presence will have a negative effect on the business performances. Finally, considering the capacity of reacting to the crisis, it has been observed that the businesses led by young leaders, especially by those leaders aged under 40, reacted better and more rapidly to the crisis, thus showing, in the period 2007-2010, some output performances, which were significantly superior, if compared to the national average. In brief, it is not only necessary to efficiently plan the process of the top management turnover, but it is also essential to rejuvenate the leadership of the family businesses, so that they may take advantage of their opportunities of growth and development to the utmost.

## CONCLUSIONS

The management of the family businesses is a rather complex phenomenon, for which, on the one hand it is necessary to take into account the business needs and, on the other hand, the needs of the family, which is the owner. The management of the relationship between the family and the business is particularly difficult, especially in relation to the family's values, which often tend to be present also in the business. In

addition to the problems that all businesses have, the family businesses, in their development, have to cope with a series of difficulties which are peculiar to their typology.

Among these difficulties, it has to be reminded the complexity of the relationships which develop inside the business, the extent and the duration of the structural crises, which periodically arise and which imply a deep reorganization of the business organizational structure. Riding these difficulties out needs significant skill requirements, as well as strong dedication. Firstly, it is essential to succeed in motivating the family's members who work in the business, thus succeeding, at the same time, in nurturing the family harmony and cohesion and, then, it is essential to pass down, to the future generations, the values and the business culture which are considered as worthy being passed down. Among the aspects on which our attention focuses, there is an aspect which is undoubtedly interesting. It concerns the transfer of the business leadership from the owner entrepreneur to the new generations, a process which is known as process of entrepreneurial succession or of generational turnover.

Usually, this event is the consequence of a state of crisis which might determine either the winding-up of the business (if it is not opportunely managed), or, as it happens in most cases, the opportunity, for the business, of developing and expanding itself. Nevertheless, it is necessary to highlight that, very often, the need for the generational turnover causes a series of problems originating from the characteristics of the relationships existing between the family (owner) and the business and from the typology of control of the family on the business. More particularly, the event of the succession highlights some aspects: the personal qualities of the leading entrepreneur and of his/her successor, with whom he/she is often in conflict; the level of development, the dimensions and the competitive position of the business; the features of the management; the culture of the family (owner); the attitude of this family *vis-à-vis* the business, as well as the family's expectations and level of financial and patrimonial dependence on the business. Therefore, it is undeniable that the process of the generational turnover represents a moment of change for the business and, given the aspects of the various typologies of family businesses, each succession process has its own characteristics.

The business succession represents a well-structured process which, aiming at guaranteeing the continuity to the business, allows the delegation of the responsibility of the entrepreneurial role. Consequently, at the same time, the business top management has to succeed in accomplishing some steps, such as: the business development, through a strategy which is appropriate to safeguard the business competitiveness, the turnover of the entrepreneurial role, through a process of generational succession which, in consideration of the heirs' *vocations*, may guarantee the family equilibrium, the guarantee of the continuity through the defense of the property to be destined to the family.

It is believed that a crucial factor for the success of the process of the generational turnover is represented by the harmony between the outgoing entrepreneur and his/her successor. Such harmony exists if there are mutual esteem and consideration which, on the one hand, allow the successor to learn, from the outgoing entrepreneur, knowledge and skills, and which, on the other hand, allow the outgoing entrepreneur to confirm his/her positive judgment of the person who will replace him/her. Therefore, it is necessary that a relationship of mutual exchange is established between the successor and predecessor and, also in this sense, it is necessary to intend the concept according to which planning the succession means also planning the coexistence. There is not a model, which is valid universally, to deal with the succession effectively. Nevertheless, in the light of what has emerged, the succession has to be considered as that process which may create, through the replacement of the top management, an opportunity, for the business, of developing and expanding, innovating and revitalizing. All this will be important in order to set some conditions of continuity for the business.

# MODERN DATA ANALYTICS FOR DECISION MAKING

William J. Amadio, Rider University

Barry M. Pelletteri, New Jersey Turnpike Authority

John S. Krall,III, MuseAmi, Inc.

## ABSTRACT

*In this paper, we explore the use of modern data analytics for decision making. We show how modern enterprise data sources can be combined with sophisticated analysis methods into an iterative decision making process that improves the likelihood of successful choices and maintains the cost of decision making within limits that are economically justified. We illustrate the use of this process through a comprehensive case study involving staffing for a new project. Should a manager hire salaried or hourly professional-level employees? We consider tangible variables such as salary and benefits along with the impact of intangibles such as worker satisfaction and turnover.*

**JEL:** M1, C1

**KEYWORDS:** Bayesian Analysis, Analytics, Managerial Decision Making

## INTRODUCTION

This paper discusses how business managers can use Bayesian Analysis for decision making. Bayesian Analysis is a paradigm that holds we learn about the world through approximation, getting closer and closer to the truth as we gather more evidence (Silver, 2012). For an example of Bayesian Analysis in business, consider inventory decisions made throughout a selling season. Managers must decide to stock a quantity of an item in anticipation of demand at several points in the season. Various costs are involved, among them, the cost of purchasing stock, the cost of holding stock, and the cost which arises whenever inventory is insufficient to meet demand. The Bayesian manager assesses the likelihood of strong, medium and low sales at the start of the season using last year's sales figures and her judgment about the appeal of this year's items. As the season unfolds, new sales figures and customer feedback are incorporated into the assessments, and order quantities are changed, if necessary, to fit the profile of costs the manager chooses to face. The goal of the manager's analysis is to come as close as possible to the desired mix of costs. Based upon this example, the advantages of Bayesian Analysis for management decision making include the ability to

*accumulate experience over time, enabling the decision maker to recognize changes in historical trends and incorporate these changes into decisions going forward articulate the uncertainty inherent in the assumptions and results of common business analyses incorporate subjective judgment into the analysis avoid impulsive and politically motivated actions by using a deliberate, data-driven methodology express multivariate relationships in a natural setting*

Despite its significant advantages, Bayesian Analysis is not commonly used in business decision making (Hubbard, 2010; Borison & Hamm, 2010; Pfeffer & Sutton, 2006). One of the obvious obstacles to its use is the requirement to collect current data so that prior assessments can be updated. This requirement is often perceived to be too costly or time-consuming to be profitable. This project will test the assertion that modern enterprise-wide computing systems are already delivering the data necessary for a wide range of mid-size Bayesian projects. We present a comprehensive case study and develop a general guide to Bayesian Analysis consisting of practical tools and procedures to identify decisions amenable to Bayesian Analysis and to apply the analysis to reach an optimal conclusion.

## LITERATURE REVIEW

Generating business value from modern enterprise systems requires combining large and small volumes of data, internal and external sources, and structured and unstructured formats to yield new insights in predictive and prescriptive models (Davenport, 2013; McAfee & Brynjolfsson, 2012, pp. 62-64; Hyde & Probst, 2012). It is interesting to note that much of the relevant discussion on these topics appears in blogs and interviews. While the authors cited above are recognized thought leaders, their remarks are quite general, and leave the reader to his/her own devices when trying to make things work. Much of the published analytics research is very specific about how to process data, but vague on how to generate business value. With few exceptions (for example: Ghose & Ipeirotis, 2011, pp. 1503-1507), the analytics research we have seen addresses business value with a few quick sentences in the Introduction. The time is right for a publication that combines technical specifics with detailed prescriptions for use by managers.

## METHODOLOGY

Applied Information Economics (AIE) (Hubbard, 2010) is a decision-making methodology based upon careful research and insightful use of long-standing analytical methods including Bayesian Analysis. We consider a comprehensive case study involving the human resources of a small pharmaceutical company. The point of this exercise is to better manage the available human resources in order to improve the company's profitability. The organizational problem of finding the right balance of human resources plagues many companies. The question we sought to answer was, "Should management hire additional headcount to a particular department, or should management employ temporary staff based upon prior weeks' billable time?" One of the goals for any company is to maximize revenues and reduce costs to maximize profitability for its shareholders. In the research and development industry this is no exception. Well-trained people are hard to come by so although we are interested in maximizing profit, we do not want to lose valuable and highly skilled resources as a result of surges in workloads due to clinical deadlines. When these increases in workload occur, one option is to have staff work over and above their standard hours. This option appears less expensive on the surface, but could cause employee burnout leaving them dissatisfied and ultimately leaving the organization and joining a competitor with all of the acquired know-how. Since the company revenue is based upon billable hours, without these resources, my revenue will decrease along with the company profitability. Another option is to hire temporary staff to supplement the full-time staff. These resources typically cost more per hour versus permanent staff so although the company gets the billable revenue, the overall profitability of these resources per hour will be less versus permanent staff.

Our model utilizes "intangibles" in business and incorporates factors such as salary costs, benefit costs, payroll taxes, billable time for the last five weeks (Rule of Five), probability of employees working the hours, probability of employees leaving, as well as temporary staff costs, hourly billable fee rates and published data regarding average working hours and employee burnout. In considering this wide range of factors, we validate how things that seemed almost impossible to measure could actually be approximated utilizing this five step decision-making methodology. The metric of our sample analysis is cost. Whichever alternative costs less over an agreed upon time frame is preferred. Certainly, other metrics need to be considered in addition to cost. The analysis of these metrics follows the same method as we follow for cost. Our analysis method is Monte Carlo simulation. The simulation consists of runs and scenarios. A run is a set of scenarios. A run represents the duration of the project, say two years or 104 weeks. So, each run of our simulation consists of 104 scenarios. Each run produces a distribution of weekly metric outcomes based upon the values of  $c$ ,  $th$  and  $temp$  which remain fixed throughout the run, and the values of  $bh$ ,  $p$ ,  $fee$  which vary from one scenario to the next. These variables are described below.

### Variables Are

c = compensation for the run

bh = billable hours for the scenario

p = probability the employee works overtime willingly for the scenario

th = threshold for employee leaving for the run

fee = hourly fee rate for the scenario

temp = temporary staff hourly cost for the run

Our initial estimates for the inputs to the simulation come from steps 1 through 3 above. We specify subjective 95% confidence estimates and uncertainty models for each of our variables based upon our experience (O'Hagan, et. al., 2006; Kahneman & Tversky, 1972; Taleb, 2010). An uncertainty model is a probability distribution for the variable, i.e., a list of possible outcomes and the likelihood of each. The output of the simulation is an uncertainty model for the cost metric, expressed as the cost of a temporary hire. The results of the initial simulation (1000 runs of 104 scenarios each) are shown in Figure 1. Negative costs indicate the temporary hire was favorable, i.e., the temporary hire cost less than the full time hire for the given simulation run.

Figure 1: Initial Uncertainty Model For the Cost of a Temporary Hire

The figure shows our initial estimates of the probability distribution of the cost of a temporary hire. Negative outcomes are favorable, i.e., the temporary hire cost less than the full time hire for the given simulation run. X-axis labels indicate the right-hand boundaries of each bin, so negative outcomes begin at the 0 bin and go left, while positive outcomes begin at the 18,160 bin and go right.

The decision maker can apply several criteria to Figure 1 to decide whether to choose a full-time or temporary hire. These include the mean and standard deviation, the best or worst cases, the most likely outcomes or the pattern of probabilities from high to low outcomes. Our initial result shows a fairly symmetric pattern of probabilities with a small majority of negative outcomes. The median outcome of the runs is -\$2,278.62. The middle 50% of the outcomes covers -\$42,041.70 through 29,209.27, so a reasonable first choice is to favor the temporary when considering the cost metric.

The wide range of outcomes in Figure 1 indicates high uncertainty in our inputs. To reduce uncertainty, a decision maker needs information about the input variables. Often, the most accessible measurements do very little to reduce the uncertainty in our estimates. We, therefore, follow a rational approach to choosing

our measurements based upon expected opportunity loss (Hubbard, 2010). Expected opportunity loss is the cost of being wrong times the probability of being wrong. Each of our input variables has a range that would make our tentative decision of a temporary hire unfavorable if the other variables take on their average values. Averaging the opportunity loss over this range using the probabilities over this range gives an optimistic estimate of the value of information about this variable.

The variable with the highest expected opportunity loss, given our tentative choice of temporary hire, is billable hours. The value is \$30,992. This means knowing the billable hours for sure eliminates \$30,992 of opportunity loss. Since perfect information is not possible to attain, we set of information budget at considerably less, say 10%. So, we have \$3,000 to collect information about the distribution of billable hours for the upcoming project, enough for, say, a small study of past similar projects.

To see the reduction in uncertainty resulting from new information about billable hours, suppose our initial estimate used a mean of 40 hours per week and a standard deviation of 9, and that our study, using Bayesian Analysis (Silver, 2012) revised the mean to 42 with a standard deviation of 6. The results of the revised simulation, displayed in Figure 2, show the reduction in uncertainty. The highest three bars for outcomes below 0 are all significantly higher than the corresponding bars for outcomes above 0. These bars show a mixed pattern in Figure 1. The length of the middle 50% also shrank from [-42,042, 29,209] to [-41,914, 26,093]. There is clearly much uncertainty remaining in Figure 2, so the decision maker needs to continue the analysis by examining the variables again for information value, and collecting information according to the resulting budgets, until no further economically justifiable efforts are revealed. At this point, the decision maker sees the uncertainty inherent in the decision, and makes a choice based upon the criteria he/she deems appropriate for the situation.

Figure 2: Revised Uncertainty Model for the Cost of a Temporary Hire

*This figure shows a reduction in uncertainty resulting from a study of billable hours in past projects. The first three bars representing outcomes below 0 are all significantly higher than the bars for the corresponding outcomes above 0. In Figure 1, these bars show a mixed pattern.*

## RESULTS AND DISCUSSION

The Pharmaceutical Company example discussed in this paper illustrates the effectiveness of data analytics using Bayesian analysis in solving multifaceted problems where both quantitative and qualitative variables

are present at the outset. The example uses a modern definition of data analytics that includes a highly efficient iterative methodology coupled with technology tools that facilitate data identification, measurement and refinement. This methodology consists of a repeatable process that provides a cost efficient means of identifying and refining measurements for qualitative variables that are often difficult or seemingly impossible to quantify. The importance of qualitative variables or intangibles cannot be underestimated in today's high connected and competitive business landscape. Both structured and unstructured data available from a variety of new sources introduce new and innovative measurement possibilities from quantitative and exacting to qualitative and subjective. The balance between these two categories of measurement will change as a decision maker utilizes this iterative methodology to validate the quantitative measurements and confirm or replace many of the subjective assumptions.

With this process, we are able to strike a practical balance between the quantitative and qualitative information necessary to perform analysis that is relevant to both a specific business problem and the surrounding competitive ecosystem. As noted in our example, this iterative approach is a process that broadens our ability to identify useful information, controls the cost of complex decision making and improves the probability of successful choices and related outcomes. Given the efficiency inherent in this process is not designed solely for initial decision making but establishes a working model that can be employed on a continuous basis as new information and actual results become available following a particular choice or selection. The iterative nature of this approach coupled with the efficient use of Bayesian analysis and modern technology tools provide a continuous modeling capability that enables an efficient means of validating actual results well beyond initial decision making.

## CONCLUSION

In some organizations, champions of a modern data analytics process that is grounded in Bayesian analysis may reasonably expect resistance from decision makers based upon uncertainty and lack of familiarity in working with qualitative variables or intangibles. We anticipate that a well defined process that is both efficient and iterative in nature will serve to enhance engagement, reduce uncertainty and effectively counter much of the resistance associated with the use of qualitative information in complex decision making. Finally, organizations that embrace a modern data analytics process that uses iterative models to improve the likelihood of successful outcomes from initial decisions can also reuse these models to continually evaluate results from these decisions over an extended time horizon.

# TECHNOLOGY AND BUSINESS PERFORMANCE: CASE CANCUN TRAVEL AGENCY

Enrique Corona Sandoval, Universidad del Caribe  
Miguel Ángel Olivares Urbina, Universidad del Caribe

## ABSTRACT

*This case presents a didactic tool for the student incorporates elements of analysis and decision-making in relation to the implementation and use and management of technology applied to the improvement of the performance of a virtual travel agency established since 1984 in the city of Cancun, Mexico. It is presented to the student information relating to the business history of the signing, key characters in the decision-making, evolution and innovation factors that led to the organic growth in the midst of a highly competitive environment. The case raises dilemmas the student concerning the preparation of generating competitive advantage strategies. Students may suggest alternative courses of action and may assume a posture of consultants to the firm. The case is recommended for working on computers and can be used in business schools basically undergraduate, requiring knowledge of management and marketing. The case can be developed in two-hour classes and requires a presentation of results and discussion at the end of the class.*

**KEY WORDS:** Business Performance, Innovation, Strategy, Technology

## CASE INFORMATION

In recent years the Mexican Great Day Travel Company has excelled in the national and international market in the segment of sales of vacation packages online, due to complex processes of innovation are reflected in its growth in the market, but beyond that, in its growth and solidity as a signature. Constant innovations in the marketing of tourist services in the world, favored by the globalization and the democratization of the tourist offer, occur in a context of high competition. In the starts of the paradigm shift in the marketing of tourism services associated with the four categories recognized by the UNWTO (2009), which are: hospitality, leisure & entertainment industry, industry of travel and transportation, further development in new design and marketing processes is given in Europe and the United States, major tourism managers and large emitters of tourist flows. It is why it is notable firms based and DNA 100% Mexican that are inserted in the global competition, not by way of a proven commercial current followers, but through innovation, they propose improved ways of meeting the needs of consumers, with a clear market focus. The initial bet of Great Day Travel, Mexican company with 29 years of experience, established in 1984 in Cancun, Quintana Roo by engineer Fabián Mercado was to offer a receptive travel agency services, model dominant in those years when the agencies were in general owned foreign and dominated by large airlines and hotel consortia.

A few years later, driven by the growth in demand, are global pioneers in online travel marketing. The creation of this marketing channel, coupled with a strong philosophy of service to the customer, resulted in growth in sales of the firm that will increase each year in a sustained and driven by the philosophy of innovation proposed by their managers and employees. Evolution in clients served, by mentioning recent data, speaks of a 2011 with 2, 550,000 tourists, projecting a goal for the next years of 3,000,000 million users by year of the portal, both national and foreign. The Web portal is the strategy of Great Day Travel, which has more than 60 million annual visits, which come primarily from Mexico with nearly 80%, 11% in South America and 9% of the rest of the world.

The strategy of development of the internal market that has given not only boosts the sales of the firm, but the democratization of tourism in Mexico is not explained without the participation of the Administration headed by Lic. Juan Villareal. These strategies have been reflected in the exponential growth of sales and workforce that the company has been reflected in recent years by moving to international companies such as despegar.com, Orbitz and Travelocity. Then be mentioned growth factors that Great Day Travel shows in recent years. They will analyze the diverse capacities of the firm contributing in the implementation of activities focused on creating opportunities for travel and entertainment accessible to national and foreign tourists, the approach to maintain customer loyalty, the need for strategic alliances that add value and essence of the company developed and potentiated by the DNA of innovation in his team.

### Great Day Travel

Since 1984, the company have been important changes which are noticeable, definitely in the size of the Organization, the number of employees (currently hovering around the 1600), in its share of the market, sales, etc. A revision to its history is necessary to understand its evolution driven by innovative capabilities based on the idea of providing consumer quality, exceed expectations and applying technology for the benefit of all stakeholders in the tourism process. Without initial capital or business plan, Mr. Mercado started a personal project named Great Day. The origin of the name is as interesting as the beginning of the project; as part of a service of instruction of scuba diving offered a couple of American tourists who wanted to visit Tulum and the surroundings, the Mr. Mercado intends to surprise them with an experience more personalized. The couple of tourists were more than satisfied with the experience that tells him to say goodbye to: "This has been the Great Day of our stay" by automatically naming the venture. The evolution of pass signature by the incorporation in the business of transportation, in vogue in those years in which connectivity to the destination was dependent on air transport, nautical monopoly and the scarce offer inland transport according to the needs and lifestyle of the visitor, controlled in those days few tour operators, DMC (Destination Management Company).

The offer of transportation was limited, and the big opportunity. The founder creates a concept of private transportation by limousine from the airport to any hotel or destination in the region, from there to offer tours in Cancun with two units only. In those moments, (1984-1985) the socio-economic level of the tourists who were visiting the destination was high and the characteristic markets were the United States, mainly the East Coast and Canada, also characterized by their high level of education. Within a few months of luxury shuttle fleet grows to 7 units and specialized according to the needs of the customers are sophisticated. The marketing of these services was carried out from the hotels, through hospitality tables, supported the recommendation of the hotel Concierge. A couple of years after starting, and already concentrated in tourist business, ventures in Hotel Administration, through the signing of GD Real Hotels, which operated condominiums Kin Ham amounting to 40 condominiums.

In 1997, and after years of accumulating experience and relationships in the tourism industry, they acquire the hotel Costa Real, which put emphasis on service to the customer and in the generation of networks of cooperation in the tourism industry that detonate an occupation of the hosting Centre above 90%, the highest in the area, and manage to maintain this occupation in the subsequent years. They are pioneers in the implementation of the hotel operation model called all inclusive, thought about the comfort of the guest, which want an experience free of complex decisions, focusing on total hedonism. A year later, they make the hotel Continental Villas Plaza, remodel and become the Caribbean Cancun, with 638 keys. Great Day, through its Great Resorts division, operates 5 hotels with Grand Touring categories, five-star and four-star, 1721 Hotel keys in total. Ground transportation, hotel operation and DMC and online travel agencies are part of the activities of Great Day Travel.

The operation of a travel agency online, which migrated from a travel agency receiving a tour operator wholesalers, with great capability negotiation with suppliers of tourist services and a great customer focus, accompanied by a marketing channel redesigned based on international trends and a marketing approach as innovative business model engine is not generated from the evening to the morning.

If you want to explore the possibilities to travel, both domestically and abroad and are used to the internet, chances are that to consult in any Western search engine leads to Great Day Travel page, which responds to a strategy of positioning in search engines known as SEO (Search Engine Optimization), search engine positioning strategy that it has been instrumental in the evolution of the firm over time.

To activate your channel marketing in line with security, engineer market is given the task of directing an investigation that articulate the perceptions of customers in terms of security of transactions on the internet, to offer a dynamic and secure portal that would work as a promotional, commercial tool and with absolute guarantee of safety in terms of the management of the user's information. It is so it manages to locate at the University of California in Los Angeles (UCLA), data encryption software allowing carrying out commercial transactions with the highest standards of quality in those moments. The program is purchased in 17,000 US dollar and since then remains in operation controlled entirely by the firm.

Technology takes on an increasingly important role in Great Day, creating an internal area responsible for the research and development of processes associated with the technologies of information, expert systems, connectivity and systems that would permanently mark the direction of the firm.

Maturing the concept called internally "3 T: technology, tariff and traffic", which implies buttress business model in cutting edge technology generated at home, competitive discounted rates generated on the basis of their bargaining power and volume purchasing and traffic, understood as strategies to make visible and visited its web site. This reinforced with advertising by mass media in recent years. With technology as the axis of growth and central strategy, the firm migrates its business model from traditional responsive Agency to agency online, the concept of "Integrated tourist service" which is aimed at the comprehensive care of the client via a tourist content integration platform, proposing solutions to the traveler and the best rates available to choose between multiple airlines Hotels and tourist services added. It highlights the design of an own booking engine which internally referred to as MATRIX, and which is the result of the collaboration of experts in designing systems with collaborators in areas of marketing, finance, customer service, management etc.

Great Day Travel relate to strategic business partners is enhanced by the style of the firm establish relations win - win, giving operators and travel agencies receiving a platform for integration of services, multiple channels of marketing, advertising and promotion continues, summing up a promotion - multichannel marketing tool and most importantly, with the credibility and support of customers well-known actors and authorities from the sector. Since the beginning of formal operations of Great Day Travel, partnerships and business relationships have been considered priority for development and growth. First established trade relations with hotel operators and airlines, subsequently changing its business model and break as a wholesaler, they engage in relationships with travel agencies receiving not only in Mexico but in other countries in the region.

The strategy of activation of destinations, commonly called the average tourist co 'ops (collaborative integration) included later to Puebla, the destinations of Cancun, Cozumel, Mazatlan, Veracruz and other domestic destinations, leading to the signing, during 2010, to anticipate the demand of travelers and to South America, in particular by improving the purchasing power of citizens of countries like Brazil Chile, Argentina and Colombia, as well as the proximity of the World Cup, Gold Cup and Olympic Games to be held in Brazil in the year 2014, 2015 and 2016, respectively. The South American market is very attractive, the Mexican Caribbean and generates large flows to their destinations, but the market was attended by local firms such as HotelDo. That Great Day Travel set a commercial approach to operate with them and ends

up buying the company together with the Clickhotels brand, with a dominant presence in Brazil, Argentina and Chile, would consider the best chance of entry into the South American market. The incorporation immediately adds a wide range of hotel, near 6000 hotels in all Latin America, new airlines and local operators established in the Southern Cone. This opportunity for expansion in the South American market implies them to move their technology, knowledge and experience to their new offices in Sao Paulo and Buenos Aires, injecting Great Day philosophy attached personnel.

Partnerships with local governments give cause for new relations now with the federal Government, in this case with the Ministry of tourism of Mexico, (SECTUR) where from the year 2011, Great Day operates its portal [WWW.VISITMEXICO.COM](http://WWW.VISITMEXICO.COM) articulating the same strategy of partnership and marketing of destinations. To operate the campaign, he hires digital agency CROSSMEDIA, who proposes the cartoons, creating memorable characters, messages multi-segment strategy, with a focus on the payment facilities. The campaign uses media mass media, TV pay, magazines on board, press, and banners on web sites such as MSN, Google, Tripadvisor, daily national circulation, social networks and outdoor advertising. Customer satisfaction is a priority for the company, so it has been implemented systems of monitoring, 24 hours customer service channels, even by traditional means such as operating 24 hours to assist in the processes of purchase of online travel, chat or via e-mail, intelligence systems markets to underpin decision making based on always-current market information.

The system of research and development of new services works hand with customer needs, market trends and the potential of the firm to combine products and services innovative and customizable by the strategy called dynamic packaging, allowing the customer the possibility of combinations and changes it considers necessary in relation to flight hotel, transportation or rent a car, tours or tours, etc. As already mentioned, they were the first to offer credit card payments via the Internet, but have expanded their forms of payment in response to the needs of customers by introducing the form of pay with two credit cards, the system of payments, which is to collect a part in cash and one credit card, cash payments via convenience stores, after a detailed study of risks, it was tested and approved a program called CrediGreatDay, where once valued the credit history of a client, this leaves your credit card even without balance as collateral and the firm gives the financing. Except for the method of payment in cash, partial payments are offered from 3 to 18 months interest-free. To not neglect the traditional market, 120 kiosks have been installed in malls nationwide for reservation and sale to travel, offering between 9 and 18 months to pay credit. With this modality has grown 8% depending on offer more payment alternatives.

## QUESTIONS

*After the revision of historical performance, and a careful analysis of the evolution of the company, is considered the administrative decisions used in Great Day Travel to respond to an identifiable pattern inside the theory of Management? Are there signs of the professionalization of management in Great Day Travel from the appointment of the CEO? Justify your answer. Virtual travel agency being a technological platform is the choice of generating technology in house research or buys an external platform; what recommendation would you propose as an external consultant to the senior management of Great Day Travel to generate sustainable competitive advantage? Emphasis for the security of electronic transactions has generated confidence in customers; strategic proposals which could be Great Day Travel to communicate the security and functionality of your engine reserves MATRIX? Based on history of partnerships undertaken so far, would recommend strategic actions for the internationalization of the firm in the next few years? Provides a final recommendation to the directors of the company from the perspective of an external consultant.*

## TECHNOLOGY AND BUSINESS PERFORMANCE: CASE CANCUN TRAVEL AGENCY

Enrique Corona Sandoval, Universidad del Caribe  
Miguel Ángel Olivares Urbina, Universidad del Caribe

### ABSTRACT

*This case presents a didactic tool for the student incorporates elements of analysis and decision-making in relation to the implementation and use and management of technology applied to the improvement of the performance of a virtual travel agency established since 1984 in the city of Cancun, Mexico. It is presented to the student information relating to the business history of the signing, key characters in the decision-making, evolution and innovation factors that led to the organic growth in the midst of a highly competitive environment. The case raises dilemmas the student concerning the preparation of generating competitive advantage strategies. Students may suggest alternative courses of action and may assume a posture of consultants to the firm. The case is recommended for working on computers and can be used in business schools basically undergraduate, requiring knowledge of management and marketing. The case can be developed in two-hour classes and requires a presentation of results and discussion at the end of the class.*

### GENERAL COMMENTS

This case is intended to generate reflection on the importance of decision making in an organization governed by the innovation in students and which plays in a highly competitive sector and global. The systemic vision needed to be able to contribute from the vision and experience of an external consultant, management strategies of technology as a guiding axis of the performance of the company. The information presented has been supplemented with data favoring a framework of qualitative and quantitative analysis within the team, seeking to generate discussion and consensus on the proposals of business strategies. Students have freedom made proposals provided they present a justification and it is derived from an analysis and discussion on computer.

### Questions

*Question 1:* After the revision of historical performance, and a careful analysis of the evolution of the company, is considered the administrative decisions used in Great Day Travel to respond to an identifiable pattern inside the theory of Management?

*Solution 1:* Although there are efforts identified by professionalize the operation of the company from its origins, the scientific administration is important until the transfer of the leadership from the founder of the company CEO. Order and control in the internal processes and the construction of an administrative support structure to the operation based on the demands of customers resulting in organizational strengthening. From management by objectives, internal entrepreneurship and leadership are influences in the management of this company of Peter Drucker.

*Question 2:* Are there signs of the professionalization of management in Great Day Travel from the appointment of the CEO?

*Solution 2:* Divides the initial basic functions of the company, on the one hand establishing formal relations to institutionalize of entrepreneurship and creative capacity of its founder, Mr. Fabian market, using its vision for the future to promote the growth in market share and generation of new products emerging demand while on the other hand the administration of the company is professional-oriented on performance

management by objectives and the strengthening of the organizational capabilities needed to shore up the management and control.

*Question 3:* Virtual travel agency being a technological platform is the choice of generating technology in house research or buys an external platform; what recommendation would you propose as an external consultant to the senior management of Great Day Travel to generate sustainable competitive advantage?

*Solution 3:* An analysis of cost - benefit to elucidate on the issue. According to changing market and the sensitive information, it is recommended to keep the agility of manufacturing at home through a Department of research, development and innovation that generates the virtual travel agency operation support systems. This allows adjustments as soon as, maintain the flexibility of the systems to ensure the security of transactions and makes it possible to be able to offer technology services to other companies and Governments with the knowledge generated.

*Question 4:* Emphasis for the security of electronic transactions has generated confidence in customers; strategic proposals which could be Great Day Travel to communicate the security and functionality of your engine reserves MATRIX?

*Solution 4:* Communication will be oriented to position your engine reserves as a highly efficient and secure through a campaign of recommendation from satisfied customers. Social networks and portals that document the customer satisfaction are recommended. Should be seeking legitimacy for the satisfaction of the clients and seek to certify before external efforts.

*Question 5:* Based on history of partnerships undertaken so far, would recommend strategic actions for the internationalization of the firm in the next few years?

*Solution 5:* Are basically recommended the mergers and acquisitions of local companies, empowering them with the knowledge, experience and technology of Great Day Travel and give them internal and external customer service philosophy. Additionally negotiate with suppliers of tourism services to generate sustainable competitive advantage in the long run.

*Question 6:* Provides a final recommendation to the directors of the company from the perspective of an external consultant.

*Solution 6:* Consolidation and maturity of the previous business model to the international expansion, mainly to Europe, the factors economic and social in that area and consider furthering developing the emerging markets of tourism through the model of business GDT.

# FAIR VALUE, AUDITORS' SPECIALIZATION AND VALUE RELEVANCE OF FINANCIAL PRODUCTS

Hsiu-Mei Liao, Ming Chuan University

Li-Lin (Sunny) Liu, California State University, Dominguez Hills

Farrukh Suvankulov, Zirve University

Leonard Branson, University of Illinois at Springfield

## ABSTRACT

*This article explores value relevance of fair value measurement in the financial services industry. It further analyzes whether industry specialization of auditors impacts value relevance of fair value measurement. Using 2006-2010 data in Taiwan and the equity model by Ohlson (1995), we find that fair value information for the financial products in the financial services industry are value relevant. However, due to the financial crisis in 2008, international accounting standards were changed to adapt to the changes in international situation, resulting in the failure of corporate earnings to truly reflect the real fluctuations in fair value. Fair value information for the financial products in 2009 to 2010, thus, no longer has value relevance. Consistent with prior studies, our results suggest that industry-specialized auditors enhance the value relevance of fair value information in the financial services industry. The findings provide guidance to financial statement users on information relevant to fair value.*

**JEL:** M4

**KEYWORDS:** Fair Value, Auditor Industry Specialization, Value Relevance

## INTRODUCTION

This study brings several contributions to the existing literature related to fair value relevance. First, Taiwan is implementing IAS gradually starting from 2013. Since IAS favors fair value as a reporting basis for financial statements, the issue of whether the accounts measured and disclosed at fair value are able to increase value relevance of corporate earnings needs verification via in-depth research. The results of this study expand our understanding of the application status of fair value information of financial products in capital markets. Second, compared to other industries, the financial services industry has greater tendency to measure assets and liabilities using fair value. Given the difficulty of verifying measurement of fair value, auditor industry specialization becomes a crucial factor. A number of prior studies analyzed the impacts of auditor industry expertise on earnings quality for other industries (DeAngelo 1981; Craswell, Francis and Taylor 1995; Krishnan 2003; Chin and Chi 2009; Reichelt and Wang 2010). Their conclusions though should not be applied to the financial services industry, which is under stricter external supervision and control.

Hence, this study extends the research on the influences of auditor industry specialization on value relevance of fair value information in the financial services industry. With respect to industry specialization, many studies in recent years utilized individual audit partners as measurement basis (i.e., Carey and Simnett 2006; Chen, Lin and Lin 2008; Chi, Huang, Liao and Xie 2009). Chin and Chi (2009) further analyzed the impacts of industry specialization of individual auditors on restatement of financial statements. Because audit partners in Taiwan are required to sign audit reports, following Chin and Chi (2009) and Chi, Liao and Xie (2012), we determine industry-specialized auditors using both audit firms and individual audit partners as measurement basis. Finally, to examine whether these changes made by IASB affect value relevance of fair value measurement on financial statements. We separate the sample of the 2006-2010

period into two sub-periods 2006-2007 and 2009-2010. We investigate whether there is any difference in the association among fair value, auditors industry specialization and value relevance between the two periods. The results can serve as useful reference for legislators and regulators when enacting evidence-based policy with respect to accounting measurement and financial reporting in the future. The remainder of the paper is organized as follows. Section 2 reviews the literature and develops the hypotheses. Section 3 describes the research design, sample selection, and data sources. Section 4 presents the data and empirical results, and Section 5 the conclusion.

## LITERATURE REVIEW AND HYPOTHESES DEVELOPMENT

### Value Relevance of Fair Value Information

In recent years, more and more countries have modified/adopted their accounting principles/standards to align with the IAS for the sake of raising global financial marketability and increasing the comparability of various markets' information for investors. One of the main essences of the IFRS is to use "fair value" as the primary basis for assessments of assets and liabilities to reflect true value of a company. For instance, IAS 32 "Financial Instruments: Disclosure and Presentation" and IAS 39 "Financial Instruments: Recognition and Measurement" enacted in 1995 and 2003 respectively, require corporations to measure their financial products using fair value. These two standards thus become an important referencing basis for all countries when enacting respective financial accounting standards for financial products.

The Financial Accounting Standards Board (FASB) has gradually shifted its focus and become fair-value-oriented in recognizing financial instruments. For example, SFAS No. 107 was enacted in 1990 to regulate the fair value disclosure of financial products; SFAS No. 115 "Accounting for Bonds and Equity Securities investments" was enacted in 1993, requiring that "held-for-trading" investments and "held-for-sale" investments be evaluated using fair value; SFAS No. 119 was enacted in 1994 to regulate the fair value disclosure of derivative financial products and financial products; SFAS No. 133 was enacted in 1998, requiring that derivative financial products and hedging instruments be measured using fair value. SFAS No. 157 was enacted in September 2006, requiring that corporations categorize levels of fair value measurement information to amplify the disclosure of fair value and enhance consistency and comparability of financial statements so the financial statement users can evaluate the reliability of fair value measurement. Under the hypothesis of fully efficient market, information fully disclosed in financial reports, including not only numbers presented in financial statements, but also additional disclosures in the notes section, should be reflected in the security market. (Level 1 refers to financial products which have available public quoted prices for identical financial products in the active market; Level 2 refers to financial products which have available observable prices other than public quoted prices in the active market (i.e., direct (e.g., price) or indirect (be inferred from price)), including public quoted prices for similar financial products in the active market, public quoted prices for identical or similar financial products in the inactive market, fair value measured by evaluation models which use parameters that are obtainable from the market, derived from observable market information, or can be verified for relevance via observable market information (e.g., interest rate, yield curve, fluctuation rate etc.); Level 3 refers to financial products whose fair value is measured by evaluation models which use parameters not all from obtainable market information.)

If certain accounting information is expected to be related to corporations' market value of equity, this information is considered to be value relevant (Ohlson 1995; Barth, Beaver and Landsman 2001). However, given the relative complexity of the accounting treatment and audit procedure for financial products, Ryan (2007) indicated that the balance between relevance and reliability may constitute risks when measuring fair value. If financial products are traded in an active market (e.g., stock securities), verification of fair value measurement becomes easy. Contrarily, if no precise market price is available (e.g., derivative

financial assets) or a model is needed to estimate the value (e.g., liabilities or noncurrent assets), fair value measurement will then be subject to discretions of management, resulting in information asymmetry (Benston 2008; Landsman 2007; Penman 2007) and value relevance being potentially affected. One special attribute of the financial services industry is that a big percentage of assets and liabilities are composed of financial assets and financial liabilities. Also, as hedging instruments need to be provided to meet customers' transaction demands, the use of financial products tends to be versatile and their amounts are higher than in other industries.

A number of prior studies examined the relationship between fair value measurement and value relevance using the financial services industry as the research object and found that fair value of investment securities is more value relevant than historical cost for the banking and insurance industries (Barth 1994; Petroni and Wahlen 1995; Barth, Beaver and Landsman 1996; Eccher, Ramesh and Thiagarajan 1996; Nelson 1996; Carroll, Linsmeier and Petroni 2003; Wang, Alam and Makar 2005). Yet, some of these studies demonstrated that value relevance will be affected by noise when fair value of the financial instruments is less reliable. For example, Petroni and Wahlen (1995) concluded that fair value of stocks and national bonds is value relevant, but this relevance does not exist in municipal bonds and corporate bonds. Barth et al. (1996) found that additional disclosure of fair value of derivative products does not contain incremental explanation power. Nelson (1996) reported that value relevance of loan, deposit, and long-term liabilities will be affected by noise when its fair value is less reliable.

Eccher et al. (1996) also reported that fair value disclosure for financial instruments other than security investments is only value relevant under limited conditions. Song et al. (2010) divided sources of fair value information to three levels based on FAS No. 157. Their results indicated that fair value information of level 1 and level 2 are more value relevant than that of level 3. Taken the above together, not all financial assets and liabilities have fair value relevance. The value relevance will be affected by noise, especially when fair value of financial products is less reliable. To understand whether fair value measurement of financial products for the financial services industry in Taiwan is value relevant, we formulate hypothesis 1 (H1) as follows.

Ceteris paribus, fair value information of financial products for the financial services industry are value relevant.

#### Impacts of Auditors Industry Specialization on Value Relevance of Fair Value Information

According to DeAngelo (1981) and Watts and Zimmerman (1986), audit quality is a joint probability of detecting omission/misstatement in financial statements and truly reporting that omission/misstatement. Prior studies found that compared to auditors without industry specialization, industry-specialized auditors possess more abundant knowledge and audit experience for the industry and are more capable of making accurate judgments and detecting misstatements (professional ability), thus generating better audit quality (Balsam, Krishnan and Young 2003; Craswell et al. 1995; Krishnan 2003; Dunn and Mayhew 2004; Knechel, Naiker and Pacheko 2007; Chin and Chi 2009; Reichelt and Wang 2010).

The financial services industry is quite different from other industries in that it has unique assets and liabilities, regulations, and internal and external control (government regulators). Further, due to the development of new financial products and advancement of information technology in recent years, the financial services industry has deeper involvement in the innovative financial business such as derivative financial products and assets-securitized products. The accounting treatment and audit procedures for these products are quite complicated, and it's also difficult to verify fair value measurement of these products – especially assets and liabilities with less marketability. As such, fair value estimated by different corporation using various assumptions and judgments is quite different. Benston (2008) pointed out that

auditors need to exercise considerable professional judgments when encountering difficulty in measuring fair value. As corporations and accountants may not possess all the professional knowledge needed for assets evaluation, financial statements preparer and auditors are thus likely to make mistakes when measuring fair value, causing an increase in audit complexity and risk – a further revelation of the importance of auditors' industry expertise. Because big (4) audit firms have more internal resources, sharing of on-the-spot audit experiences, and higher level of industry expertise, they are likely to invest more resources in conducting educational training for employees, holding and participating in finance-related seminars, and strengthening employees' ability of professional judgment to reduce the audit risks associated with fair value measurement and to enhance value relevance of fair value information. The financial services industry in Taiwan is under stricter external supervision and oversight. In addition to the regulations of Corporate Act, Security Exchange Act and the Financial Supervisory Commission, it is also restrained by other finance-related legislations (e.g., Banking Act of the Republic of China, Insurance Act and Financial Holding Company Act, etc.) and government authorities (e.g., Banking Bureau and Insurance Bureau, etc.).

Therefore, it is likely that regulators' special supervision and management over the financial services industry might be associated with auditors' characteristics. Besides, Chi (2011) indicated that an audit failure occurring in the financial services industry will cause more significant impacts on auditors' reputation than other industries given the enormous depositors and insurers in the former. Consequently, from the perspective of stakeholders' impact and political costs, it's likely that industry-specialized auditors will perform audit engagements more prudently when auditing clients in the financial services industry to avoid audit failure. Following this line of reasoning, the impacts of auditor characteristics on audit quality might be more evident in the financial services industry.

On the contrary, if auditors believe that regulators will protect the financial services industry from closure because it's too big to fail, auditors may not throw in too much audit efforts when auditing the financial services industry. Following this argument, auditor characteristics may impact audit quality less evidently in the financial services industry. In other words, the conclusions from prior studies regarding the influences of auditor industry specialization on audit quality may not be applicable to the financial services industry under stricter supervision and control. In order to understand whether auditor industry specialization helps mitigate the deviations in measuring fair value and diminish people's concern regarding reliability of fair value information so as to elevate value relevance of fair value information, we develop hypothesis 2 (H2) as follows.

The level of auditor industrial specialization will impact value relevance of fair value information in the financial services industry.

In the wake of the financial crisis in 2008, the IASB promulgated an amendment on IAS under a political pressure. The amendment was related to relaxation of the restrictions on reclassifying corporations' financial assets and liabilities, allowing partial loss incurred by corporations due to value decline in financial products being excluded from income statement reporting or such products being evaluated using measurements other than fair value. This amendment has caused the failure of corporate earnings to truly reflect the real fluctuations in fair value, lower reliability of financial statements, and investors' confidence loss for financial reports, thus potentially impacting value relevance of fair value measurement. Under this circumstance, whether investors should give more trust to earnings quality of financial statements of the corporations audited by industry-specialized auditors becomes a research issue. This study compares and examines whether the association among fair value, auditors industry specialization and value relevance is any different in the two years before and the two years after the financial crisis in 2008. We formulate hypothesis 3 (H3) as below.

The association among fair value, auditor industrial specialization and value relevance is different in the two periods pre- and post- the financial crisis in 2008.

## DATA AND METHODOLOGY

Corporations in Taiwan are required to apply the Statement No. 34 since 2006. Because the financial services industry gives undue emphasis to fair value measurement relative to other industries, this study uses listed companies (Taiwan Stock Exchange Corporation, TSEC) and over-the-counter (OTC) companies (GreTai Securities Market, GSM) (TSEC and GSM in Taiwan are analogous to NYSE and NASDAQ in the United States) in the financial services industry (including banks, insurance companies, and financial holding companies) (Banks under control of financial holding companies are further regulated by the Financial Holding Company Act, which requires that all financial holding companies be listed and each company hold only one bank. After the Financial Holding Company Act was passed, many financial holding companies were established and many formerly listed banks were delisted and became subsidiaries of the listed financial holding companies. For example, Hua Nan Bank was a listed company before 2001, but was delisted in 2001 and became a subsidiary of Hua Nan Bank Financial Holding.) as research objects. The sample period spans from 2006 to 2010 which are five years after the implementation of the Statement No. 34. As there is a gap between the business of the securities industry and that of the banking and insurance industries, the majority of prior literature didn't include the securities industry in their research scope. This study follows prior research and also excludes the securities industry from its sample. In addition, corporations which applied for reorganization, were taken over, became unlisted, or that had incomplete data are eliminated from the sample and the final sample consists of thirty three firms and 165 observations. Among this group, eleven firms are in the banking industry, eight firms are in the insurance industry, and fourteen firms are financial holding companies. We further separate the sample period into two sub-periods using year 2008 as the mid-point (2006-2007 and 2009-2010) and examine if there is any difference between the two periods concerning the association among fair value, auditor industry specialization and value relevance. There are sixty six observations in each period. All research data are obtained from corporations' public annual reports listed in the Market Observation Post System and the database of Taiwan Economic Journal.

## RESULTS

To control the influence of outliers, this study winsorizes all the continuous variables at the top and bottom 1 percent of their respective distributions. Table 1 provides the descriptive evidence of the entire sample. From Table 1, we found that the mean (medium) value of financial assets and liabilities measured at fair value is 118,000 (51,500) and 12,400 (1,332) thousand respectively, and the mean (medium) ratio out of total assets and total liabilities is 16.5% (10.6%) and 1.4% (0.3%) respectively, indicating that the average amount of financial assets of listed and OTC companies measured at fair value in the financial services industry is much higher than that of financial liabilities. In addition, the mean ratio of EXPERT (both audit firm and one of the report-signing audit partners being industry-specialized) is 18.8%.

Table 2 presents the results from the OLS pooled regression model with cluster robust standard errors, random effects panel model and Amemiya-MaCurdy panel IV. In the OLS pooled regression model, we find from the results of the entire sample that financial assets measured at fair value is significantly positively associated with stock price ( $p$  value  $< 5\%$ ), indicating that fair value information of financial products in the financial services industry is value relevant. In the random effects model once we control possible existence of unobserved heterogeneity, we find a stronger positive effect for FVA as well as statistically significant negative relationship between the liabilities measured at fair value (FVL) and stock price ( $p$  value  $< 1\%$ ). Moreover, based on Amemiya-MaCurdy Panel IV model, we report that the revealed relationships are causal in nature. From the OLS model there is no significant difference between value

relevance of financial assets (liabilities) measured at fair value and that of financial assets (liabilities) measured at historical costs (the tests of coefficient difference for  $FVA=NFVA$  and  $FVL=NFVL$  are not statistically significant). In other words, while fair value information is value relevant, given the lower marketability of partial financial products, it is likely that fair value measurement will cause serious deviations and yield value relevance which is not significantly greater than that of historical costs measurement. In addition, we found from the results of the two sub-periods pre- and post- 2008 that financial assets measured at fair value for the period of 2006-2007 is significantly positively associated with stock price ( $p$  value = 5%), but this association is not present in the period of 2009-2010. The results indicate that the changes made by the IASB due to the financial crisis in 2008 caused corporate earnings to fail to truly reflect the real fluctuations in fair value, leading to a decreasing reliability of financial statements, a loss in investors' potential confidence in the financial statements, and thus a decline in value relevance of the entire statements.

To better understand whether auditor industry specialization increases value relevance of fair value information for the financial services industry, we add the interaction variable of financial assets measured at fair value and industry-specialized auditors and report the results in Table 3. We report that the impacts on stock price of financial assets and liabilities measured at fair value, or assets, liabilities, and net income measured at historical costs are about the same as those presented in Table 2. Regarding the interaction variable  $FVA*EXPERT$ , we found that the coefficient for the entire sample period and the sub-period of 2006-2007 is negative but insignificant; while the coefficient for the sub-period of 2009-2010 is positive and significant ( $p$  value < 5%). The results indicate that prior to the financial crisis in 2008, investors did not care if fair-value-measured financial assets are audited by industry-specialized auditors. Whereas, following the financial crisis in 2008, investors may have lost confidence in financial statements which results in lower value relevance of the statements. Earnings quality of financial statements of those corporations audited by industry-specialized auditors thus became more reliable from the investors' perspective. As a result, investors tend to give higher ratings for those financial assets that are measured at fair value and audited by industry-specialized auditors, further enhancing value relevance of fair value information.

Finally, we split the entire sample into two groups – financial holding companies and non-financial holding companies and try to assess whether we observe similar trends. The Financial Holding Company Act in Taiwan was enacted in 2001. The act was intended for the domestic large-scale financial groups to be able to integrate their resources. Since financial holding companies may be composed of companies from the insurance, banking, and trust industry, value relevance of their consolidated financial statements is likely to be different from that of individual bank's or insurance company's financial statements. The results are presented in Table 4. We found that the results for the group of non-financial holding companies are similar to those for the entire sample. For the group of financial holding companies, none of the variables influence stock price except net income, which is significantly positively associated with stock price. This implies that the results for the entire sample are driven by non-financial holding companies and value relevance for the two groups is significantly different. Because financial statements of financial holding companies are prepared by consolidating the statements of individual financial entities, the components of assets and liabilities are more complex relative to those of an individual bank or insurance company. As such, the association between financial statement information and stock price for the financial holding companies is relatively less apparent.

As all the independent variables are measured based on year-end information, similar to many of the prior studies which used year-end value to measure the dependent variable (i.e., Barth et al. 1996; Eccher et al. 1996). To make the results of this study more complete, we further utilize market value on the financial statement date to measure the dependent variable as an additional analysis. For the purpose of brevity, we don't report table with regression findings. We found that either the results for the entire sample period or

those for the two sub-periods pre- and post- 2008 remain unaltered compared to Table 3, indicating that the empirical conclusions are not affected by market value measurements made at different times.

## CONCLUSION

In recent years, fair value has become a global trend in formulating accounting standards. The issue of whether fair value accounting can truly convey corporations' value in the market and increase value relevance of financial statements has drawn significant attention among researchers, financial statement users, and regulatory authorities. The financial services industry has a greater tendency in using fair value to measure its assets and liabilities compared to other industries. Because it is difficult to verify the accuracy of fair value measurement, industry specialization of auditors becomes more crucial. This study explores value relevance of fair value measurement in the financial services industry, and analyzes whether the level of auditor industry expertise impacts value relevance of fair value measurement. In addition, following the financial crisis in 2008 the IASB has made changes on IAS to adapt to the changes in international situation. To understand whether these changes cause impacts on value relevance of fair value measurement of financial statements, this study further separates the entire sample period into two sub-periods using 2008 as the division point and compares whether the association among fair value, auditor industry specialization, and value relevance is any different in the two periods.

Our empirical results contain the following major findings. First, overall fair value information of financial products in the financial services industry is value relevant, but there is no increase in the relevance compared to that of historical costs measurement. In fact, we report a casual relationship. Second, due to the financial crisis in 2008, the changes made by the IASB to respond to the changes in international situation has resulted in the failure of corporate earnings to truly reflect real fluctuations in fair value, causing a loss of value relevance for fair value information of financial products in the period of 2009-2010. Under this circumstance, corporations that are audited by industry-specialized auditors will gain more trust from investors for their financial statements' earnings quality.

Investors will give higher ratings to financial assets that are measured at fair value and audited by industry-specialized auditors, thus leading to an increase in value relevance of fair value information. Lastly, there exist significant differences between financial holding and non-financial holding companies for value relevance of financial statements. As financial statements of financial holding companies are prepared by consolidating the statements of individual financial entities, the components of assets or liabilities are more complex relative to those of individual banks or insurance companies from the investors' viewpoint. Therefore, the association between financial statement information and stock price is relatively less obvious for financial holding companies.

With regard to a methodological framework, the contribution of our study is crucial as well. Using random effects model we are able to tackle the issue of the unobserved heterogeneity in the estimated regressions. Further, we extend empirical framework by successfully implementing panel IV models. Doing so, we are able to solve the issue of endogeneity of key independent variables. In other words, the resulting coefficients are both unbiased and consistent. Such a detailed discussion and treatment of unobserved heterogeneity and endogeneity has been largely missing in the existing literature.

According to the empirical results, we find that while fair value information of financial products in the financial services industry are value relevant, its relevance is not significantly higher than that of historical costs measurement. Therefore, standards formulating authorities should place more emphasis on the problems driven by measurement deviations of financial products in inactive markets. Moreover, the amendments to IAS by the IASB under political pressures diminished the reliability of financial statements and caused investors' loss of confidence in financial statements. The IASB should strive to maintain

fairness and objectivity when framing accounting principles in the future. In addition, consistent with the results of prior studies related to using non-financial services industries to analyze impacts of auditor industry specialization on earnings quality, this study also supports that industry-specialized auditors will enhance value relevance of fair value information in the financial services industry. Nevertheless, our analysis further provides the means and methods of how financial statement users should utilize the information relevant to fair value. Lastly, since this study focuses its analysis on the financial services industry, the conclusions might not be applied or generalized to other industries, which requires further discussion and exploration of future researchers.

# THE EFFECTS OF MANDATORY AUDITOR ROTATION ON AUDIT QUALITY IN TAIWAN: A HIERARCHICAL LINEAR MODELING ANALYSIS

Yu-Shan Chang, Tamkang University  
Li-Lin (Sunny) Liu, California State University, Dominguez Hills  
Dana A. Forgione, University of Texas at San Antonio

## ABSTRACT

*This study employs the Hierarchical Linear Modeling (HLM) technique to conduct analysis in an attempt to overcome the lack-of-independence problem present among the sample of audit firms, audit partners, and audited companies. By computing audit tenure using names of audit partner and audit firm, we aim to understand whether the implementation of mandatory auditor rotation policy changes audit quality of audit partners or audit firms. We find empirically that prior to rotation audit partner tenure is not significantly associated with discretionary accruals; however, audit quality is enhanced with longer audit partner tenure following rotation. While these results do not support the implementation of auditor rotation policy, a comparison between pre- and post- implementation points out audit quality of audit partners is escalated following the implementation of rotation, implying that rotation adoption will help enhance audit quality of audit partners within finite audit tenure. Interestingly, by comparing the HLM with Ordinary Least Squares (OLS) results we further discover that the relationship between audit firm tenure and audit quality is changed from significant negative to insignificant due to the rotation adoption. This result indicates that mandatory auditor rotation policy not only changes audit behavior of audit partners but also affects audit quality of audit firms.*

**JEL:** M4

**KEYWORDS:** Audit Partner Tenure, Audit Firm Tenure, Audit Quality, Hierarchical Linear Model

## INTRODUCTION

This study contributes to the existing literature in that it conducts analysis using the HLM method (which is different from the OLS method used in prior studies) and it provides evidence that the HLM method, by comparing with the OLS method, is more able to capture the changes in audit quality of audit firms following the rotation implementation. That is, after implementing the rotation policy the influences of audit partner tenure on audit quality will be greater than that of audit firm tenure. Collectively, our empirical findings do not support the conclusion that longer audit partner tenure will impair audit quality; also, it serves as a reminder to the in-charge authorities on the importance of emphasizing audit quality of audit firms as well. The remaining of this paper is organized as follows. Chapter two reviews the existing literature and develops hypothesis. Chapter three introduces the research method, including definition of all variables and data source. Chapter four analyzes the empirical results and chapter five provides concluding remarks.

## LITERATURE REVIEW AND HYPOTHESIS DEVELOPMENT

### Audit Tenure and Audit Quality

Auditors are engaged to audit companies' financial statements with the aim to provide investors with relative but not absolute confirmation of financial statements reliability. Because audit fees are paid by the

audited clients instead of investors, it is imperative to chronically examine auditors' independence in addition to their professionalism. The practitioners and academic professionals have arguments regarding the influences of mandatory auditor rotation. Those who hold positive views contend that the longer the same auditor audits the same company, the more likely the auditors are familiar with companies' operation or have friendship with them, thus causing lower audit quality and impaired independence (excessive familiarity effect) (Chi and Huang 2005). Those who hold negative views argue that mandatory rotation of auditors every five years will cause higher audit cost in the first engagement year for new auditor as well as rising risk and cost of choosing inadequate auditors for audited companies, thus leading to higher likelihood of audit failure due to auditors' lack of understanding of clients' internal real status in the first few years of engagement.

Moreover, it is also likely that predecessor auditors are more willing to accommodate management's discretion and compromise their independence during the last audit period. If so, the policy of mandatory auditor rotation every five years will form an incentive for reducing audit quality since predecessor auditors are not obligated to maintain audit quality for successor auditors; also, the five years audit term limit is too subjective to continue auditors' learning curve effects because of the enforced rotation when auditors go a step further in understanding the audited client's operation. The continuous occurrence of business scandals has made the regulatory institutions and academia believe in the association between longer audit tenure and higher likelihood of audit failure - which eventually results in corporate failure and significant loss incurred by public investors, and stipulate the policy of mandatory auditor rotation every five years. Nevertheless, it is also likely that the establishment of such regulation will cause a decline in audit and financial statements quality (Johnson,

Khurana, and Reynolds 2002 ; Myers et al. 2003 ; Ghosh and Moon 2005) as policy standards don't necessarily improve auditors' attitude and quality in performing audit. The General Accounting Office (GAO) in United States, under the request of the Congress, surveyed audit firms and Fortune 1000 large public offering companies regarding their opinions of the policy of mandatory audit firm rotation using the questionnaire approach and received the following result – it is commonly believed that costs incurred by implementing mandatory auditor rotation far exceed the benefits it brings. And other interest parties within the enterprise also hold about the same opinion regarding the survey. The GAO thus believes that mandatory rotation of audit firms might not be the most effective way of enhancing audit quality and intensifying auditor independence.

A number of prior studies hold negative views concerning the policy of auditor rotation. Myers et al. (2003) investigated the association between audit tenure and earnings quality for American enterprises from 1988 to 2000 and demonstrated that the longer the audit tenure the better the earnings quality. That is, emphasizing auditor rotation might worsen earnings quality. Johnson et al. (2002) researched the U.S. companies audited by Big6 firms from 1986 to 1995 and conducted sample pairing based on industry and company size. They separated audit tenure into three categories, including 2-3 years (short term), 4-8 years (medium term), and 9 years and above (long term) and investigated the relation between audit tenure and financial statements quality. Their results indicate that financial statements with shorter tenure have worse quality than those with medium tenure and no evidence supports declining quality for financial statements with longer tenure. They thus inferred a lower audit quality in the first few years of audit engagement, a better audit service in audit tenure of four years and above, and negative influences of mandatory auditor rotation on audit services provided by audit partners.

Geiger and Raghunandan (2002) examined the association between audit opinion type and audit tenure by using bankrupt companies as research objects. Their results revealed that with a shorter tenure auditor are less capable of issuing modified or qualified opinion while with a longer tenure they are more able to discover the potential insolvency crisis that might exist within the company at a later point and propose

warnings beforehand. That is, audit failure is more likely to occur in the initial few years of audit engagement and the mandatory auditor rotation policy may increase the rate that auditor lapse into such risk. Chung and Kallapur (2003) used abnormal accruals as proxy of audit quality and examined the association among client importance, non-audit services, and abnormal accruals. They found that audit tenure and absolute value of abnormal accruals are negatively correlated. Carcello and Nagy (2004) studied the companies that had financial statements fraudulency from 1990 to 2001 using matching sample observations. They found that financial statement fraudulency is more likely to occur in shorter tenure (within three years), which overthrew the conclusions by Casterella, Knechel, and Walker (2002). Ghosh and Moon (2005) investigated the relation between auditor tenure and audit quality and their results confirmed the positive impacts of audit tenure on audit quality. Specifically, investors and information intermediary believe audit tenure can improve audit quality; also, mandatory auditor rotation will raise additional cost to capital market participants.

In contrast, there are also considerable studies that hold reverse views. Casterella et al. (2002) found that longer audit tenure is usually accompanied with higher risk of audit failure. Davis, Soo, and Trompeter (2003) detected bigger absolute value of abnormal accruals and smaller deviation of analysts' earnings projection in longer tenure, indicating that auditors with longer tenure are more willing to provide more flexibility in reporting earnings so as to reach analysts' prediction more easily. Chi and Huang (2005) researched the listed companies in Taiwan from 1998 to 2001 and explored the relationship between audit tenure and abnormal accruals from two aspects of learning effect and excessive familiarity effect. Their results exhibited positive learning effect in shorter tenure (using years that auditors perform audit as measure) while negative excessive familiarity effect in longer tenure when using square value of years that auditors perform audit as measure. This result implies that audit quality can be escalated year by year in the occasion of shorter tenure while gradually declining when the tenure is excessive.

The reforms driven by SOX also prompted the passage of an auditor rotation policy in Taiwan in April 2003. The Taiwanese regulations mandate that listed and OTC companies whose financial statements since 2004 are audited by the same audit partners for the most recent consecutive five years are subject to virtual investigation. Application of the standards to determine the "most recent consecutive five years" should be retraced to the companies' dates of public offering. While companies usually adhere to the regulation of five-year audit tenure to avoid being virtually investigated, it doesn't represent the positive influence on audit quality of the policy intervention. Moreover, both audit firms and audited companies must pay out extra cost and assume higher risk under the stipulation of auditor rotation, meaning the implementation of the policy might change the audit behavior and attitude of auditors.

### Application of the HLM

HLM is a complex form of OLS regression that is used to analyze variance in the outcome variables when the predictor variables are at varying hierarchical levels (Woltman et al., 2012); for example, students in a classroom share variance according to their common teacher and common classroom. Prior to the development of HLM, hierarchical data was commonly assessed using fixed parameter simple linear regression techniques; however, these techniques were insufficient for such analyses due to their neglect of the shared variance (Woltman et al., 2012). HLM accounts for the shared variance in hierarchically structured data. Using the educational case as an example, this technique accurately estimates lower-level slopes (e.g., student level) and their implementation in estimating higher-level outcomes (e.g., classroom level; Hofmann, 1997). HLM is prevalent across many domains, and is frequently used in the education, health, social work, and business sectors. It simultaneously investigates relationships within and between hierarchical levels of grouped data, thereby making it more efficient at accounting for variance among variables at different levels than other existing analyses.

Hierarchical linear (multilevel) models have the same assumptions as other major general linear models (e.g., ANOVA, regression), but some of the assumptions are modified for the hierarchical nature of the design (i.e., nested data). The assumptions of linearity and normality do not pose any problems for multilevel models, and are thus retained. However, the assumptions of homoscedasticity and independence of observations pose several problems and must be adapted in order to proceed with this type of analysis. First, units of observations in the same group are more similar than those in different groups. Second, while groups are independent of each other, observations within a group share values on variables, and thus, are not independent. One advantage of employing multilevel models over other types of analyses is that independence is not required, because it is violated at each level of the analysis (Fidell and Tabachnick, 2007). Additionally, multilevel models are designed to deal with this intra-class correlation, which assumes that data from the same context are more similar than data from different contexts. That is, such modeling analysis serves to measure the variability within contexts.

### Hypothesis Development

Prior studies presumed a homogeneous audit quality among audit partners and audit firms (Chi and Huang 2005 ; Chen et al. 2008 ; Chi et al. 2009); yet, audit quality differences are present among Big4 and non-Big4 firms and even more likely among audit partners in the same firm or different firms. Further, observation samples tend to be non-independent if different companies are audited by the same auditor in the same year. Therefore, this study utilizes the HLM method to conduct analysis due to several problems we encountered with our research sample (i.e., nested data, lack of independence and homogeneity of variance among observations), the modified assumptions, and the advantages of this technique in solving these issues. The alternative hypothesis is proposed as below.

Ceteris paribus, the implementation of auditor rotation policy will help enhance audit quality.

## **DATA AND METHODOLOGY**

Our sample selection process began with all of the publicly listed and OTC companies included in the Taiwan Economic Journal (TEJ) database from 2000 to 2011. Tenure of audit partners and audit firms was computed since 1983 through the end of the study period. Considering the comparability, we deleted the financial and insurance companies from our sample as well as those companies with missing value for the variables included in this study. Table 1 presents the distribution of our entire sample. The size of the sample increases yearly from 2000 to 2011. The final sample contains a total of 14,561 observations, with the Electronics industry being the highest proportion (56.45%), followed by the Chemicals industry (6.97%).

## **EMPIRICAL RESULTS**

### Descriptive Statistics

Table 2 presents the mean, median, standard deviation, 25th and 75th percentile values for each of our variables. Panel A displays the descriptive statistics for the total observations, while Panel B and C show the descriptive statistics for the subsamples of 2000-2003 (prior to the implementation of auditor rotation policy) and 2004-2011 (after the implementation of auditor rotation policy). As presented in Table 2, Panel A, the mean value of DAC is -0.005, the average tenure for CPAA, CPAB, and CPAFIRM\_Tenure is 2.705, 2.057, and 8.252 years, respectively. Of the total sample, 80.8% are audited by Big4 firms. The sample companies have stayed in the market for an average of 23.473 years since incorporation (AGE). As presented in Table 2, Panel B, the mean value of DAC is -0.002. Prior to the implementation of auditor rotation policy, the average tenure for CPAA, CPAB, and CPAFIRM\_Tenure is 3.794, 2.705, and 6.250 years, respectively. Of the 2000-2003 sample, 72.7% are audited by Big4 firms.

As presented in Table 2, Panel C, the mean value of DAC is -0.007. After the implementation of auditor rotation policy, the average tenure for CPAA and CPAB is 2.240 and 1.780, indicating that mandatory auditor rotation does affect (reduce) audit partner tenure whether the tenure is computed based on leading partner only or both partners. The average tenure for CPAFIRM\_Tenure is increased to 9.107 years and of the total sample, 84.3% are audited by Big4 firms.

### Pearson Correlations

We calculate first-order Pearson correlation coefficients for all of our variables, presented in Table 3. The results indicated that longer audit tenure can effectively lower discretionary accruals and Big4 audit firms can effectively restrain companies from conducting earnings manipulation. The correlated coefficients among variables are not too high (between -0.7 and 0.7), indicating that multicollinearity is not a concern in this study.

Table 4 displays the results of univariate analysis (Chin and Chi (2009) found that leading partners are more likely to reduce the probability of financial statements restatement than concurrent partners, and their audit quality is also higher than the latter. Thus, this study utilizes only audit tenure computed based on leading partners (CPAA) to perform univariate analysis in Table 4.) In Panel A, we partitioned the entire sample into three subsets based on audit tenure (CPAA), including short term (CPAA ≤ 5), medium term (6 ≤ CPAA ≤ 10), and long term (CPAA > 10), separately computed the mean value for each subset of DAC and performed the t-test of the mean. The results exhibited that longer audit tenure is associated with smaller discretionary accrual and better audit quality. Panel B presents the results of the t-test of the mean between pre- and post-implementation of rotation policy. We find that the DAC after the rotation is significantly smaller than that before the rotation, indicating that the implementation of auditor rotation policy is effective in mitigating company's behavior of earnings management.

### Regression Results

This study has the following claims. First, prior studies perceive audit quality among audit firms and also among audit partners within the same firm or from different audit firms as homogenous. However, from Figure 2 we observed diverse DAC in companies audited by partners from the same or different audit firms (including Big4 and non-Big4), revealing the heterogeneity in audit quality among audit partners and audit firms. Second, the practice of different companies being audited by the same audit partner will cause the problem of non-independence among observed sample. Besides, the fact that audited companies might change their engaged auditor or audit firm, and audit partners might move from one firm to another formulates a cross-level structure for this study. We thus use the HLM method to conduct analysis in an attempt to overcome the above stated limitations. To begin with, the ICC value in the Null model was used to determine the significance of variations among individual audited companies, audit partners, and audit firms. The ICC value is an intra-class correlation coefficient, representing the ratio of self-variation of the same audit partner, audit firm or audited company to total variation. On average, the ICC value should be taken into account in selecting the statistical analysis method when it reaches 7% of the entire sample variations. Table 5 presents the ICC value of the entire sample in three subsets (including audit firms, audit partners under audit firms, and audited companies under audit partners). The results manifest that the ICC value for each measure of discretionary accrual (AbsDAC, DAC+, and DAC-) is greater than 7% in the entire sample, pre-, and post- rotation implementation, indicating the need of using the HLM method to perform analysis.

Table 6 to Table 14 present the results of OLS and HLM regression for the entire sample, pre-implementation of auditor rotation (2000 – 2003), and post-implementation of auditor rotation (2004 –

2011). Table 6 shows the absolute value of discretionary accruals for the entire sample (2000 – 2011). Panel A presents the results of OLS regression where CPAA, CPAB, and CPAFIRM\_Tenure are all significantly and negatively associated with AbsDAC. We also find a significant negative correlation with AbsDAC if both audit partner and audit firm tenure are considered simultaneously. Panel B displays the results of HLM regression. We find a negative but insignificant relationship between audit tenure and AbsDAC regardless of whether only audit firm tenure is considered or the impacts of both audit partner and audit firm tenure are considered. The sole observation of the influence of audit partner tenure yields a significant and negative correlation with AbsDAC, indicating that longer audit partner tenure produces higher audit quality. We further examined the results of implementing auditor rotation policy and display them in Table 7 (pre-rotation) and Table 8 (post-rotation). Table 7, Panel A presents the results of OLS regression prior to rotation implementation. We find that audit partner tenure is not associated with AbsDAC regardless of whether audit firm tenure is controlled; and audit firm tenure is significantly negatively associated with AbsDAC. Panel B presents the findings from the HLM regression, where we obtain consistent results as Panel A. Table 8 shows the results after the implementation of rotation policy. We find similar results as those reported in Table 6 for both the OLS and HLM regression.

To sum up the above, prior to rotation longer audit partner tenure is not effective in constraining AbsDAC; while after rotation audit partner tenure does function and can effectively mitigate companies' behavior in using AbsDAC to conduct earnings management. Based on the results from the HLM regression, we further find that audit firm tenure is associated with higher audit quality prior to rotation, while after rotation its effects in refraining AbsDAC are reduced (the relationship between two variables becomes not statistically significant) after controlling for audit partner tenure. Contrary to this result, performing the OLS regression yields an erroneous conclusion that longer audit firm tenure is associated with higher audit quality after the rotation implementation. Collectively, while the empirical findings do not provide proof that longer audit partner tenure will impair audit quality (that is, do not support the implementation of mandatory rotation policy); we do find evidence that rotation adoption will change audit quality of audit partners. More specifically, following the rotation implementation audit partners tend to provide better audit services and improve their audit quality within restricted tenure. The results from the HLM regression indicate that audit firm tenure is not significantly associated with AbsDAC after controlling for audit partner tenure (Table 6 and Table 8), providing further implication that implementation of auditor rotation policy should place emphasis on audit quality of audit partners (instead of audit firms). Regarding the explanatory power of the model, the HLM results presented in Table 6 through Table 8 all provide additional explanatory power in R<sup>2</sup> than the Null model (Table 6: around 2% increase, Table 7 and Table 8: around 0.7% increase).

Table 9 displays the results of positive discretionary accruals (DAC+) for the entire sample. We find that both audit partner tenure and audit firm tenure can effectively lower DAC+ regardless of (1) whether OLS (Panel A) or HLM (Panel B) regression is used, and (2) whether audit firm tenure is controlled or not. Table 10 shows the results of DAC+ prior to rotation. The results (whether OLS or HLM) are similar to those reported in Table 7. That is, before implementing the rotation policy audit partner tenure is not effective in controlling DAC+. Table 11 presents the results of DAC+ after the rotation. The results remain unaltered compared to those reported in Table 8. In other words, we obtain similar evidence in the results of AbsDAC and DAC+ - the influence of audit firm tenure on audit quality after implementing the rotation policy is more likely to be observed from the HLM regression than the OLS regression. Overall, the HLM results reported in Table 9 through Table 11 provide more than 20% additional explanatory power in R<sup>2</sup> than the Null model.

We demonstrate the results of negative discretionary accruals (DAC-) for the entire sample in Table 12. The results indicate that (1) audit partner tenure is significantly positively related to DAC- if it is solely observed, (2) audit firm tenure is negatively (not significant for OLS and marginally significant for HLM) related to DAC- if it is solely observed, and (3) longer audit partner tenure is associated with better audit

quality while this relationship does not exist in longer audit firm tenure if we include both types of tenure into observation. Table 13 presents the results of negative discretionary accruals prior to rotation. We don't find significant relationship between audit partner or audit firm tenure and DAC- regardless of whether the OLS or HLM regression is performed. Table 14 displays the results of negative discretionary accruals after the rotation. We find a significant and positive relationship between audit partner tenure and DAC- no matter whether audit firm tenure is controlled, while an insignificant and negative relationship between audit firm tenure and DAC-. These results exhibit that audit partner tenure is efficacious in reducing companies' earnings manipulation behavior via use of negative discretionary accruals as a mechanism. Overall, the results from Table 12 to Table 14 provide additional explanatory power than the Null model by more than 18%.

Taken together the results from Table 6 to Table 14, we find in both OLS and HLM regression that compared to pre-rotation, audit partners are more likely to promote their audit quality following rotation implementation and can effectively restrain companies from conducting earnings management using AbsDAC, DAC+, or DAC- as a mechanism. We do not find evidence that longer audit partner tenure will impair audit quality. Relative to the OLS regression results, the HLM method performs better in discerning the changes in audit quality of audit firms after rotation. That is, the impacts of audit partner tenure on audit quality are greater than those of audit firm tenure after the mandatory rotation policy came into effect. Collectively, our empirical findings do not support the implementation of mandatory rotation policy that infers longer audit partner tenure will impair audit quality. Moreover, the HLM results also serve as a reminder to the in-charge authorities on the importance of emphasizing audit quality of audit firms.

## CONCLUSIONS

This study investigates the listed and OTC companies in Taiwan. Given the Taiwanese regulation that two audit partners (leading and concurrent), in addition to the audit firm, need to sign the auditors' report, we explore the influences of implementation of auditor rotation policy on companies' discretionary accruals by (1) separately calculating tenure of audit partner and audit firm, and (2) partitioning the entire sample into 2 subsets using the implementation of auditor rotation policy as the dividing point. Considering the cross-level feature of our research framework, we utilize the HLM method to conduct analysis.

We examined the impacts of rotation adoption on audit quality by observing the absolute value, positive value, and negative value of discretionary accruals. The empirical results exhibit that prior to rotation (1) audit partner tenure is not effective in restricting discretionary accruals regardless of whether audit firm tenure is controlled, and (2) audit firm tenure is significantly and negatively related to discretionary accruals. Interestingly, we find that after rotation audit partner tenure is significantly and negatively (positively) correlated with absolute and positive (negative) value of discretionary accruals. The sole observation of audit firm tenure yields a significant and negative correlation with discretionary accruals (absolute and positive value), while simultaneous observation of both audit partner and audit firm tenure reveals a significant and negative relationship of discretionary accruals (absolute and positive value) with audit partner tenure but an insignificant relationship with audit firm tenure.

These results indicate the focusing effects of rotation adoption on audit quality of audit partners and the mitigating effects of that on audit quality of audit firms. In contrast, the OLS results show a significant and negative association with both audit partner and audit firm tenure after the mandatory rotation policy came into effect, implying the failure of the OLS method in precisely capturing the change in audit quality of audit firm due to rotation adoption. While the overall results do not support the inference that longer audit partner tenure will impair audit quality, a comparison of pre- and post-rotation results provide evidence that implementation of auditor rotation policy does escalate audit quality of audit partners within finite tenure,

and the HLM results also suggest that the in-charge authorities should strive on maintaining audit quality of audit firms as well.

# WHAT COMES NEXT FOR CREDIT UNIONS IN COSTA RICA? FROM FINANCIAL REPRESSION TO THE RISKS OF A NEW FINANCIAL ENVIRONMENT

Miguel Rojas, Université de Moncton,  
Sébastien Deschênes, Université de Moncton

## ABSTRACT

*During the 1980s many developing countries started to dismantle policies constraining the financial sector. Those policies were adopted in order to channel resources to the manufacturing sector, as well as other sectors (infrastructure, commercial agriculture for export) considered as key for economic development. We argue that financial repression spurred the growth of credit unions (CUs) in Costa Rica. These organizations took advantage of the opportunity to expand their customer base by serving borrowers that were routinely refused access to credit to finance consumption when banks attained the cap for consumption set up by authorities. Our article tackles a question of great social and economic importance, namely, have CUs in Costa Rica lost their overall competitiveness vis-à-vis other financial players in Costa Rica, after the liberalization of financial markets? If the answer is yes to this question, one would expect that the cooperative financial sector in Costa Rica and other developing countries can only be a marginal player in a financial sector that most likely will not return to the dirigiste policies of the past. We suggest avenues for future research on the topic.*

**JEL:** G180

**KEYWORDS:** General Financial Markets Government Policy and Regulation Credit Unions Financial Repression

## INTRODUCTION

During the 1980s many developing countries started to dismantle policies that constrained the financial sector. Those policies were adopted in order to channel resources to the manufacturing sector, as well as other sectors (infrastructure, commercial agriculture) considered as key for economic development. Negative interest rates were widespread; a minimum amount of bank lending was set up for the “modern” sectors of the economy, and a cap was set for some others, such as consumption.

Many researchers consider nowadays that those policies — called “financial repression”— harmed the prospects of economic development of adopting countries, rather than fostering them (Lizano, 2004). Nevertheless, financial repression spurred the growth of credit unions (CUs) in Costa Rica (Rojas-Alvarado 2013, personal communication). They saw an opportunity serving borrowers that were routinely refused access to credit to finance consumption when banks attained the cap for consumption. By mid-1980s a process of reform of financial markets began, being completed by late 1990s (Lizano, op. cit.). Given the dismissal of the main factor behind the emergence of CUs in Costa Rica, we ask ourselves about the impact of the liberalization of financial markets on CUs.

Thus, our article aims to tackle a question of great social and economic importance, namely, have CUs in Costa Rica lost their overall competitiveness vis-à-vis other financial players in Costa Rica, after the liberalization of financial markets? If the answer is yes to this question, one would expect that the cooperative financial sector in Costa Rica can only be a marginal player in a financial sector that most likely will not return to the *dirigiste* policies of the past. Next section reviews the emergence of CUs in Costa

Rica, as well as the liberalization of financial markets. This section also sets the hypothesis of our study. This is followed by a section discussing data and the methodology of our study, and another one devoted to its results. The article is wrapped up by a section containing concluding comments and suggesting avenues for future research.

## **FINANCIAL REPRESSION, EMERGENCE OF CREDIT UNIONS AND LIBERALIZATION OF FINANCIAL MARKETS IN COSTA RICA**

Costa Rican economic policy between 1950 and the late 1970s was strongly interventionist. It was the result of a development strategy that has been labelled as import-substitution industrialization (ISI) (Lizano 2004). This development strategy was promoted by the United Nations Commission for Latin America (ECLA), and it was aimed at the creation of industrial infrastructure rapidly in countries with economic production dominated by agricultural production and raw material exports (see Baer 1972 for a detailed exposure of the implementation of ISI. He also provides an early criticism concerning the shortcomings of the policy). According to ISI advocates, industrialization should be implemented quickly, given the gap vis-à-vis the industrialized countries, which had the opportunity to develop and test over long periods mechanisms intended to facilitate industrialization. From the decade of 1950 most countries in Latin America began to promote accelerated the manufacturing sector of the economy. This involved a set of economic policies that included the erection of a "wall" of tariffs on imports of manufactured products, to facilitate the substitution of imports by local production and the number of policies to facilitate the financing of the emerging manufacturing sector.

The adoption of high tariffs on manufactures was coupled in Costa Rica (and probably elsewhere in Latin America), by a number of policies intended to use the operation of the financial sector of the economy to channel resources to manufacturing development. Those policies included the setting on an annual basis of a minimum of the commercial bank loan portfolios going to the "modern" sectors of the economy (manufacturing and agro- export). Cap rates were also widespread in the case of loans made to the manufacturing sector and agricultural activities that could generate foreign exchange to the industrialization and modernization of the country. It was also common the setting of a maximum amount ("cap") of the bank loan portfolios to finance consumption. Negative interest rates were common during this period, especially towards the end of the ISI-dominated period (Lizano 2004). Some development theorists have labelled the policies described above as "financial repression."

An observer reported by the mid-1950s that commercial banks were nationalized in Costa Rica (Bannell 1956). In fact, the three State-owned commercial banks held nearly 60% of all assets of the financial system of the country as late as 1995, as we discuss below. Undoubtedly, the fact that the government controlled directly the main players in the financial sector facilitated financial repression.

According to a former manager of Coocique R.L., one of the largest cooperatives in Costa Rica, and who is now retired, it is in the context of financial repression that emerged most of the existing CUs in Costa Rica, particularly the larger among them (Rojas-Alvarado 2013, personal communication). In the view of this former manager, the emergence of such financial players was a collective response to a serious lack of credit for a widespread number of individuals in Costa Rica during the 1950s and 1960s. According to Mr. Rojas, who worked as an executive for one State-owned bank before joining Coocique, the constraints on credit imposed by economic authorities even affected individuals showing good credit histories and relatively high income levels. Before joining the cooperative as a general manager, Mr. Rojas noted that routinely the local branch of the Banco Nacional de Costa Rica (the largest bank in the country at the time and still today) where he worked refused loan applications for financing consumer durables to individuals who exhibited a low level of risk. Those applications were turned down simply because the bank had reached the "ceiling" or maximum that it can lend on this type of loans. This observation has led the Mr.

Rojas to resign from his position at the bank and accept to become general manager of the credit union by mid 1960s. During the following decades the cooperative exhibited strong growth, because it took advantage of the absence of strong competition from state-owned banks, hampered by existing financial policies, and the virtual absence of private-sector players in the Costa Rican financial industry.

By mid 1980s “financial repression” policies began to be reformed. Between 1984 and 1987 the ceilings and floors in banks’ portfolios were dismantled for most activities (Lizano op. cit.). The new policies were bound to face significant challenges. For instance, a wave of bankruptcies in the late 1980s and early 1990s showed the limitations of a regulation system that was not prepared to deal with some of the private-sector players that ventured in commercial banking under the new rules. In spite of those early shortcomings, a return to the interventionist policies of the past does not seem likely (Calderón 2013, personal communication).

Being creatures from the time of financial repression, the dismissal of policies connected with it was supposed to hamper ability of CUs to compete with both new private players in the financial industry and the State-owned commercial banks that have been freed of the constraints that limited their capacity to attract new customers and offer attractive rates for both investors and lenders. Mr. Rojas, who ran Coocique during three decades, noticed a change in the environment as a result of the new policies, making more difficult to remain competitive. The wave of bankruptcies was followed by enhanced, more tightened regulation (and costly to comply with). By mid-1990s a new organization was set up to deal with regulation of players in the financial industry, which was until then the responsibility of a department of the central bank of the country. Calderón (2013, personal communication) argued that, although the new regulator, the Superintendencia General de Entidades Financieras (SUGEF) was critically important for the stability of the financial system as a whole, it was also designed with an “anti-CUs’ bias,” further deteriorating the capacity of CUs to compete. For instance, according to Calderón, SUGEF rules include the obligation of supervised entities to report changes in ownership stakes. This is easy to do in the case of small privately-owned banks with less than 20 or 30 shareholders, but it is cumbersome, costly and unwarranted in the case with CUs that typically have several thousand members, if not ten of thousands.

The discussion above allows us to set up the hypothesis of our study. It relates to the evolution of competitiveness of CUs in Costa Rica. Given that CUs’ emergence and growth in Costa Rica were mainly connected with the presence of policies connected with the so-called “financial repression,” the dismissal of those policies should have led to loss of competitiveness of CUs vis-à-vis other players in the financial market. Thus, we have set the following hypothesis:

H.1 CUs in Costa Rica exhibit less growth in terms of the volume of assets that they hold, vis-à-vis other players in the financial market of Costa Rica.

## DATA AND METHODOLOGY

In order to test our hypothesis, we compiled information about the volume of assets held by CUs and other important players in the financial industry that were likely to be affected by the dismissal of the financial repression policies and the emergence of a new regulatory environment in Costa Rica.

We have chosen the year 1995 as our vantage point. The new regulatory body of the financial industry in Costa Rica was set up in that year by the new Ley Orgánica del Banco Central de Costa Rica (No. 7558). The new regulator, the Superintendencia General de Entidades Financieras (SUGEF), acquired enhanced powers, more autonomy and its own governing board vis-à-vis its predecessor, the Auditoría General de Entidades Financieras (AGEF), which belonged to the Banco Central de Costa Rica (SUGEF 2014).

The creation of SUGEF is a major landmark in the development of today’s Costa Rican financial system. Furthermore, the same law ended the monopoly that State-owned banks enjoyed over checking accounts.

Under certain conditions, privately-owned banks were allowed to open checking accounts, a decision that considerably increased their access to new funds (El Financiero 2014).

The SUGEF started compiling accounting data on the entities that it regulated from its start in 1995. That database is available, free of charge, to the public in SUGEF's website. In order to test our hypothesis we downloaded information about total assets (net of SUGEF's estimates for uncollected receivables), for three major players in the Costa Rican financial system. Those actors are: the ensemble of the three State-owned commercial banks (Banco Crédito Agrícola de Cartago, Banco de Costa Rica, and Banco Nacional de Costa Rica); the ensemble of privately-owned commercial banks; and the ensemble of CUs. Table 1 presents the information on the value of assets held by each of the different types of players in the financial markets. Data are stated in thousands of nominal Costa Rican colones.

## RESULTS AND DISCUSSION

The data presented in Table 1 does not uphold our hypothesis. CUs absorbed nearly 42.2 billion Costa Rican colones in 1996, i.e. 3.7 % of the nominal value of the assets held by all actors in the financial sector. In 2006 CUs managed nearly 505 billion Costa Rican colones, 6.1% of all assets being held by actors regulated by SUGEF. Assets controlled by CUs have grown to roughly 1.9 trillion colones, 9.2% of the

total in 2013. This was almost three times the level in percentage terms, if we compare with the starting year.

Privately-owned commercial banks also exhibit important growth, although not as fast as CUs. In 1995 this type of banks held 173.5 billion Costa Rican colones, 23% of total assets. Ten years later those banks held almost two trillion current Costa Rican colones, about 30% of all assets managed by organizations reporting to SUGEF. Assets under management of privately-owned banks represented 29% of all assets held in 2013.

State-owned commercial banks lost considerable market share during the period under examination. In 1995 the three banks in the group absorbed 60.8% of assets under management. In 2013 the figure has lowered to just 43.7%. This reduction is more remarkable even than it appears at first sight for two reasons. Firstly, even if State-owned banks lost their monopoly over issuing of checking accounts, they should have also benefited from the removal of constraints that limited their competitiveness. Secondly, and arguably, much more important, it is worth to mention that deposits in privately-owned banks are not insured in Costa Rica. State-owned banks, on the contrary, are backed by the Ministry of Finance. This was highlighted in 1994, when Banco Anglo Costarricense, a State-owned bank went bankrupt and was closed down by the Costa Rican government. Deposit holders were fully compensated for their losses by the Ministry of Finance (Rodríguez 2013, personal communication).

## CONCLUDING REMARKS

Our data do not uphold the hypothesis stated in our study. Against our expectations, CUs in Costa Rica exhibited an enhanced capacity to compete with other players, after liberalization of the financial industry in Costa Rica. This is truly surprising, given that CUs were, in many regards, creatures that directly emerged from the financial repression policies that were in place during the 1950s-late 1970s period. Furthermore, the financial sector reform of 1995 did not allow CUs to open checking accounts to the public, unlike State and privately-owned commercial banks.

We believe that our study presents an interesting result, calling for more in-depth analysis. One very interesting open question is: why CUs in Costa Rica were not saw a steep reduction in their capacity to compete after financial reform, but instead they seem to thrive? We hint a possible answer to the paradox. Under current legislation, SUGEF only regulates CUs managing over 1 billion Costa Rican colones (roughly 2 million US dollars) (Arias 2012). It is possible that larger CUs, regulated by SUGEF are able to merge with smaller CUs, which cannot to keep up as independent entities have been fuelling CUs' growth. If that is the case, the strategy of growth will erode rapidly as the interesting targets for mergers disappear. Future research could also benefit from more formal test of our hypothesis.

# NON-FINANCIAL PREDICTORS OF DEFAULT RISK IN UNSECURED SME LENDING –EVIDENCE FROM NIGERIA

Osaretin Kayode Omoregie, Pan-Atlantic University, Lagos, Nigeria

## ABSTRACT

*This study examines non-financial parameters as predictors of default risk in Nigerian SMEs and their applicability to developing economies. SME financing is critical to national development. However, high incidents of default have been recorded by commercial banks for SME financing. Using the logistic regressions analysis technique, and primary and secondary data from SMEs and commercial banks that has made unsecured loans to SMEs in Nigeria, we characterize default as principal and interest past due 90 days in accordance with Basel II. Our study contributes to the literature by focusing on non-financial predictors of default, given the informational opacity of SMEs and high incidence of earnings management, which make their financial data unreliable, and the fact that few SMEs have adequate security for bank lending. Our findings suggest that the industry to which the SME belongs, loan amount, tenure of the loan, and interest rate, age and legal form of the business can be used to predict default risk. However, location was not found to be significant. The study derives a default predictor model for SME unsecured lending.*

# RANKING METHODOLOGY FOR LARGE NUMBER OF PROCESS MAPS

Gustavo A. Diaz, University of Phoenix

## ABSTRACT

*Is not unusual during an acquisition or a merger of two or more organizations, to perform a large process mapping exercise (fifty or more), before management can decide a course of action for existing business process, as far as eliminating, combining or replacing them. This paper presents a practical, combined methodology of a traditional swim-lane process mapping followed by completing a team-driven Pugh matrix and a process simulation exercise, in order to prioritize for analysis large number of process maps. After the maps creation, the Pugh matrix will comprise metrics categorized by customer line of sight, employee, operations, financials, as well as functional areas or different geographical sites. These metrics are then weighted during the ranking stage. Once the prioritization phase is completed, this hybrid methodology would entice the analyst to perform process simulations for the top ranked process. This step should be easy to perform, as we would have most of the data required already available. The simulation / processmapping tool of choice is iGrafx® Process 2013, due to its appealing price-performance, ease of use and centralized repository for maps.*

**KEYWORDS:** Process Maps, Swim-lanes, Metrics, Pugh Matrix, iGrafx®

## INTRODUCTION – BUSINESS PROCESS IMPROVEMENTS

Improving business processes begins with a high-level understanding of the process and its surroundings, using a SIPOC (suppliers-inputs-process-outputs-customers) diagram, as a way to encapsulate the process at hand. More detailed process maps follow. There are several commonly used mapping techniques used to document the various business processes within an organization. For organizations that prefer to take a graphical view of their processes, swim-lane maps are utilized. Among the advantages of these cross-functional mappings is the ability to communicate processes within your organization and identify touch points, hand-offs and lines of visibility with the customer (Szymanski, 2010).

The experience from quality initiatives in business and industry over the past twenty years show that improving the work content of a process, improves the work itself and the employee morale. A large toolset has been developed to implement these methods and to understand, analyze, and improve the business processes in an organization (Rosen, 2009).

Process maps address the key Six Sigma foundational concept of  $Y = f(X)$ , or simply, outputs are a function of inputs. A well-developed process map can help to uncover the different inputs and their quantification, as well as potential rework loops, unnecessary inspections and help to avert failures in performance or delivering customer requirements (Kubiak, 2007). Process analysis require consideration of cycle times, elimination of unnecessary processing steps or looping activities within the process; it should also look for financial opportunities for process improvement, including cost savings, efficiencies, reviewing controls, or isolating the root cause of process problems (Verschoor, 2010).

Usually the analysis and evaluation of these processes is according to criteria like performance, cost, and timeliness, and compared to benchmark indexes, which are defined as attributes of the best in class

practices. These benchmarks typically only pertain for some of the steps in the process, and are therefore difficult to evaluate overall. Relations among different benchmarks cannot typically be defined. Benchmarks help to compare relevant quantitative aspects for a business process analysis and optimization in the form of metrics concentrated in some aspects of the business processes significantly reducing an overall performance metric (Neuscheler, 1998).

However, during the research stage, there was no indication of an existing overarching methodology where a large series of business maps are evaluated as a portfolio with the aim of prioritization and ranking. Maps and their evaluation are usually treated as standalone work. The literature research shows mostly procedures relying on metrics like cost, time, revenue, ratios like cost/benefit, throughput yield, or labor required to perform the operations, etc. There are some prior attempts to create an overall procedure to compare and rank dissimilar processes. One of them asks to rank the process by opportunity result (revenue gain, cost reduction or other value add criteria) and opportunity effort (cost and time). Then it looks at these rankings to determine those with the maximum benefit/cost ratio and decide the order in which the changes are to be made (Cowan, 2005).

## METHODOLOGIES USING PROCESS MAPS

The proposed methodology is heuristic in nature. The components utilized are proven methodologies in their own right. Their use together as a procedure has been successfully proven in several acquisitions and mergers taken place during 2010 – 2014. The four steps used in ranking a large number of process maps are delineated next.

a. Start with a classical swim lane map, along with an exhaustive series of metrics and operational parameters (see Figure 1).

Figure 1 – Partial list of process maps metrics and operational parameters

b. Utilization of a Pugh Matrix exercise, where subject matter experts reach a consensus of the weight and the risk associated with a specific metric. A Pugh matrix methodically assists in the evaluation and prioritization of competing attributes or options. (R., 2012). A partial detail of a working Pugh matrix is shown In Figure 2.

Figure 2 – Pugh Matrix with weights and Risk assessments.

c. Creation of a matrix multiplication of the Pugh matrix results and the metrics gathered during the process map creation. A partial prioritization results is presented below (See Figure 3).

Figure 3 – Pugh Matrix multiplication with process metrics.

d. The last step of the heuristic is to utilize a process mapping to create what-if simulations scenarios to validate the prioritization of process maps from cost and cycle time perspective. This aspect is addressed in a separate paper to be published in the summer of 2014. The tool of choice for this heuristic is iGrafx® Process 2013 (iGrafx Process 2013 Solutions, 2014). This is a very cost effective process modeling and discrete simulation tool.

A detailed flow of this heuristic is shown on Figure 4.

Figure 4 – Detailed methodology steps.

## CONCLUSIONS AND NEXT STEPS

This paper addresses a very practical approach to rank and prioritize a large, concurrent number of process maps for further decision making, like elimination, consolidation, or partial migration into other processes. A future step in the evolution of this algorithm is the automation of all matrix manipulations, and the creating of a cloud application to make it portable to any organization in the process of acquisition.

# IMPROVING BUSINESS STUDENTS' CLASSROOM PERFORMANCE WITH BIG DATA

Rafael Romero, SUNYIT

## ABSTRACT

*Recent technological innovations have increased the availability of structured and unstructured data. This event has improved the efficiency with which evaluators could assess business students' performance. Rather than basing performance on several smaller sets of data, evaluators can now derive single large sets, from which a clearer picture could be drawn. The level of detail that could be achieved is like going from a standard definition TV set to a high definition TV set. This paper explores how this new level of data detail, big data, helps build a smarter, more innovative and ingenious business classroom. A key question answered is if personalized learning with digital devices could help discouraged business students, in particular, students who find math or stat concepts difficult. Based on aggregation of comments students write on their personal devices, evaluators can determine what part of a particular difficult lesson needs adjustment. Also, it becomes easier to identify at risk-students. Overall, this results in better instruction and a more effective learning experience for students.*

# EMISSION DISCHARGE PERMIT TRADING WITHIN A COMMON POOL MARKET

Anetta Čaplánová, University of Economics in Bratislava

Keith Willett, Oklahoma State University- Stillwater

Rudolf Sivák, University of Economics in Bratislava

*The formulation of a cap and trade policy to deal with the environmental problems is a complex issue. It can be based on the use of a property right defined as an emission discharge permit (EDP). However, this approach has also some drawbacks. In case of air quality the potential problem with using an emission discharge permit is the problem of “hot spots,” which occurs when regional air quality standards are violated when EDP trades take place. These problems can be addressed by using a permit trading structure, which is based on a common pool market and regulatory tiering also known as a smart market. In the paper we design a model based on the common pool market and regulatory tiering. Using a set of linear programming formulations and a set of numerical simulations we demonstrate the usefulness of the common pool market design for dealing with the specific environmental problems from the policy perspective.*

# GESTION DEL PROCESO DE TOMA DE DECISIONES EN LOS AJUSTES TARIFARIOS DE EMPRESAS CONTRATISTAS PETROLERAS

César Martínez Zacarias, Universidad del Zulia

Carlos García, Universidad del Zulia

Rubelys Mindiola Gonzalez, Universidad del Zulia

Mariany Moreno, PDVSA Servicios Petroleros S.A.

## RESUMEN

*El propósito del estudio es analizar el proceso de toma de decisiones gerenciales aplicado a los ajustes tarifarios de los contratos en empresas de servicios petroleros que operan en el municipio Lagunillas del Estado Zulia, Venezuela. Como principales bases teóricas tenemos las etapas del proceso de toma de decisiones Gómez Balkin (2010). Además se revisan las teorías de Hubert (2010) y se consideran los aportes de HARVARD BUSINESS ESSENTIALS (2010) en cuanto al análisis de los estados financieros luego de las soluciones. La toma de decisión es el proceso de identificar los problemas, evaluar las alternativas y resolverlos. El ajuste tarifario es un procedimiento decisorio aplicado comúnmente en contratos de obras y servicios para sincerar y aminorar el efecto inflacionario en la estructura de costos de los mismos. En cuanto a las fases decisorias se evaluará: 1) identificar y diagnosticar el problema; 2) generar soluciones alternativas; 3) evaluar alternativas; 4) seleccionar la mejor alternativa; 5) implantar la decisión; 6) evaluar la decisión. Se trata de un estudio descriptivo y de campo, para el cual se diseñará un cuestionario de preguntas de selección múltiple dirigido a gerentes de 25 empresas de servicios de perforación, ubicadas en el municipio Lagunillas. Los resultados de esta investigación permitirán analizar periódicamente la gestión decisoria en los procesos por ajustes de las tarifas en las contratistas del sector estudiado, para contrarrestar las variaciones del entorno y establecer estrategias prácticas que mantengan un margen de rentabilidad óptimo, para garantizar la estabilidad y expansión financiera organizacional.*

## MANAGEMENT OF THE DECISION-MAKING PROCESS IN SETTING RATES OF OIL CONTRACTORS

### ABSTRACT

*The purpose of the study is to analyze the managerial decision-making process applied to tariff adjustments of contracts in oil companies operating in the municipality of Lagunillas in Zulia State, Venezuela. The stages of the process of decision-making Gomez Balkin (2010) we have as main theoretical bases. Also the theories of Hubert (2010) were reviewed and are considered contributions from HARVARD BUSINESS ESSENTIALS (2010) in terms of the analysis of the financial statements after the solutions. Decision making is the process of identifying problems, evaluate alternatives and resolving them. The tariff adjustment is a decision-making procedure commonly applied in works and services contracts to be honest and slow the inflation effect on the cost structure of the same. En \_cuanto\_ a decision-making phases will be assessed: 1) identify and diagnose the problem; (2) generate alternative solutions; (3) evaluate alternatives; (4) to select the best alternative; (5) implement the decision; (6) to evaluate the decision. It is a descriptive study and field, for which a multiple choice questions questionnaire addressed to managers of 25 companies from drilling services, located in the Lagunillas municipality will be designed. The results of this research will allow periodically analyze management decision-making processes by adjustments of the rates in the studied sector contractors, in order to counter the changes in the environment and establish practical*

*strategies that maintain an optimal profitability margin, to ensure stability and organizational financial expansion.*

**JEL:** G32

**KEY WORDS:** Business Management, Decision-Making, Tariff Adjustment Process

Esta investigación tiene como propósito establecer la relación entre el proceso de toma de decisiones gerenciales como herramienta para el ajuste tarifario en las empresas contratistas petroleras venezolanas, delimitadas en el municipio Lagunillas de la Costa Oriental del Lago de Maracaibo, zona fundamentalmente dependiente de la exploración, producción y comercialización del crudo. Se enmarcó en el área de las Ciencias Gerenciales, basándose en las teorías de Gómez y Balkin (2010), Harvard Business (2010), Hernández (2009) y Huber (2010). La investigación fue de tipo descriptiva y de campo, con un diseño no experimental, transeccional. La indagación expone la problemática en la aplicación efectiva de estrategias gerenciales decisorias en organizaciones petroleras, acordes a la realidad actual variante, que les permita un desarrollo del proceso administrativo-contable de ajustes de tarifas a través de líneas operativas que flexibilicen las variaciones en las estructuras de costos de las contratistas con PDVSA, para garantizar la rentabilidad adecuada, viabilidad organizacional y desarrollo socio económico de la región, teniendo como base el cumplimiento de las etapas del proceso de toma de decisiones. Considerando las dimensiones del problema planteado, se presenta la sistematización del mismo, orientada por sus objetivos:

#### Objetivo General

Analizar el proceso de toma de decisiones por etapas en los ajustes tarifarios de empresas contratistas petroleras. Objetivos Específicos:

Identificar el proceso básico de toma de decisiones en empresas contratistas de servicios petroleros.

Determinar la aplicación de las etapas del proceso de toma de decisiones en empresas contratistas de servicios petroleros.

Establecer lineamientos estratégicos para la optimar el proceso de toma de decisiones gerenciales en las organizaciones objeto de estudio.

#### **METODOLOGÍA**

Se trata de un estudio de tipo analítico-descriptivo; analítico porque estudia la realidad tal cual es, a través del análisis de situaciones existentes, y descriptivo, porque identifica características del universo de investigación, orientadas a recolectar información relacionada con el estado real de las personas, objetos, situaciones y fenómenos de investigación. El tipo de diseño a utilizar es el no experimental, por cuanto no se manipularán deliberadamente las variables de estudio, porque ya han sucedido en su contexto natural. Se identifica con los estudios de campo. En cuanto a la población, se tomará en consideración para los fines del estudio, el total de gerentes de las empresas contratistas de perforación petrolera adscritas a (ACIL); dado que es de fácil acceso al momento de aplicar el instrumento de recolección; se realizará un censo de los mismos. La recolección de datos se llevará a cabo mediante un instrumento (cuestionario), dirigidos a las fuentes de información (gerencia de las empresas contratistas petroleras). En tal sentido, el cuestionario se encuentra estructurado en ítems, con una escala de selección múltiple de cuatro (4) alternativas de respuestas. El instrumento diseñado será sometido a un proceso de validación, a través de la técnica "Juicio de Expertos", esta consiste en la revisión lógica de las personas consideradas como expertos en el campo donde se ha de aplicar (teórica y metodológicamente) los instrumentos. Se consideraran (5) expertos en el área de finanzas,

los cuales deberán poseer el título de especialista, magíster o doctor con reconocida experiencia. La confiabilidad de un instrumento será medida a través del coeficiente Alpha Cronbach. Los resultados fueron procesados mediante la aplicación del método de estadística descriptiva, permitiendo la representación de las variables de estudio, específicamente a través del uso de medidas de tendencia central y de variabilidad.

### Viabilidad de la Investigación

La presente investigación fue viable debido a que el insumo requerido para su desarrollo es plenamente accesible y cuantificable, y existe un acercamiento con los gerentes de las contratistas petroleras de servicios de perforación por la actividad profesional y experiencia de los investigadores en esta área durante más de 10 años. Para la ejecución de la investigación se aborda la problemática con el fin de generar líneas estratégicas para este ramo. Los resultados podrían ser aplicados en el establecimiento de estándares en el proceso de toma de decisiones referidos a la gestión de ajustes tarifarios. Procesamiento estadístico de datos:

Tabla 1: Categoría de Análisis Para la Interpretación del Promedio

Rango	Intervalo	Categoría
1	4.21 – 5	Muy Alta
2	3.41 – 4.20	Alta
3	2.61 – 3.40	Moderada
4	1.81 – 2.60	Baja
5	1 - 1.80	Muy Baja

Fuente: Martínez y Otros (2014)

Para la segunda técnica mencionada “medida de variabilidad”, indica el grado de dispersión de las respuestas, con relación a la escala de medición utilizada y su rango (4 a 0), permitirá elaborar su análisis por intervalo y categoría, presentado en la tabla No. 2:

Tabla 2: Categoría de Análisis Para la Interpretación de la Desviación Estándar

Rango	Intervalo	Categoría
1	3.21 – 4	Muy Alta Dispersión
2	2.41 – 3.20	Alta Dispersión
3	1.61 – 2.40	Moderada Dispersión
4	0.81 – 1.60	Baja Dispersión
5	0 - 0.80	Muy Baja Dispersión

Fuente: Martínez y Otros (2014)

### Avances del Resultado de la Investigación

En relación al Objetivo No.1 de Identificar el proceso básico de toma de decisiones en empresas contratistas petroleras, encontramos:

Tabla 3: Identificar el Proceso Básico de Toma de Decisiones

Indicadores	Promedio	Categoría	Desviación	Categoría
Objetivos	4,06	Alta	0,67	M. Baja
Metas	4,50	M. alta	0,71	M. Baja
Actividades	4,22	M. alta	1,33	Baja
Promedio General	4,25	M. alta	0,90	M. Baja

Fuente: Martínez y otros (2014)

Grafico 1: Identificar el Proceso Básico de Toma de Decisiones

Fuente: Martínez y otros (2014)

En lo que respecta al objetivo Identificar, el proceso básico de toma de decisiones, se alcanzó un valor promedio de 4.25, con baja dispersión de 0.90; ubicándose dentro de la categoría muy alta; señalando que la gerencia en condiciones operativas, establece un proceso básico de toma de decisiones y compromete recursos para alcanzar niveles deseados de desempeño; asimismo, la administración diagnostica completamente el problema antes de intentar una solución y evalúa las causas y consecuencias de la decisión. Sobre éste particular, Gómez (2010) afirma que una vez que se identifica las pautas básicas para la toma de decisiones, el gerente necesita establecer los objetivos a desarrollar para esta decisión, estableciendo metas previas para lograrlo, por medio de una serie de actividades direccionadas al cumplimiento de las metas establecidas. Para el segundo objetivo específico, orientado a determinar la aplicación de las etapas del proceso de toma de decisiones en los ajustes tarifarios en las empresas contratistas prestadoras de servicios petroleros; se presentan los siguientes resultados;

Tabla 4: Aplicación de Etapas del Proceso de Toma de Decisiones en los Ajustes Tarifarios

Indicadores	Promedio	Categoría	Desviación	Categoría
Identificar y Diagnosticar el Problema	4,26	M. Alta	0,66	M.Baja
Generar soluciones alternativas	3,81	Alta	0,90	Baja
Evaluar Alternativas	4,15	Alta	0,69	M.Baja
Seleccionar Alternativas	4,06	Alta	0,89	Baja
Implantar la Decisión	4,31	M. Alta	0,84	Baja
Evaluar la Decisión	4,37	M. Alta	0,66	M.Baja
Promedio General	4,16	Alta	0,77	M.Baja

Fuente: Martínez y otros (2014)

Gráfico 2: Aplicación de Etapas del Proceso de Toma de Decisiones en los Ajustes Tarifarios

Fuente: Martínez y otros (2014)

La dimensión etapas del proceso de toma de decisiones, se alcanzó un promedio de 4.16, con una muy baja dispersión de 0.77; ubicándose dentro de la categoría moderada; señalando los encuestados con este mismo nivel que se ejecuta la identificación y diagnóstico del problema, la generación de soluciones alternativas;

su evaluación y selección; así como la implantación y evaluación de la decisión; logrando considerar los elementos planteados para el desarrollo de las decisiones organizacionales. Para Gómez (2010), la toma de decisiones es un proceso «escalón a escalón» que avanza en sucesivas etapas desde el principio hasta el fin. Como característica las decisiones tomadas, es el proceso de identificar los problemas y resolverlos, aplicadas por los directivos y su equipo dependiendo del alcance y la estructura de la organización. En otras palabras, cuando la dirección observa que algo no está bajo control surge la necesidad de solucionarlo.

## CONCLUSIONES

En cuanto al objetivo general Analizar el proceso de toma de decisiones por etapas en los ajustes tarifarios de empresas contratistas petroleras se evidencia que la variable toma de decisiones gerenciales, es considerada significativamente por los gerentes ( promedio de 4.16 de 5 - Alta); con este nivel se desarrollan las etapas del proceso de toma de decisiones en los ajustes tarifarios, el cual es fundamental para el desarrollo de una gestión efectiva dentro de las empresas analizadas, contribuyendo a la viabilidad y ejecución de los proyectos operativos petroleros, con rentabilidad deseada, garantizando el proceso productivo organizacional. Sobre la base de lo anterior, los autores plantean (2014), que la toma de decisiones constituye una herramienta fundamental para el desarrollo de las actividades gerenciales, entre ellas el ajuste de tarifa, logrando que las mismas constituyan el desenvolvimiento de los procesos organizacionales que brinden la posibilidad de seguir operando a largo plazo.

Además Gómez Balkin (2010), expresa que las decisiones deben tener en consideración la perspectiva de largo plazo de las decisiones estratégicas y la perspectiva de corto plazo de las decisiones tácticas. Se centran en actividades operativas de la empresa o procesos administrativos como el ajuste de tarifas. Las etapas para este autor deben establecerse paso por paso de una manera firme y segura, desde el inicio de las mismas con la secuencia lógica de las fases, encaminadas a soluciones adecuadas conducentes al logro de los objetivos organizacionales, esta consideración se observó en la categoría alta de las empresas encuestadas. Con base a lo anterior Huber (2010) plantea que los niveles jerárquicos en todas las situaciones está continuamente tomando decisiones para contrarrestar las problemáticas que influyen sobre la misión y visión de la empresa, esto hace que la organización sea un complejo sistema de decisiones encaminado a lograr la productividad y competitividad de sus servicios a nivel regional, nacional e internacional Sin embargo es importante que se aplique pro actividad en las etapas de:

Generar soluciones alternativas, y Selección de alternativas eficaces, de esta forma se establecerán lineamientos estratégicos para optimizar el proceso de toma de decisiones gerenciales en los ajustes tarifarios de las organizaciones objeto de estudio (Objetivo No.3). Contribuyendo a flexibilizar las líneas gerenciales en este ambiente cambiantes e inflacionario que facilite la variación tarifaria adecuada, el retorno de la inversión esperado, el éxito empresarial y por ende el desarrollo socioeconómico del país.

# MODELO TEÓRICO DE LA CONFIANZA EN REDES INTER-ORGANIZACIONALES

Merlin Patricia Grueso Hinestroza, Universidad del Rosario

María Concepción Antón Rubio, Universidad de Salamanca

## RESUMEN

*La confianza es un aspecto fundamental para la creación y desarrollo de las redes inter-organizacionales y constituye un tema de especial relieve, pues el nivel de implicación de los participantes y la cooperación mutua, en este contexto, tienen un carácter voluntario. Diversos autores han señalado la necesidad de concebir la confianza en redes inter-organizacionales desde una perspectiva amplia, dado que se trata de un fenómeno de naturaleza multidimensional y complejo. En complemento de lo anterior algunos autores han planteado que la confianza en redes inter-organizacionales debe comprenderse al menos mediante tres componentes: afectivo, cognitivo y conductual. El objetivo de la investigación es plantear un modelo teórico, que explique el desarrollo de la confianza en redes inter-organizacionales. Para lograr dicho propósito, se emplea una metodología descriptiva y se relacionan diferentes aproximaciones y modelos existentes que enfocan distintos aspectos de la confianza en redes. Como resultado del análisis, se propone un modelo explicativo que busca ser integrador y se discuten las implicaciones prácticas del mismo.*

## THEORETICAL MODEL OF TRUST IN INTER-ORGANIZATIONAL NETWORKS

### ABSTRACT

*Trust is fundamental to the creation and development of inter - organizational networks and is a topic of high relevance, because the level of involvement and mutual cooperation in this context are voluntary. Several authors have noted the need to develop trust in inter - organizational networks from a broad perspective, because it is a multidimensional and complex phenomenon. In addition to the above, some authors have argued that trust in inter - organizational networks should be understood by at least three components: affective, cognitive and behavioral. The research objective of this paper is to propose a theoretical model that explains the development of trust in inter - organizational networks. To achieve this purpose, a descriptive methodology is used and different approaches and models that focus on different aspects of trust in networks are described. As a result of the analysis, a descriptive model that seeks to be inclusive and practical implications of this are discussed proposed.*

**KEY WORDS:** Trust, Inter-Organizational Networks, Theoretical Model, Trust Levels, Trust Dimensions

## INTRODUCCIÓN

En el actual entorno de negocios, las organizaciones han encontrado en la cooperación una forma de competir; una de las formas de lograrlo es mediante la consolidación de redes inter-organizacionales. En este contexto, la confianza constituye un factor determinante para su éxito y desarrollo. Se ha planteado que la confianza en redes inter-organizacionales constituye un fenómeno complejo, por lo que se hace

necesario debatir acerca de este constructo, adoptando una perspectiva multidimensional y multinivel. La investigación se organiza de la siguiente manera: La primera parte describe los principales modelos, conceptos y dimensiones de la confianza en redes inter-organizacionales, así como su papel en torno de la efectividad de las mismas. En la segunda parte se plantea el tipo de estudio realizado. La tercera parte describe los resultados de la investigación, a través de los cuales se propone un modelo explicativo de la confianza en redes inter-organizacionales. Finalmente se presentan las conclusiones, limitaciones y futuras líneas de investigación.

## REVISIÓN DE LITERATURA

En las últimas dos décadas el estudio de las redes inter-organizacionales ha mostrado una tendencia creciente (Popp, MacKean, Casebeer, Milward y Lindstrom, 2013). Las redes inter-organizacionales se definen como “un conjunto de organizaciones interdependientes con mecanismos independientes de toma de decisiones, que negocian y se ajustan mutuamente entre sí, donde las relaciones entre las organizaciones son continuas” (Sanz-Carranza, 2007, p. 11). Müller-Seitz (2012) por su parte define una red inter-organizacional como un conjunto de “tres o más entidades individuales que colaboran entre sí” (p. 428). Provan, Fish y Sydow (2007) señalan que se trata de “un grupo de tres o más organizaciones conectadas, con el fin de lograr un objetivo común” (p. 482). En torno a este tema, Sanz-Carranza (2007) advierte que en cualquier caso, se trata de un mecanismo de relación entre empresas que se distingue de otras formas de cooperación. Se ha defendido que la confianza constituye uno de los principales determinantes para la creación, desarrollo (Chaturvedi y Gaur, 2009; Robson, Katsikeas y Bello, 2008) y éxito de las redes inter-organizacionales (Klerk, 2012; Pesämaa y Hair, 2007; Provan y Kenis, 2008). En contraste, se ha evidenciado también que la ausencia de confianza es un potente predictor del fracaso de los procesos de cooperación entre organizaciones (Parkhe, 1998).

En redes inter-organizacionales la confianza se define como “la disponibilidad de una parte para ser vulnerable a las acciones de otra parte, con base en la expectativa que el otro desarrollará una importante acción hacia el que confía, indistintamente de la habilidad del otro para monitorearlo o controlarlo” (Mayer, Davis y Schoorman, 1995, p. 712). Bhattacharya, Devinney, y Pillutla (1998) señalan que la confianza entre organizaciones es “la expectativa de los resultados positivos que uno puede recibir, con base en la acción esperada de otra parte, en una interacción caracterizada por la incertidumbre” (p. 462).

### Dimensiones de la Confianza en Redes Inter-Organizacionales

Los desarrollos alcanzados en torno de la confianza en redes inter-organizacionales permiten identificar aproximaciones unidimensionales, bidimensionales y tridimensionales que se expresan en mecanismos y escalas de medida. Gulati y Nickerson (2008) y Young y Wiersema (1999) emplearon escalas unidimensionales para medir la confianza inter-organizacional. En su investigación Medlin y Quester (2002), aunque partieron del supuesto que la confianza se componía de dos factores, los resultados obtenidos en su estudio les llevaron a concluir que se trataba de una escala con un único factor. Entre las aproximaciones bidimensionales se encuentran las propuestas de Cullen, Johnson y Sakano (2000) y Johnson y colaboradores (1996), quienes identifican dos dimensiones de la confianza inter-organizacional: benevolencia y credibilidad. Ring (citado por Chaturvedi y Gaur, 2009) identifica también dos dimensiones de la confianza inter-organizacional aunque con diferente denominación: vinculación emocional y calculadora. Das y Teng (1998) plantean dos tipos de confianza: de reputación y de competencia. Existen aproximaciones tridimensionales. Sako (citado por Boersma, Buckey y Gauri, 2003) plantea como componentes de la confianza inter-organizacional: confianza basada en el contrato, confianza basada en la competencia y confianza basada en el buen nombre. Mukherjee, Renn, Kedia y Mukherjee (2012) al igual que Mayer, Davis y Schoorman (1995), también identifican tres componentes de la confianza: habilidad,

benevolencia e integridad. Chaturvedi y Gaur (2009) proponen que la confianza inter-organizacional se fundamenta en la disuasión, el conocimiento la identificación.

### Modelos de Confianza en Redes Inter-Organizacionales

Uno de los primeros planteamientos en torno del desarrollo de la confianza en redes inter-organizacionales es desarrollado por Sydow (1998), quien en su disertación identifica seis factores determinantes:

- Frecuencia y apertura de la comunicación inter-organizacional
- Multiplicidad de las relaciones de la red
- Apertura de las relaciones
- Balance entre autonomía y dependencia en la relación
- Número de organizaciones que conforman la red y
- La estructura del campo inter-organizacional.

Otras investigaciones han permitido identificar factores que al parecer tienen efecto en el desarrollo de la confianza interorganizacional. Cote y Latham (2006) en su modelo hipotético planteaban que los valores compartidos entre las organizaciones que conforman la red contribuyen al desarrollo de la confianza. Gargiulo y Ertug (2006) identifican un conjunto de predictores de la confianza inter-organizacional:

- Factores disposicionales
- Factores relacionales
- Factores situacionales

Entre los factores disposicionales se encuentran los rasgos individuales de quien confía y en quien se confía y la predisposición a confiar. Entre los factores relacionales, estos autores identifican las experiencias pasadas y las actuales. Finalmente, los factores situacionales hacen referencia al entorno en el que se desenvuelve la relación (Gargiulo y Ertug, 2006). Zaheer y Harris (2006) plantean un modelo explicativo de la confianza en redes inter-organizacionales mediante el que explican qué es la confianza, como se crea, de qué manera funciona y qué resultados genera. Entre los factores que explican la confianza estos autores identifican: factores institucionales, la confianza interpersonal y los costos asociados a la generación de confianza. Seppänen, Blomqvist y Sundqvist (2007) realizan un análisis de los diferentes estudios conducidos entre 1990 y 2003 en torno de la confianza inter-organizacional e identifican que son factores predictores de la confianza:

- La intencionalidad
- La conducta pasada
- Las relaciones sociales y
- La similitud entre las empresas que conforman la red.

