*The main purpose of this research is to present the state of art about the application of Artificial Neural Networks for time series forecasting stock indexes and associated shares of major Latin American countries: Brazil, Mexico, Colombia, Argentina, Chile and Peru. A review of published papers in each country are made in order to extract the main components of the designed RNAs: the architecture used, the activation function of the hidden layer and output layer, the training algorithm, the transformation methods of the data , sampling the series in the training set and test set and the performance measures. The consolidation of information reveals that the BOVESPA index is the one with larger applications, the type of network used in all investigations is feedforwardnet, the designed network topology has one or at most two hidden layers, the learning algorithm more used is BackPropagation, and the performance of neural networks in forecasting the series in some cases exceeds autoregressive models. It is concluded that the application of RNAs in these countries is booming, opening space for the application of innovative RNAs in the region.*

## INTRODUCCIÓN

El uso de las redes neuronales artificiales para el pronóstico de series financieras ha tenido durante los últimos años un incremento significativo, ya que las RNA se pueden considerar como modelos no-paramétricos que pueden describir muy bien este tipo de series, pero las cuales tienen asociada experimentación, por lo que es difícil generalizar acerca las características y sus efectos en el pronóstico de la serie. En el siguiente documento se presenta la revisión de literatura acerca de la utilización de estos modelos, las características utilizadas y sus efectos en el pronóstico de los principales mercados latinoamericanos: Colombia, Brasil, Argentina, Chile, México y Perú.

## REVISIÓN DE LITERATURA

Las Redes Neuronales Artificiales, han tomado una relevancia muy importante, ya que han demostrado en algunos casos ser mejores describiendo las series de tiempo financieras frente a otros modelos. El diseño de una red neuronal tiene asociada experimentación lo que dificulta concluir acerca de cuáles deben ser las características que se deben utilizar para modelar series de tiempo, lo que ha motivado a la realización de investigaciones que consolidan estas características y sus efectos en el pronóstico; iniciando con Wong, Bodnovich y Selvi (1997), quienes clasifican los artículos que utilizan redes neuronales artificiales en el estudio de series financieras desde 1990 a 1996, de acuerdo al área de aplicación y concluyen que existe una gran oportunidad para aplicar estos modelos matemáticos al área financiera; posteriormente Zhang, Patuwo y Hu, (1998) hace una revisión de literatura acerca de la aplicación de las redes neuronales para pronosticar series de tiempo y consolida cuales han sido las características principales de éstas, concluyendo que la determinación de la arquitectura, intervalo de entrenamiento, algoritmo de aprendizaje entre otras, aún debe hacerse por prueba y error.

Posterior a la publicación de este trabajo se publican importantes investigaciones, cuyo objetivo es revisar las aplicaciones de las redes neuronales a las series financieras e identificar características y tendencias en su uso (Vellido, Lisboa y Vaughan, 1999; Chatterjee, Ayadi, y Boone, 2000; Fadlalla y Lin, 2001; Li y Ma, 2010), las cuales concluyen que las redes neuronales dan un pronóstico satisfactorio frente a otros modelos. Los anteriores artículos revisan la aplicación a series financiera de países como Estados Unidos, India, China, Japón; y debido a la importancia que los mercados latinoamericanos en el escenario mundial, se presenta una revisión de la aplicación de estos modelos a los siguientes países: Colombia, Argentina, Perú, Brasil y Chile; con sus conclusiones acerca del éxito de estas series para estos mercados.

## METODOLOGÍA

Se hace una revisión de artículos de cada país de donde se extraen las principales características para el diseño y la aplicación de redes neuronales:

*Arquitectura de la red:* la cual corresponde al número de capas, número de neuronas por capa, número de pesos que están interconectados con las neuronas.

*Función de activación:* la cual determina la relación que existe entre las entradas y salidas de cada nodo en la neurona.

*Algoritmo de entrenamiento:* el cual determina el método por el cual se hallan los pesos asociados a cada neurona a través de la minimización de una función de error.

*Método de normalización:* asociado a las transformaciones de los datos de entrada y salida,

*Datos de entrenamiento y de prueba:* que indica como se ha dividido la serie financiera en el conjunto de entrenamiento y el conjunto de prueba de la red.

*Medidas de desempeño:* por las cuales se pueden comparar el desempeño del pronóstico de las diferentes arquitecturas de la red.

## RESULTADOS

Las aplicaciones en estos países tienen por objeto de estudio las series de tasas de cambio respecto al dólar, la inflación, acciones e índices generales. Para el caso de Colombia Pantoja Rojas (2005) ha utilizado las redes neuronales para pronóstico de acciones Colombianas (Bavaria, Argos, Valbavaria, IGBC) a partir de datos históricos, el cual arroja que en general las redes neuronales proveen mejores resultados que los modelos ARIMA en algunas series; posteriormente, Santana (2006) pronostica la variación del IPC (Índice de Precios al Consumidor) a partir de datos históricos, quien enfatiza que las RNAs tienden a ser más precisas que las metodologías tradicionales Box-Jenkins; así como, Arrieta, Torres y Velasquez (2009) pronostica el cierre de la acción SURAMINV (Suramericana de Inversiones) a partir de 77 variables macroeconómicas, y concluye que es posible hacer predicciones confiables y obtener rendimientos extraordinarios con respecto a la estrategia *Buy and Hold*; siguiendo esta línea, Cruz, Restrepo y Medina (2009) aplica las redes neuronales para pronosticar el precio de cierre del IGBC (Índice General de la Bolsa de Valores de Colombia), en el cual indican que el modelo basado en RNA es mejor que los tradicionales modelos ARIMA y GARCH; posteriormente,

Velásquez y Franco (2010) pronostican la variación porcentual del IPC (Índice de Precios al Consumidor) mensual a partir de datos históricos; los resultados muestran que la red neuronal propuesta es capaz de pronosticar los datos fuera de la muestra tanto para un período como de varios períodos adelante y Villada, Muñoz y García (2012) usan redes neuronales para pronosticar el precio de cierre diario de las acciones de Ecopetrol y Bancolombia, quienes comprueban el uso exitoso de las RNAs para las series ya que se obtiene bajos errores en el pronóstico tanto dentro como fuera de la muestra. La aplicación al sector de la energía eléctrica lo hace Villada, Cadavid, y Molina (2008) quien utiliza redes neuronales para pronosticar los precios diarios de la energía eléctrica de Colombia, quien afirma que estos modelos son más sencillos de implementar y en la mayoría de los casos mostraron mejor desempeño fuera de la muestra. Para el país de Brasil; de Faria, Albuquerque, Gonzalez, Cavalcante y Albuquerque (2009) han utilizado redes neuronales artificiales para pronosticar el precio de cierre diario del índice general BOVESPA a partir de datos históricos las cuales muestran que las RNAs tienen un desempeño superior en el pronóstico, por otro lado Andrade de Oliveira, Zarate, de Azevedo Reis y Neri Nobre (2011) pronostican precio de cierre diario de la acción de Petrobras y el índice general BOVESPA, quien concluye que el uso de RNAs demuestra ser una alternativa viable junto con las demás técnicas clásicas de pronóstico; posteriormente, de Oliveira, Nobre y Zárate (2013) utilizan RNAs para el pronóstico del precio de cierre mensual de Petrobras, (PETR4) a partir de datos técnicos de mercado, a partir de 15 variables técnicas y 11 fundamentales, demuestran que las RNAs pueden ser una alternativa factible complementaria a las técnicas convencionales de pronóstico.

En el país de Chile, Glaria-bengoechea, Ordofiez-ureta, Marchant-saavedra y Opaz-medina (1996) diseñan una red neuronal para pronosticar el precio de cierre del IGPA a partir de datos históricos y volumen de transacciones, concluyen que la principal ventaja de estos modelos está en la rapidez del pronóstico y Parisi (2004) ha utilizado redes neuronales artificiales para pronosticar los precios de cierre del IPSA a partir de datos históricos y la variable Dow Jones, quien concluye que el uso de la red neuronal diseñada supera en promedio la estrategia de *Buy and Hold*. Para el país de México; Gómez, Venegas y Campuzano (2011) se utilizan las redes neuronales para pronosticar el Dow Jones y el IPC Mexicano comparándolas con el modelo GARCH, el cual presenta un mejor ajuste para la series seleccionadas. Así como para el país de Argentina, Benedetti et al. (2009) entrena una red neuronal para intentar pronosticar el índice Merval a

partir de la tasa de interés, del dólar, de la actividad productiva y Dow Jones; cuyo principal hallazgo es que las redes neuronales son un buen predictor de este índice.

\*Red Ward Recursiva Autorregresive Network \*\*Nonlinear Autorregresive Network \*\*\*N.D.:No Disponidle

La Tabla 1, resume las principales características de cada red neuronal diseñada para las diferentes series de tiempo explicadas anteriormente. Sobresale la utilización en todas las investigaciones de la Red Neuronal Multicapa con conexiones hacia adelante (Multi Layer Perceptron *feedforwardnet*), y la utilización de una sola neurona en la capa de salida.

## CONCLUSIONES

Se ha presentado una revisión de la aplicación de redes neuronales artificiales a series de tiempo en América Latina, en la cual se presentan los siguientes hallazgos: Todas las redes utilizan el tipo de red MLP (*Multi-Layer-Perceptron*) o Red Multicapa con conexiones hacia adelante (*Feedforward*) completamente conectadas. La metodología para escoger la arquitectura adecuada de la red es por ensayo y error, siendo común el diseño de redes con una sola capa oculta, en la cual el número de neuronas de la capa de salida es una neurona, y las de la capa oculta oscilan entre 1 y 15 neuronas. Sólo un trabajo utiliza 3 capas ocultas en su arquitectura. La función de activación para las capas ocultas varía entre la tangente hiperbólica (Tansig) y la función logística (Sigmoidal), siendo ésta última la más utilizada. Respecto a la capa de salida la función común a todas las investigaciones es la función lineal (Lineal). Respecto a la división de la serie, en los conjuntos de entrenamiento y prueba se observa que no hay un método común de selección, ya que éste varía entre el 87% vs 13%, 60% vs 40%, 85% vs 15% entre otros.

La medida de desempeño más utilizada para comparar las diferentes arquitecturas es le RMSE y el MAE. Finalmente, se concluye que a pesar del éxito relativo que exhiben las redes neuronales frente a otros modelos a nivel internacional; no son infalibles frente a otros modelos estadísticos; además su diseño y entrenamiento, exige que el investigador realice una gran cantidad de pruebas respecto a combinaciones de diferentes características de la red; lo que hace muy difícil generalizar acerca de su uso. Para investigaciones futuras se deberían utilizar otros algoritmos de aprendizaje y métodos de tratamiento de los datos; que conduzcan a elevar el número de aplicaciones en las series de tiempo de la región, ya que a la fecha el uso de redes neuronales en Latinoamérica está iniciando.

## BIOGRAFÍA

Pilar Tatiana Parada Mayorga, es estudiante de la Maestría en Ingeniería Industrial de la Universidad Industrial de Santander, Colombia. El objetivo de su tesis de grado es identificar qué tan superiores son las redes neuronales artificiales a los modelos autorregresivos para el pronóstico de series de tiempo financieras de Latinoamérica. Correo electrónico: pilarparada.m@gmail.com

Juan B. Duarte Duarte, es profesor adscrito a la Escuela de Estudios Industriales y Empresariales de la Universidad Industrial de Santander, Colombia. Director de proyecto de grado. Correo Electrónico: jbduarted@hotmail.com

## **GESTION FINANCIERA Y CALIDAD DEL SERVICIO DEL SECTOR HOTELERO EN EL MUNICIPIO DE RIOHACHA DEPARTAMENTO DE LA GUAJIRA**

Wilmar Sierra Toncel, Universidad de La Guajira  
Ángela Nair Ortiz Rojas, Universidad de La Guajira  
Karen Nahyr Sierra Ortiz, Universidad EAFIT  
Marelis Alvarado Mejía, Universidad de La Guajira  
Olivia Rangel Luquez, Universidad de La Guajira

### **RESUMEN**

*El presente artículo tiene como objetivo presentar los resultados de la investigación Gestión Financiera y Calidad de Servicio en el Sector Hotelero de La Guajira”, la cual se tipificó como un estudio descriptivo correlacional, con diseño no experimental y de campo. Se fundamentó teóricamente en Estupiñan y Estupiñan (2007) León (2007), Ortiz (2009), Gómez (2003), Albrecht (2006), Villoria (2006), Zeithaml (2005), entre otros. Para recolección se utilizó la encuesta estructurada, con reactivos múltiples de escala tipo Likert. La interpretación de resultados se hizo utilizando estadísticos descriptivos y un baremo. En cuanto a resultados se evidenció una deficiente planificación financiera. El desempeño gerencial financiero en cuanto a la toma de decisiones estas no responden al objetivo básico financiero de incrementar las riquezas de los propietarios, su visión cortoplacista de generación de utilidades no garantiza posicionamiento en el mercado turístico. En cuanto a calidad de servicio, los hoteles cuentan los equipamientos necesarios y actualizados tecnológicamente, las instalaciones físicas visualmente atractivas y los elementos materiales son llamativos. Los clientes tienen poca confianza en la prestación del servicio y en cuanto la capacidad de respuesta son lentos en la solución de las inquietudes de los clientes. Existe una correlación positiva entre las variables*

**PALABRAS CLAVE:** Gestión Financiera, Calidad del Servicio, Sector Hotelero, Turismo, Cliente

## **FINANCIAL MANAGEMENT AND QUALITY SERVICE IN HOSPITALITY SECTOR TOWNSHIP DEPARTMENT RIOHACHA**

### **ABSTRACT**

*This article aims to present the results of research Financial Management and Service Quality in the Hotel Industry of La Guajira ", which was classified as a descriptive correlational study with no experimental design and field . It was based on theory and Estupiñan & Estupiñan (2007) Leon (2007), Ortiz (2009) , Gomez (2003 ) , Albrecht (2006 , Villoria (2006 ) , Zeithaml (2005), among others. To harvest the structured survey was used with multiple reactive Likert scale. Interpretation of results was done using descriptive statistics and a scale. As for poor financial planning results are evident. The financial management performance in terms of decision-making do not respond to these basic financial objective of increasing the wealth of the owners, their shortsighted vision to generate profits not guarantee positioning in the tourism market . As for quality of service, the hotels have the necessary facilities and technologically updated, visually appealing physical facilities and materials are eye-catching elements. Customers have little confidence in the service and as responsiveness are slow in resolving customer concerns. There is a positive correlation between the variables*

## INTRODUCCIÓN

La humanidad en toda sus dimensiones se encuentra inmersa en un mundo global, competitivo con una economía internacional, caracterizada por mutaciones e innovaciones en todos los campos de la ciencia y la tecnología, así como en la estructura multidimensional de la vida del hombre como ser social, en sus organizaciones, económicas, sociales, políticas y culturales, enfrentándose a retos y desafíos de un nuevo ordenamiento del escenario mundial con eventos que sirven, algunos como impulsores o retardadores de tal dinámica, como por ejemplo: los avances tecnológicos en la gestión de la información y las comunicaciones, la crisis financiera mundial, el reconocimiento de las minorías étnicas, la conciencia ambiental y ética, la responsabilidad social empresarial, entre otros, que sin duda cambian las apuestas frente al logro de los objetivos vitales de la humanidad.

En ese sentido, se plantea que el requerimiento de estructuras mentales con capacidades adaptativas, flexibles, de pensamientos estratégicos y sistémicos que puedan dirigir las organizaciones encargadas de suplir las demandas del nuevo consumidor demandante de un mercado que en consonancia con los cambios también cambió, hoy se debe competir para lograr la fidelidad de un cliente exigente frente a la calidad del servicio, por lo tanto el capital humano, único capaz de crear e innovar se ha vuelto el intangible más importante para las organizaciones. Es así como, las organizaciones industriales y de servicios en América Latina, han ingresado al inventario de las empresas que han cambiado sus estructuras y fisonomías organizacionales ajustada este nuevo contexto, son muchas y variadas las que hoy son conscientes de los problemas ambientales del planeta, de la responsabilidad social y de la necesidad de competir en un mundo globalizado, con recurso humano capacitado como elemento fundamental de la competitividad y calidad del servicio prestado.

El mundo y Colombia, no es la excepción, es una sociedad compuesta por organizaciones, que orientan sus actividades a la producción de bienes o la prestación de servicios, siendo planeadas, coordinadas, dirigidas y controladas por personas, de las cuales depende su subsistencia y estas a su vez del trabajo de las personas; por ello las organizaciones necesitan ser administradas con criterios de calidad, eficiencia y pertinencia, para que puedan alcanzar cierto grado de desarrollo, madurez y excelencia empresarial. Dentro de este contexto competitivo mundial ha tomado fuerza la empresa multi y transnacional como el modelo de organización empresarial coherente con la economía global, donde igualmente entra en vigencia la ley de la selección natural de Darwin, según la cual las especies mejor dotadas sobreviven y las menos dotadas desaparecen, fenómeno que amenaza con la supervivencia de la tradicional empresa con visión local, unicelular y pequeña que predomina en las economías de países en vía de desarrollo como Colombia. En la anterior clasificación de empresas se encuentran hoteles, apartahoteles, hostales, moteles, rancherías y residencias, que constituyen el subsector hotelero del sector turístico de Riohacha, las cuales se encuentran en procesos embrionarios de desarrollo empresarial en su gran mayoría. El sector fue considerado por el Observatorio del Mercado Laboral de La Guajira como un sector en lento crecimiento y desarrollo que no va en coherencia con la apuesta del departamento de ser en el 2019 un polo de desarrollo turístico con aportes al producto interno bruto del 5%( Análisis de la demanda laboral y perfiles ocupacionales del sector hotelero del municipio de Riohacha, departamento de La Guajira (2012).) Al parecer estas empresas presentan disfuncionalidades en la gestión gerencial de sus áreas funcionales, presentando debilidades especialmente en la calidad del servicio y la capacidad financiera.

En ese sentido, se hace necesario indagar sobre aspectos relacionados con la gestión de sus áreas funcionales, especialmente en aquellos aspectos que se convierten en neurálgicos porque tocan la medula existencial de este tipo de empresas como son la gestión de sus finanzas y la calidad del servicio que prestan, por demás, este último no solo nutre el primero sino que se convierte en variable sostén de la estabilidad de las empresas, debido a la fidelización implícita del cliente que genera un servicio o producto ofertado con calidad.

## REVISION LITERARIA

La expresión gestión financiera podría definirse como el proceso sistémico y sistemático que una organización realiza de forma cotidiana para planear, organizar, dirigir y controlar los recursos financieros a fin de lograr el cumplimiento de los objetivos organizacionales de rentabilidad económica o social, productividad, posicionamiento en el mercado, satisfacción de los clientes, proveedores, accionistas o miembros de la organización, para ello es necesario el cumplimiento de otros objetivos implícitos en el proceso tales como: la administración eficiente de los recursos líquidos, de los recursos de capital, la estructuración y manejo equilibrado en la estructura de financiamiento, de ello depende la satisfacción económica y social de sus propietarios o miembros asociados.

Por su parte Estupiñán y Estupiñán (2007), se refiere a la Gestión financiera integral como la combinación de la gestión de activos, liquidez, financiamiento, ventas, costo y productividad, que los analistas deben identificar las debilidades y fortalezas, profundizarlas y analizarlas suficientemente con el personal de la empresa determinando las causas que generaron sus crecimientos y decrecimientos para atacarlas y cumplir las metas de retorno de la inversión a sus dueños. Para Mendoza (2007), a diferencia de la gestión financiera privada cuya preocupación principal es la maximización de las utilidades de los dueños -con excepción de las entidades sin ánimo de lucro- que se verán reflejadas en los estados financieros, en la pública, las actividades deben encaminarse primordialmente a incrementar los beneficios sociales, asunto este difícil de medir por medio de los parámetros convencionales y que por lo tanto difícilmente de reflejar en los estados financieros tradicionales. Pero este propósito -el de incrementar los beneficios sociales- deben enmarcarse dentro de otros de mayor jerarquía porque la gestión financiera se desarrolla en dos escenarios distintos: un macroeconómico y otro microeconómico.

Según Ortiz (2009), La gestión financiera debe cimentarse en decisiones que contribuyan a la sincronización perfecta de los flujos monetarios, en forma tal que la integración de los recaudos y las disponibilidades iniciales de efectivo permita el cumplimiento oportuno de los compromisos de la deuda como requisito que favorece el mantenimiento de buenas relaciones laborales, comerciales y financieras. Además, la gestión debe propender por el uso eficiente de recursos, para evitar situaciones de saturación o la ausencia de los mismos, toda vez que por ambos caminos se cortan las metas de rentabilidad. Gómez (2003), plantea que la gestión financiera está íntimamente relacionada con la toma de decisiones relativas al monto y composición de los activos, al nivel y estructura de la financiación y a la política de dividendos, enfocándose en dos factores primordiales como la financiación y del beneficio de la riqueza.

En cuanto a la calidad del servicio, Benavides (2003), plantea que se debe estudiar desde una doble dimensión, la interna y la externa, en la primera se precisa una correcta implantación y mantenimiento de la cadena proveedor-cliente, a través de los clientes internos se dotará de cohesión organizativa a la empresa, asegurando el funcionamiento eficaz y eficiente de sus procesos y de sus equipos de dirección transversal. Y en la externa: basada en un eficaz servicio técnico y una correcta y buena atención al cliente.

Igualmente, Acuña (2005), plantea que el término calidad es bastante abstracto y se puede definir como las propiedades de un servicio que permite al usuario o cliente calificarlo de acuerdo con el grado de satisfacción que este le genere. Por ello, se puede decir que la calidad es un grado y que va desde un grado cero de muy baja calidad a un grado uno, de muy alta calidad, en donde los valores intermedios representan

la tendencia del servicio a brindar alta o baja satisfacción. Para Zeithaml (2003), calidad es la amplitud de la discrepancia o diferencia que existe entre las expectativas o deseos de los clientes y sus percepciones. Factor que influyen en las expectativas. Entre los factores que influyen en las percepciones del cliente están:

Lo que los usuarios escuchan de otros usuarios.

Las necesidades personales de los clientes.

La experiencia que han tenido con el uso de un servicio.

La comunicación externa de los proveedores del servicio.

La calidad de cualquier servicio depende fundamentalmente, de lo bien que funcionen los miles de elementos que intervienen en el proceso de prestación de servicio y de la capacidad de cada uno de esos elementos para satisfacer las expectativas de los clientes. Esos elementos incluyen: personas que realizan distintos servicios relacionados con el servicio final; equipos, que le dan apoyo a esas realizaciones y; el medio ambiente físico en el que se llevan a cabo los servicios. Para Dolors (2004), La compra de un servicio establece una relación comercial peculiar, muy distinta de la se establece cuando se adquiere un bien físico. Y es la comparación entre lo que el cliente espera recibir -es decir sus expectativas- y lo que realmente recibe o él percibe que recibe – desempeño o percepción del resultado del servicio.

Cabe decir en esta parte desde una perspectiva más conceptual en lo que a calidad del servicio se refiere algunas apreciaciones en materia de calidad que sirvan de base para analizar el acento del esfuerzo modernizador. Es así como la calidad de servicio alude principalmente a la amplitud de la discrepancia o diferencia que existe entre las expectativas o deseos de los clientes y sus percepciones particulares. En tal sentido, puede decirse que lo que caracteriza principalmente a los servicios en general es que estos son básicamente intangibles y heterogéneos, ya que suponen prestaciones y expectativas más que objetos y, adicionalmente, dicha prestación varía de un proveedor a otro y de un día a otro. Dadas las condiciones que anteceden, en los servicios es fundamental lograr la implicación y prever la participación del personal debido a la alta intervención del factor humano en la prestación de servicios y en la percepción de calidad que se hacen los usuarios y clientes.

En cuanto a las dimensiones de la calidad, desde esta perspectiva Zeithaml (2005), comenta que de acuerdo a diversas investigaciones los clientes no perciben la calidad como concepto de una sola dimensión; es decir, las valoraciones de los clientes acerca de la calidad se basan en la percepción de múltiples factores. Así mismo, la calidad percibida está relacionada con el conjunto de atributos o de servicios que componen una prestación y la evaluación que el receptor da a los mismos. En efecto se trata de criterios que utilizan los clientes a la hora de evaluar la calidad del servicio. Entre estos están:

Confiabilidad entendida como la capacidad para cumplir la promesa del servicio de manera segura y precisa. Significa que la empresa cumpla sus promesas - lo convenido acerca de la entrega, la prestación del servicio, la solución de problemas y los precios. Los clientes desean hacer negocios con las compañías que cumplen sus promesas, particularmente las que se relacionan con los atributos del servicio básico. , Respuesta que es la voluntad de colaborar con los clientes y prestar el servicio con prontitud. Destaca la atención y prontitud con la que se hace frente a las solicitudes, las preguntas, las reclamaciones y los problemas de los clientes. La responsabilidad se comunica a los clientes a través del lapso de tiempo que deben esperar para percibir la asistencia, la respuesta a sus preguntas o la atención a sus problemas. La responsabilidad también comprende la noción de flexibilidad y la capacidad para personalizar el servicio a las necesidades del cliente, Seguridad, el conocimiento y cortesía de los empleados, y la capacidad de la empresa y sus empleados para inspirar buena voluntad y confianza. Es probable que esta dimensión adquiera particular importancia para aquellos servicios en que los clientes perciben que se involucra un gran riesgo o en los que se sientan inseguros acerca de su capacidad para evaluar los resultados, Empatía, se define como la atención cuidadosa e individualizada que la empresa brinda a sus clientes. Consiste en

transmitir a los clientes, por medio de un servicio personalizado o adecuado, que son únicos y especiales. Los clientes quieren sentir que son importantes para las empresas que les prestan el servicio y que éstas los comprenden.

Tangibilidad, es la apariencia de las relaciones físicas, el equipo, el personal y los materiales de comunicación. Todos ellos transmiten representaciones físicas o imágenes del servicio que los clientes, y en particular los nuevos, utilizarán para evaluar la calidad. Por otro lado Dolors (2004), distingue en la calidad del servicio dos componentes o dimensiones: La calidad técnica: que se centra en lo que el cliente recibe, es decir, el resultado del proceso y la calidad funcional: que se centra en como el servicio es entregado, es decir en el propio proceso. Lo que los clientes perciben en su experiencia con la empresa es, sin duda alguna, importante para evaluar la calidad, pero es simplemente una de sus dimensiones: la calidad técnica. Es lo que se le da al cliente cuando el proceso productivo y las interacciones comprador-vendedor han finalizado. Por otra parte la calidad funcional es cuando el cliente evalúa el servicio recibido también tendrá en cuenta la forma en que el resultado del proceso le es transmitido, la forma en que el personal de contacto realiza sus tareas, lo que dice o como lo dice son aspectos que también influyen en la opinión del cliente respecto al servicio. Bajo las anteriores posiciones teóricas de la gestión financiera y la calidad del servicio se realiza la presente investigación.

## METODOLOGIA

La presente investigación se tipifica como Descriptiva correlacional con diseño no experimental y de campo de campo, la población de esta investigación estará conformada por los gerentes de los establecimientos hoteleros del municipio de Riohacha, a quienes por ser una población finita considerada pequeña se aplicará el censo población como estrategia para la recolección, procesamiento y tratamiento estadístico de la información. En cuanto a la recolección de la información se abordó utilizando un instrumento diseñado para la investigación con preguntas y respuestas múltiples tipo liker, validado por cinco expertos del área de la administración financiera y gestión turística hotelera. Para el cálculo de la confiabilidad del instrumento se aplicó una muestra piloto a sujetos de similares características de la población objeto de estudio, utilizando la técnica del coeficiente alfa de Crombach, obteniendo una confiabilidad de 0.86 es decir de confiabilidad alta. Para el análisis e interpretación de los datos resultantes de la investigación en cuanto a las variables, dimensiones e indicadores, se utilizó un baremo en escala de muy baja  $1,00 \geq x < 1,80$ ; baja,  $1,80 \geq x < 2,60$ ; media,  $2,60 \geq x < 3,40$ ; alta  $3,40 \geq x < 4,20$  y muy alta  $4,20 \geq x \leq 5,00$ .

## RESULTADOS

Una vez analizados los resultados, se presenta la discusión de los objetivos, utilizando para ello el esquema lógico de la investigación. Para el primer objetivo específico, “Determinar la planeación de la gestión financiera de los hoteles del municipio de Riohacha departamento de La Guajira”, se obtuvo una media de 2.39 ubicada en la categoría del baremo como baja, evidenciándose de esta forma la percepción que tienen los gerentes sobre la planeación financiera en sus establecimientos, calificada como deficiente.

Para el segundo objetivo específico “Identificar la organización de la gestión financiera de los hoteles del municipio de Riohacha departamento de La Guajira”. Se pudo establecer con un promedio de 2.85, clasificado en el baremo como categoría moderada, que la organización para la gestión financiera presenta debilidades estructurales. Para el tercer objetivo específico “Determinar la dirección de la gestión financiera de hoteles del municipio de Riohacha departamento de La Guajira”, presentó una media de 2.60, considerada baja en la jerarquía del baremo, lo que indica la presencia de factores que inciden negativamente en el desempeño gerencial de la gestión financiera.

Para el cuarto objetivo “Analizar el control de la gestión financiera de los hoteles del municipio de Riohacha departamento de La Guajira”: presentó una media 3.20, considerada alta en la jerarquía del baremo, lo que

indica que los gerentes consideran que los procesos de control de la gestión financiera son aceptables. Para el sexto objetivo específico “Analizar las dimensiones de la calidad del servicio de hoteles del municipio de Riohacha departamento de La Guajira”. esta dimensión arrojó una media 2.75 considerada moderada en la jerarquía del baremo, evidenciándose una presencia deprimida del atributo, lo que quiere decir que los clientes consideran deficiente el cumplimiento de las dimensiones de la calidad del servicio en los hoteles en referencia a sus indicadores de confiabilidad, respuesta, seguridad, empatía y tangibilidad. En cuanto al séptimo y último objetivo, “Establecer la relación entre la gestión financiera y la calidad del servicio de los hoteles del municipio de Riohacha departamento de La Guajira ” se estableció mediante el coeficiente de correlación de Pearson, utilizando la herramienta informática software de estadística SSPS, una correlación de 1.0%, considerada como positiva alta, indicando con ello que la gestión financiera guarda una estrecha relación con la calidad del servicio ofertado en los hoteles del municipio de Riohacha.

## CONCLUSIONES

La planeación financiera fue calificada como deficiente la cual se traduce en que no tienen formulados por escritos los elementos de direccionamiento estratégico financiero (misión, valores, objetivos y políticas), que además estos no se convierten en soporte para la toma de decisiones y no se divulgan para el empoderamiento de todos los empleados y trabajadores. Del mismo modo, los presupuesto algunos no se diseñan y tampoco se utilizan como herramienta para el soporte de las acciones del equipo de dirección y los recursos asignados presupuestalmente no los consideran suficientes para lograr una buena prestación del servicio a los clientes. En cuanto a la organización financiera se cuenta con manuales de funciones y procedimientos formulados por escrito, que son de conocimiento de los empleados del hotel y que son una herramienta de ejecución de las actividades y tareas de los empleados del hotel. En lo referente a la dirección de la gestión financiera, la toma de decisiones financieras del equipo de dirección de los hoteles no responde al objetivo básico financiero de incrementar las riquezas de los propietarios, no consultan el impacto que puede generar en las demás áreas funcionales y el comportamiento de las variables del entorno. Así mismo, el ejercicio de delegación funcional los gerentes no están delegando en otros funcionarios aquellas tareas o actividades distractoras al logro del objetivo financiero, de allí, que no existan criterios diseñados por escritos para el ejercicio de delegación y cuando suele hacerlo se carece de seguimiento con regularidad a las tareas entregadas a los empleados.

Por otro lado, el control de la gestión financiera en los hoteles, estos no cuentan con una caja de herramientas de indicadores financieros, que la administración los utilice con periodicidad para evaluar el estado financiero del mismo. En cuanto a las auditorías, no se evidenció planes y programas de auditoría diseñados por escrito para la gestión financiera, que sean ejecutados con regularidad para conocer la consistencia del control interno y los riesgos asociados a la gestión y estos sirvan para soportar la gestión y diseñar las acciones correctivas. Igualmente, los plan de mejora, los gerentes tienen una percepción negativa en lo que se refiere a la existencia de planes de mejora producto de las auditorías realizadas, al igual que sean revisados periódicamente para evaluar el grado de cumplimiento de los mismos, y se constituyan en herramientas de gestión para toma de decisiones por parte del equipo financiero.

En cuanto a la calidad del servicio se concluye que en términos de confiabilidad, los hoteles dan poco cumplimiento a los tiempos estipulados en la prestación de servicio, muestran desinterés en solucionar los problemas que se presentan durante la prestación de servicio y por lo tanto generan poca confianza a sus clientes. No informan con antelación la fecha de cancelación de sus reservas de servicio, son lentos en la prestación y no responden a los clientes las inquietudes respecto a las deficiencias del mismo en los tiempos estipulados. En cuanto a la seguridad, los mecanismos que ofrecen para proteger los bienes y la vida de los clientes durante la prestación del servicio son deficientes, no minimizan los riesgos en la prestación de los mismos y por lo tanto, los clientes se sienten inseguros al momento de ocupar los servicios del hotel. De igual forma, la empatía, los hoteles no consideran que los clientes son el centro de la prestación del servicio,

la atención es impersonal, por lo tanto se asume que sus necesidades específicas no son interpretadas en el diseño de la prestación de un servicio de calidad. En cuanto a la Tangibilidad, los hoteles cuentan con los equipamientos necesarios actualizados tecnológicamente para la prestación de un servicio de calidad, las instalaciones físicas visualmente atractivas para el cliente y los elementos materiales (folletos, y similares) son llamativos para el cliente. Por último, se concluye que de acuerdo al resultado del coeficiente de correlación de Pearson, con una correlación de 1.0%, considerada como positiva alta, la gestión financiera guarda una estrecha relación con la calidad del servicio por lo tanto si se mejoran las debilidades estructurales financiera tiene un efecto positivo en la calidad del servicio.

# **PROPUESTA DE UN MÉTODO PARA MEDIR EL DESARROLLO DE CAPITAL INTELECTUAL Y HUMANO EN EL CENTRO DE PRODUCCIÓN ACUA-AGRÍCOLA SUSTENTABLE EN EL MUNICIPIO DE BENITO JUÁREZ, SONORA, MÉXICO**

Lizeth Alejandra González Martínez, Universidad Estatal de Sonora

Daniel Paredes Zempual, Universidad Estatal de Sonora

## **RESUMEN**

*Las empresas enfrentan hoy en día una nueva economía en la cual el acceso a las redes de tecnología de información, el crecimiento en el uso del conocimiento y la globalización del comercio tienen influencia hacia un cambio y una competencia más dinámica en el entorno en el cual giran sus actividades. El Capital Intelectual siempre ha estado presente en las organizaciones, sólo que en los últimos años se le está dando la importancia y significado del impacto que genera en las en ellas. El papel del trabajador en las empresas se encuentra en proceso de cambio debido al contexto donde se desarrolla, el recurso humano deja de ser un actor pasivo y se convierte en participante activo en la organización en la que colabora; una de sus herramientas tradicionales ha sido el conocimiento, pero actualmente se convierte en su herramienta más poderosa debido a que le ayuda a generar información que le proporciona valor. La importancia que se le está dando a la información y el conocimiento va creciendo cada día más, ambas son consideradas dos armas muy poderosas que ayudan a las empresas a ser triunfadoras; si la información que poseen es la mejor y sobre todo si es muy bien empleada para el logro de los objetivos, debido a que el conocimiento es considerado como un factor de la producción; esto último permite que la administración de los bienes intelectuales se haya vuelto la tarea más importante de las organizaciones. En base a lo antes mencionado surge la pregunta de investigación: ¿Es factible la implementación de un método para medir el desarrollo de capital intelectual y humano en el Centro de Producción Acua-Agrícola sustentable?. Llevando a cabo una serie de entrevistas a la población total del mismo para recabar información, procesarla y llegar a las conclusiones del proyecto*

**PALABRAS CLAVE:** Método de Desarrollo de Capital Intelectual y Humano, Producción Acua-Agrícola Sustentable y Benito Juárez, Sonora México

## **PROPOSAL OF A METHOD TO MEASURE THE DEVELOPMENT OF INTELLECTUAL AND HUMAN CAPITAL AT THE CENTER OF AQUA-AGRICULTURAL PRODUCTION SUSTAINABLE IN THE MUNICIPALITY OF BENITO JUAREZ, SONORA, MEXICO**

## **ABSTRACT**

*Firms face today a new economy in which access to the networks of information technology, the growth in the use of knowledge and the globalization of commerce have influence toward a change and a more dynamic competition in the environment in which turn their activities. Intellectual Capital has always been present in organizations, only that in the past few years you are giving the importance and significance of the impact that generates. The role of the worker in the companies is in the process of being changed due to the context where it develops, the human resource ceases to be a passive actor and becomes active participant in the organization in which it works; one of their tools has been the traditional knowledge, but now becomes your*

*most powerful tool because it helps you to generate information that gives you value. The importance that is being given to the information and knowledge is growing each day more, both are considered two very powerful weapons that help businesses to be winners; if the information they possess is the best and especially if it is very well used for the achievement of the objectives, because knowledge is considered as a factor of production; the latter allows that the administration of intellectual property has become the most important task of the organizations. On the basis of the before mentioned the question arises as to research: is it really possible the implementation of a method to measure the management of intellectual capital and people at the center of Acua-Agricultural production sustainable?. Carrying out a series of interviews to the total population of the same to gather information, process it, and arrive at the conclusions of the project.*

**KEYWORDS:** Method of Development of Intellectual and Human Capital, Production Aqua - Agricultural Sustainable and Benito Juárez, Sonora Mexico

## INTRODUCCIÓN

Debido al interés de la Universidad Estatal de Sonora por generar conocimiento y alternativas que incrementen la producción y rentabilidad del campo agrícola, así como coadyuvar como con productores de las comunidades rurales para que diversifiquen sus actividades tradicionales de agricultura temporal, y en la búsqueda de promover el autoempleo y la producción de alimentos libres de agroquímicos (productos orgánicos), se realiza el desarrollo de un sistema de producción en el que se integre la actividad acuícola con la agrícola. Teniendo en cuenta el contexto donde se realizará el presente estudio y la necesidad de documentar la operación que se lleva a cabo en el proyecto de la Universidad que tiene como objetivo social promover la implementación de este tipo de sistemas de producción entre los habitantes de la región para contribuir al autoempleo, a la producción y consumo de los cultivos altamente proteicos en beneficio de la salud y de la economía familiar, promoviendo el uso sustentable de los recursos naturales según González (2013), se toma la decisión de proponer la implementación de un método para el desarrollo de Capital Intelectual y Humano, para que se lleve a cabo en el proyecto del Centro de Producción Acua-Agrícola en el Municipio de Benito Juárez, Sonora, que ayude a la operación eficiente de acuerdo a las descripciones de puestos, competencias y productos que se obtengan del mismo.

## REVISIÓN LITERARIA

Desde los comienzos de la era industrial (Bernardez, 2005), los economistas clásicos comenzaron a preguntarse sobre la forma de medir y proteger el valor agregado por las personas a los procesos de trabajo. La emergencia de una sociedad en la que la aplicación de conocimiento y competencias comenzaba a crecer con mayor ritmo y velocidad que los otros factores económicos clásicos. Una particular diferencia que ya los clásicos advirtieron entre el capital financiero, la infraestructura física, la maquinaria y la tierra y el referido a los recursos humanos era que mientras los primeros podían ser plenamente poseídos por la organización, los últimos –superada la sociedad esclavista y la servidumbre medieval- eran co-propietarios de los conocimientos, habilidades y competencias acumulados en ellos. Los grandes componentes enfatizados por la escuela clásica (Schultz, Mincer y Becker) de la estructura del capital humano son:

Conocimientos, habilidades, actitudes y competencias:

Generales

Específicos al puesto

Salud física y mental

Capacidad de aprendizaje y concentración

Expectativa de vida

Continuidad y confiabilidad  
Movilidad y capacidad migratoria  
Empleabilidad  
Entre áreas  
Entre compañías  
Estructura familiar  
Como fuente de transmisión de valores y actitudes  
Como “incubadora” y “tutora” del capital humano de la siguiente generación  
Calidad de vida  
Seguridad y estabilidad  
Bienestar

## MÉTODOLOGIA

*Objetivo:* Realizar una propuesta de un plan de desarrollo de capital intelectual y humano en el CEPROAA ubicado en la Unidad Académica Benito Juárez de la UES.

*Delimitaciones:* El CEPROAA se lleva a cabo en la UES Benito Juárez con recursos propios de la Institución, apoyos estatales y se están gestionando recursos Federales para una operación eficiente, así como generar capital intelectual y humano por medio de los proyectos realizados por profesores y alumnos en conjunto.

Este proyecto presenta las siguientes delimitaciones:

Está enfocado sólo a la pertinencia del proyecto en la Unidad Académica Benito Juárez.

La profundidad del estudio está sujeta a la información disponible por los integrantes del proyecto.

La decisión de la implementación del proyecto queda a discreción de las autoridades de la UES y del responsable del proyecto

*Sujeto:* La presente investigación se realizó con los responsables de la operación del CEPROAA, así como los responsables del proceso de producción de los diferentes productos que se siembran de manera hidropónica, siendo profesores y alumnos respectivamente.

*Materiales:* Para la realización de esta propuesta del método de desarrollo de capital intelectual y humano, se realizaron entrevistas abiertas con los integrantes del proyecto, asesoría de maestros de la Universidad Estatal de Sonora y expertos en los temas abordados. Se aplicaron cuestionarios donde indicaban el nivel en que se encontraban y el desado y una abierta las cuales estuvieron enfocadas a la situación actual y expectativas del proyecto, otro método al que se recurrió fue al de observación, y consultas de fuentes directas como libros y páginas Web cuyos autores y páginas se encuentran en la sección de bibliografía.

*Procedimiento:* Al iniciar la investigación se realizó una plática con el Coordinador general del proyecto para conocer la situación actual de la operación del Sistema de Producción Acua-Agrícola, posteriormente se propuso el trabajo a desarrollar, el cual fue realizar un método para medir el desarrollo de capital intelectual y humano que ayude a recopilar de manera formal la información. En la realización del método para medir el desarrollo de capital intelectual y humano se realizaron los siguientes pasos: Determinar los puestos, competencias y productos del CEPROAA, Hipótesis, Población, Evaluación del capital humano, Factores desmotivantes, Análisis de la organización, Procesar información, Informe de resultados, Conclusiones y recomendaciones.

Tabla1: Operacionalización de Variables

1. Variable	2. Tipo de Variable	3. Definición y Objetivo
4. Conocimiento de métodos de desarrollo de Capital Humano	5. Cualitativa nominal	6. Esta variable se refiere al conocimiento que integrantes del proyecto tienen de los conceptos de capital intelectual y humano.
7. Definición de competencias de los puestos	8. Cualitativa nominal	9. En ésta, se determinan las competencias que cada uno de los puestos que componen el proyecto.
10. Evaluación conceptual del capital humano	11. Cualitativa nominal	12. Se identifican los niveles actuales y deseados de cada uno de los factores, componentes e indicadores del proyecto.

Tabla 2: Competencias Centrales de CEPROAA

Puesto	Competencias	Productos
<b>Coordinador general</b>	Implementar el proceso y fases del cultivo. Administrar eficiente de los recursos. Implementar el sistema hidropónico del proyecto. Controlar el desarrollo fenológico de los productos generados. Aplicar estratégicamente la dirección y liderazgo. Realizar gestión. Aplicar la gestión de capital humano. Detectar necesidades de desarrollo del capital humano. Desarrollar capital intelectual.	Cosecha de tilapia y tomate proyectada. Manual de procedimiento Manual de mercadotecnia Plan estratégico del sistema de producción acua-agrícola para la comunidad. Método para el desarrollo de gestión de capital intelectual y humano.
Puesto	Competencias	Productos
<b>Supervisor de producción</b>	Contar con características de liderazgo. Operar las fases del cultivo. Manejo eficiente del sistema en ambientes reducidos el proyecto. Implementar sistemas de control de calidad de los productos cultivados.	Ambiente laboral. Cosecha de tilapia y tomate proyectada. Sistema acua-agrícola operando en la comunidad. Estadísticas de crecimiento del producto. Estadísticas de la productividad del cultivo.
Puesto	Competencias	Productos
<b>Obreros</b>	Aplicar conocimientos técnicos para el manejo del sistema del proyecto.  Controlar tallas, pesos, medidas de crecimiento de los productos sembrados.  Dar mantenimiento constante a los estanques.  Controlar la alimentación de los peces y el regado de las plantas.  Realizar reportes de la evolución del crecimiento de los peces y productividad en los cultivos.	Cosecha de tilapia y tomate proyectada. Manual de procedimiento Manual de mercadotecnia Plan estratégico del sistema de producción acua-agrícola para la comunidad. Cosecha de tilapia y tomate proyectada.  Base de datos de periodos del ciclo productivo.  Base de datos de contingencias del proceso de cultivo.  Base de datos rendimiento de agua.

## RESULTADOS

*Necesidades de Información:* Se determinaron los factores internos del CEPROAA que opera en el municipio de Benito Juárez, para la obtención de las competencias y productos de los puestos que lo forman, así como evaluar los niveles de los factores, componentes e indicadores que coadyuvan en el desarrollo de las funciones, conocer la situación actual y deseada, para determinar la brecha que existe para establecer

estrategias para llegar al objetivo de manera eficiente y documentarlo, ya que no se cuenta con la información.

*Hipótesis (H1):* La hipótesis de la investigación es la propuesta de un método para medir el desarrollo de capital intelectual y humano en el CEPROAA, la cual se ubica en la comunidad de Benito Juárez, una vez analizada la información, se podrá conocer la aceptación o rechazo del proyecto por parte de los responsables del proyecto.

HA: Los responsables del proyecto SI están dispuestos a implementar el método para medir el desarrollo de capital intelectual y humano en el CEPROAA.

HO: Los responsables del proyecto NO están dispuestos a implementar el método para medir el desarrollo de capital intelectual y humano en el CEPROAA.

*Población:* La población de esta investigación serán los tres profesores responsables del proyecto del CEPROAA en la Universidad Estatal de Sonora, Unidad Académica Benito Juárez. Se esquematizaron los datos obtenidos mediante una hoja de cálculo de Microsoft Excel para obtener el total de datos precisos para graficar.

*Informe de resultados:* A continuación se muestran el análisis y las representaciones gráficas los resultados más importantes obtenidos en el desarrollo de la investigación.

Tabla 3: Evaluación Conceptual del Capital Humano

Factor	Componente	Indicadores	Nivel Actual	Nivel Deseado	Brecha y Puntos a Mejorar
13. Innovación y creatividad	○ Innovación	Implementar en el centro y en la comunidad el proceso de cultivo hidropónico en el periodo de un año.	2	4	Realizar cultivo en espacios reducidos productos orgánicos.
	○ Creatividad		4	5	Utilizar materiales reciclables.
2. Actitudes de los empleados	○ Satisfacción de los empleados.	Contar con un manual operativo con funciones y competencias.	3	5	Elaborar un manual operativo.
	○ Compromiso organizacional.	Contar con un plan de capacitación y actualización continua.	4	5	Elaborar un plan de capacitación continua.
	○ Compromiso de los empleados ("engagement")	Eficiencia en el manejo de los recursos	3	5	Difusión del proyecto con los productores de la comunidad.
3. Estabilidad de la fuerza de trabajo	○ Rotación y terminación.	Asegurar la permanencia de los obreros en el proyecto.	2	4	Elaborar plan de desarrollo de habilidades al capital humano.
	○ Permanencia y estabilidad		2	4	
4. Capacidad de los empleados	○ Experiencia	Que el personal tenga mínimo dos años de experiencia necesaria para la coordinación y supervisión del proyecto.	4	5	Capacitación en el manejo y administración de granjas de tilapia y en cultivos de hortalizas.
	○ Aprendizaje	Desarrollar un proyecto productivo al año.	4	5	Cumplir con las funciones y competencias del puesto.

5.	Inversión en capital humano	o	Conocimientos		4	5	Conocimientos generales de sanidad acuícola, legislación acuícola, aspectos biológicos de la especie, fases del cultivo, administración y comercialización. Desarrollo de manuales de los procesos, manejo del proceso administrativo.
		o	Habilidades		4	5	Proactivos, confianza, mejora continua.
		o	Actitudes		3	5	Administración eficiente de los recursos, implementar el sistema en ambientes reducidos el proyecto.
		o	Competencias		3	5	Desarrollo fenológico de los productos generados, gestión. Ing. Acuicultor o biólogo, ing. Agrónomo, biólogo pesquero, Lic. En agronegocios, todos a nivel mínimo de maestría en el caso del coordinador general.
		o	Nivel educacional		4	5	Implementar la inversión debido a que no existe un área específica para CEPROAA.
6.	Liderazgo	o	Inversión total del departamento de Recursos Humanos	Desarrollo e implementación de la gestión de capital humano.	1	3	Contar con el presupuesto necesario y suficiente para la inversión en el capital humano que se tiene proyectada.
		o	Inversión total en capital humano.	Tener al 100% el presupuesto para operar el proyecto.	1	3	Gestionar la autorización y ejercicio del presupuesto correspondiente.
		o	Inversión por categoría		1	3	
		o	Feedback 360°	Revisión de los objetivos mensualmente, según el plan operativo.	3	5	Retroalimentar al equipo de los progresos y áreas de oportunidad de la implementación del sistema.
7.	Productividad	o	Inventarios de liderazgo.	Comunicación eficiente y atención personalizada.	1	4	Desarrollo e implementación de inventarios de liderazgo.
		o	Percepción del liderazgo		4	4	Implementar un programa de aplicación de liderazgo.
		o	Productividad por unidad	Análisis de cumplimiento de la cosecha y la difusión del proyecto en un 100%. Control del plan operativo.	3	5	Mejorar un 15% de la producción.
		o	Productividad general		4	5	Teniendo reuniones quincenales para analizar el plan operativo.
8.	Perfil de la fuerza de trabajo	o	Características demográficas	Personal ambos sexos, no importa estado civil, edad de 20 a 45 años.	3	5	Difusión del programa a la comunidad en general.
9.	Creación de trabajos y reclutamiento	o	Desarrollo de puestos	Están definidas las funciones, competencias y escolaridad.	5	5	Establecer un manual operativo del proyecto.
		o	Efectividad del reclutamiento y sus fuentes.	El 100% es personal de la institución.	2	3	Contar con un 20% de personal externo contratado.
		o	Eficiencia del reclutamiento	Solo hay personal interno.	2	4	Otorgar una 5% del presupuesto del proyecto para el reclutamiento.
		o	Compensación	Solamente seguridad social	1	4	Contar con un diseño completo de compensaciones y beneficios para el personal
10.	Compensaciones y beneficios	o	Beneficios para los empleados	es el beneficio para los empleados, y en relación			

11. Cumplimiento de normas y seguridad	o Compensaciones variables	con las compensaciones variables que hay no aplica.			que participa en el proyecto, con los ingresos que genere el proyecto.
	o Participación de los empleados en utilidades, beneficios, acciones				
	o Quejas y conflictos.	Las quejas que se tienen, se analizan en la unidad de manera interna permitiendo un 10%.	3	5	Implementar un programa de calidad para el proyecto.
	o Cargos y demandas judiciales.	Mantener un 90% de casos controlados y solventados de manera interna.	2	4	10% de los casos que se atiendan en el departamento jurídico de la institución.
12. Relaciones con los empleados	o Salud y seguridad	El 90% del personal en medidas de seguridad estipuladas en el Manual de Seguridad.	2	4	Implementar manual de seguridad e higiene y capacitar el 10% del resto del personal.
	o Ausentismo y llegadas tarde	Son permitidos 15 días de permiso anuales según CGT previamente solicitados.	4	5	Disminuir los permisos en un 50% y pagar los días como un incentivo económico.
	o Balance entre vida y trabajo	Las incapacidades son a discreción del ISSSTESON.	1	4	Se permitan hasta 6 meses de incapacidades continuas según la enfermedad.

## CONCLUSIONES

En la presente propuesta del método para medir el desarrollo de capital intelectual y humano, se determinó la pertinencia de llevarlo a cabo en el CEPROAA, así mismo, los manuales que resulten de las necesidades que resultaron puede ser ofrecido a productores o familias de la comunidad de Benito Juárez cuando éste proyecto lo implementen en el traspaso de los hogares como lo establece en la investigación de mercado de Paredes, 2014. Sin embargo, la investigación fue realizada y adaptada a las necesidades de operatividad del CEPROAA, por lo que necesitaría apoyo de los responsables para capacitar a los interesados de llevar a cabo ésta alternativa de producción sustentable. Para concluir, es importante resaltar que a futuro se puede generar nuevos puestos y nuevas competencias que desarrollar y documentar, así mismo, cabe señalar que se estaría generando líneas de investigación en el proyecto, la Universidad y el acervo de los Journals.

Tabla 7: Factores Desmotivadores (Spitzer, 1995; Clark, 2006)

Factor Desmotivante	Nivel Actual en el Ámbito de Trabajo	Acciones Propuestas Para Removerlo
1. "Política"	1 2 3 4 5	Darlas a conocer por escrito y estar atentos a su cumplimiento para resolver los problemas en su aplicación.
2. Expectativas poco claras	1 2 3 4 5	Afinar el proceso de inducción para dar claridad a la contribución que el personal hará para el logro de los objetivos. Además realizar seguimiento y retroalimentación de su desempeño.
3. Reglas innecesarias	1 2 3 4 5	Revisión del reglamento interior de trabajo para descartar las reglas no necesarias.
4. Trabajo mal organizado	1 2 3 4 5	Revisión del Manual de Organización cada año.
5. Reuniones ineficaces	1 2 3 4 5	Programar las reuniones con anticipación y definir previamente la agenda a tratar.
6. Falta de seguimiento	1 2 3 4 5	Establecer un sistema de monitoreo del desempeño en las actividades críticas.
7. Cambio constante	1 2 3 4 5	Los procesos no varían por la esencia misma de la operación del centro.
8. Temor	1 2 3 4 5	Establecer un estilo de supervisión más democrático.
9. Hipocresía	1 2 3 4 5	Fomentar la congruencia haciendo que los jefes de área sean congruentes con sus acciones y establecer canales y mensajes claros.
10. Retener información	1 2 3 4 5	Fomentar que los directivos dispersen la información, sobretudo aquella que tiene vital importancia para el desarrollo de las actividades.
11. Inequidad	1 2 3 4 5	Estar atentos ante la aplicación de las políticas y reglas para evitar las injusticias, permitiendo que el personal las exprese de manera libre y oportuna.
12. Respuestas desalentadoras	1 2 3 4 5	Tener cuidado al transmitir una respuesta ante un problema, tratando de ser asertivos, confiando y creyendo en la gente.
13. Crítica ácida o destructiva	1 2 3 4 5	Fomentar la apertura en la comunicación y proporcionar la retroalimentación correctamente.
14. Subutilización de su capacidad.	1 2 3 4 5	Establecer un escalafón para los ascensos.
15. Tolerar baja performance	1 2 3 4 5	Establecer un sistema de información ágil y clara que permita identificar los niveles de cumplimiento de las metas.
16. "Derechos adquiridos"	1 2 3 4 5	Establecer políticas claras para otorgar promociones, ascensos, permisos, etc.
17. Management "invisible"	1 2 3 4 5	No aplica. No existen asesores las líneas de autoridad están claramente definidas.
18. Sobrecontrol	1 2 3 4 5	No aplica
19. Dar y quitar	1 2 3 4 5	Sistema de remuneración claro y a la vista de todos para su cotejo correspondiente.
20. Verse forzado a trabajar mal	1 2 3 4 5	Establecer un adecuado balance de cargas de producción y una mejor supervisión.

# SATISFACCIÓN LABORAL EN PROFESORES INVESTIGADORES UNIVERSITARIOS

Norma Aguilar Morales, Universidad Juárez Autónoma de Tabasco  
Deneb Elí Magaña Medina, Universidad Juárez Autónoma de Tabasco  
Candelaria Guzmán Fernández, Universidad Juárez Autónoma de Tabasco

## RESUMEN

*La satisfacción laboral es considerada como un sentimiento positivo respecto al trabajo propio, que resulta de una evaluación de sus características. Cuando el sentimiento es negativo, se considera que hay insatisfacción. El objetivo de la investigación fue conocer el nivel de satisfacción laboral de los profesores de los cuerpos académicos de la Universidad Juárez Autónoma de Tabasco, México y los factores relacionados con dicho nivel de satisfacción. El tipo y diseño del estudio fue no experimental, descriptivo, transeccional, con enfoque mixto y abarcó dos etapas, cuantitativa a través de encuestas y cualitativa por medio de grupos de enfoque. Los resultados obtenidos reflejan que el 26.9% de los profesores presentan insatisfacción laboral siendo las dimensiones que representan focos de alerta el reconocimiento, la compensación y las condiciones de trabajo. Entre las principales causas asociadas se atribuye un agobio relacionado con las funciones, la gestión de apoyos y las labores administrativas.*

**PALABRAS CLAVE:** Satisfacción Laboral, Capital Humano, Investigadores

## JOB SATISFACTION ON UNIVERSITY RESEARCH PROFESSORS

### ABSTRACT

*Job satisfaction is considered as a positive feeling towards our own work, resulting from an evaluation of its characteristics. When the feeling is negative, it is considered as dissatisfaction. The aim of this work was to know the job satisfaction level of the academic community professors of the Universidad Juárez Autónoma de Tabasco, as well as the factors associated with this level of satisfaction. The type and the research design was non-experimental, descriptive and transactional, with a mixed approach carried out in two stages, a quantitative one through surveys and a qualitative one through focus groups. The results show that 26.9% of the professors have job dissatisfaction, showing warning signs: recognition, compensation and working conditions. The main causes are attributed to the stress caused by working and work-related activities, the requesting of resources, and the administrative tasks.*

**KEYWORDS:** Satisfaction, Human Capital, Researchers

## INTRODUCCIÓN

Los seres humanos dedican por lo menos una tercera parte de su tiempo al trabajo, lo que representa una actividad fundamental en la vida de las personas (Peiró y Prieto, 1996). Desde esta perspectiva, el trabajo es fuente de satisfacción o insatisfacción personal, ya que en él se obtiene reconocimiento, el cual contribuye a la sensación de logro, que a su vez impacta en la autoestima de los individuos. De acuerdo a Warr (1999) y Oshagbemi (2003), tiende a pensarse que los trabajadores más satisfechos sean también los más productivos, aunque esta percepción no es corroborada por los datos empíricos. En el ámbito del

trabajo académico, la satisfacción en el trabajo posiblemente promoverá un mejor rendimiento escolar, mejor satisfacción de los alumnos, funcionarios y profesores; en la medida en que la satisfacción deja a los profesionales psicológicamente estables y dispuestos a liderar el proceso educacional a través del establecimiento de filosofías y políticas educacionales, así como mediante la motivación grupal. Estos profesionales estarán también más dispuestos a asimilar los progresos científicos y tecnológicos.

La satisfacción laboral se ha igualado en importancia a la preparación científica del profesional o a la disposición de una determinada tecnología, además, el grado de calidad de los servicios ofertados por una organización, está directamente relacionado con el nivel de satisfacción de las personas que trabajan en ella y en su vinculación con la motivación (Varela, Ferreiro, Fontao y Martínez, 2004).

En el ámbito académico, se ha podido constatar que el grado de satisfacción que los profesores universitarios manifiestan con la docencia, la investigación y las tareas de gestión que desempeñan, es reducido; siendo la gestión la actividad más insatisfactoria y la docencia la más estresante. Según Fisher (1984), en Herranz, Reig, Cabrero, Ferrer y González (2007), cuando los profesores universitarios clasifican sus diez principales fuentes de estrés, sitúan en primer lugar las tareas administrativas, mientras que la enseñanza ocupa la cuarta posición y la investigación la octava.

#### Planteamiento del Problema y su Importancia

La satisfacción laboral es considerada por la comisión europea como un indicador de la calidad de los empleos, ya que el análisis de sus determinantes y consecuencias ha sido objeto de una extensa literatura, siendo la satisfacción laboral contemplada como una variable económica y como un factor que afecta a las conductas individuales en el mercado laboral, produciendo consecuencias como el abandono de trabajo, el absentismo y la baja productividad (Gamero, 2007; Gholipur, Saeidinejad y Zehtabi, 2009).

En el contexto de la Universidad Juárez Autónoma de Tabasco, los profesores constantemente expresan su inconformidad con los esquemas de evaluación a que se ven sometidos, ya que las políticas cambian de un año a otro sin previo aviso y también se muestran inconformes con la forma en que se aplican estas evaluaciones. De igual manera, se declaran inconformes con las condiciones en que realizan su trabajo, mencionando la falta de equipos, materiales de trabajo, instalaciones inadecuadas, sobre todo la falta de aire acondicionado en los salones de clase, siendo que la temperatura en el trópico húmedo es muy elevada, lo que dificulta la realización de las labores.

Tomando como base la situación descrita, surge la inquietud de estudiar el problema en la universidad, para poder determinar el grado de satisfacción laboral de los profesores investigadores de los cuerpos académicos de la misma, analizando las diferencias que se presenten entre las distintas divisiones académicas, ya que la universidad tienen una población docente muy heterogénea, tanto por las diferentes disciplinas que abarca, como por otros factores importantes como la cultura, el ambiente organizacional y la estructura física, entre otras, siendo cada división académica diferente a las demás. El objetivo de la investigación fue determinar el grado de satisfacción laboral en los profesores investigadores que integran los Cuerpos Académicos de la universidad. Un cuerpo académico es un conjunto de profesores investigadores que comparten una o más líneas afines de investigación, cuyos objetivos y metas están destinados a la generación y/o aplicación de nuevos conocimientos, a través de su alto grado de especialización (Secretaría de Educación Pública [SEP], 2011).

## REVISIÓN LITERARIA

### La Satisfacción Laboral

De acuerdo a Muchinsky (2002), la satisfacción laboral forma parte relevante de la Psicología del trabajo y de las organizaciones, existiendo por parte de estas últimas un gran interés por comprender el fenómeno de la satisfacción o la insatisfacción en el trabajo, ya que se le considera un elemento importante en la productividad de los trabajadores. Actualmente se vive una época de transición de modelos laborales que han caído en desuso a otros no muy bien definidos que provocan un estado de readaptación permanente, generando incertidumbre en un contexto tan básico como el bienestar laboral, provocando que el equilibrio entre la vida personal y la vida laboral sea cada vez más difícil de mantener (Laca, Mejía y Gondra, 2006). Lo anterior se puede constatar en un estudio realizado por Martínez, Méndez y Murata (2011) en la Universidad Autónoma Metropolitana, de México; en el cual los investigadores expresan que las instituciones de educación superior han venido adecuándose a los requerimientos de la globalización, uno de los cuales es el incremento de la productividad bajo la lógica de hacer más con menos recursos.

En el sector educativo la productividad adquiere características específicas: más horas de clase, mayor número de artículos, de libros, de capítulos de libros, de conferencias, de alumnos formados, de comisiones y de participación en la gestión universitaria.

En dicho estudio se encontró, que como consecuencia de lo antes mencionado; se da en el profesor universitario una sobrecarga de trabajo, estrés, disfonía y trastornos musculoesqueléticos, trastornos del sueño, ansiedad, fatiga, fatiga neurovisual, lumbalgia y cefalea tensional, entre otros padecimientos; trastornos que reflejan las condiciones del trabajo sedentario, el uso excesivo de la voz y ojos, como consecuencias asociadas a la tarea de docencia, así como el uso de la pantalla de cómputo por largas horas. Aunado a lo anterior, también se encontró que esto ocasiona a su vez un deterioro en la vida familiar, social y laboral del profesor, debido a la prolongación de la jornada laboral y del trabajo realizado en días de descanso y vacaciones.

## MATERIAL Y MÉTODOS

### Diseño del Estudio

En la investigación se empleó un enfoque mixto y abarcó dos etapas: 1ª. Etapa: Fue de tipo descriptivo, con enfoque cuantitativo. El diseño fue no experimental transversal (Hernández, Fernández y Baptista, 2010). El método empleado fue el estudio de caso con investigación de campo y la técnica empleada fue la encuesta. En esta etapa se identificó el nivel de satisfacción/insatisfacción laboral de los profesores investigadores de los cuerpos académicos de la universidad, de acuerdo a las dimensiones estudiadas (condiciones de trabajo, oportunidades de promoción, reconocimiento, logro y compensación). Para la realización de esta etapa se aplicó de manera directa a los profesores investigadores de los cuerpos académicos, la adaptación propia del cuestionario de Minnesota para medir satisfacción laboral (Weiss, Dawis, England y Lofquist, 1977).

2ª. Etapa: Fue de tipo descriptivo, con enfoque cualitativo y diseño no experimental transversal. Se llevaron a cabo reuniones con los profesores de todas las divisiones académicas, empleando la técnica de grupos de enfoque (Morgan, 1998), con el fin de elaborar un inventario de factores asociados a la satisfacción/insatisfacción laboral. Los profesores fueron invitados de manera verbal y el grupo de enfoque se realizó con los que asistieron de manera voluntaria. Cabe mencionar que esta actividad se realizó con la asistencia de por lo menos 8 profesores en cada grupo focal, lo cual cumple con la norma de que en estos grupos pueden participar entre dos y 10 participantes (Martínez, 2006).

### Población de Estudio

La universidad cuenta con 11 Divisiones Académicas y 66 Cuerpos Académicos compuestos por 462 profesores distribuidos en 9 de ellas, los cuales conformaron la población de estudio. Se empleó un muestreo estratificado para la primera etapa (cuantitativa), tomando como estrato cada una de las divisiones académicas, el cual puede observarse en la tabla 1.

Tabla 7: Muestreo Estratificado de las Divisiones Académicas de la Universidad

División Académica	Población	Muestra
División Académica de Ciencias Agropecuarias (DACA)	55	28
División Académica de Ciencias de la Salud (DACS)	56	28
División Académica de Ciencias Económico Administrativas (DACEA)	38	19
División Académica de Ciencias Sociales y Humanidades (DACS y H)	36	18
División Académica de Educación y Artes (DAEA)	53	27
División Académica de Ingeniería y Arquitectura (DAIA)	53	27
División Académica de Informática y Sistemas (DAIS)	61	31
División Académica de Ciencias Biológicas (DACBIOL)	53	27
División Académica de Ciencias Básicas (DACB)	57	29
Total	462	234

*Nota: Esta tabla presenta la distribución de la muestra estratificada por división académica de los profesores que participaron en el estudio.*

### Instrumentos de Recolección de Datos

Para la recolección de los datos de la primera etapa se empleó una adaptación propia del cuestionario de Minnesota para medir las variables de satisfacción Laboral (Weiss, Dawis, England y Lofquist, 1977). Adicionalmente se incluyeron variables socio demográficas. La validez se determinó por medio del análisis factorial exploratorio, los resultados del análisis reportaron que los cinco factores explicaron el 43.37 % de la varianza total, valores que se consideran aceptables (Milton, 2010, Martínez, 2005). Para la confiabilidad se aplicó una prueba piloto a un grupo compuesto por el 10% del tamaño de la muestra, sometiendo los resultados a la prueba de alpha de Cronbach, el cual reportó un valor de 0.9261, que en términos generales el valor se considera elevado.

### Recolección y Análisis de Datos

Para la primera etapa, los puntajes obtenidos en la escala de satisfacción laboral fueron analizados en primer término a través de la distribución de frecuencias. Posteriormente, con el análisis de varianza (ANOVA) se determinaron las diferencias que se presentan entre cada una de las dimensiones de la satisfacción laboral y según las variables socio demográficas, las variables institucionales y los sistemas de evaluación externos, así como también las diferencias presentes en los niveles de satisfacción laboral de cada una de las Divisiones Académicas de la Universidad Juárez Autónoma de Tabasco. Para el análisis cuantitativo se utilizó el software especializado SPSS. Para la segunda etapa, se realizaron grupos focales para identificar los factores que pudieran ocasionar un impacto negativo en la satisfacción laboral de los profesores de cada una de las Divisiones Académicas de la Universidad. Una vez concluida la etapa de recolección de datos cualitativos, la información obtenida en los grupos focales fue transcrita para su análisis. Posteriormente a la transcripción se realizó una selección de frases testimonio para cada dimensión estudiada de la satisfacción laboral por cada profesor que participó en los grupos focales. Las frases se seleccionaron por expresión de opiniones, desacuerdos, causas o propuestas para cada una de las dimensiones de las variables definidas para el estudio.

## RESULTADOS

### 1ª. Etapa Cuantitativa

Con la finalidad de establecer categorías de análisis se decidió identificar los cuartiles de la distribución y se derivan las categorías presentadas en la tabla 2.

Tabla 8: Niveles de Satisfacción Laboral, Rango de Valores (Escala 20 – 100)

Satisfacción Laboral	Percentil	Rango	%
Insatisfecho	25	Valores $\leq$ 59	26.9
Poco Satisfecho	50	60 – 68	23.9
Satisfecho	75	69 – 77	24.4
Muy Satisfecho	100	Valores $\geq$ 78	24.8

*Nota: Esta tabla presenta la distribución de frecuencias por cuartiles.*

Con la finalidad de establecer un criterio más preciso para la población que se puede considerar que está insatisfecha, se consideró únicamente la población registrada debajo del percentil 25 (26.9%) como está señalado en la tabla 2. En la figura 1 se ilustra la distribución de frecuencias de los totales en los cuestionarios para evaluar el nivel de satisfacción por cuartiles.

Figura 1: Distribución de Frecuencias Sobre el Cuestionario de Satisfacción Laboral

*Nota: Esta figura presenta la distribución de frecuencias del cuestionario.*

En consideración de la distribución y la escala de la prueba (20 – 100), únicamente el 24.8% de la población considera estar muy satisfecho laboralmente y un 24.4% satisfecho a secas. Contrariamente, un 26.9% de la población bajo estudio se percibe insatisfecho laboralmente y un 23.9% expresaron estar poco satisfechos, por lo cual, en realidad un 50.8% presenta insatisfacción.

### Análisis de Variabilidad.

Para analizar las dimensiones del cuestionario de satisfacción laboral en relación a las variables socio demográficas se empleó el análisis de varianza ANOVA para la edad, la antigüedad y el área, así como la prueba *t* de student para analizar el género, el estado civil, acreditación del perfil PROMEP, vigencia en el

SNI y desempeño de algún cargo administrativo. A continuación se presentan las que resultaron estadísticamente significativas. La tabla 3 presenta los resultados de un ANOVA para evaluar diferencias de medias poblacionales de la antigüedad laboral con relación a las dimensiones de la satisfacción laboral.

Tabla 9: Comparación de las Medias Poblacionales de Cada Dimensión del Cuestionario de Satisfacción Laboral Por Antigüedad

Dimensión	Antigüedad	N	Media	Desviación Típica	F	Sig.
Condiciones de Trabajo	1 a 10	53	12.98	4.102	.394	.757
	11 a 20	83	13.02	4.117		
	21 a 30	84	13.61	3.780		
	31 a 45	10	13.40	4.477		
Oportunidades de Promoción	1 a 10	53	12.72	4.007	1.309	.272
	11 a 20	83	12.02	4.042		
	21 a 30	84	12.99	3.913		
	31 a 45	10	11.00	4.989		
Reconocimiento	1 a 10	53	12.11	4.798	1.390	.247
	11 a 20	83	12.14	4.387		
	21 a 30	84	13.21	3.887		
	31 a 45	10	11.20	4.756		
Logro	1 a 10	53	18.13	1.798	2.854	.038*
	11 a 20	83	16.82	3.465		
	21 a 30	84	17.76	2.660		
	31 a 45	10	18.10	2.961		
Compensación	1 a 10	53	11.34	3.562	1.091	.354
	11 a 20	83	11.51	3.817		
	21 a 30	84	12.33	3.420		
	31 a 45	10	11.50	3.979		

*Nota: Esta tabla presenta la comparación de medias poblacionales de cada una de las dimensiones de estudio con respecto a la antigüedad.*

\* $p \leq .05$

Se observa una diferencia estadísticamente significativa para los rangos de antigüedad establecidos con respecto a la dimensión de logro, siendo el rango entre 1 y 10 años el que presenta la media más alta, 18.13 (mayor satisfacción) y el rango entre 11 y 20 años de antigüedad el que reporta la media más baja, 16.82 (menor satisfacción). Para analizar la diferencia de las muestras poblacionales por género, estado civil, acreditación del perfil PROMEP, vigencia en el SNI y desempeño de algún cargo administrativo se empleó la prueba  $t$  de student para muestras independientes ya que permite comparar las medias para dos grupos de casos (Mendenhall, 1990). A continuación se presentan las que resultaron estadísticamente significativas. En la tabla 4 se presentan los resultado de la prueba  $t$  para la variable estado civil.

Tabla 10: Comparación de las Medias Poblacionales de Cada Dimensión del Cuestionario de Satisfacción Laboral Por Estado Civil

Dimensión	Estado Civil	N	Media	Desviación Típica	T	Sig. (Bilateral)
Condiciones de Trabajo	Soltero	66	12.70	4.598	-1.204	.230
	Casado	167	13.40	3.722		
Oportunidades de Promoción	Soltero	66	11.89	3.915	-1.441	.151
	Casado	167	12.74	4.065		
Reconocimiento	Soltero	66	11.61	4.343	-1.861	.064
	Casado	167	12.78	4.329		
Logro	Soltero	66	17.27	3.321	-.825	.410
	Casado	167	17.62	2.670		
Compensación	Soltero	66	10.77	3.972	-2.617	.009*
	Casado	167	12.13	3.402		

Nota: Esta tabla presenta la comparación de medias poblacionales de cada una de las dimensiones de estudio con respecto al estado civil.

\*p≤ .05

Se observa que sí existe una diferencia estadísticamente significativa sobre la compensación con relación al estado civil, siendo los solteros los que presentan menor satisfacción.

La tabla 5 presenta los resultados de la prueba *t* para los profesores que además desempeñan un cargo administrativo.

Tabla 11: Comparación de las Medias Poblacionales de Cada Dimensión del Cuestionario de Satisfacción Laboral Sobre el Desempeño de un Cargo Administrativo

Nota: Esta tabla presenta la comparación de medias poblacionales de cada una de las dimensiones de estudio con respecto al desempeño o no de un cargo administrativo.

\*p≤ .05

Se observa que existen diferencias estadísticamente significativas en el nivel de satisfacción con relación a las dimensiones de condiciones de trabajo y oportunidades de promoción, siendo en ambos casos los que no tienen un cargo administrativo, quienes registran un nivel más bajo de satisfacción con respecto a estos dos factores. La tabla 6 presenta los resultados de un ANOVA para evaluar diferencias de medias poblacionales entre las diferentes Divisiones Académicas con relación a las dimensiones de la satisfacción laboral. Se observa una diferencia estadísticamente significativa en las Divisiones Académicas con respecto a las condiciones de trabajo, siendo la División Académica de Ingeniería y Arquitectura la que presenta los niveles más bajos de satisfacción laboral, con una media de 10.15 y la División Académica de Ciencias

Tabla 12: Comparación de las Medias Poblacionales de Cada Dimensión del Cuestionario de Satisfacción Laboral Por División Académica

Nota: Esta tabla presenta la comparación de medias poblacionales de cada una de las dimensiones de estudio por cada una de las divisiones académicas. \* $p \leq .05$

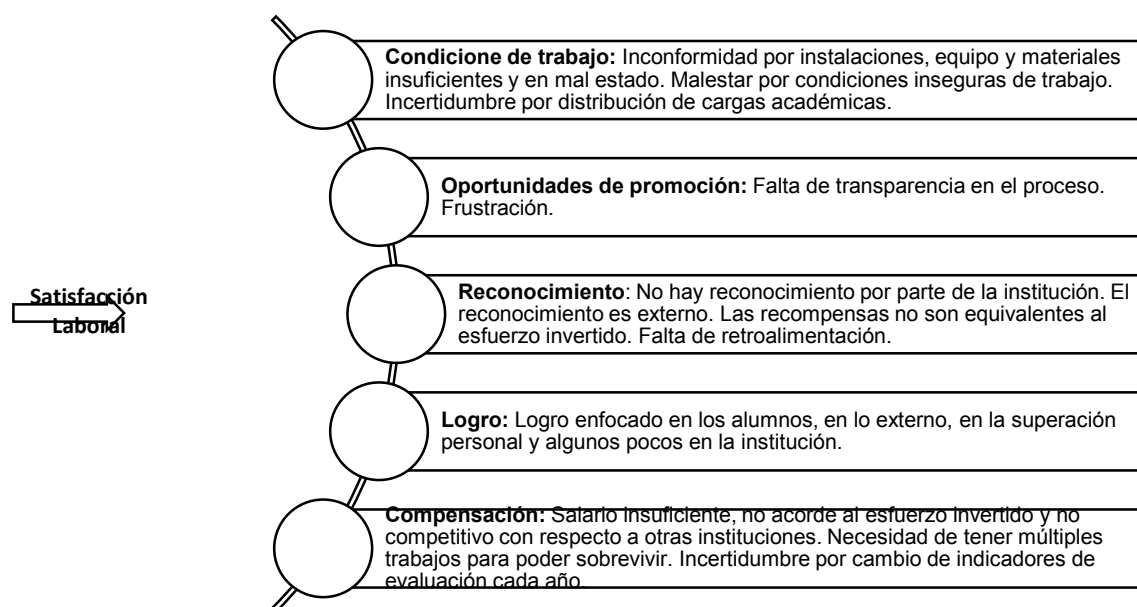

biológicas la que presenta la media más alta 14.81(mayor satisfacción). En términos generales, es la División Académica de Ingeniería y Arquitectura, la que presenta los niveles más bajos de satisfacción, ya

que su media es la más baja en condiciones de trabajo (10.15), oportunidades de promoción (10.52) y reconocimiento (10.67). A su vez, la División Académica de Ciencias Económico Administrativas presenta las medias más bajas (menor satisfacción) en las dimensiones logro (16.58) y compensación (10.68). Por otra parte, las medias más altas (mayor satisfacción) las obtuvo la División Académica de Ciencias de la Salud en las dimensiones reconocimiento (13.64) y compensación (13.29); de igual manera, División Académica de Ciencias Biológicas obtuvo la media más alta (mayor satisfacción) en la dimensión condiciones de trabajo (14.81), la División Académica de Ciencias Sociales y Humanidades en la dimensión oportunidades de promoción (13.89) y la División Académica de educación y Artes en la dimensión logro (18.93).

## 2ª. Etapa Cualitativa

Después de analizar la transcripción de los grupos focales llevados a cabo en cada una de las divisiones académicas, se identificaron las frases testimonio por cada una de las dimensiones de estudio. Los resultados generales indican que la dimensión con mayor frecuencia (más insatisfacción) es el reconocimiento, seguida por la compensación y las condiciones de trabajo. En menor medida expresan no estar satisfechos en las dimensiones de logro y oportunidades de promoción. En la figura 2 se presentan los resultados globales de los niveles de satisfacción, con sus respectivas frases testimonio.

Figura 2: Resultados Globales de los Niveles de Satisfacción Laboral de Segunda Etapa del Estudio

**Nota:** Esta figura presenta los resultados globales de los niveles de satisfacción laboral con sus respectivas frases testimonio.

Se puede observar que a nivel global de la muestra, la frecuencia más alta se obtuvo en las dimensiones de Reconocimiento, Compensación y Condiciones de trabajo. La primera dimensión, el reconocimiento, se asocia a ideas que refieren a una ausencia de este factor, tales como: 1) La falta de reconocimiento por parte de la institución, 2) se perciben que las recompensas no equivalen al esfuerzo invertido, 3) el reconocimiento se obtiene de fuentes externas a la organización, y por último 4) se percibe que es necesaria una retroalimentación sobre las labores que deben mejorarse. En la segunda dimensión en importancia, las condiciones de trabajo, se percibe que las instalaciones y el equipo se encuentran en muchas ocasiones en mal estado y que no siempre se cuentan con los recursos suficientes para el desempeño de las labores.

asignadas. Por otro lado, la inseguridad, también fue una idea asociada a esta dimensión, al igual que la incertidumbre que se genera en la distribución de asignaciones académicas cada ciclo. La tercera dimensión se asocia a cuestiones en las cuales los profesores expresaron inconformidad porque consideran que el salario devengado no alcanza para satisfacer sus necesidades, además de que no es acorde al esfuerzo invertido y que perciben que no es competitivo con respecto a los salarios que pagan en otras instituciones, motivo por el cual se ven obligados a tener varios empleos para poder subsistir.

## CONCLUSIONES

Se concluye que sí hay evidencia de insatisfacción, pues el 26.9% de los profesores investigadores que integran los cuerpos académicos de la universidad, se percibe insatisfechos laboralmente y un 23.9% expresa que se encuentra poco satisfecho, por lo cual se puede afirmar que realmente es un 50.8%. A su vez, al calcular los descriptivos de las dimensiones, se pudo observar que la media más baja (11.77), se registró en la dimensión compensación, lo cual indica que es aquí donde está el menor grado de satisfacción. En la fase cualitativa, todas las expresiones asociadas a cada una de las dimensiones dan cuenta de una evidente insatisfacción del profesor con el rol múltiple que debe desarrollar por las demandas internas y externas que le genera una sobrecarga de trabajo, la cual se percibe como no remunerada ni reconocida de manera adecuada. El análisis dimensional de la variable señala que los principales factores en las que tiene incidencia la satisfacción laboral, se encuentran asociados a la compensación, el reconocimiento y las oportunidades de promoción. A nivel global, los resultados obtenidos permiten concluir las divisiones académicas con índices más bajos de satisfacción son: la División Académica de Ingeniería y Arquitectura, en las dimensiones condiciones de trabajo, oportunidades de promoción y reconocimiento; y la División Académica de Ciencias Económico Administrativas, la cual presenta los menores índices de satisfacción en las dimensiones logro y compensación. Se concluye de manera general que los factores causales de insatisfacción son los mismos en diferentes niveles para todas las divisiones.

# ESTRUCTURA DE CAPITAL Y RIESGO FINANCIERO: EVIDENCIA EMPÍRICA EN PYMES HOTELERAS

Luis Alfredo Gallardo Millán, Universidad de Occidente

Ezequiel Avilés Ochoa, Universidad de Occidente

## RESUMEN

*En este trabajo se expone el desempeño financiero de 21 empresas hoteleras, relacionando componentes de valuación para determinar el riesgo financiero estratégico. El contexto teórico establece que la toma de decisiones financieras a nivel estratégico en las pequeñas y medianas empresas (PyMEs) requiere de la comprensión de diversos paradigmas. El análisis sobre la administración del riesgo establece que el control sobre la estructura de capital, la tasa de retención, la tasa de crecimiento, y el rendimiento de capital ajustado por riesgo permiten crear estrategias que puedan convertirse en una ventaja competitiva. Los resultados indican que el riesgo financiero estratégico se identifica determinando la estructura de capital que maximiza el valor de las empresas.*

**PALABRAS CLAVES:** Estructura de Capital, Riesgo Financiero, Pymes Hoteleras

## CAPITAL STRUCTURE AND FINANCIAL RISK: EMPIRICAL EVIDENCE IN SME

### ABSTRACT

*This work presents the financial performance of 21 hotel companies, linking components of valuation to determine the strategic financial risk. The theoretical context establishes that financial decision-making at the strategic level in small and medium-sized enterprises (SMEs) requires the understanding of different paradigms. Analysis on risk management establishes control over the capital structure; retention rate; growth rate; and risk-adjusted return on capital performance allow create strategies that can develop into a competitive advantage. The results indicate that strategic financial risk is identified by determining the capital structure that maximizes the value of the companies*

**JEL:** G32

**KEYWORDS:** Capital Structure, Financial Risk, And Smes

## INTRODUCCIÓN

Los propietarios o directivos de las PyMEs mantienen un control total sobre sus decisiones, restringiendo su tasa de crecimiento; financieramente hablando prefieren financiar sus operaciones o proyectos de inversión con recursos económicos propios. (Velázquez y Butze, 2009). Esta decisión responde en un análisis particular a las oportunidades de acceso al sistema financiero y al costo de financiamiento por la obtención de los recursos. De acuerdo con (Myers, 2001) es producto de la decisión de financiar las inversiones con las fuentes más baratas y con mayor posibilidad de obtención; pero esto aleja a la empresa de una estructura de capital óptima; ya que se elige la fuente de financiamiento de menor costo versus el porcentaje de deuda que minimice el costo promedio de financiamiento. Esto es, que el empresario PyME prefiere la retención de utilidades antes que el financiamiento externo y la deuda antes que al capital. Los comportamientos descritos previamente y los riesgos inherentes en los entornos empresariales tienen un

efecto directo en el retorno sobre capital, pero en la toma de decisiones financieras estratégicas este indicador debe ser complementado con la determinación del riesgo en la combinación de los factores de valuación de negocio. En nuestra investigación obtuvimos información con respecto al desempeño financiero de las PyMEs hoteleras sinaloenses, lo cual nos permitió realizar un análisis para determinar el nivel de riesgo financiero estratégico. El empresario hotelero sinaloense como ente conocedor debe aportar las estrategias de fortalecimiento de la oferta hotelera regional, sin olvidar la satisfacción de los turistas; participando para ello, en actividades que fortalezcan la cultura de su entorno, revaloricen su ecosistema y minimicen la estacionalidad de la actividad turística. Lo anterior, sumado a una toma de decisiones que maximice el valor de las empresas hoteleras motivaría el deseo o la oportunidad de reinvertir en el sector turístico sinaloense; convirtiéndose en una ventaja competitiva de largo plazo.

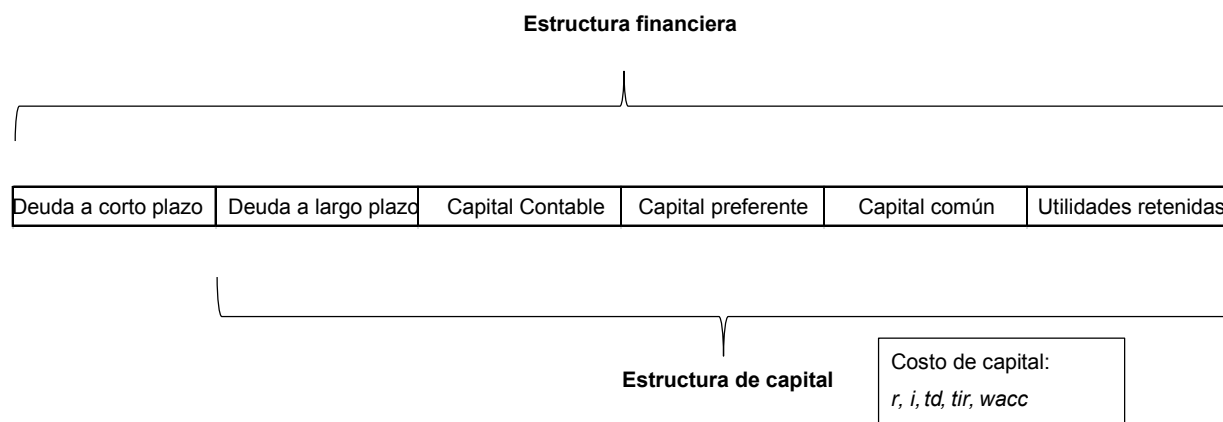

## REVISIÓN LITERARIA

Para Velázquez y Butze (2009) la evidencia empírica establece que el costo y el acceso a fuentes de financiamiento se relacionan con el desarrollo de los sistemas y mercados financieros, justificando la teoría de Myers. Esta combinación teórica “facilita las decisiones de inversión, influyendo en el crecimiento de las empresas, y se integra por tres funciones”: 1) movilización y asignación del ahorro, 2) adquisición de información y 3) administración del riesgo. Con lo anterior, podemos comprender que la incertidumbre determinada en los plazos de las fuentes de financiamiento modifica las funciones previas y establecen el costo y disponibilidad de las mismas. Así, en sistemas y mercados financieros limitados, el costo financiero de una fuente es mayor si la exigencia del financiamiento es a corto plazo; lo mismo para la posibilidad de obtención de recursos mediante fuentes externas, la cual es menor si el financiamiento es a largo plazo. Por consecuencia, las empresas pueden acceder a varias fuentes para la obtención de recursos económicos, con la alternativa de integrar su estructura financiera con deuda y capital.

La estructura de capital se concentra en las fuentes de financiamiento de largo plazo, definiendo el costo de capital como la tasa de retorno del financiamiento empleado en una inversión; por lo que la combinación de deuda y capital con su relativo costo de oportunidad se convierte en un factor que influye en mejores decisiones financieras en el largo plazo. (Grajales Bedoya, 2008). Figura 1. En un estudio de Pavón (2010) se señala que las PyMEs tienen una nula utilización de fuentes de financiamiento externas relacionadas con el sistema financiero a largo plazo, el capital privado de riesgo o el capital social por oferta privada y/o pública de acciones. Así, el tamaño de las empresas es una variable de análisis como lo establece en su investigación Delfino (2007) en la cual señala que “las firmas pequeñas pueden estar más endeudadas que las grandes y además pueden preferir préstamos a corto plazo a través del sistema bancario en lugar de emitir deuda a largo plazo a los más bajos costos fijos asociados con esta alternativa”. Las relaciones teóricas previas están acorde con la teoría de Myers, permitiendo entender porque muchas empresas no tienen como objetivo una estructura óptima de capital, en especial las PyMEs ya que prefieren financiarse con recursos propios dada su aversión al riesgo financiero.

(Zambrano V. y Acuña C., 2011). Mac an Bhaird (2010) señala que en los tiempos recientes, los investigadores de PyMEs relacionan el financiamiento de las empresas con el enfoque del ciclo de vida, observando que el desarrollo de la firma es un proceso secuencial lineal a través de las fases de crecimiento. Lo cual ha sido adoptado por los investigadores de finanzas corporativas quienes describen las fuentes de financiamiento disponibles en las diferentes etapas del ciclo de vida de las empresas, esto es, que en la medida de que las empresas crecen de manera continua ganan acceso a recursos de financiamiento externo de deuda y capital. Explicando también, que el crecimiento inicial en los primeros 12 años de la empresa es por el uso del financiamiento interno, y ese potencial de crecimiento se disminuye en la medida que se presentan dificultades para obtener financiamiento externo.

Figura 13: Fuentes de Financiamiento

*En esta tabla se muestran las fuentes de financiamiento que componen la estructura financiera y la estructura de capital, relacionando las variadas tasas de descuento que pueden utilizarse como costo de capital. Fuente: Elaboración propia, LAGM (2014). A partir de Grajales Bedoya (2008).*

Por lo tanto, surge un debate sobre el efecto de la selección de la estructura de capital en el valor de la empresa, con cuestionamientos como: ¿Cuál es la mezcla de la estructura de capital que optimiza el valor de la firma?, ¿Cuál es el rol del capital de deuda en la estructura de capital?, y ¿Cuáles son los factores de influencia en la selección de la estructura de capital? Esto ha convertido a la proposición de la estructura de capital en un rompecabezas difícil de resolver, partiendo de la existencia de una estructura de capital óptima y un nivel de deuda pertinente en la estructura de capital de las empresas. (Collins, Filibus, y Clement, 2012). Desde un contexto directivo, los empresarios deben de identificar, diseñar e implementar estrategias financieras que le permitan a su empresa desarrollarse en las diferentes etapas de ciclo de vida; acumulando valor económico con el menor riesgo estratégico; el cual ha sido expuesto por Avilés y Palma (2011) como la probabilidad de no poder crear una empresa, de no generar los recursos suficientes para la operación de las PyMEs, de no encontrar en el entorno las oportunidades para crecer o de no alcanzar niveles óptimos de competitividad. En la práctica las empresas toman decisiones en un entorno asediado por riesgos, los cuales se incrementan en función de la evolución y desarrollo de los seres humanos y las organizaciones. En la medida en la que una empresa crece y se vuelve más compleja tiende a enfrentar riesgos más dinámicos y diversos. (Roberts, Wallace, y Neil, 2012). Tabla 1.

Tabla 1: Clasificación de Riesgos Básicos

Por Nivel	Por Naturaleza
<ul style="list-style-type: none"> <li>Riesgo estratégico</li> <li>Riesgo de proyecto</li> <li>Riesgo operacional</li> <li>Riesgo impredecible</li> </ul>	<ul style="list-style-type: none"> <li>Riesgo financiero</li> <li>Riesgo de conocimiento</li> <li>Riesgo externo</li> <li>Riesgo interno</li> <li>Riesgo especulativo</li> <li>Riesgo estático</li> <li>Riesgo interdependiente</li> </ul>

*En esta tabla se listan los diferentes tipos de riesgos básicos clasificados por nivel y por naturaleza. Fuente: Elaboración propia, LAGM (2014). A partir de Roberts, Wallace, y Neil (2012).*

Dada la diversidad en los tipos de riesgos, es necesario que las empresas establezcan una administración del riesgo, la cual consista en un proceso para identificar, evaluar y tomar medidas con respecto a su efecto potencial en las actividades del negocio. Dicho proceso debe ser una parte central de cualquier administración estratégica con el objetivo de maximizar el valor de la empresa. (Frigo y Anderson, 2011).

Con lo que respecta a los componentes de valuación relacionados con la administración del riesgo, (Damodaran, 2008) describe los efectos en la cobertura del riesgo; estos componentes son las variables que han sido contextualizadas previamente, al definir el riesgo financiero y la estructura de capital. Tabla 2.

Tabla 2: Componentes de Valuación en la Administración del Riesgo

Componente de Valuación	Efecto de Cobertura de Riesgo	Efecto de Administración Del Riesgo
Costo de capital	Reducir el apalancamiento y el costo de deuda minimiza el riesgo.	Optimizar la estructura de capital, puede convertirse en una ventaja competitiva.
Flujos de efectivo	Si se considera un costo financiero, reduce las ganancias pero reduce la carga fiscal.	Una administración efectiva del riesgo puede incrementar los márgenes operativos y los flujos de efectivo.
Tasa de crecimiento durante expansión	Al reducir la exposición al riesgo, se puede optar por inversiones más rentables. Si se incrementa la tasa de retención, se incrementa la tasa de crecimiento.	Explotar oportunidades generadas por riesgo permitirá a la empresa obtener mayores retornos sobre capital (ROC) en sus nuevas inversiones.
Extensión del periodo de crecimiento	No hay efecto por la protección sobre el riesgo.	La administración estratégica del riesgo puede convertirse en una ventaja competitiva en el largo plazo y extender el periodo de crecimiento.

*En esta tabla se describen los efectos de los componentes de valuación en la cobertura de riesgo y/o en la administración del riesgo. Fuente: Elaboración propia, LAGM (2014). A partir de Damodaran (2008).*

De acuerdo con Ghemawat (2009) “el riesgo es la no consecución de un rendimiento satisfactorio en alguna dimensión. El riesgo financiero de invertir es la no obtención de un rendimiento financiero satisfactorio a partir de una inversión y el riesgo competitivo de no invertir consiste en la imposibilidad de mantener una posición competitiva satisfactoria debido a la falta de inversión”. Buscar formas innovadoras en el análisis de los resultados financieros, permite a los empresarios apropiarse de técnicas para determinar indicadores que simplifican la toma de decisiones. Rogers (2002) analiza la perspectiva teórica de Schumpeter, “los efectos de la destrucción creativa”, señalando que cualquier empresa que falle en su capacidad para obtener logros e innovar sus procesos competitivos, será eliminada de los mercados.

En nuestro estudio se identifica el riesgo financiero estratégico relacionando las tasas de crecimiento y el retorno sobre capital ajustado por riesgo, para decidir sobre la preferencia entre la optimización de la estructura de capital y el nivel de deuda en función del costo de capital, multiplicando la oportunidad de nuevas inversiones de largo plazo que generen valor económico.

## METODOLOGÍA

Las PyMEs hoteleras son un factor relevante para el estudio del sector turismo, ya que generan empleo, atraen inversión directa, incentivan otros sectores como los servicios turísticos y valorizan los bienes raíces, entre otros beneficios sociales y económicos. Para alcanzar rendimientos sostenidos y optimizar los recursos que se gestionan en el sector hotelero, hemos considerado el análisis de las relaciones que resultan del diseño e implementación de estrategias financieras para la creación de valor económico. La investigación de campo se llevó a cabo mediante la aplicación de encuestas a directivos de las PyMEs hoteleras seleccionadas de acuerdo a la categorización de la muestra, ubicados en las principales ciudades del Estado de Sinaloa, México; la información obtenida se procesó estadísticamente usando The Statistical Package for the Social Sciences, versión 2.0. (SPSS) Las variables utilizadas para el cálculo del riesgo financiero consistieron en:

Estructura de capital (D/C)	Tasa de retención (r)
Rendimiento sobre capital (ROC)	Utilidades (Ut)
Total de activos (TA)	Rendimiento sobre activos (ROA)
Costo de capital (WACC)	Tasa de crecimiento (g)
Valor económico agregado (EVA)	ROC ajustado por el riesgo (RAROC)

Dada que la población hotelera en Sinaloa es finita y censada por el Instituto Nacional de Estadística, Geografía e Informática de México (INEGI, 2010) se determinó una muestra inicial que resultó ser una representación muy alta con respecto a la población seleccionada, por lo que se decidió realizar un ajuste utilizando la fórmula que considera una correlación finita de la población propuesta por Namakforoosh (2010). La selección de los hoteles para aplicar las encuestas fue al azar, pero se incluye la información de aquellos que cuentan con un rango de 11 hasta 100 empleados. La información se obtuvo de los gerentes generales y/o responsables financieros. El análisis de los datos obtenidos se conformó considerando las siguientes dimensiones, acorde al orden planteado en el instrumento de investigación, como sigue:

Perfil del encuestado	Características de la empresa
Estrategias financieras	Objetivos estratégicos
Riesgo estratégico	Creación de valor económico
Fuentes de financiamiento	

En este trabajo se presentan los resultados de la aplicación de 21 encuestas, lo que nos permitió obtener los datos necesarios para realizar el análisis y responder nuestra pregunta central de investigación: ¿Cómo se identifica el riesgo financiero estratégico y cuáles son los componentes que generan valor económico y oportunidades de crecimiento en el largo plazo?

## RESULTADOS Y DISCUSIÓN

El análisis de fiabilidad del instrumento de investigación aplicado; el cual se representa por Alfa de Cronbach resultó en 0.942. Con la relación de las variables financieras calculamos la tasa de crecimiento (g) y el rendimiento de capital ajustado por el riesgo (RAROC). La propuesta conceptual que planteamos para determinar el nivel de riesgo financiero estratégico es que (g) supere RAROC. Tabla 3.

En esta tabla se presentan los resultados al determinar el riesgo financiero estratégico relacionando los indicadores financieros crecimiento (g) y el Rendimiento sobre capital ajustado por riesgo (RaRoc). Fuente: Elaboración propia, LAGM (2013). A partir de la investigación de campo.

El cálculo del riesgo financiero con la combinación de los datos obtenidos de las PyMEs hoteleras estudiadas permitió ubicarlas en los cuadrantes positivo o negativo; con dicha representación gráfica se

puede visualizar el nivel de riesgo financiero. Las PyMEs hoteleras que tienen un resultado positivo cuentan por lo tanto, con una solvencia financiera que las posiciona en una ventaja competitiva; aquellas con resultados negativos enfrentan un riesgo financiero que limita la creación de valor económico. Figura 2.

Figura 2: Nivel de Riesgo Financiero

En esta figura se muestra la representación gráfica donde aprecian los niveles de riesgo financiero estratégico determinado para cada hotel. Fuente: Elaboración propia, LAGM (2013). A partir de la investigación de campo.

De las empresas encuestadas, 61.90% se ubican en el cuadrante negativo; encontramos también que al relacionarlas en las etapas del ciclo de vida, el 23.80% están en las etapas de estancamiento y/o declive. Sólo el 14.28% se posiciona en la etapa de expansión, corroborando los fundamentos teóricos de que potencial de crecimiento se disminuye en la medida que una empresa se desarrolla. Figura 3.

Figura 3: Pymes Hoteleras en las Etapas del Ciclo de Vida

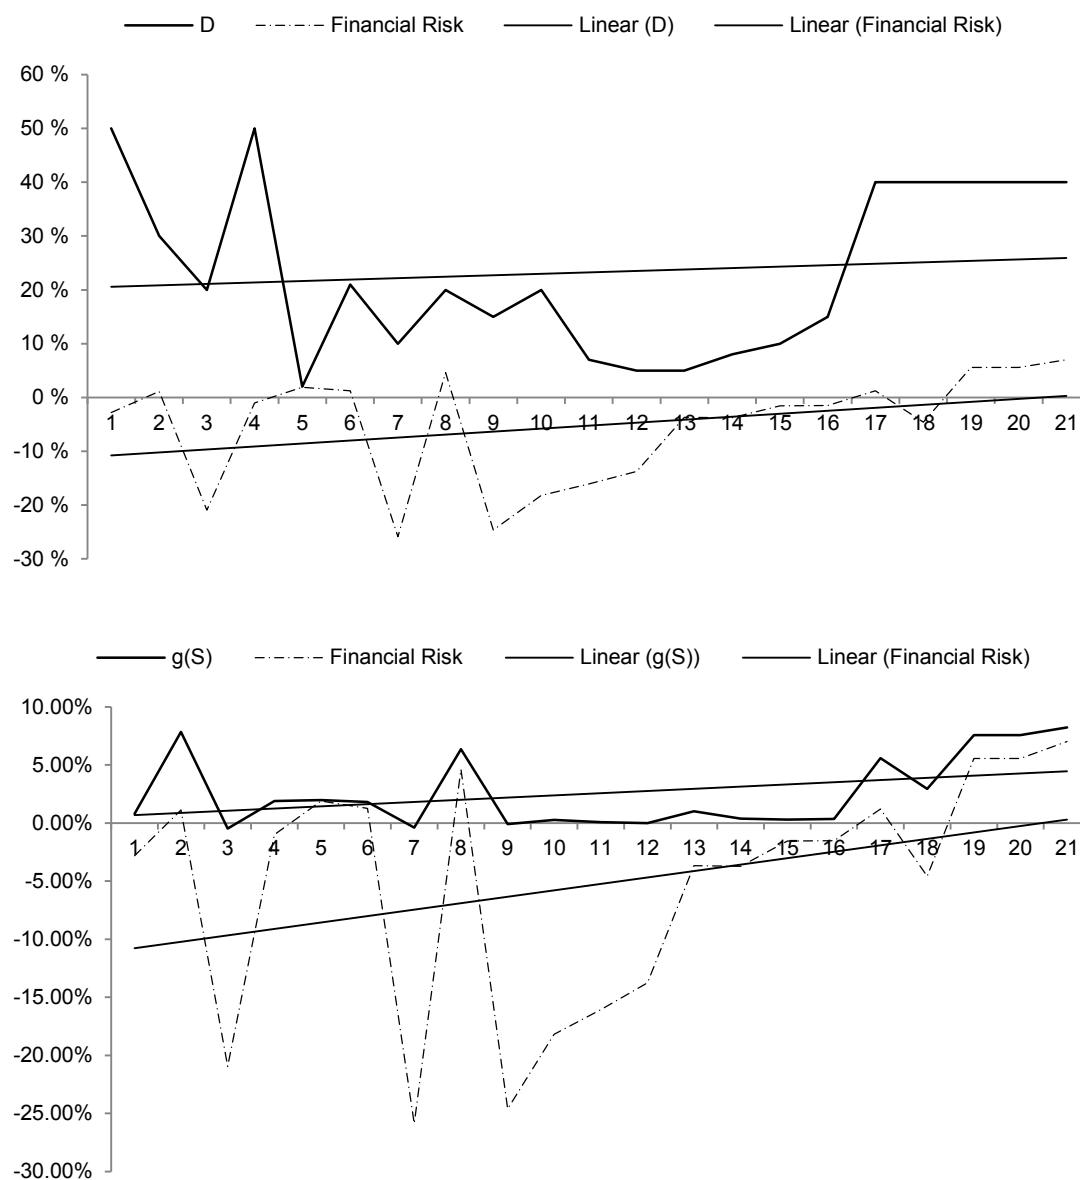

En esta figura se muestra el número de hoteles de la muestra que se identificaron en las diferentes etapas de desarrollo. Fuente: Elaboración propia, LAGM (2013). A partir de la investigación de campo.

Al continuar con nuestro análisis relacionamos el resultado de riesgo financiero estratégico con el nivel de deuda y con la tasa de crecimiento, para ello insertamos líneas de tendencia representando la desviación estándar en cada variable; y se observó primero, que hay empresas que cuentan con niveles óptimos de

deuda, y segundo, que hay empresas que reflejan por su desempeño financiero tasas de crecimiento superiores y sostenidas en el largo plazo; ambos componentes como se aprecia gráficamente minimizan el riesgo financiero estratégico. Figura 4.

Figura 4: Relaciones de Deuda y Crecimiento Con el Riesgo Financiero Estratégico

En esta figura se muestra la representación gráfica de las variables de nivel de deuda (D) y crecimiento (g) con el nivel de riesgo financiero calculado para cada hotel de la muestra. Fuente: Elaboración propia, LAGM (2013). A partir de la investigación de campo.

## CONCLUSIÓN

La teoría de la jerarquización financiera de la estructura de capital condicionada por los costos de financiamiento y los riesgos agregados, puede ser optimizada por ajustes en la estructura de capital, en la

tasa de retención de utilidades, en el desempeño financiero, y en el costo de capital. A su vez, la creación de valor económico en las empresas, se representa con la conservación y/o incremento de activos estratégicos, por lo tanto, los flujos de fondos requeridos para un crecimiento sostenido requieren de una financiación que responda a las condiciones competitivas del sector económico analizado. La administración práctica y objetiva del riesgo combinando los componentes de valuación como costo de capital, desempeño financiero, tasa de crecimiento tienen un efecto positivo en la estructura de capital incrementando los márgenes operativos, los flujos de efectivo y los retornos sobre capital. Cuando una empresa genera el potencial para tomar decisiones más rentables en el largo plazo, debido a que explota su conocimiento sobre la exposición al riesgo, puede extender sus periodos de crecimiento y expansión al reducir el costo financiero, incrementando tasas de retención y tasas de crecimiento, lo cual permite obtener mayores retornos sobre capital, que a su vez puede convertirse en una ventaja competitiva. El modelo conceptual que se presenta, establece una relación de la tasa de crecimiento condicionada en el desempeño financiero con los retornos de capital ajustados por el riesgo, permitiendo ilustrar el riesgo financiero estratégico desde un contexto integrador e innovador de las teorías financieras.

## RESUMEN

*Hay que destacar que si bien el 2012 fue un año de recuperación para la industria turística en donde se revirtió la tendencia negativa que tuvo origen desde el año 2009, podemos afirmar que el 2013 fue un año de consolidación y crecimiento. Las cifras indican que la afluencia de turistas aumentó en 29% desde el 2009 al 2013, alcanzando 1.41 millones de visitantes. Por ello, el objetivo de la investigación fue identificar los factores de ventaja competitiva en Los Cabos, mediante trabajo de campo y documental. Esto permitirá generar recomendaciones para alcanzar un mejor desarrollo en el sector turístico.*

**PALABRAS CLAVE:** Turismo, Desarrollo Y Competitividad

## COMPETITIVE ASSESSMENT OF TOURIST DESTINATION IN LOS CABOS

### ABSTRACT

*Although 2012 was a year of recovery for the tourism industry where the negative trend that originated since 2009 was reversed, we can say that 2013 was a year of consolidation and growth. The figures indicate that the number of tourists increased by 29% from 2009 to 2013, reaching 1.41 million visitors. Therefore, the aim of the research was to identify factors of competitive advantage in Los Cabos, through fieldwork and documentary. This will generate recommendations for a better development in the tourism sector.*

**JEL:** O11, O14, O44, O50.

**KEYWORDS:** Tourism, Development and Competitive

## INTRODUCCIÓN

El turismo es una de las actividades que más ha crecido en el mundo. La Organización Mundial de Turismo (United Nations World Tourism Organization [UNWTO], 2008) reporta en 2007 que las llegadas de turistas en todo el mundo ascendieron a 903 millones, lo que representa un crecimiento interanual de 6.6%. Los ingresos por turismo internacional se elevaron a 856,000 millones de dólares (625,000 millones de euros) en 2007, que corresponde a un incremento en términos reales de 5.6% en relación con el año anterior. Para 2010 se prevé que las llegadas internacionales alcancen 1,000 millones y, para 2020, las llegadas de turistas internacionales superarían los 1,600 millones, de las cuales 1,200 millones serán arribos interregionales. En América se proyecta recibir 282 millones de visitantes, que representa un 18% del mercado mundial, con una tasa de crecimiento de 4% entre 1995 y 2020 (UNWTO, 2009a). internacional (crecimiento de 0%) o un ligero descenso de -1 a -2% durante el año. En lo que respecta a México, éste se encuentra en el décimo lugar como destino turístico y en 2009 ocupó el segundo lugar a nivel América Latina, siendo los destinos de sol y playa los más demandados. Es durante este año que México comienza a ver una ligera recuperación

de los efectos del AH1N1; las llegadas de turistas internacionales aumentaron 8% en el primer trimestre, aunque en el primer semestre de ese año el turismo decreció en México en un 20%, siendo uno de los países con las caídas más fuertes (UNWTO 2010a).

México se ha convertido en uno de los principales destinos turísticos del mundo, al ocupar la décima posición en arribos de turistas internacionales y el veintitrés en ingreso de divisas por este rubro (OMT, 2012). De acuerdo a INEGI (2011), el turismo aporta cerca del 9% al PIB y genera 7.5 millones de empleos. A pesar de lo anterior, existe poca bibliografía que analice la importancia del sector turístico sobre la economía Mexicana, y ninguna que haya contrastado si la política sectorial del turismo, consistente en la creación de Centros Turísticos Integralmente Planificados (CIP), ha tenido un impacto en el crecimiento económico de largo plazo en México.

En Baja California Sur (BCS), el turismo ha sido desde hace más de cinco décadas motor de la actividad económica en el estado. A nivel nacional, BCS se ubica en la posición 19 en número de visitantes (Sistema de Información e Inteligencia de Mercados Turísticos [SIIMT], 2012). En 2010 el sector terciario contribuyó con el 77% al PIB estatal (53.09 MDP). En cuanto al empleo, el turismo aporta 9% de los empleos directos y 2% de los indirectos (Instituto Nacional de Estadística, Geografía e Informática [INEGI], 2012). Para el periodo 2003-2010, el sector terciario participó, en promedio, con el 78% al PIB estatal con alrededor de 36 MDP y un crecimiento interanual aproximado de 4%. En el año 2011, Los Cabos recibió 1 millón 237 mil 283 visitantes; cuya distribución proporcional es 73% extranjeros y 27% turistas nacionales.

En el periodo poscrisis, entre el año 2007 y el año 2011, Los Cabos muestra tasa de crecimiento media anual negativa de 0.1%; lo cual puede ser indicador de que este destino se está recuperando de los efectos que dejó la crisis financiera. Los vuelos operados en el año 2009 en el Aeropuerto Internacional de San José del Cabo fueron 13 mil 894; con un total de arribos registrados que ascienden a 2 millones 655 mil 686 pasajeros (31% arribos nacionales y 69% arribos internacionales). En cuanto al turismo que arriba vía marítima, en el mismo año se tuvieron 288 arribos de cruceros, que transportaban 665 mil 477 pasajeros. En cuanto a infraestructura turística, hasta el año 2009 (GBCS, 2009), el CIP Los Cabos contaba con 115 hoteles; 14 mil 16 habitaciones y 406 espacios acuáticos en marinas. Lo anterior, manifiesta la existencia de ciertos factores que todos en su conjunto condicionan a que el destino de Los Cabos tenga ventaja competitiva y que lo hagan una zona turística con cierto liderazgo. Por ello, el objetivo de este artículo es identificar los factores de ventaja competitiva en Los Cabos, mediante trabajo de campo y documental. Esto permitirá generar recomendaciones para alcanzar un mejor desarrollo en el sector turístico y aprovechar las oportunidades.

## REVISIÓN DE LITERATURA

De acuerdo a Porter (2008) en relación a los determinantes de la ventaja nacional y competitiva, la naturaleza de la competencia y las fuentes de una ventaja competitiva son diferentes entre industrias y segmentos de industrias, existen cuatro (4) atributos de una nación que moldean el entorno en el cual las firmas participan y compiten y estos son conocidos como los determinantes de la ventaja nacional y son: Condiciones de los Factores.- Es la Posición de una nación en los factores de producción, tales como mano de obra calificada o infraestructura necesaria para competir en una industria dada. Condiciones de la Demanda.-La naturaleza de la demanda local para los productos y Servicios. Industrias Relacionadas y de Soporte.-La presencia o ausencia de industrias proveedoras en la naciones es decir industrias relacionadas que son internacionalmente competitivas. Estrategia de las Firmas, Estructura y Rivalidad.-Las condiciones en la nación de gobernabilidad y como las compañías son creadas, organizadas y administradas y la naturaleza de la rivalidad domestica. Estos determinantes de la ventaja nacional forman lo que se conoce como el diamante de Porter (2008)

## METODOLOGIA

Para proceder e identificar los factores de ventaja competitiva en Los Cabos, el estudio se basa en la metodología de Michael Porter (2008) en la cual mediante un ejercicio de trabajo documental y de campo, se procede a llenar los apartados del diamante y fuerzas competitivas. Esto permite ir adecuando la información a la realidad en el destino turístico de Los Cabos.

## RESULTADOS

### A) Condición de los Factores

Los Cabos, es uno de los municipios de B.C.S., este, se ubica al sur en el sur de dicha entidad, limita al norte con el municipio de La Paz; al sur y al este con el golfo de California y al oeste con el océano Pacífico. La localización de Los Cabos, resulta estratégica ya que al contar con una gran extensión de costas y diversidad marina, se favorece el desarrollo del turismo principalmente de sol y playa, así como la pesca deportiva y el ecoturismo. El crecimiento de la oferta turística en los Cabos se percibe desde las unidades de alojamiento que son representativas por el nivel operatividad según datos de la SECTUR Estatal (2014). Al 2010 se tenían registrados 115 establecimientos, y en el 2011 y 2012, se mantiene en 117 y en el 2013 registra 118. Los últimos registros oficiales de INEGI, en el 2013, donde se puede apreciar la distribución por categoría de hotel, podemos identificar que en Los Cabos la mayor parte de los establecimientos de hospedaje son de cinco estrellas, registrando 48 unidades. De cuatro estrellas 15, tres estrellas 13, 9 de dos estrellas y 25 sin una clasificación específica (Tabla 1).

Tabla 1: Establecimientos de Hospedaje Según Categoría en los Cabos, 1999 – 2012

Tipo de Hotel	1999	2012
Cinco estrellas	26	48
Cuatro estrellas	12	15
Tres estrellas	8	13
Dos estrellas	6	9
Una estrella	2	11
Sin categoria	23	25

La Tabla indica la mayor proporción de hoteles de cinco estrellas en Los Cabos, así como de cuatro estrellas, que infieren la existencia de un destino Premium, donde los servicios son muy buenos y el precio alto. Fuente: Elaboración basado en Anuario estadístico INEGI, 2013.

Como podemos apreciar en la Tabla 2, la mayor parte de los cuartos en Los Cabos están clasificados en 5 estrellas, un poco más del 79%. Un 10% de cuatro estrellas y un 4% establecimientos de tres estrellas, entre los más representativos. Cabe mencionar que más de 11 mil cuartos se tenían registrados en hoteles de cinco estrellas en Los Cabos, 1,489 cuartos de cuatro estrellas y 601 cuartos de tres estrellas. (INEGI, 2013).

Tabla 2: Cuartos de Hospedaje en Establecimientos Según Categoría En los cabos, 1999 – 2012

Tipo de Hotel	1999	2012
Cinco estrellas	26	48
Cuatro estrellas	12	15
Tres estrellas	8	13
Dos estrellas	6	9
Una estrella	2	11
Sin categoria	23	25

La Tabla muestra la cantidad de habitaciones de acuerdo a la clasificación de estrellas, donde la mayoría de los cuartos son clasificados en cinco y cuatro estrellas, lo cual lo hace atractivo para los turistas sobre todo extranjeros. FUENTE: Elaboración basado en Anuario estadístico INEGI, 2013

Además, cuenta con el 30% de los es establecimientos de preparación y servicio de alimentos y de bebidas con categoría turística del estado, entre los cuales se encuentran restaurantes, cafeterías, discotecas, centros

nocturnos y bares. Según INEGI (2013) se encontraban registrados 116 establecimientos de alimentación y hospedaje, 92 de los cuales eran restaurantes, 9 discotecas y centros nocturnos, 11 bares y 4 cafeterías (Tabla 3).

Tabla 3: Establecimientos de Preparación y Servicio de Alimentos y de Bebidas Con Categoría Turística En los Cabos, 2012

Municipio	Total	Restaurantes	Cafeterías	Discotecas Centros nocturnos	y Bares
Estado	388	314	20	25	29
Los Cabos	116	92	4	9	11

La Tabla representa la cantidad de establecimientos que ofertan alimentos y bebidas en el Estado y Los Cabos, y donde gran parte de estos los abarca Los Cabos. Fuente: INEGI, 2013.

Carreteras La red carretera de Los Cabos, consta de 589 kilómetros; de la cual, 20 corresponden a red federal de cuota. Tradicionalmente el tramo más transitado por los turistas es la carretera tras peninsular, en la zona que conecta el corredor turístico y las zona hotelera. Aeropuertos internacionales Los Cabos, cuentan con un aeropuerto que nacional y otro internacional, se ubican en el km 42 de la Carretera Transpeninsular, a 10 minutos de San José del Cabo, y operan vuelos nacionales y hacia diferentes ciudades de los Estados Unidos y Canadá a través, de las líneas como Aeroméxico, American Airlines, Volaris, Vivabus, Interjet y Alaska Airlines, por mencionar algunas, ya que al 2013 existían 21 grupos de aerolíneas. Así también, el municipio cuenta con cinco aeródromos y tres helipuertos (SPyDE, 2012).

## B) Condición de la Demanda

Así mismo, podemos identificar en la Tabla 4, el número de turistas registrados en los últimos años que llegan a establecimientos de alojamiento temporal en Los Cabos. Datos de la SECTUR Estatal de BCS, indican que en el 2010 eran 1,081,743 llegadas de turistas a Los Cabos, y éste tuvo un aumento a 1,400,820 en el 2013. De los cuales la mayoría eran extranjeros tan solo en el 2010 se registraban 766,794 turistas y en el 2013 aumentó a 1,059,558 turistas. Lo cual hace reflejar la importancia del destino Los Cabos, como primer destino del Pacífico Mexicano. Estas cifras nos muestran que el municipio de Los Cabos es el principal receptor de visitantes con una alta concentración de visitantes extranjeros lo que seguramente explica porque podemos encontrar en el municipio hoteles de lujo y gran turismo donde los visitantes pueden disfrutar del confort.

Tabla 4: Llegada de Turistas a Establecimientos de Hospedaje En los Cabos, 2010-2014

Turista / Año	2010	2011	2012	2013
Total	1,081,743	1,203,309	1,247,808	1,400,820
Extranjero	766,794	867,289	896,642	1,059,558
Nacional	314,949	336,020	351,166	341,262

La Tabla muestra la importancia del turista extranjero desde el 2010 al 2013, pues abarca más del 75% de afluencia internacional y 25% nacional. Fuente: Elaboración basada en datos de SECTUR Estatal de BCS, 2014.

Cabe mencionar que en los centros turísticos del municipio de Los Cabos, Cabo San Lucas se presenta la mayor ocupación hotelera en el 2012, con 63.6 % y una estadía promedio de 4.9 noches. Le sigue en consecuencia San José del Cabo con una ocupación hotelera de 54.5 % y una estadía promedio 4.7 noches. Y por último la zona del corredor Los Cabos registraba una ocupación hotelera de 51.8 % con una estadía promedio de 3.3 noches (INEGI, 2013).

### C) Industrias Relacionadas y Se Soporte

Sumado a lo anterior, Los Cabos cuenta con el 52% de las agencias de viajes del total Estatal, que representan a 27 unidades en Los Cabos, el 49% de las arrendadoras de autos (21 unidades), el 73% de los campos de golf (11 campos) y hasta el 2013, un centro de convenciones (Tabla 5). El golf, representa un atractivo adicional para el turista ya que, Los Cabos es considerado como uno de los 15 mejores destinos de Golf en el mundo y cuenta con campos de golf, Diamante y Cabo del Sol, posicionados dentro del TOP 100 mundial. Para finales de 2012 se registraron 11 campos de golf, en su mayoría fueron diseñados por especialistas reconocidos. Cuenta con un nuevo centro de convenciones, recientemente construido y utilizado para la reunión del G20, y que tiene una capacidad de albergar eventos de hasta 6 mil 400 personas en 3 salas de exposiciones y 7 salas de convenciones, lo que abre una ventana de oportunidad al turismo de grupos y convenciones.

Tabla 5: Establecimientos Que Prestan Servicios Relacionados En los Cabos, 2012

Municipio	Agencias de viajes	Empresas Arrendadoras de automóviles	Campos de golf	Centros de convenciones
Estado	52	43	15	1
Los Cabos	27	21	11	1

La Tabla indica la importancia de los servicios complementarios turísticos, tanto de las agencias de viajes, arrendadoras y los campos de golf, que son atributos importantes para los turistas. Fuente: INEGI, 2013.

Asimismo, Los Cabos cuenta con el 27% de las marinas turísticas vigentes en el Estado (que corresponden a 4 unidades), tiene el 52% de los muelles de atraque en el Estado (que corresponden a 860 unidades) y 28% de las transportadoras turísticas especializadas, en relación al total de unidades en el Estado (25 unidades). Este tipo de infraestructura es básica para este destino, puesto que los visitantes suelen recurrir mucho a los servicios marítimos para visitar las áreas naturales (Tabla 6).

Tabla 6: Marinas, Muelles y Transportadoras En los Cabos, 2012

Municipio	Marinas turísticas	Muelles de atraque	Transportadoras turísticas especializadas
Estado	15	1663	88
Los Cabos	4	860	25

Parte importante de Los Cabos son el acceso a los muelles y las transportadoras turísticas, que son las que abastecen de los servicios a los visitantes. Fuente: INEGI, 2013.

### D) Estrategias de las Firmas, Estructura y Rivalidad

En la Tabla 7 podemos observar el arribo de visitantes internacionales por vía aérea que tienen los principales destinos turísticos del Pacífico, entre ellos Los Cabos. De los cuales se puede observar que el arribo de los pasajeros internacionales en Los Cabos aumento un 16.10% del año 2012 al 2013. Y que fue el destino turístico con un mayor incremento de pasajeros internacionales del Grupo Aeroportuario del Pacífico (GAP). Tan solo de pasajeros internacionales al 2013 se registraron 2,475,500, y un año atrás registraba 2,132,900 turistas extranjeros (Tabla 7). Así mismo identificamos que considerando los totales de arribos de turistas vía aérea en Los Cabos, también aumentaron del 2010 al 2013. En el 2010, el total de pasajeros a Los Cabos fue de 2,745,500 que aumentó al 2011 en 2,807,000, ello representa una variación positiva de 2.20%. Sin embargo, la mayor variación positiva fue del 2012 al 2013 del 12.20%, que representa un aumento de más de 368,00 mil pasajeros a Los Cabos. Alcanzando este destino un total de 3,387,400 turistas en el 2013 vía aérea.

Tabla 7: Afluencia de Pasajeros Internacionales Vía Aérea en Principales Destinos del Grupo Aeroportuario del Pacífico, 2012-2013

Destino	Dic-12	Dic-13	% Variación	Ene-Dic 2012	Ene-Dic 2013	% Variación
Guadalajara	230.6	273.9	18.80%	2,446.00	2,605.90	6.50%
Tijuana	1.7	2.1	21.20%	21.7	23.3	7.70%
Los Cabos	203.5	221.3	8.80%	2,132.90	2,475.50	16.10%
Puerto Vallarta	203.4	205.3	0.90%	1,798.20	1,810.60	0.70%
Hermosillo	6.8	8.1	18.80%	77.2	80.1	3.70%
La Paz	2.1	1.7	-18.00%	26.9	16	-40.70%
Mochis	0.4	0.5	11.30%	4.4	5	13.00%
Manzanillo	9.7	9.8	1.10%	79.5	75.9	-4.60%

La Tabla muestra, la importancia del destino Los Cabos, comprado con otros destinos del Pacífico. Y donde nos percatamos que desde años atrás la afluencia de visitantes a este destino se incrementa, y se considera preferencia comparado con el resto. Fuente: Elaboración basado en GAP, 2014.

### E) Gobierno-Estructura Organizacional del Ayuntamiento

En la estructura de los municipios mexicanos el Ayuntamiento, de elección popular directa, se erige como el órgano principal de gobierno. Así, el Ayuntamiento es un órgano colegiado de pleno carácter democrático, ya que todos y cada uno de sus miembros son electos por el pueblo para ejercer las funciones inherentes al gobierno municipal (INAFED, 2004b: 4). El Ayuntamiento de Los Cabos se encuentra integrado conforme al artículo 135 de la Constitución Política del Estado de la siguiente forma: “un Presidente, un Síndico y siete Regidores electos por sufragio universal, directo, libre y secreto, mediante el sistema de Mayoría Relativa y con cuatro Regidores por el principio de Representación Proporcional” (CPEBCS, 32). De acuerdo al Plan Municipal de Desarrollo 2005-2008 para el IX Ayuntamiento de Los Cabos, y siendo el objetivo de la Dirección General Municipal de Servicios Públicos, brindar servicios eficientes con calidad, para elevar el nivel de vida de la población en crecimiento, se presentan las siguientes estrategias en el sector de servicios y obras públicas: a) Aplicación del Reglamento de Aseo y Limpieza; b) Recolección y disposición final de basura; c) Barrido mecánico y manual; d) Educación ambiental; e) Alumbrado público; f) Áreas verdes; g) Eventos especiales, rastros municipales y panteones; h) Taller mecánico; i) Mejorar la Administración; j) Elevar la eficiencia de servicios de agua potable, alcantarillado y saneamiento; k) Agua potable, alcantarillado y saneamiento; l) Planta desalinizadora; m) Asuntos jurídicos; n) Cultura del agua; ñ) Comunicación social; o) Sistemas; p) Comercialización; q) Obra pública; r) Infraestructura deportiva; s) Infraestructura cultura; t) Asentamientos humanos; u) Modernización administrativa; v) Eficiencia en trámites y servicios; (PMD, 2005-2008: 47-60).

## CONCLUSIONES

La revisión documental y de campo mostró evidencias de elementos de ventaja competitiva en el destino de Los Cabos, tanto en infraestructura hotelera, establecimientos de alimentos, vías de comunicación, atractivos naturales, servicios complementarios y una competencia clara y diferenciada con otros destinos del Pacífico Mexicano. Lo cual representa para Los Cabos una ventaja competitiva con el resto de los destinos turísticos en México. Ello se ve reflejado en el incremento constante de afluencia de turistas desde el año 2009 al 2013.

## ABSTRACT

*Este estudio aborda el tema de conocer la relación entre productividad y capacitación del recurso humano y de la calidad como el factor que incrementa la competitividad de una empresa ensambladora de televisores LCD-LED de alta definición y 3D. Se concluye en lo teórico que la tarea sustantiva del área relativa a la asesoría para el alto desempeño es apoyar a los responsables de cada área para: sistematizar, clasificar y dar forma explícita a sus expectativas en cuanto al alto desempeño; procesar la información relativa al factor humano y su desempeño; establecer programas de acción conforme a las necesidades; facilitar el cambio en los comportamientos; evaluar los resultados, incluyendo el análisis del costo-beneficio. Se utilizó el método cuantitativo, no-experimental, transeccional. Se obtuvieron datos históricos directos de las variables defectos, productividad y horas de capacitación. Para el análisis de datos se utilizaron las pruebas no paramétricas de Mann-Witney-Wilcoxon y de Correlación de Spearman. Se probó a un  $\alpha = 0.05$  que la productividad fue significativamente mayor cuando se capacitó estratégicamente al personal con una  $p < 0.05$ . Sin embargo, la correlación entre la variable defectos y productividad mostro una correlación muy baja con un  $\alpha = 0.05$  una  $r = -0.170$  y  $p = 0.42$ .*

**PALABRAS CLAVE:** Competitividad, Capacitación, Productividad

# SPECIALIZED TRAINING AS A COMPETITIVE STRATEGY IN A MAQUILA ORGANIZATION OF THE ELECTRONIC SECTOR

## ABSTRACT

*This study is about the relationship that exists between productivity and the training of the human resources/quality defects as an important factor that increases the competitiveness in a maquiladora industry of LCD-LED-3D televisions. Theoretically speaking, it was concluded that the most important task to develop high human performance is to support the responsible people in each area to: classify, systematize and give explicit form of what is expected in regards to achieve high performance; process the information related to the human factor and its performance; establish programs of action according to the needs; facilitate change in behavior; and evaluate results including its cost benefit analysis. The method used was the quantitative, non-experimental and transeccional. The data was gathered from historical information provided directly from the organization. The non parametric test of Mann-Witney-Wilcoxon and the Spearman Correlation Coefficient were used to analyze the data. Productivity was probed to be better when people were strategically trained at an  $\alpha = 0.05$  with a  $p < 0.05$ . However, the correlation between quality defects and productivity showed a very low correlation with an  $\alpha = 0.05$  an  $r = -0.17$  and a  $p = 0.42$ .*

**KEYWORDS:** Competitivity, training, productivity

## INTRODUCCION

Este estudio aborda el tema de conocer la relación entre productividad y capacitación del recurso humano y de la calidad como el factor que incrementa la competitividad de una empresa ensambladora de televisores LCD-LED de alta definición y 3D. La pregunta de investigación con la que se partió fue: ¿Qué relación existe entre productividad y la capacitación en el recurso humano y en la calidad para el aumento de la competitividad en la empresa Tatung México? La hipótesis de investigación que probamos fue que el desarrollo de la capacitación en el recurso humano incrementa la competitividad de la empresa.

### Marco Teórico

El incremento de la competitividad, el aumento de la productividad y el desarrollo de los recursos humanos se plantean como objetivos inseparables de las empresas para enfrentar las tendencias de cambio de la economía internacional (Prokopenko, 1988). La estrategia de las empresas transnacionales de crear nuevos centros de producción a nivel global para enfrentar la competencia internacional ha pasado por varias etapas a partir de la década de 1960s. En el caso de la economía mexicana, las empresas transnacionales instalaron nuevos centros de producción de la industria manufacturera a través de la creación de Industria Maquiladora de Exportación (IME). La Industria Maquiladora de Exportación inició en México tratando de aprovechar las ventajas comparativas de la economía derivadas de la dotación abundante de mano de obra barata y poco calificada. Sin embargo, la carrera competitiva de la economía global demandaba que las empresas fueran más flexibles en sus operaciones, que utilizaran tecnología avanzada para producir con alta calidad productos de precio razonable, que se apoyaran en métodos de operación 'speed to market', que adoptaran la producción y distribución 'just in time', etc.

(Prokopenko, 1988, p.53). Las empresas pertenecientes a la IME, respondieron a las exigencias competitivas globales a través de la incorporación de innovaciones tecnológicas y de métodos de organización del trabajo que requerían trabajadores calificados. Así se fue creando una industria heterogénea en la que subsisten empresas tradicionales de ensamble, al lado de empresas con tecnología de punta. Las fases por las que ha pasado la expansión de la industria maquiladora en México, es sintetizada de la siguiente manera por Ludlow y De la Rosa (2009):

*Desde su nacimiento en 1965 [la industria maquiladora de exportación] ha pasado por varias etapas, hasta llegar a la fase más reciente de escalamiento industrial (industrial upgrading), donde se reconoce el empeño tecnológico de las ramas modernas, tales como cómputo, autopartes y electrónicos, que conviven junto a ramas tradicionales como textil, vestido y alimentos. Esto le ha dado al sector maquilador un carácter bastante heterogéneo, que intenta avanzar del simple ensamble, ocupando mano de obra no calificada y de salarios bajos, hacia sectores propiamente de manufactura, utilizando mano de obra calificada con mejores salarios (p.156).*

Para entender las necesidades de capacitación que requiere la entrada de la industria maquiladora en esta nueva fase de innovación tecnológica, es importante explicar en qué consiste el concepto de escalamiento industrial, el cual está:

*[...] asociado con el incremento de valor a través de los procesos de innovación a partir de entradas en nichos de productos con mayor valor agregado (por ejemplo de TV con cinescopio a TV digital), entrada en nuevos sectores (de un producto como TV a múltiples productos como monitores, antenas parabólicas,*

*receptores de señales satelitales, etcétera), o tomando nuevas funciones productivas o de servicio (del ensamble al paquete completo de la industria de la ropa; o del ensamble al diseño y manufactura en la industria de las autopartes, por ejemplo). Adicionalmente, el escalamiento no es solamente crear un nuevo producto (como el caso del flat panel display) sino implica también la trayectoria evolutiva de mejoramientos de productos y procesos que son nuevos para la firma, lo cual les permite continuar siendo competitivos en el mercado internacional (Carrillo y Gomis, 2007, p.25 citado por Ludlow y De la Rosa 2009).*

Las presiones competitivas de las empresas para sobrevivir en el entorno global y la adaptación a nuevos sistemas tecnológicos e informativos, en especial a los sistemas de producción flexible, crearon la necesidad de capacitar permanentemente al personal y de crear un clima favorable para el aprendizaje acelerado. Así, filosofías de gestión de recursos humanos tuvieron que adaptarse a esos cambios y fueron evolucionando de la gestión por objetivos y gestión del cambio en la década de los 80s, a la gestión por competencias en los 90s hasta llegar a la gestión del conocimiento en 00s.

## METODOLOGÍA

El método que se utilizó fue el cuantitativo, no experimental, longitudinal. Es decir, se utilizó una técnica estadística para probar las hipótesis, no se manipularon ninguna de las variables, y se observó y midió el objeto de estudio en dos años consecutivos. La población se definió como la producción de televisores manufacturados en una empresa con una productividad, un número de defectos de calidad y un número de horas de capacitación. La muestra fue determinada como la productividad de televisores, el número de defectos de calidad y las horas de capacitación registrados en la empresa maquiladora Tatung de México durante los años 2011 (Enero-Diciembre) y 2012 (Enero-Septiembre).

Los datos se obtuvieron de una fuente primaria, ya que los datos de las tres variables fueron tomados directamente del proceso productivo. Esta forma de obtener los datos tiene la gran ventaja de que se eliminó el instrumento de recolección de datos que normalmente implica una percepción tanto del que diseña las preguntas como del que las contesta. Para el análisis de los datos se aplicó la prueba no paramétrica de Mann-Whitney-Wilcoxon (MWW) para valores menores de 10 con el objetivo de determinar si las dos poblaciones son idénticas y con ello probar si con el incremento en las horas de capacitación se demostraba un incremento en la productividad. (Anderson et.al, 2001) La fórmula para la prueba fue la ecuación número 1 que se muestra enseguida:

$$T_U = n_1 (n_1 + n_2 + 1) - T_L \dots \dots \dots (1) \quad \text{Rechazar } H_0 \text{ Si } T < T_L \text{ ó si } T > T_U$$

También se utilizó la Prueba no Paramétrica de Rangos de Spearman para demostrar el grado de relación que pudiera haber entre la variable “Productividad” y la variable “Defectos de Calidad”, así como la “Productividad” y la variable “Horas de Capacitación”. Es importante señalar que se tomaron los 21 datos que comprendieron los meses de Enero del 2011 a Septiembre del 2012 para cada juego de variables. La fórmula de Rangos de Spearman utilizada fue la ecuación 2 mostrada enseguida:

$$r_s = 1 - \frac{6 \sum d_i^2}{n(n^2 - 1)} \dots \dots \dots (2)$$

La prueba de Rangos de Spearman utiliza la distribución Normal Z como se muestra en la siguiente ecuación 3:

$$Z = (r_s - \mu_{rs}) / \sigma_{rs} \dots \dots \dots (3) \quad \text{Donde } \mu_{rs} = 0 \quad \text{y} \quad \sigma_{rs} = \sqrt{1/n-1}$$

## ANÁLISIS DE RESULTADOS

Para la prueba de MWW se obtuvo una  $T_L = 63$  con  $n_1 = 9$  y  $n_2 = 9$  y un  $\alpha = 0.05$  de la Tabla MWW para valores de  $n$  menores de 10. Y sustituyendo en la ecuación 1 tenemos:  $T_U = 9(9+9+1)-63 = 108$  Como se muestra en la Tabla 3 del Anexo de Datos la suma de rangos fue de  $T = 111$  para 2012 y  $T = 60$  para 2011 y de acuerdo a la regla de rechazar  $H_0$  si  $T < T_L$  y  $T > T_U$  y concluimos que se rechaza  $H_0$  lo que indica que los valores de productividad de 2011 son realmente diferentes de los valores del 2012 a un  $\alpha=0.05$ . Esto prueba que hubo mejor productividad en el 2012 que en el 2011. En cuanto al análisis de Correlación de Spearman se probaron dos hipótesis para verificar si había correlación entre Productividad y Defectos de Calidad así como entre Productividad y Horas de Capacitación obteniéndose los datos que se muestran en la Tabla 1.

Tabla 1: Correlaciones de Rango de Spearman y Prueba de Z

Par de Variables	rS	Z	Valor p	Rechazar/No Rechazar
Productividad/Defectos de Calidad	-0.1769	-0.7911	0.22	No rechazar $H_0$
Productividad/Horas de Capacitación	-0.273	-1.2209	0.12	No rechazar $H_0$

Como podemos observar en la Tabla 1 no se rechazaron ninguna de las dos hipótesis planteadas a un  $\alpha=0.05$  porque obtuvimos valores  $p$  de 0.22 y 0.12 que son mayores que 0.05. Esto significa que con los datos obtenidos no encontramos relación entre la variable Productividad y las Horas de capacitación ni entre la Productividad y los Defectos de Calidad.

## CONCLUSIONES Y RECOMENDACIONES

Al principio lo que queríamos probar era que a mayor capacitación estratégica en 2011 esperábamos tener una mejor productividad en el 2011 que en el 2012. Sin embargo, la productividad fue mejor durante el 2012 que durante el 2011. Aquí hay dos factores importantísimos que hicieron posible este incremento en la productividad a pesar de que la producción cayera dramáticamente como se puede observar en la Tabla 2 en el Anexo de Datos.

El primer factor que contribuyó a este fenómeno es que vimos que los efectos de la capacitación no se muestran inmediatamente sino hasta que se les da la oportunidad a los empleados de aplicar lo que aprendieron en el entrenamiento especialmente en un caso extremo o de alta presión. Y en este caso ese hecho sucedió durante 2012. El segundo factor se dio en abril del 2012 cuando la mano de obra se redujo a 500 empleados mientras que en abril del 2011 era de 1264 como se ve en la misma Tabla 2. La producción también cayó de 265,577 a 95,626 mientras que la productividad subió ligeramente de 178.65 a 180.19 también mostrado en la Tabla 2. La explicación de este fenómeno es precisamente el efecto que tuvo la capacitación estratégica en la productividad debida a la mano de obra.

La conclusión a la que llegamos a este respecto es que en cualquier circunstancia en la que se encuentre Tatung o cualquier otra empresa es de vital importancia la capacitación como estrategia de competitividad ya que les permite a las organizaciones tener una mano de obra flexible para enfrentar exitosamente cualquier situación de mercado en la que se encuentren. (Prokopenko, 1988) Nuestra sugerencia a Tatung y a cualquier otra empresa es que incrementen el presupuesto para capacitación en lo más que se pueda porque el resultado se va a ver reflejado directamente en la productividad. Finalmente, el hecho de que la correlación entre la productividad y las horas de capacitación no haya sido significativa se debe precisamente a que todavía la cantidad de horas de capacitación no son ni siquiera las mínimas para que la capacitación tenga un impacto en la competitividad de alto desempeño. Además los datos que se tomaron en cuenta fueron muy pocos, creo que si se consideraran mas años tendríamos una mejor forma de concluir a este respecto. La situación que se vivió en Tatung fue gracias principalmente al esfuerzo tan grande que

llevo a cabo la mano de obra para que cuando menos en abril del 2012, 500 trabajadores mejoraran la productividad que no lograron 1264 en el mismo abril del 2011.

# FUTUROS PROMOTORES TURÍSTICOS: ANÁLISIS DE LA APRECIACIÓN Y CONOCIMIENTO DEL PATRIMONIO CULTURAL POR ESTUDIANTES DE LICENCIADOS EN ADMINISTRACIÓN DE EMPRESAS TURÍSTICAS

José Alonso Acosta Contreras, Universidad Estatal de Sonora  
Blanca Reyna Olguín Negrete, Universidad Estatal de Sonora  
Elsa Isabel Montaña Martínez, Universidad Estatal de Sonora

## RESUMEN

*La labor educativa de la carrera de Licenciado en Administración de Empresas Turísticas de la Universidad Estatal de Sonora, formadora de profesionales en el renglón turístico, debe implementar a través de diferentes materias del su plan de estudios, el reconocimiento de los valores del patrimonio natural y del cultural tangible e intangible; y para conocer la apreciación y conocimiento que tienen los estudiantes del último semestre de la citada carrera, con respecto al patrimonio cultural y natural de la ciudad de Hermosillo, Sonora, específicamente; se llevó a cabo una investigación para analizar el nivel de conocimiento y con ello proponer un programa de formación académica en apoyo a los futuros promotores turísticos que permita la concientización y comprensión del significado y valores del patrimonio cultural y natural que identifica y diferencia de un país a otro. Para llevar a cabo la investigación se utilizó como instrumento la elaboración de un cuestionario de diecinueve preguntas, doce de elección múltiple y siete abiertas, escogiéndose intencionalmente algunas categorías consideradas representativas del fenómeno a estudiar. Éste se aplicó a 98 alumnos de un universo de 118, de los cuales 81 fueron mujeres y 17 hombres. Con la información recopilada, permitió identificar en el estudiante los conocimientos básicos sobre los conceptos de historia, patrimonio cultural, monumento histórico, patrimonio cultural intangible, así como los orígenes e historias de edificios, costumbres, tradiciones, mitos y leyendas que forman parte del atractivo de la ciudad de Hermosillo.*

*Entre los resultados obtenidos, se pudo apreciar que más del 90% tienen muy claro el concepto de lo que es historia, patrimonio cultural y patrimonio cultural intangible, mientras que en lo correspondiente a lo que es monumento histórico sólo el 79% acertaron; y donde revelaron desconocimiento y confusión fue ante el cuestionamiento del conocimiento y apreciación del patrimonio cultural intangible y sobre el patrimonio natural de la ciudad, respondiendo en la primera, que son los atractivos de la ciudad y en la segunda señalaron la playa, el pinacate por mencionar algunos, pero éstos se localizan fuera del destino y en otros municipios del estado. En cuanto al conocimiento de edificios históricos, la mayoría identificó dos o tres, pero de éstos el 64% señaló no conocer su historia.*

**PALABRAS CLAVES:** Patrimonio Cultura, Patrimonio Natural, Cultura, Monumentos Históricos, Patrimonio Tangible E Intangible

## ABSTRACT

*The educational work of the race 's degree in Tourism Business Administration from the State University of Sonora, forming professionals in the tourist line, you must deploy across different subjects of the curriculum , recognition of the values of natural heritage and of tangible and intangible cultural , and appreciation for , and knowledge among students in the last semester of that race, with respect to the*

*cultural and natural heritage of the city of Hermosillo, Sonora, Mexico, specifically, was carried out an investigation to analyze the level of knowledge and thereby propose a formal training program to support future tourism promoters to enable awareness and understanding of the meaning and values of cultural and natural heritage that identifies and differs from country to country. To carry out the research instrument was used as the development of a questionnaire questions nineteen twelve multiple choice open seven intentionally some categories being chosen to be representative of the phenomenon under study. This was applied to 98 students from a universe of 118, of whom 81 were women and 17 men. With the information collected, allowed to identify the student with basic knowledge of the concepts of history, cultural heritage, historical monuments, intangible cultural heritage, as well as the origins and histories of buildings, customs, traditions, myths and legends that form part of the appeal city of Hermosillo. Among the results, it was observed that more than 90% have very clear concept of what is history, cultural heritage and intangible cultural heritage, while in the corresponding historical monument which is only 79% matched, and where revealed ignorance and confusion was before the questioning of knowledge and appreciation of the intangible cultural heritage and the natural heritage of the city, responding to the first, which are the attractions of the city and the second pointed to the beach, pinacate mention some but these are located outside the destination and other municipalities in the state. On knowledge of historic buildings, most identified two or three, but 64% said they do not know their history.*

## INTRODUCCIÓN

El tema de patrimonio cultural se aborda desde los aspectos intangibles como son las leyendas, mitos, lenguaje, religión, música, costumbres y tradiciones; y el tangible que abarca los muebles e inmuebles. En el caso de la ciudad de Hermosillo, Sonora, México, cuenta con 545 inmuebles considerados como monumentos históricos según el Instituto Nacional de Antropología e Historia (INAH) y la zona centro se ubica como la más rica en este tipo de obras. Señala como monumentos históricos aquellos muebles o inmuebles posteriores a la consumación de la conquista y que su conservación sea de interés público, ya sea por estar vinculados a nuestra historia política y social o porque su excepcional valor artístico o arquitectónico los haga exponentes de la historia de la cultura. Además, la protección, conservación, restauración y recuperación de los monumentos arqueológicos, artísticos e históricos es de utilidad pública, así lo marca la Ley Federal sobre Monumentos y Zonas Arqueológicas, Artísticas e Históricas (INAH 2014). La mayoría de las obras arquitectónicas valiosas son privadas y únicamente el INAH solo puede asesorar en su conservación, sin embargo, si el inversionista privado lo desea puede demolerlo y darle el uso meramente comercial y utilizarlo como un estacionamiento.

Para poder ser protegidos y valorados por la población de la ciudad, un primer paso, es el conocimiento que tengan del patrimonio cultural para tomar conciencia de su importancia, por lo tanto, la educación no solo permite acumular cimientos sino comprender el significado del patrimonio cultural como una herencia que nos identifica y diferencia entre otros pueblos. Según Tello (2000), con el desarrollo en las sociedades capitalistas en lo referente al consumo de más tiempo, espacio y dinero a actividades de turismo, el patrimonio cultural ha adquirido otra dimensión, si bien es cierto que ha entrado abiertamente en el mercado como un producto para el desarrollo de una comunidad, es preciso que la preservación y su adecuada utilización deba formar parte de los planes de desarrollo y enfatizar el papel que tiene la sociedad, con relación a los monumentos históricos para el disfrute del turismo, como es el caso de este análisis que se enfoca a los estudiantes universitarios de la Licenciatura en Administración de Empresas Turísticas de la Universidad Estatal de Sonora.

Por consiguiente, la labor educativa en las instituciones de educación superior, formadoras de profesionales en el renglón turístico, deben implementar el reconocimiento de los valores patrimoniales culturales tangibles e intangibles y natural. Así como colaborar en la orientación de evidencias de aquellas características y cualidades exclusivas que le otorgan representatividad, reconocimiento, toma de conciencia y sensibilización sobre el valor del mismo. Aunado a la tarea de la Comisión de Fomento al Turismo y el Instituto Municipal de Cultura, Arte y Turismo, será resaltar la importancia del turismo como actividad generadora de alternativas de desarrollo socioeconómico y la conservación de la diversidad cultural y ambiental, con enfoque de identidad e involucrar a los estudiantes universitarios en actividades y campañas de promoción, para formarlos como futuros promotores turísticos.

Por lo tanto, ¿Cuál es el conocimiento y apreciación que tienen los estudiantes del último semestre de la carrera de Licenciado en Administración de Empresas Turísticas, con respecto al patrimonio cultural tangible, como los inmuebles para apoyar en la formación de futuros promotores turísticos? ¿Cuál es el conocimiento y apreciación que tienen los estudiantes del último semestre de la carrera de Licenciado en Administración de Empresas Turísticas, con respecto al patrimonio cultural intangible, manifestado en leyendas, mitos, lenguaje, religión, música, costumbres y tradiciones, para apoyar en la formación de futuros promotores turísticos? ¿Cuál es el conocimiento y apreciación que tienen los estudiantes del último semestre de la carrera de Licenciado en Administración de Empresas Turísticas, con respecto al patrimonio natural para apoyar en la formación de futuros promotores turísticos? El objetivo general es elaborar un análisis de la apreciación y conocimiento del patrimonio cultural y natural de Hermosillo, Sonora, que tienen los estudiantes de la carrera de Licenciado en Administración de Empresas Turísticas para realizar un programa de formación que refuerce la apreciación y conservación en apoyo a los futuros promotores turísticos.

## REVISIÓN DE LITERATURA

Según Zapatas (2004), la cultura es la relación que los grupos humanos establecen con el mundo y con la vida mediante las prácticas culturales públicas y privadas. La cultura de una localidad se materializa y se transforma continuamente en su relación con el entorno y con las ideas, prácticas y productos de otras culturas. Asimismo, la cultura puede ser vista como herencia, tradición y persistencia o como desviación, innovación y cambios permanentes. De igual forma, el patrimonio agrupa en un sentido amplio a la historia, las ideas, los valores, las creencias, las construcciones, los monumentos, los lugares donde tuvieron acontecimientos en el pasado, las artes, la danza, la música y otras manifestaciones de los pueblos o países. Consiguientemente y de acuerdo con Álvarez (2000), el patrimonio cultural se define como:

*Las obras de sus artistas, arquitectos, músicos, escritores y sabios, así como las creaciones anónimas surgidas del alma popular y el conjunto de valores que dan sentido a la vida. Es decir, las obras materiales y no materiales que expresan la creatividad de un pueblo: la lengua, los ritos, las creencias, los lugares y monumentos históricos, la literatura, las obras de arte, los archivos y bibliotecas.*

Los tipos de patrimonio según el Consejo de Monumentos Nacionales, consultado en la Dirección de Bibliotecas, Archivos y Museos, DIBAM (1999): en el Seminario de Patrimonio Cultural, hace una diferenciación de patrimonio, quedando como patrimonio natural y cultural. La UNESCO define el patrimonio natural como: aquellos monumentos naturales, formaciones geológicas, lugares y paisajes naturales, que tienen un valor relevante desde el punto de vista estético, científico y/o medioambiental. Por otra parte, el patrimonio cultural está conformado por los bienes culturales que la historia le ha legado a una nación y por aquellos que en el presente se crean y a los que la sociedad les otorga una especial importancia histórica, científica, simbólica o estética. De esta manera, el patrimonio cultural se divide en dos tipos el tangible e intangible, el primero es la expresión de las culturas a través de grandes materiales y

éste se puede clasificar según el Consejo de Monumentos Nacionales de Santiago de Chile (Consejo de Monumentos Nacionales, 1998), en mueble e inmueble. Por lo tanto, el patrimonio tangible mueble son todos los objetos portables, las obras de arte como pinturas y esculturas, grabados y litografías, piezas de orfebrería y cerámica, la alfarería, mobiliario de todo tipo, artefactos científicos y tecnológicos (maquinaria, automóviles y ferrocarriles, barcos y aviones), libros y manuscritos, monedas, objeto de uso personal, entre otros. El patrimonio tangible inmueble está constituido por edificaciones, obras de ingeniería, conjuntos arquitectónicos, zonas típicas y monumentos de interés o valor relevante desde el punto de vista arquitectónico, arqueológico, histórico, artístico o científico, reconocidos y registrados como tales. Para la UNESCO el patrimonio intangible, es el conjunto de formas de cultura tradicional y popular o folclórica; son las obras que emanan de una cultura y se basan en la tradición, misma que se trasmite de forma oral o mediante gestos que se modifican en el transcurso del tiempo a través de un proceso de recreación colectiva.

Asimismo el patrimonio cultural como el patrimonio natural constituye la esencia de la identidad de una nación tanto regional como local. Los bienes muebles e inmuebles construidos en cada una de las ciudades, así como su parte intangible que existe en el espíritu mismo de la cultura del lugar; todo ello pone de manifiesto que está ligada a los seres humanos que lo habitan. En este sentido, de acuerdo con Camarero y Garrillo (2004), el patrimonio cultural puede ser considerado como una causa social que intenta crear en las personas una conducta hacia la protección, valoración y una conciencia en beneficio a la sociedad. Sin embargo, para valorarlos, protegerlos e inclusive, conservarlos bajo una rentabilidad que puede ser el turismo como una alternativa factible de generar ingresos y mantener viva la riqueza patrimonial de la ciudad. Pero la relación del patrimonio y el turismo cultural es compleja por sí sola, sí se contempla solamente que el turismo es solo la promoción de hoteles, de viajes y se deja de lado la apreciación y valoración del patrimonio. Sin embargo, en la actualidad cobra cada vez mayor relevancia los lugares donde el turismo desea viajar para conocer y apreciar cada vez más el patrimonio de los sitios; por otra parte, las autoridades gubernamentales de algunos países visualizan al turismo cultural como una alternativa de desarrollo. La Secretaría de Turismo de la Federación (SECTUR), define al turismo cultural como: “Aquel viaje turístico motivado por conocer, comprender y disfrutar el conjunto de rasgos y elementos distintivos, espirituales y materiales, intelectuales y afectivos que caracterizan a una sociedad o grupo social de un destino específico” (SECTUR-CESTUR, Estudio de Viabilidad de Turismo Cultural, 2002).

## METODOLOGÍA

El tipo de investigación es mixto, según Hernández Sampieri y Colaboradores (2010) debido a que se combina al menos un componente cuantitativo y uno cualitativo. Asimismo, representa un conjunto de procesos sistemáticos, empíricos y críticos de investigación e implican la recolección de datos cuantitativos y cualitativos. En este tipo de investigación se combinan ambos métodos centrándose en uno de ellos o dándoles el mismo peso. Por lo tanto, el enfoque de esta investigación es cualitativo y se utilizó el cuestionario (Gómez, 2006) como instrumento de recolección de datos cuantitativo, con el fin de indagar el conocimiento y apreciación del patrimonio cultural y natural que tienen los estudiantes del último semestre de la Licenciatura en Administración de Empresas Turísticas de la Universidad Estatal de Sonora. Por consiguiente, para alcanzar los objetivos planteados en esta investigación se describe el marco conceptual, utilizando la fuente de recolección secundaria que se fundamenta en información sobre cultura, patrimonio cultural y turismo.

Ander-EGG (1995), para la determinación de la muestra se decidió utilizar el tipo de muestreo denominado intencional, el cual exige un cierto conocimiento del universo a estudiar. La técnica consiste en escoger intencionalmente y no al azar algunas categorías consideradas representativas del fenómeno a estudiar. El instrumento utilizado es un cuestionario que se aplicó a estudiantes universitarios, el cual consta de diecinueve preguntas, de las cuales doce son de elección múltiple y siete abiertas. Por último, con la información recopilada, se procedió a realizar un análisis de los resultados, con la finalidad de identificar

tanto el conocimiento y apreciación sobre el patrimonio cultural y natural que se tienen en la ciudad de Hermosillo, Sonora.

## RESULTADOS

Como método de investigación para la apreciación del conocimiento del patrimonio cultural y natural por estudiantes del último semestre de la Licenciatura en Administración de Empresas Turísticas de la Universidad Estatal de Sonora, se llevó a cabo la aplicación de un cuestionario a 98 jóvenes de un universo de 118 alumnos. De los participantes 81 son de sexos femenino y 17 masculino, correspondiéndole 82.65% y 17.35%, respectivamente.

Figura 1: Encuesta Aplicada a Estudiantes de LAET del Último Semestre

En esta figura se muestra la representación gráfica de la población participante en la investigación. Fuente: Elaboración propia.

Las primeras cuatro preguntas planteadas a los estudiantes universitarios, permitieron identificar el conocimiento básico sobre el tema de interés de la investigación. La primera de ellas cuestiona qué es la historia, obteniéndose como resultado que el 91% respondió correctamente: Disciplina que estudia los actos del pasado, y sólo el 9% no fue asertivo en la respuesta. Cabe destacar que el universo masculino fue el que contestó afirmativa a la pregunta.

Figura 2: Evaluación del Conocimiento a los Alumnos Sobre lo Que es la Historia

En esta figura se muestra la representación gráfica de los diferentes resultados obtenidos ante el planteamiento ¿Qué es historia? Elaboración propia.

Ante el cuestionamiento qué es patrimonio cultural, el 93% tiene el conocimiento, respondiendo que es un bien material tangible e intangible, considerados relevantes para la preservación e identidad de un pueblo. Asimismo ante la pregunta qué es monumento histórico, un 79% acertó en su respuesta: edificios construidos en los periodos del siglo XVI al XIX, así como muebles, documentos y/o mobiliarios de esa época, mientras que el 21% desconocía la respuesta. Por último, qué es patrimonio cultural intangible fue la pregunta con la que se concluyó la evaluación básica de la investigación, arrojando que un 92% fue puntual en su respuesta: tradiciones o expresiones vivas heredadas de nuestros antepasados y transmitidas a sus descendientes (UNESCO, 2003).

Figura 3: Evaluación del Conocimiento de los Alumnos Sobre Patrimonio Cultural, Monumentos Históricos y Patrimonio Cultural Intangible

*Fuente: Elaboración propia (2014). En esta figura se muestra la representación gráfica de los diferentes resultados obtenidos ante los planteamientos sobre patrimonio cultural, monumentos históricos y patrimonio intangible.*

Los resultados ante el conocimiento y apreciación del patrimonio cultural intangible, básicamente en los aspectos de costumbres y tradiciones, las respuestas fueron muy variadas en cuanto a las tradiciones religiosas, gastronomía típica, etnias, costumbres que se pueden considerar como las asertivas por parte de los estudiantes, pero cabe mencionar que a su vez el análisis de las respuestas revelaron desconocimiento ante el cuestionamiento, respondiendo que son los atractivos de la ciudad, puntos de encuentro y las fiestas populares, entre otros, que no tienen relación con el tema de la investigación.

En este sentido, algunas de las respuestas englobadas en fiestas tradicionales, mencionan eventos que se llevan a cabo en otros municipios del estado, así como ir al río, cuando la localidad no tiene acceso a tal recurso natural, y práctica de ciclismo alrededor de la ciudad, a pesar que esta actividad es ejercida por muy pocas personas por falta de cultura y aunado al clima caluroso del municipio y del estado. Los resultados en el cuestionamiento sobre el conocimiento del patrimonio natural de la ciudad, las respuestas fueron muy variadas en cuanto al cerro de la campana, el parque ecológico, la presa Abelardo L. Rodríguez y el cerro de la virgen, que se pueden considerar como las asertivas por parte de los estudiantes, pero cabe mencionar que a su vez el análisis de las respuestas revelaron desconocimiento ante la interrogante, respondiendo que son la playa, el pinacate, la pintada, el tetakawi, la isla del tiburón como el patrimonio natural de la ciudad; sin embargo éstos se localizan fuera de la ciudad y en otros municipios del estado.

Fuente: Elaboración propia (2014).

La respuesta anterior saca a luz un desconocimiento de los atractivos naturales de la ciudad; pero ante la pregunta: Consideras que el patrimonio natural de la ciudad es un atractivo para los turistas, las respuestas fueron que el 76% consideró que sí, en relación al 15% que respondió que no, y 9% de la muestra no contestó. Lo que hace suponer que los alumnos no tienen la experiencia de haber visitado los lugares atractivos de la ciudad o por lo menos identificar cuáles son, a pesar de que están cursando el último semestre de la licenciatura en administración de empresas turísticas y deberían dominar estos temas, sobre estudios preocupados por la promoción de su ciudad.

Figura 4: Consideras Que el Patrimonio Natural de la Ciudad Es un Atractivo Para los Turistas

Fuente: Elaboración propia (2014).

Según INAH (2014), entre los edificios históricos más representativos de la ciudad son: Antigua Penitenciaría del Estado hoy Museo de Sonora, Antiguo Palacio Municipal, Villa de Seris, Catedral de la Asunción o de Hermosillo, Centro Cultural Sociedad Artesanos Hidalgo, Colegio de Sonora, Escuela Primaria Colegio de Sonora, Escuela Primaria Leona Vicario, Palacio de Gobierno, Parroquia de Nuestra Señora del Carmen, Radio Sonora, Templo de San Antonio, Mercado Municipal de Hermosillo, Casona Hoefffer, Casona de Xochimilco, Molino Hermosillense, Antiguo Cuartel Militar, Museo Regional de la Universidad de Sonora, Plaza Zaragoza con su kiosco estilo morisco, traído desde la ciudad de Florencia, Italia. En relación al conocimiento de los estudiantes sobre los edificios históricos de la ciudad, las repuestas coinciden en el dominio de dos a tres edificios históricos que conocen, sólo algunos mencionaron edificios construidos menos de 10 años. Cabe mencionar que a su vez, el análisis de las respuestas al preguntarles si de los edificios mencionados conocen su historia, el 64% señaló que no y el 32% dijo que sí.

Fuente: Elaboración propia (2014). Los parámetros de respuesta indican que los estudiantes solo identifican de dos o tres edificios históricos.

Parte de los atractivos culturales de cualquier ciudad son sus leyendas y sus mitos, situación a la que no está exenta la ciudad de Hermosillo, Sonora; por ello, la importancia de cuestionarles a los estudiantes de la Licenciatura en Administración de Empresas Turísticas, cuáles son desde su punto de vista son los más representativos de la localidad, señalando con 64 respuestas el Casino del Diablo, leyenda que ha pasado de generación en generación. Cuenta la historia que un 31 de diciembre se celebra en el lugar la víspera del nuevo año, donde asistió una joven desobediente llamada Linda, a quien la invitó a bailar un misterioso y elegante joven al centro de la pista, hasta que un intenso olor de azufre y un aumento de temperatura le hicieron voltear hasta el piso para encontrar ante sus ojos una pata de gallo y una de cabra, Linda en ese momento se desmaya sin saber nada, mientras otros dicen que ahí mismo murió.

La llorona, obtuvo un total de 30 respuestas, cabe mencionar que ésta es una leyenda a nivel nacional pero cada región ha hecho propia su versión. La planchada fue la leyenda que obtuvo 7 respuestas, y cuenta la historia que hubo una vez una enfermera llamada Eulalia, la cual trabajaba en un hospital de la ciudad, trabajo que desempeñaba con mucho cariño. Ella poseía una particularidad que siempre tenía la ropa perfectamente planchada y limpia, misma que sufrió mal de amores. Realizando sus actividades murió al quedar atrapada en el elevador, desde entonces son muchas las historias que ven a una joven enfermera caminar por el lugar. La siguiente leyenda son los túneles en las iglesias ubicadas en el centro de la ciudad; existen dos hipótesis respecto a ésta, la primera que fueron túneles empleados durante la persecución religiosa de finales de 1930 en la guerra cristera que cimbró al país durante 8 años, según investigación del Instituto Nacional Estadística, Geografía e Informática realizada durante los últimos 30 años; la segunda, establece que fueron construidos en el período de la reforma (1857 aproximadamente), durante la persecución religiosa que realizó el gobierno del presidente Benito Juárez.

Como parte del patrimonio cultural, se les pidió a los alumnos que mencionaran las fiestas tradicionales de la ciudad, de las respuestas que si corresponden a esta categoría, mencionaron: La Fiesta del Pitic con un 85% y la Expo- ganadera con 48%. Pero el análisis de la pregunta, permite observar que existe una confusión en su denominación, por parte del estudiante, ya que la mayoría de los resultados fueron de carácter religioso, como es el caso de la Fiesta de la Candelaria con un 25%. Además se encontraron festividades que se llevan a cabo en otros municipios del Estado de Sonora.

En otro orden, los tres primeros lugares obtenidos ante el cuestionamiento, qué aspectos del patrimonio cultura de Hermosillo consideras más atractivos, los resultados se enlistan de acuerdo al orden descendente obtenidos: En 1er. lugar, los eventos culturales, los grupos indígenas y artesanías y la historia; 2do. lugar, los grupos indígenas y artesanías, eventos culturales y monumentos históricos; 3er. lugar, la historia, la arquitectura de sus edificios y monumentos históricos, 4to. lugar, monumentos históricos, arquitectura de sus edificios e historia; y en 5to. lugar, arquitectura de sus edificios, historia y monumentos históricos.

Tabla 4: Aspectos del Patrimonio Cultural de Hermosillo Considerados Más Atractivos

Opciones De Respuesta	Escala de Valor de Acuerdo a la Percepción de Importancia					Respuestas Nulas
	1ero.	2do.	3ero.	4to.	5to.	
Eventos culturales	50	18	11	6	12	1
Arquitectura de sus edificios	1	8	24	17	38	10
Historia	14	13	27	16	17	11
Monumentos históricos	6	15	16	37	13	11
Grupos indígenas y artesanías.	27	37	9	11	7	7

Fuente: Elaboración propia (2014).

Por último, se les cuestionó, si como estudiantes tienen la responsabilidad de promover la ciudad de Hermosillo, Sonora; respondiendo en un 96% que sí, sólo un 3% del universo considero que no y un 1% no respondió. Asimismo comentaron que los medios que utilizan para conocer historia de la citada ciudad, de acuerdo al orden descendente de las opciones de respuestas, fueron: escuela, familia y amigos, medios de comunicación, libros, tic's y otros.

Figura 5: Medios Que Utilizan Para Conocer la Historia de la Ciudad de Hermosillo, Sonora

Fuente: Elaboración propia (2014).

Los estudiantes de la Licenciatura en Administración de Empresas Turísticas saben que tienen como tarea la de ser los futuros promotores turísticos; pero este acercamiento a su apreciación y conocimiento del

patrimonio cultural, refleja que aún tienen mucho por conocer y sobre todo tomar conciencia de su responsabilidad.

## CONCLUSIÓN

Una vez analizados los resultados se pudo apreciar que en las primeras preguntas planteadas con respecto al conocimiento básico sobre lo que es historia, patrimonio cultural y patrimonio cultural intangible, arriba del 90% de los jóvenes respondió correctamente, mientras que en lo correspondiente a lo que es monumento histórico sólo el 79% acertaron; sin embargo ante el conocimiento y apreciación del patrimonio cultural intangible, básicamente en los aspectos de costumbres y tradiciones algunas de las respuestas de los estudiantes revelaron desconocimiento ante el cuestionamiento, respondiendo que son los atractivos de la ciudad, puntos de encuentro y las fiestas populares, entre otros, que no tienen relación con el tema de la investigación.

Por otra parte, sobre el conocimiento del patrimonio natural de la ciudad, las respuestas fueron muy variadas, pero al hacer análisis de las respuestas revelaron desconocimiento ante el interrogante, respondiendo que son la playa, el pinacate, la pintada, el tetakawi, la isla del tiburón como el patrimonio natural de la ciudad pero éstos se localizan fuera del destino y en otros municipios del estado. Al cuestionárseles a los estudiantes sobre los edificios históricos que conocen de la ciudad de Hermosillo, la mayoría acertó dos o tres, pero al preguntárseles si de estos edificios conocen su historia, el 64% señaló que no y el 32% dijo que sí. Al entrar al tema de leyendas y mitos más representativos de la ciudad, los alumnos, desde su punto señalaron con 64 respuestas el Casino del Diablo, leyenda que ha pasado de generación en generación, La llorona, obtuvo 30 contestaciones, y en tercer sitio con 7 menciones fue la Planchada; pero también demuestran confusión en cuanto a las de origen local entre las de otras regiones del país. Ahora bien, en el tema del patrimonio cultural, se les pidió a los alumnos que mencionaran las fiestas tradicionales que se celebran en la ciudad de Hermosillo, de las respuestas que corresponden a esta categoría, nombraron la Fiesta del Pitic en un 85% y la Expo-ganadera con 48%.

Pero el análisis de la pregunta, permite observar que existe una mala interpretación en cuanto a su denominación por parte del estudiante, ya que la mayoría de los resultados fueron de carácter religioso, como es el caso de la Fiesta de la Candelaria con un 25%. Además se encontraron festividades que se llevan a cabo en otros municipios del Estado de Sonora. Por otra parte, al interrogarles a los alumnos sobre qué aspectos del patrimonio cultural de Hermosillo consideran más atractivos, señalaron en orden descendente a los eventos culturales, los grupos indígenas y artesanías, así como la historia; y en segundo plano citaron los monumentos históricos y la arquitectura de sus edificios. Con respecto a la pregunta, si como estudiantes tienen la responsabilidad de promover la ciudad de Hermosillo, Sonora; un 96% contestó que sí, un 3% del universo considero que no y un 1% no respondió. Finalmente, comentaron los alumnos en sus respuestas que los medios que utilizan para conocer historia de la citada ciudad, son la escuela, familia y amigos, medios de comunicación, libros, tics y otros.

Los estudiantes de LAET saben que tienen como tarea la de ser los futuros promotores turísticos; pero este acercamiento a su apreciación y conocimiento del patrimonio cultural, refleja que aún tienen mucho por conocer y sobre todo tomar conciencia de su responsabilidad, en las siguientes propuestas: Implementar cursos alternos para capacitar con conocimientos más integrales sobre el tema, que garanticen a los jóvenes universitarios el conocimiento, tanto declarativo, instrumental y actitudinal; debido a que los estudiantes de LAET del último semestre, como futuros promotores del turismo revelan en sus respuestas un desconocimiento en general sobre los aspectos de patrimonio cultural; aunado a que consideran que la principal fuente de conocimiento es la escuela a través de su formación profesional. Que la formación durante el proceso enseñanza- aprendizaje, garantice la asimilación del conocimiento en el área; de ahí la relevancia de tener docentes preparados con el conocimiento según las asignaturas y prácticas de la mismas,

asimismo deberán estar en constante actualización, acorde a las necesidades socioeconómicas que repercuten en el ámbito turístico y que permitirán equipar a los estudiantes de los conocimientos y actitudes necesarios.

Es importante que desde las aulas se impulse el conocimiento y motivación para que continúen preparándose fuera de ellas, ya que se denota que los estudiantes de LAET del último semestre, no tienen la capacidad de investigar y la actitud para conocer las riquezas culturales de la ciudad, como punto de partida del quehacer profesional. Que realicen investigaciones documentales y de campo en relación a la promoción y comercializan del destino turístico a través del patrimonio cultural; no sólo prácticas o recorridos como parte de su formación; aunado de debe de existir un cuerpo docente que se dedique a la investigación en relación a los aspectos relativos del tema mencionado, involucrando a los estudiantes en ello.

# LIDERAZGO Y AUTOEVALUACION, PARA MEJORAR LA GESTION DIRECTIVA EDUCACIONAL

Graciela Vidal Carvajal, Universidad La República La Serena Chile

## RESUMEN

*Las Instituciones de Educación estatales y privadas, deben afrontar un conjunto de factores como la globalización, tercerización o externalización de funciones, la mejora en la calidad de la prestación del servicio y como aspecto fundamental, la generación de valor para competir óptimamente, con sus pares. El presente trabajo, se ha desarrollado en base a la experiencia realizada a 83 directivos de diferentes escuelas y fue posible evidenciar los mismos problemas. La gestión directiva se ha visto involucrada en este dinámico proceso de innumerables cambios en las dos últimas décadas y en los nuevos paradigmas que modifican las dinámicas de las Organizaciones de Educación. Los actores involucrados, Directores, para cumplir con estas expectativas de la sociedad actual, requieren del desarrollo de competencias que los definan en un perfil acorde con las demandas de la educación moderna. Los Directivos son figura clave para cambiar y generar modernas prácticas en sus respectivas entidades a través de un liderazgo eficaz compartido, propiciando un clima laboral agradable, aportando para la capacitación y actualización del recurso humano y poniendo en práctica los principios para un trabajo colaborativo efectivo. Los Directores/as deben actualizarse y autoevaluar sus competencias y desempeño para mejorar sus capacidades de liderazgo, de gestión, optimizar la dirección de sus respectivas escuelas y aplicar estrategias actualizadas que le sirvan como soporte en su cotidiano quehacer.*

**PALABRAS CLAVE:** Gestión, Dirección, Liderazgo, Autoevaluación, Mejoramiento

## LEADERSHIP AND SELF EVALUATION TO IMPROVE EXECUTIVE MANAGEMENT IN EDUCATION

### ABSTRACT

*The management of educational organization has been involved in dynamic process and changes in the last two decades, in front of a new paradigm about education at world level. So, the managers and professional team in this organization, have to fulfill new demands of actual society. For that reason they need to get more specific abilities, according with their professional profiles and demands of society and the students. The educational manager director, has an important role to start changes and modern practices in educational organization, through a good leadership, better organizational work climate, and giving more opportunities to human resources, applying a collaborative work. So, every organization and its management team, have to implement strategies, looking for better use of all resources. The good management will always find the better results for students and educational community. All board directors should improve their own abilities and knowledge in topics like leadership and management for different scenarios focused in the students. This paper is aimed at analyzing the skill and abilities for managers in educational organization, which are required as the axis for improvement in the quality of education. Leadership, innovation, have a key role for such a purpose*

**JEL:** I2, I21

**KEY WORDS:** Management, Leadership, Self Evaluation, Improvement

## INTRODUCCION

Hoy en día estamos frente a Organizaciones Inteligentes que deben aprender permanentemente para adaptarse a los cambios que el vorágine mundo exige, por lo que los recursos humanos de las escuelas, liceos y entidades de educación superior, deben preocuparse por formar ciudadanos comprometidos con su trabajo y preparar a futuros trabajadores inteligentes, personas autónomas, capaces de continuar estudiando a lo largo de su vida una vez que han terminado su escolaridad obligatoria. Aprender a aprender, uno de los pilares de la educación, que señala en su informe a la UNESCO Delors 1996, implica que los/las estudiantes aprendan conceptos, conozcan diferentes formas de comprender la realidad y, tengan actitudes que pueden ser utilizadas para resolver problemas personales, culturales, políticos, religiosos, sociales, productivos, etc.

Otro de los ejes de Delors, es Aprender a vivir juntos, ya que hoy con la modernidad, las sociedades han variado y son muy diferentes de las tradicionales; hoy en día la sociedad en general es más compleja y exige compromiso con las nuevas culturas, nuevas identidades políticas, sexuales, nuevas formas de hacer familia, razón por la que es importantísimo formar a los alumnos bajo estos nuevos sistemas de vivir juntos con respeto a sí mismo, al otro y a la convivencia familiar; es posible apreciar que son nuevos sistemas de una sociedad inclusiva; pero para ello, para acercarse a estos significados, primeramente hay que empezar con una evolución de nuevos conceptos y nuevas formas de gestionar los Centros Educativos de todo nivel y, son los/las Directores los llamados a ser gestores de cambio, tener una mentalidad diferente, ser líderes eficaces que busquen la calidad y la equidad, la mejora continua a través de la autoevaluación para así estar en coordinación con los requerimientos de una nueva y moderna Escuela y de una nueva Formación tanto para sí mismo, como para el profesorado y para satisfacer las necesidades que la sociedad espera de los/las alumnos, futuros trabajadores del país que deben estar preparados para aprender, para saber transferir y para aprender durante toda su vida; ello marcará nuevos y motivadores modelos de aprendizaje a la organización educacional.

### Algunos Alcances de Calidad y Equidad Para la Dirección Educacional

La Administración Directiva, debe relacionarse con la creación, mantenimiento, estímulo, control, supervisión y unificación de las energías humanas y materiales, organizadas formal o informalmente dentro de un sistema unificado, a objeto de cumplir objetivos predeterminados del sector educativo; esta constituye entonces, un conjunto sistemático de funciones, procesos, gestión, técnicas y recursos requeridos para el logro máximo de eficiencia y eficacia en la función de las actividades directivo – educacional. La eficacia y eficiencia son conceptos que se necesitan uno a otro, ello implica que cada persona debe tener oportunidad de acceder a una educación de calidad integral, valórica, de conocimientos, bilingüe, que fortalezca el aprendizaje de las competencias blandas y duras. La metodología debe incluir por lo tanto, estrategias de enseñanza – aprendizaje alternativas y al ritmo de la capacidad del/a alumno/a, para ello la gestión directiva, debe contribuir a la inclusión de éstas en el sistema educativo y debe considerar que el/la Director/a, jefes/as y docentes, son actores estratégicos de esta transformación. Para el logro de estos cambios, la directiva de la Escuela, debe permitir el desarrollo de competencias en los/las alumnos, profesores y jefaturas, apoyándose en dos de los 4 pilares fundamentales de la formación: a) aprender a aprender y b) aprender a convivir con otros (Delors, 1996). Es primordial que además el/la directora de la entidad educacional conozca, participe y trabaje en conjunto con la comunidad: sean instituciones sociales, alianzas estratégicas con otras instituciones, que participe el RRHH y alumnado en el desarrollo comunitario dando con ello, la oportunidad a las y los jóvenes, de conocer las posibilidades de su futuro laboral y universitario, ya que sabrán qué campos elegir, según los intereses de cada uno de ellos/as.

### Enfrentando Estos Desafíos

Es relevante considerar que la gestión educacional se preocupa del diseño de situaciones que permiten hacer acción en general. Debe la gestión además de diseñar, establecer y mantener pautas y normativas que permitan desarrollar un proyecto educativo según se estime conveniente, siempre y cuando, el resultado que se obtenga beneficie a todos/as. Para el logro de este resultado, el Director/a y su equipo de trabajo, deben estar comprometidos y motivados para inducir al cambio, para tener una mejora constante, saber hacia dónde se dirigen, tomar decisiones correctas y dinámicas, tener un liderazgo emocional efectivo, reforzar y mejorar la capacidad administrativa de la Organización. Es decir, tendrán que repensar nuevas metodologías de trabajo en equipo para planificar bajo estos parámetros un buen proyecto a corto, mediano y largo plazo cuyas metas estén claramente definidas o estipuladas, que sean factibles de gestionar, que sean cuantificables, basadas en la información fidedigna y estén centradas en obtener un óptimo aprendizaje de los/las educandos, cualquiera sea el nivel de escolaridad: básico, medio o superior.

### **REVISION LITERARIA**

Existe numerosos libros sobre temas educativos, liderazgo, administración, etc, sin embargo, se ha tratado en este trabajo, de coordinar la experiencia, conocimiento y práctica, por lo que se ha investigado material bibliográfico, que integre estos tres elementos fundamentales en un proceso de reformulación de actitud y del pensamiento. Se presenta dos ejemplos importantes de resaltar: Según Daniel Goleman (en su libro *La inteligencia emocional*): “El buen líder no es el que tiene más conocimientos, títulos o estudios. Ni siquiera es el que está en el puesto más alto. El buen líder es quien sabe dirigir y guiar, haciendo el mejor uso de las herramientas con las que cuenta. Y estas herramientas se relacionan cada vez más con características personales o inteligencia emocional”. Según Alfonso Mujica (en su Artículo *El desafío de ser líder*): “señala que las Organizaciones sólo cambian si las personas que trabajan en ella sufren alguna transformación. Son las personas quienes imprimen un sello de distinción a las Instituciones y empresas.” Revista de la Facultad de Ciencias Económicas y Administrativas de la Universidad Católica.

### **METODOLOGÍA**

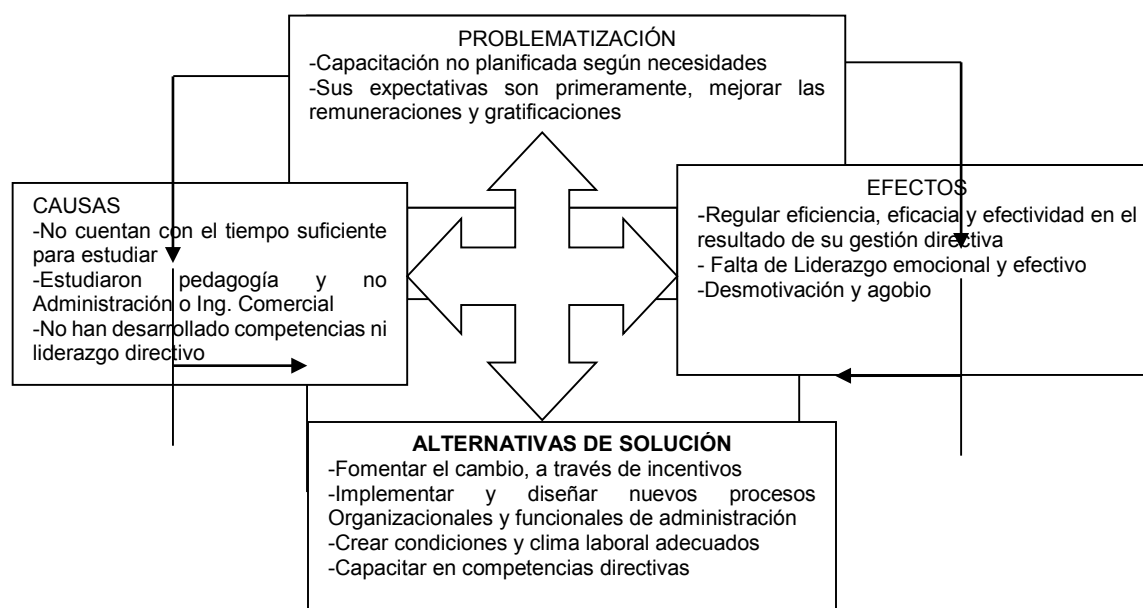

Se realizó un diagnóstico situacional para tomar conocimiento de los problemas que se le presentan a los/las Directivos de entidades educacionales y buscar una posible solución para ello; el diseño del proceso de investigación se llevó a cabo con la recogida de datos e información para evaluar las habilidades y competencias de liderazgo, de gestión y qué tipo de acciones directivas utiliza el/la directora de la Escuela. De acuerdo a los resultados obtenidos de la información, se sugerirán estrategias de mejoramiento de gestión. Se combinará los procesos y técnicas de los métodos cuantitativos y cualitativos, conforme con la naturaleza de la investigación a realizada.

El primer paso considerado para el mejoramiento de la Dirección de los centros educativos, es en este trabajo, el levantamiento y recopilación de información, con ello se tendrá un mapa de la situación real de la gestión del directivo y jefaturas de la entidad. Para ello, se coordinaron tres cursos - talleres, cuyos participantes fueron directivos y jefaturas de estos centros. A través de los tres talleres realizados a diferentes Directores de Escuelas, Liceos y Entidades de Educación Superior estatales y privadas, fue posible tener los antecedentes de diagnóstico de 83 directivos; estos talleres consistieron en la realización de diálogos, análisis, trabajos grupales, consultas, casos reales, cuestionarios, opiniones, reflexiones, ideas y soluciones para mejorar la gestión y calidad directiva, tema que en estos momentos en Chile, forma parte de las actuales políticas gubernamentales.

Durante el desarrollo de los talleres, la pregunta más frecuente que repetitivamente hicieron los participantes fue “¿cómo se logra una mejora en la gestión de la dirección de una escuela? Esta temática se

transformó en una interesante polémica en los tres casos y se consideró como lo más relevante a tratar para lograr cambios significativos en la dirección de la entidad educacional. Se realizó un Diagnóstico Situacional, para conocer la problemática general, se dialogó acerca de los/las muchos directores de establecimientos que son excelentes profesores o maestros, pero no han desarrollado las competencias ni se han preparado para dirigir a una Organización tan compleja, como es el recurso humano que labora y estudia en una institución educacional, cualquiera sea el nivel de la entidad. En el andar de los talleres, aportando cada uno/a sus experiencias y desarrollando casos reales, fue posible detectar variados problemas comunes que enfrentaban diariamente estos/as profesionales, como es posible apreciar en la figura n°1.

Figura 1 :Formulación del Diagnóstico Situacional

*Elaboración propia*

### Diseño de la Investigación Aplicada

Se ha tratado que la investigación se encamine a la obtención de resultados reales para la solución de los problemas anteriormente planteados, aplicando en forma mancomunada el conocimiento e interés de los participantes en la búsqueda de respuestas a su interrogante “¿qué hacer y cómo mejorar la gestión de la dirección educacional?”. En la investigación se ha dado énfasis a la aplicación del conocer para hacer, actuar, cambiar, reformar e innovar, antes que en lo teórico, a fin de resolver la problemática que surge o que se plantea en la investigación. Se realiza además, una consulta cuantitativa, para obtener información fidedigna, inmediata y personal como así también, se aplicó un enfoque cuantitativo ya que se considera a ambos, complementos indispensables e insustituibles.

### Fase Exploratoria: Cuestionario N° 1, Realizado a Directores/As y Jefes Unidades Técnicas Pedagógicas (UTP), Para Tener Un Mapa Situacional Real

Conocimiento	Si	No	Compromiso	Si	No
¿Tiene conocimiento de la existencia de proyectos de desarrollo institucional?	45	38	¿Apoyará usted el desarrollo y lineamiento de proyectos?	31	52
¿Sabe de Gestión educativa?	21	62			
¿Conoce el Organigrama de su Institución?	61	22	¿Considera Ud. Que este instrumento sea necesario y conocido por el RRHH que labora junto a usted?	48	35
¿Conoce la realidad de su Institución?	83				
¿Tiene un Manual de funciones y se respeta?			¿ Participaría en el nuevo diseño de este?	70	13
¿ Existe un Reglamento Interno	73	10	¿Lo pone en práctica?	68	15
¿ Existe un buen clima laboral al interior de su establecimiento?	78	5			
¿Participaría de un Plan de Capacitación Directivo?	43	40	¿Considera usted que es importante su participación y	68	15
¿Además de su responsabilidad como Director/a, hace clases?	64	19	¿ Está de acuerdo con esa carga horaria?	59	24
¿Conoce sobre Administración?	38	45			
¿ Sabe elaborar un Plan anual de Trabajo?	63	20			
¿ En su Organización, se practica la Planificación estratégica?	67	16	¿Participaría usted de un curso específico de la	73	10
¿ Conoce el PEI de su Institución?	51	32	¿ Cree que es necesario que su personal a cargo lo	71	12
			nozca?		
¿ Conoce el PADEM?	47	39	¿ Le parece importante que el RRHH de su entidad, le	69	14
			nozca?		
¿ Trabaja en equipo?	75	8	¿ Participa usted de una red de apoyo interna y	61	22
			eamiento curricular, en su entidad?		
¿ Considera que la capacitación recibida en los dos últimos	58	30			
os, le ha mejorado su rendimiento directivo?					
¿ Le da importancia al Liderazgo emocional y efectivo?	70	13	¿ Cree usted que es necesario para dirigir?	64	19
¿ Le interesa saber sobre la mejora continua?	52	31			
¿ Ha desarrollada competencias que favorezcan su	48	35			
sempaño directivo, en los últimos tres años?					
¿ Practican en su Escuela, la autoevaluación?	65	18	¿ Se deja evaluar por sus pares?	57	26
¿ Otorga a su personal un día al mes, para hacer un	46	37	¿ Le parece pertinente?	24	59
gnóstico situacional?					

*En relación a las Respuestas obtenidas:* Se presenta a continuación dos gráficos, los que mostrarán en forma fidedigna, la opinión de estos Directivos, en relación al rol que les compete a ellos/as, en su función y responsabilidad de la jefatura que tienen. Ha sido posible apreciar, que no hay mayor compromiso ni interés en conocer ni aprender más que lo que saben, por lo tanto, se sugiere desarrollar diferentes competencias y estrategias que les lleve a un equilibrio emocional para paulatinamente capacitarles en los reales requerimientos que ellos/as tienen como directivos.

Figura N° 2: Cuestionario N° 1, Análisis Realizado al Inicio de la Primera Sesión del Curso-Taller

Elaboración propia

Figura N° 3

*Elaboración propia*

Taller N° 1: Comente Según Su Apreciación, Qué Aspectos Más Relevantes Consideran y Desean los Estudiantes en Su Liceo, Escuela U Otro y Califique Con Criterios del 1 al 10, Mientras Mayor Sea el Número, Mayor Será La Prioridad

N°		Criterios	Ideal Para Los Alumnos	Prioridad
1	Servicio Educacional	Calidad	Cero defecto	9
		Factibilidad de apoyo audiovisual e informática	No siempre se requiere Capacitación	8
2	Procesos	Flexibilidad de enseñanza - aprendizaje	Sistemas metodológicos innovativos y amenos	10
		Administración	Facilidad comunicacional, de trabajo en equipo y liderazgo de los directivos	10
3	Profesores	Conocimiento de los servicios que prestan , comprometidos y responsables	Capaz de responder todas las preguntas y dudas e integración en los equipos de trabajo	8
4	Directores	Competitivo, con Liderazgo y gestión	Que muestre su gestión y la toma de decisiones , dentro de la Escuela	8
5	Aranceles	Competitivos	Ser el mejor Liceo y no cancelar nada	10

El taller, se trabajó en grupos de 5 y se les otorgó 20 minutos para completar el temario; posteriormente cada grupo eligió a un representante y este explicó la razón de lo que habían decidido escribir, poniéndose en el lugar de los alumnos, ver resultados en % en figura 4.

Figura 4

Elaboración propia

Autoevaluación de los Directivos – Taller Realizado al Final de la Capacitación – Taller “Favor, Marque Con Un o, la Opción Más Cercana a Su Realidad, Hoy”:

Nº	Contenido Del Cuestionario	1	2	3	4
1	Sé cuál es mi plan para los próximos años			7	76
2	Tengo la información necesaria, para tomar mis propias decisiones			1	82
3	Converso con las personas comprometidas con la escuela				83
4	Analizo mis estrategias con ellos/as			23	63
5	Realizo reuniones de planificación mensualmente			52	31
6	Confo en que estoy en mejores condiciones que la competencia			48	35
7	Soy capaz de predecir con precisión, las necesidades de mis alumnos	6		35	22
8	Sé como obtener lo mejor de la tecnología			3	80
9	Conozco los criterios de mi personal y alumnos			83	
10	Discuto y mejoro con mi equipo de trabajo, los procesos internos	10		11	62
11	Utilizo el análisis FODA constantemente	8		9	64
12	Entiendo mi ventaja competitiva actual				83
13	Consulta con otros Directores acerca de las estrategias aplicadas	7		10	64
14	Analizo los cambios de estrategias con mi personal, equipo de trabajo y alumnos/as			13	70
15	Sé como se comparan mis egresos e ingresos con los objetivos logrados				83
16	Sé con exactitud en qué área requiere mi equipo de trabajo, mejorar habilidades y competencias			11	72
17	Cuento con un plan estratégico escrito y actualizado				83
18	Conozco las amenazas para el logro de los objetivos				83
19	A las reuniones de evaluación, sólo convoco a quienes me parece deben estar presentes	5		13	65
20	Me aseguro que mis estrategias, concuerden con las de mis colegas Directores de otras entidades.	3		15	65

En este cuestionario –taller, fue posible observar que las respuestas fueron con alturas de mira, con motivación y con muchos deseos de continuar aprendiendo y creciendo como profesionales y personas. Fueron capaces de autoevaluarse y aprender a realizarlo para una mejora continua.

### Implementación de Estrategias Para la Solución de Problemas

Posterior al diagnóstico e información obtenidos y a partir de sus resultados, se propone un Plan de mejoramiento continuo, orientado a mejorar el nivel de gestión que hoy realizan los directivos en sus

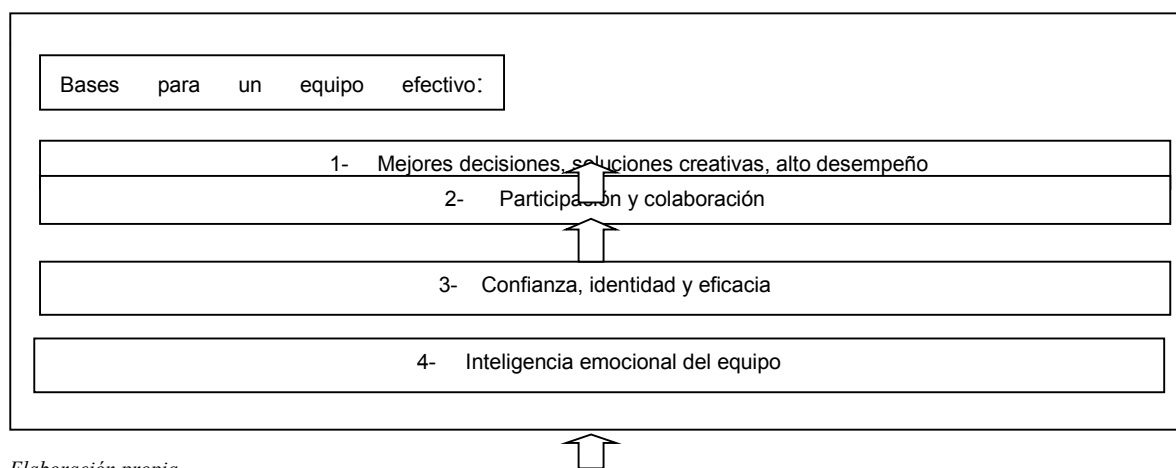

respectivos planteles educacionales. Consta este plan de competencias requeridas, de un sistema de análisis práctico y toma de decisiones estratégicas que van integrando el quehacer institucional, a favor de una mejor y constante gestión y tiene por finalidad, fortalecer el (Proyector educativo institucional) PEI y lograr las metas propuestas por la dirección, a saber:

*Competencias Directivas:* La educación es un comportamiento motivado, comienza por la revalorización del trabajo en sí. Esta revalorización emerge en forma natural, cuando se manifiesta aprecio por la calidad del trabajo y se hace bien desde su inicio, por ello es fundamental lograr un equilibrio entre las tres dimensiones de competencias, para ejercer un liderazgo maduro, responsable y sostenible en el tiempo. Se debe considerar que un buen líder es aquel/a capaz de adaptarse a las circunstancias o necesidades de cada situación, sean éstas para sí mismo o para el RRHH que lidera. Es por tanto relevante, definir ciertas competencias y/o características que se pueden adquirir y que ayudan a un directivo, a dirigir óptimamente a su equipo.

*Identificando Competencias:* Al hablar de competencias, hay que referirse a comportamientos observables y habituales que conducen al éxito en el desempeño de una función o tarea. Estos comportamientos son los que marcan las diferencias entre un Jefe y un Líder. Es posible por tanto, distinguir tres dimensiones de competencias directivas: de negocios, interpersonales y personales, para lograr sensatez en el liderazgo que se ejerza.

*Las competencias de negocio:* son aquellas que se orientan al logro de una mejora económica de una empresa o institución educacional, en esta dimensión hay variadas competencias como: Tener visión de negocios: significa capacidad de reconocer los peligros y aprovechar las oportunidades que repercuten en la competitividad y efectividad del negocio, tener visión de organización, es decir, conocer muy bien la empresa y la interrelación de sus distintas unidades para lograr el desarrollo de la cooperación entre estas, también el/la directivo, debe orientarse hacia los estudiantes (sus clientes), satisfaciendo todos los requerimientos que estos tienen y dando respuesta además, a sugerencias y peticiones que estos hagan. Este líder, también debe ser competente en la gestión de los recursos, vale decir, realizar la mejor utilización de estos en aspectos económicos y materiales; debe desarrollar competencias de negociación, para alcanzar acuerdos favorables para ambas partes cuando se requiera, todo ello, sustentado en el manejo de la tecnología y redes de apoyo. Todas estas competencias son importantes, pues del buen manejo de ellas, dependerá la eficacia del Centro educativo y por lo tanto, de su supervivencia en el tiempo.

*Aprendiendo a convivir con otros/as:* significa que hay que dar oportunidad a los demás colaboradores para lograr un correcto desempeño en el campo laboral. Una importante competencia es la Comunicación, tener la capacidad de escuchar y transmitir ideas de manera efectiva. También en este ámbito, es relevante la gestión de conflictos, pues se debe tener la capacidad de diagnosticar, afrontar y resolver los problemas interpersonales que se suscitan constantemente. El/la directora que ejerce un buen liderazgo, debe saber comprometer a sus trabajadores inspirando su confianza y motivación, a fin de lograr los objetivos propuestos. Es primordial además que trabaje en equipo, fomente la colaboración entre los colaboradores y la confianza mutua. Cuando el/la líder trabaja con su equipo e ingresa al campo de las emociones, logra un alto desempeño con el menor esfuerzo, ver figura 5

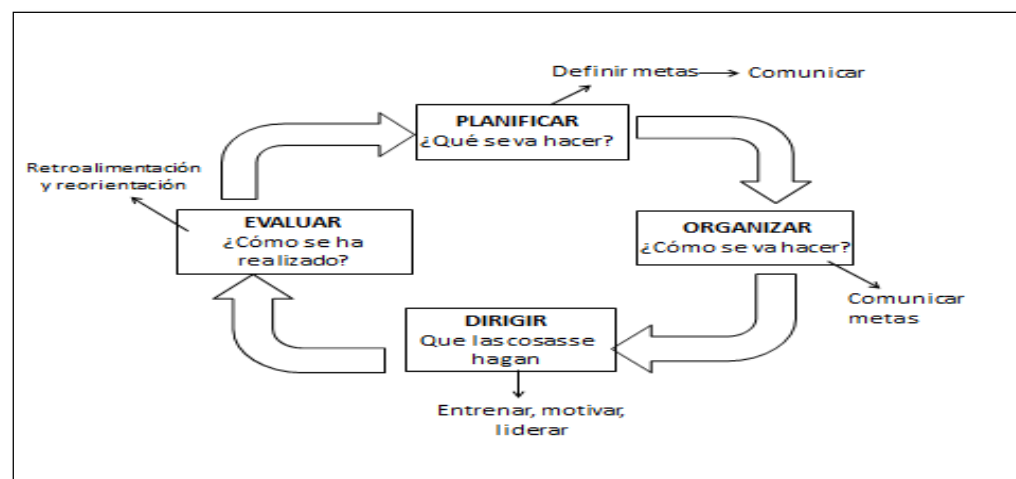

*Competencias de actitud personal:* son las cualidades y habilidades necesarias para ejecutar la parte del trabajo relacionada con la gestión y la relación social; permiten desarrollar la confianza e identificación de los/las trabajadores. Se asocian estas competencias al auto liderazgo y al ejemplo personal que debe iniciar el directivo. Este líder, debe tener iniciativa para promover cambios en forma convincente, entusiasta y responsablemente. Las actitudes más preponderantes deben ser en los directores el positivismo, autocontrol, equilibrio emocional, autoconocimiento y autocrítica (aceptar sus propios errores y limitaciones). Las personas que dirigen establecimientos educacionales además, deben preocuparse de la gestión del tiempo (aprender a priorizar y programarse) y considerar también, la gestión del stress (capacidad de mantener el equilibrio ante situaciones de tensión). El liderazgo directivo, exige el cambio, aceptar que se debe dejar atrás criterios autocráticos, individualismos, la poca flexibilidad, la pasividad, el hacer las cosas sin planificar, etc. Debe por el contrario, asumir un liderazgo participativo, flexibilidad en sus normas, dinamismo, destinar horas extras al logro del éxito, superar las metas y seguir a la excelencia, entre otros. En síntesis, el/la directora de un Centro educacional, más que un jefe, debe ser un líder eficaz, de inteligencia emocional y preocuparse de crecer profesional y personalmente.

### Mejorando la Gestión Administrativa del Directivo Educacional

Los Directivos deben saber a cabalidad como manejar sus funciones, desempeño y mantenerse actualizados; al revisar sus tareas, hubo que explicarles que debían cambiar su manera de trabajar, ya que ellos cuando tienen el rol de directivos no están enseñando, sino que lideran a un grupo de personas que espera que alguien tome las decisiones correctas para lograr las metas que esa entidad educacional tiene. Se les hizo las siguientes preguntas a fin de llevarlos a conocer su propia realidad en su rol de directivos: ¿Qué tareas hacen? ¿Cómo las hacen? ¿Por qué las hacen? ¿Qué les implica hacerlas? Todas estas preguntas, fueron trabajadas en los talleres grupales, comentadas y analizadas, lo que les llevó a la reflexión objetiva de que debían cambiar, ya que no se habían hecho ninguna de estas interrogantes, que en un principio las encontraron irrelevantes. Hubo que hacer algunas observaciones y diseñar una guía de trabajo, introduciéndoles antes, en algunos conceptos básicos de administración a fin de poder coordinar algunos objetivos, reglas y funciones de las jefaturas. Para ello, se les dio a conocer y se trabajó el Ciclo Administrativo, a fin de tener claro, las funciones administrativas de los/las directivos, entre otros temas; a continuación se presenta en la figura n° 6 el Ciclo Administrativo: En síntesis: La Dinámica Administrativa, significa Dirigir o Ejecutar y Evaluar o Controlar La Mecánica Administrativa, significa Planificar y Organizar La Planeación, es la determinación de la acción que se seguirá, además se fija los principios que

Figura N° 6: el Ciclo Administrativo, Mecánica y Dinámica (Se Adjunta Power Point\*)

*Elaboración propia*

sitúa la secuencia de las acciones, los tiempos y unidades necesarias para su realización, se orienta a:  
Las políticas, para orientar la acción. Los procedimientos, que comprende las secuencias, operaciones o métodos y los programas, que son para fijar los tiempos requeridos.

*La Organización:* se refiere a la estructuración de las relaciones que debe darse entre las jerarquías, funciones y obligaciones individuales necesarias para un organismo educacional, consta de: Jerarquía: significa que se debe fijar autoridad y responsabilidades de cada nivel Funciones: Dividir las actividades específicas y Obligaciones: las que se dan en cada unidad de trabajo

*La Dirección o Ejecución :* que significa que las cosas deben hacerse o, impulsar, coordinar, vigilar las acciones de cada individuo o grupo de un organismo , con el fin que el conjunto realice lo planeado, comprende: Autoridad o mando: principios del que deriva la administración

*Comunicación:* es la base de la coordinación y Supervisión: ver que se haga lo que debe hacerse

*Evaluación o Control:* implica medir los resultados de los procesos antes mencionados, a fin de saber si se ha ejecutado y cómo, lo solicitado, introducir acciones correctivas o realizar un plan de mejora , formulando nuevas y mejores acciones, comprende: Determinación de normas, que sirven para comparar Operación de Controles, es la función técnica de la evaluación y la Interpretación de resultados, que es el medio de un planeamiento próximo.

### Plan de Mejoramiento Continuo

Como última unidad de aprendizaje, se volvió a trabajar con la guía de trabajo elaborada por los directivos, ahora complementándola con Líneas de acción, explicándoles que son aquellas que agrupan iniciativas y orientan acciones que llevan a mejorar los aspectos deficitarios de la gestión institucional; esta se expresa en la intención y modo en que se cambiará el ámbito deficiente encontrado. Deben ser congruentes con la misión institucional y estar asociadas a los objetivos estratégicos de la entidad educacional; manera de asegurar la continuidad entre las definiciones estratégicas de la escuela y de las acciones que se planifican para el corto y mediano plazo. Las líneas de acción definen la forma de accionar del establecimiento

educativo y deben orientarse a detectar dónde se requiere mejorar , para ello habrá que proponer un conjunto de líneas, para evaluar alternativas la mejor y dar solución al problema detectado (diagnóstico situacional) Una vez que hubieron definido las líneas de acción, se les explicó que debían saber cómo lograr el mejoramiento, que para ello se requiere de un período específico, de algunos recursos y el logro de resultados, ya que para ello, debe considerar al recurso humano administrativo, técnicos y financieros disponibles , es decir considerar al capital humano que hay en todas las Organizaciones, sean educacionales o de otra área, estatales o privadas.

## CONCLUSIONES

Es primordial mejorar la gestión de los centros educativos a través de líderes responsables, a pesar del sinnúmero de barreras que constantemente se van presentando; ejercer liderazgo, es darle sentido a la vida de muchos, con amor. Las y los directores de centros educativos, deben contribuir al mejoramiento de sus escuelas, liceo o entidades de educación superior, para ello ,deben superar un proceso de implementación de un ciclo continuo de la Administración Directiva, que exige cada vez más, especialización en los profesionales y ello implica, que el/la directora del establecimiento, sea capaz de coordinar una serie de elementos humanos y técnicos de modo eficaz y eficientes para que logren los resultados que se pretende en el proceso y así, sea posible modificar, ajustar o complementar, de acuerdo a los requerimientos, el proyecto de mejora. Como resultado de la experiencia de estos tres cursos con diferentes directivos/as, me llevó a la reflexión y preguntarme si para dirigir las entidades educacionales, cualquiera sea su nivel, ¿ no será mejor contratar a una persona que aunque no haya estudiado pedagogía, sea un administrador o un ingeniero comercial? Hoy en día, la competencia exige especialistas y si a la cabeza, no está aquella persona idónea con mucho liderazgo, capacidades, facultades, habilidades y con un perfil como se requiere, la entidad perderá prestigio, posicionamiento y calidad, entre otros. En las instituciones de educación, el/la directora es una autoridad para los estudiantes y su obligación es por lo tanto, demostrar que tiene las suficientes capacidades y habilidades para lograr con su equipo de trabajo, el desarrollo integral de los alumnos de su entidad a cargo, para el correcto funcionamiento de la organización. Es primordial por lo tanto, que los/las directivos se preocupen de su constante formación y capacitación, de acuerdo a sus reales necesidades, que se den el tiempo y motiven a crecer como personas y profesionales que son.

# **PROPUESTA DE PROGRAMA DE CULTURA TURÍSTICA PARA ESTUDIANTES DE NIVEL BÁSICO EN MANZANILLO, COLIMA, MÉXICO, COMO DESTINO DE SOL Y PLAYA**

María Adelaida Silvestre Campos, Universidad de Colima

Nuchnudee Chaisatit, Universidad de Colima

Adriana del Carmen Bautista Hernández, Universidad de Colima

## **RESUMEN**

*Manzanillo, como destino de sol y playa, ha estado en constante desarrollo turístico, aumentando los productos y servicios que brinda a los visitantes, de manera que esto contribuye al incremento de la afluencia turística al puerto. Con este crecimiento, es importante sembrar en los involucrados en dicha actividad una cultura de atención, amabilidad y buen trato, demostrando con ello trabajo colaborativo. La presente investigación ofrece una propuesta de programa de cultura turística aplicada a niños de nivel básico en la ciudad de Manzanillo. El propósito es inculcar desde edad temprana el interés por una de las principales actividades económicas de su ciudad y la importancia de esta para sus familias, generando con ello un efecto multiplicador. La información recopilada para dicha investigación se hizo a través de una encuesta aplicada a la población, a los niños de escuelas de nivel básico y se complementó con entrevistas a profesores del mismo nivel. Los resultados muestran una notable falta de conocimiento sobre la actividad turística en los niños; así como la carencia de programas que puedan ayudarlos a aprender sobre ello; además de identificar los temas que se deberían incluir como parte del material a utilizarse dentro del programa de cultura turística.*

**PALABRAS CLAVE:** Cultura Turística, Programa, Niños de Educación Básica, Actividad Turística

## **PROPOSED PROGRAM OF CULTURAL TOURISM FOR STUDENTS IN BASIC LEVEL IN MANZANILLO, COLIMA, MEXICO, AS DESTINATION OF SUN AND BEACH**

## **ABSTRACT**

*Manzanillo, as a destination of sun and beach has been in constant tourist development, increasing the products and services offered to visitors, so that it contributes to increasing tourism to the port. With this growth, it is important to plant in those involved in such activity in a culture of care, kindness and good treatment, demonstrating collaborative work. This research offers a proposed program of tourist culture applied to children from basic level in the city of Manzanillo. The purpose is to instill from an early age interest in one of the main economic activities of the city and the importance of this for their families, generating a multiplier effect. The information collected for this research was done through a survey applied to the population, children from basic level schools and complemented by interviews with teachers of the same level. Results show a remarkable lack of knowledge about tourist activity in children; as well as lack of programs that can help them learn about it; and identify issues that should be included as part of the material to be used within the program of tourist culture.*

## INTRODUCCIÓN

Manzanillo es el puerto más importante en el estado de Colima, en México, es conocido por ser el principal puerto comercial del Pacífico. A pesar de que su principal ingreso económico es la industria comercial, el turismo se ha convertido en la segunda fuente de empleos para este destino en los últimos años. El crecimiento de la industria turística en Manzanillo ha sido apresurado, infraestructura moderna, nuevos centros comerciales, plazas y cadenas de comida rápida han abierto sus puertas, extendiendo una mayor gama de servicios de consumo para los locales y para los turistas. Nuevos hoteles también han hecho su aparición como el de la cadena Holiday In Express Manzanillo y City Express, por mencionar algunos, incrementando la afluencia turística. Manzanillo debe ser un puerto más competitivo y comenzar a prepararse para estar al nivel de otros destinos de gran trayectoria turística, por tanto, debe ser un compromiso de todos los involucrados en la actividad, lo cual implica la participación de jóvenes, niños, padres de familia, comerciantes, hoteleros, restauranteros y población en general, pues el esfuerzo conjunto hace que todos ganen y que la economía de la localidad tenga un buen flujo.

Para efecto de este trabajo de investigación, se optó por considerar solo a uno de los involucrados en la actividad turística, los niños de educación básica, con la finalidad de generar una cultura que los involucre en la obtención de un conocimiento turístico, que a su vez les ayude a comprender la importancia que éste tiene para el desarrollo y crecimiento de un destino, con la seguridad de que sembrando en ellos el interés por conocer más acerca de las actividades que se desarrollan en la localidad, la temporalidad de estas, las características de las personas que visitan su ciudad, el motivo por el cual viajan y los lugares que con frecuencia visitan durante su estancia en Manzanillo, se fomentará la importancia de la actividad turística y permitirá que en poco tiempo la calidad en la atención al turista mejore desde las familias hasta el más alto ejecutivo. La capacitación referida anteriormente estará representada por una propuesta de programa de cultura turística que se aplicará a los niños de educación básica. Dicho programa tiene como base una investigación de campo que inicio con una prueba piloto, en la que se observó el grado de conocimientos en el área turística que tiene los niños, el compromiso que manifiestan ante la buena atención del visitante; así como las tareas que organismos privados y gubernamentales han desarrollado para los niños en materia de turismo, considerando ejemplos no sólo en Manzanillo, sino también en todas partes de la república y el mundo.

## REVISIÓN LITERARIA

El turismo ha sido el instrumento tradicionalmente empleado para revalorizar culturas, y lograr que las mismas sean conocidas por la humanidad. Al estimular la protección de las ciudades históricas, la arquitectura tradicional, los monumentos, entre otras manifestaciones. Por lo tanto, el turismo ayuda a que los pueblos adquieran conciencia de sus propios valores culturales y contribuyan a fortalecer el orgullo nacional. Es el conjunto de valores, costumbres, creencias y prácticas que constituyen la forma de vida de un grupo específico. La cultura se aprende mediante una interacción social con otras personas en la sociedad. Los humanos, dependen para sobrevivir de la transmisión social de conocimientos. “La Cultura se integra por un conjunto de imaginarios colectivos y estructuras simbólicas de pensamiento (criterios, conocimientos, valores), los cuales se traducen en manifestaciones o expresiones (actitudes, costumbres, estilos de vida) que cohesionan a los miembros de una sociedad determinada y que la hacen diferente de las demás poblaciones o comunidades.”( SECTUR (2011), Breviario de cultura turística[en línea] Cultura [http://www.sectur.gob.mx/es/sectur/sect\\_9070\\_breviario\\_de\\_cultura](http://www.sectur.gob.mx/es/sectur/sect_9070_breviario_de_cultura)) “La Cultura Turística tiene su fundamento desde la perspectiva del desarrollo sustentable, concebido como la adecuada administración de los recursos (naturales, materiales, financieros y humanos), la Cultura Turística incorpora las dimensiones sociales, culturales, ambientales y económicas del turismo, orientándose hacia los beneficios comunitarios,

pretendiendo resaltar la participación de las comunidades según sus propias características locales. De manera que se logre la mayor satisfacción del visitante y el mayor beneficio para la comunidad receptora.” (SECTUR, 2011) La aparición del término Cultura Turística en el marco del desarrollo turístico de México es relativamente reciente. Es en 1992 cuando se realizan los primeros análisis sobre la necesidad de incorporar nuevos elementos a los esfuerzos de concientización realizados por varias décadas.

El objetivo primordial radica entonces, en enfocar el modelo turístico a una relación en donde los resultados y el éxito en la recepción y atención del turista sea reflejo del desarrollo sustentable del turismo, basado en el continuo mejoramiento de la calidad de vida de la población. Cultura Turística contará con ciertos elementos principales: Conocimientos – referidos a las experiencias asimiladas que constituyen la preparación de quienes participan en el turismo (comunidad receptora o anfitriones) para brindar servicios con calidad, los cuales pueden ser: históricos y geográficos, sobre los recursos, factores y repercusiones del turismo, sobre las características de la nación, región o localidad en la cual se vive y finalmente sobre técnicas y métodos de administración y operación de los servicios turísticos.

Valores – aquellos elementos emotivos compartidos, basados en ciertos principios éticos y que motivarán a brindar servicios con calidez y en los que encontramos: compromiso, constancia, honradez, orgullo, respeto, responsabilidad, vocación de servicio, amabilidad, cortesía, eficiencia, disposición y profesionalismo. Como resultado de la asimilación personal y colectiva de conocimientos y valores, existirán ciertas actitudes que le dan sentido en la práctica a la Cultura Turística (SECTUR, 2011). “Don Miguel Alemán Valdés en su libro “15 Lecciones de Turismo”, abordó por primera vez el concepto *conciencia turística* denotando entre otros factores, el carácter personal del turista y del anfitrión, por lo que resulta fundamental dirigir especial importancia a ambas partes.” La conciencia turística no es más que un estado mental positivo, orientando a la conservación de los bienes y servicios turísticos, estableciendo contactos favorables con su entorno social.

Existen algunos modelos de programas de cultura turística que se han implementado en escuelas primarias dentro del país; las tácticas a realizar pueden ser muy variadas de ahí dependerá el interés y agrado del niño por aplicar lo aprendido. Como ejemplo de ello se obtuvieron tres modelos.

*Primer Modelo: “La Batalla de los Tuzos, Zacatecas Mi Conquista” (Zacatecas, México).* Consiste en realizar un juego de mesa didáctico por parte de la SECTURZ. El objetivo es de interesar a los niños de la población en el aprendizaje de los principales atractivos de la entidad, a través del juego. Buscando que inicien su formación como promotores turísticos de las riquezas de la entidad, y personas con capacidad para brindar una atención adecuada a los visitantes. Consta de: Plática de media hora y un video. Demostración jugando el juego en una réplica gigante de éste en el patio de la escuela primaria.

*Segundo Modelo: “Turismo para Todos”.* SEDETUR-Empresas turísticas de Cancún, el cual tiene como objetivo incentivar la cultura turística entre los niños y fortalecer la economía interna. Mediante descuentos a parques acuáticos, restaurantes y recorrido en hoteles para los 4tos y 5tos grados, se quiere ayudar a que conozcan más lugares de Cancún para convertir a los niños y sus familias en promotores del turismo cubriendo las necesidades de esparcimiento de adultos y jóvenes. Como se pudo observar los modelos anteriores fueron aplicados en diversos lugares de la república y se presume de efectos positivos en los niños que recibieron esta información, lo cual fue transmitido a sus familiares provocando un efecto multiplicador de conciencia turística.

## METODOLOGÍA

La investigación se llevó a cabo en dos partes, se partió primero de una “*Propuesta para programa piloto de cultura turística para los estudiantes de sexto grado en escuelas primarias en la zona centro de*

*Manzanillo Colima*” aplicado a niños de sexto grado en escuelas primarias de la zona centro de Manzanillo, para lo cual se recurrió a la aplicación de los instrumento diseñado uno para los niños de las 6 primarias objeto de estudio, un segundo instrumento para sus profesores y otro para la muestra de la población manzanillense, tomando como base algunos antecedentes acerca de cultura turística en otros destinos. Con dicha encuesta se midió en los elementos participantes conocimientos sobre turismo, la importancia de este, actividades realizadas a partir de la actividad, entre otros aspectos. La Tabla 1 contiene la lista de escuelas primarias que participaron en la prueba piloto y la Tabla 2, muestra la cantidad de alumnos encuestados por escuela primaria participante en la prueba piloto.

Tabla 1: Escuelas Utilizadas Para la Aplicación de Encuestas

1. Benito Juárez
2. Rafael Ramírez
3. Vicente Guerrero
4. Primero de Junio
5. Padre Hidalgo
6. Cristóbal Colón

Tabla 2: Muestra de Alumnos Por Escuela Primaria en la Prueba Piloto

Escuela Primaria	Regla de Tres	Valor de X (%)	Regla de Tres	Valor de X (Encuestas A Aplicar)
Benito Juárez	147-100%	17%	107-100%	18.19 – 19
Rafael Ramírez	25 -x 147-100%	17%	x -17% 107-100%	18.19 – 19
Vicente guerrero	25 -x 147-100%	10.20%	x-17% 107-100%	10.91 – 11
Primero de junio	15-x 147-100%	15.64%	x-10.20% 107-100%	16.73 – 17
Padre hidalgo	23-x 147-100%	23.12%	x-15.64% 107-100%	24.73 – 25
Cristóbal colon	34-x 147-100%	17%	x-23.12% 107-100%	18.19 - 19
	25 -x		x-17%	

Para la aplicación de las entrevistas se eligió un profesor por cada grupo de sexto grado en las escuelas primarias de la zona centro de Manzanillo Colima y en el caso concreto de la población para la prueba piloto se tomaron 98,180 habitantes considerando un rango de edad entre los 18 años a 60 años, dando como resultado la necesidad de aplicar 385 encuestas como arroja la formula. La Tabla 3 muestra la población considerada para la aplicación del cuestionario en la prueba piloto.

$$n = \frac{(1.96)^2(93,180) (.50) (.50)}{(.05)^2(93,180-1) + (1.96)^2(.50) (.50)} = 385$$

Tabla 3: Población Considerada Para la Muestra

Edad	Población
18 – 24	“20,692”
25 – 29	“14,074”
30 – 34	“13,562”
35 – 39	“12,809”
40 – 44	“10,461”
45 – 49	“8,785”
50 – 54	“7,385”
55 -59	“5,415”

La segunda parte de este proceso consistió en la puesta a prueba del programa piloto, la evaluación de resultados y los ajustes pertinentes al mismo para generar el nuevo proyecto.

## RESULTADOS

En Manzanillo, como puerto turístico existen muchas necesidades, si se les da la importancia y atención pertinente, el desarrollo turístico podría aumentar más de lo esperado, por ello es importante que en la población manzanillense se implementen actividades en relación con el turismo. En base a la investigación de campo durante la prueba piloto, se detectó que los niños en las escuelas primarias de la zona centro de Manzanillo tiene el interés por adquirir nuevos conocimientos acerca del puerto y el turismo que recibe, pero existe carencia de información que permita a los niños de primaria valorar la visita de los turistas. Es importante mencionar que se entrevistó a algunos profesores de las escuelas primarias visitadas en relación a programas de cultura turística; el resultado de esta fue muy interesante ya que plantearon que no en todas las escuelas primarias han participado de una plática relacionada a cultura turística, a pesar de que la Secretaría de Turismo del Estado, a través de su delegación municipal, imparte charlas al respecto pero que lamentablemente no incluyen a todas las escuelas de nivel básico y que además, según opinión de los profesores entrevistados no son adecuadas para los alumnos por la complejidad del material utilizado durante las visitas.

Otros de los resultados obtenidos en la entrevista a profesores fue el que en algunas ocasiones piden a las escuelas primarias la colaboración de cinco niños para la recepción de cruceristas, sin informales, quiénes son, cuál es su lugar de origen, o motivos por los cuales ellos atracan en Manzanillo y el por qué los niños tiene que ir a recibirlos. La Secretaria de Turismo proporcionó un calendario de cursos de cultura turística y de playas limpias, en las cuales se puede observar que inician y concluyen en un mismo día sin dar continuidad a las pláticas implementadas o alguna comprobación de lo aprendido; además de se encontró que solo incluyen una escuela de educación básica lo que deja fuera a los más pequeños de manera que se pueda cumplir el objetivo de iniciar con la asimilación de la cultura hacia el turismo en su localidad. La Tabla 4 muestra la programación de actividades de SECTUR en materia de cultura turística con las escuelas del puesto de Manzanillo.

Tabla 4: Programación de Cursos de Cultura Turística en Manzanillo

Fuente: SECTUR

Después del análisis de la información de campo obtenida durante esta investigación se generó el programa de capacitación piloto sobre cultura turística, el cual fue aplicado por estudiantes del cuarto semestre de la Licenciatura en Gestión Turística y que fue implementado en las seis escuelas primarias sujeto de estudio.

### Propuesta de Programa Piloto de Cultura Turística.

*Primer paso:* Selección de temas principales a exponer, utilizando como guía un manual de cultura turística que ha sido diseñado exclusivamente para niños. Los temas deberán ser variados de interés analizados para desarrollarlos de la mejor manera para comprensión de los niños.

Elaboración y revisión del manual con el contenido apegado a las exposiciones y el material audiovisual brindando apoyo a los niños en las definiciones y explicaciones asíéndolo lo más sencillo posible y llamativo para el grado de ellos abarcando temas como geografía, historia, ecología, cultura, turismo entre otras. Reclutamiento de estudiantes para la aplicación del programa piloto acompañado de la capacitación pertinente, con base a aspectos pedagógicos.

*Segundo paso:* Visita a las escuelas para impartir la capacitación. Afirmado la fecha se procede a visitar las escuelas primarias para impartir las pláticas con una duración máxima 45 minutos, tiempo ideal para que los niños retengan la información y puedan disfrutar de las dinámicas, videos y juegos que se realicen.

*Tercer paso:* Seguimiento y evaluación de la capacitación proporcionada a los estudiantes. Se lleva a cabo un seguimiento de los niños después de haber concluido el programa de cultura turística y una visita de reafirmación de lo aprendido después de un par de meses para medir que tanta información pudieron retener y si están aplicando lo aprendido en su vida cotidiana aplicando un pequeño examen recordatorio.

Estructura Del Manual Utilizado Durante La Prueba Piloto El manual de cultura turística se conforma por los siguientes capítulos:

### Conoce Manzanillo

Historia.  
Ubicación.  
Geografía.

Actividad económica ( hablar un poco de la importancia de las dos actividades turísticas y comerciales)  
En este capítulo se explica en general de la historia del puerto el significado de la palabra Manzanillo, la ubicación, su geografía y clima y las actividades económicas importantes en el lugar. Aprendiendo un poco del turismo/ aprendiendo a hacer turismo

¿Sabías que? (que es turismo).  
¿A quién se le llama turista?  
Razones para hacer turismo.

Se explican conceptos básicos de turismo para que los niños se familiaricen con los conceptos más sencillos como el significado de turismo, de turista y las razones por las cuales las personas hacen turismo.

### Turisteando Por Manzanillo

Lugares naturales  
Parques  
Eventos culturales importantes de Manzanillo.

Eventos deportivos  
Iguanario  
Zonas naturales

Se habla acerca de los lugares atractivos en Manzanillo que los turistas frecuentan , como los parques, eventos deportivos, el iguanario y algunas zonas naturales, en los eventos culturales se pretende enseñar a los niños a que conozcan y se comprometan con Manzanillo sus tradiciones.

### Cultura Turística

¿Qué es la cultura turística?

¿Cómo lograr la cultura turística?

Y, Yo, ¿qué beneficios tengo si trato bien al turista?

10 mandamientos para el buen trato al turista.

En este apartado se retoma tema de cultura turística y la importancia que tiene esto ligado al turismo, se verá cómo lograr obtenerla y los beneficios que atrae el ofrecer una cultura turística efectiva. La propuesta anterior se llevo a la práctica por seis meses en las seis primarias sujetos de estudio y de lo cual se obtuvieron resultados favorables y se rescataron aspectos positivos del material a utilizarse, lo que permitió agregar temáticas nuevas y más claras, generar nuevas actividades, un mejor proceso de evaluación y seguimiento en los niños. De los resultados anteriores surge la Propuesta de Programa de Cultura Turística para Estudiantes de Nivel Básico en Manzanillo, Colima, México, como Destino de Sol y Playa. Con base a este nuevo proyecto se iniciaron los trabajos conjuntos con la Secretaría de Turismo del municipio, la cual permite capacitar a sus trabajadores para que se unan al grupo de estudiantes que colaboran con la capacitación sobre cultura turística en las escuelas de nivel básico.

A la fecha se han integrado 30 alumnos de la Licenciatura en Gestión Turística de la Escuela de Turismo y Gastronomía, de la Universidad de Colima al grupo de estudiantes capacitadores. Hoy día se han incluido para participar en la Propuesta de Programa de Cultura Turística para Estudiantes de Nivel Básico en Manzanillo, Colima, México, como Destino de Sol y Playa, siete primarias nuevas que se encuentran tanto en la zona centro como en la zona más turística de la ciudad de Manzanillo, seis escuelas preescolares y dos casas Hogar . Se han a la fecha las siguientes temática impartidas, como consecuencia de la mejora continua: Turismo para ver la vida, atractivos turísticos locales, nacionales e internacionales, música y danza como patrimonio de la ciudades, el turismo y la paz, viajar en familia, Artesanías, entre otros.

### **CONCLUSIONES**

Manzanillo es el municipio más importante del estado de Colima, por las actividades portuarias y turísticas que en él se desarrollan, pero a pesar de que para Manzanillo, la actividad turística comparte terreno con la comercial, sigue siendo para Colima el principal municipio turístico. En últimos años Manzanillo ha estado en constante desarrollo en el área turística, por ello que cada vez se detecta un incremento en la afluencia de visitantes a esta ciudad y puerto, por ende, los prestadores de servicios como los habitantes del lugar se capacitan para brindar servicios de mejor calidad y un excelente trato. Al inicio de este proyecto de investigación se plantearon varias interrogantes que denotaban la necesidad de saber el grado de compromiso de una ciudad con el turismo y el beneficio que la sociedad obtiene de ello. Bajo esta consigna se haría una propuesta para un programa de cultura turística aplicable principalmente a niños de nivel básico. En base a lo anterior y a una serie de actividades de campo, encuestas aplicadas, entrevistas e información documental y la aplicación de la propuesta piloto del programa de cultura turística se , concluyendo lo siguiente.

Se encontró que aún sin haber aplicado la prueba, era necesario implementar un programa de cultura turística, ya que respecto a las encuestas aplicadas a los niños de escuelas primarias y a un porcentaje de la población manzanillense se detectó un interés por adquirir nuevos conocimientos acerca del municipio de Manzanillo en relación con lugares destacados y puntos de interés; así como el buen trato hacia el turismo que arriba en Manzanillo. Era necesario establecer un programa fijo de capacitación en materia turística, con fechas programadas para charlas presenciales, material impreso, actividades externas que complementen la teoría impartida en el salón de clase, seguimiento y evaluación del programa, pues todo ello incrementaría el interés de los niños de nivel básico por obtener nuevos conocimientos en el ámbito turístico manzanillense, se despertaría la necesidad de ayudar a los visitantes cuando ellos lo requieran y los educandos obtendrían un nivel de compromiso mayor al inicial hacia el turista en la región. Y finalmente de acuerdo con los resultados obtenidos en las encuestas y en base a la capacitación que se implementó en las escuelas de nivel básico se concluye, la necesidad de un programa de cultura turística debidamente estructurado, con fechas de actividades programadas y con el seguimiento y evaluación pertinente, se espera que los habitantes de Manzanillo, iniciando por los niños, empiecen a generar una inquietud dirigida al buen trato hacia los turistas que visitan el puerto de Manzanillo, Colima, inquietud por el aprendizaje de una segunda lengua, por el cuidado y respeto de medio ambiente y por la conservación de espacios para realizar actividades turísticas. Por tanto podemos concluir de manera general que la propuesta de implementar un la Propuesta de Programa de Cultura Turística para Estudiantes de Nivel Básico en Manzanillo, Colima, México, como Destino de Sol y Playa, los instruirá en conocimiento para el buen trato al turista, teniendo como resultado la formación de individuos familiarizados con los temas de esta rama, capaces de transmitirlos a otros individuos generando un compromiso entre la sociedad que les ayude a mejorar su calidad de vida.

## MODELO DE LIDERAZGO DE COMPETITIVIDAD PARA MIPYMES EN MÉXICO, CASO PUEBLA

José Arturo Fuentes Rojas, Benemérita Universidad Autónoma de Puebla

Jacinto García Flores, Benemérita Universidad Autónoma de Puebla

Ana Lilia Silva Ambriz, Benemérita Universidad Autónoma de Puebla

### RESUMEN

*El objetivo de esta investigación es poder hacer conciencia a los empresarios que son propietarios de micro, pequeñas y medianas empresas, se han visto en muchos problemas desde la apertura comercial que se implantó en México en diciembre de 1994, de tal manera que es conveniente e importante encontrar un modelo que permita crear una nueva cultura empresarial que sea efectiva para poder enfrentar la competencia a nivel mundial y que estos no desaparezcan. Esta investigación se fundamenta en teorías de liderazgo, que ponen en evidencia que los empresarios carecen de estos principios, para ello se tienen testimonios vivos a través de entrevistas y cuestionarios muestra, que nos permiten establecer la hipótesis, que es necesario un cambio de ver y hacer las cosas, constituir un papel de líder que eleve la competitividad de las MIPYMES y que responda a los problemas que les aquejan en Puebla o México, como son: Cultura Empresarial (Visión Empresaria), Desarrollo del Capital Humano, Uso de las tecnologías existentes, entre otras.*

**PALABRAS CLAVES:** Administración, Calidad, Liderazgo en las Organizaciones, Liderazgo, Productividad, Mipymes, Globalización, Empresas, México Y Puebla

## ONE LEADERSHIP MODEL OF COMPETITIVITY FOR MIPYMES IN MEXICO, CASE IN PUEBLA-PUEBLA CITY

### ABSTRACT

*The objective of this research is to raise awareness entrepreneurs who own micro, small and medium enterprises, they have been seen many problems from trade liberalization that was implanted in Mexico on December 1994, such convenient and important to find a model that allow us to create a new business culture and be effective to face the global competition and they do not disappear. This research is based on leadership theories, that evidence entrepreneurs lacking these principal, for this, are living testimonies through interviews and simple surreys, that allows us establish hypothesize, that change is needed to see and do things, build a leadership role to increase competitiveness of the MIPYMES and that responds to the problems that afflict them in Puebla or México such as: Business Culture (Business Vision) Development of Human Capital and Use of existing technologies, among others.*

### INTRODUCCIÓN

Hoy en día las MIPYMES en México y en el caso particular en Puebla al margen de la gran penetración de empresas transnacionales, estas tienen un papel sumamente importante en la economía mexicana, esto no

solo con las grandes aportaciones de su producción y distribución sino por la gran cantidad de empleos que generan a lo largo del país, lo cual las hace de suma importancia para el crecimiento y desarrollo del país, sin embargo, las MIPYMES se han visto sumamente afectadas, ya que antes de la apertura en México en 1994, no era tan difícil poder crear, mantener y obtener créditos; hoy el embate de la inversión extranjera de empresas como Walmart, Nestle, etc., están ocasionando el cierre parcial o total de estas empresas, lo cual, también provoca por otro lado el despido impresionante de miles de personas por no tener condiciones de competencia o el suficiente capital para sostenerse en el mercado.

Los problemas en México son resultado de muchos años de historia derivados de crisis recurrentes a partir de los 70's, visible la de 1976, 1982, 1987, 1994, 2000, 2008 fundamentalmente todas ellas han afectado a las MIPYMES por efectos de inflación, devaluación, financiamientos, etc., sin embargo, la reciente crisis del 2008 ha impactado de manera muy importante ya que la contracción del producto interno bruto mexicano fue de 8% y está relacionada con la desaceleración de los Estados Unidos y deriva a la dependencia económica de México, agudizó la desigualdad económica y la MIPYMES han sido las más afectadas, generando una cadena de desempleo, disminución del salario real sumados a la inflación, según datos del INEGI en el 2008 alrededor de un millón 900 mil personas se encontraron en paro forzoso y se incorporaron un poco más de 300 mil personas a la economía informal, en la que el INEGI ubica a 11.8 millones de personas (el 10% de población total de México) y el IMSS reportaba que más de 356 mil trabajadores habían sido registrados como derechohabientes, pero de ellos 45% eran empleados eventuales. Si a todo ello le agregamos los problemas políticos y sociales de 2008 a la fecha, sobretudo la inseguridad pública, los sectores menos favorecidos viven en más dificultades, penurias y desgracias.

## REVISIÓN LITERARIA

En la literatura de administración y liderazgo se distinguen diversos métodos o modelos. Entre varios autores destaca Morales Castro (2006), quien nos muestra una visión de la situación que viven las MIPYMES en México. Robbins y Coutler (2005), Chiavenato (1999) definen lo que es liderazgo desde un punto de vista particular. Se analizaron la situación de las MIPYMES con datos del Instituto Nacional de Estadística y Geografía (INEGI), Instituto Mexicano del Seguro Social (IMSS) y la Secretaría de Economía (SE) donde se aprecia la influencia de estas empresas en la actividad económica del país, su importancia en la creación de fuentes de empleo y la desigualdad que enfrenta ante las grandes empresas por la falta de oportunidad para crecer. También fue de gran importancia los datos obtenidos por la Organización para la Cooperación y el Desarrollo Económico (OCDE) que indica la situación que vive nuestro país por no contar con una economía competitiva y la Organización Internacional del Trabajo (OIT) la cual muestra la afectación al poder adquisitivo de los trabajadores.

## METODOLOGÍA

El análisis inicia su proceso de conocimiento por la identificación de cada una de las partes que caracterizan una realidad; de este modo se logró establecer las relaciones causa-efecto entre los elementos que componen el objeto de investigación. En la investigación se evaluaron cada una de las variables que repercuten directamente en el liderazgo y productividad, de esta manera el análisis permitió establecer las relaciones causa-efecto, es investigación analítica y sintética, de un análisis deductivo que se utiliza en la investigación el cuestionario y la observación de testimonios vivos y entrevistas con los dueños de MIPYMES, lo que origina un estudio de diagnóstico identificando las características y desarrollando una hipótesis de trabajo sobre las variables cualitativas del objeto de estudio.

## RESULTADOS

El modelo neoliberal dominante en México es el ingrediente principal de la economía actual mexicana, orientado a la apertura, la desregulación, la inversión extranjera directa fundamentado en la globalización de los mercados, estrategia de transición adecuada para promover un crecimiento eficiente y competitivo de las empresas en México, esto implica la competencia, es decir, la asignación más eficiente de los recursos. La estrategia de entrar a esta dinámica de un modelo macro-global y competitivo que haga crecer la economía y ponerla a nivel de los mercados mundiales, sobre todo con Estados Unidos, sin embargo, en la actualidad México enfrenta la “paradoja de la competitividad” de la misma, es la de los países más abiertos, sin embargo, México es uno de los menos competitivos ubicándonos por la OCDE entre los últimos lugares.

Estos es claro que la globalización que si bien es expansiva en todo el país y en Puebla que atrae grandes compañías a invertir, ejemplo: Volkswagen, Audi, Walmart, Fiesta Inn, etc., a las MIPYMES no les queda mucho que hacer, desaparecer o seguir luchando y trascender para no desaparecer. Tras la crisis económica suscitada en años anteriores, hizo que México hoy tome más precauciones, sin embargo, la crisis de 1994-1995 afecto principalmente a la clase media y por consiguiente a empresarios de MIPYMES, la crisis actual podemos decir se ha generalizado y perjudica a la clase trabajadora y a los empresarios ya que ha impactado en los ingresos y por tanto la pérdida de sus empresas. Según la OIT: al mismo tiempo advirtió en su informe sobre salarios, sobre el débil crecimiento de las remuneraciones en México, en los últimos tres lustros el salario real aumento apenas el 1% al año. Los efectos de estas crisis y la competencia de la globalización están repercutiendo notablemente en los empresas de carácter familiar, convirtiéndolas en un problema de estabilidad económica de las empresas principalmente las más pequeñas, de esta manera el trabajo se ve afectado así como la visión de los empresarios, ay que el trabajo con estabilidad eleva la moral, la salud, aumenta la capacidad de aprendizaje, crea la posibilidad de una cultura más pujante, proyectando la auto realización, fomentando el respeto, contribuye a la estabilidad armónica y bienestar familiar.

La Secretaría de Economía afirma que las micro, pequeñas y medianas empresas poseen una importancia especial para nuestra economía desde la prospectiva que representan el 90% del total de las empresas constituidas y porque emplean a más del 42% de la población económicamente activa, al mismo tiempo aportan aproximadamente el 23% del Producto Interno Bruto, para el caso de Puebla y según “Las MIPYMES en el estado de Puebla Ed. BUAP, 2008”; el 76.9% de las empresas están constituidas como personas físicas lo que significa que la condición de estas está en manos de los dueños, los sectores que predominan son el comercio con 53.7%, servicios con 26.3%, manufactura con el 17.1% y construcción con el 2.9%. La población económicamente activa en el 2009 representa el 5.2%, en 2010 el 5.3%, en 2011 tiene una baja y representa el 4.8%, en 2012 es del 4.6%, lo cual representa 2.4 millones de desempleados y para el 2014 ya representa 2.6 millones de desempleados y si contrastamos esto con el crecimiento económico se manifiesta claramente lo que hemos venido comentando acerca de la crisis, en 2010 el crecimiento fue del 5.2%, en 2011 fue de 4.0%, en 2012 de 3.9%, en 2013 tiene una baja con un total de 1.1% y según Banxico en el 2014 tendrá una recuperación, ya que pronostica un 3.9% similar al que se tuvo en 2012. Estos números muestran claramente y aluden tanto a las micro, pequeñas y medianas empresas, que si bien han contribuido de manera significativa lamentablemente se ven sometidas a una serie de procesos y obstáculos que derivan de todo lo mencionado e incluso sino tienen cautela y visión, las hacen desaparecer.

Tabla 1: Estratificación de las MIPYMES en México

Tamaño	Industria (Empleados)	Comercio (Empleados)	Servicios (Empleados)
Microempresa	0-10	0-10	0-10
Pequeña empresa	11-50	11-30	11-50
Mediana empresa	51-250	31-100	51-100

En la tabla se puede observar cómo se clasifican las empresas de acuerdo al número de trabajadores que tienen, así como al sector que pertenecen. Fuente: Manual Micro Regiones. Fondo de Apoyo para la Micro, Pequeña y Mediana Empresa (Fondo PYME) (Octubre de 2004). México: Secretaría de Economía, p. 3

Desafortunadamente los programas y políticas implementadas para las MIPYMES, no han dado soluciones reales y de fondo, de modo que hay que buscar alternativas en busca de soluciones y como decimos en México, hay que rascarse con las propias uñas, las empresas deben hacer esfuerzos que mejoren sus atributos ante el constante cambio, renovarse o morir, es algo indispensable para seguir existiendo, los esfuerzos que haga una empresa por mejorar deben retroalimentarse con la percepción de aquellas que tiene características de líder, ya que los problemas en el que suscriben las MIPYMES podríamos citar según Morales Castro; PYMES financiamiento, inversión y administración de riesgos, casos prácticos, segunda edición, editorial Gasca Sisco, México 2006, enfrentan las siguientes causas:

Tabla 2: Crisis de las PYMES en México

Crisis	Problema
De liderazgo	1. El administrador general percibe a la empresa como una extensión de sí mismo <ul style="list-style-type: none"> <li>• El administrador general no escucha a los demás</li> <li>• El administrador general no controla</li> </ul>
De lanzamiento	2. Inexperiencia del dirigente <ul style="list-style-type: none"> <li>• Sistema de información inadecuado</li> <li>• Subcapitalización</li> </ul>
De liquidez	3. Aumento de las inversiones ligado al crecimiento <ul style="list-style-type: none"> <li>• Endeudamiento exagerado para compensar la subcapitalización</li> <li>• Errónea planeación de la tesorería</li> </ul>
De delegación	4. Concentración de la información y del poder <ul style="list-style-type: none"> <li>• Falta de personal de nivel intermedio</li> <li>• Aumento de personal</li> <li>• Diversificación de las operaciones</li> </ul>
De financiamiento	5. Expansión rápida <ul style="list-style-type: none"> <li>• Límite de crédito de proveedores</li> <li>• Límite de crédito bancario</li> </ul>
De prosperidad	6. Complacencia <ul style="list-style-type: none"> <li>• Relajamiento</li> <li>• Dividendos excesivos</li> </ul>
De continuidad	7. Divergencia entre los accionistas <ul style="list-style-type: none"> <li>• Salida del administrador general</li> <li>• Impuesto de sucesión</li> <li>• Desavenencias en el equipo dirigente</li> </ul>

En la tabla se aprecia que tipo de crisis puede afrontar una MIPYMES y que problemas tiene por la falta de liderazgo. Fuente: García Flores, Jacinto (et-al) (2008). Las MIPYMES en el estado de Puebla. Puebla: Benemérita Universidad Autónoma de Puebla

Por lo anterior, surgió la necesidad de hacer un estudio actual del modelo en que se dirigen las MIPYMES en Puebla con el fin de posibilitar la estabilidad y completar los ciclos que se marcan cuando se favorecen a emprender una empresa, encontramos que no hay recetas fijas ya que no hay empresas iguales, en consecuencia este estudio permite efectuar intervenciones tanto a nivel de diseño o rediseño de estructuras organizacionales, planeación estratégica, cambios en el entorno de la empresa, mejorar los mecanismos de comunicación, delegación y desarrollo, a través de una visión de líder altamente dinámico que tenga impacto en los resultados efectivos de la empresa, al mismo tiempo mejorar el estilo de dirigir procesos de toma de decisiones, capacitarse, impulsar el trabajo en equipo para optimizar los medios existentes y conseguir el fin perseguido. Para todo ello se plantea direccionar a los empresarios y cambiar su forma de pensar y actuar para elevar la productividad y lograr la congruencia que exige el mundo de hoy creemos, puede ayudar los enfoques de liderazgo y transformar de jefes a líderes.

Tabla 3: Diferencias Entre Jefe y Líder

Jefe	Líder
<ul style="list-style-type: none"> <li>• Existe por la autoridad</li> <li>• Considera la autoridad un privilegio de mando</li> <li>• Inspira miedo</li> <li>• Sabe cómo se hacen las cosas</li> <li>• Le dice a uno; ¡vaya!</li> <li>• Maneja a las personas como fichas</li> <li>• Llega a tiempo</li> <li>• Asigna las tareas</li> </ul>	<ul style="list-style-type: none"> <li>• Existe por la buena voluntad</li> <li>• Considera la autoridad un privilegio de servicio</li> <li>• Inspira confianza</li> <li>• Enseña cómo hacer las cosas</li> <li>• Le dice a uno; ¡vayamos!</li> <li>• No trata a las personas como cosas</li> <li>• Llega antes</li> <li>• Da el ejemplo</li> </ul>

*En esta tabla se muestran las diferencias que hay entre un jefe y un líder, un líder tiene una visión compartida de la realidad, de los objetivos y de la estrategia que se utiliza para lograrlos, es decir tiene un sentido de identidad colectivo. Fuente: elaboración propia.*

Estos cambios consisten en una modificación al interior del sistema, donde las organizaciones se ven obligadas a reestructurarse y ser más competitivas, Hersey Blanchard y Jonhson (1998). El liderazgo primeramente se orientaba al cómo, cuándo dar directrices y ordenes que obedecieran los subordinados, posteriormente se desarrollaron nuevas teorías orientadas a la participación y procesos consultivos de grupos (líder enfocado a la relación líder más participativo y directivo), acompañando a los miembros como podemos observar en la siguiente comparación.

Tabla 4: Liderazgo Tradicional Vs Liderazgo Basado en Confianza

Tradicional	Basado En Confianza
<ul style="list-style-type: none"> <li>• El líder dirige, controla, vigila y conduce a los miembros a una solución. Básicamente, los miembros reconocen su autoridad, liderazgo y responsabilidad.</li> <li>• El líder personalmente centra la atención en los problemas que deben resolverse, y realiza muchas de las funciones necesarias para lograr la solución adecuada.</li> <li>• El líder establece los límites y usa leyes de orden para mantenerse la discusión dentro de los límites estrictos determinados por la agenda. Controla el tiempo que se dedica a cada tema, evitando que el grupo divague.</li> <li>• La necesidad de arribar a una solución al problema es muy importante para el líder, por lo que las necesidades de los miembros individuales se consideran menos importantes.</li> </ul>	<ul style="list-style-type: none"> <li>• Los miembros son dueños del círculo, también el líder. Todos los miembros, con la asistencia del líder, contribuyen a su efectividad.</li> <li>• El círculo es responsable (con ayuda ocasional del líder) de alcanzar una solución que incluye la participación de todos los miembros. El líder debe servir y ayudar al círculo.</li> <li>• El líder estimula a los miembros de círculo a asumir responsabilidad por la productividad de su trabajo, por sus métodos de trabajo y por el tiempo disponible.</li> <li>• Con ayuda y estímulo del líder, los miembros advierten que deben satisfacer las necesidades, sentimientos y propósitos de todos, lo que crea un sentido de grupo. El círculo puede entonces continuar creciendo.</li> </ul>

*En esta tabla se muestran las diferencias del liderazgo tradicional vs liderazgo basado en confianza, describe la situación que se tienen entre los dos diferentes tipos de liderazgo. Fuente: elaboración propia*

El líder tradicional tiene sus demeritos, significa que hay que evolucionar ya que se puede perder el enfoque el enfoque o visión del presente y el futuro.

Tabla 4: Comportamiento, Causa, Efecto del Líder Tradicional

Errores Conceptuales del Líder Tradicional	Consecuencias del Líder Tradicional
<ul style="list-style-type: none"> <li>• Se confunde liderazgo con carisma.</li> <li>• Se debe nacer líder para serlo.</li> <li>• Sólo se necesitan líderes en la cúpula.</li> <li>• Es una habilidad.</li> <li>• No se puede aprender ni desarrollar.</li> <li>• Es un instrumento o forma de influir en las personas para ganar amigos.</li> </ul>	<ul style="list-style-type: none"> <li>• Centralismos y concentración de la información.</li> <li>• Verticalismo y autoritarismo en el mando.</li> <li>• Ineficiencia y desmotivación.</li> <li>• Baja productividad.</li> <li>• Carencia de iniciativa.</li> <li>• Apego a viejas rutinas.</li> <li>• Estructuras rígidas.</li> <li>• Desadaptación para el cambio.</li> <li>• Burocracia.</li> </ul>

*Esta tabla muestra los errores que cometen un líder tradicional y las consecuencias de tener un líder tradicional, lo cual nos indica que tipo de errores se cometen en estos líderes. Fuente: Elaboración propia*

Si nosotros parafraseamos algunos autores de liderazgo encontramos tres conceptos más relacionados al poder, autoridad e influencia.

*Poder*: capacidad de coaccionar a alguien.

*Autoridad*: el arte de conseguir que la gente haga voluntariamente lo que tú quieres.

*Influencia*: propiciar que se haga algo.

Según Robbins y Coutler “Liderazgo”: capacidad de influir en un grupo a fin de encaminarlo hacia el logro de sus metas; también define “líderes”: personas que tienen la capacidad de influir en otros y que poseen autoridad administrativa. Según Chiavenato Idalberto (1999) lo define como la influencia, arte o proceso de influir sobre las personas de modo que estas se esfuercen voluntariamente hacia el logro de las metas del grupo. Otros autores afirman que liderazgo es: Definir estrategias proporcionando orientación a los demás, teniendo visión de aquello que se puede lograr. Desarrollar una involucración social y psicológica – cultura de equipo – que permita alcanzar objetivos definidos en la estrategia, esto es motivar, incorporar, recompensar y unificar. El término de líder dentro de una organización debe entenderse en el marco de que las empresas requieren de personas, cualidades innatas o aprendidas capaces de dirigir un equipo y conseguir los objetivos y metas trazados en común. Existen diferentes tipos de liderazgo pero citamos tres:

Liderazgo autocrático	Líder que ordena, dogmático, dirige mediante recompensa o castigo, se apoya de la autoridad formal, el puesto de autoridad.
Liderazgo democrático	También conocido como participativo, delega autoridad, involucra y plantea la participación, provoca entusiasmo.
Liderazgo Laissez-Faire	Viene del término en francés “dejar ser”, se caracteriza porque se haga lo que deben hacer, hay poco poder del líder.

## CONCLUSIONES

Aplicando la metodología descrita se puede señalar que, sin negar que existen diferentes tipos de liderazgos es importante que los líderes de hoy y en consecuencia con las encuestas y observaciones que se tiene de la realidad que viven los empresarios de la MIPYMES en Puebla y podríamos decir en la cultura tradicional de México, cada vez más están abiertos a la tecnología y a la movilidad, se han adaptado pero se mantiene una actitud que bloquea su capacidad de dirigir y más a un ser líder. Por tanto consideramos que deben de cumplir con ciertas características como las siguientes: Saber escuchar, ser buen comunicador, tener sentido de la realidad y no sólo de su verdad, consciencia situacional, flexibilidad, creativo, aspiracional, honesto, etc., puede ser esto y más, creemos que las condiciones actuales exigen una transformación en la cultura empresarial, para los empresarios de hoy y para las nuevas generaciones y que estas se refuercen con principios que deberán ser trabajados para encontrar su identidad y desarrollarlas a favor de la sociedad. Estos principios deberán convertirse en una forma de pensar y generar los cambios convenientes y son:

*Autodisciplina*: es decir deberán trabajar a un nivel de alto rendimiento, sin tener que esperar que algo o alguien se los pida, estableciendo claro sus objetivos de corto, mediano y largo plazo. Da disciplina entendido como lo que se debe hacer y no lo que quiero hacer según la planeación, programación y procedimientos establecidos.

*Ritmo*: establecer un programa de actividades sin dejar que otras actividades distraigan el objetivo y quehacer del día a día, programando debidamente y razonablemente las tareas preestablecidas, constancia.

*Equilibrio Emocional*: entendido y priorizando lo que se quiere ser y no confundirlo con lo que se requiere tener, este principio hace énfasis en el bienestar, cumpliendo con las necesidades básicas, culturales y

psicológicas y poder administrar el tiempo con los fines. Consideramos que el líder se forma y hoy el uso de la tecnología y el conocimiento permite que se cumplan con los cometidos de ser buenos líderes, buenos padres, buenos maestros y así contribuir a un mundo mejor.

# ESTRATEGIAS DE DIFERENCIACIÓN EN MODELOS DE NEGOCIO DE CARNE BOVINA

Miguel Ángel Vargas Del Ángel, Universidad Autónoma Chapingo  
Manrubbio Muñoz Rodríguez, Universidad Autónoma Chapingo  
Vinicio Horacio Santoyo Cortés, Universidad Autónoma Chapingo

## RESUMEN

*Los nichos de mercado por lo común son poco visibles para el público general pero altamente rentables para las empresas. Entre diversos nichos de mercado existentes en México para la carne de bovino, se identificaron y estudiaron cuatro modelos de negocio: carne artesanal (cecina), carne para exportación y mercado nacional con sello TIF, carne Kosher con sello TIF, y carne Wagyu con sello TIF; mismos que fueron analizados bajo la metodología de estudios de caso con la finalidad de identificar las estrategias de diferenciación que les permiten obtener ventajas competitivas, para lo cual se consideraron diez variables de análisis (segmento de mercado objetivo, calidad genética del ganado, edad al sacrificio, sistema de clasificación, integración de procesos, servicios adicionales valorados por el cliente, proceso de ceba, sistema de sacrificio y procesamiento, valor de mercado por Kg de carne fresca, y método de asignación de precio). La principal conclusión es que las estrategias de diferenciación resultaron relevantes para la elección que hacen los clientes en el mercado y para la captura de valor económico que realizan las empresas con la finalidad de generar utilidades.*

## DIFFERENTIATION STRATEGIES IN BUSINESS MODELS OF BEEF

### ABSTRACT

*The niche markets are usually few visible to the public but highly profitable for companies. Among various existing market niches in Mexico for beef, were identified and studied four business models: artisanal meat (jerky), meat production for export and domestic market with stamp TIF, Kosher meat with seal TIF, and Wagyu beef with stamp TIF; same which were analyzed using the methodology of case studies in order to identify differentiation strategies that enable them to gain competitive advantages, for which considered ten variables analysis (target market segment, genetic quality of livestock, age at slaughter, classification system, process integration, additional services valued by customer, fattening process, system of slaughtering and processing, market value per kg of fresh meat, and method for price allocation). The main conclusion is that differentiation strategies were relevant to the choice made by customers in the market, and to capture economic value by firms in order to generate profits.*

**KEYWORDS:** Market Segmentation, Classification System, Value Network

Las evidencias (FAO, 2012) indican que la red global de valor en bovinos carne pierde competitividad y valor de mercado frente a otras redes de valor de proteína animal tales como: la carne de pollo y carne de cerdo, de ser la carne de mayor producción mundial (42% del total) en la década de 1960, pasó a ocupar el tercer lugar con 23% en la primera década del siglo XXI. Estas tendencias se atribuyen a los ciclos productivos y reproductivos más largos de la ganadería bovina (Aranda, García Ortiz, Monzon Armenta,

Hernández Garay, & C, 2009) y al tipo de alimentación de cada especie, pero desde una perspectiva económica, las tendencias se pueden atribuir al costo de producción que alcanza cada especie y a su vez, a la capacidad de competir con precio en el mercado. En efecto, los precios de exportación de la carne bovina norteamericana son hasta cuatro veces superiores a los de la carne de ave (USMEF, 2013).

En México, la ganadería bovina especializada en la producción de carne ocupa el 50% del territorio nacional, concentra 32.9 millones de cabezas de ganado para la cría, y 2.5 millones de cabezas de ganado en 54 mil corrales de engorda (INEGI, 2013), y exportó un millón 399 mil becerros, principalmente a los Estados Unidos de América en 2012 (AMEG, 2014) (SIAP\_SAGARPA, 2013b). Por su parte, la agroindustria de la carne de bovino aporta el 29% de la producción pecuaria nacional de México (SIAP\_SAGARPA, 2013b), que equivale a 23% del valor total de la producción pecuaria, por el orden de los 61 mil millones de pesos; genera un millón 130 mil empleos directos remunerados, tres millones de empleos relacionados y 600 millones de dólares en divisas (COMECARNE, 2013). Con la dinámica de la globalización se ha incrementado la competitividad del sector cárnico nacional, sin embargo, las empresas mexicanas también tiene que enfrentar en el mercado interno a la oferta que proviene del extranjero, la cual suele competir con estrategias agresivas en cuanto a calidad y precios bajos.

Esta tendencia obliga a las empresas nacionales inmersas en la red de valor de carne bovina a buscar estrategias de diferenciación de productos y modelos de negocio (Shafer, Smith, & Linder, 2005), que les ayuden a resolver el problema de la competitividad (Johnson, Christensen, & Kagermann, 2008). En este sentido, la exploración de nichos de mercados ayudan a las empresas en la creación de espacios de mercados no disputados, hacer que la competencia sea irrelevante, crear y captar nueva demanda, romper el dilema valor/costo, y alinear el sistema completo de actividades de una empresa en la búsqueda de diferenciación y bajo costo (Kim & Mauborgne, 2004).

Una manera primaria de establecer la diferenciación en la carne de bovino obedece a la clasificación de los establecimientos de sacrificio (SIAP\_SAGARPA, 2013a), los cuales en México, se dividen en rastros municipales y rastros Tipo Inspección Federal (TIF). En estos últimos se reciben animales para sacrificio bajo una estricta normatividad, cuyo propósito fundamental es garantizar la inocuidad del producto (ANETIF, 2013). Otras estrategias de diferenciación tienen que ver con la conformación del modelo de negocio (Montgomery, Thomas, & Kamath, 1984), las cuales es importante conocer, en tal virtud las preguntas a responder son: ¿cuáles son las estrategias de diferenciación que las empresas de la agroindustria de la carne bovina han implementado para conformar su modelo de negocio? ¿a qué nichos de mercado están orientadas esas estrategias de diferenciación?, y ¿cuáles son las perspectivas para la red de valor bovinos carne, con respecto a la conformación de nichos de mercado? El presente trabajo tiene por objetivo caracterizar y analizar cuatro modelos de negocio de la red de valor bovinos carne mexicana, a fin de identificar nichos de mercado que permitan mejorar las oportunidades de negocio para esta red de valor.

## REVISIÓN DE LITERATURA

Un modelo de negocio se define como la manera en que una organización o persona física crea, entrega y captura valor (Osterwalder & Pigneur, 2010). Entre las variables que definen a un modelo de negocio destacan las siguientes: el segmento de clientes al cual está dirigido, la manera en que está formulada la propuesta de valor, los canales de comunicación y distribución, la relación que se establece con los clientes, las fuentes de ingresos, los recursos clave de la empresa, las actividades clave de la empresa, y las alianzas que la empresa establece con otros actores. La manera de crear valor generalmente está relacionada con la transformación de una necesidad no satisfecha en una solución apropiada, misma que puede ser valorada por los clientes de la organización como por no clientes, debido a que en la mayoría de las veces las soluciones apropiadas generan externalidades positivas para la sociedad, como pueden ser empleos, menor contaminación o productos saludables que generan bienestar. De la misma manera el valor entregado puede ser recibido por los clientes como por la sociedad que se beneficia de la operación de un modelo de negocio

determinado. En cuanto a la captura de valor, principalmente se considera a los accionistas, no obstante que pueden ser otros miembros de la red de valores que capturen alguna parte del valor generado y entregado, por ejemplo algunos eslabones de una cadena productiva que se benefician de recibir un producto elaborado con mucha calidad y alto valor en el eslabón anterior (Montgomery et al., 1984). Por otro lado, el éxito o fracaso de una empresa poco tiene que ver con la casualidad, más bien tiene que ver con la planeación de estrategias de gobierno y dirección. La estrategia es la disciplina que sirve, o debería servir, para administrar mejor el futuro, al menos el empresarial (Massa, Zott, & Amit, 2010). De esta manera, la visión anticipada es una de las dimensiones más sustantivas de la estrategia, y la gestión del futuro uno de los rasgos que han servido para trazar la ruta de las grandes empresas de negocios, para llegar a ser lo que han logrado (Hamel & Prahalad, 2005).

La teoría general de la estrategia, es una disciplina que proporciona a quienes tienen la responsabilidad de tomar decisiones, el bagaje mental e instrumental de acción necesario para saber responder a los retos y oportunidades que les aguardan, por aleatorios y hasta inesperados que sean (Pérez & Massoni, 2009). La teoría general de la estrategia, se concibe como la ciencia de la articulación social, centrada en el aprovechamiento de las coyunturas críticas, para convertirlas en oportunidades, y en la búsqueda de mejores configuraciones de la trama social; en tal sentido adquieren importancia conceptos como: complejidad, conectividad, redes de valor, percepciones, flujos, dinámicas, sistemas, interacciones, correlaciones, pero sobre todo la acción, debido a que la estrategia es una disciplina para la acción y su banco de pruebas es la realidad social.

Entre las principales estrategias para mantener una ventaja competitiva está la diferenciación de un producto o modelo de negocio, entre más difícil sea de imitar esa estrategia, mayor tiempo podrá durar esa ventaja competitiva (Porter, 2005). En este sentido, las empresas sensatas enfocan sus acciones de marketing a un público bien definido. En mercados de mucha competitividad las estrategias funcionales están relacionadas con los servicios externos, como la garantía de calidad, inocuidad y el servicio de trazabilidad pueden ser importantes para diferenciar al producto (Kelli, 2002). En concreto la estrategia debe ser una síntesis de características, diseño, calidad, servicio y costos porque todos los mercados tienen muchos segmentos y nichos (Kotler, 2003).

Los clientes de los nichos suelen encontrarse complacidos de que alguien preste atención a sus necesidades, si una empresa les atiende bien, podrá convertirse en propietaria del nicho. Si bien el volumen de los nichos suele ser pequeño, el margen por lo general tiende a ser alto. Las estrategias deben ser vender más productos y servicios al mismo nicho, vender a personas adyacentes al nicho y buscar otros nichos adicionales. Los nichos por lo general son poco visibles para el público general pero altamente rentables (Kotler, 2003). En cuanto a los modelos de negocio de la carne de bovino, la estrategia más importante de diferenciación es el sacrificio de animales bajo el estándar de los establecimientos TIF, que fue implementado por el gobierno federal entre 1949 y 1950, para impulsar la modernización de la industria de la carne y sus derivados, con el propósito de elevar los estándares de calidad en beneficio de la salud pública y de la satisfacción plena de los consumidores (ANETIF, 2014), con lo cual se buscaban beneficios colaterales tales como: la regulación de los establecimientos de matanza, disminución del gasto de agua y la contaminación que generaban los rastros y mataderos municipales, así como garantizar el sacrificio humanitario e higiénico de los animales. Pero fue hasta inicios del presente siglo donde empezó a tener relevancia el sistema de plantas TIF, principalmente por las exigencias del mercado internacional y de los consumidores que ahora son más informados. En síntesis, la nueva competencia no se da entre los productos físicos que las empresas producen en sus plantas, sino entre los valores que añaden a sus ofertas en forma de: embalaje, empaque, servicios, publicidad, consejos al cliente, financiación, plazos de entrega, almacenamiento y otras cosas que el consumidor valora.

## RESULTADOS

En la Tabla 3 se destacan las principales estrategias de diferenciación para cada uno de los cuatro modelos de negocio estudiados.

Tabla 3: Caracterización de Cuatro Modelos de Negocio de la Red de Valor Bovinos Carne Mexicana, en la Que Se Destacan las Principales Estrategias de Diferenciación

Estrategia de Diferenciación	Modelo de Carne Artesanal (Cecina de Yecapixtla)	Modelo de Carne Para Exportación y Mercado Nacional Con Sello TIF	Modelo de Carne Kosher Con Sello TIF (Carne Certificada Por El Protocolo Judío)	Modelo De Carne Wagyu Con Sello TIF (Carne Producida y Clasificada Bajo el Protocolo Japonés),
Segmento de mercado objetivo	Clientes de clase media y baja, que acuden a mercados o restaurantes populares	Exportación de los cortes de mayor calidad y clientes de clase media que acuden a supermercados	Comunidad Judía, y clientes de clase alta y media alta que acuden a supermercados	Clientes selectos del grupo restaurantero y consumidores de clase alta y media alta
Calidad genética del ganado empleado	Totalmente heterogénea	Tipo de ganado comercial encastado con <i>Bos indicus</i> , y razas europeas, garantiza buenos rendimientos comerciales	Tipo de ganado comercial encastado con <i>Bos indicus</i> y razas europeas, garantiza buenos rendimientos comerciales	Raza Wagyu proveniente de Japón, determinante en el marmoleo, vetado y terneza de la carne
Edad al sacrificio	Mayor a 30 meses, busca aprovechar los bajos precios	Máximo 20 meses, busca eficientar el proceso de ceba	Máximo 20 meses, busca eficientar el proceso de ceba	Máximo 30 meses, pero no menos de 28, busca el máximo marmoleo
Sistema de clasificación de calidad	Carente de sistema de clasificación de calidad	Sistema americano de clasificación de calidad, permite diferenciar productos para mercado nacional y para exportación con base en dos factores: marmoleo y edad de sacrificio	Sistema americano de clasificación de calidad, permite diferenciar productos con base en dos factores: marmoleo y edad de sacrificio	Sistema japonés de clasificación de calidad, establece diferencia en calidad (Mirror Type Carcass Camera), con base en seis factores: marmoleo, vetado, color de grasa, color del musculo, firmeza y genética
Integración de procesos	Totalmente fragmentado	A partir de la ceba, sacrificio, empacado, congelado y distribución a centros comerciales y mercado internacional, mediante la exportación busca captar un mayor porcentaje de valor agregado	A partir de la ceba, sacrificio, empacado, congelado, distribución a la comunidad judía, y centros comerciales; mediante la certificación kosher busca captar un mayor porcentaje de valor agregado	Desde la cría del becerro hasta la distribución que garantiza trazabilidad, con outsourcing en el proceso de sacrificio, empacado y congelado; también permite captar la mayor parte del valor agregado
Servicios adicionales que el cliente valora		Etiqueta con sello TIF	Permite la supervisión del proceso por un Rabino, información en etiqueta, con sello TIF	Capacitación a personal de restaurantes para promocionar el producto, información en etiqueta, con sello TIF
Proceso de ceba	No estandarizado	Confinamiento, basado en granos, que busca marmoleo, grasa blanca, terneza y jugosidad, no se permite el uso de beta-agonistas	Confinamiento, basado en granos, que busca marmoleo, grasa blanca, terneza y jugosidad, no se permite el uso de beta-agonistas	Confinamiento bajo el protocolo japonés, basado en granos, que busca marmoleo, vetado, grasa blanca, color del musculo, terneza y jugosidad, no se permiten hormonas, antibióticos o beta-agonistas en el proceso
Sistema de sacrificio y procesamiento	Generalmente en rastros municipales, proceso de elaboración tradicional al aire libre y secado al sol, aplica sal como método de conservación, busca el sabor y gusto popular	Sistema TIF que garantiza inocuidad, empacado al alto vacío y congelamiento (Blast Freezer)	Sistema TIF que garantiza inocuidad, empacado al alto vacío y congelamiento tipo ráfaga (Blast Freezer)	Sistema TIF que garantiza inocuidad, empacado al alto vacío y congelamiento tipo ráfaga (Blast Freezer)
Valor de mercado por Kg de carne fresca	Precio del Kg de cecina= 183%	Corte de Mayor precio (calidad Premium, exportación)= 357% Corte de menor precio (calidad Select, mercado nacional)= 100%	Corte de Mayor Precio (calidad Premium)= 459% Corte de menor precio (calidad Choice)= 155%	Corte de mayor precio (calidad Premium)= 1833% Corte de menor precio (calidad Cross)= 306%
Método para asignación de precios	Asignación genérica de precio	Diferenciación por tipo de cortes y calidad	Diferenciación por tipo de cortes y calidad	Diferenciación por tipo de cortes y calidad

*Nota: para estimar el valor de mercado se tomó el precio del kilogramo de bistec calidad Select, ofertado al consumidor, en un supermercado de la Ciudad de México, el cual fue de Mx \$ 98.00=100%, en el caso del modelo convencional con sello TIF, el corte de mayor precio fue tomado el precio por mayoreo para exportación. Fuente: elaboración propia.*

## METODOLOGÍA

Entre diversos nichos de mercado existentes en México para la carne de bovino, se identificaron cuatro modelos de negocio y estos son: carne artesanal (cecina de Yecapixtla), carne para exportación y mercado nacional con sello TIF, carne kosher con sello TIF, carne Wagyu con sello TIF, los cuales fueron analizados bajo la metodología de estudios de caso (ITESM, 2012) (Díaz\_De\_Salas, Mendoza, & Porras, 2011) (Eisenhardt, 1999) con la finalidad de identificar las estrategias de diferenciación que les permiten obtener ventajas competitivas, para lo cual se consideraron diez variables de análisis (segmento de mercado objetivo, calidad genética del ganado empleado, edad al sacrificio, sistema de clasificación, integración de procesos, servicios adicionales valorados por el cliente, proceso de ceba, sistema de sacrificio y procesamiento, valor de mercado por Kg de carne fresca, método de asignación de precio); en este sentido, se llevó a cabo una revisión exhaustiva de información existente en medios impresos, páginas web, estadísticas diversas, documentos técnicos y científicos; así también se llevaron a cabo entrevistas a profundidad con los actores clave de cada uno de los modelos de negocio estudiados; para finalmente establecer una caracterización de las redes de valor encontradas, acorde a sus características propias de gestión.

### Discusión de Resultados

De conformidad con los resultados encontrados, en los años posteriores a la década de los 90, las estrategias de diferenciación han adquirido una gran importancia en las empresas inmersas en la agroindustria de la carne de bovino, un bien intermedio, que a pesar de más de 60 años de existencia (ANETIF, 2014) del primer rastro de Tipo Inspección Federal en México, se había considerado como un commodity, porque los consumidores valoraban poco la diferencia del producto proveniente de un rastro municipal contra los productos provenientes de un rastro TIF, que por los costos de gestión presentaba precios más elevados para el consumidor.

Fue a principios del presente siglo que se empezó a destacar entre los consumidores la importancia de contar con sistemas de gestión que garanticen las buenas prácticas de manejo, sacrificio humanitario, procesos higiénicos e inocuos, que son supervisados y certificados por terceras empresas que dan credibilidad a las empacadoras y confianza a los consumidores. Y es que para la zootecnia en el mundo entero, una preocupación constante ha sido el incremento en la eficiencia de la conversión alimenticia de los animales, en consecuencia en muchos corrales de ceba (principalmente los que no están ligados a un rastro TIF), se ha incurrido en la utilización de diversas sustancias tales como antibióticos, pro bióticos, encimas, antimicrobianos, modificadores del sistema inmunitario, modificadores metabólicos o agentes anabolizantes, entre estos productos destacan los llamados fármacos "beta- agonistas" como clenbuterol y ractopamina, mismos que han llegado a provocar intoxicaciones en animales y en seres humanos, principalmente porque se han utilizado de manera indiscriminada. Al respecto el gobierno mexicano ha tomado cartas en el asunto, al grado de legislar para no utilizar esas sustancias.

En este sentido, los procesos del Tipo Inspección Federal se han convertido en una primera estrategia de diferenciación para la carne fresca. Llama la atención que en el caso del modelo de carne artesanal, la cual puede proceder de rastros municipales o de carne importada, de tal manera que esta estrategia parece ser irrelevante para los consumidores de cecina. A pesar de que muchos productores primarios de México se han resistido al empleo de sistemas de clasificación de calidad de la carne, estos son otra fuente importante de diferenciación que repercute en los precios, tanto los pagados al productor como los precios ofertados al consumidor. Incluso el modelo de negocio de carne Wagyu tiene su propio sistema de clasificación, debido a que el sistema americano de clasificación utilizado por los rastros TIF, para el ganado convencional, resulta ser insuficiente para la alta calidad que distingue a la carne procedente de ganado Wagyu. Por otro lado, debe resaltarse que el modelo de carne artesanal, por ser un producto de gran tradición popular, se

asemeja más a un commodity que no se ajusta a la diferenciación por sistema de calidad no obstante que es diferente del bistec que los consumidores pueden comprar en el mercado.

El segmento de mercado al que están dirigidos los diferentes modelos de negocio analizados, es otra estrategia de diferenciación, así la carne artesanal o cecina de Yecapixtla está orientada a consumidores de clase media y baja que acuden a los mercados populares, mientras que el modelo de carne para exportación y mercado nacional con sello TIF está dirigido a consumidores de clase media que compran en supermercados, el modelo kosher tiene orientación precisa a la comunidad judía y a consumidores de clase media alta y alta que acuden a supermercados, y finalmente el modelo Wagyu tiene orientación al grupo restaurantero más selecto de México, y consumidores de clase media alta, y alta.

Con respecto a la calidad genética empleada en los animales procesados, en el modelo de carne artesanal no existe estrategia de diferenciación, mientras que los animales sacrificados en los modelos de: carne para exportación y mercado nacional con sello TIF, y carne kosher se privilegian los animales de tipo comercial de razas europeas encastadas con *Bos indicus*. En el caso del modelo Wagyu, la diferenciación genética es sumamente importante, dado que se requiere estrictamente ganado de la raza Wagyu. Relativo a la edad de sacrificio de los bovinos, en el llamado modelo de carne artesanal no existen restricciones, mientras que en los modelos de carne para exportación y mercado nacional con sello TIF, y carne kosher con sello TIF; se privilegian animales jóvenes, no mayores a 20 meses de edad. No obstante, en el modelo de negocio Wagyu, la edad de sacrificio en México se recomienda entre los 28 y 30 meses de edad para lograr un mejor marmoleo y veteado de la carne. La integración de procesos es una estrategia importante de diferenciación, debido a que en la medida en que se logra un negocio más integrado, mayor es la captación de valor económico para la empresa. El modelo de negocio de carne artesanal es el que presenta una mayor fragmentación de la cadena de suministro en la que se identifican como actores importantes: los productores primarios, los acopiadores, los cebadores, los introductores, los tablajeros y los distribuidores. En contraste el modelo Wagyu, por ser un producto de alto valor agregado, presenta una mayor integración de procesos y sólo se subcontrata el sacrificio, empaque y congelado en el rastro TIF, pero la mayor parte del valor agregado es para la empresa productora, que también se encarga de la distribución y comercialización e su producto al consumidor final.

En cuanto a los servicios adicionales que el cliente valora, en el modelo de carne kosher con sello TIF, se permite el protocolo de sacrificio de los rabinos, y se informa de la calidad kosher a los clientes mediante una etiqueta en el empaque del producto. En el modelo de carne artesanal el proceso de ceba no es relevante como estrategia de diferenciación, mientras que en los modelos: carne para exportación y mercado nacional con sello TIF, y carne kosher, el confinamiento y la alimentación a base de granos, con la prohibición estricta de los beta-agonistas, son importantes para garantizar la calidad de la carne. En el modelo Wagyu este proceso es aún más estricto porque además de lo anterior, tampoco se permite el uso de antibióticos, hormonas, subproductos de origen animal y se procura al máximo el bienestar animal.

En el modelo de carne artesanal, el precio se fija como un commodity debido a la ausencia de un sistema para la clasificación de su calidad. En cambio en los otros tres modelos de negocio, la diferenciación por calidad y tipo de corte son factores sumamente importantes para la asignación de precios. En cuanto al valor de mercado por kilogramo de carne fresca, llama la atención que la carne artesanal, por ser un producto de arraigo popular alcanza un precio superior en 1.8 veces al bistec de calidad Select, en el caso del modelo de carne para exportación y mercado nacional con sello TIF, éste puede alcanzar un sobreprecio hasta 3.5 veces al bistec, por su parte el modelo kosher alcanza un sobreprecio que va de 1.5 a 4.5 veces el precio del bistec de calidad Select, mientras que en el modelo Wagyu, el sobreprecio puede ir de 3 a 18 veces el precio del bistec Select.

## CONCLUSIONES

La complejidad de los mercados en el escenario global exige a las empresas de la red de valor bovinos carne, propuestas de valor cada vez más creativas y diferenciadas, que les permitan enfrentar con éxito a las ofertas competitivas de los grandes corporativos internacionales. De esta manera, las empresas que producen carne para exportación y para el mercado nacional, deben globalizar el comercio de las carcasas para vender los cortes mejor valorados por el mercado internacional, el cual tiene una mejor capacidad de pago que el mercado interno. A la vez, tienen que destinar al mercado interno aquellos cortes que son poco demandados en el mercado exterior, a precios muy competitivos para poder enfrentar a las importaciones. Las estrategias de diferenciación en los modelos de negocio son muy relevantes para la elección que hacen los clientes en el mercado y para la captura de valor económico que realizan las empresas con la finalidad de generar utilidades. De esta manera, los nichos de mercado permiten la venta de carne de bovino a precios diferenciados, acordes al mercado objetivo.

Los nuevos modelos de negocio recurren constantemente a la innovación para mejorar su propuesta de valor y hacerla difícil de imitar, en la medida en que esto ocurra, con los nichos de mercado se incrementará la demanda y por lo tanto se generarán mayores oportunidades de crecimiento, este es el caso del modelo de negocio de carne Wagyu, el cual tiene una importante demanda en el mercado interno y externo. En este sentido la empresa Rancho Las Luisas es pionera en el mercado mexicano y tiene enfrente una gran demanda por atender, de tal manera que deberá planear con mucha inteligencia sus estrategias de crecimiento. Las evidencias encontradas en el presente estudio con respecto a las estrategias de diferenciación en los modelos de negocio de carne bovina, demuestran que la oportunidad de crecimiento de las empresas radica en su creatividad, su capacidad de innovación y su habilidad para conquistar nichos de mercado.