En una investigación documental Adams y colaboradores (2010) seleccionan y analizan 30 artículos de investigación en los que se plantean aproximaciones y/o modelos explicativos de la confianza, desde diferentes tipologías de cooperación, entre ellas, las redes inter-organizacionales. Luego de la revisión de la literatura, estos autores concluyen que los modelos explicativos de la confianza incorporan aspectos interpersonales e individuales. Entre los aspectos interpersonales se encuentran: la similitud, proximidad, historia previa y comunicación. A partir de los hallazgos, Adams y colaboradores (2010) identifican un conjunto de factores explicativos de la confianza inter-organizacional tanto del nivel interpersonal como organizacional: justicia procedimental y justicia distributiva. Otros factores determinantes de la confianza, identificados por Adams y colaboradores (2010) fueron la expectativa de continuidad de la relación y el uso del poder.

### La Confianza y la Efectividad de las Redes Inter-Organizacionales

La confianza en redes inter-organizacionales es considerada un predictor de su efectividad (Provan y Kenis, 2008; Mandell y Keast, 2008, Cepiku, 2013). Provan y Kenis (2008) señalan que la confianza es una contingencia estructural que determina la efectividad de las redes inter-organizacionales, aunque el grado de confianza requerido dependerá del tipo de gobierno de la red. De acuerdo con estos autores en un tipo de red de gobernación compartida al igual que en un tipo de red gobernada por una organización líder, no se requiere un alto grado de confianza. En contraste, en una organización administrativa de red se requieren altos niveles de confianza inter-organizacional.

Para explicar la efectividad en redes inter-organizacionales Mandell y Keast (2008) emplean un modelo de tres niveles de funcionamiento: operacional, organizacional y ambiental/ del entorno. De acuerdo con este modelo, la confianza es un factor operacional, al igual que el poder, el control, las normas de reciprocidad y la cultura. Entre los factores de nivel organizacional, Mandell y Keast (2008) identifican las características estructurales de los diferentes tipos de red, el grado de interdependencia y la autonomía. Finalmente, estas autoras señalan que el nivel ambiental incluye la relación que establecen las redes con todos los grupos de interés relevantes. Y si bien los anteriores niveles plantean distinciones entre unos y otros, las autoras del modelo defienden que no son mutuamente excluyentes, así, lo que ocurre en un nivel tiene efectos en otro nivel. Cepiku (citada por Elmi, Giordano y Cepiku, 2013) también plantea un modelo de efectividad en redes inter-organizacionales donde la confianza juega un rol determinante. Cepiku en su modelo plantea que factores exógenos, sumados a recursos externos, a la gestión de la red y a recursos internos, son determinantes del desempeño de la red. En este contexto, la confianza inter-organizacional es un recurso interno que afecta tanto la administración de la red como la obtención de resultados intermedios.

Tal como lo destacan Seppänen, Blomqvist y Sundqvist (2007) es claro que se ha llevado a cabo investigación en torno de la confianza en redes inter-organizacionales como factor resultante (variable dependiente) y como factor predictor (variable independiente). De igual forma, se han desarrollado escalas de medida unidimensionales, bidimensionales y tridimensionales de la confianza en redes inter-organizacionales. No obstante lo anterior, se ha señalado que la investigación en torno del tema es aún escasa (Provan y Kenis, 2008) y especialmente si se concibe como un fenómeno multidimensional y multinivel (Seppänen, Blomqvist y Sundqvist, 2007). Por todo lo anterior se plantea como objetivo de esta investigación proponer un modelo teórico de la confianza en redes inter-organizacionales

### **METODOLOGIA**

Para llevar a cabo la investigación se realizó un estudio de tipo documental. Para desarrollar el modelo se tomó como unidad de análisis la red inter-organizacional, entendida como un grupo de tres o más organizaciones conectadas para obtener objetivos comunes, tal como lo han defendido defendida por Provan, Fish y Sydow (2007). Se trata entonces de redes que han sido formalmente establecidas, con un sistema de gobernación claro. En el diseño del modelo se parte además de la clasificación realizada por Provan y Kenis (2008) respecto de la gobernación de las redes inter-organizacionales, así, estos autores señalan que las redes interorganizacionales pueden ser:

- aredes gobernadas por los participantes,
- redes gobernadas por una organización líder o
- redes gobernadas por una organización administrativa de red.

El modelo que aquí se plantea explica el desarrollo de la confianza para una red tipo organización administrativa de red, donde una “entidad administrativa separada es creada para administrar la red y sus

actividades” (p.236). Finalmente, para el diseño del modelo se tuvo en cuenta la literatura revisada en torno al tema y las brechas identificadas a partir de los estudios consultados.

## RESULTADOS

El modelo propuesto se compone entonces de niveles, factores explicativos por nivel, dimensiones y efectos de la confianza en redes inter-organizacionales (Ver Figura 1).

### Niveles del Modelo

De acuerdo con Mandell y Keast (2009) las redes inter-organizacionales operan en tres niveles: ambiental, organizacional y operacional. El nivel ambiental hace referencia al impacto que tienen factores externos en la red, incluidos los grupos de interés que se encuentran alrededor de esta. El nivel organizacional hace referencia al impacto de las características estructurales de los diferentes tipos de red. Por último, el nivel operacional se refiere a las interacciones que toman lugar entre los participantes de la red. De otra parte Cepiku (citada por Elmi y colaboradores, 2013) en su modelo de efectividad de redes inter-organizacionales, plantea la existencia de factores exógenos y recursos externos, factores relacionados con la administración de la red y recursos internos de la red, que permiten comprender su funcionamiento y los resultados que se obtienen. Estos factores pueden ser equiparables a los niveles ambiental, organizacional y operacional propuestos por Mandell y Keast (2008). En función de lo anterior, en el modelo propuesto se plantea que la confianza es un fenómeno multinivel, determinado por factores que se manifiestan en el nivel ambiental, organizacional y operacional (Figura 1).

### Factores Explicativos del Modelo Por Nivel

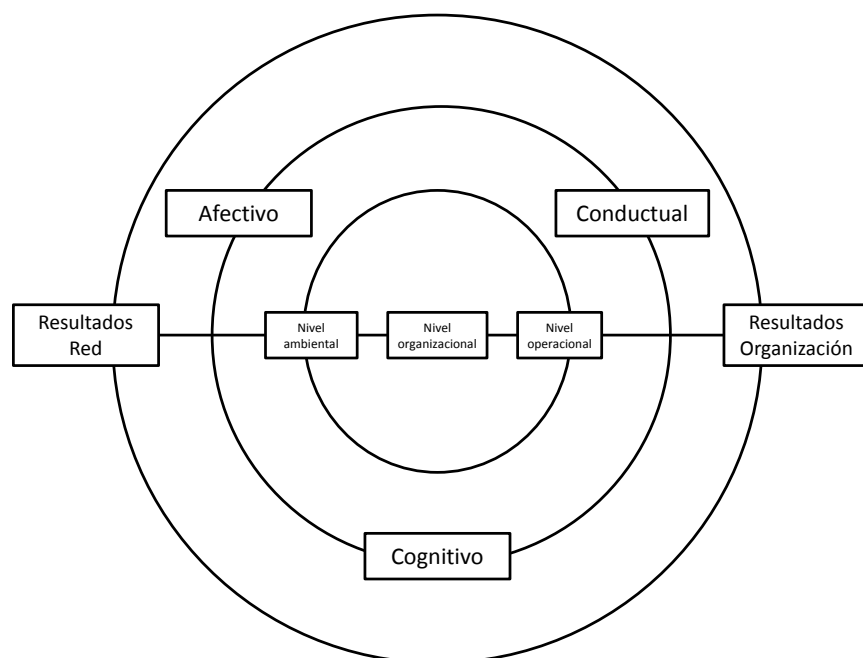

Con base en los tres niveles propuestos (ambiental, organizacional y operacional) se plantean factores explicativos por cada uno de ellos (Figura 1). Entre los factores del nivel ambiental se podrían considerar las experiencias previas que la red como un sistema ha tenido con sus grupos de interés, dado que los grupos de interés constituyen un factor de especial relieve en el funcionamiento de las redes (Mandell y Keast, 2008; Cepiku, citada por Elmi y colaboradores, 2013). Gargiulo y Ertug (2006) enfatizan también que la influencia de terceras partes puede contribuir al desarrollo de la confianza entre organizaciones. Zaheer y Harris (2006) destacan también el papel de factores externos como determinantes de la confianza. De otra parte y retomando la propuesta de Sydow (1998) en torno del desarrollo de la confianza, el grado de dependencia y de autonomía y la multiplejidad de las relaciones, pueden ser factores que explican la confianza en redes inter-organizacionales en el nivel organizacional. Finalmente, factores del nivel operacional como el control, la reciprocidad (Mandell y Keast, 2008), el poder (Adams y colaboradores, 2010; Mandell y Keast, 2008), la comunicación (Adams y colaboradores, 2010; Klerk, 2012; Sydow, 1998) el estilo de liderazgo (Cepiku, citada por Elmi, Giordano y Cepiku, 2013) y los valores compartidos (Cote y Latham, 2006), pueden considerarse factores explicativos de la confianza en redes inter-organizacionales.

### Dimensiones de la Confianza Inter-Organizacional

De acuerdo con Seppänen, Blomqvist y Sundqvist (2007), la confianza inter-organizacional es un constructo multidimensional. Estos autores advierten además que si bien no existe acuerdo en torno de las dimensiones que componen el constructo, una única dimensión no lo describiría suficientemente. En los estudios realizados empleando dos dimensiones de la confianza (Cullen Johnson y Sakano, 2000; Johnson y colaboradores, 1996; Das y Teng, 1998), se han obtenido resultados apropiados. Algunos estudios analizados evidenciaron el uso de tres dimensiones de la confianza en redes inter-organizacionales (Chaturvedi y Gaur, 2009; Mayer, Davis y Schoorman (1995; Mukherjee y colaboradores, 2012). No obstante lo anterior, y tomando en consideración recomendaciones de autores como Möllering (2002) y

Seppänen, Blomqvist y Sundqvist (2007, en el modelo propuesto se incorporan tres dimensiones de la confianza: afectiva, cognitiva y conductual. El componente afectivo valora el aspecto emocional de la relación, el componente cognitivo valora el componente racional de la relación y el componente conductual valora la tendencia o predisposición a actuar en función de la confianza (Figura 1). Sin pretender avanzar en lo referente a los resultados que genera la confianza, el modelo plantea dos tipos: resultados a nivel de las organizaciones que conforman la red y resultados a nivel de la red. Esta propuesta también se encuentra en consonancia con los planteamientos de Mandell y Keast (2008) y Cepiku (citada por Elmi y colaboradores, 2013). Tanto los resultados de nivel organizacional como de red podrían expresarse en términos de indicadores económicos, sociales y ambientales desde la perspectiva de creación de valor

## CONCLUSIONES

En contextos de cooperación entre organizaciones se ha puesto especial énfasis en aspectos “hard” de la alianza en contraste, los aspectos “soft”, han recibido escasa atención (Cullen, Johnson y Sakano, 2000). Diversos autores han señalado la necesidad de concebir la confianza en redes inter-organizacionales desde una perspectiva amplia, dado que se trata de un fenómeno de naturaleza multidimensional y complejo (Chaturvedi y Gaur, 2009; Seppänen, Blomqvist y Sundqvist, 2007). El presente artículo tiene la pretensión de plantear un modelo teórico en torno de la confianza en redes inter-organizacionales que tiene como característica fundamental plantear el concepto desde una perspectiva multidimensional y multinivel. En cuanto a los niveles considerados se incorporó una clasificación que ha sido propuesta en estudios previos. De igual forma, dos de las tres dimensiones incorporadas en el modelo corresponden a las recomendadas en investigaciones anteriores; otros estudios han recomendado también que las tres dimensiones consideradas aborden componentes afectivos, cognitivos y conductuales de la confianza.

Si bien se han desarrollado algunas propuestas para el estudio de la confianza en contextos como son las alianzas (Currall e Inkpen, 2002) y la cadena de suministro (Laequuddin y colaboradores, 2010), en la

revisión de la literatura no se evidencia la existencia de un modelo explicativo del desarrollo de la confianza en redes inter-organizacionales, a pesar de que se reconoce que constituyen un mecanismo de relacionamiento entre empresas diferente a los anteriormente mencionados. Provan y Kenis (2008) advierten sobre esta situación, señalando que si bien las redes han sido estudiadas desde diferentes perspectivas, asuntos relacionados con el gobierno han recibido poca atención en la investigación.

### Limitaciones

El modelo propuesto plantea algunas limitaciones. En primer lugar, se trata de un modelo teórico, que deberá ser objeto de comprobación empírica. De otra parte, los desarrollos alcanzados en torno de la conceptualización de la confianza inter-organizacional, sus factores explicativos y las dimensiones que la componen son objeto de discusión y análisis. Finalmente, existe un escaso cuerpo de investigación que respalda empíricamente los planteamientos del modelo.

## RESUMEN

*Los hábitos de consumo han cambiado y las compras digitales cada vez tienen más peso. El comercio electrónico crece con fuerza y las PyMEs no pueden ser ajenas a este fenómeno. De acuerdo a la Asociación Mexicana de Internet (AMIPCI, 2013), las ventas de comercio electrónico en México crecieron alrededor de un 42%; es decir, 121 mil millones de pesos en el año 2013, con lo que el comercio electrónico o e-commerce en el país, se está levantando como un sector de perspectivas optimistas. El comercio es una actividad que ha evolucionado de manera significativa, tanto que ahora se puede efectuar mediante el uso de herramientas informáticas, lo que ofrece múltiples ventajas y facilidades. En este artículo se plantea un análisis del comercio electrónico como estrategia de comercialización en el sector comercio considerando las PyMEs que operan en la ciudad de Hermosillo, Sonora. El estudio realizado es descriptivo con un enfoque mixto. La recolección de datos se realizó mediante la aplicación de un cuestionario a los gerentes de las empresas, y se analizaron aspectos del mercado, seguridad y finanzas, características técnicas, conocimientos y usos del comercio electrónico en las empresas como estrategia.*

## E-COMMERCE IN SMALL AND MEDIUM-SIZED BUSINESSES (SMBS) THAT OPERATE IN HERMOSILLO, SONORA.

## ABSTRACT

*Consumer habits have changed and the digital purchases each time have more weight. The e-commerce grows with force and PyMEs may not be outside this phenomenon, according to the Mexican Association of Internet (AMIPCI, 2013), e-commerce sales in Mexico grew by around 42 %; that is to say, 121 billion pesos in 2013, with what e-commerce or e-commerce in the country is picking as a sector of optimistic outlook. Trade is an activity that has evolved significantly, both that can now be performed through the use of computer tools, which offers many advantages and facilities. This article presents an analysis of the e-commerce and marketing strategy in the commerce sector considering PyMEs operating in the city of Hermosillo, Sonora. The study is descriptive with a mixed approach. Data collection was performed by the application of a questionnaire to the managers of the companies, and were analyzed aspects of the market, security and finances, technical characteristics, knowledge and practices of e-commerce in companies as a strategy.*

## INTRODUCCIÓN

El fenómeno de la globalización y el desarrollo de las tecnologías de la información y comunicación, vinieron a cambiar los paradigmas más importantes que regían la organización social y económica de los países. El comercio no ha sido ajeno a estos nuevos cambios, el uso de la Internet ha revolucionado las opciones de compra y venta en el mundo, ya no hay limitantes de tiempo, ni espacios para realizar operaciones comerciales de cualquier índole. El comercio electrónico o *e-commerce*, puede definirse, según ProMéxico (2014), como la producción, publicidad, venta y distribución de productos, a través de las redes de telecomunicaciones. Actualmente, existen una gran variedad de servicios que se pueden pagar vía la Internet, por ejemplo, el teléfono, los canales televisivos de paga, el intercambio de datos y el propio servicio de navegación por la Internet.

Asimismo, hay una gran cantidad de productos que se encuentran disponibles para su compra y venta de forma electrónica: casas, carros, libros, ropa, comida, capacitación y actualización disciplinaria, asistencia a eventos sociales y académicos, viajes, etcétera. Para las empresas, la Internet ha venido a solucionar muchos problemas que existían respecto a la mercadotecnia y publicidad, de tal forma que, han logrado extender sus productos o servicios por todo el mundo. La creación de las redes sociales ha venido a reforzar aún más el comercio, sobre todo, para las Pequeñas y Medianas Empresas (PyMEs), las cuales no disponen de suficientes recursos para pagar publicidad en televisión o radio, debido a sus elevados costos, y deciden invertir en publicidad en sitios Web o en redes sociales. La gran cantidad de PyMEs existentes en México, pueden ver en el comercio electrónico una gran oportunidad de crecimiento y una real estrategia competitiva de comercialización. Sin embargo, el *e-commerce* a pesar de ser aceptado y desarrollado por una gran cantidad de empresas e instituciones a nivel mundial, sobre todo las transnacionales, en México su desarrollo es más lento, poco se conoce respecto a su situación actual en el país y los datos estadísticos son escasos.

Para el desarrollo de este trabajo se estudió el impacto que tiene el comercio electrónico como estrategia competitiva para las PyMEs del sector comercio, partiendo del análisis de la situación en América Latina, seguidamente se visualizó el panorama Mexicano y finalmente, se abordó de forma específica a la ciudad de Hermosillo, Sonora. Las PyMEs, constituyen la columna vertebral de la economía nacional por los acuerdos comerciales que ha firmado México en los últimos años y asimismo, por su alto impacto en la generación de empleos y en la producción nacional (ProMéxico, 2014). En esta investigación se estudió la situación del comercio electrónico en las PyMEs que operan en la ciudad de Hermosillo, Sonora, de tal forma que permitiera determinar si realmente constituye una herramienta competitiva en este sector. Su organización es la siguiente: en el apartado de revisión de literatura se abordan dos temas principales, el *e-commerce* y las PyMEs, en ellos se conceptualiza el desarrollo de cada aspecto y se presentan estadísticas y datos puntuales que sirven de referencia para la creación del marco conceptual. Seguidamente, en la sección de metodología se presenta los aspectos relevantes en cuanto a la operatividad de las variables que son estudiadas y analizadas, a partir de un cuestionario estructurado y aplicado a una muestra representativa del total de PyMEs del sector comercio que operan en la ciudad de Hermosillo, Sonora. Posteriormente, se presentan los resultados obtenidos con base al estudio descriptivo y análisis estadístico de la información recolectada, a través del software *IBM SPSS Statistics v21*. Finalmente, se presentan las conclusiones y las futuras líneas de investigación derivadas del presente trabajo de investigación.

## REVISIÓN DE LITERATURA

### El Comercio Electrónico O E-Commerce

Definición. El *e-commerce* es un término que nació con la aplicación de los medios electrónicos en las empresas u organizaciones comerciales, viendo en ello una oportunidad de ampliar sus horizontes y con ello, aumentar sus ventas, generando mayores ventajas competitivas que les redunden en la obtención de

ganancias económicas. Para iniciar es importante definir este concepto de acuerdo a varios autores. Para Guerrero y Rivas (2005), el e-commerce es:

*...un caso particular del e-Business, que se refiere a cualquier actividad de negocios que hace uso de las tecnologías de Internet para transformar las relaciones comerciales y explotar las oportunidades del mercado, influenciadas por una economía interconectada”.*

De acuerdo a la Ley Modelo de la Comisión de Naciones Unidas sobre Derecho Mercantil (CNUDMI, 1996), refiere el comercio electrónico como:

*...las transacciones comerciales que se realizan por medio del intercambio electrónico de datos y por otros medios de comunicación en los que se usan medios de comunicación y almacenamiento de información sustitutivos de los que utilizan papel”.*

Para Carril (2000), citado por Rojas, (2000): La transacción típica del comercio electrónico consta de tres fases. En la primera un potencial comprador accede a un servicio electrónico y obtiene información sobre cierto producto que desea adquirir. En la segunda fase, el comprador manifiesta su aceptación enviando una orden de pago por medios electrónicos al vendedor. Finalmente, el vendedor procesa la orden de pago y hace entrega del producto o presta el servicio al cliente. Al comercio que se realiza haciendo uso solo de una de las tres fases anteriormente señaladas, no se le suele catalogar como comercio electrónico. En conclusión, el comercio electrónico puede ser definido de varias formas, dependiendo del autor o la fuente; sin embargo, todas las definiciones coinciden en que el comercio electrónico se lleva a cabo cuando en las transacciones de comercio o compra-venta de un bien o servicio se emplean medios electrónicos, ópticos o de cualquier otra tecnología.

### Datos Estadísticos

El *e-commerce* ha evolucionado a gran escala en los últimos años, tanto en el nivel multinacional como en México, en mayo de 2012, VISA-América Economía Intelligence realizaron un estudio para conocer el panorama en América Latina, los datos revelan que el crecimiento de ventas del comercio electrónico alcanzó un crecimiento del 98.5 % del año 2009 al año 2011; es decir, de 21,774 millones de dólares en ventas en el 2009, se elevó a 43,230 millones de dólares en el 2011. Haciendo un comparativo entre países de Latinoamérica, resultó que Brasil es el país que detonó sobremedida el comercio electrónico, alcanzando en el año 2011 el 1 % del Producto Interno Bruto (PIB) en ventas a consumidores; México alcanzó el 0.52%, quedando por debajo del promedio de América Latina que logró el 0.76 % (VISA-AméricaEconomía Intelligence, 2012).

En México aún existe un rezago en relación al uso de las tecnologías de comunicación, principalmente por la falta de acceso a los servicios de la Internet. La Secretaría de Comunicaciones y Transportes (SCT), a través de la Subsecretaría de Comunicaciones, aprovechó la publicación del estudio realizado por la Organización de Cooperación y Desarrollo Económicos (OCDE, 2012), sobre el sector de las telecomunicaciones en México, en enero de 2012, para presentar una serie de acciones para motivar el despliegue de redes, incrementar la penetración y promover la adopción de los servicios de telecomunicaciones (Palacios y Flores, 2012). Estas acciones que ya implementó el Gobierno Mexicano, aunado a las tendencias del uso de las tecnologías de información y comunicación de los consumidores, provocará, sin lugar a dudas, un despunte del *e-commerce* en México en los años venideros. Palacios y Flores (2012), plantean una serie de indicadores con la finalidad de que sirvan de guía para la medición de los esfuerzos en los avances tecnológicos en el país, los cuales representan un comparativo entre la última medición con que se cuenta y la visión de los mismos para el año 2015. En la Figura 1, se puede visualizar

el comparativo entre las cifras del año 2010 y la prospectiva al año 2015, con referencia a cuatro indicadores de los más importantes en cuanto a usuarios y acceso a computadora e internet en los mexicanos. De igual manera, en la Figura 2, se puede observar el crecimiento que representará el uso de la computadora y la Internet en los negocios del país.

Figura 1: Crecimiento de Usuarios y Acceso a Computadora E Internet en los Mexicanos (Cifras En Millones)

Fuente: elaboración propia, a partir de Palacios y Flores (2012)

Figura 2: Crecimiento en la Proporción del Uso de Computadoras E Internet en los Negocios Mexicanos

Fuente: Elaboración propia, a partir de la información de Palacios y Flores (2012)

Los datos anteriores revelan que el *e-commerce* se ha convertido en un fenómeno comercial en los últimos años, y se prevé que para el año 2014, el gasto mundial de comercio electrónico aumentará en un 90 % y, en América Latina más del doble. Estudio sobre la Perspectiva del Mundo de los Negocios por Internet en América Latina 2011, realizado por Rodrigo Teijeiro CEO Sonico y FNBOX.

Esta tendencia también aplica para México, a pesar de los rezagos existentes en la actualidad, el futuro avizora un crecimiento importante en las operaciones comerciales en las grandes, medianas y pequeñas empresas, por lo cual, aquellas empresas que no adopten el nuevo paradigma tecnológico en la venta de productos o servicios, tenderán a desaparecer o quedar en el olvido.

### El Contexto de las Pequeñas y Medianas Empresas (PyMEs)

De acuerdo al Sistema de Información Empresarial Mexicano (SIEM, 2014), en México existen un total de 647,701 empresas, de las cuales 6,200 empresas corresponden al Estado de Sonora y, 2,462 a la ciudad de Hermosillo, capital de la misma entidad. La información presentada, pertenece sólo a las empresas registradas en el SIEM al año 2014, y no a la totalidad de empresas que existen en el país. Ahora bien,

haciendo un análisis más específico y atendiendo a al universo de PyMEs del sector comercio, en Hermosillo, Sonora, existen 145 PyMEs. No se contabilizan aquellas PyMEs que tienen dos o más establecimientos considerados como sucursales o centros de distribución.

En la Tabla 1, se presentan los datos absolutos distribuidos por la cantidad de empleados que tiene la empresa, donde Sonora representa el 0.95 % del total nacional y la ciudad de Hermosillo el 0.38 %. Datos consultados el día 25 de febrero del 2014. Con base a la información presentada, se puede visualizar que el 92.3 % de las empresas en el país tienen entre 0 y 10 empleados, lo cual corrobora la tesis de que las microempresas son las que componen la mayoría del aparato productivo de la nación. De igual forma, el 84.8 % de las empresas en el Estado de Sonora corresponden a este mismo grupo de empresas con menos de 10 colaboradores. En el caso de la ciudad de Hermosillo, corresponde el 80 % al grupo de las microempresas. La Figura 3, muestra la distribución porcentual de la ciudad respecto a la cantidad de empresas existentes, de acuerdo al SIEM, 2014.

Tabla 1: Distribución de las Empresas en México, Sonora y Hermosillo Por Cantidad de Empleados

No. Empleados	México	Sonora	Hermosillo
0-10	597,969	5,260	1,970
11-50	36,905	686	386
51-100	5,687	134	40
Más de 100	2,887	71	66
51-250*	2,950	30	**
Más de 250*	1,303	19	**
<b>TOTAL</b>	<b>647,701</b>	<b>6,200</b>	<b>2,462</b>

\* Solo industria. \*\* No se contempla este rubro, datos no identificados Fuente: Elaboración propia, a partir de los datos del SIEM, 2014

Como dato interesante, de acuerdo al Censo actualizado del INEGI, 2011; en el estado de Sonora existen 2,649 empresas que utilizan internet en sus relaciones con sus clientes; 2,600 emplean equipo de cómputo en procesos técnicos o de diseño y; 2,068 lo emplean en el desarrollo de programas o paquetes informáticos para mejorar sus procesos. La ciudad de Hermosillo contaba, en el 2012, con un total de 2,462 empresas que de acuerdo al número de empleados, 1,970 tienen de 0 a 10 (micro); 386 cuentan con un total de 11 a 50 empleados (pequeña), 40 empresas poseen de 51 a 100 empleados y; 66 que tienen un número mayor a 100 empleados.

### El Comercio Electrónico En Las Pymes Como Estrategia Competitiva De Comercialización

El *e-commerce* es una estrategia que si se aplica tanto en las grandes compañías como en las pequeñas y medianas empresas, se pueden obtener grandes ventajas competitivas, debido al gran potencial que ofrece para acceder a nuevos mercados y llegar a más clientes. Este medio ha permitido a pequeños negocios crecer a pasos agigantados, gracias a que decidieron implementar sistemas de ventas por medio de la Internet. Las PyMEs tienen grandes posibilidades de obtener ganancias económicas gracias al comercio electrónico, por sus beneficios y por la naturaleza tan cambiante del mundo actual y futuro. La mayoría de las PyMEs no tienen los medios para hacer grandes inversiones en tecnología y sistemas informáticos; sin embargo, con el apoyo de organizaciones gubernamentales y del sector privado, estas empresas pueden conseguir adaptar sus estrategias a lo que demanda la sociedad actual y futura. Pero lo más importante es la determinación al cambio, a querer adaptarse y a buscar nuevas formas de emprender un negocio.

Figura 3: Distribución Porcentual de Empresas en Hermosillo Por Rango de Empleados

Fuente: Elaboración propia, a partir de los datos del SIEM, 2014.

A pesar de las grandes ventajas que ofrece el comercio electrónico, en México hasta el momento solo el 10% de las Pequeñas y Medianas Empresas mexicanas se atreven a incursionar en él, indican las cifras del Instituto Nacional de Emprendedores (INADEM). Lo anterior, sucede principalmente por dos motivos: el poco conocimiento de las empresas en cuanto a esta temática y la desconfianza de los usuarios a proporcionar sus datos, por miedo a ser víctimas de algún tipo de estafa o robo de identidad. Aunado a esto, existe la barrera tecnológica, que consiste en la baja penetración de la banda ancha, lo que dificulta que el comercio electrónico esté al alcance de todos los ciudadanos. Si bien es cierto, que estas cuestiones son determinantes, también es definitivo que el mundo de los negocios ha cambiado sus paradigmas y hay que superarlas, pues para las PyMEs, el comercio electrónico es una nueva modalidad y excelente oportunidad de negocios, ya que se ha venido evolucionando desde el siglo XX y que actualmente, es un área muy dinámica y especializada sin precedentes, que les permite extender el alcance de su negocio a todo el mundo, reduciendo la estructura de costos y aumentando las ventas.

## METODOLOGÍA

La metodología empleada para el desarrollo de esta investigación se efectuó a través de fuentes de información primarias como la consultada en bibliografía en libros, revistas y documentos electrónicos relacionados con el tema objeto de estudio, con la intención de poder construir un marco de referencia y realizar comparaciones con estudios similares. Como parte del trabajo de campo, se aplicó un cuestionario estructurado por un conjunto de 35 preguntas, distribuidas en dos secciones, una primera sección aborda lo referente al uso del *e-commerce* como una estrategia de mercadotecnia y, en una segunda sección se analiza el uso de las redes sociales como medio publicitario de las empresas. El cuestionario recoge información a través de preguntas dicotómicas cerradas, de respuestas múltiples y de escala tipo Likert, que mide el grado positivo, neutral y negativo de cada pregunta de este tipo. El tipo de método con el que se realiza dicho análisis corresponde al cuantitativo descriptivo, del modelo no experimental, ya que no se harán cambios en las variables a investigar. Es del tipo transaccional, donde los datos se recolectaron en un solo tiempo o periodo de tiempo y, las encuestas se aplicaron una sola vez, reflejando la situación en el momento (Hernández y col., 1998). Como prueba de confiabilidad, los reactivos fueron sometidos a una técnica de análisis factorial con rotación varimax, en la cuales fueron confirmados los dos factores principales sujetos de estudio, partiendo que un resultado por arriba del 0.70 en alpha de Cronbach, significa una buena correlación entre los reactivos y por ende, se puede inferir que existe una buena fiabilidad en el instrumento aplicado.

*La Rentabilidad (alpha de Cronbach = 0.787)*

*La Competitividad (alpha de Cronbach = 0.782)*

El propósito de la investigación es, proporcionar información relevante y de ayuda, de tal manera que impulse el uso del comercio electrónico en las empresas, las PyMEs del sector comercio, pero que también sirva como punto de referencia para el resto de las empresas, incluyendo las grandes empresas que no han incursionado al comercio electrónico como una estrategia de comercialización y posicionamiento estratégico. Si bien durante los últimos años se han identificado los beneficios, desventajas, obstáculos del comercio electrónico, la presente investigación tiene como objetivo identificar bajo cuáles lineamientos y circunstancias, las PyMEs hermosillenses del sector comercio utilizan el e-commerce. Las preguntas de investigación que en el apartado de resultados se desea contestar son:

*Pregunta Uno: ¿Cuáles son las razones para que las PyMEs del sector comercio realicen acciones digitales con un enfoque en e-commerce?*

*Pregunta Dos: ¿El que las PyMEs del sector comercio utilicen el e-commerce como estrategia de comercialización, le ha permitido obtener una ventaja competitiva?*

En la Tabla 2, se muestra la ficha metodológica utilizada para efectos de esta investigación, la cual se llevó a cabo en el mes de febrero de 2014, específicamente del 7 al 28 de febrero del presente año.

Tabla 2: Ficha Metodológica Para el Estudio de Investigación

Universo	Ámbito Geográfico	Trabajo de Campo	Error Muestral	Nivel de confianza	Nivel de Heterogeneidad	Muestra Obtenida	Técnica
PyMEs del sector comercio	Hermosillo, Sonora	Del 7 al 28 de febrero de 2014	Error máximo de muestreo para los datos globales de $\pm 10\%$	95% $Z^2_\alpha = 1.96$	50%	59* casos totales, obtenidos de forma aleatoria a partir de la base de datos del SIEM, 2014	Entrevista directa, a través de un cuestionario y procesado en el SPSS v21

*\*Se aplicaron un total de 55 encuestas, ya que 4 empresas se negaron a proporcionar información, justificándose que las operaciones se centralizaban en otras ciudades del país. Fuente: Elaboración propia.*

Lo anterior, corresponde a una muestra probabilística del 40.69 % de la población total; sin embargo, es importante mencionar que de acuerdo a Santesmases (2009), se procedió a calcular el tamaño de la misma, de acuerdo a la ecuación estadística (1), para el cálculo de muestras para poblaciones N, finitas y conocidas. Cuando se desconoce la probabilidad o proporción de éxito, se tiene que utilizar un criterio conservador ( $p=q$ , entonces es igual a 0.5), lo cual maximiza el tamaño de muestra. Si la seguridad de  $Z_\alpha$  es igual a 95%, entonces el coeficiente es 1.96

$$n = \frac{N * Z_\alpha^2 * p * q}{d^2 * (N - 1) + Z_\alpha^2 * p * q} \quad (1)$$

Donde:

N = Tamaño de la población;  
Z = Nivel de confianza;  
p = Probabilidad de éxito;  
q = Probabilidad de fracaso;  
d = Error máximo permisible.

## RESULTADOS

Los resultados obtenidos en la investigación, con respecto al giro y/o tipo de empresas. De las 55 encuestas realizadas, 10 pertenecen al giro comercial y de servicios, lo que representa un 18.18 %, mientras que seis empresas pertenecen al giro de compra venta de autos nuevos, semi nuevos y refacciones, lo que representa un 10.91 %; las empresas que pertenecen al giro de compra venta de calzado, artículos de ferretería y, compra venta de refacciones y maquinaria, suman 16 PyMEs. En cuanto a los datos generales, respecto al género del participante, el sexo masculino tiene un 52.7 % y el femenino un 47.3 %. En este sentido, se pudo deducir que las mujeres tienen una participación importante y con ello, contribuyen al proceso de toma de decisiones en las empresas u organizaciones estudiadas. Por otro lado, los años de operación que tienen las empresas en la ciudad de Hermosillo oscilan en promedio en seis años, ya que el 18.2 % tienen operando hace un año; 10.9 % hace siete años y; el 12.7 %, opera desde hace 12 años, lo que significa que las PyMEs estudiadas son relativamente nuevas en su operación y participación en el mercado.

En cuanto al número de empresas que participan realizando acciones de comercio electrónico, se obtuvo que el 67.3 % de ellas; es decir, 37 PyMEs, actualmente están realizando acciones de mercadotecnia digital con un enfoque de comercio electrónico, mientras que 18 (32.7 %) de ellas, no realizan ninguna acción encaminada al comercio electrónico. De acuerdo a la Tabla 3, se muestran las razones del por qué las empresas no hacen uso del comercio electrónico, de las cuales el 33.3 % de las personas encuestadas respondieron que a la empresa no le interesa, seguido por la respuesta relacionada a la protección de datos e información y, la de no tener la infraestructura requerida para realizar el comercio electrónico.

Tabla 3: Razones Para No Usar el Comercio Electrónico

			Respuestas		Porcentaje de casos
RAZONES PARA NO USAR ECOMMERCE <sup>a</sup>			Nº	Porcentaje	
		Por protección de datos e información	4	17.4%	22.2%
		Por cancelación de uso	2	8.7%	11.1%
		No le interesa	6	26.1%	33.3%
		No se tiene la infraestructura requerida	4	17.4%	22.2%
		Por temor a incursionar en su uso	1	4.3%	5.6%
		Por desconocimiento en su uso	3	13.0%	16.7%
		Por no contar con un diseño de página Web	3	13.0%	16.7%
<b>Total</b>			<b>23</b>	<b>100.0%</b>	<b>127.8%</b>

a. Agrupación Fuente: A partir de los datos obtenidos en el SPSS v21.

En la Tabla 4, se puede observar los medios que utilizan las empresas para realizar actividades de e-commerce, siendo el uso de las redes sociales el más alto, con un 29.5 % de las respuestas o en su defecto, un 73.7 % de las personas encuestadas, confirmaron que la empresa hace uso de las redes sociales como un medio para comercializar sus productos, seguido del uso de los meta buscadores en la Internet, con un 60.5% de las personas encuestadas o un 24.2 % de las respuestas.

Tabla 4: Medios Más Utilizados Por las Pymes Hermosillenses del Sector Comercio Para Realizar el E-Commerce

				Respuestas		Porcentaje de casos
MEDIOS PARA USAR ECOMMERCE <sup>a</sup>				Nº	Porcentaje	
		A través de dispositivos móviles		5	5.3%	13.2%
		Banners en portales en Internet		12	12.6%	31.6%
		En Redes Sociales		28	29.5%	73.7%
		Gestión de perfiles en Redes Sociales		13	13.7%	34.2%
		En meta buscadores en Internet		23	24.2%	60.5%
		Email de marketing		10	10.5%	26.3%

<b>Total</b>				<b>95</b>	<b>100.0%</b>	<b>250.0%</b>

a. Agrupación Fuente: A partir de los datos obtenidos en el SPSS v21.

Por un lado, en cuanto a la frecuencia y experiencia en el uso del comercio electrónico, las PyMEs hermosillenses del sector comercio respondieron que es “frecuente” en un 71.05 %, mientras que el 28.95 %, respondieron “muy frecuentemente”, tal y como se muestra en la Tabla 5; por otro lado, la experiencia en el uso del *e-commerce* traducida en años, el promedio pareciera ser que es de 3 años y medio; sin embargo, los mayores porcentajes se observan en aquellos rubros marcados con un año y más de cinco años, con un 15.79 %.

Tabla 5: Frecuencia en el Uso del E-Commerce Por las PyMEs Hermosillenses, Sector Comercio

		Frecuencia	Porcentaje	Porcentaje válido	Porcentaje acumulado
Válidos	Frecuentemente	27	71.05%	71.1%	71.1%
	Muy frecuentemente	11	28.95%	28.9%	100.0%
	<b>Total</b>	<b>38</b>	<b>100.00%</b>	<b>100.0%</b>	

Fuente: elaboración propia, a partir de la información procesada en el SPSS v21.

A continuación se presentan los resultados relacionados con la competitividad de la empresa, en cuanto al uso del comercio electrónico, como una estrategia de posicionamiento competitivo. El 97.3 % de las personas encuestadas respondieron que, la empresa ha logrado obtener una ventaja competitiva con el uso del *e-commerce*, como una estrategia de comercialización; es decir, 37 PyMEs comentaron haber logrado obtener una ventaja competitiva con respecto a las empresas que no utilizan el *e-commerce* como estrategia de mercadotecnia y comercialización. Lo anterior, se confirma cuando el mismo porcentaje (97.3 %) de las PyMEs respondieron que el uso y aplicación del *e-commerce* ha generado un aumento en sus ventas anuales, lo que representa un porcentaje del 10 % anual, de acuerdo al 30.56 % de las respuestas obtenidas. Otro aspecto importante a evaluar es el nivel de satisfacción en el uso del e-commerce, por las PyMEs comerciales que operan en la ciudad de Hermosillo, Sonora, ya que permitirá saber con mayor precisión, el grado de aceptación del comercio electrónico como herramienta estratégica mercadológica, en cuanto a los niveles de satisfacción expresados en la encuesta aplicada. En la Tabla 6, se muestran los niveles de satisfacción alcanzados en porcentajes, para las 35 PyMEs que fueron encuestadas.

Tabla 12: Niveles de Satisfacción en las Pymes Comerciales en el Uso del Comercio Electrónico

			Respuestas	
			N°	Porcentaje
NIVEL DE SATISFACCIÓN ECOMMERCE <sup>a</sup>	DE	Ni satisfecho ni insatisfecho	14	3.7%
	DE	Satisfecho	203	53.6%
		Completamente satisfecho	162	42.7%
		<b>Total</b>	<b>379</b>	<b>100.0%</b>

a. Agrupación Fuente: elaboración propia, a partir de la información procesada en el SPSS v21.

Por último, se presenta el resultado obtenido en cuanto al uso de las redes sociales en las PyMEs comerciales de Hermosillo, Sonora, destacándose que el 76.4 % de las empresas hacen uso de las redes sociales como medio para publicitarse o realizar negocios en la Internet, siendo Facebook la más destacada, con un 48.1% de las respuestas otorgadas por un 90.5% de las personas encuestadas, mientras que el 23.6 % manifestaron no hacer uso de las redes sociales.

## CONCLUSIONES

Los resultados de la investigación revelan que las PyMEs comerciales de Hermosillo, Sonora, en un porcentaje por arriba del promedio nacional, utilizan el comercio electrónico o e-commerce, como una estrategia de comercialización y posicionamiento estratégico en el sector y giro donde compiten.

Claramente, se puede señalar al e-commerce como una ventaja competitiva para la empresa, al responder la mayoría, que sí se percibe un aumento en sus ventas anuales, al menos del 10 % anual; asimismo, el 97.3 % de las PyMEs respondieron haber logrado obtener una ventaja competitiva con respecto a las empresas que no utilizan el *e-commerce* como estrategia de mercadotecnia. Con base a los mismos resultados, se concluye que las PyMEs tienen muy bien definidas las estrategias de promoción y ventas por medio del e-commerce; así como los métodos de pago, los cuales están respaldados por una infraestructura informática, lo que permite brindar a los usuarios y/o clientes, un sello de confianza en las transacciones comerciales; así como una privacidad y confidencialidad en los datos proporcionados. Por último, la interacción que se tiene con las PyMEs, a través del uso de las redes sociales ha ganado una gran relevancia, ya que los resultados así lo indicaron; en ese sentido, representan una oportunidad para interactuar con el consumidor, lograr un mayor conocimiento de la empresa y la marca, tener un buen control sobre la post venta y lograr un mayor nivel de lealtad.

Como respuesta a las dos preguntas de investigación formuladas para este trabajo, en primer lugar, se tiene que las principales razones o motivos del por qué las PyMEs no utilizan el *e-commerce* como estrategia de comercialización, es la falta de interés, por protección de datos e información y por no contar con la infraestructura requerida para poder llevar a cabo operaciones digitales; sin embargo, el porcentaje es poco, 32.7 % comparado con aquellas empresas que si utilizan el comercio electrónico (67.3 %). En segundo lugar, quedó claramente estipulado y comprobado que las PyMEs del sector comercio que operan en la ciudad de Hermosillo, Sonora, y que utilizan el e-commerce como estrategia de comercialización, le ha permitido obtener una marcada ventaja competitiva con respecto a las empresas que no lo utilizan.

### Estudios Posteriores

Una nueva línea de investigación que puede surgir del presente estudio o trabajo, es proponer un análisis comparativo entre el resto de los sectores de la economía; así como realizar una investigación entre las PyMEs y los usuarios principales, con la finalidad de estudiar los hábitos y actividades online de las personas y detectar aquellas áreas de oportunidad que pudieran significar un despegue económico para las PyMEs que utilicen el *e-commerce* como una estrategia de comercialización y posicionamiento estratégico.

# COMPETENCIAS EMPRESARIALES, RENDIMIENTO Y COMPETITIVIDAD EN LAS PEQUEÑAS Y MEDIANAS EMPRESAS DEL SECTOR SERVICIOS DE CIUDAD JUÁREZ

Jorge Francisco Salas Fernández, Universidad Autónoma de Ciudad Juárez

## RESUMEN

*En los últimos años los gobiernos e incubadoras de empresas han sido dos protagonistas para favorecer la situación de la PYMES en su lucha por sobrevivir. Por otro lado, existen fundamentos en la literatura para poner atención a las competencias empresariales del emprendedor, ya que estas pueden llegar a tener una relación positiva y significativa con respecto a la competitividad y rendimiento de la empresa, lo que pondría el desarrollo de las competencias empresariales como otro protagonista más en la lucha de las PYMES. Por lo tanto, en este trabajo se estructura el modelo conceptual entre las competencias empresariales con respecto a la competitividad y rendimiento de la PYME.*

**PALABRAS CLAVES:** Competencias Empresariales, Competitividad, Rendimiento, PYMES

## ENTREPRENEURIAL COMPETENCIES, PERFORMANCE AND COMPETITIVENESS IN SMALL AND MEDIUM ENTERPRISES OF SERVICE FROM CIUDAD JUAREZ

### ABSTRACT

*In recent years, governments and business incubators have been two protagonists to promote the situation of SMEs in their struggle to survive. Moreover, in the literature there are grounds to bring attention to the entrepreneurial competencies as these can have a positive and significant relationship with respect to the competitiveness and performance of the company, which would develop entrepreneurial competencies as another player in the fight of SMEs. Therefore, in this paper is designed the conceptual model between business competence with respect to the performance and competitiveness of SMEs.*

**JEL:** M1

**KEYWORDS:** Entrepreneurial Competencies, Performance, Competitiveness, Smes

## INTRODUCCIÓN

En la actualidad las Pequeñas y Medianas Empresas (PYMES) tienen un rol importante dentro de la economía de cualquier región; cada día, son más los apoyos que los gobiernos ofrecen a este sector para su supervivencia y éxito empresarial. Las incubadoras de empresas se han convertido en un intermediario para alcanzar fondos que puedan solventar las finanzas de estas empresas, incluso sirven como capacitadores y desarrolladores de emprendedores en diferentes áreas fundamentales de la organización. Pero ¿Qué el emprendedor pueda obtener un financiamiento o capacitación de las áreas funcionales y de apoyo es garantía de que la empresa vaya a funcionar o se requiere desarrollar ciertas competencias empresariales para lograr la competitividad y rendimiento de la PYME? Por lo pronto, los gobiernos hacen su trabajo colocando financiamientos accesibles para las PYMES y las incubadoras de empresas capacitan a los emprendedores en las áreas claves de la organización. Son situaciones que favorecen a estas empresas en

su lucha por la supervivencia. Sin embargo, además de las situaciones anteriores ¿Se debería hacer énfasis en las competencias empresariales para que la PYME pueda ser competitiva y generar rendimiento? El presente trabajo se concentra en estructurar el modelo conceptual de las relaciones entre las competencias empresariales con respecto a la competitividad y rendimiento de la PYME. Para la estructuración del modelo teórico se fundamenta en la proposición de Cooper y Gimeno-Gascon (1994) quienes son los pioneros en enlazar el espíritu empresarial e influencia del empresario con el rendimiento de las PYMES sosteniendo esta argumentación en una exhaustiva revisión de la literatura y descripción de los diversos factores que influyen en los resultados de esta relación.

## REVISIÓN DE LA LITERATURA

El enfoque de competencias empresariales es un modo de estudiar lo que Cooper y Gimeno-Gascon (1994) denominan espíritu empresarial; además son una guía para analizar las características individuales que conducen a un puesto de trabajo (en este caso como administrador de la empresa) o el éxito organizacional (Bartlett y Ghoshall, 1997). Para definir las competencias empresariales se toman los estudios empíricos de McClelland (1987), Mitton (1989), Gasse y d'Amboise (1997) y Bartlett y Ghoshall (1997), donde intentan categorizar todas las competencias e identificarlas en las actividades en un contexto de las PYMES, y que sucesivamente otros autores han adaptado a sus trabajos de investigación. Estos autores señalan seis áreas o categorías como resultado de estos estudios: a) competencias de oportunidad, b) competencias de relaciones, c) competencias de conceptualización, d) competencias de organización, e) competencias de estrategia y f) competencias de compromiso.

Para determinar el rendimiento de la PYME se adquiere la metodología de Yacuzzi (2006) el cual trata de medir el rendimiento con elementos no financieros y que se relacionan directamente con las estrategias del administrador; además son meramente cualitativos. Los elementos que menciona son dos: a) servicio al cliente y b) satisfacción de los empleados. Se toman estos dos elementos ya varios de los enfoques de las competencias empresariales están conectados con la interacción con los clientes y empleados. Si el administrador de la PYME tiene desarrollados las competencias empresariales entonces la relación entre las competencias empresariales con el rendimiento será positiva y significativa.

La competitividad puede ser tratada como una variable independiente o intermediario dependiente, siempre en función de las perspectivas en que se le esté tratando (Waheeduzzaman, 2002). Para la formulación del modelo teórico, la competitividad toma ambas posturas (dependiente e independiente); es dependiente de las competencias empresariales, ya que en la revisión de la literatura se distingue la influencia del empresario como aspecto clave que conduce a la competitividad de las PYMES (Xiaogang, et al., 2007). Por otro lado es independiente porque la competitividad sirve como medio para alcanzar el rendimiento empresarial (O'Farrel y Hitchens, 1988). Lo que dificulta manejar el concepto de competitividad en un trabajo de investigación es la forma de definirla y determinarla. Su grado de dificultad se hace evidente al momento de mencionar su medición, los índices que se utilizaron en dicha medición y en qué forma se interpreta los resultados surgidos de la medición (Ezeala-Harrison, 2005). En este caso para determinar la competitividad de las PYMES se sigue la recomendación ofrecida por Maldonado, Sánchez, Gaytán y García (2012) de apropiarse como referencia el estudio realizado por Buckley, Pass y Prescott (1988) quienes presentan un instrumento de la competitividad sencilla de medir e interpretar. Estos autores diferencian tres aspectos de la competitividad conocidas como las 3 'P': a) desempeño competitivo, b) potencial competitivo y c) procesos de gestión.

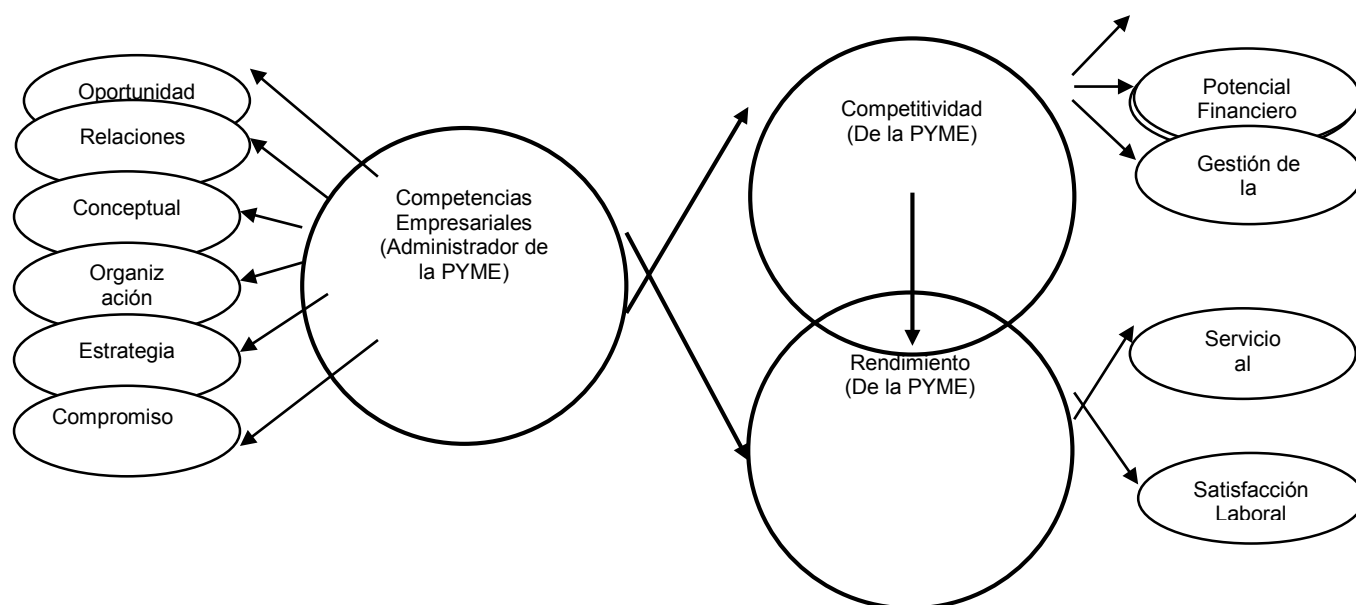

El modelo se aplica en las PYMES del sector servicios en Ciudad Juárez. Las características de los administradores de las PYMES en Ciudad Juárez son similares a las del resto de México. En sus formas de origen, los creadores de estas empresas son por lo general: estudiantes universitarios o recién egresados, personas que interrumpieron sus estudios de nivel básico o medio superior, desempleados que optan por un

autoempleo, hijos de empresarios y personas que buscan una independencia económica. De igual forma, la mayoría de las empresas tienen un solo dueño quien emprendió el negocio (aproximadamente el 80%) hallazgo que otorga validez a la proposición respecto al emprendedor de ser alma y vida de su negocio. Mientras tanto, el resto de las PYMES (con un 20%) se hallan organizadas como sociedad, lo cual ofrece fuentes alternas de capital y una base gerencial de operación más amplia siempre y cuando se trate de socios adecuados y confiables que agilicen la toma de decisiones, al no dividir la autoridad.

## CONCLUSIONES

En los últimos años se han intentado organizar las teorías y los hallazgos existentes en la relación entre las características empresariales a nivel individual y el rendimiento de las PYMES, obteniendo como resultado un marco teórico en desarrollo y estudios empíricos aun sin concretar una conclusión firme (Smart y Conant, 2011). Asimismo, la relación se ve afectada por el concepto de competitividad, que puede ser generada a raíz de las competencias empresariales del administrador (Xiaogang, Yongyong, Yanling, 2007) y a su vez, permite que se incremente el rendimiento empresarial (O'Farrel y Hitchens, 1988). De esta forma el modelo teorico queda estructurado como se muestra en la Figura 1.

Figura 1: Modelo Teórico

En esta figura se muestra las relaciones entre las competencias empresariales con respecto a la competitividad y rendimiento de la PYME; asimismo, se muestra la relación entre la competitividad y rendimiento. En los extremos se muestra las dimensiones de cada variable..

## RESUMEN

*Esta investigación tiene como objetivo identificar y analizar los principales factores que amenazan la sobrevivencia y continuidad de la empresa familiar. Para tal efecto, se realizó una investigación documental y otra de campo. Para la investigación de campo se administró la escala tipo Likert a 38 dueños de empresas familiares en Región Centro del Estado de Coahuila en el año 2013. Esto, con la finalidad de medir la reacción de éstos hacia las variables: discriminación entre los sistemas familiar y empresarial, confianza y confiabilidad. Para el procesamiento de la información recabada se utilizó el paquete estadístico para las ciencias sociales (SPSS). Los resultados obtenidos muestran que la interacción de dos sistemas sociales con escasa compatibilidad entre sí: familia y empresa; la probable ausencia de confianza entre los miembros de la familia dueños de la empresa y la frágil confiabilidad de los mismos son parte medular de la problemática que amenaza la sobrevivencia y continuidad de la empresa familiar.*

**PALABRAS CLAVE:** Empresa Familiar, Sobrevivencia Y Continuidad

## FACTORS THAT THREATEN THE SURVIVAL AND CONTINUITY OF THE FAMILY BUSINESS IN MEXICO

### ABSTRACT

*The objective of this research was to identify and analyze the main factors that threaten the survival and continuity of a family business. For such purpose, it was made a documental and another field research. For the field research it was used a scale Likert to a 38 owners of family business in the Center Region of the State of Coahuila in the year 2013. This, with the objective to measure the reaction of them to the variables: discrimination between the family and managerial system, confidence and reliability. For the processing of the raised information it was used the Statistical Package for the Social Sciences (SPSS). The results obtained demonstrate that the interaction of two social systems with scarce compatibility between them: family and business; the likely absence of the owners of the business and the fragile reliability of them are a core part of the problematic that threaten the survival and continuity of the family business.*

**JEL:** M1, M10, M100

**KEY WORDS:** Family Business, Survival And Continuity

## INTRODUCCIÓN

Una empresa familiar es un negocio administrado y controlado por los miembros de una o varias familias (Belasusteguigoita, 2010). La familia o familias dueñas de la empresa tienen el control legal y accionario de ésta y buscan mantener su sostenibilidad para las siguientes generaciones (Navarro, 2008). Las empresas familiares se han convertido desde hace algunos años en objeto de estudio. Primero, por su preponderancia en la actividad económica ya que cuantitativamente es la forma más dominante de empresa. Davis, J. (1998) afirma que “Una gran cantidad de empresas en México son empresas familiares, siendo estas muy importantes para la economía del país, ya que son las que generan un gran porcentaje de la producción nacional” De acuerdo con datos del censo económico del INEGI efectuado en el 2004 se estima que de los tres millones de empresas que existen en México, el 90% son empresas familiares con una tasa de crecimiento del 2% y que éstas constituyen la fuente de empleo de 54 millones de mexicanos (Grant-Thornton, 2011). Por su parte, Belausteguigoitia (2010) advierte que entre el 90 y el 95% de las empresas en América Latina son familiares.

Segundo, la empresa familiar es también objeto de investigación, pues reiteradamente se observa que de cada 100 empresas familiares que se crean, únicamente 30 sobreviven a la segunda generación; mientras que sólo 10 ó 15 logran consolidarse en la tercera generación. Así lo expresa Gallo (1998) cuando advierte que “Es frecuente oír y leer que el ciclo de vida de la mayoría de las empresas familiares vendrá inexorablemente marcado por el hecho de que el abuelo la funda, los hijos la debilitan y los nietos la entierran”. Esto es preocupante ya que se calcula que más del 50% del Producto Interno Bruto y de las fuentes de empleo en nuestro país provienen de las empresas familiares (Belausteguigoita, 2010). Lo anterior es corroborado por Grabinsky (2002:1) al señalar que un alto porcentaje de negocios familiares se encuentran en riesgo de no poder asegurar su supervivencia y continuidad para las siguientes generaciones. Por lo anteriormente expuesto, el objetivo de este trabajo consiste en exponer y analizar cuáles son los principales factores que amenazan la sobrevivencia de una empresa familiar; así como proponer algunas estrategias para promover su permanencia y continuidad. Por tanto, a continuación se expone la revisión de la literatura pertinente al tema. Posteriormente, se describe la metodología, los resultados obtenidos como resultado de esta investigación y sus respectivas conclusiones.

## REVISIÓN DE LITERATURA

### Interacción De Dos Sistemas Diferentes: Familia Y Empresa

A través de la historia de la humanidad dos de las principales funciones de la familia doméstica son, la reproducción de la especie humana y preparar a los hijos para que de manera independiente desarrollen su vida y aprendan a valerse por sí mismos. Desde una perspectiva sociológica, la familia empresaria continúa afectiva y económicamente unida más allá de su generación originaria y toma una dirección opuesta a la familia doméstica (Nogales, 2007). Esto constituye la primera de las principales amenazas para la empresa familiar. Pues cuando una familia se convierte en empresaria su dinámica cambia y si no se actúa estratégicamente, existe el riesgo de que se generen fuertes conflictos familiares y la empresa familiar se pierda. En la tabla 1 pueden apreciarse las diferencias entre las características que distinguen a una familia doméstica y las que adquieren una familia empresaria.

Tabla 1: Diferencias Entre la Familia Doméstica y la Empresaria (Nogales, 2007)

FAMILIA DOMESTICA	FAMILIA EMPRESARIA
<ul style="list-style-type: none"> <li>-Existe pronta fragmentación en cada generación.</li> <li>-Nula dependencia de los hijos adultos.</li> <li>-Relaciones basadas solamente en la afectividad, espontaneidad e informales.</li> <li>-No hay necesidad de profesionalizar las relaciones internas.</li> <li>-Las une el afecto, pero esta unión no está orientada hacia alguna acción común.</li> <li>-Prevalece una mono cultura familiar. (Familia consanguíneas: padres, hermanos y hermanas comparten mismos valores, costumbres, tradiciones, etc.)</li> </ul>	<ul style="list-style-type: none"> <li>-Hay continuidad inter-generacional.</li> <li>-Los hijos forman parte de la empresa y de ahí obtienen su sustento. Proyecto económico de carácter inter-generacional.</li> <li>-Las relaciones internas deben ser periódicas, formales y basadas en intereses y objetivos comunes (económicos y profesionales)</li> <li>-Necesidad de profesionalizar y formalizar las relaciones internas.</li> <li>-Buscan la cohesión: estado psicológico que permite sentirse unidos y además trabajar hacia un objetivo común (económica – profesional).</li> <li>-Coexiste un mosaico cultural: debe cohesionar las diversas culturas familiares que se van incorporando. (Familia política con diferentes valores, creencias, costumbres, etc.)</li> </ul>

*Esta tabla muestra la diferencia que existe entre una familia que no es empresaria (doméstica) y una empresaria. Puede observarse que en la familia empresaria no se da la fragmentación natural entre las generaciones y las subsecuentes generaciones obtienen su sustento de la empresa familiar. Entonces la interacción entre los familiares está regida no sólo por los lazos afectivos, sino por intereses económicos y de supervivencia, lo cual hace más compleja la dinámica familiar.*

El núcleo de este problema radica en que dentro de la empresa familiar interactúan dos sistemas diferentes entre sí: familia y empresa. Cada uno con sus características, normas y atributos particulares. Por tanto, no es extraño que existan conflictos en la empresa y en la familia derivados de la coexistencia de estos dos sistemas. En la tabla 2 se describen las funciones específicas y los atributos de estos dos sistemas.

Tabla 2: Diferencias Entre los Sistemas Familia y Empresa

SISTEMAS	
FAMILIA	EMPRESA
<ul style="list-style-type: none"> <li>-Sus vínculos son de gran fuerza originados en la consanguinidad y en el amor.</li> <li>-Es emocional: Se rige por: cariño / odio</li> <li>-Brinda protección a los miembros de la propia familia y suele ser incondicional hacia ellos.</li> <li>-El apoyo es total</li> <li>-La relación es permanente y de por vida para sus miembros.</li> <li>-Los vínculos son de gran amplitud, pues atienden desde aspectos importantes hasta aspectos triviales y durante prolongados periodos</li> <li>-Existen normas, pero no hay regulaciones de tipo contractual</li> </ul>	<ul style="list-style-type: none"> <li>-Sus vínculos son de origen contractual.</li> <li>-Es racional y objetiva: se rige por resultados.</li> <li>-La retribución y compensaciones están en función de los objetivos logrados y de la contribución de cada miembro.</li> <li>-El apoyo es condicionado</li> <li>-La relación no es permanente: se cumplen los objetivos o lo despiden</li> <li>-Los vínculos se determinan por la legislación, reglamentos o contratos de trabajo.</li> <li>-Las normas son reguladas contractualmente. Existen medidas disciplinarias.</li> </ul>

*Esta tabla muestra la divergencia que existe entre las características y normas que rigen en la familia y las que rigen en la empresa. La unión de estos dos sistemas tan diferentes en su naturaleza y que coexisten e interactúan continuamente puede ser motivo de conflictos y riesgos para la empresa familiar si no se toma conciencia de este fenómeno y se actúa estratégicamente.*

### Confianza

Gallo (1998) advierte que uno de los factores que antecede a una crisis en la empresa familiar es la pérdida de confianza. Esta pérdida de confianza puede oscilar desde la desconfianza por parte del fundador respecto a la capacidad de su sucesor para conducir la empresa –evitando así la sucesión- hasta la que puede surgir entre los miembros de la siguiente generación una vez que la sucesión se ha efectuado. De acuerdo con Luna y Velasco (2005) la confianza es un “conjunto de expectativas positivas sobre los demás o, más específicamente sobre las acciones de los demás”. La confianza es una actitud sobre el comportamiento futuro de otra persona a pesar de no tener la certeza y el control sobre el rumbo que tomará dicho comportamiento. “Es una apuesta hecha en el presente, hacia el futuro y fundamentada en el pasado” (Conejeros, L., Rojas, J., & Segure, T., 2010).

La confianza posee dos componentes: el cognitivo y el afectivo. El cognitivo se fundamenta en el conocimiento y evidencia empírica que previamente se posee acerca de la otra persona. Con base en este

conocimiento se toma la decisión de confiar o no. Los lazos emocionales son el pilar del componente afectivo. Este incluye la percepción de que existe un interés mutuo por el bienestar de ambas partes. Para que se genere la confianza es necesario que el componente cognitivo preceda al afectivo (McAllister, 1995). Por el contrario, la desconfianza genera expectativas negativas y se convierte en una amenaza para la empresa familiar. Una persona desconfía de otra cuando supone que las acciones del otro individuo le traerán consecuencias dañinas, así lo expresa Luna y Velasco (2005) “Generalmente, la desconfianza supone que un individuo sí buscará sacar provecho ilícito o ilegítimo de las acciones cooperativas de otro o que no será capaz de realizar las acciones que se esperan de él”.

La confianza es fundamental para lograr consensos, inclusive, para la articulación del protocolo familiar. La mayor o menor interacción entre familiares, el clima familiar y la distribución de funciones y poder dependen del grado de confianza que prevalezca entre los miembros de la familia empresaria (Rodríguez-Alcaide y Rodríguez -Zapatero, 2005). Un estudio realizado por Gallo (2002) mostró que cuando existe confianza entre los miembros y accionistas de una empresa familiar, estos:

*Muestran mayor disposición para intercambiar información sin experimentar sospecha de que se hará mal uso de ésta o se tome alguna ventaja ilícita. Enfocan su atención hacia la adquisición de nuevos conocimientos pertinentes a su área de trabajo. Incrementan su capacidad para tomar decisiones que involucren cierto riesgo, sin el temor de verse expuesto a juicios o críticas destructivas; y Se concentran en analizar las diferentes alternativas de solución “en vez de la interpretación de los motivos que condujeron a los demás a actuar como lo hicieron, o en tediosas disputas derivadas de la sospecha de que la otra parte quizá no esté diciendo la verdad o actuando correctamente” (Gallo, 2002).*

Grabinsky (2002:2) advierte que la confianza sobre todo entre hermanos, permite que estos se sientan seguros para depender completamente uno del otro, evitar la sospecha y el conflicto; y expresa que “Tener hermanos puede ser una bendición...o puede ser una serie de batallas campales donde los celos, resentimientos y el odio hagan que Caín y Abel sean, en comparación, unos amateurs. Tener hermanos en los negocios familiares es agregarle un grado más de complejidad, a la de por sí difícil relación familiar”.

### Confiabilidad

El tercer factor que pueden afectar la permanencia y continuidad de la empresa familiar es la ausencia de confiabilidad. De acuerdo con Gallardo (2006) la confiabilidad se refiere a: “...las características que uno percibe en otro y que lo hacen a uno creer que se puede o no confiar en él”. La confiabilidad no es algo que se otorga a otro, sino que ésta debe ser ganada a través de una serie de actitudes, desempeño y conductas en el lugar de trabajo. Luhmann (2000) afirma que todo sistema legal, político, familiar, social u organizacional requiere de la confiabilidad para emprender actividades de soporte en momentos de incertidumbre y riesgo; y agrega que cualquier sistema puede desintegrarse debido a la ausencia de confiabilidad. Sí dentro de una organización no familiar la confiabilidad es un recurso estratégico para su buen desempeño, con mayor razón lo es para garantizar la unidad, compromiso, competitividad y continuidad de la empresa familiar.

Así lo corrobora Belausteguigoitia (2010) cuando afirma que la confiabilidad es un recurso estratégico para lograr y mantener la unidad y el compromiso en la empresa familiar y que la falta de dicho recurso merma la voluntad de compromiso entre las personas. Por ejemplo, el familiar que se integra a la empresa debe ser competente, responsable y que su remuneración sea congruente con su desempeño. Pues, remunerar a este miembro sólo por el hecho de ser pariente, es percibido por los demás como injusto, inadecuado y frustrante.

## MÉTODOLÓGIA

En ésta investigación se procedió a establecer una conexión interdisciplinar entre los diversos campos que abordan el estudio de la empresa familiar. Para abordar la naturaleza del sistema familiar se recurrió al campo de la Sociología. Para indagar la dinámica y conflictos que surgen en la empresa familiar se consultaron investigaciones sobre la Administración de la Empresa Familiar. Posteriormente se administró la escala tipo Likert a 38 dueños de empresas familiares de la Región Centro del Estado de Coahuila en el 2013, esto, con la finalidad de medir la reacción de éstos hacia las variables: discriminación entre los sistemas familiar y empresarial, confianza y confiabilidad. Dado que una variable tiene un grado de abstracción que de ordinario no puede ser utilizada como tal en la investigación, se procedió a operacionalizar las variables a través de indicadores. En la siguiente tabla se muestra la operacionalización de las variables.

Tabla 3: Variables e Indicadores

Variable	Indicadores
Discriminación entre el sistema familiar y el empresarial.	Manejo por separado los asuntos familiares de los de la empresa. Ausencia de estrés al interactuar con los familiares que trabajan en la empresa. Existencia de acuerdos claros sobre la forma correcta e incorrecta de hacer las cosas. Consensuar los asuntos difíciles sin dañar los lazos afectivos. El resto de los familiares también lograr separar los asuntos familiares de los de la empresa.
Confianza.	Empatía entre los familiares que trabajan en la empresa. Sentirse seguridad cuando se juntan y platican. Ayudarse cuando es necesario. Compartir sin temor o recelo información importante. Ante los desacuerdos, trabajar para encontrar soluciones donde todos ganen.
Confiabilidad	Apertura en la comunicación entre los familiares que laboran en la empresa. Ante las dificultades, trabajar juntos y eficazmente. Enfrentar retos eficazmente. Trabajar consistentemente y de manera predecible. Compromiso con los resultados. Cada miembro que labora en la empresa posee las habilidades necesarias para su puesto. Ausencia de la necesidad de reemplazar algún miembro de la familia que trabaja en la empresa por otro más capaz.

Para el procesamiento de la información recabada se utilizó el paquete estadístico para las ciencias sociales (SPSS). Se analizaron los resultados obtenidos y se procedió a la interpretación y análisis de estos para responder a los objetivos de investigación planteados y a la elaboración de las conclusiones.

## RESULTADOS

Para la primera variable se obtuvieron los siguientes resultados:

Tabla 4: Discriminación Entre el Sistema Familiar y el Empresarial en la Empresa Familiar

Categoría	Frecuencia	Porcentaje	Porcentaje acumulado
Definitivamente sí	10	4	4
Probablemente sí	28	12	16
Indeciso	40	18	34
Probablemente no	77	34	68
Definitivamente no	73	32	100

*Al agrupar la categoría de indecisos con la de probablemente no y definitivamente no, se observa que un 84% tienen dificultad para separar los asuntos familiares de los de la empresa, lograr el consenso en temas difíciles sin dañar los lazos afectivos, conservar la unidad a pesar de los problemas y lograr acuerdos acerca de la forma correcta e incorrecta de hacer las cosas. Esto constituye una amenaza para la permanencia y continuidad de la empresa familiar.*

Esto significa que la mayoría de los dueños de las empresas familiares no logran distinguir, ni separar dentro de lo posible, la coexistencia de ambos sistemas: familia y empresa. Estos resultados corroboran las

aportaciones sobre el mismo tema publicadas por Nogales, F., (2007), Gordon, G., & Nicholson, N., (2010) y Grabinsky, S., (2010). Los resultados obtenidos muestran también que un negocio de estructura familiar donde los miembros de las distintas ramas son los dueños y a su vez trabajan en este, puede convertirse en un asunto muy delicado pues están involucrados la familia, su dinámica interna, y el manejo de la empresa que debe ser de una forma adecuada, con políticas y decisiones racionales y lógicas. Lo cual es opuesto a las normas que rigen en la familia, por ejemplo, el apoyo incondicional y permanente hacia sus miembros. Para la variable confianza se muestran la siguiente información obtenida.

Tabla 5: Confianza

Categoría	Frecuencia	Porcentaje	Porcentaje acumulado
Definitivamente sí	24	11	11
Probablemente sí	34	15	26
Indeciso	59	26	52
Probablemente no	68	30	82
Definitivamente no	43	18	100

*De acuerdo con los resultados vertidos en esta tabla se observa que la desconfianza representa una seria amenaza para la sobrevivencia de la empresa familiar. Pues un 74% no dudó en seleccionar entre las categorías de indeciso, probablemente no y definitivamente no para los indicadores: empatía entre los familiares que laboran en el negocio, seguridad cuando se juntan y hablan, ayudarse entre sí cuando es necesario, compartir ampliamente la información, trabajar para encontrar soluciones donde todos ganen cuando existen desacuerdos y apertura en la comunicación entre los familiares que laboran en la empresa.*

La confianza y la desconfianza son estados psicológicos que causan un impacto en la estructura cognitiva y el estado afectivo del individuo, por tanto, son factores determinantes del grado de participación responsable y efectiva –compromiso- y del sentido de pertenencia –unión- que los miembros familiares que laboran en la empresa familiar decidan cultivar y aportar a la organización. Los resultados obtenidos muestran que la desconfianza es una amenaza para la empresa familiar. Pues cuando prevalece la desconfianza, disminuye el nivel de comunicación y de transparencia en la información, en los intereses personales y objetivos fijados. Consecuentemente, la colaboración se restringe, se reafirman las expectativas negativas y se genera una competencia destructiva entre los miembros familiares de la empresa. Finalmente, para la variable confiabilidad se obtuvieron los siguientes resultados.

Tabla 6: Confiabilidad

Categoría	Frecuencia	Porcentaje	Porcentaje acumulado
Definitivamente sí	25	11	11
Probablemente sí	35	15	26
Indeciso	48	21	47
Probablemente no	55	24	71
Definitivamente no	65	29	100

*Se observa que los dueños de las empresas familiares en México consideran que prevalece la ausencia de confiabilidad entre los miembros de la familia que están incorporados como trabajadores en la empresa. Así lo confirman el 74% de las respuestas obtenidas para las categorías indeciso, probablemente no y definitivamente no. Consideran que los familiares que laboran en la empresa no trabajan ni enfrentan los retos de manera efectiva, su forma de trabajar no es consistente, no están comprometidos con los resultados, ni cuentan con las habilidades necesarias para el trabajo y que sienten la necesidad de reemplazar algún miembro de la familia por otra persona más capaz.*

En pleno siglo XXI y a pesar de los cambios en las normas sociales, la familia es para la mayoría de los mexicanos una red de seguridad que provee mayor apoyo y protección que la que el Estado proporciona. La naturaleza del sistema familiar en México y su crecimiento a través de la inclusión de los parientes políticos y del compadrazgo puede convertirse en una amenaza para la permanencia y consolidación de la empresa familiar. Estos resultados corroboran las investigaciones realizadas por Belausteguigoitia (2010) quien advierte que un negocio rentable siempre es atractivo para los parientes quienes inclusive tratan de incorporar también a sus parientes políticos y amigos con los que se sienten en deuda. Así mismo, también están aquellos parientes quienes por estar poco calificados no logran colocarse en otras empresas y esperan que por ser parte de la familia se les apoye a través de un trabajo independientemente de su capacidad y

nivel de desempeño. Al aceptarlos el dueño pone en riesgo la rentabilidad del negocio lo cual es contrario a la lógica empresarial.

## CONCLUSIONES

En este trabajo se abordaron tres de los más álgidos problemas por lo que puede atravesar una empresa familiar: la interacción de dos sistemas sociales con escasa compatibilidad entre sí: familia y empresa; la ausencia de confianza entre los miembros del mismo linaje; y la frágil confiabilidad entre los miembros de la estirpe que trabajan en el negocio familiar. Para sobrevivir, una empresa debe obtener utilidades razonables, estar organizada y manejada eficientemente. Equivocadamente se asume que una empresa familiar es sinónimo de una empresa improvisada. Por tanto, para disminuir el impacto negativo de los factores que amenazan a la empresa familiar es de suma importancia determinar e implantar estructuras básicas para asegurar la continuidad, crecimiento y supervivencia de la esta. Entre las principales estructuras recomendadas están: el Consejo de Familia, el Código de Ética y el Protocolo Familiar.

Estas estructuras permiten: reducir la frecuencia de situaciones de conflicto, tanto en la familia como en la empresa; promover la continuidad, el desarrollo y administración profesional de la empresa familiar; apoyar en la resolución justa y equitativa de los conflictos que se presenten dentro de la familia propietaria y entre ésta y los directivos o empleados de la empresa; y conservar en la medida de lo posible las relaciones armónicas entre la familia misma y entre ésta y la empresa. El Consejo de familia permite coordinar acciones de todo tipo entre la familia y la empresa. Igualmente, ayuda a los miembros familiares en asuntos tales como la educación, asesoría financiera, en la solución de conflictos familiares y en asuntos relacionados con las políticas de empleo, remuneración y desempeño. El Código de Ética es un documento que acota y fija límites para prevenir y disuadir contra aquellas conductas erradas; así como, contra los excesos por parte de aquellos empleados que por ser familiares abusen de su posición. También proporciona al resto de los empleados una visión correcta de los valores que guían la vida del dueño de la empresa y la de su familia.

El Protocolo Familiar, es un documento que contiene las reglas que regulan la relación de la familia con la empresa. Por ejemplo, reglas para el ingreso a la empresa de miembros de la actual o siguiente generación, para la venta de acciones por parte de algún familiar propietario, para la toma de decisiones; y especialmente para la forma en que deberá darse la sucesión. Además de contar con estas estructuras básicas es necesario que la familia dueña de la empresa tome conciencia y aprenda a distinguir y separar, dentro de lo posible, la coexistencia de ambos sistemas: familia y empresa. Existe una diferencia entre la familia que sabe separar lo que corresponde a cada sistema y manejarse adecuadamente en los dos sistemas, de aquella que no lo sabe. Es decir, entre una empresa familiar que ha tomado la decisión de profesionalizarse de aquella que no lo ha hecho. En una empresa familiar que ha sumido la responsabilidad de profesionalizarse:

*La asignación de puestos está basada en las competencias individuales, capacidades, conocimientos, preparación, etc. Esta asignación no está basada en relaciones e intereses familiares. Ni tampoco están reservados los puestos directivos para la familia propietaria. Las promociones dependerán del buen desempeño y no de la relación familiar. Existe una estructura organizacional que responde en forma adecuada a las necesidades del negocio. En lugar de que dicha estructura responda a las necesidades de la familia. Implantan un Consejo de Administración. Se canalizan las inquietudes y necesidades familiares ordenadamente, a través de un Consejo de Familia. Sí existe la posibilidad de un sucesor, a éste le queda claro que si desea incorporarse a la empresa familiar tendrá que ser a través de méritos y no por parentesco o independientemente de sus capacidades. Se observa la existencia de una planeación estratégica, en lugar de improvisar los rumbos que la empresa tome.*

*La toma de decisiones es descentralizada, pues la autoridad y las responsabilidades se delegan.*

A su vez, la profesionalización genera confiabilidad, pues cada miembro familiar que labora en la empresa demostrará estar dotado de las habilidades, conocimientos y actitudes necesarias para desempeñar responsablemente su labor; y si alguno de éstos miembros no está interesado en participar, o carece de capacidad, lo más conveniente es permitirle reubicarse en otro lugar acorde a sus intereses o capacidad. Uno de los aspectos más críticos en la empresa familiar y en el que se requiere trabajar con convicción es el factor confianza. Si los actuales propietarios o directivos de una empresa familiar cultivan la convicción de que el negocio familiar no es de su propiedad, sino que pertenece a sus hijos, nietos, bisnietos, etc., entonces, estarán motivados para transformar paulatinamente aquellas conductas que generan desconfianza y por lo tanto desunión y falta de compromiso.

Es conveniente también capacitarse profesionalmente en la negociación y solución de conflictos. Esto resultará sumamente útil para dirimir los conflictos en lugar de embotellarlos, para comunicarse abiertamente en lugar de triangular la comunicación y dar origen a rumores destructivos. Asimismo, es necesario tomar decisiones justas y éticas. Esto con el fin de evitar la percepción de actos de injusticias distributivas respecto a compensaciones, promociones y asignación de puestos; así como, adoptar posturas de transparencia en lo que concierne a la información sobre los diversos procesos de la empresa. Proporcionar información insuficiente o distorsionada es causa de conflictos y deteriora la confianza. Las recomendaciones ya expuestas pueden coadyuvar a: preservar el patrimonio de muchas familias y conservar la fuente de empleo para los trabajadores que no son parte de la familia. Así mismo, puede ayudar a promover la competitividad de la empresa familiar, su continuidad y el sustento para las siguientes generaciones. Como dice un proverbio africano, “*La unión en el rebaño obliga al león a acostarse con hambre*”.

# ESTRATEGIAS EN LOS MODELOS DE NEGOCIO DE DOS EMPRESAS LATINAS LÍDERES EN LA RED DE VALOR BOVINOS CARNE

Miguel Ángel Vargas Del Ángel, Universidad Autónoma Chapingo  
Manrubbio Muñoz Rodríguez, Universidad Autónoma Chapingo  
Quito López Tirado, Universidad Autónoma Chapingo

## RESUMEN

*El mercado internacional de la carne de bovino tiende a ser liderado por firmas que internamente controlan los nodos más relevantes de las cadenas de valor, para transformarlas en redes de valor en las que el consumidor adquiere un rol preponderante en la definición de la oferta de productos. En este artículo, se analizan las tendencias globales en la producción y consumo de carne bovina en la primera década del siglo XXI, explicadas por la innovación en el modelo de negocio de las empresas latinas, posterior al brote de encefalopatía espongiforme bovina (EBS), que puso en crisis a las exportaciones norteamericanas, en 2003. Con la finalidad de identificar cambios y tendencias en la red de valor y obtener lecciones de estrategia en la gestión de negocios del sector agropecuario, mediante la metodología de estudio de caso, se identifican y comparan las estrategias de dos empresas del mercado de la carne de bovino: la empresa que ostenta el liderazgo mundial (JBS-Friboi), y la empresa que lidera el mercado nacional y las exportaciones mexicanas (Su Karne).*

**PALABRAS CLAVE:** Innovación en el Modelo de Negocio, Mercado de Exportación, Empresas Emergentes

## STRATEGIES IN THE BUSINESS MODELS OF TWO LEADING LATINO BUSINESS NETWORK VALUE OF BOVINE MEAT

### ABSTRACT

*The international market for beef tends to be led by firms that internally control the most important nodes of the value chain, to transform them into value networks in which the consumer acquires a major role in defining the product offering. In this paper, the global trends in production and consumption of beef in the first decade of the XXI century there are analyzed, explained by innovation in the business model of Latino businesses, after the outbreak of bovine spongiform encephalopathy (EBS) that put in crisis the U.S. Exports in 2003. In order to identify changes and trends in the value network and get lessons of strategy in business management in the agricultural sector, through the case study methodology, there were identified and compared the strategies of two companies in the market of beef, the company that leads the world (JBS-Friboi), and the company leading the national market and mexican exports (Su Karne).*

**KEYWORDS:** Innovation in the Business Model, Export Market, Emerging Companies

## INTRODUCCIÓN

En los últimos años, el consumo mundial y el flujo internacional de agro alimentos, se han incrementado sustancialmente, en particular el de las carnes, esto como resultado de la conjunción de factores íntimamente

relacionados con los procesos de globalización, el crecimiento de las economías emergentes (Zinn, 2011), y más específicamente con la incorporación de las industrias agroalimentarias a las cadenas globales de valor (Bisang, Robert, Santangelo, & Albornoz, 2008) (Reardon, Codron, Busch, & Bingen, 2001) (Langreo, 2009). En otros términos, se va pasando de un modelo de producción altamente segmentado a otro donde las tramas productivas se diseñan en el contexto internacional: las materias primas se producen en un espacio, se industrializan en otro, y eventualmente se consumen en un tercero (Humphrey & Memedovic, 2006) (Torrescano, Sánchez, Gustavo, & Palma, 2010). Las normas de calidad, y los procesos de certificación se vuelven imprescindibles para garantizar la calidad (Bisang et al., 2008), inocuidad, homogeneidad y volúmenes de los productos transables.

El mercado internacional de la carne de bovino tiende a ser liderado por firmas que internamente controlan los nodos más relevantes de las cadenas de valor, para transformarlas en redes de valor en las que el consumidor adquiere un rol preponderante en la definición de la oferta de productos, que son más valorados cuando se hacen llegar a través de centros de distribución diferenciados, marcas y otros activos complementarios que vuelven disruptivo a su modelo de negocio, en tanto que introducen innovaciones y atributos completamente nuevos y distintos, de los usuales y valorados por los clientes (Wessel & Christensen, 2012). El presente trabajo tiene por objetivo identificar las estrategias de gestión de dos empresas que emergen con liderazgo desde América Latina en la red de valor bovinos carne, a través de la comparación de sus modelos de negocio, con la finalidad de identificar cambios y tendencias en la red de valor y obtener lecciones de estrategia en la gestión de negocios del sector agropecuario.

## REVISIÓN DE LITERATURA

Para lograr la competitividad en el mercado, las empresas están obligadas a hacer el uso más eficiente posible de los recursos y por lo tanto a reducir sus costos de producción, como sus costos de transacción (Coase, 1937). El éxito o fracaso de una empresa poco tiene que ver con la casualidad, y en cambio sí tiene que ver con la planeación de estrategias de gobierno y dirección. Un planteamiento útil que permite hacer un análisis de los conceptos que proveen ventajas competitivas a las empresas, es el la herramienta denominada el lienzo del modelo de negocio (Osterwalder & Pigneur, 2010). De manera particular, llama la atención el crecimiento sobresaliente que han mostrado algunas empresas inmersas en el sector de la agroindustria cárnica bovina en América Latina. En este sentido, una característica importante de las empresas exitosas en los mercados emergentes, es que la innovación alrededor de la tecnología del producto está siendo desplazada por estrategias de innovación en el modelo de negocios, a través de conceptos como gestión del conocimiento, innovación de valor, imaginación corporativa, tecnologías alternativas, efectos de redes, orquestación y modelos disruptivos (Christensen & Brower, 1995).

Un modelo de negocio describe las elecciones a través de las cuales se lleva a cabo la gestión del equipo de trabajo de una organización, con el propósito de solucionar problemas de una población determinada y satisfacer sus necesidades. Por tanto, un modelo de negocios considera dos elementos esenciales: las elecciones y sus consecuencias (Osterwalder & Pigneur, 2010). De acuerdo con la gestión empresarial, se trata de identificar, conquistar, fidelizar y desarrollar el valor para los clientes, a través de la creación, comunicación y entrega de un valor superior (Kotler, 2003). En este sentido, la pregunta relevante a responder es ¿qué modelo de negocios han diseñado las nuevas empresas latinoamericanas líderes para posicionarse en el mercado internacional de la carne y en qué estrategias coinciden o divergen?

## METODOLOGÍA

Con base en el valor de sus ventas anuales y el liderazgo que ejercen en sus respectivos países, fueron seleccionadas dos empresas latinas de la red de valor bovinos carne para ser analizadas bajo la metodología del estudio de caso (Eisenhardt, 1999) (Morra & Friedlander, 2001) (Martínez, 2006) (Yin, 1994) : la

primera corresponde a la brasileña JBS-Friboi, empresa con supremacía mundial en el comercio de carne bovina, cuyas ventas superaron los 30,000 millones de dólares en 2012 (JBS-Friboi, 2013); y la mexicana Su Carne, líder en ventas de carne bovina tanto para el mercado nacional, como para exportación, que logró el quinto lugar en participación del mercado norteamericano, y alcanzó ventas totales por 2,500 millones de dólares en 2012 (Su Carne, 2013).

Posteriormente, se realizó un análisis comparativo entre ambos casos para identificar sus diferencias y semejanzas, con tal propósito se analizan 16 variables que a continuación se mencionan: años de experiencia desde su fundación, monto de ventas totales en el año 2012, capacidad de faena por año, capacidad instalada, número de marcas en el mercado, margen EBITDA (utilidades antes de intereses, impuestos, depreciación y amortización), capacidad de empleo, número de productores involucrados en su red de valor, tipo de producción, oferta de productos, estrategias de crecimiento, presencia en el mercado por continentes, asociación con el eslabón primario de la cadena productiva (criadores y ganaderos), forma de pago a proveedores, origen del financiamiento para su expansión, y calificación de su deuda. Las fuentes de información para el presente trabajo fueron algunas páginas web, entrevistas a profundidad con actores de la red de valor, estadísticas oficiales y diversos documentos de carácter técnico, científico y teórico, que versan sobre la red de valor bovinos carne, y sobre la gestión de los modelos de negocio.

## RESULTADOS

Entre los principales cambios que ha registrado la red de valor global de bovinos carne, se puede destacar que, en los primeros años del presente siglo, el mercado internacional de carne bovina sufrió transformaciones importantes que dieron paso a una reconfiguración del mercado mundial y abrieron oportunidades inéditas para los países oferentes de carnes, entre los cuales se encuentran Brasil y México. En el año 2003, cuando Estados Unidos aún se consideraba el líder mundial oferente de carne bovina, los principales destinos de sus exportaciones eran Japón con el 31%, México con 26%, Corea del Sur con 24% y Canadá con 10% (USMEF, 2013). Sin embargo, en diciembre de 2003 fue detectado en los Estados Unidos de América un brote de encefalopatía espongiforme bovina (BSE, por sus siglas en inglés), lo cual se tradujo en una drástica caída de sus exportaciones, dando pie a la irrupción creciente de Brasil como líder mundial oferente de carne bovina (Bisang et al., 2008).

De esta manera, a finales del año 2003 y principios de 2004, se registró una caída de las exportaciones de carne de bovino con destino a los mercados ruso y asiático (Corea del Sur y Japón). Al prohibirse las importaciones de carne estadounidense en estos países, se abrió una ventana de oportunidad para las empresas latinas aquí analizadas, las cuales fueron cubriendo la demanda insatisfecha de manera paulatina en tanto se recuperaban las exportaciones norteamericanas. Una coincidencia importante entre la agroindustria cárnica de Brasil y la mexicana, es que a pesar de las diferencias en el tamaño del sector, en ambos casos las exportaciones son lideradas por una empresa que cubre más del 70% de ese mercado. Bajo esta premisa se procedió a realizar el análisis comparativo.

En la Tabla 1 aparece el análisis de Benchmarking entre las dos compañías seleccionadas para el presente estudio. La empresa JBS-Friboi tiene dos grandes corporativos para la división de carne bovina: JBS-Friboi Bovinos Mercosur cuyo margen EBITDA (utilidad antes de intereses, impuestos, depreciación y amortizaciones) fue de 11.2% en junio de 2012 y Bovinos USA, que incluye a las plantas ubicadas en Australia y Canadá con un margen EBITDA de 3.4% (JBS-Friboi, 2013); en contraste con el margen EBITDA de Su Carne para el mismo período que fue de 11% (S&P, 2013).

Tabla 1: Benchmarking de las Compañías: JBS-Friboi Vs Su Karne

Variable de Análisis	JBS-Friboi	Su Karne
Años de experiencia desde su fundación	60 años.	43 años.
Monto de ventas totales en el año 2012	30,000 millones de dólares.	2,500 millones de dólares.
Capacidad de faena por año	16 millones de cabezas.	1 millón de cabezas.
Capacidad instalada	50 plantas procesadoras.	7 plantas procesadoras.
Número de marcas en el mercado	16 marcas.	1 marca.
Margen EBITDA (segundo trimestre 2012)	JBS Bovinos Mercosur =11.2%, JBS USA Bovinos (incluye Australia y Canadá) = 3.4%	Su Karne = 11%
Capacidad de empleo	80,000 empleados.	9,000 empleados.
Número de productores involucrados en su red de valor	120,000 productores primarios.	80,000 productores primarios.
Tipo de producción	Carne de bovino, cerdo, pollo y ovino y leche.	Carne de bovino.
Oferta de productos	Carne de bovino, cerdo, pollo, ovino, y leche.	Carne de bovino, cerdo, pollo y pescado.
Estrategia de crecimiento	Adquisiciones y fusiones de marca en distintos países productores, con capital accionario público en ocho países: Brasil, Argentina, Estados Unidos, Australia, Italia, Uruguay y Paraguay.	Crecimiento propio en México y Nicaragua, a través de la reinversión de utilidades, y financiamiento mediante fondos de inversión de capital privado.
Presencia en el mercado por continentes	5 continentes.	4 continentes.
Asociación con el eslabón primario de la cadena productiva (criadores y ganaderos)	Si, mediante esquemas de aparcería, buey a término.	No, solamente la compra de becerros para la ceba.
Forma de pago a proveedores	Pagos inmediatos en línea e incluso financiamiento a productores mediante banca propia.	Pago en línea de manera inmediata.
Origen del financiamiento para su expansión	Banca gubernamental de Brasil, colocación de acciones en la bolsa de valores, fondos de inversión.	Respaldo financiero institucional, mediante la adquisición de deuda privada: GE Capital, Deutsche Bank, Societé Générale, Wells Fargo, Inbursa, HSBC, Bancomer, Scotiabank y Rabobank.
Calificación de su deuda	<b>BB/estable</b>	MxA/ estable

Fuente: elaboración propia con datos de (Su Karne, 2013) [www.sukarne.com.mx](http://www.sukarne.com.mx), y (S&P, 2013) Standar & poor's, en [www.standarandpoors.com.mx](http://www.standarandpoors.com.mx); y (JBS-Friboi, 2013) [www.jbs.com.br](http://www.jbs.com.br).

Las evidencias indican que el endeudamiento que muestra JBS- Friboi ('BB/ estable', la primera B significa Brasil) es de mayor riesgo, que el de Su Karne ('MxA/estable'), ambas calificadas por Standard&poor's. Esto se traduce de la siguiente manera, la deuda calificada 'MxA', es algo más susceptible a efectos adversos por cambios circunstanciales o de las condiciones de la economía que la deuda calificada en las categorías superiores 'MxAA', sin embargo la capacidad de pago del emisor para cumplir con sus compromisos financieros sobre la obligación es fuerte en relación con otros emisores en el mercado nacional. La deuda calificada 'BB' presenta una mayor vulnerabilidad que la calificada con 'BBB' en relación con otras obligaciones en el mercado nacional. Lo cual quiere decir que actualmente el emisor tiene una débil capacidad para cumplir sus obligaciones financieras, y que condiciones adversas del negocio, financieras o en la economía, podrían deteriorar la capacidad o voluntad del emisor para cumplir sus compromisos financieros sobre la obligación.

Entre las coincidencias fundamentales que se encontraron, puede destacarse una estrategia de complementación hacia el giro principal de las empresas que iniciaron siendo productoras y empacadoras de carne bovina, la cual han fortalecido con la venta de cortes primarios y porcionados empacados al alto vacío y puestos en el punto de venta, no obstante que han diversificado su oferta de producto, JBS por ejemplo ha incursionado en la producción, procesamiento y distribución de carne de cerdo, pollo, ovinos y lácteos; mientras que la empresa mexicana ha diversificado su oferta, a través de importación y reexportación de carne de cerdo, pollo y pescado. El ambiente competitivo del mercado global ha orillado a las empresas a buscar estrategias para generar economías de escala y alcance, en este sentido también coinciden en la integración de procesos que van desde el acopio de ganado, la ceba, la producción de alimentos balanceados, el sacrificio, despiece, empacado y congelado para su posterior distribución y para ganar la confianza de los proveedores han implementado sistemas de pago electrónico.

En cuanto a las divergencias en sus modelos de negocio, se pueden destacar los siguientes aspectos: La estrategia de crecimiento e internacionalización de JBS-Friboi ha sido quizás la más atrevida, la más arriesgada, y de mayor magnitud entre las empacadoras del mundo, la cual incluye fusiones y adquisiciones de plantas procesadoras de bovinos, cerdos, pollos, ovinos y lácteos, en los principales países productores; en cambio la empresa mexicana SuKarne ha optado por una estrategia de crecimiento más conservadora con crecimiento propio y busca exportar sus productos a diversos puntos del mercado global tratando de encontrar el mercado adecuado para cada pieza del bovino que se exporta desde México y Nicaragua. Para financiar su crecimiento, la multinacional brasileña JBS-Friboi ha recurrido al financiamiento gubernamental y a la bursatilización para incremento de su capital; en cambio SuKarne se ha financiado del capital privado y la reinversión de utilidades.

JBS-Friboi muestra una mayor integración de su red de valor, desde la plataforma de producción de pollo, cerdo, ovinos y lácteos en diversos países; para lo cual ha adquirido plantas de producción y ha construido alianzas con criadores y ganaderos, a través de aparcerías, esquemas de financiamiento y hasta una plataforma de banca propia. Por el contrario SuKarne ha implementado unidades integrales de producción en las que el negocio inicia en el acopio de ganado, la producción de alimentos balanceados, la ceba, el sacrificio, procesamiento y distribución de carne, mientras que importa carnes de cerdo, pescado y pollo que posteriormente son exportadas a diversos países. En cuanto a la ideología central de cada empresa, JBS\_Friboi hace énfasis en la orientación al cliente, mientras que SuKarne se ha orientado prioritariamente hacia los empleados de la empresa y temas ambientales. Durante el año 2011, esta última empresa fue cuestionada al intentar poner una planta de producción en Nuevo León, México; precisamente por el tema de la contaminación ambiental.

*Cómo Explicar la Emergencia de JBS-Friboi:* Por su parte, la empresa brasileña JBS-Friboi es considerada la compañía número uno en el mundo en la producción de carne bovina, con una capacidad de sacrificio de 51,400 cabezas/día ó 16 millones de cabezas sacrificadas al año que comercializa a través de 16 marcas. Tiene plataformas de producción y oficinas en los principales países productores de carne como Argentina, Estados Unidos, Italia, Uruguay, Paraguay, México, Australia, y su corporativo central en Brasil (Pereira\_Peláez, 2012). Está posicionada como la compañía número uno en producción y exportaciones de carne en Australia. En el año 2012, el negocio de JBS-Friboi se distribuía de la siguiente manera: 46 % de su producción era carne bovina, 21% carne de pollo, 9% carne de cerdo y 24% lácteos, a través de cuatro unidades de negocios: JBS-Friboi Mercosur, JBS-Friboi USA bovinos, JBS-Friboi USA porcinos y JBS-Friboi USA aves. Del total de su producción, JBS-Friboi exporta el 62%, mismo que se distribuye de la siguiente manera: 23% al mercado asiático, 27% a Europa, 23% para África, 8% a Canadá, 4% para América Central y 15% a EE UU.

Entre sus principales ventajas competitivas destacan, su liderazgo en el mercado mundial con reconocimiento de sus marcas mediante la asociación entre la calidad de marca y producto para conquistar la fidelidad del cliente; posee un modelo de negocio diversificado con alcance global a través de la mejor red de distribución que le permite atender a clientes finales a quienes ofrece una oferta diversificada de proteínas. Se precia de tener la mejor diversificación en sus exportaciones y un récord histórico en la adquisición de empresas de su sector. Todo ello le da una sólida experiencia y especialización en la venta de proteína animal. Como un mecanismo de apoyo a la gestión empresarial orientado a disminuir los costos de transacción, en el contexto de la globalización económica, se ha flexibilizado la normatividad para lograr alianzas estratégicas entre empresas mediante diversas operaciones que pueden contemplar las fusiones o adquisiciones de empresas ya establecidas, asumiendo que dichas alianzas conducen a ciertas ganancias de eficiencia, así como a una mejora de los productos y servicios prestados, lo que resulta beneficioso desde el punto de vista de los consumidores, a lo cual se puede llamar beneficios agregados (Méndez\_Naya, 2012). En este sentido, JBS-Friboi emplea a 80 mil personas que se distribuyen en 50 plantas de producción, de las cuales 33 se dedican al sacrificio bovino (19 en Brasil, seis en Argentina, cuatro en Estados Unidos

y cuatro en Australia; 10 de ellas poseen unidades productoras de carne industrializada); tres plantas se orientan al sacrificio de porcinos en Estados Unidos (capacidad de 47,900 cabezas/día, lo que la posiciona como la tercera en este mercado); una planta de sacrificio ovino (Estados Unidos); dos productoras de Beef Jerky (carne cocida) en Brasil y Estados Unidos. A esta red se le suman centros de distribución y confinamientos para bovinos en los países en los que opera, con actividad en las áreas de alimentos, cuero, productos para animales domésticos, biodiesel, colágeno, latas y productos de limpieza.

Involucra a 120,000 productores agrícolas y ganaderos como proveedores de la red. Esta empresa tiene integrado un sistema que abarca desde la cría de ganado con catálogos para determinar la calidad genética, el financiamiento, acompañamiento y asociación con productores bajo modalidades de aparcería o confinamiento en el que los ganaderos pagan el alimento que sus animales consumen y reciben a cambio un animal listo para la faena, conocido como *buey a término o trabajar en la bolsa*, lo cual permite a los ganaderos la comercialización de sus animales en cualquier época del año, independientemente del momento en que estén listos para el sacrificio, reduciendo con ello los riesgos y los problemas de estacionalidad. Estos esquemas permiten la trazabilidad y rastreabilidad de los productos a través del programa Quality Farms, con miras a lograr la certificación Global Gap que permitirá penetrar en todo el mercado europeo. JBS-Friboi también garantiza a sus proveedores el pago inmediato en línea. En el año 2007, la compañía se convirtió en la primera del sector frigorífico en cotizar acciones en la bolsa de valores. A través del Banco JBS-Friboi, los clientes tienen opciones de financiamiento para las dietas, y hasta un cobro parcial por adelantado. En su página web cuenta con un simulador de negocios que permite a los ganaderos obtener información para tomar mejores decisiones. En la Tabla 3 se presentan los aspectos más destacados que caracterizan al modelo de negocio de la empresa JBS-Friboi.

*Cómo explicar la emergencia de Su Karne:* La empresa mexicana Su Karne forma parte del corporativo empresarial Grupo Viz. En 2012 procesó el equivalente a un 1 millón de reses, logrando una producción de 500 mil toneladas de carne bovina; también destaca por ser la principal importadora de carne de cerdo, pescado y pollo que son comercializados en 16 países, además de la venta de cuero, harina de sangre, harina de carne, cebo y biofertilizantes. Generó nueve mil empleos directos, con una capacidad de faena instalada de un millón 300 mil cabezas de ganado bovino por año (Su Karne, 2013). Para atender diariamente a sus 12 millones de clientes, Su Karne dispone de una red de distribución conformada por 40 mil puntos de venta, de los cuales 400 son propios. Ante un escenario de pequeños productores diseminados a lo largo y ancho de todo México, la empresa mantiene una relación comercial con 80 mil productores agrícolas y ganaderos a través de 200 centros de acopio para la compra de becerros, los cuales se pagan de manera inmediata en línea por razones de seguridad. En la Tabla 3 aparecen los aspectos más destacados que caracterizan al modelo de negocio de Su Karne.

Su Karne ha integrado un modelo productivo que inicia en el acopio de ganado, elaboración de alimentos balanceados con base en granos, engorda intensiva en corrales con un promedio de 157 días, laboratorios, sacrificio, procesamiento, empaque, distribución de carne y una red de centros de atención a clientes, cuyo modelo de negocio se ha conformado a lo largo de 43 años de gestión y experiencia. Abarca 16% del mercado doméstico y 75% de las exportaciones mexicanas de carne bovina, destacando como destino países como Estados Unidos de América, Japón, Rusia, Corea del Sur, Hong Kong, Vietnam y Angola.

## CONCLUSIONES

El acontecimiento de EBS a finales de 2003 en los EEUU creó una coyuntura crítica que fue aprovechada por dos empresas latinas cuyas innovaciones en el modelo de negocio (López-Palacios, Muñoz-Rodríguez, & Leos-Rodríguez, 2010) les permitió irrumpir en el mercado internacional. Así, mientras la brasileña JBS-Friboi logró el liderazgo mundial en ventas, la mexicana Su Karne se consolidó como la principal empresa exportadora, con una participación del 75% en las exportaciones mexicanas de carne bovina. Ante

la conformación de las cadenas globales de valor orientadas por el consumo, con un fuerte dominio de los grandes “pakeros” y distribuidores (Anderson De Moura ZANINE, 2006), las dos empresas latinas líderes en sus respectivos países, diseñaron un modelo de negocio que básicamente considera el logro de economías de escala y alcance, así como el control de las fuentes de abastecimiento de materia prima y la diversificación de mercados. Los casos analizados sugieren que si bien existe un diseño básico del modelo de negocio, en la estrategia de gestión empresarial existen variaciones en conceptos como: estrategia de crecimiento, segmentos de mercado, fuentes de financiamiento, relación con proveedores e ideología central; así como el lugar donde se producen, se procesan y se empaacan los cortes de carne.

La globalización económica y la emergencia de los países en desarrollo traen consigo el incremento de los flujos comerciales. Estas situaciones han incrementado la demanda de carne en el mundo, pero con ello también las exigencias en las regulaciones de calidad, inocuidad y trazabilidad. En este sentido, las empresas oferentes de carne han tenido que diseñar estrategias que les permitan competir -ingresar y permanecer- en los mercados globalizados, y una manera eficaz para hacerlo es a través de la innovación en sus modelos de negocio. Su Karne ha optado por la exportación desde México y Nicaragua; mientras que JBS-Friboi ha preferido las fusiones y adquisiciones de plantas de producción y empaque instaladas en diversos mercados, esta estrategia le permite disminuir riesgos de diversa índole y sortear las barreras no arancelarias, como por ejemplo las barreras sanitarias que son comunes en el mercado internacional de la carne. Entre las tendencias más importantes de la red de valor bovinos carne, destacan: la integración vertical de los procesos de producción, sacrificio, empaque, embalaje y distribución; la internacionalización de las estructuras empresariales y sus capitales financieros para disminuir los costos de transacción y comercializar volúmenes que les permitan aquilatar los costos de coordinación interna. No obstante que los nichos de mercado representan una opción para las empacadoras de tamaño mediano o pequeño, por lo que se recomienda trabajar en la diferenciación de productos a través de procesos de certificación.

# HERRAMIENTAS PARA EL ANÁLISIS Y VALIDACIÓN DE IDEAS DE NEGOCIO

Evaristo Colomina Climent, Universidad de Alicante (España)

Leonardo Yáñez Muñoz, Universidad de Alicante (España)

## RESUMEN

*El emprendimiento es hoy un fenómeno de gran relevancia social, probablemente debido a las actuales turbulencias del sistema económico mundial. Ello lo convierte en objeto de interés académico, profesional y político. En correspondencia con esa preocupación, el proporcionar soporte técnico a los procesos de emprendimiento es el objetivo del trabajo que a continuación se desarrolla. En concreto, y a partir de la perspicaz interpretación del concepto de modelo de negocio planteada por Joan Magretta, se propone un método (AVIN, Análisis y Validación de Ideas de Negocio) para facilitar la toma de decisiones del emprendedor en relación a la validez y, por consiguiente, racionalidad en abordar los esfuerzos necesarios para tratar de materializar una idea de negocio. Además, AVIN se está implementando mediante una aplicación informática de fácil utilización.*

**PALABRAS CLAVE:** Idea de Negocio, Proceso de Emprendimiento, Modelo de Negocio, Metodología

## TOOLKIT FOR ANALYSIS AND VALIDATION OF BUSINESS IDEAS

### ABSTRACT

*Entrepreneurship is a phenomenon of the most relevance today, probably as a result of the current turmoil of the global economic system. That is why it is subject of academic, professional and political attention. In line with this concern, provide technical support to the process of entrepreneurship is the aim of the work we then develops. Specifically, and from the insightful interpretation of the concept of business model raised by Joan Magretta, we propose a method (named AVIN, Analysis and Validation of Business Ideas) to facilitate decision-making to entrepreneurs in relation to validate and therefore rationality into necessary effort to address seeking to realize a business idea. Furthermore, AVIN is being implementing via a user-friendly computer application.*

**JEL:** L21, L26, M13, M21, M41

**KEYWORDS:** Business Idea, Entrepreneurship Process, Business Model, Methodology

## INTRODUCCIÓN

El emprendimiento (expresión más aceptada por las academias de la lengua del término inglés *entrepreneurship*) se pregona hoy en día como la receta mágica capaz de desatar el crecimiento económico y la proliferación de empleos. Ello, dado el ambiente depresivo (crisis y recesión) que se vive desde hace algunos años en áreas significativas del sistema económico mundial, explica que sea un tema de la mayor relevancia social. No puede extrañar, entonces, que en el mundo académico, así como en el profesional y el político, se generen abundantes discursos e iniciativas de todo tipo y calidad ocupándose del asunto, lógicamente desde finalidades diferentes, con diversos enfoques y, desde luego, distinto rigor. Dicho brevemente, lo que planteamos en este trabajo es que una idea de negocio es validada, y por lo tanto digna

de consideración, en la medida que pueda ser expresada de forma consistente como un modelo de negocio completo, coherente y provechoso, susceptible por ello de merecer los esfuerzos y recursos necesarios para su ulterior desarrollo mediante un plan de negocio rigurosamente elaborado y finalmente implementado. El documento que presentamos se desarrolla de este modo: en el siguiente apartado presentamos el marco de referencia en que se inserta el trabajo, definiendo los diferentes conceptos utilizados y su ubicación en el fenómeno emprendedor, tal y como lo concebimos; después, describimos el proceso AVIN (acrónimo de Análisis y Validación de Ideas de Negocio) como elemento de soporte a las tareas iniciales del emprendimiento; a continuación se describen las herramientas utilizadas en cada una de las fases del proceso AVIN, precisando la fuente de procedencia de las mismas y explicando el efecto sinérgico de combinarlas en un método integrado, lo que constituye hasta donde alcanza nuestro conocimiento una novedad en las metodologías a disposición de los actores del proceso emprendedor; finalmente, se presentan las conclusiones y futuros desarrollos del proyecto.

## REVISIÓN DE LA LITERATURA

### Emprendimiento (Perspectiva General)

El área de estudio en la que planteamos nuestra aportación es la del emprendimiento. En síntesis, el emprendimiento hace referencia al conjunto de actividades que un emprendedor (persona o grupo que desea iniciar una experiencia empresarial por cuenta propia) desarrolla al objeto de materializar sus ideas de negocio, esto es, convertirlas en una empresa viable. Ello significa, dicho de manera simple, implementar esa idea en una entidad organizada (empresa) capaz de proporcionar un producto o servicio a un consumidor de tal modo que la contraprestación conseguida en consecuencia por la empresa supera los costes en que ha debido incurrir para generar y distribuir lo intercambiado, al tiempo que el valor percibido por el consumidor por lo recibido supera, traducido a unidades monetarias, al sacrificio realizado al satisfacer el precio exigido. Si estas dos condiciones se verifican, entonces es indudable que la experiencia tendrá sentido económico y será sostenible, a más de beneficiosa socialmente.

En torno a la experiencia emprendedora, y al hilo que la ola de interés general que se ha despertado por él en los últimos años, como ya señalamos en la introducción, se ha ido delineando un campo de conocimiento interdisciplinar en busca de su especificidad y, claro está, reconocimiento y respetabilidad académica. En este sentido, si bien no hay un consenso generalizado al respecto, una perspectiva con alto grado de aceptación es la que proporcionan Morris, Kuratko y Schindehutte (2001) en su marco de referencia integrado en el que la comprensión del fenómeno del emprendimiento viene a ser el resultado de analizar y comprender las interacciones entre un conjunto de seis variables, en el que la variable “proceso de emprendimiento” ocupa un lugar central. De hecho, Moroz y Hindle (2012) consideran que “... [El] emprendimiento, [...] es fundamentalmente un fenómeno pragmático [*action-based*] que implica un conjunto altamente interrelacionado de procesos creativos, estratégicos y organizativos” (p. 785). Si bien el consenso a este respecto (es decir, la visión del emprendimiento como un proceso) es considerablemente amplio, no ocurre sin embargo lo mismo a la hora de especificar la estructura y elementos constituyentes de tal proceso. Moroz y Hindle (2012) identifican hasta 32 modelos de proceso de emprendimiento en la literatura sobre el tema, desde diversos enfoques teóricos y de investigación. En todo caso, destaca como uno de los puntos de convergencia de las diferentes propuestas la necesidad de métodos para facilitar la transición de la etapa de “descubrimiento” de la oportunidad de negocio a la de la “explotación” de la misma (p.811).

Precisamente, es esta cuestión la que hemos abordado en nuestra investigación, y la que pretendemos ayudar a resolver con el resultado obtenido, en concreto mediante un método para construir un modelo de negocio consistente y ajustado a una oportunidad percibida (idea de negocio) que sirva para evaluar inicialmente sus perspectivas de éxito y, por lo mismo, permitir a la persona o personas que han generado dicha idea

juzgar sobre bases sólidas la pertinencia o no de llevar adelante la iniciativa, reformularla o abandonarla. Conceptos básicos en este método son, por consiguiente, los de “idea de negocio” y “modelo de negocio”.

### Idea de Negocio

El descubrimiento de una oportunidad de negocio se empieza a hacer operativo generando una idea, esto es, una percepción todavía no formalizada que vincula problemas y/o deseos de un grupo de población con una propuesta de valor conveniente para resolverlos y/o satisfacerlos. Las ideas de negocio son, pues, la materia prima de todo proceso de emprendimiento, en el sentido obvio de que sin ellas no hay tal. La fuente de origen de las ideas es, sin duda, la creatividad. Si bien esta última no es un recurso fácil de adquirir y aplicar, existen múltiples técnicas de organización de la reflexión que ayudan a su canalización. En este sentido, son diversas las técnicas de ideación recomendadas, siendo las más comunes la de la tormenta de ideas (*brainstorming*) en grupo, el pensamiento lateral, SCAMPER, etc. Lo importante, no obstante, es que quede establecido con nitidez y credibilidad lo anteriormente indicado para caracterizar una idea de negocio, es decir: una propuesta de valor específica para un grupo bien establecido de potenciales consumidores que van a obtener un beneficio concreto de adquirir algo, y pagar por ello.

A este respecto, quizás toda idea a evaluar debería pasar un filtro previo basado en la frase atribuida a Einstein: si no puedes explicar algo a tu abuela, probablemente es porque tú mismo no lo comprendes del todo. Por otra parte, es claro que la frontera entre una buena idea digna de desarrollo ulterior y una mera ensoñación es, muchas veces, tenue y difícil de percibir, en especial para quien ha generado la propuesta, por lo que disponer de un método de análisis y validación de ideas, como el que aquí planteamos, y con carácter previo al desarrollo de actividades de “explotación” de la oportunidad, es muy conveniente. En definitiva, ¿qué hace a una idea atractiva, merecedora de aprecio inicial y posterior estudio de un modelo de negocio que establezca la hoja de ruta de su implementación? En lo fundamental, dos cosas: por una parte, el que la idea se pueda concretar en algo cuyo funcionamiento se presuma preciso y consistente y que, al menos en principio, la posibilidad de disponer de ello parezca viable; por otra, que exista un grupo más o menos amplio de personas de las que se presuma que estarán interesadas en acceder al producto o servicio que se ofrezca, con capacidad económica para sufragar dicho acceso. En otras palabras, y para simplificar, una idea a tomar en consideración debería, de entrada, parecer capaz de responder con suficiencia a dos riesgos: el técnico (se puede hacer, y su funcionalidad está razonablemente definida) y el comercial (existe un mercado objetivo para ésta propuesta de valor de tamaño suficiente y con capacidad adquisitiva bastante para sufragar su precio).

### Modelo de Negocio

El término “modelo de negocio”, si bien relativamente reciente, es hoy de uso muy frecuente en la literatura empresarial. Para Ricart (2009), es un concepto de enlace entre la estrategia empresarial y los procesos de negocio que la implementan. Sin embargo, y pese a que la investigación sobre el tema se ha expandido considerablemente en los últimos años, falta un mínimo consenso básico en términos conceptuales, como se verifica en los trabajos de Osterwalder, Pigneur y Tucci (2005) y Zott, Amit y Massa (2011), entre muchos otros. Probablemente porque, como señala Teece (2010), el concepto carece hasta ahora de fundamentación teórica en Economía y Administración de Empresas. A efectos operativos para este trabajo, la definición más clarificadora nos la proporcionan Osterwalder y Pigneur (2010) al decir que “Un modelo de negocio describe el sistema lógico [*rationale*] mediante el que una entidad crea, proporciona y captura valor [...] Creemos que la mejor forma de describir un modelo de negocio es mediante nueve bloques constructivos básicos que muestran cómo una empresa trata de obtener beneficios. Los nueve bloques cubren las cuatro principales áreas de un negocio: cliente, oferta, infraestructura y viabilidad financiera. El modelo de negocio es equivalente a un esbozo de la estrategia a ser implementada mediante estructuras organizativas, procesos y sistemas” (pp. 14-15). En definitiva, se trata de una descripción

simplificada de los elementos básicos que permiten a la empresa generar una propuesta de valor a un segmento de clientes, alcanzar a éstos para entregarla y obtener a cambio una renta neta que permite la sostenibilidad de la empresa a corto y largo plazo. Esta definición es el punto de partida desde el que Osterwalder y Pigneur construyen su “lienzo de modelo de negocio” [*business model canvas*], que se ha convertido en una de las técnicas empresariales más populares y comentadas, y que nosotros utilizaremos en nuestra “caja de herramientas”.

Por otra parte, una aportación en este ámbito (la conceptualización del modelo de negocio) es crucial en el diseño de nuestro método. Se trata del artículo de la relevante investigadora en Management, Joan Magretta (2002) en la Harvard Business Review, “*Why Model Business Matters*”, en el que se plantea la utilidad del entonces novedoso concepto de modelo de negocio para comprender el sentido de una iniciativa empresarial y mejorar su desarrollo. Lo que nos interesa especialmente de este artículo son dos observaciones: la primera de ellas que “[...] los modelos de negocio [...] no son nada misterioso. Son, en el fondo, relatos [...] que explican cómo funcionan las empresas” (p. 87), y, más adelante, “[...] aplicado correctamente, [el modelo de negocio] fuerza a los directivos a pensar rigurosamente sobre sus negocios. Una de las mayores fortalezas del modelo de negocio como herramienta de planificación es que enfoca la atención sobre cómo todos los elementos del sistema encajan en un conjunto en funcionamiento” (p. 91). En segundo lugar que “[...] cuando los modelos de negocio no funcionan es porque fracasan ya sea en el *test narrativo* (el relato carece de sentido) o en el *test numérico* (la cuenta de resultados no da positivo) [*cursiva nuestra*]” (p. 89).

En resumidas cuentas, y en la perspectiva de Joan Magretta, el modelo de negocio es una historia, un relato que describe cómo articula la empresa los diferentes elementos que le permiten crear valor para alguien, entregárselo y obtener por ello una renta neta (deducidos los costes de generar y distribuir la propuesta de valor a los clientes) suficiente para sostenerse, cuando no crecer y transformarse, a lo largo del tiempo. Dicho relato debería visualizarse tanto desde un punto de vista narrativo, lo que significa una descripción de los elementos constitutivos del modelo y las relaciones entre los mismos, como desde un punto de vista numérico, es decir mediante la representación de los flujos financieros derivados de la acción e interacción de los componentes del modelo. En los siguientes apartados utilizaremos esta idea como fundamento de nuestro método.

## METODOLOGÍA

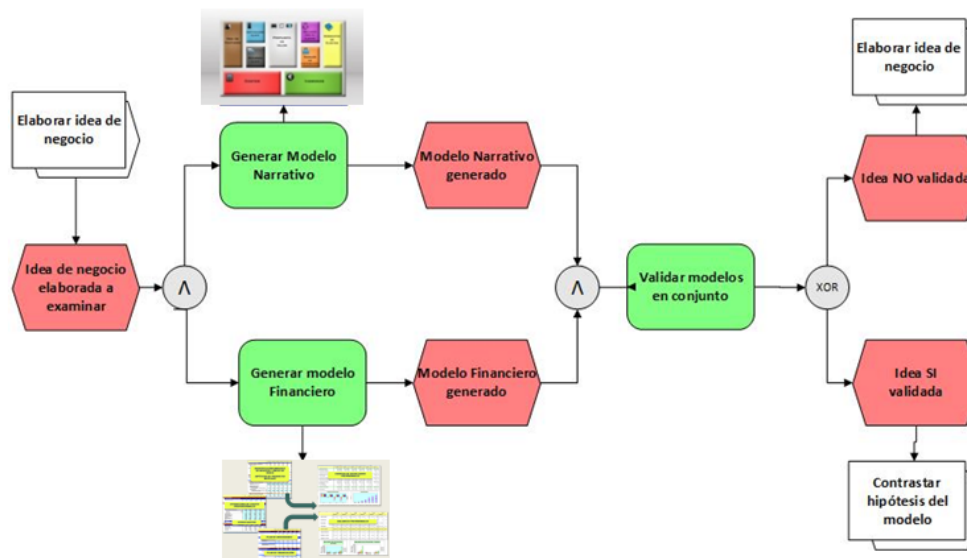

El propósito que nos ha llevado a diseñar AVIN (Análisis y Validación de Ideas de Negocio) es el de “operativizar” la percepción de Magretta (2002) de modo que sea posible, siguiendo un proceso bien definido y aplicando las herramientas adecuadas en cada etapa, validar y refinar una idea de negocio tanto desde el punto de vista narrativo como numérico, así como visualizar y facilitar el análisis de la consistencia entre ambos análisis. La correcta combinación de ambas perspectivas, en efecto, permitiría generar un modelo de negocio con perspectivas de éxito.

### El Proceso Avin, Vista General

Dentro del más amplio proceso de emprendimiento antes aludido, el proceso AVIN se propone facilitar la “traducción” de una idea de negocio inicialmente atractiva en un modelo de negocio que recoge la doble perspectiva (narrativa y numérica) prescrita por Magretta (2002), lo que lo hace susceptible de ser valorado sistemáticamente y con un alto grado de objetividad, prescindiendo de prejuicios y de una posible predisposición favorable a las propias ideas. Como se describe en la figura 1, en la que hemos utilizado la técnica de modelado de procesos denominada “Cadena de Procesos guiada por Eventos” (en inglés, *EPC: Event-driven Process Chain*), AVIN arranca con la disponibilidad de una idea de negocio que inicialmente se considera con posibilidades de desarrollo ulterior. Para verificar esta posibilidad empezamos simultáneamente el diseño de los modelos narrativo y numérico (financiero) que supondrían la

implementación de la idea examinada. Aunque después volveremos sobre ello, señalar que aquí es crucial el adverbio “simultáneamente” puesto que, no lo olvidemos, estamos diseñando un único modelo de negocio, si bien contemplado desde perspectivas diferentes.

Figura 1: El Proceso AVIN (Análisis y Validación de Ideas de Negocio)

En esta figura se representa el proceso AVIN (Análisis y Validación de Ideas de Negocio). AVIN es un subproceso dentro del proceso general de emprendimiento. A su vez, AVIN está compuesto de varios subprocesos. En primer lugar, los de elaboración del modelo narrativo y el modelo financiero, finalmente el subproceso de coordinación y validación de ambos modelos en conjunto. El evento final del proceso es una idea validada positiva o negativamente, lo que, lógicamente, desencadena procesos externos diferentes. Fuente: Elaboración propia.

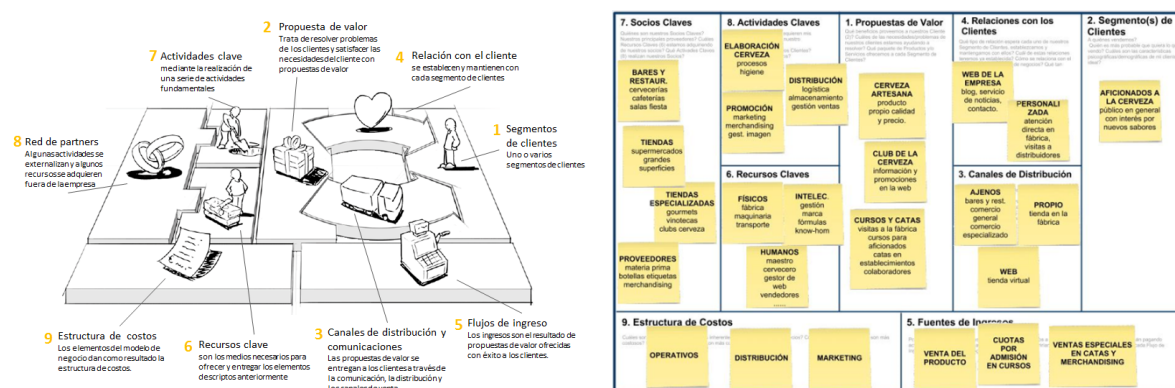

Finalmente, y una vez hemos comprobado que el modelo de negocio “cuadra”, en el sentido en el que lo hacen el Activo y el Pasivo de un Balance de Situación (es decir, que ambas masas patrimoniales representan la misma realidad solo que mirada desde puntos de vista diferentes), podemos determinar la validez del modelo, tanto respecto a si la historia que nos plantea tiene sentido como a si las expectativas financieras que nos ofrece a corto y a largo plazo esa historia son suficientemente atractivas. Si es este el caso, lo procedente es continuar el proceso de emprendimiento general, lo cual, y desde la perspectiva “lean start-up” a la que antes nos hemos referido, significaría entender el modelo validado como un conjunto razonable de hipótesis que deben ser contrastadas y, de ser ello necesario, refinadas posteriormente. Si por el contrario no fuera el caso, es decir, si el modelo elaborado no resulta verosímil o convincente, lo adecuado es regresar a la fase anterior de elaboración de la idea de negocio y reflexionar sobre la modificación de aquellos aspectos puestos en cuestión en el proceso de modelado.

Para resumir, el método AVIN, que es la implementación del proceso descrito, consiste en la combinación del modelado de la lógica de creación de valor de un negocio (modelo narrativo) con el modelado de los flujos financieros (modelo numérico) y la verificación de la conciliación de ambos modelos. En los siguientes subapartados, por lo tanto, vamos a explicar cómo nos planteamos, y con qué herramientas, el diseño de los modelos narrativo y numérico, así como su coordinación. Estas tres tareas son las que están siendo implementadas como módulos de la aplicación AVIN, a lo cual haremos referencia puntualmente

### Diseño del Modelo Narrativo

Para este subproceso hemos considerado adecuado utilizar la herramienta desarrollada por Osterwalder y Pigneur (2010), el lienzo de modelo de negocio (*business model canvas*), que es una técnica visual de diseño para representar los elementos esenciales de un modelo de negocio de forma tal que el conjunto, y por lo tanto su lógica de funcionamiento, sea fácilmente perceptible, y en consecuencia de más sencilla comprensión de un solo vistazo, a modo de panel de control. Más precisamente, el lienzo de modelo de negocio es una plantilla subdividida en nueve casillas (nueve bloques de diseño del modelo de negocio en la terminología de Osterwalder y Pigneur) que se ubican en un orden preciso que facilita entender las relaciones entre los componentes de un negocio, y que representan categorías de elementos universales en toda iniciativa empresarial, en las que se debe describir de manera breve el contenido concreto de cada caso que se quiere representar (figura 2).

Figura 2: el Lienzo de Modelo de Negocio (*Business Model Canvas*)

En esta figura se representa, a la izquierda, el conjunto de bloques que configuran de modo general el lienzo de modelo de negocio, en el que se considera que la visión de conjunto del modelo requiere definir la infraestructura (6, 7 y 8), la propuesta de valor (2, 3 y 4), el segmento de clientes objetivo (1) y el equilibrio financiero (5 y 9); a la derecha incluimos una imagen en la que hemos aplicado la plantilla derivada de la imagen de la izquierda al modelado de una idea, en este caso concreto la de una factoría y distribuidora de cerveza artesanal. Fuente: Osterwalder y Pigneur (2010) y elaboración propia.

Veamos brevemente una descripción de los bloques. Siguiendo la numeración de la plantilla de la figura 6, tenemos: 1, propuesta de valor, que será el conjunto de bienes y servicios que aportan valor a un segmento de mercado específico, al punto que las personas identificadas en dicho segmento pensamos que estarán dispuesta a sacrificar una parte de sus recursos para disfrutar de dicha propuesta; 2, segmento de clientes, bloque en el que deberemos identificar con la mayor precisión posible el perfil de las personas que se pueden sentir atraídas por la propuesta de valor planteada; 3, canales de distribución, esto es, mecanismos que van a hacer posible la comunicación con los clientes y el acceso de éstos al disfrute de la propuesta de valor; 4, relaciones con los clientes, que significa el estilo de contacto previsto con los clientes (personalizado, autoservicio, ...); 5, fuentes de ingreso, que se refiere a las consecuencias (en flujos de entrada de dinero) que todo lo anterior tendrá; 6, recursos claves, o sea los básicos para que la propuesta de valor planteada sea viable; 7, socios claves, o sea la red de proveedores y colaboradores sin cuya intervención el modelo no es posible; 8, actividades claves, o procesos cuya correcta realización es esencial para el funcionamiento del modelo finalmente, 9, estructura de costes, requiere reflejar con la mayor precisión posible las categorías de costes en los que será necesario incurrir para que el modelo pueda funcionar. Establecido el significado de cada bloque (casilla) del lienzo, la operativa es simple: identificar para la situación real que tratamos de modelizar cuál es el contenido concreto de cada bloque, cuidando de que no quede ningún elemento esencial sin ser reflejado, al tiempo que el conjunto resulta coherente y completo.

Hay una gran cantidad de tutoriales sobre el lienzo del modelo de negocio fácilmente accesible en la red, así como modelos de plantillas para uso manual, versiones informatizadas, etc. En la aplicación informática que actualmente desarrollamos para la implementación del método AVIN hemos considerado necesario desde luego la digitalización de la plantilla así como la conexión con algunos módulos complementarios para facilitar la reflexión sobre bloques individuales y sobre el lienzo en su conjunto. Por ejemplo, en el análisis de la propuesta de valor son muy interesantes dos técnicas: por una parte la planteada por Kim y Mauborgne (2007), la estrategia de océano azul; por otra, la de Johnson, Christensen y Kagermann (2008), y el concepto “*job-to-be-done*”. En consecuencia, hemos decidido integrarlas en el módulo de la aplicación enfocado al diseño del modelo narrativo como complementos del elemento central que es, como ya hemos explicado, el lienzo del modelo de negocio. Además, nos ha parecido importante apoyar la reflexión sobre los elementos constitutivos del modelo de negocio (o sea sus aspectos internos) con técnicas para estructurar la reflexión respecto a la influencia del entorno en el propio diseño de esos elementos internos. Para ello, otros complementos de que dispondrá la aplicación AVIN para su módulo narrativo son herramientas que facilitan el análisis DAFO (Debilidades, Amenazas, Fuerzas, Oportunidades) en relación a las que consideramos son las cuatro áreas del entorno determinantes para la configuración de un modelo de negocio, que, siguiendo a Osterwalder y Pigneur (2010), denominaremos fuerzas de la industria, tendencias claves, fuerzas del mercado y fuerzas macroeconómicas.

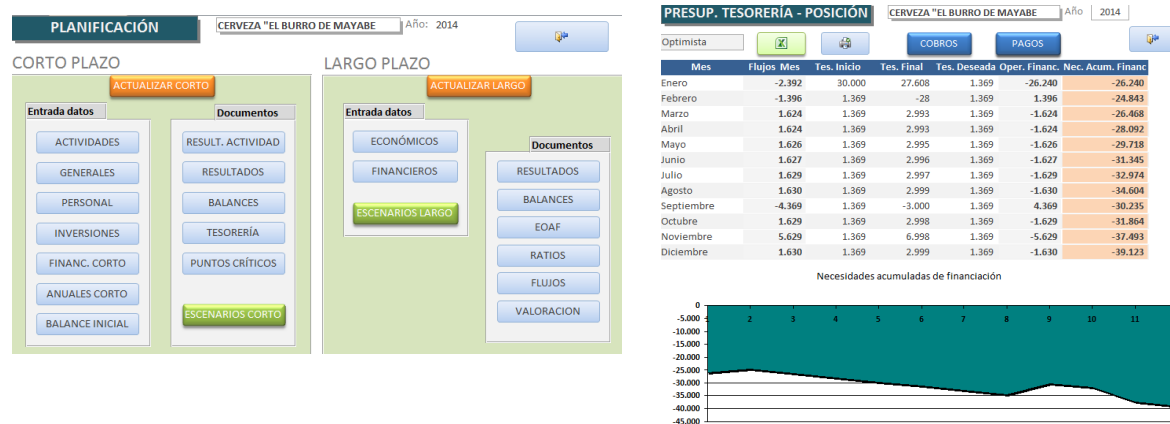

### Diseño del Modelo Numérico

En paralelo al ejercicio de diseñar el modelo narrativo en la manera en que sugerimos en las líneas anteriores, nuestro método plantea abordar el modelo numérico. Ello significa cambiar la óptica con la que reflexionamos sobre los elementos necesarios para implementar una idea de negocio en el sentido de pensar en los flujos financieros vinculados a ellos, ya sea en el sentido de los que se ocasionan de modo regular (ingresos o costes) o puntual (inversión o financiación). Como ya hemos dicho en varias ocasiones, la idea de negocio debe parecer razonable, lo que verificamos con el modelo narrativo, pero también debe parecer posible y rentable, lo que requiere el contraste desde el punto de vista financiero.

Al objeto de hacer esta comprobación hemos diseñado una herramienta de simulación financiera (segundo módulo de nuestra aplicación AVIN) que creemos cumple suficientemente el requisito de validar desde el punto de vista financiero un proyecto de negocio. En concreto, el módulo (figura 3) facilita, en primer lugar, “traducir” el diseño narrativo elaborado, utilizando el módulo correspondiente, en un modelo financiero inicial. Para diseñarlo nos hemos inspirado en diferentes aportaciones, Tjia (2009) por ejemplo, con el fin de construir una plataforma flexible de gestión de datos. Como decíamos antes, en principio la finalidad del módulo es hacer una “visualización financiera” de la idea de negocio en estudio. Desde ese punto, el modelo financiero cumple un papel fundamental en el proceso de validación del modelo de negocio: viabilidad (capacidad de supervivencia) a corto plazo y rentabilidad (sentido económico del proyecto) a largo plazo.

Para cumplir la tarea comentada, es decir validar viabilidad y rentabilidad, la herramienta que hemos diseñado facilita, en primer lugar, la introducción de los diferentes conceptos de ingresos, gastos, inversión y financiación implicados por la idea de negocio en consideración, y que ya se van perfilando en el modelo narrativo. También, debemos introducir, en el caso de haberlos por tratarse de una iniciativa ya en funcionamiento, los datos históricos de partida. A continuación, procede introducir las previsiones sobre los diferentes conceptos considerados, tanto para el corto como el largo plazo, siendo las referidas al corto plazo lógicamente tratadas con mayor nivel de detalle. También debemos aportar estimaciones de variables externas importantes como por ejemplo el coste de la financiación. Recordemos que la perspectiva a corto plazo fundamentalmente nos va hablar sobre la viabilidad de la iniciativa, “es posible”, en tanto que el largo plazo se centra en la rentabilidad, “interesa”.

Figura 3: Vistas del Módulo Financiero de AVIN

En esta figura vemos, a la izquierda, el menú general provisional del módulo financiero de la aplicación AVIN (en desarrollo). Por una parte, el módulo se estructura en un bloque de introducción de datos y otro de obtención de documentos; por otra, se plantea ambas posibilidades desde dos perspectivas sustancialmente diferentes: corto y largo plazo. La idea es que, a corto plazo, el problema básico al que se enfrenta un negocio es el de la liquidez; a largo plazo, el problema es la rentabilidad. A la derecha, uno de los documentos que facilitan el análisis. Fuente: Elaboración propia.

La herramienta procede al procesamiento de la información introducida y permite su recuperación en forma de estados financieros y otros documentos e informes relevantes. Este módulo de AVIN es así mismo una herramienta de simulación, por lo que podemos hacer todas las iteraciones que consideremos convenientes, introduciendo cambios en los diferentes supuestos, hasta establecer una imagen final satisfactoria. Para enriquecer el análisis, podemos también considerar escenarios alternativos (pesimista, optimista, probable).

### Coordinación de los Modelos Narrativo y Numérico.

Hemos diseñado una plantilla como herramienta para apoyar la tarea de coordinación o conciliación de los modelos narrativo y numérico. Como se puede ver en la figura 4, consta de cuatro bloques o casillas denominadas “gastos corrientes”, “inversiones requeridas”, “ingresos corrientes” y “financiación prevista”. Para facilitar su uso, y la propia coherencia, se organiza siguiendo la pauta de los estados contables: conceptos que implican aplicación de dinero a la izquierda, flujos de entrada a la derecha.

Su lógica de funcionamiento se explica a continuación. Ya sea en paralelo con el diseño del modelo narrativo, o bien una vez construido éste, se requiere reflexionar sobre cada uno de los elementos que se han introducido en el mismo en los siguientes términos: ¿genera un gasto/ingreso corriente?, ¿requiere inversión?, en caso afirmativo, ¿cómo se financiará esa inversión? Por ejemplo, supongamos que hemos reflejado un vehículo industrial como elemento incluido en el modelo narrativo (en el bloque “recursos clave” del lienzo del modelo de negocio, en concreto). Respecto a la primera cuestión, gasto o ingreso, es evidente que su utilización y mantenimiento requerirá desembolsos periódicos, por lo que debemos anotar los conceptos de gasto correspondientes; además, disponer del vehículo supondrá una inversión. En consecuencia lo reflejaremos en la plantilla, así como el método de financiación que se utilizará (¿crédito?, ¿fondos propios?).

Figura 4: Área de Coordinación de Modelos del Método AVIN

Gastos corrientes	Ingresos corrientes
<ul style="list-style-type: none"> <li>■ Introduzca conceptos de gasto observados</li> <li>■ Utilización del vehículo industrial</li> <li>■ Mantenimiento del vehículo industrial</li> <li>■ .....</li> <li>■ .....</li> <li>■ .....</li> </ul>	<ul style="list-style-type: none"> <li>■ Introduzca conceptos de ingreso observados</li> <li>■ .....</li> <li>■ .....</li> <li>■ .....</li> <li>■ .....</li> <li>■ .....</li> </ul>
<ul style="list-style-type: none"> <li>■ Introduzca las inversiones requeridas</li> <li>■ Adquisición de vehículo industrial</li> <li>■ .....</li> <li>■ .....</li> <li>■ .....</li> <li>■ .....</li> </ul>	<ul style="list-style-type: none"> <li>■ Introduzca la financiación prevista</li> <li>■ Crédito para vehículo industrial</li> <li>■ .....</li> <li>■ .....</li> <li>■ .....</li> <li>■ .....</li> </ul>
Inversiones requeridas	Financiación prevista

En esta figura vemos la estructura prevista inicialmente para el módulo de coordinación de la aplicación AVIN. Se requiere al usuario que verifique, en primera instancia y para cada elemento incluido en el modelo narrativo, las consecuencias financieras de dicho elemento, lo que permite la identificación sistemática de los distintos conceptos que vamos a utilizar en el módulo financiero de la aplicación. El uso del módulo financiero puede generar también anotaciones en esta plantilla que deberán ser incorporadas al lienzo del modelo narrativo. Fuente: elaboración propia.

## RESULTADOS Y CONCLUSIONES

El método AVIN (Análisis y Validación de Ideas de Negocio), tal y como aquí se ha explicado, es en definitiva una caja de herramientas para el emprendedor, o para el asesor de emprendedores, que facilita la reflexión sobre ideas de negocio de modo sistemático y ordenado, orientada al propósito de generar un modelo de negocio explícito y complejo (narrativo y financiero) descriptivo de dichas ideas. La propuesta de valor en AVIN estriba en que su usuario dispone de una guía exhaustiva y de uso intuitivo para modelizar desde dos puntos de vista diferentes pero complementarios (narrativo y financiero) ideas de negocio de forma rápida y consistente. El resultado final de aplicar AVIN a una idea puede ser el rechazo de ésta, si no es posible generar para dicha idea un modelo de negocio aceptable; o, por el contrario, y de ser positiva la validación, disponer de un excelente y bien documentado proyecto de negocio (es decir, conjunto de hipótesis) con el que trabajar de cara a su implementación.

Por otra parte, pensamos que la utilidad del modelo generado mediante la aplicación de AVIN a la idea de negocio no finaliza en el momento previo al lanzamiento de la iniciativa; también puede ser, con posterioridad, una suerte de “panel de control” sobre el cual reflejar los acontecimientos realmente sucedidos y reajustar el modelo a la luz de aquellos. En definitiva, serviría para visualizar los cambios ocurridos desde el proyecto inicial y reflexionar sobre posibles modificaciones de los supuestos. Evidentemente, no afirmamos que nuestro método es el correcto, el mejor de los posibles. No decimos que es la solución al problema que abordamos, pero sí una solución. Como sabe todo ingeniero y, en general, todo aquel que trabaja en campos de estudio orientados al diseño, los artefactos producidos no son juzgados importantes porque sean más o menos perfectos (signifique ello lo que signifique) sino únicamente porque son más o menos útiles para los propósitos de sus usuarios. Y en este aspecto las experiencias que hemos podido desarrollar con AVIN han sido positivas.

En la actualidad, los autores estamos desarrollando tres líneas de trabajo diferentes pero complementarias, para refinar y agregar valor al método. En primer lugar, trabajamos en la implementación de AVIN como aplicación informática integrada susceptible de uso tanto en un entorno desconectado (modo local) como a través de la red, en modo remoto; dos, hemos diseñado un formato de curso-taller para la presentación y

práctica del método a grupos reducidos; finalmente, estamos elaborando un conjunto de materiales de apoyo (manuales, tutoriales, casos,...) sobre el método y el conjunto de herramientas que contiene. En cuanto a la implementación de AVIN como aplicación informática hemos desarrollado por completo el módulo de diseño del modelo numérico, ya operativo, y está avanzado el diseño de los módulos de diseño del modelo narrativo y de integración. El formato del curso-taller de presentación del método también está ultimado y se ha ido probando, y refinando, en sucesivas sesiones. En un próximo trabajo haremos la descripción del mismo, así como de las experiencias realizadas y del feedback recibido de éstas. Finalmente, hemos avanzado sustancialmente en la elaboración de los materiales de apoyo.

# ALUMNOS UNIVERSITARIOS EN EL DESARROLLO DE PLANES DE MERCADOTECNIA ESTRATÉGICA Y LA ADOPCIÓN DE LAS TIC'S A TRAVÉS DE LA VINCULACIÓN

Mayda González Espinoza, Universidad Autónoma de Baja California  
Mónica Claudia Casas Páez, Universidad Autónoma de Baja California  
Gloria Muñoz del Real, Universidad Autónoma de Baja California

## RESUMEN

*Toda institución de educación superior debe mantener programas de vinculación empresarial, que pongan de manifiesto la calidad educativa y la preparación académica que los alumnos desarrollan en sus estudios superiores, para que estos otorguen a las empresas de la localidad alternativas de posicionamiento, innovación y adaptación al mercado cambiante, será entonces obligación de estas instituciones determinar si: ¿los empresarios aceptan la intervención de alumnos universitarios para la aplicación de metodologías que detonen el desarrollo empresarial? y si ¿la aplicación de estas metodologías efectivamente impactan en la mejora de los negocios intervenidos?. Este trabajo pretende dar respuesta a estas interrogantes, mediante la evaluación de las prácticas administrativas de las MIPyMEs intervenidas por el proyecto de vinculación denominado “desarrollo de planes de mercadotecnia estratégica y soporte empresarial” aplicado por los alumnos de mercadotecnia en el ciclo escolar 2012, lo que otorga la posibilidad de dar respuesta a las necesidades de actualización y capacitación que demandan las organizaciones de la región, mediante la aplicación de planes de mercadotecnia estratégica para detonar el posicionamiento empresarial, por otro lado la intervención de los alumnos al aplicar los conocimientos teóricos que han adquirido a lo largo de su formación profesional les permite conocer y manejar herramientas prácticas de diagnóstico, visión y el plan de acción.*

**PALABRAS CLAVES:** Vinculación, Desarrollo Empresarial, Mipymes, Mercadotecnia

## UNIVERSITY STUDENTS IN THE DEVELOPMENT OF STRATEGIC MARKETING PLANS AND THE ADOPTION OF TIC'S A THROUGH THE INVOLVEMENT

### ABSTRACT

*Any institution of higher education must keep corporate engagement programs, that highlight the quality of education and academic preparation that students develop in their higher education for them to grant companies the alternative location positioning, innovation and adaptation to changing market, will then be required to determine whether these institutions: companies accept the intervention of university students to implement methodologies that trigger business development? and if it is the application of these methodologies effectively impact the business improvement surgery?. This paper aims to answer these questions by evaluating the administrative practices of MIPYMEs intervened by linking the project entitled "Development of strategic marketing plans and business support " applied by marketing students in 2012 school year , the which gives the possibility to respond to the needs of updating and training organizations demanding the region through the implementation of strategic marketing plans to detonate the business positioning , second intervention students to apply theoretical knowledge have acquired throughout his training allows them to understand and manage practical diagnostic tools , vision and action plan.*

**KEYWORDS:** Bonding, Business Development, Mipymes, Marketing

## INTRODUCCIÓN

En todas las economías del mundo, Las Micros y Pequeñas Empresas las (MIPyMEs) son de gran importancia ya que cumplen un rol fundamental en la actividad económica y la generación de empleos, así mismo el desarrollo económico de una nación depende en gran medida del desarrollo de sus empresas, las cuales pueden mejorar su desempeño mediante la participación activa de las universidades a través de la vinculación. Los proyectos de vinculación de la Universidad Autónoma de Baja California aplicados por la Facultad de Ciencias Administrativas son diseñados para dar respuesta a las necesidades de actualización y capacitación que demandan las organizaciones de la región, mediante la aplicación de planes de mercadotecnia estratégica para detonar el posicionamiento empresarial, por otro lado la intervención de los alumnos al aplicar los conocimientos teóricos que han adquirido a lo largo de su formación profesional les permite conocer y manejar herramientas prácticas de diagnóstico, visión y el plan de acción.

Habitualmente los empresarios toman la decisión de definir un plan estratégico cuando consideran que hay que realizar algún cambio sustancial en el rumbo del negocio, sin embargo, cualquier empresa u organización, debe tener un plan estratégico que guíe su acción y sus decisiones. Por otro lado los empresarios piensan que el propósito de una empresa es generar ganancias, vender más que sus competidores o ser líder en su industria. Lo cierto es que las ganancias, las ventas, el posicionamiento en el mercado y las utilidades, son simplemente una medida, un termómetro de qué tanto está la empresa cumpliendo con su verdadero propósito que es crear y mantener clientes que es sin duda el objetivo de cualquier empresa. Este trabajo evalúa las prácticas administrativas de las organizaciones intervenidas por el proyecto de vinculación denominado “desarrollo de planes de mercadotecnia estratégica y soporte empresarial” aplicado por los alumnos de mercadotecnia en el ciclo escolar 2012, lo que otorga la posibilidad de determinar que herramientas de carácter mercadológico permiten detonar el posicionamiento empresarial deseado.

## Desarrollo

La función de vincular a las Instituciones de Educación Superior (IES) con el sector productivo resulta un tanto compleja definirla, Campos G.(2006) , establece a la vinculación como; “... la constitución de un conjunto de acciones complejas que se establecen entre instituciones de educación superior, institutos y centros de investigación con el sector productivo”, esta definición concreta que el vincular no solo se convierte en la intervención de alumno en el sector productivo, si no que al conjugar acciones se debe mejorar las condiciones empresariales de la organización intervenida.

Una pregunta interesante sería ¿cuándo inicia en México la inquietud por parte de las IES a realizar vinculación?, Campos (1994) retoma a Etzkowitz y Webster (1991) quienes destacan que en México “existen dos momentos claves en la relación universidad-sociedad: en la primera revolución, que tuvo lugar en el siglo XIX, cuando se integró la investigación a las universidades como otra de sus tareas sustantivas, y el segundo momento que se vive actualmente... donde las universidades asumen nuevas responsabilidades económicas con la sociedad” sin duda un ejemplo de éxito de este tipo de intervención fue la construcción de Ferrocarriles Mexicanos y el desarrollo de la Industria Petrolera.

Entonces ¿todas las IES deben realizar vinculación empresarial?, Cuello (2006) establece que “Existen instituciones educativas y universitarias que se distinguen por ser emprendedoras y otras básicamente por

ser de tipo académico” en la segunda prevalece la inversión en el desarrollo educativo dentro del aula, un ejemplo lo son las escuelas de educación básica y media de nuestro país, mientras que en la primera se centra en el desarrollo de innovaciones y tecnología, refiriéndonos específicamente a las IES y en pocas excepciones a las escuelas de educación media-superior. Por su parte la Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES) habla sobre el papel que las universidades mexicanas deberán cumplir en la solución de problemas sociales a nivel nacional y local, añade también, que esta contribución no solo será posible a través de la investigación o la formación de profesionales, científicos y técnicos, sino que deberá desarrollar la formación de valores de cada individuo instruido, según refiere Alcántar, (2006).

En este sentido, la pregunta obligatoria sería ¿quiénes son los participantes en la vinculación educativa?, para contestar esta pregunta Gould G. (1997) menciona que los participantes en la vinculación son; el sector productivo como las cámaras, el gobierno, agrupaciones profesionales, etc..., así como también la participación de las IES, universidades tecnológicas, centros de estudios y organizaciones promotoras de la vinculación, dejando de manifiesto que la obligación es conjunta y que las acciones a tomar deberán sin duda orientarse a una función colaborativa y cooperativa que permita el desarrollo de metodologías de intervención rápidas y efectivas que generen la aplicación de conocimiento en los alumnos y la mejora de las empresas intervenidas. Campos M. (1994) destaca que en 1984 la Universidad Nacional Autónoma de México (UNAM) establece que si bien el vínculo con la sociedad es tan antigua como la institución misma “el momento actual de la universidad se encuentra buscando vías que le permitan alcanzar la modernización en el ámbito de la tecnología y de la ciencia, enfocadas a solucionar los graves problemas sociales, económicos y políticos nacionales”, al año siguiente la universidad se abocó a hacer públicos los esfuerzos que realizó en el ámbito de las facultades y escuelas. Este antecedente involucra el concepto de vinculación entendido en su sentido más amplio y no sólo con el sector productivo, sino que también con los procesos de transformación educativa y social.

Estos procesos no han surgido desde dentro de las IES, si no que los procesos globalizados han obligado a la aceptación de la investigación por parte de los expertos en las ciencias teóricas tanto en el ámbito empresarial, social, político y cultural. La política económica ha repercutido en la creación, difusión y desarrollo de una estructura educativa de pautas, estándares, programas, proyectos, currículos y modelos pedagógicos que orientan sus acciones a mejorar los procesos de vinculación educativa. De esta turbulencia surge la globalización, el neoliberalismo y las nuevas tecnologías, que fungieron como base para el lanzamiento del Modelo Educativo Basado en Competencias, Moreno P. (2010).

La introducción de México a los mercados internacionales implicó el involucramiento del sector educativo en los procesos productivos, sin embargo existe una relación de dependencia en la creación de conocimiento y la recepción del mismo, Campos (1994) establece que “En la actualidad el sistema industrial depende en gran medida de una base de conocimientos y capacidades mucho más sofisticados, el cambio tecnológico se caracteriza por tener una estrecha alianza entre la ciencia, la tecnología y la industria, en la cual las universidades están llamadas a desempeñar un nuevo papel”, esto significa que la relación universidad-industria es ahora mucho más necesaria que en décadas anteriores, la dependencia es mutua y es importante mantener una comunicación abierta.

La vinculación es una actividad necesaria en la sociedad, la ANUIES destaca que el desarrollo económico de una nación depende en gran medida del desarrollo de sus empresas, las cuales pueden mejorar su desempeño mediante la participación activa de las universidades, a través de la capacitación y asistencia técnica; este proceso de desarrollo deberá estar acompañado de acciones conjuntas de gobierno-banca y de desarrollo-universidad para lograr con esto un avance significativo en el posicionamiento de las empresas. En el 2010 la ANUIES estableció que la vinculación ha generado grandes beneficios para las IES, entre los que se enfatiza: “La actualización de los planes de estudio, la innovación en métodos de enseñanza-

aprendizaje, las estancias de alumnos en empresas, la creación de fuentes alternas de financiamiento, una mayor aceptación de sus egresados, la creación de nuevas carreras y/o campos de investigación y en general, una mayor pertinencia social de la Institución”. En conclusión los beneficios que la vinculación otorga tanto a las empresas como a las IES se ve reflejado en un crecimiento económico. El plan de marketing es una herramienta de gestión por la que se determina los pasos a seguir, las metodologías y tiempos para alcanzar unos objetivos determinados. Así tenemos que el Plan de mercadotecnia forma parte de la planificación estratégica de una compañía. El propósito de las MIPyME's es consolidarse en la mente del consumidor con alternativas de posicionamiento, innovación y adaptación al mercado cambiante, de tal manera que debemos definir el termino de posicionamiento, Trout y Ries (2011) lo define como: “...la toma de una posición concreta y definitiva en la mente del o de los sujetos en perspectiva a los que se dirige una determinada oferta u opción”.

De manera tal que, frente a una necesidad que dicha oferta u opción pueda satisfacer, los sujetos en perspectiva le den prioridad ante otras similares. Así pues, es algo que ocurre o se hace, no en el departamento comercial, en la fábrica o el supermercado, sino en la mente de las personas. Para lograrlo se deben identificar los criterios adecuados para el proceso de comunicación y la forma en que la mente absorbe, procesa y almacena la información que recibe. A partir de este concepto hay que entender que ser mejor, diferente o más creativo no es suficiente para ocupar un sitio especial en la mente del sujeto en perspectiva. Es mejor ser «el primero» que ser «el mejor», este es uno de los principios fundamentales.

En este sentido la aplicación de la metodología del plan de mercadotecnia estratégica aplicado en las MIPyME's debe pretender lograr el posicionamiento empresarial, mediante el desarrollo e implementación de innovaciones que las lleven a la competitividad empresarial, según Koenes (1997), menciona que Michael Porter determina que "La competitividad de una nación depende de la capacidad de su industria para innovar y mejorar. Las empresas consiguen ventajas competitivas si consiguen innovar", es decir la innovación y el posicionamiento se encuentran de la mano, las cuales deben ser detonadas mediante la práctica de técnicas administrativas que permitan a las organizaciones alcanzar niveles de rentabilidad que les ayuden a perdurar en el negocio; en este sentido el desarrollo de la metodología del plan de mejora para esta investigación se centra en el desarrollo de estrategias administrativas que logren el posicionamiento en el mercado.

En base a los datos mas actuales del Instituto Nacional de Estadística y Geografía, (INEGI, 2012) en nuestro país existen alrededor de 4 millones 15 mil unidades empresas de las cuales, el 99.8 por ciento son MIPyMES, dichas empresas forman el 52 por ciento del Producto Interno Bruto (PIB) y el 72 por ciento del empleo en el país. Con la finalidad de ampliar el acceso a los programas diseñados para estas unidades, la Secretaría de Economía (SE) y la Secretaría de Hacienda y Crédito Público (SHCP) modificaron la clasificación de las MIPyME's.

En todas las economías del mundo, las MIPyME's son de gran importancia, Munch y García (1999) establecen que “la empresa nació para atender las necesidades de la sociedad creando satisfactores a cambio de una retribución que compensa el riesgo, los esfuerzos y las inversiones de los empresarios”, las MIPyME's cumplen esta característica y son fundamentales debido a su aporte productivo y oferta de bienes y servicios; la demanda y compra de productos que estas empresas realizan constituyen un eslabón determinante en el encadenamiento de la actividad económica y la generación de empleo. Por su tamaño las MIPyME's poseen mayor flexibilidad para adaptarse a los cambios del mercado y emprender proyectos innovadores, lo que las hace más susceptibles a los cambios, ENAMI (2010).

## Clasificación Micro, Pequeñas Y Medianas Empresas

Tamaño	Sector	Rango de número de trabajadores	Rango de monto de ventas anuales (mdp)
MICRO	Todas	Hasta 10	Hasta \$4
PEQUEÑA	Comercio	Desde 11 hasta 30	Desde \$4.01 hasta \$100
	Industria y Servicios	Desde 11 hasta 30	Desde \$4.01 hasta \$100
GRANDE	Comercio	Desde 31 hasta 100	Desde \$100.01 hasta \$250
	Servicios	Desde 51 hasta 100	Desde \$100.01 hasta \$250
	Industria	Desde 51 hasta 100	Desde \$100.01 hasta \$250

*Fuente Según el Censo Económico INEGI el 99.8 % son micro, pequeñas y medianas Empresas*

Por otro lado las tecnologías de la Información y las Comunicaciones (TIC's) son piezas fundamentales en el mundo económico y empresarial actual. Su implantación en la empresa permite la modernización y agilización de los procesos, incrementar los niveles de productividad y, en definitiva, aumentar la competitividad de la empresa en un mercado cada vez globalizado, y en consecuencia mucho más competitivo. Las necesidades tecnológicas y comunicativas de cada empresa varían en función de sus objetivos y cartera de clientes. Por ello, en algunos casos, la utilización de una base de datos y una hoja de cálculo serán suficientes para mantener toda la información acerca de nuestra clientela actualizada. En otros casos, sin embargo, la necesidad de fidelizar un número más elevado de clientes hará necesaria la utilización de sistemas online y de programas de CRM (Customer Relationship Managemet o gestión de las relaciones con los clientes). Estos programas nos permiten adquirir cada vez más información sobre nuestros clientes y adaptar nuestras áreas de negocio con mayor eficiencia, Guillen (2007).

Las TIC's son excelentes aliadas para el desarrollo del nuevo Marketing, gracias a estas herramientas hemos pasado de la satisfacción puramente de las necesidades a la creación de deseos. De producir para vender (marketing masivo e indiferenciado), a crear valor para el cliente. De la venta y la gestión del producto, a la gestión de la relación con el cliente para mantener diálogo con él. De atender a clientes a la gestión de clientes. De la comunicación masiva a la comunicación centrada en la información, y la comunicación individualizada y emocional. De conquistar a los clientes al marketing de fidelización, que quiere mantener con el cliente relaciones de satisfacción, a largo plazo. De vender masivamente a la segmentación y personalización de la oferta (mi- cromarketing o marketing one to one) (Kotler Philip, 2013).

## METODOLOGÍA

La base de este estudio se centra en la evaluación de las empresas intervenidas en el programa de vinculación con valor en crédito denominado “desarrollo de planes de mercadotecnia estratégica y soporte empresarial” aplicado en el año del 2012; estas empresas fueron sujetos de aplicación de la metodología del plan de mejora diseñado para las micro, pequeñas y medianas empresas; el proceso de selección de las empresas se realiza en forma conjunta con alumnos y maestros involucrados en el proyecto, en este año se atendieron 6 empresas de las cuales se consideró la muestra del total de ellas. Esta es una investigación descriptiva-correlacional debido a que la literatura provee de teorías que apoyan empíricamente la importancia de este estudio, las variables consideradas en el análisis se destacan la vinculación universitaria, la aplicación de un plan metodológico que otorgue mejora en las empresas y la realización práctica administrativa que detonen el posicionamiento empresarial.

Para realizar la evaluación del programa de vinculación y la efectividad de la práctica administrativa de las MIPyMEs intervenidas, se realizó un cuestionario de 26 preguntas, este instrumento se dividió en tres

apartados específicos, denominado el primero en evaluación del programa de vinculación que consta de diez preguntas enfocadas a determinar como el empresario evalúa al proyecto de vinculación, la importancia de la intervención de la UABC en el sector productivo y que aspectos de sus empresa cambió después de la intervención; es segundo apartado se centra en la evaluación de la práctica Administrativa enfocada a determinar cómo la empresa desarrolla los programas de mercadotecnia, el cual se compone de trece preguntas y el tercer y último apartado pretende determinar que mejoras obtuvo la empresa al implementar el plan de mercadotecnia estratégica, el cual se compone de tres preguntas.

## RESULTADOS

En el proceso de evaluación de los programas de vinculación de la UABC se detectó que el 100% de la muestra considero importante la aplicación de técnicas que le proporcionen una mejora significativa en su desempeño empresarial, en el mismo porcentaje la muestra consideró pertinente la intervención de estudiantes universitarios en las empresas de la localidad. En uno de los resultados significativos en la evaluación del programa de vinculación se destaca que el 100% de la muestra mejoró en sus procesos de mercadotecnia después de haber aplicado las técnicas sugeridas por los alumnos. Estos resultados reflejan que las MIPyME's de la localidad cuentan con una apertura a la intervención de la UABC, esto como resultado del prestigio y calidad educativa que esta universidad ha demostrado en los últimos años.

Al momento de realizar la evaluación de la aplicación de las estrategias de mercadotecnia y en particular las recomendaciones a la imagen corporativa se detectó que a las empresas intervenidas les favoreció la propuesta de cambio de imagen en la que destacan que mejoró su imagen comercial en cuanto a la presentación de los productos y/o servicios, al diseño del logo, restructuración del nombre y slogan y en la papelería institucional, etc. En la pregunta que se les planteó sobre qué áreas de la empresa mejoraron después de aplicar el plan de mercadotecnia, los propietarios de las MIPyME's intervenidas (que en todos los casos son los administradores y directivos de sus empresas) encuentran en el mismo nivel de importancia las áreas de oportunidad en cuanto a la publicidad, relaciones con los clientes, creación de nuevos productos y ventas. Ver Figura 1.

Figura 1. ¿Que Áreas de la Empresa Mejoraron Después de Aplicar El Plan de Mercadotecnia?

Evaluar la satisfacción del cliente es ya habitual en la gestión empresarial. El 75% de los empresarios encuestados afirman que a partir del plan de mercadotecnia recomendado se ha podido medir la satisfacción del cliente mediante la implementación de encuestas de satisfacción, informes del personal en contacto con los clientes y a través de un panel de usuarios (focus group). Ver Figura 2.

Figura 2. Su Negocio Ha Podido Medir la Satisfaccion del Cliente?

La implantación de las TIC's en la empresa permite la modernización y agilización de los procesos, incrementar los niveles de productividad y aumentar la competitividad de la empresa. Los empresarios de las MIPyME's consideran que las herramientas TIC's y el uso del Internet los acerca a un mercado masivo, mantener relaciones con el cliente de modo que regrese muchas veces a comprar el producto o el servicio. El 75% mencionó que si incorporó las redes sociales a su negocio siendo las principales las páginas de Facebook, creación de página web e Instagram. Ver Figura 3.

Figura 3. ¿A Partir del Plan de Mercadotecnia Recomendado Incorporó las Redes Sociales a Su Negocio?

Como punto importante en esta investigación se detectó que el 50% de los empresarios, requieren asesoría y capacitación así como el seguimiento profesional de las estrategias de mercadotecnia presentadas por los estudiantes; el 25% mencionó la importancia de la asesoría y manejo de redes sociales y la interpretación de la información. Ver Figura 4.

Figura 4: ¿Que Considera Que Faltó en las Estrategias de Mercadotecnia Presentadas?

## CONCLUSIONES

El alumno lleva al empresario a través de la metodología administrativa orientándolo para buscar la rentabilidad de su nicho de mercado con responsabilidad. Dicha metodología observa aspectos tales como mercadotecnia estratégica (conocer las necesidades actuales y futuras, posicionamiento), publicidad (diseño de estrategias publicitarias), relaciones públicas (implementación de la imagen corporativa), desarrollo de nuevos productos (innovación y desarrollo de nuevos productos que generen valor a los clientes y que representen verdaderas ventajas competitivas y procesos de servicio que incrementen el valor de la marca). Así mismo el empresario obtiene una investigación de los distintos entornos de la empresa. Tanto alumnos como empresarios obtienen experiencias y conocimientos ya que ambos son asesorados por la planta docente experta en el área de mercadotecnia. Dicha actividad pertenece a la formación basada en competencias que parte de una revisión constante del plan de desarrollo de los gobiernos federal, estatal y municipal, así como de las cámaras comerciales y patronales de la localidad, para que el alumno elabore planes y estrategias con responsabilidad y compromiso. La misión de la carrera de mercadotecnia es promover la formación de profesionistas integrales, que generen valor para las empresas creando vínculos interdisciplinarios sustentables, que busquen la igualdad, la justicia y la responsabilidad empresarial como factor de desarrollo económico de la región, entregándoles a los clientes ofertas que sirvan a la sociedad con equilibrio y visión global. Nuestros egresados son reconocidos como actores de cambio en la sociedad buscando el equilibrio, la filantropía y el bien común en los proyectos económicos en los que participan, mejorando el entorno y las oportunidades de las empresas a través del bien hacer con justicia y visión global.

## RECOMENDACIONES

La mercadotecnia se encarga de planificar con bastante garantía de éxito, basándose en la satisfacción de la demanda del cliente. Hoy por hoy, el mercado se encuentra en constante cambio y evolución, por lo que el éxito de la empresa se debe enfocar en su capacidad para satisfacer esas nuevas necesidades y deseos que el cliente demanda. Por esta razón, la mercadotecnia estratégica se encarga de conocer las necesidades actuales y futuras; para que de esta manera la empresa logre no únicamente sobrevivir sino pueda posicionarse en un lugar destacado en el mercado dentro de su industria y por arriba de sus competidores. Detectando la necesidad de los empresarios respecto a los temas de asesoría y capacitación es urgente que las universidades ofrezca cursos apegados a la realidad del empresario, que sean prácticos, económicos y rápidos, que les ayuden a resolver las problemáticas cotidianas. La difusión de estos cursos deben ser adecuados para que lleguen al alcance de las MIPYME's. También es importante que la universidad implemente un seguimiento profesional por parte de los docentes a los empresarios a través de la creación de un centro de atención al empresario donde se pueda incubar un negocio o una idea más allá de lo que la currícula de un semestre abarca. La vinculación con la empresa podría trascender a otros semestres y a otras

carreras para trabajarlo de manera multidisciplinaria y tener un panorama realista de la asesoría y capacitación. La labor de la universidad ante la comunidad empresarial es de apoyo en el desarrollo económico y el bienestar de la sociedad aportando profesionales que comprendan la problemática de las pequeñas y medianas empresas y aporten valiosas contribuciones que transformen sus procesos y las lleven al éxito.

# PROPUESTA PARA EFICIENTAR LOS SERVICIOS OFRECIDOS POR EL GOBIERNO MUNICIPAL, A TRAVÉS DE SU PORTAL. CASO MEXICALI

Abel Meraz Sepulveda, Universidad Autónoma de Baja California

Karla Emilia Cervantes Collado, Universidad Autónoma del Estado de Baja California

Manuel Alejandro Ibarra Cisneros, Universidad Autónoma de Baja California

## RESUMEN

*Actualmente las ciudades de País no cuentan con gobiernos profesionales y eficaces. Esto se debe al resultado de una estructura de gobierno local que no ha alcanzado una evolución a la par de los cambios demográficos del país. La mayoría de las funciones y atribuciones de los municipios mexicanos datan de la constitución de 1917, cuando en ese momento la población de México era aproximadamente de unos 14 millones, siendo 4 millones ciudades solamente. En la actualidad la población aproximada del país es de más de 118 millones y existen ciudades de más de un millón de habitantes. Gobiernos locales que fueron pensados y esquematizados para un territorio despoblado, hoy en día deben responder a demandas y requerimientos de un México altamente urbanizado. México es un país de ciudades, sin embargo en algunos aspectos no se tiene la funcionalidad debida, esto por el deficiente desempeño de las instituciones encargadas de gobernarlas. IMCO (2012)*

**PALABRAS CLAVES:** Gobierno Municipal, Urbanización, Propuesta

## PROPOSAL FOR MAKE EFFICIENT THE SERVICES OFFERING FOR THE MUNICIPAL GOVERNMENT THROUGH WEBSITE. CASE STUDY MEXICALI

### ABSTRACT

*Currently the cities of Country not have professional and effective governments. This is the result of a local government structure that has not reached a development on par with the changing demographics of the country. Most of the functions and attributions of Mexican cities constitution dating from 1917, when at that time the population of Mexico was approximately about 14 million of people, of which 4 million were just cities. At present the approximate population is over 118 million of people, and there are cities with over one million of habitants. Local governments that were intended and outlined for an unpopulated territory today must respond to demands and requirements of a highly urbanized Mexico. Mexico is a country of cities, though in some respects not have the proper functionality, this is for the poor performance of the institutions responsible to govern.*

**JEL:** G18

**KEYWORDS:** Municipal Government, Development, Proposal

## INTRODUCCIÓN

Día a día se expande la urbanización de una manera apresurada, se construyen viviendas en lugares remotos las cuales quedan desvinculadas del resto de la ciudad lo cual implica planes para vincularlas, vemos calles saturadas de vehículos que generan contaminación al aire, generando contaminación espacios públicos deteriorados, suministros de agua insuficiente, poblaciones que no confían en las instituciones de seguridad pública. Al crecer tanto las ciudades, por consecuente los trámites de cualquier tipo en una institución de gobierno local se gestionan de una manera tardada, burocracia presente, largas filas, dobles ventanillas, todo un panorama caótico. Las tecnologías de la información y la comunicación, poseen esa potencia de hacer más fácil y ampliar las formas y las capacidades de los individuos que trabajan en empresas, organizaciones y gobiernos. Estas tecnologías permiten trabajar en conjunto con actividades de producción, administración, finanzas, educación, comercio y gobierno. Surge de esa necesidad de encontrar esos medios y formas para optimizar y mejorar la gobernabilidad y así implementar y crear nuevos canales de comunicación entre ciudadanos y gobiernos. *UNESCO, Las tecnologías de la información y la comunicación en la enseñanza. (2006)*

En el gobierno municipal local, es importante tomar en cuenta todo esto y comenzar a modernizar los trámites y servicios y también comenzar con esta nueva cultura y poco a poco transmitirla a los ciudadanos para aprovechar estas tecnologías apropiarse más de ellas y tener los beneficios que brinda la tecnología aplicada a la interacción del gobierno municipal y los tramites y servicios que se brindan al ciudadano. El uso de las Tecnologías de la Información y las Comunicaciones, está modificando de una manera acelerada las formas de gestionar, producir, educar, interactuar y comunicar las acciones de los gobiernos. revista política digital (2012)

### Objetivo General

Realizar una propuesta de mejora de los servicios y tramites que ofrece el gobierno municipal a través de la web, así como un diagnostico actual de los mismos.

### Objetivo Específicos

Identificar la perspectiva del ciudadano respecto a la utilización de la web para trámites y servicios actualmente.

Diagnóstico de los servicios y trámites que se ofrece en la web.

Proponer estrategias que mejoren la eficiencia y eficacia de los servicios y trámites ofrecidos en la web.

El presente trabajo busca ofrecer una propuesta para eficientar los servicios y tramites aplicando las Tecnologías de la Información y Comunicación (TIC) y su impacto en la construcción del gobierno electrónico en la administración municipal de Mexicali Baja California.

### Tipo de Estudio y Metodología de Investigación

El abordaje del objeto de estudio se hará desde una perspectiva cualitativa, tomando como base una investigación enmarcada en el contexto fenomenológico. Esta investigación estará soportada por la revisión documental-bibliográfica desde el punto de vista de la hermenéutica. *ROBERTO HERNANDEZ SAMPIERI (2010)*

### Adopción de las Tics en Gobiernos de Mexico

Existen dependencias de gobierno que desarrollan una función muy importante en la búsqueda de una mayor apropiación de las TIC por parte de la población. Una de ellas es el Sistema nacional e-México creado en 2000 dentro de la SCT como agencia coordinadora de las diversas agencias gubernamentales responsables de impulsar la Sociedad de la Información y el Conocimiento. Las políticas actuales se enfocan en acercar las TIC en las zonas marginadas del país y en grupos con alto grado de vulnerabilidad a través de la conectividad, la creación de contenidos y servicios digitales, y la educación digital. En este esfuerzo de incorporar las TIC a la vida del país, también participa la Secretaría de la Función Pública, con un enfoque en acciones y políticas orientadas al e-gobierno, esto a través de la Unidad de Política Digital cuya responsabilidad es organizar y coordinar los esfuerzos de la Administración Pública Federal en el uso de las TIC para incrementar la eficiencia de la gestión pública. La Comisión Intersecretarial para el Desarrollo del Gobierno Electrónico, entre sus principales funciones tiene las siguientes:

*Conocer las necesidades en materia de TIC en la Administración Pública Federal y recomendar las acciones para su desarrollo.*

*Promover mecanismos de coordinación y colaboración entre el gobierno federal y los gobiernos de las entidades federativas y de los municipios para la realización de proyectos conjuntos en materia de e-gobierno.*

*Promover entre dependencias la aplicación de los criterios de interoperabilidad y los lineamientos para la estandarización y homologación de sistemas electrónicos.*

*Realizar las normas necesarias para el buen funcionamiento de las estrategias de e-gobierno. IMCO (2012)*

#### Fomento de las TICs en los Gobiernos de México

Para que exista un fomento dentro de la sociedad mexicana, y así poder ingresar las TIC en la vida diaria de los ciudadanos, el gobierno mexicano tiene tres objetivos desde que fue creado e-México:

Conectividad: Garantizar el acceso a los mexicanos mediante la implantación de redes de cobertura social a internet de banda ancha en escuelas, centros de salud, oficinas de gobierno y centros comunitarios digitales.

Contenidos y servicios digitales: Facilitar el acceso de los mexicanos, especialmente los de menores ingresos, la población rural y los grupos vulnerables, a contenidos, trámites y servicios digitales de dominio público en materia de educación y capacitación, economía, gobierno, salud, empleo, seguridad, cultura, ciencia y entretenimiento.

Inclusión digital: Masificar el uso de internet mediante una estrategia nacional permanente de inclusión digital

#### Agenda de Gobierno Digital

En 2009, la Secretaría de la Función Pública, publicó la “Agenda de Gobierno Digital”, con el objetivo promover el uso y aprovechamiento de las TIC por parte del gobierno. Cuenta con tres grandes objetivos:

Mejorar la eficiencia operativa de las instituciones públicas;

Reducir los costos de transacción entre ciudadanos y gobierno

Construir bienes públicos de información interoperables, tales como los registros civiles y de la propiedad, de educación o salud en formato digital.

El presidente Calderón en 2010 anunció una Ley de fondo para transformar al país, en su punto octavo se refirió, a incrementar el uso de las tecnologías de la información para eliminar ineficiencias en los trámites y las normas. El gobierno se comprometió para 2012 automatizar el 70% de los 3 mil trámites y servicios gubernamentales identificados hasta ese momento. De todos éstos, 74 se identificaron como trámites de alto impacto, de los cuales 47 ya están completamente digitalizados y se pueden realizar 100% en línea. *AMIPC (2012)*

### Diagnostico Municipal en el Uso de las Tic Evaluación del Gobierno Electrónico Por Estados

Desde 2006 se analiza la utilidad de los portales de los gobiernos estatales para con los ciudadanos. Este análisis, consiste en un cuestionario de 143 preguntas que se clasifican en 5 componentes: Información, Interacción, Transacción, Integración y Participación.

FIGURA 1: Ranking de Portales Municipales

Ranking	Entidad Federativa	Información	Interacción	Transacción	Integración	Participación	Índice
1	Jalisco	84.43	67.28	53.96	7.61	16.67	59.19
2	Aguascalientes	69.23	46.32	63.33	62.50	31.25	54.53
3	Baja California	69.86	48.94	59.38	65.28	24.85	53.66
4	Nuevo León	64.13	57.76	55.00	65.28	20.83	52.60
5	Distrito Federal	73.13	51.52	39.17	69.25	27.68	52.15
6	Edo. de México	76.30	60.54	30.21	50.00	33.93	50.19
7	Yucatán	59.65	50.62	54.79	63.89	15.48	48.88
9	Sinaloa	58.82	47.35	48.54	75.00	12.50	48.44
10	Colima	63.00	51.52	54.58	59.72	8.93	47.55
11	Quintana Roo	81.29	46.60	45.83	45.83	12.20	46.35
12	Hidalgo	60.09	40.45	45.63	66.67	14.29	45.42
13	Sonora	57.53	43.87	55.63	56.94	11.31	45.06
14	Veracruz	61.26	41.75	49.96	63.10	14.73	44.96
15	Guerrero	65.94	47.51	36.67	55.56	6.99	42.53
16	Chihuahua	56.38	44.58	52.29	46.63	11.61	42.30
17	Tabasco	57.14	45.61	52.08	54.17	0.00	41.80

Fuente: Fuente: Revista Política Digital, "Ranking estatal 2011 de portales.gob", agosto 2011

*IMCO (2012)*, evidencia el uso inadecuado e insuficiente que se le da a los portales municipales. Por un lado existe poca infraestructura disponible para mantenerlos, por otro lado la mayoría de los portales son de difícil navegación y tienen escasa información disponible sobre la gestión gubernamental. En los municipios, según datos de la Encuesta Nacional de Gobierno, Seguridad Pública y Justicia Municipal menos del 10% de los municipios del país cuentan con páginas web con la posibilidad de realizar algún tipo de transacción en línea. *ENGSPJM (2009)*. Aunado a estos, los pocos municipios que cuentan con un sitio web no lo aprovechan para facilitar el acceso a la información pública a la ciudadanía.

### Situación Actual del Uso de las Tic en el Municipio de Mexicali Utilización de las TIC en el Gobierno Municipal de Mexicali B.C

Con la incorporación de las nuevas tecnologías de información y telecomunicaciones se modernizan los procesos tradicionales conforme a las exigencias de una sociedad cada vez más demandante, revolucionando las actividades humanas y la forma de trabajar a nivel mundial, lo cual fomenta nuevas formas de aprender, comunicarse y realizar negocios; reduciendo las distancias, borrando fronteras y disminuyendo costos. Aproximadamente en 2001, el gobierno municipal de Mexicali comenzó a implementar el uso de las TIC en sus gestiones para servicio al ciudadano; se comenzó a implementar en la dirección de catastro al momento de que algún usuario iba a pagar el predial y se tenía alguna duda con lo que se cobraba se buscaba y aparecía si era lote baldío o si se contaba con construcción. Este es uno de los primeros antecedentes que se tienen, de cómo en el gobierno municipal se comenzó a incursionar con las TIC para así facilitar el acceso a la información y otorgar información fidedigna y rápida al ciudadano.

*Plan De Desarrollo Municipal (2011-2013):* en la política pública Núm. 5 "Gobierno Innovador y participativo", cuyo objetivo es lograr un gobierno municipal que brinde atención integral a través de una política de gestión, bajo los principios de calidad y transparencia, eficiente en la simplificación de los procedimientos, trámites y servicios, con una constante modernización y actualización en las tecnologías de la información; establece en la estrategia 5.3 "Atención de Calidad y Gobierno Digital", el Desarrollar

la simplificación de trámites mediante la automatización de procedimientos, logrando la digitalización y la calidad en la atención de servicios administrativos, y para lograrlo se proponen las siguientes lineamientos:

*5.3.1 Modernización del Registro Civil:* Impulsar la modernización integral del registro civil, mediante el uso de las tecnologías de la información, para lograr sistematizar y eficientar la operación, coadyuvando en elevar la calidad en la prestación de los servicios a la sociedad.

*5.3.2 Sistematización de Bienes Muebles:* e Inmuebles Identificar y administrar el universo de bienes muebles e inmuebles, para conciliar un registro único, confiable y actualizado, estableciendo procedimientos y controles para su mantenimiento permanente, así como el uso debido de las tecnologías de la información, que permita mejorar los servicios ofrecidos a la ciudadanía.

*5.3.3 Mejora de Procesos Tecnológicos:* Actualizar e incorporar los cambios necesarios para mejorar los procesos tecnológicos actuales que permitan la modernización, eficacia y eficiencia de los procedimientos, sistemas y equipamiento tecnológico, bajo la incorporación de mejores prácticas en tecnologías de la información y comunicación.

*5.3.4 Tecnologías de la Información:* Aplicar tecnologías de la información y comunicación, a los procesos, trámites y servicios gubernamentales, coadyuvando en elevar la calidad de la prestación de los servicios públicos hacia los ciudadanos.

*5.3.5 Gobierno Digital:* Acercar a la ciudadanía los servicios que ofrece el gobierno municipal, mediante la modernización e implementación de las tecnologías de la información y comunicación en los medios electrónicos Actualmente el portal del gobierno municipal, cuenta con 12 ligas de trámites en línea. De las cuales 4, solo muestran información, 1 está vinculada con el gobierno federal y es consulta, 5 están vinculadas con el gobierno estatal, de las cuales solo en 3 son para realizar un trámite en línea realmente y el resto son solo consultas de información, y por ultimo de las 2 restantes, que pertenecen al gobierno municipal, solo 1 es un trámite en línea y el resto es solo una consulta. *Fuente:* Ayuntamiento de Mexicali. *Trámites y Servicios.* Consultado el 05 de Julio de 2013.

<http://www.mexicali.gob.mx/ayuntamiento/TramitesServicios.aspx>. México.

Figura 3: Porcentajes Trámites del Portal

Fuente: Elaboración propia.

Como podemos visualizar en las gráficas, en el gobierno municipal de Mexicali solo existe un trámite propio a realizarse en línea, eso nos dice que falta mucho por hacer y por innovar. Falta darle seguimiento al plan municipal de desarrollo, y crear una agenda estratégica, dentro de la cual se siga de cerca:

- La política pública de e-gobierno y las innovaciones de las TIC
- Que exista una coordinación sobre proyectos especial de e-gobierno
- Implementar lugares con acceso público al internet
- Implementar cursos sobre alfabetización digital
- Promover la participación ciudadana a través de instancias en la web

#### Visión, Misión, Propósitos, Objetivos y Metas en el Uso de las Tic en la Gestión Profesional Municipal

**Visión:** Ser un municipio de clase mundial haciendo uso de las tecnologías de la información y comunicación para así poder ofrecer servicios de gran impacto a la ciudadanía. Alcanzando la transformación de la relación del gobierno municipal, empresas y ciudadanos a través del uso efectivo de las TIC, contribuyendo al proceso de modernización y transparencia del municipio satisfaciendo las necesidades y demandas de los ciudadanos.

**Misión:** Mejorar la competitividad municipal a través de la prestación de servicios públicos transparentes así como de alto nivel para los ciudadanos, impulsando y promoviendo la inclusión y apropiación de las

TIC y su buen uso mediante un gobierno interconectado. Implementando la política municipal del gobierno electrónico para impulsar el desarrollo de las capacidades de servicios y trámites municipales de calidad facilitando y agilizando su acceso y proceso

### Propósitos

Lograr un gobierno transparente, eficiente y eficaz a través del uso de las TIC y mejoras principalmente en aspectos administrativos.

Modernizar la gestión pública y propiciar la descentralización del Estado, mediante el uso intensivo de las tecnologías de información.

Promover el aumento de la productividad en la Administración Pública, empresas y ciudadanos, por medio del uso intensivo de las tecnologías de Información.

### Objetivos

Incrementar la Eficiencia, Efectividad, Rendimiento y Productividad de los servicios y procesos.

Mejora de la Calidad de los Servicios que ofrece el municipio.

Mejorar el Acceso a la Información municipal.

Incrementar la Participación Ciudadana

Mejorar la Accesibilidad de los Servicios, entregándolos por medios electrónicos, ahorro de tiempo, dinero y tramitología.

### Metas

Promover la integración electrónica de los sistemas de administración pública municipal, a través de ventanillas únicas digitales para mejorar la gestión de los trámites y procesos.

Constituir un grupo de trabajo para elaborar una agenda de prioridades para la implementación de estándares de interoperabilidad de servicios municipales electrónicos.

Promover más la adopción y desarrollo de medios de pago electrónico con la finalidad de incentivar el uso de las transacciones electrónicas con el municipio.

Que el ciudadano perciba los servicios del municipio por la web como una opción viable y segura por su facilidad y amplitud de trámites en línea.

*Fuente: Elaboración propia*

## **CONCLUSIONES**

Es importante señalar que en esta propuesta para efficientar los servicios ofrecidos en el portal de Mexicali, se hizo un plan de acción con sus respectivas actividades y acciones a seguir:

Tabla 1: Plan de Acción en el Uso de las TIC

Plan de acción	Actividades	Acciones
<b>Fortalecer la promoción y la mejora de la comunicación con el municipio para el acceso de la población a los servicios y tramites en línea.</b>	Desarrollar sistemas de información sobre servicios y trámites que ofrece el municipio en línea.	Diseño, actualización y operación de Sistemas de Información.
	Mejorar la presencia del Municipio en la web propiciando la transparencia y la relación con el ciudadano.	Rediseño del portal municipal integrándose eficazmente a los nuevos servicios que ofrecen las TIC.
<b>Contribuir con información y enfoques creativos a la formulación de políticas para el desarrollo sostenible, competitivo del municipio en línea.</b>	Procesos de transferencia de Sistemas de Información y Herramientas.	Modelos tecnológicos de capacitación a distancia. Modelos de comunicación virtual
<b>Mejorar la eficiencia de los procesos internos del municipio para garantizar la excelencia de los trámites y servicios en línea.</b>	Desarrollar sistemas sobre los procesos de apoyo interno.	Desarrollar el sistema de trámite documentario.  Gestión electrónica de procesos de recaudación, actas y otros trámites que se puedan realizar de manera online híbrida o de manera total.
<b>Mejorar las relaciones con las instituciones públicas para apoyo mutuo en trámites en línea.</b>	Diseño e implementación de un sistema integral de informática y redes.	Modernizar la infraestructura de informática y redes.

Fuente: Elaboración propia

El Gobierno electrónico no implica sólo la instalación y uso de las tecnologías de información y comunicación (TIC), en el sector público ni proveer servicios de calidad y modernizar la gestión interna. El concepto es mucho más amplio e incluye la transformación de la relación entre gobierno, entes externos y ciudadanos, donde todos deben interactuar y estar involucrados. Hay que acercar la administración pública local al ciudadano. El gobierno local tiene que comprender que la ciudadanía es el verdadero protagonista de cambios políticos, económicos y sociales, y cuando hay mejoras todos mejoramos. Es necesario reforzar la preparación del ciudadano en cuanto a las TIC. Se requiere mayor difusión de las tecnologías disponibles y promoción de una cultura adecuada en las tecnologías de información y comunicación, entre toda la población.

Para que haya un desarrollo armónico del gobierno electrónico, es necesario que el gobierno municipal coordine el flujo de información entre las plataformas de manera que se tenga contenidos, sistemas y aplicaciones coherentes, consistentes, integrales e información al día.

Hasta este momento la comunicación se limita en el portal, no existe mucho intercambio de información entre el ciudadano y el gobierno, ni gestión en trámites y servicio en línea. Es necesario operar con criterio de integración y comenzar a trabajar en función de los intereses colectivos para servir mejor a los ciudadanos.

## **RESUMEN**

*Este trabajo presenta los resultados de una investigación realizada en el Municipio de Heroica Ciudad de Huajuapán de León, Oaxaca, México, una zona árida con una orografía accidentada que no facilita la agricultura. Sin embargo, en esta región se encuentran apicultores que han logrado producir miel orgánica para consumo regional y nacional. El objetivo de esta investigación fue conocer la influencia de los valores del consumidor en su estructura cognitiva con respecto al consumo de miel orgánica. Esta investigación se realizó siguiendo la teoría means-end-chain, propuesta por Gutman (1982), para establecer relaciones entre los atributos del producto, las consecuencias de dichos atributos y los valores del consumidor. Estas relaciones se midieron a través de una entrevista cualitativa llamada laddering, aplicada a 70 personas para conocer las asociaciones atributos-consecuencias-valores de los consumidores de miel orgánica. Primero se llevó a cabo la elección de los atributos más importantes, posteriormente se realizaron las entrevistas a profundidad. Esta metodología permite analizar el comportamiento del consumidor y proporciona datos para el diseño de estrategias de mercadotecnia, esta técnica también permite comparar los resultados de dos grupos, por lo que también se comparan los resultados obtenidos en las mujeres y en los hombres entrevistados.*

## **IDENTIFICATION OF ATTRIBUTES, CONSEQUENCES AND VALUES FROM DE ORGANIC HONEY CONSUMERS IN A LOCAL COMMUNITY FROM OAXACA, MÉXICO FOLLOWING THE MEANS-END-CHAIN TO DEVELOP MARKETING STRATEGIES**

## **ABSTRACT**

*This paper has the results of a research project developed in Huajuapán de León, a small city from Oaxaca, México. This is a very dry area, with not many opportunities for agriculture. However there is a small group of people dedicated to apiculture, they produce organic honey for the regional and national market. The main objective of this research was to determine the influence from the values for the consumers in their own knowledge structure in relation with the consumption of organic honey. This research was made following the methodology of means-end-chain proposed by Gutman (1982), in order to establish the relationships between the characteristics of the product, and the consequences and the values from the consumer. These relationships were determined through qualitative interviews called laddering to 70 people. First, it was necessary to choose the most important characteristics from the product, and then the*

*interviews were made. This methodology allows the researcher to analyze the consumer behavior and gets information for the future development of marketing strategies. This technique is good also for comparing the results from two groups, so in this research there is a comparison between the results from women and the results from men.*

## INTRODUCCIÓN

La estructura de los mercados se ha ido modificando y un ejemplo importante de estos cambios lo constituye el sector agroalimentario que se ha visto afectado por relevantes crisis alimentarias y por nuevos alimentos. También destaca el crecimiento de la preocupación respecto al impacto de la alimentación en la salud de los consumidores, lo cual para algunos segmentos de mercado se ha convertido en un importante criterio de elección de alimentos. Esto ha llevado al reconocimiento y desarrollo de alimentos funcionales, que son alimentos que cuidan de la salud de los habitantes previniendo la aparición de algunas enfermedades y que no producen efectos nocivos para el ser humano.

Por esta razón es importante que los productores conozcan las necesidades de los consumidores y la forma como toman decisiones respecto a cuáles productos elegir. Para esta investigación se ha elegido a la miel orgánica producida en el municipio de Heroica Ciudad de Huajuapán de León, Oaxaca y el objetivo central fue conocer la influencia de los valores del consumidor en su estructura cognitiva con respecto al consumo de miel orgánica. Esta investigación se realizó siguiendo la teoría *means-end-chain*, propuesta por Gutman (1982), para establecer relaciones entre los atributos del producto, las consecuencias de dichos atributos y los valores del consumidor. Estas relaciones se midieron a través de una entrevista cualitativa llamada *laddering*, aplicada a 70 personas para conocer las asociaciones atributos-consecuencias-valores de los consumidores de miel orgánica. Esta metodología permite analizar el comportamiento del consumidor y proporciona datos para el diseño de estrategias de mercadotecnia, esta técnica también permite comparar los resultados de dos grupos, por lo que también se comparan los resultados obtenidos en las mujeres y en los hombres entrevistados.

## REVISIÓN DE LITERATURA

Gutman (1982) expuso la teoría cadena-medio-fin en el marketing y desde entonces ha sido utilizada para realizar investigación respecto a los consumidores, analizando la estructura cognitiva que relaciona el conocimiento de los productos por parte del consumidor con su conocimiento personal sobre algunas consecuencias y valores, que pueden encontrarse asociadas con este. La teoría propone que los consumidores aprenden a elegir productos que contienen atributos que les permiten alcanzar las consecuencias deseadas (Reynolds y Gutman, 1984; Walker y Olson, 1991; Olson y Reynolds, 2001). Propone que los consumidores tienen cierto conocimiento de los productos y cierto grado de conocimiento de sí mismo, que al paso del tiempo se van organizando jerárquicamente en diferentes niveles de abstracción (Howard, 1977); (Young y Feign, 1975). Por lo tanto, los consumidores saben qué productos elegir de acuerdo con los atributos de cada producto ya que esos atributos le permiten adquirir junto con ese producto, un conjunto de consecuencias personales que tendrá al usarlo y al mismo tiempo logrará cubrir algunos valores personales.

La miel es una sustancia dulce natural que las abejas elaboran -recogen, transforman, combinan con sustancias específicas propias y almacenan- a partir del néctar de las flores o de secreciones que producen las partes vivas de las plantas. Las características de la miel dependen de la fuente donde las abejas

recolectan el néctar, sin embargo, el producto no debe tener sabor ni aroma desagradables, debe estar libre de materia extraña y de contaminantes químicos; tampoco debe contener aditivos alimentarios para su conservación, estar diluida en agua o mezclada con almidones, melazas, glucosas, dextrina, fructosa u otros azúcares, de acuerdo con lo que establece la Norma Mexicana NMX-F-036-1997-NORMEX.

## METODOLOGÍA

En esta investigación la metodología utilizada fue de tipo cualitativo, exploratorio descriptivo, transeccional y no experimental. La investigación se llevó a cabo de enero a marzo de 2014. En la región de la mixteca en la que se llevó a cabo la investigación, no existen estudios previos de este tipo. Para llevar a cabo la investigación se realizaron 70 entrevistas cualitativas denominadas *laddering*, que consiste en una entrevista realizada de manera personal, individual, siguiendo la metodología para poder conocer las asociaciones atributos-consecuencias-valores que llevan a cabo los consumidores respecto a la miel orgánica que se produce en la región. El análisis de los datos se llevó a cabo en tres etapas: la primera consistió en la elección de los atributos más importantes que tiene la miel, posteriormente se llevaron a cabo las entrevistas a profundidad para conocer en qué atributos ponen más atención los consumidores y finalmente se analizaron los resultados para determinar cuáles son las consecuencias de estos y los valores con los que se ligan. Esta metodología permite analizar el comportamiento del consumidor y proporciona datos fundamentales para el diseño de estrategias de mercadotecnia. Finalmente se analizó la información para comparar los resultados de hombres y mujeres.

## RESULTADOS

Para llevar a cabo la investigación se construyeron los mapas jerárquicos de valor para cada género. El mapa que representa todos los enlaces entre atributos-consecuencias y consecuencias-valores iguales o superiores a la frecuencia del quinto enlace en nivel de importancia. Para determinar los atributos se hizo una revisión de literatura y se llevaron a cabo entrevistas con expertos, posteriormente se construyó una matriz con seis atributos concretos y seis atributos abstractos. También se identificaron diez consecuencias funcionales y once consecuencias psicológicas. Estas consecuencias estuvieron ligadas con cuatro valores instrumentales y cinco valores terminales que se muestran en la Tabla 1.

En la Tabla 2 se muestran los Puntos de corte para cada nivel y género. Se puede ver que el punto de corte resultó distinto para cada nivel de abstracción y género. En esta tabla se puede apreciar que en todos los casos se obtuvieron valores superiores a 40% de la información aportada, lo que se encuentra dentro de los límites indicados para la mayoría de los autores. En cada uno de los mapas jerárquicos se pudo notar que en la cadena de valor (atributos, consecuencias y valores) presentada en los mapas, muestra el porcentaje de los encuestados que han adoptado esa relación. En el análisis de los resultados se puede notar que hay diversas similitudes entre los datos de los dos grupos, ya que ambos están interesados en aspectos como el color, el sabor y el precio de la miel. Por otra parte, en relación con los atributos abstractos, ambos grupos perciben a la miel como un producto que es expectorante y antiinflamatorio por lo que lo han utilizado incluso como un medicamento natural auxiliar cuando en algún familiar cercano hay enfermedades de vías respiratorias o inflamación de una herida. También hubo coincidencia en cuanto a la consideración de que se trata de un producto de calidad con cualidades nutritivas. También puede apreciarse que en ambos grupos predominan los atributos concretos sobre los abstractos. Hubo un atributo concreto que solo fue considerado por las mujeres, que es la información nutrimental (que viene en la etiqueta) y la marca o productor específico, ya que muchas mujeres afirmaron que han cambiado de marca o de apicultor y la miel no tiene ni la misma fluidez ni el mismo sabor, por lo que siempre regresan a una marca o productor en particular. Cabe mencionar que en estos últimos aspectos analizados, los hombres no pusieron mayor atención.

Tabla 1: Lista de Atributos, Consecuencias y Valores Para la Investigación

Atributos	Consecuencias	Valores
<b>Atributos concretos</b> <ul style="list-style-type: none"> <li>- color</li> <li>- fluidez o porcentaje de cristalización (total o parcialmente)</li> <li>- sabor (que varían de acuerdo con su origen floral)</li> <li>- Envase de vidrio, envase de plástico</li> <li>- Marca o productor específico</li> <li>- Información nutrimental, (Fecha y lote de producción)</li> <li>- Precio</li> </ul>	<b>Consecuencias funcionales</b> <ul style="list-style-type: none"> <li>- Es rica y me siento bien al consumirla</li> <li>- La relación entre calidad y precio es adecuada</li> <li>- Me ayuda a tener una vida más saludable</li> <li>- Cuidar la salud es fácil</li> <li>- Se lo que conviene a mi salud</li> <li>- La adquiero con relativa facilidad</li> <li>- La marca la consumían mis padres</li> <li>- Estoy informado</li> <li>- La puede consumir toda mi familia</li> <li>- Es un alimento nutritivo</li> </ul>	<b>Valores Instrumentales</b> <ul style="list-style-type: none"> <li>- Tengo buen sabor y no arriesgo mi salud</li> <li>- Me proporciona placer y energía</li> <li>- Me permite tener una buena calidad de vida</li> <li>- Me permite disfrutar y mantener una buena calidad de vida</li> </ul>
<b>Atributos abstractos</b> <ul style="list-style-type: none"> <li>- Cualidades nutritivas (contiene vitaminas y minerales)</li> <li>- Antioxidante</li> <li>- Gran aporte energético</li> <li>- Calidad</li> <li>- Expectorante</li> <li>- Familiaridad con el producto</li> </ul>	<b>Consecuencias psicológicas</b> <ul style="list-style-type: none"> <li>- Es un alimento sano</li> <li>- Cuida de mi salud y la de los míos</li> <li>- Tengo buenos hábitos alimenticios</li> <li>- Consumo un producto de calidad</li> <li>- Me proporciona bienestar y satisfacción</li> <li>- Evoca sentimientos en mi memoria</li> <li>- Es un símbolo de estatus</li> <li>- Me hace sentir como una persona con cultura amplia</li> <li>- Me siento identificado culturalmente</li> <li>- Siento que pertenezco a un grupo de personas que previenen enfermedades</li> <li>- No constituye un riesgo para la salud</li> <li>- Siento que hago lo correcto</li> </ul>	<b>Valores Terminales</b> <ul style="list-style-type: none"> <li>- Me cuido a mí mismo y a mi familia</li> <li>- Me siento bien y realizo bien mis actividades</li> <li>- Tengo el respeto de familiares y amigos por cuidar de mi persona</li> <li>- Siento que pertenezco a un grupo de personas que se cuidan</li> <li>- Tengo respeto hacia mí mismo</li> </ul>

En esta tabla se puede ver la lista de los atributos concretos que son fácilmente percibidos y de los atributos abstractos, es decir que aunque no se perciben a simple vista son conocidos por los consumidores informados. También se incluyen las consecuencias percibidas por los consumidores, tanto las funcionales como las psicológicas. Finalmente se muestran los valores tanto instrumentales como terminales asociados a los atributos de la miel.

Tabla 2: Puntos de Corte Para Cada uno de los Cinco Niveles y Para Cada Género

		Hombres		Mujeres	
		Punto de Corte	%	Punto de Corte	%
Nivel 1	AC	18	81.8	19	82.6
	CV	16	72.7	16	69.6
Nivel 2	AC	17	77.3	14	60.9
	CV	14	63.6	15	65.2
Nivel 3	AC	16	72.7	13	56.5
	CV	13	59.1	11	47.8
Nivel 4	AC	13	59.1	12	52.2
	CV	12	55.5	10	43.5
Nivel 5	AC	12	55.5	11	47.8
	CV	12	55.5	11	47.8

En esta tabla pueden verse los puntos de corte para hombres y mujeres y es posible notar algunas diferencias en los valores alcanzados para hombres y para mujeres, con base en 5 niveles.

## CONCLUSIONES

La metodología basada en el análisis de los atributos-consecuencias-valores aplicada a 70 personas con respecto al consumo de miel orgánica que se produce en el municipio de Heroica Ciudad de Huajuapán de León, Oaxaca, México. Se analizó el comportamiento del consumidor y se obtuvieron datos que serán fundamentales para el diseño de estrategias de mercadotecnia. Esta técnica también permite comparar los resultados de dos grupos, por lo que también se comparan los resultados obtenidos en las mujeres y en los hombres entrevistados. A partir de esta investigación fue posible conocer la influencia de los valores del consumidor en su estructura cognitiva con respecto al consumo de miel orgánica con la ayuda de la teoría *menas-end-chain*, propuesta por Gutman (1982).

Entre los principales resultados se encontró que en la Ciudad de Huajuapán de León, Oaxaca los consumidores tanto hombres como mujeres, ponen más atención a los atributos concretos como el precio, el color o el sabor, por lo que cualquier apicultor de la región deberá cuidar esos atributos en primer lugar. También fue posible notar que las mujeres que consumen miel orgánica, están interesadas en la información nutrimental de la miel y esto probablemente se debe más a su deseo de cuidar la salud, ya que también manifestaron que suelen comprar la miel de una determinada marca o con un mismo productor. Entre las cadenas de atributos, consecuencias, valores, se pudo ver que algunos consumidores compran miel, ya que reconocen algunos de sus atributos, tal como el de tener propiedades expectorantes. Estos clientes actúan como clientes informados, que actúa movidos por el valor terminal de cuidarse de sí mismos y de su familia. También se puede concluir que algunos consumidores tienen la información de que la miel es un digestivo y un expectorante, con la consecuencia psicológica de que la consumen al darse cuenta de que se trata de un alimento sano, y que la relación calidad precio es adecuada, lo que les lleva a concluir que el consumir miel orgánica les permite tener una buena calidad de vida y que eso les permite disfrutar y mantener una buena calidad de vida.

Los consumidores de miel orgánica también dejaron ver que tienen una gran preferencia por la miel de color claro y transparente, mostrando un desconocimiento respecto al hecho de que si una miel es oscura simplemente significa que para producirla, las abejas utilizaron diferentes tipos de flores y que por lo tanto esa miel puede tener mayor riqueza en cuanto a la variedad de vitaminas y minerales que contiene. Contrario a este conocimiento, los consumidores entrevistados prefieren la miel de un solo color ya que para ellos, la consecuencia funcional es que esa miel es más rica y que se sienten bien al consumirla. El valor instrumental que se encuentra detrás de tal consecuencia es que ese tipo de miel les permite disfrutar y mantener una buena calidad de vida. Las conclusiones de este estudio serán de utilidad para los apicultores de la región, pues les permitirá cuidar ciertos atributos del producto en los que los consumidores ponen más atención, además con el conocimiento de las consecuencias y valores detectados, también se pueden dirigir mejor los esfuerzos de mercadotecnia pues podrán poner énfasis en los atributos abstractos que a veces se dejan de lado y reforzar los planteamientos de las consecuencias y valores que los consumidores tienen más presentes.

## RECONOCIMIENTO

Los autores agradecen a los apicultores que amablemente nos permitieron hacerles entrevistas e incluso visitar sus apiarios para conocer más respecto a los procesos de apicultura en la región. También agradecemos el apoyo financiero brindado por el Programa para el Mejoramiento del Profesorado (PROMEP) para hacer posible esta investigación. Finalmente agradecemos a los alumnos Saucedo Ubaldo Daniela, Martínez García Nanci Esther, García Melchor Abril Cecilia y Bautista López Rafael que apoyaron con la realización de las entrevistas.

## BIOGRAFÍA

Mónica Teresa Espinosa Espíndola es Maestra en Administración Pública por el Centro de Investigación y Docencia Económicas (CIDE). Realizó estudios de Maestría en Política y Asuntos Internacionales en la Universidad de Warwick, en Inglaterra. Es Profesora Investigadora del Instituto de Ciencias Sociales y Humanidades, de la Universidad Tecnológica de la Mixteca, es Coordinadora de la Maestría en Administración de Negocios y su correo electrónico es: monitte2005@hotmail.com

Adolfo Maceda Méndez es Profesor Investigador de la Universidad Tecnológica de la Mixteca desde 1997. Tiene estudios de Maestría en Ciencias con especialidad en Matemáticas por parte del Centro de Investigación y de Estudios Avanzados (CINVESTAV), del Instituto Politécnico Nacional. Actualmente se encuentra terminando el Doctorado en Matemáticas y se puede contactar en el correo electrónico: amaceda901@hotmail.com.

### RESUMEN

*La supervivencia de las PyMES depende en gran medida de su capacidad para establecer mecanismos que les permitan lograr y mejorar una ventaja competitiva, el analizar factores internos en las organizaciones puede darles una capacidad estratégica clave que las lleve a una posición diferenciada en el mercado. y la innovación se torna como una oportunidad. Esta investigación surge de la necesidad de conocer la importancia de la planeación estratégica en la innovación que realizan de las PyMES en el Estado de Durango, México. Los resultados obtenidos permiten identificar que a mayor realización de planeación estratégica la innovación se ve favorecida, sobretodo la innovación en productos y prestación de servicios, seguida de la innovación en procesos operativos y en administración. Se muestra el panorama de las empresas existentes en el Estado de Durango en relación a variables como la planeación estratégica y la innovación en productos y servicios, en procesos operativos y en la gestión.*

**PALABRAS CLAVE:** planeación estratégica, innovación, PyMES

## THE IMPORTANCE OF STRATEGIC PLANNING ON INNOVATION AND CONSISTENCY OF SMEs

### ABSTRACT

*The survival of SMEs depends largely on their ability to establish mechanisms that allow them to achieve and improve a competitive advantage, analyze the internal factors in organizations can give them a key strategic capability that leads them to a differentiated market position, and innovation becomes an opportunity. This research arises from the need to understand the importance of strategic planning on performing innovation of SMEs in the State of Durango, Mexico. The results obtained allow us to identify that innovation is enhanced when there is a greater realization of strategic planning, especially innovation in products and services, followed by innovation in business processes and administration. The overview of existing businesses in the State of Durango in relation to variables such as strategic planning and innovation in products and services, as well as business processes and management are shown.*

**JEL:** M19

**KEYWORDS:** Strategic Planning, Innovation, Smes

## INTRODUCCIÓN

Tratando de entender a las organizaciones, se considera que hoy en día deben estar en condiciones de responder a lo que es completamente impredecible, dentro de los límites de la misión y principios guía de la organización. En diferentes trabajos de investigación se ha planteado la relación entre las diferentes estrategias o técnicas de dirección que adoptan las empresas y el éxito obtenido en términos de competitividad. El objetivo de este estudio es conocer la importancia de la planeación estratégica formal en la aplicación de innovación en las PyMES en el Estado de Durango. Para esta investigación de tipo descriptiva se tomó una muestra de 345 empresas del Estado de Durango; el universo de estudio se ha determinado conforme al número de empleados generándose tres grupos: micro, pequeña y mediana empresa, dentro de este universo no han sido incluidas aquellas empresas con menos de 6 trabajadores, ni las grandes empresas con más de 250 empleados.

El tamaño de la muestra fue calculado considerando un nivel de confianza del 95% y el diseño general de la misma se fundamenta en los principios de muestreo estratificado para poblaciones finitas, asimismo la técnica para recopilación de información fue una encuesta personal, utilizando como soporte un cuestionario autoadministrado dirigido al gerente de la organización. El trabajo realizado permite conocer la situación por la que atraviesan la micro, pequeña y mediana empresa en el estado en cuanto a la realización de planeación estratégica formal y su relación con la innovación en procesos operativos, productos y servicios y en administración.

Los resultados obtenidos en la investigación indican que la empresa a mayor realización de planeación estratégica formal (PEF) también aplica más innovación en productos y servicios, en administración y en procesos operativos, además le asigna un mayor nivel de importancia a la misma en sus tres tipos. La investigación está organizada en cuatro apartados. En el primero la sección de revisión literaria se presenta literatura relevante sobre la administración estratégica e innovación y se muestra una panorámica general del Estado de Durango México, después tenemos la sección de metodología donde se describe cómo se llevó a cabo el estudio, en la sección de resultados se resume los datos recolectados más relevantes y el tipo de análisis realizado. Una vez presentados los resultados, en conclusiones se procede a evaluar e interpretar sus implicaciones.

## REVISIÓN LITERARIA

### Administración Estratégica e Innovación

Para Daft (2000), una estrategia es el plan de acción que describe la asignación de recursos y las actividades para enfrentarse al ambiente y alcanzar las metas de la organización. Por otro lado David (2008), define a la administración estratégica como el arte y la ciencia de formular, implementar y evaluar las decisiones inter funcionales que permiten a la organización alcanzar sus objetivos. Asimismo, para Thompson y Strickland (2003), la administración estratégica es un proceso de evaluación sistemática de la naturaleza de un negocio, definiendo los objetivos a largo plazo, identificando las metas y objetivos cuantitativos, desarrollando estrategias para alcanzar dichos objetivos y localizando recursos para llevar a cabo dichas estrategias. Para García (2007), el proceso de planeación estratégica implica la realización de actividades formalizadas y por escrito por parte de las empresas, encaminadas a identificar objetivos y metas, a analizar el ambiente externo y los recursos internos para identificar oportunidades y amenazas del entorno y determinar fortalezas y debilidades de la organización, lo que permitirá a la empresa formular estrategias adecuadas a sus objetivos en función de su situación interna y externa.

En este trabajo se usará el término de administración estratégica como sinónimo de planeación estratégica y de dirección estratégica. Coincidiendo con el planteamiento de David (2008), en cuanto a que la

competitividad de las empresas depende de la facilidad de adaptación a los cambios, de la capacidad de gestión y por supuesto de la capacidad estratégica de la organización que envuelve a la tecnología y a la investigación y desarrollo de nuevos productos, y tomando en cuenta el papel relevante que desempeñan las PyMES en la economía del país y por supuesto del estado se muestra como una exigencia prestar especial atención a factores de competitividad como la innovación.

En cuanto al concepto de innovación, Molina y Conca (2000), citan a Ruíz González (1988, p. 71), y conceptualizan el proceso de innovación como “el conjunto de actividades inscritas en un determinado período de tiempo y lugar, que llevan a la introducción con éxito en el mercado, por primera vez, una idea en forma de productos, nuevos o mejorados, de procesos, servicios o técnicas de gestión y organización”, es decir, la innovación envuelve todo el proceso de introducción de un invento en el conjunto económico.

Los mismos autores citan a Barceló, Solé y Valls (1992), y plantean la posibilidad de distinguir tres fases en el proceso de innovación, que en la práctica aparecen superpuestas manteniendo continuas interacciones o retroalimentaciones y son: Invención, Innovación y Difusión. De acuerdo a los términos utilizados por Barceló, et al. (1992), la invención es la idea prototipo, modelo de un nuevo producto o proceso antes de llegar al mercado, la innovación consiste en aquella invención aceptada por el mismo, mientras que la difusión comprende los procesos que permiten que una determinada innovación sea asimilada por un número creciente de usuarios efectivos.

De igual manera Afuah (1997), cita a Evan (1996) y Knight (1967), quienes diferencian entre innovaciones administrativas e innovaciones tecnológicas, en función de que la innovación afecte a la parte administrativa o a la operativa de la organización y plantea que se pueden distinguir tres tipos de innovación: Las innovaciones tecnológicas en productos, que son aquellas que dan lugar a nuevos productos, servicios o procesos tecnológicos de producción. Este tipo de innovaciones supone cambios relacionados con el diseño, fabricación, comercialización de un producto o mejora de uno existente. Las innovaciones tecnológicas en procesos que consisten en la introducción de nuevos procesos de producción o la modificación de los existentes mediante la incorporación de nuevas tecnologías. Y las innovaciones administrativas o en sistemas de gestión, que engloban aquellas que se realizan en la estructura organizativa y en el proceso administrativo, es decir, en aquello más relacionado con la dirección de la organización que con su actividad primaria o productiva.

### El Estado de Durango México

El Estado de Durango es una de las treinta y dos entidades federativas que integran la República Mexicana, representada en el Congreso de la Unión por 4 Senadores y 10 diputados federales. Con una superficie de 123,181 kilómetros cuadrados, es el cuarto Estado de la República Mexicana en extensión, y representa el 6.3% de la superficie total del país. Se encuentra al centro-norte de la República Mexicana y colinda al norte con Chihuahua y Coahuila, al este con Coahuila y Zacatecas, al sur con Jalisco, Zacatecas, Nayarit y Sinaloa y al oeste con Sinaloa y Chihuahua, y se divide en 39 municipios (Durango Competitivo, 2003). De acuerdo con el Censo de Población y Vivienda del 2005, la población total del Estado de Durango asciende a 1, 509,117 con una densidad de población de 12 habitantes por kilómetro cuadrado, cuando en el resto del país es de 50 habitantes lo cual lo sitúa entre los estados con menos concentración de población. La tasa de crecimiento anual del Estado ha sido en los últimos años muy reducida; en el período 2000-2005 fue del 0.7%, e incluso únicamente 9 municipios presentaron tasas positivas. El municipio de Durango es el que cuenta con el mayor porcentaje de habitantes (35.1%), seguido de Gómez Palacio (20.2%) y en tercer lugar se encuentra Lerdo (8.6%), siendo las tres regiones con mayor concentración de productividad.

Actualmente la actividad económica se encuentra distribuida en cinco regiones económicas: a) La región de la Laguna, es la región más desarrollada del Estado por haberse visto beneficiada por los esfuerzos

conjuntos del gobierno de Coahuila y de Durango. Dicha región alberga cuatro de las actividades económicas del Estado, como la textil y la de confección, muebles, productos lácteos y cárnicos; b) En la región centro se encuentra la producción cárnica, mueble, textil y confección además de la forestal, que no comparte con la Laguna; c) En la región noroeste se concentra la actividad minera y forestal más que en el resto del Estado; d) En la región norte se concentra la producción de cárnicos y e) En la región sur la producción de cárnicos y forestal. Del número de unidades económicas que operaron en el país en el año de 2004, en Durango fueron 64515, y su personal ocupado fue de 353, 087. Durango contaba con 37911 unidades económicas de todas las ramas, así como son 216591 de personal ocupado en el año 2003. De acuerdo con el Sistema de Información Empresarial Mexicano, las empresas en el Estado de Durango se clasifican de acuerdo a su tamaño y sector como se muestra en la Tabla 1.

Tabla 1: Clasificación de Empresas de Durango

Tamaño	Industria	Comercio	Servicios	Total
Micro	306	303	149	758
Pequeñas	140	59	55	254
Mediana	91	33	11	135
Grande	25	19	8	52
Total	562	414	223	1199

*De acuerdo con el Sistema de Información Empresarial Mexicano, las empresas en el Estado de Durango se clasifican de acuerdo a su tamaño y sector y está distribuido como se muestra en esta tabla y se han clasificado en los siguientes sectores económicos: industriales, comerciales y de servicios, y por lo general son micros y pequeñas empresas.*

Algunas de las características más importantes de las PyMES en el Estado de Durango son: empresas cuyo origen es de capital familiar y su integración es en sociedad mercantil o personas físicas. La edad del gerente, los estudios académicos, la experiencia, la visión del negocio, son significativos dependiendo del sector y tamaño. El tamaño del negocio se clasifica en 3 magnitudes: microempresa, pequeña y mediana; de acuerdo al número de empleados que laboran. Y las ventas y compras, las enfocan al tipo de proveedores y clientes que manejan en el mercado, según el tipo de producto/servicio que operen.

Según datos de la Secretaría de Economía (2008), las PyMES constituyen un sector estratégico para el desarrollo económico del país ya que contribuyen con un 64% de los empleos a nivel nacional y con un 40% de la inversión y PIB nacional. Además se sabe que en promedio las empresas mexicanas invierten menos del 0.1% del Producto Interno Bruto en investigación y desarrollo, aunado a que solo 25,000 personas en todo el país están dedicadas a alguna actividad relacionada (CONACYT, 2001, p. 45). Esta situación coloca a las empresas en una posición de desventaja con otros países.

Algunos resultados del Censo 2004 realizado por el INEGI nos muestran información en torno a aspectos relacionados con la innovación en las PyMES del Estado de Durango, como el que el 28.6% de las PyMES cuenta con departamento de diseño, el 30.0% si invierte en la creación, el 45.2% cuenta con personal calificado de tiempo completo, el 21.3% plantea proyectos innovadores sin desarrollar por falta de recursos y el 5.2% registra sus obras. Este tipo de empresas tienen una importante contribución en el crecimiento económico del estado, en la competitividad, la innovación y la creación de empleo, pues un alto porcentaje del empleo en Durango es generado por las PyMES, las cuales además crean productos y servicios.

## METODOLOGÍA

Investigación vertical ya que las muestras se recopilaron en un determinado punto del tiempo. Para la confección del cuestionario definitivo y su adaptación a la realidad del Estado de Durango, se realizó un panel de expertos externos y visitas a empresas de diferentes sectores para la realización del pre-test y formación de la encuesta definitiva. La técnica para recabar los datos fue una encuesta personal utilizando como soporte un cuestionario autoadministrado dirigido al gerente. Se ha determinado el tamaño de la

muestra tomando como error máximo de estimación 0.05 puntos, es decir, con un nivel de confianza del 95%. El diseño general de la muestra se fundamenta en los principios del muestreo estratificado para poblaciones finitas. Las variables a analizar fueron: innovación, permanencia, edad del gerente y nivel de estudios, y planeación estratégica formal (PEF).

### Estructura de la Muestra

La población objeto de estudio, queda definida por las PyMES del Estado de Durango constituida por 3,835 empresas, tomando en cuenta que el tamaño de la empresa se ha definido en función del número de empleados generándose tres grupos: microempresas (de 6 a 9 trabajadores), empresas pequeñas (de 10 a 49 trabajadores) y empresas medianas (de 50 a 250 trabajadores). Por tanto, no se han incluido las empresas con 5 o menos trabajadores ni las grandes empresas (más de 250 trabajadores). Se realizó un muestreo aleatorio simple. Para la determinación del tamaño de muestra se considerará la fórmula para poblaciones finitas, obteniendo de la población la muestra, de acuerdo a la siguiente fórmula:

$$n = \frac{NZ_a^2 pq}{d^2(N-1) + Z_a^2 pq} \quad (1)$$

Sustituyendo los valores en la fórmula para la determinación para tamaño de muestra se tiene:

$$n = \frac{(3835)(2)^2(0.05)(0.95)}{(0.0224)^2(3835-1) + (2)^2(0.05)(0.95)} = 345$$

Análisis de datos. En este estudio se utilizó el programa SPSS 19 para Windows con el fin de obtener los siguientes estadísticos: frecuencias, frecuencias relativas y medias. Que fueron la base del análisis de los datos.

## **RESULTADOS**

Los resultados obtenidos en relación a la innovación y la permanencia de las PyMES nos muestran que en las 140 empresas jóvenes, esto es, con 10 o menos años el 60.7% ha efectuado innovación en los procesos operativos, mientras que en las 205 empresas consideradas maduras con más de 10 años de permanencia sus respuestas indican que en un 65.4% de ellas si han efectuado alguna vez innovación en estos procesos. Del mismo modo, la innovación en procesos operativos se comporta de la siguiente manera: en el 46.4% de las empresas jóvenes le asignan el nivel de importante y muy importante, mientras que en las empresas con más de 10 años en el 59.5% de ellas le otorgan esos mismos niveles de importancia. En cuanto a la innovación en productos y servicios la han realizado en un 68.6% de las empresas jóvenes y en un 71.2% de las empresas maduras. Asimismo el nivel de importancia que le asignan en las primeras es de 64.3% como importante y muy importante y por su parte en las empresas maduras el 66.8% la consideran como importante y muy importante.

Respecto a la innovación en administración en las empresas con 10 años o menos en el 61.4% de estas la han realizado, mientras que en las empresas con permanencia mayor a 10 años en el 68.3% se ha efectuado esta innovación. Referente a la importancia de este tipo de innovación, en un 53.6% de las empresas jóvenes le atribuyen el nivel de importante y muy importante, por su parte de las empresas maduras en un 59.5% le otorgan estos mismos niveles de importancia. Abordando la edad del gerente y la importancia de la innovación, se tiene que los grupos de edad más representados son los de 31 a 40 años con un 25.5%, de 41 a 50 con un 33.1% y los de 51 a 60 años con un 24.5%; en el primer grupo de edad el 45.3% de los

directivos le asigna el nivel de importante y muy importante a la innovación en procesos productivos, en el segundo grupo el 51.3% le otorga el nivel de importante y muy importante y en el tercer grupo de edad el 65.0% le atribuye estos mismos niveles de importancia.

En relación a la innovación en productos y servicios en el grupo de 31 a 40 años el 63.1% de los directivos la consideran entre importante y muy importante, en el grupo de 41 a 50 años el 69.7% le asignan estos mismos niveles de importancia y en el grupo de 51 a 60 años el 69.2% le atribuye también el nivel de importante y muy importante a este tipo de innovación. En la innovación en la administración el 52.3% del primer grupo de edad le otorga el nivel de importante y muy importante, el 56.9% del segundo grupo le asignan estos mismos niveles de importancia y del tercer grupo un 63.7% clasifican a este tipo de innovación en el mismo nivel de importante y muy importante.

En referencia al nivel de estudios del gerente y la importancia que le asignan a la innovación en procesos productivos en el grupo de gerentes con nivel de estudios básicos el 47.7% la consideran entre importante y muy importante, el 47.9% de gerentes con estudios de bachillerato le otorgan estos mismos niveles de importancia, el 56.6% con nivel de técnico superior universitario la consideran igual y el 56.6% de gerentes con nivel de licenciatura le atribuyen la misma importancia que todos los anteriores. En este mismo ámbito y cuando se cuestiona la importancia de la innovación en productos y servicios los resultados muestran que el 50.5% de gerentes con nivel de estudios básicos la considera entre importante y muy importante, el 62.5% de los gerentes con estudios de bachillerato le otorga ese mismo nivel de importancia, de igual manera el 68.0% de directivos con estudios de técnico superior universitario y el 69.3% con nivel de licenciatura le atribuyen los niveles de importante y muy importante a este tipo de innovación. Los resultados en la importancia de la innovación en la administración indican que para el 50% de los gerentes con nivel de estudios básicos es entre importante y muy importante este tipo de innovación, y el mismo nivel de importancia le atribuyen el 53.6% de gerentes con estudios de bachillerato, un 56.0% de quienes tienen estudios de técnico superior universitario y un 57.1% para los que cuentan con estudios de licenciatura.

Tratando de relacionar la permanencia y la PEF, ésta última solo la realizan en un 40.0% de las PyMES jóvenes del estado y en un 53.2% de las empresas maduras. Asimismo para las primeras en el 21.2% de ellas sus planes los realizan a más de un año, el resto solo planea a un año y en las empresas maduras el 12.8% realizan su planeación a más de un año y el 87.2% planea a un año. Además, del total de las empresas encuestadas en 165 de ellas realizan planeación estratégica formal, esto equivale a un 47.8% y además en 125 de éstas PyMES también han realizado innovación, lo que representa un 75.8% de empresas innovadoras en procesos productivos que cuentan también con administración estratégica.

En la innovación en productos y servicios 136 PyMES de las 165 referenciadas han innovado en esta categoría, lo que significa que un 82.4% de las PyMES innovadoras en productos y servicios además realiza planeación estratégica formal. Para el último tipo de innovación tenemos que de las 165 empresas que realizan planeación estratégica 125 de ellas ha efectuado innovación en administración, lo que refleja que un 75.8% de empresas que cuentan con dirección estratégica, también son innovadoras en la gestión. En relación al nivel de importancia de la innovación se encontró que en el 63.6% de las empresas que realizan la PEF le atribuyen el nivel de importante y muy importante a la innovación en los procesos productivos. Un 75.1% le otorgan el nivel de importante y muy importante a la innovación en productos y servicios y finalmente en un 63.0% de las empresas que cuentan con planes por escrito le asignan el nivel de importante y muy importante a la innovación en administración.

## CONCLUSIONES

Podemos concluir que en la micro, pequeña y mediana empresa a mayor permanencia se realiza más innovación y además ésta se torna cada vez más importante para los gerentes, ocupando la primera posición

la innovación en los productos y servicios. También a mayor edad del gerente se torna más importante la innovación, alcanzando los valores máximos la innovación en productos y servicios (PS) y casi a la par la innovación en procesos productivos (PP) y en administración, asimismo, a mayor nivel de estudios del directivo es mayor el nivel de importancia que le atribuyen a la innovación, posicionándose primero la innovación en los PS, seguida con valores medios de la innovación en administración y luego de la innovación en los PP. De igual manera es evidente que a mayor nivel de estudios del gerente se realiza más planeación estratégica y resulta relevante que las PyMES que planean, incluidas las innovadoras, lo hacen en su mayoría a un año, y en aquellas que cuentan con dirección estratégica le asignan un mayor nivel de importancia a la innovación en sus tres tipos comparado con el nivel de importancia que le asignan los directivos de empresas que carecen de planeación estratégica.

# ESCENARIOS DE MERCADO PARA LA ALMENDRA COMO PRODUCTO ALTERNATIVO EN LA SIERRA DE SONORA

José Jesús Meza Montaña, Universidad de la Sierra  
Manuel Arturo Coronado García, Universidad de la Sierra  
Dora Alicia Mendoza Yocupicio, Universidad de la Sierra  
María del Carmen Ramírez Siqueiros, Universidad de la Sierra

## RESUMEN

*El objetivo de la siguiente investigación es ofrecer el cultivo de la almendra como producto alternativo a los agricultores de la sierra alta de Sonora, diversificando de esta manera las actividades económicas que se practican, con la intención de mejorar la economía de la región. En la Universidad de la Sierra por medio del Departamento de Estudios y Desarrollo de Proyectos en convenio con Fundación PRODUCE Sonora A.C. nos hemos dedicado a estudiar las variedades que mejor pudiesen adaptarse a las condiciones de la región. Se realizaron pruebas de validación de cultivo donde se plantaron las siguientes variedades: Nonpareli, Monterey y Wood Colony. Un aspecto importante por considerar son las horas frío que acumula la planta al año. La almendra es uno de los frutales más resistentes a la sequía por lo que se considera como una ventaja la poca agua que estas plantas requieren. En cuanto al suelo, las tierras sueltas o arenosas resultan ser las más apropiadas. Es así que con estos datos que más adelante se detallarán de la investigación, se ha determinado que Nonpareli es la variedad con mejores resultados en cuanto aspectos técnicos se refiere. Como segunda etapa se contempló el conocer los mercados de la almendra, identificando los nichos potenciales para su comercialización ya sea ésta a nivel regional, nacional o internacional; elaborándose una guía comercial que contiene datos como: propiedades de la almendra, usos comestibles y medicinales, el mercado, empaque y embalaje, precios, trámites de exportación y contactos. Se realizó un “Foro Demostrativo” por parte de la Universidad de la Sierra donde se invitaron a 65 productores de los municipios vecinos a Moctezuma para presentarles los resultados de 6 cultivos alternativos los cuales fueron investigados y validados por nuestra institución en el Departamento de Estudios y Desarrollo de Proyectos en conjunto con maestros investigadores de la División de Ciencias Económico-Administrativas y a estudiantes que realizan su estadía profesional de la Universidad. Estos cultivos fueron: Espárrago, Stevia, Chiltepín, Manzanilla, Pistacho y Almendra. Así mismo se aplicaron encuestas de opinión a los asistentes quienes favorecieron con sus respuestas a la almendra al expresar su interés en la plantación de este fruto.*

**PALABRAS CLAVES:** Cultivos Alternativos, Variedades, Validación, Comercialización

## MARKET SCENES OF ALMOND AS ALTERNATIVE PRODUCT AT THE SIERRA OF SONORA

### ABSTRACT

*The aim of this study is to provide the crop of almond as an alternative product to the producers in the high sierra of Sonora. Thereby diversifying economic activities practiced, with the intention of improving the economy of the region. In the University of La Sierra through its Department of Development Studies and Projects have been dedicated in an agreement with Sonora Produce Foundation A.C to study the varieties that are able to adapt at the conditions of the region. Crop validation test was made where the following varieties were planted: Nonpareli, Monterey and Wood colony. An important aspect to consider is the*

*accumulated cold hours per year by a plant. Almond is one of the fruit more resistant to drought and the low quantity of water that the plant requires is considered in this case as an advantage. As for soil, loose and sandy ground is the most appropriate. Thus, it was determined that Nonpareli is the variety with better results in terms of technical aspects are concerned. As a second phase it was established to know the almond markets, identifying potential niches of marketing whether it is regional, national or international label, showed in a commercial guide which contains data such as almond's properties, edible and medicinal uses, market, packing and wrapping, prices, export procedures and contacts. We performed a Demonstrative Forum where 65 producers from neighboring towns attended. On it, we present the results of six alternative crops, which have been investigated and validated by our Institution in the Department of Studies and Development Projects, altogether with research teachers from the Economic Administrative Science Division and students who do their final term from the University. These crops were Asparagus, Stevia, Chiltepin, Chamomile, Pistachio and Almond. So then, was applied an opinion survey to the audience, those who express their interest in planting Almond.*

## INTRODUCCIÒN

La sierra alta de Sonora en México se ha orientado a la producción de ganado bovino. Desde los años 70's en esta región se introdujeron razas europeas que ameritaban alimentación distinta a la acostumbrada con las razas criollas, tanto en cantidades como en la calidad de los nutrientes de los forrajes. Fue entonces que se intensifica la agricultura e incorpora variedades como la alfalfa, ray grass, o la cebada. La ganadería y la agricultura en la región son actividades que se han sabido desarrollar y formar parte de la identidad sonorenses. Nuestro país entra en la dinámica de formar acuerdos comerciales y abrirse al comercio mundial con la firma de tratados y acuerdos comerciales a partir de 1994, que sin duda han sido de gran ayuda para fortalecer la economía, sin embargo en el sector agropecuario se resintieron efectos contradictorios a los esperados. Hoy en día resulta poco rentable continuar con las mismas prácticas de siembra ya que los insumos productivos se han encarecido y la actividad agrícola-ganadera se realiza cada vez más por tradición que como un negocio. El objetivo de esta investigación se enfoca en diseñar un plan mercadológico para el almendro y de esta manera mostrar a los productores de la región la diversidad de productos que la región puede dar e impulsar el desarrollo económico de la sierra.

## REVISIÒN DE LA LITERATURA

Se realizó una investigación documental para conocer las distintas variedades de almendros que se pudiesen adaptar a las condiciones climáticas, de suelo y agua de estas tierras consultando a Fernando Hill-Albert Velarde (2002) y Francisco Javier Riera (1970). Para que posteriormente realizar la validación de estas plantas y poder presentar aquellas con mayores probabilidades de resistencia y producción. Así también se consultó a Castro F. Andrés (2008) para decidir sobre la información que se integraría a la guía comercial en el tema de exportación, en especial con la tramitología a seguir. En el tema de los mercados y el comportamiento del consumidor seleccionamos a Mc Daniel Carl y Gates Roger (2005). En lo que respecta a la presentación del producto al intermediario o consumidor final se consultaron a Lamb Hair McDaniel (2006) y Fisher Laura (2007).

## METODOLOGÌA

Durante este proyecto se realizaron ciertas actividades para cumplir con el objetivo planteado anteriormente mencionado, en lo que respecta a la recolección y análisis de información se consultaron algunas fuentes

en libros y portales en línea. El estudio realizado se refuerza con una investigación de campo donde se validan aquellas variedades que por sus cualidades pudiesen adaptarse a las horas frío de la región, dicha validación se realizó en el campo experimental de la Secretaría de Agricultura, Ganadería, desarrollo Rural, Pesca y Alimentación (SAGARPA) en el municipio de Moctezuma, Sonora. Así también se consultó personal de la Secretaría de Economía en la ciudad capital de Hermosillo en el tema de comercio exterior para confirmar y a su vez complementar la documentación necesaria que requiere el proceso de exportación de la almendra hacia los Estados Unidos.

El método utilizado para la elaboración de la guía comercial de la almendra fue de tipo descriptivo, se recabaron datos y se seleccionó aquella información que pudiese ser útil al productor. Para conocer el grado de aceptación del cultivo de la almendra se realizó un Foro Demostrativo en las instalaciones de la Universidad de la Sierra donde se invitaron a los agricultores de diez municipios y asistieron un total de 65 personas. Se expusieron los siguientes cultivos: espárrago, nopal, stevia, pistacho y almendra. Al cierre del evento se aplicó una encuesta para conocer la aceptación hacia los distintos cultivos y a su vez se les entregó la guía con el fin de que conozcan más sobre el producto de su preferencia. Como fuentes secundarias a lo largo de esta investigación se consultaron referencias de las memorias de estadía de alumnas de la carrera de Administración y Evaluación de Proyectos de la Universidad de la Sierra, elaboradas por Moreno Briseño Jazmín (2011) y Búrquez Montaña María Yuriana (2001), información útil por tratar de la elaboración de guías comerciales de cultivos como el espárrago y zarzamora.

Figura 1: Guía Comercial

*Se muestra la portada de la guía comercial elaborada para mostrar los resultados obtenidos en relación a los temas de mayor interés para los productores. Como se puede apreciar se imprime en la parte superior el título del cultivo que se presenta, así como su nombre científico y por supuesto los logos de la Universidad de la Sierra en colaboración con Fundación PRODUCE A.C. quienes son las instituciones que asisten esta investigación. El contenido de la guía inicia con los aspectos técnicos, los usos de la almendra, recomendaciones comerciales, de mercado, tramitología para exportar y contactos tanto locales como en el extranjero. Fuente: Elaboración propia.*

## RESULTADOS

Es gratificante el poder validar cultivos alternativos que gozan de precios atractivos y sobre todo que tienen una demanda tanto a nivel estatal como internacional. Las condiciones climáticas de unas 400 horas frío que la región registra al año son suficientes para que el fruto presente las características tanto físicas como nutrimentales requeridas. Enseguida se muestra la forma en que ésta información fue presentada a los agricultores.

Al cierre del evento se aplicó una encuesta cuyo instrumento se puede consultar en Anexos. Dicha encuesta fue realizada con la intención de saber la percepción que tienen los productores sobre los trabajos realizados en la Universidad y si éstos son realmente de su interés o en su caso conocer inquietudes sobre algún otro cultivo que tuviera demanda y a su vez se pudiera adaptar a la región para con esto incluirlos en los siguientes proyectos a desarrollar.

## CONCLUSIONES

Los productores mostraron interés en conocer más sobre el cultivo de la almendra y los resultados de las encuestas realizadas en el foro lo reafirman; sin embargo, es necesario que los productores muestren iniciativa para cultivar nuevos productos ya que en esta región existen las condiciones adecuadas para poder desarrollar la almendra de variedad Non Pareil procedente de California. La almendra tiene una oportunidad importante de ser cultivada en la sierra de Sonora ya que por su demanda y buenos precios resulta rentable el incorporarla en la agricultura de la zona, como otro de los aspectos a considerar es la diversidad de sus usos ya que puede ser consumida al natural, agregarla en la elaboración de postres, turrone, licores o aceites. Cada vez resulta más necesario este tipo de eventos en donde los agricultores puedan conocer tendencias, intercambiar opiniones y recibir capacitación por parte de instituciones educativas, fundaciones o dependencias de gobierno, para que de esta manera se animen a invertir en sus cultivos con mayor certeza y conocimiento.

## ANEXOS

Anexo1: Se muestra el instrumento utilizado para obtener el nivel de aceptación del foro demostrativo realizado a los productores locales.

### Encuesta de Apreciación Sobre Cultivos Alternativos Para la Sierra de Sonora

1.- ¿Este Foro fue de interés para usted?

<input type="checkbox"/>	Sí
<input type="checkbox"/>	No ¿Por qué?

2.- ¿Qué opinión tiene acerca de la vinculación de la Universidad de la Sierra con los productores para promover nuevos productos innovadores?

<input type="checkbox"/>	Bueno	<input type="checkbox"/>	Regular	<input type="checkbox"/>	malo
--------------------------	-------	--------------------------	---------	--------------------------	------

3.- ¿Cuál de los siguientes productos le interesaría producir?

<input type="checkbox"/>	Almendras	<input type="checkbox"/>	Pistachos	<input type="checkbox"/>	Stevia	<input type="checkbox"/>	Nopal	<input type="checkbox"/>	Esparago
--------------------------	-----------	--------------------------	-----------	--------------------------	--------	--------------------------	-------	--------------------------	----------

4.- ¿Motivo por el que eligió ese producto?

5.- ¿Qué otros mercados y productos le gustaría que la Universidad de la Sierra investigara además de los presentados en este evento?

Gracias

## CADENA DE VALOR EN PRESTACION DE SERVICIOS PROFESIONALES, CASO: “EMPRESA FAMILIAR”

Daniela Carolina Santiago López, Universidad Autónoma de Baja California

Loreto María Bravo Zanoguera, Universidad Autónoma de Baja California

Placido Valenciana Moreno, Universidad Autónoma de Baja California

Sósima Carrillo, Universidad Autónoma de Baja California

### RESUMEN

*Existen pocas razones para que una empresa familiar tenga éxito, al contrario de que las razones para que tengan fracaso son incontables, la tendencia de las empresas familiares no es de crecer y evolucionar, sino de mantenerse con una estabilidad empresarial que dure generación tras generación. Los problemas que se presentan hoy en día en estos negocios son contar con personal ineficiente por darle trabajo a un miembro de la familia y hasta tener algún puesto directivo. En las empresas de prestación de servicios existe con frecuencia una falta de visión sobre el potencial que se tiene el propio negocio, así como informalidad en la estructura y poco profesionalismo. Esta investigación tuvo como objetivo el diseño de un plan de crecimiento y los resultados obtenidos con la aplicación de las teorías de calidad y de gestión del servicio que se implementaron mediante la elaboración de la cadena de valor tuvo como finalidad el alcance del éxito a corto, mediano y largo plazo con el propósito de establecer metas que permitieron llevar a cabo los planes estratégicos del negocio en este caso un despacho contable familiar. Se concluyó que al implementar el sistema de gestión de calidad que aseguro la optimización de los procesos, fue un elemento esencial el contar con personal capacitado y comprometido con la misión y visión de la empresa.*

**PALABRAS CLAVE:** Empresa Familiar, Cadena de Valor, Ventaja Competitiva

## THE VALUE CHAIN IN PROFESSIONAL SERVICE COMPANIES, CASE STUDY: “FAMILY BUSINESS”

### ABSTRACT

*There are few reasons to have successful in a family business, but contrary there are countless the reasons to have a failure, the tendency of this businesses is not of grow and evolve, but to kept on a corporate stability lasting one generation to another. Nowadays the problem that we found in these businesses is to have inefficient employees just for give work for the family people and also give a management position. In the Professional service companies there is often a lack of vision on the potential that the business itself has as informal and unprofessional structure. This investigation aimed to design a growth plan and the results obtained by applying the theories of quality and management service that is implemented by developing the value chain aimed to reach success in the short, medium and long term in order to set goals that helped carry out the strategic plans of the business in this case a family accounting firm. It was concluded that implementing the quality management system to assure the optimization of processes, an essential element was the have trained and committed to the mission and vision of the company staff.*

## INTRODUCCION

La presente investigación tratara sobre la empresa familiar, a pesar de que es un tema complejo de definir, se considera familiar una empresa cuando se le ha identificado por lo menos dos generaciones de una familia y cuando esta vinculación ha tenido una influencia en la política de la empresa, en los intereses y los objetivos de la familia. Algunas características que presentan estas organizaciones son: Mantienen un marcado estilo autocrático que las hacen resistentes a los cambios. La mayoría de los puestos directivos son ocupados por familiares Excesiva rigidez del liderato, que impide el desarrollo de otras personas para acceder a puestos claves. Se valora mucho más la fidelidad que la habilidad Mediante el desarrollo de cadena de valor en estas empresas, resulta de gran ayuda para su crecimiento ya que se logra el diagnostico de la propia ventaja competitiva, lo que sería crearla y encontrar las estrategias para mantenerla. Así mismo se reafirma la estructura organizacional el cual necesitan las empresas familiares. El sector de servicios que se segmenta a un área en particular permitirá que la empresa pueda ajustar su cadena de valor y tener un punto de comparación entre sus competidores. La investigación de este tema se realizó por el interés de las empresas de servicios que son familiares y tienen una oportunidad de crecer y mejorar la estructura empresarial.