## RESUMEN

*Las Pequeñas y Medianas Empresas (pymes) son una de las bases primordiales de la economía mexicana, ellas producen una importante cantidad de empleos y aportan la mayoría del Producto Interno Bruto del país, aun así, su tasa de permanencia en el mercado es de las más bajas lo que provoca que estas pequeñas empresas terminen por desaparecer en el corto plazo. El objetivo de esta investigación es el de analizar el impacto de la falta de fuentes de financiamiento que sufren las pequeñas y medianas empresas mexicanas así como los elementos que afectan la supervivencia de estas entidades mediante un estudio descriptivo transversal en forma de encuesta. Al identificar los factores financieros que afectan la supervivencia de los pequeños negocios ayudaremos a generar estrategias que se enfoquen en la atención de las dificultades de estos microempresarios y así mejorar la competitividad de la economía nacional.*

## FINANCING OF SMALL AND MEDIUM ENTERPRISES AND ITS RELATION TO RETENTION RATE

### ABSTRACT

*Small and Medium Enterprises (SMEs) are one of the primary foundations of the Mexican economy, as they produce a significant number of jobs and make the most of the country's GDP. Yet its retention rate in the market is one of the lowest, causing these small companies to eventually disappear in the short term. The objective of this research is to analyze the impact of the lack of funding sources experienced by small and medium-sized Mexican companies as well as the elements affecting the survival of these entities using a descriptive cross-sectional study in the form of survey. By identifying the financial factors that affect the survival of small businesses we will help create strategies that focus attention on the difficulties of these entrepreneurs and improve the competitiveness of the national economy.*

## INTRODUCCIÓN

Podemos definir a la empresa como una entidad económica destinada a producir bienes, venderlos y obtener un beneficio. (Valencia, 2010) las empresas son una de las bases de la economía de cualquier país, ya que son las entidades que mueven el ciclo económico y uno de los principales indicadores de la salud macroeconómica de un país. Por lo que la base de esta economía es el microempresario ya que del total de las unidades económicas que se registraron en los Censos Económicos de 2009, el 94.7% eran micro

empresas, lo que muestra una alta concentración en este tamaño de establecimientos. Las pequeñas empresas (11 a 50 personas) en reportaron como personal ocupado total a 17.5%, para ocupar el segundo lugar en importancia respecto a la generación de empleos (INEGI, 2009) Muchos mexicanos buscan una manera de cumplir sus metas de superación en el ámbito personal y sobre todo económico mediante la creación de su propio negocio; la mayoría de las veces, estos negocios son familiares o muy básicos. Para Grabinsky (2002) “Empresa familiar es aquella en la que los dueños y los que operan toman decisiones estratégicas y operativas, y son miembros de una o varias familias”. La mayoría de las veces las familias son las semillas de la creación de una pequeña y mediana empresa (pyme) y esto trae los beneficios de una organización simplificada y un flujo de trabajo más centralizado, pero a la vez es la parte fundamental de sus problemas, ya que al ser una organización demasiado pequeña la confianza de las instituciones financieras de que puedan solventar los créditos de funcionamiento se ve mermada por el hecho de que por ser pequeñas no podrán pagar. Pero la baja tasa de permanencia de las pymes en nuestro país no es un problema aislado ni reciente, tiene sus bases en un sistema cauteloso que prefiere la seguridad de las grandes empresas, que aunque no son muchas, si tienen bastante respaldo económico.

El problema no es puramente de las instituciones de crédito, las esferas del gobierno en sus tres niveles saben de las dificultades que estas pequeñas empresas tienen que enfrentar y a través de los años han desarrollado muchos programas de acceso a créditos, subsidios y financiamiento a las pequeñas empresas, pero uno de los grandes problemas que estos programas enfrentan es la falta de continuidad a largo plazo, ya que muchas de las veces al terminar cada administración federal o estatal, los beneficiarios de estos programas tienen que enfrentar cambios de procesos o reorganización de los fondos, y en el peor de los casos, la desaparición de estos programas. Uno de los grandes errores que cometen las pequeñas y medianas empresas es la de pensar que solo basta con acceder al crédito o al programa de financiamiento, en muchos casos las empresas cuentan con financiamiento, pero la falta de una aplicación eficiente de este es lo que provoca que su tasa de permanencia sea mínima. Todo esto tiene su origen en la naturaleza misma de la pequeña empresa que se basa en la informalidad y en la falta de una cultura de administración eficiente, Mercado, (2007) opina que los principales problemas que han definido a gran número de pequeñas y medianas empresas son: su estilo de dirección que está enfocado al corto plazo, no incorporan suficiente tecnología moderna a sus sistemas de producción; la información sobre su operación es insuficiente, imprecisa y desfasada; su productividad es insuficiente; poseen inadecuadas estructuras organizacionales y financieras, así como medios de financiamiento inadecuados, escasos y caros.

## REVISIÓN LITERARIA

Para comprender las dimensiones que involucran a las pymes debemos definir en primer lugar a la empresa como una entidad económica destinada a producir bienes, venderlos y obtener un beneficio. Las empresas son el principal factor dinámico de la economía de una nación y constituyen a la vez un medio de distribución que influye directamente en la vida privada de sus habitantes (Valencia, 2010). No hay una definición general para el concepto de pequeña y mediana empresa, ya que su definición se puede dar, de acuerdo al criterio de distintas estructuras productivas de diferentes países, pero en México de acuerdo a un estudio sobre censos del INEGI (2009) las entidades denominadas pymes, tienen características distintivas, ya sean cualitativas o cuantitativas, usadas para su clasificación, que son de importancia económica tanto en nuestro país, como en muchos otros, por su capacidad de generar empleos y su contribución al desarrollo económico. Para esta investigación utilizaremos la estratificación de empresas publicada en el Diario Oficial de la Federación el 30 de junio de 2009. Como podemos observar en la tabla 1, podemos considerar a una pyme como es una empresa que tiene un rango de 0 a 100 empleados en los sectores de comercio y servicios; y en sector industrial esta cantidad aumenta hasta los 250, como se muestra a continuación de manera detallada:

Tabla 1: Estratificación de Empresas Publicada En el Diario Oficial de la Federación En 2009

SECTOR	MICRO			PEQUEÑA			MEDIANA		
	Personal	Rango de monto de ventas anuales (mdp)	Tope Máximo combinado*	Personal	Rango de monto de ventas anuales (mdp)	Tope Máximo combinado*	Personal	Rango de monto de ventas anuales (mdp)	Tope máximo combinado*
<b>Industria</b>	0 a 10	Hasta \$4	4.6	11 a 50	hasta \$4.01 \$100	95	51 a 250	hasta \$100.1 \$250	250
<b>Comercio</b>	0 a 10	Hasta \$4	4.6	11 a 30	hasta \$4.01 \$100	93	31 a 100	hasta \$100.1 \$250	235
<b>Servicios</b>	0 a 10	Hasta \$4	4.6	11 a 50	hasta \$4.01 \$100	95	51 a 100	hasta \$100.1 \$250	235

\*Tope Máximo Combinado = (Trabajadores) x 10% + (Ventas Anuales) x 90. *A partir de 1990 existen seis pronunciamientos acerca de los criterios para la definición de las micro, pequeñas y medianas empresas, realizados los primeros cuatro de ellos por la entonces Secretaría de Comercio y Fomento Industrial, y los últimos dos, por la actual Secretaría de Economía. El más actual es de 2009. Fuente: Diario Oficial de la Federación del 30 de junio de 2009.*

La mayoría de las Pymes se dedica al sector de servicios, aunque las Pymes también representan un alto porcentaje de las empresas manufactureras y proveen al menos la mitad de los empleos en este sector. Las pequeñas empresas están cada vez ms presentes en industrias con alta tecnología como la informática y las comunicaciones, y el sector servicio como el desarrollo de recursos humanos. (OCDE, 2006) Del total de las unidades económicas de Servicios que se registraron en los Censos Económicos 2009, el 94.7% eran micro empresas, lo que muestra una alta concentración en este tamaño de establecimientos. Las pequeñas empresas (11 a 50 personas) en Servicios reportaron como personal ocupado total a 17.5%, para ocupar el segundo lugar en importancia respecto a la generación de empleos (INEGI, 2009).

La baja participación de las empresas de menor tamaño en el crédito al sector privado es un problema que aqueja a todas las economías modernas desde hace muchos años. Las pymes, por su parte, tienen enormes dificultades para cumplir con los requisitos que les son exigidos. Por una parte, muestran falencias técnicas asociadas a la presentación de las solicitudes de préstamo ante los bancos, esto incluye el armado del proyecto, el diseño de una estrategia y la capacidad de reunir la documentación necesaria. Por otra, tienen dificultades que se centran en la falta de garantías suficientes, lo que constituye uno de los impedimentos más relevantes que enfrentan las empresas (Ferraro & Stumpo, 2010). En gran parte de los países de América Latina, las altas tasas de interés y la insuficiencia de garantías son los factores que más influyen en el uso de fuentes alternativas al crédito bancario para el financiamiento de las pymes. En México, los bancos exigen elevados niveles de coberturas, que promedian el 150% y 200%, respectivamente. (Chorro, 2010; Pavón, 2010). Por otra parte, Kauffman, (2001) dice que entre los problemas más importantes relativos al financiamiento de las pymes, destacan los siguientes: se favorece a las grandes y muy grandes empresas y corporaciones, debido a una inadecuada articulación del sistema económico; políticas gubernamentales inadecuadas y la corrupción generalizada de funcionarios del sector público. La baja penetración bancaria en el segmento pymes ha dado protagonismo a los proveedores como fuente principal de fondos que en el 2009, contribuían con más de 65% del financiamiento a las pequeñas empresas. Dentro de la gama de crédito externo, éste suele ser el más demandado pero en ese sentido, este tipo de apoyo conlleva tasas y plazos opacos que dificultan una estimación fidedigna de su costo real, incluso para las propias pymes (Lecuona, 2009).

La falta de un financiamiento adecuado tiene como consecuencias que estas pequeñas y medianas empresas tengan una baja tasa de permanencia en el mercado. Pero esto no es exclusivo de los países emergentes, aún en los países industrializados las pequeñas empresas se caracterizan por una alta tasa de mortalidad; en los Estados Unidos por ejemplo, 24% de las nuevas empresas cierran dos años después de su creación y el

53% antes de los cuatro años (Benavente, Galetovic, & Sanhueza, 2005). Por su parte, en América Latina y el Caribe la tasa de supervivencia de las Pymes también es muy baja, “sólo un 45% a los tres años después de creada,” (SELA, 2010, pág. 15). Como Gómez (2006) en su estudio de la supervivencia de las pymes afirma: “Alrededor del 65% de las PYMES desaparece a los dos años de su creación y sólo un 25% sobrevive con pocas posibilidades de desarrollo” Asimismo, Mercado (2007) opina que las pymes tienen una baja permanencia principalmente por los problemas de escasez de recursos a los que se enfrentan día a día, y que a esto hay que sumarle los problemas en la administración propia de estos negocios, que tienen su origen en su estructura financiera y administrativa deficientes lo que conlleva a que su estilo de dirección se enfoque al corto plazo y tengan que producir y vender sin la debida atención a la calidad. Además podemos identificar otros factores que afectan la supervivencia de las pymes como: la información sobre su operación es insuficiente, imprecisa y desfasada; tienen el hábito de operar en una situación de excesiva estabilidad dentro de un mercado protegido; poseen inadecuadas estructuras organizacionales, así como medios de financiamiento inadecuados, escasos y caros; sus recursos humanos son poco calificados y prestan escasa atención a los mercados internacionales (Mercado, 2007). López (2008) en su estudio de las principales dificultades de estas organizaciones, clasifica en diez categorías los principales problemas que enfrentan las pequeñas empresas en nuestro país, en este estudio nos muestra que las pymes se enfrentan a: “recursos financieros limitados, alto nivel de endeudamiento, cartera vencida, cambios en el costo de materia prima, bajo nivel de ventas, falta de capital para invertir, dificultad para adquirir préstamos, falta de capital de trabajo, ausencia de control financiero y de personal especializado”.

En dicho estudio, el 66% de las organizaciones externaron tener algún tipo de dificultades financieras y el bajo nivel de ventas representa la principal problemática que se presenta a las empresas, seguida por la falta de recursos financieros y por el incremento en el costo de la materia prima. (López, 2008). Márquez (2013) que las pymes tienen poco o nulo financiamiento por parte de los proveedores, debido a que no cuentan con líneas de crédito y por el contrario deben pagar de contado o por adelantado los insumos para la producción o los productos para la venta. Es importante mencionar que enfrentan un problema serio de liquidez ya que están financiando a las grandes empresas con quienes tienen negocio debido a que estas les pagan de 30 a 90 días.

## METODOLOGÍA

La investigación se llevó a cabo de enero de 2014 a marzo de 2014 y es un estudio cuantitativo del tipo transversal, correlacional y descriptivo con información primaria y secundaria. El instrumento de investigación consistió en una encuesta elaborada de acuerdo a los lineamientos de Hernández Sampieri (2010) utilizando la construcción del instrumento por medio de dimensiones, indicadores e ítems. Para conocer nuestra población que sería sujeta a nuestra investigación consultamos al Instituto Nacional de Estadística y Geografía en su Censo Económico 2009, mediante el Sistema Automatizado de Información Censal 2009, que nos mostró que existen en Ciudad Juárez 14,433 entidades considerados como pymes distribuidas de la siguiente manera:

Tabla 2: Información Demográfica de Pequeñas y Medianas Empresas En Juárez, Chihuahua

Municipio	Empresas			
	Industria	Comercio	Servicios	Total
Juarez	1,236	8,532	4,665	14,433

La tabla 2 muestra la distribución local de empresas consideradas como pymes en Ciudad Juárez, Chihuahua, divididas en las tres áreas económicas más importantes, industrias, comercios y de servicios. Fuente: Consultado en febrero de 2014 en el Sistema de Información Empresarial que a la vez utiliza los datos del Censo Económico 2009 realizado por el INEGI.

Para nuestra investigación solo consideramos las pymes de las áreas de comercio y de servicios por ser más accesibles y numerosas. Nuestro muestreo fue del tipo no probabilístico ya que la elección de nuestra

muestra no se basó en fórmulas de probabilidad sino por medio de conveniencia, ya que tuvimos dificultades para tener acceso a sus datos e información, esto se debe a la situación actual de inseguridad en nuestra región, por lo que realizar un estudio probabilístico detallado para obtener la muestra no es viable. El instrumento se aplicó a 15 de estas pequeñas y medianas empresas en el mes de marzo 201. La encuesta se conformó por 20 ítems divididos en dos variables, la primera se refería al financiamiento de las pymes y la segunda consistía en la variable de permanencia de estas. Antes de la aplicación del instrumento se realizó un piloteo donde se analizó la confiabilidad del instrumento mediante el software informático SPSS, al tener una confiabilidad apropiada, se procedió a aplicar la encuesta, vaciar los resultados en una base de datos en Microsoft Excel 2010 y posteriormente analizarlos en el software SPSS utilizando herramientas descriptivas como Alfa de Cronbach, estimaciones de curva y regresiones.

## RESULTADOS

El análisis de resultados se obtuvo una vez que se analizaron los datos, se transfirieron a una matriz y se guardaron en un archivo para su respectivo análisis mediante la aplicación del método cuantitativo ya antes mencionado. El programa estadístico que utilizamos (SPSS) muestra en la Tabla 3 los datos donde se midió la relación estadística que existe entre las variables así como su media y su desviación, lo cual nos indica que hay poca relación entre las variables que se analizaron ya que la media sobrepasa de los 2.8970 para permanencia al igual que 2.6074 para financiamiento.

Tabla 3: Estadísticos descriptivos

	Media	Desviación típica	N
PERMANENCIA	2.8970	.40049	15
FINANCIAMIENTO	2.6074	.38917	15

La tabla 3 muestra la relación que existe entre las dos variables analizadas la variable independiente es la de Financiamiento y la variable dependiente es la de Permanencia. Fuente: Elaboración propia en base a resultados del SPSS

Como vemos en la tabla 4, nuestra las variables analizadas no tuvieron la relación esperada, los resultados mostraron que al momento de correlacionar la variable de permanencia con la de financiamiento no se acercaban a la unidad.

Tabla 4: correlaciones

		PERMANENCIA	FINANCIAMIENTO
Correlación de Pearson	PERMANENCIA	1.000	.277
	FINANCIAMIENTO	.277	1.000
Sig. (unilateral)	PERMANENCIA	.	.158
	FINANCIAMIENTO	.158	.
N	PERMANENCIA	15	15
	FINANCIAMIENTO	15	15

La Tabla 4 muestra la correlación que se logró obtener en base a la aplicación del instrumento de medición o encuesta, como podemos analizar, la relación entre las dos variables es muy poca, para que se dé una relación total entre las variables la correlación debería ser cercana a la unidad, pero en este caso, no es mayor a .20. Fuente: Elaboración propia en base a resultados del SPSS

Como podemos ver, al cruzar la variable de permanencia con la financiamiento nos da una correlación de Pearson de 0.277, cuando debería acercarse a 1.000, lo que es un indicativo de que la hipótesis principal de nuestra investigación no está en relación con estas dos variables.

Tabla 5: Resumen del Modelo B

Modelo	R	R cuadrado	R cuadrado corregida	Error típ. de la estimación	Estadísticos de cambio					Durbin-Watson
					Cambio en R cuadrado	Cambio en F	gl1	gl2	Sig. Cambio en F	
1	.277a	.077	.006	.39929	.077	1.085	1	13	.317	1.587

*Esta tabla nos muestra los resultados de las variables en el modelo b*

Figura 1: Relación Entre la Permanencia y el Financiamiento

*Como podemos observar en la Figura 1, las dos variables, la de financiamiento y la de permanencia no tienen una pendiente de 45 grados, es más, ni siquiera inicia en la unidad, lo que demuestra la poca relación entre estas dos variables.*

También al analizar la figura 1 podemos llegar a la conclusión de que las dos variables tratadas en este estudio no tienen una correlación suficiente como para tomar la hipótesis general de que la falta de financiamiento es un factor decisivo para la tasa de permanencia de las pymes, así que en nuestro caso tomaremos como válida la hipótesis nula de nuestra investigación que nos dice que Si existen varias fuentes de financiamiento para las pymes, y las que se encuentran disponibles pueden ser accesibles a estas, por lo que al tener acceso a créditos, tiene un impacto positivo en su tasa de permanencia

## CONCLUSIONES

El fin primordial de la investigación fue analizar que existe una generalizada falta de financiamiento para las pequeñas y medianas empresas y que eso afectaba negativamente en el factor de supervivencia de estas, en donde el supuesto relacionaba estas variables, sin embargo se puede identificar que no es una relación causa efecto y que hay otros factores correlacionados con la permanencia de las empresas.

Es claro que las pequeñas y medianas empresas sufren por mantenerse en el mercado, pero con grandes esfuerzos logran sobrevivir. El análisis muestra que las pymes ya llevaban bastante tiempo en el mercado, lo que nos indica que si existe financiamiento de estas, el problema es que este tipo de financiamiento muchas veces no es formal o legal, ya que estos negocios prefieren salir día a día con préstamos familiares

o negociando prestamos con sus proveedores, porque como vimos anteriormente las alternativas en el mercado financiero son poco accesibles para este tipo de negocios, esta es una de las razones por las que las pymes tienen que vivir muchas veces en la informalidad, sin poder tener una estructura organizacional bien definida y sin poder invertir en su futuro, lo que a largo plazo llevará a su desaparición. Aunque este estudio no logró demostrar su hipótesis principal de la falta de financiamiento es el causal de la permanencia, si se detecta que influye por la moderada tendencia positiva que muestra la figura 1. De cualquier forma se tomó como no rechazada la hipótesis nula previamente discutida en los resultados del instrumento de medición, es un hecho de que las pymes necesitan más financiamiento y oportunidades, de parte del gobierno, de las instituciones financieras y en general de la sociedad, ya que son parte fundamental de nuestra economía, el rechazo de nuestra hipótesis es debido a las limitaciones de esta investigación, como son la falta de tiempo para el muestreo, las imposibilidades de recabar información sensible de las pymes por el renuente rechazo de proporcionarla por parte de este negocio, entre otras.

## ESTILO DE LIDERAZGO PREDOMINANTE EN DOCENTES UNIVERSITARIOS EN MÉXICO

José Pablo Alcázar-Zamacona, Universidad Popular Autónoma del Estado de Puebla.

Karla Liliana Haro-Zea, Universidad Popular Autónoma del Estado de Puebla.

### RESUMEN

*La presente investigación tuvo como objetivo la determinación del estilo natural de liderazgo y liderazgo situacional en docentes a nivel superior en diferentes universidades de México, ubicadas en los estados de Puebla, Michoacán, Sonora y Sinaloa. Se realizaron cincuenta encuestas diseñadas por la empresa Sinergy Consulting para determinar estas características, clasificando los resultados por género, así como una clasificación entre tres grupos de edades; para poder diferenciar los aspectos diversos entre hombres y mujeres. Las conclusiones muestran como, dependiendo de la edad y género, los estilos de liderazgo varían, pero siendo congruentes con las características propias del liderazgo de cada género. También se muestra como estas variaciones se comportan de forma distinta si se cruzan los valores de edad con los de género.*

**PALABRAS CLAVE:** Estilos de Liderazgo, Universidades en México, Liderazgo Situacional, Liderazgo Hombre-Mujer

## PREDOMINANT LEADERSHIP STYLE OF UNIVERSITY TEACHERS IN MEXICO

### ABSTRACT

*The objective of this research was to find the leadership and situational leadership natural style of teachers and academics in different colleges and universities in Mexico, specifically in the states of Puebla, Michoacán, Sonora and Sinaloa. Fifty surveys designed by the Sinergy Consulting Corporation were apply, to establish these characteristics, classifying the results by gender and in three age groups; in order to differentiate several aspects between men and women. The conclusions show that, depending on age and gender, the leadership styles change, but maintaining the own characteristics of each gender. The study also shows how these variations behave in different ways when the values of age and gender are compared.*

**KEYWORDS:** Leadership Styles, Universities in Mexico, Situational Leadership, Men-Women Leadership

### INTRODUCCIÓN

El presente trabajo se llevó a cabo para identificar el tipo de liderazgo por género “femenino vs masculino”. Actualmente los factores para un liderazgo docente debe contar con una gran influencia para los alumnos y distinguirlo de la autoridad y el poder. La presente investigación fue llevada a cabo en las ciudades de Puebla, Sinaloa, Michoacán y Sonora con docentes de nivel superior de la siguientes universidades: Universidad de Sonora (Sonora), Universidad de San Miguel (Sinaloa), Universidad Autónoma de Sinaloa (Sinaloa) Instituto Tecnológico de Morelia (Morelia), Universidad Iberoamericana Plantel Puebla (Puebla) y Universidad de las Américas (Puebla). La muestra es de 50 encuestados los cuales representan 27 hombres y 23 mujeres. Los docentes son de nivel superior educativo; Licenciatura, Maestría y Doctorado. Los líderes

docentes en el nivel superior educativo deben de demostrar un liderazgo de vanguardia en una comunidad que aprenda, inteligente y autosuficiente para lograr los cambios. Además de hacer partícipe al alumnado para el aprendizaje de los programas educativos. El objetivo general es identificar el liderazgo predominante en los docentes de seis universidades privadas. El objetivo específico: Es identificar el tipo de liderazgo por género de los docentes. ¿Cuál de estos géneros es constante para un estilo de liderazgo determinado?, ¿Qué género tiene a ser flexible en los diferentes niveles educativos?, ¿Cuál es el grado de estudios en el que se demuestra un tipo de liderazgo? Estas son algunas de las preguntas de las cuales obtendremos una respuesta empírica de nuestro estudio.

El alcance del presente estudio toma como base dos cuestionarios, el primero “Estilo de Liderazgo” y el segundo “Liderazgo Transformacional”. El primero intenta demostrar empíricamente dos resultados; el estilo natural de liderazgo del cual se divide en apoyador, consultivo, delegador y directivo. El segundo resultado muestra la eficiencia de liderazgo acorde a la situación con tres variables importantes; eficiencia ideal de liderazgo, puntaje obtenido y porcentaje de mejora para el docente. El segundo cuestionario identifica los diferentes estilos de liderazgo predominantes en el docente; estilo transaccional, estilo transformacional y estilo de dejar hacer. Cada uno de los docentes contestó los dos cuestionarios.

Los cuestionarios fueron llevados a cabo durante el mes de Noviembre 2012 y los resultados fueron recopilados en dos semanas para elaborar las conclusiones. Como referencia en el Estado de Puebla hay más de 362 institutos superiores, resaltando que la Benemérita Universidad Autónoma de Puebla (BUAP) mantiene una matrícula del 73% de la población estudiantil superior en el Estado y el resto son otras universidades por destacar la Iberoamericana, UDLAP, UPAEP (privadas más reconocidas). A continuación se presentan las estadísticas del Sistema de Educación Superior en Puebla, destacando que el 49.66 % de la matrícula en Licenciatura y Posgrado son mujeres y el 50.34% son hombres.

Tabla 1: Estadística del Sistema de Educación Superior en Puebla, Ciclo Escolar 2010-2011

Nivel/Modalidad	Total	Hombres	Mujeres	Docentes	Escuelas
Normal Licenciatura	10,009	2,769	7,240	977	37
Licenciatura	154,688	78,698	75,990	13,913	362
Posgrado	14,336	6,395	7,941	2,030	135
Público	97,809	51,009	46,800	6,998	129
Federal	9,427	6,365	3,062	573	6
Estatal	35,807	18,622	17,185	2,814	64
Autónomo	52,575	26,022	26,553	3,611	59
Particular	81,224	36,853	44,371	9,922	405

Fuente: Secretaría de Educación Pública, 2011

Por otra parte, la siguiente tabla presenta la cantidad total de docentes en Educación Superior en instituciones privadas y públicas en los Estados que representan la muestra de este estudio, precisando que el total de la población es de 330,464 docentes a nivel nacional de acuerdo a cifras de la Secretaría de Educación Pública; durante el ciclo escolar 2011-2012.

Tabla 2: Docentes Educación Superior, Ciclo Escolar 2011-2012

Docentes

## Marco Teórico

### Liderazgo Educativo.

Las escuelas, como las demás organizaciones, tienen vida propia, que se va llenando a base de quemar etapas o fases que transcurren desde el nacimiento hasta la madurez o decrepitud. En este sentido, se dice que son una construcción, algo que se va haciendo en el tiempo, que tiene su propia historia (Delgado, 2005). El liderazgo de la institución es el que imprime un carácter específico a cada etapa, cada líder marca una imagen de la institución, imprime un estilo propio de funcionamiento. El liderazgo es el motor de esa construcción histórica, social y cultural que llamamos centro educativo y organización en sentido más general (Delgado, 2005). Académicos e investigadores han debatido sobre cómo definirlo, medirlo, desarrollarlo y reconocerlo cuando es efectivo. No es de extrañar entonces que Bass (1985) liste más de 3,000 estudios sobre este tema, o que Yukl (1994) señale que “existen casi tantas definiciones como personas que han tratado de definir el concepto”. A pesar de esta gran cantidad de trabajos acumulados existen aún muchas preguntas sin contestar sobre el tema (House y Aditya, 1997). En resumen y en palabras de Burns (1978): “El liderazgo es uno de los fenómenos más observados y menos comprendido de la tierra”. Son varios los enfoques y modelos con los cuales se ha estudiado el liderazgo. Una de las primeras formas de estudiarlo surgió en los primeros años del siglo 20, cuando se trató de explicar el liderazgo por medio de las cualidades innatas y características de los grandes líderes sociales, políticos y militares. De acuerdo a estas teorías, las personas nacían con estas cualidades y solo las “grandes” personalidades las poseían. Algunas de las características encontradas con estas teorías fueron: inteligencia, confianza en sí mismos, determinación, integridad y sociabilidad (Northouse, 2013).

Con el paso del tiempo, las teorías fueron evolucionando centrando su análisis en la actividad, en la acción de los líderes hasta llegar a establecer comportamientos o patrones de conductas más o menos estables y permanentes como propias de cada tipo de líder. Algunas de estas teorías son aquellas basadas en las habilidades, como el modelo desarrollado por Mumford, Zaccaro, Harding, et al. (2000) llamado el modelo de habilidades de liderazgo. También están las teorías basadas en el estilo de liderazgo, que se caracterizan por estudiar lo que el líder hace en lugar de lo que es líder es. Una tercera línea de investigación, entre otras, es la del liderazgo situacional, desarrollado por Hersey & Blanchard (1969), cuya premisa fundamental es que diferentes situaciones demandan diferentes tipos de liderazgo.

### El Liderazgo Como Proceso Cultural.

Los líderes, siendo los eslabones más importantes de una organización, serán más eficaces cuando utilizan un estilo en particular de liderazgo. Este estilo debe de tomar muy en cuenta los contextos, o sea, el entorno en el que se trabaja. Se debe tomar en cuenta que no nada más importa qué hace el líder, sus conductas y habilidades, sino también, las creencias e ideales que orientan su actuación en el centro escolar, los compromisos que trata de cultivar en relación con la tarea educativa, los valores y creencias que cultiva en el centro. Con el fin de desarrollar una cultura organizativa.

### Liderazgo Transformacional y Personalidad.

Según Bass, el Liderazgo Transformacional, en general, es afectado por la personalidad individual del líder. Para el autor, el rol de las diferencias individuales en cuanto a la personalidad y valores, constituye un factor moderador que modula el tipo de liderazgo que emerge en una situación dada (Bass, 1985). Evidencia empírica señala que características tales como: la aptitud física, experiencias previas, autoestima, habilidades cognitivas y emocionales, están asociadas a la emergencia y efectividad del Liderazgo Transformacional (Atwater, Dionne, Avolio, Camobreco y Lau, 1999, Bass y Avolio, 1994). Según Bass y Avolio (1994), según estos atributos personales resultaban centrales en el Liderazgo Transformacional,

principalmente para la efectividad del líder de equipo. Por otra parte, características y rasgos personales pueden fomentar la aparición de ciertas conductas transformacionales más que de otras. Al respecto, Bass (1985) señala, por ejemplo, que personalidades más activas, proactivas y con mayor iniciativa están más relacionadas con conductas de Motivación Inspiracional y Estimulación Intelectual. En tanto que, personalidades reactivas y con menos grado de involucramiento se relacionan con el estilo Transaccional Dirección por Excepción, lo que los hace estar más dominados por efectos situacionales.

Así, el Liderazgo Transformacional debería relacionarse positivamente con medidas de motivación para dirigir, satisfacción en el poder, sentimientos de trascendencia, medidas de asertividad, audacia social, introspección, atención, creatividad, necesidad de logro, integridad y madurez. En cambio, el líder transaccional, según Bass estaría más relacionado con medidas de conformidad, sentimientos de equidad, y con satisfacción en las relaciones de afiliación. Los valores y creencias personales también influyen en el estilo de liderazgo desplegado, en cómo se interpretará una situación y cómo será la intervención. El esquema o estructura de valor se cimienta en una concepción de mundo y ser humano que tiñe el significado y sentido de su quehacer en la relación líder-miembro, de manera que una misma intervención tiene distinto sentido, significado e implicancias éticas y morales, según la estructura de valor del líder. De este modo, los métodos transaccionales se acercan más a las estrategias de control, donde el seguidor es tratado como un robot que debe ser programado; mientras que los métodos transformacionales estarán más cerca de las estrategias de empoderamiento, las cuales intentan cambiar las actitudes, creencias y valores del seguidor, ayudándolo a acceder a un foco de control interno, autodirección y autonomía.

De acuerdo con la teoría del Liderazgo Transformacional, esta consiste en un “Rango Total de Comportamiento”. Esto implica que abarca conductas clasificadas tanto como transformacionales, transaccionales y laissez-fair. De esta forma el líder transformacional puede desplegar cualquiera de ellas, según lo requiera el contexto. Teniendo en cuenta esto, el líder transformacional también utilizaría mecanismos motivacionales propios del proceso transaccional. En este sentido, la teoría de las expectativas sigue siendo utilizada por Bass para describir y explicar parte del proceso transformacional. Sin embargo, Bass señala que esta teoría es necesaria pero no suficiente para dar cuenta del complejo proceso motivacional que el Liderazgo Transformacional encierra. Esto se desprende de la propia definición de este, que involucra reconocer la existencia de necesidades potenciales de los seguidores e ir más allá, buscando animar y satisfacer necesidades de más alto orden (Bass, 1985)

Bass sostiene que: *“we would look at leaders in the context of their group’s reactions to deviations from the steady state, their leadership performance in such circumstances, and the leader-subordinate processes by which a new higher (or lower) steady state is achieved”* (Bass, 1985). Tras esta idea de Bass se contienen varios supuestos implícitos. Por una parte, el accionar del líder transformacional no queda circunscrito y limitado a la licitación de cambios de primer orden en sus seguidores, donde tras la desviación siempre se volverá al mismo estado de equilibrio anterior. Por el contrario, además de verse involucrado en esta clase de cambios transaccionales, se agrega la capacidad de ser un agente detonador de nuevos estados de equilibrio cualitativamente diferentes. Estos cambios de segundo orden son las transformaciones de actitud, ideológicas, de valor y de creencias en los seguidores que Bass menciona como características del proceso transformacional.

Otro implícito contenido, es que el proceso motivacional transformacional, para Bass es necesario estudiarlo a través de los efectos observados en los seguidores. Esto es coherente con su enfoque teórico, en donde es el comportamiento del subordinado el que define frente a qué liderazgo estamos, y por ende, ante qué proceso motivacional está sujeto el seguidor. Por último, se desprende que para Bass, la influencia de Liderazgo Transformacional no se da en una causalidad lineal, donde el líder tiene una influencia absoluta sobre los cambios del seguidor. Él señala que es un proceso que se da entre líder y subordinado, dándole también importancia a los procesos cognitivos del seguidor, diciendo: *“if the stimulus becomes too*

*strong, the disturbance is stressfull and the individual will attempt to psychologically withdraw from the situation”* (Bass, 1985, pág. 7). Las dinámicas motivacionales implicadas en el Liderazgo Transformacional, se realizan a través de cuatro procesos de influencia o atributos claves, más conocidos como las “Cuatro I’s” (Bass y Avolio, 1994). Estas son Carisma, Estimulación Intelectual, Consideración Individualizada y Motivación Inspiracional. A través de éstas, el líder transformacional propende cambios por vías indirectas o directas, tanto a nivel macro como a nivel micro-organizacional. La forma directa de cambios, es a través de influir sobre los seguidores, en tanto que indirectamente lo logran cambiando la cultura organizacional. A continuación se describen los tres diferentes tipos de liderazgo, los cuales son; Liderazgo Transformacional, Liderazgo Transaccional y Laissez-Faire (Dejar Hacer).

Liderazgo Transformacional: forma de adoptar el liderazgo que se enfoca en la manera en que los líderes transforman los objetivos y las acciones del grupo, sobre todo a través del ejercicio del carisma. Es también una forma de liderazgo basada en carisma. Liderazgo Transaccional: forma de adoptar el liderazgo que se enfoca en la transacción de recursos entre el líder y los seguidores. Es también un estilo de liderazgo. Liderazgo Laissez-Faire (dejar hacer): líderes que emplean un estilo basado en el desinterés por los seguidores.

## METODOLOGÍA

La metodología consistirá en cuatro pasos principales, los cuales se explican a continuación: El primero será la aplicación de dos tests o encuestas: Estilos de Liderazgo y Test Transformacional, ambos a 50 docentes de nivel superior en Instituciones de los estados de Puebla, Sinaloa, Sonora y Michoacán. El segundo paso consistirá en la concentración de los resultados de dichas encuestas, en las cuales se obtendrán tres resultados. Primero, con la encuesta de Estilo de Liderazgo, obtendremos los datos de la matriz de Estilo Natural de Liderazgo, así como la Eficiencia del Liderazgo de acuerdo a la situación. Después, con el test transformacional, se pretende encontrar el Estilo de Liderazgo predominante (Transaccional, Transformacional o Dejar Hacer).

Una vez teniendo en un solo documento dichos resultados, se clasificaran de acuerdo al género, grado académico y área de especialidad de los encuestados; esta última pudiendo ser una de las siguientes cuatro: económico-administrativas, ciencias sociales, ciencias exactas u otras. Por último, habiendo realizado esta clasificación, se analizarán tanto cualitativa como cuantitativamente, para después llegar a conclusiones generales y particulares de la investigación. Las variables utilizadas fueron las siguientes: edad, escolaridad, área de estudio, estilo natural de liderazgo, estilo de liderazgo predominante, estas podrían ser del tipo cualitativo o cuantitativo. En una escala; Nominal (N), Ordinal (O), Intervalo (I), Razón (R). Y las medidas de tendencia central; Media, Mediana, Moda y Desviación Estándar. Tal como se muestran en la siguiente tabla.

## RESULTADOS

Se presentan las gráficas que registran los resultados más relevantes para esta investigación

Gráfica 1: Población por género.

Gráfica 2: Estilo Natural De Liderazgo Masculino

Gráfica 3: Estilo

Gráfica 4: Estilo de Liderazgo Predominante Masculino

Gráfica 5: Estilo de Liderazgo Predominante Femenino

Gráfica 6: Estrategias Que Facilitaron El Aprendizaje

A continuación se presentan los datos estadísticos, tanto de tendencia central como de dispersión de la eficiencia de liderazgo situacional, obtenidos de las encuestas y procesados por medio del programa para computadora MINITAB 16.

Descriptive Statistics: HOMBRES

Variable	Mean	SE Mean	StDev	Variance	CoefVar	Minimum	Q1	Median
HOMBRES	68.11	2.82	<b>14.68</b>	215.41	21.55	39.00	58.00	<b>69.00</b>
Variable	Q3	Maximum	Range	Mode	N for Mode			
HOMBRES	81.00	94.00	<b>55.00</b>	58	4			

Descriptive Statistics: MUJERES

Variable	Mean	SE Mean	StDev	Variance	CoefVar	Minimum	Q1	Median
MUJERES	71.22	2.42	<b>11.58</b>	134.18	16.27	50.00	61.00	<b>75.00</b>
Variable	Q3	Maximum	Range	Mode	N for Mode			
MUJERES	81.00	86.00	<b>36.00</b>	61, 81	4			

Descriptive Statistics: TOTAL

Variable	Mean	SE Mean	StDev	Variance	CoefVar	Minimum	Q1	Median
TOTAL	69.54	1.88	13.30	176.99	19.13	39.00	58.00	72.00
Variable	Q3	Maximum	Range	Mode	N for Mode			
TOTAL	81.00	94.00	55.00	81	6			

Se obtuvieron también las gráficas de dispersión con los datos de las puntuaciones obtenidos del liderazgo situacional como variable dependiente y los grupos de edad (26-35, 36-44 y +45) como variable independiente.

## CONCLUSIONES

De las 50 personas encuestadas, 27 fueron hombres y 23 mujeres, estos datos corresponden a un 54% y 46% respectivamente (gráfica 1). A pesar de que la población femenina en México según INEGI (2010) corresponde a un 51.15% de la población total, en este caso, por ser una muestra muy pequeña, la tendencia en nuestro estudio se comporta ligeramente diferente. Haciendo la distinción entre edades de la población masculina y femenina en nuestro estudio, se encontró que el grupo de docentes hombres más numeroso fue el de entre 26 y 35 años (41%), que contrasta con el grupo mayoritario de las mujeres que fue el de 36 a 44 años (39%). A continuación se muestran ambas gráficas comparativas (gráficas 2 y 3).

También se hizo la clasificación del grado académico al cual imparten clase los docentes encuestados de acuerdo a su género. Los grupos se dividieron en licenciatura, maestría y doctorado. En el caso de los hombres, la mayoría da clases en el nivel licenciatura (12), seguido por la maestría (9) y el doctorado (6). Refiriéndonos a las mujeres, también fue la licenciatura (11) el primer lugar, pero en este caso, le siguió el doctorado (8) y por último la maestría (4). De acuerdo a estos resultados, concluimos que son más los profesores que imparten cátedra en nivel licenciatura por ser el nivel académico con mayor demanda de cursos por tener más alumnos inscritos. Estos comportamientos son presentados en las siguientes gráficas.

Continuando con los datos muestreados, se clasificaron los docentes de acuerdo a su área de estudio, teniendo cuatro grupos: ciencias sociales, económico-administrativo, ciencias exactas y otros. Para el grupo masculino, los pertenecientes al área económico administrativo (10) y ciencias exactas (9) fueron los más numerosos, seguidos por otras áreas (7) y ciencias sociales (1). Las mujeres tuvieron a los grupos con más integrantes a las áreas económico-administrativo (8) y otras áreas (8), ciencias exactas fue el tercer grupo con (5) y solo 2 de ciencias sociales. Estos resultados coinciden con la realidad mexicana actual, en donde la mayoría de los estudiantes prefieren estudiar especialidades en el área económico administrativo, como

lo muestra la Secretaría de Educación Pública (ver gráfica a). Por otra parte cabe mencionar la evolución de la matrícula por género (participación de la mujer gráfico b). Las gráficas 6 y 7 presentan los resultados anteriores.

Como resultado de las encuestas realizadas, se obtuvieron los estilos naturales de liderazgo, tanto masculinos como femeninos. En el caso de los hombres, los resultados muestran un balance entre los estilos consultivo (36%) y apoyador (36%) y ligeramente menor el estilo directivo (28%), esto muestra no solo un alto interés por la relación, sino también por la tarea, aunque de forma separada. Enfocándonos ahora del lado femenino, más de la mitad tuvieron el estilo consultivo (52%), seguidos de lejos por el apoyador (28%) y el directivo (20%), lo cual muestra también un alto interés por la relación y la tarea pero al mismo tiempo, de manera integral. En ambos casos resultó nulo (0%) el estilo delegador. Las gráficas mostradas a continuación (gráficas 8 y 9) apoyan dichos resultados.

En el caso del estilo de liderazgo predominante, queda claro que en ambos géneros es el estilo transaccional, siendo este de 59% para los hombres y 70% para las mujeres; el transformacional es de 41% en el caso masculino y solo el 30% para el femenino; para ambos casos no hubo el estilo dejar hacer. Se concluye que para este estudio, el liderazgo que se ejerce por los docentes es el transaccional, por el tipo de actividad y metas establecidas; además de las características de los estudiantes. Las gráficas 10 y 11 muestran dicho comportamiento. Por último, en la eficiencia de liderazgo de acuerdo a la situación, que corresponde al análisis cuantitativo del estudio, se obtuvieron resultados, tanto de toda la muestra como por género. Dentro de los resultados de tendencia central, y tomando la mediana como valor representativo, los hombres obtuvieron una calificación de 69, mientras que el de las mujeres fue de 75, diferencia que nos permite concluir un mejor liderazgo situacional en el género femenino.

En cuanto a las medidas de dispersión, observamos que en los hombres es mayor el rango con un valor de 55 (39 a 94); por su parte, las mujeres con un rango de 36 (50 a 86), con lo que podemos concluir que el liderazgo situacional femenino es, como grupo, más estable y definido, contrario al comportamiento de los hombres. También, como se presentó en la sección de resultados, se puede observar, que en el caso de los hombres, a mayor edad menor puntuación en el liderazgo situacional, lo que nos lleva a concluir la falta de flexibilidad. En las mujeres sucede lo contrario, el liderazgo situacional aumenta con la edad.

# LA CONDUCTA PROSOCIAL Y SU RELACIÓN CON LOS ESTILOS PARENTALES EN ADOLESCENTES EN MORELIA, MICHOACÁN

Marcela Patricia del Toro Valencia, Universidad Michoacana de San Nicolás de Hidalgo

## RESUMEN

*El objetivo de este estudio fue determinar los niveles de conducta prosocial en adolescentes y, si existe relación entre éstos y los estilos parentales del padre y de la madre. La investigación fue de tipo cuantitativo, con un diseño no experimental. La muestra estuvo conformada por 150 estudiantes de una escuela pública y otra privada del nivel medio superior en Morelia, Michoacán. Se aplicó un cuestionario para la obtención de datos sociodemográficos realizado ex profeso para la investigación, la conducta prosocial se midió a través del instrumento de habilidades sociales para adolescentes de Suárez & Morales (2011), y los estilos parentales con la escala de estilos parentales en adolescentes mexicanos de Palacios & Andrade (2006). Los resultados mostraron niveles bajos en los factores de la conducta prosocial como toma de perspectiva, solidaridad y altruismo, y niveles alto y bajo en el factor asistencia. No existió correlación entre conducta prosocial y el estilo parental del padre, y, si hubo correlación entre solidaridad y altruismo y el estilo parental de la madre. Nuestro estudio sugiere que se requiere promover la conducta prosocial en adolescentes y en jóvenes por su impacto en el ajuste social y desarrollo de conductas adaptativas en ellos y, que tanto el contexto educativo como el familiar, son idóneos para ello.*

**PALABRAS CLAVE:** Conducta Prosocial, Estilos Parentales Y Adolescentes

## PROSOCIAL BEHAVIOR AND ITS RELATIONSHIP WITH PARENTING STYLES IN ADOLESCENTS IN MORELIA, MICH

### ABSTRACT

*The aim of this study was to determine the levels of prosocial behavior in adolescents, and the correlation between them and the parenting styles of father and mother. The research was quantitative, with a non-experimental design. The sample consisted of 150 students from a public school and a private from high school in Morelia, Michoacán. A questionnaire to obtain sociodemographic data made expressly for research was applied; prosocial behavior was measured through the instrument of social skills for adolescents Suarez and Morales (2011) and parenting styles with the scale of parenting styles in adolescents Mexicans Palacios and Andrade (2006). The results showed low levels in prosocial behavior factors as perspective taking, solidarity and altruism, and high and low levels in the attendance factor. There was no correlation between prosocial behavior and parenting style of the father, and if there was correlation between solidarity and altruism and parental style mother. Our study suggests that it is necessary to promote prosocial behavior in adolescents and young people for their impact on social adjustment and development of adaptive behaviors in them and that both the educational context as family, are ideal for this.*

**JEL:** M00

**KEY WORDS:** Prosocial Behavior, Parenting Styles, Adolescents

## INTRODUCCIÓN

En el reconocimiento de los efectos devenidos del impacto que la violencia tiene en todos los sectores de la población y en todas las sociedades del mundo, uno de los grupos vulnerables a la misma tanto como víctimas como perpetradores, es el de los adolescentes. La adolescencia es considerada el periodo de transición entre la niñez y la edad adulta, y un estadio de gran trascendencia por ser es la etapa que marca la definición de la identidad afectiva, psicológica y social en hombres y mujeres. Esta etapa evolutiva, entraña un periodo de rápidos cambios físicos, sexuales, psicológicos, cognoscitivos y sociales que conllevan riesgos para el desarrollo saludable del joven y un adecuado ajuste social. La inestabilidad en la manifestación de su conducta social, es una característica que destaca en los adolescentes (González, 2001). Los cambios biológicos puberales que suceden en esta etapa del ciclo vital son parte de un proceso complejo de maduración que inicia antes de nacer pero con implicaciones psicológicas que continúan hasta la edad adulta, y que ejercen influencia sobre aspectos emocionales y del comportamiento. La sociedad asume las vicisitudes que conlleva la adolescencia y concede al joven una prórroga para presentar conflictos que, si perduran en la edad adulta, desembocan en comportamientos patológicos, entre éstos, la violencia. En las últimas décadas, pretendiendo contrarrestar la conducta anormal y sus implicaciones, la psicología, y particularmente una subdisciplina, la psicología positiva se ha interesado ya no sólo en estudiar el comportamiento anormal sino que han tornado la mirada hacia los aspectos positivos del ser humano para poder comprenderlo en su totalidad. Dentro de este contexto, los adolescentes son uno de los sectores en donde se pueden evidenciar con bastante claridad los aspectos de estas transformaciones.

No se niega la complejidad de esta etapa de la vida; sin embargo, hoy se considera también a la adolescencia como una etapa de oportunidades para el crecimiento físico, cognitivo y psicosocial; clave para integrar aspectos de la personalidad del adolescente, y consolidar su identidad, elementos que van a regir la vida del adulto, su desarrollo social, emocional y su adaptación social.

En este orden de ideas, la psicología positiva busca el desarrollo de la persona a través de sus fortalezas o virtudes (Barragán, 2012) se perfila hacia el desarrollo del potencial humano considerando las motivaciones y capacidades (Contreras & Esguerra, 2006) y estudia los factores que producen el bienestar del individuo (Seligman, 2002). De acuerdo a esta perspectiva, la conducta prosocial descrita como actos que se realizan para beneficiar a otro (s) sin que se espere recompensa alguna, es una variable que juega un papel central en el bienestar físico y psíquico del adolescente, en prevenir conductas violentas, y fomentar aquellas que benefician su salud, su desarrollo personal y su ajuste social (Martínez, Inglés, Piqueras, & Oblitas, 2010), con impacto positivo en la autovaloración y en la valoración de los demás (Lacunza, 2012).

Al estimular el desarrollo de la conducta prosocial en los adolescentes se incide en su desarrollo socioemocional lo que le posibilita el tener mecanismos de adaptación al entorno; se fomentan valores (diálogo, tolerancia, igualdad y solidaridad), conductas sociales positivas (dar, ayudar, cooperar, compartir, consolar). En este sentido, se puede afirmar que la conducta prosocial es una fortaleza para el adolescente Terjesen, Jacofsky, Froh, & Digiuseppe (2004), han demostrado que como resultado de promover las fortalezas personales de los niños y jóvenes, éstos desarrollan herramientas necesarias para afrontar con éxito las dificultades y el estrés propios de la etapa de la vida en la que se encuentran. La familia es quizá quien influya más evidentemente en la salud mental del adolescente o en la falta de ella; provee lo necesario para la supervivencia y para el desarrollo integral de sus miembros. La familia es el primer contexto para la transmisión de las normas, valores y modelos de comportamiento, socializa al niño permitiéndole interiorizar los elementos básicos de la cultura y desarrollar las bases de su personalidad cada familia (Rodríguez, 2007). El sistema familiar es un ambiente en el que se pueden promover las conductas prosociales. Del tema de la familia, una de las variables familiares más estudiadas por su relación con la facilitación de conductas prosociales son los estilos parentales (Mestre, y otros, 2007). Darling y Steinberg

(1993, pág. 488), definen los estilos parentales como “una constelación de actitudes hacia las hijas (os) que les son comunicadas y que en su conjunto, crean un clima emocional en el cual se expresan las conductas de los padres”. Estos estilos han sido determinados a partir de dos grandes dimensiones que son: el apoyo parental que alude al involucramiento o aceptación y conlleva el grado de atención y conocimiento que los padres tienen sobre las necesidades de sus hijos, y el control parental, que engloba la exigencia y supervisión que marca en qué medida los padres establecen reglas claras de comportamiento, a la vez que supervisan la conducta de sus hijos (Vallejo & Mazadiego, 2006). A partir de la combinación de estas dos dimensiones, los estilos parentales se han clasificado en cuatro: Autoritario, Democrático, Inconsistente y Negligente.

Los estilos parentales no solo contribuyen al desarrollo de conductas prosociales sino que se puede afirmar que aquel ambiente familiar en el que el adolescente percibe apoyo y afecto, aunado a la estimulación de su autonomía, es un factor predictor de este tipo de comportamiento (Cuervo, 2010). Cada familia asume las pautas de crianza dependiendo de sus características, dinámica y factores contextuales, así como de sus recursos y apoyo (Rodríguez, 2007).

Garaigordobil (2005) también destaca la relación entre los estilos parentales y la conducta prosocial; al señalar la importancia de padres que brindan apoyo y afecto a los hijos en un ambiente con una adecuada comunicación, las reglas familiares están bien establecidas y hacen cumplir a través de una disciplina basada en el razonamiento inductivo, educan con mayor probabilidad hijos sociables, cooperativos y autónomos. Eisenberg (1991), y Steinberg, Mounts, Lamborn, & Dornbusch (1991), destacan la importancia y la relación que existe entre el educar sobre la base de una disciplina inductiva y la madurez y mayor competencia moral en el niño. Y, por último, con (Hoffman, 1983), relaciona el comportamiento prosocial, con el uso de criterios y razonamientos de índole moral.

La importancia de la conducta prosocial en los adolescentes, en estrecha relación con los estilos parentales, se fundamenta en hallazgos de diversas investigaciones, como las anteriores, además, se ha encontrado, que niños considerados prosociales están relativamente bien adaptados, establecen mejores relaciones interpersonales con los pares, y adultos que los niños menos prosociales (Clark, 2000). En este mismo hilo argumental, Caprara, Barbaranelli, Pastorelli, Bandura, & Zimbardo (2000), señalan que niños con un desarrollo de conductas prosociales a temprana edad tienen relaciones interpersonales positivas y un mejor rendimiento académico posteriormente en la adolescencia que aquellos que de niños fueron menos prosociales. Así, si la conducta prosocial aumenta con la edad (Eisenberg N., 1999), ésta puede expresarse en la adolescencia en aquellos niños que fueron creados en un ambiente familiar en el que el padre y la madre, a través de sus prácticas parentales, facilitaron la formación de este tipo de conductas.

Es así que con fundamento en lo antes expuesto los objetivos de este estudio fueron determinar la percepción que adolescentes de la ciudad de Morelia que acuden a dos escuelas del nivel medio superior, una privada y otra pública, tienen del estilo parental del padre y de la madre y si esta caracterización que el adolescente hace de ambos padres tiene relación con la conducta prosocial.

## MÉTODO

**Participantes** La población de estudio estuvo conformada por 150 estudiantes del nivel medio superior; de los cuales el 52.3% fueron del sexo masculino y el 47.7% del sexo femenino. La edad de los sujetos osciló entre 15 y 20 años, con una media de 16. El 59% cursaba el segundo semestre y el 40.9% el cuarto semestre del bachillerato. Un 49.7% asistía a la escuela pública y un 50.3% a la privada. **Instrumentos** Para recabar la información sociodemográfica a los participantes se les aplicó un cuestionario cerrado que fue diseñado ex profeso. Los estilos parentales se midieron a través de la Escala de estilos Parentales en Adolescentes mexicanos de Palacios y Andrade (2006) que consta de 76 reactivos tanto para papá como para mamá, que miden la percepción del adolescente de cuatro estilos parentales; autoritario, democrático, negligente e

inconsistente basados en dos dimensiones: control y apoyo parental del padre y de la madre. Los reactivos se responden con cuatro opciones de respuesta tipo Likert que va de 1 (casi nunca) a 4 (todo el tiempo). Para medir la conducta prosocial se aplicó instrumento de Habilidades Sociales para Adolescentes de Suárez y Morales (2011), que consta de 20 reactivos, distribuidos en cuatro factores: Toma de Perspectiva, Solidaridad y Respuesta de Ayuda, Altruismo y Asistencia, en formato Likert con cuatro opciones de respuesta que van de me describe bien a no me describe. Con un Alpha de Cronbach de .859.

**Procedimiento** En primera instancia se contactó a los directores del plantel educativo a quienes se les explicaron los objetivos del estudio. Posteriormente, se evaluaron los grupos que cursaban el segundo y cuarto semestre de bachillerato. A cada grupo por separado se le aplicaron los instrumentos dentro de su aula. Antes de cada aplicación se les aclaraba a los alumnos el anonimato y confidencialidad de sus respuestas. Posteriormente, los datos fueron analizados con el programa estadístico SPSS 17.0.

## RESULTADOS

A continuación se presentan los datos más sobresalientes obtenidos en este estudio. Para ello se muestran primeramente a nivel descriptivo cada uno de los factores que integran la conducta prosocial y los estilos parentales. Posteriormente se describe las correlaciones entre las variables de estudio y por último, las diferencias por variables contextuales.

### Descriptivos Conducta Prosocial

En la figura 1 se presentan los niveles del **factor toma de perspectiva**; pudiéndose observar que la mayoría de los adolescentes se describen en cuanto a la capacidad de ponerse en el lugar del otro, comprender sus pensamientos, sentimientos y conductas, en el nivel bajo

Figura 1. Niveles de Toma de perspectiva

Para la categoría de solidaridad, se puede observar que predomina los niveles medio bajo y bajo, lo que significa que los adolescentes se describen poco solidarios para con otros (Figura 2).

Figura 2: Niveles de Solidaridad

En relación al altruismo, los resultados arrojan que la muestra se encuentra en un nivel bajo principalmente (Figura 3)

Figura 3: Niveles de Altruismo

En cuanto a conducta de asistencia, llama la atención que predominan los niveles alto y bajo de igual manera, lo que significa que una parte importante de adolescentes se concibe como personas que ayudan en situaciones específicas, mientras que un porcentaje similar percibe todo lo contrario (Figura 4)

Figura 4: Niveles de Asistencia

### Estilos Parentales

*Estilo parental del padre:* Como se observa en la Figura 5, el estilo parental del padre predominante fue el Democrático, lo que significa que los adolescentes percibieron a un padre que apoya, respeta y brinda un balance entre la expresión emocional y la comunicación con ellos. En el estilo parental Democrático la dimensión de apoyo tiene nivel alto y la de control nivel bajo. Después del estilo parental democrático los

adolescentes perciben al padre con un estilo parental Negligente. El estilo negligente, hace alusión a un padre que es caracterizado por el adolescente que brinda apoyo y con quien puede lograr comunicarse adecuadamente. Es un padre que brinda poca autonomía, y niveles bajos en la toma de decisiones para regir sus actividades, a la vez que proporciona baja supervisión. En la tipología de estilos parentales de Palacios y Andrade (2006), este tipo de estilo parental se compone por niveles bajos en las dimensiones tanto de apoyo como de control. En un porcentaje muy bajo se ubicó el estilo Autoritario con niveles altos en la dimensión de control y bajo en la de apoyo. Refiere a un padre que para el adolescente impone su manera de ser sobre sus procesos de pensamiento, expresión de emociones y sentimientos. Es un padre que se percibe ejerciendo su voluntad, con predominio de su razón en todo, sin que se cuestión su autoridad. Anula la expresión emocional del hijo, controla las actividades del adolescente y no lo orienta a metas ni reconoce sus éxitos. Así, no promueve su autonomía. Dicho estilo estuvo por abajo del Inconsistente que también el porcentaje de incidencia fue bajo.

Figura 5: Estilo parental del padre

#### Estilo parental de la madre

En relación con la forma en la que los adolescentes perciben el estilo parental de la madre, se observa que predominan los estilos Negligente y Democrático (Figura 6). En el estilo Negligente la dimensión tanto de control como de apoyo son bajas. Mientras que en el estilo Democrático, el control es bajo, y alta la dimensión de apoyo.

Figura 6: Estilo Parental Mamá

*Correlaciones:* No existe relación entre el estilo parental del padre con la conducta prosocial.

En cuanto al estilo parental de la madre, se encontró relación con Solidaridad ( $r=-.372; p=.002$ ) y con Altruismo ( $r=.449; p=.000$ ), lo que significa que los adolescentes cuya madre tiene un estilo parental Democrático, apoyan y son considerados con el que más lo necesita.

#### Diferencias Por Variables Contextuales Conducta Prosocial

Se encontraron diferencias por *escolaridad de la madre* en Altruismo, destacando que los adolescentes de madres con nivel de preparatoria se describen a sí mismos más altruistas a diferencia de aquellos cuyas madres cuentan con estudios de primaria (Ver figura7).

Figura 7: Escolaridad de la Madre

Por otro lado, se observaron diferencias por ocupación del padre en Solidaridad y Altruismo, resaltando en ambos casos que los adolescentes cuyos padres se dedican a una profesión se describen a sí mismos más solidarios y altruistas que aquellos que no son profesionistas (ver Tabla 1).

Tabla 1: Diferencias En Conducta Prosocial Por Ocupación del Padre

	Ocupaciones				Diferencias Significativas ANOVA
	Oficio M	Comercio M	Empleado M	Profesionista M	
Altruismo	11.75	13.81	14.34	15.26	.031
Solidaridad	20.33	19.41	19.30	20.80	.018

Nota: M=media

Otro variable que estableció diferencias fue el **número de hermanos** en Toma de perspectiva y Altruismo tal y como se observa en la tabla 2; en el caso de la primera destacan los adolescentes que tienen de 4 a más hermanos; en cambio quienes tienen un solo hermano, tienden a ser más altruistas (Tabla 2).

Tabla 2: Diferencias En Conducta Prosocial Por Número de Hermanos

	Numero De Hermanos				Diferencias Significativas ANOVA
	Uno M	Dos M	Tres M	Cuatro y más M	
Toma de perspectiva	17.19	16	17	17.80	.050
Altruismo	15.20	14.12	13.29	11.33	.014

Nota: M=media

*Estilos Parentales* : Se encontró diferencias significativas en el *estilo parental materno* por escuela de procedencia ( $t=-2.70$ ;  $p=.042$ ) observándose más el estilo parental inconsistente en las madres de los hijos que asisten a escuela privada a diferencia de aquellos que asisten a escuela pública donde predomina el estilo autoritario (figura 8)

Figura 8: Estilo Parental de la Madre

## DISCUSIÓN

Tanto el padre como la madre fueron caracterizados con dos estilos parentales predominantes que son el Democrático y el Negligente. Sin embargo, el padre es caracterizado, más democrático en relación con la madre. Lo que se traduce en que los adolescentes perciben a un padre exigente que atiende a las necesidades de sus hijos, que los valida, escucha, reconoce sus derechos, y respeta su autonomía individual, aún más que la madre. Llama la atención que de manera similar al Democrático fue caracterizado un padre y una madre con un estilo parental Negligente, es decir, padre y madre con poca exigencia y poca atención a las necesidades de los hijos, a quienes les proporcionan pocas muestras de afecto. Sin embargo, los resultados ponen en evidencia la importancia de la madre caracterizada como democrática en la promoción de conductas de ayuda y solidaridad de los hijos ayuda para con otros. Y, que además cuenta con un grado mayor en cuanto a la escolaridad se refiere. En cuanto al padre, la profesión resultó ser factor de influencia en la conducta prosocial, a diferencia de los hijos cuyo papá no lo es.

En familias en donde existen cuatro hijos, entre los hermanos se favorece el altruismo. Siendo el subsistema de los hermanos el laboratorio para las relaciones interpersonales como lo ha señalado Minuchin (1977). El predominio en la caracterización de una madre autoritaria en la escuela pública a diferencia de la madre caracterizada como inconsistente en la privada parece estar relacionado con la necesidad de ejercer un control y exigencia que se piensa no proporciona la escuela pública a diferencia de la privada. Los resultados evidencian la necesidad de fomentar la conducta prosocial en los adolescentes para su adecuado desarrollo físico y mental y un buen ajuste social. Tanto la familia como la escuela son los ambientes idóneos para ellos. Si la familia y, a través de la educación se promueve el desarrollo de seres prosociales, e incide en la conducta moral, expresión del desarrollo biopsicosocial, y por tanto, se genera salud integral en el individuo prosocial, y se incide en una sociedad altruista, justa, compartida, empática y prosocial.

# IMAGEN CORPORATIVA ACTIVO CLAVE EN LA GESTION DE LA UNIVERSIDAD PÚBLICA

Wilmar Sierra Toncel, Universidad de La Guajira

Karen Nahyr Sierra Ortiz, Universidad Eafit

Erick Johan Sierra Ortiz, Universidad de La Guajira

Ángela Nair Ortiz Rojas, Universidad de La Guajira

## RESUMEN

*El presente artículo tiene como objetivo socializar los resultados de la investigación Imagen Corporativa como elemento de posicionamiento en universidades públicas. Se fundamentó teóricamente en: Costa (2006), Caldevilla (2010), Rivera y otros (2009), Osuna y otros (2006), Molla y otros (2006), Koontz y Weihrich (2007), Robbins (2005) entre otros. Fue una investigación descriptiva correlacional con diseño no experimental y de campo. Se aplicó una encuesta a 99 miembros de la comunidad universitaria de las universidades de la Guajira en Colombia y Zulia en Venezuela. Dentro de los hallazgos Existe una percepción deficiente de la imagen corporativa y una débil reacción frente a los estímulos que debería generar las imágenes publicitarias a través de los contenidos, simbologías y lenguaje cromático. Los procesos de planificación referidos especialmente a la visión de largo plazo, los planes y presupuestos, definición de roles, funciones y estructura organizacional así como el control y monitoreo de los procesos de gestión de la imagen corporativos presentan serias disfuncionalidades. No existe un enfoque administrativo de la imagen centrado en los usuarios del servicio para aprovecharlos como base del posicionamiento de la imagen institucional. Se estableció que la imagen corporativa es un activo clave para la gestión de las universidades públicas.*

**PALABRAS CLAVE:** Imagen Corporativa, Universidad, Gestión, Percepción

## KEY CORPORATE ASSET MANAGEMENT IN THE PUBLIC UNIVERSITY

### ABSTRACT

*This article aims to share the results of the research: Corporate image as an element of positioning public universities. It is theoretically substantiated in: Costa (2006), Caldevilla (2010), Rivera and others (2009), Osuna and others (2006), Molla and others (2006), Koontz and Weihrich (2007), Robbins (2005) among others. It was a descriptive correlational non-experimental research design and field. A survey was applied to 99 members of the college community from the universities of La Guajira in Colombia and Zulia in Venezuela. Among the findings there is a poor perception of the corporate image and a weak reaction to stimuli that should generate advertising images through the contents, symbols and chromatic language. Planning processes especially related to the long-term vision, plans and budgets, defining roles, functions and organizational structure as well as control and monitoring processes of corporate image management have serious dysfunctions. There is no image management approach focused on service users to use them as the basis of the positioning of the corporate image. It was established that the corporate image is a key asset for the management of public universities.*

## INTRODUCCIÓN

Las nuevas concepciones económicas basadas en las reglas de juego del mercado, la ahora más aproximada realidad de la Aldea global soñada por Tofler en la Tercera Ola, y bautizada por otros como la sociedad del conocimiento, le ha impuesto retos y nuevos desafíos a las organizaciones como motores de desarrollo social y económico, entre ellos el de moldear y flexibilizar sus estructuras, cosmovisión, comportamientos y actitudes para adaptarse a esa nueva realidad cambiante. Al respecto (Costa, 2003); plantea que se ha pasado de la economía de producción a la economía de información, después del industrialismo, los pilares que lo sostenían, ya no son sino una vieja estructura que se ha convertido en genérica para todas las organizaciones, así como secundaria en la era de la información y la competitividad. La lógica industrial ya no es el ombligo del negocio en la sociedad de los servicios.

Esto habrá quedado bien claro debiéndose ordenar ideas conforme a la plataforma actual desde la que se vislumbra el futuro. La empresa es hoy una célula más de la enorme red de valores emergentes de la sociedad global. En ese orden de ideas, la educación no ha sido ajena a estas transformaciones antes por el contrario, ha nucleado y apropiado muchas de las políticas públicas implementadas en coherencia con su actividad y misión social, es así como la privatización de muchas funciones sociales que antes eran exclusivas de desarrollar por los entes estatales por mandato constitucional, hoy hacen parte de la canasta de oferta de los inversores privados y obviamente de las universidades, lo que denota un predominio de la economía de mercado, característico del modelo económico actual, donde toman vitalidad aspectos tales como: la productividad y la competitividad, constituyéndose en factores inherentes a la supervivencia de las organizaciones y los sistemas. Así las cosas, la educación superior y sobre todo la universidad, como entidad encargada del desarrollo de la ciencia, la formación del hombre para el trabajo, la convivencia y la transformación del entorno social, también le ha correspondido ponerse a tono con la nueva realidad económica y social, volviéndose autosuficientes económicamente para poder mantenerse en el mundo competido de la educación superior, pese a la crítica de la mercantilización de la educación, hoy deben mercadear sus productos denominados programas académicos, sus servicios de consultoría, labores investigativas, la venta de propiedad intelectual a través de patentes, franquicias y otras formas de producción y gestión de propiedad del conocimiento.

Así mismo, han tenido que incorporar técnicas modernas de gestión empresarial, como elementos diferenciadores competitivos que les garantice permanencia en el mercado, constituyéndose en vectores portadores de futuro, tal como: el enfoque al cliente, gestión por procesos, calidad total e imagen corporativa. Esta última objeto de estudio, tiene una afectación particular en las instituciones de educación superior de carácter público, las cuales carecen en muchas ocasiones de estructuras reguladoras de la imagen; por tanto actúan muchas veces olvidando los impactos ocasionados a una imagen corporativa que no es impermeable, derivándose un gradual deterioro por la exposición a multiplicidad de factores internos y externos contaminantes. Desde esta perspectiva, es claro que las universidades deben diseñar políticas e implementar estrategias que permitan identificar las falencias y disfuncionalidades en los procesos de gestión de su imagen corporativa, así como los efectos que estas causan en el posicionamiento de las universidades públicas, las cuales permitan desarrollar planes estratégicos de desarrollo institucional considerando esta, como una variable clave, estratégica susceptible de gobernar, por la importancia y potencialidad de sus implicaciones en la gestión corporativa y por ende en la imagen institucional que estos establecimientos educativos proyectan. Cabe anotar que las universidades como muchas de las entidades públicas inmersas en el paradigma que la publicidad y la inversión en la imagen es propia de las empresas privadas en el pasado no han adquirido una cultura de gestión de la imagen y por ende este no ha sido reconocido como un activo clave y factor de competitividad en el mercado de la educación superior.

## REVISIÓN LITERARIA

### Imagen Corporativa

Para Costa (2006), imagen corporativa es la imagen psicológica que una sociedad se representa mentalmente de una empresa por consiguiente a la imagen corporativa, la configura el conjunto variado de actuaciones y mensajes de la organización a lo largo del tiempo. Las características primordiales que debe de tener la imagen corporativa para cumplir las expectativas que de ella se espera son: La Diferenciación de la empresa de todas las demás, darle un valor duradero a todo cuanto la empresa realiza y comunica y Permanecer en el tiempo y en la memoria social. De igual manera Sánchez (2009), plantea que la imagen corporativa se puede definir como una evocación o representación mental que conforma cada individuo, formada por un cúmulo de atributos referentes a la compañía; cada uno de esos atributos puede variar, y puede coincidir o no con la combinación de atributos ideal de dicho individuo. Por otra parte Caldevilla (2010), expone que la imagen corporativa es la imagen que tienen los públicos acerca de una organización en cuanto entidad. Es la idea global que tienen sobre sus productos, sus actividades y su conducta. Se refiere a cómo se percibe una compañía. La imagen corporativa es utilizada como un valor estratégico, que sirve para diferenciarse del resto de empresas, para de esta forma perdurar en la memoria social, en ese sentido cumple funciones de ser eficaz, dar estilo, personalidad a la empresa, generar una opinión pública favorable, acumular reputación, prestigio, atraer a los clientes y fidelizarlos.

### La Percepción

Para Rivera (2009), la percepción es una función mental que permite al organismo, a través de los sentidos, recibir y elaborar las informaciones provenientes del exterior y convertirlas en totalidades organizadas dotadas de significado para el sujeto. Esto supone que no se puede percibir totalmente la realidad porque nuestra percepción es selectiva e interpretativa. Así mismo Molla (2006), plantean que el proceso comienza con la exposición del sujeto a un estímulo que, en nuestro caso, será un estímulo comercial, como un anuncio publicitario, una marca o un establecimiento comercial. Este encuentro del consumidor con el producto, anuncio, establecimiento (el estímulo) puede ser fortuito, no buscado por él (recepción pasiva), o bien fruto de una búsqueda activa. En cualquier caso, la mera exposición no garantiza que un estímulo impacte en un consumidor de modo que éste continúe procesándolo.

### Atención

Para Molla (2006), es un proceso de localización perceptiva que incrementa la conciencia clara y distinta de un núcleo central de estímulos, en cuyo entorno quedan otros más difusamente percibidos.

La Atención presenta características como que:

*Es activa, tanto si el consumidor presta atención de manera voluntaria, como si lo hace de forma involuntaria, se prepara (se activa) para empezar el procesamiento de los estímulos a los que se ha expuesto. Por ejemplo, la atención voluntaria puede activarse porque existe la intención de buscar información sobre un producto que se desea adquirir, de modo que el consumidor "presta atención" a todas las informaciones que se refieran a él. La atención involuntaria se produce, en cambio, cuando las características que presenta el estímulo provocan que el consumidor oriente su atención hacia el mismo, aunque en un principio careciese de interés para él Tiene una amplitud limitada. Los individuos son incapaces de prestar atención a más de siete estímulos a la vez, aproximadamente. No obstante, esta amplitud puede aumentar en el momento en el que los estímulos se agrupan en conglomerados.*

*Es selectiva. Los individuos prestan una mayor atención a algunos estímulos que a otros.*

Así mismo para Pintado (2008), la *atención*, son sensaciones, que son transmitidas al cerebro para su procesa miento. Sin embargo, todas las personas están expuestas a muchos más estímulos de los que se pueden procesar: no se analizan todos los productos de un hipermercado, no se lee al pie de la letra todo el correo que llega a través del marketing directo.

*Interpretación:* Pintado (2008), manifiesta que se le da un significado a esas sensaciones; esta interpretación tiene un componente cognoscitivo y un componente afectivo. En este caso, se puede diferenciar entre la interpretación cognoscitiva de los estímulos con las categorías de significado ya existentes, y la interpretación afectiva, que es la respuesta emocional o sentimental que un individuo tiene ante un estímulo.

*Identidad Corporativa:* Para Sanz (2006), la identidad es el resultado de un proceso en el que un aspecto general de la materia cobra singularidad. Un enorme bloque de mármol de carrara puede contener en potencia cualquier escultura. Sin embargo, sólo existe un Moisés de Miguel Ángel identificable, diferente y singular. Algo hay en esa escultura que la diferencia de las demás. Es su identidad. Pero, ¿dónde está la complejidad? La complejidad radica en los procesos que han ido marcando el resultado. Esa escultura es consecuencia de las circunstancias culturales, como también personales de un artista que poseía determinados valores morales, estéticos y unas habilidades técnicas propias de su época. También podría decirse, de un modo sencillo, que la identidad se manifiesta como el elemento o conjunto de elementos que hace que una cosa sea diferente de las demás. Las Últimas consecuencias de la identidad las tenemos en las huellas dactilares, en el ADN e incluso en el iris del ojo, que parece contener en sus hilos información singular. Una especie de código de barras que en este caso, sería un código de radios. Como se puede apreciar, se sigue hablando de formas y estructuras.

*Verbal:* Para Osuna (2008), Los elementos verbales son aquellos que están relacionados con el contenido. A través de éste se transmiten las ideas, sentimientos y argumentaciones que harán el mensaje persuasivo. Según el contenido elegido, el mensaje puede ser general o particular, íntimo o impersonal, sencillo o complejo, realista o abstracto, etc. En general, las empresas publicitarias eligen contenidos persuasivos a través de comentarios positivos, plantear interrogantes, emitir refuerzos verbales, dirigirse a la audiencia en primera persona, etc. Así mismo, Los elementos no verbales son aquellos que, sin ser signos sonoros, acompañan a los componentes verbales para transmitir o complementar los mensajes. Dentro de los componentes no verbales podemos encontrar los gestos (acciones concretas que envían estímulos visuales a los observadores del mensaje publicitario para añadir énfasis, franqueza o espontaneidad a los elementos verbales), la mirada, la sonrisa, la expresión facial y las posturas de los personajes que transmiten el mensaje.

*Cromático:* Añaños (2008), plantea que la comunicación mediante el color se debe entender como una comunicación que aporta signos, en este caso cromáticos, que permiten construir estructuras que podemos identificar como lenguaje simbólico -el signo cromático adopta un contenido arbitrario- o, al contrario, como lenguaje o sinestésico, donde el contenido del signo es inherente. La publicidad conoce la influencia de los cromatismos en los envases, los productos, los puntos de venta, en las campañas y los anuncios gráficos y televisivos, así como también en la imagen corporativa de las empresas, en su nombre y también en los logotipos de las marcas. El uso adecuado de los colores en publicidad comunicará los hechos y las ideas más rápidamente al receptor. El marketing utiliza los colores para: a) Mostrar el producto más atractivo. b) Crear estímulos de venta. c) Dotar el producto de personalidad propia, diferenciándolo del de la competencia. d) Posicionar la marca en el mercado.

*Gestión:* Para Blejmar (2009), es el proceso de intervenciones desde la autoridad de gobierno para que las cosas sucedan de determinada manera y sobre la base de propósitos ex ante y ex post, que incluye múltiples y complejas variables entre ellas la dimensión tiempo. Desde esta perspectiva, se puede decir que el gerente

en el cumplimiento de sus funciones, debe conocer y dirigir las dimensiones gerenciales: Planificación, Organización, Dirección y Control.

*Planeación:* Para Koontz y weihrich (2007), la planeación comprende la selección de misiones, objetivos, y las acciones necesarias para lograrlos; requiere tomar decisiones, lo cual consiste en elegir entre líneas de acción. De este modo los planes proporcionan un enfoque racional para la consecución de objetivos preseleccionados. La planeación cubre la brecha desde donde estamos hasta donde queremos llegar. Daft (2006), expone que la planeación indica donde quiere estar la empresa en el futuro y la manera de llegar allí. Significa definir las metas del desempeño futuro y seleccionar las actividades y recursos necesarios para alcanzarlas. De igual modo para Robbins (2005), la planificación abarca la definición de las metas de la organización, el establecimiento de una estrategia general para alcanzar esas metas y el desarrollo de una jerarquía minuciosa de los planes para integrar u coordinar las actividades. Establecer metas sirve para no perder de vista el trabajo que se hará y para que los miembros de la organización fijen su atención en las cosas más importantes. En coherencia con lo anteriormente expuesto, la organización es la función administrativa que se encarga de agrupar las actividades necesarias para alcanzar los objetivos de la empresa. Agrupar las actividades involucra la reunión de las personas y recursos empresariales bajo la autoridad de un jefe.

*Dirección:* Según Koontz y weihrich (2007), la dirección consiste en influir en las personas para que contribuyan a las metas de la organización y grupos, en particular se relaciona con el aspecto de trato personal de la administración. Daft (2006), plantea que la dirección consiste en usar la influencia para motivar a los empleados para que alcancen las metas organizacionales. Dirigir significa crear una cultura y valores compartidos, comunicar las metas a los empleados mediante la empresa e infundirles el deseo de un desempeño excelente; igualmente Robbins (2005), dice que la función de dirección comprende motivar a los empleados, guiar a los demás, elegir los mejores canales de comunicación y resolver conflictos. En conclusión la dirección es la función administrativa que se encarga de agrupar las actividades necesarias para alcanzar los objetivos de la empresa. Agrupar las actividades involucra la reunión de las personas y recursos empresariales bajo la autoridad de un jefe.

*Control:* Según Koontz y weihrich (2007), el control consiste en medir, corrigiendo el desempeño tanto de individuos como de organizaciones para comprobar que los hechos corresponden a lo planeado. Es medir el desempeño en relación con las metas y los planes, señalar las desviaciones de los estándares corrigiéndolas. En síntesis, controlar facilita la realización de los planes. Así mismo Daft (2006), señala que el control es la cuarta función del proceso administrativo que significa vigilar las actividades de los empleados, determinar si la empresa se dirige a la consecución de sus metas para tomar las medidas correctivas que vayan necesitando; Robbins (2005), por su parte, ve el control como la supervisión de actividades para verificar que se realizan, como se planearon para corregir las desviaciones significativas.

## METODOLOGÍA

La investigación fue de tipo descriptiva correlacional, con diseño no experimental y de campo y con un enfoque cuantitativo, utilizando la estadística descriptiva para el diseño y análisis de los datos con mediación tecnológica utilizando el aplicativo spss y la hoja de cálculo Excel. En cuanto a la población y la muestra se trabajó con una población finita integrada por dos (2) directores, sesenta y dos (62) coordinadores y seis mil ochocientos sesenta y cuatro (6.864) docentes; miembros de la comunidad universitaria, se trabajó con un nivel de confianza del 95.5%, un margen de error del 10%, y proporciones complementarias de p y q, iguales de 0.50. En cuanto a la recolección y análisis de los datos se utilizó la técnica de la encuesta, por medio de un cuestionario con 54 ítems, de respuestas múltiples en escala tipo Likert con las siguientes opciones: muy de acuerdo, de acuerdo, ni de acuerdo ni en desacuerdo, en desacuerdo, muy en desacuerdo y cada alternativa de la respuesta se le asigna un valor de ponderación.

En lo que respecta al cálculo de la confiabilidad del instrumento, en esta investigación se determinó por la aplicación de una muestra piloto a sujetos de similares de las dos universidades, con el fin de buscar la factibilidad de uso y confiabilidad del instrumento, con base en el criterio mencionado anteriormente, se utilizó la hoja de cálculo de Excel y se aplicó el formulario, la técnica utilizada para la confiabilidad del instrumento fue el coeficiente alfa de Crombach arrojando un alto coeficiente de confiabilidad de 0.95. Por otro lado, para la interpretación y categorización de los estadísticos de las variables gestión utilizó el baremo ponderado con las siguientes categorías Muy baja  $1,00 \geq x < 1,80$ ; Baja  $1,80 \geq x < 2,60$ ; moderada  $2,60 \geq x < 3,40$ ; Alta  $3,40 \geq x < 4,20$  y Muy Alta  $4,20 \geq x \leq 5,00$ .

## RESULTADOS

En cuanto a la percepción de la comunidad universitaria de la imagen corporativa en universidades públicas”, se obtuvo una media de los puntajes de 2.21 ubicada en la categoría del baremo como baja y una tendencia de desacuerdo de 46,83%, 34,03% y 50,50% en cuanto a los indicadores exposición, atención e interpretación respectivamente, evidenciándose que se tienen una percepción deficiente de la imagen corporativa de las universidades, lo cual se corrobora con una media de 2,21 en cuanto a la exposición, indicando que los encuestados reaccionan muy poco o nada frente a los estímulos que debe generar la imagen expresadas a través de los contenidos, simbología y lenguaje cromático de la publicidad. Del mismo modo, consideran que la universidad no tiene en cuenta el conocimiento ni las emociones que los clientes tienen de la imagen corporativa para diseñar los productos académicos, lo cual se reafirma con la media resultante de 1.83 en el indicador interpretación.

En lo que respecta a la identidad corporativa, se pudo establecer con un promedio de 3.11, clasificado en el baremo como categoría media, que los encuestados consideran que las universidades poseen una identidad caracterizada por una razón social, un slogan y colores corporativos que determinan su razón de ser, guardando coherencia con la misión institucional, sin embargo la media de 2.48, del indicador cromático, clasificada como baja en el baremo, evidencia que lo encuestados con una tendencia acumulada del 47.80%, manifiesta estar en desacuerdo que la universidades le dan un manejo apropiado a los colores y que reflejen o proyecten su imagen organizacional. Así mismo, se analizó la gestión de la imagen corporativa, la cual presentó una media 1,90, considerada baja en la jerarquía del baremo, lo que indica la presencia de factores que inciden negativamente en el desempeño gerencial en lo atinente a la administración de la imagen corporativa de las universidades.

En lo referente a la planeación de la imagen esta presento una media 2.0 considerada como baja en la categorización del baremo y un porcentaje acumulado del 68%, de desacuerdo, evidenciándose una planeación deficiente de la imagen corporativa, representada en la falta de visiones, planes de largo plazo y presupuestos para garantizar el cumplimiento de objetivos propuestos. En cuando al indicador relacionado con la dirección, arrojo un porcentaje acumulado de 76.4% y una media de 1.8 clasificada como categoría baja en el baremo, indicando que no están establecidos los roles, estructura y niveles de autoridad para la toma de decisiones en cuanto a la imagen corporativa de las instituciones. En ese orden de ideas para el indicador Control, se registró un porcentaje acumulado de desacuerdo de 92.93%, y una media de 1.69, considerada muy de acuerdo al baremo, dejando en evidencia las deficiencias de control, traducidas en la falta de monitoreo a los resultados e indicadores de las campañas publicitarias y demás acciones encaminadas al posicionamiento de la imagen corporativa.

## CONCLUSIONES

*Analizados y discutidos los resultados se concluye lo siguiente:* Existe una percepción deficiente de la imagen corporativa de las universidades y una débil reacción frente a los estímulos que debería generar las imágenes publicitarias a través de los contenidos, simbologías y lenguaje cromático, por lo tanto no se

aprovecha ni los conocimientos ni las emociones que manifiestan los usuarios del servicio para diseñar la oferta académica como elemento de posicionamiento organizacional. Las universidades poseen una identidad expresada y caracterizada en la razón social institucional, slogan y colores corporativos que determinan la razón de ser y guardan relación con la misión institucional, pero no existe manejo apropiado de la paleta de colores para que la publicidad refleje o proyecte la imagen institucional que deben proyectar de forma objetiva y clara. Los procesos de planificación referidos especialmente a la visión de largo plazo, los planes y presupuestos, por otro lado la definición de roles, funciones y estructura organizacional así como el control y monitoreo de los procesos de gestión de la imagen corporativos presentan serias deficiencias y disfuncionalidades que hacen que la imagen institucional no se considere un activo importante para el logro de los objetivos misionales. No existe un enfoque administrativo de la imagen centrado en los usuarios del servicio para aprovecharlos como base del posicionamiento de la imagen institucional. Las universidades manejan un liderazgo conservador en el mercado y es reconocida por los precios, pero existe timidez para utilizar esto como elemento competitivo, además se evidencia neutralidad conceptual en el uso de la diferenciación de valor agregado en los productos y en la publicidad para mercadear y competir, así como se manifiesta en desacuerdo con poseer nichos de mercado establecidos y específicos producto de las estrategias aplicadas. Se estableció que la imagen corporativa es un activo clave para la gestión de las universidades públicas.

# EL CAPITAL INTELECTUAL E INNOVACIÓN PILARES PARA DESARROLLO DE UN CENTRO DE INVESTIGACIÓN PÚBLICA

Eyran Roberto Díaz Gurrola, Universidad Tecnológica de Torreón

Julio Cesar Dorado Espino, Universidad Tecnológica de Torreón

Ramón Heredia Martínez, Universidad Tecnológica de Torreón

Gloria Josefina Montiel Sánchez, CETIS 59 de Torreón

María Luisa Dorado Espino, Universidad Autónoma de Coahuila

## RESUMEN

*La gestión de la innovación permite ser competitivos y colocarse a la vanguardia en productos y servicios que se ofrecen, otorgando un mayor ingreso y desarrollo en las organizaciones. Para identificar las variables que la propician se seleccionó el Consejo de Ciencia y Tecnología (CONACYT), como entidad pública y de investigación. El Objetivo principal es identificar las variables de la gestión de la innovación de un centro CONACYT, y lo que necesita para implementar los resultados. Concluyendo que: La gestión de innovación es el resultado de la interacción entre las variables generadas por los valores, la cultura organizacional, el liderazgo, la visión de la empresa, el compromiso de cada uno de los integrantes de la organización, entre otras; las cuales no pueden actuar separadamente, tienen que estar en sincronía con el mercado, la tecnología, las necesidades actuales y futuras del cliente, encausadas por un liderazgo comprometido con la gestión de la innovación.*

**PALABRA CLAVE:** Gestión de la Innovación, Tecnología, Cultura

## THE INTELLECTUAL RESOURCES AND INNOVATION PILLARS FOR THE DEVELOPMENT OF A PUBLIC RESEARCH CENTER

### ABSTRACT

*Innovation management lets us be more competitive, placing products and services offered at the vanguard, giving a greater income and development. To Identify variables that create them, a science and technology center (CONACYT) is selected, which it's public and for investigations. The objective is to identify management innovation variables in a CONACYT center and what is needed to implement results. We find innovation management is the result of interactions between variables generated through values, culture organization, leadership, companies vision, and commitment of each organization member, among others, which are not able to act separately. They must be synchronized with market, technology, the actual and future needs of the customers, aligned by a committed leadership with the innovation management.*

**JEL:** I12, M00

**KEY WORD:** Innovation Management, Technology, Culture

## INTRODUCCIÓN

Los centros CONACYT en México requieren enfocar sus esfuerzos en lograr un bienestar social para su población, una de las herramientas de mayor impacto es elevar la innovación, la productividad y la investigación, para dejar de ser un país que solamente exporta materias primas, e importa la tecnología de

los países desarrollados. Los 27 centros de investigación que dependen del CONACYT son el pilar para el desarrollo del país, además de estar alineados al plan nacional de desarrollo 2013-2018. En base a lo anterior el personal que labora en los centros de investigación son servidores públicos, con la responsabilidad de impulsar la innovación, la productividad y la generación de conocimiento aplicable al desarrollo tecnológico del país. Por medio de observaciones así como de consultas internas con personal que se desempeña en el centro CONACYT

Se realizó el presente trabajo de investigación para contestar la pregunta “¿Cuáles son las variables del capital intelectual que generan la gestión de la innovación y en un centro CONACYT?. Objetivo principal: ¿Cuáles son las variables de la gestión de la innovación en un centro CONACYT y del capital intelectual? Objetivos particulares 1. Identificar los elementos que intervienen en la innovación 2. Establecer si innovación es un valor establecido en la organización 3. Examinar cual es el métrico que la empresa tiene para medir a la innovación y como sus integrantes contribuyen 4. Determinar si la cultura y de la empresa promueve la innovación 5. Comprender si en la organización se dan las condiciones para generar aprendizaje en su personal 6. Examinar cual es la orientación hacia el cliente por parte de la empresa 7. Determinar cómo se lleva a cabo el proceso de la administración para la gestión de la innovación. Identificar como se crea el valor en la empresa y si es responsablemente social. 8.

Conocer el tipo de liderazgo que tiene la organización y cómo influye en la gestión de la innovación En la investigación se probaron las siguientes proposiciones 1 No se gestiona la innovación en el centro CONACYT CIATEQ A.C. 2 Como consecuencia de no desarrollar adecuadamente las variables relacionadas a la gestión del conocimiento, el capital estructural y el capital relacional. 3 la cultura en la organización promueve valores que no toman en cuenta la gestión de la innovación. 4 El liderazgo en la organización no tiene como prioridad la gestión de la innovación. 5 El enfoque que se tiene al cliente no es entregar producto con innovación. Variables intermedias independientes: el capital humano, el capital organizativo, el capital tecnológico capital relacional, variable dependiente gestión de la innovación

## REVISIÓN LITERARIA

Basándonos en Kendrick (Kendrick, 1961), se puede afirmar que el concepto de Capital Intelectual fue introducido por primera vez en el siglo XIX por el economista alemán F. List (List, 2012), avanzándose conceptos sobre el mismo desde esa época, por otros economistas; tal es el caso de Senior (Senior, 1836), de Sidgwick (Sidgwick, 1887), de J. Bentham (Bentham, 1996) y J.S. Mill (Mill, 1900). También en esta génesis, no podemos dejar de mencionar al sociólogo francés A. Comte (Comte, 1907) y a Alfred Marshall (Marshall, 2012). Bueno (E. Bueno, 2002) considera que fue Marshall el que inicio la actual economía del conocimiento. En la literatura más reciente se considera y es de común aceptación, que el origen del Capital Intelectual se sitúa en el primer lustro de la década de los noventa del siglo XX, disputándose su autoría economistas y columnistas de revistas y periódicos de Estados Unidos y Suecia, caso entre otros de Stewart (T. Stewart & Ruckdeschel, 1998) y Edvinsson y Malone (L. Edvinsson & Malone, 2000). En esas fechas el concepto de Capital Intelectual se utilizaba para explicar el valor en los mercados financieros de las empresas más intensivas en I+D o en inversiones de esta naturaleza, intangibles propios de la actividad científica y tecnológica, o, en otras palabras, empresas basadas en el conocimiento. En 1969, en una carta del economista John Kenneth Galbraith a su colega Michael Kaleski ya este hacia una referencia al termino Capital Intelectual.

Los Modelos de gestión de capital intelectual: Mapa estratégico, es el proceso de elaboración de una visión estratégica macro, propuesto por Kaplan & Norton, que normalmente precede a la implementación de un cuadro de mando integral.. El Balanced Scorecard, es un modelo de gestión empresarial, cuya estrategia es a largo plazo, con crecimiento y permanencia del negocio, Capital humano, y activos tangibles e intangibles (Kaplan & Norton, 2000). Modelo de Dirección estratégica por competencias. El profesor

Bueno (1998) interioriza en el concepto de Capital Intelectual, mediante la creación del modelo de dirección estratégica por competencias. Si relacionamos el Capital Intelectual con las competencias dentro de la organización, encontramos un nuevo paradigma que nos lleva a los activos intangibles, los cuales constituyen un valor crítico estratégico en la competencia empresarial, Modelo Intellectus, se está desarrollando en el Centro de Investigación sobre la Sociedad del Conocimiento (CIC) por un equipo de investigación liderado por el profesor Eduardo Bueno

El capital es todo lo que produce y genera valor a la empresa (capital financiero y físico) hasta manejar el concepto de capital intelectual. Por lo que el capital se divide en tangible e intangible (Villarreal & Villarreal, 2003). El capital intelectual es por tanto, la suma de lo que saben todos en la compañía y que estructurado, le proporciona a la empresa una ventaja competitiva en el mercado (Valdés, 2002) ver tabla 1. El capital intelectual es el conjunto de aportaciones no materiales que en la era de la información se entienden como el principal activo de las empresas del tercer milenio (Brooking, 1996). Edvinsson presenta el concepto de Capital Intelectual mediante la utilización de la siguiente metáfora: “Una corporación es como un árbol. Hay una parte que es visible (las frutas) y una parte que está oculta (las raíces). Si solamente te preocupas por las frutas, el árbol puede morir. Para que el árbol crezca y continúe dando frutos, será necesario que las raíces estén sanas y nutridas. Esto es válido para las empresas: si sólo nos concentramos en los frutos (los resultados financieros) e ignoramos los valores escondidos (todos aquellos que indirectamente generan un apoyo para lograr los frutos), la compañía no subsistirá en el largo plazo”. (L. Edvinsson & Malone, 1996). Edvinsson y Malone dividen al capital intelectual en: a) Capital Humano. Corresponde al conjunto de conocimientos, habilidades, actitudes, y destrezas de las personas que componen las organizaciones. b) Capital estructural. Conocimientos desarrollados y explicitados por las organizaciones, integrados por los siguientes elementos:

*Creación en colaboración de Eyran Díaz, Ramón Heredia, Julio Dorado, Gloria Montiel en esta tabla se explica los diferentes enfoques del capital intelectual alrededor del mundo y desde las perspectivas financiera, estratégica y social*

### Modelos Básicos

Estos modelos son aquellos que tienen como finalidad medir los activos intangibles de la organización, con el fin de efectuar un diagnóstico y rendir información de su capital intelectual permitiendo adoptar decisiones de gestión.

Tabla 2: Modelo de Capital Intelectual Definiendo su Estructura y sus Indicadores

Modelos	Estructura	Indicadores
Navegador de Skandia Edvinsson. 1992-1997	Enfoque cliente, Enfoque financiero, Enfoque humano, Enfoque procesos, Enfoque renovación	Indicadores de medida absoluta del Capital Intelectual, Indicadores de eficiencia del Capital Intelectual
Technology Broker Brooking, 1996	Activos de mercado, Activos humanos, Activos de propiedad intelectual, Activos de infraestructura	Indicadores no cuantitativos, Auditoria del Capital Intelectual
University of Werstern Ontario Bontis, 1996	Relación de causalidad, Capital, Humano, Capital, Relacional, Capital, Organizativo	Indicadores de resultados organizativos
Canadian Imperial Bank of Commerce Saint Onge, 1996	Learning organization, Capital de conocimiento	Indicadores de aprendizaje
Monitor de activos intangibles Sveiby, 1997	Estructura interna, Estructura Externa, Competencia	Indicadores de crecimiento y renovación, Indicadores de eficiencia, Indicadores de estabilidad
Modelo Nova Camisón, Paíacios y Devece, 1998	Capital Humano, Capital Organizativo, Capital Social, Capital de innovación y aprendizaje	Indicadores de procesos dinámicos
Modelo Intellect U. Euroforum, 1997-1998	Bloque de capital humano, Bloque de capital relacional	Indicadores de presente y de futuro
Balanced Business Scorecard Norton y Kaplan, 1992 -1996	Perspectiva financiera, Perspectiva de clientes, Perspectiva de procesos internos, Perspectiva de aprendizaje y crecimiento	Indicadores de intangibles, Indicadores financieros
Modelo de Dow Chemical 1998	Capital humano, Capital organizacional, Capital clientes	Indicadores de intangibles con impacto en los resultados organizativos
Modelo de aprendizaje organizativo KPMG	Interacción de la cultura, liderazgo, mecanismos de aprendizaje, actitudes de las personas, trabajo en equipo, etc...	Factores de aprendizaje, Factores que condicionan los resultados de aprendizaje
Modelo de Roos, Roos, Edvinsson y Dragonetti 1997	Capital humano, Capital organizativo, Capital de desarrollo y renovación	Índices de C.I. que integran los diferentes indicadores en una única medida
Modelo de Stewart	Capital humano, Capital tecnológico, Capital estructural, Capital cliente	Indicadores internos
Teoría de los agentes interesados Atkinson, Waterhouse y Wells 1998	Empleados, Clientes, Proveedores, Comunidad	Indicadores de clientes Indicadores de rendimiento de los agentes
<b>Directrices Meritum 1998-2002</b>	<b>Objetivos estratégicos, Recursos intangibles, Actividades intangibles</b>	<b>Sistema de indicadores para intangibles críticos</b>

*Modelos Básicos de medición y gestión del Capital Intelectual Fuente: (E Bueno et al., 2003) creación en colaboración de Eyran Díaz, Ramón Heredia, Julio Dorado, Gloria Montiel en esta tabla se explica los diferentes enfoques del capital intelectual y sus indicadores*

## Innovación

Surgen preguntas tales como: ¿Qué es la innovación?, y respuestas a la misma como: consiste en un proceso de aprendizaje, de un nivel de conocimiento inicial, a partir de él se crean nuevos conocimiento y son aplicados a los productos, procesos de producción y a la organización empresarial. Cotec (2004). La innovación es un continuo proceso de aprendizaje por el cual las empresas generan el nuevo conocimiento tecnológico (Nonaka & Takeuchi, 1995). Por su parte, Drucker define la innovación como la búsqueda organizada y sistemática con el objeto de cambio de las oportunidades que existen en el ambiente; o la necesidad de mejorar un proceso existente.

El sistema nacional de innovación de Colombia SNIC, concibe la innovación empresarial como una disposición mental, que propicia procesos dinámicos de investigación y aprendizaje. En los países desarrollados tienen gran claridad sobre la relación del desarrollo económico e innovación tecnológica, pues han determinado que la base de la prosperidad económica y la competitividad internacional, son la habilidad económica de introducir nuevos productos, servicios y procesos, comercialmente exitosos; ésta es la verdadera innovación tecnológica. El objeto: la ejecución de nuevas combinaciones. (López N., Montes J. & Vázquez C., 2007). El Manual de Oslo, define a la innovación como la introducción de un nuevo, o significativamente mejorado producto (bien o servicio), de un proceso, de un nuevo método de comercialización o de un nuevo método organizativo, en las prácticas internas de la empresa, la

organización del lugar de trabajo o las relaciones exteriores. Las olas de innovación tecnológica a través del tiempo se han reducido, generando necesidades de formación de personal, y como se han roto paradigmas, contempla que en la sexta ola puedan converger tres ámbitos: el de las tecnologías de información, el de la biología y el de la nanotecnología previstas para el año 2020. (López N., Montes J.

& Vázquez C., 2007) Vigilancia tecnológica, es una actividad básica en la gestión de la innovación, consiste en una vigilancia constante tanto externa como interna, permite proporcionar buena información a la persona idónea, en el momento adecuado. Por ello la empresa deberá decidir en qué áreas quiere estar informada, por lo que deberá responder a lo siguiente: cuál es el objetivo de la vigilancia, qué información requiere buscar, dónde localizarla, de qué forma comunicarla, a quién dirigirla, qué recursos va a destinar. Lo anterior dado que la vigilancia competitiva, se ocupa de la información sobre los competidores actuales y potenciales; la vigilancia comercial, estudia la información sobre clientes y proveedores, y la vigilancia del entorno, detecta aquellos hechos externos que puedan condicionar el futuro de la empresa en áreas como la política, el medio ambiente, la sociología, etc. Para ser eficaz en la vigilancia es necesario lo siguiente: Centrarse en los factores críticos, lo que exige precisar los indicadores a vigilar, orientarse en la toma de decisiones y propiciarla. Ser sistemática, organizada con métodos cuya finalidad sea hacer un seguimiento programado. (Palop & Vicente, 1994).

## METODOLOGÍA

Del Instrumento Se realizó un instrumento con la totalidad de 66 variables que integran al capital intelectual con la finalidad de someterlas a un análisis mediante el método de expertos técnica que se define como un método de estructuración de un proceso de comunicación grupal que es efectivo a la hora de permitir a un grupo de individuos, como un todo, tratar un problema complejo (Linstone, Turoff, & Helmer, 1975). Consiste en la selección de un grupo de expertos a los que se les pregunta su opinión sobre cuestiones referidas a acontecimientos del futuro. Las estimaciones de los expertos se realizan en sucesivas rondas, anónimas, al objeto de tratar de conseguir consenso, pero con la máxima autonomía por parte de los participantes. (Astigarraga, 2003) Con esto hacer una posible reducción de variables con el objetivo de obtener el modelo teórico propio para el centro de investigación. El instrumento fue aplicado a 24 colaboradores entre ellos Directores, gerentes, mandos medios y personal operativo considerados en este caso como los expertos a fin de que conocen y viven la misión y los objetivos estratégicos de la Institución, La metodología en el instrumento es la siguiente: Como primer paso se les informara a los expertos que el instrumento tiene la finalidad de evaluar las variables que componen el Capital Intelectual del Modelo Intelectus y los diferentes tipos de la innovación que su objetivo es evaluar si cada una de esas variables son importantes o no y además están alineadas a los objetivos estratégicos de la del centro público de investigación

Tabla 3: Elemento Su Definición Por el Grupo de Expertos y Sus Variables Consideradas Para su Análisis

Elemento	Definición	Variables
Valores y actitudes Capital Humano	Representan aquellos conocimientos que poseen las personas de forma natural, es decir, el carácter propio de las personas, su forma de ser, derivan en un comportamiento propio e individual, en una forma de enfrentarse al día a día, de hacer las cosas.	1 Sentimiento de pertenencia y compromiso. 2 Automotivación. 3 Satisfacción. 4 Sociabilidad y orientación al cliente. 5 Flexibilidad y adaptabilidad. 6 Creatividad
Aptitudes Capital Humano	Este tipo de conocimiento que se conoce como conocimiento explícito, es el recurso que posee cada persona para desarrollar su tarea o función dentro de la empresa. forma en la que cada uno de los miembros de la organización	7 Educación reglada. 8 Formación especializada. 9 Formación interna. 10 Experiencia. 11 Desarrollo personal.
Capacidades Capital Humano	Ya no se trata del conocimiento que poseen las personas por el hecho de saber cosas, sino que se trata de las habilidades y destrezas que poseen las personas para desarrollar las	12 Aprendizaje. 13 Colaboración (Trabajo en equipo). 14 Comunicación (Intercambio de conocimiento). 15 Conciliación de la vida laboral

Esfuerzo en I+D Capital Tecnológico	La investigación son los trabajos creativos que se emprenden de modo continuado para conocer más y mejor de la realidad que nos rodea.El desarrollo (D) es la incorporación de tales conocimientos para concebir nuevas aplicaciones	17 Gasto en I+D. 18 Personal en I+D. 19 Proyectos en I+D.
Dotación tecnológica Capital Tecnológico	Conjunto de conocimientos, métodos y técnicas que la organización incorpora a los procesos para que sean más eficaces y eficientes que no forman parte del “Esfuerzo en I+D+i” de la empresa y que obtiene del exterior	20 Compra de tecnología. 21 Dotación de tecnologías de la producción. 22 Dotación de tecnologías de la información y de las comunicaciones.
Propiedad intelectual e industrial	Este elemento se refiere a aquellos conocimientos generados en el seno de la organización y que son protegidos legalmente otorgando a la empresa el derecho a su explotación en exclusiva durante un tiempo y espacio determinados	23 Patentes y modelos de utilidad. 24 Marcas registradas. 25 Licencias. 26 Secreto industrial. 27 Dominios en internet
Vigilancia tecnológica Capital Tecnológico	Este elemento se refiere a la red organizada de técnicas y herramientas de las que dispone la empresa para captar información tecnológica del exterior, analizarla y transformarla en conocimiento que pueda emplear en la toma de decisiones que le permitan anticiparse a los cambios y	28 Información sobre patentes. 29 Conocimiento sobre la actividad tecnológica de la competencia. 30 Información sobre líneas de investigación y tecnologías emergentes. 31 Conocimiento de posibles asociaciones con empresas para I+D. 32
Relaciones con clientes Capital de Negocio	Relaciones con los diferentes segmentos de clientes que demandan o pueden demandar los bienes o servicios que configuran el proceso de negocio básico de la entidad.	33 Base de clientes relevantes. 34 Lealtad de clientes. 35 Satisfacción del cliente. 36 Procesos de relación con clientes. 37 Red de distribución
Relaciones con proveedores Capital de Negocio	Relaciones con los diferentes suministradores de los recursos necesarios para el proceso de negocio básico de la entidad.	38 Formalización de la relación con proveedores. 39 Soporte tecnológico. 40 Personalización de productos y servicios. 41 Capacidad de respuesta del proveedor.
Relaciones con aliados Capital de Negocio	Acuerdos de colaboración que la organización mantiene con un cierto grado de intensidad, continuidad y estructuración con otras instituciones	42 Base de aliados. 43 Solidez de las alianzas. 44 Beneficios de las alianzas.
Relaciones con competidores	Relaciones existentes con otros competidores tanto del mismo sector como de sectores afines.	45 ANALISIS DE LA COMPETENCIA
Relaciones con instituciones de promoción y mejora de la calidad	Relaciones que la organización mantiene con las instituciones de promoción y mejora de la calidad, con el fin de incrementarla tanto en los procesos, productos y servicios, como en la gestión de la empresa.	46 Relaciones con instituciones de la calidad. 47 Certificaciones y sistemas de calidad.
Relaciones con empleados Capital de Negocio	Relaciones con los miembros de la plantilla de la organización para que desarrollen actitudes y capacidades recogidas como elementos y variables del capital humano.	48 Antigüedad y fidelización del empleado. 49 Satisfacción del empleado. 50 Procesos de relación con empleados. 51 Portal del empleado.
Relaciones con las administraciones públicas	Busca definir como son las relaciones de la organización con el ayuntamiento, comunidad autónoma y otras instituciones públicas del entorno en el que la empresa opera.	52 Colaboración con las administraciones públicas. 53 Participación en la gestión pública
Relaciones con medios de comunicación e imagen corporativa	Relaciones que la institución mantiene con los medios de comunicación para incrementar la notoriedad de la marca así como la imagen corporativa de la empresa.	54 Notoriedad de marca. 55 Relaciones con medios de comunicación.
Relaciones con la defensa del medio ambiente	Preservación del medio natural y promoción de iniciativas ecológicas.	56 Relaciones con las instituciones de defensa medioambiental. 57 Códigos y certificaciones Medioambientales.
Relaciones sociales Capital Social	Relaciones con las organizaciones sindicales, instituciones del mercado de trabajo, conducentes a la creación, calidad y estabilidad del empleo.	58 Relaciones con las organizaciones sindicales. 59 Relaciones con las instituciones del mercado de trabajo.
<b>Reputación corporativa Capital Social</b>	<b>Relaciones que la organización mantiene con los diferentes agentes sociales (mercados, instituciones, ciudadanos y consumidores) así como las acciones que redundan en una percepción social favorable.</b>	<b>60 Códigos de conducta organizativa. 61 Automotivación. 62 Código de igualdad. 63 Acción social. 64 Programas de conciliación de la vida familiar y profesional.</b>

*Creación en colaboración de Eyran Díaz, Ramón Heredia, Julio Dorado, Gloria Montiel esta tabla se explica las diferentes definiciones adecuadas para todo tener un concepto homogéneo y sus diente variables*

### Metodología Para la Aplicación del Instrumento en el Centro de Investigación

La epistemología, rama de la filosofía indica cómo se puede conocer la relación sujeto-objeto; esta rama nos permite conocer cómo se crea el conocimiento y ayuda a establecer la relación entre el investigador y el objeto de estudio asumiendo que el mundo existe independientemente de nuestro pensamiento, (Creswell 1998). El tipo y diseño de estudio de la presente investigación, desarrolla un estudio de caso, con un enfoque cualitativo; utilizando el método fenomenológico, busca conocer, describir e interpretar cómo perciben los individuos o actores el mundo social a través de su experiencia. Al realizar un estudio de caso

en la investigación, se ven reflejadas las características holísticas y significativas de eventos de la vida real. (Hernández R., Fernández, C. & Baptista P, 2006).

### Muestra

Para la investigación se considera una muestra partiendo del organigrama, desde la alta dirección hasta la gente operativa y un directivo del CONACYT de la zona centro. En un rango de 30 a un año de trabajo en la organización, con este rango se espera tener la representatividad adecuada y se busca encontrar la visión de los miembros de la organización, así como el considerar los elementos cualitativos y/o representativos de la realidad que se mostrará desde la perspectiva de quienes la viven. La unidad para esta investigación es: El centro CONACYT ubicado en Querétaro. La documentación que se consulta son manuales, políticas y procedimientos. Sierra Bravo (1994) define que la validez, intenta demostrar que la investigación, representa a la realidad a la que se refiere así como las características del fenómeno investigado. 24 Las entrevistas se grabaron con el consentimiento de los entrevistados, se transcriben textualmente posteriormente se realiza el análisis de los datos, apoyados con el paquete informático atlas Ti 5.0 para los datos cualitativos estableciéndose un código relacionado con frases utilizadas por el entrevistado. Variables consideradas para la aplicación de la entrevistas de profundidad enfocado a la innovación. Variables sociodemográficas 1.- Procedencia, 2.- Escolaridad, 3.-Puesto, 4.-Departamento, 5.-Antigüedad en la empresa 6. Con cual valor de la organización te encuentras más identificado. “Innovación: Conseguir resultados originales, satisfactorios y aplicables a través de un enfoque creativo.

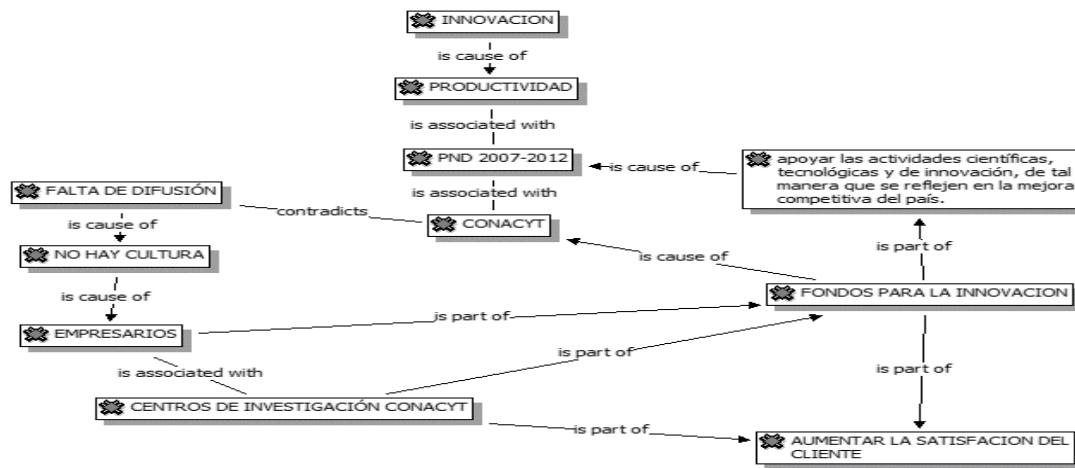

Profesionalismo: Cubrir y superar las expectativas del trabajo, concluido en forma oportuna y confiable. Trascendencia: Buscamos trascender con resultados que tengan impacto y consecuencias importantes en la sociedad.” 7. Cuáles son las tradiciones que identificas en CIATEC. A.C. 8. Cuanto tiempo tiene trabajando en CIATEQ A.C y de que estado proviene (cultura como variable externa). 9. Que opinión tienes de los siguientes conceptos enfocados a CIATEQ A.C: 10 Liderazgo visionario, 11 Orientación hacia el cliente, 12 Aprendizaje organizacional y personal, 13 Valorar a empleados y socios, 14 Agilidad, 15 Enfoque hacia el futuro, 16 Administración para la innovación, 17 Administración por objetivos, 18 Responsabilidad social, 19 Enfoque hacia los resultados y 20 creación de valor, 21 Perspectiva del sistema. 22 Enfocado a la innovación. Gracias por tus respuestas.

## **RESULTADOS**

Innovación referente al Valor de la innovación en la entrevista (E21) mostró una clara identificación hacia este Valor, ya que está buscando realizar su trabajo en una forma diferente, innovadora que permita dar seguimiento a los indicadores que son su responsabilidad, en la entrevista (E-17) se menciona la innovación desde un punto de vista personal en su interés propio, no tanto por una exigencia de trabajo. Respecto al Indicador administración para la innovación, en las entrevistas realizadas este indicador empírico contó con más comentarios y variables, entre los cuales destacan el proceso de selección del personal para adecuarlo, incluyendo en él metodologías diversas, que ayudan a identificar cuando a las personas se les facilita la innovación, déjalas que trabajen en los proyectos, todo con libertad. Involucrar a la alta dirección y a las gerencias en los talleres que serán de innovación con la finalidad de que se impulse a todos niveles, romper paradigmas crear grupos interdisciplinarios y quitar barreras administrativas entre los diferentes procesos, así como desarrollar una matriz de innovación, todo ello para definir si la innovación es incremental o de ruptura. Para considerar la innovación en un producto o servicio, se deberá medir la aceptación del producto o servicio por parte del mercado, siendo fundamental el acercamiento con la industria, sobre todo la micro y mediana empresa por parte de los centros de investigación para difundir en medios masivos de comunicación que existen programas por parte del gobierno que apoyan a través de estímulos económicos a las empresas, para que desarrollen procesos, proyectos y servicios para la innovación y de esta manera generar la vinculación entre los centros de investigación, universidades, empresa y gobierno. El análisis de

Figura 1: Interacción de las Variables Utilizando el Software Atlas Ti5

*Creación en colaboración de Eyran Díaz, Ramón Heredia, Julio Dorado, Gloria Montiel realiza con el paquete Atlas Ti5en donde se relaciona las respuestas con las variables y se denota que aún falta por desarrollar una cultura que nos impulsé de desarrolla el capital intelectual y por ende la innovación en el centro de investigación en el sector empresarial sobre todo los pymes*

## CONCLUSIONES

**El capital humano** El personal de Ciateq se encuentra identificado con una cultura regida por valores, siendo el más inculcado el Valor del profesionalismo en 70% de las entrevistas, sin embargo el Valor de la innovación y sólo un 20%. La percepción de los empleados respecto así son valorados por parte de la institución depende en gran medida por el esquema de contratación los empleados, los que cuentan con una base o están contratados directamente por CIATEQ perciben una mayor valoración hacia ellos, Esto no como ocurre por parte de los empleados son subcontratados ya que ellos realizan un esfuerzo similar tanto físico como mental y no reciben los mismos incentivos ni prestaciones en cuanto al salario se refiere El liderazgo en la organización es fuerte, y en él, se deberá de inculcar la gestión de la innovación, sin embargo los empleados de CIATEQ perciben que sí se cuenta con una visión sólo que no es a largo plazo depende del director del curso y este puede cambiar cada cinco años cada director definir la misión visión y objetivo del centro CIATEQ.

**Capital Organizativo** La cultura es un sistema de valores y comportamientos compartidos de una organización Evans y Lindsay (2007) el personal de empresa tiene valores similares mismos que los llevan a tener comportamientos de compañerismo y de apoyo a la organización A lo largo de 30 años han adquirido una cultura una identidad como organización dentro de las tradiciones en asistir a una reunión informativa con el director de la empresa y posteriormente, convivir con sus compañeros en un desayuno informal , festejar el 15 de Septiembre, eventos deportivos y culturales. En lo que se refiere agilidad la mayoría de los entrevistados consideró que la empresa no es ágil para responder en poco tiempo a las necesidades de los clientes ya que considera que se tiene un burocratismo excesivo tanto por la función pública CONACYT órganos de vigilancia y el mismo sistema de calidad. El tiempo de permanencia en CIATEQ nos indica a mayor número de años es más el compromiso y el orgullo que permanecen a la institución existan muy poca rotación de personas en los grupos de madurez y crecimiento en el grupo de integración que tiene un rango de uno a cinco años existen mayor rotación sobre todo si se encuentran bajo el sistema de subcontratación ya que no pertenecen directamente la empresa y no tiene las mismas

prestaciones que un empleado de base.

Aprendizaje institucional se considera por parte de los entrevistados que CIATEQ es una muy buena escuela ya que constantemente está dando capacitación a su personal y éste a su vez tiene la facilidad de aprender. Administración para la innovación se consideró que la innovación no ha tenido la importancia necesaria y de los esfuerzos que se han tenido han sido aislados. Capital Tecnológico gestión de la innovación. medir el grado de innovación por el número de patentes consideran que no es lo más adecuado, y no se tiene claro el beneficio tangible que se pueda obtener en forma personal el patentar. Capital. Relacional gestión de la innovación Se considera la orientación hacia el cliente por parte de los entrevistados como una fortaleza del centro, Ciateq si es una empresa responsable socialmente. Ya que gran parte sus proyectos se enfocan a la sustentabilidad. Hallazgos sobre las hipótesis plantadas 1. No se gestiona la innovación en el centro CONACYT CIATEQ A.C.

La innovación en CIATEQ A.C está en una etapa muy temprana de gestión son pocos y aislados esfuerzos. 2 Como consecuencia de no desarrollar adecuadamente las variables relacionadas a la gestión del conocimiento, el capital estructural y el capital relacional. Falta integrar e interiorizar las variables de la gestión por parte de la dirección general. 3 La cultura en la organización promueve valores que no toman en cuenta la gestión de la innovación. En el tiempo que el estudio fue realizado el valor principal es el profesionalismo. 4 El liderazgo en la organización no tiene como prioridad la gestión de la innovación. El liderazgo es una fortaleza en el centro, solo es necesario incluir el enfoque hacia la gestión de la innovación. 5 El enfoque que se tiene al cliente no es entregar producto con innovación. El enfoque hacia el cliente es una fortaleza y el producto se entrega bien y en forma sin embargo si no se realiza, una cambio de paradigma respecto a la gestión de la innovación nuestros productos y servicios serán obsoletos un corto periodo de tiempo (caso polaroid). Discusión El presente estudio muestra el estado del arte y permite realizar contrastarlo con la realidad, lo cual permite aseverar que aún falta difusión y cultura para llegar a una gran parte de las empresas, y generar la innovación que impacte en un mejor nivel de calidad de vida. Por otra parte, reconocemos la necesidad de ampliar la muestra a otros centros CONACYT para obtener variables más representativas y una vez obtenidas compararlas con modelos internacionales.

## RESUMEN

*Al promover el desarrollo de las habilidades y destrezas la Gestión por Competencias genera mayor conocimiento al capital intelectual que se forja en las universidades. Los docentes transfieren conocimientos a los alumnos, lo que permite determinar el grado de éxito donde los estudiantes se desarrollan y participan activamente en la empresa, desempeñando posiciones estratégicas, competitivas, y traducidas en variables que les permiten lograr sus metas. Esta investigación está enfocada al grado de cultura, capital intelectual y competencias educativas de la Institución de Educación Superior de Torreón Coahuila. Se lleva a cabo una metodología fenomenológica, considerando además la observación y análisis estadístico. De las variables analizadas, se concluye que la gestión por competencias es una herramienta para desarrollar el Capital Intelectual; además, marca una diferencia entre capacitación y requerimientos; e identifica la influencia que se tiene con respecto a la misión de la Institución. Se busca tener un liderazgo organizacional, donde docentes y personal estén alineados al Sistema de Gestión de Calidad ISO9001:2008*

**PALABRAS CLAVE:** Gestión Por Competencias, Conocimiento, Docente, Capital Intelectual, Cultura

## INTELLECTUAL CAPITAL AND COMPETENCE MANAGEMENT, APPLIED TO AN INSTITUTION OF HIGHER EDUCATION IN TORREON, COAHUILA

### ABSTRACT

*By promoting the development of skills and abilities Competence Management generates more knowledge to Intellectual Capital that is created in universities. Teachers and professors transfer knowledge to student thus allowing determining the degree of success where students develop and participate actively in companies, performing strategic and competitive positions that translate into variables that allow them to accomplish their goals. This research is focused on the degree of culture, intellectual capital and educational competences of the Higher Education Institution in Torreon Coahuila. A phenomenological methodology is carried out, considering as well observation and statistical analysis. After analyzing these variables it is concluded that Competence Management is a tool that helps develop Intellectual Capital, shows a difference between training and requirements, and identifies the influence the it has with respect to the mission of the Institution. It is expected to have an organizational leadership where teachers, professors and personnel are aligned with the Quality System ISO9001:2008.*

## INTRODUCCIÓN

En el escenario laboral actualmente las competencias de los individuos son consideradas como un activo de las empresas por la conexión que aportan entre la estrategia de la empresa y la gestión de los recursos humanos, así mismo el análisis de los modelos más significativos que han abordado la medición del Capital Intelectual, han permitido los componentes que lo conforman, y los elementos que cada uno de ellos considera como integrantes de aquel, se cree conveniente hacer algunas precisiones sobre algunos de los términos y conceptos que utilizan dentro del capital Intelectual, y cómo influyen en la transferencia de gestión del conocimiento. La competitividad de la empresa puede estar en función de la posesión de éstas más aún, dada la situación de la globalización, donde la mayoría de las barreras al acceso a todo tipo de recursos organizativos han cambiado de dirección (acceso a la información, tecnología, capital, etc.), siendo la principal fuente de ventaja competitiva pueden ser las personas que componen la empresa en un entorno de competencia y de creciente exigencia la Gestión por Competencias es una técnica de recursos humanos que tiene sus antecedentes en los estudios del comportamiento humano en el campo de la Psicología, en donde se destaca los trabajos de McClellan (1973) y sus socios, es por ello que se apunta a las características innatas o subyacentes de la persona, en combinación con otros aspectos tales como los conocimientos y la motivación hacia el desempeño excelente en las diversas actividades profesionales.

La literatura nos ofrece una variedad de definiciones, tal como Wernerfelt (1984), donde considera que son activos tangibles e intangibles vinculados a la empresa que permitan producir de forma eficiente una determinada oferta de productos que logre proporcionar valor en uno o varios segmentos del mercado, así mismo el capital intelectual, es todo lo que produce y genera valor a la empresa (capital financiero y físico) hasta manejar el concepto de capital intelectual. Por lo que el capital se divide en tangible e intangible (Villarreal & Villarreal, 2003); esto permite la importancia en entender, estudiar y desarrollar las diversas técnicas de mejorar la gestión de las competencias en las personas, es por ello que la presente investigación, se centra en la capacidad del capital intelectual, Gestión por competencias y permite conseguir mejores resultados a través de la inteligencia emocional (Dolan et al. 2007).

Esta investigación se presenta de la siguiente forma: En la sección de revisión de literatura se plantean los argumentos que sustentan uno de los modelos como lo es el Balanced Score Card (Cuadro de Mando Integral), así como el modelo de valoración de Competencias, basada en el grado de cultura, apoyado en (Cameron y Quinn 1999). Posteriormente se presenta del problema abordado, y se desarrolla la metodología utilizada en las variables a investigar, donde su procedimiento de aplicación permite identificar el grado de cultura y su grado de contribución cultural, posteriormente se presentan los resultados alcanzados en la investigación y finalmente las conclusiones y su limitación, así como posibles líneas de investigación futuras

En la revisión de la literatura técnica, se ha observado que en los últimos años la aceptación de la misma es un factor distintivo y estratégico del que muchas empresas se valen para conseguir más ventajas que sus competidores, que influye no sólo en el ámbito de las decisiones empresariales de las organizaciones, sino en otros campos como la educación y la administración pública, inspirando en cierto modo medidas en materia de empleo y formación. En otras palabras, hoy en día no se cuestiona la importancia capital que tiene una efectiva gestión de los Recursos Humanos de la organización para conseguir mejores resultados (Dolan et al. 2007). El estudio y la aplicación de las competencias inundan el campo del conocimiento desde diferentes ángulos, a nivel de la organización y a cada empleado impactando los procesos de selección, en el éxito de la misma, puesto que en el mercado global, competitivo y cambiante, el factor humano es de vital importancia para generar ventaja competitiva. Se considera a McClelland (1973) como un pionero y luego retomado en las formulaciones de Daniel Goleman (1999), sobre la inteligencia

emocional, sin embargo, existen muy pocas evidencias empíricas de que la Gestión por Competencias incrementa los resultados de las empresas en el capital intelectual, por lo que adquirir nuevos conocimientos implica un dominio de las competencias, y el capital intelectual es una punta de lanza para lograr el despliegue del conocimiento, en la competitividad educativa.

## REVISION DE LITERATURA

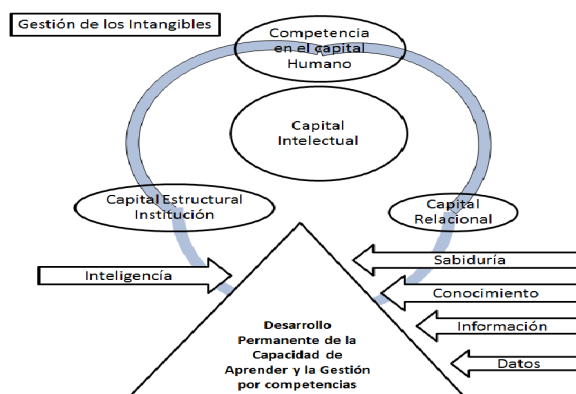

Figura 1 modelos de gestión de competencias, fuente: Dra. Liliana Guerrero

Para la presente investigación desde esta perspectiva, se revisa literatura referente al tema en los cuales se retoma del valor del capital humano partiendo desde el análisis del concepto, estrategia, aplicación, etc. Barney (1991, 2001) afirma que los recursos de una empresa incluyan todos los activos, procesos organizativos, atributos empresariales, información, conocimiento, etc. controlados por la empresa, para concebir estrategias y mejorar su eficacia y eficiencia. Barney (1991) agrupa a los recursos en tres categorías: Capital Físico, Recursos Humano y Recursos de Capital Organizacional. Por su parte Grant (1991) los clasifica en Tangibles, Intangibles y humanos; sin embargo a pesar de las diversas clasificaciones, la propuesta por Barney et al. (2001) ha distinguido entre los recursos que son tangibles y los que son intangibles incluyen habilidades, información y conocimiento, rutinas organizacionales etc., los cuales no son observables directamente. La medición del valor estratégico del capital humano es una estimación acerca de su alineamiento con la estrategia de la institución.

Según Kaplan y Norton, “en el caso del capital humano, la disposición estratégica se calcula en función de si los empleados poseen el tipo y nivel adecuado de conocimientos para desempeñar los procesos internos críticos del mapa estratégico, dado que no todos los empleados tienen el mismo impacto sobre la estrategia, el mayor retorno se obtiene de focalizar la brecha de competencias de las familias de cargos estratégicos” (Kaplan & Norton, 2002). De esta manera, el Mapa Estratégico permite identificar las capacidades e iniciativas claves de capital humano que impactarán los resultados financieros de la empresa o Institución, o Unidad de Negocio de acuerdo con su estrategia particular. Por lo tanto, los indicadores que miden la contribución estratégica del capital humano dependerán en cada caso de la estrategia de la compañía, por lo que adquirir nuevos conocimientos implica un dominio de las competencias, considerando que el capital intelectual es una punta de lanza para lograr el despliegue del conocimiento, permitiendo el desarrollo del personal en la competitividad educativa, ya que desde el punto de vista organizativo y estratégico, la gestión del conocimiento o del capital intelectual de una organización supone, como Primer paso, la construcción de un modelo que simule la capitalización del Conocimiento de la organización. De esta forma, se pueden sugerir cinco fases principales: 1) la auditoría o diagnóstico del conocimiento, 2) su localización, organización y almacenamiento, 3) su transmisión y compartimiento, 4) su utilización y capitalización, y, por último, 5) su creación.

Es de suma importancia que los modelos de educación actuales, permitan desarrollar y alinear el capital humano, debiendo interactuar el capital de transferencia de los docentes en el ámbito profesional de los estudiantes, siendo aquellos docentes que aporten a la Institución su capital intelectual, para encausar a la educación y ser reconocidos como una Institución de alto desempeño para que los alumnos sean reconocidos en el mercado empresarial, y a la vez se desarrollen en el ámbito profesional competitivo; Un modelo de forma intuitiva se muestra en la figura 2, donde se muestra un Modelo de competencia Educativas y Capital Intelectual de la Dra. Liliana Guerrero Ramos (2006). En la figura 1 se muestra la Competencia básica para una efectividad individual, del valor que representan, es conocer los resultados de su gestión, y los registros contables contribuyen poco y nada como medio informativo. El problema a resolver es que se sabe lo que hay que hacer, pero la dificultad está en cómo hacerlo.

De acuerdo a este criterio, el Capital Intelectual está formado por el Capital Humano, el Capital Relacional y el Capital Estructural, permitiendo un acercamiento a las competencias que se requieren en el ámbito laboral, y que desarrollen en los alumnos habilidades que permitan la toma de decisiones para un logro competitivo como parte del valor intangible a un valor tangible dentro de la institución o la empresa. Por capital humano se entiende el conocimiento, como parte del capital intelectual que aportan al alumno, tanto único como genérico, que los alumnos se llevan consigo cuando dejan la institución, sus habilidades y experiencias, como por ejemplo su creatividad y motivación. Por capital estructural se entiende, el conocimiento que permanece en la empresa, embebido en sus rutinas, procesos, cultura, etc.

Finalmente, el capital relacional se compone de los recursos ligados a las relaciones externas de la empresa con sus clientes, proveedores, colaboradores, inversores, etc. (Cañibano et al., 2002), de acuerdo a Edvinsson y Malone (1998, 2002) dividen al capital intelectual en: a) Capital Humano. Corresponde al conjunto de conocimientos, habilidades, actitudes, y destrezas de las personas que componen las organizaciones. b) Capital estructural. Conocimientos desarrollados y explicitados por las organizaciones, integrados por los siguientes elementos: Capital clientes. Activos relacionados con los clientes (marcas registradas, fidelidad del cliente, listas de clientes); Procesos. Referido a la forma como la organización añade valor a través de las diferentes actividades que desarrolla

Capacidad de innovación, entendida como la capacidad de mantener el éxito de la organización a través del desarrollo de nuevos productos o servicios. El capital intelectual se puede medir mediante el establecimiento de los distintos componentes y presentando, indicadores pertinentes que sean fácilmente inteligibles, aplicables y comparables con otras empresas, las actividades de innovación tecnológica son el conjunto de etapas científicas, tecnológicas, organizativas, financieras y comerciales, incluyendo las inversiones en nuevos conocimientos I+D, la innovación consiste en un continuo proceso de aprendizaje por el cual las empresas generan el nuevo conocimiento a partir de las competencias y del capital intelectual; Drucker (2002) define la innovación como la búsqueda organizada y sistemática con el objeto de cambio de las oportunidades que existen en el ambiente, el modelo de cultura Organizacional de Cameron-Quinn (1999), Los estilos de liderazgo dominantes en los cuadrantes diagonales, son opuestos unos de otros, ya que, mientras en la cultura innovadora los líderes rompen las reglas, en la controladora se refuerzan las reglas, y mientras en la cultura Colaboradora los líderes son Cercanos y Protectores, en la Competitiva son Fuertes y Demandantes (Cameron y Quinn, 1999)

### Problema Estudiado / Alcance

El problema: “De qué manera influye el capital Intelectual y el grado de cultura de los docentes en las competencias de los alumnos”, el alcance del estudio es representativo ya que se analizan cómo se siguen los lineamientos de la Institución con la estrategia de competitividad, y se lleva a cabo la alineación y se mide el capital intelectual en conjunto, con el objetivo de crear valor a la Institución y registrarlos como

un activo Intangible. Los estudios que correlacionan las prácticas de capital humano con los resultados financieros de las empresas brindan la base para evidenciar la importancia del capital humano. Además los medios persuasivos de impacto del capital humano sirven como medios de diagnóstico al comparar la empresa con las mejores prácticas que impactan en los resultados financieros. Sin embargo, no permiten la medición específica del impacto de las prácticas de capital humano en una institución en particular, se requiere un enfoque que mida la contribución del capital humano y focalice las condiciones singulares de la organización. Para esto es necesario entender que el capital humano es parte de los activos intangibles de la organización, reconocidos en una economía del conocimiento como la fuente sostenible de ventajas competitivas. Sin embargo, los activos intangibles, como el capital humano, deben vincularse con los activos tangibles para crear valor. De esta forma, el valor del capital humano depende de la Estrategia de la organización. El modelo BSC consiste en un sistema de indicadores financieros y no financieros integrados en un esquema que permite entender las interdependencias entre sus elementos, así como la coherencia con la estrategia y la visión de la empresa; con el objetivo final de medir los resultados obtenidos por la organización, el BSC monitoriza cuatro áreas o perspectivas diferentes de actividad.

Los indicadores tradicionales de actuación financiera deben equilibrarse (Balanced) midiendo otras tres actividades de la empresa: las relaciones con el cliente, los procesos internos de negocio y la habilidad de la organización para aprender y mejorar. Dentro de cada bloque hay dos tipos de indicadores: indicadores drivers (factores condicionantes de otros) e indicadores Output (indicadores de resultados). (R. S. Kaplan & Norton, 1992) Esta conexión causa-efecto se puede mostrar en la forma de un Mapa Estratégico, la información se muestra en tabla 1, El Mapa Estratégico de CMI de la UTT describe el proceso de transformación de los activos intangibles en resultados tangibles (Kaplan & Norton, 2001).

*Tabla 1 : Mapa Estratégico del Cuadro de Mando Integral UTT: Fuente: Universidad Tecnológica de Torreón*

<b>Visión - Misión</b>	En el 2018, la Universidad Tecnológica de Torreón, será reconocida nacional e internacionalmente como una Institución de Educación Superior competitiva y de experiencia. En un entorno tecnológico de Innovación y sustentabilidad, con egresados portadores de competencias impulsoras del desarrollo y crecimiento del País			Formar Profesionales tecnológicos a través de una Educación integral basada en competencias y con programas educativos pertinentes incluyentes y reconocidos por su calidad fomentando la responsabilidad social y los valores universales para que contribuyan como agentes competitivos de cambio en la región y en el país	
<b>Temas Estratégicos</b>	Cobertura y Equidad	Calidad Institucional	Formación Integral	Desarrollo del capital Intelectual	Vinculación
<b>Clientes</b>	Brindar una Educación Integral Basada en competencias y con programas educativos pertinentes, incluyentes y reconocidos por su calidad		Otorgar servicios que coadyuven en la Formación Integral del estudiante a través de los valores y de su aplicación en los diferentes ámbitos que se ejercen en la Institución		Brindar una educación Integral Basada en competencias y con programas educativos pertinentes, incluyentes y reconocidos por su calidad
<b>Financiera</b>	Fortalecer la infraestructura física educativa que atienda las necesidades de crecimiento y la calidad de los Programas educativos (PE)			Eficientar y transparentar el uso y administración de los recursos de que dispone la Universidad	
<b>Procesos</b>	Programar, Evaluar y difundir planes y programas institucionales que permitan sistematizar los procedimientos y esquemas Organizacionales		Mantener la calidad de los programas educativos a través de la evaluación, acreditación, y reacreditación por organismos reconocidos por CIEES y COPAES		Fortalecer la calidad de la Gestión brindando servicios basados en procesos certificados bajo la Norma ISO9001, a través del personal administrativo y de apoyo calificado
<b>Aprendizaje y Crecimiento</b>	Incrementar la capacidad Académica de los Profesores de Tiempo Completo		Establecer Redes de colaboración con los Cuerpos Académicos (CA) de IES y Centros de Investigación		Mantener la Vinculación con los sectores productivo y de servicio, que contribuya a la sociedad con el desarrollo económico, productivo

Tabla 1: Mapa estratégico del cuadro de mando integral de UTT, fuente: Universidad Tecnológica de Torreón, Se analiza la parte integral del Cuadro de Mando Integral, donde en función de la misión, visión y objetivos de la Institución se busca determinar de como el capital intelectual apoyado por el docente, se busca influir en las competencias que alcancen los alumnos permitiendo el desarrollo de las competencias en los alumnos, en la búsqueda de formar alumnos capaces de competir en un mercado laboral competitivo, formando estudiantes que aporten a la sociedad, siendo reconocidos como alumnos de alto desempeño en el desarrollo de nuestro país.

## METODOLOGÍA

Enfoque metodológico. La epistemología es una rama de la filosofía que nos indica cómo podemos conocer la relación sujeto-objeto. Esta rama nos permite conocer cómo se crea el conocimiento y nos ayuda

establecer la relación entre el investigador y el objeto de estudio, asumiendo la posición objeto vista llamada positivista o empirista, asumiendo que el mundo existen independientemente de nuestro pensamiento, que el investigador no se relaciona con el objeto de estudio y aparecen distante e independiente de este. Podemos distinguir dos tipos de paradigmas, el paradigma teórico, que proporciona bases para la formulación de problemas. Y el paradigma epistemológico que constituye la base filosófica para tratar de interpretar y explicar los fenómenos sociales para realizar esta investigación se considera el estudio del caso apoyado en el enfoque cualitativo inductivo, diferentes métodos de aproximación al objeto de estudio de campo lo realizamos utilizando la fenomenología que se refieren al análisis de la realidad desde el punto de vista de quien lo vive la revisión documental y la etnografía de textos en red Tipo y diseño de estudio. La presente la investigación desarrolla un estudio de caso, utilizando el método fenomenológico el cual busca conocer, describir e interpretar cómo perciben los individuos o actores el mundo social a través de su experiencia.

El marco de análisis desde la perspectiva mixta: los métodos mixtos, representan un conjunto de procesos sistemáticos, empíricos y críticos de investigación e implican la recolección de datos cuantitativos y cualitativos, así como su integración y discusión conjunta, para realizar inferencias productos de toda la información recabada (meta inferencias) y lograr un mayor entendimiento del fenómeno bajo estudio Hernández R., Fernández, C. y Baptista P. (2006). La unidad de análisis es la UTT, usando escalas de likert, por medio del instrumento de encuestas, las que fueron analizadas midiendo las competencias en la organización, así mismo se analizan las partes preponderantes de la cultura Institucional, y se realiza un análisis de interacción de las variables. Existen diversos métodos para analizar el capital intelectual entre los que podemos mencionar “InCaS”, Informe de Capital intelectual para Europa, ya que es una herramienta para evaluar, mostrar y gestionar con precisión el capital intelectual, sin embargo

InCaS está diseñada para medir en las Pyme. La figura 3 nos muestra un ejemplo de la representación de la valoración de las fortalezas y debilidades de una organización por lo que respecta a cuatro componentes del capital humano. Asimismo, permite priorizar las acciones o proyectos a ejecutar, según su impacto en los resultados, la facilidad de obtener éxito, y el periodo de retorno. Se pudiera considerar el mapa de componentes del capital Intelectual, para priorización de acciones, el cual podemos observar en cuatro áreas que permiten priorizar acciones, en función de si se necesita desarrollar, estabilizar, analizar, o no actuar sobre un componente en concreto, la descripción del Método, de acuerdo al Estado del Arte se adoptó la metodología de tipo mixta cuantitativa y cualitativa donde se toma el punto de vista de diferentes autores que han realizado investigaciones sobre el tema, realizado de Agosto a Noviembre de 2013, Encontrando que existen 2 coincidencias respecto a considerar en primer término las características del material para plantear las mejores condiciones y tecnología adecuadas para producir productos con menores tiempos de proceso, buena calidad superficial y un rendimiento aceptable del capital intelectual herramienta de corte. Nuestro triangulo de investigación: docentes (capital intelectual), competencias docentes, alumnos permiten aplicar la sociología para un análisis fenomenológico.

Con este estudio se considera tener elementos suficientes para alcanzar nuestro objetivo que busca en la práctica relacionar competencias, capital intelectual competitividad y docencia, con propiedades que no son fácilmente medibles (capacitación, responsabilidad, honestidad, conocimientos, habilidades, etc.), así como el valor más adecuado para reducir los tiempos de proceso. Utilizando para este trabajo de investigación un método de medición likert que permitiera visualizar primeramente el tipo de cultura prevaleciente vs la cultura tradicional y sus manifestaciones en los docentes y a la que nos enfrentaríamos, se utiliza una encuesta, partiendo de las características culturales que se dan en la institución y de acuerdo a una escala preponderante, se analiza por medio de descripciones y de afirmaciones el grado en que la institución o empresa facilita la cultura entre todos los integrantes, durante el método de análisis se extrae la parte interesante quedando resumida en la tabla 2, donde revisamos la tendencia de Cultura Competitiva vs Cultura Colaboradora, capital intelectual, competencias docentes y recurso humano.

## RESULTADOS

Los resultados alcanzados para la Variable 1: Capital intelectual, Cultura Competitiva vs Cultura Colaboradora, la información se muestra en Tabla 2, encontrándose que se tiende a ser competitivo, ya que el sistema de Gestión de calidad, empuja a los docentes a que estén en los lineamientos del Sistema ISO9001:V2008, haciendo que los conocimientos en los alumnos tiendan a crecer y al momento de salir al campo laboral, tengan una percepción de los requerimientos existentes. Según el modelo de cultura Organizacional de Cameron-Quinn (1999), Los estilos de liderazgo dominantes en los cuadrantes diagonales, son opuestos unos de otros, ya que, mientras en la cultura innovadora los líderes rompen las reglas, en la controladora se refuerzan las reglas, y mientras en la cultura Colaboradora los líderes son Cercanos y Protectores, en la Competitiva son Fuertes y Demandantes (Cameron y Quinn, 1999).

Característica de Calidad	Conclusiones
1. Con respecto a las Normas de la Organización	Se determina que las Normas aplicadas a la institución son innovadoras y competitivas, sin embargo el personal tiende a buscar que sean Tradicionales, ya que es una institución con 15 años de servicio
2. Apoyos por Parte de la dirección en el Aprendizaje permanente para el Alumno	El apoyo que se da para utilizar en equipos, es suficiente, ya que se utilizan, proyectores, TV's, pintarrón dinámico, Audiovisuales, Centro de computo, Etc.
3. EL trabajo es Innovador o Rutinario	Tiende a ser más innovador que rutinario
4. El trabajo es compartido o es propio	De acuerdo al Análisis, se observa que tiende a ser tradicional, por lo que cada docente indica que es dueño de su propio trabajo
5. El trabajo es Retador o Aburrido	De acuerdo al Análisis se observa que el trabajo es retador, sin embargo tienden a aburrirse, es tedioso, ya que los docentes y personal tienen que cumplir el sistema de Gestión de Calidad de la Institución.
6. Se comprometen con el éxito colectivo	Se consideran los docentes comprometidos con la Institución, tienden a la innovación y competitividad
7. Cómo consideras que son las interacciones en la Institución	En este apartado, los docentes consideran que las interacciones deberían ser más tradicionales
8. Cómo consideran las prácticas de Indagación y curiosidad de las practicas existentes en la Institución	Los docentes consideran que no existe la práctica de indagación, que se encuentran estáticas, no hay dinamismo en las mismas.
9. La toma de decisiones es Autoritaria o Democrática, con o sin liderazgo	La Toma de decisiones se considera democrática, con tendencia a ser innovadora y competitiva, ya que los maestros al tener preparación académica tienden a ser vanguardistas, y permiten estar bien preparados en la práctica como en la teoría, haciendo más simples la toma de decisión
10. Cómo consideras la solución a los problemas que se presentan en la Institución	Se consideran que hay una tendencia a la solución de los problemas de forma competitiva e Innovadora, ya que están conscientes los maestros a no fallar, porque existe una función que seguir. Los problemas se resuelven de forma participativa y en forma individual si así lo requiere la situación.
11. Cómo consideran la pericia de los docentes en base a sus habilidades y conocimientos	Se observa una tendencia a resolver las situaciones de forma rápida para la toma de decisiones, ya que la preparación académica y experiencia laboral, los hace competitivos e innovadores.
12. La Cultura está centrada en los procesos o a la búsqueda de culpables son competitivos e innovadores	Al estar regidos bajo la normatividad de procesos del ISO 9001, hacen que se cumplan de forma ecuaníme y rutinarios.
13. La Cultura de la institución es de estereotipos, como la consideran los docentes.	Los maestros la consideran tradicional, ya que los alumnos son los que deben adquirir el aprendizaje, y tener una conducta de mejora para sobresalir, ante la competitividad que existen en otras instituciones de educación superior
14. Qué tipo de Interconexiones existen entre los docentes, de aislamiento o de Cooperación.	Se considera que hay interconexión entre los maestros, ya que son objetivos en sus labores, existe cooperación y colaboración, lo que les permite ser innovadores y competitivos
15. Cómo consideran las decisiones entre compañeros: de infantilismo, capricho y/o madurez.	Existe una expectativa de madurez que determina ser competitivo e innovador, lo que hace que las situaciones que surgen se resuelvan de forma inmediata
16. Cómo considera la profesionalización de los docentes en la Institución.	La consideran adecuadas, ya que existen apoyos por parte de la institución para el mejoramiento de los PA y PTC
17. Cómo consideran los conflictos que se presentan.	Los conflictos se consideran como parte de las oportunidades de mejora dentro de la institución, resolviéndolos de forma inmediata para superación de los mismos.

*Tabla 2. Análisis de Cultura Competitiva vs Cultura Colaboradora, Fuente creación propia apoyado en Camerón Quinn, (1999), donde permite determinar el grado de la cultura de los docentes, si es una cultura competitiva vs cultura Colaboradora, determinando estas variables que los docentes están alineado a ser competitivos, debido a que el sistema de gestión de Calidad, determina una alineación hacia seguir procedimientos, sin embargo, los docentes tienden a ser competitivos y tratan de transmitir estos conocimientos a sus alumnos, y desarrollarlos en las diversas ramas de la industria, a través de conocimientos y capital intelectual del docente*

Podemos concluir que esta encuesta aborda la participación del docente y la ubica centrada en el capital intelectual, gestión del capital intelectual, la Innovación y en la competitividad, que lo que ellos imparten

y el grado de experiencia es adecuado y por ende influyen en los alumnos para ser competitivos, dado el grado académico que tienen, lo que transmiten de forma dinámica, generando el conocimiento por medio de casos prácticos y que tienden a resolverse de manera sistemática.

#### Los Resultados De Variables Analizadas

**Tipo de Cultura Predominante en UT Torreón**

**Fig.4 Modelo de Valores de Competencias. Fuente: Creación propia**

Variable 1: Cultura Competitiva vs Cultura Colaboradora, tiende a ser tradicionalista, por sistema de Gestión de Calidad tendemos a ser competitivos (Ver Tabla 2); Figura 3 Tipo de cultura Predominante: modelo de valores de competencia, con respecto a la Variable 2: En la Matriz de Incidencias de competencias de Primer Nivel, identifica las competencias más representativas que manejan los docentes son: La Toma de decisiones, Orientación al Cliente, Pensamiento Analítico, Trabajo Colaborativo, Uso de la Información. Con respecto a la Variable 3: Análisis de Brecha: de cómo “SON” y cómo “DEBERÍAN SER” las competencias en la Institución, se muestra que los docentes conocen y determinan que el nivel de competencias es necesariamente de un nivel alto, es decir el IDEAL sería una escala de 1 = Muy Alto, ya que aunque los directivos manejan un nivel menor, es decir un nivel 2 = Alto, la percepción que el docente tiene en la enseñanza de los alumnos es que “DEBERÍAN SER” muy alto, por lo que el docente se maneja a un nivel alto y por lo tanto las competencias que enseña serán a niveles competitivos. Con respecto a la Variable 4: Análisis de Cultura Institucional: Siendo Predominante la Cultura “Jerárquica”.

Durante éste análisis con los docentes, se utilizó el instrumentó de evaluación por medio de encuesta, para determinar qué tipo de Cultura predomina en la Institución, las características principales que se midieron fueron: Características dominantes, liderazgo organizacional, Administración de Empleados, La unidad como organización, Énfasis Estratégico y Criterios de Éxito; posteriormente se evaluaron éstos 6 puntos en la cual se subdividió en 4 alternativas a las que le asignara un peso respectivo no excediendo de 100 y distribuyéndose de acuerdo a la percepción del docente, donde gráficamente se observa un valor numérico que deberá ser distribuido en A, B, C, D, para determinar el tipo de cultura, ver figura 4, según se puede apreciar, al aplicar el modelo de Cameron y Quinn (1999), se puede apreciar después de recopilar la información en el instrumentó de evaluación por medio de encuestas, y posteriormente al analizar los datos, se observa que la Cultura predominante en la Institución es la JERÁRQUICA, donde existe características organizativas, control y seguimiento a los procedimientos, con un liderazgo organizacional, donde existe una administración de empleados, existe una seguridad y estabilidad de la planta de docentes, existe un pegamento organizacional, unión por solucionar las situaciones que permiten generar una oportunidad de desarrollo, donde se mantienen estables los procesos, políticas y reglas, las cuales son claras, se tiene un énfasis estratégico, existe un marcado interés en la Permanencia y estabilidad de la docencia, y hay criterios de éxito, donde la eficiencia se traduce en Tiempo, calidad y entrega intelectual, para el mejoramiento y competitividad de la Institución hacia los alumnos, a los cuales se les comparte las diversas experiencias para el desarrollo de su conocimiento en las competencias educativas que desarrolla el alumno donde bajo

un Enfoque Interno, se tiene una integración del “SER” y la estabilidad y control de las actividades que le permiten ser competitivos en el campo laboral.

## CONCLUSIONES

De acuerdo al estudio realizado en la UT Torreón con el personal docente, se determinó que Gestión por competencias es una herramienta para desarrollar el Capital Intelectual, marcando una diferencia entre capacitación y los requerimientos para identificar las capacidades del docente, con respecto al propósito de la Institución. En conclusión se identifican los diferentes aspectos y procesos en los docentes, usando técnicas de medición de capital intelectual, para crear valor a la Institución. El análisis desarrollado a los docentes por medio del instrumento de evaluación de encuesta, se determina que al revisar el acumulado de las diversas respuestas, el tipo de cultura que se presenta es una cultura PREDOMINANTE, tipo JERARQUICA, donde el personal docente tiende a tener características Organizativas, existe un trabajo competitivo y de Innovación en la transferencia de conocimiento hacia los alumnos, se busca tener un liderazgo organizacional, donde los docentes y personal están alineados al Sistema de Gestión de Calidad ISO9001:2008, alineando a los docentes al cumplimiento de las metas estratégicas de la Universidad, buscando la gestión, Competitividad e Innovación en los diversos departamentos y permitiendo un liderazgo de competencia en el mercado regional, siendo una Universidad que apunta a ser la primera opción de ingresos de las diversas preparatorias de la región, debido a su grado de Competitividad y preparación en la región lagunera, por ser una Institución que permite obtener dos grado de Educación, siendo uno de Nivel Técnico Superior Universitario, e Ingeniería en las diversas opciones de carreras, que prioriza capacitación, manejo de técnicas y conocimientos, vinculada a la empresa y a la administración pública fortaleciendo el conocimiento y la aplicación de los mismos, así como el manejo de las diversas herramientas en la práctica cotidiana en la que los alumnos adquieren su certificación.

## RECOMENDACIONES

Para la investigación se recomienda ampliar la muestra en más Universidades Tecnológicas para determinar los tipos de organización cultural por regiones y saber si se encuentran alineadas al Sistema de Universidades Tecnológicas. La gestión del capital intelectual y las competencias docentes, permiten al recurso humano desempeñarse de acuerdo a como lo requiere la empresa cuando cuenta con ciertos requisitos como lo son: la disposición, conocimientos, habilidades, destrezas, actitudes, aptitudes, etc. Lo cual permite al sujeto ser competitivo en el ámbito en el cual se desempeña.

### Futura Linea de Investigaciones

Para trabajos posteriores se recomienda integrarse de una manera más amplia una línea de investigación enfocada a la forma de cómo influye el liderazgo como variable de competitividad en la gestión de Competencias y Capital Intelectual, y como segunda línea de investigación estaría integrada por un análisis comparativo entre diferentes universidades tecnológicas, México-Francia del cómo se aborda la gestión del sistema por Competencias.

### Discusion

Durante la parte Aplicada, se llevó a cabo una serie de encuestas en la Universidad Tecnológica de Torreón, para determinar el grado de competitividad del capital intelectual, el recurso humano, la gestión del capital intelectual, cultura organizacional y competencias educativas que se tienen, para identificar y procesar la información, en la búsqueda de introducir un procedimiento en la gestión de competencias para docentes generando la siguiente discusión. ¿Quién determina cuando un individuo, llámese docente, alumno, gerente, es competente, y en base a qué elementos podremos decir que ha destacado sobre cierta

competencia?, ¿Hasta qué nivel de competencia, podremos evolucionar?, ¿Cómo influirá en la Gestión de competencias las nuevas formas de visualizar la educación con la tecnología que está evolucionando a niveles insospechados? Durante el transcurso de la Aplicación del instrumento de evaluación (en total fueron 4 instrumentos) su procesamiento y análisis para interpretar los resultados numéricos, con la intención de alinear al personal docente al Sistemas de Gestión de Calidad Institucional ISO 9001:2008, Cabe mencionar que la institución tiene cerca de 180 maestros PTA y cerca de 50 PTC, con un total de personal administrativo cercano a 70 personas (Secretarías, administrativos, etc.) dado que este análisis se llevó a cabo durante la semana del Agosto 2013 a Noviembre de 2013, en el turno Matutino, y con la participación de diversos docentes los cuales se analizan sus resultados tanto individualmente como en grupo (Acumulado), la muestra fue de un total de 18 docentes, de los cuales 10 son PTA (Profesores de Tiempo Asignado) y 8 son de PTC (Profesores de Tiempo Completo) y agradeciéndoles su colaboración y participación a estas instrumentos de evaluación y encuestas realizadas en la Universidad Tecnológica de Torreón.

### Contribucion a la Investigacion

Parte de la contribución técnica a esta investigación surge la definición personal de competencia la cual es: “*Dentro del entorno personal y capacidad de desarrollo, destrezas, conocimiento y habilidades desempeñadas en un determinado campo de acción, el individuo es multifuncional para el desempeño de uno o varios trabajos, llegando a un fin determinado y común para los objetivos estrategicos de la organización, usando las diversas herramientas y capacidades para su funcionalidad y éxito final*” (Julio César Dorado Espino, 2013), esto es que al empezar a generalizar y analizarlas, éstas, estarán creando un sinnúmero de variables que se irán embañando y su determinación definitiva estará siendo complicada.

## BIOGRAFIA

Julio César Dorado Espino, es Master en Calidad, PTC de la Universidad Tecnológica de Torreón, carretera Torreón Matamoros km 10 s/n ejido el Águila en Torreón Coahuila, México. Líder del Cuerpo Académico PROMEP: UTTOR-CA-6, Cultiva la línea de Investigación: “Gestión de Sistemas de Calidad, y Sistemas de Manufactura” expone en congresos nacionales e internacionales, Alumno del Doctorado en Administración y Alta Dirección de la U.A. de C. Unidad Torreón, Trabajo en Empresas: Thomson Consumer Electronic, Cooper Estándar Automotive of México, GESOL S.A. de C.V. y Catering Mexicana S.A. de C.V. correo electrónico: jdorado@utt.edu.mx correo alternativo: dianali96@hotmail.com

Eyrán Roberto Díaz Gurrola Es Master en Administración, Profesor de Tiempo Completo de la Universidad Tecnológica de Torreón, Participa en el Cuerpo Académico reconocido por PROMEP: UTTOR-CA-6. Es catedrático impartiendo materias de ingeniería en la carrera de Mantenimiento Industrial. Actualmente cursando último semestre del doctorado en Administración Alta Dirección. Realizando tesis, en la Universidad Autónoma de Querétaro. Maestría en administración alta dirección, titulado obteniendo mención honorífica Universidad Autónoma de Querétaro. ediaz@utt.edu.mx

María Luisa Dorado Espino es Master en Educación Especial, P.A. Facultad de Contaduría y Administración de la UAdeC, Unidad Torreón, Supervisora de Educación Especial Z.E. 508. Coordinadora Laguna Norte de Educación Especial Región Laguna. Profesora de Matemáticas (1989), licenciada en Educación Básica SEAD por UPN(1992), Licenciada en Educación Especial de Aprendizaje(1993). Postgrado en Educación Especial 1997. Doctorado en Administración y Alta Dirección en 2012 en FCA UT UAdeC. Participa en elaboración de libros de texto gratuitos de SEP en 1994. Correo: mldoradoe@hotmail.com

MA. Ramón Heredia Martínez es Coordinador de la carrera de Administración y Evaluación de proyectos ha sido Profesor de Tiempo Completo, Actualmente es alumno del Doctorado en Administración y Alta de la Universidad Autónoma de Coahuila carretera Torreón Matamoros km 10 s/n ejido el Águila en Torreón Coahuila, México. Correo electrónico rheredia@utt.edu.mx

Diana Rosa Salas Rodríguez es Ingeniero en Sistemas Computacionales, Instituto Tecnológico de la Laguna, Actualmente estudia Maestría en Administración de Empresas, participa como P.A. en la Universidad Tecnológica de Torreón. Correo: dsalas@utt.edu.mx

# IMPACTO DEL PROGRAMA DE VERANO CIENTÍFICO EN LA TITULACIÓN POR LA MODALIDAD DE TESIS EN ESTUDIANTES DE PREGRADO. UN ESTUDIO DE CASO

Deneb Elí Magaña Medina, Universidad Juárez Autónoma de Tabasco

Norma Aguilar Morales, Universidad Juárez Autónoma de Tabasco

Luis Alfredo Argüelles Ma, Universidad Autónoma de Campeche

Román Alberto Quijano García, Universidad Autónoma de Campeche

## RESUMEN

*La formación en investigación de estudiantes de pregrado se ha dado en la práctica, a través de la realización de una tesis y de la participación activa con algún investigador a través de proyectos de investigación. El objetivo del estudio, fue analizar los porcentajes de titulación de los estudiantes que han participado en el programa de verano científico para el periodo comprendido de 2009 a 2012 y que al final del periodo evaluado habían optado, concluido y presentado un trabajo de investigación para terminar su proceso de titulación por la modalidad de tesis en la Universidad Juárez Autónoma de Tabasco en México. El diseño del estudio fue no experimental, descriptivo, longitudinal y se empleó como técnica de recolección y análisis de datos la minería de textos. Los resultados indican que el 18% de los estudiantes que han participado en el programa se han titulado por esta modalidad, destacando el área de ingeniería y el bajo índice que reporta el área de medicina y ciencias de la salud. Se concluye que los resultados se relacionan con problemas en el modelo de operación y seguimiento de las capacidades de investigación de los estudiantes del programa, y no al área del conocimiento.*

**PALABRAS CLAVE:** Tesis, Investigación, Verano Científico

## IMPACT OF SUMMER SCIENTIFIC PROGRAM FOR DEGREE THESIS MODE ON UNDERGRADUATE STUDENTS. A CASE STUDY

### ABSTRACT

*The research training of undergraduate students has been done through the formulation of a written thesis and an active participation with a researcher through research projects. The aim of the study was to analyze the graduation rates of students who participated in summer science program for the period from 2009 to 2012 and those whom at end of the evaluation period had chosen, completed and submitted a research paper to finish their certification process by thesis mode at Universidad Juárez Autónoma de Tabasco, México. The study design was non-experimental, descriptive, longitudinal and using a 'text mining' technique for collecting and analyzing data. The results indicate that 18 % of students who participated in the program have graduated from this mode, highlighting the engineering and the low index was for medicine area and health sciences. We conclude that the results are related to problems in the operating model and tracking capabilities of student in the research program, not about knowledge area.*

**JEL:** I23

**KEY WORDS:** Training, Research, Human Capital

## INTRODUCCIÓN

En las sociedades actuales, la ciencia, la tecnología y la innovación, juegan un papel preponderante para que los países alcancen mayor prosperidad económica y bienestar para su población. Ante este panorama, las universidades públicas y privadas tienen el gran compromiso de incrementar la alfabetización científica, no sólo para la formación de los científicos, sino también para fomentar los conocimientos básicos, las aptitudes prácticas y el espíritu crítico de los niños, los jóvenes y los adultos, (Organización de las Naciones Unidas para la Educación, la Ciencia y la Cultura [UNESCO], 2006, p.1).

La formación en investigación de estudiantes universitarios se ha dado en la práctica, a través de la realización de una tesis y de la participación activa en trabajo de campo con algún investigador a través de proyectos de investigación. Sobre este tipo de formación, Jenkins (2004) establece que el área que más necesita de investigación es sobre el impacto que tiene esta experiencia en los estudiantes y en el desarrollo de su inteligencia.

### Planteamiento del Problema y su Importancia

En los últimos 8 años de participación que ha tenido la Universidad Juárez Autónoma de Tabasco en el programa de verano científico, iniciativa de la Academia Mexicana de Ciencias (AMC, 2013) por fomentar las vocaciones científicas, ha sostenido crecimiento constante de estudiantes de pregrado que participan (UJAT, 2013). Cabe mencionar que durante este tiempo, el objetivo es que el estudiante adquiera conocimientos y habilidades propias de un investigador en formación. Sin embargo no existen estudios que presente evidencia del impacto que ha generado este programa en los estudiantes que han asistido, tanto en el interés por desarrollar sus competencias en investigación, así como en el desarrollo de un trabajo que refleje estas capacidades como la tesis.

Estudios previos del equipo de trabajo determinaron en una primera fase del proyecto (Magaña, Aguilar, Pérez, Quijano y Argüelles, 2014) si éstos estudiantes después de haber participado en el programa presentaban un verdadero interés en las actividades de investigación y cuáles fueron sus motivaciones y las limitantes que percibían, concluyéndose en esta fase, que si existe un interés del alumno por el desarrollo de actividades de investigación, sin embargo los resultados señalan que los conocimientos y la experiencia adquirida durante la estancia se perciben como insuficientes para el desarrollo de un trabajo de investigación. Los resultados presentados para esta fase del estudio, tienen por objetivo analizar los porcentajes de titulación de los estudiantes que han participado en el programa de verano científico para el período comprendido de 2009 a 2012 y que a la final del período evaluado habían optado, concluido y presentado un trabajo de investigación para concluir su proceso de titulación por la modalidad de tesis en la Universidad Juárez Autónoma de Tabasco en México.

El programa de “Verano de la Investigación Científica” tiene por objetivo fomentar el interés de los estudiantes por la actividad científica, ampliando sus conocimientos y sus opciones para su futura etapa de formación profesional (Academia Mexicana de Ciencias [AMC], 2013). La Universidad Juárez Autónoma de Tabasco es una de las instituciones de educación superior que ha participado desde los inicios del programa y además cuanta con un número significativo de estudiantes que han asistido. Por otra parte el estado de Tabasco en México es actualmente el segundo Estado con mayor número de participantes en el programa (AMC, 2013).

Para la Universidad en la que se desarrolló el estudio existen en el reglamento otras modalidades de titulación relacionadas a la generación de conocimiento y a las actividades de investigación y/o desarrollo tecnológico, como la titulación por artículo publicado y desarrollo tecnológico, pero son relativamente de reciente incorporación al mismo (UJAT, 2011a) y para el período bajo estudio (2008 – 2012) la mayor parte

de los estudiantes se rigieron con el reglamento anterior (UJAT, 2007), en donde la modalidad más representativa relacionada a las actividades de investigación fue la modalidad de tesis. El resto de esta investigación está organizada como sigue. La sección de revisión literaria presenta un análisis de los estudios realizados sobre la formación en investigación de estudiantes universitarios, el programa de Verano Científico de la Academia Mexicana de Ciencias y por último el desarrollo y evolución del programa en la Universidad Juárez Autónoma de Tabasco. En la sección de metodología se describe el diseño de la investigación, cómo se conformó la población y el proceso de recolección y análisis de datos. Después se presenta la sección de resultados con los valores que se reportan del análisis descriptivo. Por último las conclusiones del estudio que integran las líneas de investigación futuras.

## REVISIÓN LITERARIA

La forma de adscripción de nuevos miembros en las comunidades académicas difiere totalmente del reclutamiento tradicional que se da en otros contextos, ya que en el ámbito académico va de la relación discípulo-maestro a la relación estudiante-formas de conocimiento, disponiendo dichas comunidades de diversas interacciones como proyectos, publicaciones, canales de interacción, convocatorias, estrategias de formación, conformación de grupos y semilleros de investigadores (Ministerio de Educación Nacional, MEN, 2010 y Santelices, 2010; citados por Rojas-Betancour, 2011).

Millspaugh y Millenbah (2004) describen tres tipos de experiencia en investigación en los que los estudiantes participan: 1) el modelo de práctica orientada, generalmente enseñada en el aula, donde se adquieren habilidades básicas de investigación pero que tiene pocas oportunidades de aplicarlas; 2) el modelo de estudiante - colega, cuando el estudiante participa en las diversas etapas del proceso investigativo, este modelo involucra el mayor nivel de participación y puntos de vista de los estudiantes como colega de investigación; y 3) el modelo técnico, el cual permite a los estudiantes recolectar datos, aprender técnicas de investigación y trabajar como equipo, lo cual representa una ventaja porque permite a los estudiantes conectar un curso con la investigación, aprenden a trabajar solos y en equipos así como desarrollar sus habilidades para resolver problemas, generalmente cuando apoyan al investigador en el trabajo de campo. Para Rivas (2004) la formación de investigadores debe considerarse como un proceso educativo donde existan profesores que instruyan la manera de investigar con base a su propia experiencia y que hayan alumnos que estudian, analizan y comparan los diferentes métodos, y que también hay habilidades que se aprenden, desarrollan y perfeccionan, para ello se requiere no solo un cuerpo docente que investiga, sino programas específicos que permitan al alumno generar las competencias necesarias para desarrollar investigación.

En el ámbito universitario la investigación se ha dado en la práctica a través de la realización de tesis y de participar activamente en trabajo de campo con algún investigador. Durante el desarrollo de una tesis la orientación y ayuda del investigador experimentado es indispensable para guiar e influir en los avances del estudiante en formación. Su colaboración es crucial porque con su conocimiento y experiencia orienta y mejora las actividades de investigación y el desarrollo de habilidades, que conducen al estudiante a formalizar proyectos.

### Academia Mexicana de Ciencias y el Programa de Verano Científico

El Verano de la Investigación Científica tiene como objetivo principal fomentar el interés de los estudiantes de licenciatura por la actividad científica en cualquiera de sus áreas: Físico matemáticas, Biológicas, biomédicas y químicas, Ciencias sociales y humanidades e Ingeniería y Tecnología.

El programa consiste en promover y facilitar que los estudiantes realicen estancias de investigación de 7 semanas de duración en los más prestigiados centros e instituciones de investigación del país, bajo la supervisión y guía de investigadores en activo, quienes los introducen en el apasionante mundo de la ciencia

al permitirles participar en algún proyecto de investigación. El Verano de la Investigación Científica inició sus actividades en 1991 y, desde entonces, la Academia ha garantizado que su difusión sea completamente abierta, lo que ha permitido el registro de un número cada vez mayor de estudiantes provenientes de todas las áreas del conocimiento y de todos los estados de la República. (AMC, 2013).

### Evolución del Verano Científico en la Universidad Juárez Autónoma de Tabasco

La Universidad Juárez Autónoma de Tabasco ha participado desde el inicio del programa de Verano de la Investigación Científica con sólo 6 estudiantes su incremento anual en las primeras convocatorias no fue representativo, pero a partir del año 2005, la participación fue de 71 alumnos y de un profesor investigador de nuestra Universidad que por primera vez recibía estudiantes del programa, en 2006, la cifra se incrementó a 94 alumnos y 4 profesores como asesores, en se elevó la participación siendo 111 estudiantes y 6 profesores investigadores como asesores, sin embargo a partir de 2008 comienza una campaña extensiva de difusión del programa y el registro de estadísticas más detalladas sobre los participantes y donde se reportaron 174 estudiantes becados, de los cuales 24 habían sido por la Academia Mexicana de Ciencias, 10 estudiantes por el Consejo de Ciencia y Tecnología del Estado de Tabasco y 141 por parte de la Universidad Juárez Autónoma de Tabasco, de las distintas

Divisiones Académicas que la integran y 9 profesores investigadores brindaron apoyo a estudiantes de otras entidades. En el año siguiente aumento de nuevo la cifra a 201 participantes, en el 2010 fueron 254, en el 2011 de 277 estudiantes y en el año 2012, la última convocatoria evaluada del programa, la UJAT registro a 350 estudiantes, lo que equivale a un crecimiento de 26.36% de participación por año (figura 1), lo que demuestra el compromiso hecho por la universidad con el desarrollo local al formar profesionistas capacitados para afrontar los retos que le depara el futuro próximo (UJAT, 2010, 2011b, 2012a, 2013).

### Marco Legal

Con base en la Ley Orgánica de la Universidad Juárez Autónoma de Tabasco y al Estatuto General de la Universidad, se reestructura en 2011 el Reglamento de Titulación que tiene como objetivo establecer las bases y fijar las normas para la obtención del título a nivel Licenciatura a través de la elección de diferentes modalidades y sus requisitos correspondientes (UJAT, 2011a). El reglamento de titulación actual cuenta con 125 artículos, de los cuales el artículo 7 hace referencia a las diferentes modalidades de titulación, los cuales son: a) Tesis, b) Examen General de Conocimientos, c) Manual de Prácticas para Laboratorio, d) Taller o Campo, Diseño de Equipo, e) Máquinas o Software Especializado, f) Diplomado de Titulación, g) Estudio de Maestría o Doctorado, h) Memoria de Trabajo, i) Titulación por Promedio, j) Titulación por Desarrollo tecnológico, k) Titulación por Artículo Publicado, l) Titulación por Proyecto de Creación Artística, m) titulación por Examen de Certificación (UJAT, 2011a).

Se hace necesario también presentar las modalidades de investigación que se regían en el reglamento que estuvo vigente para el período 2008 - 2011 (UJAT, 2007), el cual estuvo conformado de cinco capítulos, 119 artículos y dos transitorios, y las modalidades de titulación se especificaban en el artículo cuarto las cuales fueron: a) tesis, b) examen general de conocimientos, c) manual de prácticas para laboratorio y taller, d) diseño de equipo o máquinas, e) cursos de titulación, f) estudios de maestría o doctorado, g) memoria de trabajo, h) titulación automática por promedio, i) titulación por proyectos de investigación.

Asimismo, se requiere justificar el indicador de comparación que fue la titulación por la modalidad de tesis desde un marco legal de operación, pues si bien existían otras opciones de titulación podrían reflejar el aprendizaje del estudiante en las actividades de investigación (UJAT, 2007), como el proyecto de investigación, las cifras de titulación por esta modalidad eran muy bajas. Para opciones más recientes (UJAT, 2011b) como el artículo publicado o el desarrollo tecnológico, aún no se tenían cifras registradas

en estas modalidades, por lo que fue necesario definir la más representativa para los fines de esta investigación y la transición de reglamentos siendo esta una limitación del estudio.

## MATERIAL Y MÉTODOS

### Diseño del Estudio

El diseño del estudio fue no experimental, descriptivo, longitudinal (Kerlinger y Lee, 2002) con un enfoque de investigación cuantitativo. La población considerada fueron los estudiantes de todas las áreas del conocimiento que han participado en el verano científico en un período de evaluación de 2008 a 2012. Así mismo se utilizaron los registros de la Secretaría Académica (UJAT, 2012b) sobre los estudiantes que se titularon por la modalidad de tesis durante el periodo de 2009 a 2012, considerando un año mínimo para el desarrollo del trabajo recepcional de tesis. La metodología de recolección de datos y análisis empleada fue el análisis cuantitativo de textos o también denominado análisis de contenido cuantitativo (Álvarez, 2012, p. 132), la cual se concibe como una técnica que trata de garantizar la reproductividad y validez de los resultados, mediante el establecimiento de indicadores definidos por el investigador, siendo para este caso particular, la titulación por tesis el indicador de eficiencia para las actividades de investigación en los estudiantes de licenciatura que participaron en el programa de verano científico 2012.

Para poder obtener la información sobre el período 2009 – 2012 de todos los estudiantes titulados por tesis para poder realizar el análisis correspondiente, ésta se obtuvo a través de un oficio enviado a la Secretaría Académica y la Dirección de Planeación, siendo ésta última la que proporcionó los datos de manera digital para poder realizar el análisis de datos correspondiente (UJAT, 2012b). Para el análisis estadístico se empleó el software Microsoft Office Excel 2007 para Windows y el SPSS, en donde se realizó el análisis descriptivo y de frecuencia con la finalidad de describir el fenómeno bajo estudio en cada una de sus dimensiones y en general.

## RESULTADOS DESCRIPTIVOS

En esta etapa se presenta primero la información relativa a los estudiantes que participaron en el programa verano de la investigación científica, así como la inversión realizada por la universidad por cada alumno que participó en la estancia y fue compararla con los trabajos de investigación terminados evaluados a través del indicador de titulación por tesis. A continuación se muestran las tablas que reflejan los resultados obtenidos nos muestra las cantidades de alumnos que participaron en el verano científico y se titularon por tesis y su comparación con el total de alumnos que han participado en el periodo comprendido en el estudio (tabla 1).

Tabla 14: Alumnos Titulados Por Tesis en la UJAT

Tipo De Alumno	2009	2010	2011	2012	TOTAL
Total de Alumnos titulados en la modalidad de tesis	625	529	441	559	2154
Total de alumnos titulados en la modalidad de tesis y que participaron en el programa de verano científico.	62	57	38	4	161
PORCENTAJE	10%	11%	9%	1%	7%

*Nota: esta tabla presenta el número de alumnos titulados en la modalidad de tesis para el período 2009 – 2012 de toda la Universidad, así como el total de alumnos titulados en la modalidad que además participaron en el programa de verano científico.*

*Fuente: Elaboración Propia UJAT (2009, 2010, 2011b, 2012a, 2013).*

Se observa que en el año 2009 se concentró la mayor cantidad de alumnos titulados por la modalidad de tesis de toda la Universidad, sin embargo, porcentualmente contrastando el total de alumnos que se titularon con la misma modalidad en el programa de verano científico, éstos solo representan el 10%, en el año 2010 el 11%, el año 2011 con un 9% y en el 2012 el valor es del 1%. Es necesario señalar que no se pudieron tomar valores de referencia de los años anteriores al estudio, debido a que no existe documentación oficial

detallada para los estudiantes que participaron en el verano científico. En la tabla 2 se muestran a los alumnos que participaron en el verano científico por año y que se titularon por tesis.

Tabla 15: Alumnos Que Participaron en el Programa de Verano Científico Titulados Por Tesis (2008-2012)

Año	No. de Alumnos Participantes en el Programa de Verano Científico	Sexo		No. de Alumnos Titulados Por Tesis Por Cohorte Generacional Del Programa de Verano Científico
		M	F	
2008	174	77	97	67
2009	201	77	124	62
2010	254	100	154	57
2011	277	96	181	38
2012	350	126	224	4
	TOTAL			228

*Nota: esta tabla presenta el número de alumnos que participaron en el programa de verano científico (2008 – 2012) y el total de los mismos que han culminado sus estudios por la modalidad de tesis. Fuente: Elaboración Propia UJAT (2008, 2009, 2010, 2011b, 2012a, 2013)*

En la tabla 2 se observa que a pesar de que el número de alumnos participantes en el programa ha registrado un incremento significativo con una tasa de crecimiento anual promedio de 27.75%, el indicador de la titulación por tesis disminuye en una tasa de decrecimiento anual de 34.89%.

### Análisis Comparativo Por Área del Conocimiento

En este apartado se presentarán las tablas de resultados que presentan el número de estudiantes que participaron por año y programa de licenciatura en el programa de verano científico, así como el número de estudiantes de cada generación que hasta la fecha de corte del estudio, diciembre de 2012, se había titulado por la modalidad de tesis, es decir la cohorte generacional del programa. Las áreas fueron clasificadas de acuerdo a la catalogación internacional Barros Sierra que hace referencia el Consejo Nacional de Ciencia y Tecnología (CONACYT, 2000), la cual divide se divide en siete áreas del conocimiento, 1) Físico-Matemáticas y Ciencias de la Tierra, 2) Biología y Química, 3) Medicina y Ciencias de la Salud, 4) Humanidades y Ciencias de la Conducta, 5) Ciencias Sociales, 6) Biotecnología y Ciencias Agropecuarias, y 7) Ingenierías.

En la tabla 3 se presenta en análisis general comparativo de las siete áreas del conocimiento planteadas para el estudio. El mayor porcentaje de alumnos que han participado en el programa de verano científico y que han optado por la modalidad de tesis dentro de su cohorte generacional, lo reporta el área de ingenierías, seguido del área de físico-matemáticas y ciencias de la tierra.

Uno de los resultados que sorprendió al grupo de trabajo fueron los resultados del área de medicina y ciencias de la salud, pues su participación en cantidad de alumnos dentro del programa es la más alta de todas las áreas, pero los estudiantes no han decidido finalizar sus estudios realizando un trabajo recepcional de investigación como lo puede ser la tesis, pues apenas el 7% de todos los participantes desarrollaron un trabajo terminal para la modalidad de tesis, siendo un aspecto fundamental en la formación del área el desarrollo de habilidades de investigación (Ponce, et al., 2002; 2005; Ramos y Sotomayor, 2008). Conclusiones Desde un punto de vista de participación el programa ha tenido un comportamiento de crecimiento significativo de 179 de alumnos participantes en promedio por año, sin embargo, desde una perspectiva de eficiencia, considerando la tesis como un indicador de salida, el programa no ha tenido los resultados esperados, pues no ha motivado lo suficiente a sus participantes a que su formación en investigación se vea reflejada en un trabajo terminal como lo puede ser la tesis.

Es necesario señalar que se seleccionó la modalidad de titulación por tesis como el indicador de eficiencia, porque se concuerda con Calvo (2009) en señalar que su desarrollo es un proceso complejo en el que los

estudiantes producen conocimiento, entendiendo por ello la movilidad de temas, conceptos y problemas que ellos hacen circular en la tesis a manera de red de significaciones, apropiándose de los significados y plasmándolos mediante el despliegue de recursos de escritura. Si bien el objetivo del verano científico es promover las vocaciones científicas a través de un programa en donde la convivencia y tutoría de un investigador se pretende que despierte el interés del estudiante por el desarrollo de las competencias científicas, este interés no se puede medir solo desde el punto de vista de la percepción del mismo, se hace necesario evaluar si ese interés lo condujo al desarrollo de un proceso de aprendizaje dentro de la investigación, que dado el contexto y reglamentos de la Universidad bajo estudio y el periodo evaluado, la tesis puede llegar a ser el mejor referente de éxito en dicho proceso de enseñanza aprendizaje. Los resultados dan evidencia de que existe una baja tasa titulación por tesis en los estudiantes que participaron en el programa de verano científico, pues en promedio no rebasa el 18% por cohorte generacional en el periodo que se analizó (2009-2012). Desde esta perspectiva el modelo del programa de Verano Científico a nivel institucional está requiriendo un apoyo mayor que la estancia de dos meses para motivar al estudiante a desarrollar un trabajo de investigación y mejorar sus competencias para ello.

Tabla 16: Número de Alumnos Participantes en el Programa de Verano Científico, y Titulados Por Tesis Por Cada Área del Conocimiento (2008-2012)

Programa de Licenciatura	2008	2009	2010	2011	2012	TOTAL	% Titulados
Físico-Matemáticas y Ciencias de la Tierra							
Participantes	16	8	7	9	22	62	19%
Titulados	6	4	2	0	0	12	
Biología y Química							
Participantes	8	9	10	11	47	85	15%
titulados	5	6	2	0	0	13	
Medicina y Ciencias de la Salud							
Participantes	44	39	57	66	71	277	7%
titulados	8	5	3	3	0	19	
Humanidades y Ciencias de la Conducta							
Participantes	3	2	14	12	17	48	8%
titulados	1	0	2	1	0	4	
Ciencias Sociales							
Participantes	7	41	41	48	33	170	13%
titulados	2	9	7	4	0	22	
Biotecnología y Ciencias Agropecuarias							
Participantes	20	15	36	20	24	115	18%
titulados	2	7	10	2	0	21	
Ingenierías							
Participantes	52	42	28	44	42	208	39%
titulados	29	20	8	21	4	82	
TOTAL							
Participantes	150	156	193	210	256	965	18%
titulados	53	51	34	31	4	173	
% titulados	35%	33%	18%	15%	2%	18%	

*Nota: Esta tabla presenta el número de alumnos que participó del 2009 al 2012 en el programa de verano científico, así como el número de alumnos que se ha titulado por la modalidad de tesis de cada grupo generacional para cada área del conocimiento según la calificación Internacional Barros Sierra empleada por CONACYT (2000), y como resultado el porcentaje proporcional por año y programa de licenciatura. Fuente: Elaboración Propia UJAT (2008, 2009, 2010, 2011b, 2012a, 2013).*

Por otra parte la titulación universitaria, asumida como un proceso formativo, requiere de trabajo de acompañamiento entre los estudiantes y con los asesores, identificar las reglas del juego que se tornan productivas tanto para la elaboración conceptual de la tesis como para la escritura (Calvo, 2009).

Los resultados no permiten generalizar a todas las áreas del conocimiento, lo cual hace pensar que el problema es de tipo estructural en el modelo de operación y no relativo al área del conocimiento. Diversos estudios (Corpas, 2009; Hernández, 2005; Quintero, Munévar y Munévar, 2008) han señalado la estrategia de los semilleros de investigación como un programa de licenciatura que brinda el acompañamiento necesario que pudiera ser un complemento del programa de verano científico, para garantizar que los

alumnos que han logrado despertar un interés por las actividades científicas logren desarrollar competencias científicas que garanticen su inserción exitosa y profesional en la sociedad del conocimiento. Con relación a los resultados presentados por el área de medicina y ciencias de la salud, el estudio realizado por Ramos y Sotomayor, (2008) señala que las estrategias de mentoría y participación activa en proyectos de investigación científica, son las estrategias que mejor resultados han generado en esta área del conocimiento, tomando como base que el programa de verano científico es una estrategia de mentoría dentro de un proyecto de investigación, los resultados para el área solo generan más interrogantes, ¿son dos meses suficientes como para despertar el interés del estudiante? ¿han generado interés en la vocación científica? ¿por qué no desarrollar un trabajo de investigación como la tesis? ¿cuál ha sido la experiencia del estudiante en cuanto a su proceso de enseñanza aprendizaje?. Las respuestas requieren un estudio más profundo del programa, más allá de las percepciones del estudiante que ya se han publicado por el equipo de trabajo (Aguilar, Magaña, Guzmán, 2013; Magaña, Vázquez, Aguilar, 2013; Magaña, et al., 2014), o de los resultados aquí presentados.

El estudio que se presenta es de índole descriptiva cuantitativa y los datos presentados no permiten señalar causales precisas por lo que se afirma que las futuras líneas de investigación deberán presentar un enfoque holístico, que permitan determinar con precisión las diversas situaciones que se están presentando hacia el interior de cada área del conocimiento y poder presentar un panorama general de la problemática aquí presentada. Es necesario recordar que no necesariamente mayor cantidad representa mejor calidad, se requieren de modelos que permitan dar evidencia de un verdadero proceso de aprendizaje en el desarrollo de competencias en investigación (Ovide, 2000), pues sin importar la orientación de los programas de licenciatura, la investigación es una actividad fundamental en el desarrollo profesional de los estudiantes de pregrado.

# PERCEPCIÓN DE LA INNOVACIÓN EN LA EDUCACIÓN COMO UNA FORMA DE VINCULACIÓN

Ana Bertha Plascencia Villanueva, Universidad Autónoma de Baja California

## RESUMEN

*Este artículo forma parte de diversas investigaciones realizadas a nivel educación superior durante los ejercicios 2011, 2012 y 2013, y en las cuales se cuestionó desde diversos ángulos a una muestra de estudiantes acerca de la innovación y si consideran que es un detonante de las economías de los países e influir en mejorar sus niveles de calidad de vida, detectando que las personas pueden tener su propia perspectiva de lo que es la innovación y su propia percepción de cuál es el impacto en los diversos sectores de la sociedad, este artículo fue elaborado en forma empírica, de acuerdo a resultados de las investigaciones mencionadas con la finalidad de influir en el ámbito educativo al conocer los requerimientos del entorno global y las exigencias de la organización de cooperación y desarrollo económico(OCDE), y sus recomendaciones que pretenden la vinculación real de los egresados de educación superior con el entorno, independientemente del programa de estudios en el que se preparan.*

**PALABRAS CLAVE:** Educación, Innovación, Vinculación y Estudiante Educación Superior

## PERCEPTION OF INNOVATION IN EDUCATION AS A FORM OF BONDING

### ABSTRACT

*This item is part of several investigations at higher education level in 2011 , 2012 and 2013 , and which was challenged from different angles to a sample of students about innovation and if they feel that is a trigger for the economies of countries and influence improve their quality of life , sensing that people can have their own perspective of what is innovation and their own perception of what is the impact on the various sectors of society , this article was written in empirically, according to research results mentioned in order to influence the education sector to meet the requirements of the global environment and the requirements of the organization for Economic Cooperation and development(OECD),and recommendations that seek the real link of graduates from higher education to the environment regardless of the curriculum in preparing.*

**JEL:** A19, A22, B59, D60, F01

**KEYWORDS:** Education, Innovation, Linking Higher Education and Student

## INTRODUCCIÓN

Los requerimientos del entorno global en cuanto a educación son claros tienen que ver con factores de carácter social, político, económico, científico y tecnológico debido a ello las Instituciones de Educación Superior(IES) han adoptado los modelos educativos preparados específicamente para lograr vincularse con el objetivo primordial de impactar los entornos laborales de acuerdo a las funciones sustantivas de la educación desde una perspectiva de evaluación, y considerando diversos aspectos como por ejemplo educación, calidad, equidad, pertinencia, transparencia e internacionalización, las cuales permiten la transformación social a partir de las relaciones entre universidad, gobierno y sociedad.

Este artículo toma de base 3 investigaciones realizadas por Plascencia (2013) en los últimos años 2011, 2012 y 2013, en las cuales se consideraron tres aspectos fundamentales que son en primer lugar un “Curso de capacitación diseñado y realizado dentro del contexto de un enfoque formativo, que desarrolla el liderazgo, la sensibilización y las competencias para una acertada toma de decisiones financieras en la gestión directiva, a la vez que propicia la innovación” por otra parte considerando a “El emprendedor en la Universidad Autónoma de Baja California, caso estudiantes de la Facultad de Ingeniería y Negocios Tecate” y logrando unir con este artículo estos tres problemas identificados por Plascencia en otra investigación denominada “Educación con Calidad a través de la Vinculación”

Los resultados vertidos tienen que ver con algunos cuestionamientos que se efectuaron con la finalidad de llegar a las hipótesis planteadas en cada una de estas investigaciones y algunos de estos cuestionamientos fueron acerca de ¿Cuáles han sido los procesos de vinculación que han permitido el tránsito del estudiante al mercado laboral?, ¿Cuáles han sido los diversos modelos de vinculación a través de los cuales las IES han adoptado para lograr impactar los entornos laborales y la innovación? por último acerca de ¿Cuáles han sido los sistemas de evaluación y el impacto en la vinculación asociada a la calidad, equidad, la pertinencia, la transparencia y la internacionalización? Una contestación adecuada de estas preguntas orientaría al objetivo que en su conjunto permita lograr contribuir a una transformación social a partir de las relaciones entre universidad gobierno y sociedad generando un adecuado desarrollo humano y con ello lograr elevar los niveles de innovación y competitividad económica que a su vez permitan la generación de capacidades y competencias para la empleabilidad de los egresados de las IES. Lo que nos llevaría a una hipótesis:

Algunos modelos educativos de educación superior y posgrado presentan características distintas en cuanto a los enfoques educativos y los requerimientos del entorno hacia los estudiantes así como la no consideración de la cultura en el desarrollo pleno y realización de un ser humano ideal lo que se provoca por una falta de una vinculación en el entorno laboral e innovación en el entorno empresarial. La intuición humana tiene que ver con lo aprendido, debido a que en la práctica el ser humano genera estructuras específicas que son métodos o bien los patrones que se hacen de acuerdo a experiencias pasadas acumuladas en el presente. Es indudable que el entrenamiento hace a los genios, al respecto Aristóteles menciona que el ser humano aprende de acuerdo a sus experiencias puestas en la práctica debido a ello se forma percepciones del mundo considerando ver del mundo lo que le es útil ver y es en ese momento que se propicia una innovación. Asimismo esas percepciones se consideran en la toma de decisiones fundamentadas en experiencias pasadas este artículo fundamentado en las investigaciones mencionadas anteriormente en su conjunto permiten contar con una percepción de los estudiantes de IES en relación a la innovación en la educación como una forma de vinculación.

## REVISIÓN DE LITERATURA

Relacionado con estas investigaciones se mencionan los siguientes autores. Barroso (2008), comenta que las empresas de hoy en día se están dando cuenta de que el éxito no depende solo de la obtención de utilidades, sino que se requiere contribuir con todos los que participan en ellas para hacerlas más competitivas y enfrentar un mundo cada vez más globalizado. Mendoza, García y González (2012), uno de los principales retos de las empresas es la capacidad de adaptación todos motivados por efectos del entorno ya sea macroeconómico o microeconómico aunado a los cambios de la tecnología que son a pasos agigantados día a día, ello les obliga a “aclarar sus valores, desarrollar nuevas estrategias y aprender nuevas formas de funcionar. Y la tarea más importante para los líderes, en vista de tales desafíos es movilizar a todos los empleados de la organización para trabajar en la adaptación” Hoy en día cada vez son las más las empresas que se enfrentan a retos de adaptación, cambios de ámbito mundial en las sociedades, los

mercados y la tecnología les están obligando a aclarar sus valores, desarrollar nuevas estrategias y aprender nuevas formas de funcionar.

Medina (1993) De la misma manera el autor comenta que México irrumpe en los nuevos mercados de alta competencia, por esto requiere de una generación de empresarios que tengan conocimientos profundos sobre cómo organizarse y adaptarse para alcanzar el éxito; que vivan cada día el compromiso de constituir, mediante la producción de riqueza, un país más justo y equitativo; que sean emprendedores e impulsen la calidad como su principal ventaja competitiva.

## **METODOLOGÍA**

Esta investigación se relaciona a temas de innovación como una forma de vinculación, considerando para ello estas tres investigaciones y la percepción que tienen los estudiantes de educación superior acerca de la innovación de acuerdo a estos tres ángulos. Se realizó una investigación de tipo empírico descriptivo, en las investigaciones mencionadas se utilizaron instrumentos como la observación nota de campo y una encuesta cuestionario aplicado a la muestra de 231 estudiantes con un 40% de confiabilidad dada la población de 573 estudiantes de IES, dando un índice de confiabilidad del  $95 \pm 5\%$  es decir un 95 a 100% de confiable. En primer término se analizaron los resultados obtenidos al aplicar los instrumentos en cuanto al tema del emprendedurismo como una cultura de superación personal, la innovación empresarial y los modelos educativos actuales. Concluyendo que no todas las personas desean ser emprendedores exitosos, ni cuentan con un plan de vida definido, pocos se preocupan por su futuro, no todos se capacitan con el objeto de ser empresarios, y algunas personas no tienen ni idea de cómo iniciar una empresa.

## **RESULTADOS**

En cuanto a algunos de los indicadores resultantes: un 50% de la muestra nunca ha iniciado un emprendimiento, el 30% de la muestra no sabe qué beneficios tiene al generar empresa, también comentan que el 61% de los proyectos iniciados han dado resultados malos, un 50% nunca ha desarrollado un proyecto emprendedor, el 66% de los entrevistados opina que un emprendedor nace y se hace así como el 29% considera que los emprendedores se hacen. La misma investigación refleja resultados en forma positiva y se ubica en que, si los estudiantes de las IES contaran con cualidades de conocimiento del entorno, facilidad de palabra, iniciativa, actitud crítica, alta autoestima y personalidad proactiva estarían en una mejor posición para ser emprendedores exitosos y personas innovadoras tanto con sus proyectos de vida personales como a nivel empresarial.

## **CONCLUSIONES**

Estas tres investigaciones generaron las siguientes conclusiones: Es importante contar con una cultura del emprendimiento, debido a que las personas indudablemente desean superarse personalmente y profesionalmente con el fin de elevar su propia calidad de vida y de los que dependen de ellos, para ello es importante la generación de emprendimientos y la preparación que se adquiera independientemente de que estos proyectos sean de tipo empresarial, personales como los planes de vida o profesionales vía laboral, que en un momento determinado los lleven a superarse en todos los ámbitos de sus vidas. Algunos estudiantes de ciencias administrativas, les gustaría contar con más competencias y habilidades para desarrollarse eficazmente como asesores financieros y esta situación no les es favorable para generar innovaciones, planeaciones y proyectos viables.

La globalización y los requerimientos de sus procesos de tipo político, económico, social y tecnológico sería interesante agregar la palabra cultura ya que la muestra manifiesta una falta de conocimiento del entorno para la toma de decisiones y un 33% no utiliza las tecnologías de la información como un hallazgo

importante, así como que también los enfoques macroeconómico y microeconómico son importantes para la toma de decisiones y que estas actitudes pueden influir positivamente en generar empresas que orienten a las personas a la superación personal identificando un área de oportunidad al agregar la palabra cultura. Como IES, es necesario generar las vinculaciones necesarias con las empresas e instituciones educativas como una responsabilidad social en el brindar conocimientos desarrollar las habilidades y actitudes necesarias en los egresados de educación superior, de tal manera que generen la confianza en el ámbito empresarial brindándoles soluciones viables derivadas de sus problemáticas empresariales con sus recomendaciones pertinentes esto con el fin de lograr la competitividad empresarial tendiente a la innovación como una de las labores primordiales empresariales que promueven la creación de empleo y que ambos contribuyan con el gasto publico elevando la calidad de vida de los mexicanos y en consecuencia el éxito financiero y nacional elevando el producto interno bruto.

## **RESUMEN**

*El presente estudio da a conocer la importancia de las Pequeñas y Medianas Empresas (MIPyMES) en las economías modernas y su relación con la mala administración y los apoyos gubernamentales. En particular se destaca la fuerte incidencia que tienen en la provisión de fuentes de trabajo, conformando una base fundamental del tejido social. Es decir, las MIPyMES representan un elemento clave para la economía de América Latina, constituyen entre el 90 y 98 por ciento de las unidades productivas en este continente, participando con cerca del 63 por ciento de los empleos y aportan el 35 y hasta 40 por ciento del producto total de la región. En México a pesar de tener un número importante de este tipo de empresas, son pocas las que se han atrevido a incursionar en mercados internacionales. Según datos de la propia Secretaría de Economía (2009), alrededor de 240 mil millones de dólares dejan ir las PyMES para surtir a las grandes multinacionales. Es bastante sensato pensar que es en estas empresas es donde deben desarrollarse herramientas de cambio organizacional o tecnológico para potenciar su capacidad de producción y competitividad y con ello acelerar en el país. Lo anterior se traduciría en beneficios que de manera natural se deriven como: formación de capital humano, ampliación de la infraestructura, mayor presencia en el mercado internacional, creación, desarrollo y aceleración de PyMES.*

**PALABRAS CLAVE:** Mipymes, Crecimiento Económico, PIB Y Apoyos Gubernamentales

## **PROBLEMS IN THE DEVELOPMENT AND RETENTION OF MICRO, SMALL AND MEDIUM ENTERPRISES IN THE COUNTRY: CASE OF STUDY NAVOJOA**

## **ABSTRACT**

*This study shows the importance of Small and Medium Enterprises (SMEs) in modern economies and their relation with the government support and bad administration. In particular it highlights the strong impact they have on the provision of jobs, forming a foundation of the social fabric. In other words, SMEs are a key element for the economy of Latin America to make up between 90 and 98 percent of the productive units in this continent, participating with nearly 63 percent of jobs and make the 35 to 40 percent of total output in the region. In Mexico despite having a large number of such companies, there are few who have introduced into international markets. According to the Ministry of Economy (2009), about 240 billion left to go to fill SMEs to large multinationals. It is quite reasonable to think that in these companies is where tools of organizational or technological change should be developed to enhance its production capacity and competitiveness and thereby accelerate the country. This would result in benefits that arise naturally as human capital formation, infrastructure expansion, greater presence in the international market, creation, development and acceleration of SMEs.*

## INTRODUCCIÓN

Las Micro, Pequeñas y Medianas Empresas, constituyen la columna vertebral de la economía nacional, por su alto impacto en la generación de empleos y en la producción nacional. De acuerdo con datos del Instituto Nacional de Estadística y Geografía (citado en Secretaría de Economía, 2013), *“en México existen aproximadamente 4 millones 15 mil unidades empresariales, de las cuales 99.8% son MIPyMES que generan 52% del Producto Interno Bruto (PIB) y 72% del empleo en el país”*. Así mismo, el Centro para el Desarrollo de la Competitividad Empresarial (citado en Marker, 2013), *“sólo el 10% de las MIPyMES mexicanas llegan a los diez años de vida y logran el éxito esperado, mientras que el 75% de las nuevas empresas del país fracasan y deben cerrar sus negocios sólo dos años después de haber iniciado sus actividades”*. Con lo anterior, se observa que las MIPyMES benefician a la economía de un país, sin embargo, también son diversos los factores que inhiben el desarrollo de las mismas en México, ocasionando el fracaso de estas. En el contexto local, Navojoa no es la excepción, debido que se observa que los pequeños negocios que prosperaron por un tiempo, ahora se encuentran cerrados; también pequeñas empresas que abrieron sus puertas y al poco tiempo se vieron obligadas a cerrar. Esto ha provocado un impacto negativo en la economía de la ciudad, pues los habitantes al cerrar sus negocios se ven forzados a trabajar para las grandes empresas.

En la actualidad las MIPyMES tienen un papel fundamental en el desarrollo de un país. Estas son consideradas el principal generador de empleos, el mejor distribuidor de ingresos entre la población y entre las regiones, son indispensables para que las grandes empresas existan y son un factor central para la cohesión social y la movilidad económica de las personas. (Urias, Cota y Aguilar, 2013, p. 83) Navojoa ha crecido gracias a la inserción de las grandes empresas instaladas en la ciudad, proporcionando trabajo a sus habitantes. Pero, dentro de estas empresas instaladas, hay empresas extranjeras que lo único que aportan para la economía son el salario y trabajo para los obreros, y las ganancias de estas se van fuera del país. El problema que se propone analizar, radica en el crecimiento, desarrollo y sobre todo la permanencia de las MIPyMES de la localidad, ya que las personas prefieren trabajar en las empresas grandes, por lo que hay poco desarrollo e inversión en las empresas en pequeño, sin mencionar que muchas de estas están cerrando sus puertas a pesar de los apoyos que ofrece el gobierno de Sonora, así como el Ayuntamiento de Navojoa. Según Domenge y Belausteguigoitia (2010), los principales factores que se han identificado que impiden el desarrollo de las MIPyMES, se dividen en dos categorías: internas y externas, las cuales se muestran a continuación:

*Internas:* Excesivos gastos personales y sin control, mala delegación de responsabilidades y toma de decisiones, mala o falta de planeación estratégica, problemas de ineficiencia en producción e inventarios, problemas de ventas y de mercado, sucesión y problemas entre generaciones, dirección general deficiente, manejo de personal y contratación deficiente, problemas financieros, mala o falta de capacitación de personal

*Externas:* Excesiva tramitología y burocratización, altos costos de financiamiento, falta de accesibilidad a programas de financiamiento especializados en MIPyMES, falta de incentivos fiscales, falta compartir riesgos financieros con el emprendedor, falta de ética, piratería en el mercado, la gran competencia entre las mismas MIPyMES y grandes Empresas

En este sentido, se constata que las MIPyMES son un factor importante en el desarrollo de la economía, tan es así que la Organización para la Cooperación del Desarrollo Económico (2004), estas empresas juegan

un rol importante en la transición y el desarrollo de los países, surgiendo así este tipo de empresas como la llave para disminuir la pobreza (pág. 5). Sin embargo, existen casos de incursión de las MIPyMES que no duran en el mercado, por lo que es necesario determinar los factores que impiden su desarrollo, y que esta información sirva a los nuevos empresarios e inversionistas que desean iniciar su propio negocio en esta ciudad, y para hacer crecer a las micro, mediana y pequeñas empresas que ya se encuentran instaladas en la ciudad, y de esta manera que pueda crecer la economía de Navojoa. Dentro de las dificultades que enfrentan las MIPyMES destaca el que no cuentan con un plan de negocios, lo que les hace difícil conseguir financiamientos y coordinar eficientemente los recursos físicos y humanos, generando una operación de la empresa mucho más difícil e ineficiente y provocando el retraso de su “crecimiento” (Red PyMES Cumex, pág. 3). Por lo tanto, en este trabajo se han planteado dos hipótesis, la cuales son las siguientes:

*La mala administración está directamente relacionada con la permanencia de las MIPyMES en Navojoa. El desconocimiento de los Apoyos Gubernamentales está directamente relacionado con la permanencia de las MIPyMES en Navojoa.*

## REVISIÓN LITERARIA

Las MIPyMES, así como para las grandes empresas, según Anderson (citado en Flores, Hernández y Flores, s.f., pág. 1) son “una unidad económica de producción y decisión que, mediante la organización y coordinación de una serie de factores (capital y trabajo), persigue obtener un beneficio produciendo y comercializando productos o prestando servicios en el mercado”. Según Ortiz (2013), las MIPyMES son empresas con características distintivas, y tienen dimensiones con ciertos límites ocupacionales y financieros prefijados por los estados o regiones. Es decir, son agentes con lógicas, culturas, intereses y un espíritu emprendedor específicos. Las MIPyMES cumplen un importante papel en la economía de todos los países y México no es la excepción. Tienen particular importancia para la economía nacional, no sólo por sus aportaciones a la producción y distribución de bienes y servicios, sino también por su capacidad de cambiar rápidamente su estructura productiva (Excélsior, 2010).

De acuerdo con Excélsior (2010), una de las ventajas de estas empresas, es que pueden realizar productos individualizados en contraposición con las grandes empresas que se enfocan más a productos más estandarizados, además de que se caracterizan por auxiliar a estas últimas en sus servicios u operaciones. Acorde a la Secretaría de Economía (2011, pág. 4), con base en la estratificación establecida en la fracción III del artículo 3 de la Ley para el desarrollo de la competitividad de la micro, pequeña y mediana empresa y en el Acuerdo por el que se establece la estratificación de las micro, pequeñas y medianas empresas, publicado en el diario oficial de la federación el 30 de Junio de 2009, las MIPyMES se clasifican de la siguiente manera:

Tabla 1: Estratificación de las Mipymes

Xv. Estratificación					
Tamaño	Sector	Rango de número de trabajadores	Rango de monto de ventas anuales (mdp)	Tope combinado*	máximo
Micro	Todas	Hasta 10	Hasta \$4	4.6	
Pequeña	Comercio	Desde 11 hasta 30	Desde \$4.01 hasta \$100	93	
	Industria y Servicios	Desde 11 hasta 50	Desde \$4.01 hasta \$100	95	
Mediana	Comercio	Desde 31 hasta 100	Desde \$100.01 hasta \$250	235	
	Servicios	Desde 51 hasta 100			
	Industria	Desde 51 hasta 250	Desde \$100.01 hasta \$250	250	

Fuente: Diario Oficial de la Federación (2009). ACUERDO por el que se establece la estratificación de las micro, pequeñas y medianas empresas. Disponible en [http://www.dof.gob.mx/nota\\_detalle.php?codigo=5096849&fecha=30/06/2009](http://www.dof.gob.mx/nota_detalle.php?codigo=5096849&fecha=30/06/2009)

El PIB, es el principal indicador económico, debido a que es el total de la producción de bienes y servicios que produce un país, estado o ciudad en determinado tiempo, sirve de parámetro para analizar que tan productivo es una entidad en comparación con otras, lo que permite la toma de decisiones con respecto al giro de la economía (Fuentes, 2009, pág.1) En la figura 5, se muestra como el PIB de México ha estado en constante crecimiento desde el año 2010 al 2012 a un ritmo acelerado, pero en 2013 su crecimiento decayó, pese a que creció un 0.84% (Rodríguez, 2013):

Figura 1: Crecimiento del PIB En México en los Años 2010 A 2013 (Mdp)

Fuente: Elaboración propia en función de datos obtenidos de Instituto Nacional de Estadística y Geografía (2014). Banco de Información Económica. Disponible en: <http://www.inegi.org.mx/sistemas/bie/>

Según Montoya (2012), dentro del PIB, el sector de actividad económica que aporta más en su desarrollo, es el sector terciario con un 62.5%, el siguiente es el sector secundario con un 33.3%, y por ultimo esta el sector primario, el cual aporta un 4.2%. Por otro lado, las MIPyMES constituyen la columna vertebral de la economía nacional, gracias a los acuerdos comerciales con los que cuenta México, por su alto impacto en la generación de empleos y por su participación en la producción nacional. De acuerdo con datos del Instituto Nacional de Estadística y Geografía (citado en Secretaria de Economía, 2013), “en México existen aproximadamente 4 millones 15 mil unidades empresariales, de las cuales 99.8% son MIPyMES que generan 52% del Producto Interno Bruto (PIB) y 72% del empleo en el país”. Esto se demuestra en la tabla 2:

Tabla 2: Estructura Empresarial (2009)

Empresas	Nº de Empresas	% del Total de Empresas	% De Empleos	Generación de	% de Aportación Al PIB
Micro	4,877,070	95.2%	45.6%		15.5%
Pequeñas	214,956	3.4%	23.8%		14.5%
Medianas	42,415	0.3%	9.1%		22.5%
Grandes	9,615	0.2%	21.5%		48.0%
Total	5,144,056	100.0%	100.0%		100.0%

Fuente: Saavedra, M. (2010). El Sistema de Garantías para el apoyo a la MIPyME, en México. Disponible en: <http://www.paginaspersonales.unam.mx/files/210/PonenciaPuebla.pdf>

Se observa en la tabla 2, que las MIPyMES representan el mayor porcentaje del total de empresas en México, entre estas destacan, por ser el grupo mayoritario y ser la mayor fuente de empleo, las microempresas. En lo que se refiere a la aportación al PIB, las que presentan mayor aportación al PIB son las empresas grandes con el 48% y medianas con el 22%, y las microempresas a pesar de ser cuantiosas solo aportan el 15% al igual que las pequeñas empresas. De acuerdo con la clasificación de INEGI, las

microempresas conforman el grupo mayoritario, al contar con 92,7% de los establecimientos totales en manufacturas, 97,2% en comercio y 94,5% en servicios solo en 2008, ya que la pequeña y mediana empresa tuvieron una participación minoritaria. Cabe destacar que los cálculos sobre las microempresas existentes distan mucho de ser exactos, ya que éstas son numerosas y abren y cierran constantemente, además de que poseen un alto y volátil componente informal, es decir, en México la economía informal contaba con más de tres millones de microempresas y generaba cerca de nueve millones de empleos (un cuarto de la Población Económicamente Activa) (Pavón, 2010, pag.12).

A pesar de la contribución tan significativa a la economía, las MIPyMES mexicanas no han alcanzado un nivel de competitividad suficiente como para posicionarse en el mercado global, ni para integrarse plenamente como proveedores de grandes empresas. Su tasa de mortalidad pone de manifiesto el bajo nivel de desempeño de estas organizaciones; es decir, de las 200 mil empresas que anualmente abren sus puertas en México cada año, solamente 35 mil sobreviven dos años más tarde (Góngora, García y Madrid, s.f.), 25% tienen escasas posibilidades de desarrollo y solo 10% cuentan con alguna oportunidad de desarrollarse en la economía formal (Secretaría de Economía, 2008). En el caso específico de las microempresas, la cifra es aún más dramática, ya que para Olmeda (2009), de cada 10 que surgen, 8 desaparecen al año. En la actualidad la aportación que las MIPyMES realizan al PIB del país pasó de 52 a 34% en los últimos 10 años, debido sobre todo a la falta de liquidez (El Economista, 2012).

## METODOLOGÍA

Para el desarrollo de esta investigación se llevará a cabo una investigación cuantitativa y cualitativa del tipo descriptiva, la que permitirá observar un panorama amplio por el cual está pasando la ciudad de Navojoa, Sonora, México así como las MIPyMES que se encuentran en ella. Se llevara a cabo una revisión del estado del arte y base de datos confiables como: Dialnet (de la Universidad de La Rioja) y Redalyc (de la Universidad Autónoma del Estado de México), así como la consulta en las organizaciones gubernamentales que se encuentran en la ciudad de Navojoa, Sonora.

## RESULTADOS

En 2009 el PIB de Sonora fue de \$21,552 millones de dólares. La entidad aporta el 2.56% del PIB nacional, lo que lo ubica en la decimocuarta economía del país. Entre 2003 y 2009 la producción estatal tuvo un crecimiento promedio anual de 2.8%, siendo en 2006 cuando tuvo la mayor tasa de crecimiento de 8.9%; por el contrario, en 2008 la producción solo creció 0.6% y en 2009 se contrajo en 4.6%. La industria Manufacturera es la que más aportó al PIB estatal, en 2009 este sector representó el 19.1% del PIB. Le siguieron el sector Comercio, el sector Servicios Inmobiliarios y de Alquiler de Muebles e Intangibles. Estos sectores aportan el 15% y 11.27% a la producción estatal, respectivamente. Cabe destacar que los subsectores de Maquinaria y Equipo, la Industria Alimentaria, de bebidas y del tabaco tienen una aportación de 7.3% y 6.5% al PIB, lo que manifiesta la importancia de estas actividades en la economía del estado. (Laclette, et. al., 2012, Pag.13)

Figura 2: Desarrollo del PIB del Estado de Sonora 2003-2013 (Mdp)

Fuente: Elaboración propia en función de datos obtenidos de Instituto Nacional de Estadística y Geografía (2014). Banco de Información INEGI. Disponible en: <http://www3.inegi.org.mx/sistemas/biinegi/default.aspx#P>. IBM SPSS Statistics (Versión 19).  $\square$  Estimación del PIB de Sonora 2012 a 2013 regresión simple

De forma más clara, la figura 2 muestra el comportamiento del PIB del estado de Sonora desde 2003 a 2011, mostrando una tendencia positiva respecto al crecimiento del PIB, pero en 2009, se observa como decae drásticamente, con una aportación de \$ 199 millones 69 mil 572 pesos, pero en el año 2010, vuelve a crecer de una manera acelerada hasta 2011. Debido a que la información encontrada no muestra los años 2012 y 2013, se usó el programa SPSS (Versión 19), realizando una regresión lineal simple [ $y=a+bx$ ], donde como resultado un índice de confiabilidad del 83.4%, demostrando que el PIB de Sonora sigue creciendo constantemente cada año. Respecto al crecimiento del estado, el 85% del PIB es generado por MIPyMEs, las cuales se encuentran en peligro por falta de liquidez y en donde hay dificultad de financiamiento para las nuevas empresas (Duarte, Estrada y Valenzuela, 2010, pág.3). Por ello, es importante apoyar con crédito accesible, oportuno y de bajo costo a las MIPyMES estatales, debido a que estas generan siete de cada 10 empleos y aportan casi la mitad del PIB de la entidad. (Expreso, s.f.). Estos apoyos en la mayoría de los casos se aportan según el número de habitantes de cada ciudad en el estado.

El municipio de Navojoa registró un Producto Bruto Total de 15 mil 230 millones 935 mil pesos, equivalentes al 5.16% del Producto Bruto Total del estado. Este PIB equivale a su vez a un ingreso per cápita mensual de \$8,189 pesos, cifra inferior a la de la entidad, para la cual se estimó en un ingreso per cápita de \$9,442 pesos mensuales (H. Ayuntamiento de Navojoa, 2013, pág. 30)

Figura 3: Participación de Navojoa en el PIB de Sonora (2013)

Fuente: Elaboración propia en función de datos obtenidos de H. Ayuntamiento de Navojoa (2013). Participación de Navojoa en el PIB de Sonora 2013. Plan Municipal de Desarrollo 2013-2015. Disponible en: <http://www.navojoa.gob.mx/transp/pmd20132015.pdf>

Los principales sectores económicos que realizaron los mayores aportes al PIB del municipio de Navojoa, fueron la industria manufacturera con el 60.48%, la Minería con el 13.33%, el comercio con el 11.30% y la construcción con el 5.31% del total. (H. Ayuntamiento de Navojoa, 2013, pág. 32)

Figura 4: Composición del PIB Municipal en Navojoa

Fuente: Instituto Nacional de Estadística y Geografía (2010). Composición del PIB Municipal en Navojoa. Citado en H. Ayuntamiento de Navojoa (2013). Plan Municipal de Desarrollo 2013-2015. Disponible en: <http://www.navojoa.gob.mx/transp/pmd20132015.pdf>

En Navojoa también destaca la actividad comercial, ésta representa una producción bruta de \$1,996 millones de pesos, de los cuales el 43.07% es generado por el comercio al por mayor y el 56.93% por el comercio al por menor. (H. Ayuntamiento de Navojoa, 2013, pág. 33). Según el H. Ayuntamiento de Navojoa (2013), primero destaca el comercio al por mayor de abarrotes, alimentos, bebidas, hielo y tabaco, así como el comercio al por mayor de materias primas agropecuarias y forestales, para la industria, y materiales de desecho con el 57.95% y 36.79% respectivamente (pág. 34). En el comercio al menudeo destacan las tiendas de autoservicios y departamentales con el 31.07%, la venta de vehículos de automotor, refacciones, combustibles y lubricantes con el 25.20% y el comercio de abarrotes, alimentos, bebidas, hielo y tabaco. (H. Ayuntamiento de Navojoa, 2013, pág. 33)

## CONCLUSIONES

En base a los resultados presentados, podemos concluir que en México las PyMES son parte importante en la dinámica económica no solo de México, sino también de los países de América Latina. Aunque con distintos énfasis, ha sido reconocido en México y en otros países esta importancia la cual se basa, primero, en su papel de la reproducción, crecimiento o permanencia de la capacidad productiva para satisfacer necesidades sociales y demandas industriales y, segundo, en su papel central como generadora de las tres cuartas partes de los empleos de comercio, servicio y manufacturas. En el contexto regional, las PyMES sonorenses en el PIB nacional, se caracterizan por ser los principales motores de la economía nacional, incursionando en actividades diversas que van desde maquila, infraestructura, comercio de bienes y de servicios. Finalmente a nivel local las PyMES empujan día a día la economía del municipio de Navojoa, el cual registró un Producto Interno Bruto Total de 15 mil 230 millones 935 mil pesos, equivalentes al 5.16% del Producto Bruto Total del estado de Sonora.

## RESUMEN

*Un elemento clave de la innovación es el empresario, ya que este es la persona que realiza las innovaciones hasta obtener nuevos productos y/o servicios, por lo que es considerado como el motor del cambio tecnológico según Schumpeter (1934). Empero, el estudio del impacto de las actividades desarrolladas por este tipo de agentes es relativamente reciente, los primeros estudios se centraron en las características personales del empresario; sin embargo, la evidencia y hallazgos obtenidos permiten concluir que lo que realmente diferencia al empresario emprendedor es un proceso caracterizado por la innovación constante. Es por esto que, los trabajos recientes, proponen considerar al proceso emprendedor como un conjunto de funciones, actividades y acciones asociadas con la percepción de oportunidad y la creación de la organización para explotarla. La Universidad Tecnológica Regional del Sur (UTRSUR) y la Universidad de Puerto Rico tienen entre sus propósitos el formar gente emprendedora que pueda desarrollar negocios y contribuir al crecimiento económico de sus respectivas zonas, todo esto a través del desarrollo académico de sus respectivas carreras de negocios. En el presente trabajo se pretende analizar la capacidad de emprendimiento, en cuanto a las dimensiones de creatividad, seguridad, aceptación de riesgo y manejo de problemas, de los alumnos de la carrera económico administrativas de ambas universidades, así como de igual manera conocer si existen diferencias entre ellos.*

**PALABRAS CLAVE:** Empresario, Dimensión, Emprendedor

## ABSTRACT

*A key innovation is the entrepreneur, as this is the person making innovations to develop new products and / or services, so it is considered the engine of technological change according to Schumpeter (1934). However, the study of the impact of the activities of such agents is relatively recent, early studies focused on the personal characteristics of the entrepreneur; however, the evidence and findings obtained allow to conclude that what really differentiates the entrepreneur is a process characterized by constant innovation. That is why, recent works propose to consider the entrepreneurial process as a set of functions, activities and actions associated with the perception of opportunity and the creation of the organization to exploit. The University of Southern Regional Technology (UTRSUR) and the University of Puerto Rico has among its purposes the form enterprising business people who can develop and contribute to economic growth in their areas, all through the academic development of their business careers. In the present work is to analyze the entrepreneurial capacity in terms of the dimensions of creativity, safety, risk acceptance and management problems, the students of the economic administrative career of both universities, and likewise determine whether there differences between them.*

**JEL:** M1, M13, M130

**KEYWORDS:** Entrepreneur, dimension, entrepreneur.

## INTRODUCCIÓN

Un elemento clave de la innovación es el empresario, ya que este es la persona que realiza las innovaciones hasta obtener nuevos productos y/o servicios, por lo que es considerado como el motor del cambio tecnológico según Schumpeter (1934). Empero, el estudio del impacto de las actividades desarrolladas por este tipo de agentes es relativamente reciente, los primeros estudios se centraron en las características personales del empresario; sin embargo, la evidencia y hallazgos obtenidos permiten concluir que lo que realmente diferencia al empresario emprendedor es un proceso caracterizado por la innovación constante. Es por esto que, los trabajos recientes, proponen considerar al proceso emprendedor como un conjunto de funciones, actividades y acciones asociadas con la percepción de oportunidad y la creación de la organización para explotarla. La Universidad Tecnológica Regional del Sur (UTRSUR) y la Universidad de Puerto Rico tienen entre sus propósitos el formar gente emprendedora que pueda desarrollar negocios y contribuir al crecimiento económico de sus respectivas zonas, todo esto a través del desarrollo académico de sus respectivas carreras de negocios. En el presente trabajo se pretende analizar la capacidad de emprendimiento, en cuanto a las dimensiones de creatividad, seguridad, aceptación de riesgo y manejo de problemas, de los alumnos de la carrera económico administrativas de ambas universidades, así como de igual manera conocer si existen diferencias entre ellos.

### Objetivo General

El objetivo de la investigación fue medir la capacidad de emprendimiento y determinar si existen diferencias entre los alumnos de la UTRSUR y Puerto Rico.

### Objetivos Específicos

Conocer el nivel de creatividad de los alumnos de la carrera de desarrollo de negocios de ambas universidades.

Conocer el nivel de seguridad personal de los alumnos de la carrera de desarrollo de negocios de ambas universidades.

Conocer el nivel de aceptación del riesgo de los alumnos de la carrera de desarrollo de negocios de ambas universidades.

Conocer el nivel de manejo de problemas de los alumnos de la carrera de desarrollo de negocios de ambas universidades.

Comparar si existen diferencias entre las dimensiones de creatividad, seguridad personal, aceptación de riesgo y manejo de problemas.

## METODOLOGIA

### Hipótesis

*Ha1:* La dimensión de creatividad de los alumnos de la UTRSUR no es igual a la de los alumnos de Puerto Rico.

*Ha2:* La dimensión de seguridad personal de los alumnos de la UTRSUR no es igual a la de los alumnos de la de Puerto Rico.

Ha3: La dimensión de aceptación del riesgo de los alumnos de la UTRSUR no es igual a la de los alumnos de Puerto Rico.

Ha4: La dimensión de manejo de problemas de los alumnos de la UTRSUR no es igual a la de los alumnos de Puerto Rico.

### Justificación

La industria reclama al sistema educativo la responsabilidad de formar a los jóvenes en competencias metodológicas y habilidades sociales y desarrollar competencias tales como: interés por la calidad, capacidad de innovar, responsabilidad ante las propias decisiones y actuaciones, familiarizarse con el entorno, capacidad para trabajar en equipo y cooperar, pensar en positivo y capacidad de aprender. Es muy importante para el estudio, conocer las principales competencias o características de los alumnos de las carreras económico administrativas de la UTRSUR y Puerto Rico, esto dará los elementos necesarios para establecer estrategias que coadyuven en la adecuada formación emprendedora de los estudiantes tomando como base este estudio. El conocer los resultados de este proceso, permitirá sentar las bases e identificar las áreas de oportunidad en este sentido, de manera que se pueda ser congruente en los estilos de enseñanza y técnicas didácticas aplicadas, buscando que se produzca un mejor efecto formativo en los alumnos.

### Preguntas de Investigación

¿Cuál es el nivel de creatividad, seguridad personal, aceptación del riesgo y manejo de problemas de los alumnos de la carrera de desarrollo de negocios de ambas universidades?

¿Existen diferencias entre las dimensiones de creatividad, seguridad personal, aceptación de riesgo y manejo de problemas de ambas universidades?

### Población y Muestra

Población: Estudiantes del área económico administrativa del ciclo escolar 2013-2014 de la Universidad Tecnológica Regional del Sur de Tekax Yucatán México y de la Universidad de Puerto Rico

Para esta investigación se entrevistó a toda la población de estudiantes de la UTR con excepción de los de Turismo y Tecnologías de la Información

### Instrumento

El instrumento que se utilizara para medir las características de los emprendedores es el “inventario del perfil del emprendedor” del Ing. Rafael Alcaraz. Este instrumento consta de 20 ítems, los cuales evalúan las principales características inherentes al emprendedor. Cada pregunta forma parte de las cuatro dimensiones manejadas en el instrumento, las cuales son: creatividad, seguridad personal, aceptación del riesgo y manejo de problemas. El significado de cada una de las características es el siguiente:

Creatividad: Ver un problema, tener una idea, hacer algo sobre ella, tener resultados positivos. Seguridad personal: Actitud proactiva y seguridad en la toma de decisiones. Aceptación del riesgo: Capacidad para manejar el riesgo de fallas potenciales al tomar decisiones o realizar acciones. Manejo de problemas: Capacidad metodológica para solucionar problemas. Para la respuesta del cuestionario se aplicó una escala de Likert del 01 al 5, donde: 5 es definitivamente sí, 4 es probablemente sí, 3 es indeciso, 2 es probablemente no y 1 es definitivamente no.

### Validación del instrumento

Todas las preguntas del instrumento han sido validadas y clasificadas dentro de las categorías a la cual pertenecen, lingüística y psicológicamente. De igual manera el instrumento ha sido confiabilizado en otros ambientes mediante la aplicación del alpha de cronbach arrojando resultados superiores al 70%.

## **REVISIÓN LITERARIA**

### El Emprendedor (Perfil del Emprendedor)

Emprender es un concepto con múltiples acepciones, de hecho, dependiendo del contexto en que se utiliza es la connotación que se le da, por ejemplo, para el ámbito empresarial el emprendedor es un empresario, es decir es sinónimo de propietario de una empresa comercial con fines de lucro, como es el caso de Finley (1990), quien lo describe como alguien que se aventura en una nueva actividad de negocios o Say (1800), citado por Drucker (1989), quien lo clasifica como un “buen administrador”. Para el académico en cambio, emprender denota más un perfil, un conjunto de características que le hacen actuar de una manera determinada y que le permiten mostrar ciertas “capacidades” para visualizar, definir y alcanzar objetivos, tal como lo señalan Ely y Hess (1937), citados por Ronstadt (1985). De la misma manera, Shefsky (1997) y Baumol (1993), éste último citado por Ibáñez (2001), señalan que el término es utilizado para describir a cualquier miembro de la economía cuyas actividades son, de alguna forma, novedosas, quienes en definitiva huyen de rutinas y prácticas mayoritariamente aceptadas, por tanto es definido en términos de su capacidad para crear, innovar, salir de la rutina, hacer cosas diferentes, mejorar lo existente. Harper (1991), lo identifica como una persona capaz de detectar oportunidades y con las habilidades necesarias para desarrollar a partir de ellas un nuevo concepto de negocio.

Así pues, existen diversas formas de definir y entender el término emprendedor, sin embargo en lo que coinciden diversos autores es en que el término Emprendedor se deriva de la palabra Entrepreneur, que a su vez se origina del verbo francés: “Entreprendre”, que significa *encargarse de*, tal como lo señala Jennings (1993), en su libro “Multiple perspectives of Entrepreneurship”. De la misma manera, Jennings cita a Joseph Schumpeter (1934), quien afirma que la innovación se desarrolla a partir de la capacidad para emprender, por tanto, los emprendedores no son necesariamente capitalistas, administradores o inventores, ya que finalmente se trata de personas con una capacidad para “combinar” los factores de producción existentes y obtener mejores resultados de dicha forma de utilizarlos, es decir, de *innovar*.

Un elemento que no había sido señalado hasta este momento es el riesgo, el cual algunos autores establecen como una característica fundamental y por tanto base de la definición de emprender, ya que consideran al emprendedor como un “tomador de riesgos”, que pondera los beneficios y asume los riesgos que implique alcanzarlos (Baty, 1990). Por su parte, Halloran (1992), señala que los emprendedores son individuos dispuestos a tomar el riesgo y asumir sus propias ganancias y sus propias pérdidas. De la misma manera, Gray y Cyr (1994), mencionan que el emprendedor (empresario, para ellos es sinónimo), es “alguien que organiza, controla y asume riesgos en un negocio, ante su deseo por enfrentar desafíos, la oportunidad de alcanzar logros y el impulso de cumplir necesidades personales, emocionales y psicológicas”. Hiam y Olander (1991) por otro lado, definen al emprendedor como un individuo que “inicia, administra y asume los riesgos y recompensas de un nuevo negocio”, mientras que Longenecker, Moore y Petty (1994) lo definen como una persona con “aptitud para innovar y disposición para asumir el riesgo”. Stacey (1980), agrega otro elemento interesante en el perfil del emprendedor relacionado con la aceptación del riesgo y es la capacidad para aprender de los errores o fracasos, y señala que el emprendedor es una persona capaz de caer y levantarse con una nueva perspectiva de las cosas y un aprendizaje que le permitirá mejorar su desempeño. Dollinger (1999), define al emprendedor como un individuo con capacidad de crear e innovar, de obtener y manejar recursos y de evaluar la posibilidad de éxito y su correspondiente riesgo, mientras que Longenecker y Shoen (1975), lo ven como una persona con autonomía para buscar oportunidades y definir

objetivos. Shapero y Sokol (1982), establecen que la acción de emprender es el hecho de “tomar la iniciativa, consolidar los recursos, gestionar la empresa, actuar con autonomía y asumir el riesgo”, lo mismo que Stevenson, Roberts y Grousbeck (1989), quienes consideran que emprender esta en un continuo de actuación en el que en un extremo se identifica como un promotor que considera que puede “hacer pasar las cosas” y en el otro extremo un administrador eficiente de recursos que los combina para aprovechar las oportunidades. Para Edwards (1992) el emprendedor es una persona que busca un “trabajo con significado, que le permita, disfrutar la vida a la vez que hacen lo que ellos saben hacer mejor y de la manera como ellos quieren hacerlo”. Kuriloff, Hemphill y Claud (1981) por su parte, señalan que el emprendedor es una persona que se compromete con la tarea, que afronta el riesgo moderado, que evalúa las oportunidades, que piensa objetivamente, que busca la retroalimentación, que es optimista y proactivo y que tiene una actitud de logro orientada más allá del dinero. Para Lambing y Kuehl (1997), además de lo anterior, el emprendedor es una persona que tiene los siguientes atributos: confianza, determinación, tenacidad, tolerancia a la ambigüedad, creatividad, visión y orientación a los detalles (perfeccionismo).

Pero que finalmente usa todos estos recursos (cualidades) para generar “bienestar”, según Ronstadt (1985). McClelland, citado por Kuriloff y Hemphill (1981) así como DEMAC (1991), mencionan que el emprendedor es una persona que posee necesidades psicológicas básicas (como todo ser humano, según McClelland son tres): necesidad de logro, necesidad de afiliación y necesidad de poder, en donde la necesidad de logro es la más importante y dominante para determinar sus actitudes y actuaciones correspondientes, DEMAC menciona algunas más que aunque pudieran estar contempladas en las anteriores tres, señala como: Necesidad de Independencia y autonomía, necesidad de dominio de su medio y necesidad de crear.

#### Características del Emprendedor Que Favorecen el Éxito

Las características más señaladas por lo autores localizados (más de 50, que a su vez citan a más de 150 autores y sus correspondientes estudios), fueron un total de 60, sin embargo aquellas en las que coincidieron el mayor número de autores y que fueron seleccionadas por ser las mencionadas más recurrentemente y que se diferenciaban claramente unas de otras, fueron:

- Creatividad
- Iniciativa
- Auto-confianza (confianza en sí mismo)
- Energía y capacidad de trabajo
- Perseverancia
- Liderazgo
- Aceptación del riesgo
- Necesidad de Logro
- Tolerancia al cambio
- Manejo de Problemas

Según Robbins (1999) las características de los emprendedores son: trabajo constante, autoconfianza, optimismo, determinación y un alto nivel de energía. Pero por lo general 3 factores proporcionan el perfil de la personalidad emprendedora, los emprendedores tienen una gran necesidad de logro, tienen la convicción de que pueden controlar su propio destino y solo enfrentar riesgos moderados. Los emprendedores son trabajadores independientes que tienen una tendencia a aceptar riesgos calculados y, al mismo tiempo, aceptan el hecho de que puedan ocurrir errores. Estas y las características anteriores se pueden complementar con la falta de experiencia en los negocios, pareciera que la combinación de estos elementos, es una mezcla para preparar un fracaso anunciado, pero si no es de esta forma ¿Cómo vamos a obtener experiencia los nuevos egresados?

## RESULTADOS

Figura 01: Porcentaje de Participacion Por Pais de la Poblacion Entrevistada en el Estudio

Esta tabla refleja cuanto es el porcentaje de alumnos entrevistados de las diferentes carreras económico administrativas, tanto de la universidad tecnológica regional del sur como de la universidad de Puerto Rico.

Dentro de los resultados se puede observar que la mayoría de los entrevistados fueron alumnos de la Universidad de Puerto Rico los cuales representaron el 56.44% contra 43.56% de la UTRSUR.

Figura 2: Sexo de los Participantes Por Instituciones Educativas

Esta tabla refleja el sexo de los participantes por institución educativa en donde se puede observar que en ambas instituciones el número de mujeres fue mayor reflejándose esta diferencia mayormente en la universidad de Puerto Rico.

Existe una mayoría de mujeres entrevistadas en el estudio, pues en ambas universidades 66 de 114 y 48 de 88 fueron del sexo femenino en la U de Puerto Rico y Tecnológica Regional respectivamente. Existe un rango elevado de 11 años puesto que los entrevistados de menor edad fueron de 18 años y los de mayor edad 29 años.

Tabla 1: Análisis de la Edad Promedio de los Participantes de Ambas Universidades

Estadísticos		
Edad		
N	Válidos	202
	Perdidos	0
Media		20.35
Mediana		20.00
Moda		19
Desv. típ.		1.947
Rango		11
Mínimo		18
Máximo		29
Percentiles	25	19.00
	50	20.00
	75	21.00

En esta tabla podemos observar que la edad promedio de los participantes de ambas universidades es de 20.35 años con una desviación típica de casi dos años (1.94), La edad que tuvo mayor frecuencia fue la de 19 años y el 50% de los entrevistados tiene 20 años o menos.

Tabla 3: Prueba de Normalidad de la Edad de los Participante

Pruebas de normalidad							
Kolmogorov-Smirnov <sup>a</sup>				Shapiro-Wilk			
Edad	Estadístico	Gl	Sig.	Estadístico	gl	Sig.	
	.175	202	.000	.855	202	.000	

a. Corrección de la significación de Lilliefors

En esta tabla se llevó a cabo la prueba KS de normalidad para descartar la hipótesis nula de que la edad sí tiene una distribución normal, se obtuvo un p valor de 0.000 por lo que se rechaza la hipótesis nula, con lo que se puede afirmar con 95% que la edad no presenta una distribución normal

Tabla 3: Prueba T Para Igualdad de Medias de las Dimensiones de Creatividad, Seguridad, Aceptación Del Riesgo y Manejo de Problemas

Prueba T Para la Igualdad de Medias			
Dimensión		T	Sig. (Bilateral)
Creatividad	Se han asumido varianzas iguales	-.026	.979
	No se han asumido varianzas iguales	-.027	.978
seguridad	Se han asumido varianzas iguales	-.843	.400
	No se han asumido varianzas iguales	-.898	.370
Dimensión riesgo	Se han asumido varianzas iguales	-5.718	.000
	No se han asumido varianzas iguales	-6.157	.000
Manejo de Problemas	Se han asumido varianzas iguales	-.654	.514
	No se han asumido varianzas iguales	-.653	.515

En esta tabla se analizaron cada una de las dimensiones de creatividad, seguridad, aceptación del riesgo y manejo de problemas a través de la prueba T de diferencia de medias y se pudo constatar que todas las dimensiones son iguales entre ambas universidades con excepción de la de aceptación del riesgo debido a que la significancia fue menor a .05.

Se llevó a cabo la prueba T de diferencia de medias para descartar la hipótesis nula de que los alumnos de ambas universidades tienen igual nivel de creatividad, seguridad riesgo y manejo de problemas: la única dimensión donde no son iguales es en la de riesgo ( $p\text{-valor}=0.00 < 0.05$ ).

Tabla 4: Prueba de Diferencia de Medias Para Muestras Independientes Respecto a la Variable Sexo

	Prueba T Para Igualdad de Medias		
		t	gl Sig. (bilateral)
Dimensión Creatividad	Se han asumido varianzas iguales	-.882	200 .379
	No se han asumido varianzas iguales	-.879	184.937 .381
Seguridad	Se han asumido varianzas iguales	1.214	200 .226
	No se han asumido varianzas iguales	1.237	197.431 .217
Dimensión riesgo	Se han asumido varianzas iguales	-.816	200 .416
	No se han asumido varianzas iguales	-.803	174.641 .423
Manejo de Problemas	Se han asumido varianzas iguales	-.278	200 .781
	No se han asumido varianzas iguales	-.279	189.344 .780

En esta tabla se puede observar que tanto para hombres como para mujeres las dimensiones de creatividad, seguridad, aceptación del riesgo y manejo de problemas fueron similares para ambas universidades debido a que p tuvo un valor mayor de .05.

Se realizó la prueba de diferencia de medias para muestras independientes respecto a la variable sexo para descartar la hipótesis nula de que tanto hombres y mujeres tienen el mismo nivel de creatividad, seguridad, riesgo y manejo de problemas. Cada dimensión tuvo un p valor  $> 0.05$  por lo que no se descarta que las dimensiones sean iguales.

## CONCLUSIONES

Los estudiantes de ambas universidades salieron con indicadores elevados y solamente en el nivel de riesgo no se pudo descartar la hipótesis de igualdad entre ambos, posiblemente por las características geográficas de los entrevistados que si bien ambos son latinoamericanos quizá los puertorriqueños tengan un concepto de riesgo diferente a los mexicanos. La edad también se puede considerar un factor conyuntural debido a que en los entrevistados una pequeña parte de la población es de mayor edad (arriba de los 25 años). La mayoría de los entrevistados pertenecen a las carreras de contaduría y mercadotecnia que si bien ambas son económico administrativas el perfil de personalidad entre ambos suele ser diferente, pero para efectos de este estudio no presentaron mayores diferencias. Uno de los hallazgos de mayor importancia en este estudio con respecto a otras investigaciones es la identificación de la dimensión que establece diferencia entre estudios de dos universidades de diferentes países, en el caso de este estudio fue la aceptación del riesgo. La principal limitación del estudio fue la distancia existente entre ambos países, ya que los trabajos de campo se dieron de manera separada por los docentes de México y Puerto Rico. Como una probable línea de investigación se propone identificar las principales fuentes de inspiración de estos emprendedores así como determinar la cultura emprendedora de ambos países.

## BIOGRAFIA

El profesor Mario René Chan Magaña es profesor investigador de tiempo completo de la carrera de contaduría y Coordinador del Cuerpo Académico de Ciencias Económico Administrativas de la Universidad Tecnológica Regional del Sur (UTRSUR). Al profesor se le puede contactar en tablaje catastral No. 792 vía del ferrocarril Mérida – Peto en Tekax de Álvaro Obregón; correo: mario.chan@utregionaldelsur.edu.mx.

La maestra Nery del Socorro Escalante May es Directora General de la empresa CITRA S.A. DE C.V. empresa dedicada a la elaboración de proyectos empresariales. A la maestra se le puede contactar en calle 33 A no. 373 x 24 frac, Polígono 108 Mérida, Yucatán; correo: citra.neryescalante@gmail.com.

Dr. Elizabeth Robles es profesor de Marketing en el Departamento de Gestión de la Universidad de Puerto Rico. Sus áreas de investigación son el comportamiento del consumidor, relaciones públicas, marketing en un sistema no-capitalista, el marketing de la moda, la responsabilidad social corporativa (RSC), y la espiritualidad en el lugar de trabajo. Dr. Robles ha publicado su investigación en las revistas de Marketing, el Foro Empresarial y el Inter Metro Business Journal. Se le puede contactar en: elirobles@yahoo.com.

# IMPORTANCIA ECONÓMICA Y SOCIAL DE LOS SERVICIOS DE LOS ECOSISTEMAS: UNA REVISIÓN DE LA AGENDA DE INVESTIGACIÓN

María Guadalupe Oropeza Cortés, Universidad Autónoma de Baja California Sur  
José Isabel Urciaga García, Universidad Autónoma de Baja California Sur

## RESUMEN

*Hasta hace 50 años, los servicios ecosistémicos (SE) eran invisibles para el análisis económico y social, no se reconocía o quizá se desconocía su contribución al sistema económico y la vida humana en general. Su investigación descansaba en la ciencia biológica y ecológica sin embargo, gracias al trabajo de diversos autores, entre los que destacan Daily (1997), Constanza (1997) y Barbier (2011), el tema comienza a estudiarse desde un enfoque multidisciplinario, donde ecología y economía se fusionan para reconocer y determinar el grado de contribución de los servicios ecosistémicos y la importancia de su conservación. En este sentido, se realizó una revisión teórica exhaustiva del tema con el objetivo de identificar los aspectos relevantes en los que hay consenso, los aspectos donde todavía hay un amplio debate y lo que aún se desconoce. Al parecer existe consenso en relación en la contribución al bienestar de los ecosistemas y sus servicios y la necesidad de establecer medidas de conservación para garantizar su perdurabilidad en el tiempo y espacio; no obstante, todavía no hay acuerdo en el valor monetario de su contribución y aunque recientemente hay una amplia investigación al respecto, aún quedan muchos temas abiertos para internalizar los ecosistemas y sus servicios en el sistema económico y social.*

## ECONOMIC AND SOCIAL IMPORTANCE OF ECOSYSTEM SERVICES: A REVIEW OF RESEARCH AGENDA

### ABSTRACT

*Until 50 years ago, ecosystem services (ES) were invisibles to the economic and social analysis, their contribution to the economic system and the human life in general, did not recognized or maybe was unknown. The research supported in the biological and ecological science however, thanks to the work of many researchers, among them Daily (1997), Constanza (1997) y Barbier (2011), the subject begins to be studied from a multidisciplinary approach, where ecology and economics blend to recognize and determine the degree of contribution of ecosystem services and the importance of their conservation.. In this sense, a comprehensive theoretical review of the topic was conducted in order to identify relevant areas where there is consensus, the areas where there is still debate and what is still unknown. There seems to be consensus on the contribution to the welfare of ecosystems and their services and the need for conservation actions to ensure their durability in time and space; however, there is still no agreement on the monetary value of their contribution and although recently there is extensive research, there are still many open issues to internalize ecosystem and their services in the economic and social system.*

## INTRODUCCIÓN

La investigación académica de la relación hombre-naturaleza no es nuevo, su estudio comienza en la década de los 50 cuando economía y ecología lo abordan de manera abstracta pero gracias al avance del conocimiento hoy se reconoce que su análisis debe ser interdisciplinario, después de todo al ambiente interactúa con el sistema económico y social. La literatura en torno a la problemática ambiental ha ayudado a reconocer la importancia de los servicios que proveen los ecosistemas en términos que la creciente demanda de bienes y servicios ha conducido a su degradación, el sistema de producción genera desechos que dañan directamente al ambiente de manera negativa igualmente el consumo daña a los ecosistemas. En este sentido, se realizó una revisión exhaustiva de la literatura con el fin de identificar aquellos puntos donde la comunidad científica ha llegado a un consenso, ubicar áreas que continúan en amplio debate y elementos que el hombre aún desconoce.

## REVISIÓN DE LITERATURA

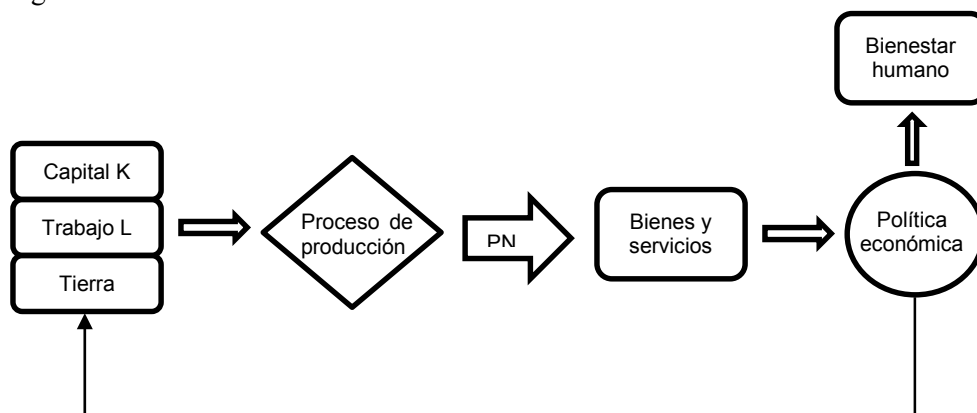

Laguna de San Ignacio, ubicado en Baja California Sur, México es un bello lugar donde llega la ballena gris y acontece el nacimiento de nuevos miembros. Es parte de la Reserva de la Biosfera El Vizcaino (un área protegida) por lo que cuando un visitante realiza un tour para observar a la ballena gris en su hábitat natural paga una cuota para su conservación; en este sentido, la Laguna es hogar de la ballena gris y aves, provee alimentos (pescado) hay turismo para el avistamiento de la ballena y provee oxígeno entre muchos otros servicios. Así como la Laguna de San Ignacio, hay cientos de lugares en todo el mundo que se han tenido que convertir en áreas naturales protegidas, como una medida de conservación y protección del medio natural, ya que la acción del hombre está provocando la degradación de ecosistemas y de los servicios que provee al ser humano para su bienestar.

Pero sin duda, el elemento clave para comenzar a tomar medidas de conservación, protección y manejo de los servicios ecosistémicos (SE) ha sido comprender y aceptar que el capital natural no es infinito sino al contrario, los bienes y servicios que provee el ambiente son finitos y escasos, en la medida en que su uso es extensivo el stock disminuye día a día, que de aplicar medidas de conservación se podría llegar a niveles críticos, donde no solo peligraría el bienestar del hombre sino incluso su supervivencia. En este sentido, en la Figura 1 se puede observar que el modelo económico tradicional reconoce tres factores productivos: tierra, trabajo (L) y capital (K), los cuales al ingresar y transformarse en el proceso de producción generan bienes y servicios que satisfacen las necesidades del hombre y le generan bienestar. Si las economías continuarán con este modelo económico el hombre acabaría con el capital natural y pondría en riesgo su propio bienestar. De hecho, el mismo sentido común nos indica que si el mundo evoluciona las economías deben evolucionar, es decir, ¿por qué continuar con modelos de antaño si actualmente las condiciones son totalmente diferentes?

Con este modelo, es evidente que hace 50 años economía y ecología trabajan de manera unidisciplinaria y quizá entonces no se consideraba que el problema de la degradación del ambiente pudiera ser también un problema económico. Hoy esa visión ha cambiado, actualmente se reconoce que no se puede aislar los problemas ambientales de la dimensión económica y social. Los SE son los beneficios que se obtienen de los ecosistemas, divididos en cuatro categorías (MEA 2005): i) servicios de soporte como el ciclo de nutrientes y la formación de suelo, ii) servicios de aprovisionamiento como comida, agua y combustibles, iii) servicios de regulación como la regulación del clima, regulación de gas y regulación del agua, y iv) servicios culturales como ecoturismo, recreación y servicios espirituales. Todos ellos satisfacen las necesidades del hombre en términos de seguridad, alimentación, obtención de materiales para producción de bienes, salud y relaciones sociales. Sin embargo, al observarlo bajo el enfoque económico su oferta presenta una degradación en debido a la crecimiento demanda que descansa en el aumento poblacional, cambios en el uso de suelo y la expansión económica, más población implica más necesidades a satisfacer

(MEA 2005, TEEB 2008). Uno de los primeros trabajos registrados en el análisis de los servicios ecosistémicos (SE) es la carta que Harold Hotelling (1949) dirige al director del parque nacional con el fin de proveer los mecanismos para medir el valor de los parques para lo cual relaciona la frecuencia de visitas con un área geográfica dada y el costo promedio de visitar el parque, a esta metodología se le conocería más tarde como costo de viaje.

Figura 1: Modelo Económico Tradicional

*Modelo económico tradicional que reconoce tres factores productivos: tierra, trabajo y capital, los cuales al ingresar al proceso de producción generan bienes y servicios que satisfacen las necesidades humanas y aumentan su bienestar*

En la década de los 60's se forma en Estados Unidos una institución de protección al ambiente (Environmental Protection Agency EPA), marca el comienzo del interés en los problemas ambientales. Además surge la primera comunidad académica especializada para abordar la problemática ambiental, llamada Society of Environmental and Resource Economics. Destaca también el trabajo de Boulding quien reconoce en su trabajo el servicio de los ecosistemas bajo la asimilación de residuos generado en el proceso de producción. Surge el análisis de los servicios culturales con la observación de Krutilla cuyos argumentos se basan en la utilidad (desde el enfoque neoclásico) que obtienen las personas por el disfrute de las maravillas naturales nace el concepto de valor de existencia (valor que se le da al ambiente por el simple hecho de existir); La aportación de Krutilla se extiende ya que gracias a su trabajo el valor se divide en valor de uso y valor de no uso, juntos constituyen el Valor Económico Total (VET). En contra parte la visión ecológica propone un análisis de energía, con base en principios de termodinámica consideran a la energía solar como el único insumo del sistema (Liu et.al. 2010).

Durante los 70's hay un reconocimiento a la existencia de límites en el crecimiento económico, es decir, la economía no puede crecer para siempre (Daly). Por su parte Odum (1971) publica el libro *Environment, Power and Society* donde analiza la energía del sistema ecológico y su aplicación a problemas sociales. A la par de dichos esfuerzos surge un debate entre economía y ecología respecto al concepto de valor. Desde el punto de vista económico el valor y el precio son quienes determinan la voluntad a pagar de las personas por el contrario, para la ecología el valor está determinado por la cantidad de energía necesaria para producir un bien o servicio. Esta década es el inicio de un rápido incremento de trabajos ambientales y de economía de los recursos en este sentido formalmente se establecen *Journal of Environmental Economics and Management* (JEEM) con el fin de analizar el ambiente desde un punto de vista económico (Liu et.al. 2010).

Las diferencias de opinión y el debate continúan entre economía y ecología para la década de los 80's respecto a la relación entre insumos energéticos, precios y valor. Después de dos décadas de investigación

de la problemática ambiental donde el análisis se realizaba de manera disciplinaria surge el primer trabajo de coautoría entre economía y ecología (Farber y Constanza 1987), representa el inicio de un enfoque multidisciplinario. Con el esfuerzo de vincular la investigación económica y ecológica surge en 1981, el concepto de servicios ecosistémicos (Ehrlich y Ehrlich 1981) que junto con el concepto de capital natural implica un avance en el conocimiento para comprender mejor la relación entre el hombre y el ambiente, en particular las funciones ecosistémicas que contribuyen al bienestar humana.

De acuerdo a Liu et.al. (2010) los conceptos de ambiente natural y ecosistemas se pueden conjugar en uno solo: capital natural, que junto con el capital físico, humano y social entran al proceso económico para generar bienes y servicios, lo cual ayuda a enunciar el nuevo modelo económico que reconoce la existencia de los ecosistemas y sus servicios. Para los años 90's se hace necesario analizar el tema ambiental desde un enfoque interdisciplinario, es decir, se trata de conjugar esfuerzos para trabajar de manera conjunta y reconociendo que la problemática no se debe de analizar por partes o aisladamente, en esta línea surgen dos trabajos bajo el conducto de EPA (1991) y National Center for Ecological Analysis and Synthesis (NCEAS 1997), los resultados fueron publicados en las ediciones de 1995 y 1998 de Ecological Economics. A decir de los especialistas, estos trabajos constituyen la oportunidad de trabajar de manera conjunta ecología, economía y otras ciencias sociales y así abordar el tema desde un enfoque más integral, finalmente el ambiente es parte del sistema económico y social y hay interacción entre los tres elementos como lo muestra la Figura 2.

Figura 2: Interacción entre ambiente, economía y sociedad

*La economía, el ambiente y la sociedad son sistemas que interactúan entre sí con múltiples relaciones, su funcionamiento no es aislado y lo que sucede en uno afecta al resto.*

Comienza así el enfoque interdisciplinario, en el trabajo de Constanza (1997) se hace una valoración global de los servicios que proveen los ecosistemas, retoma 17 servicios ecosistémicos y concluye que su aportación es de 33 trillones de dólares. En 1997 surge el primer libro totalmente dedicado al análisis de los servicios ecosistémicos (SE) y cuyos autores son de diferentes disciplinas, precisamente en este esfuerzo de abordar de manera integral el tema ambiental. La publicación se titula Nature's Services cuyos autores son Ehrlich, Kennedy, Matson, Constanza, Nabhan, Lubchenco, Postel y Myers.

Ya para el siglo XXI destacan los trabajos de Ecosistemas del Milenio (Millenium Ecosystem Services MEA 2005) quien ha cambiado el enfoque de los servicios ecosistémicos (SE), en lugar de continuar con la atención en el proceso y función ecológica pasa a observar al servicio ecosistémico en sí mismo. Además de esta contribución también genera un cambio en el sentido que ubica el tema en la agenda de la política con lo que contribuye hacer visible la importancia de la biodiversidad y sus servicios para el bienestar del hombre. Surge la Economía de los Ecosistemas y Biodiversidad (The Economics of Ecosystems and Biodiversity TEEB) quien estima los costos de no tomar acciones de conservación.

El avance de la investigación ha conducido a un interés por el diseño de mercados que se encarguen de crear incentivos para la conservación de los servicios ecosistémicos (SE) en este sentido aparecen dos mecanismos: i) mercados para servicios ecosistémicos (MSE) y ii) pago por servicios ecosistémicos (PSE). El mercado de carbono, que nace a principios del año 2000, es un ejemplo de MSE. En cuanto los PSE Costa Rica ha sido pionero al utilizar este mecanismo (aunque lo llama Pago por Servicios Ambientales PSA) el cual se aplicó para frenar la severa deforestación. El análisis de los ecosistemas y sus servicios en realidad no es nuevo, al menos desde la década de los 50's comienza su investigación la cual inicia de manera disciplinaria pero gracias al avance del conocimiento actualmente el tema se aborda de forma interdisciplinaria, de hecho la problemática ambiental no es abstracta no obstante que su análisis lo fue por algún tiempo, más bien es una problemática que afecta al sistema económico y a la sociedad en su conjunto.

## METODOLOGÍA

Para la localización de documentos bibliográficos, se realizó una búsqueda en los sitios Science Direct, JSTOR, BioOne, Wiley Online Library, Google Scholar y Google Books en español e inglés desde septiembre 2013 hasta enero de 2014. En la búsqueda se utilizaron las frases “servicios ecosistémicos (ecosystem services)”, “valoración de los SE (ecosystem services assessment)”, “biodiversidad (biodiversity)”, capital natural (natural capital)”, “valoración económica (economic valuation)” y “valor económico total VET (total economic value)”. Se encontraron 150 documentos entre artículos científicos, informes y reportes, se seleccionaron 50 documentos de acuerdo a tres criterios: i) relevancia, ii) año de publicación y iii) trabajos que constituyen una revisión de la agenda de investigación, por lo que se excluyó todo trabajo fuera de alguno de estos criterios. Una vez que los documentos fueron seleccionados se agruparon en cuatro grupos: i) servicios ecosistémicos ii) valoración económica, iii) documentos metodológicos y iv) reportes e informes. Entre los trabajos destacan por su relevancia Constanza (1997), Daily (1997), MEA (2005), TEEB (2008) y Barbier (2011). Una vez realizada la selección y agrupamiento de los trabajos se revisaron exhaustivamente con el fin de identificar aspectos en los cuales hay consenso por parte de la comunidad científica, áreas donde aún existe un amplio debate y aquellos elementos que continúan desconocidos.

## RESULTADOS

Los servicios ecosistémicos (SE) es un área donde la investigación sigue creciendo no solo en términos conceptuales sino metodológicos y de clasificación. Actualmente existen diversas investigaciones y estudios de caso sin embargo, la característica de este tema es que un ecosistema es dinámico en tiempo y espacio por lo que los hallazgos en algún lugar de América Latina serán totalmente diferentes a los encontrados en Europa, incluso a un nivel local los ecosistemas son diferentes.

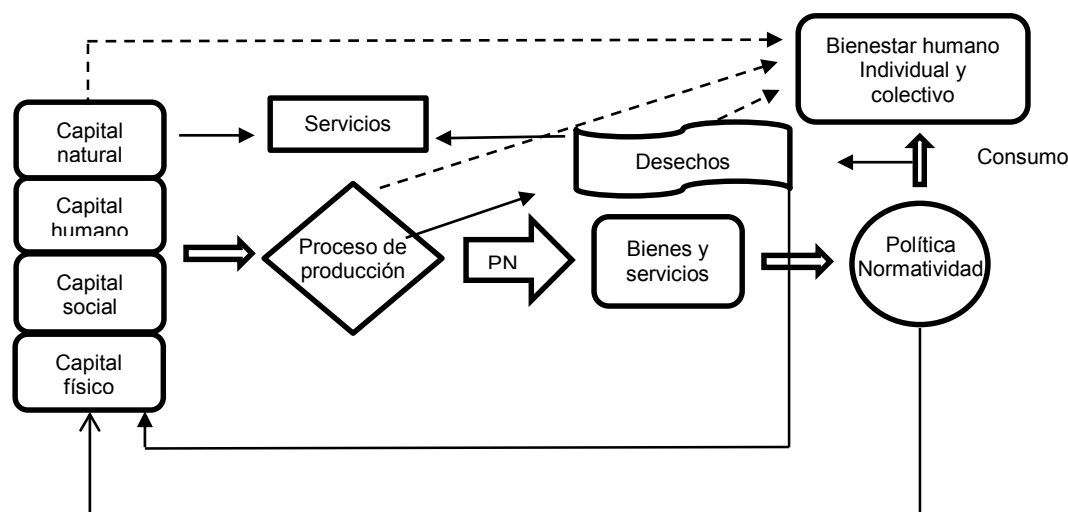

Dentro de los elementos de consenso entre las investigaciones revisadas son que el crecimiento poblacional vinculado a una alta demanda de bienes y servicios (expansión económica) afecta negativamente a los ecosistemas y los servicios que provee. Otro punto de acuerdo que hay un reconocimiento del capital natural dentro del sistema económico como proveedor de insumos para producir bienes y servicios pero también como el elemento que se degrada debido a la producción económica y el consumo humano.

La Figura 3 muestra un nuevo modelo económico ecológico donde los SE están presentes bajo la definición de capital natural el cual junto con el capital humano, capital social y físico entran al proceso de producción para generar bienes y servicios que satisfacen las necesidades del hombre sin embargo, el mismo proceso productivo además del consumo genera desechos que impactan negativamente al capital natural el cual además de proveer insumos genera otros servicios ecosistémicos. Los desechos generados afectan los servicios que proveen los ecosistemas pero además afecta al bienestar humano. Un tercer punto aceptado

es la necesidad de establecer medidas de conservación y protección del ambiente con el fin de permitirle a los ecosistemas regenerarse y que puedan seguir proveyendo de bienes y servicios. Un cuarto elemento es el acuerdo de que incluso la inacción tiene un costo, es decir, la ausencia de medidas de conservación

Figura 3: Modelo Económico Ecológico

*Modelo económico ecológico donde los insumos del proceso de producción son cuatro: capital natural, humano, social y físico, al conjuntarse se producen bienes y servicios que satisfacen el consumo humano y aumenta el bienestar. Sin embargo, tanto el proceso de producción como el consumo generan desechos que afectan directamente al capital natural y al bienestar del hombre*

Un tercer punto aceptado es la necesidad de establecer medidas de conservación y protección del ambiente con el fin de permitirle a los ecosistemas regenerarse y que puedan seguir proveyendo de bienes y servicios. Por otro lado, se identifican dos puntos que continúan en debate: i) la valoración de los servicios ecosistémicos y ii) la tipología de los servicios ecosistémicos. Respecto al primer punto hay autores que están en contra de dar un valor cuantitativo a los servicios que proveen los ecosistemas puesto que un existe la confusión de que valor significa precio cuando no necesariamente es así, de hecho en cada acción que realiza cualquier persona en pro o en contra del ambiente ya existe una valoración, de tal manera que sin signo de pesos en lo individual se hace una valoración del ambiente. El segundo elemento se refiere a que hay clasificaciones que lejos de ayudar crean el problema de la doble contabilidad ya que de acuerdo a su punto de vista se mezclan los fines con los medios, es decir, el fin es en sí el servicio ofrecido y el medio son los servicios de apoyo. La clasificación resulta más compleja de lo que parece, en algunos casos dependiendo el enfoque de la investigación un servicio como por ejemplo el agua puede ser analizada como servicio intermedio y en otro caso de estudio como servicio final. En este sentido, una clasificación que sugieren los críticos de la tipología actual es aquella que se base en bienes y servicios finales como la propuesta de EPA quien hace un sistema de clasificación de bienes y servicios finales.

Dentro de los elementos desconocidos se encuentran los mismos ecosistemas, aunque la investigación comienza hace 50 años es indudable que el hombre aún no conoce toda la biodiversidad existente sobre el planeta. Un segundo punto desconocido es la valoración que las generaciones jóvenes (menores de 18 años) tienen sobre el ambiente, finalmente son ellas quienes gozarán dentro de 10, 15 o 20 años de los servicios de los ecosistemas y debiera incorporarse su valoración del ambiente al análisis.

## CONCLUSIONES

Al aceptar y reconocer la contribución del capital natural a los sistemas económico y social es evidente que debe incorporarse al modelo económico prevaleciente a nivel global. Al constituirse el capital natural como

parte del modelo económico entonces existe la necesidad de diseñar y aplicar políticas de conservación con el fin de proteger el capital natural en el sentido de permitir su regeneración y por tanto su perdurabilidad. Con el incremento constante de la población y el aumento desmedido de la demanda de bienes y servicios la inacción no es una opción, prácticamente –y como lo indican la mayoría de los trabajos- la única opción para continuar satisfaciendo necesidades tan básicas como la alimentación con las políticas de conservación, una de ellas la valoración de los servicios que proveen los ecosistemas, quizá asignando una cantidad entonces la sociedad entera se percatara de la verdadera contribución y se preocupará por tomar las medidas para garantizar la recuperación de los ecosistemas.

## EL TURISMO DE NEGOCIOS: UNA ALTERNATIVA COMERCIAL DIFERENCIADA

Manuela Camacho Gómez, Universidad Juárez Autónoma de Tabasco  
Rosa María Martínez Jiménez, Universidad Juárez Autónoma de Tabasco  
Carlos Alberto Paz Gómez, Universidad Juárez Autónoma de Tabasco

### RESUMEN

*Las tendencias mundiales muestran que los mercados turísticos son cada vez más demandantes de servicios diferenciados. En este sentido, los destinos turísticos requieren de un análisis, identificación de nuevas oportunidades, detección de áreas de oportunidad e innovación de procesos y de marketing. Bajo esta perspectiva, el marketing fomenta la comercialización de productos actuales, pero también es deseable estimar la necesidad de configurar otros productos que puedan ser impulsados con un potencial de crecimiento elevado y alcanzable a corto y mediano plazo, con el objetivo de buscar nuevos mercados con nuevos productos. El presente trabajo presenta un análisis sobre el factor de competitividad promoción, comunicación y comercialización de servicios turísticos, aplicado al destino Villahermosa, como una alternativa de consolidación comercial en el segmento de turismo de negocios, más recientemente denominado turismo de reuniones. En este proyecto, se privilegió el análisis cuantitativo y cualitativo derivado de las indagatorias realizadas en el proceso de investigación. El estudio fue desarrollado por especialistas de la Universidad Juárez Autónoma de Tabasco (UJAT), desarrollando una investigación descriptiva-transeccional, no experimental, que se efectuó a través de la búsqueda documental y empírica, de forma sistemática considerando el análisis de variables independientes no controladas, asumiendo que estas manifestaciones ya habían sucedido (Hernández, Fernández, Baptista, 2010).*

**PALABRAS CLAVE:** Turismo De Negocios, Promoción, Marketing, Villahermosa

## BUSINESS TOURISM: A DIFFERENTIATED COMMERCIAL ALTERNATIVE

### ABSTRACT

*Global trends show that tourist markets are increasingly demanding for differentiated services. In this sense, tourist destinations require analysis, identifying new opportunities, detection of areas of opportunity and process innovation and marketing. From this perspective, the marketing promotes marketing existing products, but it is also desirable to estimate the need to configure other products that can be driven with high potential and achievable short and medium term growth, with the goal of finding new markets new products. This paper presents an analysis of the competitiveness factor of advocacy, communication and marketing of tourism services, applied to Villahermosa destination as an alternative commercial consolidation in the business tourism segment, most recently called business tourism. In this project, the quantitative and qualitative analysis derived from the investigations carried out in the research process was favored. The study was developed by specialists from the Universidad Juárez Autónoma de Tabasco (UJAT), developing a descriptive - transactional, non-experimental research, carried out through the documentary and empirical research, systematically considering the analysis of independent variables not controlled assuming that these events had already happened (Hernández Fernández, Baptista, 2010).*

## INTRODUCCIÓN

Esta ponencia revisa el factor de competitividad de promoción y comunicación del destino Villahermosa y destaca la relevancia de invertir en el desarrollo y puesta en marcha de estrategias de marketing que favorezcan el posicionamiento del destino en sus segmentos regional, nacional e internacional.

### Problemática de la Investigación

En materia de promoción turística, según el índice de competitividad turística ICTEM 2012, Tabasco, cuya capital es Villahermosa, ocupa el lugar 19 a nivel nacional en este rubro, posición que mantiene desde 2010. En este sentido, se considera que los recursos destinados a la promoción y al marketing turístico no son suficientes, a diferencia de los estados de Veracruz, Quintana Roo, Chiapas, Estado de México y Jalisco que son los mejores posicionados en estas prácticas mercadológicas, derivado de una elevada cantidad de recursos federales, estatales y municipales que invierten en el desarrollo turístico de sus destinos. Esto se asocia a la visión de las autoridades que conocen de la importancia económica que significa invertir en la promoción. Sus esfuerzos de marketing se enfocan a foros y exposiciones especializadas. También utilizan el internet, recurso muy requerido por los turistas previo a sus viajes. Las páginas webs con las que cuentan son funcionales (Tello, Cerda y Pardo, 2012).

En términos de marketing, los productos turísticos del destino Villahermosa, entre los que se encuentran parques, museos y centros de entretenimiento, demandan mayor atención en la calidad de los servicios, así como en la reestructuración, limpieza y mantenimiento de los recintos respectivos. Respecto a la promoción existe un reducido número de módulos de información al turista, así como la carencia de estrategias turísticas con tecnologías de información y comunicación; por ejemplo en dispositivos móviles, redes sociales y páginas webs que puedan operar en tiempo real. En general, Villahermosa evidencia áreas de oportunidad para desarrollar nuevos productos y subproductos, consolidar los actuales, acciones que requieren de un impulso con inversiones en infraestructura tecnológica, capital humano especializado y un plan de marketing para consolidar el segmento de turismo de reuniones.

### Pregunta de Investigación

¿Cuáles son las estrategias de promoción, comercialización y marketing que se llevan a cabo para posicionar a Villahermosa como un destino en el segmento de turismo de negocios?

### Objetivo General

Conocer el estado del arte que guarda la competitividad de Villahermosa en materia de promoción, comercialización y marketing, para delinear una Agenda Turística realista, práctica y viable para consolidarla como destino.

### Objetivos Específicos

Conocer en qué etapa de desarrollo está el destino turístico de Villahermosa.

Conocer las potencialidades, debilidades, amenazas y oportunidades del destino turístico en los rubros de promoción, comunicación y marketing.

### Justificación de la Investigación

Un Proyecto Agenda de Competitividad por Destinos Turísticos (ACDT), corresponde a una nueva Política Nacional Turística, que tiene como propósito diagnosticar su situación y emprender un programa de acciones, en coordinación estrecha entre la Federación y los gobiernos locales, para aprovechar el potencial turístico de México y generar mayor derrama económica en el país. Las ACDT se alinean a la Estrategia 4.11.2. del Plan Nacional de Desarrollo (PND), relativo a “Impulsar la innovación de la oferta y elevar la competitividad del sector turístico”. La Agenda de Competitividad es un instrumento analítico con alto perfil de contenido, que diagnostica la situación por la que atraviesan los destinos turísticos del país. Como herramienta de planeación participativa, coordina la actuación de los tres órdenes de gobierno, para mejorar el desempeño del sector turístico. Como tal, es una base sólida para promover el desarrollo turístico local sustentable del destino Villahermosa, al mismo tiempo que permite conocer el comportamiento de la competitividad de la localidad.

### Supuestos

Villahermosa como destino turístico no cuenta con un plan de marketing que incluya estrategias promocionales y de comercialización aplicables al segmento de turismo de negocios.

### Antecedentes

Ubicada en el Sureste Mexicano, Villahermosa, Tabasco, se impulsó a principios de este siglo como ciudad energética por su participación en las actividades de exploración y producción petrolera, lo que atrajo una gran cantidad de proveedores nacionales e internacionales, que a su vez, se convirtieron en los turistas de negocios que demandaban especialmente servicios complementarios como hospedaje y alimentación, ya que su estancia, generalmente, era corta (1.6 noches) (PLED 2007-2012). Sin embargo, las visitas de estos es frecuente a lo largo del año. El turismo de reuniones en México, representaba en 2011, ventas por aproximadamente 33 millones de dólares, de los cuales 18 millones correspondían a ventas y consumos directos y 15 millones de dólares de manera indirecta. En cuanto al número de empleos el turismo de reuniones generaba 441,300 empleos directos y 342,400 indirectos, en total 783,700 empleos (CESTUR, 2011).

El promedio de turistas que Villahermosa recibe anualmente es de aproximadamente 550 mil, lo que genera una ocupación hotelera del 54.9 en promedio (Plan Municipal de Desarrollo 2013-2015 pág. 31). Respecto al promedio de gasto de los turistas que llegan a Villahermosa, de acuerdo a un estudio realizado por el Centro de Estudios Turísticos (CESTUR), los que no adquieren paquetes y que pagan su hospedaje directamente erogan un promedio, por viaje de \$1,510.00 por persona, Por su parte, los turistas que se hospedaron en modalidades diferentes a un establecimiento comercial, es decir, que pernoctaron en casa de familiares, amigos, vivienda propia, vivienda rentada; tenían un gasto promedio de \$1,460.00 (CESTUR, 2011). Villahermosa como capital del Estado de Tabasco (Ver ilustración 1), en los últimos años fue promocionada con el eslogan: “La Esmeralda del Sureste”. Este destino ofrece innumerables atractivos al visitante en un entorno natural, donde se destaca la vegetación de sus parques, sus caudalosos ríos y sus hermosas lagunas. Es punto de partida a todos los sitios turísticos de la entidad y centro de entretenimiento y servicios del Sureste. El destino cuenta con infraestructura hotelera que se compone por 4554 habitaciones.

Fuente: Elaboración propia.

### Materiales y Métodos

La investigación fue descriptiva-transeccional, no experimental, con técnicas de investigación documental y de campo. La primera parte a través de la búsqueda documental y empírica, de forma sistemática considerando el análisis de variables independientes no controladas, asumiendo que estas manifestaciones ya habían sucedido (Hernández, Fernández, Baptista, 2010). La segunda con cuestionarios y entrevistas aplicadas a informantes clave. Se aplicaron de 26 entrevistas diagnósticas, dirigida a expertos, directivos de empresas, prestadores de servicios turísticos como hoteles, restaurantes, agencias de viaje, tour operadores, DMCs, aeropuerto, terminal de autobuses y funcionarios de la Coordinación de Turismo Estatal y Municipal, entre otros actores. Así mismo, se aplicaron 385 cuestionarios a turistas que arribaron a Villahermosa en el periodo de estudio, tanto por vía aérea como terrestre y se efectuaron dos grupos de enfoque para conocer la percepción que los informantes tenían con respecto a la competitividad de Villahermosa como destino, uno con un grupo de universitarios y otro con directivos, empresarios y funcionarios del sector turístico. En esta ponencia, sólo se divulgan los resultados relativos al factor de competitividad de promoción, comercialización y marketing del destino Villahermosa.

### **RESULTADOS**

Villahermosa cuenta con la Oficina de Convenciones y Visitantes (OCV), la cual inició sus operaciones en 1998 como Fideicomiso de Promoción Turística del Estado de Tabasco y en 2002 se le dio carácter de OCV. Sus principales funciones consisten en participar como oficina de destino, apoyar a las Asociaciones, Sociedades, Cámaras, Confederaciones y Empresas que tienen el deseo de desarrollar un Congreso, Convención, Feria, Exposición y viajes de incentivo en la ciudad de Villahermosa y en el estado. La misión de la OCV es incrementar anualmente el número de eventos que se desarrollan en el estado de Tabasco, potenciando los atractivos turísticos con que cuenta la plaza e incrementando los índices de ocupación de los prestadores de servicios turísticos, generando una mayor derrama económica para el estado que se traduzca en beneficios económicos y sociales para la población.

En tanto que la visión es posicionar a Tabasco como un destino turístico de negocios de primer nivel y sede ideal para la organización de Congresos Nacionales e Internacionales, impulsando la infraestructura turística y servicios que ofrece el estado. Su organigrama está compuesto por una directora ejecutiva, una asistente de dirección, un subdirector y las áreas de contabilidad y recursos materiales, coordinador de atención y eventos y proyectos especiales, coordinador de atracción de eventos y proyectos de promoción.

En su página web cuentan con un formulario de solicitud de apoyo a eventos (RFP), para las agrupaciones o empresas interesadas en realizar sus eventos en la ciudad de Villahermosa. En general la OCV es el organismo que en términos prácticos lleva a cabo el marketing del destino Tabasco, pero sin que medien metas, objetivos y alcances específicos para el destino Villahermosa. Esta organización es la que mantiene relación estrecha con los DMC's. Los hallazgos provenientes de la investigación de campo, permitieron identificar la necesidad de desarrollar una cultura turística, formar profesionalmente a los prestadores de servicios, añadirles valor con certificaciones y acreditaciones de competencias laborales y profesionales, que les permitan atender eficazmente a los segmentos turísticos que visitan el destino. En ese orden de ideas es prioritario impulsar la actitud de hospitalidad en todos los habitantes del destino y lograr la eficiencia en la calidad de los servicios en hoteles, restaurantes y servicios complementarios. En términos de marketing, se identificaron como fortaleza a los parques, museos y centros de entretenimiento, los cuales demandan mayor atención en la calidad de los servicios, así como la reestructuración, limpieza y mantenimiento de los recintos respectivos. Se observó un reducido número de módulos de información al turista, así como la carencia de estrategias turísticas con tecnologías de información y comunicación; por ejemplo en dispositivos móviles, redes sociales y páginas webs que puedan operar en tiempo real.

#### Identificación de Problemáticas de la Promoción y Comunicación

De manera global se puede afirmar que la actividad turística en la Ciudad de Villahermosa se ha mantenido estable en los últimos 3 años. El PIB turístico en 2012 fue del 2.6%, esta participación puede atribuirse a las condiciones de políticas públicas en la entidad. No obstante los presupuestos tanto del Gobierno Estatal como de los municipios y áreas con competencias directas en turismo, no han sido suficientes para detonar el destino. Consecuentemente, también se ha limitado el acceso al financiamiento para las empresas turísticas, reduciendo, el ritmo de creación y mejora de oferta y, al mismo tiempo, de dinamización económica en el destino Villahermosa a través de la creación de puestos de trabajo. Todo ello incide en márgenes de rentabilidad para los prestadores de servicios.

Asimismo, Tabasco es percibido como un destino caro con relación a estados como Chiapas. Villahermosa como destino turístico cuesta hasta 25 por ciento más por los altos precios de los boletos de avión, el hospedaje, los alimentos y demás bienes. Viajar a Tabasco o desde Tabasco por vía aérea es cada vez más costoso (Sámano, 2010). Hacia el 2015, se tiene el objetivo de convertir a Centro, y particularmente a Villahermosa como uno de los principales destinos turísticos del Sureste, mediante estrategias de impulso gastronómico, promoción de programas culturales y artísticos locales, realización de actividades de promoción y desarrollo de productos turísticos, en coordinación con el sector empresarial y apoyar al turismo social.

#### Comercialización

El marketing de destinos turísticos debe contemplar, en la actualidad, una detallada estrategia de e-marketing y una estrategia que contribuya de forma decisiva a facilitar la distribución online de la oferta del destino. Por esta razón se recomienda una amplia estrategia de marketing online. Bajo estas perspectivas, la participación de gobierno estatal y municipal, así como la iniciativa privada juegan un papel preponderante, cuyas estrategias deberían ser convergentes y complementarias para aprovechar la presencia de PEMEX y la continuada concurrencia de sus proveedores nacionales e internacionales.

El destino Villahermosa ha sido impulsado con estrategias diferentes desde hace más de dos décadas, especialmente a partir del establecimiento de las oficinas administrativas de PEMEX Exploración y Producción y Pemex Petroquímica Básica. Las ediciones de la Exposición y Conferencia del Petróleo de México PECOM, ha sido una actividad estratégica en los esfuerzos de consolidar a Villahermosa como ciudad energética. Los objetivos y metas en materia turística han sido delineados para el Estado de Tabasco y no para Villahermosa en particular, aunque se han hecho esfuerzos por posicionarla en años recientes como ciudad energética y también como “la esmeralda del Sureste”. Recientemente se busca promoverla como “La ciudad de la salud y el conocimiento”. El destino se destaca como un centro de negocios y administración de la industria petrolera y del sureste de México Según el gobierno en turno, estatal y municipal; se han planteado estrategias para el sector turístico en sus Planes de Desarrollo, los cuales no necesariamente se han alcanzado o han quedado inconclusos.

### Comercialización Directa

Si bien, Villahermosa, como destino aún no cuenta con un plan de marketing estratégico para su posicionamiento y atracción de visitantes, es necesario que éste se diseñe para dotarse de estrategias innovadoras para crear una ventaja competitiva frente a otros destinos. En este contexto el Plan Estatal de Desarrollo de Tabasco 2013-2018 contempla al turismo como uno de sus ejes estratégicos para impulsar el desarrollo económico de la entidad. En este sentido los esfuerzos del gobierno estatal a través de la Secretaría de Desarrollo Económico y Turismo (SDET) apuntan hacia el impulso de una campaña de promoción turística de Tabasco, cuyo propósito es atraer más visitantes nacionales y extranjeros, esta acción forma parte del acuerdo entre el gobierno federal, el Consejo de Promoción Turística de México y el Gobierno del Estado. Como parte de este plan, los impulsores de esta iniciativa se encuentran analizando las estrategias, el monto de la inversión, las formas y eligiendo los medios más efectivos, así como la delimitación de los segmentos de mayor interés y prioridad, teniendo como aliados a patrocinadores de empresas privadas.