## REVISION LITERARIA

Una de las palabras usadas como punto de referencia es la de “cadena de valor”, varios autores la manejan como una herramienta aplicable únicamente para el sector industrial se le asocia de forma muy cercana con: productividad de las empresas, Porter (1985) métodos de producción eficiente en cuanto a la elaboración de un producto. En varios libros se manejan cadenas de valor genéricas que muestran un punto de partida para realizar análisis y estudios que ayudan a detectar las áreas más rentables y tomar las mejores decisiones que afectaran positivamente a las empresas que tengan un proceso de elaboración. Esta herramienta se puede utilizar también en empresas de prestación de servicios profesionales, existen otros factores que promueven rentabilidad es el desarrollo del capital humano. Considerando la interacción de las personas en las negociaciones de suma importancia, nos es interesante conocer cuáles son las condiciones en que están actuando en cada uno de esos contactos de negocio que se da en nuestras empresas. El tipo de estudio que se maneja en la presente investigación es descriptivo ya que la empresa de servicios profesionales que es el caso de un despacho contable familiar tiene potencial de crecimiento y desarrollo empresarial. El diseño de este caso es realizado mediante un análisis de información cualitativa y de interacción social, entrevistas con personas de alta experiencia en el tema, técnicas de observación y cuestionarios de medición. Esta investigación se justifica desde el punto de vista práctico, ya que la misma propone al problema planteado en las empresas familiares una estrategia de acción que al aplicarla impactara en la expansión de la empresa familiar. El punto de vista teórico ayudara a generar reflexión y discusión tanto sobre el conocimiento existente del área investigada mediante los argumentos estudiados y se encuentra sustentada en la bibliografía Roberto Hernández Sampieri (2010).

## METODOLOGIA

El objetivo de la cadena de valor es procurar generar el mayor valor posible en cada una de las actividades desagregadas, y al mismo tiempo procurar minimizar los costos en cada una de éstas; buscando, de ese modo, obtener el mayor margen de utilidad posible, se utiliza para:

- Entender mejor la ventaja competitiva de la empresa
- Identificar dónde puede incrementarse el valor para los clientes
- Identificar dónde pueden reducirse los costos
- Entender mejor las relaciones de la empresa con los proveedores, clientes y otras empresas de la industria
- Descubrir los pasos y actividades que no son competitivos

Para esta investigación se determinaron generadores de valor, es decir todos aquellos factores de medición del valor que los clientes dan a cada actividad estratégica de la empresa, independientemente del valor que asignan a los productos. Existen dos categorías de generadores de valor: Generadores de valor del cliente para este estudio se encaminaron a incrementar lo que un cliente está dispuesto a pagar de más por la satisfacción de sus necesidades. Generadores de valor del negocio fueron elementos que impulsan el valor en beneficio de los accionistas con respecto a su inversión en la empresa. Los generadores de costos, son aquellos factores que dentro de cada actividad causan, generan o inducen el costo. Dentro de cada actividad es posible detectar la existencia de varios generadores de costos diferentes. El riesgo financiero es el riesgo de no estar en condiciones de cubrir los costos financieros de una empresa. La determinación de este análisis es por el grado de apalancamiento financiero que tenga la empresa en un momento determinado. El primer análisis realizado en el despacho contable familiar fue un modelo estratégico sobre las cinco fuerzas de Porter el cual propone un modelo de reflexión estratégica sistemática para determinar la rentabilidad de un sector específico, normalmente con el fin de evaluar el valor y la proyección futura de empresas o unidades de negocio que operan en dicho sector.

Negociación de los compradores o clientes  
Negociación de los proveedores o vendedores  
Amenaza de nuevos entrantes  
Amenaza de productos sustitutivos  
Rivalidad entre los competidores

Para la aplicación de este método de Porter fue necesario enfocarnos al sector empresarial, centrar el ambiente a que nos dedicamos a prestar un servicio profesional. Fuerza de poder de los clientes: la concentración de clientes son 8 los que representan la mayor parte de los ingresos a la empresa. Como este número de clientes no es elevado se afecta la palanca de negociación puesto que puede exigir más. En cuanto al volumen de los ingresos, se mantiene fijo por los honorarios y en ocasiones se llega a tener más ingresos por actividades extras realizadas dependiendo de la necesidad del cliente, a veces puede ser que surja algún problema legal a la empresa de alguno de nuestros clientes y lo atendamos, o bien en el caso de alguna devolución de impuestos el cliente otorga una comisión. Los mismos clientes llegan a ser la carta de presentación, han sido ellos los que han hecho crecer la cartera de clientes por recomendación y también para saber valorar y decidir con argumentos mayores cuando se les presente alguna otra sociedad que brinden los mismos servicios, es decir, la competencia. Esta fuerza de los vendedores hace referencia a la capacidad de negociación con que cuentan los vendedores, en el caso de los prestadores de servicios profesionales, es un mercado demandante y donde si hay de donde escoger, en este aspecto las posibilidades de que mayor cantidad de despachos existan, menor es la capacidad de negociación, ya que al haber tanta oferta de insumos, estos pueden bajar sus cotizaciones fácilmente.

Las variables significativas que se encuentran en esta fuerza aplicada a esta empresa son: Concentración del despacho contable: Dar un servicio de calidad puede ayudarnos a marcar una diferencia como despacho, pero más aun ayudara el trato directo con el cliente.

*Importancia del volumen para las empresas de servicios contables:* Por ser un despacho mediano las cotizaciones de los servicios profesionales son menores a las que se dan en despachos más grandes.

*Costo al cambio:* El crecimiento se da con la tecnología, la adquisición de los más nuevos y modernos sistemas contables, que genera un alto costo, pero su recuperación es en muy poco tiempo.

Los nuevos entrantes amenazan a este campo no son muy seguidos, es decir, para que un contador empiece su propio despacho contable es necesario adquirir gran experiencia profesional y darse a conocer en el ámbito laboral. Amenaza de productos sustitutos como la tecnología y los procesos que han cambiado para

la presentación de declaraciones, cambio de leyes, etc. han hecho creer a las empresas que no necesitan de un contador, incluso varios de nuestros clientes lo pensaban así y con el tiempo se fueron dando cuenta de que si es una realidad que los sistemas o software que salen al mercado facilitan el área financiera de un negocio. La rivalidad entre los competidores competencia en este sector, no se da igual a la del sector industrial porque no se compiten en cuanto a los precios, inclusive de acuerdo al código de ética profesional los servicios profesionales no se pueden competir en publicidad o propaganda, simplemente se dan a conocer de manera discreta y se miden en cuanto a la calidad del servicio. Todos esto nos lleva a una rivalidad entre competidores baja, lo que sí es importante en la rivalidad entre competidores es la preparación y actualización de los despachos.

Determinando los resultados financieros entre los años 2009, 2010 y 2011 de la empresa de un despacho contable y comparando los porcentajes entre los años se llega a la siguiente obtuvo lo siguiente durante los años 2009 y 2010 se mantuvo con una capacidad de saldar las obligaciones a corto plazo que se han adquirido a medida que estas se vencen es decir su liquidez fue buena, sin embargo en el 2011 con la disminución de activos tuvo una menor habilidad para convertir en efectivo determinados activos y pasivos corrientes. La Solvencia y Estabilidad de la empresa fue muy variada entre un año y otro, determinando que la cantidad de activos corrientes para pagar pasivos a largo plazo fue buena durante los primeros años, porque no una deuda tan alta, pero en el 2010 los pasivos a largo plazo aumentaron y se logro una disminución de deuda hasta el 2011.

Analizando y evaluando las ganancias de la empresa con respecto a un nivel dado de ingresos, de activos o la inversión de los dueños, se refleja una pequeña variación por lo que muestra que la rentabilidad o productividad de la empresa ha sido estable durante estos 3 años. En cuanto a los activos de la empresa fueron disminuyendo año con año, estoy quiere decir que la empresa no fue adquirió bienes tangibles e intangibles durante los siguientes años. Para la cadena de valor se llevo a cabo un reconocimiento de las actividades de la cadena de valor los eslabones de apoyo son aquellas actividades que están directamente relacionadas con el servicio al que se Logística interna son las actividades relacionadas con la recepción, almacenaje y distribución de los insumos necesarios prestar el servicio. Las operaciones actividades es la manera en la que se va a realizar el servicio. La logística externa son las actividades relacionadas con el proceso de operaciones sobre el servicio que se va a brindar.

*Marketing y ventas:* actividades relacionadas con el acto de dar a conocer, promocionar dentro de las posibilidades el servicio que se brindara. Las actividades relacionadas con la provisión de servicios complementarios tales como la instalación, reparación, mantenimiento, también fueron categorizadas. Actividades de apoyo o de soporte son las que agregan valor los servicios que el despacho ofrece pero que no están directamente relacionadas con la prestación de éste, sino que más bien sirven de apoyo a las actividades primarias:

Actividad 1: Cliente entrega documentación del mes para elaboración de contabilidad.

Actividad 2: Empieza la captura contable.

Actividad 3: Determinar impuestos y archivar documentación.

Actividad 4: Presentación de declaraciones mensuales.

Actividad 5: Generar el recibo de honorarios a los clientes

Las ventajas de esta herramienta muestra debilidades y fortalezas del proveedor, cliente/usuario. Identifica proveedores/clientes críticos y propone alianzas estratégicas. Es una base del diagnóstico de la ventaja competitiva y a su vez es una fuente de ideas para actuar estratégicamente; si se realiza bien es una fuente de información muy precisa para la toma de decisiones. Las desventajas es que es compleja y difícil encontrar la información en la empresa que se requiere para elaborarla. Se comunica con dificultad a la organización. Si no se realiza bien puede hacer que se tomen decisiones erróneas en la organización.

Para una empresa de servicio, las actividades comienzan con el concepto del servicio y su diseño, propósito y demanda; enseguida, viene el conjunto de actividades que proporcionan el servicio para crear un cliente satisfecho. Infraestructura de la empresa: actividades que prestan apoyo a toda la empresa, tales como la planeación, las finanzas, la contabilidad. Para este punto se utilizó un análisis organizacional donde se identificó mediante el En el estudio se manejan las áreas de Atención a Clientes y Financiero, ya que son áreas críticas, ya que al ser empresa de Servicios, la atención al cliente es importante porque lo se ve reflejado en la atracción de nuevos clientes por recomendación y mantener a los que se tienen y se estudia a nivel operativo y estratégico. En cuanto al área financiera se maneja a nivel estratégico ya que se encuentra centralizada la operación y toma de decisiones en el gerente general. El análisis que se realizó en la organización fue a corto plazo y se tomaron por etapas del proceso administrativo para la recopilación de la información. Se utilizó la siguiente tabla como un cronograma de actividades.

Etapas	Actividades	7	8	9	10	11	14	15	16	17	18	21	22	23	24	25	28	29	30	31
Planeación	Investigación documental: Antecedentes, visión, misión, objetivos, metas, procesos, políticas, programas, enfoques.		X	X	X	X														
Organización	Estructura organizacional. Organigrama, división y distribución de funciones, recursos humanos, cambio organizacional, instrumentos técnicos de apoyo.							X	X	X	X	X								
Dirección	Liderazgo, comunicación, motivación, tecnología de la información, toma de decisiones, grupos y equipos de trabajo.												X	X	X	X	X			
Control	Naturaleza, sistema, niveles, proceso, herramientas, calidad.																		X	X

En esta tabla se presenta un esquema básico donde se distribuye y organiza en forma de secuencia temporal el conjunto de experiencias y actividades diseñadas a lo largo de un curso. La organización temporal básicamente se organiza en torno a dos ejes: la duración de la tarea y el tiempo que previsiblemente se dedicará al desarrollo de cada actividad.

La empresa cuenta con un organigrama formal y como microempresa cuenta con uno de características horizontal y casi plano. A continuación se enumeran algunas características:

Se lleva a cabo un proceso o procesos.

Objeto de procesos: añadir valor para el Cliente

Los puestos cuentan con Autonomía-autocontrol.

El Responsable del proceso, coordina y apoya.

Compromiso con los resultados de la organización.

El Director general asigna Qué tareas hacer y para qué.

Trabajo en equipo.

Mejoramiento continuo.

Delegación de autoridad.

Se habla de representantes, no de responsables, de trabajo en equipo.

En relación a la organización formal, se encuentra estipulado en el organigrama, pero cabe mencionar que los encargados de Contabilidad y Fiscal se encargan de coordinar los pendientes del día, aunque da la libertad de hacerlo y se logran los objetivos. De forma directa el Director se puede dirigir de forma general cuando hay la necesidad de aplicar alguna acción correctiva de forma constructiva, y también cada uno de los integrantes de la organización cuenta con la libertad de tiempos de sus actividades. Los recursos

humanos actividades relacionadas con la búsqueda, contratación, entrenamiento y desarrollo del personal. En la actualidad no se cuenta con una planeación de recursos humanos, se da según la situación que se presente es conforme se actúa para solucionar el problema. La atracción de talento se da con los familiares allegados y su contratación se da de manera directa en relación al desempeño de estos.

La inducción consiste en una reunión con los directivos del despacho y posterior una presentación con los empleados en el lugar de trabajo. La capacitación comienza con una capacitación directa en el cual se asigna a un empleado con experiencia a que le explique el proceso de elaboración de contabilidad y el manejo del sistema contable. Se cuenta con 4 empleados en el colegio de contadores donde reciben capacitación, actualización en la materia contable por medio de cursos y certificaciones, dicha inscripción al colegio es pagada por la empresa y las cuotas anuales son pagadas por el empleado ya que dichas capacitaciones son necesarias por el simple hecho de ser contador público. A su vez los empleados no inscritos en el colegio de contadores son capacitados por sus jefes directos.

Sistema de compensaciones: En la actualidad dentro de este sistema están establecido: los salarios, las prestaciones tanto de ley (vacaciones, aguinaldo, utilidades, seguro social) como las que no (caja de ahorro), bonos, horas extras, incentivos. Los salarios se encuentran estructurados mediante las horas trabajadas y los puestos que se manejan. Los auxiliares contables tienen un horario de trabajo reducido debido a que la mayoría son estudiantes y por lo tanto el salario es menor. Los incentivos de la empresa se manejan en situaciones donde el empleado se le asigna un trámite extra del cliente como por ejemplo: devoluciones de impuestos, de la comisión que se cobra de esta devolución se le brinda al empleado un incentivo por ganar la devolución.

Desarrollo tecnológico: actividades relacionadas con la investigación y desarrollo de la tecnología necesaria para apoyar las demás actividades. Los despachos contables cuentan con programas y tecnología utilizados para mejorar su eficiencia, los sistemas y programas que se utilizan en el despacho contable siempre están a la vanguardia, ya que son los más reconocidos y utilizados en el mercado por la calidad, el sistema de nominas es utilizado tanto para que los empleados puedan desarrollar sus funciones (manejan la nomina de los clientes) como para el encargado nomina del despacho. La inversión en la capacitación para la uso del sistema de nominas lo tomaron la mayoría del personal y a su vez los que fueron capacitados pasaban el conocimientos a los puestos de auxiliares.

El sistema contable utilizado por los empleados es el de mayor tecnología y novedoso; todos los empleados fueron capacitados para el manejo del sistema y cuando existen actualizaciones se añaden al programa. A lo largo de la vida de un despacho contable que se dedica a prestar sus servicios profesionales se han manejado muchos sistemas contables y en la actualidad se comprueba la eficiencia con una mayor productividad del empleado por el tipo de sistema que operan, ya que se han reducido las tareas porque el programa las genera automáticamente. Existen otros software que son utilizados por los empleados no por opción de la empresa, si no por disposición de la autoridad por medio de comunicados llega a los contadores la información de la nueva disposición y a su vez la capacitación de uso de estos software son en línea y son tomados por todos los empleados del despacho.

Ya que no existe un departamento formal de recursos humanos, se propone asignar a una persona específicamente para que maneje toda el área de RH, como la continuidad y seguimiento en la renovación de contratos. Preparar al personal de la empresa cuando se presenten cursos de reforma fiscal para los clientes, dar el tema a exponer con anticipación, evaluar una exposición del empleado previa al curso, esto se propone porque siempre exponen los directivos por la falta de preparación del personal. Restringir en internet el acceso a redes sociales, bloqueo de páginas y chats para evitar la pérdida de tiempo y aumentar la productividad. Realizar un reglamento interno de trabajo y darlo a conocer por medio de una junta donde mencione políticas de la empresa como por ejemplo el uso del uniforme para el cuidado de imagen del

despacho, recordarlo por medio de correos mensuales, boletines, etc. y por ultimo establecer un checador digital para el horario de entrada y salida, aunque no sea mucho personal el que se maneja en la empresa se trabajaría en la responsabilidad y el compromiso de puntualidad. El margen fue la diferencia entre el valor total y los costos totales incurridos por la empresa para desempeñar las actividades generadoras de valor, dentro de la empresa se identifico de manera específica las actividades que generan valor, mismas que las empresas de una industria deben realizar en los procesos de diseño, producción y atención al cliente. Las actividades también deben determinaron a un nivel relativamente detallado de las operaciones, es decir, al nivel de la unidad de negocios o proceso que sea apenas suficientemente grande para administrarse como una actividad empresarial por separado.

## RESULTADOS Y CONCLUSIONES

Las empresas familiares tienen una gran oportunidad de crecimiento, principalmente las que se dedican a brindar servicios profesionales, y el realizar ventajas competitivas mediante un sistema de valor donde dentro de las actividades que la misma empresa desempeñe puedan llevar acabo aplicaciones de nuevos servicios resulta de ayuda tanto a la administración y estructura de interna como a la empresa dentro de su mercado. La aplicación de las Teorías de Calidad y de Gestión del Servicio que se implementaron mediante la elaboración de la cadena de valor tuvo como fin el alcance del éxito a corto, mediano y largo plazo con el propósito de establecer metas que permitieron llevar a cabo los planes estratégicos del negocio en este caso un despacho contable familiar, comparando y determinando cuales son los principales competidores para el establecimiento de nuevos servicios. Fue necesario enfocarnos al sector empresarial y centrar el ambiente a que se dedica a prestar un servicio profesional, donde podemos concluir que ante la tendencia y responsabilidad de generar sistemas de gestión de calidad para asegurar la optimización de los procesos, es necesario contar con personal capacitado y comprometido con la misión y visión de la empresa. Para administrarse efectivamente el personal de una organización se requirió de un programa que le permitió a la administración tener la más completa selección de personas idóneas para los distintos puestos este departamento se le llamo recursos humanos. Ninguna empresa funciona sin recursos humanos, y como es la parte más compleja de la empresa, por eso se necesita un departamento de recursos humanos, la importancia del departamento, es aquí donde se estableció el departamento con una persona a cargo capacitada para realizar las tareas de esta área.

Deneb Elí Magaña Medina, Universidad Juárez Autónoma de Tabasco, México

### RESUMEN

*Se desarrolla el modelo predictivo de calidad de vida laboral obtenido en la primera fase del proyecto de investigación (Argüelles et al., 2013), diseñando estrategias a nivel negocio experimentando con los 50 trabajadores de las mipymes turísticas. El experimento confirma que el modelo es confiable para la percepción de esta calidad de vida, al responder en forma positiva las variables dependientes de las dimensiones observadas: soporte institucional, seguridad, integración al puesto, satisfacción, bienestar logrado, desarrollo personal, y administración del tiempo libre. Definiéndose que las estrategias directivas que se adopten en base a este modelo predictivo llevarán a mejorar la competitividad organizacional. Los resultados de la correlación de las variables independientes y dependiente, son altamente aceptables, significando su estrecha relación y respuesta entre sí, además que a través de la prueba estadística T Student, se comprobó que las estrategias diseñadas para el experimento impactaron en los trabajadores, incrementando su percepción de satisfacción.*

**PALABRAS CLAVE:** Experimento, Calidad de Vida, Estrategias, Satisfacción Laboral

## EXPERIMENTAL STUDY ON QUALITY OF WORK LIFE TOURISM MIPYMES

### ABSTRACT

*Predictive model of quality of work life obtained in the first phase of the research project develops (Argüelles et al., 2013), designing a business level strategies experimenting with 50 workers of tourism mipymes. The experiment confirms that the model is reliable for the perception of the quality of life, to respond positively to the dependent variables of the observed dimensions: institutional support, security, the post integration, satisfaction, well managed, staff development, and administration time. Defining the strategies, adopted policies based on this predictive model will improve organizational competitiveness. The results of the correlation of the independent and dependent variables are highly acceptable, meaning their close relationship and response to each other, in addition to through the test statistic T Student, it was found that strategies designed for the experiment impacted workers increasing their perception of satisfaction.*

**KEYWORDS:** Experiment, Quality of Life, Strategies, Job Satisfaction

## INTRODUCCIÓN

Múltiples son los aspectos que deben contemplarse cuando se aborda el estudio, entre otras cosas: el momento histórico, la concepción religiosa, las diferencias individuales, los aspectos sociales, así como las particularidades empresariales (Boada, De Diego y Vigil, 2004). El punto en el que los miembros de una organización son capaces de satisfacer sus necesidades en el contexto empresarial, donde se aplican todo tipo de políticas y estrategias de gestión de recursos humanos puede considerarse como calidad de vida laboral (Chiavenato, 1995). La salud laboral es un tema relevante a nivel mundial al referirse a la relación entre salud y el trabajo, con enfoque de encontrar el equilibrio que permita a los empleados desarrollar sus actividades laborales bajo las mejores condiciones posibles, y así llegar a alcanzar el objetivo de lograr el nivel más alto de bienestar físico, mental y social de los empleados en los lugares de trabajo (OIT, 2010) (OMS, 2004).

Esta investigación experimental, parte del estudio transversal realizado en la primera parte del proyecto, en el sector turístico hotelero campechano, para describir y correlacionar la calidad de vida de los trabajadores, diseñando y aplicando para las 10 empresas, que formaron parte de la población, las estrategias que mejoren la percepción de los empleados, aplicando con posterioridad en forma consistente el instrumento válido y confiable para medir la calidad de vida en el trabajo (González, Hidalgo, Salazar y Preciado, 2010), integrado por 7 rubros multidimensionales, en las que visualiza cuando el individuo se integra al trabajo, a través del empleo y bajo su propia percepción, ve cubiertas sus necesidades personales de: soporte institucional, seguridad e integración al puesto de trabajo y satisfacción por el mismo, identificando el bienestar conseguido a través de su actividad laboral y el desarrollo personal alcanzado, así como la administración y tiempo libre. Se transita por un marco teórico que sustenta la elección, para concluir con la ratificación del modelo predictivo propuesto.

Siempre nos habremos de preguntar la probabilidad de mejorar las productividad empresarial y el rendimiento óptimo de los trabajadores, si tenemos a la mano un modelo predictivo de calidad de vida laboral y se apliquen estrategias a nivel negocio que las mejore e impacten en ella. De esto se trata la investigación, obtener al final de cuentas si hay un impacto positivo en la percepción de la satisfacción laboral, después del uso de estrategias idóneas que la motiven.

## REVISION DE LA LITERATURA

El estudio de la calidad de vida laboral se viene investigando desde dos perspectivas teórico-metodológicas, básicamente: observándola desde el entorno del trabajo y desde el punto de vista psicológica (Davis y Cherns, 1975; Taylor, 1978; Elizur y Shye, 1990; (González et al., 1996). Ambas corrientes difieren en cuanto a los objetivos que persiguen en su propósito de mejora en la calidad de vida, en los aspectos del entorno de trabajo como objeto de estudio, en el punto en que centran su interés y en el nivel de generalidad de sus análisis de la vida laboral. Sin embargo, se complementan y guían a un estudio integral. En la recopilación de definiciones representativas de la calidad de vida laboral, se encuentran los dos enfoques tratados anteriormente, y que en su conjunto vienen a soportar la teoría de las estrategias que se diseñaron para comprobar su funcionalidad bajo el modelo predictivo obtenido en el trabajo de investigación desarrollado en su primera etapa por Argüelles et al. (2013), siendo:

*“Un proceso para humanizar el lugar de trabajo” (Walton, 1973). “Condiciones y ambientes de trabajo favorables que protegen y promueven la satisfacción de los empleados mediante recompensas, seguridad laboral y oportunidades de desarrollo personal” (Lau, 2000). “Alta calidad de vida, cuando: a) experimenta sentimientos positivos hacia su trabajo y sus perspectivas de futuro, b) está motivado para permanecer en su puesto de trabajo y realizando bien, y c) cuando siente que su vida laboral encaja bien con su vida privada, de tal modo que es capaz de percibir que existe un equilibrio entre*

*las dos de acuerdo con sus valores personales” (Katzell et al., 1975). “Es el proceso a través del cual una organización responde a las necesidades de sus empleados, desarrollando los mecanismos que les permitan participar plenamente en la toma de decisiones de sus vidas laborales” (Robbins, 1989). “Grado de satisfacción personal y profesional existente en el desempeño del puesto de trabajo y en el ambiente laboral, que viene dado por un determinado tipo de dirección y gestión, condiciones de trabajo, compensaciones, atracción e interés por las actividades realizadas y nivel de logro y autodesarrollo individual y en equipo” (Fernández, 1999). “Conjunto de Estrategias de cambio con objeto de optimizar las organizaciones, los métodos de gerencia y/o los puestos de trabajo, mediante la mejora de las habilidades y aptitudes de los trabajadores, fomentando trabajos más estimulantes y satisfactorios y traspasando poder, responsabilidad y autonomía a los niveles inferiores” (De la Poza, 1998).*

La manera en como las personas perciben el día a día del ambiente laboral, que involucran situaciones como: condiciones físicas, contractuales, remunerativas, de desarrollo, descanso, relaciones sociales que se dan entre los trabajadores, como entre éstos y la parte empresarial, también las actividades y los valores de los sujetos y las percepciones de satisfacción o insatisfacción, configuran la multidimensionalidad de la calidad de vida laboral ((Ministerio del Trabajo y Asuntos Sociales, 1998), (Chiang, 2008). Congruentes con lo expuesto, la calidad de vida laboral manifiesta la forma en que se percibe la experiencia laboral tanto en sus condiciones objetivas como la seguridad, higiene, salario, como en las subjetivas, esto es, la forma en que lo vive y experimenta el trabajador (González et al., 1996). En los estudios anteriores, se observan investigaciones paralelas, por un lado se toman las variables del entorno laboral y por el otro, las características personales de los individuos. Habrá que conjuntar las teorías, para tener un panorama completo de la calidad de vida laboral.

La calidad de vida laboral incluye múltiples factores: satisfacción con el trabajo ejecutado, posibilidades de futuro en la organización, reconocimiento a los resultados alcanzados, salario percibido, beneficios alcanzados, relaciones humanas con el grupo y la organización, ambiente psicológico y físico del trabajo, apertura de decisión y participación (Chiavenato, 2004). González, Hidalgo, Salazar y Preciado (2010) desde su óptica, para construir el instrumento que mide la calidad de vida laboral (CVT), establecen su definición: “La CVT es un concepto multidimensional que se integra cuando el trabajador, a través del empleo y bajo su propia percepción, ve cubiertas las necesidades personales. Asimismo, continúan señalando, implica la valoración objetiva y subjetiva de la dimensión: soporte institucional para el trabajo. Como conclusión de los antecedentes teóricos expuestos, y propuestos por los diferentes autores, se puede decir que la calidad de vida laboral ha sido utilizada como indicador de las experiencias humanas en el lugar de trabajo, y, el grado de satisfacción de las personas que lo desempeñan. Las organizaciones necesitan personas motivadas que participen activamente en los trabajos realizados, que sean atendidos correctamente por sus contribuciones, y que su calidad de vida sea el reflejo de su aporte, tanto al círculo que pertenece como a la misma sociedad de la que es parte.

Es por lo expuesto teóricamente, que justamente el instrumento desarrollado por González, Hidalgo, Salazar y Preciado (2010), resulta el idóneo para medir la calidad de vida de los trabajadores del sector hotelero campechano, siendo el utilizado en esta investigación. Como primera parte del proyecto de investigación de la Calidad de Vida Laboral de los empleados de las mipymes turísticas campechanas (Argüelles et al., 2013), se obtuvo un modelo predictivo de cada una de la dimensión del instrumento CVT-GOHISALO, el cual sirve de base para el experimento de este avance del conocimiento. Para experimentarlo, la organización diseña estrategias a nivel negocio para las áreas de insatisfacción, que les permitan obtener una ventaja competitiva y mejorar la percepción de la calidad de vida laboral (Hill y Jones, 2005). Para poder comprobar si las estrategias tienen el impacto esperado, basta con establecer:

Hipótesis de Investigación (Hi) = el establecimiento de estrategias mejoran la percepción de los ‘trabajadores de la calidad de vida laboral.

Hipótesis Nula (Ho) = el establecimiento de estrategias no cambian la percepción de los trabajadores de la vida laboral.

## METODOLOGÍA

La investigación es de tipo experimental correlacional, se tiene un grupo de estudio al que se le aplican las variables que puedan modificar la estructura de la percepción original de la calidad de vida laboral, en el ambiente del sector turístico hotelero de la zona centro de la ciudad de San Francisco de Campeche, Campeche. Inicialmente la entidad diseña sus estrategias de negocio, las aplica y posteriormente se obtienen los resultados, utilizando consistentemente el instrumento elaborado por González, Hidalgo, Salazar y Preciado (2010), en sus siete dimensiones. Siguiendo este camino, se describen los rasgos característicos modificados de la calidad de vida laboral, de la población sujeta de estudio. Este trabajo es cualitativo, aplicando cuestionarios y utilizando como método la entrevista. El modelo predictivo de calidad de vida se obtuvo con 10 mipymes del sector turístico campechano, con 50 trabajadores, que representaron a la población total. Las estrategias a nivel negocio se diseñaron para las 10 empresas modelo, con 50 trabajadores, misma utilizada en la muestra inicial, ya que el objeto es generar ventaja competitiva. Al ser la continuación del proyecto de investigación desarrollado por Argüelles et al (2013), el instrumento ya ha sido comprobado ser adecuado para el objeto del trabajo. Ya aplicado, después del diseño y uso de las estrategias a nivel empresa, se determinó su confiabilidad, obteniendo 0.89 de alfa de cronbach, por lo que se considera aceptable (Hernández, Fernández y Baptista. 2006).

Para las variables relacionadas con la calidad de vida laboral, se aplicó el CVT-GOHISALO (González, Hidalgo, Salazar y Preciado, 2010), creado específicamente para medir este concepto, debidamente acreditada su validez y confiabilidad, instrumento construido con 74 ítems, los cuales se agrupan en 7 dimensiones: soporte institucional, seguridad en el trabajo, integración al puesto de trabajo, satisfacción por el trabajo, identificando el bienestar conseguido a través de su actividad laboral y el desarrollo personal logrado, así como la administración de su tiempo libre, las cuales pueden valorarse de manera independiente. Los ítems se encuentran agrupados por tipo de respuesta, las cuales se encuentran en escala tipo Likert de 0 (la peor calificación), hasta 4 (la mejor calificación). Para la interpretación de los resultados se recomienda utilizar los límites para el puntaje de satisfacción baja, media y alta, en cada una de las dimensiones. El instrumento se aplicó de manera personalizada e individual con la finalidad de estar seguros de que los ítems fueran comprendidos por los empleados del sector hotelero. El cuestionario para describir la calidad de vida laboral, se aplicó bajo la corriente cualitativa, utilizando como método la entrevista. Se desarrolló con los 50 trabajadores del caso de estudio de las organizaciones del sector hotelero de la zona centro de la ciudad de San Francisco de Campeche, Campeche. Con las respuestas, se construyó una base de datos para que las variables contenidas en las siete dimensiones se analizaran en función a distribuciones de frecuencias.

Aplicado el instrumento a la población que sirve de base al experimento, se obtuvo un nuevo modelo calidad de vida laboral, que se comparó con el original propuesto en la primera parte del proyecto de investigación, determinándose el grado de afectación que tuvieron las estrategias a nivel negocio implantadas por la organización en la percepción de los trabajadores por la calidad de vida laboral, auxiliándose de la prueba estadística T de Student. Para una mejor comprensión de los conceptos de estudio, habrá que revisar la Tabla 1, en la que se operacionalizan las variables.

Tabla 1: Operacionalización de las Variables

Variable	Concepto
Soporte Institucional para el Trabajo	Aportes de la institución al puesto de trabajo, en forma de estructura que configura y soporta el empleo, agrupando sus indicadores en rubros tales como: procesos de trabajo, supervisión laboral, apoyo de los superiores, evaluación del trabajo y oportunidades de promoción.
Seguridad en el Trabajo	Se relaciona con las condiciones que se oferta al trabajador y le da confianza en su relación con el ente económico, incluye rubros tales como:
Integración al puesto de Trabajo	Grado de inserción del trabajador en su actividad laboral, estudia aspectos de pertinencia, motivación y ambiente de trabajo.
Satisfacción por el Trabajo	Es la sensación de gusto o disgusto del trabajador con respecto a la función encomendada, se estudian aspectos relativos a: dedicación a la labor, pertenencia, participación, despliegue de habilidades y aptitudes para el trabajo, reconocimiento y autovaloración.
Bienestar logrado a través del Trabajo	Posición de satisfacción por las necesidades básicas, que incluye lo obtenido mediante el desarrollo del trabajo. Evalúa los aspectos de: identidad organizacional, igualdad de puestos en la estructura empresarial, vivienda y aspectos de salud.
Desarrollo personal del Trabajador	Valor agregado personal obtenido por la actividad laboral; se estudian lo relativo a logros, seguridad y mejora personal.
Administración del Tiempo Libre	Es la percepción del gozo del tiempo libre del trabajador, cuando no está en su función laboral, referidas a: tiempo libre, así como al equilibrio entre la vida en sociedad y el ejercicio productivo.

*Para una mejor interpretación de los resultados a alcanzar, en la Tabla 1 se definen las 7 variables que son estudiadas y que en su conjunto integran el instrumento que mide la calidad de vida laboral; asimismo, cada una de ellas en lo particular, se evalúa a través de dimensiones que están contenidas en el concepto, y se estructuran en un cuestionario.*

## RESULTADOS

Atendiendo a los objetivos particulares del proyecto de investigación, el modelo predictivo de calidad de vida laboral determinado en la primera parte de Argüelles et al (2013), fueron diseñadas estrategias a nivel negocio para los ítems de insatisfacción, de cada una de las 7 dimensiones, que fueron aplicadas con los resultados de impacto que se narran a continuación:

Tabla 2: Áreas de Insatisfacción y Estrategias Diseñadas

INSATISFACCIONES (Ítems, 2,3,6,10,12 Y 13)	ESTRATEGIAS
1. Insatisfacción que tiene un empleado con respecto al trato que se recibe por parte de los superiores.	Curso de integración organizacional
2. Insatisfacción en la falta de interés que muestra un superior respecto a la calidad de vida de sus empleados	
3. Se carece de retroalimentación de los compañeros y directivos por los resultados del trabajo.	Elaboración manual de procedimientos
4. Falta de indicaciones claras y concisas para que el trabajador pueda realizar adecuadamente sus funciones.	
5. Forma en la cual se evalúan los procedimientos bajo los cuales un trabajador realiza sus funciones	Programas de reconocimientos
6. Escaso reconocimiento al esfuerzo y desempeño.	

*Como se observa en la Tabla 2 para los 6 ítems que presentaban insatisfacción se diseñaron 3 estrategias, las cuales servirán de base para convertirla a satisfacción.*

**Dimensión 1. Soporte Institucional para el Trabajo** Se diseñaron y aplicaron estrategias tales como: curso de integración organizacional, elaboración del manual de procedimientos, así como programas de reconocimiento. Con ello se propició que se modificara la percepción de los trabajadores en forma positiva, toda vez que se registran incrementos relevantes, en el número de casos: del 25-49% de satisfacción a 17 (34%) empleados, y del 50-74% de satisfacción a 18 (36%) trabajadores, posicionándolos en escala de crecimiento hacia su satisfacción total. Véase Tabla 2. La implementación de las estrategias fue efectivo para mejorar las condiciones de trabajo de los empleados en el sector turístico de Campeche. La prueba estadística T de Student permite comprobar que las estrategias implantadas incrementaron la satisfacción de los trabajadores en su calidad de vida.

**Dimensión 2. Seguridad en el Trabajo** Se diseñaron y aplicaron estrategias tales como: actualización de trabajo a los empleados de la organización, análisis acerca de los instrumentos de trabajos que requiere cada trabajador, una afiliación de la organización con una institución médica, y tener una base de datos con los

perfiles de cada miembro de la organización. Con ello se propició que se modificara la percepción de los trabajadores en forma positiva, toda vez que se registran incrementos importantes en el número de caso de empleados: del 0-24% de satisfacción a 27 (54%) y del 50-74% de satisfacción a 20 (40%), posicionándolos en escala de crecimiento hacia su satisfacción total. Véase Tabla 3. La implementación de las estrategias fue efectiva para mejorar las condiciones de trabajo en materia de seguridad en el sector turístico campechano. Al aplicar el estadístico T de Student se comprueba que las estrategias impactan positivamente en la percepción de la calidad de vida.

Tabla 3: Áreas de Insatisfacción de la Dimensión y Estrategias Diseñadas

INSATISFACCION (Ítems 7,9,10,13 Y 14)	ESTRATEGIAS
1. insatisfacción a las oportunidades de actualizaciones que ofrece la institución donde se labora	Actualizaciones de trabajo a los empleados.
2. el salario percibido por trabajador	Estudio socioeconómico
3. No recibir los insumos necesarios para realizar las funciones encomendadas.	Estudios acerca de los instrumentos de trabajo que requieren los trabajadores
4. No se realizan exámenes periódicos de salud por parte de la organización.	Afiliación de la organización con una institución médica
5. Las oportunidades de crecimiento en la organización muchas veces son por medio de influencias y no por medio curricular del empleado	Base de datos de todos los miembros de la organización, donde se encuentran los perfiles de cada miembro de la organización

*Como se muestra en la Tabla 3 se diseñaron 5 estrategias para combatir 5 ítems de oportunidad de mejora, en base al modelo predictivo propuesto en el proyecto de investigación.*

Dimensión 3. “Integración al área de trabajo” Se diseñaron y aplicaron estrategias tales como: registros y control de entradas y salidas así como también de las vacaciones correspondientes por ley, la delegación de las actividades por parte de los directivos de la organización, el establecimiento de un mediador de los conflictos que surjan dentro de la organización, programas de integración personal y el análisis de las funciones que se realizan en las áreas de trabajo. Con ello se propició que se modificara la percepción de los trabajadores en forma positiva, toda vez que se registran incrementos considerables en el número de empleados como son: del 0-24% de satisfacción a 16 (32%), del 25-49% de satisfacción a 21 (42%) y del 50-74% de satisfacción a 10 (20%), lo cual los posicionan, en escala de crecimiento hacia su satisfacción total. Véase Tabla 4. Esto se corrobora con la aplicación de la prueba estadística T de Student, dando como resultado que las estrategias si impactan en la percepción de la calidad de vida laboral.

Tabla 4: Áreas de Insatisfacción de la Dimensión y Estrategias Diseñadas

INSATISFACCIONES (ítems 2,4,5,7 y10)	ESTRATEGIAS
1. Las organizaciones no respetan los derechos laborales de cada persona	Registros de entradas y salidas por trabajador, y control acerca de las vacaciones por empleado
2. Desmotivación por estar activo en el puesto de trabajo	Delegación de actividades y/o autoridad por parte de los mandos altos de la organización
3. Insatisfacción por los conflictos de trabajo que no pueden ser resueltos por medio del dialogo	Establecimiento de un departamento y persona encargada de mediar los conflictos que surgen en la organización
4. Falta de solidaridad por parte de los compañeros en el trabajo	Establecimiento de programas de Integración organizacional
5. Insatisfacción por el trabajo asignado de acuerdo a la preparación académica	Análisis de las funciones que realiza cada área de trabajo.

*Como se puede apreciar en la tabla 4, se diseñaron estrategias para cada una de las áreas de insatisfacción (5 ítems), en base al modelo predictivo propuesto en el proyecto de investigación.*

Dimensión 4. “Satisfacción por el trabajo” Se diseñaron y aplicaron estrategias tales como: Establecimiento de compensaciones de trabajo y estímulos de trabajo, involucramiento del trabajador en las actividades de la empresa, realizaciones de análisis de puestos y el establecimiento de un manual de procedimientos. Con ello se propició que se modificara la percepción de los trabajadores en forma positiva, toda vez que se

registran incrementos notables en el número de casos: del 0-24% de satisfacción a 7 (14%), del 25-49% de satisfacción a 33 (66%) y del 50-74% de satisfacción a 7 (14%) trabajadores, a partir de los cuales posicionan a los empleados, en escala de crecimiento hacia su satisfacción total. Véase Tabla 5. El método estadístico T de Student utilizado, permite adoptar la hipótesis de que las estrategias sí impactaron la percepción de la calidad de vida laboral.

Tabla 5: Áreas de Insatisfacción de la Dimensión y Estrategias Diseñadas

INSATISFACCIONES (Ítems 2,5,6,7,8 Y 9)	ESTRATEGIAS
1. Horario de la jornada de trabajo	Establecimiento de compensaciones y estímulos de trabajo, Involucramiento del trabajador con la organización (participación en las decisiones de la empresa) y Realización de análisis de puestos y el establecimiento de un manual de procedimientos.
2. Insatisfacción por laborar en una institución y no en otra	
3. La relación de las funciones que se realizan en la organización	
4. Existe insatisfacción por parte de los empleados de no poder utilizar sus habilidades potenciales	
5. Insatisfacción por no poder aplicar la creatividad por parte de los trabajadores.	

*En la tabla 5 podemos observar que se diseñaron 3 estrategias para los 5 ítems que presentaban insatisfacción, entre los cuales se encuentran: establecimiento de estímulos dentro del trabajo, y una mayor participación de los empleados dentro de su organización, esto con el fin de mejorar las áreas que presentaban insatisfacción.*

Dimensión 5.” Bienestar logrado a través del trabajo” Se diseñaron y aplicaron estrategias tales como: Establecimiento de estudios socioeconómicos y de programas de recompensas. Con ello se propició que se modificara la percepción de los trabajadores en forma positiva, toda vez que se registran incrementos formidables en el número de casos: del 0-24% de satisfacción a 12 (24%), del 25-49% de satisfacción a 22 (44%) y del 50-74% de satisfacción a 13 (26%) trabajadores, con lo que se posicionan los empleados, en escala de crecimiento hacia su satisfacción total. Véase Tabla 6. Como resultado final concluyente, utilizando el método estadístico T de Student, las estrategias impactan, mejorando la percepción de la calidad de vida de los trabajadores.

Tabla 6: Áreas de Insatisfacción de la Dimensión y Estrategias Diseñadas

INSATISFACCIONES (Ítems 1,2,7,8, 10 Y 11)	ESTRATEGIAS
1. No se cuenta con calidad de los servicios básicos de la vivienda.	Estudios socioeconómicos
2. Insatisfacción de las dimensiones de las viviendas	
3. Insatisfacción por el mal desempeño de actividades diarias (alimentación, vestido, etc.)	
4. No se tiene suficiente acceso a alimentos en cantidad y calidad	
5. Grado de compromiso reflejado hacia el logro de objetivos personales con respecto al trabajo.	Establecimiento de programas de recompensas

*En la tabla 6 se observan las 2 estrategias implantadas en base al modelo predictivo, en el cual se implantaron estrategias económicas para incentivar a los empleados, mismas que propician el incremento de la satisfacción en los 5 ítems deficientes.*

Dimensión 6. “Desarrollo personal” Se diseñaron y aplicaron estrategias tales como: programa de recompensas, establecimiento de actividades físicas (deportes, áreas de recreamientos. Etc.) Y el involucramiento del personal con las actividades propias y extraordinarias de la organización. Con ello se propició que se modificara la percepción de los trabajadores en forma positiva, toda vez que se registran incrementos abundantes en el número de casos entre los cuales destacan: del 0-24% de satisfacción a 12 (24%) empleados, del 25-49% de satisfacción a 21 (42%) y del 50-74% de satisfacción a 11 (22%) de ellos, lo cual posicionan a los empleados, en escala de crecimiento hacia su satisfacción total. Véase Tabla 7. De esta forma los resultados obtenidos en la dimensión *Desarrollo personal*, muestran claramente un mayor grado de satisfacción por parte del empleado en sus respectivas empresas que forman parte del turismo campechano y con ello se le brinda la posibilidad al trabajador de poder desarrollarse física, mental y

socialmente dentro de la organización. Se ratifica la hipótesis nula de que las estrategias mejoran la percepción de la calidad de vida, esto mediante la prueba de la T de Student.

Tabla 7: Áreas de Insatisfacción de la Dimensión y Estrategias Diseñadas

INSATISFACCIONES (Ítems 3,5,6, 7 Y 8)		ESTRATEGIAS
1.	Insatisfacción por no mejorar las potencialidades de cada trabajador por estar en ese trabajo.	Establecimiento de programa de recompensas
2.	Insatisfacción por no poder mejorar el nivel de vida.	Establecimiento de actividades físicas, (deporte, áreas de recreamiento etc.)
3.	El trabajo no permite brindar el cuidado necesario para conservar la integridad de mis capacidades físicas, mentales y sociales.	
4.	El grado de compromiso que siente un trabajador hacia el logro de los objetivos de la institución	Involucramiento del personal con actividades y/o eventos de la empresa

*Las 3 estrategias implantadas como se puede apreciar en la Tabla 7 son un efectivo programa de recompensas, establecimiento de áreas de recreación y la incorporación de los empleados a las actividades de toma de decisiones destinadas a combatir los 5 ítems de insatisfacción.*

Dimensión 7. “Administración del tiempo” Se diseñaron y aplicaron estrategias tales como: realización de un programa efectivo de trabajo, donde se especifiquen los horarios de trabajo, y la aplicación de la matriz de Eisenhower. Con ello se propició que se modificara la percepción de los trabajadores en forma positiva, toda vez que se registran incrementos en el número de casos: del 0-24% de satisfacción a 7 (14%) y del 25-49% a 29 (58%) trabajadores, lo cual posicionan a los empleados, en escala de crecimiento hacia su satisfacción total. Véase Tabla 8. Se logra un aumento en el nivel de satisfacción por parte de los trabajadores, lo cual deja en claro que la implementación de las estrategias fue efectivo para mejorar las condiciones cambiantes de trabajo de los empleados en el sector turístico de Campeche. Esto se comprobó con la prueba T de Student.

Tabla 8: Áreas de Insatisfacción y Estrategias Diseñadas

INSATISFACCION (Ítems 2 Y 4)	ESTRATEGIA
El trabajo no permite cumplir con las actividades planeadas fuera del horario establecido de trabajo	Realización de un programa efectivo de trabajo, especificando los horarios de trabajo. Asimismo aplicando la matriz de Eisenhower.
Los horarios de trabajo no permiten participar en la realización de actividades domésticas	

*Las dos estrategias aplicadas en esta dimensión se pueden observar en la tabla 8, donde se observa que se dirigen a abatir la insatisfacción de los 2 ítems observados en el estudio inicial.*

## DISCUSIÓN Y CONCLUSIÓN

Con base en la información obtenida, se identifica en términos generales que los trabajadores del sector turístico campechano presentan una mayor satisfacción en su calidad de vida laboral. Esto en función a que se implementaron estrategias dentro de las siete dimensiones y dejaron como resultado la eliminación de las áreas de insatisfacción por las que atravesaban los trabajadores del sector turístico campechano.

La Dimensión Soporte Institucional para el trabajo presenta una satisfacción en aumento al registrar más casos de satisfacción en los trabajadores en las variables de satisfacción del 25-49% con 17 (34%) y del 50-74% de satisfacción con 18 (36%) empleados, esto debido a que las estrategias fueron de gran ayuda para mejorar internamente la organización al comprender mejor cada trabajador su función y optimizar las relaciones obrero-patronales. La siguiente dimensión Seguridad en el trabajo registro aumento en la satisfacción de los empleados del promedio de 0-24% con 27 casos (54%) y del 25-49% con 20 casos.

Este incremento se debe a que los empleados tienen más satisfacción en sus labores diarias al contar con la seguridad que una institución médica le ofrece en su entorno de trabajo, así como también de las constantes actualizaciones de las funciones de trabajo y tener la certeza de crecimiento dentro de su organización. Integración al puesto de trabajo fue un área de regular satisfacción del número de casos. Las mayores satisfacciones se presentaron en los porcentajes de satisfacción del trabajador del 0-24% de satisfacción

con 16 (32%), del 25-49% de satisfacción con 21 (42%) y del 50-74% de satisfacción con 10 (20%) casos. Este incremento de satisfacción se debió a que los directivos de la organización utilizan los principios de empowerment con la finalidad de mantener en constante motivación al empleado al sentir que se le encomiendan responsabilidades serias dentro de la institución donde labora, otro punto importante fue que ahora se mantienen registros de entrada y salidas y se sabe correctamente cada función del personal dentro de la organización. La dimensión Satisfacción por el trabajo presento mejoría en torno a la satisfacción por parte de los empleados ya que se obtuvo incrementos notables en el número de casos: del 0-24% de satisfacción a 7 (14%), del 25-49% de satisfacción a 33 (66%) y del 50-74% de satisfacción a 7 (14%) trabajadores. La mejoría se presenta debido a que los empleados empezaron a recibir estímulos económicos debido al horario de su jornada de trabajo y del involucramiento del personal con las decisiones de la empresa, lo cual sin duda logro estimular más al trabajador, al sentirse parte esencial de la organización. La siguiente dimensión,

Bienestar logrado a través del trabajo, fue a la alza en su satisfacción al registrar incrementos formidables en el número de casos: del 0-24% de satisfacción a 12 (24%), del 25-49% de satisfacción a 22 (44%) y del 50-74% de satisfacción a 13 (26%) trabajadores, al estimular a los empleados con un programa de recompensas con el fin de alentarlos en sus actividades diarias. Desarrollo personal fue un área con regular incremento en la satisfacción en diversos porcentajes. Los mayores números de casos se presentaron en las siguientes variables de satisfacción: del 0-24% de satisfacción a 12 (24%) empleados, del 25-49% de satisfacción a 21 (42%) y del 50-74% de satisfacción a 11 (22%) de ellos al incentivarlos con un programa de actividades físicas y el involucramiento de este dentro de las decisiones diarias de la organización. La última dimensión Administración del tiempo libre mejoro sus porcentajes al aplicar un programa de supervisión de entradas y salidas del personal y la correcta aplicación de la estrategia de la matriz de Eisenhower. Cabe mencionar la mejoría en torno a sus áreas de insatisfacción las cuales registraron incrementos notables en el número de casos: del 0-24% de satisfacción a 7 (14%) y del 25-49% a 29 (58%) trabajadores, con lo cual deja muy claro la eficiencia y eficacia de la correcta implementación de las estrategias en el sector turístico.

## CONCLUSIÓN GENERAL

La globalización y la competitividad ha crecido mucho a lo largo de los años, por este motivo es importante tener en cuenta al recurso más importante que tiene una organización: el capital humano.

Antes de la aplicación de las Estrategias, se buscaba poner más énfasis en 3 puntos importantes relacionados a los trabajadores.

La mejora de la forma de vivir, que incluye el disfrute de bienes y riquezas logrados gracias a la actividad laboral (bienestar logrado a través del trabajo).

Brindarle al trabajador firmeza en su relación con la organización (seguridad en el trabajo).

Propiciarle al trabajador la sensación global de agrado o gusto con relación a su empleo (satisfacción por el trabajo).

Luego de la aplicación de las mismas es seguro mencionar que estos tres puntos fueron mejorados con éxito al permitir al trabajador del sector turístico campechano una mejor forma de vivir, de trabajar, de sentirse parte de su organización, al brindarle la firmeza en relación con su organización y hacerle sentir de su agrado las labores que desempeñar dentro de su puesto de trabajo en la organización. Con lo expuesto, se concluye que el modelo predictivo de calidad de vida laboral que se presenta en sus 7 dimensiones, es confiable y el diseño e implantación de estrategias a nivel negocio arrojó el resultado esperado.

## RECOMENDACIONES

El instrumento utilizado para medir la calidad de vida laboral, se contextualizó al sector turístico hotelero, ubicado en el centro histórico de la ciudad de Campeche, Campeche, por lo tanto, su alcance se circunscribe a él. Podría utilizarse en otras realidades, siempre y cuando se estime que su fiabilidad sea aceptable en ellos. Paulatinamente, ir depurando las estrategias a nivel negocio, que se instrumentaron, toda vez que la percepción apunta a la satisfacción pero no logra rebasar el nivel 3, de un total de 4, o en su caso, probar con otras nuevas.

# MOTIVACIONES DE LA REVELACIÓN DE INFORMACIONES REPRESENTATIVAS DEL CAPITAL RELACIONAL SOCIAL DE LOS BANCOS EN EL MERCADO DE CAPITALES DE BRASIL Y DE ESPAÑA.

Edila Eudemia Herrera Rodríguez, Universidad de Panamá  
Clea Beatriz Macagnan, Universidade do Vale do Rio dos Sinos

## RESUMEN

*Este estudio analiza las motivaciones de la revelación voluntaria de informaciones sobre recursos intangibles representativos de capital relacional social, de los bancos en el mercado de capitales de Brasil y de España. En vista de que el problema de la asimetría de la información surge por el hecho de que una de las partes de un contrato pudiera poseer más información que su contraparte, la teoría de la agencia plantea que revelar informaciones voluntarias reduce los costes de agencia. Por otro lado, la teoría del coste del propietario parte del presupuesto de que revelar informaciones genera costes, adicional al hecho de que se pudiera estar revelando información estratégica a la competencia. Este estudio analiza ciento setenta y cuatro informes anuales de veintinueve bancos, durante el período 2006 al 2011. Se utilizó la técnica de regresión lineal múltiple con datos de panel para el análisis de los datos. Se confirmaron las hipótesis de que el tamaño de los activos del banco, la rentabilidad del activo y del patrimonio, el endeudamiento, el precio de la acción dividido entre su valor contable y el pago de dividendos, son motivaciones de la revelación voluntaria de informaciones de recursos intangibles relacionados al capital relacional social.*

**PALABRAS CLAVES:** Revelación Voluntaria, Capital Relacional Social, Recursos Intangibles, Asimetría de Información, Teoría de Agencia, Teoría del Coste del Propietario

## MOTIVATIONS FOR DISCLOSURE OF INFORMATION REPRESENTATIVE RELATIONAL SOCIAL CAPITAL OF BANKS IN THE CAPITAL MARKET IN BRAZIL AND SPAIN

### ABSTRACT

*This paper examines the motivations of voluntary disclosure of information about intangible resources, representative of relational social capital of banks in the capital market in Brazil and Spain. Since the problem of information asymmetry arises from the fact that one of the parties to a contract may have more information than its counterpart, agency theory suggests that voluntary information disclosure reduces agency costs. On the other hand, the proprietary costs theory, part of the budget that reveals information generates costs and it could be revealing strategic information to competitors. This study examines one hundred seventy four annual reports of twenty banks during the period 2006 to 2011. The technique of multiple linear regressions with panel data for the analysis of the data was used. The size hypothesis of the bank, the return on assets and equity, debt, the share price divided by book value and pay dividends were confirmed as motivations for voluntary information disclosure of intangible resources related to relational social capital.*

**JEL:** G10, G12, G14

**KEYWORDS:** Voluntary Disclosure, Social Relational Capital, Intangible Resources, Information Asymmetry, Agency Theory, Proprietary Costs Theory

## INTRODUCCIÓN

Este trabajo examina las motivaciones de la revelación de informaciones representativas del capital relacional social de los bancos en el mercado de capitales de Brasil y de España. Fueron considerados los bancos que publicaron los informes anuales completos de los años 2006 al 2011. Dada la existencia de asimetría de la información, esta investigación va encaminada hacia la reducción de la misma, a través de la comunicación voluntaria de informaciones sobre recursos intangibles, en este caso particular sobre capital relacional social. Esta investigación se sustenta en dos teorías: la teoría de la agencia y la teoría del coste del propietario. La primera presupone que la revelación voluntaria de informaciones reduce la asimetría de la información y los consecuentes costes de agencia. (Jensen & Meckling, 1976). La segunda por su parte, limita la revelación de informaciones por los costes generados por procesar y publicar las mismas, además de la posible pérdida de ventajas competitivas por revelar información estratégica a la competencia. (Verrecchia, 1983, Fishman y Hagerty, 1989, Darrough y Stoughton, 1990, Wagenhofer, 1990 y Macagnan, 2007). Seguidamente se presenta la revisión de literatura, metodología, análisis de resultados, conclusiones y bibliografía.

## REVISIÓN DE LITERATURA Y FORMULACION DE LAS HIPOTESIS

Diferentes estudios han investigado la asociación entre algunas características de la empresa y la divulgación de una variedad de índices de divulgación respecto al capital relacional social en diferentes países. (Arvidsson, 2003; Macagnan, 2007, 2009; Vikalpa, 2012; Herrera, 2013). En contexto de la empresa, el agente (administrador) actúa en nombre del propietario (accionista). (Eisenhardt, 1989; Fox, 1984; Jensen & Meckling, 1976; Ross, 1973; Barako, Hancock e Izan, 2006). En este sentido, la teoría de la agencia plantea que revelar informaciones voluntarias reduce el problema de la asimetría de la información entre agentes y propietarios y los costes de agencia. (Jensen & Meckling, 1976). Los denominados costes de agencia incluyen: a). Gastos del principal, generados por la vigilancia de las actuaciones del agente (gastos de control o vigilancia), a fin de garantizar que el agente actuará en beneficio de sus intereses; b). Costes incurridos por el agente (gastos de garantía), en el sentido de demostrar que estaría actuando en beneficio de los intereses del principal; y c). La pérdida residual: las divergencias que se darán entre los resultados conseguidos y los que hubiera conseguido el principal por actuar directamente. (Jensen & Meckling, 1976). Como mecanismo para reducir estas divergencias, la teoría de la agencia sugiere la necesidad de establecer políticas de revelación de información voluntaria, minimizando la problemática de asimetría de información entre agentes y propietarios.

Desde otra perspectiva, la teoría del coste del propietario parte del principio de que las empresas restringirían la revelación voluntaria de información, debido a los costes relacionados con la preparación y divulgación de la misma, así como por costes por revelar ventajas competitivas (Verrecchia, 1983; Fishman & Hagerty, 1989; Darrough & Stoughton, 1990), Wagenhofer, 1990; Macagnan, 2007). Los costes de la revelación de información se divide en tres tipos: a). Costes de la preparación, elaboración y publicación de las informaciones (Verrecchia, 1983; Fishman & Hagerty, 1989); b). Costes relativos a la evaluación de las acciones por los accionistas (Verrecchia, 1983; Fishman & Hagerty, 1989); y c). Desventajas competitivas por revelar informaciones sensibles al mercado (Wagenhofer, 1990, Darrough & Stoughton, 1990, Macagnan, 2007). Frente a estas dos situaciones se encontrarían los agentes, por un lado revelar informaciones reduce el problema de la asimetría de la información y los costes de agencia; y por otra parte revelar informaciones ocasiona costes a la empresa y la posible pérdida de sus ventajas competitivas. La teoría de la agencia (Jensen & Meckling, 1976), sugiere que el tamaño constituye una motivación para que las empresas revelen mayor cantidad de informaciones. Esto con el propósito de reducir el problema de la

asimetría de la información entre agentes y propietarios. Por su parte, la teoría del coste del propietario (Verrecchia, 1983, Macagnan, 2007), presupone que revelar informaciones adicionales genera costes (Buzby 1975, Cooke 1989, 1992), además de la posible pérdida de ventajas competitivas por revelar informaciones estratégicas a la competencia. (Macagnan, 2007). En base a estos planteamientos, se formula la siguiente hipótesis:

El tamaño de los bancos está positivamente relacionado con la motivación de revelar informaciones representativas del capital relacional social. En base a la teoría de la agencia (Jensen & Meckling, 1976), la rentabilidad elevada constituye una motivación para la revelación de informaciones. Esto porque la empresa estaría mostrando al mercado su solidez financiera. Para la teoría del coste del propietario (Verrecchia, 1983, Macagnan, 2007), una elevada rentabilidad de la empresa no debería constituir una motivación para revelar informaciones, ya que esta habla por sí sola de la situación de la empresa, y por tanto, no sería necesario incurrir en costes adicionales para procesar y publicar estas informaciones. Se plantea la siguiente hipótesis:

La rentabilidad de los bancos está positivamente relacionada con la motivación de revelar informaciones representativas del capital relacional social. Revelar informaciones sobre el endeudamiento de la empresa pudiera estar motivado por la necesidad de justificar las políticas de deuda asumidas por la empresa ante sus accionistas. Esto de acuerdo a los presupuestos de la teoría de la agencia. (Jensen & Meckling, 1976). Se formula la siguiente hipótesis:

El endeudamiento de los bancos está positivamente relacionado con la motivación de revelar informaciones representativas del capital relacional social. Entre mayor sea la cantidad de años que tengan las empresas de estar constituidas, más motivadas estarían a revelar informaciones sobre sus recursos intangibles, de acuerdo con la teoría de la agencia. (Jensen & Meckling, 1976). Desde la perspectiva de la teoría del coste del propietario (Verrecchia, 1983, Macagnan, 2007), la cantidad de años reflejaría la solidez de la empresa por lo que no implicaría una motivación para revelar este tipo de informaciones. Se formula la siguiente hipótesis:

La antigüedad de los bancos está negativamente relacionada con la motivación de revelar informaciones representativas del capital relacional social. La teoría de la agencia (Jensen & Meckling, 1976) podría explicar que la diferencia entre el precio de la acción y su valor contable es una motivación para revelar informaciones sobre sus recursos intangibles. De acuerdo a esta teoría, entre mayor sea el precio de la acción dividido entre el valor contable, mayor debería ser la revelación de información sobre sus recursos intangibles. Con esto se reduciría el problema de asimetría de información y los costes de agencia. Se plantea la siguiente hipótesis:

La diferencia entre el precio de la acción dividido entre el valor contable de los bancos está positivamente relacionado con la motivación de revelar informaciones representativas del capital relacional social. De acuerdo a la teoría de la agencia (Jensen & Meckling, 1976), la revelación de informaciones acerca del pago de dividendos, pudiera estar motivada por la confianza que se generaría entre los accionistas, al decirles que la empresa sí paga dividendos y por tanto muestra una política atractiva para captar nuevas inversiones. Para la teoría del coste del propietario (Verrecchia, 1983, Macagnan, 2007), la posición sería en sentido contrario. Es decir que revelar este tipo de informaciones significaría incurrir en costes innecesarios para la empresa. En base a lo anterior, se formula la siguiente hipótesis:

El pago de dividendos por parte de los bancos está positivamente relacionado con la motivación de revelar informaciones representativas del capital relacional social. La teoría de la agencia (Jensen & Meckling, 1976), plantea que la emisión de nuevas acciones debería ser una motivación para la revelación de informaciones sobre recursos intangibles. Así las empresas mostrarían su incursión a nuevos mercados, con

lo cual reflejarían su solidez financiera. En otra perspectiva, la teoría del coste del propietario (Verrecchia, 1983; Macagnan, 2007), presupone que revelar este tipo de informaciones significaría costes para recolectar y procesar la información. Se formula la siguiente hipótesis:

La emisión de nuevas acciones por parte de los bancos está positivamente relacionada con la motivación de revelar informaciones representativas del capital relacional social. De acuerdo con la teoría de la agencia (Jensen & Meckling, 1976) la revelación de informaciones reduce el problema de la asimetría de la información y los costes de agencia. Así, mediante la revelación de informaciones acerca del pago de dividendos, los accionistas pudieran sentir confianza acerca de la administración de los recursos que han colocado para que se los administren. La teoría del coste del propietario (Verrecchia, 1983; Macagnan, 2007), presupone que revelar este tipo de informaciones involucraría costes innecesarios, ya que al pagar dividendos se puede concluir que la empresa está en capacidad de atender los intereses de los accionistas. Se formula la siguiente hipótesis:

Los dividendos por acción pagados por los bancos están positivamente relacionados con la motivación de revelar informaciones representativas del capital relacional social. La hipótesis cotización en más de una bolsa, no fue encontrada como elemento condicionante de la divulgación de información sobre recursos intangibles, por las investigaciones revisadas. En base a los presupuestos de la teoría de la agencia (Jensen & Meckling, 1976), el hecho de que el banco cotice en más de una bolsa debería ser una motivación para revelar más informaciones. La teoría del coste del propietario (Verrecchia, 1983; Macagnan, 2007), plantea que no es necesaria la revelación de informaciones, por el hecho de que al ampliar sus mercados la empresa está reflejando su solvencia económica. Se formula la siguiente hipótesis:

La cotización en más de una bolsa por parte de los bancos está positivamente relacionada con la motivación de revelar informaciones representativas del capital relacional social. En general, los gerentes tienen incentivos para revelar más información cuando las empresas tienen mejores perspectivas de beneficios u oportunidades de crecimiento. (Akhtaruddin & Hossain, 2008). Las empresas con mayor crecimiento podrían tener más motivaciones para revelar informaciones sobre sus recursos intangibles, de acuerdo a los presupuestos de la teoría de la agencia (Jensen & Meckling, 1976). Con esto sería posible reducir en parte el problema de la asimetría de la información y los costes de agencia. La teoría del coste del propietario (Verrecchia, 1983; Macagnan, 2007), no considera que una empresa en crecimiento necesite incurrir en costes de revelación, ya que sus propios activos, ingresos y utilidades mostrarían la buena situación en la que se encuentra la compañía. Se formula la siguiente hipótesis:

El crecimiento por parte de los bancos está positivamente relacionado con la motivación de revelar informaciones representativas del capital relacional social. La relación positiva de las variables explicativas es medida en base a que entre mayor sea el tamaño de las mismas, mayor será motivación de la revelación de informaciones representativas del capital relacional social. La relación negativa en cambio, indica que entre mayor sea el tamaño de la variable explicativa, menor será la motivación para revelar este tipo de informaciones.

## METODOLOGÍA

A partir de las hipótesis se ha formulado las variables representativas de las mismas, tal como puede ser observado en la tabla 2.

Tabla 2: Hipótesis, Variables, Identificación, Fórmulas y Unidades Utilizadas

Hipótesis	Variables	Identificación	Fórmulas	Unidades Utilizadas
Tamaño	Total de activos	Lnactt	Valor total del activo	Millones de Reales
Rentabilidad	Roa	Roa	(Utilidad Neta/ Activos)*100	Porcentual
	Roe	Roe	(Utilidad Neta/ Patrimonio Líquido)*100	Porcentual
Endeudamiento	Endeudamiento	End	(Total de pasivos / Total de activos)*100	Porcentual
Antigüedad	Años de constitución del banco	Antig	Años de constitución del banco	Años
Precio de la acción dividido por su valor contable	Precio de la acción dividido por su valor contable	P_Vcont	(Cotización de la acción/Valor contable de la acción)*100	Porcentual
Pago de dividendos	Pago de dividendos	Pag_Div	Pago de dividendos	Dicotómica
Emisión de nuevas acciones	Emisión de nuevas acciones	Em_Nu_Acc	Emisión de nuevas acciones	Dicotómica
Dividendo por acción	Dividendo por acción	Div_Acc	Dividendo por acción	Reales
Cotización en más de una bolsa	Cotización en más de una bolsa	Cot_+_Bol	Cotización en más de una bolsa	Dicotómica
	Activo total	C_Actt	(Activo total del año analizado/activo total del año anterior)*100	Porcentual
Crecimiento	Ingresos	C_Ing	(Ingresos del año analizado/ingresos del año anterior)*100	Porcentual
	Lucro líquido	C_Luc	(Lucro líquido del año analizado/lucro líquido del año anterior)*100	Porcentual

Fuente: elaboración propia de las autoras

La fórmula 1 presenta el modelo empírico utilizado para medir las motivaciones para la revelación de informaciones representativas del capital relacional social.

$$Rcrs = \beta_0 + \beta_1 \ln Actt_{it} + \beta_2 Roa_{it} + \beta_3 Roe_{it} + \beta_4 End_{it} + \beta_5 Antig_{it} + \beta_6 P\_Vcont_{it} + \beta_7 Pag\_Div_{it} + \beta_8 Em\_Nu\_Acc_{it} + \beta_9 Div\_Acc_{it} + \beta_{10} Cot\_+\_Bol_{it} + \beta_{11} C\_Actt_{it} + \beta_{12} C\_Ing_{it} + \beta_{13} CLuc_{it} + \varepsilon_{it} \quad (1)$$

Siendo:

**Rcrs**= revelación de informaciones representativas del capital relacional social

$\beta_0$ = constante

$\beta_i$ = parámetros que serán estimados

$\ln Actt_{it}$  = total del activo del banco “i” en el año “t”;

$Roa_{it}$  = rentabilidad del activo del banco “i” en el año “t”;

$Roe_{it}$  = rentabilidad del patrimonio del banco “i” en el año “t”;

$End_{it}$  = endeudamiento del banco “i” en el año “t”;

$Antig_{it}$  = antigüedad del banco “i” en el año “t”;

$P\_Vcont_{it}$  = precio de la acción dividido entre su valor contable del banco “i” en el año “t”;

$Pag\_Div_{it}$  = dividendos pagados del banco “i” en el año “t”;

$Em\_Nu\_Acc_{it}$  = emisión de nuevas acciones del banco “i” en el año “t”;

$Div\_Acc_{it}$  = dividendos por acción del banco “i” en el año “t”;

$Cot\_+\_Bol_{it}$  = cotización en más de una bolsa del banco “i” en el año “t”;

$C\_Actt_{it}$  = crecimiento del activo total del banco “i” en el año “t”;

$C\_Ing_{it}$  = crecimiento de los ingresos del banco “i” en el año “t”;

$C\_Luc_{it}$  = crecimiento del lucro líquido del banco “i” en el año “t”;

$\varepsilon_{it}$  = error aleatorio que capta el efecto de las variables omitidas del banco “i” en el año “t”;

i = bancos, de 1 a 29;

$t$  = anos, de 2006 a 2011.

### Variable Dependiente: Revelación de Información Sobre Capital Relacional Social

Para medir las motivaciones de la revelación de informaciones representativas del capital relacional social, fueron creados veinte (20) indicadores representativos de este tipo de recursos intangibles. Los indicadores utilizados tienen como base la investigación de Macagnan (2007), que analizó las empresas españolas. Se partió de esos indicadores analizando y adaptándolos al segmento bancario. Fue adoptado el procedimiento dicotómico, en el cual se utilizan uno o cero para dar a conocer la revelación. Con el número uno se identifican los indicadores (ítems) revelados y con el cero los no revelados. (Cooke, 1989, 1992; Camfferman & Cooke, 2002; Macagnan, 2007, 2009) y se define como:

$$I_j = \frac{\sum_{i=1}^{nj} x_{ij}}{nj} \quad (2)$$

Dónde:

**I** = índice

**j** = banco

**i** = indicadores “i” del banco “j”

**x<sub>ij</sub>** = número de indicadores “i” obtenidos para el banco “j”; 1 si el ítem es revelado, 0 si no es revelado; de modo que  $0 \leq I_j \leq 1$

**nj** = número de indicadores =20

Para el desarrollo de esta investigación, se han seleccionado los bancos inscritos en el mercado de capitales: en Brasil la bolsa de São Paulo - BM&F BOVESPA y en España: las bolsas de Madrid y Barcelona. La muestra la integran aquellos bancos que publicaron el 100% de sus informes anuales disponibles para descargar su página electrónica de internet, siendo 38 bancos. De ellos, fueron eliminados 9. Esto, por la ausencia de datos sobre algunas variables, y en otros casos porque los datos se localizaban muy dispersos de la media, lo cual pudiera ocasionar que se obtuvieran resultados poco significativos. La muestra quedó integrada finalmente por 29 bancos. Esta representa un total de 174 informes anuales. Para el desarrollo de esta investigación, fueron analizados seis años, desde el año 2006 hasta el 2011. El total de la muestra para cada uno de estos países se presenta en la Tabla 1.

Tabla 1: Representación de los Bancos Por País

País	Total de bancos	Muestra
Brasil	29	18
España	23	11
Total de bancos	52	29

## RESULTADOS

En esta sección se presentan los resultados obtenidos en esta investigación. Se muestran las estadísticas descriptivas y el análisis de correlación entre las variables explicativas, seguido del análisis de regresión lineal múltiple con datos de panel.

Estadísticas Descriptivas y Análisis de Correlación

En este apartado se muestran las estadísticas descriptivas de la variable dependiente y las variables explicativas. En la tabla 3 se muestran las estadísticas descriptivas de la variable dependiente: revelación de capital relacional social de los bancos en el mercado de capitales de BM&F BOVESPA.

Tabla 3: Resumen de las Estadísticas Descriptivas de la Revelación de Informaciones Representativas del Capital Relacional Social de los Bancos Registrados en el Mercado de Capitales de Brasil. Bolsa de Valores de São Paulo – BM&F BOVESPA

Año	N	Media	Desv-Std.	Mínimo	Máximo
2006	18	52.78	38.90	0.00	100.00
2007	18	59.92	33.25	0.00	100.00
2008	18	55.16	37.22	0.00	100.00

Para la variable total de activos, se sugiere la transformación de los datos originales en logaritmo o raíz cuadrada a fin de facilitar el trabajo estadístico. Esto debido a que las variables presentan una desviación estándar muy superior al valor de la media. La Tabla 6 presenta la matriz de correlaciones entre las variables explicativas.

Tabla 6: Matriz de Correlaciones de las Variables Explicativas

La variable activo total está relativamente correlacionada con la variable antigüedad. La variable Roa está relativamente correlacionada con la variable Roe y con la variable endeudamiento. La variable Roe está

relativamente relacionada con la variable precio entre el valor contable. En relación a las demás variables, se observan diferentes correlaciones en menor significancia.

### Análisis de Regresión Múltiple Con Datos de Panel

La Tabla 7 presenta los resultados del modelo, donde se examinan las motivaciones de la revelación de informaciones representativas del capital relacional social. La Tabla 7 presenta el análisis de regresión entre la revelación de capital relacional social (variable dependiente), y las motivaciones de tal revelación (variables explicativas), con un  $R^2$  Ajustado de 43.25%. Fueron confirmadas seis variables, como motivaciones de la revelación de informaciones representativas del capital relacional social, con un nivel de significancia entre 1% y 5%. Se confirma que entre mayor sea el tamaño de los activos, mayor será la motivación de revelar informaciones representativas del capital relacional social. Estos resultados ratifican los obtenidos por Arvidsson (2003) y Vikalpa (2012). Se confirma la hipótesis Roa, representada por la rentabilidad del activo, como motivación de la revelación de informaciones representativas del capital relacional social, con relación positiva. Las mismas conclusiones fueron obtenidas por Vikalpa (2012).

Fuente: elaboración propia de las autoras.

La hipótesis Roe, representada por la rentabilidad del patrimonio, fue confirmada como motivación de la revelación de información de capital relacional social, con relación negativa. Ratifican estos resultados, los obtenidos por Macagnan (2007) y Vikalpa (2012) en sus investigaciones. Se confirma que en endeudamiento es una motivación de la revelación de informaciones sobre capital relacional social, con relación positiva. Con los mismos hallazgos concluyó sus investigaciones Macagnan (2007, 2009). Se confirma que entre mayor sea la diferencia entre el precio de la acción y su valor contable, mayor será la motivación de la revelación de informaciones representativas del capital relacional social. La hipótesis pago de dividendos fue confirmada, con relación negativa. Las hipótesis antigüedad, emisión de nuevas acciones, dividendos por acción, cotización en más de una bolsa y crecimiento (de los activos, ingresos y lucro líquido) fueron rechazadas como motivaciones de la revelación de informaciones representativas del capital relacional social.

## CONCLUSIONES

De acuerdo a los resultados de esta investigación, entre mayor sea el tamaño de los activos, la rentabilidad del activo, el endeudamiento, mayor sea la diferencia entre el precio de la acción y su valor contable, mayor será la motivación de los bancos para revelar informaciones representativas del capital relacional social. Estos resultados ratifican los presupuestos de la teoría de la agencia (Jensen & Meckling, 1976), que plantea que mientras más grande sea el tamaño de la empresa, mayor sea su rentabilidad, más endeudada esté y

mayor sea la diferencia entre el precio de la acción y su valor contable, mayor debería ser la revelación de informaciones representativas del capital relacional social. Las hipótesis rentabilidad del patrimonio y pago de dividendos fueron confirmadas con relación negativa.

Estos resultados ratifican los presupuestos de la teoría del coste del propietario (Verrecchia, 1983; Dye, 1986; Wagenhofer, 1990 y Macagnan, 2007). Según esta teoría, revelar informaciones de este tipo genera costes, además de que se pudiera estar revelando información estratégica a la competencia. El resto de las hipótesis fueron rechazadas como motivaciones de la revelación de informaciones representativas del capital relacional social.

## RESUMEN

*Los modelos matemáticos han sido utilizados recientemente para contribuir a la optimización de procesos y recursos en las organizaciones. La empresa en la que se implementó el modelo en cuestión pertenece al sector minero y se encuentra ubicada en la región centro del estado de Coahuila. El objetivo de estudio fue generar un modelo que permitiera optimizar las entregas de materia prima al cliente externo con las características y calidad solicitadas. Se aborda la forma en que el modelo fue aplicado implementando la metodología Lean Manufacturing, Simulación y Algoritmos Genéticos para lo cual se realizaron 8 visitas a la empresa utilizando la técnica de observación del proceso de recorrido de la materia prima hacia el cliente externo, así como el análisis de las propiedades que integran la calidad del mismo. Como resultado se implementó el modelo y se optimizó el proceso interno.*

**PALABRAS CLAVE:** Optimización, Procesos, Modelos matemáticos

## IMPLEMENTATION OF A MATHEMATICAL MODEL FOR OPTIMIZATION OF INTERNAL PROCESSES OF A MINING COMPANY

### ABSTRACT

*Mathematical models have been used recently to contribute to the optimization of processes and resources in organizations. The company in which the model in question was implemented in question belongs to the mining sector and is located in the central region of the state of Coahuila State. The objective of this study was with the build a model that would optimize the supply of raw material to the external customer requested features and quality. The model was applied implementing the Lean Manufacturing methodology, Simulation and Genetic Algorithms for which eight visits were made to the company using the technique of observing the travel process of the raw material to the external customer and also the analysis of property that integrate the quality of the product. As a result the model was implemented and the internal process was optimized.*

## INTRODUCCIÓN

El estado de Coahuila está localizado en la porción centro-norte de la República Mexicana y colinda al norte con los Estados Unidos de Norteamérica, al oriente con el estado de Nuevo León, por el sureste con el estado de San Luis Potosí, al sur con el estado de Zacatecas, por el suroeste con el estado de Durango y al poniente con el estado de Chihuahua. Tiene una superficie de 150,611 km<sup>2</sup> que corresponde al 7.6% del

área total del país y su altitud fluctúa entre 200 y 2,500 m s.n.m. Coahuila está constituido por 38 municipios. Las principales ciudades y por consiguiente los centros de mayor concentración de población son: Saltillo (Capital), Torreón, Monclova, Sabinas, Piedras Negras y Ciudad Acuña. El estado de Coahuila cuenta con una excelente red de carreteras, caminos, vías férreas y aeropuertos que permite una buena comunicación tanto en el interior del Estado como con el resto del país. De igual forma posee muy buena infraestructura para la aeronavegación y la telecomunicación. El estado cuenta con un total de 7 carreteras federales de primer orden. La red de carreteras tiene una longitud pavimentada de 3,890 km y 4,446 km revestidos. La red de caminos rurales tiene un desarrollo pavimentado de 240 km y 4,206 km están revestidos. La longitud total de la red carretera en el estado es de 8,336 km. En el estado de Coahuila la extracción de minerales es relevante, por lo que la infraestructura ferrocarrilera es de vital importancia para su desarrollo. La necesidad de estar vigentes en el sistema económico de un país así como ser parte importante de la infraestructura como recurso proveedor de fuentes de empleo del estado nos lleva a la búsqueda constante de áreas de oportunidad, con la aplicación de una mejora continua permanente nos dimos a la tarea de optimizar el proceso de entrega de carbón al cliente externo (empresa proveedora de energía eléctrica en el estado de Coahuila), ya que existían constantes rechazos del producto debido a características y parámetros fuera de especificaciones.

Esta investigación se presenta con el objetivo de analizar e implementar sistemas de optimización actualizados y diseñados específicamente para la problemática que se presenta. Para ello se muestra en el presente documento el seguimiento que se le dio partiendo de revisión literaria que nos muestran los argumentos para determinar una alta importancia económica del sector minero en nuestro estado así mismo la retribución de ser el único proveedor local de carbón a la industria eléctrica. Posteriormente describimos la metodología utilizada donde muestra la mezcla de la programación lineal y los algoritmos genéticos adecuados a determinar las mezclas óptimas cubriendo las necesidades y requerimientos que el cliente nos solicita.

## REVISIÓN LITERARIA

INEGI 2010. Con la necesidad de establecer la importancia de la industria del carbón se inicia la revisión literaria a lo largo de la historia de este producto en nuestro estado, ya que aunado a la importancia económica que genera el producto también es una fuente de empleos permanente y estable en esa zona del estado ya que las familias de la localidad de donde se establece esta minera dependen directamente de las fuentes de empleo que ella genera, así como las generadas por el cliente externo refiriéndonos a la empresa generadora de energía eléctrica. La historia del estado se encuentra relacionada estrechamente con la minería como actividad principal desde época de la colonia, con la fundación en 1577 de Minas de la Trinidad lo que ahora es Monclova, el descubrimiento y explotación del carbón desde 1828, Cuenta con una excelente infraestructura minero-metalúrgica y vías de comunicación, destacando la fundidora de metales en Torreón, fundidora de hierro en Monclova, plantas carboeléctricas en Nava, así como varias plantas de beneficio y transformación en diversas localidades.

Servicio Geológico Mexicano, organismo federal coordinado sectorialmente por la Secretaría de Economía. “Panorama Minero del estado de Coahuila” El estado de Coahuila participó en el año 2010 con el 5.86 % de la producción minera nacional, ocupando el primer lugar en la producción de carbón (Coordinación General de Minería Agosto 2011) El valor de la producción minera estatal en el 2010 ascendió a \$ 13,086’476,235 participando con el 5.86 % del valor total nacional que fue de \$ 187,646’444,492 pesos (Fuente: Anuario Estadístico de la Minería Mexicana Ampliada 2010, Servicio Geológico Mexicano).

## METODOLOGÍA

El desarrollo del presente trabajo partió del análisis en busca de las variables que intervenían directamente en los requerimientos del cliente externo así como las que influían en el acomodo de la materia prima dentro de la industria minera. Haciendo uso del Método de inducción-deducción que es un procedimiento de inferencia que se basa en la lógica para emitir su razonamiento; su principal aplicación se relaciona de un modo especial con las matemáticas puras. El método de inducción-deducción se utiliza con los hechos particulares, siendo deductivo en un sentido, de lo general a lo particular, e inductivo en sentido contrario, de lo particular a lo general.

*Método inductivo, Inducción:* es un razonamiento que analiza una porción de un todo; parte de lo particular a lo general. Va de lo individual a lo universal.

Aunado a lo anterior la metodología utilizada para la realización de la documentación del sistema fue la Métrica Versión 3 la cual ofrece a las Organizaciones un instrumento útil para la sistematización de las actividades que dan soporte al ciclo de vida del software dentro del marco que permite alcanzar los siguientes objetivos: Proporcionar o definir Sistemas de Información que ayuden a conseguir los fines de la Organización mediante la definición de un marco estratégico para el desarrollo de los mismos; Dotar a la Organización de productos software que satisfagan las necesidades de los usuarios dando una mayor importancia al análisis de requisitos; Mejorar la productividad de los departamentos de Sistemas y Tecnologías de la Información y las Comunicaciones, permitiendo una mayor capacidad de adaptación a los cambios y teniendo en cuenta la reutilización en la medida de lo posible; Facilitar la comunicación y entendimiento entre los distintos participantes en la producción de software a lo largo del ciclo de vida del proyecto, teniendo en cuenta su papel y responsabilidad, así como las necesidades de todos y cada uno de ellos; Facilitar la operación, mantenimiento y uso de los productos software obtenido; Mediante las herramientas observación y entrevista se definieron los requerimientos del sistema y basándose en éstos se logró desarrollar un sistema funcional.

*Logrando definir mediante la Métrica Versión 3 los principales puntos como:* Planificación del Sistema de Información; Estudio de Viabilidad del Sistema; Análisis del Sistema de Información; Diseño del Sistema de Información; Construcción del sistema de información; Mantenimiento del sistema de información; Aseguramiento de la calidad. Así mismo para el desarrollo del sistema “Optimización de Recursos” se hizo uso de las siguientes plataformas tecnológicas: Visual Basic 6.0: Es un lenguaje de programación dirigido por eventos, desarrollado por Alan Cooper para Microsoft. Este lenguaje de programación es un dialecto de BASIC, con importantes agregados. Microsoft Access: Es un sistema de gestión de bases de datos para los sistemas operativos Microsoft Windows, desarrollado por Microsoft y orientado a ser usado en un entorno personal o en pequeñas organizaciones. Modelo Matemático de Investigación de Operaciones (Minimizar Costos). Así como Excel: Paquete el cual se usa para manejar hojas de cálculo, ingresar datos, y Visual Basic: Programa en el que se elaboró el sistema de entradas y salidas así como el modelo de optimización. Se prosiguió a hacerse el modelo matemático de Minimización de costos, el cual se muestra a continuación:

$$\begin{aligned}
 (1) \quad & Z = Y_1 + Y_2 + Y_3 + Y_4 + \dots + Y_n \\
 (2) \text{ Donde: } & \frac{x_1}{\sum_{i=1}^n x} * B_1 + \frac{x_2}{\sum_{i=1}^n x} * B_2 + \dots + \frac{x_n}{\sum_{i=1}^n x} * B_n \leq \\
 (3) \quad & \frac{x_1}{\sum_{i=1}^n x} * C_1 + \frac{x_2}{\sum_{i=1}^n x} * C_2 + \dots + \frac{x_n}{\sum_{i=1}^n x} * C_n \leq \\
 (4) \quad & \frac{x_1}{\sum_{i=1}^n x} * D_1 + \frac{x_2}{\sum_{i=1}^n x} * D_2 + \dots + \frac{x_n}{\sum_{i=1}^n x} * D_n \leq \\
 (5) \quad & X_n \leq T_n
 \end{aligned}$$

La ecuación 1) muestra la función objetivo, esta trata de minimizar el costo del carbón usado, la ecuación 2) está destinada a la restricción del porcentaje de la ceniza donde “x” son la cantidad de toneladas. La ecuación 3) define la restricción del porcentaje de humedad, la ecuación 4) define la restricción del porcentaje de azufre y la ecuación 5) define que las toneladas usadas no pueden ser mayores a las toneladas existentes. A continuación se prosiguió con la elaboración de un modelo en Solver, para fines prácticos se uso una tabla de datos resumida en la cual se muestra el tonelaje, porcentaje de azufre, porcentaje de cenizas y porcentaje de humedad. El diseño formulado se combina con algoritmos genéticos para su máxima optimización.

## RESULTADOS

Tabla 1: Resultados Que Arroja el Sistema del Modelo de Optimización. Área Carbón Demanda de Carbón 600 Toneladas

Tipo	Fecha	Toneladas arrojadas por el sistema					Clave Registro	Existencias
		Sistema	Área	% de Ceniza	% de Hu.	% de S.		
Carlos III M2	10/10/2013	28.28	Pila 11	54.43	9.96	0.92	107	4.728
Mina VI	03/08/2013/	92.89	Pila 10	41.43	6.91	2.59	97	3.412
Mina VII	09/03/2013	144.22	Pila 13	83.96	8.04	0.59	102	293
Pepeñado Mina VI	05/01/2013	334.61	Pila 11	18.54	5.43	1.28	25	380

La tabla nos muestra el resultado final que nos arroja el sistema, donde nos da como resultado el área (ubicación) y la disponibilidad del material requerido según las especificaciones.

Al llevar a cabo este proyecto se logro el objetivo principal, el cual es crear un sistema el cual te permita hacer un buen uso de tus recursos pero con un costo mínimo. Por otra parte se encontró que modificando el programa se le puede otorgar una prioridad a los lotes, para poder darles una salida adecuada y así evitar que se rezaguen lo cual a con el paso del tiempo genera un cambio en las propiedades del material por lo tanto un costo extra.

## CONCLUSIONES

En síntesis, podríamos decir que el éxito en la implantación de una metodología de desarrollo en una organización consiste en aplicar un enfoque de gestión del cambio (apoyo de la dirección, comunicación, formación, plazos razonables, etc.) acompañado de sencillez y flexibilidad en el fondo y la forma de los procesos. Al llevar a cabo este proyecto se logro el objetivo principal, el cual es crear un sistema el cual te permita hacer un buen uso de tus recursos pero con un costo mínimo. Por otra parte se encontró que modificando el programa se le puede otorgar una prioridad a los lotes, para poder darles una más rápida salida y así evitar que se rezaguen lo cual a con el paso del tiempo generaría un costo extra.

Francisca Adriana Sánchez Meza, Universidad Tecnológica de la Mixteca

## **RESUMEN**

*Zapotitlán Palmas se encuentra al noroeste del estado de Oaxaca, México. Sus habitantes tejen con sus manos sombreros de palma, una planta abundante en esa región. Esta actividad cobró importancia desde 1850, cuando se dejó de producir el algodón y la caña de azúcar. Lamentablemente, sus artículos son vendidos a muy bajos precios. Actualmente se les ha capacitado, sugiriéndoles que en lugar de sombreros, se dediquen a tejer bolsas de mano, tanto de palma natural como de palma sintética. Las sugerencias han sido adoptadas introduciendo importantes innovaciones a su producto. Sin embargo, no saben cómo comercializar estos nuevos productos. En esta ponencia se muestran los resultados de una investigación en la que se analizaron los atributos más importantes para el consumidor de bolsas de mano tanto de palma natural como sintética, sus comportamientos de elección y compra mediante una encuesta realizada a 300 consumidores, a partir de la cual se realizó un análisis factorial de componentes principales con rotación varimax aplicado a los atributos más importantes. A partir de los resultados obtenidos se plantea una segmentación de mercado que permitirá generar estrategias de mercadotecnia para impulsar las ventas de estos productos y apoyar a los artesanos para obtener mejores ingresos.*

## **MARKETING STRATEGIES TO INCREASE SELLS OF HANDBAGS MADE OF NATURAL AND SYNTHETIC PALM ELABORATED IN ZAPOTITLÁN PALMAS, OAXACA, MÉXICO, DESIGNED FROM A MULTIVARIATE ANALYSIS OF CONSUMER'S BEHAVIOR**

## **ABSTRACT**

*Zapotitlán Palmas is located at the north east of Oaxaca State in México. Its inhabitants weave palm hats. Palm is an abundant plant in that región. This activity has been important since 1850, when the cotton and sugarcane production stopped. Unfortunately, this articles are sold at low prices. Actually, these craftsmen have been trained, suggesting that instead of hats, they weave handbags, using natural and synthetic palm. The suggestions has been adopted, introducing important product innovations. However, they don't know how to market these new products. In this document we show the results of a research in which the most important attributes for the consumer of handbags made of natural or synthetic palm are determined. In order to achieve this goal, a factor analysis of principal components with varimax rotation was carried out over surveys applied to a representative sample of 300 women. The results were used to design a market segmentation which will allow to increase sells of these products in order to help these craftsmen.*

## INTRODUCCIÓN

La comunidad de Zapotitlán Palmas se caracteriza por tener una importante superficie en la que crece la palma, planta que ha permitido a sus habitantes confeccionar sombreros y otras artesanías. En años recientes esta actividad se ha visto modificada por la introducción de un nuevo material: la palma sintética, trayendo como consecuencia la posibilidad de elaborar otros productos como las bolsas para dama, con formas y colores que anteriormente no podían conseguirse. Sin embargo, sus habitantes no han encontrado la forma apropiada de comercializar estos productos. En este trabajo se presenta, en primer lugar un panorama del origen, evolución y situación actual de la actividad artesanal de elaboración de productos de palma en la mencionada comunidad. Posteriormente se presentan los resultados obtenidos mediante una técnica de análisis multivariante (análisis factorial de componentes principales con rotación varimax), para determinar los factores que influyen en las decisiones de compra de bolsas de palma hechas de plantas naturales y las realizadas con materiales sintéticos, en mujeres de la ciudad de Huajuapán de León, Oaxaca, la segunda ciudad en importancia en el estado de Oaxaca y ubicada a 16 km de Zapotitlán Palmas. A partir de estos resultados se propone una segmentación para el mercado de bolsas de palma artesanales. Por último se presentan las conclusiones de la investigación.

## REVISIÓN LITERARIA

Zapotitlán Palmas es uno de los 28 municipios del Distrito de Huajuapán, en la región Mixteca Norte del estado de Oaxaca. La Comisión Nacional Forestal (CONAFOR) señala que un tipo de vegetación importante en él es el palmar (*Brahea dulcis*), ya que abarca una zona de producción de 1928.4 hectáreas (CONAFOR, 2009). Este tipo de planta se caracteriza por su color verde, llega a medir hasta 70 centímetros de altura y sus hojas forman un abanico que cerrado puede abarcar hasta 6 cm de ancho. La de mejor calidad es la que nace en la época de calor. El producto principal que se elabora con ella es el sombrero, aunque también se fabrican petates, tenates, sopladores y bolsas, que desde hace 500 años se convirtieron en los enseres de confort para las familias de la región. Los antecedentes históricos de esta actividad en Coixtlahuaca, por el año 1850, cuando se convirtió en una actividad importante de la Mixteca tanto Alta como Baja, debido a que se dejó de producir algodón, caña de azúcar, maíz y frijol, productos que se llevaban a otras regiones del estado como la Cañada.

La cultura de los habitantes de Zapotitlán Palmas está determinada, en gran medida, por la producción artesanal de productos de palma natural. Las mujeres y amas de casa son las que se dedican principalmente a esta actividad durante todo el año, excepto en la época de siembra, en la que también tienen que contribuir con el trabajo del campo. Desafortunadamente, este tipo de artesanías han ido desapareciendo, debido a que sus pobladores no las ven como una forma de obtener ingresos, pues el margen de ganancia por la venta de sus productos es muy bajo. Las consideran más bien como una forma de mantener su cultura y sus tradiciones (Municipio de Zapotitlán Palmas, 2008). A raíz de esto, los habitantes de esta localidad han incursionado en la fabricación de artículos utilizando palma sintética. La técnica para fabricarlos es la misma que la empleada con la palma natural, pero tiene algunas ventajas como la durabilidad del material, el colorido y la disponibilidad del material durante todo el año. Entre estos artículos destacan las bolsas para dama que tienen colores muy llamativos y muestran una gran variedad de formas y diseños. Sin embargo, los habitantes no han logrado encontrar un mercado que les permita incrementar sus ganancias por la venta de estos productos. Con el fin de determinar aquellos factores que influyen en la compra de bolsas para dama, una herramienta muy útil es el análisis factorial, el cual ha probado su utilidad en el estudio del comportamiento de los consumidores (Frias-Navarro y Pascual Soler, 2012). Tomando como

base los resultados obtenidos, se presenta una propuesta de segmentación de mercado a fin de facilitar el desarrollo posterior de propuestas de comercialización para los productores artesanos de Zapotitlán Palmas.

## METODOLOGÍA

El estudio se llevó a cabo aplicando una encuesta a una muestra representativa de 300 mujeres que viven de manera temporal o permanente en la ciudad de Huajuapán de León, durante los meses de noviembre y diciembre de 2013. En la encuesta se pueden diferenciar tres bloques de contenidos. Primeramente se interroga a las encuestadas sobre sus hábitos de compra de ropa y accesorios (frecuencia de consumo, lugar de compra y valoración de diferentes aspectos en la compra de este tipo de productos). Enseguida se les interroga sobre la valoración que hacen las mujeres acerca de las bolsas de palma natural y palma sintética, identificando al mismo tiempo las características más relevantes para ellas (materiales, tamaño, color, divisiones, bolsas internas, y combinaciones) y los factores que influyen en su decisión de compra, su necesidad de usarlas para enriquecer su arreglo personal, y su disposición a pagar por las diferentes características de ellas. El último grupo de preguntas de la entrevista se destina a recoger las características sociodemográficas y económicas clásicas de las entrevistadas.

## RESULTADOS

Sobre sus hábitos de compra de ropa, las mujeres encuestadas señalaron que la adquieren en promedio tres veces al año y que más de la mitad de las veces lo hacen de forma espontánea. Las compras las realizan principalmente en centros comerciales, en el tianguis y en tiendas locales. Sus principales fuentes de actualización en moda son la televisión (30%), las tiendas (15%), las revistas (20%) y el internet (40%). Una vez que encuentran su talla, los factores que más influyen en su decisión de compra son la tela y los materiales. El precio no es un factor importante. En relación con la frecuencia de compra de ropa y accesorios, la siguiente tabla muestra los porcentajes encontrados en el grupo de encuestadas. El criterio para decidir si la compra es pocas o varias veces al año depende del artículo considerado.

Tabla 1: Frecuencia de Compra de Ropa y Accesorios de las Mujeres de la Ciudad de Huajuapán de León

	Pocas Veces al Año (%)	Varias Veces al Año (%)
Ropa	61.7	38.3
Zapatos	54.3	45.7
Bolsa de mano	69.3	30.7
Cartera	72.3	27.7
Gafas	88.3	11.7
Aretes, anillos y pulseras	48.7	51.3
Collares	79.0	21.0
Cinturón	67.7	32.3
Accesorios para la cabeza	51.0	49.0
Mascadas, chalinas o bufandas	55.0	45.0
Guantes	86.0	14.0

*Los porcentajes de esta tabla muestran la proporción de las mujeres encuestadas que adquieren pocas o varias veces, a lo largo del año, los artículos indicados. Los artículos tales como los aretes y los accesorios para la cabeza son comprados con mucha frecuencia por un porcentaje importante de mujeres, mientras que otros como las gafas o los guantes son adquiridos por pocas mujeres en varias ocasiones en el año.*

La relevancia de los aspectos que influyen en la compra de ropa y accesorios se valoró mediante una escala de Likert con valores de 1 a 5, en la que el nivel de mayor importancia corresponde a 5. Otros atributos tales como el precio o la marca no tuvieron un lugar importante en la explicación de la varianza total. La Tabla 2 muestra el resultado del análisis factorial de componentes principales con rotación varimax efectuado con los resultados obtenidos. Como resultado de la reducción, se observaron dos factores. El primero de ellos se relaciona con aspectos propios de la bolsa, como son su diseño y los materiales empleados en su fabricación. El otro factor abarca la utilidad práctica y el valor que se le concede como forma de mejorar el aspecto personal.

Tabla 2: Análisis de los Factores Considerados al Momento de Adquirir Ropa y Accesorios Por Parte de Las Mujeres de la Ciudad de Huajuapán de León

	<b>Factor 1 Diseño Materiales</b>	<b>Factor 2 Utilidad Valor para el aspecto personal</b>
Materiales	<b>0.768</b>	0.148
Diseño	<b>0.732</b>	0.302
Utilidad	0.258	<b>0.538</b>
Valor para el aspecto personal	0.384	<b>0.747</b>
<b>Varianza total explicada (%)</b>	<b>39.23</b>	<b>31.12</b>

*Esta tabla muestra los resultados del análisis factorial de componentes principales con rotación varimax para determinar los factores de mayor influencia en las decisiones de compra de ropa y accesorios de las personas encuestadas. KMO: 0.702.*

Se identifican dos factores, uno de ellos relacionado con el diseño y el material con el que están elaboradas las bolsas y el otro relacionado con aspectos de utilidad y del valor que le da a la persona que los usa. El precio no influye de manera importante. La siguiente tabla muestra los porcentajes en los que las mujeres encuestadas buscan ciertas características en una bolsa artesanal elaborada de palma. La mayoría se inclinó por adquirir una bolsa de palma natural en lugar de una sintética, aunque les gustaría que estuviera combinada, que tuviera forro de color rosa y que tuviera asas forradas. Entre los colores que más les gustaría ver están el amarillo, el rosa y el café.

Tabla 3: Características Que Buscan las Mujeres de la Ciudad de Huajuapán de León en las Bolsas de Palma Artesanales

	<b>Porcentaje (%)</b>
¿Qué tipo de bolsa le interesa más?	
De palma natural	63.6
De palma sintética	36.4
¿Qué características busca en una bolsa de mano?	
Diseño general llamativo	45.0
Colores llamativos	17.0
Compartimentos	13.9
Combinación de varios materiales	31.4
Forro	13.4
Asas de tamaño adecuado	23.7
Tamaño adecuado	27.8
Precio adecuado	21.6

*Esta tabla muestra el porcentaje de las encuestadas que señalaron como deseables ciertas características que esperan encontrar en las bolsas de palma, ya sea natural o sintética.*

La Tabla 4 presenta los resultados del análisis factorial de componentes principales con rotación varimax que se obtuvieron al evaluar los aspectos que consideran las mujeres de la ciudad de Huajuapán de León para adquirir estas bolsas. Los factores identificados en este caso como relevantes para la adquisición de este tipo de productos son por una parte el diseño y los materiales con los que está elaborada, y por otra parte el precio, su utilidad y el valor que le proporciona al usuario.

Tabla 4: Análisis de los Factores Considerados al Momento de Comprar Bolsas de Mano Elaboradas Con Palma Natural O Sintética

	<b>Factor 1 Diseño Materiales</b>	<b>Factor 2 Precio Utilidad</b>
	<b>Valor para el aspecto personal</b>	
Diseño	<b>0.643</b>	0.142
Materiales	<b>0.748</b>	0.274
Precio	0.215	<b>0.713</b>
Utilidad	0.148	<b>0.604</b>
Valor para el aspecto personal	0.305	<b>0.632</b>
<b>Varianza total explicada (%)</b>	<b>42.13</b>	<b>26.34</b>

*Esta tabla muestra los resultados del análisis factorial de componentes principales con rotación varimax para determinar los factores de mayor influencia en la compra de bolsas de mano de palma natural o sintética entre las personas encuestadas. KMO: 0.635.*

Las mujeres encuestadas tienen edades entre 18 y 50 años, son de clase media en su mayoría (85%). Los resultados obtenidos en los análisis previos permiten identificar dos segmentos de mercado para la venta de bolsas de palma, considerando como variable de segmentación los factores mostrados en la Tabla 4. En el primer grupo (64% de las encuestadas) están las mujeres jóvenes, entre 18 y 25 años, de clase media, que buscan una bolsa con colores y combinaciones llamativos que les permitan lucir a la moda y sentirse seguras de sí mismas. En el segundo grupo (36% de las encuestadas) se encuentran las mujeres de mediana edad (25 a 50 años), amas de casa o trabajadoras que requieren una bolsa que les resulte práctica para cargar y organizar sus accesorios a fin de poder llevarlos y encontrarlos fácilmente y que tenga un precio accesible.

## CONCLUSIONES

El empleo de las técnicas de análisis factorial de componentes principales con rotación varimax ha permitido analizar los hábitos de consumo de las mujeres de la ciudad de Huajuapán de León, Oaxaca, en relación con las bolsas de palma artesanales, mostrando que lo más importante es el diseño y materiales de los que están hechas las bolsas, así como la utilidad y el valor personal que le da a la portadora. A partir de esto se ha propuesto una segmentación del mercado que facilitará el diseño de estrategias de mercadotecnia para apoyar a los artesanos que elaboran estos productos en su proceso de comercialización.

# LA CAPACITACIÓN AL AIRE LIBRE: UNA OPCIÓN EFECTIVA DE INCENTIVAR A LOS COLABORADORES

Oscar Guzmán Vargas, Universidad de Guadalajara

## RESUMEN

*El presente trabajo parte de la experiencia de poner en práctica una nueva metodología del aprendizaje dirigida a la formación de las personas y de una forma particular, a los equipos, especialmente indicada para lograr el desarrollo y crecimiento de competencia emocionales y la transmisión de valores, como una manera de vincular las empresas con la Universidad y en particular con el Centro Universitario de la Costa Sur, para lo cual se sirve de la naturaleza como aula y el aprendizaje experimental como método, con el propósito de reflejar a través de actividades en el medio natural y su posterior análisis, un ambiente similar al laboral cotidiano. Se analiza la particularidad de formación de esta modalidad la cual es más poderosa que los métodos tradicionales, ya que sostiene el interés, atención y motivación de los participantes y provoca que éstos trabajen con mayor nivel de productividad, siendo protagonistas de su propio aprendizaje.*

**PALABRAS CLAVE:** Capacitar, Medio Ambiente, Observar, Hacer Y Sentir

## OPEN-AIR TRAINING: A EFFECTIVE TOOL TO MOTIVATE YOUR COLLEAGUES

### ABSTRACT

*This paper starts from the experience of putting into practice a new learning methodology aimed at training people and in a particular way, teams, especially suitable to achieve the growth and development of emotional competence and transmission of values, as a way to link companies with college and in particular the university of the south coast, which uses nature as a classroom and experimental learning as a method, for the purpose of reflecting through activities environment and further analysis, similar to the everyday work environment. The particularly of this type of information which is more powerful analyzes that traditionalist methods, and holding interest, attention and motivation of participants and causes you to work with higher productivity, the protagonist of their own learning.*

Keywords: qualify, environment, observe, do and feel.

### INTRODUCCION

El Centro Universitario de la Costa Sur (CUCSUR) de la Universidad de Guadalajara, ha implementado una serie de actividades de vinculación con la empresas de la región por medio de la Capacitación al Aire Libre, busca incrementar la competitividad y elevar el grado de satisfacción de los colaboradores de la empresa. Es una nueva metodología del aprendizaje dirigida a la formación de las personas y de una forma particular, a los equipos, especialmente indicada para lograr el desarrollo y crecimiento de competencia emocionales y la transmisión de valores, para lo cual se sirve de la naturaleza como aula y el aprendizaje experimental como método, con el propósito de reflejar a través de actividades en el medio natural y su posterior análisis, un ambiente similar al cotidiano.

Este nuevo método de formación es más poderoso que los métodos tradicionales, ya que sostiene el interés, atención y motivación de los participantes y provoca que éstos trabajen con mayor nivel de productividad, siendo protagonistas de su propio aprendizaje. Además, al estar fundamentado con la Educación Experimental, trabaja los 4 elementos básicos del aprendizaje: pensar, observar, hacer y sentir.

La capacitación al aire libre ofrece extensos beneficios para la empresa y sus colaboradores, es mucho más que un juego; ya que se busca que el empleado asuma un compromiso de mejora con su empresa.

Las actividades diseñadas parten de los objetivos que se deseen alcanzar y de una planificación tomada de la problemática y las necesidades de capacitación que se tengan en la empresa. Se busca que el grupo detecte los puntos fuertes y débiles derivados de los comportamientos del equipo y vincular estas actitudes a las conductas habituales en el trabajo. Finalmente, se elabora un plan de acción con los diferentes aspectos a mejorar aplicables a la empresa y sus colaboradores. Al igual que todo programa de formación desarrollado por una compañía, sus objetivos deben estar claramente definidos, evaluando el momento en el cual se aplica y siendo administrado y dirigido por técnicos especialmente entrenados para ello.

## REVISIÓN LITERARIA

Desde hace 30 años se han hecho publicaciones en relación con el tema de capacitación al aire libre y entrenamiento experiencial, mismas que han surgido con el fin de crear una forma no tradicional de aprendizaje que se base en la experiencia vivencial, en donde se adquieren capacidades para la construcción de equipo de alto rendimiento, facilitar la resolución de conflictos o aminorar la resistencia al cambio. Existen publicaciones especiales realizadas por el Project Adventure, disponibles en la página web: [www.pa.org](http://www.pa.org) con títulos COWSTAILS AND COBRAS, SILVER BULLETS, QUICK SILVER, ZIP LINES: THE VOICE FOR ADVENTURE EDUCATION, la cual es revista dedicada a ofrecer información a la creciente comunidad de educadores experienciales así como también se cuenta con páginas de apoyo que pueden consultarse como lo es la página del European Institute for Outdoor Adventure Education and Experiential Learning: [www.eioaee.org](http://www.eioaee.org) toda esta información respalda y apoyo a muchos nuevos estudios que se han y se seguirán realizando respecto al tema.

Hoy en día es imprescindible contar con cursos de adiestramiento que brinden oportunidades de crecimiento a las personas que buscan empleo o ya se encuentran laborando. No basta con títulos de educación, también es importante la actualización y la mejora continua todo esto a través de un análisis de la empresa en cuanto a el aprendizaje, al análisis de las personas, así como la aplicación de un proceso informativo mediante entrevistas, muestras de trabajo o análisis de casos mediante las cuales detectan las principales necesidades de cada aspecto, y los resultados, ya que estos otorgan la pauta para descubrir donde es necesario aplicar un sistema de capacitación que ayude a elevar niveles de aprendizaje y competitividad en los colaboradores y reduzca la insatisfacción laboral, mejore el trabajo en equipo y la comunicación entre el personal de la empresa, así como la mejora del ambiente de trabajo.

Es vista como una herramienta que fortalece diversas cualidades, además del compromiso con la empresa, la comunicación, la responsabilidad, así como la tolerancia y la empatía. Además, está comprobado científicamente que aprendemos el 20% de lo que escuchamos; el 50% de lo que vemos y el 80% de lo que hacemos. Esto comprueba que la experiencia vivencial frente a una conferencia, sería mucho más enriquecedora y efectiva. Aquí es cuando el sistema de “outdoor” training cobra importancia. Por ello, la capacitación representa una inversión, ya que ofrece resultados positivos y un aumento en la productividad y calidad en el trabajo; por lo tanto, es una inversión que conlleva beneficios al colaborador y a la organización. Esta debe adaptarse a las necesidades de la organización, a las actividades que ahí se realizan para que den resultados de conocimientos, habilidades y actitudes que se requieren para lograr un desempeño óptimo. El objeto principal de los cursos de capacitación al aire libre es mejorar la eficiencia de los trabajadores para que estos aporten en el incremento de la productividad, lo que ha dado grandes resultados en el desempeño de los individuos que componen la fuerza laboral. Mediante el contenido de la

capacitación al aire libre, los colaboradores tienen la oportunidad de **aprender cosas nuevas**, actualizar sus conocimientos, liberarse del estrés, relacionarse con otras personas, en otras palabras, satisfacen sus propias necesidades, mediante técnicas y métodos nuevos que ayudan a aumentar sus competencias, para desempeñarse con éxito en su puesto, permitiendo a su vez a las organizaciones alcanzar sus metas.

## METODOLOGÍA

Consiste en juegos o actividades al aire libre o espacios abiertos, (tracking, rafting, bicicleta de montaña, y el descenso de montaña, entre otras actividades) con una metodología propia de la educación experiencial, es decir aprendizaje netamente vivencial, que presenta una secuencia lógica de actividades donde se extraen conclusiones que ayudan a mejorar el entorno personal y profesional. El Entrenamiento Experiencial al Aire Libre es una de las más completas metodologías de aprendizaje, es llevada a cabo por personal (facilitadores) con un alto contenido docente, que basan el aprendizaje a través de la experiencia en un clima distendido, pues combina lo lúdico, la superación de obstáculos, la actividad física, el trabajo corporal, el contacto con la naturaleza, el trabajo grupal y procesos de reflexión, conceptualización y aplicación de lo aprendido a la vida diaria.

El proceso de aprendizaje consiste en hacer que el grupo de participantes se involucre físico, intelectual y emocionalmente en el manejo y solución de una serie de retos u obstáculos, para lo cual tiene que recurrir a sus habilidades personales, su creatividad y su capacidad de trabajo conjunto. Posteriormente, se realiza un proceso dirigido de reflexión individual y grupal, que busca una revisión del propio comportamiento y la conceptualización clara y simple de las habilidades utilizadas para la solución del problema. Al final de este análisis, son los mismos participantes quienes descubren y reconocen que la experiencia vivida tiene un sinnúmero de conexiones y aplicaciones con la “vida real”, lo que genera el interés por aplicar lo aprendido a la vida diaria personal, familiar y laboral y permite la adopción de nuevos comportamientos eficaces y adecuados. Este proceso suele realizarse al aire libre, pues en el contacto con la naturaleza y en un ambiente lúdico, se predisponen la mente y el corazón para estar abiertos y compartir con los demás, actuando con menores tensiones y prejuicios. De este modo, se logran cambios no impuestos, que parten del individuo, y tienen mayor profundidad y estabilidad.

Este proceso está descrito ampliamente por autores como Kolb y Argirys y muestra claramente el proceso mediante el cual una experiencia lúdica puede llegar a producir un nuevo conocimiento o aprendizaje, que es estable en el tiempo y se traduce en nuevos comportamientos en las actividades del individuo. Este ciclo se compone de cuatro fases, La Experiencia, Observación y Reflexión, Conceptualización y Aplicación. En la fase de la Experiencia se genera la información, es asociada como la etapa más “simpática” del proceso, el “juego”, el “ejercicio”, lo “gracioso”. Dentro de la Observación y la Reflexión la intención es informar acerca de la experiencia de cada individuo en términos de aprendizaje “cognitivo” (datos, información) y “afectivo” (sentimientos hacia mi persona y otras personas). La Conceptualización es la fase crítica, ya que trata de un análisis sistemático de la experiencia que ha sido compartida por todos. Y en la Aplicación que es la fase final del ciclo de aprendizaje vivencial refleja el propósito del proceso en sí. En esta el facilitador ayuda a que los participantes apliquen las generalidades de la fase 2 hacia situaciones reales, pero en términos de su comportamiento futuro en tales situaciones. Cuando ya se habla de la implementación de un Modelo de capacitación al aire libre se debe considerar la implementación de cinco fases que son el Diagnóstico, Planificación, Diseño de la Creación del Modelo de Capacitación al Aire Libre, Seguimiento y Evaluación.

En la fase de Diagnóstico se analiza el estado actual de la organización, en lo referente a las necesidades de capacitación, mismas que se identifican y evalúan mediante la recolección de información y datos necesarios para planificar el programa de capacitación. Se utiliza la Evaluación de Necesidades de Capacitación (ENC), con el objeto de identificar las dificultades para lograr los trabajos focalizados y

determinar qué conflictos se deben a la falta de capacitación y cuáles podrían deberse a otros factores. En la fase de Planificación se desarrolla la programación de lo que comprenderá la creación del modelo Outdoor Training. Se establecerán los objetivos estratégicos, que favorecerán a la aplicación del modelo así como las normas que han de conducir el camino del desarrollo del Modelo de Capacitación al Aire Libre y que respaldan lo establecido por la organización. Todos en la organización, deben adquirir un compromiso, en el que participen con el desarrollo de las actividades y de ésta manera se conviertan en una parte activa de los cambios que se generen durante y después de la implementación del modelo.

Dentro de la fase del Diseño del modelo de Capacitación al Aire Libre se realiza toda la metodología de aprendizaje la cual combina lo lúdico, la superación de obstáculos, la actividad física, el trabajo corporal, el contacto con la naturaleza, el trabajo grupal y procesos de reflexión, conceptualización y aplicación de lo aprendido a la vida diaria. Se dirige a personas interesadas en el desarrollo personal y social, fomentando el trabajo en equipo, comunicación, liderazgo y reforzar habilidades y conocimientos en los participantes. A través de actividades divertidas, realizadas en un ambiente diferente, al aire libre, ya sea en la playa, montaña o un campo. Facilitando el aprendizaje y disminuyendo el estrés laboral debido a la rutina. Dentro de la fase de Seguimiento se debe contar con un esquema de seguimiento, acompañamiento y control de aprendizaje. En este sentido, los efectos de capacitación deben tener carácter de permanente y evidenciable en el desempeño y la productividad. Las acciones de seguimiento se refieren a la necesidad de identificar, comportamientos o conocimientos que deben ser de especial atención por parte del área de R.H. En la fase final referente a la Evaluación la capacitación, como cualquier otra función de Recursos Humanos, debe ser evaluada para establecer su efectividad. Existe una amplia variedad de métodos que ayudan a determinar hasta qué grado los programas de capacitación mejoran el aprendizaje, influyen en el comportamiento en el trabajo y repercuten en el desempeño final de la organización.

## RESULTADOS

Cuando se logra la aplicación correcta y oportuna de un modelo de capacitación al Aire libre se logra una gran variedad de resultados, mismos que se describirán a continuación.

*Conocimiento en todos los niveles:* se consigue comprender mejor los estilos de trabajo de cada persona, además de conocer a los compañeros en distintos niveles como son su forma de pensar y actuar ante determinadas situaciones.

*Cambio de imagen:* al cambiar la forma de aprendizaje, también se cambia la forma de ver a un compañero de trabajo, la imagen que se tiene de éste.

*Aprendizaje compartido:* a través de la participación, cada persona tendrá oportunidad de compararse con sus compañeros, aprender lo bueno de cada uno de ellos, entenderse y comprender sus errores; esto les dará una visión más amplia sobre el trabajo.

*Entender las limitaciones:* durante las actividades de la capacitación, los participantes deberán tomar decisiones acerca de la información que pueden o no compartir con otros equipos, aquí entenderán cuáles son sus limitaciones y hasta dónde están dispuestos a llegar por salvar a su equipo.

*Mejora continua:* a través de la participación, los integrantes alcanzan a conocer los puntos débiles y fuertes. Al final, el consultor detalla las conclusiones y ofrece recomendaciones para mejorar la forma de trabajo.

## CONCLUSIONES

El entrenamiento al Aire Libre, incrementa la competitividad y eleva el grado de satisfacción de los colaboradores de la empresa. Es una nueva manera de formación de las personas y de una forma particular, para lograr el desarrollo y crecimiento de competencia emocionales y la transmisión de valores, donde de la naturaleza sirve como aula y el aprendizaje experimental como método. Es un método que sostiene el interés, atención y motivación de los participantes, ya que trabaja los 4 elementos básicos del aprendizaje: pensar, observar, hacer y sentir. El entrenamiento Aire Libre es una de las más completas metodologías de aprendizaje, ya que basan su aprendizaje a través de la experiencia en un clima agradable, y combina lo lúdico, la superación de obstáculos, la actividad física, el trabajo corporal, el contacto con la naturaleza, el trabajo grupal y procesos de reflexión, conceptualización y aplicación de lo aprendido a la vida diaria. Es un adiestramiento que brinda la oportunidad de crecimiento a las personas que no tuvieron la oportunidad de obtener un título, porque incorpora la actualización y la mejora continua. La Capacitación al aire libre es una actividad formativa con un componente de innovación y novedad, y que aporta una experiencia de aprendizaje de incalculable valor organizativo.

Se refuerzan ciertas habilidades claves como lo son la organización, la planificación estratégica, el manejo de la información y el liderazgo. Por medio de hacer la capacitación al aire libre se le puede brindar conocimientos teóricos para que se lleven a la práctica, aumentando el rendimiento laboral de un colaborador dentro de la empresa. La capacitación al aire libre es una herramienta que fortalece diversas cualidades como el liderazgo, la independencia, trabajo en equipo, compromiso con la empresa, la comunicación, la responsabilidad, la tolerancia y la empatía. Se maneja que aprendemos el 20% de lo que escuchamos; el 50% de lo que vemos y el 80% de lo que hacemos.

Mediante la capacitación al aire libre, los colaboradores aprenden cosas nuevas, actualizar sus conocimientos, liberarse del estrés, se relacionarse con otras personas, en otras palabras, satisfacen sus propias necesidades, permitiendo a la vez a las organizaciones alcanzar sus metas. Se encuentran muchos beneficios para los colaboradores, ya que aumenta la confianza entre compañeros, motiva a los participantes en los compromisos del trabajo diario, ayuda a solucionar problemas, aumenta la autoestima y la autoconfianza, reduce el estrés, salen de la rutina, mejora la comunicación, mejora la toma de decisiones, se mejora las relaciones interpersonales, incrementa el nivel de satisfacción laboral y facilita en los participantes un mejor conocimiento de sí mismos y un mayor desarrollo de sus habilidades de comunicación y cooperación. Se pueden adquirir conocimientos valiosos para una empresa y para la misma persona como son: responsabilidad, calidad, eficacia, empatía, honestidad, justicia, perseverancia, solidaridad, sinceridad, trabajo en equipo y productividad. La evaluación de los resultados obtenidos, debe ser para establecer su efectividad y determinar hasta qué grado los programas de capacitación mejoran el aprendizaje, influyen en el comportamiento en el trabajo y repercuten en el desempeño final de la organización.

# LA SINERGIA SISTÉMICA ENTRE EL DERECHO Y LA MERCADOTECNIA.

Norma Estela Pimentel Méndez, Universidad Popular Autónoma del Estado de Puebla  
Rosa de las Nieves Galáz Vega, Universidad Popular Autónoma del Estado de Puebla

## RESUMEN

*En este documento se analiza la relación holística entre el derecho y la mercadotecnia, teniendo como punto de partida la aplicación de la teoría general de sistemas así como la interpretación sistemática del derecho, sustentada a su vez en la teoría de la jurisprudencia analítica, que coloca en un lugar privilegiado la participación de los órganos judiciales y jurisdiccionales, para la configuración del ius en el orden jurídico de un Estado. Por medio de esta investigación, se confirma la presencia del derecho como guía para el desarrollo de estrategias de mercadotecnia utilizadas por las empresas para seleccionar su mercado meta, el posicionamiento de su producto y la generación de valor del mismo para el logro de la fidelización del consumidor.*

## SYSTEMIC SYNERGY BETWEEN LAW AND MARKETING.

### ABSTRACT

*This paper analyzes the holistic relationship between law and marketing, settle as its starting point the application of general systems theory and systematic interpretation of the law, supported by the theory of analytical jurisprudence, standing in a place privileged participation and judicial courts for configuring the ius in the legal order of a State. Through this research, the presence of the law as a guide for the development of marketing strategies used by companies to select their target market, positioning their product and generating value thereof to achieve consumer loyalty is confirmed.*

## INTRODUCCIÓN

Como hipótesis al presente documento se afirma la existencia de relación entre el derecho y la mercadotecnia, así como la influencia entre ambas para la toma de decisiones públicas y privadas. La teoría general de los sistemas, en tanto paradigma científico, se caracteriza por su perspectiva holística e integradora, en donde lo importante son las relaciones y los conjuntos que a partir de ellas emergen (Arnold y Osorio, 1998). En el campo de la investigación del derecho, las aportaciones de Tamayo y Salmorán (2008) sobre la teoría de interpretación sistémica u holística este fenómeno de estudio, permite justificar los vínculos e interdependencia de las diversas ramas de esta disciplina, así como de su interrelación con otras áreas del conocimiento. En adición con las nociones de la visión sistémica propuesta los postulados de la jurisprudencia analítica del Derecho permiten asignar el enfoque transversal al presente estudio teórico. Las contribuciones de este documento permiten valorar la relación entre los mandatos jurídicos que regulan desde la planeación de los productos o servicios a ofrecer por las empresas, la asignación de su precio, su promoción y distribución en el mercado, con los estudios y estrategias comerciales tendientes a conseguir el posicionamiento de los productos y servicios en la mente del consumidor y cliente. Se podrá

concluir la importancia de la correlación que debe existir entre el *ius*, el mercado, la empresa y sus partes relacionadas, así como las áreas de oportunidad del Estado para reglamentar esta relación.

## REVISIÓN LITERARIA

En la literatura se reconoce la vigencia de la teoría de los sistemas, con una perspectiva holística e integradora (Arnold y Osorio, 1998). En materia jurídica Tamayo y Salmorán (2008) justifica los vínculos e interdependencia de las diversas ramas de esta disciplina, así como de su interrelación con otras áreas del conocimiento. No se encuentran estudios particulares sobre la relación en México entre el derecho y la mercadotecnia desde un enfoque holístico. De Pina Vara define al derecho como “conjunto de normas eficaz para regular la conducta de los hombres...” (1999: 228). Rolando Tamayo y Salmorán (2008) para asignar de manera explícita el contenido del derecho considera adecuado nombrarlo *ius*, cuya expresión que engloba los *dictum* de autoridades. Ponce de León reconoce que “en cualquier escenario de la vida en sociedad, el ser humano requiere de un instrumento científico que armonice a las personas con su entorno” (1998: 44). Jorge Witker aporta que la perspectiva holística jurídica busca responder las siguientes preguntas concretas: “¿cómo?, ¿por qué?, ¿para qué?, ¿quién?, ¿cuándo?, ¿dónde?” (2008: 954). Siguiendo la interpretación aportada por García Máynez (2009) a los estudios de Hans Kelsen, al interpretar de manera tradicional el orden jurídico positivado mexicano, se jerarquizan en forma de pirámide las leyes supremas que identifica el artículo 133 de la Constitución Política de los Estados Unidos Mexicanos. En la presente investigación doctrinal hermenéutica, se consideraron como fuente de conocimiento criterios emitidos por el Poder Judicial de la Federación, los cuales no se encuentran sujetos a reconocimiento de derechos de autor de conformidad con el artículo 14 fracción VII de la Ley Federal del Derecho de Autor.

## METODOLOGÍA

En el campo de la investigación jurídica, se reconocen como métodos generales los procesos mentales tradicionales para la indagación científica; Ponce de León (2009) los clasifica de la siguiente manera: método intuitivo, discursivo, sistemático, deductivo, inductivo, analógico o comparativo, histórico, dialéctico, fenomenológico. Con la aplicación de estos se pueden identificar métodos específicos para la ciencia jurídica, por medio de los cuales será factible identificar los propios fines del derecho –teleología jurídica– así como sus valores o principios –axiología jurídica; entre estos métodos se identifican los siguientes: el doctrinal, el legislativo, procesal, hermenéutico, casuístico, informático, jurisprudencial, docente, así como para la ejecución de las disposiciones jurídicas (Ponce de León, 2009). Siguiendo el paradigma en la investigación del derecho, el presente documento se clasifica en el rubro de la hermenéutica jurídica, pues partiendo de la propia interpretación del derecho, así como del *ius* que lo integra, se realiza la interpretación sistemática de algunos de los mandatos jurídicos que tienen influencia de la mercadotecnia, haciendo hincapié en la importancia de la creación del derecho por la participación del Poder Judicial de la Federación.

## RESULTADOS

Con esta exploración dogmática se identifica la relación entre el derecho y la mercadotecnia, reconociéndose la importancia de los agentes públicos y privados que día a día construyen con sus decisiones oportunidades para reinterpretar el derecho. Se considera necesario desarrollar un catálogo de mandatos jurídicos aplicables al orden jurídico mexicano que reglamenten las actividades empresariales tendientes a la segmentación del mercado, así como a la emisión de campañas publicitarias. Lo anterior permitirá conocer si en esta relación holística el derecho está satisfaciendo las necesidades de la sociedad o con su poca regulación, facultando el desarrollo de actos de generen la competencia desleal de las empresas con daños en el mercado.

## CONCLUSIONES

Existen diversos métodos reconocidos para realizar la interpretación del derecho, uno de ellos es el sistémico u holístico por medio del cual se reconoce la interconexión de los diversos mandatos que integran el orden jurídico de un Estado para converger en el *ius*, así como la relación de la materia jurídica con otras como es el caso de la mercadotecnia. En la complejidad que refleja la integración de las normas, con los problemas aparejados de corrupción que si bien no son el objeto de estudio de esta investigación no pueden dejar de ser considerados, surge la necesidad de establecer un orden así como criterios que permitan abstraer el espíritu de las normas para conocer si los actos que realizamos día con día, se sujetan al *ius*, se encuentran fuera de su alcance o lo trasgreden. La participación de las autoridades judiciales y jurisdiccionales es de suma importancia para México, al contar estas con la posibilidad de adecuar el derecho a las necesidades sociales, siempre y cuando se utilicen los mecanismos jurídicos de manera eficiente.

## COMPETENCIAS DIRECTIVAS: SU IDENTIFICACIÓN PARA INSTITUCIONES DE EDUCACIÓN SUPERIOR.

Laura Ofelia Zermeño Casas, Universidad Tecnológica de Torreón

María del Carmen Armenteros Acosta, Universidad Autónoma de Coahuila

Ana Gabriela Sologaistoa Guangorena, Universidad Tecnológica de Torreón

Yanet Villanueva Armenteros, Universidad de Ciencias Informáticas de La Habana

### RESUMEN

*La gestión por competencias permite evaluar el potencial del capital humano existentes para el cumplimiento de los objetivos institucionales, dentro de ella, la capacidad directiva juega un papel muy importante en el logro del éxito en el desempeño de la organización. El objetivo del presente trabajo es identificar las competencias directivas claves en el ámbito de la dirección de las Instituciones de Educación Superior (IES). La metodología utilizada se basa en el método de expertos para la identificación de las competencias directivas más importantes para las instituciones educativas, a partir de las competencias directivas más valoradas en base el estudio realizado por el Instituto de Estudios Superiores de la Empresa (IESE Business). La indagación abarcó a todos los integrantes de la Comunidad de Instituciones de Educación Superior de La Laguna. Se utilizó el análisis de medias en el procesamiento de los datos obtenidos de la aplicación del cuestionario. Los resultados revelan que las competencias más valoradas en las IES son: en el Ámbito Estratégico: Gestión de Recursos; dentro de las Intratégicas: Trabajo en equipo y Liderazgo, y en eficacia personal: Integridad.*

**PALABRAS CLAVE:** Gestión Por Competencias, Competencias Directivas, Competencias Estratégicas, Intratégicas y de Eficacia Personal

## DIRECTIVES SKILLS: IDENTIFICATION IN A UNIVERSITY.

### ABSTRACT

*Competency management allows to evaluate the potential of existing competencies to the achievement of the corporate objectives, managerial ability plays an important role in achieving success in the role organizational performance. The aim of this study is to identify the key management skills in the field of management of a University. The methodology is by using the expert method that allows us to identify the key management skills are educational institutions and to compare them with the most valuable management skills identified by P Cardona, Chinchilla, and García- Lombardy (2001 ), building based on the study by the Institute of Higher Business Studies (IESE Business). Analysis of medias for processing the data obtained from the questionnaire of managerial skills most valued was used, the sample consisted of members of the Community of Institutions of Universities of La Laguna. The results reveal that most valuable skills in are: Strategy : Resource Management , intrategic : Teamwork and Leadership, Personal Effectiveness and Integrity.*

## INTRODUCCIÓN

Los entornos crecientemente dinámicos característicos de la sociedad del conocimiento demandan organizaciones cada vez más ágiles, flexibles y planas, con puestos de trabajo especializados y exigentes al tiempo que versátiles. (Clavero & Guerrero, 2004). Según Santos (2001) uno de sus principales activos estratégicos de las organizaciones es el recurso humano, debido a su contribución en el diseño y ejecución de la estrategia considerándose crítico su desempeño en los procesos de dirección y gestión. Es por esto, que las organizaciones buscan que sus directivos sean capaces de hacer frente a este entorno, contando con las cualidades definidas en un perfil de puestos por competencias que le garanticen que todos los esfuerzos de gestión estén alineados a la estrategia de la organización.

El concepto de competencia ha cobrado gran importancia en los últimos años y ha evolucionado a lo largo del tiempo buscando que el conocimiento se oriente a la gestión del desempeño y que la formación se materialice en los planes de desarrollo de competencias individuales. De acuerdo a Santos (2001), la gestión por competencias es una concepción relevante que implica mayor integración entre estrategia, sistema de trabajo y cultura organizacional, junto a un conocimiento mayor de las potencialidades de las personas y su desarrollo. Las Instituciones de Educación Superior (IES) de México han desarrollado el concepto de competencias en la formación curricular docente, dejando a un lado la función directiva de la organización, es por esto, que el objetivo de este estudio es identificar las competencias directivas clave del perfil directivo en el ámbito de la dirección en los procesos sustantivos de las Instituciones de Educación Superior (IES), como punto de partida para el desarrollo ulterior de la investigación en las Universidades Tecnológicas del país. El desarrollo del trabajo se estructura en tres partes: referentes teórico–metodológicos mediante la revisión de la literatura, la metodología utilizada en la exploración empírica con los expertos y el análisis de la identificación de las competencias directivas más importantes para las IES.

## REVISION DE LITERATURA

El tratamiento teórico, las experiencias y las acciones en torno al enfoque de gestión por competencias se han incrementado a nivel internacional en las últimas dos décadas, asociado a las nuevas formas de organización y recompensa al trabajo, como vías de mantener las ventajas competitivas y elevar la eficiencia y eficacia. Aunque no existe un concepto unánimemente aceptado de competencia, la definición adoptada y aceptada de forma mayoritaria en la literatura científica y en los modelos de management moderno, tienen sus antecedentes en las investigaciones de McClelland (1973) sobre los posibles vínculos entre las motivaciones y las necesidades de logro con el éxito profesional, donde demuestra que los expedientes académicos y los test de inteligencia por sí solos no eran capaces de predecir con fiabilidad la adecuada adaptación a los problemas de la vida cotidiana, y en consecuencia el éxito profesional. Varios de los autores relacionados con el tema de la gestión por competencias (Cuesta, 2002) coinciden en que la elaboración de los perfiles de competencias aporta mejoras significativas durante la implementación del subsistema de gestión integral de los recursos humanos en las organizaciones, pues impactan decisivamente en la efectividad de los planes de formación, en la selección del personal que ingresará a la empresa y en la evaluación del desempeño.

Para el análisis de la función directiva Cardona, P. y Chinchilla, N. (1998) plantean dos tipos de competencias: las competencias estratégicas (competencias orientadas a la obtención de resultados económicos) y las competencias intratérgicas (competencias orientadas a desarrollar a los empleados e incrementar su compromiso y confianza con la empresa). A estos dos tipos de competencias directivas propiamente empresariales, le suman las competencias de eficacia personal. Las competencias directivas son una herramienta esencial para asegurar la competitividad de las empresas en la nueva economía global. Cada empresa debe definir las competencias que considere necesarias para desarrollar su competencia distintiva y cumplir así su misión (Cardona, P. 1999). Así mismo agrega: Todo parece indicar que los

directivos son conscientes de que el valor diferencial de su negocio está en las personas y que ya no se puede dirigir sin pensar en el desarrollo profesional de los subordinados. Por lo tanto, la función directiva se refiere a tres dimensiones.

*Competencias estratégicas:* “Son aquellas necesarias para obtener buenos resultados económicos y entre estas los autores citan: la visión, la resolución de problemas, la gestión de recursos, la orientación al cliente y la red de relaciones efectivas”.

*Competencias intratélicas:* “Son aquellas necesarias para desarrollar a los empleados e incrementar su compromiso y confianza con la empresa, que según el referido modelo, se trata en esencia de la capacidad ejecutiva y de la capacidad de liderazgo, entre las cuales se mencionan: la comunicación, la empatía, la delegación, el coaching y el trabajo en equipo”.

*Competencias de eficacia personal:* que son aquellos hábitos que facilitan una relación eficaz de la persona con su entorno “Estas competencias miden la capacidad de auto-dirección, la cual resulta imprescindible para dirigir a otros, potenciando de esta forma las competencias estratégicas e intratélicas”.

En su estudio García-Lombardía, Cardona, and Chinchilla (2001) aplicó el cuestionario a 1,147 empresas multinacionales conformado por 30 ítems clasificados en los tres tipos de competencias, obteniendo 148 respuestas a diferentes sectores siendo los más representativos el de consultoría, servicios financieros, químico y farmacéutico, energía y de alimentación y tabaco; todas de origen español, de Europa y América Central. El objetivo del trabajo era analizar cuál es el perfil de competencias directivas más valorado por las empresas para la elección de un directivo. Identificó entre 30 competencias un ranking de las diez más valoradas. 1) Orientación al cliente (estratégica); 2) Liderazgo (intratélicas); 3) Honestidad (personal); 4) Iniciativa (intratélicas); 5) Trabajo en equipo (intratélicas); 6 Comunicación (intratélicas); 7 Visión del negocio (estratégica); 8) Aprendizaje personal (personal); 9) Credibilidad (personal) y 10) Toma de decisiones (personal). Los resultados generales muestran que las competencias estratégicas son las menos valoradas y las intratélicas obtienen la valoración más alta. Revela su estudio que las empresas buscan en los futuros directivos un equilibrio entre los tres tipos de competencias, con mayor dominio de la intratélica referidas al desarrollo de las personas; y las mas valoradas son la orientación al cliente, liderazgo y honestidad.

## METODOLOGÍA

Para establecer un perfil por competencias así como su diagnóstico y evaluación lo primero es la identificación de las competencias. Con el fin de seleccionar el listado de las competencias directivas para las Instituciones de Educación Superior, se tomó como punto de partida tanto la clasificación como el cuestionario utilizado por Cardona, Chinchilla, and García-Lombardía (2001) para diferentes sectores en su estudio “Las competencias directivas más valoradas” aplicada a 148 empresas de diferentes sectores que contratan MBA egresados del Instituto de Estudios Superiores de la Empresa (IESE Business). Como la investigación se desarrollará en las IES, como primera fase de la misma se determinó validar el instrumento para comprobar su pertinencia para el sector educativo, mediante el método de expertos. Se seleccionaron como expertos a los miembros de la Comunidad de Instituciones de Educación Superior de La Laguna (CIESLAG) constituida por 28 Directivos, de los cuales se obtuvieron 16 encuestas contestadas (57% de los cuestionarios enviados). Las características de los miembros del grupo de expertos son las siguientes: 13 de los Directivos de los cuestionarios contestados son hombres que representan el 81% de la muestra y un 19% correspondiente al sexo femenino. La edad promedio de los directivos es de 55 años, un 19 % se encuentran entre los 35 y 45 años de edad, correspondiendo a 3 directivos; el 44% oscila entre una edad de 41 a 60 años y un 37% tiene más de 60 años (6 directivos). En lo que a nivel de estudios se refiere el 19% de la muestra corresponde al máximo nivel de estudios (Doctorado) está

representado por 3 directivos, un 44% cuenta con estudios de Maestría y el resto, tiene estudios de Licenciatura. El 100% de los directivos encuestados son la máxima autoridad de la institución que representan y en promedio tienen más de 20 años desempeñándose como directivos en una institución de educación superior.

El instrumento contó de 30 ítems que representaban las diferentes clasificaciones de las competencias directivas: estratégicas, intratélicas y de eficacia personal, usando una escala likert para definir la importancia de cada una de ellas para las diferentes funciones sustantivas de la educación superior. El Alfa de Cronbach general para el estudio arrojó 0.88, por lo que se considera confiable para el propósito por el cual fue generado. El procesamiento de datos se basó en técnicas de la estadística descriptiva de tendencias centrales, comparando los resultados de la aplicación del instrumento en lo fundamental con los obtenidos por García-Lombardía et al. (2001).

## RESULTADOS

### Análisis Según la Clasificación de las Competencias Directivas.

El cálculo de las medias de todas las competencias directivas, evidencia como se refleja en la Figura No. 1 las competencias estratégicas se encuentran en primer lugar con un 4.79, las competencias intratélicas obtienen una puntuación de 4.77 y la de eficacia personal un 4.67. A diferencia de los resultados obtenidos en el estudio de García-Lombardía et al. (2001) donde se determina a la dimensión intratélica como la más dominante y referida al desarrollo de las personas en las organizaciones, más sin embargo, ambos resultados coinciden en que las empresas e instituciones buscan en sus directivos un equilibrio entre los tres tipos de competencias, al igual como lo determina García Lara (2008) donde establece una relación entre las tres dimensiones de competencias siendo más fuerte la relación de las intratélicas. Este equilibrio en las competencias se ve reflejado en la Figura No.1, al representar un 33% las de eficacia personal y la intratélica cada una contra un 34% la estratégica, demostrando que para definir un perfil directivo de una IES es importante considerar las tres dimensiones.

Figura 1: Dimensiones de las Competencias Más Valoradas: Media Y %

*En esta figura 1 se muestra que las dimensiones de las competencias en cuanto a las medias oscila entre 4,67 a 4,79 y que en correspondencia el promedio porcentual es de 33-34%, reflejando un equilibrio entre las tres dimensiones*

Las competencias directivas son una herramienta esencial para asegurar la competitividad de las organizaciones, debe existir un equilibrio para el logro de los objetivos (estrategia), promover el desarrollo y compromiso de los empleados (intrategia), buscando una relación eficaz de la persona consigo misma y con el entorno. Dentro de las Competencias Estratégicas se encuentra la Gestión de recursos con una media

de 5.00 como la más valorada para las IES, seguida de la visión de negocio con un promedio de 4.88 y la competencia de red de relaciones efectivas con 4.81, como se muestra en la Figura No.2, a diferencia con los resultados del estudio de García-Lombardía et al. (2001) donde la competencia de orientación al cliente se encuentra en el nivel 1 del ranking. La gestión de recursos, competencia estratégica más valorada, se define como la forma en que el directivo utiliza los recursos del modo más idóneo, rápido, económico y eficaz para obtener los resultados deseados. Esta competencia es muy importante en el directivo de IES para obtener los resultados de desempeño establecidos en sus planes estratégicos mediante la adecuada aplicación de los recursos y su gestión para incrementarlo. La competencia de orientación interfuncional se encuentra dentro de las competencias estratégicas menos valoradas por las IES.

Figura 2: Competencias Estratégicas Más Valoradas en las IES

En esta figura 2 se muestra el valor medio obtenido por cada una de las competencias que integran la competencia estratégica, destacando la gestión de recursos seguida por la visión de negocio y la red de relaciones efectivas para las IES. Elaboración Propia

En las Competencias Intratégicas, según la Figura 3, se encuentra como las más valoradas el trabajo en equipo y el liderazgo, seguida por la dirección de personas; y por último como la menos valorada la delegación y el coaching. El trabajo en equipo y liderazgo son dos competencias que manifiestan que el directivo encamina sus esfuerzos para fomentar un ambiente adecuado que movilice, motive y comprometa a los diferentes trabajadores con el logro de los objetivos de la organización.

Figura 3: Competencias Intratégicas Más Valoradas en las IES

Figura 3. En esta figura se muestra la representación gráfica de las competencias directivas intratégicas en las IES siendo el Trabajo en equipo y el Liderazgo las más valoradas. Elaboración Propia

La Competencia de Eficacia Personal, como capacidad de autodirección de los directivos, ubica en primer lugar la integridad, seguida por la resolución de problemas por parte de los directivos y en último sitio el autogobierno, reflejándose en este el menor interés por parte de los directivos el autocontrol y tenacidad, como se evidencia en la figura No.4. Dentro de las competencias para el desarrollo de la eficacia del personal en primer lugar encontramos la integridad consistente en la honestidad reflejada en la necesidad de que tanto él como los docentes y personal administrativo cuenten con un comportamiento transparente, basado en principios éticos ante cualquier situación. Los directivos buscan en sus instituciones personas encaminadas al logro de objetivos que promuevan la colaboración, comunicación y confianza en un ambiente de transparencia y rectitud hacia sus alumnos. De acuerdo a las competencias más valoradas por García-Lombardía et al. (2001) encontramos una relación estrecha con los resultados obtenidos, ya que se identifica la Honestidad como la competencia de eficacia personal más valorada y la tercera en los resultados general. La menos valorada fue la concentración, en contraste con los resultados del estudio de García Lara (2008) quien determina el autogobierno competencia que incluye la concentración, autocontrol y tenacidad como la más representativa de la eficacia personal, y con una influencia tanto en los resultados tangibles como intangibles de la organización.

Figura 4: Competencias de Eficacia Personal Más Valoradas en las IES

Figura 4. En esta figura se muestra la representación gráfica de las competencias directivas de eficacia personal en las IES siendo Integridad la más valorada en las IES. Elaboración Propia

## CONCLUSIONES

La evaluación diagnóstica de las competencias directivas en las IES de la región Laguna, objetivo de esta investigación, identificó como resultados más importantes los siguientes:

Con respecto a las dimensiones de las competencias (estratégicas, intratérgicas y de eficacia personal) existe en las IES (sector educativo) un equilibrio en las valoraciones de las tres dimensiones con una ligera inclinación hacia las competencias estratégicas, a diferencia del estudio de García-Lombardía et al. (2001) donde las empresas buscan en los futuros directivos un cierto equilibrio entre estos tres tipos de competencias dominando más la búsqueda de competencias intratérgicas, referidas al desarrollo de las personas en las organizaciones.

En relación a las competencias más valoradas, en las IES son: gestión de recursos (estratégicas), trabajo en equipo y liderazgo (Intratérgicas) e integridad (eficacia personal), de lo cual se infiere que el

perfil directivo deberá ser una persona eficiente en el manejo de los recursos que tiene a cargo, fomentando un ambiente de colaboración, comunicación y confianza entre los miembros del equipo dando sentido a su trabajo para el cumplimiento de los objetivos institucionales, con un comportamiento transparente, recto, honrado sin discriminación ante cualquier situación.

Dentro de las 3 competencias más valoradas en la comparación del estudio resultaron coincidentes: el liderazgo y la integridad, lo cual confirma la significancia que se le atribuye a la capacidad de dirección como factor de competitividad de las organizaciones y además los valores y actitudes manifiestas en la formación y comportamiento integral de los profesionales en general y en cargos de dirección en particular.

El aporte de la investigación reside en la validación de un instrumento para la evaluación de las competencias directivas ajustado al contexto de las IES de México (en particular para el sistema de universidades e Institutos Tecnológicos), teniendo en cuenta la composición del grupo de expertos, el valor de 0,88 que arrojó el Alfa de Cronbach; el valor superior a 4.53 de todas las competencias incluidas en el instrumento, y la comparación de los resultados en cuanto a dimensiones, las 10 y 3 competencias más valoradas con respecto al estudio de García-Lombardía et al. (2001) en el Instituto de Estudios Superiores de la Empresa (IESE Business), el cual tiene un gran reconocimiento en América Latina en diferentes tipos de organizaciones. A diferencia de los diversos estudios de Cardona, Chinchilla incorpora como variables de estudio: visión estratégica los directivos; Innovación en dirección y gestión; Capacidades directivas e Inversión en formación y desarrollo de los empleado. Ello significa que la competencias directivas solo son un indicador de la capacidad de dirección además de separada de la visión estratégica. Estos aspectos deben ser profundizados para el ulterior desarrollo teórico - metodológico de la presente investigación.

# LA GESTIÓN DEL TALENTO HUMANO EN LA ADMINISTRACIÓN PÚBLICA DE UNA MUNICIPALIDAD DE COSTA RICA BAJO EL MODELO DE LIDERAZGO NIVEL 5 DE COLLINS

Edgar Armando Chávez Moreno, Universidad Autónoma de Baja California

Randall Ramírez Loria, Universidad de Costa Rica

María Virginia Flores Ortiz, Universidad Autónoma de Baja California

## RESUMEN

*Este estudio de investigación presenta, los resultados de un diagnóstico aplicando el instrumento de medición liderazgo nivel 5 de Jim Collins, con la finalidad de identificar el grado de liderazgo que presenta la administración pública de la municipalidad de Pococí, Costa Rica, y a partir de los resultados obtenidos de la aplicación del instrumento de medición, para presentar los resultados y recomendaciones a las autoridades correspondientes, bajo un tratamiento estadístico sustentado en el paquete estadístico SPSS v17.*

**PALABRAS CLAVE:** Liderazgo, Capital Humano, Sector Público

## HUMAN TALENT MANAGEMENT IN THE PUBLIC SERVICE OF A CITY OF COSTA RICA APPLYING A MODEL LEADERSHIP LEVEL 5 OF COLLINS

### ABSTRACT

*This research study presents the results of a diagnosis using the measuring instrument level 5 Leadership Jim Collins, in order to identify the degree of leadership that has the public administration of the municipality of Pococí, Costa Rica, and from the results obtained from the application of the measuring instrument to present the findings and recommendations to the appropriate authorities under a statistical treatment sustained in SPSS v17.*

**JEL:** H760, M120

**KEYWORDS:** Leadership, Human Talent, Public Service

## INTRODUCCIÓN

En la actualidad, se requiere con más urgencia mayor liderazgo en las administraciones públicas. Como es bien sabido el liderazgo ha venido presentando una evolución continua en función de las condiciones que presenta cada organización, en particular en las últimas tres décadas. Este estudio de investigación persigue, de manera específica aplicar un instrumento de medición que permita medir el grado de liderazgo nivel 5 de Jim Collins en la administración pública de la municipalidad de Pococí, Costa Rica. Una vez que se logró la gestión correspondiente con los directivos involucrados en el estudio, se aplicó el instrumento y se midió el grado de liderazgo nivel 5 que presenta la administración pública de Pococí, Costa Rica, para presentar ante las autoridades correspondientes los resultados obtenidos y plantear diferentes alternativas o soluciones que ayuden a mejorar el desempeño de sus departamentos.

## REVISIÓN DE LITERATURA

### Liderazgo de Nivel 5

El liderazgo nivel 5, se refiere al nivel más alto, en una jerarquía de capacidades ejecutivas, según Collins, J. (2005). Los líderes de los otros cuatro niveles, en la jerarquía pueden generar altos grados de éxito, pero no el suficiente para elevar a las organizaciones de la mediocridad, a la excelencia sostenida. La siguiente tabla 1, resume la teoría que plantea Collins, J. (2005), en su investigación de liderazgo de nivel 5.

Tabla 1: Características del Líder Nivel 5 de Jim Collins

<b>El Líder de Nivel 5 Se Sitúa en la Cima de una Jerarquía de Capacidades y es, un Requisito Necesario Para Transformar una Organización de Buena a Excelente.</b>
<b>Nivel 5 Ejecutivo de Nivel 5</b> Desarrolla una grandeza duradera, mediante una paradójica combinación de humildad personal, y voluntad profesional.
<b>Nivel 4 Líder eficaz</b> Cataliza el compromiso, con una visión clara y convincente; y su vigorosa aplicación, estimula al grupo a lograr altos estándares de desempeño.
<b>Nivel 3 Ejecutivo competente</b> Organiza a las personas, y los recursos para la búsqueda eficaz y eficiente, de objetivos predeterminados.
<b>Nivel 2 Colaborador de un equipo</b> Contribuye al logro de objetivos grupales; trabaja eficazmente con otros en un entorno de grupo.
<b>Nivel 1 Individuo altamente capaz</b> Hace contribuciones productivas mediante talento, conocimiento, habilidades y buenos hábitos de trabajo.

*Fuente: Collins, J. (2005). Esta tabla muestra los 5 niveles de liderazgo propuestos por Jim Collins, considerados dentro del instrumento de medición del presente estudio de investigación.*

Y aunque el liderazgo de Nivel 5, no es el único requisito para transformar una organización buena en excelente –otros factores incluyen sumar a las personas correctas a la aventura (y apartar a las incorrectas), así como crear una cultura de disciplina-, según Collins, J. (2005) muestra que es esencial. Las transformaciones, de bueno a excelente, no ocurren sin líderes de Nivel 5 en el mando. Según investigaciones, Mendoza, R. & Ortiz, C. (2006); Ortiz, G., Amalia, R. (2006); Pedraja-Rejas, L., Rodríguez-Ponce, E., & Rodríguez-Ponce, J. (2008) los líderes transformacionales, ejercen una influencia al interrelacionarse con los miembros del grupo, estimulando cambios de visión buscando el bien común y dejando de lado los intereses particulares, por lo que el liderazgo nivel 5 de Collins se puede identificar como liderazgo transformacional. Esta teoría, confirma la importancia, de colocar a líderes de Nivel 5 que corresponden a la categoría de tipo transformacional en los puestos clave de la administración pública en la municipalidad de Pococí, Costa Rica y de esta manera definir la ruta hacia el mejoramiento continuo.

Por otro lado, Mendoza, I., Ortiz, M. & Parker, H. (2007) refieren que los miembros del equipo transformacional se preocupan por otros, se estimulan intelectualmente, se inspiran entre ellos, y se identifican con las metas del equipo lo que logra percibirse en los líderes de nivel 5. La asertividad, por parte de los responsables, de asignar a los líderes de los puestos clave, dentro de la administración pública, reside en la objetividad del análisis de la currícula presentada, por los sustentantes al cargo público y, que en algunas ocasiones no se cuenta con un proceso de selección y reclutamiento riguroso, si no se cuenta con una herramienta que permita medir el grado de liderazgo nivel 5. Según Cardona, J. (2004), El modelo “Círculos de Liderazgo y Gestión por 8 hábitos es altamente efectivo e implica una interacción entre clientes y colaboradores partiendo de 8 conceptos: información, visión estratégica, resultados, delegación, aprendizaje, comunicación y negociación, equipo e innovación. En este sentido, para que pueda ocurrir una transformación en el sector público, deberá contar con la determinación de combatir, y abatir el comportamiento organizacional tan arraigado.

## Las Instituciones del Sector Público

Según Velazquez, G. (2005), en los últimos años se ha observado un deterioro continuo de las organizaciones nacionales en comparación con otras naciones, identificando principalmente la pérdida de productividad, altos costos de producción, lento proceso de comercialización y, sobretodo, ausencia de creatividad e innovación por parte del capital humano. En este sentido, según investigaciones Aguilar, J. (2007); Gutierrez, A., & Gutierrez, J. (2008) el servidor público se motiva, para laborar, por la remuneración, su estabilidad laboral, su satisfacción personal y el poder que pueda ejercer en la organización. En especial es altamente recomendable actuar localmente y buscar la mejora en el desempeño de los líderes a partir de los puestos clave en la administración pública de las municipalidades.

Según Castro, A. (2006), el liderazgo es el proceso por el cual una persona tiene la capacidad para influir y motivar a sus seguidores de modo que contribuya al logro de los objetivos establecidos y al éxito del proyecto organizacional. Según Pedraja, L. & Rodríguez, E. (2004), la relevancia de la decisión, la importancia del compromiso, la probabilidad de éxito, la experiencia del líder y del grupo, el apoyo del grupo al logro de los objetivos y la competencia del grupo son determinantes en la competitividad de las organizaciones. Según Villarzú, J. (2005), transcurrían las primeras semanas de 1994, y la Corporación Nacional del Cobre (Codelco) estaba a punto de correr la misma suerte que el Titanic. Con 24 000 empleados y utilidades por unos US\$ 516 millones, Codelco era grande, imponente y majestuosa. La mejor herramienta que todo CEO debe poseer según Villarzú, J. (2005); Gil, F., Alcover, M., Rico, R. & Sánchez-Manzanares, M. (2011), es la negociación, y Juan Villarzú, la explotó de una forma por demás sabia. La clave del éxito de Codelco, estriba entre otras cosas, en la decisión del presidente de Chile, Frei en dejar al frente de la empresa de cobre, a Juan Villarzú. Tras estudiar la propuesta de los sindicatos, Juan Villarzú les dijo con palabras textuales: “Miren, ustedes y yo queremos mantener esta empresa estatal. Comparto 90% de lo que ustedes plantean. Trabajemos el otro 10% y lleguemos a un acuerdo”.

## **METODOLOGÍA**

### **INTRODUCCIÓN**

El presente estudio es de tipo descriptivo y se llevó a cabo en la administración pública de la municipalidad de Pococí, Costa Rica. En este trabajo de investigación, se aplicó el instrumento de medición (cuestionario) del modelo liderazgo nivel 5 de Collins para identificar el nivel de liderazgo que existe en los sujetos de estudio.

*Descripción de la muestra:* La muestra estuvo compuesta por 20 sujetos de estudio, que trabajan en las jefaturas de la municipalidad de Pococí, Costa Rica, como se puede observar en la Tabla 2.

*Procedimiento de aplicación:* Para la aplicación del instrumento de medición (cuestionario), el investigador de la Universidad de Costa Rica visitó a los sujetos de estudio en la municipalidad de Pococí, Costa Rica, en primera instancia para agendar la aplicación del instrumento, y posteriormente en la fecha acordada se procedió a la explicación y aplicación del llenado del instrumento de medición obteniendo el 100% de respuesta, por parte de los sujetos de estudio, es decir solo 20 de 20 sujetos de estudio accedieron a participar en el estudio.

*Sujetos de estudio:* Jefe de departamento de la municipalidad de Pococí, Costa Rica de la administración pública que posea autoridad para tomar decisiones estratégicas y personal bajo su cargo.

### Objetivo

Identificar el grado de liderazgo nivel 5 en los puestos clave de la administración pública en la municipalidad de Pococí, Costa Rica.

### Hipotesis

Ho: No existe un nivel de liderazgo nivel 5 significativo en la administración pública de la municipalidad de Pococí, Costa Rica.

H1: Existe un nivel de liderazgo nivel 5 significativo en la administración pública de la municipalidad de Pococí, Costa Rica.

### Determinación de la Muestra

*Aspectos generales de Costa Rica:* Con respecto a su ubicación geográfica Costa Rica está situada en América Central, entre los mares: Océano Pacífico y Mar del Caribe. Sus países vecinos son Nicaragua al norte y Panamá al sur. Posee una extensión territorial de 51,100 Km<sup>2</sup>, una población de 4.7 millones y una fuerza laboral de 2.18 millones. Su división administrativa consta de siete provincias: San José (capital), Alajuela, Heredia, Cartago, Guanacaste, Puntarenas y Limón, que a su vez están divididos en 81 cantones.

*Municipalidad De Pococí:* Pococí es el segundo cantón de la provincia de Limón en Costa Rica, se crea mediante la ley n° 12 del 19 de septiembre de 1911, con siete distritos. El nombre del cantón según don Carlos Gagini, en su obra Los Aborígenes de Costa Rica, le fue asignado en recuerdo de la provincia indígena de Pococí, situada entre las provincias Tariaca y Suerre. Actualmente en Pococí existen almacenes de todo tipo, tiendas, hoteles, restaurantes, al norte se encuentra el Parque Nacional Tortuguero, uno de los sitios turísticos más visitados de Costa Rica, por su belleza escénica, su bio diversidad y por la presencia de las tortugas marinas que llegan cada año convirtiéndolo en el sitio de desove más importante del Caribe. El cantón de Pococí tiene una extensión de 2,403.49 km<sup>2</sup>, y es el segundo en importancia de la provincia de Limón, Costa Rica.

Tabla 2: Sujetos de Estudio la Municipalidad de Pococí, Costa Rica

	Población	Muestra
Total de sujetos de estudio la Municipalidad de Pococí, Costa Rica	20	19

*En esta tabla se muestra la población y muestra obtenida de los sujetos de estudio que participaron en este estudio de investigación, y a quienes se les aplicó el instrumento de medición de Collins.*

Factores que se consideraron en el cálculo de la muestra:

La población se considera con características homogéneas

Se cuenta con una población finita, ya que el número de dependencias es conocido

Fórmula empleada para el cálculo de la muestra  $n = k^2 (p \cdot q \cdot N) / (e^2 \cdot (N-1)) + (k^2 \cdot p \cdot q) = 1.96^2 (0.5 \cdot 0.5 \cdot 20) / (0.05^2 \cdot (20-1)) + (1.96^2 \cdot 0.5 \cdot 0.5) = 19$

### Instrumento de Medición

El instrumento de medición propuesto se tomó del modelo de liderazgo nivel 5 de Collins directamente del sitio oficial de Jim Collins (ver Anexo 1). El instrumento se compone de 8 reactivos bajo una escala Likert, estableciendo los siguientes criterios: A = Siempre B = Casi siempre C = Frecuentemente D = Casi nunca E = Nunca. La validación de contenido del mismo está sustentada por el modelo de Jim Collins. Apoyado en el tratamiento estadístico que hace referencia García, B. (2005), para conocer la confiabilidad de un instrumento de medición de tipo cuantitativo, se utiliza el análisis Alpha de Cronbach. Este es de consistencia interna y donde según la Tabla 3 nos arroja un Alpha de Cronbach de .905 para los 8 ítems.

Tabla 3: Confiabilidad del Instrumento de Medición Liderazgo Nivel 5 de Collins

Alpha de Cronbach	Ítems
.905	8

*Esta tabla muestra el resultado del alfa de Cronbach obtenido a través del análisis factorial realizado con apoyo de SPSS v.17, al instrumento de medición utilizado en el presente estudio de investigación.*

En la Tabla 4 se puede observar el comportamiento de los ítems con respecto a su correlación y el grado de confiabilidad con respecto al Alpha de Cronbach si se llegan a eliminar los ítems de manera individual del instrumento de medición.

Tabla 4: Confiabilidad del Instrumento de Medición Liderazgo Nivel 5 de Collins Por Eliminación de Ítems Para Mejorar el Alpha de Cronbach

Ítem	Correlación Del Ítem Corregida	Alpha de Cronbach con el Ítem Eliminado
LN51. Los líderes que ocupan los cargos más importantes de nuestra organización son ambiciosos, ante todo, por la causa, la organización del trabajo, no de ellos mismos y tienen una voluntad de hierro para hacer lo que se necesita para hacer realidad esa ambición.	.726	.892
LN52. Los líderes que ocupan los cargos más importantes de nuestra organización muestran una trayectoria cada es mejor, a la hora de tomar las decisiones que funcionan para la grandeza a largo plazo de la empresa y su trabajo.	.913	.871
LN53. Los líderes que ocupan los cargos más importantes de nuestra organización practican colocan en la ventana a las personas para dar crédito por el éxito. Cuando se enfrentan a las fallas, se miran al espejo y dicen: yo soy responsable.	.893	.879
LN54. Mientras que algunos miembros del equipo pueden reflejar un liderazgo carismático. Ellos inspiran a los demás principalmente a través de normas de inspiración como la excelencia, el trabajo duro, sacrificio, y la integridad.	.266	.922
LN55. Nuestra cultura valora la sustancia sobre el estilo, la integridad sobre la personalidad, y los resultados sobre las intenciones.	.507	.909
LN56. Los miembros de nuestro equipo de liderazgo, fomentan el diálogo y el debate en la búsqueda de la mejor respuesta (no por el bien de una persona inteligente o ganar un punto) hasta el punto de decisión.	.916	.874
LN57. Una vez que se toma una decisión, los miembros del equipo trabajan unificados detrás de la decisión para asegurar el éxito, incluso aquellos que estaban en desacuerdo con la decisión.	.611	.902
LN58. Cultivamos líderes que tienen los cinco niveles en la jerarquía de nivel 5: individuos altamente capaces, que contribuyen como colaboradores del equipo, ejecutivos competentes, líderes eficaces, y los ejecutivos de nivel 5.	.817	.884

*En esta tabla se puede observar el comportamiento de los ítems con respecto a su correlación y el grado de confiabilidad con respecto al Alpha de Cronbach si se llegan a eliminar los ítems de manera individual del instrumento de medición.*

La validación de constructo del instrumento de medición se llevó a cabo en SPSS v17 con la prueba de análisis factorial, la Tabla 5 explica el comportamiento estadístico de la variable liderazgo nivel 5 de Jim Collins.

Tabla 5: Análisis Factorial de la Variable Liderazgo Nivel 5 de Jim Collins

Ítem	Componentes	
	1	2
LN51. Los líderes que ocupan los cargos más importantes de nuestra organización son ambiciosos, ante todo, por la causa, la organización del trabajo, no de ellos mismos y tienen una voluntad de hierro para hacer lo que se necesita para hacer realidad esa ambición	.804	.213

LN55. Nuestra cultura valora la sustancia sobre el estilo, la integridad sobre la personalidad, y los resultados sobre las intenciones.	.577	.586
LN56. Los miembros de nuestro equipo de liderazgo, fomentan el diálogo y el debate en la búsqueda de la mejor respuesta (no por el bien de una persona inteligente o ganar un punto) hasta el punto de decisión.	.959	-.178
LN57. Una vez que se toma una decisión, los miembros del equipo trabajan unificados detrás de la decisión para asegurar el éxito, incluso aquellos que estaban en desacuerdo con la decisión.	.743	-.465
LN58. Cultivamos líderes que tienen los cinco niveles en la jerarquía de nivel 5: individuos altamente capaces, que contribuyen como colaboradores del equipo, ejecutivos competentes, líderes eficaces, y los ejecutivos de nivel 5.	.893	-.334

*Esta tabla explica el comportamiento estadístico de la variable liderazgo nivel 5 de Jim Collin bajo la validación de constructo del instrumento de medición apoyado de SPSS v17 con la prueba de análisis factorial.*

Según Kaiser (1970), el contraste de Kaiser-Meyer-Olkin (KMO) debe ser mayor a 0.5 en los ítems evaluados, de tal manera que no hubo necesidad de eliminar ítems según lo demuestra la Tabla 5, por lo que se incluyeron los 8 ítems propuestos por Collins en el instrumento de medición, adicionalmente a estos 8 ítems se anexaron 4 ítems adicionales de tipo sociodemográfico.

## RESULTADOS

Para identificar la clasificación del liderazgo nivel 5 de Jim Collins se codificó como 1=Siempre, 2=Casi Siempre, 3=Frecuentemente, 4=Casi nunca, 5=Nunca y 6=No contestó.

Tabla 6: Liderazgo Nivel 5 de Jim Collins en la Administración Pública de la Municipalidad de Pococí, Costa Rica

Ítem	Media	Mín	Máx
LN51. Los líderes que ocupan los cargos más importantes de nuestra organización son ambiciosos, ante todo, por la causa, la organización del trabajo, no de ellos mismos y tienen una voluntad de hierro para hacer lo que se necesita para hacer realidad esa ambición.	2.8500	1.00	5.00
LN52. Los líderes que ocupan los cargos más importantes de nuestra organización muestran una trayectoria cada es mejor, a la hora de tomar las decisiones que funcionan para la grandeza a largo plazo de la empresa y su trabajo.	3.0500	1.00	5.00
LN53. Los líderes que ocupan los cargos más importantes de nuestra organización practican colocan en la ventana a las personas para dar crédito por el éxito. Cuando se enfrentan a las fallas, se miran al espejo y dicen: yo soy responsable.	3.6500	2.00	5.00
LN54. Mientras que algunos miembros del equipo pueden reflejar un liderazgo carismático. Ellos inspiran a los demás principalmente a través de normas de inspiración como la excelencia, el trabajo duro, sacrificio, y la integridad.	3.0000	1.00	5.00
LN55. Nuestra cultura valora la sustancia sobre el estilo, la integridad sobre la personalidad, y los resultados sobre las intenciones.	2.9000	1.00	4.00
LN56. Los miembros de nuestro equipo de liderazgo, fomentan el diálogo y el debate en la búsqueda de la mejor respuesta (no por el bien de una persona inteligente o ganar un punto) hasta el punto de decisión.	3.1500	1.00	5.00
LN57. Una vez que se toma una decisión, los miembros del equipo trabajan unificados detrás de la decisión para asegurar el éxito, incluso aquellos que estaban en desacuerdo con la decisión.	3.4000	1.00	5.00
LN58. Cultivamos líderes que tienen los cinco niveles en la jerarquía de nivel 5: individuos altamente capaces, que contribuyen como colaboradores del equipo, ejecutivos competentes, líderes eficaces, y los ejecutivos de nivel 5.	3.6000	1.00	5.00

En esta tabla se pueden observar los resultados encontrados en esta investigación al aplicar el instrumento de medición de Collins, se puede observar el grado de liderazgo nivel 5 de Jim Collins que está presente en la municipalidad de Pococí, Costa Rica.

### Contrastación de la Hipótesis

Tabla 7: Contrastación de la Hipótesis

Hipótesis	Resultados	Observación
H1: Existe un nivel de liderazgo nivel 5 en la administración pública de la municipalidad de Pococí, Costa Rica.	Se rechaza por ser menor a 5	Se observa que al obtener una media entre 2.85 y 3.65 en los 8 ítems no existe un valor significativo de que se justifique la presencia del liderazgo nivel 5 de Jim Collins.

En esta tabla de contrastación de hipótesis, se observa que al obtener una media entre 2.85 y 3.65 en los 8 ítems no existe un valor significativo de que se justifique la presencia del liderazgo nivel 5 de Jim Collins en la municipalidad de Pococí, Costa Rica.

### Análisis e Interpretación de Tablas Cruzadas

El análisis e interpretación de los datos estadísticos, se llevó a cabo mediante la técnica de tablas de contingencia o tablas cruzadas apoyado de SPSS v17, con la finalidad de observar los resultados encontrados y los factores que influyen en el liderazgo nivel 5 de Jim Collins en la administración pública de la municipalidad de Pococí, Costa Rica. Los resultados encontrados en esta investigación, muestran que el liderazgo nivel 5 de Jim Collins está presente en el grado 3.2, considerando una escala del 1 al 5, y en su

mayoría en sujetos de estudio del género masculino, en un rango de edades de 25 a 45 años, solteros y con un nivel de escolaridad de preparatoria o menos.

## CONCLUSIONES

Como se pudo observar (Mendoza, R. & Ortiz, C. (2006); Ortiz, G., Amalia, R. (2006); Pedraja-Rejas, L., Rodríguez-Ponce, E., & Rodríguez-Ponce, J. (2008)) los líderes transformacionales, tienen algunas de las características del liderazgo nivel 5 de Jim Collins, y pueden ayudar en el desempeño de toda organización, llevándola de buena a excelente en el tiempo. En este sentido (Mendoza, I., Ortiz, M. & Parker, H. (2007)) algunas de las características presentes de todo líder de nivel 5 de Jim Collins, es la forma en que se identifican con las metas del equipo por encima de sus intereses personales. Collins (2005) establece que el nivel 5 de liderazgo es un descubrimiento empírico, no ideológico y que funciona en cualquier tipo de organización. Por otro lado, Aguilar, J. (2007); Gutierrez, A., & Gutierrez, J. (2008) hacen hincapié en que el servidor público se motiva, entre otras cosas, debido a el poder que pueda ejercer en la organización. El reto que presenta toda administración pública, según Pedraja, L. & Rodríguez, E.

(2004), es la de elevar la competitividad, tomando como referencia la importancia del compromiso, la experiencia del líder y del grupo, y el apoyo del grupo al logro de los objetivos, lo cual se ve reflejado en el liderazgo nivel 5 de Collins. De igual manera, otro de los retos importantes (Villazú (2005); Ascorra, P. (2008)), es que todo líder de una organización logre convencer a sus colaboradores de la estrategia y el rumbo que la organización persigue, ya que de lo contrario ni la mejor gestión ejecutiva logrará un cambio significativo en el desempeño de su equipo de trabajo. Los hallazgos que se observan en este estudio de investigación, lograron cumplir con el objetivo planteado a partir de la hipótesis del nivel de liderazgo nivel 5 de Collins que existe en la administración pública de la municipalidad de Pococí, Costa Rica, donde se observa un grado 3.2, considerando una escala del 1 al 5 de liderazgo nivel 5 de Collins presente en los sujetos de estudio según se puede observar en la Tabla 6 y lo valida la contrastación de hipótesis que se muestra en la Tabla 7. Los resultados obtenidos reflejan la importancia de establecer un plan de acción que permita incrementar el liderazgo nivel 5 de Collins en la administración pública de la municipalidad de Pococí, Costa Rica con la finalidad de elevar la competitividad y brindar un mejor servicio a la comunidad. Se invita a investigadores e interesados en llevar a cabo estudios comparativos de otras municipalidades de Costa Rica u otros países a sumar esfuerzos para lograr realizar un diagnóstico más integral, y en donde se consideren otras variables que permitan medir el nivel de liderazgo y competitividad presentes en el sector público.

# FORMULACIÓN Y EVALUACIÓN DE PROYECTOS E INNOVACIÓN COMO UNA RESPONSABILIDAD SOCIAL

Ana Bertha Plascencia Villanueva, Universidad Autónoma de Baja California  
Edith Montiel Ayala, Universidad Autónoma de Baja California

## RESUMEN

*Este artículo forma parte de una investigación realizada a nivel educación superior en el ejercicio del 2012, y en la cual se pretendió identificar que tanto influye la utilización de la información financiera para la toma de decisiones asertivas de tal manera que se brinden asesorías profesionales que permitan la innovación, actuando todos los participantes con una responsabilidad social, llevando a cabo una investigación de tipo etnográfica experimental tomando como muestra 60 estudiantes de los cuales 30 fueron considerando un grupo experimental y 30 grupo control, a esta muestra se le aplicó un cuestionario de 35 preguntas elaborado de acuerdo a la escala de Likert, contando con 8 categorías de las cuales únicamente la referente a formulación y evaluación de los proyectos se utiliza para el presente artículo concluyendo la muestra que el contar con análisis previos y conocimiento de la información financiera les permite generar nuevas ideas y proyectos alcanzables para la administración así como mejoras en las empresas.*

**PALABRAS CLAVE:** Innovación, Proyecto, Formulación, Evaluación y Responsabilidad Social

## FORMULATION AND EVALUATION OF PROJECTS AND INNOVATION AS A SOCIAL RESPONSIBILITY

### ABSTRACT

*This item is part of an investigation to higher education level in the year 2012, and which was intended to identify both influences the use of financial information for decision making assertive so that professionals can provide advice to enable innovation, acting all participants with a social responsibility, leading to an investigation of experimental ethnographic kind, taking as sample 60 students of which 30 were given an experimental group and 30 control group, this sample was applied in a questionnaire of 35 questions prepared according to the Likert scale, with eight categories of which only related to formulation and evaluation of projects used for this article concluding the shows that have prior analysis and knowledge of financial information allows generate new ideas and achievable projects for administration as well as improvements in business.*

**JEL:** M13, M14, M21, M51, M53

**KEYWORDS:** Innovation, Project, Formulation, Evaluation and Accountability Social

## INTRODUCCIÓN

El mundo atraviesa hasta la fecha por innumerables problemas de carácter económico financiero, que invariablemente afectan a sus habitantes, México con una población de 118 millones de personas según datos del Consejo Nacional de Población (CONAPO), no es la excepción, son innumerables los intentos que realizan los diversos sectores de la población con la finalidad de revertir esta problemática con la

finalidad de elevar la calidad de vida de las personas, los requerimientos de la sociedad son claros, por una parte la administración pública buscando elevar su recaudación tributaria por otra el ámbito empresarial buscando elevar su productividad, por otra las instituciones educativas intentando lograr satisfacer los requerimientos de la sociedad y por último los ciudadanos que se desenvuelven en este entorno, intentando cumplir con todos los requerimientos de esta sociedad, que indudablemente siendo ciudadanos con una alta responsabilidad social se enfocan en la aportación más adecuada al gasto público para lo cual intenta educarse cada cual de acuerdo a sus posibilidades.

La administración pública en México, ha realizado intentos de generar empresa, como por ejemplo la Secretaria de Economía(SEDECO), los municipios y los estados, otorgando recursos ya sea vía financiamiento y asesorías de todo tipo persiguiendo el mismo objetivo la creación de nuevas empresas y con ello fuentes de empleo, considerando que es una de las probables soluciones a la falta de recursos frescos en la administración pública y como una forma de incentivar la economía, sin embargo las estrategias no han dado los resultados esperados debido a que las empresas que inician sólo logran permanecer 2 años.

Esta investigación se enfoca, en identificar como un problema la falta de utilización de la información financiera para la toma de decisiones por parte de algunos estudiantes a nivel educación superior del área de ciencias económico administrativas y cuál es el impacto en el entorno empresarial, debido a que se considera como una de las posibles soluciones a esta problemática de que si los estudiantes de nivel superior conocen realmente la información financiera esto probablemente permitirá generar nuevas empresas así como planeaciones y proyectos viables, además de que en determinado momento brindaran asesorías empresariales efectivas demostrando con ello una clara responsabilidad social. Considerando como palabras clave en el presente artículo y de acuerdo a definiciones contenidas en el diccionario de la real academia española y de acuerdo al planteamiento del problema definiendo formulación como un medio de resolución ya sea personal o empresarial que debe de generar un costo determinado, reflejado en un proyecto que invariablemente surge de una idea y el proceso de llevarla a cabo con los costos que implicará el introducir un cambio de acuerdo a la innovación planteada en el proyecto como una forma de responder a los requerimientos de la sociedad de que esta formulación y proyectos deben de satisfacer necesidades de las sociedades por una responsabilidad social como se especifica en la Tabla 1.

Tabla 1: Formulación y Evaluación de Proyectos E Innovación Como una Responsabilidad Social

1	2	3	4	5	6	7
Formulación	Evaluación	Proyecto	Inversión	Innovación	Responsabilidad	Social
Medio practico para resolver un asunto	Determinar el costo real de un proyecto	Idea que se tiene de algo que se piensa hacer y cómo hacerlo	Capital invertido en el desarrollo de un proyecto	Cambios con la finalidad de introducir novedades	Capacidad de responder por los propios actos y en ocasiones por los ajenos	Sociedad relativo a las personas familias o naciones

*En esta tabla se considera como un mapa conceptual y la relación que tiene con el planteamiento del problema definiendo conceptos simples.*

## REVISIÓN DE LITERATURA

Existe diversa literatura que habla acerca de la información financiera como una base para llevar a cabo planeaciones y una adecuada formulación y evaluación de los proyectos de inversión al respecto diversos autores han escrito como por ejemplo: Vroom y Deci (1979), Es importante saber delegar responsabilidades con la finalidad de desarrollar las competencias necesarias con los conocimientos adecuados y sensibilizándose con los empresarios con el objeto de brindar asesorías de calidad por parte de los LCP. Medina (1993), Las empresas y su información financiera se pude analizar desde diferentes ángulos y visiones que podrían ser en cuanto al producto y servicio que ofrece primeramente esto tanto en lo interno como en lo externo todo ello con la posibilidad de adaptarse al mercado e identificar el punto de equilibrio

y es en ese momento cuando se puede brindar una asesoría de calidad siempre y cuando sea en forma oportuna de la misma manera comenta el autor acerca de la planeación considerándola como un principio de guía de acuerdo a las actividades que realizan las empresas que se pueden ir ajustando durante el tiempo “Podría incluso cambiar de rumbo, cuando sea necesario para alcanzar el objetivo general” Plascencia (2013), las empresas efectúan aportaciones en sus negocios con la finalidad de obtener un rendimiento y su capital invertido en un tiempo medido y un proyecto debe de ir orientado a la viabilidad de la inversión efectuada. “Un proyecto también pretende demostrar con estudios profesionalmente elaborados que existe una viabilidad de recuperación de la inversión para los que están arriesgando su capital, y demostrar también que no se estaría realizando una inversión que en determinado omento nos aleje de nuestro costo mínimo de oportunidad que una empresa debe de tener considerado”

Torres y Romero (1996) Pág. 137, comentan los autores que un valor agregado es de los componentes más importantes para evaluar la actividad económica, concluyen los autores con que “El valor agregado surge de la diferencia entre los ingresos totales de una empresa y los costos de compra de materias primas, servicios y componentes. Por lo tanto mide el valor de la empresa y agrega a esos materiales y componentes de compra, por medio de su proceso de producción”.

## METODOLOGÍA

Este artículo se fundamenta principalmente en una investigación de tipo experimental etnográfica educativa realizada por Plascencia(2012), en la cual aplicó diversos instrumentos con el objeto de darle cientificidad a su investigación entre los cuales se encuentran: observación, nota de campo, cuestionario, entrevista, pretest y postest a una muestra de 60 estudiantes de educación superior, 30 participando como grupo experimental y 30 como grupo control, el cuestionario fue categorizado y clasificado en 8 categorías de estudio para este artículo sólo se utilizó 1 categoría que es la correspondiente a formulación de proyectos, efectuando preguntas conducentes a la hipótesis generando una hipótesis de solución.

## RESULTADOS

Dentro de los cuestionamientos que dirigen a la hipótesis de solución y que se efectuaron relacionados con el problema se encuentra en primer término: ¿La falta de asesoría de carácter administrativo provoca carencia de competencias para la toma de decisiones financieras en la gestión directiva? La muestra manifestó, de acuerdo al cuestionario pre-test y post-test efectuado, en ambos grupos que si les es útil la información financiera para la toma de decisiones, con el objeto de asesorar en forma eficiente y oportuna. Así como que con ello pueden tomar decisiones que contribuyan a la mejora e innovación tanto ellos a nivel de asesoría como los empresarios, manifiestan también que es una responsabilidad social de los profesionistas de ciencias administrativas los resultados obtenidos o no obtenidos en una empresa al utilizar o bien dejar de utilizar la información financiera para la toma de decisiones ya que con ello se propician áreas de mejora, por otra parte, ambos grupos manifiestan que el no utilizar la información financiera promueve una falta de motivación en todos los involucrados en una empresa al desconocer cuál es la situación financiera real lo que les provoca incertidumbre laboral.

Como hallazgo importante en los indicadores de ambos grupos manifestaron que debido a los bajos sueldos así como a la inflación se propicia también una falta de motivación en todos los involucrados en una empresa, y que además el entender la forma como se debe de utilizar la información financiera ubica en posición de liderazgo para la toma de decisiones a los profesionistas además de que si conocieran la forma de utilizar la información financiera les sería más fácil la toma de decisiones eficiente y oportuna lo que orientaría a los empresarios a la permanencia de sus empresas en una gestión directiva eficaz lo que propiciaría una responsabilidad social de todos los involucrados así como una mayor innovación.

El segundo cuestionamiento conducente a la hipótesis de solución fue de si: ¿Una escasa planeación propicia carencia de visión de proyecto por falta de competencias para la toma de decisiones financieras en la gestión directiva? a lo cual la muestra manifestó que el entender la forma como se debe de utilizar la información financiera los ubica en posición de liderazgo para la toma de decisiones, sin embargo al preguntarles cual era la información financiera que conocían ambos grupos contestaron en forma errónea pero a la vez la muestra manifiesta que el no contar con habilidades y conocimientos para la utilización de la información financiera los limita en la preparación de proyectos y ambos grupos están conscientes de ello así como que, el no preparar proyectos podría ocasionar el cierre de empresas, además de que el conocer la información financiera y su utilidad les permitirá contar con habilidades para preparar proyectos viables. La muestra considero también que los análisis previos para preparar planeaciones financieras y proyectos son importantes, ya que les permite predeterminedar los acontecimientos del futuro y podría promover el incremento de nuevas empresas, debido a que el contar con los conocimientos y habilidades de utilización de la información financiera les generan nuevas ideas, lo que propicia la innovación. De estos cuestionamientos iniciales se generó una hipótesis de solución con los siguientes objetivos clave que son: Uno: brindar asesoría financiera de calidad, despertando una responsabilidad social de los trabajos que efectúen los egresados de una licenciatura en ciencias económico administrativa y Dos: preparar planeaciones y proyectos alcanzables contribuyendo con la administración en la generación de nuevas ideas. Todas las actividades que se realizaron fueron con el objeto de someter a comprobación la hipótesis de posible solución y así poder determinar si esta es la vía para resolver el problema planteado. Impartiendo un curso taller en el que se propicie en el estudiante de ciencias económico administrativas que influya responsablemente como líder, preparando planeaciones y proyectos alcanzables que conduzcan a la innovación para la administración aplicando las competencias para la toma de decisiones financieras en la gestión directiva

Tabla 2: Modelo Generado del Conocimiento a la Innovación

1	2	3	4	5
Conocimiento	Motivación	Generación de Proyecto	Toma de decisiones	Innovación

*En esta tabla se describe un modelo que indica que al sensibilizar transmitiendo los conocimientos relativos a la información financiera se logra motivar en la generación de proyectos y/o planeaciones financieras para posteriormente llegar a asesorar en forma asertiva para la toma de decisiones lo que en forma forzosa colocara en posición de conducirse a la innovación.*

Como alumno de ciencias administrativas, al desarrollar un proyecto y/o planeación financiera completo motivara a los involucrados en una empresa vía el conocimiento a la generación de un proyecto y/o planeación financiera ello les permitirá contar con elementos clave para la toma de decisiones que los llevara forzosamente a la innovación. Tal y como se hace referencia en el Tabla 2 mencionada anteriormente.

## CONCLUSIONES

El actuar con responsabilidad social quizá no se ha logrado sensibilizar a todos los actores de una sociedad determinada ya que cada cual aporta su esfuerzo en propiciar la innovación ya sea en la administración pública que busca el beneficio general de la población, a nivel empresarial con el sueño de permanecer siendo productivo, como institución educativa transmitiendo a sus estudiantes los conocimientos adecuados a los requerimientos del entorno y como estudiante de educación superior de una licenciatura en ciencias administrativas. Esta investigación refleja que si se logra aportar a la sociedad en un corto plazo egresados con conocimientos acerca de la utilización de la información financiera desarrollando en ellos las habilidades de asesoría que propicien la generación de proyectos y/o planeaciones financieras viables para las empresas o bien para desarrollar el emprendimientos individuales invariablemente se detonara la economía en forma positiva, generando innovaciones empresariales que contribuirán en forma importante

con el gasto publico elevando el prestigio de la institución por su forma de educar debido a la preparación de sus egresados impactando el entorno en forma positiva por las habilidades desarrolladas con el objeto de que a corto plazo se generen nuevas empresas y fuentes de empleo, que permanezcan en forma sana abriendo espacios donde se involucren estos estudiantes ya sea como empleados o bien como empresarios prósperos lo que contribuirá a una mejoría en la economía.

## **LIMITACIONES**

Las limitaciones son que quizá hace falta un cambio de paradigma en cuanto a que los estudiantes de una licenciatura de ciencias económico administrativas pueden llegar a ser empresarios y si se preparan con los conocimientos adecuados logrando sensibilizar en la utilización de la información financiera para la toma de decisiones, sin embargo existe renuencia de algunos estudiantes para utilizar la información financiera que les parece muy complicada y que también consideran más sencillo el trabajar para otros que iniciar sus propios proyectos empresariales.

# **EFFECTOS ADMINISTRATIVOS Y FINANCIEROS POR EL ESQUEMA VIGENTE DE LOS COMPROBANTES FISCALES PARA LAS MICROS, PEQUEÑAS Y MEDIANAS EMPRESAS DEL ESTADO DE BAJA CALIFORNIA**

María del Mar Obregón Angulo, Universidad Autónoma de Baja California

Aurelio Gutiérrez García, Universidad Autónoma de Baja California

José de Jesús Moreno Neri, Universidad Autónoma de Baja California

Plácido Valenciana Moreno, Universidad Autónoma de Baja California

## **RESUMEN**

*Debido al avance tecnológico que se ha venido presentando, las autoridades fiscales en México han buscado actualizarse en la emisión de comprobantes fiscales, creando una nueva modalidad de alcance nacional a partir de la reforma del Código Fiscal de la Federación (CFF), en los últimos tres años, tendientes a lograr un mejor control de los ingresos de los contribuyentes, implementando para tal efecto la factura electrónica, misma que paulatinamente ha incluido su uso obligatorio a más contribuyentes de acuerdo con sus ingresos acumulables. Este cambio en la facturación expedida y recibida por proveedores de bienes y servicios, les ha implicado a los contribuyentes afectaciones administrativas y financieras. Con la finalidad de conocer el efecto administrativo y financiero que tienen las micro, pequeñas y medianas empresas por la aplicación de la facturación electrónica, se llevó a cabo una investigación dentro de los principales municipios del estado de Baja California. Como resultado de la investigación detectamos inconformidad de los contribuyentes MIPYMES con el esquema actual por la carga administrativa y la inversión en equipo de cómputo y capacitación el personal para poder cumplir con el esquema vigente, así como las ventajas y desventajas de la implementación de la facturación electrónica.*

**PALABRAS CLAVE:** Efecto Administrativo, Efecto Financiero, MIPYMES, Comprobantes Fiscales

## **ADMINISTRATIVE AND FINANCIAL EFFECTS OF THE CURRENT TAX RECEIPT OUTLINE FOR MICRO, SMALL AND MEDIUM BUSINESS IN THE STATE OF BAJA CALIFORNIA**

### **ABSTRACT**

*Given the technological advancements that have been developing, Mexican tax authorities have looked for a way to update the issue of tax receipts, creating new means of national coverage, based on the Federal Tax Code reform (FTC). In recent years, this has tended towards a better taxpayer revenue control, and to that effect the electronic invoices have been implemented, which has gradually included its compulsory application to taxpayers according to their income. This change in the issued invoices and receipts by goods and services dealers has implied administrative and financial effects to the taxpayers. In order to identify the administrative and financial effects in micro, small and medium business with the application of the electronic invoices, an investigation has been carried out in the main municipalities of the state of Baja California. As a result of the investigation we detected an inconformity on part of the SMBs (Micro, Small and Medium Business) taxpayers in the current outline because of the administrative burden, the*

*investment in computing equipment, and the training of personnel to carry out the valid outline, as well as the advantages and disadvantages of the implementation of electronic invoice.*

**JEL:** M2,M4

**KEY WORDS:** Administrative Effect, Financial Effect, SMBs, Tax Receipts.

## INTRODUCCION

### Antecedentes

El Servicio de Administración Tributaria (SAT) tratando constantemente de estar a la vanguardia en la automatización de sus operaciones y en la búsqueda asimismo del cumplimiento de las obligaciones fiscales de los contribuyentes; introdujo a partir del año 2004, por medio de reformas fiscales al Código Fiscal de la Federación (CFF), la adición del capítulo II denominado “*de los medios electrónicos*”, por medio del cual en primera instancia, reconoció el poder autenticar con una firma electrónica (FIEL) de los contribuyentes y representantes legales, dándole de esa manera toda la validez, como si fuera firma autógrafa. Esto constituyó el preámbulo del origen de los comprobantes digitales, los cuales iniciaron como una opción para que los utilizaran los contribuyentes en la formalización de sus operaciones generadoras de ingresos a partir del año referido.

Sin embargo, fue con las reformas fiscales del 2010 en materia del propio CFF, las que obligaron a un importante número de contribuyentes a la utilización de la facturación electrónica, por el hecho de rebasar sus ingresos la cantidad de \$4'000,000 en el ejercicio inmediato anterior, aunado a que la autoridad les dio opción de utilizar el *comprobante fiscal digital (CFD)* en lugar del *comprobante fiscal digital por internet (CFDI)*, si se acogían al CFD a más tardar en el ejercicio 2010. Pero ¿porque los contribuyentes preferían el CFD en lugar del CFDI?, simplemente para tener menos presencia fiscalizadora del SAT en sus operaciones al no tener que enviar al SAT sus comprobantes para que los folie y les ponga su sello digital (timbrado) por medio del *proveedor autorizado de certificación (PAC)*. Estos cambios importantes, causaron incertidumbre en los contribuyentes, sobre todo por lo novedoso, aunado a la inversión y cambios administrativos que implican su implementación, sin embargo también se observan varios beneficios derivados de ellos. Para efectos de lo anterior, un grupo de investigadores de la Universidad Autónoma de Baja California de los municipios de Tijuana y Ensenada, acordamos realizar esta importante investigación, para conocer directamente de los empresarios micros, pequeños y medianos, su opinión en cuanto a las ventajas y desventajas por la introducción de la facturación electrónica.

La facturación electrónica son los comprobantes fiscales digitales por internet (CFDI), documentos electrónicos que permiten comprobar las operaciones realizadas entre los contribuyentes, bajo estándares tecnológicos y de seguridad internacionalmente reconocidos, que se incorporan a los esquemas tradicionales existentes, cuya particularidad es el uso de las tecnologías de la información para la generación, procesamiento, transmisión y resguardo de los documentos fiscales de manera 100% digital (Servicio de Administración Tributaria. (2009). Comprobantes Fiscales. Consultado el 1 de marzo de 2010 en:

[www.sat.gob.mx/sitio\\_internet/asistencia\\_contribuyente/principiantes/comprobantes\\_fiscales/66\\_9798.html](http://www.sat.gob.mx/sitio_internet/asistencia_contribuyente/principiantes/comprobantes_fiscales/66_9798.html)), agilizan la conciliación de la información contable, reduce costos y errores en el proceso de generación, captura y almacenamiento. También simplifica el proceso de emisión de comprobantes, ofreciendo beneficios a los receptores en la integración de manera automática y segura a su contabilidad, por medio de los servicios de validación de comprobantes fiscales digitales en línea, desde la página de Internet del SAT. Gracias a sus características, cada comprobante que se emite cuenta con un sello digital que lo identifica como único. La emisión de facturación electrónica es obligatoria a partir de 2011; sin

embargo, con el fin de que los contribuyentes se incorporaran paulatinamente a este nuevo esquema, se estableció un periodo de transición durante el cual se podían emitir comprobantes impresos el cual termino el 31 de diciembre del 2013. En folletos fiscales impresos en 2010 (Folleto “Factura Electrónica”.

Edición preparada en el Servicio de Administración Tributaria por la Administración General de Asistencia al Contribuyente, consta de 70,250 ejemplares y se terminó de imprimir en noviembre de 2010), el SAT informo que las empresas que ya manejan facturación electrónica, reportaron tener ahorros de hasta 85% en sus costos de operación y almacenamiento de los comprobantes para efectos fiscales. También mencionan diversas ventajas que brinda el esquema. Por lo anterior, es importante investigar, si se confirma las ventajas anunciadas por este nuevo esquema.

El objetivo de esta investigación era tener información confiable directamente de las organizaciones productivas de nuestro estado, nos avocamos a realizar esta investigación sobre el efecto del Sistema Tributario en las micros, pequeñas y medianas empresas con relación a su productividad y competitividad, la cual dio origen a la generación del presente trabajo. Actualmente no se cuenta con un diagnóstico formal de la situación que guardan las micro, pequeñas y medianas empresas del estado de Baja California ante los cambios en nuestro sistema tributario ni mucho menos el efecto que esta ha tenido sobre la competitividad y productividad de las empresas.

La presente investigación está organizada de la siguiente manera se presenta una sección 2 en donde se muestra la necesidad de llevar a cabo esta investigación de la cual se derivó la presente investigación, seguido por la sección 3 donde se lleva a cabo el planteamiento del problema en el cual se hace un diagnóstico de la situación actual que guardan las micro pequeñas y medianas empresas y se establece la pregunta de investigación. En la sección 4 se muestra la revisión literaria que se llevó a cabo para la investigación del tema, seguido por la sección 5 en donde se muestra la metodología aplicada en el presente trabajo. Por último se muestra las secciones de resultados en donde se analiza los datos obtenidos por los instrumentos aplicados y las recomendaciones y conclusiones de los autores.

### Justificación

A nivel internacional las micros, pequeñas y medianas empresas (MIPYMES), tienen una amplia participación en la economía mundial porque representan el 95% del total de las empresas de conformidad con datos proporcionados por la Organización para la Cooperación y Desarrollo Económico (OCDE 2010). Las MIPYMES son importantes asimismo para la economía nacional, en virtud de la generación de empleo y producción, ya que según datos del Instituto Nacional de Estadística y Geografía, en el país existen aproximadamente 4 millones 15 mil unidades empresariales, de las cuales 99.8% son MIPYMES, mismas que generan el 52% del Producto Interno Bruto (PIB) y el 72% del empleo del país. (INEGI 2010) Por lo anterior, y debido a la importancia de las MIPYMES en la economía de Baja California, consideramos los maestros que integramos este grupo de investigación, que a través de nuestro estudio, sea posible evaluar el efecto administrativo y financiero en las empresas por la implementación de la facturación electrónica.

### Planteamiento del Problema

Las micros, pequeñas y medianas empresas representan la gran mayoría de las existentes a nivel internacional, nacional y regional, generando asimismo más del 50% de los empleos y del Producto Interno Bruto. Sin embargo, cabe señalar asimismo que estas organizaciones son históricamente evasoras de contribuciones, hasta el grado que según estimaciones del SAT la evasión acumulada del 2007 al 2009 alcanzó los 45,852 millones de pesos.

Derivado de lo anterior, el SAT ha implementado una serie de mecanismos fiscalizadores, mismos que incluyen la automatización de sus operaciones que asimismo posibiliten su presencia en los contribuyentes.

En materia de comprobación fiscal, se ha palpado una gran cantidad de cambios en los últimos años, previo a la aparición de los comprobantes digitales, el contribuyente debía acudir a una imprenta autorizada por el SAT, para que por medio de los mismos, se autorizaran folios y se pudieran imprimir los comprobantes fiscales requeridos para poder efectuar la deducción fiscal, y en algunos casos, cumpliendo con ciertos requisitos, pudiera el contribuyente pedir a la autoridad autorización para auto facturar sus propios comprobantes de compras y gastos. Sin embargo, la posibilidad mencionada con anterioridad terminó en diciembre de 2012, ya que actualmente las únicas opciones de deducción son a través de comprobantes digitales o comprobantes impresos con código de barras bidimensional.

Como nuestros años de estudio en la investigación fueron del 2012 al 2013, los contribuyentes se encontraban en ese período, con una amplia gama de comprobantes fiscales recibidos para efectos de deducción, tales como: CFD, CFDI, comprobantes impresos con cédula de identificación fiscal elaborados por impresores autorizados, que fueron impresos hasta diciembre 2010 y vigentes hasta diciembre 2012, y comprobantes impresos con CBB. Todo lo anterior, además obligaba a los contribuyentes a efectuar la validación de los distintos tipos de comprobantes, para evitar tener problemas de no cumplimiento con la normatividad fiscal y caer de esa manera, en problemas de originarse créditos fiscales. Asimismo aprovechamos nuestra investigación, para conocer el efecto en los contribuyentes MIPYMES, por la introducción de la facturación electrónica CFDI, ¿cómo han sido los dos primeros años de obligatoriedad en algunos de ellos?, ¿cuáles han sido sus problemas financieros y administrativos en su implementación? Es importante señalar, que a mediano plazo se han detectado importantes beneficios también por la introducción del comprobante digital, tales como: Ahorro de costos de papel, tinta de impresoras, gastos por almacenamiento, tiempo de inversión en la facturación, gastos de envío de las mismas, reducción de errores en su elaboración, entre otros beneficios.

Cabe mencionar asimismo el aspecto ecológico por el ahorro de hojas, por la consecuente reducción de la tala de árboles; se calcula que cada millón de hojas se dejan de talar 60 árboles, como en el país anualmente se emiten alrededor de cuatro mil millones de facturas, esto representaría proteger 240,000 árboles, con el consecuente efecto de la disminución en la contaminación y lógicamente asegurar contar con aire más puro para las presentes y futuras generaciones. En el tema financiero de igual manera, según información plasmada en el folleto emitido por el SAT denominado “factura electrónica” editado en impresos en 2010 (Folleto “Factura Electrónica”).

Edición preparada en el Servicio de Administración Tributaria por la Administración General de Asistencia al Contribuyente, consta de 70,250 ejemplares y se terminó de imprimir en noviembre de 2010), las empresas ahorrarían hasta un 85% en sus costos administrativos por su facturación electrónica. Es importante señalar que los comprobantes digitales se emiten en sus dos vertientes, en archivo XML y archivo PDF, siendo el primero de ellos el XML, el comprobante importante ya que cumple con los requisitos fiscales para efectos de la deducción y es el que se debe almacenar electrónicamente; sin embargo, por desconocimiento o por costumbre, el archivo PDF es el que generalmente solicitan más los clientes, para guardarlos en contabilidad y se olvidan del otro en su correo electrónico, haciendo de esa manera caso omiso de la obligación de almacenarlos debidamente.

### Revisión Literaria

Durante años se ha venido observando, cómo el documento escrito ha sido, sin duda alguna, la forma más fiable y comúnmente aceptada de comunicación y conservación de todo tipo de información, cualquiera que sea su contenido. No en vano para dar cobertura a sus más esenciales necesidades básicas a lo largo de su existencia, el ser humano ha ido desarrollando todo tipo de técnicas para hacer del documento escrito, una herramienta segura. Así, los documentos fueron plasmados: primero en piedra, después en papiro, más tarde en papel, y actualmente, hemos podido observar su evolución hacia el soporte informático. Sin

embargo, y a pesar de que nadie cuestiona el documento tradicional, el uso cada vez más cotidiano y difundido de las nuevas tecnologías en materia de transmisión de datos de toda índole, deja entrever un escenario futuro en el cual, los documentos de elaboración electrónica han de reemplazar inevitable y paulatinamente a los documentos tradicionales o manuales (los creados en soporte "papel"), para la realización de gran parte de los actos documentados de la vida cotidiana. Por factura técnicamente se ha venido entendiendo que: es el justificante fiscal de la entrega de un producto o de la provisión de un servicio, que afecta al obligado tributario emisor (el vendedor) y al obligado tributario receptor (el comprador). Tradicionalmente es un documento en papel, cuyo original debe ser archivado por el receptor de la factura. Habitualmente el emisor de la factura conserva una copia o la matriz en la que se registra su emisión.

### Factura Electrónica

Ahora bien, una factura electrónica, también llamada comprobante fiscal digital por internet (CFDI), e-factura o efactura, es un documento electrónico que cumple con los requisitos legal y reglamentariamente exigibles a las facturas tradicionales garantizando, entre otras cosas, la autenticidad de su origen y la integridad de su contenido. La factura electrónica es, por tanto, la versión electrónica de las facturas tradicionales en soporte papel y debe ser funcional y legalmente equivalente a estas últimas. Por su propia naturaleza, las facturas electrónicas pueden almacenarse, gestionarse e intercambiarse por medios electrónicos o digitales. Queda comprendido entonces, que la factura electrónica es el equivalente digital y evolución lógica de la tradicional factura en papel y que a diferencia de ésta, se emplean soportes informáticos para su almacenamiento en lugar de un soporte físico como es el papel. En los países en los que la legislación lo admite, la validez de una factura electrónica es exactamente la misma que la de la tradicional factura en papel y gracias a la firma digital que incluye se garantiza su integridad y un alto nivel de trazabilidad, por lo que judicialmente es un documento considerado como vinculante y que no necesita de mayor prueba o confirmación que su propia existencia. (CFF 29, RMF 2009 II.2.5.3)

La factura electrónica es un tipo de factura que se diferencia de la factura en papel por la forma de gestión informática y el envío mediante un sistema de comunicaciones que conjuntamente permiten garantizar la autenticidad y la integridad del documento electrónico.

### Efecto Administrativo

Efecto deriva del vocablo latino "effectus", y significa lo que resulta de otra cosa. Es lo que sucede como consecuencia de una causa. Sobre la necesidad inevitable de ocurrencia del efecto con respecto a la causa, difieren los antiguos griegos que los consideraban inexorablemente unidos a ellas, de las nuevas concepciones empiristas que sostienen que producida la causa es solo probable que acontezca el efecto, pues puede suceder que experiencias futuras demuestren otra cosa, lo administrativo es lo referente a la administración, o actividad de administrar, entendiéndose por administrar la función de cuidado de intereses, propios o de terceros.

### Efecto Financiero

Lo financiero es lo referente al manejo de las finanzas, entendiéndose por tales, los bienes o caudales, a veces estrictamente ceñido a los bienes que integran el patrimonio estatal o erario público.

Tabla 1: "Comparativa " "la Factura Electrónica en Otros Países"

ESPAÑA	CHILE	COLOMBIA	REPUBLICA DOMINICANA	COSTA RICA	ARGENTINA
En España, se aplica de forma general la Directiva 115/2001, si bien esta normativa está adoptada al ordenamiento nacional, principalmente en estas normas:17	La normativa se establece en los siguientes documentos: <input type="checkbox"/> Resolución Exenta SII N°108 del 24 de octubre del 2005  Establece Normas y Procedimientos de Operación Referente a la Emisión de Liquidaciones Facturas Electrónicas. <input type="checkbox"/> Resolución Exenta SII N°107 del 20 de octubre del 2005  Establece Normas y Procedimientos Respecto de la Emisión de Facturas de Compra Electrónicas.18	Por medio del decreto 1929 del 29 de mayo de 2007, el Departamento Administrativo de la Función Pública reglamentó el artículo 616-1 del Estatuto Tributario referente a la aplicación de la factura electrónica y, el artículo 26 de la Ley 962 de 2005 sobre Racionalización de Trámites. El decreto 1929 del 2007 faculta a los empresarios a expedir la factura electrónica como un documento equivalente a la factura física que soporta transacciones de venta de bienes o servicios.19	Las Leyes Dominicanas no contemplan ninguna normativa o control para la emisión de las facturas en formato electrónico (eFactura). Siempre y cuando la factura (Digital o impresa) cumpla con todas las normas y requisitos establecidos por la Dirección General de Impuestos Internos (DGII).20	Desde el 1ero de octubre del 2007 entró en vigencia la Resolución #22-07, publicada en el Diario Oficial La Gaceta, que permite el uso en Costa Rica de la factura electrónica como documento tributario con validez fiscal. Se trata de un documento XML que contiene información comercial y tributaria esencial distribuida en distintos nodos, así como un segmento llamado "Otros" opcional, que puede contener información de interés comercial para el emisor o el receptor en cualquier formato electrónico (XML, EDIFACT, texto plano, etc.).21	En Argentina, se aplican las resoluciones general 2177 y 2485 de la Administración Federal de Ingresos Públicos (AFIP), que incluye y hace obligatoria a la resolución general 1361 de registración electrónica. Esta última norma obliga a registrar las compras en un formato especial.22

Como se aprecia en la tabla 1 ya son muchos países en los cuales se ha implementado la facturación electrónica.

## METODOLOGIA

Esta investigación se efectuó a través de un estudio descriptivo aplicado a 384 empresas establecidas en el Estado de Baja California por medio de la aplicación de un cuestionario en las tres principales ciudades del estado, es decir: Mexicali, Tijuana y Ensenada, que durante el período 2012 al 2013, realizaron actividades económicas diversas. La población de estudio se conformó por micro, pequeñas y medianas empresas, ya que este tipo de empresas representa un sector importantísimo en la economía del estado, y por ende en la productividad y competitividad de Baja California. El cuestionario aplicado consta de 25 preguntas, donde la mayoría de las preguntas son de opción múltiple, distribuidas en tres secciones que son: información general, productos y mercados, así como aspectos financieros y fiscales. Una vez recopilados los cuestionarios se procesaron en el paquete estadístico SPSS realizando de esa manera el análisis descriptivo

de la información, tales como, las medidas de tendencia central que permitió detectar los efectos administrativos y financiero por la implementación de la facturación electrónica.

## ANALISIS DE RESULTADOS

Para ubicar las empresas en las que fueron aplicadas las encuestas señalaremos que se ubicaron en las ciudades de Mexicali el 33%, Tijuana 24% y Ensenada 43% cubriendo así las ciudades más importantes del estado. El tipo de contribuyente al que fue dirigida la encuesta fue en su mayoría personas físicas con actividades empresariales, representando estas el 58% de los encuestados. el promedio de personal que labora en las empresas participantes es en su mayoría de 1 a 10 trabajadores y sus ingresos anuales promedio de 4'000,000 millones de pesos.

Tabla 2 "Crecimiento de la Empresa"

Crecimiento de la empresa		
Igual Recuento 32%	Empeoró Recuento 24%	Mejóro Recuento 44%

Como se observa en la tabla 2 las empresas encuestadas se les pregunto sobre el crecimiento de su empresa a los cual la mayoría tuvo crecimiento positivo

De los factores que consideran importantes en el crecimiento de su empresa señalan el principal la crisis económica que pasa nuestro país dándole solo el 5% a los cambios fiscales que nuestro país a tenido, y consideran que la situación económica a mediano plazo mejorará con un 31%, los factores que afectaran a las empresas principalmente serán la competencia 54%, la carencia de recursos financieros 18%, el desarrollo tecnológico 13% y los cambios en el sistema fiscal con un 7% entre otros.

Tabla 3: "Efectos del Sistema Fiscal en la Competitividad"

El Sistema Fiscal Ha Restado Competitividad	
Si Recuento 35%	No Recuento 65%

Como nos muestra la tabla 3, las empresas consideran que el sistema fiscal vigente no afecta a la competitividad de su empresa

El efecto administrativo principal encontrado es la carga administrativa que el sistema fiscal vigente a impuesto a las empresas y la principal consideran es la entrada en vigor de la facturación electrónica representada por el 40% seguida por la elaboración de dictámenes fiscales con un 28%, así como el desconocimiento de los requisitos tramites y tipos de comprobantes que se deben de elaborar, lo cual implicara capacitación del personal a cargo, pero también facilitara los procesos de facturación y los hará mas eficientes. El efecto financiero que más impacto con la entrada de la facturación electrónica es la contratación de nuevo personal o la capacitación del existente así como la adquisición de equipo y paquetes especializados para la facturación electrónica ya que esta obligación es para todo tipo de empresas desde las más pequeñas hasta las más grandes.

Tabla 4: " Ventajas de la Facturación Electrónica"

<b>Ventaja de Proporcionar Factura Electrónica</b>	<b>Recuento</b>
Reducción de costos	22%
Seguridad y rapidez en la emisión y envío de comprobantes	34%
Simplificación de los procedimientos administrativos	16%
Disminución del uso del papel	15%
Mejor control de la facturación	13%
<b>Desventaja de Proporcionar Factura Electrónica</b>	
Dificultad en la utilización del equipo de cómputo	16%
Desconocimiento del uso de los sistemas	27%
Costo de inversión elevado	33%
Desconfianza en la implementación del sistema	17%

Como se muestra en las tablas 4 y 5 se considera como principal ventaja la seguridad y rapidez en la emisión de las facturas, pero el costo de la implementación es elevado

## CONCLUSIONES

Independientemente de que la implementación de la factura electrónica tiene como objetivo el incrementar la recaudación fiscal al ser un instrumento que minimiza la evasión de ingresos y mayor certidumbre en las deducciones, también proporciona soporte a una gama importante de transacciones realizadas por medio de internet, lo que apoya a dar mayor seguridad y resguardo de las operaciones realizadas. Ante los resultados obtenidos de la investigación observamos que la facturación electrónica es un mecanismo complejo, sobre todo en su inicio, ya que requiere equipo de cómputo actualizado y un software especializado, aunado al soporte informático de especialistas como lo es el Proveedor Autorizado de Certificación (PAC), esto implica costos adicionales, sin embargo, el éxito futuro dependerá de la simplificación en su implementación y a un marco jurídico y tecnológico, que genere las condiciones de confianza necesarias para su adopción. Al responder la pregunta de investigación: ¿Cuál ha sido el Efecto Administrativo y Financiero en la implementación de la facturación electrónica? Podemos mencionar lo siguiente:

En lo económico, por la reducción de costos administrativos inherentes.

En lo administrativo, se eliminan procesos al ser más rápida y directa la facturación.

En lo ecológico, por la disminución de uso del papel, colaborando de esa manera en la disminución de la tala indiscriminada de bosques, lo que ayuda a conservar la capa de ozono. Sin embargo, es importante señalar que por costumbre la mayor parte de los contribuyentes sigue imprimiendo la representación impresa de la factura electrónica, pero a medida que reconozcan el archivo XML como el válido legal y fiscalmente, ya no lo imprimirán y reducirán así el uso del papel.

En lo social y cultural, en la medida que se facilita el intercambio de bienes y servicios entre zonas distantes incluyendo con otros países, utilizado a la vez comprobantes digitales.

En la seguridad informática, al contar con los medios requeridos para la estandarización de los documentos electrónicos, induce a minimizar los riesgos que asechan la información que circula en internet.

Leticia María Gonzáles Velázquez, Universidad Sonora

## RESUMEN

*El estudio sobre factores familiares que apoyan en la formación profesional de los estudiantes universitarios es un tema de creciente interés en el ámbito familiar y educativo, para tomar medidas de prevención para evitar la reprobación o deserción escolar. Los factores económicos, afectivos y escolares son muy importantes para que los estudiantes logren sus metas. La familia y la escuela deben de apoyar a los estudiantes universitarios. El propósito fundamental que dio origen a este estudio fue conocer los factores familiares que apoyan en la formación profesional de los estudiantes universitarios. Participaron 163 estudiantes de primer ingreso de tres instituciones de Educación Superior de Navojoa, Sonora: Universidad de Sonora Unidad Regional Sur, ITSON, UPN 262. El diseño de esta investigación fue no experimental, transversal exploratorio usando como instrumento de recolección de información el cuestionario. Para el procesamiento y análisis de información se utilizó el paquete estadístico SPSS versión 21. Los factores familiares que apoyan en la formación profesional de los estudiantes universitarios son: la motivación de los padres para que sus hijos sigan una carrera universitaria, mantienen una buena relación familiar entre ellos, los padres apoyan económicamente a los jóvenes para que logren sus metas, algunos de los aspectos desfavorecedores es que los padres son de escasos recursos, no tienen estudios universitarios, algunos viven en comunidades pequeñas fuera de la ciudad y los alumnos se tienen que trasladar en autobús, uno de los problemas enfrentan los estudiantes es el estrés.*

**PALABRAS CLAVE:** Familia, Factores Familiares, Apoyos Para Formación Profesional, Estudiantes Universitarios

## FAMILIAR FACTORS THAT SUPPORT THE PROFESSIONAL TRAINING OF THE UNIVERSITY STUDENTS

### ABSTRACT

*The study about familiar factors that support the professional training of the university students is a topic of growing interest in family and educational context, to take actions to prevent students' failing or school desertion. The economical, affective and scholar factors are very important for the students to achieve their goals. The family and the school should support to university students. The fundamental purpose that originated this study was to know the familiar factors that support the professional training of university students. Participated 163 students from first semester of three different higher level institutions from Navojoa, Sonora: Universidad de Sonora, campus Navojoa, Instituto Tecnológico de Sonora (ITSON), Universidad Pedagógica Nacional 262 (UPN). The design of this research was not experimental, transversal exploratory using as collect data instrument, the questionnaire. For the processing and data, analysis of information has used the statistics kit SPSS version 21. The familiar factors that support the*

*professional training of university students are: parents' motivation to students to follow the career, to keep a good familiar relationship between them, parents give economic support to young students to achieve their academic goals; some of the unfavorable aspects is that parents are scarce of resources, they do not have university studies, some of them live in rural communities just outside the city and the students have to use de bus to get to school, one of the problems that students face is the stress.*

**KEY WORDS:** Family, Familiar Factors, Support For Professional Training, University Students

## INTRODUCCIÓN

Los factores familiares repercuten en la formación profesional de los estudiantes universitarios. La familia es un vínculo muy importante que favorece la formación académica de los estudiantes. En nuestro país podemos ver día con día grandes problemas de analfabetismo, pobreza, delincuencia, drogadicción, en fin una serie de conflictos que cada vez crecen más; todo esto a raíz de una educación deficiente que gira alrededor de la falta de valores y una carente atención en el hogar. Además muchos de los estudiantes universitarios ven truncadas sus expectativas por la falta de apoyo de sus familias. Es necesario fomentar los factores de protección familiar y de relación con las instituciones educativas representadas por directivos y docentes para que los jóvenes adquieran conocimientos, habilidades, las competencias para enfrentarse a un mundo globalizado. La pregunta que guio la investigación fue la siguiente ¿Cuáles son los factores familiares que sirven de apoyo en la formación profesional de los estudiantes universitarios? La investigación está estructurada de la siguiente manera: Revisión bibliográfica se analizan las principales aportaciones sobre la familia como aspecto importante para una formación integral de los individuos, seguido de la metodología donde se explica el procedimiento que se utilizó en la investigación, posteriormente la presentación y discusión de resultados y por último se encuentran las conclusiones.

## REVISIÓN DE LITERATURA

Para la realización de la investigación se llevó a cabo la siguiente revisión bibliográfica: Bueno Delgado (2007), considera que la familia es “el primer laboratorio donde el estudiante empieza a relacionarse con otros seres humanos y a desarrollar los lazos afectivos consigo mismo, sus allegados y con el medio ambiente en el que se desempeña. García (1984), considera que si un profesor quiere educar, no tiene más remedio que contar con los padres y colaborar con ellos, para que los esfuerzos que él realiza en las horas de clase tengan continuidad en el resto del día. Ferreyra, M. (2007), considera relevante la manera en que percibe el estudiante su ambiente familiar, su dinámica, la importancia que sus padres le dan al estudio en casa, a las tareas en equipo, al tiempo que pasa en la escuela, al apoyo familiar, a su percepción acerca de las capacidades y habilidades de los hijos. Pariente (2006), el profesor debe convertirse en un mediador del aprendizaje, tal como lo menciona Ali (2009) al destacar que estudiar conlleva un gasto, de eso no queda duda, cada inicio de curso los padres tienen que realizar un gran esfuerzo para poder suministrar a sus hijos la lista de útiles que la escuela exige. Rodríguez, Herrera, Quiles y Álvarez (2008), afirman que la familia se puede definir como un sistema organizado y jerarquizado, estructuralmente delimitado por una serie de reglas que tienen como objetivo proteger la pertenencia de las personas que la componen, las cuales comparten una serie de vínculos de afecto e intimidad. León, Montaña y Gallegos (2009) nos señalan que el compromiso de las instituciones de educación superior, se centra en brindar educación de calidad, donde sus acciones, no solo se concentran a la acción pedagógica. Zarate Lizondo (2002) señala que “La función del docente es la de un profesional comprometido con la enseñanza en el proceso de transmisión de saberes o conocimientos, así como de conductas tendientes a la formación integral del educando, de una manera ágil, abierta y dispuesta al cambio” (p. 32).

La escuela y la familia son el lugar y el núcleo en donde se forman personas capaces para desenvolverse adecuadamente en la sociedad; siempre y cuando se les brinden las herramientas necesarias para lograrlo; y esto se cumplirá mediante su trabajo en equipo.

## METODOLOGÍA

El objetivo del estudio es identificar los factores familiares que sirven de apoyo en la formación del estudiante universitario. De acuerdo a los objetivos establecidos, la investigación involucró a los estudiantes de nuevo ingreso y tomo en cuenta específicamente los principales apoyos que los estudiantes han recibido de su familia, tratándose por consiguiente de un estudio exploratorio, no experimental, transversal. Se tomó en cuenta a 280 estudiantes de nuevo ingreso y la muestra fue de 163 estudiantes de tres universidades: 56 estudiantes del Instituto Tecnológico de Sonora de la Licenciatura en Educación Infantil, 40 de la Universidad Pedagógica Nacional de la Licenciatura en Intervención Educativa, 67 de la Universidad de Sonora alumnos de Licenciatura en Derecho. Para recabar la información se aplicó un cuestionario con 27 preguntas de opción múltiple, analizaron cada uno de los datos obtenidos y se vaciaron en el programa estadístico SPSS versión 21.

### Presentación y Discusión de Resultados

Los factores familiares son importantes en la formación profesional de los estudiantes universitarios, por lo que requieren de los apoyos económicos, afectivos y escolares para la culminación de una carrera profesional.

*Características generales de los jóvenes universitarios:* Podemos apreciar que los estudiantes en su mayoría son jóvenes solteros y solteras con poco tiempo de haber ingresado del bachillerato, de familias con poco ingreso económico, una tercera parte radica fuera de la ciudad, mayoría de los padres no tiene una carrera universitaria, la mayoría de los estudiantes son mujeres, se observa la preferencia de las mujeres por las siguientes carreras: Licenciatura en Educación Infantil, Licenciatura en Intervención Educativa, y Licenciado en Derecho.

*Factores económicos:* La percepción de los jóvenes es que viven adecuadamente a pesar de que se observan condiciones salariales bajas en sus padres, algunos estudiantes son de fuera y hay un gasto económico del traslado hasta la Universidad, la mayoría dependen económicamente de sus padres por ser los que solventan sus gastos. Una ventaja es que una parte de los estudiantes universitarios cuenta con recursos materiales como computadora, lo que muestra interés de la familia para que sus hijos tengan una educación actualizada.

*Factores afectivos:* Hay una buena relación de afecto familiar, los estudiantes cuentan con apoyo moral y educativo lo cual incrementa su motivación, la mayor parte vive con sus padres, abuelos o tíos.

*Familia integrada:* Se puede observar que la mayoría de los estudiantes cuentan con el apoyo de una familia unida, estableciendo un buen ejemplo en su formación.

*Dinámica familiar positiva:* La mayoría de los estudiantes tiene una excelente relación con sus padres.

*Reconocimiento de logros:* Otra de las preguntas fue ¿Quién te motivó a elegir la carrera que estas estudiando?, la mayoría de las respuestas indicaron que la familia, elemento principal que contribuye a la formación del joven universitario., seguida de los amigos.

*Comprensión:* Se preguntó ¿quién te ha motivado a salir adelante en tus estudios? Se puede observar que la familia juega un papel esencial en la vida escolar de sus hijos, son sus padres quienes los motivan a salir adelante en sus estudios, quienes les dan ánimos y comprensión ante las dificultades. Los estudiantes tienen aspectos positivos para su formación, ya que viven en su mayoría en familias integradas, tienen una buena relación con sus padres, presentan los problemas cotidianos de la familia actual donde sus padres los comprenden ante los problemas que se les presentan y reciben motivación para salir adelante.

*Contexto:* En su mayoría el nivel de estudios del padre es de secundaria, un pequeño porcentaje estudió una carrera universitaria, es importante señalar que la preparación de los padres es un puntapié en la educación de sus hijos ya que el tener una formación académica los impulsa a seguir su ejemplo, a pesar de que la mayoría carece de estudios profesionales, sus hijos se encuentran estudiando una carrera universitaria con entusiasmo por destacar en el ámbito profesional lo cual deja ver que la carente preparación académica de sus padres en este caso no fue un impedimento para integrarse a una universidad, ya que el apoyo moral y motivación de los padres los ha impulsado a salir adelante. Comparando el nivel profesional con los padres, es un poco más bajo en las mujeres aunque no varía mucho, de igual manera se hace la observación que el no tener una carrera universitaria no fue una limitante para impulsar a sus hijos a incorporarse en el medio superior y guiarlos para su desarrollo.

La mayor parte de los estudiantes viven en la Ciudad, mientras que el 33.3 % radica fuera, se puede mencionar que el vivir lejos de su universidad puede traerle contratiempos futuros para desarrollar exitosamente en sus trabajos escolares. Aunque un poco más de la mitad de los padres tiene un trabajo fijo, sus sueldos son bajos. El contexto social es considerado un factor importante en el desarrollo de los estudiantes, se puede mencionar que la mayoría de los universitarios señalan que su entorno si es el adecuado para su desarrollo.

*Factores escolares:* Aunque una parte importante de los padres no tiene relación con la escuela, los estudiantes consideran que debe de existir una mayor vinculación entre la familia e institución. Los estudiantes tienen de excelente a buena relación con sus profesores, acarreando esto como beneficio un mejor rendimiento académico. Se visualiza profesionalmente a futuro como una persona exitosa, al integrarse a una carrera universitaria los jóvenes automáticamente tienden a aspirar a la superación debido a formación brindada, así como su entorno basado en competencias.

*Factores de riesgo:* La familia es un elemento importante en la vida académica de los estudiantes ya que si no existe una buena colaboración entre escuela y padres de familia la formación de los estudiantes tiende a correr riesgos. Las principales problemáticas enfrentadas en su vida, están el estrés, seguido de la falta de dinero, en poca medida violencia y drogas. Los estudiantes consideran que viven en un contexto adecuado, que están motivados por sus padres para salir adelante, se visualizan como profesionistas exitosos, sin embargo uno de los principales problemas que están enfrentando es estrés.

## CONCLUSIONES

Dentro de los principales apoyos que reciben los estudiantes son afectivos, motivacionales, tienen buena relación con su familia, se visualizan como profesionistas exitosos, consideran que viven en un contexto adecuado, sin embargo son de bajos recursos, sus padres no tienen estudios universitarios, falta una mayor relación escuela- familia y uno de sus principales problema es el estrés. Es necesaria la colaboración entre escuela y familia para que los estudiantes puedan enfrentarse a las diversas situaciones de riesgo que se le presenten día con día como punto clave para un desarrollo óptimo. La sociedad actual requiere que los jóvenes universitarios se integren al mundo globalizado en el cual se encuentran inmersos, que propongan soluciones de forma autónoma y sin temor al cambio constante. Se requiere trabajo colaborativo, se debe apoyar a los jóvenes con becas ya que las dificultades económicas que enfrentan, en

la mayoría de los casos también les impactan directamente y por ende influyen su estado emocional y su rendimiento académico.

# EL MODELO DE MARKOWITZ EN COYUNTURAS DE ALTA VOLATILIDAD DEL MERCADO FINANCIERO GLOBAL

Eduardo Andrés Botero Cedeño, Universidad Cooperativa De Colombia

## RESUMEN

*El modelo de Markowitz constituye uno de los primeros esfuerzos para la determinación de la rentabilidad y el riesgo de un activo financiero, para lograr esto se apoya en conceptos estadísticos sencillos que sin embargo son de gran utilidad a la hora de valorar alternativas de inversión. Los resultados obtenidos en el ejercicio académico desarrollado y plasmado en el presente documento, permiten aseverar que aún en situaciones en las que los mercados financieros presentan un comportamiento volátil producto de problemas estructurales de considerable importancia, con la implementación del modelo de Markowitz se pueden desarrollar portafolios que reducen la varianza de los rendimientos y por consiguiente la exposición al riesgo del inversionista.*

**PALABRAS CLAVES:** Activo Financiero, Diversificación, Dividendos, Inversión, Portafolio de Inversiones, Rentabilidad, Riesgo, Volatilidad

## MARKOWITZ MODEL IN TIMES OF HIGH VOLATILITY OF GLOBAL FINANCIAL MARKET

### ABSTRACT

*Markowitz's model is one of the first efforts to determine the profitability and the risk of a financial asset, to achieve this is based on simple statistical concepts which are nevertheless very useful when evaluating investment alternatives. The results obtained in the developed academic exercise, suggests that even in situations in which financial markets are volatile behavior product of considerable structural problems with the implementation of the Markowitz model portfolios can be developed that reduce the variance of the yields and therefore the investor's risk exposure.*

## INTRODUCCIÓN

Medir, Controlar y administrar el riesgo en el mercado financiero internacional es uno de los objetivos esenciales de la gerencia financiera internacional, en búsqueda de alcanzar esta meta se han desarrollado una amplia gama de modelos y herramientas que son de valiosa ayuda a la hora de tomar decisiones de inversión en contextos volátiles y cambiantes como el que impera en los mercados financieros internacionales en la actualidad. Dentro de esta conceptualización teórica y práctica de las decisiones de inversión, el modelo expuesto por el profesor Harry Markowitz en su tesis doctoral en el año 1.954 es sin lugar a dudas un referente relevante a la hora de estudiar la optimización en la selección de cartera y la medición del riesgo de inversión. Este breve escrito es entonces, un esfuerzo por exponer con claridad y simpleza los postulados básicos del modelo desarrollado por el profesor Markowitz, exhibiendo los

aspectos teóricos relevantes que componen el mismo y lo más importante demostrando su aplicabilidad con un ejemplo real. La importancia del ejemplo mencionado, radica en la coyuntura bajo la cual se pone a prueba la conceptualización del modelo de Markowitz para la selección optima del portafolio de inversiones, en este caso, se aplica para un periodo de tiempo en el que los mercados financieros mostraron un comportamiento extremadamente volátil; los meses de Agosto y Septiembre del año 2011 a los cuales se hace referencia, en esencia reflejan una condición crítica de la economía global y de los mercados financieros desarrollados principalmente.

A través de la aplicación del modelo de Markowitz, se pudo constatar que es posible seleccionar una canasta de activos financieros tal, que se reduzca considerablemente la varianza de los rendimientos obtenidos y por lo tanto se minimicen las pérdidas de los inversionistas en momentos de gran volatilidad.

Los resultados no son nada desdeñables, por el contrario, llevan a plantear que aún en momentos en los que muchos tienden a cuestionar la sensatez de los inversionistas y de los mercados financieros internacionales y por ende a poner en duda la aplicabilidad de los modelos diseñados para comprender el lógica por la cual se rigen estos; es posible e imperativo generalizar aún más la aplicación de este tipo de herramientas. Se presentan pues en este artículo notas desarrolladas para la cátedra Gerencia Financiera Internacional y el ejemplo desarrollado en el transcurso de la misma, el autor espera que sea de utilidad para los integrantes de la comunidad académica y que este escrito sea solo un abre bocas de una interesante discusión académica que bajo el contexto global actual es mucho más que pertinente.

#### Breve Desarrollo Conceptual del Modelo

El modelo de Markowitz parte de una premisa relativamente sencilla y de indiscutible validez en la actualidad. Haciendo referencia al comportamiento racional de los inversionistas el autor plantea que la búsqueda de la utilidad no es el único aspecto importante a tener en cuenta, también surge la minimización del riesgo como un objetivo esencial a la hora de tomar las decisiones de inversión; en términos económicos se puede plantear como *la búsqueda del máximo beneficio con el menor costo posible*. La diversificación de la inversión surge como una respuesta óptima al problema de la maximización del beneficio y la reducción del riesgo sistemático, básicamente se busca elegir el monto optimo de inversión que debe realizarse, escogiendo entre la gran variedad de activos financieros de renta variable disponibles en el mercado. El proceso de selección se lleva a cabo a través del análisis estadístico de la información histórica de los activos financieros, evaluando principalmente la media y la varianza de los cambios en la cotización del activo, entendiendo que la utilidad que obtiene el inversionista proviene del diferencial entre el precio de compra y el precio de venta. De esta forma se está asumiendo que los posibles pagos de dividendos y/o de primas por emisión de nuevas acciones no son tenidos en cuenta por el inversionista a la hora de adquirir un título de renta variable, adjudicándole implícitamente una perspectiva de corto plazo en la toma de sus decisiones de inversión. De acuerdo a lo expuesto anteriormente se puede plantear el cálculo de la rentabilidad del activo tal como se presenta en la expresión (1).

$$RT = \frac{P_t - P_{t-1}}{P_{t-1}} \quad (1)$$

Donde:

$P_t$  = Es el precio de la acción en Momento "t"

$P_{t-1}$  = Es el precio de la acción en un periodo anterior

La rentabilidad en términos estadísticos se puede asociar al concepto de esperanza o valor esperado, que para este caso podemos definir como el promedio de las variaciones en el precio de cierre durante el periodo analizado, en las ecuación 2 se presenta matemáticamente el cálculo de la rentabilidad esperada.

$$VARPRECIO_{promedio} = \frac{1 \sum \left( \frac{P_t - P_{t-1}}{P_{t-1}} \right)^2}{N} \quad (2)$$

El riesgo entendido como la probabilidad de no obtener el rendimiento esperado está asociado con el concepto de varianza, que es una medida de dispersión que muestra que tan alejados están los datos del promedio; lógicamente entre más alto sea el valor de este estadístico mayor será el riesgo percibido. Para calcular la varianza se debe elevar al cuadrado la diferencia entre los datos y el promedio de los mismos, la sumatoria de estas diferencias se divide entre el número de datos menos uno (ver ecuación 3), se realiza este procedimiento de elevar al cuadrado las diferencias, porque de acuerdo a una de las propiedades de los promedios de no hacerse el resultado obtenido sería cero.

$$VARIANZA = \frac{1 \sum (VARPRECIO_t - VARPRECIO_{promedio})^2}{N-1} \quad (3)$$

Existe sin embargo un problema con la utilización de la varianza como medida de dispersión y de riesgo, esto se debe a que este estadístico se expresa con las unidades elevadas al cuadrado lo que genera inconvenientes en la interpretación de los resultados; por esta razón, se suele utilizar la variación estándar como medida lineal del riesgo, esta se calcula obteniendo la raíz cuadrada de la varianza tal como se muestra en la expresión (4).

$$Desviación\ estandar = \sqrt{\frac{1 \sum (VARPRECIO_t - VARPRECIO_{promedio})^2}{N-1}} \quad (4)$$

Otro elemento conceptual importantísimo dentro del modelo de Markowitz es que se asume que la variable rentabilidad esperada sigue una distribución normal, desde el punto de vista estadístico esto tiene varias connotaciones: en primer lugar la probabilidad de obtener un valor menor o igual al promedio es del 50%, por obvias razones entonces la probabilidad de obtener el resultado contrario es también del 50%, igualmente, la normalidad de esta variable implica que cuando el número de observaciones tiende a infinito las medidas de tendencia central como la media, la mediana y la moda tienden a igualarse. Para la comprobación de la denominada regla empírica, se aplica el procedimiento de estandarización de la distribución de probabilidad normal, que surge de restar la media de un valor experimental y dividir el resultado entre la desviación estándar (ver Ecuación 5), de esta forma se obtiene el valor del estadístico Z, el cual expresa la distancia entre un valor de X y el promedio.

$$Z = \frac{Valor\ experimental - promedio}{Desviación\ estándar} \quad (5)$$

La posibilidad de obtener un rendimiento negativo a la hora de invertir en una acción expresada en una función de probabilidad normal estandarizada, estaría dada por el área debajo de la curva señalado por el estadístico Z, en este caso el valor experimental en la ecuación 5 asumiría un valor de cero. Aunque anteriormente se mencionó la maximización del beneficio y la reducción del riesgo como el objetivo primordial de la diversificación de los activos financieros, es importante hacer claridad que el modelo de Markowitz no pretende maximizar el rendimiento esperado del portafolio, ni tampoco minimizar el riesgo. Lo que pretende es encontrar dentro de un conjunto factible una combinación óptima de rendimiento esperado y riesgo, de acuerdo con las preferencias del inversionista, lo que llevaría a una única solución, ya que dados los supuestos de preferencia, se elegirá una única combinación de rendimiento esperado y desviación estándar entre el conjunto eficiente (Alvarez Garcia, Ortega Oliveros, Sanchez Ospina, & Herrera Madrid, 2004).

### Contrastación Empírica del Modelo

Se analizarán las variaciones diarias de los precios de cierre de las acciones desde el día 1 de agosto del año 2010 hasta el día 30 de septiembre de 2011, lo que corresponde a un total de 251 observaciones, con esta información se desarrollará el modelo y se determinarán los montos óptimos de inversión en tres escenarios diferentes, uno en el que se asume un bajo riesgo, otro en el que el nivel de riesgo es moderado y otro con un alto riesgo. Para efectos prácticos se plantea un capital inicial de USD \$ 100.000 para cada uno de los escenarios distintos y se define el horizonte de inversión como los meses de agosto y septiembre del año 2011, iniciando el día lunes 1 de agosto y culminando el día viernes 30 de septiembre. La escogencia de esta fecha no se hace de manera caprichosa, por el contrario, la idea es evaluar el modelo en condiciones de alta volatilidad como las que se presentaron específicamente durante este periodo de tiempo.

*Las Acciones:* Las acciones seleccionadas para el análisis planteado son: Aluminium, Bank of America, Coca Cola, Microsoft, General Electric, Mac Donalds, United Techno y Pfizer Inc; todas estas acciones hacen parte del índice bursátil Dow Jones, el cual se compone de los 30 títulos valores industriales con mayor capitalización. El cálculo de la muestra se realizó como base un nivel de confianza del 95%, un margen de error del 5% y un error muestral de 0,21%, la selección se realizó a través de un muestreo aleatorio simple.

*Los Datos:* Calculando a través de la hoja electrónica de Excel los estadísticos necesarios para el desarrollo del modelo, se obtuvieron los resultados que se presentan en la tabla 1. Los cuales nos muestran que todas las acciones a excepción de Bank of America tienen una rentabilidad esperada positiva, por su parte la acción mencionada es la única también que tiene una posibilidad de pérdida superior al 50%. Otro aspecto importante para destacar en estos resultados es la comprobación empírica de la correlación entre los mayores beneficios y un riesgo más elevado, en este caso las acciones de Aluminium y Bank of America que registran las rentabilidades positivas y negativas más altas son igualmente las que muestran las desviaciones estándar más elevadas.