Como parte de las estrategias de promoción de turismo, las autoridades tabasqueñas cuentan con una oficina en la ciudad de México, misma que tiene como función sustantiva la promoción y difusión de la entidad como destino turístico, el cual se difunde en los eventos donde se participe a nombre del gobierno de Tabasco. Adicional, se puede afirmar que fundamentalmente la promoción y marketing del destino descansa en las actividades que ha emprendido la Oficina de Convenciones y Visitantes para atraer grupos a la ciudad, sin embargo, sus alcances no son suficientes para posicionar a Villahermosa como un sitio de turismo de reuniones. La difusión y comercialización de los destinos turísticos es fundamental para el éxito y duración de cualquier proyecto turístico. Es imprescindible utilizar todas las herramientas disponibles para lograr colocar en el mercado nacional e internacional el destino en cuestión.

### **CONCLUSIONES**

En general, los principales resultados del diagnóstico evidencian ventajas y áreas de oportunidad de Villahermosa para desarrollar nuevos productos y subproductos, consolidar los actuales centros de recreación turística, como el Museo de la Venta o el Centro de Interpretación de la naturaleza Yumká. Villahermosa cuenta con una potencialidad relevante que requiere de un impulso con inversiones en infraestructura tecnológica, capital humano especializado y un plan de marketing para consolidar el segmento de turismo de reuniones y a corto plazo, impulsar el turismo de naturaleza. El destino Villahermosa, requiere sumar los esfuerzos aislados que ha llevado a cabo en materia de promoción, comercialización y Marketing. Algunas de las herramientas más utilizadas para lograr este objetivo es la realización de campañas de publicidad, relaciones públicas y mercadeo directo en los mercados norteamericano, europeo y latinoamericano, destacando la nueva estrategia de comunicación utilizada que

privilegia los esfuerzos hacia un segmento y destino específico, en lugar de la presentación de la imagen genérica de México. Asimismo es deseable que se aproveche la participación de los diversos actores de la actividad turística en el país y de socios comerciales en el extranjero a través de programas de cooperación mutua para mejorar la rentabilidad de los recursos destinados a la promoción turística del Parque Estatal, así como lograr la integridad de acciones que reditúan en un mayor posicionamiento del producto turístico en los mercados objetivo. El plan de marketing para el destino Villahermosa debe ponerse en marcha a la brevedad para consolidarse en 2014 como una ruta imprescindible para el turismo de negocios que incluya una creciente participación en el turismo de grupos, a través de convenciones, congresos y viajes de estímulo, asumiendo que las estrategias que lo integren sean acordes al sector y las tendencias turísticas internacionales, redefiniendo en su caso aquellas tácticas que se consideren prioritarias para el logro de los objetivos mercadológicos.

# DESARROLLO HISTÓRICO DE LA CONTABILIDAD DE ESTADOS UNIDOS DE AMERICA Y SU ENCUENTRO CON LAS NORMAS INTERNACIONALES DE INFORMACION FINANCIERA

Rafael Marrero, Universidad De Puerto Rico Recinto De Rio Piedras

## RESUMEN

*Recuento histórico de la contabilidad en Estados Unidos de América desde finales del siglo XIX hasta el presente y su encuentro con las normas internacionales de información financiera. Se trata de una amplia revisión de literatura que narra el desarrollo contable en Estados Unidos, el surgimiento de la contabilidad internacional, la firma del acuerdo de convergencia y un análisis sobre el futuro de las normas internacionales de información financiera en Estados Unidos. Se discuten los pros y los contras de la posible adopción de las normas internacionales de información financiera en Estados Unidos de América y las razones por las cuales aún no se han aceptado. Además, se resumen los argumentos a favor y en contra de que la Comisión de Intercambios y Valores (SEC, por sus siglas en inglés) permita a las empresas domésticas que venden sus valores en los mercados de Estados Unidos de América el uso de las normas internacionales de información financiera.*

**PALABRAS CLAVES:** Contabilidad, Principios de Contabilidad Generalmente Aceptados, Normas Internacionales de Contabilidad Financiera y Acuerdo de Convergencia

## HISTORICAL DEVELOPMENT OF ACCOUNTING IN UNITED STATES OF AMERICA AND ITS ENCOUNTER WITH INTERNATIONAL FINANCIAL REPORTING STANDARDS

### ABSTRACT

*Historical review of accounting in the United States of America since the end of the 19th century up to the present and his meeting with the international financial reporting standards. It is a comprehensive review of the literature that tells the accounting development in the United States, the emergence of international accounting, the signing of the agreement on convergence and an analysis on the future of the IFRS in the United States. Discussed the pros and cons of the possible adoption of IFRS in the United States and the reasons why still not been accepted. In addition, we summarized the arguments in favor and against the Securities and Exchange Commission to allow IFRS for domestic companies selling values in the United State of America trade markets.*

**JEL:** F23, M16, M41

**KEYWORD:** Accounting, Gaap, IFRS, Norwalk Agreement

## INTRODUCCION

El surgimiento de la globalización presenta nuevos retos y oportunidades para las empresas. Una de estas oportunidades es poder participar de un mercado financiero global (Fernández, Fernández y Olmedillas, 2007). Las empresas se benefician de esta apertura del mercado financiero ampliando las posibilidades de

obtener financiamiento de proveedores de capital extranjeros (IFRS USA, 2012). A su vez los inversionistas alrededor del mundo también se benefician al tener opciones de inversión en empresas a nivel global (Djatej, Duanning, Gorton, y McGonigle, 2012). Para atender las necesidades de estos proveedores de capital es necesario un formato de información que permita la comparabilidad y promueva la competitividad estimulando la inversión de capital a nivel mundial (Lew, 2005). Según un estudio de PwC (2012) la globalización de los negocios y las finanzas han promovido la adopción en masa de las normas internacionales de información financiera (NIIF) en más de 12,000 empresas alrededor del mundo. La contabilidad se conoce como el lenguaje de los negocios (Cherubini, Rich, Zhu y Michenzi, 2011) y a su vez el inglés como el lenguaje de la contabilidad (Tsakumis, Campbell y Doupnik, 2009). Las empresas utilizan los Estados Financieros para presentar ante los inversionistas sus resultados de operaciones y posición financiera. Esta información está dirigida a los proveedores de capital y busca obtener el financiamiento que necesitan las empresas (Kranacher, 2010). Kranacher indica que los proveedores de capital demandan y necesitan que la información que presenta el sistema de contabilidad sea uniforme, comprensible, completa y permita la comparabilidad.

La contabilidad solo se puede justificar si logra servir el propósito de proveer información útil para la toma de decisiones. De acuerdo a Wolosky (2008) el uso de normas internacionales de información financiera promueve la comparabilidad a nivel global. Este autor además, señala que el uso de las NIIF reduce las barreras internacionales para competir por el capital y permite a los inversionistas evaluar distintas opciones de inversión a nivel internacional participando de mercados de capital globales. Esto a su vez promueve la competitividad ya que los inversionistas pueden evaluar y entender mejor la información que las empresas le comunican (Bolt-Lee y Smith, 2009). Por otro lado las empresas pueden competir en la obtención de capital al presentarse ante los mercados usando unas normas uniformes (Gannon, 2010). El capitalismo se caracteriza por la compra y venta de valores, la libre competencia y la búsqueda de la riqueza. Los negocios se crean para crear valores y riqueza.

Factores como el surgimiento de la Unión Europea, el capitalismo de estado de China, el dominio del capitalismo como sistema económico y el repunte económico de las naciones en vías de desarrollo han contribuido a la globalización de los mercados de capital. Esta disponibilidad de capital extranjero ha hecho necesario que la información financiera sea uniforme y sea entendible por todos los participantes (Djatej, Duanning, Gorton y McGonigle, 2012); (American Institute of CPA's, 2011). Además, las empresas multinacionales y la inversión foránea exigen información de calidad, transparente, correcta, confiable, oportuna y sobre todo comparable (Bradshaw, et al., 2010). Según el marco conceptual de la FASB y la IASB la contabilidad tiene como único objetivo ofrecer información útil a los proveedores de capital para la toma de decisiones (Financial Accounting Standards Board, 2012), sin embargo, tener diferentes sistemas de normas de contabilidad alrededor del mundo complica el entendimiento y la comparabilidad de los estados financieros que producen las empresas (Shinn, 2009). Esta situación agrega costos adicionales ya que requiere de la conversión de un sistema contable a otro (American Institute of CPA's, 2011). En un estudio realizado por “*Internacional Federation of Accountants*” y citado por el American Institute of CPA's, se encontró que la mayoría de los líderes de contabilidad en el mundo están de acuerdo en que solo debe haber una organización que promulgue normas de contabilidad de calidad global. Incluso el FASB (2012) ha expresado que los usuarios estarían mejor servidos si se logra esto. Solo de esta manera que se puede asegurar que la información que reciben los usuarios reúne las cualidades necesarias (FASB, 2012).

Ya podemos ver dos fuerzas que parecen buscar lo mismo sin embargo, pueden ser la mayor amenaza que enfrentan los esfuerzos de convergencia. Si vemos lo antes expuesto, por un lado se habla de la comparabilidad como el objetivo mayor por parte del IASB, por el otro lado la FASB favorece la comparabilidad pero lo condiciona a que las normas uniformes que se promulguen sean de calidad. La SEC también reclama que las normas sean de calidad. A los representantes de la IASB les preocupa que para

lograr la calidad que exigen la FASB y la SEC se tenga que cambiar de las NIIF a principios de contabilidad de aceptación general de EU.

Mientras tanto, Pounder (2010) señala que la característica de la información que más se cuestiona en los foros que establecen normas de contabilidad es la comparabilidad como el resultado del uso de reglas y normas distintas. En la actualidad, la uniformidad de la normas cobra mayor relevancia ya que la globalización ha traído consigo la necesidad de flujo de información comprensible para todos los inversionistas a nivel internacional (Bolt-Lee y Smith, 2009); (Wolosky, 2008). Estos inversionistas a su vez reclaman y exigen un lenguaje de contabilidad global (Lew, 2005). Respondiendo a esta necesidad, los organismos responsables de establecer las normas y principios de contabilidad están en un proceso de armonizar las reglas, métodos y presentación de la información financiera. Evidencia de esto es que los dos grupos regulatorios principales, La Junta de Normas de Contabilidad Financiera de Estados Unidos (FASB, por sus siglas en inglés) y su homóloga La Junta de Normas de Contabilidad Internacional (IASB, por siglas en inglés) han suscrito un acuerdo de convergencia llamado “Norwalk Agreement” (Financial Accounting Standards Board, 2012).

El acuerdo de convergencia procura armonizar los principios y las normas de contabilidad que se utilizan en Estados Unidos y los utilizados para los mismos propósitos en el ámbito internacional (Pounder, 2010). De esta manera la profesión responde a un reclamo de los usuarios por un conjunto de reglas uniformes que aplique a todas las empresas que participan del intercambio de valores a nivel internacional (Kranacher, 2010). Las Normas Internacionales de Información Financiera ya han sido adoptadas o están en proceso de adopción por cerca de 128 países (IFRS USA, 2012). El impulso mayor de aceptación de las NIIF surge cuando la Unión Europea hace mandatorio el uso de éstas para las empresas que venden valores al público (Brackney y Witner, 2005); (Tsakumis, Campbell y Doupnik, 2009). Esto coloca a Estados Unidos de America (EUA, por sus siglas en español) en una encrucijada ya que cada día es mayor el reclamo por un cuerpo de normas uniformes (Bolt-Lee y Smith, 2009); (Shinn, 2009); (American Institute of CPA's, 2011). Los beneficios esperados de la conversión son: consistencia, promover la competitividad y mejorar la transparencia de los informes financieros (Bolt-Lee y Smith, 2009). Consciente de esto la Comisión de Cambios y Valores de EU (SEC, por sus siglas en inglés), ha iniciado el proceso de aceptación de las NIIF. Según la SEC, las empresas americanas comenzarán a presentar sus informes financieros usando las NIIF no antes de 2015, esto luego de una votación unánime el 24 de febrero de 2010 (Atwood, 2010); (Defelice y Lamoreaux, 2010); (Gannon, 2010). Sin embargo, Mary Schapiro, actual directora de la SEC, ha expresado que la Comisión no tiene prisa por la adopción de esta medida (Lynch y Clarke, 2012). Según Schapiro, la decisión sobre el uso de las NIIF en Estados Unidos se hará protegiendo los intereses de los inversionistas y el mercado de capital de EU (Lynch y Clarke, 2012). Sin importar la fecha de efectividad, esta convergencia afectará de forma directa los procesos de contabilidad en las empresas y la enseñanza de la materia en las universidades. Esta investigación se presenta organizada como sigue: una amplia revisión de literatura, metodología, conclusión, limitaciones y conclusiones.

## REVISION DE LITERATURA

### Trasfondo Histórico

Estados Unidos tiene más de 100 años evaluando, estudiando y promulgando normas y principios de contabilidad financiera (Zeff, 2005). Algunos entienden que el desarrollo de la contabilidad comienza en la década de 1930 hasta el presente. Existe otro grupo que señala que en EU se lleva trabajando con normas y principios desde que surgió American Association of Public Accountants (AAPA por sus siglas en inglés) en el 1897, predecesora de la American Institute of Certified Public Accountant (AICPA por sus siglas en inglés) (Davidson, Anderson, 1987). En el 1917 cambió su nombre a American Institute of Accountant,

(AIA por sus siglas en inglés), nombre con el que se le conoce hasta el 1957. Para el 1921 surge *The American Society of Certified Public Accounting*, que funcionó como una federación de las organizaciones de Contadores Públicos estatales. Durante el año 1936 ambas organizaciones se unieron. Para el 1957 adopta el nombre actual de AICPA (Zeff, 2005).

La contabilidad de Estados Unidos ha estado influenciada en su etapa inicial por la contabilidad de Inglaterra. Inglaterra lleva más años en el proceso de establecer normas y principios (Zeff, 2005). Esto es un hecho en casi todas las ex colonias de Inglaterra (Davidson y Anderson, 1987). Los contadores que provinieron de Inglaterra ayudaron al desarrollo de la contabilidad de Estados Unidos (Davidson y Anderson, 1987). El desarrollo de la contabilidad a su vez facilitó el desarrollo industrial temprano que logro la nación (Zeff, 2005). En el 1916 se establece la Asociación Americana de Contabilidad (AAA, por sus siglas en inglés). Incluso los economistas se dividieron al señalar algunos que la contabilidad jugó un papel muy importante en el desarrollo del capitalismo mientras que otros señalan que nada tuvo que ver (Zeff, 2005). Según artículos y estudios hay economistas convencidos que el desarrollo del capitalismo no estaba atado al uso de la contabilidad de doble entrada que conocemos, que la llegada del capitalismo y su crecimiento resultaría igual con o sin contabilidad (Davidson y Anderson, 1987). Según Davidson, Werner Sombart dice que a mediados de 1920 la contabilidad estimuló el desarrollo del capitalismo. En el 1919 Werner Sombart escribió que el capitalismo sin el sistema de doble entrada de la contabilidad es algo inconcebible (Davidson y Anderson, 1987).

En los primeros veinticinco años del siglo XX, la corporación más grande de América pertenecía a la industria del acero. Esta estableció la pauta de incluir en los informes la divulgación (Zeff, 2005). El periodo de 1903 al 1938 se considera uno de poco crecimiento en el desarrollo de normas y reglas de contabilidad (Davidson y Anderson, 1987). La caída de los mercados de acciones de 1929 marcó otro punto crucial en el desarrollo de la profesión y el establecimiento de normas de contabilidad (Davidson y Anderson, 1987). Es entonces que el Congreso de EU creó la Comisión de Cambios y Valores (SEC por sus siglas en inglés). El objetivo de esta comisión de gobierno era restaurar la confianza de los inversionistas en las empresas y en la información que genera el sistema de contabilidad (Davidson y Anderson, 1987). Las leyes 1933 y 1934, representaron un avance y ayudaron a establecer unos requisitos para las empresas que pretendían vender valores al público. La SEC se convirtió en una entidad estrictamente regulatoria (Davidson y Anderson, 1987). Entre sus prioridades estaba lograr la comparabilidad, divulgación completa y transparencia en las transacciones (Davidson y Anderson, 1987). En el 1935 la SEC crea la Oficina de *Chief Accountant* (Davidson y Anderson, 1987). Otra aportación grande de la comisión es el establecimiento de la División de Corporación y Finanzas conocida por (DCF, por sus siglas en inglés) (Davidson y Anderson, 1987). La SEC favorece el uso de costo histórico para la valoración de activos fijos como propiedad, planta y equipo (Davidson y Anderson, 1987). En el 1936 el AIA introduce y define lo que hoy se conoce como (GAAP), que representan los principios de aceptación general de contabilidad (Davidson y Anderson, 1987). Según Davidson y Anderson, entre los años 1938 y 1939, la SEC decide confiar en la profesión y en el sector privado, permitiendo que se auto regule y permite a estos el establecimiento de los GAAP. El respaldo de la SEC a los organismos privados que establecían las normas de contabilidad constituye un respaldo fuerte a las mismas y obliga a las empresas públicas a que se rijan por estas.

Para el 1939 se estableció el Comité de Procedimientos de Contabilidad (CAP, por sus siglas en inglés). Según la página oficial del FASB, el CAP comenzó en el 1936. A partir de esa fecha comienza a publicar boletines (ARB, por sus siglas en inglés). El Comité está integrado por 18 practicantes de la profesión de contabilidad y tres profesores. Todos trabajando a tarea parcial y con un pequeño grupo de investigadores como apoyo. La SEC le brinda al Comité apoyo sustancial para que pueda verse como autoritativa (Zeff, 2005). Sin embargo, es importante señalar que la SEC nunca delegó al sector privado la autoridad de establecer las normas y principios. Por ley, la Comisión no podía delegar esta función. Siempre retuvo el

poder de cancelar o cambiar cualquier norma o regla del comité de entender que fuera necesario (Davidson y Anderson, 1987). En otro hecho sin precedente, en el 1938-1939 el Congreso de Estados Unidos permite a las empresas usar LIFO (last in first out) como un método de valoración de inventario (Davidson, y Anderson, 1987). Esta es una de varias ocasiones en que las políticas contributivas tienen influencia en el establecimiento de principios de contabilidad generalmente aceptados.

Para esa misma fecha la AIA (American Institute of Accounting) recomienda el uso de *present fairly... in conformity with generally accepted accounting principles* en la opinión estándar del informe de auditoría (Davidson y Anderson, 1987) y (Zeff, 2005). En 1940 la AAA publica una monografía del Profesor W. A. Paton y A.C. Littleton, *An Introduction to Corporate Accounting Standards*, donde se hace una defensa elocuente del uso de costo histórico e impulsa el principio de pareo de ingresos y gastos (Zeff, 2005). El trabajo reforzó el uso de la contabilidad convencional por parte de la profesión. Esta monografía impactó tanto que fue usada por más de una década como libro de texto en cursos de contabilidad (Zeff, 2005). En el año 1950 el CAP emitió un boletín donde se oponía a un ajuste inflacionario para estimar el gasto de depreciación (Davidson y Anderson, 1987); (Zeff 2005). Muchas empresas trataron de persuadir al Congreso de EU para que permitiera el uso de costo de remplazo a la hora de estimar la depreciación (Davidson y Anderson, 1987). Con esta movida el CAP buscaba ganar la confianza de la SEC que también se oponía a usar el ajuste en valor que las empresas proponían. Una de las fallas más grandes señaladas al CAP era las muchas alternativas que ofrecía para tratar lo que en esencia era la misma transacción (Davidson y Anderson, 1987).

El CAP recibió muchas críticas e incluso enfrentó en el Tribunal Supremo demandas por parte de empresas que alegaban que sus pronunciamientos eran adversos a los resultados económicos que las empresas tenían que informar (Zeff, 2005). Este fue el caso de una empresa de la industria de electricidad que se oponía al tratamiento de Impuesto Diferido, deuda que el CAP propuso con el boletín #44 (ARB 44) (Davidson y Anderson, 1987) y (Zeff, 2005). El Tribunal Supremo de EU estableció que el CAP tenía derecho a opinar sobre el asunto (Zeff, 2005). Por años críticos del CAP señalaban que esta organización ofrecía demasiadas opciones para tratar un mismo evento de contabilidad (Zeff, 2005). Ante este reclamo y atendiendo las críticas, el AICPA decidió remplazarlo por el Accounting Principles Board (APB, por sus siglas en inglés) (Davidson y Anderson, 1987); (Zeff, 2005).

La APB se establece en el 1959 y estaba integrado por 21 miembros, dentro de los que estaba un representante de cada una de las ocho firmas grandes de contabilidad (Big Eighth, para entonces), de Estados Unidos (Davidson y Anderson, 1987). Este grupo tenía como misión mejorar la calidad de las normas y eliminar la ambigüedad y las múltiples alternativas que existían para tratar el mismo evento económico (Zeff, 2005). De esta forma la profesión enfrenta otro momento crítico y fue necesario actuar para evitar perder la confianza de la SEC y del público. Una de las principales encomiendas de la APB era reducir el número de alternativas de tratamiento contable para las transacciones. En otras palabras, detener la práctica de aceptar demasiadas alternativas para las transacciones. En el 1960 crece la presión de la SEC hacia el APB porque lo percibía como muy lento en sus acciones y continuaba la ambigüedad que tanta crítica le ganó al CAP. La complejidad de las transacciones y los negocios obligaba a que la organización que establecía las normas fuera más dinámica y más pro-activa. El APB no llenó las expectativas y posteriormente se piensa en otra organización que atienda el asunto a tiempo completo y esté más dedicada a la investigación y evaluación. Surge un reclamo por que se cree un marco conceptual que permita el desarrollo de normas coherente.

El 1 de julio de 1973 se establece la Junta de Normas de Contabilidad Financiera (FASB, por sus siglas en inglés). El grupo estaba compuesto por siete (7) miembros y la votación para aprobar nuevos pronunciamientos tenía que ser ratificada mayoritaria, más un voto adicional. Más tarde se redujo el número a cinco (5) y se aceptó la decisión a favor de una norma por mayoría (FASB, 2012). Actualmente es la

entidad que promulga las normas y principios de contabilidad de EUA. En 37 años publicó 168 pronunciamientos (FASB, 2012). Desarrolló un marco conceptual que ahora está en revisión y suscribió el acuerdo de convergencia con el IASB. La FASB es una organización independiente y separada del AICPA a quien le respondían el CAP y el APB. La SEC anunció entonces a la FASB como la principal entidad encargada de establecer las normas de contabilidad (Zeff 2005). Desde el año 2004 el FASB está promoviendo normas y reglas que sean más compatibles con las normas internacionales (Zeff, 2005). Esto como respuesta al acuerdo que suscribió en el 2002 con su homóloga IASB.

Dos días antes de organizar la FASB, en el 1973, se establece el Comité de Normas de Contabilidad Internacional (IASC, por sus siglas en inglés), predecesora de IASB. En su etapa inicial fue creada para proveer de guías y normas de contabilidad a países que no poseían las mismas (Brackney y Witmer, 2005). Para el año 2002, la Unión Europea hace mandatorio para las empresas que venden valores al público el uso de las NIIF (Tsakumis, Campbell y Doupinik, 2009); (Brackney y Witmer, 2005). En septiembre de 2002, con el acuerdo de Norwalk, se comenzó el proyecto de convergencia entre la FASB y el IASB (Atwood, 2010). Se esperaba que el proceso finalizara para el año 2011, luego se establece el 2014, y como fecha final se habla del 2015 (Atwood, 2010). La SEC entiende que lo más temprano que se puede implantar el cambio hacia las normas internacionales es para el 2015 y ya hay fuertes indicios de que no será antes del año 2016.

Mientras el proceso se dilata en EU, cada vez son más los países que han optado por usar las NIIF. Dos de las naciones que han adoptado las NIIF recientemente son Corea y Canadá. Canadá comenzó a utilizar las normas internacionales desde enero 2011. Muchos se preguntan si se trata de una evolución o una revolución (Blanchette, 2007). Según Blanchette, Canadá es un buen modelo a seguir e imitar pues están emigrando de las normas de Canadá conocidas como “Canadian GAAP” a las NIIF (Blanchette, 2007). En esa transición las firmas grandes de contabilidad y las universidades han representado un rol primario ya que estas fueron las que más promovieron el cambio (Blanchette, 2007).

Regresando al escenario de Estados Unidos, existe cierto apego a la tradición y al hecho indiscutible de que por más de 100 años se han estudiado, evaluado y promulgado normas de contabilidad (Zeff, 2005). La creencia de que en EU se hacen mejor las cosas y el nacionalismo pueden ser amenazas al proyecto de convergencia que ha suscrito la IASB y la FASB. Sin duda este hecho se menciona como obstáculo a la convergencia (Lew, 2005). Una de las razones principales de la armonización es reducir los costos para cumplir con las exigencias de las comisiones de intercambio de valores de las distintas naciones (Lew, 2005). También se persigue la búsqueda de una forma integral de principios y normas confiables y que sea capaz de reducir los costos de capital (Malwitz y O'Rourke, 2009).

### Armonización de Normas de Contabilidad en Europa

El desarrollo de la contabilidad en Europa es muy diverso. En un comienzo cada nación tenía sus propias normas. Al formarse la Unión Europea, se ven en la necesidad de establecer normas para la Unión (Batt, 1998). En un esfuerzo sin precedente, la Unión Europea revisó la directriz cuatro que había sido emitida el 26 de julio de 1978. Esta trata básicamente sobre el formato y contenido de los estados financieros (ej. utilización e integración de los principios de contabilidad generalmente aceptados en la Unión Europea). También se revisó la séptima directriz, que originalmente fue emitida el 13 de junio de 1983 y que trata de manera muy profunda la presentación de los estados financieros consolidados (Batt, 1998); (Springsteel, 1998). El Parlamento de la Unión Europea enmendó estos pronunciamientos. La directriz cuatro (4) fue enmendada el 31 de mayo de 2001 para modernizar la contabilidad mediante el uso de justo valor en el mercado remplazando el principio de costo histórico (Wilson, 2002). Además, se enmendó la forma en que las empresas que tienen presencia en distintas naciones de la unión tributan sus ganancias para evitar la doble tributación. Para lograr esto se estableció que las empresas que tienen afiliadas en otras

naciones de la unión tributarán sus ingresos sólo en la nación donde los generan (Reynolds, 1998). Esta es la culminación de una gestión que se inició en el 1990.

En noviembre de 1995 la Comisión Europea propuso que todas las empresas grandes que intercambian sus valores financieros en mercados globales deben presentar sus informes financieros en armonía a las normas de contabilidad que establezca la Junta de Normas Internacionales (Batt, 1998). La propuesta establecía que todas las empresas europeas deberían cumplir con esta directriz no más tarde del 1 de enero de 2005 (Green, 2002). El 5 de febrero de 2002, en votación de 492 a favor, 5 votos en contra y 29 abstentions, el Parlamento Europeo aprobó los cambios sugeridos por la Comisión Europea (Curtis, 2002). Esta enmienda a la directriz siete (7) hace obligatorio que las empresas participantes en los mercados de intercambio de valores de Europa presenten los Estados Financieros consolidados usando las NIIF. Aquí comienza la adopción de las normas internacionales como el estándar que dictará la forma que la contabilidad será requerida en la Unión Europea (Curtis, 2002).

Los argumentos a favor de la decisión descansan en la necesidad de que los informes se preparen usando unas normas uniformes para todas las empresas que participan del mercado de valores de Europa (Curtis, 2002). Además, se persigue el organizar un mercado de capital que permita el libre intercambio de valores dentro de las 15 naciones miembros de la Unión Europea (Curtis, 2002). Las normas uniformes son necesarias para asegurar la transparencia de los reportes financieros y permitir un entendimiento claro de estos (Curtis, 2002). Se promueve la comparación de la información, lo que permitirá a los inversionistas una mejor comprensión y, por ende, mejor toma de decisiones. Esto producirá y fomentará en un mercado de capital fuerte y eficiente para la Unión (Curtis, 2002).

Por otro lado, el Parlamento rechazó que el requisito se extendiera a las empresas pequeñas que aspiran llevar sus valores al mercado. Para estas se les debe conceder más tiempo. Justificaron esta decisión al entender que exigirle a los negocios pequeños esta directriz era algo muy costoso para los mismos. Además, se le otorgó libertad a cada estado para que determine si las empresas que intercambian sus valores en los mercados estarán sujetas a la directriz o se les eximirá de la misma. Esta flexibilidad ha sido altamente criticada, pues permite que empresas ofrezcan sus valores sin apegarse a las normas (English, 1998). También se pueden eximir de la directriz aquellas empresas que vendan sus valores en otros países y que ya cumplan con las normas de ese país, ej. Una empresa Europea que vende sus valores en los mercados de Estados Unidos. Sin embargo esta excepción estuvo vigente hasta el 2007 (English, 1998). Mientras tanto, el socio de negocios al otro lado del trasatlántico, Estados Unidos, observa con detenimiento el fortalecimiento de las normas internacionales como los principios de contabilidad de aceptación general a nivel global. Expertos no descartan la guerra entre las normas de contabilidad (Green, 2001). De una parte Estados Unidos y la Comisión de Valores e Intercambio y del otro la Unión Europea y las normas internacionales. Muchos han interpretado la movida de la Unión Europea como una respuesta para evitar que Estados Unidos les dicte la pauta de cómo debe ser la contabilidad de estos (Green, 2001). A pesar de que ya EU, mediante la SEC han aceptado permitir el uso de las NIIF para el 2015, muchos piensan que esta última se está dejando sentir en el IASB.

Es correcto señalar que el mercado de capital más fuerte y amplio se encuentra en Estados Unidos. Evidencia de esto es que existen cerca de 11,000 corporaciones registradas con la SEC. De estas, 1,100 son empresas extranjeras (Oracle Corporation, 2008), (Marcy, 2008). En el mercado Europeo es de 7,000 firmas. Por esta razón se cree que la Comisión de Cambios y Valores (SEC) seguirá imponiendo sus reglas. Otro reto que enfrenta la armonización es de índole legal. En muchos países, como Alemania, Francia y Argentina, disponen de enfoques legales para la contabilidad. Las empresas de Francia y Alemania enfrentarán conflictos legales si se allanan a las normas internacionales sin realizar enmiendas a las leyes nacionales. Esto nos hace pensar que la armonización será más difícil y complicada de lo que se pensó

originalmente. Francia y Alemania están legislando varias enmiendas a leyes para permitir que sus empresas puedan allanarse a la directriz siete (Batt, 1998).

El idioma en que se publicarán los reportes será otro problema. Existen once lenguajes diferentes en la Unión Europea. Se trata de un factor cultural que afectará la armonía. Al parecer existe un consenso de que el idioma que se debe usar es el inglés por entenderse que la mayoría de las naciones y usuarios promueven el inglés como el idioma universal de los negocios. La armonización en Europa tiene cinco aspectos a favor:

*Primero:* El Euro como la moneda común permite que los estados financieros se presenten con una moneda única que, a su vez, se convierte en la unidad de medida de las transacciones (McQuaid, 1998).

*Segundo:* El nivel de inflación de los países miembros debe permanecer dentro de un perímetro, lo que evidenciará que la misma está controlada y la moneda tiene un valor estable.

*Tercero:* La Unión Europea funciona como un estado, o sea se trata de la integración política y económica de varias naciones de Europa que han evolucionado de un mercado común a una unión.

Cuarto La Unión Europea, con su enmienda a la directriz cuatro, ha establecido el uso del justo valor en el mercado para valorar sus activos. Esto facilita la valoración de los activos de las empresas que intercambiaran sus valores en los mercados de capital. Quinto La adopción del inglés como el idioma de los negocios evitara que las empresas presenten sus estados financieros en varios idiomas (Kranacher, 2008 and 2010). Sobre el Euro como moneda común de la Unión Europea vale la pena señalar que Bulgaria, Dinamarca, Letonia, Lituania, Hungría, Polonia, República Checa, Reino Unido, Rumanía y Suecia no aceptaron participar por el momento en el uso del Euro. Sin embargo hay que destacar que las empresas inglesas están preparando sus reportes usando el Euro para facilitar su entrada a los mercados de capital de la Unión Europea. Además, se han establecido tasas de intercambio de paridad entre el Euro y las monedas de estas naciones para facilitar que eventualmente se unan a la moneda común (McQuaid, 1998). El propósito de esta armonización es ofrecer a las empresas europeas un mercado de capital uniforme a la vez que atienden la necesidad de los inversionistas y el reclamo de estos para que se armonice la contabilidad. Esto permitirá el libre flujo de capital y el uso eficiente del mismo (Wilson, 2002). Sin embargo, una de las amenazas mayores que enfrenta este esfuerzo es el hecho de que para atender los problemas de índole legal, la directriz será flexible. Para que esta iniciativa tenga éxito es necesario que sea obligatoria y se le dé fuerza legal.

#### La Junta de Normas Internacionales de Contabilidad (IASB, Por Sus Siglas en Inglés)

Fundada en el 1973 gracias a un acuerdo de colaboración entre los principales cuerpos profesionales contables de Australia, Canadá, Francia, Alemania, Japón, México, Países Bajos, Reino Unido, Irlanda y Estados Unidos. En la actualidad más de 128 naciones han adoptado el uso de las NIIF. La IASB es una organización que no pertenece al gobierno, su afiliación es voluntaria. En ese sentido se parece a su contra parte en EU, la FASB y al Instituto Americano de Contadores Públicos Autorizados (AICPA, por sus siglas en inglés). El IASB está gobernada por representantes de 13 países, incluyendo los países fundadores afiliados que se mencionaron anteriormente.

La Junta de Normas Internacionales de Contabilidad (IASB), antes conocida como el Comité de Normas Internacionales de Contabilidad (IASC), tiene la encomienda de establecer las normas o reglas uniformes que se usaran para la presentación de Estados Financieros Consolidados de empresas que deseen participar en un mercado de capital integrado para todas las naciones de la Unión Europea. La IASB no tiene poder legal sobre las empresas. Antes de la directriz, el uso de sus normas era voluntario. El éxito o fracaso de

las enmiendas a las directrices cuatro y siete, emitidas por el Parlamento Europeo, dependerá de los 40 cuerpos reguladores -con poder legal-, de las naciones participantes para hacer obligatorias las mismas (Wilson, 2002). En la Unión Europea se ha organizado el Comité Europeo para Regular Intercambio de Valores. El objetivo de esta organización es darle poder a las normas, hacerlas obligatorias. Sin embargo, los esfuerzos de la Comisión Europea hacia el mercado único de capital parecen no tener éxito ante el rechazo del Parlamento Europeo a una propuesta en ese sentido. Esto es evidencia de que desarrollar un marco legal que promueva el mercado de capital único para Europa no será fácil. La pluralidad de valores y la forma en que se intercambian los mismos, así como la diversidad de los usuarios de la información, contribuyen a la fragmentación de los mercados de capital en Europa. Esto representa la imposición de costos en transacciones de capital que se efectúan entre los inversionistas de distintas naciones. Sin embargo, se entiende que las fuerzas del mercado van a prevalecer y que eventualmente emergerán unas regulaciones uniformes que permitan la conversión de los mercados de capital fragmentados en uno integrado. Una fuerza que estimulará el establecimiento del mercado uniforme será la necesidad que tienen los fondos de pensiones por conseguir un mercado de inversión eficiente y confiable (Wilson, 2002). Hoy día la uniformidad en Europa es un hecho, aunque quedan aspectos por conciliar, pues las naciones miembros se reservan el derecho a requerir o eximir a sus empresas del uso de una u otra regla de las NIIF.

Otro reto que enfrentaron las normas de contabilidad internacional es que la Comisión de Cambios y Valores de Estados Unidos requería a las empresas que venden valores en el mercado estadounidense reconciliaran sus resultados usando las normas de Estados Unidos. Afortunadamente este requisito se derogó en noviembre de 2007. Esto representa un respaldo parcial a las normas internacionales. Sin embargo, el poder de la SEC sobre las reglas que deben usar las empresas que venden valores en los mercados de EU le da mucho poder e influencia. La Junta de Normas de Contabilidad Internacional realiza esfuerzos continuos para obtener el endoso de las Comisiones de Valores e Intercambio de todas las naciones socias. Esta organización se conoce como la Organización Internacional de Comisiones de Valores (International Organization of Securities Commissions, IOSCO por sus siglas en inglés) (Street, 2008). La Comisión de Cambios y Valores de Estados Unidos forma parte del IOSCO y solo endosará las normas internacionales que sean similares a las que pronuncia la Junta de Normas de Contabilidad Financiera (Street, 2008). Por eso el acuerdo de convergencia es tan importante para que eventualmente la SEC acepte el uso de las NIIF para todas las empresas que participen del mercado de valores de EU. La Unión Europea se opone a que las normas internacionales sean una copia de las normas de Estados Unidos. Por el momento, la Junta de Normas Internacionales de Contabilidad está trabajando de forma acelerada en la creación de normas que promuevan la transparencia, un lenguaje común, la confianza y la calidad de la información. El propósito es promover la creación de un mercado Europeo que responda a los intereses de los inversionistas y de la Unión Europea.

En la Unión Europea, el Parlamento tiene el poder legal para imponer las normas mediante leyes que se aplican a todas las empresas que hacen negocios dentro de la zona. Estas leyes requieren de ajustes dentro de cada estado de la Unión Europea (entiéndase, nación independiente). Debemos recordar que para algunas naciones la contabilidad tiene una orientación legal y en otras no. Esto significa que para algunas naciones dentro de la unión la contabilidad es altamente prescriptiva, detallada y específica (orientación legal) y en otras es más innovadora y adaptable a las situaciones de negocios. Algunos estados de la Unión Europea ven esto como una pérdida de autonomía o el poder nacional cediendo ante el interés de la Unión. Un grupo de contadores, similar al Contador Público Autorizado, tiene la encomienda de examinar mediante procedimientos de contabilidad y el apego de las empresas a las normas y principios de contabilidad internacional. En esto se puede establecer una similitud con sus homólogos de Estados Unidos. Es pertinente señalar que muchos servicios profesionales de contabilidad se importan de Estados Unidos. Esto produce una fuerte influencia de las normas de contabilidad estadounidense en Europa.

Las Cuatro Firmas Grandes de Contabilidad (Big Four) de Estados Unidos tienen sucursales en Europa. Esto sirve para demostrar el liderazgo que tiene Estados Unidos en el área de contabilidad y auditoría en el ámbito mundial. A su vez, estas firmas grandes son los principales promotores en el proceso de aprendizaje y uso de las NIIF. Existe un grupo de profesionales que se ha organizado para impulsar el desarrollo de la profesión de contadores en el ámbito mundial. Este grupo, fundado en el año 1977, se conoce como la Federación Internacional de Contadores (International Federation of Accountants, IFAC por sus siglas en inglés). Esta organización está más interesada en el desarrollo profesional de los contadores que en las normas o prácticas contables. El complemento perfecto es el Comité Internacional de Prácticas de Auditoría (International Standard Auditing Committee).

### Normas de Contabilidad de Estados Unidos

Según la SEC, Estados Unidos tiene el mercado de capital más grande y poderoso del mundo. Las normas y principios de contabilidad se hacen procurando proveer información pertinente y relevante a los usuarios de los reportes financieros. La contabilidad de Estados Unidos está orientada hacia el usuario (Green, 2001). Esto es lo que la Unión Europea está procurando (Kranacher, 2010). Sin embargo, para los europeos las normas estadounidenses contienen demasiado detalle y no son del todo claras o transparentes, argumentando lo ocurrido en el caso de la Empresa Enron (Kranacher, 2010). Mientras que, en el otro lado del océano, los expertos en la materia rechazan el argumento europeo. Estos señalan que la calidad de los pronunciamientos, las normas y los principios de contabilidad de Estados Unidos no se pueden cuestionar. Prueba de esto es la estabilidad de los mercados financieros de la nación. Además, la experiencia de años y la diversidad de empresas o industrias que existen en EU es algo que no tienen las normas internacionales. Como se había mencionado antes, en Estados Unidos existe una agencia de gobierno que se encarga de velar por que todas las empresas que ofrezcan sus valores al público presenten informes financieros en armonía con los principios de contabilidad de aceptación general de la nación. Esta agencia se conoce como la Comisión Cambios y Valores (SEC).

Fue creada para la década de los 30 y su misión es fiscalizar la información financiera que producen las empresas para obtener la confianza de los usuarios. Es responsable por exigir que las empresas que venden valores al público cumplan con las leyes 1933 y 1934. Para lograr esto, entre otros requisitos se exige que los estados financieros de las empresas que trafican sus valores en el mercado estadounidense estén auditados. De esta manera la agencia se asegura que cumplen con las normas establecidas tal y como exigen las leyes antes mencionadas. La Comisión de Cambios y Valores permite que una organización privada establezca normas de contabilidad. Desde 1973, la entidad que tiene esta función a cargo es la Junta de Normas de Contabilidad Financiera (FASB por sus siglas en inglés). Esto hace que las normas y principios de contabilidad se tengan que seguir obligatoriamente. La SEC tiene el deber de velar y proteger los intereses de los acreedores e inversionistas. La confianza en los mercados de capital depende de esto. Los programas profesionales de las universidades preparan a los contadores con toda una gama de conocimientos para que puedan acumular, producir y comunicar la información financiera de las empresas. Otro grupo de profesionales de contabilidad recibe una licencia, estos se conocen como Contador Público Autorizados, CPA por sus siglas en inglés.

Estos últimos realizan exámenes independientes de los informes financieros que producen las empresas y emiten una opinión sobre la razonabilidad de estos. Estos exámenes reciben el nombre de auditoría. Los CPA deben ser personas independientes de la empresa que produce la información financiera y tienen la misión de testimoniar que los reportes financieros cumplen con las normas y principios de contabilidad de Estados Unidos y que representan de forma razonable la realidad económica de la empresa. En el pasado la opinión establecía el cumplimiento del uso de los principios de contabilidad sin identificar la procedencia de tales principios. En la actualidad, la opinión debe establecer el lugar de procedencia de tales principios. El servicio que prestan los CPA añade credibilidad a la información financiera y transparencia en los

procesos (American Institute of CPA's, 2011). Además, estos se convierten en representantes independientes de los usuarios de dichos estados (American Institute of CPA's, 2011). Este es el complemento perfecto para darles a los inversionistas mayor confianza en la información. Este grado de seguridad permite al inversionista medir su riesgo y promueve decisiones informadas que permitan la eficiencia de recursos (American Institute of CPA's, 2011).

En el mercado de capital de Estados Unidos vemos una labor conjunta de tres organismos que aportan a la comprensión, cumplimiento y evaluación de la información financiera que producen las empresas. Estas tres organizaciones son:

IFASB, Junta de Normas de Contabilidad Financiera, su función es establecer las normas y principios de contabilidad que se usan en las empresas. Emite interpretaciones sobre su utilización y su significado.

SEC, Comisión de Valores e Intercambio, su función es asegurar que se cumpla con las leyes federales que obligan el cumplimiento de las normas de contabilidad a toda entidad que ofrezca sus valores al público.

AICPA, esta organización agrupa a la mayoría de los contador públicos autorizados de EU, la función principal de los CPA es evaluar (auditar) los estados financieros de las empresas y emitir una opinión sobre el uso correcto de los principios de contabilidad y la razonabilidad de la información financiera que presenta la empresa. Esto es, que los estados financieros se presenten libres de errores materiales y representen razonablemente la realidad económica del negocio.

#### Normas Internacionales Vs. Normas de Estados Unidos

En una ronda de discusión de la Asociación Americana de Contabilidad (AAA por sus siglas en inglés) y representantes de Inglaterra se discutió y analizó lo que la Asociación entiende que debilita las normas internacionales como las normas a usarse en el ámbito global. Los participantes en esta ronda identificaron cuatro retos claves que enfrentan las normas internacionales. Estas son:

Las normas internacionales tienen una mala reputación para asegurar la credibilidad en el ámbito mundial. El ofrecer tratamientos alternativos a transacciones idénticas y la presencia de ambigüedades evita que sea clara y efectiva. Este cuadro permite que las empresas se las arreglen para darle la vuelta a las normas y ajustarlas a sus realidades en lugar de ajustar la empresa a las normas. El plan para adoptar las normas internacionales para el 2005 es muy ambicioso. El principal obstáculo que se ve es la Comisión Europea que, por un lado, tiene la encomienda de velar que se implementen las enmiendas a las directrices cuatro y siete y por el otro como la entidad que fiscalice a la Junta de Normas de Contabilidad Internacional, actuando como el SEC pero en el ámbito Europeo. Muchos ven esta movida como la fuerza reguladora y otros la ven como una interferencia burocrática al proceso. Era necesario lograr eliminar el requisito de la reconciliación F-20 que la SEC exigía a las empresas extranjeras interesadas en participar del mercado de capital de Estados Unidos. Esta situación ya fue superada, desde noviembre de 2007, la SEC permite el uso de NIIF para las empresas extranjeras listadas en la bolsa de valores de EU y espera que no más temprano de 2015 se adopten las NIIF para todas las empresas que venden valores al público en EU. Asegurarse que los contadores de todas partes del mundo cumplan cabalmente con lo dispuesto por las normas internacionales, que no se limiten a cumplir con las normas nacionales que pueden ser tan divergentes de lo que proponen las normas internacionales.

Este parece ser el reto más complejo de todos. En Europa existe un rechazo a las normas de contabilidad de Estados Unidos por entender que se trata de un libro masivo de reglas que exige a las empresas el ceñirse a la letra y no a la esencia de lo que se quiere (Kranacher, 2010); (Heffes, 2009). También expresan que la flexibilidad es la fortaleza mayor de las normas internacionales. Los escándalos recientes de empresas que

han burlado la aplicación de las normas “tan rigurosas” de contabilidad de Estados Unidos son una muestra de la vulnerabilidad de las mismas (Green, 2001). Además, Europa no aceptará que Estados Unidos le imponga la pauta (Cheney, 2002). Esto último es lo que se conoce como la guerra política de contabilidad entre la Unión Europea y Estados Unidos y parece ser la manzana de la discordia. Una muestra de la fricción existente entre la Unión Europea y Estados Unidos ocurrió cuando una propuesta del Comité Internacional de Normas de Contabilidad fue rechazada por considerar la propuesta de normas una muy parecida al estilo estadounidense (Springsteel, 1998).

Otra controversia surgió cuando la directriz cuatro de las normas internacionales permitió valorar los activos al justo valor en el mercado. Este tratamiento produce una diferencia marcada en los resultados de los estados financieros. En Estados Unidos se justifica el uso de costo histórico porque ofrece una prueba irrefutable del valor del activo al momento de la compra y el justo valor en el mercado representa un valor de apreciación que no se puede corroborar. Sin embargo ya existe en Estados Unidos la opción de valorar los activos a su justo valor en el mercado (FASB, 2012). La justificación para la adopción del principio del justo valor en el mercado por la Unión Europea descansa en la utilidad que ofrece a la hora de valorar la empresa. Hay que recordar que la fuerza mayor para la armonización proviene de los inversionistas y para estos es más pertinente conocer el valor actualizado de la empresa y no los valores del pasado. Sin embargo, en Estados Unidos se prefiere valorar el activo a costo porque permite que el mismo se pueda verificar y le da a la información un grado mayor de objetividad. El valor en el mercado de un activo está sujeto a juicios y distintas personas pueden asignar un valor diferente a un mismo activo. Como se puede establecer un valor confiable para los activos que no se sujeten al costo. Además como permitir que una empresa reconozca un ingreso que no se ha realizado, esto también afecta otro principio, el de pareo de ingresos y gastos. Aunque es posible continuar señalando diferencias fundamentales entre las normas internacionales y las de Estados Unidos, recordamos que ese no es el propósito de esta investigación. Entre las grandes diferencias y por ende las aéreas a trabajar en conjunto se destacan las siguientes (Russell y Nanson, 2006):

Combinaciones de negocios

Consolidaciones

Medición a justo valor en el mercado

Distinción entre patrimonio y deudas

Informes de desempeño

Beneficios post retiro, incluyendo pensiones

Informes sobre instrumentos financieros

Activos intangibles

Arrendamientos

Los inversionistas de capital globales desean unas normas internacionales que sean aceptadas en todas partes. Esto es necesario para reducir costos, promover la eficiencia de los mercados de capital, promover la transparencia y permitir la comparación de las empresas. La convergencia ya es un hecho irrefutable y los argumentos a favor de la misma son abrumadores. Atendiendo estos reclamos, las organizaciones principales encargadas de formular las normas y principios de contabilidad se han embarcado en un proyecto de convergencia. Tanto la FASB como la IASB entienden que es la forma de poder servir bien a los usuarios de la información y promover la competitividad, además de atender los otros objetivos. La SEC también ha dejado claro que promueve y busca la uniformidad de la información financiera global. Muestra de esto es que desde noviembre de 2007 no requiere la reconciliación de los estados financieros presentados por las empresas multinacionales extranjeras. De esta manera la SEC dejó de requerir la forma F-20. La SEC acepta que las empresas foráneas presenten sus informes financieros usando las NIIF. Además, se ha pronunciado con claridad sobre la aceptación de las NIIF para las empresas norteamericanas que venden valores al público no antes de 2015.

El 1 de julio de 1973 se establece la Junta de Normas de Contabilidad Financiera (FASB, por sus siglas en inglés). La FASB es una organización independiente y separada del AICPA. La SEC anunció entonces a la FASB como la principal entidad encargada de establecer las normas de contabilidad (Zeff, 2005). Desde el año 2004 la FASB está promoviendo normas y reglas que sean más compatibles con las normas internacionales (Zeff, 2005). Esto como respuesta al acuerdo de convergencia que suscribió en el 2002 con su homóloga IASB. Uno de los logros más destacado es el desarrollo de un marco conceptual bajo un acuerdo de convergencia con el IASB en el 2010. Otro reto que enfrentaron las normas de contabilidad internacional fue que la Comisión de Cambios y Valores de EUA requería a las empresas que venden valores en el mercado estadounidense reconciliaran sus resultados usando las normas de EUA. Afortunadamente este requisito se derogó en noviembre de 2007. Esto representa un respaldo parcial a las normas internacionales. Aun así, la SEC fiscaliza todas las empresas que venden valores en el mercado de EUA y esto le da mucha influencia sobre los organismos que promulgan principios de contabilidad. Por otro lado, en Europa la pluralidad de valores, la forma en que se intercambian los mismos, así como la diversidad de los usuarios de la información, contribuyen a la fragmentación de los mercados de capital (Wilson, 2002). Según Wilson (2002) esto representa la imposición de costos en transacciones de capital que se efectúan entre los inversionistas de distintas naciones. Sin embargo, se entiende que las fuerzas del mercado van a prevalecer y que eventualmente emergerán unas regulaciones uniformes que permitan la conversión de los mercados de capital fragmentados en uno integrado (Wilson, 2002). Wilson señala que una fuerza que estimulará el establecimiento del mercado uniforme será la necesidad que tienen los fondos de pensiones por conseguir un mercado de inversión eficiente y confiable. Hoy día la uniformidad en Europa es un hecho, aunque quedan aspectos por conciliar, pues las naciones miembros se reservan el derecho a requerir o eximir a sus empresas del uso de una u otra regla de las NIIF (Brackney y Witmer 2005).

El desarrollo de la contabilidad en Europa es muy diverso en términos de sus objetivos y usuarios (Batt, 1998). En un comienzo cada nación tenía sus propias normas. Al establecerse la Unión Europea, las naciones miembros se ven en la necesidad de establecer normas para la Unión (Batt, 1998). Los argumentos a favor de las directrices descansan en la necesidad de que los informes se preparen usando unas normas uniformes para todas las empresas que participan del mercado de valores de Europa (Curtis, 2002). Según Curtis se persigue el organizar un mercado de capital que permita el libre intercambio de valores dentro de las naciones miembros de la Unión Europea. Las normas uniformes son necesarias para asegurar la transparencia de los reportes financieros y permitir un entendimiento claro de estos (Curtis, 2002). Se promueve la comparación de la información, lo que permitirá a los inversionistas una mejor comprensión y, por ende, mejor toma de decisiones. Esto producirá y fomentará en un mercado de capital fuerte y eficiente para la Unión (Curtis, 2002). Sin embargo, los esfuerzos de la Comisión Europea hacia el mercado único de capital parecen no tener éxito ante el rechazo del Parlamento Europeo a una propuesta en ese sentido. La Junta de Normas de Contabilidad Internacional realiza esfuerzos continuos para obtener el endoso de las Comisiones de Valores e Intercambio de todas las naciones socias. Esta organización se conoce como la Organización Internacional de Comisiones de Valores (International Organization of Securities Commissions, (IOSCO, por sus siglas en inglés) (Street, 2008). Street (2008) indica que la Comisión de Cambios y Valores de EUA forma parte del IOSCO y ha señalado que solo endosará las normas internacionales que sean similares a las que pronuncia la Junta de Normas de Contabilidad Financiera, la FASB.

Por el momento, la Junta de Normas Internacionales de Contabilidad está trabajando de forma acelerada en la creación de normas que promuevan la transparencia, un lenguaje común, la confianza y la calidad de la información. El propósito es promover la creación de un mercado de capital europeo que responda a los intereses de los inversionistas y de la Unión Europea. Existen buenas razones para promover la convergencia, una de las razones principales de la armonización es reducir los costos para cumplir con las exigencias de las comisiones de intercambio de valores de las distintas naciones (Lew, 2005). También se

persigue la búsqueda de una forma integral de principios y normas confiables que sea capaz de reducir los costos de capital a la vez que se promueve la competitividad y se mejora la eficiencia de los mercados (Malwitz y O'Rourke, 2009). Por eso el acuerdo de convergencia es tan importante de manera que eventualmente la SEC acepte el uso de las NIIF para todas las empresas que participen del mercado de valores de EUA. En la Unión Europea se teme que esta influencia tan fuerte del SEC produzca que las normas internacionales sean una copia de las normas de EUA.

Mientras tanto, EUA observa con detenimiento el fortalecimiento de las normas internacionales como los principios de contabilidad de aceptación general a nivel global. Expertos no descartaban la guerra entre las normas de contabilidad (Green, 2001). De una parte EUA y la Comisión de Valores e Intercambio (SEC) y del otro la Unión Europea y las NIIF. Muchos han interpretado la movida de la Unión Europea como una respuesta para evitar que EUA les dicte la pauta de cómo debe ser la contabilidad de estos (Green, 2001). A pesar de que ya EUA, mediante la SEC han aceptado permitir el uso de las NIIF para el 2015, muchos piensan que la SEC se está dejando sentir en el IASB.

### Normas de Contabilidad de EUA

El objetivo principal de la contabilidad es ofrecer información útil para la toma de decisiones a los proveedores de capital actuales y potenciales (Green, 2001). Preservar la confianza de los inversionistas en la información financiera que presentan las empresas. Para reforzar esto el Congreso de EUA aprobó la Ley Sarbanes Oxley luego de los escándalos de Enron y otras empresas en el año 2000 que minaron la confianza de los inversionistas. En junio de 2012 la Comisión de Cambios y Valores dejó en suspenso la posible adopción de las normas internacionales de información financiera en EUA. Esta determinación sorprendió a la IASB y ahora muchos dudan que la SEC permita el uso de las NIIF en los informes financieros de las empresas domesticas de EUA. Se dice que el 2012 no fue un buen año para las NIIF en Estados Unidos. A la decisión de la SEC se une el hecho que tanto la FASB y la IASB no han logrado ponerse de acuerdo en temas como arrendamientos e instrumentos financieros lo que representa una dificultad mayor en el acuerdo de convergencia (ICAEW 2012). Además, señala que nunca se va a poder lograr un 100% de uniformidad.

## **METODOLOGIA**

Esta investigación está basada en una amplia revisión de literatura. Se estudió el desarrollo de la contabilidad de EUA y el desarrollo de las normas internacionales de información financiera. Se analizó mediante la revisión de literatura las diferentes tendencias y momentos que han marcado la trayectoria de las NIIF en EUA. Por último hace un pronóstico sobre el futuro de la adopción de la NIIF en EUA.

## **CONCLUSIONES**

La aceptación de las Normas Internacionales de Información Financiera en Estados Unidos luce incierta. Antes de junio de 2012, todo parecía indicar que la SEC estaba convencida de permitir su uso para una fecha posterior al año 2015. Sin embargo en su informe de 2012 dejó en suspenso esa decisión. Muchos de los estudios encontrados dicen que al parecer las NIIF nunca van a ser aceptadas en EUA. La mayoría reconoce que las NIIF tienen la calidad necesaria pero aun así siguen con otras interrogantes entre las que están las fuentes de financiamiento de la IASB, la independencia del cuerpo y la influencia política a la que está expuesta. Por otro lado agrupaciones importantes como la AAA entiende que la existencia de dos cuerpos reguladores de normas contables permite la presión y fiscalización entre ambas y que eso es bueno para asegurar la continuidad de normas y principios de contabilidad de calidad global. También se alega que un cambio de principios de contabilidad generalmente aceptados de EUA "GAAP" a NIIF le producirá un costo enorme a las empresas domesticas parecido al que ocasiono la aplicación de la Ley Sarbanes

Oxley. A esto se añade que múltiples estudios señalaron que el nivel de familiaridad que tienen los profesores, estudiantes y profesionales de EUA con las NIIF es muy limitado y no están listo para semejante cambio. Sin embargo, la propia FASB ha señalado en varias ocasiones que solo debe existir un cuerpo rector que establezca las normas de contabilidad de calidad a nivel global.

Las cuatro firmas de contabilidad también han realizado grandes esfuerzos por prepararse para el uso de las normas internacionales. De hecho las firmas de contabilidad han financiado programas universitarios para promover la inclusión de cursos de contabilidad internacional en los currículos universitarios y han ofrecido asesoría y ayuda a sus clientes en naciones que han adoptado las normas internacionales de información financiera. El AICPA también favorece que se reconozca una sola organización responsable de establecer las normas de contabilidad a nivel global. Prueba de esto es que desde el año 2011 se han incluido preguntas relacionadas a las NIIF en el examen de revalidación de los futuros CPA.

A esto le podemos añadir que la IASB respondiendo a las interrogantes y señalamientos de la SEC, entiende que la calidad de las normas de internacionales de información financiera es incuestionable. Que existe un reclamo global para que se seleccione una sola organización que establezca las normas contables. Que el grupo de ministros de finanzas de las 20 economías más poderosas del mundo, conocidos como los G20, demandan una sola entidad para establecer las normas contables. Además, argumentan que los inversionistas y los mercados de valores van a estar mejor servidos si se aceptan una normas de contabilidad globales y se deja una sola organización para promulgar los mismos. La necesidad de transparencia, uniformidad de principios y la competencia por obtener los recursos financieros que necesitan las empresas y la información que demandan los inversionistas llevarán eventualmente a la SEC y por ende a EUA a aceptar las normas internacionales en una fecha futura aún no determinada.

## **LIMITACIONES**

Este estudio recoge la postura y posiciones de diversos sectores que gobiernan la contabilidad y que presentan la opinión de los autores con relación al tema discutido. No se realizaron procesos científicos o estadísticos para obtener la información. Tampoco se aplicaron modelos estadísticos.

## **CONTRIBUCIONES**

Este estudio presenta una discusión en español de un tema de mucha actualidad que ha producido una enorme literatura sobre el tema en inglés. De esta manera insertamos a la comunidad hispano parlante en la reflexión sobre este tema y promovemos la reacción y discusión futura del mismo.

# LA RUEDA DE ANÁLISIS DEL CONSUMIDOR MICROFINANCIERO COLOMBIANO: UNA PROPUESTA METODOLÓGICA DE INVESTIGACIÓN PARA SERVICIOS FINANCIEROS

Santiago García Carvajal, Universidad Militar Nueva Granada

## RESUMEN

*El artículo propone un análisis del consumidor Microfinanciero en Colombia a partir de su adaptación al entorno que presenta la industria a partir unas definiciones básicas: la visión original denominada (alivio a la pobreza), representada generalmente por la Cumbre de microcrédito y Yunus con su banco Grameen; y la segunda visión denominada (minimalista), representada por actores como el CGAP (Consultative Group to Assist the Poor), USAID (Agencia de Estados Unidos para el Desarrollo Internacional), ACCION International y la Universidad del Estado de Ohio entre otros. Para el Análisis del Comportamiento se llevó a cabo un Análisis Factorial para determinar unos segmentos de mercado en función de su tamaño y composición. Finalmente se analizó el sistema afectivo-cognitivo del consumidor microfinanciero por medio de escalamiento multidimensional para obtener el mapa perceptual de los consumidores.*

**PALABRAS CLAVE:** Mercadeo Bancario, Microfinanzas

## THE WHEEL OF COLOMBIAN MICROFINANCE CONSUMER ANALYSIS: A METHODOLOGICAL RESEARCH PROPOSAL FOR THE FINANCIAL SERVICE INDUSTRY

### ABSTRACT

*The article proposes an analysis of the Microfinance consumer in Colombia from its adaptation to the environment that the industry presents from some basic definitions: the original vision called (poverty alleviation), generally represented by the Yunus Microcredit Summit and his Grameen bank and the second vision called (minimalist), represented by actors such as CGAP (Consultative Group to Assist the Poor) USAID (United States Agency for International Development) ACCION International and the Ohio State University among others. Factor analysis is carried out for behavioral analysis, size and composition. Finally the affective-cognitive system was analyzed through multidimensional scaling to get the microfinance consumer perceptual mapping.*

**JEL:** M14, M16

**KEYWORDS:** Financial Marketing, Microloaning

## INTRODUCCIÓN

El artículo propone un análisis de la conducta del microtenedor de servicios financieros en Colombia bajo la Rueda de análisis del Consumidor como marco teórico fundamental, formulada inicialmente por Paul Peter & Jerry C. Olson. (peter & Olson, 2008) Dos investigadores que ampliamente han difundido su visión conductista del comportamiento del consumidor en función de la estrategia de Mercadeo. A pesar de

reconocer en ésta metodología una propuesta muy reduccionista de la realidad, ayuda a construir un plan de acción frente a la ambigüedad del consumidor como ser humano en su inmenso desorden.

Como se ve en la figura 1, cada uno de los tres elementos está conectado por una flecha de doble sentido, la cual indica que cualquiera de ellos puede ser causa o efecto de un cambio en uno o más de los elementos restantes. Los procesos de toma de decisiones del consumidor no sólo involucran un sistema dinámico e interactivo, sino que también representan un sistema recíproco. La Estrategia de Marketing es un conjunto de estímulos colocados en el ambiente del consumidor cuyo objetivo es influir en sus afectos, cognición y comportamiento.

Figura 1: La Rueda de Análisis del Consumidor

*Existen tres elementos del análisis del consumidor y las relaciones entre ellos. Cada uno es crítico para desarrollar la comprensión plena de los consumidores y elegir estrategias para influir en ellos. 1 Entorno: Las grandes fuerzas que influyen el presente y futuro de una sociedad, son las características demográficas, económicas, tecnológicas, políticas y culturales afectan directamente el micro entorno de un negocio. Un análisis estructural de la relación entre la industria y la sociedad, puede facilitar el análisis de los segmentos de consumidores. 2. Afectos y cognición del consumidor: Los afectos y cognición del consumidor son dos tipos de respuestas mentales que los consumidores experimentan con respecto a los estímulos y eventos de su ambiente. El término afectos se refiere a los sentimientos que se tienen hacia esos estímulos y eventos, como el agrado o desagrado en relación con un producto. La cognición abarca los pensamientos, como las creencias relativas a un producto.*

En el caso Colombiano, el interés público (estatal) en el sector microfinanciero se plasmó a través de un rango de iniciativas. Las mismas se ocuparon de establecer claras definiciones sobre el sector, promover la oferta de servicios de crédito y ahorro desde el sector privado y desarrollar tareas de capacitación, entre otros aspectos. Hacia 1994 se crea el Plan Nacional de Desarrollo de la Microempresa. Posteriormente, con la Ley 590 del año 2000, se crea la Ley Pyme cuyo objetivo era la promoción del desarrollo de micro y medianas empresas. En el marco nacional, la definición de Microcréditos en el sector financiero colombiano es la siguiente: operaciones definidas en los sistemas de crédito y créditos otorgados a microempresas cuya fuente de pago principal provenga de los ingresos derivados de la actividad. El monto del endeudamiento en el sistema debe ser igual o menor a los 25 salarios mínimos, excluyendo los créditos hipotecarios para la vivienda (Ley 590 del año 2000).

Esta ley también establece definiciones funcionales sobre las microfinanzas en Colombia: Microempresa: aquella (empresa) cuyo personal no supera los 10 trabajadores y sus activos totales (excluida la vivienda) son inferiores a 500 salarios mínimos mensuales. Sistema de microcrédito: entendido como el sistema de financiamiento a microempresas, con préstamos inferiores a los 25 salarios mínimos. Esto, autorizó a los intermediarios financieros y a las organizaciones especializadas en crédito microempresarial, a cobrar honorarios y comisiones determinadas por el Consejo Superior de la Microempresa. Esta flexibilización obedece a la política que fija techos a las tasas de interés a todas las operaciones de crédito. Las tasas son establecidas actualmente por la Superintendencia Financiera. De esta forma, estos conceptos no son

considerados como intereses a los efectos de lo estipulado en la legislación colombiana sobre las operaciones financieras. En el año 2003 se creó una nueva modalidad de microcrédito destinado a financiar las viviendas de los microempresarios. Mediante la Ley 795 de 2003 se estableció la figura de microcrédito inmobiliario para la adquisición, construcción o mejoramiento de inmuebles.

Para el año 2006, se crea la Ley 1014 con el fin de fomentar la cultura del emprendimiento que además propuso realizar acuerdos con las entidades financieras para que los planes de negocios de los nuevos empresarios sirvan como garantía para el otorgamiento de créditos. Por otro lado el tratamiento común que se le ha dado al microcrédito en Colombia está en concordancia con el Decreto 919 de 2008 el cual indica: “Microcrédito. Es el constituido por las operaciones activas de crédito a las cuales se refiere el artículo 39 de la Ley 590 de 2000 sobre los sistemas de microcrédito: “Con el fin de estimular las actividades de microcrédito, entendido como el sistema de financiamiento a microempresas, dentro del cual el monto máximo por operación de préstamo es de veinticinco (25) salarios mínimos mensuales legales vigentes sin que, en ningún tiempo, el saldo para un solo deudor pueda sobrepasar dicha cuantía, autorizase a los intermediarios financieros y a las organizaciones especializadas en crédito microempresarial, para cobrar honorarios y comisiones, de conformidad con las tarifas que autorice el Consejo Superior de Microempresa, no repuntándose tales cobros como intereses, para efectos de lo estipulado en el artículo 68 de la Ley 45 de 1990”.

Como se observa en el anterior aparte, las microfinanzas en Colombia desde la normatividad nacional han adoptado una transformada concepción respecto a las características de los objetivos del modelo original, es decir, si bien los microcréditos están enfocados a iniciativas productivas, tienen los rasgos típicos de los créditos de la banca tradicional. Al respecto, la participación de la banca comercial en el microcrédito colombiano es preponderante frente a la intervención del estado, que se limita a la regulación y le deja las puertas abiertas a la banca tradicional para manejar el modelo. Una vez obtenido las diferentes concepciones y tratamientos de las microfinanzas, es necesario realizar una comparación y ubicación de las visiones de este sector. Con el fin de lograr identificar sus principales diferencias y su transformación hacia los conceptos tradicionales de la globalización ligados a interpretaciones del desarrollo o precisamente ligados a la dinámica del sistema financiero.

## REVISIÓN LITERARIA

### Primer Elemento de la Rueda de Análisis del Consumidor: el Entorno Micro Financiero en Colombia

El primer enfoque denominado (alivio a la pobreza), representado generalmente por la Cumbre de microcrédito y Yunus, prioriza el impacto en “los más pobres”, relegando la sustentabilidad financiera de la oferta y aludiendo más a menudo al alivio de la pobreza y la oferta de microcrédito junto con otros servicios no financieros (en particular, cursos cortos de entrenamiento empresarial y cuestiones sanitarias básicas). El rasgo más distintivo del Crédito Grameen es no exigir garantía, ni contratos legales; Se basa en la "confianza" y no en un sistema de procedimientos legales; Todos los préstamos se pagan en cuotas (semanales o quincenales); Para obtener préstamos una prestataria debe unirse a un grupo de prestatarias; Los préstamos pueden ser otorgados en una secuencia continua. Se accede a renovaciones cuando se ha pagado el préstamo anterior; Una prestataria puede recibir más de un préstamo simultáneamente. Incluye programas de ahorro tanto obligatorio como voluntario para las prestatarias.

Por lo general estos préstamos son otorgados a través de instituciones sin fines de lucro o instituciones de propiedad, en primer lugar, de las prestatarias. Si se lo hace en el marco de instituciones con fines de lucro, se hacen esfuerzos para mantener la tasa de interés a un nivel cercano al necesario para la sostenibilidad del programa y no para generar utilidades atractivas para los inversionistas. Una regla básica del Crédito Grameen es mantener las tasas de interés lo más cercanas posibles a la de mercado, vigentes en el sector

bancario comercial, sin sacrificar la sostenibilidad. Al fijar la tasa de interés, se toma como referencia la tasa de interés de mercado y no la de los prestamistas. La banca Grameen se inició como un reto a la banca convencional que rechazaba a los pobres, clasificándonos como "no sujetos de crédito". En consecuencia, rechazó la metodología básica de la banca convencional y creó su propia metodología. El Crédito Grameen da alta prioridad a la construcción de capital social. Esto se promueve a través de la formación de grupos y centros, estimulando la calidad del liderazgo por medio de la elección anual de líderes de grupos y centros y eligiendo a los representantes a las juntas directivas cuando la institución es de propiedad de las prestatarias. Con el objeto de desarrollar una agenda social de las prestatarias, algo similar a las "dieciséis decisiones", asume un proceso de discusión intensiva entre ellas y las impulsa a tomar en serio esas decisiones e implementarlas. En el transcurso de la década, ante el evidente éxito de estas nuevas entidades con origen del microcrédito en población denominada pobre, las entidades financieras despertaron sus interés en aumentar sus clientes con el sistema de banca con características similares al adoptado por la original banca Grameen, algunos bancos decidieron explorar este nicho de mercado apoyados la mayoría de las veces, por agencias multilaterales o bilaterales.

Este movimiento se dio en algunos casos como respuesta a una situación de competencia severa, como en el caso de Paraguay, y en otros como reconocimiento de un nicho de mercado accesible dada la cobertura de la red de oficinas y de su portafolio de productos. Este último es el caso del Banco Estado en Chile, o en el Perú el Banco de Crédito, que se acercó al nicho de mercado a través de la Financiera Solución. El acercamiento de instituciones financieras formales hacia el segmento microempresarial se ha denominado el downscaling. En este sentido se desarrolla el segundo enfoque denominado minimalista, representado por actores como el CGAP, USAID, ACCION International, la Universidad del Estado de Ohio, entre otros, que sostiene que la población objetivo de las microfinanzas son "los menos pobres de los pobres", preconiza la especialización financiera con todo tipo de servicios financieros y enfatiza la sustentabilidad financiera de la oferta y el alcance está dado por la escala (dando por supuesto el impacto a partir del aumento de acceso a los servicios microfinancieros).

En lo referente a los arreglos desde grandes bancas del sistema financiero, también llamada enfoque o visión "minimalista", encontramos las microfinanzas como una herramienta para la profundización del sistema financiero a través de la ampliación de la bancarización al incluir población antes excluida. Es decir, las microfinanzas desde este enfoque se interpretan como la alternativa de financiamiento de iniciativas productivas lo más cercanas a la economía formal, y que evidencia en un menor término las mismas garantías del financiamiento de crédito tradicional. En la misma línea el Grupo de Consultoría para Ayudar a los Pobres (CGAP) se ha encargado de fijar políticas independientes orientadas a mejorar el acceso financiero a los pobres. Es sostenido por más de 30 agencias de desarrollo y fundaciones privadas (ONG) cuya misión común es la reducción de la pobreza.

Una vez hecha la revisión conceptual como el marco comparativo de las perspectivas del sector de las microfinanzas, podemos tener un panorama para profundizar y realizar una comparación de la estructura del sector a partir de sus iniciativas, sus objetivos y planteamientos para el desarrollo y dinámica de la población. Cabe decir que para realizar objetivamente una comparación de los enfoques y mostrar sus diferencias es necesario tener en cuenta que es imposible simplificar los dos enfoques a través de unas pocas experiencias documentadas y analizadas, ya que el sector de microfinanzas en el mundo lo conforman miles de IMF, por lo tanto al mismo tiempo podrían existir decenas de visiones del sector. Por lo tanto dada la existencia de un amplio universo de estas instituciones en la actualidad se realiza la comparación en función de la primera iniciativa que expone Yunus en sus libros "hacia un mundo sin pobreza" y "El banquero de los pobres; los microcréditos y la batalla contra la pobreza" y como enfoque minimalista las iniciativas apoyadas por el Banco Mundial y el Fondo Monetario Internacional.

De este modo, es también necesario aclarar que estas percepciones pueden variar según el autor y la IMF que analice ya que entre un ejemplo de un enfoque y otro existen diferentes matices. Incluso, cada IMF adopta según su gobierno, sociedad, organizaciones, cultura y desarrollo de las características que se adapten a su entorno; ya sea el normativo, el de la globalización y la dependencia, un entorno independiente y consiente, con perspectiva social, perspectiva económica etc. Al respecto muchas de estas características pueden ser valoradas de diferente manera, ya que los enfoques también hacen parte de un pensamiento y modo de visualizar el modelo de desarrollo que se quiere para las sociedades. A continuación se muestra en la Tabla 1 un resumen comparativo las grandes diferencias halladas en la revisión conceptual y en el marco comparativo; el objetivo de esta Tabla es precisar la perspectiva de los dos grandes enfoques del sector en cuanto a sus actores dominantes, objetivos, población, administración y características que evidencian la transformación del sector y su inserción en la economía global a través de los grandes organismos multilaterales.

Tabla 1: Resumen Comparativo

Características	Alivio a la Pobreza- Banca Grameen – Accion Internacional	Enfoque Minimalista Cgap Usaid, Accion International, la Universidad del Estado de Ohio
Impulsadores de la iniciativa del modelo microfinanciero	ONG, académicos y la organización social, cooperativas	Bancas multilaterales, bancas comerciales y el estado
Instituciones dominantes del modelo de Microfinanzas	La población y el Estado	La banca comercial y el Estado
Administradores de la banca de microfinanzas	Asociación de prestatarios a través de junta.	Banca comercial regulada por el Estado
Forma de apropiación del modelo.	Upscalling	Downscalling
Papel del estado	Socio no dominante	Regulador
Esquema de funcionamiento	Dinámica solidaria y de cooperación	Banca convencional
Objetivo explícito	Oportunidades para la población más pobre	Bancarización de la población menos pobre.
Objetivo implícito	Generar auto sostenibilidad de la economía domestica	Profundización y expansión del sector financiero
Visión de las microfinanzas	Inclusión social	Especialización financiera
Contribución de las microfinanzas al mundo	Desarrollo social	Crecimiento económico
Característica básica del enfoque de microcrédito	La confianza	La garantía mínima
Población objetivo original	Sector rural -mujeres	Microempresas
Población objetivo actual	Rural- Diversa	Mipymes
Situación característica de la población objetivo	Los más pobres (25%)	Los menos pobres de los pobres
Organización social	Grupos	Individuos
Tipo de crédito	Diverso, libre iniciativa productiva	iniciativa productiva formal
Vínculo con el prestatario	Informal	Formal
Tipo de garantía	Ninguna específica	Garantías típicas de la banca convencional
Efectos directos de la dinámica	-Superación de la pobreza -Construcción de capital social -Fortalecimiento de las redes sociales y de confianza -organización social para el desarrollo	-Formalización de las iniciativas productivas -Bancarización de población menos pobre -Inserción al sistema financiero de la población -Disciplinamiento de la población pobre.
Criticas compartidas desde la revisión.	Financiamiento por parte de los gobiernos nacionales e internacionales así como de agencias u organismo no independientes. Esto implica un direccionamiento de las iniciativas y un disciplinamiento hacia las actividades según intereses de los organismos y sus financiadores.	

*Aunque se podría construir una Tabla más amplia sobre las grandes diferencias de los dos enfoques del sector, las diferencias planteadas se pueden considerar suficientes para el cumplimiento de los objetivos propuestos; adicionalmente permite fuera de ofrecer un derrotero de diferencias dar una interpretación del sector respecto a su funcionalidad en la economía global.*

Se puede afirmar que la Tabla 1 resumen es concluyente por sí sola, ya que las grandes diferencias entre los enfoques evidencian las perspectivas en que se desarrolla el sector. En primer lugar observamos que los impulsores de las iniciativas del micro financiamiento desde el enfoque Grameen son cooperativas u

organizaciones sociales sin ánimo de lucro, independientes de bancas convencionales u organismos multilaterales, su financiamiento es a través de donaciones pero no influyen en sus políticas de inversión. En contraparte el enfoque minimalista; los organismos según lo observado actúan dependientemente de los lineamientos del Banco Mundial y Fondo Monetario Internacional, adicionalmente el apoyo que reciben agencias como la USAID provienen de recursos del presupuesto Estadounidense, y estas reportan al Gobierno sus inversiones y desarrollos. Su propósito es explícito en su website: “La ayuda exterior de los Estados Unidos ha tenido siempre el doble propósito de apoyar los intereses de la política exterior americana, expandiendo la democracia y el libre mercado y, al mismo tiempo mejorar la vida de los ciudadanos de los países en desarrollo. Gastando menos de la mitad del 1 por ciento del presupuesto federal, USAID trabaja en todo el mundo para lograr estas metas”.

Por otro lado quienes administran las iniciativas Grameen son las mismas organizaciones a través de acciones de cooperativismo, donde existe una junta democrática de prestatarios que coordinan la iniciativa; en el enfoque opuesto muchas iniciativas son administradas por el gobierno local o nacional o incluso directamente por la banca convencional algunas organizaciones se catalogan como independientes pero nacen a partir de un promotor como la banca comercial y o sus principales ayudas provienen de grupos económicos influyentes.

### Segundo Elementos de la Rueda de Análisis del Consumidor: Afectos y Cognición del Consumidor de Microcréditos

La técnica estadística para inferir el sistema afectivo-cognitivo del Microtenedor financiero es el escalamiento Multidimensional. Esta técnica abarca un conjunto de técnicas matemáticas que permiten al investigador descubrir la “estructura oculta” de una base de datos y determinar cuántas características identificables se pueden discernir, entre diferentes evaluaciones de un grupo de objetos, para ayudar a entender su actitud”(Quaglino & Giuliani, 2011, pág. 3) El escalamiento multidimensional (EMD) es una clase de procedimientos para hacer una representación espacial de las de las percepciones y preferencias de los encuestados, por medio de una presentación visual. Las relaciones percibidas o psicológicas entre estímulos se representan como relaciones geométricas entre puntos de un espacio multidimensional. Estas representaciones geométricas suelen denominarse mapas espaciales. Se supone que los ejes del mapa espacial denotan las bases psicológicas o las dimensiones subyacentes que usan los encuestados para formar percepciones y preferencias de estímulos. (Malhotra, 2008) El EMD se utilizó en la investigación de consumidores microfinancieros para buscar lagunas en el mapa espacial que indiquen oportunidades para desarrollar nuevos servicios.

Según Arce Francisco y Arce (2010) la desemejanza hace referencia a la diferencia de distancia entre dos puntos, incorporando un término de error (por la percepción de los individuos). Completando lo anterior Linares (2001) expresa que en el tema de la semejanza o desemejanza que se hace entre estímulos es importante el análisis de la similaridad, disimilaridad y la distancia. Finalmente está la elección del procedimiento que se va utilizar para trabajar con los datos obtenidos, usualmente se emplea la matriz de disimilaridades; estableciendo la diferencia entre dos objetos y se elige el número de dimensiones en las que se representaran los datos. Así mismo se obtuvo un mapa de tres dimensiones donde se pudo evaluar la magnitud, el sentido y la dirección. Finalmente se obtienen las dimensiones subyacentes de la motivación del consumidor de microcréditos,

$$\Delta = \begin{pmatrix} \delta_{11} & \delta_{12} & \dots & \delta_{1n} \\ \delta_{21} & \delta_{22} & \dots & \delta_{2n} \\ \vdots & \vdots & & \vdots \\ \delta_{n1} & \delta_{n2} & \dots & \delta_{nn} \end{pmatrix} \quad (1)$$

### Tercer Elemento de la Rueda de Análisis del Consumidor: Comportamiento del Consumidor Microfinanciero

El comportamiento de compra del consumidor se refiere a la forma en que compran los consumidores finales, individuos y hogares adquieren bienes y servicios para consumo personal. Todos estos consumidores finales combinados constituyen el mercado del consumidor. Los factores culturales ejercen una influencia amplia y profunda sobre el comportamiento de los consumidores. Se necesita entender el papel que desempeñan la cultura, la subcultura y la clase social del comprador. La cultura es el origen más básico de los deseos y comportamientos de una persona. El comportamiento humano se aprende en gran parte. Al crecer en una sociedad, un niño aprende valores básicos, percepciones deseos y comportamientos a partir de la familia y de otras instituciones importantes. Cada cultura contiene pequeñas subculturas, o grupos de personas que comparten sistemas de valores basados en experiencias y situaciones comunes (Kotler & Armstrong, 2008) Muchos investigadores consideran el análisis factorial como la reina de los métodos analíticos de investigación del comportamiento, debido a su poder, elegancia y cercanía al propósito científico. Sin embargo; se trata de un método que no está libre de controversia. A pesar de que se trata de un método poderoso, no constituye una panacea para estudios mal diseñados o sin diseño. Comrey (1978) señaló que el análisis factorial ha sido un tema de gran discusión y crítica. No obstante a pesar de las críticas, el aumento de su uso continúa. En esta sección se explorarán las subculturas subyacentes en la correlación de variables comportamentales en el consumidor de microcrédito teniendo en cuenta las dificultades que se pueden presentar al usar este método.

El análisis factorial es una prueba de interdependencia. En este tipo de análisis no se determinan variables dependientes e independientes, sino que se identifican variables subyacentes entre variables altamente correlacionadas. En el contexto de la teoría basada en la rueda de análisis del consumidor en los microcréditos el propósito es precisamente identificar unas subculturas de mercado que no solamente estén basados en el comportamiento, el sistema afectivo-cognoscitivo o en el entorno; sino en la reciprocidad entre los tres, de tal manera que las variables subyacentes sirvan de base para interpretar segmentos por estilo de vida. El análisis factorial sirve como herramienta de reducción de datos altamente correlacionados en la construcción de unos pocos factores que para los objetivos de este estudio, pueden ser llamados segmentos. Pueden identificarse entonces varios segmentos no correlacionados para hacer análisis posteriores con estos, o pueden establecerse hipótesis entre las variables pertenecientes a cada segmento. En modelo matemático del Análisis Factorial (AF) supone que cada una de las  $p$  variables observadas es función de un número  $m$  factores comunes ( $m < p$ ) más un factor específico o único. (Montoya, 2007) Tanto los factores comunes como los específicos no son observables y su determinación e interpretación es el resultado del AF. Analíticamente, supondremos un total de  $p$  variables observables tipificadas y la existencia de  $m$  factores comunes. El modelo se define de la siguiente forma:

$$X_1 = l_{11}F_1 + l_{12}F_2 + l_{1m}F_m + e_1 \quad (2)$$

$$X_2 = l_{21}F_1 + l_{22}F_2 + l_{2m}F_m + e_2 \quad (3)$$

$$X_p = l_{p1}F_1 + l_{p2}F_2 + l_{pm}F_m + e_p \quad (4)$$

que se puede expresar de forma matricial como:  $X = Lf + e$  donde:  $X$  es el vector de las variables originales,  $L$  es la matriz factorial. Recoge las cargas factoriales ó (saturaciones)  $X_{ih}$  es la correlación entre la variable  $j$  y el factor  $h$ ,  $f$  es el vector de factores comunes,  $e$  es el vector de factores únicos.

## CONCLUSIONES

### Comportamiento- Sistema Afectivo Cognocitivo y Estrategia de Marketing

La dimensión I y IV son las que mejor se pueden asociar al segmento II (18%), son aquellos empresarios que están evidenciando un crecimiento en su negocio, es el segmento de mercado que hace desarrollar el ciclo de vida de la categoría de microcrédito, ya superó una etapa de inconformidad en la adopción del producto, han adquirido un cierto nivel de confianza por el servicio financiero, estarían dispuestos a acudir a una entidad financiera a solicitar nuevamente un microcrédito. La dimensión II es la que mejor se puede asociar al segmento III (12%). Estos empresarios han estado durante un largo tiempo con el servicio financiero, les empieza a generar mucha inconformidad la tasa de interés que están pagando por el servicio de microcrédito, y le preocupan mucho las tasas del servicio por que el pasivo es insostenible en el tiempo, pero aun así no desea el crédito informal. La dimensión III Adquirió hace muy poco al programa de Microcréditos, aun no lo conoce muy bien, no ha experimentado muchos beneficios de este servicios, no había tenido contacto con el servicio anteriormente, accedió al microcrédito más por huirle al crédito extra bancario que a la motivación por el Microcrédito en sí mismo. La estrategia de Marketing que se propone para la dimensión I consiste en hacer uso de un Crédito rotativo: Es un cupo de crédito ligado a una cuenta de ahorros o corriente, que asigna el banco de acuerdo con los ingresos, su característica principal está constituida por la renovación del cupo disponible a medida que se van efectuando los pagos, además solo se cobra intereses sobre los montos que han sido transferidos la cuenta. La destinación debería ser exclusivamente para capital de trabajo.

La estrategia de Marketing referente a la dimensión II, menos explorada por los microempresarios, son las líneas de redescuento con entidades como Bancóldex, mecanismos efectivos cuando los bancos comerciales facilitan el proceso. Por último y dado que los factores que restringen el crédito a los microempresarios en Colombia son la capacidad financiera y el historial crediticio, bien vale la pena que los establecimientos de crédito desarrollen alternativas “innovadoras” que incluyan programas de formación financiera. Esta debe ser direccionada a las pymes con objetivos claros como enseñar a mantener niveles de liquidez adecuados para atender oportunamente las deudas, sin apartarse de adecuados índices de eficiencia operativa. La estrategia de Marketing para la dimensión III sería crear un fondo de empleados o de asociados sobre montos ahorrados para la compra de insumos. La Estrategia de Marketing para la dimensión IV, sería establecer un crédito de permanencia, beneficios para la empresa, Mecanismo de financiación a mediano y largo plazo, Asegura liquidez por el plazo del préstamo, En caso de un préstamo a tasa fija, asegura la tasa por el plazo del préstamo. En caso de un préstamo a tasa variable, asegura el spread por el plazo del préstamo.

### Entorno y Estrategia de Marketing

Después de lanzar el producto nuevo, el Gerente de Mercadeo quiere que el producto disfrute de una vida larga y feliz. Aunque no espera que el producto se venda eternamente, la compañía quiere obtener utilidades razonables para cubrir todo el esfuerzo y el riesgo en que incurrió al lanzarlo. (Kotler, 2008) Esta es la razón de ser del microcrédito minimalista, se puede penetrar en la mente del consumidor, inferir e interpretar su comportamiento con el nivel de profundidad que se quiera, pero al final siempre estaremos evaluando el desarrollo del servicio sobre la relación a largo plazo entre ventas y gastos, es decir la dirección sabe que todo producto tiene un ciclo de vida, aunque su forma y duración exactas no se conocen con antelación. Por el contrario, en la banca de alivio a la pobreza, se observa que estos préstamos son otorgados a través de instituciones sin fines de lucro o instituciones de propiedad y se hacen esfuerzos para mantener la tasa de interés a un nivel cercano al necesario para la sostenibilidad del programa y no para generar utilidades atractivas para los inversionistas. Una regla básica del Crédito Grameen es mantener las tasas de interés lo

más cercanas posibles a la de mercado, vigentes en el sector bancario comercial, sin sacrificar la sostenibilidad.

**Banca Minimalista:** El concepto de ciclo de vida del producto (CPV) para el consumidor microfinanciero ayuda a converger los hallazgos de todos los elementos de la Rueda de análisis del consumidor en los resultados de la investigación, es decir a encauzar el curso que las ventas y utilidades del servicio durante su existencia. El ciclo de vida del producto Microcrediticio se hizo evidente en la implementación de la metodología del estudio al combinar ambos tipos de análisis, tanto el factorial como el de dimensiones multiples. Este comprende 5 etapas bien definidas: El desarrollo del producto se inicia cuando la compañía encuentra y desarrolla una idea de producto nuevo. Durante el desarrollo del producto, las ventas son nulas y los costos de inversión de la compañía aumentan. Realizar inversión en la capacitación de personal de representación que pueda evangelizar al consumidor sobre el servicio financiero, dar a conocer las ventajas competitivas que tiene adquirir pasivos con el sistema financiero; a diferencia de adquirirlo con prestamistas independientes, por la importancia que tiene tener vida crediticia y la seguridad de deberle a un banco y no a otra persona. La introducción es un periodo de crecimiento lento de las ventas a medida que el producto se introduce en el mercado. Las utilidades son nulas en esa etapa debido a los considerables gastos que se incurre por la introducción del producto. Esa es la característica del microcrédito. Prestar poco dinero a mucha gente y no mucho dinero a poca gente. La profundización financiera está basada en la bancarización y colocación de líneas de crédito. El éxito de esta etapa del servicio es encontrar que muchas personas tengan una línea de crédito de bajo valor, pero que a su vez esté diversificada en tarjetas de crédito, seguros, ahorros etc.

El crecimiento es un periodo de aceptación rápida en el mercado y de aumento en las utilidades, en esta etapa se hace necesario incorporar herramientas que estimulen la innovación en los negocios para el microemprendedor, asesoría más personalizada en la maximización del capital de trabajo, diversificación en las líneas de crédito, planeación financiera etc La madurez es un periodo en el que se frena el crecimiento de las ventas por que el producto ha logrado la aceptación de la mayoría de los compradores potenciales. Las utilidades se nivelan o bajan a causa del incremento en los gastos de marketing para defender al producto de los ataques de la competencia. La carga que genera el pasivo de las tasas de interés sobre un negocio, es el factor que más desmotiva la percepción del consumidor. Este efecto se puede contrarrestar con una buena asesoría gerencial o capacitación, pero la rigidez del sistema financiero sobre la fijación a las tasas de interés hace que con el tiempo el microemprendedor decida continuar con el negocio, financiándolo sólo con ahorros personales.

La decadencia es el periodo donde las ventas bajan y las utilidades se desploman. Banca de Alivio a la pobreza ofrece un panorama nuevo para futuras investigaciones para las instituciones no financieras que fijen una estrategia de fijación de precio, basada en la precisión de la estructura en la tasa de interés, que sirva para atraer y alcanzar la profundización financiera. Eventualmente, muchos de estos tenedores de crédito de organización basadas en alivio a la pobreza, pueden incorporarse en el sistema financiero convencional; sin embargo, pueden también estas instituciones establecer algún tipo de alianza con los bancos para incorporarse en las dos primeras etapas del ciclo de vida bancario antes mencionado y así encontrar un entendimiento mutuo entre ambos tipos de noción microfinanciera ampliamente debatido en nuestro continente pero que en el caso Colombiano presenta unas dicotomías muy grandes a nivel tanto ideológico como administrativo. La conclusión general es que se debe promover una política más flexible en torno al peso que tiene el componente riesgo dentro de la tasa de interés que se cobra por los microcréditos.

## RECONOCIMIENTOS

Agradezco la colaboración y generosidad de los siguientes profesionales por sus valiosas contribuciones en la realización de este estudio: Dr Julio Cesar Gonzalez, Gerente de Mercadeo de Bancamia, Profesor Mario Luis Perossa, Universidad Maimónides, Buenos Aires, Profesor Angel David Roncancio, Universidad Militar Nueva Granada, Bogotá.

## BIOGRAFIA

Santiago García Carvajal, es Administrador de empresas y Magister en Administración con énfasis en Mercadeo, tiene experiencia en Periodismo, Consumo Masivo, Marketing Bancario y experiencia Docente e investigativa desde el 2007. Actualmente se desempeña como coordinador de la especialización en Alta Gerencia a Distancia en la Universidad Militar Nueva Granada, Bogotá-Colombia.

# DIFERENCIAS ENTRE CONTADORES NO CPA'S Y CONTADORES CPA'S CON RELACIÓN AL ACUERDO DE CONVERGENCIA Y A LAS NORMAS INTERNACIONALES DE INFORMACIÓN FINANCIERA

Rafael Marrero, Universidad de Puerto Rico, Recinto de Rio Piedras

## RESUMEN

*Se estudió las diferencias entre los contadores no CPA's y contadores CPA's. En la revisión de literatura se encontró que los CPA's por lo general están más comprometidos con mantenerse al día en la profesión ya que se les requiere educación continuada para conservar sus licencias. Por lo tanto se les considera más comprometido con la ética, la profesión y el servicio público. Luego de la revisión de literatura y usando la base de datos de la tesis: Grado de Familiaridad de Profesores, Estudiantes y Profesionales con el Acuerdo de Convergencia y la Posible Adopción de las Norma Internacionales de Información Financiera en Estados Unidos de América (Marrero, 2013), se analizó las medianas de ambos grupos usando la prueba estadísticas U de Mann-Whitney encontramos que los CPA's presentan medianas un poco más altas que los no CPA's. Sin embargo, la distribución de valores no presenta significancia estadística, por lo que se concluyó que en términos de la muestra evaluada, no hay diferencia estadística significativa entre los CPA's y los no CPA's.*

**PALABRAS CLAVES:** Contador CPA's, Contador No CPA's, Convergencia Entre la FASB y la IASB, Normas Internacionales de Información Financiera

## DIFFERENCES BETWEEN ACCOUNTS NOT CPAS AND ACCOUNTANTS CPA'S REGARDING THE AGREEMENT OF CONVERGENCE AND THE POSSIBLE USE OF INTERNATIONAL FINANCIAL REPORTING STANDARDS IN UNITED STATE OF AMERICA

## ABSTRACT

*We studied the differences between accountant non CPAs and accountant CPAs. The review of literature found that the CPA's are generally more committed to keep abreast in the profession that is required for continuing education to retain their licenses. Therefore considered more committed to ethics, profession, and the public service. After the review of literature, we use the database of thesis: "Level of Familiarity of Professors, Students and Professionals with the Agreement of Convergence and the Possible Adoption of the International Financial Reporting Standard of in the United States of America" (Marrero, 2013), and analyze the medians using the Mann-Whitney U statistical test we found that the CPA's medium value is little high than the non-CPA's However, the distribution of values presents no statistical significance. We concluded in terms of the evaluated sample, that's there is no statistical difference between the values of CPA's and not CPA's.*

## INTRODUCCION

En términos generales la percepción de la mayoría de las personas es pensar que existe diferencia entre los contadores CPA's y los contadores no CPA's. Los Colegios y Asociaciones profesionales que agrupan a los CPA's promueven una imagen de este profesional que lo distingue de aquellos que no tienen licencia de contador público autorizado. En este estudio evaluamos si en realidad existe diferencia entre los CPA's y los no CPA's que contestaron la encuesta usada en la tesis: *Grado de Familiaridad que tienen los Profesores, Estudiantes y Profesionales con Relación al Acuerdo de Convergencia y la Posible Adopción de las Normas Internacionales de Información Financiera en EUA* (Marrero 2013). Este estudio está organizado de la siguiente manera, en la revisión de literatura presentamos artículos que destacan las diferencias entre los CPA's y los no CPA's. En la metodología describimos la muestra y las pruebas estadísticas usadas para analizar los resultados obtenidos de la base de datos. En los resultados presentamos los hallazgos y su significado. En la parte de las conclusiones resumimos y presentamos la interpretación de lo investigado. Por ultimo presentamos las limitaciones y las contribuciones de esta investigación.

## REVISION DE LITERATURA

En la búsqueda de literatura se encontró información limitada sobre las diferencias entre los contadores CPA's y los contadores no CPA's. La mayoría de las distinciones las hacen los colegios y asociaciones profesionales de contadores públicos autorizados de Estados Unidos y Puerto Rico. Tom Hood (2008) señala que contador puede ser todo aquel que practica la contabilidad. Para ser CPA, Hood señala que se tiene que tener una licencia que otorga el estado y eso de por si es la gran diferencia (NYSED, 2009).

En el caso de Puerto Rico la designación de CPA se les otorga solamente a aquellas personas que hayan aprobado un riguroso examen de reválida que ofrece la Junta de Contabilidad de Puerto Rico (Colegio de CPA, 2014). El examen que ofrece la Junta de Contabilidad de Puerto Rico es el examen uniforme que se ofrece en Estados Unidos a los candidatos a CPA. Un CPA se distingue por sus estrictos requisitos de licenciatura. Para ser CPA, es necesario, en muchos lugares, poseer un grado universitario (Colegio de CPA, 2014). En Puerto Rico, es requisito haber completado 150 horas de educación universitaria antes de tomar el examen de CPA (Colegio de CPA, 2014). Cada tres años, deben cumplir con 120 horas crédito de educación continuada (Colegio de CPA, 2014). Ser miembro de organizaciones profesionales es también importante. Por ejemplo, todos los CPA en Puerto Rico son miembros del Colegio de Contadores Públicos Autorizados de Puerto Rico y alrededor de 330,000 contadores en Estados Unidos pertenecen al Instituto Americano de CPA (AICPA, por sus siglas en inglés) (Colegio de CPA, 2014).

En Estados Unidos la designación de CPA es una de las certificaciones profesionales más reconocidas y confiables en el mundo de los negocios (Oklahoma Society of CPAs, 2014). El CPA se distingue de otros profesionales de las finanzas por las calificaciones estrictas y requisitos de licencia (Oklahoma Society of CPAs, 2014). Las personas han trabajado duro para obtener la designación de CPA, y están comprometidos a trabajar más duro para mantener el valor que transmiten (Oklahoma Society of CPAs, 2014). En los círculos comerciales y financieros, la designación de CPA ofrece una enorme credibilidad (Pennsylvania Institute of Certified Public Accountants, 2010). De hecho, los CPAs son considerados los asesores más confiables del negocio, según a una encuesta reciente realizada por el AICPA (Pennsylvania Institute of Certified Public Accountants, 2010). Esta confianza no es sorpresa debido a la consideración de los requisitos estrictos para entrar y quedarse en la profesión (Pennsylvania Institute of Certified Public Accountants, 2010). El CPA tiene la inteligencia, la ética, la integridad y el compromiso de servir de por vida siguiente los más altos estándares (Pennsylvania Institute of Certified Public Accountants, 2010). Sólo un CPA puede realizar auditorías de estados financieros en EEU y Puerto Rico (Day, 2008). Además, sólo un CPA puede preparar revisiones de estados financieros (Day 2008). Sin embargo las compilaciones de estados financieros pueden ser preparadas por CPA's y los contables no CPA's (Day 2008)

En contraste con los CPAs, los contadores no CPAs, no tienen requisitos de educación continuada rigurosa y requisitos de experiencia (Pennsylvania Institute of Certified Public Accountants, 2010). Típicamente, los contables se gradúan de un colegio o universidad con un grado de contabilidad (Pennsylvania Institute of Certified Public Accountants, 2010); (NYSED, 2009). Su alcance de trabajo se limita generalmente al cuidado de los libros de contabilidad, manteniendo cuentas generales del negocio y a cargo de asuntos de impuesto simples (Pennsylvania Institute of Certified Public Accountants, 2010). Un contable por lo general no puede realizar tareas más complejas que la leyes solo permiten un CPA (Pennsylvania Institute of Certified Public Accountants, 2010). Es importante notar que todos los CPAs son contables, sin embargo, no todos los contables son CPAs (Pennsylvania Institute of Certified Public Accountants, 2010).

Según Khul (2013) los contadores no CPA's pueden llevar la empresa al siguiente nivel y generalmente pueden manejar la mayoría de los entresijos que experimenta una empresa en crecimiento. Generalmente no aconsejan sobre la dirección futura de la empresa (Khul 2013). Incluso cuando se trabaja con un contador, su compañía probablemente llegará a un punto de inflexión de crecimiento (Khul 2013). Khul señala que los contadores pueden practicar en cualquier base de contabilidad (efectivo o acumulación), pueden manejar las presentaciones de impuestos y trabajo de auditoría interna. Por lo general poseen un grado de contabilidad 4 años (Khul 2013). Son geniales para las empresas con potencial de alto crecimiento, y sus habilidades pueden ser instrumentales cuando intentamos fuera de financiación (Khul 2013). Los contadores experimentan generalmente también en los fundamentos de la contabilidad básica incluyendo análisis financiero, métricas e informes, que ayudan a crear transparencia en la salud financiera de la empresa (Khul 2013). También, es responsable de los trabajos de contabilidad de un individuo o una empresa. Es responsabilidad del contador emitir informes financieros. Estos no necesitan ser profesionales certificados (Khul 2013).

## METODOLOGIA

En este estudio se usaron dos estrategias, primero se realizó la revisión de literatura correspondiente para establecer las diferencias entre los contadores CPA's y los contadores no CPA's. Luego usando la base de datos obtenida en la investigación *Grado de Familiaridad de Profesores, Estudiantes y Profesionales con el Acuerdo de Convergencia y la Posible Adopción de las Norma Internacionales de Información Financiera en Estados Unidos de América* (Marrero, 2013), se analizó para conocer si existían diferencias entre los contadores CPA's y contadores no CPA's con relación al acuerdo de convergencia y la familiaridad con las normas internacionales de información financiera. Para el análisis estadístico se utilizaron la prueba estadística de medianas U de Mann-Whitney. Por tratarse de una investigación exploratoria con variables independientes y valores discretos se utilizaron valores de tendencia central como las medianas para la interpretación de los resultados. Este estudio no presenta hipótesis nula, en su lugar presentamos una pregunta de investigación. La pregunta de investigación es: ¿Existe diferencia entre la familiaridad que tienen los contadores CPA's los contadores no CPA's con el acuerdo de convergencia y la posible adopción de la normas internacionales de información financiera? La Tabla 1 contiene el perfil de la muestra usada

### Muestra

Tabla 1: Muestra de Contadores CPA's y Contadores No CPA's

Categoría	Cantidad	Porcentaje %	Femenino	Masculino
Contador CPA	24	64	11	13
Contador no CPA	14	36	0	14
Total	38	100	11	27

La Tabla 1 presenta el perfil de los que contestaron la encuesta.

La muestra se obtuvo usando la red social conocida como Facebook, se enviaron 50 cuestionarios a exalumnos graduados de la UPR, Recinto de Río Piedras. Se recibieron 40 cuestionarios contestados para un 80 % de respuesta, de esos 40 cuestionarios solo 38 estaban completos para una tasa de cuestionarios válidos de 76%. La muestra no es científica, fue por conveniencia y disponibilidad. El estudio se realizó entre enero y marzo de 2013.

## RESULTADOS

La Tabla 2 presenta los resultados en términos de mediana y promedio para las categorías de familiaridad que tienen los contadores CPA's y los contadores no CPA's con el acuerdo de convergencia y la familiaridad con las normas internacionales de información financiera. Las medianas para ambos grupos es 3, lo que significa que ambos grupos no están familiarizados con el acuerdo de convergencia y con las NIIF.

Tabla 2: Resultado de Medianas y Promedio

Sub-Categorías	Mínimo	Máximo	Mediana	Promedio	Desviación Estándar
Nivel de familiaridad con acuerdo de convergencia entre el FASB y IASB	1	5	3	3.18	0.834
Nivel de familiaridad con las NIIF	1	5	3	2.97	0.854

La mediana para los contadores CPA's y no CPA's es similar y no existe significancia estadística en la distribución de sus valores, por lo que se concluye que no hay diferencia estadística entre los valores de estos dos grupos.

En la Tabla 3 se presenta el resumen de la prueba de hipótesis usando U de Mann-Whitney. El resultado presenta que no hay significancia estadística para los contadores CPAs y los contadores no CPAs que participaron en este estudio. Ambos muestran un nivel de familiaridad similar con respecto a la convergencia y con respecto a la familiaridad con las NIIF.

Tabla 3: Prueba de Hipótesis Usando U de Mann-Whitney

Hipótesis Nula	Significancia	Decisión
La distribución de valores con respecto al nivel de familiaridad con acuerdo de convergencia entre el FASB y IASB es la misma entre los contadores CPA's y los no CPA's	0.520	Se acepta la hipótesis Nula
La distribución de valores con respecto al nivel de familiaridad con las NIIF es la misma entre los contadores CPA's y los no CPA's	0.823	Se acepta la hipótesis Nula

Usando valor de significancia de 0.05, se retiene la hipótesis nula.

En un examen de 6 preguntas incluido en la encuesta se les solicitó a los participantes que indicaran si los tópicos preguntados eran parte de los esfuerzos de convergencia entre la FASB y la IASB. El resultado de la prueba fue de un promedio de 2.83, de un máximo de 6 para un 47.22 % para los contadores CPA's y un promedio de 2.43, de un máximo de 6 para un 40.48 % para los contadores no CPA's. No se encontró significancia estadística entre estos dos promedios. Esto confirma que tanto los contadores CPA's y los contadores no CPA's que contestaron la encuesta no están familiarizados con el acuerdo de convergencia entre la FASB y la IASB.

## CONCLUSIONES

La diferencia fundamental entre los contadores CPA's y los contadores no CPA's es la licencia o certificación que tienen los primeros. Esa licencia o certificación compromete a los contadores CPA's a mantenerse en mejoramiento continuo y por lo tanto estar más alerta a los cambios y tendencias nuevas. Sin embargo al examinar los resultados de los participantes en la encuesta de estos grupos en términos de la familiaridad con la convergencia entre la FASB y la IASB, no encontramos diferencia alguna. Tampoco se encontró diferencia entre el nivel de familiaridad que tienen los participantes del estudio con respecto a las normas internacionales de información financiera.

### Limitaciones

La muestra en este estudio no fue aleatoria, se usó una muestra por conveniencia y todos los participantes son exalumnos de la Universidad de Puerto Rico, Recinto de Río Piedras. Sin embargo es importante señalar que la UPR, Recinto de Río Piedras tiene el programa de contabilidad más grande de las universidades de Puerto Rico. Además, sobre el 75% de los contadores CPA's de Puerto Rico son egresados de la UPR, Recinto de Río Piedras.

# IMPACTO DE LOS INDICADORES DE COMPETITIVIDAD RELACIONADOS CON LA PROPIEDAD INTELECTUAL EN EL COMERCIO INTERNACIONAL

Germán Aníbal Narváez Vásquez, Instituto Tecnológico y de Estudios Superiores de Monterrey  
Julio Cuauhtémoc Guerrero Dávalos, Universidad Michoacana de San Nicolás de Hidalgo  
Jorge Victor Alcaraz Vera, Instituto de Investigaciones Económicas y Empresariales

## RESUMEN

Con la creación de la OMC y la firma del Acuerdo sobre los Derechos de Propiedad Intelectual relacionados con el Comercio (ADPIC) en 1994, se instauró un nuevo paradigma en las relaciones comerciales internacionales. Esta situación dio lugar a muchos debates académicos: Por un lado se afirma que los países con mayor capacidad tecnológica y de innovación se ven beneficiados con dicho Acuerdo, ya que pueden comercializar productos con un mayor valor agregado; y por el contrario, los países con menor desarrollo al no disponer de tecnología ni de recursos económicos quedan relegados de la innovación a ser importadores de tecnología. Por lo tanto, la problemática se presenta debido a que no se ha podido determinar con certeza el impacto del Acuerdo sobre los ADPIC en la competitividad de los países miembros. La metodología que se utilizó fue: el análisis de diferentes estudios empíricos, la síntesis de reportes estadísticos presentados por organismos internacionales y la comparación entre varios indicadores. La conclusión a la que se llegó, fue que los únicos beneficiarios del Acuerdo, por el momento son los “países desarrollados”, los mismos que aprovechan de mejor forma sus recursos económicos y tecnológicos; variables que son adversas para los países de menor desarrollo.

**PALABRAS CLAVES:** Impacto, Indicadores Propiedad Intelectual, Comercio Internacional

## IMPACT OF COMPETITIVENESS INDICATORS RELATED TO INTELLECTUAL PROPERTY IN INTERNATIONAL TRADE

### ABSTRACT

*With the creation of the WTO and the signing of the Agreement on Intellectual Property Rights (TRIPS) in 1994, a new paradigm was introduced in international trade relations. This situation led to many academic debates: firstly states that countries with greater technological and innovation capacity benefit from the Agreement as they can sell products with higher added value, and conversely, countries with less developed in the absence of technology or economic resources are relegated innovation to be importers of technology. Therefore, the problem arises because not possible to determine with certainty the impact of TRIPS on the competitiveness of member countries. The methodology used was: the analysis of various empirical studies, the synthesis of statistical reports submitted by international bodies and comparison of various indicators. The conclusion that was reached was that the only beneficiaries of the Agreement, for the moment are the "developed countries", the same advantage of best economic and technological resources; variables that are adverse to the less developed countries.*

## INTRODUCCIÓN

Con el auge en Investigación y Desarrollo que en la actualidad se presenta, se ha desencadenado un cambio espectacular en las estrategias comerciales y en el desarrollo económico mundial. Bajo este contexto, el Acuerdo sobre los ADPIC se convirtió en el referente normativo para garantizar la equidad y justicia en la relación existente entre los derechos de la Propiedad Intelectual (PI) y el comercio internacional (CI). No obstante, muchos países en desarrollo se enfrentan a auténticos dilemas de orden político y estructural, entre otras cosas, con relación a su alcance y participación en el sistema internacional de patentes, el sistema de Madrid y el sistema de Lisboa. Considerando las anteriores premisas nos encontramos ante dos situaciones: 1) La dificultad para medir el impacto de la PI en el comercio exterior. (GATT, 1987, pp.1-2) Las distorsiones sobre comercio creadas por una insuficiente protección, surgiendo al respecto opiniones encontradas. Para Coenraad V. (2006, p.9), cumplir formalmente con las disposiciones del Acuerdo sobre los ADPIC conlleva altísimos costos para los países en desarrollo. Por su parte el BANK (2001, p.145) sostiene que el cumplimiento de las disposiciones permite a los países en desarrollo atraer una mayor afluencia de tecnología e inversiones extranjeras directas. En este sentido, el objetivo de la presente investigación es determinar de qué forma la los indicadores de PI a través del Acuerdo sobre los ADPIC impactan en la competitividad del CI. Por lo que la metodología utilizada para tal efecto fue analítico descriptiva, ya que se puntualizan las causas de la problemática y se analizan sus posibles efectos sin arribar a inferencias causales o de asociación de variables. Es necesario recalcar que en lo futuro se empleara las expresiones “comercio internacional” o “negocios internacionales” como sinónimos.

La estructura de la presente investigación se encuentra organizada como sigue: En la sección de revisión de la literatura se aborda los siguientes temas: i) La PI, definiciones conceptuales y ámbito de aplicación; ii) Los negocios internacionales y su relación con la PI. En la sección metodológica se describe el proceso científico que permitiría llevar a comprobar los supuestos planteados. Seguidamente tenemos la sección de resultados, donde tratamos temas como: iii) El impacto de los indicadores de Competitividad y de Innovación (relacionados con la PI) y, iv) El impacto de los indicadores del Acuerdo sobre los ADPIC en los negocios internacionales. Finalmente en conclusiones se enfatiza en que los los mayores y únicos beneficiarios de este acuerdo por el momento son los países desarrollados.

## REVISION DE LA LITERATURA

En los últimos años, la crisis financiera mundial ha afectado a la actividad innovadora de las empresas. La disminución de los ingresos, la reducción de los flujos de efectivo, un menor acceso al crédito y la creciente incertidumbre económica han llevado a las empresas a ajustar sus estrategias de innovación y a revisar el costo beneficio de los acuerdos internacionales. (WIPO, 2013). Uno de los temas polémicos es el referente al Acuerdo sobre los ADPIC, ya que desde su creación han surgido innumerables discusiones respecto a que este acuerdo favorece en mayor proporción a los países de mayor desarrollo y que se ha convertido en un obstáculo para los países con menor desarrollo. La verdad del caso es que de una u otra forma la PI actualmente es el motor del desarrollo de los países, por lo tanto sus indicadores constituyen una herramienta para la toma de decisiones estratégica de todos los países. Por ello, es necesario comenzar realizando las siguientes definiciones: El Acuerdo sobre los ADPIC: Constituye un conjunto de normativas a través de las cuales se intentan reducir las diferencias en la manera de proteger los derechos de PI en los distintos países del mundo. Al hacerlo, establece un equilibrio entre los beneficios a largo plazo y los posibles costos a corto plazo resultantes para la sociedad. (WTO, 2011). La Competitividad internacional: Es la capacidad que tienen las empresas de un sector particular para alcanzar un crecimiento sostenido respecto a sus competidores foráneos, y a nivel país será la capacidad para colocar su producción en los mercados nacionales e internacionales bajo condiciones leales de competencia y traducirlo en bienestar para su población. (Villareal, 2004).

### La Propiedad Intelectual

Antes de profundizar nuestro análisis respecto de la PI, es necesario poner especial atención a ciertos aspectos como el hecho de que el tipo de bienes se pretende proteger. Por ello, vale preguntarse: ¿Qué es la propiedad y qué es lo intelectual? El concepto de derecho de PI puede tener diversas acepciones, con sus diversas ideologías de trasfondo, por lo cual es necesario recordar el concepto de *propiedad* del derecho romano, que señala como: *dominium est ius utendi et abutendi re sua quatenus iuris ratio patitur*, (García, 2006, p. 209), configurada en el art. 348 Código Civil español, art. 827 del Código Civil mexicano, art. 669 del Código civil colombiano, art. 599 del Código Civil ecuatoriano como: “el derecho de gozar y disponer de una cosa, sin más limitaciones que las establecidas por las leyes”. En este sentido, la dogmática jurídica así como la sociedad en general relaciona el derecho de propiedad con lo material o patrimonial, y por tanto alejado de la PI que se configura como un bien inmaterial. En cambio el concepto de *intelectual* hace referencia a la mente humana, a lo incorporeal; el ser humano como ser dotado de intelecto que puede producir obras o expresar ideas.

Estos criterios encontrados en la doctrina han generado distintas teorías sobre el fundamento y la legitimidad del derecho de PI, destacando: i) Las Teorías negativas, que afirman que la PI no es verdadera propiedad; ii) Las Teorías positivas, sostienen que la PI es propiedad privada individual y como tal absoluta y iii) Las Teorías Mixtas, entienden que la PI es objeto de propiedad porque la obra ha sido creada en virtud del trabajo de su autor. Pero a fin de hacer que la sociedad tenga cierta participación, se limita temporalmente. (Diez & Gullon, 2001, p. 198). Al parecer, en la actualidad la teoría que más aceptación ha tenido y en virtud de la cual se han establecido los principios señalados infra que rigen en la materia a los tratados internacionales y leyes nacionales, ha sido la teoría mixta o ecléctica.

Considerando los aspectos supra, podemos decir que el concepto de PI se compone de los siguientes elementos: i) Conjunto de normas: las mismas que han sido establecidas conforme a los tratados y convenios internacionales, por lo tanto tienen validez universal, ii) Usufructo de su creación: esto es la explotación exclusiva o monopolio, iii) Temporalidad: es decir la limitación temporal del monopolio, iv) Dominio público: el beneficio que tiene el Estado al reconocer al creador la explotación exclusiva, es que transcurrido el tiempo previsto, toda persona pueda explotar la creación sin el pago de regalías. Por lo anterior, podemos definir a la PI como una herramienta jurídica que el Estado otorga al creador de una obra para su explotación exclusiva, durante un período de tiempo. A cambio de que transcurrido el tiempo concedido, la creación pase a dominio público. Convencionalmente la WIPO (2013a), ha dividido las áreas que son sujeto de protección y explotación en vertientes, como: La Propiedad industrial, los Derechos de Autor y Conexos y las Obtenciones Vegetales, con sus respectivas subdivisiones adecuadas al cumplimiento de algunos requisitos.

### Los Negocios Internacionales y la Propiedad Intelectual

Varias han sido las aportaciones teóricas respecto a la conceptualización de los Negocios Internacionales (NI). Daniels, et. al. (2004, p.3) señalan que se entienden como toda transacción comercial, privada o gubernamental, entre dos o más países, entre las operaciones que realiza son las ventas, las inversiones y el transporte. Martínez, et.al. (2006, p. 9) refieren como el intercambio de bienes y servicios entre los países, en un sentido más amplio. Czinkota & Moffet, (2008, p. 5) señalan que los NI consisten en transacciones diseñadas y realizadas entre fronteras nacionales para satisfacer los objetivos de individuos, compañías y organizaciones. Donde las formas básicas de negociación son el comercio de importaciones y exportaciones y la inversión extranjera directa, existiendo además otros tipos de NI como son el otorgamiento de franquicias, licencias y contratos de administración.

Por otra parte, podemos decir que la relación entre el comercio internacional y la PI ha sido visualizada desde dos perspectivas complementarias: la falta de protección como obstáculo al comercio y el abuso de derechos que conduce a restricciones indebidas de la competencia (Smith, 1995, p.16). De acuerdo con el estudio realizado por Correa (1994), es difícil establecer en qué medida el comercio internacional se relaciona o es afectado por derechos de PI. Por su parte Pérez Miranda (1994, p.78) señala que la evolución del sistema de PI en el plano internacional ha sido impulsada, en gran parte, por los países más desarrollados. Como podemos advertir la globalización ha traído consigo la necesidad de unificar el mercado mundial para hacerlo mas “justo” a través de la creación de acuerdos como el Acuerdo ADPIC creado por la OMC y la Organización Mundial de la Propiedad Intelectual (OMPI), que ha decir de su Director General, Gurry, (2010, p. 1) es el organismo especializado de las Naciones Unidas que tiene el mandato de garantizar un sistema de PI equilibrado, accesible y eficaz que permita atender las demandas crecientes de sus miembros, a través de tres comités permanentes: uno, de las patentes; otro, del derecho de autor; y un tercero, de las marcas, los diseños industriales y las indicaciones geográficas.

## METODOLOGÍA

En la presente investigación nos apoyamos principalmente en fuentes documentales de organizaciones internacionales como: la OMC, OMPI, el Banco Mundial (BM), la Organización para la Cooperación y el Desarrollo Económico (OCDE), el Foro Económico Mundial (FEM), recurrimos también a los datos estadísticos que proporcionaron el Índice tecnológico, el Reporte de Competitividad, y los reportes estadísticos de la OMPI. El presente estudio es analítico descriptivo, ya que describe las causas de la problemática y analiza sus posibles efectos sin arribar a inferencias causales o de asociación de variables. Para fines de limitación de nuestro análisis, seleccionamos el listado de países de acuerdo a su etapa de desarrollo y el Índice de Competitividad Global que presenta el World Economic Forum, (WEF, 2013, p. 27) y de forma aleatoria seleccionamos los países que consideramos más representativos. La información obtenida fue procesada y analizada.

## RESULTADOS

Para determinar el impacto de los indicadores de competitividad relacionados con la PI en el Comercio Internacional, es necesario conocer en primer lugar cuáles son los países considerados desarrollados o en vías desarrollo. Según propuesta del WEF, (2013, p.27) los países se encuentran clasificados de la siguiente forma: de un total de 148 países, 37 corresponden a la tercera etapa (países más desarrollados), 22 a la etapa de transición entre la segunda y tercera etapa, 31 a la segunda, 20 a la etapa de transición entre la primera y segunda y 38 países de menor desarrollo componen la primera etapa. Donde los principales criterios utilizados para su clasificación, son el Producto Interno Bruto (PIB) per cápita y el grado en que los países son un factor de impulso económico (exportaciones). Para cumplir con nuestro objetivo, seleccionamos a los países considerando su competitividad y la región de procedencia en cada etapa de desarrollo. Sin embargo para facilitar nuestra terminología y por considerar fríamente la clasificación de los países según su etapa de desarrollo relativo, la hemos dividido en tres etapas: los países de mayor desarrollo que corresponden íntegramente a los de la etapa 1, los países en vías de desarrollo, conformados por la etapa 2 y de transición 2 y 3 y finalmente los países de menor desarrollo económico, que se encuentran conformados por la etapa de transición 1 y 2 y la etapa 1. Como lo demuestran la siguiente Tabla 1.

Tabla 1: Países Seleccionados de Acuerdo a Su Nivel de Desarrollo y Competitividad.

País	Rank	Puntaje	Rank	Etapa De	
	(2013-2014)		(2012-2013)	Desarrollo	
Suiza	1	5.67	1	Etapa 3	Mayor desarrollo económico
Singapur	2	5.61	2		
Finlandia	3	5.54	3		
Alemania	4	5.51	6		
EE.UU.	5	5.48	7		
Suecia	6	7.48	4	Etapa de transición 2 a 3	En vías de desarrollo económico
Chile	34	4.61	33		
México	55	4.34	53		
Brasil	56	4.33	48		
China	12	5.29	13	Etapa 2	
Peru	61	4.21	61	Etapa de transición 1 a 2	Menor desarrollo económico
Colombia	69	4.19	69		
Kuwait	36	4.56	37		
Venezuela	124	3.35	126		
Bolivia	98	3.84	104		
Chad	148	2.85	139	Etapa 1	
Vietnam	70	4.18	75		
India	60	4.28	59		

En esta Tabla encontramos la clasificación de los países de acuerdo a su mayor o menor desarrollo económico (3 etapas), y su posición comparado (2012-2013/ 2013-2014). La selección de los países fue a conveniencia del investigador dando preferencia para su análisis a los países latinoamericanos mejor posicionados. Fuente: Elaboración propia a partir de los datos del WEF (2013, p. 27).

### Índice Global de Competitividad

Considerando la clasificación de los países según el Índice Global de Competitividad (IGC) del World Economic Forum (WEF), cabe comenzar haciéndonos la siguiente pregunta: ¿De qué forma la PI impacta en la competitividad de los países? La respuesta podríamos obtenerla en los criterios para la selección de las variables que conforman el IGC. De acuerdo con el WEF, el IGC se encuentra conformado por 12 pilares o variables, las mismas que son: i) Las Instituciones, ii) Infraestructura, iii) Entorno económico, iv) Salud y educación primaria, v) Educación superior, vi) Eficiencia del mercado, vii) Eficiencia en el trabajo laboral, viii) Desarrollo de mercados financieros, ix) Preparación tecnológica, x) Tamaño del mercado, xi) Business sofisticación y xii) Innovación. Uno de los indicadores de la variable “Instituciones” es el de “Protección de la PI”, mismo que nos servirá posteriormente para relacionar y determinar la incidencia de la PI en la competitividad de los países (de mayor o menor desarrollo).

En el informe de el WEF (2013-2014) para medir esta variable formuló la siguiente pregunta: ¿Cómo calificaría la protección de la propiedad intelectual, incluyendo medidas contra la falsificación, en su país?, (donde 1 = muy débil; 7 = muy fuerte). Como resultado a la pregunta, se puede observar en el Gráfico 1, que los primeros 20 lugares son ocupados por los países con mayor desarrollo económico, destacando a Finlandia, Singapur, Nueva Zelanda con una calificación que se aproxima a siete; es decir, estos países adoptan medidas a favor de la protección de la PI que hasta el momento les están dando un buen resultado, lo mismo ocurre con los restantes países como Qatar, Japón, Emiratos Arabes, etc. Situación que es predecible ya que en la actualidad son quienes además de tener una cultura de respeto a la PI (con excepciones) vienen implementando grandes reformas a sus sistemas normativos y fuertes medidas antipiratería y anticorrupción, además de poseer los recursos tecnológicos, científicos y económicos. Es de destacar el trabajo que están realizando algunos países como Puerto Rico y Sud Africa, que no estaban considerados como desarrollados sin embargo de lo cual se encuentran ubicados en la séptima y decima octava posición respectivamente.

Gráfico 1: Lista de los Países Que Mejor Protegen la PI (Promedio Ponderado 2013-2014)

En este Gráfico podemos observar la clasificación de una de los pilares del IGC "Instituciones" dentro del cual tenemos el indicador "Protección de la PI", Donde podemos observar a los 20 primeros países que mejor protegen la PI., notando que la mayoría corresponde a los países denominados de mayor desarrollo económico. Fuente: Elaboración propia a partir de los datos del WEF (2013, p. 52)

Profundizando, en el Gráfico 2 relacionamos el IGC y la PI para los países seleccionados, encontrando algunas inconsistencias:

Gráfico 2: Relación IGC y los Países Que Mejor Protegen la PI (Países Seleccionados)

En este Gráfico 2 podemos observar la relación IGC y los países que mejor protegen la PI para los países seleccionados. Resaltando por ejemplo el caso de Finlandia, que ocupa el 1er lugar en protección de la PI y el 3er lugar en competitividad. Seguido de Singapur con el 2do lugar tanto en protección de la PI y Competitividad. Fuente: Elaboración propia a partir de los datos del WEF (2013).

Los países que calificaron con una protección a la PI muy fuerte, corresponden a los países desarrollados con niveles de competitividad altos, existiendo algunas excepciones como Estados Unidos (EEUU), Alemania y Suecia que aparentemente no adoptan mayores medidas de protección a las creaciones intelectuales. Contrario a los discursos y exigencias de protección para los países menos desarrollados,

ejemplo de ello son las salvaguardas para medicamentos (importaciones paralelas y licencias obligatorias), que tanto en la declaración de Doha como en la OMC se establecieron teniendo en cuenta la vulnerabilidad de estos países en aspectos de salud pública. Por el contrario países de menor desarrollo como Chad, Bolivia, la India a pesar de tener un nivel menor en el IGC tienden a hacer todo lo que está a su alcance para adoptar medidas de protección de la PI. Situación que nos permite concluir que los países desarrollados o en vías de desarrollo utilizan diferente tipo de estrategias para ser más competitivos, una de ellas no es necesariamente el respeto a los derechos de PI, que como vemos países desarrollados que son muy competitivos no necesariamente respetan los acuerdo internacionales como el ADPIC.

### Índice Global de Innovación

Otro de los aspectos para nuestro análisis, es el tema relacionado con la innovación, en este sentido cabe realizarnos la siguiente pregunta: ¿Cómo se relaciona el Índice Global de Innovación (IGI) con la PI y cómo impacta en la competitividad de los países?. Concretamente, la innovación es una invención aplicada que se encuentra tutela por las normativas sobre PI a través de las patentes. Como sabemos las empresas patentan para tener el derecho de la explotación exclusiva de sus productos tanto a nivel nacional como internacional. En la Tabla 2 encontramos los 10 primeros países más innovadores del mundo según *The Business School for the World (INSEAD, 2013)*. Coincidiendo en su mayoría con los países más competitivos del Gráfico 2 que pertenecen al grupo de los países desarrollados. Las variables consideradas para el IGI son: i) Las Instituciones, ii) Capital humano e investigación, iii) Infraestructura, iv) Sofisticación del mercado, v) Sofisticación de negocios, vi) Resultados del conocimiento y la tecnología, vii) Resultados de la creatividad. Donde las dos últimas variables consideran aspectos de la PI como las patentes, marcas, licencias, regalías, entre otros.

Tabla 2: Índice Global de Innovación (IGI)

Rank	Country	Score/100	Income
1	Suiza	66.6	HI
2	Suecia	61.4	HI
3	Reino Unido	61.2	HI
4	Países Bajos	61.1	HI
5	Estados Unidos	60.3	HI
6	Finlandia	59.5	HI
7	Hong Kong (China)	59.4	HI
8	Singapur	59.4	HI
9	Dinamarca	58.3	HI
10	Irlanda	57.9	HI

En esta Tabla encontramos la clasificación de los 10 primeros lugares, correspondientes a los países mas innovadores. El INSEAD, realiza la clasificación de los países de acuerdo con su nivel de ingresos: Así, el código LI = ingresos bajos, LM = ingresos medio-bajos, UM = ingresos medio-altos, y HI = ingresos altos. Como es de notar en los primeros lugares no existe ningún país de menor desarrollo. Fuente: Elaboración propia a partir de los datos de INSEAD, (2013, pp. 20-21).

En la anterior Tabla 2 y en general en el IGI podemos observar que los países con ingresos altos y medios altos (países desarrollados) ocupan las mejores posiciones. No es sino hasta la posición número 45 del IGI que encontramos a la República del Moldova como primer país de ingresos medio bajos y a Uganda en la 89 de ingresos bajos como mejores posicionados respecto a sus similares en ingresos. Esta situación nos permite inferir que existe una relación proporcional entre el nivel de ingresos que tienen los países y su nivel de innovación, lo que indica además que las normativas sobre PI no inciden en mayor proporción que el nivel de ingresos. Esta situación la podemos ver con mayor claridad infra, donde relacionamos al IGI con la lista de los países que mejor protegen la PI. (WEF, 2013).

Como se demuestra en le siguiente Gráfico, los países se encuentran mejor ubicados respecto a la innovación que respecto a la protección de la PI. En este sentido, es de destacar a Suiza, Singapur y

Finlandia que tienen una relación proporcional entre la innovación y la PI, resaltando la situación de Finlandia que se encuentra en la primera posición sobre la protección de PI y sexta sobre el IGI, es decir existe una coherencia entre los primeros lugares que ocupa en cada medición ya sea el IGI o si observamos supra en el IGC. Situación que es contraria en EEUU. Éste país está situado en la posición quinta respecto al IGI y veinticinco en la protección de la PI, evidenciándose una vez más en la contradicción de su retórica sobre el cumplimiento de los tratados internacionales y la exigencia para con los países en vías de desarrollo con el cumplimiento del Acuerdo sobre los derechos de propiedad intelectual y comercio.

Gráfico 3: Relación Entre el IGI y los Países Mejor Ubicados en la Protección de la PI

En este Gráfico 3 podemos observar la relación IGI y los países que mejor protegen la PI para los países seleccionados. Resaltando por ejemplo el caso de Finlandia, que ocupa el 1er lugar en protección de la PI y el 6to lugar en innovación. Seguido de Singapur con el 2do lugar en protección de la PI y 8vo en Innovación. Fuente: Elaboración propia a partir de los datos de WEF (2013) y del INSEAD (2013, p. 11).

Se puede observar además en el Gráfico 3, que la situación sobre la relación PI/IGI se acentúa conforme los países son menos desarrollados; es decir, están mejor situados en el IGI respecto a los países que mejor protegen la PI. Destacando la situación de Suecia, Peru y Vietnam, que prácticamente duplican la diferencia de posiciones respecto a la relación PI/IGI. Podría decirse que estos países están innovando pero no adoptando medidas para proteger o cumplir con lo dispuesto en el Acuerdo sobre los ADPIC. De acuerdo con el Director de la OMPI (Gurry, 2011) Las empresas de los países de bajos ingresos ya no son simples importadores de tecnología ya que la brecha tecnológica se ha reducido (...). En virtud de los resultados analizados supra, se demuestran que la brecha entre los países de mayores y menores ingresos sigue tan profunda como décadas atrás. A partir de la firma del Acuerdo sobre los ADPIC únicamente se ha exigido a los países de menores ingresos el estricto cumplimiento de sus disposiciones con amenazas de represalias en caso de no hacerlo.

#### Número de Solicitudes Por Sector de la Tecnología

Roffe & Santa Cruz (2006, p.5) señalan que la PI ha adquirido en estos últimos años una particular importancia en el proceso de globalización y en la nueva economía del conocimiento. En este sentido ya no se puede afirmar que los aspectos sobre la PI no tienen relación con el comercio internacional, más aún cuando observamos en la siguiente Tabla el incremento de solicitudes de patentes para casi todas las actividades de comercio. El asunto ahora es identificar si las disposiciones sobre la PI son equitativas para todos los países.

Tabla 3: Solicitudes de Patente Presentadas Por Sector Tecnológico y Por País de Origen. (2007-2013)

Sector Tecnológico/País	Jp	Sz	Eu	Ch	Al	Ko	Fr
I. Electrónica	170890	8014	220804	75912	46750	52998	26020
II. Instrumentos	71120	9078	129302	10744	35014	12168	13142
III. Química	95598	18682	181862	17210	58836	21624	25476
IV. Mecánica	85438	10066	87432	14554	81310	14532	23990
V. Otros sectores	13208	3412	42684	7658	15550	10608	6480
<b>TOTAL</b>	<b>436,254</b>	<b>49,252</b>	<b>662,084</b>	<b>126,078</b>	<b>237,460</b>	<b>111,930</b>	<b>95,108</b>

En esta Tabla 3 encontramos las solicitudes de patente por Sector tecnológico (5 Sectores) y por el otro lado 7 países seleccionados que corresponden a los que mas presentaron solicitudes en el periodo (2007-2013). Cabe resaltar que EEUU. es el país que mas solicitudes ha presentado. Fuente: Elaboración propia a partir de WIPO (2013, p. 43).

Para nuestros fines, hemos dividido en cinco sectores de la tecnología como consta en la anterior Tabla 3, donde el mayor número de solicitudes presentadas correspondió a Estados Unidos con 662,084 solicitudes, destacando 220,804 para aparatos electrónicos, 181,862 para productos químicos y 129,302 para instrumentos entre los más representativos. El siguiente país con más solicitudes es Japón con 436, 254 donde se destaca 170,890 para la electrónica especialmente la tecnología informática, 95,598 en el sector químico, 71,120 para instrumentos, principalmente para la tecnología médica; los siguen Alemania con 237,460, China con 126,078, Corea con 111,930, Francia con 95,108 y Suiza con 49,252, solicitudes de patentes por sector tecnológico. En conclusión, las innovaciones hoy en día abarcan una amplia gama de campos de la tecnología donde por la información obtenida supra solo participan los países desarrollados, como creadores, mientras los países de menor desarrollo participan en el mercado como consumidores de tecnología.

### Impacto de los Indicadores del Acuerdo Sobre los ADPIC en el Comercio Internacional

El objetivo del siguiente apartado, es describir y analizar en forma sucinta como las creaciones intelectuales protegidas a través de las patentes, modelos de utilidad, marcas y diseños industriales son estratégicamente manejadas por los países desarrollados, buscando ser más competitivos en el comercio internacional, valiéndose para ello de convenios internacionales como son: el Tratado de Cooperación en materia de Patentes, el Sistema de Madrid y el Sistema de la Haya.

### El Tratado de Cooperación en Materia de Patentes (PCT)

El PCT cuenta con 142 miembros, brinda a los solicitantes de patentes un medio ventajoso para obtener protección por patente en múltiples países. En la Tabla 4 encontramos que los países que utilizan esta vía PCT son los denominados de mayores ingresos o países desarrollados, destacándose entre estos, las solicitudes de los EEUU, Japón y Alemania que en conjunto suman el 52,6% del total mundial de entradas en la fase nacional/regional vía PCT. Siendo EEUU el principal país en solicitar la protección de sus patentes. Por ejemplo de mayor a menor porcentaje, el 53,5% del total de solicitudes de patentes que realizan los no residentes en México, las realiza EEUU, del mismo modo el 49,8% del total de solicitudes que realizan los no residentes en Canadá, los realiza EEUU, lo mismo ocurre con el 45,5 % de Australia, el 43,6 % de Singapur, el 33,9% de Japón. Es decir EEUU asegura y exige el cumplimiento de las disposiciones de PI a aquellos países en los que realiza mayores inversiones.

Tabla 4: Porcentaje de entradas en la fase nacional/regional del PCT. (2013)

País de origen	Oficina de Patentes											Total
	AU	CN	CH	OE	JP	CO	MX	RS	SG	EU	Otros	
China	0.7	0.5	1.5	1.0	0.7	0.7	0.2	1.2	0.9	1.1	0.2	0.8
EEUU	45.5	49.8	28.8	33.5	33.9	33.4	53.5	29.1	43.6	14.3	15.1	29.5
Finlandia	0.9	0.9	1.7	1.7	0.9	1.7	1.1	2.2	1.6	1.2	3.0	12.0
Francia	2.7	4.0	4.0	5.2	4.5	3.7	4.0	5.9	3.0	6.0	1.5	4.0
Japón	5.6	6.2	25.0	15.3	22.4	30.2	3.1	8.0	12.4	26.9	2.6	15.6
Rep. Corea	1.7	1.3	3.9	2.1	3.5	0.9	1.8	4.1	1.5	3.1	4.0	2.1
Suiza	5.0	4.1	3.3	3.2	3.1	3.3	5.8	6.9	5.4	2.1	1.5	3.1

En esta Tabla 4 se presenta las entradas de patentes a fase nacional/regional del PCT por país de origen, donde se puede apreciar el potencial de mercado de los países desarrollados a través de las patentes y la estrategia de penetración a los mercados de interés. Fuente: Elaboración propia a partir de WIPO, (2013, p. 30). NOTA: Australia (AU), Canadá (CN), China (CH), Oficina Europea (OE), Japón (JP), Corea (CO), México (MX), Rusia (RS), Singapur (SG), Estados Unidos (EU).

### El Sistema de Madrid Para el Registro Internacional de Marcas

El Sistema de Madrid (SM) ofrece a los propietarios de marcas la posibilidad de proteger su marca en el territorio de las 85 Partes Contratantes, mediante la presentación de una única solicitud en una oficina nacional o regional de PI. De acuerdo con el informe de WIPO (2010). En 2009, los 100 principales solicitantes con arreglo al SM representaron casi el 10% de todas las solicitudes internacionales de registro de marcas, destacando a los solicitantes europeos y asiáticos dentro de las 10 primeras.

Tabla 5: Los 10 Principales Solicitantes Con Arreglo al Sistema de Madrid (2010)

No.	Nombre del Solicitante (Sistema de Madrid)	País de Origen	Solicitudes Presentadas
1	novartis ag	Suiza	136
2	lidl stiftung & co.kg	Alemania	109
3	hekel ag & co. kgaa	Alemania	98
4	zhejiang province haomenglai grup co.,	China	96
5	ltd	Japón	74
6	shimano inc.	Eslovenia	74
7	krka	Hungría	70
8	richter gedeon nyrt.	Francia	67
9	l'oreal	Alemania	64
10	bsh bosh und siemens hausgerate gmbh	Hungría	63

En esta Tabla 5 se presenta las 10 principales solicitudes de registro de marca, que corresponde a los países de mayor desarrollo económico. Así por ejemplo Suiza presenta 136 solicitudes para la marca correspondiente a NOVARTIS AG. Seguido de la Empresa LIDL STIFTUNG & CO.KG de Alemania con 109 solicitudes. Fuente: Elaboración propia a partir de WIPO, (2010, p. 90).

Podemos apreciar en la anterior Tabla, que la empresa farmacéutica Novartis AG, de Suiza, encabeza la lista con 136 solicitudes. Los alemanes ocupan 16 puestos entre los 50 principales solicitantes. La empresa Zhejiang Province Haomenglai Group Co. LTD de China, que ocupa el cuarto puesto, es una de las cuatro empresas chinas que figuran en la lista de los 50 principales solicitantes. Empresas de Eslovenia y Hungría ocupan el 6° y el 7° lugar, respectivamente. Es necesario aclarar que entre las 10 empresas y aún más entre los 100 principales solicitantes de marcas no se encuentra ningún país en vías de desarrollo. Recordemos que un registro internacional con arreglo al SM surte el mismo efecto que una solicitud de registro de la marca en cada una de las Partes Contratantes. En este sentido el SM constituye la mejor estrategia para que las empresas transnacionales puedan proteger sus marcas y su prestigio.

### El Sistema de la Haya

El Sistema de La Haya (SH) para el registro internacional de diseños industriales está constituido por tres tratados internacionales (Acta de Londres, Acta de La Haya y Acta de Ginebra) y es administrado por la OMPI. Al igual que los anteriores sistemas, éste ofrece a los solicitantes la posibilidad de registrar sus diseños industriales en varios países mediante la presentación de una única solicitud ante la Oficina Internacional de la OMPI. Si observamos la evolución de los registros internacionales de diseños industriales y su respectiva tasa de crecimiento, podemos notar que el número de registros inscritos disminuyó drásticamente durante el período comprendido entre 2003 y 2005, lo que puede explicarse según WIPO, (2010, p. 107) el hecho de que, a partir de 2003, se permitió solicitar diseños comunitarios por vía de la Oficina de Armonización del Mercado Interior (OAMI), con lo que los solicitantes podían presentar una única solicitud en esta oficina para proteger sus diseños en todos los países miembros de la UE. En 2008, el número de registros internacionales volvió a crecer considerablemente lo que, a su vez, puede atribuirse según el organismo antes citado en gran medida a la adhesión de la OAMI al Sistema de La Haya en ese mismo año. Situación contraria en los países de menor desarrollo, ya que no existe este tipo de iniciativas.

### CONCLUSIONES

La PI constituye por hoy uno de los temas de mayor complejidad dentro del ámbito del comercio internacional, específicamente el tema de la relación TLC y los indicadores de PI inmersos tanto en el IGC, el IGI, y el Acuerdo sobre los ADPIC. Si bien es cierto con el advenimiento de este último se llegó a controlar de alguna forma las infracciones a las creaciones intelectuales, en la actualidad se ha constituido en una herramienta de sometimiento para los países con menor desarrollo. Tal es el caso de las exigencias que imponen los EEUU para la firma de los TLC a países como Panamá, Colombia, Perú, Ecuador, entre otros; los cuales terminan firmando contratos de adhesión renunciando a su autonomía para controlar sus propios recursos. Entre las peticiones que realizan los EEUU para la firma del TLC se encuentran: la patentabilidad de segundos usos, extensión del plazo, patentabilidad de las técnicas de diagnóstico médico, licencias obligatorias, protección de los datos de prueba. Del mismo modo se exige la adhesión a tratados internacionales como son: El tratado de Budapest para el reconocimiento de depósitos de microorganismos y el Convenio internacional para la protección de las obtenciones vegetales (UPOV de 1991), entre otros. Por lo tanto ante la problemática planteada sobre que no se ha podido determinar con certeza, el impacto de los indicadores de competitividad relacionados con la PI en el Comercio Internacional, podemos concluir que los mayores y únicos beneficiarios por el momento son los países desarrollados. Posiblemente en un futuro, esperamos que muy cercano, todos los países nos encontremos en condiciones de explotar libremente nuestros recursos intelectuales y entrar de este modo a una sana competencia.

## RESUMEN

*En la actualidad los dispositivos móviles han venido formando parte de nuestra vida diaria. En la mayoría de nuestras actividades se ve involucrado su uso. Las generaciones actuales ven el uso de estos dispositivos como parte de sus vidas tanto en la comunicación social, diversión y aprendizaje. Por lo cual se busca darles una herramienta de apoyo académico a los alumnos y maestros de la Facultad de Derecho Campus Mexicali con el fin de aprovechar las tecnologías existentes en nuestras instalaciones además de su interés en el uso y manejo con estos dispositivos. En base a lo anterior se buscó una aplicación la cual pueda apoyar las clases presenciales en salones y laboratorios de cómputo de la Facultad logrando ofrecer presentaciones y trabajos de calidad utilizando equipos y tecnologías modernos y actuales la cual se apoya con la utilización de dispositivos móviles (iphone, ipad, smartphones, tablet, etcétera) como herramienta de almacenaje y control de presentaciones para trabajos a exponer en clase utilizando los cañones de proyección y redes inalámbricas disponibles en la facultad.*

**PARABAS CLAVAS:** Enseñanza, Facultad de Derecho

## MOBILE APPLICATIONS USED IN TEACHING, CASE LAW SCHOOL, UNIVERSITY OF BAJA CALIFORNIA INDEPENDENT

### ABSTRACT

*At present mobile devices have been part of our daily lives. In most of our activities are involved use. Current generations are using these devices as a part of their lives both in social communication, fun and learning. Therefore it seeks to give a tool for academic support to students and teachers of the Law School Campus Mexicali in order to leverage existing technologies in our facilities in addition to its interest in the use and handling these devices. Based on the above application which sought to support face classes in classrooms and computer labs of the Faculty making presentations and provide quality work using modern equipment and technologies which supports the use of mobile devices (iphone, ipad, smartphone, tablet, etc.) as a tool for control storage and presentations for work to present in class using guns projection and wireless networks in school.*

**JEL:** M00

**KEYWORDS:** Teaching, Law School

### INTRODUCCIÓN

En los últimos años para los alumnos, las aplicaciones móviles han venido desplazando a las computadoras de escritorio y computadoras portátiles como medios de comunicación y medios de información. En la actualidad se puede tener por medio de estos aparatos electrónicos comunicación en tiempo real y búsqueda

de información en la palma de nuestras manos. Los alumnos ven en estos equipos una herramienta muy amigable y a la vez entretenida para su preparación académica. Es por esto que se buscó una aplicación que pueda ayudar tanto a los alumnos y maestros de la Facultad de Derecho Mexicali en el desarrollo y presentación de sus trabajos aprovechando las tecnologías existentes en la Facultad como son cañones y redes inalámbricas, además de poder utilizar los equipos tradicionales como computadoras personales y portátiles también ya existentes. Un dispositivo móvil o teléfono inteligente es un dispositivo electrónico que tiene las funciones de un teléfono móvil como hacer llamadas telefónicas y además de ser muy parecido a las funciones que desarrolla una microcomputadora personal. Una de las funciones que lo hacen muy parecido a una microcomputadora personal es la posibilidad de instalar programas adicionales desarrollados incluso por programadores independientes. Los dispositivos móviles actuales pueden interactuar con una variedad de sistemas operativos como Android, BlackBerry OS, Symbian, Windows mobile, iPhone OS, etcétera, con lo que puede haber una gran diversidad de desarrolladores de aplicaciones de software facilitando al usuario a realizar parte de sus tareas cotidianas.

## REVISIÓN LITERARIA

*Aplicaciones móviles:* Se le conoce como aplicación móvil a un programa informático que se puede descargar de algún sitio de internet e instalar en un teléfono o dispositivo móvil creado para llevar a cabo una tarea.

*Dispositivos móviles:* Son dispositivos electrónicos diseñados de pequeño tamaño físico con capacidades de procesamiento de datos con la opción de conexión a una red de datos, con memoria propia limitada diseñados para funciones específicas pero con la posibilidad de llevar a cabo funciones más generales.

### Características de los dispositivos móviles

*Portabilidad:* Accesibilidad a correo electrónico, crear y editar documentos, acceso a páginas electrónicas, utilización de aplicaciones acezado de cualquier lugar.

*Características técnicas:* Comúnmente de tamaño pequeño, capacidad de procesamiento, acceso a redes de cómputo.

*Internet:* Acceso a Internet por medio de tecnología Wi-Fi o 3G.

*Funcionalidad:* Geo localización, cámara digital

### Sistemas Operativos Para Dispositivos Móviles

*Android:* Sistema Operativo para dispositivos móviles basado en GNU/Linux inicialmente desarrollado por google. Permite desarrollo de aplicaciones por terceros.

*Symbian:* Es un Sistema operativo con una colección compacta de código ejecutable y varios archivos, la mayoría de ellos bibliotecas vinculadas dinámicamente.

*BlackBerry OS:* Sistema operativo multitarea que soporta desarrollo de aplicaciones JAVA.

*Windows Mobile:* Sistema operativo basado en Windows.

*iPhone OS:* Versión reducida de Mac OS X Optimizada para procesadores ARM.

## METODOLOGÍA

Para conocer la disposición de dispositivos móviles, el uso de internet por medio de la redes inalámbricas proporcionadas por la UABC, la utilización de equipo de video proyección disponible en laboratorio de cómputo para apoyo en las aulas de la facultad y la utilización de las computadoras de los laboratorios de cómputo por parte de los alumnos de la Facultad de Derecho Campus Mexicali de la UABC se realizó una encuesta entre 746 alumnos de un total de 2478 representando un 30 % del alumnado total de las cuales se obtuvo la siguiente información.

### Encuesta

Figura 1: Alumnos Que Disponen de Dispositivo Móvil

Para conocer la disposición y utilización de dispositivos móviles o teléfonos inteligentes entre los alumnos de la Facultad de Derecho Mexicali se realizó una encuesta entre el alumnado en el cual se obtuvo como resultado que el 73% dispone de un dispositivo móvil y lo utiliza con gran frecuencia y el 23% no dispone de algún dispositivo móvil.

Figura 2: Utilización de Internet Por Parte de los Alumnos

Para conocer el uso y demanda de las redes inalámbricas disponibles como apoyo para el acceso a información hacia internet se realizó una encuesta entre el alumnado en el cual se obtuvo como resultado que el 70% utiliza el Internet frecuentemente, el 23% no lo utiliza y el 7% prefirió no responder.

Figura 3: Utilización de Equipo de Video Proyección

El uso del servicio de equipo de video proyección para exposición en salones de clase, según resultados de la encuesta aplicada, indican que el 19% de los alumnos utilizan semanalmente este servicio y el 81% no hace uso de este servicio.

Figura 4: Alumnos Que Utilizan Centro de Cómputo

La Facultad dispone de un laboratorio de cómputo el cual ofrece a los alumnos un área de trabajo para realizar tareas, prácticas e investigaciones jurídicas, de la encuesta aplicada se obtuvo como resultado que el 13% de los alumnos utilizan con MUCHA frecuencia el centro de cómputo, el 28% de los alumnos utilizan con BASTANTE frecuencia el centro de cómputo, el 47 % de los alumnos utilizan con POCA frecuencia el centro de cómputo, el 11.7% de los alumnos NO utilizan el centro de cómputo y el 0.3% de los alumnos no respondió.

## CONCLUSIONES

En base a las encuestas realizadas y en base a lo investigado en opciones de aplicaciones móviles para utilización en la docencia, se encontró e incorporo una aplicación llamada MobiShow la cual se ejecuta en la mayoría de los dispositivos móviles con diferentes sistemas operativos y nos ayuda a transmitir imágenes

figas a un proyector de video con la opción de ser utilizada con conexión inalámbrica. Con la ayuda de un dispositivo de AWIND, como se muestra en la figura 5, nos permite visualizar contenido de teléfonos inteligentes en una pantalla externa sin necesidad de cables. Este receptor se conecta a nuestro teléfono inteligente mediante Wi-Fi y dispone de una salida VGA que conectamos a un televisor o un proyector de video. Por medio del software de aplicación para nuestro dispositivo móvil podremos enviar el contenido a nuestra pantalla, sin vernos limitados por la resolución del teléfono. Esta aplicación puede ayudarnos a visualizar presentaciones realizadas en Power Point y además puede transmitir video de alta resolución.

Figura 5: Equipo de Interconexión Inalámbrico Para Conectar a Equipo de Proyección

## **DESIGN OF A H. HALL ECONOMIC INDICATORS SYSTEM FOR MANAGEMENT DEVELOPMENT DIRECTION OF THE TOWN GRULLO, JALISCO**

## **ABSTRACT**

*All activities can be measured with parameters focused decisions are signals to monitor management and ensures that the activities are in the right direction and to assess the results of a management meet its objectives, goals and responsibilities. These signals are known as indicators. A performance indicator is a quantitative expression of the behavior and performance of a process, whose magnitude, when compared to a reference level, it may be signaling a deviation on which corrective or preventive actions are taken as appropriate. To work with a whole system indicators that go from the correct understanding of the fact or characteristic to making the right decisions to maintain, improve and innovate the process which should be made aware. Indicators are a key form of feedback process, to monitor the progress or the implementation of a project and strategic plans, among others. This paper shows a management indicators designed to measure each of the programs that are handled in the Directorate of Economic Development City Council of Cranbrook, Jalisco, Mexico, as an improvement initiative for the area and that despite changes in government administration and occurring every three years, you can take a*

*continuation and statistical monitoring of supports and programs offered by the area in order to find always increase the number of potential beneficiaries.*

**JEL:** M100

**KEYWORDS:** Flag, Management, Economic Development

## INTRODUCCIÓN

Todas las actividades pueden medirse con parámetros que enfocados a la toma de decisiones son señales para monitorear la gestión, así se asegura que las actividades vayan en el sentido correcto y permiten evaluar los resultados de una gestión frente a sus objetivos, metas y responsabilidades. Estas señales son conocidas como indicadores de gestión. Un indicador de gestión es la expresión cuantitativa del comportamiento y desempeño de un proceso, cuya magnitud, al ser comparada con algún nivel de referencia, puede estar señalando una desviación sobre la cual se toman acciones correctivas o preventivas según el caso. Para trabajar con los indicadores debe establecerse todo un sistema que vaya desde la correcta comprensión del hecho o de las características hasta la de toma de decisiones acertadas para mantener, mejorar e innovar el proceso del cual dan cuenta. Los indicadores son una forma clave de retroalimentar un proceso, de monitorear el avance o la ejecución de un proyecto y de los planes estratégicos, entre otros. El presente trabajo muestra un tablero de indicadores de gestión diseñados para la medición de cada uno de los programas que se manejan en la Dirección de Desarrollo Económico del H. Ayuntamiento de El Grullo, Jalisco, México; como una iniciativa de mejora para el área y que a pesar de los cambios de administración y gobierno que ocurren cada tres años, se pueda llevar una continuación y seguimiento estadístico sobre los apoyos y programas ofrecidos por el área con la finalidad de buscar siempre aumentar el número de beneficiarios posibles. Todo ello con el objetivo de diseñar e implementar procesos de gestión eficientes para la dirección de Desarrollo Económico así como disminuir el retroceso en las metas establecidas por la administración en los cambios de gobierno y asegurar un desarrollo económico sostenido. De igual forma, la sociedad se beneficiaría mejorando el impacto de los programas en la sociedad.

## REVISIÓN LITERARIA

Los indicadores son elementales para evaluar, dar seguimiento y predecir tendencias de la situación de un país, un estado o una región en lo referente a su economía, sociedad, desarrollo humano, etc., así como para valorar el desempeño institucional encaminado a lograrlas metas y objetivos fijados encada uno de los ámbitos de acción de los programas de gobierno. La comparabilidad del desarrollo económico y social es otra de las funciones de los indicadores, ya que estamos inscritos en una cultura donde el valor asignado a los objetos, logros o situaciones sólo adquiere sentido respecto a la situación de otros contextos, personas y poblaciones, es decir, es el valor relativo de las cosas lo que les da un significado (Extraído el 20 de marzo desde:

[www.inegi.gob.mx/inegi/contenidos/espanol/prensa/contenidos/articulos/economicas/indicadores.pdf](http://www.inegi.gob.mx/inegi/contenidos/espanol/prensa/contenidos/articulos/economicas/indicadores.pdf)).

### Conceptos de Indicador

Herramientas para clarificar y definir, de forma más precisa, objetivos e impactos, son medidas verificables de cambio o resultado diseñadas para contar con un estándar contra el cual evaluar, estimar o demostrar el progreso con respecto a metas establecidas, facilitan el reparto de insumos, produciendo productos y alcanzando objetivos. Una de las definiciones más utilizadas por diferentes organismos y autores es la que Bauer dio en 1966: “Los indicadores sociales son estadísticas, serie estadística o cualquier forma de indicación que nos facilita estudiar dónde estamos y hacia dónde nos dirigimos con respecto a determinados

objetivos y metas, así como evaluar programas específicos y determinar su impacto” (Extraído el día 20 de marzo de 2014, desde:

<http://www.inegi.gob.mx/inegi/contenidos/espanol/prensa/contenidos/articulos/economicas/indicadores.pdf>).

Medida estadística de un aspecto determinado de la realidad, ya que expresa las propiedades de un fenómeno o situación del que interesa conocer el estado en que se encuentra. El indicador por tanto, es un referente de aquello que será medido bajo la consideración de varias escalas o dimensiones y por definición, provienen de relacionar dos o más datos significativos que contribuyen a la realización del seguimiento o evaluación de una situación o fenómeno señalado (Extraído el día 20 de marzo de 2014, <http://planeacion.ucol.mx/indicadoresinstitucionales/publicaciones/glosario/>).

Datos que nos permiten medir de forma objetiva los sucesos del mercado para poder respaldar acciones. Pero ¿cuáles son los más fiables? Son variables que intentan medir u objetivar en forma cuantitativa o cualitativa, sucesos colectivos para así, poder respaldar acciones. Es la definición de los indicadores y entre los atributos de un buen indicador están la disponibilidad, especificidad, confiabilidad, sensibilidad y alcance".

#### Características de un Indicador

**Disponibilidad:** los datos básicos para la construcción del indicador deben ser de fácil obtención sin restricciones de ningún tipo.

**Simplicidad:** el indicador debe ser de fácil elaboración. Validez: la validez de los indicadores significa que éstos deben tener la capacidad de medir realmente el fenómeno que se quiere medir y no otros.

**Especificidad:** si un indicador no mide realmente lo que se desea medir, su valor es limitado, pues no permite la verdadera evaluación de la situación al reflejar características que pertenecen a otro fenómeno paralelo.

**Confiabilidad:** los datos utilizados para la construcción del indicador deben ser fidedignos (fuentes de información satisfactorias).

**Sensibilidad:** el indicador debe ser capaz de poder identificar las distintas situaciones aún en áreas con distintas particularidades, independientemente de la magnitud que ellas tengan en la comunidad.

**Alcance:** el indicador debe sintetizar el mayor número posible de condiciones o de distintos factores que afectan la situación descrita por dicho indicador. En lo posible el indicador debe ser globalizador (Extraído el día 20 de marzo de 2014, ¿Qué son los indicadores y para qué sirven?

[www.estrategiasdeinversion.com/noticias/20120705/son-indicadores-para-sirven#iZJ4xdOxphQPk17W](http://www.estrategiasdeinversion.com/noticias/20120705/son-indicadores-para-sirven#iZJ4xdOxphQPk17W)).

#### ¿Para Qué Sirve un Indicador o Su Importancia?

Un indicador se usa para describir un problema: Cómo y dónde ocurre y cómo afecta a éste. Los indicadores se desarrollan recolectando datos y se expresan a través de fórmulas matemáticas, tablas o gráficas. Los indicadores son útiles para poder medir con claridad los resultados obtenidos con la aplicación de programas, procesos o acciones específicos, con el fin de obtener el diagnóstico de una situación, comparar las características de una población o para evaluar las variaciones de un evento.

Permite identificar las diferencias existentes entre los resultados planeados y obtenidos como base para la toma de decisiones, fijar el rumbo y alinear los esfuerzos hacia la consecución de las metas establecidas con el fin de lograr el mejoramiento continuo de los servicios. Los indicadores pueden ser relativos a: Impacto, cobertura, eficiencia, calidad y recursos.

### ¿Qué es un Indicador de Gestión?

Un indicador de gestión es la expresión cuantitativa del comportamiento y desempeño de un proceso, cuya magnitud, al ser comparada con algún nivel de referencia, puede estar señalando una desviación sobre la cual se toman acciones correctivas o preventivas según el caso. Los indicadores de Gestión resultan ser una manifestación de los objetivos estratégicos de una organización a partir de su Misión. Igualmente, resultan de la necesidad de asegurar la integración entre los resultados operacionales y estratégicos de la empresa. Deben reflejar la estrategia corporativa a todos los empleados. Dicha estrategia no es más que el plan o camino a seguir para lograr la misión. Los indicadores de gestión, se entienden como la expresión cuantitativa del comportamiento o el desempeño de toda una organización o una de sus partes: gerencia, departamento, unidad u persona cuya magnitud al ser comparada con algún nivel de referencia, puede estar señalando una desviación sobre la cual se tomarán acciones correctivas o preventivas según el caso. Son un subconjunto de los indicadores, porque sus mediciones están relacionadas con el modo en que los servicios o productos son generados por la institución. El valor del indicador es el resultado de la medición del indicador y constituye un valor de comparación, referido a su meta asociada. Los indicadores de gestión suministran la información necesaria para el ejercicio del control económico de la gestión, concebido éste en su triple vertiente de control de eficacia, control de eficiencia y control de economía (Extraído el 20 de marzo desde: [www.escuelagobierno.org/inputs/los%20indicadores%20de%20gestion.pdf](http://www.escuelagobierno.org/inputs/los%20indicadores%20de%20gestion.pdf)).

### Dirección de Desarrollo Económico del Municipio de el Grullo, Jalisco

La Dirección de Desarrollo Económico es la encargada de Promover el desarrollo económico, la competitividad y atraktividad de nuestro municipio de manera sustentable, fortaleciendo la planta productiva, impulsando la inversión local, nacional y extranjera que propicie una mayor derrama económica y una mejor calidad de vida para el Municipio y de sus comunidades e impulsora de los Sectores Productivos, procurando la sustentabilidad y la competitividad en la Industria y las Empresas, con participación importante en el desarrollo y Bienestar del Municipio, en coordinación con los diferentes niveles de gobierno, la Iniciativa Privada, Instituciones Educativas, ong's, y evaluada por la Sociedad. Líneas de acción de los programas de la Dirección de Promoción Económica

a)	Desarrollo de Ideas De Negocio
b)	Financiamiento e inversión
c)	Empleo y autoempleo
d)	Productividad
e)	Atención a la vivienda
f)	Capacitación y calidad
g)	Cooperativismo
h)	Subsidios a MIPYME's
i)	Estudios de factibilidad
j)	Comercio y abasto

La dirección de promoción económica de El Grullo ofrece sus servicios mediante programas que emergen de las secretarías de los gobiernos estatales y federales, dichos programas son difundidos con estructuras y procesos documentados para su ejecución. Sin embargo, basado en la experiencia personal, se requiere que la dirección municipal de desarrollo cuente con un sistema que permita hacer estos programas más efectivos a la hora de bajarlos al ámbito municipal. Los programas de Desarrollo Económico desde el punto de vista municipal están enfocados a beneficiar en lo individual y en lo colectivo y por tanto cada programa y acción

ejecutada debe estar dirigida hacia este fin. De tal forma que no se obtengan resultados mínimos y aislados sino que desencadenen una serie de consecuencias positivas en lo colectivo.

### Procesos y Programas

#### Desarrollo de Ideas de Negocio

Trabaja por el desarrollo de ideas de negocio cuyo objetivo sea establecerse en el Municipio y que sean candidatas a tener un fuerte impacto regional. Este proceso se divide en dos:

Proyectos de inversión de El Municipio. Emergen directamente de la administración pública y buscan beneficiar a más de un productor teniendo como objetivo principal la creación de nuevas cadenas productivas.

Acompañamiento a proyectos individuales de inversión. Nacen desde el sector privado específicamente de empresas que buscan crecer o desarrollarse y buscan el acompañamiento para llevar a cabo su idea.

Programas que se incluyen. Dentro del sistema del Instituto Nacional del Emprendedor, INADEM, (2013), Fondo de Apoyo para la Micro, Pequeña y Mediana Empresa, Fondo Pyme. Definición del programa El FONDO PYME es un instrumento que busca apoyar a las empresas en particular a las de menor tamaño y a los emprendedores con el propósito de promover el desarrollo económico nacional, a través del otorgamiento de apoyos de carácter temporal a programas y proyectos que fomenten la creación, desarrollo, viabilidad, productividad, competitividad y sustentabilidad de las micro, pequeñas y medianas empresas. Dentro del Fondo PYME se encuentran los siguientes programas de apoyo.

Programas de Sectores Estratégicos y Desarrollo Regional  
Desarrollo de Proveedores  
Competitividad Regional  
Reactivación Económica

### Crédito

Incluye la gestión, promoción y acompañamiento a empresas para participar en programas de financiamiento de los diferentes niveles de gobierno así como de fideicomisos y fondos públicos de inversión. Programas que intervienen. Fondo Jalisco de Fomento Empresarial (FOJAL): La principal finalidad del FOJAL es otorgar una respuesta a las necesidades de asesoría integral, capacitación y financiamiento para las micro, pequeñas y medianas empresas del estado, fomentando con esto la creación, sobrevivencia y consolidación de las mismas.

### Empleo y Autoempleo

Se conforma por programas de capacitación para el empleo, programas de empleo temporal, bolsa de empleo municipal, campañas de fomento al autoempleo, promoción de la formalidad al empleo y ferias de empleo. Programas que intervienen. Servicio Nacional del Empleo Es la institución pública a nivel nacional que atiende, de manera gratuita y personalizada, los problemas de desempleo y subempleo en el país. Su misión consiste en ofrecer servicios de información, vinculación y orientación, así como proveer apoyos de tipo económico, de capacitación y de movilidad laboral.

*Productividad:* Integra tanto el desarrollo de opciones productivas para el municipio, y el encadenamiento productivo de esas opciones.

*Programas que intervienen:* Productividad Jalisco (PROJAL) Este programa contempla diversas acciones a realizar por parte de los sectores público, social y privado a fin de impulsar el desarrollo económico, La generación, La conservación y la creación de empleos mejor remunerados, la inversión, la competitividad y la productividad de los sectores económicos, así como la atención de situaciones económicas emergentes, para mejorar el nivel de vida de la población e impulsar el desarrollo equilibrado y sustentable del Estado.

*Consejo Estatal de Promoción Económica (CEPE):* El CEPE, es un Organismo Público Descentralizado del Ejecutivo del Estado con personalidad jurídica y patrimonio propio, sectorizado a la SEPROE, que en coordinación con la misma dependencia, se encarga de promover la inversión en el Estado. Su participación en el contexto del Plan Estatal de Desarrollo Jalisco 2030, motiva la integración de este Plan Institucional 2007-2013, estructurado bajo los lineamientos y supervisión de la Secretaría de Planeación del Gobierno del Estado. El Plan Institucional CEPE 2007-2013 incorpora las estrategias, políticas, objetivos y metas, en concordancia con las políticas públicas definidas en el entorno nacional y local. (Consejo Estatal de Promoción Económica. <http://www.jalisco.gob.mx/>. Recuperado 08, 2013, de <http://www.jalisco.gob.mx/es/gobierno/organismos/1856>).

*Capacitación y calidad:* Se refiere a la oferta de oportunidades de formación para las empresas locales enfocadas principalmente a elevar la calidad y la competitividad de las empresas. Programas que intervienen. Instituto Jalisciense de la Calidad, INJAC, 2013. Somos un Instituto que promueve en las organizaciones la adopción de Sistemas de Gestión de: Calidad, de Mejora, Ambiental y de Competitividad. Apoyamos a la micro, pequeña y mediana empresa a través de capacitación y consultoría especializada a desarrollar sistemas, mejorar sus procesos de forma que incremente la calidad de los productos y/o servicios que ofrecen a sus clientes.

*Cooperativismo:* Comprende las labores y acciones en conjunto con las sociedades cooperativas de El Municipio a fin de hacer real los principios de este modelo de asociación.

*Programas que intervienen:* Instituto Nacional de Economía Solidaria (INAES) Órgano desconcentrado de la Secretaría de Economía, cuyo propósito es apoyar los esfuerzos organizados de productores indígenas, campesinos y grupos populares-urbanos, para impulsar proyectos productivos y empresas sociales que generen empleos e ingresos para la población, lo cual permite mejorar sus condiciones de vida y propicia el arraigo en sus comunidades de origen, a través de los apoyos que otorga dicha institución.

*Atracción de la inversión y oferta exportable:* Busca potencializar y exponer las cualidades económicas y estratégicas propias del Municipio de El Grullo a fin de posicionarlo como una opción atractiva de inversión para las empresas externas y de esta forma desarrollar el sector empresarial. En el tema de oferta exportable se trabaja por potencializar la producción local y ofrecerle los medios para la internacionalización de su producto. Programas e instituciones que intervienen. SEIJAL JALTRADE

JALTRADE es la respuesta del sector Empresarial y el Gobierno del Estado de Jalisco para aprovechar las oportunidades derivadas del proceso de globalización de las economías Tiene como principal propósito, fomentar el comercio del Estado de Jalisco en el exterior, a través de:

Incrementar el conocimiento de los procesos de exportación y los mercados internacionales, mediante diferentes esquemas de capacitación y consultoría.

Proveer información estratégica y análisis en materia de comercio exterior a la comunidad empresarial interesada, que coadyuve a la toma de decisiones.

Promover los productos y servicios de Jalisco en el extranjero a través de la participación de empresarios en misiones comerciales, ferias internacionales y la articulación con Organismos Federales e Internacionales.

Coordinar acciones con Instituciones y Organismos relacionados con el comercio exterior del Estado de Jalisco para la unificación de esfuerzos en el impulso de las exportaciones.

Operar recursos económicos estatales para apoyar proyectos que fomenten la exportación (Programa Productividad Jalisco). (JALTRADE. <http://www.jalisco.gob.mx/>. Recuperado 08, 2013, de <http://www.jalisco.gob.mx/es/gobierno/organismos/1856>).

*Consejo Municipal de promoción económica y empleo:* Busca velar por el desarrollo real y sostenido de la economía municipal mediante la unión de capacidades y puntos de vista de las diferentes organizaciones económicas del municipio que resultan en ideas y nuevas políticas que generen el desarrollo.

### De la Definición y el Objeto

*Artículo 2:* El Consejo Municipal de Promoción Económica y del Empleo es el órgano ciudadano auxiliar de la Administración Municipal, que tiene como objeto establecer las bases para: Fomentar y promover el desarrollo y la competitividad en materia económica. Elaborar e implementar las estrategias generadoras de fuentes de empleo, consolidando las existentes y promoviendo el autoempleo, el cooperativismo y cualquier otra forma de asociación cuyo objeto sea afín al presente reglamento. Establece políticas generales e incide en la formación, evaluación y seguimiento del Plan Municipal de Desarrollo, procurando un equilibrio sustentable del mismo. Promover el desarrollo de los sectores de la Economía Municipal tales como, el industrial, comercial, turístico, agroindustrial, artesanal y de servicios.

Reglamento del consejo Municipal de promoción económica y empleo de El Grullo, 2012

## **METODOLOGÍA**

La metodología empleada para el presente trabajo fue la consulta directa sobre los programas con el encargado del área, en este caso el Director de Desarrollo y Promoción Económica del H. Ayuntamiento de El Grullo. Una vez que se proporcionó la información se revisó, analizó y resumió para su adecuada presentación y entendimiento y poder elaborar el tablero de indicadores.

## **RESULTADOS**

Como resultados del presente trabajo, se muestra un tablero de indicadores por cada uno de los programas que se manejan en la Dirección de Promoción Económica del H. Ayuntamiento del Municipio de El Grullo; como una iniciativa de mejora para el área y que a pesar de los cambios de administración y gobierno que ocurren cada tres años, se pueda llevar una continuación y seguimiento estadístico sobre los apoyos y programas ofrecidos por el área con la finalidad de buscar siempre aumentar el número de beneficiarios posibles. Todo ello con el objetivo de diseñar e implementar procesos de gestión eficientes para la dirección de Desarrollo Económico así como disminuir el retroceso en las metas establecidas por la administración en los cambios de gobierno y asegurar un desarrollo económico sostenido. De igual forma, la sociedad se beneficiaría mejorando el impacto de los programas en la sociedad.

Tabla 1: Tablero de Indicadores de Gestión Para la Dirección de Desarrollo y Promoción Económica del Municipio de el Grullo

Clave	Proceso	#	Nombre del Indicador	Unidad de Medida	Fórmula de Cálculo	Frecuencia	Registro	Encargado de Medir
0.01	Proyectos inversión	1	Total de proyectos ejecutivos terminados	Unidades	Número de proyectos terminados / Número de proyectos planeado a recibir	Anual	Registro de folios de proyectos	PROYECTISTA
		2	Porcentaje de productores a beneficiar	%	Diferencia entre total de productores de los ramos del proyecto - Productores participantes en el proyecto a beneficiar/ total de productores de ramos *100	Anual	DENUE y registros proyecto	PROYECTISTA
		3	Impacto laboral promedio de los proyectos	Unidades	Diferencia del número de empleos a generar por proyectos y los empleos Creados	Anual	Fichas técnicas de cada proyecto	PROYECTISTA
		4	Promedio de retorno de la inversión propuesta	Años	Suma de tiempo de retorno / Número de proyectos	Anual	Fichas técnicas de cada proyecto	PROYECTISTA
		5	Total de proyectos que entran dentro de alguno de los sectores estratégicos.	Unidades	Proyectos que se encuentran dentro de los sectores - Proyectos que no se encuentran dentro de sectores	Anual	DENUE y registros proyecto	PROYECTISTA
		6	Incremento de proyectos productivos	%	(Diferencia de proyectos actuales y antiguos /Proyectos año anterior*100)	Anual	Informe anual y padrón de proyectos	PROYECTISTA
		7	Monto total de inversión pública propuesta	\$	Suma de inversión proveniente de los diferentes niveles de gobierno	Anual	Fichas técnicas de cada proyecto	PROYECTISTA
		8	Monto total de inversión privada propuesta	\$	Suma de la propuesta de aportación privada	Anual	Fichas técnicas de cada proyecto	PROYECTISTA
		9	Numero de cadenas productivas a las que se integran los proyectos	Unidades	Suma de cadenas productivas que se ven afectadas	Anual	SEIJAL - Registros	PROYECTISTA
		10	Porcentaje convocatorias atendidas con proyectos	%	Diferencia del total de convocatorias y convocatorias atendidas/Total de convocatorias * 100	Semestral	INADEM - Registro de proyectos	PROYECTISTA
		11	Tasa de crecimiento de solicitudes de crédito	%	Diferencia del total de solicitudes anteriores y del año actual / solicitudes del año anterior*100	Anual	Relación de créditos otorgados	AGENTE OPERATIVO FOJAL
		12	Monto de créditos FOJAL otorgados	\$	Suma total de créditos aprobados - 2%	Semestral	Relación de créditos otorgados	AGENTE OPERATIVO FOJAL
		13	Porcentaje de comportamiento de inconformidades de solicitantes	%	Diferencia del total de inconformidades presentadas el año anterior y año actual/ Inconformidades año anterior* 100	Anual	Relación de créditos otorgados	AGENTE OPERATIVO FOJAL
		14	Nivel de rechazo de solicitudes	%	Diferencia del total de proyectos rechazados el año anterior y año actual/ proyectos rechazados* 100	Anual	Relación de créditos otorgados	AGENTE OPERATIVO FOJAL
		15	Tasa de solicitudes aprobadas	%	Diferencia del total de proyectos rechazados el año anterior y año actual/ proyectos rechazados* 100	Anual	Relación de créditos otorgados	AGENTE OPERATIVO FOJAL

0.03	Empleo	16	Monto de créditos a empresas de transformación Total beneficiarios	\$	Suma de créditos a industria	Mensual	Relación de créditos otorgados	AGENTE OPERATIVO FOJAL
		17	programa capacitación en la práctica laboral Total	Personas	Suma de asistentes por temporada	Trimestral	Registro de participantes	Auxiliar P.E.
		18	beneficiarios capacitación para el empleo	Personas	Suma de beneficiarios	Trimestral	Registro de participantes	Auxiliar P.E.
		19	Porcentaje de incremento beneficiados del programa de fomento al autoempleo	\$	Diferencia del total de beneficiarios el año anterior y año actual/ Beneficiarios año anterior* 100	Trimestral	informe	Auxiliar P.E.
		20	Total de plazas laborales ofertadas en la dirección	Unidades	Suma de plazas ofertadas por la dirección	Anual	Control de solicitudes de personal	Auxiliar P.E.
		21	Total de solicitudes de empleo recibidas	unidades	Suma de solicitudes de empleo	Anual	Control de solicitudes de empleo recibidas	Auxiliar P.E.
		22	Porcentaje de desempleo local	%	PEA - Registrados en Seguridad Social/PEA*100	Trienio	Informe	Auxiliar P.E.
		23	Porcentaje de unidades económicas en Industria	Unidades	Número de unidades económicas en el municipio menos unidades Económicas del sector industria/ total de U.E.*100	Anual	Padrón de licencias municipales	Auxiliar D.E.
		24	Porcentaje de incremento de industrias	%	Industrias establecidas en año anterior - total de industrias/ industrias año anterior*100	Anual	Informe	Auxiliar D.E.
		25	Inversión Municipal en capacitación especializada	\$	Monto total de inversión en temas de capacitación especializada para industria.	Anual	Reporte	Auxiliar D.E.
0.04	Productividad	26	Inversión a sector primario por Fomento Agropecuario	\$	Total de recursos gestionados y entregados al sector primario	Anual	informe	Auxiliar D.E.
		27	Proyectos aprobados por el Consejo Estatal de Promoción Económica.	Unidades	Suma de proyectos aprobados	Anual	informe	Auxiliar D.E.
		28	Proyectos productivos aprobados por PROJAL	Unidades	Suma de proyectos aprobados	Anual	informe	Auxiliar D.E.
		29	Total de beneficiarios del programa de capacitaciones regionales del INJAC	Personas	Sumatoria de participantes en uno o más cursos	Semestral	Informe capacitación	Director D.E.
0.05	Capacitación y calidad	30	Calificación promedio de jornada trimestral de capacitación.	%	Suma de promedios de cada curso/ Número de cursos	semestral	Informe de resultados de encuestas	Dir. D.E.
		31	Total de empresas locales certificadas en ISO 9001	Unidades	Suma de empresas locales certificadas	anual	certificados	Dir. D.E.
		32	Total de aportación municipal para	\$	Suma de las aportaciones por cada curso gestionado		Informe capacitación	Dir. D.E.

		capacitación INJAC						
0.06	Cooperativismo	33	Porcentaje de incremento de Soc. Cooperativas	%	Soc. Coop. Registradas en el año anterior - Soc. Coop. Del año actual/ Soc. Coop. Registradas el año anterior *100	Anual	Padrón de Sociedades Cooperativas del Municipio de El Grullo.	Auxiliar de la Dirección de Desarrollo Económico
		34	Incremento de asociados a Cajas Populares	Personas	Socios en el año anterior - Socios del año actual/Socios Registradas el año anterior *100	Anual	Base de datos del INAES	Auxiliar de la Dirección de Desarrollo Económico
		35	Monto total Anual de inversión INAES	\$	Suma montos de proyectos aprobados	Anual	Convenio	Director
		36	Porcentaje de crecimiento de empresas exportadoras	Unidades económicas	Empresas exportadoras registradas el año pasado - Empresas exportadoras del año actual/ Empresas exportadoras del año pasado*100	Anual	Padrón Municipal de licencias	Aux. de la dirección
		37	Inversión pública en infraestructura económica	\$	Total de la inversión en infraestructura económica de acuerdo a montos de inversión estatal en Municipios	Anual	Informe de inversión pública	Aux. de la dirección
0.07	Atracción de la inversión y oferta exportable	38	Ficha técnica del Municipio para inversionistas	Ficha	Ficha técnica actualizada y entregada a la SEDECO	Anual	Ficha técnica	Aux. de la dirección
		39	Convenio de colaboración con SEIJAL	Convenio	Convenio firmado por Ayto. y SEIJAL	Triannual	Convenio firmado	Aux. de la dirección
		40	Monto total de las becas otorgadas y ejecutadas por JALTRADE	\$	Suma de los costos individuales de becas JALTRADE	Anual	Relación de becarios	Aux. de la dirección
		41	Empresas participantes en expos comerciales	unidades	Total de empresas registradas a participar en exposiciones comerciales	Anual	Listado	Aux. de la dirección
		42	Empresas participantes exposiciones internacionales	unidades	Suma de empresas participantes en exposiciones internacionales o misiones comerciales	Anual	listado	Aux. de la dirección
0.08	Consejo Municipal de desarrollo económico y Empleo	44	Sesiones de consejo	Unidades	Total de sesiones de consejo	Semestral	Actas	Director
		45	Promedio de asistencia a sesiones	Promedio	Suma de totales de asistencia por reunión/reuniones durante el año	Anual	Control de reuniones realizadas	Director
		46	Iniciativas ciudadanas presentadas por consejo	Razón	Razón: Iniciativas estudiadas contra iniciativas presentadas al Ayuntamiento	Anual	Minutas	Director
		47	Proyectos propuestos del consejo al Mpio.	Unidades	suma de proyectos emergidos	Anual	Minutas	Director
		48	Porcentaje de asuntos resueltos por el consejo	%	Número de asuntos que ingresan - Número de asuntos resueltos/Total de asuntos ingresados *100	Anual	Minutas	Director

Fuente: Elaboración propia.

## CONCLUSIONES

Con el diseño del sistema de indicadores se deja el precedente para su implementación dentro de la dirección de desarrollo económico y por ende se abre la posibilidad de consolidar a esta dirección como un organismo público descentralizado que impulse de forma efectiva el desarrollo económico municipal.

Se recomienda que se capacite al personal de la dirección a fin de que adquieran las capacidades necesarias para poder implementar el sistema y que de esta forma sean ellos quienes apoyen a los directores nuevos a implementarlo. Otro de los temas que se deben profundizar es el del diseño organizacional que complemente y refuerce este proyecto. Como conclusión se consideró necesario recalcar que se trata de un proyecto muy amplio y que puede dar pie a otro sin número de proyectos e investigaciones que fortalezcan y concreten la aplicación del sistema.

## BIOGRAFÍA

Claudia Leticia Preciado Ortiz Licenciada en Administración por el Centro Universitario de la Costa Sur – Universidad de Guadalajara (UdeG), y Maestra en Dirección y Finanzas por la Universidad Popular Autónoma del Estado de Puebla (UPAEP). Se desempeña como profesora de asignatura, Presidente de Academia de Administración aplicada del Departamento de Ciencias Administrativas y es actual Coordinadora de Calidad del Centro Universitario de la Costa Sur (CU COSTA SUR). Así mismo, ha participado como ponente en congresos nacionales e internacionales. Las líneas de investigación que maneja son conducta del consumidor, sistemas de gestión de calidad y forma parte del Grupo de investigación en estudios de egresados del CU COSTA SUR.

Enrique Robles Rodríguez Recién egresado de la Ingeniería en Gestión Empresarial por el Tecnológico Superior de El Grullo, Técnico en contabilidad por el Colegio de estudios científicos y tecnológicos de Jalisco, Diplomado en Administración y desarrollo Sustentable por la Universidad Iberoamericana D.F., Taller Consultor Financiero por el Tecnológico de Monterrey. Actualmente se desempeña como Director de Desarrollo Económico del H. Ayuntamiento de El Grullo, Jalisco, México, Administración 2012-2015.

# PERTINENCIA Y CALIDAD EN PROGRAMAS DE ESTUDIOS SUPERIORES

Gonzalo Llamas Bañuelos, Universidad Autónoma de Baja California

## RESUMEN

*La globalización económica mundial ha afectado de manera profunda a la educación en todos sus niveles. Por ello, se convierte en un imperativo la revisión de los planes de estudio sobre todo a nivel de educación superior en donde las tecnologías de la información y la comunicación (TICs) han permeado también el mundo del trabajo. En un entorno cambiante donde el conocimiento se vuelve obsoleto de manera vertiginosa, se hace pertinente la revisión permanente de los programas de estudio. En este contexto se registra el actual estudio, donde se presentan los resultados obtenidos en una investigación a 129 egresados de la carrera de mercadotecnia para determinar si el perfil de egreso responde a las necesidades del entorno y si estos cuentan con las competencias necesarias para insertarse en la actividad laboral. Dentro de los objetivos planteados con los resultados de esta información se contempla el mejoramiento y diseño de los planes de estudio, así como evaluar el nivel de satisfacción de los egresados con su formación. La evaluación de la pertinencia y calidad es otro de los propósitos, así mismo, la identificación de las necesidades de formación en posgrados. Se incluye también un análisis del modelo de regresión logística para determinar cuáles son las variables independientes que inciden de manera importante en la inserción al mercado de trabajo.*

**PALABRAS CLAVES:** Planes y Programas de Estudio, Mercado de Trabajo, Competencias Laborales

## RELEVANCE AND QUALITY IN HIGHER EDUCATION PROGRAMS

### ABSTRACT

*The economic globalization has profoundly affected education at all levels. Therefore, it becomes imperative a permanent revision of curricula especially at the higher education level where the information and communication technologies (ICTs) have also permeated the world of work. In a changing environment where knowledge becomes obsolete exponentially, the ongoing review of the curriculum becomes relevant. In this context, the current study present the results of an investigation to 129 graduates of the marketing bachelor to determine if the graduate profile meets the needs of the business environment and whether they have the necessary skills to insert themselves in the labor market. In that sense, a cuestionary was applied to determine the necessity to improve and redesign the curricula, to assess the level of satisfaction of the students related to the program, also the evaluation the relevance and quality and the identification of training needs in postgraduate courses. It also includes an analysis of the logistic regression model to determine the independent variables that have a great impact on the insertion to the labor market integration.*

### INTRODUCCIÓN

Ante los desafíos que impone la globalización en las instituciones de educación superior, surge la preocupación en la UABC por la evaluación institucional como una estrategia para optimizar su calidad,

reconociendo su relación inseparable de la pertinencia, ya que esta no se logra con respuestas educativas de baja calidad; de igual modo la calidad de la educación superior no se puede omitir la valoración de su pertinencia. En 1998 la UNESCO concibió a la pertinencia como la adecuación entre lo que la sociedad espera de las instituciones y lo que estas hacen. De allí la valoración de la pertinencia social de la ES no sea tarea fácil especialmente si se adopta el concepto amplio de pertinencia social. Sin duda la evaluación sirve para dos propósitos, rendir cuentas a la sociedad con una evaluación externa y evaluación interna que permita la autorregulación y mejoramiento de procesos administrativos y académicos. Las categorías son la pertinencia que tiene que ver con la misión de la educación, mientras que la eficiencia se relaciona con la forma en que adquiere su funcionamiento y la eficacia con los logros obtenidos.

Hoy en día, es importante la revisión permanente de los planes y programas de estudios, en virtud del entorno tan cambiante que incide de forma importante en las instituciones de educación superior en el mundo. Es aquí donde la revisión de los planes y programas de estudio se justifica ampliamente para evitar la obsolescencia de los conocimientos que se imparten en las aulas y por ello, se ha venido trabajando en la revisión sistemática de las necesidades que han sido señaladas por los egresados. La estructura del mercado laboral es una instancia que ha sido afectada de manera profunda por la globalización económica y por el desarrollo de las tecnologías de la información y la comunicación (TICS), de tal manera que como institución educativa, la UABC requiere de hacer acopio de todos esos conocimientos, actitudes, habilidades y destrezas que está requiriendo el mercado laboral.

El presente trabajo de investigación pretende recoger las opiniones de los egresados en términos del empleo actual que desarrolla así como las razones que influyeron en los empleadores para otorgarles un puesto de trabajo. En general se pretende conocer el entorno laboral en el cual se desenvuelve actualmente así como su grado de satisfacción con los servicios recibidos por la Facultad de Ciencias Administrativas (FCA), el contenido de las asignaturas cursadas y su grado de aplicación en el trabajo. También se rescatan algunas opiniones de los egresados sobre su formación recibida, su opinión sobre la institución, así como una evaluación de los docentes, y sobre la organización académica y el desempeño institucional y la pertinencia de los conocimientos adquiridos en las aulas universitarias. Dentro de los objetivos planteados en la investigación destacan los siguientes: Evaluar la pertinencia y la calidad de los planes de estudios, Mejorar el diseño de los planes de estudio. Obtener indicadores de la calidad de la educación, Evaluar el nivel de satisfacción de los egresados con su formación, Conocer el nivel de inserción de los egresados en el mercado laboral y en sus carreras profesionales.

## **METODOLOGÍA**

El procedimiento que se siguió para localizar a los egresados de las distintas carreras fue a través de un padrón de egresados que tiene la Facultad de Ciencias Administrativas. El contacto se realizó vía correo electrónico, por teléfono y una gran mayoría en los centros de trabajo. Una vez localizados se procedió a aplicarles la encuesta a través del cual se localizó a los egresados para aplicar la encuesta; posteriormente los cuestionarios se concentraron y se analizaron cada uno de ellos para ver si estaban debidamente contestados. Ya con los cuestionarios aplicados procedimos a diseñar el sistema de captura en el Programa Estadístico para Ciencias Sociales (SPSS). En este caso se capturaron 129 encuestas que contestaron estudiantes egresados del programa de la licenciatura en Mercadotecnia. Una vez capturada la información del instrumento aplicado, se hicieron varias corridas en el programa para ver si la información estaba completa y no tenía inconsistencias. El siguiente paso fue obtener la distribución de frecuencias de cada una de las variables contenidas en el Instrumento. Procedimos después a realizar las Figuras en el programa Harvard Graphics. Enseguida se trabajó en la redacción del reporte final. El instrumento fue diseñado para capturar la información precisa, objeto de este estudio e incluyó un total de 46 preguntas distribuidas en las siguientes temáticas:

Aspectos socio demográficos  
 Formación Académica  
 Trayectoria y ubicación en el mercado laboral  
 Desempeño profesional  
 Opinión sobre formación profesional  
 Opinión sobre la formación recibida  
 Recomendaciones para mejorar el perfil de formación profesional  
 Opinión sobre la institución  
 Opinión sobre la organización académica y desempeño institucional  
 Opinión sobre la organización institucional  
 Satisfacción con la UABC y la carrera cursada (ver anexo)

### Sujetos

Los sujetos encuestados fueron los egresados de la licenciatura en Mercadotecnia de primera generación hasta el periodo 2013-1.

### Universo

El universo de encuestados lo constituyen los egresados de las licenciatura en Mercadotecnia de la primera generación hasta 2013-1 que suman un total de 434 egresados

### DETERMINACION DEL TAMAÑO DE MUESTRA

N= Universo o Población

n= Tamaño de muestra

Z= Nivel de confianza 95%

P= 0.50%

q= 0.50%

e= .07%

$$n = \frac{NZ^2pq}{e^2(N-1)+Z^2pq}$$

$$n = \frac{434*(1.96)^2*0.5*0.5}{(0.07)^2(434-1)+(1.96)^2*0.5*0.5}$$

$$n = \frac{416.8136}{3.0821} = 135.2368 \approx 135$$

## RESULTADOS

Podemos observar en la Figura 1 que los porcentajes significativos sobre el grado de satisfacción que tienen los egresados en los siguiente aspectos: El 84% se encuentra muy con la puesta en práctica de los conocimientos adquiridos en la licenciatura, el 75% se declara muy satisfecho con la posibilidad de realizar ideas propias, el 78.4% se manifiesta muy satisfecho por el reconocimiento profesional alcanzado, el 82.3% se encuentra muy satisfecho con el trabajo en equipo, el 81.5% se siente muy satisfecho con la posibilidad de coordinar un equipo de trabajo, el 83.2% se encuentra muy satisfecho con la posibilidad de responder a problemas de trabajo, 82.4% se siente muy satisfecho con el contenido del trabajo, 80.8% se dice muy satisfecho con el ambiente de trabajo, el 80.8% se dice muy satisfecho con el salario que percibe. También el 71.2 se manifiesta muy satisfecho con la posición jerárquica alcanzada, el 76% se dice muy satisfecho con la posibilidad de responder a problemas de relevancia social. Como podemos constatar los porcentajes de satisfacción son muy altos con respecto a lo “nada satisfecho y poco satisfecho”.

Figura 1: Grado de Satisfacción Con la Formación Recibida y Correspondencia Con las Funciones del Cargo

Fuente: Investigación sobre seguimiento de egresados de Mercadotecnia 2013

Figura 2: Experiencia Laboral Extra UABC, Actualización Profesional y Actuación

A continuación enlistamos algunas características básicas de los docentes y su actividad, haciendo una evaluación al conjunto de los profesores, indique que porcentaje de los docentes de la carrera que usted cursó, cumplía las siguientes condiciones

Fuente: Investigación sobre seguimiento de egresados de Mercadotecnia 2013

En esta Figura 2 se evalúa el desempeño de los profesores que laboran en la Facultad de Ciencias Administrativas, las opiniones vertidas corresponden a los egresados de las distintas carreras, así encontramos que el 53.2% de los entrevistados dijeron que los profesores tenían amplio conocimiento de la materia y que su rango de dominio fluctuaba entre un 76 a un 100%. La calidad expositiva la valoraron

entre un 50 y 75%, para el 41.8% la atención fuera de clase estaba en un rango de 75 a 100%. En general todos los aspectos sometidos a votación se encuentran en el rango de 76 a 100%. De lo anterior se deduce que la evaluación al magisterio es sobresaliente, sobre todo lo que se relaciona con su actuación en el aula.

**Indique en que medida fueron atendidos los siguientes aspectos referidos a la organización académica y administrativa de la carrera que usted estudió**

**Fuente: Investigación sobre seguimiento de egresados de Mercadotecnia 2013**

En la Figura 3 los egresados evalúan aspectos sobre la organización académica y administrativa en los siguientes aspectos: Realización de foros académicos de apoyo para los cursos y seminarios, estímulo al trabajo de investigación conjunto entre profesores y alumnos, orientación y conducción de los trabajos terminales o tesinas, atención del responsable de la carrera a las necesidades académicas de los alumnos, asignación de profesores al inicio del periodo lectivo, apoyo y orientación para la realización del servicio social, entrega de los programas de materia/seminarios a los alumnos. Se puede observar que en todos los aspectos evaluados más del 70% de las opiniones de los egresados las califican de buena

**Señale en que medida la formación de licenciatura lo preparó para lo siguiente**

**Fuente: Investigación sobre seguimiento de egresados de Mercadotecnia 2013**

No hay duda que las opiniones de los egresados nos sirven para la reestructuración de planes y programas de estudios, aun cuando son parciales son importantes ya que como complemento se requeriría la opinión de expertos docentes y por supuesto la opinión de los empleadores. Así encontramos que el 46.7% de los egresados opina que se hizo mucho énfasis en su formación teórica. En tanto que el 53.7% opina que se le dio medio énfasis a la enseñanza metodológica. El 48.2 opina que se le dio medio énfasis a la enseñanza de las matemáticas y estadística y solo el 34.5% considera que se le dio medio énfasis a estas asignaturas. La opinión sobre la enseñanza de técnicas fue con medio énfasis de acuerdo con el 45.4% de las opiniones. Y para el 43.9% que la formación en prácticas de laboratorio, trabajo de campo y talleres fue con medio énfasis.

**En su opinión, ¿Cuál es el grado de énfasis otorgado a los diferentes contenidos en el plan de estudios de licenciatura que usted estudió?**

**Fuente: Investigación sobre seguimiento de egresados de Mercadotecnia 2013**

En la Figura se destaca el grado de énfasis en el Plan de Estudios en aspectos como: la enseñanza teórica, metodológica, matemáticas y estadística, técnicas de la carrera, las prácticas de laboratorio, de campo y talleres.

**¿Que modificaciones sugeriría al plan de estudios que usted cursa los siguientes rubros?**

**Fuente: Investigación sobre seguimiento de egresados de Mercadotecnia 2013**

Las sugerencias son: el 63% que el plan de estudios cursado se mantenga igual en sus contenidos teóricos. Que también se mantengan los contenidos metodológicos igual en opinión del 64.6% de los egresados. Según el 57.1% que los contenidos técnicos se amplíen, mientras que el 62.7% considera que los contenidos profesionales se deben ampliar. Por último el 69% que la enseñanza de las matemáticas y estadística deben permanecer igual.

## CONCLUSIONES

El grado de satisfacción en la aplicación de los conocimientos adquiridos en la licenciatura es muy variado sin embargo podemos decir que en su mayoría los egresados se encuentran satisfechos con la aplicación de sus conocimientos. Se encuentran también muy satisfechos ya que en su empleo actual tiene posibilidades de desarrollar ideas propias, también se encuentran satisfechos por el conocimiento que han alcanzado y por el reconocimiento también al trabajo en equipo que viene desarrollando, el ambiente de trabajo según su opinión es muy satisfactorio, igualmente se encuentran satisfechos por el nivel de salario que obtienen actualmente. La posición jerárquica que actualmente ocupan, los mantienen satisfechos y se encuentran también ante la posibilidad de responder a problemas de relevancia social y de hacer algo de provecho para la sociedad. El egresado manifiesta que se hizo mucho énfasis teórico a los contenidos en los planes de estudio de las carreras y medio énfasis en la enseñanza metodológica, también manifiesta el mismo énfasis en la enseñanza de las matemáticas y estadística, en la enseñanza técnica, en laboratorios, talleres y trabajo de campo. La formación recibida lo ha estimulado para estar informado mediante la lectura de medios escritos. Manifiesta que su formación en parte ha contribuido a ser más participativo en asuntos de interés público y que lo ha motivado para promover iniciativas benéficas para la colectividad.

Las recomendaciones que hacen los egresados para mejorar el plan de estudios son: Que los contenidos teóricos se mantengan igual e inclusive que se amplíen, así mismo que los contenidos metodológicos y los contenidos técnicos se amplíen y que se deben ampliar los contenidos profesionales así como la enseñanza de las matemáticas y la estadística. La percepción que tienen los egresados sobre la calidad de la UABC varía de alta a muy alta y los porcentajes de no aprobación de este concepto son muy bajos.

El sentido de pertenencia es muy alto de tal forma que está dispuesto a aconsejar y recomendar a un pariente o amigo para que estudie en la UABC, por el reconocimiento social regional y nacional que tiene la institución. Los egresados hacen una evaluación de los docentes manifestando que tenían un amplio conocimiento de la materia, que eran claras sus exposiciones y que la tensión fuera de clase era buena, que existía claridad en los enfoques teóricos metodológicos, así como objetividad en la evolución de los trabajos escritos y exámenes. Características necesarias para motivar y ascender a nuevos conocimientos ya que esto les permitía a ellos motivarse para participar en clase con un respeto y restricto hacia el alumnado así como una asistencia puntual al salón de clases. Realizan una evaluación sobre la organización académica y el desempeño institucional argumentando como muy buenos los cursos y seminarios, así como un estímulo al trabajo entre profesor y alumno. La orientación y conducción de los trabajos por parte de los docentes es buena, la Atención hacia los alumnos también es buena, orientando en todo momento para la realización de servicio social así como la entrega a tiempo del plan de trabajo a realizar durante todo el semestre.

# COMPETITIVIDAD DE LA INDUSTRIA DEL MUEBLE EN LA REGIÓN CENTRO OCCIDENTE DE MÉXICO EN EL MERCADO DE LOS ESTADOS UNIDOS

Marco Alberto Valenzo-Jiménez, Universidad Michoacana de San Nicolás de Hidalgo  
Jaime Apolinar Martínez Arroyo, Universidad Michoacana de San Nicolás de Hidalgo

## RESUMEN

*El presente artículo expone un estudio sobre los factores de competitividad en la industria exportadora del sector mueblero en la Región Centro Occidente de México. Los resultados indican que se trata de una industria con una competitividad alta, de acuerdo a las variables independientes de mercado, canales de distribución, precio, tecnología, calidad y servicios. Los resultados muestran que esta industria exportadora radica su competitividad en las tres primeras, sin embargo, no son sostenibles en el largo plazo.*

**PALABRAS CLAVE:** Competitividad, Industria del Mueble, Exportación, Estados Unidos

## ABSTRACT

*This article shows a study about competitiveness factors in the Center Eastern region of Mexico furniture exporting industry. The results indicate that it is an industry with high competitiveness according to the independent variables of market, distribution channels, price, technology, quality, and services. The results demonstrate that this exporting industry lays in its competitiveness in the first three mentioned variables; however, they are not sustainable at a long term.*

## INTRODUCCIÓN

Los muebles son todos aquellos enseres, artefactos y utensilios, generalmente apoyados sobre el suelo, que se encuentran en el interior de las casas y los edificios en los que el ser humano desarrolla su vida familiar, su trabajo y su ocio (BANCOMEXT, 2000). El comercio internacional de muebles representa aproximadamente el 1% del comercio mundial de la industria de elaboración. Este valor registró un crecimiento rápido hasta 2008 (US\$ 117 billones), seguido por una fuerte contracción de -19% en 2009 y una recuperación en 2010 y 2011. Se prevé un crecimiento del 4% en el comercio mundial de muebles entre 2012 y 2013 (Centro de Estudios Industriales, 2013). En donde el rubro “muebles de madera utilizados para dormitorio” el de mayor dinámica (10%), seguido por los “demás muebles de madera” (8,4%) (Ministerio de Comercio Exterior y Turismo de Perú, 2010). La producción de muebles en el mercado internacional está concentrada en los Estados Unidos, Italia y China. Es en estos países donde se concentra cerca del 45% de esta industria. En lo referente a los principales exportadores Italia es el líder, seguido de China, Canadá y Alemania. En cuanto a los principales importadores a nivel mundial son E.U., Alemania y Reino Unido, éstos cuentan con el 52.22% del consumo internacional.

Los EEUU concentran el 34.7% del consumo total de muebles a nivel mundial y registra uno de los crecimientos más dinámicos (16.7%). Esta tendencia al alza de las importaciones estadounidenses se mantendrá, dada la reducción de las inversiones de los fabricantes nacionales, quienes han optado por la

subcontratación en terceros países, principalmente en China y otros países asiáticos que se tornaron más competitivos debido al menor costo de la mano de obra. En el año 2010, México sólo aportó 1.1% de las exportaciones globales de muebles. Sin embargo, a nivel Latinoamérica, México ocupa el primer puesto seguido por Brasil, Chile, Colombia, Argentina, Bolivia y Perú (Rodríguez, 2010).

Las principales regiones productoras en nuestro país son el Distrito Federal (13.6%), Puebla (13.6%), Jalisco (11.6%), Nuevo León (11.6%), Baja California y Chihuahua (8.4%), y Michoacán (3.2%). Dado el panorama para incursionar en el comercio internacional es importante conocer cómo se encuentran los niveles de competitividad. Este tema puede ser estudiado desde el punto de vista macroeconómico (países) y desde la perspectiva microeconómica (industrial o empresarial) que permita identificar elementos esenciales sobre la estrategia funcional e inserción en los mercados internacionales. Es en este sentido que el presente estudio pretende analizar cuáles son los factores que explican la competitividad de la industria exportadora de mueble de la región Centro Occidente de México (RCOM), – esta región esta integrada por los Estados de Jalisco, Michoacán, Guanajuato, Colima, Nayarit y Aguascalientes. Es importante destacar que el estado de Colima no reportó industria exportadora de mueble para el período de estudio.

El Banco de Comercio Exterior (2010), reportó que la industria exportadora del mueble en México ha perdido su posición competitiva con respecto a los países exportadores ya que en el año 1999 ocupaba la posición 5 a nivel mundial y para el año 2010 se encuentra en el lugar 15, en donde presenta una caída en 10 posiciones (EL ECONOMISTA, 2011). Rodríguez (2010) afirma, que el sector mueblero mexicano se quedó estático, ya que se mantiene con un estilo artesanal, y además de un escaso diseño y poco avance tecnológico. Esta falta de dinamismo ya causa estragos en la industria en México. A finales de la década de los 90's, el sector mueblero nacional estaba constituido por al menos 20,000 empresas que generaban 150,000 empleos y aportaban 2.6% del Producto Interno Bruto (PIB). En la actualidad, en cambio, el sector mueblero mexicano representa 1.3% del PIB y genera 129,000 empleos directos y cuenta con 17,000 empresas aproximadamente; de las cuales 86.9% son pequeñas, 10.8% medianas y únicamente 2.3% son grandes, según cifras de la Secretaría de Economía (SE).

El objetivo de la presente investigación es identificar las variables que determinan la competitividad y de qué manera inciden éstas en el sector exportador de muebles de madera en la Región Centro Occidente de México (RCOM) en el mercado de los Estados Unidos. La hipótesis que se describe a continuación surge como resultado del análisis del marco teórico y del análisis documental del sector exportador de muebles de madera con un sentido causa-efecto para tratar de dar respuesta a los problemas que enfrentan los socios y propietarios de este industria con la finalidad de implementar estrategias para mantener la competitividad en el mercado de los Estados Unidos. La competitividad de las empresas exportadoras de muebles de madera de la Región Centro Occidente de México, se explican por la calidad, los canales de distribución, el nivel de precios, los servicios ofrecidos, la tecnología y el mercado.

En este trabajo se presentan el método de investigación y los materiales utilizados, la recolección y procesamiento de la información que se captó en el estudio de campo; se explica la obtención de datos y el procesamiento de la variable dependiente, así como de las variables independientes. En el análisis e interpretación de resultados se exponen los obtenidos al procesar la información que fue recabada en campo. La concentración de los datos permite a través de la escala de medición utilizada, la comprobación de la hipótesis planteada y pasar a la discusión de los resultados. Por último, se presentan las conclusiones de la investigación y las referencias consultadas

## REVISIÓN DE LA LITERATURA

Al llevar a cabo la revisión de la literatura respecto a las variables que inciden en la competitividad se han identificado diferentes autores entre los que destacan (Cetindamar & Kilitcioglu, 2013), (Martinez, Espitia,

& Valenzo, 2013), (Montoya Rendón & Montoya Rendón, 2011), (Valenzo, Martinez, & Bonales, 2010), (Ambastha & Momaya, 2004), (Rudelius, 2004), (Chavez Ferreiro, 2004), (Bonales, 2003), (INEGI, 2001), (Azua, 2000), (Chauca, 2000), (Gaiter & Frazier, 2000), (Azua, 2000), (BANCOMEXT, 1999), (Kotler & Armstrong, 1998), (Alvarez, 1998), (Gutiérrez, 1997), (Torres Hernández, 1997), (Baldwin, 1995) (Scott & Lodge, 1995), (Krugman, 1994), (Hernandez & Rodriguez, 1994), (García, 1993), (Zikmund, 1993), (Monteverde, 1992), (Porter, 1990), (Morita & SONY, 1990), (Kirkland, 1988), (Wilensky, 1986), (Levitt, 1986), (Berryman & Zeithaml, 1985), (Martínez M., 1976), (Donnelly, 1976) con la revisión de estos autores se lograron identificar 91 variables que inciden en la competitividad, en donde se realizó un análisis exploratorio y de frecuencia, el cual consistió en la realización de un cotejo de variables empleadas en los diversos estudios empíricos y las variables sugeridas a ser empleadas en los estudios teóricos, de las cuales seis se citan con mayor frecuencia y son; la calidad, los canales de distribución, el precio, los servicios, la tecnología y el mercado y a continuación se conceptualizan estas variables.

En primer lugar, la Calidad, Gaiter y Frazier (2000, p. 630) afirman que la calidad de un producto o servicio es el grado de percepción del cliente en que dicho bien cumple con sus expectativas, asimismo, señalan que la calidad se determina por el desempeño del producto, características atractivas para el cliente, confiabilidad, capacidad de reparación, durabilidad, apariencia, seguridad y servicio. Los Canales de Distribución conceptualizado por Martínez (1976, p.4) afirma que son el conjunto de elementos materiales y humanos, externos a la empresa y que utiliza para completar su acción distribuidora. Estos elementos son de tres tipos: zonas o locales de almacenamiento, medios de transporte y personal. El Precio, en el sentido más estricto, es “la cantidad de dinero que se cobra por un producto o servicio, o la suma de los valores que los consumidores dan a cambio de los beneficios de tener o usar el producto o servicio” (Kotler y Armstrong, 1998p. 89). Los Servicios son “una tarea o actividad instrumentada que se efectúa para un cliente y/o una actividad llevada a cabo o consumada que implica la participación del consumidor, como el uso, mas no la propiedad, de los productos o instalaciones de una organización” (Zikmund, 1993).

Los servicios tienen las siguientes características; intangibilidad (Levitt, 1986), inseparabilidad (Zikmund, 1993) (Donnelly, 1976), variabilidad (Kotler & Armstrong, 1998) y caducidad (Berryman & Zeithaml, 1985). La Tecnología es definida por Morita y SONY(1990) como un conocimiento organizado para fines de producción, que se encuentra incorporado a la fuerza de trabajo (habilidades). Y finalmente, el Mercado son aquellos consumidores potenciales con el deseo y la capacidad para comprar un producto o servicio en específico. Las personas conscientes de sus necesidades insatisfechas podrían tener el deseo de adquirir el producto; pero eso no basta por sí solo, también deben tener la capacidad de comprarlo, que podría comprender la autoridad de tiempo y dinero para ello (Rudelius, 2004). La Competitividad es usada frecuentemente por los gobiernos, empresas y los medios de comunicación como un concepto “vago”. Sin embargo, aún en los investigadores existe la ausencia de un consenso en cuanto al concepto de competitividad lo cual ha propiciado que los estudiosos hayan abordado dicho concepto desde distintas perspectivas teóricas (Valenzo, Martinez, & Bonales, 2010).

Como es el caso de Krugman (1994) y Baldwin (1995) quienes argumentan que, en el ámbito internacional, la competitividad no es un concepto relevante, ya que los principales países no están de ninguna forma compitiendo entre ellos, por lo que se trata más de un asunto interno de la nación que de un aspecto externo. En esta misma línea, Porter, (1990) señala que la competitividad de una nación depende de la capacidad de sus industrias para innovar y mejorar. Asimismo, Scott & Lodge, (1995) consideran que la competitividad es cada vez más un asunto de estrategias y estructuras, y cada vez menos una consecuencia de las dotaciones naturales de un país. Para Ambastha & Momaya (2004), la competitividad se define como la capacidad de competir. Es decir la capacidad de diseñar, producir, y ofrecer productos superiores en el mercado, a los ofrecidos por los competidores, considerando el precio. Por lo tanto una organización, es competitiva ante los ojos de sus clientes si ésta puede entregar un mejor valor comparado con el de sus competidores,

logrando precios más bajos con beneficios equivalentes o superiores a las de sus competidores. El valor del cliente por lo tanto, se puede considerar como la ventaja percibida en lo referente a lo que éste exige.

**Problema de Investigación:** Se desconoce si las variables definidas en el marco teórico son determinantes en los niveles de competitividad por parte de las empresas exportadoras de muebles en los Estados Unidos; sin embargo, se han definido como propuesta y se espera probarlo a través del proceso de investigación.

## **METODOLOGIA**

El método de investigación contendrá un diseño no experimental, ya que lo que se pretende es observar el fenómeno en su contexto natural para después analizarlo, es decir, cómo se encuentra la competitividad en el sector exportador mueblero y emitir el análisis de las variables de estudio. A su vez, esta investigación, tendrá un diseño transeccional (transversales), ya que los datos recogidos sólo se recopilaron en un único momento de la investigación que comprendió el periodo de junio 2009 a febrero 2010. Además, tendrá un diseño transversal correlacional ya que lo que se busca es describir las relaciones que se presentan y de esta manera conocer el nivel de relación que tienen las variables independientes (calidad, canales de distribución, precio, servicios, tecnología y mercado) y la variable dependiente “Competitividad”. En lo concerniente, al método de recolección de los datos, se utilizó un cuestionario para recoger las actitudes de los gerentes de las empresas exportadoras de muebles en la RCOM, el cuestionario fue diseñado con 50 ítems y se sometió a una prueba piloto previa.

Para la validez y la confiabilidad se obtuvo en el análisis de fiabilidad del  $\alpha$  (alfa) de Cronbach el resultado de 0.921. Estos datos se procesaron en el programa de cómputo denominado Windows, Office (Word, Excel y Power Point en su versión 2007) y SPSS para Windows versión 17. También es importante agregar que éste es un estudio de campo y por lo tanto, se realizó in situ, en donde los sujetos de estudio de esta investigación fueron aquellos directivos, dueños o encargados de las empresas exportadoras de muebles de madera ubicadas en la RCOM. Al mismo tiempo, esta investigación tendrá un carácter deductivo- inductivo, ya que de las teorías revisadas de la Competitividad se llevó al plano empírico en las empresas exportadoras de muebles ubicadas en la RCOM. Esta investigación tendrá un carácter mixto (cuantitativo-cualitativo) predominantemente cualitativo de las variables seleccionadas, con la finalidad de realizar un análisis de la competitividad.

En lo referente al universo, se tomó en cuenta el directorio proporcionado por BANCOMEXT que realizó y publicó en su página de Internet actualizado en 2010, en donde son 23 empresas las que se dedican a la exportación de muebles al mercado de los Estados Unidos; de este universo se realizó un censo, en donde se lograron aplicar a 20 empresas. En esta investigación se utilizó una escala tipo Likert, la cual es en estricto sentido, una medición ordinal, la cual “consiste en un conjunto de ítems presentados en forma de afirmaciones o juicios ante los cuales se pide la reacción de los sujetos” que permitirá determinar en qué nivel de Competitividad se encuentran las empresas exportadoras de muebles en el mercado de los Estados Unidos.

## **RESULTADOS**

El análisis de las respuestas obtenidas de la instrumentación de los cuestionarios aplicados a las empresas exportadoras de muebles ubicadas en los estados de Michoacán, Jalisco, Guanajuato y Aguascalientes, dan cuenta de la situación que guarda este sector en términos de la competitividad. La competitividad se mide considerando las variables en estudio, lo cual incluye las 50 preguntas del cuestionario y la totalidad de los entrevistados, resultando la mediana de 180.00 unidades que ubicadas en la escala muestran la opinión generalizada de que es Alta Competitividad en la Región Centro Occidente. Cabe destacar que ninguna empresa calificó como Baja o Muy Baja Competitividad (en el rango de 50 a 130 puntos).

Tabla 1: Rango de Escalas Para la Investigación de la Competitividad

Muy Baja Competitividad	Baja Competitividad	Regular Competitividad	Alta Competitividad	Muy Alta Competitividad
50	90	130	170	210
			180.00	250

En esta tabla se observan los diferentes rangos de Competitividad en la Administración de la Cadena de Suministro en donde se clasifican en diferentes rangos; Muy Baja, Baja, Regular, Alta y Muy Alta. La mediana fue de 180.00 puntos lo que representa que el sector exportador del mueble en la RCOM presenta niveles de competitividad Alta.

Fuente: Elaboración propia con base en la Investigación de Campo.

Tabla 2: Índice de Competitividad Por Variable en la Industria Exportadora del Mueble

Variables	Puntaje Alcanzado	Puntaje Esperado	Índice De Competitividad SCM
Calidad	695	900	77.20%
Canales de Distribución	679	900	75.40%
Precio	804	1100	73.10%
Servicios	198	300	66.00%
Tecnología	703	1100	63.90 %
Mercado	522	700	74.50%
Total	3601	5000	72.00%

La tabla 2 se presenta el índice de Competitividad y se puede apreciar que la variable Calidad fue la mejor evaluada y solamente alcanza niveles del 77.20%, seguido por los Canales de Distribución con un 75.40%, el Mercado y el Precio alcanzaron niveles de 74.50% y 73.10 respectivamente y las variables Servicios obtuvo un 66% y la Tecnología un 63.90 % las cuales fueron las que obtuvieron las peores calificaciones y de manera general se alcanza un 72.00 % de la Competitividad del Sector Exportador del Mueble en la RCOM. Fuente: Elaboración propia con base en el Trabajo de Campo.

Los datos obtenidos en el trabajo de campo se procesaron utilizando los programas SPSS 17.0 para Windows, Microsoft Word, y Excel que permitieran probar el grado de dependencia entre las variables independientes y la variable dependiente. Los datos al aplicar el coeficiente de correlación de Spearman (r) en esta investigación fueron los siguientes:

Tabla: 4 Matriz del Coeficiente de Correlación de Spearman (R) Bivariadas

Variables	Calidad	Canales de Distribución	Precio	Servicios	Tecnología	Mercado	Competitividad
Calidad	1.000	0.658**	0.550*	0.150	0.437	0.579**	0.728**
Canales de Distribución	0.658**	1.000	0.845**	0.377	0.471*	0.741**	0.933**
Precio	0.550*	0.845**	1.000	0.460*	0.350	0.488*	0.789**
Servicios	0.150	0.377	0.460*	1.000	0.257	0.491*	0.488*
Tecnología	0.437	0.471*	0.350	0.257	1.000	0.676**	0.718**
Mercado	0.579**	0.741**	0.488*	0.491*	0.676**	1.000	0.839**
Competitividad	0.728**	0.933**	0.789**	0.488*	0.718**	0.839**	1.000

En la tabla 4 se presenta la matriz del coeficiente de correlación de Spearman en donde se puede apreciar que la variable Canales de Distribución es la que presenta mayor correlación con un 0.933\*\*, seguida por la variable Mercado con un 0.839\*\*, el precio del producto se correlaciona en un 0.789\*\*, la calidad del producto se relaciona un 0.728\*\*, la tecnología del sector mueblero se correlaciona un 0.718\*\* y finalmente la que se correlaciona de manera moderada con un 0.488\*\*. Los niveles de correlación se expresan de la siguiente manera: \*\*. La correlación es significativa al nivel 0,01 (bilateral), \*. La correlación es significativa al nivel 0,05 (bilateral). Fuente: Información obtenida de la investigación de campo

## DISCUSIÓN DE RESULTADOS

Los resultados muestran que 13 de 20 empresas exportadoras de muebles ubicadas en los estados de Michoacán, Jalisco, Guanajuato y Aguascalientes son Altamente Competitivas. A la vez que el mercado, el precio y los canales de distribución son las variables que más inciden en la competitividad. Lo que sugiere que la fuente de ventaja competitiva de las empresas de la industria del mueble de la RCOM, se ubica en estos rubros. Los resultados arrojados no tienen un carácter estrictamente comparativo con otros países y

con ello la explicación de la pérdida de posición competitiva del país se establece que tiene como causas: a) los resultados son parciales referentes a una región y b) no se cuenta con un estudio similar en estos países que arrojen información al respecto. Así pues, en este sentido, el estudio tiene un carácter general.

## CONCLUSIONES Y RECOMENDACIONES

Las variables seleccionadas sugieren que más de la mitad de las empresas son altamente competitivas. Sin embargo, la pérdida de posición competitiva de la industria del mueble nacional sugiere que otros países tienen fuentes de ventaja competitiva superior, por ejemplo, los casos de China, Italia y Estados Unidos. En tanto que la fuente de ventaja de las empresas RCOM son el precio, los canales de distribución y la relativa cercanía con el mercado más grande del mundo lo que, sin embargo, no garantiza una fuente de ventaja sostenible. La calidad, los servicios y la tecnología mostraron los niveles de correlación más bajos respecto a la Competitividad, y que muestra que no hay fuente de ventaja, por lo cual se debe buscar una fuente de ventaja Competitiva sustentable en la calidad, la innovación en diseño y tecnología, así como en los servicios de venta y posventa. La organización de la industria del mueble de madera de exportación en la RCOM, no promueve las sinergias y las economías de escala. Se aprecia que la producción de tipo artesanal no genera economías de escala suficientes para mantener un ritmo de crecimiento acorde con los principales competidores del mundo en este rubro. El promedio del índice de competitividad de las empresas exportadoras de Muebles de RCOM se ubican en 180.00 (Alta Competitividad). El índice de competitividad propuesto para las empresas exportadoras de mueble de la RCOM es aprobado en sus variables independientes, (mercado, canales de distribución, precio, tecnología y servicios) lo cual demuestra elementos importantes para poder identificar la competitividad a escala nacional. Se sugiere un estudio sobre esta industria a escala nacional para conocer la situación del sector, así como las posibles medidas estratégicas para su mejora.

# EL COMPORTAMIENTO DEL CONSUMIDOR EN LA ADQUISICIÓN DE ARTÍCULOS ELECTRÓNICOS: CASO COLIMA, MÉXICO

Marco Antonio Barajas Figueroa, Universidad de Colima

Alma Ruth Rebolledo Mendoza, Universidad de Colima

Zulema Díaz Vega, Universidad de Colima

Alberto Mejía Conzuelo, Universidad de Colima

## RESUMEN

*Conocer a los consumidores no es tarea fácil ya que, con frecuencia, formulan sus necesidades y deseos de una forma y actúan de otra. A pesar de esto es tarea cotidiana de los especialistas en marketing analizar cómo van cambiando sus necesidades, preferencias y comportamiento de compra en general.*

*El actual estilo de vida ha hecho de los aparatos electrónicos, como son los teléfonos celulares, tabletas y plasmas, los artículos preferidos de los consumidores en las principales concentraciones urbanas de nuestro país. Hasta la fecha se desconoce con certeza el comportamiento actual que tienen los consumidores en la adquisición de artículos electrónicos en la ciudad de Colima, es decir, las variables que intervienen en su intención y posterior decisión de compra. Ese es el objetivo principal en esta investigación.*

**PALABRAS CLAVE:** Comportamiento del Consumidor, Intención de Compra, Aparatos Electrónicos

## CONSUMER BEHAVIOR AT THE PURCHASE OF ELECTRONICS: CASE COLIMA, MEXICO

### ABSTRACT

*Knowing consumers is not easy task since, often formulated their needs and desires in a way and act another. Despite this is everyday task of marketing specialists analyze how changing your needs, preferences and purchase behavior in general. The current style of life has made electronic devices, such as cell phones, tablets and plasmas, favorite items for consumers in the major urban concentrations of our country. To date is unknown with certainty the current behavior of consumers in the purchase of electronics in the city of Colima, i.e., the variables involved in its intention and subsequent decision to purchase. That's main objective in this research.*

**JEL:** M00

**KEYWORD:** Behavior of Consumer, Purchase Intention, Electronic Devices

## INTRODUCCION

El estudio del comportamiento del consumidor tiene sus orígenes en tres orientaciones de negocio filosóficamente diferentes que llevaron a una tendencia de negocios que actualmente se conoce como *marketing*. La primera orientación, que con frecuencia se denomina orientación a la producción, se extendió aproximadamente desde la década de 1850 hasta finales de 1920, y se enfocó en el perfeccionamiento de la

capacidad de producción, es decir, en la satisfacción por sentirse capaces de producir grandes cantidades de producto. La segunda orientación es a las ventas y se extendió aproximadamente desde 1930 hasta mediados de 1950. Esta orientación se enfocó en vender cada vez más y, en algunos casos, una cantidad mayor de lo que la empresa era capaz de producir. Sin embargo, para mediados de 1950 las compañías comenzaron gradualmente a cambiar a una orientación de mercado (*marketing*). El supuesto fundamental en el concepto del *marketing* es que para tener éxito una empresa debe determinar las necesidades y los deseos de sus mercados meta y proveer las satisfacciones deseadas mejor que las de su competencia. De esta manera, el estudio del comportamiento del consumidor hace especificaciones precisas acerca de las diferentes actitudes que adoptan.

## REVISIÓN LITERARIA

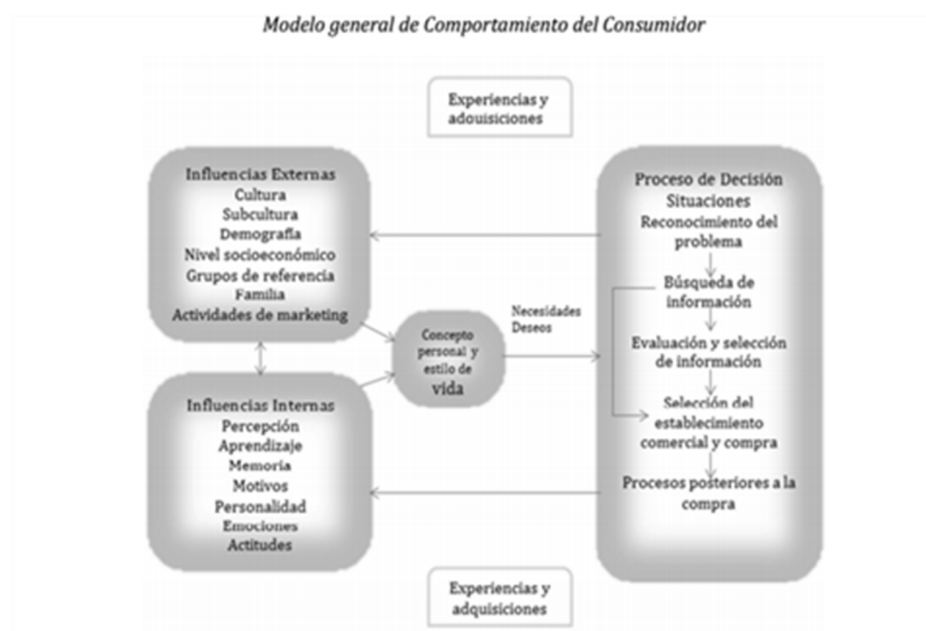

Dado que no existen investigaciones formales al respecto a nivel local, en este punto es importante resaltar algunas ideas clave que permitan una conceptualización general del tema. En primer lugar está el concepto de comportamiento humano que básicamente es estudiado por disciplinas como la psicología, sociología, antropología, criminología y sus diferentes ramas. Al respecto, el Instituto Universitario de Puebla (2012) dice que “es el conjunto de comportamientos exhibidos por el ser humano e influenciados por la cultura, las actitudes, emociones, valores de las personas y los valores culturales, la ética, el ejercicio de la autoridad, la relación y la genética”. Ahora bien, hablar sobre el comportamiento del consumidor genera especificaciones en cuanto a los diferentes tipos de actitudes de los consumidores. Canclini (1995) señala que “el consumo es el conjunto de procesos socioculturales en que se realizan la apropiación y los usos de los productos”, pero al mismo tiempo “el consumo implica el uso que el comprador hace del producto adquirido” (Blackwell R. D., 2001).

Esto implica que en el acto de consumir aparecen diferentes comportamientos y si, al mismo tiempo, se consideran una amplia gama de circunstancias en las que el consumidor está inmerso la situación se convierte en una mucho más compleja. Por eso y de acuerdo con Leon G. Schiffman y Leslie Lazar (2010), “el comportamiento del consumidor es la actitud que exhiben al buscar, comprar, utilizar, evaluar y desechar productos y servicios que ellos esperan que satisfagan sus necesidades”. De esta manera, “el comportamiento del consumidor se basa en la manera en que los consumidores y las familias o los hogares, toman decisiones para gastar sus recursos disponibles (tiempo, dinero y esfuerzo) en artículos relacionados con el consumo.” (Schiffman & Lazar Kanuk, 2010, p. 5). De ahí la importancia de la satisfacción que el consumidor obtiene en su compra, de lo contrario su insatisfacción puede terminar en una mala publicidad para los usuarios que aun no adquieren este producto, crear una mala fama o influir en el comportamiento de otros consumidores para que vaya cambiando.

El comportamiento del consumidor tradicionalmente se refiere al estudio sobre las razones por las que compra la gente. Sin embargo, para Blackwel, Miniard, Engel (2002) el comportamiento del consumidor se define como “las actividades que las personas efectúan al obtener, consumir y disponer de productos y servicios”. Obtener se refiere a las actividades que llevan a la compra o recepción de un producto. y algunas de estas incluyen la búsqueda de información en relación con las características y elecciones del producto. La evaluación de productos o marcas alternativos y la compra. Los analistas del comportamiento del consumidor examinan estos comportamientos, toman en cuenta la forma en que los consumidores adquieren los productos. Consumir, se refiere a cómo, dónde, cuándo y en qué circunstancias los consumidores utilizan los productos. Problemas relacionados con el consumo pudieran incluir decisiones relativas si los consumidores utilizan los productos en su casa u oficina.

Disponer, es la forma en que los consumidores se deshacen de productos y empaques Los mismos autores refieren que el comportamiento del consumidor también se puede definir como un campo de estudio que se enfoca en las actividades del consumidor. Conforme ha evolucionado el estudio del comportamiento del

consumidor, también ha evolucionado su alcance. Hawkins (2004) señala que el comportamiento del consumidor “es un proceso que incluye numerosas actividades que abarcan las que preceden, acompañan y siguen a las decisiones de compra y en las que el individuo interviene activamente con el objeto de efectuar sus elecciones con conocimientos de causa”. Este proceso consta de 3 etapas: a) Pre compra, en la que el consumidor detecta necesidades y problemas, busca información, percibe la oferta comercial, realiza visitas a las tiendas, evalúa y selecciona alternativas; b) Compra, en la que el consumidor selecciona un establecimiento, delimita las condiciones del intercambio y se encuentra sometido a una fuerte influencia de variables situacionales que proceden, fundamentalmente de la tienda; c) Pos compra, que tiene lugar cuando se utilizan los productos, lo que lleva a su vez a la aparición de sensaciones de satisfacción o insatisfacción. El comportamiento del consumidor comprende no solo la decisión de compra, sino también un conjunto de actividades directamente asociadas. Condicionan la decisión de compra en cierta forma proporcionando realimentaciones capaces de influir en las elecciones que efectuará el consumidor. (Mollá Descals, Berenguer Contrí, Gómez Borja, & Quintanilla Pardo, 2006)

Fuente: HAWKINS, Del I et al. (2004). *Comportamiento del Consumidor. Construyendo estrategias de marketing*. 9ª Edición. México: Ed. Mc Graw Hill

También es importante resaltar que dentro de las variables del comportamiento del consumidor se encuentra la mezcla de mercadotecnia, donde el precio, la plaza, elaboración y calidad del producto así como la promoción y los canales de distribución que se utilizan repercutirán de manera positiva o negativa tanto en la introducción de un producto al mercado como en el mantenimiento de éste por un largo periodo. Finalmente, se aborda la intención como el momento en que se ha mostrado interés a una compra. Una intención de compra es cuando el prospecto o cliente ingresa en un método de pago e intenta obtener el producto o servicio que éste sitio ofrece. La intención de compra se define como “el estado mental que refleja el plan del comprador de adquirir un número específico de unidades de una marca, en un periodo de tiempo determinado”. (Howard, 1993) Sobre la influencia de compra se tiene que, a mayor nivel de riesgo percibido, el consumidor busca mayores niveles de información como la mejor estrategia para reducir el riesgo y posteriormente realizar la compra.

Esta búsqueda incluye la utilización de opiniones de amigos, revistas especializadas, consulta con expertos del sector. (Ruiz de Maya & Grande Esteban, 2006) En el modelo de la teoría de la acción razonada que

representa una integración completa de los componentes de la actitud de una estructura diseñada por la obtención de mejores explicaciones y predicciones respecto del comportamiento. De acuerdo con este modelo ampliado, en la intención de alguien también se requiere medir las normas subjetivas que influyen en su intención de actuar. Una norma subjetiva se mide directamente evaluando los sentimientos del consumidor hacia lo que otros personajes relaciones (familiares, amigos, compañeros de clase o de trabajo) pensaría de la acción que se considera.

## METODOLOGÍA

De acuerdo al estado del arte y su alcance el presente estudio es principalmente de corte cualitativo, dado que se trata de analizar información suficiente para describir la relación de las variables de intención de compra y comportamiento del consumidor ante un proceso como la adquisición de aparatos electrónicos. Además, mediante un acercamiento a los sujetos de estudio de acuerdo con su perfil de consumidor, se pretende conocer otros factores como son los motivos, los valores, las circunstancias internas, sociales y familiares que los lleva a un acontecimiento como el que se describe en el presente trabajo. Esta investigación se ubica en la Ciudad de Colima, México en la que participan consumidores (hombres y mujeres) de 30 a 50 años. Para la consideración de la edad de quienes conforman la muestra se utilizaron datos del INEGI en donde se indica que el estrato que presenta mayor actividad económica es el que comprende dichas edades. De esta manera, en el universo serán consideradas las personas bajo los criterios de edad: 30 a 50 años; residencia: ciudad de Colima; situación económica: activas; filtro: que hayan comprado un aparato electrónico en los últimos 6 meses y que acudan a los principales centros comerciales de la ciudad.

## RESULTADOS

En cuanto a la adquisición de aparatos electrónicos (celulares, plasmas y tabletas) y de acuerdo con la Tabla 1 y la Figura 1, la adquisición por género en un período no mayor de dos meses se conforma de la siguiente manera: 52% de hombres y el 58% de mujeres. Se puede observar una diferencia marginal de apenas 6%.

Tabla 1: Distribución Porcentual Por Género

	SI		NO		TOTAL	
	FRECUENCIA	%	FRECUENCIA	%	FRECUENCIA	%
<b>MASCULINO</b>	92	52%	84	48%	176	100%
<b>FEMENINO</b>	120	58%	87	42%	207	100%
<b>TOTAL</b>	212		171		383	

Fuente: Elaboración propia.

Figura 1: Distribución Porcentual Por Género

Fuente: Elaboración propia

En la Figura 2 se muestran las marcas más compradas diferenciándolas por género. En el caso de los hombres son: *BlackBerry* (32%), *Nokia* (17%) y *Apple* (16%), mientras que para las mujeres son: *Nokia* (28%), *Samsung* (26%) y *BlackBerry* (18%). Es importante hacer notar que en el estudio la marca *BlackBerry* es preferida más por hombres que por mujeres (32% contra 18%), y que la marca *Nokia* tiene mayor preferencia por mujeres que por hombres (20% contra 17%).

Figura 2: Proporción de Marcas Preferidas Por Género

Fuente: Elaboración propia.

La Figura 3 muestra la distribución de las marcas por sexo. Notablemente se observa que el 100% de los usuarios de la marca *HTC* son mujeres y los de la marca *PALM* son hombres. El resto de las marcas tienen diferentes proporciones por cada género, pudiéndose observar para qué marcas hay proporcionalmente más usuarios.

Figura 3: Proporción Por Género y Marca

Fuente: Elaboración propia.

Al relacionar algunas de las variables sociodemográficas con la de uso diario se encontró que todas se asocian de forma significativa, (Tabla 2).

Tabla 2: Relación de las Variables Sociodemográficas y la Proporción de Uso

	X 2	GL	P-VALUE
EDAD	11.691	9	0.031
GÉNERO	1.250	1	0.026
OCUPACIÓN	0.837	3	0.041
LOCALIDAD	4.365	1	0.037

Al relacionar las variables sociodemográficas con la forma de prepago se ha encontrado que solamente la variable género se asocia de manera significativa, (Tabla 3).

Tabla 3: Relación de las Variables Demográficas y la Forma de Prepago

	X 2	GL	P-VALUE
Edad	22.809	18	0.198
Género	3.407	2	0.009
Ocupación	1.148	6	0.979
Localidad	9.369	2	0.182

Al relacionar las variables sociodemográficas con las diferentes marcas se ha encontrado que solamente las variables de género y localidad se asocian de forma significativa, (Tabla 4).

Tabla 4: Relación de las Variables Sociodemográficas y las Marcas

	X 2	GL	P-VALUE
Edad	78.850	81	0.547
Género	17.604	9	0.040
Ocupación	25.061	27	0.571
Localidad	19.840	9	0.019

En conclusión, se tiene que entre los encuestados la proporción de usuarios de teléfonos celulares, plasmas y tabletas es de 55% en comparación con estudios encontrados que indican que la proporción nacional en México es del 39% (Ortega, 2010), esto ubica a la zona metropolitana de Colima por encima de la proporción nacional de usuarios de teléfonos celulares. Por otro lado, los resultados muestran que los usos más comunes son: la navegación en internet y el uso de las redes sociales, datos que coinciden con el estudio realizado por Ofcom (2011). En esta información repunta el primero de los usos (navegación en internet). Finalmente, en los resultados de esta investigación también se encontró que no existe diferencia significativa en los diferentes usos que dan los hombres y las mujeres a dichos dispositivos electrónicos.

# ACTITUD Y COMPORTAMIENTO DE CONSUMO EN LA INDUSTRIA HOTELERA EN FUNCIÓN DE LA PERCEPCIÓN DE PRÁCTICAS SUSTENTABLES

Cristóbal Fernández Robin, Universidad Técnica Federico Santa María

Jorge Cea Valencia, Universidad Técnica Federico Santa María

Geraldine Jamett Muñoz, Universidad Técnica Federico Santa María

Paulina Santander Astorga, Universidad Técnica Federico Santa María

Diego Yáñez Martínez, Universidad Técnica Federico Santa María

## RESUMEN

*Esta investigación busca medir la actitud, percepción y preferencia de consumidores denominados clientes recurrentes de hoteles en relación a la implementación de prácticas sustentables. Para esto se aplicó un cuestionario a 208 personas obteniéndose que: una alta valoración de la reputación del hotel y una mayor disposición a pagar extra por los servicios de hoteles sustentables incide en una percepción positiva de los establecimientos generando un mayor nivel de compromiso y cuidado con el medioambiente. Además se encontró que las personas desconocen el significado de sustentabilidad, y no manifiestan interés por informarse y realizar prácticas que contribuyan al cuidado medioambiental. También se desconoce la existencia de leyes en Chile en torno al turismo sustentable no reconociendo la existencia de deficiencias en este aspecto. Se obtuvo que los hoteles en general son percibidos como caros pero esto no es influyente en la selección, por otra parte las personas se hospedan principalmente por motivos de placer y no de trabajo, así mismo están dispuestas a pagar extra pero no están dispuestas a sacrificar gran parte de su presupuesto por visitar hoteles que realicen prácticas sustentables. Respecto a la caracterización de los posibles consumidores se tiene 3 perfiles: "No comprometidos", "Influenciables" y "Comprometidos".*

**PALABRAS CLAVE:** Sustentabilidad, Actitud, Imagen, Hoteles Ecológicos

## ABSTRACT

*This research seeks to measure the attitude, perception and preference of recurring customers of hotels in relation to the implementation of sustainable practices. Then a questionnaire was administered to 208 hotel customers in which it was obtained that: a high value on the reputation of the hotel and a greater willingness to pay extra for services sustainable hotels strikes a positive perception of the establishments generating a higher level of commitment and care with environment. It was also found that people ignore the meaning of sustainability, and they are not interested in receiving information and engaging in practices that contribute to environmental care. The existence of laws regarding sustainable tourism is also unknown in Chile not recognizing the existence of deficiencies in this regard. It was found that the hotels are generally perceived as expensive but this is not influential in the selection process, on the other hand people are mainly staying for pleasure and not for work-related reasons, also they are willing to pay extra but they don't want to sacrifice much of their budget for visiting ecological hotels. In relation to the characterization of potential consumers, 3 clusters were founded: "Uncommitted", "Influential" and "Committed".*

**JEL:** L83, Q56, M32, Q50

**KEYWORDS:** Sustainability, Attitude, Image, Ecological Hotels

## INTRODUCCIÓN

Chile hoy en día es considerado uno de los países con más altos ingresos per-cápita en Latinoamérica, su crecimiento económico se ve respaldado por muchas áreas, y últimamente la que destaca es el sector turismo. El aporte al PIB corresponde a un 1.5%, sin embargo y pese a todas las medidas que pudiesen tomarse en torno al crecimiento de este sector hay uno muy importante y por el cual esta investigación centra sus objetivos: la Sustentabilidad. En Chile no existen hoteles 100% ecológicos pero sí que realizan prácticas que son amigables con el medioambiente, pero estas prácticas no pasan por ser producto de un nivel de consciencia mayor o una preocupación por la problemática actual sino más bien pasa por ser un tema de estrategia diferenciadora que han adoptado algunos establecimientos que genere el menor impacto en términos de inversión y el mayor impacto económico en términos de ganancias. En base a lo anterior se desarrolló para esta investigación una definición de objetivos que buscaron medir la actitud, percepción y preferencia de consumidores denominados clientes recurrentes de hoteles, en relación a la implementación de prácticas sustentables.

## REVISIÓN LITERARIA

### Imagen General

La imagen global proyectada por una empresa o negocio, es un concepto relevante para muchos investigadores, y es un factor importante en la toma de decisión de los consumidores. Respecto al gran número de estudios realizados, autores como Baloglu & McCleary (1999), Bloemer & Ruyter (1998), Chen & Tsai (2007), Ryu & Jang (2007), tratan de definir la fuerte influencia e impacto de la imagen global en el comportamiento de los consumidores, sin lograr una definición consensuada. Para algunos es un conjunto de creencias, impresiones y pensamientos que las personas pueden tener sobre un lugar, para otros es un concepto que mezcla las percepciones más complejas de los consumidores con los atributos que más se destacan o se caracterizan en una empresa o negocio, así como también es considerado un factor que evalúa las funciones de dichos atributos (Crompton, 1979, Gartner, 1986, Bloemer & Ruyter, 1998). Al respecto investigaciones iniciales trataron de describir el comportamiento de los consumidores, en efecto, Martineau (1958) concluye que se trata de una representación psicológica y distorsionada de la realidad objetiva que conciben las personas, lo que los lleva a interesarse y actuar de manera determinada. Así mismo, se encontró que ciertos consumidores actúan influenciados por información previa respecto a un producto aun sin tener experiencia real de haberlo consumido.

Los investigadores más interesados en la teoría de la imagen en el ámbito de los negocios han llegado a la conclusión de que la imagen se forma a través de tres fases secuenciales: fase cognitiva (creencias), fase de imágenes afectivas (sensaciones) y la fase en general (intención de conducta), las que se vinculan a la idea de “imagen” como un concepto de actitud (Doyle & Fenwick, 1974; James et al., 1976). Aun así, la definición más citada es: “La conceptualización que refleja el conjunto de creencias, ideas e impresiones que las personas tienen de un producto, servicio, destino, individuo, empresa o marca, la cual es procesada con el tiempo” (Kotler et al. 1993). La imagen es vista como un factor importante tanto en los negocios en general así como en la industria del turismo y el sector hotelero. De este modo ha sido necesario que se destinen esfuerzos por hacer de esta imagen un atributo positivo desde la perspectiva de los clientes.

### Actitud Hacia la Conducta

La *actitud* refleja la disposición personal hacia la realización o no de la *conducta*. La *actitud hacia una conducta* muestra el grado en que la actuación de la conducta está valorada positiva o negativamente. Según el modelo racional-evaluativo la *actitud hacia una conducta* viene determinada por el número total de *creencias conductuales* accesibles que unen la conducta con los resultados y la evaluación de dichos

resultados. Aunque la gente puede formar muchas *creencias* diferentes sobre un propósito, se asume que solamente las *creencias* que sean fácilmente accesibles en la memoria influyen en la *actitud* en un momento dado. La capacidad de acceder a las *creencias* tiende a aumentar en función tanto de la frecuencia con la cual la expectativa se activa y como la novedad de su activación, así también por la importancia que se da a dichas creencias. Por otro lado, ante la importancia que las reacciones evaluativas tienen en los propósitos psicológicos, investigadores han manifestado la necesidad de medirlas (Jarvis & Petty 1996). Existe un acuerdo general que indica que la *actitud* representa una evaluación sumaria de un propósito psicológico sujeto a dimensiones tales como bueno-malo, perjudicial-beneficioso, agradable-desagradable, y simpático-antipático (Ajzen & Fishbein, 2000; Eagly & Chaiken, 1993; Petty et al., 1997). De acuerdo a Ajzen & Fishbein (2000), la *actitud*, en el modelo racional-evaluativo se presenta espontánea e inevitablemente a partir de la *creencia* sobre el *propósito*. Cada *creencia* asocia el *propósito* de una acción a cierta *cualidad*, y la *actitud* de la persona hacia un *propósito* es determinada por los valores subjetivos de las *cualidades* de los *propósitos*.

### Conductas Ambientales

Hay un gran número de investigaciones enfocadas a las conductas ecológicas responsables como acciones que son un aporte al cuidado y conservación del medioambiente (Axelrod & Lehman, 1993; Grob 1990). De lo anterior se desprende que las personas pueden actuar motivadas por la percepción subjetiva que les genera un problema ambiental grave. El que una persona se comporte de determinada forma o realice una determinada practica ecológica no implica que lo realice en todos los aspectos de su vida, como por ejemplo, reciclar plástico no implica que también recicle papel, es por esto que las personas tienden a comportarse de diferente forma o manifestar su compromiso con el medioambiente de diversas maneras (De Castro, 2001; Corral-Verdugo, 2002; Lee et al., 1995; Van Liere & Dunlap, 1981).

### Variables Sociodemográficas

La edad, el nivel educativo, el sexo, e incluso el nivel de ingresos, parecen ser variables sociodemográficas que se relacionan con los comportamientos ambientales en general. De acuerdo a Dunlap & Van-Liere (1978) las personas jóvenes y con un nivel educativo alto, son las que presentan actitudes pro-ambientales más positivas hacia la realización de comportamientos ambientales. No obstante, en otros trabajos se encontraron bajas correlaciones entre tener una actitud positiva hacia el comportamiento pro-ambiental y la edad (Amérigo & González, 1996; Samdahl & Robertson, 1989). Con respecto al sexo, el trabajo de Hines et al. (1987) indica que no ejerce una influencia significativa sobre la puesta en marcha de este tipo de conductas, aunque, en estudios más recientes se ha encontrado que las mujeres están significativamente más dispuestas a proteger el medio ambiente que los hombres (Amérigo & González, 2001; Kalof et al. 2002; Stern & Dietz, 1994; Stern et al., 1993; Stern et al., 1995). En la misma línea, Zelezny, Chua y Aldrich (2000), en una revisión de trabajos publicados entre 1988 y 1998, concluyen que existen mayores evidencias empíricas que apoyan que las mujeres realizan más comportamientos pro-ambientales que los hombres. De forma general, se puede indicar que los estudios realizados con el objetivo de comprobar la influencia que tienen los factores sociodemográficos en la puesta en marcha de conductas pro-ambientales, a menudo ofrecen resultados poco concluyentes e incluso contradictorios (Saphores et al., 2006).

## METODOLOGÍA

El proceso de investigación incluye dos fases, exploratoria y concluyente. En la primera etapa y dada las diversas variables a considerar al momento de identificar cómo obtener los datos, se realiza una revisión bibliográfica buscando comprender la situación actual de la Sustentabilidad, los Hoteles y en general, de los entes participantes. Así mismo se realiza el diseño de la encuesta, diseño de la muestra y marco muestral. Posteriormente en la fase concluyente se efectúa un análisis univariado de los datos buscando generar un

perfil del encuestado, posteriormente se realizan análisis multivariados como correspondencias entre variables y preguntas de percepción que pudieran generar los primeros indicios respecto al comportamiento actual de los consumidores. Del mismo modo se desarrolla un análisis factorial exploratorio con el objetivo de identificar los perfiles de conglomerados encontrados mediante un análisis clúster.

## RESULTADOS

En primer lugar se realiza un perfil del encuestado, respecto al sexo se destaca una mayor presencia de mujeres con un 59% de la muestra, en contraposición a los hombres que representan un 41% del total de los datos. En términos de la edad, se pueden destacar dos rangos etarios que fueron los que aportaron mayor cantidad de información para este estudio, el primero es aquel donde las personas tienen principalmente entre 41 y 54 años (36%), seguido muy de cerca por el rango donde las personas tienen entre 25 y 40 años (33%). Respecto de la situación laboral, destaca la presencia de personas trabajando a tiempo completo (72%), seguido por personas con trabajo de medio tiempo (12%) y estudiantes (10%). Además cabe destacar el nivel educacional de los mismos, un 67% de los encuestados dijo poseer el grado académico Universitario, seguido por Licenciatura con un 14%, Secundaria un 8%, Master 8% y 2% posee el grado de Doctor. Por último la mayor parte de ellos se hospeda por motivos de placer y no de trabajo.

### Análisis de Percepción: Sustentabilidad

En relación al conocimiento del concepto *Sustentabilidad* así como la relación de este con la actual situación de Hoteles Ecológicos en Chile, se puede evidenciar que el 47% de los encuestados no saben si han pernoctado en un hotel de estas características alguna vez, seguido de un 30% que afirma haber estado en alguno, mientras que el 23% restante manifiesta no haberlo hecho. De esto puede deducirse que en la industria hotelera las prácticas sustentables han tomado gran fuerza y son realizadas con mayor frecuencia producto de la consciencia que está instaurándose en este sector de la economía que entrega importantes ingresos y aportes a nivel productivo. Por contraparte las personas no poseen una clara definición respecto al concepto de un Hotel 100% Ecológico, principalmente por que en Chile no existe uno y por lo tanto no hay una referencia tangible. Adicionalmente, se ahonda en el grado de conocimiento por parte de los encuestados acerca de la existencia de normativas o leyes relacionadas a *Sustentabilidad Turística*, además de la valoración percibida respecto de la normativa o contexto vigente en relación a este tema.

En este análisis se evidencia una gran cantidad de respuestas asociadas a las personas que indican que “No saben” si existen leyes actualmente y “No saben” si hay deficiencias en este aspecto, representados por un 39% de la muestra, demostrándose así el bajo nivel de preocupación respecto a temas medioambientales y por sobre todo en términos de *Sustentabilidad Turística*. Del mismo modo se destaca un 38.5% de encuestados que reconocen deficiencias en terminos de *Sustentabilidad Turística* en Chile.

Tabla 1: Deficiencia En Términos de Sustentabilidad Turística Frente al Conocimiento Sobre Existencia de Leyes Para el Turismo Sustentable

¿Sabe Si Existen Leyes Para El Turismo Sustentable?	¿Hay Deficiencia en Términos de Sustentabilidad Turística En Chile?			
		Sí	No sé	No
Sí		13.9%	7.7%	2.4%
No sé		17.8%	39.9%	1.0%
No		6.7%	6.7%	3.8%
		38.5%	54.3%	7.2%
				100.0%

La Tabla 1 representa el cruce entre las variables ¿Hay deficiencia en términos de sustentabilidad turística en Chile? y ¿Sabe si existen leyes para el turismo sustentable?, cabe destacar que ambas preguntas tenían tres opciones de respuesta, sí, no y no sé. Fuente: Elaboración propia.

### Análisis de Percepción y Correspondencias: Actitud

La actitud se categoriza bajo dos conceptos: *Prácticas realizadas con mayor frecuencia* y *Nivel de compromiso con el cuidado del medioambiente*. Respecto a las *Prácticas realizadas con mayor frecuencia* destacan el “Uso de ampolletas de bajo consumo” (16.8%), “Uso responsable de agua y luz” (15.9%), “Ahorrar” (12.5%) y el “Uso de colores claros para favorecer la entrada de la luz” (11.5%). De este modo las prácticas más recurrentes se relacionan con actitudes más tangibles y naturales, mientras que aquellas prácticas que requieren un nivel de conocimiento o compromiso mayor como “Reutilizar el agua”, “Reciclar y separar residuos” o “Construir con materiales reciclados” son menos realizadas, esto nuevamente sugiere que el concepto sustentabilidad no está del todo arraigado en los consumidores, dicho de otro modo existe un problema asociado a la información o conocimiento, más allá de compromiso, con la *Sustentabilidad*. Esto toma fuerza al analizar el *nivel de compromiso con el cuidado del medioambiente* donde se obtuvo en primer lugar “Medio” (51.4%) seguido de “Alto” (27.3%). En resumen, los encuestados manifiestan estar comprometidos con el cuidado del medioambiente sin embargo las prácticas que realizan demuestran un escaso conocimiento del tema.

### Análisis de Percepción y Correspondencias: Imagen

Para determinar el nivel de importancia asignado a las diferentes formas de medir la Imagen es que se realizó un análisis de correspondencia. En cuanto a las características que definen *Imagen*, “Reputación del Hotel” y “Los hoteles 5 estrellas son los más ecológicos” son los más relevantes para este modelo en contraposición a la importancia de un “Programa de fidelización”. En efecto, al observar la alta valorización de “Reputación del Hotel”, se puede afirmar que esta característica se considera muy importante para la concepción de una imagen positiva sobre estos establecimientos.

### Análisis de Percepción y Correspondencias: Boca a Boca

En relación al concepto *Boca a Boca* y su implicancia con la *Intención de visita a Hoteles*, se busca indagar en la importancia que le otorgan los usuarios a los comentarios que reciben respecto a los hoteles que concurren. Para establecer el nivel de asociación y representación es que se realizó el análisis de correspondencias. La variable más significativa e importante es “*Importancia de buscar opiniones de terceros*”, por lo tanto se puede asumir que los clientes dependen de la información, de la comparación y de la observación para poder formar una percepción que finalmente se traduzca en una *Intención de visita* y una *actitud* hacia los comportamientos ecológicos.

### Análisis de Percepción y Correspondencias: Probabilidad de Pagar Más

En cuanto a la variable “¿Visitaría un Hotel Ecológico?”, un 98% de los encuestados manifiesta estar de acuerdo mientras el 2% restante señala no saber, esto sugiere la existencia de la *intención de visita*. Al respecto, de quienes sí estarían dispuestos a visitar un Hotel Ecológico un 57% afirmó que pagaría extra, un 23% manifestó lo contrario, mientras que un 20% se muestra indeciso. Al respecto se desprende que existe una disposición positiva a visitar Hoteles Ecológicos y a pagar extra por hospedarse en estos, a continuación corresponde conocer qué tanto más están dispuestos a pagar los clientes.

Figura 1: Porcentaje de Pago Extra Por Servicios de Hoteles Ecológicos

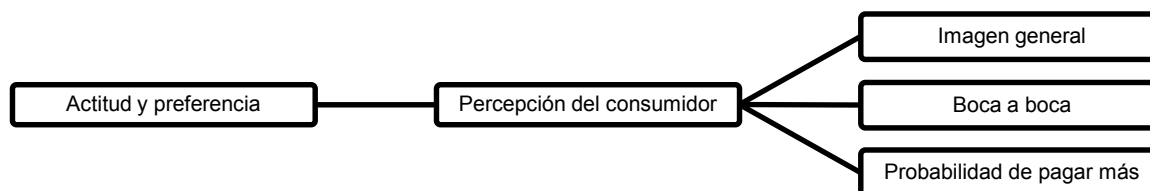

La Figura 1 muestra la relación entre el porcentaje de pago adicional por hospedarse en Hoteles Sustentables, siendo estos porcentajes 0%, 5%, 15%, 25%, 40%, 50%, y 60%, frente a la cantidad de encuestados de cada categoría. Al respecto, se aprecia una mayor cantidad de preferencias por un pago del 15% extra o adicional. Fuente: Elaboración propia.

En la Figura anterior el eje de las abscisas muestra los distintos porcentajes adicionales a pagar para quienes sí están dispuestos a hacerlo, al respecto, el 40% de los encuestados pagaría a lo más 15% extra por los servicios ecológicos ofrecidos, un 27% pagaría sólo hasta un 5% adicional y un 21% de personas pagaría hasta 25% extra. Por lo tanto, y como se afirmó anteriormente, las personas sienten la intención de visitar hoteles con prácticas sustentables y consideran la opción de pagar más por estos servicios, sin embargo esta disposición se traduce en un nivel de pago extra de un 15% sobre los valores de sus preferencias actuales.

### Análisis de Relaciones (Correspondencias)

Para poder establecer relaciones entre las variables relevantes para esta investigación y generar un modelo final es que se realiza una comparación entre los 3 posibles vínculos generados entre la Actitud hacia comportamientos verdes: *Imagen general* del hotel, el *Boca a boca* y la *Probabilidad de pagar más*, con el fin de poder determinar si el modelo inicial es o no consistente.

Figura 2: Modelo Inicial - Actitud Hacia Comportamientos Ecológicos

La Figura 2 muestra el Modelo inicial - Actitud hacia comportamientos ecológicos. Este modelo propone la existencia de una relación causal entre Imagen general, Boca a boca, y Probabilidad de pagar más, hacia el concepto de Actitud y preferencia por comportamientos ecológicos. Fuente: Elaboración propia.

**Análisis de Relaciones: Actitud v/s Imagen:** Este análisis arrojó, en relación a la proporción de inercia de las 2 primeras dimensiones un 83% de explicación de la varianza total, pero sin embargo un nivel de significancia de 0.129, lo que indica la inexistencia de una relación causal significativa entre las variables, ya que la hipótesis nula que indica independencia de las variables es aceptada. Ahora, considerando el nivel de asociación o dependencia de ambas variables a nivel global, es posible indicar un nivel de Significancia de  $0.021 < 0.05$  lo que significa que se rechaza la hipótesis nula y por lo tanto existe una dependencia entre ellas, que va en la dirección Imagen → Actitud.

**Análisis de Relaciones: Actitud v/s Boca a Boca :** En la relación Actitud v/s Boca a Boca se puede observar que si bien la proporción de inercia es para las 2 primeras dimensiones de un 90% que explica la varianza total, el nivel de Significancia es de 0.575 respecto al 0.05 o menos que se permite para decir que se rechaza la hipótesis nula. De este modo queda descartado que el Boca a Boca sea influyente a la hora de percibir

de buena (o mala) forma un Hotel Ecológico y que esto finalmente pueda verse reflejado en una actitud positiva (o negativa) de compromiso. Cabe destacar que respecto a la significancia de las variables globales como “Actitud” v/s “Boca a Boca”, esta corresponde a  $0.575 > 0.05$  por lo que es posible decir que se acepta la hipótesis nula de independencia de ambas, en otras palabras no es posible establecer un nivel de asociación o relación.

*Análisis de Relaciones: Actitud v/s Probabilidad de pagar más* :Por último, en la relación Actitud v/s Probabilidad de pagar más se obtiene un nivel de significancia de 0.003, es posible rechazar la hipótesis nula que indica independencia de las variables. La proporción de inercias en las 2 primeras dimensiones explica el 83.5% de la varianza total del modelo. Y en lo que respecta a la proporción de pago extra, 15% es el nivel más aceptado en este sentido, seguido por un 5% y finalmente un 25% más. Respecto a la significancia encontrada en la medición de la variable “Actitud” v/s “Probabilidad de pagar más” como variables globales se puede decir que esta es de  $0.003 < 0.05$ , lo cual indica que se rechaza la hipótesis nula y por lo tanto es posible afirmar la no existencia de relación causal entre las variables pero sí un nivel de dependencia en la dirección “Probabilidad de pagar más → Actitud”.

### Modelo Final

Figura 3: Modelo Final - Actitud Hacia Comportamientos Ecológicos

La Figura 3 muestra el Modelo final - Actitud hacia comportamientos ecológicos. Este modelo evidencia la existencia de una relación causal entre Imagen general, y Probabilidad de pagar más, hacia el concepto de Actitud y preferencia por comportamientos ecológicos. Al respecto, se destaca la eliminación del concepto Boca a boca debido a que no supera la prueba de hipótesis de significancia. Fuente: Elaboración propia.

La *Actitud y Preferencia* de consumo de servicios ecológicos, lograda por la *percepción de los clientes* a raíz de las variables independientes se puede justificar finalmente por la asociación de esta última con la variable *Imagen general* del hotel y *Probabilidad de pagar más* por estos servicios.

En base a la *Imagen general* se puede afirmar que por medio de claras y definidas creencias (cognitivas) de los consumidores, así como también por aquellas sensaciones e intenciones de conducta que vinculan a la idea de *Imagen general* como un concepto de actitudes favorables, se logra en definitiva una *Imagen general* positiva. Respecto a la *Disposición a pagar más*, esta se justifica netamente mediante la valoración personal por el medioambiente y el entorno, lo cual indica que a mayor actitud mayor probabilidad de pagar más.

### Análisis Factorial

Con el fin de poder determinar el número de variables óptimas para establecer las relaciones influyentes en términos de percepciones y preferencias de los posibles conglomerados de consumidores de servicios hoteleros se realiza un análisis factorial considerando la importancia de las siguientes variables exógenas: “Ubicación”, “Política ambiental establecida”, “Precio”, “Atractivo del Hotel”, “Seguridad”, “Programa de Fidelización”, “Confort en habitaciones” y “Certificación Ecológica”.

Tabla 2: Matriz de Comunalidades

	Inicial	Extracción
Ubicación	1.000	0.681
Política ambiental	1.000	0.807
Precio	1.000	0.416
Atractivo del Hotel	1.000	0.523
Seguridad	1.000	0.642
Programa de fidelización	1.000	0.410
Confort de habitaciones	1.000	0.301
Certificación ecológica	1.000	0.834

*Método de extracción: análisis de componentes principales. La Tabla 2 muestra la Matriz de comunalidades correspondiente al análisis factorial realizado. Al respecto se destaca la baja comunalidad de las variables Precio, Programa de fidelización, y Confort de habitaciones. Fuente: Elaboración propia.*

Considerando los resultados de la matriz de comunalidades, la determinación de conglomerados se realizará en base a las siguientes variables: “Ubicación”, “Política ambiental establecida”, “Atractivo del Hotel”, “Seguridad” y “Certificación Ecológica” agrupadas en dos factores.

### Análisis de Conglomerados

Por medio del análisis de K-Medias se agruparon los datos de la muestra mediante las distancias presentes entre ellos respecto a las cinco variables mencionadas en el análisis anterior y se desarrolla un proceso iterativo que entregó los centroides finales de cada conglomerado. Luego se inició el proceso de iteración con 2 clústeres para finalmente concluir en 4 (siendo el cuarto muy pequeño). La caracterización de los conglomerados no depende en ninguna medida de las variables sociodemográficas, además se puede destacar el nivel de significancia idóneo de las variables. Una caracterización posible de apreciar se puede distinguir en las relaciones mostradas por los datos en cada clúster:

*Cluster 1: Los No Comprometidos* recibe esta denominación ya que reúne a personas que le entregan una muy alta importancia a la presencia de los atributos de tipo subjetivo, como *Ubicación*, *Atractivo del Hotel* y *Seguridad*. Para estos resulta muy importante que el hotel en el cual se hospeden se encuentre en una buena y/o estratégica ubicación favoreciendo las actividades que realicen durante su estancia ya sea por motivos de placer o negocios. Además valoran en gran medida el atractivo del hotel, lo cual puede ser reflejo de un cierto status que las personas quieren encontrar en dicho lugar, así como también sinónimo de calidad y confort. Sumado a lo anterior consideran importantísima la seguridad en estos establecimientos, por lo que puede ser un punto decisivo en su intención de visita y finalmente en su elección. Por contraparte no cumplen con el perfil de consumidores comprometidos con el cuidado medioambiental que valoran la presencia de las variables *Política Ambiental* y *Certificación ecológica*, reiterándose la baja importancia asociada a estas características.

*Cluster 2: Los Influenciables* recibe esta denominación y caracterización ya que en él se reúnen personas que le entregan una mediana importancia a la presencia de los atributos de tipo subjetivos como la *Ubicación*, el *Atractivo del Hotel* y la *Seguridad*. De este modo las personas de este grupo puede que estén indecisas ya que cumplen parcialmente con el perfil de consumidor comprometido con el cuidado medioambiental, podrían estar más informadas y podrían considerar la necesidad de hacer algo más por contribuir al cuidado del medioambiente, pero hasta el momento no les resulta relevante.

*Cluster 3: Los Comprometidos* recibe esta denominación porque sin duda reúne las características imprescindibles para ser considerado como el grupo más comprometido con el cuidado del medioambiente y la realización de prácticas sustentables. Los clientes de este conglomerado se caracterizan por considerar muy importante que el hotel cuente con una buena ubicación, además creen muy importante que el hotel sea atractivo y cuente con buenas medidas de seguridad. Además de cumplir con todas las características de tipo subjetivas exigen tener una clara *política ambiental establecida* que debe ser comunicada a los

clientes y una *certificación ecológica* que refleje las buenas prácticas y estrategias seguidas por esta cadena hotelera.

## CONCLUSIONES

Respecto al concepto *Sustentabilidad* no existe una clara definición entre los consumidores, así mismo no consideran necesario informarse antes de visitar un hotel ni tampoco la presencia de medidas que certifiquen la realización de prácticas sustentables en los hoteles a la hora de decidir por alguno. Los hoteles 100% ecológicos en Chile no existen, pero sí existe una gran cantidad que realiza prácticas que resultan amigables y protectoras para el medioambiente, sin embargo al momento de optar por certificaciones que respalden su buen actuar los hoteles aún no se sienten realmente motivados. Los clientes que recurrentemente se hospedan en hoteles lo hacen principalmente por motivos de placer y no de trabajo, lo cual refuerza la idea de que los encuestados poseen un nivel socioeconómico medio o alto pero jamás bajo. La mayor parte de ellos está dispuesto a pagar hasta un 5% más por un Hotel Ecológico, lo cual permite afirmar que valoran el cuidado del medioambiente.

Para informarse de los hoteles y servicios relacionados, los clientes prefieren sistemas en línea ya que les permite un mayor nivel de información, comparación, y opiniones, entre otras alternativas que generarán una *Imagen* del Hotel, al respecto si bien los Hoteles son vistos como caros, esto no es un factor que resulte decisivo en la selección final del hotel. Además se puede afirmar que la reputación de estos sí es relevante a la hora de percibirlos y puede influir de manera positiva al momento de generarse una actitud y preferencia respecto a la adopción y conciencia de prácticas que favorezcan el cuidado del medioambiente. No hay una conducta fija que determine el proceso de selección de hoteles sustentables, principalmente por el hecho de que en Chile no hay un parámetro de comparación o referencia que permita indagar en los patrones de conducta de los clientes que visiten hoteles sustentables.

Al comparar la relación establecidas entre las variables propuestas en el modelo según la Edad y el Sexo de los encuestados, se puede afirmar que es la edad la que presenta una mayor asociación y justificación para representar las diferencias, en efecto, clientes con un rango etario entre 25 y 40 años son quienes más manifiestan haber visitado hoteles que realizan prácticas sustentables, lo cual puede deberse principalmente a que este grupo es el que más interés manifiesta en términos medioambientales. Se identificaron tres conglomerados que indicaron perfiles característicos asociados a los clientes de este tipo de servicios, donde destacó la existencia de uno muy afín al compromiso ecológico, denominado *Los comprometidos*, el cual valora de sobremanera la presencia de una *Política ambiental establecida* y una *Certificación ecológica*, así como también la presencia de las variables subjetivas correspondientes a *Ubicación*, *Atractivo del hotel* y *Seguridad*. Los dos grupos restantes no cumplen con el perfil de cliente que se pretende lograr: los denominados *No Comprometidos* y *Los influenciables*.

# LA CADENA DE VALOR, UNA VENTAJA COMPETITIVA PARA LAS PEQUEÑAS Y MEDIANAS EMPRESAS AGRÍCOLAS.

Seidi Iliana Perez Chavira, Universidad Autónoma de Baja California  
Lizzette Velasco Aulcy, Universidad Autónoma de Baja California

## RESUMEN

*En la actualidad los mercados globales exigen empresas competitivas, y esto la obtienen mediante actividades que permitan elevar los niveles de preferencia hacia sus productos o servicios por parte de los integrantes de su mercado o bien, elevar barreras que impidan que sus posiciones de mercado sean superadas por otros competidores. El trabajo se realizó en la zona rural del valle de San Quintín del municipio de Ensenada, Baja California. El estudio es descriptivo, transversal, no experimental. En esta investigación se realiza un estudio sobre la aplicación de la cadena de valor en pequeñas y medianas empresas (Pymes) agrícolas en las zonas rurales y sus ventajas. La investigación es de tipo correlacional, se utilizó el cuestionario como fuente de información con un análisis de confiabilidad medido por el alpha de Cronbach de 0.885, con una escala de medición tipo Likert, sobre una muestra de 20 pequeñas y medianas empresas del sector agropecuario cuya rama principal es la agrícola. El trabajo enfatiza el concepto, aplicación y beneficios de la cadena de valor. Muestra cómo las empresas agrícolas (pymes) al integrarse a la cadena, obtienen beneficios al establecer sistemas de procesos y de control en sus actividades, al adquirir tecnología suficiente para automatizar sus sistemas productivos y de información, al mejorar la gestión administrativa y fortalecer su estructura organizacional.*

**PALABRAS CLAVES:** Cadena de Valor, Micro, Pequeñas y Medianas Empresas Agrícolas, Ventaja Competitiva

## THE VALUE CHAIN, A COMPETITIVE ADVANTAGE FOR SMALL AND MEDIUM AGRICULTURAL ENTERPRISES

### ABSTRACT

*Today's global markets require companies competitive, and that obtained by the activities to raise levels of preference for their products or services by the members of your market or raise barriers to their market positions you are overtaken by other competitors. The study was conducted in the rural area of the San Quintin Valley town of Ensenada, Baja California. The study is descriptive, transversal, not experimental. In this research, a study on the application of the value chain in small and medium enterprises (SMEs) in rural agricultural areas and its advantages are performed. The research is correlational, the questionnaire as a source of information with a reliability analysis measured by Cronbach's alpha of 0.885, with a Likert scale of measurement on a sample of 20 small and medium enterprises in the agricultural sector was used as main branch is agricultural. The work emphasizes the concept, implementation and benefits of the value chain. How the agricultural enterprises (SMEs) to join the chain, make a profit by establishing systems and control processes in their activities, to acquire enough technology to automate their production systems and information management to improve and strengthen the administrative structure organizational.*

**KEYWORDS:** Value Chains, Micro, Small And Medium Business, Competitive Advantage

## INTRODUCCION

El papel que en la actualidad las micro, pequeñas y medianas empresas (Mipymes) agrícolas desempeñan, demostrando su capacidad efectiva para propiciar el desarrollo económico y social de las regiones rurales de nuestro país, ha sido de gran beneficio para las grandes empresas. En México, las Mipymes representan más del 95% del total de las unidades económicas establecidas, generando más del 50% de los empleos del país, información proporcionada por la Secretaría de Economía. La clasificación de las empresas se realiza de acuerdo a la Ley para el Desarrollo de la Competitividad de la Mipyme, publicada en el Diario Oficial de la federación en 2002 y parten del número de trabajadores adscritos a cada unidad económica. Sin embargo, por encontrarse en lugares rurales en su mayoría de las veces, estas empresas agrícolas carecen de capacidades técnicas, gerenciales, financieras, tecnológicas, por lo que les resulta difícil cumplir con los requerimientos que los mercados globales determinan. El trabajo de investigación analiza el concepto de cadena de valor, su aplicación por medio de un Modelo aplicado a empresas agrícolas y da a conocer las ventajas competitivas que se logran al utilizar un modelo de cadena de valor agrícola, donde los actores principales son las grandes organizaciones en colaboración con las micro, pequeñas y medianas empresas.

## REVISION LITERARIA

### Análisis Conceptual de la Cadena de Valor Aplicada a Empresas Agrícolas

La Cadena de valor se define como una red de alianzas o estrategias entre varias empresas de negocios independientes. Se crean cuando las empresas deciden colaborar conjuntamente para lograr un fin común. Las una una visión, objetivos, estrategias y metas comunes, al igual que comparten los riesgos y beneficios que pudieran resultar de la unión. El objetivo principal de integrarse en una cadena de valor, es la optimización sistemática, con la finalidad de lograr metas que difícilmente lograrían en forma individual, para ello requieren de una efectiva comunicación, coordinación y coordinación. La cadena de valor es una herramienta de análisis estratégico que identifica y describe a través de esquemas visuales, cuales son las actividades empresariales dentro de la organización que realmente genera valor al consumidor.

### Modelo de Cadena de Valor de Michael Porter

Para Porter las empresas son un conjunto de actividades que se desempeñan para diseñar, producir, llevar al mercado, entregar y apoyar a sus productos. Todas esas actividades pueden ser representadas usando una cadena de valor, como se puede ver en la figura 1. En este modelo las actividades tienen un valor que influye en el costo, precio y en la calidad de los productos o servicios. Estas actividades se dividen en dos tipos:

**Actividades Primarias:** Las actividades primarias en la cadena de valor son las implicadas en la creación física del producto, su venta y transferencia al comprador así como la asistencia posterior a la venta. Se dividen a su vez en las cinco categorías genéricas que se observan en la imagen.

**Logística interna:** Las empresas necesitan gestionar y administrar una manera de recibir y almacenar las materias primas necesarias para crear su producto, así como el medio para distribuir los materiales. Cuanto más eficiente sea la logística interna, mayor es el valor generado en la primera actividad.

**Operaciones:** Toman las materias primas desde la logística de entrada y crea el producto. Naturalmente, mientras más eficientes sean las operaciones de una empresa, más dinero la empresa podrá ahorrar, proporcionando un valor agregado en el resultado final.

*Logística Externa:* Después de que el producto está terminado, la siguiente actividad de la cadena de valor es la logística de salida. Aquí es donde el producto sale del centro de la producción y se entrega a los mayoristas, distribuidores, o incluso a los consumidores finales dependiendo de la empresa.

*Marketing y Ventas:* Marketing y ventas es la cuarta actividad primaria de la cadena de valor. Aquí hay que tener cuidado con los gastos de publicidad, los cuales son una parte fundamental de las ventas.

*Servicios:* La actividad final de la cadena de valor es el servicio. Los servicios cubren muchas áreas, que van desde la administración de cualquier instalación hasta el servicio al cliente después de la venta del producto. Tener una fuerte componente de servicio en la cadena de suministro proporciona a los clientes el apoyo y confianza necesaria, lo que aumenta el valor del producto.

*Actividades de Apoyo:* Sustentan a las actividades primarias y se apoyan entre sí, proporcionando insumos comprados, tecnología, recursos humanos y varias funciones de toda la empresa. Las líneas punteadas reflejan el hecho de que el abastecimiento -compras-, la tecnología y la gestión de recursos humanos pueden asociarse con actividades primarias específicas, así como el apoyo a la cadena completa. La infraestructura no está asociada a ninguna de las actividades primarias sino que apoya a la cadena completa.

Figura 1: Muestra el Modelo de Cadena de Valor de Michael Porter

### La Cadena de Valor y la Ventaja Competitiva

Para Porter las actividades de valor son los tabiques discretos de la ventaja competitiva. Como cada actividad es desempeñada en combinación con su economía, determinará si una empresa tiene un costo alto o bajo en relación con sus competidores. Cómo se desempeña cada actividad de valor también determinará la contribución a las necesidades del comprador y por lo mismo, a la diferenciación. El comparar las cadenas de valor de los competidores expone diferencias que determinan la ventaja competitiva. *La cadena de valor* en términos estratégicos es una importante herramienta que debe ser usada en la gestión de negocios. Una empresa obtiene una ventaja competitiva cuando realiza un análisis estratégico, que logra satisfacer al cliente ofreciéndole productos de mayor calidad o más baratos que la competencia.

### **METODOLOGÍA**

El trabajo se realizó en la zona rural del valle de San Quintín del municipio de Ensenada, Baja California. El estudio es descriptivo, transversal, no experimental. En esta investigación se realiza un estudio sobre la aplicación de la cadena de valor en pequeñas y medianas empresas (Pymes) agrícolas en las zonas rurales.

y sus ventajas. La investigación es de tipo correlacional, se utilizó el cuestionario como fuente de información con un análisis de confiabilidad medido por el  $\alpha$  de Cronbach de 0.885, con una escala de medición tipo Likert, sobre una muestra de 20 pequeñas y medianas empresas del sector agropecuario cuya rama principal es la agrícola.

En un primer punto se realizó un análisis del significado de la cadena de valor, se estudió la población agrícola que estuviera dentro de la clasificación de Micro, Pequeñas y Medianas Empresas, de acuerdo al número de trabajadores de las mismas. Se aplicó el Modelo de Cadena de Valor de Porter a una Empresa Productora de Fresa de la Región, esta empresa está clasificada dentro de las grandes empresas. Por ser una empresa exportadora y estar en el mercado internacional debe sujetarse a normas y leyes de calidad de otros países, lo que incrementa sus costos y no puede elevar los precios, ya que se encuentra sujeta a grandes mercados que mueven la economía nacional. Dentro del estudio de la empresa se arrojó que dentro de las actividades primarias, en sí las relacionadas directamente con la producción del producto es la que se podría adecuar a las necesidades de la empresa.

San Quintín es una zona totalmente rural, integrada por un número contado de grandes empresas dedicadas a la producción agrícola y un sin número de Mipymes formales y no formales, familiares que se dedican a pequeñas producciones debido a su capacidad financiera. Por lo que la empresa productora de fresa, se asocia estratégicamente a 20 Mipymes dedicadas a la producción del mismo bien. Aquí la empresa productora proporciona la semilla y la materia prima necesaria para producir la fresa y las Mipymes utilizando sus tierras, sus trabajadores, producen a favor de las grandes productoras.

## RESULTADOS

De la aplicación del Modelo de Porter en las empresas agrícolas se generó información importante para la toma de decisiones de las mismas, ya que los empresarios consideran la cadena de valor como una herramienta de análisis estratégica, que les ayuda a identificar qué actividad está generando menor o mayor costo, cual es importante para los procesos que se realizan para que las empresas funcionen correctamente. También al utilizar un esquema visual y describir paso a paso el proceso, se determinó cuáles actividades realmente generan valor al consumidor final.

Al utilizar el modelo en las grandes empresas, estas redujeron sus costos y obtuvieron mayor margen, mientras que las empresas agrícolas que colaboraron estratégicamente produjeron productos de alta calidad entrando al mercado de exportación. También es importante mencionar que de la aplicación del modelo en las Mipymes, se benefician mejorando sus procesos administrativos,

## CONCLUSIONES

Es un mercado globalizado y de competencia, la tendencia hacia la unión de las grandes empresas con las micro, pequeñas y medianas empresas agrícolas, es una realidad, las primeras reducen costos mientras que las segundas (Mipymes), introducen al mercado productos de alta calidad. Las Mipymes agrícolas aprovechan las oportunidades de los mercados especializados en productos agrícolas para introducirse y mantenerse en altos puestos de competencia. El uso de un Modelo de Cadena de Valor es un factor que origina ventaja competitiva y que se puede emplear para fortalecer los procesos administrativos en las micro, pequeñas y medianas empresas y así poder competir en una economía globalizada.