Tabla 1: Cálculos de Rentabilidad y Riesgo de las Acciones Seleccionadas

	Aluminium	BK Of America	Coca Cola	Microsoft	General Electric	Mc Donalds	United Tecno	Pfizer Inc
Rentabilidad	0,1275%	-0,13%	0,09%	0,03%	0,05%	0,09%	0,07%	0,11%
Varianza	0,03%	0,04%	0,01%	0,01%	0,02%	0,01%	0,02%	0,01%
Desv Estándar	1,86%	1,95%	0,79%	1,22%	1,38%	0,82%	1,07%	1,22%
Z	-6,8569	6,6671	10,9889	2,5583	-3,7215	-10,8528	-6,2036	-8,765
Probabilidad de pérdida	47,27%	52,66%	45,62%	48,98%	48,42%	45,68%	47,56%	46,51%

### Rentabilidad y el Riesgo del Portafolio

Como se menciono al inicio de este artículo, la idea de diversificar la inversión en activos de renta variable como las acciones, parte de la premisa esencial de obtener los máximos beneficios posibles pero a la vez reducir a su mínima expresión el riesgo sistemático, si esta última parte de este postulado no se tuviera en cuenta, las inversiones se realizarían solo en la acción que mayores utilidades pudiera generar, pero estas generalmente y tal como lo vimos en el punto anterior, son la que mayor riesgo llevan implícito al registrar desviaciones estándar elevadas. En un portafolio de inversiones la rentabilidad esperada está dada por la ponderación de las rentabilidades individuales de cada acción, o lo que es lo mismo surge del producto entre la rentabilidad de cada una de las acciones y el porcentaje de participación de estas en el ya mencionado portafolio, tal como se muestra en la ecuación 6.

$$R_p = \sum R_x * A_x \quad (6)$$

Donde:

$R_p$  = Rentabilidad esperada del portafolio

$R_x$  = Rendimiento esperado de la acción x

$A_x$  = Proporción del total de los fondos, invertida en la acción x

La idea de este análisis es identificar cuáles son las acciones que presentan una covarianza negativa, buscando siempre compensar la posible caída en un activo con el posible aumento del otro, para facilitar el análisis de la relación entre dos activos financieros se utiliza un coeficiente de correlación hallado al dividir la covarianza del precio de dos acciones entre el producto de las desviaciones estándar de las mismas (ver expresión 7).

$$\text{Coeficiente de correlación}_{xy} = \frac{\sigma_{xy}}{\sigma_x * \sigma_y} \quad (7)$$

Donde:

$\sigma_{xy}$  = Covarianza de las acciones

$\sigma_x$  = Desviación estándar de la acción x

$\sigma_y$  = Desviación estándar de la acción y

Para calcular el riesgo del portafolio es necesario hallar las covarianzas de todas las acciones disponibles para invertir, este valor, se multiplica por el porcentaje de los recursos del portafolio que se invierten en cada una de las acciones, la raíz cuadrada de la sumatoria de este producto, arroja como resultado el riesgo del portafolio de inversión, el cual se espera que sea menor que la sumatoria de los riesgos individuales de cada una de las acciones analizadas, a continuación en la ecuación 8 se muestra la expresión matemática de este importantísimo componente del modelo de optimización de inversión.

$$\sigma_p = \sqrt{A_x * A_x * \sigma_{xx} + A_x * A_y * \sigma_{xy} + A_x * A_n * \sigma_{xn} + A_y * A_x * \sigma_{yx} + A_y * A_y * \sigma_{yy} + A_y * A_n * \sigma_{yn} + A_n * A_x * \sigma_{nx} + A_n * A_y * \sigma_{ny} + A_n * A_n * \sigma_{nn}} \quad (8)$$

Donde:

$\sigma_p$  = Riesgo del portafolio

$A_x$  = Proporción invertida en el activo x

$\sigma_{xn}$  = Covarianza de las variaciones del precio de las acciones

### La Conformación de los Portafolios

Una vez definidos los aspectos estructurales del modelo de optimización del portafolio de inversión en activos de renta variable, se procede a definir los porcentajes de inversión ideales en cada acción de acuerdo a los tres escenarios hipotéticos planteados previamente, uno en el que el inversionista presente una propensión al riesgo baja, otra en el que dicha propensión sea moderada y por ultimo otro que presente un nivel alto de riesgo. Para este fin se utilizará otra función importantísima de Excel denominada Solver, la cual permite resolver problemas de optimización (maximización o minimización) con las restricciones específicas del modelo que se está evaluando.

Escenario de Riesgo Bajo

El mínimo riesgo que puede asumir el inversionista al invertir en un portafolio de inversiones compuesto por las ocho acciones estudiadas en este artículo, es de 0,5695%; para este nivel de riesgo la composición del portafolio queda de la manera en que se muestra a continuación:

TABLA 1: Distribución de la Inversión en el Escenario de Riesgo Bajo

Acción	Porcentaje de la Inversión	Valor de la Inversión
Aluminium	0,0%	0
BK of America	2,485%	USD \$ 2.485
Coca Cola	33,610%	USD \$ 33.610
Microsoft	9,374%	USD \$ 9.374
General electric	2,593%	USD \$ 2.593
MC Donalds	32,792%	USD \$ 32.792
United Techno	7,561%	USD \$ 7.561
Pfizer Inc	11,585%	USD \$ 11.585
<b>TOTAL</b>	<b>100%</b>	<b>USD \$ 100.000</b>

Riesgo Moderado

Para el escenario de riesgo moderado se ha estipulado un valor de la desviación estándar de aproximadamente el 0,80%, asumiendo este nivel de riesgo la rentabilidad diaria que se espera es 0,1043% aproximadamente y la composición óptima del portafolio de inversión es la siguiente:

TABLA 2: Distribución de la Inversión en el Escenario de Riesgo Moderado

Acción	Porcentaje de la Inversión	Valor de la Inversión
Aluminium	25,3%	USD \$ 25.300
BK of America	0,000%	USD \$ 0
Coca Cola	14,665%	USD \$ 14.665
Microsoft	0,000%	USD \$ 0
General electric	0,000%	USD \$ 0
MC Donalds	26,733%	USD \$ 26.733
United Techno	0,000%	USD \$ 0
Pfizer Inc	33,344%	USD \$ 33.344
<b>TOTAL</b>	<b>100%</b>	<b>USD \$ 100.000</b>

Riesgo Alto

Si se asumiera el riesgo máximo del portafolio de acciones analizado la inversión se realizaría únicamente en la acción que presente la rentabilidad esperada más alta, pero esto se podría considerar un caso extremo y es mejor entender que aunque la propensión al riesgo del inversionista sea alta, de igual forma este querrá consolidar un portafolio que le permita mitigar en algo la posibilidad de pérdida que enfrenta, más teniendo en cuenta que asumir un mayor riesgo no siempre se ve recompensado proporcionalmente en la rentabilidad esperada. Se ha establecido el 1,2% como un nivel de riesgo elevado y a partir de este valor se ha estipulado un rendimiento esperado del 0,1165%, para esto el sistema plantea la siguiente composición del portafolio de inversiones:

TABLA 3: Distribución de la Inversión en el Escenario de Riesgo Alto

<b>Acción</b>	<b>Porcentaje de la Inversión</b>	<b>Valor de la Inversión</b>
Aluminium	48,5%	USD \$ 48.500
BK of America	0,000%	USD \$ 0
Coca Cola	0,000%	USD \$ 0
Microsoft	0,000%	USD \$ 0
General electric	0,000%	USD \$ 0
MC Donalds	1,516%	USD \$ 1.516
United Techno	0,000%	USD % 0
Pfizer Inc	49,948%	USD \$ 49.948
<b>TOTAL</b>	<b>100%</b>	<b>USD \$ 100.000</b>

### El Contexto

El periodo de tiempo seleccionado para contrastar los portafolios de inversión en títulos de renta variable obtenidos a través del modelo de Markowitz, está enmarcado por una gran volatilidad del sistema financiero internacional producto de acontecimientos que han puesto en jaque el actual ordenamiento económico y financiero mundial. Entre los mencionados sucesos podemos contar la crisis de la deuda en los países de la zona euro, en especial de Grecia e Irlanda que han tenido que recurrir a planes de rescate con condiciones rigurosa, también existe una amenaza latente sobre economías de gran dimensión como España, Italia y Francia, que de llegar a caer en situación en default de su deuda generarían un gran impacto en el desempeño económico de todo el mundo.

Pero la vorágine de circunstancias no acaba con la crítica situación europea, como si fuera poco y en una coyuntura nunca antes vista al menos en la historia reciente del capitalismo moderno, otro de los grandes sino el más grande centro económico y financiero del mundo presenta una situación igual o más preocupante; Estados Unidos llegó al tope establecido en su constitución para la deuda pública, lo que obligo a una tortuosa negociación entre los partidos políticos dominantes que termino en un desconcertante tire y afloje que además de no solucionar a profundidad los problemas existentes mermo notablemente la credibilidad estadounidense en el concierto internacional, esto derivó en la degradación de la calificación de su deuda por la calificadora Standar & Poors, algo que no se había presentado nunca en casi 90 años de existencia de esta calificación, lo que acrecentó el nerviosismo de los inversionistas.

Para continuar la seguidilla de acontecimientos generadores de incertidumbre y volatilidad en el sistema financiero internacional, cabe agregar que Japón y China, otros de los centros económicos y financieros importantísimos en el contexto global presentan situaciones complicadas, el primer país apenas se está recuperando económica y socialmente del devastador tsunami que afectó seriamente su capacidad productiva, por su parte, la economía China presenta serios indicios de recalentamiento que se han venido manifestando en una inflación elevada que vislumbra serías dudas sobre la capacidad de este país de seguir creciendo al menos a las tasas elevadas que lo ha venido haciendo en los últimos lustros.

Los resultados de todos estos acontecimientos en los mercados financieros del mundo no podrían haber sido diferentes, las variaciones de los precios de las acciones cotizadas en bolsa medidas a través de índice bursátiles son mayoritariamente negativas, el Dow Jones por ejemplo registra en diez de sus cuarenta y cuatro sesiones durante los meses de agosto y septiembre bajas superiores al 2%, presentado el nivel máximo el día 8 de agosto del año en curso cuando la reducción fue del 5,5% aproximadamente.

## LOS RESULTADOS

Evaluando los niveles de rentabilidad y de riesgo obtenidos en cada uno de los tres escenarios planteados con anterioridad (información que se relaciona en la tabla 2) y comparando los rendimientos y el riesgo calculado para el índice industrial Dow Jones, se pueden destacar conclusiones muy importantes.

TABLA 4: Resultados Obtenidos al Final del Periodo Para Cada Escenario y Para el Mercado en Su Conjunto

	Riesgo Bajo	Riesgo Moderado	Riesgo Alto	Índice Dow Jones
Rentabilidad	-3,576%	-11,533%	-24,834%	-10,048%
Varianza	0,031%	0,039%	0,065%	0,048%
Desviación estándar	1,766729%	1,990559%	2,552326%	2,2019565%

Tal como se puede apreciar en los resultados obtenidos, en coyunturas de alta volatilidad los portafolios de baja exposición al riesgo, es decir, altamente diversificados permiten reducir efectivamente el riesgo y reducir ostensiblemente los niveles de pérdida del inversionista, por el contrario, asumir una estrategia de alta exposición al riesgo incrementa considerablemente los niveles de pérdidas. Siguiendo con el ejemplo propuesto en uno de los apartados de este artículo, si se considera un inversionista con un capital inicial de USD \$ 100.000 y tres escenarios de inversión, de bajo, medio y alto nivel de riesgo los niveles de rentabilidad que se obtendrían para cada escenario serían de USD - \$ 3.452,42, USD \$ - 10.340,15 y USD \$ - 19.893,81 respectivamente, el comportamiento diario de la rentabilidad se presenta a continuación en la Figura 1

Figura 1: Análisis del Rendimiento de los Diferentes Portafolios Seleccionados

Analizando los resultados obtenidos es posible afirmar que aún en épocas de alta volatilidad en los mercados financieros internacionales, el modelo de Markowitz es propicio para generar estrategias defensivas en la inversión en activos de renta variable, dicha estrategia permitirá al inversionista reducir el nivel de exposición al riesgo y obtener niveles de rentabilidad negativos inferiores a los registrados por el mercado en su conjunto.

## CONCLUSIONES

Cuando se registran altos niveles de volatilidad en los mercados financieros, tal como el fue caso de los meses de agosto y septiembre del 2011, los niveles de riesgo a los que deben exponerse los inversionistas son llamativamente más altos que los evidenciados con anterioridad. Durante el periodo de tiempo analizado una estrategia de inversión defensiva representada en el portafolio de inversión con menor exposición al riesgo, reduce ostensiblemente las pérdidas de los inversionistas. Aunque es necesario realizar más estudios sobre la temática, es posible afirmar que en momentos de alta volatilidad y altos niveles de riesgo, el modelo de Markowitz sirve como una herramienta eficaz para diseñar portafolios de inversión con bajo de nivel de riesgo que permita minimizar las perdidas en comparación con el comportamiento del mercado en su conjunto. Una estrategia ofensiva, representada en un portafolio compuesto por acciones con una desviación estándar alta, genera en contextos volátiles como los evidenciados en los meses de agosto y septiembre del 2011, unos niveles de perdida superiores a los asumidos por la totalidad de las acciones del mercado analizado.

## RESUMEN

*Cada organización tiene su propia cultura, producto de su clima laboral, de sus políticas, valores y las directrices que aplican los ejecutivos o altos directivos; ya que a través de ésta, los colaboradores dirigirán sus esfuerzos y competencias para orientarse al logro de objetivos y metas trazados. Es conveniente mirar hacia atrás y analizar si la cultura hasta hoy empleada ha sido la adecuada, pero por otra parte, si será la indicada para los cambios que se pretenden de acuerdo a la competitividad del mercado, a aspectos tecnológicos, de innovación. La cultura permite detonar los elementos que generan las ventajas competitivas, creando capacidades organizacionales, apoyados por un liderazgo que impulse la implementación de la estrategia para el logro de la excelencia organizacional. Por ello, el objetivo de este estudio es describir la cultura y liderazgo existente en una Institución de Educación Superior, que pretende generar cambios a mediano y largo plazo en la implementación de su planeación estratégica proyectada a 6 años.*

**PALABRAS CLAVE:** Cultura Predominante, Liderazgo, Planeación Estratégica

## THE PREVAILING CULTURE AND LEADERSHIP, AS AN ELEMENTAL PART OF THE IMPLEMENTATION OF A STRATEGY IN A UNIVERSITY

### ABSTRACT

*Every organization has its own culture, as a direct result of its labor environment, policies, values, and guidelines applied by its executives and managers; thorough this culture, all of its members will aim their efforts and competencies to achieve their goals and objectives. It is convenient to look back and analyze if this culture, employed today, has being the correct one, on the other hand, if it will be the correct one for all changes that we had planned according to competitiveness of the market, technological aspects and innovation. Culture let us detonate all elements that generate competitive advantages, creating organizational skills, supported by solid leadership that leads to a correct implementation of strategy to achieve organizational excellence. For all of this, this study objective is to describe the culture and leadership that exist in a higher education institution, that pretend to generate medium and long term changes at the implementation of is strategic planning projected to 6 years.*

**KEYWORD:** Prevailing culture, Leadership, Strategic planning

## INTRODUCCIÓN

El tema del liderazgo cobra hoy mayor relevancia, las ciencias administrativas nos muestran la importancia de revalorar la aportación de las personas al desarrollo y a los logros de las organizaciones. En un mundo donde el signo principal es el cambio, resulta apremiante el estudio de la capacidad de dirigir, orientar y fortalecer el esfuerzo colectivo hacia la continua innovación y adaptación a las nuevas circunstancias, en tanto que resulta apremiante el estudio de la capacidad de dirigir orientar y fortalecer el esfuerzo colectivo hacia la continua innovación y adaptación a las nuevas circunstancias. Es indispensable la detección y formación de los hombres y mujeres que sean capaces de encontrar los nuevos rumbos y opciones cuyas fronteras aún son desconocidas. En la Dirección y conducción de las empresas e instituciones modernas se ve la formación de líderes que favorezcan la reconversión de las plantas industriales y las nuevas demandas de servicio para poder enfrentar el reto de la competitividad, la innovación y la adaptación al cambio acelerado. (Beraún Quiñones, 2011)

En un estudio previo, se obtuvo como resultado, que la cultura que prevalece en la Universidad Tecnológica de Torreón (UTT) es de tipo Jerárquica, la cual fue determinada conforme a la aplicación de la metodología empleada por Cameron & Quinn (2011) denominada Modelo de Valores en Competencia (CVF), que incluye cuatro tipologías (Clan, Adhocrática, Mercado y Jerárquica). Este tipo de cultura se basa en las reglas, la especialización, impersonalidad, responsabilidad y jerarquía. Las metas de la organización a largo plazo son la estabilidad, la previsibilidad y la eficiencia. Los procedimientos gobiernan y dicen qué hacer a las personas.

Dando seguimiento a la investigación, en este estudio se plantea como objetivo analizar la cultura y el liderazgo de la institución, con el fin de obtener información para el rediseño e implementación de la Planeación Estratégica del 2013- -2018, con mayores expectativas de éxito y considerando la posibilidad de establecer las bases para proyectarlo todo el Subsistema de Universidades Tecnológicas, sustentado en las directrices del Plan Nacional y Estatal de Desarrollo. La UTT con su propia estrategia a lo largo de quince años se ha colocado en un sitio privilegiado en un mercado altamente competitivo en la región.

El desarrollo del trabajo se estructura en tres partes: fundamento teórico – metodológico mediante la revisión de la literatura, la metodología utilizada en el estudio empírico, y el análisis de los resultados en cuanto a las características de la cultura y el liderazgo en la institución objeto de estudio y las conclusiones.

## REVISIÓN DE LITERATURA

La estrategia de una organización describe de qué forma intenta crear valor para sus accionistas y clientes. Si el activo intangible de una organización representa más del 75% de su valor, entonces la formulación y ejecución de su estrategia requiere que se contemple explícitamente la movilización y alineación de los mismos. Sin alineación no se pueden implementar nuevas estrategias para el actual entorno cambiante de competencia global, desregulación, soberanía del cliente, tecnología avanzada y ventajas competitivas derivada de los activos intangibles, principalmente el capital humano y el de información. Cuando los tres componentes de la perspectiva de aprendizaje y crecimiento, el capital humano, de información y organizacional, están alineados con la estrategia, la institución tiene un alto grado de preparación organizacional: tiene la capacidad de movilizar y sostener el proceso de cambio requerido para ejecutar su estrategia (Kaplan & Norton, 2014). La cultura organizacional y el liderazgo orientan las acciones rumbo a la estrategia, parte fundamental del presente estudio.

La cultura es un conjunto aprendido de creencias, valores y conductas que se aceptan como suficientemente satisfactorias como para transferirse a las nuevas generaciones. Tal definición ofrece una imagen completa de la cultura y de la manera en que se forma. Como lo sugiere la propia definición, una cultura empieza cuando un grupo de seres humanos enfrenta una serie de retos. En una organización, la cultura podría

comenzar a formarse cuando los primeros miembros enfrentan los retos iniciales de asegurar la fundación de aquella, de crear el producto, de distribuirlo a los clientes, etcétera. Los pioneros (o primeros líderes) casi siempre tienen un conjunto de creencias que guían sus conductas y sus elecciones. En general, las decisiones y las prácticas iniciales se conservan mientras funcionan. Éste es el motivo por el cual los pioneros tienen una influencia tan significativa en la justa naturaleza de la cultura de una compañía. Las creencias, los valores y las conductas que son exitosos se enseñan a los nuevos participantes. En una organización, los nuevos integrantes son las contrataciones recientes. Por lo tanto, para los nuevos miembros la cultura es algo que se aprende, no algo que se hereda. La cultura se enseña a los nuevos integrantes, con el paso del tiempo, valores, creencias y conductas determinados empiezan a compartirse entre los miembros del grupo. No obstante, como las circunstancias cambian, lo que en un momento específico se consideraban respuestas convenientes también llegan a evolucionar y cambiar. En consecuencia, la cultura se va adaptando al entorno. (Hitt & de Lara Choy, 2006).

Por ello, es importante identificar la cultura que prevalece en una organización antes de querer hacer cambios estratégicos que marquen un camino de retos, y confirmar si es posible el implementar las acciones o primeramente hay que ajustar algunos factores para que el impacto sea realmente significativo y pueda llevarse de una manera más eficiente y competitiva. Pedraja R and Rodríguez P (2004) han demostrado la pertinencia y la importancia del liderazgo para explicar la eficacia a nivel de las organizaciones. El liderazgo es una forma de comunicación, por lo que la persona que dirige tiene mucho que ver cómo se comunica. El término liderazgo posee diferentes significados atendiendo a los rasgos individuales, comportamientos, influencias sobre otras personas, modelos de interacción, roles, ocupaciones, puestos jerárquicos, percepciones vinculadas a legitimidad e influenciar (Kaufmann, 1997).

La Real Academia Española define el liderazgo “como una situación de superioridad en que se halla una empresa, un producto o un sector económico, dentro de su ámbito” (2001). El liderazgo es un proceso de influencia y poder, que trata sobre logros y alcances, sobre cómo llegar a alguna parte y para ello se necesita tener un fin y una visión sobre lo positivo que se busca y sobre cómo se trabajará para lograrlo. El liderazgo, por lo tanto, tiene que tener un objetivo. Tiene que tener dirección o no es liderazgo (Afkhami, Eisenberg, & Vaziri, 2012). Pedraja Rejas, Rodriguez Ponce, and Rodríguez Ponce (2006) plantea que tanto el diseño como la implementación de la estrategia dependen del proceso de toma de decisiones estratégicas, proceso éste es la resultante de los estilos de liderazgo.

Existen diversas tipologías de los estilos de liderazgo, optaremos por la clasificación de Ogbonna (2000): el estilo de liderazgo participativo, el estilo colaborativo y el instrumental. El estilo participativo se caracteriza por que el líder considera la opinión de los subordinados, y les consulta para decidir. El estilo colaborativo es donde el líder ayuda a los suyos en los trabajo encomendados, está atento al bienestar del grupo, trata a todos por igual y se afana en los detalles para que todos se sientan bien. Por último el liderazgo instrumental es donde el líder explica a sus subordinados cómo llevar a cabo el trabajo, decide el modo en el cual las cosas se deben hacer, define los estándares de desempeño y los esquemas de trabajo, sin consultar a nadie (Ogbonna & Harris, 2000).

Uno de los teóricos que basa sus ideas sobre las teorías de Burns es Bass que considera que el liderazgo se debe medir la efectividad de un líder a partir de la respuesta de sus seguidores (1985). El liderazgo transformacional determina la importancia del líder al promover y cultivar una visión que dé sentido y significado a los propósitos y actuaciones organizativas (Salazar, 2006). Bass (1985) manifestaba que el liderazgo transformador superaba al transaccional que se definía por hacer concesiones a los intereses personales mediante recompensas contingentes y a la gestión por excepción. Mientras que el transformador estaba compuesto por el carisma (desarrollar una visión), inspiración (motivar altas expectativas), tolerancia psicológica (prestar atención, respeto y responsabilidad a los seguidores) y la estimulación intelectual (proporcionar nuevas ideas y enfoques). Leithwood, Begley, and Cousins (2005) se enfocan en el liderazgo

transformacional pero enfocada a las instituciones de educación donde considera a las instituciones como imperfectas, permanentes e imprescindibles para la sociedad, las considera instrumentos de cambio social su objetivo es desarrollar la participación, una visión. Incrementar la capacidad de los miembros de la comunidad escolar para superar los obstáculos. Tener y compartir una visión sistémica de la organización implica el cambio de paradigma sobre la forma de trabajar, de relacionarse y de depender unos de otros. Muchas de las tendencias administrativas modernas, tales como la “polivalencia”, el “crecimiento horizontal”, la “Gestión del Conocimiento” y muchas más, difícilmente tendrían cabida en un sistema de trabajo por funciones. Si el mercado abierto demanda de las organizaciones nuevas estrategias para responder a las nuevas exigencias, una visión sistémica es el punto de partida para el proceso de ajuste.

Las organizaciones trabajan por resultados, no importa la naturaleza de las mismas ni si sus objetivos son de carácter económico, social o mixto. Estos objetivos, fruto de la Visión, Misión y Estrategias competitivas de la empresa, son obtenidos a través de la ejecución de actividades o tareas. Las actividades, a su vez, se agrupan en cargos, responsabilidades o procesos, de acuerdo con el sistema de trabajo que se tenga implementado. Son las personas quienes en esos cargos, en esos procesos, o con esas responsabilidades, realizan las actividades que conducen al logro de los objetivos. Pero, para alcanzarlos, los empleados y directivos deben poseer las competencias requeridas, es decir, contar con todos los conocimientos, habilidades, y demás elementos de personalidad, aplicados al ejercicio del trabajo y traducidos a comportamientos laborales concretos en términos de productos o servicios. (Ortiz Cancino, Rendón Morales, & Atehortúa Ramírez, 2012)

## METODOLOGÍA

La investigación, de carácter descriptiva exploratoria, se planteó como objetivo determinar la cultura predominante y las características del liderazgo en la Universidad Tecnológica de Torreón (UTT), mediante la aplicación de encuestas, que permitieran conocer las expectativas, opiniones y percepciones del personal involucrado: personal directivo, profesores, personal administrativo y de apoyo. Para determinar la cultura predominante se aplicaron un total de 109 encuestas, de las cuales 42 se aplicaron a Profesores, 43 a personal administrativo y de apoyo y 24 a personal directivo de la institución. Se aplicó al 79% del total de la plantilla, un 92% del personal directivo, un 82% de los profesores de tiempo completo y un 70% del personal administrativo.

El cuestionario para determinar los aspectos prevalecientes en la comparación cultura competidora vs cultura colaboradora se conformó de 34 reactivos, el cual fue validado al realizar un análisis factorial de la información obtenida, además mediante estadística de fiabilidad (Alfa de Cronbach), este instrumento se desarrolló con los factores determinados en ambas culturas por (Cloke & Goldsmith, 2002). Además de considerar como metodología el conocer las ponderaciones totales de cada uno de los niveles encuestados. De manera específica se establecieron criterios de valor para cada una de las variables utilizando una escala likert: 5 absolutamente de acuerdo, 4 más en acuerdo que en desacuerdo, 3 ni en acuerdo ni en desacuerdo, 2 más en desacuerdo que de acuerdo y 1 absolutamente en desacuerdo.

Figura No 1: Estadísticas de Fiabilidad

Alfa de Cronbach	Alfa de Cronbach basada en elementos estandarizados	N de elementos
dis.810	.820	34

La aplicación de las evaluaciones para determinar el nivel de las Competencias Gerenciales (Liderazgo), contó con 18 variables, cuyo instrumento versó en lo expuesto por (Cardona & Chinchilla, 1998). El total de la encuesta fue de 24 personas entre mandos medios y superiores, de los cuales 14 (67%) son hombres,

7 mujeres (33%) y 3 personas no establecieron el tipo de sexo. Del total de los encuestados 11 (46%) sí han tenido experiencia a nivel dirección, 9 (38%) no han tenido experiencia y los 4 restantes no respondieron. De igual forma se validó la fiabilidad del instrumento a través del Alfa de Cronbach.

Figura No 2: Estadísticas de Fiabilidad

Alfa de Cronbach	Alfa de Cronbach Basada en Elementos Estandarizados	N de Elementos
.931	.934	18

Los datos de las encuestas fueron capturados en base de datos del sistema SPSS, procesándose con estadística descriptiva. Para el análisis de evaluación del nivel de competencias gerenciales se obtuvo el valor de datos reales, el rango mínimo y máximo, así como la media y la desviación estándar para cada una de las ellas. Dada la participación de diferentes sujetos según sus cargos en la institución, se aplicó la triangulación de fuentes en el procesamiento de los datos.

## RESULTADOS

La Universidad Tecnológica de Torreón es un Organismo Público Descentralizado del Gobierno del Estado de Coahuila. Que tiene como finalidad principal el impartir Educación de nivel Técnico Superior Universitario, Licenciatura Profesional, Licenciatura (Ingeniería) y posgrado, con el propósito de contribuir a la formación de profesionales aptos para la aplicación de conocimientos y la solución creativa de problemas con un sentido de innovación mediante la incorporación de los avances científicos y tecnológicos. Así como efectuar investigación tecnológica que coadyuve con aportaciones concretas al fortalecimiento de la enseñanza técnica profesional, ofrecer y fomentar el desarrollo de nuevos perfiles académicos en la Educación Superior y realizar programas de vinculación con los sectores productivos de bienes y servicios, público, privado y social, para formar profesionistas capaces que participen y consoliden el desarrollo productivo, económico y social del Estado, la Región y el País.

### Cultura Organizacional

La identificación del tipo de cultura predominante se refleja en la Tabla 1. Las ponderaciones mayores corresponden a la cultura colaborativa, quien denota las calificaciones más altas en “más de acuerdo” y “absolutamente de acuerdo” del total de los tres grupos que contestaron la encuesta. Si bien, el resultado es satisfactorio en cuanto a la cultura colaborativa, está reflejando los obstáculos existentes para el tránsito hacia una organización basada en el aprendizaje colectivo, ya que existe un alto porcentaje que se encuentra en “ni en acuerdo ni en desacuerdo”.

Tabla 1: Ponderaciones de los Tipos de Cultura Organizacional

Tipo de Cultura	Absolutamente en Desacuerdo	Más en Desacuerdo	Ni en Acuerdo Ni en Desacuerdo	Más en Acuerdo	Absolutamente de Acuerdo
Cultura colaborativa	94	211	570	631	311
Cultura competitiva	313	270	538	453	230

*En la tabla para cada uno de los grupos evaluados se ponderaron las calificaciones, distribuyendo los resultados de acuerdo al tipo de cultura, encontrándose el mayor puntaje en más de acuerdo y de acuerdo en la cultura colaborativa. Fuente: Elaboración propia.*

Figura 3: Resultados de Ambas Culturas

Esta figura muestra los resultados de manera general de las dos culturas evaluados por los tres grupos de encuestados. Fuente: Elaboración propia.

Dentro de los factores considerados para cada tipo de cultura se adoptó la participación colectiva en la construcción de las normas y en la toma de decisiones para caracterizar el liderazgo, lo cual se expone en las siguientes figuras.

Figura 4: Las Normas Se Construyen Colectivamente En Mi Organización

En esta figura se muestra la percepción de los administrativos, directivos y profesores de tiempo completo (PTC) en relación a si consideran que las normas de la Universidad Tecnológica de Torreón se construyen colectivamente. Fuente: Elaboración propia.

Este mismo factor se refleja en cada cultura con los siguientes resultados: Los datos de la Figura 4 reflejan que con respecto a la construcción colectiva de las normas, entre los diferentes sujetos existe una percepción general orientada a “más de acuerdo” (nivel bueno, pero no óptimo), sin embargo son los propios directivos lo que le asignan un valor menor. Destaca además la dispersión en las valoraciones otorgadas por los profesores (PTC) hacia “más en desacuerdo” y ninguna percepción definida (“ni de acuerdo, ni en desacuerdo”). Por lo tanto, debe mejorarse la cuestión de difundir cómo se realiza la normatividad, quiénes intervienen y cómo cada uno de los colaboradores participa dentro de la misma. Y la figura 4, proyecta de manera más clara la inclinación de sus respuestas a que las normas las construyen los altos directivos; con una igualdad en las respuestas para los que se encuentran en ni en acuerdo ni en desacuerdo. Con respecto a la participación en la toma de decisiones, la figura 6 muestra resultados interesantes, en su mayoría no tienen un criterio formado sobre la variable al seleccionar “ni en acuerdo ni desacuerdo”, sobre todo los administrativos y los profesores, y en relación a los directivos, éstos oscilan entre la variable mencionada y “más de acuerdo”.

Figura 5: Las normas se construyen...

En esta figura se muestra la percepción de los administrativos, directivos y profesores de tiempo completo (PTC) en relación a cómo consideran que se construyen las normas de la Universidad Tecnológica de Torreón, de acuerdo a cada cultura, donde colectivamente se referencia a la cultura colaborativa y por la Alta Dirección a la cultura competidora. Fuente: Elaboración propia.

Figura 6: Toma de Decisiones Democráticas

Figura que denota la manera en que se toman las decisiones al interior de la Universidad Tecnológica de Torreón dirigida a la toma de decisiones democrática. Fuente: Elaboración propia.

Figura 7: Toma de Decisiones Autoritaria

Figura que denota la manera en que se toman las decisiones al interior de la Universidad Tecnológica de Torreón, dirigida a la toma de decisiones autoritaria. Fuente: Elaboración propia.

Las respuestas en la Figura 7, denota la indecisión en la toma de decisiones autoritaria por parte de los administrativos, lo que puede inferir en la apreciación que tengan de manera particular por cada uno de los jefes inmediatos y no sea considerado de manera genérica en el total de los directivos, además de que en

ambos aspectos (democrático y autoritario) su respuesta es similar en forma porcentual, lo que muestra que no tienen claro qué tipo de liderazgo se ejerce para ejecutar las acciones. Por otra parte, los directivos y profesores de tiempo completo están más en desacuerdo con que la toma de decisiones sea autoritaria y se inclinan más porque es de tipo democrática. Este aspecto es importante en la cultura y liderazgo participativo, por lo que debe ser objeto de atención mediante acciones estratégicas de la institución.

Figura 8: Toma de Decisiones

En esta figura se muestra la percepción de los administrativos, directivos y profesores de tiempo completo (PTC) en relación a cómo consideran que se acuerdan la toma de decisiones de acuerdo a cada cultura, donde democrática se referencia a la cultura colaborativa y la autoritaria a la cultura competitiva. Fuente: Elaboración propia.

Esta última figura para el factor de la toma de decisiones refleja de manera más significativa lo expuesto en cada una de los anteriores.

### Evaluación de Competencias Gerenciales

Complementando el tipo de cultura y liderazgo, se presentan los resultados obtenidos en la evaluación de competencias gerenciales, considerando el total de mandos medios y superiores (24). De ellos, la edad oscila entre los 31 y 66 años, con una antigüedad en la institución que oscila entre 8 - 15 años y el 46% del sexo femenino. La autoevaluación del nivel de desarrollo de cada competencia refleja el nivel a alcanzar y el nivel real. En la tabla 2 se observa que en lo referente en el nivel de desempeño real, las competencias se colocan en 4 niveles (de muy alto a bajo), mientras que en el desempeño a alcanzar, ésta considera únicamente 3 niveles (de muy alto a medio). Dentro de las 18 variables, se extrae una de carácter relevante para el tema de estudio, que es el liderazgo, mismo que se muestra en la figura siguiente:

Tabla 2: Evaluación de Competencias Directivas

Competencias Para La Dirección	% Nivel de Desempeño Real				% Nivel de Desempeño a Alcanzar		
	Muy alto	Alto	Medio	Bajo	Muy alto	Alto	Medio
Comprensión del entorno organizacional	21	19	10	0	42	4	4
Orientación al cliente y/o necesidades sociales	17	23	10	0	40	10	0
Orientación al logro / orientación a resultados	19	21	10	0	42	8	0
Planificación	19	19	13	2	46	4	0
Pensamiento analítico	10	29	8	2	44	6	0
Toma de decisiones	15	25	8	2	44	6	0
Iniciativa e innovación para la solución de problemas	10	31	6	2	40	10	0
Motivación	8	23	17	2	38	13	0
Comunicación efectiva	10	25	13	2	40	10	0
Trabajo colaborativo	19	17	10	4	44	6	0
Uso de información	13	31	4	2	42	8	0
Desarrollo de las personas	6	31	8	4	40	8	2
Delegación y compartir autoridad	19	25	4	2	46	4	0
Liderazgo participativo y transformacional	10	31	6	2	42	8	0
Autoaprendizaje	10	29	10	0	35	15	0
Administración del tiempo y el estrés	8	29	10	2	40	10	0
Manejo o administración de conflictos	8	31	10	0	40	10	0
Impacto ambiental	7	30	11	0	43	9	0

Se divide la tabla en dos aspectos evaluados, los que consideran que en el momento aplica para las competencias de los directivos y lo que ellos ven factible alcanzar (ideal). Los resultados son porcentajes de acuerdo a la apreciación. Fuente: Elaboración propia.

Figura 9: Liderazgo Participativo y Transformacional

Esta figura refleja el resultado de la percepción del liderazgo participativo y transformacional de los directivos y cómo desearían que fuera. Fuente: Elaboración propia.

El liderazgo participativo y transformacional, se encuentra entre alto y muy alto actualmente, correlacionando con lo ideal que se proyecta en muy alto. Esto conecta el primer resultado de la cultura predominante la cual resultó colaborativa a que el liderazgo se ejecute de manera participativa para obtener

grandes logros. Considerando, que en el estudio previo se obtuvo que la cultura que prevalece en la institución es de tipo Jerárquica (atendiendo a la clasificación y metodología de Cameron & Quinn, 2006) comparándola con el resultado que se presenta, donde predomina la cultura colaborativa y un liderazgo participativo y transformacional, lo que favorece para el camino deseado, no así, el considerar los resultados imprecisos del tipo de toma de decisiones que habrá de perfeccionarse, junto con la motivación, planificación y la comunicación efectiva, cuyos resultados se ubican en el nivel medio. Para que realmente impacten en la implementación y seguimiento de la nueva estrategia, tienen que ser competencias vanguardistas, de empuje, de reto, dirigidas hacia el éxito y la competitividad, impulsando así, el cambio deseado basado en una alineación estratégica.

## CONCLUSIONES

Conforme avanza el siglo XXI la complejidad y la velocidad de los cambios se van incrementando, lo que exige transformaciones de las organizaciones al adaptarse para responder a los nuevos desafíos, lo que conduce al replanteamiento de las estrategias, estructuras y procesos. (PNC, 2014). La institución de educación superior objeto de estudio, consciente de los nuevos retos, redirecciona su estrategia con los impulsores internos que la han distinguido y las capacidades y competencias que la caracterizan, con estrategias en la calidad, excelencia y competitividad.

Por ello, la cultura organizacional y el liderazgo son dos aspectos de importancia trascendental para promover e implementar un cambio estratégico en las instituciones educativas. El estudio exploratorio realizado reflejó el predominio de una cultura colaborativa, que es más favorable que la cultura jerárquica predominante en un estudio anterior. Sin embargo, resulta una necesidad imperiosa, para el éxito de las estrategias de la institución, adoptar acciones para lograr una mayor participación en la toma de decisiones y las normas establecidas que propicien un compromiso colectivo y un liderazgo más participativo, con ello dar paso a la consolidación de una cultura colaborativa e innovadora.

El análisis del nivel de desempeño de las competencias gerenciales, mediante la autoevaluación de los mandos medios y superiores, evidenció que las competencias más desarrolladas son Iniciativa e innovación para la solución de problemas, Uso de la información, Delegación y compartir autoridad, y Liderazgo participativo y transformacional; y las menos desarrolladas Motivación, Trabajo colaborativo, e impacto ambiental, lo cual sirve de información para mejorar las políticas de selección, formación y evaluación de las gestión de recursos humanos en la institución, en particular de los directivos, así como el desarrollo de sus competencias.

Dentro de las competencias gerenciales, el liderazgo participativo y transformacional resultó valorado de alto, y perspectiva de muy alto, lo que favorece la transformación estratégica de la organización en ejecución, pero plantea brechas o debilidades existentes en cuanto a las impresiones de la toma de decisiones democráticas, y los valores medios obtenidos por las competencias de motivación, planificación y la comunicación efectiva.

El aporte de la investigación realizada reside, como caso de estudio, en ofrecer información fidedigna, tanto de fortalezas como debilidades, que propician la interiorización de los elementos necesarios para que la institución reoriente su cultura organizacional y liderazgo y pueda dirigirse hacia la nueva etapa de su estrategia, con mayores alcances en el mercado competitivo de la región y del país. Este análisis constituye uno de los fundamentos para el diseño e implementación del enfoque de procesos sustentado en la alineación estratégica que desarrolla la institución, como punto de referencia para las prácticas de gestión educativa de todo el subsistema educativo. Los resultados presentados tienen como limitación que sólo abarcan un caso de estudio y la necesidad de seguir ampliando la aplicación y evaluación de herramientas de gestión estratégica para el cambio organizacional, en su etapa de implementación.

# EMPRENDIMIENTO SOCIAL INNOVADOR: EL CASO DE BIORED COLOMBIA SAS EN ANTIOQUIA COLOMBIA

Fernando Alemán Ramírez, Universidad Militar Nueva Granada  
Camilo Ignacio Coronado Ramírez, Universidad Nacional de Colombia

## RESUMEN

*El emprendimiento social innovador procura, entre otros, la inclusión social de grupos vulnerables a la dinámica económica así como la creación de valor social, incluso más allá de las fronteras mercantiles del momento, propiciando la generación de oportunidades para el cambio social. El caso de estudio es Bioired Colombia S.A.S, una empresa con conciencia ambiental que contribuye a la reconstrucción del tejido social en el Bajo Cauca en Antioquia. Nace como iniciativa movilizadora de inversión social en investigación, infraestructura, generación y divulgación de tecnologías, orientadas a la rehabilitación y reasentamiento de población en zonas rurales afectadas por el desplazamiento. Así, Bioired Colombia S.A.S organiza y capacita grupos familiares para la producción y comercialización de peces y plantas, que se producen en espacios reducidos de forma intensiva por medio de la tecnología de los Sistemas de Producción Bioired (SPB), con características relevantes de ahorro en los recursos naturales principalmente agua.*

**PALABRAS CLAVE:** Emprendimiento Social, Innovación, Desarrollo Rural, Sostenibilidad

## ABSTRACT

*The innovative social entrepreneurship seeks for social inclusion of vulnerable groups to the economic dynamics as well as the creation of social value, even beyond the commercial boundaries, leading to the creation of opportunities for social change. The case study is Bioired Colombia SAS, a company that contributes to the reconstruction of the social fabric in the Bajo Cauca Antioquia, with an environmental conscience. Born as mobilizing social investment initiative in research, infrastructure, generation and dissemination of technologies aimed at the rehabilitation and resettlement of population in rural areas affected by displacement. So Bioired Colombia SAS organizes and trains family groups to the production and marketing of fish and plants that occur in confined spaces intensively through technology Bioired Production Systems (SPB), with relevant features of savings natural resources, water and soil.*

**JEL:** L26, O35, O44, P25

**KEYWORDS:** Social Entrepreneurship, Innovation, Rural Development, Sustainability

## INTRODUCCIÓN

El artículo se enfocara en la organización innovadora con fines sociales por la importancia mundial del emprendimiento social, que de acuerdo con Yunus, premio Nobel de Paz en el año 2006 y fundador del Grameen Bank, llama la atención sobre los problemas sociales actuales, que amerita la atención de los estados y la iniciativa privada. “Olvidamos que la crisis financiera es solo una de las muchas crisis que amenazan la humanidad. También tenemos crisis global de alimentos, crisis energética, crisis medioambiental, de atención en la salud y la continua crisis económica y social de una pobreza masiva” (Yunus, 2010). En este sentido, la empresa social es considerada actualmente como una iniciativa que

contribuye no sólo a desarrollar espacios de participación ciudadana, sino que busca procesos de inclusión social, laboral y económica que contribuyan a superar el asistencialismo.

Para Roberts y Woods (2005: p.49), el emprendimiento social es la construcción, evaluación y persecución de oportunidades para el cambio social transformativo llevado a cabo por individuos visionarios, apasionadamente dedicados. Esta definición permite resaltar otros aspectos claves del emprendimiento social. El primero de ellos es que las oportunidades sociales no se descubren, sino que se construyen gracias a la generación de ideas.

El emprendimiento social en Antioquia-Colombia, ha estado liderado por la Promotora social quien define el emprendimiento social, como la empresa social relacionada al resultado de la autogestión comunitaria con el fin de responder a necesidades de índole social de un territorio o comunidad, mediante la implementación de buenas prácticas empresariales, trabajo en red y con un claro propósito del bienestar del ser (Pacheco, 2007). El concepto anterior se desprende la pregunta : ¿las empresas sociales que están surgiendo si están capacitadas para establecer apropiadas formas de trabajo en red sin llegar a quedar en desventaja en el momento de una negociación?. De esta manera Explorar, caracterizar, y comprender experiencias de emprendimiento social en Antioquia.

En este contexto, Bioired Colombia SAS se crea como un proyecto dedicado a la recuperación social y económica de la población vulnerable en regiones en este caso el bajo cauca que se ve afectado por la violencia civil, las bandas criminales, los cultivos ilícitos, la explotación ilegal de recursos naturales entre otros hechos, que han generado problemas de desplazamiento masivo Comisión Tripartita, 2012; AEA 2011). En la figura 1 se puede apreciar el porcentaje de desplazamiento de las diferentes subregiones de Antioquia, apreciando a su vez que el bajo cauca presenta un rango promedio de personas con desplazamiento forzado. Este modelo de emprendimiento social incluyente busca reducir estas cifras y recuperar la población bajo una economía legal sostenible.

El marco metodológico contenido para desarrollar el estudio empírico se basará en los fundamentos de los estudios de caso como metodología científica. La recolección de información y el análisis propuesto es de carácter cualitativo, teniendo su base en la revisión documental y entrevistas en profundidad a diferentes actores de Bioired Colombia SAS. En consecuencia, el alcance de los resultados está limitado por un caso e implica que los resultados a la problemática de la investigación no permiten hacer deducciones con exactitud sobre las preguntas. El artículo evidencia al emprendedor social como un individuo excepcional, pues posee cualidades asociadas a los emprendedores de negocios, aunque su dedicación y entusiasmo están dirigidos a resolver los problemas a los que se enfrenta la sociedad.

## REVISION DE LITERATURA

El emprendimiento social es un elemento importante en el desarrollo de un país, como lo define Ana Luz Abramovich en su investigación sobre el papel de los emprendimientos productivos sociales (Abramovich, 2003). En la concepción de la Economía Social, los emprendimientos productivos sociales tienen como función ayudar a construir o reconstruir circuitos de producción y circulación de bienes y servicios, enriqueciendo el entramado social, sirviendo de punto de incorporación de los sectores marginales y excluidos, ampliando el acceso al trabajo, captando y potenciando las capacidades y energías sociales existentes, colaborando en la emergencia de nuevas fuerzas emprendedoras, facilitando la autonomía de las personas al producir promoción laboral auto sustentable, mejorando la formación para el trabajo en equipo, produciendo lazos de solidaridad y cooperación.

Para Roberts y Woods (2005: p.49), el emprendimiento social es la construcción, evaluación y persecución de oportunidades para el cambio social transformativo llevado a cabo por individuos visionarios,

apasionadamente dedicados. Esta definición permite resaltar otros aspectos claves del emprendimiento social. El primero de ellos es que las oportunidades sociales no se descubren, sino que se construyen gracias a la generación de ideas. El segundo aspecto está relacionado con las características de los emprendedores sociales. Austin, Stevenson y Wei-Skillern, definen emprendimiento social como —una actividad innovadora, de creación de valor social, que ocurre al interior ya través de los sectores sin ánimo de lucro, de negocios y gubernamental (Austin, Stevenson & Wei-Skillern, 2006). Lo anterior permite comprender que el emprendimiento social no está aislado del emprendimiento comercial, sino que coexisten. El emprendimiento social sigue tres componentes: (1) La identificación de un equilibrio estable pero intrínsecamente injusto que causa exclusión, marginalización (2) la identificación de una oportunidad en este equilibrio injusto, desarrollando una proposición de valor social y llevando a utilizar inspiración, creatividad, acción directa, coraje y fortaleza y (3) la creación de un equilibrio estable y nuevo que libera el potencial coartado o alivia el sufrimiento del grupo objetivo, ya través de la imitación y la creación Emprendimiento social (Martin & Osberg, 2007: p. 35).

Desde este punto de vista Yunus clasifica a los empresarios en dos tipos: Empresarios sociales basados en el mercado y empresarios sociales no basados en el mercado. La diferencia entre ambos tipos de empresarios estriba en si existe o no el afán de lucro, de manera que las empresas sociales no basadas en el mercado son aquellas que persiguen fines sociales (asociaciones, fundaciones) sin obtención de lucro, y las empresas sociales basadas en el mercado, son aquellas que persiguen fines sociales a la vez que buscan beneficios empresariales (cooperativas, sociedades laborales). (Yanus, 2006). Hay, sin embargo, algunos trabajos que reconocen su existencia basado en el hecho que el empresario social presenta diferencias dignas de mención con respecto al resto de los empresarios (Zandonai & Pezzini 2004).

Según Mac Millan y Boisot (2004) El emprendimiento social es definido como el compromiso de iniciar nuevos modelos de actividad que desarrollen productos y servicios para satisfacer necesidades básicas, de colectivos desatendidos por las economías convencionales y las instituciones. (De Pablo, 2005). En esa revisión se encuentran algunas definiciones o aproximaciones de lo que se considera una empresa social; Según la OIT, no existe una definición única y universal sobre emprendimiento social. Ni tampoco existe un único tipo. Sin embargo, todo emprendimiento social incluye tres elementos clave: un objetivo social, una innovación transformadora y un modelo de negocios sostenible. El emprendimiento social suele darse, y tener éxito, en los sectores de la economía donde el mercado ha fallado y la acción del Estado es inexistente o ineficaz. Un emprendimiento social, cuando resulta exitoso, puede no sólo transformar las vidas de los beneficiarios, sino también la forma de abordar un problema en general.

Muhammad Yunus, define el emprendimiento social a través de dos tipologías, La primera, una compañía que no da perdidas pero tampoco dividendos, dedicada a resolver un problema social, de propiedad de inversionistas que reinvierten todas las utilidades en ampliar y mejorar el negocio, la segunda compañías que hacen utilidades y son propiedad de personas pobres, ya sea directamente o a través de un fondo dedicado a una causa social predeterminada. (Yunus, 2010). Para Yunus la creación de empresas sociales que surgen a partir de otras organizaciones no necesariamente se hacen bajo el esquema de responsabilidad social. No podría decirse que una empresa que practica la responsabilidad social corporativa es un emprendimiento social. Ya que se preocupa por el impacto que su actividad tiene en la sociedad y actúa acorde a esa preocupación. Tampoco debemos confundir el emprendimiento social con otros conceptos o actividades como organizaciones sociales, activismo social o la provisión de servicios sociales. El emprendimiento social tiene similitudes con estos conceptos y actividades, pero ninguno de ellos reúne los tres requisitos básicos de objetivo social, innovación transformadora y modelo de negocios sostenible. Un empresario social crea una solución a un problema social con el potencial para revolucionar un sector entero, como Florencia Nightingale revolucionando el sector del healthcare, o como Muhammad Yunus creador del Gremen Bank concepto que lo hizo merecedor del Premio Nobel de la Paz en el año 2006. De esta forma, el emprendimiento social es un elemento importante en el desarrollo de un país, como lo define

Ana Luz Abramovich en su investigación sobre el papel de los emprendimientos productivos sociales (Abramovich, 2003).

La Red Senk para efectos de definición, presenta los emprendimientos sociales como: las acciones realizadas con el propósito explícito de crear valor social. En general, se asocia a estas actividades con las OSC, pero, cada vez son más las empresas que desarrollan este tipo de iniciativas: desde acciones puramente filantrópicas hasta verdaderos proyectos de negocios orientados a mejorar la calidad de vida de la gente y, al mismo tiempo, los resultados económicos de las compañías.

Esta definición habla de acciones y las acciones pueden ser desarrolladas o no por una comunidad organizada, o por una empresa constituida lo que nos lleva a pensar que la importancia de crear valor deja de lado el sujeto que debe crearlo, sin embargo hace mención de dos elementos que hasta hace poco iban en sentido contrario como son los resultados económicos de la empresa y su objetivo de mejorar la calidad de vida de la gente, pero que en la empresa social, no sólo en la teoría sino también en la práctica, deberían ser dos elementos que comulguen permanentemente. A pesar de las diferencias entre la relación empresarial social y tradicional, algunos estudiosos exigen allí, que exista una continua relación empresarial comercial y social como las bases fundamentales de la organización. En otros términos, las organizaciones pueden seguir la relación empresarial comercial, relación empresarial social, o alguna combinación de ambos. Kets de Vries (1977) propone una comprensión del emprendedor a partir de la composición de su familia de origen, mientras que Kilby (1971) propone una comprensión del emprendedor a través de sus actividades, desde una perspectiva sociológica.

Por otro lado Shapero y Sokol, dejan de lado al emprendedor, como un camino para salir del difícil campo de su definición, para tomar como unidad de análisis el evento emprendedor. Por el contrario y con un concepto más cercano a la búsqueda de impacto en la comunidad, Wallace (1999) define la empresa social como aquella cuya finalidad social empresarial es facilitar el desarrollo de la comunidad; sin fines de lucro en busca del desarrollo comunitario. Sullivan y Colaboradores (2003) ven el emprendimiento social como aquel que se encarga de construir organización sin fines de lucro, impulsado por la misión social, permitiendo un juicio equilibrado, explorando y reconociendo las oportunidades para crear valor social mejor para los clientes y como entes innovadores, proactivos y con la asunción de riesgos para la búsqueda de oportunidades. La creación de valor social parece ser el objetivo primordial, mientras que la creación de valor económico es a menudo un producto que permite a la organización lograr la sostenibilidad. De hecho, para la empresa social, la creación de valor económico, es a menudo limitada, principalmente debido al tipo de "clientes" que la empresa social atiende (Seelosa, 2005).

Sin embargo y en virtud de su número, los pobres representan un significativo poder adquisitivo latente que debe desencadenarse (Prahalad, 2005). Es allí, en la base de la pirámide, donde la Empresa social encuentra su campo de acción, teniéndola como punto central desde cualquiera de sus stakeholders, inclusive en varios de ellos. En la figura siguiente podemos visualizar las características de los emprendimientos sociales. En términos generales los autores y organizaciones citadas en la presente investigación coinciden en tres características como fundamentales para el desarrollo de empresas sociales, estas características son: Servicio a la comunidad, Orientación a la solución de una problemática, Generador de cambio

Sin embargo a parece una cuarta característica que aunque no sea necesariamente coincidente en los autores si es coincidente en las organizaciones y es el desarrollo de bienes y servicios. Con estas características, un emprendimiento social sería entonces: una empresa orientada al servicio a la comunidad que busca solucionar una problemática territorial y permite generar cambio en el territorio que impacta. Sin embargo no se debe descartar el desarrollo de bienes y servicios que con llevan a la auto sostenibilidad, que le permitirá generar ese impacto por un periodo de tiempo más extenso.

Figura 1: Características de los Emprendimientos Sociales

#### En Cuanto a los Criterios Sociales:

Un poder de decisión que no se basa en la posesión del capital. Dicho criterio hace una referencia general al principio de una voz un voto. Obviamente los poseedores de cuotas de capital tienen su importancia, pero la capacidad de decisión está compartida con los demás partícipes de la empresa. Limitación en el reparto de los beneficios. Las empresas sociales no incluyen sólo organizaciones caracterizadas por una vinculación total de la distribución de los beneficios, sino también otras organizaciones, como las sociedades cooperativas en algunos países, que pueden repartir los beneficios de forma limitada, para evitar una política orientada hacia la optimización de los beneficios.

Como objetivo explícito, un beneficio para la comunidad. Otra característica de la empresa social cabe en la misma perspectiva: la integración que permite promover el sentido de la responsabilidad social en el seno de las comunidades locales o de los barrios. El emprendimiento social en Medellín ha estado liderado por la Promotora social quien define el emprendimiento social, como la empresa social relacionada al resultado de la autogestión comunitaria con el fin de responder a necesidades de índole social de un territorio o comunidad, mediante la implementación de buenas prácticas empresariales, trabajo en red y con un claro propósito del bienestar del ser (Pacheco, 2007).

Sin embargo, esta definición presenta ambigüedad, en cuanto a la claridad que pretende hacer sobre lo que la empresa social debe tener: “un claro propósito del bienestar del ser”. Podría preguntarse ¿a qué se refieren con el bienestar del ser?. Amartya Sen por ejemplo se refiere a cinco fuentes distintas que proveen bienestar: heterogeneidad personal, diversidad relacionada con el medio ambiente, diferencias de clima social, las diferencias entre las perspectivas relacionales y la distribución dentro de la familia. Lo anterior, nos lleva, varias preguntas: ¿a cuál de las fuentes de bienestar se refiere la definición?, ¿la empresa social que pretenda responder a necesidades de índole social de un territorio, tiene la posibilidad de intervenir en aspectos como las diferencias de clima social o la perspectiva relacional, o será que con el trabajo en red se pretende solucionar las diferencias de las perspectivas relacionales?

En este sentido, los emprendimientos sociales son efectivos en la medida que exista un liderazgo como pilar fundamental y una estrategia adecuada que permita distribuir los recursos adecuadamente. La pregunta entonces puede ser: ¿Tienen estos emprendedores las características con las que debe contar un líder y adicional a esto tener una visión global de la organización y la economía para llevar al éxito a la organización? (Red Senk, 2006). El mercado del emprendedor social es la población del mundo con sus diversos retos y necesidades, tomando por estandarte conceptos como los que menciona (Guzmán, 2008): la educación básica, la igualdad de géneros, la reducción de la mortalidad infantil, la lucha contra las enfermedades, la sustentabilidad del ambiente, la mejora en la calidad de vida, entre otros. Otro elemento distintivo es la carencia de afán lucrativo como fin principal de sus esfuerzos.

## METODOLOGIA

La metodología está orientada en buscar la estructura interna y externa del caso de estudio en relación al papel de las organizaciones sociales, a partir de sus vínculos con los diferentes actores del sistema social en la ciudad de Medellín. Yin propone una definición de un Estudio de Caso como una aproximación empírica que investiga un fenómeno contemporáneo a través, o desde, su contexto real; especialmente cuando las fronteras entre fenómeno y contexto, no son claramente evidentes. (Yin, 1994). Como unidad de análisis se tomó, el emprendimiento social de Biores Colombia SAS, por considerarlo innovador, lo que orientó la selección de la estrategia expuesta por Yin (2003), como estudio de caso.

### Recolección de Datos

Para este estudio en específico, busca la exploración y explicación, que contribuya a determinar un marco de referencia del rol de las organizaciones e instituciones de carácter social frente al emprendimiento innovador social en Medellín. Por medio de la evidencia cualitativa, bajo la presunción causal, de su vinculación con el proceso real al ciclo de vida de una nueva empresa social, nos permitió la operacionalización del caso de estudio. Para este propósito se optó por la realización de entrevistas semi-estructuradas a los actores claves fundadores de la iniciativa emprendedora, con el propósito de develar creencias, problemas, experiencias, y proyectos. Y por otro lado, actores institucionales de apoyo o relacionados al emprendimiento regional. El número de entrevistas se determinó, según la evaluación previa de la responsabilidad de los actores y la necesidad de profundizar en las prácticas encontradas. Las entrevistas se comenzaron con preguntas de tipo general y se fueron avanzando hasta llegar a preguntas más específicas, sobre procesos, estrategias, y consecuencias, relacionados según el rol de la persona entrevistada.

### Análisis y Tratamiento de la Información

Para el análisis de la información, se utilizará el software especializado en el tratamiento de información cualitativa QRS NVivo 7. El uso de este tipo de software, nos ayudó a gestionar, precisar y dar sentido a la información recolectada que en principio podría ser no estructurada, para categorizar y clasificar la información.

### Fases de Desarrollo

*Fase 1:* Evaluación de información secundaria entorno al emprendimiento innovador social en Colombia, y específicamente en cada ciudad estudiada. Esta primera fase tuvo el propósito de revisar la información secundaria de la región. Lo anterior, nos permitió seleccionar de manera objetiva el caso de estudio de emprendimiento social y adicionalmente. (Entrevistas exploratorias)

*Fase 2:* La planeación, preparación y ejecución de la estrategia de recolección de la información. Como una primera instancia la preparación la primera entrevista se hizo bajo el criterio de obtener una visión panorámica del caso estudiado, y con el fin de obtener información secundaria, que nos permitió orientar las entrevistas de otros actores claves del caso.

*Fase 3:* El análisis de la información, comprendió la fase tres. Esta fase se comenzó paralelamente a la fase dos, pues los resultados que se fueron obteniendo, proveieron elementos adicionales que fueron utilizados, en la preparación de las entrevistas que se fueron ejecutando.

## RESULTADOS

### Caso Biored Colombia Sas

Actualmente Colombia gira entorno a procesos productivos insostenibles debido a la facilidad de armar empresas tradicionales en casi todos los sectores económicos del país; es así, que el aprovechamiento y/o explotación de los recursos naturales propios de cada región se han venido perdiendo causando decadencia ecológica, económica y social. Adicionalmente, el surgimiento de una clase “industrial destructiva” o “depredadora”, como los caracteriza Baumol (1996,1993,1990), quienes basan su coexistencia con el tráfico de estupefacientes, sumergidos en una cultura de ilegitimidad, como la corrupción y actividades ilegales. Lo anterior, unido a la descomposición social caracterizado por el desplazamiento forzado a consecuencia de la violencia paramilitar, guerrillera y delincuencia organizada.

Por otro lado, las empresas que actualmente se benefician de los componentes naturales y de la mano de obra de los oriundos propios de las regiones, sugieren intereses particulares, en el mejor de los casos, que no contribuyen al desarrollo sostenible de las comunidades. De acuerdo a Escorsa (2003), el hablar de empresas tradicionales se refiere a organizaciones que no adoptan estrategias de innovación y continúan en un régimen fuera de los componentes propios de desarrollo; pese a que es clara la relación que existe entre el déficit de los recursos naturales con la sobre población de las sociedades, y que dicha relación se extiende a nivel nacional sugiriendo una notable conciencia acerca de la importancia de cuidar para las generaciones futuras. Una de las principales problemáticas es la escasez del recurso hídrico que afecta considerablemente la seguridad alimentaria, el desarrollo económico y peor aún altera la arquitectura de ecosistemas productivos. Por otra parte, los suelos considerados como base del sustento alimentario de la población mundial se encuentra en desequilibrio nutricional a razón del efecto antrópico que se ha ejercido sobre estos así como la sobreexplotación agrícola y la falta de conocimiento frente al uso de agroquímicos entre otros, dando resultados poco favorables a quienes dependen de ellos (FAO, 2004).

Dados los anteriores antecedentes y en vista de la poca importancia concedida por las empresas tradicionales a estas falencias reales del territorio nacional, Biored Colombia SAS surge como una empresa que no solo trabaja de forma sostenible en pro de las comunidades, sino que contribuye al cuidado de los ecosistemas y recursos naturales creando un nuevo modelo de desarrollo económico incluyente a partir de la innovación social empresarial.

Biored Colombia SAS, es una empresa que proporciona una solución a la reconstrucción del tejido social en el bajo Cauca antioqueño que se ha creado con el ánimo de generar soluciones ambientalmente viables orientadas a un camino sostenible, siendo una empresa promotora del desarrollo Agrícola-Rural como fuente de recursos que promoverá la seguridad alimentaria y el progreso económico y social de las comunidades asociadas. La empresa nace con la iniciativa de movilizar inversión en diversos campos como la investigación, infraestructura, generación y divulgación de tecnologías, guiadas a la rehabilitación de población desplazada. De esta manera, Biored se focaliza en el reasentamiento de comunidades, la conservación de los recursos naturales y al establecimiento de políticas productivas que busquen aumentar

el bienestar social y mejorar las condiciones de vida en regiones azotadas por la violencia. El Sistema de Producción Bioed (SPB) se basa en sistemas de recirculación acuícola cerrados, estos sistemas se componen de tres en donde se realiza una simbiosis entre peces, plantas y bacterias; esta relación aprovecha los desechos generados por los peces utilizándolos como fertilizante natural para las plantas y las bacterias actúan controlando los altos niveles de amonio que se encuentran cuando el volumen de desechos aumenta a través de un proceso de filtración biológica llevado a cabo por estas; de esta forma se obtiene una política de cero desperdicios, auto sostenibilidad y sustentabilidad en el tiempo; Cada SPB consta de dos subsistemas piscícolas y seis subsistemas hidropónicos.

## CONCLUSIONES

Dentro de las políticas de gobierno de países como Colombia se ha reducido la financiación y coordinación de proyectos en pro del bienestar social, pero esta desatención ha generado una corriente de emprendedores cuyo objetivo es contribuir con la mejora de las condiciones de vida de población vulnerable. Las empresas de emprendimiento social presentan diferentes características claves, sin embargo, se identificó el servicio a la comunidad, como el principal factor para el emprendimiento social, que determina las diferentes características claves como la búsqueda de una solución a una problemática social, generando valor a través de la sostenibilidad y el trabajo en red.

Por otro lado, la valoración de los niveles de riesgo de una experiencia de emprendimiento social, radica en la persistencia y creencia en el valor propio del emprendimiento, de esta manera lograr los procesos de adaptación desde las ideas o soluciones a las condiciones reales del ambiente de aplicación, donde el impacto visible solo se ve reflejado los resultados en el largo plazo. Si bien son muchos los individuos u organizaciones que se han arriesgado a realizar proyectos de emprendimiento social, no todos han alcanzado el éxito a largo plazo, por esto se hace necesario centrar esfuerzos para analizar aquellos factores que potencialmente pueden influir sobre las actividades de este tipo.

# ANÁLISIS RETROSPECTIVO DEL PROYECTO EMPRESARIAL “TRANSFORMANDO CAMPECHE”

José Alonzo Sahui Maldonado, Universidad Autónoma de Campeche

Luis Alfredo Argüelles Ma, Universidad Autónoma de Campeche

Román Alberto Quijano García, Universidad Autónoma de Campeche

## RESUMEN

*En el presente trabajo analizamos de manera retrospectiva y bajo la estructura de un estudio de caso, el proyecto empresarial “Transformando Campeche”, iniciado en 1996, con el propósito de encontrar las causas por las cuales muchos proyectos económicos de México simplemente no funcionan. Los resultados muestran algunos vicios de origen, así como fallas graves en su implementación. Se concluye que, en algunas ocasiones, los servicios de consultoría empresarial contratados para llevar a cabo estos proyectos no toman en cuenta las particularidades propias de cada región.*

**PALABRAS CLAVE:** Proyecto Empresarial, Servicios de Consultoría

## RETROSPECTIVE ANALYSIS OF THE BUSINESS PROJECT “TRANSFORMANDO CAMPECHE”

### ABSTRACT

*In this paper we analyzed retrospectively and under the structure of a case study, the business project "Transformando Campeche", started in 1996, with the purpose to find the causes why many economic projects in our country simply do not work. The results show some vices of origin, as well as serious flaws in its implementation. We conclude that, in some instances, business consulting services contracted to carry out these projects do not take into account the particularities of each region.*

**JEL:** M21

**KEYWORDS:** Business Project, Business Consulting

## INTRODUCCIÓN

México es un país de ocurrencias e improvisaciones. El afán de protagonismo de la clase gobernante ha generado una práctica –costosa y desgastante– de querer reinventar y reorientar las políticas públicas que rigen las estructuras del país cada seis años. Cada inicio de sexenio, el gobernante en turno, independientemente de la ideología política que tenga, se embarca en la elaboración de los más “novedosos” planes, programas y proyectos que durante un breve lapso de tiempo serán el eje rector de la maquinaria burocrática sobre la que descansará la “buena” marcha del país. Desafortunadamente, los resultados hasta el día de hoy dejan mucho que desear. Proyectos van y proyectos vienen, y en este afán gatopardiano de nuestros gobernantes vemos tristemente como se desperdicia tiempo y dinero sin que exista en realidad un proyecto claro de nación.

En el terreno económico, observamos cómo países que hace 30 años estaban más atrasados que nosotros, se convierten en las nuevas potencias industriales y comerciales. Su ejemplo debe ser objeto de un cuidadoso análisis. ¿Qué hicieron ellos y qué no hicimos nosotros? ¿Qué están haciendo ellos y qué estamos

haciendo nosotros? Derivado de lo anterior, el presente trabajo surge como resultado del deseo de encontrar –y tratar de explicarnos– las causas por las cuales muchos proyectos económicos de nuestro país simplemente no funcionan. Para tal efecto, decidimos tomar el proyecto *Transformando Campeche* como estudio de caso. Las razones que nos dispusieron a utilizar este proyecto en particular, fueron las siguientes:

*Transformando Campeche* surgió como una iniciativa conjunta de líderes empresariales y gubernamentales del estado de Campeche a mediados de 1996, motivo por el cual algunas de las acciones resultantes de este proyecto –sean éstas positivas o negativas– pueden ya ser analizadas de forma crítica, y El hecho de que el proyecto *Transformando Campeche* fuera asistido técnicamente por un equipo de consultores internacionales desde su inicio, y utilizando una metodología de comprobada eficacia en otras regiones –desarrollo de *clusters*–, permitía garantizar una mejor probabilidad de éxito en su implementación.

En este sentido, el análisis que a continuación se presenta pretende señalar algunos vicios de origen, así como fallas graves en la implementación de este proyecto no con miras a denostarlo, sino tratando de encontrar elementos que permitan explicar el por qué no ha funcionado como se esperaba, así como también desarrollar un espacio de reflexión con el propósito de buscar propuestas de solución que contribuyan al desarrollo económico y social del estado de Campeche.

## REVISIÓN DE LITERATURA

### ¿En Qué Consistió el Proyecto Transformando Campeche?

En abril de 1996 surgió el proyecto *Transformando Campeche* como una iniciativa financiada por los sectores público y privado del estado. Este proyecto se llevó a cabo con el apoyo técnico de un equipo de consultores encabezados por el *Economic Competitiveness Group* (ECG)-DRI/McGraw Hill y Alderete y Socios, Consultoría industrial, S.C. Cabe destacar que el ECG-DRI/McGraw Hill es una empresa de consultoría con sede en San Francisco, California que, mediante una metodología basada en el desarrollo de clusters, se especializa en elaborar y aplicar estrategias de desarrollo económico regional; mismas que ha desarrollado en varios estados de la Unión Americana, así como en países tales como: Nicaragua, Honduras, Guyana, Croacia, Georgia, Malasia, India, México y Marruecos, entre otros.

El motivo de esta iniciativa, según consta en el Resumen Ejecutivo del Proyecto (ECG y Alderete y Asociados, 1997) obedeció a que Campeche se enfrentaba a una nueva realidad económica. “En una época de mercados cambiantes, mayor competencia extranjera y rápidos cambios tecnológicos, las economías estatales a través del país se están volviendo vulnerables a nuevas fuerzas, algunas veces inesperadas, para las cuales las políticas tradicionales de desarrollo económico no son operativas. Adicionalmente, la economía de Campeche se encuentra en una encrucijada. El estado ha prosperado razonablemente durante los últimos 40 años, basándose en su abundancia de recursos naturales, especialmente camarón, productos agrícolas y desde los años setenta, el petróleo. Hoy sin embargo, la economía de Campeche está en riesgo, no ha generado el suficiente ingreso ni los nuevos empleos requeridos para soportar el crecimiento en la población. Desde mediados de los ochenta la economía se ha debilitado, el empleo no ha estado creciendo y el ingreso per cápita ha declinado” (p. 6). Para enfrentarse a la situación anterior, el equipo consultor estableció que los retos para Campeche eran (p. 7):

*Necesidad de tomar una actitud más proactiva:* La generación de empleos no es suficiente para las necesidades actuales, estimándose un requerimiento global del orden de 9,000 empleos anuales para los próximos años.

*Diversificación:* Campeche debe evolucionar de una economía básica de recursos naturales a una economía basada en nuevas ventajas competitivas, especialmente con el mejor aprovechamiento de su potencial de recurso humano.

*Aprovechar oportunidades:* Todos los sectores económicos presentan una serie importante de oportunidades de inversión que pueden impulsar en forma dramática la generación de empleos, la transferencia de tecnología y la generación de riqueza.

*Movimiento hacia la industrialización:* Los recursos naturales deben incorporar mayor valor agregado a través de la industrialización utilizando plataformas tales como disponibilidad de mano de obra calificada y no calificada, localización geográfica, disponibilidad de recursos naturales para construir un sector industrial más grande y competitivo.

*Reorientación y desarrollo de la infraestructura económica existente:* Un análisis comparativo de la infraestructura económica de Campeche (recursos humanos, infraestructura física, acceso a la tecnología, clima de negocios, acceso a recursos financieros y calidad de vida) lo sitúa en uno de los niveles más bajos en el país.

Con esta perspectiva en mente, la comunidad empresarial campechana en vinculación con el Gobierno del Estado decidió tomar acciones concretas con el objetivo de “elevar la calidad de vida de la población a través de un mayor desarrollo económico y social” (p. 8). De aquí surgió el proyecto *Transformando Campeche*, el cual se basó en un modelo económico conocido como desarrollo de *clusters*. Cabe señalar que un *cluster* o agrupamiento industrial es “un grupo de empresas de la misma actividad que tienen una estrategia común, que se vinculan con los sectores soporte y mantienen entre sí lazos de proveeduría y prestación de servicios, los cuales están organizados en redes verticales y horizontales con el propósito de elevar sus niveles de productividad, competitividad y rentabilidad” (Secretaría de Economía, 2010). En la siguiente gráfica se muestra la manera en que tradicionalmente opera:

Figura 1: Estructura de los Clusters

Esta figura opera bajo un esquema piramidal, en donde la base de la pirámide, incluye una base económica que genera los recursos necesarios para alimentar la red de proveedores, mismos que a su vez, son los que surten los insumos necesarios para que las empresas líderes incursionen en los mercados con productos de calidad y a precios competitivos. Fuente: Elaboración propia.

## METODOLOGÍA

Es importante destacar que aunque el modelo de desarrollo de *clusters* fue popularizado por Michael Porter en su libro *La ventaja competitiva de las naciones* (1990) cada empresa de consultoría tiene o desarrolla una metodología propia para implementar este modelo. Lo anterior representa, a nuestro juicio, uno de los principales problemas con las que operan las empresas de consultoría empresarial, las cuales muchas veces adaptan y desarrollan modelos teóricos que –según ellos– pueden cambiar a corto plazo el desarrollo de un país, una región o una empresa. En el caso de la metodología empleada en el proyecto *Transformando Campeche*, este se compuso de tres fases:

Evaluación del desafío económico de Campeche e identificación de los *clusters*.  
 Evaluación de la competitividad de los *clusters*.  
 Desarrollo de la estrategia de *cluster* y el plan estratégico de acción.

Los *clusters* identificados y propuestos por el equipo consultor fueron los siguientes:

Tabla 1: Identificación de los Clusters y Sus Estrategias

Cluster	Estrategias Fundamentales
Cluster Agropecuario y Forestal	Desarrollar una actividad tecnificada con una clara orientación comercial, explotando como especialidad los productos de clima tropical. Dentro de las estrategias y acciones específicas se contempla el integrar la cadena productiva de frutas y hortalizas, desarrollo de plantaciones forestales, mayor valor agregado al procesamiento de carne, consolidar y expandir un programa de atracción de inversiones industriales en las áreas de agroindustria, industria alimentaria y biotecnológica, así como facilitar el acceso a la tecnología.
Cluster de Energía	Buscar la integración del sector petrolero con la economía estatal. Como estrategias específicas se considera el implementar un programa de atracción y ubicación regional de proveedores estratégicos para la industria petrolera; la vinculación y alineación de los tres órdenes de gobierno, la iniciativa privada y la industria petrolera; el implementar un programa para la formación de nuevos negocios industriales y de servicios basados en capital local o coinversiones, y particularmente la formación y capacitación de recursos humanos de acuerdo a las necesidades de este <i>cluster</i> .
Cluster de Industria	Desarrollar la industria ligera y la agroindustria. Un elemento fundamental será el Programa de Atracción de Inversiones "Invirtiendo en Campeche". Asimismo, se pretende desarrollar la industrialización de productos agrícolas y la industria de ensambles para exportación. Una estrategia de gran impacto en el largo plazo será el establecimiento del Centro de Investigación de Recursos Bióticos del Sureste. Adicionalmente se contempla el desarrollar proveedores para todos los <i>clusters</i> y la vinculación de los sectores educativo y productivo.
Cluster de Pesca	Para recuperar los niveles de operación históricos, la estrategia fundamental de este <i>cluster</i> será el impulso decidido de la acuicultura y el establecimiento de una marca de origen para el camarón. Adicionalmente se contempla el desarrollo formal de nuevas pesquerías, la mejora de los canales de comercialización, la incorporación de mayor valor agregado, el fortalecimiento de la capacitación técnica y el mejorar e implementar los reglamentos para la racionalización y conservación de recursos pesqueros.
Cluster de Turismo	Como estrategia fundamental el <i>cluster</i> de turismo enfocará su oferta en el área del turismo ecoarqueológico ofreciendo un producto único y distintivo a nivel mundial. Para esto desarrollará servicios turísticos integrados a través de alianzas entre diversos operadores y organismos regionales, nacionales e internacionales y la colaboración entre el gobierno y el sector privado turístico a través del Consejo Estatal de Turismo y el Plan Maestro de Desarrollo Turístico.

En esta tabla se identifican los cinco *clusters* definidos por el equipo consultor. Fuente: Elaboración propia con base en ECG y Alderete y Asociados, 1997.

## RESULTADOS

En lo que respecta a los resultados presentados en el presente análisis únicamente se consideraron los cinco elementos que integran la infraestructura económica del *cluster*, es decir, los que aparecen en la base de la pirámide (ver Figura 1). La razón de hacerlo de este modo, obedece a que si estos cinco elementos no se cumplen, es poco probable que exista una red de proveeduría así como la presencia de empresas líderes que apunten la economía del estado.

### Recursos Humanos

En la actualidad, y debido a la cada vez más recurrente escasez de recursos naturales, el factor humano se está convirtiendo en la clave del éxito. En este contexto, la educación y la capacitación se convierten en las herramientas fundamentales para lograr este propósito, siempre y cuando éstas sean competitivas. El énfasis que le damos aquí al término *competitividad* obedece a que en una época de globalización y de rápidos cambios tecnológicos, solamente las regiones que ofrezcan *ventajas competitivas* podrán lograr un pleno desarrollo económico y social.

La diferencia, en este sentido, entre las ventajas competitivas y las ventajas comparativas consiste en que “las primeras son aquellas derivadas de la posición favorable del país por su infraestructura física y humana, lo mismo que por su nivel de eficiencia, absorción de tecnología y “management” [todos estos, elementos que brinda la educación y la capacitación]. El segundo término, acuñado desde el siglo pasado por los economistas clásicos, se refiere, fundamentalmente, a la existencia de recursos naturales o a las ventajas asociadas a la producción de algún producto en particular. La diferencia podría resumirse diciendo que las primeras se crean, mientras que las segundas se tienen o no se tienen” (Villamizar, R. y Mondragón, J., 1995: XX-XXI). En el caso de *Transformando Campeche*, era imprescindible la vinculación entre las empresas y las universidades. Hasta la fecha, esta vinculación es prácticamente inexistente. Ejemplo de lo anterior es que una de las iniciativas insignia del proyecto consistía en el establecimiento de cinco centros de investigación y apoyo tecnológico, de los cuales todavía no se inaugura ninguno. Cabe señalar que los centros contemplados son: “Centro de Investigación de Recursos Bióticos del Sureste, Centro de Investigación de Maricultura del Golfo de México, Centro de Investigación sobre Alimentación y Desarrollo, Centro de Investigación en Energía e Instituto Superior de Ganadería Tropical” (ECG y Alderete y Asociados, 1997: 18). En lo que respecta a la capacitación, las empresas de la entidad todavía requieren de personal especializado para la realización de ciertas actividades, lo cual puede constatarse con el uso de técnicos de otros estados del país por parte de PEMEX, así como de otras empresas locales que requieren un mayor desarrollo tecnológico.

### Tecnología

En términos generales, se puede señalar que “la preeminencia industrial y, juntamente con ella el crecimiento económico, dependen en grado considerable del carácter de las actividades científicas de una nación” (Morse, D. y Warner, A., 1967: 4). De igual manera, es importante destacar que los términos de ciencia y tecnología van de la mano -el primero como generación de conocimiento y el segundo como aplicación de conocimiento-. Asimismo, es necesario también señalar que para lograr el desarrollo científico y tecnológico de una región se requieren políticas públicas que favorezcan su aparición. Claro que hay otros caminos; por ejemplo, los países del Sureste Asiático han demostrado cómo la transferencia de tecnología ha coadyuvado al desarrollo de esta región. Sin embargo, hay que sentar bases y los resultados no son –no pueden ser– a corto plazo.

Esto se debe a que para que un proceso de transferencia de tecnología se realice con éxito no basta con transportar técnicos y maquinaria de un lugar a otro. “El proceso requiere, además, la selección, transmisión, adaptación, modificación y difusión de conocimientos experimentados con éxito en otro lugar” (Villamizar, R. y Mondragón, J., 1995: 6). Bajo este esquema, la experiencia observada en otros países señala que, en la mayoría de las veces, el impulso inicial al desarrollo tecnológico se debe dar por el gobierno a través de sus instituciones educativas para que, posteriormente y de manera gradual, las empresas vayan asumiendo esta tarea. La aclaración anterior es necesaria debido a que en el caso de Campeche no se ha visto ningún esfuerzo ni del gobierno ni de la iniciativa privada por promover el desarrollo tecnológico. Como se mencionó en el apartado anterior, la necesaria vinculación universidad-empresa no existe. Por otro lado, los centros de investigación existentes en nuestras dos principales instituciones de educación superior –la UAC y la UNACAR respectivamente- realizan investigaciones que tienen muy poco impacto en la entidad, lo cual es claramente observable en el hecho de que Campeche era hasta hace poco tiempo el único estado que no contaba con ningún programa académico registrado en el PNPC del CONACYT –todavía el año pasado la UAC registró sus primeros dos programas–, así como también que es una de las entidades con el menor número de investigadores pertenecientes al Sistema Nacional de Investigadores, no alcanzando siquiera el 1% de los investigadores registrados ante este organismo.

### Recursos Financieros

Como se ha mencionado anteriormente, uno de los principales problemas de nuestro país es la falta de un proyecto de nación a largo plazo. A falta de éste, la administración pública ha centrado sus esfuerzos en estrategias a corto plazo que solamente se han convertido en paliativos, pero que de ningún modo han atacado los problemas estructurales y de fondo. En lo que respecta al ámbito económico y financiero, la informalidad y la mala distribución de la riqueza –por citar algunos ejemplos– son la prueba de que en este sector hace falta implementar mejores políticas públicas. Con esto queremos hacer notar que nosotros consideramos que los gobiernos pueden y deben desempeñar un papel fundamental a través de una política económica que atraiga inversiones y facilite la apertura de nuevos negocios, buscando en todo momento elevar el nivel de vida de los habitantes. Para lograr esto, se requieren dos cosas: ser productivo y ser competitivo. Cabe señalar que la productividad -aunque es una condición necesaria- no es suficiente para lograr un alto nivel de competitividad. Para ser competitivo, “los países deben tener empresas competitivas, y éstas, a su vez, deben desarrollar y mantener a través del tiempo ciertas ventajas, bien sea mediante mayor eficiencia en la producción (costos bajos) o mediante la elaboración de productos y servicios de más alta calidad” (Villamizar, R. y Mondragón, J., 1995: 17).

En Campeche, la estrategia básica que se siguió fue un programa de promoción a la instalación de maquiladoras, para lo cual la labor de *Transformando Campeche* se desarrolló de la siguiente manera: “En conjunción con el Gobierno del Estado a través de la SEFICO hemos desarrollado un plan de Atracción de Inversiones, donde acordamos que las once primeras maquiladoras que se instalen en el mercado se les va a proporcionar el terreno y la nave en comodato, sin erogar costo alguno por tres años a partir de que firmen el contrato en donde se especifica que se comprometen a liquidar dentro del tiempo establecido. De igual forma se les dará algunas facilidades como por ejemplo no se les cobrará el 2% sobre nómina y tendrán descuentos en el pago de otros impuestos locales” (DECAM, 1998: 7).

Los resultados de esta estrategia fueron que en 1998 se instaló la primera maquiladora en el municipio de Calkiní; para el 2000 eran catorce las maquiladoras que integraban la Asociación de Maquiladoras de Exportación de Campeche, A.C [AMEC] (DECAM, 2000); y en la actualidad, son solamente 6 las afiliadas a la AMEC. Aquí es importante destacar como a pesar de los indudables beneficios fiscales otorgados a estas empresas, hubo situaciones muy lamentables como la que describe Castro Soto (2002) “cuando el 7 de enero de 2002 se presentaron a laborar, luego del periodo vacacional, los 466 trabajadores y trabajadoras de la planta Blazer que inauguró el presidente Ernesto Zedillo. La sorpresa fue que ya no tenían trabajo. La maquiladora textil estadounidense había sido desmantelada sin aviso durante las vacaciones dejando a todos los trabajadores sin liquidaciones, con un convenio incumplido con el gobierno del Estado y una enorme deuda ante el Instituto Mexicano de Seguridad Social (IMSS) y otras dependencias de gobierno. La deuda llegó a más de 3 millones de pesos por concepto de prestaciones, además de las indemnizaciones. El proyecto de instalación de las maquiladoras en Campeche ha tenido un costo de 610 millones 226 mil pesos que se paga con los impuestos del pueblo”. Un caso similar, aunque más reciente, lo representa el Proyecto Playa Esmeralda que se desarrolla desde el 2005 en el municipio de Champotón, mismo que contempla en una superficie de más de 300 hectáreas un campo de golf de 18 hoyos, una marina y club de yates para 150 posiciones, un hotel de cinco estrellas, restaurantes, zona comercial, helipuerto y viviendas de lujo (DECAM, 2006). Desafortunadamente este proyecto ha estado envuelto en muchas controversias y, hasta el día de hoy, no tiene fecha de conclusión.

### Infraestructura Física

“En lo que concierne al capital físico, la región requiere de una estrategia que considere a la infraestructura de transporte como uno de los pilares del crecimiento económico de la región, y de esta forma revertir el problema endógeno de que la infraestructura inadecuada es consecuencia de la baja competitividad y el

bajo desempeño competitivo es resultado de la falta de infraestructura. Una buena parte de la limitada adaptación a la globalización de esta región se explica en su déficit de infraestructura, que evita el cabal aprovechamiento de las ventajas comparativas de la región” (Rodríguez Mejía, 2008: 171). En el caso de Campeche, el comentario anterior es muy pertinente en virtud de que uno de los grandes obstáculos para el desarrollo económico de la entidad ha sido la mala infraestructura física con que cuenta el estado. La cual se traduce en la falta de programas de desarrollo de parques industriales, infraestructura de riego e infraestructura carretera, entre otros. De manera más específica, se puede citar –en materia de comunicaciones y transportes– el reducido número de vuelos de sus aeropuertos, lo cual los hace poco competitivos con respecto a los aeropuertos de los otros estados de la región; así como también el caso del puerto de Seybaplaya, el cual supuestamente fue creado para apoyar las importaciones de los insumos requeridos por las maquiladoras instaladas en la localidad y que no ha podido ser utilizado para este fin debido a su bajo calado. Es importante destacar que durante mucho tiempo el puerto de Campeche fue, después del de Veracruz, el puerto más importante del golfo de México. Lamentablemente y, a pesar de la gran tradición marinera de esta entidad, la actividad portuaria en comparación con los estados vecinos – Tabasco, Yucatán y Quintana Roo– ha ido en retroceso. Mientras tanto, y en comparación, el puerto de Progreso en el estado de Yucatán se ha convertido en el punto de entrada y salida de prácticamente todas las mercancías elaboradas en la península de Yucatán, así como también una importante vía de acceso de turistas que visitan la región, contribuyendo de esta manera al desarrollo económico de esa entidad.

#### Clima de Negocios

Este concepto se refiere básicamente al conjunto de condiciones existentes o creadas en una región que facilitan el desarrollo de la actividad empresarial. En este sentido, el Banco Mundial y la Corporación Financiera Internacional a través de los documentos denominados *Doing Business* mide el clima de negocios de los países a partir de las siguientes diez áreas:

- Apertura de negocios
- Permisos de construcción
- Empleo de trabajadores
- Registro de propiedades
- Acceso al crédito
- Protección al inversionista
- Pago de impuestos
- Comercio exterior
- Cumplimiento de contratos
- Cierre de empresas

A nivel nacional, y según los parámetros de este mismo indicador, Campeche ocupa el séptimo lugar como se observa en la siguiente tabla:

Independientemente de las observaciones que se le puedan hacer a la tabla anterior, uno de los aspectos no considerados por el *Doing Business* y que han repercutido en el desarrollo económico de Campeche es la variable política. Por este término, queremos referirnos a la influencia que tiene la política o los actores políticos en el ámbito empresarial. Indudablemente, este tipo de acciones es muy difícil que puedan ser documentadas de manera formal; sin embargo, es un secreto a voces el hecho de que en México –y Campeche no es la excepción– la cercanía o la lejanía con alguna figura prominente de la política puede representar el éxito o el fracaso de una carrera en el mundo de los negocios. Como señala Roderic A. Camp: “Postulo que, dado que el sector privado es el hijastro del Estado, jamás se ha roto su relación inicial ni la dependencia que engendró, por lo menos en el aspecto psicológico. Esta característica es un ingrediente

esencial de la mezcla de lazos privados y públicos que existe en México, y condiciona los modelos de comportamiento de los dos sectores” (1995: 25).

Tabla 2: Doing Business en México: ¿Dónde es Más Fácil Hacer Negocios?

Los Más Fáciles	Los Intermedios	Los Más Difíciles
1. Aguascalientes (Aguascalientes)	12. Nuevo León (Monterrey)	23. Tlaxcala (Tlaxcala)
2. Chiapas (Tuxtla Gutiérrez)	13. Sonora (Hermosillo)	24. Veracruz (Coatzacoalcos)
3. Zacatecas (Zacatecas)	14. Michoacán (Morelia)	25. Guerrero (Acapulco)
4. San Luis Potosí (San Luis Potosí)	15. Nayarit (Tepic)	26. Yucatán (Mérida)
5. Sinaloa (Culiacán)	16. Hidalgo (Pachuca de Soto)	27. Baja California (Tijuana)
6. Colima (Colima)	17. Querétaro (Querétaro)	28. Estado de México (Tlalnepantla de Baz)
7. Campeche (Campeche)	18. Durango (Durango)	29. Jalisco (Guadalajara)
8. Tabasco (Centro/Villahermosa)	19. Puebla (Puebla)	30. Morelos (Cuernavaca)
9. Guanajuato (Celaya)	20. Oaxaca (Salina Cruz)	31. Baja California Sur (La Paz)
10. Coahuila (Torreón)	21. Tamaulipas (Matamoros)	32. Distrito Federal
11. Chihuahua (Cd. Juárez)	22. Quintana Roo (Benito Juárez/Cancún)	

Esta tabla presenta el lugar que ocupan los estados del país en lo que respecta a la facilidad para hacer negocios en ellos. Fuente: Doing Business México 2009.

## CONCLUSIONES

El presente trabajo no tiene como propósito denostar al proyecto *Transformando Campeche*. Su finalidad fue señalar las acciones que han salido mal para tomar medidas correctivas o reorientar las acciones que estén mal encaminadas. Por otro lado, sucede -con bastante frecuencia en México-, la aparición de personas en el ámbito de la política que prometen cambiar como por arte de magia la situación económica y social de un país o de una región. No es que las cosas no puedan cambiar, es que las cosas no cambian por decreto, ni de la noche a la mañana. En el ámbito empresarial, también se da -desafortunadamente- la presencia de consultores y asesores de negocios que, amparados en algún modelo de desarrollo económico tomado de otro país prometen guiar por la senda del éxito a las empresas que los contratan. No es que los modelos sean malos, es que las realidades son diferentes. Y lo que en realidad ha faltado es que los consultores conozcan realmente las regiones donde pretenden implementar dichos modelos.

El problema, en este sentido, es la falta de regulación con respecto a la prestación de servicios de consultoría empresarial. Es decir, en la actualidad prácticamente cualquiera puede -a veces con tomar algún curso sobre benchmarking, agrupamientos industriales o gestión de la calidad- vender sus servicios de consultoría y cobrar sus honorarios sin que exista un sentido de corresponsabilidad por los resultados obtenidos. En este sentido, nuestra propuesta a manera de conclusión, es proponer una mayor regulación al respecto. Mientras esto no se haga, no nos debe asombrar que sigamos escuchando aquella vieja definición acerca de que un consultor es simplemente “una persona que te pide prestado tu reloj, y te cobra por darte la hora”.

### RESUMEN

*Desde que se constituye una empresa familiar, generalmente los puestos gerenciales son asignados a los miembros del núcleo, de acuerdo al requisito de la relación filial basado sobre los principios de fidelidad y confianza como elementos de su cultura familiar; así se conforman las estructuras de poder y la forma de adquirir y transmitir la experiencia empresarial, para la construcción de su propia cultura organizacional. La prevalencia de estos criterios determina en su mayoría el perfil de este tipo de organizaciones importantes para la economía de los países; pero que presentan una elevada tasa de mortalidad como resultado de una inadecuada planeación de largo plazo en temas como la sucesión generacional. Este estudio es descriptivo porque se mide información sobre las variables que participan en el problema, con diseño no experimental transversal ya que se recolectaron datos en un solo momento en su contexto natural, mediante entrevistas a los líderes de las organizaciones; el principal objetivo es identificar la incidencia de factores como el poder y la experiencia en la cultura empresarial. Los resultados señalan que las variables bajo estudio responden en gran medida al liderazgo del socio fundador y su particular estilo en la toma de decisiones.*

## GENERATIONAL EXPERIENCE AND TRANSMISSION OF POWER AS ORGANIZATIONAL CULTURE ELEMENTS IN FAMILY BUSINESS CAMPECHE, MEXICO

### ABSTRACT

*Since a family business is constituted, generally the management positions are assigned to the main family members, according to the condition of the filial relationship based on the principles of loyalty and trust as elements of family culture, that is how power structures are formed and how to acquire and transmit the business experience to build their own organizational culture. The prevalence of these criteria largely determines the profile of this kind of important businesses to the economy of the countries, but they have a high mortality rate as a result of inadequate long-term planning issues such as generational succession. This study is descriptive because it measures the information about the variables of the problem, with non-experimental transversal design since it collects data at a single moment in its natural context through interviews with the business leaders; the main objective is to identify the incidence of factors such as power and experience in business culture. The results indicate that the variables under study respond largely to the leadership of founding partner and his particular style in decision making.*

## INTRODUCCION

*Antecedentes:* Las empresas familiares emergen de la iniciativa del socio fundador cuya personalidad y estilo de liderazgo influyen en el crecimiento de la misma y en ocasiones complica su rumbo, establecimiento y permanencia (Chua, Chrisman y Chang 2004). El sector camaronero de altura contribuye a la economía de México (Cámara Mexicana de la Industria Pesquera y Acuícola, 2012), y su permanencia y desarrollo es primordial para el gobierno federal y el de los Estados donde se desarrolla, ya que a través de esta actividad se provee de ingresos a parte de la población económicamente más vulnerable mediante la generación de empleos.

*Planteamiento del problema:* Diversos estudios como los desarrollados por Klein, Astrachan y Smyrnios (2005) y Vallejo (2008) evalúan el estilo de liderazgo del socio fundador y cómo este influye en la forma en que se ejerce el poder mediante la propiedad accionaria, cómo se adquiere la experiencia operativa y la forma en que se reflejan en la cultura empresarial, factores que se consideran determinantes en el tipo de administración implementada en las firmas familiares y que trascienden en temas fundamentales como la selección del sucesor y la transición generacional. Actualmente el sector camaronero de altura atraviesa por problemas financieros que son consecuencia entre otros factores, de la toma de decisiones desarrollada por líderes con experiencia empresarial, pero con un enfoque administrativo diferente a las exigencias actuales de la economía, la globalización y su propio mercado, por lo tanto es necesario evaluar los factores que conforman su cultura empresarial elemento determinante en el diseño de estrategias de largo plazo para el desarrollo y permanencia en el sector.

## Objetivos

Toda organización desarrolla una cultura, como resultado de la combinación de factores como la toma de decisiones, los valores de su líder y los empresariales entre otros, por ello el presente estudio pretende alcanzar los siguientes objetivos:

Identificar la forma en que se transmite la experiencia organizacional en las empresas familiares del sector camaronero de altura de la ciudad de Campeche.

Identificar los medios de control de la propiedad utilizado en las empresas familiares del sector camaronero de altura de la ciudad de Campeche.

Determinar la percepción del socio fundador respecto a la cultura empresarial y la influencia de los demás miembros del núcleo en la misma.

## REVISION DE LA LITERATURA

De acuerdo con Cater y Schwab (2008), las firmas familiares tienen características muy particulares en aspectos como la forma de decidir sobre los objetivos propuestos, el diseño e implementación de estrategias, su cultura (Vallejo, 2008), establecimiento de metas (Hall y Nordqvist 2008), presencia y resolución de conflictos (Lee y Rogoff, 1996) y la actitud de los integrantes de la organización en el desarrollo de la operación (Vilaseca, 2002). Respecto a la forma como compiten en el mercado Gudmundson, Hartman y Tower (1999), desarrollaron un estudio donde evalúan las diferentes estrategias que utilizan y cómo las diseñan, sus hallazgos sugieren que la selección de estrategias se ve influenciada por aspectos como el género del líder de la organización, el grado de profesionalización del cuerpo ejecutivo y el número de generación en el poder. Esparza, García y Duréndez (2010) desarrollaron un estudio descriptivo con fuentes

teóricas y empíricas sobre la cultura en las firmas familiares concluyendo que ésta influye de manera importante en el comportamiento gerencial y en la mejora de su rendimiento y gestión. Vallejo (2008) destaca la importancia de la cultura en las firmas familiares al evaluar factores como la homogeneidad en el tamaño de la firma y de la influencia del ambiente, considera que la cultura es una de las fuerzas más poderosas y estables dentro de las organizaciones y con influencia en la ejecución financiera y en el desarrollo interno. Concluye en su estudio que en las empresas familiares: a) los empleados de las firmas familiares muestran niveles más altos de lealtad, involucramiento e identificación, los cuales se traducen en un compromiso más fuerte hacia la firma, b) hay una mejor atmósfera de trabajo en las firmas familiares y niveles más altos de participación y confianza entre los individuos que se traduce en una mayor armonía organizacional, c) estas firmas reinvierten más sus ganancias orientando su administración a largo plazo y d) el liderazgo ejercido en las firmas familiares es más transformacional, lo que lleva a un mayor grado de cohesión entre los miembros de la organización, a diferencia de las firmas no familiares. Poza (2005) señala que los fundadores de firmas familiares suelen manifestar un desdén natural hacia la arquitectura organizacional, como el establecimiento de sistemas, de prácticas administrativas profesionales y de mecanismos de gobierno.

### Solución de Conflictos en Empresas Familiares

Danes, Zuiker, Kean y Arbuthnot (1999) estudiaron al conjunto de elementos predictores de tensiones en el logro de metas de las empresas familiares señalando que si la familia como núcleo es sana, respecto a sus niveles de estrés, entonces esto facilita alcanzar las metas propuestas independientemente del tipo de administrador que la dirija, es decir, ya sea un miembro de la familia o un profesional del área no familiar. Sorenson (1999), analizó la naturaleza única de los conflictos en este tipo de organizaciones, ya que las firmas familiares están interesadas en los resultados de la empresa y de la familia al mismo tiempo, lo que puede desembocar en conflictos relacionados con el rol que tiene el padre con los hijos, relaciones entre los demás miembros, rivalidad entre hermanos, la sucesión y finalmente en conflictos laborales.

### Liderazgo en las Firms Familiares

Martos (2007), menciona que el mayor compromiso (afectivo, de continuidad y normativo), que se presenta generalmente en las empresas familiares, se deriva de un adecuado liderazgo transformacional y puede ser explicado a través del aprendizaje organizacional lo que incrementa los niveles de identificación, implicación y lealtad hacia la organización. Heredar el liderazgo de una empresa familiar de una generación a otra se ve complicado por los cambios en el patrón de negocios familiar, en la medida que crece la empresa se requiere un mayor grado de conocimiento profesional, y la empresa puede verse presionada a romper el molde paternalista, que le da mayor prioridad a la autoridad familiar y menos atención a la capacidad profesional (Longenecker, Moore y Petty, 2001). Planear para lograr la transición de una generación a otra es un proceso difícil y se considera el compromiso más importante en la administración de empresas familiares y éste se hará presente tarde o temprano por diferentes razones (Sorenson, 2000), su falta de previsión como es sabido puede llevar a la división familiar y como consecuencia a la desaparición de la organización; y es aquí donde se da la contribución del estilo de liderazgo al éxito de la familia y la empresa, como indica Vilaseca (2002).

Tokarczyk, Hansen, Grenn y Down (2007) en el estudio desarrollado sobre la teoría del rol que desempeñan los lazos filiales o fraternos “familiness” dentro de una empresa familiar señalan que este “recurso intangible” tiene una influencia determinante en las relaciones familiares y la eficiencia operacional cuando la organización está orientada hacia el mercado. Por su parte Forcadell, Montero, Ortiz y Sacristán (2001) definen la ‘familiness’ como el conjunto de recursos y capacidades específicos de la empresa familiar que en algún grado permiten la obtención y mantenimiento de sus ventajas competitivas. Con base a lo anterior, existe un cierto acuerdo en que los recursos más relevantes para obtener y mantener la ventaja competitiva

son los intangibles y esto depende de un conjunto de orientaciones o enfoques como pueden ser: 1) enfoque basado en el conocimiento, 2) enfoque de los recursos, 3) orientación al mercado y 4) orientación al cliente.

### Experiencia Generacional y Estructuras de Poder en la Cultura Organizacional

La experiencia influye en la suma de los resultados obtenidos en las operaciones del negocio y va generando cambios provocados por la toma de decisiones, el poder se manifiesta mediante el ejercicio de las acciones y el control que se ejerce en las actividades de administración en las que participa la familia; la influencia del poder es proporcional a la posición que ocupa en la administración el miembro familiar, y por último, la cultura refleja el compromiso que tienen los elementos de la familia con sus valores y el trabajo desarrollado en la organización (Klein, Astrachan y Smyrnios, 2005). Por su parte Serna (2012) evaluó la forma en que sobreviven a la crisis financieras las empresas familiares, encontrando que para el caso de México, muchas sobrevivieron usando recursos tangibles e intangibles como el capital económico, el social y el cultural para poder transitar con la menor afectación a la organización

De la Garza, Medina, Cheín, Jiménez, Ayub y Díaz (2011) sostienen que la influencia del fundador es decisiva en la formación de la cultura de su organización y que a su vez ésta proviene del ambiente familiar; siendo la transmisión de valores y su permanencia en cada generación el factor fundamental para conservar el sentido de orgullo y pertenencia hacia la empresa. Vallejo (2008) estudió si la cultura es verdaderamente diferente entre las firmas familiares y desarrolla un modelo basado en valores para la sobrevivencia de las futuras generaciones. Se basa en un marco de teorías generalmente aceptadas como sistemas neoinstitucionales, liderazgo de transformación y de identidad social, los hallazgos señalan que existen elementos de cultura como los valores que ayudan a su permanencia y continuidad, y que a su vez ésta se ve afectada por la institucionalización de procesos en lo que respecta a su transmisión, la preservación y la resistencia al cambio y agrega que los elementos que la distinguen son: a) la apreciación, que es la necesidad que tienen los miembros de la familia respecto a sus prójimos, b) tiempo, que se identifica como aquel que pasan juntos conviviendo de forma planeada y organizada, c) el compromiso que tienen entre ellos para lograr la felicidad y el bienestar de todos sus miembros, d) la comunicación, la cual se alcanza fomentando el respeto mutuo que caracteriza a las familias fuertes; e) la orientación religiosa, la cual les da un sentido de significado y de fortaleza y les ayuda a vencer los conflictos de forma más rápida y f) la capacidad de resolución de crisis mediante la ayuda mutua y la búsqueda de aspectos positivos que les permita confrontar los problemas.

Sharma y Manikutty (2005) evaluaron la influencia de la cultura en las estrategias que se planean y desarrollan cuando las organizaciones deciden diversificarse para penetrar nuevos mercados (Hofstede, 2001), citado por Sharma y Manikutty (2005) define cultura como “la programación colectiva de la mente que distinguen a los miembros de un grupo o categoría de otro grupo de personas”. Hofstede (2001) identifica cinco dimensiones que se distinguen en la cultura como son: a) la fuerza de la distancia, b) evasión de la incertidumbre, c) masculinidad contra la femineidad, d) orientación de largo plazo contra el corto plazo y e) el individualismo contra el colectivismo; sostiene que estas dimensiones tienen implicaciones para las organizaciones y los procesos de administración y que éstos proveen programas mentales colectivos que legitiman los valores y conductas como aceptables.

Por su parte Corbetta y Salvato (2004) señalan que los elementos de experiencia, poder y cultura tienen presencia desde la junta de directores y que estas características influyen en las decisiones que los mismos toman para dirigir a las firmas familiares. Sostienen que la junta de directores es un cuerpo regulador cuyas funciones van desde la representación de los accionistas hasta funciones de monitoreo de operaciones y que los papeles varían según la cultura de cada país. Hall y Nordqvist (2008) evaluaron la competencia formal y cultural de la administración profesional de las empresas familiares, siendo que solamente la primera está reconocida de forma explícita en la literatura que existe en el tema y no así las implicaciones de la

competencia cultural argumentado que sin ésta, un ejecutivo está propenso a trabajar con menos eficiencia sin importar su formación profesional y el lugar que ocupa como miembro de la familia.

## METODOLOGIA

Investigación de tipo descriptiva porque se pretende medir o recoger información sobre las variables que participan en el problema sujeto a estudio como el ejercicio del poder mediante estructuras jurídicas y la transmisión de la experiencia empresarial. El diseño es no experimental transversal ya que se recolectaron datos en un solo momento en su contexto natural, mediante encuestas a los socios fundadores por un periodo comprendido de marzo a junio de 2013; teniendo como objetivo el describir variables y analizar su incidencia e interrelación. El método utilizado para la recolección de información cuantitativa y cualitativa es a través de trabajo de campo y la técnica empleada es el cuestionario (Hernández, Fernández y Baptista, 2006).

### Sujetos en el Estudio

Se consideró como población las empresas familiares del sector camaronero de altura de la ciudad de Campeche y que aceptaron participar en el estudio. Se eligió como población las empresas de este sector al considerar dos aspectos: a) generan empleo para individuos que en su mayoría no cuentan con niveles de estudio que les permitan acceder a otras actividades, y b) por su contribución a la economía del estado.

Las empresas identificadas con esta especialidad fueron 44, según el directorio de socios del Sistema Producto de Camarón de Alta Mar del Estado de Campeche AC al día 31 de julio de 2012, del universo antes señalado se identificaron y eliminaron 14 de las empresas por estar constituidas bajo el régimen de personas físicas con actividad empresarial, y que no estaban constituidas como sociedades mercantiles (personas morales) lo que redujo la población a 30 empresas. Adicionalmente al momento de realizar las entrevistas a las 30 empresas consideradas en la población, se discriminaron aquellas que no cumplen los requisitos para ser consideradas como empresas familiares y entonces tener plenamente delimitada la población: 1) la tenencia accionaria y 2) la participación de por lo menos dos de los miembros de la familia en su administración y funcionamiento (Longenecker et al, 2001); esta situación no pudo preverse hasta el momento de realizar la entrevista al director de cada empresa y conocer la integración accionaria así como la relación filial y laboral de los socios que la integran. De las 30 empresas familiares identificadas, participaron 24, lo que representa el 80% del universo inicial.

### Instrumento

Se administró el cuestionario diseñado por Klein et al. (2005) quienes lo desarrollaron al estudiar la influencia y repercusión de las variables: cultura, poder y experiencia en firmas familiares alemanas; para ello obtuvieron una muestra al azar evaluando finalmente las respuestas de 1,140 socios fundadores. Con estos elementos los autores construyen una escala cuya validez radica en 1) la facilidad de medidas y comparaciones adecuadas, 2) permite determinar el nivel de la influencia familiar y 3) la aplicación e identificación en la construcción del modelo de variables dependientes e independientes.

### Procedimiento Para Recolección y Análisis de Datos

En una primera fase se aplicaron cuestionarios de forma personal a los propietarios de las empresas con una duración de veinte minutos por cada cuestionario. Para procesar la información se utilizó el programa de análisis estadístico denominado SPSS (Statistic Program for Social Sciences). Para analizar la información cuantitativa obtenida de los cuestionarios administrados a los propietarios de las empresas se realizó un análisis estadístico descriptivo y de frecuencias de las principales variables. Estos instrumentos consideran

puntajes asignados en una escala tipo Likert con valores que oscilan de 1 a 5, siendo 5 el valor que se considera el más alto. Posteriormente con un análisis de varianza (ANOVA) se determinaron las diferencias presentes entre cada una de las variables.

## RESULTADOS

Para conservar la confidencialidad de la información, se asignó una clave a cada empresa formada por un número del 1 al 24. Las 24 empresas que participaron finalmente en el estudio reportaron ser familiares ya que la propiedad de las acciones estaba en manos de los miembros integrantes de las mismas y que no participaban dentro de algún corporativo, es decir no han celebrado alianzas estratégicas. De la información generada por el instrumento en su dimensión “poder”, se obtuvo respecto a los órganos para la toma de decisiones, que siete empresas (28.8%) reportaron tener una junta directiva que colabora en la toma de decisiones, sin embargo, se observa que todos sus integrantes son familiares, aun cuando tienen directivos no familiares; las diecisiete restantes señalan tener únicamente el consejo de administración como órgano de gobierno. La dimensión de “experiencia generacional” señala que de todas las empresas participantes, sólo una reporta que la dueña de la compañía es la segunda generación, y todas las demás son propiedad de la primera y que son ellas mismas quienes administran la empresa, aunque el 33% informa que ya están participando dentro de la operación ambas generaciones.

El análisis de los participantes familiares activos en la administración de las empresas, indica que existen dos firmas en las que entre 1 y 3 familiares no participan activamente, y otras 2 cuentan con dos integrantes familiares no interesados aún en la dinámica empresarial. El cuestionario administrado a 24 propietarios de las empresas familiares del sector camaronero de altura igualmente evalúa la dimensión cultura determinándose tanto la media como su desviación estándar, con el objetivo de analizar los reactivos más cercanos y lejanos de los valores asignados así como el nivel de dispersión de las respuestas (Tabla 1).

Tabla 1: Estadística Descriptiva Relativa a la Dimensión Cultura (Escala 1-5)

Reactivo	Valor mínimo	Valor máximo	Media	Desviación estándar
1. Su familia tiene influencia en su negocio.	1	5	4.54	.806
2. Los miembros de su familia comparten valores similares.	2	5	4.57	.543
3. Su familia y su negocio comparten valores similares	3	5	4.61	.470
4. Los miembros de la familia apoyan al negocio familiar dialogando con amigos, empleados, y otros miembros de la familia.	2	5	4.59	.684
5. Los miembros de la familia sienten lealtad hacia el negocio familiar.	3	5	4.55	.675
6. Los miembros de la familia están orgullosos de decirles a los demás que son parte del negocio familiar.	3	5	4.35	.718
7. Hay tanto qué obtener al participar con el negocio familiar en una base de largo plazo.	1	5	4.05	.336
8. Los miembros de la familia están de acuerdo con las metas, planes y políticas.	2	5	4.25	.544
9. A los miembros de la familia les importa realmente el rumbo del negocio familiar.	3	5	4.60	.614
10. La decisión de involucrarme con el negocio familiar tiene una influencia positiva en mi vida	5	5	5.00	.000
11. Entiendo y apoyo las decisiones de mi familia en cuanto al futuro del negocio familiar.	3	5	4.34	.508
12. Los miembros de la familia están dispuestos a poner un muy gran esfuerzo, mayor a lo esperado para ayudar a que el negocio familiar tenga éxito.	2	5	4.10	.536

*La tabla presenta reactivos relacionados con la cultura organizacional evaluada desde la perspectiva del socio fundador o líder actual Fuente: Dimensión cultura del instrumento diseñado por Klein, Astrachan y Smyrniotis (2005).*

Como puede observarse en la tabla 6, la media más alta corresponde al reactivo diez, relacionado con la decisión del socio fundador de crear e involucrarse con el negocio familiar y el tipo de influencia que la empresa ha tenido en su vida y por otra parte, la media más baja la obtuvo el ítem número doce relacionado con la percepción que tiene el líder respecto al esfuerzo que espera de parte de los miembros de la familia para que el negocio tenga éxito. Los valores oscilaron en una escala de 1 a 5 percibiéndose que se agruparon mayormente a valores de aceptación (de acuerdo = 3) y (totalmente de acuerdo =5).

Respecto a la desviación estándar, el reactivo con mayor dispersión en las respuestas es el número uno, relativo a la influencia en el negocio que pueden tener los demás miembros de la familia, de acuerdo a la percepción del líder, y que constituye un reflejo del estilo de liderazgo y control que ejerce en la toma de decisiones administrativas y operativas. Considerando el mismo parámetro todos los líderes coinciden invariablemente en la influencia positiva que la empresa tiene en sus vidas

## CONCLUSIONES

### Discusión de Resultados

La forma en que se constituyeron jurídicamente estas empresas obedeció a fines financieros o legales y no a una planeación organizativa o de largo plazo basada en un proyecto estratégico, tal como lo señala Longenecker et al. (2001) y conlleva que se haga uso de una figura jurídica para cumplir con parte de los requisitos que establecen las instituciones públicas o privadas y poder tener acceso a esquemas de financiamiento que otorgan para el sector primario. Al evaluar la experiencia empresarial, se encontró que está conformada básicamente por los años que tiene al frente la primera generación, pues sólo una empresa informó que la segunda generación ya está al mando de la organización, aun cuando el socio mayoritario es consultado en las decisiones cruciales de la firma como la inversión en infraestructura( Klein et. al, 2005); en todos los demás casos, tanto la operación como la administración de las empresas están realmente en manos del socio fundador aunque actualmente los hijos laboran dentro de las misma a nivel directivo. No se esperaba de que a pesar de tener pocos miembros que conforman el núcleo existan entre uno y tres familiares que no colaboran aún en ella (8.2%), e incluso existen miembros que no están interesados en trabajar dentro de la empresa familiar en lo absoluto (8.2%).

La cultura empresarial se manifiesta por la forma tan individual en la que el socio fundador ha dirigido la empresa según su propia visión del vínculo empresa-familia, al manifestar que involucrarse en el negocio familiar ha tenido una influencia positiva en su vida, lo que coincide con lo especificado en los estudios desarrollados por Forcadell et al. (2001) y Tokarczyk et al. (2007) y adicionalmente consideran que aún hay mucho que esperar de la empresa sobre una base de largo plazo. La mayoría de los entrevistados no perciben que su familia y el negocio compartan la mayoría de sus valores lo que puede desembocar en la presencia de futuros conflictos tal como lo previenen Lee y Rogoff (1996) dependiendo de la actitud que finalmente adopten los integrantes de la organización en el desarrollo de la operación (Vilaseca, 2002) y (Sorenson, 1999). Lo anterior refuerza la idea de la influencia del líder, su personalidad y estilo en la dirección de la firma familiar.

No se encontró información relacionada con la realización de alianzas estratégicas entre las empresas (Sharma y Manikutty, 2005), para hacer frente común a reducciones de costos, gestión de financiamientos o proyectos operativos de captura conjunta en épocas de veda en la captura del camarón con empresas de otras entidades del país (Poza, 2005) y (Forcadell et. al, 2001). Siete de las empresas entrevistadas, aplican la figura de la junta directiva para el análisis y toma de decisiones como lo refieren Corbetta y Salvato (2004), sin embargo no forma parte de la misma ningún ejecutivo no familiar, lo que pone en duda la imparcialidad en la toma de decisiones las demás organizaciones se apoyan en un consejo de administración que es una figura más de tipo jurídico que financiera o administrativa, lo que ratifica la idea de que, el control administrativo y el poder económico, se ejercen más por la participación accionaria de los socios

familiares, que por tomar en consideración la experiencia y opinión de su cuerpo directivo en decisiones trascendentales, tal como lo señala Klein et al. (2005).

En el ámbito gerencial la mayoría de los puestos directivos se confían a los hijos (79.2%) y en consecuencia el 20.8% contratan administradores no familiares, observándose que esta situación se presenta en aquellas empresas con uno o dos hijos, o donde actualmente colabora únicamente la esposa y los hijos no se hacen cargo de las responsabilidades gerenciales; sin que se pueda inferir si la contratación sea por necesidad o se dé por un proceso de selección según la capacidad del administrador, tal como lo refieren Shu-hui y Shing-yang (2007), o que la empresa esté pensando en fomentar una administración profesional en la búsqueda de alcanzar metas y resultados previamente planeados lo que coincidiría con lo señalado por Hall y Nordqvist (2008).

## CONCLUSIONES

La evaluación de los resultados obtenidos permite identificar las principales características de la población de estudio respecto a las dimensiones de poder y experiencia en la cultura organizacional desde la perspectiva del líder de la empresa, concluyéndose que:

La experiencia organizacional de estas empresas está integrada por los resultados de la toma de decisiones realizada por el líder de la primera generación, que es la que se encuentra al frente de las operaciones de la gran mayoría de la población estudiada (95.8%), y dependiendo del estilo de liderazgo se aceptan e implementan planes de largo como parte de una administración estratégica que favorezca la permanencia de la empresa. Por lo anterior es posible señalar que la experiencia como factor en la cultura organizacional está circunscrita al éxito o fracaso empresarial del socio fundador, y que se refleja en el posicionamiento actual de cada organización en el mercado.

El poder está centralizado jurídicamente en los miembros de la familia a través de la tenencia accionaria, sin que se tenga contemplado implementar una junta directiva independiente, formada por los ejecutivos de la organización sean o no familiares, y que con base a la experiencia profesional de cada integrante, coadyuve en las decisiones fundamentales de la empresa como gestión de financiamientos o inversiones en infraestructura.

La cultura organizacional está construida sobre las decisiones tomadas y los resultados obtenidos por el socio fundador, quien no considera que la familia influya fundamentalmente en el negocio y no percibe congruencia entre los valores familiares y los de la empresa, lo anterior puede ser causa de conflictos interpersonales al incrementarse la participación de los hijos en la operación de la empresa.

Es recomendable una evaluación por parte de los miembros de la familia respecto a la cultura empresarial adquirida o desarrollada por el socio fundador, considerando que como proceso natural en la vida de este tipo de organizaciones, en algún momento se presentarán procesos como la selección del sucesor y la transición generacional y que una buena cultura empresarial arroja ideas tales como implementación de una administración estratégica, planeación de inversiones de largo plazo e incluso el desarrollo del protocolo familiar en un esfuerzo de integrar armónicamente el trinomio familia-propiedad-empresa.

### RESUMEN

*En la actualidad, la economía ambiental, como instrumento de política ambiental para tratar de revertir el proceso de degradación ambiental a través de contribuciones ambientales, ha permitido el interés y motivación para plantear una propuesta de fiscalidad ambiental en el marco del Acuerdo de Asociación Económica México-Unión Europea (UE). Aunque México cuenta con leyes que establecen los fundamentos para el uso de instrumentos económicos como estrategia contra la problemática ambiental; no se ha establecido aun una política fiscal ambiental integral que contemple el uso de impuestos ecológicos como una herramienta eficiente contra los problemas medioambientales. La presente investigación presenta una revisión de la literatura en torno al tema de la tributación ambiental en el contexto internacional, especialmente en los países de la UE que han logrado impacto en la implementación de impuestos ambientales para restituir el daño ambiental, así como los elementos para la implementación de contribuciones ecológicas. Posteriormente se detalla la metodología utilizada en el trabajo de investigación; se continúa con el análisis y opciones para una propuesta de fiscalidad ambiental en México, para terminar con las conclusiones y las referencias bibliográficas utilizadas.*

## PROPOSAL FOR AN ENVIRONMENTAL TAXATION, AN OPTION FOR MEXICO

### ABSTRACT

*At present, environmental economics, as an instrument of environmental policy to try to reverse the process of environmental degradation through environmental contributions, has allowed the interest and motivation to make a proposal of environmental taxation in the framework of the Agreement of Economic Partnership México-European Union. Although Mexico has laws providing the rationale for the use of economic instruments as a strategy against environmental problems; has not yet established a comprehensive environmental tax policy that addresses the use of environmental taxes as an efficient tool against environmental problems. This research presents a literature review on the topic of environmental taxation in the international context, especially in the European Union countries that have made an impact on the implementation of environmental taxes to restore the environmental damage, as well as the elements for the implementation of ecological contributions. Subsequently, the methodology used in the research is detailed; continues with an analysis and options for an environmental taxation proposal in Mexico, ending with conclusions and references used.*

**KEY WORDS:** Environmental Economics, Environmental Taxes, Environmental Taxation and Environmental Tax Policy

**JEL:** H23

## INTRODUCCIÓN

La idea de abordar la temática ambiental proviene del interés y motivación de contribuir en asuntos sustentables como profesional de la contaduría pública y comprender la importancia que tiene la economía en la administración de los recursos naturales y la cuantificación de la pérdida y daños del medio ambiente. De igual forma, el aprendizaje sobre temas relacionados acerca de los impuestos ecológicos en España y el contexto en la Unión Europea (UE) en relación a la economía ambiental como instrumentos de su política ambiental; así como las distintas medidas que podrían adoptarse para tratar de revertir el proceso de degradación ambiental tales como las contribuciones ambientales implementadas y los logros obtenidos en España han permitido el interés y motivación de desarrollar una propuesta de tributación ambiental, una opción para México para ser pertinente a las problemáticas del mundo actual y buscar soluciones para un mundo mejor.