Las Mipymes al integrarse a una cadena de valor, necesitan adecuar algunos de sus procesos, ya que en muchas ocasiones carecen de sistemas de control y gestión administrativa, no hacen planeación y no cuentan con la tecnología suficiente para automatizar sus sistemas productivos y de información. Por eso

al vincularse a estas cadenas de valor reciben estos beneficios y fortalecen su estructura administrativa, resultando para ellos una ventaja competitiva frente a otras empresas similares a ellas.

## RESUMEN

*Mencionando algunos problemas principales que nos acogen en esta investigación refiriéndonos a las mejoras en la producción. La mejora de la productividad es el resultado de la mejora de las relaciones humanas, derivada de la participación de los trabajadores, de su inclusión en la toma de decisiones y en la resolución de problemas. Existe una relación positiva entre satisfacción laboral y compromiso organizacional. Tanto la motivación como la satisfacción laboral dependen de la satisfacción de las necesidades de los individuos y su congruencia con las de la organización. Por esta razón, la satisfacción de las mismas genera un individuo más motivado, capacitado y satisfecho laboralmente Si las empresas detectaran la importancia de la capacitación tendrían mejores oportunidades de éxito ya que permite detectar situaciones en la empresa y así trabajar en estas ya que si se capacita y motiva al Capital Humano es sinónimo de éxito en la organización.*

**PALABRAS CLAVE:** Comunicación, Liderazgo, Motivación y Trabajo En Equipo

## JOB TRAINING AND MOTIVATION AS A FACTOR OF IMPORTANCE FOR THE ACHIEVEMENT OF ORGANIZATIONAL OBJECTIVES

### ABSTRACT

*Mentioning some major problems welcome us in this investigation referring to improvements in production. Improving productivity is the result of the improvement of human relations, derived from the participation of workers , their inclusion in decision -making and problem solving . There is a positive relationship between job satisfaction and organizational commitment. Both motivation and job satisfaction depend on meeting the needs of individuals and their congruence with the organization. For this reason, the satisfaction of these generates a more motivated and satisfied individual qualified occupationally If companies detected the importance of training would have better chances of success and to detect situations in the company and thus work on these because if it enables and motivates the Human Capital is synonymous with success in the organization*

**KEYWORDS:** Communication, Leadership, Motivation and Teamwork

### PLANTEAMIENTO

En la actualidad el nombre de Recursos Humanos ha cambiado, desde el nombre hasta la función y tratamiento en la empresa situación que es distinta comparada con épocas pasadas, ahora es conocido con el nombre de Capital Humano ya que se le da más valía porque se convierte en un generador de riqueza igual o más importante que el recurso financiero, esto ha provocado el cambio de los requerimientos humanos en las empresas y la satisfacción laboral. Siendo considerado el Capital Humano como generador de riqueza y la fuerza de la producción se hace necesario la detección de necesidades de capacitación, que

es un tema que está en boga, ya que las empresas en la actualidad están a la vanguardia de todas las posibles soluciones a los problemas particulares de cada una. La capacitación viene a dar solución a muchos problemas que tienen las entidades ya que es un factor determinante para dar solución a problemas de los diferentes departamentos de acuerdo a la problemática y requerimientos que se tengan en la organización.

## INTRODUCCION

Mencionando algunos problemas principales que nos acogen en esta investigación son en su mayoría la mala comunicación, el liderazgo, motivación y el trabajo en equipo. Generalmente los supervisores no toman en cuenta a su personal, refiriéndonos a las mejoras en la producción, así como también se hacen asignaciones erróneas en actividades, ya que unos hacen las tareas de otros. Es pertinente señalar que ante estos errores se buscan culpables y no soluciones, algunos empleados señalan que hay favoritismo por parte de la gerencia que no hay liderazgo para la asignación de actividades, los supervisores y mandos medios recibían instrucciones por parte de dos jefes lo cual es una falta de liderazgo. Partiendo de la misión, visión, valores y objetivos así como de los valores se pudo observar que no estaba en esa sintonía con la organización, ya que no se cumplían las expectativas de los clientes, tanto en las entregas en tiempo así como la calidad del producto.

Además los trabajadores no tenían el balance con la familia y el trabajo, pasaban mas tiempo en el trabajo que con la familia, aunado a ello, los problemas de carácter técnico y de calidad que se sucedían frecuentemente en los departamento de moldeo, fundición, calidad y mantenimiento. Tomando como base lo anterior se procedió a elaborar una lluvia de ideas involucrando a todo el personal tanto operativo, mandos medios y directivos, para encontrar realmente la causa raíz del problema. En general se considera de vital importancia la detección de la capacitación que requiere la empresa sobre todo porque en algunas empresas no se preocupan por el personal sino por la producción y es un área a atacar por la administración. Con el proceso de capacitación se logran resultados tangibles, medibles y cuantificables ya que mediante la información, adecuación y organización se pueden implementar los cambios necesarios para el logro de los objetivos de la empresa.

## METODOLOGIA DE LA INVESTIGACION

*Tipo de investigación:* el tipo de investigación esta basada en un enfoque cuantitativo, ya que se mostraran los resultados de una capacitación realizada a la empresa manufacturera y poder analizar si realmente funciona o no la implementación de programas de capacitación para el logro de los objetivos.

*Diseño de investigación:* esta investigación reúne las características del diseño de investigación de campo, ya que se observan los fenómenos en su contexto natural, de tal manera que se analizará y nos permitirá conocer los factores que determinan las necesidades de capacitación.

*Población:* la población esta ubicada en una empresa manufacturera llamada Lacermex, S.A de C.V.

*Delimitación:* Industrias Lancermex S.A. de C.V. fue fundada por el Señor George Alfred "Jud" Schroeder en el año de 1976, inicia sus operaciones en la Ciudad de San Antonio haciendo solo partes de las Maquina Dispensadoras de Bebidas como Desconectores, Carbonadores y Accesorios, convirtiéndose así en un proveedor de la Empresa Coca-Cola.

Posteriormente, Industrias Lancermex S.A. de C.V: fue incorporado en México a principios de 1990, y en el año del 2006 fue adquirida por la compañía HOSIZAKI. Lancermex es una subsidiaria de Lancer Corp. de los Estados Unidos. Lancer se ha ganado una buena reputación para ofrecer máquinas dispensadora de bebidas de alta calidad a precios moderados, fabrica y remanufactura maquinas dispensadoras para bebidas

*Misión:* Ser líderes en la producción de máquinas dispensadoras de bebidas a través de la mejora continua en nuestros procesos de calidad y entrega oportuna

*Visión:* Ser líderes mundiales de productores de máquinas dispensadoras de bebidas en un plazo no mayor de 10 años

*Muestra:* Es la representativa de la empresa para ser estudiada y analizada. Se reúne información de personal de confianza y sindicalizados.

### Objetivos

Entre los objetivos de esta investigación está el objetivo general de la detección de necesidades de capacitación en los diferentes departamentos

Obtener resultados cuando ya se ha implementado un programa de capacitación.

Diagnosticar las necesidades del Capital Humano, tales como saber que lo motiva, impulsa y como afecta la mala administración en él.

### Marco Teórico

La organización necesita personas para que funcione de forma normal, pero si lo que desea es que funcione de forma excelente esas personas necesitan estar motivadas.

Sugerencias que pueden mejorar esta situación son:

Mejorar la comunicación entre empleados y empresa

Respeto mutuo

Buscar la conciliación entre trabajo y familia

Reconocer el trabajo de los empleados

Mostrar interés por las necesidades del empleado

Establecer retos constantes para evitar la rutina

Crear equipo

Instaurar entrevistas personales y evaluación de satisfacción.

Con pequeñas acciones se puede lograr aumentar de forma significativa el nivel de motivación de los empleados. Cuando no se realiza una comunicación efectiva en la empresa el empleado puede tener un sentimiento de falta de pertenencia a la empresa y reconocimiento, sumándose la falta de interés por su trabajo.

## **RESULTADOS**

Lancermex Piedras Negras realizó por medio de una encuesta las necesidades de entrenamiento y se dio a la tarea de proporcionar Capacitación a los niveles directivos, personal de confianza y sindicalizados, se muestran las gráficas de los resultados a continuación

#### Detalle De Horas De Entrenamiento Y Tiempo Extra

### CONCLUSIONES

Una vez que se tuvo el programa de capacitación se lograron los siguientes resultados en la empresa Lancermex, S.A. de C.V.:

- Reducción de rotación a 1.5 %
- Reducción de Ausentismo a 2%
- Ambiente laboral mejoro notablemente
- Reducción de tiempo extra total
- Reducción de Scrap de 970,000 a 150. Dlls
- Se elimina el segundo turno como consecuencia de la Reducción de tiempo extra
- Eliminación de quejas de cliente
- Se elevan las ventas por la conquista de nuevos mercados

Si bien es cierto que el aumento del salario económico es importante para mejorar la calidad de vida, también es cierto que, pasado cierto período, la nueva remuneración se diluye en satisfacer ciertas necesidades. Si las empresas detectaran la importancia de la capacitación tendrían mejores oportunidades de éxito ya que permite detectar situaciones en la empresa y así trabajar en estas ya que si se capacita y motiva al Capital Humano es sinónimo de éxito en la organización.

# **ECUADOR: CONTABILIDAD GUBERNAMENTAL Y SU PASO A LA ADAPTACION DE NORMAS INTERNACIONALES DE CONTABILIDAD EN EL SECTOR PUBLICO (NICSP)**

Jazmín Elsa Sánchez Astudillo, Universidad Estatal de Milagro

David Richard Pincay Sancán, Universidad Estatal de Milagro

## **RESUMEN**

*Por una parte, muchos países de Sur América vienen aplicando la Contabilidad Pública bajo el Método de Acumulación o Devengo. Por otra, el International Federation Of Accountants (IFAC) a través de la Junta de Normas Internacionales de Contabilidad para el Sector Público (ISPASB), busca armonizar la información contable y financiera de las entidades públicas a nivel mundial. ¿Cuál podría ser la relación entre la práctica actual de la Contabilidad Pública en los países de la América del Sur y las normativas propuestas por IFAC? El estudio refleja la conceptualización y aplicación del devengado en diversos países y la situación contable que vive Ecuador en estos momentos. El devengado como principio ha diferenciado los registros contables entre el Sector Público No Financiero Ecuatoriano y el Sector Comercial Privado. Sin embargo, este modelo se ha ido integrando con el Sistema de Administración Financiera (ESIGEF). Esta integración supone el primer paso en el camino de integrarnos internacionalmente en el campo de Contabilidad Pública. Esta integración suponemos podrá permitir realizar la rendición de cuentas de forma clara y transparente.*

**PALABRAS CLAVES:** Devengado, ISPASB, Rendición De Cuentas, IFAC

# **ECUADOR: GOVERNMENTAL ACCOUNTING AND PASSING TO THE ADAPTATION OF INTERNATIONAL ACCOUNTING STANDARDS IN THE PUBLIC SECTOR (IPSAS)**

## **ABSTRACT**

*On the one hand, many countries in South America have applied under the Public Accounting Method Accrual or Accrua. In addition, the International Federation Of Accountants (IFAC) through the Board of International Accounting Standards for the Public Sector (ISPASB), seeks to harmonize the accounting and financial reporting by public entities worldwide. What could be the relationship between the current practice of public accounting in the countries of South America and the standards proposed by IFAC? The study reflects the conceptualization and implementation of accrual in various countries and accounting situation in Ecuador right now. The accrual principle of accounting records has differentiated between the Nonfinancial Public Sector Private Sector Ecuadorian and Commercial. However, this model has been integrated with the Financial Management System (ESIGEF). This integration is the first step on the road to integrate internationally in the field of Public Accounting. This integration may allow a assume accountability clear and transparent.*

## INTRODUCCIÓN

En Ecuador la obligatoriedad de la aplicación de las Normas Internacionales de Información Financiera (NIIF) ha sido introducida partir del año 2006 en el sector privado. De esta forma la Información Financiera Contable dejaba atrás las Normas Ecuatorianas de Contabilidad y empezaba la aplicación de las Normas Internacionales de Contabilidad. Así, se suprime los principios anteriores y nace la obligatoriedad del Devengo. El Sector Público No Financiero acompaña a este cambio dejando atrás la base simplista del uso del flujo de caja y manteniendo el Devengado como el Principio que contablemente registra los hechos económicos existen o no movimientos de dinero en la instancia de la obligación o derecho monetario (Ecuador, Ministerio de Economía y Finanzas, 2005)

La contabilidad como ciencia ha evolucionado y ha estado inmersa en muchos diseños de re-análisis en las investigaciones internacionales. En el tiempo los cambios se han concentrado en forma de micro y macro-contabilidad en dos sectores económicos, como son el sector privado y el sector público. La micro-contabilidad ha sido usual en el Sector Privado a través de la utilización de sistemas de registro construidos en base a los flujos de efectivo. La contabilidad macroeconómica en este sector utiliza el criterio del devengado. Mientras que en el Sector Público donde, en forma general y dependiendo el país, los registros se caracterizan por la atribución de los flujos de recursos y gastos, se utiliza como criterio el término de “percibido” (Hauque, 2008)

## REVISIÓN LITERARIA

La revisión bibliográfica realizada abarca el periodo desde el año 1971 hasta 2013. Este estudio se apoya en los trabajos de los autores cuyas investigaciones del campo de contabilidad han sido publicadas en las revistas indexadas, además de las leyes y normativas contables que rigen en cada país.

## METODOLOGÍA

En este estudio, se analiza la conceptualización y la aplicación del devengado en diversos países de Latinoamérica. La presentación de diferentes formas utilizadas en los países de referencia, nos sirve para analizar la situación contable que vive Ecuador en estos momentos. Para poder hacerlo, se ha considerado la información procedente de varias bases de datos, publicaciones y muestras de trabajos sobre el tema.

### La Contabilidad Pública y las Normas Internacionales de Contabilidad Para el Sector Público (Nicsp)

Hablar del devengado no es nuevo. Este principio (Assum Cima, 1977) describe como la relación con el sentido económico de la contabilidad y la eliminación de la versión simplista de la caja. Este modelo ha sido adoptado por las empresas privadas alrededor del mundo. Sin embargo, *Government Public Finance Statistics System* (GPFS) influido por el Fondo Monetario Internacional, mostró la resistencia a este sistema y defendería la utilización de la base de caja como una herramienta más adecuada para los flujos y stock en el Sector público. En el estudio realizado por Raimondi (1974) se propone el cambio del principio de “equidad” debido a falta de un sustento teórico y se exige la aplicación del “devengamiento” por su uniformidad y aplicabilidad en la emisión de estados financieros contables independiente del área. El estudio sugiere también que el devengo sea el principio básico de la contabilidad.

Por otro lado el Fondo Monetario Internacional empezó regulando las normas internacionales con las Estadística de Finanzas Publicas. El método utilizado ha sido el Sistema de Cuentas Nacionales de las Naciones Unidas (SNA) del año 1953 con sus posteriores revisiones del 1963 y 1968, basado en flujos de caja y en el método de acumulación. De esta forma la SNA presenta un modelo de valores devengados

modificados. Así se puede constatar que esta conceptualización sostiene las prácticas contables históricas que han surgido en determinadas condiciones y como la composición de varias líneas de fuerzas (Ryan, 1998) En la actualidad la Junta de Normas Internacionales de Contabilidad para el Sector Público (IPSASB) ha publicado 32 Normas Internacionales de Contabilidad para el Sector Público (NICSP) con el fin de armonizar la información financiera. Dichas normas han sido aplicadas, adaptadas o modificadas por diferentes países. Sin embargo, lo que sí es notorio que muchos países de Latinoamérica solo aplican la base de acumulación acorde a su gestión pública y estructura política que mide los intereses propios de cada nación. De esta forma están creando manuales propios y normas técnicas que se relacionan con las NIIF y NIC. En nuestra investigación hemos desarrollado un cuadro que nos permita visualizar, lo que acabamos de presentar (Tab.3):

Tabla 17: Método del Devengado y las NICSP

1971 Raimondi	1974 Raimondi	1977 Assum Cima	1993	2001 Fmi	2003 Ipsasb	2013 Ipsasb
se expresa que el devengado debe ser parte de los principios contables	escribe “ ensayo sobre el principio del devengamiento”	describe: “la relación con el sentido económico de la contabilidad y la eliminación de la versión simplista de la caja”	fmi se adscribe totalmente al sistema del devengado	nueva versión del sistema de estadísticas de finanzas públicas	creación del marco conceptual para informes financieros con propósito general de entidades del sector público	la junta de normas internacionales de contabilidad para el sector público desarrolla el manual de procedimientos internacionales del sector público
			estudio del manual de la balanza de pagos	el ifac y el ipsasb adopta el “método de acumulación”	únicos responsables de emitir niif – nic	adopto por primera vez las nicsp basadas en la acumulación
		otros datos importantes del año 2013: para el 2013 el ipsasb, da un plazo de 3 años de gracia para su implementación. el estudio 14 nos habla de la “transición a la base contable de acumulación o devengo” se crea la nicsp 32.				

*Fuente: elaboración propia*

Son contados los países de Latinoamérica que no aplican la Base de Acumulación o Devengo. Paraguay es una de esas excepciones, ya que aun maneja la base de registro del percibido, motivada a que cada entidad del sector público es un ente contable. De esta manera y a pesar que este país cuenta con una Dirección General de Contabilidad Pública, vuelve el sistema débil que no permite dar respuestas a todas las necesidades de transacción poniendo en duda la integridad y la transparencia en la información financiera. Sin embargo, se nota el uso de un manual de registro y las normas propias que le permiten al Sector Público Paraguay rendir cuentas (Giachino de Paladino, 2011)

#### Análisis de la Contabilidad Gubernamental en Ecuador

A continuación con el objetivo de complementar la presentación del sistema de financiación pública hemos resumido a nivel macro la información del Ministerio de Finanzas sobre el escenario fiscal para el periodo 2012-2015. Los ingresos permanentes se los conoce por ser recursos del Estado, que se perciben de manera continua, periódica y previsible que no disminuyen la riqueza nacional (proviene de los Recursos Fiscales y financian los Ingresos del Grupo 1-Corrientes. Los ingresos no permanentes son recursos del Estado que se perciben de forma temporal, por situación específica, excepcional o extraordinaria. Estos pueden generar una disminución de la riqueza nacional por provenir de las ventas de activos públicos o endeudamiento

público. Este tipo de fuentes financian a los ingresos del Grupo 2-Capital y 3-Financiamiento. La tabla 4 nos muestra claramente que en el Ecuador las cifras económicas se leen a nivel presupuestario siempre teniendo en cuenta la reducida importancia de la información financiera. La reducción de este tipo de información, no permite emitir mayor opinión sobre otros valores como son los activos fijos, clases de contratos de construcción (NICSP-11), costes de endeudamiento (NICSP-5), información que reposa en el Estado de Situación Financiera y otros estados que representan el Sistema Único de Contabilidad. Debido a ello el Ministerio de Finanzas se encarga de consolidar la información de las entidades y organismos que formen parte del estado (Ecuador, Ministerio de Finanzas, 2012).

## RECOMENDACIONES

En nuestro estudio se evidencia que los países de América Central y del Sur en su mayoría aplican metodologías de registro del Devengo a excepción de Paraguay que se mantiene con el devengado y la base del percibido. El Devengado en el Sector Público ha dejado atrás la base del flujo del Efectivo. Esta puede ser la razón por qué muchos países del mundo, en especial los del continente suramericano, están tomando medidas de implementación, convergencia, transición, armonización adopción a las NICSP. Las medidas tomadas deben proteger los sistemas financieros de estos países que el cambio propuesto no se realice de forma caótica y sobre todo garantizar la transparencia de la información pública.

El ISPASB ha publicado 32 NICSP hasta la actualidad. La última ha sido basada en la Concesión de Servicios llamada “La Concedente”. Países como Costa Rica, Chile, Colombia se han volcado por la capacitación desarrollando planes de acción de convergencia. Las normas desarrolladas deberán permitir les la posibilidad de aplicar a sus sistemas de contabilidad los Métodos de Acumulación o Devengo. Esta tarea de capacitación y debate está acompañada por la Asociación Interamericana de Contabilidad. La

Asociación agrupa más de 21 países en América y realiza cada dos años conferencias y congresos para debatir, comunicar y mejorar la información financiera contable. Una de las sugerencias presentadas en su última conferencia en el año 2011, en referencia al AREA 3 – Sector Público, indicó que el Sistema de Contabilidad Gubernamental debe ser el núcleo integrador del sistema de administración financiera. El sistema de administración financiera debe estar basado en NCISP a efectos de ser utilizado como una herramienta para luchar contra la corrupción y hacer la rendición de cuentas más transparente (Asociación Interamericana de Contabilidad – AIC, 2011).

Cada país aplica el Devengado conforme a su sistema contable. Sin embargo, para adoptar o armonizar las NICSP no solo bastará con estudios del mismo, de su impacto y de los costos económicos. Se deberá obtener también el apoyo por parte del Estado en forma de las políticas regulatorias, cambios tecnológicos, adopción de nuevos regímenes de contabilidad, marco conceptual, catálogos de cuentas, y el ámbito tributario. Con este fin, lo más importante parece ser el mantenimiento de la capacitación y la participación de los profesionales a la hora de definir estas políticas. Esta tarea no será realizable con éxito sin proporcionar les unas herramientas adecuadas.

## CONCLUSIONES:

Ecuador goza de la aplicabilidad del Devengado como principio. Sus Normas Técnicas se acogen a los Sistemas de Administración Financiera. Su ente Rector definido por el COPLAFIP lo lidera el Ministerio de Finanzas. Sin embargo su información financiera se revela mas a nivel presupuestario, considerando al devengo como una simple acumulación de valores. Esta apreciación debe cambiar teniendo en cuenta las experiencias de otros países en la aplicación del Devengado y la Partida Doble.

Actualmente Ecuador no aplica las NICSP en su sistema financiero. Nuestra investigación sugiere la consideración de su aplicación en el entorno financiero del Ecuador. Sugerimos también que los gremios contables de Ecuador, como la Federación Nacional de Contadores y el Instituto de Investigaciones Contables, hagan los estudios de impacto sobre la aplicación de las NICSP en Ecuador. Al igual que analicen profundamente el tema de los activos y la necesidad de obtener información coherente consistente con las NICSP y su metodología internacional. Este tipo de análisis y preparación de la introducción de las NICSP al sistema financiero ecuatoriano, permitiría reducir los costes y el riesgo del cambio propuesto y sobre todo la malversación de los fondos públicos.

## RESUMEN

*El presente trabajo se basa en el análisis y diseño de la arquitectura ideal de la empresa Caffè Sorpreso; el cual contempla la revisión y evaluación de la estructura organizacional actual, tomando como base la matriz de análisis de Rummler-Brache. En el diseño organizacional planteado es necesario examinar la cadena de valor, basada en la teoría general de sistemas (entrada-proceso-salida). Stoltze (2004) esta cadena de valor es útil para identificar y estructurar los procesos estratégicos, procesos claves, procesos de apoyo y procesos evaluación que integran el mapa de los que componen la organización Caffè Sorpreso. Al final el diseño de los medios claves (producción, servicios y mercadotecnia) se llevó a cabo con base a los procedimientos y actividades que han sido analizadas al interior de la empresa. Para entonces obtener una arquitectura que facilite y contribuya a que las diversas funciones del negocio estén plenamente identificadas, y que los elementos que la componen contribuyan alineados con todas las acciones de la organización.*

**PALABRAS CLAVE:** Diseño Organizacional, Mercadotecnia Estratégica,

## THE IMPORTANCE OF ORGANIZATIONAL DESIGN ON A COMPANY WITHIN THE STRATEGIC MANAGEMENT PLAN; THE CASE OF CAFFE SORPRESO

### ABSTRACT

*This work is based on the analysis and design of an ideal architecture for the company Caffè Sorpreso; which observes the vision and valuation of the actual organization structure, taking as base the Rummler-Brache. On the proposed organizational design its necessary to examine the value chain, based on the general systems theory (entrance-process and exit). Stoltze (2004) this value chain is useful to identify and structure the strategic processes, key processes, support processes and valuation processes that integrate the organization map of Caffè Sorpreso. At the end the design of the key media (production, services and marketing) was based on the procedures and activities that have been analyzed at the company's interior. In order to obtain an architecture that facilitates and contributes to the adequate identification of the diverse functions of the company, and that the elements that integrate it help to promote every action from the organization.*

## INTRODUCCIÓN

La respuesta corporativa a las cuestiones sociales y ambientales, mejor conocido como Responsabilidad Social Corporativa (RSC), ha sido estudiada por varios autores que la han visto progresar por las siguientes tres etapas: maximización de utilidades, administración de la confianza y administración de la calidad de vida (Gray, 1977). Se puede identificar cómo las empresas muestran una serie de etapas de transición, en lo que a Responsabilidad Social se refiere; la primera cuando a través de este concepto las empresas denotan una herramienta para mejorar procesos, venderse e incluso posicionarse; la segunda, cuando por medio de ésta intentan alcanzar la confianza de los actores tanto internos, en el caso por ejemplo de los trabajadores, como los externos, en el caso de los proveedores y clientes entre otros; y por último la tercera, a través de la cual buscan lograr la calidad de vida para el contexto en el que interactúan. En adelante, trataremos de identificar las idealidades o ventajas asociadas a estas etapas. Las empresas tienden a mostrar motivaciones diversas para la adopción de una política de Responsabilidad Social Corporativa. Estas motivaciones pueden ir desde el cumplir con los requerimientos legales obligatorios básicos encaminados a controlar prácticas empresariales destructivas, tradicionalmente implementadas por los gobiernos, hasta considerarla como una herramienta para incrementar la productividad y mejorar el desempeño financiero de la empresa (Panwar, Rinne, Hansen y Juslin, 2006).

### Marco Teórico

De acuerdo con (Kaufman, 2004) que empieza por plantear una visión ideal donde habla de tres tamaños de análisis o de tres formas de enfocar el análisis para la planeación estratégica. La primera revisión denominada Micro que sería lo más pequeño, lo individual, donde el análisis solamente se concentra en pequeñas tareas y por lo tanto es sumamente limitado, en este aspecto de Micro lo que alcanza a evaluar se abocará a atender a los clientes internos, en este nivel de planificación los resultados por lo tanto no tienen efectos en el entorno, enseguida se plantea lo que sería un nivel de planificación Macro donde ya busca algunos de los clientes externos como satisfacerlos, sin embargo a las conclusiones que llega son limitadas, para llevar a cabo su modelo es realizarlo en la empresa y el entorno esto es a través del modelo denominado Mega, donde el modelo Mega se compromete a realizar las contribuciones de valor a la sociedad. Éste modelo Mega contempla un análisis de los clientes externos, también incluyendo clientes/ciudadanos en la comunidad a la que sirve la organización, de esta manera podemos decir que el modelo Mega incluye a los niveles Macro y Micro este modelo también plantea que se debe identificar y seleccionar necesidades, por otro lado definir la misión actual, con esto se llevara a la empresa a una serie de fases, en las cuales se irá alcanzando diferentes metas, una primera fase de alcance, donde posteriormente viene una fase de planificación y finalmente una implementación y mejora continua, cada una estará definida por actividades diferentes.

En la fase de alcance lo más importante es definir el objetivo de la misión; En la fase de planificación aquí tratamos de hacer un análisis FODA (Koontz & Weihrich, 2002) y de ahí derivar las misiones a corto y largo plazo que a su vez derivarán en el Plan Estratégico en todo este proceso iremos avanzando hacia la implementación. La fase de implementación se compone de diferentes aspectos donde se tiene que proporcionar los planes operacionales y tácticos para posteriormente obtener recursos, implementar y luego evaluar para determinar la efectividad y la eficacia de la estrategia. Finalmente se debe revisar y mejorar cada uno estos aspectos cuando sea necesario y regresar. Definir la misión, es decir al alcance y empezar de nuevo el proceso.

El modelo de elementos organizacionales (OEM) es una de las guías básicas para la planificación Mega (Kaufman, 2004), el modelo contempla elementos organizacionales que se identifican y vinculan a través de toda la organización, no importa si es pública o privada, aquí habría que considerar los factores críticos de éxito número tres (FCE 3) que es el uso de los tres niveles de planificación y resultados y el factor crítico de éxito cuatro (FCE 4), preparar los objetivos, incluyendo aquellos para la visión ideal y los objetivos de la misión, que tienen indicadores de cómo saber cuándo se ha llegado.

El modelo OEM (Organizational Elements Model) tiene tres niveles de resultados y dos tipos de procesos, recursos y medios. Los elementos organizacionales son los siguientes: consecuencias, outputs y productos. Y como hemos dicho, por otro lado están procesos e inputs. Las Consecuencias en este sentido, significan resultados a nivel de la sociedad, es decir, consecuencias son aquello que los resultados añaden valor a la sociedad, a la comunidad en la que la organización se desarrolla; De esta manera llegaríamos a una planificación Mega. Es evidente que hoy en día hacer el bien social es una obligación empresarial, no una opción.

Outputs serán los resultados que pueda lograr en el nivel Macro para los clientes externos y no el logro de los resultados externos que es una medida sino la entrega de los resultados fuera de la organización que puede lograr consecuencias al nivel Mega. Cuando se refiere a los tres niveles de planificación Mega, Macro y Micro, se asevera que en el nivel Mega la planificación se dirige a la sociedad como principal cliente y beneficiario de lo que logra la organización. En el caso del nivel macro es cuando el cliente y beneficiario principal es la misma organización y finalmente hablamos del nivel micro de planificación, cuando el cliente, es el beneficiario principal es un individuo o pequeño grupo, es decir, que no es la sociedad en general. De esta manera existen tres fines o resultados que contribuyen de esta manera al logro de los objetivos de la organización. Se deben escribir objetivos para cada uno de ellos, en este caso al nivel Mega se estaría hablando de consecuencias, para el nivel Macro (Outputs) y finalmente para el nivel Micro (Productos). De esta manera se podría entender los tres tipos de resultados que se esperan.

Las tres principales consideraciones para desarrollar objetivos útiles serían las siguientes: diferenciación entre medios y fines, fiabilidad de la medición de los resultados, ordenar y clasificar los elementos organizacionales cubiertos. Mega consecuencias, Macro outputs y Micro productos. Se dice que todos es medible, entonces en este caso los objetivos de acuerdo a una clasificación se puede tener un nivel de medición. Las cuatro escalas de medidas serían: la nominal, la ordinal, el intervalo y de razón. Los objetivos son medibles en una escala de intervalos o de razón, mientras que las metas, finalidades y propósitos más generales utilizan escalas nominales y ordinales. Los objetivos deberían medirse sobre la base de una escala de intervalos o de razón para poder asegurar su exactitud y fiabilidad.

Las necesidades identificadas dentro del modelo de Kaufman, indican que no es un desajuste en los recursos, procesos, métodos o en el cómo hacer las cosas, es realmente, un desajuste entre los resultados actuales de los resultados deseados o requeridos. Por lo tanto la determinación de necesidades identifica dichos desajustes y situando un orden de prioridad para ser resueltos. Tres ventajas para definir necesidad como desajuste en los resultados serían los siguientes: primero la dimensión que debería ser de una necesidad identificada no sirve como objetivo mensurable, número dos la dimensión que debería ser sirve como evaluación y criterios de mejora continua y número tres tiene la justificación para que una proposición dada no sea rechazada nuevamente, con estas tres formas podemos explicarle de una mejor manera a alguien de la dirección que quieren decir con un desajuste de los resultados. La número tres nos da una clara idea de poner precio a lo que es y que debería ser, puede decirnos como dar claridad sobre el costo de alcanzar esa necesidad y el costo de ignorar la necesidad.

El proceso mediante el cual se define los desajustes en resultados y se seleccionan los más importantes para su reducción o resolución se denomina determinación de necesidades. De acuerdo con (Kaufman, 2004),

los pasos para la determinación de necesidades: El primero paso es planificar usando información de una determinada necesidad sin incluir lo que comúnmente llamamos deseos. El segundo paso es identificar los tres niveles determinación y planificación de necesidades que serán incluidas: el mega, macro y micro y comprometerse a la determinación y planificación de necesidades que se inicia en el nivel mega. El paso tres es identificar a los participantes en la determinación de necesidades y planificación, en este caso entenderemos como participantes a tres ejes muy importantes por un lado quienes implementan, por otro lado los receptores y en el otro ángulo la sociedad, estos son los tres socios que determinarán las necesidades. De esta manera haremos sentir a los participantes como dueños, tanto en el proceso, como de los resultados, en vez de ser indiferentes u obstruirlo tenderán a ser sus campeones. El paso cuatro será obtener la participación de los socios en la determinación de necesidades y planificación. El paso cinco es obtener la aceptación de Mega como marco de referencia de la determinación de necesidades y planificación. El paso seis es recopilar información sobre necesidades externas e internas. El paso siete es enumerar las necesidades identificadas, documentadas y acordadas. El paso ocho es ubicar las necesidades en orden de prioridades, basándose en los costos de encontrar y no encontrar las necesidades, ordenar según su prioridad y reconciliar diferencias.

Y finalmente el paso nueve es enumerar los problemas, necesidades seleccionadas a resolver y obtenga el acuerdo de los socios. El Dr. Bernárdez destaca lo que denomina Tecnología del Desempeño Humano, (Bernardez, 2008) esta metodología define cinco grandes fases para la implementación de proyectos de mejora del performance. En este caso Bernárdez se ocupa primero del análisis de la ejecución de la empresa para luego pasar a un análisis de causas y finalmente a la selección y diseño de intervenciones, es decir dónde se harán cambios para la mejora continua y la implementación y gestión de la ejecución, concluyendo con la evaluación y el seguimiento que permita mejorar el desempeño y regresar al análisis de la ejecución. En parte este modelo se utilizan algunos elementos de los modelos anteriores incluso algunas de las partes utiliza por ejemplo elementos de los análisis, principalmente en la definición del desempeño (Kaufman, 2004) en la fase de análisis de causas.

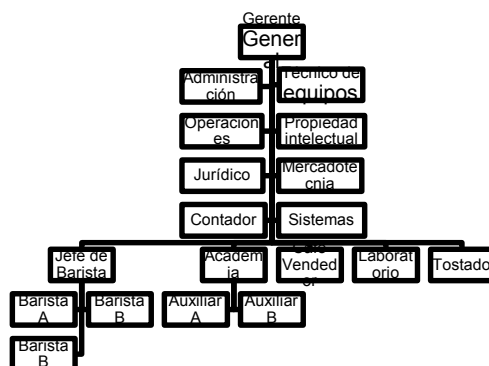

## METODOLOGÍA

Partiendo de los fines que se pretenden alcanzar, en cuanto a la estructura adecuada para el desarrollo de objetivos del plan estratégico se plantea en primer lugar un análisis de la conformación actual de la organización. En este sentido se presenta que, la organización Caffé Sorpreso tiene una estructura funcional, en la que al realizar un análisis de necesidades de los procesos con base en la matriz de Rummler y Brache se encontró que su conformación no es la adecuada como se muestra en la figura 1, por lo tanto las metas y los objetivos no es posible que sean logrados en la forma en que está construida actualmente el negocio, dado que existe una carente coordinación que permita a las diferentes áreas interactuar y alinearse de manera eficiente.

Este esquema sirve de base para el planteamiento y cambio de la distribución de las áreas que son necesarias, de tal modo que el negocio logre el cumplimiento de los objetivos plasmados en el tablero de control y logren los fines determinados por el negocio.

Una de las ventajas del modelo funcional de acuerdo Bernárdez (2007) es su capacidad de multiplicar el alcance del control a través de la distribución de funciones e inserción de niveles intermedios de supervisión, para asegurar que la complejidad o volumen de las operaciones no influyan en la seguridad o calidad. Sin embargo la empresa no ha aprovechado las bondades de este tipo de estructura, de este modo se visualiza que estos fueron incluyéndose, conforme se iba necesitando de su función dentro de la misma, para entonces considerarla y asignarles un lugar en la estructura, aunque esto fue sin ningún análisis previo de las necesidades que deberían ser cubiertas por el puesto requerido.

Figura 1: Estructura Actual de la Empresa Caffé Sorpreso

Fuente: Elaboración propia a partir de Song (2012)

Bernárdez (2007) asevera que no existe una forma organizacional que se considere de mayor eficiencia o ideal para una organización, la respuesta será una combinación de diferentes modelos que permita optimizar las ventajas que se sumarían a lo que requiere la empresa. De este modo Caffé Sorpreso podría continuar con una estructura funcional (Figura 2), sin embargo su diseño debe de conformarse con base en un análisis de los requerimientos y actividades, que deben ser cubiertas por el puesto y son esencialmente necesarios en la creación de valor. En este sentido que sea de tipo mecánica en los procesos que requiere de la estandarización, de este modo en las actividades que requieren flexibilidad y adaptabilidad ante el entorno cambiante, bajo un modelo orgánico que permita el trabajo en conjunto, coordinados y de la oportunidad a equipos auto dirigidos sin predecir el comportamiento de algunas contingencias que puedan llegar a presentarse.

Figura 2: Ejemplo de una Estructura Funcional

Elaboración Propia a partir de Daft(2007)

Para la revisión de los diferentes tipos de organización, se utiliza una tabla comparativa que permite llevar a un análisis de las características que conducen a la definición de la estructura adecuada, que se adapte a los requerimientos y medios con los que cuenta la empresa. Con base en los requerimientos de mercado y el tipo de organización lo esencial es la estructura funcional, el diseño permitirá distinguir las diferentes funciones que deberán desempeñar cada uno de los involucrados en el desarrollo de los objetivos, algo relevante a considerar es no perder de vista la visión mega en la que pretende establecer sus bases la empresa, de acuerdo con Kaufman (2004) esto permitirá aumentar el valor del producto o servicio, convirtiendo al plan de negocios en una estrategia que relaciona el bien común de la empresa y los clientes, de esta manera se logró la identificación de los consumidores a través de las acciones comprometidas de la organización para con ellos.

El siguiente paso es la justificación de los puestos y áreas funcionales, los cuales han sido detectados y son esencialmente necesarios para el logro de las metas, en esta etapa se define la estructura que será presentada a la organización, con el objetivo de eliminar y separar aquellos procesos que no están directamente

involucrados en la creación de valor del negocio. La siguiente etapa tiene como finalidad la identificación de los procesos propuestos en la cadena de valor, de este modo se acentúen como actividades primarias o de apoyo. A través de este análisis se determine la relevancia y contribución que tienen estos elementos en los resultados de la organización. Así mismo esto favorece para darle un seguimiento a las entradas y salidas que hacen que los diferentes niveles jerárquicos estén relacionados, y conectados con las metas que pretende el negocio.

Una vez consumada la anterior etapa se presenta el mapa de los procesos de la organización Caffè Sorpreso, y de ese modo la estructura de los elementos clave identificados, para entonces consolidar la secuencia e interacción que tienen en la creación de valor de la organización. Esto permitirá visualizar la conformación de la empresa y la forma en que se llevan a cabo las diferentes actividades esenciales entre los procesos que las integran. De este modo la siguiente etapa es llevar a cabo un análisis y discusión de los resultados obtenidos, para entonces destacar las conclusiones a partir de la propuesta realizada, la cual tiene como finalidad resolver la carencia de una estructura adecuada para el desarrollo de objetivos del plan estratégico, para entonces alcanzar las metas del negocio en el mercado de venta de café, en este sentido llevar a cabo el compromiso de la visión mega que identifica a la organización.

Esta investigación reúne información relevante que permite evaluar la profundidad y diversidad de las actividades de Responsabilidad Social Corporativa, además de examinar cómo empresas con características distintas, aunque dentro de un mismo contexto, utilizan opciones diferentes en relación al manejo o administración de sus relaciones internas, con sus inversionistas y empleados, así como externas, con proveedores-clientes y comunidad en general (Freeman, 1984; Nasi, 1995). El primer aspecto de la investigación requiere del análisis teórico de la realidad local y de los estudios sobre la temática de estudio, esto se logra mediante las siguientes estrategias:

*Como primera estrategia, se elaboró un marco contextual que describe las empresas del sector cervecero en el estado de Baja California, su realidad, entorno, características e importancia.*

*Como segunda estrategia, se desarrolló un marco teórico de los conceptos que componen las variables de estudio de esta investigación, partiendo del análisis de literatura relevante sobre el tema, consultando bibliografía, bases de datos, ponencias, actas, memorias y actas de congresos.*

En esta primera parte se analizaron los aspectos teóricos relativos a la delimitación conceptual, para continuar con aspectos relacionados con la Responsabilidad Social Corporativa.

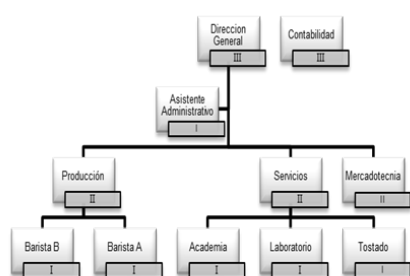

## RESULTADOS

Los resultados obtenidos parten de la justificación de los puestos considerados para la estructura propuesta, de tal modo que estos se definen a continuación: Justificación de los puestos y áreas funcionales propuestas. La estructura funcional propuesta (Figura 3) está construida partiendo de un enfoque de la metodología de manufactura esbelta, en donde se pretende eliminar de la organización el desperdicio que puedan presentar las diversas áreas consideradas así como las funciones de cada puesto. De acuerdo con Ohno (1978), (1988) citado por Bernardez (2009) este sistema de producción se basa en la completa identificación y supresión de las causas del desperdicio, en este sentido una de las claves de este sistema está en adelgazar eliminando la corriente creación de valor. La organización Caffè Sorpreso busca que todas las áreas tengan identificado las funciones así como la coordinación y alineación con cada uno de los procesos del negocio. Ballesteros (2008) coincide en que este sistema tiene varias herramientas que ayudan a eliminar todas las operaciones que no influyen directamente en el producto, aumentando el valor de cada actividad realizada y descartando lo que no se requiere. De este modo se lleva a cabo la reducción de desperdicios y la mejora de las operaciones, basándose siempre en el respeto al trabajador. Se debe eliminar todo aquello por lo cual el

cliente no está dispuesto a pagar, como sobreproducción, espera, transportes innecesarios, sobreprocesamiento o procesamiento incorrecto, inventarios, movimientos innecesarios, productos defectuosos o retrabajos.

Así mismo la estipulación de las responsabilidades y actividades de la gerencia son un motor base que permite a la organización orientarse en la dirección que le indica la visión y misión estipuladas, de acuerdo con Coulter & Robbins(2005) no existe un estilo de liderazgo que siempre sea el más eficaz, sin embargo las funciones han sido determinadas de tal manera que esté involucrado directa e indirectamente en el cumplimiento de las metas organizacionales. La creación de las coordinaciones y la asignación de sus funciones tienen como objetivo desarrollar con mayor eficiencia los procesos clave de la organización, Sánchez (2008) destaca que la importancia de una coordinación está en que las actividades correspondientes sean comprendidas y bien comunicadas al capital humano a cargo. La naturaleza de las diferentes asignaciones y la similitud de unas con otras facilitará la posibilidad de un agrupamiento en mejores condiciones de tiempo y costos, de tal manera se logre simplificar el organigrama así como el intercambio de información entre los distintos elementos jerárquicos. Los niveles I, II y III han sido diseñados con el objetivo de consolidar la base de la empresa, de tal manera que sus funciones y la interacción entre ellos, las coordinaciones y los clientes permiten que no se aislen con el objetivo organizacional, para que la información y el intercambio de experiencias enriquezcan las estrategias planteadas. De acuerdo con Bernárdez (2008) el presupuesto Mega que es con el que trabaja la organización, permitirá el desarrollo del capital intelectual que se esté consolidando, logrando incrementar el valor de los servicios y los productos cafeteros de la empresa.

Figura 3: Propuesta de Replanteamiento de Estructura Organizacional

Fuente: Elaboración propia

Lo siguiente es distinguir las actividades que destacan a los procesos principales para entonces integrarlos en la cadena de valor. De acuerdo con Vidal (2004) el modelo de la cadena valor de Porter se clasifica en actividades primarias y de apoyo, las primeras son aquellas que dan valor al producto así mismo tienen que ver con el flujo primario de materiales y servicios (logística interna y externa, producción, mercadotecnia y ventas y servicio posventa). Sin embargo las actividades de apoyo son importantes para el buen funcionamiento del negocio pero no aportan valor al producto o servicio creado (infraestructura de la organización, administración de recursos humanos, desarrollo tecnológico y abastecimiento). De esta manera la organización al definir la importancia de sus procesos podrá enfocarse en aquellas funciones que son principales en la entrega del producto final del negocio.

### Cadena de Valor de la Empresa Caffè Sorpreso

De acuerdo con Porter (1991) cada empresa es un conjunto de actividades que se realizan para construir, producir, llevar al mercado, entregar y apoyar a sus productos. La cadena de valor de una empresa y la forma en que desempeña sus actividades individuales son un reflejo de su historia, su estrategia y su enfoque para desarrollar el plan del negocio y muestra los medios fundamentales para realizar las actividades de las mismas. De este modo Porter (1991) manifiesta que existen cinco categorías genéricas de actividades primarias relacionadas con la competencia, y cada categoría es divisible en varias funciones distintas que se respaldan del sector industrial en particular y de la estrategia de la empresa, a continuación se describen estas funciones a las que hace referencia el autor en su obra literaria:

*Logística interna:* Son las actividades asociadas con el recibo, almacenamiento, y diseminación de insumos del producto, como manejo de materiales, almacenamiento, control de inventarios, programación de vehículos y retorno de proveedores.

*Operaciones:* Son las actividades asociadas con la transformación de insumos en la forma final del producto, como es maquinado, empaque, ensamble, mantenimiento del equipo, pruebas, impresión u operaciones de instalación.

*Logística Externa:* Son actividades que están asociadas con la recopilación, almacenamiento y distribución física del producto a los compradores, como almacenes de materias terminadas, manejo de materiales, operación de vehículos de entrega, procesamiento de pedidos y programación.

*Mercadotecnia y ventas:* Son las actividades asociadas con proporcionar un medio por el cual los compradores logran comprar el producto e inducirlos a hacerlo como publicidad, promoción, fuerza de ventas, cuotas, selecciones del canal, relaciones del canal y precio.

*Servicios:* Son actividades asociadas con la prestación de servicios para realzar o mantener el valor del producto, como la instalación, reparación, entrenamiento, repuestos y ajuste del producto. Así mismo el mismo autor describe las siguientes actividades de apoyo:

*Abastecimiento:* Se dedica a comprar insumos usados en la cadena de valor de la empresa. Aunque los insumos adquiridos se asocian comúnmente con las actividades primarias, están presentes en cada actividad de valor incluyéndolas actividades de apoyo (provisiones de laboratorio y los servicios independientes de pruebas comprados en el desarrollo de tecnología, mientras que contabilidad de la organización es un insumo comúnmente comprado con la infraestructura).

*Desarrollo de tecnología:* Cada actividad de valor representa tecnología, ya sean conocimientos, procedimientos, o la del equipo de proceso. El conjunto de tecnologías empleadas por la mayoría de las organizaciones es amplio, partiendo desde el uso de aquellas que son utilizadas para preparar documentos y transportar bienes, a aquellas que representan tecnologías representadas en un mismo producto.

*Administración de Recursos Humanos:* La administración de recursos humanos consiste de las actividades en la búsqueda, contratación, entrenamiento, desarrollo y compensaciones de todo tipo del capital humano. Respalda tanto a las actividades primarias como las de apoyo.

*Infraestructura de la empresa:* Consiste de varias actividades, incluyendo la administración general, planeación, finanzas, contabilidad, asuntos legales gubernamentales y la administración de calidad. De acuerdo con Carrión (2007) el objetivo final del análisis de la cadena de valor es identificar las fuentes de ventajas competitivas, es decir, las partes de la empresa que contribuyen de forma diferencial a la creación de valor. Dichas fuentes de ventaja competitiva pueden identificarse como una actividad concreta (ya sea

básica o de apoyo). Como interrelaciones entre las actividades o inclusive interrelaciones dentro del sistema de valor, es decir, interrelación entre empresas, en este sentido en la figura 4 se presenta la cadena de valor que representa a la organización Caffè Sorpreso.

Figura 4: Cadena de Valor de la Organización Caffè Sorpreso

*Fuente: Elaboración propia*

## CONCLUSIONES

El correcto diseño y revisión de la estructura organizacional es vital para establecer las estrategias de la empresa, para entonces lograr la competitividad y su continuo desarrollo antes los retos que se presentan. Así también es importante la identificación y la gestión de las actividades que se realizan y determinar la relación en la creación del producto, lo anterior permite destacar la importancia de la correcta representación gráfica de la cadena de valor y del mapa de procesos de la empresa. Así mismo, el mapa de procesos permite identificar el nivel de intervención que tienen los elementos involucrados en el negocio y como se llevan a cabo las actividades y a quienes afectan. Por lo tanto es de suma importante para la empresa su eficiente planteamiento, con el fin lograr incrementar la mejora del desempeño de los procesos involucrados en los resultados del negocio. La estructura y distribución de las actividades propuestas, son en este momento las que se requieren en la organización Caffè Sorpreso para el alcance de las iniciativas planteadas en el plan estratégico del negocio, sin embargo el crecimiento de la empresa y las exigencias del mercado estarán empujando a la incorporación de otras áreas de apoyo al termino del cumplimiento del plan estratégico, buscando la mejora continua del desempeño de la organización.

Para determinar los procesos clave en la organización Caffè Sorpreso, se llevó a cabo un análisis e identificación de la contribución que tienen al momento de crear el valor y la satisfacción de los clientes, ya que no todas las actividades tienen este protagonismo, de este modo se detectó al proceso de mercadotecnia, producción y servicios que están directamente involucrados en la actividad clave del negocio. Continuando con lo expuesto en el anterior párrafo, para considerar un proceso dentro de las actividades clave es necesario determinar una influencia relevante en el producto final que construye la organización, ya que esto significa abrir un espacio dentro de la estructura, de este modo aquellos elementos que aportan indirectamente serán desplazados como de apoyo, e incluso si es mínima su contribución tendrán un lugar como procesos externos fuera de la estructura principal.

Es necesario que los procesos estratégicos, apoyo y evaluación trabajen alineados con elementos claves, para al alcance de los fines del negocio, el cual comienza por identificar las expectativas de los clientes para entonces satisfacer sus necesidades, siempre bajo el enfoque que define al negocio, buscando la mejora del valor del producto entregado a los consumidores. Completando lo expuesto en el anterior párrafo se

puntualiza que, los mapas de procesos clave de mercadotecnia, producción y servicios deben trabajar en una dinámica de intercambio de información, con el objetivo incrementar la eficiencia de las actividades que se llevan a cabo al interior de estos elementos, ya que el intercambio y contribución mutua permitirá que se alcancen los fines del negocio. Una de las principales recomendaciones es que la organización Caffè Sorpreso debe estar abierta a los cambios del entorno y variables externas que están fuera del control de la organización, de tal modo que, a pesar de que la estructura propuesta fue diseñada considerando todas las situaciones durante el cumplimiento del plan estratégico, se debe tomar en cuenta algunas alternativas de mejora que surjan durante este periodo. Así mismo al finalizar el cumplimiento del plan estratégico se deberá revisar las actividades de los procesos clave, a modo de realizar los ajustes necesarios a causa de las nuevas necesidades del mercado, dado que al cumplimiento de todas la iniciativas pudieran haberse detectado algunas funciones que requieren de algún cambio o bien ya no son necesarias, con el objetivo de incrementar la eficiencia de los procesos de producción, servicios y mercadotecnia.

# EL CLIMA ORGANIZACIONAL COMO FACTOR DE COMPETITIVIDAD EN LAS FRANQUICIAS DE COMIDA RÁPIDA EN TIJUANA, B.C., MÉXICO

María Virginia Flores-Ortiz, Universidad Autónoma de Baja California

Alfonso Vega-López, Universidad Autónoma de Baja California

Edgar Armando Chávez-Moreno, Universidad Autónoma de Baja California

## RESUMEN

*El presente trabajo contempla una investigación para conocer la relación que existe entre el clima organizacional como factor de competitividad en las franquicias de comida rápida en Tijuana, B.C.; sin lugar a dudas el primordial activo de las organizaciones es el recurso humano ya que es a través de un buen equipo de trabajo que la empresa logra sus objetivos y metas asegurando así su desarrollo y posicionamiento en el mercado, no se debe dejarse de lado el clima organizacional y la importancia que este tiene dentro de las empresas. De aquí la importancia de analizar el clima organizacional en las franquicias de comida rápida en Tijuana, B.C. como factor de competitividad para determinar si esta influye de manera directa en su crecimiento e incluso en el éxito de la compañía. Para lograr los resultados se han realizado 66 encuestas representativas a los empleados de las franquicias de comida rápida registradas en el Sistema de Información Empresarial Mexicano, (SIEM), correspondiente a Tijuana, en Baja California. México. La investigación cuantitativa se aplica para el levantamiento de encuestas, a través de cuestionarios a los empleados de las franquicias de comida rápida de Tijuana, B.C., se procesa la información recabada con aplicación del programa estadístico SPSS para el análisis descriptivo e inferencial.*

**PALABRAS CLAVES:** Franquicias, Clima Organizacional, Competitividad

## ORGANIZATIONAL CLIMATE AS A FACTOR OF COMPETITIVENESS IN FAST FOOD FRANCHISE IN TIJUANA, B.C., MEXICO

### ABSTRACT

*This research includes an investigation to determine the relationship between organizational climate as a factor of competitiveness in the fast food franchises in Tijuana, BC; undoubtedly the primary asset of organizations is the human resource and that it is through a good team, the company achieves its goals and objectives ensuring their development and market positioning, so you should not ignore the organizational climate and the importance this has in companies. Hence the importance of analyzing the organizational climate in fast food franchises in Tijuana, BC as a competitive factor to determine whether this directly affects their growth and even the success of the company. To achieve the results were representative surveys conducted 66 employees of fast food franchises registered Mexican Business Information System (SIEM, for its acronym in Spanish), corresponding to Tijuana, Baja California, Mexico. Quantitative research is applied to the lifting of surveys through questionnaires to the employees of fast food franchises in Tijuana, BC, will process the information received in the application of SPSS software for descriptive and inferential analysis.*

## INTRODUCCIÓN

Las franquicias en México tienen un papel importante en el mercado nacional debido a su aportación económica a diversas entidades del país la ubican como una actividad productiva dinámica y relevante. La Asociación Mexicana de Franquicias (AMF) prevé que estos negocios generen 12 mil empleos durante el 2013. Las franquicias en el país generan ventas por más de 10 mil millones de pesos anuales, y representan el 7% del Producto Interno Bruto (PIB) nacional, en este año estiman generar 12 mil empleos, estimo Diego Elizarrarás Cerda, presidente de la Asociación Mexicana de Franquicias, asimismo estas han generado 2,300 empleos este año. El presidente de la AMF Diego Elizarrarás señaló que en la actualidad, el sector franquicias representa 6% del Producto Interno Bruto de México y genera ventas por más de 95,000 millones de pesos, dos factores que hacen que la industria se encuentre bien posicionada a nivel internacional. En México existen 1,000 marcas, las cuales generan 70,000 puntos de venta y 750,000 empleos directos. Por otra parte, Miguel Marón Manzur, subsecretario para la Pequeña y Mediana Empresa de la Secretaría de Economía, puntualizó que se está trabajando para fortalecer el sector, ya que el Programa Nacional de Franquicias ha creado desde su aparición 11,303 empleos e instaló 1,504 puntos de venta en todo el país. (El Economista, 2011).

Asimismo el Economista (2011), hacer referencia que en México, menos de 4% de las franquicias tienen más 50 unidades, más de 60% de estos negocios se encuentran en el rango de aperturas de 1 a 50 unidades y sólo 1% por arriba de 100 establecimientos. De acuerdo con el ranking de las 100 franquicias más exitosas a nivel mundial (2011), la franquicia de comida rápida Mac Donald's se encuentra en el cuarto lugar con \$81,016 millones de dólares, contando con 26,209 franquicias desde 1955 (Chen, 2011). Asimismo el ranking de las 100 franquicias más exitosas a nivel mundial hace referencia de que Pizza Hut se encuentra en el séptimo lugar con 5, 305 millones de dólares y el 58% de su incremento se debe al desemepeño que ha tenido en China.

Subway es una de las franquicias más exitosas en México, de Acuerdo con datos proporcionados por Rodríguez (2011), en el Financiero, para este año, las expectativas de la marca es abrir cien unidades más, y su meta para 2015 es estar operando mil 200. Uno de los conceptos de alimentos que está teniendo un gran desarrollo en territorio mexicano es Subway, empresa que cerró 2010 con 510 tiendas operando -en esta año abrieron 70 unidades-, y con un incremento en ventas de entre 7 y 8 por ciento. Una vez mencionado todo lo relacionado al ámbito económico, es importante mencionar como en la actualidad muchas empresas tienen limitados los departamentos de recursos humanos dedicándolos únicamente al reclutamiento, selección, contratación y pago de sueldos y salarios, dejando de lado el clima organizacional y la importancia que este tiene dentro de las organizaciones. Esta situación también se repite en las franquicias, que es la poca importancia que se le da al área de recursos humanos, dejando de lado al personal que ahí labora, lo que puede afectar su crecimiento y competitividad. Sin lugar a dudas el principal activo de las empresas es el recurso humano ya que es a través de un buen equipo de trabajo, la empresa logra sus objetivos y metas asegurando así su desarrollo y posicionamiento en el mercado.

Algo que no se debe perder de vista es el trato que se da a los empleados, es de vital importancia en estos tiempos, no solo para incrementar el nivel de eficiencia o de productividad, también para mejorar las relaciones interpersonales internas, así como el servicio a los clientes y lograr que estos sean competitivos. Por lo tanto, se debe tomar en cuenta el clima organizacional que prevalece en la empresa, para generar el sentido de pertenencia del empleado, esto se puede lograr a través de los sueldos y salarios, la autonomía en el área de trabajo, la capacitación, el trabajo en equipo, la innovación, el apoyo hacia el empleado y la comunicación existente dentro de la organización. Lo que va a impactar de manera directa el ambiente de trabajo, a través de la satisfacción laboral del empleado, sintiéndose este más comprometido y cuando se

presenten épocas de crisis como la que estamos viviendo en la actualidad, en lugar de estar desmotivados, se da un mayor compromiso y esfuerzo de salir adelante. De aquí la importancia de analizar el clima organizacional en las franquicias de comida rápida en Tijuana, B.C. como factor de competitividad para determinar si este influye de manera directa en su crecimiento e incluso en el éxito de la compañía.

## REVISIÓN LITERARIA

### Franquicias

Las franquicias son una opción de negocio, en la cual, la mayoría de las veces se tiene identificado su mercado, así como su reutilizabilidad. (Secretaría de Economía 2011). Asimismo Pons (2011), menciona que la franquicia es la comercialización de bienes y servicios, bajo una marca y un sistema operativo por los cuales se reciben beneficios y regalías. La franquicia es un formato de comercialización, cuya definición legal se presenta de la manera siguiente: Existirá Franquicia cuando con la licencia de uso de una marca se transmitan conocimientos técnicos, para que la persona a quien se le concede pueda producir o vender bienes o prestar servicios de manera uniforme y con los métodos operativos, comerciales y administrativos establecidos por el titular de la marca, tendentes a mantener la calidad, prestigio e imagen de los productos o servicios a los que ésta distingue. (Feher, Ferenz; Gallástegui, 2001)

Pons (2011), hace referencia de la siguiente clasificación de franquicias: a) Franquicia maestra, es la que corresponde a la suscripción del acuerdo de voluntades por la cual el franquiciante otorga exclusividad al franquiciado para desarrollar la franquicia en una determinada región (pueblo, provincia, etc.) otorgándole a la vez, la opción de sub-franquiciar el modelo de negocio entre los interesados locales. b) Franquicia individual: es el clásico contrato entre un comerciante independiente que adquiere los derechos de explotar el modelo del empresario en una sola unidad. c) Franquicias múltiples: es el caso anterior, agregada la facultad de abrir un número determinado de locales dentro de un área acordada. Se debe tener en cuenta que este contrato no acepta la posibilidad de sub-franquiciar. d)

Franquicia corner: son aquellas que se instalan en pocos metros cuadrados y forman parte integrante de un mega espacio o mega evento, como por ejemplo, un supermercado o meramente un discurso político o evento de disciplina deportiva. Estas pueden ser corner fijo o corner móvil. e) Franquicia de productos: se transmite la posibilidad de vender dentro de un local, determinados productos del franquiciante. f) Franquicia de servicios: se trata del franquiciante otorgando su transferencia del saber hacer en la prestación de un determinado servicio como inmobiliaria, capacitación, asesoramiento contable, jurídico, etc. g) Franquicia de distribución: si hablamos de tornillos, no franquiciamos la fábrica de tornillos, si no su distribución, el contrato lleva inserto y delimitada perfectamente la extensión zonal, permitida al franquiciado. La franquicia contiene las siguientes ventajas: Productos probados y aceptados, bienes y servicios que ofrecen un plus al consumidor final, demanda a largo plazo, la transmisión de conocimientos vía manuales, capacitación y asistencia técnica (apoyo continuo), conocimiento de la inversión total antes de emprender el negocio, estrategias de mercadotecnia y comercialización probadas por el franquiciante maestro, que son transmitidas inmediatamente al franquiciatario para la aplicación en su negocio o punto de venta.

### El Clima Organizacional Como Factor de Competitividad

En un estudio realizado por Hernández Sampieri y Méndez (2012), mencionan que el concepto de clima organizacional ha recibido en las últimas décadas una atención considerable por parte de los administradores del desarrollo empresarial, particularmente a partir del 2000 (Hernández Sampieri y Andrade, 2011). Lo anterior se debe a que la mayoría de los modelos que caracterizan el comportamiento organizacional se centran en las percepciones del ambiente laboral al que se refieren como clima organizacional. (Patterson et al. 2005). Asimismo Hernández Sampieri y Méndez (2012), señalan que

aunque recientemente, la mayoría de las definiciones conceptualiza al clima organizacional o laboral como un conjunto de percepciones de los individuos respecto a su medio interno de trabajo. Estas reflejan la interacción entre los elementos individuales, las características y procesos de la organización (Schneider, Ehrhart y Macey, 2011; Datta et al., 2010; Neal et al., 2005) Así el clima organizacional representa el ambiente interno entre los miembros de la organización, y está íntimamente relacionado con el grado de motivación existente. Expresándose en el concepto la influencia del ambiente sobre la motivación de los participantes, de manera que se pueda describir como cualidad o propiedad del ambiente organizacional que perciben o experimentan sus miembros y que influye en su conducta. (Chiavenato, 2011). De tal manera que el clima organizacional lo constituyen todos aquellos factores que influyen en la conducta de una organización y que son comunes a puestos no necesariamente relacionados entre sí. Es decir, éste describe como las organizaciones (tomadas como un todo) difieren una de otra en un desempeño típico. Dichas diferencias son influenciadas por y expresadas a través de cosas tales como: procedimientos operativos, estructura organizacional y otros factores que aunque no estén escritos, son poderosos en influyen en el comportamiento. (Reddin, 2004).

Es en este punto en donde los gerentes deben ser altamente sensibles para identificar el clima organizacional en las empresas, porque es difícil cambiarlo, se requiere de capacidades, habilidades y destrezas de parte de los directivos, así como de un conocimiento profundo de la organización para determinar las estrategias a seguir para lograr el cambio organizacional. De acuerdo con Bohlander y Snell (2008), El análisis del ambiente competitivo de la empresa es esencial para la planeación estratégica, este incluye las organizaciones específicas con las que la empresa interactúa. En la planeación estratégica se analiza para adaptarse o influir en la naturaleza de la competencia. Una regla general en este análisis es: cuanto más poder tenga cada una de estas fuerzas, menos rentable y, por tanto menos atractiva será el sector. De acuerdo con Reddin (2004), existen cuatro climas organizacionales básicos los cuales se necesita conocer derivados de dos dimensiones del clima. Estas dos dimensiones son: Orientación a la tarea (OT) y Orientación a la Relación (OR). La orientación a la tarea (OT), enfatiza la productividad, hace que el trabajo sea realizado, iniciando, organizando y dirigiendo y la orientación a la relación (OR), enfatiza a la gente y se evidencia por: escuchar, confiar y motivar. Estas dos variables dan como origen a cuatro tipos básicos de clima organizacional, dependiendo el grado en el que estén presentes, como se muestra a continuación:

Reddin (2004), menciona que existen un total de 23 características que diferencian a los cuatro climas básicos de una organización. Por ejemplo: El modo de interacción de un clima organizacional orientado a sistemas es corregir. El modo de un clima organizacional orientado a la gente es aceptar. El clima organizacional orientado a la producción tiende a enfatizar el dominio y la dirección. El clima orientado al trabajo en equipo quiere unir a otros en el servicio del trabajo. Una vez identificado el clima organizacional básico de la empresa y se define si estos pueden ser apropiados o inapropiados al ambiente, es claro que hay ocho tipos de clima organizacionales que cuando la competitividad es considerada. Es decir, surgen cuatro tipos de climas más competitivos y cuatro tipos de clima menos competitivos. Cuando se mencionaron los cuatro climas básicos de la organización, no se hizo referencia al ambiente. Sin embargo, el clima organizacional real de una empresa debe relacionarse a este ambiente. Las diferentes combinaciones de alta y baja de la orientación a la tarea, de la orientación a la relación y de la orientación a la efectividad, dan como resultado ocho tipos de clima, cuatro orientados a actividades, es decir a lo que se hace y cuatro orientados a los resultados, es decir a lo que se logra. Estos cuatro climas orientados a actividades y los cuatro climas orientados a resultados, son derivados de climas organizacionales básicos. Cuando estos son impulsados inapropiadamente, el clima básico con orientación a la producción recibe el nombre de clima autoritario, cuando el clima básico orientado a la producción es usado apropiadamente recibe el nombre de clima productivo. La Figura 2 marca la posición de los ocho tipos de clima con relación a su uso en el ámbito de la empresa.

De acuerdo a los ocho climas organizacionales representados en la Figura 2, que representan los ocho climas organizacionales de acuerdo a Reddin (2004), se describen de la siguiente manera: Clima Estancado. El clima estancado es aquel que resulta de una baja orientación a las relaciones en un medio ambiente en donde dichas orientaciones son inapropiadas, creando por lo tanto una condición en la que el esfuerzo individual y el estado de ánimo se mantienen en un nivel mínimo. Este clima es percibido como una alta dosis de pasividad. Clima de Sumisión. El clima de sumisión es aquel que refleja una baja orientación a la tarea y una alta orientación a las relaciones en un ambiente en donde dichas orientaciones son inapropiadas creando por lo tanto una orientación a acciones amigables que no favorecen la competitividad. Este clima motiva que la organización sea percibida como agradable, cálida y amable; con una alta dosis de pasividad Clima Autoritario. El clima autoritario es aquel que refleja una alta orientación a la tarea y una baja orientación a las relaciones en un ambiente en donde dichas orientaciones son inapropiadas, creando por lo tanto una atmosfera en la que predomina el autoritarismo sin que esta característica ayude a la competitividad. El clima es apreciado como crítico y amenazante. Clima Ambiguo. Es aquel que refleja una alta orientación a la tarea y una alta orientación a las relaciones en un ambiente en donde solo una de ellas es requerida, creando por lo tanto una atmosfera de ambigüedad en la que el interés en la participación de los actores no favorece a la competitividad.

Clima de Equidad. Es aquel que refleja una baja orientación hacia la tarea y una baja orientación a las relaciones en un ambiente en donde dichas orientaciones son apropiadas, creando por lo tanto un impacto favorable a la competitividad por medio del orden, el control y la equidad. Clima Humanitario. Es aquel que refleja una baja orientación a la tarea y una alta orientación a las relaciones en un ambiente en donde dichas orientaciones son apropiadas, creando por lo tanto condiciones para una alta efectividad por medio de la confianza y el aprecio a los seres humanos Clima Productivo. Es aquel que refleja una alta orientación a la tarea y una baja orientación a las relaciones en un ambiente en donde dichas orientaciones son apropiadas, creando por lo tanto condiciones para la alta efectividad por medio de una dirección puntual y vigorosa. Clima Desafío. Es aquel que refleja una alta orientación a la tarea y una alta orientación a las relaciones en un ambiente en donde dichas orientaciones son apropiadas, creando por lo tanto condiciones para la alta competitividad a base del esfuerzo comprometido mas allá de los propios límites de la capacidad, conocimiento y experiencia. El clima es percibido por el alto nivel de logro de los objetivos y por la práctica sistemática de la motivación mutua para el logro de un alto desempeño; alto compromiso de la gente en el trabajo; toma de decisiones en equipo como recurso para elevar la calidad de estas y para desarrollar nuevas alternativas. De acuerdo a lo anterior el clima organizacional se constituye desde el dueño, presidente o gerente general de la compañía, los factores de competitividad que influyen en el mismo, sin orden de importancia son los siguientes tomándose como las variables dependientes para efectos de esta investigación: Autonomía. Percepción del trabajador acerca de la autodeterminación y responsabilidad necesaria en la toma de decisiones con respecto a procedimientos del trabajo, metas y prioridades. La percepción que tienen los miembros de la organización, con respecto a la recompensa que reciben, por su contribución a la empresa. (Koys y Decottis, 1991). Apoyo.

La percepción que tienen los miembros acerca del respaldo y tolerancia en el comportamiento dentro de la institución, esto incluye el aprendizaje de los errores, por parte del trabajador, sin miedo a la represalia de sus superiores o compañeros de trabajo. (Koys y Decottis, 1991). Comunicación. Es considerada como un proceso por medio del cual hay intercambio de información entre individuos o computadores en el interior de las organizaciones, por medio del uso de símbolos comúnmente aceptados. Tres dimensiones son consideradas en toda comunicación: el emisor o emisores, el medio de comunicación y el intercambio de información (Monge, 2008)

Presión. La percepción que existe con respecto a los estándares de desempeño, funcionamiento y finalización de la tarea. (Koys y Decottis, 1991). En estricto sentido, el trabajo bajo presión se refiere a realizar una tarea bajo condiciones que ejercen tensión, llámese menos tiempo, menos recursos (humanos,

materiales y técnicos), menos espacio, esmero en lograr el resultado con eficiencia (bien hecho al primer intento), con nula, poca o mucha supervisión cercana que haga ‘presión’ para lograr el objetivo. Reconocimiento. Se define como la respuesta dada por una compañía a los comportamientos, esfuerzos y logros alcanzados por los colaboradores. (Perea, 2013), asimismo es la percepción que tienen los miembros de la organización, con respecto a la recompensa que reciben, por su contribución a la empresa. (Koys y Decottis, 1991) Equidad. La percepción que los empleados tienen, acerca de si existen políticas y reglamentos equitativos y claros dentro de la institución. (Koys y Decottis, 1991). Innovación.

La percepción que se tiene acerca del ánimo para asumir riesgos, ser creativo y asumir nuevas áreas de trabajo, en donde tenga poco o nada de experiencia. (Koys y Decottis, 1991). Percepción a la organización. Es el proceso de interpretar mensajes por medio de nuestros sentidos para dar orden y significado a nuestro entorno. Entonces la percepción es de las personas y utiliza nuestros sentidos para crear una interpretación de lo que sucede a nuestro alrededor dentro de la empresa. (Johns y Sacks, 2010). Motivación. Es aquello que origina una propensión hacia un comportamiento específico. Este impulso a actuar puede provocarlo un estímulo externo (que proviene del ambiente) o puede ser generado internamente en los procesos mentales del individuo. (Chiavenato, 2011). Remuneración. Es el total de todas las retribuciones que se otorgan a los empleados a cambio de sus servicios. (Mondy, 2010)

Capacitación y desarrollo. La capacitación constituye un esfuerzo continuo diseñado para mejorar la competencia de los empleados y el desempeño de la organizacional, en tanto que el desarrollo implica un aprendizaje que va más allá del trabajo actual y tiene un enfoque a largo plazo. (Mondy, 2010). Ambiente físico y cultural. En cuanto al ambiente físico evalúa el sentimiento de los trabajadores respecto de los elementos físicos que conforman su ambiente de trabajo. Se recogen percepciones y expectativas respecto de los espacios físicos y los implementos de trabajo. (Reinoso y Araneda, 2007), en tanto que La cultura de una organización no está definida por una sola arista, sino que comprende un conjunto dinámico de valores, ideas, hábitos y tradiciones, compartidos por las personas que integran una organización y que regulan su accionar dentro de la misma. (Parades, 2012). Visión. Es la imagen que la organización tiene de sí misma y de su futuro, es decir, es el acto de verse así misma proyectada en el tiempo y en el espacio. (Chiavenato, 2012). Satisfacción general. Es un indicador promedio que puede sentir el trabajador frente a las distintas facetas de su trabajo, es decir, la satisfacción por facetas es el grado mayor o menor de satisfacción frente a aspectos específicos de su trabajo: reconocimiento, beneficios, condiciones del trabajo, supervisión recibida, compañeros del trabajo, políticas de la empresa. (Ortiz y Cruz, 2008) Buscando que la organización debe estar orientada más a resultados, solo que el clima puede ser el correcto dependiendo del ambiente, es decir de la forma en que están estructuradas las tareas. No hay un clima organizacional más competitivo que otro, este debe ser apropiado a la situación real bajo la cual opera la empresa. De igual manera la competitividad del clima también dependerá de la naturaleza de las expectativas de la fuerza de trabajo con la que cuente la empresa a todos los niveles.

## MÉTODO

La metodología de investigación es cuantitativa y cualitativa. La variable dependiente el clima organizacional, Hernández Sampieri y Méndez (2012), lo definen como un conjunto de percepciones de los individuos respecto a su medio interno de trabajo. Estas reflejan la interacción entre los elementos individuales, las características y procesos de la organización (Schneider, Ehrhart y Macey, 2011; Datta et al., 2010; Neal et al., 2005). En cuanto a las variables independientes se tomaron las siguientes: autonomía, trabajo en equipo, apoyo, comunicación presión, reconocimiento, equidad, innovación, percepción a la organización, motivación, remuneración, capacitación y desarrollo, ambiente físico y cultural, visión y satisfacción general.

Para el presente trabajo se eligió una muestra de 66 franquicias de comida rápida afiliadas al padrón del Sistema de Información Empresarial Mexicana (SIEM) Marzo 2011 delegación Tijuana, Baja California. A los empleados de las franquicias de comida rápida se les aplicó un cuestionario conformado por 99 preguntas relacionadas al tema de estudio. Una vez recopilada la información de los cuestionarios, se procedió a la elaboración de una base de datos en SPSS y posteriormente se realizó el respectivo análisis y su interpretación. Se utilizó una escala de medición de likert. Se elaboraron los cuadros y gráficos que nos permite determinar el clima organizacional como factor de competitividad en las franquicias de comida rápida de Tijuana, B.C., México.

**Objetivo General**-Determinar el clima organizacional como factor de competitividad en las franquicias de comida rápida de Tijuana, B.C., México.

**Objetivo específico**-Determinar si los elementos de autonomía, trabajo en equipo, apoyo, comunicación presión, reconocimiento, equidad, innovación, percepción a la organización, motivación, remuneración, capacitación y desarrollo, ambiente físico y cultural, visión y satisfacción general son parte del clima organizacional como factor de competitividad en las franquicias de comida rápida de Tijuana, B.C., México.

### Muestra

El diseño de la muestra es resultado de la identificación de una población total de 110 empresas de franquicias de comida rápida, afiliadas al padrón del Sistema de Información Empresarial Mexicana (SIEM) Marzo 2011 delegación Tijuana, Baja California y de la consideración del porcentaje de presencia sobre la población total, dando como resultado 66 empresas como muestra representativa, como se ejemplifica en la Tabla 1. Los factores que se tomaron en cuenta en el cálculo de la muestra, es que la población se considera con características homogéneas, además, de contarse con una población finita, ya que el número de franquicias de comida rápida es conocido y la representatividad de la muestra está determinada por un error permisible de 0.068, con un nivel de confianza del 95% y  $p = q = 0.5$ . Para la recolección de la información se realizaron entrevistas personales, para aclarar cualquier duda que tuviera el entrevistado, acerca de alguna de las preguntas del cuestionario, finalmente se obtuvieron 66 encuestas, estas fueron válidas y ninguna fue excluida al momento de analizar la información.

**Tabla 1: Total de Empresas Según SIEM, Marzo 2010**

	Población	Muestra
Total de empresas	124	66

*La tabla muestra que el total de empresas registradas, integran una población de 124 la población se considera con características homogéneas y se contó con una población finita, porque se conoce el número de empresas familiares, dando como resultado que la muestra esperada es de 66 empresas estas fueron válidas y ninguna fue excluida al momento de analizar la información.*

**Validación del Instrumento**-A los empleados de las franquicias de comida rápida se les aplicó un cuestionario conformado de 99 preguntas, el cual fue validado relacionado al tema de estudio. Se utilizó una escala de medición de likert. Se elaboraron los cuadros que permiten un análisis de los factores que inciden en la competitividad de las franquicias de comida rápida. La validez del cuestionario se determinó mediante el coeficiente de confiabilidad de Alfa-Cronbach, por medio del programa SPSS: el resultado arrojado por dicho programa fue de .80, un grado de confiabilidad aceptable (y a que esta por arriba .60 y de 0.70, puntuación mínima aceptable).

**Tabla 2: Análisis de Fiabilidad**

Alfa de Cronbach	No. de Elementos
.923	99

*En la tabla se muestra la validez del cuestionario se determinó mediante el coeficiente de confiabilidad de Alfa-Cronbach, por medio del programa SPSS: el resultado arrojado por dicho programa fue de .923, un grado de confiabilidad aceptable (ya que esta por arriba .60 y de 0.70, puntuación mínima aceptable.). Fuente: elaboración propias con datos del spss (2013)*

## RESULTADOS

### Correlaciones Bivariadas (Matriz de Pearson) de las Variables Independientes

Para determinar las variables en las que existe correlación se utilizó la Matriz de Correlación de Pearson. Los resultados de las correlaciones permiten concluir que dos variables están relacionadas con otras dos variables: Se propone como estrategia de investigación que, a partir de la evidencia empírica que arroja la matriz de coeficientes de correlación de Pearson, considerar sólo aquellas correlaciones significativas al rango de 0.01 y 0.05 y de una magnitud igual o mayor a 0.50, lo cual representa una correlación positiva de moderada a fuerte. Como se muestra en la Tabla 3. Resultando las variables independientes con una correlación más alta de acuerdo al criterio establecido con anterioridad, los elementos que son parte del clima organizacional como factor de competitividad en las franquicias de comida rápida de Tijuana, B.C., México., presentándose a continuación:

Tabla 3: Correlaciones Bivariadas (Matriz de Pearson) de las Variables Correlación Entre Variables Correlación

Autonomía – Autonomía	.664**
Trabajo en Equipo- Trabajo en Equipo	.608**
Innovación – Apoyo	.605**
Innovación – Innovación	.646**
Remuneración – Remuneración	.610**
Remuneración y Reconocimientos	.608**
Promoción y Carrera – Promoción y Carrera	.634**
Capacitación y Desarrollo – Capacitación y Desarrollo	.610**
Satisfacción General – Visión	.624**

*En la tabla se observan las correlaciones que resultaron del análisis estadístico a través del SPSS 15. Se muestran las correlaciones más altas con respecto a las variables independientes, dando como resultado que la que la innovación incide en el apoyo en un 0.605 y la remuneración y reconocimientos inciden en un 0.608 y la satisfacción general y la visión en un 0.624 presentando correlaciones significativas en el nivel de 0.01, asimismo se presentan correlaciones directas en la variable de autonomía con un 0.664, trabajo en equipo con un 0.608, innovación en un 0.646, promoción y carrera en un 0.634 y capacitación y desarrollo en un 0.610. \*\*La correlación es significativa en el nivel 0.01 \* La correlación es significativa en el nivel 0.05*

Los resultados de las correlaciones anteriores permiten concluir que las siguientes variables están relacionadas con el clima organizacional: autonomía, trabajo en equipo, innovación, apoyo, remuneración, reconocimientos, promoción y carrera, capacitación y desarrollo, satisfacción y visión. Dando como resultado un clima de organizacional de desafío: Porque existe autonomía en la toma de decisiones ya que se da un balance entre el colaborador y el equipo de trabajo en cuanto a que decide el modo en que ejecutará su trabajo, propone sus propias actividades, organiza su trabajo como mejor le parece de acuerdo a sus necesidades. Se manifiesta el trabajo en equipo por la alta coordinación y el esfuerzo de manera conjunta enfatizando en el logro de objetivos y planes, por lo cual el alto desempeño es motivado de manera continua. Dando como resultado el compromiso de los empleados con los propósitos de la organización. Esto se logra porque la mayoría de las veces en el departamento en que se desempeña el empleado comparten la información más que guardársela, existe una comunicación permanente entre los compañeros de trabajo y se da una relación cordial, por lo mismo existe la confianza entre ellos y reconocen sus fallas o errores cuando se equivocan.

La innovación porque se le permite al empleado tener altos estándares de sí mismo por la búsqueda incesante de nuevos desafíos que se presenten dentro de la empresa y su trabajo. El apoyo se refleja en el énfasis en el equilibrio personal-trabajo ya que se da una alta orientación a la tarea y una alta orientación a las relaciones en un ambiente donde dichas orientaciones son apropiadas, dando como resultado la alta competitividad a base del esfuerzo y el compromiso. Se logra a través de que el jefe respalda al empleado

cuando este se equivoca, para que aprenda de sus errores, asimismo es tratado con respeto y desempeña labores propias del puesto para el cual fue contratado. Las empresas premian el esfuerzo de los colaboradores a través del establecimiento de objetivos claros y medibles para que los puedan alcanzar y recompensar sus logros a través de incentivos, por lo tanto los empleados se encuentran satisfechos con los sueldos que les pagan y consideran justo el pago, así como con las promociones y ascensos que realiza la empresa y los incentivos tanto profesionales o personales que otorga la organización.

El reconocimiento si se da en la empresa ya que existe un programa de incentivos tales como: el empleado del mes y colocar su fotografía, es decir, si perciben el valor de los empleados que laboran en la organización a través de la evaluación de las tareas asignadas. Se logra a través de que el jefe reconoce los puntos fuertes de sus empleados y se los hace notar, lo utiliza como ejemplo de lo que se debe de hacer bien y reconoce a sus colaboradores cuando realizan un buen trabajo. Las empresas analizadas manejan la promoción y carrera, dentro de la empresa, existiendo criterios definidos para las promociones, como la antigüedad, evaluaciones de desempeño, disposición del empleado y la actitud frente a su jefe y compañeros de trabajo. En cuanto a la capacitación y desarrollo, el empleado considera que la organización ofrece capacitación de acuerdo con su misión y objetivos y le pregunta acerca de sus intereses y necesidades de capacitación. Además de que la empresa destina los recursos suficientes para capacitar a su personal. Ante la satisfacción el empleado se encuentra satisfecho con su trabajo, con la relación que mantiene con su jefe, los resultados de sus actividades, el desarrollo que tiene en la empresa y de las relaciones interpersonales con sus compañeros. De acuerdo a la visión de la empresa, los empleados consideran que la organización tiene un objetivo y un camino que otorga sentido y rumbo a su trabajo, de igual manera sabe muy bien lo que la organización espera de él y existe una planeación a largo plazo en la empresa.

## CONCLUSIONES

En un entorno difícil para crear empresas exitosas en nuestro país, una buena opción para los empresarios es el invertir en franquicias, porque representan una forma más rápida, no sólo para entrar en los negocios, sino también para acceder a nuevas tecnologías, estrategias de mercado, capacitación de personal y La manera con la que los empleados perciben a la organización ya sea de manera sutil, con calidez o bondad y asimismo evalúan el ambiente laboral, es uno de los aspectos claves en el desempeño y la competitividad de la empresa. En específico, cuando el medio ambiente se vuelve más competitivo y por ende complejo. Es una realidad a la que se están enfrentando las empresas, los directivos necesitan contar con información confiable para determinar estrategias que les permita incluir y generar un compromiso con los empleados de la compañía, es decir, organizar y alinear los objetivos del equipo de trabajo en aumento de la calidad, eficiencia, productividad y que esto de cómo resultado que: la organización se vuelva competitiva o se eleve su competitividad.

Las empresas que están orientadas a los resultados tienen como objetivo primordial el ser efectivas, es decir, tienen capacidad de alcanzar los objetivos que se fijan. Por lo tanto es importante conocer que todos tipos de climas organizacionales logren que las organizaciones sean más competitivas, equitativas y con un amplio sentido de humanismo. De tal manera que las organizaciones logren percibir el clima organizacional idóneo y que este sea de acuerdo a sus necesidades, con la finalidad de alcanzar una respuesta eficiente que contribuya a la capacidad de ubicar al recurso humano con el objetivo de que sean también competitivos. Para obtener esta efectividad se mezclan una serie de factores que involucran a los diferentes departamentos de la empresa, indicadores establecidos, el tipo de clima organizacional que prevalece en la empresa y las expectativas que tengan los colaboradores en todos los niveles para que se logre el resultado esperado. Un clima organizacional propicio es una inversión a largo plazo para cualquier empresa, representa una excelente herramienta para elevar el potencial de sus colaboradores e incrementar su competitividad, motivo por el cual las organizaciones en la actualidad deben prestarle el debido cuidado y valorarlo,

buscando un clima favorable que le brinde a sus empleados lo mejor para que este se sienta motivado, con ganas de colaborar y que sepa y sienta que es parte de la empresa.

Tiene muchas ventajas un clima favorable positivo, tales como: elevar la competitividad y productividad de los empleados, el que sean creativos, innovadores, baja rotación, satisfacción laboral, generar compromiso y lealtad. Por lo cual el identificar claramente un clima organizacional le permite a la empresa conocer cuáles son las causas que provocan un clima negativo y establecer estrategias y acciones para mejorarlo, con la finalidad de lograr que la empresa permanezca en el mercado y sea competitiva. Si bien es cierto que este formato de las franquicias disminuye notablemente los riesgos y posibilidades de fracasar, no se debe descuidar el clima organizacional porque está directamente relacionado al factor humano que es un eje vital en cualquier organización. No obstante, las franquicias de comida rápida de Tijuana, B.C. México, manejan un clima organizacional de desafío ya que existe una alta orientación a la tarea y una alta orientación a las relaciones en un ambiente apropiado, en donde existe el reconocimiento por las tareas desempeñadas y el apoyo del jefe inmediato. Por lo tanto se propician las condiciones para lograr una alta competitividad, por el tipo de clima organizacional que tienen estas empresas, otro factor que es decisivo es la visión de las compañías, porque tienen establecidas estrategias a largo plazo que se encuentran alineadas con los objetivos de sus empleados. Es decir, que cuando los empleados conocen las metas y objetivos estos le encuentran sentido y un rumbo a su trabajo y de antemano sabe las expectativas que se tienen de él y los estándares que tiene que cumplir para el logro y el buen desempeño de las tareas asignadas. Cabe resaltar que los empleados se encuentran satisfechos con su trabajo y por la relación que mantienen con su jefe, lo cual indica una relación de cordialidad, incluso hasta con sus compañeros de trabajo. Este tipo de empresas tienen bien definido el concepto de innovación, porque se le permite al empleado tener altos estándares de sí mismo, porque se le permite proponer ideas y que busque de manera permanente nuevos desafíos que se presenten dentro de la empresa y su trabajo.

Las franquicias de comida rápida perciben el valor de los empleados que laboran en la organización a través de la evaluación de las tareas asignadas. Se manifiesta el trabajo en equipo por la alta coordinación y el esfuerzo de manera conjunta enfatizando en el logro de objetivos y planes, por lo cual el alto desempeño es motivado de manera continua. Dando como resultado el compromiso de los empleados con los propósitos de la organización. Asimismo, el apoyo se refleja en el énfasis en el equilibrio personal-trabajo ya que se da una alta orientación a la tarea y una alta orientación a las relaciones en un ambiente donde dichas orientaciones son apropiadas, dando como resultado la alta competitividad a base del esfuerzo y el compromiso. Es importante resaltar que no porque las franquicias de comida rápida presentan este tipo de clima organizacional de desafío, se pretenda decir que se aplica a todas las organizaciones. El clima organizacional es de acuerdo a la situación que en ese momento este atravesando la empresa y que el clima organizacional si es factor de competitividad que influye en el crecimiento e incluso en el éxito de las franquicias de comida rápida en Tijuana, B.C. México. Por último, se puede concluir que los elementos de autonomía, trabajo en equipo, innovación, apoyo, sueldos y salarios, reconocimientos, promoción y carrera, capacitación y desarrollo, satisfacción y visión son parte del clima organizacional como factor de competitividad en las franquicias de comida rápida de Tijuana, B.C., México.

# ESTRATEGIAS DE IMPLEMENTACIÓN DE MEJORA CONTINUA EN EL ÁREA DE ALMACÉN PARA UNA EMPRESA MEDIANA

Francelia Polanco Mayorquín, Universidad Tecnológica de Tijuana  
Dora Rocío Guerrero Muñoz, Universidad Tecnológica de Tijuana  
Santiago González Velásquez, Universidad Tecnológica de Tijuana

## RESUMEN

*El presente trabajo tiene como finalidad el diseño e implementación de estrategias de mejora continua que impacten en el desarrollo del área de almacén de materiales de una empresa mediana que provee servicios de outsourcing a la industria manufacturera de la región de Tijuana Baja California. Se realizó una investigación de tipo exploratoria utilizando la observación para identificar las variables de la problemática, posteriormente se complementó con una investigación concluyente utilizando como herramienta de recopilación de información las entrevistas al personal que labora en el área de almacén de materiales. Se identificaron teóricos y teorías para la mejora continua de las empresas complementando la investigación. Se concluyó con la elección de la herramienta 9's como estrategia para estandarizar las actividades del área abordada y así lograr el desarrollo empresarial dentro del almacén de materiales de una empresa que brinda servicios de outsourcing.*

**PALABRAS CLAVE:** Administración, Almacén, Estandarización, Mejora Continua, Procesos

## IMPLEMENTATION STRATEGIES OF CONTINUOUS IMPROVEMENT AREA WAREHOUSE FOR MEDIUM

### ABSTRACT

*This documents objective is the design and implementation of continuous improvement strategies that impact on the development of materials storage area of a medium sized company that provides outsourcing services to the manufacturing industry in the Tijuana Baja California. Of exploratory research was conducted using observation to identify the variables of the problem, then supplemented with conclusive research using as a tool for information gathering interviews with staff working in the area of warehouse materials. We identified theorists and theories for continuous improvement of enterprises complementing research. It concluded with the election of the 9's tool as a strategy to standardize activities of a specific area and achieve the development of the business within the warehouse materials a company that provides outsourcing services.*

**JEL:** L150, M110, M190

**KEYWORDS:** Management, Storage, Standardization, Continuous Improvement Processes

## INTRODUCCIÓN

Uno de los grandes retos de toda empresa es ser reconocida por la calidad de los productos y servicios que ofrece a sus clientes y actualmente se suma el identificarla como una empresa socialmente responsable. Para solventar satisfactoriamente los retos a los que se enfrentan, se genera el compromiso con las personas

que laboran para crear un ambiente de libertad y armonía que le permita a la organización crecer al igual que a sus miembros, lo anterior representa establecer una serie de programas que proporcionen los satisfactores necesarios para lograr este compromiso, generando la cultura de mejoramiento continuo, la cual conduce adoptar un sistema de gestión de calidad. Para hacerlo realidad se requiere efectuar algunos cambios tales como: crear propuesta de calidad, comprometerse, motivar y auto motivarse. Como parte de un programa de gestión de calidad, la empresa promueve el trabajo en equipo siguiendo diferentes metodologías administrativas como puede ser el modelo japonés de las 9's, donde la esencia es trabajar en un ambiente de libertad que genera la necesidad de mantener el bienestar integral, desarrollo humano y seguridad laboral. El presente trabajo se desarrolla en una empresa mediana que brinda servicios de outsourcing en el departamento de almacén de materiales, el cual se encarga de cubrir las necesidades de los departamentos dentro de la empresa, tales como la recepción, revisión, control, preparación y surtido de los productos necesarios para cumplir con la demanda de sus clientes, como también la de transportación de los mismos a los diferentes destinos. Por la relevancia de sus actividades y el constante movimiento y servicio es importante establecer un sistema de control de actividades y de información para cumplir en tiempo y forma, a su vez, surge la necesidad de contar con una comunicación efectiva que permita entre otras cosas un constante entrenamiento y seguimiento de las actividades del departamento.

La problemática con la que se enfrenta el almacén de materiales de la empresa es que no cuenta con políticas, procedimientos y programas que permitan la estandarización de los procesos que frecuentemente se efectúan, ejemplo de ello es el control, manejo, recepción y despacho de mercancías. Por las razones anteriormente mencionadas se propone e implementa la metodología japonesa de las 9's, misma que constituye un propulsor de sensibilización que favorece el compromiso e identidad del personal con las actividades, equipo e instalaciones de trabajo, lo que garantiza el éxito del modelo japonés y su mantenimiento, exigiendo la cooperación del personal operativo así como de altos niveles jerárquicos. La implementación en cada actividad y/o tarea que realizan y que además funciona como una herramienta de control consiste en clasificar, limpiar, separar, disciplinar, tener constancia, compromiso, coordinación y estandarización, busca un ambiente de trabajo coherente con la filosofía de una calidad total, destacando el compromiso y constancia del personal ante la empresa. Las 9's pueden ser aplicadas en cualquier tipo de empresa u organización que desee llegar a la satisfacción de la calidad tanto en el producto como en el servicio e incluso en lugares ya organizados y limpios esta metodología ayudara a reforzar cada procedimiento realizado en las empresas.

## REVISIÓN LITERARIA

¿Qué es calidad? La calidad se define como el conjunto de características que posee un producto o servicio obtenido en un sistema productivo, así como la capacidad de satisfacción de los requerimientos el usuario (Cuatrecasas Arbós, 2012), también se debe entenderse como el grado en el que un conjunto de características (rasgos diferenciadores) cumple con ciertos requisitos (necesidades o expectativas establecidas), los requisitos deben satisfacer las expectativas del cliente. (Alcalde, 2009). El término de calidad envuelve diferentes conceptos y opiniones de los cuales aterrizan a un mismo enfoque el adquirir productos y servicios con excelente calidad y que cubran nuestras necesidades. La calidad supone el cumplimiento por parte del producto de las especificaciones para las que ha sido diseñado, que deberán ajustarse a las expresadas por el cliente (Cuatrecasas Arbós, 2012). Este término ha evolucionado con el paso de los tiempos, presentando variaciones desde su concepción pasando de ser una simple realización de la verificación (control o inspección de productos) a generar la calidad desde sus orígenes.

Hasta llegar a lo que es la Calidad Total, la cual persigue el cumplimiento de los requerimientos, donde el sistema es la prevención, el estándar es cero defectos y la medida es el precio del incumplimiento (Alemán, 2002), también (Verdor & Mahiques, 2006) la define como una estrategia de gestión que tiene como objetivo lograr de una manera equilibrada la satisfacción de los clientes, empleados, accionistas y sociedad

en general. Al momento de establecer el plan estratégico de un departamento para dar cumplimiento a cada acción con el objetivo de satisfacer al cliente, se debe estandarizar por eso (Pulido, 2003) menciona que es todo aquello que está documentado y norma el comportamiento de la gente, hacer estándares ha sido el reto de la administración en todas las empresas, sin embargo, las únicas que han tenido éxito con sus estándares han sido aquellas donde su personal ha participado para hacerlos, porque sólo con el involucramiento activo de todos se logra, mientras que (Martínez, 2005) se refiere a que los objetos deben ser iguales, y es indispensable en muchos aspectos de la vida cotidiana para ser eficientes., con la estandarización se debe controlar cada actividad así como las funciones que desempeña cada empleado que pertenece al área.

Guerra López (2007) argumenta que la mejora continua depende del conocimiento hacia dónde vamos, y el monitoreo continuo de nuestro curso para llegar desde donde estamos hasta donde queremos estar. El objetivo de una cultura de mejora continua, es por lo tanto, apoyar un viaje continuo hacia el logro de la visión organizacional mediante el uso de retroalimentación de desempeño. Es indispensable resaltar que no se debe llegar a tener una calidad total en cada actividad que se realice, si no, buscar la mejora continua en cada procesos que se realiza dentro de cada área, en donde se busca obtener un ambiente agradable, lugar de trabajo acorde y sobre todo un control en cada proceso con la finalidad de evitar demoras y errores en algún proceso. Éste se define según (Velasco, 2010) como la secuencia ordenada de actividades repetitivas cuyo producto tiene valor intrínseco para su usuario o cliente, entendiendo como valor todo aquello que se aprecia o estima por el que lo percibe al recibir el producto, mientras que para (Soto, 2005) es la manera natural de organizar el trabajo, así como la secuencia de actividades que tiene un producto. Para seguir en una mejora continua es necesario que se lleve a cabo nuevos programas de calidad que permitan mejorar, es por eso que las organizaciones se preocupan por seguir actualizándose y una manera es seguir nuevas tendencias es la implementación de la metodología de las 9's.

El programa 9's permite mejorar y mantener las condiciones de organización, orden y limpieza en el lugar de trabajo. No es una mera cuestión de estética. Se trata de mejorar las condiciones de trabajo, de seguridad, el clima laboral, la motivación del personal y la eficiencia y, en consecuencia, la calidad, productividad y competitividad de la organización. (UTT, 2014) Esta metodología permite dar respuesta a la necesidad de mejorar el ambiente de trabajo, así como busca la reducción de pérdidas por la calidad, tiempo de respuesta del personal en el cuidado del sitio de trabajo y crea las condiciones para aumentar la vida útil de los equipos de cómputo y maquinaria. La implementación de un sistema de calidad supone ante todo: una operativa de trabajo, una eficacia en todos los aspectos, formas de realizar el trabajo, formación y gestión. (Cabarcos, 2006), además exige como primer paso, definir los sistemas actuales de fabricación o prestación de servicio de servicio y gestión de la empresa (Rey, 2006).

Dicha implementación tiene como resultados permite conservar el sitio de trabajo mediante controles periódicos sobre las acciones de mantenimiento de las mejoras alcanzadas con la aplicación de las 9's y reduce las causas potenciales de accidentes y se aumenta la conciencia de cuidado (UTT, 2014). Las 9 'S es una metodología que hace énfasis en ciertos comportamientos que permiten un ambiente de trabajo limpio, ordenado y agradable, debe su nombre a la primera letra de la palabra de origen japonés. La tabla 1 permite visualizar a todo el personal en que consiste la metodología de las 9's, invitando a los colaboradores a desarrollar la cultura de mejora continua de la empresa. Como se puede observar en la tabla 1, se resume la metodología de las 9's, todo un reto que debe de tener una organización, donde mantiene disciplinas de trabajo que se coordinan con el personal.

La figura anterior explica los pasos que se llevan en la aplicación de las 9's en una organización, los resultados obtenidos al aplicar cada uno de los pasos se vinculan a una Mejora Continua en la calidad tanto del producto como del servicio, seguridad y medio ambiente. Por consiguiente este modelo será enfocado a las necesidades del área de almacén con la finalidad de estandarizar actividades y funciones que realizan para la correcta distribución de cada una de ellas, cumpliendo los parámetros de los clientes al momento de

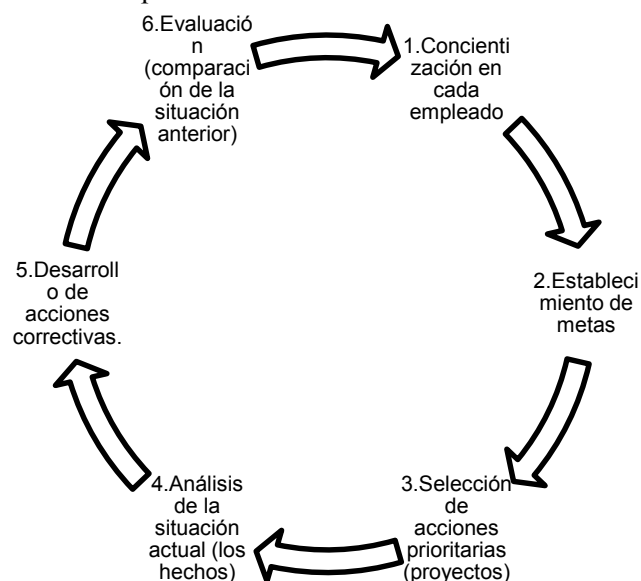

la adquisición del bien o servicio. Uno de los retos de toda organización es mantener disciplinas de trabajo y de orden, en la actualidad existen controles, procedimientos y mecánicas de trabajo que nos permiten obtener resultados óptimos en eficiencia, Productividad y grandes utilidades tanto por producto como por los procesos. Las pérdidas por este concepto van desde tiempo perdido, documentación Extraviada, deficiente hábito en archivo e inclusive robo de información confidencial. A raíz de esto la gran mayoría de las empresas adoptan las prácticas del modelo japonés. Que como tales, reflejan los aspectos de la cultura de este país. Es así que el trabajo se inicia con algunas consideraciones sobre los valores de la Sociedad Japonesa.

Tabla 1: Conceptos y Significados de la Metodología Japonesa 9'S

S	Práctica	Herramienta	Pronóstico
<b>Seiri</b>	Identificar todos los artículos innecesarios. Eliminar todo aquello que definitivamente no se utiliza. Encontrar un lugar de almacenamiento para las cosas que no se usan con frecuencia. Asignar e identificar un lugar para cada artículo.	Listado de cosas que son necesarias e innecesarias mediante la frecuencia de utilidad.	Mantener los elementos necesarios cerca de la "acción", mientras que los innecesarios se deben retirar del sitio o eliminar.
<b>Seiton</b>	Determinar la cantidad exacta que debe haber de cada artículo. Asegurar que cada artículo este listo para su uso. Crear los medios para asegurar que cada artículo regrese a su lugar.	Etiquetas de colores.	Ubicar los elementos necesarios en sitios donde se puedan encontrar fácilmente para su uso y retornarlos al sitio asignado.
<b>Seiso</b>	Identificar los materiales necesarios y adecuados para la limpieza del área de trabajo. Asignar un lugar adecuado y funcional a cada artículo utilizado para mantener limpia el área. Establecer métodos de prevención que eviten que se ensucie el área. Implementar las actividades de limpieza como rutina.	Lista de verificación de inspección y limpieza.	Crear el hábito de mantener el sitio de trabajo en correctas condiciones.
<b>Seiketsu</b>	Desarrollar condiciones de trabajo que eviten retraso en las primeras 3's. Estandarizar procedimientos de almacén. Realizar las actividades asignadas al personal conforme lo indica el procedimiento establecido por la metodología de las 9's. Información de procedimientos al alcance del personal que labora en el área de almacén.	Mapeo (Ayuda visual)  Tarjetas de control de entradas y salidas parciales	Conservar lo que se ha logrado aplicando estándares a la práctica de las tres primeras "S".
<b>Shitsuke</b>	Haz visible los resultados de las 5's. Provocar la crítica constructiva entre el personal del área. Comprender la importancia del respeto por las políticas.	Platica de motivación para seguir la disciplina 5's.  Lluvia de ideas de las 5's.	Lograr el hábito de respetar y utilizar correctamente los procedimientos, estándares y controles previamente desarrollados.
<b>Shikari</b>	Mejorar el ambiente laboral. Constancia en una actividad. Facilitar las tareas cotidianas. Desarrollo de hábitos. Dar seguimiento a los estándares establecidos.	Continuar con el seguimiento de los hábitos Seguimiento a los acuerdos establecidos. Reconocer el seguimiento que se está dando a las 9's	Fomentar la participación continua del personal en los buenos hábitos.
<b>Shitsukoku</b>	Crear un sentido de pertenencia. Esfuerzo para cumplir la meta. Realizar y completar todas las tareas. Proyectar la actitud positiva en los empleados.	Lista de verificación con ponderación acorde a las actividades cumplidas.	Motivar a todo el personal a comprometerse y no a involucrarse.
<b>Seishoo</b>	Formar equipos de trabajo. Fomentar la comunicación en el trabajo. Coordinación y plan de trabajo en cada actividad. Alcanzar los objetivos y metas definidas.	Formato de coordinación con cronograma de fechas establecidas.	Trabajar de una manera sincronizada de acuerdo al orden y plan establecido de trabajo.
<b>Seido</b>	Aplicación de procedimientos, instrucciones, políticas, etc. Seguir el plan de trabajo establecido. Normas que indiquen lo que cada quien tiene que hacer.	Formato de estandarización de procedimientos, documentación, herramientas de cada S.	Establecer métodos, normas, etc., difundirlas en forma continua.

Figura 1: Procedimientos Para la Aplicación de las 9'S

La figura 1 nos muestra el proceso para la aplicación de las 9's, permitiendo visualizar a los colaboradores en qué fase de la implementación de la metodología se encuentra.

## METODOLOGÍA

La presente investigación es de tipo cualitativo. No experimental (observar y medir las cosas como son), descriptivo transaccional que recaba datos en un solo momento. El método de recolección de datos se realiza a través documentación necesaria que proveerá la empresa como fuente primaria de información. Los tipos de investigación que se utilizó para desarrollar este proyecto es explorativo y descriptivo. Explorativo porque se realiza cuando el objetivo es examinar un tema o problema de investigación poco estudiado que no ha sido abordado antes (Díaz Narvaéz, 2009). Se considera esta clase de estudio de investigación porque existe poca información. Los estudios descriptivos buscan especificar las propiedades, las características y los perfiles de personas, grupos, comunidades, procesos, objetivos o cualquier otro fenómeno que se someta al análisis.

Es decir miden, evalúan o recolectan datos sobre diversos conceptos (variables), aspectos, dimensiones o componentes del fenómeno a investigar (Díaz Narvaéz, 2009). La investigación es de tipo cualitativa, esta investigación proporciona profundidad a los datos, dispersión, riqueza interpretativa, contextualización del ambiente o entorno, detalles y experiencias únicas. Una vez concebida la idea del estudio de investigación, se requiere conocer sobre el almacén de materiales, que es el lugar en donde se implementa la metodología de las 9's. Para llevar a cabo la investigación se realizaron visitas de campo sin agendar citas previas con el supervisor con el objetivo de observar el funcionamiento del almacén de materiales de la empresa, en donde se verificó la existencia de códigos o nomenclaturas que identificaran a los productos, señalamientos de zonas de trabajo, corroborar que las diversas actividades a ejecutar en el área de trabajo fueran estandarizadas de acuerdo a políticas y procedimientos.

Para finalizar el estudio exploratorio se desarrolló una entrevista no estructurada a los empleados del área del almacén para medir el ambiente laboral, cumplimiento de los objetivos y el conocimiento-ejecución de los procedimientos. En base a la problemática que se identificó en el área de almacén el cual se encuentra dentro de las instalaciones de la empresa, se propone la implementación de la metodología de las 9's. Esta metodología de las 9's consiste en crear un propulsor de sensibilización para favorecer el compromiso e identidad del personal con las actividades repetitivas que ejercen de manera estandarizada con la finalidad

de lograr una sistematización en cada proceso que se realice dentro del área de almacén de materiales, lo cual garantiza el éxito de las 9's y su mantenimiento, lo que exige un compromiso total con el personal operativo como de altos niveles jerárquicos.

Para la implementación del manual de 9's se generó un costo de apoyo a personal de staff, papelería y herramientas de apoyo durante la ejecución de dicho manual, con la finalidad de sensibilizar a los colaboradores y crear un compromiso empleado-empresa. Tabla 2 muestra la inversión que se realizó para la implementación de la metodología de las 9's dentro del almacén de materiales, es importante mencionar que solo representa los costos originados por el colaborador (practicante) que lideró el trabajo durante 28 semanas. La tecnología utilizada en dicha implementación fue básica ya que se utilizó la paquetería de Office 2012 y el software Doing Business As (DBA) para consultas de partes dentro del almacén de materiales. Para la ejecución de la metodología se utilizaron los siguientes recursos: computadora, impresora, herramientas de corte y medición como papelería y algunos letreros de señalización en áreas específicas dentro del área de almacén de materiales. El tiempo de elaboración y ejecución del manual de 9's fue de 24 semanas, donde se realizaron diferentes actividades cada una ejecutada en tiempo y forma de acuerdo a la planeación, esto con el fin de no tener contratiempos y ofrecer la mejor implementación de dicha metodología al área de almacén de materiales. El personal que se requirió en el área de almacén para la implementación de este manual son dos: el personal de staff encargado de realizar pequeñas ejecuciones y el auxiliar de almacén el cual le dio seguimiento a cada etapa.

Tabla 2: Costo de Implementación de la Metodología de las 9'S

Costo de la implementación Metodología 9's	
Descripción	Cantidad
Apoyo económico practicante	41,024
Papelería	5,000
Herramientas	1,000
<b>Total</b>	<b>47,024</b>

Esta metodología de 9's es una innovación en el área de almacén ya que no se cuenta con algún antecedente de trabajo estandarizado. Mediante el cronograma de actividades fijas se explicó cómo se realizó cada etapa de la metodología 9's, así como el seguimiento que se dará una vez ya entendida y desarrollada de manera cotidiana por el personal que labora en el área de almacén de materiales.

## RESULTADOS

Mediante el estudio exploratorio durante las visitas al almacén de materiales se observó lo siguiente:

La capacitación es informal pues se da, de manera oral sin contar con una herramienta de apoyo, únicamente se realiza un recorrido por el área de almacén de materiales sin agendar cita previa con el supervisor. No se siguen pasos, procesos y/o cronogramas: se proporciona de manera espontánea ya que no existen procedimientos estandarizados de las actividades dentro del almacén. No se proporciona información física o digital del manejo de materiales dentro del almacén, así como tampoco de la ubicación física de las mercancías. También se observó que el supervisor del almacén de materiales, no tiene tiempo suficiente para capacitar y verificar que el personal realiza las funciones que le corresponden con la puntualidad y eficiencia necesaria. No se cuenta con procedimientos estandarizados para la realización de las actividades. Las áreas donde se almacena el material no cuentan con los códigos de identificación de mercancías, señalamientos en las zonas de trabajo y no están delimitadas las áreas de excedentes de insumos. Los resultados de las preguntas dirigidas a los empleados del área de almacén coincidieron que el ambiente

laboral es bueno, pero falta compromiso y estandarización de las actividades y/o procedimientos dentro del área para el cumplimiento de los objetivos trazados por la alta dirección. Una vez que concluyen los estudios exploratorios aplicados se plantea el objetivo de implementar la metodología de las 9's dentro del almacén de materiales, utilizando el siguiente proceso.

#### Práctica de las 9'S Dentro del Área de Almacén de Materiales Seiri (Clasificación)

Se identificaron los materiales que eran innecesarios, se procedió a eliminar todo aquellos que definitivamente no se utilizaba y solo generaba costo y pérdida de espacio, se realizó una búsqueda en donde se podrían poner los materiales innecesarios, todas estas actividades y cambios generados durante la práctica de la clasificación se registraron en el formato de artículos necesarios e innecesarios. Una vez identificado, se estableció un lugar en el cual se colocaran los materiales necesarios en zonas de trabajo y materiales innecesarios en el segundo almacén el cual se utiliza como bodega.

#### Seiton (Orden)

Una vez realizada la clasificación de los materiales necesarios e innecesarios dentro del área, se reestructura la imagen del almacén, ya que no se tenía un orden en los materiales, la locación, el control de tarjetas, la visibilidad de la descripción de los materiales e iluminación adecuada, entre otros factores que empujaron a la decisión de darle un giro al orden y acomodo de los racks y material. Esta reubicación es minuciosa porque realiza el acomodo correcto de los materiales, de acuerdo a la frecuencia con que los clientes solicitan compras, que se canalizan al área de producción generando un tránsito al momento de surtir los kits. Con la ubicación correcta de cada artículo se dio a la tarea de colocar los materiales pequeños que podrían perderse fácilmente en bins, separándolos por cantidades pre-establecidas por los requerimientos del área de producción, se etiquetaron las bolsas indicando cantidad, descripción y lote. Cada material identificado de esa manera se le coloco tarjetas de control de entradas y salidas de materiales parciales con la finalidad de tener un mayor control de existentes en el almacén.

Ya identificados y colocados en los bins con tarjetas parciales se inició con la tarea de crear un documento en donde se realizaron plantillas para las etiquetas parciales a los materiales, etiquetas de descripción de los materiales, etiquetas de números de parte, mapeo de cada número de parte y por rack, letreros de identificación de cada rack dependiendo el color y clientes. Donde se encuentra cada material utilizado con mayor frecuencia para los procesos que se realizan en producción. En el documento se concentraron cedulas de números de partes que se manejan dentro del área de almacén de materiales, archivos con plantillas de impresión ya preliminares para agilizar el proceso, con el objeto de que cualquier persona consulte o modifique números de partes, localizaciones, renombrar racks. Dentro del orden de los materiales se mostró la falta de señalización de zonas de trabajo, espacio entre racks, transito del montacargas o algunas herramientas de movilidad de materiales, materiales excedentes, localizaciones de kits, área de escritorios entre otras. Se formó un equipo de trabajo en donde los participantes se encargaron de delimitar las zonas de trabajo, áreas de surtir, mesa de corte de alambre, materiales excedentes, con la finalidad de que el área de trabajo quede totalmente señalizada mediante la estandarización de actividades que se realizaran durante la jornada de trabajo.

Formato de Artículos Necesarios E Innecesarios					
Área de trabajo: Auditor: Fecha:					
Descripción	Cantidad	Utilidad	Reubicación	Fecha	Realizó ó

*Nota: en la columna de utilidad se colocaran los siguientes incisos dependiendo el seguimiento de la implementación. a-siempre, b-con frecuencia, c-nunca La tabla 3 permite clasificar los artículos necesarios e innecesarios dentro del área de almacén y reubicarlos a un espacio adecuado de acuerdo a su uso. Es un instrumento de apoyo que permite conocer fechas y persona que ejecuta la función. El llevar la práctica de seiri en el almacén fue muy difícil ya que el personal no estaba acostumbrado a clasificar el material necesario e innecesario teniéndolo todo en desorden, sin lugar específico y estorbando en el área de trabajo. Si el material innecesario que se encontraba en la zona de trabajo obstruía la ejecución de alguna actividad solo lo movían a otro lado, impidiendo que otro compañero realizara su labor; generando con esto un conflicto, donde ninguna de las dos partes accedía a asignarle un lugar con el objeto de no tener problemas con ese material. Esto mismo atrasaba que la implementación de la clasificación de los materiales.*

Tabla 4: Formato de Señalización de Artículos y Zonas de Trabajo

Área de Trabajo: Auditor: Fecha:						
Descripción	Localización Correcta	Ayuda Visual	Accesibilidad	Colocación correcta después	Realizó	Comentario

La tabla 4 es una lista de verificación de las distintas áreas que conforman el almacén de materiales, sirviendo de apoyo para corroborar que todos los artículos se encuentren en el lugar asignado y lleven el etiquetado correspondiente. Todo material dentro del área de almacén fue señalizado dependiendo la locación que se le asignó mediante el listado, con ello se facilita el acceso de búsqueda de materiales sobre todo con las ayudas visuales realizadas durante la clasificación y orden de cada material. El cambio de locación de cada número de parte fue registrado en el sistema DBA, este programa es utilizado para el control de materiales dentro de almacén, ordenes de compras, hojas de rutas, parking list, envíos, stocks, movimientos realizados de cada material con su respectivo número de parte, control de inventarios, entre otros movimientos generados por otros departamentos los cuales ayudan a mantener el informados al área de almacén si se genera algún cambio en algún número de parte.

### Seiso (Limpieza)

Establecimiento de una metodología de limpieza que evite que el área de trabajo se ensucie. Mediante la práctica de las dos 'S' anteriores se creó conciencia en el personal para mantener limpio el área, las herramientas de trabajo y colocar material que no se utilice en lugares que correspondan dependiendo si el material tendrá un reusó. Se formó un grupo de trabajo en donde se les explicó la importancia de mantener limpio el área, el no colocar artículos de uso innecesario en lugares no apropiados, ante la inasistencia del grupo de limpieza, se tomaron medidas de inspección en cada área de almacén, tomando fotos como evidencia para cambiar el comportamiento de los empleados. Una vez que se implementa las herramientas de limpieza, se establecen políticas con la ayuda de una lista de verificación y los comentarios generados por el personal se toman en cuenta para generar las políticas de limpieza en el área de almacén de materiales.

Seiketsu (Bienestar personal)

Una vez realizada la clasificación, organización y limpieza, se puede notar un ambiente laboral limpio, ordenado y cómodo para ejercer cualquier actividad. Por lo que el reto dar seguimiento de las herramientas de las primeras 3's, ya estandarizadas las actividades de las primeras 3's se formuló un rol donde se asignó un encargado de cada zona delimitada para mantenerla en óptimas condiciones de comodidad. En el rol se establecieron las metas que debemos cumplir para seguir dando el seguimiento a los formatos de las primeras 3's, como también, dar reconocimiento al personal que mantenga su zona de trabajo apegada a la metodología de las 9's. El uso de mapeos es uno de los puntos donde los empleados agilizan el proceso de elaboración de kits.

Tabla 5: Formato de Limpieza E Inspección del Área de Trabajo

Área de Trabajo:						
Auditor:

Las áreas de trabajo se encuentran limpias al iniciar la jornada laboral.						
El equipo y herramientas se encuentran en condiciones de uso y limpio.						
Se utilizan detergentes y limpiadores adecuados.						
Es fácil identificar los materiales de limpieza, usos detergentes y limpiadores.						
Las medidas de limpieza son utilizadas.						
Los horarios de limpieza son adecuados durante la jornada.						

Shitsuke (Disciplina)

La disciplina es una de las 'S que no es visible ni tampoco se puede medir a diferencia de la clasificación, orden y limpieza. Este se da en la mente y voluntad de cada personal y en la conducta que demuestran al momento de ejecutar alguna actividad, para la implementación de la disciplina se crean pláticas de motivación, donde se estipularan los puntos a tocar, avances, metas realizadas, problemas surgidos durante la implementación de alguna política, algunas de las S, comportamiento de empleados, propuestas o críticas constructivas mediante en el transcurso de la implementación de la metodología. Las pláticas de motivación las realiza el supervisor del almacén con el objeto de dar a conocer los puntos generados por la demora de elaboración de kits, pero a su vez da reconocimiento al esfuerzo que se ha realizado para cambiar el comportamiento de cada miembro que labora dentro del área de almacén de materiales, logrando así el dialogo entre empleados acerca de los cambios que se han generado durante la aplicación de nuevas herramientas de control, ellos mencionaron varias mejoras que se deberían anexar a los formatos y la manera que se implementa cada S, logrando la motivación de seguir trabajando de esa manera y lograr cada una de las metas establecidas con la finalidad de trabajar en un ambiente de trabajo con óptimas condiciones.

Tabla 6: Formato de Limpieza E Inspección del Área de Trabajo

Shikari (Constancia)

Para establecer la constancia entre los empleados es importante crear acuerdos que ayuden al seguimiento correcto de cada S un paso importantes es dar constancia a cada actividad y hábitos generados durante la implementación de esta metodología, por ello se fomentó un reconocimiento a cada personal que ejerce correctamente cada S. Durante las pláticas de motivación se generaron acuerdos, con el propósito de fomentar la participación continua del personal en los buenos hábitos. Para crear o medir esta S se estableció un formato de seguimiento de asuntos 9's, en el cual se hace mención del asunto que se está tratando, el responsable del área, el seguimiento que se le dará al acuerdo y por ultimo su cumplimiento. Al momento de aplicar este formato se presentó el asunto de supervisión de limpieza en el área de insumos, la cual no se llevaba toda la práctica de la limpieza en el anaquel de herramientas de camiones, por lo que se responsabiliza a una persona de staff para verificar que el personal encargado de la zona de insumos realice correctamente las herramientas para implementar la S de limpieza, ya establecido las actividades y acuerdos que debe realizar el encargado del área, se fijó la fecha y duración de la supervisión del asunto y se evalúa mediante la ponderación dividida en tres conceptos ( se cumplió con color verde, en proceso color amarillos y sin cumplir rojo) todo esto con el propósito de darle seguimiento a los hábitos establecidos en la metodología 9's.

Shitsukoku (Compromiso)

El compromiso se empieza a observar cuando se establecen los acuerdos y fechas, sin embargo se comprueban cuando estos son ejecutados correctamente, para esto es importante que el responsable de la implementación registro cada acuerdos cumplido ya se en las minutas de reunión o en el formato de seguimiento de acuerdos 9's. Para dar seguimiento al compromiso en los empleados se genera la motivación de seguir cumpliendo los acuerdos establecidos en cada ejecución de las S, en cada plática se menciona al empleado que más compromiso y constancia genero durante la implementación de la metodología. De tal manera que se generaron nuevas metas para darle continuidad a la metodología 9's y esto genera confianza de expresar algún comentario acerca de esta ejecución, como a su vez se crea la crítica constructiva en cada actividad. El propósito de esta platica fue fomentar el compromiso el cual se logró pero sobre todo dejar en claro a cada empleados que no es solo cumplir, realizarlo por realizar si no de lo contrario crear un compromiso de involucrarse en la actividad ejecutar esta metodología no solo en su trabajo en sus vidas personales logrando el bienestar en uno mismo y si estamos bien toda actividad que realicemos estará bien. Se aplicado el formato de compromiso de 9's logrando la motivación e involucramiento de todo el personal que labora en el almacén de materiales.

### Seishoo (Coordinación)

Para llevar a cabo la coordinación de todas las herramientas y actividades realizada en cada S, se busca que el personal tenga la disponibilidad para trabajar en forma colaborativa. Durante la implementación de las 9's y aplicación de formatos se formaron grupos de trabajo en el cual los empleados trabajaban de manera mutua con algún compañero, fomentando la comunicación interna durante las actividades ejecutadas. Al momento de que alguno de los dos participantes saliera a envíos el otro participante continuaba con la actividad dejando documentada cada actividad que realizó durante su ausencia. Durante la ejecución de las actividades se coordinó cada procedimiento como también, se llevó un plan de trabajo en donde se estipulaban las actividades que se realizarían durante la jornada de trabajo.

Se realizó un cronograma de actividades en el cual se estipuló cada actividad y la fecha en la cual se cumplió cada actividad, este cronograma formó parte de la motivación del personal al momento de observar cómo se cumplió cada meta propuesta por el responsable de la implementación de las 9's. Todas estas actividades son realizadas con el propósito de trabajar de manera sincronizada de acuerdo al orden y plan establecido de trabajo.

### Seido (Estandarización)

Para finalizar la metodología de las 9's, se pretende unificar el trabajo por medio de estándares que sustenten el correcto seguimiento de la metodología. A través de la aplicación de procedimientos, instrucciones, políticas, etc. y seguimiento del plan de trabajo establecido por áreas dentro del almacén, una vez aplicadas las 9's en el área de almacén de materiales, se aplicó el formato de sincronización de actividades en donde el responsable de la implementación de la metodología documenta cada proceso y a su vez recopilaba todas las metas, actividades, herramientas que se utilizaron para la implementación de la metodología. El propósito de esta última S es establecer procedimientos, políticas, normas y métodos de trabajo que ayuden a la difusión continua de cada una de las 9's. Por ello, se sugiere documentar cada idea, actividad o proceso que mejore las 9's de igual manera seguir el manual de 9's en caso de dudas acerca de la ejecución de alguna herramienta de la metodología.

## CONCLUSIONES

Los resultados de esta investigación nos arrojaron que es necesario que el área de almacén cuente con políticas y procedimientos establecidos y aprobados por la alta dirección, con la finalidad de estandarizar los procesos que se ejecutan en dicha área. Las preguntas dirigidas a los empleados mencionan que existe un buen ambiente de trabajo, sin embargo en la investigación exploratoria que se realizó mediante la observación se apreció la falta de señalización de las zonas de trabajo y códigos o nomenclaturas de los artículos almacenados, así como algunos sin etiquetar, entre otros aspectos. Una vez que se cuentan con los resultados obtenidos, se presenta como propuesta de mejora continua la implementación de la metodología de las 9's que consiste en sensibilizar al personal para favorecer el compromiso y sentido de pertenencia, mediante la sistematización de cada proceso que se ejecuta en el área de almacén, exigiendo el compromiso del personal operativo y de alta dirección para garantizar el éxito y funcionamiento del proyecto.

Durante la realización de este estudio se encontraron como limitantes la falta de interés por algunos de los colaboradores para cambiar sus hábitos de trabajo, sus funciones no estaban delimitadas ejecutando labores conforme iban surgiendo en la jornada laboral, teniendo como resultado que ninguno era responsable de determinadas acciones.

# ESTUDIO DE LOS EFECTOS SOCIO-ECONÓMICOS DEL MAÍZ COMO ELEMENTO BÁSICO DE LA COCINA REGIONAL EN LOS MUNICIPIOS DE CUAUHTÉMOC, TECOMÁN Y MANZANILLO DEL ESTADO DE COLIMA

Adriana del Carmen Bautista Hernández, Universidad de Colima

Jesús Otoniel Sosa Rodríguez, Universidad de Colima

María Adelaida Silvestre Campos, Universidad de Colima

## RESUMEN

*Este artículo tuvo como objetivo investigar los efectos socio-económicos del cultivo de maíz (Zea mays) en los municipios de Cuauhtémoc, Tecomán y Manzanillo. La importancia y usos del maíz crecen en la actualidad ya que se cuenta como un elemento tradicional muy importante, además de ser ingrediente principal de una extensa gama de productos de la cocina tradicional mexicana. El maíz representa una fuente importante de trabajo e ingresos, es una de las principales bases de la alimentación mexicana, y por lo tanto los cultivos son de vital importancia tanto para los productores, la población dedicada a la cocina regional y los consumidores. La pérdida del cultivo de maíz afectaría drásticamente las preparaciones tradicionales y como consecuencia cambiaría la perspectiva y la forma de comer de los locales y por consiguiente influiría en la economía de la población dedicada a la comercialización de alimentos y bebidas.*

## STUDY OF THE SOCIO-ECONOMIC EFFECTS OF CORN AS A STAPLE OF REGIONAL CUISINE IN THE MUNICIPALITIES OF CUAUHTÉMOC, TECOMAN AND MANZANILLO IN THE STATE OF COLIMA

## ABSTRACT

*This article was intended to investigate the socio-economic effects of growing corn product (Zea mays) in the municipalities of Cuauhtémoc, Tecoman and Manzanillo. The importance and uses of corn have increased since it is considered as a very important and traditional element, in addition to being the main ingredient in a wide range of products in traditional Mexican cuisine. Corn represents an important labour source and income, it is one of the main bases of Mexican nutrition, and therefore crops are vitally important for producers, and both: population dedicated to regional cuisine and consumer population. Corn product loss would drastically affect the traditional preparations and as a result would change the perspective and locals way of eating and also influence the economy of the population engaged in the marketing of food and beverages.*

## INTRODUCCIÓN

“La historia de un pueblo sedentario está estrechamente vinculada al cultivo de un producto agrícola. Tal es el caso de México con el maíz, y más aún: desde el norte de nuestra actual geografía política hasta el centro de Sudamérica el maíz ha sido el alimento fundamental de sus habitantes y con frecuencia ha devenido incluso en moneda indígena. De alguna manera, esta gramínea ha sido factor de unidad cultural y económica entre los pueblos del continente (Iturriaga, 2013 p.13).

El maíz, es uno de los pilares básicos de la alimentación mexicana, se ha adaptado y como resultado de este largo proceso de domesticación hoy en día podemos encontrar una amplia diversidad de razas de maíz, cultivadas bajo condiciones fisiográficas distintas, cada una con características que la diferencian con las demás variedades provenientes de otras regiones del territorio nacional, razón más que suficiente para que la preservación de dichos cultivos sea considerada de gran importancia.

En esta investigación se integran la historia y las características del maíz en nuestro país además de la evolución que esta planta ha tenido con el paso de los años. Se analiza además la situación actual de este producto en el estado de Colima y el lugar que ocupa dentro de la cocina tradicional de la región, y por último los efectos socioeconómicos positivos y negativos que pudieron detectarse en la vida de la población que trabaja el maíz en cualquiera de sus etapas: producción, transformación o consumo, específicamente en los municipios de Cuauhtémoc, Tecomán y Manzanillo.

En nuestro país, el maíz es una de las principales bases de la alimentación, se identifica como el más importante de los elementos incluidos en la trilogía básica de la gastronomía mexicana: maíz, frijol y chile; por lo tanto la pérdida de las distintas variedades de maíz afectaría directamente las formas tradicionales de preparación y como consecuencia modificaría radicalmente la perspectiva acerca de los alimentos, los sabores tradicionales y la forma de comer la cocina local, en este estudio específicamente la cocina del estado de Colima. De presentarse estos cambios la afectación puede influir en la economía de los miembros de la población que se sostienen directa o indirectamente de la gastronomía colimense.

## REVISIÓN LITERARIA

Los nahuas llamaron al grano y a la planta *tzintli* o *atzintzintli*, derivación de las voces *iziz centli*, que en nahuas que quiere decir grano de hormiga porque ya que según la leyenda nahua el hombre descubrió al maíz cuando vieron a una hormiga que llevaba unos granos a su hormiguero.

En la huasteca mexicana, se referían al maíz cultivado como *to-nacayo*, que significa nuestra carne, para los aztecas herederos de las viejas culturas del sureste, se referían al grano como *teocintle* o alimento de los dioses.; y los toltecas, quienes se atribuían el hallazgo del maíz silvestre en lo llamaron: *puxpuch*.

En el libro sagrado de los mayas, el *Popol-Vuh*, habla de los *pashil*, hombres hechos con masa de maíz y que se alimentados con granos de la misma planta. Según las leyendas y la historia, el maíz empezó a ser cultivado en Tamoanchán, en la Huasteca mexicana. En su libro *cocina prehispánica mexicana: la comida de los antiguos mexicanos*, el autor Heriberto García Rivas describe los conocimientos que los pueblos indígenas poseían acerca de la agricultura: “los antiguos indígenas mexicanos practicaron la hibridación del maíz por instinto. Acostumbraban sembrar su maíz en forma de mata, para lo cual hacían un hoyo en la tierra, y en el depositaban granos escogidos, seleccionados con cuidado: un grano de color rojo, uno morado, otro amarillo y uno blanco, los cuatro granos que por costumbre colocaban en cada hoyo de siembra. Sabían por experiencia que tal método favorecía más sus cosechas, pues el aire o los insectos mezclaban el polen de los distintos granos, mas fuertes.”

García Rivas menciona también “un pan de maíz” o lo que hoy conocemos como tortilla elemento icónico de la cocina mexicana tradicional y por consiguiente de la cocina colimota.

Se enumeran algunos de los usos de la planta:

El cabello de la mazorca tiene propiedades diuréticas

La hoja seca se emplea como papel envoltura para tamal, figuras y juguetes.

Del grano se obtiene almidón, aceite, alcohol, miel y whisky.

Del grano seco se obtiene pinole, palomitas y bebidas como cerveza de maíz, tesguino y tascalate. Del grano fresco se obtienen tortillas, atoles, pozoles, pozol y maicena.

El hongo del maíz o Cuitlacoche es un ingrediente muy utilizado en la cocina mexicana

La mazorca tierna se puede comer cocida o tostada.

El tallo, las hojas y granos se utilizan como forraje.

Raíz y horcones se emplean como abonos.

Olote se emplea como combustible y forraje pobre, pipas talladas, desgranador industrializado para papel, explosivos y disolventes.

Dentro de los usos y aplicaciones culinarios se pueden enumerar las siguientes preparaciones:

Masa de maíz sirve para elaborar sopes, tlacoyos, huaraches, tamales, gorditas, picaditas, talladas y como ingrediente principal del atole. También se utiliza para la elaboración de tortillas y estas a su vez son usadas en diversos platillos como tacos, enchiladas, burritos, chilaquiles, quesadillas, sopa de tortilla, flautas, totopos, tostadas, papadzules.

Harina de maíz se usa para hacer atole, galletas, pan, pasteles y como sustituto de la masa de maíz fresca, mezclándose con agua, polvo para hornear, sal y manteca de cerdo.

Maíz fresco, se consume asado o hervido, en forma de esquites, tlascales, sopa de elote y tamales de elote como guarnición o ingrediente de otros platillos como el arroz y ensaladas.

En la temporada de verano la alta humedad de las parcelas donde se siembra la milpa favorece la aparición de diversas especies de hongos, entre ellos el llamado huitlacoche. Las mazorcas con este hongo no producirán maíz aprovechable pero, justo antes de que las protuberancias estallen liberando las esporas, son cortadas con cuchillo se separan los granos tiernos y la masa fungosa que los aprisiona, obteniendo así el huitlacoche. En la parte nutrimental no son menos las bondades de dicha planta:

El maíz tiene un alto contenido en hidratos de carbono de fácil digestión.

Las sedas o estigmas de maíz son utilizadas como infusiones diuréticas, excelentes en la hipertensión, en la retención de líquidos..

Su aporte en fibra, favorece la digestión y reduce el colesterol.

Ofrece antioxidantes Betacaroteno, muy recomendado en la prevención del cáncer.

También nos ofrece vitaminas del grupo B, específicamente B1, B3 y B9, las cuales actúan ante el sistema nervioso.

El maíz contiene un biocarburante derivado del bioetanol caracterizado por mezclarse fácilmente con la gasolina.

La hoja seca del maíz sirve como fibra para tejidos y artesanías.

La misma hoja seca se puede incluir en la materia seca de la composta, o bien como papel para fumar.

Los olotes, o mazorcas desgranadas, se usan con fines decorativos y para realizar artesanías.

El almidón o fécula de maíz, se obtienen de la industrialización del grano

También se extrae aceite, el cual tiene un valor nutritivo y es de fácil digestión.

El alcohol del maíz se emplea en grandes cantidades en la fabricación del caucho sintético.

Las tusas de las mazorcas se emplean para hacer pipas baratas de fumar. De las tusas se extrae también la sustancia química frutal, importante en la elaboración de resinas, disolventes e insecticidas también se utiliza como combustible.

Los tallos y vainas se emplean para hacer colchones baratos.

La médula de los tallos sirve para elaborar algodón pólvora.

La pulpa de las cañas del maíz se emplea para fabricar papel. En la construcción de ciertos tabiques se utiliza cañas de maíz en vez de yeso.

David Oseguera Parra (1995), reconocido cronista colimense, narra que el maíz y el cacao fueron los productos de origen indígena que tuvieron mayor importancia para la conformación de la dieta regional. El cultivo de maíz, sin ocupar lugar desatado en la economía del estado, persistió todo el virreinato y para la época del porfiriato era suficiente para abastecer al mercado regional, e incluso para comerciar con regiones lejanas donde había escasez. El maíz no suplantó fácilmente al trigo en el gusto de la pequeña población de españoles y criollos que se asentó en la Villa de Colima desde 1523.

Casi un siglo después entre 1900 y 1906, el maíz y arroz contribuían con más del 75 por ciento del valor agregado agrícola en el estado de Colima. La especialización del estado en nuevo esquema de agricultura comercial durante el periodo de 1925-1939, reportaba un bajo diferencial en cultivos básicos como el maíz y el frijol, lo que nos habla de una buena producción de ambos ingredientes.

Colima cuenta con 10 municipios, los cuales Cuauhtémoc, Manzanillo y Tecomán, son municipios que producen, consumen y trabajan con el maíz en el ámbito culinario.

El maíz es el tercer producto agrícola en importancia después del arroz y el trigo para el 2013 se estimó una producción de 45 mil toneladas se tiene una superficie aproximada de 19 mil hectáreas de las cuales la mayor parte se cultiva durante el periodo de lluvias y algunas se trabajan durante las estaciones frías según datos publicados por la SAGARPA durante el año pasado.

La superficie de maíz en Colima es de 21 mil hectáreas distribuidas en los municipios de Cuauhtémoc, Comala, Minatitlán y Manzanillo y producen más de 600 millones de toneladas.

Por lo general los habitantes de los municipios mencionados anteriormente que trabajan con estos el maíz tienen años haciéndolo identificándose esta actividad como parte de las costumbres y tradiciones de dichas entidades.

Los establecimientos dedicados a la venta de alimentos llevan años en funcionamiento y reportan generaciones llevando a cabo la misma actividad y por consiguiente los habitantes los identifican por el sabor, la variedad de alimentos y la calidez con la que son atendidos, estos factores influyen mucho en la decisión de quienes acuden a ellos.

## METODOLOGÍA

La manera en la cual se recopiló la información fue mediante la aplicación de instrumentos de investigación como: encuestas y entrevistas además de visitas a lugares y con personas que trabajan el maíz en Cuauhtémoc, Manzanillo y Tecomán, El objetivo de esta investigación es identificar y analizar los efectos económicos, sociales y culturales del maíz dentro de la gastronomía típica en los municipios de Tecomán, Manzanillo y Cuauhtémoc del estado de Colima.

Las encuestas fueron enfocadas a personas entre 30 a 60 años, se aplicaron 20 en Cuauhtémoc y 110 en Tecomán, dando un total de 380. Esto con el fin de informarse sobre sus gustos por la gastronomía, su nivel

de vida económica así como los hábitos y los lugares que mas frecuentan, con la finalidad de identificar si hay tradición en lo que hacen o con el paso de los años se ha perdido.

## RESULTADOS

### De los ingresos generados en un establecimiento de alimentos y bebidas

El estudio se enfocó en establecimientos como cenadurías, fondas o restaurantes con conocimiento y experiencia comprobable en el negocio de la comida colimota. El estudio nos arrojó que el 45 por ciento de los encuestados prefería consumir cocina regional cuando comían fuera de casa, que el cheque promedio en estos establecimientos es de entre 200 y 350 pesos, dentro de las ventajas competitivas de estos establecimientos los encuestados refirieron la sazón y la popularidad del lugar dejando de lado el precio y el servicio. Guiados por la posesión de carro propio, se concluyó que el 73% tienen un nivel socioeconómico medio o medio alto

Análisis: Se elaboro esta pregunta para saber que establecimientos visitan mas las personas encuestada. Interpretación: Con el 79% de resultados demuestran que las personas encuestadas prefieren ir a un restaurante, el 15% va a cocinas económicas y solo el 6% acude a fondas. De los consumidores Las personas encuestadas son individuos que gustan de reunirse ya sea con la familia o con amigos y dentro de sus preferencias se encuentran establecimientos de cocina tradicional colimense y disfrutar platillos típicos, de 2 a 3 veces por semana, principalmente los fines de semana.

De los restauranteros De los restauranteros encuestados un 80 por ciento recibieron los “conocimientos” de cocina tradicional colimense de alguno de sus antecesores ( madres o abuelas). Los motivos por los cuales se deciden a formar parte del gremio de los alimentos y bebidas, se enfocan principalmente al gusto por la cocina tradicional puntualizando el que sus antecesores se los “inclulcaron “. Un dato relevante es que las personas que cumplieron las características buscadas para este estudio fueron en su totalidad mujeres dueñas de un establecimiento propio. Todas las emprendedoras de estos negocios elaboran sus productos de manera artesanal usando tecnología básica en la cocina como molinos eléctricos en lugar de metates o gas en vez de leña; pero siguen preservando el proceso de la nixtamalización del maíz de forma tradicional.

Pese a la disponibilidad del ingrediente en la actualidad algunas de estas restauranteras dueñas de un establecimiento de cocina regional son parte de una familia dedicada al trabajo del maíz, y así evitan costos extra cuando el precio del maíz se eleva o se escasea. Las ventas alcanzan su mejor comportamiento durante la temporada vacacional con la llegada del turismo. De los platillos más populares de la región se mencionó con mayor frecuencia el pozole blanco ya sea seco o con un poco de caldo y las enchiladas dulces además de los sopitos, los sopes gordos y las tostadas

El 63 por ciento de ellos compra el maíz en abarroteras por ser mas practico y económico, pero el 25 por ciento lo compra directamente con el agricultor siendo aun más barato pero implicando mayor trabajo y el 17 por ciento lo cultiva y cosecha a pesar de que al principio fue un poco más caro y con mayor trabajo pero, cuentan que así es como debe ser por tradición y sazón, costumbres que les fueron heredadas y fue comprobado porque el 50 por ciento respondió que si cambiaba de tipo de maíz en la elaboración de toda su comida podría perder clientes, el resto, 50 por ciento comento que el costo en la elaboración podría disparse.

### Nivel económico

Las encuestas nos arrojan que el nivel económico de las personas en la zona de Cuauhtémoc, Tecmán y Manzanillo, es medio a alto, el 47 por ciento de los encuestados se toman el fin de semana por lo general

para salir a divertirse formando parte de esto ir a centros de consumo de gastronomía colimota, ya que como el 31% tienen familia prefieren gastarlo en alimentos.

Se entrevistaron a 11 personas distribuidas en Manzanillo, Cuauhtémoc y Tecmán que cuentan con cenaduría de años de servicio quienes compartieron anécdotas y experiencia acerca de su cocina.

Los precios varían mucho de acuerdo al municipio siendo el puerto de Manzanillo más caro que Tecmán y Cuauhtémoc, es en este primer municipio en donde podemos encontrar menos lugares con años de experiencia trabajando con esta comida mientras que Tecmán y Cuauhtémoc son municipios con más tradiciones y que se caracterizan por mayor número de establecimientos de cocina tradicional.

La cocina tradicional colimota, a pesar de ser una gran fuente de empleos y de generación de ingredientes tradicionales puede verse no tan beneficiada, el escenario más conveniente sería encontrar un equilibrio para que ambos se manejen de la mejor manera y la gente que por años ha trabajado con esta cocina no se vea en la necesidad de elegir entre la economía o la preservación de la cultura y tradición culinaria que durante años han concebido como fuente de trabajo.

### Cuauhtémoc

Cuauhtémoc es un municipio que cuenta con tradiciones importantes como las fiestas patronales; una de las más representativas es la de San Rafael Arcángel que se llevan a cabo en el mes de octubre entrando la música el primer domingo del mes, en estas fiestas sacan al santo a la calle y hacen una peregrinación que inicia en el templo de la virgen de Guadalupe. Las personas visten a sus hijos como san Rafael en agradecimiento por un milagro o por pagar una manda. Después de la peregrinación se celebra una misa, al terminar la celebración, afuera del templo hay una verbena donde se ofrecen platillos típicos de Colima como los sopitos, tostadas, tacos dorados de papa, sopes gordos, enchiladas dulces, tamales y atole siendo el maíz el ingrediente principal de todas las preparaciones. En estas fiestas se organizan corridas de toros, jaripeos y por las noches en el jardín principal hay banda para las personas que gusten de este tipo de música. El 24 de octubre es el día del santo patrono y en la noche queman el tradicional “castillo”.

Por otro lado, una vez al año se lleva a cabo la feria gastronómica municipal, en ella los dueños de restaurantes, cocinas económicas y puestos ambulantes montan un stand donde presentan los platillos que ofrecen para darse a conocer o para hacer promoción a su establecimiento. A la feria acuden personas de todas las colonias y pueblos circunvecinos al municipio. Uno de los objetivos de esta feria es que se fomente la convivencia familiar para que esto sea una tradición que perdure a través de los años, otro objetivo es impulsar la cocina colimota para que las generaciones más jóvenes sigan en contacto con ella y la conserven.

Efectos sociales positivos :Las personas salen a disfrutar de una cena y lo hacen en familia para que los niños se den cuenta de cuáles son sus raíces y cuáles son los sabores que han prevalecido durante años.

En este municipio se fomentan mucho las técnicas antiguas de la siembra y la transformación del maíz para el consumo de los habitantes del pueblo, pasándolas de generación a generación.

También se da la convivencia entre familias cuando se encuentran en el templo principal del pueblo en las fiestas patronales de san Rafael Arcángel.

Efectos sociales negativos: No hay efectos negativos ya que Cuauhtémoc es un municipio que hoy en día conserva sus tradiciones y son el pilar de muchas familias.

Efectos económicos positivos: Una de las ventajas que tienen los habitantes del municipio de Cuauhtémoc es que aun cuentan con terrenos que se usan para la crianza de ganado y la siembra de diferentes productos tales como el arroz, frijol, caña de azúcar y el maíz, siendo este el de mayor producción.

Gracias a estas ventajas la población cosecha y procesa sus propios productos que son derivados del mismo, un claro ejemplo es una señora que tiene un restaurante de cocina colimota que su esposo siembra y cosecha maíz para el sustento del restaurante y con ello el bienestar económico de la familia. Con las ferias gastronómicas se impulsa a que las personas de dicho municipio consuman los platillos colimotas y así incrementan la economía de los restauranteros.

Efectos económicos negativos: Actualmente en Cuauhtémoc no existen suficientes establecimientos que ofrezcan comida regional colimota, y los que existen se conocen solo en la localidad. Es necesario dar a conocer los atractivos de este municipio ante los municipios vecinos como Cómala, la capital Colima para que así sean visitados por más personas y sus ventas se eleven.

Las personas que pertenecen a este municipio han solicitado apoyo para sus siembras de maíz, siendo esto el sustento de muchas familias cuauhtemenses; ya que los productos químicos que se utilizan para que la siembra sea favorable son muy costosos por lo que algunos agricultores se ven obligados a pedir préstamos. Actualmente los restaurantes de comida rápida se han vuelto cotidianos y dejan de lado a los restaurantes de cocina regional

### Tecomán

El municipio de Tecomán cuenta con tradiciones familiares importantes tales como la fiesta patronal de la Virgen de la Candelaria, que se lleva a cabo el día 2 de Febrero de cada año, en la procesión de la virgen cada familia se encuentra unida en las principales calles de Tecomán, para dar paso a los carros alegóricos, danzas y bandas de guerras, hasta terminar con la anda de la virgen.

Al llegar la virgen a su parroquia que está ubicada en el centro de dicho municipio, se hace una misa para venerar y celebrar su día, al concluir la misa la mayoría de la gente visitan establecimientos de antojitos mexicanos que tiene como base el maíz tales como el pozole, tostadas, enchiladas, entre otros, pero en especial los tamales con distintos rellenos acompañándolo con un atole que va elaborada a base de masa de maíz.

Los trabajadores del maíz en Tecomán cuentan con el beneficio de tener una tierra fértil y un amplio campo para tener una cosecha buena y por lo tanto ser uno de los municipios del Estado de Colima en el que la explotación del maíz es considerada una actividad relevante tanto económica como culturalmente

Efectos sociales positivos : La sociedad tecomense es tradicionalista basada en la unión familiar . Una de las más grandes manifestaciones de ellos son las fiestas patronales donde se consumen platillos típicos del Estado de Colima, elaborados a base de maíz.

Tecomán cuenta con un factor importante para el cultivo de maíz; grandes extensiones de tierra fértil destinadas a la cosecha del maíz que contribuyen a la obtención de un producto de buena calidad. Este factor constituye un ingreso a las familias tecomenses y motiva este sector de la población a seguir cultivando y no perder esa tradición,

Efectos económicos positivos: Se registra una derrama económica en especial durante las fiestas patronales, ya que los platillos que se consumen durante este tiempo se celebración tienen como base el maíz. Lo que incrementa los ingresos de las personas que trabajan con el maíz.

Efectos económicos negativos: Los recursos otorgados por el gobierno son pocos para la gente que trabaja con el maíz, por lo cual se incrementa el riesgo del abandono del campo por parte de los agricultores quienes buscan de mejores fuentes de ingresos y productos finales no tan favorables.

## Manzanillo

El bagaje culinario en este municipio no es tan abundante como en las demás en las demás entidades. El turismo se enfoca en actividades en la playa y gira en torno a los productos del mar, es muy poca la gente que cosecha y trabaja con el maíz. Este municipio también cuenta con fiestas patronales específicamente las de Santo Santiago celebradas a principios del mes de julio. La comida tiene su lugar privilegiado durante estas celebraciones: las golosinas o la tradicional fruta enmielada, pozole, sopitos, enchiladas, tostadas entre otros.

Como en el resto del estado, Manzanillo también celebra a la virgen de Guadalupe desde el 1 de diciembre hasta el 12 del mismo mes, los habitantes suelen poner afuera de sus casas un altar para la virgen, este va desde lo más sencillo pero significativo, hasta el más colorido y despampánate durante los 12 días de fiestas. Durante estos días se pueden observar diferentes actividades tradicionales del municipio como bailables afuera de la iglesia en ofrenda a la virgen de Guadalupe, puestos ambulantes de curiosidades que caracterizan estas fechas como trajes de indios para hombres y mujeres, collares, adornos para los altares de la virgen de Guadalupe, puestos de comida regional, golosinas y aguas frescas. El día 12 de diciembre después de la misa oficial que se celebra a las 8 de la noche, frente a la iglesia se prende el tradicional castillo, que está lleno de juegos pirotécnicos, que por 15 minutos iluminan las calles de Manzanillo ya que esta celebración se hace afuera de cada iglesia en las diferentes localidades de este.

En el mes de Mayo podemos disfrutar de 15 días de celebración por las fiestas tradicionales del municipio. En estas podemos encontrar juegos mecánicos para los niños y adultos, una gran número de cocina cotidiana, entretenimiento en el teatro del pueblo, peleas de gallos en el palenque seguido de bailes con grandes bandas o solistas, disfrutando de corridas formales o jaripeos en la plaza de toros, exposiciones de diferentes municipios y cosas de interés común.

El carnaval de Manzanillo es otra celebración que se lleva a cabo en el mes de Marzo, donde se hace un desfile de dos días con carros alegóricos de diferentes empresas, escuelas o negocios por el Boulevard Miguel de la Madrid, una de las calle principales de Manzanillo, empezando desde la comunidad de Santiago hasta el centro histórico acompañado de artistas e invitados de otros estados para presentar sus bailes o actuaciones que los caracterizan. En el centro histórico se hacen actuaciones en la explanada del pez vela un monumento característico de la ciudad.

Hace pocos años el 31 de diciembre se celebra “Manzanillo se ilumina” una noche donde por toda la bahía de Manzanillo se pueden apreciar una serie de juegos pirotécnicos a partir de las 12 de la noche dándole la bienvenida al año nuevo.

Efectos sociales positivos :Manzanillo es el puerto más importante del estado, esto es una ventaja, ya que se puede mostrar no solo al interior de la República sino a otros países los elementos gastronómicos que mas identifiquen al municipio. Los productos del mar y la cocina tradicional colimota, son dos elementos pueden unirse para crear una cocina de identidad, que diferencie al puerto con el resto de los municipios.

Efectos sociales negativos :Los habitantes de Manzanillo se ven rodeados por un entorno que cambia y se ajusta a un ritmo más rápido que la mayoría de los municipios. Las principales fuentes de trabajo radican en la actividad portuaria y la actividad turística, el núcleo familiar de Manzanillo no está tan cargado de tradicionalismo como lo están otros municipios. La gastronomía cotidiana se centra en los tacos, ya que no cuentan con un platillo o tipo de comida con el cual se identifiquen. Mucha de la población no es oriunda del estado o solo se establece por periodos de tiempo. Sus habitantes no hacen uso cotidiano de sus tradiciones, por lo tanto se encuentran perdidos entre las tradiciones de Colima y esto los pone en desventaja con Tecmán y Cuauhtémoc.

Efectos económicos positivos :Los pocos establecimientos de cocina regional colimense, cuentan con una extensa cartera de clientes cautivos, ya que se ha heredado la costumbre de consumir en esos lugares, siendo los fines de semana los días que más dinero generan estos restaurantes de cocina regional.

El dueño de un establecimiento como este, gasta un poco menos de la mitad de lo que gana el fin de semana sin necesidad de recurrir a las promociones ya que este tipo de comida se vende sola, siendo el pozole uno de los platillos más vendidos, mas económico de hacer y uno de los más caros.

Efectos económicos negativos :Los restauranteros no quieren arriesgar la tradición en la elaboración de sus platillos empleándolos de forma moderna, porque esto implicaría tener que cambiar la forma de elaboración y en algunos caso la ubicación del lugar, prefiriendo ante todo seguir conservando a sus clientes con el sazón, la tradición y el servicio que los caracteriza.

## CONCLUSIONES

El maíz es uno de los elementos más importantes en la historia de los mexicanos siendo este alimento principal desde la prehistoria hasta la actualidad. En el estado de Colima es parte importante para la conservación de las tradiciones del estado. En la actualidad el maíz es elemento importante en nuestra dieta, en Tecomán es la base primordial de algunos platillos, es un ingrediente representativo y de explotación abundante ya que es este municipio el que abastece al estado de Colima.

El tradicionalismo es un elemento que promueve el consumo del maíz ya que los platillos típicos se elaboran de este producto. El grano se utiliza principalmente para consumo humano, para lo cual es necesario que los granos se sometan a un proceso conocido como nixtamalización. En algunos lugares se recogen las mazorcas incipientes llamadas jilotes y hervidas o crudas se consumen, también se preparan en salmuera. La mazorca ya desarrollada se puede preparar a la brasa. La molienda del grano en seco produce hojuelas de harina de maíz, frituras, botana y aguardientes para fabricación de bebidas fermentadas.

El consumo de los alimentos a base de maíz, en la cocina regional colimota, afecta de manera positiva solo en los municipios de Cuauhtémoc y Tecomán, siendo estos los dos municipios con más tradicionalismo en sus habitantes y en los que la costumbre de la cocina tradicional se registra con mayor auge. Los restauranteros enfocados a la cocina tradicional en los municipios de Cuauhtémoc y Tecomán, cuentan con años de experiencia en las preparaciones de estos alimentos enfocándose principalmente en el sabor y la calidad de los productos, haciéndose de clientes cautivos, heredándose con el paso del tiempo las tradiciones a los hijos tanto de los restauranteros como de los consumidores de cocina tradicional, popularizando y conservando así la cocina colimota.

La situación en el municipio de Manzanillo es diferente debido al crecimiento elevado y acelerado, las costumbres y permanencia de las mismas es menor esto afectada en cierto nivel a las gastronomía ya que el consumo de la cocina regional es menor que en otros municipios. Sin embargo, Manzanillo tiene una ventaja sobre los demás municipios es un escaparate abierto al turismo en donde puede darse a conocer la gastronomía típica del estado La gastronomía de Colima es una fuente de ingresos para la economía siendo generadora de empleos que registran poca movilidad. El rubro de la cocina tradicional no implica grandes inversiones, las ventas al mes son suficientes y en algunos negocios positivamente superiores a las esperadas, en especial los días vacacionales.

Se puede decir que la cocina tradicional colimota se consume en diferentes proporciones debió a la ubicación de los diferentes municipios, en este caso Manzanillo cuenta con un consumo mínimo de platillos típicos de la región a diferencia de Tecomán y Cuauhtémoc donde sus habitantes aun son más apegados al consumo de estos alimentos y son más usados en la vida cotidiana. Por lo tanto sus ingresos son varían mucho ya que Tecomán y Cuauhtémoc tienen gran ingreso económico gracias a que la mayoría de los que

trabajan con este tipo de establecimientos aun cultivan su propio maíz, pero Manzanillo careciendo de esto tiene un número elevado de turistas que ayudan a equilibrar los ingresos específicamente de esta cocina.

# METODOLOGÍA APLICADA PARA EL DESARROLLO DE UN INSTRUMENTO DE MEDICIÓN DE LA SATISFACCION DE LOS CLIENTES EN LAS INSTITUCIONES FINANCIERAS

Sandra Vázquez López, Instituto Tecnológico de Apizaco  
Jorge Luis Castañeda Gutiérrez, Instituto Tecnológico de Apizaco  
Miguel Ángel Rodríguez Lozada, Instituto Tecnológico de Apizaco

## RESUMEN

*En el presente artículo, se aborda la investigación enmarcada en el estudio de la calidad del servicio que prestan las Instituciones Financieras, el objetivo de la investigación es el desarrollo de un instrumento de medición que identifique el grado de satisfacción de los clientes y al mismo tiempo permita determinar las variables o áreas de oportunidad dentro de las instituciones financieras en busca de generar estrategias de mejora de servicio al cliente.*

**PALABRAS CLAVE:** Calidad en el Servicio, Cliente, Instituciones Financieras

## METHODOLOGY APPLIED FOR DEVELOPMENT OF AN INSTRUMENT FOR MEASURING CLIENT SATISFACTION IN FINANCIAL INSTITUTIONS

### ABSTRACT

*Framed in the study of the quality of service provided by financial institutions the research presented in this article, the aim of the research is to develop a measurement instrument that identifies the degree of client satisfaction while variables or to determine areas of opportunity within financial institutions for generating client service improvement strategies.*

**JEL:** C35, C42, C88

**KEYWORDS:** Service Quality, Client, Financial Institutions

## INTRODUCCIÓN

El tema servicio al cliente ha venido tomando fuerza dado el aumento de la competencia que hay entre las empresas y particularmente en las de servicios, en donde la calidad en el servicio es clave para lograr la diferenciación como ventaja competitiva, ya que los clientes son cada vez más exigentes, ya no sólo buscan precio y calidad, sino también, una buena atención, un ambiente agradable, comodidad, un trato personalizado y un servicio rápido. La relación y la interacción del cliente interno con el externo influyen directamente en la satisfacción de los clientes y la calidad del servicio. Medir el nivel de satisfacción de un cliente en el ámbito bancario es cada día más importante dado el alto índice de competencia dentro del mismo, desde la perspectiva comercial de las entidades financieras, el elemento que más tiende a diferenciar unas entidades de otras es la calidad de servicio prestado al cliente y el nivel de eficacia de las soluciones que se le ofrecen. En México, se han realizado diversos esfuerzos para recuperar el terreno perdido en lo

que se refiere a una cultura de la calidad en el servicio, es notorio observar como algunas empresas están realizando acciones encaminadas a mostrarles a sus clientes y usuarios su cambio de actitud y su nueva disposición hacia la verdadera satisfacción de sus necesidades. Con la competitividad entre empresas las opciones para los usuarios están aumentando, la alta dirección de las instituciones financieras está consciente de la necesidad de datos reales sobre el estado actual que guarda el servicio, es por esto que el desarrollo de un instrumento de medición de calidad en el servicio propio y único para instituciones financieras, aportara la información que les permita establecer estrategias para proporcionar un servicio más rápido y eficiente que cumpla con las expectativas y necesidades de los clientes.

## REVISION LITERARIA

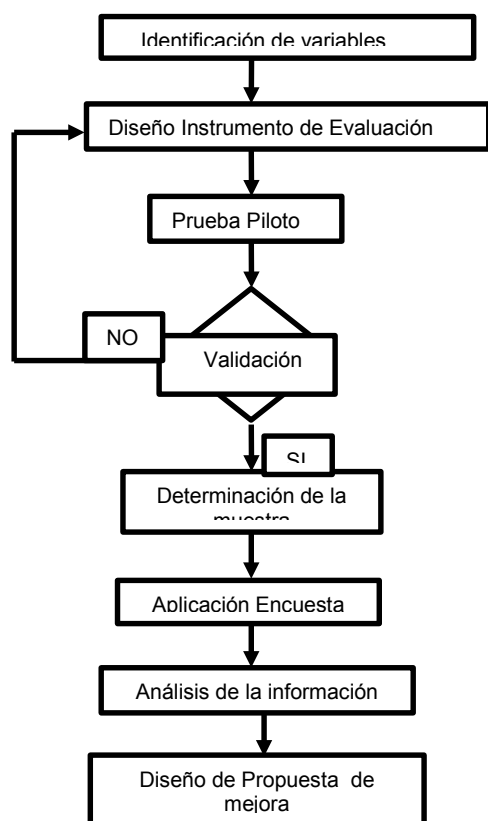

En lo referente a la medición de la calidad del servicio, existe una ardua controversia, la mayoría de los autores coinciden en señalar que en el sector bancario los trabajos son iniciados por Parasuraman, Zeithaml y Berry (1985, 1988) donde validaron el SERVQUAL, el modelo de mayor difusión y aplicación para la medición de la calidad de servicio, otros estudios en el ámbito bancario se deben a Cronin y Taylor (1994), quienes utilizan los usuarios bancarios para desarrollar el SERVPERF (Acosta, 2009), analizados los argumentos de ambas escalas se concluye la necesidad de investigar modelos de calidad que integren calidad, satisfacción del cliente, valor del servicio, así como su relación no sólo con las intenciones de compra sino también con la fidelidad concretada en comportamientos y de examinarlos a niveles particulares y globales de análisis. (Merino, 2004)

Un camino que han decidido tomar las entidades del sector bancario para adaptarse al entorno competitivo ha sido el de reorientar su filosofía para enfocarse en el servicio al cliente, con el fin de introducir el concepto de calidad del servicio en la mente de sus clientes, buscando con ello, su crecimiento (Sharma & Mehta, 2004), Conocer lo que el cliente espera es el primer paso y posiblemente, el más importante para proporcionar un servicio de calidad. Aunque parezca muy sencillo, para dar un servicio que los clientes perciban como excelente, la empresa necesita saber lo que los clientes esperan (Kotler, Bowen, & Makens, 1997). Luego de revisada la literatura relevante hasta la fecha sobre la calidad del servicio, se tiene una idea general de las formas que hay para su medición y se infiere que existe más de un método para abordar su conceptualización, con esto se concluye que lo realizado en esta investigación, será la propuesta de un modelo que se adapte a cada una de las necesidades de las distintas instituciones financieras y sea un aporte significativo hacia los tantos modelos de la calidad del servicio que hay presentes en la actualidad. La banca Mexicana ha pasado por diversas etapas, es en la actualidad cuando más penetración de mercado existe y más competencia por atraer y mantener a los clientes. En México existen 8933 sucursales bancarias, por entidades federativas Tlaxcala es una de las entidades con menor número de sucursales en la actualidad cuenta con 69 sucursales en operación. (Financial red LA ECONOMIA, 2012).

## METODOLOGIA

La presente es una investigación descriptiva, no experimental y transaccional donde se recolectaron los datos en un solo momento, con el propósito de describir las variables relacionadas con los aspectos clave del servicio al cliente en las instituciones financieras así como la interrelación entre estas. Se desarrolla una metodología de investigación basada en 7 etapas presentadas (Figura 1), que se apegan a las necesidades del proyecto, en este caso medir la satisfacción del cliente en las instituciones financieras.

Figura1: Etapas de la Metodología

En esta figura se representan las etapas a seguir para el desarrollo de la metodología. Fuente: Elaboración propia

### Etapas de la Metodología

A Partir Del conocimiento de las variables del servicio, se identifican las variables de estudio, y se realiza la organización de las mismas divididas en 4 variables y 17 sub-variables, la Tabla 1 muestra la clasificación de las variables de estudio.

Tabla1: Clasificación de las Variables del Servicio a Evaluar

Variables	Subvariables
Competencias	Cortesía
	Conocimiento
	Buen desenvolvimiento
	Amabilidad
Localización	Condición de las instalaciones
	Espacio distribuido
	Presentación del personal
Productos y Servicio	Mat. Físico de comunicación
	Calidad del servicio
	Accesibilidad y disponibilidad
Tiempo de atención	Facilidad para contactarse
	Capacidad de respuesta
	Tiempo reducido de espera
	Disminución de largas colas
	Horario de servicio

En esta tabla se muestra la clasificación de las variables del servicio a evaluar en las 2 Instituciones Financieras en el Municipio de Apizaco Tlaxcala. Fuente: Elaboración propia

### Etapas 2: Determinación de la Muestra

Se define la población sobre la cual se realiza la investigación de campo. La Tabla 2 incluye cada uno de los elementos de muestra de acuerdo a este estudio.

Tabla 2: Elementos de Muestra

Elementos	Usuarios y Clientes de las 2 Instituciones Financieras
Unidades de muestreo	Hombres y Mujeres usuarios del servicio de las sucursales
Alcance	2 sucursales bancarias de Apizaco Tlaxcala, México
Tiempo	Julio- Agosto 2013

*La tabla describe los elementos de la muestra de estudio. Fuente: Elaboración propia*

Una vez considerados los elementos de estudio, se calcula el tamaño de la muestra, para entrevistar a los clientes y usuarios se decidió utilizar un muestreo probabilístico, debido a que en este tipo de muestreo cada miembro del universo objetivo tiene una probabilidad fija de ser un miembro de la muestra objeto. La muestra se determina de acuerdo a la Fórmula [1] de población infinita o desconocida Murray & Larry, (2005):

$$= \frac{Z_{\alpha}^2 * p * q}{i^2}$$

Dónde:

n: Tamaño de la muestra

z: Valor correspondiente a la distribución de gauss,  $z_{\alpha} = 0.05 = 1.96$

p: Prevalencia esperada del parámetro a evaluar, en caso de desconocerse ( $p = 0.5$ ), que hace mayor el tamaño muestral

q:  $1 - p$  (si  $p = 70\%$ ,  $q = 30\%$ )

i: error que se prevé cometer si es del  $10\%$ ,  $i = 0.1$

Aplicando la Formula [1] tenemos: 81 encuestas por aplicar

### Etapas 3: Diseño de Instrumento de Recolección de Datos

Con los indicadores resultantes del estudio exploratorio previo se elaboró un cuestionario instrumento de medición, se realizó una prueba piloto con el objetivo de asegurar la claridad de las preguntas, además para limitar la extinción del cuestionario, conocer el tiempo en que se realiza la entrevista, averiguar si las instrucciones dadas a los entrevistados son las precisas, descubrir cualquier problema que pueda presentarse al editar, codificar y tabular cuestionarios. Se encontró que las preguntas no eran muy entendibles y que contenían algunos aspectos sin relevancia, así los cuestionarios fueron modificados en base a lo anterior. Posteriormente fue aplicado nuevamente el cuestionario modificado a los clientes y usuarios de las 2 instituciones financieras, para conocer sus percepciones acerca de la calidad del servicio. Para el instrumento de medición se optó por una escala tipo Likert, con la que el participante califica 20 ítems que reflejan las situaciones concretas y específicas del servicio. Dado el número de elementos, el tiempo máximo recomendable para su aplicación y que las operaciones de evaluación se efectuaban para cada ítem de manera consecutiva en: Competencias, Localización, Productos y Servicio, Tiempo de espera se seleccionó una escala Likert sencilla de 5 puntos positivos, donde se pide al participante que indique su nivel de acuerdo o desacuerdo con cada declaración asignándole una calificación numérica.

#### Etapa 4: Aplicación del Instrumento.

La aplicación del instrumento se realizó de la siguiente manera: Fue necesario acudir con los gerentes de cada una de las sucursales para explicarle los motivos de la investigación y se nos proporcionara un permiso para poder realizar las encuestas a los clientes y usuarios. El instrumento que se utilizó para medir la variable calidad de servicio, fue de elaboración propia, el cual consta de 20 ítems es una escala tipo Likert, que “consiste en un conjunto de ítems presentados en forma de administraciones o juicios, ante los cuales se pide la reacción de los sujetos a los que se les administra, se presenta cada afirmación y se le pide al sujeto que externé su reacción eligiendo uno de los cinco puntos de la escala. A cada punto se le asigna un valor numérico, las afirmaciones califican el objeto de actitud”. (Hernández Sampieri, 2003) La escala Likert cuenta con cinco alternativas de forma ascendente, a saber:

Totalmente no aceptable = 1

No aceptable = 2

Medianamente aceptable = 3

Aceptable = 4

Totalmente aceptable = 5

Donde cada alternativa representa el grado de acuerdo en que se encuentra el cliente con respecto a cada planteamiento. A fin de, evaluar la calidad de atención al cliente se procede a aplicar las encuestas, en dos bancos de la zona centro del Estado de Tlaxcala, específicamente en el municipio de Apizaco (Figura 2), esta etapa se llevó a cabo en los meses de Julio- Agosto 2013, la metodología a seguir se centra en la aplicación de un instrumento de carácter cualitativo, por tanto estadístico, en donde se recolectaron los datos referentes a la satisfacción del cliente.

Figura 2: Ubicación Geográfica del Municipio de Apizaco Tlaxcala, México

*La figura nos muestra la ubicación geográfica del Municipio de Apizaco Tlaxcala en México. Fuente: Elaboración propia*

#### Etapa 5: Análisis de la Información Arrojada

La interpretación de la información obtenida en la encuesta se realizó mediante el paquete estadístico IBM SPSS Statistics versión 21 debido a que es un programa que contiene las herramientas necesarias para analizar la información, ya que contiene una gama completa de procedimientos estadísticos para prueba de hipótesis, intervalos de confianza y análisis de correlación, además de ser preciso y fiable.

### Etapa 6: Validación

Para proceder al cálculo de fiabilidad de la escala se empleó el coeficiente Alpha de Cronbach Tabla 3 y se realiza la validez del contenido que consiste en una evaluación subjetiva pero sistemática de la representatividad del contenido de una escala para la tarea de medición actual. (Malhorta, 2008). Para evaluar la validez del contenido se ha realizado una buena definición conceptual del objeto de la medida de calidad de servicio bancario, además del estudio previo que genere los ítems que representan todas las dimensiones relevantes del estudio.

Tabla 3: Estadísticos de Fiabilidad

Alpha de Cronbach	Alfa de Cronbach Basada en los Elementos Tipificados	N de Elementos
0.767	0.766	20

*La presente tabla nos muestra la fiabilidad del instrumento, datos obtenidos con el programa estadístico IBM SPSS Statistics versión 21. De acuerdo a la literatura existente nos dice que el valor mínimo aceptable para el coeficiente alfa de Cronbach es 0,70; y dado que nuestro valor es de 0.767 nuestro instrumento se considera válido. Fuente: IBM SPSS Statistics versión 21*

### Etapa 7: Diseño de Propuesta de Mejora

Con base a los resultados, las Instituciones Financieras no logran que los clientes perciban una actitud de servicio adecuada, ya sea por el trato que se les da en el área de cajas y/o área de ejecutivos, o el interés que pueda tener el empleado para con las necesidades del cliente, esto originado del problema que experimentan los empleados de contacto con los clientes, que no obstante desean servirles mejor en ocasiones no reciben el apoyo necesario de la parte gerencial ya que actualmente no les otorgan capacitación enfocada a atención al cliente. El tiempo en que se proporciona el servicio a los clientes nunca será lo suficientemente bueno, pero los niveles de insatisfacción muestran resultados preocupantes. Para que se puedan mejorar los tiempos y acentuar la actitud de servicio es importante remarcar que la capacitación del personal es muy importante, es importante que esta capacitación este bien planeada y que cumpla con los criterios necesarios para complementar la calidad del servicio, así como las necesidades de información del cliente. El poder realizar un control adecuado de los factores que están afectando a la empresa, podrá evitar consecuencias negativas como la pérdida de clientes.

Un control de calidad adecuado a los requerimientos de la empresa es hoy en día una de las herramientas que podrán ayudar de manera más efectiva a reducir la inconformidad de los clientes y mejorar la calidad. Esto servirá para mantener satisfechos a los clientes actuales, para que los usuarios se conviertan en clientes, servirá como prestigio a la empresa y para tener satisfechos a los empleados. Establecer un control de calidad en una empresa en la que se tiene una interacción directa con el cliente, deberá de adecuarse a las necesidades de la misma, esto debido a que se debe incluir el elemento de medición ya que es una parte clave para obtener una retroalimentación de los clientes.

## **RESULTADOS**

Se presentan los resultados obtenidos en las 81 encuestas realizadas a los clientes y usuarios de las 2 sucursales de las Instituciones Financieras de Apizaco Tlaxcala, México. Las cuales tienen como finalidad medir la percepción de los clientes y usuarios de dichas sucursales con respecto a la calidad en el servicio ofrecido. La Figura 3, nos muestra los promedios de la escala Likert de cada una de las variables evaluadas, el criterio que se siguió para interpretar los resultados de la encuesta con una escala de Likert de 5 puntos fue: respuestas mayores o iguales a 3.5 se consideraron como aceptables y respuestas menores a 3.5 se consideraron como no aceptables. Este rango se definió con el propósito de que aquellos elementos de la calidad en el servicio que ofrecen las instituciones financieras que presenten valores menores a 3.5 sean tomadas en cuenta como áreas de oportunidad para lograr un nivel más alto de satisfacción.

Se puede observar que las variables Productos y servicios y Tiempo de Atención son las variables que tienen un promedio menor a 3.5 por lo que las consideramos como no aceptables, es decir no están cumpliendo con la calidad en el servicio requerida por el cliente. Por lo que tomaremos estas 2 variables como áreas de oportunidad, para las cuales se generaran estrategias preventivas y correctivas que incrementen su promedio y al mismo tiempo se logre cumplir con las expectativas y requerimientos de calidad que los clientes desean.

Figura 3: Promedios de la Escala Likert de las Variables Evaluadas

En esta figura se muestran los promedios de la escala Likert de cada una de las variables evaluadas. Fuente: Elaboración Propia

## CONCLUSIONES

En la actualidad existen una gran competencia entre las industrias financieras, por ello es fundamental que cuenten con una ventaja competitiva fundamental como lo es la calidad en el servicio al cliente, ventaja que se puede desarrollar fácilmente, siempre y cuando existan y se cumplan las políticas de atención al cliente establecidas por la empresa. La calidad en el servicio al cliente es uno de los puntos clave para permanecer entre la preferencia de los clientes, es de suma importancia poder detectar a tiempo posibles áreas de oportunidad dentro del servicio prestado a los clientes, para desarrollar las estrategias oportunas que lleven a lograr la satisfacción de los clientes y al mismo tiempo fidelizarlos con la institución.

## ANEXOS

Anexo 1: Cuestionario aplicado a usuarios y clientes de las 2 sucursales bancarias en Apizaco Tlaxcala, México. Muchas gracias por tomarse el tiempo para completar esta encuesta. Su opinión es de gran importancia para mejorar el servicio prestado en esta Institución Financiera la encuesta requiere sólo 5 minutos de su tiempo y sus respuestas serán totalmente anónimas.

### 1: ¿Considera que el personal del área de atención a clientes es un personal capacitado para desempeñar ese puesto?

- a) Sin capacitación    b) Capacitación baja    c) Capacitación media    d) Capacitado capacitado    e) Altamente

### 2: ¿La Información Que Maneja el Personal del Área de Atención a Clientes Es?

- a) Totalmente no actualizada    b) No actualizada actualizada    c) Medianamente actualizada    d) Actualizada actualizada    e) Totalmente

### 3: El Personal del Área de Atención a Clientes Emplea una Comunicación

- a) Totalmente Sin claridad      b) Sin Claridad      c) Medianamente clara      d) Clara Clara      e) Totalmente

4: El Personal Brinda una Atención Personalizada

- a) Nula      b) Escasa      c) Medianamente personalizada      d) Regular      e) Altamente personalizada

5: Considera Que el Personal del Área de Atención a Clientes Es

- a) Nada Amable Ni responsable      b) Escasamente Amable Y Responsable      c) Medianamente Amable y Responsable      d) Muy amable y responsable Amable y Responsable      e) Totalmente

6: Considera Que la Iluminación en la Sucursal Es

- a) Totalmente No adecuada      b) No adecuada Adecuada      c) Medianamente Adecuada      d) Adecuada      e) Totalmente

7: La Ventilación de la Sucursal Es

- a) Totalmente No adecuada      b) No adecuada Adecuada      c) Medianamente Adecuada      d) Adecuada      e) Totalmente

8: En La Sucursal, el Área de Cajas Se Encuentra Debidamente Distribuida y Señalizada

- a) Totalmente No señalizadas      b) No señalizadas      c) Medianamente Señalizadas      d) Señalizadas      e) Totalmente Señalizadas

9: El Área de Ejecutivos, Dentro de la Sucursal Se Encuentra Debidamente Señalizada

- a) Totalmente No Señalizadas      b) No Señalizadas      c) Medianamente Señalizadas      d) Señalizadas      e) Totalmente Señalizadas

10: Como Considera la Imagen del Personal

- a) Totalmente No adecuada      b) No adecuada Adecuada      c) Medianamente Adecuada      d) Adecuada      e) Totalmente

11: ¿La Capacidad de Respuesta del Personal es?

- a) Totalmente No aceptable      b) No Aceptable aceptable      c) Medianamente Aceptable      d) Aceptable      e) Totalmente

12: ¿La Atención Que Presta el Personal, Cubre Sus Necesidades Como Cliente?

- a) Nunca      b) Escasamente      c) Medianamente      d) Regularmente      e) Altamente

13: La Accesibilidad y Disponibilidad del Personal de Atención a Clientes es

# TURISMO DE SALUD, NUEVAS OPORTUNIDADES DE NEGOCIO EN EL MUNDO

Yesenia Balderas Ruiz, Universidad Nacional Autónoma de México

## RESUMEN

*Las nuevas tecnologías y los nuevos estilos de vida hacen cada vez más cercanas las distancias entre las cuestiones de salud y las tendencias de desarrollo en el turismo. Perfeccionando de esta forma el turismo de salud alrededor del mundo, uniendo estos dos conceptos. El turismo de salud se produce cuando los usuarios de servicios médicos, tratamientos de belleza o cualquier otro proceso que busque el bienestar físico y mental del individuo, se buscan o realizan fuera de su lugar de residencia; dándose que las naciones más desarrolladas exploran servicios en otras con menos desarrollo, pero que a su vez brindan servicios de salud con alta calidad y a un costo mucho menor que en su país de origen. Esta ponencia, detalla la información conocida respecto al turista de salud, la afluencia actual y los factores que determinan la elección entre un destino a otro, dando un panorama general del crecimiento económico que éste puede generar para el país destino.*

**PALABRAS CLAVE:** Turismo de Salud, Bienestar Físico y Mental, Crecimiento Económico, Calidad

## HEALTH TOURISM, NEW BUSINESS OPPORTUNITIES IN THE WORLD

### ABSTRACT

*The new technologies and lifestyles are closing the gap between health issues and development trends in tourism by linking these two concepts health tourism is improved worldwide. Health tourism is produced when users of medical services, beauty treatments or any other processes that seeks the physical and mental well-being of the subject is obtained outside the place of residence of the person in need of these procedures. having as a result that the more developed nations seek services in the less developed ones that provide such health services with higher quality and a lower cost than in their original country. This paper details information regarding the health tourist, the tourism flow and the factors that determine the choice between one destination to another and giving an overview of the economic growth that this movement generates for the destination country.*

**JEL:** I10 I11 I15 I18 I19 P46 F60

**KEYWORDS:** Health Tourism, Physical and Mental Wellbeing, Economic Growth, Quality

## INTRODUCCIÓN

En años recientes el surgimiento de grandes emporios turísticos focalizados en la integración humano – natural, el regreso a medios tradicionales de salud y a la creciente oferta internacional de servicio médicos internacionales, hicieron que en las últimas décadas se diera el boom en el resurgimiento del turismo de salud, concepto proveniente de la Grecia antigua. La unión de procesos de vanguardia para el bienestar físico y mental fomenta la búsqueda de nuevas alternativas de calidad y de bajo costo en cuestión del cuidado de la salud. Estas circunstancias conjugadas con los factores globales para procurar resolver estas necesidades, hacen mediante empresas privadas y el uso de la tecnología el desarrollo en el turismo de

salud. Lo anterior da una mayor importancia a las actividades de investigación no solo como generación de propuestas de forma cuantitativa por parte de los grandes grupos médicos, si no; para el desarrollo de nuevos destinos turísticos con un enfoque ya no de diversión dado que persigue el cuidado y mejoramiento de la salud en los individuos que disfrutan de estos servicios. Esta investigación, enfocada a la importancia y al crecimiento de los países para el fomento e implementación bajo el concepto de Turismo Salud, proyecta lo mejor de un lugar a su máxima expresión y permite un mayor crecimiento económico con el menor daño posible al ambiente en el país de implementación. Los datos proporcionados respecto al auge de la actividad medico - turística podrá también ser analizada con la idea de mantener los recursos existentes para que la actividad siga dando frutos a futuras generaciones de residentes y beneficios a los demandantes de servicios médicos.

## REVISIÓN LITERARIA

El término de turismo de salud es sumamente amplio, y se remonta a miles de años cuando peregrinos griegos viajaban desde el Mediterráneo al pequeño territorio en el Golfo Sarónico, llamado Epidauria; el cual fue el santuario del Dios sanador Asclepio. Convirtiéndose así Epidauria en el primer destino para el turista de salud. Se compone de todos aquellos turistas que buscan el bienestar, la belleza y el descanso, siendo esta su principal motivación para realizar el desplazamiento. En general, son todos aquellos viajes realizados con el fin de obtener beneficios relacionados con la salud, el bienestar o la estética. (Juan Carlos Lucena Navarro, 2012) La asociación Mexicana de Turismo de Salud A.C. divide al turismo de salud en tres grandes grupos: Turismo Medico, Turismo Wellness y Turismo de Medicina Alternativa y Complementaria (MAC).

Figura 1: Clasificación del Turismo de Salud

Conforme a la asociación mexicana de turismo de Salud clasifica al turismo de salud en tres grandes rubros el primero es el turismo medico enfocado a la medicina preventiva o diagnostico, quirúrgico o terapéutico. El segundo es el turismo MAC y por último el turismo de bienestar o mejor conocido por wellness que en la práctica estos últimos están muy relacionados entre si pues permiten la interacción a través de Centros de descanso o SPAs

Dentro del turismo medico se puede incluir conceptos que van desde la compra de medicamentos, tratamientos corporales, hasta sofisticados niveles de servicios de medicina o programas de bienestar. De los cuales; los turistas médicos principalmente se encuentran impulsados por calidad de los servicios, precio, la cobertura limitada de los seguros médicos en su país de origen, listas de espera para algunos tratamientos o cirugías, así como la facilidad y los bajos costos que implican determinados viajes internacionales. Se estima anualmente que alrededor del mundo existen entre 60,000 a 750,000 turistas de servicios médicos. De acuerdo a la publicación de la Universidad de Delaware, UDaily los principales destinos que están especializados en este sector son: Argentina, Brunei, Cuba, Colombia, Costa Rica, Hong Kong, Hungría, India, Jordania, Lituania, Malasia, Filipinas, Singapur, Sudáfrica, Tailandia y recientemente, Arabia Saudita, Emiratos Árabes Unidos, Corea del Sur, Túnez y Nueva Zelanda.

Particularmente, para 2009 el turismo médico en México generó una captación de ingresos por 122 millones de dólares anuales, de los cuales; 90 millones de dólares representaron el gasto por el uso de servicios médicos 32 millones de dólares costos de viaje. (Deloitte, 2010). Por su parte el diario “La Jornada” informo el aumento de los ingresos generados por el turismo médico en los últimos ocho años, los cuales ascendieron a mil 544 millones de dólares y se calcula que el año pasado llegaron a dos mil 847 millones de dólares revelando una diferencia de mil 303 millones de dólares. Mismo que se incrementa hasta 4 mil 196 millones de dólares si son incluidos los servicios del turismo de bienestar o wellness (Susana, 2014). La India por su parte busca convertirse en el líder mundial en turismo médico, anualmente este destino recibe 150,000 turistas que acuden por algún tratamiento médico como son: cirugías plásticas, cirugías cardíacas, ortopédicas, como también oftalmológicas, odontológicas, y cuidado del adulto mayor. Las autoridades pronostican una tasa medial anual de crecimiento del 30%. (Blanca, 2010). Mientras que para el 2013 Tailandia ocupó el primer lugar en turismo médico al concentrar un millón 200 mil de los visitantes siendo un 17% del total. (Susana, 2014). En la tabla 1 se presenta un rango de ahorros en servicios de salud que pueden obtener un paciente estadounidense si viajan a otro país a recibir el servicio. Asimismo se presenta un rango de horas de viaje en avión promedio que tendría que hacer el paciente para llegar en este caso a EEUU.

Tabla 1: Rango de Ahorro y Tiempo Estimado de Viaje en Diferentes Destinos

País	Rango de Ahorros en Procedimientos Médicos	Horas de Viaje	
Colombia	55 % -92%	mínimo	Máximo
Costa Rica	44% -89%	04:00	06:45
India	50% -97%	14:10	19:40
Israel	19% -86%	11:50	16:40
Jordania	14% -91%	12:00	18:10
Corea del Sur	50% - 85%	13:20	15:00
México	36% -89%	02:40	05:20
Tailandia	30% - 93%	19:40	21:40

*En esta tabla se describe el porcentaje de ahorro que representa el realizar actividades de turismo médico, así como la comparativa respecto al tiempo estimado de viaje entre el país de origen y Estados Unidos de América; Fuente: Promexico con datos de Medical Tourism Association.*

El auge en el turismo de bienestar (wellness) ofrece a los consumidores la opción de evaluar su “salud y bienestar” a través de una adecuada alimentación, condición física, medicina preventiva, balance emocional y espiritual, así como tratamientos especializados, todo ello conectado a un ambiente de respeto y cuidado de la naturaleza. El potencial que se encuentra dentro de este tipo de turismo es enorme y el margen de crecimiento muy elevado, debido al aumento progresivo de la esperanza de vida, al envejecimiento de la población, a una mayor preocupación por la salud. Por lo cual existe un enorme panorama para crear espacios de turismo de salud en sus distintas modalidades, en casi todo el mundo. Se puede mencionar que los países más desarrollados buscan alternativas de salud en países menos desarrollados, lo cual hace que puedan acceder a mayores servicios de salud a costos más accesibles como lo muestra la tabla 2.

Tabla 2: Porcentaje de Gasto En Salud Comparado con el Producto Interno Bruto

País	Producto Interno Bruto (2012) Billones de Dólares	Porcentaje de Gasto En Salud
Brasil	2,253	8.90%
Canadá	1,821	11.2%
Costa Rica	451	10.9%
Estados Unidos	16,244	17.9%
México	1,178	6.2%
Reino Unido	2,471	9.3%
Suecia	523	9.4%
Suiza	631	10.9%
Nueva Zelandia	167	10.1%

*Esta tabla compara a 9 naciones respecto al Producto Interno Bruto del año 2012 respecto al porcentaje de gasto en salud del mismo año. Fuente: Tabla elaborada con datos del banco de México.*

Queda entendido que el turismo de salud beneficia no solo al sector salud privado, teniendo un impacto positivo en la derrama económica en lo referente al comercio y al turismo.

Como ejemplo de lo anterior en el Periódico “La Nación” con datos del Consejo de la Promoción Internacional de la Medicina de Costa Rica (PROMED) para el 2011 atrajo a 48.253 turistas médicos y generó ingresos cercanos a los 338 millones; y se pronostica para el 2014 la atracción de 100.000 turistas de salud (Andrea, 2014).

## METODOLOGÍA

La intención de desarrollar una investigación focalizada en el turismo de salud, es el análisis de las tendencias actuales para el fomento de la salud en diferentes lugares del mundo tanto por el sector privado al proveer las instalaciones como por parte del sector público al fomentar el turismo de la zona. Como es sabido, la práctica del turismo de salud es una actividad que se remonta históricamente a los griegos y romanos, siendo que al paso del tiempo fue teniendo gran diversificación y cambios en la conceptualización de dicho segmento de salud y de turismo. Al definir cuáles son las variantes cuantitativas que determinan si un individuo es candidato de la práctica de turismo de salud o bien que variables cualitativas lo conducen al uso de servicios médicos fuera de su país de origen. Se pueden establecer los retos, propuestas y actores clave en el crecimiento futuro del turismo de salud a nivel mundial, siendo énfasis en los puntos que hacen de un proyecto exitoso en un país, para poderlo adecuar a otro.

## RESULTADOS

Los resultados a este trabajo de investigación permiten visualizar en un plano el comportamiento y las tendencias para el mercado del turismo de salud. Y que permiten la implementación de nuevas estrategias para captar el mercado y ser competitivo a la vista del turista. También es posible ver aspectos importantes como es el uso del seguro médico de gastos mayores, las ventajas a partir de una planeación y correcta adecuación al país o región donde se desee activar la economía con proyectos de turismo de salud.

## CONCLUSIONES

Elegir proyectos de turismo de salud es una opción de impulso al desarrollo de los países, ya que proporciona ingresos económicos positivos a la zona donde se localiza como al paciente que busca otra forma de turismo aunado al mejoramiento de la salud. Es posible situar la conformación de interrelación entre centros hospitalarios con grupos hoteleros para mejorar el posicionamiento de esta actividad dentro del contexto del mercado turístico. Con los proyectos de turismo de salud, es posible avanzar de manera mejorable con un crecimiento económico que beneficie con fuentes de empleo tales como la elevación en

el nivel de desarrollo de la zona, generación de fuentes de empleo y el ahorro económico para los turistas de salud. En 2014 se tienen varios congresos referentes al turismo de salud, entre los cuales se tiene el Congreso Internacional de turismo Medico en el mes de Abril en Costa Rica Mientras que La cumbre de Negocios en Turismo medico y bienestar en el mes de Noviembre en México.

# ACULTURACION EN LA PRODUCTIVIDAD Y DISTRIBUCION DE LAS ARTESANIAS WAYUU EN SU MERCADO ACTUAL EN EL DEPARTAMENTO DE LA GUAJIRA-COLOMBIA

Víctor José Iguaran Manjarres, Universidad de la Guajira  
Ledis Esther Campo Rivadeneira, Universidad de la Guajira

## RESUMEN

*El objetivo de la presente investigación. Analizar la aculturación en la productividad y distribución de las artesanías wayuu en su mercado actual en el Departamento de La Guajira-Colombia. El estudio se sustenta en las teorías de los autores: Fernández, Guerra, Cadena, Chun, y Taylor, entre otro. Donde la aculturación es el resultado de un proceso en el cual un pueblo o grupo de gente adquieren una nueva cultura o aspectos de la misma, generalmente a expensas de la propia cultura. La investigación es descriptiva, de corte transversal, bajo un enfoque cuantitativo. Los resultados obtenidos reflejan que los diseños, dibujos, y símbolos que representan los patrones culturales de la etnia wayuu en sus tejidos, son sustituidos en los procesos de productividad y distribución en su mercado actual; Se identifican los efectos del desarrollo de la aculturación comercial en dichos procesos; y se aprecian los niveles de apropiación de los excedentes económicos que se generan por la alta intermediación en la comercialización de las artesanías wayuu. Se concluye, que los efectos de la globalización de los mercados influyen en la aculturación mercantil de estos productos artesanales.*

**PALABRAS CLAVES:** Aculturación, Representación Simbólica, Intermediación, Distribución, Productividad, Artesanías Wayuu, Departamento de la Guajira

## ACCULTURATION PRODUCTIVITY AND DISTRIBUTION OF WAYUU CRAFTS IN YOUR CURRENT MARKET IN THE DEPARTMENT OF GUAJIRA-COLOMBIA

### ABSTRACT

*The aim of the present investigation. Analyze acculturation productivity and distribution of Wayuu handicrafts in its current market in the Department of La Guajira, Colombia. The study is based on the theories of the authors: Fernandez, War, Chain, Chun, and Taylor, among other. Where acculturation is the result of a process in which a people or group of people acquire a new culture or aspects of it, usually at the expense of their own culture. The research is descriptive, cross-sectional, under a quantitative approach. The results show that designs, drawings, and symbols that represent the cultural patterns of the Wayuu ethnic group in their tissues are replaced in the process productivity and distribution in its current market, the effects of the development of commercial acculturation are identified these processes, and levels of appropriation of economic surplus generated by high intermediation in marketing Wayuu handicrafts are appreciated. We conclude that the effects of the globalization of markets influence the corporation acculturation of these handicrafts.*

## INTRODUCCION

Las artesanías han estado en continua evolución, introduciendo y adaptándose a los cambios tecnológicos de cada época. Hasta la primera mitad del Siglo XX mantiene un cierto prestigio, símbolo de resistencia a la mecanización, en los años sesenta surge el reconocimiento social, empieza a ser coleccionada y exhibida en exposiciones y museos. En estas condiciones se llega al siglo XXI en el que se considera a la artesanía como una actividad residual, con un fuerte desprestigio, falta de cohesión como sector, carencias formativas en gestión empresarial y diseño y dificultades para acceder a fuentes de financiación. No obstante, los valores que se identifican con las culturas locales están en la artesanía que es local por su propia naturaleza, realizada con materiales locales y para clientes locales. Guerra (2003).

Desde el punto de vista textil, encontramos que las tejedoras wayuu han utilizado una amplia gama de técnicas en la elaboración de sus productos que van desde las más simples hasta las más complejas estructuras, incluyendo procedimientos tan elementales como los de pasamanería torzal, redes, cordones, nudos trenzados y más desarrollados como los de telar, tejidos planos, brocados y tejidos de estructuras diversas y tubular. Guerra (2003). La globalización y la liberación de los mercados, han generado una nueva idea económica promovida tanto por las empresas transnacionales, como por los mismos gobiernos, denominada neoliberalismo o de libre mercado, lo cual se podría considerar como una Aculturación comercial, porque las empresas trasnacionales han importado a los países latinoamericanos una nueva situación social y cultural, y también han impuesto normas de conducta a través de los procesos de producción y de consumo industriales y mercantiles, aspectos que son asimilados, en los procesos de producción y comercialización de las artesanías de la etnia wayuu en el

Departamento de la Guajira-Colombia. Por consiguiente, el proceso de aculturación consiste, por un lado, en la incorporación de elementos de la nueva cultura y, por otro, en el reajuste de los patrones culturales del individuo o grupo, motivados ambos por la necesidad de reorientar sus pensamientos, sentimientos y formas de comunicación a las exigencias de las realidades externas. A través de las actividades de incorporación y acomodación, el individuo va aprendiendo a desenvolverse, con altibajos, en la nueva cultura. Teniendo en cuenta que el proceso responde a una búsqueda de equilibrio (que a su vez implica una reorganización permanente). Desde otro punto de vista, la productividad es una de las principales preocupaciones de los administradores de este siglo, rebasa la frontera de Estados Unidos y se extiende a muchas otras partes del mundo, incluso Japón, admirado por sus mejoras de productividad, se interesan en la actualidad por mantener su competitividad en el mercado mundial. En Latino América implica medición, que es un paso esencial del proceso de control. Aunque prevalece un amplio consenso acerca de la necesidad de mejorar continuamente el desempeño laboral.

La productividad permite al empresario, determinar la relación insumo – producto, el cual sirve para evaluar el rendimiento de los talleres, máquinas, equipo de trabajo y empleados. La productividad implica tanta eficacia en el desempeño individual y organizacional. Por su parte, la eficacia es el cumplimiento de los objetivos; mientras que la eficiencia es el logro de las metas con la menor cantidad de recursos Koontz y otros (2006). De ahí, una organización es productiva si consigue sus metas paralelamente transformando sus insumos en productos al menor costo. En el mundo la mayoría de los mercados, el alojamiento físico y/o psicológico entre productores y compradores es tal, que el uso a los intermediarios es necesario para permitir un encuentro eficiente entre la oferta y la demanda. La necesidad de un canal de distribución para comercializar un producto, procede de la imposibilidad para el fabricante de asumir el mismo todas las tareas y las funciones que se punen las relaciones de intercambio, conforme a las expectativas de los

consumidores potenciales Stanton y otros (2006). Factores estos que se encuentran latentes en la comercialización de las artesanías producidas por las etnias wayuu.

El uso de intermediarios implica, por consiguiente, para la empresa una pérdida de control sobre algunos elementos del proceso de comercialización, ya que realizan una parte de una función que, teóricamente la propia empresa podrían ejercer. Desde el punto de vista, del fabricante, la elección de un canal de distribución, es pues, una decisión de importancia estratégica que debe ser compatible, no solo con los deseos del segmento objetivo seleccionado, sino también con los objetivos de la empresa. Lo cual es necesario que en la distribución de las artesanías de la etnia wayuu, se realice la elección de un canal de distribución apropiado a la importancia cultural que tienen estos productos artesanales.

Por tal motivo, se reconoce que las actividades en las comunidades indígenas wayuu, se destaca la producción de artesanías desarrollada por la mujer, quien tiene un papel importante dentro de la cultura wayuu; puede decirse que es la conductora y organizadora del clan, ahora bien, políticamente son muy activas e independientes en su sociedad. Pero se carece de una estructura de distribución que garantice que estos productos lleguen, a los mercados local, Nacional e internacional de forma eficiente. De igual forma las mujeres son expertas tejedoras y han conservado bellos diseños tradicionales en los chinchorros, mochilas, faja, cordones vistosos, borlas y mantas que son los trajes que usan las mujeres, han desarrollado numerosos objetos de utilidad con colores vistosos. Por ello, el adagio de los wayuu, que “ser mujer es saber tejer”. Comienza entonces, la vida del tejido. La madre, tías, hermanas mayores, primas que se dedican a hilar y tejer. Guerra (2003).

Es importante señalar, que en la producción y distribución de las artesanías de los pueblos indígenas, la identidad cultural está amenazada por los efectos de la aculturación, que es el resultado de un proceso en el cual un pueblo o grupo de gente adquieren una nueva cultura o aspectos de la misma, generalmente a expensas de la propia cultura. A diario, se suscitan procesos de aculturación en diferentes niveles y espacios, durante este proceso existe un intercambio de elementos culturales entre distintos grupos sociales. Las causas socioeconómicas, se relacionan con la situación laboral, salarios, falta de trabajo en relación al país de origen, las expectativas construidas sobre los países de destino, y la globalización de los mercados. En tal circunstancia hay que reconocer, que el efecto de la globalización en los mercados, influyen en la aculturación mercantil, en los procesos de productividad y distribución en las artesanías wayuu del Departamento de la Guajira-Colombia, así como la técnica de punta en cruz fue desarrollada por religiosas que lo aprendieron de los Españoles, fue apropiada por la mujer wayuu en la alta

Guajira, de igual forma, se está dando la aculturación en la productividad y distribución de las artesanías wayuu. Adoptando rasgo de la cultura mercantil existente en los mercados globalizados, asumiéndola como propia en dichos procesos. Por consiguiente, la aculturación comercial se ha generado a partir de las culturas actuales de libre mercado, que han sido originadas por la dependencia que tienen los procesos sociales de las grandes empresas trasnacionales, que existen en diferentes partes del mundo y que han traspasado otros aspectos que no sólo le competen al desarrollo tecnológico e industrial, sino que han llegado hasta el ámbito del desarrollo de las sociedades que se rigen por los nuevos procesos de comunicación social, en los que están involucradas las marcas de consumo mercantil, que tienen una influencia importante en las actuales sociedades de los países latinoamericanos, sobre todo aquellos, que se rigen por las leyes del mercado.

En la productividad y distribución, de las artesanías de la etnia wayuu se caracterizan por ser una expresión propia, auténtica, de riqueza espiritual, que atiende las necesidades de identidad al preservar las raíces, de subsistencia, recreación, comunicación y conocimiento. Es un factor sinérgico, porque puede satisfacer simultáneamente varias necesidades. Las artesanías pueden correr el riesgo de aculturación y de destrucción por varios motivos de aculturación mercantil, por el cambio en sus patrones tradicionales de diseño, dibujos y símbolos. Con lo anteriormente expuesto, se puede apreciar, cuando se sustituyen los patrones propios de

los productos artesanales, en el proceso de productividad y distribución por otros patrones que no reflejan los valores culturales de esta etnia, ocurre que en las artesanías wayuu aparecen nombres de personas, equipos de futbol, lugares, e innovaciones, por parte de los que comercializan dichos productos, o sea por la alta intermediación que se está dando en el momento, se están perdiendo las representaciones simbólicas abstractas de la cultura wayuu; al mismo tiempo, la aculturación por la acción evangélica, hacen desaparecer símbolos y representaciones que no encuadran con el sistema de creencias que se desea imponer. Por tal motivo, la aculturación no es solo un factor que obstaculiza el desarrollo de las representaciones étnicas en las artesanías wayuu, sino de la economía indígena en general por la desigual apropiación del excedente generado en las actividades económicas, debido a la dispersión de la oferta y la estructura oligopólica de la comercialización. Las leyes del mercado de los arijunas alteran la tradición, se trata de sacar provecho del negocio sin tener en cuenta el valor de los patrones culturales de los indígenas wayuu. La deficiente organización económica de los indígenas del Departamento de la Guajira-Colombia, frente a los intermediarios los coloca en una posición de desventaja, que originan una falta de retención del excedente, lo cual constituye uno de los componentes de la problemática socioeconómica de esta etnia.

Es importante, que las tejedoras de la etnia wayuu, traten de consolidarse y asociarse como grupo de productoras y distribuidoras, con el propósito de unificar la oferta, y puedan mejorar su capacidad de negociación, que les permitan una adecuada y justa articulación de compradores y vendedores, al mismo tiempo se requiere del apoyo de instituciones públicas y privadas que velen por la preservación y el desarrollo de sus patrones tradicionales. El propósito de la investigación fue analizar la aculturación en la productividad y distribución de las artesanías wayuu en su mercado actual en el Departamento de La Guajira-Colombia, estructurada bajo los siguientes lineamientos: en la sección de revisión literaria se plantean los argumentos que sustentan la Aculturación que genera la globalización de los mercados en los productos artesanales de esta etnia, cuyo objetivo es analizar los efectos de aculturación mercantil, con el fin de determinar si los diseños, dibujos y símbolos que representan los patrones culturales de la etnia wayuu en sus tejidos, son sustituidos en los procesos de productividad y distribución, a la vez se identifican los efectos del desarrollo tecnológico e industrial, se conoce los efectos que generan la intermediación, con la finalidad de proponer lineamientos estratégicos que minimicen la incidencia de la aculturación en los procesos de productividad y distribución de las artesanías wayuu en su mercado actual en el Departamento de la Guajira-Colombia. Seguidamente se presenta la metodología utilizada en la investigación, definiendo el enfoque epistemológico, tipo y diseño de investigación, población, muestra, y seguidamente se presentan los resultados y conclusiones de la investigación.

## REVISION LITERATURA

En la literatura relacionada con la aculturación se distinguen muchos conceptos, que permiten conocer cuáles son los postulados teóricos más relevantes, en la presente investigación se sustenta bajos los principios teóricos de Ortiz (1991), que señala que la aculturación es el nombre que recibe un proceso que implica la recepción y asimilación de elementos culturales de un grupo humano por parte de otro. De esta forma, un pueblo adquiere una filosofía tradicional diferente a la suya o incorpora determinados aspectos de la cultura descubierta, usualmente en detrimento de las propias bases culturales. La colonización suele ser la causa externa de aculturación más común. En este sentido, y partiendo de dicha premisa podemos subrayar que momentos históricos del descubrimiento de América por parte de Cristóbal Colón, dieron lugar a que los indígenas de las mencionadas zonas descubiertas se vieran en la obligación y en la necesidad de llevar a cabo un proceso de aculturación. Así, entre otras cosas, tuvieron que ir asimilando las creencias religiosas cristianas de España.

En tal sentido, son muchos y variados los casos similares a estos que se han producido a lo largo de la historia de la humanidad. Entre los mismos también pueden resaltarse que los aborígenes africanos durante el siglo XIX se vieron sometidos a un proceso de aculturación, en sus valores religiosos, costumbres, y

lengua. Los procesos de aculturación poseen distintos grados de supervivencia, dominación, resistencia, destrucción, modificación y adaptación de las culturas nativas una vez producido el acercamiento intercultural. La aculturación, lejos de ser un proceso lineal, se desarrolla en sucesivos movimientos de avance, retroceso, prueba, ensayo, acercamiento y alejamiento entre ambas culturas. Algunos autores señalan que el individuo experimenta procesos de aprendizaje, hábitos y fenómenos de la nueva cultura y des-aprendizaje o des-culturación de hábitos pertenecientes a su cultura de origen Chun (2002). En lo que respecta al concepto de productividad, Koontz (2006), la definen como, la relación entre la cantidad de bienes, servicios producidos, así como la cantidad de recursos utilizados. La productividad sirve para evaluar el rendimiento de los talleres, las maquinas, los equipos de trabajo o los empleados, se eleva cuando es posible generar más producto con igual cantidad de insumos o generar la misma cantidad de productos con los mismos insumos. La idea de la misma no implica necesariamente producir más, sino que es más bien una medida del grado de eficiencia con la que se generan los productos deseados, cualquiera que sea la cantidad de estos.

En lo que concierne al concepto de distribución, dentro de la mezcla de marketing, Stanton y otros (2004), señalan que consiste en hacer llegar el producto a su mercado meta. La actividad más importante para llevar un producto al mercado es la de arreglar su venta y la transferencia de derechos del productor al cliente final. Otras actividades (o funciones) comunes son promover el producto, almacenarlo, y asumir parte del riesgo financiero que surge durante el proceso de distribución. Para Fischer (2004) los intermediarios son grupos independientes que se encargan de transferir el producto del fabricante al consumidor, obteniendo por ello una utilidad y proporcionando al comprador diversos servicios. Estos servicios tienen gran importancia porque contribuyen a aumentar la eficacia de la distribución. En relación al concepto artesanías wayuu Guerra (2003), argumenta que son la expresión de cultura y tradición de siglos atrás que compila con el consentimiento de una gama de procesos técnicos y la aplicación de diversos oficios. El tejido ha sido siempre una tradición entre los wayuu y es una actividad tan significativa en esta cultura, que quien es hábil en estas labores, especialmente en el arte de tejer dibujos, es digno de mayor respeto y el poseer muchas piezas tejidas, es símbolo de poder y prestigio. Estos son los conceptos prioritarios que sirven de tapiz, para desarrollar la presente investigación.

## METODOLOGÍA

La presente investigación tiene un enfoque epistemológico positivista que enfatiza la participación del investigador activo y formativo de lo que ya conoce. Asimismo este enfoque conduce a considerar en el análisis de la información la lógica formal como un procedimiento válido, y fundamentales para la consecución de la objetividad, lo que implica el uso del método inductivo, el cual, según, Meléndez (2002), se encuentra referida aquellos procesos de reconocimiento que se inician mediante la observación de fenómenos, hechos o personas, con el propósito de obtener premisas y conclusiones de carácter general que puedan ser aplicadas a situaciones similares. El estudio se clasificó como descriptivo, porque se especificaron naturalmente todas las propiedades importantes encontradas en los componentes esenciales de la aculturación en la productividad y distribución de las artesanías wayuu en su mercado actual en el Departamento de La Guajira-Colombia; el diseño fue no- experimental, de corte transversal, especificando los efectos que causa la aculturación mercantil en los procesos de comercialización de los productos artesanales de esta etnia, aplicando tres instrumentos de recolección de datos en un solo momento, que para tal caso fue la encuesta directa.

Para la presente investigación se tomaran en cuenta tres (03) poblaciones: la población A, conformada por dos mil ocho (2.008) artesanas de la etnia wayuu; la población B, conformada por cinco (05) empresas comercializadoras de artesanías ubicadas en la ciudad de Riohacha (Tienda de Artesanías Numartes, Artesanías Cien por ciento Guajira, Artesanías Natca, Stan SENA “SAO – Olímpica”, Artes con Corazón Wayuu) y por último, la población C, constituida por los doscientos doce mil cuarenta y seis (212.046)

clientes potenciales. La muestra representativa para la presente investigación, se fundamento de acuerdo con Sierra (2001), que especifica que la muestra es la parte de un conjunto o población debidamente elegida, que se somete a observación científica en representación del conjunto, con el fin de obtener resultados válidos. Para la población artesana de la etnia wayuu la muestra fue de trescientos treinta y seis (336) sujetos; los clientes arrojo una muestra de cuatrocientos (400) sujetos; y para las empresas comercializadoras se realizo un censo poblacional. Finalmente se diseñaron los tres cuestionarios conformados por veinticuatro (24) ítems cada uno con tres (3) opciones de respuestas, según la escala de Likert, se determinó la confiabilidad y la valides de los mismos, se concluyo con el análisis e interpretación de los resultados obtenidos de la información recolectada con la aplicación de los cuestionarios.

## RESULTADOS

Después de interpretar los resultados obtenidos de la aplicación de los instrumentos dirigidos a las artesanas de la etnia wayuu, empresas comercializadoras, y clientes de los productos artesanales, con el propósito de analizar la aculturación en la productividad y distribución de las artesanías wayuu en su mercado actual en el Departamento de La Guajira-Colombia, se procede a señalar los siguientes resultados:

Tabla 1:Patrones Culturales

Alternativas		Empresas Comercializadoras								
Indicadores	Artesanas Wayuu						Clientes			
	SI	AV	NO	SI	AV	NO	SI	AV	NO	
Baile típico	100%	0	0	90%	10%	0	10%	90%	0

Agentes	6%	5%	89%	10%	5%	85%	0	0	100%

*Leyenda: (AV) A veces. En esta tabla se aprecia que las artesanas de la etnia wayuu reconocen que sus tejidos no son comercializados por los grandes supermercados, tiendas de prestigio u organizaciones comerciales; las empresas comercializadoras consideran que comercializan con arijunas y pequeñas tiendas; y los clientes manifiestan que compran sus productos a las artesanas y en algunos casos a los arijunas y en las pequeñas tiendas. Fuente: Elaboración propia.*

## CONCLUSIONES

Con base a los resultados obtenidos, con el propósito de analizar la aculturación en la productividad y distribución de las artesanías wayuu en su mercado actual en el Departamento de La Guajira-Colombia, y de acuerdo a los objetivos de esta investigación se procede a señalar las siguientes conclusiones: En relación al primer objetivo específico: Determinar si los diseños, dibujos y símbolos que representan los patrones culturales de la etnia wayuu en sus tejidos, son sustituidos en los procesos de productividad y distribución de las artesanías wayuu en su mercado actual en el Departamento de La Guajira-Colombia, se pueden estipular los siguientes hallazgos: Las artesanas de la etnia wayuu, manifiestan que sus productos artesanales, representan su baile típico, comidas propias de su cultura, que también simbolizan la muerte, la vida, el mal, el bien, animales conocidos, naturaleza, casta, y su espiritualidad, que son para ellas la representaciones más significativas de su cultura, pero le preocupan las transformaciones y valores agregados que le están haciendo, los intermediarios que se están apropiando de los excedentes productivos; se observa que existe concordancia con lo que afirmaron las empresas comercializadoras y los clientes, ya que prefieren en su gran mayoría las representaciones simbólicas, exceptuando las comidas típicas, la muerte y el mal.

En relación al segundo objetivo específico: Identificar los efectos del desarrollo tecnológico e industrial en los procesos de productividad y distribución de las artesanías wayuu en su mercado actual en el Departamento de La Guajira-Colombia, se pueden considerar las siguientes conclusiones: Las artesanas de la etnia wayuu, consideran que sus productos artesanales, se realizan en forma manual, es decir, artesanalmente, utilizando para tal fin el telar y las agujas en sus tejidos; se aprecia discordancia con artesanas, ya que las empresas comercializadoras están transformando los tejidos de las artesanas wayuu, utilizando maquinarias, equipos, talleres, sistematización, y comunicación; existiendo concordancia con las clientes, quienes prefieren las artesanías con ciertos valores agregados.

En relación al tercer objetivo específico: Conocer los efectos de la intermediación en la productividad y distribución de las artesanías wayuu en su mercado actual en el Departamento de La Guajira-Colombia, se pueden considerar las siguientes conclusiones: Las mujeres wayuu que se dedican a tejer, manifiestan que sus artesanías no son comercializadas por: supermercados de la región, almacenes de prestigio, organizaciones comerciales, ni por agentes intermediarios, las artesanas consideran que sus productos son distribuidos por pequeñas tiendas, arijunas y por ellas mismas; existe concordancia con las empresas comercializadoras, quienes afirman que no comercializan con supermercados, almacenes, organizaciones comerciales y agentes; de igual forma los clientes señalan que no obtienen los productos artesanales con esta clase de intermediarios. Con base al último objetivo específico: Proponer lineamientos estratégicos con el propósito de minimizar la incidencia de la aculturación en los procesos de productividad y distribución de las artesanías wayuu en su mercado actual en el

Departamento de La Guajira-Colombia, es necesario que se tengan en cuenta los efectos de la intermediación que se están generando por los mayoristas y minoristas que comercializan estos productos artesanales, que por tal motivo es necesario velar por la preservación de los patrones culturales, evitar que estas artesanías sufran cambios en su diseño, y transformaciones en sus representaciones simbólicas, que representan el valor real en los tejidos que son elaborados por las artesanas pertenecientes a la etnia wayuu; pero se necesita que las entidades públicas y privadas desarrollen programas y proyectos que garanticen la preservación de los patrones culturales y propiedades mercantiles de las tejedoras wayuu. Se proponen a continuación los siguientes lineamientos estratégicos: La oficina de Asuntos indígenas del Departamento de la Guajira debe diseñar programas y proyectos, con el propósito de consolidar gremialmente a las artesanas de la etnia wayuu, con el fin de agrupar por territorios y zonas específicas productoras y comercializadoras de las artesanías wayuu de la ciudad de Riohacha, para que mantengan los niveles de propiedad de sus tejidos, y a la vez sigan produciendo los mismos, con los patrones culturales propios de esta etnia, y así se pueda evitar la transformación que se quiere dar por algunos intermediarios comerciales que están distribuyendo estos productos. El Gobierno Departamental de la Guajira, le corresponde, estipular leyes que garanticen el comercio de las artesanías de la etnia wayuu, donde las artesanas se protejan del dominio, producción, y preservación de sus patrones culturales, y puedan lucrar en forma optima de los excedentes monetarios que realmente producen la venta de estos tejidos, ya que existen muchos intermediarios que están ganando ganancias importantes en el intercambio comercial que están realizando con estos productos artesanales.

Las entidades privadas como el Cerrejón, Texas, Concepción Salinas, entre otras, deben brindar apoyo a la producción y comercialización de las artesanías de la etnia wayuu, desarrollando proyectos que permitan que estas artesanas lleguen a mercados locales, Nacionales, e internacionales, sin tanta intermediación, con el fin de garantizar un canal de distribución directa entre productoras y consumidoras finales, para que estas artesanas puedan liderar la distribución y así logren alcanzar mayor beneficio mercantil. En la comercialización de las artesanías wayuu se debe implementar la estrategia de cobertura de mercado, que sus productos se ofrezcan en todos los sitios posibles que puedan ser comercializados, entre ellos: tiendas, almacenes, y supermercados, entre otros, a nivel Local, Nacional e Internacional, con el propósito de garantizar una distribución intensiva de las artesanías wayuu.

Implementar una distribución exclusiva, por medio de franquicias en otros países, con el propósito que se vendan los productos artesanales en Europa y Norteamérica, donde se una el fabricante con detallista y mayoristas. El Estado debe intervenir en la distribución de las artesanías wayuu, estableciendo las reglamentaciones de los precios y los márgenes de distribución, con el objeto de controlar la tendencia inflacionista, y a la vez, brindar la protección de los consumidores, a través, de reglamentaciones referente a la venta, el etiquetado de los precios y contenidos, las operaciones publicitarias y promocionales. Desarrollar el Comercio Electrónico: El cual no tiene fronteras, para que los clientes por internet puedan adquirir los productos artesanales en mercados Regionales, Nacionales e Internacionales. Se tiene que mantener la transferencia de información electrónica ubicados sitios web de artesanas y empresas compradoras de artesanías, y publicando paulatinamente información, con el propósito de realizar transacciones electrónicas, que en la actualidad, los vendedores de productos de consumo como los vendedores de negocios, hacen uso de estas transacciones y cada día crece el número de personas que realizan compras en la web.

## **RESUMEN**

*Para obtener ventajas del comercio internacional en Navojoa es importante tener los elementos suficientes tomando en consideración que vivimos en una economía globalizada, con más apertura para el comercio, por lo que esta investigación tiene como objetivo conocer las ventajas que tiene el comercio exterior para las PYMES de Navojoa, y para su realización se partió de la siguiente pregunta central ¿Cuáles son las ventajas que tiene el comercio exterior para las PYMES de Navojoa? La investigación se desarrolló mediante una metodología cuantitativa y exploratoria y se aplicó un cuestionario a 40 empresas exportadoras de la localidad. Algunos de los resultados obtenidos son los siguientes: satisfacción de los empresarios por las utilidades obtenidas, además la generación de nuevos empleos que han beneficiado sobre todo a las personas de menos recursos económicos, el aumento de la productividad y de la competitividad, sin embargo existe la necesidad de un programa de desarrollo tecnológico que incluya los requerimientos y apoyos que ofrece las instancias gubernamentales. Tuvo como objetivo general conocer las ventajas que tiene el comercio exterior para las PYMES de Navojoa.*

## **INTERNATIONAL COMMERCE ADVANTAGES IN NAVOJOA ENTERPRISES FOR THE ECONOMIC GROWTH**

### **ABSTRACT**

*To take advantages on the international commerce in Navojoa, it is important to have enough elements, considering that we live in a globalized economy, with more trade openness. The objective of this research is to recognize that foreign trade has advantages to SMEs in Navojoa. The central question is that follows: What are the advantages that international commerce offers to SMEs of Navojoa? This research was developed with a quantitative and exploratory methodology; a questionnaire was applied to 40 local exporter companies. The results are as follows: employers' satisfactions by the profits obtained, also, the creation of new jobs which have mostly benefited people of less economic resources, the increase in productivity and competitiveness. However, there is the need of a program of technological development that includes government requirements and supports offered from international commerce to SMEs*

**KEYWORDS:** International Commerce, Small And Medium Enterprises Trade, Economic Benefits

## INTRODUCCIÓN

El presente estudio “Las ventajas del comercio internacional en las pequeñas y medianas empresas (PYMES) de Navojoa”, es un esfuerzo teórico empírico por contribuir con el análisis de las pequeñas y medianas empresas en cuanto a su participación a nivel mundial, a partir de las normas existentes y apoyos para incursionar en este renglón. México ha establecido acuerdos, tratados, convenios con otros países para que las empresas mexicanas puedan exportar sus productos o servicios así el exterior y así mismo los demás países a México, esto ha puesto en vigor las negociaciones internacionales de empresas mexicanas con otros países y con ello gozar de los beneficios que deja el comercio mundial.

## REVISIÓN LITERARIA

El comercio internacional comprende tanto a la exportación, que corresponde a la venta de los productos (bienes y servicios) originarios de un país a clientes situados en otro país, como la importación, que es la compra de bienes o servicios a un proveedor originario de un país distinto al del comprador. (W.L. Hill, 2011). La exportación asignatura compleja compuesta sobre todo por tres tipos de elementos: marketing internacional, derecho internacional aplicado a las transacciones comerciales y logística de exportación. En el marketing internacional aplicado al comercio exterior, se analizan los elementos que conforman la mezcla del marketing: producto, mercado, precio y promoción; en tanto que la aplicación del derecho internacional se relaciona con la determinación de los derechos y obligaciones de cada una de las partes que actúan en el comercio exterior, principalmente en lo que se refiere a convenios y tratados comerciales internacionales a la contrataciones entre compradores y vendedores internacionales.

La logística de exportación abarca en esencia cuatro aspectos: el transporte para la exportación, los seguros al comercio exterior, la tramitación aduanal tanto en el país de origen como en el destino y las formas internacionales de pago. La maquila internacional (o subcontratación), caracterizada porque el contratante opera en un país diferente al suyo, donde utiliza instalaciones propias o ajenas para efectuar uno o varios procesos de producción. En el ámbito internacional se han facilitado los niveles de integración de las economías mediante la concertación de acuerdos e instituciones bilaterales y multilaterales como son: Organización mundial de comercio (OMC), que se ocupa de las normas que regulan el comercio entre países y tiene como objetivo ayudar a los productores de bienes y servicios, a los exportadores y a los importadores a llevar adelante sus actividades.

Las empresas que participan en el mercado exterior forman el mercado internacional en el que existen instituciones y organismos que regulan el comercio internacional y que afectan al flujo de comercio, por lo cual es conveniente que las empresas conozcan la normatividad de estas instituciones. También la normatividad internacional procede de acuerdos, convenios y tratados bilaterales y multilaterales y, dependiendo de su alcance, se establecen normas para la circulación de los factores de producción (bienes y servicios; personas y capitales) alterando el entorno en el que las empresas se desarrollan e incidiendo en las estrategias de marketing internacional.

Organización Mundial del Comercio (OMC), institución internacional creada para promover y aplicar un libre cambio global, se fundó en 1993 por el acta final que cerraba la Ronda Uruguay de negociaciones multilaterales contempladas en el acuerdo general sobre aranceles y comercio. La OMC tiene como fin administrar y controlar los 28 acuerdos de libre comercio recogidos en el acta final, supervisar las prácticas comerciales mundiales y juzgar los litigios comerciales que los estados miembros le presentan. La organización empezó a funcionar el 1 de enero de 1995. Conferencia de naciones unidas para el comercio y el desarrollo.

La Conferencia de Naciones Unidas para el Comercio y Desarrollo (*United Nations Conference on Trade and Development*, UNCTAD), organismo permanente de la Asamblea General de la Organización de las Naciones Unidas (ONU), se fundó en diciembre de 1964, donde participaron 120 naciones para discutir problemas relacionados con el mercado internacional de mercancías y el comercio. Entre las funciones de la UNCTAD se encuentran promover el comercio internacional entre los países en vías de desarrollo, iniciar acciones encaminadas a la negociación y adopción de acuerdos comerciales multilaterales y proporcionar un centro para armonizar las políticas relativas al comercio y al desarrollo de los gobiernos o agrupaciones económicas.

## METODOLOGIA

La presente investigación, “Las ventajas del comercio internacional en las pequeñas y medianas empresas (PYMES) de Navojoa”, se refiere a una investigación cuantitativa y exploratoria (Hernández Sampieri Roberto, 2010) ya que utiliza la recolección y el análisis de datos para constatar preguntas de investigación y probar hipótesis establecidas previamente, y confía en la medición numérica, el conteo y frecuentemente en el uso de la estadística para establecer con exactitud patrones de comportamiento en una población. Se requirió una recopilación de los datos de la región de Navojoa, Sonora, México. Se partió de una pregunta principal ¿Cuáles son las ventajas que tiene el comercio exterior para las PYMES de Navojoa? Y de la hipótesis, entre más se desarrolle el comercio exterior en Navojoa mayor serán las ventajas para los empresarios navojoenses. Y tuvo como objetivo general, conocer las ventajas que tiene el comercio exterior para las PYMES de Navojoa. Se obtuvo información mediante la aplicación de un cuestionario, información que fue procesada con el paquete estadístico SPSS. Para el estudio fue necesario aplicar un cuestionario con 20 reactivos considerados los necesarios para recabar la información requerida. Para ello se determinó que la unidad de análisis son la PYMES exportadoras de Navojoa, con una población de 40 empresas exportadoras y se encuestaron a todas.

## RESULTADOS

La región sur de Sonora está compuesta por los valles del Yaqui y Mayo. En este último se enclava el municipio de Navojoa, se asienta en la cuenca hidrológica del Río Mayo y se ubica en la planicie costera del Golfo de California. Representa una de las zonas agrícolas más importantes de Sonora, en la cual se fue desarrollando una producción agrícola de exportación. De acuerdo al Censo de Población y Vivienda 2010, Navojoa cuenta con un total de 133,836 habitantes, distribuidos en 32 colonias y 13 fraccionamientos. La investigación parte de la hipótesis de que más se desarrolle el comercio exterior mayores serán las ventajas para los empresarios navojoenses, por lo que la variable, más desarrollo del comercio exterior de Navojoa, tuvo como indicadores, extenderse al exterior, calidad del producto, Imagen corporativa, lugar de establecimiento, desarrollo de la comunicación, asesoría, gestión de las dependencias oficiales y oportunidades para el comercio internacional.

La variable mayores ventajas para los empresarios navojoenses, tuvo como indicadores: Publicidad, nivel de ventas, aceptación del negocio, programa económico definido y concertado que responda a vocaciones regionales y programa de desarrollo tecnológico claro e incluyente. Sobre la variable más desarrollo del comercio exterior se encuestó a los empresarios sobre las dificultades que tienen para extenderse hacia el exterior, se encontró que están principalmente las exigencias de documentos y los trámites burocráticos y así lo manifestó el 50% de los encuestados, y el 42.5% opina que el costo de los trámites son demasiado altos, el resto opina que son otras las dificultades.

El 50% de los empresarios manifiesta estar conforme con las ganancias directas obtenidas con las ventas al comercializar al exterior y el resto simplemente dice estar satisfecho. Un 80% de los encuestados señala que la estrategia para atraer clientes es la calidad del producto y el 20% considera que son los precios

accesibles. Los encuestados consideran que la imagen de la empresa y la disposición de su negocio es muy importante para extenderse a otros países. La variable mayores ventajas para los empresarios navojoenses, se indagó lo siguiente: La falta de oportunidades para el comercio internacional es un impedimento para su desarrollo, en cuanto a que un 80 % de los funcionarios empresariales encuestados de Navojoa consideran que impulsar el comercio exterior tiene un impacto positivo en el desarrollo regional, que efectivamente, si tuvieran oportunidad de desarrollar el comercio exterior aportarían más al desarrollo regional, el resto se muestra indiferente.

En cuanto a la variable mayores ventajas para los empresarios navojoenses, el 75% los encuestados opina que la Publicidad es fundamental para elevar el nivel de ventas y aceptación del negocio. El nivel de ventas y aceptación del negocio son elementos asociados con el éxito de las negociaciones. Para el Programa económico definido y concertado que responda a vocaciones regionales, el 100% de empresarios del sur de Sonora manifiesta su interés de que el programa económico de los municipios responda al desarrollo regional. El 100% de los encuestados reconoce que el gobierno del Estado tiene programa de apoyo a las PYMES, como el programa de apoyo integral, y que apoya a diferentes sectores: a mujeres, jóvenes, otros. El 100% de los encuestados opina que por las características de la región, sobre todo por tener poca industrialización se requiere un Programa de desarrollo tecnológico claro e incluyente. El 70% de los empresarios considera la necesidad de infraestructura científica y tecnológica orientada y vinculada al desarrollo económico para lograr un mejor desarrollo en la localidad.

El 77.5% de los empresarios consideran que si existen las condiciones adecuadas para competir a nivel internacional en una diversidad de productos, en contra parte el 22.5% se mostró temeroso de la participación al exterior. Por otro lado los empresarios definen que la empresa competitiva debe contar con los recursos humanos, financieros, y de capacidad técnica y productiva para poder hacer frente a la competencia y que la exportación requiere de una empresa competitiva para tener éxito en el mediano y largo plazo. Implica encauzar los suficientes recursos (humanos, materiales, financieros) a esta actividad con el fin de convertir a la empresa en una empresa orientada a la exportación. Para el caso de Navojoa suman alrededor de 90 empresas consideradas como pequeñas y medianas empresas y de ellas 40 son las que exportan a diferentes países aprovechando los tratados y convenios internacionales que México tiene con el mundo.

## CONCLUSIONES

Una exportación es cualquier bien o servicio enviado a otra parte del mundo, con propósitos comerciales. La exportación es el tráfico legítimo de bienes y servicios nacionales de un país pretendidos para su uso o consumo en el extranjero. Las exportaciones pueden ser cualquier producto enviado fuera de la frontera de un Estado. El comercio exterior se define como el intercambio de bienes y servicios entre dos bloques o regiones económicas. El punto de partida para iniciar la exportación es contar con un producto competitivo que satisfaga las necesidades, gustos y preferencias del mercado meta mejor que la competencia. Es importante asegurarse de que su producto cuente con ventajas atractivas sobre sus competidores de tal manera que lo haga un producto único o diferenciable.

Los empresarios entienden por competitividad contar con los recursos humanos, financieros, y de capacidad técnica y productiva para poder hacer frente a la competencia y que la exportación requiere de una empresa competitiva para tener éxito en el mediano y largo plazo. “La competitividad internacional de un país se puede definir como la capacidad de producir y vender bienes y servicios al exterior como un medio para aumentar el ingreso real de su población” (Marcue, 7, 2012). Es decir que la competitividad se relaciona con elevar el nivel de vida que se materializa con la generación nuevos empleos. En Navojoa, Sonora el 44% de las empresas pequeñas y medianas son exportadoras, lo que permite que los empresarios estén satisfechos con los resultados de la comercialización y el impacto que esto tiene se relaciona con un mayor

beneficio para la población, como es el caso la generación de empleos, las contribuciones, entre otras. El comercio exterior si trae beneficios para los empresarios navojoenses y reconocen el impacto positivo en el desarrollo regional. El nivel de ventas y aceptación del negocio son elementos asociados con el éxito de las negociaciones.

Es de reconocer que los encuestados reconoce que el gobierno del Estado tiene programa de apoyo a las PYMES, como el programa de apoyo integral y que apoya a diferentes sectores: a mujeres, jóvenes, otros y al mismo tiempo los empresarios opina que por las características de la región, sobre todo por tener poca industrialización se requiere un programa de desarrollo tecnológico claro e incluyente. Por último los empresarios definen que la empresa competitiva debe contar con los recursos humanos, financieros, y de capacidad técnica y productiva para poder hacer frente a la competencia y que la exportación requiere de una empresa competitiva para tener éxito en el mediano y largo plazo. Implica encauzar los suficientes recursos (humanos, materiales, financieros) a esta actividad con el fin de convertir a la empresa en una empresa orientada a la exportación.

## **RESUMEN**

*Una manera de que exista una buena relación de la empresa con el trabajador y una gran influencia en el desempeño sobresaliente para que se cumpla con los objetivos de la organización es la motivación laboral y la eficiencia. Esta investigación plantea la problemática que se presenta en los departamentos de Finanzas y Tool Crib de la empresa Motores Domésticos de Piedras Negras S de R. L de C.V; ya que no se están logrando los objetivos establecidos. Esta investigación tiene por objetivo determinar por medio de un análisis si la influencia de la motivación laboral y la eficiencia del personal son fundamentales para el logro de los objetivos departamentales. La metodología es de tipo descriptiva y los resultados obtenidos en la investigación de la población encuestada fueron: En cuanto en lo que se refiere a la motivación laboral se constata que de la población encuestada el 38% están motivados para desempeñar su trabajo en la obtención de los objetivos departamentales y el 62% consideran que existen áreas de oportunidad dado que poco están motivados. En cuanto a la eficiencia laboral se llega a la conclusión que la población encuestada el 37% consideran que son eficientes en el desempeño de su trabajo en la obtención de los objetivos departamentales y el 63% consideran que existen áreas de oportunidad dado que poco están motivados.*

**PALABRAS CLAVE:** Análisis, Motivación, Desempeño y Eficiencia

## **MOTIVATION AS INFLUENCES IN ACHIEVING GOALS IN THE DEPARTMENT OF FINANCE AND TOOL CRIB CASE: MOTORES DOMÉSTICOS DE PIEDRAS NEGRAS S. DE R.L. DE C.V.**

## **ABSTRACT**

*One way that there is a good relationship between the company and the worker and a great influence on the outstanding performance to ensure compliance with the objectives of the organization is to work motivation and efficiency. This research raises the issue presented in the departments of Finance and Tool Crib Motores Domésticos de Piedras Negras S R. L de C.V , as there are achieving their objectives. This research aims to determine through testing if the influence of work motivation and staff efficiency are fundamental to the achievement of departmental objectives. The methodology is descriptive and the results obtained in the investigation of the population surveyed were: As to what concerns the work motivation is found that of the population surveyed 38% are motivated to do their work in obtaining departmental objectives and 62% believe there are areas of opportunity because some are motivated. In terms of labor efficiency concludes that the population surveyed 37% believe they are efficient in carrying out their work*

*in obtaining departmental objectives and 63% believe that there are areas of opportunity because some are motivated.*

## INTRODUCCION

En las últimas décadas las sociedades industriales han sufrido algunos cambios económicos, culturales y sociales que han tenido un gran impacto en las distintas aéreas del desarrollo humano, afectando no solo la vida del ser humano sino también la relación que se tiene la empresa con el individuo. Este cambio requiere que las sociedades industriales sean dinámicas y que adapten al dicho cambio, que desarrollen en los empleados comportamientos dinámicos y eficientes para que sean capaces de satisfacer las necesidades específicas de un mercado exigente que opera en un medio ambiente dinámico y altamente competitivo. Este desafío no solo lo tiene la empresa, sino cada uno de los empleados que en ella trabajan.

Una forma de que exista una gran influencia en el desempeño sobresaliente de los trabajadores para que cumplan con los objetivos de la organización es la motivación laboral. La motivación es un elemento pero cobra un valor especial en el trabajo de gran importancia para la vida humana ya que es una actividad que ocupamos en la gran parte de nuestra vida por lo que es necesario estar motivados.

La motivación es uno de los factores más importantes y existe como mecanismo para lograr determinados objetivos y metas. Aplicándolo en el ámbito laboral se puede obtener un mejor desempeño en el trabajo, transmitirán de mejor manera la misión de la empresa. Para que esto suceda, cada empleado debe sentirse estimulado a proporcionar su mayor capacidad y para que este estímulo exista la empresa debe motivarle. El objetivo principal de cualquier empresa es alcanzar los estándares más altos de desempeño tanto en el ámbito productivo como el comportamiento de su personal. Por esta razón el objetivo de la presente investigación es determinar por medio de un análisis como influye la motivación y la eficiencia en el logro de los objetivos en los departamentos de servicios de finanzas y Tool Crib.

En la actualidad uno de los problemas más urgentes que encaran las empresas modernas es encontrar la manera de motivar al personal para que pongan más empeño en sus labores y aumentar la satisfacción y el interés en el trabajo. Debido a esto el problema que se presenta en los departamentos de Finanzas y Tool Crib es que no se están logrando los objetivos de la empresa, por lo que el fin de la presente investigación es determinar por medio de un análisis si la influencia de la motivación en la eficiencia del personal es fundamental para el logro de los objetivos en los departamentos antes mencionados. El objetivo de la presente investigación es determinar por medio de un análisis si la influencia de la motivación en la eficiencia del personal es fundamental para el logro de los objetivos en los departamentos de Finanzas y Tool Crib de la empresa Motores Domésticos de Piedras Negras S. de R.L. de C.V. mediante un instrumento de medición llamado encuesta.

## REVISIÓN LITERARIA

### Antecedentes de la Motivación Laboral

La motivación laboral surge por el año de 1700, en el viejo mundo europeo, cuando los antiguos talleres de artesanos se transformaron en fábricas donde decenas y centenares de personas producían operando máquinas; los contactos simples y fáciles entre el artesano y sus auxiliares se complicaron. Había que coordinar innumerables tareas ejecutadas por un gran número de personas y cada una de ellas pensaba de

manera distinta, empezaron los problemas de baja productividad y desinterés en el trabajo. Surge como alternativa ante los conflictos, la falta de entendimiento entre las personas, la desmotivación, la baja productividad y el desinterés, por mencionar algunos; es una alternativa que logró la mediación entre los intereses patronales y las necesidades o expectativas de los trabajadores, porque en donde existen varias personas laborando, las relaciones se complican y hay que emplear la cabeza para reflexionar, decidir y comunicar. El Psicólogo F: (Dorsch, 1988), menciona que la motivación es "el trasfondo psíquico e impulsor que sostiene la fuerza de la acción y señala la dirección a seguir". Los seres humanos actuamos siguiendo determinados móviles y buscando fines; siempre obedeciendo a motivaciones de diversos géneros. Se puede decir que la motivación es considerada como "el conjunto de las razones que explican los actos de un individuo" o "la explicación del motivo o motivos por los que se hace una acción".

Según (Schultz, 1995) sean hechos progresos muy importantes en las técnicas de reclutamiento, selección, asignación y capacitación de empleados. Pero ninguna de las actuales lograra la calidad del trabajo, a menos que el personal este motivado para rendir su máximo esfuerzo posible.

En 1970 el Dr. Rogelio Díaz Guerrero realizó encuestas que le demostraron que en México al 68% de los trabajadores, les gusta su trabajo (1988). En 1982, "el Centro de estudios educativos" encontró que el 83% de los trabajadores, se encontraban entre muy y bastante orgullosos de su trabajo. Estos estudios han concluido que él, problema en general no es, pues, el trabajo en sí, sino las relaciones humanas y las actitudes personales. De acuerdo al salario mínimo o inferior de México se considera que muchos de ellos tienen fuertes carencias en su alimentación, por lo tanto es comprensible que les importe poco su seguridad, el amor, la dignidad o su ausentismo laboral. Los lugares que ofrecen niveles elevados de salario y prestaciones al trabajador mexicano, además de seguridad física y estabilidad económica; demuestran que el personal se encuentra con demasiada necesidad de contacto social y búsqueda continúa de relaciones interpersonales. En estas organizaciones son muy dados a los festejos y la comunicación excesiva. A continuación aparecen algunas investigaciones nacionales e internacionales relacionadas con la motivación laboral: Un estudio realizado por (Asensio, 2008) menciona que el objetivo general es establecer cuáles son los factores motivacionales que influyen en los agentes de "merchandising" de los supermercados de la cabecera departamental de Zacapa.

Trabajó en los seis principales supermercados de Zacapa en donde tuvo como base a 20 supervisores de empresas proveedoras en esos puntos de venta. Como instrumento de investigación utilizó dos cuestionarios elaborados por el investigador con 16 preguntas abiertas. Estableció como resultados que los factores motivacionales que influyen en los colaboradores son las necesidades fisiológicas o básicas y de seguridad, así como características del puesto y prácticas organizacionales. Recomendó que se debe conocer los factores motivacionales para tomar en cuenta las necesidades reales del recurso humano así como que se evalúe periódicamente el personal para tener retroalimentación de su desempeño

Así mismo, (Palma, 2000) realizó un estudio en donde la motivación se encuentra como factor influyente en el desempeño laboral. La muestra se integró por la población de trabajadores de la planta de producción de pinturas más grande de Centroamérica. El grupo fue conformado por 118 hombres y 2 mujeres con edades comprendidas entre los 16 y 58 años y con más de tres meses de laborar en la empresa. Utilizó un cuestionario de motivación al logro del doctor Morales Madrid y el cuestionario de Evaluación del Desempeño elaborado por la empresa. Las variables que estudió fueron motivación al logro, nivel de aspiraciones, nivel de constancia en el trabajo, nivel de organización, métodos de trabajo y desempeño laboral. Concluyó que no existe correlación entre el desempeño laboral y motivación al logro por lo que recomendó el enriquecimiento del trabajo, crear programas que motiven al logro e identificar necesidades que se puedan utilizar como motivadores.

(Mejía, 2007 ), en su estudio descriptivo que tenía como objetivo identificar los factores que motivan a los

colaboradores, tanto de nivel administrativo como operativo de una empresa familiar de entretenimiento, trabajó con una muestra de 38 colaboradores utilizando un cuestionario de 13 preguntas. Los resultados indicaron que los colaboradores carecen de incentivos económicos y no económicos así como la necesidad de que la empresa los apoye a superarse profesionalmente, les brinde seguridad física y emocional. Recomendó implementar el programa de incentivos económicos y no económicos como método de motivación al mismo tiempo deben mejorar la comunicación entre jefes y subordinados.

La investigación realizada por (Bartolo, 2006), tuvo como objetivo general realizar un análisis del nivel de motivación del personal que se encuentra en un departamento ubicado en el área de exploración de una empresa paraestatal en la ciudad de Veracruz, México. La muestra fue basada en un censo ya que el personal del área de exploración cuenta con 37 empleados únicamente a los cuales se les hizo una encuesta que estudió cinco variables intrínsecas o motivacionales y siete variables extrínsecas o de higiene. Como recomendación a la empresa indicó que si la gerencia considera generar un nivel alto de motivación se deben apoyar los factores intrínsecos ya que según los trabajadores éstos son los más importantes que deben fomentar sin olvidar los factores extrínsecos que sirven como refuerzo.

### Marco Conceptual

(Donnelly, 1992), Define la Motivación es un término general que se aplica a todo tipo de impulsos, deseos, necesidades, aspiraciones, y fuerzas similares”. “Según (Koontz, H. y Werhrich , 1991). La motivación es el proceso de estimular a un individuo para que actúe, con lo cual cumplirá una meta deseada”. “Para (Robbins, 1998). La motivación es la voluntad de ejercer un esfuerzo persistente y de alto nivel en favor de las metas de la organización, condicionado por la habilidad del esfuerzo para satisfacer algunas necesidades individuales”. “En (Gibson, J. y Otros, 1990). Dice: A pesar de la importancia obvia de la motivación, resulta difícil definirla y aplicarla en las organizaciones. Una definición propone que la motivación tiene que ver con: 1) la dirección de la conducta; 2) La fuerza de la respuesta (ósea, esfuerzo) una vez que un empleado decide seguir un curso de acción; y 3) la persistencia de la conducta o por cuánto tiempo la persona sigue portándose de una manera en particular”.

(Rivas L. , 2010) “La motivación es una conducta impulsada por la realización de deseos y satisfacción de necesidades, un esfuerzo para lograr una meta determinada”. Motivación es el esfuerzo hacia una meta, se busca satisfacer una necesidad. Ya que las personas altamente motivadas pueden aportar incrementos sustanciales en ausentismo, impuntualidad etc. Por lo que debemos destacar el esfuerzo y persistencia la dirección de las metas y necesidades de la organización aplicando las teorías motivacionales para que sean de gran ayuda. Las necesidades no satisfechas crean tensión, y esto estimula los deseos del individuo. Según (Robbins, 1998). Una necesidad en nuestra terminología, significa algún estado interno que hacen parecer atractivos ciertos resultados.

Por su parte, (Chiavenato, 2000) la define como “el resultado de la interacción entre el individuo y la situación que lo rodea”. Según (Chiavenato, 2000) para que una persona esté motivada debe existir una interacción entre el individuo y la situación que este viviendo en ese momento, el resultado arrojado por esta interacción es lo que va a permitir que el individuo este o no motivado. Según (Stoner, 1996) define la motivación como “Una característica de la Psicología humana, incluye los factores que ocasionan, canalizan y sostienen la conducta humana. Lo que hace que las personas funcionen”. Desde mi parecer en esta definición el autor nos da a entender que la motivación viene siendo como un motor si lo comparamos con un automóvil, es decir, que si las personas se encuentran motivadas estas funcionan como el automóvil, en caso contrario habría que empujarlas, pero cuanta energía no se gastaría durante todo este proceso. Así mismo, (Mahillo, 1996) define la motivación como “el primer paso que nos lleva a la acción”. Entiendo esta definición como que para que el individuo realice sus acciones este debe de estar motivado, de lo contrario hay que empujarlo al igual que un carro cuando este se apaga, para que pueda realizar las acciones, esto también ocasiona desde mi parecer un gasto de energía enorme, lo que origina que los gerentes que no

tengan estrategias claras sobre la motivación de sus empleados pasen la mayor parte de su tiempo ocupado en como incentivar a estos trabajadores.

(Feldman, 1998) Dice que "el estudio de la motivación consiste en determinar por qué las personas buscan hacer determinadas cosas". Esto es, estudia los motivos que rigen las acciones de los individuos. Es interesante conocer el porqué de muchas de las acciones que rigen la vida de las personas y la respuesta es revelada a través de los motivos. "Si se conocen los motivos que originan una determinada conducta entonces, al ejercer cierta influencia para provocar o inhibir estos motivos, se podrá reforzar o quitar la conducta que dichos motivos originan". La motivación trascendente se orienta a satisfacer, en los otros, necesidades no demandadas. Trascender adquiere aquí un sentido nuevo: por beneficiar a otro, me aventuro a pasar por encima de mí mismo. (Pérez López, 1979) Las modernas concepciones gerenciales no consideran recomendable la utilización de la motivación negativa (la amenaza, el miedo), y, por lo general, proponen el castigo como último recurso para enfrentar conductas no deseadas. (Hellriegel, D. y Slocum, J., 2004), destaca que el castigo puede surtir efecto en el corto plazo, pero a largo plazo puede originar *recurrencia de la conducta indeseada, reacción emocional no deseada, conducta agresiva destructiva, desempeño apático y falta de creatividad, temor al administrador del castigo y rotación y ausentismo laboral*. En otros términos, la teoría de los dos factores de Herzberg afirma que:

La satisfacción en el cargo es función del contenido o de las actividades retadoras y estimulantes del cargo que la persona desempeña: son los factores motivacionales o de satisfacción. La insatisfacción en el cargo es función del contexto, es decir, del ambiente de trabajo, del salario, de los beneficios recibidos, de la supervisión, de los compañeros y del contexto general que rodea el cargo ocupado: son los factores higiénicos o de insatisfacción según se aprecia en la siguiente tabla.

Tabla1: Human Behavior of Work: Human Relations and Organizational Behavior

Factores Higiénicos	Factores Motivadores
<ul style="list-style-type: none"> <li>- Factores económicos: Sueldos, salarios, prestaciones.</li> <li>- Condiciones físicas del trabajo: Iluminación y temperatura adecuadas, entorno físico seguro.</li> <li>- Seguridad: Privilegios de antigüedad, procedimientos sobre quejas, reglas de trabajo justas, políticas y procedimientos de la organización.</li> <li>- Factores Sociales: Oportunidades para relacionarse con los demás compañeros.</li> <li>- Status: Títulos de los puestos, oficinas propias, privilegios.</li> <li>- Control técnico.</li> </ul>	<ul style="list-style-type: none"> <li>- Tareas estimulantes: Posibilidad de manifestar la propia personalidad y de desarrollarse plenamente.</li> <li>- Sentimiento de autorrealización: Certeza de contribuir en la realización de algo de valor.</li> <li>- Reconocimiento de una labor bien hecha: La confirmación de que se ha realizado un trabajo importante.</li> <li>- Logro o cumplimiento: La oportunidad de realizar cosas interesantes.</li> <li>- Mayor responsabilidad: El logro de nuevas tareas y labores que amplíen el puesto y brinden un mayor control del mismo.</li> </ul>

Fuente: (Keith Davis, 1979)

De la teoría de Herzberg se deriva el concepto de Job enrichment (enriquecimiento del trabajo) que supone diseñar el trabajo de un modo más ambicioso de modo que permita satisfacer motivos de más alto valor. Para lograrlo se deben aplicar los siguientes principios (Engel y Redmann, 1987)

Suprimir controles.

Aumentar la responsabilidad sobre las tareas a desarrollar.

Delegar áreas de trabajo completas.

Conceder mayor autoridad y mayor libertad.

Informar sobre los avances y retrocesos.

Asignar tareas nuevas y más difíciles.

Facilitar tareas que permitan mejorar.

### Dimensiones de la Motivación

De lo hasta ahora expuesto se deduce que la motivación tiene tres dimensiones. De acuerdo los autores (Muchinsky, P., Robbins y Gibson, 2000), identifican esas tres dimensiones: *intensidad* (o fuerza), *dirección* (u orientación) y *persistencia* (o perseverancia).

(Blum, Milton y James Naylor, 1999), presentan una interesante síntesis sobre los hechos que hacen complejos tanto el fenómeno de la motivación como cualquier intento de estudiarla. Hay una frase muy buena de Albert Einstein que dice: “Hay una fuerza motriz más poderosa que el vapor, la electricidad y la energía atómica: la voluntad”. Establecer incentivos y sistemas de motivación que cubran expectativas reales de los miembros de la empresa es vital, tener estrategias motivacionales es básico para que los empleados se involucren y comprometan. El crear hábitos institucionales en los que diariamente se valore el esfuerzo del trabajador y sobre todo se humanice el trato, la clásica “palma en el hombro” es un detalle que anima al miembro del grupo y más si quien la proporciona tiene una jerarquía importante en la empresa.

### Motivación en Eficiencia de Logro de Objetivos

Dado que todas las empresas están empeñadas en producir más y mejor en un mundo competitivo y globalizado, la alta gerencia de las organizaciones tiene que recurrir a todos los medios disponibles para cumplir con sus objetivos. Estos medios están referidos a: planeamiento estratégico, aumento de capital, tecnología de punta, logística apropiada, políticas de personal, adecuado uso de los recursos, etc.

En dicho contexto, la motivación del personal se constituye en un medio importante para apuntalar el desarrollo personal de los trabajadores y, por ende, mejorar la productividad en la empresa.

### Motivación y Conducta

Con el objeto de explicar la relación motivación-conducta, es importante partir de algunas posiciones teóricas que presuponen la existencia de ciertas leyes o principios basados en la acumulación de observaciones empíricas. Según Chiavenato, existen tres premisas que explican la naturaleza de la conducta humana. Estas son:

- a) El comportamiento es causado.
- b) El comportamiento es motivado.
- c) El comportamiento está orientado hacia objetivos

Para la mejor comprensión de los recursos humanos en el ámbito laboral, es importante conocer las causas que originan la conducta humana. El comportamiento es causado, motivado y orientado hacia objetivos. En tal sentido, mediante el manejo de la motivación, el administrador puede operar estos elementos a fin de que su organización funcione más adecuadamente y los miembros de ésta se sientan más satisfechos; en tanto se controlen las otras variables de la producción. Al respecto, (Stoner, James; Freeman, R. Edward y Gilbert Jr, Daniel R., 1996), señalan que “los gerentes y los investigadores de la administración llevan mucho tiempo suponiendo que las metas de la organización son inalcanzables, a menos que exista el compromiso permanente de los miembros de la organización. La motivación es una característica de la psicología humana que contribuye al grado de compromiso de la persona.” En ese mismo contexto, Judith Gordon señala que: “todos los administradores enfrentan un reto enorme: motivar a los empleados para que produzcan los resultados deseados, con eficiencia, calidad e innovación”.

## METODOLOGÍA

La presente investigación es de tipo descriptivo ya que presenta hechos a partir de un criterio o modelo teórico definido previamente para darle solución al problema a través de información obtenida de la organización. El lugar en el que se realizara la investigación será en la empresa Motores Domésticos de Piedras Negras S. de R.L. de C.V. Ubicada en Parque Industrial la Amistad No s/n y está delimitada al periodo de Enero a Noviembre del 2013. La población de esta investigación es con los trabajadores de los departamentos de Finanzas y Tool Crib tanto de sexo masculino como femenino con edades comprendidas entre los 20 a los 40 años. La muestra de esta investigación será el 100% de alrededor de 32 empleados de los departamentos antes mencionados. El instrumento de medición que se utilizara será un cuestionario con 28 ítems en la escala de Likert que permitieron obtener información de los empleados de los departamentos sujetos de esta investigación.

## RESULTADOS

Los resultados de esta investigación se graficaron en función de los factores que fueron medidos los cuales están considerados en dos variables que son la motivación laboral y la eficiencia en el logro de los objetivos departamentales que se describen a continuación.

Figura 1: Variable Motivación

Fuente: Elaborado por el investigador

representa los resultados obtenidos que corresponden a la variable de Motivación Laboral. Como se puede observar 38% de la población encuestada manifiestan que siempre y casi siempre se sienten motivados en el trabajo y el 32% casi nunca y nunca están motivados y el 30% Algunas veces se sienten motivados.

Figura 2: Variable Eficiencia

Fuente: Elaborado por el investigador

En esta figura se muestra la representación de la gráfica de los resultados obtenidos que corresponden a la Variable de Eficiencia Laboral. Como se puede observar el 37% de la población encuestada manifiestan que siempre y casi siempre son eficientes en la realización de sus actividades relacionados con los objetivos departamentales y el 27% mencionaron que casi nunca y nunca son eficientes y el 32% que algunas veces lo hacen.

Figura 3: Grafica Global De Variable Motivación Y Eficiencia

Fuente: Elaborado por el investigador

En esta figura se muestra la representación de la gráfica global de los resultados globales obtenidos que corresponden a las dos Variables de Motivación y Eficiencia Laboral. Como se puede observar 37% de la población y el 31% manifestaron que siempre y casi siempre no están motivados y eso no incrementa la eficiencia en el logro de los objetivos departamentales y el 32% afirmaron que en algunas veces lo hacen.

## CONCLUSIONES

El trabajador motivado sobre la base de sus propios intereses, sus vivencias, estar en las mejores condiciones para desempeñar de manera eficiente sus actividades laborales de ahí la importancia que el jefe conozca bien a sus trabajadores, que tenga una buena relación y del medio social del cual son parte, para que respondan de manera eficientemente sus actividades laborales y que se logren los objetivos de la organización. Una buena forma de motivar a los trabajadores es reconociendo su esfuerzo y desempeño laboral; Así el trabajador mostrara mayor interés en su trabajo y lo desempeñara de mejor manera posible.

En cuanto en lo que se refiere a la motivación laboral se constata que de la población encuestada el 38% están motivados para desempeñar su trabajo en la obtención de los objetivos departamentales y el 62% consideran que existen áreas de oportunidad dado que poco están motivados. En cuanto a la eficiencia laboral se llega a la conclusión que la población encuestada el 37% consideran que son eficientes en el desempeño de su trabajo en la obtención de los objetivos departamentales y el 63% consideran que existen áreas de oportunidad dado que poco están motivados.

### Respuestas a las Preguntas de Investigación

*¿Los trabajadores consideran que la motivación influye en el logro de los objetivos de la organización? Aunque existen pocas acciones que motiven a los trabajadores de la empresa estos, están conscientes que la motivación si incide en el logro de los objetivos departamentales ¿Qué induce a las personas a comportarse, pensar o sentir de una determinada manera que tiene una relación con los objetivos departamentales? La mejor manera de motivar a los empleados es el mejoramiento económico, prestaciones como el ahorro, utilidades anuales, aguinaldo, rifas, viajes, eventos sociales. ¿Cuáles son algunos factores que incrementan la eficiencia en los trabajadores para producir más y mejor? La relación entre jefe y subordinado, mejoramiento en las relaciones interpersonales, actualización permanente, fomentar una cultura de valores relacionada con principios que la dedicación, el esfuerzo, compromiso y la responsabilidad en el trabajo entre otros.*

### Recomendaciones

Sabemos que la motivación en el proceso laboral es muy importante y es en donde se generan algunos intereses que mantendrán la atención y el mejor desempeño en cuanto a la eficiencia del individuo en las actividades que realice por lo que se sugiere:

Levantar un informe de necesidades básicas de tal manera que se considere mejorar las condiciones económicas y calidad de vida de las personas.

Se les recomienda crear un sistema de reconocimiento por labor cumplida, para estimular el esfuerzo y la dedicación en la actividad que se desempeña y mejorar el nivel de eficiencia.

Planificar talleres de motivación al logro y desarrollo personal que les permita elevar la autoestima deseos de superación y eficiencia.

Promover actividades de mejoramiento profesional que estimulen al personal a desarrollarse eficientemente en la organización.

Organizar actividades recreativas donde se les brinde la posibilidad a todo el personal de participar activamente y unir lazos de amistad y cooperación.

# DIAGNÓSTICO DE LOS FACTORES QUE INFLUYEN EN LA COMPETITIVIDAD DE LAS EMPRESAS DE ALOJAMIENTO

Carlos Anibal Manosalvas Vaca, Universidad Estatal Amazónica

Luis Oswaldo Manosalvas Vaca, Universidad Estatal Amazónica

## RESUMEN

*En la actualidad, las empresas que desarrollan actividades relacionadas al turismo, están inmersas en un mundo globalizado, caracterizado por la aparición de mercados más competitivos y clientes mejor informados y más exigentes; lo que las ha obligado a diseñar e implementar estrategias innovadoras con el objetivo de mejorar su desempeño, rentabilidad, y su posición frente a sus competidores. Bajo este contexto, en este estudio se analiza cuáles son los factores que influyen en la Competitividad de las empresas de alojamiento de la Provincia de Pastaza - Ecuador, desde el punto de vista de gerentes y propietarios, con el objetivo de determinar cuáles son las variables más importantes sobre las que se deben diseñar las estrategias que les permitan ser más competitivas y obtener mejores resultados. El modelo subyacente utilizado para aplicar las encuestas, fue el Diamante de Porter, enriquecido con otras variables de otros estudios que analizan la competitividad en la industria hotelera. Los resultados muestran que casi todas las variables tienen una influencia directa en cada categoría de empresa de alojamiento, encontrando diferencias significativas en las variables: innovación, capital de inversión y recursos turísticos y culturales.*

**PALABRAS CLAVE:** Competitividad, Hotelería, Competitividad Turística, Gestión Hotelera

## DIAGNOSIS OF THE FACTORS INFLUENCING THE COMPETITIVENESS OF HOSPITALITY COMPANIES

### ABSTRACT

*Currently, companies developing tourism related activities, are immersed in a globalized world, characterized by the appearance of better informed and more demanding and competitive markets and customers; which has forced them to design and implement innovative strategies to improve their performance, profitability, and its position compared to its competitors. In this context, this study analyzes the factors influencing the competitiveness of hospitality companies (hotels) in Pastaza Province - Ecuador, from the point of view of managers and owners, in order to determine which variables are most important of which must design strategies to become more competitive and to obtain better results. The underlying model used to implement the survey, was the Porter Diamond, enriched with other variables from other studies that analyze the competitiveness in the hospitality industry. The results show that almost all variables have a direct influence on each category of these companies, finding significant differences in the variables: innovation, capital investment and tourism resources and cultural*

## INTRODUCCIÓN

En los últimos años, la competitividad de las empresas ha sido un tema de gran interés para muchos estudiosos de la Economía y los Negocios, debido principalmente a los nuevos retos que enfrentan las empresas hoy en día. Factores como la globalización, las tecnologías de información, la nueva generación de clientes mejor informados y más exigentes y la aparición de mercados con actores cada vez más competitivos, han obligado a la mayoría de empresas a buscar mecanismos que permitan mejorar su posición frente a sus competidores, con el objetivo de obtener mayores ganancias. La mayoría de estudios relacionados a la competitividad, se han desarrollado en empresas de manufactura y sectores relacionados, y solo en años recientes, los investigadores comenzaron a examinar la competitividad internacional en el sector de los servicios, y principalmente en los destinos turísticos y la industria hotelera (Tsai H., Sonh H. & Wong K., 2009), toda vez que, la presencia de hoteles en un territorio determinado, contribuye a la generación de empleo y tiene un efecto indirecto sobre el medio ambiente que los rodea; además, da soporte a otras actividades turísticas, mejora el bienestar de la gente en las áreas de influencia turística y revitaliza una serie de actividades económicas que pueden desaparecer sin la presencia de un Hotel (Carmona G., 2012).

Bajo este contexto; y, tomando en cuenta que el turismo es una actividad clave para el desarrollo económico de cualquier nación, ciudad o destino turístico, este estudio pretende determinar cuáles son los factores que influyen en la competitividad de las empresas de alojamiento de la Provincia de Pastaza, desde el punto de vista de los gerentes y propietarios de estos establecimientos. El objetivo principal es sentar las bases que permitan diseñar un sistema de gestión estratégica que, en base a los resultados de este diagnóstico y al análisis de estudios similares realizados en otros países, permita mejorar la competitividad de las empresas del sector hotelero de la Provincia de Pastaza, considerando además que este sector es uno de los componentes importantes de toda actividad turística.

## REVISIÓN DE LA LITERATURA

### Competitividad

La competitividad se define como la habilidad de una organización para obtener y mantener ventajas comparativas, que le permitan alcanzar, sostener y mejorar una determinada posición en un ambiente socioeconómico (Carmona G., 2012, Tomado de Porter 2005). La competitividad es un concepto amplio que puede ser observado desde diferentes perspectivas; sin embargo, la literatura provee dos connotaciones de este concepto: macro y micro. Desde una perspectiva macro, la competitividad es un asunto de interés a nivel de naciones, cuyo objetivo principal es el de mejorar el ingreso real de toda la comunidad (Gomezelj D., 2006). Desde una perspectiva micro, este concepto es visto como un fenómeno a nivel de empresas, donde la competitividad se define como la habilidad de una organización para competir, crecer y ser rentable; en otras palabras, la capacidad de las empresas para producir, de forma rentable, bienes y servicios que satisfagan las necesidades de un mercado. Aunque el concepto a nivel micro es ampliamente aceptado, a un nivel macro, la competitividad de una nación, no está definida claramente y no existe un concepto universalmente aceptado (Hategan D., 2012).

A pesar de todo esto, la investigación sobre competitividad, tuvo un impulso importante con los trabajos desarrollados por Michael Porter. Una de sus obras más importantes relacionadas a este tema es “La Competitividad de las Naciones” (1990), donde este autor define la Competitividad de una Nación como su capacidad de mantener una posición de ventaja frente a otras naciones, en los sectores industriales clave. La competitividad de una nación depende además de la capacidad de innovación que tengan sus industrias. Como resultado de sus estudios, desarrolló un modelo que determina cuáles son los factores que influyen

en la ventaja competitiva que puede alcanzar una empresa y en consecuencia una nación; este modelo se denomina “El Diamante de Porter”. De acuerdo a este modelo, la capacidad para innovar se ve afectada por cuatro grandes atributos: condiciones de los factores, condiciones de la demanda, sectores afines y auxiliares, y estrategias, estructura y rivalidad de las empresas (Porter M., 1990). Las condiciones de los factores hacen referencia a los factores de producción que posee una nación. El autor reconoce dos tipos de factores: básicos y avanzados. Los factores básicos se refieren a recursos naturales, clima, localización y demografía. Los factores avanzados son aquellos aspectos relacionados a comunicaciones, infraestructura, habilidades sofisticadas y facilidades para la investigación y desarrollo; todos ellos necesarios para competir en una industria. En relación a las condiciones de la demanda, las empresas suelen ser más sensibles a las necesidades de sus clientes más cercanos, por lo tanto, las características de la demanda interna son particularmente importantes al momento de configurar los atributos de diferenciación de los productos de fabricación nacional y en la creación de presiones para la innovación y la calidad. Los sectores auxiliares y afines hacen referencia a la presencia o ausencia en la nación de proveedores y empresas auxiliares que sean internacionalmente competitivas. Finalmente, la estructura y rivalidad de las empresas hace referencia a las estructuras, metas, prácticas empresariales, actitudes individuales, y la intensidad de la rivalidad dentro del sector de negocio (Grant R., 1990).

### Competitividad en el Sector Hotelero

La competitividad de una nación, depende del desempeño de sus empresas, dentro de las cuales están incluidas las empresas de la industria hotelera. Esta industria se beneficia del crecimiento y estabilidad de los destinos turísticos, además del desarrollo de las comunidades en general. Sin embargo, existen muchos otros factores que determinan la competitividad de un hotel: procesos, salidas, resultados, etc., (Tsai H., Sonh H. & Wong K., 2009). Tsai et al. (2009), realizaron una investigación exhaustiva relacionada a los factores que influyen de la Competitividad de los Hoteles, y destinos turísticos, así como los principales modelos que se han creado para medir la competitividad en este sector. Luego de un profundo análisis de varios estudios, los autores concluyeron que, los factores más importantes que afectan la competitividad de un hotel son: características del destino turístico, talento humano (nivel de preparación y entrenamiento), tecnología, estrategia empresarial, productividad, capital, calidad del servicio, imagen, alianzas estratégicas, costos operacionales, condiciones del mercado, condiciones de la demanda, precio, características físicas, y gestión de los procesos.

Este estudio se complementa con otros que analizan la influencia de diferentes factores internos y externos que influyen sobre la competitividad de las empresas hoteleras; por ejemplo, Ivanovic, Mikinac, & Perman (2011), señalan que, la implementación del CRM (Customer Relationship Management), desde el punto de vista estratégico y tecnológico, es un componente indispensable para el funcionamiento de las empresas en mercados globales. Por otro lado, Sanchez, Leon, Gutierrez (2010), manifiestan que, la comunicación entre trabajadores y líderes se considera la variable más significativa que impulsa el empoderamiento; una característica vital en la industria hotelera que permitirá al talento humano que trabaja en ella, ofrecer un excelente servicio e incrementar la competitividad de la misma. Para Metaxas (2009), el marketing de lugares (place marketing), es un proceso estratégico con varias fases de desarrollo que lleva a la creación de un destino atractivo y competitivo, sin embargo, para Cegarra J., & Martínez-Martínez A., (2009), la implementación de este tipo de iniciativas, aunque son importantes, no son suficientes para mejorar la competitividad de los hoteles.

La gestión del conocimiento contribuye también a establecer ventajas competitivas sobre los competidores dentro de la industria hotelera y el turismo (Bouncken, & Sungsoo Pyo, 2002) Además de todo esto, el ambiente complejo e impredecible en el que operan actualmente las empresas hoteleras, obliga a los gerentes y propietarios a utilizar modelos y herramientas cuantitativas y cualitativas para la toma de decisiones con el objetivo de disminuir la incertidumbre (Raguz, Pavlić & Svilokos 2011) y garantizar así su permanencia en el mercado y la obtención de una mayor competitividad. Tomando como base la literatura citada, el presente estudio busca determinar qué factores internos y externos inciden sobre la

competitividad de las empresas hoteleras de la provincia de Pastaza, tomando como referencia el modelo de Porter y otras variables complementarias que se han incluido en este modelo.

## METODOLOGÍA

La metodología aplicada para realizar este estudio, se compuso de dos fases. En la primera fase se realizó una investigación secundaria, para determinar el número de establecimientos hoteleros registrados en el Catastro del Ministerio de Turismo del Ecuador. En la segunda fase se realizó una investigación de campo exploratoria-inductiva, con la aplicación de una encuesta personal, aplicada a los gerentes y propietarios de establecimientos hoteleros de la Provincia. Esto permitió conocer de forma directa su punto de vista sobre los factores que influyen en la competitividad de sus establecimientos.

Tabla 1: Estructura del Cuestionario

Vértice del Diamante de Porter	Variable a Ser Evaluada
Condiciones de los Factores	Recursos Naturales Recursos Turísticos y culturales Infraestructura Recursos Humanos Nivel de Seguridad
Sectores de Apoyo y relacionados	Conocimiento del Know How Turístico Proveedores de Transporte Proveedores de alimentos y bebidas Proveedores de material y equipo de oficina Proveedores de Servicios básicos Proveedores de servicios de mantenimiento y limpieza Proveedores de Servicios Médicos Proveedores de Servicios Financieros Centros de Diversión (Bares, discotecas, etc) Restaurantes y Cafeterías Intermediarios de servicios turísticos (agencias, operadoras) Valor Agregado Tecnología
Estrategia, estructura y rivalidad de las empresas	Diseño y ejecución de Estrategias Modelo de negocio Capital Intelectual (Talento Humano) Precio Cultura organizacional Estructura organizativa Flexible Conocimiento del Mercado Responsabilidad Social empresarial (velar por el cuidado del medio ambiente promover proyectos de carácter social) Mejoramiento Continuo de procesos productivos Satisfacción de clientes Innovación Certificaciones de Calidad Adaptación rápida al cambio Estrategias de Marketing (Segmentación, Posicionamiento, Promoción) Capital de Inversión
Gobierno	Servicios prestados por el Gobierno Planificación Estratégica de desarrollo turístico Promoción Turística
Todos los Vértices	Estrategias y estructuras empresariales Rivalidad (Competencia entre empresas de alojamiento) Sectores de apoyo al sector turístico (proveedores) Sectores que bienes y servicios para empresas de alojamiento (agencias, operadoras, etc) Características de los turistas Apoyo del Gobierno

*Esta tabla muestra las distintas variables analizadas dentro de cada uno de los vértices del Modelo de Porter utilizado. Aunque no está presente el vértice Condiciones de la Demanda, las variables para medirlo se han incluido en el componente: Estrategia, estructura y rivalidad de las empresas*

### Técnicas De Recolección De Información

*Datos Primarios:* Son los datos que el investigador obtiene de primera mano; es decir, directo de la fuente de información. Los datos se obtuvieron utilizando un cuestionario, estructurado en base al Diamante de Porter (Betancort B. & Fernandez H., 2002), al cual se han añadido otras variables y factores tomados de diferentes estudios de la competitividad en empresas de alojamiento y destinos turísticos. La estructura del cuestionario fue la siguiente:

*Datos Secundarios:* Son los datos ya investigados u obtenidos de otras fuentes. Los sitios web del ministerio de Turismo y el INEC fueron las fuentes secundarias principales de esta investigación. La información que se obtuvo fue el listado de hoteles registrados en el catastro del Ministerio de Turismo del Ecuador, la categoría a la que pertenecen y el tipo de establecimiento: Hotel, Hostería, Hostal, Hotel residencia, Hostal residencia, y Cabaña. La encuesta se aplicó por igual a los gerentes y propietarios de todas las empresas de alojamiento, sin embargo, para el análisis estadístico, se tomó en cuenta el tipo de establecimiento encuestado.

### Muestra

Al realizar la investigación secundaria, se pudo observar que, en el Catastro del Ministerio de Turismo ecuatoriano se encuentran registrados 55 establecimientos hoteleros. Luego de un análisis de costos, y por la importancia de obtener información confiable, se decidió realizar la investigación en todos los establecimientos registrados, convirtiéndose este número entonces, en la población de estudio. Para obtener la información, se solicitó una cita con el gerente o propietario de cada uno de estos establecimientos, para explicar brevemente los objetos de la investigación y para aplicar la encuesta. Se obtuvo respuesta favorable del 70% de los encuestados. Aunque no se pudo obtener una respuesta favorable del total de la población de estudio, el 70% que sí respondió, puede utilizarse de forma confiable para estimar los resultados de la población.

## **RESULTADOS**

Los resultados obtenidos, fueron sometidos a un análisis estadístico descriptivo, que consistía en analizar las respuestas obtenidas en cada variable por cada tipo de establecimiento: hotel, hostería, hostal y pensión; en la tabla 2 se muestran los resultados de las variables del primer componente del modelo de Porter utilizado: condiciones de las factores. Como puede observarse, cada tipo de empresa asigna una calificación diferente a una misma variable. Para determinar si estas diferencias se deben a errores de muestreo o realmente representan una diferencia significativa, se aplicó la prueba estadística no paramétrica de Kruskal Wallis a todas las variables analizadas, toda vez que, la mayoría de variables no presentan una distribución normal, un supuesto imprescindible si desea aplicar pruebas paramétricas. Se utilizó la prueba estadística de Kolmogorov-Smirnov para determinar la normalidad de todas las variables. La hipótesis nula de la que se parte para aplicar las pruebas estadísticas mencionadas, es que no existe diferencia en las medias que asignan cada tipo de establecimiento a cada una de las variables:  $\mu_1 = \mu_2 = \mu_3 = \mu_4$

Tabla 2: Análisis Descriptivo de las Variables Correspondientes al Componente Condiciones de los Factores

Tipo de Establecimiento		Componente Condiciones de los Factores					Seguridad
		Recursos Naturales	Recursos Turísticos y Culturales	Infraestructura	Recursos Humanos	Conocimientos del Know How Turístico	
Hotel	Media	4,33	4,33	4,20	3,20	4,00	4,50
	Desv. típ.	,816	1,033	1,304	1,304	,894	,837
Hosteria	Media	4,22	4,67	3,22	3,67	3,88	4,33

	Desv. típ.	,833	,500	1,787	1,581	1,356	1,118
Hostal	Media	4,00	3,95	3,37	3,26	2,89	3,58
	Desv. típ.	1,054	,848	1,165	1,195	1,329	1,071
Pension	Media	2,80	2,80	3,20	3,20	3,40	3,40
	Desv. típ.	1,304	1,095	,837	1,304	,894	1,140
Total	Media	3,95	4,03	3,42	3,34	3,34	3,87
	Desv. típ.	1,075	,986	1,308	1,279	1,279	1,105

*Estadísticas Descriptivas del primer componente del Modelo utilizado. Los resultados están agrupados por cada una de las categorías de empresas de alojamiento.*

Al aplicar la prueba estadística, la mayoría de variables no mostraron una diferencia significativa a un nivel de confianza del 5%; a excepción de tres: Recursos Turísticos y Culturales, Innovación y capital de Inversión; los resultados se pueden observar en la tabla 3:

Tabla 3: Variables Que Muestra Diferencias Significativas

Estadísticos de Contraste <sup>a,b</sup>			
	Recursos Turísticos y Culturales	Innovación	Capital de Inversión
Chi-cuadrado	11,405	8,069	9,507
Gl	3	3	3
Sig..	,010	,045	,023

*a. Prueba de Kruskal-Wallis; b. Variable de agrupación: Tipo de Establecimiento. La Significancia (Sig.) está evaluada a un nivel de confianza del 0.05*

Los resultados obtenidos nos obligan a realizar un análisis más profundo de estas variables en función de cada tipo de establecimiento, con el objetivo de determinar las causas que subyacen a estas diferencias obtenidas.

### Recursos Turísticos y Culturales

Esta variable hace referencia a los distintos atractivos turísticos y culturales con los que cuenta la Provincia y que podría influir sobre la Competitividad de las empresas de alojamiento. Los resultados muestran que, todas las empresas califican como importante la influencia de esta variable sobre la competitividad (media = 4.03); sin embargo, al analizar las respuestas por tipo de establecimiento, podemos observar que las pensiones asignan una importancia muy baja a la misma variable (media = 2.8).

Tabla 4: Estadísticas Descriptivas de la Variable Recursos Turísticos y Culturales

Estadísticos Descriptivos					
	N	Media	Desviación típica	Mínimo	Máximo
Recursos Turísticos y Culturales	39	4,03	,986	1	5

*Estadísticas descriptivas de la variable Recursos Turísticos y Culturales, sin hacer distinción por tipo de establecimiento*

Tabla 5: Estadísticas Descriptivas de la Variable Recursos Turísticos y Culturales Por Tipo de Establecimiento

	N	Media	Desviación Típica	Mínimo	Máximo
Hotel	6	4,33	1,033	3	5
Hosteria	9	4,67	,500	4	5
Hostal	19	3,95	,848	2	5
Pension	5	2,80	1,095	1	4
Total	39	4,03	,986	1	5

*Estadísticas descriptivas de la variable Recursos Turísticos y Culturales, haciendo distinción por tipo de establecimiento*

La prueba estadística de Kruskal-Wallis aplicada sobre estos datos, arroja un valor  $p = 0.010$ ; a un nivel de confianza del 95%. Este resultado muestra que existe una diferencia importante entre las medias por tipo de establecimiento; es decir, las empresas de alojamiento, categorizadas como pensiones y hostales, no creen que esta variable tenga una gran influencia sobre su competitividad.

### Innovación

A través de esta variable se midió la percepción que tienen los gerentes y propietarios de empresas de alojamiento sobre el impacto que pueden tener los procesos de innovación que se ejecuten en sus empresas y la competitividad de las mismas. Los resultados obtenidos muestran que no todos los tipos de establecimientos hoteleros creen que la implementación y ejecución de procesos de innovación afecten en gran medida la competitividad que pueden tener en el mercado en el que se desempeñan; las diferencias más importantes se encuentran entre los hoteles y el resto de categorías.

Tabla 6: Estadísticas Descriptivas de la Variable Innovación Por Tipo de Establecimiento

	N	Media	Desviación típica	Mínimo	Máximo
Hotel	5	5,00	,000	5	5
Hosteria	9	3,33	1,225	2	5
Hostal	19	3,84	1,385	1	5
Pension	5	3,60	,548	3	4
Total	38	3,84	1,242	1	5

*Estadísticas descriptivas de la variable Innovación, haciendo distinción por tipo de establecimiento*

La prueba estadística aplicada a esta variable, arroja un valor de  $p = 0,45$ ; a un nivel de confianza del 95%, lo que indica que, existe una diferencia significativa entre las medias de cada tipo de establecimiento; se necesita hacer un análisis más profundo para determinar las causas de estas diferencias.

### Capital de Inversión

La variable capital de inversión mide la percepción que tienen los gerentes y propietarios de establecimientos hoteleros, sobre el impacto que puede tener este capital sobre la competitividad de su empresa. En este estudio, el capital de inversión se define como la cantidad de dinero que las pequeñas y medianas empresas pueden obtener a través de endeudamiento con entidad financieras para costear sus activos fijos productivos. Los resultados muestran que, los hoteles y pensiones son los que asignan una mayor importancia a esta variable:

Tabla 7: Estadísticas Descriptivas de la Variable Capital de Inversión Por Tipo de Establecimiento

	N	Media	Desviación Típica	Error Típico	Mínimo	Máximo
Hotel	5	5,00	,000	,000	5	5
Hosteria	9	3,89	1,453	,484	1	5
Hostal	19	3,47	1,307	,300	1	5
Pension	5	4,40	,548	,245	4	5
Total	38	3,89	1,269	,206	1	5

*Estadísticas descriptivas de la variable Capital de Inversión, haciendo distinción por tipo de establecimiento*

La prueba Kruskal-Wallis aplicada a esta variable corrobora lo expuesto en el párrafo anterior, puesto que, a un nivel de confianza del 95%, se obtiene un valor  $p = 0,23$ ; es decir, existe una diferencia significativa en las medias de los valores que asigna cada tipo de establecimiento a esta variable.

## Discusión

Los resultados encontrados en el presente estudio, corroboran los supuestos y resultados empíricos de muchos estudios relacionados a los factores que influyen en la competitividad de empresas turísticas; sin embargo, en este caso particular, las variables Recursos Turísticos, Innovación y Capital de Inversión, muestran diferencias significativas, obligando a realizar un análisis más profundo que permita detectar las causas subyacentes que expliquen las diferencias encontradas en las valoraciones que da cada tipo de establecimiento a estas variables. Para esto se realizó una entrevista a profundidad con algunos de los gerentes para analizar cómo influyen estas variables sobre la competitividad de sus empresas. En estas entrevistas, algunos gerentes y administradores, señalan que, los recursos turísticos y culturales no influyen de manera importante para la competitividad de las pensiones, ya que, su mercado objetivo son aquellos turistas que están de paso y no se quedan mucho tiempo en la ciudad; es decir, turistas que no son atraídos por los atractivos turísticos de la zona de estudio.

Por otro lado, con respecto a la innovación, la diferencia más importante se encontró entre los hoteles y el resto de categorías; la razón principal puede estar en el nivel competitivo en el que se desenvuelven los hoteles frente a otros tipos de establecimientos; al tener una mayor competencia, este tipo de establecimientos están obligados a desarrollar procesos de innovación continua que les permita destacarse de sus competidores y ofrecer una mayor satisfacción a sus clientes. Finalmente el capital de inversión se vuelve un factor de suma importancia tanto para hoteles y pensiones; en el primer caso, un mayor capital de inversión les permitirá diseñar y ejecutar procesos de innovación continua que posibiliten obtener una mayor competitividad; por otro lado, para las pensiones, un mayor capital de inversión, permitirá mejorar sus servicios y ofrecer mayor valor a sus clientes. Los resultados de las entrevistas realizadas permiten suponer además la existencia de una clara relación de la variable innovación y capital de inversión.

## CONCLUSIONES

Este estudio se desarrolló con el objetivo de levantar una línea base que permita diseñar un sistema de gestión estratégica para empresas que brindan servicios de alojamiento. El diagnóstico de los factores que influyen en la competitividad de este tipo de empresas, permite enfocarse en las variables y procesos más importantes que se desarrollan en su interior. A través del análisis de estudios empíricos relacionados a esta temática y de una investigación primaria, se pudieron determinar los factores claves que inciden en la competitividad de establecimientos hoteleros desde el punto de vista de gerentes y propietarios; la mayoría de los resultados obtenidos corroboraron los estudios empíricos analizados así como la teoría subyacente a la investigación; sin embargo, las diferencias encontradas en algunas de las variables analizadas, obligaron a realizar un análisis cualitativo a través de entrevistas semiestructuradas, para determinar las causas subyacentes a estas diferencias. Aunque la presente investigación se realizó con base en teorías aceptadas y comprobadas, se recomienda que futuras investigaciones incluyan aspectos culturales, de esta manera se podrían enriquecer los resultados obtenidos y así alcanzar una mayor comprensión de la realidad que se esté estudiando.

## RESUMEN

*Este artículo tiene por objetivo describir los elementos sustanciales que determinan e inciden en las prácticas de emprendimiento del sector turístico liderado por mujeres en la región de Valparaíso, Chile. La metodología seleccionada es de tipo cualitativa cuya herramienta de producción de datos corresponde a la entrevista en profundidad. Los resultados obtenidos describen la importancia y tipología referente a los motivadores, barreras, percepciones entre otros elementos que componen, desde la visión de sus propias protagonistas, la formación y desarrollo de negocios en el principal sector económico de la región. Este estudio está orientado a aportar en la formación de políticas públicas desde una mirada local, y desde su metodología, incentivar el interés por comprender la configuración de emprendimientos desde un conocimiento profundo desde la visión de quienes son sus protagonistas.*

**PALABRAS CLAVES:** Emprendimiento, Mujer, Turismo, Valparaíso

## ABSTRACT

*This article aims to describe the main points that determine and influence the practices of entrepreneurship in the tourism sector led by women in the region of Valparaíso, Chile. The selected methodology is qualitative production tool type whose data corresponds to the in-depth interview. The results describe the importance and type regarding the motivators, barriers, perceptions among other elements that, from the perspective of their own players, training and business development in the main economic sector of the region. This study is aimed to contribute to the formation of public policies from a local perspective, and from their methodology, encourage interest in understanding the configuration of enterprises from a deep understanding from the perspective of those who are its protagonists.*

**JEL:** L26, M13

**KEYWORDS:** Entrepreneurship, Women, Tourism, Valparaiso

## INTRODUCCIÓN

El siguiente estudio es un intento por conocer y profundizar en la experiencia de emprendimiento del sector turístico en la región de Valparaíso desde un enfoque de género. La mujer, como protagonista central en este estudio, nos muestra desde su experiencia diferentes aspectos que la conforman y la constituyen en su rol de emprendedora. ¿Por qué es importante profundizar esta temática? Porque cuando nos preguntamos acerca de un fenómeno social los datos no bastan, debemos buscar a través de herramientas diferentes cómo explicarnos y entender mejor nuestros fenómenos de estudio, sobre todo cuando queremos generalizar y aplicar políticas parados en éstos. En este estudio se evalúan aspectos de diferente naturaleza: las motivaciones, las barreras a las cuales deben hacer frente quienes emprenden, así como los percepción de

roles del estado, organizaciones no gubernamentales y de la propia mujer. Se hace un intento además por evaluar su percepción de estructura, incorporando al recurso humano, la descripción de sus clientes, la fijación de precios y la publicidad dentro del análisis. Además de ello, se evalúan sus creencias respecto a la posición de género que se percibe dentro del rubro turístico y la valoración social que identifican en su entorno regional. Finalmente, se intenta conocer las expectativas de futuro que poseen, sus sueños y aspiraciones más concretas en el mediano plazo. Todos estos aspectos aspiran a ayudarnos a entender desde la visión de sus protagonistas lo que significa ser mujer emprendedora en el sector del turismo en la región de Valparaíso.

## REVISIÓN LITERATURA

El Emprendimiento en su concepción más amplia es “la habilidad del individuo de convertir ideas en acción. Incluye creatividad, innovación y la toma de riesgos, así como la habilidad para planificar y gestionar proyectos para lograr los objetivos” (Jenner, 2013). Desde el Global Entrepreneurship Monitor se entiende el emprendimiento como un proceso, analizando las actitudes, actividades y aspiraciones del emprendedor en diferentes fases. Abarcando desde las intenciones generales hasta la fase inicial de los negocios que están en gestación, siguiendo con los nuevos negocios que han comenzado operaciones, hasta la fase del negocio establecido y la posible discontinuación del mismo (GEM Mujer, 2013). De esta manera, se vuelve complejo hallar un indicador para medir el emprendimiento, y aún más para hacer comparaciones entre lo que acontece en diversos países.

En un esfuerzo por llevar a cabo esta tarea, la Organización para la Cooperación y el Desarrollo Económico, entrega los “Timely Indicators of Entrepreneurship”, indicadores creados para establecer una comparación internacional de emprendimiento entre países miembros de la OCDE, considerando los datos de creación de nuevas empresas. El estudio señala que los casos de Chile, Colombia y Francia son los que muestran un mayor éxito en potenciar el emprendimiento. Particularmente, en el caso de nuestro país, el año 2012 se crearon 68.439 empresas, superando las 58.407 del 2011; y la proyección para el año 2013 es llegar en torno a 105.000 constituciones de sociedades (Ministerio de Economía, Fomento y Turismo, 2013). El aumento de las cifras de emprendedores en Chile, parece ser el reflejo de lo que viene ocurriendo en los últimos años en materia legal. Nuestro país ha sido escenario de la implementación de varias reformas que reducen el tiempo y los costos de emprender, entre las que destacan la Ley de Agilización de Trámites, y la Ley sobre Constitución de Sociedades en un día a costo cero.

Además, el país ha crecido a tasas de 6% en los años 2010 y 2011 y en torno al 5,6% el 2012. (Ministerio de Economía, Fomento y Turismo, 2013). La evidencia existente acerca de la alfabetización financiera de los emprendedores de Chile hasta el año 2012, entendida como el grado de conocimientos y entendimiento de aspectos relacionados a la tasa de interés e inflación considerados clave para comenzar y mantener un negocio, nos indica que, en base a los datos recopilados por la realización de la 2ª Encuesta de Microemprendimiento 2011, existe una baja alfabetización financiera, ya que un 55% de los emprendedores posee un escaso o nulo conocimiento financiero. (Ministerio de Economía, Fomento y Turismo, 2012). Ante esto, surgen diferentes iniciativas por parte del Gobierno chileno, que hacen evidente la preocupación sobre la alfabetización financiera que afecta a los emprendedores del país.

El surgimiento de nuevas entidades como el Sernac Financiero y la creación de diversas capacitaciones de SERCOTEC, tratando temáticas de financiamiento, Gestión Financiera, Contabilidad Simplificada y Facturación Electrónica; permite que los emprendimientos se establezcan con mayor información y claridad. Además, la 2ª Encuesta de Microemprendimiento indica que las zonas geográficas con mayor nivel de conocimiento son la Zona Centro (V, VI, VII y VIII región) y la Región Metropolitana. Por otro lado, revela que no se encuentran diferencias por género, es decir que la distribución de conocimientos financieros es similar entre hombres y mujeres (Ministerio de Economía, Fomento y Turismo, 2012). Esta

información saca a relucir el papel de la mujer dentro la participación en el mercado del trabajo, la cual ha aumentado su intervención con el correr de los años.

Al observar el informe de empleo trimestral, emanado por el Instituto Nacional de Estadísticas en marzo del presente año, es posible apreciar que en los aumentos anuales de la ocupación y de la Fuerza de Trabajo incidieron en mayor medida las mujeres. Son ellas quienes han alcanzado mayores ritmos de expansión, provenientes mayoritariamente de una previa inactividad laboral (INE, 2013). Si bien existe incremento en la tasa de participación laboral en el sector femenino, se evidencia una pequeña disminución en lo que respecta a situación de empleo de Cuenta Propia; y por otro lado un aumento de mujeres Empleadoras (INE, 2013).

En este sentido, numerosos estudios (Ortíz et al, 2013; Kourilsky y Walstad, 1998; Langowitz y Minniti, 2007) indican que tanto hombres como mujeres tienen múltiples razones para crear empresa y que en ambos casos, son motivados principalmente por la búsqueda de autonomía, de progreso, deseo de satisfacción en el trabajo y otras recompensas no económicas. Aunque el deseo de ganar dinero también es un motivo de peso, las diferencias entre hombres y mujeres se encuentran precisamente aquí. Las mujeres están menos interesadas en hacer dinero y, a menudo, eligen hacer empresa propia como resultado de la insatisfacción de su carrera. También ven el espíritu empresarial como medio de satisfacer simultáneamente las necesidades de su propia carrera profesional y las necesidades de sus hijos (Ortíz et al). Frente a esto, es necesario crear nuevos criterios para tomar decisiones y diseñar políticas respecto al emprendimiento en la población femenina (Carioso, 2004). El incremento en la tasa de emprendimiento de las mujeres, requiere actuar sobre dos variables que resultan claves para facilitar la formación de la intención de emprender: la valoración de resultados y el contexto de seguridad que es percibido por la existencia de asesoramiento y ayuda a la mujer emprendedora (Chandler, 1999).

Estudios de las Naciones Unidas (2005) realizados en el sur de Asia señalan que hay una cantidad de barreras que impiden a las mujeres desarrollar su potencial emprendedor para hacer contribuciones significativas a la sociedad (Ortíz et al). Desde aquí, el rol desempeñado por el gobierno chileno se vuelve relevante en lo que respecta a la implementación de diferentes programas e incentivos para las emprendedoras. Las mujeres desempeñadas en el rubro del turismo nacional, pertenecen al numeroso grupo de beneficiadas con el apoyo gubernamental y de otras organizaciones. Instituciones como INDAP, FOSIS y CORFO; con Programas como “Turismo Rural”, “Yo Emprendo Semilla” y “Emprendimiento Locales”. Además de ayudas de tipo económico como el “Crédito Corfo Micro y Pequeña Empresa” y “Capital Semilla Emprendimiento”, entregados por CORFO y SERCOTEC respectivamente. El turismo ha sido una de las actividades más dinámicas debido a la expresiva capacidad de generar trabajo e ingresos y de motivar nuevas perspectivas económicas, inclusive en lugares con características peculiares en los aspectos ambientales, sociales y económicos (Bernardy, E., G. Bortoluzzi, J. Zuanazzi y S.

Migliorini, 2012). Según el informe de Empleo trimestral de marzo del 2013, sectorialmente los aumentos más significativos de plazas de empleo se observaron en Enseñanza; Hoteles y Restaurantes, y Construcción. Las cifras positivas que se desprenden del sector del turismo han llevado a poner la atención en el desarrollo de un Plan de Desarrollo Turístico de los años 2011 al 2014, tanto a nivel nacional como a nivel Regional en Valparaíso, tomando en consideración que durante los próximos años el mundo podrá observar el fortalecimiento del proceso de globalización, la disminución en los costos y tiempos de viaje y el auge en la cantidad de turistas interesados en conocer nuevos lugares, culturas y paisajes. Frente a estos fenómenos, el Plan de Desarrollo Turístico establece diferentes desafíos para el desarrollo de la Región de Valparaíso. Entre estos se puede apreciar el fortalecimiento de la actividad turística a través del rescate de la identidad cultural, el desarrollo de programas de capacitación y formación, el apoyo al fortalecimiento de la asociatividad entre actores del turismo regional, el seguimiento e impulso a programas y proyectos para el mejoramiento de la infraestructura y servicios turísticos, el fortalecimiento del turismo en congresos

y reuniones, y el apoyo a programas dirigidos a los canales de posicionamiento (tour operadores, agencias), prensa en turismo y turistas potenciales.

Respecto a los servicios, la Región cuenta con la segunda mayor planta turística a nivel país en términos de alojamientos, 622, y la primera en número de plazas, camas, disponibles, 22.252. En cuanto a los servicios de gastronomía, el registro regional institucional integra 807 establecimientos, en cuanto a agencias de viajes, 240, y más de 170 guías (SERNATUR, 2012). turismo incorpore y beneficie en más del 85% de los casos a PYMES y MIPYMES regionales. La Región se ha ido consolidando como uno de los más importantes destinos turístico de Chile que acoge a 1.8 millones de visitantes nacionales (SERNATUR, 2012) y un estimado de 700 mil visitantes internacionales (SERNATUR, 2012). Además, cabe desatacar que el turismo aporta al PIB regional con un 6,9% y genera más del 20% de los empleos (Plan de Desarrollo Turístico, 2011). El compendio de cifras, tasas e índices que se desprenden de los diversos estudios, forma la idea de los próximos pasos a seguir en lo que respecta al turismo regional, nacional y a la participación femenina en estos espacios de negocio y superación personal. Para el futuro se prevé una importante contribución en inversión que haga aprovechar las enormes oportunidades que va a traer consigo el turismo. Los déficits en el desarrollo de infraestructura, en la planificación de la promoción de la región y en el fomento del desarrollo sustentable de la actividad turística cuidando el patrimonio natural y cultural, dejan entrever las tareas pendientes en el rubro del turismo. En este sentido, la vinculación de la mujer con estos desafíos parece ser un buen camino para romper con años de tradiciones de discriminación hacia la población femenina para su realización plena, en el entorno personal y social.

## METODOLOGÍA

La metodología utilizada para la investigación realizada fue desarrollada mediante un enfoque de tipo Cualitativo ya que el objetivo central de la investigación fue profundizar en las experiencias de las emprendedoras del sector turismo en la quinta región, poniendo acento en los procesos, factores y resultados que las han transformado en tales para poder obtener una mayor aproximación y comprensión al fenómeno de estudio. La muestra estuvo compuesta por 24 mujeres emprendedoras de diferentes rubros del turismo (hostales, hoteles, agencias de turismo, entre otras) de sectores urbanos y rurales de la Quinta región, incluyendo las comunas de San Antonio, Casablanca, Cartagena, Limache, Olmué, Hijuelas, Viña del Mar y Valparaíso, a las cuales se les aplicó una Entrevista Semiestructurada en las mismas dependencias donde se desempeñan laboralmente, es decir, en las instalaciones de sus negocios.

Se utilizó una única pauta de temas a tratar en todas las entrevista, dando espacio siempre a temas emergentes particulares e importantes para las emprendedoras que no estuvieran contemplados en las preguntas iniciales. Se seleccionó únicamente a emprendedoras del sector turístico debido a la importancia e impacto que posee esta industria en esta región del país y al gran número de emprendimientos regionales asociados a esta industria. Los datos obtenidos fueron procesados a través del software de análisis cualitativo Atlas- Ti versión 7.0 y fueron analizados bajo el enfoque de Teoría Fundamentada en los datos. Esta perspectiva de análisis señala que la teoría emerge desde los datos (Glaser y Strauss, 1967) y que tiene por objetivo la identificación de procesos sociales básicos como punto central en la teoría. A través de esta metodología podemos descubrir aquellos aspectos que son relevantes en una determinada área de estudio. En este caso, nos interesa comprender desde la visión de las emprendedoras la realidad social a la cual se ven enfrentadas (Strauss y Corbin, 1990). La teoría fundamentada no es una teoría, sino una metodología para descubrir teorías que dormitan en los datos (Strauss y Corbin, 1990).

## RESULTADOS

Los resultados nos muestran diferentes categorías que se generaron a partir de las entrevistas realizadas que nos detallan un contexto respecto a las principales barreras, motivaciones, percepciones y visiones que tienen las emprendedoras del sector turístico en la región.

### Motivadores

#### La Familia Como Movilizadora del Negocio

Muchos de los emprendimientos liderados por mujeres han surgido desde una necesidad familiar, de tiempo doméstico, de una situación en particular familiar que ha hecho nacer una idea de negocio. En este sentido, algunas señalan:

*“Bueno lo otro es que yo me di cuenta de que prácticamente con 4 guaguas, mis hijos y mi madre, no podía ir a trabajar ni en mi carrera mi profesión laboratorista química ni en ninguna actividad porque iba a ser dinero por dinero entonces esto nace desde ahí”.*

#### El Emprendimiento Como un Desafío Personal Frente a Diferentes Oportunidades

Así como encontramos emprendedoras que a partir de su condición de vida personal y familiar han optado por generar un emprendimiento, también nos encontramos con aquellas mujeres que simbolizan los elementos impulsores hacia aspectos internos y de su propia personalidad: un desafío personal, una oportunidad que desean tomar, un espacio de desarrollo personal y económico, un aporte a su comunidad.

*“De la oportunidad que teníamos con esta casa, que era una casa grande y obviamente había que sacarle provecho, así que empezamos de a poco a arrendar habitaciones y ahí vimos que como fue resultando al final salió un bed and breakfast.”*

**Barreras:** las distintas caras de los dificultadores al emprendimiento en la mujer. En nuestro análisis de dichos elementos hemos podido establecer primero que todo, diferencias en su naturaleza, por tanto nos encontramos con *Barreras Externas*, aquellas que provienen desde el ambiente y el contexto donde se incuba el negocio y que escapan de control de la emprendedora, pues se configuran desde marcos institucionales, legales, gubernamentales; y por otra parte, nos encontramos con **Barreras Internas**, pertenecientes al universo simbólico y psicológico que cada mujer lleva consigo y que surge desde su propia historia y de la experiencia que ha tenido no sólo en el devenir de su emprendimiento, sino en otros ámbitos y roles de la vida que ha experimentado.

### Barreras Externas

En el marco de los impedimentos exógenos que perciben las emprendedoras para impulsar su negocio nos encontramos con al menos 2 agentes relevantes: Crédito bancario: Dificultad de acceso en emprendedoras pequeñas. Una de las principales barreras que golpean a las pequeñas emprendedoras, es la dificultad para acceder a préstamos bancarios, lo cual atribuyen principalmente a la carencia de respaldo económico y de posesión de bienes materiales. En una sociedad con un despertar tardío en la inserción de la mujer al mundo del trabajo, donde la mayoría de los bienes raíces y posesiones que pueden respaldar un crédito están inscritos por el hombre, se torna difícil, sumado a ello la data histórica del trabajo no remunerado de la “dueña de casa”, lo cual se ha relegado a una posición de motor invisible de impulso a la economía que hasta hoy no cuenta con tanta fuerza hacia el sistema formal del porcentaje mayor de la banca. Algunas señalan:

*“Así que pedí la casa con mucho susto, porque bueno yo traía unos ahorros, yo en realidad trabajaba, tenía mis ahorros, pero aquí no te ayuda el banco si no tienes ingresos genuinos, no ingresos de arriendos”.*

### Barreras Burocráticas

El conocimiento y la constante transformación de las normativas, el acceso a permisos de funcionamiento dificultoso y errores en la comunicación y lenguaje entre organismo y persona, son algunos de los factores que en mayor medida afectan al emprendimiento y a las mujeres en el rubro turístico.

*“Porque tú tienes que saber la parte tributaria, tienes que saber que te van a controlar impuestos internos, inspección del trabajo, y las multas son grandes, no son de juego. Por lo tanto tienes que saber cómo contratar empleados, o sea tienes que manejarte en el tema, y la gente que no lo ha hecho sencillamente su emprendimiento se fue al saco”.*

Como se puede apreciar en las citas se refleja esta dificultad burocrática que viene a instalarse como una de las barreras que más enlentece y confunde en muchas ocasiones el trabajo realizado. El manejo del aspecto legal, tributario, los impuestos, patentes de funcionamiento, son los errores más comunes. Esta categoría obviamente se mezcla con otra de las barreras internas: la barrera de capacitación en emprendimientos iniciales.

### Barreras Internas

Hablamos de barreras internas, refiriéndonos a aquellos dificultadores del emprendimiento que tienen su origen en el universo simbólico y también individual de quienes participan. Desde este punto de vista, se han podido identificar al menos tres falencias que dificultan el desarrollo y crecimiento de los negocios en el sector turístico desde una naturaleza interna: Barreras de formación. Muchas de las emprendedoras a las que se entrevistó, mencionaron haber identificado en sus propios procesos la traba de la falta de conocimiento y capacitación en determinadas áreas fundamentales para hacer surgir su negocio.

*“La ignorancia de todas maneras, la ignorancia eso de estar con palos al aire, eso de no tener idea de nada. Porque aquí yo arrendaba al que viniera, al que cayera, al que pasara, al que fuera. Aprendí que uno tenía que tener un segmento, que uno no podía mezclar las edades, cierto tipo de personas, ni tener alguien por día alguien por meses”.*

**Barreras Tecnológicas:** Cuando hablamos de barreras tecnológicas primero que todo tenemos que situarnos en un punto del tiempo en el cual aquellos que no nacieron nativos de internet tuvieron que comprender la existencia de un mundo totalmente nuevo y desconocido. El aumento explosivo de páginas webs, el surgimiento de redes sociales y plataformas de comunicación, representan un salto cuantitativo y cualitativo para muchas generaciones que vieron en este mundo virtual una oportunidad de comunicarse y publicitarse, pero también un lenguaje lejano y un mundo poco familiar al cual muchos de manera involuntaria se resisten. Algunas emprendedoras señalan:

*“Porque lo que pasa es que las personas de mi edad no son nativos a internet, entonces el computador le molesta, aunque lo sepa usar le incomoda, no está acostumbrado a estar publicando todos los días cosas, ni tampoco se le ocurre porque no tiene amigos que se dediquen a eso. Imagínate que yo, bueno yo soy un caso especial, pero suponte que entre mis amigas no saben mandar fotos, no saben subirlas, no está estructurado en nuestro cerebro ese tema”.*

Como podemos entender, el uso de internet sigue siendo una barrera generacional que requiere un mayor apoyo en cuanto a su capacitación. Nos cuestionamos entonces si es necesario más cursos de computación

o realmente lo que debemos centrarnos es en el tipo de enfoque que hoy en día reflejan la propuesta de conocimiento.

*Barreras económicas:* Sin lugar a dudas esta es la barrera que con mayor fuerza golpea a las emprendedoras, independiente del tamaño de sus negocios es la barrera económica la que más retrocesos causa en los negocios. Cuando hablamos de barreras económicas nos referimos a la falta de capital económico de inversión inicial y de crecimiento aportado por el mismo emprendedor a la cual la mayoría de las entrevistadas hizo algún tipo de alusión. Esto no sólo trae efectos directos sobre el emprendimiento particular, sino que además limita la integración y contratación de colaboradores.

*“Ahora en lo económico yo te diría que hasta ahora no salgo a flote he avanzado si pero no es algo, porque está la prueba de que aún no puedo contratar ni siquiera una persona por el mínimo, o sea todavía no me da el excedente como para tener un sueldo, necesitándola enormemente”.*

El atractivo del sector turístico para las mujeres emprendedoras. Dentro de los atractivos del sector turístico que motivan el emprendimiento de mujeres en la región, encontramos:

#### La Libertad de Horario: el Tiempo no Tiene Precio

Las mujeres emprendedoras no tienen más tiempo libre que las que se emplean, eso sería un análisis injusto e irresponsable, pero sí tienen una ventaja que ellas mismas describen que se relaciona con la forma en la cual pueden distribuir el tiempo que es para el trabajo y el que es para la familia, lo cual destacan como un aspecto positivo de su labor.

*Como te digo mucho de la libertad de horario, que puede ser entendida por el otro extremo también, que vas a estar trabajando en un periodo extenso de tiempo día y noche, sobre todo estos programas nocturnos que yo hago... me debe gustar mucho la noche digo yo para hacer estas cosas.*

*Ganar tiempo con la familia en reacción a la “trampa” de la mujer multirol.* En: tiempos modernos se abrió una promesa hacia la mujer trabajadora, donde se incluye a la emprendedora. Se le dijo que a través de la inserción al mundo laboral iba a ser más ventajoso, lo cual en gran parte fue cierto, menos por un detalle: la trampa de la mujer multirol. ¿De qué se trata? Ahora se desempeñan laboralmente, tienen mayor independencia económica y más fuerte participación en la sociedad, al menos más visible, pero finalmente se tienen las mismas 24 horas para desempeñarse no sólo como trabajadoras, sino que además se exige no descuidar los roles de madre, esposa y en muchos casos dueña de casa o jefa de hogar. Algunas señalan:

*“A pesar de que nos creemos más independientes porque la verdad es que lo somos, son muchas las tareas que uno debe hacer igual, no se puede hacer la lesa uno con los hijos, los actos, el colegio. También a través de este trabajo uno no se pierde cosas importantes, cumpleaños por ejemplo”*

Se destaca la percepción de participación en la familia de forma positiva. El emprendimiento en el rubro turístico es entendido desde una visión posibilitadora y no como una labor limitante. No debemos olvidar además que muchos emprendimientos generados por mujeres incluyen dentro de sus colaboradores o recursos humanos, la integración de miembros de la familia lo cual genera un aporte extra.

*El rol gubernamental:* percepción del vínculo con el estado. El estado desde los capitales de financiamiento y capacitación. Al consultarles a las emprendedoras respecto al rol que consideran tiene el estado dentro de los emprendimientos en turismo en la región desde su propia experiencia, podemos identificar que uno de los aspectos más mencionados responden al ejercicio del rol estatal como financiador y capacitador. Frente

a ello tenemos opiniones divididas respecto al apoyo que existe, existiendo varias que han contado con este apoyo como se ve a reflejado con las siguientes citas:

*“Lo que estoy muy agradecida es de los cursos, las capacitaciones que he tenido, sí, extremadamente agradecida. Porque llego yo me declaro ignorante completamente en el rubro, entonces cuando enseñan, explican, exponen, te explican como para una persona totalmente neófita”.*

Como se puede apreciar en todos los casos los dos elementos valorados son los ejes de capital económico y cursos de capacitación promovidos a través de diferentes instituciones como CORFO, SERCOTEC, SERNATUR y las municipalidades como estamentos vinculantes indiscutibles. Percepción de desvinculación y falta de apoyo. A pesar de lo anteriormente señalado, nos encontramos con que existen personas que perciben carencia de apoyo, dificultad en el acceso o falta de comunicación de los aportes del estado en estas líneas:

*“Apoyo del estado no hay, o yo no me he encontrado, no he tenido la suerte de encontrarme con estas ayudas del estado a pesar de que aparentemente hay muchas. Una de las más alcanzables es capital Semilla”.*

Como se puede apreciar, muchas manifiestan un descontento en este aspecto. Más allá de cuestionarnos objetivamente la existencia o no de dichos apoyos, debemos preguntarnos respecto a los canales de acceso a la información, los sistemas y parámetros que hoy en día se utilizan para la selección de emprendedoras a los fondos, que muchas veces utilizan criterios unilaterales, como es el caso de la sobrevaloración del Nivel socioeconómico como criterio único de adjudicación en vez de la evaluación de las potencialidades individuales de mantener un emprendimiento en el tiempo, como algunas lo han expresado.

*Percepción social: la visión del entorno ante el sujeto de la emprendedora:* La inserción de la mujer al mundo laboral no ha sido fácil por diversos motivos tanto en el ámbito interno de los procesos y la adaptación que el género ha experimentado, como la visión y discursos que circulan desde la sociedad respecto a este nuevo rol de la mujer. Desde esta visión quisimos saber la percepción que las emprendedoras poseen respecto a lo que la sociedad dice de ellas y cómo esto afecta positiva o negativamente en su desarrollo como personas y trabajadoras. Algunos extractos nos muestran su visión:

*“Considero que en Chile tenemos muy buena aceptación, en primer lugar porque somos mayoría, y porque la mayoría lamentablemente divorciadas o separadas. O el mismo hecho de ser familias monoparentales, o tener bastante irregularidad de lo que era una familia tradicional antiguamente”.*

De los discursos de las mujeres podemos rescatar que no podemos dejar de entender la visión actual que la sociedad posee respecto a la mujer emprendedora sin hacer al menos una breve revisión de los procesos históricos que han marcado las transformaciones sociales que han abierto espacios a la mujer en su rol emancipador. Ha sido un proceso lento y con ciertas barreras, forjado por una sociedad machista y orientada a mantener el status quo, pero hoy en día a través de procesos globales existe la visión desde las emprendedoras que ese mismo camino con obstáculos, ha energizado al género para mostrar las capacidades, habilidades y la horizontalidad respecto al sexo opuesto que hoy en día ha quedado en evidencia a través de los múltiples programas orientados exclusivamente a la mujer. Por tanto, podemos entender que existe una visión positiva y alentadora de parte de las emprendedoras, de la confianza que la sociedad ha puesto en ellas.

## CONCLUSIONES

A partir de los resultados obtenidos podemos concluir que el emprendimiento de género, de la mujer en este caso, posee diferentes aspectos que hacen necesario su estudio como eje particular al menos en la región de Valparaíso y en el sector turístico, donde nos hemos enfocado en esta oportunidad. Encontramos en este ejercicio diferentes dimensiones que enriquecen el conocimiento no solamente a nivel descriptivo, sino que además nos permite establecer diferentes relaciones entre las dimensiones que se generan y que van profundizando el entendimiento de la mujer emprendedora en sus diferentes partes.

A partir de las motivaciones, no se encontraron mayores diferencias, en cuanto al fortalecimiento del negocio a partir de los motivos. Esto quiere decir, que no se identificó evidencia de que los emprendimientos por oportunidad, es decir aquellos movilizadas por desafío personal, fueran mejores o más productivos que aquellos por necesidad centrados en las condiciones de vida familiar. Simplemente podemos hablar de dos motivadores que aparecen impulsando el emprendimiento de las mujeres, a saber, oportunidad y necesidad. Respecto a las barreras, se pueden identificar dos naturalezas diferentes; por una parte encontramos las barreras internas y por otra las barreras externas.

Dentro de las internas están aquellas generadas por la falta de capacitación y conocimiento de áreas diferentes al oficio desempeñado (manejo tributario, sanitario, entre tantos), la barrera tecnológica, centrada en la dificultad de integrarse al mundo virtual como herramienta de crecimiento del negocio, y finalmente la barrera económica, es decir aquella relacionada con la falta de recursos económicos iniciales principalmente y de desarrollo, esto tiene sentido con la estrecha relación encontrada entre el nivel de educación de las emprendedoras y la etapa de emprendimiento en la cual se pueden categorizar, en efecto, el nivel de educación de las emprendedoras en etapas iniciales es mayor al nivel de educación encontrado en emprendedoras establecidas. Por otra parte, tenemos las barreras externas centradas en primera instancia en las limitaciones del acceso al crédito por la falta de antecedentes de solvencia por parte de las emprendedoras; y por otra, la barrera burocrática que enlentece y estanca los procesos de desarrollo en las emprendedoras y que se mezcla con la barrera interna de conocimiento.

En línea con lo anterior, se logró detectar en las mujeres de la región una menor percepción de oportunidades y habilidades para iniciar emprendimientos, y un mayor miedo al fracaso, en comparación a la media nacional. Respecto al atractivo del sector turístico logramos entender que la distribución de tiempo y los espacios para la familia resultan aquellas ventajas más atractivas para las mujeres para emprender en el sector. Entender todas las dimensiones anteriormente señaladas, nos ayuda a comprender el fenómeno del emprendimiento femenino en el sector turístico desde una visión más profunda y como se señaló en algún párrafo, el conocimiento nos da mayores espacios de acción, nos entrega herramientas para generar políticas públicas desde lo empírico y no desde la teoría internacional, pues desde Valparaíso y todas sus comunas se construye una identidad única desde donde se sugiere se construyan programas locales pensados en el desarrollo regional de la industria y el mejoramiento en la calidad de vida de tantas familias lideradas por las emprendedoras de hoy.

Respecto a las limitaciones de este estudio en términos globales se puede señalar que por razones metodológicas de acceso a la muestra cuantitativa, la cual tiene su origen en un enfoque regional sin diferenciación por género, fue imposible realizar un filtro que incluyera únicamente emprendedoras del sector turismo, lo cual fue el foco central en la parte cualitativa donde únicamente se entrevistaron a mujeres de este sector. Ello se debió a que el número de encuestas del sector no eran suficientes para su análisis exhaustivo. Esto nos impide hacer comparaciones absolutas entre ambas partes del estudio, aunque si resultan interesantes algunas relaciones que se dan entre ambos resultados como se expuso anteriormente.

# TRANSFERENCIA DE UTILIDADES BAJO EL CONCEPTO DE CONTRATACION INTERNACIONAL DE ACTIVOS INTANGIBLES

Gabriel Alfonso Rodríguez González, Benemérita Universidad Autónoma de Puebla

## RESUMEN

*En los últimos años ha aumentado el interés por los activos intangibles (al menos en la empresa privada); su identificación, medición y gestión es un tema de actualidad, considerando importante reconocer y valorar estos activos, puesto que agregan información económica y financiera a los tradicionales indicadores de medición que se utilizan para la toma de decisiones, así como para demostrar a los usuarios externos su “verdadera” potencialidad. Sin embargo, la parte total de ésta investigación, no sólo radica en la dificultad de determinar los ingresos imputables en las operaciones que se efectúan intra empresa, sino en la dificultad de fijar y adoptar un sistema de valoración que proporcione un resultado de plena competencia, cuando las operaciones tengan por objeto o incorporen algún bien intangible, de tal forma que, clarifiquemos que es necesario la valoración específica de los activos intangibles por separado, logrando así, una aproximación a su valor real en el momento de su transacción, máxime que dichos activos no se comercializan constantemente en el mercado y, por ello, es difícil determinar el valor real de los mismos.*

**PALABRAS CLAVE:** Contratación Internacional, Activos Intangibles, Valor, Contratación, Utilidades, Dinero, Elusión

## TRANSFER OF UTILITIES ON THE CONCEPT OF INTERNATIONAL RECRUITMENT OF INTANGIBLE ASSETS

### ABSTRACT

*In recent years there has been increasing interest in intangible assets (at least in the private sector); identification, measurement and management is a hot topic, considering important to recognize and value these assets, since they add economic and financial information to traditional measurement indicators used for decision-making, and to demonstrate to external users their "true" potential. However, the total part of this research, not only is the difficulty of determining the income attributable to the operations carried out intra company but the difficulty of fixing and adopting a rating system that provides a result of arm's length, operations when the object or incorporate any intangible property, such that, we clarify that the specific valuation of intangible assets separately is necessary, thus giving an approximation to its actual value at the time of your transaction, especially since these assets are not constantly sold in the market and it is difficult to determine the actual value thereof.*

**JEL:** K22, K23

**KEYWORDS:** International Recruitment, Intangible Assets, Value, Recruitment, Utilities, Money, Evasion

### Contratación Internacional de Activos Intangibles

La globalización de la economía ha hecho necesaria la adopción de normas jurídicas que rijan transacciones internacionales con independencia de la nacionalidad de las partes. El derecho privado actual, ligado a la construcción de los Estados Nacionales, se contemplaba como un orden jurídico aplicable exclusivamente a las naciones de un Estado o, a actos que se realizan dentro del territorio de un Estado. En un mundo con fronteras bien limitadas y cerradas este era un sistema viable. Pero a medida que se intensifican los intercambios comerciales entre los distintos países y, que se hace necesario, desde el punto de vista económico, la apertura de las fronteras a fin de sostener la producción masiva, el derecho privado entendido como un orden nacional, ligado a un territorio y a un Estado, resulta insuficiente. Esto se manifiesta principalmente en el ámbito de los contratos, que son los actos jurídicos concretos en los que se verifica el intercambio comercial.

Siendo trascendental lo anterior, en 1998 la Cámara de Comercio Internacional, llevó a cabo una encuesta mundial sobre los contratos comerciales más importantes, respondiendo doscientas cuarenta y cinco organizaciones de promoción comercial de ciento veinticinco países. En dicha encuesta, se puso de manifiesto la necesidad de contar con contratos internacionales (modelos) para organizar empresas conjuntas, siendo el 77% de dichas organizaciones un criterio que consideraban sumamente prioritario. Por lo tanto, se han dado diferentes circunstancias en la formación de un derecho privado supranacional, principalmente a los esfuerzos del Instituto Internacional para la Unificación del Derecho Privado (UNIDROIT) y a la Comisión de las Naciones Unidas para el Derecho Mercantil Internacional, que suele designarse por sus siglas en inglés como CNUDMI, lo cual, ha generado que actualmente se le intitule Derecho Mercantil Internacional.

Ante todo esto, no sé tienen datos de empresas mexicanas que hayan firmado Contratos de Uso de Marca, Know How y Licencia de Tecnología, ni mucho menos de aquellos que se firmaron para utilizar o proteger a la Propiedad Industrial nacional, lo cual, ha traído pésimos resultados para nuestro país, ya que, en casi todos los casos, se establecen jurisdicciones internacionales de otros países para salvaguardar el valor y los derechos de dichos bienes. Asimismo, tampoco se tienen datos de cuántas empresas protegen su Propiedad Intelectual, teniendo como única referencia que, de acuerdo al Informe Anual 2011 presentado por el Instituto Mexicano de la Propiedad Industrial, se presentaron únicamente 951 solicitudes de patente mexicanas, contra 6,805 de Norteamérica, concluyendo que muy pocas empresas han protegido su Propiedad Intelectual a través de cualquier documento legal que ampare sus derechos y obligaciones. A mayor abundamiento, para el año 2011, la *Licensing Executives Society International* presentó un informe del valor que ha tenido y tiene la Propiedad Intelectual para las 500 empresas más grandes del mundo, teniendo como resultado que, en 1975 los activos intangibles representaban sólo el 17%, del valor total de las empresas y, para el año 2010, representan el 80% del valor total de la empresa.

Pero ante el movimiento de diversos órganos hacia la construcción de un derecho mercantil internacional (salvaguardando así los derechos de dichos activos intangibles), la UNIDROIT ha publicado algunos principios sobre contratos comerciales internacionales, siendo una aportación importante, ya que pretende una muy amplia aplicación, pues contiene principios generales aplicables a todo tipo de contratos internacionales (incluso los contratos “atípicos” como es en la especie), sea ya que tengan una regulación internacional específica, o ante la ausencia de la misma, sirvan como reglas directamente aplicables. Por lo tanto y, con base en los problemas acaecidos, así como el mal uso de los Contratos de Uso de Marca, Know How y Licencia de Tecnología, resulta necesario una guía de elementos mínimos que debe considerar un usuario para la protección de sus derechos y, el cumplimiento de sus obligaciones. Sin que sea óbice lo anterior, ha traído como resultado que varios países traten de regular en su legislación interna los métodos correspondientes para llegar a demostrar ante terceros que los contribuyentes se valen de operaciones comerciales y, en su caso, de prestaciones de servicios internacionales para evadir o eludir el pago de

impuestos a las respectivas autoridades hacendarias, sin que en ninguno de estos se haya formalizado la elaboración de un cuerpo normativo capaz de regular dichas figuras jurídicas.

Por si fuera poco, instituciones del ámbito fiscal y financieras como el Organismo Internacional de Normas Contables, el Accounting Standard Board, así como el Consejo Mexicano para la Investigación y Desarrollo de Normas de Información Financiera, han emitido criterios sobre la “correcta” valuación de los activos intangibles, sin que hasta el momento exista una disposición legal que regule los Contratos de Uso de Marca, Know How y Licencia de Tecnología, ni mucho menos, se fijen los factores, hechos y circunstancias que den en cada transacción comercial la tranquilidad a la Autoridad Hacendaria que las operaciones comerciales se realizan a valor mercado.

Gracias a la globalización, las empresas transnacionales, han tenido un desarrollo trascendente derivado del comercio internacional, puesto que anteriormente, sus operaciones comerciales se encontraban relativamente controladas o, en su caso, limitadas. Asimismo, no existían grandes desplazamientos de capitales, de tal forma que, las empresas se limitaban a realizar sus operaciones dentro de las fronteras de sus países de residencia y, la mayor parte de éstas, obtenían sus ingresos de actividades o inversiones que se realizaban dentro del país. Estas circunstancias, permitían que las administraciones hacendarias, se encontraran en aptitud de gravar los flujos comerciales, identificar los beneficios, el consumo, así como los ingresos de las empresas, sin que existiera una imposibilidad por parte de la autoridad para identificar o determinar dichas circunstancias, trayendo como consecuencia que cada país aplicara su política tributaria sin la necesidad de afectar el sistema fiscal de otros entes nación.

#### Operaciones Comerciales Entre Partes Relacionadas

Actualmente las empresas pueden planificar sus actividades y operar integralmente, lo cual genera un desequilibrio importante, ya que ante la complejidad de dichas operaciones, ha llevado a los respectivos países a “intentar” establecer en su legislación interna, los métodos correspondientes para llegar a demostrar ante terceros que las empresas (contribuyentes) se valen de operaciones comerciales y, en su caso, el pago de prestaciones de servicios para evadir o eludir el pago de impuestos a las respectivas autoridades hacendarias. En los últimos años ha aumentado el interés por los activos intangibles (al menos en la empresa privada); su identificación, medición y gestión es un tema de actualidad, considerando importante reconocer y valorar estos activos, puesto que agregan información económica y financiera a los tradicionales indicadores de medición que se utilizan para la toma de decisiones, así como para demostrar a los usuarios externos su “verdadera” potencialidad.

Aunado a lo anterior, las empresas transnacionales que tienen filiales en diversas partes del mundo tienen el beneficio de firmar Contratos de “Cooperación y Licencia”, los cuales, se refieren al pago de regalías por concepto de Contratos de Uso de Marca, Know How y Licencia de Tecnología. En dichos contratos, se establece que una Empresa (Matriz) dispone a favor de otra (filial) –partes relacionadas-, de un conocimiento técnico profundo y amplio en las áreas técnicas, comerciales, científicas, industriales o bien, la concesión, explotación o transmisión de una patente, marca, nombre comercial o transferencia de tecnología; usualmente bajo el resguardo del secreto y, cuyo beneficiario se obliga a no develarlo a terceros. Por lo tanto, la empresa matriz, se compromete a poner a disposición de la filial este conocimiento, concesión, explotación o transmisión, incluyendo los derechos de protección existentes sobre la utilización no exclusiva y no transferible; apoyando ampliamente en la formación de las capacidades adecuadas para la producción, prueba y comercialización.

Por su parte, la Secretaria de Hacienda y Crédito Público (México) tiene como uno de sus fines primordiales, recaudar ingresos federales, fortaleciendo a través de sus acciones al gasto público. Por su parte, la Secretaria a través de su Informe Tributario y de gestión 2012, programó una recaudación de 359

351.6 millones de pesos, recaudando al final del ejercicio cerca de 459 654.0 millones de pesos. De la cifra mencionada anteriormente, el Fisco Federal calcula que dejó de percibir alrededor de 422 millones de pesos, por concepto de operaciones comerciales celebradas con entes extranjeros, puesto que no contaba con el soporte jurídico para ejercer sus facultades de comprobación en países extranjeros, así como determinar las contribuciones correspondientes. Pero éste no es un tema que sólo afecte o interese a nuestra autoridad nacional, ya que de igual forma, las administraciones tributarias internacionales se han visto superadas en su intento por gravar los beneficios que las empresas multinacionales obtienen en este tipo de operaciones, principalmente por la dificultad de encontrar información y bienes intangibles comparables que permitan la aplicación de los métodos de valoración recomendados por las Directrices de la Organización de Cooperación y Desarrollo Económico (OCDE) sobre precios de transferencia, las cuales, se encuentran inmersas dentro de las legislaciones internas de cada uno de los países.

Corolario a lo anterior, la propiedad industrial e intelectual que día a día generan las empresas, han representado y representan, una complejidad para la Secretaría de Hacienda y Crédito Público, puesto que determinar el valor comercial que pueda tener la concesión, explotación o transmisión de una patente, marca, nombre comercial o transferencia de tecnología mediante la figura jurídica del Contrato de Uso de Marca, Know How y Licencia de Tecnología, resulta imposible para nuestra Autoridad, ya que hasta el momento no cuenta con las condiciones operativas, tecnológicas y humanas para poder determinar con exactitud el valor comercial de dichos bienes, es más, a pesar de los por cientos máximos autorizados en la Ley del Impuesto Sobre la Renta tratándose de gastos y cargos diferidos, existe una ficción en la determinación del valor y, por consiguiente una transferencia de capital sumamente importante.

Sin embargo, las empresas al firmar éste tipo de contratos, pactan un porcentaje en la participación del volumen de las ventas netas o por la prestación de un servicio (participación o prestación de servicios que deberá de ser regulada mediante la figura de precios de transferencia); porcentaje que se transmitirá a la empresa matriz bajo el concepto de “royaltys”, las cuales, en el común denominador de los casos resulta por demás onerosa y, simplemente se han convertido en un método efectivo para transmitir utilidades a la empresa matriz por parte de la empresa filial.

A pesar de la valoración de bienes y determinación de precios que las empresas transnacionales se plantean, éste aún no se encuentra resuelto ni en el ámbito de los Convenios para evitar la doble Tributación, ni mucho dentro de las legislaciones internas de los diversos países, es más, a los problemas tradicionales, se unen otros nuevos, de tal forma que, el desarrollo del comercio ha provocado que las transacciones entre empresas, cada vez sean más complejas, pues los bienes y servicios que se transfieren, incluyen en su producción y comercialización, avances tecnológicos –principalmente- bienes intangibles.

Así las cosas, es notorio entender que las empresas vinculadas eluden el pago de impuestos mediante la manipulación de los estudios de precios de transferencia utilizados contractualmente entre ellas y, a través de dichos acuerdos comercializan activos intangibles y, por ende, obtienen un mejor posicionamiento en ámbitos financieros y económicos. Por lo tanto, es necesario indagar si en ámbitos nacionales e internacionales existe algún cuerpo normativo que regule la Contratación Internacional de dichos bienes; teniendo como fin primordial, analizar y, en su caso, proponer la creación de un cuerpo normativo que regule tanto la contratación, así como el incremento a los porcentos máximos autorizados para la transmisión de utilidades.

### Contratación Internacional

La parte toral de ésta investigación, no sólo radica en la dificultad de determinar los ingresos imputables en las operaciones que se efectúan *intra* empresa, sino en la dificultad de fijar y adoptar un sistema de valoración que proporcione un resultado de plena competencia, cuando las operaciones tengan por objeto o incorporen algún bien intangible, de tal forma que, clarifiquemos que es necesario la valoración específica

de los activos intangibles por separado, logrando así, una aproximación a su valor real en el momento de su transacción, máxime que dichos activos no se comercializan constantemente en el mercado y, por ello, es difícil determinar el valor real de los mismos. El Contrato Internacional Privado, es decir aquel que se utiliza para el intercambio de mercaderías y servicios a nivel internacional, es uno de los mecanismos legales por los cuales las partes formalizan el consentimiento de cada uno de ellos, permitiéndose una competencia comercial a nivel mundial, competencia que de alguna manera colabora con el mejoramiento de la manufactura y el ofrecer mejores productos a nivel internacional.

Por lo tanto, se considera que si tras la regulación sobre las técnicas de Contratación de Marcas y Patentes (que amparan los Contratos de Uso de Marca, Know How y Licencia de Tecnología), así como fijar los factores, hechos y circunstancias que se dan en cada transacción, se otorgaría plena certeza jurídica y comercial a la Secretaría de Hacienda y Crédito Público, del valor real de las operaciones comerciales que se realizan, ya que tras la regulación de dichas actividades en un marco legal interno, se desarrollaría un instrumento que combata la evasión y elusión tributaria, gravando de manera efectiva las utilidades derivadas de las transferencias de bienes intangibles entre empresas vinculadas, evitando problemas de interpretación y aplicación de normas sobre valoración y doble tributación económica internacional.

## CONCLUSIONES

El estudio de los Contratos de Uso de Marca, Know How y Licencia de Tecnología, así como la delimitación de los factores, hechos y circunstancias que se dan en cada transacción comercial que utilizan dichos contratos, otorgaría a la Autoridad Hacendaria un valor real de las operaciones comerciales que se realizan entre las empresas vinculadas, de tal forma que se evite la elusión del pago de contribuciones. Establecer una valoración adecuada de activos intangibles que permita a las administraciones tributarias gravar de un modo eficaz los ingresos que las empresas vinculadas obtienen por la celebración de contratos internacionales, disminuiría la evasión y elusión fiscal.

## RECONOCIMIENTO

El autor agradece el apoyo brindado por la Benemérita Universidad Autónoma de Puebla, México. Asimismo, agradece los comentarios de los árbitros y editores del IBFR, los cuales contribuyeron a mejorar la calidad esta investigación.

# INFLUENCIA DE LOS VALORES ÉTICOS EN EL LIDERAZGO Y SU RELACIÓN CON LA SOLUCIÓN DE CONFLICTOS Y LA COMUNICACIÓN EN LAS EMPRESAS, FAMILIAS Y SOCIEDAD

Víctor Mercader, CETYS Universidad

## RESUMEN

*Este estudio identifica y prioriza los valores éticos más importantes y/o necesarios para lograr un mejor desempeño del Liderazgo aplicado en la empresa, familia y sociedad según la percepción de los integrantes de la muestra analizada, conformada por profesionales del Estado de Baja California, México, núcleo de desarrollo industrial en dicho país y estado fronterizo con California, USA. Posteriormente, los compara y relaciona con los valores éticos obtenidos en investigaciones previas en la Solución de Conflictos y la Comunicación, tanto en el sector empresa, como familia y sociedad e igualmente con profesionales de la misma región anteriormente citada. Al estudiar los resultados se encuentran similitudes, diferencias y correlaciones entre las dimensiones y las variables analizadas que nos ayudarán a comprender mejor la influencia de los valores éticos en el liderazgo, comunicación y solución de conflictos como una necesidad para el desarrollo y la sustentabilidad en los medios principales donde los profesionales se desempeñan en su vida diaria, como son la empresa o trabajo, familia y sociedad.*

**PALABRAS CLAVES:** Liderazgo, Comunicación, Solución De Conflictos, Ética, Valores, Empresas, Sociedad

## INFLUENCE OF ETHICAL VALUES IN LEADERSHIP AND ITS RELATION TO CONFLICT RESOLUTION AND COMMUNICATION IN BUSINESS, FAMILIES, AND SOCIETY

### ABSTRACT

*This study identifies and prioritizes the most important and / or ethical values needed to achieve better performance Leadership applied to business, family and society. The sample was integrated by professionals of the State of Baja California, México, which it is a core industrial development in the country; Baja California is a Mexican state bordering California, USA. This research compares and relates the ethical values obtained in previous researches focused on Conflict Resolution and Communication, applied to business, family, and society, and also with samples integrated by professionals in the same aforementioned region. When analyzing the results, we found that there are similarities, differences and correlations between the dimensions (leadership, conflict resolutions and communication) and the variables (ethical values) which will help us to understand better the influence of ethical values in business, family, and society.*

**JEL:** M00

**KEYWORDS:** Leadership, Communication, Conflict Resolution, Ethics, Values, Companies, Society

## INTRODUCCIÓN

La influencia de los valores éticos está presente en las empresas, familia y sociedad e impactan en los resultados de muy diversas maneras. La comunicación y la solución de factibles conflictos están inherentes en el proceder de las personas y de los equipos de trabajo tanto en las empresas como en la sociedad y familia. El líder aparece en estos entornos como eje principal en sus roles de guía y dirigente con el fin de mejorar y corregir las situaciones que se presenten. De allí que realizar una investigación que identifique, relacione y pueda mostrar el impacto o influencia que los valores éticos tienen en la Solución de Conflictos, Comunicación y en el liderazgo en el ámbito empresarial, familiar y social, y poder relacionarlos, resulta de suma relevancia. Las variables presentadas sirven de impulsores para alcanzar logros con calidad y ética que generen superación y desarrollo en las áreas del vivir. El conocernos a nosotros mismos aplicando valores éticos, nos ayuda a la vez, a comprendernos mejor como miembros de la empresa, familia y sociedad y nos potencia a convertirnos en auténticos líderes de nuestra propia vida.

## REVISIÓN DE LITERATURA Y MARCO TEÓRICO

El liderazgo se demuestra cónsono con la capacidad que un individuo tiene de comunicarse, influenciar, motivar y generar sinergia con sus equipos de trabajo contribuyendo al logro y efectividad de las metas establecidas en una dada organización. Los estilos son múltiples y dependen del momento y circunstancias en ocasiones pero la humildad, participación y confianza son esenciales para un adecuado desempeño, relaciones interpersonales fluidas y un ambiente laboral apropiado y agradable (Díaz, M. et al., 2013). Este autor basa sus resultados en un estudio que analiza una serie de preguntas con variables de liderazgo como propósito, estructura, relaciones, recompensas, mecanismos útiles, cualidades de liderazgo y actitud hacia el cambio.

Por su parte, Akins, R. et al. (2013), muestra la relación y dependencia del líder con los problemas sociales, económicos y ambientales que influyen sus resultados dentro de la empresa u organización, y presenta 10 cualidades de Liderazgo Efectivo necesarias para el desarrollo sustentable: Aprendizaje, Empoderamiento, Adaptación, Desarrollo, Acoplamiento, Reflexión, Sustentable, Humildad, Integridad y Práctica. Entre ellas tuvieron más énfasis la humildad y la integridad y el acoplamiento, reforzando así, ambos autores, la necesidad de aplicación de valores éticos. En las organizaciones inteligentes, el líder asume su presencia y rol como ejemplo y como un agente motivacional y transformador que considera la influencia y las consecuencias sociales como parte prioritaria en pro del bien común para que la organización sea sustentable a través del tiempo. El líder debe adaptarse a las realidades con base a valores éticos y a la vez, debe hacer énfasis en que el fin no justifica los medios; adicionalmente, hay que prever si las decisiones y resultados obtenidos perjudican con daños colaterales a las partes involucradas de alguna manera (Becerra y Sánchez, 2011).

Todo miembro de la empresa, familia o sociedad tiene la oportunidad y el deber de contribuir con el aprendizaje continuo y organizacional en pro del bienestar propio y del desarrollo social, pasando a ser un líder maestro y facilitador, como individuo o como empresa, que potencie en su entorno una mejora progresiva. De allí, el aportar al aspecto ético y humanitario del líder empresarial como ejemplo productivo y humano es fundamental. Karakas y Sarigollu (2013) analiza el caso de la empresa Bereket en Turquía que aplica un modelo de Liderazgo denominado Benevolente, enfocado a la creación de organizaciones virtuosas y compasivas, lo que compagina totalmente con la influencia de los valores éticos y la creación de círculos virtuosos.

Enfatiza también, en incentivos complementarios a los empleados y en la satisfacción de necesidades de los mismos, lo que incrementa el sentido de pertenencia y sus deseos de generar calidad, productividad y

sustentabilidad. Los pilares de soporte fundamental son la moralidad con decisiones éticas, la espiritualidad con inspiración y significado de vida y de trabajo, el positivismo con acciones y resultados que beneficien a las partes involucradas y la comunidad con contribuciones de servicio y conocimientos para resolver situaciones de la realidad que se vive; de esta forma, expresa un liderazgo con sentido humano. Los resultados son la generación de empleados comprometidos e involucrados en el desarrollo y bienestar de la organización y por lo tanto, mayor frecuencia de momentos felices.

Este concepto nos induce a analizar las posibilidades de cambio y adaptación a nuevas estrategias que fusionen productividad con sensibilidad humana. Prada (2013) insiste que el cambio es la esencia de la existencia y que en períodos no largos, debemos renovarnos como lo hacen las células del cuerpo humano en un periodo de seis años. No hay mejoramiento en los procesos y sistemas sin cambio; por lo tanto, el líder y los equipos de trabajo tienen que adaptarse y encontrar nuevas soluciones e impulsar la actualización e innovación que incluye compromiso, desarrollo personal y profesional y cooperación mutua y sinérgica. Este concepto aplica en la parte tangible e intangible del desarrollo del individuo y del colectivismo y a todo nivel.

La necesidad de un liderazgo responsable surge como ineludible en los negocios, la familia y la sociedad; preparar al líder y a los integrantes de la empresa y sociedad en pro del autoconocimiento y autoencuentro como un ser auténtico, es parte fundamental de la superación de cada persona y empresa y se logra por medio de la aplicación de los valores éticos (Freeman y Auster, 2011). Se trata de ser fiel a sí mismo y estar comprometido y por lo tanto, ser solucionador positivo de situaciones propias y ajenas con visión de futuro y prevención de las consecuencias que crean sus resultados de vida y de trabajo; ser capaz de relacionar los propios intereses y aspiraciones personales con las aspiraciones y necesidades comunitarias.

Adicionalmente, el desarrollo organizacional y la sustentabilidad de la organización dependen de un liderazgo visionario que prevea y prepare para el futuro, dentro del plano de incertidumbre que existe en los tiempos actuales cambiantes donde aparecen variables tales como: respeto a las personas, confianza y apoyo, igualdad de poder, participación y confrontación, lo cual nos enfrenta a la realidad presente y las expectativas viables, creíbles y futuras. (Ramos & Díaz, 2010).

Surge el aspecto de la incertidumbre en el que frecuentemente se ven envueltos tanto líderes como equipos de trabajo y que está asociado al recurso humano en todas sus facetas y en especial cuando los cambios organizacionales son necesarios. La empatía en tiempos de incertidumbre disminuye y el mantener la mente y el ambiente laboral en positivo, se hace más imperioso. Un liderazgo de apoyo con comunicación y retroalimentación y con el refuerzo de valores y principios, ayuda a mantener una autoestima personal y de la empresa conservando la confianza y el deseo de encontrar y plantear soluciones que puedan evitar a su vez, conflictos endógenos y exógenos. (Hernández et al., 2014).

La satisfacción de los participantes de cualquier tipo de organización es el resultado concluyente que refleja el presente y futuro de la misma. La ventaja competitiva predominante e importante radica en su recurso humano que si se comunica y maneja los conflictos incipientes de manera sensata y objetiva demostrará un liderazgo adecuado capaz de sobreponerse a las adversidades.

Hoy en día, de acuerdo a Azanza et al. (2013), las culturas organizacionales deben ser flexibles y respaldar el desarrollo del colectivo laboral e inducirles una mentalidad innovadora y de cambio constructivo. Así, se demostrará la confianza, la comunicación armónica, el optimismo y la aplicación de valores éticos con perspectivas y realidades más promisoras hacia el futuro; así, emerge el auténtico liderazgo que se siente apoyado por los empleados o integrantes de la organización de forma solidaria, fluida y natural. La milla extra y el aporte no obligatorio estará presente y la productividad tenderá a mejorar continuamente. El Liderazgo implica transformación continua pero soportada por un plan de acción, que crea un conjunto de procesos en pro de la excelencia de manera colaborativa.

(Bolívar, 2011). Estos conceptos se pueden aplicar a la educación, a la familia, empresa y sociedad de forma simultánea, en pro de una mejor calidad del producto y del servicio, así como de los procesos requeridos. De este modo se evidencian las competencias puestas en práctica por el líder reflejadas en calidad y productividad. Seeger y Sellnow (2007) insiste en que el rol de ser líder debe estar unido a la aplicación de valores éticos mientras Chen y Yang (2010) al igual que Rodríguez & Aguilera (2005) exhortan al encuentro de la satisfacción de todas las partes involucradas en las organizaciones con el fin de que los objetivos y metas se conviertan en logros y productividad.

El aspecto ético y social trasciende a la empresa de manera recíproca originando mayor responsabilidad y cooperación social que según Vhora, Sheel, et al. (2012) resulta en una ventaja competitiva que permea en las diferentes áreas de la empresa robusteciendo las relaciones y ambiente laboral e incluso los beneficios financieros. Sin embargo, la sociedad actual y empresarial está sometida a presiones de sobrevivencia dada una inclemente competencia a todo nivel que olvida con frecuencia la relevancia de los valores éticos al enfocarse prioritariamente en la productividad económica y relegar el virtuoso factor humano (De Sendagoría, 2008).

Esta realidad es un semillero de conflictos internos y/o externos que estimulan de modo negativo a la empresa, familia y sociedad. Es necesario reflexionar como Freeman (2011) propone, al situarnos en el liderazgo espiritual que estimula la armonía y la motivación entre el personal y la organización, tomando como pedestal la aplicación de valores éticos. Este estilo de liderazgo crea una conciencia social e incrementa el aprendizaje, el compartir la información e manera abierta y un gran sentido de solidaridad y pertenencia (Ramírez, Sánchez y Quintero, 2005). Por su parte, Arcienaga et al. (2008) induce a la integración sinérgica del talento y de los valores de los empleados y equipos de trabajo de las empresas, lo cual es reforzado por Schwartz (1992) quien se concentra en la necesidad de la presencia de los valores éticos para lograr mejor desempeño a nivel individual y de equipo.

Estos conceptos llevados a la práctica reducen las posibilidades de conflictos y desagrazos, generándose un mejor ambiente de trabajo y un mayor espíritu de cooperación. Läms & Puçétait (2006) enfatiza en la confianza como pivote del liderazgo y trampolín del desempeño profesional y personal, sustentado por criterios similares de Joseph y Sailakshmi (2011) que promueven el equilibrio del personal, la comunicación, el aprendizaje y las relaciones interpersonales. Todo este conjunto de factores nos mueve a la corresponsabilidad y el balance social y empresarial según Ferrer (2007).

De modo análogo, Graham (2005) nos propone el apoderamiento que estimula y beneficia la productividad y la sustentabilidad. Michaelson (2010) plantea la necesidad de los valores éticos con una perspectiva global donde la comunicación transcultural y el comportamiento organizacional juega un rol fundamental. El hecho de inculcar una visión congruente empresa-empleado se considera vital para la sustentabilidad de la empresa y el hecho de la aplicación de valores éticos en todas las prácticas laborales, personales y sociales de forma oportuna y conveniente, otorga el privilegio de un ambiente laboral apropiado y agradable con sentido de cooperación (Elango et al., 2010; Peterson & Seligman, 2004). Se puede deducir que cada vez aumenta la congruencia en criterio de muchos autores e investigadores de la importancia y necesidad de la aplicación de valores éticos en la empresa, familia y sociedad y al igual de los beneficios que ello implica.

### Metodología y Análisis de los Datos

Los datos obtenidos en esta investigación provienen de dos estudios previos enfocados en la Solución de Conflictos (Mercader, 2013) y en la Comunicación (Mercader, 2011) y en el estudio realizado especialmente para esta investigación enfocado en el Liderazgo. En cada uno de ellos se ha aplicado un cuestionario dirigido a profesionales que trabajan en el área de Baja California, México. Este estado es un centro económico y de desarrollo industrial ubicado en la frontera norte de México siendo limítrofe con el

estado de California de Estados Unidos. En el instrumento aplicado a las diferentes muestras establecidas se han incluido preguntas relacionadas con la importancia de los valores éticos en las tres dimensiones seleccionadas en la investigación y que se presentan en la Tabla 1, la cual indica el número de participantes (profesionistas o profesionales) integrantes de las muestras.

Tabla 1: Dimensiones, Muestra y Sexo de Participantes

Dimensión	Muestra	Sexo	Sexo
Solución de conflictos	268	Masculino	Femenino
		128	140
Comunicación	120	47.80%	52.20%
		56	64
Liderazgo	186	46.70%	53.30%
		73	111
		39.70%	60.30%

Los resultados han sido presentados en tablas y analizados estadísticamente con indicadores porcentuales y en un análisis estadístico descriptivo y correlacional. Los estudios son cuantitativos y transversales.

Se administró un cuestionario a una muestra probabilística de profesionistas / profesionales por vía electrónica siguiendo un similar formato: *¿Cuáles son los (3) tres valores más importantes a considerar para que haya una buena Solución de Conflictos, Comunicación y Liderazgo?* Las preguntas se presentaron de forma separada según fueran dirigidas a las empresas, familia o sociedad.

Los valores éticos considerados en el instrumento provienen de una taxonomía o categorización de valores desarrollada por el autor (Mercader, 2006) y aplicada en diferentes estudios de investigación, Mercader, 2009; Mercader y Velarde, 2010; Mercader 2013). La taxonomía incluye cuatro categorías principales, a saber: de Conducta social, de Crecimiento, de Talento personal y de perfil Interno o Espiritual; cada una de ellas está compuesta de 7 valores éticos, lo que nos da un total de 28 valores que se analizan en esta investigación y en otras previas.

Cada participante debía seleccionar tres valores de los 28 presentados como opción. Es conveniente aclarar al respecto que cada persona al seleccionar tres valores obliga a tener tres veces las respuestas por persona, por lo tanto, las cantidades relacionadas por porcentajes son mayores a 100%, las cuales se convierten posteriormente para que sean porcentajes que no sobrepasen el 100%. Estas son las Tablas que se muestran. Los instrumentos utilizados en cada estudio que se realizó, no se incluyen como anexos, como estaba pensado, por falta de espacio dada la limitación de páginas a presentar. Al igual, hay varias tablas y gráficos de resultados de correlaciones y regresiones que no fueron incluidos por la misma razón. El autor siempre está a la disposición de cualquier investigador para mostrarlos, así como los detalles necesarios y/o adicionales que puedan ser útiles a quienes lo requieran.

Se presentan seguidamente, las Tablas 2, 3 y 4 con los porcentajes de selección de los valores dados en porcentaje (0-100%) que da respuesta por parte de los participantes en el medio empresarial, familiar y social, a las dimensiones consideradas en el estudio: Solución de Conflictos, Comunicación y Liderazgo. Los resultados se aprecian en la misma tabla y los valores mayormente seleccionados se resaltaron en negrilla. La Tabla 5 sintetiza los cuatro valores más importantes para las dimensiones y áreas analizadas. Al analizar la Tabla 5 se aprecian los valores éticos con mayor frecuencia de elección, al considerar los porcentajes provenientes de las dimensiones y áreas o entornos.

Se destaca el Respeto de modo predominante, y tienen preferencia también la Honestidad, la Responsabilidad y la Comunicación. Es importante señalar que el valor Equidad y Justicia es seleccionado en los tres entornos al referirse a la Sociedad mientras que el valor Visión/Objetividad lo es en el entorno o área de la Empresa. También hay que hacer notar que el valor Amor se selecciona de forma relevante al

referirse a la Familia. Es conveniente también, mencionar a la vez, los valores menos nombrados tales como son la Automotivación, Coraje/Valentía, Perdón/Compasión, Generosidad, Perseverancia, Entusiasmo, Creatividad, Atención/Bondad y Buen humor entre otros.

Tabla 2: Valores Éticos en la Solución de Conflictos Presentados en Porcentaje

Solucion de Conflictos		Solucion de Conflictos		Solucion de Conflictos	
Tabla 2a. Valores más importantes para una apropiada solución de conflictos en la Empresa.		Table 2b. Valores más importantes para una apropiada solución de conflictos en la Familia.		Table 2c. Valores más importantes para una apropiada solución de conflictos en la Sociedad.	
VALORES	Porc (%)	VALORES	Porc (%)	VALORES	Porc (%)
Amistad/Unidad	0.50	Amistad/Unidad	1.98	Amistad/Unidad	1.20

La Tabla 5 nos muestra también que los cuatro valores más seleccionados por los participantes según su percepción representan casi el 50% o más de los valores seleccionados, especialmente en la Familia (58.74%; 53.94%; 54.87%) y en Solución de Conflictos en empresas donde representan (52.11%; 48.51%; 49.30%). En sociedad aunque algo menor, representan (48.73%; 46,62%; 37,62%).

Al analizar la data de la Tabla 5 puede concluirse que el Respeto es el valor de mayor impacto entre los 28 valores seleccionados; le siguen la Comunicación, la Honestidad y la Responsabilidad en las dimensiones analizadas de Solución de conflictos, Comunicación y Liderazgo en general. La Equidad y Justicia es muy relevante al analizar la sociedad en las tres dimensiones mientras el Amor solo es considerado al referirse a la Familia. La Visión/Objetividad es de gran importancia al referirse a la Empresa.

Tabla 5: Valores Éticos Más Relevantes Por Dimensión y Área Estudiada Dados en Porcentaje

Se realizó un análisis estadístico de correlaciones para obtener el factor Pearson, indicador de la correlación cuyos resultados se muestran en la tabla 6. En este estudio, se ha establecido que al dar el índice resultados mayores de 0.60 se puede establecer significancia. Existe correlación significativa entre empresa y sociedad en referencia a la Comunicación (0.7903); entre empresa y sociedad en referencia a Solución de Conflictos (0.6309); entre empresa y familia en referencia a Solución de Conflictos (0.6092); entre empresa y sociedad en referencia al Liderazgo (0.6403) y entre empresa y familia en referencia al Liderazgo (0.5738).

## CONCLUSIONES

El estudio, tanto como parte de reflexión de la literatura analizada como en su parte aplicada, deduce: Las tres dimensiones analizadas en este estudio, Solución de Conflictos, Comunicación y Liderazgo están inmersas continuamente en la vida cotidiana del desarrollo y mejoramiento de las empresas, familias y sociedad y los valores éticos son pivotes básicos en sus logros y desarrollo. Los valores éticos han sido tomados más en consideración como necesarios y útiles en el entorno empresarial, familiar y social, según un número mayor cada día de investigadores. Los valores éticos son de importancia esencial y sus consecuencias implican en todos los espacios del vivir y del trabajo, un mayor bienestar, satisfacción y progreso integral. Los cambios son la norma de esta era presente, si los cambios se generan enraizando valores éticos en la empresa, familia y sociedad, podremos tener una humanidad mejor y más armónica y productiva. Un nuevo tipo de líder está lentamente emergiendo con una mentalidad enfocada a la productividad integral que hace converger la autenticidad, el bienestar social y un mayor desarrollo donde la norma es ganar-ganar, tanto en la empresa, familia como sociedad. Es importante inculcar y preparar a los estudiantes y profesionales y decantar a todos los niveles y en todas las direcciones la relevancia de los valores éticos y los beneficios que otorgan a nivel individual y colectivo. Los líderes de hoy son los responsables de los resultados del futuro y los jóvenes serán los líderes del futuro. Se recomienda que investigaciones similares se realicen a personas de diferente nivel académico, social, económico y de diferentes nacionalidades para confirmar y establecer similitudes y diferencias

## **ANÁLISIS DE LA ROTACIÓN DE PERSONAL. CASO: SABRITAS, SUCURSAL PIEDRAS NEGRAS**

Clara Patricia Buentello Martínez, Universidad Autónoma de Coahuila

Nemecio Lorenzo Valenzuela Salazar, Universidad Autónoma de Coahuila

Indalecio Benavides Díaz, Universidad Autónoma de Coahuila

### **RESUMEN**

*La presente investigación es un estudio sobre las causas que originan la rotación de personal en la empresa SABRITAS, sucursal Piedras Negras. Generalmente detrás de una excesiva rotación laboral se oculta la desmotivación, el descontento, la insatisfacción laboral y esto a su vez está influenciado por un conjunto de aspectos vinculados en muchos casos a una insuficiente gestión de los Recursos Humanos.*

*Los resultados que se arrojen servirán para demostrar dichas causas y dárselas a conocer a altos mandos de la empresa mediante las conclusiones y recomendaciones que resulten para que si se desea las apliquen lo más pronto posible y con esto evitar que el personal laboral abandone su trabajo, ya que el personal es el capital intelectual de la empresa porque al abandonar un empleado el trabajo que está realizando en algún puesto lastima económicamente a las empresas, en la que se le invierte recursos económicos al empleado desde su contratación, capacitación, adiestramiento hasta el día que el empleado deja de laborar por la causa que haya sido y afecta también directamente en las ganancias de la organización, así como en el reparto de utilidades de los trabajadores que continúan laborando.*

**PALABRAS CLAVE:** Rotación, Investigación, Análisis de Datos, Insatisfacción Laboral, Interpretación

## **ANALYSIS OF EMPLOYEE TURNOVER. CASE: SABRITAS, BRANCH PIEDRAS NEGRAS**

### **ABSTRACT**

*This research is a study on the causes of staff turnover in the company SABRITAS branch Piedras Negras. Usually behind excessive labor turnover demotivation, dissatisfaction, job dissatisfaction, and this in turn is influenced by a set of aspects linked in many cases to inadequate management of human resources is hidden. The results will shed to prove these cases and make them accessible to senior officers of the company by the conclusions and recommendations arising if you want to implement them as soon as possible and thereby prevent the workforce leave their work, as the staff is the intellectual capital of the company for an employee to leave the work being done in any position financially hurt companies in which he invests financial resources the employee from recruitment, training, training until the day the employee stops working because it has been the cause and also directly affects the profits of the organization, as well as profitsharing for workers who continue to labor.*

**KEYWORDS :** Rotation, Research, Data Analysis, Job Dissatisfaction, Keywords: Rotation, Research, Data Analysis, Job Dissatisfaction, Interpretation

### **PLANTEAMIENTO**

El término "Rotación de Recursos humanos" se utiliza para definir la fluctuación de personal entre una organización y su ambiente; esto significa que la fluctuación entre una organización y el ambiente se define por el volumen de personas que ingresan en la organización y el de las que salen de ella. La rotación de

personal se expresa mediante la relación porcentual entre las admisiones y los retiros, y el promedio de los trabajadores que pertenecen a la organización en cierto periodo. Chiavenato (1990), el término rotación de recursos humanos se usa para definir la fluctuación de personal entre una organización y su ambiente; en otras palabras, el intercambio de personas entre la organización y el ambiente es definido por el volumen de personas que ingresan y salen de la organización.

En toda empresa siempre es bien sabido que existe una leve fluctuación de personal y en definitiva esto es sano para la empresa, después de cierto tiempo si se detectan empleados que no rindan al 100% en su actividad es válido tratar de solucionar el problema ya sea sustituyéndolo, capacitándolo, motivándolo etc., para que de su máximo desempeño, o bien, también es válido que a determinada tiempo el empleado decida por voluntad propia salir de la empresa para buscar algo mejor o cambiar su ambiente entre otros factores; esto es correcto siempre y cuando se presenten muy esporádicamente, pero, cuando esto sucede con demasiada continuidad en definitiva debemos buscar las causas que origina esta situación y tratar de solucionarla ya que de alguna u otra forma afecta a la empresa o bien a otros trabajadores que dependen de la actividad que desarrollan estos trabajadores insatisfechos e inconformes. INDICE DE ROTACION, es la relación porcentual entre las admisiones y las desvinculaciones de personal, en relación al número medio de miembros de una empresa, en el transcurso de cierto tiempo. Si el índice es muy bajo se da el estancamiento y envejecimiento del personal de la organización. Si el índice es muy elevado se presenta demasiada fluidez y se puede perjudicar a la empresa (falta de estabilidad). La rotación laboral se expresa conforme a dos índices para separaciones y para ingresos. El U.S Bureau of labors estadistics, usa el método siguiente para calcular la tasa de separación:

Ejemplo:

$$\begin{array}{l} \text{Índice de rotación} \\ \text{(o porcentaje de separación)} \end{array} = \frac{\text{No total de bajas}}{\text{No total de empleados en nómina}} \times 100$$

El otro método más usado es el siguiente:

$$\begin{array}{l} \text{Índice de} \\ \text{rotación} \end{array} = \frac{\text{No. total de bajas}}{\text{Promedio de empleados en nómina}} - \frac{\text{No. inevitable de bajas}}{\text{(muertes, reducciones de personal, etc.)}} \times 100$$

Si existen 1000 empleados, salen 10 y entran 20. en 1 año.(recordar la importancia del tiempo) El índice de rotación es:  $(20 - 10 / 1000) * 100 = 1\%$  anual. Como la relación es porcentual, el índice es del 1% positivo, lo que indica además que la empresa está creciendo. Existe estabilidad, y la rotación es baja. Si la empresa está en crisis, supongamos salen 500, y entran 20.  $(20 - 500 / 1000) * 100 = - 48\%$  Implica que la empresa decreció personal en 48% y la rotación es muy alta.

### Tipos de Salidas

Las salidas pueden ser por diversas causas, según García (1985), se pueden agrupar de la forma siguiente:

*Bajas biológicas o Inevitables:* esto se refiere a las bajas que se producen en la empresa por motivos de muerte, jubilación e incapacidad para el trabajo.

*Bajas socialmente necesarias.* Es cuando se le debe dar baja a un empleado por haber cometido un acto ilegal como fraude, robo, etcétera.

*Bajas por motivos personales:* Son aquellas bajas promovidas por voluntad del trabajador y causadas por la incidencia de factores propios de su vida personal.

*Bajas por motivos laborales:* Son aquellas bajas promovidas por los propios trabajadores pero por razones como: motivos salariales, afectación de las condiciones ambientales anormales, laborar en tareas no acordes con la calificación poseída o con los intereses profesionales u otros similares, no cumplir con el perfil y competencias que se requieren en la organización.

*Bajas por decisión de la propia Empresa:* Son aquellas bajas donde la decisión es tomada por la empresa y no por el trabajador, y a las cuales tiende a concedérsele un carácter positivo o favorable para el trabajo de la empresa, se agrupan las bajas por motivos de despido, por indisciplinas, ruptura de contratos, por ineptitud o falta de idoneidad para el puesto, separaciones por racionalización, o vencimiento del plazo de contrato.

### Costos

La rotación de personal es muy costosa para una organización y cobra una cuota muy alta en su funcionamiento, productividad y utilidades. Existen costos directos e indirectos asociados a la rotación. Muñoz Pérez (1989). Los costos directos incluyen al tiempo implicado en el reclutamiento, la selección, y el entrenamiento del nuevo personal, así como los costos asociados a gastos de publicidad para obtener personal. El tiempo que un encargado pasa en el proceso de selección, se podría dedicar a otras responsabilidades en sus funciones diarias. Los costos indirectos incluyen a las cargas de trabajo crecientes que los compañeros de trabajo absorben hasta que se contrata y se entrena a los nuevos empleados, así como la productividad baja, asociada a la baja moral del empleado.

### Determinación del Costo de la Rotación de Personal

El sistema es eficiente cuando alcanza los objetivos para los cuales fue construido, es importante saber el rendimiento y la economía obtenidos en la aplicación de los recursos. El sistema que ahorra sus recursos, sin sacrificar sus objetivos y los resultados alcanzados, tiene mayores posibilidades de continuidad y de permanencia. Obviamente uno de los muchos objetivos de todo sistema es la autodefensa y supervivencia. Saber hasta qué nivel de rotación de personal una empresa puede soportar sin mayores daños, es un problema que cada organización debe evaluar según sus propios cálculos y base de interés. La rotación de personal involucra una serie de costos primarios y secundarios. Entre los costos primarios de rotación de personal, están:

Costo de reclutamiento y selección, Costos de registro y documentación Costos de integración, Costo de desvinculación. Como son básicamente cuantitativos, los costos primarios de la rotación de personal son fácilmente calculables, bastando un sistema de tabulación y acompañamiento de datos.

Entre los costos secundarios de la rotación de personal, están:

Reflejos de la producción  
Reflejos en la actitud del personal  
Costo extra-laboral  
Costo extra-operacional  
Costo extra-inversión  
Perdidas en los negocios

Obviamente los cálculos de los costos primarios y secundarios de rotación de personal podrán tener mayor o menor influencia, de acuerdo con el nivel de interés de la organización.

### Causas

Muchos factores contribuyen a la rotación, por ejemplo; desajuste entre el empleado y el jefe inmediato, la filosofía de la organización, el entrenamiento inadecuado del empleado, la poca remuneración salarial, las políticas de la organización (reconocimiento, evaluaciones de desempeño, políticas de vacaciones, etc.) que debilitan la satisfacción por el trabajo, etc. Estos factores no son independientes, generalmente dan como resultado una alta rotación. Es inevitable cierta cantidad de movilidad por motivos de enfermedad, accidentes, envejecimiento, muerte y una gran variedad de razones personales que producen las separaciones. Algunos de estos mismos factores así como las condiciones económicas y financieras en una organización y en la comunidad ocasionan la terminación del empleo, suspensiones o la movilidad interna.

### Afectaciones

Demora en la Producción, ya que la falta del empleado provoca el trabajo no se esté realizando conforme a lo planeado y eso acarrea un costo o precio asociado. Nuevo proceso de capacitación al nuevo personal, lo que invariablemente repercute en la economía de la empresa y su continuidad del trabajo. Actitudes de desmotivación en determinados casos, lo cual distrae la atención y con ello se vuelve menos efectivo el trabajo que se realiza. Maslow (1943). Tiempo en que tarda en cubrirse la vacante es otro aspecto fundamental, lo cual afecta los resultados planeados por la empresa y en algunos casos, se han tenido que modificar los planes de desarrollo y/o crecimiento de las empresas ante constantes situaciones de rotación de personal. En el presente estudio se determinan los factores que originan la rotación de personal en la empresa SABRITAS, S. DE R.L. DE C.V. sucursal PIEDRAS NEGRAS específicamente en el área de almacén. Identificando la relación entre rotación de personal e insatisfacción laboral explicando el efecto que tiene la baja remuneración en la rotación del personal y se analizara cómo afecta la selección incorrecta y la motivación en la rotación de personal.

### Objetivo General

Detectar las causas de la rotación de personal en la empresa SABRITAS, S. DE R.L. DE C.V. sucursal PIEDRAS NEGRAS, las consecuencias que este problema ocasiona y las posibles soluciones a esta problemática, con el fin de dar a conocer los puntos débiles en esta área.

## **METODOLOGÍA**

La presente investigación se llevó a cabo en la empresa SABRITAS, sucursal PIEDRAS NEGRAS, en el estado de Coahuila. El número de trabajadores de esta empresa es de 56 empleados entre secretarías, vendedores gerentes y almacenistas. Se tomó como muestra solo al personal de almacén y algunos empleados del personal de ventas una "Encuesta de Clima Laboral" que dio un total de 20 empleados, considerándose el 35.70% de la población. Esta investigación describió y evaluó la percepción que tienen los trabajadores de la empresa sobre sus tareas, su salario, sobre la capacitación que pudimos descubrir con la herramienta de trabajo utilizada que es verdaderamente nula así como también la relación que existe entre Jefe-Empleado y entre Empleados-Empleados. Hasta lograr llegar al objetivo deseado.

El instrumento de investigación utilizado fue la encuesta la cual es un instrumento que ayuda a medir los siguientes indicadores: Remuneraciones, Capacitación constante, Ambiente Laboral, Respeto, Puntos de Vista, Habilidades, Salario Correcto, Reconocimiento, Satisfacción Laboral.

### Análisis de Resultados

Los resultados de la encuesta de clima laboral aplicada en la Empresa SABRITAS. sucursal PIEDRAS NEGRAS se presentan a continuación:

Figura 1: El 54% de la Muestra Opina Que el Salario Es Malo, el 40% Dice Que el Salario Es Regular y Solo el 6% Opina Que Es Bueno Dejando En 0 la Opción de Excelente

Figura 2: el 35% de la Muestra Opina Que la Relación Jefe-Empleado Es Malo, el 38% Dice Quela Relación Es Regular y el 27% Opina Que Es Bueno Dejando Nuevamente En 0 La Opción de Excelente. Nótese Que los Porcentajes Están En Proporciones Muy Similares Esto Quiere Decir Que No Es Muy Deficiente la Relación Por Que el Porcentaje Mayo Es Regular Ósea Que los Trabajadores de Cierta Manera Están Conformes con el Trato.

Figura 3: La Figura Nos Muestra un Porcentaje de 60% de Malo En Cuestión de Capacitación un 29% de Regular y Por Ultimo Un 11% de Bueno, una Vez Más Dejando Sin Porcentaje a la Opción de Excelente Que No Alcanzo Votos de Opinión Por la Muestra Seleccionada

## CONCLUSIONES Y RECOMENDACIONES

Para concluir la presente investigación se dio por enterado que la máxima consecuencia para que exista una excesiva rotación de personal fue exactamente cada una de las hipótesis formuladas el bajo salario, la falta de capacitación y en más bajo porcentaje la relación entre el jefe y los subordinados sin darle menos importancia. A continuación se presentan una serie de sugerencias con el fin de que el clima laboral en la empresa pueda mejorar y por ende hacer que el índice de rotación del personal disminuya, lo cual era el propósito del diagnóstico en esta investigación.

Se recomienda que se le de capacitación constante a los trabajadores en cuanto a la realización de sus actividades, De igual forma sería de gran ayuda un programa de incentivos en los cuales se les motive monetariamente y moralmente, Además un punto de gran importancia es que el trabajador se sienta escuchado y tomado en cuenta por lo cual se aconseja que se manejen las juntas de empleados donde ellos puedan expresar directamente con los dueños sus inconformidades y puedan dar su punto de vista sobre las acciones que toma la empresa en lo que a ellos concierne. También es de gran importancia que el trabajador conozca la visión, misión, políticas, objetivos, estrategias, valores y metas que la empresa persigue ya que al carecer de esta información no se tiene la visión de lo que se quiere y el trabajador no puede cooperar para alcanzarlo. Por último se sugiere seguir con un estudio donde constante para así poder saber las problemáticas que aquejen a la entidad y poder solucionarlas a tiempo antes de que puedan ocurrir deserciones de trabajadores pero no solo se tomen en cuenta a los trabajadores sino también a altos mandos para así tener un más amplio criterio de lo que se quiere y necesita

Con este tipo de investigación, se puede detectar cuáles son las causas de , "Rotación de Personal" en una organización por lo que se debe de actuar con las recomendaciones realizadas en la Empresa y con esto evitar que el empleado abandone su trabajo y que las empresas puedan crecer y crear nuevas fuentes de empleo. Existe un departamento pero a nivel Región Norte no especialmente para la sucursal piedras negras, parte de esto es la causa por la cual existe la excesiva rotación de personal ya que el departamento no pone atención en los empleados de esta sucursal. Así como también se pudo dar cuanta que las principales causas que ocasionaron esta problemática fue el bajo salario y las pocas o nulas retribuciones así el trabajador, la falta de capacitación y la mala relación que existe entre algunos los jefes a algunos de los trabajadores. La rotación de personal ha sido un problema en esta empresa desde los últimos años. Mas ahora ha ido en considerable aumento en los últimos 3 años el porcentaje de rotación ha sido notable en el año 2011 el índice era de 35% para el 2012 aumento el porcentaje a 45%, y en lo que va del año existe el mismo porcentaje de rotación del año pasado, solo que ocurrió en 1 año y ahora solo han transcurrido 6 meses.

### RESUMEN

*En esta investigación se analizó ecoturismo y desarrollo local en comunidades indígenas. Para Wong (2000) el desarrollo local es un parámetro para evaluar las condiciones de desarrollo económico en las regiones. Martínez-Luna (2010) y Velázquez et al (2013) coinciden que para analizar el desarrollo local en comunidades indígenas se debe incluir la interpretación de los habitantes con respecto a la convivencia armónica de su cultura con la naturaleza. Para SECTUR (2010) el ecoturismo ofrece al visitante disfrute de ambientes naturales y convivencia con habitantes de comunidades. El problema de investigación se debe a la falta de estudios que evalúen el desarrollo local en comunidades indígenas con ecoturismo. Se estudiaron ocho destinos, autorizados como ecoturismo indígena (CDI, 2013), para evaluar indicadores de desarrollo local. Se diseñó un cuestionario con indicadores de desarrollo local y se aplicaron 38 en 8 comunidades indígenas mexicanas. Se evaluaron indicadores para desarrollo local. Los resultados mostraron que para observar desarrollo local en comunidades indígenas con ecoturismo se debe incluir a los habitantes. Se concluyó que el desarrollo en términos económicos no explica el desarrollo local del ecoturismo en comunidades indígenas. Este trabajo contribuye con metodología para evaluar indicadores de desarrollo local y ecoturismo indígena.*

### ABSTRACT

*In this research, ecotourism and local development in indigenous communities was analyzed. To Wong (2000) local development is a parameter to evaluate the conditions of economic development in the regions. Martínez -Luna (2010) and Velázquez et al (2013) agree that to analyze local development in indigenous communities should include interpretation of the inhabitants regarding to the culture of harmonious coexistence with nature. To SECTUR (2010) ecotourism offers to visitors enjoy natural environments and interaction with people of communities. The research problem is due to the lack of studies evaluating local development in indigenous communities with ecotourism. Eight locations, authorized as an indigenous ecotourism (CDI , 2013), were studied to assess local development indicators. A questionnaire with indicators of local development was designed and 38 were applied in 8 Mexican indigenous communities. Indicators for local development were evaluated. The results showed that to observe local development ecotourism in indigenous communities should be included the inhabitants. It was concluded that development in economic terms does not explain the local development of ecotourism in indigenous communities. This work contributes methodology to assess indicators of local development and indigenous ecotourism*

## INTRODUCCIÓN

La actividad turística tiene una mayor e importante participación en la economía del país. El turismo ocupa el segundo lugar en derrama económica después del petróleo. Una rama importante del sector turístico en México es el turismo de naturaleza, dividido en ecoturismo, turismo de aventura y turismo rural. Estos han sido implementados como proyectos de desarrollo en varias comunidades con habitantes indígenas del estado de Oaxaca. De acuerdo a la CDI (2010), se encuentran registrados en el estado, alrededor de 50 proyectos ecoturísticos, la mayoría en la región llamada Sierra Norte.

De acuerdo a Velázquez y colaboradores (2013), los proyectos de ecoturismo localizados en comunidades indígenas mexicanas apuntan hacia la sustentabilidad, tanto de los recursos naturales como de la comunidad (concepto definido por Martínez Luna, 2004), a través de introducir acciones para la conservación de los recursos naturales y culturales de la comunidad, es decir sin alterar la estructura local. El interés de esta investigación es analizar la forma en que la presencia de establecimientos para el ecoturismo se relacionan con los aspectos de desarrollo local, con la participación de la comunidad, es decir ¿se puede dar la adecuación de lo propio con lo nuevo que propone el desarrollo de proyectos eco-turísticos. O tal vez, su visión sea ubicarse como un proyecto para el desarrollo del turismo, sin considerar los elementos que integren a la comunidad y que puedan reflejarse en un desarrollo local acorde a la sustentabilidad comunitaria.

La importancia de este trabajo radica en la preocupación que se tiene sobre si los proyectos ecoturísticos realizados en la región de la Sierra Norte de Oaxaca, de acuerdo con la sustentabilidad de la comunidad cumple y se manifiesta en las categorías de comunidad, descritos por Martínez Luna (2004), (cultura propia, adecuación, cultura y tecnología propia) y como estos explican la percepción de desarrollo local en los habitantes de dichas comunidades. El desarrollo local no es una situación alcanzada o no, como sería decir: esta comunidad está desarrollada, esa otra no. Tal vez uno podría decir que tal comunidad es una de las comunidades con mayor desarrollo. ¿Pero cuál es la percepción de desarrollo local en términos de comunidad con respecto a los proyectos de ecoturismo de los habitantes de las comunidades de la región de la Sierra Norte de Oaxaca?. Debido a la poca bibliografía disponible con respecto a estudios que aborden el análisis de la relación entre desarrollo local y comunidad del ecoturismo, en este estudio se tomaron como bases los antecedentes de Díaz (2000) y Martínez (2003) en términos de comunidad y desarrollo y los implementados por Velázquez-Sánchez y Solana (2013) y Velázquez y colaboradores (2013) en los que se observan resultados que explican los elementos de sustentabilidad comunitaria (comunidad) y la intervención que tienen en los proyectos de desarrollo para explicar su aplicación en comunidades indígenas mexicanas y en particular oaxaqueñas para planear el objetivo de investigación, analizar la participación de los proyectos eco-turísticos en el desarrollo local desde la perspectiva de la sustentabilidad comunitaria en la región de la Sierra Norte del estado mexicano de Oaxaca.

### Marco Teorico

Dice José Luis Coraggio (2000), el desarrollo es un proceso que nunca termina; siempre es posible mejorar la calidad de vida y, sobre todo, impedir el deterioro. Es un proceso que tiene que ser cada vez más participativo, que involucre a todos los sectores, que genere esa famosa sinergia de la cual tanto se habla pero que es tan difícil de lograr, donde lo que uno hace no es en un vacío de relaciones sino que se realimenta con lo que hace el otro. Si uno en un momento tiende a bajar la guardia, de pronto es estimulado y motivado por algo que está pasando en el resto de la sociedad. Es un movimiento continuo en búsqueda de mejores condiciones de vida (Coraggio, 2000.). De acuerdo a la SECTUR (2010), el ecoturismo se diferencia del turismo tradicional porque se enfoca a realizar actividades en contacto directo con la naturaleza para la apreciación y el conocimiento de esta, así como de convivencia con la comunidad. Cuyas finalidades dentro de este ámbito es que tales proyectos apuntan hacia la sustentabilidad, concientizando y

conservando los recursos naturales y culturales de la comunidad sin alterar su estructura social. En este sentido el ecoturismo es un factor para el desarrollo local en comunidades indígenas, siempre y cuando se pueda adecuar a las condiciones de comunalidad.

La Secretaría de Turismo define el concepto de ecoturismo desde la perspectiva de que es un *producto turístico*, que está dirigido para aquellos turistas que disfrutan de la historia natural, y que desean apoyar y participar activamente en la conservación del medio ambiente, definiéndolo como: “Los viajes que tienen como fin el realizar actividades recreativas de apreciación y conocimiento de la naturaleza a través del contacto con la misma” (SECTUR, 2010). Entre las actividades más reconocidas y practicadas en este segmento son:

- Observación de la naturaleza
- Observación de fauna
- Observación de ecosistemas
- Observación geológica
- Senderismo interpretativo
- Rescate de flora y fauna
- Talleres de educación ambiental
- Proyectos de investigación Biológica
- Safari fotográfico
- Observación sideral
- Observación de fósiles.

En este sentido el ecoturismo es un factor importante para el desarrollo de una comunidad siempre y cuando se pueda adecuar a las condiciones de la comunalidad. La importancia de conocer el territorio para el ecoturismo reside en la posibilidad de apropiación de la realidad local para promover los recursos existentes en la búsqueda de una mejor calidad de vida para sus habitantes. Un importante eje que atraviesa este proceso es la participación ciudadana. Con ella conocen los intereses, aspiraciones y problemas de la comunidad, a la vez que los líderes locales pueden presentar propuestas, difundirlas y sumar esfuerzos en pro del desarrollo local. El propósito del desarrollo local (González, 2008), no sólo puede ser comprendido desde una perspectiva económica, sino lo contrario, ya que es un proceso dinámico de ampliación de capacidades locales que permitan trabajar en acciones para mejorar la calidad de la vida de todos los integrantes de la comunidad. Rescatando a Coraggio (2006), se puede mencionar que el objetivo del desarrollo local tiene cuatro componentes básicos:

*Económicos*, los que hacen énfasis en el trabajo productivo, ingreso, satisfacción racional de necesidades legítimas, suficiencia y calidad de bienes públicos. *Sociales*, los que integran las propuestas para promover condiciones de creciente igualdad, efectiva igualdad de oportunidades, convivencia y justicia social. *Culturales*, pertenencia e identidad histórica, integración a comunidades con contención, valores como la Solidaridad, como valor moral, pero también un componente funcional (nadie puede vivir mejor si su entorno no mejora sensiblemente de manera generalizada) y *Políticos*, que se refieren transparencia, legitimidad y responsabilidad de las representaciones, participación directa responsable e informada de la ciudadanía en las grandes decisiones colectivas y en la gestión pública (Coraggio J. L., 2006)

De acuerdo con (González Reyes & López-Calva), diversos estudios sobre el tema utilizan el concepto de desarrollo local en forma intercambiable con expresiones como *desarrollo regional*, *desarrollo comunitario* o incluso *desarrollo rural* para referirse a fenómenos que, con algunas variantes, se refieren a asuntos relacionados con el desarrollo *económico* de unidades territoriales subnacionales de características diversas. En muchos casos es conceptualizado como *crecimiento económico* a nivel subnacional y medido: En términos de ingreso per cápita; o mediante los precios de los factores de producción, como los salarios en el caso del factor trabajo. En otros casos se conceptualiza de acuerdo con parámetros que expresan un mejor

o peor *desempeño* de la economía subnacional, típicamente medido según: Medidas de productividad como el Producto Interno Bruto (PIB) per cápita o el valor agregado bruto en la manufactura por empleado. Los niveles, cambios, y/o duración del empleo o del desempleo. Algunas variables demográficas como el cambio en población o el nivel de inmigración neta. Algunos indicadores del mercado de bienes raíces tales como el ritmo de crecimiento de las solicitudes de construcción o los precios promedio de las casas-habitación (González Reyes & López-Calva). “El objetivo del desarrollo se relaciona con la valuación de las libertades reales que disfruta la gente en una población determinada... La discusión sobre los medios y los fines del desarrollo nos llama a colocar la perspectiva de la libertad en el centro del escenario. Las personas deben ser vistas, bajo este enfoque, como agentes activamente involucrados –dada la oportunidad– en la construcción de su propio destino y no solamente como receptores pasivos del fruto de ingeniosos programas de desarrollo”. (Sen, 1999 p. 53). La perspectiva de Amartya K. Sen sobre desarrollo local (González Reyes & López-Calva) involucra los siguientes aspectos: El proceso de generación de bienestar individual. Acceso a recursos, bienes y servicios. Función de conversión. ¿De qué depende?: condiciones físicas, tecnológicas, intelectuales, sociales, institucionales y culturales. Importancia de la responsabilidad y agencia: Función de evaluación (nivel de bienestar). Desafíos del desarrollo local. En términos de desafíos, los procesos de desarrollo local descritos por Hernán Blanco (2003) deben tender a: *La apropiación territorial*, el desarrollo local debe surgir a partir de la participación de todos los actores en el territorio, a través del aprovechamiento de los recursos humanos, materiales y naturales y de las potencialidades que la comunidad tiene para alcanzar una mejor calidad de vida y la realización de los intereses de cada uno de sus habitantes. *Afirmar la identidad cultural*: el desarrollo local debe aprovechar y fortalecer la identidad cultural de su comunidad, en un mundo donde esta tiende a ser subsumida por los procesos de globalización.

Ello permite una mejor apropiación de la realidad local y facilita enfrentar los desafíos que el desarrollo plantea. Al respecto, *Articular/ coordinar*, el desarrollo local debe responder a una voluntad de gestión asociativa entre los representantes públicos y privados, para recoger y estimular todos los elementos propios y también los recursos externos, para generar nuevos proyectos de desarrollo que tengan una identidad propia. *Planificar*, en este sentido se trata de proyectar las capacidades locales más allá de la actividad turística, involucrando a esta industria en el desarrollo local. Este punto implica la participación estrecha de la comunidad con las empresas que operan en el territorio. *Fortalecer el liderazgo del municipio*, el gobierno local debe transitar desde la administración, con capacidad de liderazgo para articular y conducir las fuerzas y recursos de participación ciudadana.

Hablar de comunidad indígena es mencionar lo que respecta a comunalidad, la cual en palabras de Jaime Martínez Luna (2004), “Significa que los recursos y la energía partan del origen de propiedad de la comunidad, es decir, de todas las familias, entendida como propiedad de hombres y mujeres. Al ser la tierra un bien de todos, su cuidado es y en la actualidad seguirá siendo de todos. Esto ofrece una explicación de la conservación de la diversidad natural en los territorios comunitarios. *Comunalidad* es compartencia, es derecho propio, es cultura propia, es naturolatría, es resistencia aunque de manera permanente es adecuación, es también comunalicracia, es tecnología propia. “De algo estoy seguro: no es amor, ni familia, pero el sentimiento sí es propiedad comunal y social” (Martínez Luna, 2004).

Al hablar de comunalidad es necesario mencionar la autonomía de una comunidad, ya que es un factor que la representa como estructura social. La autonomía tiene su origen en dos vocablos griegos: auto, que significa mismo y nomos que significa ley. La capacidad de los organismos para darse su propia ley, su propio mando. La autonomía es una forma de división de poder, pero no significa soberanía. Ambos conceptos son excluyentes, ya que soberanía significa antes que nada independencia ante los otros poderes y autonomía, una condición legal que no afecta la distribución de funciones que establece la Constitución (Cuervo, 2011). En una comunidad también existen las tradiciones, la cosmovisión, es decir, la manera en cómo ven ellos al mundo y en general la cultura. “La tradición sería ahora algo así como el resultado de un

proceso evolutivo inacabado con dos polos dialécticamente vinculados: la continuidad recreada y el cambio. La idea de tradición remite al pasado pero también a un presente vivo. Lo que del pasado queda en el presente eso es la tradición. La tradición sería, entonces, la permanencia del pasado vivo en el presente. La tradición no se hereda genéticamente; se transmite socialmente y deriva de un proceso de selección cultural. La parte de la cultura seleccionada en el tiempo con una función de uso en el presente sería la tradición (Arevalo).

"La cultura... puede considerarse... como el conjunto de los rasgos distintivos, espirituales y materiales, intelectuales y afectivos que caracterizan una sociedad o un grupo social. Ella engloba, además de las artes y las letras, los modos de vida, los derechos fundamentales al ser humano, los sistemas de valores, las tradiciones y las creencias." (Gajardo, 2006). En el caso de la cosmovisión Broda (2001) la define como "[...] la visión estructurada en la cual los miembros de una comunidad combinan de manera coherente sus nociones sobre el medio ambiente en que viven y sobre el cosmos en que sitúan la vida del hombre [...]" (Broda, 2001). Estos factores como muchos otros pertenecen a la esencia de una comunidad dado que es necesario conservarlos para que estas, conserven su autenticidad para poder definir en términos de sustentabilidad comunitaria.

La palabra conservación dentro del contexto ambiental, es definida por la Union Internationale pour la Conservation de la Nature, como: "... la gestión de la utilización de la biosfera por el ser humano, de tal suerte que produzca el mayor y sostenido beneficio para las generaciones actuales, pero que mantenga su potencialidad para satisfacer las necesidades y las aspiraciones de las generaciones futuras..." (Sanchez). De acuerdo con lo establecido en los escritos por la SEMARNAT (2006), los efectos socioculturales del turismo varían en intensidad y forma, dependiendo de la clase de visitantes. La presencia de visitantes afecta los patrones de vida de los pobladores. La forma en que se comportan los visitantes y sus relaciones con los ciudadanos del país anfitrión surten un efecto profundo en el modo de vida y las actitudes de la gente local. Es probable que los efectos más acentuados de este fenómeno se observen cuando los visitantes de América del Norte o de Europa Occidental viajan a un país en desarrollo y se enfrentan a una cultura que no comprenden o caracterizada por un nivel de vida económicamente bajo.

A su vez, las expresiones culturales de un pueblo, deben ser de gran interés para la mayoría de los viajeros, porque incluyen música y danza, artesanías, alimentos y bebidas, industria y negocios, agricultura, educación, literatura y lenguaje, ciencia, gobierno, religión e historia. Las experiencias de los turistas se ven enriquecidas cuando hacen un esfuerzo sincero para conocer mejor a la gente local. El interés de los visitantes por la cultura local proporciona empleo a artesanos, músicos y otros artistas, lo que acrecienta la herencia cultural. El turismo puede ser el vehículo que haga posible un intercambio cultural entre las colectividades que entran en contacto durante la experiencia turística. Por esta razón, es importante que los pueblos conserven, valoren y desarrollen sus diferentes manifestaciones culturales (SEMARNAT, 2006). Ahora bien, aunque el *intercambio transcultural* es tal vez el mayor valor social del turismo, también puede conducir a la alteración de las costumbres de una cultura o a la globalización de las culturas. Los impactos negativos en el medio sociocultural de las comunidades locales se atribuyen a los visitantes de conducta irrespetuosa.

Los estudios sobre el impacto social realizados en diversos países revelan que la mayoría de los lugareños piensa que el aumento en las concentraciones de turistas es lo que causa o acentúa los problemas sociales. Entre los aspectos culturales, el lenguaje es uno de los que más resienten el impacto de la actividad turística, fenómeno evidente en las ciudades fronterizas o en aquellos destinos turísticos que reciben principalmente a visitantes de una comunidad lingüística determinada (SEMARNAT, 2006). Como se puede observar en la información disponible y comentada en esta revisión, existen tres aspectos que tienen relación para explicar la visión del término desarrollo local desde la comunalidad y los proyectos de ecoturismo. Primero con la presencia de establecimientos para prestar servicios de ecoturismo en comunidades indígenas,

segundo la participación de los habitantes en la prestación de los servicios y tercero los aspectos de sustentabilidad comunitaria en la percepción de desarrollo local.

## METODOLOGÍA

En esta investigación se analizaron los factores de medio natural y cultura incluidos en el proyecto de ecoturismo, sustentabilidad comunitaria y desarrollo local en 8 comunidades con destino eco-turístico en la región de la sierra norte del estado de Oaxaca, para analizar los aspectos de desarrollo local que identifican y expresan los habitantes y como contribuye la presencia del proyecto de ecoturismo. Se realizó una entrevista la cual fue estructurada con base a indicadores de las variables sustentabilidad de la comunidad desarrolladas por Velázquez-Sánchez y Solana (2013) de acuerdo a las categorías de comunalidad descritas por Martínez Luna (2004) y con la inclusión de indicadores de desarrollo local y factores medio natural y cultura en las actividades de ecoturismo, para analizar la participación de los proyectos de ecoturismo. En la Tabla 1, se pueden observar las variables sustentabilidad comunitaria con 4 categorías y con los indicadores que las definen. Actividades de ecoturismo con las categorías medio natural y cultura y la variable desarrollo local con las categorías económicas, sociales, culturales y políticas.

Tabla 1: Operacionalización de las Variables Sustentabilidad y Medio

Variables	Categorías	Indicadores
Sustentabilidad comunitaria (comunalidad)	Cultura propia	Tecnología. Conocimiento. Producción y normatividad
	Adecuación Cultura	Social. Originalidad. Valores. Armonía. Medicina. Comida. Creatividad. Cosmovisión
Desarrollo Local	Tecnología propia	Materiales. Relación hombre-tierra
	Económicas	Ingreso. Trabajo productivo. Satisfacción de necesidades legítimas
	Sociales	Igualdad efectiva. Igualdad de oportunidades. Convivencia. Justicia social
	Culturales	Pertenencia. Identidad histórica. Integración. Valores (solidaridad). Mejora del entorno
Medio natural	Políticas	Transparencia. Legitimidad. Responsabilidad. Participación de los habitantes. Decisiones colectivas. Gestión pública.
	Conservación	Limpieza. Programa de reforestación. Empleo de insumos naturales. Manejo de basura
	Prevención	Programas de prevención. Campañas. Educación. Brigadas
	Cuidado Reglamentación	Vigilancia Reglamentos. Folletos. Trípticos informativos

En esta tabla 1, se pueden observar las variables que se incluyen en este estudio con sus respectivas categorías y con los indicadores que se contemplaron para observar cada una de ellas desde la perspectiva del actor y receptor del desarrollo local. Fuente: elaboración propia.

*Diseño y aplicación de la entrevista.* Para recolectar la información fue elaborada una entrevista semi-estructurada. Las preguntas que se incluyeron en ella se formularon con base al cuadro operacional para las variables de sustentabilidad comunitaria, desarrollo local y medio natural. Como informante clase se entrevistó directamente al señor Rafael Ruiz López, presidente del comité de ecoturismo de San Pedro Nexicho y se entrevistó a 38 habitantes de 8 comunidades. Se consideró el empleo el método cualitativo de fenomenología y se practicó análisis factorial para observar el comportamiento de los indicadores en las categorías planteadas.

## RESULTADOS

Con los datos obtenidos se realizó el análisis sobre los factores de comunalidad que se integran en los servicios de ecoturismo, pero principalmente la integración de los habitantes en las mismas. Con la ayuda de un tríptico proporcionado por el presidente del comité de ecoturismo se observó como resultado que el destino ecoturístico no involucra los aspectos de desarrollo local faltando la inclusión de la comunidad. Esto percibido en que solamente ofertan cabañas, recorridos a los hornos de cal, aguas termales, al bosque, peñascos, mirador y sendero prehispánico. Dejando de lado las categorías de la comunalidad salvo la gastronomía y la historia que se describen brevemente. Lo curioso del caso es que el título del tríptico es “arte, cultura y tradición”, no viéndose nada de esto en el contenido de este, además en el apartado de los servicios que ofrecen se incluye el Turismo rural, estando este de mas porque no se tienen actividades actualmente que pertenezcan a este tipo de turismo. Además se obtuvo información sobre la vestimenta tradicional la cual no es conocida mucho ya que solo es vista en las fiestas. De esto, aun no se han implementado actividades sobre el rescate de esta. No se tiene un rescate de artesanías, se conoce que una sola persona en la comunidad sabe elaborarlas, lo que son bolsas de mano y canastos. Un dato alarmante fue que en la comunidad un 0% de los habitantes habla lengua indígena, en este caso la zapoteca, siendo esta un principal atractivo para aquellos turistas que prefieran este tipo de actividades en las comunidades. Dado esto, aun no se está haciendo nada para el rescate y preservación de este importante elemento y atractivo dentro de una comunidad indígena.

Con la información obtenida de la entrevista y a la observación, se puede decir que los destinos ecoturísticos de la Región de la Sierra Norte de Oaxaca, de acuerdo a los cuatro componentes básicos que describe José Luis Coraggio (2006) del desarrollo local y a las categorías de comunalidad de Martínez Luna (2004) actualmente ha comprendiendo tres componentes básicos del desarrollo local: sociales, políticos y económicos, dejando de lado el componente cultural, es decir, la comunalidad. Los resultados obtenidos por la entrevista, arrojan que en las 8 comunidades existe presencia de las categorías de la comunalidad en cuanto a la sustentabilidad: cultura propia, la adecuación, la cultura por parte de la medicina, comida, fiestas, cosmovisión. En la variable de medio natural se pudo probar que si manifiestan la implementación con medidas de conservación y cuidado al medio ambiente como parte de la identificación con el medio natural, también se mostraron las categorías de desarrollo local que manifiestan los entrevistados, destacando en la categoría económica la satisfacción de las necesidades legítimas en términos de fiestas patronales, convivencia y justicia social en la categoría social, mejora del entorno en la categoría cultural y en la categoría política participación de los habitantes. Los datos se pueden observar en la Tabla 2, en la que se resumen las categorías y los indicadores resultados del análisis factorial.

Tabla 2: Categoría e Indicadores de las Variables Sustentabilidad Comunitaria, Medio Natural y Desarrollo Local en la Comunidad de San Pedro Nexicho

Desarrollo Local	Sustentabilidad	Medio Natural
<i>Económicos</i> , los entrevistados manifestaron recibir <i>ingresos</i> con la presencia de turistas y con los beneficios comunitarios de las cabañas tienen para realizar sus fiestas patronales (satisfacciones legítimas). <i>Sociales</i> , permite la convivencia con los que participan en las cabañas y con los visitantes. <i>Culturales</i> , con la presentación de sus festividades, sus cultos y expresiones artísticas muestran su <i>identidad histórica</i> . Falta <i>mejorar el entorno</i> . <i>Políticas</i> . Identifican participación de la comunidad, pero <i>falta gestión pública</i> y toma de <i>decisiones colectivas</i> .	Cultura propia: los habitantes se dan a conocer como Zapotecos, cuentan con un lienzo donde narra el origen del “Pueblo del Señor” San Pedro. Adecuación: aun se rigen por usos y costumbres. Cultura: se realizan fiestas tradicionales y religiosas. Su música es tradicional contando con una banda de viento. En cuanto a la comida si principal platillo y el tradicional es el Chichilo elaborado con carne de borrego o res. Hacen uso de la medicina tradicional utilizando plantas del campo y de la comunidad.	Conservación: en cuanto a las medidas de conservación cuentan con un programa de reforestación destacando el pino. Se prohíbe el uso de productos no biodegradables. Separación de la basura Reciclaje Manejo de aguas residuales mediante pozos de absorción Inventario de flora y fauna, así como reglamento del cuidado del medio ambiente.

En la Tabla 2, se presenta el concentrado de los indicadores que se desprendieron de las entrevistas realizadas tanto al informante clave, como a los 21 habitantes de la población en torno a las tres variables analizadas en este estudio. Como se puede observar son muchos los indicadores identificados y manifestados por los entrevistados y que se vieron reflejados en el análisis factorial. Fuente: elaboración propia.

## CONCLUSIONES

Los resultados permitieron conocer la perspectiva de los habitantes hacia la implementación del centro ecoturístico, lo consideran como económico, lo cual, hasta ahora ha ayudado a generar empleos e ingresos económicos, mediante los comedores particulares, así como el comedor comunitario con el que ellos cuentan, empleándose también para la limpieza de las cabañas y los particulares que tiene comercios.

En otro sentido ha ayudado a la conservación del medio ambiente y generado la unión de las comunidades. Se logro la llegada de la señal del celular. La pavimentación desde la ciudad de Oaxaca hasta el destino, que hasta el 2010 no se tenía. De esta manera se teme que a este paso el desarrollo local observado en la Región de la Sierra Norte del estado mexicano de Oaxaca, ocasione efectos negativos como la desculturización, pérdida de identidad y distorsión en la estructura de la comunidad, entre otras, sobre la cultura ya que al parecer se advierte el paso del desarrollo en términos de empresa ecoturística con beneficios particulares.

Los resultados coinciden en las categorías de medio natural planteadas en la literatura consultada, en particular lo propuesto por la SEMARNAT (2006), sin embargo, con respecto a las categorías de sustentabilidad comunitaria se aprecia la falta de inclusión de factores culturales y de participación comunitaria en las actividades del desarrollo de ecoturismo. Sin embargo, con respecto al desarrollo local se observa la percepción de los habitantes en terminos de mejora económica, lo que resulta en la transición de la comunalidad al desarrollo, situación que Martínez (2003), prevee como estrategia de adecuación de los pueblos indígenas ante los embates del desarrollo.

## BIBLIOGRAFIA

# ANALISIS Y ADECUACION DEL PROCESO PARA LA ELABORACION DE PROYECTOS DE OBRA PUBLICA

Abelardo Ceniceros González, Universidad Autónoma de Coahuila, México

## RESUMEN

*El desarrollo de la obra pública en México, ha demostrado ser en los últimos años un área de oportunidad para crear nuevas condiciones en la gestión para la elaboración de los proyectos ejecutivos, basándose en metodologías administrativas que permiten establecer pautas entre cada uno de los procesos necesarios para la validación de los proyectos en su conjunto. De acuerdo a la Auditoría Superior de la Federación en su análisis de 80 obras públicas con montos superiores a los 100 millones de pesos realizadas entre 1999 y 2010 las cuales presentaron algún atraso o desfase, este se debió, principalmente a errores técnicos al momento de la elaboración de los proyectos ejecutivos dado que el 71% de los atrasos y desfases en las obras analizadas fue por esta causa. Por lo anterior la presente investigación busca proponer un proceso de gestión para la concepción y elaboración de proyectos ejecutivos de obra pública mediante un análisis de contenidos de tipo exploratorio y descriptivo en la fase de planeación, tomando en consideración variables utilizadas en las herramientas administrativas propuestas.*

**PALABRAS CLAVE:** Proyectos ejecutivos, metodologías administrativas, obra pública.

## ANALYSIS AND FITNESS MANAGEMENT PROCESS FOR THE PREPARATION OF PUBLIC WORKS PROJECTS

### ABSTRACT

*The development of public works in Mexico, has proven in recent years an area of opportunity to create new management conditions for the development of the final design, based on administrative methodologies to establish patterns between each of the processes required for validation of the projects as a whole. According to the Superior Audit Office in its analysis of public works 80 amounts exceeding 100 million made between 1999 and 2010 which showed some delay or lag, this was mainly due to technical errors at the time of preparation of final designs given that 71% of arrears and offsets in the works analyzed was for this cause. Therefore this research aims to propose a management process for the design and development of executive public works projects through a content analysis of exploratory and descriptive in the planning phase, taking into account variables used in administrative tools proposed.*

**JEL:** M00

**KEYWORDS:** Project Managers, Administrative Methodologies, Public Works

### INTRODUCCION

La ejecución de la obra pública ha sido históricamente un área económica importante para el desarrollo de las diferentes regiones de nuestro país, y de acuerdo a las leyes, son las instancias de gobierno quienes se encargan de planear, desarrollar y ejecutar todos y cada uno de los proyectos necesarios para fortalecer la infraestructura.

Dentro de la estructura gubernamental con la que se rige el sistema mexicano, existen en él las Secretarías de Estado las cuales de acuerdo a la Ley Orgánica de la Administración Pública Federal (Cámara de Diputados del H. Congreso de la Unión, 2013) son las encargadas de estudiar, proyectar, construir y conservar con la participación que corresponda, de acuerdo a los programas formulados y que compete realizar al gobierno federal, las obras requeridas en el ámbito de acción de cada una de ellas.

El desarrollo de la obra pública es la culminación de los trabajos que satisfacen una necesidad importante en la sociedad, ya que con ella se cubren necesidades de todos y cada uno de los sectores sociales importantes para que la ciudadanía tenga acceso a mejores servicios, de salud, educación, vialidades, servicios, etc. Es el desarrollo de este tipo de obras las que elevan la competitividad de las regiones y dan un mejor nivel de vida a sus habitantes.

Debido a la trascendencia de la obra pública en la sociedad y su impacto real se estima que entre 2009 y 2010 el financiamiento en infraestructura tuvo un crecimiento del 140% llegando en estos años a niveles de 500 mil millones de pesos (Hernández, 2011), esta cifra nos permite dimensionar la capacidad de esta actividad para activar la economía nacional de manera importante, sin embargo de acuerdo a las cifras publicadas por la Auditoría Superior de la Federación en su reporte “Problemática General en Materia del Obra Pública” de las obras analizadas, en conjunto promediaron un incremento del 142% con respecto al monto contratado y un desfase de hasta 1168 días para su ejecución, de la misma manera que resalta que el 65% de las obras con desfase o incremento económico se debió a proyectos incompletos.

Con lo anterior no es difícil descifrar el impacto a la economía nacional que representan estos desfases e incrementos de costo de la obra pública que se realiza en nuestro país, considerando que en la actualidad existen herramientas administrativas, técnicas y tecnológicas que deben de incluirse en los procesos de gestión para la elaboración de los proyectos ejecutivos de obra pública.

Las herramientas administrativas utilizadas en otros ámbitos y de las cuales se ha probado su efectividad, forman un factor importante para la evolución de los procesos para la elaboración de los proyectos ejecutivos de obra pública en nuestro país, incluyendo en su implementación las herramientas técnicas y tecnológicas con las que se cuenta hoy en día para realizar estas actividades.

La elaboración del trabajo se enfoca a establecer de acuerdo a estudios previos la definición de las áreas necesarias para desarrollar una planeación y la elaboración más apegada a la realidad de los proyectos ejecutivos de obra pública. Así como establecer en base a un análisis de contenidos de los informes y bibliografía existente en el tema un proceso para la elaboración de los proyectos de obra pública.

## REVISION LITERARIA

“Entendemos por obra pública la acción, el servicio o el trabajo que decide llevar a cabo el Estado sobre bienes muebles o inmuebles, a fin de satisfacer necesidades públicas.” (Nava, 2009)

“Las complejidades crecientes de los proyectos actuales han demandado técnicas de planeación más sistemáticas y más efectivas con el objeto de optimizar la eficiencia en la ejecución del proyecto.” (Guerrero, 2007)

“El proyecto ejecutivo es la "fase imaginativa del construir arquitectónico" fase cuyo objetivo principal es, que lo imaginado sea potencialmente útil, que asegure la integridad del edificio y sus ocupantes, que sea estéticamente conveniente, además de susceptible de ser materializado económicamente con los procesos de producción al alcance. Planear el construir arquitectónico, significa prepararse para afrontar las

dificultades previsibles del proceso constructivo, tales provisiones deben comenzar a incidir en la mente de los proyectistas durante la gestación del proyecto” (González, Casals, & Falcones, 1997)

“La Gestión de Proyectos se ha transformado en una necesidad ineludible para que estos lleguen a buen puerto y, dada la experiencia en la ingeniería, en la economía y áreas sociales, es necesario enfocar a esta Gestión desde una visión INTEGRAL, es decir desde que el Proyecto es solo una necesidad, una idea, una solicitud, hasta el cierre formal del mismo, este genero de administración permitirá optimizar y maximizar los beneficios.” (Subsecretaría de Informática, 2010)

“La Auditoría Superior de la Federación (ASF), durante la revisión anual de la Cuenta Pública Federal, observó que los principales proyectos de infraestructura realizados por diferentes entidades fiscalizadas, tuvieron modificaciones recurrentes respecto de las provisiones originales, que generaron incrementos importantes en el monto de inversión y prórrogas en el plazo de contratación, ejecución y puesta en operación, con la consecuente repercusión social y económica de no contar con las obras y servicios en el plazo y monto contratados.” (Auditoría Superior de la Federación, 2012)

Un motivo del retraso de una obra puede ser “el carácter tan heterogéneo de la construcción, la gran diversificación de actividades, la profusión de empresas, su dispersión geográfica y sobre todo la gran cantidad de factores aleatorios e incidencias impredecibles en la ejecución de las obras” (Barber, 2001)

“De acuerdo a los resultados obtenidos en los últimos años en la ejecución de obra pública, se han encontrado desfases considerables en la realización de la misma donde “las razones para la enorme desconexión entre el nivel de gasto público realizado y los resultados obtenidos son muy particulares a cada sector. Sin embargo, existe una serie de elementos comunes que explican en gran medida la falta de calidad y eficiencia del gasto público en el país, tales como: El uso político del presupuesto, Un arreglo federal disfuncional y oneroso, La falta de mecanismos efectivos de control y rendición de cuentas, Escasos indicadores relevantes para medir el impacto real del gasto.” (Hernández, 2011)

## METODOLOGIA

“A juicio de Bardin (1986:7) el análisis de contenido es un conjunto de instrumentos metodológicos, aplicados a lo que él denomina como «discursos» (contenidos y continentes) extremadamente diversificados. El factor común de estas técnicas múltiples y multiplicadas -desde el cálculo de frecuencias suministradoras de datos cifrados hasta la extracción de estructuras que se traducen en modelos- es una hermenéutica controlada, basada en la deducción: «la inferencia»”. (López, 2002)

“Es evidente que el interés del análisis de contenido no reside sólo en la descripción de los contenidos, sino en lo que éstos, una vez tratados, podrían enseñarnos relativo a «otras cosas». Estos conocimientos deducidos de los contenidos pueden ser de diversa índole: psicológica, sociológica, histórica, económica...” (López, 2002)

Por lo anterior el presente trabajo se desarrolla en el contexto de un análisis de contenidos determinantes en la materia, analizando los resultados estadísticos encontrados sobre el tema y haciendo una aportación basada en las diferentes teorías de la administración de proyectos, aplicados en lo concerniente a la elaboración de proyectos ejecutivos de obra pública.

Se valoran variables cualitativas las cuales han sido factor en el desarrollo de las obras estudiadas previamente, considerando en esa valoración interpretaciones inferenciales en el sentido de la omisión en procesos vitales para la conformación de los proyectos ejecutivos, toda vez que las conclusiones de los

estudios en mención hacen referencia a la ejecución de proyectos inconclusos lo que deriva en la falta de procedimientos en la elaboración de los mismos.

Estos datos nos llevan a desarrollar propuestas del tipo administrativos buscando la solución a los problemas encontrados en las investigaciones que se toman como base para la elaboración del presente documento, considerando en ello los procesos técnicos ineludibles para la realización de los proyectos de obra pública.

## TRATAMIENTO Y ESTADISTICOS

Para la elaboración del presente documento nos basamos en la parte más sustancial de la investigación realizada por la Auditoría Superior de la Federación donde “el estudio comprendió el análisis de 64 contratos: 19 de la Secretaría de Comunicaciones y Transportes (SCT); 25 de Petróleos Mexicanos (Pemex) y sus subsidiarias; 8 de Comisión Federal de Electricidad (CFE); 3 de Caminos y Puentes Federales de Ingresos y Servicios Conexos (CAPUFE); 2 de Comisión Nacional del Agua (CONAGUA); 2 de Aeropuertos y Servicios Auxiliares (ASA), y 1 (uno) por cada ente que se cita a continuación: Junta de Caminos del Estado de México; Luz y Fuerza del Centro; Administración Portuaria Integral de Veracruz; Administración Portuaria Integral de Manzanillo y Secretaría del Medio Ambiente y Recursos Naturales (SEMARNAT).” (Auditoría Superior de la Federación, 2012)

Los resultados fueron los siguientes:

Tabla 1: Factores de desfase y retraso en las obras analizadas.

Dependencia	Proyectos Incompletos	Problemas Financieros	Problemas Ambientales	Desfase Económico	Desfase en la Entrega
SCT	63.2%	21%	15.8%	131%	De 120 a 1442 días
PEMEX	72%		4%	284%	De 167 a 1663 días
CFE	75%		25%	51.3%	De 377 a 754 días
CAPUFE Y CONAGUA				35%	De 114 a 1095 días

Los valores promedios de la investigación fueron los siguientes:

Figura 1: Factores de Desfase de los proyectos de Obra

Los resultados de esta investigación no dejan lugar a dudas de la falta de control en la gestión no solo de los proyectos ejecutivos, sino también de la ejecución de los mismos toda vez que su desarrollo debería de detenerse al momento de advertir cualesquier deficiencia.

De la misma manera y dada la relevancia de la investigación los datos más sobresalientes en la misma son los referentes a las causas técnicas, económicas y los tiempos en los procesos de ejecución donde se vio lo siguiente:

“Por causas técnicas relativas a deficiencias del proyecto en los contratos revisados se presentaron los siguientes indicadores: 73.8 % correspondió a estudios previos que no contemplaron las condiciones reales del proyecto, 5.0 % por deficiente proyecto de cimentación, 2.5% por un deficiente proyecto estructural, 2.5% a la entrega extemporánea del proyecto ejecutivo y 16.2% a causas diversas.” (Auditoría Superior de la Federación, 2012).

“Las causas económicas que impactaron en los contratos en comento y generaron los incrementos al monto se refirieron el 81.2% a trabajos adicionales y volúmenes extraordinarios de obra y el 18.8% a causas varias como transferencias entre programas efectuadas tardíamente, entrega extemporánea del anticipo, reducciones presupuestarias durante el proceso de la ejecución.” (Auditoría Superior de la Federación, 2012).

“En el proceso de ejecución las causas que provocaron en los contratos revisados la modificación del plazo fueron: con un 65.0% un proyecto incompleto o inacabado, el 10.0% suspensiones de la obra, 6.3% falta de licencias y permisos para efectuar los trabajos, 5.0% falta de liberación del derecho de vía y con un 13.7% diversas causas entre las que se ubican el incumplimiento de las empresas contratistas y supervisoras de obra; problemas técnicos por incumplimiento de las especificaciones de construcción y normas de calidad de los materiales y equipos, retraso en la formalización de convenios modificatorios.” (Auditoría Superior de la Federación, 2012)

## CONCLUSIONES

De acuerdo a los resultados obtenidos en la investigación descrita, cabe mencionar una de las recomendaciones producto de este análisis la cual versa de la siguiente manera, “Reforzar los procesos institucionales de planeación y programación con la participación de personal calificado, para que en la realización de las obras de infraestructura exista una adecuada definición del alcance de los proyectos que tome en cuenta el estudio de costo beneficio y la problemática de carácter social y ambiental; que los contratos sean claros y equitativos para las partes, conforme a las características de los distintos proyectos de infraestructura particularmente en los contratos multianuales, que se precisen las fuentes de financiamiento, la etiquetación del recurso y su forma de pago;; y que se establezca la coordinación necesaria entre los entes para la obtención oportuna de las licencias y permisos.”

La realización de un manual de procesos el cual se realice tomando en consideración diferentes factores importantes en los proyectos de construcción, como lo son, clasificación de las obras, alcance del proyecto, región en la que se desarrollará, determinando con ello factores importantes y específicos para el inicio de la realización de los proyectos ejecutivos.

Revisión de los perfiles profesionales de los encargados no solamente de la elaboración de los proyectos sino de la dirección y gestión de los mismos, para con ello dar certidumbre al proyecto mismo y certeza en el alcance real que se estipule de cada uno de ellos.

Revisión de la gestión de los recursos asignados a cada proyecto, debido a que los recursos deben de ser asignados de acuerdo al proyecto a ejecutarse y no adecuar los proyectos de acuerdo a los recursos disponibles para su realización.

## **APORTACION DE CAMBIO**

En la actualidad las áreas administrativas han desarrollado tendencias efectivas en todas sus áreas, las teorías administrativas han ido avanzando en muchas actividades económicas buscando siempre la eficacia en el que hacer de las organizaciones, encaminado a superar a los retos mismos de nuestra actualidad.

Los sectores administrativos gubernamentales no deben quedar al margen de estas tendencias, toda vez que son ellos los encargados de emplear los recursos de la sociedad, dentro del marco de la globalización y la competitividad, el buen manejo de los recursos financieros de un país es pieza fundamental para aumentar su grado de confianza tanto interna como externamente, lo que en la actualidad refleja fortaleza y por ende confianza en todas las áreas.

La inclusión en los procesos de para la realización de los proyectos de obra pública de las herramientas administrativas contemporáneas llevaría a éstos a tener mayor fiabilidad y por ende una efectividad mayor para su ejecución, considerando en esa elaboración las nuevas técnicas y procesos constructivos así como el uso de las nuevas tecnologías en las áreas de costos y planeación disponibles en la actualidad.

Para lograr lo anterior se deberán de replantear la cultura organizacional con la que se labora en la actualidad en las dependencias encargadas de la elaboración de los proyectos, estructurar de manera puntual todos y cada uno de los puntos importantes para el desarrollo de esta cultura, los cuales vayan encaminados a dar resultados favorables para la sociedad en su conjunto, sin dejar de pensar que todos y cada uno de los miembros de esas secretarías son también parte de esta sociedad.

Abonando en la creación de una nueva cultura organizacional deberán de considerarse las siguientes áreas de gestión, “la Gestión del Alcance del Proyecto incluye los procesos necesarios para garantizar que el proyecto incluya todo (y únicamente todo) el trabajo requerido para completarlo con éxito. El objetivo principal de la Gestión del Alcance del Proyecto es definir y controlar qué se incluye y qué no se incluye en el proyecto.” (Project Management Institute, 2010), una característica importante de desarrollar es el ciclo de gestión del proyecto, el cual no podrá llevarse a cabo sin haber pasado por todas y cada una de las etapas necesarias para su concepción, De acuerdo a (Correa I., 2002) el ciclo de gestión de un proyecto se divide en tres fases: Preparación para la Ejecución: en ella se deben de marcar el rumbo del proyecto, fijar los indicadores de desempeño esperados en cada una de las actividades del mismo; de la misma manera asegurar la viabilidad del mismo en base a lo que se está proponiendo, donde aunado a esto, se propicia o estudia la capacidad requerida para su ejecución y en esta misma fase se realiza la organización y programación para el momento de desarrollar el proyecto. Control de la Ejecución: En esta fase se debe de constatar que lo programado se esté realizando de manera correcta ya que los objetivos de esta fase es asegurar el cumplimiento de la ejecución y la capacidad para realizarlo, de la misma manera en esta fase se busca verificar sistemáticamente lo realizado versus lo programado, y corregir oportunamente para evitar desvíos y recuperar capacidad de ejecución y reprogramar para mantener metas originales o mejorarlas. Término del proyecto: En esta fase se realiza un análisis de lo logrado, se realizan las comparaciones de lo programado con lo ejecutado y se hace un estudio final del proyecto para su calificación. Y de manera ineludible la gestión de costos tiene una marcada determinación que lleva a buen fin a un proyecto en su ejecución debido a que en la contratación para la realización de la obra pública, la subasta que precede al acto de contratación de la misma debe de ser equiparada con la gestión realizada a con verdad del proyecto en cuestión tomando con ello determinaciones inequívocas si en realidad se cuenta con un techo financiero apegado a los alcances reales del proyecto.

# FUENTES DE FINANCIAMIENTO EXTERNO PARA LAS PYMES DE TECOMÁN, COLIMA. MÉXICO

Héctor Priego Huertas, Universidad de Colima

Roberto Espíritu Olmos, Universidad de Colima

Alejandro Rodríguez Vázquez, Universidad de Colima

Hugo Martín Moreno Zacarías, Universidad de Colima

## RESUMEN

*Las fuentes externas de financiamiento proporcionan recursos que provienen de personas, empresas o instituciones ajenas a la organización que los recibe. Al recibir recursos externos se está contratando un pasivo el cual genera un costo financiera denominado interés y que tendrá que ser liquidado (el interés y el capital recibido) en los términos del contrato de préstamo que ampara la operación. Las fuentes externas de financiamiento, al otorgar nuevos recursos a la empresa, le proporcionan una efectiva palanca financiera, pues se incorporan fondos nuevos a los ya considerados por las empresas provenientes de sus propias fuentes de financiamiento. Al recordar el concepto de palanca financiera analizado anteriormente, los recursos provenientes de fuentes externas son los que se incorporan a las "fuerzas naturales o propias" de la empresa para incrementar sinérgicamente la fortaleza total de la organización. El financiamiento no es más que los recursos monetarios financieros necesarios para llevar a cabo una actividad económica, con la característica esencial que generalmente se trata de sumas tomadas a préstamo que complementan los recursos propios. Puede ser contratado dentro y fuera del país a través de créditos, empréstitos, de obligaciones derivadas de la suscripción o emisión de títulos de crédito o cualquier otro documento pagadero a plazo. Una de las principales formas de obtener financiamiento es el crédito, que no es más que el dinero que se recibe para hacer frente a una necesidad financiera y el que la entidad se compromete a pagar en un plazo de tiempo determinado.*

**PALABRAS CLAVE:** Financiamiento, Pymes, Capital de Trabajo

## ABSTRACT

*External funding sources provide resources from individuals, companies or institutions outside the organization who receives them. Upon receiving external resources are hiring a liability which generates a financial cost called interest and will have to be paid (interest and principal received) under the terms of the loan agreement to the consignment. External sources of funding, to provide new resources to the company, will provide effective financial leverage, as they incorporate new funds to those already considered by companies from their own sources of funding. Recalling the concept of financial leverage discussed above, funds from external sources are those that are incorporated into the "natural forces or proper" company to synergistically increase the overall strength of the organization. Funding is only financial monetary resources needed to carry out an economic activity, with the essential feature that is usually borrowed funds that complement their own resources. Can be hired in and outside the country through loans, borrowing, obligations under the subscription or issue of securities or any other documents payable to term. One of the main ways to obtain financing is credit, which is more than the money received to deal with financial need and the entity agrees to pay within a period of time.*

## INTRODUCCIÓN

Las Pymes son la principal fuente generadora de empleo en el municipio de Tecomán Colima y también uno de las principales actividades económicas del municipio. Actualmente este grupo de empresas enfrentan problemas importantes de financiamiento, por lo consecuente con este problema es que las empresas se ven al borde de la quiebra, obligando a las autoridades a realizar reprogramaciones de deuda para evitar que la situación se agrave más y con esto las pequeñas empresas pueden seguir con sus actividades. En esta realidad tan competitiva es necesario impulsar nuevos programas de capacitación para que las pequeñas empresas que no cuenten con el conocimiento necesario del cómo pueden hacerse acreedores de nueva tecnología para cada vez más sean más competitivos y no se queden estancados sin poder hacer nada y también para qué de esta manera puedan reducir sus costos de operación e información que les pueda ser de utilidad. Así también que mejoren sus utilidades y puedan permanecer más tiempo activas en el mercado, para la generación de más empleo y así pueda haber estabilidad económica en la empresa y en el municipio de Tecomán, Col. Lo que se pretende con estas investigaciones formar una guía que sirva de base para aquellos empresarios que tengan en mente crear una nueva empresa en el municipio de Tecomán, Col. y así como la maximización de sus utilidades con los puntos que se harán mención sobre las fuentes de financiamiento en el municipio.

### Planteamiento del Problema

El análisis de las fuentes de financiamiento externo para las PYMES en el municipio de Tecomán, Colima, ya que en el municipio o se cuenta con tanta facilidad para la obtención de un financiamiento para las pequeñas y medianas empresas, ya saber el cómo las PyMES pueden hacerse acreedoras de una buena fuente de financiamiento ya sea para poner en marcha su negocio, comprar mercancía etc...

### Objetivo General

Se pretende adquirir los conocimientos de financiamientos que les puedan beneficiar al momento que decidan implantar una Pyme

### Objetivo Particular

Proporcionar a los propietarios y administradores un conocimiento amplio de la utilidad que se tiene con las diferentes fuentes de financiamiento en las pymes.

### Hipótesis General

A mayor conocimiento de las fuentes de financiamiento que obtengan las pymes, podrán ser mayor los beneficios de igual forma los propietarios, ya que conocerán información oportuna, veraz y justa para la toma de buenas decisiones.

### Hipótesis Específica

A mejor conocimiento se adquiera de las fuentes de financiamiento mayores beneficios podrán adquirir los propietarios y empresarios acorde a sus necesidades.

### Pregunta de Investigación

¿Cuáles Son las Fuentes de Financiamiento Externo Para las Pymes del Ramo Comercial en Tecomán, Col.?

### **JUSTIFICACIÓN**

Uno de los atractivos significativos de los pequeños negocios en la actualidad es su capacidad para generar empleo en un tiempo donde la ocupación se ha visto reducida y ha ocasionado el retorno de altas tasas de desempleo en todo el mundo. En el estado de Colima el 56.12% de las unidades económicas se dedican al comercio, el 34.86% a los servicios y el 9.02% a la manufactura (Censo Estatal de Unidades Económicas Colima, 2003). De acuerdo a esta fuente, en números absolutos, el sector manufactura en el estado de Colima está comprendido por 1319 unidades económicas, empleando a 8578 personas en los diferentes subsectores.

### Marco Teorico

Las principales fuentes de financiamiento a las cuáles podemos acudir en búsqueda de aquél dinero que podríamos necesitar ya sea para seguir funcionando como empresa, o para invertir y hacerla crecer:

Galen (1998 ) Considera los siguientes puntos para obtener financiamiento y que considera a cada uno de ellos una forma especial que deben considerar la pequeñas y medianas empresas para que fortalezcan su estructura financiera, fortaleciendo así su capital de trabajo estos son, Ahorros personales, Familiares o amigos, Bancos, Entidades financieras no bancarias, Empresas de leasing, Empresas de factoring, Proveedores, Emisión de acciones, Emisión de bonos, Socios, Inversionista,

### Principales Fuentes de Financiamiento Externo a Corto Plazo Pasivos

Los *pasivos negociados* son aquellos que llevan en forma paralela la emisión de un contrato crediticio, en el que se negocian las distintas cláusulas que regirán el crédito otorgado. Dentro de las negociaciones se incluyen elementos tales como: Monto del crédito, Plazo máximo y periodicidad de las amortizaciones, Tasa de interés, Garantías directas del crédito (hipotecas sobre bienes raíces, hipotecas industriales, prendas, documentos quirografarios, etc.), Avaless, Bienes o servicios a financiar. (Karen & Asin, 2000).

### Mercado de Dinero

Es un tipo de mercado financiero, que proporciona un escenario en el cual los proveedores de fondos y los solicitantes de préstamos e inversiones pueden realizar directamente sus transacciones. También recibe el nombre de “MONETARIO”, el cual se establece mediante una relación intangible entre oferentes (prestamistas) y demandantes (prestatarios) de fondos a corto plazo con vencimiento a un año o menos, a diferencia del mercado de capitales cuyas relaciones son mayores a un año.

### Características de la Pyme y Su Importancia en México Estructura Organizacional y Características

Es importante definir la palabra «empresa» para poder entender clara y precisamente lo que deseamos expresar. En cuestión de estructura jurídica normativa este rasgo ve a la empresa como una sociedad creada con las formalidades legales implícitas en una escritura pública, en los estatutos, reglamentos, contratos, políticas y normas que forman la unidad que es propia de las personas morales como sujeto de derecho. (Andersen, 1999)

### Clasificación de las Pymes

En nuestro país de México, el criterio de clasificación referente a su tamaño se da de acuerdo a las siguientes características: Micro industrias: Son las empresas que ocupan hasta quince personas y el valor de sus ventas netas anuales no rebasan el equivalente a \$900,000.00. (Silvestre, 1996)

Tabla de la Clasificación de Empresas Mexicanas

Tamaño de la Empresa	Sector Económico	Rango del Número de Trabajadores	Rango del Monto de Ventas Anuales (MDP)	Tope Máximo Combinado (MDP)
Micro	Todas	Hasta 10	Hasta \$4	\$4.60
Pequeña	Comercio	Desde 11 hasta 30	Desde \$4.01 hasta \$100	\$93
Pequeña	Industria y Servicios	Desde 11 hasta 50	Desde \$4.01 hasta \$100	\$95
Mediana	Comercio	Desde 31 hasta 100	Desde \$100.01 hasta \$250	\$235
Mediana	Servicios	Desde 51 hasta 100	Desde \$100.01 hasta \$250	\$235
Mediana	Industria	Desde 51 hasta 250	Desde \$100.01 hasta \$250	\$250

### Los Perfiles de la Pyme

Las Pymes son organizaciones dedicadas a las actividades industriales y de servicios que combina capital, trabajo y medios productivos para obtener un bien o servicio que se destina a satisfacer diversas necesidades en un sector determinado y en un mercado de consumidores. (Silvestre, 1996) Las Pymes también tienen desventajas, algunas de estos son: Problemas de escasez de recursos para una asignación que les brinde igualdad de oportunidades frente a otras empresas, el difícil acceso a la información sobre procesos técnicos productivos; la desventaja competitiva por la baja escala de producción y las limitaciones de productividad; la débil agremiación y representatividad frente a una limitada atención del estado, y la carencia del mecanismos de créditos apropiados, ágiles, suficientes Y oportunos. (Karen & Asin, 2000) Dentro de la PYME de acumulación se hallan 2 tipos, la simple y la ampliada. Las de acumulación simple tienen un margen de utilidad reducido, una lenta incorporación de nuevas tecnologías productivas, y 5 o menos trabajadores. Las de acumulación ampliada son más dinámicas, tienen capacidad de modernización y operan con más de cinco trabajadores. (Hull Galen, 1998)

### Metodología Tipo De Investigación

(HERNANDEZ SAMPIERI R., 2003) Encontraron que unas de las bondades de la investigación cualitativa es que da profundidad a los datos, la dispersión, la riqueza interpretativa, la contextualización del ambiente o entorno, los detalles y las experiencias únicas. También aporta un punto de vista “fresco natural y olistico” de los fenómenos, así como flexibilidad. El estudio exploratorio según (DUNCAN, 1985) sirven para preparar el terreno y por lo común anteceden a otros tipos de estudio como los descriptivos, correlacionados y explicativos. Realizar la investigación orientada hacia un estudio exploratorio fue debido a que el tema necesidades de financiamiento de las empresas pequeñas del sector manufactura en el municipio de Tecomán, Col. no se ha abordado con anterioridad, es decir, solamente se tienen ideas vagas relacionadas con el tema.

### Diseño Muestra

Según (HERNANDEZ SAMPIERI R., 2003) para el enfoque cualitativo, la muestra es una unidad de análisis o un grupo de personas, contextos, eventos, sucesos, comunidades, etc., sobre el cual se habrán de

recolectar datos. Para este caso la muestra la comprenden las empresas pequeñas que transforman algún producto y que cuenten con un número de trabajadores entre 11 y 50. Para esta investigación la población objetivo fueron todas las empresas pequeñas del sector manufactura del municipio de Tecomán, Col. según el censo estatal de unidades económicas lo componen **78 pequeñas** empresas. Se practicó un esquema de muestreo completamente al azar, debido a que no se tiene bases de datos accesibles o confiables dónde se tenga como indicador de tamaño el número de empleados.

### Tamaño de la Muestra

Según Cochran (1996), el tamaño de muestra debe garantizar que las estimaciones que se realicen para cada una de las variables de interés tengan calidad aceptable. El tamaño de la muestra se obtuvo con base en la siguiente expresión: (Cochran, 1996)

$$n = \frac{Z^2 N p q}{e^2 (N - 1) + Z^2 p q}$$

$$n = \frac{(1.96)^2 (78) (0.5) (0.95)}{(0.0625)^2 (78 - 1) + (0.0625)^2 (0.5) (0.95)} = \frac{14.233128}{0.4832573} = 29.45$$

Las 30 empresas seleccionadas se enlistan en el (Anexo 1) que se refiere al directorio de empresas.

### Diseño de la Entrevista

(R, 2004) Define la entrevista como una técnica, dentro de la metodología cualitativa, que se utiliza para obtener información verbal de uno o varios sujetos a partir de un cuestionario o guion.

## **RESULTADOS**

El análisis de las fuentes de financiamiento de las pequeñas empresas manufactureras del municipio de Tecomán Colima, reveló que, en orden de importancia. El 60% de las empresas contestó que su principal fuente de financiamiento son los proveedores, le sigue la banca comercial un 17 %, los préstamos familiares, recursos propios, y clientes el 17% y, finalmente, la banca de desarrollo y las cajas de ahorro con un 3% cada una.

## **CONCLUSIONES**

La presente investigación consiste en un estudio exploratorio cualitativo que se espera sirva como precedente para futuras investigaciones que alguien realizara con metodologías más precisas, pero alcanzo el objetivo principal de estudio, el cual consistió en el análisis de las necesidades de financiamiento de las Pequeñas y Medianas Empresas del municipio de Tecomán, Colima. y a la vez contestar las preguntas planteadas. Ante el análisis y los resultados comentados anteriormente se puede llegar a las siguientes conclusiones:

### Fuentes Actuales de Financiamiento

Se podría pensar que debido a los montos que solicitan y a la canalización de los recursos, que ahora si se tendrá un crecimiento en la industria manufacturera del municipio de Tecomán, Colima, ya que el destino principal de esos créditos sería el 27% para maquinaria y equipo, eso es importante para la innovación y mejora de los productos, le sigue el 17% para compra de materia prima y materiales, el 13% a gastos

operativos, 9% abrir nuevos mercados, 4% abrir sucursales, 4% crear nueva línea de productos, 4% pago a proveedores y finalmente 4% adquisición de terrenos.

## **RESUMEN**

*México de acuerdo con la OCDE, tiene bajísimos índices de recaudación fiscal, solo recauda en términos generales el 30%, equivalente al 18.8% del PIB. Otros países recaudan el equivalente al 34% del PIB. Esta situación no es gratuita. Desde los años setenta del siglo pasado, en septiembre de 1975 el presidente Luis Echeverría, ordena la devaluación del peso respecto al dólar. México entra en una caída económica vertical de la cual, aún no logra recuperarse. El flagelo de la informalidad fiscal, la cultura del no pago de impuestos, y la piratería, provocan vicios administrativos y fiscales en las empresas, que las impulsan hacia el flujo de la economía informal, creándose un círculo vicioso, que afecta la recaudación fiscal. El problema que se analiza, lo viven los agricultores de nuestra región. Si no pagan impuestos se debe en parte, a que no existe una adecuada supervisión. Quién.... ¿El SAT?, pero ...¿cómo, si son miles?. La baja recaudación en México se debe principalmente a que todo lo fiscal es federal..., es centralizado. Por ello para combatir la evasión fiscal, lo que pareciera ser un deporte nacional, se analizará el artículo 115 constitucional y sus disposiciones en torno a la autonomía e independencia municipal.*

**PALABRAS CLAVE:** Impuestos, Pymes, Agricultura

## **ADMINISTRATIVE AND TAX VICES IN ENTERPRISES, GENERATED BY SMALL AGRICULTURAL PRODUCERS TAX INFORMALITY. SEARCH FOR A STRUCTURAL SOLUTION**

### **ABSTRACT**

*Mexico according to the OECD, has very low tax collection rates, generally collects only 30%, equivalent to 18.8% of GDP. Other countries collect the equivalent to 34% of GDP. Mexico according to the OECD, has very low tax collection rates, generally collects only 30%, equivalent to 18.8% of GDP. Other countries collect the equivalent to 34% of GDP. The scourge of tax informality, the culture of non-payment of taxes, and piracy cause administrative and fiscal services companies, driving them into the flow of the informal economy, creating a vicious circle, affecting tax revenues. The problem is analyzed, the farmers living in our region. If you do not pay taxes is due in part to the absence of adequate supervision. Who .... Does the SAT?, But ... how else are thousands?. The low collection in Mexico is mainly due to tax everything is federal ....., is centralized. So to combat tax evasion, what appears to be a national sport, will analyze Article 115 of the Constitution and its provisions regarding local autonomy and independence.*

**KEYWORDS:** Taxes, Pymes, Agriculture

## INTRODUCCIÓN

Administraciones y actividades relacionadas con la mejora de nuestro federalismo fiscal hasta ahora es que en los 2,500 municipios existentes en México, hoy por hoy, aquello de la autonomía e independencia municipal sigue siendo una utopía al depender, absolutamente en términos de recursos económicos, de las participaciones federales o estatales, lo cual tiene qué ver con el tipo de federalismo fiscal, que como veremos en esta investigación, tiene efectos muy nocivos en el ámbito de la fiscalización y recaudación de contribuciones fiscales. La situación que guarda nuestro país en la actualidad, en términos económicos y fiscales, esencialmente, pero en muchas otras áreas como la educativa, por ejemplo, es producto de lo que se hizo o se dejó de hacer en el pasado, desde el gobierno, claro.

*Planteamiento del problema:* Los bajísimos índices de recaudación fiscal en México, de acuerdo con la OCDE sólo se recauda el 30% del IVA potencial; durante el 2010 se obtuvieron ingresos tributarios equivalentes al 18.8% del PIB, mientras que en otros países, de ese mismo organismo, el IVA equivale al 34% del PIB. Es una pena el cómo se encuentra México a nivel recaudatorio en el escenario de la OCDE.

*Pregunta de Investigación:* ¿Cuál es el régimen tributario para los pequeños agricultores y por qué a pesar de ser tan simple y permisivo, los agricultores, los pequeños, particularmente, no cumplen con sus obligaciones fiscales?

### Objetivo General

Identificar las variables necesarias para, a partir de una propuesta de reforma al artículo 115 constitucional, crear un nuevo modelo de federalismo fiscal en México que permita, además de la participación activa de municipios como elementos fiscalizadores y recaudadores de las actividades que realizan los contribuyentes, evitar al máximo la evasión fiscal en el sector agrícola en colima.

### Objetivos Particulares

Identificar las características del régimen tributario para los pequeños agricultores y por qué a pesar de ser tan simple y permisivo, los agricultores, los pequeños, particularmente, no cumplen con sus obligaciones fiscales.

### Justificación

Trascendencia: La investigación es trascendente ya que plantea una alternativa de federalismo fiscal, Importancia: A todas luces resulta importante en lo personal, como comunidad, como pueblo, como nación, el que las finanzas públicas de nuestro país sea lo más próspero posibles. Factibilidad: Todas las fuentes de información primaria y secundarias siempre estuvieron disponibles y al alcance para ser consultadas. Marco de referencia: Según el artículo 16 del CFF, las actividades del sector primario quedan comprendidas dentro del concepto de actividades empresariales, dado que dicho artículo establece que se incluirán dentro de las mismas, las siguientes: Las comerciales, industriales, agrícolas, ganaderas, pesca y silvícolas.

### El Régimen Fiscal de Pequeños Contribuyentes Aplicable a los Agricultores, Personas Físicas

Concepto de actividades agrícolas Es la fracción III del artículo 16 del CFF la que determina lo que debe entenderse por actividades agrícolas, que dice: Las agrícolas que comprenden las actividades de siembra,

cultivo, cosecha y la primera enajenación de los productos obtenidos, que no hayan sido objeto de transformación industrial” (CFF, 2013).

Régimen fiscal en el que deben tributar los contribuyentes que realizan actividades primarias (actividades agrícolas, silvícolas, ganaderas o de pesca) De conformidad con el Título II “De las personas morales, Disposiciones generales”, Capítulo VII, “Del régimen simplificado”, de la LISR, en su artículo 79, se menciona que deberán cumplir con sus obligaciones fiscales en materia del ISR conforme al régimen simplificado establecido en dicho ordenamiento, entre otras, las personas morales siguientes: Las de derecho agrario que se dediquen exclusivamente a actividades agrícolas, ganaderas o silvícolas.

### Principios y Criterios Fundamentales del Federalismo Fiscal Mexicano

Principios de las contribuciones Nuestra Constitución Política (CPEUM, 2012) ha previsto que las contribuciones deben observar algunos principios que garanticen que no se haga un cobro indebido de los impuestos. El artículo 31, fracción IV de la Constitución Política de los Estados Unidos Mexicanos establece textualmente:

*“ARTICULO 31. Son obligaciones de los mexicanos: Contribuir para los gastos públicos, así de la Federación, como del Distrito Federal o del Estado y Municipio en que residan, de la manera proporcional y equitativa que dispongan las leyes”* (CPEUM, 2012).

*Principio de legalidad:* Los impuestos se fijan y se regulan a través de leyes. El principio de legalidad se refiere a que no se podrá cobrar ningún impuesto o contribución que no se encuentre establecido en una ley, con anterioridad al hecho o circunstancia que fue la causa del pago de un impuesto.

*Principio de proporcionalidad* Se refiere a que los impuestos deberán ser acordes con los ingresos o recursos de los ciudadanos; es decir, a la necesidad de contribuir de acuerdo con la capacidad económica de los contribuyentes. *Principio de equidad* Este principio supone la idea de justicia e igualdad, y consiste en el trato igual a los iguales. La equidad es la justicia proyectada sobre situaciones concretas y contribuyentes concreto. La equidad, como un valor de la convivencia humana, implica que cada persona, grupo o comunidad tenga acceso a un trato justo que les permita desarrollar sus actividades sociales, económicas y políticas dentro de un ambiente de libertad e igualdad absolutas.

*Principio de generalidad:* El principio de generalidad tiene como antecedente histórico el artículo 13 de la Declaración de los Derechos del Hombre y del Ciudadano de Francia, de 1789 que prescribe: “Para el mantenimiento la fuerza pública y para los gastos de la administración, es indispensable una contribución común, ésta debe ser repartida por igual entre todos los ciudadanos en razón de sus posibilidades” La Transferencias De Fondos Intergubernamentales En Nuestro Esquema Federalista En El Derecho Comparado

### Contexto General del Federalismo

La palabra federalismo, etimológicamente proviene del latín foedus que significa unión, alianza, pacto, acuerdo. También ha sido utilizada en la antigüedad “para referirse a las alianzas forjadas entre los hombres y los pueblos con objeto de alcanzar fines comunes y superiores, es difícil precisar el momento exacto en que el concepto fue utilizado con el sentido político, estructural y funcional que le conocemos hoy, como forma depurada de organización de Estado”. (Aguirre, 1997).

*El régimen fiscal en países centralistas Franci:* Su sistema fiscal combinó el modelo central con algunas ventajas del modelo federal, pero sin constituir entidades federativas independientes. Cruz (2004), en su obra Federalismo Fiscal Mexicano citando a Ortega (1998), señala que el Estado francés se ha caracterizado

históricamente por tener un gobierno central, inclusive en la actualidad es el Estado unitario más centralizado de Europa occidental. Sin embargo, el gobierno de Francia ha implementado una reforma administrativa y política a favor de los gobiernos locales que le permite tener una fuerza importante en materia tributaria.

### Chile

En Chile, el sistema de recaudación fiscal refleja una organización centralista. El gobierno central tiene un importante control sobre el sector subnacional. Los gobiernos locales sólo perciben ingresos de tributos y transferencias presupuestarias. No tienen derecho a crédito, esto es, está prohibido el endeudamiento local a menos que medie una autorización por la ley del gobierno central, sin embargo, estas autorizaciones en la práctica, no se presentan, por lo tanto es casi nulo el endeudamiento local.

### Colombia

En el caso de Colombia, señala Cruz (2004) que una de las principales deficiencias de este país, es que existe una legislación poco restrictiva en lo concerniente al sistema de endeudamiento, lo que ha provocado problemas serios.

### México

Así mismo al referirse al Sistema de Coordinación Fiscal que ha adoptado el Federalismo Mexicano, Cruz (2004), señala que en la exposición de motivos que dio origen a dicha ley, se señalaba que: “una mejor distribución del ingreso fiscal entre la Federación y Estados y una reasignación de atribuciones entre una y otros, constituye un instrumento idóneo para el fortalecimiento del Federalismo. Llegar a dotar de más recursos a los Estados, dará a éstos la base económica indispensable para que hagan lo mismo con sus Municipios.

*El Sistema Nacional de Coordinación Fiscal:* El Sistema Nacional de Coordinación Fiscal nace institucionalmente en 1980 con la promulgación de la Ley de Coordinación Fiscal (LCF, 2012), la cual contiene el Sistema Nacional de Participaciones y los instrumentos jurídicos de adhesión y de colaboración que la misma establece, para que las entidades actúen dentro de un marco ordenado de recíproca interacción de atribuciones fiscales; su objetivo principal es coordinar el Sistema Fiscal Nacional y el de fortalecer a las Haciendas Públicas tanto del Distrito Federal como de los Estados y sus municipios. El antecedente más próximo de este sistema se encuentra en 1973, año en que se inicia el proceso de coordinación con muchas de las características que presenta en la actualidad.

*Convenios de adhesión al Sistema Nacional de Coordinación Fiscal:* Camargo (2004), expresa la necesidad de la existencia de un Sistema Nacional de Coordinación con un nuevo enfoque en lo relativo a las transferencias intergubernamentales, en su forma de participaciones federales como medida compensatoria, lo mismo que los fondos ya existentes u otros nuevos que constituyan una acción complementaria de planes y programas económicos, políticos, administrativos y sociales que cada orden de gobierno desarrolló en forma individual o conjunta, este sistema nacional de coordinación debe incluir también facultades en materia del gasto público y su correspondiente control. Así tenemos que la Ley de Coordinación Fiscal (2012) vigente, establece en su Capítulo I la mecánica mediante la cual la Federación habrá de distribuir tanto a los Estados, municipios y el Distrito Federal las Participaciones Federales que les correspondan.

### Lineamientos Metodológicos Aplicados y Análisis de Resultados

Como lineamientos que orientaron el desarrollo de la parte teórica de este documento presentada a lo largo de los anteriores capítulos, pero también en términos del cómo se recabaron los puntos de vista de expertos en materia de derecho constitucional y federalismo fiscal en México, Tipo de investigación.

Observacional: Se analiza la problemática planteada al principio de este documento, sin modificar intencionalmente sus variables. Transversal: Se obtuvo la opinión de los expertos en materia de federalismo fiscal en México, en un momento dado. Prospectiva: Es aquella en la que se plantea a futuro y en la que previamente se definen con precisión las condiciones de estudio, va de causa a efecto. Comparativa: Es aquella en la que se establece la comparación entre dos o más variables (derecho comparado).

### Métodos de Investigación Aplicados

Desde el punto de vista eminentemente jurídico, se aplicaron las siguientes visiones metodológicas: Método histórico, dada la necesidad de buscar y mirar por el espejo del pasado sobre el tema que nos ocupa en su constante devenir. Método jurídico, toda vez que la historia como maestra de la vida, es fuente de conocimiento para observar la dinámica del saber jurídico. Desde el punto de vista de la metodología de la investigación social, se aplicaron los siguientes enfoques metodológicos: Método deductivo: Mediante esta visión metodológica, se acudió a la consulta de fuentes de información secundaria, en este caso, se consultaron, y se derivó información que orientó la estructuración o se incorporó al cuerpo final del trabajo que se viene presentando. Método inductivo: Mediante esta perspectiva metodológica, fue el criterio, la experiencia, el conocimiento del tesista, en este caso, lo que determinó, en una primera instancia, los contenidos de los que se integra la investigación que se viene proponiendo.

*Técnicas de investigación:* Sistematización bibliográfica: Mediante esta técnica, se elaboraron fichas de trabajo o bibliográficas, a partir de la consulta de fuentes de información secundaria

*especializada. Encuesta:* Mediante esta técnica y a partir de la aplicación de cuestionarios diseñados para tal fin, se derivó información con respecto a la opinión de expertos en materia de federalismo fiscal en México acerca de la propuesta que se presenta más adelante en este documento. Población sujeta a estudio. Especialistas en materia fiscal y de federalismo fiscal, docentes universitarios y funcionarios del SAT. Determinación del tamaño de la muestra Se logró convencer a 25 de dichos especialistas de que hicieran favor de responder al cuestionario que enseguida se presenta.

### **CONCLUSIONES**

Si constitucionalmente no se definen con precisión conceptos como autonomía y libertad municipal sobre la base de la recaudación fiscal municipal, si no se generan las condiciones para que los municipios dejen de ser tratados como niveles de gobierno de segunda clase, para empezar a ser considerados como el cuarto nivel de gobierno, de acuerdo con las modificaciones al artículo 115 constitucional, con todas las prerrogativas de que los tres niveles anteriores federal, estatal y el Distrito Federal gozan actualmente, nunca podremos hablar en México de un federalismo fiscal justo, cooperativo.

De acuerdo con el análisis teórico realizado, las tendencias mundiales en materia de federalismo, tienden hacia la visión cooperativista, que dota de autonomía absoluta a los municipios, para la realización de determinadas actividades económicas, fiscales, medio ambientales que garantice la sustentabilidad de dichos municipios. En cuanto a la hipótesis, relacionada con las posibilidades de aceptación de nuestros planteamientos por parte de los especialistas encuestados, se satisfizo plenamente, ya que, efectivamente,

las propuestas de cambio constitucional al artículo 115, fueron, en general, bien aceptadas por los especialistas encuestados.

# LA INTERNACIONALIZACIÓN DE LA EDUCACIÓN SUPERIOR A PARTIR DE LA INTERNACIONALIZATION AT HOME: UN ESTUDIO DE CASO EN LA UNICEN-ARGENTINA

Luisa de los Angeles Mayoral, UNICEN

Sebastián Alvarez, UNICEN

## RESUMEN

*En el marco de la internacionalización de la educación superior y como respuesta a las restricciones económico-financieras que suelen ser comunes en los ámbitos latinoamericanos, en los últimos años ha surgido la llamada "Internationalization at Home (IaH)", o internacionalización desde casa, esto es: un conjunto de actividades para lograr internacionalizar la educación superior sin recurrir a los viajes al extranjero. Este trabajo aborda conceptualmente la IaH, para luego desarrollar el caso de la Facultad de Ciencias Económicas de la Universidad Nacional del Centro de la Provincia de Buenos Aires en Argentina (FCE-UNICEN).*

**PALABRAS CLAVE:** Internacionalización, Educación Superior, Internacionalización desde casa.

## THE TOP EDUCATION'S INTERNATIONALIZATION FROM "INTERNATIONALIZATION AT HOME": A CASE OF STUDY IN UNICEN-ARGENTINA

### ABSTRACT

*In the frame of the top education's internationalization and as response to the economic - financial restrictions – that are very common in latinoamerican areas-, in the last years there has arisen a perspective called "Internationalization at Home (IaH) ", or internationalization from house, this is: a set of activities to manage to internationalize the top education without resorting to the trips abroad. This work approaches the IaH, to develop the case of the Faculty of Economic Sciences of the National University of the Center of the Province of Buenos Aires in Argentina (FCE-UNICEN).*

**JEL:** M00

**KEYWORDS:** Internationalization, Top Education, Internationalization At Home

## INTRODUCCION

Este es un trabajo sobre los logros concretos de la Internationalization at home (IaH) en el ámbito universitario en Argentina. El mismo se enmarca en el proceso de internacionalización de la educación superior que aunque es una de las prioridades del sistema educativo argentino, es también una construcción pendiente. Efectivamente, las estrategias utilizadas no han resultado del todo efectivas, y en particular, llama la atención que la movilidad internacional ha sido la herramienta mayoritariamente adoptada, a pesar de las dificultades para sostenerla en el tiempo a nivel masivo. Como respuesta a este marco de restricciones en los últimos años ha surgido el enfoque de "Internationalization at Home", o internacionalización desde casa, esto es: un conjunto de actividades para lograr internacionalizar la educación superior sin recurrir a los viajes al extranjero. El objetivo general de este trabajo es analizar el caso de internacionalización de la

Facultad de Ciencias Económicas (FCE) de la Universidad Nacional del Centro de la Provincia de Buenos Aires (UNICEN), a partir de la implementación de la “Internationalization at Home” (IaH) - o Internacionalización en Casa-, como estrategia de Internacionalización de la Educación Superior (IES) complementaria a la Movilidad Estudiantil. Como objetivos específicos se destacan:

*Identificar, describir y analizar los recursos preexistentes de la FCE en materia de internacionalización. Explicitar los vínculos entre estos elementos y la manera en que fueron articulados a los efectos de ampliar su alcance y profundidad. Describir y analizar las actividades iniciales de IAH a partir de los puntos anteriores, así como resultados esperados y no esperados, oportunidades y restricciones. Analizar cuáles fueron los aprendizajes emergentes y la estrategia surgida a partir de allí, como así también plantear cuáles son las oportunidades y amenazas que se observan a futuro. Reflexionar y obtener elementos de alcance general, susceptibles de ser ampliados a otras experiencias en materia de IaH. A continuación, el abordaje conceptual para la comprensión del caso. Revisión De Literatura: El Marco Para El Estudio De La Internacionalización De La Educación Superior Y La “Internationalization At Home” Como Estrategia*

### La Internacionalización de la Educación Superior (IES)

El concepto de internacionalización en el campo de la educación superior comienza a abordarse recién en los años ochenta. Según Gacel (1999) el concepto hace referencia al proceso integral que pretende incorporar la dimensión internacional e intercultural en la misión y las funciones sustantivas de las instituciones de educación superior, de tal manera que sean inseparables de su identidad y cultura. Didou Aupetit (2000) señala que este proceso debe entenderse como el esfuerzo sostenido y sistemático para hacer que la educación superior responda ante los requisitos y desafíos relacionados con la globalización de las sociedades, economía, trabajo y mercados, aportando de esta manera una visión instrumental de la IES. No obstante, la IES puede ser abordada desde diferentes ópticas y herramientas. Así, Knight (2010) sostiene que hay quienes la entienden como movilidad académica de estudiantes y profesores, formación de redes y proyectos de cooperación internacional, desembarco de servicios educativos en otros países a través de unidades académicas, franquicias o educación a distancia, inclusión de la dimensión internacional e intercultural en la currícula, etc.

En Latinoamérica existen diversos problemas para lograr que la IES forme parte de las prioridades de instituciones de educación superior y gobiernos. Los programas a tales efectos son a menudo de baja calidad, y el talento no es aprovechado debidamente por las considerables desigualdades existentes (...) en suma, la IES se ha desarrollado de manera desordenada y reactiva (De Wit y otros, 2005). Aún más, mientras los países de altos ingresos están destinando más recursos a sostener y profundizar un proceso ya instalado, América Latina sigue encarando viejos problemas, como los planes de estudio subdesarrollados, la falta de material didáctico, personal docente poco calificado y desequilibrios en el mercado laboral (De Wit y otros, op.cit.) Gacel y Ávila (2008) observan que en América Latina se registra un deficiente e insuficiente manejo de idiomas y conocimientos de culturas extranjeras tanto en profesores como en estudiantes; una escasez de recursos económicos familiares para sufragar estudios en el extranjero; un estudiantado mayoritariamente de tiempo parcial y con compromisos familiares a temprana edad y un cuerpo de profesores que no propicia la internacionalización porque en su gran mayoría no cuenta con perfil o experiencia internacionales, todo lo cual ocasiona un desaprovechamiento de oportunidades internacionales de todo tipo.

Dicha situación se confirma en los reportes de la OCDE (2004), donde se observa que América Latina aparece como la región del mundo con menos movilidad estudiantil. Por otra parte, se trata de una zona que aún recibe pocos estudiantes extranjeros: el último informe de la OCDE (2007) no reporta datos al respecto, lo que resulta una muestra de la ausencia de evaluación –e importancia– de este rubro educativo. La movilidad de académicos se concentra en una élite que ha realizado estudios de postgrado en el

extranjero y que se dedica, en buena parte, a la investigación. Asimismo, respecto de los docentes, la mayoría queda al margen, pues además de ser de tiempo parcial, su manejo de idiomas extranjeros es insuficiente. Finalmente, la falta de internacionalización del currículo implica la casi inexistencia de profesores invitados para ser incorporados a los programas de estudio.

En la Argentina, las primeras acciones aisladas en torno a la IES se registran ya entrada la década de los noventa, con los primeros programas de cooperación internacional que financian la movilidad de estudiantes y docentes. Por primera vez, las universidades argentinas destinan parte de sus presupuestos a actividades de IES de naturaleza bilateral (Theiller, 2003). A estas acciones se sucedieron otras, de carácter reactivo, a saber: instalación de sedes de universidades de Europa y de Estados Unidos, ampliación de la oferta académica en modalidad a distancia o presencial, aparición de postgrados con doble titulación o en cooperación académica entre universidades argentinas y del exterior, consolidación de redes institucionales interuniversitarias en base a proyectos de investigación e incremento de programas de intercambio. Finalmente Theiller (op.cit.) concluye que el proceso se encuentra en una etapa de aplicación de estrategias contingentes y sin perspectivas de profundización de tipo institucional a mediano y largo plazo, que ha generado impactos en un muy bajo porcentaje de estudiantes, docentes e investigadores, haciendo de la internacionalización de la educación superior Argentina, *“un proceso insípido”*.

#### La “Internationalization At Home” (IaH)

El concepto de “Internationalization at Home” (IaH) fue abordado por primera vez por Nilson (1999), quien observa que pese a haber transcurrido más de 10 años de existencia de programas de movilidad estudiantil tales como ERASMUS MUNDUS, aún no se lograba el objetivo mínimo de que el 10% de los estudiantes y profesores universitarios de la comunidad europea hubieran realizado un período de estudios en una universidad extranjera. Consecuentemente, refiere a la “IaH” en términos de la dimensión internacional e intercultural de la currícula, del proceso de enseñanza/aprendizaje, de la investigación, de las actividades extra-curriculares, y de todas aquellas actividades locales que colaboren para que los estudiantes desarrollen un conocimiento internacional y habilidades interculturales sin salir del campus.

Según Knight (2004), la internacionalización a nivel institucional cae dentro de dos diferentes corrientes. Una de ellas está formada por las actividades que ocurren en el campus, mientras que la otra se constituye con aquellas que ocurren en el extranjero. El término “Internationalization at home” enfoca la atención en los aspectos que ocurren dentro del campus, sobre todo la dimensión internacional e intercultural en el proceso de enseñanza/aprendizaje, las actividades extra-curriculares y las relaciones entre los grupos locales de distintas etnias (Wachter, 2003). Además, se trata de un concepto frecuentemente usado para describir el comercio en la educación. Ambos usos, son -en opinión de la autora-, demasiado estrechos y por ello, considera importante profundizar el análisis y clarificar ambas corrientes.

Posteriormente, la autora destaca que IaH supone algo más que la interacción cultural entre grupos locales y extranjeros (Knight, 2008), distinguiéndose por la diversidad de actividades que propone: planes y programas de estudios, procesos de enseñanza – aprendizaje, actividades extracurriculares, enlaces con grupos culturales o étnicos locales, actividades de investigación y académicas, etc., para concluir luego en que esta elaboración es más amplia que el concepto original de internacionalización en casa (Nilsson, 1999 y 2003). Más adelante, Knight (op.cit.), se refiere a la interdependencia entre las dos 'corrientes' (Internacionalización en casa, e internacionalización en el extranjero), dejando en claro que la IaH busca complementar ambas estrategias.

Para Beelen y otros (2007) la IaH hace referencia a cualquier actividad internacional o intercultural que desarrolle una institución de educación superior, a excepción de los intercambios salientes. Dentro de las acciones que resultan claves para lograr un ambiente internacional en la propia institución, Beelen y otros

(op.cit.) enfatizan: a) la internacionalización de los contenidos de los planes de estudio, b) la Internacionalización del ambiente de estudios, a través de elementos, símbolos y rituales que visibilicen la diversidad cultural de la institución, c) el desarrollo del perfil internacional del docente y su preparación para desempeñarse en ambientes interculturales, d) el estudio de idiomas y f) la recepción de estudiantes extranjeros para la realización de actividades con sus pares locales. Más tarde, Beelen (2011), toma el Tercer Estudio Global de la Asociación Internacional de Universidades de Egron-Polak y otros (2010) y aborda la implementación de estrategias de internacionalización por parte de instituciones de educación superior de distintos continentes. En cuanto a las actividades que reciben mayor atención y recursos, los autores identifican el fortalecimiento del contenido internacional del plan de estudios, mientras que en términos de restricciones, destacan la escasez de recursos económicos. Sin embargo, no queda claro hasta qué punto dicha dificultad está conectada con la internacionalización del plan de estudios. Los autores no mencionan este aspecto y limitan su análisis a la financiación de viajes, becas, colaboraciones de investigación y desarrollo de nuevos servicios, (Beelen, 2011), soslayando así la posibilidad de internacionalizar el plan de estudios por medio de la IaH.

Otros elementos que aparecen como restricciones son el interés limitado del profesorado y la experiencia y la pericia limitadas del personal y/o la falta de dominio de la lengua extranjera (Egron-Polak, op.cit). Así, se observa que sólo el 11% de las instituciones de educación superior menciona la IaH entre las cinco políticas o estrategias de internacionalización prioritarias, mientras que la movilidad de estudiantes y de docentes es elegida como estrategia prioritaria por un 45% y un 33% respectivamente. No obstante, al momento de seleccionar los tres principales obstáculos para profundizar la internacionalización, las universidades latinoamericanas coinciden en señalar los problemas de financiamiento como principal escollo (29%). Esta paradoja habilita a pensar que el proceso de internacionalización no ha sido debidamente planificado y/o desarrollado en el contexto latinoamericano, por cuanto hasta el momento el énfasis se ha puesto justamente en aquella estrategia que demanda mayores recursos económicos, aún a sabiendas de que no se dispone de los medios para desarrollarla sostenidamente, esto es: la movilidad internacional. Por último, no se cuenta con estudios acerca de la IaH en la Argentina.

*Metodología y desarrollo:* la implementación de la iaH en argentina-el caso de la facultad de ciencias económicas de la unicen

*Antecedentes:* Los antecedentes de internacionalización en la FCE de la UNICEN, se remontan al año 2001, con la creación del Programa de Intercambios Internacionales para alumnos de grado en el marco de un nuevo plan de estudios que postula la premisa de “formar profesionales de clase mundial”. Entre los años 2001 y 2007 se realizaron un total de 75 intercambios internacionales de alumnos de grado, recibiendo 64 estudiantes extranjeros y enviando sólo 11 locales sobre una matrícula de 2.000 alumnos de la FCE. A continuación, se describen los primeros pasos en este sentido.

*IaH:* Recursos pre-existentes, experiencia piloto y primeros resultados En el año 2008 se lanza un programa de internacionalización en la FCE de la UNICEN, que nace con el objetivo de integrar la dimensión internacional a las funciones básicas de la Universidad: docencia, investigación, extensión y gestión, en los niveles de grado y postgrado. Se comienza por implementar actividades de IaH para alumnos de grado. De esta manera, un área de gestión -integrada por un docente de dedicación exclusiva y un alumno avanzado- comienza a desarrollar las actividades que se describen a continuación. Un primer paso es el desarrollo de un mapa situacional de recursos, a saber: 1) alumnos extranjeros en intercambio con escaso nivel de interacción con alumnos locales, 2) cursos de distintos idiomas sin participación sustantiva del estudiantado, 3) docentes con dominio de segundas lenguas y experiencias de estudios en el extranjero, 4) un sistema de créditos extracurriculares institucionalizado, para que el alumno de grado realizara actividades pertinentes a su formación como requisito para su graduación y, 5) un grupo de estudiantes, con voluntad para la

participación en actividades informales de carácter intercultural. En base a estos recursos se desarrollaron las primeras actividades de IaH:

Implementación de un sistema de tutorías, basado en un aprendizaje vivencial, asistido por un docente local, con otorgamiento de créditos extracurriculares y accionado por alumnos de la FCE en el rol de tutores de sus pares extranjeros, Reconocimiento formal de un grupo de alumnos voluntarios con certificaciones de participación, en adelante: “Equipo de Colaboradores Internacionales” (ECI). Realización anual de una Feria de Culturas con alumnos locales y extranjeros, abierta a toda la comunidad universitaria, Dictado del Programa “Doing Successful Business in Latin America”, en idioma inglés, por docentes de la FCE, con alumnos locales (por créditos extracurriculares), alumnos extranjeros (con modalidad de curso completo) y docentes del Departamento de Lenguas de la UNICEN, Implementación de un sistema de aprendizaje de idiomas en parejas de alumnos locales y extranjeros (TANDEM), facilitado por un docente de la FCE.

*Los principales resultados fueron los siguientes:* Sistema de tutorías: Los alumnos extranjeros se integraron con mayor facilidad a la vida estudiantil; los alumnos locales demostraron aprendizajes vivenciales y entusiasmo por aprender otra lengua, conocer otras culturas y realizar una experiencia de estudios en el exterior; y finalmente, el docente a cargo constató la importancia de este vínculo. Como punto negativo cabe señalar que la informalidad de la actividad obstaculizaba la asignación de créditos extracurriculares, Equipo de Colaboradores Internacionales (ECI): El grupo creció en número y también aumentó la cantidad de actividades y su diversidad. Sin embargo, el grupo comenzó a manifestar limitaciones de crecimiento dadas por la unidad académica.

*Feria de Culturas:* Estas ferias contaron con la participación de los alumnos extranjeros, pero, en general, resultaban extrañas para los alumnos locales que no comprendían de qué manera participar, generaba molestia a los docentes que lo entendían como una irrupción en el orden y la tranquilidad de la institución, y sólo algunos pocos miembros del staff se acercaban para probar comidas exóticas.

*Doing Successful Business in Latin America:* Este programa generó una primera experiencia en el dictado de cursos de negocios en idioma inglés. Los docentes reflataron habilidades idiomáticas; los alumnos locales emularon situaciones de aprendizaje en segunda lengua y, el contingente de alumnos extranjeros evaluó de manera muy positiva los contenidos del curso y la interculturalidad del aula. Los docentes de idiomas incursionaron por primera vez en cursos de español para extranjeros. Pese a su éxito, el inconveniente se dio al tratar de reeditar el programa.

*TANDEM de idiomas:* Esta propuesta generó interés por parte de alumnos locales y extranjeros. Los problemas consistieron en compatibilizar los horarios, planificar pedagógicamente los encuentros y profundizar los aprendizajes en cursos formales. Con base en estas experiencias, se diseña la propuesta que se desarrolla a continuación

### La Propuesta Emergente

Seguidamente, se detalla el plan de IaH de mediano / largo plazo en la FCE:

De las tutorías, al sistema integral de seguimiento de alumnos tutores.

Del ECI, a la asociación internacional AIESEC.

De la Feria de culturas, a la Semana Internacional.

Del programa de negocios en idioma inglés, a “Aulas Internacionales” y la oferta de Cursos de Español para extranjeros con certificación internacional.

Del TANDEM de idiomas, al café de idiomas.

Cada uno de estos puntos es desarrollado a continuación.

*De las tutorías al sistema integral de seguimiento de alumnos tutores:* Se reconfiguran las tutorías a través de un sistema integral de seguimiento, que propone tres talleres y dos informes a cargo de un docente tutor. El primer taller (de inducción) permitiría a los alumnos comprender la actividad y su importancia. El segundo (de contenido teórico), buscaría conceptualizar la cultura y analizar las prácticas vivenciales interculturales. Por último, el taller final permitiría la reflexión grupal. En base en esta información, se duplican los créditos que obtienen los alumnos locales, se dinamiza el rol docente y aumenta el aprendizaje conceptual. Como corolario, la actividad se integra a la oferta de “Aulas Internacionales” que se desarrolla en el pto. III. 3. d.

*Del ECI a la asociación internacional AIESEC:* Este grupo trata de relacionarse con organizaciones similares en el exterior. Al no lograr resultados, plantea esta inquietud ante la coordinación del programa. Así, se contacta a la organización internacional AIESEC, con presencia en Argentina, y se plantea la posibilidad de abrir un comité en la ciudad de Tandil, con miembros fundadores de la FCE. El ECI difunde la convocatoria al proceso de selección para fundar el comité. Sobre un total de 70 postulados, se seleccionan 7 alumnos (5 de los cuales pertenecían al ECI), bajo la supervisión directa de la FCE. Entre 2008 y 2011, AIESEC Tandil se constituyó en miembro de AIESEC internacional, movilizó estudiantes locales y extranjeros en sus prácticas pre-profesionales en el exterior, generó alianzas con actores de la región, y aumentó la cantidad de alumnos miembros.

*De la Feria de culturas, a la Semana Internacional:* En la búsqueda de una mayor asociación entre las actividades, se planifican grupos de Aulas Internacionales (desarrolladas en pto. III. 3. d.) como actividades de libre elección en “paquetes”. Los alumnos deberían participar de todas las actividades del paquete elegido para obtener una buena cantidad de créditos extracurriculares. La actividad en común sería la Feria de Culturas. Al realizar un cúmulo de entre 10 y 20 actividades en 1 semana, en un mismo lugar físico ambientado para la ocasión, se lograron convocar más de 30 docentes/expositores, más de 250 alumnos y generar un impacto importante ante toda la comunidad universitaria. La Feria de Culturas se convirtió en “el” espacio de interacción, que incentivó a descubrir los beneficios de la interacción intercultural.

*Del programa de negocios en idioma inglés a “Aulas Internacionales” y oferta de curso de Español para extranjeros:* Ante la imposibilidad de continuar este programa, se plantea la opción de dictar cursos similares sólo para alumnos locales. Sorpresivamente, la primera reacción negativa es la de un docente que ya había participado, argumentando que el dictado de cursos no contribuiría de manera sustentable a internacionalizar el perfil de los estudiantes de grado. Ante esta situación, se crea una nueva propuesta y se le da el nombre de “Aulas Internacionales”. El objetivo sería internacionalizar los espacios existentes (currícula formal) o crear nuevos (actividades extra curriculares). La internacionalización de los espacios se plantearía a través de: idiomas, alumnos extranjeros, docentes visitantes, abordajes comparativos entre distintas culturas, etc. Si bien los profesores a cargo de los espacios curriculares formales no se acogieron a la propuesta, sí vieron con buenos ojos la posibilidad de desarrollar actividades extracurriculares. Esto permitió planificar la oferta de Aulas Internacionales según la disponibilidad docente y los intereses de los alumnos. Finalmente, el Departamento de Lenguas de la UNICEN dedicó recursos humanos para establecer ofertas estables de “Español para Extranjeros”, logrando la certificación internacional C.E.L.U. – Certificación de Español Lengua y Uso -.

*Del TANDEM al “café de idiomas” y la oferta de cursos de idiomas:* El TANDEM planteaba dificultades en cuanto a su continuidad. En consecuencia, se invita al Departamento de Lenguas de la UNICEN a desarrollar esta actividad en el marco de la Semana Internacional, como forma de difundir sus cursos de inglés y portugués, en dos espacios denominados “Café de idiomas”. Actualmente, esta actividad convoca estudiantes extranjeros de distintas unidades académicas, miembros de AIESEC y de la comunidad en general para que desarrollen su español y colaboren con los alumnos locales. A continuación, las conclusiones y aprendizajes emergentes de esta experiencia.

## CONCLUSIONES

Las actividades implementadas han dado pruebas del impacto que la IaH puede generar a nivel institucional. Cuantitativamente, entre 2008 y 2011 en la FCE:

*se han realizado más de 80 actividades de internacionalización: cursos, talleres, conferencias, paneles de discusión, cafés de idiomas, video-conferencias, ferias, etc., más de 1.500 estudiantes han tenido al menos una experiencia internacional y/o intercultural y, las actividades han sumado más 150 expositores: empresarios, conferencistas, docentes de la FCE, docentes de otras unidades académicas de la UNICEN, docentes y alumnos con vivencias internacionales y/o interculturales.*

Entre ellas, la propuesta de Aulas Internacionales es la que ha ganado mayor continuidad con impactos tanto cuantitativos como cualitativos. La participación masiva de los estudiantes de grado, conjuntamente con el apoyo de la asociación de estudiantes de la FCE, el respaldo de algunos docentes con participaciones periódicas, y los resultados sobre el ámbito institucional, son los factores que legitiman las propuestas. Asimismo, las distintas actividades no quedaron desarticuladas con la teoría, por cuanto cada una se enlaza con elementos propios de la IaH –especialmente: Beelen y otros (2007); Beelen (2011) y Knight (2008)-,

*internacionalización del ambiente de estudios (Semana Internacional, Aulas Internacionales y AIESEC), desarrollo del perfil internacional del docente y su preparación para desempeñarse en ambientes interculturales (Aulas Internacionales, cursos de idiomas y tutorías), estímulo al desarrollo de habilidades idiomáticas Aulas Internacionales, cafés de idiomas y cursos de idiomas), recepción de estudiantes extranjeros para la realización de actividades con los alumnos locales (Ferias de Culturas, Aulas internacionales, cafés de idiomas y tutorías de alumnos en intercambio) y, desarrollo de espacios académicos con contenidos internacionales e interculturales (Aulas Internacionales).*

En consecuencia, es posible afirmar que, en este caso, la IaH generó resultados significativos. Con todo, es importante mencionar algunas restricciones:

*tanto en docentes como en estudiantes se observa un escaso nivel de inglés no existe un reconocimiento formal de las actividades de IaH hacia los docentes, este programa no posee un presupuesto asignado y, la cantidad de docentes que ha participado es ínfima.*

Las restricciones mencionadas son preocupantes. La sustentabilidad y sostenibilidad del proceso de internacionalización demandan ya una firme voluntad política que permita la institucionalización del proceso de IaH, como estrategia complementaria de IES.

# EL EFECTO DE LA INTERACCIÓN FAMILIAR SOBRE LA GESTIÓN FINANCIERA Y LA GENERACIÓN DE VALOR EN EMPRESAS FAMILIARES.

Paula Andrea Molina Parra, Politécnico Colombiano Jaime Isaza Cadavid  
Sergio Botero Botero, Universidad Nacional de Colombia

## RESUMEN

*Este artículo es derivado de una investigación que actualmente está en curso y cuyo propósito es determinar y analizar la incidencia de la intervención familiar en el proceso de la gestión financiera de las empresas familiares y en su generación de valor para un sector industrial específico en Colombia. Esto se hará a través de la identificación de los factores que inciden positiva y negativamente en el cumplimiento del objetivo básico financiero en las empresas de familia. Esta investigación se enmarcará en los conceptos de la teoría de gestión financiera, en la Teoría de la Agencia (Fama, 1983), en la Teoría de la Jerarquía Financiera (Myers y Majluf, 1984), así como en el concepto de familiness el cual asocia a las organizaciones familiares con un entorno de recursos únicos (Habbershon y Williams, 1999). El enfoque de la investigación es de tipo cuantitativo, de alcance correlacional, cuyo diseño es no experimental y transversal.*

**PALABRAS CLAVE:** Empresa Familiar, Gestión Financiera, Generación de Valor

## EFFECT OF FAMILY INTERACTION ON FINANCIAL MANAGEMENT AND GENERATION VALUE IN FAMILY BUSINESS.

### ABSTRACT

*This paper is derived from an investigation that is currently underway, which objective to identify and to analyze the impact of family involvement in the process of financial management in family businesses and their creation of value for a specific industrial sector in Colombia. This will be done through the identification of the factors that affect positively and negatively the fulfillment of the financial basic objective in family business. This investigation will frame in the concepts of the theory financial management, the theory agency (Fama, 1983), in the financial hierarchy theory (Myers y Majluf, 1984), as well in the concept of familiness which associated family organizations with an environment unique resource (Habbershon y Williams, 1999). The study will be quantitative, correlational, of design not experimental and cross-sectional.*

## INTRODUCCIÓN

Las familias no solo tienen lazos de consanguinidad y amistad, sino que también se asocian para conformar distintos tipos de organizaciones. Las cifras y la experiencia muestran que las sociedades de familia tienen mayores dificultades para sobrevivir en el mercado, entre otras razones, porque no se planea con suficiente tiempo el proceso de sucesión de la propiedad y la administración financiera de la empresa (Superintendencia de Sociedades, [En línea]). Según las estimaciones más conservadoras, entre el 65% y

el 80% de las empresas de todo el mundo son propiedad de una o varias familias, o están dirigidas por ellas (Gersick et al., 1997, p. 2). En Estados Unidos el 96% de las empresas son familiares, en España el 71%, en Italia el 99% y en Colombia oscilan entre el 70% y 75% entre pequeñas, medianas, grandes empresas (Gaitán y Castro, 2005). Dado que la mayoría de las empresas son de carácter familiar, se hace necesario duplicar esfuerzos para conocer los factores que contribuyen a su subsistencia.

El fenómeno de las empresas familiares demanda actualmente estudios de mayor profundidad y análisis, dadas las condiciones problemáticas naturales que poseen al entremezclar en un mismo sistema los elementos de propiedad, familia y empresa, lo que genera conflictos de orden económicos, sociales y administrativos que no permiten lograr su sostenibilidad y continuidad generación tras generación (Rueda, 2011) En función de lo anterior, comprender y analizar la incidencia de los lazos familiares en la gestión financiera de las empresas familiares es un tema de vital importancia en el ámbito académico y empresarial, en la medida que al identificar si estas empresas son más o menos eficientes en la búsqueda del objetivo básico financiero permitirá generar elementos de aprendizaje y construcción de empresas más productivas, competitivas y sostenibles en el tiempo.

## REVISIÓN DE LA LITERATURA

### Concepto de Empresa Familiar

La comunidad académica en algunas ocasiones tiende a confundir el concepto “Empresa familiar” con pequeña y mediana empresa, sin reconocer que un gran número de las mayores empresas de un país son empresas familiares. También confunden el término con cualquier tipo de negocio “individual” o “artesanal”, que las personas ponen en marcha para subvenir las necesidades económicas de la familia pero sin intención de importantes desarrollos o de que otros miembros de la familia lo continúen (Gutiérrez, 2002, p. 58) Pensadores clásicos en esta materia como Berckharg (1983), Dyer (1986), Ward (1986) o Gallo (1996) cit. en Rueda (2011), proponen que la definición de empresa familiar debe estar direccionada por tres (3) condicionamientos fundamentales que son: Una o dos familias poseen más del 50% de la propiedad de la empresa, existen miembros de la familia ocupando cargos directivos y/o ejecutivos en la empresa y los miembros de la familia consideran que la empresa va a ser transferida a las siguientes generaciones. Gallo y Domenec (2004) afirman que una definición precisa de las empresas de familia está aún muy lejana, sin embargo, las caracterizan como aquellas empresas cuyo poder de decisión está en una familia, las responsabilidades de gobierno y dirección son desempeñadas por algunos de sus miembros y como mínimo algunos integrantes de la segunda generación están incorporados a la empresa.

### Gestión Financiera

La gestión financiera es el proceso que involucra el uso racional y responsable de todos los ingresos y egresos en todas las estructuras organizacionales. Este proceso debe comprender todos los métodos para la obtención de recursos como su uso eficaz y eficiente. Además comprende todas las actividades clasificadas entre: planeación del uso de los recursos, cálculo de las necesidades financieras, gestión de apalancamiento, análisis de viabilidad, entre otros. Su objetivo principal es aplicar principios financieros con eficacia en oportunidades de negocio, que maximicen los resultados de rentabilidad y el valor de la empresa (Córdoba, 2012). Burk y Lehman (2004), separan la gestión financiera en el largo y en el corto plazo, entendiéndose que la primera se ocupa de la realización de una planificación futura de la empresa buscando el modo de efectuar las inversiones adecuadas en activo fijo, de forma que se evite la infrautilización de éstas, controlando la rentabilidad generada por las mismas e intentando optimizarlas. Además, analiza la capacidad de la empresa para asumir deudas. Por otro lado, la gestión financiera a corto plazo se preocupa por la problemática relacionada con la financiación del activo circulante. Es decir, busca los fondos suficientes para hacer frente a las inversiones a corto plazo (existencias, deudores, tesorería), con el fin de

que nunca se produzca ruptura en el ciclo de explotación, ya que el desfase posible entre cobros y pagos podría ocasionar flujos de caja negativos; de ahí la necesidad de disponer de recursos en tesorería. Brealey y Myers (2007) consideran que la gestión financiera debe partir de la estrategia organizacional y comprende el diseño de objetivos, la selección de las estrategias y políticas, la ejecución de acciones y la ejecución de mecanismos de control relacionados con las decisiones financieras en el corto y en el largo plazo.

Teniendo en cuenta los anteriores conceptos, para efectos de esta investigación, se define la gestión financiera como “un proceso empresarial que comprende el diseño de objetivos, la selección de estrategias y políticas, la ejecución de acciones y de mecanismos de control, el cual busca en el largo plazo efectuar las inversiones en los activos que se requieren para mantener una operación eficiente y que sea rentable; utilizando fuentes de financiación que optimicen el costo de capital y permitan generar valor agregado para los inversionistas; y en el corto plazo se ocupa de la problemática relacionada con el Capital de Trabajo del Negocio, entendido este como los recursos necesarios para operar sin contratiempos (liquidez). Todas estas acciones deberán llevar a la empresa en su conjunto a la creación de valor” Es necesario precisar lo que se entiende por creación de valor. En términos financieros, una decisión, acción, inversión o transacción contribuye a la creación de valor cuando es capaz de retornar un monto de dinero superior a lo invertido inicialmente, y es capaz de cubrir todos los costos asociados, incluyendo los costos de oportunidad de los recursos invertidos. (Vera, 2006).

### Gestión Basada en el Valor

Durante décadas, el enfoque contable para la evaluación de la gestión empresarial fue predominante sobre otros criterios financieros de análisis, por lo que maximizar el rendimiento era el objetivo a lograr. La preferencia por este conjunto de mediciones para evaluar la situación de un negocio fue una realidad en el siglo pasado, y aún mantiene sus adeptos. Sin embargo, en la última década y media, a escala internacional, los expertos comienzan a poner en entredicho la suficiencia de este tipo de indicadores para evaluar no solo la situación financiera de una empresa sino también la capacidad de sus administradores para gestionarla. No se trata de eliminar completamente los indicadores financieros tradicionales, sino de popularizar el uso de metodologías de análisis que permitan determinar el nivel de creación o destrucción de valor financiero, variable que busca ir más allá de la rentabilidad contable. (Vera, 2006). La concepción del análisis y la gestión financiera ha venido cambiando dentro de las empresas, al sustituir paulatinamente criterios basados en variables netamente contables por variables económico financieras. Todo este cambio de paradigma financiero se lleva a cabo en el marco de la Gerencia Basada en Valor (o Value Based Management, VBM), filosofía gerencial que viene siendo ampliamente promocionada en los últimos años, especialmente por consultores especializados.

### Teoría de la Agencia

La teoría de agencia cuestiona si el gerente de una empresa actuará siempre a favor de los intereses de los accionistas y sustenta que, cuando se separan la propiedad y la gerencia el gerente tiende a adoptar un comportamiento oportunista. Jensen y Meckling (1976) modelaron la reducción en el valor de la firma a causa de dicho conflicto. Fama y Jensen (1983a y 1983b) proponen que una forma de afrontar los problemas de agencia entre gerentes en las empresas familiares y accionistas en las organizaciones más complejas es separando las decisiones gerenciales de las de control, y en las menos complejas, un mecanismo eficiente puede ser la concentración de la propiedad (cit. en González et al, 2010).

Otra dimensión de la teoría de agencia de la estructura de propiedad familiar es la relación existente entre los accionistas y los tenedores de deuda. Si bien la literatura financiera sobre empresas familiares en esta relación ha sido más escasa, la mayoría de estudios han tratado de aportar a la discusión alrededor de la hipótesis que sostiene que las empresas familiares poseen ciertas características que pueden traducirse en

menores conflictos de agencia entre accionistas y tenedores de deuda, en comparación con los existentes en las empresas no familiares. El tercer conflicto que puede presentarse en este tipo de organizaciones, se resume en la frase siguiente:

*Si bien es cierto que los problemas de agencia que se generan de la separación entre la propiedad y la gerencia tienden a atenuarse en una organización familiar, también debe reconocerse que el otro tipo de problemas, aquellos que surgen entre pequeños y grandes accionistas, se amplifican en este tipo de firmas* (Ali, Chen y Radhakrishnan, 2007, p 238. cit. en González et al, 2010, p. 23).

### Teoría de la Jerarquía Financiera

La teoría de la jerarquía de preferencias financieras (*Pecking Order*), establece la existencia de un orden en la elección de las fuentes de financiación a contratar (Myers y Majluf, 1984). En este trabajo los autores consideran que una empresa en muchas ocasiones debe emitir acciones ordinarias para recaudar dinero con el fin de emprender una oportunidad valiosa de inversión. Sin embargo, el modelo que proponen muestra que las empresas pueden negarse a emitir acciones, por lo que pueden pasar valiosas oportunidades de inversión y sugieren explicaciones sobre varios aspectos de la financiación de las empresas. Entre estos comportamientos se encuentran tendencias como recurrir a fuentes internas de fondos, y preferir deuda a patrimonio si el financiamiento externo es necesario. Según esta teoría, lo que determina la estructura financiera de las empresas es la intención de financiar nuevas inversiones: En primer lugar, de manera interna con fondos propios; seguida con deuda privada de bajo riesgo como la bancaria y, en último lugar, con emisión de acciones. (Esparza et al, 2010).

### El Concepto de Familiness

Habbershon & Williams (1999) introducen el término de “Familiness” para hacer referencia al concepto que asocia a las organizaciones familiares como un entorno de recursos únicos, los que dada su condición particular de fusionar al mismo tiempo los elementos de familia, propiedad y empresa, se convierten en una fuente generadora de significativas ventajas competitivas frente a las sociedades no familiares. La cultura empresarial que en el caso de las organizaciones familiares suele ser en gran medida un reflejo fiel de los valores de la familia propietaria, genera una escala de valores disimiles a los de otro tipo de empresas, dados por elementos como el compromiso, confianza y pertinencia entre los miembros familiares y no familiares vinculados a la organización (Habbershon & Williams, 2003).

## **METODOLOGIA**

*Enfoque de la Investigación:* Dado que esta investigación busca probar una hipótesis, con base en la medición numérica y análisis estadístico, al igual que establecer patrones de comportamiento, se considera que su enfoque es *cuantitativo*. Dadas las características de esta investigación donde existe una realidad sistémica, que puede ser conocida de manera imperfecta debido a las limitaciones humanas del investigador, y por lo tanto, tal realidad es factible de descubrirse con cierto grado de probabilidad; donde se considera que la experimentación en el laboratorio es una forma central para probar hipótesis, pero no es la única; donde se busca explicar las causas que influyen los resultados; y dónde las teorías consideradas tienen referentes empíricos, ésta estará enmarcada en la corriente del *Pospositivismo*. (Creswell, 2003; Mertens, 2010).

*Alcance de la Investigación:* Se propone una investigación *correlacional* que busca conocer la incidencia de los lazos familiares sobre el proceso de gestión financiera y su relación con la generación de valor para los inversionistas en las empresas familiares. Se busca desarrollar un modelo conceptual que pueda explicar el fenómeno en un sector de la economía en particular.

*Diseño de la Investigación:* Como en este estudio lo que se pretende analizar es la influencia que tiene la intervención familiar en el proceso de la gestión financiera de las empresas familiares y en su generación de valor para un sector específico en su contexto natural, el diseño de investigación es *no experimental*; no se proporcionarán estímulos a las variables. Es transeccional o transversal dado que la recolección de datos se hará una sola vez y su propósito es describir variables y analizar su interacción en un momento dado (Hernández et al, 2010).

*Selección de la población y de la muestra:* La población estará conformada por las empresas de familia y no familiares que estén legalmente constituidas, pertenecientes a un sector Industrial específico en Colombia. Se seleccionará la muestra a través de muestreo probabilístico, cuyos elementos muestrales se elegirán por medio de un listado o base muestral que se obtendrá de la Cámara de Comercio. Esta será una muestra estratificada inicialmente por tamaño de empresa y por tipo de actividad. Se quiso considerar todos los tamaños de empresas pensando en que las empresas grandes pueden tener algunas características distintivas (buenas prácticas financieras) que pudieran ser adoptadas por las de menor tamaño.

*Recolección de información:* Se utilizarán fuentes de información secundaria, como bases de datos de las Cámaras de Comercio y la Superintendencia de Sociedades (SIREM), registrados con corte a diciembre de 2013; y técnicas de recolección de información primaria como la encuesta a través de un cuestionario de preguntas cerradas y/o abiertas que será construido teniendo en cuenta la literatura revisada y la definición de variables a medir con sus indicadores.

*Procesamiento de la información:* Una vez los datos obtenidos en el instrumento diseñado sean codificados, se procederá a analizarlos a través de la ejecución del programa SPSS (Paquete estadístico para las Ciencias Sociales), desarrollado por la Universidad de Chicago (Hernández et al, 2010). Algunos de los análisis estadísticos que se realizarían son:

*Estadísticos descriptivos:* como la distribución de frecuencias y medidas de tendencia central, lo que permitirá analizar y visualizar descriptivamente los datos por variable.

*Estadística inferencial:* a través de análisis paramétricos, como el coeficiente de correlación de Pearson y el análisis de varianza (ANOVA) que permitirá estimar los parámetros y probar la hipótesis.

*Medición de la Validez:* Para medir la confiabilidad y validez lograda por el instrumento de medición existen diversos procedimientos, los más usados de aquellos que determinan la confiabilidad mediante un coeficiente son: Medida de estabilidad, método de formas alternativas o paralelas, método de mitades partidas y medidas de coherencia o consistencia interna (*el alfa de Cronbach y los coeficientes de Kunder y Richardson*). El método que se utilizará, según las características de esta investigación es el de Cronbach, donde el instrumento sólo requiere de una sola versión y una sola aplicación, y el cual da respuesta a si las respuestas a los ítems del instrumento son coherentes.

## RESULTADOS ESPERADOS

Con esta investigación se pretende contribuir a la literatura empírica sobre la gestión financiera en empresas de familia. Dado que es contradictoria la investigación académica que se ha publicado acerca de la incidencia de los lazos familiares en la gestión financiera y en la generación de valor. En segundo lugar, a pesar de que la muestra se restringe a Colombia, este trabajo contribuye a una mejor comprensión de la interacción familia empresa en los mercados emergentes en general, dado que Colombia no es diferente a los demás países de América Latina en términos de gobierno corporativo. De este modo, aporta la literatura sobre las finanzas corporativas en las empresas familiares.

Históricamente se ha pensado que la gestión financiera en las empresas de familia es influenciada por los lazos familiares, por lo que caracterizar y modelar este tipo de prácticas aclararía situaciones como las siguientes: las empresas familiares financieramente deben ser administradas de manera diferente a las empresas no familiares?, éstas son más eficientes en el uso de sus recursos?, poseen estructuras financieras diferentes a las empresas no familiares?, existe una estructura de gestión financiera para las empresas familiares que permita disminuir el riesgo de cierre y la generación de valor?. Conocimiento que puede contribuir a la generación de estrategias de sostenibilidad y creación de valor en condiciones de incertidumbre.

# LA VISIÓN EMPRENDEDORA EN NIÑOS DE EDUCACIÓN PRIMARIA COMO UNA ESTRATEGIA COMPETITIVA DE DESARROLLO ECONÓMICO Y SOCIAL

Seidi Iliana Pérez Chavira, Universidad Autónoma de Baja California  
Saúl Méndez Hernández, Universidad Autónoma de Baja California  
Alejandra Merino González, Universidad Autónoma de Baja California  
Guadalupe Tello Martínez, Universidad Autónoma de Baja California

## RESUMEN

*La búsqueda continua de estrategias competitivas que impulsen la economía del país y fomenten los valores en la sociedad, tiene preocupados a todos los niveles de gobierno y a las instituciones educativas. Actualmente se requieren nuevas formas de planear y realizar proyectos novedosos, enfocados a la creación de nuevas empresas que ofrezcan oportunidades de crecimiento a millones de personas sin ocupación. El trabajo de investigación parte del Programa Mi Primera Empresa, Emprender Jugando en el cual colaboran, la Universidad Autónoma de Baja California (UABC) a través de la Facultad de Ingeniería y Negocios San Quintín, en vinculación con la Organización No Gubernamental, Fundación Educación Superior Empresa (FESE). Está diseñado para apoyar a los alumnos de 5° y 6° de primaria a concebir una idea empresarial y ponerla en marcha, para ello cuentan con el apoyo de estudiantes de educación superior y un tutor académico quienes aplican sus conocimientos en favor del fomento a la actitud emprendedora de los niños. El estudio es cualitativo, descriptivo no experimental. El objetivo del trabajo consiste en identificar las competencias básicas en los niños durante la realización del proyecto. Los resultados obtenidos nos muestran que los niños reforzaron las competencias de: comunicación lingüística, cultural, artística y razonamiento matemático y las adquiridas fueron la de autonomía e iniciativa personal, social, ciudadana y la de interacción con el mundo físico y natural.*

**PALABRAS CLAVES:** Visión Emprendedora, Educación, Valores. Estrategias Competitivas

## THE ENTREPRENEURIAL VISION IN ELEMENTARY SCHOOL CHILDREN AS A COMPETITIVE STRATEGY FOR ECONOMIC AND SOCIAL DEVELOPMENT

### ABSTRACT

*The continuous search for competitive strategies to boost the economy and promote values in society have worried at all levels of government and educational institutions. New forms of planning and conducting innovative projects aimed at creating new companies that offer growth opportunities to millions of people without work are required. The research part of the program My First Company in which Playing Undertake collaborate, the Autonomous University of Baja California (UABC) through the Faculty of Business and Engineering San Quintin, in conjunction with the Higher Education Foundation Company (FESE). It is designed to support students in grades 5 and 6 primary to conceive a business idea and implement it, for it supported students in higher education and an academic tutor who apply their knowledge for the promotion of entrepreneurial vision of children. The study is qualitative, descriptive, not experimental. The objective of this work is to identify the basic competencies in children during the project. The results show that children strengthened competencies: linguistic, cultural, artistic communication and*

*mathematical reasoning, and were acquired autonomy and personal initiative, social, civic and interaction with the physical and natural world.*

**KEYWORDS:** Entrepreneurial Vision, Education, Values, Competitive Strategies

## INTRODUCCIÓN

Las instituciones educativas de nivel superior en México, se enfrentan no solo al reto de formar profesionales competentes sino también a la forma de forjar en ellos interés por los problemas y cambios sociales, que los motiven a crear, generar o transformar actividades científicas, tecnológicas, culturales o sociales en grandes ideas que puedan contribuir al desarrollo económico y social del país.

Por ello, la Universidad Autónoma de Baja California (UABC) en colaboración con la Fundación Educación Superior Empresa (FESE), ponen en marcha el programa Mi Primera Empresa, Emprender Jugando. Este programa fomenta la cultura emprendedora entre jóvenes universitarios y niños de educación primaria. Los estudiantes de educación superior asumen el papel de "asesores", ofreciendo a los niños los conocimientos básicos relacionados con la idea de un negocio o empresa, apoyados en el modelo administrativo de plan de negocios, mediante un proceso lúdico con fines formativos acorde a su nivel de maduración, desarrollo intelectual y comprensión de su entorno social y económico. Lo anterior bajo la supervisión de un "tutor", que son académicos capacitados por la fundación para apoyar en el transcurso del programa.

Figura 1: Actores Involucrados en el Proceso Ludico

### Objetivo

El objetivo de la investigación consiste en identificar las competencias básicas logradas en los niños durante la realización del proyecto.

## REVISIÓN LITERARIA

### Formación Por Competencias Como Ventaja Competitiva

En la actualidad los modelos educativos en México, están orientados a la formación en competencias la cual pretende formar al alumno en un ser autónomo, independiente, critico, reflexivo y consiente del aprendizaje que está adquiriendo en su vida cotidiana. Es decir, aprender a aprender. La formación en competencias pretende retomar todos los conocimientos que te da la vida para aplicarlos en beneficio propio y de los demás. Ahora bien para que la tarea de aprender a aprender pueda ser transversal en todo aprendizaje deben transformarse los modelos de enseñanza situando el aprendizaje como un medio para ampliar el saber del individuo y comprender su propio entorno. Por lo tanto se requiere de un esfuerzo tanto del profesor como del estudiante en las actividades de aprendizaje; el docente debe despertar en el estudiante la capacidad de reflexionar críticamente sobre su propio aprendizaje, dándose cuenta de lo que aprende, buscando a su vez estrategias que faciliten su aprendizaje y lo lleven al éxito de sus estudios. Por lo cual, este nuevo enfoque se centra en el aprendizaje de; alumno y no en la enseñanza del docente.

El alumno necesita desde sus primeros años de formación académica conocer las estrategias que le llevarán al éxito en sus estudios. Es tarea del profesor "enseñar a aprender" y del alumno "aprender a aprender". Otro factor que avala esta estrategia es que se pueden tomar todos los conocimientos que te da la vida para usarlos en beneficio propio y de los demás. En nuestro país algunas instituciones destacan el predominio de la estrategia del "aprender haciendo" o "aprender a aprender" como clave en el éxito de muchos de sus egresados. En este caso, esta estrategia representa una ventaja competitiva con respecto a otras instituciones al aludir la posibilidad de un mejor aprendizaje gracias a las actividades prácticas que realiza el alumno, aunque esta metodología no esté siempre presente en todas las asignaturas y carreras que se imparten. Dentro de la formación por competencias, se pueden observar las competencias básicas y profesionales en los alumnos. Las competencias básicas se pueden visualizar fácilmente en los niños de educación primaria y se definen como "el conjunto de destrezas, conocimientos y actitudes adecuados al contexto que todo alumnado que cursa esta etapa educativa debe alcanzar para su realización y desarrollo personal, así como para la integración social". Las competencias básicas se deberán adquirir en la enseñanza básica y a su logro debe contribuir la educación primaria, la cual deberá incluir al menos las siguientes competencias en la educación que se proporcione a los estudiantes. Competencia en comunicación lingüística. Esta competencia se refiere a:

Comunicación oral y escrita

Representación, interpretación y comprensión de la realidad

Construcción y comunicación del conocimiento

Hábitos de lectura y escritura.

Actitudes de escucha, exposición y diálogo, teniendo en cuenta y respetando las opiniones de los demás.

Dominio de la lengua oral y escritura en múltiples contextos.

Competencia de razonamiento matemático. Esta competencia se refiere a:

Habilidad para utilizar y relacionar los números y sus operaciones básicas, los símbolos y las formas de expresión y razonamiento matemático, tanto para producir como para interpretar los distintos tipos de información.

Resolución de problemas relacionados con la vida cotidiana.

Conocer los elementos geométricos, su presencia y aplicación a la vida cotidiana.

Comprender y expresar un razonamiento matemático.

Competencia digital y tratamiento de la información. Esta competencia se refiere a:

Habilidades en el tratamiento de la información: buscar, obtener, procesar y comunicar información y poder transformarla en conocimiento.

Competencia social y ciudadana. Esta competencia se refiere a:

Comprensión de la realidad social en que se vive.

Actitudes y hábitos de convivencia y vida en sociedad.

Solución de conflictos de forma pacífica.

Respeto a los derechos y deberes sociales y ciudadanos.

Aceptación, respeto y utilización de los valores democráticos para afrontar la convivencia y la resolución de conflictos.

Competencia para la autonomía e iniciativa personal. Esta competencia se refiere a:

Ser capaz de imaginar, emprender, desarrollar y evaluar acciones o proyectos individuales o colectivos con creatividad, confianza, responsabilidad, perseverancia, conocimiento de sí mismo, sentido crítico y cooperación.

Competencia en el conocimiento y la interacción con el mundo físico y natural:

Fomentar la sensibilidad ante la conservación del medio físico más cercano y la actitud crítica ante las conductas inadecuadas

Contribuir y valorar la importancia de cuidar el medio ambiente

Mostrar actitudes de respeto hacia los demás y hacia uno mismo

Competencia social y ciudadana:

Elaborar e interiorizar normas de convivencia

Resolver conflictos

Comprender la realidad social en la que se vive

Conocer las emociones y los sentimientos en relación con los demás

Trabajar en equipo, aprendiendo a aceptar otros puntos de vista distintos del propio

Comportarse y convivir en una sociedad multicultural y cambiante

Competencia cultural y artística:

Valorar las tradiciones de nuestro país

Adquirir conocimientos de diferentes manifestaciones artísticas mediante la visualización de imágenes

Desarrollar y valorar la iniciativa, la imaginación y la creatividad.

Competencia y actitudes para seguir aprendiendo de forma autónoma a lo largo de la vida (aprender a aprender):

Reflexionar sobre qué y cómo se ha aprendido

Desarrollar estrategias de atención

Expresar oralmente y por escrito el aprendizaje adquirido

Comprender, analizar y resolver problemas

Resolver situaciones cada vez más complejas

### La Visión Emprendedora

Un emprendedor es aquella persona capaz de arriesgarse a iniciar un negocio o una empresa, a concretar una idea por ilógica que esta parezca, es determinado, carismático, planeador, organizado y con una visión emprendedora sobresaliente. Se dice que una persona posee visión emprendedora cuando sabe qué desea lograr y en qué momento. Tiene una idea clara de sus metas que lo llevarán a concretar el objetivo planeado en un inicio. Tener visión es una muestra de oportunidad de crecimiento para la empresa o negocio. Brinda seguridad a la planeación de los mismos. La visión es el motivo por lo cual alguien inicia un negocio, crea o transforma un producto y brinda un servicio. Por lo cual un elemento clave para desarrollar una estrategia competitiva entre las organizaciones, empresas e instituciones, es la visión emprendedora. Ya que, se tendría ventajas en relación con otras empresas del mismo ramo. Al tener una visión clara de lo que se desea planear y el objetivo que se desea perseguir, la organización tiene más posibilidades de lograr el éxito competitivo.

### Estrategia Competitiva

La estrategia competitiva se basa fundamentalmente en un profundo conocimiento de los sectores industriales, comercio y servicio, de sus competidores y entorno. Para la planificación de la estrategia Michael E. Porter propuso cinco fuerzas que influyen en la rentabilidad a largo plazo de un mercado o de algún segmento de éste. Por tanto, la organización debe evaluar sus objetivos y recursos frente a estas cinco fuerzas que rigen la competencia, las cuales se mencionan a continuación:

Amenaza de entrada de nuevos competidores  
Rivalidad entre los competidores  
Poder de negociación de los proveedores  
Poder de negociación de los compradores  
Amenaza de ingreso de productos sustitutos

Porter identificó seis barreras de entrada que podían usarse para crearle a una corporación una ventaja competitiva:

Economías de Escala: consiste en reducir costos al aumentar la producción.

Diferenciación del Producto.

Inversiones de Capital: Fuertes recursos financieros garantizan a la organización una mejor posición competitiva frente a competidores más pequeños.

Desventaja en Costos independientemente de la Escala.

Acceso a los Canales de Distribución.

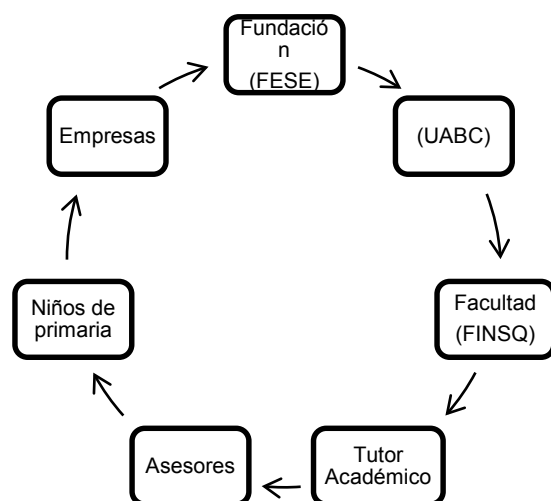

Política Gubernamental: requisitos y normas legales que pueden impedir la entrada de nuevos competidores.

El éxito de la estrategia depende de qué tan positivamente esta pueda manejar los cambios que se presenten en el ambiente competitivo. Una competencia acelerada indica que ya no es posible esperar por la acción del competidor, sino anticiparse y prepararse para enfrentar cualquier eventualidad.

### **METODOLOGÍA**

El Programa Mi [Primera Empresa, Emprender Jugando se llevo a cabo mediante un convenio de colaboración entre la Fundación (FESE) y la Universidad (UABC) a través de la Facultad de Ingeniería y Negocios San Quintín (FINSQ). Para formalizar el proceso de investigación la Facultad celebro un proyecto de vinculación con la Escuela Primaria Bilingüe Ignacio Zaragoza, comprometiéndose a trabajar por un periodo de seis meses, la facultad designaba un tutor académico y 8 estudiantes universitarios para que trabajaran como asesores de niños de primaria de quinto y sexto grado e iniciaran el proyecto más ambicioso de un niño, formar su propia empresa.

Figura 2: Metodología Utilizada en el Proyecto

A través de una metodología participativa el proyecto utiliza el plan de negocios como una herramienta administrativa para organizar el trabajo con los niños. Se establecen una serie de etapas, entre las cuales se incluye la identificación de la idea del negocio, la elaboración de la estrategia del negocio, la fabricación del producto, la venta y por último el cierre y liquidación de la empresa. Los niños se organizan dentro de su pequeña empresa en áreas de mercadotecnia, finanzas producción y director general.

Figura 3: Etapas en la Organización de las Empresas

El tipo de investigación utilizado es un estudio cualitativo, descriptivo, no experimental. La recopilación de la información se hizo por medio de cuestionarios, en los cuales se usó una escala de valor tipo Lickert. Para medir la confiabilidad de los cuestionarios se utilizó el coeficiente alpha de Cronbach, cuyo valor indica 0.938 altamente confiable. El estudio se realizó en la Escuela Primaria Bilingüe Ignacio Zaragoza, quien se sitúa en el Valle de San Quintín, Municipio de Ensenada, Baja California. El instrumento fue aplicado a los 48 niños que participaron en el proyecto durante los meses de octubre de 2013 a marzo del 2014. El objetivo del estudio consistía en determinar las competencias adquiridas o reforzadas durante el proceso de formación de los niños como pequeños emprendedores.

## RESULTADOS

De los resultados obtenidos se tiene que el 88% de los niños respondió que unas de las competencias básicas que fortaleció fue la de comunicación oral y escrita, ya que debía redactar el documento y explicarlo en una Feria de Emprendedores. Mientras que el 95.6% de los niños reforzó su habilidad matemática, al determinar el precio de venta del producto, el monto de las ventas originadas y dividirse las ganancias obtenidas. El

100% de los niños menciono que la habilidad artística se desarrollaba todos los días con la creación e innovación de ideas del negocio.

La población estudiada revelo que se adquirieron nuevas competencias básicas, entre las cuales es importante mencionar la de autonomía e iniciativa personal, social, ciudadana y la de interacción con el mundo físico y natural. Estos resultados estuvieron entre un rango de 86% a 94%.

## CONCLUSIONES

El programa Mi Primera empresa considera su aplicación como una estrategia competitiva, al desarrollar en los alumnos de educación básica actitudes emprendedoras y de liderazgo, promover los valores sociales e individuales, desarrollar y fortalecer sus competencias básicas, adquisición de conocimientos básicos sobre planes de negocios en el diseño de empresas, fomentan la solución de problemas, identifican áreas de oportunidad en el entorno social y económico, logrando un aprendizaje significativo en los niños. El niño aprende a aprender, aprende a hacer y aprende a actuar ante oportunidades de negocio. Estos aprendizajes aplicados a un proceso de emprendimiento contribuyen al desarrollo de los conceptos básicos sobre el diseño y la operación de empresas. La finalidad es provocar en los niños participantes la reflexión de su entorno social y productivo, para promover una nueva actitud y fomentar la cultura emprendedora en ellos.

# LA IMPORTANCIA DE LA IMPARTICIÓN DE LA ASIGNATURA DE ÉTICA, RESPONSABILIDAD SOCIAL Y TRANSPARENCIA, SEGÚN OPINIÓN DE ESTUDIANTES DE LA UNIVERSIDAD ESTATAL DE SONORA

Norma Lorena Arenas Mozqueda, Universidad Estatal de Sonora

Ana Bolena Sotelo Medina, Universidad Estatal de Sonora

Elsa Isabel Montaña Martínez, Universidad Estatal de Sonora

## RESUMEN

*En este trabajo, se realizó un sondeo para saber qué tan importante es para los estudiantes de la Universidad Estatal de Sonora la asignatura de Ética, Responsabilidad Social y Transparencia, y determinar con el resultado de esta investigación, si realmente la enseñanza de la Ética está cumpliendo con los objetivos en la formación complementaria de los estudiantes. Este estudio es descriptivo (cuantitativo-cualitativo), el cual nos permitirá solicitar a nuestras autoridades educativas la propuesta de que esta asignatura se imparta en todos los Programas Educativos.*

**PALABRAS CLAVES:** Ética, Responsabilidad Social, Transparencia, Asignatura, Optativa, Valores, Deontología, Estudiantes, Maestros, Universidad

## THE IMPORTANCE OF TEACHING ETHICS, SOCIAL ACCOUNTABILITY AND TRANSPARENCY BASED ON STUDENTS OPINION OF THE STATE UNIVERSITY OF SONORA (UES)

### ABSTRACT

*A survey was conducted to know the importance for students of the State University of Sonora the course of Ethics, Social Responsibility and Transparency, the results of the research indicates if the teaching techniques used are appropriate for the students to fulfill the objectives of the course. This study is descriptive (quantitative and qualitative), which allow us to demonstrate to our Academic authorities the necessity of implementing and teaching the course in all educational programs of the University.*

**JEL:** 123

**KEYWORDS:** Ethics, Social Responsibility, Transparency, Subject, Optional, Values, Deontology Students, Teachers, University

## INTRODUCCIÓN

La asignatura de ética, responsabilidad social y transparencia es una materia optativa que se ofrece en los diferentes Programas Educativos de la Universidad Estatal de Sonora, institución que está ubicada al Norte de la República Mexicana, con la cual tiene la finalidad de formar profesionistas de manera integral tanto académicamente como humano y social. Actualmente vivimos en una sociedad muy compleja y acelerada, en donde el estudiante al incorporarse a su preparación universitaria llega con una serie de valores dispersos;

motivo por el cual es menester del docente conducir a nuestros estudiantes a adquirir valores éticos para su vida personal, familiar y social. El programa y temario de la asignatura de ética, responsabilidad social y transparencia se tomó del documento elaborado por la Secretaría de Educación Pública (SEP), la Secretaría de la Función Pública y de la Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES), para profesores y estudiantes de educación superior, teniendo como objetivo a través del análisis de métodos de caso fomentar la reflexión crítica de los estudiantes para que con sus nuevos conocimientos lo apliquen en su vida diaria.

En este estudio se pretende encontrar la importancia de la ética y la inserción de los estudiantes al área laboral; así como, la de relacionarse con su entorno profesional, ha permitido preguntarnos qué tan significativos son los valores tradicionales y el surgimiento de otros que permita poner atención en la ética como una asignatura en el plan de estudios, porque no solo es esencial en nuestra vida personal sino en nuestras vida profesional; es decir desarrollar una deontología profesional. La ética debe de ser tomada en cuenta desde el seno familiar que es la primera socialización del ser humano, posteriormente al insertarse en el ámbito académico a través de las instituciones educativas, cómo es el de la Universidad, a quien compete dar la orientación debida, tanto académica como socialmente responsable a los estudiantes. Debido a que los egresados en el campo profesional, obedecerán códigos de conducta hacia el exterior, poniendo en práctica los conocimientos adquiridos y los valores éticos en su desenvolvimiento.

La ética, concatena de manera indisoluble a los diferentes programas educativos y a la universidad, motivo por el cual la asignatura de ética se incorporó en los programas educativos de las universidades a nivel nacional; porque permite, darle al estudiantes criterios de análisis en el aprendizaje de esta asignatura, para que al insertarse al área laboral no carezcan de códigos de conducta. Lo anterior, permite entender que el añadir este tipo de asignaturas en la currícula no solo en México, sino en algunos países, donde se le ha dado la importancia debida a la ética, como una asignatura En el caso de la Universidad Estatal de Sonora, los estudiantes han respondido positivamente a la impartición de esta disciplina, a pesar de que forma parte de la oferta de las asignatura optativas, lo que demuestra el interés del estudiante por adquirir conocimiento no solo relacionado con las competencias profesionales, sino actitudinal que deben de adquirir como parte su formación académica, para estar preparados para los desafíos del mercado profesional, que exige personas con conocimientos teóricos y prácticos; pero sobretodo con responsabilidad ética y social.

La esencia de esta aportación, es analizar si el aprendizaje de esta asignatura debe continuar como materia optativa, donde la enseñanza de sus contenidos éticos se impartan solo a los estudiantes que la solicitan, partiendo de las siguientes acotaciones: Porque desean tener una formación ética o deontología profesional, o bien, por ser un materia optativa, se convierte en una alternativa para alcanzar los créditos para concluir la carrera profesional; se inscriben sin saber a ciencia cierta que verán en el transcurso del semestre y durante las clases, identifican la importante para su formación. Sin embargo, no todos los estudiantes les interesan, y ni siquiera se enteran del contenido de la misma. En cambio, Si fuera una asignatura de carácter obligatorio, se podría alinear a las competencias profesionales de cada programa educativo, de acuerdo a los aspectos sociales, laborales, legales y sobre todo éticos en cada una de las carreras; es decir, teoría y la práctica enfocadas al perfil académico.

## REVISION LITERARIA

La Ética (del griego *ethika*, término que proviene de *ethos*, cuyo significado era 'comportamiento', "carácter" o incluso 'costumbre', como sabemos es la parte de la Filosofía que estudia los principios o pautas de la conducta humana. (Savater, F. 2002). También menciona que la ética es una actitud una reflexión individual sobre la libertad propia en relación con la libertad de los demás y con la libertad social en que nos movemos. *"La Ética es una ciencia práctica y normativa que estudia racionalmente la bondad y maldad de los actos humanos"*. Por lo tanto la ética

como disciplina filosófica surge por la necesidad de solucionar las preguntas sobre el bien y el mal. (Savater, F. 2002). En lo que se refiere a la responsabilidad social, históricamente no se tiene una fecha determinada pero hay literatura del siglo XIX que dan testimonio, así mismo con la creación de la Organización de las Naciones Unidas y de los Derechos humanos fueron un parte aguas para tener una conciencia social. En la Universidad Estatal de Sonora, se incorpora la asignatura de Ética, Responsabilidad Social y Transparencia por recomendación de la Secretaria de Educación Pública (SEP), la Secretaria de la Función Pública y de la Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES), ya que nuestra institución es miembro de la ANUIES, y sabedores de la importancia que tiene para los estudiantes este paso tan trascendental, decidió incorporar esta asignatura como parte de sus currículos en sus programas educativos.

Analizar y determinar si la enseñanza de la asignatura de Ética, Responsabilidad Social y Transparencia y tener una Deontología Profesional en la Universidad ha sido viable como una asignatura optativa como existe en algunos Programas Educativos hasta el momento, o bien saber si debemos incorporarlos en todos los PE de la Universidad y ver su repercusión en los ámbitos académicos, social y profesional. En el aspecto académico, varios autores han discutido la importancia de que los estudiantes deben de tener una ética profesional al egresar de sus programas educativos, ya que señalan que es de suma importancia la articulación que existe entre la enseñanza de la asignatura de ética, y el ejercicio profesional. El no impartir este tipo de formación en el estudiante hace que carezcan de una ética profesional y las universidades si deben de poner más énfasis en este foco rojo, ya que el egresado que no curse este tipo de asignaturas aprende de forma dispersa y el énfasis es de acuerdo a su ética individual. Por lo anterior, el egresado debe de contar con un perfil profesional que contenga a parte de los conocimientos dependiendo de su Programa Educativo (PE), las habilidades, destrezas y capacidades que se formen en su devenir académico, motivo por el cual, debe de tener las competencias transversales personales.

En lo referente al ámbito social, y tomando en cuenta a la sociedad globalizada y de comunicación, y los cambios tan vertiginosos que se presentan, no solo en nuestro país, sino a nivel mundial, nos conduce de manera determinante como profesionistas a adoptar una multiculturalidad, que nos da como resultado la necesidad de adaptación a una nueva sociedad de tolerancia, la cual exige a los profesionales tener una ética profesional. Y en lo que corresponde al entorno profesional nos encontramos que con la pluralidad y la diversidad de perfiles académicos en las universidades, no solo nacional sino internacional, se ha dado una evolución en la profesión, ya que no solo importa el aspecto técnico académico sino que también se debe de tener una formación completa integrando a la ética como parte importante de la curricula.

Aquí entra “la Deontología Profesional en la cual supone una normativa no jurídica complementaria a la ley para el correcto ejercicio profesional. Anne Kupiec define la necesidad de un código deontológico para la profesión, el cual aunque no tiene valor jurídico, constituye un complemento interesante para su interpretación y un elemento suplementario de acciones para las asociaciones profesionales. Es decir, la Deontología proporciona modos de actuar que ayudan a cumplir la ley, cubren el vacío legal que todavía existe en algunos de los campos de nuestro ejercicio profesional, o entran en conflicto cuando la ley no es justa”. (Kupiec, A.1999). La ética como asignatura en los planes de estudio en nuestra universidad, se ha venido impartiendo con el nombre de Ética, Responsabilidad Social y Transparencia, la cual se ha dado de diferentes formas, dependiendo en primera instancia del Programa Educativo, también de acuerdo a nuestra cultura e idiosincrasia. Es decir, que los objetivos, filosofía y características de cada programa educativo, la propuesta de cada maestro es aunque siguiendo una secuencia didáctica, el perfil de docente tiene mucho peso, pero en general son los Programas Educativos (PE) quienes determinan el enfoque que se le quiera dar, en nuestra Universidad es optativa con seis créditos.

Pérez Pulido, señala que en Canadá por ejemplo, “en las universidades se imparten los contenidos éticos de forma optativa durante un semestre, se analizan contenidos políticos, culturales y por supuesto éticos.

En Estados Unidos de Norteamérica, en algunos estados si se analiza de igual manera que en Canadá de manera optativa contando con tres o cuatro créditos, con contenidos teóricos y aplicados. En América Latina al igual que en Estados Unidos de Norteamérica, la asignatura de Ética aparece de forma específica aunque en la mayoría de los países se da de forma obligatoria con seis créditos, y no para determinada acentuación, es en forma general para todos los programas académicos. En la República Mexicana algunas Universidades ofrecen la asignatura de Ética dentro de la Deontología Profesional, y en algunas es obligatoria y en otras es optativa y generalmente cuenta con seis créditos al igual que en universidades de América Latina”. (Pérez, 2004)

Así mismo Pérez pulido, señala que otros países como Dinamarca la enseñanza de la ética se desarrolla en relación con los aspectos sociales en ciertas asignaturas como sociología, políticas culturales, entre otras. En cambio en Francia es obligatoria con tres créditos. Y en España algunas universidades imparten esta asignatura de acuerdo a sus programas educativos. Solo cuatro universidades de España imparten ética y deontología profesional de forma específica, es decir, que no significa que sus contenidos son dispersos, generalmente es optativa y cuenta con seis créditos. La estructura del programa de estas asignaturas contempla una parte teórica y otra de ética aplicada. (Pérez, 2004)

## **METODOLOGIA**

En toda Universidad es esencial elevar la calidad de la educación, motivo por el cual es de suma importancia formar estudiantes integrales. Por lo anterior, sabedores de que no solo lo académico es lo importante, sino que también la enseñanza de ética y valores enriquecen la preparación de los futuros profesionista para poder insertarlos en el área laboral de una forma adecuada, y esta aportación nos dio resultados de la opinión obtenida de primera mano de los estudiantes encuestados para obtener información que nos diera elementos para mejorar la formación integral antes mencionada. Así mismo, con este análisis se pretende hacer énfasis que aún con el desarrollo científico y tecnológico la ética, los valores, la moral, etc., son parte sustantiva de la formación de los estudiantes.

Esta investigación y su interpretación en el universo de los estudiantes con una muestra de 50 estudiantes de la UES desglosados de la siguiente manera: Licenciados en Entrenamiento Deportivo 1, Licenciados en Comercio Internacional 4, Licenciados en Nutrición Humana 5, Ingenieros Ambiental Industrial 4, Ingeniero en Geociencias 6, Licenciados en Ecología 6, y Licenciados en Administración de Empresas Turísticas 24. La elección de realizar este estudio es por el impacto y relevancia que ha tenido no solo en nuestra Universidad sino a nivel mundial. La Metodología utilizada en esta investigación fue descriptiva (cualitativa – cuantitativa), es decir, cualitativa según lo expresa Gunter L. Huber citando a Miles y Huberman (2003), una investigación cualitativa se da cuando el investigador está en contacto con el campo o las situaciones que se desean investigar en ámbitos cotidianos, ya que estos reflejan los entornos a estudiar, proporcionando una explicación a la problemática analizada. Y cuantitativa porque para llegar a una aproximación a la problemática, es necesario generar estadísticas mediante herramientas como las encuestas, la entrevista, etc., y así ubicar las opiniones vertidas de manera directa en este caso los estudiantes, para después procesarlas y obtener una interpretación final.

## **RESULTADOS**

La aplicación de las encuestas y su análisis se realizaron durante el semestre 2013-2, en su entorno académico, ya que aparte de éste contexto, son importantes las condiciones económicas, sociales y culturales que conforman su vida diaria y el desarrollo de sus habilidades cognitivas. Los alumnos entrevistados son alumnos de los semestres quinto, sexto, séptimo y octavo a una población de 50 estudiantes, de siete Programas Educativos arriba mencionados, donde el 24% correspondió a alumnos de Lic. En Administración de Empresas Turísticas (LAET), el 6% a Ingeniero en Geociencias (IG) y

Licenciado en Ecología (LE), el 5% a Ingenieros Ambientales Industriales (IAI), el 4% a Licenciados en Nutrición Humana (LNH) y Licenciados en Comercio Internacional (LCI) y 1% a Licenciados en Entrenamiento Deportivo (LED). Una de las preguntas realizadas fue si ha cursado la asignatura de ética, responsabilidad social y transparencia, o ética profesional dentro del plan de estudios de su Programa Educativos (PE), manifestando afirmativamente los programas educativos de IAI, LCI y LAET, con el 20%, 15% y 15% respectivamente; mientras el resto respondieron negativamente. Los PE contestaron afirmativo, se les ofrece en su curricula la materia como optativa, a diferencia en IAI, la tienen como ética ambiental. Asimismo, los que respondieron que no, el 28% son alumnos de LAET, el 7% LE y 7% IG, 5% LNH y 1% IAI, 1% LED y 1% LCI, esto se debe a que no se ha ofrecido el sistema a la hora de inscribirse, por ser una asignatura optativa, que se oferta generalmente entre el sexto y octavo semestre.

Ante la pregunta, los maestros los alientan a reflexionar y a debatir sobre aspectos éticos, los estudiantes de LAET fueron los que respondieron que si en un 24%, con un 18%; LED 9% y los de menor porcentaje fueron LCI y LNH con un 4% y 5% respectivamente; a pesar de que todas las profesiones deben de tener esta competencia declarativas y actitudinales sobre los aspectos éticos y valores y es responsabilidad del docente encaminar a los estudiantes en estos temas.

Otra pregunta medular fue, dónde consideraban el lugar idóneo para aprender o conocer lo que es la ética, de las 50 encuestas contestaron 36 alumnos del total de los PE contestó: en casa y en el aula, 9 contestó que en su Casa, 4 que en Aula y 1 en Otros. La pregunta de que si les gustaría que la asignatura de Ética, Responsabilidad Social y Transparencia se: a). Impartiera en el primer semestre, b). En el último semestre como optativa, c). Que se quitara de la currícula, y d). Otros. De los encuestados 24 opinaron que se impartiera en el primer semestre, 10 en el último semestre como optativa, y 1 que se quitara de la currícula y 1 en otros. Como podemos inferir con este resultado es que los estudiantes universitarios saben la importancia de la asignatura como parte de su formación integran que les garantizar enfrentar los retos de la vida diaria. En lo que se refiere a valores, de las 50 encuestas realizadas a los siete programas educativos al cuestionarles si consideran que no es función de la universidad enseñar valores a sus alumnos, 19 estuvieron en desacuerdo en donde el número mayor de encuestas (12) fueron de LAET, y el menor fue IG. Asimismo, estuvieron muy de acuerdo en que no es competencia de la universidad enseñar valores seis estudiantes de LAET, quienes hicieron este comentario y sólo tres estudiantes estuvieron indecisos al contestar esta pregunta. Aquí hay que considerar que los alumnos de LAET representa el 48% de las encuestas, el 12% LE, otro 12% IG, el 10% IAI, 8% LCI y también 8% LNH, y sólo el 2% en LED.

Figura1: Universo de Estudiantes Encuestados

Fuente: Elaboración propias (2014)

En la Pregunta si la universidad sólo se debe de remitir a enseñar valores profesionales, 15 estudiantes contestaron muy de acuerdo que equivale el 30%, 22% indecisos, 20% muy de acuerdo, 16% en desacuerdo y 12% muy en desacuerdo; de este último porcentaje se encuentran estudiantes de IG y LAET, resaltan que la universidad sólo debe de abocarse a lo académico.

Figura 2: la Universidad, Sólo Debe Enseñar Valores Profesionales

Fuente: Elaboración propias (2014)

Para este cuestionamiento, no es función de la Universidad ni de los docentes influir en la escala de valores profesionales, 26% contestaron estar muy desacuerdo y 26% en desacuerdo, y sólo 12 estudiantes que equivale al 16% y el 8% respectivamente dijeron estar de acuerdo y muy de acuerdo que ni la Universidad ni los docentes deben de influir en la escala de valores profesionales, que es de competencia personal. Y el 24% estuvieron indecisos. Nos percatamos que son los estudiantes de ingenierías quienes consideran que estos temas tan importantes en su formación profesional no deben impartirse en el aula.

La respuesta en relación a los valores personales y la responsabilidad universitaria y del docente, 23, estudiantes, es decir 27%, estuvieron muy de acuerdo, 24% de acuerdo, que cada persona tiene sus propios valores y no le corresponde cuestionarlos ni a los docentes ni a la universidad, 11 que es el 25% estuvieron indecisos en contestar esta pregunta y 11 estudiantes en donde 13% contestaron estar muy en desacuerdo y 11% en desacuerdo. Aquí observamos a los estudiantes encuestados que no permiten tratar este tipo de temas y que piensan que no les serviría de nada ponerlos en práctica.

Otro cuestionamiento importante, fue si el Profesorado tiene la obligación de transmitir a sus estudiantes los principios éticos de la profesión para que se esté formando, 33 estudiantes estuvieron muy de acuerdo que equivale al 66% que si se debe de enseñar principios éticos profesionales, de éstos LAET fue el PE con un porcentaje alto al contestar. El 2% y 14% estuvieron muy en desacuerdo y en desacuerdo respectivamente, y sólo 2 alumnos estuvieron indecisos siendo uno de LNH y uno de IAI, el 4%. En lo que se refiere a la enseñanza de los valores, 21 estudiantes 43% opinaron que no es peligroso enseñar valores porque se dice que se puede caer en adoctrinamiento, sólo 7 estudiantes los cuales equivalen al 14% consideraron que si es peligroso y 12 estudiantes es decir, el 25% estuvieron indecisos. Sin embargo, de los 50 estudiantes encuestados, 25 que equivale al 50% (24% muy en desacuerdo y 26% en desacuerdo) de los estudiantes consideraron que si es competencia de los docentes enseñar valores éticos a los alumnos, mientras 17 estudiantes, es decir el 34% (24% de acuerdo y 10% muy de acuerdo) comentaron que los docentes no deben intervenir, y 8 estudiantes el 16% estuvieron indecisos.

Que los valores profesionales nada tiene que ver con las competencias éticas, El 70% de la muestra (38% muy en desacuerdo, y 32% en desacuerdo) comentaron que las competencias profesionales nada tienen que ver con las competencias éticas, y 12 estudiantes o sea el 24% (14% de acuerdo y 10% muy de acuerdo) dijeron que si tiene que ver con las competencias éticas de los estudiantes y el 6% estuvieron indecisos. Al cuestionarles, si es responsabilidad de los profesores formar buenos ciudadanos, el 28% opinaron estar de acuerdo, así como el 22% muy de acuerdo, que el 22% estuvieron indecisos y 14 estudiantes 10% muy en desacuerdo y 18 en desacuerdo. Por lo que cabe agregar, que si es importante que los docentes contribuyan

a la formación de buenos profesionales ya que éstos serán buenos ciudadanos y en los diferentes roles de su vida. Una asignatura sobre ética profesional es necesaria en todos los Programas Educativos o carreras profesionales, fue otra de las preguntas hechas a los estudiantes, en donde 32% estuvieron muy de acuerdo, y otro 32% de acuerdo, en cambio 16 alumnos con un 32% (22% muy en desacuerdo y 10% en desacuerdo) estuvieron en desacuerdo y el 4% indecisos con los diferentes perfiles académicos y la universidad deben estar articulados con el quehacer de la Ética, motivo por el cual ofrecer esta asignatura a nuestros estudiantes ha venido coadyuvando a que nuestros egresados paulatinamente enriquezcan su formación para desenvolverse en diferentes entornos.

Figura 3: Una Asignatura Sobre Ética Profesional Es Necesaria En Todos los Programas Académicos O Carreras Profesionales

Fuente: Elaboración propia (2014)

En el mismo tenor, 33 estudiantes con 44% muy en desacuerdo y 22% en desacuerdo contestaron que una asignatura sobre ética profesional, sólo es necesario en las carreras profesionales sociales y humanísticas, no para los programas educativos técnicos o de ingeniería, 10 estudiantes con un 20% no supieron que contestar y sólo 7 estudiantes con un 8% estuvieron de acuerdo y el 6% muy de acuerdo. Podemos observar que el desconocimiento y la desinformación hace que los estudiantes tengan este tipo de opiniones, ya que es de suma importancia y necesario formar profesionales conscientes, con valores éticos y morales que refuercen su conducta profesional.

Figura 4: la Asignatura Sobre Ética Profesional Sólo Es Necesaria En las Carreras Profesionales O Programas Educativos Sociales y Humanos, No En las Técnicas E Ingenierías

Fuente: Elaboración propia (2014)

No es recomendable una asignatura sobre ética profesional o ética, responsabilidad social y transparencia, a esta pregunta 37 estudiantes equivalentes a 46% opinaron estar en desacuerdo y el 28% muy en desacuerdo, solo 5 estudiantes con un 10% (4% y 6%) estuvieron de acuerdo que no es recomendable y 8 estudiantes con un 16% resultaron indecisos. Si bien es cierto cada Programa Educativo tiene diferentes

puntos de vista como vemos en sus respuestas, pero es menester que nuestra universidad exista una verdadera coordinación entre los Programas Educativos y que la enseñanza de la Ética se incorpore para todos y no de forma diferente en lo que se refiere a sus contenidos temáticos en los Planes de Estudio de los PE que se oferta. El componente ético profesional debe impregnar a todas las asignaturas, no concentrarse únicamente a una materia, 26 estudiantes con un 28% contestaron estar muy de acuerdo y 24% de acuerdo que todas las disciplinas tengan deontología profesional, en cambio 8 estudiantes con un 12 y 4% de los entrevistados manifestaron su desacuerdo siendo del área de ingeniería, 16 alumnos correspondiéndoles un 32% estuvieron indecisos. El objetivo de la impartición de la asignatura es guiar a los estudiantes a que se conduzcan con responsabilidad no sólo en su vida personal, familiar y por ende en su área de trabajo, motivo por el cual los conocimientos que se integren a su formación académica, obtengan reforzadores teóricos para que sean aplicados en su vida diaria.

## CONCLUSIÓN

En la Universidad Estatal de Sonora, se fomenta el apoyo solidario hacia nuestros semejantes, por lo que el objetivo de la materia de Ética, Responsabilidad Social y Transparencia, es que los estudiantes se reconozcan en primer lugar como seres éticos, y adquieran información sobre su entorno, centrando su atención y reflexión en las tendencias de cambio acelerado que se ha venido dando, incidiendo en todos los ámbitos de la vida. Y el propósito es que desarrollen una visión reflexiva y crítica sobre la sociedad y a la vez adquieran conciencia de su responsabilidad como ciudadanos y futuros profesionistas. Por tal motivo, Nuestros estudiantes, desde sus hogares han adquirido valores que sus familias han fomentado y reforzado, y con éste tipo de asignaturas permite enriquecer esa acción ética.

La ética y la inserción de los estudiantes al área laboral y relacionarse con su entorno profesional, nos permitió cuestionarnos el grado de importancia de los valores ya tradicionales y el preguntarnos qué tan relevantes son y el surgimiento de otros que permita poner atención en la ética como una materia en el plan de estudios de esta universidad, como lo han hecho otras, porque no solo es fundamental en nuestra vida personal sino en nuestras vida profesional, es decir desarrollar esa deontología profesional tan trascendente en todo individuo. La inquietud de saber la opinión de los estudiantes sobre esta asignatura fue que tanto la conocían por ser una materia optativa, y en segundo nació al analizar la secuencia didáctica, ya que sabemos que es el corazón de la didáctica, el aquí y el ahora, el momento de la verdad del éxito o el fracaso del proceso de enseñanza aprendizaje.

Por lo anterior, en este trabajo y con las encuestas realizadas, se concluyó que la asignatura de Ética, Responsabilidad Social y Transparencia tiene varias líneas de acción y por lo tanto sugerencias, pero el principal resultado es que se debe de impartirse en todos los Programas Educativos de la Universidad. Finalmente, podemos decir, que lo esencial de la asignatura es la moral en la conducta humana, en todos los entornos en que se desenvuelvan los estudiantes como la sociedad, política, convivencia diaria, así como también su sentido de pertenencia como parte del desarrollo del país, podrán enfatizar las repercusiones de la acción ética individual en la conformación de una sociedad responsable. Como sugerencia podríamos citar que, es vital incursionar con ésta asignatura en los primeros semestres, y proponer sea hasta en los últimos semestres la impartición de la asignatura de ética profesional, para encaminar a nuestros egresados ya que se insertarán al área laboral. Que nuestra Universidad siga implementando mejoras en los Planes de Estudio que promuevan los valores éticos para que al egresar los estudiantes de todos los Programas Educativos pongan en alto a nuestra institución por sus fortalezas y credibilidad profesional. Otra de las propuestas es que si no se incorpora como asignatura obligatoria, se conserve como optativa pero para todos los Programas Educativos con 6 créditos.

## **CENTROS COMERCIALES EN CARTAGENA DE INDIAS – COLOMBIA: EMOCIONES GENERADAS EN LOS JÓVENES UN ANALISIS DE CLUSTER**

Emperatriz Londoño Aldana, Universidad de Cartagena

Maria Eugenia Navas Rios, Universidad de Cartagena

Rafael Eduardo Ramirez Ortiz, Universidad de Cartagena

Karen Julie Gomez Estrada, Universidad de Cartagena

### **RESUMEN**

*El recorrido realizado por los clientes en un ambiente comercial se ha convertido en un paseo que les permite experimentar emociones diversas tanto positivas como negativas. De acuerdo con Machielt y Eroglu (2000) éstas se encuentran referidas a alegría, agrado, euforia, preocupación, frustración o enfado. Dichas emociones influyen tanto positiva como negativamente en el comportamiento del consumidor, afectando en consecuencia, las ventas y la imagen de la empresa comercial. Dado que la masa crítica de visitantes y compradores en los centros comerciales se encuentra concentrada en personas menores de 35 años, en el presente trabajo se muestra la tipología de los jóvenes que visitan dichos centros comerciales en función de las emociones que estas generan en ellos, mediante la realización de un clusteranalysis, previos los correspondientes análisis bivariados y un análisis factorial de correspondencias – AFC-, con la utilización del algoritmo de Howard Harris. Se aplicó un formulario estructurado a una muestra de 250 personas con edades entre 18 y 22 años con preguntas categóricas uni y mutirrespuesta y mixta con utilización de una escala de Likert con valoración de cinco puntos para medir grados de acuerdo/desacuerdo; su validez luego de la aplicación del coeficiente Alpha de Cronbach.*

**PALABRAS CLAVE:** Centro Comercial, Emociones, Ambiente, Consumidor, Visitante

## **SHOPPING MALLS IN CARTAGENA DE INDIAS - COLOMBIA: EMOTIONS GENERATED IN YOUNG PEOPLE. CLUSTER ANALISYS**

### **ABSTRACT**

*The journey undertaken by clients in a commercial environment has become a promenade that allows them to experience various emotions both positive and negative. According to Machielt and Eroglu (2000) they are related with joy, pleasure, euphoria, concern, frustration or anger. These emotions influence the behavior of consumers, therefore affecting sales and the image of the trading company both positive and negative. Given that the critical mass of visitors and shoppers in the malls is concentrated in people under 35 years of age, the present work characterize the type of young people visiting such shopping centers on the basis of the emotions that these generates in them, by carrying out an analysis cluster, previous corresponding bivariate analyses and a factorial analysis of correspondences - AFC -, with the use of the Howard Harris algorithm. It was applied to sample of 250 people with ages between 18 and 22 an estructured formulary with unique or multiple or mixed answers with use of a Likert scale with valuation of five points to measure the agree or disagree degree; validated with the application of the alpha coefficient of Cronbach.*

**KEYWORDS:** Mall, Emotions, Environment, Consumers, Visitors

## METODOLOGIA

La investigación empírica de orden descriptivo se ha realizado en la ciudad de Cartagena de Indias; se optó por el método transversal de encuestas, dirigidas a una muestra de 220 jóvenes de ambos sexos. Dicha muestra se distribuyó en forma no proporcional en los cinco principales centros comerciales de Cartagena. La información se recogió en cada centro comercial durante la estancia de cada encuestado en éste y así además de la información suministrada se pudo observar sus reacciones emocionales *in situ*. La muestra se encuentra integrada por 37.2% hombres y 62.8%. De ellos la mayoría (67,6%) se encuentran entre 18 y 22 años e igualmente estudiantes (79,6%) y solteros (89,2%). Se aplicó un formulario estructurado con objetivo encubierto con preguntas categóricas uni y multirespuesta y mixtas; para estas últimas se utilizó una escala de Likert con valoración de uno a cinco puntos para medir grados de acuerdo/ desacuerdo en lo referente a la percepción y las emociones; la validez fue comprobada con el coeficiente Alpha de Cronbach(Peterson, 1994): 0,84. Para el tratamiento de los datos se utilizó el software Dyane 4: diseño y análisis de encuestas de Miguel Santasmases Mestre; fueron realizadas tabulaciones simples y cruzadas con aplicación de las pruebas F de Snedecor según el caso. Para establecer asociaciones entre variables múltiples se hizo un análisis factorial de correspondencias –AFC-; posteriormente se llevó a cabo un análisis de cluster para la agrupación de jóvenes según las emociones manifestadas.

### Grupos Homogéneos

#### Según las Emociones y Sensaciones Positivas Generadas Por los Centros Comerciales

*Grupo 1: Los Sociales. 69 Personas:* Este es el segundo grupo con mayor número de personas. Destaca lo importante que son los eventos del centro comercial, encontrarse rodeados de personas y ser tratados de buena forma por el personal del centro comercial, reconocidos por estas características como usuarios que gustan compartir eventos y espacios que impliquen socializar. Las anteriores condiciones ambientales son inductoras en las emociones positivas de los usuarios del centro comercial que pertenecen al grupo denominado “sociales”, al generarles euforia, Alegría y placer.

*Grupo 2: Los Divertidos. 58 Personas:* Es el tercer grupo con mayor número de personas. Buscan espacios de distracción que les genere alegrías y les brinde espacios de esparcimiento en el centro comercial, apasionados por los juegos y por la buena música, sin embargo también demuestran poco gusto o indiferencia por los eventos grandes que realizan los centros comerciales, estas personas prefieren pasar un buen rato jugando o en alguna actividad que ellos lleven a cabo, no en espacios donde sean terceros o espectadores. Las anteriores condiciones ambientales son inductoras en las emociones positivas de los usuarios del centro comercial que pertenecen al grupo denominado “divertidos”, al generarles diversión, alegría y excitación.

*Grupo 3: Insociales. 70 Personas:* Es el grupo más grande. Poco les interesa la música, la amabilidad y atención del personal del centro comercial, además de encontrarse en un lugar muy concurrido, principalmente por los dos últimos factores se observa indiferencia hacia eventos o espacios dirigidos a socializar, razón por la que se les llamo insociales. Las anteriores condiciones ambientales no resultan inductoras en las emociones de los usuarios de los centros comerciales que hacen parte de este grupo, a razón de la indiferencia que ellos presentan.

*GRUPO 4: LOS CHAPERONES. 53 personas:* Es el grupo con menos personas que lo conforman. Muestran ser en algunos aspectos ser lo opuesto a los “divertidos”, a estos usuarios no les interesan los espacios de distracción que les genere alegrías y esparcimiento, tampoco buscan diversión con juegos,

aunque se mantienen las demás variables sin destacar, su asistencia al centro comercial no está vinculada a ningún gusto en particular, para ellos simplemente no hay prioridades en espacios de distracción y le dan muy poca importancia a los juegos y la diversión.

### Según las Emociones y Sensaciones Negativas Generadas Por los Centros Comerciales

*GRUPO 1: Los INCONFORMES. 76 personas:* Demuestran según sus gustos que les molesta o preocupa: la distribución y confusión de los parqueaderos, las personas que visitan los centros comerciales, la ubicación del centro comercial, las aglomeraciones de personas, los espacios reducidos en el centro, así como el accesibilidad del mismo. En conclusión son personas que buscan practicidad y sobre todo seguridad en un centro comercial, siendo así muy selectivas cuando visita alguno de ellos. Los anteriores factores ambientales son inductores de emociones negativas en los usuarios del centro comercial que pertenecen al grupo en mención, puesto que las percepciones de los jóvenes respecto a los elementos ambientales que ofrecen los centros, no cumplen con sus expectativas y deseos, generando en ellos sensaciones o emociones como: desorientación, preocupación, temor, enfado y agobio

*Grupo 2: Los Conformistas. 45 Personas:* No les interesa o no prestan atención a las posibles incomodidades, molestias o peligros que puedan encontrar en los centros, a tal punto que no influye de ninguna forma en su decisión al elegir un centro comercial.

Las anteriores condiciones ambientales a pesar de ser inductoras en las emociones negativas de los usuarios del centro comercial, no tiene impacto negativo sobre el comportamiento del consumidor que conforma este grupo, ya que acepta las condiciones del ambiente sin problema alguno.

*Grupo 3: Los Fáciles: 62 personas.* Buscan centros comerciales cercanos a su ubicación y a los cuales poco o nada les importa que personas visitan el centro comercial en el que se encuentran. Las anteriores condiciones ambientales inducen a una emoción negativa en los usuarios del centro comercial que pertenecen al grupo denominado “fáciles”, al hacerles sentir *agobio* a los jóvenes por la distancia a la que se encuentra el centro comercial de sus hogares.

*Grupo 4: Indiferentes: 67 personas* No se incomodan con nada en gran medida. Para este grupo, aspectos ambientales como el parking, las personas que visitan el centro, la ubicación, aglomeración, espacios reducidos, accesibilidad entre otros; no son inductores en las emociones negativas (desorientación, preocupación, agobio, temor, enfado, entre otros.) de los usuarios del centro comercial.

## CONCLUSIONES

Los centros comerciales en Cartagena de Indias se encuentran en etapa de expansión. Cada uno de ellos busca tener características diferenciadoras que les permita captar y mantener el entusiasmo de la visita y por ende la compra de su mercado objetivo. Dentro de este mercado se encuentran los jóvenes que representan el mayor porcentaje de visitantes; éstos buscan placer y diversión propios de su edad, aspectos estrechamente relacionados con las emociones que puedan generarles, los productos, servicios y todos aquellos factores ambientales que puedan encontrar en los centros comerciales y que llenen o superen sus expectativas. La diferenciación de los centros comerciales es una herramienta estratégica que hace que el joven construya una idea significativa y coherente de esos sitios, al punto que llega a sentirse identificado con ellos. Igualmente tienen en contra el hecho de la sensibilidad de estas personas a concurrir al centro que se encuentre de moda.

### RESUMEN

*En la actualidad localizar al talento humano se ha convertido en una “cacería furtiva” de individuos con experiencia, pericia y sentido común, para cubrir puestos clave en las organizaciones: Tras identificarlos, les ofrecen altos sueldos. Y mejores prestaciones. Este fenómeno, antes, anti-ético, ahora se acepta por las organizaciones. Pero cuando les sucede, se sienten traicionadas. Y experimentan dos sensaciones; Emocionalmente: el directivo que no es capaz de conseguir la lealtad de un empleado, suele considerarlo como una afrenta personal y/o racional; El costo, el talento es difícil detectarlo y localizar y muy caro de reemplazar. Esta investigación presenta las estrategias para tratar de incidir o prevenirlo, muchas empresas han acudido a programas tradicionales de retención del personal (diseño de curvas de carrera a largo plazo, fuertes inversiones en formación y desarrollo, más retribución). Pero la competencia es muy intensa como para que estos esfuerzos tengan éxito. Por otra parte existe la estrategia por el mercado laboral de que retener al capital humano a través de la lealtad, a largo plazo no es posible, ni deseable. La rotación de personal aunando a la baja tasa de retención del capital humano que se está viviendo es consecuencia de la apertura de los mercados, esta es una realidad en el mundo, no en una organización. Quién determinará el movimiento de sus empleados, con oportunidades atractivas y “reclutadores” agresivos es el entorno mismo de la internacionalización de los mercados. La situación es distinta en los países desarrollados una de las consecuencias de la baja natalidad es que las empresas ya no luchan sólo por captar el talento, sino también por retener al más calificado. Las organizaciones que no se han percatado de estos cambios corren un serio peligro. El reto hoy para las organizaciones es retener al talento humano que es lo que genera ideas que son únicas de la empresa, logrando establecer la diferencia entre una empresa y otra. Por eso, el talento es actualmente la variable más competitiva de las organizaciones y la incógnita a resolver.*

**PALABAS CLAVES:** Retención, Rotación, Talento Y Organizaciones

## HUMAN TALENT RETENTION IN ORGANIZATIONS

### ABSTRACT

*Today locate human talent has become a "poaching" of people with experience, expertise and common sense, to cover key positions in organizations: After identifying them, offer them higher salaries. And better features. This phenomenon before, unethical, now accepted by organizations. But when this happen to, they feel betrayed. And experience two sensations; Emotionally: the manager is not able to get the loyalty of an employee, widely viewed as a personal affront and other, rational; The cost, talent is difficult to detect and locate and very expensive to replace.*

*This research presents strategies to try to influence or prevent. Many companies have turned up to traditional staff retention programs (design long-term career curves, investing heavily in training and development, pay more). But the competition is very intense to these efforts be succeed.*

*In the other hand there is a labor market strategy that retains human capital through loyalty, long term it is not possible or desirable. The turnover staff join to the down human capital retention, that is being experience, is the result of the market opening; this is a fact in the world, not only in an organization. The market internationalization is which will determinate their employees movement whit attractive opportunities and aggressive head hunters. The situation is different in developed countries. A consequence of the low birth rate is that companies no longer struggle just to attract talent, but also to retain the most qualified . Organizations that are unaware of these changes are at serious risk. The challenge for organizations today is retain the human talent that is generating ideas that are unique to the company , making the difference between one company and other . So the talents is currently the most competitive variable organizations and solves the mystery.*

## INTRODUCCION

Recién iniciado el siglo XXI, en un entorno que cambia muy deprisa, la lucha por el talento es el factor clave en cualquier economía. Y es que los conocimientos de las personas que requiere el mercado del trabajo y que la empresa necesita, los poseen pocas personas, sin olvidar que en las empresas más vanguardistas, es donde se requiere un talento más sofisticado, por lo tanto la oferta está cada vez más lejos de satisfacer la demanda. Atraer y retener profesionales constituye actualmente el principal desafío empresarial. Para ello se requiere un cultura diferente, que contemple aspectos sustentados en el desarrollo humano, tales como, calidad de vida en el trabajo que se basa en el principio de que los trabajadores constituyen capital humano que debe ser desarrollado y no solo utilizado, para alcanzar las metas de la organización.

Un ambiente de trabajo humanizado produce calidad de vida en el trabajo, el que debe estar centrado en un clima organizacional en donde las personas se sientan integradas y parte de la organización, deben sentirse cómodas, los factores que la determinan son los físicos y psicológicos, como lo es un lugar de trabajo confortable, donde puedan encontrar todas las herramientas para desarrollar de una manera eficiente su labor, el lugar debe ser iluminado, limpio y ubicado de acuerdo a su fin específico; otro aspecto es el psicológico, en donde se mencionan las relaciones entre el empleado y sus compañeros de trabajo, también la forma como el superior se refiere a sus colaboradores, cómo los trata, los incentiva y los promueve, todos estos factores y otros que afectan el desarrollo del individuo dentro de la organización conforman el clima organizacional la forma de externarlos y proyectarlos a los integrantes de una organizacional da como resultado una ambiente favorable o bien desfavorable.

Al existir un ambiente agradable y confortable para las personas, éstas comienzan a buscar nuevas formas de desarrollar su trabajo, tratan además de innovar y ser creativos para hacer que su labor se convierta en algo interesante y que puedan desde allí, aportar diferentes ideas dentro de la organización. Si el individuo se siente motivado para realizar sus tareas, ya sea por estar a gusto en su grupo de trabajo, o estar bien remunerado (lo cual no es factor vital para estar realizado laboralmente), puede tener resultados sorprendentes en el desarrollo de nuevas ideas, en la solución creativa de problemas que se presentan dentro de la organización y en la realización personal.

Todo lo antes expuesto significa un reto profesional para el directivo que debe presentar alternativas responsables para retener y dirigir al capital humano, con un estilo orientado a la persona otorgando reconocimiento a sus aportes, progresión y crecimiento profesional presentando oportunidades diversas de aprendizaje entre otros.

Retener al personal, considera diseñar las políticas y puesto conforme a la nueva sociedad del conocimiento y las tecnologías de la información que se encuentran en constante cambio, el puesto deberá representar un reto que le permita crear conocimiento, innovar en la forma de trabajar aplicar reingeniería con el fin de integrar las necesidades humanas en los procesos y experiencias.

El diseño de los puestos debe considerar la administración participativa, la delegación de autoridad y el liderazgo entre los integrantes del grupo de trabajo. En la sociedad del saber, el gran desafío es aprender a aprender. Y desaprender, en si romper paradigmas y presentar diferentes formas de resolver problemas al hacer la tarea. El cambio es una constante con una velocidad cada vez más rápida, aunque el cambio es una oportunidad de detectar si nuestros procesos y medios están a la par de las necesidades individuales y de la organización, hay una tendencia a la resistencia de modificar nuestra forma de actuar. Lo haremos en la medida que encontremos un beneficio inmediato y definido, es parte de la naturaleza del ser humano mantener el estado de confort aunque este no sea el optimo o conveniente para las personas con las que nos relacionamos en las organizaciones. La competitividad de las empresas se debe, en gran medida, a la calidad de sus recursos humanos, de forma que las competencias de los empleados y su continuo desarrollo, en el que la formación ocupa el puesto primordial, se convierte en un factor permanente de ventajas competitivas. Es por eso que debemos ver a las empresas como un conjunto de seres humano y a los empleados como una inversión, para esto es necesario cambiar la forma de medir el talento de las personas, se requiere reinventar los entornos inmediatos y lo necesitamos con urgencia. Los nuevos hábitos de vida, frecuentemente cambiantes y adaptables, cada vez tienen menos relación con los modelos de organización actuales.

El problema, es que los cambios son discontinuos y no responden a patrones y que además los pequeños cambios esos que las organizaciones no facilitan son los que significan enormes diferencias en la vida de las personas. Es necesario desarrollar métodos y fórmulas de éxito y realizar movimientos de valor de igual manera para el personal, con la visión de desarrollar procesos de cambio en las organizaciones y generar una conciencia de lealtad al personal que los esté desarrollando para garantizar una estancia dentro de la organización para que el personal pueda desarrollar de una manera activa los conocimientos que este adquiera en su capacitación y desarrollo. Retener el talento, “es lograr comprometer a los empleados en proyectos que ellos mismos han formulado, para que los dirijan”. Esto permitirá mantenerlos en la empresa y convertirlos en emprendedores corporativos. “Hacer sentir a los empleados parte de organización significa crear compromiso en ellos”.

## REVISION DE LA LITERATURA

El talento, factor clave de la economía empresarial Entendiendo por talento las potencialidades que poseen los jóvenes al momento de incursionar en el mercado laboral, a desempeñando habilidades, exteriorizando y aplicando conocimientos bajo una gama de valores al momento de realizar la tarea, encontramos que muchos de ellos experimentan diferentes grados de insatisfacción en el empleo actual ya sea por el clima organizacional y por el ambiente. Lo que se traduce en los altos índices de rotación de personal que presentan las estadísticas del IMSS, del ISSSTE.etc. Un dato preocupante es la antigüedad registrada entre los jóvenes de 24 a 30 que permanecen en su empleo de 6 a 8 meses. Por lo tanto el Talento humano hay que entenderlo como la capacidad para obtener resultados notables con el ejercicio de la inteligencia” (Moliner, 2004: p. 1172). Por lo tanto el talento humano ya sea innato o adquirido siempre estará en mejora continua con el apoyo de la enseñanza de la academia a través de sus técnicas didácticas y pedagógicas desarrollando en los jóvenes la inquietud de aprender a aprender. Para la empresa atraer y retener profesionales constituye actualmente el principal desafío empresarial. Pero este no es un tema reciente. Las organizaciones deben crear ventajas competitivas permanentes y una de las ventajas que puede crear y que es difícilmente "copiable" por los competidores, es contar con un talento humano con diferenciación

para lograr la satisfacción del cliente en un entorno cambiante y continuo. (Porter, 1993) – “*Establece que la educación podría vincularse con la competitividad de la empresa y sus fases de desarrollo, a través de tres aspectos: La educación como un factor no separado de la producción. La educación como el criterio de aprender – haciendo. Y La educación como relación mutua entre tecnología, capital humano y condiciones económicas. Su crecimiento y actualización constante permitirá generar valor como lo presume* (Drucker 2004). “La empresa moderna es una organización humana y social”, La organización logra que todos sus integrantes generen valor y tienen éxito en la medida que sus colaboradores sean productivos transformándola en una organización competitiva capaz de lograr sus objetivos y resultados deseados que benefician a la sociedad a través del ejercicio de las competencias aplicadas para resolver problemas y tomar decisiones. Tomando como competencia la laboral encontramos una gran variación en la definición del término por lo que contemplamos laboral la emitida por la Organización Internacional del Trabajo (OIT, 1997) es la capacidad real demostrada de realizar una tarea.

La competencia considera un conjunto integrado de capacidades, Habilidades, Destrezas y Actitudes. Que deben estar siempre vinculadas con el trabajo concreto y el desempeño en un puesto determinado. Las competencias que practican las empresas constituyen el valor agregado la razón de ser, y su diferenciación hace que los clientes tengan preferencias por productos, proveedores, marcas y servicios etc. Tales competencias se fundamentan en conocimientos y comportamientos que facilitan su materialización, las competencias generan valor por medio del conocimiento generado, de habilidades adoptadas, actitudes y prácticas de los empleados.

Capital intelectual, capital humano y social. ¿Qué relación existe en ellos? Talento humano, encuentra calificativos como “capital intangible, capital intelectual” todos para referir a la creación de valor en las empresas lo que es planteado por estudiosos de las ciencias económicas tales como: Galbraith en 1969 (citado por Salazar, De Castro, y López, 2006) quien lo define “...como un proceso de creación de valor y un activo al mismo tiempo; , Rodríguez y Salmador, en 1999 (citado por Barreiro y otros, 2003:61) lo puntualizan “conjunto de activos de una sociedad a pesar de no estar reflejados en los estados contables tradicionales, generan o generarán valor para la empresa en el futuro”; lo antes expuesto presume el apoyo de estas ciencias en busca de que el talento humano como intangible sea tangible al punto de poder reflejarlo en la contabilidad de una empresa, esto sin duda alguna impactaría para la valuación del capital humano y daría peso a la frase tan sonada de que el personal es el capital más valioso de la organización.

El capital intelectual implica contar con conocimientos estructurados que sirven para un fin bien determinado y es conocimiento valioso pues la empresa a través de él, es capaz de generar valor elevando sus utilidades lo anterior coincidente con Salazar, De Castro y López (2006:4). El capital intangible es la combinación de otros activos y bienes que construyen al capital intelectual (propiedad intelectual, valor intelectual aprendizaje y creatividad), capital humano (salud salario vivienda, experiencia, calidad laboral del trabajo y seguridad) y capital social”, (negociación, productividad, emprendimiento y valores éticos) por tal motivo relacionamos al Talento Humano con el Capital Intangible, que según Bernárdez (2008:194) “La acumulación de capital intangible, humano y social es a la vez una característica y una causa del desarrollo económico”. para la sociedad y para la economía de una organización está directamente relacionado con la capacidad que tienen sus miembros para identificar oportunidades, problemas y necesidades, en hallar soluciones viables desde todos los puntos de vista convencionales (técnico, comercial, económico, financiero, humano, administrativo, sensorial, social, etc.), y en llevar a cabo con eficiencia las soluciones a los proyectos más eficaces. Todo este proceso está basado en cualidades humanas como la creatividad (VARELA, R. 1991)

Aprovechar el potencial de los trabajadores, la experiencia y el don de hacer que las cosas cambien positivamente; pero, siempre que se alcancen altos niveles de satisfacción laboral. De otra manera, el trabajador dedicará, gran parte de su tiempo, a evidenciar y criticar destructivamente a la organización y

procederá a la búsqueda de mejores horizontes. Las empresas -inmersas en un mercado competitivo- donde esto ocurra estarán destinadas al fracaso y extinción. Es imposible que una empresa con trabajadores insatisfechos pueda competir con otra donde la situación sea diametralmente distinta. Y no tanto porque en aquella tengan un bajo desempeño, sino porque en esta, además de un buen desempeño, existe la producción de nuevas ideas; que son base en la generación de ventajas competitivas.

Las Estrategias a considerar para retener al talento humano en las organizaciones: -Comunicación efectiva y asertiva como signo de madurez. Un empleado se sentirá integrado en la medida en que advierta que sus ideas, opiniones y sugerencias son tomadas en consideración, aseguran los especialistas. De este modo, sentirá que tiene un lugar que le pertenece logrando fidelidad a la organización y que puede colaborar activamente en el cumplimiento de las metas. “Si el empleado se siente valorado, tomado en cuenta y miembro activo de esta familia, desarrollará una lealtad natural hacia la misma” -Desarrollo de las capacidades de los empleados talentosos que requieren de constantes retos para progresar. Por ello, la educación a través de la capacitaciones y actualización del conocimiento en diversas áreas son las instancias precisas que ellos requieren para sentir que evolucionan y crecen profesionalmente. En ese sentido, afirman los expertos, toda persona que busque mantenerse y crecer dentro de una compañía, deberá contar con capacitación constante para sentir que es un elemento difícil de reponer. Gestionar para el talento humano planes de crecimiento y desarrollo a corto, mediano y largo plazo considerando sus expectativas y sus necesidades económico sociales por los directivos de personal para este segmento lo que permitirá asegurar el contar con los mejores talentos y su permanencia en la organización mostrando una marca llevando tatuado un eslogan y la fidelidad para la empresa en la que se desempeñen.

## METODOLOGIA

El Contexto en donde se realiza la investigación es el estado de Coahuila, el que ofrece una infraestructura moderna y de primera clase. Además Coahuila tiene una fuerte plataforma educativa, ofreciendo mano de obra talentosa y educada su población estimada para el 2013 es de 1,350,000 habitantes por el Instituto de geografía e informática (INEGI, 2010). 2.4% del total nacional; de los cuales el 48.0% corresponde a hombres y mujeres 52% distribuida en 4,211 localidades. La tasa de crecimiento promedio anual de la población fue del 1.7 por ciento. El Producto Interno Bruto (PIB) del estado ascendió a 427 mil millones de pesos en 2011, con lo que aportó 3.1% al PIB nacional. Principalmente por actividades del sector secundario, entre las que se encuentran la industria manufacturera, que aportó el 49% al PIB estatal en 2011. por encima de estados como Sonora y Tamaulipas. Aporta más que los estados de Nayarit, Querétaro y Zacatecas juntos.

Metodología de la investigación, el método de estudio abordado en esta primer etapa es documental solamente se realizó un sondeo en 15 empresas para determinar pertinencia del instrumento misma que se presenta en este foro como primera etapa y contempla la continuidad del estudio de campo para una segunda etapa esperando presentar resultados para fin de año los resultados finales aplicando el instrumento en 72 empresas a 200 empleados de pequeñas y medianas empresas de del estado de Coahuila. El diseño de la investigación es no experimental y de corte transversal. Es decir no se manipulan de forma intencional las variables independientes, y solo se observa los fenómenos tal y como se presentan en su contexto natural.

El diseño de muestra es no probabilística a través del muestreo dirigido. El instrumentos de medición es propio y contó con el expertos de la Administración de Recursos humanos de la región,. La investigación presenta resultados de 4 variables: Valuación del desempeño y retroalimentación; Significación de la tarea; Variedad de habilidades y Autonomía. Los resultados que se presentan en esta primer etapa contempla las estrategias más viables a seguir una vez revisada la literatura para contribuir a resolver el problema de investigación que es el alto índices de rotación presente en las distintas organizaciones, así como generar las estrategias para retener y atraer al talento humano determinando cuáles son los factores de mayor

motivación en los empleados. Y que los hace ser fieles a la marca.

## RESULTADOS

Se presentan los resultados encontrados de los factores de mayor impacto y lo que representan en la satisfacción del empleado y lo que los mantiene interesados en continuar laborando en la empresa actual. Se encontró como primer factor es la medición de su desempeño y su retroalimentación, conocer como el trabajo realizado contribuía con las metas de la organización esto resulto ser el primer motivador, observe en la figura No. 1 como de 25 empleados solo el 28% de ellas gozaban del proceso de retroalimentación.