Aunque México cuenta con leyes que establecen los fundamentos para el uso de instrumentos económicos como estrategia contra la problemática ambiental; no se ha establecido aún una política fiscal ambiental integral que contemple el uso de impuestos ecológicos como una herramienta eficiente contra los problemas medioambientales. Por lo tanto, se derivan las siguientes preguntas, en relación al planteamiento, si la aplicación correcta de contribuciones ambientales sumado a las herramientas de política fiscal ambiental en México, podrían aportar una influencia positiva en los agentes contaminantes y al mismo tiempo recaudar recursos para mitigar el daño ambiental: ¿Existen ventajas al implementar impuestos ambientales como herramienta económica contra la problemática ambiental?, ¿Cuál es el contexto internacional en materia de impuestos ambientales?, ¿Cuáles son las bases con las que cuenta México para implementar impuestos ambientales?, ¿Cuáles son los obstáculos que impiden el establecimiento de impuestos ambientales en México?, ¿Cuáles son las estrategias que permitirían la aplicación exitosa de impuestos ambientales en México?. Para dar respuesta a las preguntas que se plantean, la presente investigación inicia con una revisión de la literatura en torno al tema de la tributación ambiental en el contexto internacional, especialmente en los países de la UE que han logrado impacto en la implementación de impuestos ambientales; definición, ventajas y limitaciones de los impuestos ecológicos para revertir el daño ambiental; diseño y elementos para la implementación de contribuciones ecológicas. Posteriormente se detalla la metodología utilizada en el trabajo de investigación realizada por los autores; se continúa con la presentación de la propuesta que permita el desarrollo de una política fiscal ambiental en México, para terminar con las conclusiones y las referencias bibliográficas utilizadas.

## REVISIÓN LITERARIA

Los impuestos ambientales tienen su fundamento teórico en los impuestos pigouvianos, propuestos por el economista Arthur Pigou en 1920, que planteaban la necesidad de la intervención del Estado ante la existencia de discrepancias en los beneficios marginales sociales y privados. Pigou propuso corregir las distorsiones generadas en los sistemas de precios originadas por la presencia de externalidades negativas con el cobro de un impuesto cuyo monto compensaría los daños causados (Mendezcarlo, et al. 2010). De esta manera, un impuesto que recaude el valor monetario de los daños ambientales permite corregir este fallo, ya que internaliza los costos externos causados por las actividades contaminantes. Por otro lado, Ronald Coase, Premio Nobel de Economía en 1991, publicó el artículo “El problema del costo social” en 1960, que señala la innecesaria intervención del Estado para igualar los costos y parte de una crítica al trabajo de Pigou porque señala la dificultad de este tipo de impuestos para medir con certeza el daño producido por el agente contaminante.

## Definición

Según Azqueta (2010) define a los impuestos ambientales como aquellos cuya base imponible consiste en una unidad física o similar de algún material que tiene un impacto negativo, comprobado y específico sobre el medioambiente. Los impuestos ambientales llevan incorporada la finalidad extra fiscal de protección ambiental mediante la eliminación de externalidades y se clasifican en dos categorías básicas:

*Incentivadores*: Buscan modificar la conducta del contaminador para que deje de serlo.

*Recuperadores de Costos o Redistributivos*: Pretenden la obtención de ingresos para satisfacer el gasto público ambiental ocasionado por la degradación del medio ambiente.

Por otra parte, la fiscalidad ambiental es una estrategia de política económica-ambiental que utiliza el sistema fiscal, especialmente a los impuestos, con fines de protección ambiental y el principio “el que contamina paga” se rige básicamente por dos preceptos:

*Los costos sociales causados por la degradación ambiental deben ser pagados por quienes los generan*: Este primer precepto, que pague quien contamine, produce una división del mandato. Por un lado, están los sujetos que producen la contaminación; que según la OCDE existe la intención de afectar a todos los sujetos hasta el consumidor final, ya que se pretende introducir los costos ambientales al sistema de precios. Y por otro lado, se tiene que determinar el valor monetario del costo ambiental.

*Los poderes públicos no deben asumir las externalidades ambientales que benefician particularmente a los individuos*: En lo que respecta al segundo precepto del principio “el que contamina paga”, éste autoriza las actuaciones del poder público que estén encaminadas a corregir las externalidades negativas ambientales y lo autoriza para utilizar los instrumentos necesarios que requiera para conseguirlo (Figueroa, 2005).

## Ventajas

Son muchos los autores que defienden la aplicación de tributos ambientales y destacan sus múltiples ventajas, tal es el caso de Fullerton, et al. (2010) quienes comparan la implementación de impuestos ecológicos contra el uso de otras medidas de comando y control y enumeran entre las ventajas más importantes, las siguientes:

*Eficiencia Estática*: El establecimiento de impuestos de este tipo permite conseguir un mismo nivel de reducción de la contaminación a un menor costo total, pues éstos son lo suficientemente flexibles para que cada agente elija cuanto reducir según sus costos marginales particulares.

*Eficiencia Dinámica*: Ésta tiene su origen en el incentivo que provocan los impuestos ambientales para adoptar tecnologías más limpias en los procesos de producción de los agentes contaminantes con la finalidad de reducir las emisiones, y por ende, el impuesto que tendrán que pagar.

*Tratamiento Generalizado*: Con la implementación de impuestos ecológicos se establece una tasa igual para todos los agentes contaminantes, independientemente de sus características individuales; y sin embargo, cada agente puede ajustar su nivel de reducción según sus particularidades. Con esto, el organismo regulador (el Estado) se quita de la necesidad de tener que negociar con cada agente en particular y por lo tanto se reduce la capacidad de manipulación que puedan ejercer los contaminantes para su beneficio.

*Potencial Recaudatorio:* Si bien, la recaudación no es la finalidad principal de los impuestos ambientales, éstos generan ingresos para el fisco; aunque, en este caso, el objetivo es que dichos ingresos sean cada vez menores para que el impuesto pueda considerarse exitoso. Respecto al destino de los ingresos recaudados por impuestos ambientales, Fullerton, et al (2010) señala que lo ideal es utilizarlos para financiar programas de política ambiental.

*Doble Dividendo:* La hipótesis del doble dividendo tiene su origen en las 2 finalidades de los impuestos: la finalidad fiscal, que consiste en la recaudación de ingresos y la finalidad que se refiere a la corrección de las externalidades. Esta teoría sugiere que cualquier incremento en los impuestos ambientales debe ir acompañada de una reducción con otros impuestos recaudatorios, lo que se conoce como “neutralidad en los ingresos” (Oliva, et al. 2011).

### Limitaciones

Una política ambiental puede estar compuesta de numerosos instrumentos; uno de ellos, los impuestos ambientales. Sin embargo, éstos no siempre son la mejor opción o lo más efectivo, pues en casos extremos como sustancias altamente peligrosas, riesgos de salud, etcétera, lo más factible podría ser una prohibición. Dentro de las limitantes más sobresalientes de la tributación ambiental se hace referencia a las siguientes:

*Cuantificación Económica Exacta:* Esta fue una de las principales limitaciones de la aplicación de impuestos pigouvianos según Ronald Coase porque la cuantificación monetaria exacta representa la mayor dificultad a la hora de establecer un impuesto ambiental, ya que es sumamente difícil asignar un valor monetario exacto a los recursos naturales y más difícil aún es determinar el costo social que conlleva una emisión o residuo determinado.

*Reacción de la Sociedad:* Como cualquier impuesto nuevo, la reacción que la sociedad pueda tener es impredecible y sin embargo de ésta depende en gran medida que un impuesto sea exitoso o no. Por ejemplo, un impuesto sobre residuos tóxicos puede inducir al agente contaminante a quemar esos residuos o a desecharlos en depósitos clandestinos con tal de no pagar el impuesto.

*Equidad:* Este problema se presenta por los bienes y servicios de primera necesidad que son gravados como la energía o los combustibles; es decir, si los hogares de menos recursos gastarán proporcionalmente más en este tipo de bienes, estarían también pagando más.

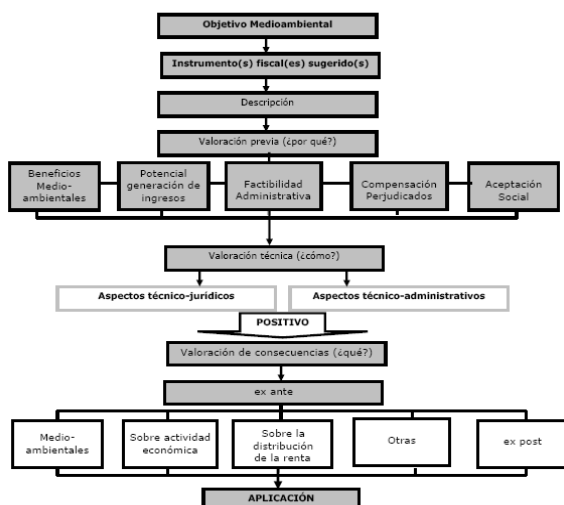

*Competitividad Internacional:* Una de las mayores preocupaciones de los impuestos ambientales se centra en el tema de competitividad internacional, debido a que no todos los países cuentan con una política fiscal que considere los tributos ecológicos y no todos los países pueden aplicar los mismos impuestos; por lo que esto ocasiona una diferencia de precios en un mismo bien (Fullerton, et al. 2010).

### Diseño de una Contribución Ambiental

De acuerdo con Oliva, et al. (2011) el logro de los objetivos ecológicos depende de distintos factores como la elasticidad de los bienes gravados, la existencia de sustitutos, la cantidad y calidad de información que tenga la sociedad, así como criterios ambientales, tales como la capacidad de asimilación de los ecosistemas. Por lo tanto, Fullerton, et al. (2010), Figueroa, (2005), Gil, (2011) y Oliva, et al. (2011) señalan que el diseño de un impuesto ambiental en relación con las emisiones, depende de su relación directa que tenga con las emisiones que pretende atacar; pues a menudo, la dificultad y el costo de la valuación del daño ambiental y las emisiones impedirán la implementación de un impuesto que grave directamente la cantidad de emisiones generadas. Por otro lado, Oliva, et al. (2011) y Sandoval, (2008) consideran el entorno internacional y el impacto de la competitividad internacional en las contribuciones

ambientales, ya que se debe tener en cuenta los mercados que se estarían afectando al aplicar el impuesto, así como los acuerdos internacionales en los que los países tienen participación. A continuación, la figura 3 nos muestra una esquema de diseño y valoración de una contribución ambiental, propuesto por Gil, (2011) quien toma en cuenta no solo los efectos ambientales, sino también los efectos jurídicos, administrativos y sociales.

Figura 1: Esquema de Diseño y Valoración de una Contribución Ambiental

En este esquema se observan los factores que se deben tener en cuenta en la creación, y diseño de un tributo ambiental y se deben tomar en cuenta no solo los efectos ambientales, sino también los efectos jurídicos, administrativos y sociales que son importantes de considerar al momento de diseñar una contribución ambiental.

Atendiendo a los puntos que se deben tomar en cuenta al momento de diseñar una contribución ambiental, Fullerton, et al. (2010) señalan que se pueden identificar tres grupos de contribuciones:

*Impuestos sobre emisiones medibles:* Debido a que este tipo de impuestos gravan las emisiones medibles; estas contribuciones pueden estar focalizadas de manera precisa a los objetivos ambientales que se persiguen.

*Impuestos sobre un bien de mercado relacionado a las emisiones:* Una alternativa a la tributación directa sobre las emisiones es establecer o modificar la tasa de un impuesto indirecto; o bien, introducir un impuesto ambiental basado en la venta de bienes o insumos contaminantes, bienes y servicios asociados con el daño ambiental como las baterías o los fertilizantes que pueden ser gravados de manera más severa ya sea en producción o consumo.

*Instrumentos Multi-Parte:* Al introducir un impuesto sobre bienes relacionados con las emisiones, se economiza en costos administrativos, sobre todo en los costos implicados en medir las emisiones. Sin embargo, existe el riesgo de que se presente un desvío en la respuesta de los agentes contaminantes que no permitan el logro de los objetivos ambientales de la manera más eficiente.

## METODOLOGÍA

La metodología representa la manera de organizar el proceso de la investigación, de controlar los resultados y de presentar posibles soluciones al problema que nos llevará a la toma de decisiones (Zorrilla y Torres, 1992). De acuerdo con Hernández, et al. (2010) la presente investigación se llevará a cabo con un enfoque descriptivo, en el desarrollo de la investigación se pretende efectuar un análisis y plantear opciones para una propuesta de fiscalidad ambiental en el marco del Acuerdo de Asociación Económica México-UE. La presente investigación contribuirá con información teórica, práctica, de responsabilidad social y de desarrollo sustentable.

Caparrós, (2007) presenta el informe sobre la Economía del Cambio Climático (2006) y menciona que al igual que muchos otros estudios recientes evidencian el progresivo deterioro que el medioambiente sufre como consecuencia de las acciones del ser humano al ignorar los límites físicos de nuestro planeta en las decisiones a nivel micro y macro económicas. De igual forma, explica que en el ámbito latinoamericano el problema se agrava, debido a la fuerte dependencia que los países de esta región tienen hacia sus recursos naturales. En este contexto, resulta necesario que los gobiernos de los países se marquen como objetivo, no sólo el aumento de calidad del medio ambiente donde habitamos, sino también encontrar un equilibrio entre desarrollo y naturaleza que permita progresar a la sociedad; y, al mismo tiempo, regenerar el entorno natural. Para ello, los instrumentos económicos de corte medioambiental y en concreto, los impuestos ambientales constituyen una de las alternativas. De esta manera, el origen de esta investigación está en conocer tres aspectos:

*Los elementos, ventajas y limitaciones de las contribuciones ecológicas,*

*El contexto internacional en la implementación de impuestos ambientales y*

*La regulación existente para la protección ambiental en México.*

El gran interés por profundizar en el campo de la economía ambiental nos lleva a planear los elementos de una propuesta que permita considerar los impuestos ambientales como estrategia de innovación para detener y revertir el daño medioambiental en México de una manera eficiente.

### Análisis y Opciones Para una Propuesta de Fiscalidad Ambiental en el Marco del Acuerdo de Asociación Económica México-Unión Europea

El propósito de esta investigación es realizar un análisis de las prácticas y experiencias de los países en la Unión Europea (UE) en el campo de la economía ambiental para promover una propuesta de fiscalidad ambiental en México y así evitar el daño actual de contaminación y pérdida de recursos naturales que están poniendo en riesgo el crecimiento futuro del país y el bienestar de las futuras generaciones. Asimismo, se prevén las ventajas que ofrece el marco institucional europeo para la cooperación con los países en desarrollo en relación con el medio ambiente y específicamente en fiscalidad ambiental, así como las oportunidades que ofrecen el Acuerdo de Asociación Económica entre México y la UE con la finalidad de transformar o revertir la difícil situación ambiental por la que atraviesa México.

A pesar de las condiciones críticas por las que atraviesa el país, no disponemos de un marco normativo moderno que permita la aplicación de instrumentos económicos de carácter fiscal (recaudatorios) y parafiscales (incentivadores) con la finalidad de promover cambios de conducta en los agentes económicos favorables a la sustentabilidad. La experiencia de los países europeos, la mayoría países de la UE, demuestra que la fiscalidad ambiental ha sido una eficiente herramienta para impulsar prácticas que penalicen la producción y consumo que inciden en altos costos ambientales, así como incentivar comportamientos de

responsabilidad a favor de la naturaleza. Sin duda alguna, la UE son el ejemplo a seguir y México puede aprender de esta experiencia, ya que cuenta con el Acuerdo de Concertación Política y Cooperación (AAECPC) firmado con la Unión Europea en diciembre de 1997, así como las oportunidades que ofrece el Tratado de la Comunidad Europea (TCE) en Cooperación Ambiental y particularmente en Fiscalidad Ambiental.

Por ello, el objetivo de la presente investigación consiste en realizar un análisis y plantear opciones para una propuesta de fiscalidad ambiental en México, destacando las posibilidades de cooperación que ofrece el contexto institucional europeo y particularmente en el marco del Acuerdo de la Asociación Económica firmado con México.

La fiscalidad ambiental significa la participación del Estado para regular o eliminar los impactos ambientales, aplicando medidas que posibiliten la internalización del costo ambiental en la función de costos del agente que realiza la contaminación en el medio ambiente. La fiscalidad ambiental parte de la posición fundamental de que “quien genera el costo ambiental debe asumirlo”, o bien, “quien contamina paga”; entonces la fiscalidad ambiental se convierte en una estrategia esencial para cumplir el cometido de resolver el problema distributivo internalizando los costos ambientales mediante la aplicación de impuestos, subsidios o cobros de derechos a los sujetos económicos (productores o consumidores) que se hagan acreedores a dicho cobro.

La fiscalidad ambiental es relativamente reciente en el mundo y se remonta a los años setenta de manera más extensiva en los países de la Organización para la Cooperación y el Desarrollo Económico (OCDE). En los años setenta y hasta los ochenta se orientaron al cobro de derechos por vertido de desechos industriales y contaminación del agua, a partir de los noventa han iniciado una verdadera “reforma fiscal ambiental” con una perspectiva de fiscalidad ambiental “dura” fortaleciendo, en especial, el cobro de impuestos sobre la energía y las emisiones de dióxido de carbono. En esta categoría se ubican el primer grupo de países mencionados, en tanto países como Francia, Alemania, Austria, Bélgica, Suiza y Holanda han diseñado un esquema de fiscalidad ambiental de menor alcance y con objetivos ambientales muy específicos, lo que se conoce en la lenguaje de la economía ambiental como fiscalidad ambiental “blanda” (Sandoval, 2008). En general la experiencia de Europa y de los países de la OCDE es un referente indispensable en la perspectiva de diseñar e implementar una reforma fiscal de largo alcance y un modelo de crecimiento con mayores posibilidades de sustentabilidad. La sustentabilidad en el desarrollo económico de las naciones requiere de la integración de las políticas económicas y ambientales, lo que demanda la realización, por una parte, de una reforma fiscal integral que considere lo ambiental como componente central en la política fiscalizadora, y por otra parte, de las políticas ambientales que tendrán carácter reactivo o compensatorio (Barde, 2002).

Algunas recomendaciones que derivan de la experiencia tenida en países de la UE y la OCDE y que es necesario tener en cuenta en la instrumentación y aplicación de impuestos ambientales son las siguientes: El impuesto ambiental debe estar directamente relacionado con el problema medioambiental que se pretende resolver, de otra manera no se podría cumplir con el objetivo de influir en la modificación de conductas de los agentes económicos. Se debe determinar la etapa en la cual se va a aplicar la carga fiscal. No tiene el mismo efecto un impuesto al consumo o la producción final, que en una etapa intermedia. Se debe tomar en cuenta, de igual forma, el nivel del incentivo respecto de su efecto en la reducción de la contaminación, de tal suerte que al ser más eficiente el impuesto ambiental se reducen las emisiones o daños ambientales, al mismo tiempo que la base gravable se va estrechando y la recaudación resulta también cada vez menor (Cortina, 2005).

Por otra parte, en México los antecedentes en materia de fiscalidad ambiental registrados en leyes y reglamentos no existen formalmente, aunque en materia de normatividad ambiental existe un antecedente

significativo en la Ley Federal para la Prevención y Control de la Contaminación, que entró en vigor en el año de 1971. En 1987 se amplía y reforma dando lugar a la Ley Federal de Protección al Ambiente y consiente su lugar en 1988, a la Ley Federal de Equilibrio ecológico y Protección al Ambiente (LFEPA), con diversas reformas agregadas en su contenido en varias ocasiones. Paralelamente al Tratado de Libre Comercio con América del Norte (TLCAN) se firma el Acuerdo de Cooperación de América del Norte (ACA). Podríamos señalar que con el ACA tiene su origen la fiscalidad ambiental en México porque contempla la aplicación de instrumentos económicos para la consecución de las metas ambientales establecidas en el Acuerdo (Sandoval, 2008).

Además de estos documentos normativos el país únicamente tiene una Ley Federal de Derechos (LFD) fuertemente imprecisa en su aplicación y de alcances muy limitados. Su aplicación se enfrenta a los problemas propios de la fiscalidad ambiental: el de la valoración y el de la cuantificación de los bienes y servicios naturales. La legislación ambiental en México hace más referencia al pago de derechos que al de impuestos ambientales. La LFD insiste que para poder establecer los costos que hay que pagar por el uso de bienes públicos es necesaria una valuación económica y de hecho no existe una metodología establecida para determinar el costo real y que también, refleje el deterioro que sufren estos bienes al ser usados (Cortina, 2002). Sin embargo, de la experiencia en la UE hay muchas cosas que aprender y presenta sin lugar a dudas, un espacio fructífero para imitar las buenas prácticas y las buenas políticas ambientales. Pero, sobre todo otorga el marco institucional para desarrollar reformas y políticas de fiscalidad ambiental. A nivel de los organismos multilaterales y de los gobiernos de los países desarrollados y de algunos en desarrollo, dos asuntos irrumpen la agenda ambiental:

El primero y más preocupante es el calentamiento global y sus secuelas (ambientales, sociales y económicas), así como la pérdida acelerada de recursos bióticos (flora y fauna) y no bióticos (recursos minerales, por ejemplo). En la actualidad, se reconoce que muchos de los bienes y servicios que aporta la naturaleza son bienes públicos mundiales y deben ser conservados mediante acuerdos globales y con la aplicación sincronizada de políticas ambientales; por ejemplo las emisiones de gases de efecto invernadero a la atmósfera. El segundo asunto tiene que ver con el contexto del comercio internacional, por las ventajas que pudieran tomar quienes no incluyen los costos ambientales en los precios de sus bienes y servicios. Debido a estas dos razones, los acuerdos de regionalización, a bilaterales y multilaterales insisten en la integración parcial o ampliada de la variable ambiental en todas las políticas comerciales y económicas. El Acuerdo General sobre Aranceles y Comercio (GATT), y en la Organización Mundial del Comercio (OMC), se discute sobre la necesidad de “enverdecer” el comercio internacional. En la declaración ministerial de Doha en Noviembre de 2001, se expide el mandato para impulsar negociaciones comerciales con acuerdos explícitos en materia ambiental en el seno de la OMC. Los debates al respecto siguen girando en torno a dos condiciones (Altman, 2007).

#### Marco Institucional Comunitario Para la Cooperación Ambiental

El Tratado de la Comunidad Europea (TCE) establece los principios y políticas que definen la integración de sus países miembros, así como se plantea la política comunitaria de Cooperación para el Desarrollo con los países extracomunitarios, entre ellos los de menor desarrollo (Artículos 2, 3, 6, 7, 10, 177 y 178). En este tratado se instituye la obligación de los países comunitarios de integrar lo ambiental en todas las políticas diseñadas e implementadas en el seno de la UE (Art. 6). En el Sexto Programa de Acción Comunitaria en materia de medio ambiente se menciona la lucha contra el cambio climático como una de las principales prioridades. En el mismo documento se recomienda que la política ambiental se fundamente especialmente en enfoques globales más que en enfoques sectoriales” (Red de Autoridades Ambientales, 2002). De igual forma, en el Consejo Europeo de Goteborg (2001) y en el informe de evaluación del Consejo Europeo de Cardiff (1998) se expone como un eje estratégico, para la incorporación de la expansión horizontal de lo ambiental en materia de política económica, apoyar *la cooperación con los*

*países en desarrollo, el diseño e implementación de políticas macroeconómicas que se vinculen a los aspectos sociales.* La estrategia propone impulsar reformas fiscales que beneficien actitudes respetuosas con el medio ambiente o estrategias de la relación entre crecimiento económico y deterioro del medio ambiente (Altman, 2007). Asimismo, están las condiciones institucionales dadas en el seno de la UE, para impulsar políticas con diversos alcances en países como el nuestro, que presenta un evidente retraso en política ambiental. Este espíritu de cooperación se ve reforzado aún más con el Acuerdo de Asociación Económica, Concertación Política y Cooperación vigente entre la UE y México desde el año 2000. En el mismo se establece (Art. 34, apartado 2) que las partes se comprometen a: Desarrollar la cooperación para prevenir el deterioro ambiental. Fomentar la conservación y el aprovechamiento sustentable de los recursos naturales. Desarrollar, difundir e intercambiar información y experiencias sobre legislación ambiental. Estimular la utilización de incentivos económicos para promover su cumplimiento. Fortalecer la gestión ambiental en los distintos niveles de gobierno. Promover la formación de recursos humanos y la educación en temas de medio ambiente. La ejecución de proyectos de investigación conjunta; y Desarrollar canales para la participación social (Sandoval, 2008). Como se puede observar el espectro de oportunidades de cooperación ambiental con la UE son muy amplias, falta crear los consensos sociales y políticos en nuestro país para darle posibilidad a las oportunidades que abre el Acuerdo de Asociación Económica y el Tratado de la Comunidad Europea en Cooperación Ambiental con el objetivo de plantear una política de fiscalidad ambiental para México.

## CONCLUSIONES

La protección al medio ambiente es un objetivo mundial compartido, por lo que es conveniente que se considere la implementación de políticas económicas y fiscales como los impuestos ambientales; tomando en cuenta la experiencia internacional, específicamente de los países de la UE, que han demostrado la eficacia de este tipo de instrumentos para combatir la problemática ambiental a través de la modificación en la conducta de los agentes contaminantes y de la recaudación de recursos económicos para mitigar el daño medioambiental. Por consiguiente, en esta investigación subsisten dos situaciones de importancia. Por un lado, la enorme experiencia que tiene la UE en el diseño de políticas ambientales y, en particular en la aplicación de reformas de fiscalidad ambiental y, por otro lado; la existencia de un marco institucional para la cooperación ambiental impulsando la creación de posibilidades de cooperación entre países en desarrollo, como México, y la UE. Con la ventaja adicional para nuestro país de contar con un Acuerdo de Asociación Económica, Concertación Política y Cooperación donde se considera la cooperación en asuntos ambientales. Las amenazas que pueden acontecer sobre nuestro país en materia ambiental debido a la presencia de un modelo de crecimiento soportado en prácticas de consumo y producción no sustentables son muchas, pero también las numerosas oportunidades. El marco institucional para la cooperación ambiental con la UE y la experiencia exitosa de sus países miembros es una de estas oportunidades. Únicamente nos falta que exista la voluntad política y el apoyo social para realizar los cambios que sean necesarios.

De acuerdo con Araya (2003) ampliar el acceso a la información sobre el tema ambiental es de vital importancia porque más que un asunto comercial es esencialmente un tema de calidad de vida. Y si hablamos de calidad de vida tenemos que dirigirnos del crecimiento económico al desarrollo económico; y que solamente adquiere sentido cuando contribuye a un incremento en el bienestar neto (amortizando los costos sociales y ambientales que signifique) de la población; o bien, contribuiría al desarrollo sustentable de países como México.

Por esto, es substancial la modificación radical de los patrones de consumo y producción que definen el modelo de desarrollo vigente en nuestro país para incentivar el diseño e implementación de instrumentos económicos para detener y revertir el daño medioambiental. Así que, la fiscalidad ambiental en el país debe estar orientada a la modificación de estos esquemas de comportamiento impulsando conductas que tengan

más responsabilidad con la naturaleza. Asimismo, tenemos que ampliar y profundizar la discusión en relación a la pertinencia del modelo de crecimiento vigente en México, altamente costoso en términos ambientales antes de llegar a una situación en el que ya no existan soluciones.

# COMERCIO INTERNACIONAL Y NEGOCIO INFORMAL DE LAS COMUNIDADES INDIGENAS WAYÚU EN LA FRONTERA COLOMBO- VENEZOLANA

Darcy Luz Mendoza, Universidad de La Guajira, Colombia  
Yolmis Nicolás Rojano Alvarado, Universidad de La Guajira, Colombia  
Edwin Salas Solano, Universidad de La Guajira, Colombia

## RESUMEN

*El estudio tiene como propósito develar la realidad del comercio internacional practicado por los wayúu asentados en la frontera colombo-venezolana eje Guajira-Zulia, conocer la existente de políticas públicas para el comercio ejercido por estas comunidades. Se fundamenta teóricamente en los postulados de reconocidos economistas sobre las teorías existentes del comercio internacional. El estudio es de tipo descriptivo-documental, se realizó un análisis bibliográfico sobre la temática descrita, además de encuestas realizadas a comerciantes de las comunidades wayuu. Los resultados evidencian el aislamiento total por parte del Estado a pesar de la existencia de políticas públicas así como el arraigado comercio ilegal y el contrabando de productos llevado a cabo por los wayúu asentados en la frontera. Se concluyó que a pesar de la existencia de variadas políticas públicas, no se evidencia un aporte positivo en la comercialización realizada en la zona, además, las teorías existentes sobre comercio internacional, desconocen las prácticas comerciales realizadas por estos indígenas en la zona de estudio ya que para ellos no existe frontera entre los países de Colombia y Venezuela en el punto analizado.*

**PALABRAS CLAVE:** Negocio Informal, Comercio Internacional, Comunidades Indígenas, Fronteras Colombo-Venezolana

## INTERNATIONAL TRADE EXECUTED BY WAYÚU COMMUNITIES LOCATED AT THE COLOMBIAN-VENEZUELAN BORDER

### ABSTRACT

*The study aims to reveal the reality of the international trade performed by the Wayúu border settled at the Colombian-Venezuelan, Zulia -Guajira axis. Knowing the existing policies for trade exercised by these communities. It is theoretically based on the principles of renowned economists on existing theories of international trade. The study is descriptive- documentary, we conducted a literature review on the issue described, plus surveys made to Wayúu indigenous traders. Results show total isolation from the state despite the existence of public policies, the ilegal trade rooted and smuggling of products conducted by the Wayúu settled at the border. It was concluded that despite the existence of various public policies, there is no evidence of a positive contribution to the marketing done in the area. Moreover, existing theories of international trade practices, unknown business practices made in the study area, and for them there is no border between the countries of Colombia and Venezuela at the point analyzed.*

## INTRODUCCIÓN

Las regiones fronterizas juegan un papel preponderante en procesos de integración, la frontera deja de ser una simple demarcación política-territorial para convertirse en un espacio importante debido básicamente a la intensidad de las relaciones presentadas en ella. Esta realidad es aún más fuerte en contexto donde se han construido redes sociales, económicas y políticas durante antaño, lo cual equivale a decir que se ha generado intereses compartidos a lo largo de la historia, razón por la cual las relaciones comerciales existentes entre las ciudades fronterizas del departamento de La Guajira en Colombia y el Estado Zulia en Venezuela, están influenciadas directamente con el comercio internacional ejercido de manera informal por las personas ubicadas en esa zona de frontera, lo anterior toma un matiz diferencial debido a que este comercio es practicado por comunidades indígenas. El documento presenta una síntesis de la forma en que estas comunidades desconocen los límites geográficos y demuestra cómo se desvirtúa la teoría sobre el comercio internacional respecto a la forma de realizar esta actividad por estas comunidades llevando a cabo la comercialización informal y el contrabando de distintos productos.

Este artículo se propone examinar de qué manera la región de frontera entre Colombia y Venezuela en el punto Paraguachón-Paraguaipoa, ha sido caracterizada por la escasa presencia institucional, prácticas económicas con escasa vigilancia estatal, amplia presencia de población indígena, zonas inhóspitas para la colonización y activo comercio con el país vecino, lo cual ha jugado un rol muy importante en la relación binacional. Con base en una perspectiva histórica, se propone dar a conocer la importancia del conocimiento y respeto de una cultura étnica frente al desarrollo comercial en una frontera de amplio dinamismo comercial, mostrando dos factores claves como son la informalidad y el contrabando. Por otra parte el artículo establece como las teorías expuestas sobre el comercio internacional se desvirtúan frente a una realidad totalmente diferente a la realizada en la zona de frontera colombo-venezolana por los indígenas wayúu asentados en la zona y las políticas gubernamentales relacionadas con la misma. La frontera entre estos dos países es bastante extensa y abarca varias regiones en territorios de ambas naciones, pero la zona de La Guajira específicamente el corregimiento de Paraguachón, municipio de Maicao, frontera colombo-venezolana de la punta norte de Colombia y el municipio de Paraguaipoa en el estado Zulia.

## REVISION LITERARIA

El Comercio internacional es el intercambio de bienes y servicios entre países, según Smith (1776), el cual permite a un país especializarse en la producción de los bienes que fabrica de forma más eficiente y con menores costes, además de aumentar el mercado potencial de los bienes que produce determinada economía, y caracterizar las relaciones entre países, permitiendo medir la fortaleza de sus respectivas economías. En este sentido, el intercambio de los bienes presentado en la frontera, según este concepto, hace referencia a comercio internacional puesto que se está dando entre dos países (Colombia y Venezuela). En cuanto a la sustentación teórica de la investigación, la variable Comercio Internacional, estará soportada en las teorías de reconocidos autores economistas tales como: Philip Kotler, Adam Smit, David Ricardo, entre otros, por otro lado, se analizan las Políticas Públicas, existente en los países Colombia y Venezuela relacionadas con la relación de comercio entre estos se tiene las constituciones de ambos países como la carta magna, entre otras.

### Posición Geográfica del Comercio Binacional

La posición geográfica del comercio binacional de las comunidades wayúu, tal como se evidencia en el mapa, en la flecha roja es el punto exacto donde se desarrollan las actividades comerciales de los indígenas wayúu, este eje de interconexión de los dos países –Colombia-Venezuela- está conformado por el eje vial Maracaibo-Sinamaica-Paraguaipoa-Guarero-Paraguachón con aproximadamente 142 Km, el cual enlaza estos cuatro centros urbanos del Municipio Páez del estado Zulia, para conectar a las poblaciones colombianas de Maicao y Riohacha, en el departamento de La Guajira en Colombia.

Figura 1: Mapa Frontera Binacional Colombo-Venezolana

### Políticas Públicas

En cuanto a los elementos que estructuran las políticas públicas son el fin de la acción gubernamental, las metas que desdoblan tal fin, los medios y los procesos para la realización de las metas. Los fines se encuentran básicamente definidos por los derechos incorporados en el ordenamiento jurídico para cuya efectividad se requieren varias fases de organización temporal de la política pública, entre las cuales se encuentran: el establecimiento de una agenda, la formulación de alternativas, la decisión o voluntad pública de implementación de las políticas, su ejecución y evolución. En general se puede decir que las políticas públicas tienen un doble componente: Un marco normativo, pues se expresan en leyes o decretos (aunque también en normas de orden Municipal o Instituciones de acción Administrativas) y los medios de gestión pública, expresados a través de unas autoridades y agentes sociales con una competencia definida y unos recursos financieros.

Las fronteras tienen su propia realidad, sus especificidades, actividades y potencialidades económicas, los cuales constituyen el marco de sus características sociales, culturales e históricas que deben ser tomadas en cuenta a la hora de concebir los programas y proyectos de desarrollo para dichas áreas. Rojas (1998). La comunidad indígena wayúu, es una etnia ancestral que en la actualidad practica sus costumbres, tradiciones y valores y que de algún modo están integrados a una economía de mercado a nivel local. Al respecto Pérez, (2004) cita lo siguiente: “Es fuerte la influencia de la sociedad externa, aunque la cultura tradicional siga siendo dominante. Los wayúu se han transformado en indios con camiones. Cada familia tiene de alguna manera un centro en la península y un anexo en la ciudad. Los que abandonaron el pastoreo van frecuentemente a Maracaibo para practicar el contrabando, buscar empleos temporales o visitar a sus familiares”.

### Las Fronteras Geográficas en la Cultura Indígena

Los responsables de tomar decisiones se están dando cuenta que es muy difícil, en este mundo globalizado, aislar la actividad económica nacional de las circunstancias del mercado internacional, y más aún cuando se trata de ciudades fronterizas, por lo que las mediciones de la política interna en muchas ocasiones son eliminadas por el efecto de las actividades de las fuerzas del mercado global. Políticas como un aumento de tasas de interés o políticas de incentivo agrícola son algunos ejemplos de políticas que pueden atraer a inversionistas extranjeros, sin embargo, para el caso de la frontera en estudio estos aspectos son invisibles puesto que en esta frontera específicamente se presenta un caso atípico debido a la concepción de las comunidades indígenas de lo que significa para ellos el concepto de frontera. Se puede considerar que el modelo económico para esta frontera especialmente con las comunidades indígenas es muy diferente a lo que se presenta en otras fronteras, inclusive de los mismos países. En estudio realizado por la Unidad de Planeamiento Minero Energético –UPME–, se considera que son fuentes formales del derecho en cuanto a

los nexos o áreas protegidas de las comunidades en orden descendente, la Constitución, las normas internacionales, la ley y los decretos. Tanto en Colombia como en Venezuela, se presentan variadas fuentes del derecho relacionadas con la etnia wayúu. En este sentido, Arango y Sánchez (2004), consideran que dentro del contexto político normativo los estados han legitimado, con el fin de proteger y conservar la diversidad cultural y étnica. La Constitución política de Colombia de 1991, en su artículo 7, el estado reconoce y protege la diversidad étnica y cultural de la nación colombiana. De igual forma la Ley 191 de 1995 en su artículo 3, establece que el “Estado apoyará las iniciativas de las comunidades indígenas localizadas en las Zonas de Fronteras, referente a programa de fortalecimiento cultural, y desarrollo de tecnología, con el fin de mejorar su calidad de vida”.

En ese mismo contexto, la Constitución de la República Bolivariana de Venezuela de 1999, en el Capítulo VIII, art.119 reconoce la existencia de los pueblos indígenas y comunidades indígenas, su organización social, política y económica, sus culturas, usos y costumbres, idiomas y religiones, hábitat y derechos originarios sobre la tierra. De igual forma, el art. 121 hace mención sobre el derecho que tienen las comunidades indígenas a mantener y desarrollar su identidad étnica y cultural, cosmovisión, valores, espiritualidad y sus lugares sagrados y de culto; derecho a una educación propia y de carácter intercultural y bilingüe. Por su parte, el artículo 123, ratifica el derecho a mantener y promover sus propias prácticas económicas basadas en la reciprocidad, la solidaridad y el intercambio, sus actividades productivas tradicionales, su participación en la economía nacional y a definir sus prioridades. Así mismo en el artículo 124; garantiza y protege la propiedad intelectual colectiva de los conocimientos, tecnologías e innovaciones de los pueblos indígenas.

Las políticas que se adopten al lado de una franja fronteriza tienen repercusiones inmediatas en el país vecino. Uno de los elementos que caracteriza fundamentalmente son los intercambios comerciales, los cuales reflejan un proceso de intercambio compartido y un proceso de integración económica relacionados con los distintos sectores de las actividades comerciales en la zona. Los aspectos sociales y económicos relacionados con el desarrollo fronterizo deben tomar en cuentas las actividades que generan las poblaciones dentro de sus actividades comerciales y de trabajo, las cuales trascienden los límites políticos, de modo tal que la integración fronteriza, en muchos casos no viene sino a ordenar de una manera integral y técnica, ese movimiento espontáneo hacia la integración. Rojas (1998). En los últimos años se ha producido un cambio fundamental de concepción en la doctrina jurídica y en la ciencia política, sobre derechos de las comunidades indígenas en las políticas públicas de los Estados tanto en Colombia como en Venezuela. En este sentido, la Constitución política de Colombia manifiesta claramente este cambio, cuyas implicaciones empiezan a tener una trascendencia que sobrepasa el ámbito estrictamente jurídico.

De igual forma, La Ley 191 de 1995 en su artículo 3, establece que el “Estado apoyará las iniciativas de las comunidades indígenas localizadas en las Zonas de Fronteras, referente a programas de fortalecimiento cultural, y desarrollo artesanal, con el fin de mejorar su calidad de vida”. El mencionado artículo legal si bien permite la participación de los grupos étnicos minoritarios, circunscribe la iniciativa en los programas fronterizos a los temas allí mencionados. Esta misma ley estableció un régimen especial para aquellas áreas del territorio nacional colindantes con países vecinos. Esta norma buscaba crear condiciones para el desarrollo de las áreas fronterizas con el fin de impulsar su incorporación a la economía nacional y asegurar la integración con las comunidades fronterizas de los países colindantes. Por otra parte, la Constitución de la República Bolivariana de Venezuela (1999), con la Enmienda N° 1 del 19 de febrero de 2009 en su Artículo 120, señala "el aprovechamiento de los recursos naturales en los hábitat indígenas por parte del Estado se hará sin lesionar la integridad cultural, social y economía de los mismos. Artículo 123. Los pueblos indígenas tienen derecho a mantener y promover sus propias prácticas económicas basadas en la reciprocidad, la solidaridad y el intercambio; sus actividades productivas tradicionales, su participación en la economía nacional y a definir sus prioridades.

De igual forma, la Ley orgánica de pueblos y comunidades indígenas del 2005 (LOPCI), en su artículo 126, establece el fomento de la economía de los pueblos y comunidades indígenas, legislado por el Estado, en garantía del derecho de los pueblos y comunidades indígenas a participar en la economía nacional, fomentando fondos nacionales o regionales de financiamiento de actividades productivas para el desarrollo socioeconómico. Asimismo, la colocación de los productos indígenas en los mercados regionales, nacionales e internacionales, el establecimiento de mercados y centros de acopios promovidos por los pueblos, comunidades y organizaciones indígenas, a fin de acercar productores y consumidores, facilitar el intercambio comercial entre pueblos y comunidades indígenas ubicados en espacios fronterizos, mediante un régimen aduanero preferencial; mecanismos y facilidades de procesamiento, transporte, distribución y comercialización de los productos, la capacitación y asistencia técnica para la formulación, ejecución, control y evaluación de sus proyectos.

En este orden de ideas, en el marco del desarrollo local sustentable y su participación en la economía de la Nación, los pueblos y comunidades indígenas podrán decidir libremente sobre los productos indígenas, el desarrollo de sus prácticas económicas propias, ejercer sus actividades productivas tradicionales, fomentando a los productores indígenas la colocación de sus productos en el ámbito local, regional, nacional e internacional. Asimismo, dispone que aquellos pueblos y comunidades indígenas que ejerzan el comercio, mediante la prestación de actividades, bienes y servicios, deben identificar los bienes o productos con un símbolo que indique a que pueblo y comunidad indígena pertenece, si proviene de un sector, zona, territorio indígena, o si los materiales utilizados son productos de técnicas indígenas o si fue realizado por manos indígenas. Así las cosas, le corresponde al Estado, a través del Ejecutivo Nacional de sus órganos y entes, competentes en materia de Comercio e Industrias y Turismo, promover las condiciones favorables a los productores indígenas para que participen con sus productos en los procesos de intercambio comercial en el ámbito nacional e internacional.

En este sentido, es necesario legislar, sobre la materia de Patrimonio Cultural de los Pueblos y Comunidades Indígenas, se garantizaría más, según el gobierno, que un concepto de patrimonio, porque respondería más a la necesidad de los pueblos y comunidades indígenas, de tener seguridad jurídica en sus espacios vivos, con relación a sus prácticas, usos y costumbres, patrimonio cultural, artístico, espiritual, tecnológico, científico, conocimiento sobre la vida animal y vegetal, los diseños, procedimientos tradicionales, en especial, todos los conocimientos ancestrales relacionados con los pueblos y comunidades indígenas plasmados en el artículo 103 de la Ley Orgánica de los Pueblos y Comunidades Indígenas LOPCI, de igual manera, las comunidades tendrían oportunidades para seguir vinculados a los dos países sin interferir en sus costumbres.

En los pueblos indígenas la identidad descansa sobre el pilar de la pertenencia a su pueblo, sus lazos de parentesco, y el concepto de territorio ancestral generan fuertes lazos de identidad con su pueblo antes que con su nación. Se destacan cuatro elementos que caracterizan a los pueblos indígenas que afectan la dinámica de relaciones comerciales y la informalidad i) existencia de un pueblo indómito que valora su autonomía, ii) construcción de un territorio de refugio, iii) circulación y uso de armas de fuego, y iv) desarrollo de actividades comerciales al margen de los circuitos oficialmente establecidos. En este punto, cabe mencionar lo expuesto por Freije (2001) “Las normas y regulaciones, por una parte, y los resultados macroeconómicos, por la otra, han sido mencionados como las principales causas del tamaño del empleo informal. La falta de protección social y la baja productividad son las consecuencias que deben enfrentar los trabajadores que se dedican a actividades informales” (Freije, S., El Empleo Informal en América Latina y el Caribe: Causas, consecuencias y recomendaciones, documento presentado durante el primer seminario técnico de Consulta Regional sobre Temas Laborales. Panamá en Noviembre del 2001).

## METODOLOGIA

Desde la perspectiva metodológica, esta investigación constituye un estudio de tipo descriptivo-documental, por cuanto se realizó un análisis de la bibliografía fundamental disponible en español sobre los aspectos relacionados con el comercio internacional y las políticas públicas desarrolladas por los estados colombianos y venezolanos, respecto a la forma de comercializar en las zonas de fronteras ejercido por las comunidades indígenas wayúu. Como instrumentos y técnicas de recolección de la información se utilizaron fuentes secundarias, se recurrió a la observación de las actividades desarrolladas en la frontera colombo-venezolana en el eje de interconexión de los dos países conformado por el eje vial Maracaibo-Sinamaica-Paraguaipoa-Guarero-Paraguachón con aproximadamente 142 Km, el cual enlaza estos cuatro centros urbanos del Municipio Páez del estado Zulia en Venezuela, para conectar a las poblaciones colombianas de Maicao y Riohacha, en el departamento de La Guajira en Colombia, aplicando la etnografía como herramienta útil para explorar nuevas aproximaciones al objeto de investigación.

Tabla 1: Población y Muestra de la Investigación

Población	327.156 Comerciantes wayuu en la Guajira 115.755 Comerciantes wayuu en Maracaibo
Área GeoFigura	Departamento de La Guajira (Colombia), Estado Zulia (Venezuela).
Muestra	Comerciantes wayuu
Método de Recolección de la Información	Encuesta a los comerciantes
Método de Muestreo	Muestreo Simple
Tamaño de la Muestra	95 comerciantes wayuu
Error del Muestreo	+/- 2% error (p=q=0.5)
Nivel de confiabilidad	95%
Trabajo de Campo	Agosto 2012 a Agosto de 2013

Fuente: Grupo de Investigación Financo

$$no = \frac{z^2 \cdot x \cdot p \cdot x \cdot q}{e^2}; n = \frac{no}{1 + \frac{no}{N}}$$

La muestra de este estudio está compuesta por 95 comerciantes wayúu ubicados en el departamento de La Guajira, y el Estado Zulia, de acuerdo a la estructura indígena realizada por la ONIC (Organización Nacional Indígena de Colombia), estos representan el 48% (327.156) de ese departamento y el 8% (116.755), de la población del estado de Zulia al noroeste de Venezuela. El departamento de La Guajira tiene una población de 681.575 habitantes según datos del censo 2005 (DANE, Departamento Administrativo Nacional de Estadística). El Municipio de Maracaibo tiene una población total de 1 459 448 personas según el censo de 2011, lo que representa un 40% de la población de Zulia. Total indígenas 443.912. La técnica de recogida de información empleada fue la encuesta personal, a comerciantes indígenas utilizándose como soporte un cuestionario auto-administrado dirigido. Se realizaron contrastes de control en el proceso de elaboración de la encuesta. El trabajo de campo se inició en agosto 2012 y finalizó en agosto de 2013.

*Cuestionario estructurado:* Instrumento construido a partir de preguntas cerradas y abiertas, cuyo diligenciamiento se complementó con comentarios anexos. El cuestionario fue aplicado a una muestra de 95 comerciantes wayuu, específicamente a los que realizan transacciones en la frontera en estudio

## RESULTADOS

El departamento de La Guajira posee una larga tradición en la actividad de comercio internacional; su ubicación geográfica, su vecindad con Venezuela y la disponibilidad de varios puertos en su extensa área de litoral, le otorgan a la región importantes ventajas para dicha actividad. No obstante, el comercio se ha explotado de manera ilegal e informal, sin información cualificada, desconociendo las oportunidades que ofrecen los acuerdos bilaterales y multilaterales celebrados con la nación y otros países y subregiones sin la adecuada infraestructura de servicios complementarios, y en esos términos, los índices de productividad del sector son bajos, a tal punto, que no soportan los tratados económicos, y en lugar de verlos como una oportunidad los ven como una amenaza para el comercio de La Guajira. La Figura 2 muestra que el 98% de los encuestados no conocen los convenios que se han establecido entre los dos países relacionados con las actividades comerciales.

Figura 2: Convenios Bilaterales

Fuente: Grupo de Investigación Financo

Son múltiples y variadas las normativas existentes en los países tanto de Colombia como de Venezuela, respecto a las distintas actividades comerciales realizadas por las comunidades indígenas, es así como en Colombia la Ley 191 de 1995 en su artículo 3, establece que el "Estado apoyará las iniciativas de las comunidades indígenas localizadas en las Zonas de Fronteras, referente a programa de fortalecimiento cultural, y desarrollo de tecnología, con el fin de mejorar su calidad de vida". Por su parte, la Constitución de la República Bolivariana de Venezuela de 1999, en el Capítulo VIII, art.119 reconoce la existencia de los pueblos indígenas y comunidades indígenas, su organización social, política y económica, sus culturas, usos y costumbres, idiomas y religiones, hábitat y derechos originarios sobre la tierra. La Figura 3 por su parte dice que el 91% de los encuestados no ha recibido ningún tipo de apoyo o beneficio por parte del Estado.

Figura 3: Apoyo Recibido del Estado

Fuente: Grupo de Investigación Financo

El comercio informal lo practican de manera natural, indistintamente del lugar donde se encuentren. Es notable que las actividades ilícitas como la fabricación y el tráfico de drogas; la comercialización de artículos robados, y actividades de contrabando; así como también actividades que no tienen un carácter estrictamente ilícito pero que escapan a registro y/o a la regulación del gobierno, son actividades que se realizan de manera “normal” en la zona fronteriza colombo-venezolana en el punto Paraguachón, sin que medie un organismo que vele por estas comunidades que a lo largo de la historia han padecido de las inclemencias del destino. La Figura 4 presenta los resultados a la pregunta de las causas por las cuales se dedica a comerciar productos de contrabando y el 51% considera que es por la falta de fuentes de empleos formales mientras que el 39% manifiesta que les genera mayor utilidad, el 7% dice que el contrabando es la actividad que sabe hacer.

Figura 4: Comercio de Productos en Contrabando

Fuente: Grupo de Investigación Financo

Las comunidades indígenas wayúu desarrollan sus actividades comerciales sin pensar que se está actuando en dos países, precisamente porque se han establecido políticas que han respetado la territorialidad de esta comunidad, lo cual hace que conserven sus costumbres, su lengua, tradiciones y creencias ya que estas etnias no conciben una existencia separada de su comunidad, que geográficamente está ubicada en una región dividida por unos límites que para ellos no existen. De allí que al preguntarles si existía alguna diferencia en la forma de comercio de uno u otro lado de la frontera manifestaron en un 95% que no hay ninguna diferencia, que es prácticamente lo mismo. VER Figura 5.

Figura 5. Diferencia Fronteriza

## CONCLUSIONES

Realizado el análisis de las Políticas Públicas en el ámbito económico para la práctica del comercio informal llevado a cabo por las comunidades indígenas wayúu ubicadas en la zona fronteriza Colombo Venezolana, se concluye que el estado colombiano al igual que el estado venezolano, reconocen y garantizan a través de las distintas fuentes legales, el derecho que tienen los pueblos y comunidades indígenas a decidir libremente el desarrollo de sus prácticas económicas propias, a ejercer sus actividades productivas tradicionales, a participar en la economía nacional, a definir su modelo económico en el marco del desarrollo local sustentable al igual que el derecho sobre su territorio, expresado en la Constitución Política de los dos países, el Convenio 169 de la Organización Internacional del Trabajo OIT, sobre pueblos indígenas y tribales en países independientes celebrado en Ginebra en 1989, las sentencias 769 de 2009, respecto de la exploración y explotación de los recursos naturales dentro de los territorios de las comunidades indígenas; los autos 004 y 005 de 2009, referido a la protección de los derechos fundamentales de las personas y los pueblos indígenas desplazados por el conflicto armado o en riesgo de desplazamiento forzado; y en la ley orgánica de pueblos y comunidades indígenas- LOPCI.

En esa zona de frontera confluyen las comunidades indígenas wayúu de los dos países, practican un comercio informal, indistintamente de las políticas públicas que cada gobierno establece. Son situaciones atípicas diferentes a lo que normalmente se escribe sobre dos países vecinos, no se dan las características que describen los distintos autores sobre fronteras, sobre formas de comercializar, sobre el comercio binacional, sobre las comunidades indígenas wayúu.

Algunos grupos indígenas conserven su lengua, tradiciones y creencias, no conciben una existencia separada de su comunidad, para ellos no existen fronteras, el límite es invisible. Por otra parte, se concluye que muchas teorías económicas quedan sin piso al analizar la forma de comercio llevado a cabo en la zona en estudio, entre ellas se tiene lo que argumenta Jiménez (1997) en su artículo sobre la nueva teoría del comercio internacional, el cual expresa que existen dos razones por las que puede surgir el comercio entre países: la primera razón es que los países comercian porque son diferentes entre sí (en tecnología, dotaciones o preferencias) y pueden beneficiarse de ese comercio si cada uno produce y vende lo que sabe hacer relativamente mejor; la segunda razón es que los países comercian para aprovechar la presencia de economías de escala en la producción (retornos crecientes a la escala); si cada país produce un número limitado de bienes, puede producirlos mejor y en mayor volumen; así, venderán el excedente de lo que producen y comprarán lo que no producen. Lo que se observa en el mundo real es que ambas razones explican la presencia de comercio. Analizando el concepto, y comparando lo que sucede en la zona de

frontera en estudio, se tiene que cuando al autor menciona “Los países comercian porque son diferentes entre sí (en tecnología, dotaciones o preferencias)” la frase se queda sin piso, después de lo percibido en la zona en estudio, porque la diferencia en tecnología, dotaciones o preferencias es nula. No hay diferencia alguna en las comunidades wayúu que comercializan en la zona fronteriza de este sector.

Por otra parte, el mismo autor expresa “Lo que se observa en el mundo real es que ambas razones explican la presencia de comercio”. Sin embargo, en el mundo real, en este caso lo evidenciado en la frontera en estudio, también se observa que ninguna de esas razones se da, pero existe el comercio entre dos países, aunque de manera informal, y es precisamente el practicado por las comunidades indígenas wayúu asentadas en la frontera colombo-venezolana en el eje La Guajira-Estado Zulia. Otra conclusión del estudio es que el pueblo wayúu tiene libre movilidad en todo el departamento de La Guajira en Colombia y en el estado Zulia en Venezuela, indistintamente, es parte sustancial de su cultura y de su identidad, no presentan pasaporte para entrar o salir de un país a otro, lo cual es aceptado legalmente por los dos países, sin embargo, en variadas ocasiones los indígenas han manifestado su inconformidad en el sentido que consideran que su movilidad se ve afectada por la injerencia del Estado, los gobiernos y empresas multinacionales lo cual hace que estas comunidades se vean afectadas en su cultura. Lo anterior a causa de grandes proyectos desarrollados en su territorio, por lo que siguen luchando debido a que consideran que el pueblo wayúu es uno solo, el cual está unido por su historia, tienen distintas formas de organización, pero consideran que históricamente sobre la nación wayúu fueron formados los estados político-administrativos de los países Colombia y Venezuela, sin embargo, para ellos es indiferente esta división geoFigura, porque sostienen que para ellos no existe la frontera ni las divisiones entre países ni regiones. De allí que a pesar de existir una normatividad por parte del Estado, donde se reconoce la territorialidad, cultura, y demás aspectos de los grupos étnicos, hacen poca aplicabilidad de las mismas por su misma costumbre y culturalidad en lo referente a la comercialización de sus productos y un desconocimiento mínimo de su existencia, de ahí que hoy se refleje mas la comercialización desde la informalidad que desde la formalidad del Estado.

Como consecuencia de lo anterior, se percibe, la intervención estatal para focalizar esfuerzos en proyectos de desarrollo social, dentro de estos sectores, en particular con el fin de ayudarlos a generar su auto desarrollo pero no está presente de manera activa, se ve pero desde el punto de vista normativo, es decir, las políticas de Estado no tienen en cuenta la importancia de la comercialización como vehículo de desarrollo cultural sostenible en beneficio de las comunidades wayúu. Así las cosas, los gobiernos colombianos y venezolanos desarrollan programas en función de la situación que viven las comunidades indígenas asentadas en las fronteras respecto de la comercialización informal y el contrabando de distintos productos. Por último, se concluye que en los últimos años, el ejercicio de la actividad comercial ha sido afectado de manera significativa por las políticas económicas y fiscales de los diferentes gobiernos entre ellas: la apertura económica, las constantes reformas tributarias aduaneras, la firma de tratados de libre comercio, el desplazamiento forzado, entre otros. Todo esto ha generado un incremento del comercio informal, lo que conlleva a la competencia desleal en la actividad económica, desorganización empresarial, explotación infantil, invasión del espacio público, poco acceso a la seguridad social, desempleo y desarrollo de actividades comerciales al margen de los circuitos oficialmente establecidos, que afecta de igual manera a las comunidades indígenas asentadas en la zona de frontera en estudio. El gobierno nacional ha estado de espaldas a la realidad comercial de la ilegalidad y el contrabando que a través de la historia se viene dando en la zona de frontera en estudio.

# **POLITICAS PÚBLICAS Y MARKETING DE LAS COMUNIDADES WAYUU ASENTADAS EN LA FRONTERA COLOMBO-VENEZOLANA**

Edwin Salas Solano, Universidad de La Guajira, Colombia

Darcy Luz Mendoza, Universidad de La Guajira, Colombia

Yolmis Nicolás Rojano Alvarado, Universidad de La Guajira, Colombia

## **RESUMEN**

*El estudio tiene como propósito conocer la existente de políticas públicas y fiscal para el comercio ejercido por las comunidades wayuu y develar la realidad del comercio internacional practicado por los wayúu asentados en la frontera colombo-venezolana eje Guajira-Zulia, Se fundamenta teóricamente en los postulados de reconocidos economistas sobre las teorías existentes del comercio internacional. El estudio es de tipo descriptivo-documental, se realizó un análisis bibliográfico sobre la temática descrita, además de encuestas realizadas a comerciantes de estas comunidades. Los resultados evidencian el aislamiento total por parte del Estado a pesar de la existencia de políticas públicas así como el arraigado comercio ilegal y el contrabando de productos llevado a cabo por los wayúu asentados en la frontera. Se concluyó que a pesar de la existencia de varias políticas públicas, no se evidencia un aporte positivo en la comercialización realizada en la zona, además, las teorías existentes sobre comercio internacional, desconocen las prácticas comerciales realizadas por estos indígenas en la zona de estudio ya que para ellos no existe frontera entre los países de Colombia y Venezuela en el punto analizado.*

**PALABRAS CLAVE:** Políticas Públicas, Comercio Internacional, Comunidades Indígenas, Fronteras Colombo-Venezolana.

## **INTERNATIONAL TRADE EXECUTED BY WAYÚU COMMUNITIES LOCATED AT THE COLOMBIAN-VENEZUELAN BORDER**

### **ABSTRACT**

*The study aims to reveal the reality of the international trade performed by the Wayúu border settled at the Colombian-Venezuelan, Zulia -Guajira axis. Knowing the existing policies for trade exercised by these communities. It is theoretically based on the principles of renowned economists on existing theories of international trade. The study is descriptive- documentary, we conducted a literature review on the issue described, plus surveys made to Wayúu indigenous traders. Results show total isolation from the state despite the existence of public policies, the illegal trade rooted and smuggling of products conducted by the Wayúu settled at the border. It was concluded that despite the existence of various public policies, there is no evidence of a positive contribution to the marketing done in the area. Moreover, existing theories of international trade practices, unknown business practices made in the study area, and for them there is no border between the countries of Colombia and Venezuela at the point analyzed.*

## INTRODUCCIÓN

Las regiones fronterizas juegan un papel preponderante en procesos de integración, la frontera deja de ser una simple demarcación política-territorial para convertirse en un espacio importante debido básicamente a la intensidad de las relaciones presentadas en ella. Esta realidad es aún más fuerte en contexto donde se han construido redes sociales, económicas y políticas durante antaño, lo cual equivale a decir que se ha generado intereses compartidos a lo largo de la historia, razón por la cual las relaciones comerciales existentes entre las ciudades fronterizas del departamento de La Guajira en Colombia y el Estado Zulia en Venezuela, están influenciadas directamente con el comercio internacional ejercido de manera informal por las personas ubicadas en esa zona de frontera, lo anterior toma un matiz diferencial debido a que este comercio es practicado por comunidades indígenas. El documento presenta una síntesis de la forma en que estas comunidades desconocen los límites geográficos y demuestra cómo se desvirtúa la teoría sobre el comercio internacional respecto a la forma como se lleva a cabo esta actividad por estas comunidades llevando a cabo la comercialización informal y el contrabando de distintos productos.

Este artículo se propone examinar de qué manera la región de frontera entre Colombia y Venezuela en el punto Paraguachón-Paraguaipoa, ha sido caracterizada por la escasa presencia institucional, prácticas económicas con escasa vigilancia estatal, amplia presencia de población indígena, zonas inhóspitas para la colonización y activo comercio con el país vecino, lo cual ha jugado un rol muy importante en la relación binacional. Con base en una perspectiva histórica, se propone dar a conocer la importancia del conocimiento y respeto de una cultura étnica frente al desarrollo comercial en una frontera de amplio dinamismo comercial, mostrando dos factores claves como son la informalidad y el contrabando. Por otra parte el artículo establece como las teorías expuestas sobre el comercio internacional se desvirtúan frente a una realidad totalmente diferente a la realizada en la zona de frontera colombo-venezolana por los indígenas wayúu asentados en la zona y las políticas gubernamentales relacionadas con la misma. La frontera entre estos dos países es bastante extensa y abarca varias regiones en territorios de ambas naciones, pero la zona de La Guajira específicamente el corregimiento de Paraguachón, municipio de Maicao, frontera colombo-venezolana de la punta norte de Colombia y el municipio de Paraguaipoa en el estado Zulia.

## REVISION LITERARIA

El Comercio internacional es el intercambio de bienes y servicios entre países, según Smith (1776), el cual permite a un país especializarse en la producción de los bienes que fabrica de forma más eficiente y con menores costes, además de aumentar el mercado potencial de los bienes que produce determinada economía, y caracterizar las relaciones entre países, permitiendo medir la fortaleza de sus respectivas economías. En este sentido, el intercambio de los bienes presentado en la frontera, según este concepto, hace referencia a comercio internacional puesto que se está dando entre dos países (Colombia y Venezuela). En cuanto a la sustentación teórica de la investigación, la variable Comercio Internacional, estará soportada en las teorías de reconocidos autores economistas tales como: Philip Kotler, Adam Smit, David Ricardo, entre otros, por otro lado, se analizan las Políticas Públicas, existente en los países Colombia y Venezuela relacionadas con la relación de comercio entre estos se tiene las constituciones de ambos países como la carta magna, entre otras.

### Posición Geográfica del Comercio Binacional

La posición geográfica del comercio binacional de las comunidades wayúu, tal como se evidencia en el mapa, en la flecha roja es el punto exacto donde se desarrollan las actividades comerciales de los indígenas wayúu, este eje de interconexión de los dos países –Colombia-Venezuela- está conformado por el eje vial Maracaibo-Sinamaica-Paraguaipoa-Guarero-Paraguachón con aproximadamente 142 Km, el cual enlaza estos cuatro centros urbanos del Municipio Páez del estado Zulia, para conectar a las poblaciones colombianas de Maicao y Riohacha, en el departamento de La Guajira en Colombia.

Figura 1: Mapa frontera binacional Colombo-Venezolana

### Políticas Públicas

En cuanto a los elementos que estructuran las políticas públicas son el fin de la acción gubernamental, las metas que desdoblan tal fin, los medios y los procesos para la realización de las metas. Los fines se encuentran básicamente definidos por los derechos incorporados en el ordenamiento jurídico para cuya efectividad se requieren varias fases de organización temporal de la política pública, entre las cuales se encuentran: el establecimiento de una agenda, la formulación de alternativas, la decisión o voluntad pública de implementación de las políticas, su ejecución y evolución. En general se puede decir que las políticas públicas tienen un doble componente: Un marco normativo, pues se expresan en leyes o decretos (aunque también en normas de orden Municipal o Instituciones de acción Administrativas) y los medios de gestión pública, expresados a través de unas autoridades y agentes sociales con una competencia definida y unos recursos financieros.

Las fronteras tienen su propia realidad, sus especificidades, actividades y potencialidades económicas, los cuales constituyen el marco de sus características sociales, culturales e históricas que deben ser tomadas en cuenta a la hora de concebir los programas y proyectos de desarrollo para dichas áreas. Rojas (1998). La comunidad indígena wayúu, es una etnia ancestral que en la actualidad practica sus costumbres, tradiciones y valores y que de algún modo están integrados a una economía de mercado a nivel local. Al respecto Pérez, (2004) cita lo siguiente: “Es fuerte la influencia de la sociedad externa, aunque la cultura tradicional siga siendo dominante. Los wayúu se han transformado en indios con camiones. Cada familia tiene de alguna manera un centro en la península y un anexo en la ciudad. Los que abandonaron el pastoreo van frecuentemente a Maracaibo para practicar el contrabando, buscar empleos temporales o visitar a sus familiares”.

### Las Fronteras Geográficas en la Cultura Indígena

Los responsables de tomar decisiones se están dando cuenta que es muy difícil, en este mundo globalizado, aislar la actividad económica nacional de las circunstancias del mercado internacional, y más aún cuando se trata de ciudades fronterizas, por lo que las mediciones de la política interna en muchas ocasiones son eliminadas por el efecto de las actividades de las fuerzas del mercado global. Políticas como un aumento de tasas de interés o políticas de incentivo agrícola son algunos ejemplos de políticas que pueden atraer a inversionistas extranjeros, sin embargo, para el caso de la frontera en estudio estos aspectos son invisibles puesto que en esta frontera específicamente se presenta un caso atípico debido a la concepción de las comunidades indígenas de lo que significa para ellos el concepto de frontera. Se puede considerar que el modelo económico para esta frontera especialmente con las comunidades indígenas es muy diferente a lo que se presenta en otras fronteras, inclusive de los mismos países. En estudio realizado por la Unidad de

Planeamiento Minero Energético –UPME–, se considera que son fuentes formales del derecho en cuanto a los nexos o áreas protegidas de las comunidades en orden descendente, la Constitución, las normas internacionales, la ley y los decretos. Tanto en Colombia como en Venezuela, se presentan variadas fuentes del derecho relacionadas con la etnia wayúu. En este sentido, Arango y Sánchez (2004), consideran que dentro del contexto político normativo los estados han legitimado, con el fin de proteger y conservar la diversidad cultural y étnica. La Constitución política de Colombia de 1991, en su artículo 7, el estado reconoce y protege la diversidad étnica y cultural de la nación colombiana. De igual forma la Ley 191 de 1995 en su artículo 3, establece que el “Estado apoyará las iniciativas de las comunidades indígenas localizadas en las Zonas de Fronteras, referente a programa de fortalecimiento cultural, y desarrollo de tecnología, con el fin de mejorar su calidad de vida”.

En ese mismo contexto, la Constitución de la República Bolivariana de Venezuela de 1999, en el Capítulo VIII, art.119 reconoce la existencia de los pueblos indígenas y comunidades indígenas, su organización social, política y económica, sus culturas, usos y costumbres, idiomas y religiones, hábitat y derechos originarios sobre la tierra. De igual forma, el art. 121 hace mención sobre el derecho que tienen las comunidades indígenas a mantener y desarrollar su identidad étnica y cultural, cosmovisión, valores, espiritualidad y sus lugares sagrados y de culto; derecho a una educación propia y de carácter intercultural y bilingüe. Por su parte, el artículo 123, ratifica el derecho a mantener y promover sus propias prácticas económicas basadas en la reciprocidad, la solidaridad y el intercambio, sus actividades productivas tradicionales, su participación en la economía nacional y a definir sus prioridades. Así mismo en el artículo 124; garantiza y protege la propiedad intelectual colectiva de los conocimientos, tecnologías e innovaciones de los pueblos indígenas.

Las políticas que se adopten al lado de una franja fronteriza tienen repercusiones inmediatas en el país vecino. Uno de los elementos que caracteriza fundamentalmente son los intercambios comerciales, los cuales reflejan un proceso de intercambio compartido y un proceso de integración económica relacionados con los distintos sectores de las actividades comerciales en la zona. Los aspectos sociales y económicos relacionados con el desarrollo fronterizo deben tomar en cuentas las actividades que generan las poblaciones dentro de sus actividades comerciales y de trabajo, las cuales trascienden los límites políticos, de modo tal que la integración fronteriza, en muchos casos no viene sino a ordenar de una manera integral y técnica, ese movimiento espontáneo hacia la integración. Rojas (1998). En los últimos años se ha producido un cambio fundamental de concepción en la doctrina jurídica y en la ciencia política, sobre derechos de las comunidades indígenas en las políticas públicas de los Estados tanto en Colombia como en Venezuela. En este sentido, la Constitución política de Colombia manifiesta claramente este cambio, cuyas implicaciones empiezan a tener una trascendencia que sobrepasa el ámbito estrictamente jurídico.

De igual forma, La Ley 191 de 1995 en su artículo 3, establece que el “Estado apoyará las iniciativas de las comunidades indígenas localizadas en las Zonas de Fronteras, referente a programas de fortalecimiento cultural, y desarrollo artesanal, con el fin de mejorar su calidad de vida”. El mencionado artículo legal si bien permite la participación de los grupos étnicos minoritarios, circunscribe la iniciativa en los programas fronterizos a los temas allí mencionados. Esta misma ley estableció un régimen especial para aquellas áreas del territorio nacional colindantes con países vecinos. Esta norma buscaba crear condiciones para el desarrollo de las áreas fronterizas con el fin de impulsar su incorporación a la economía nacional y asegurar la integración con las comunidades fronterizas de los países colindantes. Por otra parte, la Constitución de la República Bolivariana de Venezuela (1999), con la Enmienda N° 1 del 19 de febrero de 2009 en su Artículo 120, señala "el aprovechamiento de los recursos naturales en los hábitat indígenas por parte del Estado se hará sin lesionar la integridad cultural, social y economía de los mismos. Artículo 123. Los pueblos indígenas tienen derecho a mantener y promover sus propias prácticas económicas basadas en la reciprocidad, la solidaridad y el intercambio; sus actividades productivas tradicionales, su participación en la economía nacional y a definir sus prioridades. De igual forma, la Ley orgánica de pueblos y

comunidades indígenas del 2005 (LOPCI), en su artículo 126, establece el fomento de la economía de los pueblos y comunidades indígenas, legislado por el Estado, en garantía del derecho de los pueblos y comunidades indígenas a participar en la economía nacional, fomentando fondos nacionales o regionales de financiamiento de actividades productivas para el desarrollo socioeconómico. Asimismo, la colocación de los productos indígenas en los mercados regionales, nacionales e internacionales, el establecimiento de mercados y centros de acopios promovidos por los pueblos, comunidades y organizaciones indígenas, a fin de acercar productores y consumidores, facilitar el intercambio comercial entre pueblos y comunidades indígenas ubicados en espacios fronterizos, mediante un régimen aduanero preferencial; mecanismos y facilidades de procesamiento, transporte, distribución y comercialización de los productos, la capacitación y asistencia técnica para la formulación, ejecución, control y evaluación de sus proyectos.

En este orden de ideas, en el marco del desarrollo local sustentable y su participación en la economía de la Nación, los pueblos y comunidades indígenas podrán decidir libremente sobre los productos indígenas, el desarrollo de sus prácticas económicas propias, ejercer sus actividades productivas tradicionales, fomentando a los productores indígenas la colocación de sus productos en el ámbito local, regional, nacional e internacional. Asimismo, dispone que aquellos pueblos y comunidades indígenas que ejerzan el comercio, mediante la prestación de actividades, bienes y servicios, deben identificar los bienes o productos con un símbolo que indique a que pueblo y comunidad indígena pertenece, si proviene de un sector, zona, territorio indígena, o si los materiales utilizados son productos de técnicas indígenas o si fue realizado por manos indígenas. Así las cosas, le corresponde al Estado, a través del Ejecutivo Nacional de sus órganos y entes, competentes en materia de Comercio e Industrias y Turismo, promover las condiciones favorables a los productores indígenas para que participen con sus productos en los procesos de intercambio comercial en el ámbito nacional e internacional.

En este sentido, es necesario legislar, sobre la materia de Patrimonio Cultural de los Pueblos y Comunidades Indígenas, se garantizaría más, según el gobierno, que un concepto de patrimonio, porque respondería más a la necesidad de los pueblos y comunidades indígenas, de tener seguridad jurídica en sus espacios vivos, con relación a sus prácticas, usos y costumbres, patrimonio cultural, artístico, espiritual, tecnológico, científico, conocimiento sobre la vida animal y vegetal, los diseños, procedimientos tradicionales, en especial, todos los conocimientos ancestrales relacionados con los pueblos y comunidades indígenas plasmados en el artículo 103 de la Ley Orgánica de los Pueblos y Comunidades Indígenas LOPCI, de igual manera, las comunidades tendrían oportunidades para seguir vinculados a los dos países sin interferir en sus costumbres.

En los pueblos indígenas la identidad descansa sobre el pilar de la pertenencia a su pueblo, sus lazos de parentesco, y el concepto de territorio ancestral generan fuertes lazos de identidad con su pueblo antes que con su nación. Se destacan cuatro elementos que caracterizan a los pueblos indígenas que afectan la dinámica de relaciones comerciales y la informalidad i) existencia de un pueblo indómito que valora su autonomía, ii) construcción de un territorio de refugio, iii) circulación y uso de armas de fuego, y iv) desarrollo de actividades comerciales al margen de los circuitos oficialmente establecidos. En este punto, cabe mencionar lo expuesto por Freije (2001) “Las normas y regulaciones, por una parte, y los resultados macroeconómicos, por la otra, han sido mencionados como las principales causas del tamaño del empleo informal. La falta de protección social y la baja productividad son las consecuencias que deben enfrentar los trabajadores que se dedican a actividades informales”( Freije, S., El Empleo Informal en América Latina y el Caribe: Causas, consecuencias y recomendaciones, documento presentado durante el primer seminario técnico de Consulta Regional sobre Temas Laborales. Panamá en Noviembre del 2001.)

## METODOLOGIA

Desde la perspectiva metodológica, esta investigación constituye un estudio de tipo descriptivo-

documental, por cuanto se realizó un análisis de la bibliografía fundamental disponible en español sobre los aspectos relacionados con el comercio internacional y las políticas públicas desarrolladas por los estados colombianos y venezolanos, respecto a la forma de comercializar en las zonas de fronteras ejercido por las comunidades indígenas wayúu. Como instrumentos y técnicas de recolección de la información se utilizaron fuentes secundarias, se recurrió a la observación de las actividades desarrolladas en la frontera colombo-venezolana en el eje de interconexión de los dos países conformado por el eje vial Maracaibo-Sinamaica-Paraguaipoa-Guarero-Paraguachón con aproximadamente 142 Km, el cual enlaza estos cuatro centros urbanos del Municipio Páez del estado Zulia en Venezuela, para conectar a las poblaciones colombianas de Maicao y Riohacha, en el departamento de La Guajira en Colombia, aplicando la etnografía como herramienta útil para explorar nuevas aproximaciones al objeto de investigación.

Tabla 1. Población y Muestra de la Investigación

<b>Población</b>	<b>327.156 Comerciantes Wayuu en la Guajira 115.755 Comerciantes Wayuu en Maracaibo</b>
Área GeoFigura	Departamento de La Guajira (Colombia), Estado Zulia (Venezuela).
Muestra	Comerciantes wayuu
Método de Recolección de la Información	Encuesta a los comerciantes
Método de Muestreo	Muestreo Simple
Tamaño de la Muestra	95 comerciantes wayuu
Error del Muestreo	+/- 2% error (p=q=0.5)
Nivel de confiabilidad	95%
Trabajo de Campo	Agosto 2012 a Agosto de 2013

Fuente: Grupo De Investigación Financo

$$no = \frac{z^2 \cdot p \cdot q}{e^2}; n = \frac{no}{1 + \frac{no}{N}}$$

La muestra de este estudio está compuesta por 95 comerciantes wayúu ubicados en el departamento de La Guajira, y el Estado Zulia, de acuerdo a la estructura indígena realizada por la ONIC (Organización Nacional Indígena de Colombia), estos representan el 48% (327.156) de ese departamento y el 8% (116.755), de la población del estado de Zulia al noroeste de Venezuela. El departamento de La Guajira tiene una población de 681.575 habitantes según datos del censo 2005 (DANE, Departamento Administrativo Nacional de Estadística). El Municipio de Maracaibo tiene una población total de 1 459 448 personas según el censo de 2011, lo que representa un 40% de la población de Zulia. Total indígenas 443.912. La técnica de recogida de información empleada fue la encuesta personal, a comerciantes indígenas utilizándose como soporte un cuestionario auto-administrado dirigido. Se realizaron contrastes de control en el proceso de elaboración de la encuesta. El trabajo de campo se inició en agosto 2012 y finalizó en agosto de 2013.

*Cuestionario estructurado:* Instrumento construido a partir de preguntas cerradas y abiertas, cuyo diligenciamiento se complementó con comentarios anexos. El cuestionario fue aplicado a una muestra de 95 comerciantes wayuu, específicamente a los que realizan transacciones en la frontera en estudio.

## RESULTADOS

El departamento de La Guajira posee una larga tradición en la actividad de comercio internacional; su ubicación geoFigura, su vecindad con Venezuela y la disponibilidad de varios puertos en su extensa área de litoral, le otorgan a la región importantes ventajas para dicha actividad. No obstante, el comercio se ha explotado de manera ilegal e informal, sin información cualificada, desconociendo las oportunidades que ofrecen los acuerdos bilaterales y multilaterales celebrado con la nación y otros países y subregiones sin la adecuada infraestructura de servicios complementarios, y en esos términos, los índices de productividad del sector son bajo, a tal punto, que no soportan los tratados económicos, y en lugar de verlos como una oportunidad los ven como una amenaza para el comercio de La Guajira. El 98% de los encuestados no conocen los convenios que se han establecidos entre los dos países relacionados con las actividades comerciales.

Son múltiples y variadas las normativas existente en los países tanto de Colombia como de Venezuela, respecto a las distintas actividades comerciales realizadas por las comunidades indígenas, es así como en Colombia la Ley 191 de 1995 en su artículo 3, establece que el “Estado apoyará las iniciativas de las comunidades indígenas localizadas en las Zonas de Fronteras, referente a programa de fortalecimiento cultural, y desarrollo de tecnología, con el fin de mejorar su calidad de vida”. Por su parte, la Constitución de la República Bolivariana de Venezuela de 1999, en el Capítulo VIII, art.119 reconoce la existencia de los pueblos indígenas y comunidades indígenas, su organización social, política y económica, sus culturas, usos y costumbres, idiomas y religiones, hábitat y derechos originarios sobre la tierra. El 91% de los encuestados no ha recibido ningún tipo de apoyo o beneficio por parte del Estado.

El comercio informal lo practican de manera natural, indistintamente del lugar donde se encuentren. Es notable que las actividades ilícitas como la fabricación y el tráfico de drogas; la comercialización de artículos robados, y actividades de contrabando; así como también actividades que no tienen un carácter estrictamente ilícito pero que escapan a registro y/o a la regulación del gobierno, son actividades que se realizan de manera “normal” en la zona fronteriza colombo-venezolana en el punto Paraguachón, sin que medie un organismo que vele por estas comunidades que a lo largo de la historia han padecido de las inclemencias del destino. Los resultados a la pregunta de las causas por las cuales se dedica a comerciar productos de contrabando y el 51% considera que es por la falta de fuentes de empleos formales mientras que el 39% manifiesta que les genera mayor utilidad, el 7% dice que el contrabando es la actividad que sabe hacer. Las comunidades indígenas wayúu desarrollan sus actividades comerciales sin pensar que se está actuando en dos países, precisamente porque se han establecido políticas que han respetado la territorialidad de esta comunidad, lo cual hace que conserven sus costumbres, su lengua, tradiciones y creencias ya que estas etnias no conciben una existencia separada de su comunidad, que geoFiguramente está ubicada en una región dividida por unos límites que para ellos no existen. De allí que al preguntarles si existía alguna diferencia en la forma de comercio de uno u otro lado de la frontera manifestaron en un 95% que no hay ninguna diferencia, que es prácticamente lo mismo.

## CONCLUSIONES

Realizado el análisis de las Políticas Públicas en el ámbito económico para la práctica del comercio informal llevado a cabo por las comunidades indígenas wayúu ubicadas en la zona fronteriza Colombo Venezolana, se concluye que el estado colombiano al igual que el estado venezolano, reconocen y garantizan a través de las distintas fuentes legales, el derecho que tienen los pueblos y comunidades indígenas a decidir libremente el desarrollo de sus prácticas económicas propias, a ejercer sus actividades productivas tradicionales, a participar en la economía nacional, a definir su modelo económico en el marco del desarrollo local sustentable al igual que el derecho sobre su territorio, expresado en la Constitución Política de los dos países, el Convenio 169 de la Organización Internacional del Trabajo OIT, sobre pueblos indígenas y

tribales en países independientes celebrado en ginebra en 1989, las sentencia 769 de 2009, respecto de la exploración y explotación de los recursos naturales dentro de los territorios de las comunidades indígenas; los autos 004 y 005 de 2009, referido a la protección de los derechos fundamentales de las personas y los pueblos indígenas desplazados por el conflicto armado o en riesgo de desplazamiento forzado; y en la ley orgánica de pueblos y comunidades indígenas- LOPCI.

En esa zona de frontera confluyen las comunidades indígenas wayúu de los dos países, practican un comercio informal, indistintamente de las políticas públicas que cada gobierno establece. Son situaciones atípicas diferentes a lo que normalmente se escribe sobre dos países vecinos, no se dan las características que describen los distintos autores sobre fronteras, sobre formas de comercializar, sobre el comercio binacional, sobre las comunidades indígenas wayúu. Algunos grupos indígenas conserven su lengua, tradiciones y creencias, no conciben una existencia separada de su comunidad, para ellos no existen fronteras, el límite es invisible.

Por otra parte, se concluye que muchas teorías económicas quedan sin piso al analizar la forma de comercio llevado a cabo en la zona en estudio, entre ellas se tiene lo que argumenta Jiménez (1997) en su artículo sobre la nueva teoría del comercio internacional, el cual expresa que existen dos razones por las que puede surgir el comercio entre países: la primera razón es que los países comercian porque son diferentes entre sí (en tecnología, dotaciones o preferencias) y pueden beneficiarse de ese comercio si cada uno produce y vende lo que sabe hacer relativamente mejor; la segunda razón es que los países comercian para aprovechar la presencia de economías de escala en la producción (retornos crecientes a la escala); si cada país produce un número limitado de bienes, puede producirlos mejor y en mayor volumen; así, venderán el excedente de lo que producen y comprarán lo que no producen. Lo que se observa en el mundo real es que ambas razones explican la presencia de comercio.

Analizando el concepto, y comparando lo que sucede en la zona de frontera en estudio, se tiene que cuando al autor menciona “Los países comercian porque son diferentes entre sí (en tecnología, dotaciones o preferencias)” la frase se queda sin piso, después de lo percibido en la zona en estudio, porque la diferencia en tecnología, dotaciones o preferencias es nula. No hay diferencia alguna en las comunidades wayúu que comercializan en la zona fronteriza de este sector. Por otra parte, el mismo autor expresa “Lo que se observa en el mundo real es que ambas razones explican la presencia de comercio”. Sin embargo, en el mundo real, en este caso lo evidenciado en la frontera en estudio, también se observa que ninguna de esas razones se da, pero existe el comercio entre dos países, aunque de manera informal, y es precisamente el practicado por las comunidades indígenas wayúu asentadas en la frontera colombo-venezolana en el eje La Guajira-Estado Zulia.

Otra conclusión del estudio es que el pueblo wayúu tiene libre movilidad en todo el departamento de La Guajira en Colombia y en el estado Zulia en Venezuela, indistintamente, es parte sustancial de su cultura y de su identidad, no presentan pasaporte para entrar o salir de un país a otro, lo cual es aceptado legalmente por los dos países, sin embargo, en variadas ocasiones los indígenas han manifestado su inconformidad en el sentido que consideran que su movilidad se ve afectada por la injerencia del Estado, los gobiernos y empresas multinacionales lo cual hace que estas comunidades se vean afectadas en su cultura. Lo anterior a causa de grandes proyectos desarrollados en su territorio, por lo que siguen luchando debido a que consideran que el pueblo wayúu es uno solo, el cual está unido por su historia, tienen distintas formas de organización, pero consideran que históricamente sobre la nación wayúu fueron formados los estados político-administrativos de los países Colombia y Venezuela, sin embargo, para ellos es indiferente esta división geoFigura, porque sostienen que para ellos no existe la frontera ni las divisiones entre países ni regiones.

De allí que a pesar de existir una normatividad por parte del Estado, donde se reconoce la territorialidad, cultura, y demás aspectos de los grupos étnicos, hacen poca aplicabilidad de las mismas por su misma costumbre y culturalidad en lo referente a la comercialización de sus productos y un desconocimiento mínimo de su existencia, de ahí que hoy se refleje mas la comercialización desde la informalidad que desde la formalidad del Estado. Como consecuencia de lo anterior, se percibe, la intervención estatal para focalizar esfuerzos en proyectos de desarrollo social, dentro de estos sectores, en particular con el fin de ayudarlos a generar su auto desarrollo pero no está presente de manera activa, se ve pero desde el punto de vista normativo, es decir, las políticas de Estado no tienen en cuenta la importancia de la comercialización como vehículo de desarrollo cultural sostenible en beneficio de las comunidades wayúu. Así las cosas, los gobiernos colombianos y venezolanos desarrollan programas en función de la situación que viven las comunidades indígenas asentadas en las fronteras respecto de la comercialización informal y el contrabando de distintos productos.

Por último, se concluye que en los últimos años, el ejercicio de la actividad comercial ha sido afectado de manera significativa por las políticas económicas y fiscales de los diferentes gobiernos entre ellas: la apertura económica, las constantes reformas tributarias aduaneras, la firma de tratados de libre comercio, el desplazamiento forzado, entre otros. Todo esto ha generado un incremento del comercio informal, lo que conlleva a la competencia desleal en la actividad económica, desorganización empresarial, explotación infantil, invasión del espacio público, poco acceso a la seguridad social, desempleo y desarrollo de actividades comerciales al margen de los circuitos oficialmente establecidos, que afecta de igual manera a las comunidades indígenas asentadas en la zona de frontera en estudio. El gobierno nacional ha estado de espaldas a la realidad comercial de la ilegalidad y el contrabando que a través de la historia se viene dando en la zona de frontera en estudio.

## RESUMEN

*El propósito de esta investigación es dar a conocer la percepción que se ha generado respecto del multidependiente a través de sus funciones como factor de facilitación del despacho de mercancías y su desaduanamiento, que se realizan por la aduana de Manzanillo ubicada en el puerto de Manzanillo, Colima, así como las ventajas y desventajas que se generan por su intervención e identificar en que otras tareas puede participar y con esto poder proponer la manera en que su actuación pueda favorecer al desarrollo del puerto de Manzanillo, Colima y su actividad de comercio exterior. La exploración de la información se efectuó a través de una investigación de campo realizada sobre el personal que labora en las agencias aduanales asociadas a la asociación de agentes aduanales del puerto de Manzanillo, Colima A. C. (AAPUMAC, A. C.), respecto de una muestra de las agencias aduanales que reciben el servicio del multi dependiente, obteniendo los siguientes resultados: la agilización del despacho aduanero de mercancías a través de las funciones del multi dependiente han generado resultados favorables en favor de las agencias aduanales, destacando la facilitación de los tramites de relativos al despacho aduanero y desaduanamiento de mercancías, disminución del tiempo del despacho, tiendo mayor presencia en los módulos del sistema de selección automatizada, la plataforma del reconocimiento aduanero y los recintos fiscalizados, concluyendo que para optimizar el movimiento de mercancías en el despacho aduanero y su desaduanamiento, los encuestados proponen el reclutamiento de más personal para desempeñarse como multi dependientes.*

## PERCEPTION OF DEPENDENT MULTI FUNCTIONS THROUGH AS A FACTOR OF FACILITATION OFFICE OF GOODS

### ABSTRACT

*The purpose of this research is to provide the perception that has been generated regarding multi dependent through their roles as facilitating factor for clearance of goods and customs clearance which are performed by the office of Manzanillo located in the port of Manzanillo, Colima, and the advantages and disadvantages that are generated by his speech and identify other tasks that can participate and to propose how their actions may favor the development of the port of Manzanillo, Colima and foreign trade activity. Exploring the information was made through a field research on personnel working in customs agencies associated brokers association of Manzanillo, Colima AC (AAPUMAC, AC), for a sample of customs agencies served by the multi-dependent, with the following results: speed up the clearance of goods through the functions of multi-dependent generated favorable results for Customs agencies, highlighting the simplification of paperwork related to customs clearance and customs clearance of goods, decreased clearance time, I tend more presence in the automated system modules selection, the platform of the customs inspection and bonded warehouses, concluded that to optimize the movement of goods in customs clearance and customs clearance, respondents suggested recruiting more staff to serve as multi-dependent.*

## INTRODUCCIÓN

Las empresas mexicanas que participan en la economía internacional, buscan que su mercancía llegue a su destino en las condiciones adecuadas y pactadas entre cliente-vendedor y en el menor tiempo posible, ya sea a los almacenes o bodegas del importador o al domicilio del comprador en el extranjero, en el caso de los exportadores. Por tanto, por parte del gobierno federal de México a fin de contribuir a la competitividad de las empresas, sin perjuicio del control y cumplimiento de las disposiciones aduaneras y de comercio exterior, a través de las secretarías de Economía y de Hacienda y Crédito Público ha implementado diversas acciones de simplificación, automatización y mejora de los procesos aduaneros y de comercio exterior, que contemple, entre otras, la incorporación de tecnología y el desarrollo de esquemas adicionales para realizar operaciones de comercio exterior, la disminución de medidas de control que incrementan tiempos y costos de las operaciones aduaneras y la unificación de los programas de fomento a las exportaciones, por mencionar algunas situaciones, para lo cual se han modificado, adicionado, abrogado o derogado diversas disposiciones legales, sobre este respecto Reyes, E.

(2006) expresa que “Desde 1991 la aduana de México demostró su interés por pasar desapercibido, al implementar el semáforo que, en aquel entonces, era aleatorio y que con el paso del tiempo se convirtió en automatizado, por no decir parametrizado. Con este nuevo mecanismo se logró que el 90% de las operaciones de comercio exterior pasaran sin revisión física haciendo mucho más fluido el tráfico de las mercancías y dada la parametrización que controla los “rojos” sin exponer en demasía al país con la entrada de productos nocivos o peligrosos para nuestra salud o para la economía nacional. A partir de entonces se inició el camino a la simplificación y agilización...”

Los actores que participan en el proceso del despacho aduanero de mercancías llevan en hombros una gran responsabilidad, ya que si estos realizan sus funciones de forma oportuna, apegados a los lineamientos de calidad, regulaciones, higiene, leyes y demás disposiciones, la introducción o extracción de mercancías de territorio nacional se efectuara de manera efectiva. El proceso de importaciones y exportación de mercaderías implica la atención de una serie de requisitos y el desarrollo de otros tantos procesos, el proceso principal que se atiende a fin de poder realizar la introducción o extracción de mercadería desde territorio extranjero hacia nuestro territorio o viceversa, es el despacho aduanero o despacho de mercancías, el cual de conformidad con la ley Aduanera vigente en México debe entenderse como “el conjunto de actos y formalidades relativos a la entrada de mercancías al territorio nacional y a su salida del mismo, que de acuerdo con los diferentes tráficos y regímenes aduaneros establecidos en el presente ordenamiento, deben realizar ante la aduana, las autoridades aduaneras y quienes introducen o extraen mercancías del territorio nacional, ya sea los consignatarios, destinatarios, propietarios, poseedores o tenedores en las importaciones y los remitentes en las exportaciones, así como los agentes aduanales, empleando el sistema electrónico aduanero.”

Se desprende de la definición legal del despacho aduanero, que es un proceso ( relativo a la importación y exportación de mercaderías) constituido por actos y formalidades, donde intervienen diferentes entes, dentro de los cuales se encuentran los Agentes Aduanales, agentes cuya principal función es promover por cuenta ajena el despacho de las mercancías, en los diferentes regímenes aduaneros previstos en la ley aduanera vigente de México, en relación a la importancia de la intervención de los agentes aduanales Reyes, E. (2009) señala que “la intervención de los Agentes y Apoderados Aduanales, ha sido por mucho muy positiva para nuestro país en términos de facilitación, cumplimiento y representatividad. Por su parte los Agentes Aduanales son personas físicas independientes que obtienen su licencia, patente o autorización de manos de la Administración General de Aduanas”

Los agentes aduanales según lo establecido en la legislación aduanera vigente en México, serán apoyados en la gestión de los trámites relativos al despacho aduanero por mandatarios, dependientes autorizados e inclusive con la posibilidad de constituir sociedades con otros agentes para extender la realización de las formalidades del despacho aduanal, sin embargo, en el caso de los dependientes autorizados, su existencia no ha sido del todo suficiente, al existir limitación en la cantidad dependientes por parte de las autoridades aduaneras en función del tipo de aduana y el volumen de sus operaciones, generándose la necesidad de incorporar un nuevo ente que participe en los trámites del despacho aduanal al cual se le denominó multidependiente, es en el año 2010, con las modificaciones a las reglas de carácter general en materia de comercio exterior, en donde se incorpora la posibilidad legal de que las confederaciones y asociaciones de agentes aduanales pondrán a disposición de sus agremiados, un listado con los nombres de las personas que podrán actuar como multidependientes, que coadyuvarán con estos en la gestión de sus trámites en los diversos espacios donde se desarrolla el despacho aduanero de mercancías. Por lo que el blanco de la investigación es conocer la percepción del multidependiente a través de sus funciones como factor de facilitación del despacho de mercancías por la aduana de Manzanillo y en base a los resultados de la investigación realizar propuestas de mejora a fin de contribuir al mejoramiento del proceso de despacho de mercancías, en beneficio, no solo de los agentes aduanales, si no en general del comercio exterior en México.

## REVISIÓN LITERARIA

En México a través de los años se ha acentuado cada vez más la situación relacionada con el entorpecimiento del proceso del despacho aduanero de mercancías, dejando a importadores y exportadores en su calidad de clientes de los agentes aduanales, insatisfechos, demorándose el proceso de desaduanamiento de mercancías dentro del Puerto de Manzanillo. Como se mencionó, a quien se le encomienda de forma general los trámites relacionados al despacho aduanero de mercancías es a los agentes aduanales, resultando importante definir que es un agente aduanal. Para efectos de la ley aduanera vigente en México en su artículo 159 el agente aduanal es definido como “la persona física autorizada por el Servicio de Administración Tributaria, mediante una patente, para promover por cuenta ajena el despacho de las mercancías, en los diferentes regímenes aduaneros previstos en esta Ley”

Para Acosta, F. (2005) “Agente Aduanal es la persona física debidamente autorizada por la Secretaría de Hacienda y Crédito Público, mediante la expedición de una patente, para ocuparse a nombre y por cuenta ajena de los actos y las formalidades del despacho aduanero y celebrar los actos civiles y mercantiles necesarios para recibir las mercancías, así como para hacerlas llegar a su destino” En México para la representación y gestión de los intereses de los agentes aduanales se han constituido asociaciones civiles con esa función, en el puerto de Manzanillo, Colima, México, existe la asociación de agentes aduanales del puerto de Manzanillo, Colima, A.C. (AAPUMAC, A. C) constituida legalmente el 14 de Agosto de 1985 y conformada originalmente por ocho Agentes Aduanales adscritos a la Aduana de Manzanillo, en la figura de una Asociación civil, ha sido y seguirá siendo un detonante del desarrollo, prospección y proyección del Puerto de Manzanillo.

La AAPUMAC, A. C. Nace como respuesta a la necesidad e interés de un grupo de emprendedores agentes aduanales quienes visualizaron que agruparse en un organismo que los representara ante las diversas autoridades del ámbito local y regional, les volverá capaces de replicar esta representatividad a sus clientes y de poder ser partícipes del crecimiento del puerto de Manzanillo. De tal forma que a través de ella sus asociados puedan contar con servicios comunes encaminados a la satisfacción de los requerimientos directamente relacionados con la materia aduanera y de comercio exterior mediante asesoría, gestión, representación, capacitación y promoción del comercio internacional, fomentando el mejoramiento colectivo e individual de sus miembros. En relación a los propósitos señalados para la gestión de los intereses de los agentes aduanales por cuenta de las asociaciones en el puerto de Manzanillo se impulsó en

el año 2011, un proyecto por parte del entonces presidente Arturo Eleazar Villaseñor Sánchez, en coordinación con el también entonces administrador de la Aduana de Manzanillo, Lic. Jorge Daniel Castro Acedo y el ministerio público federal, para la gestión e implementación de una novedosa figura a la cual se le indetifico como “Multidependiente”, firmando el convenio (acuerdo) el día 15 de febrero del 2012, con la finalidad de realizar un despacho aduanero más eficiente y eficaz en el cual se agilizaran las operaciones aduaneras autorizadas previamente por la autoridad aduanera, así como también por el agente aduanal que desee que el observador aperture sus embarques.

Dicha autorización emitida por el agente aduanal nace del reconocimiento pleno de la representación del multidependiente designado por la AAAPUMAC, A. C., en la cual la agencia aduanal manifiesta su autorización para que la figura pueda desempeñar su función de multidependiente y poder así intervenir dentro del despacho en operaciones propias de la patente que ejerza y en los términos y condiciones establecidos en los lineamientos del convenio dado a conocer a la aduana de Manzanillo, con la finalidad de facilitar la prestación de los servicios propios de la agencia aduanal.

La importancia de la implementación de esta figura estriba principalmente en el desarrollo oportuno de las operaciones aduaneras, ya que los servicios prestados por el multidependiente servirán para brindar apoyo a las agencias aduanales adscritas a la aduana de Manzanillo y asociadas a la AAAPUMAC, A. C. En el reconocimiento aduanero de las mercancías con el objetivo de agilizar los tiempos de las operaciones aduaneras. Las ventajas proyectadas para agencias aduanales respecto de esta figura, es para agilizar el movimiento de mercancías, manteniendo canales de comunicación directa con la autoridad aduanera y que las agencias aduanales cuenten con un área de apoyo al personal, la existencia de coordinación con las demás autoridades para un mejor desempeño de la operación aduanera (PGR, SEMARNAT, PROFEPA, SEDENA, SRIA DE SALUD), así como dotar de herramientas en materia arancelaria, legal y operativa a las asociadas, eficientar procesos y espacios operativos actuales organizando el despacho de las mercancías con fluidez, reducir costos por maniobras de transporte, observar y emitir procesos que ayuden a la agilización de las mercancías para obtener indicadores de servicios, son algunos de los beneficios que se proyectaron obtener.

Debido a que la figura del multidependiente cuenta con la capacidad y un nivel adecuado de conocimientos para el desempeño de sus funciones, se encuentran enfocados en crear sistemas personalizados con el apoyo del centro de desarrollo e investigación de la AAAPUMAC, A. C. que generan un crecimiento constante en información respecto de áreas como plataforma de reconocimientos, recintos fiscalizados y módulos para la automatización de las operaciones de desaduanamiento de mercancías. De esta manera en comparación con los dependientes (tramitadores), la capacitación del multidependiente está realmente más optimizada y enfocada en las áreas de mayor interés en el despacho aduanero. Por todo lo antes expuesto y a fin de conocer la idea que se ha generado por cuenta de los agentes aduanales asociados a AAAPUMAC, A. C. Que han admitido la intervención del multidependiente en los trámites del despacho aduanero que gestionan. Es que se determina como blanco de la investigación el conocer la percepción del multidependiente a través de sus funciones como factor de facilitación del despacho de mercancías.

## METODOLOGIA

El objetivo principal de esta investigación es conocer la percepción del multidependiente a través de sus funciones como factor de facilitación del despacho de mercancías. Resulta interesante resolver algunas cuestiones: ¿Cuáles son los trámites del despacho aduanero en los que interviene el multidependiente para la realización de las operaciones de comercio exterior de las agencias aduanales? ¿Cuáles son las ventajas que las agencias aduanales obtienen derivado de la intervención del multidependiente en los trámites del despacho aduanero en las operaciones de comercio exterior que se realizan por el puerto de Manzanillo, Colima? ¿Cuáles son las desventajas que las agencias aduanales obtienen derivado de la intervención del

multidependiente en los trámites del despacho aduanero en las operaciones de comercio exterior que se realizan por el puerto de Manzanillo, Colima? ¿Qué beneficios existen para las agencias aduanales derivado de la intervención en los trámites del despacho aduanero en las operaciones de comercio exterior? ¿Cuál es la percepción que existe por parte de las agencias aduanales en relación a la función del multidependiente como facilitador de sus operaciones de comercio exterior? ¿Qué acciones se propondrían para optimizar las funciones del multidependiente respecto de su intervención en los trámites del despacho aduanero?

Además se pueden enlistar algunos objetivos específicos que se cumplirán al término de la investigación: conocer los trámites del despacho aduanero en los que interviene el multidependiente para la realización de las operaciones de comercio exterior de las agencias aduanales, conocer si existen ventajas para las agencias aduanales derivadas de la intervención del multidependiente en los trámites del despacho aduanero en las operaciones de comercio exterior que se realizan por el puerto de Manzanillo, Colima, conocer si existen desventajas para las agencias aduanales derivadas de la intervención del multidependiente en los trámites del despacho aduanero en las operaciones de comercio exterior que se realizan por el puerto de Manzanillo, Colima, determinar si derivado de la intervención del multidependiente en los trámites del despacho aduanero en las operaciones de comercio exterior existen beneficios para las agencias aduanales, conocer la percepción que existe por parte de las agencias aduanales en relación a la función del multidependiente como facilitador de sus operaciones de comercio exterior, proponer acciones que permitan la optimización de las funciones del multidependiente respecto de su intervención en los trámites del despacho aduanero.

El cumplimiento de los objetivos planteados, así como la resolución a las preguntas elaboradas para la investigación, conducen una hipótesis general. Derivado de las funciones que realiza el multidependiente se facilitan los trámites del despacho aduanero generando ventajas y beneficios para los agentes aduanales del puerto de Manzanillo, Colima. En el transcurso de la investigación se determinó la cantidad agencias aduanales que se encuentran asociadas a las funciones e intervención del multidependiente y al tenerlas plenamente identificadas se siguió el método inductivo, ya que se planteó la intervención del multidependiente en los trámites del despacho aduanero es un factor de facilitación de este proceso, situación que podría ser aplicada en general en cualquier otro tipo de organización para identificar estas situaciones y que su desempeño sea eficiente.

La investigación tendrá un enfoque cuantitativo ya que para comprobar la hipótesis, el estudio se basará en el instrumentos de medición aplicado, dicho instrumento es un cuestionario que se podrá tabular de manera estadística, a través de herramientas informáticas como el Excel. Cabe hacer mención que la información analizada fue obtenida de una encuesta que se aplicó a las agencias aduanales relacionadas con las funciones que realiza el multidependiente autorizado que es 75, sobre la cual se realizó el estudio estadístico, es importante señalar que a fin de determinar la muestra se utilizó la fórmula de muestra de poblaciones finitas, considerando un universo finito cuando la población objeto de estudio es menor a 500000. La investigación de campo se realizó durante el año 2012.

La población a la que se le aplicó la encuesta se determinó en base al padrón de Agencias Aduanales que se encuentran asociadas a la asociación de agentes aduanales del puerto de Manzanillo, Colima, A. C. (AAPUMAC) y que se encuentran relacionadas con las funciones del multidependiente, de lo anterior se desprende una población de 75 agencias aduanales asociadas a esta organización y que se encuentran ubicadas en el puerto de Manzanillo, Colima, México, de las cuales nuestra muestra constó de 63 entidades a aplicarles la encuesta. Las personas a las que se les aplicó la encuesta fueron los jefes de dependientes autorizados (tramitadores) del departamento de operación, pertenecientes a cada una de las 63 agencias aduanales para tener un valor más correcto en las gráficas producto de la tabulación de resultados, estos individuos tienen como característica principal el laborar para una agencia aduanal y participar en las operaciones de comercio exterior que realizan como parte de sus servicios las agencias aduanales ubicadas en el puerto de Manzanillo, Colima, México. Se elaboró una encuesta de 17 preguntas que servirán de

apoyo para conocer cuál es la percepción del multidependiente a través de su función como elemento facilitador de las operaciones de comercio exterior.

## RESULTADOS

Después de haber realizado la investigación correspondiente, de haber tabulado, graficado los datos, haber realizado el análisis y la respectiva investigación de los datos, finalmente se obtuvieron los siguientes resultados: Se observa que las agencias aduanales de Manzanillo con respecto a el multidependiente y la percepción a través de su función como elemento facilitador de las operaciones de comercio exterior, consideran que conocen las funciones que realiza el multidependiente para el despacho en la Aduana el 100% opino que solo el 100% opinan que conocen la figura del multidependiente lo que indica que todas las agencias aduanales asociadas operan con esta figura, debido a que el multidependiente interviene en los tramites del despacho aduanero, por lo cual se mencionó sobre la percepción por parte de las agencias aduanales respecto a las funciones del multidependiente.

Una vez recibida esta percepción de las funciones del multidependiente por parte de las agencias aduanales, se tiene por aclaradas las funciones que realiza este para así poder implementarlas y así las agencias aduanales no quieran que realice las funciones del dependiente, así estando con la finalidad de agilizar el proceso de apertura de contenedores en reconocimiento aduanero, recintos fiscalizados y en la Secretaria de Agricultura, Ganadería, Desarrollo Rural, Pesca y Alimentos (SAGARPA); y la recepción de documentos en el área de módulos. Es importante mencionar, que en la encuesta realizada se identifica que las agencias aduanales, en un 100%, conocen la figura en mención, por lo tanto se cumple con la finalidad de dar a conocer si la difusión de dicha figura ha sido la apropiada, de tal manera que el personal que integra a cada agencia aduanal asociada a esta figura conozca y sepa para que se ha implementado el multidependiente en este contexto, la respuesta de esta pregunta ha servido de apoyo ya que el resultados de la encuesta da confianza a la asociación para seguir adelante en sus proyectos referentes al multidependiente.

Debido a lo importante que es tener conocimiento de las funciones de dicha figura, el 100% respondió que en particular tienen la noción de las funciones que realiza en multidependiente para realizar las funciones en el despacho de las mercancías en la Aduana Manzanillo. Mas sin embargo, se toma en cuenta que las agencias aduanales conocen hasta adonde comprenden las funciones de dicha figura para que así no realicen más funciones de las que se autorizaron por la autoridad aduanera. Respecto al tiempo que se lleva desde que se inicia el reconocimiento hasta que este es liberado actualmente con la figura en mención, se observa que para las agencias aduanales el tiempo que se lleva es, en un porciento del 44% menciona que es normal y 44% respondió que es rápido, mientras que el 8% opino que es demorado y 4% más lento de lo normal. Lo anterior atiende, a la diferencia de los porcentajes ya que el motivo de que el tiempo que se lleva para ser liberado es demorado y normal se debe a la mercancía que se presente ante reconocimiento al momento de realizar las funciones de dicha figura.

Derivado de lo anterior se tiene que el tiempo aproximado que tarda para ser liberado un embarque que le es asignado reconocimiento aduanero es, de menos de 3 horas según el 54% de los encuestados, más de 4 horas con el 27%, más de 5 horas respondieron el 11%, más de 6 horas opinaron el 4%, más de 7 horas el 2% y el otro 2% que más de 8 horas. La controversia de resultados es por lo dicho anteriormente, ya que depende del tipo de mercancía en operación, ya que con esta puede ser más lento el proceso para que pueda ser liberada. Con lo anterior se tiene que disminuyo el tiempo que tarda para ser liberado un embarque en el status de reconocimiento con la figura del multidependiente según el 75% de los encuestados y el otro 25% opino que no ha disminuido.

Así mismo, la percepción por parte de las agencias aduanales respecto a las funciones del multidependiente según el 75% opinaron que es buena, el 3% respondió que es mala, el 20% que es regular y el otro 2% que es excelente. Es importante mencionar que la que se ha recibido de parte de los multidependientes al momento que les han brindado el servicio, el 65% de los encuestados respondieron que es buena, más sin embargo el 5% de respondieron que es mala, así como el 14% de opino que es regular y el otro 16% de los encuestados opinaron que es excelente.

Derivado de lo anterior resulto ser beneficioso para el 87% de los encuestados que exista esta figura de multidependiente y el 13% opino que no, esto derivado de que algunos tienen recelo de que el dependiente pierda todas sus funciones y en alguno de los casos pierda su trabajo esto se comentó con el personal de las agencias asociadas. Sin embargo, el 100% de los encuestados conocen ventajas que obtiene la agencia aduanal con la intervención del multidependiente, estas son según el 77% agilizar el movimiento de mercancías, mientras que el 10% opino que mantiene canales de comunicación directa con la autoridad aduanera, así como el 3% que cuenta con un área de apoyo al personal y el otro 10% que eficiente procesos y espacios operativos del despacho de las mercancías.

Derivado de lo anterior se tiene que la implementación del multidependiente ha sido aceptada por las agencias aduanales asociadas manifestando así la mejoría que les causa en los procesos dicha figura. Con lo anteriormente descrito se obtienen ventajas en las operaciones de comercio exterior con la intervención del multidependiente según el 100% de los encuestados, estas ventajas son puesto que el 19% respondió el mayor flujo comercial y de inversión extranjera directa, mientras que el 62% opinaron que el mayor control operativo, así como el 17% respondió que la eficiencia, calidad y transparencia de los servicios y tramites del comercio exterior y el otro 2% respondió que el desarrollo económico del país. Por consecuente se refleja que en las operaciones de comercio exterior se tiene un mayor control operativo con la intervención de esta figura para así mejorar los procesos del reconocimiento.

Derivado de esto, las agencias aduanales mencionan el lugar más frecuentemente en el que utilizan los servicios de la figura del multidependiente, ya que el 43% respondió que en el área de plataforma, el 5% opinaron que en recintos fiscalizados, el 19% de los encuestados respondieron que en módulos y el 33% de los encuestados opinaron que en ambos lugares. Procedente de lo antepuesto, derivado de la investigación de campo se comentó por personal encuestado que generalmente se utiliza más en plataforma ya que ayuda a las agencias aduanales en las gestiones con la Autoridad. Con lo antepuesto el principal beneficio que aportan las funciones del multidependiente en los trámites del despacho aduanero según el 59% mencionaron que la facilitación de los trámites del despacho aduanero, así como el 2% de los opino que la disminución de costos por la contratación de personal, mientras que el 27% respondió que la disminución del tiempo de despacho y el otro 12% opino sobre la mejora de las gestiones ante la autoridad. Mientras que las agencias aduanales menciona que el multidependiente aporta desventajas puesto que el 63% respondió que no trabaja para la empresa, mientras que el 17% opino que desconoce la organización de la empresa, así como el 8% de menciona que no está comprometido con la empresa y el otro 12% opina que no tiene disposición del personal.

Cabe señalar que estas desventajas surgirán debido a que el multidependiente forma parte de la AAPUMAC, A. C. y las agencias aduanales aspiran a que formen parte de su organización, pero esto no puede ser posible ya que la autoridad aduanera es la que analizo las funciones que realizaría esta figura para así trabajar conjuntamente con la asociación. Cabe hacer mención que las agencias aduanales propondrían acciones para optimizar las funciones del multidependiente en los trámites del despacho aduanero según el 100% de los encuestados, dichas acciones serian según el 48% que respondió contratar mayor número de multidependientes, así como el 6% opino que propondrían la difusión de la figura, mientras que el 29% respondió que mayor grado de capacitación y el otro 17% respondieron que propondrían la intervención en más trámites del despacho.

Cabe hacer mención que la contratación de mayor número de multidependientes dependerá de la cantidad de operaciones que se realicen en las que esta figura va a intervenir para así y de igual forma se capacitarlos para que realicen una buena intervención en los tramites del despacho para así mejorar las operaciones de comercio exterior.

## CONCLUSIONES

Con la creación e implementación de la figura multidependiente, la AAPUMAC, A.C. quiso solucionar el problema que a través del tiempo se había presentado con respecto al tiempo en que las mercancías permanecían en el proceso de despacho aduanero, por lo cual esta figura vino a coadyuvar para que dicho proceso se agilizará, en relación a que los dependientes autorizados de las agencias aduanales no contaban con la comunicación y presencia adecuadas en el proceso a fin de que este concluyera de forma ágil y eficiente. De acuerdo con los resultados obtenidos de la presente investigación, se deduce las funciones del multidependiente, están debidamente encauzadas a agilizar el proceso del despacho aduanero de mercancías en las operaciones de comercio exterior que se realizan en el Puerto de Manzanillo, Colima, México. La implementación del multidependiente se generó debido a la preocupación de la AAPUMAC, A. C. respecto a la demora del proceso de despacho de mercancías en la aduana de Manzanillo, en virtud de que los dependientes autorizados no contaban con un canal de comunicación adecuado con la autoridad aduanera, teniendo como consecuencia que el proceso del despacho de mercancías en el momento de su aforo no se desarrollara con regularidad.

De esta forma, la creación e implementación de la figura del multidependiente fue sin lugar a dudas una acción importante, la cual implicó una inversión, que generó de manera positiva un gran impacto dentro de las actividades de comercio exterior que se realiza por el puerto de Manzanillo, Colima, México, las encuestas revelaron datos interesantes, probando y dando a conocer que fue un gran acierto de la AAPUMAC, A. C. en coordinación con sus asociados y la autoridad aduanera. Concluyendo, la implementación del multidependiente se alcanzó el objetivo de agilizar el movimiento de mercancías en los procesos de despacho en la Aduana de Manzanillo, Colima. La percepción que se ha generado respecto del multidependiente en resumen es de confianza por la comunidad portuaria, situación que se ve materializada en la ampliación de las áreas materia de su intervención, iniciando sus gestiones originalmente en la plataforma del reconocimiento aduanero hasta ir teniendo mayor presencia en trámites que se realizan ante otras entidades tales como: recintos fiscalizados, líneas navieras, etc.

# LA ADMINISTRACIÓN DE LABORATORIOS EXPERIMENTALES DE INSTITUCIONES EDUCATIVAS DE NIVEL SUPERIOR: UN ESTUDIO DE CASO

Claudia Verdín Padilla, Universidad Autónoma de Coahuila  
Liliana Angélica Guerrero Ramos, Universidad Autónoma de Coahuila  
José de Jesús Espinoza Arellano, Universidad Autónoma de Coahuila

## RESUMEN

*La aplicación de normatividad y uso de sistemas de gestión de calidad en laboratorios experimentales de instituciones educativas de nivel superior en los cuales se manejan sustancias y residuos peligrosos en comparación con los laboratorios clínicos, es un área de importancia que puede ser apoyada mediante herramientas de gestión que coadyuven al administrador a contribuir en el cuidado del medio ambiente así como optimizar su trabajo diario. Los objetivos primordiales que persigue el presente artículo de investigación es diagnosticar la situación que se desempeña actualmente en la administración del laboratorio de una institución educativa en lo referente a la aplicación de sistemas de calidad, normatividad, manejo de residuos, seguridad y capacitación. Utilizamos la metodología de investigación cualitativa con estudio de caso en una Universidad Privada de Saltillo, Coahuila, México, encontrando mediante la guía de observación utilizada resultados como nula capacitación en materia ambiental o de manejo de residuos, no cuenta con procedimientos documentados y no realizan acciones como minimización de residuos, tratamiento in situ o reutilización. Concluyendo que sería de gran ayuda un sistema de gestión integral para la administración de dichos laboratorios para garantizar el cumplimiento de la normatividad.*

## ADMINISTRATION OF EXPERIMENTAL LABORATORIES OF INSTITUTIONS OF HIGHER EDUCATION: A CASE STUDY

### ABSTRACT

*The applications of standards and use of quality management systems in experimental laboratories of educational institutions of higher learning level in which hazardous substances and wastes are handled in comparison with clinical laboratories, is an area of importance that can be supported by management tools that help administrator to contribute to the care of the environment and optimize his daily work. The primary objectives of this research article is to make a diagnostic of the situation that is currently happening in the administration of the laboratory of an educational institution in relation to the implementation of quality systems, standards, waste management, safety and training. We use the methodology of qualitative research case study in a private university in Saltillo, Coahuila, México. We found by observation method results such as null environmental training or waste management, lack of documented procedures and absence of actions as waste minimization, in situ treatment or reuse. I concluded that a complete management system would help administration of these laboratories to guarantee the accomplishment of regulations.*

## INTRODUCCIÓN

La competitividad, mejora continua y globalización pareciera que son las palabras clave que en la actualidad no deberían faltar cuando hablamos de cualquier organización, sin embargo, al referirnos a la administración de instituciones educativas de nivel superior en el área de sus laboratorios experimentales, encontramos que al ser un licenciado en química o en alguna materia de la especialidad quien debe dirigirlos, se encuentran poco o nulos conocimientos referentes a los sistemas de calidad y la normatividad que pudiera simplificar, y mejorar el trabajo diario para cumplir con el objetivo central de los laboratorios que es la enseñanza, investigación y sobretodo el servicio, además de lo anterior, no debemos dejar de lado la importancia de la capacitación en materia de gestión ambiental tanto para el personal docente, administrativo así como para los estudiantes.