Figura No 1: Valuacion de la Tarea y Retroalimentacion

Otro elemento estudiado fue el entorno interno de la organización en el que se desarrollan el trabajo y encontramos que solo 11 empleados consideran que el ambiente en el que se realiza el trabajo los estimula y lo hace pertenecer a la organización. Asociando el ambiente interno al clima organizacional que es la percepción individual del entorno donde se desarrolla el trabajo el ambiente en donde el empleado pueda externar sus ideas y ser creativo dándole fidelidad para con la empresa. Observe como en la figura 2 solo 11 empleados sienten pertenencia por la empresa y el 56 % no siente que el ambiente laboral los motiva para seguir colaborando en la empresa.

Figura No. 2: Significacion de la Tarea

La dimensión centrada en el trabajo tiende a impulsar la motivación, la satisfacción y la calidad del trabajo y a reducir la salida de la empresa. Por lo tanto en la figura No. 3 observe como impacta la tarea realizada a los empleados.

Figura No. 3: Variedad de Habilidades

Los datos encontrados en la figura No. 3 muestran como el trabajo desafiante que le exige al empleado aplicar conocimientos habilidades y actitudes los motiva e impacta, el 84% siente atracción por la tarea realizada tal y como lo presentaban Hackman y Oldham que identificaban cinco dimensiones para que el empleado no se margine y pierda motivación. Para concluir tenemos la última variable “Percepción que tienes como empleados” A cerca de que les es más fácil a la empresa retener el talento o contratar nuevas opciones y encontramos que el 93% de los empleados consideran que es mas facil contratar nuevas opciones.

Figura No 4: Autonomía

*El grado en que el puesto brinda libertad, independencia discreción sustanciales al empleado en la programación de su trabajo y en los métodos a utilizar. Fuente: Elaboración propia 2013*

Como puede observarse en la figura No. 4 el empleado solo goza de cierta autonomía ello limita su creatividad e innovación al momento de realizar la tarea en las organizaciones. Solo un 40% de los empleados encuestados goza de autonomía porcentaje muy bajo si estamos tratando de motivar al empleado y fomentar en ellos la creatividad y el desarrollar innovaciones en los proceso y en las tareas administrativas de la organización por lo tanto estos empleados son los que se consideran proactivos y reactivos el 60% por cuestiones de políticas, metodologías y sistemas ya estructurados.

## CONCLUSIONES

Se llega a la conclusión de que el 93 % de las profesionistas jóvenes que dejan su lugar de trabajo lo hacen en busca de un clima organizacional con calidad de vida laboral y un ambiente que les permita ser creativos

e innovar en la forma como realizan la tarea. Refiriéndonos al segmento de joven profesionistas de entre 24 y 30 años, los que no permanecen en las organizaciones más de 8 meses, debido a que no se sienten realizados, recompensados y el trabajo que realizan no presenta ningún reto ocasionando una movilidad muy alta en busca de mejores alternativas “Fuga de talentos” buscando el reconocimiento, la remuneración y compensación por el trabajo valorado.

La retención del personal en las organizaciones proviene de un mal proceso de reclutamiento que no considera el perfil del candidato y sus aspiraciones para empatarlo con el puesto a cubrir. Y eso hace que los profesionistas desfilen por las empresas en busca de su verdadera posición. La rotación y la retención van de la mano mientras que la rotación está en función del proceso de reclutamiento, selección y la retención está en función de la capacidad de los gerentes para crear los incentivos y un trabajo desafiante que los motive y arrigue en su centro de trabajo. La retención del talento humano en las organizaciones será el detonante de la competitividad de las empresas exitosas y dependerá de la gestión de los directivos de personal para aplicar las estrategias asegurando el crecimiento del empleado el reconocimiento a su desempeño respetando su autonomía liderazgo e inteligencia creativa e innovadora para realizar su tarea. De lo contrario continuara la fuga de cerebros en busca de nuevas oportunidades y sustentadas en la actualidad solo por la remuneración.

#### Futuras Líneas de Investigación

Los resultados de esta investigación abren la oportunidad para trabajar en nuevas líneas de investigación, como serían la medición del capital intelectual para buscar hacer tangible lo intangible que presenta el trabajo intelectual y poderlo retribuir conforme el desempeño.

#### **AGRADECIMIENTOS**

Agradecemos sinceramente a los árbitros del Comité Científico y a los editores del IBFR por sus comentarios para mejorar los resultados de la presente investigación.

## RESUMEN

*Así como se reconoce que el núcleo familiar es la célula básica de la sociedad, de igual manera se ha asumido que las empresas familiares son las que sostienen las bases de las diferentes economías alrededor del mundo. Diferentes estudios muestran que más del 90% de los empleos son producidos por este tipo de organizaciones, además de producir también, en algunos casos, el 70% del PIB mundial. La situación no es nada diferente en Latinoamérica y más específicamente en México. Sin embargo, según diversas investigaciones, solamente 3 de cada 10 empresas familiares llegan a la segunda generación, y solo 1 de cada 3 a la tercera. Un elemento clave en la mortalidad de este tipo de organizaciones es el proceso de sucesión, el cual pocas veces se planea de manera profesional dentro de estas compañías. Por todo esto, este artículo busca establecer un marco teórico de referencia acerca de los Procesos de Sucesión Intergeneracional en las Empresas Familiares, ensalzar la importancia que tiene su debida planificación y profesionalización, así como identificar las razones por las cuáles una herramienta como el Succession Scorecard puede ser un valioso instrumento para que estos procesos se puedan llevar a cabo con mayor eficacia en nuestro país.*

**PALABRAS CLAVE:** Empresa Familiar, Sucesión, Planificación, Succession Scorecard.

## ANALYSIS OF SUCCESSION PROCESS IN FAMILY BUSINESSES IN MEXICO: ITS EVALUATION TOOL: SUCCESSION SCORECARD

### ABSTRACT

*As well as it's recognized that the familiar nucleus is the basic cell of society, in a similar way it has assumed that the familiar businesses are those who maintain the bases of the different economies around the world. Different studies show that more than 90% of the employments are produced by this type of organizations, besides also producing in some cases, 70% of the world GDP. The nothing at all different situation in Latinoamerica and more specifically in Mexico. However, according to diverse investigations, only 3 of each 10 family businesses reach to the second generation, and just 1 of each 3 to the third. A key element in mortality of this type of organizations it's the process of succession, which a few times it has planned in a professional way inside these companies. For all this, this article searches for establish a theoretical field of reference about the Family Business Transgenerational Succession Processes, exalting the importance that has their proper planning as well as identifying the reasons of why, a tool as the Succession Scorecard, can be a valuable instrument in order that these processes can be carried out with major efficacy in our country.*

## INTRODUCCIÓN

El núcleo familiar es una de las primeras instituciones desarrolladas por el hombre, misma que ha venido transformándose desde los primeros momentos que tuvo conciencia. Dicha entidad se ha venido adecuando a las diferentes necesidades de tipo social, político y económico en las distintas etapas de la evolución de la sociedad. Así pues, la familia ha desempeñado un rol fundamental en el desarrollo de las sociedades, esto lo demuestra el hecho de su prevalencia en múltiples culturas y pueblos establecidos en todas las regiones del mundo, así como el registro en los libros de historia de lazos de consanguineidad clasificados como padres, hermanos, hijos, etc. demostrando así la aceptación de esta organización en todas las épocas.

De esta manera, la familia se ha convertido en un tema de análisis para explicar los procesos de industrialización y crecimiento económico en las sociedades; en esta perspectiva, se pueden observar diversas posiciones sobre la importancia de la familia en la promoción del crecimiento económico y en la creación de empresas. Es así como una buena parte de la totalidad de los intentos económicos empiezan con la figura de una empresa familiar. Es decir que, la célula básica de unidad social (familia), sirve también como célula básica de organización económica (empresa). Las empresas familiares que iniciaban en los hogares campesinos fue un hecho casi omnipresente, tanto en las sociedades agrícolas preindustriales como en las más modernas, y formó la columna vertebral de la primera revolución industrial, tanto en Inglaterra como en los Estados Unidos. En economías maduras, las nuevas empresas también comienzan en general como empresas familiares que con el tiempo van adoptando diversas formas en la estructura de propiedad, algunas se desplazan a formas impersonales, mientras otras mantienen el componente familiar en su propiedad y control.

Si cuando se llega el tiempo óptimo para la sucesión, el fundador o dirigente no acepta su salida, esto puede llevar al estancamiento o desmotivación de los directivos y además a que la empresa no se adapte a los cambios que se suceden con el tiempo, de manera que puede llegar a desaparecer.

De acuerdo con lo anterior, los procesos de sucesión se convierten en la piedra angular de la supervivencia de las empresas familiares a través de las diferentes generaciones de una familia empresaria. Del poder resolver estos eventos con eficacia depende, en buena medida, su éxito en la trascendencia de los años. Por lo que es necesario que se incremente el número y profundidad de las investigaciones con respecto a este tipo de empresas, y sobre todo, abordando el tema central de la sucesión.

El presente artículo, en base a una metodología exploratoria de análisis documental, busca crear un marco referencial del estado que guarda el estudio de las empresas familiares en nuestro país y dar pie a algunas iniciativas que se han creado en el extranjero, sobre todo en Europa con respecto a la profesionalización de dichos procesos, específicamente adentrándonos en la herramienta conocida como "Succession Scorecard", con el objetivo de facilitar a los empresarios familiares el poder llevar a cabo los "cambios de estafeta" de manera segura, práctica y funcional.

## REVISIÓN DE LITERATURA

Las empresas familiares ha sido una alternativa no sólo de empleo, sino de aprovechamiento de las estructuras familiares para generar emprendimientos productivos asociados a factores de confianza, que facilitan las actividades de financiamiento e inversión orientados a generar procesos empresariales. Sin embargo, en las empresas familiares dependiendo de cada momento histórico, se produce una segregación de la propiedad, la cual recaerá en una u otra persona o en grupos de personas, en este caso vinculados por relaciones de consanguineidad.

Para comprender en primera instancia el significado del término empresa familiar se puede observar en la Tabla 1 las definiciones de diferentes autores.

Tabla 1. Concentrado conceptual del término empresa familiar en la investigación en México. Fuente: Soto Maciel, 2011.

Autor	Concepto
Hoshino (2004)	Grupo de empresas poseídas y controladas por familias o por los descendientes del fundador.
De la Garza (2008)	Empresa donde los sistemas familia y empresa se entrelazan y en la que la participación de sus miembros en la dirección, en la toma de decisiones y en el capital está plenamente establecida, y existe el deseo de continuidad dentro del seno familiar.
Belausteguigoitia (2007)	Empresa que mayoritariamente se encuentra poseída o controlada por una familia y en la cual dos o más miembros de esta se encuentran de alguna forma relacionados con el negocio (Rosenblatt, 1990).
Castrillo (2007)	Empresa cuya propiedad —o al menos una parte significativa— esté concentrada en una sola persona o en un número reducido de personas ligadas por un vínculo de sangre que intervienen de forma importante en la gestión de la empresa y en la voluntad de que este estado de cosas perdure en el tiempo (Cuesta, 2000).
Navarrete (2008)	Empresa cuya propiedad está en manos de uno o más miembros de un grupo familiar y en consecuencia, su dirección y la sucesión estarán influenciadas por dicha familia.
Esparza (2009b)	Empresa donde más del 50% del capital es propiedad de la familia o grupo familiar, los puestos gerenciales o de dirección son ocupados al menos por un representante de esa familia y existe continuidad en el negocio (GEEF1 – FBN2).
Flores (2010)	Empresa que se identifica con al menos dos generaciones de la familia y donde ese vínculo lleva a una influencia en la compañía de los intereses y objetivos de la familia (Donnelley, 1964).
Suárez (2010)	Organización donde en un modelo tridimensional evolucionista se encuentra en la intersección de los ejes: familia, empresa y propiedad (Gersick, 1997).
Ramírez y Fonseca (2010)	Organización donde la familia posee todas las partes, los miembros familiares ocupan posiciones gerenciales y donde miembros de varias generaciones se

*Esta tabla muestra como el concepto de empresa familiar ha sido tratado por varios autores observándose coincidencias en todas ellas en que se reitera el control familiar, aunque algunas son más específicas al plantear el capital de propiedad familiar por encima del 50 % y la permanencia del control familiar en al menos dos generaciones.*

Se puede decir que desde el comienzo, las investigaciones en esta temática han realizado esfuerzos por ser reconocidas y aceptadas como un campo de estudio riguroso e independiente (Astrachan et al., 2002). De esta manera, se observa que en los campos de la Teoría Económica, la Organización de Empresas y la Historia Económica y Empresarial, se están realizando esfuerzos notables de renovación teórica en el estudio de las empresas familiares (Fernández Pérez, 2003).

Así pues, desde 1989 la disciplina entró en un proceso de desarrollo más intenso (Casillas y Acedo, 2007), sin embargo, aún se considera que se encuentra en un estado emergente, lo que se evidencia, por ejemplo, en la falta de consenso sobre el concepto de empresa familiar (Miller et al., 2007). La consolidación de la investigación sobre empresa familiar como disciplina científica depende de la comprensión del pasado y del análisis de la evolución de las contribuciones relacionadas con este campo. La descripción de los conceptos y de los temas tratados posibilita la identificación de posibles líneas futuras de investigación y de aspectos metodológicos que complementen, mejoren y avancen las actuales contribuciones.

En una investigación publicada en Junio de 2011 por (Benavides et al., 2011) sobre la "Evolución de la literatura sobre empresa familiar como disciplina científica" se estudió el estado, tendencias y potenciales líneas de investigación en dicha disciplina a través de la aplicación de indicadores y métodos bibliométricos. Con este propósito se analizaron todas las revistas que se han publicado sobre empresa familiar incluidas en las categorías de "business", "business finance" y "management" del Social Science Citation Index (SSCI) recogidas por el Institute for Scientific Information (ISI).

Se puede afirmar que la sucesión es una de las etapas más difíciles por las que debe atravesar la sociedad, porque no solo afecta a quien o quienes se les transfiere el mando y la propiedad, sino que también requiere

de un plan adecuado de retiro para el fundador o fundadores, acorde con la importancia que han tenido en la Compañía. Actualmente, muchas compañías forman muy lenta o caso contrario muy rápidamente a sus sucesores. En el caso de una formación rápida están preparados pero no acceden al cargo, llevándolos a aceptar otro tipo de posiciones en otras compañías y en el caso de una formación lenta las compañías se encuentran con líderes poco capacitados.

En México este sigue siendo un problema ya que no se encuentran sistematizados procedimientos y herramientas para apoyar a los empresarios en esta tarea de la sucesión, por lo que una vez que en esta revisión de literatura se abordaron los conceptos, modelos, así como los principales autores y fuentes de información en estas temáticas, se requiere profundizar de manera concreta acerca de la importancia de la Empresa Familiar y la Sucesión Generacional en sus expresiones particulares en México y una breve caracterización del “Succession Scorecard” como herramienta que se puede adaptar para su utilización en el entorno mexicano apoyando que estos procesos se realicen de una forma más efectiva para el beneficio de las empresas y la sociedad en su conjunto.

## METODOLOGÍA

El progreso de lo que conocemos como frontera del conocimiento está ligado de manera directa con los diferentes avances científicos y tecnológicos. Pero es solo que mediante el proceso de investigación documental que se puede iniciar el análisis de la información escrita sobre un determinado tema, con el objetivo de establecer relaciones, diferencias, etapas, posiciones o estado actual del arte con respecto al tópico que es el objeto de la investigación. Dicho estudio se debe caracterizar por el uso predominante de registros gráficos como fuentes fidedignas de información.

Así pues, según (Torres V., 1998) el propósito de la investigación documental es establecer un marco teórico conceptual para formar un cuerpo de ideas sobre el tema de investigación y encontrar soluciones a determinadas preguntas a través de la utilización de procedimientos documentales. Estos procedimientos han sido desarrollados con la intención de incrementar el grado de certeza de que la información reunida cumple con las condiciones de fiabilidad y objetividad documental.

A partir de estos criterios, los puntos que a continuación se enuncian, representan el itinerario a seguir que toda investigación documental debe llevar a cabo para cumplir con las normas ya mencionadas:

1. Elección y delimitación del tema.
2. Definición del Tema y determinación de subtemas.
3. Selección de información.
4. Organización de la información.
5. Redacción del informe.
6. Estructuración para su presentación.

Determinado lo anterior, el presente artículo ha seguido los pasos a seguir establecidos con el objetivo de llevar a cabo una investigación que abarque las características necesarias y completas que le permitan constituirse como una base teórica confiable e imparcial sobre los fenómenos de la empresa familiar, la sucesión empresarial en este tipo de organizaciones y algunas herramientas que faciliten dichos procesos. De igual forma se ha seguido con esta hoja de ruta en cuanto al estado actual del conocimiento que se refiere a estos temas en, por lo menos los últimos 10 años.

## RESULTADOS

Desde los años cincuenta y especialmente en la última década, la investigación sobre las empresas familiares ha alcanzado un desarrollo que se puede notar en el gran aumento de trabajos publicados,

abriéndose camino como campo de estudio en la Dirección de Empresas (Chrisman et al., 2008). A pesar de existir publicaciones previas, podemos afirmar que el primer artículo centrado en la dinámica de la empresa familiar en revistas indexadas, como lo es el Social Science Citation Index (SSCI) fue elaborado por (Trow, 1961) titulado "Executive succession in small companies" y publicado en la revista Administrative Science Quarterly. En 1962 se puede encontrar otra aportación en la revista Business History. A partir de esta fecha y en particular tras la fundación del Center for Family Business en Cleveland, Estados Unidos, por Léon y Katie Danco (Sharma et al., 2007), se inició el desarrollo de la investigación en empresa familiar como disciplina científica.

### La importancia de la Empresa Familiar y la Sucesión Generacional.

Se comenta que "la empresa familiar es la figura empresarial dominante en la estructura económica de la mayoría de los países occidentales; está ampliamente documentado entre los historiadores económicos que la rápida formación de nuevas empresas familiares proporcionó un dinamismo vital durante las fases iniciales de la modernización industrial de los países desarrollados". Braulio (Vivas, 2006). Todos los estudios señalan que las empresas familiares mexicanas son la columna vertebral de la economía y el principal generador de empleo. De acuerdo con el Instituto Nacional de Estadística y Geografía (INEGI) existen alrededor de 4.5 Millones de unidad empresariales en todo el país de las cuales el 99.8 son Pymes de las cuales generan el 52% del Producto Interno Bruto del país y alrededor del 72% del empleo. El 90% de estas pymes son familiares y generan 8 de cada diez empleos en el país.

Como ya se advirtió, las empresas familiares conforman principalmente las Pequeñas y Medianas empresas en nuestro país, y la Pyme es parte importante de economías mundiales de las cuales México es una de ellas, por lo que, el tema de la sucesión es una situación fundamental. Datos de la Secretaría de Economía indican que en 2012 el Gobierno Federal adquirió bienes y servicios por 94 mil millones de pesos en este sector Mipyme. En el estudio del consultor Kiyo Kajihara (2009) quien mediante el levantamiento de encuestas personales, cara a cara y tratando de entrevistar al Director General o Gerente General o, en su caso, al fundador de cada empresa, realizó 120 entrevistas entre empresas familiares, donde pudo concluir que:

1. En México, en el 85% de las empresas no se llevan a cabo procesos de sucesión.
2. El 80% de las empresas encuestadas tienen arriba del 80% de las acciones de la organización
3. El 21.43% de empresas que sí tienen una planeación para la sucesión, está conformado en su totalidad por empresas que ya han enfrentado, al menos, un proceso de sucesión o, en su caso hasta dos.
4. En las empresas que existe una planeación para la sucesión no todo está resuelto pues se detectó que en un 75% de los casos no se tiene claramente definido el o los sucesores, es decir, de las 31 empresas que sí cuentan con una planeación para la sucesión tan sólo 7 de ellas saben quién va a suceder la empresa. Y en estos siete casos todos los empresarios coincidieron en que el sucesor va a ser el primer hijo varón. A estos siete empresarios se les interrogó acerca de las razones por las cuales ellos creían que el primogénito iba a ser la persona más indicada para asumir el mando de la organización y una de las cuatro razones más frecuentes mencionada (4 de las 7 veces) fue porque era el primer hijo varón y no porque fuera el más capaz. (Kajikara, 2009)

Como se puede observar, este proceso no es solo pasar la batuta de la empresa. La sucesión representa una decisión familiar, empresarial y patrimonial, donde dicha decisión será juzgada por la familia, y los integrantes de la empresa que no son parte de la familia como accionistas y hasta los mismos trabajadores. El proceso de sucesión es un fenómeno muy complejo, en el cual participan una gran cantidad de actores y, el reto que implica pasar exitosamente la estafeta entre generaciones es enorme. En la medida que se realice de forma planeada y profesional, además de que los diversos implicados en este proceso lo enfrenten

con conciencia y sensibilidad, se aumentarán las posibilidades de lograr la continuidad de las empresas familiares en nuestro país.

Javier Llanos Riera (2012) comenta que el sucesor debe generar en los miembros de la familia las siguientes actitudes:

- a. Confianza Personal.
- b. Eficacia Profesional.
- c. Seguridad económica.
- d. Seguridad familiar.
- e. Equidad con los privilegios y compensaciones.
- f. Seguridad en la Solidaridad familiar.
- g. Prestigio Social.
- h. Accesibilidad amable y sincera.
- i. Transparencia informativa.
- j. Valores éticos. (Llanos, 2012)

Como consecuencia de todo esto, es necesario crear métodos de apoyo a la pyme familiar, para que planifiquen y profesionalicen sus procesos sucesorios, a través de la búsqueda de herramientas útiles para diagnosticar los procesos de sucesión e identificar qué áreas se deben fortalecer, así como una posible implementación de políticas públicas por parte de los gobiernos, asociaciones e instituciones, que ayuden a los Empresarios Familiares Mexicanos a planear de manera más profesional estos procesos de sucesión.

### El Succession Scorecard

Cómo ya se ha dicho existen diferentes instrumentos o guías que pueden ayudar a las empresas familiares a llevar a cabo su proceso de sucesión. Se han escrito una gran variedad de libros y artículos al respecto, sin embargo aquí se analizará una herramienta en particular, la cual ha tenido un éxito notable como instrumento de diagnóstico y apoyo a dichos procesos en la Unión Europea.

Dicha herramienta ha pasado ya por los filtros de confiabilidad (Alfa de Cronbach) y ha sido probada razonablemente, por lo cual ha sido utilizada para determinar el nivel de eficacia que guardan las empresas familiares con respecto a sus procesos de sucesión. Dicha herramienta es conocida como "Succession Scorecard" (Tablero de evaluación de la Sucesión). En el fichero en extenso se analiza y aplica, a partir de la identificación de los factores críticos de éxito.

## **CONCLUSIONES**

familiares aún no constituye una disciplina científica consolidada (Sharma, 2004; Bhalla, Henderson & Watkins, 2006). Sin embargo, a últimos años existe un creciente interés en este campo de estudio como así lo demuestra el aumento del número de artículos publicados en revistas de prestigio relacionadas con la dirección de empresas.

De igual manera, podemos asegurar que la sucesión de empresas familiares se caracteriza por el desplazamiento del poder y la influencia desde los fundadores hacia los sucesores, así como la existencia de un periodo de poder compartido entre ambos. Elaborar un plan de sucesión en este tipo de organizaciones no es fácil y requiere, entre otras cosas, de tiempo y esfuerzo, además, no existe un plan de sucesión estándar que se adapte a todas las empresas familiares. El "Succession Scorecard" es un instrumento valioso para diagnosticar el estado en que se encuentran los procesos de sucesión intergeneracional en las empresas familiares.

# LAS ACTITUDES HACIA LA INVESTIGACIÓN EN EL POSGRADO DE LA FECA-UJED

Ma. Concepción Rico Pérez, Universidad Juárez del Estado de Durango-México  
Norma Patricia Garrido García, Universidad Juárez del Estado de Durango-México  
Arturo Reveles Pérez, Universidad Juárez del Estado de Durango-México

## RESUMEN

*Este estudio estableció como objetivos medir las actitudes de los estudiantes hacia la investigación y conocer las barreras para ser investigador percibidas por los estudiantes de la División de Estudios de Posgrado de la Facultad de Economía, Contaduría y Administración de la UJED. Integraron la muestra estudiada 110 alumnos inscritos en la División de Estudios de Posgrado; se elaboró una Escala tipo Likert para medir la Actitud hacia la Investigación. Las dimensiones de la variable fueron: Conocimientos y habilidades para la investigación, Valoración de la investigación científica, Prestigio y éxito económico de los investigadores, El docente investigador como motivador de la investigación científica y La institución como promotor y proveedor de condiciones para el desarrollo de actividades de investigación. Se realizó el análisis discriminante y el cálculo del coeficiente Alfa de Cronbach de la escala. La actitud hacia la investigación de la mayoría de los estudiantes de la DEP (80%) fue Favorable. Sólo 4 estudiantes se ubican en la intensidad Muy favorable. Un poco más de la mitad respondieron afirmativamente a la pregunta de si le gustaría dedicarse a la investigación. Las razones por las que sí les gustaría ser investigador se refieren más a la valoración de la investigación científica, que a razones personales. Las razones por las que no les gustaría ser investigador se refieren a cuestiones personales y están formuladas en términos de carencias como falta de interés, falta de habilidades, falta de recursos y la creencia del escaso éxito económico de los investigadores. Todas estas razones fueron de índole personal y confirman la falta de información que fue manifestándose en el análisis descriptivo. Si la División de estudios desea fortalecer la cultura de investigación en los estudiantes, deberá diseñar estrategias para modificar actitudes empleando técnicas como propiciar el contacto y comunicación con investigadores, experiencias de investigación como auxiliar, análisis de reportes de investigación y discusiones en pequeño grupo, equipos de trabajo cooperativo, realización de conferencias, simposios, exposición de carteles, información del apoyo para la investigación y la formación de grupos extracurriculares.*

**PALABRAS CLAVE:** Actitudes Hacia La Investigación; Motivación Hacia La Investigación; Condiciones Institucionales Para Investigadores; Limitaciones Del Estudiante Para Realizar Estudios De Doctorado.

## ATTITUDES TOWARDS RESEARCH IN GRADUATE FECA-UJED

### ABSTRACT

*This study identified key objectives to measure student attitudes towards research and to identify barriers to researcher be perceived by students of the Division of Graduate Studies, Faculty of Economics, Accounting and Management UJED. The study sample was composed of 110 students enrolled in the Division of Graduate Studies; they developed a Likert scale to measure the attitude towards research. The dimensions of the variable were: Knowledge and skills for research, evaluation of scientific research, prestige and economic success of the researchers, the teacher researcher and motivator of scientific research and the institution as a developer and supplier of conditions for development. research activities. Discriminant analysis and calculation of Cronbach alpha coefficient of the scale was performed.*

*The attitude towards the investigation of most students DEP (80 %) was Pro . Only 4 students are placed in the current very favorable. Slightly more than half responded affirmatively to the question whether he would like to do research . The reasons why yes researcher would like to be more concerned with the assessment of that scientific research to personal reasons . The reasons why they would not like to be a researcher relate to personal issues and are formulated in terms of deficiencies as lack of interest , lack of skills, lack of resources and poor economic success belief of researchers. All these reasons were personal in nature and confirmed the lack of information that was manifested in the descriptive analysis . If the Division of Studies wishes to strengthen the research culture in students must design strategies to change attitudes using techniques such as foster contact and communication with researchers, research experiences as an auxiliary analysis, research reports, and discussions in small groups , teams cooperative work , holding conferences , symposia , poster exhibition , information support for research and training of extracurricular groups.*

## INTRODUCCIÓN

En nuestro país la administración es una ciencia relativamente nueva que se empezó a estudiar en universidades entrado el siglo XIX, sin embargo algunas carreras ya habían nacido en el seno de estas instituciones educativas de nivel superior.

En los años ochenta, se inicia en el país una política pública tendiente a las evaluaciones de las instituciones de educación superior (Montaño, 1999), que marcará de manera importante la evolución de los esfuerzos de investigación. Se crea el Programa Nacional de la Educación Superior 1984-1988 (PRONAES), y la Comisión Nacional para la Evaluación de la Educación Superior (CONAEVA).

De la revisión de los siguientes autores: Montaño (1999) Béjar y Hernández en 1996 , Hernández Vela (2001), Luthans, 2008, Blanco, Neligia y Alvarado (2005), Aldana y Joya (2011) Rojas, Méndez y Rodríguez (2012) Magaña, Vázquez y Aguilar (2013) quienes hicieron diferentes investigaciones sobre actitudes se realizó la presente investigación cuyos resultados aparecen en el capítulo correspondiente.

### II. Método

Muestra.- Integraron la muestra estudiada 110 alumnos inscritos en la División de Estudios de Posgrado de la FECA-UJED, quienes se encontraron en los salones de clases durante los días 13 y 14 de junio de 2013. La muestra representa más del 75% de la población.

Instrumento.- Se elaboró una Escala tipo Likert para medir la Actitud hacia la Investigación. Las dimensiones de la variable fueron:

Conocimientos y habilidades para la investigación. Dimensión medida a través de la opinión acerca de los conocimientos y habilidades necesarios para la investigación en su área y la opinión acerca del desarrollo de habilidades de pensamiento lógico y transferencia de dichas habilidades al análisis de los problemas de la práctica profesional y a la toma de decisiones)

Valoración de la investigación científica. Dimensión medida a través de la opinión acerca del valor de la ciencia y su impacto en la sociedad.

Prestigio y éxito económico de los investigadores. Dimensión medida a través de la percepción acerca del prestigio académico y social y del éxito económico de quienes se dedican a la investigación en general y en el área administrativa en particular.

El docente investigador como motivador de la investigación científica. Dimensión medida a través de la percepción del estudiante sobre el profesor de la DEP, como investigador que involucra a los estudiantes en las tareas de investigación y les comunica sus hallazgos y trabajos.

La DEP como promotor y proveedor de condiciones para el desarrollo de actividades de investigación. Dimensión medida a través de la percepción sobre la promoción y disposición de apoyos e infraestructura que brinda la DEP para la realización de actividades de investigación.

Para medir las dimensiones señaladas, se redactaron 59 ítems y se adaptaron 10 ítems de la Escala elaborada por Magaña, Vázquez y Aguilar (2013) con los que se integró la versión inicial de la escala, 45 con dirección positiva y 24 con dirección negativa. Los ítems se ordenaron de manera aleatoria en la escala. Ante cada ítem se presentaron cinco opciones de respuesta: Totalmente de Acuerdo, Acuerdo, No sé, Desacuerdo y Totalmente en Desacuerdo.

## RESULTADOS

Respondieron la Escala de Actitud hacia la Investigación 110 estudiantes de la División de Estudios de Posgrado de la FECA-UJED; 61% del género femenino y 45% masculino. El promedio de edad es de 29 años; teniendo 50 años el mayor y 22 el menor. El tiempo promedio de experiencia profesional es de 8 años.

Con respecto a la licenciatura cursada, el 34% corresponde a Contaduría Pública; un 23% corresponde a diversas Ingenierías, el 18% corresponde a la Licenciatura en Administración y el 14% a la Licenciatura en Enfermería. El resto se distribuye en licenciaturas como Arquitectura, Derecho, Economía, Química e Informática con porcentajes mínimos (de 1% a 3%).

La mayoría (90%) procede de instituciones públicas: un 64% realizó sus estudios en la UJED, un 23% en el Instituto Tecnológico de Durango y un 3% en universidades públicas de otros estados (UAG, UANL, UNAM); sólo un 6% realizó estudios de licenciatura en instituciones privadas (UAD, PROMEDAC, UGM, UNIVER). Un 4% no contestó.

Tabla 1 Actitudes hacia la investigación

Intensidad y dirección	Puntuación	Frecuencia	Porcentaje %
Muy favorable	4.2 – 5	4	4
Favorable	3.4 – 4.1	88	80
Neutra	2.6 – 3.3	18	16
desfavorable	1.8 – 2.5	0	0
Muy desfavorable	1 - 1.7	0	0
Puntuación promedio de la muestra: 3.7			

La actitud hacia la investigación de los estudiantes de la DEP se ubicó con el mayor porcentaje (80%) como Favorable, tal como puede apreciarse en la tabla 1. Sólo 4 estudiantes se ubican en la intensidad Muy favorable.

Es importante destacar que ninguno de los estudiantes se ubicó en la dirección negativa de la actitud, aunque un 16% tienen una actitud neutra o indecisa.

La hoja de respuestas incluyó la pregunta dicotómica ¿Le gustaría ser investigador? Con las alternativas SI - NO y ¿por qué?

Respondieron afirmativamente 68, mientras que 27 negativamente. Puede observarse que las razones por las que sí les gustaría ser investigador indican la valoración de la investigación científica, su contribución a la solución de problemas, el crecimiento personal y profesional de quienes se dedican a la investigación y porque resuelve necesidades personales como la curiosidad o el aumento en sus ingresos.

## CONCLUSIONES Y DISCUSIÓN

El instrumento diseñado la Escala para medir la Actitud hacia la Investigación resultó tener consistencia. La actitud de los estudiantes de la DEP hacia la investigación es favorable; destaca el hecho de que no hubo ningún estudiante que mostrara una actitud desfavorable, lo que es congruente con el hecho de que estén realizando estudios de posgrado.

Un poco más de la mitad respondieron afirmativamente a la pregunta de si le gustaría dedicarse a la investigación. Las razones por las que sí les gustaría ser investigador se refieren más a la valoración de la investigación científica, que a razones personales. Las razones por las que no les gustaría ser investigador se refieren a cuestiones personales y están formuladas en términos de carencias como falta de interés, falta de habilidades, falta de recursos y la creencia del escaso éxito económico de los investigadores. Todas estas razones fueron de índole personal y confirman la falta de información que fue manifestándose en el análisis descriptivo.

El 88% consideran que la investigación es importante para la vida profesional. Sin embargo, un porcentaje alto (49%) percibe a la investigación en Administración ajena a nuestra realidad. Esta opinión podría indicar tal vez el desconocimiento de la investigación que se realiza en México y concretamente en la Institución. Nuevamente hay que señalar que es necesaria la transmisión del conocimiento que se genera en la Institución, tal como fue planteado en la investigación realizada en 2010 por Hernández, Garrido y Reveles denominada “La Gestión del Conocimiento desde la Perspectiva de los Docentes” en donde se encontró que los docentes utilizan en mayor grado la comunicación formal, aunque también se realiza intercambio en los centros de reunión y los pasillos. Estaríamos de acuerdo en la conveniencia de realizar algunas acciones para favorecer la comunicación informando de las actividades, investigaciones e innovaciones que realizan los investigadores y los estudiantes de la institución y favorecer la creación de espacios comunes para fomentar la comunicación Informal.

La decisión de elegir una profesión tiene relación con el estatus social y éxito económico que percibe el joven estudiante, por lo que era importante explorar su opinión con relación a la investigación en el área Administrativa. Se encontró dispersión en la opinión que tienen los estudiantes acerca del éxito económico de quienes se dedican a la investigación. Opinan que los profesionistas de prestigio disminuirían sus ingresos si se dedicaran a la investigación. Es posible suponer que no tienen suficiente información acerca de lo que puede ganar un investigador, pero aún así suponen que sería inferior al de un profesionista exitoso. En este sentido habría que difundir los diversos programas de estímulo a los investigadores que ofrece el Gobierno Federal como son el Sistema Nacional de Investigadores (SNI), el Programa para el Mejoramiento del Profesorado (PROMEP), o el Programa de Estímulos al Desempeño del Personal Docente (ESDEPED).

La opinión de los estudiantes con respecto a la preparación de los docentes de la DEP para realizar investigación científica es desfavorable para un 21%, y llama la atención el que un 27% no lo saben. Tal vez en las materias que imparten los docentes no haya oportunidad de manifestar su formación o no la

tienen, por lo que tal vez se debe establecer una estrategia para fortalecer tanto la formación en investigación de los docentes como la manifestación de la misma. (Comunicación formal e informal)

La opinión está dividida con relación a si los profesores impulsan la investigación cuando usan sus propias investigaciones al impartir su asignatura. El 50% opina que sí lo hacen, pero llama la atención que la mitad no perciban este impulso. Tal vez el área de conocimiento en la que el estudiante recibió su formación de licenciatura le permite ser sensible a las muestras tanto de la formación del profesor para la investigación como del impulso que éste da a la investigación en su asignatura. Valdría la pena explorar esta posible relación.

Un 38% señalan que los maestros no propician la participación de los estudiantes en eventos y conferencias de investigación científica y un 12% dicen no saberlo, lo cual podría deberse a una deficiente comunicación. Con respecto a la promoción de proyectos de investigación por parte de los maestros hay opiniones divididas, un 49% dan una opinión favorable, pero dan una opinión desfavorable un 40%. Puede tener relación con la asignatura, la oportunidad de contar con conferencias en las diversas áreas, el tipo de maestría cursada, etc. También esta posible relación debe ser explorada para fortalecer aquellas áreas del Plan de Estudios que lo requieran.

Un 78% de los estudiantes opinaron que los maestros de la DEP les solicitan realizar investigaciones documentales. Lo que tal vez ellos no han conceptualizado como parte de la investigación científica. Habría que reconceptualizar la investigación documental. Es importante destacar el hecho de un 70% de los estudiantes de la DEP consideran que la elaboración de tesis es una opción excelente de titulación; tan sólo un 23% tienen una opinión contraria. Este resultado indica una excelente oportunidad para la investigación que se realiza en los cuerpos académicos, por lo que debe fortalecerse este enlace.

La mayoría (47%) desconoce si hay dificultad para obtener becas que apoyen la realización de estudios de doctorado en Administración, aunque es interesante que un 31% creen que no existe esa dificultad, tal vez cuentan con más información o consideran que sólo hay que realizar los trámites correspondientes. Sería recomendable que la DEP impulsara la difusión de las becas a las que puede tener acceso el estudiante y en lo posible establecer tutores que puedan orientar al estudiante al respecto.

Así mismo, la mayoría desconoce si la DEP promueve y provee de condiciones para el desarrollo de actividades de investigación: un alto porcentaje desconoce si existe el apoyo de la DEP para que los estudiantes realicen investigación; existe una opinión desfavorable acerca de la realización de eventos para vincular a los estudiantes con la investigación mediante la presentación de avances de tesis; la mayoría de los estudiantes no saben si en la DEP se cuenta con apoyos económicos, sin embargo, casi un 53% de los estudiantes consideran que la DEP cuenta con infraestructura como biblioteca y bases de datos para la investigación.

Si la División de estudios desea fortalecer la cultura de investigación deberá diseñar estrategias para modificar actitudes empleando técnicas variadas: contacto y comunicación con investigadores, experiencias de investigación como auxiliar, análisis de reportes de investigación y discusiones en pequeño grupo, equipos de trabajo cooperativo, realización de conferencias, simposios, exposición de carteles, información del apoyo para la investigación.

# CONTABILIDAD DE GESTIÓN COMO ESTRATEGIA DE DIFERENCIACIÓN EN MIPYMES RURALES

Lizzette Velasco Aulcy, UABC  
Seidi Iliana Pérez Chavira, UABC  
Luis Alberto Morales Zamorano, UABC

## RESUMEN

*Las Micro, Pequeñas y Medianas empresas representan el 90% del total de las empresas en México como lo indica el Censo Económico 2009 del Instituto Nacional de Estadística y Geografía (INEGI), ocupan 8 de cada 10 empleados, por lo que la atención a sus necesidades cobra nuestro especial interés. El presente estudio pretende ofrecer una alternativa en el mejoramiento del control administrativo mediante el establecimiento de un sistema de contabilidad de gestión visto como estrategia de diferenciación en las empresas atendidas. Al investigar el comportamiento que han tenido las micro y pequeñas empresas del Valle de San Quintín, en el Municipio de Ensenada, Baja California, encontramos que existe un área de oportunidad en la implantación de un sistema de contabilidad de gestión que propicie la creación de estrategias de diferenciación ante la globalización. Es de gran importancia para la actividad económica de la región el fomentar prácticas operacionales que faciliten un adecuado control administrativo que permita la reducción de los costos y gastos, encaminándose al establecimiento de estrategias de diferenciación por precios.*

## MANAGEMENT ACCOUNTING AS DIFFERENTIATION STRATEGY RURAL SMALL BUSINESS

### ABSTRACT

*The Micro, Small and Medium businesses represent 90 % of all businesses in Mexico as indicated by the Economic Census 2009, National Institute of Statistics and Geography (INEGI) took 8 out of 10 employees, so the attention to their needs is our special interest. The present study aims to provide an alternative in improving the administrative control through the establishment of a management accounting system seen as a strategy of differentiation in target companies. When investigating the behavior that have micro and small enterprises Valle de San Quintin, in the municipality of Ensenada, Baja California, found that there is an area of opportunity in the implementation of a management accounting system that encourages the development of strategies differentiation to globalization. It is of great importance for the economy of the region to promote business practices that facilitate an appropriate administrative control that allows the reduction of costs and expenses, heading to the establishment of price differentiation strategies.*

## INTRODUCCIÓN

En Baja California como en el resto del mundo las micro, pequeñas y medianas empresas representan más del 90% del total de empresas según el último Censo Económico del Instituto Nacional de Estadística y Geografía (INEGI) 2009, por lo que su estudio cobra cada día mayor importancia, pues estas empresas

generan el 72% de los empleos y aportan el 52% del Producto Interno Bruto. Como uno de los problemas reconocido por el gobierno de México en la página de la Secretaria de economía y en las asociaciones empresariales es el inadecuado e incluso inexistente sistema de Contabilidad y las Finanzas de la empresa, mencionan que comúnmente son escasos los registros contables, hay costos mal determinados y listas de precios que no cubren los costos totales. La falta de estados financieros reales y no contar con información oportuna para la toma de decisiones, son problemas cotidianos en las micro, pequeñas y medianas empresas en México.

## REVISIÓN LITERARIA

La Contabilidad de Gestión definida por el Observatorio Iberoamericano de Contabilidad de Gestión en su Revista la explica como la Rama de la contabilidad que tiene por objeto la captación, medición y valoración de la circulación interna de una unidad económica, así como su racionalización y control, con el fin de suministrar a la entidad la información relevante para la toma de decisiones. Su principal preocupación es la de proporcionar información y control para apoyar a la administración en las tareas que dicen relación con la racionalización de costos y procedimientos, la de ejercer control sobre las operaciones internas, como también la preparación de información especial para resolver decisiones estratégicas o no rutinarias, en la empresa. Para el cálculo del costo la contabilidad de gestión utiliza muy diversos datos elaborados en el ámbito de la contabilidad financiera o externa (costos externos), y a su vez la contabilidad de gestión ofrece a la contabilidad externa la información relativa a los inventarios mantenidos en la organización y el costo de los productos vendidos, con el fin de que la contabilidad financiera incorpore tales valoraciones en los estados financieros.

Existe, por tanto, un intercambio informativo entre la contabilidad financiera y la contabilidad de gestión por medio de la contabilidad de costos. La contabilidad de gestión como lo enmarca la revista iberoamericana de contabilidad de gestión, puede ayudar a las empresas a reducir sus gastos operativos. Los empresarios a menudo utilizan la información de gestión contable para revisar el costo de los recursos económicos y otras operaciones comerciales. Esta información permite a los propietarios poder comprender mejor la cantidad de dinero que cuesta operar el negocio. Los empresarios también pueden utilizar la contabilidad de gestión para llevar a cabo un análisis sobre la calidad de los recursos económicos utilizados para producir bienes o servicios.

La toma de decisiones se ve favorecida al tener disponible la información necesaria oportunamente para la fijación y control de precios. Los microempresarios al establecer un sistema de contabilidad de gestión tienen acceso a la información que les permite el establecimiento de estrategias de manera mas adecuada. Las estrategias de diferenciación consisten en diferenciar el producto o servicio que ofrece la organización mediante la creación de algo que se considere único en el ámbito del sector (Porter 1991). Las estrategias para esta diferenciación pueden adoptar muchas formas, como las de proyecto o imagen de la marca, tecnología, peculiaridades, especialidades, servicios por encargo, red de proveedores u otras dimensiones. (Chiavenato 2010). La estrategia de diferenciación por precio se refiere a una estrategia adecuada para atraer al público más racional. Todas las compañías denominadas “low cost” utilizan esta estrategia como fórmula para ganar cuota en sus respectivos mercados. Para que sea sostenible en el tiempo, es necesario optimizar los costos y los procesos, de forma que se pueda garantizar la rentabilidad a pesar de ofrecer los precios más bajos.

## METODOLOGÍA

El presente estudio se realizó como prueba piloto en el Valle de San Quintín perteneciente al municipio de Ensenada, Baja California, zona rural dedicada principalmente a las actividades del sector primario, comercio al por menor y servicios. La investigación consistió en analizar si los micro y pequeños

empresarios de la zona rural tienen establecido algún tipo de sistema de contabilidad de gestión que les permita un adecuado sistema de información eficiente para la toma de decisiones. El instrumento utilizado para identificar el sistema de control de costos establecido por los micro y pequeños empresarios fue un cuestionario de 20 preguntas donde se describen los indicadores principales en el establecimiento de un sistema y la generación de información necesaria en la toma de decisiones. El instrumento se aplicó a 35 micro empresarios dedicados al comercio al por menor, distribuidos a lo largo del Valle de San Quintín, desde el poblado conocido como Camalú hasta El Rosario, los resultados se agruparon en porcentajes y se presentan a continuación.

## RESULTADOS

Los resultados de nuestra investigación se presentan a continuación: Los microempresarios encuestados manifiestan en un 60% tener un control de ingresos y gastos mientras el 40% manifestó que no cuenta con un sistema de control. Las microempresas revisadas realizan sus operaciones de compra en un 34% al por menor, en un 29% al por mayor y en un 37% combinan mayoreo y menudeo. Al referirse a los plazos de crédito recibido los microempresarios manifiestan tienen plazos desde una semana en un 34%, un plazo de 15 días en un 49%, con plazo de un mes el 3% y sin plazo fijo el 14%. Cuando se les cuestionó sobre las políticas de venta establecidas en su negocio encontramos que las operaciones de venta las realizan al por menor en un 69%, combinando mayoreo y menudeo 31%. Las ventas de las empresas se integran por 43% al contado, el 26% a crédito y el 31% manejan una combinación de crédito y contado.

En lo que se refiere al mantenimiento de las instalaciones de las microempresas visitadas se encontró que se efectúa con la siguiente periodicidad, mensual 43%, bimestral 11%, trimestral 6%, semestral 26%, anual 9% y bianual 5%. Detectamos que el énfasis de mantenimiento está orientado de la siguiente manera: en limpieza un 63%, en pintura un 26%, en mobiliario 3% y sin énfasis un 8%. Dicho mantenimiento manifiestan que es realizado por el 9% por compañías externas a las empresas, por el 14% por compañías promotoras y por el 77% por la misma empresa. Los micro empresarios cuestionados sobre la imagen de su empresa, manifestaron en un 88% que es un aspecto muy importante de su empresa, un 6% lo considera importante y un 6% lo considera de importancia regular. En los cuestionamientos relacionados a su disposición para modificar la distribución de sus instalaciones encontramos que el 54% de los empresarios está dispuesto a realizar las modificaciones necesarias y el 46% está indeciso ante tal cuestionamiento.

## CONCLUSIONES

Como se manifiesta al inicio del presente estudio un problema evidente es la falta de sistemas contables y financieros adecuados para la toma de decisiones de las microempresas en el país. Se manifiesta la necesidad de establecer mecanismos de control que permitan un adecuado funcionamiento y determinación de listas de precios considerando las necesidades de las empresas. Las operaciones comerciales se ven afectadas por la falta de información oportuna y adecuada que permita tomar decisiones a los empresarios, ya que solamente se dedican a cubrir por grado de urgencia los créditos recibidos. Al no contar con un sistema de contabilidad de gestión adecuado que propicie una programación detallada de operaciones de compra venta.

En lo referente a gastos operativos como lo son el mantenimiento y adecuación de instalaciones se manifiesta un interés en la imagen de la empresa, sin embargo existe una resistencia al cambio evidente, ya que no están dispuestos a hacer las modificaciones necesarias para poder mejorar esa imagen tan importante. Consideramos que el establecimiento de un sistema de contabilidad de gestión que permita un adecuado control de costos y gastos podría propiciar el establecimiento de estrategias de diferenciación por precio en las microempresas, lo que permitiría la subsistencia de las microempresas por un periodo mas largo de vida, lo que mejoraría el grado de competitividad de las empresas de la zona rural.

# APLICACIÓN DE MODELO DE NEGOCIO PARA EL FORTALECIMIENTO DE LA MIPYME EN TIJUANA, BAJA CALIFORNIA

Liliana Gallarzo-López, Universidad Autónoma de Baja California

Eduardo Ahumada-Tello, Universidad Autónoma de Baja California

## RESUMEN

*El presente trabajo es una investigación documental sobre la importancia de contar con un modelo de negocio en la Micro, Pequeña y Mediana empresa, para lo cual se utilizó el lienzo del modelo de negocio propuesto por Osterwalder & Pigneur (2010), como una herramienta para plasmar las ideas y los alcances a través de la descripción, análisis y diseño del modelo de negocio que se gestiona en la empresa. Un Modelo de Negocio es la base sobre las que una empresa crea, proporciona y capta valor económico o social; a través del cual se transmite lo que hace, como lo hace, para quien, a través de qué medios, como se diferencia de sus rivales, quienes son la red de proveedores y socios. Estos elementos son puestos en un lienzo a través de papeletas adheribles al módulo que completa dicha descripción, originado de una lluvia de ideas de las personas más experimentadas en el negocio. Así mismo se abordan las diferencias entre los modelos tradicionales y el modelo de negocio propuesto, considerado como más innovador y sencillo de comprender para los emprendedores o empresarios. También se aborda las ventajas y desventajas del modelo propuesto por Osterwalder & Pigneur (2010).*

**PALABRAS CLAVES:** Modelo de Negocio, Innovación, Desarrollo y Fortalecimiento de la Mipyme

## BUSINESS MODEL IMPLEMENTATION FOR MSME's DEVELOPMENT IN TIJUANA, BAJA CALIFORNIA

### ABSTRACT

*The present work is a research on the importance of having a business model in the Micro, Small and Medium Business, for which the business model canvas proposed by Osterwalder & Pigneur (2010). Was used as a tool to translate ideas through the description, analysis and design of the business model that is managed in the company. A Business Model is the basis on which a company creates captures and provides economic or social value, through which it transmits what it does, how it does it and for whom, through what means, how it differs from its rivals and who are suppliers. Some elements are placed through presented to a group of experts in the field in order to improve upon what's known. Also the differences between traditional models and the proposed business model, regarded as the most innovative and easy to understand for entrepreneurs or business addresses. The advantages and disadvantages of the proposed by Osterwalder & Pigneur (2010) model is also discussed.*

## INTRODUCCIÓN

Las Micro, Pequeñas y Mediana empresas, son importantes para México, puesto que representan el 99.8 por ciento de las unidades económicamente activas, proporcionando el 52% del Producto Interno Bruto

Nacional, empleando el 72% de la población en edad de prestar un servicio a una sociedad económica. (ProMexico, 2013). En este documento, se lleva a cabo una investigación documental argumentativa utilizando el modelo propuesto por Antonia Tena y Rodolfo Rivas (2007). En términos generales el proyecto busca identificar como mejor alternativa de fortalecimiento para las MiPyMes, la aplicación del modelo de negocio propuesto por Alexander Osterwalder e Yves Pigneur (2010).

En relación a los objetivos de efectividad de cualquier empresa está la rentabilidad del negocio, la administración efectiva y proactiva, optimización de los recursos, desarrollo y crecimiento del capital humano y la expansión de más sucursales, entre otros. Todos estos objetivos son orientados al fortalecimiento interno, pero su competencia no solo se limita a ello, sino que también tiene un impacto recíproco con factores externos, los cuales le afectan de manera positiva o como amenazas; considerando que las MiPyMes en la ciudad de Tijuana representan el 99 por ciento con una aportación al empleo del 67 por ciento, y de las unidades económicas que hay en la entidad, Tijuana capta el 48 por ciento, lo que significa una fuerte aportación a la economía a nivel Estatal. (García, 2013). Este análisis documental aporta información útil al sector de desarrollo económico puesto que las MiPyMes forman parte importante de la ciudad y del país en general, ya que lo sostienen económica, social y familiarmente estable, de ahí su interés como una de sus principales prioridades, velar por su desarrollo y fortalecimiento. Ahora bien, en la medida que el empresario o emprendedor tenga clara la visión de funcionalidad y trascendencia a través de un innovador modelo de negocio, práctico, sencillo y flexible contribuirá a que su MiPyMe se consolide, se fortalezca y se posicione en un nivel competitivo.

## REVISION LITERARIA

*Análisis del modelo de Negocio:* El hablar de modelo de negocio, con regularidad se piensa en el diseño del negocio, ¿cómo nos gustaría que fuera la fachada?, ¿qué tipo de mobiliario, logotipo, slogans, infraestructura, etc.? En cierta medida se incluyen, pero no es tan limitado, por tal motivo iniciaremos por conocer la etimología de los términos que nos interesa en este trabajo, para después comprender la finalidad del mismo. Según el diccionario de la Real Academia Española, Modelo: es la acción de modelar, presentar con exactitud el relieve de las figuras. A su vez el concepto de Negocio: es la ocupación, el quehacer o trabajo, aquello que es objeto o materia de una ocupación lucrativa, de interés o un local en que se negocia o comercia. (Real Academia Española, 2014). También se analizan las definiciones que dan dos de los autores más utilizados en la Universidad Autónoma de Baja California (UABC), para la elaboración de modelos de negocio. (Alcaraz Rodríguez, 2011), nos dice que modelo de negocio es la forma en que se lleva a cabo una actividad de servicio o manufactura, para que sea rentable y se obtengan beneficios económicos. Osterwalde y Pigneur, (2010). Lo define como las bases sobre las que una empresa crea, proporciona y capta valor.

*Innovación del modelo de Osterwalder Alexander y Yves Pigneur:* La moda en nuestros días en el ámbito empresarial, es hablar del término innovación, el cual implica la renovación, ampliación o innovación de procesos, productos y servicios, así como cambios en la organización, la gestión y cambios en las calificaciones del Capital Humano. (JICA, 2011). Por lo tanto tiene como objetivo aprovechar las oportunidades que ofrecen los cambios que sean necesarios en la generación de una cultura innovadora que dé lugar a las empresas a ser capaces de adaptarse a las nuevas situaciones y exigencias del mercado en que compete. Así mismo, la innovación en los modelos de negocio juega un papel fundamental, ya que lo reforma y adapta según sea la necesidad del negocio, ciertamente no es nuevo el mencionar la innovación en los modelos de negocio, sino que data desde el siglo XV, cuando Johannes Gutenberg buscaba aplicaciones para los dispositivos de impresión mecánica que había inventado; y en 1950, los fundadores de Diners Club aplicaron el modelo de negocio cuando introdujeron la tarjeta de crédito; en 1959 Xerox, también lo introdujo en el alquiler de fotocopadoras y el sistema de pago por copia. (Osterwalder & Pigneur, 2010).

Consecuentemente la rapidez con que los modelos de negocio están siendo cada vez más innovadores, transforman el panorama empresarial, no hay tiempo que perder, no es momento de pensar en dejarlo para después, pues es imperante pensar en crear valor para los negocios, los clientes, empleados, proveedores y la misma sociedad; es por ello que se debe abandonar los modelos obsoletos que no dan resultado. Utilizar la creatividad es un elemento clave para poder inventar, diseñar y aplicar los eficientes y novedosos modelos de negocio de manera sistemática y desafiar, cuestionar y transformar las ideas para sean visionarias al realizar modelos de negocio revolucionarios que desafíen los esquemas prefijados y rejuvenezcan para poder hacer frente al mundo globalizado y competitivo al que nos enfrentamos hoy en día.

### Presentación del Modelo

El Modelo de Negocio propuesto por Osterwalder Alexander y Yves Pigneur (2010), los cuales lo describen a través del lienzo o canvas del modelo de negocio que consiste en nueve módulos:

*Segmento de mercado:* responde a las preguntas ¿Para quién creamos valor? ¿cuáles son nuestros clientes más importantes?, es la elección de los diferentes grupos de personas o entidades a los que la empresa se va a dirigir. Todo empresario sabe que si no hay cliente no hay negocio, por lo tanto ellos son el centro de cualquier modelo de negocio. En este módulo se sugiere agruparlos en varios segmentos con necesidades, comportamientos y atributos comunes; dicha selección de segmento debe estar bien pensada y fundada, decidiendo su cliente objetivo al que se va a dirigir, así como los que no tendrá en cuenta. Los grupos de clientes pertenecen a distintos segmentos como los clientes que necesitan una oferta diferente, los que son necesarios diferentes canales para poder llegar a ellos, los que requieren un trato diferente y los que están dispuestos a pagar. Los segmentos de mercado más utilizados son:

*Mercado de masas:* se centra en el público en general, los cuales tienen necesidades y problemas similares. Se recomienda en modelos de negocio de gran consumo.

*Nicho de mercado:* son segmentos específicos y especializados y todos los esfuerzos se adaptan a los requisitos específicos de una fracción de mercado. Se recomiendan en modelos de negocio en que la relación proveedor-cliente sea indispensable y frecuente.

*Mercado segmentado:* es la distinción de varios segmentos de mercado con necesidades y problemas ligeramente distintos. Se recomienda en modelos de negocio que atienden diferentes segmentos de mercado.

*Mercado diversificado:* Es la atención de dos segmentos de mercado que no están relacionados y que presentan necesidades o problemas muy distintos.

*Propuestas de valor:* Es la razón por la cual los consumidores prefieren a esa empresa sobre las demás que venden los mismos productos u ofrecen el mismo servicio, lo cual se traduce en la firma en que se resuelve un problema o se satisface la necesidad de un cliente; casi siempre una idea original da pie a soluciones innovadoras, las cuales presentan una oferta o tienen ciertas características distintivas. La propuesta de valor puede ser cuantitativa, como el precio, rapidez en el servicio; también pueden ser cualitativas como un diseño innovador en el producto, conocimiento del cliente. En resumen es el conjunto de productos y servicios que crean valor para el segmento de mercado específico, o sea una ventaja competitiva para la empresa. Las preguntas a las que responde son: ¿Qué valor se proporciona al cliente? ¿qué problema de nuestros clientes ayudamos a solucionar? ¿qué necesidades de los clientes satisfacemos? ¿qué paquetes de productos o servicios ofrecemos a cada segmento del mercado?

*Canales de distribución:* es la forma en que la empresa hará llegar los productos a sus consumidores. Estos canales juegan un papel muy importante en la experiencia del consumidor que además de dar a conocer los productos y servicios de la empresa, permite a los clientes evaluar fácilmente la propuesta de valor.

*Relaciones con clientes:* La empresa es la que determina el tipo de relación que desea tener con el cliente potencial, estas se pueden dar en dos vertientes: en las personales o en las automatizadas; estas ven aspectos como asistencia personalizada y atención a necesidades muy específicas del consumidor.

*Fuentes de ingreso:* Es importante que la empresa se pregunte ¿Cuánto estará dispuesto el cliente a pagar por mi producto o servicio?, partiendo de este punto se estará en condiciones de establecer el precio. La búsqueda de otras formas de obtener ingresos, también es importante que se consideren, estas deben ser adicionales a la simple venta del producto o la prestación del servicio.

*Recursos clave:* son los insumos que necesita la empresa para poder hacer un producto, permitiéndola crear y ofrecer una propuesta de valor, mantener el vínculo con su segmento de mercado y por consiguiente tener más ganancias. Estos incluyen todos los tipos de recursos: físicos, de información, técnicos, humanos y financieros.

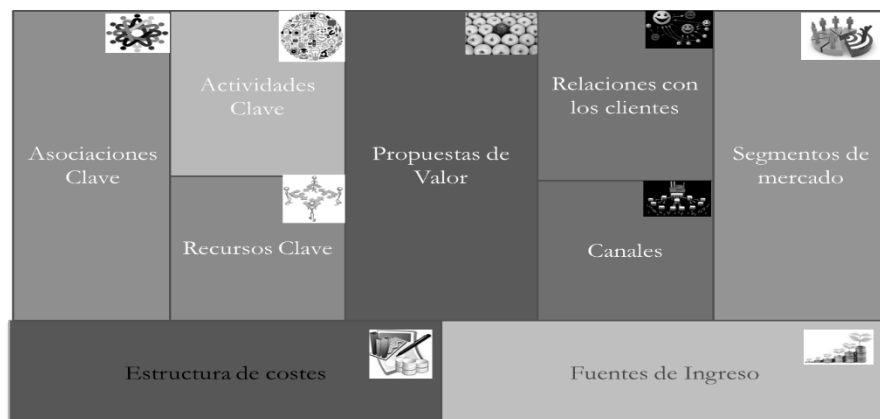

*Actividades clave:* Describe las acciones más importantes que una empresa realiza para que funcione su modelo de negocio, ya sea que se relacione con la producción, la prevención y solución de problemas o al desarrollo de sistemas de soporte a la logística de operación.

*Asociaciones clave:* La incluyen la red de proveedores y socios que hacen funcionar el modelo de negocio. También se incluyen las alianzas estratégicas para optimizar el modelo de negocio, reducir el riesgo o adquirir recursos. Las alianzas se pueden tener entre los no competidores, competidores, distribuidores, financieros o proveedores, con el afán de asegurar abastecimientos confiables.

*Estructura de costes:* Incluye todos los costos en que se incurre, tanto para poner en marcha el negocio como para crear y entregar el valor ofertado en la propuesta, así como mantener las relaciones con el consumidor y generar ingresos. Los costos pueden calcularse una vez que se definen los recursos clave, actividades clave y socios clave. Los costos debe minimizarse lo más posible. Estos módulos del modelo de negocio, son los elementos esenciales a tomar en cuenta al momento de pensar en un negocio que genere valor para el emprendedor, el consumidor y a la misma sociedad, se representa de manera esquemática, simple y entendible en una sola visualización ilustrado en la Figura 1.

*Diferencia del modelo de Osterwalder con el modelo tradicional:* La innovación de este modelo de negocios con respecto a los demás autores de este tema en particular, es la sencillez y practicidad con que se esquematiza, así como su adaptabilidad a cualquier situación económica, legal, social, tecnológica y ecología del entorno. De esta manera la empresa puede ir adaptando su modelo de negocio según circunstancias internas o externas, no es fijo ni permanente, lo cual va a permitir ser más competitivo en la medida que los requerimientos del mercado lo exijan. (Alcaraz Rodriguez, 2011). La diferencia con el modelo tradicional, es que los modelos se ven como planes de negocio, los cuales requieren de una intensa dedicación en la elaboración de cada área a desarrollar, en la que por su complejidad a muchos empresarios se les dificulta su elaboración y tienen que acudir a personal especializado para que se lo realice, y eso les genera el desembolso de su dinero. Se entiende que en cualquier modelo de negocios deberá existir la investigación documental y de mercado, pero la gran diferencia es que los que ya operan, cuentan con la experiencia como tal, en cuanto a la operación del negocio, y esa experiencia con facilidad la podrán plasmar en el esquema del modelo sugerido en este trabajo de investigación.

Figura 1: Modelo de Negocios “CANVAS

En esta figura se ilustra el modelo de negocios “CANVAS” propuesto por Alexander Osterwalder e Yves Pigneur (2010), en él se diferencian distintas fases o procesos que componen el camino de la producción al cliente final y la propuesta de valor del producto que se oferta. Fuente: Elaboración propia con información de (Osterwalder & Pigneur, 2010)

### Ventajas y Desventajas del Modelo de Osterwalder.

En el análisis de este modelo de negocios, se puede ver con claridad las bondades que proporciona al momento de hacerlo; y en realidad cualquier persona que lo utilice le podrá resultar efectivo, si se aplica correctamente. Las ventajas de la utilización de este modelo de negocios son:

Una visión clara y entendible de lo que se hace en la empresa.

Lleva de la mano al emprendedor de manera secuencial: que hago, quien me compra, que necesito, porque me prefieren, a quien necesito para hacer mejor las cosas, de qué forma llego a mis clientes, como me relaciono con ellos, como género y distribuyo el ingreso.

Contempla un análisis interno y externo, lo que permite estar a la vanguardia con los cambios que pudiera haber en el entorno.

Es práctico y sencillo, puesto que solo se necesita la comprensión global del negocio.

Flexibilidad en realizar cambios al modelo de negocios según circunstancias del entorno.

Es retador ya que desafía los tradicionales modelos de negocios.

Ayuda al diseño de empresas del futuro, ya que permite adaptarlo según sean las necesidades del negocio.

Las desventajas en realidad son escasas, sin embargo sí se encuentran, están dirigidas al que realiza el modelo, en este caso al emprendedor o empresario:

El desconocimiento de un elemento del modelo de negocios, la forma de cómo aplicarlo, o el mal entendimiento del mismo.

La incongruencia de lo escrito (pensado y analizado) con las acciones en las actividades (práctica).

Miopía del emprendedor.

### **METODOLOGÍA**

La guía metodológica que se siguió en este trabajo están basados en la investigación documental, específicamente argumentativa, bajo el modelo de Antonio Tena y Rodolfo Rivas (2007), el cual consiste en recolectar, seleccionar y presentar resultados congruentes, a través del procedimiento lógico y mental. El seguimiento analítico empleado, llevó a la reflexión, a la interpretación y comparación de los temas planteados para lograr con el objetivo del estudio.

## RESULTADOS

### La Importancia de las MIPYMES En el País y en la Región

En México existen aproximadamente 4 millones 15 mil unidades empresariales de las cuales el 99.8% de las empresas son Micro, Pequeñas y Medianas empresas, empleando el 72% del personal ocupado, significando siete empleos formales de cada 10, aportando el 52% al PIB (Producto Interno Bruto). (Centro de Atención Empresarial, 2014). La estratificación de las MiPyMes es como sigue, según datos de SEDECO que se muestra en la Tabla 1.

Tabla 1: Estratificación de las Empresas de Acuerdo Con la Secretaría de Economía

Tamaño	Sector	Rango Numero Trabajadores	Rango Monto Ventas Anuales	Tope Combinado*	Máximo
Micro	Todas	Hasta 10	Hasta \$4		4.6
Pequeña	Comercio	Desde 11 hasta 30	Desde \$4.01 hasta \$100		93
	Industria y Servicios	Desde 11 hasta 50	Desde \$4.01 hasta \$100		95
Mediana	Comercio	Desde 31 hasta 100	Desde \$100.01 hasta \$250		235
	Servicios	Desde 51 hasta 100	Desde \$100.01 hasta \$250		235
	Industria	Desde 51 hasta 250	Desde \$100.01 hasta \$250		250

\*Tope Máximo Combinado=(Trabajadores)X10% + (ventas Anuales)X90% En esta tabla se describe la estratificación de las empresas de acuerdo con la clasificación propuesta por la Secretaría de Economía de México. Fuente: Elaboración propia con información de (SEDECO, 2012).

El Estado de Baja California tiene una gran ventaja competitiva con respecto al resto del país, puesto que geográficamente se encuentra en colindancia con el sur de California, Estados Unidos de América; el cual representa para el Estado una ventaja competitiva importante. Ocupa el quinto lugar en el desarrollo de pequeñas y medianas empresas, lo que demuestra su vital importancia para la región. (Instituto Tecnológico, 2010). Las MiPyMes en el estado brindan el 68.6% de empleos y de estas el 99.5 por ciento son empresas familiares (Tafoya, 2013). Actualmente el estado tiene una población de 3,155,070 de individuos, de los cuales 49.6% son mujeres y el 50%. La población económicamente activa (PEA) es de 1,471,671 personas, lo que representa una tasa de participación económica del 58.1 por ciento; existiendo 80 mil 368 unidades económicas, de las cuales 73 mil 608 son microempresas, lo que representa el 92%; 5 mil 186 son pequeñas y representan el 6%; y 132 mil son medianas representando el 1%. (García, 2013).

### Importancia y Desarrollo de las Mipymes En Tijuana B.C.

De acuerdo con INEGI (2009) existen 38 mil 781 empresas, en la ciudad de Tijuana, de las cuales 35 mil 244 son microempresas, las cuales representan el 92 por ciento; 2 mil 483 son pequeñas y representan el 6%; y 542 son medianas empresas representando el 1% y el otro 1% son grandes empresas; Tijuana capta el 48 por ciento de las unidades económicas del Estado. El empleo proporcionado es del 67 por ciento, del cual las microempresas aportan el 35%, las pequeñas el 19% y las medianas el 13%. (García, 2013). A nivel Nacional, Estatal y Municipal se está impulsando el desarrollo de las mismas a través de apoyos para emprender con más de 220 mil pesos a fondo perdido con lo que cuenta el programa de Capacitación y Asistencia para el desarrollo de Microempresas, así mismo se cuenta con orientación para la elaboración de proyectos, financiamientos y capacitación. (SEDECO, 2012). El Instituto Nacional del Emprendedor (INADEM), brinda un impulso a la capacidad creativa del mexicano para que emprenda, prospere y consolide su idea de negocio; su finalidad es democratizar la productividad, impulsar surgimiento de más emprendedores particularmente de alto impacto, generar empleos en el estado, fortalecer el ecosistema de financiamiento y hacer frente a la crisis económica que en estos momentos se vive. Se cuenta en la ciudad de Tijuana con cuatro incubadoras, certificadas por INADEM, las cuales son las siguientes:

Tabla 2: Incubadoras de Empresas En la Ciudad de Tijuana, B.C.

Organización	Nombre	Correo
Centro de Asesorías para la creación de nuevas empresas EMPRENDER Tijuana.	Lic. Martha Sandez Gutiérrez	emprender@coparmextijuana.org
Incubadora de Empresas "IGNITUS"	Ing. Flavio Olivieri, CECd	folivieri@tijuanaedc.org
Centro incubador de empresas de la Universidad Tecnológica de Tijuana (CIENUTT)	MBA. Pedro J. Espinoza Muñoz	cienutt@uttijuana.edu.mx
MIND HUB	Ulises Elías	uelias@mind-hub.com

*En esta tabla se mencionan los datos principales de cuatro incubadoras de empresas certificadas por la Secretaría de Economía y con presencia en la ciudad de Tijuana, Baja California. Fuente: Elaboración propia con información de (S.E & INADEM, 2013)*

Además de los apoyos, financiamientos y asesorías de estas incubadoras en la ciudad, también se encuentran impulsando el emprendimiento de los jóvenes y el fortalecimiento de los negocios que ya están en marcha, los programas de las universidades de la ciudad, y como muestra de ello está el proyecto de Servicios Integrales para la Gestión de Universitarios Emprendedores (SIGUE) de la Universidad Autónoma de Baja California (UABC), a través del Centro de Emprendimiento y Apoyo Empresarial (CEAE), el cual tiene como propósito la detección temprana de talentos estudiantiles que de iniciativa propia desean emprender un negocio, el cual incluye el liderazgo de directivos, coordinadores y docentes, apoyando el emprendimiento y creación de nuevos sectores económicos en la ciudad y nuevas redes de colaboración con otros actores sociales. Además se ofertan materias que llevan a la creación de un plan de negocios. Organismos como Entijuana Arte, Tijuana innovadora, realzan la importancia y desarrollo que este sector económico representa para la ciudad, realizando expos que impulsan las Micro, Pequeñas y Medianas empresas hacia nuevas inversiones y nuevos horizontes de mercado Nacional e Internacional.

### Importancia de Contar Con un Modelo de Negocio En las Mipymes En Tijuana

La relevancia de que cada emprendedor o empresario cuente con un modelo de negocios innovador, es de suma importancia ya que le proporcionará una visión global y una comprensión desde la perspectiva de un todo. Al contar con el modelo se podrán tomar decisiones asertivas y veraces, adaptándose a los cambios del entorno; como tomar la opción de diferenciarse a través de sus productos o servicios, otorgándolos de manera distinta. Teniendo claro lo que la empresa ofrece a los clientes, como llega a ellos, como se relaciona y cuál es su fuente de ingresos, el emprendedor está en condición de buscar socios o inversionistas si este los requiriera; y el beneficio para el empresario le traza un punto de partida para su crecimiento e innovación. Así mismo ayudara al emprendedor o empresario al posicionamiento en su país así como en la expansión en otros mercados internacionales. En esta ciudad la MiPyMe está en ventaja ya que puede aprovechar la cercanía con el sur de California, aprovechando las oportunidades de exportación del gobierno. Los estudios en materia de modelos han demostrado que más del 43 por ciento de las innovaciones en el mundo se debe a los cambios en el modelo de negocios, y hoy por hoy Tijuana puede aprovechar las ventajas que la zona geográfica y demográfica, mejorando en los accesos a los segmentos de clientes, reduciendo los costos y mejorando el abastecimiento y los procesos.

### Necesidad de Fortalecer a las Mipymes

No cabe duda de la importancia de las MiPyMes en México, en el estado de Baja California y en el municipio de Tijuana, puesto que son el resultado del esfuerzo de los individuos de esta nación y del deseo de crecer y desarrollarse en todas las áreas que pueda tener un ser humano, no solamente en lo económico y lo laboral, sino lo familiar, social, secular, recreativo y afectivo. Como ya se mencionó anteriormente, tanto el gobierno, instituciones educativas, empresarios y emprendedores están interesados e involucrados en el desarrollo y crecimiento de las MiPyMes, para que éstas se consoliden y no mueran a menos de tres o cinco años de operación (Tafoya, 2013).

El entorno negativo en que operan las MiPyMes, es más por causas de fracaso en las propias organizaciones y en específico en la administración de la gestión de sus responsables, y muchos de ellos prefieren laborar en la informalidad, lo cual representa el 70 por ciento, solo tomando en cuenta a los 10 estados menos productivos y entre ellos se encuentra Baja California. (Gonzalez, 2014). La mortalidad de las Micro, Pequeña y Medianas empresas en México es del 75%, ya que cierran sus operaciones después de dos años de estar en el mercado; el 50% quiebran durante el primer año de actividad y el 90% antes de cumplir 5 años en el mercado y solo el 10% que cumplen 10 años logran crecer, madurar y tener éxito. (Tafoya, 2013).

La solución para fortalecerlas es echar mano de los recursos que el país a dispuesto a través de organismos como la Secretaria de Economía, del cual se descentraliza el INADEM, éste ha creado una estrategia integral de articulación y vinculación para los emprendedores y las MiPyMes, y consiste en una red nacional que la integran 23 dependencias y entidades del gobierno federal, a través de las cuales operan 65 programas orientados a incrementar la productividad y 26 instituciones privadas que ofrecen productos y servicios orientados a distintas necesidades y áreas de oportunidad; esta estrategia dará pie a la sinergia de cooperación entre los que pueden aportar conocimiento, ideas, capacidad y capital con el fin de desarrollar nuevos y mejores productos y servicios para el sistema emprendedor en México. (S.E & INADEM, 2013).

La red de apoyo al emprendedor y empresario será la ventanilla de promoción y difusión para encontrar toda gama de productos y programas que los diferentes organismos del gobierno y sector privado ponen a disposición en cada entidad federativa y a través de la red, para que con más rapidez se pueda crecer y permanecer en el mercado y así impulsar la cultura emprendedora con el surgimiento de nuevos emprendedores en el país. Cada año se realizan convocatorias para el premio nacional del emprendedor, de los cuales se eligen los mejores según categoría.

## CONCLUSIONES

Para que los objetivos sean alcanzados por una empresa, es de vital importancia, la forma en que realiza su modelo de negocio y la manera en que apoya en el desarrollo socioeconómico potencial. Siempre con el entendimiento de que el modelo de negocios es el método con el que una empresa construye y usa sus recursos para proporcionar un mayor valor a sus clientes, diferente que el ofrecido por sus rivales, y con el mayor rendimiento esperado, de tal manera que le permita tener una ventaja competitiva sostenible, así mismo desempeñarse más eficientemente que sus competidores a un corto, mediano y largo plazo, haciendo constantemente un análisis interno que permita seguir sosteniendo sus fortalezas a un nivel aceptable, analizando sus debilidades para convertirlas estratégicamente en fortalezas; optimizando sus recursos, acrecentando sus relaciones, analizando y comprendiendo los cambios en su entorno; de esta manera estarán las MiPyMes de nuestra localidad en condiciones de aprovechar las oportunidades y hacer frente a las amenazas que les depare el mercado en el que están inmersas.

Por esta razón México está obligado a unir esfuerzos entre gobierno, empresarios, instituciones educativas y nuevos emprendedores, para poder hacer frente a los cambios mundiales y de globalización, y a la vez a la crisis económica, social y familiar del país, que genera el desempleo, la pobreza y violencia, a través de condiciones de juego oportunas para poder competir en el ámbito internacional y a crear organizaciones económicamente competitivas que brinden empleo, seguridad y una calidad de vida digna que merece todo ser humano. La importancia y trascendencia de contar con un modelo de negocio de manera formal, plasmada en un esquema que permita la toma de decisiones basadas en el análisis del entorno interno y externo de la empresa, contribuirá a permanecer en el mercado con mayor competitividad y hacer frente a los retos globales. Considerando que en nuestros días el país está sufriendo la mayor contracción en la generación de empleos; la razón es la mortandad de la MIPYME. El 2013 cerró con una plantilla laboral de 12.29 millones de personas, cifra del 0.81 por ciento menor a los 12.39 millones al cierre del 2012. (CNNExpansion & de la Rosa, 2014).

Al hacer el análisis anterior, llevo a la realización del presente trabajo con la finalidad de contribuir al desarrollo de una de las columnas fuertes de la economía en el país, las cuales son las MIPYMES; estas se analizan desde la perspectiva nacional, así como de la entidad federativa de Baja California y a su vez en el municipio de Tijuana, en el cual está centrada dicha investigación documental, brindando un panorama del desarrollo de las mismas, su importancia en la contribución al Producto Interno Bruto. Así mismo, la importancia de contar con un modelo de negocio que permita su consolidación, crecimiento y competitividad, para el fortalecimiento de la misma, contribuyendo a alcanzar la visión del emprendedor o empresario de la localidad, lo cual permitirá ser candidato a participar en los apoyos financieros, asesoría y capacitación a través de gobiernos e instituciones privadas que están comprometidas al progreso de este país.

# LA TECNOLOGÍA E INNOVACIÓN COMO FACTOR DE COMPETITIVIDAD EN LA INDUSTRIA AEROESPACIAL DEL ESTADO DE BAJA CALIFORNIA, MÉXICO

Norma Isabel Reyes-Marín, Universidad Autónoma de Baja California

Alfonso Vega-López, Universidad Autónoma de Baja California

## RESUMEN

*Este trabajo presenta un diagnóstico sobre la industria aeroespacial a nivel mundial, nacional y estatal. La información recopilada es la más actualizada y relevante de la industria aeroespacial, describiendo los antecedentes, el valor de mercado, los principales participantes, las áreas de desarrollo, la regulación y su perspectiva. Con la información proporcionada por instituciones gubernamentales y especializadas se ha analizado a la industria aeroespacial en México y Baja California en el área de inversión, exportaciones, número de empresas, normatividad y generación de empleos. Finalmente se describe la importancia que ha cobrado actualmente la tecnología e innovación, como factores que impulsan la competitividad en las organizaciones y como la industria aeroespacial en el estado requiere crear condiciones que la diferencien de otros Estados para atraer inversiones.*

**PALABRAS CLAVE:** Industria Aeroespacial, Competitividad, Tecnología E Innovación

## TECHNOLOGY AND INNOVATION AS COMPETITIVENESS DRIVER IN AEROSPACE INDUSTRY IN BAJA CALIFORNIA, MEXICO

### ABSTRACT

*This paper presents an analysis of the aerospace industry at a global, national and regional level. The information collected is related and relevant to the aerospace industry, describing the background, the market value, the main participants, the areas of development, regulation and perspective. With information provided by NGOs and specialized institutions the aerospace industry it have been analyzed in Mexico and Baja California in the area of investment, exports, number of firms, regulation and job creation. Finally we describe the importance of technology and innovation as drivers of competitiveness in organizations such as the aerospace industry in the state must create conditions that differ from other states to attract investments.*

**JEL:** A11, A22, M11, M15, O11, O14

**KEYWORDS:** Aerospace Industry, Competitiveness, Innovation and Technology

### INTRODUCCION

Industria aeroespacial y de defensa. Las actividades productivas en su conjunto, enfocadas a la construcción y diseño de aviones, helicópteros, launchers, misiles y satélites así como el equipo del que depende además de los motores y los equipos electrónicos utilizados a bordo, corresponden al sector aeroespacial y aeronáutico. Los productos aeronáuticos únicamente circulan en la atmósfera, mientras que los de la

aeroespacial lo hacen fuera de la atmosfera terrestre (Hualde, Carrillo, & Dominguez, 2008). El valor de mercado de esta industria se encuentra cerca de los 450 mil millones de dólares, genera empleos especializados y el desarrollo de nuevas tecnologías va de la mano con las actividades de esta industria, lo cual le permite estar en una constante innovación y generar en su cadena productiva un alto valor agregado.

## REVISIÓN DE LA LITERATURA

### Antecedentes

En la primera mitad del siglo XX la industria aeronáutica estaba dispersa por el mundo, pero con Estados Unidos a la cabeza. Hasta la caída del bloque soviético en Europa la industria tuvo innovaciones relevantes como el primer avión comercial supersónico. En la década de los 90's, la industria aeronáutica cobro gran importancia, una de las razones es que parte del poder se había trasferido a manos de particulares. Es por lo anterior que grandes grupos inversores se unieron en gigantescos consorcios, para consolidarse en esta industria dando lugar a los conglomerados de la industria aeroespacial, (Roldan, 2011) Panorama del sector aeroespacial en el mundo. El sector aeroespacial incluye a todos los actores públicos y privados involucrados en la provisión de productos y servicios basados en tecnología aeroespacial. Esta industria se encuentra en un constante cambio. A futuro se estima que la demanda aumentara tanto civil como militar, así como de centros productivos de tecnología en países de Estados Unidos y Europa, y China que actualmente se encuentra en una etapa sorprendente de desarrollo, incluyendo a otros países de Asia, (PROMÉXICO, 2012).

En el periodo de 2005 a 2009, el sector aeroespacial y de defensa a nivel global, crecieron a razón de 8.7% anual, en donde el valor de mercado alcanzó los \$920.6 mil millones de dólares. En este año el sector aeroespacial mundial alcanzará un valor de \$1,190 mil millones de dólares. Es importante tomar en cuenta que el sector defensa representa el 71.8% del total del mercado, mientras que la aviación civil aporta el 28.2% restante (PROCEI, 2013) El valor del mercado mundial aeroespacial asciende alrededor de los 450 mil millones de dólares. Poco menos de la mitad corresponde al mercado estadounidense. Los otros cuatro mercados más importantes son Francia, Reino Unido, Alemania y Canadá. En la escena mundial están creciendo países como China, Brasil, India, Singapur y México que, en su conjunto, representan el 7% de la industria global en ventas (Secretaria de Economía, 2012). En el gráfico 1 se visualiza que Estados Unidos tiene una participación del 45% del total, seguido por los países europeos Francia, Reino Unido y Alemania. También se identifican los países en donde la industria aeroespacial está en desarrollo como lo son India, Holanda y México.

Figura 1: Valor de Mercado

En esta figura se muestra el valor de mercado de la industria aeroespacial por países. Fuente: Elaboración propia con base en (Secretaria de Economía, 2012)

Las compañías aeroespaciales enfrentan nuevos retos de eficiencia de costos en sus programas y contratos. Además de que tienen que ajustarse a los recortes presupuestales de defensa a nivel mundial, también deben construir aeronaves más eficientes, ligeras y a costos más bajos. Durante los siguientes 20 años se espera que la tecnología incremente y que los nuevos productos reduzcan en costo y aumente en eficiencia, sin olvidar el impacto sobre el medio ambiente (ProAereo SE, 2013)

### Principales Áreas de Desarrollo y Participantes

En una mayor parte la industria aeroespacial y la investigación en Europa está representado por EADS, BAE System, Saab, Thales, Finmeccanica y Dassault, siendo uno de sus principales consumidores de tecnología y productos aeroespaciales la Agencia Aeroespacial Europea. Por lo que respecta a Rusia, Oboronprom y la United Aircraft Corporation representan a la industria aeroespacial. Las compañías Boeing, Lockheed Martin y United Technologies Corporation son las más sobresalientes en los Estados Unidos, mientras que sus consumidores potenciales son el departamento de Defensa y la NASA. La industria fabricante de aviones comerciales está totalmente dominada por cuatro empresas, todas en el hemisferio occidental. Airbus y Boeing son las empresas líderes en tecnología en esta industria, para la producción de grandes aviones de pasajeros. Bombardier de Canadá, Embraer de Brasil y ATR de Francia, son los principales fabricantes de aviones regionales (Federación Mexicana de la Industria Aeroespacial, 2012) En este contexto, la prospectiva del mercado global de aviones para 2031 será de 4,500 miles de millones de dólares con pedidos totales de 34 mil aeronaves, de los cuales 41% serán para sustituir aeronaves existentes y 59% representará el crecimiento del sector; De la flota existente en 2011 (19,890) se conservarán un total de 5,780 para 2031, (Academia de Ingeniería en México., 2013)

### El Sector En México

El crecimiento de la industria aeroespacial nacional y su consolidación son una oportunidad que está estrechamente ligada a la importancia económica del sector aeroespacial mundial. Para lograr en desarrollo en esta industria, tanto en el estado como en el país, se han articulado el gobierno, la industria y la academia para generar condiciones e incrementar las capacidades existentes (Secretaría de Economía, 2012) Se han establecido tres corredores especializados en el país (centro, noreste y noroeste) que ubican a México en el escenario mundial como un clúster regional del sector aeroespacial viable por distintos factores. Existen más de 300 compañías en el sector aeroespacial mexicano que se dedican (PROCEI, 2013):

El 80% de esas empresas se dedican a la manufactura de piezas.

El 11% de las mismas se dedican a tareas de ingeniería, diseño y educación como investigación y desarrollo.

Y el 9% restante se dedica a tareas de mantenimiento, reparaciones y revisiones. En los últimos diez años el sector aeroespacial mexicano ha creado una plataforma industrial competitiva en el ámbito mundial y actualmente se ubica como la tercera mejor economía de catorce analizadas, para atraer inversiones en este sector (Academia de Ingeniería en México., 2013) A nivel mundial, México es un país lo suficientemente atractivo e idóneo para atraer inversión en la industria aeroespacial, y al mismo tiempo lo posiciona como un fuerte competidor en dicha área, principalmente por las siguientes razones:

*A nivel continente México representa el talento tecnológico, por sus más de 115 mil egresados en ingeniería, según proyecciones (INEGI, 2011) y que además cuentan con un nivel alto de capacitación. La cercanía con el país que tiene una mayor producción y consumo en la industria aeroespacial y de defensa, le favorece en ubicación estratégica. Los costos de manufactura para Estados Unidos, son más bajos en México, comparado con la India y China, siendo México el destino más competitivo. Las*

*exportaciones en el país en los últimos 8 años, según (PROMÉXICO, 2012), registraron un crecimiento anual sostenido del 17%, del total de las empresas aeroespaciales del país. Las exportaciones netas de manufactura y de componentes de la industria aeroespacial fueron de 4.3 millones de dólares (PROMÉXICO, 2012) Los productos y diseños de empresas mexicanas aeroespaciales pueden ingresar al mercado estadounidense, a través del Acuerdo Bilateral de Seguridad (BASA). Dicho acuerdo equipara las certificaciones de la autoridad local con las de las de la Administración Federal de Aviación (FAA, por sus siglas en inglés). En los últimos 8 años la inversión extranjera directa recibida estuvo cerca de los 30 mil millones USD. La perspectiva laboral para los últimos 5 años, partiendo de 2011, es de 31 mil empleos directos con más 350 empresas. La cercanía con dos de los principales centros de desarrollo de tecnología aeroespacial (Quebec y Seattle) abre la oportunidad para una integración industrial y tecnológica (Federación Mexicana de la Industria Aeroespacial, 2012)*

Además las exportaciones en 2011 alcanzaron los 600 millones de dólares, principalmente por las KPO'S (Knowledge Process Outsourcing por sus siglas en inglés) como lo son software y procesos industriales, ingeniería y diseño de componentes (Business Conexión, 2013) La mayoría de las inversiones incluyen alta tecnología restringida para uso compartido civil y militar, lo cual al transferir la tecnología ayuda a fortalecer la competitividad nacional.

Industria aeroespacial en Baja California: La industria aeroespacial en el estado, inicio con actividades de manufactura hace más de 40 años. Las empresas establecidas en la región han aprovechado la cercanía geográfica; estas empresas producen componentes para aplicaciones aeroespaciales y de defensa con altos estándares de calidad y cumplimiento regulatorio. Por consiguiente se debe aventajar el alcance global de las operaciones actuales de la industria aeroespacial, reforzando los servicios técnicos y tecnológicos, la formación de talento y la infraestructura de soporte de ingeniería y desarrollo. Baja California debe considerarse como una industria de alto valor agregado, debido a:

Existen más de 60 empresas. A nivel nacional, Baja California representa el 27% de las exportaciones. La cadena de valor es similar a la de Arizona y California. Las exportaciones del estado están dirigidas a Estados Unidos en un 75 %, la otra parte se envía a Inglaterra, Francia, Canadá, Alemania y otros países (PROMÉXICO, 2012). Esta industria emplea cerca de 16 mil personas, que van desde la mano de obra básica hasta profesionistas y técnicos especializados. Las actividades de la industria abarcan el ensamble, investigación, desarrollo, diseño, análisis y fabricación. Baja California permite exportaciones e importaciones libres de impuestos en la industria. Egresados altamente capacitados en la industria aeroespacial e ingeniería (Business Conexión, 2013).

#### La Tecnología E Innovación Como Factor de Competitividad de la Industria Aeroespacial

Para lograr un crecimiento económico existen diversas y excelentes estrategias, los economistas dedicados al estudio del crecimiento refieren que el progreso económico está basado en cuatro factores, independientemente si el país es rico o pobre. Los cuatro factores de crecimiento son: los recursos humanos, recursos naturales, formación de capital y la tecnología (Paul & Nordhaus, 2006)

Los avances tecnológicos representan el cuarto ingrediente vital para un crecimiento de nivel de vida, a través de los grandes inventos y de cambios tecnológicos que han contribuido a un mejor nivel de vida y desarrollo de un país. Hoy en día se vive un continuo flujo de nuevas tecnologías en áreas como las ciencias computacionales y de la información, las comunicaciones y a vida. La introducción de un nuevo producto a servicio y los cambios en los procesos de producción es a lo que se le denomina un cambio tecnológico. La máquina de vapor fue un gran invento de proceso que incremento en su momento la productividad, de igual forma lo hizo la generación de electricidad, el motor de combustión, los antibióticos y el avión de fuselaje. Por lo que se refiere a inventos de producción se encuentran el teléfono, la radio, el avión, el

fonógrafo, la televisión y el microprocesador. Las áreas como la electrónica y la computación, están presentando grandes avances tecnológicos hoy en día.

Los ejemplos mencionados representan los avances tecnológicos más magníficos, sin embargo, visto en un horizonte temporal, es un proceso continuo de pequeñas y grandes mejoras (Escorsa & Valls, 2007) A pesar de todo el cambio tecnológico incuestionablemente no es un procedimiento basado en encontrar y mejorar productos y procesos, si no que requiere de la introducción de innovaciones, por ello es primordial que las organizaciones se comprometan y fomenten la cultura en innovación. El incremento de los conocimientos da como resultado el incremento de la producción y la riqueza del mundo a largo plazo. La propiedad privada, el sistema de patentes y de resolución de conflictos basados en reglas son medios que impulsan la innovación (Molina & Conca, 2000) No obstante, las innovaciones tecnológicas no se limitan solo a los grandes avances científicos, sino que abarcan las grandes ideas que involucran hacer un mejor uso de los recursos diversos de una organización, logrando así, la entrega de un mejor producto y mejor precio al cliente (Ahmed, Ramos, Ramos, & Shepherd, 2012)

En este contexto, el interés que la industria aeroespacial ha despertado en los últimos años se deriva porque genera una gran cantidad de tecnología de comunicaciones y otros recursos que no podrían ser producidos por ningún otro sistema. Simboliza la fortaleza tecnológica, el liderazgo y la imaginación y tiene un crecimiento ilimitado, va más allá de la frontera del conocimiento. El espacio no tiene límites (World Future Society, 2007). La continua innovación y al desarrollo de nuevas tecnologías y materiales de vanguardia, están ligados a la industria aeroespacial, lo que genera un nivel considerable de desarrollo económico y social en los países que participan.

## METODOLOGÍA

### Objetivos

Identificar y analizar los elementos/ prácticas relacionadas con la tecnología e innovación y determinar su relación con la competitividad en la industria aeroespacial de Baja California, México.

Objetivos específicos.

Identificar los elementos relacionados con la tecnología e innovación en la industria aeroespacial de Baja California, México.

Analizar los elementos relacionados con la tecnología e innovación, identificados en la industria aeroespacial de Baja California, México.

Determinar el impacto entre los elementos relacionado a la tecnología e innovación y su relación con la competitividad en la industria aeroespacial de Tijuana, Baja California, México.

Tipo de investigación.

El diseño elegido para esta investigación es Experimental y transversal. El método para guiar este investigación será llevada a través de la investigación cuantitativa, en la cual su objetivo o propósito es medir variables y realizar un análisis estadístico (Sampieri, Fernandez, & Baptista, 2010). La investigación aquí presentada es de carácter no exploratorio, con enfoque cuantitativo y descriptivo. Sin embargo también encaja en la investigación correlacional dado que se busca medir el grado en que están relacionadas tres variables. Esta investigación pretende dar cuanta del grado de relación que existe entre la variable independiente innovación y la variable dependiente competitividad. De igual forma, busca conocer la relación entre la variable tecnología y la variable competitividad, independiente y dependiente, respectivamente.

## RESULTADOS

Esta investigación aún no cuenta con resultados debido a que se encuentra en proceso. Sin embargo, el diagnóstico y análisis de la industria aeroespacial permiten visualizar que dicha industria debe adquirir capacidades que la diferencien del resto del país, para incrementar su participación en dicho sector. De acuerdo con el objetivo general, el cual es analizar y diagnosticar a la industria aeroespacial en Baja California, respecto a los factores de innovación y tecnología y su relación con la competitividad, la literatura del arte permite deducir que si existe una relación entre los factores ya mencionados.

# EL SENTIDO DE COMPROMISO COMO ESTRATEGIA PARA LA MOTIVACIÓN EN EL SECTOR INDUSTRIAL DE TIJUANA, BAJA CALIFORNIA, MÉXICO

Adriana- Silva- Padilla, Universidad Autónoma de Baja California  
María Virginia Flores-Ortiz, Universidad Autónoma de Baja California

## RESUMEN

*Como es bien sabido, las industrias son esenciales para cada país puesto que representan la base principal de la economía mundial. Hoy en día son indispensables, incluso, para la vida cotidiana ya que -entre otras cosas- nos brindan satisfactores para nuestras necesidades básicas. A nivel mundial, la industria electrónica es una de las industrias de mayor dinamismo y se encuentra estrechamente vinculada a la continua innovación y al desarrollo de nuevas tecnologías de vanguardia contribuyendo, de manera relevante, al desarrollo económico y social de los países con alta participación. Para México, la industria electrónica es prioritaria para el gobierno no solamente por su contribución a las exportaciones, sino también porque es una importante generadora de empleos. Así, en un mundo tan competitivo y globalizado como el actual, donde la oferta de bienes y servicios se desborda a la orden del día y, donde las descargas publicitarias son cada vez más fuertes, las empresas buscan valores agregados que constituyan un beneficio diferencial para poder obtener cierto margen de distinción con relación a la competencia.*

**PALABRAS CLAVES:** Sentido de Compromiso, Motivación y Estrategia

## THE SENSE OF COMMITMENT AS A STRATEGY FOR MOTIVATION IN THE INDUSTRIAL SECTOR IN TIJUANA, BAJA CALIFORNIA, MEXICO

### ABSTRACT

*As we know, industries are essential for every country. It represents the main base of the world economy furthermore they are essential in everyday life because they provide our basic satisfactors. At a global level, the electronic industry is one of the most dynamic industries and is closely related to the continuous innovation and development of new advanced technologies contributing relevantly to economic and social development of countries with high participation. In Mexico, the electronics industry is a priority for the government not only for its contribution to exports, but also because it is an important generator of jobs. In a competitive world, where the demand of goods and services overflows the agenda, companies should look for added values that constitute a benefit and differentiate themselves to obtain a margin of distinction between their competitors.*

**JEL:** A11, A22, J01, M12, M14, O15

**KEYWORDS:** Sense of Commitment, Motivation and Strategy

## INTRODUCCIÓN

A través del tiempo, hemos observado como algunos estudios psicológicos efectuados en diversas organizaciones han mostrado, por una parte, evidencia de que la satisfacción profesional y el desempeño o

productividad no necesariamente son co-dependientes y, por otro lado, que la actitud hacia el trabajo está directamente relacionada con una evaluación favorable del desempeño de su propio trabajo. Bajo el precepto anterior, el presente intentará identificar el conocimiento existente sobre el sentido de compromiso como estrategia de motivación laboral dentro de un sector específico: el industrial; de modo que, la relevancia del tema radica en la forma de relacionarse de las personas (empleados) con la cultura organizacional que se genera a raíz de dicha interacción.

Si bien, la investigación que se aborda trabajará en resaltar la importancia de una de las principales funciones directivas de toda organización, es decir, motivar a los empleados para que ejecuten el trabajo con altos niveles de desempeño; también hará énfasis en la diferencia entre tener que hacer lo que se debe hacer y, querer hacer lo que se debe, lo cual se identifica a través de lo que comúnmente conocemos como: sentido de compromiso. En términos generales, podemos decir que el compromiso se produce cuando en una persona surge una relación de afecto, un vínculo emocional que le lleva a identificarse con una persona, idea u organización. (Jaramillo, 2005). De esta manera, el concepto de compromiso laboral se visualiza en las empresas como el vínculo de lealtad por el cual el trabajador desea permanecer y sobresalir en la organización debido –lo cual es importante resaltar- a la motivación que refleja de manera implícita en su desarrollo día a día. (Robbins, 2005) Se dice que, en muchas ocasiones, la ventaja competitiva de las organizaciones está personificada por los trabajadores y, ante todo, por el grado de compromiso, profesionalismo y pertenencia que tengan ellos hacia la compañía, sus operaciones y, sus objetivos. Así pues, se entiende entonces que la productividad en el trabajo no sólo depende de un factor, sino de las habilidades de los individuos y del ambiente de trabajo presente en la organización, así como de la motivación para desempeñarse en la misma.

## REVISIÓN LITERARIA

La industria electrónica es una de las industrias de mayor dinamismo a nivel mundial y se encuentra estrechamente vinculada a la continua innovación y al desarrollo de nuevas tecnologías de vanguardia contribuyendo, de manera relevante, al desarrollo económico y social de los países con alta participación. A nivel mundial, se transformó en un sector altamente globalizado y estratégico ya que su participación en los procesos de producción y contenido de los productos fabricados en otros sectores es cada vez mayor. Tal es el caso de la industria automotriz, la de electrodomésticos, instrumentos de medición, maquinaria productiva, equipo médico, equipo fotográfico y de fotocopiado e, incluso, juguetes; su constante y rápida evolución genera externalidades positivas que permiten impulsar continuamente la productividad de las empresas. En la actualidad, la industria electrónica opera en un mercado altamente globalizado y cada vez más especializado; por tanto, las empresas deben competir fuertemente a fin de encontrar los medios que les permitan satisfacer las necesidades de los clientes quienes –de más está decir- cada vez son más exigentes; en consecuencia, los países sedes de las grandes inversiones son aquellos capaces de ofrecer las condiciones que las empresas requieren a través –por mencionar- de la promoción de políticas agresivas. (DGIPAT, 2013).

La industria electrónica mundial creció a tasas elevadas en las últimas décadas y se espera que en el mediano plazo, aunque su crecimiento bajará, lo hará al doble que el ritmo del PIB mundial. En 2012 la producción global de electrónicos fue de 3,432 miles de millones de dólares (mmd). Se estima que para el 2020 el valor de la producción alcance un monto de 5,571 mmd, con una Tasa Media de Crecimiento Anual (TMCA) de 6.2% para el periodo de 2012-2020. (PROMEXICO, 2013). El subsector con mayor producción fue el de semiconductores (1,033 mmd) aunque con la menor tasa de crecimiento (TMCA 2012-2020: 1.0%) de la industria, a diferencia del subsector de audio y video el cual obtuvo la menor producción (426 mmd) con la mayor tasa de crecimiento (TMCA 2012-2020: 9.8%). (PROMEXICO, 2013). Actualmente, la industria electrónica opera en un mercado altamente globalizado y cada vez más especializado, por lo cual las empresas deben competir fuertemente a fin de encontrar los medios que les permitan satisfacer las

necesidades de los clientes, quienes -de más está decir- cada vez son más exigentes y, en consecuencia, los países sedes de las grandes inversiones son aquellos capaces de ofrecer las condiciones que las empresas requieren a través -y, sólo por mencionar- de la promoción de políticas agresivas. (DGIPAT, 2013). La industria electrónica captó 5,493 millones de dólares por Inversión Extranjera Directa (IED) del 2007 al 2012, de los cuales, 78.8% se canalizó en cinco estados, de acuerdo con datos de la Dirección General de Industrias Pesadas y de Alta Tecnología de la Secretaría de Economía. Se trata de Jalisco, el cual concentró 19.8%; Estado de México, con 17.7%; Chihuahua, con 17.3%; Baja California, con 13.4%, y Tamaulipas, con 10.6 por ciento. (DGIPAT, 2013).

Los estados que participan en esta industria se han especializado en algún subsector: Jalisco lo ha hecho en equipos de cómputo; Chihuahua, en equipo de video y telecomunicaciones; Baja California, en circuitos, inductores, conectores, tableros electrónicos, televisores y celulares; el Estado de México, en telecomunicaciones, y Tamaulipas produce también televisores, equipo de cómputo y teléfonos celulares. (Ramírez, 2013) Debemos estar conscientes de que los tiempos cambian y la competencia por el mercado, en consecuencia, modifica los patrones para retener al capital humano, capacitarlo, desarrollar sus habilidades en pos -desde luego- de lograr las metas de producción y productividad que se traduzcan en ventas y números negros. (Jaramillo, 2011). Hoy por hoy, en el ámbito de recursos humanos, la motivación se convierte en una herramienta útil para contrarrestar el decremento de la productividad, el desinterés del trabajo y la aparición de conflictos interpersonales e intergrupales.

La motivación es un concepto fundamental explicativo relacionado con él "por qué" del comportamiento. Los organismos experimentan, constantemente, necesidades o deseos que les impulsan a actuar. Cuando un individuo se ve impedido a alcanzar una meta o evitar alguna consecuencia indeseable, entonces tenemos evidencia de necesidad de motivación. Así pues, para alcanzar mejores niveles de productividad se requiere que los empleados deseen hacer el trabajo (motivación), posean la capacidad para hacer el trabajo (habilidad) y, cuenten con los recursos necesarios (materiales, métodos, equipo, etc.), para poder realizarlo. De esta manera, la importancia del proceso de motivación radica en volver perceptible la deficiencia en la satisfacción de la necesidad que experimentan los trabajadores, y de cómo buscan maneras de satisfacerla, dando lugar a la elección de un comportamiento específico que va dirigido a una meta y que, por ende, en ocasiones afecta el alcance de la misma.

La motivación es una actuación dirigida hacia un objetivo con un fin en particular, lo cual nos da como resultado la satisfacción. Podemos describir a la motivación como una variable por demás compleja en la que intervienen aspectos conscientes, inconscientes, cognitivos y afectivos: una variable que imprime fuerza y direccionalidad al comportamiento humano. La palabra motivación se deriva del latín moveré, que significa, mover. Así como también tiene su raíz en el vocablo latín motum, variación de moveré que significa mover, de donde también se derivan las palabras móvil, motor, emoción y terremoto. Robbins (2005), menciona que la motivación es la voluntad de ejercer altos niveles de esfuerzos hacia las metas organizacionales, condicionados por la habilidad del esfuerzo de satisfacer alguna necesidad individual como la motivación general que concierne al esfuerzo hacia cualquier meta.

La motivación del empleado es fundamental porque es él quien realiza los procedimientos; es quien mejor conoce su puesto de trabajo y la tecnología que utiliza. Hacer partícipes a los trabajadores de un plan ó, de una meta de productividad, es un paso importante para lograr que se alcancen los propósitos de la organización. Es decir, mantener motivados a los trabajadores hace que ellos trabajen por y para la empresa. De igual forma, destaca la cercanía y el sentido de gratitud que ahí se despierta ya que en ella han crecido puesto que les han ayudado a salir adelante, han pensado en sus familias y se les ha brindado estabilidad. Ahora bien, para que la motivación del personal desencadene en productividad en una empresa – independientemente del tamaño de la misma- hay varios puntos relevantes a considerar, entre los cuales

encontramos: Tratar a cada empleado como persona, acompañarlo en el desarrollo de su plan de vida: brindarle flexibilidad en los horarios y permisos para cumplir con compromisos académicos.

Mejorar las condiciones laborales ofreciendo espacios de trabajo adecuados y fortalecer sus competencias (evaluación, seguimiento, plan de capacitación). Integración emocional y mental de cada equipo de trabajo con la organización: escuchar sus ideas y propuestas para que los empleados tengan la oportunidad de participar en la toma de decisiones. nDesarrollar sentido de compromiso: este permite ver que el crecimiento de la organización influye directamente en la prosperidad personal. Ofrecer reconocimientos a las personas cuando sea necesario: ejemplo de ellos son los memorandos de reconocimiento, permisos remunerados, bonificación si el cumplimiento de objetivos financieros lo permite, detalles sencillos en fechas especiales, entre otros.

Sin duda alguna, todos estos puntos resultan por demás importantes, sin embargo, en lo que refiere a compromiso y sentido de pertenencia de los empleados hacia la empresa, se debe tener presente que estos son factores tan valiosos que pueden llegar a marcar la diferencia, incluso, con respecto a los competidores. (Jaramillo, 2011) Con base en lo anterior, se entiende entonces que el compromiso del empleado no se limita a la satisfacción individual con el trabajo sino que, también, tiene un vínculo con el desempeño organizacional constituyendo con ello, su característica diferencial. Así pues, podemos decir que la voluntad de permanencia de un empleado en la empresa y el esfuerzo discrecional que está dispuesto a hacer (dar un poco más: el extra), dependerá de la percepción que tiene acerca de lo que recibe en su trabajo. En ese sentido, cada vez es más frecuente observar que la cultura organizacional se constituye en un nuevo paradigma y, por lo tanto, en una interpretación diferente de la organización que permite su comprensión desde otra perspectiva. Cabe mencionar que el concepto de “compromiso” se revitaliza a raíz de los procesos de globalización y que, por consecuencia, se desarrolla un nuevo modelo tecno-económico, basado en el conocimiento, la tecnología y la información.

En un enfoque realista, el considerar a la gestión del compromiso como un valor intangible cuyos efectos repercuten directamente en los principales valores tangibles de la empresa; es decir: la productividad, desempeño, ausentismo, rotación, etc., representa -o debiera representar- el centro de atención, de toda organización. (Vázquez, 2010) Constantemente se escucha que uno de los mejores predictores del desempeño y de la contribución del capital humano en la empresa es el compromiso organizacional. Sin embargo, entender que el gestionar dicho compromiso significa implantar acciones y herramientas útiles con la intención de conseguir una fuerza laboral con un alto grado de rendimiento y de compromiso con el proyecto de empresa, representa tarea fundamental para la organización.

Algunos estudios señalan que el sentido de compromiso conforma el ciento por ciento del desempeño del empleado y que, además, representa el 70% del funcionamiento de la empresa (Jaramillo, 2011). Otros más, aseguran que el compromiso que un empleado desarrolle frente a la compañía es una gran ayuda para el logro de las tareas individuales y de los objetivos de la organización. Lo que es seguro es que, la retroalimentación del desempeño de los empleados –por favorable o negativa que esta resulte-, puede llegar a provocar que los empleados hagan ajustes en la actitud hacia el trabajo, originando esto una percepción distinta de su desempeño. Con frecuencia, la productividad sobresaliente que es recompensada en forma equitativa puede conducir a la satisfacción del empleado y a su sentir de compromiso con la organización, siendo a su vez esta percepción la que genera una actitud positiva hacia el trabajo que, generalmente, se traduce en mayor productividad provocando en consecuencia una espiral de satisfacción creciente. Considerando el punto anterior, se puede decir que los empleados que no se identifican con lo que hacen; que no se identifican con la empresa, que hablan mal de los jefes o del producto, se convierten en líderes negativos y, peor aún, se convierten en multiplicadores de una mala imagen de la organización. Por el contrario, si un trabajador está convencido que la compañía es buena y que le da beneficios, es una persona que realmente luchará en pro de las metas de la empresa, sumándose al entender de que lo que necesitan las organizaciones es que su fuerza laboral esté unida y trabaje en equipo. (Jaramillo, 2011).

Se debe tener presente que algunas de las estrategias a considerar por parte de la organización, a fin de mejorar los índices de calidad y de productividad -entre otros indicadores-, dependerán de la gente que trabaja en las mismas. Por tanto, la habilidad de motivar a los empleados para conseguir la mejora en cualquiera de los rubros que así le requiera la empresa radicarán -en gran medida- en el entendimiento del comportamiento humano ante una relación laboral. El nivel y el tipo de compromiso de los empleados inciden tanto en la voluntad de permanencia como en el esfuerzo que el empleado está dispuesto a hacer para aumentar su esfuerzo y nivel de contribución en la organización.

Diferentes estudios ponen de manifiesto que las empresas con trabajadores muy comprometidos tienen una media del 29% de mayor beneficio, un 50% más de clientes leales y un 44% más de posibilidades de dar la vuelta a unos resultados negativos que las empresas con trabajadores menos involucrados / satisfechos. (Jaramillo, 2011). Por lo tanto Robbins (2005), define el compromiso como una actitud que se expresa como el vínculo psicológico del empleado hacia la empresa, lo cual hace que sea poco probable que el empleado abandone la organización. Este vínculo psicológico se puede alcanzar mediante tres componentes: Compromiso afectivo. (Deseo) identificación psicológica del colaborador con los valores y la filosofía de la empresa. El empleado muestra fuerte convicción y aceptación de los objetivos y valores de la organización, disposición de ejercer un esfuerzo en beneficio de la organización, preocupación por los problemas de la empresa y fuerte deseo de permanecer en ella.

Compromiso de continuidad, (Necesidad) el apego que tiene el trabajador con la empresa es de carácter material. Su continuidad depende de la percepción que tiene en relación con lo que recibe del trabajo, los costes personales que le supone el trabajo y los costes añadidos al abandono de la empresa (estado Civil, hijos, edad o tiempo trabajado en la organización, nivel educativo, capacitación, estado del mercado laboral). Compromiso normativo. (Moral) sentimiento de lealtad a la empresa motivado por presiones de tipo cultural o familiar. Así entonces, queda claro que en la actualidad, no sólo los recursos financieros, tecnológicos o materiales habrán de representar los valores de una compañía; sino que por el contrario, elementos como la información, la comunicación y la gente deben hacer parte de las fortalezas de la organización. Finalmente, podemos decir que, en muchas ocasiones, la ventaja comparativa estará personificada por los trabajadores y, ante todo, por el grado de compromiso, profesionalismo y pertenencia que tengan hacia la compañía, sus operaciones y objetivos.

Para efectos de realizar la presente investigación se utilizara el Instrumento de medición *Work Environment Scale*(WES) de Moos (1974) que contempla las siguientes dimensiones: a) Implicación. Esta dimensión mide hasta qué punto los empleados se sienten implicados en su trabajo. b) Cohesión. Esta dimensión se basa en las relaciones de amistad y apoyo en que viven los trabajadores entre sí. c) Apoyo. Esta dimensión se refiere al apoyo y el estímulo que da la dirección a sus empleados. d) Autonomía. Este factor se refiere al grado en que la organización anima a sus trabajadores a ser autónomos y a tomar sus decisiones. e) Organización. Este elemento se refiere al punto en que el clima estimula la planificación y la eficacia en el trabajo. f) Presión. Esta dimensión se basa en la presión que ejerce la dirección sobre los empleados para que se lleve a cabo el trabajo. g) Claridad. Esta dimensión mide hasta qué punto los reglamentos y las políticas se explican claramente a los trabajadores. h) Control. Este factor se refiere a los reglamentos y a las presiones que puede utilizar la dirección para controlar a los empleados. i) Innovación. Este rasgo mide la importancia que la dirección puede dar al cambio y a las nuevas formas de llevar a cabo el trabajo. j) Comodidad. Esta dimensión hace referencia a los esfuerzos que realiza la dirección para crear un ambiente físico sano y agradable para sus empleados.

## MÉTODO

Mediante técnicas específicas es posible medir la motivación del personal de una empresa en un determinado tiempo y lugar. En este proyecto se aplica el modelo *Work Environment Scale* (WES) para

medir la motivación de personal en una empresa dedicada al ensamble de productos electrónicos. El enfoque de este estudio es de tipo cuantitativo, con un alcance descriptivo y correlacional. El diseño es no experimental y de corte transversal.

### Justificación

El proceso de motivación en el que los trabajadores experimentan la deficiencia en la satisfacción de una necesidad, y de cómo buscan maneras de satisfacerla, dando lugar a la elección de un comportamiento específico que va dirigido a una meta, representan la justificación del presente trabajo de investigación. Se pretende corroborar el hecho de que para determinar el sentido de compromiso como estrategia de la motivación en el Sector industrial de Tijuana, Baja California, México, se requiere que los empleados deseen hacer el trabajo, es decir que se encuentren motivados, que tengan la capacidad y habilidad para hacer el trabajo contando con los recursos necesarios tales como materiales, métodos y equipo para poder realizarlo.

### Muestra

Se realizará un censo a 77 empleados, en los distintos departamentos en relación al número total de empleados de la empresa Electric S.A. de C.V. en la ciudad de Tijuana, Baja California, México. A los empleados se les aplicará un cuestionario de 36 preguntas para identificar el sentido de compromiso como estrategia de la motivación, utilizando el instrumento *Work Environment Scale* (WES) de Moos (1974), utilizando una escala de *lickert*. Se elaboró una base de datos en SPSS y se están aplicando las encuestas para realizar la prueba piloto y validar el instrumento a través del *alpha de cronbach*. Una vez validado el instrumento se iniciará con las encuestas a todos los sujetos de estudio y posteriormente se realizará el respectivo análisis y su interpretación. Se procederá con la realización de los cuadros y gráficos que permitirán determinar el sentido de compromiso como estrategia de la motivación en el Sector industrial de Tijuana, Baja California, México

### Objetivo General

Determinar el sentido de compromiso como estrategia de la motivación en el Sector industrial de Tijuana, Baja California, México

### Objetivo Específico

Determinar si la implicación, cohesión, apoyo, autonomía, organización, presión, claridad, control, innovación y comodidad inciden en el sentido de compromiso como estrategia de la motivación en el Sector industrial de Tijuana, Baja California, México.

## **RESULTADOS**

Hasta el momento la investigación se encuentra en proceso como se menciona anteriormente en el apartado del método encontrándose en la fase de las encuestas para validar el instrumento, por lo tanto se elaboró una base de datos en SPSS a través del *alpha de cronbach*. Una vez validado el instrumento se iniciará con las encuestas a todos los sujetos de estudio y posteriormente se realizará el respectivo análisis y su interpretación. Se procederá con la realización de los cuadros y gráficos que permitirán determinar el sentido de compromiso como estrategia de la motivación en el Sector industrial de Tijuana, Baja California, México.

# RESPONSABILIDAD DEL AUDITOR ANTE EL FRAUDE EMPRESARIAL

Miguel Ángel Villacorta Hernández, Universidad Complutense de Madrid

## RESUMEN

*Este trabajo se centra en observar la responsabilidad del auditor frente al fraude, teniendo en cuenta el modo en que las NIAs se ocupan de ello. El método es el estudio de las NIAs que regulan la responsabilidad del auditor frente al fraude. La conclusión fundamental es que los auditores deben incrementar su trabajo, y documentar muchos más aspectos, de los que generalmente recoge, para cumplir correctamente con lo establecido en la NIA 240.*

**PALABRAS CLAVE:** Delito, Auditoría, NIA

## AUDITOR'S RESPONSIBILITY TO CORPORATE FRAUD

### ABSTRACT

*This paper focuses on observing the auditor's responsibility to fraud, given how the ISAs deal with it. The method is the study of ISAs governing auditor liability against fraud. The key finding is that auditors should increase its work, and document many more aspects of which generally collected to properly fulfill the provisions of ISA 240.*

**JEL:** M42

**KEYWORDS:** Crime, Auditing, NIA

## INTRODUCCIÓN

La responsabilidad del auditor frente al fraude empresarial ha sido uno de los temas más controvertidos que han acaecido en la historia de la auditoría de cuentas, tanto para la profesión de auditoría como para los usuarios de la información contable (Benau y Maestro, 2012: 46). El denominador común de los escándalos financieros (Enron, Parmalat,...) es la utilización de prácticas contables destinadas a falsear los resultados del negocio, acompañados por informes limpios. La responsabilidad del auditor ante el fraude se ha visto modificado por las modificaciones en algunas normas técnicas de auditoría (Normas Internacionales de Auditoría- NIA) emitidas por la IAASB (*International Auditing and Assurance Standards Board*), de la IFAC (*International Federation of Accountants*). Las NIA tienen una estructura determinada, integrada por las secciones: «Introducción», «Objetivo», «Definiciones», «Requerimientos» y «Guía de aplicación y otras anotaciones explicativas». Las NIAs que se ocupan de la responsabilidad del auditor ante el fraude es la 240, aunque hay que tener en cuenta su complemento en la 200 y 720. La Norma Internacional de Auditoría (NIA) 240, “Responsabilidades del auditor en la auditoría de estados financieros con respecto al fraude”, es la norma fundamental que se ocupa de las responsabilidades que tiene el auditor con respecto al fraude en la auditoría de estados financieros.

### Rasgos Definitorios

La NIA 240 recoge algunos aspectos novedosos: Pone al fraude en el centro de la actuación del auditor, Establece un nuevo concepto de fraude

Establece un nuevo objetivo del trabajo del auditor frente al fraude, Establece la presunción de riesgo de fraude relativo al reconocimiento de ingresos, Establece el concepto de riesgo significativo, Obliga a establecer procedimientos de valoración del riesgo y de actividades relacionadas para conocer mejor el sistema de control interno de la entidad y su entorno, Obliga al auditor a identificar y valorar los riesgos de incorrección material debida a fraude, Obliga a realizar una discusión entre los miembros del equipo del encargo poniendo especial énfasis en como los estados financieros pueden estar expuestos a incorrecciones materiales debidas a fraudes. La discusión entre los miembros del equipo del encargo debe servir para que los miembros más del equipo del encargo puedan compartir sus conocimientos sobre cómo los estados financieros pueden estar expuestos a incorrecciones materiales; igualmente puede ayudar al auditor a escoger los miembros del equipo del encargo que aplicarán determinados procedimientos de auditoría. El objetivo es que esta discusión sea un buen método para reforzar la detección de los fraudes entre los miembros del equipo, y una buena oportunidad para que los miembros menos experimentados puedan aprender y compartir experiencias con aquellos que tienen una mayor experiencia en la materia y poder aplicar de este modo los conocimientos adquiridos en futuras auditorías.

Obliga a documentar más información en los papeles de trabajo: control interno, evaluación del riesgo, monitorización, información y comunicación, y actividades de control, Obliga a realizar pruebas sobre los asientos del libro diario, Obliga a realizar entrevistas con Dirección, Administradores/Consejeros, Auditoría interna y otros, Obliga a solicitar manifestaciones específicas a la Dirección.

La NIA 240 conceden una mayor importancia a la detección de incorrecciones cuando detalla el papel del auditor como responsable de la detección del fraude y errores significativos y lo vincula a la obtención de una seguridad razonable de que los estados financieros en su conjunto estén libres de incorrecciones materiales debido a fraude o error. Al incluir el término seguridad razonable (“...un nivel de seguridad alto, aunque no absoluto) está dejando claro que el auditor no es responsable de encontrar todas las incorrecciones que se hayan podido cometer en los estados financieros de la entidad auditada debido a la existencia del riesgo inherente a toda auditoría. El concepto generalizado de fraude no es equivalente al contemplado en la NIA 240. La definición de la RAE presenta tres acepciones sobre un mismo término: (a) Acción contraria a la verdad y a la rectitud, que perjudica a la persona contra quien se comete, (b) Acto tendente a eludir una disposición legal en perjuicio del Estado o de terceros, y (c) Delito que comete el encargado de vigilar la ejecución de contratos públicos, o de algunos privados, confabulándose con la representación de los intereses opuestos. Por su parte, la consideración de fraude de la NIA 240 se limita exclusivamente a dos hechos. Desde el punto de vista del auditor, son relevantes dos tipos de incorrecciones intencionadas: Información financiera fraudulenta:

manipulación, falsificación o alteración de registros contables o documentación soporte.  
omisión intencionada de hechos, transacciones o información; y  
aplicación intencionada errónea de algunos principios contables

*Apropiación indebida de activos:* La definición de la NIA es mucho más concreta. Deja fuera de su ámbito gran parte del posible fraude ocupacional (el que afecta a la empresa por parte de su propio personal), que es el que intenta regular. No incluye como relevante el tercer grupo del fraude ocupacional, definido por el ACFE: la Corrupción. Este organismo considera que existe corrupción cuando un empleado o un miembro de la organización hace un uso incorrecto de su influencia en una transacción mercantil de una manera ilegal y en contra de su deber hacia la organización para obtener un beneficio ilícito de manera directa o indirecta (ACFE: 2013). Por tanto, la definición de la NIA excluye Conflictos de intereses, Sobornos, Regalos ilegales y Extorsión económica.

Como base para la opinión del auditor, las NIA requieren que el auditor obtenga una seguridad razonable de que los estados financieros en su conjunto están libres de incorrección material, debida a fraude o error. Las NIA requieren que el auditor aplique su juicio profesional y mantenga un escepticismo profesional durante la planificación y ejecución de la auditoría y, entre otras cosas que identifique y valore los riesgos de incorrección material, debida a fraude o error, basándose en el conocimiento de la entidad y de su entorno, incluido el control interno de la entidad. Para la NIA 240, el auditor no es responsable de determinar si se ha producido fraude; el auditor es responsable de aplicar unos procedimientos para afirmar que no hay fraudes significativos. Lo que es indudable es que la nueva legislación establece un procedimiento de auditoría más amplio, que supondrá más carga de trabajo para el profesional auditor.

### Características del Fraude

Las incorrecciones en los estados financieros pueden deberse a fraude o error. El factor que distingue el fraude del error es que la acción subyacente que da lugar a la incorrección de los estados financieros sea o no intencionada (NIA 240: párrafo 2). Los errores son, por tanto, involuntarios errores aritméticos o de transcripción en los registros y datos contables, inadvertencia o interpretación incorrecta de hechos, o la aplicación incorrecta de principios y normas contables. La NIA 240 se centra exclusivamente en el fraude. Aunque “fraude” es un concepto jurídico amplio, a los efectos de las NIA al auditor le concierne el fraude que da lugar a incorrecciones materiales en los estados financieros. Para el auditor son relevantes dos tipos de incorrecciones intencionadas: las incorrecciones debidas a información financiera fraudulenta y las debidas a una apropiación indebida de activos. Aunque el auditor puede tener indicios o, en casos excepcionales, identificar la existencia de fraude, el auditor no determina si se ha producido efectivamente un fraude desde un punto de vista legal (NIA 240: párrafo 3). Los párrafos A1-A6 analizan las características del fraude. El fraude, ya consista en información financiera fraudulenta o en apropiación indebida de activos, conlleva la existencia de (a) un incentivo o un elemento de presión para cometerlo, así como la (b) percepción de una oportunidad para llevarlo a cabo y (c) cierta racionalización del acto.

Puede existir un incentivo o un elemento de presión para proporcionar información financiera fraudulenta cuando la dirección está presionada, desde instancias internas o externas a la entidad, para alcanzar un objetivo previsto (y quizá poco realista) de beneficios o de resultado financiero, especialmente cuando las consecuencias de no alcanzar los objetivos financieros pueden ser significativas para la dirección. Del mismo modo, algunas personas pueden verse incentivadas a realizar una apropiación indebida de activos, por ejemplo, por el hecho de vivir por encima de sus posibilidades. La percepción de una oportunidad para cometer fraude puede darse cuando una persona considera que el control interno puede eludirse; por ejemplo, por encontrarse esa persona en un cargo de confianza o porque conoce deficiencias específicas en el control interno. Las personas pueden llegar a racionalizar la comisión de un acto fraudulento. Algunas personas tienen una actitud, un carácter o un conjunto de valores éticos que les permiten cometer un acto deshonesto de forma consciente e intencionada. Pero, también personas que en otra situación serían honestas, pueden cometer fraude en un entorno que ejerza suficiente presión sobre ellas.

### Información Financiera Fraudulenta

La información financiera fraudulenta implica incorrecciones intencionadas, incluidas omisiones de cantidades o de información en los estados financieros con la intención de engañar a los usuarios de estos. Esto puede ser consecuencia de intentos de la dirección de manipular los resultados para engañar a los usuarios de los estados financieros influyendo en su percepción de los resultados y de la rentabilidad de la entidad. Dicha manipulación de los resultados puede empezar por acciones pequeñas o indebidos ajustes de las hipótesis y cambios en los juicios de la dirección. Los elementos de presión y los incentivos pueden llevar a que estas acciones aumenten hasta el punto de dar lugar a información financiera fraudulenta. Una

situación así puede producirse cuando la dirección, debido a las presiones a las que está sometida para cumplir las expectativas del mercado, o al deseo de maximizar una remuneración basada en resultados, adopta, de forma intencionada, posturas que dan lugar a información financiera fraudulenta mediante la introducción de incorrecciones materiales en los estados financieros. En algunas entidades, la dirección puede estar motivada para infravalorar los resultados en una cantidad material a fin de minimizar los impuestos, o sobrevalorarlos con el objetivo de obtener financiación bancaria (NIA 240: párrafo A2). La información financiera fraudulenta puede lograrse mediante (NIA 240: párrafo A3):

La manipulación, la falsificación o la alteración de los registros contables o de la documentación de soporte a partir de los cuales se preparan los estados financieros.

El falseamiento o la omisión intencionada de hechos, transacciones u otra información significativa en los estados financieros.

La aplicación intencionadamente errónea de principios contables relativos a cantidades, a la clasificación, a la forma de presentación o la revelación de la información.

La información financiera fraudulenta a menudo implica que la dirección eluda controles. La dirección puede cometer fraude eludiendo los controles mediante la utilización de técnicas como las siguientes (NIA 240: párrafo A4):

*Registrando asientos ficticios en el libro diario, especialmente en fechas cercanas al cierre de un periodo contable, con el fin de manipular los resultados operativos o lograr otros objetivos. Ajustando indebidamente algunas hipótesis y cambiando los juicios en que se basa la estimación de saldos contables. Omitiendo, anticipando o difiriendo el reconocimiento en los estados financieros de hechos y transacciones que han ocurrido durante el periodo. Ocultando, o no revelando, hechos que podrían afectar a las cantidades registradas en los estados financieros. Realizando transacciones complejas de forma que falseen la situación financiera o los resultados de la entidad. Alterando los registros y las condiciones relativos a transacciones significativas e inusuales.*

#### Apropiación Indevida

La apropiación indebida de activos implica la sustracción de los activos de una entidad. A menudo, se realiza por empleados en cantidades relativamente pequeñas. Sin embargo, la dirección también puede estar implicada, al tener, generalmente, una mayor capacidad para disimular u ocultar las apropiaciones indebidas de forma que sean difíciles de detectar. La apropiación indebida de activos puede lograrse de diversas formas, entre otras (NIA 240: párrafo A5):

Mediante una malversación de ingresos (por ejemplo, apropiación indebida de ingresos procedentes de cuentas a cobrar o desvío de importes recibidos por cuentas canceladas contablemente hacia cuentas bancarias personales), Por medio de la sustracción de activos físicos o de propiedad intelectual (por ejemplo, sustracción de existencias para uso personal o para su venta; sustracción de material de desecho para su reventa; colusión con la competencia al revelar datos tecnológicos a cambio de un pago). Haciendo que una entidad pague por bienes o servicios que no ha recibido (por ejemplo, pagos a proveedores ficticios, pago por los proveedores de comisiones ilegales a los agentes de compras de la entidad a cambio de sobrevalorar los precios, pagos a empleados ficticios), Utilizando los activos de la entidad para uso personal (por ejemplo, como garantía de un préstamo personal o de un préstamo a una parte vinculada). La apropiación indebida de activos, a menudo, va acompañada de registros o documentos falsos o que inducen a error, a fin de ocultar que los activos han desaparecido.

### Responsabilidad En la Prevención y Detección del Fraude

Los responsables del gobierno de la entidad y la dirección son los principales responsables de la prevención y detección del fraude. Es importante que la dirección, supervisada por los responsables del gobierno de la entidad, ponga gran énfasis en la prevención del fraude, lo que puede reducir las oportunidades de que éste se produzca, así como en la disuasión de dicho fraude, lo que puede persuadir a las personas de no cometer fraude debido a la probabilidad de que se detecte y se sancione. Esto implica el compromiso de crear una cultura de honestidad y comportamiento ético, que puede reforzarse mediante una supervisión activa por parte de los responsables del gobierno de la entidad. La supervisión por los responsables del gobierno de la entidad incluye prever la posibilidad de elusión de los controles o de que existan otro tipo de influencias inadecuadas sobre el proceso de información financiera, tales como intentos de la dirección de manipular los resultados con el fin de influir en la percepción que de ellos y de la rentabilidad de la empresa tengan los analistas (NIA 240: párrafo 4).

### Responsabilidad del Auditor

El auditor que realiza una auditoría es responsable de la obtención de una seguridad razonable de que los estados financieros considerados en su conjunto están libres de incorrecciones materiales debidas a fraude o error. Debido a las limitaciones inherentes a una auditoría, existe un riesgo inevitable de que puedan no detectarse algunas incorrecciones materiales en los estados financieros, incluso aunque la auditoría se haya planificado y ejecutado adecuadamente (NIA 200: párrafo A51). Como se indica en la NIA 200 (párrafo A51), los posibles efectos de las limitaciones inherentes son especialmente significativos en el caso de incorrecciones debidas a fraude. El riesgo de no detectar incorrecciones materiales debidas a fraude es mayor que el riesgo de no detectar las que se deben a error. Esto se debe a que el fraude puede conllevar planes sofisticados para su ocultación, tales como la falsificación, la omisión deliberada del registro de transacciones o la realización al auditor de manifestaciones intencionadamente erróneas. Dichos intentos de ocultación pueden ser aún más difíciles de detectar cuando van acompañados de colusión (pacto ilícito entre dos personas para perjudicar a un tercero). La colusión puede inducir al auditor a considerar que la evidencia de auditoría es convincente, cuando, en realidad, es falsa.

La capacidad del auditor para detectar un fraude depende de factores tales como la pericia del que lo comete, la frecuencia y el alcance de la manipulación, el grado de colusión, la dimensión relativa de las cantidades individuales manipuladas y el rango jerárquico de las personas implicadas. Si bien el auditor puede ser capaz de identificar la existencia de oportunidades potenciales de cometer un fraude, puede resultarle difícil determinar si las incorrecciones en aspectos en los que resulta necesario ejercer el juicio, tales como las estimaciones contables, se deben a fraude o error (NIA 240: párrafo 6). Por otra parte, el riesgo de que el auditor no detecte una incorrección material debida a fraude cometido por la dirección es mayor que en el caso de fraude cometido por empleados, porque la dirección normalmente ocupa una posición que le permite, directa o indirectamente, manipular los registros contables, proporcionar información financiera fraudulenta o eludir los procedimientos de control diseñados para prevenir que otros empleados cometan fraudes de ese tipo (NIA 240: párrafo 7).

En el proceso de obtención de una seguridad razonable, el auditor es responsable de mantener una actitud de “escepticismo profesional” durante toda la auditoría, teniendo en cuenta la posibilidad de que la dirección eluda los controles y reconociendo el hecho de que los procedimientos de auditoría que son eficaces para la detección de errores pueden no serlo para la detección del fraude. Los requerimientos de la NIA 240 se han diseñado para facilitar al auditor la identificación y valoración de los riesgos de incorrección material debida a fraude, así como el diseño de procedimientos destinados a detectar dicha incorrección (NIA 240: párrafo 8).

## CONCLUSIONES

Para aplicar correctamente la NIA 240, los auditores deben incrementar su trabajo, y documentar muchos más aspectos de los que generalmente recoge:

Pone al fraude en el centro de la actuación del auditor, Establece un nuevo concepto de fraude Establece un nuevo objetivo del trabajo del auditor frente al fraude , Establece la presunción de riesgo de fraude relativo al reconocimiento de ingresos, Establece el concepto de riesgo significativo, Obliga a establecer procedimientos de valoración del riesgo y de actividades relacionadas para conocer mejor el sistema de control interno de la entidad y su entorno, Obliga al auditor a identificar y valorar los riesgos de incorrección material debida a fraude, Obliga a documentar más información en los papeles de trabajo: control interno, evaluación del riesgo, monitorización, información y comunicación, y actividades de control, Obliga a realizar pruebas sobre los asientos del libro diario, Obliga a realizar entrevistas con Dirección, Administradores/Consejeros, Auditoría interna y otros, Obliga a solicitar manifestaciones específicas a la Dirección, Obliga a realizar una discusión entre los miembros del equipo del encargo poniendo especial énfasis en cómo los EF pueden estar expuestos a incorrecciones materiales debidas a fraudes , Especial relevancia tienen dos aspectos: la conciliación con los programas de prevención de delitos y la discusión entre los miembros del equipo de auditoría. En primer lugar, es necesario que las NIAs definan cómo se complementan, tanto para el negocio de la auditoría, como para la actuación del auditor, los “programas de autorregulación corporativa para prevenir el delito”.

En segundo lugar, la discusión entre los miembros del equipo del encargo debe servir para que los miembros del equipo del encargo puedan compartir sus conocimientos sobre cómo los EF pueden estar expuestos a incorrecciones materiales; igualmente puede ayudar al auditor a escoger los miembros del equipo del encargo que aplicarán determinados procedimientos de auditoría. El objetivo es que esta discusión sea un buen método para reforzar la detección de los fraudes entre los miembros del equipo, y una buena oportunidad para que los miembros menos experimentados puedan aprender y compartir experiencias con aquellos que tienen una mayor experiencia en la materia y poder aplicar de este modo los conocimientos adquiridos en futuras auditorías.

# POTENCIALIDAD PARA QUE LOS BUQUES DE ULTIMA GENERACION ATRAQUEN EN EL PUERTO DE MANZANILLO COLIMA

Germán Israel Silva Aguilar, Universidad de Colima

Manuel Rubio Maldonado, Universidad de Colima

Oscar Bernardo Reyes Real, Universidad de Colima

## RESUMEN

*El proyecto de investigación que se presenta tiene como objeto de investigación determinar la potencialidad para el atraque de buques de última generación en el Puerto de Manzanillo, Colima. Se enfoca en el potencial con el que cuenta el puerto para recibir buques portacontenedores de última generación, con la finalidad de conocer si el puerto de Manzanillo Colima cuenta con las expectativas necesarias para poder formar parte de las rutas de estos buques. Se efectuó una investigación de campo encuestando a empresas, tales como: agencias aduanales, líneas navieras y terminales especializadas con movimiento de carga a través de contenedores que son las que más intervienen en el proceso. Con esta investigación se logró identificar y analizar las principales ventajas y desventajas con las que cuenta el puerto para el atraque de los buques de última generación. Los principales hallazgos encontrados son que el calado será un impedimento para el atraque de estos buques, la ineficiencia en el despacho aduanero y la falta de almacenamiento en el puerto, entre otras problemáticas que se mencionaran dentro del contexto. En consecuencia a los resultados obtenidos se clasificaron alternativas de solución para que buques de última generación puedan atracar en el puerto de Manzanillo Colima en 5 áreas diferentes: 1) infraestructura portuaria, 2) servicios confiables y de calidad de las empresas, 3) impacto económico, 4) daño ecológico, y 5) eficiente despacho de las mercancías.*

**PALABRAS CLAVE:** Potencialidad, Buques, Puerto, Atraque, Contenedor, Carga

## POTENTIAL FOR LAST GENERATION SHIPMENTS TO DOCK IN MANZANILLO COLIMA HARBOUR

### ABSTRACT

*The research project presented it focuses on the potential that the port has for last generation container shipments, in order to know if Manzanillo Colima port has the expectation needed to be part of the maritime routes for that kind of vessels. We made a field research, surveying companies such as custom agencies, steam shipping lines & specialized terminals moving cargo through containers the ones mentioned are the most important inside the processes, with this investigation we can identify and analyze the principal advantages and disadvantages that the port has for docking of last generation shipments. The main results founded that the draft it's an impediment for the berthing of these vessels, the inefficiency in custom clearance and lack of warehouse at the port, among other issues will be mentioned in the context. In consequence of the obtained alternative solutions were classified to let the last generation ships dock in Manzanillo Colima port in five different areas: 1) port infrastructure, 2) reliable and quality services of the companies, 3) economic impact, 4) ecological damage, and 5) efficient clearance of goods.*

## INTRODUCCIÓN

La evolución de los buques portacontenedores ha tenido un significativo incremento gracias a la globalización y a las economías de escala, donde es de suma importancia el estar en constante innovación para la satisfacción de las necesidades actuales de crecimiento y competitividad, las principales líneas navieras optan por incrementar el tamaño de los buques para hacerlos más rápidos y con una capacidad mayor de carga, es difícil saber cuál será el tamaño máximo que alcanzarán los buques pero el crecimiento de estos no se detendrá. Siendo que el sector marítimo es de suma importancia para las sociedades modernas y para el comercio internacional, y tomando en cuenta que el transporte marítimo es el más usado para el movimiento de la carga contenerizada entre los países han emergido los principales cambios tecnológicos y organizacionales que internacionalmente tienen gran importancia las economías de escala y la velocidad con que circulan las mercancías y los equipos de transporte, era de esperar que el dinamismo derivado del uso del contenedor impulsara cambios tecnológicos en las características de los buques. La tendencia a la creación de buques de gran tamaño no se ha detenido en la nueva dinámica del transporte marítimo y multimodal, sólo los puertos mayores podrían captar el volumen de carga suficiente para que la operación de tales navíos sea rentable.

En esos puertos se han construido mega terminales, dotados con equipo especializado de alto rendimiento e instalaciones adecuadas para movimientos masivos. En este momento es difícil establecer el tamaño máximo que alcanzarán los buques. Sin embargo, es evidente que la tendencia hacia el gigantismo no se detendrá en el corto plazo. En virtud de lo anterior, solo los puertos que se encuentran debidamente preparados, dotados de las mejores infraestructuras y los mejores servicios portuarios serán tomados en cuenta en las rutas de estos buques. Por ello, es primordial para el puerto de Manzanillo, Colima cumplir con todos los requerimientos que estos buques necesitan para poder atracar en el puerto. El puerto de Manzanillo, Colima es el puerto con más movimiento de carga contenerizada en el país (Administración Portuaria Integral de Manzanillo, 2013) y es importante que las empresas prestadoras de servicio estén dispuestas a invertir para mejorar su infraestructura para la atención de buques de última generación, realizando un análisis y saber si el potencial de crecimiento de Manzanillo será el suficiente para que este sean integrado como puerto de destino en las rutas de los buques de última generación. En relación al movimiento de carga contenerizada que tiene el puerto de Manzanillo, Colima, registrado en los últimos años, este ha tenido un incremento de hasta 20%, tal como señalan los informes 2011 y 2013 de la propia Coordinación General de Puertos y Marina Mercante, dependiente de la Secretaría de Comunicaciones y Transportes; por lo cual es importante resaltar las actividades que realiza la autoridad portuaria para atender ese incremento de mercaderías y el acondicionamientos de espacio para almacenamiento, maniobras y atraques de buques.

## REVISIÓN LITERARIA

El transporte marítimo internacional es un elemento clave sobre el que se sustenta el proceso de globalización económica y comercial. En efecto, buena parte de las innovaciones tendientes a integrar los flujos de mercancías pertenecientes a cadenas productivas crecientemente fragmentadas y dispersas sobre el planeta, se gestaron originalmente “en el mar” y fueron introducidas en el concierto internacional por las grandes empresas navieras del mundo. Esto no es extraño, si se considera que la mayor parte del comercio internacional se realiza por vía marítima. (Martner Peyrelongue & Moreno Martínez, 2001) Los buques de última generación (séptima) son los denominados ULCS, una nueva clase de buques portacontenedores y 400 metros de eslora que con capacidad superior a los 10,000 TEUS; sin embargo, China Shipping Containers Lines ha anunciado que va a aumentar la capacidad de los cinco barcos de 18.400 Teus que tenía contratados con el astillero de Ulsan (Hyundai Heavy Industries), la intención es hacerlos de 19.000 TEUS.

El primero se espera salga en noviembre 2014 y los otros cuatro en el primer trimestre de 2015.(Marmer, 2014) Esencialmente, los puertos continúan cumpliendo la misión de lugar de intercambio, como lo hicieron en los inicios de la navegación, pero el desarrollo del comercio y el progreso tecnológico han multiplicado sus funciones en número y complejidad. (Pontet Ubal & Silva Domingo, 2009) La revolución tecnológica del contenedor y el desarrollo del intermodalismo, ha dado lugar a una de las tendencias más significativas en el transporte marítimo internacional actual. Se trata del acelerado crecimiento del tamaño y la capacidad de carga de los buques. Dado que en el transporte marítimo internacional, las economías de escala y la velocidad con que circulan las mercancías y los equipos de transporte son elementos muy importantes, era predecible esperar que el dinamismo del contenedor empujara un cambio tecnológico en las características de los buques.(Martner Peyrelongue & Moreno Martínez, 2001). De esta manera, en relación con la nueva etapa del pensamiento económico liberal, la evidencia disponible aconseja a los gobiernos que den una alta prioridad al desarrollo y a la modernización de los medios e instalaciones actuales, y que aumenten la orientación comercial de las infraestructuras. En particular, los puertos marítimos deben de contar con unos servicios eficientes, ya que son el vínculo entre los sistemas de tráfico nacional e internacional.(Freire Seoane & González Laxe, 2003) Ciertos y determinados puertos preparados para el transporte multimodal están captando el mayor volumen de tráfico, lo que les ha permitido configurar una nueva función en lo que respecta a las terminales especializadas en el sentido de que poseen equipo e instalaciones adecuadas para el movimiento masivo y especializado de las mercancías.

Freire Soane y González Laxe (2003), en su obra Economía del transporte marítimo ponderan que en la actualidad todos los países tratan de reducir el tiempo muerto de los buques y el de carga y descarga en los puertos, con el fin de alcanzar situaciones competitivas a nivel internacional. Así mismo con la estandarización de los espacios de carga en los buques portacontenedores, facilita las operaciones de carga y descarga, dando más rapidez y menos tiempo de estancia en puerto.(Marí Sagarra, Martín Mallofré, Rodrigo de Larrucea, & De Souza, 2003) La competitividad portuaria subraya las características que derivan de la integración vertical y de las redes portuarias, a la vez que define el papel de los puertos como agentes y como actores complejos. De esta forma, la terminal portuaria responde a un acuerdo de “exclusividad temporal y espacial” que está dirigido a los siguientes objetivos: a) aumenta la responsabilidad de la terminal sobre los requisitos del buque; b) controla un factor exógeno que influye en los tiempos de tránsito en los puertos; c) permite el aumento del tamaño del buque; d) admite mayores economías de escala y mayores densidades para el transportista; y e) promueve ciclo *hub-and-spoke* en lugar de conexiones directas por medio de la colaboración entre compañías estibadoras y entre compañías navieras. (González Laxe, 2008)

## METODOLOGÍA

Para dar inicio a esta investigación es necesario conocer la infraestructura con la que cuenta en la actualidad el puerto de Manzanillo, Colima. El objetivo principal de la mismas es el de proponer estrategias que permitan la Factibilidad de atraque de los buques de última generación en el puerto de Manzanillo, Colima. Luego entonces, surge la siguiente interrogante: ¿Es adecuada la infraestructura con la que cuenta el puerto de Manzanillo, Colima para el atraque de buques de última generación? Al responder esta pregunta se podrá saber si el puerto de Manzanillo cuenta con la infraestructura adecuada para el atraque de buques de última generación. Para poder atender eficientemente a los buques de última generación es necesario conocer la capacidad operativa del puerto para atender el atraque de los mismos, por lo que se genera la siguiente interrogante ¿es adecuada la capacidad laboral con la que se cuenta para la atención de buques de última generación?. Luego de conocer que podrían atracar buques de última generación en el puerto de Manzanillo, Colima; nos surge la siguiente interrogante.

¿Cuál será el impacto económico que resultara del atraque de los buques de última generación en el puerto de Manzanillo, Colima?. La importancia que tiene la preservación del medio ambiente hace indispensable

realizar la siguiente interrogante ¿Cuál sería el daño ecológico que generaría el atraque de buques de última generación en el puerto de Manzanillo, Colima?. Para que sea posible la recepción de buques de última generación es de suma importancia tener un óptimo despacho de mercancías que no entorpezca el flujo de las mismas por lo que es de suma importancia realizar la siguiente pregunta. ¿Qué tan eficientes son las autoridades aduaneras para realizar un ágil despacho de mercancías? Además de lo anterior, podemos citar como objetivos específicos que pretenden cumplirse con la presente investigación, como son: Definir si la infraestructura portuaria de Manzanillo Colima es la adecuada para que los buques de última generación puedan atracar, evaluar la capacidad con la que cuenta el personal que participa en la atención de los buques de última generación, Identificar el impacto económico que traerá consigo el atraque de buques de última generación en el puerto de Manzanillo Colima, y por último, evaluar la eficiencia del despacho aduanero de mercancías en el puerto de Manzanillo, Colima.

La presente investigación tendrá un enfoque mixto, lo que representan un conjunto de procesos sistemáticos, empíricos y críticos de investigación e implican la recolección y el análisis de datos cuantitativos y cualitativos, así como su integración y discusión conjunta, para realizar inferencias producto de toda la información recabada y lograr un mayor entendimiento del fenómeno bajo estudio. (Hernández Sampieri, Fernández Collado, & Baptista Lucio, 2010) Lo anterior, en virtud de que por una parte se recolectan y analizan datos para dar respuestas a las preguntas de investigación planteadas, auxiliándose para lo anterior de la estadística simple y las mediciones numéricas. Y por otro lado se obtiene información a través de análisis documentales.

Por otra parte, se presenta una recolección de datos sin medición numérica para descubrir o afinar preguntas de investigación en el proceso de interpretación. Tomando en cuenta la delimitación de esta investigación que es la ciudad y puerto de Manzanillo y que el tema a investigar se determinó como población a los Agentes Navieros, Agentes Aduanales y Operadoras Portuarias en el municipio de Manzanillo Colima que es de 33 Navieras en base al directorio de la Asociación de Agentes Navieros A. C., así como 130 Agentes Aduanales conforme al directorio de la Asociación de Agentes Aduanales del Puerto de Manzanillo Colima A. C., y 11 operadoras con fundamento en el anexo 22 apéndice 6 de la Ley Aduanera respectivamente sobre la cual se le realizara el estudio estadístico; por lo que se procedió a determinar la muestra conforme a la siguiente fórmula: (Fischer de la Vega & Navarro Vega, 2000)

$$n = \frac{\sigma^2 N p q}{e^2 (N - 1) + \sigma^2 p q}$$

Dónde:

$\sigma = 1.96$

$N =$  total de población

$p = 50\%$

$q = 50\%$

$He = 5\%$

Debido a que existe un campo de investigación amplio para poder obtener la información deseada, se tomaron los datos por separado de las siguientes empresas prestadoras de servicios:

Navieras

$$n = \frac{1.96^2 * 33 * 0.5 * 0.5}{0.05^2 * (33 - 1) + 1.96^2 * 0.5 * 0.5} = 30$$

Agentes Aduanales

$$n = \frac{1.96^2 * 130 * 0.5 * 0.5}{0.05^2 * (130 - 1) + 1.96^2 * 0.5 * 0.5} = 97$$

Operadoras

$$n = \frac{1.96^2 * 11 * 0.5 * 0.5}{0.05^2 * (11 - 1) + 1.96^2 * 0.5 * 0.5} = 10$$

El muestreo que se llevará a cabo para realizar las entrevistas, encuestas y demás cuestionarios será el muestreo estratificado, que deriva del muestreo aleatorio, en virtud de que es el más adecuado para atender a nuestras preguntas de investigación. La investigación de campo del presente proyecto se realizará mediante encuestas a una muestra de población del total de población existente que son: 33 Navieras en base al directorio de la Asociación de Agentes Navieros A. C., de los cuales fue aplicado el cuestionario a una muestra de 30 Agencias Navieras, así como también se obtienen 130 Agentes Aduanales conforme al directorio de la Asociación de Agentes Aduanales del Puerto de Manzanillo Colima A. C., aplicando a una muestra de 97 Agentes Aduanales y 11 operadoras con fundamento en el anexo 22 apéndice 6 de la Ley Aduanera aplicando a una muestra de 10 Operadoras Portuarias, dando un total de población de 137, para poder obtener información actualizada y real y así capturar un registro de datos importantes para la elaboración del proyecto, Para lograr dicho objetivo se utilizó un cuestionario de 17 preguntas de opción múltiple que ayudaron a conocer si es factible el atraque de buques de última generación en el puerto de Manzanillo, Colima.

## RESULTADOS

Después de haberse realizado la investigación correspondiente, de haberse tabulado y graficado los datos y finalmente haberse realizado el análisis y la respectiva interpretación de los datos se han obtenido los siguientes resultados: Se puede observar que de acuerdo a las 137 encuestas que se realizaron, el 66% opina que el puerto de Manzanillo, Colima no está preparado para atender buques de última generación.

Por lo anterior mencionado el principal problema por el cual el puerto de Manzanillo Colima no podría recibir buques de última generación con un 38% es el calado, pero sin marcar una gran diferencia lo sigue con un 28% el almacenamiento y con un 22% insuficiencia en el número de grúas pórtico, dejando rezagado con 12% al avituallamiento. Aunado a los aspectos negativos el 82% de los usuarios opinan que las posiciones de atraque con las que cuenta el puerto de Manzanillo Colima no son las suficientes para la atención de estos buques.

Así como también el 44% considera que se debería modificar las facilidades de acceso marítimas, terrestres y ferroviarias sin olvidar a los servicios portuarios que juegan un papel preponderante en la operación portuaria. Sin embargo, algo de suma importancia que define el tiempo de estadía de las mercancías es el despacho aduanero, donde la percepción de los encuestados en un 38%, dice que el despacho no es factible para la atención de los buques de última generación ya que tarda alrededor de 5 a 6 días. Aun con la percepción negativa de los usuarios, se definen ciertas ventajas competitivas del puerto de Manzanillo, Colima sobre otros puertos mexicanos ya que un 75% opinan que la ubicación geográfica del Puerto de Manzanillo, Colima es de suma importancia para las relaciones comerciales del mismo, y que al atracar buques de última generación existirá un mayor beneficio para las empresas prestadoras de servicios, pero éste, sería colectivo, ya que, al atraque de estos buques y el beneficio de las empresas existirán más empleos.

Donde la percepción de los encuestados indica con un 80% que el personal que más se necesitara contratar será el personal operativo. Para obtener óptimo desempeño de estos nuevos empleados, es necesario que las capacitaciones impartidas por las empresas sean más constantes, puesto que como resultado de la aplicación del cuestionario se detectó que un 61% de los encuestados señalan que actualmente solo se les brinda de una a dos capacitaciones anuales.

Al atracar los buques de última generación en el puerto de Manzanillo, Colima existe una percepción por parte de los usuarios de que existiría una gran afectación ecológica donde surge una gran preocupación ya se tiene la percepción de que las empresas no cuentan con una estrategia para la protección del medio ambiente.

## CONCLUSIONES

Debido al proceso de globalización económica y comercial el transporte marítimo se convirtió en un elemento clave, puesto que el mayor porcentaje de intercambio comercial es realizado por vía marítima, donde las grandes empresas navieras del mundo se vieron obligadas a desarrollar e incrementar el tamaño de los buques así como la implementación de tecnología de última generación en los mismos. Estas tendencias de mega buques no serán detenidas, por lo que solo los puertos dotados con las condiciones físicas, de infraestructura y servicios adecuados, podrán brindar los servicios a estas embarcaciones, de acuerdo con los resultados obtenidos en esta investigación los buques de última generación requieren de una infraestructura sumamente especializada para poder atracar en los puertos.

Actualmente el puerto de Manzanillo, Colima capta el mayor volumen de mercancía a nivel nacional, esto ha traído consigo la modificación de infraestructura y equipos para el movimiento especializado de mercancía contenerizada, tratando de reducir el tiempo en la carga y descarga con el fin de alcanzar situaciones competitivas a nivel nacional. No obstante a lo anterior mencionado el puerto de Manzanillo, Colima aún no se encuentra preparado para la atención de los buques de última generación, ya que el puerto no cuenta con una infraestructura adecuada para la recepción de estos, ya que para poder atender eficaz y eficientemente dichos buques es necesario contar con grandes equipos especializados, como los son: una cantidad de grúas porticas súper post Panamax, para poder realizar la carga o descarga en el menor tiempo posible. Estas naves requieren de un calado mínimo de 16 metros, con el que el puerto de Manzanillo con la entrada en operaciones de la Terminal Especializada de Contenedores II se podrá trabajar para explotar su mayor potencial respecto al dragado del espacio de las terminales especializadas en carga contenerizada. No obstante la infraestructura no es el único problema puesto que existe una deficiencia en las empresas prestadoras de servicios al no mostrar el interés necesario a la capacitación de sus empleados, ya que para poder formar parte de las empresas que prestan servicios en los puertos más competitivos es necesario cumplir las expectativas que se requieren. Un puerto eficiente requiere de infraestructura, superestructura y equipamiento adecuado dedicado y cualificado y con mano de obra motivada y entrenada, sino también buenas comunicaciones y, especialmente, un equipo de gestión.

El crecimiento del puerto de Manzanillo va más allá del potencial del desarrollo que puedan tener las empresas privadas ya que es necesario trabajar conjuntamente con el sector público siendo que para poder recibir estos buques es importante realizar un despacho transparente y eficiente, donde se pudiera llegar a un despacho más rápido.

Cabe señalar que con el atraque de buques de última generación que existirían diversos beneficiarios, en primer término serían las empresas prestadoras de servicios, esto, debido al incremento en el movimiento de la carga contenerizada traerá como consecuencia la necesidad de contratación de nuevo personal para así poder solventar la fuerte carga de trabajo. No es óbice señalar, que el daño ambiental que generara el atraque de estos buques, es un tópico que genero incertidumbre entre los encuestados; ya que se considera que las empresas establecidas en el puerto no cuentan con una estrategia ecológica para ayudar a solventar

dicho daño, el movimiento operativo como el lavado de las bodegas, el desalojo de aguas negras de los barcos ,etc. son situaciones que no se pueden prohibir, pero sería de gran utilidad que las autoridades conjuntamente con las empresas prestadoras de servicios busque una solución eficiente y eficaz.

Entre las amenazas ambientales creadas por las operaciones portuarias en la región figuran las siguientes: sedimentación y otros efectos derivados de la expansión portuaria y actividades de mantenimiento como el dragado; derrames accidentales durante los procesos de carga, descarga y/o almacenamiento, particularmente de materiales peligrosos; la ausencia de planes de contingencia en caso de accidentes. Existen aspectos administrativos que dificultan la consolidación de cadenas de transporte multimodal eficientes en Manzanillo. Tal es el caso de la actuación de instituciones de control y revisión que se muestran poco sensibles a los imperativos del comercio exterior y, por lo tanto, tienen a hacer menos dinámico los flujos de carga. Los mecanismos de inspección deben adecuarse al tiempo de operación normal del barco y de la carga. Por lo tanto, se requiere una coordinación más estrecha entre autoridades federales, autoridades portuarias, agentes de carga, agentes aduanales, operadores de transporte multimodal, transportistas y usuarios para poder cumplir en tiempo las necesidades tanto de control como de despacho de las mercancías, evitando los flujos de comercio exterior y, en última instancia, la competitividad del puerto se vean afectados.

## RESUMEN

*Las pequeñas y medianas empresas (PYMES) constituyen el sostenimiento mas importante dentro de la economía de los municipios en México, por su alto impacto en la generación de empleos y en la producción. De acuerdo con datos estadísticos en México existen aproximadamente 4 millones 15 mil unidades empresariales, de las cuales 99.8% son MIPYMES que generan 52% del Producto Interno Bruto (PIB) y 72% del empleo en el país. Por la importancia de las PYMES, es importante instrumentar acciones para mejorar el entorno económico y apoyar directamente a las empresas, con el propósito de crear las condiciones que contribuyan a su establecimiento, desarrollo y consolidación. Hoy en día se puede observar que no se ve la iniciación de nuevas empresas por esta serie de trabas con las que se encuentran los empresarios por la falta de conocimiento de cómo realizar los procedimientos pertinentes para su emprendimiento e ingreso al mercado económico municipal.*

**PALABRAS CLAVE:** Economía, Finanzas, Emprendedurismo, Mipymes

## ABSTRACT

*The small and medium companies (SMES) constitute the maintenance mas important inside the economy of the municipalities in Mexico, for his high place I affect the generation of employments and the production. In agreement with statistical information in Mexico 4 exist approximately million 15 thousand managerial units, of which 99.8 % is MIPYMES that generate 52 % of the Internal Brute Product (GDP) and 72 % of the employment in the country. For the importance of the SMES it is important to do actions to improve the economic environment and to rest directly to the companies, with the intention of creating the conditions that they contribute to his establishment, development and consolidation. Nowadays it is possible to observe that one does not see the initiation of new companies for this series of hobbles which the businessmen meet for the lack of knowledge of how realizing the pertinent procedures for his undertake and revenue to the economic municipal market.*

## INTRODUCCIÓN

Hoy en día las pequeñas y medianas empresas familiares están luchando por mantenerse en el mercado comercial e industrial. Para esto, deben consolidarse más en el ámbito comercial ya que la competencia es uno de los grandes factores que repercuten en la manera de que se encuentren situadas las empresas y que incrementen o decremento su crecimiento dentro del mercado. En México se lamenta la falta de financiamiento pero aun así siguen sobreviviendo. Con la presente investigación se realizó un análisis de

las Pequeñas y Medianas empresas (Pymes) de un Municipio de México durante el año 2013, aplicando cuestionarios a especialistas en el tema para saber cual es la causa que frena el crecimiento de las Pymes del Municipio. El concepto de empresa de acuerdo a los elementos que la integran y a la unidad que debe darse hacia los mismos es la siguiente, es la unidad económica y social donde se coordinan capital y trabajo humano para lograr la producción de bienes o servicios que satisfagan a un mercado. Jay, (1967), la define como una Instituciones para el empleo eficaz de los recursos mediante un gobierno (junta directiva), para mantener y aumentar la riqueza de los accionistas y proporcionarles seguridad y prosperidad a los empleados. La clasificación publicada en el Diario Oficial de la Federación del 30 de junio de 2009. Establece que el tamaño de la empresa se determinará a partir del obtenido del número de trabajadores multiplicado por 10%; más el monto de las ventas anuales por 90%. Esta cifra debe ser igual o menor al Tope Máximo Combinado de cada categoría, que va desde 4.6 en el caso de las micro, hasta 250 para las medianas.

Tabla1: Estratificación del Tamaño de las Empresas En México

Estratificación				
Tamaño	Sector	Rango de Número de Trabajadores	Rango de Monto de Ventas Anuales (Mdp)	*Tope Máximo Combinado
Micro	Todas	Hasta 10	Hasta \$4	4.6
	Comercio	Desde 11 hasta 30	Desde \$4.01 hasta \$100	93
Pequeña	Industria y Servicios	Desde 11 hasta 50	Desde \$4.01 hasta \$100	95
	Comercio	Desde 31 hasta 100	Desde \$100.01 hasta \$250	235
Mediana	Servicios	Desde 51 hasta 100	Desde \$100.01 hasta \$250	235
	Industria	Desde 51 hasta 250	Desde \$100.01 hasta \$250	250

Fuente: Diario oficial de la Federación (2009).

*\*Tope Máximo Combinado = (Trabajadores) X 10% + (Ventas Anuales) X 90%:* El tamaño de la empresa se determinará a partir del puntaje obtenido conforme a la siguiente fórmula: Puntaje de la empresa = (Número de trabajadores) X 10% + (Monto de Ventas Anuales) X 90%, el cual debe ser igual o menor al Tope Máximo Combinado de su categoría. Se consideraba como hipótesis inicial que los empresarios señalarían como la causa principal para un buen crecimiento la oportunidad de financiamiento hacia los empresarios y el no saber los requisitos que se necesitan cumplir para llevar a cabo el inicio de operaciones. El estudio se aplicó a empresarios que cuentan de 11-30 trabajadores y de 30-100 trabajadores respectivamente a su cargo, de acuerdo a la estratificación publicada en el Diario Oficial de la Federación (2009).

### Planteamiento del Problema

La presente investigación tiene por objetivo determinar cuáles son los problemas con los que se enfrentan los emprendedores en el momento en que deseen establecer un negocio y cómo solucionarlos. Todos estos problemas surgen por la falta de información sobre que procedimientos seguir para su inscripción ante las autoridades correspondientes. También se originan problemas relacionados con la falta de visión hacia que es lo que desean implementar, por la falta de planeación sobre el negocio a emprender.

### Hipótesis

De acuerdo a las anteriores consideraciones, se plantean las siguientes hipótesis:

La falta de financiamiento de una de las principales causas que frena el crecimiento de las Pymes.

Los empresarios no tienen conocimiento de los procedimientos que se deben llevar a cabo para registrar su empresa ante las autoridades correspondientes.

De acuerdo a todos estos problemas surge la pregunta de investigación: ¿Cuál es la problemática con la que se enfrentan los empresarios que desean emprender su negocio?

### Objetivos

*El objetivo general que se plantea en este estudio es:* Detectar los problemas hacia los que se enfrentan los empresarios emprendedores que desean establecerse dentro del mercado municipal.

*Y los objetivos específicos son:* Mostrar las problemáticas ante las cuales se enfrentan los empresarios al momento de querer emprender un negocio, así como propiciar el crecimiento económico de las pymes.

### Justificación

La presente investigación tiene como justificación encontrar la causa del decremento que ha tenido últimamente las Pymes en el municipio, de esta manera se pueden constatar que las empresas no se tienen adecuados procedimientos ante las autoridades fiscales, es por esto que tiene grandes conflictos dentro de las mismas, lo cual hace que la empresa no tenga buen fin.

Los conflictos no se pueden enlistar porque son demasiados, pero este trabajo trata de a los de mayor importancia o aquellos que son los que en un momento hacen que se ponga en situaciones críticas la empresa, por el cual se pueden dar a conocer tanto los económicos como los financieros.

## **LITERATURA REVISADA**

Las empresas familiares están conformadas por los miembros de una misma familia, siendo estos además quienes cuentan con la capacidad suficiente para poderguiarla hacia el éxito, los valores que predominan en este tipo de empresas son solo el producto de la creencias, las expresiones, la cultura y las relaciones sociales que existen entre sus integrantes. Además los valores son un punto muy importante para que la empresa familiar pueda continuar en el mercado, ya que la mayoría de ellas son similares a la vida de un ser humano nacen, se desarrollan, maduran y mueren (Gallo, 2008). Por ello es importante analizar el estudio de las empresas familiares, porque son muy vulnerables al fracaso con el paso del tiempo tal como lo reflejan los índices de sobrevivencia de estas empresas. Gallo (2008), menciona que existe registros donde se indican que solo la primera y segunda generación tienen un 30% de supervivencia y que tal solo del 10% al 15% de las empresas familiares llegan a una tercera generación. Los cambios que se realizan con el paso del tiempo y con las generaciones son puntos vulnerables en el ciclo de vida de estas empresas, ya que suelen ser las principales causas por las que las empresas familiares tienden a fracasar en el crecimiento y su continuidad.

Las empresas familiares presentan ciertas ventajas como ya se ha venido mencionando como: poseer una mayor visión de la empresa a largo plazo, un mayor compromiso, dedicación, mayor participación en las decisiones y con mayor rapidez de solución, así como también se reduce la rotación del personal y por lo tanto se reducen los costos de agencia. Así mismo este tipo de organización tienen ciertas características que las diferencian de las empresas no familiares como lo son 1) estas empresas tienen mayor participación económica en la mayoría de los países. 2) aunque también tienen mayor probabilidad de desaparecer (Barugel, 2005). Para México, las empresas familiares representan la oportunidad de creación de nuevos puestos de trabajo, y con ello apoya a la economía de la comunidad, así mismo intervienen en el incremento de la estructura económica de la nación (Neubauer y Lank, 1999). Es por esto que se debe apoyar, promover a estas empresas, y a su continuidad, ya que es el futuro de muchos jóvenes que existe la posibilidad de que puedan continuar con la familia bien, inicien esta actividad empresarial. En otras palabras la cercanía que se tenga de los jóvenes con las organizaciones familiares y su esfuerzo por contribuir con el fortalecimiento son factores importantes para la supervivencia de este tipo de negocios.

El concepto de empresa, en general, de acuerdo con los elementos que la integran y a la unidad que debe darse hacia los mismos es la siguiente. Es la unidad económica y social donde se coordinan capital y trabajo humano para lograr la producción de bienes o servicios que satisfagan a un mercado. Jay (1967), la define como una “Instituciones para el empleo eficaz de los recursos mediante un gobierno (junta directiva), para mantener y aumentar la riqueza de los accionistas y proporcionarles seguridad y prosperidad a los empleados”. De acuerdo al Diccionario de la Real Academia Española se define como “La entidad integrada por el capital y el trabajo, como factores de la producción y dedicada a las actividades industriales, mercantiles o de prestación de servicios, con fines lucrativos y la consiguiente responsabilidad”. Valdivia (1963), la define como la unidad económico-social en la que el capital, el trabajo y la dirección se coordinan para lograr una producción que responda a los requerimientos del medio humano en el que la propia empresa actúa. Fernández Arena (1977), menciona que es la unidad productiva o de servicio que, constituida según aspectos prácticos o legales, se integra por recursos y se vale de la administración para lograr sus objetivos.

En economía, se define como el agente económico o unidad autónoma de control y decisión, que al utilizar insumos o factores productivos los transforma en bienes y servicios o en otros insumos. No se trata de una entidad legal, sino de una organización que tiene objetivos definidos, como el lucro, el bien común o la beneficencia, y para cuya consecución utiliza factores productivos, produciendo bienes y servicios (Sepúlveda (1996). Desde el punto de vista fiscal en su artículo 16° párrafo último del Código Fiscal de la Federación Mexicana define a la empresa como, “la persona física o moral que realiza las actividades a que se refiere este artículo, ya sea directamente, a través de fideicomiso o por conducto de terceros; por establecimiento se entenderá cualquier lugar de negocios en que se desarrollen, parcial o totalmente, las citadas actividades empresariales”.

“La organización industrial, comercial, de servicios, profesional, agropecuaria o de cualquier otra índole que, generada para el ejercicio habitual de una actividad económica basada en la producción, extracción o cambio de bienes o en la prestación de servicios, utiliza como elemento fundamental para el cumplimiento de dicho fin la inversión del capital y/o el importe de mano de obra, asumiendo en la obtención el beneficio el riesgo propio de la actividad que desarrolla” (Teoría y Técnica tributaria, 2012).

Las pequeñas y medianas empresas mejor conocidas como Pymes son las mayores generadoras de empleo a nivel mundial, al igual que incrementan la economía de todos los continentes del mundo, es por esto que las Pymes son una de las más importantes variantes dentro del crecimiento de un estado o país. Según datos de la Comisión Económica para América Latina y el Caribe (CEPAL), la presencia de las PYMES en la estructura económica de la región es relevante, al representar un importante porcentaje de variables como la producción, el empleo y el número de empresas (Martínez, 2012).

En México las Pymes son grandes generadoras de empleo y contribuyen a mejorar la distribución de ingreso. Las pequeñas y medianas empresas (Pymes), en México suman unas 350,000 y representan cerca de 95 por ciento del total de las empresas del país, generan el 70 por ciento del empleo nacional (Negrete, 2012). Por la importancia de las PYMES, es necesario instrumentar acciones para mejorar el entorno económico y apoyar directamente a las empresas, con el propósito de crear las condiciones que contribuyan a su establecimiento, desarrollo y consolidación (Observatorio PYME, 2012).

La familia es considerada en nuestro país, como el núcleo sobre el que se gira la vida de la persona, pero a decir verdad este término es más extenso, ya que no solo se limita a los padres e hijos que viven en un mismo entorno, sino que este término incluye a más generaciones, como abuelos y nietos, siendo estos en la segundo y en una tercera generación. De acuerdo a este término de la familia, esto también se llega aplicar en las empresas familiares donde se logra la participación de segundas y terceras generaciones. Las empresas familiares se consideran así, cuando es administrada por una familia, conforme lo que menciona

Gallo (2008), citado por De la Garza et al, (2011), define las empresas familiares como empresas en las que: La familia tiene el poder de la decisión, así como también son la propia familia la dueña de la mayor parte de la propiedad de la empresa.

Las obligaciones y responsabilidades de gobierno y de la dirección de los órganos que ejercen el poder, recae solo en algunos miembros de la familia. No todos los miembros de la segunda generación se encuentran involucrados en la compañía familiar. Neubauer y Lank (1999), sostienen que las empresas familiares cuentan con características importantes como lo es el compartir con los miembros de la familia una visión. Las cualidades que caracterizan a estas empresas son el poder, la experiencia y la cultura. Esta conceptualización de las empresas familiares no ha tenido una definición íntegra y completa, ya que para autor i estas características que hacen distintivas a estas empresas son los factores que afectan en los objetivos, estrategia, estructura de la empresa, dichos factores son la gestión, los recursos humanos, el patrón de propiedad y la sucesión. En las empresas familiares están involucrados dos o más miembros en actividades propias de la empresa por la situación presentada es un complejo dual entre las familias y negocios, las empresas familiares se convierten en hacer realidad los sueños.

La planificación y la sucesión deben estar sustentadas en ideas de trascender en próximas generaciones. De acuerdo con Gallo (2008), expresa que la sucesión es la transferencia de liderazgo a las próximas generaciones la razón es que se debe trabajar como un proceso y no como un evento. En las empresas familiares se les permite a sus propios miembros mantener y ejercer el control de las actividades que se presente dentro de ella. La mayoría de las empresas son similares a las ya existentes el sentido que se presenta es que el primogénito es el que establece las reglas, y el resto de la familia es el que asume el trabajo del negocio (Basco, 2005).

## METODOLOGÍA

La presente investigación se realizó en un municipio de México durante los meses de enero a junio de 2013 por medio de un cuestionario que se aplicó a pequeños y medianos empresarios que tenían como máximo 100 trabajadores. Los instrumentos de medición fueron cuestionarios aplicados a propietarios de empresas. Para la realización de este trabajo solo se aplicó un cuestionario de opción múltiple para los propietarios de los negocios. Una vez formulado el instrumento, analizado su estructura y contenido, la forma de calificar así como ponderar las respuestas, se procedió a hacer una prueba piloto a pequeños y medianos empresarios en el Municipio, para analizar su confiabilidad. Se aplicó a propietarios de Pymes con el propósito de recabar la información requerida. El tamaño de la población es el número de elementos a considerar para el estudio, siendo en este caso 789 Pymes Afiliados a la Cámara Nacional de Comercio Canaco (CANACO) pertenecientes a un municipio de México, relativo al 2013. Se aplicaron 278 a empresarios de Pymes en un municipio, seleccionados previamente de acuerdo a la fórmula aplicada que fue la siguiente:

$$n = \frac{\lambda^2 PQN}{\varepsilon^2 (N-1) + PQ\lambda^2}$$

N: Es el tamaño de la población, siendo un total de 11590 estudiantes matriculados. n: Tamaño de la muestra a estudiar. P y Q=1-P son desconocidos. Se consideró el caso de máxima indefinición: P=Q=0,5.

$\lambda$  es el valor de la distribución normal para un nivel de significación ( $\alpha$ ) prefijado: para un  $\alpha = 0,05$  que supone un nivel de confianza del 95%  $\lambda = 1,96$  Para un  $\alpha = 0,1$  que supone un nivel de confianza

del 90%  $\lambda = 1,64$   $\varepsilon$  es el error permitido, suelen manejarse valores 2% o 3% Nivel de confianza 90%  
 $n = 278$

## RESULTADOS

A continuación se presentan gráficamente los resultados obtenidos relacionados con las actividades emprendedoras de las empresas familiares, de acuerdo al cuestionario aplicada a los propietarios de las mismas y que se relacionan con los factores económicos y financiero.

Figura 1: ¿Cómo Logro Iniciar Su Negocio?

Fuente: Elaboración propia.

El resultado obtenido es que la mayoría de las empresas familiares inician funciones con una buena parte de recursos propios y del capital familiar con el que cuentan. Esto significa que son la base de su inicio dejando muy por atrás el otorgamiento de algún crédito bancario. Una vez que se obtuvo la información sobre la forma de iniciar financieramente sus actividades, se les preguntó si el control de las actividades de la empresa, en su mayoría, es familiar, tal y como se aprecia en la siguiente gráfica.

Figura 2: ¿El Control Mayoritario de Su Empresa Es Familiar?

Elaboración propia.

El resultado obtenido nos muestra que el control mayoritario lo concentra la propia familia que está concentrada en un 75%, delegando ciertas actividades al resto del personal.

Figura 3: ¿ Los puestos de direccion ¿estan ocupados mayoritar por miembros de la familia?

*Fuente: Elaboración propia.*

El resultado a esta pregunta nos muestra, según la gráfica anterior, que coincide con las actividades de control, que se tiene en la empresa familiar, por lo que es concordante este dato con el anterior. Respecto a la forma de elaborar el presupuesto de la empresa familiar, se les cuestionó de la siguiente forma.

Figura 4: ¿Lleva a Cabo Un Presupuesto de Acuerdo a las Necesidades de Su Empresa?

*Fuente: Elaboración propia.*

El resultado obtenido que se presenta en la gráfica anterior, muestra que, para la elaboración del presupuesto de la misma, se realiza de acuerdo a las necesidades básicas que la propia requiere, lo cual se hace acorde a los requerimientos inherentes de los propios organismos.

Figura 5: ¿Participan los Integrantes de la Familia En el Diseño del Presupuesto?

*Fuente: Elaboración propia.*

Es importante la participación de los familiares de la empresa en la elaboración de presupuesto, por lo que la gran mayoría de las mismas lo contempla, tal y como se demuestra en la gráfica anterior, si participan en su diseño lo que viene a beneficiar el desarrollo de las empresas familiares.

Figura 6: ¿Cuál cree Ud. que es el factor más importante que frena el crecimiento del negocio

Fuente: Elaboración propia.

El 43% de las empresas encuestadas señalaron que la competencia es muy grande hoy en día, el 33% señalo que la falta de financiamiento de instituciones de crédito o financieras es otro de los factores que frena el crecimiento y emprendimiento de Pymes, y el 20% restante son respuestas variadas. Por lo que respecta a la siguiente pregunta, se les pidió información si llevan un registro contable de todas sus actividades realizadas durante el periodo en el que laboran, lo cual se presenta en la siguiente gráfica.

Figura 7: ¿Llevan un registro contable de todas sus actividades realizadas durante el periodo en el que laboran

Fuente: Elaboración propia.

El 80% ha respondido que sí, lo que les beneficia llevar un control de sus actividades financiera, aunque solamente el 20% a contestado que no. Esto viene a dar cierta ventaja a los que la realizan, ya que se darán cuenta del costo que se eroga por cada una de las actividades que lleva a cabo la empresa, sobre todo para elaborar sus proyecciones presupuestales. Como resultado principal de la investigación se encontró que uno de los mayores problemas de los propietarios de las Pymes familiares es la competencia, una de las causas principales que frena el crecimiento de las empresas. Asimismo, el financiamiento es otro de los factores que más afectan la creación de nuevas empresa ya que no les es fácil obtener un financiamiento por una institución que desee aportarles un préstamo financiero o crédito, por lo que muchos recurren al capital familiar.

## CONCLUSIONES

Los instrumentos de investigación aplicados proporcionaron una amplia información. Este trabajo se enfoca a los resultados más significativos que frenan el crecimiento de las Pymes y el emprendimiento de nuevas Pymes familiares municipales durante el año 2013. La competencia fue identificada como la causa principal que frena el crecimiento de las Pymes en el Municipio, según la opinión de empresarios dueños de las Pymes. Sin embargo la situación económica del país es un importante factor que frena el crecimiento. Como hipótesis inicial se consideraba que la falta de financiamiento externo era la causa principal que frenaba el

crecimiento de la misma, por carecer de un adecuado sistema contable que les permitiera elaborar estados financieros confiables para el otorgamiento de créditos. Como producto final de la presente investigación, en parte se cumplió la hipótesis planteada ya que la falta de financiamiento, si es una de las causas que repercute en el crecimiento de las Pymes y en el emprendimiento de nuevas empresas en el Municipio. Sin embargo, se encontró que los encuestados consideraron la competencia como uno de los factores que frena el crecimiento y emprendimiento de Pymes, ya que en la actualidad se cuenta con Microempresas en su mayoría las cuales captan la atención y cubren las necesidades de la población en general.

## RESUMEN

*Se tiene como propósito dar a conocer conceptos básicos sobre qué es la motivación. Así mismo presentar aspectos de importancia sobre el tema teniendo como marco teórico: Motivación usando falsas interpretaciones, motivación para trabajar y necesidades fisiológicas. Ya que el clima laboral que se está presentando en la actualidad en algunas empresas familiares en México, se ha dado mucho de qué decir, gracias a una serie de variables dependientes e independientes las personas actúan motivados al realizar sus actividades. Utilizando la investigación cualitativa y descriptiva mediante fuentes de información primaria y secundaria. Los resultados obtenidos nos permiten ver un mejor panorama de conocimiento y saber cuál es la variable para este estudio. La forma del ser humano para desarrollarse, mide sus capacidades para obtener las necesidades propias aunque no en todos los casos le resulta, ya que para las Pymes Comerciales, interviene un factor de que los gerentes o dueños de las organizaciones tienen conocimiento de lo importante que es la motivación para un mejor progreso pero a su vez no le es conveniente dar estímulo pago por desempeño o bajo las prestaciones que tienen acceso los trabajadores de las Pymes Comerciales. Debido a que creen que es un gasto excesivo y no hay mejor desempeño de los trabajadores, aunque con ello resulta una alta rotación de puestos.*

**PALABRAS CLAVE:** Estrategias, Clima Laboral, Motivación

## ABSTRACT

*It is intended to present basic concepts on what is motivation. Also present aspects of importance on having as theoretical issue: using false interpretations Motivation, Motivation to work and physiological needs. As the working environment is being presented today in companies Armory city, Colima. He has given so much to say, because thanks to a number of independent and dependent variables are motivated people to perform its activities. Using qualitative research and descriptive by sources primary and secondary information. The study was performed using the statistical analysis of contingency tables and Pearson correlations. The results obtained allow us to see a better picture of knowledge and know what the variable for this study. For the form of human beings to develop, measure their ability to get their own needs but not all cases you find, because for SMEs Commercial Colima Armory Township involving a factor that managers or owners of the organizations have knowledge of the importance of motivation to better progress but in turn it is not appropriate to give encouragement or under pay for performance benefits that workers have access Commercial SMEs. Because they believe is excessive spending and no better worker performance, although it is a high turnover of positions.*

**KEYWORDS:** Strategies, Working Environment, Motivation

## INTRODUCCIÓN

García (2007), menciona que la motivación inicia en el rompimiento de un equilibrio que existe entre el ser humano y su conveniencia que tiene que ver en el mundo como una realidad, las motivaciones están caracterizadas por la natural vida social del hombre, que es el que constantemente crea sus necesidades. Este desequilibrio produce un estado de tensión escondida, que se manifiesta subjetivamente por medio de la sensibilidad, que se comienza por producir un incremento de la actividad motora hasta concluir en una conducta con sentido, cuya finalidad es la satisfacción de las necesidades específicas que establece el equilibrio de la vida del ser humano.

Martínez (2011), La palabra motivación se deriva del latín *motus* lo cual significa “movido” y de *motio* que es “movimiento”. Esta se define como el impulso que lleva a una persona a elegir y a realizar una acción entre aquellas alternativas que se representan en una determinada situación. La motivación está relacionada con el impulso, porque este provee eficacia al esfuerzo, y en el contexto organizacional, y se trata de un esfuerzo colectivo orientado a conseguir los objetivos de la empresa, y empuja al individuo a la búsqueda continua de mejores situaciones con el fin de realizarse profesional y personalmente, integrándolo así en la comunidad donde su acción cobra significado.

En la actualidad en que viven las organizaciones, la motivación del personal se constituye como un medio importante para el desarrollo personal de los trabajadores, por lo tanto mejora la productividad de la empresa. Martínez (2011), menciona la teoría de la pirámide de Maslow. Se dice que en 1954 Abraham Maslow formuló una teoría de la motivación que recalca el deseo de alcanzar plenamente el potencial como motivación humana, que incluyen otros motivos además de la autorrealización. Maslow sostuvo que una teoría general de la motivación ha de tener en cuenta el individuo en su totalidad. Sus observaciones lo llevaron a concluir que las necesidades humanas se organizan en una jerarquía de las necesidades fisiológicas básicas, de seguridad, de afiliación, de pertenencia a grupos y a organizaciones y de reconocimiento o estatus. Las evidencias y los indicadores de insatisfacción laboral podemos enumerar algunos como renuncias abandonos, expresión de descontento, actitudes de pasividad o indiferencias, baja motivación y productividad, absentismo, negligencias, etc. Esto quiere decir la falta de satisfacción puede producir al mismo tiempo (Gaspar, 2007).

Chiavenato (1988), menciona que el concepto de motivación (en el ámbito individual) conduce al clima organizacional. El ambiente interno existe entre los miembros de la organización, está estrechamente ligado al grado de motivación de los mismos, por ellos los deseos e impulsos de los deseos e impulsos de los individuos se pueden ver afectados de acuerdo con el clima organizacional en el cual trabajan, que provoca la inhibición de la motivación. La motivación define, según Chiavenato (2007), que la teoría de Maslow se basa en una estructura uniforme y jerárquica de las necesidades y la de Herzberg en dos clases de factores. Ambas reposan sobre la suposición implícita de que existe “una mejor manera” de motivar a las personas, ya sea mediante el reconocimiento de la pirámide de necesidades humanas, o a través de la aplicación de los factores motivacionales y el enriquecimiento del puesto. Sin embargo, la evidencia ha demostrado que las distintas personas reaccionan de manera diferente, de acuerdo con la situación que se encuentren. La teoría de motivación de Vroom (citado por Chiavenato, 2007) nos dice que la motivación solo es para producir y que existen 3 factores que determina su motivación para producir: 1.- Los objetivos individuales, es la fuerza del deseo para alcanzar los objetivos. 2.- La relación que el individuo percibe entre productividad y logro de sus objetivos individuales. 3.- Capacidad del individuo para influir en su propio nivel de productividad a medida que cree influir en él. La motivación puede comprender: dinero, seguridad en el puesto, aceptación social, reconocimientos, despensas, un buen salario, y muchos elementos más que llame la atención al individuo.

### Planteamiento del Problema

Uno de los problemas que sucede en las empresas es el mal desempeño laboral que los empleados realizan dentro de las pymes debido a que muchos de ellos no reciben ningún incentivo o aumento de sueldo que los motive por haber laborado con eficiencia en el trabajo. Este trabajo profundiza en el papel que juega la gestión de recursos humanos (GRH) en la gestión del conocimiento (GC), centrándose en las prácticas de gestión de los recursos humanos que pueden favorecer la transferencia de conocimiento y la creación del mismo. Los continuos cambios en los entornos empresariales de los últimos años obligan a las organizaciones a esforzarse, cada vez más, por ser competitivas a largo plazo.

Los mercados laborales actuales, altamente competitivos, obligan a los responsables de Recursos Humanos de las empresas familiares a desarrollar e implementar herramientas que colaboren con la motivación y la retención de sus colaboradores calificados. Uno de los planes lo constituyen los llamados “beneficios del personal”. Cuando la motivación es escasa, ya sea por frustración o por impedimentos para la satisfacción de necesidades, el clima organizacional tiene a enfriarse y sobreviven estados de depresión, desinterés, apatía, descontento, desconfianza y con el tiempo resentimiento, hasta llegar a estados de agresividad, agitación, incomodidad, principalmente. Característico de situaciones en que los empleados se enfrentan abiertamente contra la empresa (Gaspar, 2007).

### Objetivos

Los objetivos que se mencionan a continuación son para ayudar a detectar los problemas que existen dentro de las Pymes comerciales, de esta manera se analiza si los empleados se sienten motivados por sus subordinadas o por el ambiente que se manifiesta en dicha Pyme, así mismo concluir la productividad que tienen en el trabajo. Como objetivo general: analizar y detectar cuáles son los problemas que se generan dentro de las pymes comerciales al no ser motivados al desempeñar una buena labor dentro de su trabajo. Y como objetivos particulares: Determinar cuál es la importancia de la motivación en los trabajadores de las pymes comerciales para la mejora de sus actividades laborales, así como conocer los métodos de motivación que utilizan las pymes comerciales hacia los trabajadores y ver en que están fallando.

### Hipótesis

Los gerentes de las Pymes comerciales aplican estrategias de motivación en la gestión del RRHH.

En las Pymes comerciales si cuentan con estrategias pero no son llevadas a cabo en la gestión de RRHH.

Las Pymes comerciales cuentan con manual de bienvenida y de procesos en el área de RRHH que de secuela a la motivación laboral.

Preguntas de investigación.. ¿Qué provoca que los trabajadores no desempeñen un buen trabajo? 2. ¿Cuál es la manera que utilizan los gerentes en las pymes para motivar a su personal?

### Justificación

La finalidad por la que se justifica esta investigación es con base a las necesidades de los trabajadores en las Pymes comerciales para que ellos estén motivados y afanen mejor. Es importante saber que la motivación siempre debe de estar presente en cualquier trabajo ya que si no se logra llevarlo a cabo los trabajadores no tendrán un buen desempeño laboral y a su vez afectara también a las empresas debido a las renuncias de sus afanosos o a su baja producción. La motivación laboral es una de la herramienta más útil a la hora de elevar el desempeño de los empleados ya que proporciona la posibilidad de incentivarlos a que

lleven a cabo sus actividades y que además las hagan con gusto lo cual proporciona un alto rendimiento de parte de la empresa. La motivación laboral está influenciada directamente por varios factores como la personalidad de la persona, su sistema de creencias. La motivación laboral dependerá de gran manera de dos factores 1) como la persona se auto estimule y 2) como lo estimula el medio (Porret, 2010). En la actualidad la mayoría de las empresas familiares usan este método para que su empresa trabaje correctamente y no tengan problemas con sus trabajadores.

## REVISIÓN DE LITERATURA

El problema de la motivación ocupa una posición central en el estudio psicológico de la personalidad. Algunos autores afirman que ambas cosas son idénticas. Nosotros, aunque no creemos necesario aceptar esta extrema actitud, reconocemos que la teoría de la personalidad se centra en el análisis de la naturaleza de la motivación (Vélaz, 1996). En realidad, se puede afirmar que los fenómenos motivacionales dentro del trabajo laboral se recuerdan en los comienzos del pensamiento humano. No en vano se descubren en la filosofía griega muchos antecedentes de la mayoría de las tendencias psicológicas actuales. La historia de las ideas relacionadas con la motivación es tan interesante y confusa que siquiera una síntesis de cada una de las principales escuelas se presenta como una tarea enciclopédica. Sin embargo, tampoco sería correcto ofrecer visiones parciales de ellas o interpretaciones críticas desvinculadas de la exposición, por lo que hemos optado por recordar las líneas históricas generales y remitir para consultas concretas psicológicas que presenten hallazgos sobre la motivación, y siempre que tengan alguna relación con el comportamiento humano de la empresa (Vélaz, 1996).

Petri y Govern (2006), el filósofo griego Aristóteles propuso dos ideas importantes que siguen en el estudio de la motivación. Lo cual sostuvo que el espíritu es libre y la mente es un calcula rasa al momento de nacer. Se suele comparar la primera idea con la del determinismo, el cual toda la conducta proviene de las condiciones que la anteceden. La motivación del trabajo es el conjunto de fuerzas tanto internas como externas que logran que un empleado elija un curso de acción y se conduzca de ciertas maneras. La motivación en el trabajo es una combinación complicada de fuerzas psicológicas dentro de cada persona y los empleados tienen un interés que se compone de 3 elementos los cuales se mencionan a continuación; Dirección y enfoque de la conducta: este punto son las cosas positivas también negativas que se tienen en una organización con los trabajadores dentro de lo positivo entra la confiabilidad, creatividad, sentido de ayuda etc. Y lo negativo es el ausentismo, retrasos, retiro, y bajo desempeño. Nivel del esfuerzo: es contraer compromiso pleno de la excelencia, en lugar de hacer apenas lo suficiente para salir adelante. Persistencia de la conducta: mantener repetidas veces el esfuerzo en contraste con su abandono prematuro (Newstrom, 2011).

## METODOLOGÍA

Utilizando la investigación cualitativa, descriptiva y correlacional mediante fuentes de información primaria y secundaria. El estudio que se realizó usando el análisis estadístico de tablas de contingencia y correlaciones de Pearson. Los resultados obtenidos nos permiten ver un mejor panorama de conocimiento y saber cuál es la variable para este estudio. El método llevado a cabo en esta investigación fue a través de una investigación cualitativa la cual ayudará a conocer el grado de relación que existe entre el patrón y el trabajador ya que lo cual se pretende saber si los jefes buscan la manera de motivar a los trabajadores a desempeñar una buena labor o si los trabajadores solo trabajan por cumplir debido a que el jefe no busca la manera de que siempre estén motivados.

La población en la cual se realizaron encuestas, fue dirigido a los encargados, gerentes y dueños que estén en el cargo dentro de las pymes en la ciudad de Armería, Colima, México. La cantidad que se debe cubrir nuestro análisis es de 901 pymes comerciales que se encuentran ubicados solo en la cabecera municipal de

Armería, Colima México lo cual por cada pyme se aplicó un cuestionario. El tamaño de muestra que se tomó fue de 53 pymes que están registradas en el municipio de Armería, Colima, México. Se cabe aclarar que las 53 pymes a encuestar se le obtuvieron el 4% de margen de error de las 901 pymes comerciales registradas en Armería Colima, México. Se encuestó al encargado de dichas empresas para lograr obtener la información adecuada de la investigación. Rojas (2001), menciona que se puede dar un margen de error de 5%, lo cual en esta fórmula se utilizara el margen de error de 4%.

### Fuentes de Información

Una vez concluida la muestra, procedió a elegir las fuentes de información y los instrumentos que se utilizaran para lograr la recopilación. Se aplicaran las fuentes secundarias que generando información original comprendida por libros, revistas como información de primera mano y las fuentes secundarias son las que generan un análisis sintetizado para el proceso de investigación en las Pymes Comerciales de la Ciudad de Armería, Colima, México. Para la elaboración del cuestionario, se hizo una prueba piloto donde se ajustó la forma y el tipo de preguntas para poder concluir con el cuestionario final. Para responder el cuestionario que se aplicó a los dueños, encargados, gerentes, etc. los cuales están a cargo de las pymes comerciales se utilizó la escala de Likert que es de nivel ordinal.

La escala de Likert se caracteriza por ubicar una serie de frases seleccionadas en una escala con grado: totalmente de acuerdo/totalmente de desacuerdo. La principal ventaja de utilizar la escala de Likert es que todos los sujetos coinciden y comparten el orden de las expresiones. Esto se debe a que el mismo Likert (psicológico creador de esta escala) procuró dotar a los grados de la escala con una relación de muy fácil comprensión para el entrevistado. A la persona a entrevistar se le hicieron preguntas y el calificó del uno al cinco dependiendo cómo se trabaja para motivar al personal, donde: 1 significa totalmente en desacuerdo; 2 en desacuerdo; 3 neutral; 4 de acuerdo y 5 totalmente de acuerdo.

## **RESULTADOS**

Los resultados que se obtuvieron al aplicar los cuestionarios en las pymes comerciales en el municipio de Armería, Colima, México fueron: El cargo a quien se entrevistó en las pymes comerciales lo cual arrojó un 62.26% son los dueños de estas mismas debido por la pequeña administración les permite atender su negocio junto con los empleados, así mismo con un 32.08% dejan a un encargado de confianza siguiendo con 5.66% por los gerentes aunque casi nadie cuenta con uno existe este rango, de esta manera se concluye como se encuentra la distribución de las PyMEs comerciales en el municipio de Armería, Colima. La mayoría de las PyMEs comerciales que se encuentran en ese lugar se dedican a la comercialización compra y venta de productos con un 81.13% como lo son las tiendas de ropa, ferreterías, farmacias, zapaterías, mueblerías entre otras. Y con 3.77% se dedican a la producción de productos entre estos se puede mencionar la fábrica de Coco Colima, fábrica de hielo y con respecto a la de servicios se encuentra un 15.09% de negocios a los de producción.

Las pymes comerciales en Armería, Colima contratan poco personal para desempeñar las labores porque así lo requieren, por consiguiente son de 1 a 5 empleados con un 75.47% en tiendas de ropa, papelerías, dulcería, entre otras. Y de 6 a 10 empleados con 18.87% en ferreterías, farmacias, mueblerías; con un poco más de personal que haciende a 11 a 15 empleados 5.66% ya que se trabaja doble turno o que lo permite por sus labores diversas. Cuando se les preguntó a los encargados de las pymes que si los trabajadores se esforzaban más cuando hay dinero de por medio en su mayoría contesto 92.45% totalmente de acuerdo, ya que es una manera en que estos se motivan para desempeñar su labor; mostrando a su vez apego con la empresa; y con una minoría de 7.55% estuvieron de acuerdo con la pregunta establecida. Como consiguiente nadie contestó lo contrario mostrándose como un pregunta asertiva que influye en el comportamiento de los trabajadores. Con respecto a la pregunta, si se les trata con justicia a los

trabajadores, en su mayoría contestó 45.28% totalmente de acuerdo y 54.72% de acuerdo. Así mismo, ningún resultado negativo que nos pudiera dar controversia ya que quienes fueron encuestados hacen hincapié donde el factor humano es importante tratarlo con justicia para que este cuente con secuelas para la organización.

Las pymes comerciales encuestadas arrojan un 54.72% en resultados donde están totalmente de acuerdo y con 32.08% de acuerdo en que la motivación es una prioridad para la organización, considerando un estímulo para el ambiente laboral, permitiendo a cada uno de los trabajadores estar en constante activación. Otra parte de las pymes están en neutral con 11.32% pues no lo consideran como un factor importante que intervenga en el estado de ánimo pero tampoco afectando a la realización de su trabajo. Y con una inferioridad 1.89% en desacuerdo ya que el trabajo es indispensable y necesario para la sostén de la familia como de sí mismo. La relación entre el esfuerzo del trabajador tomando en cuenta con la capacidad y los factores de higiene y motivación, han marcado un 62.26% que están de acuerdo. Enseguida un 22.64% están totalmente de acuerdo, pues la capacidad adquirida influye permitiendo el crecimiento en su entorno pero siempre depende de las condiciones y el salario.

De manera neutral han marcado un 13.21% y por último en desacuerdo 1.89% considerando la existencia de un resultado negativo Por consiguiente el esfuerzo no influye en el factor humano. Las iniciativas para elevar la motivación del personal incluyen recompensas no monetarias. Se muestra con un 43.40% que contestaron totalmente de acuerdo y con 1.89% de acuerdo. Esto indica que menos de la mitad utilizan iniciativas para elevar la motivación del personal incluyendo recompensas no monetarias por otra parte el 30.19% ni están de acuerdo ni en desacuerdo pero en resto si está en desacuerdo ya que se debe a que la mayoría de las personas se motivan más cuando hay dinero de por medio como se mostró en la figura.

## CONCLUSIONES

Los resultados obtenidos en la investigación que se realizó nos arrojaron que los encargados de las PyMEs comerciales están conscientes en que una de las formas para que los trabajadores se motiven más en su trabajo laboral es cuando hay dinero de por medio, pero casi no lo aplican ya que los dueños, encargados o gerentes a los que se les encuestó mencionaron que los trabajadores solo reciben un bono en diciembre pero no es mucho lo que se les da, lo cual no se les está motivando constantemente por su buen desempeño, esto ocasiona a que el personal de trabajo no dure dentro de las PyMEs debido a que no hay esa motivación que logre satisfacer sus necesidades. Se realizó el análisis de los resultados obtenidos y se observa que dentro de las PyMEs comerciales los que dirigen los negocios sí saben que, cuando hay dinero de por medio por su buen desempeño laboral, los trabajadores se motivan más y trabajan mejor pero no se lleva a la práctica, y también saben que cuando hay recompensas no monetarias de por medio, sí se motivan el personal pero para ellos no es lo mismo ya que el dinero logra que se motiven más.

Las hipótesis planteadas con anterioridad, al compáralas con los resultados arrojados, ninguna aplica con la información que se consiguió, ya que en las PyMEs comerciales las estrategias de motivación no son llevadas a cabo en la gestión de RRHH. Si saben la forma en que los trabajadores se motivan más para desempeñar un mejor trabajo pero no aplican la estrategia para lograrlo. Por eso constantemente hay cambio de personal debido a la falta de motivación y a un bajo sueldo. Con esto se puede determinar que la visión de los dueños, gerentes y encargados va encaminado a no invertir en las prestaciones del personal, ya que consideran que no se compensa las prestaciones con las utilidades de la empresa.

# MEDIDAS DE INNOVACIÓN EN EMPRESAS TURÍSTICAS DE CANCÚN Q. ROO

Enrique Corona Sandoval, Universidad del Caribe

Lucila Zárraga Cano, Universidad del Caribe

José Gabriel Ruíz Andrade, Universidad del Caribe

## RESUMEN

*La innovación es un elemento clave para la competitividad de las empresas turísticas, pues permite adaptarse a los cambios del mercado mejorando procesos, capacidades organizacionales y tecnología. Las empresas turísticas en la ciudad de Cancún Q. Roo., son en su mayoría del sector servicio por lo tanto el objetivo de este estudio es identificar el grado de innovación de las empresas que ofrecen servicios turístico, con el fin de diferenciar a dichas empresas y puedan servir como ejemplo para otras empresas. La investigación que se realizará es de tipo cuantitativo mediante una técnica multivariable en donde se utilizará el análisis cluster para segmentar a un grupo de empresas de servicios turísticos las cuales generen información relevante que fortalezcan a otras empresas.*

**PALABRAS CLAVE:** Turismo, Innovación, Procesos Generadores De Innovación

## MEASURES OF INNOVATION IN TOURIST COMPANIES OF CANCUN Q. ROO

### ABSTRACT

*Innovation is a key element for the competitiveness of the tourist industry, as it allows to adapt to market changes improve processes, organizational capabilities and technology. Tourism enterprises in the city of Cancun Q. Roo., are mostly sector service therefore the objective of this study is to identify the degree of innovation of the companies that offer tourist services, in order to differentiate these companies and can serve as an example for other companies. The research to be carried out is of quantitative type by using a multivariate technique where cluster analysis is used to segment a group of tourist services companies which generate relevant information to strengthen other companies.*

**JEL:** M1, M10

**KEYWORDS:** Tourism, Innovation And Generating Innovation Processes

## INTRODUCCIÓN

La innovación es un elemento clave para la competitividad de las empresas turísticas, forma parte del motor interno que permite adaptarse al entorno y mantenerse vigente en plena competencia de destinos turísticos; Cancún, Q. Roo no es la excepción, su actividad principal son los servicios, sin embargo día con día hay más competencia, por lo que es importante destacar y conocer los aciertos de empresas de servicios innovadoras para sobrevivir al entorno empresarial tan cambiante. El problema que existe es que en las empresas de servicios turísticos, se desconoce que tan innovadoras son. El objetivo es identificar el grado de innovación de las empresas que ofrecen servicios turísticos para poder diferenciar a dichas empresas y tomarlas como ejemplo para otras empresas. En los últimos quince años ha habido un interés en la literatura por el estudio de la innovación en servicios, aunque son escasos los trabajos publicados se han centrado en el análisis de los servicios turísticos.

## REVISIÓN LITERARIA

La innovación, un aspecto de suma importancia para la competitividad y el progreso económico de las empresas turística, surge de conexiones, intersecciones e integración de ideas, en razón con otros individuos las ideas se fusionan para formar nuevos patrones (White, 2007). Una definición muy sencilla pero con una gran realidad es la de Tushman y Nadler (1996), en la cual destacan que la innovación es la creación de cualquier bien, servicio o proceso que sea nuevo para la unidad de negocios. Para complementar esta definición, algunos autores (Ahmed, Sheperd, Ramos y Ramos, 2012), dicen que la innovación incluye dos partes la generación de una idea o invención y la comercialización fructífera de dicha invención o idea, lo que se puede decir que la innovación es la invención más el nivel de uso. La innovación se puede apreciar en varias aristas como la creación, invento o desarrollo de un nuevo producto o servicio para hacer de una mejor forma las cosas. La innovación como difusión y aprendizaje se refiere al apoyo o al uso de un producto, un servicio. Como un suceso, debido a que es un acontecimiento relevante como el desarrollo de un solo producto o servicio, o una sola idea o decisión. Como una trayectoria, esto es el reconocimiento de que un solo acto de innovación facilitaría que se derive una familia de innovaciones, a partir de la fuente original.

Como un cambio creciente o radical, algunas innovaciones son ajustes mínimos, en tanto que otras son de naturaleza radical o discontinua. Como un proceso o una estrategia, se trata de una serie de actividades que realiza una organización para llegar a la obtención de un resultado. Y por último la innovación como un proceso a nivel contexto, este enfoque considera la innovación como un acto que va más allá de los confines de un individuo o una empresa (Ahmed et al., 2012). Goñi (2008), estableció el Modelo Capital Innovación (MCI), que busca ayudar a empresas de servicios ofreciendo prácticas detalladas que consoliden la capacidad de innovar, permitiendo responder con aciertos y velocidad al mercado, creando soluciones a través de una medición de debilidades y fortalezas obteniendo competencias organizativas con planes precisos para gestionar los cambios de: Los clientes y mercado, proveedores y fuentes de tecnología; organización, procesos y sistemas; y personas y cambios. Los procesos generadores de innovación (Ahmed et al., 2012), tienen el objetivo de captar la realidad de la organización a varios niveles como el estratégico, táctico y operacional, los más relevantes son los que se muestran en la Tabla 1.

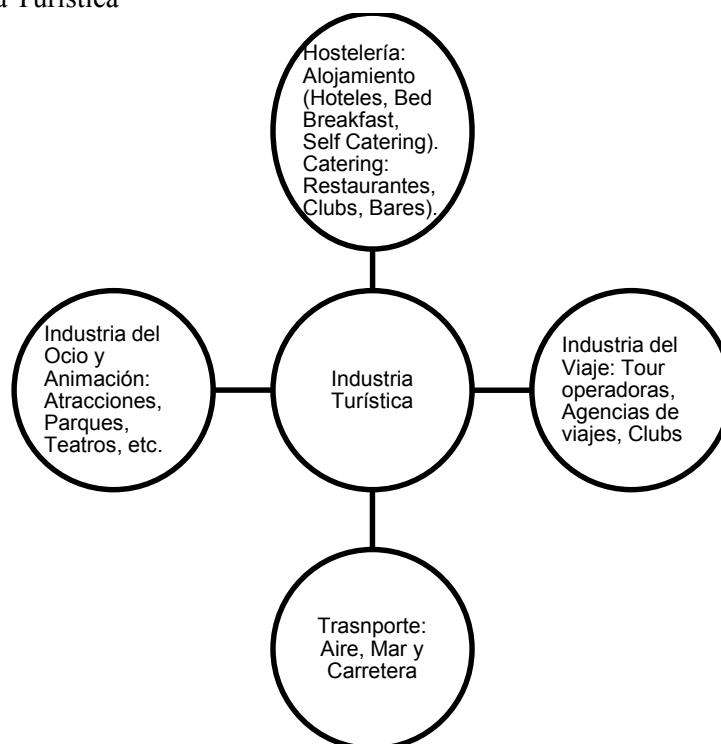

Tabla 1: Procesos Generadores de Innovación

Ventajas Competitivas	Cultura Innovadora	Clientes	Investigación de Mercados	de Prospectiva
En qué grado su organización cuenta con procesos de generación de nuevos productos o servicios con orientación al cliente.	En qué grado se fomenta los procesos de comunicación interna que favorezcan la creatividad, la innovación y el trabajo en equipo.	En qué grado se establecen procesos de identificación de oportunidades tomando en cuenta las preferencias de los clientes.	En qué grado su organización aplica un proceso de búsqueda de oportunidades.	Cuenta con actividades cotidianas que ayuden a identificar escenarios futuros para la empresa.
En qué grado esta organización, se asume competitiva, gracias a la aplicación de la innovación.	En qué grado su organización estimula el desarrollo superior de su personal.			
En qué grado existen incentivos formales a las propuestas internas de innovación.	En qué grado utiliza sistemas de gestión interno que considere a la productividad			
En qué grado su organización usa la tecnología de la información y comunicación como	En qué grado se impulsa una cultura interna basada en la confianza, compromiso, disposición al cambio, que			

fueron: elaboración propia, después de un análisis factorial de componentes principales y del análisis discriminante. malhotra (2008), recomienda que en antes de un análisis cluster se realice un análisis factorial, para determinar las variables con mayor relevancia para después poder utilizar el análisis de conglomeración jerárquica de ward. es decir se tomaran solamente en cuenta los procesos generadores de innovación más relevantes.

Zeithaml, Bitner y Gremler (2009), afirman que los servicios representan una amplia gama de ofertas de productos intangibles que los clientes valoran y por los que pagan en el mercado. Estos autores mencionan que a finales del siglo XX, muchas empresas invirtieron en iniciativas de servicios y promovieron la calidad del servicio como forma para diferenciarse y crear ventajas competitivas. Los servicios en el sector turístico son la principal fuente de empleo debido a que los turistas realizan actividades durante sus viajes y estancias en lugares distintos al de su entorno habitual, por un periodo de tiempo consecutivo inferior a un año con fines de ocio, por negocios y otros (OMT, 1994). Dentro de los servicios turísticos se encuentra: El alojamiento, los restaurantes, los bares y clubs nocturnos, los parques temáticos, teatros, atracciones deportivas, las tour operadoras, agencias de viaje y el transporte ya sea por aire, mar, carretera, etc., como se muestra en la Figura 1.

Figura 1: Industria Turística

Fuente: Elaboración propia adaptado de OMT, 1998, p. 55

Fomentar la innovación en los servicios es básico para mejorar el desempeño del sector de servicios, estas se están percatando de que para crecer y obtener ganancias en el futuro necesitan ser competitivas globalmente en servicios, por lo que están reconociendo la necesidad de invertir en innovación, educación e investigación (Bitner y Brown, 2008). Una de las invenciones tecnológicas más grande de los años 90's fue el internet, el cual permitió transmitir información y ofertas de productos o un gran número de consumidores en todo el mundo, suministrar información más extensa y de mejor calidad que la que podía transmitirse por el medio tradicional impreso, permitir a los consumidores reservar rápida y fácilmente y posibilitar grandes ahorros en la producción y distribución de material impreso (OMT, 2001).

## METODOLOGÍA

Se estableció un estudio cuantitativo, que permite examinar los datos de manera científica con ayuda de la estadística, de tipo descriptivo. Se utilizó un cuestionario estructurado formado por 38 preguntas, el cuál fue aplicado por alumnos de servicio social, en donde se utilizó una técnica de recolección de datos que

requiere la presencia del entrevistador capacitado para que haga las preguntas y anote las respuestas del entrevistado (Hair, Bush y Ortinau, 2010). Se tomo una muestra no probabilística, debido a que se desconoce la probabilidad de seleccionar cada unidad de muestreo. El muestreo no probabilístico que se uso fue el muestreo por juicio, ya que se eligieron a los encuestados de la muestra porque se cree que cumplen con los requisitos del estudio (Hair et al., 2010). La muestra fue de 98 empresas, las cuales entraron en el rubro de hostelería, industria del ocio y animación, industria del viaje y transporte como se muestra en la Tabla 2.

Tabla 2: Muestra

Empresa		Número
Hostelería	Hoteles	15
	Restaurantes y bares	44
Industria del ocio y animación		9
Industria del viaje		16
Transporte		14
Total		98

Fuente: Elaboración propia.

El cuestionario estuvo compuesto por 38 preguntas las cuales se especifican en la ficha técnica (Tabla 3). Los datos fueron procesados por el programa estadístico Statistical Product and Service Solutions 15 (SPSS 15).

Tabla 3: Ficha Técnica

Número de Preguntas	38 Preguntas
Preguntas cerradas	33 preguntas
Preguntas abiertas	5 preguntas
Tiempo de respuesta del cuestionario	Entre quince y treinta minutos aproximadamente

Fuente: Elaboración propia.

El análisis de conglomerados es una técnica usada para clasificar objetos o casos en grupos relativamente homogéneos llamados conglomerados o cluster. Los objetos de los conglomerados tienden a ser similares entre sí y diferentes de los objetos de otros conglomerados (Malhotra, 2008). Para esta investigación se tomaron en cuenta únicamente las capacidades innovadoras de la Tabla 1, las cuales fueron las más relevantes del análisis factorial y discriminante. Se realizó un cluster jerárquico, que es un procedimiento que se caracteriza por el desarrollo de una jerarquía, además de la técnica de Ward, que es un procedimiento de varianza en el que la distancia euclidiana elevada al cuadrado se minimiza a la medida del conglomerado (Malhotra, 2008). Se estableció un indicador que diga en qué medida cada par de observaciones se parecen entre si, en este caso fue el grado de innovación, con esta variable se crean grupos de acuerdo a la medida de similaridad.

## RESULTADOS

El historial de aglomeración muestra las distancias de aglomeración y los grupos que se han formado al aplicar el análisis cluster, que es una forma gráfica de ver dicha información, en este caso se dividieron en cuatro grupos. La Tabla 4: Muestra los Conglomerados de Pertenencia de Cada Caso, Para Este Caso Se Tomaron Cuatro Conglomerados

La Figura 2 muestra de una forma representativa, el grado de innovación de las empresas, de acuerdo a los cuatro conglomerados que se obtuvieron del análisis cluster y en donde se puede ver que la mayoría de las empresas caen en el cuadrante de más alto grado de innovación.

Figura 2: Grado de Innovación

Tomando en cuenta únicamente las capacidades innovadoras más relevantes, siendo estas parte del análisis cluster, en donde se puede observar que no existe un solo tipo de empresas que sean innovadoras sino que dentro de un alto grado de innovación se encuentran: Hostelería, industria del ocio y animación, industria del viaje y transporte, lo cual habla de un interés en seguir trabajando en el tema de innovación, como se aprecian los resultados en la Tabla 5.

Tabla 5: Grado de Innovación Por Tipo de Empresa

Grado de Innovación	Tipo de Empresa	Frecuencia	Porcentaje
Alto grado de innovación	Hostelería	29	50
	Industria del ocio y animación	7	12.1
	Industria del viaje	11	19
	Transporte	11	19
	<b>Total</b>	<b>58</b>	<b>100</b>
Medio grado de innovación	Hostelería	27	71.1
	Industria del ocio y animación	2	5.7
	Industria del viaje	4	11.4
	Transporte	2	5.7

	Industria del viaje	1	20
	Transporte	1	20
	<b>Total</b>	<b>5</b>	<b>100</b>

Fuente: Elaboración propia.

## CONCLUSIONES

La innovación no es asunto exclusivo de las empresas que producen o manufacturan, hoy en día la innovación a traspasado esas fronteras y a llegado a los servicios, mediante la transformación de procesos más prácticos y rentables en cualquiera de las áreas para las empresas, ya sean tecnológicos o manuales, sin embargo estas innovaciones muchas veces se realizan a los ojos de los consumidores para

que ellos perciban estas mejoras. Los servicios parte importante de la economía del norte de Quintana Roo, se enfrentan cada vez más a la competencia, por lo que tienen que estar preparados para los cambios que exija el mercado, con soluciones vanguardistas que coadyuven a la competitividad. Las empresas de servicios turísticos están inmersas en un sistema capitalista que las impulsa a seguir renovándose para sobrevivir en un ambiente competitivo, en este sentido la percepción que el consumidor tiene sobre estos cambios es más palpable. Se pudo observar al final que todas las empresas manejan un grado de innovación, este puede ser bajo, medio o alto; en este primer trabajo se demostró que tanto la hostelería, que esta compuesto por restaurantes y hoteles manejan un grado alto y medio de innovación, únicamente se detectó que tres de este tipo de empresas tienen un bajo grado de innovación. Tanto la industria del ocio y animación como la industria del viaje y transportación se caracterizaron por tener un alto grado de innovación, una de las conclusiones que se obtuvieron fue que debido a que existe una gran oferta de este tipo de servicios, por lo que deben ser más competitivas.

# LA TRANSDUCCIÓN COMO HERRAMIENTA DE COMPETITIVIDAD Y ANÁLISIS DE LA CALIDAD DEL SERVICIO OFRECIDOS POR LOS GUÍAS DE TURISTAS ESTADOUNIDENSES EN CANCÚN, Q. ROO

Lucila Zárraga Cano, Universidad del Caribe  
Gabriela Aracelly Solís González, Universidad del Caribe  
Cinthya Aranda de Paz, Universidad del Caribe

## RESUMEN

*Cancún es un destino paradisíaco que con sus playas invita a cualquier visitante a quedarse, rico en contrastes, con paz, tranquilidad y alegría que sólo una región como esta puede brindar. En Cancún la velocidad e intensidad con que se ha desarrollado ha llevado a que el factor de migración cada vez sea mayor; cada día son más las personas que se desplazan de sus lugares de origen a sitios turísticos y deciden establecerse en ellos de manera indefinida, trabajando como guías de turistas. La siguiente investigación tiene el objetivo de identificar cual es la percepción de los turistas de Estados Unidos cuando son atendidos por un guía de la misma nacionalidad. La metodología que se utilizará es de tipo cuantitativo a través de un análisis factorial. El alcance del estudio es conocer los principales elementos de apreciación que surgen en la transducción de los servicios prestados por los guías a los turistas estadounidenses, para poder mejorar la calidad en el servicio y de esta manera ser más competitivos.*

**PALABRAS CLAVE:** Transducción, Turistas, Calidad En el Servicio

## TRANSDUCTION AS A TOOL OF COMPETITIVENESS AND ANALYSIS OF THE QUALITY OF THE SERVICE OFFERED BY THE TOUR GUIDES US IN CANCUN, Q. ROO

### ABSTRACT

*Cancun is a paradise destination that with its beaches invites visitors to linger, rich in contrasts, with peace, tranquility and joy that only a region such as this can provide. In Cancun the speed and intensity with which it has developed has led to that the migration factor ever higher; more are people who are displaced from their places of origin to tourist sites and decide to settle in them indefinitely, working as tour guides. This research aims to identify which is the perception of United States tourists when they are attended by a guide of the same nationality. The methodology to be used is of quantitative type through a factorial analysis. The scope of the study is to know the main elements of assessment arising in the transduction of the services provided by the guides to American tourists, in order to improve the quality in the service and thus become more competitive.*

## INTRODUCCIÓN

Una ventaja de un destino turístico es la creación del empleo, el turismo depende del factor humano, por lo que se ha caracterizado por requerir un gran número de trabajadores sin importar su cualificación profesional (OMT, 1998). En la mayor parte de los destinos turísticos de Latinoamérica se observa que el turismo es una actividad empírica, en la cual la mayor parte de los colaboradores ha llegado ahí de manera circunstancial. Si bien las nuevas generaciones de turisteros son producto de escuelas de hotelería y licenciaturas en turismo, existe una gran cantidad de trabajadores en todos los niveles que no tuvieron acceso a formación en turismo, pero han adquirido una vasta experiencia (González, 2006). En Cancún como en diversos destinos turísticos del Caribe, la velocidad e intensidad con que se ha desarrollado el producto turístico de esta actividad ha rebasado, en ciertos casos las previsiones, y cabe señalar el hecho de la migración que hay en estos destinos. Cada día son más las personas que se desplazan de sus lugares de origen a sitios turístico y deciden establecerse en ellos de manera indefinida (González, 2006).

Por lo tanto siendo Cancún un lugar paradisíaco con muchos atractivos, en donde se ha visto un crecimiento tanto en infraestructura hotelera como en la ciudad (Municipio de Benito Juárez), resulta atractivo para las personas de otras nacionalidades vivir en este polo turístico buscando una mejor calidad de vida. De acuerdo al Instituto Nacional de Estadística y Geografía (INEGI) con cifras del censo del 2010 se sabe que en México viven 961,121 personas extranjeras y Estados Unidos de América es el país número uno con una población de 738,103 personas que representa el 76.8% de la población nacida en el extranjero que vive en México. En el Municipio de Benito Juárez Q.

Roo se tiene una población total de 8,661 extranjeros que viven en Cancún, que corresponde al 0.9% del total de extranjeros que viven en México. Muchas de estas personas que viven en los destinos turísticos encuentran trabajo como personal de servicio (hoteles, agencias de viajes, transportadoras, guías, etc.) que llegan al lugar y permanecen trabajando en esas actividades (Jiménez, 2005), atendiendo a turistas de todas partes del mundo, sin embargo en este estudio se investigan cuestiones más sutiles como la percepción que tiene el turista al ser atendido por un guía de su propia nacionalidad, debido a que el trabajo de los guías de turistas radica en solucionar el aislamiento del turista, protegiéndolo de las dificultades derivadas del contacto con la sociedad (Jiménez, 2005), o también del shock cultural al que se enfrenta. Existen pocos trabajos relacionados con la interacción entre los turistas y los guías desde la perspectiva de los turistas, por lo que en esta investigación se introduce el término de la transducción que radica en descifrar y comunicar para el turista los códigos internos de toda la cultura anfitriona y en términos en los que los visitantes los pueden comprender mejor, de acuerdo con su propio contexto cultural de referencia (Jiménez, 1998).

### Marco Referencial

El turismo según la Organización Mundial de Turismo (OMT) son las actividades que realizan las personas durante sus viajes y estancias en lugares distintos al de su entorno habitual, por un periodo de tiempo consecutivo inferior a un año con fines de ocio, por negocio y otros (OMT, 1994). Jiménez (2005), menciona que el turismo es un fenómeno de gran importancia y magnitud que tiene implicaciones profundas para los países visitados o anfitriones como para los países generadores de los flujos, tanto a nivel económico, social, cultural y político. González (2006), considera al turismo como generador de fuentes de empleo es una visión limitativa, el turismo es más un factor de desarrollo para que las comunidades sean emprendedoras y empleadoras. La migración afecta la vida de mucha gente en diferentes países en el mundo tanto de forma individual como familias debido a que buscan mejorar sus vidas, oportunidades económicas o refugio de la violencia (Romo, López y Garrido, 2012).

Los migrantes residentes en Cancún tienen como posibilidad emplearse como guías de turistas, para esta labor se requiere acreditar uno o más cursos impartidos por instituciones con reconocimiento en el ámbito

cultural y académico coordinado por la Secretaría de Turismo o por las autoridades estatales de turismo (Norma Oficial Mexicana NOM-08-TUR-2002, 2003), teniendo en consideración además de que por ser extranjero debe acreditar su estancia legal en el país y la calidad y características migratoria para desarrollar la actividad de guía de turista. Además deben presentar el certificado de estudios expedidos en el país donde se realizaron los estudios, además deben acreditar el dominio del idioma español en un 90% (SECTUR, 2010). El papel de los guías representa mucho más que traductores de idiomas, tienen que ser transductores de mundos porque entienden el código del lugar y lo decodifican para luego volverlo a codificar en los términos que entiende el turista de acuerdo con sus propias experiencias y contextos cotidianos (Jiménez, 1998). Los guías de turistas son transductores culturales ya que cumplen con la función primordial de transmitir a los turistas la esencia del lugar que visitan y al mismo tiempo transfiere a la población receptora las particularidades propias del lugar de origen del visitante. El shock cultural se refiere sobre todo al proceso y la experiencia desilusionante de quienes entran en contacto con nuevas culturas (turistas) pudiendo ser visto como una expresión genérica que resume las dificultades de todo tipo que se derivan del cambio e interacción con otra cultura (Jiménez, 1998).

Jiménez (1998) refiere el término transducción en el turismo como paráfrasis y se refiere a las personas (transductores) que no son guías o traductores de idiomas en el sentido tradicional, sino que van más allá al tener en la relación (comunicación) anfitrión – turista, el papel de descifrar y comunicar a los turistas los códigos internos de toda cultura anfitriona y en términos en los que ese turista los puede comprender mejor, de acuerdo con su propio contexto cultural de referencia. Con el factor de la transducción lo que se busca es mejorar la calidad en el servicio, de acuerdo a Horovitz (2000) la calidad en el servicio es la percepción que tiene el usuario acerca de la correspondencia entre el desempeño y las expectativas de la experiencia del servicio. Para muchas organizaciones es una cualidad que les permite diferenciarse y cautivar a sus clientes, que inciden sobre los consumidores y los resultados del negocio (Peralta, 2006). La calidad del servicio es un concepto complejo y multidimensional, y se compone de varias dimensiones únicas, basadas en diferentes experiencias con los empleados de servicio en este caso los guías de turistas. Estas dimensiones implican tanto el proceso de producir el servicio como el resultado (Lovelock, 1997).

La calidad del servicio es un elemento básico de las percepciones del cliente. En el caso de los servicios puros (por ejemplo los guías de turistas) la calidad del servicio será el elemento dominante en las evaluaciones de los clientes (Zeithaml, Bitner, y Gremler, 2009). Dos aspectos fundamentales que influyen en la calidad del servicio son el comportamiento y las actitudes, por lo que en la relación turista y guía de turistas estas dos características influyen de manera notable en la percepción del servicio otorgado.

## METODOLOGÍA

Se establece un estudio cuantitativo, de tipo descriptivo, a través de un análisis factorial de factores comunes, que es una técnica estadística multivariante que se utiliza para resumir la información contenida en una gran cantidad de variables a una cantidad más pequeña de subconjuntos y factores (Malhotra, 2008). Se utilizó un cuestionario estructurado formado por 15 preguntas de las cuales 10 de ellas se realizaron a través de una escala de Likert del uno al siete, donde el uno era el de menor y siete el de mayor valor. Los datos estadísticos se procesaron en el programa SPSS versión 15. Se utilizó una muestra no probabilística, esta puede definirse como una muestra en la que los elementos específicos de la población se seleccionan de manera no aleatoria (McDaniel y Gates, 2011). La muestra de este estudio fue de 93 estadounidenses, un aspecto importante es que se basó en el juicio personal del investigador para seleccionar personas de dicha nacionalidad.

## RESULTADOS

La muestra arrojó que el 55.4% de los encuestados eran mujeres y el 44.6% hombres, los rangos de edad de los entrevistados se presentan en la siguiente tabla:

Tabla 1: Rango de Edad

Rango De Edad	Porcentaje
20 a 25	19.35%
26 a 30	31.18%
31 a 34	19.35%
36 a 40	12.90%
41 a 45	10.75%
46 a 62	6.45%

Fuente: Elaboración propia.

La muestra entrevistada proceden de las siguientes ciudades: Atlanta, Baltimore, Boston, Chicago, Conecticut, Dallas, Denver, Detroit, Houston, Kentwood, Las Vegas, Los Angeles, Louisiana, Miami, Mineapolis, New York, Orlando, Phoenix, Filadelfia, San Francisco, Seatle, San Louis y Washington D.C. El 60.2% de los turistas entrevistados opinó que contrataría a un guía de turistas de su nacionalidad por las siguientes razones: seguridad, conocimiento del lugar, idioma, conocimiento de las reglas del país, conocen las costumbres de los estadounidenses. El 39.8% opinó que no por los siguientes motivos: podrían conocer más la cultura, les gustaría que su guía fuera mexicano, los mexicanos conocen mejor los lugares, los estadounidenses no saben toda la cultura, el servicio no es tan bueno y no están totalmente preparados. Se empleo el modelo de análisis de factores comunes para analizar los datos en la categoría de contribuciones comunes las variables ya no son uno, como se muestra en la Tabla 2.

Tabla 2: Comunalidades

	Inicial	Extracción
Did you feel comfortable with the attention provided by the tour guide	.773	.713
The tour guide inspires trust when providing the service.	.776	.704
You feel empathy towards the tour guide	.518	.494
The no verbal language provided by tour guide was appropriate	.493	.456
The tour guide tone of voice was appropriate	.740	.739
The tour guide conveys the culture characteristic of the place you visited	.727	.745
The time that you spent getting to know the culture characteristic at the place you visited was appropriate	.712	.701
The Way the tour guide communicated was appropriate (language)	.640	.627
The tour guide provided the solution of all your questions and doubts	.751	.721
You feel good about being in foreign culture	.763	.756

Método de extracción: factorización de ejes principales.

Después de extraer los factores todas las varianzas son diferentes de los valores propios iniciales, el primer factor explica el 66.561 como lo muestra la Tabla 3, con tan solo un factor.

Tabla 3: Varianza Total Explicada

Factor	Autovalores Iniciales			Sumas de las Saturaciones al Cuadrado de la Extracción		
	Total	% de la varianza	% acumulado	Total	% de la varianza	% acumulado
1	6.976	69.763	69.763	6.656	66.561	66.561
2	.575	5.750	75.513			
3	.566	5.658	81.170			
4	.457	4.566	85.736			
5	.411	4.109	89.845			
6	.283	2.833	92.678			
7	.247	2.469	95.147			
8	.196	1.960	97.107			
9	.158	1.578	98.686			
10	.131	1.314	100.00			

Método de extracción: factorización de ejes principales.

El factor 1 (Tabla 4) una carga factorial que es el punto de partida al interpretar el análisis factorial y se refiere a la correlación simple entre cada una de las variables originales y los factores recién desarrollados. Las cargas de los reactivos en su respectivo factor iban de .676 a .869, lo que significa que cada una de las variables medidas tiene que tomarse en cuenta.

Tabla 4: Matriz Factorial

	Factor 1
Did you feel comfortable with the attention provided by the tour guide	.844
The tour guide inspires trust when providing the service.	.839
You feel empathy towards the tour guide	.703
The no verbal language provided by tour guide was appropriate	.676
The tour guide tone of voice was appropriate	.860
The tour guide conveys the culture characteristic of the place you visited	.863
The time that you spent getting to know the culture characteristic at the place you visited was appropriate	.837
The Way the tour guide communicated was appropriate (language)	.792
The tour guide provided the solution of all your questions and doubts	.849
You feel good about being in foreign culture	.869

Método de extracción: factorización del eje principal.

Dentro de los resultados del análisis factorial se observa que las variables que encuadran el concepto de la transducción según los turistas entrevistados están formadas por las 10 variables lo cual no discrimina ninguna de ellas por lo que estas serán tomadas en cuenta para futuras investigaciones debido a que demuestran tener incidencia en el objetivo de estudio de esta investigación.

## CONCLUSIONES

En suma, los resultados obtenidos comprueban que la percepción de los turistas con relación a las variables analizadas están profundamente ligados con el proceso de la transducción en los servicios ya que se sienten confortables con la atención prestada, el guía inspira confianza cuando provee el servicio, siente empatía hacia el guía de turistas, el lenguaje no verbal es el apropiado, el tono de voz es el adecuado, el guía de turistas conoce las características del lugar que se visita, la comunicación del guía es adecuado, el guía provee la solución para todas las preguntas y dudas y se siente bien estando en otra cultura. La transducción en el turismo juega un papel importante ya que los guías de turistas comunican la cultura de lugar que se visita, y los factores mencionados anteriormente coadyuvan a que la transmisión de esa información sea realmente efectiva y sean verdaderos embajadores del destino turístico.

# EL MODELO DE LA BASE EXPORTADORA COMO PUNTO DE PARTIDA PARA EL ANALISIS DEL DESARROLLO REGIONAL. EL CASO SONORA

María del Rosario Fátima Robles Robles, Universidad Estatal de Sonora

Beatriz Alejandra Hurtado Bringas, Universidad Estatal de Sonora

Alberto Carlos Sánchez Acosta, Universidad Estatal de Sonora

## RESUMEN

*El tránsito de un modelo de sustitución de importaciones al de la producción orientada a la exportación por el que ha transitado Sonora en los últimos treinta años, ha transformado su estructura productiva al pasar de ser un estado líder en la producción de productos agropecuarios a una diversificación de sus actividades económicas. Esto ha sido posible por políticas públicas orientadas a la reestructuración productiva y a la atracción de inversión extranjera, lo anterior hace necesario analizar los resultados de estas políticas a la luz del desarrollo regional; como punto de partida para este objetivo, partimos del modelo de la base exportadora.*

**PALABRAS CLAVE:** Desarrollo Regional, Modelos Económicos, Políticas Públicas, Base Exportadora, Industrialización

## ABSTRACT

### THE SONORA CASE STUDY: AN EXPORT-ORIENTED BASE MODEL AS A STARTING POINT FOR THE ANALYSIS OF REGIONAL DEVELOPMENT

*The transition from a model of import substitution to the one of export-oriented production has occurred in the state of Sonora over the past thirty years. This has transformed its economic structure from being primarily a state leader in the production of agricultural products to a broader diversification of their economic activities. This has been possible due both to public policies aimed at productive restructuring and to the attraction of foreign investment. Based on these facts it is necessary to analyze the results of these policies in the light of regional development. As a starting point for this goal, we will evaluate the export-oriented base model.*

**JEL:** O19, O21, O25

**KEYWORDS:** Regional Development, Economic Models, Public Policies, Export Base, Industrialization

## INTRODUCCIÓN

En los albores del siglo XXI, ante la eficiencia limitada del modelo neoliberal, en la mayor parte del planeta, pero principalmente en los países latinoamericanos, se analizan y prueban diferentes modelos económicos, uno de los referentes más sobresalientes, es el acercamiento de modelos económicos que hacen énfasis en el territorio, en una dimensión espacial, a la par, con la “globalización” se había anunciado el fin de las fronteras y de la “geografía”. Esta revalorización de lo local, ha producido una preocupación creciente por teóricos y agentes institucionales, por el diseño de estrategias y políticas orientadas al impulso de regiones para el crecimiento y desarrollo económico, a la vez que ha puesto en relieve, las disparidades en el

desarrollo económico de las regiones en un continente, país o un mismo Estado ¿Por qué el norte de México se ha desarrollado diferente al Sur? ¿Qué es lo que ha posibilitado que se den desarrollos como el de Monterrey, México?, ¿Cómo el de Saltillo o Torreón en Coahuila?.

Las políticas y estrategias implementadas por los gobiernos, han seguido diferentes enfoques teóricos y por ende responden a distintos modelos económicos. En México, desde mediados de la década de los ochenta, y de acuerdo al cambio de paradigma, se siguió la línea de liberación económica como una política del Estado mexicano. Este nuevo paradigma, no contempla la planeación del desarrollo regional desde el Estado, *“en general la política económica se reorientó a promover el papel del mercado en la asignación de recursos productivos, incluso su asignación interregional”* (Flores Tamayo 2002, 3) Nuestro objetivo consiste en analizar el comportamiento del modelo de la base exportadora en Sonora, con el fin de identificar las actividades básicas y las actividades económicas que constituyen una especialización relativa en la entidad, asimismo relacionamos el modelo con la inversión extranjera directa.

## REVISION DE LITERATURA

### Desarrollo Regional

Al abordar este tema, la primera pregunta que surge, es ¿Qué es el desarrollo regional? Boisier, señala que la economía clásica *“hizo del crecimiento económico su tema central, en tanto que la economía neo-clásica, hizo de la distribución su tema central. En este sentido puede decirse que el concepto de desarrollo tiene sus raíces más en la economía neo-clásica que en la clásica”* (Boisier 2001, 1), señala además que el concepto de desarrollo es un “tópico de la posguerra” y puntualiza que es un “tópico de las Naciones Unidas”. Durante décadas, el concepto de desarrollo se asoció al de crecimiento, y su medida corriente fue el PIB per cápita, no fue hasta 1970 que Dudley Seers establece que *“desarrollo es un concepto normativo, lleno de juicios de valor”*, en 1990 el Programa de las Naciones Unidas para el Desarrollo calcula por primera vez el Índice de Desarrollo Humano (IDH), que integra conceptos de educación, salud, esperanza de vida.

A partir de esta fecha, el concepto se ha ido construyendo y redefiniendo, Boisier, define el desarrollo regional como un *“proceso localizado de cambio social sostenido que tiene como finalidad última el progreso permanente de la región, de la comunidad regional como un todo y de cada individuo residente en ella. Y este desarrollo del individuo dentro de una región y de la misma, se logrará con la descentralización de una política regional que sea eficaz y equitativa”*. De tal forma, que esta discusión y lo que podemos llamar un nuevo paradigma, ha puesto sobre la mesa, una serie de cuestionamientos, tanto para los teóricos como para los gobiernos e instituciones. Las crisis económicas y el poco éxito que ha tenido en los países latinoamericanos, el modelo neoliberal, para las metas de desarrollo, ha ocasionado la búsqueda e implementación de modelos económicos orientados a nuevas determinantes.

El reconocimiento de las contradicciones del modelo neoliberal implementado a mediados de la décadas de los ochenta en México. Entre las cuales esta, que por un lado, se ha conformado una,

*“organización capitalista global, donde las actividades económicas, además de internacionalizarse, se organizaron funcionalmente a partir de una división global coordinada del trabajo. [...] un sistema de manufactura internacional, donde la capacidad de producción se dispersa a un número sin precedente de países en desarrollo, pero también industrializados”* (Lara, Velázquez y Rodríguez 2007, 3)

Aunada a una eliminación de las barreras para el movimiento de los capitales y el comercio. En una aparente contradicción

*“Estas nuevas condiciones de la producción y el comercio mundial han colocado en primer plano la dimensión local del proceso. La globalización involucra territorios concretos de actividad económica, donde se establecen las conexiones y se tejen las redes entre actores gubernamentales y privados, locales y transnacionales, que podrán traducirse en inversiones nuevas” (Lara, Velázquez y Rodríguez 2007, 3)*

Es así como lo local, los actores locales, el espacio se han revalorizado sin dejar de reconocer las circunstancias específicas en las cuales se aborda, *“entre ellas está aquello que los “neoinstitucionalistas” identifican como restricciones institucionales, las cuales no son otra cosa que las reglas formales o informales ideadas por el hombre para dar forma a su propia interacción (North, 1983).”* (Bracamontes Sierra 2006, 133). Es decir el reconocimiento de las características de cada región.

### Teoría de la Base Exportadora

Este modelo ha tenido influencia *“tanto en la teoría del crecimiento regional como en su impacto en las técnicas para relacionarlo con el crecimiento del Producto Interno Bruto (PIB)”* (Mendoza y Díaz-Bautista 2006). El argumento central, *“supone que el crecimiento regional, es determinado por el crecimiento de las actividades básicas de una región (definidas como las actividades que producen bienes y servicios de exportación y, por tanto, traen recursos monetarios de fuera de la región)”* (Tamayo Flores 1998). Su idea central es que la única manera que tienen las economías locales para aumentar los flujos monetarios para lograr el crecimiento económico es que los recursos vengan de las exportaciones.

En este modelo, podemos observar que efectúa una diferencia en las actividades productivas; las básicas que dependen de la demanda externa para su producción y *“las no básicas (definidas como las actividades que sirven exclusivamente a los mercados locales o regionales, de consumo final o intermedios), dependen de la demanda alcanzada y del ingreso generado por las actividades exportadoras básicas”* (Tamayo Flores 1998, 3). Este planteamiento, asigna un papel pasivo a las actividades “no básicas” en la promoción del crecimiento de una región. Los argumentos en pro de este modelo, establecen que *“el desarrollo de la base exportadora regional depende de las ventajas competitivas de la región (costos relativos de producción y distribución). Una economía regional crecerá en la medida que su base exportadora tenga capacidad para competir con otras regiones y la competitividad de la base exportadora sólo crecerá en la medida en que se desarrollen las actividades “no básicas”* (Tamayo Flores 2002).

Entre los argumentos en contra, se señala que supone una oferta de insumos elástica, es decir *“asume que los insumos necesarios para apoyar una creciente actividad de las industrias básicas (mano de obra, capital, insumos importados y servicios públicos, etc.), estarán disponibles a un costo constante por unidad”* (Tamayo Flores, Los nexos teóricos de la política de desarrollo industrial en México 2002, 5).

Otro de los argumentos en contra, que adquiere una relevancia creciente ante las contradicciones que estamos viviendo del capitalismo global, es que este modelo supone una constante de demanda externa para la producción local.

### Aplicación del Modelo En Sonora

Sonora es un estado que en los últimos treinta años ha transitado por una recomposición de sus actividades económicas, al pasar a ser un estado productor de productos básicos para el consumo interno y la agricultura comercial paso a una economía que tiene en el sector manufacturero y los servicios su principal fuente de contribución al producto interno bruto. Ver Figura 1.

Figura 1: Estructura Del PIB de Sonora (1970-2003)

Fuentes: Robles (2014).

En esta transformación ha sido clave que el nuevo rumbo de la economía se formalizara en los proyectos de gobierno, ejes rectores de la acciones en los diferentes ámbitos de gobierno. Es por ello, que en el presente ensayo, analizaremos los planes de desarrollo de Sonora, para los años 2004-2009 y 2010-2015, en el rubro de desarrollo económico, con la finalidad de identificar si encontramos en los objetivos planteados por estos gobiernos, acciones que lleven a la priorización de los supuestos del modelo de la base exportadora.

*Plan Estatal de Desarrollo 2003-2009:* En el objetivo 5, Empresas de calidad mundial e innovación tecnológica para generar empleos calificados y mejorar remuneraciones. Se propone lo siguiente: 1) Atraer a la gran empresa para que se convierta en locomotora que jale el desarrollo de la economía sonorense, aproveche de manera óptima los recursos humanos y sea fuente de transformación de tecnología; 2) Identificar las ventajas competitivas con las que cuenta el estado para vincular a ellas el desarrollo de los grandes proyectos de infraestructura; 3) Fomentar la adopción de compromisos de productividad por parte de las empresa sonorenses, vinculados a las remuneraciones de los trabajadores e 4) Impulsar alianzas estratégicas de empresas locales con grandes empresas para acceder a nuevos mercados, capital y tecnología.

Algunos de estos objetivos, demuestran evidentemente que se busca atraer la inversión de empresas externas al territorio con el fin de que sean ellas las que mediante la inversión detonen el desarrollo, algunas otras, no son tan claras, como la de vincular las remuneraciones a la productividad, esta medida no va a la inversión, pero si a mantener una elasticidad en los insumos, pues no se plantea mejores salarios, sino que las remuneraciones se vinculen a la productividad, de tal forma, que solamente si existe una mayor productividad los trabajadores obtendrán mejores salarios, por otra parte, se deja la inversión en manos de las grandes empresas, así como el acceso a la tecnología, mercados y capital, pues son - las grandes

empresas (externas)- por medio de las cuales, las empresas locales (¿básicas?), podrán acceder a ellos. (Sonora 2004) (Sonora, Plan Estatal de Desarrollo 2009-2015, 2009)

*Plan Estatal de Desarrollo 2010-2015:* En los objetivos propuestos en este plan, identificamos que nos son tan obvias, las medidas que incentivan la inversión externa, en territorio sonorense, pero se pueden derivar por los planteamientos formulados, en el apartado cuatro “*Sonora competitivo y sustentable*”, donde se establece 1) Impulsar la infraestructura de apoyo al desarrollo, como lo es la infraestructura carretera, aeroportuaria y portuaria y de comunicaciones, así como el desarrollo y fortalecimiento de parques industriales para garantizar a la población el acceso a los servicios y actividades económicas; 2) Fomentar iniciativas y actividades de cooperación internacional de Sonora con regiones y países estratégicos y la coordinación entre los diferentes actores estatales e internacionales; 3) Promover acuerdos de colaboración del Estado de Sonora con los estados fronterizos de México y Estados Unidos, organismos internacionales y regiones del mundo que contribuyan al desarrollo de la entidad; 4) Establecer la corresponsabilidad de las grandes industrias con el estado para apoyar la formación y fortalecimiento de las cadenas productivas con las micro, pequeña y mediana empresa de la entidad; 5) Impulsar el sector minero de la entidad, a través de la modernización y reestructuración de su actividad en el estado. Cada uno de estos planes proponen un Sonora industrial, además de iniciativas y acuerdos de colaboración con empresas y gobiernos de estados fronterizos o de otros países, con la finalidad de atraer la inversión extranjera, para que sean ellas, las que impulsen la industrialización e innovación tecnológica y que esto constituya un ancla para las PYMES sonorenses.

Por otra parte se reconoce el impulso que ha dado desde hace algunos años el sector minero, ya que buena parte del superávit de las exportaciones, lo ha originado este sector, que en los últimos años ha recibido una fuerte inversión extranjera. Los objetivos de los planes de desarrollo anteriormente analizados, sustentan la base que en las últimas décadas Sonora ha basado el desarrollo en la atracción de inversión extranjera, de la cual se espera la generación de empleos, transmisión de tecnología a las empresas locales, el aprendizaje industrial y la innovación tecnológica de la industria que se establezca en el territorio sonorense, sea un multiplicador de la economía regional.

#### Análisis del Método de la Base Exportadora

La teoría de la base exportadora puede ser expresada en términos de ingreso o empleo.

$$\Delta T = \Delta k \Delta B \text{_____} (1a)$$

$$\Delta Y = \Delta k \Delta E \text{_____} (1b) \quad (1)$$

Donde

T	=	empleo total
Y	=	ingreso total
B	=	empleo exportador (básico)
E	=	ganancias de las exportaciones
k	=	multiplicador de la base exportadora
Δ	=	cambio

Como se puede observar en las ecuaciones (1a) y (1b), “*las industrias exportadoras generan dinero que fluye a la ciudades*” (Flores Tamayo 2002, 42), una parte de estos ingresos se gasta localmente, que gastan los empleados de estas industrias exportadoras, con ello se crean empleos en el sector servicios locales, y a su vez, estos nuevos empleos del sector servicios gastan parte de esos ingresos generados, lo que permite un multiplicador positivo, por la creación de los empleos locales. La magnitud de este multiplicador va a depender de la propensión de los trabajadores locales al gasto.

Modelo formal incluyendo el ingreso

$$Y = C + M_1 - M_0 \quad (2)$$

Donde:

Y	=	ingreso total
M <sub>1</sub>	=	ingreso monetario
M <sub>0</sub>	=	egreso monetario
C	=	consumo de residentes locales

El consumo está integrado por dos componentes.

$$C = A + B_y \quad (3)$$

Cuando la demanda está fuera del área de control ésta se considera exógena. Es por ello que los ingresos no se relacionan con el tamaño del ingreso regional, por lo que

$$M_1 = E_0 \quad (4)$$

Donde:

E<sub>0</sub> = ingreso de exportaciones determinado exógenamente

## METODOLOGIA

Los autores señalan que si se utilizarán los parámetros que hemos señalado anteriormente, presenta dificultades para su aplicación, ya que es muy difícil obtener la propensión marginal al consumo y a la importación, la mayoría de las veces no se dispone de esta información y si quisiéramos obtenerla, se tendría que aplicar encuestas, que requieren elevados recursos económicos y tiempo de aplicación, es por ello que para utilizar este modelo de manera práctica, podemos utilizar los datos regionales del empleo.

Para ello los autores, proponen una metodología que aplicaremos para demostrar este modelo en Sonora:

1) El ingreso debe ser proporcional al empleo, por lo que el ingreso no básico como proporción del ingreso será igual al empleo no básico como proporción al empleo total; 2) En el corto plazo es posible que los ingresos se incrementen sin que aumente el empleo, por lo que el ingreso per cápita puede elevarse. Este ingreso más elevado atraerá trabajadores a la región, por lo que el vínculo empleo-ingreso se sostiene como resultado de la migración laboral; 3) La razón empleo-exportador a empleo-total es constante. El multiplicador de la base exportadora puede expresarse

$$\Delta T = (T/B) (\Delta B) \quad (5)$$

Donde:

ΔT	=	cambio en empleo total
T	=	empleo total
B	=	empleo exportador o básico

Para poder utilizar esta técnica estadística de evaluación del crecimiento económico regional, debemos realizar determinados supuestos para determinar el empleo exportador y son los siguientes: 1) La razón capital-producto es igual en todas las regiones; 2) Los patrones de consumo son iguales en todo el país, 3) El producto de cada industria es idéntico en cada región. El modelo considera, que si el coeficiente de

localización  $LQ = (e_i/e_t)/(E_i/E_t) > 1$ , la región tiene más trabajadores establecidos en esa industria que los esperados, la explicación a esta situación para efectos del modelo se relaciona con una mayor proporción de trabajadores que laboran en el sector exportador. El empleo exportador se calcula usando como base de la estimación el cociente de localización. Coeficiente de localización, representa el grado de similitud de la distribución interregional de un sector con respecto a la distribución de un patrón de comparación, normalmente el total de la actividad económica. Este indicador se utiliza Coeficiente de localización, representa el grado de similitud de la distribución interregional de un sector con respecto a la distribución de un patrón de comparación, normalmente el total de la actividad económica. Este indicador se utiliza

$$Q = \frac{(e_i/e_t)}{(E_i/E_t)}$$

Donde

(6)

Q = cociente de localización de la industria i  
 $e_i$  = empleo local de la industria i  
 $e_t$  = empleo total de la industria i  
 $E_i$  = empleo nacional de la industria i  
 $E_t$  = empleo nacional total

### Aplicación del Modelo En las Actividades Económicas de Sonora

Con el objetivo de conocer de manera parcial la tasa de crecimiento de las actividades económicas de Sonora que están en función del crecimiento de la actividad económica del sector exportador, elaboramos el cuadro 1, en el que analizamos el multiplicado del empleo exportador para Sonora en el año 2012.

Tabla 1: Multiplicador del Empleo Exportador: Sonora

			Ei	Ei	Coef. Local	Et(Ei/Et)	LQ
Total de actividades	48,203,851	1,155,317					
Agropecuarias	6,893,742	153,329	0.13	0.14	0.928004	165,225	0.93
Ind. Extractiva y de Electricidad	429,329	29,039	0.03	0.01	2.82209743	10,290	2.82
Ind. Manufacturera	7,431,599	182,542	0.16	0.15	1.02485189	178,115	1.02
Construcción	3,517,161	89,728	0.08	0.07	1.06442805	84,297	1.06
Comercio	9,335,904	214,975	0.19	0.19	0.96075389	223,757	0.96
Servicios	20,278,146	466,678	0.40	0.42	0.96021758	486,013	0.96
No Especificado	317,970	19,026	0.02	0.01	2.49655948	7,621	2.50
Total	48,203,851	1,155,317					
T		1,155,317					
B		280,323					
Multiplicador		4.12					

Elaboración propia en base a los datos de PROMEXICO (Promexico 2012)

En la tabla 1, se presentan las actividades económicas y las estimaciones de los coeficientes de especialización por actividades, tanto del estado de Sonora como en los totales a nivel nacional. De acuerdo con la metodología establecida, se obtuvieron las estimaciones del empleo exportador o no básico y con base a éste el multiplicador del empleo exportador del estado de Sonora es de 4.12, lo que significa que el cambio en el empleo básico o exportador tuvo en el ejercicio 2012, una repercusión de 4.12 veces mayor en el empleo total en el estado de Sonora. Al aplicar el modelo observamos que Sonora es un estado que concentra la base exportadora en cuatro actividades básicas, que para el modelo son aquellas que están orientadas a la producción de bienes y servicios para exportación son las industrias extractivas (2.82), manufacturera (1.02), construcción (1.06) y las no especificadas (2.50), para este modelo las actividades no básicas en Sonora, o que están orientadas al mercado local serían las agropecuarias (0.93), comercio (0.96) y servicios (0.96). La información que nos proporciona este modelo es valiosa porque permite un primer acercamiento para conocer las actividades que tienen un efecto multiplicador positivo para la economía de Sonora.

### Comparación del Modelo con la Inversión Extranjera Directa (IED)

Consideramos que en los procesos de crecimiento económico de un estado o región existe una multicausalidad de factores, sin embargo las políticas públicas que siguen estos estados, son un factor determinante, por otra parte, la globalización de la economía y las tendencias de crecimiento y desarrollo que se dan en otras regiones, son asuntos que son indispensables de analizar. Estas tendencias de crecimiento y desarrollo globales, traen aparejados la expansión de los mercados y la búsqueda de satisfactores y para la producción. Por ello consideramos conveniente comparar la pertenencia del modelo con la IED en el estado de Sonora. En párrafos anteriores expusimos que en los últimos sexenios de los gobiernos de Sonora, las políticas públicas orientadas al crecimiento económico han basado sus estrategias en la atracción de la inversión extranjera, para la generación de empleo, el aprendizaje industrial y el impulso multiplicador de esta inversión en el consumo y en la economía regional en su conjunto.

Tabla 2: IED En Sonora Inversión Extranjera Directa Por Sector de Actividad Económica Receptora (1999-2012)

	Nacional	Entidad
Total (millones de dólares)	300,084.4	4,386.5
Minería (%)	3.7%	43.2%
Industria manufacturer	43.6%	42.3%
Servicio de alojamiento temporal y de preparación de alimentos y bebidas	2.4%	7.9%
Agricultura, ganadería y aprovechamiento forestal	0.3%	2.7%
Construcción	3.3%	1.2%
Servicio de apoyo a los negocios, manejo de desechos y servicios de remediación	3.8%	1.1%
Comercio al por menor	4.3%	0.9%
Servicios inmobiliarios y de alquiler de bienes muebles e intangibles	3.8%	0.9%
Comercio al por mayor	4.2%	0.2%
Otros sectores	30.6%	-0.5%

Fuente: (INEGI, *Perspectiva estadística Sonora 2012*) Nota. Cifras del Iro. De Enero al 30 de junio del 2012 notificadas al Registro Nacional de Inversión Extranjera (RNIE)

La congruencia del modelo de base exportadora con otros indicadores, en este caso la IED, el sector que ha recibido más inversión en este periodo es el de la minería con un 43.2% del total de inversión, seguido muy de cerca por la industria manufacturera con un 42.3% y los servicios de alojamiento temporal con un 7.9%,

## CONCLUSIONES

A partir de los años ochenta, en México se transitó del modelo de sustitución de importaciones al modelo de producción orientado a la exportación, en el que se implementan una serie de medidas con la finalidad de detonar el crecimiento económico y el desarrollo, las cuales estaban ligados fuertemente a la atracción de inversión extranjera y al fomento de las exportaciones. En Sonora, estos cambios de modelo económico ocasionaron una transformación en las actividades económicas al pasar de ser un estado orientado preponderantemente a las actividades primarias, a una orientación en la cual los servicios y la manufactura pasan a ocupar este papel.

Sonora, por casi cincuenta años se ha propuesto como meta la industrialización, los proyectos de los gobiernos que se han plasmado en los planes de desarrollo, han tenido como propósito lograr esta meta mediante la inversión externa y la exportación de productos terminados que se elaboran en las maquiladoras, y de productos agrícolas y ganaderos que se producen en el territorio sonorense. El común denominador de los planes de gobierno en estos periodos ha sido apoyar a la inversión extranjera y otorgar

facilidades para que se instalen empresas en Sonora con la finalidad de que las empresas locales se engancen a la dinámica de estas grandes empresas y detonar el desarrollo regional. La IED y la instalación de plantas de manufactura de exportación, con la finalidad de generar empleos, impacta positivamente al crecimiento económico y se activan las actividades “no básicas” en el estado. Sin embargo, la industria manufacturera de exportación, ocupa el tercer lugar en generador de empleos en el estado en el año del 2012, por debajo del sector comercio y servicios, El coeficiente de empleo (ei), para la manufactura (.16) es menor comercio (.19) y muy por debajo del (.40) del sector servicios en sus diferentes rubros. Por otra parte, la especialización relativa que muestra el indicador de solamente el 1.02, sugiere que la especialización relativa o empleo excedentario no es aún significativa.

Por otra parte, las limitantes propias del modelo no permiten identificar, la medida en que el sector servicios depende del crecimiento de las actividades básicas, como son las manufacturas y la industria extractiva (minería), consideramos que el análisis del modelo de la base exportadora, es un indicador que muestra un punto de partida a partir del cual es necesario profundizar en esos sectores como la manufactura, a la que se le han dedicado recursos económicos, sin embargo el impacto en la región no es el esperado, siendo una de las posibles causas: la desarticulación de las políticas de atracción de inversión extranjera con la política de desarrollo del estado, privando de una mayor especialización a la entidad.

Asimismo, Sonora, un estado con importantes yacimientos mineros, en el modelo se muestra como este rubro es que muestra un factor más alto de localización de la industria, con un 2.82, que genera un multiplicador importante, sin embargo, el número de empleos que genera no es tan significativo como los de servicios, manufactura y el comercio, por lo que su efecto en la economía estatal se ve limitado.

Cincuenta años de políticas para detonar la industrialización en el estado, no han bastado, para impulsar las actividades “básicas”, a la fecha, el sector servicios es el mayor generador de empleos en el estado, habría que tomar en cuenta los resultados de este tipo de modelos, que sirven de apoyo para la toma de decisiones en dos vertientes. Una de ellas, es analizar el porqué, si en el discurso oficial se fomenta, apoya, reconoce y se diseñan estrategias para atraer la inversión extranjera para detonar la generación de empleos, este objetivo aparece aún muy difuso y por otra parte, reconocer a los sectores locales, que son los que a la fecha, los mayores generadores de empleo en la región y por ende, impulsores del crecimiento regional. Los modelos de la economía neo-clásica, son reveladores, el modelo de la base exportadora demuestra que las acciones que se efectúen para atraer inversión externa en el caso específico de la manufactura, ha tenido un impacto multiplicado reducido en la región, consideramos que, para que estas acciones puedan tener beneficios a largo plazo, se requieren que los actores locales sean incluidos también en el desarrollo, que las empresas locales se engancen en la lógica de la gran empresa y se dé realmente un aprendizaje de su saber hacer, es decir, un efecto multiplicador cuantitativo y cualitativo.

## EASY-CAR, EL PROCESO DE INNOVACIÓN DEL AULA AL MERCADO

Juan Carlos Mandujano Contreras, Universidad Juárez Autónoma de Tabasco

Cecilia García Muñoz Aparicio, Universidad Juárez Autónoma de Tabasco

Concepción Reyes De La Cruz, Universidad Juárez Autónoma de Tabasco

Leticia Rodríguez Ocaña, Universidad Juárez Autónoma de Tabasco

### RESUMEN

*Easy-car es un producto innovador, patentado en la Universidad Juárez Autónoma de Tabasco consiste en un carrito portátil que ofrece múltiples beneficios: capacidad para armarse y desarmarse, lo que facilita su transportación, diseño en las llantas que facilita subir escaleras de manera fácil y segura. Es el resultado de la transferencia de conocimientos del aula al mercado. Este producto está elaborado a base de materiales ligeros pero muy seguros y se encuentra al alcance del usuario para uso doméstico. Para poder patentar este producto, se llevó a cabo una investigación de tipo exploratorio mixto: con un enfoque cualitativo y cuantitativo; en el enfoque cuantitativo, se diseñó un cuestionario con preguntas cerradas en una muestra poblacional de 88 amas de casa y el enfoque cualitativo un focus group.*

**PALABRAS CLAVE:** Emprendimiento, Desarrollo de Productos, Innovación, Patente

## EASY-CAR, THE INNOVATION PROCESS FROM THE CLASSROOM TO MARKET

### ABSTRACT

*Easy-car is an innovative product, patented in Universidad Juárez Autónoma de Tabasco, is a portable cart that offers multiple benefits: with the ability to assemble and disassemble, making it easy to transport with a tire design that facilitates climbing stairs easily and safe. It is the result of the transfer of knowledge from the classroom to market. This product is made from lightweight but very safe materials and is available to the user for home use. For patent this product, it had to do a joint exploratory research: a qualitative and quantitative approach, the quantitative approach, a questionnaire with closed questions in a population sample of 88 housewives and designed a qualitative approach focus group.*

**KEYWORDS:** Entrepreneurship, Product'S Development, Innovation, Patent

### INTRODUCCIÓN

En este artículo se plasman los resultados de una educación efectiva brindada a estudiantes de la licenciatura en Relaciones Comerciales de la Universidad Juárez Autónoma de Tabasco [UJAT] ubicada en la División Académica de Ciencias Económico Administrativas [DACEA] en la ciudad de Villahermosa, Tabasco en México. En esta carrera se busca concientizar a los estudiantes sobre la importancia que tiene el desarrollo de sus habilidades creativas como parte del fomento a la innovación y desarrollo de nuevos productos en la asignatura que lleva el mismo nombre. Esta concientización busca formar jóvenes socialmente responsables que produzcan valor a futuras empresas, así como el emprendimiento en ellos. A raíz de la asignatura anteriormente mencionada, surgió el proyecto titulado "Easy-Car" como solución a la necesidad de

transportar objetos de un lugar a otro, mismo que gracias a su diseño innovador fue presentada la solicitud de patente ante el Instituto Mexicano de la Propiedad Industrial bajo el expediente: MX/a/2013/004927 con fecha de 2/mayo/2013 y con folio MX/E/2013/031390. Del mismo modo se presenta una investigación de mercado realizada para conocer la factibilidad de este nuevo producto diseñado en las aulas de la UJAT, lo que dio como resultado la aceptación que este producto tendrá en la sociedad capitalina tabasqueña. Como resultado de esta investigación, además de haber sido demostrada la factibilidad del producto, se demuestra que es posible la generación de nuevas ideas a través de un acompañamiento por parte de profesionales de la educación, la mercadotecnia y áreas específicas para las habilidades de cada nuevo inventor.

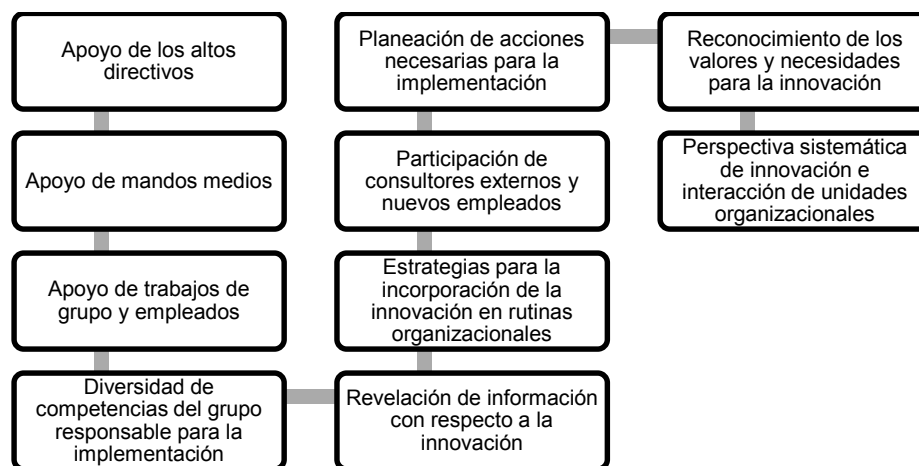

## REVISIÓN LITERARIA

En la Universidad Juárez Autónoma de Tabasco en su División Académica de Ciencias Económico Administrativas, se oferta la Licenciatura en Relaciones Comerciales, en la que se incluye la asignatura de “Innovación y Desarrollo de Nuevos Productos”, como parte del área sustantiva profesional (UJAT, 2003), para la cual se debe entregar un prototipo de producto innovador con su respectivo plan de comercialización. Para esta actividad cuentan con asesorías multidisciplinares, al contar con el apoyo de profesores de 40 disciplinas diferentes en las nueve divisiones académicas de la UJAT. De esta asignatura surge el proyecto Easy-Car, un carro de carga plegable para uso doméstico que facilita el traslado de objetos ligeros de uso cotidiano, caracterizado por expandirse, contraerse y adaptarse según las necesidades del consumidor en cuanto a tamaño del objeto a transportar, además cuenta con llantas que facilitan su desplazamiento por escalones (Rodríguez y Miranda, 2013).

Gracias a la impartición de esta asignatura, se concientiza a los estudiantes sobre la importancia del desarrollo tecnológico para las empresas en la actualidad, toda vez que desarrollar y administrar tecnología es lo que contribuye a crear riqueza para las naciones, compañías e individuos (Vega, 2009, citando a Khalil y Ezzat, 2005). En todos los países se desarrollan prototipos tecnológicos, en diferentes niveles tanto en organizaciones públicas como privadas, pero la incorporación de estos al sistema productivo, es un trabajo que le corresponde a las empresas (Vega, 2009). Las actividades de las empresas relacionadas con la innovación tienen mayor impacto en la medida en que se gestionan de forma adecuada. Cuando dichas actividades se organizan y se realizan sistemáticamente conforman lo que se denomina procesos de gestión de tecnología, comprendida esta como la herramienta que se debe enmarcar en los procesos generales de innovación al que están sometidas todas las empresas (Universida de Vigo, s.f.); además, con ellos, las organizaciones aprovechan mejor sus recursos, incrementan sus ventajas competitivas y maximizan sus resultados (Premio Nacional de Tecnología, 2006).

La innovación de acuerdo con Pedroza y Ortiz (2008), es el motor más importante para el desarrollo de las empresas. Por su parte, Damanpour y Gopalakrishnan, 2001 (citados en Huang y Rice, 2012), proponen que la innovación consiste en dos resultados dinámicos, cambios en productos específicos o servicios ofrecidos a los consumidores, y cambios al modo en el que estos son creados y entregados; estos corresponden a innovación del producto e innovación del proceso respectivamente. Souza y Bruno-Faria (2013), basados en la identificación de los aspectos organizacionales que pueden intervenir favorablemente o en contra del proceso de innovación, propusieron 10 factores que ayudan a la innovación en las empresas, en la Figura 1 se presentan dichos factores.

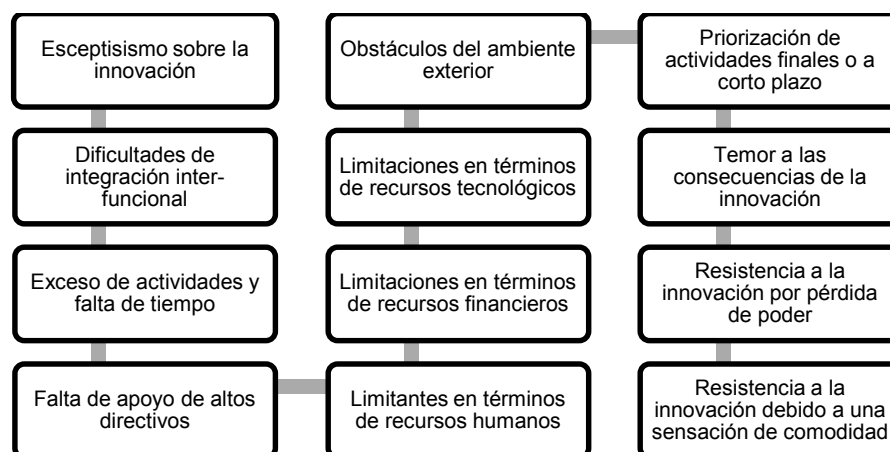

Figura 1: Diez Factores Que Favorecen la Innovación en las Empresas

Fuente: Traducción propia del autor de los diez aspectos que favorecen la innovación, basados en la identificación de los aspectos organizacionales que pueden intervenir favorablemente en el proceso de innovación propuestos por Souza y Bruno-Faria (2013).

Del mismo modo, se presentan en la Figura 2, los doce factores que minimizan la innovación en las empresas propuestas por Souza y Bruno-Faria (2013).

Figura 2: Doce Factores Que Minimizan la Innovación En las Empresas

Fuente: Traducción propia del autor de los doce aspectos que afectan la innovación, basados en la identificación de los aspectos organizacionales que pueden intervenir desfavorablemente en el proceso de innovación propuestos por Souza y Bruno-Faria (2013).

El desarrollo de nuevos productos contribuye en gran medida a la sociedad, ya que, en su mayoría, los nuevos productos nos permiten tener una mejor calidad de vida (Solomon y Stuart, 2001). Según Kotler y Armstrong (2001), el desarrollo de productos es el hecho de desarrollar un concepto de producto, para que este sea convertido en un producto físico, práctico para quienes lo consuman. La importancia de este radica en los beneficios que ofrece a las empresas tales como incremento de utilidades, incremento de la participación de mercado, así como sobrevivir y crecer en el mercado, entre otros (Kirchner 2011). El desarrollo de productos sigue un proceso, mismo que es considerado como la secuencia de pasos o actividades que una empresa emplea para idear, diseñar, y finalmente comercializar un producto. Las seis

fases del proceso de desarrollo genérico se describen en la Tabla 1 según lo establecido por Ulrich y Eppinger (2004).

Tabla 1: Fases del Proceso de Desarrollo Genérico de Productos

Fase	Descripción
0. Planeación	Se conoce como “fase cero” por anteceder a la aprobación del proyecto y al lanzamiento del proceso de desarrollo del producto real. El resultado de esta fase es el principio de misión del proyecto, especificando los objetivos del producto, comerciales así como suposiciones básicas y limitaciones.
1. Desarrollo del concepto	Se identifican las necesidades del mercado objetivo, se generan y evalúan conceptos de productos alternativos y se seleccionan uno o más conceptos para desarrollo y prueba.
2. Diseño a nivel sistema	Incluye la definición de la arquitectura del producto y el desglose del producto en subsistemas y componentes.
3. Diseño de detalles	Incluye la especificación completa de la geometría, materiales y tolerancias de todas las partes que sean únicas en el producto, y la identificación de todas las partes estándar que se van adquirir de los proveedores.
4. Prueba y refinamiento	Involucra la construcción y evaluación de múltiples versiones de producción previas del producto.
5. Producción piloto	En esta fase el producto se fabrica utilizando el sistema de producción pretendido con el propósito de capacitar a la fuerza laboral y resolver cualesquiera problemas que persistan en los procesos de producción.

*Fuente: Descripción de cada una de las seis fases que componen el proceso de desarrollo genérico de productos propuesto por Ulrich y Eppinger en su libro “Diseño y desarrollo de productos. Enfoque multidisciplinario”. Considerado como la secuencia de pasos o actividades que una empresa emplea para idear, diseñar y finalmente comercializar un producto*

Según Kotler (2002), la investigación de mercados es el diseño, la obtención, el análisis y la presentación sistemática de datos y descubrimientos pertinentes para una situación de marketing específica que enfrenta la empresa. Esta herramienta de la mercadotecnia, busca determinar el grado económico de éxito o fracaso que pueda tener una empresa al momento de entrar a un nuevo mercado o al introducir un nuevo producto o servicio (López, 2011). Una de las aplicaciones que tienen la investigación de mercado, se dirige al análisis de productos (González, 2010). Gracias a las características únicas del nuevo producto “Easy-Car”, fue posible realizar la solicitud de patente del mismo, entendida esta como un derecho exclusivo concedido a una invención, es decir, un producto o procedimiento que aporta, en general, una nueva manera de hacer algo o una nueva solución técnica a un problema (OMPI, 2014). Para que una invención sea aceptada como patentable, debe cubrir las siguientes características: debe tener uso práctico, debe ser novedoso, con alguna característica nueva y debe presentar un paso inventivo.

Como bien es sabido, las patentes son concedidas por una Oficina Nacional de Patentes, en el caso de México, es en el Instituto Mexicano de la Propiedad Industrial la autoridad administrativa competente. Si una persona ya sea física o moral desea tener derechos exclusivos de explotación sobre una invención, misma que le confiera ventajas competitivas sobre la competencia colocando productos novedosos en el mercado, esta debe proceder con su registro ante el IMPI, institución que, una vez examinada la solicitud de registro, le conferirá una patente sobre el invento en cuestión por un plazo de veinte años. El procedimiento que sigue una solicitud de patente inicia al presentar la solicitud ante el IMPI, este realiza un examen de forma de la documentación para posteriormente, y después de una plazo de 18 meses (contados a partir de la fecha de presentación), se publica la solicitud de patente.

Una vez que la solicitud fue publicada, se procede a un examen de fondo, y si es otorgada la patente se procede a la expedición del título por el cual se debe cubrir el pago de la tarifa correspondiente de \$3,377.78 (IVA incluido), sin embargo cuando la solicitud es presentada directamente por los inventores, personas físicas, micro o pequeñas industrias, instituciones de educación superior públicas o privadas o por instituciones de investigación científica y tecnológica del sector público, se otorgará un descuento del 50% del valor total (IMPI, 2012). De forma independiente y previa al procedimiento de solicitud de patente ante el IMPI, las estudiantes de la asignatura de Innovación y desarrollo de nuevos productos, se acercaron a la

Secretaría de Investigación, Posgrado y Vinculación de la UJAT, donde se encuentra un área que ofrece el servicio de Registro de Propiedad Intelectual para la protección de ideas desarrolladas tanto por alumnos como por profesores investigadores de la misma institución. En esta área, las estudiantes fueron orientadas y asistieron a asesorías personalizadas ofrecidas por expertos del IMPI. Como resultado de estas asesorías, obtuvieron la redacción completa y correcta de la patente, bajo el nombre “Carro de carga plegable para uso doméstico” para su identificación y protección.

### Producto

EASY-CAR es un producto patentado por la UJAT y consiste en un carro portátil de uso doméstico, elaborado de aluminio redondo, se caracteriza por ser ligero, económico e higiénico al ser inoxidable. Este producto cuenta con unas llantas innovadoras que le permiten desplazarse con facilidad por los escalones. Una innovación más que se pensó para este producto fue la capacidad para poder ser armado, esto con la finalidad de hacerlo más práctico y facilitar su transportación, además de construirlo de un tamaño adecuado para poder transportar cosas de dimensiones mayores que comúnmente no entran en un diablito o carrito de súper. Una de las razones decisivas para optar por desarrollar esta idea de producto, fue la concientización ambiental, misma de la que son objeto los estudiantes de la asignatura de Innovación y desarrollo de nuevos productos en cada curso. Con el conocimiento de los elevados índices de contaminación en México, las estudiantes decidieron materializar un producto que ayudara a la disminución de empaques, desde su entrega hasta su uso, ya que proponen la eliminación de cualquier empaque plástico al integrar una funda de tela como protección al producto, y que, con la implementación de una bolsa envolvente del mismo material, puede ser llevado al supermercado para disminuir el uso de bolsas de plástico como las acostumbradas en el mercado mexicano.

## METODOLOGÍA

Se realizó una investigación de tipo mixto exploratorio con enfoque cuantitativo, y cualitativo. En la investigación cuantitativa se utilizó una muestra de población de 88 amas de casa del municipio de Centro, Tabasco, dirigido a mujeres entre 30 y 45 años de edad; el diseño del cuestionario fue de preguntas cerradas y este se aplicó en los principales supermercados del Estado.

### Objetivo

El objetivo de la investigación es identificar las posibilidades de rentabilidad y factibilidad en el mercado de un producto con las características de Easy-Car, el cual está dirigido específicamente a amas de casas de entre 30 y 45 años del municipio de Centro, Tabasco. Para la determinación del tamaño de la muestra de estudio, se tomaron a consideración los siguientes datos: El municipio de Centro cuenta con una población total de 640,359 habitantes, de los cuales, 328,740 son mujeres y solo 31,423 tienen una edad entre 30 y 45 años.

### Muestra

*La muestra fue calculada de la siguiente manera:* Tomando como base que nuestro segmento (**N**) está constituido por 31,423 personas y considerando la probabilidad a favor o en contra es de .5 (**p**) y (**q**), se obtuvieron los siguientes resultados:

$$\bar{X} = (N)(p) = (31,423)(.5) = 15,711.5 \quad (01)$$

$$\delta = (N)(p)(q) = (31,423)(.5)(.5) = 7,855.75 \quad (02)$$

$$\delta^2 = 88.63 \quad (03)$$

Finalmente se obtuvo una *Media* ( $\bar{X}$ ) de 15,711.5, una *varianza* ( $\delta$ ) de 7,855.75 y una *desviación estándar* ( $\delta^2$ ) de 88.63. Para la determinación de la probabilidad de éxito o fracaso de la aplicación de las encuestas, se aplicó la regla empírica:

$$\bar{X} = 15,711.5$$

$$\bar{X} \pm a = 90 \% \text{ de los casos} \quad (04)$$

$$\bar{X} \pm 2a = 95\% \text{ de los casos} \quad (05)$$

$$\bar{X} \pm 3a = 99\% \text{ de los casos} \quad (06)$$

Donde:

$\bar{X}$  = Media

$a$  = Desviación estándar

En la cual sustituyendo valores:

$$15,711.5 \pm 88.63 = 15,622.87 \gg 15,800.13 = 90\%$$

$$15,711.5 \pm 177.26 = 15,534.24 \gg 15,888.76 = 95\%$$

$$15,711.5 \pm 265.89 = 15,445.61 \gg 15,977.39 = 99\%$$

A esta investigación se le asignará una cota (margen) de error de .5% en el caso del sistema de muestreo por juicio utilizado, debido a que se está utilizando este margen de error por lo tanto con un coeficiente de confianza de .95% se tendrá un valor aproximado para Z de 3.84.

## RESULTADOS

Los cuestionarios fueron aplicados a mujeres específicamente entre los 30 y 45 años de edad siendo un total de 88, estos fueron aplicados en los principales supermercados del municipio de Centro, Tabasco. Con base a las preguntas realizadas obtuvimos los siguientes resultados: Se cuestionó a las participantes en la investigación cuál sería el uso que le daría a “Easy-Car”, a esto el 73% de la población afirmó que la mayor utilización que le darían a este producto sería para mover cosas dentro del hogar, seguido por cargar las compras del supermercado.

Figura 3: Utilización del Producto

Fuente: Elaboración propia, uso que le darían los consumidores del municipio de Centro, Tabasco al poseer el carro de carga “Easy-car”

En mercados competidos, es necesario tener ideas creativas e innovadoras que satisfagan las necesidades del mercado, estudios de consultorías en mercadotecnia coinciden en que el número de consumidores interesados en el cuidado de su salud, en prevenir y corregir enfermedades es cada vez mayor (Sumaya-Martínez, Suárez, Cruz, García y Sampedro, 2010), sin embargo a pesar de las grandes ventajas que el

producto representa a aquellas personas que por alguna prescripción médica se encuentran incapacitadas para levantar diversos objetos, sólo el 15% de la población encuestada afirmó tener algún padecimiento que les impide transportar cosas dentro del hogar, por lo que el producto Easy-Car no puede ser dirigido únicamente a estas personas, ya que no representan un grueso en la población.

Figura 4: Padecimientos médicos en la población encuestada

¿Posee usted algún problema físico que le impida transportar cosas dentro de su hogar?

*Fuente elaboración propia, porcentaje de la población del municipio de Centro, Tabasco que presenta un problema físico que le impida transportar objetos dentro de su propio hogar.*

Del mismo modo, se cuestionó a los participantes sobre lo atractivo que les resultaba que este nuevo producto pueda desarmarse, a lo que el 75% respondió que esta es la mayor ventaja que el producto presenta.

Figura 5: Atractivo del Producto

¿Qué tan atractivo es para usted que Easy-Car se pueda desarmar para hacer más fácil su transportación?

*Fuente: Elaboración propia, medida en que los clientes potenciales del municipio de Centro, Tabasco encuentran atractiva la condición desarmable y la facilidad de transportación que presenta el carro de carga plegable Easy-Car.*

Así también, se preguntó a los encuestados el valor de uso que consideran le darían a este producto dentro de su hogar, a lo que el 57% de los encuestados manifiestan que le darían un uso fundamental dentro de sus hogares.