Por otro lado, tenemos el tema del medio ambiente de actual relevancia y preocupación, respecto al cual escuchamos noticias sobre las convenciones, convenios, cumbres y demás acontecimientos relevantes que ocurren en estos días, sin embargo, debemos estar conscientes respecto a las acciones específicas que cada uno de nosotros debemos llevar a cabo desde el ámbito en el que nos desenvolvemos tanto personal como profesionalmente para coadyuvar al cuidado del medio ambiente. Analizaremos en este caso una universidad privada de la localidad de Saltillo, Coahuila que cuenta con laboratorios experimentales, observaremos las medidas de seguridad y revisaremos la administración que se aplica en cuanto al manejo de sustancias y residuos peligrosos, así como los sistemas de gestión de calidad, normatividad y capacitación en materia ambiental. Cabe mencionar que este trabajo es parte de una investigación más amplia en la que se estudiarán más laboratorios. Finalmente esperamos que esta investigación nos ayude para determinar las pautas generales a seguir en las visitas de campo que se seguirán realizando en otras universidades participantes para poder llegar a la realización de un sistema integral de gestión conforme a la normatividad en materia ambiental y de calidad. El objetivo general de este artículo es diagnosticar la situación actual en el laboratorio experimental de una institución educativa respecto a:

- Aplicación de sistemas de gestión de calidad
- Normatividad ambiental
- Medidas de seguridad
- Educación ambiental
- Manejo de residuos peligrosos

## REVISIÓN LITERARIA

Bertini (2009) analizó que la normativa enfoca la gestión de residuos peligrosos a los de origen industrial, no teniéndose en cuenta las características particulares de los generados en los laboratorios químicos universitarios en cuanto a su poca cantidad y gran variedad. Reyes (2009) indica en su investigación que la implementación de una adecuada gestión de la calidad ha resultado ser un proceso lento y engorroso, además de caro. Etcheverry (2001) indica que la calidad de una organización puede mejorarse de varias maneras, como un director más exigente, un supervisor muy amable o un nuevo equipo, pero que estos cambios son temporales y dependen un tanto de la suerte, sin embargo, que el uso de modelos para mejorar el desempeño aumenta la probabilidad de un éxito duradero y constituye la base de la gestión de la calidad Izquierdo (2007) observa que sólo el 7.20% de los requisitos se encuentran implantados concluyendo que se necesitaba tiempo y recursos tanto humanos, materiales y económicos.

Galicia (2010) indica que se han realizado investigaciones con la finalidad de dar cumplimiento a la normatividad en los laboratorios clínicos, pero principalmente son manuales de procedimientos, pero sólo se enfocan en una norma y no están integrados a algún proyecto de trabajo, incluso pareciera que sólo tapan huecos, y no toman en cuenta todas las demás normas oficiales aplicables, dando la impresión de que se trabaja separadamente, como si se pusiera un parche a algo descubierto, en vez de encajar en un proyecto en conjunto. Uno de los puntos más relevantes es el que abarca (Galicia, 2010) respecto a la cultura de calidad, que al momento de dar un primer paso, lo directivos y trabajadores presentan indistintamente una resistencia al cambio y en ocasiones incluso actitudes negativas y a la defensiva.

## METODOLOGÍA

La generalización de estudios cualitativos (incluido el estudio de casos) no radica en una muestra probabilística extraída de una población a la que se pueda extender los resultados, sino en el desarrollo de una teoría que puede ser transferida a otros casos. De aquí que algunos autores prefieran hablar de “transferibilidad”, en vez de generalización, en la investigación de naturaleza cualitativa (Larrinaga & Rodríguez, 2010). El caso es definido como algo específico (Stake, 1999), algo complejo, en funcionamiento, es visto como un sistema integrado con límites y partes constituyentes, y es utilizado en esta investigación por sus características, así mismo tomaremos en cuenta las recomendaciones que hace respecto a algunas orientaciones para la realización de observación de campo en el estudio de casos.

Utilizaremos el procedimiento metodológico de la investigación utilizado para un estudio de casos (Monge, 2010): fase teórica, Fase de trabajo de campo y Fase analítica. En la investigación en campo se explorará el laboratorio de la Universidad privada seleccionada para este estudio, se visitará y evaluará para cerciorarse que sea la adecuada como lo indica la descripción del ingreso en el ambiente (campo) que marca (Sampieri, 2010), se realizará observación directa, así como las notas de campo de la observación, interpretativas, temáticas y personales.

Para el diagnóstico tomaremos en cuenta que de acuerdo a la integración de información de Norma Técnica 480: *La gestión de los residuos peligrosos en los laboratorios universitarios y de investigación* (Subías & Comas), y el estudio de Bertini (2009) revisamos si se cuenta con la información de la Guía de observación con información de la Universidad “A” nombre que asignaremos a la Universidad estudiada, ya que por solicitud de las autoridades, deberá permanecer anónimo el nombre de la institución educativa en la que realizamos el presente estudio, y los posteriores.

## RESULTADOS

La Universidad que se investigó en este artículo es una Universidad Privada, la cual cuenta con programas de nivel medio superior, superior y posgrado. Ofrece diversas carreras para las cuales cuentan con talleres y laboratorios que es donde se manejan las sustancias y residuos peligrosos. El laboratorio se encuentra en buen estado en general, aunque tiene detalles de mantenimiento y limpieza profunda, por ejemplo, se encontraron puertas de gavetas zafadas, y mucho polvo en los estantes y mobiliario en general; además las válvulas de las mesas, de gas, agua, etc. se encuentran sin identificar correctamente, se percibe un tanto descuidada, además no cuenta con equipo de alta sofisticación o moderno, tienen los mismos equipos desde hace nueve años que inició la escuela.

En la Universidad “A” en lo que respecta a reactivos encontramos que se encuentran almacenados según los colores correspondientes, así mismo cuenta con su etiqueta de identificación de riesgos, en el lugar donde se encuentran es una gaveta en el mismo laboratorio y se tiene un letrero de precaución, además de que se tienen las hojas de seguridad de los reactivos. Cuenta con un botiquín con muy poco material, así como una simbología para la tubería de las mesas, además de que no tiene implementado ningún sistema

de gestión de calidad, el personal indica que sólo recibe capacitación una vez al año respecto a las brigadas de evacuación, es decir es nula la capacitación en materia ambiental o de gestiones propias del laboratorio o de sustancias y residuos peligrosos. Respecto a los residuos peligrosos es de llamar la atención que sí se utilizan etiqueta de identificación para dichos residuos, sin embargo, no todos los contenedores contaban con ella, argumentaban que la colocaban hasta que la empresa recolectora se los iba a llevar. Se almacenan mientras se van generando en la parte baja de una campana de extracción, que se encuentra llena de polvo, pero lo que es de mayor consideración es que el lugar donde se almacenan hasta que acuden por ellos, y cuyo tiempo efectivamente nunca rebasa los seis meses como lo indica la reglamentación, es un sitio que se encuentra alejado de los edificios pero está muy descuidado.

En cuanto a la minimización, sustitución, tratamiento in situ y reutilización se afirma que tan sólo se aplica la de la eliminación mediante empresa de recolección de residuos peligrosos y control de manifiestos en orden. En cuanto a la discusión respecto al estudio de Galicia (2010) en donde tenemos en común la norma NOM-005-STPS-1998 que trata de los procedimientos de seguridad e higiene en los centros de trabajo en el manejo, transporte y almacenamiento de sustancias químicas peligrosas, encontramos diferencias en la revisión de la aplicación de varios puntos como por ejemplo, en el laboratorio de la Universidad "A" si cuenta con botiquín pero no proporciona los medicamentos y materiales de curación necesarios para prestar los primeros auxilios, se tiene muy poco material, a diferencia del Laboratorio Clínico del Hospital Escuela de la Universidad Veracruzana que no cuenta con ningún botiquín, por otro lado encontramos en común que no se cuenta con: estudios para analizar los riesgos potenciales de sustancias químicas peligrosas, elaboración de diversos manuales, registros, entre otros. En las cuestiones generales del laboratorio, el reglamento se encuentra a un lado de la puerta de entrada, observamos también un letrero de simbología de identificación de los colores de la tubería que se encuentra en las mesas de trabajo, según la norma NOM-026-STPS-1998, así mismo el botiquín con muy poco material, aunque el personal argumentó que como ya se iba a terminar el semestre, se resurtirá en el inicio del próximo ciclo.

## CONCLUSIONES

En esta investigación inicial en la visita a campo para el diagnóstico de una Universidad a estudiar, pudimos observar varias cuestiones de gran relevancia para nuestro estudio, iniciando con todo lo referente al manejo de sustancias y residuos peligrosos, su identificación, almacenamiento, clasificación, etc. Así mismo observamos las generalidades del laboratorio desde su limpieza, reglamentos, botiquín, etc. Otra de las cuestiones relevantes que no cuentan con ningún sistema de administración de calidad y en cuanto a la normatividad sólo vimos la indicada en el letrero de la identificación de colores de la tubería. Finalmente podemos afirmar que no se cuenta con programas de capacitación en materia ambiental ni respecto al manejo de las sustancias químicas y residuos peligrosos para el personal relacionado como coordinadores, auxiliares de laboratorio, docentes y alumnos. Verificamos la importancia de una herramienta que ayude a los administradores de los laboratorios experimentales de instituciones educativas de nivel superior a realizar su trabajo de manera más eficiente mediante un sistema de gestión integral en el que estamos trabajando.

# NEGOCIOS INTERNACIONALES Y COMERCIO EXTERIOR: IDENTIFICACIÓN DE TEMÁTICAS PARA LA CONSTRUCCIÓN DE LÍNEAS DE INVESTIGACIÓN

Juan Gabriel Vanegas, Tecnológico de Antioquia Institución Universitaria  
Jorge Aníbal Restrepo Morales, Tecnológico de Antioquia Institución Universitaria  
Mariano Alberto González, Tecnológico de Antioquia Institución Universitaria

## RESUMEN

*El presente trabajo identifica los campos actuales de investigación alrededor del comercio exterior y los negocios, desde lo que se registra en la literatura académica hasta el abordaje del tema desde la institucionalidad mundial, regional y nacional-local (Colombia). El objetivo es que estudiantes, docentes, investigadores y empresarios de las áreas de comercio exterior y negocios internacionales, se adentren en el entendimiento de las tendencias globales, y enmarquen los procesos de investigación propiamente dicha y aquellos con fines formativos, prácticas investigativas, trabajos de grado y formulación de proyectos, en las áreas identificadas en este documento con el fin de construir comunidad académica alrededor del tema. Asimismo, se busca promover el trabajo interdisciplinario con otros actores de la comunidad académica que permitan alcanzar un mayor grado de profundidad y complejidad en los tópicos investigados.*

## INTERNATIONAL BUSINESS AND FOREIGN TRADE: RESEARCH TRENDS ON SELECTED TOPICS

### ABSTRACT

*This paper identifies the current research agenda on trade and international business, ranging from the different positions in the academic literature to the institutional perspectives in the world, regional, and national and local levels (Colombia). The goal of this paper is to build a framework for the understanding of global trends in the field, in order for students, teachers, researchers and entrepreneurs to deepen their knowledge in the areas of foreign trade and international business, as well as to frame research and academic processes in these fields, promoting an interdisciplinary work with other academic disciplines.*

**JEL CLASSIFICATION:** B41, F00, F1, L22, M16

## INTRODUCCIÓN

Las líneas de investigación son los cimientos de un objeto de estudio que se fijan los grupos de investigación en distinto tipo de universidades y centros de pensamiento; que se convierten en la plataforma conceptual, teórica y metodológica con el propósito de generar y decantar conocimiento. En el caso particular del comercio exterior y los negocios internacionales aparecen temáticas bastante frecuentes y reiterativas como eje de estudio, las cuales pareciera que en torno a ellas ya todo está dicho. No obstante, la propuesta de identificación de temáticas para la construcción de una línea de investigación consiste en tomar esas situaciones como un dato, como un hecho que ha ocurrido, que sirven como punto de partida para plantear

contextos y continuar la discusión, discurrir en nuevos escenarios y obtener nuevos conocimientos desde la interdisciplinariedad de la investigación que permitan situarnos en la frontera del conocimiento, y así dilucidar propuestas acordes a una realidad específica en un mundo globalizado. En un mundo dinámico y cambiante con nuevas tendencias en las áreas del comercio exterior e internacional, es plausible plantear la existencia de nuevos escenarios que pueden cambiar el rumbo de las economías con juegos de suma cero en el ámbito de la negociación internacional. Las políticas comerciales de gran parte de los países en desarrollo han alcanzado un mayor grado de liberalización a partir de la década de los ochenta (World Bank, 2012, January), lo que significa que al aumentar la tasa de globalización, las economías tienden a estar más interconectadas y dependientes, por lo que las políticas comerciales internacionales juegan un papel clave.

El principal aporte de este documento, se encuentra la identificación de tendencias frente a la fundamentación de una línea de investigación, lo cual se convierte en un proceso relevante ya que ofrece visibilidad, donde interesa tanto la forma como el producto final, se genera un espacio de discusión abierto que nutre aportaciones al desarrollo de grupos de investigación y centros de pensamiento, e invita a descubrir la lógica de los procesos y proyectos, y bajo qué lineamientos y en qué objeto de estudio se debe profundizar. Además, con el fin de aportar no solo desde la óptica de la literatura publicada en revistas especializadas, sino también desde la realidad de la representación institucional en distintos niveles, en este trabajo las tendencias de investigación abarcan dos ámbitos complementarios que componen las temáticas del comercio exterior y la negociación internacional: i) desde lo académico, y ii) desde las asociaciones, gremios y demás instituciones relacionadas.

En este sentido, el estudio del comercio exterior y los negocios internacionales permite imprimirle rigor a los procesos actuales que son de real importancia, pues es posible registrar y clasificar de manera ordenada la información que se desea conocer, donde la praxis retroalimenta los hallazgos empíricos con su quehacer teórico. Sumado a lo anterior, desde un punto de vista cuantitativo se avanza hacia la construcción de bases de datos, que dan cuenta de los procesos y de la información detallada en un orden coherente. La estructura del presente documento, aparte de esta introducción, está organizada de la siguiente manera: la sección 2 se muestran algunos hechos estilizados que dan cuenta de la magnitud del comercio y los negocios en los datos agregados; la sección 3 expone las tendencias de investigación desde la visión de la academia; la sección 3 muestra la visión de la institucionalidad en sus niveles internacional, regional y nacional-local para Colombia; finalmente, se presentan unas reflexiones finales y la bibliografía soporte.

### Hechos Estilizados: Un Panorama General a los Resultados del Comercio y los Negocios

Para ubicar en contexto las cifras agregadas de las negociaciones internacionales a nivel mundial, y cómo éstas representan un porcentaje importante de la producción económica, se hace el siguiente recorrido en los principales indicadores agregados de movilidad de mercancías, servicios y recursos financieros. En los últimos veinte años la participación del comercio total mundial en el producto interno bruto (PIB), entendido como el peso de la suma de exportaciones e importaciones, ha crecido de forma significativa al pasar de 39,8% en 1990 a 57,7% en 2012 (Figura 1). De igual forma, las entradas de inversión extranjera directa han pasado de representar en el PIB para el mismo periodo de tiempo 0,93% a 2,3%, respectivamente (Figura 2). Por su parte, los ingresos de remesas provenientes de nacionales en el extranjero en la década del noventa representaron en promedio 0,4% del PIB, mientras que dos décadas más tarde dicha participación fue del 0,7% (Figura 3).

Figura 1: Participación del Comercio de Bienes y Servicios en el PIB (%), 1960-2012

Fuente: elaboración propia a partir de World Bank (2013c).

Figura 2: Participación de los Flujos de Inversión Extranjera Directa en el PIB (%), 1960-2012

Fuente: elaboración propia a partir de World Bank (2013c).

Figura 3: Participación de las Remesas en el PIB (%), 1960-2012

Fuente: elaboración propia a partir de World Bank (2013c).

Estas dinámicas están directamente relacionadas con los accesos preferenciales a nuevos mercados, vía tratados de libre comercio, tratados de inversión y otros tipos de accesos, lo cual permite contar con tamaños de mercado mayores, generando así posibilidades de crecimiento potenciales adicionales para el sector externo de los países.

### Tendencias en Investigación Desde la Academia

La literatura académica alrededor de los flujos de exportación e importación y la negociación internacional es bastante amplia. Por ello, con el fin de acotar los tópicos de discusión, se abordarán siete grandes temáticas que ubican trabajos teóricos y empíricos aplicados que marcan la frontera del conocimiento en la investigación en comercio exterior (NBER, 2013; Rose, 2013). Los temas anteriores se recogen en estudios a distinto nivel. De acuerdo con el Programa de Comercio Internacional e Inversión de la National Bureau of Economic Research (NBER, 2013), los tópicos actuales de investigación en el área comprenden:

*Las generalidades del comercio internacional:* en esta subárea el enfoque se basa en la identificación de puntos de quiebre y de tendencias desde una visión cuantitativa, es decir, desde los datos históricos se busca la explicación de patrones comerciales, de inversión y de migración; deuda soberana; institucionalidad del sistema multilateral y su efecto en el comercio mundial (Acuerdo General sobre Aranceles Aduaneros y Comercio –GATT- / Organización Mundial del Comercio –WTO-); política comercial; y la relación existente entre comercio y el entorno (desarrollo, crecimiento, medio ambiente, pobreza, etc.).

*Efectos de las formas de integración:* las tendencias actuales muestran un crecimiento exponencial en los patrones de integración, vía acuerdos con diferente tipo de alcance (comercial, inversión, económico, monetario); luego, éste tipo de vinculación tiene efectos en la reconfiguración del comercio intra e interindustrial; en la producción nacional y sectorial; en la búsqueda de unas zonas monetarias óptimas (por ejemplo, euro); y en el clima de los negocios internacionales en América Latina como un elemento de ventaja para la integración económica, liberación del mercado y privatización.

*Aspectos financieros:* el capital financiero transita de frontera en frontera buscando maximizar la rentabilidad de su inversión, por lo que los estudios buscan dar respuesta a los determinantes de estos flujos financieros, incidencia en los balances de las finanzas internacionales, así como la integración financiera de activos.

*Crisis internacionales:* las crisis económicas generan puntos de quiebre y formas de repensar los fundamentales sobre los que se sustenta el aparato económico; la crisis financiera internacional reciente (2008-09) ha mostrado mecanismos de transmisión y efectos profundos con ciertas particularidades que los diferencian de otras crisis. Este tópico de estudio cubre temas (Desde el punto de vista logístico también se estudia el impacto negativo de las crisis financieras en el comercio vía los tiempos de envío (Berman et al., 2012) como ataques especulativos de tasa de cambio; efectos contagio en crisis monetarias; nuevos mecanismos de transmisión en países desarrollados y en vía de desarrollo.

*Tasa de cambio:* la relación de precios de una moneda nacional y una extranjera, denominada tipo de cambio, ha sido objeto de estudio como elemento generador de ganancias o pérdidas en términos de competitividad en el escenario comercial; luego su estudio cobra relevancia y dentro de los enfoques recientes resalta la determinación del tipo de cambio; relación entre la determinación del precio y las fluctuaciones cambiarias, regímenes monetarios, impacto de la volatilidad cambiaria en las decisiones de inversión, y en la supervivencia y en el performance empresarial.

*Tamaño económico:* las teorías clásicas del comercio exterior dan cuenta de los patrones de especialización comercial de acuerdo a ventajas, absolutas, comparativas o competitivas (Hernández (1992), en temas de

integración regional acuña otro tipo de ventajas: las compartidas. Este tipo de ventajas se aduce que son una forma que facilitan los procesos de integración y creación de mayor flujo comercial. Czinkota y Ronkainen (1997). Todas estas temáticas de estudio hacen parte de los contenidos de los cursos de Comercio Internacional y Economía Internacional (DESU, 2012; NISU, 2012) dotaciones factoriales, etc.; la entrada de China a la OMC pone de relieve un nuevo jugador en las reglas de juego, lo cual sin duda surge como campo de estudio en los efectos del comercio en países grandes y países pequeños.

*Entornos empresariales y organizacionales:* en los mercados internacionales la competencia se genera entre firmas, por ello como temas investigativos destacan: la forma en que entran las empresas a estos mercados, como realizan negocios y cómo se asocian; los perfiles gerenciales o de top-management ante los nuevos riesgos del entorno internacional, las formas de internacionalización empresarial y su configuración (exportación, IED, Offshoring/outsourcing, adquisición/fusión, licencia, franquiciamiento, joint-venture, consorcio, maquila y manufactura propia); la importancia relativa de la estructura organizacional (gobierno corporativo) y la estrategia para alcanzar el éxito de las empresas en el marco internacional (Czinkota y Ronkainen, 1997)., el caso de las *born global* y su espíritu empresarial (start-ups); tipología de negocios online/offline (digital/convencional) y aprovechamiento de la tecnología con propósito de expandir el mercado; y manejo del recurso humano para la internacionalización empresarial. Dentro de las categorías enunciadas previamente, aparecen como un objeto de estudio la heterogeneidad de firmas que registran transacciones comerciales y las decisiones de exportación por parte de éstas, los diferentes tipos de inversión extranjera directa, las fricciones institucionales y que incidencia o impacto tienen éstas en la configuración de los flujos de comercio, el papel de las firmas multinacionales, la interacción entre el comercio internacional y la teoría de la firma (Todas estas temáticas de estudio hacen parte de los contenidos de los cursos de Comercio Internacional y Economía Internacional (DESU, 2012; NISU, 2012).

#### Tendencias en Investigación Desde la Institucionalidad: Organizaciones, Asociaciones, y Gremios

En el plano institucional existen diversas organizaciones, asociaciones, y gremios que se encargan de establecer las reglas de juego en torno al comercio, o de representar intereses sectoriales en la negociación internacional. Bajo esta perspectiva es posible acercarse a la actualidad del comercio exterior e internacional desde lo que sucede en la práctica o en el mundo real, y que impacta el entorno mundial, regional y nacional, y aspectos de las esferas macro, meso y microeconómicos.

#### Contexto Internacional

En el contexto internacional se encuentran tópicos alrededor de los cuales gira la investigación en instituciones, entre las que se destacan el Banco Mundial (WB), la Organización Mundial del Comercio (WTO), la Federación Internacional de Asociaciones Comerciales (FITA), la Organización para la Cooperación y el Desarrollo Económico (OECD), la Cámara de Comercio Internacional (ICC), el Instituto Peterson para la Economía Internacional (PIIE), y la Organización Mundial de Aduanas (WCO).

Los tópicos de investigación en torno al comercio internacional que destaca el World Bank (2012, January; 2013a; 2013b) van encaminadas a que éste impacte en el desarrollo sostenible y reducción de la pobreza en los países en vía de desarrollo. Estos tópicos comprenden: patrones comerciales e información estadística, asuntos multilaterales, efectos del comercio en diversos campos (pobreza, crecimiento, inversión, trabajo y medioambiente), regionalismo, sectores económicos (agricultura y servicios), estándares internacionales, costos y facilitación del comercio, migración internacional, acceso a la WTO, ronda de Doha, política de competencia, reforma a las barreras comerciales, protección contingente, derechos y propiedad intelectual, contratación pública, geografía económica, política económica de la política comercial, y estudios de países. La investigación en la Organización Mundial del Comercio se enmarca en diferentes tipos de estudios que parten del análisis económico para estructurar las cuestiones más relevantes para esta organización.

Entre éstos se encuentran los estudios especiales que incluyen: ajustes a la liberalización comercial; barreras y obstáculos en el acceso a mercados; relación y efectos del comercio en: disparidad de ingresos y pobreza, medio ambiente, finanzas y crisis financieras; comercio electrónico; y mercados abiertos de servicios financieros (WTO, 2013). En algunas de las mismas líneas temáticas señaladas previamente se enmarca el enfoque de la OECD. Algunos de los estudios se pueden clasificar en la interacción y el impacto del comercio sobre la generación de empleo, el papel de las organizaciones internacionales en la política comercial, el análisis de las tendencias comerciales, los aspectos relacionados con la integración económica y las políticas de movimientos de los factores productivos y políticas de régimen cambiario internacional (OECD, 2013).

La FITA (2013) en sus tendencias de mercado plantea oportunidades comerciales internacionales y negocios tanto de importación y como de exportación. Los estudios de mercado donde se encuentran clasificados la mayor cantidad de trabajos se dan en los siguientes sectores: agricultura y ganadería, alimentos, bebidas y tabaco, médico, salud y productos cosméticos, tecnologías de información y comunicaciones en energía y medio ambiente, transporte y almacenamiento, textiles, confecciones y accesorios, productos y maquinaria para la construcción y robótica. Por su parte, el mayor número de análisis de mercado en Colombia, aparte de los anteriores incluye el sector defensa y seguridad y el sector automotriz. En los temas relacionados con el comercio internacional que aborda la ICC (2013), se puede encontrar el comercio financiero. Dentro de esta línea destacan el panorama económico mundial, tendencias globales y regionales, tendencias comerciales en seguros de crédito a la exportación, y tendencias comerciales en los programas de facilitación del comercio.

Asimismo, reportes especiales del grupo de países del G20, que incluyen guías comerciales y de negocios. De igual forma, la medición de un índice de apertura de mercados a nivel mundial. A nivel privado, el PIIIE (2013) plantea grandes líneas en torno al estudio del comercio internacional e inversión. Dentro de los tópicos de análisis destacan: políticas de competencia, transparencia y gobierno corporativo, la relación comercio electrónico y tecnología, sanciones económicas, energía, inversión extranjera directa, derechos de propiedad intelectual, los bloques comerciales regionales, el tema de los servicios, la política de tasación (fiscal), y la OMC y otras instituciones globales reguladoras.

### Contexto Latinoamericano

Por su parte, en el plano regional latinoamericano aparecen la Asociación Latinoamericana de Integración (ALADI), la Comisión Económica para América Latina (CEPAL), y el Banco Interamericano de Desarrollo (BID). Para empezar, la Aladi (2013) concentra sus esfuerzos en el análisis de los efectos de la integración en sus países miembros. Sus tópicos principales de investigación se enfocan en las tendencias generales de comercio exterior, en particular las relacionadas con el comercio intraindustrial, el comercio negociado y el aprovechamiento de las preferencias arancelarias; informes sobre el avance del proceso de integración latinoamericano; el análisis de competitividad de los productos exportables de los países latinoamericanos en sus pares de la misma región; y la identificación de oportunidades comerciales que tienen los productos de estos países para acrecentar sus exportaciones en otros mercados.

La Cepal (2013) en el tema del comercio exterior ha direccionado su investigación hacia varios tópicos entre los que sobresalen: “i) tendencias del comercio global y regional de bienes y servicios; ii) políticas y negociaciones comerciales en los ámbitos multilateral, plurilateral, regional, bilateral hemisférico e interregional; iii) procesos de integración regional; iv) relaciones económicas interregionales; v) otros temas de especial interés, desde la óptica de la inserción internacional de América Latina y el Caribe”.

Por su parte, el BID (2013) en sus temas recientes de investigación en comercio prioriza los estudios de caso de nuevas actividades de exportación, que tipo de actividades han sido pioneras en alcanzar los mercados extranjeros en los países de la región y cuáles de ellas han sido exitosas. Otros temas que han

sido abordados desde esta institución tiene que ver con la liberalización comercial, efectos de la integración comercial y competitividad.

### Contexto Colombiano

En el ámbito nacional nos remitiremos al Ministerio de Comercio, Industria y Turismo (Mincomercio) y a la Oficina de Promoción de Turismo, Inversión y Exportaciones (Proexport), a la Asociación Nacional de Comercio Exterior (Analdex), cámaras de comercio, la Cámara de Comercio Colombo Americana (CCCA); e instituciones del orden local como la Asociación de Comercio Exterior del Valle (Adicomex).

De acuerdo con los estudios económicos del Mincomercio (2013), la hoja de ruta investigativa gira en torno a las relaciones comerciales de Colombia, en particular aquellas relacionadas con los tratados de libre comercio (TLC) vigentes (Estados Unidos y Europa) y algunos otros en etapa de negociación, análisis de tendencias comerciales, y perfiles de exportación departamentales. De acuerdo con el Ministerio los ejes centrales de la política comercial deben virar en torno a la internacionalización de la economía, la transformación productiva, y Colombia como destino turístico de clase mundial. Bajo estos lineamientos se han definido unos sectores de clase mundial por su potencialidad de desarrollo en el corto plazo y creciente demanda global, éstos son: i) autopartes, ii) industria gráfica, iii) energía eléctrica, bienes y servicios conexos, iv) textiles, confecciones, diseño y moda, v) servicios tercerizados a distancia, vi) software y servicios de TI, vii) cosméticos y artículos de aseo, y viii) turismo de salud.

Por su parte, Proexport produce informes coyunturales de la situación del turismo internacional, la inversión extranjera directa y el sector externo, así como estudios de mercado con nuevos socios comerciales (ejemplo, Canadá) y socios antiguos como el Acuerdo Europeo de Libre Comercio (EFTA), enfocados básicamente en cinco sectores: alimentos procesados, software, textiles y confecciones, ingredientes naturales para cosméticos, y frutas y verduras orgánicas. Asimismo, se encarga de divulgar las potencialidades de los 32 departamentos de cara a las nuevas oportunidades comerciales que generan los acuerdos comerciales vigentes y las posibilidades que tienen las firmas colombianas de “diversificar sus destinos de exportación en países de América, Europa y Asia, especialmente en aquellos con los que Colombia tiene tratados de libre comercio vigentes” (Proexport, 2013).

Analdex (2013a), en su publicación de la revista Exponotas resalta las temáticas actuales de estudio alrededor del tema. Con base en la revisión realizada en estas publicaciones, se resaltan tres grandes temas y los ejes específicos de estudio, los cuales se interconectan directa e indirectamente: i) logística empresarial para la competitividad (cadenas de valor, nuevo estatuto aduanero y operador económico autorizado, eficiencia logística, infraestructura, internacionalización portuaria, facilitación del comercio); ii) viejos y nuevos retos en materia comercial, así como expectativas del comercio exterior colombiano (dentro de estas problemáticas resaltan los acuerdos comerciales, escenarios de tasa de cambio y el ‘problema de la revaluación’, innovación, contrabando, alianzas público-privadas, reglas del juego claras, adhesión Rusia OMC, obstáculos al comercio, la visión china); y iii) las grandes reformas legales y su impacto en el comercio exterior (impacto reforma tributaria en asuntos aduaneros y de comercio exterior, nueva ley marco aduanera, reglamentación de sociedades de comercialización internacional, fortalecimiento de zonas Francas y su impacto fiscal).

Al igual que las entidades anteriores, las cámaras de comercio, en particular las de Medellín (CCMA, 2013) y Bogotá (CCB, 2013), se encargan de presentar estudios de mercados internacionales con potencialidades para las regiones, entre los que destacan los mercados de Centro y Norteamérica, la India y la Unión Europea; así como estudios sectoriales como los de autopartes, cosméticos y artes gráficas. De igual forma, sus análisis se centran en el tema de las aglomeraciones empresariales (clústeres) y generación de valor compartido. Finalmente, a la hora de reunir público y difundir o comunicar temas de actualidad alrededor del comercio exterior, las visiones expuestas en las secciones previas se complementan con las posturas

desarrolladas en congresos, seminarios o foros. A continuación se presentan los ejes de discusión desarrollados en este tipo de eventos:

El Congreso Nacional de Exportadores en sus últimas dos versiones (XXV y XXIV) ha enfatizado en la relación crecimiento económico y comercio exterior (tendencias, modelos, impactos), en el tema del contrabando (facilitación del comercio y penalización), cadenas de valor transfronterizas (vinculación de pymes), infraestructura y logística para el comercio exterior (intermodalidad vial, portuaria, aeroportuaria y de plataformas logísticas), desarrollo empresarial (emprendimiento e innovación), política económica (riesgos y limitaciones de la política fiscal, incentivos tributarios), y oportunidades comerciales (TLC: EEUU y Unión Europea, países nórdicos) (Analdex, 2013b).

Por su parte, el Foro de Importadores (versión III) no solo ha puesto en escena los temas de integración, comercio y aprovechamiento de los TLC's, inversión e incentivos tributarios, sino también ha enfatizado en la ley marco de aduanas y nuevo estatuto aduanero, así como el proceso de modernización de la normatividad FDA, la contratación internacional, los incoterms y avances en el operador económico autorizado (Analdex, 2013b). Entre tanto, el Encuentro Logístico e Industrial del Caribe (versión II) ha puesto de relieve el impacto de la infraestructura logística de cara a los TLC's, las cadenas de abastecimiento como estrategia financiera, la experiencia de internacionalización portuaria (caso chileno), la 'posible' enfermedad holandesa en Colombia, y la facilitación al comercio: vuce, inspección simultánea y administración del riesgo (Analdex, 2013b).

Por su parte, las dos últimas Jornadas de Comercio Exterior (VI y VII) han dado una mayor relevancia al tema de normatividad contable hacia el conocimiento de operaciones de cara a los TLC's: normas internacionales de información financiera (NIIF), agencias, procedimientos y estatuto aduanero, normas de origen, reforma aduanera y tributaria, así como hacia la sostenibilidad de las cadenas de abastecimiento (Adicomex, 2013). Las dos últimas ediciones del Congreso Internacional de Negocios realizados en Medellín (IV y V), han discutido en torno a la importancia de la prospectiva en negocios internacionales, el proceso de internacionalización de Colombia como país emergente, el vínculo entre el comercio y las nuevas preocupaciones mundiales: medio Ambiente, sostenibilidad, pobreza y otros, los escenarios futuros y las nuevas oportunidades de negocio comercial para Colombia, los nuevos escenarios logísticos y la infraestructura portuaria de la vanguardia del comercio internacional, el consumidor del futuro y las megatendencias del mercado, los nuevos jugadores mundiales, los conflictos internacionales como las guerras del futuro. Por último, el seminario la Determinación del Origen de las Mercancías: Un reto para los empresarios, se abordaron temas concernientes a los aspectos generales de los TLC, aspectos a tener en cuenta para determinar el origen de las mercancías, el acuerdo de valoración del GATT, la certificación de origen, y cómo afrontar un proceso de investigación de origen (Legis, 2013).

## REFLEXIÓN FINAL

Las temáticas relacionadas con el mundo del comercio exterior y los negocios internacionales que fueron abordadas en este documento permiten focalizar campos de trabajo que pueden ser sistemáticamente estudiados. Ciertas aristas de investigación pueden ser encaminadas hacia temáticas específicas y áreas problemáticas que conlleven a la realización de proyectos de investigación, que interdisciplinariamente y críticamente se enfoquen en el comercio exterior e internacional, así como las relaciones de negociación derivados de éste. Si bien, el abanico de posibilidades es amplio se propone como ejes temáticos los siguientes:

*Determinantes del comercio exterior (desempeño exportador e importador) y de inversión extranjera en distintos niveles: micro, meso, macro y regional.*

*Volatilidad cambiaria y afectación del comportamiento competitivo empresarial y sectorial.  
Internacionalización empresarial y capacidad exportadora*

*Medición de la apertura de mercados a nivel nacional, departamental y sectorial  
Aprovechamiento e impactos de los TLC*

## RESUMEN

*La presente investigación aborda el tema de los fondos gubernamentales no bancarios a los que pueden tener acceso la Micro, Pequeñas y Medianas Empresas (MIPYMES) mexicanas. El propósito de este estudio es brindar información actualizada a las MIPYMES de Mexicali, Baja California para que identifiquen las instancias a las que pueden acudir cuando requieran obtener fondos gubernamentales no bancarios. Se analizan investigaciones previas sobre el tema, así como el marco conceptual y legal de los fideicomisos. Se esquematiza y explica el procedimiento que aplica el gobierno federal, estatal y municipal para la entrega de los fondos. Se investiga el grado de conocimiento que tienen las MIPYMES sobre los tipos y montos de apoyos gubernamentales no bancarios. Es un estudio de corte cuantitativo de tipo descriptivo. Se estudia una muestra no probabilística de tipo por conveniencia de 30 empresas mexicalenses que aceptaron participar en la investigación. Un hallazgo en esta indagatoria fue que en Mexicali, Baja California los fideicomisos no se dan a conocer en su totalidad tal como los promueve el gobierno federal. Los datos obtenidos permitieron concluir, que la mayoría de las MIPYMES desconocen los diferentes tipos de apoyos gubernamentales no bancarios y utilizan sus ahorros personales para financiarse.*

**PALABRAS CLAVES:** Fondos Gubernamentales, Fideicomisos, Mipymes

## DELIVERY PROCESS OF GOVERNMENT NON-BANKING FUNDS TO SMES IN MEXICALI, BAJA CALIFORNIA, MEXICO

### ABSTRACT

*This research addresses the issue of Government non-banking funds that Mexican micro, small and medium enterprises (SMES) may access. The purpose of this study is to provide updated information to SMEs in Mexicali, Baja California so they can identify the options that they can turn to when they require to obtain government non-banking funds. Research on the commented topic, as well as the conceptual and legal framework of trusts is analyzed. It outlines and explains the procedure that is applied by the federal, state and municipal Governments for the delivery of funds. Research is done on the degree of knowledge had by SMEs on the types and amounts of Government non-banking supports. This is a descriptive research quantitative in nature. It also explores a non-probability sample, a convenience sample of 30 companies that agreed to participate in this research. One finding in this investigation was that in Mexicali, Baja California trusts are not disclosed in its entirety as promoted by the federal government. The data obtained allowed to conclude that most SMEs unaware of the different types of non-bank government support and use their personal savings to finance.*

## INTRODUCCIÓN

En México los empresarios dueños de MIPYMES son los principales empleadores del país. De acuerdo a datos proporcionados por la Comisión Nacional para la Defensa de los Usuarios de las Instituciones Financieras [CONDUSEF] (2012) los empresarios dueños de MIPYMES aportan un 72% del empleo en México. Actualmente el 99.8 por ciento de las empresas mexicanas son MIPYMES, de las cuales el 90 por ciento son microempresas. La totalidad de MIPYMES dan empleo al 70 por ciento de la población económicamente activa, según estudios realizados por el Banco de México (Banxico, 2013). A partir de la administración del ex presidente Vicente Fox Quesada, el Gobierno Federal emprende e implementa acciones a través de dos programas fundamentales en los cuales participan instituciones, organismos públicos y privados. Estos programas fueron impulsados también por gobiernos posteriores como fué el caso del expresidente Felipe Calderón Hinojosa, a través del: Plan Nacional de Desarrollo (2007 – 2012) y el Programa Nacional de Financiamiento del Desarrollo. El Plan Nacional de Desarrollo pretende a través del Gobierno Federal y por medio de la Secretaría de Economía, brindar apoyo a las MIPYMES. Para tal efecto, se ofrecen programas de financiamiento, asesoría y asistencia.

Una herramienta de política fundamental ha sido sin duda la Banca de Desarrollo, la cual a través del Programa Nacional de Financiamiento del Desarrollo (PRONAFIDE), promueve el desarrollo de las MIPYMES, soluciona sus problemas de acceso a los servicios financieros y mejora sus condiciones. Lo anterior resulta importante especialmente para aquellos sectores que destacan por su contribución al crecimiento económico y al empleo. No obstante los esfuerzos federales que se mencionan anteriormente, según Nacional Financiera (2004), algunas MIPYMES fracasan debido a “la ausencia de una planeación adecuada de las necesidades de recursos”, lo que evidencia una problemática de financiamiento en las MIPYMES. Aunado a lo anterior, a decir de Sánchez Barajas (2004), la normatividad para la promoción y consolidación de las MYPES ha sido incompleta e inoportuna;

es sintomático observar que no ha existido secuencia lógica ni un enfoque integral en la promulgación de los ordenamientos establecidos para el fomento de estos estratos empresariales; parece que el gobierno aún no acaba de conocer el universo de las MYPES con sus características y problemas correspondientes (p. 7)

Algunos autores que han estudiado el tema de las MIPYMES han sido Echavarría, Morales, Varela (2011); Anguiano (2010) y Bardán (2002). Echavarría y cols. (2011) realizaron un estudio en el que analizan las alternativas de financiamiento para las pequeñas y medianas empresas PYMES mexicanas. Así también Anguiano (2010) estudió las formas de Irrigación y capital para transformar el desierto en Baja California profundizando en la formación de las primeras empresas de este estado. Por su parte Bardán (2002) analizó la evolución de las micro, pequeñas y medianas empresas en México, su funcionamiento y problemática. Si bien es cierto que el tema en comento ha sido estudiado por algunos autores, las investigaciones mencionadas no abordan el procedimiento que se aplica para la entrega de fondos, ni a las instancias que se deben acudir para la obtención de financiamientos gubernamentales, por lo que se justifica ampliamente el desarrollo del presente estudio.

Dado lo anterior el propósito de éste estudio es brindar información actualizada a las Micro, Pequeña y Mediana Empresas (MIPYMES) para que identifiquen las instancias a las que deben acudir cuando requieran obtener fondos gubernamentales no bancarios. Es un estudio de corte cuantitativo de tipo descriptivo. Se estudia una muestra de 30 empresas ubicadas en la ciudad de Mexicali, Baja California. El presente trabajo se estructura de la siguiente manera: una introducción, revisión literaria, metodología,

resultados y conclusiones. En la introducción se presentan los antecedentes y problemáticas de las MIPYMES en la actualidad, se analizan investigaciones previas sobre el tema y se plantea el propósito de la investigación. En el apartado de revisión literaria se presenta el marco conceptual y legal de los fideicomisos. En el apartado de resultados se esquematiza y explica el procedimiento que aplica el gobierno federal para la entrega de los fondos y se presentan los resultados de la investigación de campo realizada sobre el grado de conocimiento que tienen las MIPYMES sobre los tipos y montos de apoyos gubernamentales no bancarios.

## REVISIÓN LITERARIA

Para iniciar la revisión literaria se considera pertinente conceptualizar algunos términos que son de interés en este estudio, tales como fideicomiso, financiamiento y MIPYME. El término fideicomiso encuentra sus raíces en el derecho romano, pues ya desde entonces se consideraba dentro de la sucesión. A decir de Luna (2005) la palabra fideicomiso según el diccionario de la lengua española es:

La disposición testamentaria por la cual el testador deja su hacienda o parte de ella encomendada a la fe de uno para que, en caso y tiempo determinados, la transmita a otro sujeto o la invierta del modo que se le señale (p. 17).

El citado autor precisa que si bien originalmente el fideicomiso fue utilizado con fines testamentarios, en la actualidad también se aplica tanto para arrendamientos como para aspectos empresariales. El término financiamiento es definido por Ortega (2005), como la captación de fondos a través de préstamos o aportaciones de capital. De acuerdo al diccionario LID de Empresa y Economía el fideicomiso se define como la aportación de dinero para desarrollar un proyecto o empresa. Puede ser como fondos propios con retribución variable en función de los beneficios o como fondos ajenos que cobran una retribución fija o interés. Las MIPYMES son las micro, pequeñas y medianas empresas. A decir de Vazquez (2007), las MIPYMES son consideradas como...

las organizaciones dominantes en todos los países del continente, representan más del 95% de los negocios existentes en el mundo, cuentan con una ventaja competitiva sobre las empresas grandes, no requieren de grandes capitales, altos inventarios y costosos equipos sino de saber general activos intangibles como es el capital intelectual y mejorar el conocimiento y la innovación por lo que deben entender el valor del conocimiento (p. 99).

### Financiamiento No Bancario Federal

En México, las MIPYMES son apoyadas por la Secretaría de Economía a través de fondos públicos. El objetivo de estos apoyos es contribuir al desarrollo económico nacional, fomentar la creación, consolidación y competitividad de estas empresas y la inversión productiva que genere más empleos. Así la Secretaría de Economía a través de un fideicomiso ofrece a las MIPYMES el fondo Pyme, el cual apoya a las empresas de menor tamaño y a emprendedores otorgando apoyos a sus programas y proyectos. El Fondo Pyme también ofrece los Centros México Emprende que otorgan servicios y apoyos públicos o privados de acuerdo con su tamaño y su potencial. El tamaño de las MIPYMES se establece mediante una estratificación conforme los siguientes criterios: tamaño, sector, rango de número de trabajadores, rango de monto de ventas anuales (Ver Tabla 1). Otros tipos de intermediarios o entidades financieras no bancarias que existen en México ofrecen opciones de financiamiento con base en la necesidad del negocio. Entre estos intermediarios se encuentran las arrendadoras financieras, las cuales adquieren bienes para que otra persona haga uso de él. En este caso la entidad financiera se obliga a pagar una renta para cubrir el valor de la adquisición del bien, sin que éste sea de su propiedad. Las empresas de factoraje financiero y las

entidades de ahorro y crédito popular son otras entidades financieras, éstas sirven como intermediario para pactar con el cliente el que ceda todos sus derechos de crédito por un precio determinado.

Tabla 1: Estratificación de MIPYMES

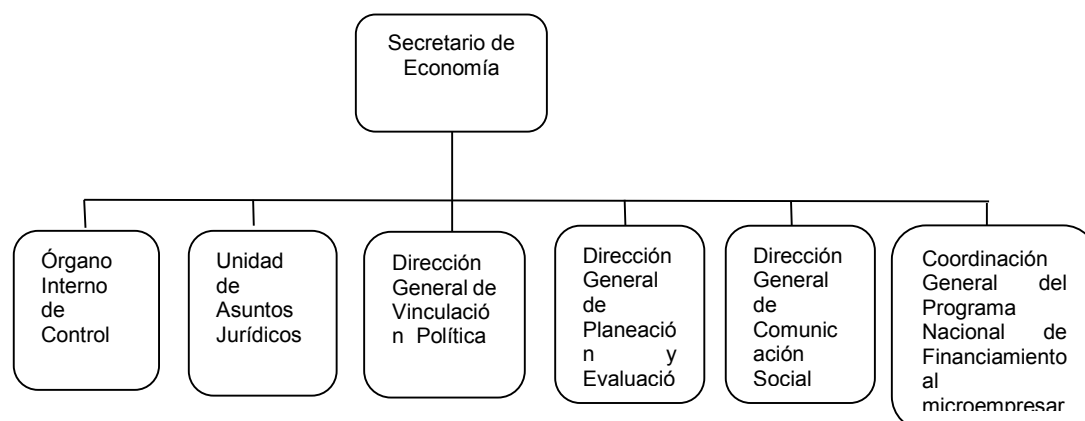

Tamaño	Sector	Rango De Trabajadores	Número de	Rango De Ventas (Mdp)	Monto de Anuales	Tope Máximo Combinado
Micro	Todas	Hasta 10		Hasta \$4		4.6
Pequeña	Comercio	Desde 11 hasta 30		Desde \$4.01 hasta \$100		93
	Industria y Servicios	Desde 11 hasta 50		Desde \$4.01 hasta \$100		95
Mediana	Comercio	Desde 31 hasta 100		Desde \$100.01 hasta \$250		235
	Servicios	Desde 51 hasta 100				
	Industria	Desde 51 hasta 250		Desde \$100.01 hasta \$250		250

*En esta tabla se observa la estratificación que la Secretaría de Economía hace para distinguir el tamaño de las MIPYMES. Destaca que a diferencia de la pequeña y mediana empresa en donde son consideradas sólo aquellas que participan en el sector comercio, industria y servicio, en el estrato de la micro empresas entran todas. Fuente: Reglas de Operación del Fondo de Apoyo para las Micro, Pequeña y Mediana Empresa (Fondo PyMe) para el ejercicio fiscal 2013. Diario Oficial de la Federación (28 de febrero de 2013).*

Según se establece en el artículo 3 de la Ley de Instituciones de Crédito (1990), reformada en 2010 y vigente en 2013, el Sistema Bancario Mexicano está integrado por: el Banco de México, las instituciones de banca múltiple, las instituciones de banca de desarrollo y los fideicomisos públicos constituidos por el Gobierno Federal para el fomento económico que realicen actividades financieras y los organismos autoregulatorios bancarios. Las instituciones de la Banca de Desarrollo del sector empresarial está regulada por la Secretaría de Hacienda y Crédito Público y la conforman Nacional Financiera (NAFIN) y el Banco Nacional de Comercio Exterior (BANCOMEXT) para impulsar el desarrollo de las MIPYMES ofreciendo acceso a productos financieros, capacitación, asistencia técnica con el fin de lograr un mayor desarrollo y generar más empleos. NAFIN es regida por la Ley Orgánica de Nacional Financiera y BANCOMEXT por la Ley Orgánica de Banco Nacional de comercio Exterior.

El Presupuesto Federal que se asigna al Fondo Pyme es del 95.62 por ciento destinados a la población objetivo y hasta un 4.38 por ciento a los gastos asociados a la promoción, operación, supervisión, seguimiento y evaluación que se requiere para la ejecución del Fondo Pyme por parte del Instituto Nacional del Emprendedor (INADEM). Para brindar apoyo financiero no bancario a las MIPYMES, el gobierno federal se apoya en la Secretaría de Economía y en algunas dependencias como la Coordinación General del Programa Nacional de Financiamiento al Microempresario y en el Instituto Nacional del Emprendedor [INADEM]. La Coordinación General del Programa Nacional de Financiamiento al Microempresario depende directamente de la Secretaría de Economía (Ver Figura 1). Se hace la precisión que a partir del año 2013 se creó el Instituto Nacional del Emprendedor, aunque aún no aparece como una dependencia dentro del organigrama oficial.

Figura 1: Organigrama de la Secretaría de Economía

La figura muestra un fragmento del organigrama de la Secretaría de Economía, la cual está a cargo de brindar apoyos no bancarios a las MIPYMES. Fuente: Secretaría de Economía

Los programas que ofrece la Secretaría de Economía (SE) a los empresarios dueños de micro y pequeños negocios a través del fideicomiso México Emprende, destaca el programa de consultoría empresarial como otra opción para recibir apoyo por parte del gobierno federal que ayuda a las MIPYMES (Ver Tabla 2). Así las cosas, para las microempresas existen tres programas de apoyo, Mi tortilla, Franquicias y Mi tienda. Estos apoyos contribuyen al fortalecimiento y modernización integral de las microempresas.

Tabla 2: Cuadro de Apoyos Para Mipymes de la Se

Fondo	Tipo de Empresa	Destino del Financiamiento
Mi Tortilla	Microempresa	Mejorar la competitividad y participación de mercado de la industria de la masa y la tortilla por medio de su modernización administrativa, comercial y tecnológica
Mi tiendita	Microempresa	Creación, modernización, eficiencia, consolidación, competitividad y sustentabilidad en logística y abasto.
Asesoría financiera	Pequeña y Mediana Empresa	Apoyar a las MIPYMES en el diagnóstico de sus necesidades de financiamiento y en la gestión para obtenerlo.
Programas Emergentes	Pequeña y Mediana Empresa	Impulsar la recuperación económica en las zonas afectadas por desastres naturales mediante el otorgamiento de crédito en condiciones preferenciales y esquemas crediticios no tradicionales, a las MIPYMES que hayan interrumpido la actividad económica.
Proyectos Productivos	Pequeña y Mediana Empresa	Financiar proyectos de inversión que fortalezcan la competitividad de las MIPYMES; como medio para detonar la creación y conservación de empleos y el desarrollo regional.
Promoción	Pequeña y Mediana Empresa	Otorgar apoyos destinados a difundir y promover los esquemas y mecanismos para el desarrollo de la productividad y competitividad de las micro, pequeñas y medianas empresas, mediante el acceso a distintas expos y eventos. Asimismo apoya la formación y consolidación de los emprendedores, con la participación del sector empresarial y diversas instituciones públicas y privadas.
Capacitación y Consultoría Empresarial	Pequeña y Mediana Empresa	Instrumento que permite a las MIPYMES ser más rentables y productivas, mediante la identificación de programas de intervención empresarial especializada, dirigida a una o varias de las áreas sustantivas de la empresa.

En esta tabla se observan los diversos fondos que ofrece la SE, de los cuales dos están dirigidos exclusivamente para microempresas.

Fuente: Elaboración propia con información de la página de la SE.(2012).

El objetivo del fondo para apoyar el programa Mi Tortilla es el modernizar su desempeño administrativo, comercial y tecnológico y de esta manera hacer más competitiva la industria de la masa y la tortilla. Por su parte el programa de apoyo Mi Tienda está dirigido a tiendas de abarrotes que generen un desarrollo competitivo a través de consultorías y capacitación para mejorar su administración. Bajo este rubro de financiamiento no bancario federal, se puede observar que para cualquiera de las empresas de los programas Mi tortilla y Mi tienda el monto asignado es de hasta \$40,000 pesos en la subcategoría de Capacitación y Consultoría, según las reglas de operación del fondo PYME. El fondo PYME deriva los montos al estado

y éste establece las fechas de convocatorias y plazos de pago una vez que determinan la capacidad de pago de las empresas.

En la subcategoría de Fondo de Financiamiento que se destina a las pequeñas y medianas empresas, llama la atención el hecho que en las reglas de operación no se muestra un monto asignado a ella, sólo se indica que se destina el 100 por ciento del monto. Sin embargo, en el resto de las subcategorías, si se desglosan montos asignados a los distintos conceptos que las conforman. Así se puede observar que en las subcategorías de Capacitación en Capital de Riesgo se asigna un monto de hasta \$15,000.00 pesos y un porcentaje de apoyo de hasta un 50 por ciento, en tanto que en la subcategoría de Metodología, Contenidos y Materiales se ofrece un monto de hasta \$500,000.00 pesos, con un porcentaje de apoyo de hasta 50 por ciento. La subcategoría de Elaboración de Estudios y Proyectos muestra un monto asignado de hasta \$500,000.00 pesos con hasta 50 por ciento de apoyo y la subcategoría Esquemas de Reducción de Costos de Financiamiento muestra un monto de hasta \$50,000.00 pesos, con porcentaje de apoyo del 100 por ciento.

#### Financiamiento No Bancario en Baja California

En Baja California, para fomentar la participación social en la educación y para fortalecer comisiones y consejos de desarrollo económico, la Ley de Hacienda del estado asigna recursos que provienen del Impuesto sobre Remuneraciones del Trabajo Personal (IRTP) en las áreas de Seguridad Pública con cargo al patrimonio al Fideicomiso Empresarial de Baja California (FIDEM). La operación del FIDEM está reglamentada y determinada por un fideicomitente integrado por el gobierno del Estado a través del Poder Ejecutivo, un fiduciario BBVA Bancomer y fideicomisarios que son las instituciones públicas y privadas y las comisiones o consejos empresariales reconocidos legalmente en Baja California a las que el Comité Técnico designe como beneficiarias. EL FIDEM es un fideicomiso público el cual apoya áreas estratégicas del desarrollo de los municipios y deberá relacionarse con algunas de las áreas estratégicas de la Constitución Política de los Estados Unidos Mexicanos o del Plan Nacional de Desarrollo. La Ley de Hacienda del estado de Baja California, asigna recursos que provienen del Impuesto sobre Remuneraciones del Trabajo Personal (IRTP) en las áreas de Seguridad Pública, con cargo al patrimonio del Fideicomiso Empresarial de Baja California (FIDEM), lo anterior para fomentar la participación social en la Educación y para fortalecer comisiones y consejos de Desarrollo Económico.

El FIDEM es el fideicomiso No. 1249 “Para Coadyuvar al Desarrollo de las Entidades Federativas y Municipios” el cual se rige por sus propias reglas de operación. Este fideicomiso público apoya áreas estratégicas del desarrollo de los municipios y deberá relacionarse con algunas de las áreas estratégicas de la Constitución Política de los Estados Unidos Mexicanos o del Plan Nacional de Desarrollo. En el desarrollo de este fideicomiso, el fideicomitente aporta el 5% de los ingresos por la recaudación del IRTP y los proyectos susceptibles de apoyo de las tres áreas anteriores deberán encuadrar en las líneas de apoyo que entre otras están los programas de apoyo a las micro, pequeñas y medianas empresas. Los siguientes son los programas que ofrece en Baja California, la Secretaría de Desarrollo Económico (SEDECO) a los empresarios dueños de micro y pequeños negocios a través del fideicomiso México Emprende (Ver Tabla 3). No se incluyen los programas dirigidos a emprendedores. En estos fondos la comisión de apertura es de 1.5% por única ocasión más IVA (No aplica para el Emprende Tradicional). Tasa de interés anual 6% más IVA. Tasa moratoria de 27% anual fija. El plazo de financiamiento es de 18 meses, incluyendo un período de gracia en capital de hasta 3 meses.

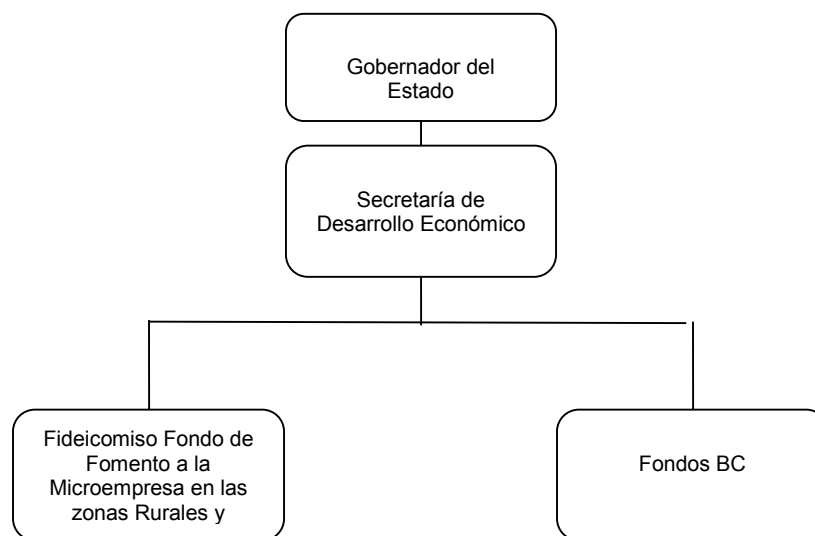

Tabla 3: Cuadro Comparativo de Apoyos Para MIPYMES de la SEDECO en Baja California

Fondo	Tipo de Empresa	Destino del Financiamiento	Monto
Prosoft	Micro, pequeña y mediana empresa	Capacitación y certificación, habilitación equipamiento tecnológico, normas y modelos, adopción y producción de TI.	
Prologýca	Micro, pequeña y mediana empresa	Creación, modernización, eficiencia, consolidación, competitividad y sustentabilidad en logística y abasto.	
Capital Semilla	Micro, pequeña y mediana empresa	Negocios tradicionales, tecnología intermedia y alta tecnología.	

En esta tabla se observa que son tres los fondos dirigidos a las Micro, Pequeña y Medianas empresas a través de la SEDECO en Baja California. Fuente: Elaboración propia con información de la página de SEDECO de Baja California (2012).

Según información que se presenta en la Convocatoria del Fideicomiso Empresarial del Estado de Baja California, en la página oficial de Secretaría de Desarrollo Económico de Baja California (2013), los proyectos susceptibles de apoyo son: 1) elaboración de estudios y proyectos, 2) programas de promoción, 3) campañas de difusión, 4) programas de capacitación, 5) programas de becas, 6) programas de apoyo a las Micro, Pequeñas y Medianas Empresas, 7) gestión de proyectos, 8) obra pública y 9) apoyo para equipamiento. De acuerdo a lo anterior y considerando la política de desarrollo empresarial, así como la visión de los organismos intermedios, se apoyan proyectos que resuelven una necesidad específica de desarrollo económico, educación y de seguridad pública del Estado. El gobierno estatal de Baja California, se apoya en la Secretaría de Desarrollo Económico para brindar los Fondos Baja California a las MIPYMES (Ver Figura 2). La Secretaría de Desarrollo Económico es la encargada de lanzar la convocatoria y las fechas para que participen las MIPYMES.

Figura 2: Organigrama del Poder Ejecutivo de Baja California

La figura muestra el organigrama del Poder Ejecutivo de Baja California, la cual está a cargo de brindar apoyos no bancarios a las MIPYMES. En el organigrama se señala a la Secretaría de Desarrollo Económico como la encargada del Fideicomiso Fondo de Fomento a la Microempresa en las zonas Rurales y Marginadas, así también aparece como la encargada de los Fondos Baja California. Fuente: Gobierno del Estado de Baja California

## METODOLOGÍA

El tema que se ha venido abordando a lo largo de la presente investigación es el financiamiento gubernamental no bancario para las micro y pequeñas empresas en Baja California, México. Es un estudio de corte cuantitativo de tipo descriptivo explicativo. Se realizó una investigación de tipo transversal, haciendo un corte en el tiempo para describir el estado del arte, la normatividad vigente al momento de llevar a cabo el estudio y las opiniones de los empresarios encuestados durante el segundo semestre del año 2012. Se estudió un universo conformado por las micro pequeñas y medianas empresas establecidas en Baja California. Según datos obtenidos del Sistema de Información Empresarial Mexicano (2012) existen 11,420 empresas en la citada entidad federativa, de las cuales 3000 se encuentran en la ciudad de Mexicali. Se estudió una muestra no probabilística que estuvo conformada por empresas que aceptaron participar en el presente estudio. De esta manera los sujetos estudiados fueron 30 micro y pequeñas empresas, las cuales se dedican únicamente a los giros comercial y de servicios. De las 30 empresas encuestadas el 78 por ciento se dedica al sector comercio y el 22 por ciento al sector servicio. Como características demográficas de quienes contestaron la encuesta se especifica que 55 por ciento de los encuestados fueron mujeres, mientras que el 45 por ciento fueron hombres. El rango de edad varió de 41 a 50 años en un 39 por ciento, de 31 a 40 en un 38 por ciento y de 20 a 30 en un 16 por ciento.

El material utilizado en este estudio fueron libros, páginas web, revistas, leyes aplicables, así como un cuestionario. Se consultaron autores como Anguiano (2010), Bardán (2002) Luna (2005) y Echavarría, Morales y Varela (2011), entre otros. Se consultaron páginas web como la de Banco de México, CONDUSEF, la de Secretaría de Economía, Gobierno del Estado de Baja California y la del Sistema de Información Empresarial Mexicano, entre otras. También se consultaron revistas como Business Conexión. También se revisó la normatividad aplicable como la Ley de Instituciones de Crédito. Asimismo se elaboró una guía de entrevista con siete preguntas abiertas (Ver Tabla 4).

Tabla 4: Guía de Entrevista

No.	
1	¿Cuál cree usted que es la razón por la que los empresarios dueños de Mipymes no acuden a solicitar más apoyos gubernamentales no bancarios?
2	¿A cuántas empresas se les ha dado apoyo desde del inicio del programa?
3	¿Cuáles son los fondos de gobierno que no utilizan créditos bancarios?
4	¿Cómo es la promoción que hace SEDECO para dar a conocer los apoyos?
5	¿Cuál es el proceso para que le sea aprobado un crédito a un empresario?
6	¿Cuál es el objetivo de los fondos gubernamentales?
7	Una vez aprobado el crédito, ¿cuáles son los requisitos que debe seguir el empresario?

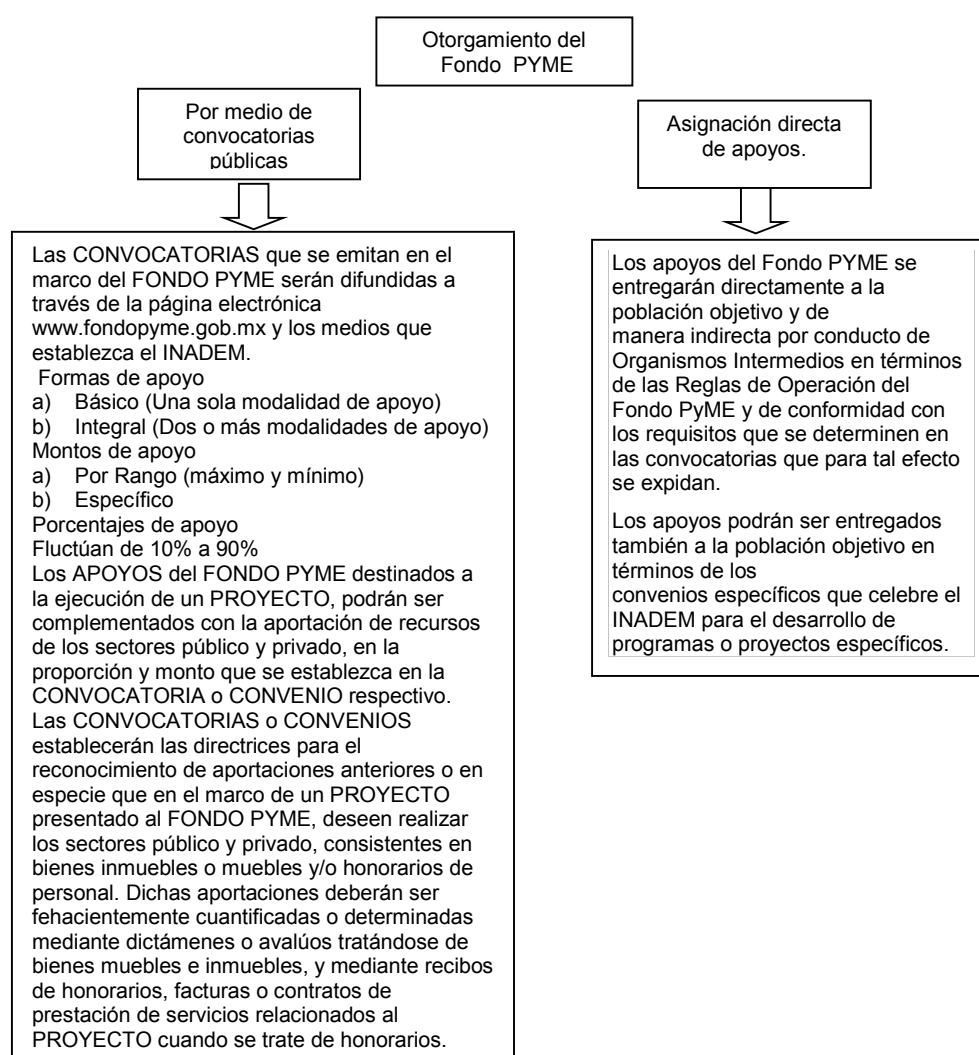

*En esta tabla se muestran las preguntas que sirvieron de base para la realización de la entrevista al encargado del Centro de Atención Empresarial.*

Se analizó como variable independiente a Apoyos Gubernamentales No Bancarios y como la variable dependiente al Financiamiento para Empresas cuya dimensión fue las micro y pequeñas empresas. El procedimiento aplicado en este estudio inició con una revisión documental en la que se identificaron algunas investigaciones previas realizadas sobre el tema de estudio y algunos autores que han abordado este tema. Se elaboró una guía de entrevista y se entrevistó al encargado del Centro de Atención Empresarial (CEA) en la Secretaría de Desarrollo Económico (SEDECO). Asimismo se encuestaron a 30 micro y pequeñas empresas de la ciudad de Mexicali. El cuestionario se aplicó durante los meses de Agosto y Septiembre de 2012. La aplicación del cuestionario se realizó en las empresas durante los turnos matutino y vespertino. Las respuestas dadas por los sujetos de estudio, fueron capturadas en una hoja de cálculo y se tabularon los resultados, los cuales reflejan los valores agrupados. Los datos obtenidos se procesaron aplicando estadística descriptiva a través de medidas de tendencia central como fue el cálculo de la media. Se utilizó una hoja de cálculo para vaciar los datos al programa Excel y se generaron las gráficas respectivas.

## RESULTADOS

A continuación se muestran los resultados obtenidos en esta investigación, los cuales se presentan en cuatro subsecciones: (1) Financiamiento No Bancario Federal, (2) Financiamiento No Bancario en Baja California (3) Resultados de la Entrevista y 4) Resultados de la Encuesta. Para explicar el procedimiento que aplica el gobierno federal para la entrega de los fondos a MIPYMES, es importante entender el contexto en el que éste se realiza (Ver figura 3). Como se mencionó en el apartado de revisión literaria, y de acuerdo al Artículo 3 de la Ley de Instituciones de Crédito, el Sistema Bancario Mexicano se encuentra integrado por Banco de México, instituciones de banca múltiple, los organismos auto regulatorios bancarios y “las instituciones de banca de desarrollo y los fideicomisos públicos constituidos por el gobierno federal para el fomento económico que realicen actividades financieras”.

Figura 3: Procedimiento Que Aplica el Gobierno Federal Para la Entrega del Fondo PYME

En esta figura se observa el procedimiento que aplica el gobierno federal para el otorgamiento del fondo PyME. Destaca el hecho que este fondo podrá ser complementado con la aportación de recursos de los sectores público y privado, de acuerdo a la convocatoria o convenio respectivo. Fuente: Elaboración propia con base en las Reglas de Operación del Fondo de Apoyo para la Micro, Pequeña y Mediana Empresa (Fondo PyME) para el ejercicio fiscal 2013

Los fideicomisos públicos realizan actividades financieras de fomento económico, a través de las cuales se realizan actividades auxiliares de crédito. Las actividades auxiliares de crédito se encuentran reguladas por la Ley General de Organizaciones y Actividades Auxiliares de Crédito (1985), reformada en 2006 y vigente a 2013, en su Artículo 4 fracción III, se establece que se consideran actividades auxiliares del crédito a la transmisión de fondos. En este contexto opera el fondo de apoyo para la micro, pequeña y mediana empresa (fondo PYME).

Los recursos que asigna el Gobierno Federal por medio de la Secretaría de Economía, son otorgados a través de la Subsecretaría para la Pequeña y Mediana Empresa (SPYME) a quienes sean beneficiados por el fondo de Apoyo para las Mipymes. La SPYME concerta con las Entidades Federativas la aportación conjunta de recursos públicos, y cuando las Entidades no logren aportar recursos a los proyectos de carácter estatal, el Consejo Directivo podrá destinar recursos federales del Fondo Pyme a la población objetivo a través de Organismos Intermedios para la ejecución de proyectos estatales. El subcomité en cada estado evalúa, dictamina y da seguimiento a los proyectos estatales a los cuales se les fue aportado algún recurso de una Entidad Federativa. La Ley de Hacienda del estado de Baja California, con cargo al patrimonio del Fideicomiso Empresarial de Baja California (FIDEM), asigna recursos provenientes del Impuesto sobre Remuneraciones del Trabajo Personal (IRTP) en el área de Seguridad Pública, y así fomentar la participación social en la Educación y fortalecer comisiones y consejos de Desarrollo Económico. La entrevista realizada al Director de la Secretaría de Desarrollo Económico de Baja California, permitió conocer algunos puntos importantes en cuanto al procedimiento y criterios de entrega de los apoyos gubernamentales no bancarios. De esta manera se obtuvo que la razón por la que los empresarios dueños de Mipymes no acuden a solicitar más apoyos gubernamentales no bancarios es por falta de información y falta de cultura empresarial. Según los datos proporcionados por el entrevistado, a la fecha se han apoyado alrededor de 1600 empresas.

El entrevistado comentó que los fondos de gobierno para Mipymes que no utilizan créditos bancarios son: emprende tradicional, Prosoft, Prológica y Capital Semilla. Emprende tradicional es un fondo 100% estatal, el cual requiere la elaboración de un plan de negocio. Por su parte, Prosoft es un fondo 50% Federal y 50% Estatal, el cual no requiere la elaboración de un plan de negocio. Asimismo Prológica es un fondo 50% Federal y 50% Estatal, tampoco requiere plan de negocio. En cuanto a Capital Semilla el entrevistado comentó que se trata de un fondo 50% Federal y 50% Estatal. Con relación a la promoción que hace SEDECO para dar a conocer los apoyos, el entrevistado mencionó que el CEA o centro de Atención Empresarial de esta institución depende del Estado y se asocia con Cámaras.

Existe un presupuesto para promover eventos en Cámaras, el cual se encuentra contenido en el presupuesto de egresos del Plan Nacional de Desarrollo El proceso para que le sea aprobado un crédito a un empresario inicia con el envío de la solicitud a Finanzas y si es aprobada por el comité se programan sus abonos dependiendo de su capacidad de pago y bajo el análisis financiero se le hace la observación de que se le dará el dinero dependiendo de cuánto puede pagar. El objetivo de los fondos gubernamentales es generar empleos. Una vez aprobado el crédito se le dan 3 meses de gracia para el primer pago y tiene un plazo de 18 meses con mensualidades fijas con una tasa del 6%. La ganancia por intereses se envía a una cuenta concentradora y al siguiente año se presta a otro empresario. La encuesta realizada mostró que más del 50 por ciento de los empresarios desconoce los programas que se encuentran disponibles. Sólo tres fondos resultaron ser conocidos por los encuestados: el fondo emprendedor, el fondo empresarial y el fondo capital semilla (Ver figura 4).

Figura 4: Grado de Conocimiento de los Empresarios Sobre los Tipos de Fondos

En la figura 1 se observa el grado de conocimiento que tienen los empresarios sobre los diferentes tipos de fondos y muestra que el 54% no tiene ningún conocimiento sobre dichos apoyos.

En cuanto al conocimiento que tienen los empresarios de MIPYMES sobre los montos de los apoyos gubernamentales no bancarios se obtuvo que la mayoría desconoce dichos montos. La figura 2 representa el grado de conocimiento que tienen los empresarios sobre los montos que ofrece el gobierno a través de los fondos y muestra que el 56% de los empresarios desconoce los montos, aunque por otro lado el 44% dice tener conocimiento de ellos. Es decir, no se confirmó el discurso que se ha venido manejando por algunos estudiosos del tema en comento y por las propias autoridades mexicanas en cuanto a que los empresarios no utilizan los apoyos gubernamentales porque los desconocen (Ver Figura 5).

Figura 5: Respuestas de los Empresarios Sobre los Montos de los Fondos de Gobierno

En esta figura se puede observar que algunos de los empresarios encuestados si conocen los montos que ofrecen los fondos gubernamentales.

## CONCLUSIONES

La investigación realizada mostró que a lo largo de los años las MIPYMES no han sido bien respaldadas, pues se pudo observar que no existe una base de datos real que indique la cantidad de empresas y el seguimiento que se les ha dado. Dado que estas empresas no son prioridad para el gobierno Mexicano, pues no pagan gran cantidad de impuestos ni requieren grandes cantidades de crédito. Se pudo observar también que ha habido constantes modificaciones de los criterios para determinar el tamaño de las empresas y la inexistencia de series históricas consistentes y detalladas. Asimismo sobresale otra inconsistencia, pues el fideicomiso empresarial de Baja California actualmente canaliza recursos a líneas que no fueron concebidas

originalmente. En la creación del FIDEM, los acuerdos originales fueron que los recursos serían tomados del Impuesto Sobre Remuneraciones al Trabajo Personal (ISRTP) y se entregaría a la iniciativa privada; sin embargo, actualmente sólo se entrega el 5% del ingreso y el 95% restante se va al presupuesto de egresos. (Business Conexión, 2012).

Cabe señalar que si bien el Sistema Financiero Mexicano no ha logrado que las MIPYMES lleguen a desarrollarse aún y con los apoyos que ofrecen, se han hecho algunos cambios importantes como el aglutinar todos los programas en una sola institución como lo es la Secretaría de Economía. Lo anterior puede considerarse un logro importante, ya que se inicia una mejor organización al dividir a las empresas para su estudio separando a las Microempresas de las Pequeñas empresas. El Gobierno del Estado de Baja California, ofrece como intermediario algunos programas que son apoyados por la Secretaría de Economía, sin embargo no ha dado los resultados esperados, ya que la encuesta mostró cómo los micro y pequeños empresarios aún tienen desconocimiento de los fondos públicos.

La mayoría de los estudios hechos a MIPYMES se enfocan en su administración, sus conocimientos sobre finanzas o si conocen los fondos públicos. En ésta investigación se puso de manifiesto que los micro y pequeños empresarios desean invertir en sus negocios y conocen los créditos de la Banca Comercial y conocen algunos apoyos públicos. Sin embargo, fue evidente que existe un gran desconocimiento sobre lo que ofrece la Secretaría de Economía y lo que ofrece SEDECO.

Se hace conciencia que la Secretaría de Economía ha logrado un gran avance en tratar de informar a las MIPYMES y los diferentes medios con los que pretende persuadirlo. La SEDECO por otro lado, no logra acercarse a los empresarios y los esfuerzos que hace no son suficientes; tienen constantes cambios en sus directivos y no presentan la información de los proyectos que apoyan, lo cual debe ser publicado para cumplir con la Ley de Transparencia. Tras la realización de la presente investigación, se puede concluir que existe una gran brecha entre lo que el Gobierno Estatal ofrece en sus fondos de apoyo con lo que son las necesidades creadas por la situación actual. También se llega a la conclusión que las MIPYMES no conocen los programas y que se requiere hacer un mayor esfuerzo para llegar a ellas. En este sentido la SE debe mostrar los programas a los que ha apoyado y el monto de la inversión para que aumente la confianza hacia dichos programas y se acerquen un poco más a solicitarlos.

La investigación realizada puso de manifiesto que existen fuentes de financiamiento para las Micro y pequeñas empresas y que se ofrecen diferentes alternativas a los empresarios que solicitan financiamiento; sin embargo, de acuerdo a los resultados obtenidos se puede inferir que la mayoría de las MIPYMES visitadas desconocen los diferentes tipos de apoyos gubernamentales no bancarios y utilizan sus ahorros personales para financiarse. Se concluye además que el grado de conocimiento de los programas de financiamiento gubernamentales no bancarios en los dueños de MIPYMES es muy bajo, ya que en las encuesta aplicada más de la mitad de los empresarios dijo no conocer dichos fondos. Los fondos gubernamentales no bancarios pueden ser más aprovechados por las MIPYMES iniciando con una actualización en la información de la página de internet de la SEDECO en Baja California, ya que no presenta todos los apoyos que ofrece el Fondo Pyme derivado de la Secretaría de Economía.

# PLANES NACIONALES DE DESARROLLO, EL SECTOR SALUD Y EL SEGURO POPULAR EN LA ZONA ORIENTE DEL ESTADO DE MÉXICO

Maricela Carmona González, Centro Universitario UAEM Amecameca

Omar Ernesto Terán Varela, Centro Universitario UAEM Amecameca

Ranulfo Pérez Garcés, Centro Universitario UAEM Amecameca

Noé Zúñiga González, Centro Universitario UAEM Amecameca

## RESUMEN

*Las políticas públicas en el sector salud, siempre ha estado presente en los últimos cuatro Planes Nacionales de Desarrollo, donde ha sido pilar fundamental en la determinación en las necesidades de salud de la población más desprotegida. A finales del sexenio 2000-2006, se crea el seguro popular como una alternativa de proveer los servicios de salud de manera gratuita, y determinar que el 100% de la población tuviera seguridad social y que fuera proporcionada por los sectores de salud de los estados. Es en el sexenio 2006-2012, donde se concreta y se divulga que el seguro popular está cubriendo al 100% de la población a nivel nacional. Es por ello que la investigación que se realizó en la Zona Oriente del Estado de México, donde se buscó medir la satisfacción de los pacientes en los servicios que recibe, determinan que en la mayoría de los casos no es el que ellos esperan y que le han publicitado como la alternativa de salud que le resuelve los problemas en sus comunidades. Los pacientes de bajos recursos que acuden a solicitar una consulta a un hospital que presta los servicios del seguro popular, se encuentran que los servicios ofrecidos en la mayoría de los casos no son de calidad. Así mismo, la satisfacción del paciente con la atención recibida es un aspecto clave, utilizado como referente en la evaluación de la calidad de los servicios de salud. Conocer la percepción del paciente, permitirá detectar áreas de oportunidad para la mejora de los servicios de salud. Dentro de las áreas de oportunidad de mejora se encuentran: el tiempo de espera para ser atendido, el interés del personal por resolver los problemas de los pacientes, la disposición del personal para ayudar cuando lo necesita el paciente, la rapidez con que se consigue lo que se necesita o se pide y la capacidad del personal para comprender las necesidades de los pacientes.*

## NATIONAL DEVELOPMENT PLANS, THE HEALTH SECTOR AND SEGURO POPULAR IN THE EAST ZONE OF THE STATE OF MEXICO

### ABSTRACT

*Public policies in the health sector, has always been present in the last four National Development Plans, which has been fundamental in determining the health needs in the most vulnerable populations. At the end of the six-year period 2000-2006, the popular insurance is created as an alternative to provide health services free of charge, and determine that 100 % of the population has social security which was provided by the sectors of health states. It is in the six-year period 2006-2012, which is concrete and it is reported that the popular insurance is covering 100 % of the national population. That is why the research was conducted in the East Zone of the State of Mexico , where we sought to measure patient satisfaction in the services you receive , determine that in most cases is not what they expect and that have advertised as an alternative to solve health problems in their communities. The low-income patients who come to request consultation with a hospital that provides the services of popular insurance services that are offered in most cases are not of quality. Also, patient satisfaction with the care received is key, used as a benchmark*

*in assessing the quality of health services. To know the perception of the patient, it will identify areas of opportunity for improving health services. Within the areas of opportunity for improvement include: the waiting time for treatment, staff interest to solve the problems of the patients, the staff's willingness to help when you need it the patient, the rapidity with which it is achieved needed or requested and staff capacity to understand the needs of patients.*

## INTRODUCCIÓN

En México el Sistema Nacional de Salud se integra por las instituciones de seguridad social bajo el régimen de cuotas obrero-patronales y el presupuesto federal, por ejemplo, el Instituto Mexicano del Seguro Social y el Instituto de Seguridad Social y Servicios Sociales de los Trabajadores del Estado. El Seguro Popular para la población que no cuenta con seguridad social y la medicina privada. En la segunda modalidad, la Ley General de Salud se refiere a la Protección Social de Salud como un mecanismo mediante el cual el Estado garantiza el acceso efectivo y oportuno como mínimo a los servicios de consulta externa en el primer nivel de atención médica así como en las especialidades básicas del segundo nivel de atención. Se garantiza también la existencia permanente de un cuadro básico de insumos en el primer nivel de atención médica con disponibilidad a la población que los requiera (DOF, 2013).

En congruencia con dichas metas el Gobierno Federal establece a partir del sexenio 2000-2006, el Seguro Popular de Salud (Seguro Popular) para garantizar la cobertura universal de salud a la población mexicana, en especial a quienes no son derechohabientes a la seguridad social. El Seguro Popular incluye en el Catálogo Universal de Servicios de Salud la atención de las enfermedades desde el primer al tercer nivel de atención médica. De esta forma se crea un fondo de protección contra gastos catastróficos y disminución del pago de bolsillo por gastos en salud lo que se refleja en la economía de las familias beneficiarias (Gobierno Federal, 2012). El gasto de bolsillo es el total de desembolso económico que hace un hogar para recibir atención médica. Incluye los gastos que se relacionan en forma directa con la atención así como aquellos que son necesarios para acceder a dicha atención (OMS, 2003). En el mismo orden de ideas, de acuerdo con un informe reciente, el Consejo Nacional de Evaluación de la Política de Desarrollo Social (CONEVAL, 2012), reporta que entre 2006 y 2011, el gasto total en salud del Gobierno Federal tuvo un crecimiento de 34.1%. En el mismo informe se menciona que la reducción de la carencia de acceso a los servicios de salud se debió en buena medida al avance de cobertura del Seguro Popular y es esta la carencia que disminuyó de manera más pronunciada entre las consideradas para la medición de la pobreza.

El sistema mexicano de salud desde su creación en 1943, ha experimentado tres generaciones de reformas que han dado lugar a significativos avances en materia atención de salud y al desarrollo del mismo sistema. La última de las reformas surgió a finales de los noventa, en atención a las evidencias internacionales que sugerían una reorganización de los sistemas de salud, aprobándose para abril del 2003 y teniendo como objetivo el hacer efectivo el derecho constitucional de todos los mexicanos a la protección de la salud. Es por ello que el tema en la calidad en los servicios de salud a las comunidades más desprotegidas en el país, busca la participación del estado y es impulsada por el Sector Salud, en donde se establece que los servicios de salud que se proporcionan deben ser de calidad, por lo que esta situación ha sido una preocupación constante para el gobierno en México, por lo tanto se registran esfuerzos importantes por mejorar la calidad, es a partir de los finales de la década de 1950, en donde se le presta mayor importancia. Los múltiples esfuerzos realizados sirvieron de cimiento para que en el año 2001 se implementara la Cruzada Nacional por la Calidad de los Servicios de Salud, con el objetivo de mejorar las condiciones de salud y garantizar un trato adecuado a la ciudadanía.

Para el año 2007 se implementó el Programa de Acción Específico 2007-2012 llamando Sistema Integral de Calidad en Salud (SICALIDAD), en respuesta al llamado que hiciera la Organización Panamericana de la Salud (OPS) en la 27a Conferencia Sanitaria Panamericana, celebrada en 2007 y en donde se destacara la importancia de contar con una política y estrategia regionales para garantizar la calidad de la atención médica. El objetivo general del programa pretende entre otras cosas situar a la calidad como una permanente prioridad en la agenda del sistema nacional de salud. En la búsqueda permanente de la calidad de la atención médica, se han utilizado diferentes modelos, fundamentalmente de mejora continua<sup>42</sup> sin embargo, es hasta años recientes, cuando la calidad de la atención a la salud se vincula con un enfoque ético<sup>43</sup>. Dado que las organizaciones sanitarias son un tipo de organización empresarial en la que se conjugan diferentes tipos de ética: la ética de los profesionales y la ética de la institución, denominada como ética organizacional, la cual trata de articular, aplicar y evaluar la misión de la organización con vistas a desarrollar un clima ético, entendiendo por este: la percepción compartida de que los valores de una organización afectan a una amplia gama de decisiones.

De acuerdo a lo anterior, se busca que los apoyos a los servicios de salud que otorga el seguro popular sea de la satisfacción del usuario y de los servicios de salud de la Secretaría de Salud, por lo que es un indicador del resultado de la atención médica y es uno de los principales retos para el sistema de salud en la generación de confianza en los ciudadanos y en sus instituciones de salud. A pesar de que los equipos de atención de salud pública han recibido mucha atención en los últimos años, esto ha sido abordado en varios sectores, por lo que se carece de suficientes investigaciones enfocadas a los servicios de salud. Dada la importancia de la evaluación de la calidad y su vinculación con la ética en los servicios, resulta conveniente el conocimiento de los aspectos vulnerables porque representan una oportunidad de mejorar en los servicios que se ofrecen.

## REVISIÓN LITERARIA

Los servicios institucionales de salud en el primer nivel de atención médica se otorga en las localidades rurales a la población afiliada o no al Seguro Popular, a través de las clínicas de la Secretaría de Salud, presentan deficiencias en los mismo debido a que a pesar de que es gratuito, en la realidad no es cierto, porque les solicitan los montos de los servicios en instrumentos médicos tales como jeringas, medicamentos, entre otros. La fuente de ingresos económicos adquiere importancia en el presente estudio desde el momento en que, en México el tipo de empleo se asocia con la oportunidad para ser derechohabiente de alguna institución de seguridad social bajo el régimen contributivo financiado por cuotas obrero-patronales. Las actividades de los hombres son en el sector agropecuario como jornaleros por día o semana; pescadores o bien como campesinos con tierra propia donde el destino final de los productos es para abasto del hogar. Otras actividades de los hombres son empleados en comercio, meseros, albañiles, obreros, policías o trabajadores de la limpia pública.

Las mujeres reportaron como actividad principal las labores domésticas. La cestería es una actividad tradicional que para la mayoría de las mujeres entrevistadas se considera como una actividad secundaria, complemento para el ingreso familiar. En México existen procedimientos normados a seguir para el diagnóstico, control y tratamiento de la DM (DOF, 2010a) y de la HTA (DOF, 2010b) en el primer nivel de atención médica. Todos estos procedimientos se contemplan en el Catálogo 2012 de enfermedades que cubre el Seguro Popular (Gobierno Federal, 2012) por lo que la población tendría garantizados en sus lugares de residencia los servicios farmacológicos y no farmacológicos una vez que se diagnostican estas enfermedades. El impacto que tiene el Seguro Popular en la población mexicana se evalúa por diversos autores (Frenk, 2004 y 2007; Knaul, 2005; Galárraga, 2010; Danese-Santos *et al.*, 2011) quienes reportan que tiene una buena focalización y apoya a las familias que no tienen acceso a los sistemas de seguridad social formal. Sin embargo, se reconoce que existen deficiencias en el desabasto de medicamentos e insuficiente equipamiento de las clínicas para brindar una atención médica de calidad. Las consecuencias

de este desabasto tienen efectos biológicos, sociales y económicos muy fuertes precisamente en la población que se debería beneficiar del sistema de Protección Social de Salud.

El desabasto de medicamentos para la DM es un problema que se comparte con otros países latinoamericanos (Vieira *et al.*, 2010; Elorza, 2012). Independientemente de que la población se encuentre afiliada/o no al Seguro Popular, la Secretaría de Salud enfatiza la necesidad de garantizar el acceso y la calidad de los servicios de salud a través del suministro de medicamentos e insumos así como de fortalecer la infraestructura y el equipo médico para atender en su lugar de origen a las personas que demandan atención médica (SESA, 2007). De los resultados del estudio se hace evidente que la visita periódica de control de la enfermedad se concreta a cumplir con un requisito. No se evalúa el control metabólico y aun cuando el personal médico considera el riesgo al que se exponen estas personas al no tener acceso a un tratamiento farmacológico, no se encuentran en posibilidades de solucionar el problema. Desde la Salud Pública, se agregan las consecuencias de solicitar la cita periódica de control como requisito obligatorio para recibir el apoyo económico de programas sociales gubernamentales sin garantizar la calidad de dicha consulta.

Un requisito que se contempló como un beneficio para la población se ha convertido en una obligación que se tiene que cumplir restando valor a las bondades de la prevención y el control. De esta forma para las personas entrevistadas el Seguro Popular se asocia a la atención de enfermedades graves y un medio para evitar los gastos que conlleva una urgencia médica, sin embargo, no se contempla el derecho a un servicio médico de calidad en el primer nivel de atención. No se debe pasar por alto que es precisamente este nivel de atención donde se llevan a cabo todas las acciones básicas de la prevención primaria y secundaria que incluye la promoción, protección específica y detección, diagnóstico y tratamiento oportuno de enfermedades. Las enfermedades tienen un componente biológico y otro social. Las personas con antecedentes familiares, inmunodeprimidas, con escasa actividad física y con obesidad o sobrepeso tienen mayor riesgo de presentar enfermedades crónicas. Se sabe también que las personas con desnutrición en la infancia y con infecciones frecuentes tienen mayor probabilidad de desarrollar en la edad adulta enfermedades cardiovasculares y Diabetes Melitis (DM) (OMS, 1985; Ravelli, *et al.*, 1997; Phillips, 1998). Al momento de evaluar el impacto de los programas de prevención y control, es necesario no pasar por alto los determinantes sociales. Organismos gubernamentales e instituciones académicas reconocen la carga social y económica que representan las enfermedades crónicas para los grupos de población desfavorecidos económicamente (Salinas *et al.*, 2001; Arredondo, 2004; OMS, 2010).

## METODOLOGÍA

La investigación está estructurada por un enfoque mixto, es decir en ella se hará uso de una combinación de métodos cuantitativos y cualitativos para la recolección, análisis y presentación de resultados. Los métodos mixtos de la investigación según Hernández Sampieri y Mendoza que están representados por un conjunto de procesos que implican la recolección y análisis de datos tanto de tipo cuantitativo como cualitativo, así como su integración y discusión conjunta, con objeto de realizar inferencias con base en la información recabada y lograr un mayor entendimiento del fenómeno estudiado. La investigación se realizó a un nivel descriptivo porque se buscará especificar características y rasgos importantes del fenómeno de estudio. El diseño será de tipo no experimental, transeccional. No experimental porque se pretende observar el fenómeno de estudio en su contexto natural para posteriormente analizarlo, y transeccional porque la recolección de los datos se realizará en un único momento.

## RESULTADOS

Los enlaces de la Comisión Nacional de Protección Social en Salud en las entidades federativas son los Regímenes Estatales de Protección Social en Salud (REPSS), los cuales son las instancias responsables en

el ámbito local de la administración de recursos y supervisión de prestadores de servicios, así como de la afiliación de beneficiarios a través de los Módulos de Afiliación y Orientación. Sin embargo, existen diferencias entre el uso y la calidad de ese control como queda en evidencia cuando se analiza la información cualitativa. Las personas entrevistadas coincidieron en mencionar que la consulta de rutina para el control de estas enfermedades se limita a medir la glicemia capilar, la tensión arterial y el peso. No existe un control metabólico regular y el antecedente de valoración especializada por el oftalmólogo. Otro aspecto importante es la irregularidad en el abasto de medicamentos, por lo que el médico extiende una receta para que los adquieran con recursos propios. Ante la falta de recursos económicos las personas suspenden el tratamiento hasta que reúnen el dinero suficiente para comprarlo.

## CONCLUSIONES

Las personas que participaron en el presente estudio trabajan en el sector informal o en actividades que no les permiten el acceso a las instituciones de seguridad social. El costo social que pagan es alto, altas también son las probabilidades de sufrir complicaciones secundarias a estas enfermedades tales como nefropatía y glaucoma. En los resultados de este estudio resalta el número de personas que presentan discapacidad visual o ceguera, que de acuerdo con cifras oficiales es actualmente la segunda causa de discapacidad en México, después de las limitaciones en la movilidad.

# COMUNICACIÓN CORPORATIVA EN ORGANIZACIONES DE LA SOCIEDAD CIVIL DE ORIGEN LOCAL Y REGIONAL

Ma. Guadalupe Díaz Díaz, Universidad Autónoma de Coahuila-México  
Adriana Guadalupe Chávez Macías, Universidad Autónoma de Coahuila-México  
Isaura Guadalupe Hernández Aldaco, Universidad Autónoma de Coahuila-México

## RESUMEN

*Para las organizaciones es de suma importancia generar una imagen que genere transparencia, confianza y reputación que perdure con el paso del tiempo pues entre los beneficios que se logran es el consolidarse en sus mercados. Para las OSC (Organismos de la sociedad civil) es trascendental, ello se puede lograr a través de una adecuada gestión de la comunicación corporativa. El presente trabajo de investigación se realizó con el objetivo de conocer si la gestión de la comunicación y visibilidad, tiene influencia importante en la práctica de la transparencia de las organizaciones de la sociedad civil de origen local o regional localizados en la región centro del Estado de Coahuila para posteriormente proporcionar a sus directivos alternativas de reforzamiento o mejora en la gestión de comunicación. La metodología empleada consistió en obtener información cuantitativa de 18 organismos de éste tipo, localizados en la región centro del estado de Coahuila mediante un cuestionario estructurado tipo escala de Likert del cual se utilizaron dos de sus variables: Comunicación y Visibilidad y Transparencia. Para medir su fiabilidad se utilizó la prueba Alfa de Cronbach obteniéndose un coeficiente de consistencia interna de .908 y .774 respectivamente lo cual indica ambas ser confiables.*

**PALABRAS CLAVE:** Organismos de la Sociedad Civil, Comunicación, Transparencia, Mercadotecnia

## CORPORATE COMMUNICATION IN NON PROFIT ORGANIZATIONS OF LOCAL AND REGIONAL ORIGIN

### ABSTRACT

*For organizations is critical to generate an image that generates transparency, trust and reputation that will endure over time as among the benefits achieved is consolidated in their markets. For nonprofit organizations is transcendental, it can achieve through proper management of corporate communication. The present investigation was performed in order to determine whether the management of communication and visibility, has significant influence on the practice of transparency of the civil society of local or regional origin located in the central region of the State of Coahuila later provide alternatives reinforcement or improvement in communication management executives. The methodology employed was to obtain quantitative information from 18 organisms of this type, located in the central region of the state of Coahuila through a structured Likert scale which two of its type questionnaire variables were used: Communication and Visibility and Transparency. To measure the reliability Cronbach alpha test was used to obtain a coefficient of internal consistency of .908 and .774 respectively, indicating both be reliable.*

## INTRODUCCIÓN

Las Organizaciones de la sociedad civil juegan un rol de gran trascendencia en el contexto social, político y hasta económico de nuestro país ya que además de generar empleos, contar con actividad económica, gran parte de su función es el de facilitar los vínculos sociales, apoyar a los sectores de la población a los que el gobierno no ha podido llegar, contribuir a la formulación y defensa de los intereses colectivos y estimular formas de participación y compromisos mutuos. Pública el Banco Mundial, que el término OSC, abarca una gran variedad de organismos, tales como grupos comunitarios, sindicatos, organizaciones no gubernamentales, grupos indígenas, organizaciones de caridad, religiosas asociaciones profesionales y fundaciones. Es hasta la década de los años 40, que la figura de las éstas Organizaciones obtuvo estatus propio ante la Organización de las Naciones Unidas. Estas, tienen cinco características cruciales:

Son entidades organizadas

Son privadas

Están separadas del gobierno

No distribuyen ganancias entre sus asociados

En ellas se realiza actividades voluntarias y gratuitas

Y pueden actuar en cualquiera de las siguientes áreas:

Asistencia social

Desarrollo y vivienda

Derechos humanos

Medio ambiente

Filantropía

Salud

Educación e investigación

Cultura

Recreación y deportes

Asociaciones profesionales y laborales.

Es en el 2004, bajo el gobierno del presidente entonces Vicente Fox Quesada, les da el reconocimiento legal como organizaciones de la sociedad civil. Hasta la fecha su operatividad en nuestro país, es regulada por las leyes mexicanas bajo el nombre de Ley Federal de Fomento a las Actividades de las Organizaciones de la Sociedad Civil (Unión, 2004). Resalta Jurisdman, C (2013) que a la fecha, en nuestro país solamente se encuentran registrados ante Sedesol 19,500 organizaciones con registro oficial las cuales se concentran en unas pocas entidades federativas..

Expresa Cepeda, S. (2008) en entrevista de prensa que la transparencia es la principal característica que deben de tener los Organismos de la sociedad civil, que están obligados a conducirse con total honestidad en el trabajo que realizan por quien lo necesita, y en ese sentido es necesario rendir cuentas a los benefactores en forma sistemática para que conozcan en dónde se están empleando los recursos. Al respecto, pública Villaseñor, P. (2013) que los principales desafíos que las OSC's enfrentan en nuestro gobierno son tales como:

Fortalecerse como puente de confianza.

Generar espacios de interés público a través de un diálogo con enfoque de corresponsabilidad y rendición de cuentas.

Construir el dialogo intersectorial donde todos asumimos nuestra responsabilidad sobre el bien público.

Construir una cultura de transparencia y rendición de cuentas

El actor de la sociedad civil está llamado a ser el portavoz del bien común.

Llevar a cabo estrategias de comunicación, diálogo e interacción

Una nueva estrategia de la sociedad civil debe ser reflejada en nuevas instituciones y reglas del juego en el espacio público.

Como se observa en estos últimos años día con día aumenta la necesidad de actuar con transparencia en la conducción de sus proyectos, de su misión, visión, así como en la rendición de cuentas a sus diversos mercados, además del cliente, que es el beneficiario, el mercado del donante ya que ellos representan una parte importante para su sostenimiento. Bajo este contexto surge el interés de generar y aportar conocimiento a los directivos de las OSC'S de origen regional y local en la región centro de Coahuila, para establecer estrategias en la gestión de la comunicación y visibilidad que les permita generar y mantener una imagen de transparencia, confianza, seriedad y respeto ante la sociedad

## REVISIÓN LITERARIA

En la actualidad, como resultado del incremento de nuevas tecnologías y formas de comunicar, la capacidad y necesidad de dar respuesta de las organizaciones, también experimentan un rápido crecimiento, pues además de crear un estado de tensión por actuar en el menor tiempo posible y con la transparencia requerida las instituciones tiene que comunicarlo. La palabra *comunicación* denota Valarezo K y Túñez M, (2009) supone participación, interrelación, interacción con la comunidad o con el entorno en el que una persona o ciudadano se encuentra para satisfacer sus necesidades y desarrollar sus proyectos.

Por su parte para Herranz J. (2010) el estudiar la comunicación en las organizaciones, explica que implica el estudio de la denominada *Gestión de la Comunicación Corporativa* y la define como el proceso global, inmerso en la estrategia de la organización, que agrupa a todas las acciones comunicativas que previa investigación, son planificadas, puestas en marcha y se encuentran en constante evaluación. Estas acciones tienen como objetivo en primer lugar transmitir valores y generar una imagen de la organización y de los productos y servicios que ofrece, en todos los grupos de interés; y en segundo lugar, consolidar una imagen en el tiempo que genere confianza y reputación. Dependiendo del objetivo y el público a los que se dirijan las acciones, se utilizarán diferentes estrategias, herramientas, técnicas o soportes, procedentes del campo de la comunicación, el periodismo, las relaciones públicas, la publicidad, el marketing, de los recursos humanos, etc.

Algunos otros autores, como Duran P. (2010) la llaman comunicación Organizacional.

Las OSC juegan un papel muy importante a la hora de comunicar valores y romper prejuicios, puesto que esta función comunicativa está implícita en su propia identidad como afirma Vidal V (2003): Las empresas comunican para existir, pero las organizaciones de la sociedad civil, existen para comunicar, para transmitir sus valores a la sociedad ya que obtener la confianza de sus poblaciones objeto requieren actuar en todo momento con transparencia, es decir con la mayor claridad posible para que conozcan y descubran su funcionamiento e identidad. Como se muestra en la fig. 1, Herranz J. (2007) desarrolla una fórmula a través de la cual sintetiza el proceso de gestión de la comunicación para la transparencia y es la base para comprender como ésta se convierte en un elemento fundamental para generar transparencia en una OSC

Figura 1: Proceso de Gestión de la Comunicación para la transparencia

$$\text{Transparencia} \times \text{comunicación} = \text{Imagen, Confianza y Reputación}$$

**Transparencia= valor**  
**Comunicación= estrategia y/o herramienta**  
**Imagen= percepción**  
**Confianza= sentimiento**  
**Reputación= reconocimiento**

*En ésta figura se muestran los elementos que interviene en el proceso de gestión de la comunicación para la transparencia en un organismo de la sociedad civil. Fuente: José María Herranz de la Casa.*

El autor expone que la transparencia debe de ser un valor en el que la OSC proyecte de manera implícita su misión, cultura, comportamiento e identidad para desear compartirlo con la sociedad. La comunicación en su doble sentido Tres años después, Herranz J. (2010) propone un Modelo de gestión de la comunicación para la transparencia pensado para las pequeñas y medianas OSC por su fácil entendimiento además de poderse implementar al funcionamiento diario de la organización, adaptándolo a sus necesidades. La clave del éxito en su funcionamiento es tener muy en claro los objetivos, mensaje, público destinatario y los soportes a utilizar. Las condiciones fundamentales idóneas para su implementación son: un liderazgo directivo y ejecutivo que guíe y confíe en el proceso, así como crear y fomentar dentro de la organización una cultura de comunicación para la transparencia. Obsérvese en la fig. 2, que dicho modelo consta de tres niveles, dependiendo del grado de relación entre la OSC y cada uno de sus grupos de interés:

Figura 2: Modelo de Gestión de la Comunicación Para la Transparencia

*En esta figura piramidal se muestra los tres niveles de participación y compromiso entre la OSC y su grupo de interés. Se percibe que entre mayor sea el nivel alcanzado mayores la comunicación y por ende la transparencia. Fuente: José María Herranz. De la Casa*

Estos niveles son propuestos como una pirámide, con un primer nivel informativo más amplio y consolidado, un segundo nivel de transición, y un tercer nivel más reducido pero cercano a la consecución de los objetivos marco. Las razones que llevan a explicar este planteamiento piramidal son dos. En primer lugar, el primer nivel es la base sobre la que se sostienen el resto de pisos y se corresponde con la función informativa y comunicativa que muchas OSC desarrollan. Y en segundo lugar, porque a medida que se asciende, el grado de implicación con la OSC aumenta, y del mismo modo, el número de personas que participan y se comprometen con la organización es menor que el número de personas que pueden recibir información sobre la OSC.

En la medida en que se ascienda de nivel, aumentará la relación entre OSC y grupo de interés, y en consecuencia los niveles de transparencia. El paso de un nivel a otro supone desarrollar programas y acciones cada vez más participativas entre la OSC y sus públicos de interés. Desde sus orígenes las OSC se han preocupado por establecer de la mejor manera posible una buena comunicación y visibilidad, si bien es cierto que por medio de la gestión de la comunicación se pueden desarrollar estrategias para hacer

visibles propuestas y demandas de la sociedad civil organizada para contribuir al desarrollo de una sociedad más justa, se pueden apoyar en la aplicación del concepto de Mercadotecnia. Kotler, P. (2001) describe a ésta disciplina como un proceso social y administrativo mediante el cual grupos e individuos obtienen lo que desean a través de intercambio de productos, servicios, y/o ideologías con sus semejantes. Esta concepción hace posible extender la aplicación de la Mercadotecnia a organizaciones que no tienen el fin de lucro, y cuando ésta condición se presenta entonces se conoce como Mercadotecnia Filantrópica.

## METODOLOGÍA

El diseño metodológico corresponde a una investigación transversal, descriptiva y cuantitativa. Para efecto de la recolección de la información se tomo como guía el *Instrumento Diagnostico Del Centro Virtual Par La Ciudadanía Y Organizaciones De La Sociedad Civil* dando como resultado un cuestionario recortado, estructurado tipo escala de Likert que consta de 130 reactivos correspondientes a preguntas relativas de 6 variables: Estructura, Pensamiento estratégico, Administración de Recursos (financieros y humanos y voluntarios), Comunicación y visibilidad, Sustentabilidad (Procuración de fondos y Desarrollo), y Capital Social (Transparencia y Alianzas Estratégicas). Para el llenado del instrumento se dividió en dos secciones.

En la primera parte se solicitan, datos generales de identificación de la persona que responde y puesto que ocupa, así como del organismo. Además se solicita responder a la primera variable (Estructura) en el que los reactivos cuenta con 3 opciones de respuesta (si, no, en proceso). El resto de los reactivos del cuestionario que corresponden a las 5 variables restantes, tienen 5 opciones de respuesta (nunca, casi nunca en ocasiones, casi siempre y siempre). En la presente investigación solamente se sometieron a estudio las variables y su respectivo constructor que se muestran en la tabla 1. Para determinar la fiabilidad de las variables “Transparencia” y “Comunicación y Visibilidad” se utilizo la prueba Alfa de Cronbach, obteniéndose un coeficiente de consistencia interna de .908 y .774 respectivamente lo cual indica ambas ser confiable.

El objetivo del presente estudio es de conocer si la gestión de la comunicación y visibilidad, tiene influencia importante en la práctica de la transparencia de las organizaciones de la sociedad civil de origen local o regional localizados en la región centro del Estado de Coahuila. La pregunta de investigación que se formuló fue: ¿Cómo influye la gestión de la comunicación y la visibilidad con la práctica de la transparencia en las organizaciones de la sociedad civil de origen local y regional en la región centro del Estado de Coahuila?, Una vez tabulados los datos, el tratamiento estadístico realizado fue el cálculo de coeficiente de correlación de Spearman ya que las variables sujetas a estudio son de tipo discreto, se utilizo el programa *SPSS versión 17.00*. El tamaño de la muestra fue de 18 organismos seleccionados a conveniencia, en donde se priorizo la inclusión de organizaciones que tienen un cierto grado de visibilidad pública, todas ellas de origen y cobertura de mercado local (7) o regional (11), en la región centro del estado de Coahuila.

Tabla 1: Operacionalización de Variables y Constructor Sujetos a Estudio

Variable		Constructo	pregunta
Comunicación y Visibilidad		La Organización comunica activamente al público sobre sus programas y servicios.	1, 2, 3, 4, 5, 6 y 7
		La Organización reconoce su aporte específico y ventaja comparativa en relación con los actores sociales que lo rodean.	
		La comunicación en el interior de la organización es fluida y en doble sentido.	
		Se ha creado espacios adecuados para que la comunicación circule oportunamente en el interior de la organización.	
		La Organización sistematiza sus experiencias usando la información principalmente a lo interno para elaborar sus informes a los donantes y demás interesados.	
		La Organización informa periódicamente a sus donantes sobre la de recursos recibidos y los beneficios generados con ellos.	
Transparencia		La Organización cuenta con una estrategia de comunicación que le permita colocar temas de interés de la opinión pública	1, 2, 3, 4, 5, 6 y 7
		La Organización elabora un informe anual de actividades, estados financieros el cual pone a disposición de los beneficiarios, voluntarios, donantes y personas interesadas.	
		Es una política institucional informar públicamente sobre las fuentes de financiamiento y el empleo de los recursos en la organización.	
		La Organización elabora un informe anual de actividades, estados financieros el cual pone a disposición de los beneficiarios, voluntarios, donantes y personas interesadas.	
		La Organización cuenta con herramientas para el control de actividades y aplicación presupuestal.	
		La organización verifica periódicamente la coherencia entre las políticas institucionales y la práctica cotidiana.	
		La organización da seguimiento al plan operativo y aplica medidas correctivas para mejorar su acción.	
		Si la organización realiza transacciones con consejeros

## RESULTADOS

En respuesta a los reactivos de datos generales relativos a objetivo social y años de operación en la tabla 2, se presentan frecuencias.

Tabla 2: Datos Generales de OSC'S Encuestadas

Frecuencia por objetivo Social	
Asistencia Social	11
Derechos humanos	1
Educación e investigación	1
Cultura y recreación	1
Asociaciones profesionales y laborales	1
Cultura y recreación	1
Asistencia social y filantropía	1
Cultura, recreación y deportes	1
Total:	18
Frecuencia por años de operación	
1 a 3 años	1
Más de 3 a 6 años	4
Más de 6 a 10 años	3
Más de 10 años	10
Total:	18

Se muestra las frecuencias de datos generales de las OSC encuesta Fuente: Elaboración propia.

Se percibe que los organismos que predominan son aquellos que tienen como objetivo social la asistencia social, entre ellos encontramos aquello que se enfocan a asilos de ancianos, casas hogar, comedores, entre otros, con una cobertura local y regional. Si el 55% de la muestra corresponden a organismos que tienen más de 10 años en operación, denota que se encuentran posicionados ante la comunidad lo que les facilita el logro de su misión, sin embargo el entorno al que se enfrentan los organismos de corta edad son más las dificultades que se les antepone, ya que no existe pleno conocimiento de su existencia por parte de la sociedad y del sector empresarial por lo que el beneficio que pueden obtener a través de uso de la Mercadotecnia no lucrativa o filantrópica.

En seguida, se realizó el cálculo estadísticos del coeficiente de correlación de Spearman el cual arroja como resultado que la variable comunicación y visibilidad con la variable transparencia tienen una correlación positiva de 0.636\*\* con un nivel alto significativo de .005, por lo que se percibe que las practicas de comunicación y visibilidad usadas por las OSC de la muestra sujeta a estudio son medianamente promotores de la práctica de la transparencia ante sus públicos seleccionados como meta respondiendo así a la primer pregunta de investigación.

Como se observa el *Modelo de Gestión de la comunicación para la transparencia* propuesto por Herranz J. en el 2007 es aplicable en las OSC participantes en el estudio pues la comunicación forma parte del plan estratégico del organismo el cual es revisado con cierta regularidad. El que comunique al mercado de donantes y beneficiados le permite actuar con transparencia, valor que conlleva a la institución a generar cierta imagen y confianza. Así lo denota que el 55% de la muestra pertenece a OSC que tiene un funcionamiento mayor de 10 años y que ya cuentan con cierta posición en la comunidad y estrategias para

procurar fondos que los lleve a cubrir los gastos de operatividad del organismo. Por otro lado llama la atención el escaso crecimiento de OSC en la región centro del estado, una de las causas que deja ver el presente estudio, es que de acuerdo al modelo mejorado propuesto por Herranz J. 2010 es que aunque cuentan con los elementos necesarios para desarrollar la gestión de comunicación y transparencia aun no han logrado construir una cultura de transparencia, al encontrarse en la etapa inicial del modelo, es decir en la base de la pirámide que corresponde al informativo, pues este modelo se plantea como un sistema cuyo objetivo es mejorar la comunicación y la transparencia, además de ganar confianza y reputación interna y externamente, con lo cual, a medida que los implicados avancen con cada uno de los grupos de interés hacia niveles superiores, generan un contexto más favorable para conseguirlos.

## CONCLUSIONES

El Estado de Coahuila se caracteriza por ocupar el segundo lugar con el mayor número de Osc en el país, sin embargo su número es reducido en comparación con los beneficios que pueden aportar a la sociedad, una alternativa para su crecimiento y consolidación en la sociedad es que a través de la generación de una cultura de comunicación y transparencia que prolongue el mayor tiempo posible el sentimiento de confianza entre los distintos públicos meta, cristalizando el reconocimiento que refuerce la reputación de la organización a largo plazo.

## RESUMEN

*Las Universidades Tecnológicas fueron creadas con la finalidad de ampliar y diversificar la oferta educativa en México orientadas hacia el aspecto práctico y al desarrollo en estrecha vinculación con el sector productivo para conocer sus necesidades y desarrollar los planes y programas destinados a satisfacer los requerimientos de las empresas en términos de sus capacidades profesionales y técnicos. El presente estudio tiene la finalidad de describir las características sociodemográficas de los alumnos de nuevo ingreso a la Universidad Tecnológica de Chihuahua que permita realizar un análisis para la elaboración de estrategias de pertenencia, deserción y eficiencia terminal. Las variables evaluadas son las características socioeconómicas que comprenden algunos datos como la edad, sexo, estado civil y niveles socioeconómicos, características familiares, escuela de procedencia, entre otros. La recolección de los datos se llevo a cabo a través de la información proporcionada por el Centro Nacional de Evaluación (CENEVAL) la cual se obtiene al momento de registro del sustentante para la aplicación del Examen Nacional de Ingresos. Los principales resultados nos indican que los alumnos provienen de familias de un nivel socioeconómico D+, el 92% estudiaron el Bachillerato en la ciudad y en promedio, los alumnos que trabajan dedican una hora diaria a sus actividades académicas.*

**PALABRAS CLAVE:** Ingreso, Deserción, Eficiencia Terminal, Ceneval, Características Sociodemográficas

## THE SOCIO-DEMOGRAPHIC FEATURES OF THE FRESHMEN STUDENTS OF UNIVERSIDAD TECNOLÓGICA DE CHIHUAHUA

### ABSTRACT

*The Universidades Tecnológicas were created with the purpose to extend and diversify the educational offer in Mexico. The above, oriented towards a more practical aspect and development, through close cooperation alongside the manufacturing sector, in order to know their needs and create plans and programs to satisfy business requirements regarding professional and technical features. This research's main goal is to describe the socio-demographic features of the freshmen students of Universidad Tecnológica de Chihuahua allowing the analysis of results to develop the strategies as to sense of belonging, withdrawing, and academic completion. The assessed variables are the socioeconomic characteristics that include certain data such as age, gender, marital status, family environment, and source school, among others. The data recollection took place based on the information provided by Centro Nacional de Evaluación (CENEVAL), which is gathered when the applicant carries out registration at Examen Nacional de Ingresos. The main results indicated that the students come from families with a social*

*status classified as D+, 92% studied at the local Highschool and in average, the working students spend one daily hour to study.*

**KEYWORDS:** Freshmen, Withdrawing, Academic Completion, Ceneval, Socioeconomic Characteristics

## INTRODUCCIÓN

En 1990 se suscribió un convenio de vinculación entre la SEP y el sector productivo privado de bienes y servicios, cuyo objeto fue establecer el grado de concertación mediante el cual los sectores productivo y educativo impulsarían acciones concretas tendientes a modernizar el aparato productivo y el sistema educativo del país. Las Universidades Tecnológicas en México fueron creadas con la finalidad de apoyar al sector productivo de bienes y servicios. (Espinoza 2009 p.1-2). En México se realizó un estudio a nivel nacional dividido por zonas regionales del país efectuado en el 2003 por Garay en el que nos expone algunas características socio demográficas de los estudiantes de nuevo ingreso de las Universidades Tecnológicas que son de interés para este trabajo. A Chihuahua le corresponde la zona noroeste por su ubicación geográfica. Sus resultados nos muestran que el sexo de los estudiantes es en su mayoría hombres con un 73.1%, la edad promedio de los estudiantes oscila entre 17 y 19 años con un 48.8%, solteros en un 87.8%, alumnos que además de estudiar realizan una actividad laboral 41.3% de los cuales el 40.1% trabajan para mantener sus estudios y el 36.2 ayuda o sostiene a su familia.

Otro aspecto es la escolaridad de sus padres en la que el 80.6% de los padres de esta zona noroeste no tiene estudios superiores y las madres en un 89.2%. Solo el 58.6% de estos estudiantes dijo tener computadora en su casa. En Universidades tradicionales como es la Universidad de Sonora, Irigoyen (2009) y et al, mencionaron el estudio sobre las características sociodemográficas de los estudiantes de nuevo ingreso a dicha universidad en el cual el 52% son mujeres, la edad de ingreso promedio se situó en 20 años, el 27% de los alumnos trabajan, el 79% de ellos realizaron estudios de bachillerato en escuelas públicas, y el 67% reporto ingresos menores a 4.5 veces el salario mínimo vigente en el estado.

## REVISIÓN DE LITERATURA

La sociología ha sido influida por las nuevas tendencias de los estudios demográficos. Tanto la fecundidad como la formación de la familia han sido siempre campos de interés para la sociología, al igual que los aportes en los estudios sobre la urbanización, la migración y la distribución espacial de la población (Naciones Unidas, 1978). El hombre por naturaleza es un ser social, el cual siempre se encuentra influido por factores internos y externos que definen su perfil, así como por una sociedad, compuesta de muchas estructuras a la cual pertenece y que constantemente lo evalúa. Principalmente, los factores internos y externos que influyen en el ser humano, son los elementos socio demográficos.

Los factores demográficos (Flores et. al, 2011), son estudiados por la demografía disciplina que articula los fenómenos sociales que se refiere a los parámetros que afectan los elementos de los sistemas políticos, económicos, sociales y culturales del entorno; además del estudio de la población humana, ocupándose de su dimensión, estructura, evolución y caracteres generales, principalmente desde un punto de vista cuantitativo. La importancia de esta disciplina radica en que los datos que aporta son fundamentales para diseñar y planificar políticas para el desarrollo de los pueblos, dado que ofrecen una caracterización exhaustiva del estado de una población, así como también de su desarrollo y cambio a lo largo de su historia. A lo anterior, Schiffman y Kanuk (2008) agregan la necesidad de información respecto de fenómenos sociales específicos, así como también de poblaciones y asentamientos, pueden ser múltiples de acuerdo a las demandas e inquietudes, así mismo, definen algunos de los factores demográficos como la edad, la cual en particular cronológica, lleva implícita varias fuerzas fundamentales.

En concreto, los demógrafos han establecido una distinción importante entre los efectos de la edad y los efectos de las experiencias y vivencias de las personas, en este caso los alumnos. Otro de los factores es el sexo o género, siendo esta una variable de segmentación distintiva. Tradicionalmente, se observa que la mayoría de las mujeres prefieren carreras de ciencias sociales y los hombres por su parte se interesan más por las carreras, que en su mayoría la retícula tiene materias de ciencias exactas. Aunque, hoy en día esa tendencia está cambiando. Otras variables que definen son educación, ocupación e ingresos, pero más que definición ellos encuentran una relación estrechamente correlacionadas en una relación casi exacta de causa y efecto. Las ocupaciones de alto nivel que reditúan ingresos elevados suelen requerir una formación académica avanzada. Los individuos cuya educación es escasa rara vez son aceptados en empleos de alto nivel. Mientras que Fischer y Espejo (2011) definen otros factores demográficos como son la clase social y familia. Como clase social o también conocido como nivel socioeconómico, comentan que son divisiones relativamente permanentes y homogéneas dentro de una sociedad en la que los individuos comparten estilos de vida y conductas similares, y que están definidos con base a las características del hogar al que pertenecen todos sus integrantes, para que todos tengan el mismo nivel socioeconómico; actualmente los estudios que han realizado diversas asociaciones y agencias de investigación han demostrado que las personas de diferentes clases sociales muestran diferencias en materia de valores, lo cual en ocasiones es una determinante para seleccionar una carrera o profesión.

Con lo anterior, se puede afirmar que al realizar un buen análisis del nivel socioeconómico de los alumnos de nuevo ingreso a cualquier institución, permite identificar las áreas de oportunidad o de apoyo que requiere un alumno durante su trayectoria escolar.

## METODOLOGÍA