Figura 6: Valor Atribuido a la Utilidad del Carrito de Carga Dentro del Hogar

Fuente: Elaboración propia, valor que le otorgarían los consumidores del carrito plegable "Easy-Car" en el municipio de Centro, Tabasco según su propio criterio.

También se cuestionó a los participantes la frecuencia con la que utilizarían este producto, a lo que el 68% de los encuestados externó que le darían un uso ocasional. Seguido del 27% quienes manifestaron que lo utilizarían todos los días.

Figura 7: Frecuencia de Utilización del Producto

Fuente: Elaboración propia, frecuencia con la que utilizarían los habitantes del municipio de Centro, Tabasco el carrito de carga "Easy-Car"

Finalmente se les preguntó a los participantes de las encuestas, el precio que estarían dispuestos a pagar por este producto, después de presentarles las características y beneficios de este, y las ventajas que presenta sobre la competencia. A esta interrogante, el 58% de la población encuestada considera que puede pagar \$800.<sup>00</sup> en la adquisición del producto, y un 34% aseguró pagar hasta \$1000.<sup>00</sup> por la adquisición del mismo.

Figura 8: Adquisición del Producto

Fuente: Elaboración propia, precio que estarían dispuestos a pagar los habitantes del municipio de Centro, Tabasco por el carrito de carga "Easy-Car"

La realización de un focus group proporcionó una importante ventaja como es el interactuar directamente con el usuario, para que éste pueda proporcionar opiniones y perspectivas más profundas para cada una de las interrogantes. En este se contó con la colaboración de 6 personas: 3 amas de casa, 2 comerciantes y un estudiante. La selección de dichas personas se realizó con la intención de ubicar y establecer bien el segmento definitivo al que iría dirigido el producto. Un paso importante de acuerdo con Pardavé (2005) es llevar a cabo un análisis situacional de mercadeo de productos tecnológicos, el cual consiste en hacer pasar los datos recopilados por el “filtro” de varios análisis sucesivos. Este análisis tiene como finalidad transformar los datos en información, para tomar las decisiones de mercadeo y definir el perfil de la actividad de la empresa y de su mercado. En cuanto a la investigación de Easy-car se hizo un análisis del entorno social, económico y ambiental, y así poder hacer un análisis sobre cómo se podrá desplazar en nuevo producto.

## CONCLUSIONES

Del total de la muestra participante en esta investigación, más del 70% le daría un uso al carrito de carga dentro del hogar; y ve atractivo el hecho de que Easy-car es desarmable, demostrando que tiene una gran ventaja frente a sus competidores. Sin embargo el dato más importante dentro de la investigación, es el que indica que el producto es rentable ya que el 80% de las personas encuestadas respondió que sí está dispuesto a adquirirlo. El precio promedio que las personas están dispuestas a pagar oscila entre los \$800 y \$1000 (MXN). Sin embargo, más allá de los resultados mercadológicos, se identificó una situación ejemplar que puede ser reproducida en diversas instituciones de educación superior, ya que se demostró que involucrar a los jóvenes en la realidad empresarial dirigida al desarrollo de nuevos productos e incentivar su creatividad, culmina en la obtención de habilidades que les permiten desarrollar nuevos productos que puedan ser llevados al mercado.

# ANÁLISIS DEL ESLOGAN PUBLICITARIO COMO RECURSO PARA EL POSICIONAMIENTO DE MARCA EN ALIMENTOS INDUSTRIALIZADOS, DESDE LA TEORÍA DEL DISCURSO

César Daniel Ortega Escalante, Universidad Autónoma de Baja California- México

Ricardo Verján Quiñones, Universidad Autónoma de Baja California- México

## RESUMEN

*La teoría del discurso indica las fases del proceso comunicativo en que se consideran los aspectos que hacen más eficaz el proceso de transmisión-comprensión de un mensaje. Para ello, es necesario hacer las precisiones técnicas, estilísticas, retóricas y argumentativas. Son estas características las que han de articularse en un eslogan publicitario para que logre posicionarse en la mente del consumidor y que eventualmente le evoque la necesidad de consumir el producto. En este documento se argumenta la necesidad de que un eslogan, integre las herramientas que el idioma ofrece, para lograr que una marca se posicione en el mercado meta.*

**PALABRAS CLAVE:** Comunicación, Retórica, Publicidad, Mercadotecnia

## ANALYSIS OF ADVERTISING SLOGAN AS A RESOURCE FOR BRAND POSITIONING IN INDUSTRIAL FOOD FROM THE THEORY OF SPEECH

### ABSTRACT

*The theory of speech indicates the phases of the communication process that considers the aspects that make the transmission process-understanding of a message more effective. To do this, you need to do, stylistic, rhetorical and argumentative technical clarifications. It is these characteristics that have to be articulated in an advertising slogan to achieve a position in the consumer's mind and eventually he evokes the necessity of consuming the product. This paper argues the need for a slogan, integrate the tools the language offers, to make a brand is positioned in the target market.*

**JEL:** D83, M31

**KEYWORDS:** Communication, Rhetoric, Advertising, Marketing

## INTRODUCCIÓN

La publicidad tradicional defiende la conveniencia de detallar las ventajas del producto; sin embargo, actualmente, la publicidad hace hincapié en el dinamismo y la perfección técnica. La publicidad empieza a actuar antes de la existencia del producto y va más allá de su consumo; por ello, cada vez se asocia más al producto significados emotivos, estéticos, que hacen referencia al sistema de valores vigentes en la cultura de masas que ha producido la publicidad como medio de comunicación. Para lograr que un producto se posicione en el destinatario de mercado, se debe emplear un eslogan que utilice recursos estilísticos, tales como la rima, contraste, aliteración u onomatopeya; además, dichas herramientas idiomáticas con la ayuda

de instrumentos mnemotécnicos como imágenes, ritmos o secuencias de spots televisivos, ayudan a que se adhieran en la memoria del consumidor y, naturalmente, en una opción de compra. Frecuentemente, las marcas son más que solo un conjunto de atributos, son instrumentos de expresión e identidad cultural. Los consumidores tienden a asociarse emocionalmente con las marcas y las considera compañeras en una relación personal (Méndez, 2009). Para Pineda (2011) todo gerente de marcas o el responsable de diseñar estrategias de marketing, debe tener muy presente que el eslogan es una herramienta poderosa que atrae clientes, la idea es crear el impacto máximo y persuadir al mercado meta. Para lograrlo, hay que apoyarse de los recursos lingüísticos que el idioma ofrece. Por una parte la persuasión se define como la "capacidad de influir en la psique y la voluntad de los receptores para modificar su opinión y/o conducta." (Escribano, 2011). Por otra parte, la Real Academia Española de la Lengua, en su diccionario define la retórica como "el arte del bien decir, de dar al lenguaje escrito o hablado eficacia bastante para deleitar, persuadir o conmover" (DRAE, 2010).

## REVISIÓN DE LITERATURA

### Teoría del Discurso

Creada por Jürgen Habermas, el discurso proviene del latín *discursus*. El diccionario de la Real Academia Española (DRAE, 2010) define discurso como "facultad racional con que se infieren unas cosas de otras, sacándolas por consecuencia de sus principios o conociéndolas por indicios y señales". De manera más detallada, para González (2006) el discurso es "una actividad científica destinada, generalmente, a describir, explicar e incluso predecir el uso del lenguaje en la comunicación humana". Para este propósito natural, se requieren de varios elementos: emisor, mensaje o discurso, receptor, canal, código, contexto, retroalimentación y contextos). La construcción de cualquier discurso, exige la atención a seis dimensiones diferentes que se complementan entre sí, de acuerdo con Retóricas (2013): comprensión, esto es, elección del tema, delimitación y trascendencia de éste; invención, es la fase en que se recopilan argumentos probatorios y refutatorios, diseño de la lógica argumentativa y establecimiento de los contenidos del mensaje; disposición, es la fase consistente en la organización de los elementos y diseño de la estructura; expresión, que consiste en la expresión obtenida y articulada.

De esta fase se desprenden las herramientas del idioma que se conocen como estilo del que se desprenden dos categorías: virtudes (virtudes) y vicia (vicios de expresión). Dentro de las virtudes de la expresión, se ubican 4 elementos: 1 claritas (claridad), 2 concinnitas que se traduce como "la justa medida" Pérez (2013), es decir, cuando nada sobra ni falta; 3 latinitas o el estricto apego al idioma español y 4 ornatus (adornos). (Ablett, et al., 2013). En la categoría de vicios del lenguaje se ubican 32 figuras. Por otra parte, dentro de la clasificación de adornos o herramientas estéticas del idioma, están las figuras semánticas. Hay tres maneras correctas de llamarles a éstas, dependiendo de su función y acción en el discurso, de acuerdo con Borboa (2013): Figuras literarias, si se emplean dentro de las obras de literatura; tropos, si se emplean en mensajes litúrgicos, políticos y filosóficos; y las figuras retóricas, que sirven para dar al lenguaje escrito o hablado eficacia bastante para deleitar, persuadir o conmover.

### Posicionamiento de Marca

Tomado por la estrategia empresarial, el posicionamiento de marca es concebido como la estrategia que se adoptará en relación con la segmentación de mercado y con la selección de los segmentos en los cuales la empresa quiere participar (Serralvo y Furrier, 2005). Fundamentalmente, el Posicionamiento es, una promesa y crea la superioridad de marca en la mente de los consumidores; por lo tanto, el posicionamiento debe convencerlos de las ventajas de sus productos contra la competencia (Rojas, 2005). Un objeto está posicionado cuando puede ser identificado en un lugar en comparación con los lugares que otros objetos ocupan. La percepción del posicionamiento está vinculada al modo y a las variables usadas como definición

de los puntos de referencia: cuanto más semejantes son los posicionamientos mayor debe ser la percepción de los grupos de referencia. Estos grupos de referencia desarrollan un doble papel: consolidan la percepción de un elemento como parte de una categoría de producto o grupo estratégico, a la vez que pueden contribuir a un proceso de no diferenciación o de estandarización de referenciales (Londoño y Sánchez, 2013). La relevancia del concepto de categoría de producto es explícita en los conceptos de posicionamiento. Generalmente, los profesionales de marketing asumen que los clientes agrupan los productos de forma jerárquica en niveles variados de especificidad. En la mente de los clientes, los productos son inicialmente agrupados en clases, después en categorías de productos, en tipos de productos y, finalmente, por marcas. La organización en categorías de productos que está en la memoria del cliente tiene un importante papel en su toma de decisión. La profundidad de la conciencia de la marca está relacionada con la probabilidad de que la marca sea recordada, mientras que su amplitud se refiere al recuerdo en diferentes situaciones de uso (Morales, 2013).

En la Pirámide para la construcción del Posicionamiento se establece claramente que podemos basarlo en atributos (simples condiciones físicas del producto o servicio), en beneficios (ventajas tangibles y medibles obtenidas por su consumo o uso), o en valores (condición preferente donde se maneja la personalidad de la marca, el quién es y no el qué hace o qué tiene). De esta manera, la opción es seguir a la mayoría, comunicar atributos y beneficios, y pasar desapercibidos; o enfrentar el reto de ser diferentes e impactar, otorgándoles verdaderos valores a nuestros productos o servicios (Rojas, 2005). Ahora bien, el Posicionamiento de una marca se fortalece con la Publicidad, pero necesariamente debe estar apoyada en la calidad del producto/servicio y superar la prueba del tiempo; esto significa que la imagen de la marca debe permanecer en la mente de los consumidores por un periodo indefinido pero constante; de manera relevante y congruente. También es posible que un producto pueda mantenerse con un posicionamiento determinado por muchos años; pero hoy en día, con tantas innovaciones tecnológicas, en mercados globales cada vez más competitivos, y con economías tan cambiantes, también es factible que sea necesario modificar ese posicionamiento y realizar un reposicionamiento.

El eslogan es importante, menciona Muñiz (2005) para que la extensión de la marca se asocie correctamente a la familia, a la marca. El diccionario de la Real Academia Española de la Lengua (2010) define al eslogan como *“fórmula breve y original, utilizada para publicidad, propaganda política, etc.”*. A esa definición, Herrero (1997) agrega que dicha expresión ha de resultar impactante, ingeniosa, atractiva o sugestiva para que el intérprete de dicho enunciado, adopte alguna actitud o conducta ante el tema que constituye dicho mensaje. A partir de esa definición genérica, el autor deduce los siguientes como rasgos discursivos del eslogan: brevedad, concisión temática, paralelismos en la estructuración del enunciado y finalidad comunicativa de persuasión o seducción del destinatario, que pueden coincidir con otras paremias. Sin embargo, en el eslogan se dan otros rasgos, de tipo lingüístico y pragmático-argumentativo, que le distinguen de las otras paremias y le ubican como una *paremia especial*.

## MÉTODO

### Muestreo Preliminar

Se realizó una monitoreo a la publicidad nacional transmitida a través de las dos cadenas de televisión abierta en México: Televisión Azteca y Televisa para conocer los contenidos publicitarios que se estaban comunicando. Se encontró que los alimentos industrializados ocupan la mayor presencia publicitaria en televisión nacional (22.1%). Como método proyectivo y únicamente como un primer acercamiento, se realizó un muestreo con 15 personas que observan publicidad en Televisión Azteca y Televisa. Se tomaron para el muestreo tan solo los eslóganes de los alimentos promocionados en la observación televisiva previa.

### Objetivos de la Investigación

**Objetivo General:** Analizar el impacto de los usos idiomáticos del eslogan publicitario en el posicionamiento de marca de productos comestibles industrializados, desde la teoría del discurso. **Específicos:**

Contrastar el posicionamiento entre marcas de alimentos que emplean recursos lingüísticos de aquellos que no.

Demostrar que los usos idiomáticos, al ser integrados en un eslogan publicitario, logran el posicionamiento de marca de alimentos.

En esta aproximación inicial, los resultados fueron los siguientes: El 62% de la población encuestada refirió mirar publicidad de alimentos industrializados a través de la televisión, El 75% admite que la publicidad en televisión ha influido en su decisión de compra. Sobre el impacto del eslogan. Para contrastar el posicionamiento de marca de dichos productos, se le indicó a la población un eslogan y se le pidió que nombrara la marca o producto con que lo relaciona. “Llegó el momento de ser príncipe”, eslogan de Galletas Emperador, fue reconocido por el 50%. “Por su rico sabor casero”, eslogan de Tortillas Tía Rosa, lo reconoció el 25%. Posteriormente, se invirtió el método: a la población de estudio se les indicó la marca y se les pidió que mencionaran el eslogan. El 68% no recordó el eslogan de Mayonesa McCormick (Póngale lo sabroso). El 94% no recordó el eslogan de Salsa Búfalo (Saca tu búfalo). En este trabajo de investigación, se buscará demostrar que la permanencia del eslogan, cuando estructura las herramientas apropiadas que ofrece el idioma, logra el posicionamiento de marca.

# IMPORTANCIA DE LA DOCTRINA DEL DERECHO TURÍSTICO EN EL DESARROLLO DE LAS EMPRESAS DEL SECTOR, EN TIJUANA, BAJA CALIFORNIA, MÉXICO

David Omar Pérez Solórzano, Universidad Autónoma de Baja California

Juan Carlos Flores Trejo, Universidad Autónoma de Baja California

## RESUMEN

*El presente trabajo pretende resaltar el impacto que tiene la doctrina, como fuente del Derecho Turístico, en la gestión de las empresas que conforman el sector turismo, en Tijuana, Baja California, México, dada la dispersión de normas jurídicas, tanto legales como administrativas que pretenden organizar dicha actividad económica. Esta problemática se ubica dentro del marco jurídico federal mexicano, partiendo de la denominación de una nueva rama del Derecho que, junto con el turismo en su conjunto, transita por el camino de la ciencia.*

**PALABRAS CLAVE:** Derecho Turístico, Derecho del Turismo, Legislación Turística, Gestión Turística, Doctrina

## IMPORTANCE OF THE DOCTRINE OF TOURIST RIGHT ON DEVELOPMENT COMPANIES IN TIJUANA, BAJA CALIFORNIA, MEXICO

### ABSTRACT

*This paper aims to highlight the impact of the doctrine, as a source of the tourism law, in the management of companies in the tourism sector, in Tijuana, Baja California, México, given the dispersal of legal rules, legal and administrative aiming to organize such economic activity. This problem is within the Mexican federal legal framework, based on the designation of a new branch of law which, along with tourism as a whole, transiting the way of science.*

**KEYWORDS:** Tourism Law, Tourism Legislation, Tourist Management, Doctrine

## INTRODUCCIÓN

El turismo es un fenómeno completo y heterogéneo que puede ser estudiado bajo muchos aspectos y que produce consecuencias en multitud de campos (De Arrillaga, J., 1955). Uno de los campos que toca el turismo y su gestión es el jurídico. Al ser un fenómeno económico que en los Estados Unidos Mexicanos representa, según el Instituto Nacional de Estadística, Geografía e Informática (INEGI), (2014) entre el 8.4 y el 8.5% del producto interno bruto provoca una diversidad de consecuencias como el movimiento económico, la entrada de divisas, la creación de empleos, la creación, formal e informal de empresas de diversos tamaños y giros comerciales, etc. De ahí que la gestión de los servicios turísticos deba estar

debidamente regulada para que guarde un orden y también sea impulsada desde las instancias gubernamentales.

## REVISIÓN LITERARIA

### La denominación “Derecho Turístico”

El connotado jurista Eduardo García Máynez (2011) establece que la palabra “Derecho” tiene diversas acepciones. Así, hace la distinción entre el derecho objetivo, el subjetivo, el vigente, el positivo y el natural. De igual manera, Peniche, E. (2005) agrega que el Derecho es una ciencia normativa, producto de la cultura y objetivación del acontecer humano. La diversidad de acepciones de la palabra debe conducir a establecer una definición práctica que permita comprender más adelante qué es el Derecho Turístico e insistir en su existencia y relevancia para los prestadores de servicios turísticos, las entidades gubernamentales y los mismos turistas. En ese sentido, se establece, para los fines de la presente investigación que Derecho es el cúmulo de normas jurídicas que regulan la vida del ser humano en sociedad. Una vez que se ha definido el Derecho en general, se debe hacer lo propio respecto de la rama particular a la que se hace referencia. Debe destacarse que existe una discusión álgida sobre la denominación o incluso existencia del Derecho Turístico.

El Derecho Turístico ha sido someramente abordado por pocos autores de los cuales, incluso hay algunos que afirman que se trata solamente de una conceptualización inadecuada. Por ejemplo, se ha concebido como una “tentación de crear o inventar un “Derecho Turístico”” (Blanquer, D., 1999). Y es que no se trata de un invento sino de la necesidad de construir precisamente un marco de doctrina del Derecho que permita abordar de manera más acuciosa la actividad de este sector económico. Es más, el mismo autor contradice su dicho cuando expresa en la misma obra que muchos textos carecen de especificaciones sobre qué es el Derecho Turístico. La falta de las especificaciones a las que se hace alusión es un aspecto más de la total importancia para este trabajo. La escasa investigación sobre esta rama híbrida del Derecho no debe confundir sobre su existencia. Otros autores, niegan rotundamente la necesidad de establecer el Derecho Turístico como una rama de estudio específica dentro de la ciencia jurídica. “Es solamente una invención conceptual que ha sido adoptada para intentar legitimar el binomio derecho-turismo desde perspectivas académicas” (McIntosh, R y Shashikant, G., 2003). Estos autores argentinos, se basan en la multidisciplinariedad del turismo y en la indivisibilidad del Derecho.

Desde una primera perspectiva podemos afirmar que el Derecho, como ciencia y como conjunto de normas coercitivas es ciertamente indivisible y es que la finalidad del derecho, como norma positiva y natural es lograr la armonía social en las diferentes comunidades jurídicas, incluyendo la gran comunidad mundial. No es correcto concebir al Derecho como un ente fraccionado, por ejemplo, en Derecho Público, Derecho Privado, Derecho Social, Civil, Mercantil, Laboral, etc., porque el Derecho *per se* posee unidad. Las clasificaciones, que no divisiones, que se han hecho desde el antiguo Imperio Romano, han tenido dos grandes finalidades: la académica, por una parte, y la determinación de la competencia de los órganos jurisdiccionales, por la otra, los cuales no siempre son de tipo judicial, como es el caso de la Junta de Conciliación y Arbitraje en materia laboral o la Procuraduría Federal del Consumidor, en materia de comercio de bienes y servicios.

Negar la existencia de un Derecho Turístico por la falta de un marco doctrinal sólido (que al parecer no se ha construido) o por determinar que se trata de una falacia académica, carece de sustento, pues, en el primer caso se ha puesto de manifiesto que precisamente es un área poco investigada a nivel mundial y de manera muy especial en México. Por lo que cabe a la segunda cuestión, se debe reflexionar un poco en que la ciencia jurídica, milenaria, desde sus inicios ha tenido la necesidad de ser clasificada con fines académicos y de competencia de los órganos encargados de resolver las controversias que se dan entre los diversos

actores o sujetos del Derecho. La turística, como actividad del hombre, está regulada por el Derecho, ciencia social que organiza las conductas del ser humano, con la finalidad de establecer una convivencia armónica entre los miembros de una sociedad. Sin embargo, estas normas no son del todo conocidas, además de que son visiblemente insuficientes y, en ocasiones, oscuras; esto trae como consecuencia que el empresario, independientemente de su tamaño, se encuentre ante la problemática de ser sancionado por las autoridades judiciales y principalmente administrativas por el hecho de no contar con los requisitos que una determinada norma jurídica impone, no por actuar con dolo o mala fe, sino por el desconocimiento de la citada norma, ignorancia tal que no puede ser utilizada, por principio general, como argumento a favor. Monterrubio, J. y Colín R. (Op. Cit.) establecen la falta de solidez de los textos alusivos al tema cuando es abordado. Se considera pobre la argumentación ya que se debe puntualizar en que no por el hecho de que falte, como se ha apuntado en párrafos anteriores, una investigación más sólida puede afirmarse la inexistencia de una rama de la ciencia jurídica enfocada en el turismo.

En su obra, los autores insisten en la crítica argumentando que el turismo no tiene bases científicas, lo cual no se considera debidamente sustentado. Más bien, como lo afirma Mota V. (2007), el turismo “transita hacia su científicidad”. Los actos que regula el Derecho no deben tener necesariamente un contenido científico y a pesar de que el turismo ya es estudiado por medio de serias investigaciones que le dan sustento y soporte, incluso en el extremo caso de que no fuese así, no escapa el hecho turístico de ser regulado por el Derecho, pues se trata de una actividad humana que implica la convivencia social, por lo que se requiere de un cúmulo de normas organizadas en un conjunto especializado para lograr un orden. Algunos autores como Ceballos, M. y Pérez, R. (2012) buscan hacer una distinción entre Derecho Turístico y Derecho del Turismo; se considera ociosa tal discusión. Analógicamente, no se distingue entre Derecho Laboral y Derecho del Trabajo. Así mismo, el Diccionario de la Real Academia Española define la palabra “turístico” como el adjetivo que hace alusión a lo relativo o perteneciente al turismo, por lo que cualquiera de las denominaciones antes citadas es correcta.

#### Descripción de la Actividad Turística y Su Normatividad en Tijuana, Baja California, México

Tijuana es una ciudad fronteriza que representa no solamente la puerta de México, sino también de Latinoamérica y el paso al país que es la antonomasia del mundo desarrollado. Esta ubicación geográfica privilegiada provoca un fuerte flujo de visitantes y turistas, a título de ejemplo, de los 78.6 millones de visitantes internacionales que llegaron a la frontera norte de México, durante 2006, Tijuana recibió 28.1%, posicionándose como la localidad más visitada de la frontera, con un flujo de 80.3% de excursionistas y 19.7% de turistas (Bringas, N. y Toudert, D., 2011). Si bien es cierto, como siguen apuntando Bringas y Tourdet (2011), ha habido una tendencia a la baja en la actividad turística en Tijuana, a partir de los ataques terroristas 9/11 en la Unión Americana, en también es cierto que se ha ido fortaleciendo el sector en el último lustro. Estos mismos autores especifican que los principales motivos de viaje a la ciudad de Tijuana son las compras, ocio o placer (24.9%) y visitas a familiares y amigos.

Para tener una idea del potencial turístico de Tijuana, de acuerdo a la Secretaría de Turismo de Baja California, contaba para 2010 con 8 hoteles de cinco estrellas, con una oferta de 1474 cuartos, 14 hoteles de cuatro estrellas, ofertando 1370 cuartos y 34 hoteles de tres estrellas, con una oferta de 1774 cuartos. Además de otros establecimientos de hospedaje, concentrando con ello el 43.5% de los 262 hoteles de una a cinco estrellas en el estado de Baja California.

Las empresas de índole turística deben sujetarse a lo establecido en la Ley General de Turismo, el Reglamento de la Ley Federal de Turismo, las Normas Mexicanas (NMX), las Normas Oficiales Mexicanas (NOM), la Ley de Turismo para el Estado de Baja California, así como leyes secundarias y reglamentos municipales. Se destaca que la ley general vigente no ha sido reglamentada, por lo que se aplica supletoriamente el reglamento de la ley federal anterior, ya abrogada. Esta es una de las razones principales por las que desafortunadamente existe una inconsistencia en todo el territorio nacional; a pesar de que fue

publicada en el Diario Oficial de la Federación el 17 de junio de 2009, han pasado prácticamente cinco años y no se ha cumplido con lo establecido por este ordenamiento en el sentido de dar cumplimiento a lo que establece su artículo cuarto transitorio: “la Secretaría deberá, emitir el Reglamento de la presente Ley, dentro de los ciento ochenta días naturales a partir de la entrada en vigor del presente Decreto, el cual incluirá su reestructuración administrativa en los términos de la presente Ley”. Esto a pesar de que ha habido ya una transición presidencial y consecuentemente, una reestructura de la Secretaría de Turismo Federal. Empero se ha emitido jurisprudencia por parte de los altos tribunales federales en el sentido de que el reglamento de una ley obsoleta, la federal de 1992 sea el que regule el turismo en toda la nación, con lo que tampoco se puede reglamentar la legislación estatal, por el riesgo que se corre de caer en contradicciones. Tampoco se cuenta en la ciudad o el estado en comento de una institución que procure en forma expedita los derechos de los turistas y los prestadores de servicios. Toda vez que la institución encargada de hacerlo, la Procuraduría Federal del Consumidor atiende todo tipo de giros dedicados a la venta de bienes y servicios. No es especializada en atender la complejidad del hecho turístico, además de que los procedimientos administrativos requieren del cumplimiento de tiempos procesales, de los cuales el usuario de los servicios turísticos, por la naturaleza de su estancia no tiene.

## METODOLOGÍA

Se hace la prevención de que los resultados que se presentan son el producto de un estudio proyectivo de valor preliminar, cuyo objetivo fue determinar el impacto que tiene el marco jurídico doctrinal en la gestión del sector turístico de la ciudad de Tijuana, Baja California. Se realizó mediante la aplicación de un instrumento conformado por 20 preguntas. Los encuestados fueron empresarios, gerentes, directivos y coordinadores de diversas empresas turísticas, abordados en forma aleatoria los días 21, 22 y 23 de noviembre de 2013, en el Centro de Convenciones Metropolitano y en la sede de empresas de índole turística. La tabla 1 muestra el giro de las empresas en las que laboran los 15 encuestados.

Tabla 1: Giro de las Empresas En las Que Laboran los Encuestados

Giro de la Empresa	Porcentaje
Establecimiento de hospedaje	6.70
Agencias de viajes	6.70
Restaurantes	33.30
Operadora de viajes	13.30
Bar	6.70
Otros giros no contemplados en las normas	33.30

*Fuente: Elaboración propia (2013). Los encuestados laboran dentro de empresas de índole turística, sin embargo, en giros diversos. Los establecimientos de hospedaje abarcan sólo hoteles, independientemente de la categoría específica en estrellas. Los giros no contemplados en las normas se refieren específicamente a una arrendadora de bicicletas dedicada a tours por el centro de la ciudad de Tijuana, una arrendadora de automóviles y el Centro Metropolitano de Convenciones. Destacan los restauranteros, debido a la proliferación de este tipo de empresas en el llamado Circuito Gastronómico.*

## RESULTADOS

El 80% de los encuestados opina que se requieren normas especializadas en materia turística. A pesar de que el 33.30% de ellos afirma conocer las normas de índole turística, realmente se encontró que ninguno pudo citar las relacionadas con su giro, por lo que opiniones más profundas sobre ellas no pudieron ser recogidas. El 86.6 % de los encuestados está de acuerdo en que falta investigación sobre la doctrina del derecho turístico en México. Así mismo ese porcentaje opina que las normas de los tres niveles de gobierno obstaculizan el desarrollo del sector, en lugar de favorecerlo.

## CONCLUSIONES

Insistiendo en que los resultados presentados son producto de un estudio preliminar, no es posible tener conclusiones definitivas; pero se puede adelantar que debe haber congruencia entre la normatividad global, la de México, Baja California y Tijuana para poder impulsar el desarrollo y la gestión de las empresas del sector. No es posible contar la aplicación de instrumentos cuantitativos para conocer el impacto de la falta de doctrina en materia de Derecho Turístico en la ciudad de Tijuana, Baja California, pues no se conoce ni siquiera la normatividad aplicable por parte de dueños, gerentes y administradores de empresas turísticas, por lo que se debe recurrir a la aplicación de técnicas cualitativas como la entrevista a profundidad y el panel de expertos.

## **EL GIRO DE NEGOCIO Y LA SUPERVIVENCIA EN MICROEMPRESAS ESTUDIO LONGITUDINAL EN LA REGIÓN 101 (CANCÚN- MÉXICO)**

Lorena Hernández von Wobeser, Universidad del Caribe

Francisco José May Hernández, Universidad del Caribe

Mario Gabriel Martínez Casas, Universidad del Caribe

### **RESUMEN**

*La microempresa es la forma de emprendimiento más socorrida no solamente en México sino en el mundo entero. En México, así como otros países de Latinoamérica, las microempresas se han convertido en una estrategia de supervivencia de la población y una parte fundamental de la estructura económica del país. Estudios previos del tema han reportado, sin embargo, altos índices de mortandad que presenta este tipo de negocios. El objetivo del presente trabajo determinar los giros de negocio que presentan mayor supervivencia y mayor mortandad empresarial en las microempresas de la Región 101 en un periodo de 4 años a través de un estudio longitudinal. El presente, se trata de un estudio de corte descriptivo que comprende el seguimiento de las unidades de negocio en un periodo que comprende del 2010- 2013. Se levantó la información a partir de censos anuales realizados en 95 manzanas. La información se sintetizó en tablas, gráficas y en mapas de ubicación de cada unidad de negocio. Un hallazgo de este estudio es que existen giros de negocio que presentan menos rotación en este periodo (nuevos nacimientos y cierres de negocio) como lo son los negocios de venta de cerveza. Mientras que otros giros de negocio presentan mayores índices de mortandad pero también nuevos emprendimientos (como lo son las lavanderías, los negocios de alimentos preparados, entre otros).*

**PALABRAS CLAVE:** Microempresas, Supervivencia Empresarial, Mortandad Empresarial, Giro de Negocio

## **THE LINE OF BUSINESS AND SURVIVAL IN MICRO LONGITUDINAL STUDY IN THE REGION 101 (CANCUN –MÉXICO)**

### **ABSTRACT**

*Micro-sized enterprise is the most common path for undertaking a business not just in Mexico but in the whole globe. In Mexico, just like in other Latin-American countries, the Micro-Sized enterprises have turn in one of the most important survival strategies of the population and a fundamental part of the economic structure of the country. Previous studies of the topic had reported high mortality rates in this kind of business. The purpose of this paper is to analyze the survival and mortality behavior of Micro- Enterprises categorized by kind of business in Region 101, a particular area in Cancun- México. The paper is the result of a longitudinal study that contemplates 4 years of observation of the business units located in a region constituted by 95 blocks. The business units were followed up by 4 censuses taken in 2010-2013. Information was processed by charts, graphics and maps. A finding of this study is that there are some kind of business that have less turnover in this period (new births and closures business) like selling beer business for example. While other lines of business have higher death rates but also new entrepreneurial projects (such as laundries, prepared foods business, etc.).*

## INTRODUCCIÓN

Hablar de microempresarios o de microempresas, es hablar de la forma de emprendimiento más socorrida a la hora de emprender un negocio, no solamente en México sino en el mundo entero. Cuando se hace referencia a las Microempresas, a éstas se les conoce como las unidades económicas de producción y comercialización a pequeña escala. En los últimos años en México las microempresas se han convertido en una estrategia de supervivencia de la población y una parte fundamental de la estructura económica del país así como en otros países de Latino América (“SOLFI Servicios financieros,” 2013). Esto debido la falta de oportunidades de trabajo bien remuneradas.

Así la microempresa ha demostrado su capacidad como un medio efectivo para propiciar el desarrollo social y económico, muestra de lo anterior es que la micro, pequeña y medianas empresas generaron en México, en el año 2012, el 52% del Producto Interno Bruto (PIB) y el 72% del empleo, según estimaciones de Banca Empresarial Banamex; ahora bien en ese año, según la Subsecretaría para la Pequeña y Mediana Empresa (Spyme), había más de 4.1 millones de microempresas, con un aporte del 41.8% del empleo; las pequeñas por su parte, sumaban 174,800 y representaron el 15.3% del empleo y finalmente las medianas con un total de 34,960 generaron el 15.9% del empleo.

Ahora bien, tratándose de las microempresas, éstas se dedican a una gran cantidad de actividades económicas o giros, a manera de ejemplo en el Municipio de Cancún, la Cámara Nacional de Comercio, en el año de 2009 registraba más de 145 actividades diferentes de sus agremiados, la gran mayoría microempresas. Entre estos giros o actividades económicas, existe una mayor o menor mortandad o cierre de negocios o dicho de otra manera la supervivencia entre los giros de actividad, es muy diferente. Por ello el objetivo del presente estudio es determinar los giros de negocio que presentan mayor supervivencia y menor mortandad empresarial entre las microempresas, tomando como muestra de lo qué sucede en Cancún, la Región 101 en el periodo comprendido entre el 2010-2013, es decir un estudio longitudinal.

### Marco Teórico

Hablando de giros o actividades que las empresas desarrollan, de acuerdo con Acevedo (2010), las empresas pueden clasificarse en:

*Industriales:* La actividad primordial de este tipo de empresas es la producción de bienes mediante la transformación y/o extracción de materias primas. Las industriales a su vez son susceptibles de clasificarse en: *Extractivas y Manufactureras.*

*Comerciales:* Son intermediarios entre productor y consumidor, su función primordial es la compra-venta de productos terminados. Pueden clasificarse en: *Mayoristas, Minoristas o detallistas y Comisionistas.*

*De Servicios:* Como su nombre lo indica, son aquellos que brindan un servicio a la comunidad y pueden tener o no fines lucrativos. Las empresas de servicio pueden clasificarse en sectores como transporte, turismo, instituciones financieras, Servicios públicos varios, servicios profesionales, educación, salud y comunicación.

### La Microempresa Como Alternativa de Emprendimiento.

Con base a Contreras, (2007), las microempresas son de gran importancia tanto para la economía del país (México), como para la economía familiar, ya que afirma que son las primeras fuentes de autoempleo y

empleo de la población menos favorecida (cuatro de cada 10 mexicanos trabajan en una microempresa formalmente establecida). No obstante la gran importancia de la microempresa hasta la fecha no se tiene una definición oficial definitiva de una microempresa, ya que desde 1990 y hasta la fecha ha cambiado en seis ocasiones, la última de ellas se verificó el 30 de junio de 2009 y estuvo a cargo de la Secretaría de Economía en donde la Micro empresa se describe como aquella que tiene hasta 10 empleados y/o hasta 4 millones de pesos de ventas anuales. La Microempresa en específico, ha demostrado su capacidad como un medio efectivo para propiciar el desarrollo social y económico, además de fomentar el autoempleo que es sin duda una forma eficaz por la cual las familias de bajos ingresos pueden ver incrementadas sus ganancias, a través de la realización de una actividad productiva que incorpora la mano de obra familiar. Soriano, (2005), hace alusión a lo expresado por Yañez de que en México, cumplir 10 años, refiriéndose a las empresas que logran esa edad, como “solamente el 10% de las empresas maduran, tienen éxito y crecen”. Ya que de acuerdo con el Cetro-Crece, “el 75% de las nuevas empresas mexicanas debe cerrar sus operaciones apenas después de dos años en el mercado”. Para la página web [degerencia.com](http://degerencia.com): “la experiencia demuestra que el 50% de las empresas quiebran durante el primer año de actividad, y no menos del 90% antes de cinco años”. Entonces, si hay empresas que sobreviven en el entorno a lo largo del tiempo ¿qué tipos de empresas o de qué giro son las que tienen mayor posibilidad de permanecer operando, primero dos años y luego alcanzar los cinco?

## METODOLOGIA

Para dar respuesta a las preguntas anteriores, se utilizarán algunos de los resultados que se han venido obteniendo, producto de una investigación longitudinal cuantitativa que se inició en el año 2010 y que cubrirá hasta el año 2015. Se trata de la investigación de la Región 101, que es una de las zonas urbanas de Cancún. Se decidió trabajar con la población total de micro empresas ubicadas en la región ya que se trata de un número manejable de unidades de negocio que pudieron ser observadas a través de levantamiento de censos con el fin de describir su comportamiento a través del tiempo: particularmente el nacimiento, la supervivencia y la mortandad de dichas unidades de negocio desde una perspectiva longitudinal. Con base al estudio longitudinal realizado, desde el año 2010, se han podido detectar los negocios y su giros que, en el entorno estudiado, han sobrevivido, han cerrado y han nacido; identificando así a los giros o actividades que muestran un mayor índice de supervivencia, esto con la ayuda de los censos anuales que se han realizado.

### Procedimientos y Herramientas Para el Levantamiento y Análisis de Censos

El estudio longitudinal en la Región 101, iniciado en el año 2010, utilizó una 'cédula de censo' para el levantamiento de información de cada unidad de negocio. Se transcribieron los datos obtenidos y se realizó un mapa para ubicar las empresas geográficamente. Del 2011 al 2013 se realizaron los censos visitando la Región 101 y verificando, a partir del año anterior, la continuidad de las microempresas censadas anteriormente (supervivencia), el cese de operaciones de negocios que antes aparecían (mortandad), y la aparición de nuevos negocios (nacimientos). Para cada nuevo negocio, se levantó una nueva cédula de censo y se tomó una foto del local, para dejar constancia y como una medida de control y comparación para estudios posteriores. Los datos levantados en el censo piloto de 2010 se transcribieron en una tabla de excell, aspecto que se continuó con los censos verificados en 2011, 2012 y 2013. Se agregó una columna por cada año 2010-2013 para observar de manera sintética qué sucedió con la microempresa a través del tiempo. Las microempresas nuevas que aparecieron se añadieron a la tabla de excell como un nuevo renglón ubicado en la manzana correspondiente, asignándole su respectiva codificación, tal como se puede percibir en el ejemplo de la figura 1, del negocio de abarrotes con código 25.2 que nace en el año 2011 y el negocio de consultas de Herbalife con código 25.3 que nace en 2013.

Figura 1: Ejemplo de Codificación Para la Manzana 25 Manzana 25

Códi	Nombre	Actividad principal del negoc	Sector	Giro	2010	2011	2012	2013
25.1	Sin nombre	Taller de autos	Servicio	Servicio Automotriz	supervivencia	mortandad		
25.2	Sin nombre	Venta de abarrotes	Comercio	Abarrotes		nacimiento	supervivencia	mortandad
25.3	Sin nombre	Consultas nutricionales Hierbalife	Servicio	Salud				nacimiento

Adicionalmente, se dibujó para cada año el mapa de la Región 101, detectando en cada manzana la ubicación de las microempresas existentes con su respectivo código. Los mapas permitieron ubicar las microempresas, concretamente las que interesan a esta investigación, es decir a las que han sobrevivido o muerto durante estos periodos. Como se puede observar los datos de los 4 censos (2010, 2011, 2012 y 2013) fueron analizados a través de estadística descriptiva para tener un panorama del comportamiento de las microempresas de esta región a través del tiempo. Este análisis permite tener una visión longitudinal panorámica de lo que sucede en las microempresas del caso estudiado.

### Marco Referencial

Esta investigación se centra en el caso de las microempresas de la Región 101, en el Municipio de Benito Juárez (Cancún). Se encuentra ubicado en la parte norte del estado de Quintana Roo, que con una superficie de 1,664 Km<sup>2</sup> ocupa el 3.27% del territorio del estado. De acuerdo con el Plan Integral de Actuación Municipal para Prevenir la Inseguridad 2009 del Observatorio Urbano de la Universidad del Caribe, Municipio Benito Juárez, Quintana Roo, PIAMPI (2009), estimó la población de Cancún en unos 700,000 habitantes. La ciudad, está dividida en 205 áreas urbanas que en ciertas zonas se denominan “supermanzanas” y en otras “regiones”. La nomenclatura de estas áreas es numérica, aunque irregular. El caso de estudio de esta investigación está ubicado en una de estas regiones, la Región 101. El Plan Director de Desarrollo Urbano de Cancún (PDDU, 2005), establece que la superficie territorial de la Región 101 es de 47.77 hectáreas y su uso del suelo está destinado, predominantemente, para habitación unifamiliar y comercio de barrio. Cuenta con un total de 95 manzanas, de las cuales 15 están dedicadas a usos comunitarios como: parques, escuelas, mercado público, el centro comunitario de la Cruz Roja y otras áreas no habitadas.

**Resultados:** Descripción de las Mipyme de la región 101, Cancún En esta sección se presentó una descripción de las MIPYME de la Región 101. De acuerdo con Strauss y Corbin “*la descripción se necesita para expresar lo que está pasando, cómo se ve el panorama, qué está haciendo la gente en él y así sucesivamente*” (Strauss y Corbin, s.f.:18). Esta descripción, tiene el propósito de “delinear” o “dibujar” las características de las MIPYME de esta zona con datos cuantitativos y descripciones espacio-temporales. Se incorpora para ello, conceptos previos como la clasificación de los negocios de acuerdo con su tamaño, sector y giro. En el primer censo que se realizó en 2010, se detectaron 304 MIPYME ubicadas en las 95 manzanas de la Región 101. Cada unidad de negocio fue ubicada en el mapa de la región y a cada una de ellas se le asignó un código como se explica en la metodología.

El mapa que se presenta en la figura 4, así como los códigos e información recolectada por el primer censo de 2010 sirvió como base para dar un seguimiento al comportamiento de las MIPYME de la Región 101 a través del tiempo. Tomando en cuenta los datos de INEGI presentados en ese mismo año, las 304 unidades de negocio censadas en la Región 101 representaron el 0.85% de las 35,516 unidades de Quintana Roo y 0.008% de las MIPYME a nivel Nacional:

De acuerdo con el Censo económico 2009 (Inegi, 2010), en México 99.8% de las empresas se clasifican como micro, pequeñas y medianas. Por su parte las microempresas por sí solas representan un 95.01% del total de empresas del sector privado, es decir unas 3 735 347 unidades. En Quintana Roo su proporción es de 91.60%, con un total de 35 516 microempresas, de las 38 770 que desarrollan sus actividades en el estado (Inegi, 2010) (en Olivares, 2011: 15-19).

Figura 2: Ubicación de Microempresas de la Región 101 (2010)

Por otro lado, durante los 4 años en los que se ha realizado el levantamiento de información se codificaron un total de 601 MIPYME (total de unidades de negocio observadas en 4 años). Estas 601 MIPYME se clasificaron de acuerdo a tres categorías de organización de los datos: **a)** Tipos de negocio (microempresas, pequeñas empresas, medianas empresas, franquicias y sucursales), **b)** Sector del negocio (industria, comercio y servicio) y **c)** Giro (abarrotes, papelerías, servicio automovilístico, entre otros). En este artículo se presentarán los resultados de la tercera categoría (giro) por ser el objeto de estudio del presente trabajo. A partir de los hallazgos del primer censo de 2010 se categorizaron los 15 giros más comunes, los cuales se muestran en tabla 1; (Cabe señalar que el apartado “otros” agrupa negocios que estaban menos representados dentro de la muestra como veterinarias, casetas telefónicas, entre otros). Mientras tanto en la Figura tres se grafica el total de unidades censadas durante los 4 años por cada giro.

Cabe resaltar que no todos estuvieron abiertos durante el mismo período, como se señala en la tabla previa a la figura. Como se puede observar en la gráfica siguiente, las unidades de negocio más representativas en cuanto a número durante estos cuatro años, fueron las de alimentos preparados, abarrotes, alimentos y bebidas no alcohólicas y expendios de cerveza, que en total representan el 46.8% del total de la población de negocios de la Región 101. En el primer año se habían clasificado a todas estas con el giro de “alimentos y bebidas” pero al ver que tenían una representación tan grande se subdividieron en 4 giros para tener una descripción más detallada de tipo de negocios en la zona y así poder ubicar los giros con mayor índice de supervivencia en la zona y los de mayor mortandad,

Tabla 1: Negocios Encontrados En la Región 101, Distribuidos Por Giro y Porcentajes de Participación Relativa En el Período

	2010	%	2011	%	2012	%	2013	%
TOTAL DE NEGOCIOS ABIERTOS+ CEPAA	304	100.0%	375	100.0%	356	100.0%	358	100.0%

CEPAA: Cerrados pero aparentemente activos.

Figura 3. Total de Unidades Censadas En la Región 101 Por Giro de Negocio (2010-2013)

Los cuatro giros con los porcentajes con base a la tabla 1 son: **a) Alimentos preparados**, que fue el giro más abundante (17.8%), incluye negocios que venden tortas, panuchos, mariscos preparados, pollo rostizado, pizzas, entre otros, **b) Abarrotes**, que fue el giro en segundo lugar más común en la Región 101 (13.8%) y que incluye tendejones, tienditas y abarrotes más formales, **c) Alimentos y bebidas no alcohólicas** representaron el 11.3% de los negocios de la zona. Se agruparon aquí los negocios que venden un tipo de producto alimenticio específico pero que no está orientado al consumo en el mismo local como venta de refrescos, frutería, venta de pollo crudo, tortillerías, panaderías. La diferencia con los abarrotes, que éstos venden diversidad de productos mientras que en este giro se agruparon los que se especializan en uno o dos solamente y **d) Expendios de cerveza**.

Representan el 3.8% de la población de negocios. Inicialmente se habían censado como “abarrotes” puesto que además de la cerveza, venden algunos productos de consumo, sin embargo se detectó que la venta principal era de cerveza y que resultaba apropiado distinguirlo por tres motivos: el primero porque en su mayoría no se tratan de emprendimientos de personas de la región sino sucursales de negocios más grandes como “Cervefrío”. En segundo lugar porque el tipo de operación parecía distinta a los abarrotes: tienen rejas para atender a los clientes, los letreros son patrocinados por alguna marca de cerveza, se requieren permisos especiales de gobierno, entre otros. Y por último para observar algunas pistas del consumo de

cerveza en la región. Los expendios de cerveza presentaron un número entre 18-21 unidades abiertas al año, que equivale a que existe un expendio de cerveza por cada 4 o 5 manzanas de la región.

Los *talleres de servicio automotriz* también están muy presentes en la zona, por lo que se distinguieron de otros talleres como herrerías, tapicerías, talleres de bicicletas, entre otros que se agruparon (el resto) bajo el giro de taller. El servicio automotriz es el tercer giro más común en la Región 101 después de “Alimentos preparados” y “Abarrotes”, representando el 11.6% de la población total de negocios censada.

Se agruparon en un mismo giro aquellos negocios que *comercian productos*, excluyendo el comercio de alimentos (que están en los giros anteriores), *papelerías* (pues existían un número importante de negocios de este tipo- 3.5%) y *comercio de ropa, accesorios y zapatos* que también tenía cierta representación (2.3%). Los negocios que comercializan productos como flores, plaguicidas, tlapalerías, mercerías, se agruparon en este giro representando el 5.7% de los negocios de la región. Otros negocios que aparecen frecuentemente son los que prestan servicios o comercian productos para la construcción y mantenimiento de los hogares, estos representaron el 4.8% incluyendo venta de materiales para construcción, madererías, alumineros, venta de espejos, entre otros. Cabe destacar que el total de 601 unidades de negocio censadas no estuvieron simultáneamente activas ya que algunas fueron naciendo cada año y otras fueron muriendo. En promedio para el periodo de investigación hubo al año 363 unidades que se encontraban operando simultáneamente. La Figura 6 presenta el número total de negocios abiertos o cerrados pero aparentemente activos para cada año del estudio siendo el más alto el de 2011 con 375 unidades de negocio operando.

Figura 4: MIPYME de la Región 101 Abiertas O Cerradas Pero Aparentemente Activas (2010-2013)

#### Nacimiento, Supervivencia y Mortandad Por Tipo de Negocio En la Región 101

A partir del comparativo entre los censos de los 4 años se pudieron detectar los nacimientos de nuevas unidades de negocio, así como la supervivencia y mortandad de unidades de negocios previamente existentes. Algo que vale la pena destacar de lo percibido en el estudio longitudinal es que el número de negocios que sobreviven ha aumentado con el paso de tiempo. Igual de importante es que 265 negocios son los que en promedio sobreviven al año, lo que representa un 73% con base a los 363 que se tienen como base, cifra que resulta interesante, ya que tan solo 97.3 son los negocios que nacen en promedio anualmente en la zona de estudio. De acuerdo con el estudio de 2011 a 2012 hubo un crecimiento en el número de negocios que cerraron actividades y de 2012 a 2013 hubo una disminución en la mortandad. El promedio de unidades que murieron en este periodo son de 80 por año, número inferior a los nacimientos y a la supervivencia de negocios.

Figura 5: Nacimiento, Supervivencia y Mortandad de Unidades de Negocio En la Región 101

Con base al estudio se determinó un promedio de supervivencia con respecto al año anterior de un 77%, y tan solo un 23% de mortandad. Es importante hacer mención que si analizamos lo que pasa con estas unidades de negocio de acuerdo a su tipología (sucursales, franquicias, pequeñas y microempresas); de las 14 sucursales censadas hubieron 6 nacimientos y solamente 2 cerraron operaciones en este periodo. Las franquicias tienen todavía un mejor comportamiento, ya que de las 6 franquicias censadas 2 nacieron en este periodo y el 100% continúa operaciones actualmente. De las 4 pequeñas empresas censadas, hubieron 2 nacimientos en el periodo censado y una muerte prematura (empresa que nació y que no duró hasta el próximo año). De las 577 microempresas censadas 237 cerraron operaciones en alguno de los años, es decir el 41%. Centrándonos en el punto que atañe al presente trabajo, se puede percibir el comportamiento de las unidades de negocio clasificadas por giro para los 4 periodos de la investigación. Se observa comparativamente la cantidad de unidades de negocio por giro, pero también su comportamiento a través del tiempo (crecimiento, disminución de unidades de negocio por el tipo de giro).

Las líneas relativamente estables percibidas en la fig. 6, (sin caídas o bajadas prolongadas) no necesariamente muestran supervivencia en los negocios del giro. En ocasiones, (como en los expendios de cerveza) la línea recta si es reflejo de cierta estabilidad en los negocios; pero en otras ocasiones (como en las estéticas) la linealidad se explica por una alta rotación de negocios. (Nacimiento y muerte en un periodo). Con base al análisis de los porcentajes que a lo largo del tiempo se han venido generando con el comportamiento del entorno empresarial de la Región 101 referenciado a los giros que en ella se desarrollan y llevan a cabo, se puede percibir lo siguiente: El giro con mayor estabilidad en la zona de estudio son los expendios de cerveza y licores, con una constante en su porcentaje de participación (5.9%); a excepción del último periodo donde hubo por primera vez un decrecimiento del 4.8% (una unidad) con relación al periodo inmediato anterior, ya que aunque en el periodo 2011-2012 de igual forma hubo un cierre, el porcentaje se mantuvo.

Una de las razones que infieren su permanencia y éxito, adicional a que es un producto altamente demandado en la cultura regional y mexicana incluso (cervezas), es que son negocios con un posicionamiento del producto – marca con un respaldo significativo de las empresas cerveceras que operan las concesiones. Los giros que están demostrando tendencias a la baja de forma no alarmante pero si como para mantener en observación son: abarrotes, estéticas y papelería, los cuales son los que mayor crecimiento de forma general han tenido en el municipio, ya que con el otorgamiento de permisos para la apertura de negocios pertenecientes a grandes corporativos como son los OXXO, tiendas EXTRA, etc, la incursión de empresas relacionadas con artículos de oficina y papelería pertenecientes inclusive a alguna franquicia,

sumado a la aparición en la entidad de escuelas especializadas en la enseñanza del corte de cabello y tópicos relacionados con los salones de belleza; indudablemente impactan a los ya existentes. Lo alarmante para el rubro de los abarrotes es que de acuerdo con la Cámara Nacional de Comercio (2014), en Cancún, se vaticina una próxima desaparición de éstas, de acuerdo con su líder, Rafael Ortega Ramírez.

Figura 6: Comportamiento de MIPYME de Región 101 Para El Periodo de (2010-2013) Clasificadas Por Giro

El rubro que contempla alimentos preparados y alimentos y bebidas no alcohólicas que en suma representan un 30.2%, mantiene una tendencia a la alza a lo largo del tiempo, curiosamente es el sector que más se ha impactado de manera negativa en el municipio al menos dentro de los establecimientos registrados en la Cámara Nacional de la Industria Restaurantera y Alimentos Condimentados (Canirac), ya que de acuerdo con el documento titulado: "Quintana Roo presenta uno de los índices más altos de cierre de comercios en México" (2014), con datos del Instituto Nacional de Estadística, Geografía e Informática (INEGI), hace mención que el estado se encuentra en la penúltima posición con más muertes que nacimientos de establecimientos, muestra de lo anterior es que tan solo en el 2012, el sector mostró uno de los años más complicados, al registrar 70 bajas. Actualmente en Cancún hay dos mil 700 restaurantes y sólo 300 afiliados a la Canirac (ibídem). Lo anterior de acuerdo con el análisis de la demografía de los establecimientos que realizara el INEGI.

Dentro del mismo documento y de acuerdo con el análisis, el cual en 37 meses realizó un estudio para verificar la apertura y cierre de negocios, encontró que en la entidad por cada 29 empresas Micro, Pequeñas y Medianas Empresas (MiPymes) que abren sus cortinas 30 las cierran, (tan sólo debajo de Sonora que registró un cierre de 30 comercios, por cada 25 que abrieron). El punto que es de llamar la atención es que de acuerdo con el mismo documento "...El sector restaurantera y el sector comercio son los que han

registrado el mayor número de cierres”.

## CONCLUSIONES Y RECOMENDACIONES

La Región 101 de Cancún es una zona urbana que guarda características muy similares en al menos dos terceras partes de la geografía de la ciudad, es decir a la mayoría, desde luego esto no nos permite extender los resultados obtenidos a toda la ciudad, pero sin duda si nos ofrece un panorama del comportamiento de una población de negocios que tiene una cierta representatividad. La investigación longitudinal es un método de investigación que nos ha permitido estimar de manera fehaciente los porcentajes de supervivencia y de mortandad entre las microempresas en una Región de Cancún. Por ahora solo se han hecho recuentos en base a observación, dejando para fechas posteriores el conocer más información sobre los motivos de supervivencia y de mortandad. En este laboratorio urbano en que se ha constituido la Región 101 de Cancún, se ha podido constatar que hay microempresarios, cuyas actividades van a la baja, una de ellas es la de abarrotes que presentándose como la más importante en los primeros dos censos, paso a segundo lugar en los dos últimos. Caso inverso son los negocios relacionados con la venta de alimentos preparados, y el de alimentos y bebidas.

Ambos giros crecen y ahora lo pertinente será conocer los factores que están incidiendo, tanto en la declinación de los abarrotes, como en el crecimiento de la venta de alimentos. La legalización de las PYMES a alguna cámara o Asociación industrial o de comercio no garantiza la permanencia en el entorno competitivo de hoy día, aunque se percibe que si se quiere estar debidamente constituido o pertenecer a la economía formal esto es necesario, ya que de lo contrario, se considera que formará parte de la economía subterránea o informal. La realidad es que, nada obliga de ninguna manera a pertenecer a alguna de éstas cámaras u organismos empresariales, y que el simple hecho no representa en sí mismo la panacea para los negocios.

# **“YO TAMBIÉN OPINO”. PROPUESTA DE UNA ESTRATEGIA DE COMUNICACIÓN INSTITUCIONAL PARA PROMOVER LA PARTICIPACIÓN CIUDADANA.**

Dulce Carolina Martínez Montoya, Universidad Autónoma de Baja California

Sheila Delhumeau Rivera, Universidad Autónoma de Baja California

## **RESUMEN**

*El problema de la participación ciudadana en el proceso de las políticas públicas ha sido de discusión durante las últimas décadas, principalmente a partir de los procesos políticos de transición a la democracia de los gobiernos autoritarios en las décadas de los ochenta y noventa del siglo pasado. Mucho se ha escrito acerca de la apatía y escasa participación por parte de los ciudadanos en los procesos de toma de decisiones, comportamiento que es resultado de la relación unidireccional y la falta de transparencia que las mismas instituciones gubernamentales han adoptado en su vinculación con el entorno. El Instituto Municipal de Investigación y Planeación (IMIP), es una organización pública descentralizada que se encarga de la elaboración de planes y programas para el desarrollo urbano, rural y costero en Ensenada, Baja California. Desde su creación, la institución ha enfrentado una escasa participación ciudadana que ha derivado en poco impulso y seguimiento a los planes y programas que desarrolla. Una posible causa de esto es el limitado conocimiento que los ciudadanos tienen del organismo. En este trabajo se presenta una estrategia piloto de comunicación llamada Yo También Opino, empleando recursos de la publicidad BTL (Below The Line) y las nuevas tecnologías para brindar a los ciudadanos una experiencia distinta al acercarse a las instituciones públicas, con el objetivo de fomentar el conocimiento, la participación y la confianza en el IMIP y sus planes y programas.*

**PALABRAS CLAVE:** Comunicación Institucional, Participación Ciudadana, Estrategias BTL

## **SUMMARY**

*The problem of citizen participation in the public policy process has been discussed for decades. Much has been written about the apathy and low participation by citizens in the processes of decision-making, behavior which is the result of a one-way relationship and lack of transparency that the same government institutions have adopted in their relationships. The Municipal Planning and Research Institute ( IMIP ) is a decentralized public organization that handles the making of plans and programs for urban, rural and coastal development in Ensenada, Baja California. Since its inception, the institution has faced little citizen participation that has led to a poor promotion and social monitoring of the plans and programs developed . This paper presents a pilot communication strategy called “Yo también opino” (I also think), using resources from the BTL ( Below The Line ) advertising and new technologies to give citizens a different experience when approaching public institutions, with the aim of promoting knowledge, participation and confidence in the IMIP its works.*

**KEY WORDS:** Institutional Communication, Citizen Participation, BTL Strategies

## INTRODUCCIÓN

En la cotidianeidad, cada día se ha vuelto más recurrente escuchar de la inconformidad social ante el manejo de los recursos que hacen las instituciones públicas de gobierno, esto debido a la falta de acciones que reflejen una mejora para la calidad de vida de la población, así como la falta de transparencia y vinculación más directa con los ciudadanos y sus necesidades. Ante este fenómeno, varios autores han dedicado tiempo a describir, comprender y proponer caminos que lleven a mejorar la situación. Sin embargo, en la relación ciudadano-gobierno predomina un paradigma que hace referencia al distanciamiento de dos actores aparentemente ajenos que ignoran la necesidad que tienen de colaborar en conjunto para mejorar su entorno. Desde la perspectiva teórica de la comunicación institucional se habla de la necesidad de las instituciones públicas por ser identificadas y reconocidas.

Para ello, éstas tienen el deber y compromiso de llevar una relación más transparente y cercana que busque la retroalimentación en todo proceso de gestión. En el presente documento se aborda el caso del Instituto Municipal de Investigación y Planeación (IMIP) de Ensenada, Baja California en México; un organismo público descentralizado que se encarga de elaborar planes y programas que asesoran a los distintos sectores de la población respecto a temas de planeación para impulsar el desarrollo integral del municipio de Ensenada. El IMIP, con escasos años en funciones, se ha percatado de la poca presencia que tienen como institución ante los ciudadanos, así como la necesidad de fomentar la inclusión de los ciudadanos en los temas de planeación. El objetivo de este trabajo es presentar el proyecto de *Yo también opino*, como resultado de un diagnóstico que refleja la situación del IMIP desde la perspectiva de la comunicación institucional y sustentando la propuesta bajo un enfoque de comunicación estratégica, haciendo alusión a las tendencias en innovación social que promueven participación ciudadana y el empleo de recursos publicitarios del *Below The Line* (BTL).

## REVISIÓN DE LITERATURA

### La Comunicación: una Necesidad Para la Institución Pública

Antes de definir a la comunicación institucional, es necesario precisar lo que es una institución, para lo cual Sotelo (2001) afirman que “es << toda organización humana en la que varias personas, a partir de unos principios configuradores y bajo una estructura concreta, coordinan diversas actividades para lograr determinados fines en el ámbito de una entidad social superior, a la que sirve y proporciona cohesión y paradigma >> (p. 24)” (citado en Canel, 2010, p. 26). Bajo la misma línea, Canel (2010) se refiere a la comunicación en las instituciones como a “la capacidad que éstas tienen para definirse, para mostrar sus objetivos, para justificar sus acciones y para implicar a los demás en las mismas” (p. 28). Con ello, la autora expresa que el quehacer de la comunicación en este tipo de organizaciones va encaminado a exponer a los ciudadanos tanto la filosofía de ésta, como sus objetivos y actividades con la finalidad de ser lo más transparente posible en todo proceso gubernamental.

Varios autores concuerdan que en parte la legitimación de una institución se logra al recibir el reconocimiento por parte de los ciudadanos. Para obtener dicho reconocimiento la organización debe hacer uso de mecanismos que estratégicamente le permitan una bidireccional al intentar vincularse o interactuar con su entorno. Siguiendo con el argumento del reconocimiento en las organizaciones, Canel (2010) menciona que “la institución pública tiene que buscar fórmulas para preguntar, investigar, llegar al *feedback* del público, si quiere conocer bien cómo reacciona su interlocutor, qué piensa de ella, qué espera y cuáles son sus expectativas.” (p. 43). Y recurre a autores como Peters y Waterman (1984) para afirmar que “cuando realmente hay comunicación bidireccional simétrica se logra la excelencia, pues cuando la institución trata de llegar a la comprensión mutua con su público, trabaja de una manera más transparente,

dinámica, descentralizada, próxima al público, autónoma y abierta a la innovación y al cambio” (citado en Canel, 2010, p. 44).

Lograr el posicionamiento o reconocimiento de las instituciones por parte de ciudadanos no es tarea fácil, aunado a ello, en el contexto mexicano según Ángeles Moreno, Juan Carlos Molleda y Ana María Suárez (2006) las organizaciones tienen un gran desafío, ya que se enfrentan ante una crisis de desconfianza y falta de credibilidad en los procesos gubernamentales, ya que son percibidas como ineficientes y corruptas. Derivada de la crisis que atraviesan las instituciones públicas se visualiza el incremento de la apatía hacia los procesos gubernamentales por parte de los ciudadanos. Para ello, Moreno, Molleda y Suárez (2006) proponen que las instituciones trabajen en lograr un mayor compromiso con la transparencia, esto provocará un incremento en la confianza y la posible incursión de las personas en los procesos de participación ciudadana. El proceso de comunicación dentro de las instituciones públicas no es sólo una necesidad, es la responsabilidad éstas tienen de rendir cuentas de sus actividades a los ciudadanos para los que va orientada su existencia y por otro lado, sin duda es necesario recurrir a una planeación estratégica que oriente a la institución por el camino más afectivo que la lleve a lograr sus objetivos.

### Comunicación Estratégica E Innovación Social

El Instituto Municipal de Investigación y Planeación de Ensenada, Baja California en México, es un organismo público descentralizado que se encarga de la elaboración de planes y programas en temas de planeación para el desarrollo integral del municipio. Desde su creación, el IMIP se ha enfrentado al limitado conocimiento que los ciudadanos tienen sobre él, provocando una escasa participación ciudadana que deriva en el poco impulso y seguimiento a los planes y programas desarrollados por la institución. En este punto es importante mencionar que en la visión del Instituto se plasma el interés por contar con la confianza de la comunidad e impulsar la participación ciudadana para lograr en conjunto la mejor calidad de vida para su población, pero ¿cómo lograr la confianza de la comunidad si aún no es una institución visible? Para proponer un proyecto para el IMIP que logre el efecto deseado, es conveniente visualizar la situación con un enfoque estratégico.

Porter (2011) define estrategia como “la creación de una posición única y valiosa que involucra un conjunto diferente de actividades” (p. 107). Por su parte, Pérez (2012) describe a la comunicación estratégica como “una práctica que emerge con la maduración que experimenta el campo de las comunicaciones en la modernización de las sociedades cuyo objetivo es convertir el vínculo de las organizaciones con su entorno en una relación armoniosa y positiva desde el punto de sus intereses y objetivos (...) Su primer interés es el posicionamiento de la organización” (p. 24). También resalta la definición de Wilcox y Ault, quienes afirman que la “estrategia de comunicación es la actividad que describe cómo se va a alcanzar, en teoría, un objetivo, ofreciendo líneas directrices y temáticas para el programa global” (citados en Pérez, 2012, p. 22).

Por su parte, Sandra Massoni (2008) afirma que la comunicación estratégica “es un modelo de desarrollo en tanto es una manera de ser y de transformar. Un programa de planificación y gestión que aborda problemas reales y no solo debates reales. Un plan para la acción que busca ir generando puntos de encuentro entre las alteridades presentes en cada situación” (p. 9). Continuando con la visión de Massoni, en su Modelo de Comunicación Estratégica propone trabajar desde una visión estratégica que necesita repensar a la comunicación desde nuevos paradigmas, teniendo en cuenta que es un fenómeno complejo y fluido. Para ello, la autora plantea que es necesaria la planificación de objetivos de conocimiento a lograr con los distintos actores, especificar metas de producto de la cual se desprenden distintos niveles: acciones, programas, proyectos y áreas estratégicas. Massoni insiste en que es necesario “reconocer intereses y necesidades de las matrices/actores ya que una estrategia es un proyecto de comprensión que asume a la comunicación como espacio de encuentro de los actores” (2008, p. 2).

Para apoyar esta postura, es conveniente complementar con el término de innovación social, el cual según el Gobierno de la Ciudad de México en su proyecto Laboratorio para la Ciudad, menciona que es:

“Reimaginar la forma en que puede funcionar o vincularse una comunidad o una sociedad. La innovación por lo general se asocia con la tecnología, pero también en nuestras relaciones y hábitos sociales o ciudadanos se pueden diseñar, difundir y cultivar nuevas estrategias, conceptos, organizaciones que contribuyen al desarrollo de una comunidad y fortalecen vínculos entre sus miembros. Las plataformas participativas, las iniciativas ciudadanas, el emprendimiento cívico, y el talento ciudadano son todos factores que contribuyen a la innovación social” (Gobierno de la Ciudad de México, s/f).

La innovación social es un término que actualmente está cobrando importancia tanto en las instituciones públicas como privadas, ya que propone el empleo de nuevos caminos que le lleven a vincularse con la comunidad, con la intención de propiciar un mejor entorno para la puesta en marcha de sus planes y programas. Complementando, en el campo de la publicidad y mercadotecnia se maneja términos como el *Above The Line* (ATL) y *Below The Line* (BTL), éstos obedecen a los canales que son empleados para la distribución del mensaje. El ATL es visto como el uso tradicional de medios considerados como masivos y actualmente se ve en debate ya que se pone en tela de juicio el impacto que puedan lograr sobre el público, debido a su generalidad. Por su parte el *Below The Line* ofrece una alternativa innovadora ya que propone la utilización de canales que le permitan acercarse al público y brindar experiencias que dejen mayor impacto en éstos. El origen del BTL aparece en la publicación de Frank Jefkins (2000) titulada *Advertising*, donde se le atribuye a la empresa Procter & Gamble, que utilizaba una línea para dividir los gastos que se aplicarían en publicidad, en la parte sobre la línea se situaban los medios que requerían comisión para la agencia de publicidad y en la parte inferior los que no.

Después de ello, el término BTL fue adquiriendo matices hasta referirse a lo que hoy representa, una alternativa que está en contacto más cercano con el público brindando una experiencia con mayor valor e impacto, gracias a su alto contenido de creatividad. Actualmente se pueden encontrar diversos proyectos que instituciones públicas han puesto en práctica, éstos con el toque innovador y estratégico ya mencionado anteriormente, impulsando la inclusión de los ciudadanos en temas de participación. Se han encontrado experiencias como *Tu voz es tu rock*, programa de radio producido por el Departamento de Comunicación Social del Instituto Estatal Electoral en Chihuahua, y el programa *Yo Propongo*, definido como una plataforma de participación ciudadana que emplea el uso de las nuevas tecnologías y canales alternativos para acercarse al público. Bajo esta perspectiva de comunicación estratégica, innovación social y BTL se analizó la situación del IMIP para plantear una serie de acciones que den solución tanto a su problemática de poca presencia ante los ciudadanos, como a la escasa participación de la población en los procesos de planeación.

## METODOLOGÍA

La propuesta del programa *Yo también opino* apuesta por ofrecer un espacio donde el ciudadano conozca qué es y qué hace el IMIP, además de que se interese en participar activamente en los planes y programas que realiza la institución. Dicho programa se basa en la instalación de una cabina en la que el ciudadano ingresa aporta su opinión y posible solución a las distintas situaciones que abordan los planes y programas. Esta participación es individual y videograbada con la intención de obtener un aporte ciudadano que pueda llevarse a las distintas autoridades dándole un sentido de bidireccionalidad, ya que el IMIP se acerca a los enseñandeses y recibe un *feedback* de la temática que se esté manejando. Es importante recalcar que cada vez que se instala la cabina, ésta abordará un plan o programa que haya elaborado o esté elaborando el instituto (puede ser de desarrollo urbano, transporte público, desarrollo económico, agua, rescate de espacios públicos, entre otros temas).

El programa *Yo también opino* consta de cuatro fases, las cuales corresponden a una etapa previa, a una de ejecución/implementación, otra de procesamiento de la información obtenida y la presentación de resultados. Para la aplicación piloto del programa se acordó con el IMIP en trabajar sobre el *Estudio de las necesidades laborales y perfiles profesionales del sector productivo de Ensenada, B.C.* Se optó por trabajar en dicho estudio ya que éste se encuentra en elaboración y consiste en incorporar la opinión de los jóvenes que están por concluir sus estudios de bachillerato respecto a qué carreras universitarias les interesa estudiar y su percepción a cerca del campo laboral en su ciudad, así como las materias en las que consideran tener mayores problemas de comprensión. La intervención con la herramienta BTL se realizó el 4 de diciembre del 2013 a las 10 horas en una preparatoria pública de Ensenada. Una vez instalada la cabina *Yo también opino* se abordó a los jóvenes por grupos de siete. El ejercicio inició con una breve explicación qué es y qué hace el IMIP, continuando con una introducción y objetivo del proyecto *Estudio de las necesidades laborales y perfiles profesionales del sector productivo de Ensenada, B.C.*; así como una explicación sobre la importancia de incorporar la opinión de los jóvenes que se pueden ver beneficiados con la elaboración del estudio. Después de la charla, se les explicó la dinámica dentro de la cabina donde se videograbaría su opinión. Así uno a uno fue ingresando, opinando y proponiendo acciones para mejorar la situación de la demanda laboral de los jóvenes que concluyen sus estudios superiores, también compartían qué es lo que quieren estudiar al terminar la preparatoria y las materias que consideran su debilidad. En total se contó con la participación de 15 jóvenes de entre los 17-19 años y una docente.

## RESULTADOS PRELIMINARES Y REFLEXIÓN FINAL

Posteriormente a la intervención se realizó la transcripción de los videos, obteniéndose información que contribuye a comprender las expectativas de los jóvenes sobre su futuro laboral, así como resaltando patrones como la debilidad de muchos en asignaturas como las matemáticas, entre otros datos. Dicha información se entregó al encargado del proyecto en el IMIP; a quien se le preguntó acerca de la funcionalidad del programa *Yo también opino*, respondiendo: “Que la intención es buena, habrá que ver como se aprovecha o desaprovecha, eso será en función del método que se utilice sobre todo para incentivar la participación y los resultados que de ahí devengan” (comunicación personal, enero 2014). A partir del ejercicio piloto, la estrategia BTL *Yo también opino* se encuentra en su fase de evaluación. Inicialmente, en su aplicación logra motivar e involucrar a los asistentes a participar e involucrarse. Sin embargo, falta analizar si es una estrategia que funcionará a mediano y largo plazo, logrando socializar al IMIP y sus funciones entre la población y acercando a la ciudadanía al proceso de la planeación institucional.

# REFLEXIONES EN TORNO A LA PARTICIPACIÓN CIUDADANA EN LA PLANEACIÓN EN BAJA CALIFORNIA

Sheila Delhumeau Rivera, Universidad Autónoma de Baja California

## RESUMEN

*En este trabajo se presenta el resultado de una investigación de tipo descriptiva, de corte transversal, no experimental, realizada para conocer la percepción ciudadana sobre el Sistema Estatal de Planeación en el estado de Baja California. Con esta finalidad, se diseñó una encuesta que se aplicó a 978 personas en todo el estado, la cual explora cinco variables que incluyen la experiencia previa de participación en programas gubernamentales; el conocimiento de los mecanismos de participación para la planeación; la experiencia personal al participar; la opinión sobre el trabajo en las instituciones de la planeación estatal; y la percepción del gobierno. Los resultados obtenidos muestran los principales problemas que los ciudadanos encuentran para promover una participación de calidad. Los hallazgos de esta investigación permiten elaborar recomendaciones que pueden ayudar a mejorar el proceso de la planeación participativa.*

**PALABRAS CLAVE:** Planeación Estatal, Percepción Social, Participación Ciudadana

## REFLECTIONS ON PUBLIC PARTICIPATION IN THE PLANNING PROCESS IN BAJA CALIFORNIA

### SUMMARY

*The results of a descriptive, non-experimental cross section research conducted to know citizen perception of the State Planning System in Baja California is presented in this paper. For this purpose, a survey was applied to 978 people statewide, which explores five variables including previous experience of participation in government programs; knowledge of the participatory mechanisms for planning; personal experiences; their opinion about the planning institutions; and their perception of government. The results show the main problems that citizens identify to promote quality participation. The findings of this research allow develop recommendations that can help improve the process of participatory planning.*

**KEY WORDS:** State Planning, Citizen Participation, Social Perception

**JEL:** Z18, M48

# HIGH QUALITY BLENDED LEARNING PARA LA ENSEÑANZA PERSONALIZADA DE LA MATEMÁTICA

Carmen Rodríguez Quiel, Instituto Profesional y Técnico de Veraguas

Alexis Tejedor De León, Universidad Tecnológica de Panamá

## RESUMEN

*La presente investigación se enmarca en una propuesta metodológica basada en High Quality Blended Learning para la enseñanza personalizada de la Matemática, con la finalidad de mejorar el rendimiento académico de los estudiantes en esta asignatura. Esta investigación tiene un enfoque cuantitativo, siguiendo a López Moreno (2013); una modalidad creativa, pues se pretende contribuir con una propuesta innovadora, apoyada en tecnología y de corte experimental, con dos grupos de estudio de séptimo grado (7°) del Centro de Educación Básica General Belisario Billar Pérez. Para el análisis de los datos se utilizó el estadístico t-student para comparar los resultados del pre test y post test aplicado al grupo experimental y al grupo control. En conclusión, la propuesta metodológica basada en High Quality Blended Learning para la enseñanza personalizada de la Matemática proporcionó una mejora significativa en el rendimiento académico de los estudiantes.*

**PALABRAS CLAVES:** High quality, Blended Learning, enseñanza personalizada, Matemática

## HIGH QUALITY BLENDED LEARNING FOR THE PERSONALIZED TEACHING OF MATHEMATIC

### ABSTRACT

*This research is part of a methodological proposal based on High Quality Custom Blended Learning for teaching mathematics, in order to improve the academic performance of students in this course. This research has a quantitative approach, following López Moreno (2013); creative mode, it is intended to contribute to an innovative proposal, experimental and supported by technology, with two study groups of seventh grade (7th) Center for Basic Education General Pérez Belisario Billiards. For the data analysis the statistical t-student test was used to compare the results of the pretest and posttest applied to the experimental group and the control group. In conclusion, the methodology based on High Quality Blended Learning for teaching custom Mathematic he provided a significant improvement in the academic performance of students.*

**JEL:** M00

**KEYWORDS:** High Quality, Blended Learning, Personalized Teaching, Mathematic

## INTRODUCCIÓN

El desarrollo de la humanidad ha traído consigo el avance de nuevas tecnologías, repercutiendo así, en diferentes ámbitos sociales donde la Educación Matemática no es la excepción; las nuevas prácticas pedagógicas y las formas en que las personas aprenden han motivado el estudio de la enseñanza personalizada *High Quality Blended Learning* para la Matemática y que hoy, se comparte en este espacio. La estructura de esta presentación inicia con la revisión de la literatura, se plantean aspectos relevantes del tema de investigación, iniciando con rasgos históricos que originan el problema y un análisis epistémico de la enseñanza del Álgebra Básica en Panamá, hasta llegar a revisar aspectos relativos a la indagación de

propuestas metodológicas innovadoras que mejoren el rendimiento académico de los estudiantes en la asignatura de Matemática, bajo la modalidad *Blended Learning (B-learning)*. A continuación se presenta la metodología seguida, enfatizando en el procedimiento utilizado para la aplicación del *pre test* y *post test* aplicado a los estudiantes y paralelamente a la presentación de los resultados, se hace un análisis comparativo del grupo control y experimental basado en los resultados estadísticos de la investigación. En la parte conclusiva, se presentan los resultados de la investigación, las principales conclusiones y que generan una serie de recomendaciones tanto para las entidades que tienen que ver con la formación de los estudiantes en el sistema de Educación Básica General como para las que tienen que formar a profesores de Matemática. Finalmente, se enlistan las referencias bibliográficas utilizadas.

## REVISIÓN DE LITERATURA

Las Ciencias de la Educación, a lo largo de la historia, han atravesado por procesos institucionales e intelectuales que actualmente las consolidan como un campo de estudio amplio y autónomo (Schriewer & Keiner, 1997). Estas ciencias están íntimamente relacionadas con los estudios de educación y los estudios de formación del profesorado; pero, para ambas líneas de estudio, se hace necesario un conocimiento más profundo sobre los diferentes programas de estudios que ofertan las distintas instituciones educativas; la formación del profesorado; estudiados a profundidad, y los puntos en común que existen entre los diferentes programas de estudio (González, 2008). Siendo así, la Educación Social, como ámbito de intervención de la Pedagogía Social, es la encargada de buscar la formación integral individual y social de la persona en su medio; con la finalidad de que sea capaz de mejorar y transformar la sociedad en la que vive, a través de la madurez social, las relaciones humanas y la convivencia en sociedad, por medio de la Didáctica de las Ciencias (Pérez Serrano, 2004).

Esta Didáctica, es considerada como un conjunto de decisiones, fundamentaciones y/o procesos de aspectos relacionados con la enseñanza; pero la praxis educativa aunado a las propuestas teóricas didácticas existentes, avanzan hacia nuevas propuestas constructivas (Wolfgang, 2011). Hoy día, la enseñanza de la Matemática continúa siendo uno de los mayores desafíos de la Didáctica de la Matemática, pues su aprendizaje trae de la mano, numerosas dificultades relacionadas con un pensamiento de orden superior en el que se encuentran comprometidos procesos como la abstracción, el análisis y la demostración, por mencionar algunos (Vrancken *et al*, s.f).

Es por ello que las prácticas pedagógicas tecnológicas para la enseñanza de la Matemática juegan un papel importante en la formación de los individuos para que sean capaces de asumir las exigencias científicas y técnicas que demanda el actual desarrollo social. En este sentido, es necesario que los alumnos aprendan a aprender (Cao & Rodríguez, 2011). Sin embargo, el enfoque tradicional basado en procesos memorísticos para la resolución de operaciones con números, aplicados a la enseñanza de la Matemática, expresado por autores como Artigue *et al* (1995), Salinas & Alanís (2009), es motivo de preocupación marcada entre los investigadores de Matemática Educativa y de Didáctica de la Matemática; manifestado también por Boyer (2012) con los trabajos de las fracciones egipcias que originaron un cúmulo de procesos matemáticos de alto nivel. Adicionalmente, los resultados obtenidos de los estudios desarrollados por la Organización de las Naciones Unidas para Educación, la Ciencia y la Cultura (UNESCO), la Organización para la Cooperación y el Desarrollo Económico (OECD), el Programa de Evaluación Internacional de Alumnos Program for International Student Assessment (PISA), han evidenciado los bajos promedios alcanzados por los estudiantes panameños, así como las debilidades en los procesos cognitivos, de comprensión, aplicación y análisis, unido a los argumentos listados, también se detectaron debilidades en la incorporación del recursos tecnológicos tanto humanos como físicos (Martínez, 2006).

Por todo lo anteriormente expuesto y tomando como referencia los resultados nacionales que muestran los bajos rendimientos en Matemática de los estudiantes panameños y de la necesidad en maximizar el uso de

los recursos tecnológicos de información y comunicación diseminados y distribuidos por el Ministerio de Educación a nivel nacional surge la inquietud de diseñar e implementar una propuesta pedagógica High Quality Blended learning para la enseñanza del Álgebra Básica, utilizando tecnología de información y comunicación para la construcción de conceptos fundamentales, la plataforma Moodle® y la combinación de estrategias propias de los enfoques presenciales y virtuales (Troncoso Rodríguez, Cuicas Ávila, & Debel, 2010). Desde el punto de vista de la didáctica, se propone un trabajo matemático de alfabetización en la reorganización de los elementos utilizados por los estudiantes en la asignatura de Matemática específicamente para la enseñanza del Álgebra Básica, que les permita analizar, resolver problemas, manejar información, y enfrentar situaciones que se presentarán en la vida adulta OCDE (2003).

Con esta propuesta se busca pasar de grupos fijos a grupos dinámicos, en los que se minimice el papel de docente explicador de conceptos para rescatar y mejorar las habilidades cognitivas y no cognitivas, duras y blandas, el aprendizaje autónomo, el crecimiento social y emocional a través de valores como el entusiasmo, el honor, la reflexión y el coraje, lo que este proyecto maneja como enseñanza personalizada (Estación 3). Con el interés de la Innovación Educativa, la propuesta está basada en el modelo de rotación de estación tomando en cuenta: aprendizaje en línea, grupos de trabajo y aprendizaje personalizado (Staker & Horn, 2012); un rediseño del aula, como se muestra en la Figura 1, con recursos limitados; y las estructuras propias del 7° de Educación Básica General Belisario Villar Pérez en Veraguas, Panamá.

Este espacio relacionado con Innovaciones tecnológicas y prácticas exitosas para propiciar la calidad en la educación, toma en cuenta la característica principal del docente: ir en busca de modelos, estrategias, experiencias y colocar al estudiante en el centro de los procesos de enseñanza y de aprendizaje para una calidad y equidad en la educación: compromiso de todos.

## METODOLOGÍA

Básicamente la investigación siguió una metodología cuantitativa, pues utilizó la recolección y análisis de datos para probar las hipótesis establecidas, basados en valoración numérica, en el conteo y el análisis estadístico como fundamento científico para la predicción de los resultados finales de la investigación (Hernández *et al*, 2002). Adicionalmente, la investigación fue de tipo experimental, pues se introdujeron cambios a un grupo (grupo experimental), con la finalidad de observar las diferencias de aprendizaje del Álgebra básica que se produjeron en un tiempo determinado y, a través de modelos estadísticos inferenciales para definir si la propuesta pedagógica *B-learning* fue efectiva o no.

La investigación se desarrolló diseñando la plataforma *B-learning*, luego validándola, para en seguida ponerla a prueba, implementando la plataforma en el grupo experimental ( $G_1$ ); es decir, se expuso el grupo experimental al aprendizaje de Álgebra básica por medio de la propuesta pedagógica *B-learning*, y finalmente se hizo la Valoración de la variable independiente sobre la dependiente con la realización de pruebas de hipótesis estadísticas sobre los resultados del pre test y pos test obtenidos a partir de los resultados del experimento, basadas en la distribución *t* – student.

### Muestra

La muestra del proyecto estaba formada por dos grupos: un grupo control y un grupo experimental. Al grupo experimental ( $G_1$ ) y al grupo control ( $G_2$ ) se les seleccionó aleatoriamente de la población. Una primera selección aleatoria suministró al grupo que representará la muestra de la población. Una segunda selección aleatoria indicó si pertenecía al grupo experimental o al grupo control.

## RESULTADOS

De acuerdo a lo establecido en la metodología, se inicia la realización de pruebas estadísticas para: conocer si las varianzas poblacionales son iguales. Posteriormente se plantea la prueba de hipótesis para los resultados obtenidos del *pre test* y *post test*, a través del estadístico *t-Student* con una cola. Tal como se señaló, esta prueba permite determinar si la propuesta metodológica mejora el rendimiento de los estudiantes. Con la prueba estadística de igualdad de varianzas se obtuvieron los siguientes resultados de la tabla 1.

Tabla 1: Cálculos de la Diferencia de Varianzas

Diferencia Entre Varianzas		
	Pre test	Post test
<b>F Calculada</b>	1,2828	1,1278
<b>GL numerador</b>	38	38
<b>GL denominador</b>	30	30
<b>Error</b>	5,0 %	5,0 %
<b>F Tabular</b>	1,7997	1,7997
<b>¿Se rechaza <math>H_0</math>?</b>	No	No

Como **F** calculada es menor que la **F** tabular, entonces no se rechaza  $H_0$ , por lo tanto se demuestra que las varianzas poblacionales para el *pre test* y *pos test* son significativamente iguales. Se calculó además, las medidas de estadísticas descriptivas por grupo como media y varianza, resultados mostrados en la tabla 2.

Tabla 2: Estadísticas Descriptivas de la Totalidad de la Muestra

Área De Estudio	Prueba	Media	Valor Mínimo	Valor Máximo	Desviación Típica	Asimetría	Curtosis
Álgebra Básica	Pre test	22,74	19	26	1,51	-0,47	-0,67
	Post test	42,23	36	49	4,27	-0,40	-1,38

Como se puede observar en la tabla anterior el rendimiento promedio del grupo control resulta ser inferior al rendimiento del grupo experimental; sin embargo, esto debe ser comprobado estadísticamente, por lo que se procedió a determinar la media, desviación típica, puntuación de ganancia y diferencia intergrupala, resultados plasmados en la tabla 3.

Tabla 3: Media y Desviación Típica del *Pre Test Y Pos Test*, Puntuación de Ganancia (PG.), Diferencia Intergrupala (T)

	Grupo Control		Grupo Experimental	
	M	DT	M	DT
<b>Pre test</b>	23,52	1,30	22,84	0,97
<b>Post test</b>	36,98	0,78	47,25	0,91
<b>PG.</b>	13,46		24,41	
<b>T</b>	-89,29		-117,35	

A partir de este resultado se procede al análisis de las hipótesis, que se presentan a continuación:

**$H_1$ :** La implementación de una propuesta pedagógica High Quality *B-learning* para la enseñanza personalizada del álgebra Básica, es estadísticamente superior al rendimiento académico de los estudiantes que se les enseña sin este tipo de metodología, en el séptimo grado (7º) del Centro de Educación Básica Belisario Villar Pérez.

$H_0$ : No hay diferencias significativas en el rendimiento académico de los estudiantes, sometidos a la implementación de una propuesta pedagógica *High Quality B-learning*, para la enseñanza personalizada del álgebra Básica y los estudiantes que se les enseña sin este tipo de metodologías en el 7° grado del Centro de Educación Básica. Al aplicar el estadístico *t-Student*, presentado en el marco metodológico y se obtuvieron los resultados que se pueden apreciar en la tabla 4.

Tabla 4: Resultados de las Medidas de Estadísticas Globales

Medidas Estadísticas Globales	
Varianza conjunta	0.4562
Sp	0.6754
T calculada	2.3462
Grados de libertad	68
Error	5.0%
T tabular	1.6675
¿Se rechaza $H_0$ ?	Si

Como la  $t$  calculada es mayor que la  $t$  tabular, se rechaza  $H_0$  y se acepta  $H_1$ , es decir tomando como base la evidencia que brinda la muestra con el *pre test* y *post test*, con un margen de certeza del 95%, se rechaza la hipótesis nula y en consecuencia existe evidencia significativa de que: el rendimiento académico de los estudiantes sometidos a la propuesta metodológica *High Quality B-learning* para la enseñanza personalizada de la Matemática son superiores al rendimiento académico de los estudiantes que aprenden sin este tipo de propuesta metodológica.

## CONCLUSIONES

Existe una diferencia significativa de que la propuesta metodológica *High Quality B-learning* para la enseñanza personalizada de la Matemática mejora el rendimiento académico de los estudiantes en el tema de Álgebra Básica. La utilidad del *High Quality B-learning* para la enseñanza personalizada de la Matemática, permite la interacción entre: los contenidos, la tecnología, los estudiantes y los docentes; favoreciendo los procesos de enseñanza, atender sus diferencias individuales y permitir que los alumnos reciban una educación acorde a los requerimientos de la sociedad actual. Con esta metodología, el proceso de enseñanza de la Matemática se convierte en una permanente búsqueda, análisis y reelaboración de información, para hacer que los aprendizajes sean cada vez más complejos y significativos para el estudiante.

## Recomendaciones

La propuesta de utilización del *High Quality B-learning* para la enseñanza personalizada de la Matemática, puede ser extrapolada a otras áreas de la Matemática y otras ciencias. Exhortar a los docentes a que realicen experimentos similares con la finalidad de corroborar que la propuesta en cuestión es funcional para los procesos de enseñanza en otras áreas de la Matemática.

# MUJERES INDÍGENAS EMPRESARIAS, UNA CONTRIBUCIÓN AL DESARROLLO ECONÓMICO Y SOCIAL DE LAS ZONAS RURALES

Seidi Iliana Pérez Chavira, Universidad Autónoma de Baja California

Jesús Antonio Rojas Méndez, Universidad Iberoamericana Puebla

Imelda Virginia López Sánchez, Universidad Autónoma de Baja California

## RESUMEN

*La población indígena en nuestro país ocupa unos de los niveles más pobres y desfavorecidos en nuestra sociedad, por lo que las personas se ven en la necesidad de dejar sus pueblos en busca de nuevas oportunidades de vida. En este proceso de migración se presenta una desintegración en sus hogares, dejando en la mayoría de los casos a la mujer como único responsable del sustento de sus familias. Esta situación da origen a que la mujer indígena, además del cuidado de sus hijos y del hogar, realicen actividades artesanales, de producción agrícola (flores), de servicios y comercio en pequeño. La falta de cultura empresarial en este género, es un problema fundamental, lo cual se refleja en la capacidad para mejorar aspectos tan importantes, como: la administración, mercadotecnia, financiamiento, identificación de oportunidades de negocio y gestión de los recursos humanos. Es por ello que, esta investigación tiene como objetivo estudiar la participación de las mujeres indígenas en el desarrollo económico y social de la región. La investigación es descriptiva, transversal no experimental. El universo de grupos a estudiar se tomo del Programa Organización Productiva para Mujeres Indígenas (POPMI) de la Comisión Nacional para el Desarrollo de los Pueblos Indígenas (CDI).*

**PALABRAS CLAVE:** Mujeres Indígenas, Micro y Pequeñas Empresas, Capacitación, Diseño Organizacional

## INDIGENOUS WOMEN IN BUSINESS, A CONTRIBUTION TO ECONOMIC AND SOCIAL DEVELOPMENT OF RURAL AREAS

### ABSTRACT

*The indigenous population in our country is one of the poorest and most disadvantaged levels in our society, so that people feel the need to leave their towns in search of new opportunities in life. In this migration process presents a breakdown in their homes, leaving in most cases women as solely responsible for the livelihood of their families. This situation gives rise to indigenous women, as well as childcare and homemade crafts, agricultural production (flowers), services and small trade. The lack of entrepreneurial culture in this gender is a fundamental problem, which is reflected in the lack of ability to improve important aspects, such as management, marketing, financing, business opportunity identification and management of human resources. For this reason, this research aims to study the participation of indigenous women in economic and social development of the region. The research is descriptive, not experimental cross. The universe will take groups to study the Productive Organization Programme for Indigenous Women of the National Commission for the Development of Indigenous Peoples (CDI)*

**JEL CODE:** R11

**KEYWORDS:** Training, Indigenous Women, Micro and Small Enterprise

## INTRODUCCION

La situación de la mujer indígena no ha cambiado a través de la historia. En nuestro país como en otros países en desarrollo, las mujeres indígenas siguen padeciendo la extrema pobreza, el tráfico humano, el analfabetismo, la violencia familiar, los pocos o nulos servicios de seguridad social, no tienen derecho a poseer patrimonio y a pesar de la activa y enorme contribución en los procesos económicos y sociales continúan sufriendo de múltiple discriminación, ya sea por su género o su origen indígena.

## REVISION LITERARIA

### Población Indígena En México

Los pueblos indígenas tienen usos y costumbres propias, poseen formas particulares de ver la vida, viven, comen celebran sus festividades, nombran a sus autoridades. Todos comparten un elemento único que los distingue y les da identidad, la lengua materna, que además es el indicador principal para medir cuanta población indígena existe. Otro indicador que ayuda a medir la población es la auto adscripción étnica, que se refiere a las personas o comunidades que en forma voluntaria deciden identificarse como indígena o como miembro de un pueblo indígena. El Censo General de Población y Vivienda en 2010, realizado por el Instituto Nacional de Estadística y Geografía (INEGI) registra 15.7 millones de personas consideradas indígenas, de las cuales 6.6 millones son hablantes de una lengua indígena. Del total de la población el 60% corresponde a mujeres. Cabe destacar que la población indígena se concentra en los estados de: Chiapas, Oaxaca, Veracruz, Puebla, Guerrero, parte del Estado de México, Hidalgo y Tlaxcala. Continúa hacia el sureste en la península de Yucatán y hacia el norte recorre Michoacán, algunas regiones de Nayarit, Durango, Chihuahua y Sonora.

La población indígena tiene indicadores que dan a conocer un rezago educativo por debajo de la población no indígena, por ejemplo, mayores tasas de analfabetismo y menores logros educativos. Tienen menos acceso a mercados de trabajo formales que los no indígenas y por lo tanto un porcentaje menor tiene acceso a las prestaciones derivadas del empleo. Los pueblos indígenas se gobiernan desde hace mucho tiempo, aprovechando las formas que les permiten leyes y autoridades civiles. Muchos municipios indígenas son gobernados por indígenas y sus cabildos, y tienen al frente sus propias autoridades tradicionales que asumen formas modernas de gobierno, esto favorece que aun en la actualidad en las comunidades indígenas no se pueda observar una equidad de género, aquí las mujeres no tienen las mismas oportunidades que los hombres.

### Mujeres Indígenas Emprendedoras

Tener su propio negocio es el sueño de muchas mujeres y para las indígenas a veces se convierte en inalcanzable. Para ellas, los esfuerzos para emprender un negocio son mayores, dado que la mayoría de las veces tienen que ir en contra de sus tradiciones y costumbres. Las mujeres indígenas a causa de su categoría históricamente baja o nula en la sociedad, son las más afectadas por la pobreza y la discriminación en la que viven. Para muchas mujeres que viven en comunidades rurales, ser indígena representa una doble tarea, ya que muchas veces trabajan sin recibir remuneración alguna. La migración, el abandono de sus parejas, la pobreza extrema ante la que se enfrentan, el rezago educativo, el machismo, la desnutrición de sus hijos son algunas de las causas por la que las mujeres decidan emprender una pequeña empresa, aun en contra de las comunidades de las cuales forman parte. En la actualidad las mujeres indígenas forman grupos sociales diversos: ejidatarias, amas de casa, jornaleras, artesanas, comerciantes y están en busca de apoyos que les garanticen la vida de sus negocios.

### Programas de Apoyo de la CDI

La Comisión Nacional para el Desarrollo de los Pueblos Indígenas (CDI), Institución del Gobierno Federal, tiene como una de sus prioridades promover y respetar los Derechos de los pueblos indígenas e impulsar su desarrollo integral, para el reconocimiento de la diversidad de los pueblos en su interior y garantizar a todos sus ciudadanos, la igualdad, el respeto a la diversidad y a la diferencia en el mundo de lo civil, social, político y pluricultural. Para ello, ha unido sus esfuerzos en el Programa para el Mejoramiento de la Producción y Productividad Indígena (PROIN). Este Programa a partir de 2014 unifica las actividades de la CDI en materia productiva, con el propósito de obtener un marco normativo simplificado que permita a la población objetivo identificar con mayor precisión los apoyos enfocados al desarrollo productivo; por este motivo, han sido consolidados en un mismo marco normativo los esfuerzos de los programas productivos que hasta el ejercicio fiscal 2013 operaban por separado: Programa Coordinación para el Apoyo a la Producción Indígena, Programa de Turismo

Alternativo en Zonas Indígenas y Programa Organización Productiva para Mujeres Indígenas (POPMI); Programa Fondos Regionales Indígenas. Dentro de estos programas de apoyo a las mujeres indígenas emprendedoras se encuentra el Programa de Organización Productiva para Mujeres Indígenas que contribuye a mejorar las condiciones de vida y posición social de las mujeres indígenas que habitan en localidades de alta y muy alta marginación, impulsando y fortaleciendo su organización así como su participación en la toma de decisiones, a través del desarrollo de un proyecto productivo.

El Programa, considera de manera adicional, un acompañamiento durante todo el desarrollo del proyecto con la finalidad de fortalecer la organización del grupo. La población objetivo son las mujeres indígenas, mayores de edad que conformen grupos de 8 mujeres como mínimo. Asimismo, podrán ser beneficiarias mujeres indígenas menores de edad que al contraer matrimonio, vivir en pareja o ser madres solteras, adquieren responsabilidades en la manutención del hogar, siempre que formen parte de un grupo. Los grupos de mujeres indígenas podrán destinar el apoyo para uno o más de los siguientes rubros:

Adquisición de insumos o materias primas para la producción.

Herramientas, maquinaria y equipos nuevos, así como costos asociados a su instalación  
Adecuaciones al espacio físico o infraestructura.

Pago de mano de obra especializada.

Capacitación especializada y servicios de asistencia técnica que se requieran para la instalación y arranque del proyecto productivo.

Fletes o transportación de insumos requeridos exclusivamente para la puesta en marcha del proyecto.

### **METODOLOGIA**

Esta investigación está dirigida principalmente al estudio de la participación de las mujeres indígenas empresarias en el desarrollo económico y social de la región. El estudio se desarrolla en el Valle de San Quintín, localidad que pertenece al municipio de Ensenada, Baja California. Es una investigación de análisis documental, es descriptiva, transversal no experimental. El universo de grupos a estudiar se tomó del Programa Organización Productiva para Mujeres Indígenas (POPMI) de la Comisión Nacional para el Desarrollo de los Pueblos Indígenas (CDI). Se elaboró como instrumento de medición un cuestionario de 15 preguntas, de opción múltiple tipo Likert. Se tomó como universo de población los grupos de mujeres indígenas que en 2013 participaron en el Programa Organización Productiva para Mujeres Indígenas de la

Comisión Nacional para el Desarrollo de los Pueblos Indígenas, centro ubicado en San Quintín. El instrumento se aplicó a ocho grupos, integrado por ocho miembros que recibieron apoyo, las variables a estudiar edad, origen étnico, motivos que originan el emprendimiento, nivel educativo, lengua materna hablada.

## RESULTADOS

De las 64 personas encuestadas, el 52% se encuentra entre 18 y 23 años, el 27% son mujeres de 30 a 35 años y el 21% restante están arriba de los 50 años. De la población total el 75% son de origen indígena Mixteco, mientras que el restante es Triqui. El 75% proviene del estado de Oaxaca y el 25% de los estados de Guerrero y Chiapas. El nivel educativo es hasta tercero de primaria en un 56%, mientras que las personas mayores de 50 años no asistieron a la escuela. Uno de los motivos principales por los que las mujeres deciden iniciar una empresa es para el sostenimiento de sus hijos, ya que ellas son el principal motor de su familia. Las principales actividades a las que se dedican es artesanal, floricultura, venta de hongo zeta, panadería y repostería, engorda y venta de pollos.

## CONCLUSIONES

De los resultados obtenidos se concluye que la mujer indígena al desplazarse de un lugar a otro en busca de nuevas oportunidades de vida, la ha llevado a iniciar pequeñas empresas, que conducen a una participación activa en los procesos económicos de las regiones rurales, a través del emprendimiento, fortaleciendo así, su participación en la sociedad. Al encontrarse en estado migratorio, la mujer indígena busca la unión con otras mujeres de su misma comunidad, para dedicarse a actividades comerciales que le generen recursos para su subsistencia. A pesar del rezago educativo que presentan, su interés por generar recursos las motivan a buscar apoyos económicos que financien su idea de negocio. La vida sexual de la mujer indígena inicia a los 8 años por costumbre o tradiciones, por los que a los quince años o menos ya cuentan con dos o tres hijos, sufren de maltrato físico y psicológico y aunado a eso, no perciben remuneración alguna por el trabajo que realizan.

## RESUMEN

*Los avances del proyecto para construir un sistema nacional de competencias laborales en la administración y función pública por medio del trabajo interinstitucional entre el Centro de Investigación y Capacitación en Administración Pública de la Universidad de Costa Rica (CICAP-UCR) y la Dirección General de Servicio Civil (DGSC) han generado los primeros resultados metodológicos para la construcción de los procesos de consulta y determinar los temas de prioridad para el diseño y desarrollo de Estándares de Competencia Laboral con enfoque Transversal y Específicos. Este esfuerzo representa un referente para otras instituciones del sector público y privado, considerando la experiencia y cooperación mexicana.*

**PALABRAS CLAVES:** Capacitación, Evaluación y Certificación de Competencias Laborales

## PROSPECTS OF INTERNATIONAL LABOR CERTIFICATION OF COMPETENCE IN PUBLIC ADMINISTRATION AND MEXICO COSTA RICA

### ABSTRACT

*The progress of the project to build a national system of labor skills in administration and public service agency working through between the Centre for Research and Training in Public Administration from the University of Costa Rica (CICAP-UCR) and the Directorate General of Service Civil (DGSC) have produced the first results to construct methodological consultation processes and identify priority issues for the design and development of Occupational Skills Standards and Specific Transverse focusing. This effort represents a benchmark for other institutions in the public and private sector.*

**JEL:** H52, J81, J82, J88

**KEYWORDS:** Training, Evaluation and Certification of Labor Competencies

## INTRODUCCIÓN

Como producto de la vinculación académica internacional entre Costa Rica y México se ha cristalizado un esfuerzo de cooperación internacional entre la Universidad de Costa Rica por medio del Centro de Investigación y Capacitación en Administración Pública (CICAP), con la Universidad Autónoma de Baja California (UABC), Universidad Tecnológica de Tijuana (UTT) y el Consejo Nacional de Normalización

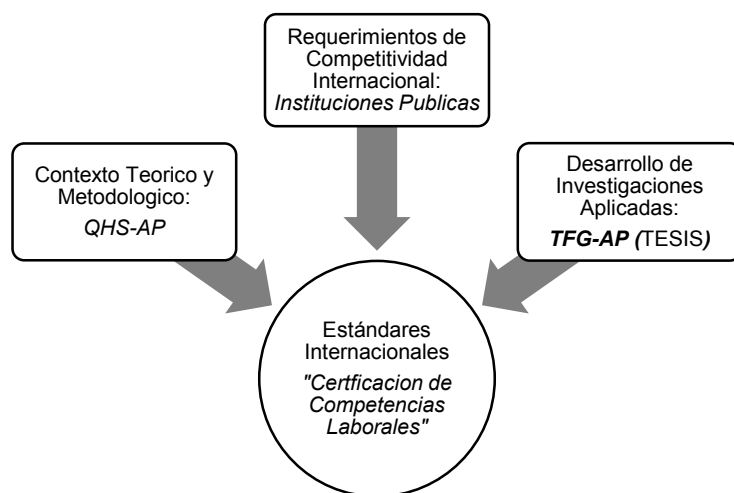

y Certificación (CONOCER) institución que administra el Sistema Nacional de Competencias Laborales de México. El CICAP (2013) ha logrado una meta estratégica al consolidar la primera etapa del proyecto de conformar un primer Grupo Semilla de personas costarricenses empoderadas metodológicamente de los procesos de instrucción y evaluación basada en competencias laborales (CICAP, 2013).

Las instituciones participantes en la primera fase fueron con la Dirección General de Servicio Civil (DGSC), Ministerio de Hacienda a través del Centro de Investigación y Formación Hacendaria (CIFH) y la Universidad Técnica Nacional (UTN). Derivado de los objetivos prestablecidos en este proceso se logró, el 15 de abril de 2013, la certificación y acreditación del Centro de Investigación y Capacitación en Administración Pública de la Universidad de Costa Rica como el primer Centro Evaluador de Competencias Laborales fuera del territorio mexicano dentro de la RedCONOCER de México, cimentando las bases para la regionalización de certificaciones internacionales.

La Universidad de Costa Rica cuenta con un Centro Evaluador de Competencias Laborales denominado CECLUCR (2013) que bajo convenio de cooperación internacional entre la Universidad de Costa Rica, la Universidad Tecnológica de Tijuana y el CONOCER (2013), el objetivo del convenio tiene como visión y misión el conocer las buenas prácticas del modelo mexicano para contribuir al estado de arte y las iniciativas metodológicas para sistematizar la construcción de un proyecto-país, orientándose a la conformación de un Sistema Nacional de Competencias Laborales de Costa Rica, basados en el campo de la administración pública del ente rector de la DGSC (2012, 2013).

En México la formación basada en competencias docentes y competencias laborales de egreso en Baja California ha generado un referente de seguimiento en los cuerpos y grupos de investigación especializados en la formación basada en competencias a nivel internacional como es el caso de PROCOMCAP (2013). Por su parte la Universidad de Costa Rica que ocupa el quinto lugar de las mejores universidades en América Latina de manera similar tiene implementados procesos de formación basada en competencias docentes, en especial la Escuela de Administración Pública (EAP, 2014). Para efectos comparativos el proyecto se enfoca en el análisis de la formación e impacto de funcionarios y administradores públicos basada en competencias laborales y las buenas prácticas internacionales. En la Figura 1 se muestra el Mapa Mental del Proyecto de Investigación.

Figura 1: Mapa Mental del Proyecto de Investigación

Fuente: Elaboración Propia

## OBJETIVO GENERAL

El objetivo general de la investigación comparativa internacional es desarrollar metodologías e instrumentos para sistematizar el proceso para el desarrollo de Estándares de Competencias Laborales Internacionales en la Función Pública. Para dimensionar el alcance del objetivo general es necesario experimentar las metodologías de análisis de competitividad laboral, en la actualidad la competitividad internacional tiene como referentes, los indicadores del Foro Económico Mundial (WEF, 2012), los enfoques de competitividad sistémica de la Organización para la Cooperación y el Desarrollo Económico (OCDE), así como el enfoque de la Organización Internacional del Trabajo (OIT) por medio del Centro Interamericano para el Desarrollo del Conocimiento en la Formación Profesional (CINTERFOR, 1998), donde se establece la importancia de los sistemas de competencias laborales.

En Costa Rica de acuerdo a Martínez (2013) se plantean que los resultados esperados son la generación de propuestas de estándares de competencias laborales y docentes, con enfoques transversales y específicos para la formación de los administradores públicos y eventualmente el desarrollo de estándares de competencia laboral regional bajo un contexto internacional. Esto representa potencialmente un precedente internacional para otras disciplinas, y que se refleje en el mejoramiento de la calidad de la docencia, el mejoramiento del impacto de la gestión pública, administración del aporte al estado del arte en el tema de competencias docentes y laborales. La contribución a la sociedad será el fortalecimiento de los grupos de investigación, el intercambio académico entre México y Costa Rica, y el fortalecimiento de la cooperación sur – sur.

## REVISION DE LITERATURA

Una formación de calidad docente es estratégica, ya que de esto depende los procesos de enseñanza – aprendizaje de las futuras generaciones. Y más relevante si se está formando administradores públicos y que de la competitividad del sector público dependerá la eficiencia y eficacia de los funcionarios. En la actualidad los constantes efectos globales de innovación, así como la competitividad internacional requiere de un mayor nivel de competencias docentes y laborales en la formación de los funcionarios de Administración y Función Pública, para satisfacer las necesidades del cliente – ciudadano, generándose nuevos desafíos de gestión del conocimiento y retos sistémicos, implicando que la administración pública deba ser cada vez más orientada a resultados de impacto en la sociedad y sectores de desarrollo de vocación de las regiones, considerando indicadores de eficiencia de políticas públicas desarrolladas e implementadas. De tal forma que los planes institucionales no solo indiquen los objetivos y metas, sino las competencias del saber, saber hacer y saber ser, que definan los saberes de la organización en la función pública. Las instituciones de gobierno requieren conocer y actualizar el marco jurídico, donde las políticas públicas provean incentivos hacia las prácticas que reditúan en un entorno competitivo de las instituciones públicas, para ello se plantea el análisis comparativo de las competencias laborales y docentes en la formación de administradores públicos. La investigación comparativa internacional permitirá desarrollar y validar indicadores que permitirán identificar los factores determinantes de las competencias docentes y laborales necesarias ante un contexto cada vez más competitivo.

El establecimiento de condiciones de competitividad laboral en la administración pública incrementa la eficiencia en el diseño, desarrollo e implementación de políticas públicas que favorecen la competitividad de la dinámica de la interacción de los agentes políticos, donde interactúan instituciones públicas, universidades, colegios profesionales, así como consultores especializados en la función pública y propiamente la voz del usuario o ciudadano, este último a través del enfoque de calidad en el servicio al ciudadano que retroalimenta el nivel de competitividad de sus instituciones públicas y contribuye al mejoramiento continuo institucional.

## METODOLOGÍA

La metodología para el desarrollo de la investigación comparativa involucra a los miembros de cuerpos y grupos de investigación de ambos países de las instituciones educativas participantes por medio de grupos focales y análisis de la información cualitativa y cuantitativa determinando el nivel de impacto aportado de la percepción social de los empleadores y formadores de los administradores públicos. A través de la comparación sectorial y el uso de la metodología de la Quinta Hélice Sistémica (QHS) desarrollada por Martínez (2012), la cual es una evolución de la Triple Hélice componente del modelo de crecimiento económico sistémico, pero contextualizado a la realidad del nuevo siglo y las tendencias globales del desarrollo y competitividad, se proponen una serie de alternativas metodológicas para determinar las variables sistémicas para la Función Pública (FP), la propuesta metodológica QHS-AFP contribuirá a la identificación de las funciones claves e individuales que inciden en la competitividad institucional.

La sistematización de las competencias sectoriales se genera al desarrollar el mapa funcional dentro de las instituciones, las cuales representan gráficamente las funciones de una unidad operativa o de gestión en una institución. Las funciones se clasifican en funciones clave, de las cuales se generan las funciones intermedias y productivas, de estas últimas se generan las funciones individuales y funciones elementales del CONOCER (2013). Los estándares de competencia laboral se estructuran en cinco niveles, cada uno con un mayor nivel de complejidad, de tal forma que los candidatos al certificarse deben tener mayor dominio de los saberes establecidos, los estándares de competencia laboral se derivan de las distintas funciones del mapa funcional de la organización o institución. Para el desarrollo de la metodología de investigación que conduzca a las determinantes de variables e indicadores para el diseño y desarrollo de Estándares de Competencias Laborales (ECL) en las Instituciones Públicas (bajo el régimen de la DGSC).

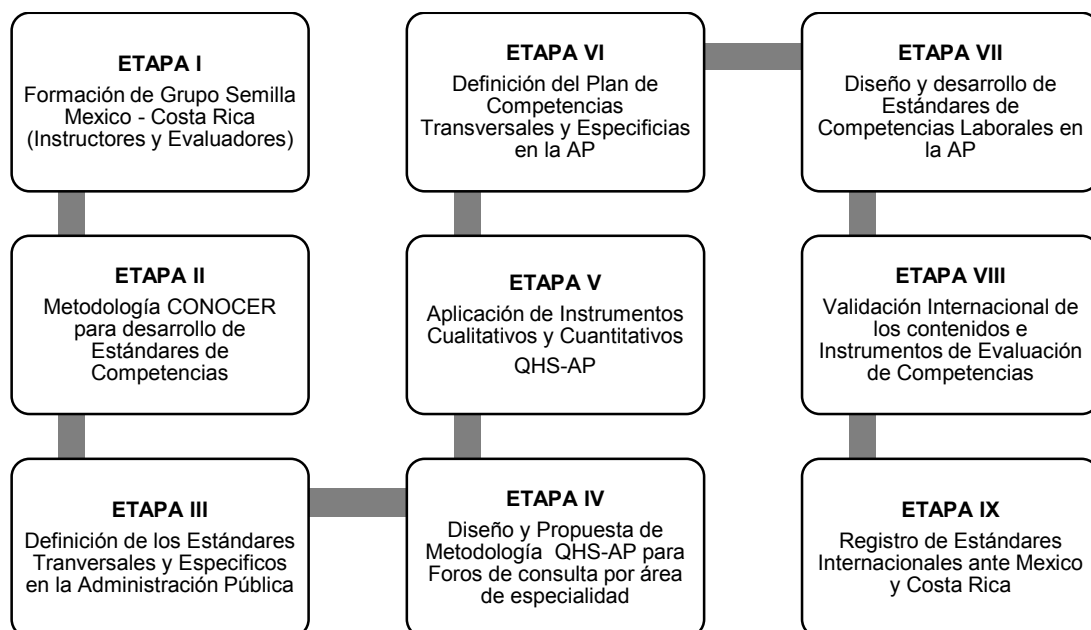

## RESULTADOS

Se ha considerado la participación sistémica de actores sociales que contribuyen y están articulados entre sí, como lo son los sectores de Educación en Administración Pública, Gobierno representado por medio de la Dirección General de Servicio Civil, Colegios Profesionales (incluyendo las perspectivas y expectativas de la sociedad sobre la función pública), Consultores y Representantes de Instituciones de los usuarios de los servicios públicos generando un marco de referencia de la evaluación sistémica del desarrollo del función pública ante los retos locales, regionales e internacionales. Las personas seleccionadas para los grupos focales en la investigación podrían participar en un proceso de entrevistas a profundidad para obtener información complementaria para el diseño y validación de instrumentos de investigación, donde se plasmen preguntas generales (PG) fundamentadas en los modelos internacionales de competitividad, considerando criterios y factores para construir ejes y parámetros de la competitividad que inciden en la eficiencia y eficacia de las funciones públicas, para ello la muestra de las instituciones y participantes en los grupos focales QHS-AFP serán seleccionados por muestra intencional.

La muestra es el conjunto menor de individuos u organizaciones, también denominada como subconjunto de la población accesible y limitado a partir de ella. Las consideraciones por las cuales se realizan estudios por muestras y no en poblaciones completas, es por ahorrar tiempo, hacer eficientes los resultados esperados de las investigaciones, lógicamente por los recursos que se invierten y además de evitar perderse en la investigación, al existir el riesgo de desviar las hipótesis y objetivos de la investigación. En la Figura 2, se plantea la secuencia cronológica de las etapas del proyecto de investigación que tuvo su concepción en la Academia con vinculación en la Función Pública, específicamente a través del área de Investigación y Cooperación Internacional del Centro de Investigación y Capacitación en Administración Pública (CICAP) de la Universidad de Costa Rica (UCR) y la Dirección General de Servicio Civil (DGSC, 2012) del Gobierno de Costa Rica. Así como los esfuerzos de cooperación internacional bajo el convenio con la

Institución CONOCER (Consejo Nacional de Normalización y Certificación) del Gobierno de México, para conocer la experiencia y metodología del Sistema Nacional de Competencias Laborales Mexicano.

Figura 2: Proyecto: Desarrollo de Estándares Internacionales de Competencias Laborales Entre México y Costa Rica

*Trabajo colaborativo entre investigadores de la Universidad de Costa Rica y Universidad Tecnológica de Tijuana, México*

El proyecto de investigación consta de siete etapas, las cuales implican una articulación interinstitucional y de vinculación internacional, la primer etapa inicio a finales de 2012 con la formación de un Grupo Semilla de funcionarios de la DGSC, CIFEH-MH (Centro de Investigación y Formación Hacendaria del Ministerio de Hacienda), Universidad Técnica Nacional (UTN) y del CICAP de la Universidad de Costa Rica, quienes participaron en un proceso de formación como instructores y evaluadores bajo la metodología del CONOCER para el empoderamiento conceptual y referencial de los mecanismos del funcionamiento de un Sistema Nacional de Competencias Laborales, todo lo anterior a través de especialistas de la Entidad de Acreditación de Centros de Evaluación de la Universidad Tecnológica de Tijuana (UTT) y de la Institución CONOCER de México. La segunda etapa implica el proceso de sistematizar los instrumentos metodológicos para el diseño y desarrollo de Estándares de Competencias Laborales (ECL), considerando el proceso de mapeo de proceso por medio de la técnica de Mapas Funcionales e identificación de Funciones Claves e Individuales de cada proceso institucional.

La tercera etapa está orientada al desarrollo de una propuesta metodológica para la determinación de las variables que conduzcan a conformar los ejes transversales y específicos de los factores de las funciones claves y específicas de las instituciones públicas y su impacto en la sociedad desde un enfoque sistémico, para ello se consideraran como sujeto de investigación las instituciones de la Función Pública que se encuentran bajo el régimen de la DGSC. En la cuarta etapa se considera el diseño y desarrollo de la propuesta metodológica denominada Quinta Hélice Sistémica en la Administración de la Función Pública (QHS-AFP) planteadas en la Tabla 1, la cual conduce al principio de una relación multisectorial con orientación de unidad de medición y de vinculación hacia el mejoramiento de las condiciones de los principios de Competencias Laborales en Función Pública.

La metodología QHS-AFP es una propuesta para investigación con características sistémicas a partir de la etapa de recolección de datos cualitativos y cuantitativos que sustentan la construcción de instrumentos e indicadores que se deben validar a través de revisión multidisciplinaria, además de entrevistas sobre factores y acciones que inciden en la competitividad de la función pública.

Tabla 1: Propuesta de Variables QHS-AFP Desde la Óptica Sistémica

Sector	Planteamientos Para Determinar Variables del Scl En la Ap
H1. Instituciones Públicas	<p>¿Cuáles son los problemas o retos de las instituciones de la función pública para fortalecer sus operaciones internas con eficacia?</p> <p>¿Qué necesitan las instituciones de la función pública para cumplir eficazmente sus objetivos y metas?</p> <p>¿Cuáles son las barreras que enfrentan la función pública a nivel interno y externo para un desempeño óptimo?</p> <p>¿Qué necesita la función pública para mejorar su eficiencia y eficacia?</p> <p>¿Los consultores en función pública han contribuido al éxito y fortalecimiento de la modernización de la administración pública?</p> <p>¿Qué necesitan la función pública para abrirse a la vinculación educativa, para actualizar las competencias de egreso de los futuros funcionarios públicos?</p> <p>¿Cómo se pueden vincular la función pública con todos los sectores de la sociedad, de manera de lograr una sinergia para el mejoramiento institucional?</p> <p>¿Cuál es la percepción función pública, fuera de la óptica de la función pública?</p> <p>¿La función pública considera los perfiles de los Profesionales bajo modelos de competencias laborales?</p> <p>¿Qué necesitan realizar los proveedores para ser elegidos por las instituciones públicas?</p> <p>¿Qué tipo de ayuda necesita la función pública para desarrollar tecnología para las actividades de un Gobierno Digital y con ello se incentive la modernidad de servicios y la eficiencia a la ciudadanía?</p> <p>¿Cuál es el perfil de una institución pública eficiente desde la óptica de la función pública?</p>
H2. Educación en Administración Pública	<p>¿Cuáles son los conocimientos y habilidades (competencias) que proporcionan en las Escuelas de Administración Pública y áreas afines a la función pública?</p> <p>¿Cómo se actualizan las Escuelas sus planes y programas de estudio conforme a los avances y desarrollo de la función pública?</p> <p>¿Cómo se actualizan los Profesores para enseñar los temas de actualidad del Función y Administración Pública?</p> <p>¿Cómo se mide la efectividad de sus programas de estudio, conforme los indicadores de desarrollo y competitividad del sector de la administración pública?</p> <p>¿Cómo se promueve la vinculación entre el sector educativo y la función pública?</p> <p>¿Cómo se promueve la educación de para el desarrollo de modelos y autogestión en la función pública?</p> <p>¿Cuáles son las principales necesidades del sector educativo en el tema de administración pública para lograr una validación de la efectividad de sus programas de estudio basado en competencias profesionales de egreso?</p> <p>¿Los Centros de Investigación y Capacitación como incentivan, promueven y asesoran a las instituciones de la función pública para el mejoramiento y modernización de sus funciones?</p>
H3. Gobierno (Servicio Civil)	<p>¿Cuáles son los compromisos con la educación y desarrollo de los empleados de la función pública?</p> <p>¿Cómo se pueden sumar esfuerzos para que la DGSC desarrolle acciones que contribuyan al desarrollo de un sistema de competencias laborales para los empleados bajo el régimen de la DGSC?</p> <p>¿Qué mecanismos se requieren gestionar para que DGSC y las instituciones que para desarrollar políticas públicas que incentiven la sistematización de las competencias laborales en el empleo público?</p> <p>¿Qué acciones estratégicas está desarrollando el gobierno a corto, mediano y largo plazo para el desarrollo de un sistema de competencias laborales para el empleo público?</p> <p>¿Cuáles son las condiciones ópticas para la creación de iniciativas de propuestas que transiten hasta convertirse en políticas públicas?</p>

H5. Consultores y Usuarios de Administración Pública	<p>H4. Colegios Profesionales</p> <p>¿Cuáles son las estrategias para que los Profesionales se desempeñen mejor en la función pública y encontrar mecanismos para su desarrollo?</p> <p>¿Qué programas de los Colegios Profesionales han generado e incentivado el desarrollo y consolidación de la función pública?</p> <p>¿Cuáles son las estrategias para apoyar a las Instituciones Públicas y los beneficios de ser miembro de un Colegio Profesional?</p> <p>¿Cómo se promueve la investigación y vinculación desde los Colegios Profesionales para la función pública?</p> <p>¿Cómo se promueve la comunicación entre la función pública y los Colegios Profesionales?</p> <p>¿Cómo se promueve el desarrollo de Recursos Humanos en la función pública?</p> <p>¿Cómo se promueve la protección y apoyo de las iniciativas de equidad de género en la función pública por medio de las competencias laborales?</p> <p>¿Cómo se promueve la transferencia del aprendizaje entre los miembros de la función pública, para incentivar la gestión del conocimiento por medio de las competencias transversales y específicas?</p>
	<p>¿Qué falta en las instituciones de Consultoría especializada en la función pública para que sus profesionales sean más asertivos en la solución de retos en administración y función pública?</p> <p>¿Qué iniciativas se consideran deben realizar las instituciones de la función públicas, servicio civil, universidades, colegio de profesionales y la propia sociedad, para ser un actor clave o agente de cambio en el desarrollo y modernización de las funciones y administración pública?</p> <p>¿Cuáles son los servicios profesionales que deben proveer los consultores de la administración pública para que contribuyan a elevar la competitividad?</p> <p>¿Cuáles son los indicadores de desempeño de eficiencia, efectividad, servicio al cliente y mejora continua de los instituciones públicas?</p> <p>¿Cómo se beneficia o reconoce a los ciudadanos cumplidos de sus responsabilidades en la sociedad, por las instituciones públicas?</p>

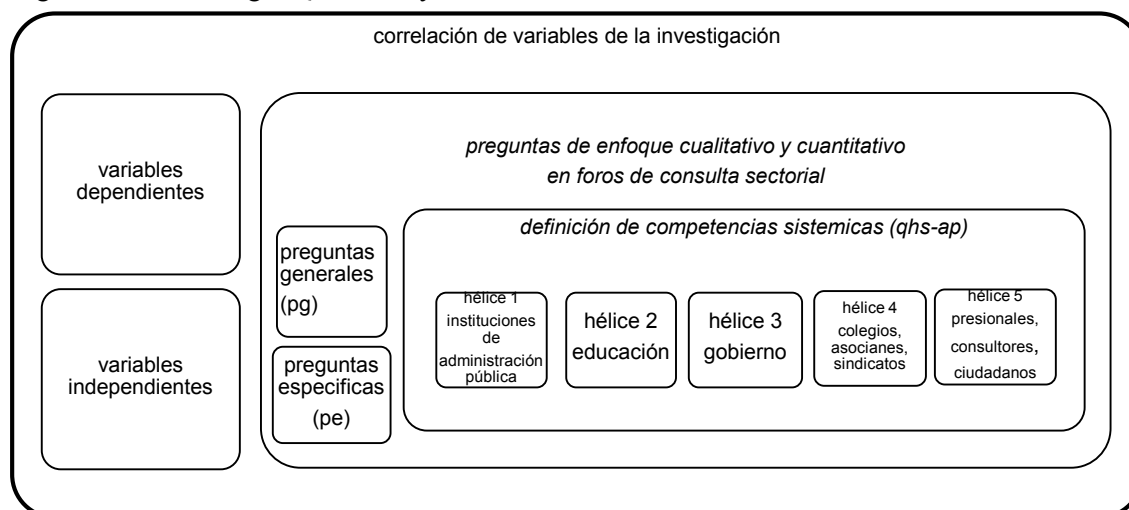

*Propuesta de Modelo de Preguntas Ejes para determinar las variables de las Competencias Laborales de la Función Pública*

En la quinta etapa se define el enfoque cualitativo, validando los planteamientos de las variables por medio de entrevistas a profundidad y con el insumo de datos duros para la conformación de los instrumentos del enfoque cuantitativo de preguntas generales y específicas por sector, así como el instrumento metodológico para la conducción de los grupos focales con enfoque de articulación, considerando tres fases: 1. Reconocimiento, 2. Retroalimentación o Crítica Constructiva y 3. Compromisos de colaboración mediante grupos técnicos de expertos funcionales.

Específicamente la técnica de grupo focales QHS-AFP incluye tres fases, la primera donde los participantes hacen un reconocimiento propositivo de avance y logro institucional, la segunda fase una crítica constructiva de retroalimentación desde la óptica de fortalezas y debilidades en las instituciones sujetas de investigación y finalmente la tercer fase se enfoca en el planteamiento de compromiso de apoyo y cooperación interinstitucional para fortalecer los procesos de prospectiva de mejoramiento y desarrollo de la Función Pública. La sexta etapa conduce al tratamiento de los resultados de la investigación, desde el análisis del discurso hasta la correlación de variables, en la Figura 3, generando base de datos que aportarán al estado del arte, de las tendencias estadísticas en el tema sujeto de investigación, así como la oportunidad de sistematizar las áreas de oportunidad por medio de anteproyectos de trabajos finales de graduación (TFG) a nivel de licenciatura y posgrado, para el diseño y desarrollo de Estándares de Competencias Laborales en la Función Pública y otros Sectores que eventualmente la tendencia internacional los llevara a la modernidad de la administración del talento y gestión del conocimiento.

Figura 3: Metodología QHS-AFP y la Correlación de Variables Sistémicas

Fuente: Elaboración Propia

Las preguntas generales (PG) se derivaron en preguntas específicas (PE) en cada sector participante en los procesos de grupos focales, para determinación y validación de los factores e indicadores de las competencias laborales en la función pública. La séptima etapa concluye en la articulación de los resultados de los sectores, el desarrollo de conclusiones y construcción de propuestas que pudieran tener continuidad en diversos escenarios, como es el desarrollo de estándares de competencias laborales, la conformación de lineamientos que conduzcan a una iniciativa de normatividad o política pública, así como trabajos que se orienten a la gestión del conocimiento por medio de trabajos finales de graduación, ya sea de Licenciatura o Posgrado, así como proyectos de investigación comparativa internacional, representando un referente para procesos de integración regionales y que sean la antesala a desarrollo de Estándares Internacionales en el tema de Competencias Laborales, ante una realidad cada vez más global. La administración y función pública representan un fértil escenario para el desarrollo y propuestas de iniciativas de competencias laborales transversales y específicas a través de esfuerzos de articulación sectorial para el planteamiento de las variables de la función pública. La gestión del talento humano por competencias plantea que los estudios o conocimientos académicos de una persona no aseguran el buen desempeño de la misma en el ámbito laboral, sino que existe una serie de factores o competencias potenciales en las personas que pueden ser gestionadas y administradas para el adecuado desarrollo en las organizaciones.

### Componentes

Manual de puestos y cargos

Diccionario de competencias.

Sistema de reclutamiento y selección.

Detección de necesidades de capacitación y el respectivo cierre de brechas.

Sistema de evaluación del desempeño.

Sistema de valoración y clasificación de puestos.

Plan de capacitación, plan de carrera, plan de desarrollo.

Los retos por concretar en este proyecto de investigación desde la académica (CICAP-UCR) y articulado en la función pública a través de la Dirección General de Servicio Civil (DGSC), proyecta conformar el primer Comité de Gestión por Competencias Laborales (CGCL) de la Función Pública en Costa Rica durante el año 2014, siendo un referente para las instituciones bajo el régimen de la Dirección General de

Servicio Civil (DGSC) para posteriormente conformar los Grupos Técnicos (GT) y a través de los cuales se realizará la construcción de los Estándares de Competencia Laborales con enfoque Transversal y Específico entre las Instituciones de la Función Pública. Estándares de Competencias Laborales para Reclutar, Seleccionar, Contratar, así como para los procesos de Capacitar, Evaluar y Certificar, consolidando con ello los esfuerzos de coordinados a nivel nacional e internacional para desarrollar por medio de la Red de CEAs (Centro de Evaluación Asociados) en cada sector de especialidad para el ámbito público y privado, incentivando las condiciones de competitividad sectorial y mejoramiento de las condiciones de vida de la sociedad. Las actividades posteriores a desarrollar en este proyecto contemplan:

Convertir al CECLUCR-CICAP en una Entidad de Certificación y Evaluación (ECE). Conformar un Ente o Consejo de Normalización de Certificación de los Estándares de Competencias Laborales para capacitación, evaluación y certificación. Conformar los Comités de Gestión por Competencias Laborales por sector Conformar Grupos Técnicos de expertos de cada Comité de Gestión. Desarrollo metodológico por medio de líneas de investigación de cada Estándar de Competencia Laboral, por medio de la integración de una RED INTERNACIONAL DE INVESTIGACIÓN en temas de competitividad y competencias laborales y profesionales. Buscar el mecanismo de integración del CECLUCR/CICAP-UCR/DGSC a través de la Red de Centros de Evaluación Asociados (RedCEA□) para participar en el escenario internacional de las mejores prácticas comparativas en CINTERFOR de la OIT.

## RECONOCIMIENTO

Los autores agradecen el apoyo logístico y financiero del Fondo para la Investigación. Asimismo, agradecen los comentarios de los árbitros y editores del IBFR. Los cuales contribuyeron a mejorar la calidad de esta investigación.

# GENERACIÓN DE ECOSISTEMAS MIPYME DE NEGOCIOS INVESTIGACIÓN-ACCIÓN (CASO SALONES DE BELLEZA)

Bogar García Martínez, Universidad Autónoma de Aguascalientes

Roberto González Acolt, Universidad Autónoma de Aguascalientes

Felipe de Jesús Salvador Leal Medina, Universidad Autónoma de Aguascalientes

Manuel Díaz Flores, Universidad Autónoma de Aguascalientes

## RESUMEN

*Proyecto con un enfoque de investigación-acción que se realiza con el ICTEA (Instituto de capacitación de trabajadores del estado de Aguascalientes) y con sus emprendedores egresados del área de belleza. Se realiza en tres fases: Primera fase con tres objetivos, primero investigar los atributos que los emprendedores consideran importantes para generar una propuesta de valor, segundo con base en la propuesta de valor y con un equipo multidisciplinario diseñar un modelo de negocio de un salón de belleza competitivo, susceptible de multiplicarse para generar un ecosistema MIPYME (micros, pequeñas, y medianas empresas) de negocios y el tercer objetivo, determinar las áreas de investigación complementarias necesarias para completar el estudio. La segunda fase tiene como objetivos, instrumentar el modelo de negocio diseñado, creando el mínimo de salones de belleza necesarios para la generación del ecosistema de negocios MIPYME y diseñar indicadores para medir los resultados del ecosistema de negocios y sus componentes. Tercera fase, su objetivo es medir los resultados del ecosistema de negocios MIPYME, investigando sus causas. Se presentan los resultados de la primera fase; los atributos del modelo: moda, estilo, reconocimiento social, aceptación. El modelo de negocio diseñado por un equipo interdisciplinario se basa en el modelo de Osterwalder (2009).*

**PALABRAS CLAVE:** Ecosistema de Negocios, Modelos de Negocio y Mipyme

## ABSTRACT

*A project research-action focused, accomplished in collaboration with the Training Institute of the State of Aguascalientes (ICTEA) and ICTEA's alumni beauty entrepreneurs. It is done in three phases: The first phase has three objectives, first to research the attributes considered important to generate a value proposition by entrepreneurs, second to design a competitive beauty salon business model that can be replicated to generate a SME (small, medium, enterprises) business ecosystem based on the value proposition done by a multidisciplinary team. The second phase has as its objectives, to create the minimum amount of beauty salons necessary for the generation of the MSME business ecosystem by implementing the designed business model and to design indicators to measure the business ecosystem results and its components. The third phase aims to measure the results of the MSME business ecosystem by researching its causes. The first phase results are presented; the model attributes: fashion, style, social recognition and acceptance. The business model designed by an interdisciplinary team is based on Osterwalder (2009).*

**KEYWORDS:** Business Ecosystem, Business Model and MSME

## INTRODUCCIÓN

La generación de espacios de vinculación, en los que se genere infraestructura para la cooperación entre las instituciones y los emprendedores, es parte de los programas de la secretaria de economía, los ecosistemas de negocios MIPYMES (micros, pequeñas y medianas empresas) es un esfuerzo para contribuir a estos espacios de vinculación.

### Planteamiento del Problema

Las metodologías aplicadas en México de planificación y diseño de organización (Planeación estratégica, diseño funcional, departamentalización) han demostrado su ineficacia en su aplicación a las MIPYMES, García (2007). Además de ser opciones no adecuadas dadas la impredecibilidad y turbulencia del medio ambiente externo. Mintzbergh, (2010), Courtney, (1999), Ansoff, (1990). Dado lo anterior, es necesario considerar propuestas metodológicas diferentes, que trasciendan a las aplicadas tradicionalmente, que sean preferentemente fáciles de aprender y de usar, que den respuesta al problema de la impredecibilidad y turbulencia del medio ambiente, con la competitividad por diseño de profesionales en el mundo globalizado actual Osterwalder (2009), Nachira (2007). Los ecosistemas de negocios MIPYME (micros, pequeñas y medianas empresas) se han instrumentado en Europa desde principios del siglo XXI como una opción al desarrollo tradicional de las MIPYMES, es importante iniciar en AGUASCALIENTES un proyecto de investigación acción para medir los resultados de implementar este tipo de iniciativas, con un proyecto interdisciplinario, tanto en el diseño del ecosistema como en la investigación Nachira (2007).

### Preguntas De Investigación

*Fase 1:* ¿Cuáles son los atributos que buscan ofrecer a los clientes y emprendedores egresados del ICTEA en el área de belleza? ¿Cuál es el diseño de modelo de negocio de un salón de belleza susceptible de multiplicarse para generar un ecosistema MIPYME de negocios electrónicos? ¿Qué líneas de investigación deberán integrarse para completar el estudio?

*Fase 2:* ¿Cuál es el mínimo de salones de belleza necesarios para la generación del ecosistema de negocios MIPYME? ¿Qué fuentes de recursos deberán utilizarse para financiar la instrumentación del modelo de negocio? ¿Qué indicadores deberán medirse para apoyar la instrumentación y operación del modelo de negocio?

*Fase 3:* ¿Cuáles son los resultados del ecosistema de negocios MIPYME?

### Objetivos

#### Primera Fase

Determinar los atributos que conformaran la propuesta de valor que esperan ofrecer los emprendedores egresados del área de belleza del ICTEA. Diseñar un modelo de negocio de un salón de belleza susceptible de multiplicarse para generar un ecosistema MIPYME de negocios electrónicos. Determinar las áreas de investigación complementarias necesarias para completar el estudio.

#### Segunda Fase

Instrumentar el modelo de negocio diseñado, creando el mínimo de salones de belleza necesarios para la generación del ecosistema de negocios MIPYME Diseñar los indicadores para medir el desarrollo del ecosistema de negocios

*Tercera fase:* Medir los resultados del ecosistema de negocios MIPYME Realizar investigación para determinar causales de los resultados en los diferentes campos de investigación

### Objeto de estudio

El desarrollo de ecosistemas MIPYME

### Unidad de análisis

El ecosistema MIPYME de salones de belleza instrumentados con el modelo de negocio diseñado

### Justificación

El proyecto se justifica: al entrenarse alumnos en el diseño de modelo de negocios, organización y construcción de ecosistemas MIPYMES. Se aplica el trabajo conformando la famosa hélice: universidad, empresario MIPYME, gobierno, además de ser un proyecto de género al ser microempresarios del sexo femenino. El Instituto de capacitación para los trabajadores del estado de Aguascalientes (ICTEA), facilitará toda la información necesaria para la realización del proyecto, dado que ofrece la capacitación técnica de belleza y cuenta con cerca de doscientos cincuenta egresados por año en Aguascalientes La innovación en el diseño empresarial tiene un efecto multiplicador al ser susceptible de aplicarse con todos los emprendedores además egresados del área de belleza del ICTEA.

## **REVISIÓN DE LITERATURA**

Definición Modelo de Negocio para efectos de este proyecto: Los diferentes módulos del negocio que deben diseñarse y construirse conceptual y físicamente con base en la propuesta de valor y de manera interdisciplinaria, para su operación por parte del micro y pequeño empresario. Sosa (2010), realiza una revisión de la literatura de modelo de negocios de diecisiete autores. Concluye en su investigación con una propuesta de nueve módulos que deben incluirse en su modelo de negocios: 1) Mercado objetivo, se refiere al grupo de consumidores que se pretende atender. 2) Propuesta de valor, son los atributos de tu servicio o producto que ofreces al consumidor. 3) Modelo de ingresos, son las actividades que realizas para generar tus ingresos. 4) Modelo de egresos, son los egresos que debes realizar para generar tu propuesta de valor. 5) Cadena de valor, los encadenamientos que realizas para producir tu propuesta de valor. 6) Recursos y capacidades necesarios para producir la propuesta de valor. 7) Arquitectura social, el diseño de organización necesario para cubrir todas tus actividades, 8) Estrategia, la manera de dirigir tu modelo de negocio para lograr su maximización. 9) Ventaja competitiva, la ubicación de tu modelo en los atributos que ofreces con respecto a tu competencia en el mercado.

Otro autor, Osterwalder (2009) propone una composición similar de modelo de negocios, con los siguientes módulos: 1) Propuesta de valor, de igual manera se refiere a los atributos de tu servicio o producto que ofreces a tus clientes. 2) Recursos clave, los insumos y activos importantes en la generación de tu propuesta de valor. 3) Segmento de mercado, el grupo de consumidores que se tiene como mercado meta. 4) Actividades clave, se refiere a aquellas importantes para la generación de los productos y servicios que ofrece la compañía. 5) Socios clave, son las relaciones importantes para generar una cadena de valor que genere los atributos en los productos y servicios al cliente. 6) Relaciones con el cliente, son el establecimiento de sistemas de servicio que mantengan un contacto con el cliente acorde con la propuesta de valor. 7) Canales de distribución, los canales para la entrega de los productos o servicios, diseñado acorde con la propuesta de valor. 8) Estructura de costos, la conformación de los egresos en los rubros importantes para generar la propuesta de valor. 9) Estructura de ingresos, establecimiento de las formas en las que se van a generar los ingresos. Por su sencillez y facilidad de aplicación en la fase uno se usará la

propuesta de Osterwalder (2009). Definición de Ecosistema de Negocios MIPYME base de esta investigación: Es la agrupación de empresas MIPYME con sistemas de operación que les permite tener entre ellas conectividad, generando la posibilidad de colaborar, cooperar y generar un ecosistema de empresas integrado (Nachira, 2002) Definición Negocios Electrónicos: Son negocios administrados con tecnología de información y comunicaciones (García, 2007)

## METODOLOGÍA

Con base en una metodología de investigación acción se plantean tres fases. Esta parte de la investigación presenta la **primera fase** realizada con un enfoque cualitativo, utilizando como instrumento de recolección de información, la entrevista semiestructurada, aplicándose a veinticuatro estudiantes mujeres (todos los estudiantes en estas unidades son mujeres), y seis maestras, en tres unidades del ICTEA Jesús María, Rincón de Romos y Aguascalientes (Pilar Blanco). Como resultado de la entrevista se obtienen los atributos de la propuesta de valor base del diseño del modelo de negocios. En la **fase dos** con un enfoque investigación-acción, se instrumentan los modelos de negocio generando el ecosistema, estableciendo con un grupo interdisciplinario, indicadores e investigación en las áreas de nuevos negocios, emprendedurismo, estudios de género, políticas públicas, desarrollo local, tecnologías de información, como resultado se generan recomendaciones para desarrollar el ecosistema de negocios.

En la fase tres con un enfoque cuantitativo y cualitativo, se realiza investigación para medir los resultados del ecosistema en las diferentes áreas de investigación, establecer las variables determinantes en las diferentes áreas del desarrollo del ecosistema de negocios MIPYME- La recolección de información de la fase 1 se realiza mediante entrevistas semiestructuradas la guía de esta entrevista se presenta en la siguiente Tabla. El objetivo de la información como se mencionó es el de determinar el modelo de negocio del salón de belleza por lo que cada pregunta corresponde a un módulo.

Tabla 1: Guía de Entrevista Semiestructurada

Preguntas	Objetivo De La Pregunta
Motivo de estudios en el ICTEA	Detectar si se desea ser emprendedor
¿Ha trabajado ya en salones de belleza?	Experiencia
¿Qué tipos de clientes desea tener o ha tenido?	Determinar el módulo de: Segmento de clientes
¿Qué buscan los diferentes tipos de clientes?	Determinar el módulo de: Propuesta de valor
¿Dónde se proporciona el servicio?	Determinar el módulo de: Canales de distribución
¿Cómo contactas al cliente? ¿Cómo te contacta el cliente?	Determinar el módulo de: Relación con el cliente
¿Con quién te gustaría tener apoyo para tú negocio?	Determinar el módulo de: Socios clave
¿Cuáles consideras las actividades relevantes para el funcionamiento del salón de belleza?	Determinar el módulo de: Actividades clave
¿Qué recursos son clave para la operación del salón de belleza?	Determinar el módulo de: Recursos clave
¿Cuáles el monto de la inversión inicial para el negocio?	Determinar el módulo de: Estructura de costos
¿En equipamiento?	
¿En insumos?	
¿En adaptación del lugar a trabajar?	
¿Cuánto cobrarás por los diferentes servicios?	Determinar el módulo de: Estructura de ingresos

## RESULTADOS

Cómo resultado de las entrevistas se integraron los módulos del modelo de negocios (Cada pregunta esta referido a un módulo del modelo de negocios). En la primer pregunta de la entrevista se obtuvo como razón más importante para sus estudios en el ICTEA, el aportar a los ingresos familiares, la gente espera generar ingresos lo antes posible, se manifestó la necesidad económica de las personas, como segunda razón, en número de respuestas fue la de tener un negocio y la de tercer importancia la de ser útil. Veintiuna de las treinta entrevistadas ya habían trabajado en salones de belleza, en su mayoría deseaban atender a todos los tipos diferentes de clientes, aunque si comentaron que el segmento de clientes de jóvenes en áreas humildes,

buscaban cortes con estilos extremos que si implicaban algún equipamiento y entrenamiento especial. La mayoría de los clientes busca aceptación y reconocimiento en el medio donde se desenvuelven, y los servicios del salón de belleza les brindan el estilo y moda necesarios para obtenerlo. La mayoría de estudiantes está pensando en iniciar su negocio en su propia casa dados los costos iniciales y la falta de recursos, el contacto con los clientes comentaron se da por celular, redes sociales y en el mismo sitio donde

establecer una comunicación con el cliente es primordial para lograr la lealtad del cliente. Los alumnos buscan continuar su relación con el ICTEA, para actualizarse y sobre todo tener capacitación complementaria en áreas importantes para mantener el canal de comunicación con sus clientes, para financiamiento y apoyo a su negocio, piensan que las universidades y el gobierno son importantes. La proveeduría sobre todo de los insumos consideran es importante para el desarrollo y crecimiento del negocio. En su mayoría veinticinco piensan que es conveniente iniciar con un nivel de precios bajos, con servicios básicos, con especial énfasis en el trato al cliente, con una inversión inicial en equipamiento menor a los treinta mil pesos. Cuatro han pensado en precios medio con una inversión mayor a los treinta mil y menor a los setenta mil pesos, y solo una piensa en una inversión mayor, con precios altos, tratando de abrir un local en un área de altos ingresos. A continuación se muestra la Tabla 2 con los resultados.

Los resultados de las entrevistas los pasamos al modelo de negocios de bloques y se integra la Tabla 3 como una ayuda para los expertos en el diseño del salón de belleza que se espera sea replicado para generar el ecosistema de negocios MIPYME.

Fuente: Elaborado por los autores

Con la definición del modelo de negocio se procedió al diseño del salón de belleza, con el apoyo de arquitectos, diseñadores de interiores, diseñadores industriales, ingenieros de sistemas y licenciados en administración de empresas. Se proponen nueve salones de belleza, tres para operar en casa, tres para operar en un local de dieciséis metros cuadrados y tres más para operar en un local mayor a veinte metros cuadrados. Se diseñaron cinco líneas diferentes de muebles para ser operados en los locales conforme a las especificaciones del modelo de negocios. El salón de belleza se diseña para operarse con apoyo en tecnología de información, proponiendo software libre operado con una tableta o un teléfono. De los salones de belleza propuestos uno fue elegido para construirse y operarse en la fase dos. El costo del modelo es de aproximadamente veinticinco mil pesos incluyendo todo, muebles etc. Por ser un proyecto que incluirá

emprendedores, la confidencialidad en el diseño y operación del negocio es necesaria. Por lo anterior no se informan los planos colores diseño de muebles y software. La investigación complementaria, dados los resultados de las entrevistas, sugieren incluir como complemento estudios de género, por lo que deberá gestionarse la relación con cuerpos académicos que manejen esta línea de investigación.

## CONCLUSIONES

Es factible generar un ecosistema con modelos de negocio de salones de belleza, ya que el costo es mínimo y el número potencial de emprendedores necesario es susceptible de ser obtenido en el ICTEA.

Para la construcción del ecosistema de negocios fase dos será necesario diseñar los módulos de arquitectura perceptual, arquitectura social, arquitectura tecnológica. Es imposible capacitar a un emprendedor en las actividades reales indispensables para el diseño de su negocio. Veinte años de escuela mínimo de las áreas de los involucrados. El empresario opera la empresa, el diseño de la empresa requiere perfiles múltiples y diferentes al de su operación. Los esquemas metodológicos funcionales como el plan de negocios, planeación estratégica son aplicables a empresas grandes, las empresas pequeñas no tienen ni tendrán áreas funcionales, la tecnología de papel (planes de negocio) tiene baja probabilidad de dar resultados en la MIPYMES. Es necesario integrar la investigación con equipos multidisciplinarios ya que la generación de un ecosistema de negocios se conforma de diversos campos del conocimiento.

## RESUMEN

*En el contexto mundial hay evidencias de la creciente importancia de la subcontratación debido a que las empresas cada vez delegan una mayor cantidad de funciones, en México se ha convertido en un elemento vital de las estrategias de negocio de muchas organizaciones y los primeros servicios que se delegan tanto en las organizaciones públicas como privadas son los de limpieza y vigilancia. Esta investigación reporta la calidad de vida de los empleados de limpieza y vigilancia que trabajan subcontratados, en función de condiciones de trabajo, ambiente laboral y relación trabajo vida personal, los resultados nos indican un ambiente laboral favorable, condiciones de trabajo malas y diversas que se relacionan con el tipo y lugar donde se desarrolla, resaltando los bajos resultados relacionados con salarios muy bajos y con la calidad de vida familiar casi ausente sobre todo a causa de horarios y tiempo extra, que se ven obligados a cumplir los empleados sometidos a presiones y en cierta forma amenazas, generadas sobre todo por las escasas opciones de trabajo que tienen, lo que impacta directamente a su vida familiar generando reclamos laborales que recuerdan a los de los tiempos de la huelga de Chicago.*

**PALABRAS CLAVE:** Outsourcing, Calidad de Vida, Empleados de Vigilancia y Limpieza

## OUTSOURCING IMPACT ON QUALITY LIFE OF SECURITY AND CLEANING EMPLOYEES IN DURANGO, MEXICO

### ABSTRACT

*In global context there are evidence about importance of outsourcing because companies have delegated more and more a greater number of functions, in Mexico, outsourcing is become a vital element of the business strategies of many organizations, cleaning and security services are first services delegated in public and private organizations. This paper reports quality life of this employees, who work in subcontracted companies based in work conditions, work environment and relationship between personal life and work, results indicate a positive work environment, bad and diverse work conditions relate to type and place where it develops, but also it denotes very low salaries and highlights about low-related quality of family life almost absent mainly by schedules and overtime, that employees are forced to accept by pressures and threats in some way, as a result, generated mainly by limited job options, which impacts in their family life directly generating labor claims that reminiscent Chicago strike days.*

**KEYWORDS:** Outsourcing, quality life, cleaning and security employees

## INTRODUCCIÓN

La subcontratación de empleados se ha vuelto una estrategia muy importante en las empresas bajo el discurso de la competitividad y la realidad de un incremento inmediato de utilidades que se derivan de ajuste en condiciones de trabajo limitadas anteriormente por cláusulas contractuales y obligaciones de reparto de utilidades entre otros puntos; hay dos caras en la moneda, si bien probablemente existan desde el punto empresarial una oportunidad de competitividad, es necesario conocer el impacto que ha tenido en el recurso humano que labora en empresas subcontratadas que a su vez están viendo la oportunidad de negocio en base a bajos salarios y jornadas de trabajo extensas.

## REVISIÓN LITERARIA

La subcontratación se da en varias connotaciones en la temática que abordamos se relaciona con empresas denominadas de abastecimiento externo que es el proceso que consiste en transferir la responsabilidad de un área de servicio y sus objetivos a un proveedor externo. El tipo de trabajo que se abastece externamente puede ser desde la elaboración de la nómina y la administración de prestaciones hasta líneas completas de servicios de recursos humanos que abarcan el reclutamiento y la retención, el manejo de las relaciones con empleados, la administración de prestaciones, la reubicación y repatriación, el manejo del conocimiento y la elaboración de los informes. En una encuesta reciente de ejecutivos de RH, se descubrió que en USA casi 7 de cada 10 patrones abastecen externamente algún aspecto de RH por medio de proveedores externos o consultores. (Wayne y Noe, 2005) y entre estos servicios tenemos los de limpieza y seguridad que normalmente son los primeros que se subcontratan. Basados en la literatura, podemos encontrar las ventajas y desventajas y los factores principales de la subcontratación, los cuales son los que más afectan a los colaboradores de las empresas: lugar de trabajo, temporalidad, exclusividad, voluntariedad y valor estratégico. Definidos por autores como (Rousseau y Wade-Benzoni, 1995; George y Chattopadhyay, 2005; (Connelly y Gallagher, 2004; Evans, Kunda, y Barley, 2006; Marler, Barringer, y Milkovich, 2002 entre otros autores.)

La calidad de vida como concepto se refiere al bienestar de los individuos desde una óptica multidimensional, incluyendo por un lado las condiciones de vida objetivas en las que los individuos desarrollan su vida y por otro, la valoración de esas condiciones desde la perspectiva de los propios sujetos. El modo en cómo se sienten los individuos, cómo evalúan sus formas de participación e integración constituyen una dimensión de peso, tanto en el concepto de calidad de vida de los individuos como en el concepto de calidad de vida a nivel de las sociedades. (Dorsh, 1985). Según la OMS (2008), la calidad de vida se refiere a la percepción que un individuo tiene de su lugar en la existencia, en el contexto de la cultura y del sistema de valores en los que vive, y en relación con sus objetivos, expectativas, normas e inquietudes. Para esta organización, la calidad de vida se ve afectada por la salud física del individuo y su estado psicológico, grado de independencia, relaciones sociales e interrelación con el entorno. Se trata de un concepto muy amplio que está influido de modo complejo por la salud física del sujeto, su estado psicológico, su nivel de independencia, sus relaciones sociales, así como su relación con los elementos esenciales de su entorno. Considerando como dimensiones que se evalúan a través de factores de las dimensiones física, psicológica y social.

Las dimensiones y factores que se incluyen para la evaluación de la calidad de vida laboral se definen también en base a necesidades específicas de investigación o en base a aspectos específicos del área ocupacional que se ocupan (Casas, Repullo, Lorenzo y Cañas, 2002; García, Ortega y Giménez, 2010; Moreno y Godoy, 2008; Saklani, 2010) La calidad de vida tiene aspectos objetivos y subjetivos que normalmente se diferencian pero es indiscutible que están unos relacionados con otros, analizando los distintos aspectos relacionados directamente a los servicios de vigilancia y limpieza se considera que la calidad de vida laboral se puede medir a partir de tres dimensiones: las condiciones laborales, el ambiente de trabajo, así como la relación entre su vida personal y trabajo. Quedando para esta investigación definida la Calidad Laboral como la percepción del individuo en relación a las condiciones bajo las cuales labora el

ambiente en que se desenvuelve su trabajo y el impacto de las condiciones y ambiente en su vida personal. integrado cada uno por diferentes factores que se señalan en la Tabla 1.

### Condiciones Laborales

Cualquier aspecto del trabajo con posibles consecuencias negativas para la salud de los trabajadores, incluyéndose además de los aspectos físicos del entorno de trabajo, aspectos técnicos, procesos y que tienen que ver con la organización y ordenación del trabajo. Condición de trabajo engloba no sólo aquellas cuestiones abordadas tradicionalmente por la seguridad en el trabajo o la higiene industrial, sino que también considera todo lo que tiene que ver con la concepción del puesto de trabajo, la forma de realizar las tareas y la organización de las mismas incluyendo horarios, sueldos, vacaciones y días de descanso.

### Ambiente Laboral

El "ambiente de trabajo" es el medio ambiente humano en el que se desarrolla el trabajo cotidiano. Está relacionado con el "saber hacer" del directivo, con los comportamientos de las personas, con su manera de trabajar y de relacionarse, con su interacción con la empresa, con las máquinas que se utilizan y con la propia actitud de cada uno. (Guerrero, Cañedo, Rubio, Cutiño, y Fernández., 2006) *Equilibrio entre vida personal y trabajo* La vida personal y el trabajo juegan los roles más importante en de nuestras actividades. Ambos luchan por tener más tiempo y más independencia; pero no puede subsistir el uno sin el otro y su interrelación resulta en la calidad de vida de las personas. Las principales variables que se consideraron involucran el impacto de las condiciones de trabajo en la vida familiar, así como la vida personal del trabajador: (Pérez y Gálvez, 2009)

Tabla 1: Factores Involucrados en la Medición de Dimensiones de Calidad de Vida Laboral

Condiciones laborales	Ambiente laboral.	Equilibrio entre vida personal y trabajo
Tipo de contratación	Relación con su supervisor	Ingreso suficiente
Antigüedad	Relación con sus compañeros	Condiciones de la casa donde vive
Horario	Apoyo de su jefe	Cuántas personas aportan recursos a su hogar
Horario de descanso	Apoyo de sus compañeros	Quien cuida a sus hijos
Salario	Problemas en el trabajo	Tiempo de convivencia con su familia
Días de descanso		Si realiza alguna comida con su familia
Servicios de salud		Actividades que hace en su día de descanso
Vivienda		Apoyo de su familia
Fondo del retiro		Motivación para trabajar
Aguinaldo		Tiempo para convivir con amigos
Vacaciones		Horas que duerme al día
Prima vacacional		Actividades que realiza en su hogar
Estímulos económicos		Estrés
Riesgos de trabajo		
Equipo de seguridad		
Herramientas y materiales		
Capacitación		

## METODOLOGÍA

Para la realización de esta investigación se encuestó a empleados de vigilancia y limpieza que laboraban en los hospitales de las instituciones de seguridad social y públicas del sector salud en el municipio de Durango México, empleados en bancos y tiendas departamentales locales, quedando la muestra de conveniencia constituida por 151 personas distribuidas como se indica en la Tabla 1.

Tabla 2: Descripción de la Muestra

Lugar	Vigilancia	Limpieza	Total
Bancos	10	11	21
Tiendas	20	39	59
Hospitales	36	35	71
Total	66	85	151

A través de grupo de enfoque y revisando instrumentos utilizados por otros autores (González, 2008) quien a su vez se basó en el formato WHOQOL-BREF (World Health Organization Quality of Life, 2012) que surgió como una iniciativa de la OMS (Organización Mundial de la Salud) en un intento de desarrollar una evaluación de la calidad de vida y revisando otros criterios (Zare, Haghgooyan y Asl, 2012) relacionados con la calidad de vida en el trabajo se elaboró el cuestionario adecuado a las condiciones e intereses de la investigación incluyendo preguntas abiertas pero conservando la medición en base a las categorías de calidad de vida basada en el ambiente de trabajo, condiciones de trabajo y equilibrio entre vida – trabajo. Los datos obtenidos en las encuestas se recurrió se registraron, para obtener resultados de las dimensiones consideradas, las que se evaluaron en función de pesos relativos por pregunta obteniendo el valor promedio de calidad de vida y de cada una sus dimensiones por servicio y lugar de empleo, en tanto que las preguntas abiertas por medio de análisis de contenido se agruparon en categorías como complemento a los resultados obtenidos reportándose en como buena regular o mala calidad de vida en base a la escala que se indica en la Tabla 3.

Tabla 3: Escala de la Calidad de Vida Laboral

Escala	Calidad De Vida Laboral
0 - 60	Mala
61 - 80	Regular
81 - 100	Buena

## RESULTADOS

Los resultados de Calidad de vida se reportan como valores promedio, en función de institución o empresa en la que se presta el servicio (bancos, tiendas, hospitales) y si laboran en el área de vigilancia o limpieza obteniéndose los siguientes resultados en base numérica.

Tabla 4: Calidad de Vida Laboral de Empleados Subcontratados en Áreas de Limpieza y Vigilancia en Bancos Tiendas y Hospitales

Dimensión	Tipo de Servicio	Bancos	Tiendas	Hospitales	Promedio
Condiciones Laborales	Seguridad	47	55	55	50.3
	Limpieza	39	49	57	
Ambiente	Seguridad	91	88	92	87
	Limpieza	76	85	90	
Vida- Trabajo	Seguridad	36	15	30	28.5
	Limpieza	32	26	32	
Promedio		53.5	53	59.3	

*La escala está dada en un rango de 0-100, aunque el ambiente laboral tiene valores buenos en promedio la calidad de vida laboral de los empleados de vigilancia y limpieza es mala*

## Condiciones de Trabajo

Las condiciones de trabajo reportadas en la tabla 4 nos indican valores muy bajos en promedio apenas llega a un valor de 50 explicado en base a los factores que la componen tenemos que aunque un 92% cuenta con seguro social que representa una de las ventajas señaladas, por el contrario un factor muy importante en decremento de la calidad de vida es el ingreso en un 60% es menor a \$1,600.00 (US\$123.00) a la quincena, aunado a que la mayor parte de estos empleados están sometidos a una alta incertidumbre en el trabajo; están normalmente contratados temporalmente cuentan con un día de descanso a la semana, con jornadas en el caso de los de seguridad y parcialmente en los de limpiezas de 12 horas diarias sin pago extra (50%), este día de descanso suele convertirse en 12 horas por cambios de turno semanales, difícilmente se les dan vacaciones.

Hay una rotación muy alta normalmente permanecen un promedio de 6 meses solamente el 8% tiene mas de 3 años de antigüedad, el 50% ha recibido un curso de inducción, prácticamente ninguno de los empleados cuenta con algún tipo de reconocimiento por el buen desempeño de su trabajo, a tan sólo el 36% se les brindó algún tipo de capacitación por parte de la empresa para la que trabajan y sólo el 30% tiene la oportunidad de ascender de puesto. El equipo para el desempeño del servicio de seguridad que no se deteriora (macana, gas lacrimógeno, radio y esposas) se proporciona normalmente en tiempo y forma por parte de la empresa lo que no ocurre en el área de limpieza donde en función de ahorros se restringe en el caso de hospitales hasta condiciones insalubres en relación a equipo de protección como son los guantes que se suministra un par por mes. En el análisis comparativo entre las menos malas condiciones (Figura 1) de trabajo tenemos que los empleados de los bancos reportan tanto en limpieza como en seguridad la perores condiciones en tanto que hospitales casi logran llegar a una evaluación regular.

Figura 1: Condiciones de Trabajo de Empleados Subcontratados en Áreas de Limpieza y Vigilancia

*Condiciones de trabajo considerada como una dimensión de la Calidad de Vida Laboral. La escala está dada en un rango de 0-100 en todos los casos la calidad de vida laboral es mala <60.*

### Ambiente de Trabajo

El ambiente de trabajo se puede considerar la parte social de la calidad de vida la interrelación de el o la empleada con sus compañeros de trabajo y las relaciones que mantienen con sus supervisores se indican en esta dimensión, en términos generales es buena obteniéndose valores buenos, en relación con la supervisión y el apoyo que reciben de ésta de alrededor de 90% para hospitales y bancos, contrastando con un 65% en

tiendas, muy buenos en relación a actividades que desempeña la empresa donde laboran y su relación personal con los compañeros tanto de la empresa que los contrata como en la que se encuentran laborando, excepción de los empleados mujeres en su mayoría de limpieza que se encuentran aislados en las sucursales bancarias (normalmente es solamente un empleado de limpieza) y no interrelacionan con los empleados de la empresa, aunado a que son rotados con frecuencia dando como resultado una valoración regular del ambiente de trabajo para estos empleados. Comparando los valores en función de lugar de trabajo y tipo de trabajo de la Figura 2, se observa en primer lugar que los valores más altos corresponden a vigilancia tanto en bancos como hospitales lo que se atribuye al papel en sí de su función en estos lugares, a diferencia de la vigilancia de tiendas donde enfrenta con frecuencia un mayor número de conflictos que se proyecta en la relación con supervisores. En tanto que limpieza como se había señalado anteriormente los valores menores se presentan en bancos por las consideraciones enunciadas anteriormente en contraparte el alto valor de hospitales obedece a la interrelación entre pares es alta por el número de personas que laboran en el área de limpieza y sus relaciones con los compañeros de trabajo.

Figura 2: Ambiente de Trabajo de Empleados Subcontratados en Áreas de Limpieza y Vigilancia

*Ambiente de trabajo considerada como una dimensión de la Calidad de Vida Laboral. La escala está dada en un rango de 0-100. A excepción de los empleados de limpieza se puede decir que el ambiente laboral es bueno.*

### Equilibrio Vida-Trabajo

Los datos obtenidos de las encuestas, encontramos que en la dimensión de Equilibrio Vida-Trabajo dieron un porcentaje ínfimo de 28.5% lo que nos muestra que la calidad de vida de los trabajadores de limpieza y seguridad en lugares como hospitales, tiendas departamentales y bancos es muy baja, afectando a todas ellas factores como: ingresos que no son suficientes para cubrir sus necesidades básicas, la demanda de actividades domésticas complementarias al trabajo que no alcanza a cubrir y que además no les permiten descansar, falta de tiempo libre disminuido por el tiempo que consumen en llegar al trabajo que aumenta tiempo a la jornada laboral y el estrés que les produce el desempeñar su trabajo ya sea por sus actividades o bien por el poco tiempo que tienen para descansar y pasar tiempo de calidad con sus familiares y amigos para una vida de calidad. Cualquier (Figura 3) comparación tratando de decir que uno es mejor que otro no es sino mera especulación en valores tan bajos en la dimensión de Equilibrio Vida – Trabajo, lo que si podemos explicar son los valores reducidos de las tiendas que aunado a los horarios de jornadas altas tienen supervisión estricta que los somete a fuerte estrés, aún mayor en el caso de seguridad a los que continuamente se están reportando y como el resto tienen ingresos insuficientes, falta de tiempo libre para dedicarlo a la familia y entretenimiento y para realizar actividades domésticas cuando se está en casa.

Figura 3: Equilibrio Vida-Trabajo de Empleados Subcontratados En Áreas de Limpieza y Vigilancia

*Equilibrio vida-trabajo considerada como una dimensión de la Calidad de Vida Laboral La escala está dada en un rango de 0-100 los resultados nos indican valores ínfimos para esta dimensión.*

### Calidad de Vida

Los valores integrados de limpieza y vigilancia independientemente del lugar en que labora para cada dimensión mantienen la información analizada anteriormente como se indica en la Figura 4 en donde lo remarcable es la diferencia en las condiciones de trabajo entre seguridad y limpieza.

Figura 4: Dimensiones de Calidad de Vida Laboral de los Empleados de Seguridad y Limpieza

*La escala está dada en un rango de 0-100*

En sentido inverso la integración por lugar donde se desempeña el trabajo como se muestra en la Figura 5 nos indica que los hospitales tiene los valores más altos en ambiente y condiciones trabajo en tanto que en equilibrio de vida y trabajo casi igualan a los bancos donde se presenta el valor menos malo, como se ha señalado anteriormente se resalta el hecho del bajo valor del equilibrio entre vida y trabajo de los empleados de las tiendas.

Figura 5: Dimensiones de Calidad de Vida Laboral en Base al Lugar Donde Se Labora

La escala está dada en un rango de 0-100 existen diferencias evidentes entre las tres dimensiones

La reexpresión de los valores (Tabla 5) de calidad de vida laboral en base a la tabla 3, nos indica que la calidad de vida es mala independientemente del servicio y lugar donde se labora, aunque la dimensión de ambiente de trabajo es buena para todos a excepción de la limpieza en los bancos es innegable que las malas condiciones de impactan directamente en el equilibrio de la vida con el trabajo y de ahí los valores inaceptables en esta dimensión.

Tabla 5: Reexpresión de los Valores de Calidad de Vida Laboral de Empleados Subcontratados En Áreas de Limpieza y Vigilancia en Bancos Tiendas y Hospitales

Dimensión	Tipo de Servicio	Bancos	Tiendas	Hospitales	Promedio
Ambiente	Seguridad	Buena	Buena	Buena	Buena
	Limpieza	Regular	Buena	Buena	
Condiciones Laborales	Seguridad	Mala	Mala	Mala	Mala
	Limpieza	Mala	Mala	Mala	
Vida- Trabajo	Seguridad	Mala	Mala	Mala	Mala
	Limpieza	Mala	Mala	Mala	
Promedio		Mala	Mala	Mala	Mala

En promedio la calidad de vida que se debe considerar como un todo es mala.

Los trabajadores tienen la percepción de que el trabajo está afectando su vida personal e inclusive su salud pero se ven restringidos ante la falta de oportunidades de trabaja e inclusive hay un 8% que manifiesta su interés en seguir trabajando en la empresa. Necesidad y familia son las causas de su permanencia en el trabajo.

## CONCLUSIONES

La calidad de vida considerada como un todo, de los empleados de limpieza y vigilancia subcontratados en bancos es mala, Puede, no ser outsourcing la causa de este resultado sino la forma que se está implementado en nuestro país en donde al menos un 50% se desarrolla con largas jornadas hasta de 12 horas, sin pago de horas extras, sueldos que no sobrepasan los \$ 1,600.00 por quincena, contratos temporales, sin vacaciones o recompensas por desempeño; se puede decir que es un trabajo empobrecido.

Es imposible mantener el equilibrio del trabajo y la vida personal bajo tales condiciones y afirmar que el outsourcing es la panacea de la competitividad negando el impacto que tiene en la familia y la sociedad en general, La OIT (2006) ya ha emitido observaciones sobre esta nueva forma de explotación, favorecida por

la baja demanda laboral, y la casi imposibilidad de la supervisión del estado para el cumplimiento de una nueva ley poco conocida y socializada. Podemos concluir, que los nuevos esquemas de contratación por medio de outsourcing en el caso de los empleados de vigilancia y limpieza de hospitales, bancos y tiendas no es ninguna respuesta para lograr un empleo digno y una buena calidad de vida, sino todo lo contrario de ahí que nos planteamos la siguiente preguntas ¿Se vale sacrificar en aras de la competitividad y el lucro la calidad de vida de los empleados? ¿Tendrá el estado responsable de la calidad de vida de sus ciudadanos, capacidad para generar un crecimiento que mejore las condiciones de los empleados subcontratados en base a mejores alternativas de empleo o ajuste del mercado? O estamos llegando nuevamente a las condiciones laborales que antecedieron las luchas de los obreros por «ocho horas para el trabajo, ocho horas para el sueño y ocho horas para la casa».

# ESTILOS DE LIDERAZGO DE LOS DIRECTIVOS DEL CIIDIR DURANGO Y LA PERCEPCIÓN DE SU EFICACIA DESDE EL MLRC

Ma. Concepción Rico Pérez, Universidad Juárez del Estado de Durango  
Diana Carolina Alanis Bañuelos, Universidad Juárez del Estado de Durango  
Víctor Manuel Lerma Moreno, Universidad Juárez del Estado de Durango

## RESUMEN

*La presente investigación se basa en los datos correspondientes a 93 trabajadores del CIIDIR Unidad Durango, donde se evaluó la eficacia del líder desde la percepción del subordinado de acuerdo al Modelo de Liderazgo de Rango Completo, evaluado con el Cuestionario de Liderazgo Multifactorial (MLQ). Los resultados señalan que los Directivos del CIIDIR presentan tanto conductas del estilo de Liderazgo Transaccional como Transformacional, por lo que se confirma que ambos estilos no son excluyentes; el estilo de liderazgo que tuvo una mayor correlación con la eficacia del líder fue el Liderazgo Transformacional, con un coeficiente de Pearson de .925 en comparación con el Liderazgo Transaccional, el cual obtuvo un coeficiente de .646. Se observa que las conductas pasivas del liderazgo Transaccional generan en el subordinado una correlación negativa en relación a la Eficacia del líder, en tanto que, las conductas activas del liderazgo Transaccional generan una correlación positiva con la misma. Se deduce que una posible razón del elevado coeficiente de correlación en el Liderazgo Transformacional con la Eficacia del líder, se deriva del alto nivel educativo tanto del jefe como del subordinado, coincidiendo con los resultados de Álvarez (2009) y con Hersey y Blanchard (Keith y Newstrom, 2003).*

**PALABRAS CLAVE:** Liderazgo Transaccional, Liderazgo Transformacional, Eficacia

## LEADERSHIP STYLES OF MANAGERS IN THE RESEARCH CENTER OF CIIDIR DURANGO AND THE PERCEPTION OF THEIR EFFECTIVENESS FROM THE MLRC

### ABSTRACT

*This research is based on data of 93 workers in the Research Center of CIIDIR Durango, where the leader effectiveness was evaluated from the perception of the subordinate, according to the Leadership Model of Full Range, evaluated with the Multifactor Leadership Questionnaire (MLQ). The results indicate that the executives of CIIDIR have both behaviors, the Transactional Leadership style and Transformational, so it is confirmed that the two styles are not mutually exclusive; the leadership style that had a higher correlation with the effectiveness of the leader was the Transformational Leadership, with a Pearson coefficient of .925 compared to Transactional leadership, which obtained a coefficient of .646. It is observed that the passive behaviors of transactional leadership generate a negative correlation on the subordinate with respect to the effectiveness of the leader, while the active behaviors of transactional leadership generate a positive correlation. One possible reason for the high coefficient of correlation in the Transformational Leadership with the Effectiveness of the leader is deducted, this is due to the high educational level of both the boss and the subordinate, coinciding with the results of Alvarez (2009) and Hersey and Blanchard (Keith and Newstrom, 2003).*

**KEYWORDS:** Transactional Leadership, Transformational Leadership, Effectiveness

## INTRODUCCIÓN

México cuenta hoy en día con un escenario demográfico envejecido que implica en el mediano y largo plazo grandes retos para el país en todos los ámbitos de la vida social: contar con una cantidad inédita de personas en edad productiva (15 a 64 años de edad) que prácticamente duplicará a la población en edad económicamente dependiente durante las primeras décadas del siglo XXI (CONAPO, 2010). Los cambios demográficos descritos provocarán una reducción de la demanda de servicios de educación básica y un notable crecimiento en la demanda de educación media superior y superior. El papel de las Instituciones de Educación Superior (IES) es de innegable importancia (SEP, SESIC, IESALC y UNESCO, 2003), y ha generado análisis, tal es el caso de la OCDE (1997 y 2007 citado por Vázquez 2008): “La mayoría de las instituciones educativas mexicanas, se han caracterizado por una administración ineficiente con poca capacidad de respuesta ante los cambios socioeconómicos del país”, “la inversión educativa en México ha crecido significativamente, pero los resultados de esa inversión no han mejorado”. Lo expresado anteriormente demuestra la poca eficiencia en la administración de los recursos y la falta de liderazgo que genere altos niveles de desempeño en el sector educativo. Por consiguiente se plantean los siguientes objetivos de investigación.

### Objetivos de Investigación

Determinar si existe relación entre el estilo de liderazgo que emplean los Directivos del CIIDIR Unidad Durango y la percepción de su Eficacia por los subordinados. Identificar la relación entre los estilos de liderazgo Transaccional y Transformacional empleados por los Directivos del CIIDIR Unidad Durango y las variables Socio-demográficas laborales.

*Preguntas de investigación:* ¿Existe relación entre el estilo de liderazgo que emplean los Directivos del CIIDIR Unidad Durango y la percepción de su Eficacia por los subordinados? ¿Cómo se relacionan los liderazgos Transaccionales y Transformacionales que emplean los Directivos del CIIDIR Unidad Durango y las variables Socio-demográficas laborales?

*Hipótesis:* El estilo de liderazgo que emplean los Directivos del CIIDIR Unidad Durango está relacionado con la percepción de su Eficacia por los subordinados. Existe una relación significativa entre los estilos de Liderazgo Transaccional y Transformacional que emplean los Directivos del CIIDIR Unidad Durango y las variables Sociodemográficas laborales.

*Justificación:* Este estudio presenta una contribución a un tema actual e importante debido a que el líder representa para con la sociedad un compromiso al desenvolverse como dirigentes de instituciones gubernamentales o de organizaciones privadas creadas para satisfacer necesidades a través de sus productos o servicios con el menor dispendio de recursos. Por lo tanto, resulta necesario formular e implementar políticas públicas que permitan mantener niveles aceptables de Eficacia, sin elevar la carga tributaria y sin necesidad de recurrir a reformas estructurales (Ayoub, 2011, p. 1).

### El Instituto Politécnico Nacional (IPN) y el Centro Interdisciplinario de Investigación Para el Desarrollo Integral Regional (CIIDIR) Unidad Durango

El IPN, es la institución nacional con mayor madurez en la enseñanza técnica superior en el país (SEP, et al, 2003). Como parte de las políticas de fomentar la desconcentración de la investigación, el desarrollo tecnológico y la educación de posgrado en regiones estratégicas por sus potenciales y sus carencias (Meré, 2010) se crea el Centro Interdisciplinario de Investigación para el Desarrollo Integral Regional (CIIDIR)

Unidad Durango el 11 de Noviembre de 1979, en la ciudad de Vicente Guerrero, Durango. El CIIDIR Unidad Durango, es un Centro de investigación perteneciente al Instituto Politécnico Nacional (IPN).

## REVISIÓN DE LITERATURA

El Modelo de Liderazgo de Rango Completo (MLRC) es uno de los enfoques más desarrollados y estudiados en la actualidad. Su principal precursor es Bernard M. Bass (1985) quien se basó en las ideas originales acerca del liderazgo carismático y transformacional de Robert House (1977) y James McGregor Burns (1978), (citados por Lupano y Castro, 2008). Este modelo plantea que un mismo líder puede mostrar conductas propias de un Líder Transformacional y/o de un Líder Transaccional.

### Proceso Transaccional

Bass (1985, citado por Ayoub, 2011) lo describe como el proceso mediante el cual el líder reconoce lo que el seguidor desea obtener de su trabajo y procura velar porque lo obtenga siempre que su desempeño lo justifique. Las dimensiones del Liderazgo Transaccional en el modelo de Bass y Avolio (MLRC), presentan dos formas: una activa, es decir cuando el líder previene para que los errores no ocurran y una pasiva que se refiere a actuar cuando en error ya ocurrió (Nader y Castro, 2007). A continuación se describen tanto las conductas activas como pasivas (Gómez, 2008): Refuerzo Contingente (RC). El líder identifica las necesidades de los seguidores y realiza una transacción entre las necesidades del grupo y las de cada persona. Recompensa ó sanciona en función del cumplimiento de los objetivos. Dirección por Excepción Activo (DPE-A). Controla y busca que no existan desviaciones que se alejen de las reglas y las normas tomando acciones correctivas. Dirección por Excepción Pasivo (DPE-P). El líder interviene sólo cuando no se satisfacen las normas. En general las intervenciones son negativas y de crítica para que los objetivos no se desvíen de su curso. Laissez-Faire (LF). Abdica a las responsabilidades, evita tomar decisiones.

### Proceso Transformacional

El liderazgo Transformacional estimula el emerger de la conciencia de los trabajadores, los cuales aceptan y se comprometen con el logro de la misión de la organización dejando de lado sus intereses personales, para enfocarse en los intereses del grupo (Mendoza y Ortiz, 2006). Las dimensiones del Liderazgo Transformacional son los siguientes (Mendoza, 2005): Influencia Idealizada Atribuida (IIA). Es la capacidad de un líder en influir en los seguidores proporcionando un sentido de visión y misión, inspira orgullo, respeto, búsqueda de logro y confianza, incrementa el optimismo. Influencia Idealizada Conductual (IIC). Influyen en la conducta de los seguidores hacia el logro de metas y objetivos. Inspiración (I). El líder se preocupa por actuar como un modelo para los seguidores, comunica una visión y utiliza símbolos para enfocar esfuerzos. Estimulación Intelectual (EI). El líder estimula intelectualmente a los seguidores al proporcionar un flujo de nuevas ideas que desafían los viejos paradigmas permitiendo un replanteamiento de conceptos y formas de hacer las cosas. Consideración Individualizada (CI). Los líderes prestan atención a las necesidades individuales de desarrollo personal de cada uno de los seguidores; el seguimiento es personalizado pero no es visto como un control, los líderes orientan. En esta dimensión se incluyen el cuidado, la empatía y el proveer retos y oportunidades para los otros. El líder típico es un escucha, activo y comunicador frecuente. (Mendoza y Ortiz, 2006)

### Eficacia

La Eficacia se ha definido como “la capacidad del individuo para cumplir con la tarea o propósito con el nivel de rendimiento esperado” (Bandura, 1986/1987 citado por Ayoub, 2011). Las dimensiones de la eficacia para el modelo son (Ayoub, 2011): Esfuerzo extra (EE). Grado de disposición del subordinado de emplear mayor energía y ánimo en las tareas y objetivos que persigue la organización a la que pertenece.

Satisfacción (S). Grado de aceptación de la actuación del líder y confianza del subordinado en los métodos del liderazgo utilizados por el líder, así como la forma en que el líder se relaciona y trabaja con el seguidor y con los demás. Efectividad (E). Percepción que tiene el seguidor de la capacidad del líder de lograr los objetivos y metas de los seguidores, así como la participación de los equipos de trabajo de manera armónica para el logro de lo programado.

## METODOLOGÍA

*Tipo de estudio:* Se realiza un estudio de tipo Ex Post-Facto. A su vez, se consideró el empleo de un diseño no experimental. A efectos de esta investigación se tomó en cuenta el diseño no experimental transversal. Así mismo, el estudio propuesto se adecuó al tipo descriptivo.

*Población:* La población estuvo constituida por el personal del CIIDIR Unidad Durango, debido a la voluntariedad de la encuesta se conformó por 93 seguidores lo que representa un 75% de la población constituida por un total de 127 trabajadores.

*Instrumento de medición:* El Rango Completo del liderazgo es evaluado con el Cuestionario de Liderazgo Multifactorial (Multifactor Leadership Questionnaire), -MLQ- por sus siglas en inglés. La versión que fue utilizada es la que corresponde a la versión “Visto por otros” adaptado por Vega y Zabala (2004); éste último en su versión abreviada y adaptada a países latinos, que integra 45 ítems que responden bajo una escala tipo Likert donde: 0= “Nunca”; 1= “A veces”; 2= “Con frecuencia” y 3= “Siempre”.

*Definición de variables y dimensiones:* Como variables independientes encontramos a los estilos de liderazgo Transaccional y Transformacional divididos en 9 dimensiones. Como variable dependiente se presenta la Eficacia que se encuentra constituida por tres dimensiones de resultado.

*Procesamiento estadístico de los datos:* Para el análisis de los datos recopilados se inició con una descripción de la muestra utilizando técnicas de herramientas de estadística descriptiva, tales como promedios, frecuencia, gráficas de barras, gráficas de pastel. Se tabularon los datos mediante el paquete estadístico Statistical Package for Social Sciences (SPSS) versión 20.0. Se realizó el análisis correlacional y gráficas de descripción, las variables fueron medidas en un mismo momento (agosto de 2011) y fue utilizado el coeficiente de correlación de Pearson ( $r$ ). Otro coeficiente analizado fue el coeficiente de determinación ( $R^2$ ). Posteriormente para evaluar el nivel de significancia en la diferencia entre medias se corrió una prueba de Fisher. Posteriormente para evaluar el nivel de significancia en la diferencia entre medias se corrió una prueba de Fisher.

## RESULTADOS

### Descripción de las Variables Sociodemográficas y Laborales

**Líder.** El perfil del líder fue de sexo masculino (76%), con una edad entre 41-60 años (97%), nivel jerárquico de subdirector (44%) y el último grado de estudios es de doctorado (51%).

### Análisis Descriptivo de la Variable Independiente: Liderazgo Transaccional

Para el liderazgo Transaccional se encontró que un 78% del personal percibe a sus directivos con un nivel moderado (0.76 – 1.50) en conductas de este estilo de liderazgo. Por lo que respecta a las dimensiones del liderazgo Transaccional (tabla 1), la dimensión que presenta la media más alta es la de Refuerzo Contingente (1.68), seguida por la dimensión Dirección por Excepción Activa (1.61), posteriormente la dimensión Dirección por Excepción Pasiva (.96) y finalmente, la dimensión Laissez-faire (.76).

*Análisis descriptivo de la variable independiente: Liderazgo Transformacional:* Para el liderazgo Transformacional se encontró que la mayoría de los subordinados 59% perciben a sus directivos entre un nivel alto (1.51 – 2.25) y muy alto (2.26 – 3.0). Para el liderazgo Transformacional encontramos que la Influencia Idealizada Atribuida (IIA) es la dimensión que presenta la media más alta (1.99), seguida de la Inspiración (I) (1.97), Influencia Idealizada Conductual (IIC) (1.80), Consideración Individual (CI) (1.51) y finalmente la Estimulación Intelectual (EI) (1.33).

*Análisis descriptivo de la variable dependiente:* La variable dependiente para este estudio es la Eficacia en la cual se observa que la percepción que se tiene sobre la Eficacia del liderazgo del directivo es en su mayoría muy alta (2.26 – 3.0). Los resultados muestran que la Satisfacción (S) representa la media más alta (1.89), posteriormente encontramos a la Efectividad (E) (1.75) y por último se encuentra Esfuerzo Extra (EE) (1.47).

*Análisis correlacional de Liderazgo Transaccional – Eficacia:* El coeficiente de correlación de Pearson ( $r$ ) obtenido para las variables Liderazgo Transaccional y Eficacia fue de .646. Continuando con el análisis estadístico se calculó el coeficiente de determinación ( $R^2$ ) el cual fue de .417. Las conductas pasivas presentaron una correlación significativa, negativa y baja donde el coeficiente de correlación de Pearson fue de -.377 y el coeficiente de determinación fue de 0.142. Las conductas activas (DPE-A y RC) consideradas en conjunto en correlación con la Eficacia obtuvieron un coeficiente de correlación de Pearson de .895, lo que nos indica que la asociación entre las variables es significativa, positiva y alta. Así mismo se obtuvo un coeficiente de determinación de .802.

*Análisis correlacional de Liderazgo Transformacional- Eficacia I:* Las variables Liderazgo Transformacional y Eficacia en este estudio obtuvieron un coeficiente de correlación de Pearson ( $r$ ) de .925. El resultado obtenido refleja una relación positiva y significativa.

#### Influencia de los Factores Socio-Demográficos Laborales Sobre la Presencia del Liderazgo Transaccional y el Liderazgo Transformacional

*Por Sexo:* Los hombres presentan un promedio de Liderazgo Transaccional levemente mayor que las mujeres 1.27 contra 1.21 en una escala del 0 al 3. La diferencia no es significativa. En cuanto al Liderazgo Transformacional, los hombres presentan un promedio de este liderazgo menor que las mujeres (1.68 contra 1.85 en una escala del 0 al 3), con una diferencia significativa de 0.00, por consiguiente se puede decir que el Liderazgo Transformacional se presenta mayormente en las mujeres que en los hombres.

#### Por Edad del Jefe

Los grupos de edad con mayor Liderazgo Transaccional promedio de acuerdo a la figura 6, corresponden a los de 44-46 años de edad y de 47-49, con un promedio de 1.34 y 1.45 respectivamente en una escala del 0 al 3, decreciendo este valor con el siguiente grupo de 50-52 con un promedio de 1.12, para posteriormente volver a crecer un poco menos en los dos grupos siguientes, 53-55 y 56-61 con promedios de 1.31 y 1.21 respectivamente, la diferencia de medias es significativa con un valor de significancia de .034. En cuanto al promedio de Liderazgo Transformacional por grupo de edad del jefe, los que cuentan con menor promedio, son los grupos: de 50 a 52 años de edad con un promedio de 1.47 en una escala del 0 al 3, de 47 a 49 años con un promedio de 1.79 y de 44 a 46 años con un promedio de 1.87, es decir en orden creciente, en cuanto más jóvenes mayor promedio de Liderazgo Transformacional. Por último, los grupos por edad del jefe con promedios más altos son los de: 53 a 55 años con 1.97 y el grupo de 56 a 61 años de edad con 2.47, creciendo este valor de acuerdo al grupo de mayor edad la diferencia de medias es significativa con un valor de .000.

*Por Puesto del Jefe* Se observa que de acuerdo al Puesto del Jefe, el mayor promedio de Liderazgo Transaccional lo tiene el nivel jerárquico correspondiente a Jefe de departamento, con un promedio de 1.33, en una escala de 0 al 3. El que menor lo practica es el puesto de Director con un promedio de 1.05, encontrándose entre estos extremos los puestos de Docente y Subdirector con un promedio de 1.21 y 1.23 respectivamente. Su diferencia es significativa con un valor de .000. Por otra parte y de acuerdo al Puesto del Jefe, los mayores promedios de Liderazgo Transformacional lo tienen los niveles jerárquicos correspondientes a Jefe de Departamento y Subdirector, con un promedio de 1.76 en ambos casos, siguiendo el nivel de Docente con un promedio de 1.60 y por último el de Dirección con un promedio de 1.42 en forma descendente y en una escala de 0 al 3. Su diferencia es significativa con un valor de .018.

#### Por Grado de Estudio del Jefe

En cuanto al Liderazgo Transaccional, el grado de estudio del jefe que presenta un mayor promedio (1.43) corresponde al grado de licenciatura en una escala del 0 al 3, siguiendo el grado de maestría y doctorado con 1.25 y 1.21 respectivamente, con una diferencia significativa con valor de .000, por consiguiente se puede decir que el promedio de los grupos del Liderazgo Transaccional se presenta en orden decreciente en relación al mayor grado de estudio del jefe. En el Liderazgo Transformacional correspondiente al grado de estudio del jefe, el nivel de licenciatura presenta el mayor promedio (1.93) en una escala del 0 al 3, siguiendo el grado de maestría con 1.64 en sentido decreciente, para posteriormente a nivel de doctorado se incrementa con 1.73 de promedio, contando con una diferencia significativa con un valor de .001.

### CONCLUSIONES

Los Directivos del CIIDIR presentan tanto conductas del estilo de Liderazgo Transaccional como Transformacional, por lo que se confirma que ambos estilos no son excluyentes; por lo que se coincide con la afirmación de Carmen Dos Santos (2006) de que el Liderazgo Transformacional es un agregado de la efectividad del Liderazgo Transaccional, los mejores líderes poseen ambos tipos. Los resultados obtenidos muestran que los dos estilos de liderazgo correlacionan positivamente con la variable de resultado Eficacia, sin embargo, es necesario destacar que el estilo de liderazgo que tuvo una mayor correlación fue el Liderazgo Transformacional en comparación con el Liderazgo Transaccional. De acuerdo a los resultados anteriores se corroboran las afirmaciones de algunos investigadores como son Avolio y Bass, 2004; Dum Dum, Lowe y Avolio, 2002; Lowe, Kroeck y Sivasubramaniam, (1996, citados por Molero, Recio y Cuadrado, 2010; Ramírez y Sgambatti, 2008; Álvarez, 2009) que afirman que el Liderazgo Transformacional (y sus diversas dimensiones) correlaciona de forma elevada y positiva con la Eficacia. Así mismo, se reconfirma la “jerarquía de correlaciones”, es decir, el estilo que demuestra generar mayores niveles en la Satisfacción, Esfuerzo Extra y Efectividad en el subordinado, es el Transformacional (Moreira, 2010).

Se encontró que el empleo de conductas pasivas del Liderazgo Transaccional (DPE-P y LF) con los subordinados correlacionó con un nivel de significancia bajo y negativo (-.377), contrario a las conductas activas que correlacionaron con un nivel de significancia alto y positivo (.895). Los resultados anteriores pueden ser ocasionados debido a que el No Liderazgo (conductas pasivas) genera en el subordinado falta de confianza y de respeto, en tanto que las conductas activas por el contrario generan una motivación en el primer orden (necesidades básicas) y posteriormente se complementan con las conductas transformacionales que satisfacen las necesidades de orden superior (creencias y valores).

Una posible razón del elevado coeficiente de correlación en el Liderazgo Transformacional con la Eficacia en el personal Directivo del CIIDIR Unidad Durango, se deriva del alto nivel educativo tanto del jefe como del subordinado (doctorado y maestría respectivamente), coincidiendo con los resultados de Álvarez (2009) quien concluye que: donde existen subordinados que cuentan con mucha experiencia y formación, permite

que el jefe pueda delegar, contando así con más tiempo para dedicarlo a labores de dirección, lo que aumenta las probabilidades de dirigir desde las conductas Transformacionales. Igualmente, se observa que la deducción anterior coincide con la teoría de Liderazgo de Situacional de Hersey y Blanchard (citado como Keith y Newstrom, 2003), donde se propone que el factor más importante que influye en la selección del estilo de líder es el nivel de desarrollo o madurez de los subordinados. Respecto a la Influencia de los Factores Socio-demográficos laborales sobre la presencia del Liderazgo Transaccional y el Liderazgo Transformacional, se puede concluir lo siguiente. En cuanto al Liderazgo Transformacional respecto al sexo del jefe, los hombres presentan un promedio de este liderazgo menor que las mujeres, por consiguiente se puede decir que el Liderazgo Transformacional se presenta mayormente en las mujeres que en los hombres, concordando esta conclusión con la de Hernández (2010) que afirma que “en general las mujeres son más transformacionales que los hombres”.

Los grupos de edad con mayor Liderazgo Transaccional promedio, corresponden a los de 44-46 años de edad y de 47-49, decreciendo este valor con el siguiente grupo de 50-52, para posteriormente volver a crecer un poco menos en los dos grupos siguientes, 53-55 y 56-61. Probablemente esto se deba a la llamada “crisis a mitad de carrera” de acuerdo a Hall, quien sigue con los trabajos de Super o Levinson y que describe esta etapa de cambio o por lo menos de reflexión en lo que se plantea lo realizado y piensa en el futuro que queda, suele darse en profesionales con éxito que hacia los 45 se sienten frustrados e insatisfechos y necesitan nuevos objetivos (Alexander S, 2014). Tal vez por eso abandonan un poco el estilo transformacional caracterizado por orientarse a la tarea.

En cuanto al promedio de Liderazgo Transformacional por grupo de edad del jefe, los que cuentan con menor promedio, son los grupos de 50 a 52 años de edad, de 47 a 49 años y de 44 a 46 años, es decir en orden creciente, en cuanto más jóvenes mayor promedio de Liderazgo Transformacional. Por último, los grupos por edad del jefe con promedios más altos son los de: 53 a 55 años y el grupo de 56 a 61 años de edad, creciendo este valor de acuerdo al grupo de mayor edad, la diferencia de medias es significativa. Es decir, decrece de los 44 a los 50 para después volver a crecer. Quizá parte de la explicación también se encuentre en la teoría de Hall respecto a la carrera en la organización, específicamente en la etapa “crisis a mitad de carrera”, que inicia hacia los 45 años, y que quizá culmina en el grupo de 50-52, que es a partir de este punto que se encuentran en una real crisis y emerge el liderazgo transformacional de manera ascendente, por su parte McAleer afirma que el liderazgo transformacional emerge en crisis, es decir en este grupo de edad, ya que “es de especial utilidad en situaciones de cambio” (Mendoza y Ortiz, 2006), interpretándose como de transición, crisis y reflexión por lo menos.

El nivel jerárquico bajo correspondiente a Jefe de departamento tiene el mayor promedio de Liderazgo Transaccional, descendiendo este promedio al puesto de Subdirector y seguido del de Director y Docente, coincidiendo con la conclusión de Ramírez & Sgambatti (2008) que mencionan “Con relación al estilo Transaccional, la baja gerencia posee el mayor promedio, seguido por media gerencia, alta gerencia y empleado con el menor valor.” De acuerdo al Puesto del Jefe, los mayores promedios de Liderazgo Transformacional lo tienen los niveles jerárquicos correspondientes a Jefe de Departamento y Subdirector, siguiendo el nivel de Docente y por último el de Dirección en forma descendente. Tal vez se expliquen estos resultados con respecto a los Jefe de Departamento y Subdirector, de acuerdo a las características de los líderes Transformacionales, que suelen ser más activos y revolucionarios, a diferencia de los docentes-investigadores que solamente se dedican a la docencia y a la investigación, funciones más pasivas y rutinarias. En cuanto al cargo de Director, este nivel intermedio de Liderazgo Transformacional quizá se deba a la personalidad del mismo, ya que el valor corresponde a un solo director. En cuanto al Liderazgo Transaccional, el grado de estudio del jefe que presenta un mayor promedio corresponde al grado de licenciatura, siguiendo el grado de maestría y doctorado, por consiguiente se puede decir que el promedio de los grupos del Liderazgo Transaccional se presenta en orden decreciente en relación al mayor grado de estudio del jefe. Se puede sugerir que precisamente por su grado de estudios, el nivel licenciatura está más

enfocado a los resultados, pues se habilitó para eso y esta perspectiva va modificándose, poco a poco, siendo más visionaria, conforme va elevándose el nivel de estudios y conocimientos. En el Liderazgo Transformacional correspondiente al grado de estudio del jefe, el nivel de licenciatura presenta el mayor promedio, siguiendo el grado de maestría en sentido decreciente, para posteriormente al nivel de doctorado se incrementa levemente. Quizá este promedio de Licenciatura, se deba a que los jefes con grado de licenciatura, no son docentes ni investigadores, solamente se dedican a su puesto, teniendo quizá más tiempo y energía para orientarse a las relaciones, a ser más activo y revolucionario, características de los líderes transformacionales, no así en el caso de maestría y doctorado que dentro de sus funciones en su totalidad, se encuentran la docencia y la investigación.

# LA CONSTRUCCION DE MODELOS ALTERNATIVOS DE DESARROLLO, UNA VISIÓN DESDE EL ÁMBITO DE LO RURAL: EL CASO DEL VALLE DE VALSEQUILLO, PUEBLA, MEXICO

José Fausto Alfonso Vargas Elías, Universidad Autónoma De Puebla

## RESUMEN

*Nuestra propuesta tiene dos objetivos fundamentales, la primera, incorporarse a la discusión y al cuestionamiento que hay en los ámbitos académicos sobre el concepto de Desarrollo que ahora mismo se encuentra en proceso de construcción, basado en el crecimiento económico como premisa de desarrollo, que es la filosofía del pensamiento hegemónico. Acuñado a partir del fin de la segunda guerra mundial, como el único camino por el que deben transitar las sociedades que aspiran salir del atraso en que se encuentran (Sudesarrolladas, es el término utilizado) y que a pesar de los magros resultados conseguidos generando por el contrario millones de gente en condiciones pobreza, se insiste tercamente en continuar en un modelo y visión que se encuentra rebasado por la realidad. Arturo Escobar, en su teoría de La economía del desarrollo se sostiene en un conjunto de 'fábulas' – del mercado, de la producción, del capital y por supuesto, del crecimiento- que "[...] rara vez se cuestionan, y se consideran formas normales y naturales de ver la vida, "la forma de ser de las cosas " (Escobar, 1995:120). El segundo propósito y como contrapropuesta es el de recuperar la visión alternativa de Desarrollo, que se está gestando en el pensamiento latinoamericano donde las comunidades rurales o campesinas han tomado la iniciativa y por varios medios siguen buscando hacer visibles en los foros internacionales y mediante diversos movimientos sociales independientes con los cuales han logrado medianamente contener el modelo globalizador, ahora apoyados por los círculos intelectuales del sur del hemisferio. Lo cual nos da la oportunidad de recuperar brevemente las distintas posturas teóricas del pensamiento económico y social alternativo sudamericano. Que con sus aportes epistemológicos buscan contribuir a la dignificación de los sectores de la población rural que se encuentra seriamente preocupada por el cuidado medioambiental de los recursos seriamente amenazados (léase, suelo y agua) recursos en permanente disputa por la globalidad de un modelo que por los resultados ofrecidos ha resultado inviable para la humanidad y que desde luego tiene amenazado al planeta entero pues ha perdido también el control de lo que él mismo ha creado como hijo de la filosofía del mercado.*

**PALABRAS CLAVE:** Desarrollo, Sub-Desarrollo, lo Alternativo, la Hegemonía y Post-Desarrollo

## THE CONSTRUCTION OF ALTERNATIVE MODELS OF DEVELOPMENT, A VIEW FROM THE SCOPE OF THE RURAL" THE CASE OF THE VALLEY OF VALSEQUILLO, PUEBLA, MEXICO

## ABSTRACT

*Our proposal has two main objectives, the first, merge to the discussion and questioning what in academic circles about the concept of development right now is in process of construction, based on economic growth as a premise of development, which is the philosophy of hegemonic thinking. Coined from the end of the second war world, as the only road by which they must tread societies seeking to leave backwardness in which are (Sudesarrolladas, is the term used) and that despite the meagre results achieved generating instead millions of people in poverty conditions, will insists stubbornly continue in a model and vision*

*which is lining by reality. Arturo Escobar, in his theory of development economics is held in a set of 'Fables' - of the market, of production, of capital and of course, the growth-that "[...] rarely are they called into question, and are considered normal and natural ways of looking at life, "the way of being of things" (Escobar, 1995:120). The second purpose and as a counter-proposal is the alternative vision of development, which is brewing in the Latin American thought, where rural communities or farmers have taken the initiative and by several media recover are still looking for make visible in international fora and through various independent social movements which have managed to contain fairly globalization model now supported by the intellectual circles in the South of the hemisphere. Which gives us the chance to regain briefly the different theoretical positions of South American alternative economic and social thought. With its epistemological contributions seeking to contribute to the dignity of the sectors of the rural population which is seriously worried about the environmental care of seriously threatened resources (read, soil and water) resources in permanent dispute by the global nature of a model that offered results proved unfeasible to humanity and which has since then threatened the planet whole because he has also lost control of what he has created as a son the philosophy of the market.*

**JEL:** M00

**KEYWORDS:** Development, underdevelopment, the alternative, hegemony and post-development

## INTRODUCTIONS

Los resultados ofrecidos, después de 30 años de caminar por un modelo eufenísticamente llamado “La globalización de un sistema económico”, (la cara maquillada del capitalismo moderno), nos permite afirmar que los esfuerzos no han sido suficientes quizá por que no estaban dentro del proyecto el lograr sacar del estado de marginación en que se encuentran inmensas mayorías de población a lo largo y ancho del planeta, por lo que sociólogos como Albert Rist sugieren la necesaria deconstrucción del concepto Desarrollo (Rist, 1997) pues en su opinión es un término conscientemente manipulado que ha generado confusión en la sociedad y ha permitido caminar en el rumbo equivocado.

### El Concepto de Desarrollo Desprendido del Consenso de Washington.

Los postulados “teóricos” del Consenso de Washington se fueron construyendo a partir de la crisis de principios de los años setenta del siglo pasado, hasta la imposición de las políticas neoliberales en Inglaterra y en Estados Unidos a finales de esa misma década. Los promotores del neoliberalismo empezaron su ofensiva contra el estado de bienestar, sosteniendo que los desequilibrios macroeconómicos se originaban en la política adoptada después de la Segunda Guerra Mundial dirigida a impulsar el proceso de industrialización mediante la sustitución de importaciones (ISI), lo que exigía una constante intervención del Estado para proteger y estimular la expansión de la producción nacional. De acuerdo con los argumentos del Consenso de Washington, “el proceso de ISI se asocia con un proceso de ineficiencia en la asignación de los recursos ( debido a la falta de competencia externa e interna) , y vincula la intervención del Estado en la economía con el origen de todos desequilibrios.

”(Borón y Gambina, 2004:133.) La única vía de evitar los desequilibrios macroeconómicos del mercado sobre todo en los países en vías de desarrollo expresados en falta de crecimiento, elevada inflación, el desempleo y la falta de competitividad de la economía era mediante la realización de cambios estructurales y de orientación del mercado. A partir de esa conclusión, los abogados del neoliberalismo establecieron como único propósito de la economía alcanzar y mantener los equilibrios macroeconómicos y con ello la economía pierde su carácter social con el que nació como conciencia y, desde ese momento, la razón económica desplaza a la razón social y serán la competitividad y la productividad – que no el bienestar social-, las preocupaciones centrales de quienes manejan los aparatos económicos gubernamentales. Así

surge el “Decálogo del Consenso de Washington” como la estrategia recomendada y que en pocas palabras consistían en: 1 ) Disciplina fiscal, 2) Determinación de las prioridades del gasto público con criterios estrictamente económicos, 3) Reforma tributaria, 4) Tasas positivas de interés, 5) Tipo de cambio competitivo, 6) Apertura comercial, 7) Apertura a la inversión extranjera, 8 ) Privatizaciones, 9 ) Desregulación de la economía, 10) Protección a la propiedad privada(Ornelas, 2007:144). Como puede observarse, a lo largo del catálogo no hay ninguna consideración de tipo social y de esta manera, al imponerse la razón económica sobre las consideraciones sociales, las decisiones del Estado se alejan de la preocupación por el bienestar de la población para concentrarse única o principalmente en los aspectos económicos que favorecen al capital y su acumulación, es entonces que uno se pregunta, cómo este modelo va a generar condiciones de desarrollo social..? Nunca, sería la respuesta a bote pronto.. Esta visión mercantilizada que ignora los derechos sociales como la educación o la salud y en general la seguridad social convirtiéndolos en servicios mercantiles sometidos a la lógica del mercado. El análisis de los resultados socioeconómicos arrojados tras la implementación del modelo económico globalizado en América

Latina basado en la idea de que el *Desarrollo* se alcanzará con la elevación de los índices macroeconómicos mas conocidos dejando fuera aquellos costos sociales que alguien habrá de pagar y que no necesariamente aparecen en la contabilidad mundial. Hacer un contraste de lo que se esperaba y lo que en realidad ha ocurrido en un corte de caja pertinente al modelo seguido de tres décadas para acá. A partir de ahí sumarse a la necesaria deconstrucción de este modelo de desarrollo (Rist, 1997) . Incontables estudios reflejan las falacias del crecimiento como sinónimo de *Desarrollo*, por una sencilla razón , en los planes de crecimiento no están contemplados los de la distribución del ingreso y de la renta , los discursos políticos buscan hacer creer que si, apoyados en la teoría del goteo o de la derrama, pero que sin embrago los datos duros recaudados reflejan otra cosa, ya veremos estos mitos.

### La Falacia del Crecimiento Económico Como Reducción de la Pobreza

El mito del crecimiento como distribución se replica de forma similar en lo que tiene que ver con la reducción de la pobreza. Prueba de ello está en las investigaciones y estudios del Banco Mundial, donde el ejemplo más representativo es quizá el artículo, *Growth is good for the poor* de Dollar y Kraay (2000) del *Development Research Group* de esta institución. En este estudio, que incluye 418 observaciones en 137 países, los autores concluyen que “[...]la relación entre el crecimiento del ingreso de los pobres y el crecimiento económico general es uno-a-uno.” (Dollar y Kraay, 2000: 24); es decir, que el crecimiento en el ingreso per cápita es proporcional al aumento del ingreso de los pobres. Afirman también que esta relación no ha variado en el tiempo, no cambia durante periodos de crisis, y se da generalmente de la misma manera en los países ricos y pobres. A su vez, afirman que las políticas macroeconómicas pro-crecimiento y sus instituciones, aplicadas como imperativos universales a escala global, son favorables a la mejora de las condiciones de los pobres en tanto estimulan y generan un crecimiento del que todos sacan provecho. En sus propias palabras, las “[...] políticas estándares macroeconómicas pro-crecimiento son buenas para los pobres en tanto elevan los ingresos promedio sin efectos negativos sistemáticos en la distribución del ingreso.” (Dollar y Kraay, 2001: 10).

Este estudio se basa en, y a la vez alimenta, aquellas consideraciones que señalan que el crecimiento económico *se derrama* (efecto *trickle down*) en toda la población y a cada habitante le toca algo del mismo, lo que es proclamado como una ley de carácter universal apoyada en una serie de ecuaciones matemáticas y econométricas. Dentro de este universalismo no se toman en consideración las características endógenas de cada uno de los países contenidos en el estudio, y por lo tanto, en la relación entre crecimiento económico y pobreza, se presta escasa atención al papel que la distribución del ingreso y las relaciones de poder juegan en medio de dicha relación. Si se incluyera en la ecuación el tema de la distribución a la hora de plantear la relación entre crecimiento y pobreza, sin duda los hallazgos, para ciertos países, serían distintos. En los

países en los que la distribución de los ingresos es bastante desigual, es de esperarse que los pobres se vean menos beneficiados del crecimiento general en tanto este se acumula en sectores específicos, rompiendo así la proporcionalidad uno-a-uno proclamada por el influyente estudio del Banco Mundial. Esta realidad, que se hace evidente en muchas de las economías del llamado Tercer Mundo, es presentada por Sarmiento (2008) de la siguiente manera: “Cuanto más desigual la distribución del ingreso, tanto menor el impacto del ingreso per cápita sobre el ingreso de los pobres; incluso puede ser nulo en casos extremos.” (Sarmiento, 2008: 363). Ante la evidencia del devenir de las economías de los países en desarrollo en los últimos años, después de más de cinco décadas de fe en un mito, el mismo Banco Mundial en estudios posteriores, empezó a considerar la variable distribución a la hora de (re) plantear la relación entre pobreza y crecimiento.

Sin embargo, pese a estos estudios más recientes y a un cambio evidente en el lenguaje utilizado en general por las Instituciones Financieras Internacionales, la posición de esta institución en esencia no ha cambiado, ello queda expreso con claridad en las palabras de Hassan Zaman, economista del Banco Mundial, pronunciadas en febrero del 2009 en el debate organizado por *InfoShop* del World Bank ya antes mencionado: “[...]gran parte de la reducción de la pobreza que hemos presenciado en los últimos años es el resultado de la aplicación juiciosa de las medidas y políticas de liberalización y apertura de mercados.” (Zaman, 2009). En su intervención, presentado la estabilidad macroeconómica como un prerequisite, afirmó que la estabilidad macroeconómica conduce a mayor crecimiento, este conduce a la generación de empleos y esta cadena conlleva a una reducción de la pobreza.

Existen múltiples evidencias de que en las economías capitalistas, y especialmente en aquellas que descansan en un fe ciega en el mercado y sus fuerzas auto-reguladoras, existen diversos tipos de ‘restricciones’ que se imponen como barreras para que la riqueza generada se transfiera a los sectores menos favorecidos y en realidad los beneficie. Dadas estas ‘restricciones’, el aumento del gasto público enfocado en actividades dirigidas en mayor proporción a los pobres no es la solución al problema de la pobreza. Esta fórmula, en los casos en que ha sido aplicada, “[...] no ha dado los resultados previstos, porque los estímulos del lucro impiden que los recursos se manifiesten en beneficio de los pobres.” (Sarmiento, 2008: 365). Diversos casos han mostrado que, una vez se hacen efectivas las transferencias del sector público, una parte importante se queda en los vicios de la corrupción, los intermediarios y los sectores altos. Esto lleva a pensar entonces que la incidencia del gasto público, de sus transferencias e inyecciones y su efectividad en los sectores más desfavorecidos, depende de la organización institucional y por lo tanto, no es automática.

### La Falacia del Crecimiento Económico Como Empleo

En muchas ocasiones la búsqueda de crecimiento económico ha traído consigo efectos positivos en materia de empleo, lo que en gran medida le otorgó legitimidad al mito. Sin embargo, en el contexto actual la relación entre crecimiento económico y empleo es muy distinta. En palabras de Sarmiento, “El abaratamiento de las importaciones lleva a sustituir la producción doméstica de materias primas por importaciones y a reemplazar el valor agregado y el empleo en la confección final de bienes finales por bienes intermedios.” (Sarmiento, 2008: 145) En estas condiciones, resultado de la liberalización y apertura de los mercados, es entonces esperable que un mayor crecimiento económico coincida con un aumento del desempleo. Las políticas de apertura, donde se le da un papel prioritario a las exportaciones, terminan por favorecer las ventas externas y los movimientos internacionales por encima de la producción y el mercado nacional, lo que a fin de cuentas tiene efectos negativos, entre otras, sobre el empleo.

Como ya se expuso, es evidente que los países en capacidad de producir bienes rudimentarios son muchos, ubicándose en el mercado internacional en una condición de confrontación y competencia. Esto trae como resultado un exceso de oferta internacional de determinados productos. Como lo muestra Sarmiento (2005, 2008), esta competencia ha sido especialmente desfavorable para América Latina, cuyos países se han visto en una constatación situación, alimentada por la apertura, de especialización en una producción sin demanda.

Esto ha llevado, además de a una disminución de los salarios pagados a los trabajadores –muchos de ellos no calificados- que alimenta la inequitativa distribución del crecimiento, a una fuerte eliminación de mano de obra que queda presa del desempleo o de los precarios salarios y desprotección propios del sector informal. En este contexto, y como resultado de políticas y estrategias pro-crecimiento, el empleo se ve azotado también por otras vías, por ejemplo, mediante las políticas encargadas de controlar la inflación. La reducción del desempleo, en tanto amplía la demanda real, trae consigo mayor inflación. Esta relación lógica está en la base de la famosa *curva de Phillips*, que en su representación simple del funcionamiento macroeconómico, plantea que la ampliación de la demanda se manifiesta tanto en productividad como en inflación. Mayor empleo supone mayor capacidad de demanda y ello termina suponiendo mayor inflación. A su vez, la ampliación de la demanda, por la vía del aumento de la producción, supone mayor empleo –en tanto se requiere más mano de obra-, lo que también termina suponiendo mayor inflación. En este orden, fenómenos relacionados entre sí como la ampliación de la demanda, la ampliación de la producción y la disminución del desempleo, se ganan a costas de mayor inflación. Teniendo en cuenta que una de las obsesiones centrales de los lineamientos de la economía política actual es el control de la inflación, es de esperarse que los esfuerzos por combatir estructuralmente el problema del empleo no sean del todo contundentes; otras prioridades están primando. Como bien lo señaló Rick Rowden en el reciente debate ya citado en la sede del Banco Mundial en Washington D.C, “[...] la reducción de la inflación es una de las principales prioridades del modelo neoliberal y de cualquier infraestructura macroeconómica de este tipo. Combatir la hiper-inflación es la primera, y quizá la única, prioridad clave de este modelo.” (Rowden, 2009).

Esta situación nos lleva al siguiente círculo vicioso: mayor empleo dispara la demanda y así la inflación aumenta; a la vez, una ampliación de la demanda supone mayor producción lo que requiere mayor empleo, lo que termina en un aumento de la inflación. Las autoridades económicas están en la capacidad de intervenir esta situación con la intención de atenuar la inflación. Una de las principales estrategias utilizadas es jugar con el mercado cambiario (específicamente con la tasa de cambio). Con la intención de bajar la inflación, las autoridades pueden bajar la tasa de cambio: tasas de cambio bajas estimulan y abaratan las importaciones, lo que como vimos desestimula la producción doméstica y genera desempleo. Así se cierra el círculo vicioso al que nos lleva la relación entre crecimiento económico –no hay que olvidar que en grado considerable las medidas de apertura y liberalización se hicieron en nombre del crecimiento económico- y el empleo. En síntesis, un conjunto de medidas y políticas adoptadas en el contexto actual que son consideradas por prestigiosos economistas –entre estos Dollar y Kraay del Banco Mundial como macroeconomía pro-crecimiento, han traído efectos negativos en lo que tiene que ver con el empleo, de ahí que se hable acá del la falacia del crecimiento como empleo. “[...] el empleo ha evolucionado por debajo de las posibilidades de la economía y por debajo también de la relación histórica con la producción.” (Sarmiento, 2008: 252)

Por lo tanto, y con lo anteriormente expuesto queda claro que en medio de un contexto como el actual, caracterizado entre otros elementos por la apertura de mercados y la liberalización, el crecimiento económico, como una de las principales metas de prácticamente todos los gobiernos y como eje central de un sin número de estrategias de desarrollo, no se traduce automáticamente en una mejor distribución de la riqueza, no se refleja necesariamente en un reducción considerable de la pobreza y tampoco disminuye forzosamente las preocupantes tasas de desempleo que caracterizan a muchos países del denominado Tercer Mundo. Así, desde estos tres aspectos, es posible afirmar que el crecimiento económico no se traduce en mejoras sociales que aportan al alcance de un estado en el que la mayoría de la población logra satisfacer sus ‘necesidades básicas’ y elevar sus ‘estándares de vida’. En este sentido, algunas de las premisas centrales promulgadas por el discurso del desarrollo de los años 50, retomadas y reforzadas en la era neoliberal, parecen no reflejarse en el mundo práctico. Esto, considerando que ya han pasado más de 5 décadas y los resultados no se han visto, constituyen razones suficientes para procurar deconstruir este discurso y plantear decididamente la necesidad de buscar alternativas reales. Alternativas que conduzcan a

la constitución de lo que John Cavanagh (2009), director del *Institute for Policy Studies* – prestigioso *think-tank* de Washington D.C-, llama una sociedad más sana. Es decir, una sociedad basada en la satisfacción de las necesidades que diferentes comunidades consideran básicas y no en el crecimiento, ‘necesidad’ que se impuso como básica –y suficiente- para todo el mundo sin tener en cuenta las voces de muchos ni las implicaciones de su persecución ciega.

El ejercicio acá realizado, en su esfuerzo deconstructivo, buscó identificar y penetrar los fundamentos y premisas básicas sobre las que se sostiene el discurso del desarrollo. La crítica al discurso del desarrollo por la vía del ‘mito del crecimiento’ acá contenida, se hizo en cierto grado desde algunas de las premisas de la teoría económica. El crecimiento económico, tal y como se puede constatar en prácticamente cualquier manual de economía, es un aspecto central de la teoría económica y como tal, una crítica dirigida a este, no puede marginarse de su dominio. A su vez, esto necesariamente conllevó, dada la importancia que se le otorga al crecimiento económico en las agendas de corte neoliberal, a tratar con asuntos propios de las dinámicas actuales de la llamada economía de mercado. Al respecto Rist (2004) explicita lo siguiente: “La crítica al desarrollo [...] es más urgente que nunca y debe hacerse en primero lugar y con especial importancia en el dominio de la teoría económica.” (Rist: 2004: 257).

De esta manera, las tres falacias que se identificaron como parte del mito del crecimiento económico en el contexto actual, y que por décadas han alimentado *el discurso del desarrollo*, aparecen en este análisis como fracturas internas de la estructura misma del discurso. Por lo tanto, sacarlas a la luz y mostrar la manera en que operan, develando su carácter falaz, no es buscar embellecer, refinar, ni pulir el objeto del discurso con la intención de que sobreviva; tampoco de acomodarlo a nuevas exigencias y preocupaciones contextuales como por ejemplo la *lucha global contra la pobreza* o la *gestión medioambiental*. Por lo contrario, estas fracturas, en tanto estructurales, son la fuente de la estrategia deconstructiva. Por consiguiente, este esfuerzo analítico no pretende reorganizar los elementos existentes que componen el discurso del desarrollo, ni las interrelaciones que se establecen entre sí. Es un esfuerzo por romper radicalmente con epistemologías realistas que por décadas han sido el motor de la construcción y supervivencia de este discurso. Epistemologías que se constituyen en racionalidades del tipo, en palabras de Rist (2004), “one size fits all”, que pretenden incluir una amplia diversidad de motivaciones humanas bajo a idea de *homo economicus*, desconociendo que existen prácticas sociales que sencillamente no caben dentro de esta. Esto no quiere decir que no existan otros ámbitos o vías desde donde establecer críticas contundentes al discurso del *desarrollo* por la vía del crecimiento económico y que sean congruentes con una crítica cultural post-estructuralista y que así resulten constitutivas de la ‘corriente’ del post-desarrollo.

Diversos autores, en gran medida acá referenciados, han elaborado críticas que, sumadas a esta, constituyen elementos que aportan de manera importante a la desmitificación del mito del crecimiento y así a la deconstrucción del discurso del desarrollo y la apertura de las puertas a una era *post-desarrollo*.

Algunos teóricos han puesto el acento de su crítica en la relación entre crecimiento, consumo y *felicidad*. Dirigiendo su análisis principalmente a los países del Primer Mundo y quizá a las clases más acomodadas de los países “subdesarrollados” se plantean los siguientes interrogantes: ¿Las tasas de crecimiento sostenidas alcanzadas y los niveles de consumo conquistados, nos hacen más felices? ¿Vivimos mejor ahora? Latouche (2003, 2004, 2006, 2007) plantea *el decrecimiento* y establece preguntas cruciales como ¿Podrá Occidente ser más feliz con menos? ¿Por qué menos debe ser mucho más? ¿Cómo aprender a querer menos? Su posición frente a las acepciones dominantes de desarrollo y frente a la obsesión por el crecimiento que éstas alimentan es profundamente crítica: “¿Qué tal si la mera idea del crecimiento – acumular riquezas, destruir el medioambiente y exacerbar la inequidad social- es una trampa?

Quizá necesitamos crear una sociedad basada en la calidad y no en la cantidad, en la cooperación y no en la competencia.”(Latouche, 2003: 1) Hamilton (2006), refiriéndose al tema como *fetichismo* o *fatiga del crecimiento*, retoma la pregunta que según su estudio muchos españoles y habitantes de otros países ricos

se plantean constantemente: ¿Qué sentido tienen nuestros elevados ingresos y el crecimiento económico de nuestras naciones? En su obra propone un programa político alternativo que puede resultar congruente con el post-desarrollo: “eudemonismo”. Yendo más allá del desarrollo y del crecimiento, básicamente el eudemonismo propone “[...] una sociedad en la que la gente pueda dedicarse a actividades capaces de mejorar realmente su bienestar individual y colectivo [fundamentándose] en una reflexión sobre lo que contribuye y lo que no contribuye a crear una sociedad más satisfecha.” (Hamilton, 2006: 19) Este cambio resulta necesario y urgente porque el crecimiento, en aquellos lugares en los que se han alcanzado las tasas proyectadas, no ha logrado satisfacer a la gente y ha terminado por destruir muchos espacios que podrían aportar a su satisfacción. “El crecimiento económico fomenta el consumismo vacuo, degrada la naturaleza, debilita la cohesión social y corroe la personalidad.” (Hamilton, 2006: 16)

Autores como Latouche, Escobar y Esteva, en su crítica a las estrategias desarrollistas y obsesivas por el crecimiento económico, enfatizan en la homogenización de lo que por naturaleza es heterogéneo y en la castración de opciones de vida locales y vernáculas. Latouche (1993, 1996) se refiere a este proceso como la *Occidentalización del Mundo* y la absorción de *lo informal* –entendido no en términos exclusivamente económicos- por *lo formal*. Escobar (1995) argumenta que el discurso del desarrollo ha sido el agente protagónico y más ubicuo de la política de representación e identidad de lo que fue rotulado como Tercer Mundo. El discurso del desarrollo y la obsesión por generar crecimiento económico en todo el globo amenazan la diversidad y multiplicidad en tanto son expresiones ininteligibles e ilegibles bajo el código de la modernidad –están fuera del *espacio de lo decible* y pensable en términos de Foucault-. El discurso del desarrollo, como fuerza de representación, identidad y transformación global, termina por borrar del mapa el rol de los movimientos de base, de las formas de conocimiento local y del poder “popular”. Las palabras de Esteva van en la misma dirección: “[...] la metáfora del desarrollo hegemonía global a una genealogía de la historia puramente Occidental, robándole a las personas de diferentes culturas la oportunidad de definir su propias formas de vida social.” (Esteva, 1992: 9)

### El Desarrollo Alternativo : (Que no es lo Mismo Que Alternativas de Desarrollo)

En cierto sentido, el primero, si bien es fruto de posturas críticas, termina por establecer *mejores* formas de entender el desarrollo, *refinar* las prácticas derivadas, y así, alimentar el discurso del *desarrollo*. En este sentido, el discurso del desarrollo se alimenta de la crítica, reproduce su lógica y así se mantiene en el tiempo a lado de una serie de nuevos adjetivos -sostenible, humano, local, endógeno- que si bien suponen mutaciones no dejan de ser formas de desarrollo. Estas propuestas, por más alternativas y críticas, al ubicarse bajo la pancarta del desarrollo, se ubican en el mismo modelo de pensamiento, representación e identidad que décadas atrás produjo el desarrollo. Es una realidad, como lo anota Munck (1999), que “[...] el campo más amplio del desarrollo está fuertemente unificado en sus principios fundamentales, no importa el adjetivo que se le sume en las diversas variaciones de la teoría del desarrollo.” (Munck, 1999: 199) Acudiendo nuevamente a Derrida, tal y como es utilizado por Manzo (1991) en este campo de estudios, se puede decir que *el desarrollo alternativo* es una muestra clara del *logocentrismo* discursivo. El *logocentrismo* “[...] muestra cómo inclusive el discurso más radicalmente crítico fácilmente se resbala en la forma, la lógica, y los postulados implícitos de aquello que precisamente busca combatir.” (Manzo: 1991: 8) Con esto Manzo quiere dar cuenta de la manera de que las posiciones más críticas, al no lograrse salir del ‘omnipresente’ lenguaje del discurso del desarrollo, no son tomadas más en serio y terminan siendo no más que lo mismo pero ‘alternativo’.

El post-desarrollo, por el contrario, busca deconstruir la estructura del desarrollo para abrir las puertas de una sociedad realmente diferente articulada en torno a un *nuevo sentido común emancipatorio* y no de una sociedad producto de *otro* desarrollo, producto de una nueva hegemonía. Una sociedad que esté afuera del universo del desarrollo, que venga del exterior de los contornos homogenizantes, modernizantes y occidentalizantes, y que se ubique lejos de la obsesión por el crecimiento económico y el consumo masivo.

En este sentido, “La oposición entre ‘desarrollo alternativo’ y ‘alternativas al desarrollo’ es, tanto en abstracto como en el análisis teórico, radical, irreconciliable y esencial.” (Latouche, 1993: 159). Por lo tanto, y siguiendo la argumentación de Rist (2002), las prioridades del post-desarrollo, consistentes con la estrategia de deconstrucción adoptada en este análisis y la crítica al crecimiento establecida, son: (a) lograr tomar distancia de la creencia en el desarrollo, lograr un *belief-dissolving* en el que se develen las formas ocultas en donde yacen sus contradicciones; y (b) cuestionar y desmitificar ciertas *ideas evidentes* que forman parte del discurso de la economía del desarrollo. Así las cosas, el post-desarrollo es, antes que nada, una estrategia de *transgresión* que desafía una creencia compartida e internalizada y que rechaza las prácticas y comportamientos que de esta se derivan.

Para terminar, no está de más recalcar que *post-desarrollo* no es *antidesarrollo*, aunque sí es anti posiciones hegemónicas y homogenizantes. Querer *transgredir* la manera en que por décadas se han venido haciendo las cosas, no supone querer hacer lo contrario, pero sí que lavía no sea entendida en singular, como una sola vía, es decir, LA vía. “La teoría y la práctica del post-desarrollo difiere de los sentimientos antidesarrollo en el sentido en que no niega ni la globalización ni la modernidad, pero busca formas de vida reconociéndolos pero imaginado trascenderlos.” (Hoogvelt 1996: 16). Más allá del anti-desarrollo y del anti-entnocentrismo, el post-desarrollo procurar **repensar** lo que se ha venido pensado, **pensar** en aquello que está por fuera del *espacio de lo pensable*, e **impensar** todo aquello que se ha normalizado en nuestros imaginarios y representaciones.

#### Hacia la Construcción de Modelos Alternativos de Desarrollo, el Caso del Valle de Valsequillo En Puebla, Mexico

El Plan Nacional de Desarrollo de Vicente Fox Quezada Presidente de México del año 2000 a 2006 contemplaba la construcción del Proyecto Milenium, el cual formaba parte de un Plan Global Neocolonial conocido como Proyecto Puebla- Panamá diseñado seguramente más allá de nuestras fronteras (Washington para ser exactos). Y como suele ocurrir regularmente son proyectos que se hacen en el escritorio sin tomar en cuenta ni los intereses ni la opinión de la población que habita determinados territorio y que indudablemente sufrirá los efectos en el trastorno de su propia dinámica sociocultural y económica al imponérseles proyectos para los cuales no son tomados en cuenta. Como es el caso que nos ocupa, que para efectos de localización se le conoce como el Valle de Valsequillo ubicado en la mesta central del Estado de Puebla, un Valle conformado por 20 municipios de los 217 que conforman el estado de Puebla, con una extensión territorial aproximada de 125 mil 973 hectáreas, con una temperatura promedio de 17 grados centígrados, geográficamente bien dotado y comunicado, ideales para la producción agrícola ya que entre otras cosas hay que decir que cuenta con un sistema de

Riego de Gran envergadura conformado por una Red de 360 Km., de calanes de agua para riego por gravedad que opera el Distrito 030 de Riego a cargo de la Comisión Nacional del Agua (CNA), un organismo descentralizado dependiente de la Sec. De Medio Ambiente y Recursos Naturales (Semarnat). Es el granero y productor de hortalizas que abastecen los mercados del centro de la república y del sureste del país, generador importante de fuentes de empleo familiar que genera además importantísimos círculos virtuosos de empleo producción y consumo que dicho sea de paso es una zona que se encuentra asociada a los programas de modernización rural y a los procesos de urbanización e industrialización en la producción de hortalizas, legumbres, maíz, frijol, cebada, y forraje para la cría y engorda de ganado. Quienes conocen la zona podrán dar cuenta de la belleza inigualable pues miles de parcelas sembradas por pequeños productores muestran en todo su esplendor su capacidad productiva y organizativa para el trabajo familiar. Bueno, el Proyecto Milenium diseñado para llevarse acabo en esta región altamente productiva pretendía un cambio de uso de suelo y se proponía por lo tanto materializar un proyecto de inversión que buscaba fomentar el desarrollo económico o crecimiento económico como ya hemos dicho sobre la visión hegemónica en que se conforma con facilidad en la puerta del sureste del país. Favoreciendo como se dijo

en su momento la integración Golfo de México con el Océano Pacífico, mediante la formación de un fideicomiso privado, bajo la normatividad del gobierno del estado.

En reacción a esta imposición de los proyectos referidos surge una organización independiente de 235 campesinos llamada Unión Campesina Emiliano Zapata Vive (UCEZV) que con la asesoría de investigadores docentes de la Facultad de Economía de la UAP se dan a la tarea de enfrentar el proyecto, buscando recuperar las sentidas necesidades de la población en materia social, económica y ambiental, además de resaltar la importancia de la región de Valsequillo como productora de alimentos en la entidad poblana. Integrada por la población de trece de estos municipios a saber (Acatzingo, Cuautinchan, Cuapiaxtla de Madero, Tecali de Herrera, Los Reyes de Juárez, Mixtla, San Salvador Huixcolotla, Sto. Tomás Hueyotlipan, Sta. Isabel Tlalnepantla, Tepeaca de Negrete, Tochtepec, y Tecamachalco y Tzicatlacoyan) es muestra de la capacidad organizativa de la sociedad que aún reconociendo sus limitaciones son capaces de planearse proyectos propios que les permiten diseñar sus propios planes de transformación, la solución de sus problemas presentes pero sobre todo tratando de resolver las amenazas de que son objeto estos productores por los proyectos de urbanización y modernización. Reconociendo y dejando claro el fenómeno social ya que los espacios territoriales se encuentran en disputa y amenazados permanentemente por el capital nacional e internacional.

De ahí que el caso que analizamos en esta oportunidad es la recuperación de una visión propia de futuro convirtiéndose estos en sujetos sociales capaces de construir sus propias bases para *proyectos alternativos de Desarrollo Regional* a partir de definir líneas estratégicas para construir proyectos sustentables que revalorizan el entorno rural y se plantea como reto y necesidad insoslayable la equidad social, la inclusión, la conservación y cuidado de los recursos naturales como el suelo y el agua seriamente amenazados y con ello y al mismo tiempo permitirse a sí mismos allegarse de recursos o de ingresos propios para la reproducción de sus modos de vida basados en la creación de sus propias fuentes de empleo, en sus prácticas organizativas para el trabajo y colectivo y la conservación de las culturas locales. El fortalecimiento de las organizaciones independientes de los habitantes de la región en cuestión, la posibilidad de elevar su ingreso, la creación y fortalecimiento de circuitos regionales de producción, circulación, distribución y consumos basadas en pequeñas y medianas empresas familiares; derecho al acceso a los bienes y servicios públicos; preservación y manejo sustentable de los recursos naturales en beneficio de la población local, entre otras.

Por lo tanto y a manera de conclusión, podríamos decir que con la experiencia presentada, estamos en condiciones de afirmar que el *Desarrollo desde la óptica campesina se interpreta como un proceso también conflictivo y sujeto a negociaciones en el que se va transformando la realidad social en medio de resistencias culturales pero siempre buscando mayores estados de bienestar individual y colectivo en el respeto cabal de sus identidades*. Y esta visión propia de la gente coincide no por casualidad con la corriente teórica de Boaventura De Sousa que en su obra “Sociología de las ausencias y de las emergencias” sostiene que, si es posible ver un futuro concreto en lugar de un futuro infinito, que nuestro propósito debería ser alargar el presente y acortar el futuro como una forma de avanzar en la dignificación de las generaciones presentes en lugar de esperar un futuro casi inalcanzable para las futuras. Tratar de hacer dialogar el pasado con el presente como una forma de aprovechar el conocimiento empírico en la construcción de un mundo incluyente, donde quepa la pluralidad, hacer coincidir los saberes de nuestros antepasados y aprovechar el conocimiento basado en la comprobación científica que permita construir un mundo más amigable, menos cargado de tensiones y con ello asegurar verdaderamente la sustentabilidad alimentaria y medioambiental.

Retomaremos para finalizar la filosofía de Samir Amin que sostiene que el *verdadero desarrollo* es aquel que puede medirse en términos de la libertad con que el hombre cuenta, para dedicarse a hacer lo que más le hace feliz y no sólo aquello que las circunstancias le imponen, ya que las actuales condiciones laborales ofrecen muy poco margen de maniobra (jornadas prolongadas de trabajo con salario bajo, etc.)

obligándolo a emigrar con la consecuente descomposición del tejido social que es en si misma una amenaza para la paz social en países como los de Centro América. De ahí la importancia que tiene para nosotros abordar seriamente el tema del modelo de Desarrollo que se ha estado persiguiendo y que evidentemente cada vez es mas difícil de alcanzar en razón de que es un modelo inviable para nosotros ya que está guiado por las leyes del mercado y de la renta sostenido a pesar de todo por gobiernos que han adoptado las políticas mundiales sin tomar en cuenta las particularidades de las sociedades a las que representan mediante un sistema democrático de fachada o como afirma Lorenzo Meyer “de espejismo democrático”. Reconocer que la imposición de un modelo económico hegemónico es lo mas antidemocrático que puede haber y por el contrario los modelos alternativos como el presentado sientan las bases para una convivencia social mas armónica con propuestas que salen de la base social poder fomentar estas prácticas le daría un carácter más democrático al régimen que se precie de serlo. Y no circunscribirlo a la procesos electorales de simulación. Finalmente , y para terminar a manera de conclusión diríamos que, no está de más recalcar que **post-desarrollo** no es antidesarrollo, aunque sí es anti posiciones hegemónicas y homogenizantes. Querer *transgredir* la manera en que por décadas se han venido haciendo las cosas, no supone querer hacer lo contrario, pero sí que la vía no sea entendida en singular, como una sola vía, es decir, La vía. “La teoría y la práctica del post-desarrollo difiere de los sentimientos antidesarrollo en el sentido en que no niega ni la globalización ni la modernidad, pero busca formas de vida reconociéndolos pero imaginado trascenderlos.” (Hoogvelt 1996: 16.) Más allá del anti-desarrollo y del anti-entnocentrismo, el post-desarrollo procurar **repensar** lo que se ha venido pensado, **pensar** en aquello que está por fuera del *espacio de lo pensable*, e **impensar** todo aquello que se ha normalizado en nuestros imaginarios y representaciones.

# INCIDENCIA DE LA POLÍTICA DE SOSTENIBILIDAD EN EL DESEMPEÑO FINANCIERO DE LAS EMPRESAS: ANALISIS DE UN CASO EXITOSO DE SOSTENIBILIDAD EN COLOMBIA

José Obdulio Curvelo Hassán, Universidad Cooperativa de Colombia

Mario Heimer Flórez Guzmán, Universidad Cooperativa De Colombia

## RESUMEN

*La política de sostenibilidad se soporta en la triple hélice: equilibrio económico, social y ambiental de las empresas, la cual es evidenciada en la información financiera que estas generan. La presente ponencia, derivada del proyecto de investigación “incidencia de las políticas de responsabilidad social y ambiental de las empresas agroindustriales”, muestra el impacto que tiene sobre el desempeño financiero de las empresas la implementación de la política de sostenibilidad. La población objeto de estudio se centra en la empresa del sector lácteo más importante de Colombia, que además ha sido considerada caso exitoso de sostenibilidad por el Consejo Colombiano de Desarrollo Sostenible (CECODES: 2012), la literatura indica que el estudio de caso es lo más indicado y en la presente investigación se ha tomado el estudio de caso típico planteado por Yin en el año 2003. La construcción teórica se soporta en el enfoque normativo de la teoría de los stakeholders (Donaldson & Preston: 1995), la cual plantea que los derechos de los grupos de interés son inherentes a ellos, por consiguiente deben respetarse independientemente del beneficio o perjuicio que se genere, siendo así, se afirma, en el marco de la investigación misma, que el estudio del impacto de una política de sostenibilidad deber ser leída y entendida más allá de la función social de la empresa e incluir, también, los intereses reales de los diferentes grupos de interés. Por último, después de hacer el análisis de la información utilizando diferentes estadísticos y el diseño de test para pruebas de hipótesis, se concluye que existe una relación fuerte y positiva entre la política de sostenibilidad de la empresas y su desempeño financiero, lo que se constata en el caso estudiado, dado que la compañía logra disminuir sus gastos y el valor a pagar por concepto de impuestos, al poder acceder a los beneficios fiscales establecidos por el gobierno, así mismo, incrementó su margen de utilidad y el aporte al crecimiento del sector económico del que hace parte.*

**PALABRAS CLAVE:** Información Financiera, Sostenibilidad, Stakeholders

## INCIDENCE OF SUSTAINABILITY POLICY IN THE FINANCIAL PERFORMANCE OF THE COMPANIES: A RESEARCH OF A BOUGHT CASE TO A SUCCESSFUL CASE OF SUSTAINABILITY IN COLOMBIA

## ABSTRACT

*The sustainability policy is supported in the triple helix: economical, social and ambient balance of the companies, which is evidenced in the financial information that these generate. This paper, derived of the research project “incidence of the social and environmental responsibility policies of the agro-industrial companies”. Show the impact that it has about the financial performance of the companies, the implementation of the sustainability policy. The population under study focuses on the most important company in the dairy sector on Colombia, in addition has been considerate such a successful case of sustainability by the sustainability development Colombian house of representative (CECODES: 2012), the literature indicates that the case research is the best suited and in the present research has been taken the*

*tipic study case raised by Yin in the year 2013. The theoretical building is supported in the normative focus of the stakeholders theory (Donaldson y Preston: 1995), which raises that the right of the group of interest are inherent to them, therefore, must be adhered to regardless of the benefit or harm arising, being so, it says, in the context of the same research, that the study of the impact of a sustainability policy must be read and understood more than the social function of the enterprise and include, also, the real interest of the different groups of interest. Finally, after to do the information analysis using different statistics and the test design to tests of hypotheses, it's concluded that the exist a positive and strong relationships between the sustainability policy of the enterprise and the financial performance, what is noted in the studied case, given that the company achieves to reduce their cost and the value to pay for taxes, to gain access to tax benefits established by the government, likewise, increase their profit margin and contribution to the growth of the economic sector it belongs.*

## INTRODUCCIÓN

La responsabilidad social es actualmente dimensionada no solo como práctica ética de las empresas sino como un eje estratégico de la gestión, con gran preponderancia en la toma de decisiones. Este fenómeno en gran medida ha estado dinamizado por iniciativas de la sociedad civil, que tratan de establecer un esquema de control social y de verificación a la gestión de las empresas, que cuenta como máximo exponente al pacto global de Naciones Unidas a través del Global Reporting Initiative (GRI: 2013). En términos bursátiles el Dow Jones Sustainability Index (DJSI) así mismo el KLD Domini Social Index y FTSE4 Good. Con relación a los esquemas de regulación el Libro Verde de Responsabilidad Social de la Unión Europea (2001) y las iniciativas de la Comisión Europea (2002), constituyen el referente. Por otra parte desde el inicio de la iniciativa en los años 70's, que según Adela Cortina (1991) constituían una serie de demandas de la sociedad civil alrededor del comportamiento honesto, transparente y responsable de las empresas, llevan a que la academia, lidere proyectos de investigación alrededor de la diversidad de conceptos, naturaleza del reporte, su voluntariedad y la conveniencia sobre quienes eras responsables, de que eran responsable y ante quien se es responsable. Es en este contexto donde se instauran nuevos campos de posibilidad para la comprensión de dicho fenómeno, haciendo que las investigaciones nacientes extrapolaran del plano teórico y epistémico, al campo del desempeño y del rendimiento financiero (RF) de las empresas.

Las investigaciones acerca de la relación entre prácticas de la gestión de la responsabilidad social y desempeño financiero de las empresas, van a terminar por afirmar que la ética de la empresa es una respuesta ante la necesidad de neo-legitimación de las empresas antes tres situaciones: 1) la pérdida de confianza, la disminución de las ventas y la posición de empleados y consumidores en los niveles de decisión de las empresas; 2) el fenómeno de la globalización, que termina por disminuir el poder de los gobiernos locales y por consiguiente la merma en la capacidad de maniobra frente a la conservación de los recursos naturales y; 3) la reputación corporativa y la imagen empresarial, como fuentes estratégicas de la fidelización de clientes. La literatura muestra, además, que las empresas que implementaban políticas de responsabilidad social: 1) lograban que sus trabajadores incrementaran la motivación y se generara un trabajo más cualificado; 2) generaban actuaciones y actitudes frente a la aculturación; 3) consolidan la reputación como garante de confianza y; 4) se brindan por medio de política a los problemas relacionados con los conflictos de interés. De esto se infiere que la responsabilidad social logra su eficacia en la medida en que los grupos afectados por las decisiones de las empresas son reconocidos dentro de las relaciones dialógicas que condicen a la toma de decisiones, noción que soportara la teoría de los stakeholders. Alrededor de las teorías de los stakeholders se resaltan fundamentalmente tres. La primera de ellas liderada

por Milton Friedman (1962; 2005), que posiciona el discurso alrededor de la empresa en la sociedad, en el libre mercado, es decir, que la única responsabilidad social que tiene la empresa es el lucro y la generación de nuevos negocios. El segundo de ellos, por Edward Freeman (1976), quien institucionaliza los pilares del cristianismo a la economía de la empresa, al decir que “la ética consiste en hacer cosas por los demás y por uno mismos” en razón a lo cual a mayor lucros mejores posibilidad de inversión socialmente responsable. La tercera orientación está liderada por Donaldson & Preston (1995) quienes plantea que los derechos de los grupos de interés son inherentes a ellos, por consiguiente deben respetarse independientemente del beneficio o perjuicio que se genere.

Siguiendo a Donaldson & Preston (1995) se puede afirmar que la vinculación de los grupos de interés a la gestión de la empresa termina por favorecer el desarrollo de capacidades institucionales y por consiguiente generar una ventaja competitiva sostenible (Burke y Logsdon: 1996; Husted y Allen: 2000; Mc Williams y Siegel: 2001; & Toro: 2006). Esta situación conlleva a pensar la situación y posición de las empresas que sostienen principalmente la economía de un país. Dada la vocación productiva en Colombia se formular una investigación en el sector agro industrial, que posibilite comprender que tanto las estrategias de sostenibilidad del sector han terminado por favorecer el desempeño financiero de las mismas, “Colombia ha logrado establecerse como el cuarto productor de lácteos en América Latina, con un “volumen aproximado de 6.500 millones de toneladas por año, superado solo por Brasil, México y Argentina. A nivel mundial, Colombia ocupa una posición privilegiada al ubicarse en el lugar número 15 dentro del ranking total de productores” (Proexport, 2011, p. 6).

Para la selección del caso a estudiar se ha tenido como criterio que la empresa sea considerada caso exitoso de sostenibilidad, al implicar ello que la misma logra una armonía entre el desempeño financiero, sus acciones socialmente responsable y ambientalmente sostenible. La empresa seleccionada declara en su memoria de sostenibilidad que dentro de las novedades está el reportar como empresa y su compromiso de responsabilidad con su entorno, adicionalmente posicionan el diálogos con los grupos de interés sobre la rentabilidad, así mismo la inclusión de temas alrededor del medio ambiente, proveedores, cadena de distribución y las comunidades aledañas a su materia prima. Además de estos criterios, sobre la empresa estudiada, establecen los datos oficiales que aporta aportan 1,8% del PIB industrial, porcentaje altamente significativo en tanto La industria de alimentos y bebidas en Colombia aportan el 20% de su total. Después de hacer el análisis de la información utilizando diferentes estadísticos y el diseño de test para pruebas de hipótesis, se concluye que existe una relación fuerte y positiva entre la política de sostenibilidad de la empresas y su desempeño financiero, lo que se constata en el caso estudiado, dado que la compañía logra disminuir sus gastos y el valor a pagar por concepto de impuestos, al poder acceder a los beneficios fiscales establecidos por el gobierno, así mismo, incrementó su margen de utilidad y el aporte al crecimiento del sector económico del que hace parte.

## REVISIÓN DE LA LITERATURA

Las investigaciones científicas en los ámbitos más amplios de la empresa y la organización han propendido por el desarrollo de diversas metodologías para la comprensión de sus distintos fenómenos, en procura de su sostenibilidad. Para ello se fundamentan en teorías, dentro de las cuales en temas de gestión encontramos con mayor preponderancia la teoría de los stakeholders con sus tres tradiciones: 1) liderada por Milton Friedman (1962; 2005), que posiciona el discurso alrededor de la empresa en la sociedad, en el libre mercado; 2) la de Edward Freeman (1976), que institucionaliza que “la ética consiste en hacer cosas por los demás y por uno mismos” en razón a lo cual a mayor lucros mejores posibilidad de inversión socialmente responsable y; 3) la orientación está liderada por Donaldson & Preston (1995) para quienes los derechos de los grupos de interés son inherentes a ellos. Así mismo, en las concepciones más contemporáneas Larrinaga y Rodríguez (2010) afirman que las metodologías que combinan información de distinta naturaleza como

la cualitativa y cuantitativa, la subjetiva y objetiva, la interna y externa al propio fenómeno estudiado, contribuyen a su mejor comprensión y lecturas holistas.

Soportado en ello, se ha considerado que el estudio de caso, resulta la mejor manera de comprender la relación entre desempeño financiero y la política de sostenibilidad de las empresas, máxime cuando el discurso se posiciona desde Donaldson & Preston (1995), que propenden por las relaciones dialógicas con los stakeholders. Mertens (2005) define esta apropiación metodológica, como aquella cuya construcción se centra sobre un individuo, grupo, organización, comunidad o sociedad, que es visto y analizado como una entidad. De igual forma la U. S. General Accounting Office (1990), lo define como un método para aprender respecto a una instancia compleja, basado en un entendimiento comprensivo de esta instancia como un “todo” y su contexto, mediante datos e información obtenidos por descripciones y análisis extensivos, siendo lo anterior ratificado con la definición de la Harvard Business School (1997) que lo considera desde 1908 como un método válido para evaluar unidades organizacionales.

Ahora, con relación al estado de la cuestión, se encuentra que hay una gran variedad de enfoques y de resultados de investigaciones, que confirman una relación positiva entre el desempeño financiero de las empresas y su política de sostenibilidad, no obstante, se deja en enterever, que la misma también podría no significativa, dependiendo del estudio concreto analizado. Para dicho abordaje se ha tomado la RED teórica sugerida por Ryan, et. Al., (2004) que implica: 1) La escogencia dos revistas especializadas que traten el problema de la investigación y que cuenten con índice de impacto significativo; 2) de dicha revisión se seleccionan los autores con artículos publicados en los últimos años con mayor impacto en la citación y; 3) se realiza análisis con la información encontrada estableciendo nodos y puntos de correlación, lo que requirió en la presente investigación el diseño teórico, siguiente a Ander-Egg (2006); Sabino (2007); Hernández Sampieri, et al. (2003). Para esta investigación se han utilizado los meta-análisis de Orlitzky et al., (2003); Allouche y Laroche, (2005) y Wu (2006).

En términos de las concepciones del entender por política de sostenibilidad, entendida esta como estrategia de responsabilidad social y ambiental, a finales del siglo pasado, el Consejo Mundial de los Negocios para el Desarrollo Sostenible (WBCSD: 1999), lo consensó como “el compromiso de los negocios para contribuir al desarrollo económico sostenible, trabajando con empleados, sus familias, la comunidad local y la sociedad en su conjunto para mejorar su calidad de vida”, de donde se infiere que todo trabajo que posibilite analizar la sostenibilidad en la empresa deberá centrarse en los stakeholders. Esta postura de la WBCSD, muy difundida y validada en nuestros días, entró a centrar el debate provocado por la dispersión de conceptos y posición del discurso sobre la Responsabilidad Social (McGuire, 1963; Steiner, 1975; Ackerman y Bauer, 1976; Carroll 1979) que se venía generando desde la década de los 70's, que según Cortina (1994), es producto de un movimiento de la sociedad civil, dado que ya había una iniciativa religiosa de épocas anteriores (R. T. de George 1987), donde se demandaba un límites a las actuaciones de las empresas y la necesidad de responder ante la sociedad por las acciones que ellas efectuaban y que incidían negativamente en la sostenibilidad ambiental y en el bienestar de las relaciones sociales.

Aunque la literatura poco se centra en los avances ocurridos en lo concerniente a la responsabilidad social de la empresa y su desempeño financiero desde la perspectiva teológica, es necesario precisar que en la década de los cincuenta y e inicio de los sesenta el desarrollo, de manera especial, de la doctrina social de la Iglesia Católica y de sus reflexiones teológicas sobre las realidades terrenas y el mundo del trabajo, jugaron un papel decisivo en las demandas de la sociedad civil sobre sostenibilidad de las empresas, esto puede inferirse en los debate a los planteamientos de Teilhard de Chardin (1955; 1976) sobre el sentido cristiano del trabajo en el mundo, así mismo las encíclicas Mater et Magistra (promulgada por el Papa Juan XXIII el 15 de mayo de 1961), Populorum Progressio (promulgada por el Papa Pablo VI el 26 de marzo de 1967), que trata sobre el desarrollo de los pueblos, lo mismo que la constitución pastoral Gaudium et Spes del Concilio Vaticano II, que profundiza sobre la ética social. Lo anterior devela que la de la empresa nace

en el seno de la iglesia como un cuestionamiento al hecho mismo que el crecimiento exponencial del consumo y por consiguiente la generación de riqueza no refleja una estrategia de conservación de los recursos naturales, el respeto por al formas de vida humana y no humana, ni mucho menos posibilitaba la redistribución de la riqueza en las bases sociales. En concomitancia a lo anterior se encuentra en Nieto y Fernández (2004) y Garriga y Melé (2004) que la responsabilidad social de la empresa, como estrategia para su política de sostenibilidad, constituye eje de su gestión y un criterio de juicio en la toma de decisiones. Por consiguiente, es susceptible de catalogarse como una inversión estratégica que posibilita ventaja competitiva en el marco de la llamada sostenible (Burke y Logsdon: 1996; Husted y Allen: 2000; Mc Williams y Siegel: 2001; Toro: 2006), lo que se justificaría desde el carácter funcional de la teoría de los recursos y las capacidades (Wernerfelt: 1984; Barney: 1986; 1991).

Hay otro aspecto que es sensible a este entender, y es que si para el desarrollo de la política de sostenibilidad se requieren grandes inversiones deberá gestarse incentivos, desde el Estado, que favorezca a aquellas organizaciones que a bien lo realicen, siendo ésta justificada desde la Teoría de los Costes de Transacción y la Teoría de Juegos (Rasmusen: 1992; Quinn y Jones: 1995), adicional a lo anterior se mejora la reputación y se favorece una posición beneficiosa, tanto para ellas como para sus propietarios. Esta noción nos lleva afirmar la existencia de una relación positiva entre política de sostenibilidad y desempeño financiero de las empresas, no obstante, se precisa que la posición metodológica y la diversidad de maneras de entender el concepto hacen que las conclusiones puedan tener diversidad de lecturas de sus resultados (Moskowitz: 1972; Davidson y Worrell: 1990; Ruf et al.: 2001; Montiel: 2008; Canela, et al.: 2011).

Finalmente debe precisarse que una marcada legitimidad de dicho hecho que según Kwong, et al., (2012) se favorece porque la nueva generación de dirigentes empresariales propende por desarrollar una comprensión más profunda de gestión dentro de la economía social, lo anterior retomando la tradición liderada por Daily (1992), que propone que el campo de la gestión empresarial se requiere avanzar en el conocimiento de la eficacia de la responsabilidad Social y Ambiental pero también en el diseño de modelos y teorías que con un enfoque diferencial capaces de rescatar características culturales locales, que redunden en una comprensión amplia de las estructuras y mecanismos de gobernabilidad en procura de un mejor funcionamiento organizacional.

Teniendo Este Horizonte de la Literatura Surgen las Siguietes Hipótesis

El modelo de gestión de la Responsabilidad Social además de garantizar el cumplimiento de la normativa en temas sociales y ambientales mejora la competitividad de las empresas.

plantear estrategias de sostenibilidad en las que se incluyan los grupos de interés en los procesos organizacionales de las empresas está directamente relacionado con el desempeño financiero de las organizaciones.

Vincular de forma estratégica variables que fortalezcan diferentes áreas de la empresa en materia de gestión social y ambiental, está directamente relacionada con la generación de información financiera y no financiera útil y más pertinente para los diferentes grupos de interés.

## METODOLOGÍA

Desde la estructura metodológica esta investigación se desarrolla bajo un enfoque mixto al ser este un proceso que recolecta, analiza y vincula datos cuantitativos y cualitativos en un mismo estudio o una serie de investigaciones para responder un problema de investigación (Hernández, et. Al.: 2006). De igual forma se utilizan técnicas de análisis de corte descriptivo, explicativo e inferencial basados en los datos cualitativos y cuantitativos obtenidos de la evidencia empírica proveniente de las fuentes documentales

históricas de la empresa siendo esta una investigación documental, puesto que las fuentes primarias y secundarias de la investigación obedecen a los estados financieros, estados de resultados y memorias de sostenibilidad de la empresa objeto de estudio, así como a informes emitidos por el gobierno nacional.

Particularmente para este estudio de caso se toma como referencia a YIN (2003) el cual establece que, este tipo de investigación permite el estudio de un objeto o caso, cuyos resultados permanecerán ciertos solo en ese caso específico. Sin embargo, mediante un estudio de caso se podrá obtener una percepción más compleja del objeto de estudio, considerándolo como una entidad holística, cuyos atributos podemos entender en su totalidad solamente en el momento en que se examinen todos los demás de manera simultánea, es decir estudiar un objeto como un todo.

Con relación al objeto de estudio este se centra en determinar la relación que existe entre la variable independiente (Ingresos Operacionales) con las variables dependientes (Ingresos no operacionales, costos de ventas, utilidad antes de impuesto) durante los periodos de tiempo 2010, 2011 y 2012 de la empresa ALPINA, así mismo para la hacer las inferencias, se tienen en cuenta el flujo de caja, flujo de caja del accionista. Teniendo en cuenta la ruta metodológica planteada por YIM, la investigación sigue las siguientes fases:

#### Fase I Diseño del Caso Múltiple de Estudio

En esta fase se determina como población Objeto de estudio la empresa ALPINA y el estudio de caso se centra en la observación del comportamiento financiero de esta empresa durante los periodos 2010, 2011 y 2012, puesto que ella constituye en una de las empresas más importantes de industria de productos lácteos en Colombia, fundada en 1945 y que a nuestros días cuenta con nueve plantas de producción en el país, 2 en el ecuador, una en Venezuela, y cuenta con presencia internacional en centro américa, norte américa y algunos países europeo y es considerada caso exitoso de sostenibilidad por CECODES s.

Fase II, Conducción del caso de estudio: preparación de la recolección de la información. El presente es un estudio documental, Frankiln (1997) Define la investigación documental aplicada ala empresa como una técnica de investigación en la que se deben seleccionar aquellos escritos que son de interés relacionados con el estudio. De igual forma este tipo de investigación recolecta, selecciona y presenta datos coherentes, utilizando los procesos lógicos de toda investigación como son el análisis, la síntesis, la deducción, la inducción etc, y realiza un proceso de abstracción científica generalizando sobre la base de lo fundamental Fuentes primarias: Estados Financieros publicados por los organismos de control y vigilancia del estado que cuentan con el respectivo informe del auditor y del revisor fiscal, el informe de gestión de los periodos estudiados y la memoria de sostenibilidad que ha sido depositada en el consejo colombiano de desarrollo sostenible Fuentes secundarias:

Estudios realizados por los respectivos organismos del estado a las empresas del sector y otra información divulgada por la empresa. Fase III, Conducción del caso de estudio: preparación y recolección de la información. En esta fase, se utilizó una matriz (Tabla de Hausdorf de doble entrada) en la que las variables tenidas en cuenta fueron (Ingresos operacionales, Costos de ventas, Utilidad antes de impuesto e Ingresos no Operacionales) contra los periodos de tiempo 2010, 2011, 2012. (Ver tabla \_) y los datos fueron obtenidos de los estados financieros publicados por el ente gubernativo encargado. Posteriormente se utiliza la matriz para el análisis DOFA y la matriz para el análisis PEST en donde se tomaron datos cualitativos obtenidos de las memorias de sostenibilidad publicados por la empresa.

## Tipificación y Codificación de Variables

Tabla 1: Codificación de Variables

Codificación	Denominación	Tipo De Variable
INO2010	Ingresos netos operacionales-2010	Independiente
CV2010	Costos de ventas – 2010	Dependiente
UOP2010	Utilidad operacional -2010	Dependiente
INOP2010	Ingresos no Operacionales- 2010	Dependiente
INO2011	Ingresos netos operacionales-2011	Independiente
CV2011	Costos de ventas – 2011	Dependiente
UOP2011	Utilidad operacional -2011	Dependiente
INOP2011	Ingresos no Operacionales- 2011	Dependiente
INO2012	Ingresos netos operacionales-2012	Independiente
CV2012	Costos de ventas – 2012	Dependiente
UOP2012	Utilidad operacional -2012	Dependiente
INOP2012	Ingresos no Operacionales- 2012	Dependiente

*Variable independiente: Ingresos operacionales puesto que el objeto de estudio está basado principalmente en el estado de resultados, puesto que este es quien permite medir la competitividad de la empresa. Dado que al poder conocer si los costos de operación garantizan el retorno de la rentabilidad esperada del inversor.*

## Fase IV: Análisis Del Caso de Estudio

En esta fase se utilizaron diagramas de dispersión de datos tomando como variable estudiada (Ingresos operacionales, Costos de Ventas, Utilidad Operacional e Ingresos no Operacionales) contra los periodos de tiempo 2010, 2011, 2012. De igual forma se utilizó el factor de correlación de Pearson para determinar la relación que existe entre la variable dependiente e independiente, posteriormente se utilizó el test de SPERMAN para validar las hipótesis y el análisis DOFA y PEST para generar información cualitativa frente a las actividades propias de sostenibilidad en la empresa.

## Fase V: Elaboración del Reporte del Estudio de Caso

Para realizar el reporte del caso de estudio se tuvo en cuenta los resultados estadísticos, indicadores financieros, y se hizo la inferencia cruzando la misma información con las memorias de sostenibilidad e información reportada por los organismos gubernamentales de control. Dentro de los datos estadísticos tenidos en cuenta se tuvieron: Factor de Correlación entre la variable independiente y las variables dependientes, factor de covariación de cada una de las variables en los periodos de tiempo estudiados y la validación de las hipótesis por medio de test de SPERMAN; Dentro de los factores financieros se tuvo en cuenta la variación de las variables estudiadas en los periodos de tiempo establecidos, indicadores financieros de relación entre la variable dependiente con las variables independientes y la evolución financiera de cada una de las variables, y dentro de las variables cualitativas que se tuvieron en cuenta son: Los factores políticos, sociales y económicos que intervienen en el objeto del estudio, teniendo en cuenta de cada uno de ellos las debilidades, fortalezas, oportunidades y amenazas.

## CONCLUSIONES Y ANALISIS DE LOS RESULTADOS DEL CASO

Alpina Productos Alimenticios S.A., es una multinacional con trayectoria de casi 70 años en el mercado colombiano, su actividad principal es la producción de bebidas lácteas y productos alimenticios. Su política de responsabilidad social y ambiental se centra en un proceso de trabajo mancomunado con las comunidades colombianas en situación de vulnerabilidad de los derechos fundamentales, lo cual es consecuente con su sistema de gestión de negocios inclusivos o desarrollo de la base de la pirámide, adicional a lo anterior cuentan con una fundación que se encarga entre otras cosas de propiciar la seguridad alimentaria y nutricional a través de diversas estrategias. Entre las que se pueden enunciar las siguientes

(<http://www.alpina.com.co/>) Desarrollo, transferencia e instalación de mejores prácticas en producción, comercialización y transformación de alimentos, buscando la sostenibilidad y la eficiencia económica, tecnológica, social y ambiental. Estrategias que mejoren el acceso físico y económico de las comunidades a la alimentación saludable. Habilidades para mejorar las prácticas de la alimentación saludable y estilos de vida saludables en las diferentes etapas del ciclo vital humano. Promoción de la salud y entornos saludables: cuidado para la salud, prevención de alteraciones nutricionales, acceso a servicios básicos y sistemas de vigilancia.

Distribución inclusiva de sus productos denominada Madres Emprendedoras, que vincula a madres cabeza de familia de los estratos socioeconómicos 1 y 2. Desarrollar negocios sociales, consistente en una división de negocios independiente de Alpina, que busca proveer soluciones de nutrición para la base de la pirámide, bajo criterios de rentabilidad y reinversión de utilidades.

### Evolución General de los Resultados Financieros de Alpina

De forma global se observa que en los últimos tres años la empresa ha registrado un aumento significativo en los ingresos operacionales y la utilidad operacional, por otra parte se evidencia una caída significativa en la participación de los denominados ingresos no operacionales. Uno de los primeros factores que nos lleva a aseverar que a medida que se avanza en la inclusión de la base en la actividad productiva se logra la optimización en los costes de producción y se garantiza el consumo de los productos ya que los mismos son los más arraigados posibles en la cultura, por consiguiente se incrementa la utilidad operativa.

Al realizar los respectivos análisis, específicamente las variaciones porcentuales a nivel de los cuatro aspectos de interés, se evidencia un avance significativo en el desarrollo de la participación comercial de la empresa respecto a sus segmentos comerciales de interés, lo que se corrobora en la partida de ingresos operacionales los cuales presentan un crecimiento del 26,07% entre lo registrado en el año 2011 frente a lo obtenido en el año 2010, mientras que en la vigencia 2012 se da un aumento del 12,45% frente al nivel de ingresos reportado al cierre del año 2010.

Tabla: 2: Evolución de los Cuatro Aspectos Financieros Objeto de Estudio Alpina S.A 2010-2012

Registro/Cuenta Operacionales (Millones De Pesos)	2010	2011	2012
Ingresos netos	1.142.356	1.440.198	1.619.538
Costos de ventas	689.940	875.732	991.489
Utilidad operacional	60.951	95.697	103.581
Ingresos no Operacionales	46.469	34.533	30.365

En la Figura 1 se evidencia que los ingresos no operacionales tuvieron un crecimiento notorio, según el estado de flujo de efectivo (ver anexo), provocado por una mejor estima después de haber obtenido el reconocimiento como caso exitoso de sostenibilidad en el año 2009, aumento cercano al 26,93%, el cual se inició a equilibrar a partir del segundo año (2011) después de haber obtenido dicho reconocimiento, aumento sostenido del 13,22 % en promedio.

Figura 1: Evolución de los Cuatro Aspectos Financieros Objeto de Estudio Alpina S.A 2010-2012

Fuente: construcción propia de los autores

Tabla 3: Coeficiente de Correlación de Pearson

coeficiente de correlación entre los ingresos netos operacionales y la utilidad operacional	1
coeficiente de correlación entre los ingresos netos operacionales y los costos por ventas	0,99995849
coeficiente de correlación entre los ingresos netos operacionales y los ingresos no operacionales	-0,99166476

Fuente: Creación propia de los autores

En la tabla se evidencia que existe una fuerte relación entre los ingresos operacionales y la utilidad operacional, existe una fuerte relación entre los ingresos netos operacionales y los costos de ventas, y existe una fuerte relación negativa entre los ingresos netos operacionales y los ingresos no operacionales, lo que ratifica el planteamiento hecho anteriormente el cual planteaba que dado a la naturaleza de la empresa y después de puesta en marcha la política de responsabilidad social en la entidad, cuando los ingresos operacionales aumentan, los ingresos no operacionales disminuyen

En cuanto a la utilidad operacional se observó un incremento significativo equivalente al 57,01%, no obstante disminuyó a un nivel del 8,24% para el periodo 2011-2012, esto provocado probablemente por un estancamiento o saturación de la segmentación de su mercado objetivo, lo cual se apoya en los planteamientos dejados en la misma memoria de sostenibilidad de ese periodo que habla de la promoción del consumo de los productos en los estratos 1 y 2, con productos, producción y canales de distribución ajustados a sus necesidades (ALPINA: 2012).

Figura 2: Evolución de Variables de Estados de Resultados de Alpina S.A 2010-2012

Fuente: Construcción propia de los autores

Tabla 5: Razones Financieras Entre la Variable Independiente y las Variables Dependientes

Porcentaje Costo de Ventas / Ingresos Netos Operacionales		
Año 2010 (0,60396)	Año 2011 (0,60806)	Año 2012 (0,6122)
porcentaje utilidad operacional / ingresos netos operacionales		
Año 2010 (0,05336)	Año 2011 (0,06645)	Año 2012 (0,06396)

Fuente: El autor

Adicionalmente es pertinente precisar que en el caso estudiado se constata que existe una relación positiva entre la política de Sostenibilidad de la empresa y sus rendimientos financieros, aunque se precisa que en la revisión de la literatura dependiendo del estudio concreto que se analiza dicha correlación sufre variaciones. Por último, se deja por sentado las limitaciones de carácter temporal y espacial en el caso estudiado, así mismo se requiere adicional que posibilite depurar información que pueda influenciar los resultados.

# MODELO CONCEPTUAL PARA DETERMINAR EL IMPACTO DEL MERCHANDISING VISUAL EN LA TOMA DE DECISIONES DE COMPRA EN EL PUNTO DE VENTA

Claudia Janeth Ramírez Beltrán, Universidad Autónoma de Bucaramanga  
Luis Gerardo Alférez Sandoval, Universidad Autónoma de Bucaramanga

## RESUMEN

*La investigación se realizó en los principales supermercados de la ciudad de Bucaramanga, Colombia, partiendo de la identificación de los conceptos teóricos que permiten sustentar el desarrollo de la investigación. Posteriormente se utilizaron técnicas cualitativas y cuantitativas para la recolección de datos de clientes en los supermercados seleccionados, para después realizar el análisis de los resultados obtenidos y concluir con la elaboración del modelo conceptual con su correspondiente validación estadística. El modelo destaca elementos claves para la toma de decisiones en el punto de venta, entre los que se cuentan la decoración del lugar, las promotoras de ventas, el tipo de publicidad o merchandising visual. Los resultados llevan a concluir que el 28% de los clientes de forma usual cambian o toman su decisión por efecto de la publicidad o del merchandising visual, llegando incluso al 61%, considerando a quienes cambian su decisión de forma ocasional.*

**PALABRAS CLAVE:** Merchandising, Comercio Minorista, Toma de Decisiones, Consumidor, Marketing, Punto de Venta.

## CONCEPTUAL MODEL TO DETERMINE THE IMPACT OF VISUAL MERCHANDISING IN MAKING PURCHASING DECISIONS AT THE POINT OF SALE

### ABSTRACT

*The research was realized in the main supermarkets at the Bucaramanga City, started from the identification of the theoretical concepts that substantiate the development of research. Later, were used qualitative and quantitative techniques for collection of customer's data at the chosen supermarkets, and then analyzes the results obtained and concludes with the construction to conceptual model with the correspondent statistic validation.*

*The model it highlights key elements to made decisions at the point of sales, such as the decor of the place, sales promoters, and the kind of advertising or visual merchandising. The results lead to the conclusion that 28% of the customers always make decisions by effect to the visual advertising or the visual merchandising, getting even to the 61%, considering those who change their decision occasionally.*

**JEL:** M30, M31, M37

**KEYWORDS:** Merchandising, retail, decision making, consumer, marketing, point of sale

## INTRODUCCIÓN

Desde los inicios del presente milenio, el mercado del comercio minorista de productos de consumo masivo, especialmente alimentos y hogar, empezó a cambiar de forma más acelerada en Colombia. Esto ha tenido sus repercusiones en algunas ciudades intermedias, como es Bucaramanga, acostumbradas a un comercio minorista tradicional con presencia de cadenas locales. La llegada de cadenas multinacionales, por vía directa o compra, ha impactado en los hábitos del consumidor, saliendo beneficiado por una mayor oferta.

Sin duda alguna esto ha representado retos estratégicos para las cadenas locales e independientes, por obvias razones de tamaño de mercado y presupuesto para la implementación de cada estrategia. Una de las estrategias es la atracción en el punto de venta a través de la implementación de todo lo que constituye el merchandising visual, como un elemento de comunicación de marketing que cumple con sus funciones de informar, comunicar y persuadir al consumidor. La investigación, enfocada a determinar el impacto o la incidencia del merchandising visual en la toma de decisiones en el punto de venta, con el objetivo de obtener un modelo que lo represente, permitió identificar los diferentes factores que inciden en la toma de decisiones de compra en el punto de venta.

El modelo se concibe a partir de los resultados que se obtuvieron desde la investigación cualitativa y cuantitativa realizada con los clientes de los cinco supermercados seleccionados para tal efecto. La validación estadística de los mismos llevó a las conclusiones que permiten dar validez al modelo propuesto. Con estos resultados se pretende ser un punto de referencia para que los supermercados puedan mejorar la gestión del merchandising en el punto de venta, para beneficio de las dos partes.

## REVISIÓN DE LITERATURA

Según Solomon (2008), se estima que los consumidores deciden dos de cada tres compras en el punto de venta mientras caminan por los pasillos. Por tal razón, los minoristas buscan diseñar ambientes de compras que aumenten las probabilidades de estar en contacto con los consumidores en el momento exacto en que toman una decisión. De acuerdo con esto, se revisaron los diferentes modelos para la toma de decisiones (AIDA, 1986; Nicosia, 1966; Howard-Sheth, 1969). Así mismo, se revisaron los modelos y conceptos referentes a la toma de decisiones de los consumidores, considerando los diferentes factores que inciden en el proceso cognitivo de reconocimiento del problema del consumidor (Rivas y Grande, 2010; Peter y Olson, 2006).

De otra parte, se definió el merchandising, considerando sus políticas, funciones, tipos y técnicas (Palomares, 2009; Lobato, 2005), con el fin de contextualizar sus prácticas para ser consideradas en la investigación.

## METODOLOGÍA

Para la recolección de datos primarios se aplicaron dos técnicas diferentes.

*Investigación cualitativa: Observación:* En visitas previas realizadas a tres de los supermercados seleccionados, se observó el comportamiento de los compradores que se encontraban en ese momento en el punto de venta, las zonas, el tipo de material publicitario y las diferentes formas de interacción con la publicidad (merchandising visual). Al final se obtuvieron un total de 1.080 registros individuales de observación. Finalmente, todos estos datos de observación fueron procesados en el software estadístico SPSS.

*Investigación cuantitativa: Encuesta:* Se aplicaron un total de 462 encuestas, distribuidas en los cinco supermercados considerados para la investigación (Más por Menos Carrera 27, Cajasan Puerta del Sol, Mercomfenalco 27, Cootracolta, Mercasur. La Tabla 1 muestra la composición de las encuestas aplicadas.

Tabla 1: Composición de la muestra en los supermercados.

PDV	Proporción	Encuestas Aplicadas
Más por Menos	21.6%	100
Cootracolta	21.6%	100
Cajasan	21.4%	99
Mercomfenalco	21.6%	100
Mercasur	13.6%	63
Total	100%	462

*Esta tabla indica el número de encuestas aplicadas en cada supermercado, considerando el número de registros promedio de los últimos seis meses, proporcionado por cada uno de los supermercados. Fuente: Elaboración propia.*

## RESULTADOS

Del proceso de observación se obtuvo una gráfica de la cantidad media comprada contra los niveles de los puntos de venta para cada tipo de ubicación. Se identificó que hay interacción, es decir, existen lugares de ubicación de los productos que son mejores que los otros, específicamente los clientes prefieren los productos ubicados en el lineal o estantes, reflejado en una mayor cantidad promedio de productos comprados en esta ubicación. Así mismo, se evidenció una relación entre el tiempo de observación del estímulo y la cantidad de productos comprados, tal y como se observa en la Figura 1.

Figura 1: Relación entre tiempo de observación y cantidad de productos comprada

*Se muestra la cantidad promedio comprada bajo los diferentes tiempos de permanencia frente al estímulo, observándose que los tiempos comprendidos entre 31 y 50 segundos y entre 101 y 120 segundos de permanencia ocasionan la compra de más cantidad de productos en promedio*

También se llevó a cabo un análisis respecto a la ubicación (lineal, punta de góndola, exhibición adicional), punto de venta y tipo de zona (caliente, fría) para determinar si tenían un efecto sobre la cantidad de productos adquiridos. El análisis de varianza llevó a concluir que tal efecto es significativo, de acuerdo con lo que se muestra en Tabla 2.

Tabla 2: Análisis de varianza entre ubicación, punto de venta y tipo de zona

Origen	Tipo III		
	Chi-cuadrado Wald	de gl	Sig.
(Intersección)	101.773	1	0.000
Ubicación	14.696	2	0.001
Punto de venta	13.225	4	0.010
Ubicación*punto de venta	44.829	8	0.000
Tipo zona	6.659	1	0.010

De acuerdo con el resultado del nivel de significancia cercano a 0.0, se puede concluir que tanto la ubicación de los productos como el tipo de zona, en relación con el punto de venta, inciden directamente en el número de productos que son comprados por los clientes, es decir, tienen relación directa con las ventas.

Complementando lo anterior, la Figura 2 permite observar la cantidad de productos promedio que los clientes compran en las zonas calientes y en las zonas frías del supermercado.

Figura 2: Compra promedio de acuerdo con ubicación del producto

Se evidencia que los clientes prefieren los productos ubicados en las zonas calientes de los supermercados, con una compra promedio mayor, así como prefieren los productos ubicados en el lineal.

Hasta aquí se puede concluir, con respecto a la cantidad de productos comprados y el punto de venta, que existen relaciones directas con la ubicación de la exhibición del producto, el tipo de zona, el tiempo de permanencia frente al estímulo y el género. Se concluye entonces que en general son las mujeres quienes llevan mayor cantidad de productos ubicados en los lineales ubicados en zonas calientes, después de permanecer entre 31 y 50 segundos o entre 101 y 120 segundos frente a un hablador.

Con respecto a la investigación cuantitativa, inicialmente se identificó que el estímulo al que los clientes prestan más atención en el supermercado son las promotoras de ventas de las marcas, teniendo en cuenta que un 32.8% de los clientes así lo señalaron, 15.22% de las mujeres y 17.58% de los hombres.

El análisis factorial de correspondencias asociando las variables “estímulos de atención” versus “incidencia en la compra”, mostrado en la Tabla 3, indica que hasta en un 78% de las veces la decoración del punto de venta incide en la decisión de compra (categorías siempre, casi siempre y ocasionalmente).

Tabla 3: Análisis de correspondencias (estímulos de atención -incidencia en la compra)

Cuando está en el supermercado, a cuál de los siguientes estímulos presta más atención	Los elementos de publicidad visual en el supermercado inciden en su decisión de compra						Masa
	Siempre	Casi siempre	Ocasionalmente	Casi nunca	Nunca	Margen activo	
Anuncios sonido	11.5%	17.3%	9.6%	28.8%	32.7%	52	11.4%
Decoración PDV	11.6%	42.8%	23.9%	11.6%	10.1%	138	30.1%
Promotoras	7.4%	35.1%	31.1%	19.6%	6.8%	148	32.3%
Volantes	2.6%	23.1%	25.6%	38.5%	10.3%	39	8.5%
Anuncios impresos	11.1%	33.3%	40.7%	12.3%	2.5%	81	17.7%
Margen activo	9.4%	34.1%	27.7%	18.6%	10.3%	458	100.0%

Con los datos de la tabla se ratifica lo anteriormente analizado, en referencia a que el 30% de los encuestados presta más atención a la decoración del punto de venta y el 32% a las promotoras.

Un análisis similar se puede llevar a cabo teniendo en cuenta la manera como se distribuyen los estímulos bajo los diferentes niveles de la decisión de compra, según se observa en la Tabla 4.

Tabla 4. Incidencia de la publicidad visual de acuerdo con el estímulo.

Cuando está en el supermercado, a cuál de los siguientes estímulos presta más atención	Los elementos de publicidad visual en el supermercado inciden en su decisión de compra				
	Siempre	Casi siempre	Ocasionalmente	Casi nunca	Nunca
Anuncios sonido	14.0%	5.8%	3.9%	17.6%	36.1%
Decoración PDV	37.2%	37.8%	26.0%	18.8%	29.8%
Promotoras	25.6%	33.3%	36.2%	34.1%	21.3%
Volantes	2.3%	5.8%	7.9%	17.6%	8.5%
Anuncios impresos	20.9%	17.3%	26.0%	11.9%	4.3%
Margen activo	100.0%	100.0%	100.0%	100.0%	100.0%

De acuerdo con los datos, se determina una mayor incidencia en la decisión de compra por parte de la decoración del punto de venta (37.2%), por las promotoras y por los carteles y anuncios impresos (20.9%).

Con los anteriores resultados y basados en el análisis de correspondencia, se obtuvo un mapa que representa la incidencia que tienen los estímulos en la decisión de compra, evidenciando las conclusiones anteriores, según se observa en la Figura 3.

Con el análisis de correspondencias entre la importancia de la publicidad visual en el punto de venta y los cambios en la decisión de compra por efecto de la publicidad visual, se obtuvo la Figura 4, en la cual se observa que quienes consideran la publicidad visual como importante o muy importante, siempre o casi siempre (27.6%), e incluso ocasionalmente (llega hasta el 60%), cambian su decisión de compra basada en esta publicidad, lo que denota la alta incidencia que este elemento del merchandising del punto de venta tiene sobre las decisiones de compra que se toman en el punto de venta.

En los anteriores análisis se determinó la incidencia de la publicidad visual en la toma de decisiones. Para contrastar lo anterior, se llevó a cabo el cruce entre las variables “Cuando está en el supermercado, a cuál de los siguientes estímulos presta más atención” y “Los elementos de publicidad visual en el supermercado hacen cambiar su decisión de compra”, cuyos datos se muestran en la Tabla 5.

Figura 3: Incidencia de la publicidad visual de acuerdo con el estímulo.

Los puntos que se encuentran cercanos son las modalidades que mejor se corresponden. Se identifica que la decoración del punto de venta es el elemento que siempre o casi siempre incide en la decisión de compra, mientras que las promotoras y los carteles y anuncios influyen de forma ocasional.

Figura 4: Cambio de decisión de compra de acuerdo con publicidad visual.

Se describe la relación existente entre la importancia que tiene la publicidad visual existente en el punto de venta y el cambio o toma de decisiones en el punto de venta por efecto de la publicidad visual. Es claro que para quienes la publicidad visual (merchandising) es importante o muy importante; siempre, casi siempre u ocasionalmente cambian su decisión de compra por efecto de esa publicidad visual.

Tabla 5: Tabla de correspondencias cambio de decisión y estímulo.

Cuando está en el supermercado, a cuál de los siguientes estímulos presta más atención	Los elementos de publicidad visual en el supermercado <u>hacen cambiar su decisión de compra</u>					
	Siempre	Casi siempre	Ocasionalmente	Casi nunca	Nunca	Margen activo
Anuncios sonido	0.01	0.02	0.01	0.03	0.05	0.12
Decoración PDV	0.01	0.08	0.12	0.04	0.04	0.29
Promotoras	0.02	0.09	0.08	0.09	0.04	0.32
Volantes	0.00	0.02	0.02	0.03	0.02	0.09
Anuncios impresos	0.01	0.03	0.09	0.03	0.02	0.18
Margen activo	0.05	0.24	0.32	0.22	0.17	1.00

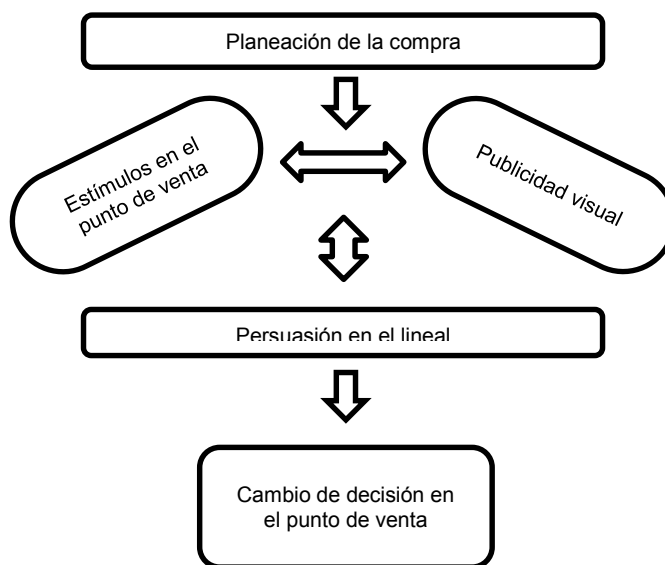

Se muestra la proporción de clientes que caen en cada entrada fila – columna de la matriz de los clientes que han sido expuestos a los estímulos de la presente investigación. El 61% de las veces los consumidores siempre, casi siempre u ocasionalmente cambian su decisión de compra ante los correspondientes estímulos.

### Propuesta del modelo

Basados en los resultados ya mostrados, se pudieron validar estadísticamente las diferentes relaciones entre las variables que inciden en el cambio o en la toma de decisión de compra en el punto de venta, usando técnicas estadísticas tales como modelos lineales mixtos, varianzas, niveles de significancia, correlaciones,

medias, frecuencias, tablas de contingencia, análisis factorial de correspondencias y la matriz de componentes rotados. La interpretación de todos estos resultados se compilan en el modelo que se muestra en la Figura 5.

Figura 5: Modelo Grimeni de toma de decisiones del consumidor en el punto de venta.

*Esta figura representa el modelo de toma de decisiones en el punto de venta obtenido como producto de la investigación de los consumidores en los puntos de venta, considerando los factores relacionados con los estímulos en el punto de venta en general, y específicamente lo referente al merchandising visual.*

El Modelo Grimeni de toma de decisiones del consumidor en el punto de venta, se puede resumir en las siguientes condiciones. El consumidor planea su compra y al llegar al punto de venta se enfrenta a una serie de estímulos propios del supermercado, así como a la publicidad visual. Influenciado por esos elementos, se enfrenta al producto en el lineal, que es donde se da el verdadero momento de validación de sus experiencias y aprendizajes previos, concluyendo con el cambio de decisión o la toma de decisión. Se consideró llamar “publicidad visual” a todos los elementos de merchandising visual que están presentes en el punto de venta acompañando al producto, puesto que el término “merchandising” no es conocido por los consumidores, lo cual podría conducir a errores y sesgos en las respuestas. El modelo se puede estructurar en cuatro momentos o instancias: Planeación, Inducción, Catálisis y Decisión.

El primer momento se indica como Planeación de la compra. El proceso de compra inicia con los motivadores, que en este caso se refiere a que los clientes deciden ir al supermercado porque se agotaron los productos en su alacena y por la rutina misma de ir a hacer las compras. Dentro de su proceso de planeación de la compra, el 60% de los clientes indicó que ocasionalmente lleva productos no considerados anteriormente, lo muestra que si bien hay una tendencia a ajustarse a lo planeado, existe disposición a comprar productos que se salen de su consideración inicial.

Con su compra planeada, el cliente llega al punto de venta, lugar donde se da paso al segundo momento, que incluye los Estímulos en el punto de venta y la Publicidad visual. Los estímulos en el punto de venta generan un efecto inductivo en la decisión de compra de los clientes dentro del punto de venta. Inductivo porque la compra planeada y racional empieza a configurarse en una compra más emocional. Los estímulos que están presentes en el momento de la compra generan un interés en querer aprovechar las promociones

existentes (58% de los clientes), indicando un deseo, posiblemente involuntario, de alejarse de la compra planeada.

Dentro de esos estímulos, los clientes se sienten más atraídos, principalmente, por las promotoras de ventas de las marcas, usualmente mujeres, y la decoración del punto de venta. Considerando la publicidad visual, que es equivalente al merchandising visual, el 86% de los clientes la consideran como importante dentro del espacio de compra, mientras que el 43% declara leerla, seguramente como consecuencia de que el 72% se sienten atraídos por los colores e imágenes que contienen las piezas de publicidad visual. La inducción a la toma o cambio de decisiones se denota más claramente cuando el 69% manifiesta que la publicidad visual ayuda a la toma de decisiones y con el 61% que asegura que la publicidad influye en su decisión de compra.

El papel que cumplen estos estímulos y la publicidad es sensibilizar al cliente hacia la existencia de productos inicialmente no considerados en su lista de compra, despertando seguramente deseos o revelando necesidades no reconocidas hasta el momento. Por eso la importancia de una adecuada combinación de estímulos que saquen al cliente de su compra planeada y rutinaria y lo lleven al cambio en la decisión de compra.

Una vez recibidos y procesados los estímulos, el cliente se enfrenta al tercer momento, Persuasión en el lineal, que es el momento de verdad, el momento del enfrentamiento del cliente con el producto, el momento de refrendar fidelidades o de abandonar las marcas tradicionales, así sea por esa única vez. Si bien el 46% de las observaciones se hicieron en zonas definidas como “calientes” dentro del punto de venta, en esas zonas se realizaron el 50% de las compras, con un promedio de 0,87 productos por cliente, contra 0,73 productos por cliente en zonas consideradas como frías, según se mostró anteriormente. La ubicación preferida de los productos, para el 65% de los clientes, es el lineal, la góndola o los estantes.

El tiempo de permanencia de los clientes frente al material publicitario de los productos (merchandising visual), es un factor determinante para la toma de decisiones. La interacción mayoritaria de los clientes es con los habladores ubicados en el lineal, que representan el 62% de las observaciones realizadas. Este tiempo de permanencia se encuentra dividido en dos franjas, seguramente asociado a lo sencillo o complejo que resulte para los clientes asimilar el mensaje allí contenido. Los resultados concluyeron en las franjas de 31 a 50 segundos y de 101 a 120 segundos de exposición, tiempo relativamente alto para realizar el procesamiento de la información.

Una vez efectuada la interacción en el lineal, el cliente pasa a cuarto momento, que es el Cambio en la decisión en el punto de venta. En esta parte final del proceso, el cliente toma la decisión de compra, y si los estímulos y el merchandising visual han cumplido a cabalidad su función, cambiará la decisión de compra con respecto a lo que había planeado antes de llegar al supermercado.

Al respecto, el 58% de los clientes manifestó que, a pesar de que lleva su compra planeada, aprovecha las promociones (descuentos en precio, regalo de un producto, más cantidad por el mismo precio) realizadas en el punto de venta. Esto se complementa con el 51% que argumenta que no siempre lleva las mismas marcas, lo que indica una propensión o tendencia.

Pero lo realmente importante en este momento de toma de decisiones de compra es lo que hace referencia a la incidencia del merchandising visual en el cambio de decisión. Las validaciones estadísticas presentadas anteriormente concluyeron que para el 44% de los clientes la publicidad visual siempre incide en su decisión de compra, mientras que para el 28% esta incidencia es ocasional.

## CONCLUSIONES

Con la concepción del modelo a partir de las validaciones estadísticas de datos de resultados de la observación y la encuesta, se da respuesta a una de las preguntas planteadas al inicio del proyecto de investigación: ¿El merchandising visual motiva al comprador e incide sobre su decisión en el punto de venta? Así mismo, se responde directamente a una de las hipótesis: Las acciones de merchandising visual producen un efecto motivador en los consumidores, incidiendo para la toma de decisiones de compra no programadas.

Finalmente, y lo trascendental en cuanto a los resultados de la investigación, se ha podido determinar que principalmente por el merchandising visual, adicional a los otros estímulos, existe una incidencia directa en la toma de decisiones en el punto de venta. Y esta incidencia se transforma en decisiones (toma o cambio) de forma permanente para el 28% de los clientes, pudiendo llegar incluso hasta el 61% de los clientes.

Lo anterior, más allá de las cifras y del modelo que representa la toma de decisiones en el punto de venta, muestra claras indicaciones a los supermercados en cuanto a la generación de espacios de venta que generen experiencias de compra memorables para los clientes, ya que con esto tendrán un mayor impacto en la toma de decisiones que se den en el punto de venta, con la mejora de los indicadores de venta y rentabilidad para el supermercado.

## RESUMEN

*Esta investigación analiza la pertinencia de los programas de licenciatura desde la percepción de alumnos del último semestre de las diferentes carreras que oferta la Facultad de Ciencias Administrativas de la Universidad Autónoma de Baja California. Las Instituciones de Educación Superior en México, realizan grandes esfuerzos para acreditar sus programas académicos, sin embargo, es necesario saber si ésta tiene un beneficio para sus alumnos. El propósito de este estudio es conocer desde el punto de vista del alumno, si el programa acreditado le ha sido de utilidad, para encontrar y desempeñar un empleo de manera competitiva. El presente estudio es descriptivo documental, se elaboró un instrumento de medición con 18 preguntas, la muestra consistió en 209 alumnos, la información obtenida se procesó con programas estadísticos, los resultados muestran la percepción de los alumnos sobre la competitividad de los programas estudiados.*

## THE STUDENT PERCEPTION ABOUT ACREDITED PROGRAMS RELEVANCE

### ABSTRACT

*This study examines the relevance of degree programs from the perceptions of students in the final semester of the different careers offered by the Faculty of Administrative Sciences of the Autonomous University of Baja California. Institutions of Higher Education in Mexico, making great efforts to prove their academic programs, however, need to know if this is a benefit to their students. The purpose of this study is to understand from the point of view of the student, if the accredited program has been useful to find a job and play competitively. The present study is descriptive documentary, a measuring instrument with 18 questions was developed, the sample consisted of 209 students, the information obtained was processed with statistical programs, the results show the perception of the students on the competitiveness of the programs studied.*

## INTRODUCCIÓN

En la conferencia mundial sobre la educación superior de la Organización de las Naciones Unidas para la Educación, la Ciencia y la Cultura (UNESCO, 1989) consideran que existirá a corto plazo una gran demanda de educación superior en forma diversificada, además toman mayor conciencia sobre la importancia fundamental de este tipo de educación, para el desarrollo social y económico de cada país. En esta conferencia reconocen que cada vez se requieren mayores conocimientos, mejor preparación y nuevas competencias, para aprovechar las oportunidades que traen consigo los nuevos avances tecnológicos. Coinciden en que los programas educativos requieren ser acreditados por organismos competentes, regulados por el estado como centros de enseñanza superior.

Entre los desafíos considerados un reto a los que enfrenta la educación se pueden mencionar: dificultades de financiamiento, condiciones e igualdad de acceso a los estudios, docentes mejor capacitados, formación con base en competencias, mejorar la calidad de la enseñanza, fomentar la investigación, asegurar la pertinencia de los planes de estudio, ampliar las posibilidades de empleo de los egresados y lograr una mejor vinculación con los diversos sectores tanto a nivel nacional como internacional. Por todo lo anterior la educación superior debe transformarse y renovarse de manera permanente conforme a los nuevos retos y demandas de la sociedad. En esta conferencia mundial sobre la educación superior, se establece en el artículo primero de las Misiones y Funciones de la Educación Superior, la necesidad de orientar y evaluar la pertinencia de los programas educativos a largo plazo, considerando las necesidades de la sociedad y la capacidad de las instituciones educativas para dar respuesta a esas necesidades. Para realizar la evaluación anterior deberán considerarse normas éticas, imparcialidad, y capacidad crítica, mayor vinculación con los problemas de la sociedad y las fuentes de trabajo. Lo anterior tiene como objetivo facilitar el acceso a una educación amplia, especializada e interdisciplinaria, centrada en competencias y aptitudes que preparen a los individuos para desempeñarse en diversas áreas. En el mismo documento en su artículo 11, se establece la evaluación de la calidad de la enseñanza superior, tomando en consideración,

“sus funciones y actividades: enseñanza y programas académicos, investigación y becas, personal, estudiantes, edificios, instalaciones, equipamiento y servicios a la comunidad y al mundo universitario. Una autoevaluación interna y un examen externo realizados con transparencia por expertos independientes, en lo posible especializados en lo internacional, son esenciales para la mejora de la calidad”.

Por su parte en México la evaluación de los programas educativos, de acuerdo con Rueda (2012), tiene sus antecedentes en la década de los setenta y ochenta, en ese periodo el Sistema Educativo Mexicano tuvo una gran demanda y tuvo la necesidad de estimular y apoyar las instituciones educativas, sin garantizar la calidad de los programas educativo que ofrecía. En la década de los noventa surgen cuestionamientos sobre la calidad y la eficiencia en la educación a nivel nacional, en respuesta se establecen políticas que favorecen la evaluación como recurso que mejore la calidad de la educación, de las instituciones y docentes. De esta manera, según Rueda entre 1989-1994 se institucionaliza la evaluación en todos los niveles educativos incluyendo la educación superior, con la finalidad de incidir en la calidad, eficiencia, cobertura e innovación educativa. En el mismo sentido, entre 1989 y 2000 aparecen diversas instancias de evaluación en el sistema educativo, se dan a conocer condiciones y procesos que fomenten la cultura de la evaluación en favor de la calidad educativa. Es así como en 1991 se crean los primeros Comités Interinstitucionales para la Evaluación de la Educación Superior (CIEES), más tarde en el año 2000 es formado el Consejo para la Acreditación de la Educación Superior (COPAES), cuya finalidad es regular a los organismos acreditadores en México.

Cuando un programa solicita su acreditación y de la revisión hecha se deriva que cumple con los parámetros previamente establecidos para su acreditación, el programa logra su reconocimiento ante la sociedad como

programa de calidad, por otra parte, la institución educativa además del reconocimiento por contar con un programa acreditado, tendrá como beneficio, la disponibilidad de recursos financieros otorgados por la Secretaría de Educación Pública en apoyo al programa acreditado. De esta manera la institución de educación superior busca la acreditación de sus programas educativos, así como los recursos financieros que otorga el estado por el programa acreditado.

Si la finalidad de la educación superior es formar profesionistas bien preparados, la finalidad de la institución educativa que cuenta con sus programas educativos acreditados, será formar profesionistas con reconocimiento académico ante la sociedad, con amplios conocimientos, habilidades y destrezas. Sin embargo, fuera del discurso oficial, del reconocimiento a los programas y la obtención de recurso monetarios, es necesario saber si en realidad el alumno se ve beneficiado con toda esta tramitología, ¿En realidad el proceso de acreditación repercute en la calidad de la educación?, ¿El alumno tiene beneficios directos?, ¿El proceso de acreditación es solo un medio de control institucional para la asignación de recursos? Por consiguiente, si el objetivo de la acreditación es asegurar un programa académico de calidad, se necesita conocer la opinión de los alumnos que cursan esos programas, la información obtenida de ellos será de utilidad para saber si las dependencias y organismos oficiales, así como las universidades están cumpliendo con ese objetivo; es el alumno y solamente el alumno la persona adecuada para calificar el grado de calidad de la educación que recibe.

En este tenor, es necesario conocer la opinión del alumno, para saber si los programas acreditados le otorgan beneficios de manera directa, si considera que los conocimientos adquiridos a través del programa acreditado que estudia, le han servido para encontrar y desempeñar un trabajo de manera competitiva en su área de sus estudios. Por tanto, este trabajo de investigación tiene como finalidad, conocer si el alumno considera que estudiar un programa acreditado ha representado para él una ventaja competitiva, si el empresario le da preferencia al buscar un empleo, si los conocimientos que ha obtenido y las habilidades desarrolladas son suficientes para desempeñar de manera competitiva un empleo o establecer su propia empresa.

## REVISIÓN LITERARIA

El proceso de acreditación comprende cumplir de manera satisfactoria con una serie de indicadores, organización, parámetros, criterios de calidad, procesos de enseñanza, infraestructura, planes de estudio, planta docente, eficiencia terminal, entre otros, mismos que son revisados y en su caso aprobados por un organismo oficial en su carácter de acreditador académico. Sin duda la educación superior es de gran importancia para el desarrollo de cualquier país, por consiguiente, en México, asegurar su calidad es una preocupación y obligación tanto de la Secretaría de Educación Pública (SEP) como de todas las instituciones de educación superior públicas y privadas, encargadas de la preparación y desarrollo de profesionistas competentes en el país. De esta manera, la SEP a través de organismos específicos, se encarga de la revisión y acreditación de los programas educativos.

De acuerdo con el Plan de Desarrollo Institucional, durante el periodo 2007-2012, las Instituciones de Educación Superior en México, consideran la acreditación como prioridad de desarrollo para el país, además se establece por la Secretaría de Educación Pública como política educativa, incluir metas claras y concretas, cuya práctica es un instrumento fundamental para analizar la calidad y pertinencia de los programas educativos, además de convertirse de manera indirecta en un instrumento de rendición de cuentas en los diferentes niveles educativos. Por su parte Rosario, Marúm, Vargas, Arroyo y González (2006), comentan la necesidad que tienen las Instituciones de Educación Superior (IES) de acreditar sus programas educativos, de mantener una visión abierta al cambio y la innovación, en busca permanente de la calidad de la educación, a través de la aplicación de estrategias de mejora de calidad, que permitan su participación continua en la acreditación de sus programas, tanto a nivel nacional como internacional. Una vez adquirida

la acreditación, las IES obtendrán mayor prestigio, demanda y obtención de recursos para realizar sus funciones sustantivas de docencia, investigación, cultura y servicios.

En los últimos años la evaluación de programas educativos se ha institucionalizado, se establece la política educativa que vincula la acreditación de programas educativos de las instituciones públicas con la asignación extraordinaria de recursos por parte de la Secretaría de Educación Pública, en apoyo a cada programa acreditado. En la opinión de García, Maldonado y Vázquez (2013), la acreditación tiene como beneficio directo para los alumnos que cursan este tipo de programas, la obtención de becas mensuales de apoyo económico por un monto determinado y por periodos que pueden ser hasta de dos años, así como becas para realizar estancias académicas en otras universidades del país o del extranjero. Otro de los beneficios que mencionan los autores es el reconocimiento de los egresados como excelentes profesionistas, por quienes los empleadores tienen preferencia para contratar.

Según información presentada por Piñera (2006), para el año de 2004 la Universidad Autónoma de Baja California (UABC), contaba con 39 programas educativos acreditados, siendo reconocida como una Institución de Educación Superior que encabeza este proceso junto con otras siete universidades públicas del país. Al 31 de enero de 2014 de acuerdo con las últimas cifras publicadas por el Consejo para la Acreditación de la Educación Superior (COPAES, 2014), la UABC cuenta con 71 programas acreditados, sigue situada junto con otras cinco universidades en el país, como las instituciones con mayor número de programas académicos acreditados. Como puede observarse, la política institucional (SEP, 2007-2012), apuesta por la acreditación de los programas académicos como una medida para lograr y conservar la calidad de los mismos. En el mismo sentido las Instituciones de Educación Superior, anhelan la acreditación como una forma de obtener reconocimiento ante la sociedad y recursos monetarios para mejorar la operación del programa acreditado. Por otra parte autores como Rosario y cols. (2006) destacan de manera breve algunos beneficios que obtienen las IES por sus programas acreditados. De los autores revisados, solo García y cols. (2013) incluyen al alumno al hablar de algunos beneficios directos que les otorga la acreditación de los programas educativos.

## METODOLOGÍA

La presente investigación es de corte descriptivo documental, en la revisión documental se obtuvieron datos del Plan de Desarrollo Institucional, así como de diferentes autores que abordan el tema de la acreditación académica, además se realizó investigación de campo. La población de estudio estuvo conformada por 455 alumnos, quienes cursan el octavo semestre en las diferentes carreras de la Facultad de Ciencias Administrativas, de la Universidad Autónoma de Baja California. La muestra determinada fue de 209 alumnos, a los cuales se les aplicó un instrumento de 10 preguntas, previamente elaborado para recabar y medir la información de los participantes. En la aplicación de los cuestionarios participaron alumnos de diferentes semestres y carreras de esta facultad. La información obtenida fue procesada a través del programa estadístico Statistical Package for the Social Sciences (SPSS), se aplicó estadística descriptiva para analizar la información y obtener resultados. La muestra de investigación se compuso de la forma siguiente:

Tabla 1: Composición de la Muestra de Investigación

No. Alumnos	Licenciatura
137	Lic. en Administración
124	Lic. en Contaduría
101	Lic. en Mercadotecnia
32	Lic. en Negocios Internacionales
29	Lic. en Gestión turística
32	Lic. en Informática

La tabla No. 1 muestra los alumnos de octavo semestre de las diferentes carreras de la Facultad de Ciencias Administrativas que integran la muestra de investigación en para esta investigación.

## RESULTADOS

En esta investigación se consideraron solo alumnos del último semestre de las diferentes carreras que se ofertan en la Facultad de Ciencias Administrativas, la razón de lo anterior se debió a que estos alumnos son los de mayor permanencia en la facultad y en el transcurso de su carrera tuvieron la oportunidad de conocer y aprovechar en su caso los beneficios de estudiar un programa académico acreditado. De los 18 indicadores que analizan la variable dependiente, para efectos de este trabajo sólo se analizan seis de ellos. Las opciones de respuesta fueron las siguientes:

Totalmente de acuerdo=TTDA

De acuerdo=DAC

Regular=REG

Muy poco=MPO

Nada=NADA

Tabla 2: Operacionalización de la Variable de Esta Investigación y Sus Indicadores

Variable	Indicadores	Opciones De Respuesta				
		%	%	%	%	%
La pertinencia de los programas acreditados de licenciatura desde la percepción del alumno.	Conozco los beneficios de estudiar un programa acreditado.	TTDA	DAC	REG	MPO	NADA
		4	9	12	33	42
	El programa desarrolla capacidades para trabajar de manera individual o en equipo	0	4	14	35	47
	El programa te da seguridad para buscar empleo en tu área profesional.	0	5	23	40	33
	El programa desarrolla su contenido académico en función de las necesidades sociales.	0	6	24	46	24
	El programa crea habilidades para manejar nueva tecnología.	4	10	24	38	24
	El programa enseña bases para desarrollarte como empresario.	1	11	21	40	27

En la tabla 2 se muestra las respuestas de los alumnos entrevistados.

De acuerdo con la tabla 2, en el indicador 1, el 4% de estudiantes contestó estar totalmente enterado de los beneficios de estudiar un programa acreditado; un 9% manifestó estar de acuerdo en conocer los beneficios; el 12% dijo conocerlos en forma regular; un 33% coincidió en que conoce muy poco los beneficios y un 42% afirmó no conocer ningún beneficio de la acreditación. En el indicador 2, no hubo alumnos que estuvieran totalmente de acuerdo en que el programa académico acreditado les desarrolla capacidades para trabajar en forma individual o en equipo; un 4% contestó estar de acuerdo en que si les desarrolla capacidades; un 14% dijo que el desarrollo de capacidades por parte del programa es regular; de acuerdo con un 35% las capacidades desarrolladas son muy pocas y el restante 47% coincidió en que el programa no les desarrolla capacidades para trabajar.

En el indicador 3, no hubo alumnos que estuvieran totalmente de acuerdo en que el programa educativo les da seguridad para buscar empleo en su área profesional; el 5% manifestó estar de acuerdo en recibir seguridad por parte del programa; un 23% dijo que la seguridad obtenida es regular, para un 40% es muy poca la seguridad que les brindó el programa y un 33% coincidió en no haber recibido seguridad por parte del programa para buscar empleo. De acuerdo con el indicador 4, de los alumnos entrevistados no hubo quienes estuvieran totalmente de acuerdo en que el programa educativo acreditado elabore su contenido en función de las necesidades sociales; un 6% dijo estar de acuerdo en que sí se elabora de acuerdo con las necesidades sociales; un 24% más dijo percibir que el programa académico desarrolla su contenido en forma regular en función de las necesidades sociales; para un 46% el programa académico desarrolla su contenido muy poco con base en las necesidades de la sociedad y el 24% restante coincidió en que el programa educativo no basa su contenido en las necesidades de la sociedad.

En cuanto al indicador 5, del total de alumnos entrevistados el 4% de ellos estuvo totalmente de acuerdo en que el programa crea habilidades para manejar nueva tecnología; un 10% más coincidió en estar de acuerdo en que el programa sí crea habilidades; para un 24% las habilidades creadas por el programa son regulares; un 38% manifestó que las habilidades creadas por el programa certificado son muy pocas y el 24% restante expresó que el programa no les crea habilidades para el manejo de nueva tecnología. En cuanto al indicador 6, el 1% de los alumnos dijo que el programa enseña bases para desarrollarte como empresario; un 11% estuvo de acuerdo en que el programa si les enseña cómo desarrollarse como empresario; por su parte un 21% consideró regulares las bases que les enseña el programa; un 40% dijo que son muy pocas las bases enseñadas por el programa y el 27% restante expresó que desde su percepción, el programa no les enseña bases para desarrollarse como empresarios.

## CONCLUSIONES

Una vez analizados los resultados de la presente investigación y con base en la percepción de los alumnos sobre la pertinencia de los programas académicos acreditados, se dan a conocer las siguientes conclusiones. De acuerdo con los alumnos entrevistados, más del 50% desconoce los beneficios de estudiar un programa académico acreditado; esta opinión permite deducir que los beneficios de la acreditación no han llegado a los alumnos o estos no han sido informados en la forma debida, por consiguiente se puede afirmar que el alumno no considera de utilidad la acreditación. Por otra parte más del 50% de los alumnos consideraron que el programa académico acreditado, no les desarrolla habilidades para trabajar; lo anterior refleja la falta de vinculación de las instituciones educativas con los sectores productivos, si el alumno no ha tenido oportunidad de aplicar en los sectores productivos los conocimientos adquiridos en las aulas, desconoce si cuenta o no con la capacidad necesaria para desempeñarse en un empleo, en consecuencia, la acreditación no les ha sido de utilidad.

En el mismo sentido más del 50% de los alumnos manifestaron que no se sienten seguros de sus conocimientos y habilidades para buscar un empleo; esto pone de manifiesto la necesidad urgente que tienen las Instituciones de Educación Superior en México de vincularse con los sectores productivos, sin ésta, el alumno desconoce la forma práctica en que una empresa realiza sus operaciones, con base en esta opinión se pudiera asegurar la acreditación académica no considera las necesidades de los alumnos. De la misma manera más del 50% de los alumnos consideran que requieren mayores habilidades para el manejo de tecnología; en este sentido, el programa educativo acreditado, debe orientarse a crear mayores y mejores habilidades en el alumno. De la misma manera, el alumno considera que el programa académico, no fomenta y motiva el emprendedurismo en el aula, por consiguiente ésta es una debilidad en su preparación como futuro profesionista. Con base en las opiniones manifestadas por los alumnos del último semestre de las diferentes carreras que se ofertan en la facultad, puede concluirse que desde la percepción del alumno,

el hecho de que un programa académico se encuentre acreditado, esto no significa que proporcione una ventaja competitiva o reconocimiento alguno al estudiante o al egresado de dicho programa.

## RESUMEN

*En el presente documento presenta las diferentes posturas desde los no racionales, no prescriptivos enunciando algunas de las corrientes entre las que se destacan posturas de Aprendizaje, Poder, Cultural, Ambiental y Configuración organizacional. Seguidamente se aborda la postura de los racionales prescriptivos entre las que se resaltan las corrientes basadas en Diseño, Planificación y Posicionamiento, y finalmente, se esboza la postura de los no racionales, no prescriptivos enunciando las corrientes basadas en el tejido empresarial y elementos cognitivos. Cada una de las posturas abordadas desde dimensiones tales como, el origen, cronología, enfoque estratégico, premisas que el ecosistema aborda, contribución social y restricciones, estas dimensiones nos permite identificar las asimetrías y convergencias en el mundo de los negocios.*

**PALABRAS CLAVES:** Planeación Estratégica, Prospectiva, Racionales, Prescriptivas, Futuristas

## STRATEGIC BRIDGE CROSSING

### ABSTRACT

This paper present an analysis of the most important authors of strategic planning, which have been classified into rational and prescriptive schools, from the beginning, approach, assumptions, social contribution and restrictions, under this scheme addresses the planning prospectively from the futuristic classic to modern. Finally identifies the relevance of prospective planning methods in developing an organizational strategy.

**KEYWORDS:** Strategic Planning, Foresight, Rational, Prescriptive, Futuristic

## INTRODUCCIÓN

El deseo del hombre por mirar al futuro ha estado en presente desde su existencia, de manera consciente o inconsciente, para descifrar lo que pasará con él, y los que lo rodea, por lo cual estudiosos de la prospectiva como Milkos y Tello(2007) buscaron la génesis de la prospectiva desde el siglo IV, cuando en la antigua Grecia los hombres acudían a la ciudad de “DELFO”, para que Apolo, le revelara el futuro, buscaban adivinar el futuro; Platón y Tecídides, a través de sus obras filosóficas aportaron al estudio del futuro los macro-escenarios de las ciudades ideales, mientras que la teología, asegura que se pueden aproximar al futuro por tres vías, profética, apocalíptica y teológica.

En el campo de la estrategia, diferentes escuelas abordan con sus respectivos postulados y premisas las problemáticas sociales concretas que las organizacionales abordan para ello, observamos herramientas que le permiten a quienes asumen los roles de estrategas la operacionalización, interpretación y la correspondiente toma de decisiones.

Dentro del desarrollo organizacional podemos identificar que los datos, información utilizada como insumo al interior de las herramientas que los gestores al interior de las organizaciones poseen para levantar una línea base y con ella trabajar en el establecimiento de un camino estratégico se basan en el pasado y en el presente para tomar decisiones sobre un futuro. Para autores como Schumpeter (1950) y Cole (1959), de la escuela empresarial es imposible prever los futuros comportamientos de las variables asociadas porque no siempre lo planeado se adapta a la realidad, dejando por lo tanto una brecha en la gestión de las organizaciones.

Por lo anterior, es necesario preguntarnos si, ¿seguiremos diseñando e implementando planificación estratégica, solo con los métodos tradicionales y populares que se limitan al pasado y presente?; ¿Nos garantizaran estos, el desarrollo de territorios, naciones, localidades y empresas? Pero, ante todo ¿Cómo podemos planificar partiendo del futuro, sin adivinar, o utilizar ciencia ficción o soñar despiertos?. Cada uno de los interrogantes planteados nos presenta el escenario propicio para abordar inicialmente los postulados y premisas de la escuela de futuristas clásicos, seguidamente se presentan los postulados y premisas de la escuela de futuristas modernos proporcionando dimensiones y elementos que le permitirán a los gestores organizacionales la evaluación de la incorporación de la prospectiva en el desarrollo de ejercicios de concreción del futuro. Finalmente, abordaremos elementos que nos proporcionara la identificación de tendencias a la luz de una sociedad de conocimiento.

#### Escuela de futuristas clásicos

Obras literarias como “Utopía”, Tomas Moro (1478 - 1535) resaltan la importancia de macro-escenarios sociales, donde los individuos contribuyen a una sociedad ideal y el rol de los científicos en ellas que describe Francis Bacon (1561 -1626)”New Atlantis”, luego en siglo XVII se presenta el primer pronóstico de tipo político-militar en la Obra anónimas “El reino de Jorge”.

Malthus (1766 -1834) en su estudio "Ensayo sobre el principio de la población", emplea las matemáticas para generar predicciones que se han cumplido y se siguen cumpliendo como el hambre y la miseria, producto del crecimiento exponencial demográfico mundial, por otra parte en siglo XIX, la literatura de ciencia ficción como "Vuelta al Mundo en 80 días" de Julio Verne, abren al imaginación del hombre, pronosticando futuros con viajes, en aviones, submarinos, cohetes a la luna, que para su época eran total ficción, y que hoy en día gracias a muchos hombres que cumplieron sus sueños, estos avances tecnológicos son parte de nuestra cotidianidad.

Richet(1882) en su obra “100 años”, utiliza la estadística para realizar proyecciones de cien años desde 1882 hasta 1992, en base datos cuantitativo y cualitativos aseguro que en el próximo centenario las naciones más poderosas serian Rusia y Estados Unidos, lo que para 1992 la predicción fue acertada, lo que demostraron que las aproximaciones al futuro, realizada bajo el rigor cuántico, pueden ser mucho más que sueños, adivinaciones, o ficciones, y convertirse en mecanismos de prevención e incluso diseños de futuros deseados para las naciones y los individuos.

Esta serie de autores basaron sus estudios bajo la orientación y premisas de postura apocalíptica, teológica y profética e incluso desde la ciencia ficción. Estos futuristas no son considerados dentro de las escuelas planeación prospectivas por la utilización de sus métodos no científicos en el estudio del futuro; Sin embargo, es innegable los aportes culturales, espirituales, y académicos de los futurista clásicos a las diferentes ciencias, como lo muestra la tabla 1.

Tabla 1. Futuristas clásicos

FUTURISTAS CLASICOS								
EPOCA	SIGLO IV	SIGLO V	TODAS	1561-1626	SIGLO XVIII	1776-1834	SIGLO XIX	SIGLO XX
CIENCIA	ADIVINACION	FILOSOFIA	TEOLOGIA	LIETRATURA	POLITICO-MILITAR	MATEMATIFICCION CAS		ESTADISTICA
APORTE	DELFIOS	MACRO-ESCENARIOS	PROFECIA	CIENCIAS	PRONOSTICO	PREDICCION	CIENCIA	PROYECCION

*fuentes: construcción propia a partir de Milkos y Tello (2007)*

Por tanto a lo largo de la historia, los estrategas frente a la incertidumbre se han visto en la necesidad de acudir a todas las ciencias para minimizar los riesgos, los autores de la planeación prospectiva también utilizan todos los aportes de estos clásicos para desarrollar sus métodos.

La planeación prospectiva también denominada “Planeación Interactiva” (Ackoff), “Planeación Normativa” (Ozbehan), “planeación transactiva”(Friedman), o “Planeación por escenarios” (Juan vergara, 2010), El concepto de planeación prospectiva fue elaborado por autores franceses en su afán por encontrar un medio original que permitiese dirigir la reconstrucción del territorio en tiempo de posguerra y alentar el desarrollo de su país(Milkos y Tello 2000)

La planeación prospectiva es un proceso que se dirige a la producción de uno o más futuros deseados, que solo ocurrirá si se actúa en el presente, (prospectiva y acción) por tanto permite la toma anticipada de decisiones, indispensable para enfrentar un sistema de decisiones o decisiones interdependientes, que influyen y dependen en la consecución del escenario óptimo.

Este tipo de planeación por efectuarse de manera previa a la planeación estratégica implementa algunos de los métodos de esta última para darle disciplina a la indisciplina intelectual (Godet, 2000), es considerada como un elemento clave en la planeación porque según (Milkos y Tello) apoya el logro de los siguientes objetivos:

Construir escenarios o imágenes que consideren la visión del futuro, una percepción dinámica de la realidad y la prefiguración de alternativas viables.

Aportar elementos estratégicos a los procesos de planeación y de apoyo a la toma de decisiones.

Impulsar la planeación abierta y creativa fundamentada en una visión compartida del futuro.

Proporcionar el impulso requerido para transformar la potencialidad en capacidad.

Aportar una guía conceptual conductora del estudio de aquellos aspectos relevantes de la realidad, que permita enfrentar con eficacia y eficiencia la complejidad del contexto actual.

La planeación prospectiva es concebida como el complemento de la planeación estratégica resaltando:

- 1) El tiempo de la anticipación, es decir de la prospectiva de los cambios posibles y deseables.
- 2) El tiempo de la preparación de la acción: es decir, la elaboración y la evaluación de las opciones estratégicas posibles para prepararse a los cambios esperados (Proactividad) y provocar los cambios deseables (proactividad).

También cabe aclarar que la prospectiva, a pesar de las diferencias con la estrategia, permite generar sinérgias al interior del ecosistema que le proporcionan al tomador de decisiones diversos escenarios del futuro dejando de ser un sueño, ya que "contemplando el futuro se transforma el presente" (Gaston Berger)y

aterriza en la planeación estratégica, y operativa, evaluándose de acuerdo a la normativa o prospectiva que previamente marco el camino que debía ser, como lo muestra la figura de (Milkos y Tello)

Figura 8: Modelo general de planeación

Fuente: Milkos y Tello (2007)

Escuela de futuristas modernos:

Los futuristas modernos según, (Bradfield, R., Wrightb) se clasifican en tres grandes escuelas:

Escuela intuitiva

Escuela prospectiva

Escuela de tendencia probabilística

Escuelas intuitivas: Esta escuela se originó con Herman Kahn (1967), quien desarrollo esquemas cualitativos, fundamentados en la intuición y juicios de valor, otros autores como Amara y Lipinski, aportaron modelos matemáticos para la elaboración y evaluación de escenarios.

La metodología procedimental introducida por Peter Wack, permite la implementación de métodos cualitativos completamente estructurados, al igual que los de Michel Porter [40] introduce el término “industry scenarios”, abordando el futuro del mundo desde escenarios macroeconómicos. La restricción encontradas por autores como Wack les la limitación de los escenarios una sola área, perdiendo otras dimensiones primordiales.

Este modelo propuesto por Porter, es más flexible al aprendizaje y complementarios a los de planeación estratégica, acá se abre ante la posibilidad de cambios que afectaran la estructura futura, teniendo en cuenta factores casuales, cambios estructurales predeterminados, elementos constantes y dependientes que de una forma articulada trazan una nueva estrategia para la organización, aunque este aporte es muy importante en el análisis previo de la creación de escenarios para la industria, se queda corto en el diseño de la estrategia a partir de factores y variables de escenarios futuros.

Otro método dentro de la planeación prospectiva intuitiva, es el de los ocho pasos propuestos por Peter Schwartz, plantea la creación de escenarios dentro un marco formal, que debe seguir una secuencia desde la identificación del problema, hasta identificar los factores claves de alertas, desarrollando escenarios enmarcados dentro de una lógica, esta disciplina es correcta para el logro de la creación de escenarios, pero se centra en un solo problema o variables ante los cuales la organización debe estar alerta, omitiendo otros factores de riesgos futuro

Escuela de planeación prospectiva: Esta escuela plantea una visión holística, activa y creativa del futuro, y a partir de este se explica el pasado, a través de escenarios múltiples e inciertos, que se intentan diseñar a partir de análisis riguroso por métodos cualitativos y cuantitativos, que le permiten a las organizaciones ser dinámicas y evolutivas en todas las etapas.

El estudio formal de la planeación prospectiva se origina desde el siglo XIX cuando Herber G. Well, quien a través de la historia proyectaba las tendencias futuras de la sociedad sin utilizar ciencia ficción. En siglo XX autores como Aldon Huxley, George Orwell, Alvin Toflel, Antoni Burgess, Beltrand Russel, entre otros, cuestiona la responsabilidad de la ciencia en futuro atroz y preocupante que ellos divisaban a travez de sus estudios. Para 1948 se dio a conocer la técnica DELFOS por Ollaf Helmer y Norman Delkey, quienes proponen que el futuro puede diseñarse a partir de métodos como este.

Para 1957 aparecen en escena futuristas franceses con el Centro Internacional de Prospectiva, a con donde se dio conocer Gaston Berger, de ahí en adelante han propagado centros de estudios de futuristas o futuribles en el mundo aplicar la prospectiva en todas los sectores de la sociedad, tanto para empresas como territorios.

Cabe destacar que autores como Ackoff y Michet (GODET, 2011), promueven el la implementación de la prospectiva normativa que integra lo creativo y holístico de la planeación prospectiva con lo estructurado y aterrizado de la planeación estratégica, por medio de métodos y técnicas muy complemente articuladas. Para (MILKOS, 2007) existe una amplia gama de herramientas, o métodos un ejemplo de ellas son:

Cualitativas: Análisis de fuerzas, análisis morfológico, Ariole, Delphi,

Escenarios, Evaluación tecnológica, TKJ, Compass, Analogías, etc.

Cuantitativas: Matriz de impactos cruzados, insumo-producto, proyección, Montecarlo, técnicas econométricas, etc.

Mixta (cuali-cuantitativas): En general, actualmente no son totalmente equitativas. Ejemplos: pronóstico tecnológico, juegos de simulación, matriz de decisión, etc.,

Escuela de tendencia probabilística:

Por último la escuela representada por Iver B. Neumann y Erik Verland, quienes afirman que las bases para el desarrollo de los escenarios pueden provenir directamente de datos del pasado, del presente o de ambos casos.

Figura 2: Modelo de Iver B. Neumann y Erik f. Veland

Fuente: planeación por escenarios (2010)

Este modelo se asemeja al enfoque de los intuitivos al partir de pasado para la creación de escenarios futuros, ampliando la perspectiva a escenarios múltiples e incluyendo la prospectiva al construir esos escenarios en el presente, como lo muestra la figura

## CONCLUSIONES

Los distintos enfoques sobre la creación y formulación e implementación de la planeación estratégica permitieron que las clasificaran en escuelas, diseño planificación, posicionamiento, todas ellas aportaron herramientas, algunas prescriptivas como el DOFA, planificación de situaciones, factibilidad, cadena de valor, cinco fuerzas, estrategias genéricas, han sido los estos enfoques más utilizados por los planificadores. Las consideradas como no racionales, empresarial, cognitiva, aprendizaje, poder, cultural, ambiental y configuración ilustraron la necesidad de involucrar a toda la organización la construcción e implementación de la estrategia, también realzaron la interdependencia de la organización con el entorno. Sin embargo toda la extensa selva de la planeación estratégica, no cuenta con herramientas de largo plazo, todas ellas buscan su posición actual, la aparente competitividad que ofrece la planeación estratégica, reduce las estrategias en mecanismos emergentes.

La planeación prospectiva, es un proceso que se dirige a la producción de uno o más futuros deseados, que solo ocurrirá si se actúa en el presente, “prospectiva y acción, por tanto permite la toma anticipada de decisiones, indispensable para enfrentar un sistema de decisiones o decisiones interdependientes, que influyen y dependen en la consecución del escenario óptimo.

Para realizar planes verdaderamente estratégicos es necesario que los planificadores de las organizaciones y los territorios en Colombia estén dispuestos a cruzar el puente, de la planeación estratégica como uno único mecanismo existente para prepararse para el porvenir, mirando el pasado y el presente, es posible abrir la mente, cambiar el paradigma que el futuro es imposible de proveer, la planeación prospectiva demuestra con sus métodos cualitativos y cuantitativos que combinados con la planeación estratégica, logran demostrar que el futuro solo es consecuencia de los sueños que fecundan la realidad.

Los territorios deberían permitirse redefinirse y para lo cual, primero se debería soñar, un sueño que parte de la colectividad, de las expectativas de las diferentes fuerzas sociales, y con base en ese sueño, tomar las decisiones que se requieren hoy en cada una de las unidades sociales para hacer posible ese sueño del mañana, siempre trabajando hoy con la mirada puesta en la meta, esa meta es el futuro, declarando lo que no se ve, como si fuese. Trabajando en lo que no se ve como si fuese.

Tu territorio requiere soñadores que trabajen en pos de ese sueño

## ANEXOS

	APRENDIZAJE	PODER	CULTURAL	AMBIENTAL	CONFIGURACION
Origen	Charles Lindblom (1959), "La ciencia de salir bien a pesar de las torpezas" ("The Science of Muddling Through")	Allison 1971 (modelo), Jeffrey y Salancik 1978 (Anstey, 1984 modelo)	Shannon y Normann 1960	Rennan y Freeman (1977), Pugh, Hickson, Trott (1968)	Chandler 1962, Mintzberg (Mintzberg, Miller, etc. 1970), Miles y Snow (1978)
Estrategia	EMERGENTE	NEGOCIACION	COLECTIVO	REACTIVO	TRANSFORMACION
Proceso	NO RACIONALES/NO PRESCRIPTIVAS				
Enfoque (tema)	Aprender con el tiempo - aumentar la eficiencia a través de la experiencia	uso del poder y la política para negociar estrategias favorables -1. Análisis de conducta de la parte interesada. - Ejecución de la conducta de partes interesadas 3. Análisis de coalición	la estrategia es un proceso colectivo y al ventaja competitiva solo se logra con elementos únicos imposibles de imitar en la organización	El estratega es un ACTOR. - ve la organización como un conjunto de fuerzas generadoras. La estrategia es proceso reactivo de ajuste de a posiciones específicas	Se reconcilia e integra con los mensajes de las otras escuelas. -La transformación es una consecuencia inevitable de la configuración. Existe un momento para la coherencia y otro para el cambio
PREMISAS	1. Incrementalismo descentralizado 2. Incrementalismo lógico Racional Estrategia emergente	-el poder y la política inciden en la formación de la estrategia, la estrategia resulta de la negociación entre poder, una mejor posición en el juego de la política. (una creencia en estrategias de alianzas y cooperación, por uso del poder)	1. La creación de estrategia es un proceso de interacción social. 2. Socialización e adaptación para convencer al individuo 3. Las convenciones de la cultura solo se obtienen de forma gradual	1. "El entorno evoluciona principal en el proceso de creación de estrategia. 2. La organización puede responder a esas fuerzas, o bien ser "impulsada" por ellas. 3. La org. es elemento pasivo, lee el entorno y asegura adaptación.	1. Una org. Es una configuración de características, con el tiempo las transforma en estrategia. 2. Puntos de estabilidad (configuración) y de transformación. 3. Orden de estado y ciclos vitales)
Contribución social	-Creación de estrategias desde la colectividad e individualismo -Descentraliza la autoridad -Creación de estrategia cooperativa e alianzas estratégicas	conceptos para management estratégico como: coalición, juego político, y estrategia colectiva -Creación de estrategia cooperativa e alianzas estratégicas	dimensión colectiva del proceso social - la formación de estrategia se convierte en la administración del conocimiento colectivo -ayuda a entender un período de reestructuración	la estrategia de la diferenciación -La teoría de la contingencia -ecología de población -modelo de variación-aleación-estabilización de otras perspectivas	ARQUETIPOS -PERSPECTIVA DEL CAMBIO -el modelo "ecológico" de crisis y renovación - "MANEJO DEL CAMBIO" ES UN OXIMORON - EL CUBO DEL CAMBIO
Restricciones	-No planes a largo tiempo -incertidumbre para la industria a corto plazo -aumenta la incertidumbre -no mide el impacto de la entrada de un nuevo competidor	El macro-poder genera problemas de monopolios en las sociedades la estrategia depende de poderes y políticas externas -complica el proceso de creación de la estrategia	rigidez conceptual -autonomía por resistencia al cambio -que iguala a la ventaja estratégica con la originalidad de la organización	-El entorno es un conjunto de fuerzas y va a -visión restringida de la decisión estratégica -La estrategia se relaciona con la selección de posiciones específicas	-El peligro de la simplicidad -el cambio múltiple -teoría ingenua

Fuente: construcción propia a partir de Mintzberg (1998)

	DISEÑO	PLANIFICACIÓN	POSICIONAMIENTO	EMPRESARIAL	COGNITIVA
Origen	Philip Selznick 1957 (Liderazgo en administración) "competencia características estado"	M. Igor Ansoff, (Estrategia corporativa) 1965	Michael Porter publicó "Estrategia competitiva" 1980, Schender hasta 1970	Stumpeter 1930, Cole 1959	Herbert A. Simon (1947, 1957) March y Simon, (1958)
Estrategia	CONCEPCIÓN	FORMAL	ANALÍTICO	VISIONARIO	MENTAL
PROCESO	NO RACIONALES/NO PRESCRIPTIVAS				
Enfoque (tema)	"Establecer concordancia", entre las capacidades internas y las posibilidades externas, entre la idoneidad y la oportunidad, dos factores claves. Los valores directivos y responsabilidad social, desde la visión de sus directivos	- FIJACIÓN DE OBJETIVOS - VERIFICACIÓN EXTERNA - VERIFICACIÓN INTERNA - EVALUACIÓN DE ESTRATEGIA - PUESTA EN OPERACIÓN DE LA ESTRATEGIA - FIJAR TODOS LOS PLAZOS PARA TODO EL PROCESO	- Cinco fuerzas - "sigas básicas de ventajas competitivas que una firma puede generar: bajo costo, e diferenciación" - Cada una de ellas una firma puede dividirse en actividades primarias y de apoyo	- intuición, criterio, talento, es "El 31 posibilidad, percepción del LIDER." - es la visión. - una representación mental de la estrategia, creada o al menos sugerida en la mente del líder - La estrategia empresarial es premeditada y emergente	entender este proceso en la esfera del conocimiento humano, en especial utilizando el campo de la psicología cognoscitiva
PREMISAS	- pensamiento consciente - responsabilidad del estratega - simple e informal - única "acto creativo" - formulada como perspectiva - explícitas-simple - madura y aplicable	- 1. Etapas claras, delineadas a través de listas y sustentada por técnicas 2. Responsabilidad del estratega desde la planificación hasta la ejecución práctica 3. Estrategias explícitas prestando máxima atención a los objetivos, presupuestos, programas y planes operativos de diversos tipos.	- 1. Las estrategias son posiciones genéricas. 2. El contexto es económico y competitivo. 3. La estrategia depende de la posición. 4. Los analistas son fundamentales. 5. La estructura de mercado impulsa estrategias	1. Estrategia en la mente del líder como perspectiva, una visión del futuro. 2. la intuición del líder. 3. El líder promueve la visión 4. visión estratégica maleable, premeditada y emergente. 5. organización es maleable, estructura simple. 6. grupo de trabajo-estrategia	- parte las estrategias son autodidactas y educación cognitiva. - las limitaciones mentales del estratega, la cognición estratégica. - reglas de las estructuras de conocimiento - el conocimiento estratégico como un proceso de construcción
Contribución social	DOFA - "idea informal" profunda - directivos de alta capacidad - estudio de casos. - aplicable en diferentes momentos de la organización, inicial, creciente, madura. - vocabulario management estratégico	- la planificación de situaciones: herramientas para especular sobre posibilidades futuras - control estratégico "la visión corporativa", - estudios de planificación - pruebas de factibilidad	- La matriz de crecimiento-participación formó parte de la "planificación de portafolio" - "EEMO" (Efecto de las Estrategias de Marketing sobre las Ganancias) - Las cinco fuerzas del entorno - líneas de investigación - conceptos prácticos	- Creación de estrategia preactiva - liderazgo personalizado - visión estratégica - Estrategias visionarias - Orientación e integración "gestal" - Proceso local - Flexibilidad y adaptación	el mundo es grande y complejo, mientras que en comparación las condiciones humanas y su capacidad de procesar información son notoriamente limitadas.
Restricciones	- para por alto el aprendizaje - La estructura sigue a la estrategia - segura formulación de aplicación - se concentra en proceso no en producto - un gran dilema dilema requiere un gran dilema dilema	- Burocracia solitaria - falta de apoyo directivo - falta de ambiente afín al proceso en la org. - inflexibilidad - predeterminación - separación del sistema - no crea estrategia - formalización sin interiorización	- no directa estrategia las selecciona - la separación de pensamiento y acción - la formulación en la "cabeza", a través del pensamiento consciente, no hay aprendizaje en proceso. - la estrategia es vista como una posición genérica.	- No explicita el proceso de planificación - un nuevo líder visionario, como la solución. - FUTUROS IMPOSIBLES DE PREVER. - Cultura de dependencia y conformidad que destruyen el aprendizaje e innovación - Depender de un individuo	1. Basar por analogía 2. Dicción de control 3. Compromiso en calidad. 4. Cálculo de un solo resultado

# LA ORGANIZACIÓN: INNOVACIÓN PARA LA COMPETITIVIDAD

Juan Carlos Robledo Fernandez, Universidad Tecnológica de Bolívar

Jorge Luís Del Río Cortina, Universidad Tecnológica de Bolívar

Hedier Lastre, Universidad Tecnológica de Bolívar

## RESUMEN

El conocimiento y la creatividad son la herramienta más poderosa para lograr la competitividad. Para generar y sostener la ventaja competitiva las organizaciones han tenido que crear formas de administrar y encauzar el conocimiento de la manera más eficiente posible, dando paso al diseño de sistemas y ambientes que estimulen la innovación. En este documento, se hace una revisión de diferentes teóricos que abordan las principales características, dimensiones y factores que las organizaciones innovadoras actualmente implementan lo que le permitirá al lector construir una línea base para tomar decisiones que incremente la curva de aprendizaje.

**PALABRAS CLAVES:** Aprendizaje Organizacional, Conocimiento Tecnológico, Innovación, Innovación Tecnológica, Gestión del Conocimiento

## INNOVATION FOR COMPETITIVENESS

### ABSTRACT

*Knowledge and creativity is the most powerful tool for achieving competitiveness. To build and sustain competitive advantage organizations have had to create ways to manage and channel the knowledge in the most efficient way possible, giving way to the design of knowledge management systems. In this paper, we approach some knowledge management systems in order to do a review of its main features and current implementations in outstanding organizations.*

**KEYWORDS:** Learning, Technology, Innovation

## INTRODUCCIÓN

En toda época y en todo tiempo pasado, presente y futuro, las sociedades humanas han debido dar respuesta a tres funciones básicas de subsistencia: la producción, la distribución y el consumo. Cada una de estas tres funciones han sido el modo prevaleciente que caracteriza y ha caracterizado a las sociedades humanas. De hecho, la existencia de estas tres funciones permite inferir que la “organización” siempre ha sido un concepto que ha estado implícito en el tejido humano. Sin embargo, la evolución de las sociedades humanas ha llevado a la construcción de un tejido social cada vez más complejo, lo que ha implicado que estas tres funciones naturales de la sociedad, sean tejidas y ligadas a los “artefactos” sociales tales como el comercio y el dinero que interactúan en lo que Polanyi denomina “el mercado formados de precios”, y lo que hoy entendemos como una “economía de mercado”.

La racionalidad económica desde la perspectiva de la función de producción lleva al hombre a comprender el poder del conocimiento y su influencia en una economía de mercado. De tal modo que, en el marco del conocimiento se da origen al concepto de la ciencia, la tecnología y la innovación.

De esta manera, la ciencia, la tecnología y la innovación como producto de una racionalidad económica se refleja en la organización productiva, que imprime su énfasis en el control del capital físico (y todos sus procesos de transformación) como fuente de riqueza, sin embargo en la medida que la ciencia y todo su cuerpo de conocimientos avanzan traduciéndose en tecnologías, éstas, permiten el desarrollo de innovaciones que dan un mayor significado y valor económico que el mismo capital físico, surgiendo la idea, que frente al capital físico, es más importante sostener la ventaja competitiva que da el capital (Ross & Von Krogh, 1996). Para generar y sostener esta ventaja competitiva las organizaciones han tenido que crear formas de administrar y encauzar el conocimiento de la manera más eficiente posible, dando paso al diseño de sistemas y ambientes que estimulan la innovación.

En este documento, se abordará inicialmente algunas premisas enfocadas en el conocimiento, aprendizaje organizacional e innovación tecnológica, seguidamente se presentará los niveles de convergencias entre la gestión de conocimiento y la creatividad identificando los factores claves para alcanzar el éxito organizacional, finalmente

## REVISION LITERARIA

### Conocimiento, aprendizaje organizacional e innovación tecnológica

La racionalidad económica ha llevado a la construcción de un sistema económico social predominante: El capitalismo. Este sistema bajo la premisa Mengeriana de “la escasez de medios con respecto a fines”, ha llevado a que la inteligencia humana agilice los procesos de producción de conocimiento (bajo los supuestos de optimización, maximización y minimización), desde entonces el efecto ha sido una transformación de las sociedades, acompañada de sus respectivas asimetrías reflejadas en las ventajas y desarrollos que se muestran en un país determinado con respecto a otros y, porque no decirlo, en todo caso desde una perspectiva global, el conocimiento nos ha “segmentado” (aunque debería unirnos aun mas) como países, como sociedades, como seres humanos. Estos efectos no vienen solos, tienen un impacto profundo en las estructuras mismas de las organizaciones productivas y no productivas. Sin embargo es en las productivas (las que se debaten en el marco de la competencia por los mercados) donde el conocimiento está marcando la pauta en la creación de ventajas competitivas, como lo manifestase Motorola en su momento, estamos en la “edad de la mente”, llevando a lo que (Ross & Von Krogh, 1996) ha denominado “The Epistemological Challenge”.

En este sentido, surge en la estructura organizacional, la figura de la Dirección de Conocimiento como el núcleo de la empresa que se relaciona íntimamente con el episteme de la compañía o la organización. Así, se ha dado origen a categorías como: Capital Humano, Capital Intelectual, Red de Conocimiento, Creatividad, Información, Datos, Innovación, Tecnología, etc.

Es significativo que se comprenda, que la diferencia entre los países ya no obedece solo a la dotación de recursos naturales, sino también a la cantidad y calidad del conocimiento que produce, que agrega y que transforma (Arrow, 1962). Esto quiere decir, que lo que se está comprometiendo desde la perspectiva de la producción de conocimiento en la organización productiva, es el conocimiento tecnológico, en otras palabras, la función de producción es una expresión de este conocimiento.

Sin embargo, la producción de este conocimiento tecnológico debe entenderse desde el marco de los retos de la globalización, de los retos de una nueva ética, y de la fragmentación especializada del conocimiento (Nasher & Ruhe, 2001). En concreto, la organización en la perspectiva racional económica y con una función de producción que necesariamente expresa un grado de conocimiento tecnológico, debe enfrentarse desde el punto de vista pragmático a tres elementos fundamentales: la investigación, la interpretación y la

acción. Elementos que para que sean funcionales, deben estar orientados por el mercado, el personal y la organización. O sea, el conocimiento tecnológico expresado por una función de producción, obliga a que la corporación y la empresa, deban transformarse en una “organización de aprendizaje” pero esto no será posible si la corporación no inicia por un curso de “calidad de personal” (Nasher & Ruhe, 2001). Lo que implica, que la corporación debe tener una “visión compartida para que funcione como una organización de aprendizaje, como lo plantea Senge, 1990, “la visión compartida provee el focus y la energía para aprender”.

En este sentido, se recalca, que el aprendizaje no es solo un proceso epistemológico basado en la cognición individual, el aprendizaje debe también ser visto como una situación social. Toda acción de aprendizaje ocurre a través solo de los individuos y su participación en las comunidades de prácticas que puedan desenvolverse en ambientes “lo suficientemente buenos”, sin confundir este ambiente con un escenario necesariamente de comodidad, sino por el contrario, comprender el ambiente suficientemente bueno como un factor para el desarrollo del aprendizaje organizacional que es motivado permanentemente por las situaciones de incertidumbre, como lo plantea Dewey :

“Si nosotros deseamos aprender desde nuestras experiencias, nosotros debemos aplicar nuestras habilidades como humanos para reflexionar sobre las relaciones entre nuestro actuar y nuestras experiencias presentes”

Ahora bien, el concepto de aprendizaje desde la organización presupone la habilidad para adaptarse al cambio. Desde esta perspectiva, la organización que aprende es una organización que se adapta al cambio y, el cambio desde el punto de vista macro emerge como un proceso de transformación de los países y puede ser solamente entendido desde las prácticas de los individuos y grupos en los niveles locales del sistema económico (Kogout, 2003). Cabe entonces preguntarnos ¿que se entiende por cambio organizacional? Desde la posición de Rosenteill y Koch en el 2001, se comprende el cambio organizacional como “el aprendizaje que ocurre en una organización que produce reales o potenciales cambios, después un cambio en las relaciones a través de la acción organizacional y la responsabilidad medioambiental”. Sin embargo, desde esta posición, me atrevo a creer que no se tiene en cuenta el hecho que si el cambio proviene del aprendizaje organizacional, entonces el cambio debe contener implícita o explícitamente un componente de identidad organizacional. Porque como bien lo plantea (Kogout, 2003): “El aprendizaje individual no es garantía de aprendizaje organizacional”. Esto se ve claramente reflejado en la visión ontológica del conocimiento, cuando expresa que, éste es creado solo por los individuos. Una organización no puede crear conocimientos sin individuos, por lo tanto, una organización solo aprende de individuos que aprenden.

En el actual entorno económico, los que compiten no son los países sino las empresas, y existen brechas de conocimiento tecnológico que una empresa no puede superar sola, sin el concurso de la institucionalidad. Esto, lleva a la pregunta: ¿como la función pública interviene en el proceso para la producción de conocimiento, ciencia y tecnología en un país, de tal manera que se pueda adaptar al cambio? O, según lo planteara (Graham, 1987), ¿Cómo podría la industria, gobierno y academia dividir los diferentes tipos de actividades científicas?

A nivel de países, se han creado entidades públicas con el propósito de gestionar e impulsar lo que podría llamarse un Sistema de Gestión de Ciencia y Tecnología, uno de sus propósitos principales es a partir del capital humano, capital intelectual articulado con las universidades y centros de investigación, promover y desarrollar las fronteras de la ciencia, especialmente fomentando la innovación tecnológica. En este sentido, dos tipos de innovación tecnológica se reconocen como objetivos de estos sistemas: Las Innovaciones Radicales que generalmente son asumidas por centros especializados de Investigación y Desarrollo; y la innovación incremental o de mejoramiento que son producto de la práctica cotidiana del trabajo organizacional. Sin embargo, los resultados en los diferentes países dista mucho unos de otros, pues al ser expresada la investigación como una función de producción, esta se somete a la racionalidad

económica que implica el asumir los costos de oportunidad, la focalización, que también es una función del grado de formación del capital humano, como lo plantea (Graham, 1987): “se ha pasado de la ciencia de la industrialización a la industrialización de la ciencia”. Esto ha llevado al tránsito de una investigación “individual” a una investigación colectiva, de redes (Whintington, Pettigrew, Peck, Fenton, & Conyon, 1999), que trae como consecuencia que, el “cambio” desarrolle tres dimensiones: “en estructuras, en procesos y en las fronteras o límites de las organizaciones”. Encontrando aquí los nuevos “conductores” del nuevo escenario competitivo: La tecnología de información y la globalización. Esto lleva a que la “organización que aprende” deba hacerse a características tales como: la flexibilidad, el conocimiento, la creatividad y creación y la colaboración o asociatividad que le permita a las nuevas formas de organización producir conocimientos desde una teoría de la contingencia hacia una teoría de la configuración. Entendiendo la contingencia como toda variable externa, característica ambiental, factor circulante o fuerza influyente que pueda afectar el diseño efectivo de la organización, como lo expusiera (Varma, 1995) : “Existe una relación funcional entre las condiciones ambientales y las técnicas administrativas apropiadas para el alcance de los objetivos”. Manifestándose de esta forma, que no existe una teoría única para la solución de los problemas organizacionales.

La preocupación actual por la innovación, no es más que la respuesta de los agentes del mercado en especial los de tipo de organizaciones productivas que frente al rigor de la competencia se ven avocados en la adopción de estructuras cambiantes, procesos cambiantes y límites cambiantes. Tal como lo manifestase (Hill & Schilling, 1998) : “Para muchas empresas el desarrollo de nuevos productos es ahora el factor singular más importante para conducir la empresa hacia el futuro”. Sin embargo esta presión del mercado para ser más competitivo lleva a la organización moderna al necesario desarrollo de su “lado oscuro” y es precisamente aquel que tiene que ver con la relación entre poder e individuo, como lo señalare Foucault: “una relación entre poder, saber y sujeto”.

La habilidad para desarrollar los nuevos productos innovadores puede ser una fuente de ventaja competitiva (McAdam & McClelland, 2002). Sin embargo el mayor énfasis se ha estado haciendo en el proceso de innovación, dejando a un lado el proceso de creatividad que tiene que ver con la “generación de ideas”.

## CONCLUSIÓN

En este sentido, podemos decir que el conocimiento se crea de manera tan rápida que lo que hoy es revolucionario, antes de aplicarse ya puede estar fuertemente cuestionado y hasta invalidado. Por otra parte, por muy dinámicas que sean las organizaciones, todas por muy pequeñas que sean tienen objetivos a corto y mediano plazo, y planes para alcanzarlos. La gestión del conocimiento en su forma más eficiente, podría llegar a ser dañina para los objetivos a mediano y largo plazo, en la medida que los procedimientos aplicados para lograrlos sean permanentemente cambiados o modificados. Dicho en otras palabras, si no se aplica de manera apropiada la gestión del conocimiento las organizaciones, podrían en lugar de lograr objetivos, no alcanzarlos y lo que es peor, no saber las razones de los fracasos debido a que los procedimientos nunca se aplicaron de manera

Ahora bien, los individuos innovadores hoy en día no nacen, se hacen. Por lo menos, esa es la tesis central del libro “El ADN del Innovador”. Según (Dyer, Gregersen, & Christensen, 2011) las personas que se consideran innovadoras, tienen todas en común cinco habilidades que pueden ser desarrolladas por cualquiera. Estas son: las capacidades de asociación, cuestionamiento, observación, creación de redes y experimentación. Estas habilidades, desarrolladas de manera excepcional en conjunto conllevan a la innovación.

Thomson Reuters, es una empresa líder en el negocio de información para empresas y profesionales. Provee información pertinente en para empresas alrededor del mundo obteniendo desde varios años una

posición de líder en ese mercado. Esta empresa, que tiene sede en Nueva York y que tiene inversiones en los sectores financieros, banca, noticias, legal, propiedad intelectual y ciencia, todos los años desde el 2011 publica el “Thomson Reuters Top 100 Global Innovators” el cual es un listado de las empresas más innovadoras del mundo durante ese año. Este año ya publico el último informe en octubre y se encuentra información pertinente. (Thomson Reuters, 2013)

Para hacer este listado, el informe tiene en cuenta en su metodología para el análisis de cada empresa, el volumen de la actividad innovadora (el numero de patentes), la tasa de éxito de patentes logradas (no todas las invenciones que se tratan de patentar son exitosas en este proceso), los mercados a nivel mundial en los cuales tiene protección a sus invenciones (da idea de que tanto protege sus ideas la empresa en diferente naciones) y finalmente la influencia de las invenciones de acuerdo a el número de veces citada la patente. Basado en estos datos, la conclusión general que arroja el informe es de nuevo la misma que en informes anteriores, la cual define que la innovación va estrechamente ligada a estrategia corporativa. Las empresas que aparecen en esta lista son empresas que reconocen que las grandes ideas son solo la mitad de la ecuación del éxito. El otro componente primordial, es la protección de esas ideas con derechos de propiedad intelectual para que puedan ser comercializados y explotados alrededor del mundo. (Thomson Reuters, 2013), Tabla 1.

Tabla 1: 10 Primeros Puestos del THomson Reuters 2013 Top 100 global Innovators

Compañía	País	Industria
3M Company	EE.UU.	Química
ABB	Suiza	Industrial
Abbott Laboratories	EE.UU.	Farmacéutica
Advance Micro Devices	EE.UU.	Componentes Eléctricos y Semiconductores

# DISEÑO DE UNA ESCALA DE MEDICIÓN DE LA CALIDAD PERCIBIDA DE LOS SERVICIOS EN LOS EVENTOS DEPORTIVOS

Ana Milena Álvarez Cano, Universidad Autónoma de Occidente

## RESUMEN

*El nombramiento de Cali-Colombia como ciudad deportiva de América, suscitó el interés de sus directivos deportivos en diseñar modelos de gestión eficientes que les permita sostener el liderazgo logrado hasta el momento. Esta situación motiva la aplicación de una metodología para crear una escala de medición de la calidad percibida de los servicios en los eventos deportivos. En el estudio se empleó la investigación documental, el método Delphi y la técnica de análisis de fiabilidad del coeficiente de alfa de Cronbach. Para iniciar, se logró una escala preliminar de 71 atributos a partir de la revisión de la literatura y el conocimiento empírico de expertos en eventos deportivos; seguidamente, se utilizó el método Delphi para la depuración de la escala preliminar; finalmente, para calcular la consistencia y viabilidad de los atributos a incluir en el instrumento de medición, se utilizó el coeficiente del alfa de Cronbach. Como resultado, se obtuvo el diseño de una escala definitiva conformada por 18 atributos. Se resalta el hallazgo del atributo "la seguridad ofrecida durante el desarrollo del evento" que no se encontró en los estudios consultados previamente. Lo anterior es el reflejo de las situaciones de orden social e inseguridad que afectan a Colombia.*

**PALABRAS CLAVES:** Calidad Percibida, Método Delphi, Eventos Deportivos, Escala de Medición

## DESIGN OF A SCALE FOR MEASURING THE PERCEIVED QUALITY SERVICES SPORTING EVENTS

### ABSTRACT

*The appointment of Cali-Colombia as a sports city in America aroused the interest of their sports managers in designing efficient management models that enable them to maintain leadership achieved so far. This motivates the application of a methodology to create a scale measuring perceived quality of services at sporting events. In the documentary research study, the Delphi method and analysis technique reliability Cronbach's alpha coefficient was used. To start, a preliminary scale of 71 attributes was achieved from the literature review and empirical knowledge of experts in sporting events. Then, the Delphi method was used for the purification of the scale preliminary. Finally, to calculate the consistency and viability of the attributes to include in the measurement instrument, the Cronbach's alpha coefficient was used. As a result, the design of a final scale attributes comprised of 18 was obtained. Attribute the discovery of "the security offered during the course of the event public" was not found in the studies previously viewed is highlighted. This reflects situations of social order and insecurity affecting Colombia.*

## INTRODUCCIÓN

La ciudad de Santiago de Cali, capital del departamento del Valle del Cauca - Colombia, cuna de un gran número de reconocidos deportistas, tanto en el ámbito nacional como internacional, es nombrada en el año

1954 por el Comité Olímpico Internacional como la Capital Deportiva de Colombia. Más adelante, en los Juegos Panamericanos realizados en 1971, el Eco de la justa panamericana le otorga el título de Ciudad Deportiva de América y la avala para que organice y realice eventos deportivos mundiales. Es así como en el último año, Santiago de Cali ha sido la sede de eventos internacionales como The World Games 2013 y el Campeonato Mundial de Ciclismo de Pista 2014 (Alcaldía de Santiago de Cali, s.f.).

Esta nominación ha suscitado el interés de los directivos del comité deportivo en diseñar modelos de gestión eficiente que les permita ser competitivos y poder sostener en el tiempo su liderazgo como la casa deportiva del país, aspecto que motiva la elaboración de una escala de medición de la calidad percibida de los espectadores respecto a los eventos deportivos realizados en la ciudad. En la revisión de la literatura, no se encontraron estudios formales realizados en Colombia dirigidos a la medición la calidad de los servicios deportivos. Las evaluaciones de la calidad de los servicios deportivos han sido diagnosticadas desde las opiniones de los espectadores que expresan sus percepciones de manera informal o desde los comentaristas y dirigentes deportivos. Estos aspectos justifican la razón por la cual en este trabajo solo se consideraron estudios internacionales.

Para la selección de los atributos determinantes en la escala de medición de eventos deportivos internacionales realizados en la ciudad de Santiago de Cali, se construyó una lista de 71 atributos seleccionados de los modelos tomados como referencia, los estudios realizados sobre la medición de la calidad percibida los servicios de eventos deportivos y los sugeridos por los integrantes del comité de expertos. Seguidamente, mediante la técnica cualitativa Delphi, se realizó la depuración de la lista de atributos hasta llegar a una lista conformada por 43 ítems. Finalmente, se aplicó el cuestionario preliminar a una muestra representativa de 49 personas que habían asistido a eventos deportivos en los últimos seis meses. Estos resultados fueron analizados mediante las calificaciones promedio de cada ítem y el coeficiente de Cronbach, obteniendo como resultado una lista de 14 atributos. En una última ronda con el comité de expertos se incluyeron cuatro atributos, de los cuales vale la pena resaltar “*la seguridad ofrecida durante el desarrollo del evento*”. Esto surge, dadas las situaciones de orden social que afectan a Colombia.

## REVISIÓN LITERARIA

Con la medición de *calidad percibida*, entendida como “el proceso de evaluación donde el cliente compara la experiencia del servicio con determinadas expectativas previas” Pérez (2006, p.29), los dirigentes deportivos podrán conocer las percepciones, necesidades y expectativas de los espectadores (Delgado (2004, p.115), aspectos que permiten la identificación del nivel de satisfacción de sus usuarios y el diseño de mejores estrategias de marketing de servicios deportivos. Aunque existen gran variedad de propuestas para medir la calidad percibida de los servicios, para el desarrollo de este trabajo se tomaron como referentes los más empleados en las investigaciones revisadas: SERVQUAL, SERVPERF y el Modelo conceptual del servicio con base en las percepciones del cliente. Así mismo, se revisaron estudios donde han surgido nuevas dimensiones para evaluar la calidad percibida del servicio en los eventos deportivos. En el modelo SERVQUAL desarrollado por Parasuraman, Zeithaml & Berry (1988) consistente en una escala conformada por 22 atributos agrupados en cinco dimensiones del servicio: Fiabilidad, garantía, tangibilidad, empatía y sensibilidad, se mide la satisfacción de los clientes a partir de las brechas identificadas entre las expectativas y las percepciones del servicio.

“La escala propuesta por los autores se ha convertido en una de las medidas más utilizadas para evaluar calidad del servicio” (Curubeto, 2001, p.138). Christian Grönroos (1988) desarrolla y prueba el modelo conceptual del servicio con base en las percepciones del cliente denominado Modelo Nórdico, puesto que para él, la calidad del servicio es influenciada por las expectativas de la calidad (conformada por las comunicaciones de la empresa, su imagen, las experiencias y las necesidades y deseos del cliente) y por la calidad experimentada, que es la imagen formada después del contacto con el servicio. En este enfoque, la

calidad total percibida es la etapa final de la transacción entre la organización y un cliente. La percepción es una función de la calidad técnica (atributos del servicio) y de la calidad funcional (la calidad de la interacción con la empresa). En el año 1992, Joseph Cronin y Steven Taylor critican fuertemente al modelo SERVQUAL porque consideran que la escala no se ajusta a todas las clases de servicios, y sugieren que la calidad de servicio debería medirse a partir de las actitudes. Es así, que como resultado de sus investigaciones surge una escala alternativa denominada SERVPERF (*Service Performance*), la cual se basa exclusivamente en las percepciones para evaluar la calidad del servicio a partir del desempeño y sus relaciones con la calidad del servicio, la satisfacción del consumidor y las intenciones de compra.

Kim & Kim (1995) siguiendo el modelo de Parasuraman, Zeithamal y Berry realizan una investigación para evaluar la calidad de los servicios prestados en los centros deportivos de Corea. Como resultado de la investigación surge el instrumento QUESC conformado por 33 atributos agrupados en las siguientes 12 dimensiones: el ambiente, actitud de los empleados, fiabilidad, información, programación, consideración personal, precio, exclusividad, privacidad, conveniencia, estimulación y oportunidad social.

Calabuig, Quintanilla & Mundina (2008) se basaron en los modelos SERVQUAL, SERVPERF y en el instrumento Neptuno-1 utilizado en investigaciones realizadas por Luna, Mundina & Gómez (1998), Mundina *et al.* (1998) y Mundina & Calabuig (1999). La aplicación del instrumento les permitió determinar el grado de calidad percibida en los servicios deportivos de carácter público como son las escuelas de actividades náuticas e identificar diez dimensiones relevantes: las clases, el tiempo libre, el entorno náutico, los horarios, la comida, el material náutico, la comida complementaria, la conserjería, la limpieza y la teoría. Calabuig & Crespo (2009) utilizan el método Delphi para la elaboración de una escala de medida de la calidad percibida de los espectadores de eventos deportivos denominada EVENTQUAL, obteniendo como resultado 22 atributos agrupados en cinco factores: los tangibles, la accesibilidad, el personal, los servicios complementarios y la relación entre espectadores.

Kelley & Turley (2001) utilizaron el modelo SERVQUAL para medir la calidad del servicio en un evento deportivo. Es este estudio se identifica la experiencia del juego y el papel de los empleados como atributos significativos del servicio. Hightower, Brady & Baker (2002) centraron su investigación en la influencia de los distintos aspectos del entorno físico durante un evento deportivo de béisbol encontrando que el ambiente del servicio (la evidencia física) es un atributo determinante para que las personas asistan en un futuro a eventos deportivos. Asimismo, Greenwell, Fink & Pastore (2002) observan que el ambiente del servicio influye en la satisfacción de los espectadores de hockey hielo de un modo global más que evaluándolos como elementos individuales (como son la comodidad o los accesos).

Finalmente, Yusof y Lee (2008) realizaron un estudio en los estadios de fútbol conociendo que los elementos tangibles del evento (accesibilidad en toda la instalación, estética del estadio, marcadores, comodidad de los asientos, suficiencia de espacio, señalización, etc.) y la calidad del equipo (buen juego del equipo, jugadores estrella, registro victorias/derrotas, historia y palmarés del club, calidad del oponente y jugadores estrella del oponente, etc.) son predictores de la satisfacción de los espectadores.

Del análisis realizado, se encontró que los estudios tomados como referencia se basaron en el Modelo SERVQUAL elaborado por Parasuraman, Zeithaml & Berry. Otros de los autores más citados en los estudios son Kim & Kim (1995) quienes elaboraron una escala más ajustada a la medición de la calidad de servicios. Para la elaboración de la escala preliminar, se consideraron las dimensiones de tangibilidad o evidencia física (Hightower *et al.*, 2002; Yusof & Lee, 2008), la accesibilidad en toda la instalación, estética del estadio, marcadores, comodidad de los asientos, suficiencia de espacio, señalización y la calidad del equipo (Kim & Kim, 1995) y la actitud de los empleados (Calabuig, Quintanilla & Mundina, 2008; Calabuig & Crespo, 2009 y Kelley & Turley, 2001). Las otras dimensiones consideradas son recurrentes en los

estudios revisados, tales como: fiabilidad, información, programación, precio, exclusividad, privacidad, conveniencia, estimulación y oportunidad social.

## METODOLOGÍA

Acorde con las necesidades de los dirigentes deportivos y las características particulares de la región se decidió elaborar una nueva escala de medición a partir de la identificación de los atributos principales y relevantes, para lo cual se desarrolló el proyecto en dos fases: en la primera fase, se realizó una escala preliminar a partir de la revisión de los modelos SERVQUAL, SERVPERF, Nórdico, el análisis de las dimensiones y atributos empleados en investigaciones previas, la observación directa y entrevistas informales realizadas a dirigentes y espectadores deportivos. Para depurar la lista preliminar se empleó la investigación con enfoque cualitativo mediante el uso de la técnica de observación no estructurada y el método Delphi. Para la aplicación del método Delphi fue necesario la creación de un comité de expertos y de un comité de investigación, conformado por espectadores, deportistas y dirigentes deportivos. En la segunda fase del proyecto, se utiliza la técnica de la encuesta para realizar la prueba de la escala entre personas que hayan asistido a eventos deportivos internacionales en los últimos seis meses. En esta fase, mediante la aplicación del coeficiente de Cronbach se logra una escala definitiva de medición conformada por 18 atributos. Por lo anterior, el alcance de este trabajo se delimita a la elaboración del instrumento de medición, el cual será aplicado y analizado en el desarrollo de la fase cuantitativa de la investigación.

### El método Delphi

Aunque el método Delphi surge para realizar análisis prospectivo, es una técnica cualitativa fácilmente aplicable a otro tipo de investigaciones, tales como unificar criterios sobre problemas organizacionales y definir factores o indicadores de evaluación, entre otros. Es así que, dadas sus características de anonimato, respuesta numérica y retroalimentación de criterios hasta llegar a un consenso, se consideró como la metodología que más se ajusta al objetivo del proyecto, consistente en la definición de los atributos que permitieran medir de manera objetiva la calidad percibida del servicio de eventos deportivos. Según Landeta (citado por Ortega, 2008) la técnica Delphi consiste en “la compilación de las opiniones y comentarios de uno o varios grupos de personas que tienen una estrecha relación sobre la cuestión, sector, tecnología, [...] objeto de la investigación” (p.34). Los miembros del comité de expertos, al conocer las opiniones de los otros miembros, pueden mantener, modificar o ampliar sus opiniones hasta que se logre un consenso en las respuestas. En este proyecto, el método Delphi se desarrolló en cuatro etapas así: a) diseño de la lista preliminar de atributos, b) conformación del comité de expertos, c) recolección de la información y d) análisis y resultados.

### Diseño de la lista preliminar de atributos

Identificar los atributos principales que serán incluidos en la lista preliminar, es la primera función que debe realizar el comité investigador, puesto que de ésta depende el éxito de la investigación. Para la construcción de la primera lista de atributos se desarrollaron las siguientes actividades: Interpretación y análisis de los modelos SERVQUAL, SERVPERF y Nórdico, revisión de algunos trabajos sobre medición de la calidad percibida del servicio y cuatro entrevistas a dirigentes deportivos. Como resultado, en esta primera fase, el comité investigador elaboró la primera lista preliminar conformada por 71 atributos, la cual se organizó en un cuestionario con escala tipo Likert de cinco puntos, siendo el 1 equivalente a *totalmente en desacuerdo* y el 5 *totalmente de acuerdo*. Al finalizar el cuestionario, se incluyó la opción a los entrevistados de modificar o eliminar ítems.

### Conformación del Comité de Expertos

Para la selección de las personas que conformaron el comité de expertos se consideraron los siguientes aspectos: experiencia en el área los eventos deportivos, la disponibilidad de tiempo e interés en participar en la investigación. Según Landeta (citado por Ortega, 2008), el experto es “aquel individuo cuya situación y recursos personales le posibiliten contribuir positivamente a la consecución del fin que ha motivado la iniciación del trabajo Delphi” (p.36), y que, de acuerdo con lo indicado por Pill (citado por Ortega, 2008), puede a su vez aportar una perspectiva relevante a la investigación. Respecto al número de expertos, Malla & Zabala (citados por Ortega, 2008) “consideran que un grupo de 10 a 20 expertos puede ser metodológicamente fiable” (pp. 36-37). Para el desarrollo de este trabajo, el comité de expertos se conformó un equipo de diez personas: cuatro empleados con cargos directivos, cuatro espectadores y dos estudiantes de marketing de servicios.

### Recolección de la Información

En este trabajo, la información se recolecta de manera individual, mediante el uso del correo electrónico. En la primera ronda, el comité de investigación se encarga de enviar el cuestionario, recoger las respuestas y compararlas con los otros miembros del comité de expertos; las respuestas afines no se alteran pero las preguntas en donde aún existe divergencia se envían de nuevo para solicitar a los expertos que revisen y reconsideren la respuesta. El comité de investigación depura la lista, selecciona las respuestas en consenso y las aprueban. Aquellas donde hay divergencia se organizan y se regresan para que el comité vuelva a evaluarlas. A la relación inicial de las preguntas se pueden adicionar las propuestas hechas por algunos participantes, aclarando a los demás que corresponde a uno de los participantes. Por tanto, se recomienda evaluarla y expresar si se debe incluir en la escala de medición.

En esta etapa se desarrollan los siguientes pasos: en una primera ronda, se envía la escala de medición al comité de expertos y se informa que regresen el cuestionario en un término de ocho días. El comité investigador recibe, analiza los resultados y depura la lista; en esta etapa se omiten o incluyen atributos. Finalmente, prepara el nuevo cuestionario y se envía nuevamente al comité de expertos. En este momento se da inicio la segunda ronda. Estos pasos se repiten en cada ronda, hasta cuando se llegue a un consenso o se alcance una cierta estabilidad en las respuestas.

### Análisis de Fiabilidad Mediante Alfa de Cronbach

Sánchez & Sarabia (1999) exponen que “una escala es fiable cuando permite obtener medidas similares en distintos momentos o, posee una baja variabilidad interna”. Dentro de la categoría de coeficientes, Alfa de Cronbach es el más empleado por los investigadores donde se estima el límite inferior del coeficiente de fiabilidad y se expresa como:

$$\alpha = \left[ \frac{k}{k-1} \right] \left[ 1 - \frac{\sum S_i^2}{S_{sum}^2} \right] \quad (1)$$

Donde k es el número de ítems de la prueba,  $S_i^2$  es la varianza de los ítems (desde 1...i),  $S_{sum}^2$  es la varianza de la prueba total. El coeficiente mide la fiabilidad del test en función de dos términos: el número de ítems (o longitud de la prueba) y la proporción de varianza total de la prueba debida a la covarianza entre sus partes (ítems). “Ello significa que la fiabilidad depende de la longitud de la prueba y de la covarianza entre sus ítems” (Ledezma, Molina & Valero, 2002, p.143). Para el análisis alpha de Cronbach se empleó el programa estadísticos SPSS.

## RESULTADOS

Al revisar los modelos SERVQUAL, SERVPERF y Nórdico se decidió tomar como referente inicial el modelo SERVPERF dado que se concentra, a diferencia de los otros modelos, en evaluar exclusivamente las percepciones. Este modelo propone 22 atributos agrupados en cinco dimensiones: tangibilidad, confiabilidad, capacidad de respuesta, seguridad y empatía.

### Construcción Preliminar de la Escala de Medición V1

Para la construcción de la primera lista de atributos, además de los propuestos en el modelo SERVPERF, el comité investigador estuvo a cargo de adicionar aquellos criterios que consideraba importantes y que podían ayudar a complementar la evaluación de la calidad percibida de los eventos deportivos. Por otro lado, el mismo equipo realizó una revisión detallada de cada ítem (incluyendo los propuestos por el modelo SERVPERF y el comité investigador) teniendo en cuenta aspectos como la ortografía, redacción, palabras o frases repetidas. En esta etapa se obtuvo como resultado una lista conformada por 71 atributos, los cuales fueron enviados al comité de expertos (vía correo electrónico) para su respectiva evaluación, ajuste y aprobación. Para someter la escala de medición a la primera evaluación se construyó una lista de chequeo que utilizaba una escala de respuesta tipo Likert de cinco puntos, donde una evaluación entre uno (1) y tres (3) significa que el atributo se debe excluir de la lista y una evaluación entre cuatro (4) y cinco (5) significa que el atributo es altamente relevante y debe continuar en la lista de atributos. En esta misma lista de chequeo los expertos también tenían la posibilidad de incluir, modificar o eliminar ítems. Los criterios utilizados para realizar la depuración de la lista de atributos fueron (ver Tabla 1) la exclusión de los atributos con una calificación promedio inferior a 3.0 y la unificación de los atributos que presentaban similitudes en su redacción y evaluaban el mismo aspecto de la calidad percibida de eventos deportivos.

Tabla 1: Criterios Utilizados Para la Depuración de Atributos de la Escala de Medición V1

No. de ítems iniciales	Criterio de depuración	No. de ítems excluidos
71	Calificación promedio inferior a 3.0	10
61	Unificación de acuerdo a los comentarios de los expertos	10
51	Lista de chequeo resultante de la primera ronda	

*En la Tabla se detallan los criterios utilizados por el comité investigador para depurar la escala de medición V1, que para este caso se excluyeron los atributos con una calificación promedio inferior a 3,0 y se unificaron los que presentaban similitudes teniendo en cuenta los comentarios del comité de expertos.*

### Resultados de la Segunda Ronda

La nueva lista de chequeo conformada por 51 atributos (escala de medición V2), fue revisada por los integrantes del comité investigador, quienes se encargaron de organizarla y enviarla nuevamente al comité de expertos para su respectiva revisión, ajuste y aprobación. En esta versión se incluyeron las calificaciones asignadas en la ronda anterior con el fin de suministrar la información suficiente a los expertos, la cual les permitiera llegar a un consenso. Después de recibir las respuestas por parte de los expertos, el comité investigador procedió a realizar un análisis a través del promedio de las calificaciones de cada ítem. Considerando lo anterior, el comité investigador decidió excluir aquellos atributos que presentaban calificaciones promedio inferiores a 3.5. Posteriormente, se unificaron los ítems que presentaban semejanzas en su redacción teniendo en cuenta los comentarios realizados por el panel de expertos. Dichos criterios de depuración dieron como resultado un listado de 43 atributos (ver Tabla 2).

Tabla 2: Criterios utilizados para la depuración de atributos de la escala de medición V2

No. de Ítems Iniciales	Criterio de Depuración	No. de Ítems Excluidos
51	Calificación promedio inferior a 3.5	2
49	Unificación de acuerdo a los comentarios de los expertos	6
43	Lista de chequeo resultante de la segunda ronda	

*En la anterior Tabla se realiza un resumen de los criterios utilizados por el comité investigador para depurar la escala de medición V1, excluyendo aquellos atributos con calificación inferior a 3.5. Igualmente, se unificaron los atributos similares.*

### Reducción de Escala Desde la Percepción de los Espectadores

Con el propósito de realizar la revisión final de la lista de atributos y teniendo en cuenta los resultados de la ronda anterior, se construyó un cuestionario piloto que fue aplicado a 49 individuos, los cuales se caracterizaban por haber asistido, como mínimo, a un evento deportivo internacional en los últimos seis meses. En el instrumento, se asignó un espacio para que los espectadores describieran si se deben adicionar, modificar o eliminar algún atributo. Después de aplicar el cuestionario y haciendo uso de la información recolectada, el comité investigador tomó como referentes los siguientes criterios de reducción para obtener el listado definitivo de atributos (ver Tabla 3): Eliminación de los atributos señalados por los individuos que obtuvieron una calificación promedio inferior a 4.0, Eliminación de aquellos atributos que generan un incremento significativo en el alpha de Cronbach del total de ítems (superior a 0.8 para obtener mayor fiabilidad del instrumento) y, Unión de atributos que, de acuerdo a los comentarios de los individuos, presentaban similitudes en su redacción y evaluaban el mismo aspecto de la calidad percibida de eventos deportivos.

Tabla 3: Criterios Utilizados Para la Depuración de Atributos de la Escala de Medición V3

No. de Ítems Iniciales	Criterio De Depuración	No. de Ítems Excluidos
43	Calificación promedio inferior a 4.0	14
29	Según alpha de Cronbach	4
25	Criterios agrupados	11
14	Escala resultante de la segunda ronda	

*En la anterior Tabla se realiza un resumen de los criterios utilizados por el comité investigador para depurar la escala de medición V3, excluyendo aquellos atributos con calificación inferior a 4.0, con un coeficiente de Cronbach igual a 0.926; finalmente, se unificaron los atributos similares.*

### Diseño de la Escala Definitiva

A la escala de 14 atributos obtenida hasta el momento, se adicionaron cuatro atributos propuestos por las personas consultadas, lo que permite llegar a una escala definitiva conformada por 18 atributos (ver Tabla 4).

Tabla 4: Escala de Medición de la Calidad Percibida de Eventos Deportivos

No.	Atributo	No.	Atributo
1	Hay gran variedad de productos del evento	10	La ubicación del parqueadero es satisfactoria
2	La relación calidad-precio de los productos del evento es buena	11	La señalización de las instalaciones facilita la orientación y ubicación de las personas
3	Se da buena información para conocer el transcurso del evento	12	La limpieza e higiene de las instalaciones es la adecuada
4	La visión del evento es buena	13	El servicio ofrecido por el personal de la organización es el adecuado
5	La instalación me produce buenas sensaciones	14	Adquirir las entradas para el evento ha resultado
6	La instalación permite desplazarse con facilidad por el interior	15	Las instalaciones ofrecen buena comodidad a los asistentes
7	Los accesos están bien preparados para asumir las colas	16	La seguridad dentro de los escenarios es adecuado durante el desarrollo del evento.
8	La información sobre disponibilidad y precios de las entradas es clara	17	El horario de realización y la puntualidad en el inicio del evento es adecuado
9	Hay suficiente parqueadero para la gente que se acerca al evento	18	Existe facilidad en el desplazamiento hacia el evento (transporte y ubicación)

*Como resultado final se conformó una escala definitiva para medir la calidad percibida de los eventos deportivos que incluye los atributos propuestos por el grupo de individuos consultados.*

Adicional a esta información, también se incluyeron en el cuestionario definitivo preguntas demográficas y se asignó un espacio para que los usuarios presenten sus sugerencias o recomendaciones.

## CONCLUSIONES

El uso de las metodologías cualitativas para definir instrumentos de medición es una excelente metodología puesto que se puede aplicar en la fase previa de cualquier investigación que requiera la construcción de un instrumento de medición con escalas tipo Likert. Entre las diferentes técnicas revisadas, se empleó el método Delphi porque ofrece la oportunidad de llegar a consenso con la participación de personas conocedoras de la actividad de la empresa. Para el análisis definitivo, el método Delphi recurre a análisis estadísticos sencillos como las medidas de tendencia central y el Coeficiente de Cronbach. En cuanto a los eventos deportivos, los estudios realizados con anterioridad presentan una gran variedad de escalas que oscilan entre cuatro y doce dimensiones.

De los 18 atributos identificados en la investigación, 17 de ellos se encuentran identificados en estos estudios. El atributo No. 16 denominado “La seguridad ofrecida durante el desarrollo del evento” surge por las características particulares que enfrenta nuestro país. En la descripción de este atributo, los espectadores solicitaron incrementar la vigilancia interna en los escenarios deportivos causada por el nivel de inseguridad que enfrenta nuestro país. Se espera que en la fase cuantitativa de la investigación, donde se aplicará el instrumento a una muestra representativa, se valide definitivamente la escala y se identifiquen los factores que agrupen los atributos. Igualmente, se espera que esta metodología sirva de referente para futuras investigaciones sobre medición de la calidad percibida del servicio en diferentes sectores de servicio.

## ANEXOS

El cuestionario y escalas preliminares están disponible bajo petición, póngase en contacto con los autores.

# DIAGNÓSTICO DEL CLIMA ORGANIZACIONAL PROMOTOR DE ESTRATÉGIAS GERENCIALES EN LAS PEQUEÑAS EMPRESAS DE LA INDUSTRIA METAL-MECÁNICA

Maricela Carolina Peña Cárdenas, Universidad Autónoma de Coahuila-México

Ma. Guadalupe Díaz Díaz, Universidad Autónoma de Coahuila-México

Maribel Moserrat Olivares Medina, Universidad Autónoma de Coahuila-México

## RESUMEN

*El presente trabajo se llevó a cabo con la finalidad de identificar los factores que determinan un clima organizacional en las Pequeñas empresas de la industria metal – mecánica de Monclova y Frontera, Coahuila, a fin de proporcionarles a estas últimas una propuesta con recomendaciones que contribuir al logro de sus estrategias gerenciales. El estudio se realizó a un consenso de 31 trabajadores a quienes se les aplicó un cuestionario estructurado, para la fiabilidad del instrumento se utilizó la prueba Alfa de Cronbach, obteniéndose un coeficiente de consistencia interna de 0.851. Una vez tabulados los datos, el tratamiento estadístico se realizará usando el programa SSPS (versión 17.0) Como resultado la Medias más altas fueron los siguientes: Relaciones, Liderazgo y Estructura; en cuando a las correlaciones de Pearson las altamente significativas entre las variables Estructura con Liderazgo y Relaciones; Recompensas, Mecanismos Útiles; Liderazgo con Relaciones. Otras de las correlaciones significativas son Propósito con Estructura; Relaciones y Recompensas con Mecanismos Útiles.*

**PALABRAS CLAVE:** Clima Organizacional, Satisfacción

## DIAGNOSIS OF ORGANIZATIONAL CLIMATE MANAGEMENT STRATEGIES IN PROMOTER OF SMALL BUSINESS OF METAL- MECHANICAL INDUSTRY

### ABSTRACT

*This work was carried out in order to identify the factors that determine an organizational climate in Small metal industry companies - mechanics Monclova and Frontera, Coahuila, in order to provide the latter a proposal with recommendations that contribute to achievement of their management strategies.*

*The study was conducted at a consensus of 31 workers who answered a structured instrument for reliable questionnaire Cronbach Alpha test was used to give an internal consistency coefficient of 0.851. Once tabulated data, the statistical treatment was performed using the SSPS program (versión 17.0). As a result the highest averages were: Relationships, Leadership and Structure; to time in the highly significant correlations between the Pearson Leadership Structure variables and relations; Rewards, Helpful Mechanisms; Leadership Relations. Another of the significant correlations are with Purpose Structure; Relationships and Rewards with mechanisms of calcification Tools.*

**JEL:** M00

**KEYWORDS:** Organizational Climate, Satisfaction

## INTRODUCCIÓN

Las organizaciones deben tener un ambiente único que permita a los trabajadores que se identifiquen con ella, de tal manera que se puedan alcanzar los objetivos de acuerdo a las necesidades de su potencial humano. Hoy en día donde más allá de ser un elemento de avance el estudio del clima laboral es algo necesario y fundamental para cualquier empresa, ya que es el indicador más preciso y demuestra los niveles que se tienen en la organización en cuanto a las relaciones laborales. Ruíz, et al (2012) cita a Koys y Decottis (1991) los cuales mencionan que los estudios de clima organizacional son de difícil realización debido a que se trata de un tema complejo y con múltiples niveles, aunque señalan que se ha producido un avance en cuanto al concepto de clima como constructo. Esto queda comprobado mediante Guédez (1995), Herzberg (1966) y Tagiuri (1968), que definen que el clima laboral es el conjunto de cualidades, atributos o propiedades relativamente permanentes de un ambiente de trabajo concreto que son percibidas, sentidas o experimentadas por las personas que componen la organización y que influyen sobre su conducta. En esta definición el clima es determinado por la percepción de los miembros del grupo, y sólo a partir de allí se podrán diagnosticar las características del mismo.

Con el clima organizacional se puede predecir una serie de sucesos que se desencadenarán a partir del tipo de clima que se tenga, si es positivo se pueden esperar beneficios tanto para los empleados como para la organización misma, como lo señalan Peña, et al (2013) que las empresas para obtener resultados positivos ante dicha situación, han concluido que la clave es el recurso humano, pues su trabajo es fundamental para el logro de los objetivos organizacionales y; así lograr un clima organizacional satisfactorio; en cambio si es negativo, se esperarán pérdidas, gastos, conflictos y demás situaciones contrarias que pueden llevar a la organización a la quiebra. El realizar un diagnóstico de Clima Organizacional, permite generar conocimientos de utilidad en la implementación de cambios planificados que impacten en las actitudes y conductas de los integrantes, como en la estructura organizacional.

## REVISIÓN LITERARIA

El clima organizacional ha adquirido gran importancia en nuestros tiempos, nos permite examinar situaciones para lograr el máximo beneficio para la empresa y el trabajador. Es por eso, que, en ellas debe predominar un clima organizacional en el que el ambiente de trabajo permita a los trabajadores sentirse satisfechos por su labor en la misma; así, estos establecen un compromiso más fuerte hacia la organización. Acosta y Venegas (2010) mencionan que desde 1968, Litwin y Stringer fueron los primeros autores en conceptualizar el clima organizacional bajo una perspectiva perceptual. Para ellos, el clima es un conjunto de propiedades del entorno de trabajo que son susceptibles de ser medidas percibidas directa o indirectamente por los trabajadores que vive y trabaja en dicho entorno y que influye en su comportamiento y motivación. La teoría de Litwin y Stringer (1968) intenta explicar importantes aspectos de la conducta de los individuos que trabajan en una organización utilizando los conceptos como motivación y clima. Los autores tratan de describir los determinantes situacionales y ambientales que más influyen sobre la conducta y percepción del individuo.

Chiavenato (2000) argumenta que el clima organizacional puede ser definido como las cualidades o propiedades del ambiente laboral que son percibidas o experimentadas por los miembros de la organización y que además tienen influencia directa en los comportamientos de los empleados. El Clima Organizacional es definitivo en la toma de decisiones en una organización y en la forma de como se dan las relaciones personales dentro y fuera de la misma. Por ello es necesario que exista un clima satisfactorio para que se vean consecuencias positivas en la misma, trayendo muchos beneficios a la empresa y por ende su posicionamiento en el mundo competitivo.

Existen muchas teorías para estudiar el clima organizacional, sin embargo nos centraremos en la Teoría de los Sistemas de Likert (1968), la cual establece que el comportamiento de los subordinados es causado por el comportamiento administrativo y por las condiciones organizacionales que los mismos perciben, por sus esperanzas, sus capacidades y sus valores. Por lo tanto, se afirma que la reacción está determinada por la percepción. Likert propone una teoría de análisis y diagnóstico del sistema organizacional basado en tres tipos de variables que determinan las características propias de una organización, las cuales influyen en la percepción individual del clima: Las *variables causales* llamadas también variables independientes, son las que están orientadas a indicar el sentido en el que una organización evoluciona y obtiene resultados. Dentro de estas variables se encuentran la estructura de la organización y su administración, reglas, decisiones, competencia y actitudes. Si las variables independientes se modifican, hacen que se modifiquen las otras variables. Las *variables intermedias*, reflejan el estado interno y la salud de una empresa y constituyen los procesos organizacionales de una empresa. Entre ellas están la motivación, la actitud, los objetivos, la eficacia de la comunicación y la toma de decisiones. Las *variables finales*, denominadas también dependientes son las que resultan del efecto de las variables independientes y de las intermedias, por lo que reflejan los logros obtenidos por la organización, entre ellas están la productividad, los gastos de la empresa, las ganancias y las pérdidas.

Para efectos de esta investigación y debido a las necesidades de la organización se elige el Modelo de Weisbord (1976) el cual facilita el diagnóstico de Clima Organizacional. A través de la medición de seis variables: Propósitos, Estructura, Relaciones, Recompensas, Liderazgo y Mecanismos auxiliares; incluyendo una variable adicional llamada Actitud hacia el cambio la cual formula preguntas clave de diagnóstico para cada una de las variables. Facilita el diagnóstico de problemas provocados por la influencia del medio ambiente externo, examinando en forma sistemática los procesos y las actividades de cada subsistema de la organización, buscando señales de problemas y el reflejo que estas acciones han tenido en cada uno de ellos.

## METODOLOGÍA

El diseño metodológico corresponde a una investigación de campo, transversal, mixta (cuantitativa y cualitativa) y de tipo descriptivo. La Muestra se determinó por consenso ya que incluye a la población total de los trabajadores de dos pequeñas empresas. Para efecto de la recolección de la información se aplicó el Modelo Organizacional de Seis Casillas de Weisbord (1976). A continuación se presenta en la tabla 1 la operacionalización de las variables.

Tabla 1: Operacionalización de Variables del Clima Organizacional

Variable	Indicadores	Preguntas
Propósito	Claridad de la meta y si los trabajadores apoyan el propósito de la organización.	1, 8, 15, 22, 29
Estructura	Es la disposición y orden de las partes dentro de un todo.	2, 9, 16, 23, 30
Liderazgo	Aceptación del jefe, reconocimiento de ser competente, trato justo, atención en sentimientos de sus subordinados.	3, 10, 17, 24, 31
Relaciones	Relaciones cordiales, vínculos amistosos, reconocimiento y respeto de la personalidad humana.	4, 11, 18, 25, 32
Recompensas	La recompensa es a través de incentivos o en su caso un castigo.	5, 12, 19, 26, 33
Mecanismos Útiles	Planeación, control, presupuestos y los demás sistemas de información, como las Tic's.	6, 13, 20, 27, 34
Actitud hacia el Cambio	Organizaciones que son capaces de cambiar en un futuro, implementar un sistema de administración, mejoramiento de la calidad.	7, 14, 21, 28, 35

En esta tabla se muestra la Operacionalización de variables consideradas en el instrumento de medición del clima organizacional

La confiabilidad del instrumento (Alfa de Cronbach 0.851) es considerable aceptable. El objetivo es identificar los factores que determinan un clima organizacional en las Pequeñas empresas de la industria metal – mecánica de Monclova y Frontera, Coahuila. Una vez tabulados los datos, el tratamiento estadístico consistió en calcular frecuencias, medias y los coeficientes de correlación de Pearson, usando el programa SSPS (versión 17.0).

## RESULTADOS

Se establecieron rangos de edad, de antigüedad, nivel de estudios y de actividad principal, calculando las frecuencias y dar respuesta a los reactivos de las características demográficas; observándose que el 52% de los trabajadores se encuentran en el rango de 31 a 50 años; mientras que el 26% con una antigüedad de 3 a menos de 5 años de servicio, seguidos por el 23% con una antigüedad de 7 a menos de 10 años de servicio; con respecto al nivel de estudios, se encontró que el 32% de los trabajadores han cursado la carrera Técnica, seguidos por 26% de los trabajadores cuentan con estudios de Secundaria; y la actividad principal que predomina en un 19% son Soldadores y Torneros.

Los resultados presentados en este apartado, han sido calculados en base a los datos obtenidos del cuestionario de Weisbord, aplicado a los 31 sujetos que conforman la Muestra de las pequeñas empresas objeto de estudio. Las Medias globales de las 7 variables estudiadas, para analizar los resultados de este estudio, se dispuso a determinar por rangos las opciones de respuesta (1 y 2 Desacuerdo; 3 y 4 Levemente De Acuerdo; 5 y 6 De Acuerdo), es decir que el promedio de respuestas dadas por los trabajadores de las empresas, fue de *Levemente de acuerdo*. Por lo cual, las Medias más altas corresponden a las variables de *Relaciones* 4.61, *Liderazgo* 4.43 y *Estructura* 4.39, mientras que la variable más baja es la de *Actitud hacia el Cambio* 3.78. En cuanto los coeficientes de contingencia indican que existe una relación significativa entre la variable *Estructura*, que se correlaciona con *Liderazgo* y *Relaciones*; así como el factor *Recompensas*, con *Mecanismos útiles*; seguida por la variable de *Liderazgo* con *Relaciones*.

## CONCLUSIONES

Los resultados obtenidos en la presente investigación muestran la percepción del clima organizacional que los trabajadores administrativos y operativos de las empresas objeto de estudio. Así mismo, por consecuencia brinda la información necesaria para conocer y determinar los factores que definen el clima organizacional. En general la percepción que tienen del clima organizacional, reporta que la relación existente entre el personal, y la forma en como interactúan los trabajadores para efectuar sus tareas, y la manera de cómo son tomadas y comunicadas las decisiones, son percibidas por los trabajadores parte importante para el ambiente organizacional satisfactorio; lo que comprende la distribución de tareas, responsabilidades y funciones entre todos los niveles del personal; los beneficios que reciben (paquete de gratificaciones y los sistemas de incentivos) son de acuerdo a los niveles de cada uno de los trabajadores. Por último proporcionar retroalimentación a los directivos, se entregará un informe con los resultados obtenidos de acuerdo a las respuestas otorgadas por los trabajadores. Se incluirá, además, una propuesta con estrategias de mejora, de reforzamiento y/o de cambio, aprovechando las áreas de oportunidad.

# EL RECONOCIMIENTO DEL TALENTO, COMO ESTRATEGIA COMPETITIVA EN LA CULTURA EMPRENDEDORA

Martha Patricia Ibarra Olguín, Benemérita Universidad Autónoma de Puebla  
Ramón Sebastián Acle Mena, Benemérita Universidad Autónoma de Puebla

## RESUMEN

*Todas las organizaciones, independientemente del tamaño y sector, enfrentan los mismos retos, entre otros continuar siendo competitivas en un entorno de mercado cada vez más exigente y cambiante. Una vez asumida por las organizaciones, la importancia de la Innovación como elemento de competitividad, el siguiente reto que se plantean es como integrar, al menos de manera sistemática, desde sus políticas y estrategias, la identificación y desarrollo de los talentos de sus miembros, que conlleven a oportunidades de innovación y a una cultura emprendedora. La sistematización de la innovación en las empresas, depende de muchos factores, pero su común denominador es la necesidad de disponer de un equipo humano, que además del talento que se le supone, demuestre un elevado compromiso con la organización y de manera recíproca, de la organización hacia ellos, buscando así mantener el paralelismo en las metas creando comunidades de aprendizaje en la misma y cumplir la estrategia innovadora.*

**PALABRAS CLAVE:** Talento, Innovación, Estrategia Competitiva, Cultura Emprendedora, Comunidades De Aprendizaje

## RECOGNITION OF TALENTS AS A COMPETITIVE STRATEGY IN AN ENTREPRENEURIAL CULTURE

### ABSTRACT

*All organizations, independently of its size and sector, face the same challenges, such as being competitive into an exigent and changing market environment. Once the organizations assume the importance of innovation as an element of competitiveness, the next challenge consists on integrating, in a systematic manner, its policies, strategies, identification procedures and the development of talents, leading to innovation opportunities and an entrepreneurial culture. The systematization of innovation in organizations depends on so many factors, its common element is the need of disposing of a human team that shows, besides the talent, a high commitment to the enterprise, and reciprocally from the Enterprise to them; this is aimed to maintain parallelism in goals, by promoting the creation of learning communities and the fulfillment of the innovative strategy.*

**JEL:** M1-90

**KEYWORDS:** Talent, Innovation, Competitive Strategy, Entrepreneurial Culture, Learning Communities.

## INTRODUCCIÓN

En este trabajo de investigación se realizará un análisis del reconocimiento del talento y de su importancia actual dentro de las organizaciones. Dentro de los factores explicativos más importantes de la riqueza y potencial de una nación se encuentran los conocimientos y habilidades de su población. En este sentido, es

importante reconocer los talentos de las personas, lo que va a permitir generar mejores emprendimientos que conlleven al país a condiciones superiores de creatividad, innovación, competitividad de las organizaciones y ambientes de bienestar en las personas. Las empresas en la actualidad tratan de analizar y distinguir diversas estrategias que les permitan optimizar sus procesos organizacionales, de tal forma que se puedan considerar como competitivas e innovadoras, como lo indican Porter y Millar (2009), los procesos administrativos han sufrido una metamorfosis en su forma de operación dado que a las organizaciones se les exige eficiencia y eficacia, entre los procesos administrativos más importantes se encuentra la administración del talento humano. Este proceso se enmarca dentro de la concepción participativa y activa de la democratización, que tiene como objetivo que las decisiones sean consensuadas hacia adentro de la organización, esta visión moderna nos inserta a un estilo de trabajo diferente y es que si la meta de toda organización es Innovar y adaptarse a los cambios con rapidez, la principal vía para lograrlo con efectividad es a través del talento humano, como una nueva gestión empresarial. Ya no basta con que la persona conozca solo su trabajo y se dedique a lo suyo sin ver su influencia en el resto de la cadena de procesos del negocio. Es necesario que cada uno de los integrantes entienda la importancia de su rol en la línea de procesos y del rol del resto de sus compañeros de trabajo. Recobramos así al ser humano como factor clave del éxito empresarial y centro de toda organización.

Este trabajo de investigación se encuentra organizado como se indica a continuación: En la sección de revisión de la literatura se exponen los argumentos sobre la importancia del reconocimiento del talento en las organizaciones para generar una cultura emprendedora y ser competitivas. En la parte de metodología se indica la utilizada para la realización de este trabajo. Posteriormente se comentan los resultados de la investigación. Por último se presentan las conclusiones.

## REVISIÓN LITERARIA

Entre los años ochenta y noventa, este proceso alcanza su principal momento, se concreta con la “Gestión del Conocimiento” como modelo organizativo que responde a la necesidad de creación de un nuevo enfoque, que ayude a las organizaciones a ser competitivas, innovadoras, inteligentes, a aprender, a tener conocimiento compartidos-comportamiento organizacional-a formar comunidades de aprendizaje en la cual todos aprenden de todos. Así, la Gestión del conocimiento crea valor con los activos intangibles de la organización. La sabiduría individual se convierte en colectiva, se captura y se distribuye hacia las áreas de la organización donde se necesite, es decir, persigue trasladar el conocimiento con un emisor que lo posee a un receptor que lo requiere. El resultado básico de la Gestión del conocimiento es la Organización Inteligente, la cual trasciende, desde sus principios, la satisfacción de necesidades básicas de quienes la conforman y promueven el aprendizaje creativo, impulsando la autoestima y la autorrealización de sus miembros, son organizaciones que aprenden permanentemente y que mediante sus aprendizajes se adaptan de manera constante y fluida a los siempre cambiantes entornos sociales de los que forman parte, mucho tiene que ver con el lugar de trabajo y con las personas que forman la organización encontrándose en ella el potencial que garantiza el éxito o el fracaso de cualquier empresa y cuando hablamos de potencial hablamos de talento y más en concreto nos referimos a las reservas de talento latentes, ese talento que todas las personas poseemos y que está esperando que se den las condiciones ideales para ser liberado, favoreciendo con ello una nueva cultura innovadora.

## METODOLOGIA

La investigación ha considerado como objetivo central el reconocimiento del talento humano en la Gestión del Conocimiento, como una forma innovadora en la ciencia administrativa en el contexto de la Sociedad del Conocimiento en el siglo XXI. Las preguntas de base fueron: ¿De qué manera es posible colocar al factor humano en el centro de la organización, como agente de cambio? ¿Cómo lograr ventajas competitivas en las organizaciones a partir de la inclusión de una cultura emprendedora? El diseño del proceso de

investigación consideró, además, el supuesto de que el talento humano, al ser incorporado al desarrollo de una cultura emprendedora, le permite a las organizaciones generar mejores estrategias en la administración del recurso humano, con el propósito de incrementar los niveles de competitividad de las mismas en el ámbito global. Como método de trabajo, se realizó una revisión y análisis del estado del arte de las investigaciones en torno al reconocimiento del talento, de las inteligencias y de la gestión del conocimiento. Desde una perspectiva comparada, ha sido posible presentar los resultados del análisis de la base epistemológica que da sustento a la propuesta de una nueva gestión del talento, en el que la puesta en práctica del principio “aprender a aprender” le otorgue sentido, dirección y fortaleza a las organizaciones, que enfrentan los nuevos retos innovadores del siglo XXI.

## RESULTADOS

Para dar inicio al tema se hace necesario preguntarnos ¿qué es el talento?, en la antigüedad, específicamente en el mundo helénico talento era el platillo de la balanza denominado talenton y más tarde sirvió para identificar a las primeras monedas griegas, y así fue como el nombre de moneda durante el imperio Romano, se llamó talentum, adquiriendo el significado de “tesoro”, por utilizarse para referirse a elevadas cantidades de dinero. Pese a no existir coincidencia total en cuanto a la equivalencia del peso, lo que sí podemos afirmar es que un talento servía para pesar más de 30 kilos de oro. Ha adquirido cierta notoriedad dado que protagoniza una de las parábolas del evangelio “De los talentos” (Mateo 25: 14-30 y Lucas 19:11-27) de la interpretación, que algunos estudiosos han realizado de esa parábola, deriva inteligencia (capacidad de entender), aptitud (capacidad para el desempeño o ejercicio de una ocupación), dadas también como primeras acepciones por la Real Academia de la Lengua Española (2011) para éste término en castellano. En inglés se utiliza el vocablo talent, y las formas gifted y talented se usan como adjetivos, mientras que en francés Intelligence, designa tanto la inteligencia como el talento. Hoy el talento no sirve para pesar oro, pero sí para valorar a las organizaciones y hoy el talento es la moneda de cambio en el mundo de los negocios y el tesoro máspreciado, convirtiéndose así en una ventaja competitiva para aquellas empresas que deseen proyectarse dentro del contexto de las principales tendencias mundiales y tiene como desafío la búsqueda de la excelencia, en el actual proceso administrativo que es la gestión del talento humano, se mira contextualizada en la interdependencia de tres escenarios: la persona, la organización y el entorno, donde el ser humano es un talento clave que debe mantenerse en el centro de toda la esencia de la organización. El talento se conceptualiza como la capacidad para desempeñar o ejercer una actividad, se puede considerar como un potencial de acción o de disposición de una serie de características o aptitudes que pueden llegar a desarrollarse en función de diversas variables “contextuales”. Siguiendo a Arancibia (2009, p.37), el talento sería un “potencial individual de logros excepcionales en uno o más dominios” y/o “competencias sobresalientes en relación a su grupo de pares”. El talento para otros especialistas (Al Mufti, 1997; Landau, 2000; Perrenoud, 2008; Piechowski, 1997; Prieto, Ferrándiz. Ferrando, Sainz, Bermejo y Hernández, 2008), se asocia a una manifestación de la inteligencia emocional y de variadas condiciones implícitas- como opuesto a explícitas y evidentes y evidenciabiles- y podría considerarse como una aptitud o conjunto de destrezas sobresalientes respecto de un grupo para realizar una tarea determinada en forma exitosa. El talento es pues, la integración e interacción de las habilidades de una persona, sus características innatas, sus conocimientos, sus experiencias, experticias, actitud, carácter e iniciativa para aprender y desarrollarse en diferentes contextos. Tenerlo claro permite identificar de qué manera y en qué áreas cada ser es talentoso y de esta forma poder explotar dicho talento en beneficio propio, de la organización y de la sociedad.

En los albores del siglo XXI la gestión del talento humano es fundamental en un mercado competitivo y globalizado, donde las organizaciones no se diferencian unas de otras por sus recursos tecnológicos, financieros y físicos, lo que realmente diferencia a una organización de otra es su capital humano, son las personas las que mantienen y conservan el statu quo existente y son solo ellas las que generan y fortalecen la innovación y el futuro de las organizaciones. Las personas producen, venden, atienden al cliente, toman decisiones, lideran, motivan, comunican, supervisan, gerencian, entre otras actividades, de tal manera que

la tendencia actual no mira a las personas como recursos organizacionales o meros sujetos pasivos del proceso, sino principalmente como personas activas que generan, de tal manera que la gente juega el papel de titular y es fundamental lograr al máximo la aceptación, participación e involucramiento del talento humano en todas las actividades Alvarado (1998).

De lo anterior se desprende la importancia de reconocer el talento humano en la empresa y considerarlo también como uno de los puntos sobre las cuales debe dirigirse un mayor nivel de atención dentro de la misma, aprovechando al máximo el potencial que despliegan las personas que laboran en ella y a la vez generando óptimos procesos que permitan alcanzar una ventaja competitiva sostenible a través de las personas, que sean encaminados hacia los resultados e intereses de cada una de las partes (personas y organizaciones), para obtener el paralelismo en las metas logrando satisfacción y compromiso por parte de ambas, lo que puede convertirse en una fortaleza para el aumento en los resultados internos y externos de la organización.

Las empresas son sistemas altamente complejos, en donde se encuentran tres escenarios particulares y son claves para el desarrollo del ámbito empresarial, como son la persona, la organización y el entorno y por ende se encuentran en continua interdependencia, viéndose influida la organización por un complejo conjunto de fuerzas siendo cada una de éstas imprescindibles e irremplazables, sin embargo, en la actualidad según la nueva tendencia mundial administrativa, se ha otorgado un mayor valor a una de ellas, a las personas, ya que éstas están relacionadas con todos y cada uno de los procesos de la empresa, por tanto el motor de una organización se refleja en el talento humano que esta posee, “el desarrollo del talento de la gente es la tarea más importante del negocio” Drucker (2002).

Como ya hemos planteado, las personas que reconocen su talento son el mayor activo de la empresa en el nuevo milenio, ahora más que nunca una eficaz gestión de personas es la pieza clave para crear un ambiente que permita a los líderes desarrollarse dentro de la empresa (Chang, 2003), cuando se reconoce el talento se prospera en un entorno en el que su trabajo les supone un reto y les ofrece la oportunidad de aprender y progresar, en lugar de sentirse obligadas a permanecer en un puesto sólo para poder hacer frente a sus gastos. Actualmente las organizaciones que reconocen el talento como ventaja competitiva sostenible se encuentran adoptando estilos estratégicos que permitan gerenciar la fuerza laboral y por tanto producir resultados óptimos y destacados, por consiguiente “la gran palanca será la verdadera gestión del talento humano” Viancha (1999). La gestión del talento humano se basa en tres aspectos fundamentales, entre los que se reconocen a las personas, los cuales están dotados de personalidad propia profundamente diferentes entre sí, tienen historias distintas y poseen conocimientos, habilidades, destrezas y capacidades indispensables para la gestión adecuada de los recursos organizacionales; son activadores inteligentes de los recursos organizacionales, capaces de dotarla de inteligencia, talento y aprendizajes indispensables en su constante renovación y competitividad en un mundo de cambios y desafíos. Las personas son fuente de impulso propio que dinamiza la organización y no agentes pasivos, inertes y estáticos, en donde son capaces de conducirla a la excelencia y al éxito; como socias, las personas invierten en la organización esfuerzo, dedicación, responsabilidad, compromiso, riesgos, entre otros más. Hoy el talento humano considerado como una verdadera ventaja competitiva, supone una labor de concientización y la decisión organizacional de lograr el fortalecimiento de la dimensión humana para responder a los nuevos retos de la globalización. Como nos damos cuenta, el talento forma parte de los activos intangibles de la empresa, el análisis de los aspectos particulares que condicionan su desarrollo es muy interesante, al respecto K. Heller (1995) plantea que el paradigma de las investigaciones actuales necesita ser redefinido con el objetivo de que sea más predictivo y explique realmente su importancia actual, para ello, se necesitan concepciones multidimensionales de talento. Existen varios modos de determinar la excelencia en el trabajo, entre los indicadores que se tienen en cuenta para estos fines se señala que una persona puede ser señalada como tal por:

El impacto revolucionario que provoquen sus aportes en un área

El juicio de otros sujetos que han alcanzado logros en ese campo

Por la evaluación de los expertos en el campo

Por el número de publicaciones o patentes que se posea.

Pero, entonces, ¿Qué formas tenemos de reconocer nuestro talento? Entre los trabajos más destacados que nos permiten reconocer nuestros talentos tenemos el trabajo realizado por Howard Gardner y su teoría de las Inteligencias Múltiples, nos propone una redefinición de la inteligencia convirtiéndola en un potencial psicobiológico, en donde es decisiva la influencia del ambiente en el que se desarrolla el individuo, sus estilos cognitivos, la disposición para resolver problemas y crear productos. Fundamentalmente propone nueve maneras distintas de ser inteligentes, dejando de lado el que la inteligencia es sólo un buen desarrollo de lo lingüístico y lo lógico matemático. El autor en 1983, define a una inteligencia como: “ la habilidad para resolver problemas de la vida real, encontrar y crear nuevos problemas y ofrecer un producto o servicio que sea valorado por lo menos por una cultura”; dieciséis años después, replantea su definición de inteligencia y la redefine como: “Es un potencial psicobiológico para procesar información, que puede ser activado en un entorno cultural, para resolver problemas o crear productos que son valorados en una cultura” (Inteligencia reformulada, 1999), de esta manera Gardner nos dice que las inteligencias no son cosas que pueden vistas o cuantificadas; que son potenciales que serán o no serán activados, dependiendo de los valores de una determinada cultura, las oportunidades disponibles en dicha cultura y las decisiones personales realizadas por individuos y/o sus familias. El autor nos señala que no existe una inteligencia general y total, sino que coexisten múltiples inteligencias, su teoría se basa en tres principios:

La inteligencia no es una sola unidad, sino un conjunto de inteligencias múltiples.

Cada inteligencia es independiente de las otras

Las inteligencias interactúan entre sí, de otra manera nada podría lograrse.

Gardner plantea nueve inteligencias, cada una con sus características, habilidades y desarrollo propio. Una persona puede tener mayor dominio en una, inclinación hacia varias, menor grado en otras y puede también tener una combinación de ellas, todos nacemos con unas potencialidades marcadas por la genética, esas potencialidades se van a desarrollar de una manera o de otra dependiendo del medio ambiente, nuestras experiencias, la educación recibida, etc., y las presentamos en la Tabla 1.

Tabla 1: Inteligencias Múltiples

Nombre de la Inteligencia	Descripción breve de la Inteligencia
Inteligencia lingüística	Es la capacidad de pensar en palabras y utilizar el lenguaje para expresar y apreciar significados complejos., los escritores, poetas, periodistas, oradores, locutores, presentan niveles altos de esta inteligencia.
Inteligencia lógico-matemática	Es la capacidad para calcular, medir, evaluar hipótesis y proposiciones, efectuar operaciones matemáticas complejas. Los científicos, matemáticos, contadores, ingenieros, analistas de sistemas, etc., presentan estas capacidades.
Inteligencia naturalista	Consiste en observar los modelos de la naturaleza, identificar y clasificar objetos, establecer patrones y comprender los sistemas naturales. Tienen estas capacidades los botánicos, agricultores, ecologistas, cazadores, paisajistas, etc.
Inteligencia espacial	Proporciona la capacidad de pensar en tres dimensiones, permite a las personas percibir imágenes internas y externas, recrearlas, transformarlas o modificarlas, recorrer el espacio o ubicar objetos, producir y decodificar información gráfica, los pilotos, marinos, artistas plásticos y arquitectos, entre otros, tienen un alto desarrollo de esta capacidad.
Inteligencia musical	Es la inteligencia que poseen los compositores, críticos musicales, oyentes sensibles, músicos en general, directores de orquestas. Es la capacidad de ser sensible a las melodías, ritmo, armonía y tono. También está orientada a los distintos estados de ánimo que produce la música.
Inteligencia corporal-kinestésica	Permite al individuo manipular objetos y expresarse a través de las habilidades físicas, los atletas, bailarines, cirujanos, mimos y artesanos poseen esta inteligencia desarrollada.
Inteligencia interpersonal	Es la capacidad de comprender a los demás e interactuar eficazmente con ellos. Es también, ser sensible a los estados de ánimo, modos y humores del otro, esta capacidad la poseen los actores, políticos, trabajadores sociales, entre otros.
Inteligencia intrapersonal	Es la capacidad de percibirse a uno mismo y de utilizar dicho conocimiento para planificar y dirigir la propia vida, esta capacidad está presente en buena medida en los teólogos, psicólogos y filósofos
Inteligencia emocional	Es la habilidad de tener conciencia emocional, sensibilidad y manejo de destrezas que nos ayudarán a maximizar la felicidad a largo plazo, sus características son: entusiasmo, perseverancia, control de impulsos, empatía, espiritualidad, agilidad mental, motivación, etc.

*Se describe en el cuadro, las características de cada una de las Inteligencias Múltiples que señala Gardner, no existiendo una inteligencia general y total, sino que coexisten múltiples inteligencias. Fuente: Elaboración propia.*

Otra herramienta que nos apoya enormemente en la identificación de nuestras habilidades y capacidades, es el Perfil de fortalezas, las denominadas Strengths Finder, elaborado por la Universidad de Gallup, basándose en el enfoque de nuestras fortalezas más que en nuestras debilidades, este test de talentos nos señala que existen treinta y cuatro talentos, de los cuales, los primeros cinco son los dominantes en la personalidad, el realizar este autodiagnóstico nos permite entender hacia dónde dirigir nuestros esfuerzos para lograr nuestras metas personales y de las personas a los que dirigimos, esos talentos se muestran en la tabla 2.

Tabla 2: Talentos

Nombre del Talento	Descripción
1.- Analítico	Se ve a sí mismo como una persona objetiva e imparcial. Le gustan los datos porque representan información objetiva.
2.- Armonía	Su objetivo es lograr un común acuerdo, poco puede obtener del conflicto y del enfrentamiento. La armonía es uno de sus valores fundamentales
3.- Auto confianza	Comprende la seguridad en sí mismo, respecto a sus capacidades y juicios
4.- Carisma	Le encanta el desafío de conocer gente nueva y lograr caerles bien, encuentra áreas de interés común.
5.- Competitivo	Su fundamento es la comparación, busca superar a sus pares.
6.- Comunicación	Le gusta explicar, describir,, escribir y hablar en público, necesidad de darle vida a las ideas.
7.- Conexión	Cree que todas las cosas ocurren por una razón, en su alma sabe que todos estamos conectados.
8.- Contexto	Mira el pasado, para comprender el presente y para predecir el futuro, desea saber el origen de todo.
9.- Creencia	Tiene ciertos valores intrínsecos que son inalterables. Valora la responsabilidad y la ética en sí mismo como en los demás.
10.- Desarrollador	A su juicio, ningún individuo ha alcanzado su pleno desarrollo, nadie ha alcanzado un estado de perfección, cada individuo está en constante proceso de desarrollo.
11.- Disciplina	Necesita que su mundo sea ordenado, predecible y planeado, instintivamente estructura su mundo establece rutinas e identifica plazos para que las cosas estén listas.
12.- Empatía	Ve al mundo a través de los ojos de los demás, comparte sus vivencias y perspectivas, es capaz de entender las decisiones de los demás.
13.- Emprendedor	Siente la necesidad constante de lograr algo tangible, sed insaciable hacia el logro e impulso a lograr más.
14.- Enfoque	Se pregunta a sí mismo hacia donde se dirige, necesita un destino claro para no sentirse frustrante
15.- Equidad	Es importante el equilibrio, tratar a todos por igual
16.- Estratégico	Le permite ordenar la confusión y descubrir el mejor camino para seguir adelante, es un proceso de pensamiento singular que le permite contar con una perspectiva especial del mundo.
17.- Estudioso	Le encanta aprender, importante el proceso de aprendizaje.
18.- Excelencia	Es la norma que rige su vida, le fascina tanto sus fortalezas, como las que ve en otros, busca personas que tengan destello innato de excelencia, con las mejores cualidades, capacidad de un rápido aprendizaje.
19.- Flexibilidad	Vive el momento, ve el futuro como un destino no fijo, sino como algo que se puede ir forjando a partir de las opciones que toma cada instante.
20.- Futurista	Le encanta mirar hacia el horizonte, el futuro le fascina
21.- Idear	Le encanta las ideas, descubrir dentro de lo complejo un concepto de sencillez para explicar porque las cosas son como son.
22.- Inclusión	Incluye a todas las personas y hace que se sientan parte del grupo, para beneficio de todos.
23.- Individualizar	Le emociona encontrar las cualidades únicas de cada persona, presta atención a las diferencias.
24.- Iniciador	Siempre esta impaciente por actuar, solo la acción puede hacer que las cosas sucedan y solo la acción conduce a los resultados.
25.- Inquisitivo	Le gusta coleccionar una diversidad de cosas (información, hechos, libros, objetos varios, etc)
26.- Intelectual	Le gusta pensar, disfrutar de la actividad y el ejercicio mental. Cualquiera que sea el enfoque de su pensamiento, éste dependerá de sus otros talentos e intereses
27.- Mando	Usted se hace cargo de las cosas; impone su opinión sobre los demás; fijar una meta no descansa hasta lograrla.; siente la necesidad de presentar los hechos y la verdad.
28.- Organizador	Trata de calcular la mejor manera de hacer las cosas, maneja la flexibilidad efectiva
29.- Positivo	Generoso para los elogios, siempre esta sonriente, siempre trata de ver el lado bueno de las cosas; trata de mejorar el ánimo de los demás.
30.- Prudente	Es cuidadoso, siempre esta alerta, reservada, saca a la luz los riesgos y los valora uno a uno.
31.- Relación	Describe su actitud hacia las relaciones; se complace de estar con los amigos más cercanos; la amistad debe ser reciproca
32.- Responsabilidad	Le obliga a asumir un compromiso sobre lo que promete, se exige moralmente hasta cumplir lo prometido.
33.- Restaurador	Le encanta resolver problemas; le entusiasma el desafío de analizar e identificar lo que está mal, hasta encontrar la solución.
34.- Significación	Desea que las personas lo vean como una persona significativa.; desea ser reconocido, escuchado, sobre todo por sus cualidades.

*Conocer nuestras habilidades, aptitudes y conocimientos , entre esta gama de talentos, nos permite valorar estos elementos innatos en los seres humanos, para ponerlos al servicio de nuestros éxitos, personales y laborales. Fuente: Elaboración propia, consultado en: Ahora descubra sus fortalezas, Buckingham, M y Clifton, D*

En esta investigación realizada por la Universidad de Gallup, se hace hincapié, como ya mencionamos anteriormente, a las fortalezas, aun cuando muchas personas prefieren no interesarse en la complejidades de sus fortalezas y optan por dedicar su tiempo y esfuerzo a estudiar sus debilidades, cabe mencionar, que la cultura que más importancia da a las fortalezas es la de Estados Unidos donde un 41% de las personas afirma que lo que más le sirve para mejorar es el conocimiento de sus fortalezas. Las culturas que menos importancia atribuyen a las fortalezas son las japonesas y las chinas. De toda la investigación que se realizó para este libro, el hallazgo más sorprendente es ¿por qué tantas personas evitan centrar su atención en sus

fortalezas?, ¿por qué las debilidades producen tanta fascinación?, de acuerdo a los autores esto último se debe a tres temores fundamentales: el temor a las debilidades; el temor al fracaso y el temor a reconocer nuestro verdadero yo, considero que es un trabajo interesante esta metodología que ha aplicado Gallup en más de mil empresas, para reconocer los talentos en las mismas.

Ahora bien, si los líderes de cada organización, se dan la oportunidad de conocer, analizar y poner en práctica estas dos herramientas mencionadas para reconocer los talentos, iniciando primero con los de ellos, ya que como líderes deben reconocerse primero, para después estar en posición de reconocer los de las personas que trabajan con él y con la organización, para después ya reconocidos los talentos de todos los miembros de la misma, podemos empezar a trabajar en equipos de alto desempeño, asignando las tareas y los roles de acuerdo con el resultado de los talentos examinados, eso va a permitirle a todos los involucrados generar mejores sinergias, elaborar un paralelismo en las metas para mejorar el compromiso de los empleados y de la empresa hacia ellos, elevando la competitividad. Es por ello, que el talento se ve como un agregado diferenciador hacia el éxito, una sumatoria de conocimientos, aptitudes y habilidades potenciadas desde el ser y aprovechadas para la innovación. Como empleado, si se pretende alcanzar el éxito, es necesario autoconocerse a tal punto de identificar las propias aptitudes, conocimientos y habilidades, sabiéndolos expresar y demostrar, donde desarrollarlas, de manera que el talento se vea reconocido y redunde en el bienestar integral del individuo.

Se preguntaran ¿Por qué trabajar con el reconocimiento del talento? Porque es la punta de lanza de la gestión del conocimiento, se centra en identificar y estimular el talento de las personas, para que en ese implícito actuar individual y social se desarrolle, cree, innove y adapte su talento a las necesidades y requerimientos de la empresa y su entorno. Es importante reconocer que uno de los grandes traspiés de la gestión del talento, ha sido desintegrar el conocimiento del individuo con su propio ser, por ello para alcanzar los frutos de las habilidades, conocimientos y aptitudes de las personas, es necesario reconocer que éstas son realmente escasas y valiosas y para retenerlas nos corresponde hacer dos tareas: primero, la identificación y reconocimiento de sus intereses y pasiones personales y segundo, el reconocimiento, el avance personal y la valoración de lo que se hace, para luego dirigirnos hacia la búsqueda del éxito. Entonces, contar con grandes talentos, implica que las organizaciones trabajen con un enfoque en donde las personas no sean recursos sustituibles dentro de las mismas, lo que implica establecer una estrategia adecuada que permita identificar sus habilidades, conocimientos, intereses personales, para que contribuyan de manera innovadora y comprometida a las necesidades de la empresa.

Alinear el talento con la estrategia organizacional tiene relación con el conocimiento que tienen las personas con respecto hacia dónde va o se dirige la empresa, lo que se está haciendo para llegar allí, igualmente cómo puede el talento contribuir con lo que la organización desea lograr y qué para las personas cuando lo logren. También es la gente la que llevará a la empresa a una más alta productividad. No obstante al alinear a las personas, éstas saben que hacer, así como también comprender las razones por las cuales deben hacerlo. Al comprometerse, las personas se sienten motivadas para hacer lo que hay que hacer. Les ayuda a experimentar su trabajo o tareas con más dedicación y emoción, los empleados entusiastas entregan esfuerzos extra, contribuyendo a crear un gran entorno de trabajo, convirtiéndolo en ambientes de aprendizaje, que es la clave para generar la creatividad, la innovación y también para atraer y conservar más personas talentosas. Por otra parte la medición ayuda a los trabajadores a comprender su nivel de contribución y como mejorar para lograr los objetivos organizacionales y los propios.

Siguiendo este orden de ideas, la nueva tendencia administrativa exige una nueva realidad, donde el talento humano se “ha convertido en una fuente crucial de ventaja competitiva. Las organizaciones que lo hagan mejor en cuanto a atraer, desarrollar, entusiasmar y retener a los talentos, ganarán más que su normal participación en este escaso recurso técnico y mejorarán grandemente su desempeño” Michaels, E., Handfield, H., y Axelrod, B.(2003). De acuerdo con estos autores, se han identificado cinco imperativos sobre los cuales deben actuar las organizaciones para hacer del talento humano una ventaja competitiva:

- a) Adoptar una medida de talento, esta mentalidad de talento tiene que ver con la manera como lo concebimos, con una apasionada creencia en que para alcanzar las aspiraciones de la organización se tiene que contar con grandes talentos y para atraer a los mejores es preciso que los líderes de la empresa se comprometan con esa meta.
- b) Crear una exitosa propuesta de valor para los empleados, entendida como la suma total de todo lo que experimenta y recibe el individuo mientras forme parte de la empresa, desde la satisfacción intrínseca con el trabajo hasta el ambiente, liderazgo, los colegas y la compensación. Indica lo bien que la empresa satisface las necesidades de la gente, sus expectativas y aun sus sueños.
- c) Reconstruir la estrategia de reclutamiento, en donde se desarrolle una estrategia encaminada a inyectar talento en todos los niveles; estar a la caza de talentos, aprovechar los diversos equipos de talento y desarrollar canales nuevos, creativos, romper las reglas de la compensación cuando sea necesario y ejecutar un proceso impecable de convencimiento.
- d) incorporar el desarrollo en la organización, viéndolo como un proceso de dos vías, en el cual el maestro aprende tanto como el discípulo, depende tanto de la receptividad e iniciativa del individuo como de la intención de la organización.
- e) Diferenciar y reafirmar al personal, la diferenciación implica evaluar el desempeño y potencial del personal y dar a cada persona los ascensos, compensaciones y oportunidades de desarrollo que sean pertinentes, esto significa invertir en los talentos de tipo A para retenerlos y desarrollarlos, reafirmar y desarrollar a los talentos de tipo B para que puedan contribuir el máximo de sus posibilidades y actuar decisivamente en el caso de los talentos de tipo C, ya sea para ayudarles a mejorar su desempeño o retirándolos de las posiciones críticas, los talentos de tipo A definen el estándar de desempeño excepcional dando continuamente resultados e inspirando y motivando a los demás; los de tipo B se desempeñan con solidez, llenan las expectativas, pero solo pueden tener movilidad ascendente limitada y los del tipo C dan resultados apenas aceptables (Michael, E. et.al).

Teniendo en cuenta el conjunto de actividades que plantea la nueva tendencia administrativa que convierte a las personas en ventaja competitiva, se generan variables a considerar, tales como el clima organizacional, que involucran tanto procesos internos de los individuos como de la organización. Se considera clima organizacional a las percepciones compartidas que los miembros desarrollan en relación con las políticas, prácticas y procedimientos organizacionales, tanto formales como informales. Se trata del resultado de un proceso perceptivo individual y de un subsiguiente proceso cognitivo, dicho proceso cognitivo hace referencia a la representación cognitiva que las personas construyen a partir de las realidades colectivas en las que viven, así como también es precursora básica de los juicios y de las actuaciones de las personas. Como podemos observar el clima organizacional está relacionado con uno de los conceptos que emplea la nueva tendencia administrativa, alineamiento, la que entendemos como buscar llevar a la gente en la dirección correcta, donde los clientes internos de la organización desean tener un claro conocimiento de la estrategia, metas, planes, procesos, responsabilidades individuales y grupales, incentivos entre otros, de la organización, generando así clima laboral satisfactorio para las personas, así como también una alta productividad. Otras variables importantes que están inmersas en esta nueva tendencia son la motivación, la satisfacción laboral y la cultura organizacional relacionadas también con los conceptos de compromiso y alineamiento empleados por Gubman, E (2000) para desarrollar, mantener y apalancar el talento de la organización. Respecto a la motivación, es sabido que los procesos motivacionales internos, cualquiera que sea su naturaleza, se manifiestan de tres maneras en la conducta de las personas (las preferencias, la persistencia y vigor de la conducta motivada), por esta razón se arguye que la motivación para el trabajo se pone en evidencia a través de la eficiencia, efectividad y la productividad de las personas, estos procesos internos tienen un triple carácter psicológico: cognitivo, afectivo/emocional y conductual.

Sobre la satisfacción laboral, lo que determina su naturaleza, no es tanto el juicio evaluativo que precede, sino el efecto emocional o afectivo que resulta como consecuencia, es decir, es la experiencia de agrado o

complacencia o de disgusto lo que define su carácter. Por otro lado, la cultura organizacional es un patrón de presunciones básicas que la empresa y el grupo han aprendido en la búsqueda de soluciones a sus problemas de adaptación externa y de integración interna, los cuales han funcionado bien para considerarlos válidos y por tanto para enseñarlos a los nuevos miembros, regulan y determinan, en alguna medida las percepciones, pensamientos, sentimientos y acciones de las personas del grupo de la empresa y son elaborados colectivamente a partir de la experiencia. De acuerdo con esto, la cultura organizacional incluye la estructura y procesos organizacionales, el manejo del espacio físico, el lenguaje escrito y hablado, la conducta expresa, los valores, estrategias, metas, creencias, entre otros, en este sentido cumple una función uniformadora del pensamiento y de la acción de la personas. Haciendo predecible la acción individual y por consiguiente posible la vida social organizada, también por este medio se adquieren, modifican o se sostienen los distintos tipos de juicios, la motivación, la satisfacción y la acción, jugando un papel fundamental a la hora de tener clientes internos alineados, comprometidos y motivados, que generen una ventaja en términos de eficiencia, eficacia y productividad para la organización. Hay que considerar que las organizaciones al igual que las huellas digitales, son únicas y singulares, poseen su propia historia, la importancia de la misma para las organizaciones y en la gestión del talento humano, radica en la necesidad de tener una cultura organizacional sólida y orientada hacia la generación de prácticas y procesos que contribuyan al éxito organizacional. Bajo la cual, resulte sencillo la aceptación por parte del talento humano de nuevos enfoques, lo que se logra si el talento humano está identificado con la cultura de su organización. Estas variables deben ser tomadas en cuenta dentro de esta nueva tendencia administrativa, ya que las mismas deberán reconsiderarse, plantearse y/o modificarse, para realizar las estrategias que permitan lograr los cambios pertinentes desde la perspectiva del reconocimiento del talento y llevar a la organización y a sus miembros a mejores estadios de competitividad, para dar un paso hacia este logro, buena parte de las organizaciones están incorporando o esperan incorporar un modelo de gestión para el área de talento humano, basado en la participación directa en las decisiones que comprometan el futuro de la organización. Se habla entonces de la necesidad de generar planes estratégicos del área, que se encuentren unidos al plan estratégico general para dar curso a una nueva planeación estratégica renovada (Guerín, Guilles y otros, 1992). La convicción de que en lo sucesivo el éxito organizacional va a depender de la capacidad organizacional sugiere una agenda de compromisos del área de gerencia del talento humano que debe incluir:

- 1.- El registro de los cambios en el comportamiento de la fuerza laboral y su impacto futuro, en términos de conocimientos y habilidades requeridos para responder a las condiciones del medio ambiente externo.
- 2.- La creación de un sentido de pertenencia de la gente que conforma la organización, para que se traduzca en mejores relaciones con los clientes externos.
- 3.- El fortalecimiento de las relaciones interpersonales, el trabajo en equipo y el ofrecimiento de oportunidades de desarrollo, frente a la poca estabilidad laboral que ofrece hoy por hoy la organización
- 4.- La preparación para la complejidad y el cambio. No esperar la influencia del medio ambiente externo, anticiparse y promover el cambio de adentro hacia afuera.
- 5.- La generación de una visión estratégica renovada en donde se brinde la misma importancia a la etapa de formulación del plan que a las etapas de ejecución y evaluación, es decir, fomentar la unidad interna a través de propósitos, compromisos y valores compartidos.
- 6.- El ejercicio del liderazgo para la ejecución de esta agenda, pero además, la convicción de la presencia del líder como resultado del cumplimiento de la misma.

Los puntos establecidos en la agenda de área de talento humano, llevará a la gerencia del área a realizar también un cambio en sus actividades tradicionales, para enfocarse en las siguientes:

La introducción de una cultura de intercambio y flujo de información

La creación de una cultura de valoración del conocimiento, la participación y la calidad.

La proyección de la empresa a través del desarrollo y la capacitación de la gente

La comprensión del entorno y el desarrollo de una conciencia de la responsabilidad social de la organización.

El desarrollo de una adecuada capacidad de negociación

El fomento del liderazgo y la comunicación

El trabajo permanente para el logro de la integración de la gente.

El logro de un mejor posicionamiento del talento humano, como el factor determinante del desarrollo de la empresa.

La creación de nuevos modelos de desarrollo y manejo de los talentos humano

El manejo futuro del talento y desarrollo humano, de acuerdo a la agenda y compromisos citados, serán más de tipo estratégico, que la simple y cotidiana solución a los problemas de empleados. La organización tradicional necesita replantear los modelos tradicionales de asesoría, relaciones laborales, control, etc., para dedicarse al desarrollo y proyección del potencial humano que se encuentra en ella. No se trata de adquirir nuevos conocimientos y habilidades para “manejar a la gente”, sino de un cambio de actitud de los niveles estratégicos, coordinadores y operativos hacia la dimensión humana, en la organización. Esto significa que el individuo, el trabajo y la calidad del mismo deben interpretarse en el contexto de la cultura y que la gerencia de nuestros días debe asumir, desde ahora, el compromiso de crear esquemas propios que atiendan los requerimientos del talento humano necesario para nuestras organizaciones.

Otro punto a considerar, por demás importante, en las consecuencias del reconocimiento del talento en la empresa, debe ser el aumento en la cultura emprendedora de la misma, es ampliamente aceptado que la capacidad de innovar en la empresa está estrechamente vinculada a su capital humano (Subramaniam y Youndt, 2005)., integran el conocimiento facilitando su difusión entre los individuos y la interacción entre los grupos, en este sentido es necesario un proceso de socialización, para que las nuevas ideas generadas se transmitan, el conocimiento tácito se haga explícito. La cultura emprendedora es aquella que propicia un lugar para trabajar dinámico y creativo, la cual se sostiene por el compromiso hacia la experimentación y la innovación, ésta predispone a los miembros para que vean las actividades de innovación favorables a ellos, y genera normas que motiven directamente a los participantes a desarrollar un comportamiento emprendedor Jassawalla y Sashittal (2002). Desde esta perspectiva, debemos apostarle a una nueva cultura emprendedora basada en el aprendizaje y el valor del capital intelectual, si trabajamos en el reconocimiento del talento como una estrategia organizacional, lograremos dar respuesta a una necesidad concreta en la empresa: la falta de una cultura y actitud emprendedora, permitiendo un cambio de paradigma, favoreciendo el desarrollo de los rasgos propios del espíritu emprendedor, capacidad de crear, de asumir riesgos, liderar, motivar, tomar decisiones, planear estratégicamente, etc., esto le dará a la organización una ventaja competitiva necesaria en la gestión del conocimiento.

Es indudable que definitivamente, la nueva realidad económica, los adelantos tecnológicos, los avances de la sociedad del conocimiento y el manejo del cambio hacen que los líderes y gestores se planteen la necesidad de asumir nuevos desafíos, nuevos paradigmas en la conducción y funcionamiento de las organizaciones, presentándoseles muchas disyuntivas en cuanto a cómo enfrentar esos retos y otros más. Lo importante es que se tomen como un proceso continuo, incluyendo a todos los miembros de la organización. Ciertamente estos retos deben interiorizarse, por quienes muchas veces, urgidos por la demanda permanente de mayor rentabilidad, olvidan que quienes impulsan este cambio, traducido en resultados son ellos mismos, es decir, que los líderes primero deben autogerenciarse, autoreconocerse, para luego poder gestionar y reconocer los talentos humanos de sus empresas y caminar juntos el camino al éxito.

## CONCLUSIONES

Ante una realidad que se transforma rápidamente, en que los mercados cambian, la economía se mueve al ritmo del comercio mundial gracias a la globalización, surgen nuevas organizaciones competitivas que modifican el comportamiento del sector empresarial y hacen la competencia cada día más fuerte, donde los

flujos de inversión varían su dirección y la apertura de los mercados y los tratados comerciales proponen grandes amenazas y nuevas posibilidades, ante estos retos las empresas buscan opciones que les permitan ser competentes en todas sus operaciones, Las empresas de cara a la nueva economía , se desarrollan en un entorno altamente competitivo, innovativo, creativo y cambiante, donde las tecnologías y los modelos de gestión caducan rápidamente y con ellas sus ventajas de ingreso, dejando atrás toda una infraestructura creada para tal efecto, poniéndolas en puntos críticos para mantenerse en el mercado donde desarrollan su actividad productiva.

Enfrentar este escenario en un mundo tan dinámico, es un proceso complejo y lleno de incertidumbre para las empresas hoy en día, por esta razón la empresa ha iniciado un proceso de revisión y análisis a lo interno de toda su estructura organizacional con el propósito de conocer hacia donde debe realinear su estrategias futuras. Para adaptarse de forma más apropiada a los cambios que las referidas condiciones nos hacen vivir surge un nuevo paradigma: el paradigma del conocimiento, el cual constituye la principal fuente de ventaja competitiva de cualquier empresa, por ello están obligadas a reconocer el talento que tienen en sus empleados e incorporar nuevos talentos humanos , debiendo contar con un plan estratégico en organización y sistemas, capacitación y en promover una cultura y clima organizacional para el éxito con visión compartida, se debe generar valor agregado y este se genera en el seno de equipos inteligentes, que aprenden y permiten desarrollar sus habilidades, capacidades, conocimientos y aptitudes, para crear innovaciones que lleven a la empresa a elaborar ventajas competitivas.

Ya no basta con que la persona conozca solo su trabajo y se dedique a lo suyo sin ver su influencia en el resto de la cadena de procesos del negocio. Es necesario que cada uno de los integrantes entienda la importancia de su rol en la misma y del rol del resto de sus compañeros de trabajo. Recobramos así al ser humano como factor clave del éxito empresarial y centro de toda organización. Para que las organizaciones tradicionales se constituyan en organizaciones inteligentes es decir, desarrollen su capacidad de aprendizaje y gestionen el conocimiento, deben cambiar su visión respecto al trabajo, pasando de un enfoque instrumental a una visión que integra los beneficios intrínsecos, aquellos que guardan una mayor coherencia con las aspiraciones humanas y que no sólo se restringen a la satisfacción de las necesidades más básicas. Se ha comentado ya que, esta nueva tendencia administrativa exige un nuevo estilo, en donde el talento humano se ha convertido en una fuente de ventaja competitiva, para ello los directivos deben comprometerse en implementar en sus empresas acciones tendientes a evidenciar la importancia del reconocimiento del talento en las mismas, en su clima organizacional, en su estructura, en su estrategia, buscando siempre el paralelismo en las metas (empleados y organización). Las empresas requieren profesionales con un alto perfil de autoconocimiento y a su vez se hace necesario de parte de las empresas contar con los cursos de acción pertinentes, para indagar acerca de estos aspectos, saber identificarlos y ayudar en su realización y promoción.

En un mundo cambiante como el de hoy, pareciera que la única capacidad perdurable en el tiempo, es la capacidad de “aprender a aprender” y las organizaciones sólo pueden aprender a través de las personas que aprenden y comparten ese conocimiento en sus comunidades de aprendizaje, facilitando la implementación de una cultura emprendedora, motivando a los participantes a desarrollar un comportamiento emprendedor. Para que se logre una innovación objetiva del conocimiento con respecto a las necesidades de la empresa, se requiere que las organizaciones inviertan tiempo y dinero en el área del talento humano. También, al intentar cubrir necesidades específicas, es indispensable retomar las metas compartidas y deseadas por toda la organización, en este punto es importante tomar en cuenta el aporte que pueden realizar los equipos que se pueden formar dentro de la organización, se pueden compatibilizar con la dirección, al mismo tiempo que buscan los mejores resultados para un tema específico.

El enfoque de los directivos de las empresas de este siglo está centrado en poseer una mirada prospectiva, una visión trascendental y obviamente en saber escoger a la mejor gente, puede hacerlo a través de

diferentes formas, que bien pueden ser seleccionadas por un gestor del talento, explorando competencias y diferenciaciones en las personas, alguien interesado en captar y retener al mejor talento y desarrollarlo realiza actividades radicalmente distintas a las del jefe de recursos humanos tradicional, la agenda central de los gestores de talento humano está orientado a producir resultados en el corto plazo, así como a modelar, gerenciar los cambios y darle un nuevo rumbo a la organización, para garantizar y asegurar la sustentabilidad y la obtención de los resultados establecidos en los objetivos organizacionales. Los cambios son procesos que suponen un nuevo aprendizaje y llevan tiempo y se produce no solo desde el punto de vista estructural, es decir, la acción a cambiar en sí, sino también desde el punto de vista psicológico, ya que el personal involucrado dentro de las operaciones de las organizaciones generan respuesta a los estímulos que están llenos de emociones, que acompañan la adaptación a la nueva situación., es por ello que en los líderes y gestores, recae el accionar de la dirección, la toma de decisiones y la operacionalización de los procesos productivos y es a través de su gestión y la de sus colaboradores que se alcanzan los objetivos estratégicos.

Evidentemente no hay gestión perfecta, por ello los líderes y gestores comprometidos están a la constante búsqueda de tendencias vanguardistas que los mantengan en el juego y que les permitan ir evolucionando a través de la praxis del conocimiento de su autoanálisis, de las nuevas experiencias, del aprender, del reaprender de nuevo al lado de sus colaboradores, sencillamente porque las organizaciones no son las que aprenden, los que aprenden son las personas que están inmersas en el contexto organizacional.

# **LAS REDES DE COLABORACIÓN ACADÉMICA EN GRUPOS DE INVESTIGADORES DE LA UNIVERSIDAD AUTÓNOMA DE ZACATECAS**

Eduardo Alejandro Carmona, Universidad Autónoma de Zacatecas

Rubén Chávez Chairez, Universidad Autónoma de Zacatecas

## **RESUMEN**

*El presente trabajo analiza desde la teoría de la administración las formas que tienen las redes de colaboración académica de los grupos de investigadores de la UAZ. El objetivo es determinar la tipología organizacional que se genera y se realiza la comparación con algunos estudios realizados previamente. El método utilizado parte de un análisis de frecuencias utilizando las respuestas que han otorgado los líderes de los diversos cuerpos académicos conformados en la UAZ. Se realiza un análisis de contingencia con tablas cruzadas para identificar las características importantes de los grupos de investigación objeto de estudio. Se utiliza un análisis de confiabilidad de alfa de Cronbach para poder relacionar diversos conceptos, se finaliza con un análisis de correlación de Spearman. Los principales resultados muestran dos tipologías de redes en las que un factor común en estas formas de organización es la colaboración con otros grupos de investigación externos a la propia Universidad así como la diferenciación de las redes de acuerdo al área académica de estudio.*

**PALABRAS CLAVE:** Redes de Colaboración Académica, Grupos de Investigadores, Tipología Organizacional

## **ACADEMIC COLLABORATION NETWORK ON RESEARCHERS GROUPS IN UNIVERSIDAD AUTONOMA DE ZACATECAS**

### **ABSTRACT**

*This paper analyzes since the management theory the networks of academic collaboration of researchers groups in UAZ. The objective is to determine the organizational typology that is generated and compared with some previous studies. The method used in this paper is mainly frequency analysis using the answers given by the leaders of several academic bodies (researchers groups) formed in the UAZ. A crossed contingency analysis is used to identify the important features of the research groups under tables is performed. Reliability analysis of Cronbach's alpha is used to relate various concepts, it ends with a Spearman correlation analysis. The main results show two types of networks in which a common factor in these forms of organization is collaborating with other research groups external to the University itself as well as the differentiation of networks according to academic field of study.*

**JEL:** I23

**KEYWORDS:** Academic Collaboration Networks, Researchers Groups, Organizational Typology

### **INTRODUCCIÓN**

Las Redes de Colaboración Académica son organizaciones de investigadores que realizan investigaciones enfocadas a temas propios del área de trabajo a la que éstos pertenecen. En México los cuerpos académicos son grupos de investigadores dentro de una institución académica, principalmente universidades. La

Universidad Autónoma de Zacatecas (UAZ) cuenta con 73 cuerpos académicos reconocidos por el Programa de Mejoramiento del Profesorado (PROMEP), instancia que depende la Secretaría de Educación Pública (Organismo Nacional). Una forma diferente de realizar investigación es a través de colectivos docentes que no pertenecen a la misma organización, lo cual permite que un trabajo tenga visiones corporativas y rigores de método diferentes. A este tipo de organizaciones se les ha denominado Redes de Colaboración Académica (Redes) Las Redes de Colaboración Académica son organizaciones que se constituyen por voluntad propia y no necesariamente por obligación (Carmona et al 2011). Los teóricos de la organización han definido las características de un ente que se denomine organización y se pueden destacar las siguientes: que persiguen un fin común, que los miembros mantienen cierta equidad, que hay una división de las tareas, entre otras cosas (Daft, 2009, Ivancevich et al, 2007). Cuando los investigadores generan una red deben de satisfacer las condiciones que se han expresado.

Este trabajo se sustenta en las respuestas obtenidas mediante encuestas aplicadas a los líderes de los cuerpos académicos, en él se hace un análisis del tema en cuestión desde la teoría de las organizaciones, buscando saber cómo es que estos grupos de investigadores se han constituido, de qué manera logran plantear los trabajos académicos, cómo es que se realizan los proyectos de investigación y cómo es que llegan a los resultados esperados. Se analizan diversas teorías sobre el proceso organizacional, partiendo de los autores clásicos hasta las investigaciones más recientes.

### Objetivo

Obtener la tipología organizacional que generan las redes de colaboración académica a las que pertenecen los diversos Grupos de Investigadores de la Universidad Autónoma de Zacatecas

### Hipótesis

La tipología organizacional de las redes de colaboración académica se genera de acuerdo al proceso administrativo llevado a cabo por los Grupos de Investigadores de la UAZ.

### Marco Contextual

En la Universidad Juárez Autónoma de Tabasco (UJAT), Deneb Magaña y su equipo realizaron un estudio acerca de los Cuerpos Académicos (CA) (Magaña, 2011) del cual se desprenden algunas ideas con las que se coincide desde la experiencia local: la habilitación de los cuerpos académicos se da desde el PROMEP, pero existe ambigüedad en la definición al hablar de líneas de investigación, objetivos y metas comunes; mayoritariamente los investigadores opinan que los procesos de generación del conocimiento son nulos o muy escasos; se reportan niveles bajos de involucramiento de la alta dirección en la generación de los CA; se reporta un nivel escaso de cultura organizativa así como baja capacidad de gestión y finalmente se concluye la importancia del involucramiento de los directivos en todo el proceso de generación del conocimiento.

### Marco Teórico

#### Proceso Administrativo

El proceso administrativo ha tenido a través del tiempo, una evolución desde la perspectiva de diferentes teóricos, la cual se muestra en la Tabla 1

Tabla 19: Evolución del Proceso Administrativo

Autor	Año	Elementos

## Redes

En los últimos años, los grupos de investigación están orientados a realizar trabajo en red, las implicaciones de esta idea nos llevan a definirla con claridad, los autores Hellriegel y Slocum (2004) plantean lo siguiente: "es la estructura enfocada en compartir la autoridad, responsabilidad y recursos entre la gente, departamentos u otras organizaciones que deben cooperar y comunicarse frecuentemente para alcanzar metas comunes". Los grupos de investigadores que están integrados en redes, de una manera implícita y más bien por experiencia, es que han acumulado este tipo de saberes que los teóricos expresan. En algunas ocasiones las redes se han generado desde la necesidad de contar con recursos que no se tienen en la propia institución, por lo que se realizan convenios (la mayoría de las veces formalizados) con otros grupos académicos pertenecientes a otras instituciones y deciden colaborar juntos por tratarse de temas similares, es decir, se genera una red con aquellos investigadores que trabajan el mismo tema o temas parecidos. Lo más común es que estas redes se inicien en las escuelas donde los investigadores han realizado estudios doctorales o estancias de investigación y en congresos en donde los investigadores acuden a presentar los más recientes avances de su investigación.

## MÉTODO

Se diseñó y aplicó una encuesta a los 73 líderes de los cuerpos académicos de la UAZ que están registrados formalmente ante PROMEP y el porcentaje de respuesta fue de 43.8 por ciento, es decir, sólo 32 respondieron. La encuesta se aplicó mediante un cuestionario que fue enviado por correo electrónico a las direcciones declaradas de ellos. Adicionalmente se aplicó la misma encuesta de manera personal a algunos otros y en ocasiones se les dejó el cuestionario y se pasó posteriormente a recogerlo. Se realizó análisis de frecuencias para las preguntas y en la medida de lo posible se realizaron tablas de contingencia para cruzar las variables involucradas y obtener información. Debido a que las respuestas son no paramétricas los análisis se realizan con el método de Spearman en lugar del de Pearson que resulta más común en estos estudios. El cuestionario se ha dividido en cuatro partes, cada una acorde con el correspondiente proceso administrativo. Al final de cada sección se genera una nueva variable con los resultados de los datos previos, de manera tal que estas cuatro variables sean el resumen de este apartado y sean valores representativos del conjunto de datos general.

## RESULTADOS

### Planeación

Los grupos de investigadores con que cuenta la UAZ tienen características que los hacen sui géneris y por ser de distintas áreas del conocimiento no son similares, pero se han encontrado algunas situaciones que permiten mencionar cómo es que de manera conjunta representan al total de ellos. Las áreas académicas por las que se integra el análisis es como se presenta a continuación:

Tabla 2: Área de Pertenencia de los Grupos de Investigación a la UAZ

		Frecuencia	Porcentaje	Porcentaje Válido	Porcentaje Acumulado
Válidos	Agropecuarias	4	12.5	12.5	12.5
	Básicas	5	15.6	15.6	28.1
	CSPEA	6	18.8	18.8	46.9
	Humanidades y educación	7	21.9	21.9	68.8
	Ingenierías	5	15.6	15.6	84.4
	Salud	4	12.5	12.5	96.9
	Sociales	1	3.1	3.1	100.0
	Total	32	100.0	100.0	

Fuente: Elaboración Propia

El análisis de la conformación de los grupos de investigadores de la UAZ dice que el número de integrantes va desde 3 hasta 9, lo que indica que son pequeños ya que en promedio tienen 5 integrantes. El número de redes académicas en las que participan los grupos va desde cero hasta ocho y el promedio está en 2.6, es decir, tres redes por grupo académico

Tabla 3: Datos Generales de los Grupos de Investigadores

	N	Mínimo	Máximo	Media	Desviación Estándar
NivelPROMEP	32	1	3	1.94	.801
Integrantes	32	3	9	5.09	1.802
NumRedes	32	0	8	2.69	2.007
IntUAZ	28	0	3	.89	.832
RIP	28	0	4	.71	1.150

Fuente: Elaboración Propia

Algunos datos que muestran cómo es que se han constituido y trabajado las redes se muestran a continuación en la Tabla 4:

Tabla 4: Datos Generales de los Grupos de Investigación

	N	Mínimo	Máximo	Media	Desv. Tip.
Actuales	28	0	8	2.89	1.853
TiempoRedes	27	1	10	4.26	2.740
RedesDejadas	25	0	2	.24	.523
TiempoNo	8	0	5	1.56	1.591
NoRedUAZ	12	0	6	.67	1.723

Fuente: Elaboración Propia

De la tabla podemos mencionar que el número promedio de redes que han formado en la propia universidad es de 0.89 es decir una por cada grupo de investigadores, mientras que las redes generadas al exterior de la UAZ son 2.69, es decir casi tres por cada grupo de investigación. Los grupos pueden asociarse de manera

independiente, pero pueden formalizar las redes con el fin de que los evaluadores federales de este tipo de procesos identifiquen a la universidad como un ente que ha aceptado este tipo de sugerencias; para tal fin los grupos de investigadores han formalizado la red con el Representante Institucional de la Universidad ante Promep (RIP), generando que el promedio de redes con esta condición sea de 0.71, es decir menos de una. Las redes que han constituido los grupos de investigadores pueden tener diversos alcances, es decir pueden ser Locales (sólo en el Estado de Zacatecas), Regionales (en las que los diversos grupos de investigadores pertenecen a estados vecinos), Nacionales o Internacionales, los resultados se muestran en la Tabla 5:

Tabla 5: Regiones de Pertenencia de las Redes de los Grupos Académicos

	N	Mínimo	Máximo	Media	Desv. Tip.
RegionL	12	1	3	1.58	.793
RegionR	7	1	2	1.43	.535
RegionN	19	1	3	1.47	.697
RegionI	14	1	4	1.36	.842
N válido (según lista)	2				

Fuente: Elaboración Propia

El número de grupos de investigadores que cuentan con redes locales son 12, con un número máximo de 3 y promedio de 1.6. Las redes que se han gestado de manera regional por parte de los grupos de investigadores son 7 con máximo de 2 pero el promedio disminuye a 1.43, quizá esto tenga que ver por la distancia de trabajo entre ellas. Diecinueve grupos han mencionado que cuentan con redes nacionales, por lo que es la mayor frecuencia. Hacerlo en este tipo de redes es conveniente porque los estándares de las redes pueden mejorar el nivel de colaboración y las publicaciones o resultados; además que hay políticas federales de apoyo para realizar este tipo de esfuerzos, así, el número promedio de redes que han gestado los grupos de investigadores es de 1.47, pero con una desviación estándar más alta que lo que se expresa en redes regionales.

### Organización

El status de los grupos de investigación en la UAZ, es que como Cuerpos Académicos 9 están consolidados, 12 están en consolidación y 11 en formación, de acuerdo con la clasificación que está definida en los lineamientos del programa federal PROMEP. Los CA consolidados han realizado publicaciones de alto nivel de manera conjunta, los CA en consolidación están en ese proceso pero sus integrantes satisfacen características profesionales de investigación y los CA en formación van iniciando en esa línea.

Tabla 6: Trabajo Personal O Por Subgrupos

	Frecuencia	Porcentaje	Porcentaje Válido	Porcentaje Acumulado
Válidos	4	12.5	12.5	12.5
Personal	12	37.5	37.5	50.0
Ambas	5	15.6	15.6	65.6
Subgrupos	11	34.4	34.4	100.0
Total	32	100.0	100.0	

Fuente: Elaboración Propia

Un 60% de los grupos de investigadores trabajan de manera personal, 57 % lo hacen a manera de subgrupos y un 17% reportaron hacerlo de ambas maneras, lo que hace suponer que dependiendo de la red es la forma de trabajar. Se cuestionó a los investigadores integrantes de los grupos de investigación acerca del tiempo dedicado a realizar algunas de las tareas de investigación y los resultados se presentan a continuación:

Tabla 7: División del Tiempo en Tareas de Investigación

	N	Mínimo	Máximo	Media	Desv. Tip.
Búsqueda bibliográfica	11	10	30	16.36	7.775
Gestión de recursos	15	5	30	17.00	9.220
Investigación	27	20	100	50.19	19.289
Trabajo en laboratorio	12	20	50	33.33	9.847
Redacción de textos	20	5	50	25.00	15.218

Fuente: Elaboración Propia

Se destaca que la mayor parte del tiempo que emplean las redes se localiza en el propio proceso de investigación, después en la parte complementaria que es el trabajo en el laboratorio, continúa el proceso de redacción de textos y de manera similar, un tiempo distribuido en la gestión de recursos y la búsqueda

## BIBLIOGRÁFICA

*Dirección:* Se cuestionó a los grupos de investigadores sobre la periodicidad con que realizan reuniones tanto presenciales como virtuales, los promedios resultan en 3,71 reuniones presenciales al año y 4.54 virtuales, lo que sumado da un total de 8 reuniones al año, es decir, casi una cada 45 días o mes y medio. Con esta información se puede decir que las redes llevan mucho trabajo, y para hacerlo de manera adecuada es importante que exista la división del trabajo.

*Control:* Se les cuestionó sobre los motivos por los que las redes han desaparecido y las respuestas que se obtuvieron en las opciones planteadas fueron: Satisfacción de objetivos 38%, Falta de recursos económicos 15%, Comunicación inadecuada 15%, Desinterés personal 8% y que no todos los miembros son igualmente entusiastas 23%. Como parte del control administrativo del trabajo de la red se les cuestionó acerca de si esta red se ha convertido en líder de algún sector, ya sea académico, empresarial o de consulta y las respuestas son halagadoras, pues el 32% está en esta situación favorable y el restante 68% aún no tiene esta condición.

## Relaciones Entre Variables

La tabla de contingencia se ha estructurado utilizando nuevas variables que han permitido identificar qué situaciones se presentan en las cuatro partes del proceso administrativo, Se definen cuatro variables tomando en cuenta cada uno de los aspectos de las variables originales, para ello se suman todos los aspectos positivos que se han cuestionado previamente. La contingencia de variables que más información nos genera es cuando se cruzan las variables general de planeación contra el número de redes y resulta:

Tabla 8: Tabla De Contingencia Numredes \* PLANEACIÓN

recuento		planeación														
		0	8	9	12	13	14	15	16	20	21	23	24	25	26	total
numredes	0	4	0	0	0	0	0	0	0	0	0	0	0	0	0	4
	1	0	0	1	2	0	1	1	0	0	0	0	0	0	0	5
	2	0	1	0	3	2	0	1	1	0	0	0	0	0	0	8
	3	0	0	0	2	0	2	0	0	0	1	0	0	0	0	5
	4	0	0	0	0	0	0	0	0	2	0	0	2	1	1	6
	5	0	0	0	0	0	0	0	0	0	0	1	0	1	0	2
	8	0	0	0	0	0	0	0	0	1	1	0	0	0	0	2
	total	4	1	1	7	2	3	2	1	3	2	1	2	2	1	32

Fuente: Elaboración Propia

De la tabla anterior se puede obtener que existen dos regiones con más información, la parte que está integrada por menos datos positivos y menos redes y el otro extremo con datos formados de manera contraria. Podemos observar que entre menos planeación tengan las redes de grupos de investigadores, también así es el número de redes que generan. De manera similar se obtienen las tablas de contingencia que resultan del proceso de organización al cruzarlas con algunas de sus subvariables. Para tal caso el resultado se observa en la Tabla 9.

Tabla 9: Tabla de Contingencia Divisióntr \* ORGANIZACIÓN

Recuento		ORGANIZACION														
		11	14	15	16	17	18	19	21	22	23	24	25	26	27	Total
divisiónt	1	0	0	1	0	0	0	0	0	0	0	0	0	0	0	1
	2	0	1	0	1	1	1	0	0	0	0	0	0	0	0	4
	3	1	1	0	0	3	0	2	1	0	0	0	0	0	0	8
	4	0	0	0	0	2	0	0	1	0	1	0	1	1	0	6
	5	0	0	0	1	0	1	1	0	1	0	1	2	1	1	9
Total		1	2	1	2	6	2	3	2	1	1	1	3	2	1	28

Fuente: Elaboración Propia

De la Tabla 9 encontramos que al cruzar las variables división del trabajo con la variable organización, podemos encontrar que existe una dispersión continua a lo largo de todo el cuadro, pues aunque los datos están más concentrados en el centro de la variable organización a la hora de observar los resultados de realizar una división del trabajo encontramos que los datos se localizan más de la parte media hacia el final. Se observan dos grupos principales de variables, una en el centro con pocos puntos dentro de la parte organizacional, otra en los extremos inferiores que resulta de mucha organización y gran división del trabajo. En la tabla anterior se localiza un aglomerado de redes que tiene bajos procesos de dirección con poca movilidad de docentes y en otro lado la situación contraria; en otra parte de la tabla localizamos un proceso similar con un bajo proceso de dirección y poco acceso al apoyo institucional. Como se observa en la tabla anterior, los datos están localizados en las partes bajas de la variable generada como control, solo dos redes tienen puntos altos en esta variable y son las que producen artículos de investigación.

### Correlaciones Encontradas

Se realizó un análisis de correlación entre las cuatro variables que definen el proceso administrativo y podemos encontrar que con un nivel de significación inferior al 0.01 encontramos que la variable organización está correlacionada con la variable dirección con un coeficiente de 0.494 lo que implica que en la medida de que las redes estén organizadas habrá una buena dirección. La otra correlación significativa se localiza entre las variables Dirección y Control con un coeficiente cercano al anterior que es de 0.505, es decir, en la medida que se dirija bien la red, el control sobre ella será mejor. Los análisis de confiabilidad nos dan una buena idea de que los reactivos están aportando datos que pueden generar confianza. Para los datos de la parte de planeación se tiene un valor de alfa de Cronbach de 0.630. Para la parte de organización se tomaron en cuenta las situaciones en las que no se deben de colocar los porcentajes de la distribución del tiempo, por ser de orígenes distintos, lo que resultó con un coeficiente muy bajo de 0.460. Para la parte de dirección el coeficiente resultante es de 0.491 y finalmente en lo que tiene que ver con el proceso de control se obtiene un coeficiente de 0.366. Podemos concluir que para estos últimos casos las variables se tienen que rediseñar para poder mejorar la confiabilidad obtenida.

### CONCLUSIONES

Las redes académicas como eje para la interacción del conocimiento a través de los grupos de

investigadores, es un esquema que cada vez se consolida en el mundo académico de la educación superior, es por ello que de acuerdo con la investigación realizada en la Universidad Autónoma de Zacatecas, a los investigadores que cuentan con proyecto registrado ante la instancia universitaria, pudo ser obtenida la siguiente información: Por otra parte, se encontró que el área de humanidades y educación es la que se encuentra con mayor producción de redes académicas, siendo el área agropecuaria la de menor producción. Partiendo de que se ha determinado que después de realizar análisis de contingencia entre la variable de trabajo en subgrupos o individual con las demás variables es posible rechazar la hipótesis alterna de que no existe evidencia estadística para relacionar estas dos variables. Ello nos lleva solamente a pensar que con esta información no se puede concluir acerca de la tipología encontrada en los cuerpos académicos de la UAZ. Al analizar los diferentes datos de los CA pertenecientes a las diversas áreas académicas podemos localizar ciertas diferencias con respecto a ciertos aspectos, pero que no son concluyentes estadísticamente. Pudimos observar que el análisis del número de redes, las instituciones de colaboración y las situaciones de trabajo y comunicación son ligeramente diferentes pero no estadísticamente concluyentes. El trabajo se puede completar con la base de datos de todos los cuerpos académicos de la UAZ para observar alguna situación concluyente.

# EDUCANDO PARA VIVIR EN UN MUNDO SUSTENTABLE

Emmanuel Rojas Castañeda, Universidad Autónoma de Coahuila  
Silvia Rodríguez Reyes, Universidad Autónoma de Coahuila  
Héctor Javier Rodríguez García, Universidad Autónoma de Coahuila

## RESUMEN

*En el año 2004 la Asamblea General de la ONU declaró al período 2005-2014 como la "Década de la Educación para el Desarrollo Sustentable." La UNESCO señala que: "El Decenio de las Naciones Unidas para la educación con miras al desarrollo sostenible, pretende promover la educación como fundamento de una sociedad más viable, humana e integrada para su desarrollo, mediante el sistema de enseñanza a todos los niveles. Asimismo se intensificará la cooperación internacional en favor de la elaboración y la puesta en común de prácticas, políticas y programas innovadores de educación para el desarrollo sostenible".*

# EDUCATING FOR LIVING IN A SUSTAINABLE WORLD

## ABSTRACT

In 2004 the UN General Assembly declared the period 2005-2014 as the "Decade of education for sustainable development." *UNESCO says that: "the Decade of education for sustainable development-United Nations, aims to promote education as the Foundation of a viable society, human integrated development, through the system of education at all levels. Also will intensify international cooperation in favour of the development and the implementation in common practices, policies and innovative programmes for education for sustainable development".*

**JEL:** M00

**KEYWORDS:** Education, Sustainability

## INTRODUCCIÓN

“La educación para el desarrollo sostenible es un concepto dinámico que pone de manifiesto todos los aspectos de la toma de conciencia del público, de la educación y de la formación para dar a conocer o hacer comprender mejor los lazos existentes entre los problemas relacionados con el desarrollo sostenible y para hacer progresar los conocimientos, las capacidades, los modos de pensamiento y los valores de manera que se pueda dar a cada quien, cualquiera que sea su edad, los medios de asumir la responsabilidad para crear un futuro viable y aprovecharlo”

En esencia propone impulsar una educación solidaria que contribuya a una correcta percepción del estado del mundo, que genere actitudes y comportamientos responsables y prepare a las personas para la toma de decisiones fundamentadas (Aikenhead, 1985) orientadas al logro de un desarrollo culturalmente plural y físicamente sostenible (Delors, 1996; Cortina et al., 1998).

### Fomento de la Educación, la Capacitación y la Toma de Conciencia

La educación, la promoción de la conciencia del público y la capacitación están vinculados prácticamente con todas las áreas del conocimiento, y aún más de cerca con las que se refieren a la satisfacción de las necesidades básicas de los seres humanos, la creación de las estructuras necesarias, los datos y la información, la ciencia y su función son del ámbito de competencia de los grupos interesados (Stakeholders), donde las instituciones de educación superior (IES) no son la excepción, dado que juegan un papel importante ya que en ellas se generan los conocimientos y se interpretan las exigencias de una sociedad responsable y comprometida con el avance del desarrollo de la industria, el comercio y los servicios así como de los aspectos administrativos del buró gubernamental.

El sector empresarial ubicado en la región centro del Estado de Coahuila de Zaragoza (México) es el principal actor social y requiere de cambios sustanciales referentes al cuidado medioambiental que le permita transformarse en proveedores comprometidos con la responsabilidad social. Las MPYMES como organizaciones sociales enfrentan el mismo reto, por un lado, generar riqueza y lograr una expansión y al mismo tiempo lograr una eficiente integración económica-financiera y cumplir con tales principios por su propia voluntad o como exigencia de las grandes corporaciones cuando forman parte de una cadena productiva y al mismo tiempo la presión de las autoridades del ramo medioambiental. La IES como copartícipe de estas jornadas está impulsando el aprendizaje para vivir en un mundo sustentable, de ahí surge las siguientes interrogantes:

¿La currícula de las instituciones de educación superior (IES) están atendiendo los nuevos requerimientos del mudo laboral referentes al desarrollo sustentable?

¿Si lo hacen, de qué forma contribuyen a que el ideal de la ONU se materialice en cada región?

Para dar respuesta a estas preguntas es necesario hacer un acercamiento a este fenómeno, mediante un análisis mas amplio, por un lado, para que la empresa pueda contar con personal profesional que se ocupe de cuidar su entorno, que coadyuve a la expansión de su mercado tan importante para su supervivencia, y al mismo tiempo para que pueda generar utilidades suficientes que apalanquen su capital contable; conforme a lo previsto por el modelo de Desarrollo Sustentable, entonces, las IES deberán estar atentas a los requerimientos de los empresarios, gobierno y organizaciones mundiales para cumplir con ese ideal, para ello es necesario actualizar los planes y programas de estudios con aprendizajes que faciliten al alumno desarrollarse y aplicar en su vida cotidiana las políticas y procedimientos nacionales e internacionales tendientes a conservar el medio ambiente en todas sus vertientes, adicionalmente a los procesos administrativos-económicos de las empresas.

Una preocupación mundial es mantener un desarrollo sostenible y sustentable de los recursos; México a través de la Ley General del Equilibrio Ecológico y Protección Ambiental regula las diversas actuaciones de los actores sociales, donde se resalta como prioridad: “La preservación y protección de la biodiversidad, el aprovechamiento sustentable, la preservación y en su caso, la restauración del suelo, el agua y los demás recursos naturales de manera que sean compatibles, la obtención de beneficios económicos y las actividades de la sociedad con la preservación de los ecosistemas, así como la prevención y control de la contaminación del aire, agua y suelos, garantizar la participación co-responsable de las personas, en forma individual o colectiva, en la preservación y restauración del equilibrio ecológico y la protección al ambiente”.

De los preceptos anteriores se desprende la obligación que todos los ciudadanos tenemos que cumplir, en particular los que realizan actividades empresariales, pero como todo conocimiento implica aprenderlo dentro de una aula universitaria, la UAdeC ha actualizado e incorporando en su currícula, desde la reforma del 2003 asignaturas que aseguren este tipo de aprendizaje como parte de la ética profesional y empresarial,

Objetivo de la investigación: Describir la metodología aplicada por la IES para reformar sus programas de estudio relativos a la incorporación de los temas previstos en la RSE y conforme a la nueva visión de un mundo sustentable, con el fin de que los alumnos al egresar e insertarse en el mundo laboral, puedan enfrentar tan semejante reto.

Objetivo particular: Analizar los contenidos de las asignaturas acordes a las necesidades de las MPYMES y en relación con los métodos de trabajo del nuevo modelo de convivencia empresarial en un mundo sustentable. Construir las características que el Talento Humano deberá aplicar al momento de insertarse en el mundo laboral, de manera tal, que le permita al profesional enfrentar los retos que se le presentan a las MPYMES en relación con los nuevos métodos de trabajo previstos en los principios de la RSE.

## REVISION LITERARIA

Las empresas no pueden existir si no cuentan con un marco jurídico legal que les de certidumbre, protección y vele por la consecución de sus intereses; las IES son instituciones sociales con una visión de corto y largo plazo comprometidas con el progreso del mundo laboral, y el Gobierno no sólo es la autoridad que dicta las normas de comportamiento social y cuida el orden de la multitud de actividades que se desarrollan dentro de su territorio, es el órgano garante de libertad y paz, por ello, continuamente celebra tratados, acuerdos, convenios y pactos, al interior y con otros gobiernos al exterior con el fin de facilitar las buenas prácticas de negocios.

Los acuerdos internacionales relacionados con el medio ambiente y los derechos humanos suscritos de manera global buscan asegurar a los ciudadanos una vida digna y decorosa susceptible de transformarse en desarrollo económico y social. Por consecuencia, el Gobierno de México realiza continuamente esfuerzos para relacionar los elementos del sistema económico internacional con las necesidades humanas de los connacionales para que puedan gozar de un medio natural, seguro y estable. Sin el respeto a los Derechos Humanos, no podrá haber Desarrollo Sustentable.

El logro de la sustentabilidad aparece hoy indisolublemente asociado a la necesidad de universalización y ampliación de los derechos humanos según la OIT. Sin embargo, esta vinculación tan directa entre superación de los problemas que amenazan la supervivencia de la vida en el planeta y la universalización de los derechos humanos, a muchos empresarios de la región les causa extrañeza y les es difícil aceptar la realidad.

Vercher, (1998) decía que los Derechos Humanos de tercera generación se referían a la preservación sustentable de nuestro planeta, dado que pretenden la satisfacción de las necesidades básicas de los seres humanos. Estos se clasifican como derechos de solidaridad porque tienden a preservar la integridad del ente colectivo. Se trata, pues, de derechos que incorporan explícitamente el objetivo de un Desarrollo Sustentable: insistía en que sólo pueden ser llevados a cabo a través del esfuerzo concertado de todos los actores de la escena social, incluyendo a los organismos que representan a la comunidad internacional.

Con el nombre de “Nuestro futuro común” la Dra. Gro Harlem Brundtland dio a conocer su propuesta, conocido como Informe Brundtland (1987), en el cual se puso en circulación el término Desarrollo Sostenible en Europa, posteriormente, el Libro Blanco de la Responsabilidad Medioambiental de la Comisión Europea del año 2000, donde se orientan las estrategias empresariales a un buen comportamiento ecológico, cuidado y conservación de los recursos naturales, hasta llegar al Libro Verde de la Comisión Europea, para fomentar un marco europeo para la responsabilidad social de las empresas, (2001), que establece directrices para la responsabilidad social y medioambiental en empresas europeas.

La ONU promueve con ímpetu la iniciativa del Global Reporting Initiative (GRI) para la emisión de informes de sostenibilidad, que permiten a las empresas rendir cuenta de sus actuaciones a todos sus grupos

de interés, apegándose en su actuar a estándares propuestos y acordados por especialistas de varios campos y entes, la versión 3.0 de octubre de 2006 sienta el precedente de acondicionamiento y adaptación a las necesidades y características de gran cantidad de organizaciones, aprovechando las ventajas y desventajas de las versiones anteriores que GRI realizó.

México ha adoptado un marco normativo nacional igual que otros países, mismo que atiende las constantes presiones de la sociedad que demanda a las empresas su cumplimiento dado que por negligencia o desconocimiento en muchos casos continúan infringiendo las leyes de la materia. Las empresas tienen como referencia los lineamientos internacionales y una norma oficial mexicana voluntaria a cargo de una institución constituida como asociación civil y las buenas intenciones de algunos empresarios y académicos, que conocen el modelo por sus cotidianas relaciones con actores de otros países, que sí cumplen esta exigencia, por consecuencia, el marco legal vigente en el ámbito social y medioambiental, se convierte en la base del desarrollo regional y nacional.

En los últimos años la actuación de las grandes empresas mexicanas públicas y privadas ha mejorado notablemente, no así las MPYMES. La política en la materia ha estado determinada, entre otros, por la suscripción a los principios del Pacto Mundial de la Organización de las Naciones Unidas (ONU) y otras iniciativas trascendentes en el ámbito internacional, por la creciente preocupación por atender a los diferentes grupos de interés, así como por la influencia y recomendación de las empresas extranjeras que operan bajo el modelo de ESR, que exigen a sus afiliadas o proveedores que cumplan con este reto.

Gobierno garante y promotor del desarrollo humano

El Desarrollo Humano se puede entender como el proceso por el cual una sociedad en su conjunto amplía las opciones de las personas y mejora las condiciones de vida de sus ciudadanos a través de un incremento de los bienes con los que pueda cubrir sus necesidades básicas y complementarias, y de la creación de un entorno en el que se respeten los derechos jurídico y sociales de todos ellos.

Desde este punto de vista, el gobierno será el garante ante su comunidad de la paz social y el desarrollo sostenible de las actividades lícitas de sus habitantes, procurando los derechos de cada cual, mediante el establecimiento de mecanismos que aseguren a todos y cada uno de los gobernados disfrutar en lo individual o en forma colectiva, como mínimo, de la libertad como el primer derecho universal para alcanzar el logro de:

Una vida prolongada y saludable.

Adquirir los conocimientos y apropiarse del acumulado cultural, de tal manera que le permita ejercerlo en el mundo laboral.

Participar de las decisiones sobre el destino de su comunidad.

Estar libre y sin miedo a la violencia.

Contar con un puesto de trabajo que le asegure ingresos suficientes para solventar un nivel de vida digno y decoroso

Tener una vida creativa y productiva en un ambiente saludable.

Disfrutar del respeto por sí mismo y de la garantía de los derechos humanos.

El desarrollo humano entraña necesariamente una preocupación por la cultura (la forma en que las personas deciden vivir juntas) sin perder de vista la cohesión social basada en valores y creencias compartidos y si lo plasma en programas de acción social y desarrollo humano, entonces tendrá la necesidad de inculcar a sus habitantes la anhelada responsabilidad social, porque la gente que vive junta, coopera para enriquecerse recíprocamente al desempeñar actividades industriales, comerciales o de servicio procurando siempre un desarrollo integral, sostenido y sustentable y hacer de su comunidad una sociedad respetuosa y equilibrada entre su medio ambiente y su población.

### Programa de Educación Ambiental

Se entiende por educación ambiental al proceso educativo formal o informal que busca generar educación, conciencia y cultura ambiental: actitudes, valores, conocimientos empíricos, científicos, tecnológicos y éticos, orientados al desarrollo sustentable. La educación ambiental, por ser un conocimiento dinámico debe darse en todo momento de la existencia de las personas, en forma adecuada y ajustado a las circunstancias del momento que éstas vivan.

El reto de la educación ambiental es promover una nueva relación de la sociedad con su medioambiente, a fin de procurar a las generaciones actuales y futuras un desarrollo personal y colectivo más justo, equitativo y sostenible, que pueda garantizar la conservación del soporte físico y biológico sobre el que se sustenta.

Los fines pueden ser:

Propiciar un cambio profundo de las estructuras y la forma de análisis, la gestión de las cuestiones referentes al medio, volviendo a la capacidad decisoria de la comunidad.

Promover la planificación económica, social y urbanística, que tome en cuenta prioritariamente los conocimientos de la ciencia de la ecología.

Establecer los principios éticos relativos a las relaciones del hombre y su medio, que sean viables a la hora de la toma de decisiones sobre aspectos del medio ambiente.

Implantar un tipo de educación utilizando una metodología básica, que incluya el contacto directo con la realidad circundante, de manera que el entorno sea un todo estructurado y lleno de interrelaciones, y que el objeto de estudio incluya los diferentes ámbitos del aprendizaje y la investigación.

### ¿Qué es el Desarrollo Sustentable?

Por Desarrollo Sustentable se entiende como el proceso de mejoramiento sostenido y equitativo de la calidad de vida de las personas, basado en medidas apropiadas de conservación y protección del medio ambiente, de tal manera que las personas de hoy se comprometan con las expectativas de las generaciones futuras.

Es pertinente mencionar que la generación actual se debe ocupar de la preservación de la naturaleza (de todos sus recursos: agua tierra y aire, así como los minerales, vegetales y animales) y desde luego de las personas, dado que somos los seres más importantes de la misma. Un ambiente sin personas en realidad no es un ambiente. Hay quienes creen tener el deber de proteger a los animales y las plantas sea como sea. Esta tarea no está mal, pero deben entender dos cosas.

Las personas son la parte más importante del ambiente;

En el ambiente todas las cosas están interrelacionadas.

Ejemplo, si una empresa industrial estuviera contaminando mucho y esta no hiciera nada para evitar la emisión de sustancias peligrosas que afectan al entorno (natural y social) algunos ambientalistas radicales le propondrían al gobierno que la cierre; pero esa propuesta afecta al entorno, porque entonces habrá varias familias sin trabajo. Esto socialmente es malo, dado que también la pobreza provoca enfermedades, hambre y más deterioro del entorno. ¿Pero qué pasa si se busca otra solución que proteja a la comunidad, a la naturaleza y a la vez evite que la empresa industrial se cierre? Ahí se habrá conseguido algo verdaderamente bueno. No siempre esto es posible porque hay empresas y empresarios muy irresponsables que no se preocupan de la salud y bienestar de sus colaboradores, mucho menos por el de la sociedad, su objetivo solo es obtener utilidades.

De igual manera hay quienes creen que se puede volver a vivir como antes, sin consumir tanto. No han pasado muchos años cuando la población en general no tenía, agua y drenaje, ni artículos domésticos como: lavadora de ropa, secadoras, licuadora, refrigerador, o automóvil, etc. y sin embargo, su calidad de vida era mucho menor. Las cosas eran bastante simples y eso hacía que no se deteriorara el ambiente, hoy en día se

requiere gran cantidad de agua potable, energía o combustibles para satisfacer las necesidades de la población que demanda más y más de esos recursos, por consecuencia hay mayor deterioro del ambiente y las empresas están obligadas a cubrir las necesidades sociales.

Ahora, las personas están dispuestas a vivir con una mayor calidad de vida olvidando el pasado; gracias a los avances de la ciencia y la tecnología ha logrado tener mayores comodidades y vivir más años; menos niños mueren de enfermedades infecto-contagiosas, se ha logrado en muchos casos un mayor confort, etc. pero no se puede volver atrás, sea cual sea la alternativa.

### Principios de una Sociedad Sustentable

En el Programa de la UNESCO "Educating for a Sustainable Future" (Educando para un futuro sustentable) existen cuatro dimensiones de la sustentabilidad: social, ecológica, económica y política. Cada una de ellas trae aparejado un principio esencial.

La sustentabilidad social se vincula con los valores y principios de la paz y la equidad; la ecológica con la conservación; la sustentabilidad económica con el desarrollo adecuado y la política con la democracia.

Esto implica que una sociedad sustentable será aquella en la cual:

Las personas se preocupe por los demás.

Se protejan los sistemas naturales y se utilicen los recursos sabiamente.

Se valore el desarrollo adecuado y la satisfacción de las necesidades básicas para todos

Se tomen las decisiones por medios justos y democráticos.

Uno: Las personas se deberán preocupar por los demás y valorar la justicia social y la paz, a medida de ejemplo:

Asegurando el acceso al agua potable, alimento y vivienda para todos.

Valorando y respetando los roles y contribuciones de las mujeres y niñas tanto como se hace con los hombres y niños.

Preocupándose por los jóvenes, ancianos y personas con capacidades diferentes asimismo, de grupos sociales menos privilegiados y marginados.

Atesorando el patrimonio cultural y el bienestar de los naturales.

Valorando y respetando la diversidad cultural en todas sus formas.

Reforzando las particularidades locales y su identidad, incluyendo la conexión con lo nacional y global.

Protegiendo la salud humana y la calidad de vida mediante ambientes seguros, limpios y saludables.

Maximizando el acceso de todos a la educación.

Construyendo pueblos y ciudades 'humanas'.

Solucionando las fricciones mediante la discusión, la negociación y otros medios pacíficos.

Dos: Se debe proteger los sistemas naturales y utilizar los recursos sabiamente, Ejemplo:

Valorando y protegiendo la biodiversidad

Preocupándose y respetando la vida de todas las especies, animales y plantas,

Utilizando la energía, el agua, aire, suelo, bosques y otros recursos naturales en forma eficiente.

Reduciendo, reutilizando y reciclando los residuos de manera aceptable.

Evitando la contaminación o reduciéndola a niveles que no dañen los sistemas naturales o la salud humana.

Manteniendo y restaurando la salud de los ecosistemas

Viviendo "ligeramente" sobre el Planeta

Tres: Las personas deben valorar el desarrollo adecuado y la satisfacción de las necesidades básicas de todos, Ejemplo:

Creando una economía local que brinde oportunidades de trabajo satisfactorio y significativo para todos.

Asegurando que las necesidades humanas básicas sean satisfechas.

Valorando el trabajo voluntario y no remunerado en el hogar y la comunidad.

Apoyando políticas que asignen el costo social y ecológico real así como los beneficios de los bienes y servicios que consumimos.

Reconociendo las aportaciones de una comunidad cuando están vinculadas a las contribuciones de las personas de áreas vecinas, como es el caso del campo a la ciudad.

Impulsando la producción y consumo de bienes y servicios que no degraden el medioambiente local o global, ni la calidad de vida de otras personas, especialmente aquellas comunidades marginadas.

Promoviendo la responsabilidad social de las empresas.

Cuatro: Tomar las decisiones a través de medios justos y democráticos, Ejemplo:

Desarrollando y promoviendo las instituciones democráticas y los procesos de toma de decisiones.

Descentralizando la toma de decisiones a los niveles locales de gobierno (por municipios).

Promoviendo la responsabilidad gubernamental y la consideración de las comunidades locales.

Otorgando poder a todos los sectores de la comunidad para participar en las decisiones tanto a nivel nacional, regional y local.

Desarrollando las capacidades de las Organizaciones no Gubernamentales (ONG's), asociaciones vecinales y profesionales u otros elementos de una sociedad civil pujante.

Eradicando la corrupción en el gobierno, instituciones y empresas, promoviendo la ética en los negocios.

### Programas de Educación Superior

La Universidad Autónoma de Coahuila es una institución pública del Estado de Coahuila de Zaragoza, tiene presencia en todo su territorio mediante tres unidades administrativas, Saltillo, Torreón y Unidad Norte, esta última abarca la región centro-desierto, carbonífera y frontera. Por estos días la Rectoría ha iniciado el proceso de homogenización de las características de todos los P.E de las 57 escuelas que la integran, tomando como base lo descrito en el Modelo Educativo del Constructivismo Humanismo, sin embargo, la FCA en forma autónoma lo venía aplicando desde la década de los 90s., donde había incluido asignaturas referentes al cuidado medioambiental y tomado en cuenta los principios de la RSE., seguramente el lector se preguntará ¿que mecanismos se dispararon para incluir en los planes de estudio estas asignaturas? El Estado se una entidad federativa localizada entre los 26° y 29° de latitud norte, y colinda con los Estados Unidos de América, por consecuencia se localizada en la franja mundial de los desiertos, con escasas lluvias, poca vegetación, climas extremos, por lo tanto, su gente ha aprendido a vivir en estas condiciones haciendo todos los esfuerzos posibles por tener mejor calidad de vida mediante la educación de sus hijos para que soporten estas inclemencias. La IES como parte de la sociedad no se ha sustraído a estas necesidades, por lo tanto, su currícula la ha venido reformando continuamente para adecuarla a los requerimientos del mundo laboral y de la sociedad en su conjunto de cada región del Estado, teniendo presente que es necesario “educar para vivir en un mundo sustentable”

### Plan de Estudios de la IES

La asignatura de ética y desarrollo profesional de la licenciatura de contaduría pública, se adecuó en el 2010 para incorporar el aprendizaje de la responsabilidad social empresarial, además del aprendizaje propio de la ética profesional de la disciplina, entendiendo a la RSE como un nuevo tipo de ética para toda la vida, orientado para que el futuro profesional pueda vivir en un mundo sustentable al momento de ejercer su profesión en el mundo laboral; la asignatura de Desarrollo Sustentable se incorporó en el Plan de estudios desde el año 2003, y en Maestría de Administración de Recursos Materiales en el Sector Público, (en 2008) como parte elemental, haciendo coincidir las disposiciones de los acuerdos universales, las leyes nacionales y locales para que el egresado al momento de la toma de decisiones cuente con el soporte técnico necesario.

## **METODOLOGIA**

Recolección de la información de las MPYMES

La investigación es de tipo bibliográfica principalmente, derivada de un documento mas amplio realizado por el autor (y otros) en la Universidad de León, España, en los primeros meses del 2013, bajo la asesoría

de destacados doctores investigadores de la Facultad de Ciencias del Trabajo, asimismo se utilizaron algunos instrumentos de recolección y análisis de datos, tales como:

a) Análisis documental: Para conformar el marco teórico del trabajo final se realizó una revisión de fuentes documentales bibliográficas, a efecto de estructurar el cuerpo teórico conceptual del trabajo. Asimismo, incluye la revisión de fuentes de Internet e información de prensa relacionadas con el tema. Todo lo anterior servirá de base para sustentarlo metodológicamente.

b) Encuesta: Este documento como forma de recolección de datos, permitió recopilar y conocer desde fuentes primarias, en este caso los requerimientos de las MPYMES en relación con el aprendizaje de los componentes para vivir en un mundo sustentable, relacionada directamente con el reto que enfrentan para cumplir con los requisitos, se aplicó a 30 MPYMES lo que permite aproximarse al conocimiento del estado del arte, atendiendo las opiniones de los empresarios, ejecutivos-directivos sobre las acciones que están adoptando, mismas que se detallan en los resultados.

c) Igualmente se tomo en cuenta los contenidos de la asignatura de Desarrollo Sustentable impartida tanto en licenciatura como en maestría, así como la incorporación al programa de Ética y Desarrollo Profesional. Con lo anterior se pretende coadyuvar con los requerimientos de las MPYMES ubicadas en el Centro del Estado de Coahuila para enfrentar el reto y la forma particular; el cuestionario se integró de seis grandes apartados, tales como: Ética empresarial, Derechos humanos, Ambiente laboral (Colaboradores) Comercialización (Clientes y Proveedores), Medio ambiente y Gobierno, se plantearon 70 preguntas tendientes a auscultar su actuación social.

## RESULTADOS

Después de describir la metodología utilizada por la universidad para conformar los nuevos programas de estudio en relación con el desarrollo sustentable; atendiendo las necesidades empresariales de la región con el fin de hacerlos operables en el amplio y diverso sector de las MPYMES localizadas en el Centro del Estado de Coahuila de Zaragoza, y tomando en cuenta la nueva visión de un mundo sustentable en relación con la RSE para que los alumnos al egresar e insertarse en el mundo laboral, puedan enfrentar tan semejante reto; se analizaron los programas de aprendizaje acordes a las necesidades de las MPYMES en relación con los métodos de trabajo y las exigencias requeridas para implementar un nuevo modelo de convivencia empresarial en un mundo sustentable y se señalaron las características que el Talento Humano debe aplicar al momento de insertarse al mundo laboral de tal forma que le permita enfrentar los nuevos métodos de trabajo como lo sugieren los principios de la RSE, y que verdaderamente coadyuven con las MPYMES para adoptarlos, ejercerlos y replicarlos, se obtuvieron los siguientes:

Hallazgos:

1. Las MPYMES a pesar de la falta de recursos económicos disponibles, requieren elegir el Talento Humano egresado de una IES, con conocimientos en materia Ambiental. Las empresas encuestadas señalaron que efectúan la selección y reclutamiento de sus colaboradores de una manera formal; Recompensan la promoción de individuos destacados; Promueven y recompensan el desarrollo de talentos y en el 85 % de ellas laboran mujeres, delegan autoridad y evalúan el desempeño del personal de mandos medios; por el contrario, en ninguna de las empresas encuestadas trabajan menores de edad y no cuentan con programas contra las adicciones; en el 60% cuentan con un reglamento interior de trabajo, promueven la salud y el bienestar de sus colaboradores, Asimismo, coincidieron que tomaran en cuenta promover un programa en contra del acoso sexual y desarrollar algún programa de asesoría para hacer mas eficientes las actividades de la empresa.

2. Las MPYMES enfrentan un verdadero reto para adoptar los principios de la RSE. El Talento Humano que integra estas empresas tratan de aplicar la Ética Profesional, pero desconocen los principios de la RSE, el 80% manifestó que conocen su misión y visión, que cuentan con valores distintivos que les permite competir e innovar sus procesos y productos, sin embargo, no han recurrido a la capacitación de sus colaboradores en aspectos de la ética empresarial; no promueven un ambiente propicio para la discusión de sus valores y no comparten los resultados financieros con otros actores sociales. En materia de la promoción de los Derechos Humanos, todas coincidieron en que sus insumos cumplen con las normas más relevantes de los derechos humanos y sus proveedores conocen sus expectativas. Por lo que corresponde a la Comercialización, todas coincidieron en que tienen conocimiento pleno de sus clientes, que cuentan con una política centrada en la atención y servicio al cliente, que su negocio forma parte de alguna cadena productiva, que respetan la privacidad de su cliente y promueven el uso o consumo de sus productos o servicios con seguridad y responsabilidad. Sin embargo, el 50% manifestó que sólo exigen a sus proveedores un compromiso formal, y que convienen con sus proveedores la adopción de compromisos acordes a los principios de la RSE.

3. Al analizar el apartado del conocimiento Medioambiental las MPYMES coincidieron que no han podido implementar programas de mantenimiento preventivo que evite el dispendio de recursos naturales, que conocen y aplican las normas de seguridad y protección civil y cuentan con algún programa para enfrentar los retos medio ambientales, por lo contrario, dijeron que no conocen programas de reducción de insumos de recursos naturales que tienen sus más cercanos competidores y sólo el 30% cuenta con técnicas para administrar el uso de energía, un 50% cuenta con algún programa de reciclaje; capacita a sus colaboradores en temas ambientales o tienen algún dispositivo para economizar el agua. En cambio al analizar el conocimiento de la normatividad emitida por el Gobierno, todas las empresas coincidieron en que cumplen con sus obligaciones fiscales y que tienen conocimiento de la Ley General del Equilibrio Ecológico en relación con su negocio.

4. Un compromiso suscrito con los encuestados fue retroalimentar a las MPYMES de los avances logrados por otras empresas, de manera que todas puedan implementar nuevos métodos de trabajo que cumplan con las exigencias requeridas por el modelo en vigor y que les permita superar los retos para convertirse en empresa socialmente responsable, en este aspecto, todas solicitaron que se les dejara copia del cuestionario que habían respondido porque les parecía interesante este estudio y querían tener una guía para mejorar su actuación, solicitando que posteriormente se les retroalimentara de los resultados obtenidos en este trabajo una vez que se hubiera publicado.

5. Respecto al análisis de la currícula de la IES, si bien es cierto que se están atendiendo los nuevos requerimientos del mudo laboral referentes al Desarrollo Sustentable, que se imparten en dos asignaturas sobre el tema y se desarrollan algunos simulacros y actividades sobre el tema por el Comité de Protección Civil de la Facultad, no son suficientes para que el alumno se sensibilice de la gravedad del problema medio ambiental.

6. Respecto a la forma de contribuir con el ideal de la ONU, la IES y la DES a través de las diversas cámaras de representación, asociaciones profesionales, CONACYT y los organismos certificadores y de vigilancia, ha tratado a toda costa revisar y actualizar los programas de estudios y las normas de actuación para cumplir con esa exigencia, los cambios no solamente están plasmados en los programas sino son evidenciados en su entono físico y su cultura laboral.

## CONCLUSIONES

El Desarrollo Sustentable como fenómeno de estudio es multifactorial, las IES, las MPYMES, las ONG's, los Stakeholders y el Gobierno, son actores de un mismo escenario, por ello, la propuesta de este aprendizaje presupone una serie de objetivos, estrategias y metas alcanzables, teniendo como premisa, que el estudiante

dentro del aula aprenda y aplique mecanismos que pueda entender respecto a los cambios que continuamente está sufriendo su medio ambiente y al mismo tiempo, se prepare para tomar decisiones al desempeñar su actividad profesional, motivo por el cual, requiere saber de los acuerdos internacionales y las disposiciones y prácticas nacionales para convencer a otros para desechar las costumbres discrecionales que la empresa tenga adoptadas en relación con su responsabilidad social y la comunidad, haciendo visible los posibles problemas medioambientales que la afectan, para que posteriormente, vigile y asegure, en igualdad de circunstancias, las mismas oportunidades de sobrevivencia de los recursos de la empresa y de la comunidad.

Después de conocer los resultados, se puede afirmar que los egresados incorporados al mundo laboral empresarial están replicando los conocimientos adquiridos en el aula, dado que en las 563 empresas ubicadas en Monclova, Coahuila, mas las empresas localizadas en el área conurbada, donde se aplicó la muestra se encontró una gran cantidad de egresados de la DES, laborando en esas empresas, destacando que de la cifra anterior, el 95% son MPYMES y están trabajando como toda organización social para adecuarse a las exigencias que plantea el nuevo reto de la RSE.

Incorporar la temática del Desarrollo Sustentable como eje transversal en las asignaturas relacionadas con las habilidades del pensamiento, gestión administrativa y el desarrollo profesional, incluyendo la necesidad de promover la igualdad de oportunidades entre el uso de los recursos de la empresa y los de la sociedad, buscando que en un futuro próximo se logren los ideales de la ONU.

Las organizaciones, el gobierno local, los Stakeholders y las ONG's especializadas en las cuestiones de desarrollo sustentable en alianza con las IES, deberían organizar cursos-taller de formación exhaustiva destinados a los alumnos de ambos sexos, previos a egresar, para tratar la cuestión de la preservación del medio ambiente y del entorno de la región, con miras de crear conciencia tendiente al logro de una sociedad mas humanitaria.

Debería respaldarse con vigor el principio “aprendiendo a aprender para toda la vida”, como parte de la ética profesional y la responsabilidad social empresarial, adoptándose medidas adecuadas para permitir que los alumnos al insertarse en el mundo laboral prosigan con su tarea de protectores y defensores del medioambiente en todas sus formas.

La temática del Desarrollo Sustentable igual que la ética profesional son temas inagotables, por lo tanto, deben formar parte de los Programas de Estudio de las IES ajustados a las demandas y aspiraciones de la sociedad en su conjunto, aprovechando la tecnología de la información y las comunicaciones como herramientas indispensables en la actualidad para obtener información y divulgar el conocimiento, por ello, el acervo cultural que se logra debe estar al alcance de los habitantes de cada región y del mundo entero como una aportación teórica o practica para eliminar prácticas inhumanas, avaricias desmedidas, cohechos y/o sobornos a los órganos decisorios y de autoridad. En el imaginario social parece una utopía, sin embargo, es tiempo de comenzar en las IES una tarea de cambio de paradigmas, inculcando en cada alumno la promoción de su responsabilidad social.

# ESTUDIO SOBRE LA INNOVACIÓN EMPRESARIAL, UN RETO PARA EL EMPRENDIMIENTO EMPRESARIAL EN COAHUILA

Juan Jesús Nahuat Arreguín, Universidad Autonoma de Coahuila

Fernando Agüeros Sanchez, Universidad Autonoma de Coahuila

Diego Buenrostro Nuñez, Universidad Autonoma de Coahuila

## RESUMEN

*Nuestro país se esta enfrentando a un problema de generación de empleo, en el Estado de Coahuila no es la excepción, a pesar de contar con industrias grandes de manufactura, existe un 6.21% de desempleo según el Banco de México en el informe 2012, este porcentaje es mayor a la media nacional, por lo que una alternativa podría ser el emprendedurismo empresarial. Por lo tanto se realizo un análisis de datos de organismos acreditados internacionalmente donde se obtuvo información sobre los tipos de economías que existen y como es el comportamiento de nuevas empresas, y los emprendedores que establecen sus empresas que nivel de innovación tienen y como las ve los clientes potenciales desde un punto de vista critico en donde sean los potenciales compradores los que tomen la decisión para apoyar a alguna empresa.*

**PALABRAS CLAVES:** Emprendimiento, Estrategia Competitiva, Innovación empresarial

## ABSTRACT

*Our country is facing the problem of generating new jobs. The state of Coahuila is not an exception. In spite of having large manufacturing industries, The state holds 6.21% of unemployment rate according to the Bank of Mexico in the annual 2012 report, this number is higher than the national average, thus a good option for people in this region could be become an entrepreneur. Therefore It was performed an analysis of data by internationally certified agencies. It contains information about the type of economies that exist and How new companies react, in addition the study includes level of innovation by the entrepreneurs and how is the vision of their potential customers from a critical perspective where potential buyers are those who make the choice of supporting or not any certain company*

**JEL:** M00

**KEYWORDS:** Study on Entrepreneurial Innovation, Challenge for Entrepreneurship in Coahuila.

## INTRODUCCIÓN

El desarrollo empresarial es una de las herramientas que la sociedad puede utilizar para la generación de riqueza entre sus habitantes, a su vez los gobiernos nacionales así como los estatales tratan de desarrollar formas y métodos para impulsar nuevas empresas ya que cada vez es mas difícil que los miembros de una sociedad puedan colocarse en trabajo formal, las estadísticas en México son contundentes el 60% de la economía se encuentra en la informalidad, esto genera múltiples problemas por un lado estas empresarios no pagan impuestos pero si consumen los bienes del estado y por otro lado los empresarios y trabajadores formales están inconformes por las obligaciones que tienen que cumplir con el gobierno.

La informalidad también traen como consecuencia que los empleos generados no tienen ningún tipo de prestaciones obligatorias que rigen la ley en el país, por lo que se crea un círculo vicioso donde la mayoría pierden y muy pocos son los beneficiados con estas actividades no reguladas.

El emprendedurismo puede ser determinante para la creación de riqueza que permita mejorar la calidad de vida pero según el INEGI el 80% de las nuevas empresas mueren en los primeros 5 años, esto es un panorama desolador, según expertos este alto índice de mortalidad se debe a factores como:

Problemas para Vender  
Problemas para Analizar  
Problemas para Controlar  
Problemas de producir y operar  
Problemas de Planificación  
Problemas de Innovación de nuevos productos

En este último punto probablemente es la base del desarrollo empresarial en donde los empresarios por lo general no lo toman en cuenta ofreciendo servicios y productos existentes por lo que limita su éxito. Existen las llamadas incubadoras de negocios sin embargo estas no han podido ser un detonador de empresas para emprendedores, aunque hay que mencionar que ayudan a darle una visión al empresario la mortalidad ha sido prácticamente la misma.

Esta investigación es una investigación teórica y se organiza de la siguiente manera: En la revisión literaria se presentarán los argumentos de los fracasos de la creación de nuevas empresas y como la innovación puede ser un elemento crucial para la rentabilidad basado en investigaciones realizadas en un mercado como el de Latinoamérica, posteriormente se presenta la metodología de análisis de la revisión literaria descubriendo indicadores importantes para posteriores investigaciones, seguidamente los resultados encontrados para terminar con las conclusiones y cual sería la futura línea de investigación.

## REVISIÓN LITERARIA

### Emprendedor

Definir el concepto de emprendedor ayuda a entender los elementos que lo componen, y facilita su operacionalización con fines de investigación empírica. Schumpeter, definió al emprendedor como una persona innovadora, quien propone y aprovecha los cambios, básicamente en cuatro ámbitos; la introducción de nuevos o mejores productos; nuevos o mejores métodos de producción; la apertura de nuevos mercados; y la reorganización del proceso administrativo (citado en Ahmad y Seymour, 2008). Esta definición permite que algunos autores afirmen que la innovación es el elemento principal en el concepto de emprendedurismo, debido a que representa una fuente de competitividad y crecimiento económico (Nadiri, 1993; Coe y Helpman, 1995; Wong et al., 2005). Un aspecto central lo constituye la perspectiva que el emprendedor fundamentalmente crea valor y obtiene una ganancia monopolística temporal, a través del proceso innovador (Schumpeter, 1934).

Un concepto de emprendedor que favorece la operacionalización para el trabajo empírico es el que denomina como emprendedores a las personas que perciben oportunidades en el mercado, valoran el riesgo, y gestionan los recursos para crear una empresa (Kirzner, 1997). Los emprendedores un gran porcentaje crean las micro y pequeñas empresas en México que desempeñan un papel relevante en la economía nacional. De las unidades económicas en el país, las microempresas representan el 95.2% y generan el 45.6% del empleo y representa el 15% del valor agregado de la economía nacional. Se estima que las micro,

pequeñas y medianas empresas, ocupan 50.3% del personal; y generan 23% de la producción. (INEGI, 2011).

### Innovación Empresarial

Las primeras definiciones establecidas sobre este concepto, establecían una fuerte vinculación y dependencia entre la innovación y la tecnología. De esta manera, en ocasiones ambos conceptos se interpretaban como sinónimos, o al menos desde un punto de vista metodológico, podía entenderse la existencia de una relación causa-efecto. No obstante, la realidad es otra, y si bien entre ambos conceptos existe una relación importante, se ha de destacar que innovación “no es necesariamente sinónimo de aplicación de alta tecnología”. En el momento de analizar los factores que afectan a la innovación, debe considerarse que gran parte de ellas pueden resultar de nuevas formas de combinar elementos ya conocidos o de la creatividad y diseño en la concepción de los productos. (DINAPYME, 2001)

El desarrollo de nuevos productos se presenta como una de las actividades más importantes desarrolladas por las empresas que presentan una fuerte orientación al mercado. Y es que en un intento de dar respuesta al consumidor, la empresa utiliza todo su conocimiento y recursos financieros, humanos y tecnológicos para desarrollar y lanzar al mercado una oferta integral, que totalmente novedosa, o mejor en algunos aspectos, permita satisfacer de forma superior y continuada en el tiempo todas las necesidades y deseos de los consumidores (Day, 1994a; Jensen, 1997; Vorhies et al. 1999).

En general, los estudios realizados sobre el éxito y fracaso de los nuevos productos y servicios en los mercados han puesto de manifiesto la existencia de un amplio conjunto de factores que determinan, o al menos afectan, el grado de éxito alcanzado por la innovación en el mercado. No obstante, pese a que los factores identificados y la importancia que estos presentan varían de unos trabajos a otros, en gran medida determinados por la estrategia empleada, también de forma general, una amplia mayoría de estos estudios reconocen en la orientación al mercado, no sólo un factor determinante del grado de innovación en producto de la empresa, sino también un factor determinante del nivel de éxito o realización alcanzada por esa innovación en el mercado (Athuame-Gima, 1995, 1996 a, b; Bowers, 1989; de Brentani and Cooper, 1992; Storey and Easingwood, 1996, 1998).

### Estrategia Competitiva

La formulación de la estrategia competitiva implica un análisis de los puntos fuertes y débiles que determine su posición en relación a sus competidores y un análisis interno externo del entorno (Porter, 1980). Las investigaciones se han centrado en el examen de dos tipologías estratégicas: una realizada por porter (1980) y la propuesta por Miles y Snow (1978). Esta ultima es mas aceptada por su visión organizativa y por considerar la relación entre recursos externos e internos (O'Regan y Ghobadian, 2005).

Miles y Snow se basan en las siguientes premisas:

La empresas que tienen éxito es donde su enfoque sistémico de adaptación a su entorno es el adecuado en tiempo y forma.

Identifican claramente las siguientes orientaciones estratégicas que son: defensivas, exploradoras, analizadoras y reactivas.

Cualquier Orientación – defensiva, exploradora o analizadora- puede conducir a un buen resultado empresarial.

Para estos autores identifican el proceso estratégico se definen de la siguiente manera:

**Defensiva:** La orientación estratégica corresponde a empresas que hacen incapie solo en el mercado y tratan de proteger su cuota de mercado, y su principal estrategia consiste en reducción de costos y optimizan la eficiencia.

**Analizadora:** Estas empresas evitan riesgos excesivos pero sobresale en la entrega de productos nuevos y/o de servicios. Se centra típicamente en una gama limitada de productos y tecnologías e intenta superar a las otras sobre la base del realce de la calidad.

**Reactiva:** Es un tipo de compañía que tienen poco control sobre su ambiente externo, carece de la capacidad para adaptarse a la competencia externa y carece de eficaces mecanismos internos de control. No tienen estrategia, un diseño, o una estructura sistemática.

**Prospectiva:** Es un tipo de empresa que intenta explotar nuevas oportunidades, de desarrollar productos y/o servicios y crear nuevos mercados. Sus habilidades centrales descansan típicamente en la comercialización y en la I&D y tienden a tener una amplia gama de tecnología y tipos de productos.

## **METODOLOGÍA**

En esta investigación se recabaron datos de generales de los niveles de emprendedurismo en países parecidos a México de su comportamiento y economía por medio de los datos se analizaran y compararan entres si para tener la visión de su factores de éxito y que tipo de empresas son las que mas proliferan así como cuales pueden ser las mas rentables.

Para este estudio sobre la actividad emprenderá se analizaran desde tra perspectivas de la economía que sos:

**Economías basadas en factores o recursos:**

De la agricultura de subsistencia a la extracción de recursos naturales y creación de conglomerados regionales a mayor escala.

Depende en la mano de obra y recursos naturales

Enfoque de desarrollo en incrementar la base de requerimientos básicos.

**Economía basada en eficiencia:**

Aumento en la industrialización y la presencia de economías de escala. Dominio de grandes empresas, pero se presenta apertura de nichos en las cadenas de suministros para pequeñas y medianas empresas.

Se mejoran los requerimientos básicos y se enfocan en el incremento y desarrollo de la eficiencia.

**Economías basadas en innovación:**

Actividades basadas en el conocimiento, la investigación y el desarrollo.

Desarrollo del sector servicios. Potencial para el desarrollo de actividad emprendedora innovadora.

Estas condiciones tienen una base sólida de requerimientos básicos y potencializadores de eficiencia.

Los datos se tomaran de Global Entrepreneurship Monitor, esta organizaciones sin fines lucros es donde se encuentran las estadísticas mas actualizadas, se tomo en cuenta en que como se comportan los países según al tipo de economía que pertenecen. Las variables que se analizaran son las siguientes:

Emprendedurismo

Innovación en las empresas

Competitividad en las empresas

## RESULTADOS

Los resultados de los datos que se tomaron en cuenta fueron los de la Tasa de Actividad emprendedora temprana (TEA) y las empresas establecidas, en este ultimo es importante conocer sus variantes de porcentajes ya que representan aquellas emprendedores que están operando y tienen experiencia en el mercado donde se encuentran.

También se observa que en la grafica 1 que el mayor desarrollo de empresas son en las economías basadas en la innovación y el principal factor de creación de empresas son las de por oportunidad, cabe mencionar que los países mas prósperos del mundo se basan en este tipo de economía.

Se observa que la TEA el pocentaje mas alto para crear nuevas empresas ocilan entre las edades 25-34 con un 13.9%, sin embargo el mayor porcentaje de actividad empresarial oscila entre los 25 hasta los 54 con mas de un 12%, esto se deduce que es por la madurez que tienen las personas en esa edad, en contrate cuando ya las empresas ya están establecidas tiene una disminución considerable y los mejor números que son mayores a 6% están a partir de los 35 años, esto es por la experiencia que tienen y la forma de conducirse son mas conservadores.

Se puede observar el comportamiento de la decisión en los diferentes grupos económicos, en donde podemos ver que en promedio en las economías basadas en factores el 35% de los emprendedores lo hacen por necesidad y el 42% por oportunidad, en las basadas en la eficiencia el 28% por necesidad y el 46% por oportunidad y en las basadas en la innovación el 18% por necesidad y el 51% por oportunidad

Se muestra como es el comportamiento de las economías en mundo, los países basados en factores muestran los porcentajes mas bajos con menos de 40% en cambio las economías basadas de la eficiencia e innovación superan el 45%, por lo que los nuevos productos mejoran la generación de riqueza para los involucrados.

En México los datos se tornan interesantes analizarlos ya que como podemos observar en las siguientes resultaodos que existen datos importantes a tomar en cuenta de cómo la actividad emprendedora en nuestro país no ha sido tan fructífera como se quisiera.

Se muestra los motivos mas sobresalientes del porque los emprendedores cierran las puertas de su empresa, destacando que el porcentaje mas alto es la del “El negocio no es rentable” con mas del 32%, seguida por la de “Motivos personales” con un 20.3%. En los porcentajes mas bajos fueron con un 1.9% “La salida fue planeada con anticipación”.

Muestra que los emprendedores ven los negocios como una oportunidad para aumentar sus ingresos con mas del 36%, esto pude tener problemas a corto plazo ya que la principal motivación no es el negocio en si sino el aumentar sus ingreso actuales y como menor medida la de tener mayor independencia con un 15.6%, ven al trabajo una forma de obtener recursos seguros a menor riesgo.

TEA en el 2012 se incrementado en todos los emprendores en los diferentes niveles educativos, en el caso de educación básica se duplico de pasar de 5.3% a 11.5% al igual de los de educación superior o técnica con bachillerato. El mas sobresaliente fue los de posgrado el cual se triplicaron en un año pasando de 3.2% a 9.9%., estos datos son indicadores de TEA, en el caso de las empresa establecidas la diferencia es entre las personas que tienen mayor nivel de estudios que tuvieron un incremento significativo del año 2011 al 2012 de pasar del 0.8% al 8.4%, esto fue porque la visión de los profesionistas es mas significativa, encuentran nichos de oportunidad en la especialización o la innovación.

Se observa como los emprendedores que inician sus negocios se inclinan por que sus empresas estén orientadas al consumidor con un 67.4% teniendo un disminución del año anterior de un 3.8% esto es por la competencia que existe en los diferentes rubros. La transformación de se tubo un incremento del 1% quedando en 22.4% para el 2012 en cuanto a los servicios de negocios su incremento fue de mas de 1% terminando en un 9.2%. La extracción es la menos atractiva con un 1%. Para negocios establecidos su mayor mercado es orientada al consumidor con un 73.7% donde su mercado mas importante es basado a las necesidades ya establecidas por el consumidor, seguido por un 20.4% de transformación, el menor desarrollado es el de extracción.

Los indicadores importantes a tomar en cuenta como en innovación de producto nuevo para ningún cliente, es decir estos no ofrecen algo nuevo, estos niveles se encuentran en un 67.8%, y el 26.3% los clientes lo consideran nuevo para algunos clientes, en cuanto a los productos nuevos comercializados a todos los clientes es 5.9%.

En la competencia para las características de TEA muchas empresas ofrecen lo mismo es de un 63.9%, en cuanto a las establecidas se cuenta con un 59.3%, en cambio si existen algunas empresas ofrecen lo mismo son de un 32.8% en TEA a diferencia de las establecidas con un 40.7%, en la categoría mas baja donde las empresas de TEA ofrecen ninguna competencia es del 3% y en cuanto a las establecidas no reportan ninguna.

En el uso de tecnología la mayoría de los emprendedores de TEA no usan nueva tecnología con un 83.6% y en las establecida es de un 93.2%, esto es reflejo de que los empresarios no se atreven a realizar nuevas actividades, en el caso del uso de tecnología disponible de 1 a 5 años es el 8.5% , y en el uso de tecnología disponible en el ultimo año es de 7.9% pero drásticamente existe una diferencia para las empresas ya establecidas con solo un 0.9%.

## CONCLUSIONES

La contribución al conocimiento de esta investigación se presenta de manera teórica analizando datos relevantes de organismos acreditados mundialmente. La manera que se abordo este estudio es comparando el comportamiento de los indicadores y analizando cada uno de ellos, por lo que podemos afirmar que a pesar de que organismos privados o gubernamentales tales como las incubadoras de negocios su éxito es relativamente bajo, esta aseveración es por los datos que se muestran en el apartado de resultados, por un lado influye el tipo de economía al que pertenece el país, en este caso México esta en un economía basada en la eficiencia, esta economía es importante porque esta relacionada directamente con la competitividad de las empresas pero al tener una baja inclusión en las tecnologías o metodologías nuevas caen en un “guerra de precios” ya bien sean de sus productos o servicios pero el resultado es que las empresas al competir por el precio sacrifican sus utilidades y beneficios a sus empleados y como consecuencia son bajos sueldos, bajas utilidades y el riesgo que cerrar las puertas de su negocio.

Otra área de oportunidad es que los empresarios mexicanos no le apuestan a la innovación como lo hacen las empresas que sus países están basados en un economía basada en la innovación, que esta comprobado que estos países incrementan su PIB. Esta área de oportunidad lo están dejando de lado las empresas mexicanas ya que como se muestra como las nuevas empresas ofrecen lo mismo de lo que ya existe por lo que ya de entrada se complica su participación porque la mejor forma de entrar a esos mercados es desatando una disminución de precios pero estos no se hacen con una base de competitividad si no de ganar solo el mercado pero de detrimento de sus ingresos.

Otra contribución es la recomendación de analizar tanto universidades como incubadoras de negocios su metodología para crear empresarios exitosos ya que los datos son contundentes la mayor parte de la

empresas nuevas y establecidas están en el mismo mercado compitiendo con los mismos servicios o productos pero como ya se menciono antes entran en una “guerra de precios” para seguir operando pero muchas a corto y mediano plazo terminaran cerrando sus puertas.

Para futuras investigaciones seria la de crear una nueva metodología para incrementar emprendedores pero con visión innovadora, incluso esta visión puede ser innovadora regional, ya que se piensa que la innovación debe ser universal sin embargo se pueden crear nuevos productos y formas de hacer negocio regionalmente apegado a las características del lugar donde viven.

# DIAGNOSTICO DEL POTENCIAL TURISTICO DEL MUNICIPIO DE CUAUTITLAN DE GARCIA BARRAGAN, JAL.

Juan Carlos Benavides Araiza, Universidad de Colima  
María Adelaida Silvestre Campos, Universidad de Colima  
Nuchnudee Chaisatit, Universidad de Colima

## RESUMEN

*En éste artículo se hace un diagnóstico para determinar si Cuautitlán de García Barragán, uno de los municipios grandes del estado de Jalisco cuenta con potencial turístico y que sus habitantes puedan diversificar sus actividades socio económicas y mejorar sus ingresos, aprovechando los recursos naturales y culturales con que cuenta. La ubicación geográfica del municipio es propicia para lograr el desarrollo sustentable ya que cuenta con extensas zonas boscosas al estar enclavado dentro de la Sierra de Manantlán. El objetivo principal del trabajo es confirmar que el municipio posee un verdadero potencial que pueda justificar inversiones, considerando la oferta, la demanda, la competencia y las tendencias del mercado. Se debe estar consciente de que el turismo no es lo que va a solucionar los problemas que conlleva el desarrollo de esta zona rural ya que no todo el territorio es apto para la actividad turística. Para diagnosticar el potencial turístico de este territorio se realizó un inventario de recursos naturales y culturales que permitirá hacer dinámicas las actividades económicas tradicionales y darle valor a las particularidades locales, ofreciendo al mismo tiempo posibilidades de empleo a los habitantes del municipio, deteniendo a su vez la migración rural la cual es constante.*

**PALABRAS CLAVE:** Potencial, diagnostico, desarrollo, municipio, natural, cultural, recursos.

## **IMPACTO DEL IMPUESTO AL VALOR AGREGADO EN EL ESTADO DE BAJA CALIFORNIA, MEXICO**

Gilberto Enrique Bustamante Valenzuela, Universidad Autónoma del Estado de Baja California

Ana Cecilia Bustamante Valenzuela, Universidad Autónoma del Estado de Baja California

### **RESUMEN**

*En esta investigación se analiza de manera objetiva el impacto que ha tenido el Impuesto al Valor Agregado al aumentarse la tasa que existía del 11% para quedar en 16%, todo esto como resultado del paquete de reformas en materia hacendaria aprobado por el Congreso de la Unión a iniciativa presentada por el Enrique Peña Nieto. Desde su creación se había considerado un trato preferencial para la frontera norte del país al imponer una tasa menor que la del resto del país, e incluso en los pasados aumentos se conservó esa preferencia. Pero en la reforma fiscal que empezó a regir el día 1 de Enero de 2014 el aumento en la tasa impositiva se dio solo en lo que respecta a la tasa preferencial existente para igualarla al resto del país. Esta medida hacendaria ha desatado en el Estado de Baja California comentarios negativos de los diversos sectores económicos de la región, así como de la población en general. La colindancia con los Estados Unidos de América pone en seria competencia al comercio de esta entidad federativa con el del vecino país, y la fuga de consumidores en busca de un mejor precio no se hace esperar.*

# HACIA LA CONSTRUCCIÓN DE NUEVAS IDENTIDADES GENÉRICAS: MUJERES EJECUTIVAS DE DURANGO Y AGUASCALIENTES

Norma Patricia Garrido García, Universidad Juárez del Estado de Durango

Adriana Gallegos Sánchez, Universidad Juárez del Estado de Durango

Hortensia Hernández Vela, Universidad Juárez del Estado de Durango

## RESUMEN

*El acceso de las mujeres a los puestos de poder en las organizaciones se ha visto limitado por diversas barreras, resultantes de la cultura que institucionaliza la discriminación, subordinación y desigualdad entre hombres y mujeres y que hace evidente la necesidad de cambios estructurales en la familia, el estado y el mercado de trabajo. Este trabajo se aborda desde la perspectiva de género y se analiza la interacción trabajo familia de ejecutivas de las ciudades de Durango y Aguascalientes. La estrategia fue una encuesta realizada mediante entrevistas a 58 mujeres ejecutivas. Con respecto a la construcción de una nueva identidad de género en este grupo de trabajadoras, pueden hacerse algunas observaciones: en su incursión en el mundo laboral han sido sometidas a mayores exigencias que las que comúnmente se hacen a los hombres para demostrar su capacidad, por lo que constantemente están siendo evaluadas y tal parece que requieren no sólo cumplir con los estándares de las organizaciones sino con los que se imponen a sí mismas no sólo en su empleo sino también en su rol de esposa-madre.*

**PALABRAS CLAVE:** Identidad de Género, Interacción Trabajo-Familia, Conflicto Trabajo-Familia y Mujeres Ejecutivas

## TOWARD THE CONSTRUCTION OF NEW GENERIC IDENTITIES: DURANGO AND AGUASCALIENTES EXECUTIVE WOMEN

### ABSTRACT

*The access of women to high positions in organizations has been limited by some difficulties originate by the culture, that institutionalizes discrimination, subordination and inequity between men and women. These problems make evident the need for structural changes in the family, the state and the labor market. This paper is a gender view to the interaction family-work; analyzes executive women in the cities of Durango and Aguascalientes. The strategy was a survey conducted 58 interviews with women executives. Looking for the construction of a new gender identity for this group of workers, is possible show some findings: in its foray into the working world have been subjected to greater demands than those commonly men are made to demonstrate its capability, which are constantly being evaluated and it seems to require not only meet the standards of the organizations but with those imposed themselves not only at work but also in their role of wife - mother.*

**KEYWORDS:** Gender Identity, Interaction Work-family, Work-family Conflict and Women Executives

## INTRODUCCIÓN

Brígida García (2011) en una revisión de los estudios elaborados durante la década de 1990-2000 sobre las principales transformaciones ocurridas al interior de las familias mexicanas destaca aquellas ocurridas en los roles laborales de las esposas o cónyuges. Señala que aunque el involucramiento económico de las esposas mexicanas todavía se encuentra rezagado respecto de lo ocurrido en otros países, sus efectos son apreciables. Tanto a nivel nacional como en áreas metropolitanas, se ha comprobado que el trabajo extradoméstico de las esposas influye positivamente en ellas para lograr mayor autonomía o libertad de movimientos, independientemente de las características socio-demográficas e individuales de estas mujeres.

La variable ocupaciones no introduce cambios significativos, salvo en los hogares donde las mujeres tienen ocupaciones más altas y en donde es más frecuente el empleo de una asistente para las tareas domésticas. Sin embargo, algunos estudios como el de Ussel y Castón (2002) señalan que en los hogares de las trabajadoras andaluzas las tareas domésticas son realizadas mayoritariamente por la mujer. El cambio de mentalidad que supone el verse cada vez más como mujer trabajadora fuera del hogar que como ama de casa, no corresponde con lo que realmente ocurre en los hogares, donde la mujer, aunque trabaje, continúa haciendo las tareas domésticas.

En contraste, en la Ciudad de México y Monterrey se ha corroborado que la experiencia laboral de las cónyuges es la variable que presenta una relación positiva con mayor cantidad de dimensiones de las relaciones de género (toma de decisiones importantes, autonomía o independencia de las mujeres, participación masculina en la vida doméstica, ausencia de violencia intrafamiliar) (García, 2011)

¿Estamos ante relaciones que se forjan a lo largo del tiempo y que permiten suponer la resignificación de las identidades genéricas? La resignificación de las identidades genéricas es un proceso que se refiere a la pérdida progresiva de las características diferenciadas de los sexos masculino y femenino, lo que modifica las estructuras simbólicas, las prácticas y los valores que identifican a los géneros, repercutiendo en la vida cotidiana de los sujetos sociales y modificando las formas de su interacción social (Martínez Vázquez, 1999).

El acceso de las mujeres a los puestos de poder en las organizaciones se ha visto limitado por diversas barreras, que tienen su raíz en concepciones culturales y que se manifiestan en los roles de género. Entre estas limitaciones pueden señalarse la insuficiente confianza en las capacidades de las mujeres, las creencias y valores acerca de los roles complementarios de los géneros, la dificultad para conciliar las funciones laborales con la vida familiar, el ejercicio del poder asignado a los hombres con la consecuente subordinación femenina y las disyuntivas y contradicciones de las mujeres ante las necesidades surgidas en la vida cotidiana.

La perspectiva de género enfocada al estudio de las mujeres que ocupan puestos de poder dentro de las organizaciones puede contribuir a la comprensión de las formas y estrategias que han empleado para superar dichas limitaciones. Desde esta perspectiva se aborda en este trabajo la interacción trabajo familia de ejecutivas de las ciudades de Durango y Aguascalientes (México).

Los datos que se presentan en este trabajo han sido obtenidos de la investigación *“Mujeres Ejecutivas de las Ciudades de Durango y Aguascalientes”*, datos que no han sido difundidos y cuyo valor mismo radica en su vigencia y en la capacidad descriptiva del fenómeno.

## REVISIÓN DE LITERATURA

Martínez Vázquez (1999) sostiene que las mujeres acceden a puestos de poder a partir de los cambios ocurridos en dos planos: la resignificación de las identidades genéricas y el cambio en las estructuras de poder y sus representaciones simbólicas en las organizaciones. Agrupa a las mujeres en tres tipos ideales respecto a su interacción trabajo-familia, sin importar el tipo de organización a la que prestan sus servicios: *Mujeres que no logran conciliar el trabajo y la familia. Mujeres que trabajan y son madres, que creen poder conciliar el trabajo y la familia pero experimentan sentimientos de culpa. Y Mujeres que logran conciliar el trabajo y la familia sin sentimientos de culpa*

En un estudio llevado a cabo por Bernal y Taracena (2012) del Centro de Investigación de la Mujer en la Alta Dirección del Instituto Panamericano de Alta Dirección (México), se realizó el análisis de casos de nueve empresas transnacionales con filiales en México, o bien, empresas mexicanas que se han hecho globales, en las cuales se han desarrollado políticas y prácticas para la promoción y permanencia del talento.

Los investigadores, lograron inferir un conjunto de rasgos, que influyen sobre sus posibilidades de promoverse y permanecer en las estructuras en condiciones de igualdad con los hombres. Se hicieron presentes ciertas condiciones sociales y familiares que facilitaron la construcción de las trayectorias de las directoras: la pertenencia a una clase social alta o media alta, con padres profesionales o dedicados a los negocios (herencia familiar o capital cultural). Un sistema de creencias en la familia de origen en relación al valor del trabajo, la educación y la proyección personal. Una tradición cultural en la familia y/o en la escuela que “forjó el carácter”, que promovía la disciplina, la auto exigencia, la competitividad y la capacidad de responder a situaciones desafiantes.

Las directoras han sido capaces de organizarse para conciliar la familia, la vida personal y el trabajo, diferenciando tiempos y espacios. Han desarrollado la actitud de saber cortar con el trabajo. En esta lógica, algunas de las directoras se han trasladado a vivir cerca de la oficina. Por otro lado, han estado dispuestas a asignar un lugar secundario a actividades de su vida social para conservar un tiempo y un espacio donde se integran hijos, pareja y trabajo.

La conciliación entre trabajo y familia no está libre de tensiones y problemas. Algunas directoras casadas señalan dificultades como el tener largas jornadas de trabajo, sentimientos de culpa; presiones del marido por exceso de trabajo o de viajes; hijos y marido que se sentían abandonados, tensiones porque la directora ganaba más que su esposo. Algunas de ellas mencionan este tipo de conflictos como la causa que llevó a la separación de la pareja.

Después de revisar estos hallazgos surgió el interés por rescatar los resultados de la investigación “*Mujeres Ejecutivas de las Ciudades de Durango y Aguascalientes*”, trabajo inédito cuyos resultados aún son vigentes. Esta investigación sobre las ejecutivas buscó identificar las habilidades gerenciales de las mujeres ejecutivas de las empresas manufactureras de las ciudades de Durango y Aguascalientes y conocer si las ejecutivas habían logrado resignificar su identidad genérica, conciliando la interacción trabajo-familia sin sentimientos de culpa. Este último objetivo es sobre el que hemos enfocado la atención en este trabajo.

## METODOLOGÍA

En septiembre y octubre de 2002 se realizó la investigación denominada “Mujeres Ejecutivas de las ciudades de Aguascalientes y Durango”. Fue una encuesta realizada mediante entrevistas a 58 mujeres ejecutivas. Las participantes fueron mujeres que ocupaban puestos de alto nivel dentro de empresas privadas.

Para este análisis, se han extraído sólo las preguntas que abordaron la interacción trabajo-familia, de manera que permitieran identificar si las ejecutivas han logrado la construcción de una nueva identidad femenina. Se buscó también presentar las voces de las mujeres al compartir sus experiencias.

*Instrumento:* Se empleó una guía integrada por 15 preguntas, en las que se midió la interacción trabajo-familia a través de las siguientes dimensiones: *Presencia de hijos, Importancia de la maternidad frente al empleo, Grado de dificultad para conciliar trabajo y vida familiar, La influencia familiar en pro de la carrera profesional y Percepción de la co-responsabilidad de su pareja en el cuidado de los hijos, las labores domésticas y del respaldo de su pareja para desarrollar su carrera profesional.*

Además, se seleccionaron comentarios de 26 de las ejecutivas, bajo el criterio de que la información resultara valiosa para entender las formas y estrategias empleadas por las ejecutivas al conciliar trabajo-familia.

## RESULTADOS

La interacción trabajo-familia de las ejecutivas de este estudio nos muestra los siguientes hallazgos con respecto a cada una de las dimensiones estudiadas:

*Presencia de hijos:* La mayoría de las ejecutivas en Durango eran mujeres solteras sin hijos, mientras que en Aguascalientes la gran mayoría fueron mujeres casadas con hijos. El 59% de las entrevistadas no tienen hijos y el 40% tienen entre 1 y 3.

*Importancia de la maternidad frente al empleo:* 25 de las ejecutivas (43%) entrevistadas le dan la misma importancia a la maternidad que a la carrera profesional.; 39 de ellas ( 67%) declararon no querer renunciar a un matrimonio o pareja estable, ni al ejercicio de su profesión, ni a ser madre; disyuntivas inherentes al género.

En cuanto a la *posibilidad de abandonar la carrera profesional*, el 21% de las ejecutivas entrevistadas en Durango dijeron que dejarían su empleo temporalmente sin dudarlo, en favor del cuidado familia, mientras que en Aguascalientes el 43% de las ejecutivas lo harían. Esto puede deberse a su situación actual y su percepción de la vida (ciclo de vida)

*Grado de dificultad para conciliar trabajo y vida familiar:* En los casos de ejecutivas con hijos pequeños, sus comentarios muestran el sentimiento de culpa, que experimentan al creer que no dedican suficiente tiempo a sus hijos. De nueva cuenta, podría tener relación con su ciclo de vida. Las mujeres casadas que aún no tienen hijos, están conscientes de la dificultad de desarrollar una doble tarea: la de madre-esposa y la de profesionista. Tienen claro que mantener ambos papeles implica invertir un gran esfuerzo para lograr el equilibrio, lo que se traduce en alcanzar los estándares que se autoimponen en cada ámbito. Saben que en múltiples ocasiones tendrán que sacrificar a su familia y, eventualmente la incompatibilidad puede llevarla a renunciar a su puesto. Tanto las ejecutivas con hijos, como aquellas que aún no los tienen, consideran que la dificultad para conciliar el trabajo remunerado con el doméstico va de moderado a alto.

*La influencia familiar en pro de la carrera profesional y redes de apoyo:* la educación familiar y la influencia que uno de los padres, o ambos, tuvieron sobre las entrevistadas fueron importantes para su desarrollo profesional. El 50% dijeron haber sido influenciadas por ambos padres para estudiar una carrera y dedicarse a ella, y el 39% recibió la influencia de por lo menos uno de los padres. La ayuda y apoyo que la madre, el padre o ambos se ha hecho patente a lo largo de la vida de la ejecutiva, y continuó aún después de tener hijos, con o sin la presencia de su pareja. Las redes de apoyo establecidas para resolver los problemas sobre el cuidado de los hijos y las labores domésticas, se centraron principalmente en las madres de las ejecutivas entrevistadas.

*Percepción de la co-responsabilidad de su pareja en el cuidado de los hijos y las labores domésticas y del respaldo para continuar ejerciendo su carrera profesional:* casi todas las entrevistadas casadas dijeron contar con el respaldo y ayuda de sus parejas, lo que ha contribuido, en gran medida, a permanecer en sus puestos de trabajo. Más de la mitad (60%) afirmaron que compartían la crianza de los hijos y las labores domésticas de manera equitativa, lo que refleja una relación igualitaria para este grupo, que indica tal vez una transición hacia la equidad. Las decisiones importantes, dicen ellas, como la compra de un bien, la forma de educar a los hijos, y los planes a futuro que pueden incluir hasta la apertura de una empresa propia, ya sea al mando del cónyuge o de ambos, son tomadas de común acuerdo, pues él ya no es el proveedor más importante. Aunque valdría la pena investigar si se darían condiciones equitativas en la dirección de la empresa.

*Estrategias como profesionistas exitosas:* colocan al trabajo y al desarrollo profesional como prioridad en su proyecto de vida y mencionaron algunas acciones que ponen en práctica para disminuir la discriminación de género: defender el derecho para ambos sexos para ocupar un mismo puesto; trabajar para que dentro de la empresa desaparezcan las ideas tradicionales de que la mujer no es tan capaz como el hombre para desempeñar eficientemente un puesto y adoptar el trabajo como la herramienta más importante para enfrentar el rechazo y la discriminación laboral.

En su reflexión con respecto a las causas que permitieron su ascenso hasta su actual puesto, destacaron la importancia de las actitudes y las capacidades (educación); de la motivación intrínseca y el compromiso personal.

*Motivación intrínseca y evaluación de sus capacidades:* Los comentarios acerca de sí mismas manifiestan una fuerte motivación intrínseca, la conciencia de sus capacidades y valores, así como de sus limitaciones:

*Desarrollo profesional y retos:* Estas ejecutivas reconocen el valor de la capacitación y manifiestan su agrado por la misma. De igual manera valoran el plantearse retos profesionales en su carrera.

Los resultados de este estudio coinciden con los de Griselda Martínez Vázquez (1995) en los siguientes aspectos: las ejecutivas son personal subordinado pero de alto nivel jerárquico, por lo que toman decisiones estratégicas y cuentan con personal a su cargo; pueden resolver los problemas logísticos para el trabajo doméstico y el cuidado de los hijos; cuentan con estudios profesionales y los consideran el elemento más importante en su desarrollo; encuentran sus mayores limitaciones en la influencia de la cultura genérica en la cultura empresarial y a la identidad femenina tradicional; están conscientes de que hay mayores exigencias en la demostración de la capacidad y responsabilidad de las mujeres; un involucramiento del género masculino en las responsabilidades domésticas posibilita mayores oportunidades dentro de la organización y su presencia dentro de las empresas, expresada en porcentaje, decrece conforme asciende en la escala jerárquica.

Con respecto a la construcción de una nueva identidad de género en este grupo de trabajadoras, pueden hacerse algunas observaciones: en su incursión en el mundo laboral han sido sometidas a mayores exigencias que las que comúnmente se hacen a los hombres para demostrar su capacidad, por lo que constantemente están siendo evaluadas y tal parece que requieren no sólo cumplir con los estándares de las organizaciones sino con los que se imponen a sí mismas no sólo en su empleo sino también en su rol de esposa-madre.

Han tenido que enfrentar concepciones tradicionales en la empresa acerca de su desempeño como solteras vs casadas con hijos; ya que se supone que quienes están en esta condición tienen un desempeño inferior debido a la doble responsabilidad. Sin embargo, las pruebas superadas han reforzado la convicción de que

su éxito es resultado de su capacidad, lo cual de alguna manera ha estado presente desde su decisión de incursionar en el mundo laboral.

Se sienten orgullosas de recibir la admiración por su desempeño. Han recibido el impulso de uno o de ambos padres y de algún tutor en la empresa.

Reconocen que en las organizaciones existe discriminación hacia las mujeres y buscan la equidad desde su posición en la empresa; este reconocimiento en el ámbito laboral permite hacer analogías para identificar la discriminación existente en otros escenarios.

También existen contradicciones en las conductas de las ejecutivas, por ejemplo imitar conductas masculinas como el quedarse en la oficina más allá de la hora de salida con el objeto de mantener el empleo y la armonía con sus superiores, a pesar de considerarlo innecesario de sentir pesar y culpa por restarle tiempo a su familia. En otras ocasiones tienden simulan “estar de acuerdo y aceptar” las opiniones de sus superiores del género masculino; adoptan posturas de simulación.

Las ejecutivas manifiestan que conciliar trabajo y familia con éxito es una tarea de moderada- alta dificultad. Tal parece que el grado de dificultad tiene relación con el momento en el ciclo de vida en el que se ubica la ejecutiva: las que tienen hijos pequeños manifiestan sentimientos de culpa al dedicar una gran cantidad de tiempo al trabajo. Tanto las solteras como las casadas sin hijos están conscientes de las dificultades que implicaría para ellas lograr un equilibrio entre trabajo y cuidado de los hijos.

Las ejecutivas reconocen la doble tarea, dicen que no estaría dispuesta a renunciar a ninguno de sus roles. Pero en el discurso mencionan primero el rol de madre, esposa y ama de casa y después su rol de trabajadora

Parece ser que el proceso para construir una nueva identidad en las mujeres ejecutivas se ha iniciado a partir de las necesidades cotidianas a las que se ha enfrentado en su desempeño laboral y que la transformación de su creencias y formas de relación inter e intragénero se darán a largo plazo, con base en la reflexión y la confrontación con las experiencias de vida. El cambio será de fuera hacia dentro.

Cambios en el mundo privado a partir de la incursión de las mujeres en el mundo público.

Hiroko (2004) cita a Marcela Lagarde (1992), quien afirma que la mayor parte de las modificaciones de género surgen en la vida social y económica. Este tipo de modificaciones tiene un proceso sumamente lento y avanza desde la periferia hacia el núcleo del ordenador simbólico. Las modificaciones impulsadas por el sujeto son mucho más difíciles; tienen que enfrentarse con la oposición del sistema y también de su propia subjetividad. Son interpretadas como pérdidas, sufrimiento y culpa. Generan una sensación de “traición” al mandato de género y a las personas con quienes se ha aprendido: la madre, el padre, el esposo, los hijos. También las personas que han modificado la identidad de género son vistas como anormales desde la óptica de la identidad asignada. Se interpreta como una transgresión al género, una confrontación con el “deber ser”. Es una batalla interna basada en el conflicto entre el “Ser para sí mismo” y el “Ser para los otros” (Lagarde, 1992).

Esto es justo lo que está ocurriendo en la actualidad. Puede observarse en distintos ambientes sociales. Dentro de los cambios generados en la identidad de género hay una contradicción fuerte. Lo que experimentan los sujetos es una sensación de goce y sufrimiento. Marcela Lagarde descubre “la doble vida” que llevan algunas mujeres (Lagarde, 1992:28). Algunas mujeres que participan en las actividades de ambas esferas, pública y privada, es decir, que tienen doble jornada, manejan valores dobles, lenguajes distintos, exigencias diferentes y derechos contradictorios, a veces sufren por la desintegración personal. La vivencia es la del conflicto interior entre partes del Ser.

Paralelamente, las mujeres han experimentado contradicciones en cuanto a la constitución de la identidad. La identidad femenina asignada socialmente (Mujer-Madre) no ha perdido su eficacia simbólica. Está arraigada fuertemente en la cultura occidental y en la subjetividad de los sujetos. A pesar de que se han abierto otras opciones de vida para las mujeres, el “deber ser” femenino sigue pesando en la conformación de la identidad subjetiva de cada persona.

Finalmente, la lucha es interna, contra sí misma.

# MODELO INTEGRAL PARA ESTUDIO DE LA CONTABILIDAD

Campo Alcides Avellaneda Bautista, Universidad Libre (Colombia)

## RESUMEN

*El modelo integral para estudio de la Contabilidad, enfoca este cuerpo de conocimientos con amplias fronteras, estructura de aprendizaje holística y pedagogías vanguardistas. Aborda el problema: ¿Cómo es el modelo curricular para la formación de contadores públicos que responda a las necesidades sociales del mundo del Siglo XXI? Por observación y análisis del contexto propios del Contador Público, se reflexionó sobre el tradicional currículo para la enseñanza/aprendizaje de la Contabilidad, utilizado en los Programas formativos de estos profesionales, en Colombia y algunos países de América Latina. El resultado condujo a rediseñar el modelo pedagógico y curricular para una IES interesada en la innovación. El trabajo que aquí se presenta, es uno de los productos obtenidos en la Cuarta Fase del programa de investigación que desarrolla el Grupo Constructores Contables, inscrito en Colciencias, Colombia.*

**PALABRAS CLAVE:** Modelo Pedagógico, Modelo Curricular, Modelo Contable de Ciclos de Operaciones Financieras

## INTEGRAL MODEL FOR STUDY OF THE ACCOUNTING

### ABSTRACT

*The integral pattern for study of the Accounting focuses this body of knowledge with wide frontiers, holistic learning structure and avant-garde pedagogies. It approaches the problem: How is the curricular pattern for the formation of public accountants that it responds to the social necessities of the world of the XXI Century? For observation and analysis of the context characteristic of the Public Accountant, it was meditated on the traditional curriculum for the teaching / learning of the Accounting, used in the formative Programs of these professionals, in Colombia and some countries of Latin America. The result led to redraw the pedagogic and curricular pattern for an IES interested in the innovation. The work that here is presented, it is one of the products obtained in the Fourth Phase of the investigation program that develops the Group Countable Manufacturers, inscribed in Colciencias, Colombia.*

**WORDS KEY:** Pedagogic Model, Curricular Model, Countable Model of Cycles of Financial Operations

**JEL CODES:** A12

## INTRODUCCIÓN

Este trabajo, corresponde a un programa de investigación en ciencias contables planeado para cinco fases. Inició en el año 2004 y se espera concluirlo en el año 2014. En la *Primera Fase* se recolectó y analizó la información obtenida de un trabajo de campo. La *Segunda Fase* se dedicó al diseño del modelo pedagógico y curricular, para una IES colombiana interesada en el proyecto el cual se culminó exitosamente, fue socializado e implementado a partir del año 2007. El organismo gubernamental colombiano, calificador para Acreditación en Alta Calidad, en las Resoluciones aprobatorias y de Reacreditación, elogió el modelo. La *Tercera Fase* estuvo dirigida a la investigación en Contametría como eje integrador de la ciencia contable. Productos: Diseño de un Programa de Maestría en Contabilidad, nivel académico que para el año 2010, no existía en Colombia; Artículos científicos; Ponencias Internacionales y un Simposio Internacional.

La *Cuarta Fase* está dirigida a la difusión, con miras a convalidar con la comunidad internacional, los resultados obtenidos hasta el momento, con el objetivo de preparar la Quinta y última Fase de este programa, consistente en la formulación de una *teoría general de los ciclos de operaciones financieras desde la concepción contable*, etapa que ya está en procesos y concluirá con la socialización de la Tesis ante jurados, a más tardar en el primer trimestre del año 2015. La Investigación encontró, entre otros aspectos, que la formación contable, en Colombia y en muchos países de América Latina, se ha hecho bajo el modelo tradicional de *enseñanza/aprendizaje* o transmisionista, centrado en el maestro como protagonista en el aula, los alumnos como sujetos pasivos obligados a recibir los saberes de sus maestros (Sáenz. 2002, p. 44); (Avellaneda, et al, 2012, p30 y 31), y el ejercicio del poder del maestro basado en el castigo (de Zubiría. 2001, pp 63 y 64)

Al analizar los currícula con los que se forman los profesionales contables, se encontró que estos estudian la contabilidad con una visión enfocada en la técnica, con unos métodos que corresponden a la tecnología de sistema de preparación de la información y con unos planes de estudio inmutables (Franco. 1997, p. 214); Se aplican estrategias de aula tales como la cátedra magistral, consultas bibliográficas y talleres prácticos sobre técnicas de teneduría de libros y confección de estados financieros, procedimientos de auditoría impartidos bajo la instrucción del maestro, memorización de la regulación contable y fiscal para aplicación con predominancia del método exegético como principal hermenéutica desarrollada. Los contadores recién egresados tenían problemas de conciliar la realidad socioeconómica, con lo aprendido en las aulas (Martínez. 2008, pp. 53 – 66).

Los empresarios se quejaban de la falta de adecuada formación de estos profesionales. De otra parte, el mundo del Siglo XXI cambió significativamente; los procesos de globalización económica y cultural han hecho cambiar la concepción científica y las relaciones sociales; actualmente, prevalecen las Técnicas de Información y Comunicación *TIC.*, Todos estos factores han hecho cambiar las necesidades de información contable en el mundo globalizado (Tovar. 2012, p 4). Tales razones condujeron a preguntar: *¿cómo es el modelo curricular para la formación de contadores públicos que responda a las necesidades sociales del mundo del Siglo XXI?* Se tomó como objetivo, diseñar un modelo holístico y flexible que respondiera a requerimientos de la sociedad del Siglo XXI, teniendo en cuenta los fenómenos patrimoniales en contextos globalizados. Las tareas fueron, hacer un estudio de los modelos pedagógicos y curriculares de vanguardia aplicables a los Programas Académico para formación de contables y definir los perfiles más adecuados para responder a las necesidades planteadas. El proyecto culminó en el diseño de un modelo pedagógico holístico, basado en las dinámicas patrimoniales de los agentes sociales (Coelho 2004, pp129-144), con una estructura de tipo nuclear (Avellaneda, et al. Op Cit, p. 56). El método y el modelo, son explicados en la siguiente sección.

## EL MÉTODO Y EL MODELO

Al observar la tradición mercantil de los agentes sociales (personas naturales y morales), en cualquier lugar del mundo, se encuentra que sus actuaciones se realizan en forma de ciclos, así: inicia con la motivación a realizar una transacción definida por el agente demandante (Hurtado y Jaramillo, 2009, p. 244), este agente encuentra a uno o más agentes oferentes de los bienes o servicios; una vez negociados los términos transaccionales, se realizan las *operaciones* de transferencia de dominio. En ese instante surgen los datos que serán procesados por métodos contamétricos -Medición, valoración, representación, evaluación- (Avellaneda B y Avellaneda R. Web). La Contabilidad comunica la información obtenida del proceso, y utilizada por los agentes sociales para toma de nuevas decisiones. En este punto cierra el ciclo e inicia uno nuevo, en forma perenne.

Teniendo en cuenta la naturaleza siempre en movimiento de las operaciones (Ákerman, 1962, pp16 y 17), las cuales giran alrededor de los procesos contables, se analizó la similitud con el funcionamiento del

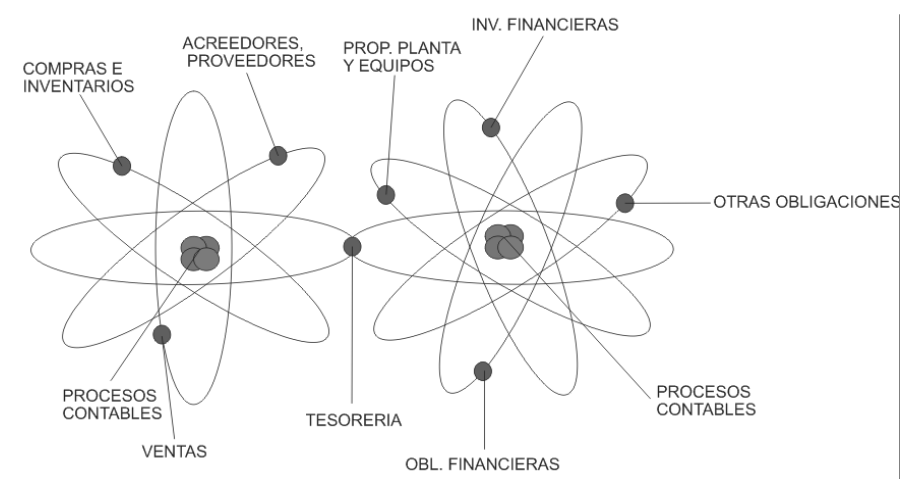

sistema atómico (Cumbre, 1977, p. 556 y 557) y se encontraron elementos similares que son comunes a los dos sistemas, destacamos los siguientes aspectos.

En los dos sistemas hay movimiento orbital alrededor de un núcleo. En los cuerpos físicos formados por los átomos, los electrones giran alrededor de los protones; En los actos de los agentes sociales los datos contenidos, giran alrededor de los procesos contables. La dinámica de los átomos es cuantificable en términos de tiempo y velocidad, siendo los periodos una de las variables. igualmente las dinámicas patrimoniales son medibles en términos de tiempo y velocidad, siendo los periodos de tiempo el factor determinante del ciclo operacional. Los enlaces atómicos forman estructuras complejas, perceptibles por los sentidos. Igualmente, los enlaces entre las operaciones realizadas por los agentes, forman estructuras complejas. Perceptibles principalmente por el entendimiento. Según su naturaleza, los electrones determinan la clase de sus estructuras. Así mismo, la naturaleza de las operaciones realizadas por los agentes sociales, determinan las clases de estructuras que conforman la representación contable. La estructura de los átomos forman los cuerpos de la naturaleza, así como las estructuras patrimoniales representadas en la contabilidad, forman la estructura económica y financiera de los agentes sociales. También se encontraron diferencia entre los dos sistemas.

El átomo es objeto de conocimiento de las ciencias naturales, en tanto que las dinámicas patrimoniales pertenecen a las ciencias sociales. Las leyes que rigen el átomo tienden a ser exactas, en tanto las leyes que rigen las operaciones entre agentes sociales son convencionales, establecidas por los seres humanos.

El sistema atómico funciona aún en ausencia de los seres humanos, en tanto el sistema de operaciones entre agentes sociales solamente funciona en el ámbito de los humanos. Los cuerpos formados por los átomos son independientes de los juicios de valor, en tanto los cuerpos de información, representativos de las operaciones entre agentes sociales, se sustentan en juicios de valor. Otras similitudes y diferencias, fueron estudiadas y evidenciadas en la fase primaria de la investigación, publicadas por Avellaneda et al (2008 y 2012) y representadas gráficamente en la siguiente estructura:

Figura 1: Estructura Nuclear de los Ciclos de Operaciones Financieras

[Fuente: Avellaneda, Avellaneda y Bermúdez, (2012, p. 56) ]Es decir que el modelo es así:

Figura 2: Modelo Cíclico de Operaciones Financieras

Donde: DAS= decisiones de los agentes sociales; D= Datos inherentes a las decisiones; PC= procesos contables; ICF, Información contable y financiera resultante; D= Difusión. [Fuente: Diseño propio]

## RESULTADOS

### El Modelo

Después de analizar el sistema, se concluyó que un modelo apropiado para formación de contadores públicos que actuarán en escenarios globalizados con dinámicas del patrimonio en contextos internacionalizados, complejos, sistémicos y holísticos, sería el siguiente:

Tabla 1: Modelo Pedagógico Para Formación de Contadores Públicos Con Enfoque en Ciclos de Operaciones Financieras (COF)

Factor	Componente
1. Filosofía	Axiológico; Constructivista
2. Énfasis	Relaciones Interdisciplinarias
3. Objetivo	Formación Integral
4. Tipo De Aprendizaje	Contextualizado
5. Currículo	Integral Desde Contenidos Problemáticos Y Flexibilizado
6. Didáctica	Diversidad De Escenarios Pedagógicos
7. Resultados	Fortalece El Pensamiento Crítico Y Promueve Inteligencias Múltiples
8. Evaluación	Integral. (Cualitativa, Cuantitativa, Autoevaluación, Evaluación De Pares, Evaluación De Grupo, Evaluación Del Docente

[Fuente: Avellaneda et al, 2012, p. 56]

### Explicación del Modelo

El modelo integral de estudio de la contabilidad por ciclos de operaciones financieras se explica de la siguiente manera: Su enfoque es constructivista, basado en Barlett, Piaget, Vygotski y Ausubel, citados por Avellaneda et al (2012, p 44) fundamentado en una conducta axiológica enfatizando en la responsabilidad profesional. Busca la formación de profesionales íntegros generadores de confianza. En el marco de la disciplina contable, el modelo que aquí se explica, el maestro orienta las temáticas curriculares guiando al estudiante para que, de acuerdo a *Planes de aula (que no asignaturas)*, alcance los objetivos planeados. Se incluyeron las estrategias que unen la teoría con la práctica; y, siguiendo a Cerda (2001), se incluyeron los *Proyecto de aula* que consisten en desarrollar la dinámica de las organizaciones en escenarios prácticos o simuladores de práctica; también se incluyó la estrategia de la *Investigación* como metodología académica

y como herramienta para la profesión; y, como tercera estrategia estructural, *los núcleos problemáticos* como base del estudio en todos los niveles.

*Organización del Currículo:* El aprendizaje contextualizado se diseñó en tres planos que forman pirámide, así: el plano *A*, conformado por Planes de Aula de contenidos básicos, tales como matemáticas, Economía, Derecho, Administración, Tecnologías de la Información y la Comunicación, Mercados globalizados. El plano *B*, lo conforman Planes de Aula para la formación profesional, sus contenidos se componen de formación en ciencia contable (Arqueología e historia de la Contabilidad; teorías contables, y modelos; cinco ciclos enfocados en operaciones financieras, así: Ciclo Básico contable, ciclo de ingresos, ciclo de egresos y administración de inventarios, ciclo de inversiones, y ciclo de estados financieros; ciclos de costo de producción; ciclos de control; ciclos financieros (Administración financiera, presupuestos empresariales, finanzas corporativas, formulación y evaluación de proyectos de inversión), sistemas normativos contables y de aseguramiento de la información; ciclos tributarios; el Programa concluye con prácticas en simuladores gerenciales. En este plano profesional, el estudiante debe realizar ciclos de prácticas empresariales, durante los tres últimos semestres del Programa Académico. Además. El Plano contempla dos líneas optativas o de énfasis, que se deben cursar en los últimos tres semestres de Carrera. Son: Gerencia Financiera, Gerencia Tributaria..

El plano *C*, está conformado por Planes de Aula para el desarrollo socio –humanístico y espiritual. Los contenidos son: formación lectoescriturales, lenguas extranjeras, epistemología y metodología de la investigación, modelos de investigación, deontología orientada a la profesión. En este Plano, el estudiante puede cursar la línea de materias electivas, para lo cual dispone de ofertas tales como: Deportes, Música y Danza, Política, comunicación, otras. La organización y administración del Plan de Estudios, se complementa con el diseño de administración por núcleos comunes, propuesto por Camacho (2010. Pp. 107-125). El modelo tiene en cuenta la flexibilidad, y la movilidad estudiantil al interior de la Institución, al interior del país, e internacional, para lo cual se cuenta con convenios interinstitucionales que permiten esa movilidad. Las relaciones de aula en el modelo *COF*, no son de maestro que enseña a alumno que aprende lo que su maestro le enseña. Estas relaciones en el modelo *COF*. Son de *profesor* guía u orientador, *a estudiantes* que aprende, según su proyecto de vida.

*Teorías que fundamentan el modelo COF:* Las teorías y escuelas pedagógicas que soportan el modelo *COF*, son las siguientes: Escuela Activa o constructiva, con precursores como Rousseau, 1762, Pestalozzi 1774, Fröbel 1826, Tolstoy 1859, Dewey 1886, María Montessori, 1904, otros. Este modelo tiene al estudiante como centro del sistema educativo y al maestro como guía, orientador y asesor; el pensamiento complejo, inteligencias múltiples, el aprendizaje significativo, formación basada en competencias y la Andragogía, son también teorías y escuelas que soportan el desarrollo del modelo *COF*; el modelo se enfoca en formar profesionales integrales, con fortalezas en el **saber ser, saber conocer y saber hacer**, con el fin de que desarrollen el perfil de líderes emprendedores para actuar en contextos internacionalizados.

*La Evaluación:* Siendo la evaluación la etapa más importante para la conclusión de todo proceso, el Modelo *COF* y teniendo presente que toda evaluación conlleva un grado de subjetividad por parte de quien evalúa, se prevé que el método integral de evaluación aplicable, en todos los Planes de Aula, es la evaluación integral. De tal manera, cada docente debe consolidar la evaluación, así: a) evaluación de pares (cada estudiante evalúa el trabajo de su compañero); b) evaluación del docente (El modelo recomienda que esta evaluación sea resultado de evaluaciones parciales, por lo menos en tres fechas diferentes); c) una autoevaluación; d) una evaluación de Grupo. Debido a que el desarrollo de los programas es por Planes de Aula y no por asignaturas, se evaluarán: a) objetivos logrados, b) calidad del rendimiento, habilidades desarrolladas; c) profundidad de interpretación y comprensión; calidad de la comunicación; d) calidad y practicidad alcanzada en desarrollo de los Proyectos de Aula vinculados al respectivo módulo; e) otros criterios que el respectivo docente considere y que haya acordado con los estudiantes al iniciar el Curso.

*Evaluación del Modelo COF:* Se han aplicado diferentes evaluaciones al modelo y los resultados han sido satisfactorios. Autoevaluación. Se ha hecho seguimiento al desarrollo aplicando evaluaciones en cuatro momentos de avance de la formación: 1°. Al concluir la etapa de Ciclos Mayores (Quinto Semestre); 2°. Al concluir la etapa de estudio de ciclos de costos y los ciclos de control; 3° al Concluir la Carrera, en la etapa de opción de grado; y 4° en etapa posgradual, en desarrollo del Programa de Seguimiento a Egresados. Evaluación Externa. Esta evaluación se ha hecho desde dos enfoques:

*Evaluación Institucional, o de Alta Calidad:* Esta evaluación la hace la central calificadora del Gobierno Colombiano, el Ministerio de Educación Nacional, en procesos de evaluación de Alta Calidad voluntariamente solicitados por la Institución Educativa, por dos veces consecutivos, en el año 2008 y en el año 20013. Los resultados han sido la obtención del Certificado de Alta Calidad, en cuya Acto Administrativo (Resolución del Ministerio) La autoridad de Educación ha expresado el significativo aporte del modelo curricular de Ciclos de Operaciones Financieras COF.

*Evaluación al Egresado:* Esta evaluación la hace también el Gobierno Nacional, en desarrollo de políticas públicas de calidad de la educación. Es de carácter obligatorio y se aplica al finalizar la Carrera. Los resultados han sido notoriamente satisfactorios, pues los puntajes promedio alcanzados por las tres cohortes que han sido formadas bajo el Modelo COF (año 2011, 2012 y 2013), han venido en ascenso comparando los resultados con los de las pruebas del año inmediatamente anterior. La reciente prueba (Noviembre de 2013), mostró que de los 234 estudiantes formados con este modelo y que se presentaron a la evaluación, el 63.2% alcanzaron puntaje promedio del 18,5% por encima del puntaje de referencia dispuesto por la Oficina Evaluadora, en tanto que 36,8% estuvo ligeramente por debajo del puntaje de referencia. Las evaluaciones de periodos anteriores, con estudiantes formados bajo el modelo tradicional, mostraban resultados contrarios a los resultados aquí presentados.

*Prospectiva:* Se está preparando un test para consultar la opinión de los empresarios que contratan a los egresados formados con el Modelo COF, para verificar la formación de los perfiles de líder y emprendedor que contemplar el Modelo. Se espera aplicar este instrumento durante el segundo periodo del año 2014. Debido a que un currículo es de permanente construcción, el Modelo Curricular COF puede ser actualizado de acuerdo con las necesidades sociales y con el momento histórico. En el momento de escribir el presente informe, se está planeando una actualización enfocada a fortalecer el perfil de líder en materia de globalización y las correspondientes competencias.

## CONCLUSIONES

Hasta el primer lustro del Siglo XXI, la formación de Contadores Públicos, se hacía con planes de estudio asignados según las necesidades técnicas de las organizaciones, y desarrollados con modelos pedagógicos clásicos (Tradicionales). El Maestro enseña y es el protagonista en el aula, el alumno está para aprender de su maestro parte de lo que aquel sabe, el modelo didáctico es instruccionalista y memorístico. En estos modelos la unidad de estructuración son las *asignaturas*. Los Programas Académicos de Contaduría Pública, bajo este modelo tradicional, son diseñados con base en la estructura del Balance. Por esta razón, lo importante es atender el desarrollo del ciclo contable con rigurosa atención en el registro contable, en la documentación de soporte, tener una exacta e impecable representación en los libros de contabilidad, y en la elaboración de los Estados Financieros fielmente tomados de esos libros, así como observar rigurosamente la regulación. De esas fuentes de información debe prepararse la información fiscal. Al graduarse el nuevo Contador, el mundo le muestra que su preparación no está en completa coherencia con la realidad de las organizaciones, debe tomarse un buen tiempo de aprendizaje práctico para estar en condiciones de competir con sus pares veteranos.

Pero la evolución socioeconómica y cultural del mundo, cambió las reglas de juego y las Tecnologías de la Información y la comunicación revolucionaron el mundo de finales del Siglo XX, generando un escenario más complejo y exigente para la Contabilidad.

El diseño del modelo pedagógico y curricular por Ciclos de Operaciones Financieras COF, permite la formación de contadores públicos para atender las necesidades de la sociedad del conocimiento que es como se conoce la sociedad del siglo XXI. Se trata de un modelo integral sistémico y complejo de estudio de la contabilidad enfocado en los Ciclos de Operaciones Financieras que ha llegado a ser identificado por su sigla COF. Bajo este modelo COF, el estudiante es el protagonista, el Maestro es el guía, asesor u orientador; el diseño pedagógico no es por asignaturas dirigidas a evaluar resultados de instrucción, sino por Planes de Aula, dirigidos a desarrollar procesos que serán evaluados con modelo integral cualitativo y cuantitativo. Se tiene en cuenta estrategias investigativa, de núcleos problémicos y Proyecto de Aula como integrador del aprendizaje.

Se orienta a desarrollar competencias propias de la disciplina contable, y a formar perfiles de líderes y emprendedores. En este modelo, se estudia la Contabilidad *como ciencia social aplicada*, cuyo objeto de estudio lo constituyen los fenómenos patrimoniales relacionados con los agentes sociales. El modelo fue implementado en una IES colombiana, sus resultados han sido evaluados por autoevaluación y por evaluación externa, alcanzando por dos veces consecutivas, certificado de Alta Calidad, expedido por la Oficina calificadora colombiana, que es el Ministerio de Educación Nacional. Para concluir el Programa de Investigación, solamente falta consultar la opinión de los empresarios que han contratado a los egresados del Programa, tarea que se espera realizar durante el segundo ciclo del año 2014.
